Thessaly (thĕ'sŭlē), largest ancient division of Greece. It corresponded roughly to the modern nomes of Larissa and Trikkala, which, together, are still called Thessaly. Ancient Thessaly was almost completely walled in by mountains, including Pindus and Oeta. The plains of Thessaly were extremely fertile, and the region was rich in grain, horses and cattle. The Thessalians were a tribe who entered the area from the northwest before 1000 B.C. The chief Thessalian cities, Larissa, Crannon, and Pherae, were oligarchical. The greatest families were the Aleuadae (at Larissa) and the Scopadae (at Crannon). Jason, the able tyrant of Pherae, succeeded in uniting Thessaly (374 B.C.), but it did not remain powerful for a long period. It was subjugated by Philip II of Macedon in 344 B.C. Under the Roman emperors it was joined to Macedonia, but after Constantine it became a separate province. It passed to the Venetians (1204) and to the Turks (1355) from whom it was ceded to Greece in 1881. Many places in Thessaly are connected with ancient Greek myths, such as that of Hercules, whose death pyre was upon Mt. Oeta

Thetford, municipal borough (pop. 4,098), Norfolk, England, on the Thet river and bordering Suffolk, in a farming region. The site was very early occupied, Castle Hill (100 ft. high, 1,000 ft. in circumference) is one of the largest earthworks in Great Britain. There are a ruined Cluniac priory founded in 1104, three old churches, and numerous old houses. The museum is housed in a 15th-century building. The town was important under the Saxons and Danes, it was the seat of the kings and bishops of East Anglia for a time, and under Edward III it had eight monasteries and 20 churches. Thomas Paine was born near here

Thetford, town (pop. 1,043), E Vt., on the Connecticut above Hartford, chartered 1761, settled 1764. Part of the town was badly flooded in 1936

Thetford Mines, city (pop. 12,716), SE Que., NE of Sherbrooke and S of Quebec, inc. 1905. It is an important asbestos-mining center, developed after the discovery (1876) of large asbestos deposits. Chromium and feldspar are also mined here

Thetis (thē'tĭs), in Greek legend, a Nereid, mother of ACHILLES. She was loved by ZEUS and POSEIDON, but because of a prophecy that her son would be greater than his father, the gods gave her in marriage to a mortal, PELEUS. All the gods brought gifts to her wedding except ERIS, who sent the APPLE OF DISCORD. Thetis appears several times in the ILIAD, comforting and helping her son

Theudas (thū'dăs), leader of insurgents mentioned by Gamaliel (Acts 5.36). Nothing is known of him, he is not the magician Theudas (fl. A.D. 45) mentioned by Josephus

Theus, Jeremiah (thūs, tōs), c. 1719–1744, American portrait painter. b. Switzerland. He came as a child to South Carolina. By 1740, according to newspaper notices, he was painting portraits and teaching art in Charleston. His portraits were good likenesses but stiff and ill-composed. The Brooklyn (N.Y.) Museum has a portrait of Elizabeth Rothmaler

Thevai, Greece: see THEBES

Theveste: see TEBESSA, Algeria

thiamine: see VITAMINS

Thiaucourt (tyōkōōr'), village (pop. 995), Meurthe-et-Moselle dept., NE France, in Lorraine, NW of Nancy. It was captured (Sept., 1918) by American troops in the First World War and is the site of the Saint-Mihiel American cemetery

Thibault, Jacques Anatole: see FRANCE, ANATOLE

Thibaut IV (tĕbō'), 1201–53, French trouvère, count of Champagne. He became Thibaut I, king of Navarre, in 1234, in succession to his uncle, Sancho VII. In 1239, against the wishes of the pope, he led a Crusade, he was, however, defeated and was unable to forestall the later fall of Jerusalem. His courtly verses and songs rank high in troubadour literature, some are addressed to Blanche of Castile. His name appears also as Thibaud or Theobald

Thibodaux (tĭ'budō), town (pop. 5,851), parish seat of Lafourche parish, SE La., on Bayou Lafourche and SW of New Orleans, laid out c. 1820, inc. 1838. It is the commercial center of an oil, sugar, and farm area. Chief Justice White was born near by

Thief River Falls, city (pop. 6,019), co. seat of Pennington co., NW Minn., N of Red Lake Falls at the confluence of the Thief and Red Lake rivers. It is the commercial and distributing center for a farm region. Near-by tracts were used in a Federal project for the resettlement of farm families

Thierry I. see THEODORIC I

Thierry, Augustin (ōgŭstĕ' tyĕrē'), 1795–1856, French historian. He sought to prove, by the example of English and French history, that the development of a nation was the process of the struggle between two races, the invaders and the invaded, thus the progressive liberation of the Gauls, representing the French people, from their Frankish conquerors, who supposedly became the ruling class, culminated in the July Revolution of 1830. The theory is, of course, utterly untenable, its very premises being false. However, the absurdity and aridity of the theory are eclipsed by the great literary value of his work. "Loving history for its own sake," he strove to bring the past back to life, and although his accuracy is questionable, he succeeded in that purpose as few historians have done. In his masterwork, *Récits des temps mérovingiens* [narratives of the Merovingian era] (1870), he painted the classic picture of that barbarous period. He also wrote a history of the Norman Conquest of England (1825), which shows the influence of Sir Walter Scott. Discredited as a historian, Thierry remains one of the great writers of French romanticism

Thiers, Adolphe (ădôlf' tyĕr'), 1797–1877, French statesman, journalist, and historian. After studying law at Aix-en-Provence, he went (1821) to Paris and joined the little group of writers that centered about the bourgeois salons and attacked the government of CHARLES X. Thiers reflected the views of the middle-of-the-road *Doctrinaires* and of the capitalist bourgeoisie. His *History of the French Revolution* (10 vols., 1823–27, Eng. tr., 5 vols., 1895) illustrated his moderate liberal views and thus was an attack on the reactionary government. With Mignet and others he began in 1830 to put out the journal *National*, which had an important part in bringing about the JULY REVOLUTION of 1830. He was prominent under LOUIS PHILIPPE but never enjoyed the king's confidence. As minister of the interior (1832–34) in the first Soult cabinet, he was instrumental in the French intervention in favor of Belgium and suppressed, with brutality, the workers' insurrection of April, 1834, in Paris and Lyons. He was premier in 1836, but his projected intervention against the Carlists in Spain caused his replacement by Guizot. In 1840 he again headed a cabinet, once more his aggressive foreign policy—this time he sought to intervene in favor of Mohammed Ali of Egypt—lacked royal support and caused his fall. He now became a liberal opponent of the July Monarchy and again turned to writing, beginning his *History of the Consulate and the Empire* (20 vols., 1840–55, Eng. tr., 1845–62). One day before the outbreak of the FEBRUARY REVOLUTION of 1848, Louis Philippe called on Thiers to replace Guizot as premier, but both king and premier were swept aside by the revolutionary tide. Elected to the constituent assembly, Thiers was a leader of the right-wing liberals and bitterly opposed the Socialists. Though he favored the restoration of the Orleanist monarchy, he did not oppose the election of Prince Louis Napoleon (later NAPOLEON III). He did, however, oppose Napoleon's coup d'état of Dec., 1851, was arrested, and later went into exile. After being allowed to return he entered (1863) the *corps législatif*, where he opposed the emperor and in a measure helped to bring about the "Liberal Empire." He was among the few deputies who voted against declaring war (1870) on Prussia. Vindicated in the disastrous defeats of France in the FRANCO-PRUSSIAN WAR, he was chosen chief executive of the provisional government of Bordeaux in 1871, negotiated the preliminary Peace of Versailles with Bismarck, and ordered his troops to suppress the COMMUNE OF PARIS of 1871—an order carried out with ferocious severity. In Aug., 1871, his title became president of the republic. The credit for the astonishingly quick payment by France of its war indemnity to Germany and the consequent evacuation (1873) of France by German troops belongs largely to Thiers's efficient economic policy. Himself an Orleanist at heart, he was supported by the monarchist majority in the national assembly. However, his conciliatory attitude toward the republicans was condemned by the national assembly, and in 1873 he was forced to resign and was succeeded by Marshal MacMahon, only the disunity of Orleanists and legitimists prevented the restoration of the monarchy. Though immensely popular in their time, Thiers's historical works are today generally regarded as superficial and inaccurate eulogies of the French Revolution and of Napoleon, written from the bourgeois point of view. See his memoirs (1903, Eng. tr., 1915), J. M. S. Allison, *Thiers and the French Monarchy* (1926) and *Monsieur Thiers* (1932)

Thiers, town (pop. 11,180), Puy-de-Dôme dept., SE central France, in Auvergne. It is a picturesque place with an old cutlery industry. The Romanesque Church of St. Genès has fragments of mosaics dating from Merovingian days

Thiess, Frank (frängk' tēs'), 1890–, German novelist, b. Livonia. His best work is concerned with the people of his native province. Among his novels are *Der Lebkaftige* (1924, Eng. tr., *The Devil's Shadow*, 1928), *Das Tor zur Welt* (1926; Eng. tr., *Gateway to Life*, 1927), *Abschied vom Paradies* (1927, Eng. tr., *Farewell to Paradise*, 1929), and *Frauenraub* (1928, Eng. tr., *Interlude*, 1929)

thimble, originally the thumb part of a glove, in modern usage a sheath of metal or other hard material used to push the needle in sewing. The various types include the leather palm of the sailor and the open thimble of the tailor and upholsterer. Prehistoric finger shields and needle pushers gave way to bronze and brass rings. The leather thimble of the Middle Ages is still found occasionally in the south of Ireland. Metal, wood, ivory, bone, china, glass, and enamel have all been used. Many modern thimbles are made of celluloid and other compositions.

thimbleweed: see ANEMONE.

Thimnathah (thĭm'nŭthŭ): see TIMNAH 3.

Thingvallavatn, Icelandic *þingvallavatn* (thĕng'gvät"lävä"tün), lake, area 46 sq mi, SW Iceland, c 25 mi NE of Reykjavik It is the largest lake of Iceland Near by, at Thingvellir, is the ancient assembly place of the Althing, the Icelandic parliament

Thingvellir, Icelandic *þingvellir* (thĕng'gvĕt"lĭr), ancient place of assembly of the Icelandic Althing, c 28 mi NE of Reykjavik

Thionville (tyôvēl'), Ger *Diedenhofen*, town (pop 15,195), Moselle dept, NE France, in Lorraine It is a processing center of a rich iron district and also a garrison town An ancient place, it was seized (1643) from its Spanish garrison by Louis II de Condé, was defended (1815) by General Hugo (Victor Hugo's father), and in 1870 was the scene of a Prussian victory over Marshal Bazaine.

Third Republic: see France

Thirkell, Angela (thûr'kul), 1890–, English novelist, daughter of J. W Mackail Her first book, *Three Houses*, a family record, was published in 1930 With her second novel, *High Rising* (1933), she struck the vein of light, witty novels of English country-house living which have delighted readers through a long series The same characters, slightly absurd but always likable, flit in and out of different stories, and for her setting she has borrowed Trollope's Barsetshire The series includes *Pomfret Towers* (1938), *The Brandons* (1939), *Before Lunch* (1940), *Cheerfulness Breaks In* (1940), *Northbridge Rectory* (1941), *Love among the Ruins* (1948), and *The Old Bank House* (1949)

Thirlmere, narrow lake, c 3 mi long, Cumberland, England, near Derwentwater NW of Helvellyn In 1894, through the construction of a high dam and an aqueduct c 100 mi long, it became a source of water supply for Manchester

Thirlwall, Connop (kŏ'nup thûrl'wôl), 1797–1875, English historian He studied at Cambridge and later taught at the university until he was forced to resign for his defense of religious dissenters He was bishop of St David's, Wales, from 1840 His chief work is his *History of Greece* (8 vols, 1835–44), it rivaled the similar work by George Grote, which appeared at about the same time

thirst, desire for water Dry or salty food and dry or dusty air cause a drying of the membranes lining the throat and produce a sensation of thirst which may be relieved by moistening the membranes with a small amount of water Deprivation of water for a long period of time may affect the water requirements of the entire body and may result not only in the sensation of simple thirst but also in pain and suffering Because water makes up a large part of the body weight and normal metabolism depends upon a sufficient amount of water in the tissues, a lack of water over a long period affects the physiological functions of the body including the metabolism of the nervous system

Thirteen Colonies, the, term used for the colonies of British North America that joined together in the American Revolution against the mother country, adopted the Declaration of Independence in 1776, and became the United States They were New Hampshire, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, North Carolina, South Carolina, and Georgia Virginia was the earliest founded (1607) They are also called the Thirteen Original States, but to call them the Thirteen Original Colonies is an error.

Thirty-nine Articles: see Creed

Thirty Tyrants, oligarchy of ancient Athens (404–403 B C) created by Lysander, under Spartan auspices, after the Peloponnesian War Critias and Theramenes were prominent members of it It was overthrown by Thrasybulus, who headed the exiles from Phyle

Thirty Years War, 1618–48, general European war, fought mainly in Germany There were many issues, territorial, dynastic, and religious, and it is recognized today that the accent placed by 19th-century historians on the religious aspects is misleading Throughout the war there were shifting alliances and local peace treaties, and the whole conflict can be understood only as a conflict of petty German princes and foreign powers—France, Sweden, Denmark, England—against the unity and power of the Holy Roman Empire as represented by the Hapsburgs and against the Hapsburgs themselves in Austria and Germany, in Italy, in the Netherlands, and in Spain The outbreak of the war came with the resistance of Protestant Bohemian nobles to the Catholic king Ferdinand (later Emperor Ferdinand II) The revolt began with violence against the royal officers in Prague—the "defenestration of Prague" (May, 1618). Ferdinand was declared deposed and the Bohemian throne was offered to Frederick V, the elector palatine Revolt also appeared in other Hapsburg dominions, especially under Gabriel Bethlen in Transylvania Maximilian I of Bavaria aided the imperialist forces under Tilly to defeat the Bohemians at the White Mt. near Prague (Nov., 1620) Frederick, ever afterward called the Winter King, had lost his brief hold on Bohemia. The war continued in the Palatinate, and severe repression began in Bohemia. In the Palatinate Mansfeld and Christian of Brunswick led the revolutionary forces Frederick expected aid from his father-in-law, James I of England, but got no effectual help The Palatinate was taken by the imperial general, Tilly, he won at Wimpfen and Höchst (1622) Frederick's lands were confiscated by the emperor, and the Upper Palatinate and the electorate were conferred on Maximilian of Bavaria The imperialist victory at Stadtlohn (1623) practically ended one phase of the war Frederick was forced to sign an armistice with the emperor The new phase saw the German war expanded into an international conflict Christian IV of Denmark came into the fighting, principally because of his fear of the rise of Hapsburg power in N Germany, he openly avowed religious motives but hoped also to enlarge his German possessions England gave a subsidy to aid the opponents of the Hapsburgs and sent a few thousand soldiers Christian IV advanced into Germany The emperor's cause was advanced by the work of Wallenstein, who gathered an effective army and defeated Mansfeld at Dessau (1626) A little later the Danish king was soundly defeated by Tilly at Lutter The imperialist armies swept through most of Germany Wallenstein went into Jutland and vanquished the Danes but failed before Stralsund (1628) In 1629 Denmark by the Treaty of Lubeck withdrew from the war and surrendered the north German bishoprics A new period of the war opened The Edict of Restitution (1629), issued by Ferdinand II, attempted to enforce the ecclesiastical reservation of the Peace of Augsburg and declared void Protestant titles to lands secularized after 1552, its full application would have had a disastrous effect on German Protestantism and naturally aroused the Protestant states to determined, though at the moment latent, hostility Gustavus II (Gustavus Adolphus) of Sweden now came into the war His territorial ambitions had embroiled him in wars with Poland, and now he feared that Ferdinand's maritime designs might threaten Sweden's mastery of the Baltic He declared against the emperor and was supported by an understanding with Catholic France, then under the leadership of Cardinal Richelieu Swedish troops marched into Germany Meanwhile Ferdinand had been prevailed upon (1630) to dismiss Wallenstein, who had powerful enemies in the empire Tilly now headed the imperialist forces He was able to take the city of Magdeburg while the Protestant princes hesitated to join the Swedes Only John George of Saxony, caught between Tilly and the Swedish king, joined Gustavus Adolphus, who offered him better terms The combined forces crushed Tilly at Breitenfeld (1631), thus winning N Germany Gustavus Adolphus triumphantly advanced and Tilly was defeated and fatally wounded in the battle of the Lech (1632) Wallenstein, recalled with some pleading by the emperor, took the field He defeated the Saxon forces and later met the Swedish forces at Lutzen (Nov., 1632), there the imperialists were defeated, but Gustavus Adolphus was killed and the anti-Hapsburg troops were disorganized Wallenstein after his great defeat remained inactive and entered into long negotiations with the enemy Meanwhile the able anti-imperialist general, Bernhard of Saxe-Weimar, stormed Regensburg (1633) Wallenstein was in 1634 murdered by imperialist conspirators Soon afterward the imperialist forces under Gallas defeated Bernhard at Nordlingen (Feb, 1634) Germany was in economic ruin, her fields devastated and bloodsoaked There was some feeling in Germany against the foreign soldiers that overran the land A general desire for peace led to the Peace of Prague (1635) This agreement drastically modified the Edict of Restitution, thus helping to reconcile Catholic and Protestant It was accepted by almost all the German princes and free cities A united imperial army was to move against the Swedish troops in Germany A general peace seemed to be in train, but Richelieu was unwilling to see the Hapsburgs retain power France entered openly into war (1635) Oxenstierna (the Swedish chancellor), anxious to preserve Sweden's hold in Germany, supported Richelieu The final stage of the Thirty Years War began The war now occupied most of Europe, with fighting in the Low Countries, where the United Provinces and France opposed Spain, in Italy, where France and Spain struggled for power, in France, in Germany, in the Iberian peninsula, where Portugal revolted against, and France attacked, Spain, and in the North, where Denmark opposed Sweden The Austrian forces went into France and achieved some success, but this was temporary For the most part this period of the war was disastrous for the empire Bernhard of Saxe-Weimar and the Swedish general, Baner, were victorious in Germany In 1636 Baner won a notable victory at Wittstock Bernhard conducted a series of brilliant campaigns, culminating in the capture of Breisach (1638) Bernhard died in 1639, Baner in 1641. Meanwhile Emperor Ferdinand II was succeeded by Ferdinand III (1637) In 1642 Richelieu died, his successor, Cardinal Mazarin, continued the established French policy. Germany was exhausted. Peace negotiations were begun before 1640, but the intricate diplomacy proceeded slowly and haltingly Meanwhile the empire was reduced by the armies of the Swedish Torstenson, Louis II de Condé, and Turenne. Torstenson defeated the imperialists at Breitenfeld (1642), after going north to subdue Danish opposition defeated Gallas, then won a climactic victory over Hatsfeldt at Jankau (1645). Meanwhile Condé had won a victory at Rocroi (1643), in 1645 he and Turenne (after a severe defeat) were victorious near Nordlingen Austria had been stripped of all conquests and her enemies were at the very door of Vienna Austria's strongest ally, Bavaria, was overrun The Swede Wrangel and the French Turenne were carrying on a successful campaign when the long-delayed peace was obtained (see Westphalia, Peace of) The general results of the war may be said to have been tremendous decrease in German population, devastation of the German fields, ruin of German commerce and industry, the breakup of the Holy Roman Empire, which was a mere shell in the succeeding centuries, and the decline of Hapsburg greatness Though generally considered a religious war, its effects on religion were bad, it was succeeded by a period of debased morality and religious decline The incredible sufferings of the German peasantry were remembered for centuries The political settlements of the peace were to the disadvantage of Germany as well as the Hapsburgs The estrangement of N Germany from Austria, then begun, was to continue for more than two centuries Many of the songs and writings of the war have been collected Old histories of the Thirty Years War are those of Anton Gindely (4 vols, 1869–80 Eng tr, 2 vols, 1884), Moritz Ritter (3 vols, 1889–1908, in German), and S R Gardiner (1874) See C V Wedgewood, *The Thirty Years War* (1939)

Thisbe see Pyramus and Thisbe

Thisbe, town whence Tobit was carried away, evidently c 90 mi N of Jerusalem Tobit 1 2

Thiselton-Dyer, Sir William Turner (thĭ'sultun-dī'ur), 1843–1928, English botanist As assistant director (1875–85) and director (1885–1905) of the botanical gardens at Kew, he enlarged its field of research, edited several of its publications, and founded (1887) the Kew Bulletin

thistle, popular name for many spiny and usually weedy plants, but especially applied to the composite-flowered genera *Carduus*, *Cirsium*, *Cnicus* and *Onopordon*, which have spiny leaves and often showy heads of purple, rose, white, or yellow flowers followed by the thistledown seeds that are so loved by the goldfinch The Scotch thistle (variously identified) is the badge of the Scottish Order of the Thistle and the national emblem of Scotland, reputed to have betrayed the presence of a band of Danish invaders by the howl of one stepping upon the plant The blessed thistle or St -Benedict's-thistle (*Cnicus benedictus*, the *Carduus benedictus* of Shakspere's *Much Ado about Nothing*, iii 4) was a heal-all of old and is still sometimes used medicinally The common or bull thistle (*Cirsium lanceolatum*) and the pasture thistle (*Cirsium odoratum*) are attractive weeds not to be confused with the Canada thistle (*Cirsium arvense*), which has a creeping rootstock and has probably been more legislated against than any other weed because of its very persistent nature (it is an offense in most states to allow the seeds to mature) The Russian thistle is a tumbleweed

Thistlewood, Arthur, 1770–1820, English conspirator Trained as a land surveyor, he traveled in France and America and acquired revolutionary views He returned to England (1794), joined the Spencean Society (a revolutionary group in London), and became known to the police as a dangerous character With James Watson, he organized a public meeting at Spa Fields (1816) at which a revolution was to be started, but the meeting was easily dispersed Thistlewood was arrested and narrowly escaped conviction for treason A challenge to a duel which he sent in 1817 to the home secretary, Lord Sidmouth, led to a prison term Upon his release (1819) Thistlewood, dissatisfied with the milder efforts of his colleagues, plotted the assassination of cabinet members at a cabinet dinner The government, apprised of the conspiracy by an informer among the plotters, allowed it to mature and then surprised the conspirators at their arsenal in a Cato Street loft. Thistlewood escaped, but was captured the next day He was convicted of treason and executed for his part in what is known as the Cato Street Conspiracy.

Thivai, Greece see Thebes.

Thokoly or **Tokoly, Emeric** (both tô'kûē), Hung *Thököly Imre* (ĭm'rĕ), 1656–1705, Hungarian rebel, of a noble family of N Hungary His father, Stephen Thokoly, took an important part in the unsuccessful conspiracy of Francis I Rakoczy and Peter Zrinyi against Emperor Leopold I and died (1670) while defending his castle against imperial troops Thokoly fled to Poland The severe reprisals meted out by the Austrian governor of Hungary led to a general uprising, supported after 1674 by Louis XIV of France Thokoly took command (1678) of the rebel army and in 1680 made a truce with Leo-

pold. The emperor restored (1681) religious and political freedom in Hungary, but Thokoly rejected his concessions as insufficient and began to plot with Turkey to make himself master of his country. In 1682 he married Helen Zrinyi, daughter of Stephen Zrinyi and widow of Francis I Rakoczy, and late in the same year he was recognized by the sultan as "king of Upper Hungary" under Turkish suzerainty It was largely at his instigation that Mohammed IV undertook his expedition against VIENNA, and in 1683 Thokoly joined the Turkish forces under Kara MUSTAFA in the siege of that city The Turks blamed their rout on Thokoly and imprisoned him briefly (1688) at Adrianople, but in 1690 they appointed him prince of Transylvania From Transylvania he was driven (1691) by the imperial force under Louis of Baden The Treaty of Karlowitz (1699), by which the whole of Hungary passed to Leopold, also stipulated that Thokoly was to be interned by the Turks in Asia Minor He spent the rest of his life near Constantinople

Thoma, Hans (hāns' tō'mä), 1839–1924, German painter and lithographer, influenced by Courbet His later, individual style, modeled on that of old German woodcuts, shows rich coloring and depth of imaginative feeling In 1899 he became director of the Karlsruhe Gallery and professor at the academy Among his paintings are *At Lake of Garda* and *Eventide* (both Metropolitan Mus) and *Solitude*, *Spring Idyl*, and *Scenes from Life of Christ*

Thomas, Saint, one of the Twelve Disciples, called Didymus (did'imus) [Gr, =twin] He doubted the Resurrection until he saw Jesus and touched His side John 11 16, 14 5, 20 24–29, 21 2 By universal tradition he is said to have gone as missionary to India The Christians of Malabar call themselves Christians of St Thomas Among the PSEUDEPIGRAPHA are a Gospel of Thomas and Acts of Thomas

Thomas, Albert (älbĕr' tômä'), 1878–1932, French statesman Becoming a Socialist, he worked with Jaurès on the journal *Humanité* and took part in local politics In 1910 he was elected to the chamber of deputies and during the First World War held cabinet positions, notably as minister of munitions (1916) Thomas was sent to Russia in 1917 to help Kerensky He was director (1919–32) of the International Labor Office Among his historical works are *Le Syndicalisme allemand* (1903) and *Le Second Empire* (1907)

Thomas, Ambroise (tômä' äbrwäz'), 1811–96, French operatic composer, studied at the Paris Conservatoire, taking the Prix de Rome in 1832 He later taught composition there and became its director in 1871 He wrote a number of ballets and 20 operas, of which *Le Caïd* (1849 a satire on Italian opera), *Mignon* (1866), and *Hamlet* (1868) were the most successful

Thomas, Augustus (tō'mŭs), 1857-1934, American dramatist, b St Louis He worked as a journalist, an actor, and an advance agent for theatrical troupes His first big success was *The Burglar* (1889), which he first adapted (1887) as a one-act play from Frances Hodgson Burnett's story *Editha's Burglar* It was not until *Alabama* (1891), however, that Thomas was able to support himself as a dramatist The first of a series of excellent regional plays, *Alabama* was followed by *In Mizzoura* (1893), *Arizona* (1897), and *The Copperhead* (1918) Among his plays on topical themes was the successful *The Witching Hour* (1907) His autobiography, *The Print of My Remembrance*, appeared in 1922

Thomas, Cyrus, 1825–1910, American ethnologist and entomologist, b Kingsport, Tenn He was a lawyer, then a minister of the Evangelical Lutheran Church (1865–69) In 1869 he joined the U S Geological and Geographical Survey of the Territories and from 1873 to 1875 he taught natural science at Southern Illinois Normal Univ He was state entomologist of Illinois from 1874 to 1876 and was with the U S Entomological Commission from 1876 to 1877 In 1882 he left natural for social science, becoming archaeologist to the U S Bureau of Ethnology His work on the Indians of North America especially on the early civilizations of Mexico and on the mound builders of the United States, was valuable Besides many monographs in ethnology he wrote *Introduction to the Study of North American Archaeology* (1898) and a general work, *The Indians of North America* (1903)

Thomas, David Alfred: see RHONDDA, DAVID ALFRED THOMAS, 1ST VISCOUNT.

Thomas, Dylan (Dylan Marlais Thomas) (dil'lŭn), 1914–, British poet, b Caermarthenshire, Wales, educated at the Swansea Grammar School His first volume, *Eighteen Poems* (1934), brought the young Welshman an instant reputation, which was deepened by later books—*Twenty-five Poems* (1936), *The Map of Love* (1939), and *Deaths and Entrances* (1946) His introspective poems are built on a correlation of symbols, showing the strong influence of Freud, diction and meter are startlingly fresh. He also has written short stories, some of these are included with poetry in *The World I Breathe* (1940) His *Portrait of the Artist as a Young Dog* (1940)—a title reminiscent of James Joyce—is a series of anecdotes based on autobiography. A small volume of selected works appeared in 1946.

Thomas, Edith Matilda 1854–1925, American poet, b. Medina co, Ohio She lived in New York city after 1887 Her verse was collected from periodicals in *The Inverted Torch* (1890), *The Flowers from the Ashes* (1915), and other volumes See her *Selected Poems* (with memoir by Jessie B. Rittenhouse, 1926)

Thomas, Edward, 1878–1917, English poet and critic, b London, educated at Lincoln College, Oxford When he had long earned his living by writing essays, travel books, and critical studies of Maeterlinck, Borrow, Swinburne, Pater, and others, his friendship with Robert Frost, which began in 1912, turned him to writing poetry *Six Poems* (1916) by "Edward Eastaway" appeared before Thomas was killed in the First World War *Poems* (1917), *Last Poems* (1918), and *Collected Poems*](1920), new ed, 1936) revealed him as a true English nature poet See biography by R P Eckert (1937)

Thomas, George Henry, 1816–70, Union general in the Civil War, b Southampton co, Va, grad West Point, 1840 He served against the Seminoles and distinguished himself at Monterrey and Buena Vista in the Mexican War Later he taught at West Point and served in Texas In the Civil War, Thomas remained in the U S army and, in Aug, 1861, was made brigadier general of volunteers After service in the Shenandoah Valley, he was sent to Kentucky, where he defeated the Confederates at MILL SPRINGS (Jan, 1862) Thomas commanded a wing of the Army of the Ohio about Corinth, was second in command to Buell at Perryville, and commanded the Union center at Murfreesboro In the CHATTANOOGA CAMPAIGN, his stand on Sept 20, 1863, in saving the Union army from complete rout, won for him the sobriquet Rock of Chickamauga He succeeded Rosecrans in command of the Army of the Cumberland (Oct, 1863) and served under U S GRANT around Chattanooga and under W T SHERMAN in the ATLANTA CAMPAIGN With the fall of Atlanta (Sept, 1864), Thomas returned to Tennessee and at Nashville thoroughly defeated Gen J B HOOD (Dec, 1864) This victory brought him a major generalcy in the regular army He was commander of the Military Division of the Pacific at the time of his death See biographies by Henry Coppée (1893), Freeman Cleaves (1948), and Richard O'Connor (1948)

Thomas, Isaiah, 1749–1831, American printer, of Worcester, Mass He published in 1785 *A Specimen of Isaiah Thomas's Printing Types*, valued as evidence of the equipment of a leading American printer of the time The types were "Chiefly Manufactured by that great Artist, William Caslon, Esq, of London" Thomas was the author of a *History of Printing in America* (1810)

Thomas, James Henry, 1874–1949, English labor leader and public official He early became a labor organizer and in 1910 was named president of the Amalgamated Society of Railway Servants which he helped to reorganize on an industrial basis as the National Union of Railwaymen after the strike of 1911 He served in the House of Commons from 1910 to 1936 He was colonial secretary in the 1924 Labour government and in 1929 was made lord privy seal and special minister for employment In 1931 he entered the National government under Ramsay MacDonald and was, as a result, expelled from the Labour party and the railwaymen's union He was dominion secretary (1930–35) and colonial secretary (1935–36) In 1936 he resigned as a result of a scandal, he was convicted of revealing budget secrets to insurance speculators See his *My Story* (1937)

Thomas, John Charles, 1891?–, American baritone, b Meyersdale, Pa, studied at the Peabody Conservatory, Baltimore After a successful career in musical comedy he made his operatic debut in Washington, D C, in 1924, after which he sang with the Royal Opera, Brussels At the Metropolitan Opera House he made his debut in 1934 in Verdi's *La Traviata*, joining the company in 1935 Well known as a concert and radio singer, he also appeared in a few moving pictures

Thomas, Martha Carey, 1857–1935, American educator and feminist, b Baltimore, Md, grad Cornell Univ, 1877, studied at Johns Hopkins and at Leipzig, the Sorbonne, and Zurich (Ph D, 1882) In 1884 she was appointed to organize Bryn Mawr College for women, serving as dean and professor of English until 1894 and as president from 1894 to 1922 She also established the summer school for women in industry at Bryn Mawr in 1921 A leader in the woman-suffrage movement, she was president of the National Collegiate Equal Suffrage League from 1906 to 1913 Her works include *The Higher Education of Women* (1900)

Thomas, Norman Mattoon, 1884–, American Socialist leader, b Marion, Ohio, grad Princeton, 1905 He did settlement work, and after he graduated (1911) from the Union Theological Seminary he served as pastor of Presbyterian churches in New York city until 1918. He formally left the ministry in 1931 In the First World War he advocated pacifism and joined the Socialist party He led in several strikes, founded (1918) the journal the *World Tomorrow*, and was (1921–22) an editor of the *Nation*. He helped found what is now the American Civil Liberties Union, and after the death (1924) of Eugene V DEBS, he became the guiding spirit of the SOCIALIST PARTY in America He sought election as governor of New York (1924, 1938) and as mayor of New York city (1925, 1929) Norman Thomas, advocating evolutionary socialism in America, was repeatedly the Socialist party candidate for President after 1928, polling his highest vote of 190,000 in 1932 His following diminished after a split within the Socialist party He was a constant critic of the American economic system and of both major parties and an insistent advocate of reform; he strongly opposed American entry in the Second World War while bitterly denouncing fascism and the dictatorship of the proletariat He wrote several books, including *The Conscientious Objector in America* (1923), *What Is Industrial Democracy?* (1927), *Socialism of Our Time* (1929), *Human Exploitation* (1934), *We Have a Future* (1941), *What Is Our Destiny* (1944), and *Appeal to the Nations* (1947)

Thomas, Robert Baily, 1766–1846, American editor, b Grafton, Mass He compiled his famous *Farmer's Almanac* (later the *Old Farmer's Almanack*) annually from 1793 to 1846, and it reached a circulation of over 200,000 copies His heirs continued it into the 20th cent See G L Kittredge, *The Old Farmer and His Almanack* (1920)

Thomas, Seth, 1785–1859, American clock manufacturer, b Wolcott, Conn In 1812 he sold his partnership in a clock business established by Eli Terry and set up a factory to make metal-movement clocks at Plymouth Hollow, Conn (renamed Thomaston in his honor c 1860) He also built and operated a mill to roll brass and make wire for his clock factory His son, **Seth Thomas,** 1816–88, b Plymouth Hollow, Conn, greatly enlarged the business

Thomas, Sidney Gilchrist, 1850–85, English metallurgist In 1875 he invented a method, known as the basic Bessemer process, for the removal of phosphorus from iron With the aid of his cousin, Percy Gilchrist, he proved its practicability, patented it, and succeeded in introducing it in the steel industry This invention met a basic need and became widely used especially on the Continent where there was a larger proportion of phosphoric ores

Thomas, Theodore, 1835–1905, American violinist and conductor, b Germany He came to the United States in 1845 and in 1851 went on the first of his self-sponsored concert tours In 1854 he became a member of the New York Philharmonic Orchestra, which he conducted in the season 1877–78 With William Mason he founded (1855) the Mason-Thomas quintet In 1862 he founded his own orchestra, with which he toured the United States and gave outdoor summer concerts in New York city He was appointed (1878) director of the newly founded Cincinnati College of Music, but he returned to New York in 1880 to conduct again the New York Philharmonic, his own orchestra, and the Brooklyn orchestra He disbanded his own orchestra in 1888 and in 1891 went to Chicago as permanent conductor of the Chicago Orchestra, the post he held until his death As a result of his tours many cities throughout the country developed orchestras He introduced major works of Brahms, Wagner, Anton Bruckner, and Richard Strauss to American audiences See his autobiography (ed by G P Upton, 1905), C E Russell, *The American Orchestra and Theodore Thomas* (1927)

Thomas. 1 Town (pop 1,220), W Okla, near the Canadian river, in an agricultural (especially wheat) area, platted 1902 Amish and Dunkard communities are in the area **2** Trading city (pop 1,449), N W Va, NE of Elkins, in a mining region, founded 1884 Blackwater Falls State Park is near

Thomas à Becket, Saint, or **Saint Thomas Becket,** 1117–70, English martyr, archbishop of Canterbury, b London He is called St Thomas of Canterbury and occasionally St Thomas of London He came of a good Norman family He was well educated, ending his studies at the Univ of Paris The straitened circumstances of his family forced him to act as a "notary" until he was taken into the household of Theobald, archbishop of Canterbury (1142) In the archbishop's service Thomas distinguished himself and was given several delicate missions to perform Theobald sent him to Bologna to study law under Gratian In 1154 he was ordained deacon and appointed archdeacon of Canterbury The next year the young King Henry II appointed him chancellor Thomas became an intimate friend and adviser of the king and was considered second most powerful man in the kingdom It would seem that he did not oppose the taxation on churchmen so vigorously opposed by some ecclesiastics, but on the other hand the statement that he injured the Church is based on unsupportable evidence of Thomas's enemies Though he lived with magnificence and took an undistinguished part on the battlefield in the Toulouse campaign, his personal life and character were above reproach He was, moreover, not invariably compliant to the will of the king When Henry wanted to secure for him the primacy of Canterbury left vacant by Theobald's death (1161), Thomas was reluctant, explicitly because it would involve him in a struggle

with the king Henry insisted, and Thomas was ordained priest and consecrated bishop in 1162 The merry chancellor became an ascetic archbishop Trouble was not long in arriving Thomas attempted to resign the chancellorship, and he angered the king by efforts to recover properties of which the archdiocese of Canterbury had been illegally deprived Thomas insisted that clerks be tried in ecclesiastical courts, even for secular offenses He maintained his right to assign priests to parishes without consulting the local lord He successfully opposed Henry's attempt to collect the tax of the Danegeld A little later, actual conflict arose when Henry summoned the bishops to Westminster (1163) and endeavored to confirm his "grandfather's customs" of unreserved obedience to the king Thomas refused unless an exception be made "saving his order," but was induced by letters from the pope to submit Henry, wishing to codify this concession, had the Constitutions of Clarendon drawn up (1164), these Thomas refused to sign, declaring them contrary to canon law The most important provision was that which provided for the trial of "criminous clerks" (i e , clerics accused of a crime at common, rather than canon, law) in the king's courts, with the secular power determining the legal jurisdiction of the accused cleric Appeals in ecclesiastical law were to proceed from bishop to archbishop to the king, rather than the pope Thomas resisted these and other innovations because they challenged the supranational authority of the Church Representing the conservative opponents of the growing royal power, he was very jealous of the privileges and of the free autonomy of the Church That he was also opposing the course of constitutional development there can be no doubt Fearing persecution, Thomas fled to the Continent (Nov , 1164), and laid his cause before Pope Alexander III, who was too enmeshed in his own difficulties to aid Thomas at the time The quarrel dragged on, and both sides took extreme stands Finally in 1170 a sort of peace was patched up, after Henry had had his son crowned by the archbishop of York in direct violation of precedent and customary constitutional law The peace did not really settle the issue, and after Thomas's return to England (Dec , 1170), trouble immediately recurred Thomas published the pope's letters suspending the bishops who had taken part in the coronation, the king demanded that the bishops be immediately absolved Although he himself had asked the pope to soften the terms of suspension and knew that they would be softened, Thomas said nothing of this and took a firm stand He was further involved in trouble concerning the restoration of property taken from him by the De Broc family Feeling between king and archbishop ran high On Dec 29 a band of armed men came to Canterbury and murdered Thomas À Becket in the cathedral itself He showed himself almost incredibly courageous at the end Though it is generally agreed that the king was not directly responsible for Thomas's death, there can be no doubt that he was indirectly responsible That Thomas was a martyr is indisputable, whatever the estimate of the cause in which he died Thomas's death shocked the whole of the Christian world, and his tomb in Canterbury became an immediate shrine He was canonized in 1173, and in 1174 Henry was forced by the revulsion of public opinion to do penance at the tomb of St Thomas The popularity of Thomas's cult continued through the Middle Ages, Canterbury's preeminence as a place of pilgrimage (immortalized in Chaucer's *Canterbury Tales*) continued until it was destroyed (probably along with the martyr's remains) under Henry VIII in 1538. The conventional view among English historians was through several centuries marred by an erroneous impression that St Thomas was seeking to extend Church power against the state Feast Dec 29 T S Eliot's *Murder in the Cathedral* is a poetic dramatization of St Thomas's martyrdom See J C Robertson, *Materials for the History of Thomas à Becket* (1875–85), Robert Speaight, *St Thomas of Canterbury* (1938)

Thomas à Kempis (kĕm'pĭs), b 1379 or 1380, d. 1471, German monk, b Kempen, Germany He was schooled at Deventer, in the Netherlands, the center of the Brothers of the Common Life founded by Gerard GROOTE He joined the Augustinian canons (1399) and was ordained a priest (c.1413) His convent was Mt St Agnes, near Zwolle, in the Netherlands Thomas worked principally at writing and copying and was very proficient Of his treatises on monastic life and little devotional essays many have been translated into English The great devotional work, *The Following of Christ* or *The Imitation of Christ*, was long attributed without question to Thomas, whose name appears as copyist or author of the standard Latin version The matter of authorship is still open, but it is claimed with good evidence that the author is Groote and that Thomas rearranged the work and inserted interpolations in establishing an official Latin version.

Thomas Aquinas, Saint (ukwī'nŭs) [Latin,=from Aquino], 1225–74, Italian philosopher and Doctor of the Church, known as the Angelic Doctor, b Rocca Secca (near Naples), Italy. He was the greatest figure of SCHOLASTICISM, one of the principal saints of the Roman Catholic Church, and founder of the system declared by Leo XIII (in the encyclical *Aeterni Patris*, 1879) to be the official Catholic philosophy. He came of the ruling family of Aquino, was educated as a child at Monte Cassino, and studied in his late teens at Naples To his family's disappointment he entered the new Dominican order in 1244. In 1245 he began to study in Paris with Albertus Magnus, whose favorite pupil he became, and in 1248 he accompanied Albert to Cologne From there, Thomas went again (1252) to Paris, where he gained a great reputation and became professor of theology He was leader of the friars in the controversy which occurred when the seculars sought to limit the friars, privileges at the university After 1259 he spent several years in Italy as professor and adviser at the papal court His return to Paris (1269) was probably precipitated by the furor over SIGER DE BRABANT and his Averroistic reading of Aristotle The doctrinal struggle with Siger was the most celebrated event of his life, and Thomas's victory meant the triumph of his position In 1272 he left Paris for good and went to Naples to organize a house of studies Two years later when he and his constant companion, Brother Reginald, were at Fossanuova, on the way to the Council of Lyons, where he was to be a papal consultant, St Thomas died St Thomas's classic nickname was the Dumb Ox, because he was slow in manner and quite stout He was, however, a brilliant lecturer and clear, sharp thinker, as his works show They reveal this not only in their rigid application of reason, but also in their Latin, which is admirably exact and simple His spiritual character can be seen in the humility and charity of his conduct and the use to which he put his theories in his devotional works, notably in the Mass and office for Corpus Christi, which Urban IV requested him to write (1264) The four hymns of this Mass and office, *Lauda Sion Salvatorem*, PANGE LINGUA, *Sacris solemniis*, and *Verbum supernum* (ending with *O Salutaris Hostia*), are classed among the greatest of Christian hymns No one work of St Thomas can be said fully to reveal his philosophy His works may be classified according to their form and purpose The principal ones are *Commentary in the Sentences* (1254–56), his earliest great work, a series of public lectures, seven *quaestiones disputatae* (public debates, 1256–72), philosophical commentaries on Aristotle's *Physics*, *Metaphysics*, *De anima*, *Ethics*, part of the *De interpretatione*, and the *Posterior Analytics*, treatises on many subjects, including the *Summa contra Gentiles* (1258–60), and most important of all, *Summa theologica* (1267–73), an incomplete but a systematic exposition of theology on philosophical principles St Thomas's philosophy is avowedly Aristotelian, the methods and distinctions of the Greek are adapted to revelation The 13th cent was a critical point in Christian thought, which was torn between the claims of the Averroists and the extreme Augustinians Thomas opposed both schools, the Averroists led by Siger de Brabant who would separate faith and truth absolutely and the Augustinians who would make truth a matter of faith St Thomas held that reason and faith constitute two harmonious realms in which the truths of faith complement those of reason, both are gifts of God, but reason has an autonomy of her own Thus he vindicated the rights of reason against the fearful who wished to suppress Aristotle as the father of Averroës and heresy The first principle of philosophy according to St Thomas is the affirmation of being From this he proceeded to a consideration of the manner in which the intellect knows that which is For man, all knowledge begins by way of the senses, which are the medium by which he grasps the intelligible world, the universal According to the position of Thomas, which is known as moderate REALISM, the form or the universal may be said to exist in three ways, in God, in things, and in the mind It is by the knowledge of things that we come to know of God's existence In the natural order what God is can be known only by analogy and negation. Thomas's conviction that the existence of God can be discovered by reason is shown by his proofs of the existence of God Thomas's analysis of that which is proceeds by way of the Aristotelian concepts of potency and act, matter and form, being and essence Any thing which requires completion by another is said to be in potency to that other; the realization of potency is called actuality. The universe is conceived of as a series of things arranged in an ascending order or potency and act at once crowned and created by God, who alone is pure act God is changeless because change means passage from potency to act, and so he is without beginning and end, since these demand change Matter and form are necessary to the understanding of change, for change requires the union of that which becomes and that which it becomes. Matter is the first and form the second. All physical things are composed of matter and form. The difference between a thing as form or character and the actual existence of it is denoted by the terms *essence* and *being*. It is only in God that there is no distinction between the two Both pairs—matter and form, essence and being—are special cases of potency and act The system of St. Thomas rests upon these three distinctions. Being may also be characterized according to modes. Modes do not add anything to the idea of being, but are ways of making explicit what is implicit in it In one sense, mode means the division of being into categories In another sense, it expresses certain distinctions of being as it is common to all kinds In this sense, modes are known as transcendentals; along with *being* these are principally unity, truth, and goodness These terms are convertible, one to another Since the opposite of being does not exist, and the good is identical with being, it is obvious that for St Thomas evil is but the absence of good. For a long time, Thomas was either ignored or misunderstood by even the greatest philosophers, but his teachings ultimately triumphed. That they are official in the Roman Catholic Church does not mean that Catholics may not adhere to other philosophies, notably the Scotist teachings, developed from the doctrines of Duns Scotus St Thomas's magnificent synthesis is now recognized generally as one of the greatest works of human thought. His wide-embracing philosophy is applied to every realm of human life Thomism is a complete structure in itself, not simply a collection of theories The terms *New Thomism*, *Neo-Thomism*, and *Neoscholasticism* are used for a school of philosophy of the 20th cent The Catholic leaders of this school are Étienne Gilson and Jacques Maritain, who seek to apply Thomistic principles to modern economic, political, and social conditions. Non-Catholics also have adapted Thomistic principles to modern life, they are also called Neo-Thomists A leader among them is Mortimer Adler In art St Thomas is usually associated with a sacramental cup (representing his devotion to the sacrament), a dove (representing the inspiration of the Holy Ghost), or a sun on his breast He was canonized in 1323 His tomb is in the Basilica of St Sernin at Toulouse Feast March 7 His works have all been translated, the more important ones in various versions Volumes of selections are also available See Francesco Olgiati, *Key to the Study of St Thomas* (tr by John S Zybura, 2d ed , 1929), G K. Chesterton, *St Thomas Aquinas* (1933), Étienne Gilson, *The Philosophy of St Thomas Aquinas* (Eng tr , 1937), Gerald Vann, *Saint Thomas Aquinas* (1941), R E Brennan, ed , *Essays in Thomism* (1942), M C D'Arcy, *Thomas Aquinas* (1944)

Thomasius, Christian (krĭs'tyan tōmā'zē-ŏŏs), 1655–1728, German jurist and philosopher A lawyer and lecturer upon natural law at Leipzig, he broke with the traditional school of lecturing in Latin and from 1687 taught in German This and other liberal stands forced him to move to Halle in 1690, where he helped establish (1694) the Univ of Halle, in which he became a professor In the practical philosophy of Thomasius every question must be considered without prejudice and submitted to the judgment of common sense He was a reformer who desired to liberate politics from religious domination, and within religion he strove for freedom and toleration He firmly and courageously pointed the way to the philosophy known as the Enlightenment His chief work is *Institutiones jurisprudentiae divinae* (1688)

Thomas Jefferson Memorial, monument, Washington, D C , in East Potomac Park, on the Tidal Basin, dedicated 1943 The building is of white marble in modified Pantheon form—a circular structure with a domed ceiling, surrounded by 26 columns The design was adapted from the plans of John Russell Pope Inside is a statue of Jefferson by Rudulph Evans

Thomas More, Saint. see MORE, SIR THOMAS

Thomas of Bayeux (bāyō'), d 1100, Anglo-Norman ecclesiastic, archbishop of York (1070–1100) On his succession to the see of York he refused to profess his submission to the archbishop of Canterbury, at that time Lanfranc Lanfranc refused to consecrate him, and it took the personal influence of the king to settle the quarrel. After his consecration Thomas went to Rome to appeal his case, and the pope referred it to a council of English bishops The final decision was in Lanfranc's favor, but Thomas gained theoretical sovereignty over Scotland The see of York never exercised this, however.

Thomas of Canterbury, Saint: see THOMAS À BECKET, SAINT

Thomas of Celano (chälä'nō), 13th cent , Italian Franciscan friar One of the first companions of St FRANCIS, he wrote the two principal lives of St Francis, one for Gregory IX and the other for the minister general of the order. He was an early Franciscan missionary to Germany. He probably composed the sequence DIES IRAE and its celebrated plain song.

Thomas of Erceldoune (ûr'ĕldōn'), fl. 1220?–1297?, Scottish seer and poet, also known as Thomas the Rhymer and Thomas Learmont He occupies in Scottish lore a position similar to that of Merlin in English lore, but with some historical foundation. Evidence of his real existence is founded on the mention of his name in documents of the 13th cent. His reputation as a prophet became proverbial soon

after his death, and in succeeding centuries "to fabricate a prophecy in the name of Thomas the Rhymer appears to have been found a stroke of policy on many occasions." His reputed sayings were consulted as late as the Jacobite risings of 1715 and 1745. The poetical romance of Thomas and the Elf-Queen, attributed to his pen but actually composed about 1400, describes the events surrounding his receipt of the gift of prophecy Modern critics are inclined to doubt that Thomas was the author, as he was reputed to be, of the Arthurian poem first printed in 1804 by Sir Walter Scott as *Sir Tristrem*

Thomaston (tŏ'məstən) **1** Town (pop 4,238), W Conn, settled 1728, set off from Plymouth 1875 Eli Terry and Seth Thomas (for whom the town was named) made clocks here Clocks and hardware are still made **2** City (pop 6,396), co seat of Upson co, W central Ga, W of Macon near the Flint river, inc 1825 Thomaston is an industrial center in an area growing cotton and peaches Its first textile mill was established in 1833 **3** Town (pop 2,533), S Maine, SW of Rockland, inc 1777 It has a small port at the head of St George inlet A trading post was established c 1630 and a fort in 1719 The state prison (1824) is near by "Montpelier," home of Henry Knox, was restored as a memorial The town has a cement plant **4** Residential village (pop 1,159), on NW Long Island, SE N Y, near Great Neck, inc 1931

Thomasville. 1 Town (pop 2,000), SW Ala, SW of Selma in a farm and timber area, founded 1887 **2** City (pop 12,683), co seat of Thomas co, SW Ga, near the Fla line and the Ochlockonee river, founded 1826 This residential and industrial city is also a tobacco and cotton market and has farm-product processing plants Neighboring large estates and gardens are many and beautiful The climate is mild, and resort activities include hunting and fishing **3** Industrial city (pop 11,041), central N C, SE of Winston-Salem It produces furniture (chiefly chairs) and textiles It has city-manager government

Thomond, Ireland see CLARE

Thompson, Benjamin. see RUMFORD, BENJAMIN THOMPSON, COUNT

Thompson, Daniel Pierce, 1795–1868, American novelist, b Charlestown, Mass, grad Middlebury College, 1820 A lawyer in Montpelier, Vt, he edited a political journal and wrote adventure novels, the most famous of which, *The Green Mountain Boys* (1839), has value for its local color

Thompson, David, 1770–1857, Canadian geographer, fur trader, and explorer, b London, England In 1784 he came to Fort Churchill as an apprentice of the Hudson's Bay Company, and until 1797 he was a fur trader on Hudson Bay and W to the Athabaska country Though he had little scientific training, he developed great skill in geodetic and astronomical observations, and after 1797, when he joined the North West Company, he methodically located points in W Canada and made surveys of astonishing exactitude In 1797–98 he traveled far south to the Mandan villages on the Missouri and then surveyed the source of the Mississippi His most notable exploring expeditions were, however, those across the Rocky Mts and on the Columbia river In 1807 he was the first to cross the Howse Pass to the source of the Columbia river and travel its length, he then explored the Kootenai, Pend Oreille, and Clark Fork region In 1810, prevented by the Piegan Indians from using Howse Pass, he went north to the head of the Athabaska river and across the mountains and explored all of the Columbia river system, visiting (1811) the American post at Astoria He then went to Montreal, where he made a large and invaluable map of W Canada for the North West Company, parts of which are still incorporated in the maps of Canada Thompson, however, received little open recognition except an appointment (1816–26) to the commission for surveying the U S–Canada boundary It was not until the 20th cent that his importance as a geographer was recognized In the quartercles of the Washington and Oregon historical societies T C Elliot has done much to trace his voyages See his narrative (ed by J B Tyrrell, 1916), E C Coues, *New Light on the Early History of the Greater Northwest* (3 vols, 1897), containing material from his notebooks, C N Cochrane, *David Thompson, the Explorer* (1924)

Thompson, Denman, 1833–1911, American actor and dramatist, b Girard, Pa His classic play of rural New England, *The Old Homestead* (1886), was based on his early life in Swanzey, N H At 17 he ran away to join a circus and, drifting to the theater, played character parts in stock companies In 1875 in Pittsburgh he produced and acted in a skit called *Joshua Whitcomb*, which he expanded in 1876 Its success, with Thompson in the title role, led him to develop it into the four-act *The Old Homestead*, with which he toured the country for more than 20 years. The play continued to be presented long after his death and has been frequently revived

Thompson, Ernest Seton: see SETON, ERNEST THOMPSON.

Thompson, Francis, 1859–1907, English poet. He was educated at the Roman Catholic Ushaw College, but his health was too poor for the priesthood He studied medicine at Owens College, Manchester In 1885 he quarreled with his father, abandoned medicine, and went to London, here he lived in poverty, ill and an opium addict In 1888 he sent a manuscript to Wilfrid Meynell who, with his wife Alice, recognized Thompson's genius and took him under their care. *Poems* (1893), which attracted much attention, contained "The Hound of Heaven," generally recognized as one of the finest poetic productions of Thompson's time Two more volumes appeared, *Sister Songs* (1895) and *New Poems* (1897), both supplemented by the publication of a few more poems after his death His genius found full development in these slender volumes of verse A Catholic, he had a deep religious sense, expressed mystically in brilliant imagery and sonorous language which more than compensated for his lack of originality in thought Thompson also wrote a number of essays, including a notable study of Shelley (1909) Many of his last years were spent in monasteries, recuperating from sickness See his *Literary Criticisms* (ed by T L Connolly, 1948), biographies by Everard Meynell (1913) and R L Mégroz (1927)

Thompson, Sir Henry, 1820–1904, English surgeon, famous for his surgery in genitourinary disease He performed a successful lithotomy on King Leopold I of Belgium in 1863 He was an advocate of cremation The installation of valuable instruments at Greenwich Observatory was made possible through his aid In 1867 he was knighted and in 1899 was created baronet His works include *Pathology and Treatment of Stricture of the Urethra* (1854)

Thompson, Jacob, 1810–85, U S Representative (1839–51) and Secretary of the Interior (1857–61), b Caswell co, N C, grad Univ of North Carolina, 1831 A prosperous lawyer and prominent Democrat of Oxford, Miss, he was six times elected to Congress Thompson was a member of President James Buchanan's cabinet until the Fort Sumter crisis and Mississippi's secession led him to resign in Jan, 1861 In the Civil War he served in the Confederate army, being inspector general under Gen John C Pemberton in the Vicksburg campaign He was made (1864) Confederate agent in Canada in order to stir up trouble for the Union among Copperhead elements in the North In April, 1865, he was captured at Portland, Maine, but was released at Lincoln's word Falsely accused of complicity in the President's assassination, he fled to Europe for several years and later lived in Memphis

Thompson, James Westfall, 1869–1941, American historian, b Pella, Iowa, grad Rutgers, 1892, Ph D Univ of Chicago, 1895 From 1895 to 1932 he taught history at the Univ of Chicago, becoming a professor in 1913, and from 1932 to 1939 he was professor of European history at the Univ of California An eminent scholar in medieval history, he wrote *The Development of the French Monarchy under Louis VI, le Gros, 1108–1137* (1895), *The Wars of Religion in France, 1559–1576* (1909), *Feudal Germany* (1928), *An Economic and Social History of the Middle Ages (300–1300)* (1928), *Economic and Social History of Europe in the Later Middle Ages (1300–1530)* (1931) *The Middle Ages, 300–1500* (1931), *The Medieval Library* (1939), *Ancient Libraries* (1940), and, with Bernard J Holm, *A History of Historical Writing* (1942)

Thompson, Sir John Sparrow David, 1844–94, Canadian statesman, b Halifax, N S He was briefly premier (1882) of Nova Scotia and a judge (1882–85) of the provincial supreme court In 1885 Sir John Macdonald appointed him minister of justice for Canada In this post Thompson was noted for the masterly skill with which he stated the government's position in the debates on the execution (1885) of Louis Riel and the Jesuit Estates Act (1888) In 1892 he became prime minister of Canada He died suddenly in England, shortly after having been sworn in as a privy councilor. See biography by J C Hopkins (1895)

Thompson, Joseph Parrish, 1819–79, American Congregationalist clergyman, b Philadelphia, grad Yale, 1838 He was pastor of the Broadway Tabernacle, New York city, from 1845 to 1871 He was a founder of the *New Englander* (1843) and one of the founders of the *Independent* (1848), long serving as associate editor

Thompson, Launt, 1833–94, American sculptor, b Ireland. In 1847 he settled in the United States An assistant in the studio of Erastus Dow Palmer for nine years, he opened his own studio in New York city in 1857 From 1875 to 1881 he lived in Florence His works include medallions, such as *Morning Glory* and one of John A Dix, portrait busts, e g, *Edwin Booth as Hamlet* (Metropolitan Mus), statues and monuments, such as Napoleon I (Metropolitan Mus), Abraham Pierson (New Haven, Conn), Gen Ambrose Burnside (Providence, R I), and Gen. John Sedgwick (West Point, N Y). He became a member of the National Academy of Design in 1862

Thompson, Mortimer Neal see THOMSON, MORTIMER NEAL.

Thompson, Richard Wigginton, 1809–1900, American politician, b Culpeper co, Va He settled in Lawrence co, Ind, began to practice law (1834), served in both branches of the legislature, and was a Whig Congressman (1841–43, 1847–49) He opposed antislavery legislation, helped organize the Constitutional Union party, and became a Republican only after the outbreak of the Civil War President Rutherford B Hayes appointed him Secretary of the Navy in 1877 but removed him in 1880 after Thompson became chairman of the American Committee of the (French) Panama Canal Company Thompson wrote *Recollections of Sixteen Presidents* (1884) and several partisan books, including polemics on the papacy and the Jesuits

Thompson, Smith, 1768–1843, American jurist, b Amenia, N Y, grad College of New Jersey (now Princeton Univ), 1788 He was admitted to the bar in 1792 In the supreme court of New York he was (1802–14) an associate justice and was later (1814–18) chief justice He was Secretary of the Navy from 1819 to 1823, when he was appointed an Associate Justice of the U S Supreme Court He was a Jeffersonian Republican in politics and while on the bench opposed the federalism of John Marshall

Thompson, William Boyce, 1869–1930, American financier and philanthropist, b Virginia City, Mont He operated silver and copper mines in Montana before he moved to New York city He was (1914–19) a director of the Federal reserve bank of New York and twice served as a delegate to the Republican national convention In the First World War he helped finance and accompanied (1917–18) a Red Cross mission to Russia He contributed money to the Kerensky government, and after the Bolsheviki seized power he also advocated U S recognition of the Soviet government He is, however, best remembered for founding the Boyce Thompson Institute for Plant Research in Yonkers, N Y See Hermann Hagedorn, *The Magnate* (1935)

Thompson, William Hale, 1869–1944, American political leader, b Boston His family moved to Chicago when he was nine years old, and there he later entered politics as an alderman (1900–1902) Later he was (1902–4) commissioner of Cook co and served (1915–24, 1927–31) three terms as mayor of Chicago A flamboyant figure, he attracted much attention during the 1927 mayoralty campaign with his tirades against England In 1936 he ran for governor of Illinois but was defeated

Thompson, William Tappan, 1812–82, American editor and humorist, b Ravenna, Ohio Thompson contributed amusing sketches to Georgia newspapers, later published in book form The best known is *Major Jones's Courtship* (1843)

Thompson, textile town (pop 5,577), extreme NE Conn, settled 1707, set off from Killingly 1785

Thompson, river of S British Columbia, formed by the junction of the North Thompson and the South Thompson at Kamloops and flowing W and S to the Fraser at Lytton The North Thompson rises in the Rocky Mts. in Thompson ice field on Mt Sir John Thompson and flows S and SW to Kamloops The South Thompson issues from Shuswap Lake and flows SW to Kamloops The Thompson is 304 mi long from the headwaters of the North Thompson It was discovered (1808) by Simon Fraser and named by him for David Thompson

Thomsen, Vilhelm (vil'hĕlm tōm'sĕn), 1842–1927 Danish philologist For many years he was professor of comparative philology at the Univ of Copenhagen A brilliant scholar with a scientific point of view, he did important work in Indo-European linguistics Probably his principal achievement was the decipherment of the bilingual Turkish-Chinese inscription found on the Orkhon river in Mongolia The inscription, published in 1894, is in the most ancient form of Turkish yet found

Thomson, Charles, 1729–1824, American patriot, b Co Londonderry, Ireland Emigrating to America in 1739, he later taught school and became a merchant His reputation for integrity and veracity made him influential, and his pre-Revolutionary activities led John Adams to call him "the Sam Adams of Philadelphia" As secretary of the Continental Congress (1774–89), Thomson kept careful records of all proceedings, and full notes of the debates He later made this material the basis of a history of the American Revolution, but destroyed the manuscript lest his description of the unpatriotic behavior of some of the colonists give offense to their descendants Thomson was the moving spirit in the committee that obtained the design for the Great Seal of the United States He wrote *An Enquiry into the Causes of the Alienation of the Delaware and Shawanese Indians from the British Interest* (1759), translated the Septuagint and the New Testament (4 vols, 1808), and published *A Synopse of the Four Evangelists* (1815) See biography by L R Harley (1900)

Thomson, Charles Edward Poulett. see SYDENHAM, CHARLES EDWARD POULETT THOMSON, BARON

Thomson, Sir Charles Wyville, 1830–82, Scottish naturalist, noted as a marine biologist and deep-sea explorer He participated in three deep-sea dredging expeditions (1868–70) and obtained evidence that animal life abounded in depths previously believed to be azoic, he recorded the results of his

studies in *The Depths of the Sea* (1873), a classic in oceanography He was director of the scientific work of the *Challenger* expedition (1872–76) and on his return was knighted and appointed director of a commission to distribute and study the collections of the expedition and to publish its results He wrote an account of the cruise *The Voyage of the "Challenger"* (1877). Thomson taught at several universities and was professor of natural history at the Univ of Edinburgh from 1870

Thomson, Elihu, 1853–1937, American electrical engineer and inventor, b Manchester, England Brought as a child to the United States, he graduated from the Central High School, Philadelphia, taught chemistry there for several years, and organized the Thomson-Houston Electrical Company, which was later absorbed by the General Electric Company From 1920 to 1923 he was acting president of Massachusetts Institute of Technology Internationally honored for his achievements in the field of electricity, Thomson invented the resistance method of electric welding, the repulsion type of induction motor, a three-phase electric dynamo, a watt meter, and the centrifugal cream separator In 1875 he demonstrated the transmission of signals without wires

Thomson, Sir George Paget, 1892–, English physicist, son of Sir Joseph John Thomson He was professor of natural philosophy at the Univ of Aberdeen (1922–30) and in 1930 became professor of physics at Imperial College, Univ of London He shared with C J. Davisson the 1937 Nobel Prize in Physics for their simultaneous, independent discovery of diffraction phenomena in the electron In 1943 he was knighted His works include *The Atom* (1930, 3d ed , 1947), *The Wave Mechanics of the Free Electron* (1930), and *Theory and Practice of Electron Diffraction* (with William Cochrane, 1939)

Thomson, James, 1700–1748, British poet, b Scotland He studied at Edinburgh Univ , and went to London in 1725 He found a post as a tutor and met such literary celebrities as Gay, Arbuthnot, and also Pope, from whose pastorals he may have derived the idea for his blank-verse poem *The Seasons*, the first book of this, "Winter," was published in 1726 and achieved an immediate success The second book, "Summer," appeared in 1727, followed by "Spring" (1728) and, in 1730, the collected work, *The Seasons*, which included "Autumn," a prefatory "Hymn," and a patriotic poem entitled "Britannia " His first play, *Sophonisba* (1730), was a poor imitation of Otway Thomson traveled through Europe in 1730–31 as tutor to Charles Talbot and in 1733 received the office of secretary of briefs His poem *Liberty*, which appeared in five parts from 1735 to 1736, was dedicated to Frederick, prince of Wales, but excited little interest *Agamemnon*, a second play, was performed in 1738, but the play *Edward and Eleanora* was banned by the censor, who feared its political implications In 1740 the famous ode "Rule Britannia" appeared in the masque *Alfred*, the joint work of Thomson and his friend David Mallet Mallet later claimed authorship of the ode but his claim is not sustained From 1738 to 1744 Thomson worked on a revision of *The Seasons* He wrote two other plays, *Tancred and Sigismunda* (1745) and *Coriolanus*, which was performed (1749) after the author's death *The Castle of Indolence* (1748) was written in imitation of Spenser *The Seasons*, however, remains his most important poem It was the first major work to challenge, by its truthful and romantic treatment of nature, the classical ideal of 18th-century poetry Its popularity endured into the succeeding century and influenced the later precursors of romanticism, such as Gray and Cowper See edition of Thomson's works by J L Robertson (1908), A D McKillop, *Background of Thomson's Seasons* (1942), biographies prefixed to the many editions of *The Seasons* and those by William Bayne (1898) and G C Macaulay (1907)

Thomson, James, 1822–92, British engineer and physicist, b Ireland, educated at the Univ of Glasgow, older brother of Lord Kelvin He was professor of civil engineering at Queen's College, Belfast (1857–73), and at the Univ of Glasgow (1873–89) He worked on problems of thermodynamics, including the relationship between pressure and the freezing point of water and other substances He is also known for improving the design of various types of hydraulic machinery

Thomson, James, 1834–82, British poet and essayist, b. near Glasgow. He was reared at the Royal Caledonian Asylum and became (1851) an army teacher at Ballincollig, Ireland There he met Matilda Weller, whose death in 1853 was the cause of much of his later pessimism There also he formed his friendship with Charles Bradlaugh Thomson was dismissed from the service in 1862, became a clerk in London, and contributed to the *National Reformer*, using the signature B V or Bysshe Vanolis, in memory of Shelley and Novalis (Hardenberg) He was subject to periodic attacks of dipsomania, which was aggravated by poverty, insomnia, and loneliness Under these conditions he produced his greatest poetical work, *The City of Dreadful Night* (1880, first published in the *National Reformer*, 1874), a darkly pessimistic work in which he gives brilliant, haunting expression to his hopeless despair. The poem "Sunday up the River" is an example of his genuine lyric gift Besides a great number of essays and criticisms, he wrote *Vane's Story* (1881) and *A Voice from the Nile* (1884) His collected poems appeared in 1895 and a volume of prose in 1896 See biography by H S Salt (1914)

Thomson, Sir John Arthur, 1861–1933, Scottish scientist and writer From 1899 to 1930 he was regius professor of natural history at the Univ of Aberdeen In 1924 he lectured at Union Theological Seminary, New York city, and at Yale He was knighted in 1930. He wrote many popular works on science and on the reconciliation of science and religion, scholarly in content and of good literary style These include *What Is Man?* (1923), *Science and Religion* (1925), *Modern Science* (1929), *Life* (with Patrick Geddes, 1931), and *The Outline of Natural History* (1931) He edited *The Outline of Science* (4 vols , 1922, reissued 1937)

Thomson, Joseph, 1858–95, Scottish explorer in Africa At the Univ of Edinburgh he studied geology and botany On his first expedition (1879) he reached Lake Tanganyika and then explored the relations of the lakes in the Great Rift Valley to the drainage system of Africa On another trip (1892–93) he traveled through Kenya and Uganda and ascended Kilimanjaro Thomson explored (1885) the Sudan and forestalled German designs on the area by concluding many treaties with native chiefs on behalf of Great Britain His last expedition (1890) was in SE Africa, he explored the Zambesi river and obtained extensive concessions for the British South Africa Company Thomson's work as an explorer ranks in importance only below that of Henry Stanley and David Livingstone His books include *To the African Lakes and Back* (1881) and *Through Masai Land* (rev ed , 1887) See biography by James B Thomson (1896)

Thomson, Sir Joseph John, 1856–1940, English physicist From 1884 to 1919 he was Cavendish professor of experimental physics at Cambridge Winner of the 1906 Nobel Prize in Physics for his study of conduction of electricity through gases, he is known also for his discovery of the electron and his investigation of its charge and mass, his development of the mathematical theory of electricity and magnetism, and his work in radioactivity He was knighted (1908) and served (1915–20) as president of the Royal Society He is buried in Westminster Abbey His works include *Elements of the Mathematical Theory of Electricity and Magnetism* (1895, 5th ed , 1921), *Conduction of Electricity through Gases* (1903, 3d ed , with George Paget Thomson, 2 vols , 1928–33), *Rays of Positive Electricity* (1913, 2d ed , 1921), *The Electron in Chemistry* (1923), and an autobiography, *Recollections and Reflections* (1936). See biography by R J S Rayleigh (1942)

Thomson or **Thompson, Mortimer Neal,** 1831-75, American journalist and humorist, who used the pseudonym Q K Philander Doesticks, P B , b Riga, Monroe co , N Y , studied at the Univ of Michigan He joined the staff of the New York *Tribune* in 1855 His contributions in verse and prose, especially those against slavery, attracted wide attention His best-known works include *Doesticks What He Says* (1855) and a parody of Hiawatha, *Plu-ri-bus-tah* (1856)

Thomson, Tom, 1877–1917, Canadian painter of typically Canadian outdoor scenes, b Claremont, Ont , self-taught Most of the year he served as a ranger at Algonquin Provincial Park, gaining inspiration for pictures which he executed during the winters in Toronto His first picture to be exhibited, *A Northern Lake*, was purchased by the Canadian government, and *A Moonlight Scene* was purchased by the National Art Gallery at Ottawa In his lifetime the critics were divided in their judgment of his work, but he has come to be regarded as an outstanding colorist

Thomson, Virgil, 1896–, American composer and critic, an organist, b Kansas City, Mo , grad Harvard, 1922 He later went to Paris and studied with Nadia Boulanger Until c 1926 he wrote in a dissonant, neoclassic style, but after his *Sonata da chiesa* (1926) he began to employ a highly simplified style which shows the influence of Erik Satie He wrote two operas—*Four Saints in Three Acts* (1928, Hartford, Conn , 1934) and *The Mother of Us All* (1947)—with librettos by Gertrude Stein, music for the moving pictures *The Plough That Broke the Plains* (1936), *The River* (1937), and *Louisiana Story* (1948), the ballet *Filling Station* (1937), his *Symphony on a Hymn Tune* (1928), *The Seine at Night* (1947), for orchestra, and organ pieces, piano pieces, chamber music, songs, and a number of "musical portraits" including *Canons for Dorothy Thompson* and *The Mayor LaGuardia Waltzes* (both 1942) Thomson returned to New York in 1939, having lived mostly in Paris for many years, and in 1940 became music critic for the New York *Herald Tribune* He wrote *The State of Music* (1939), *The Musical Scene* (1945), and *The Art of Judging Music* (1948)

Thomson, William: see KELVIN, WILLIAM THOMSON, 1ST BARON

Thomson, industrial city (pop 3,088), co. seat of McDuffie co , E Ga., W of Augusta; inc. 1854. Thomson is on the fall line, in a farm area.

Thor (thôr) [Norse,—connected with *thunder*], in Germanic religion, Norse god of thunder, hence of might and war He was the eldest and strongest son of Odin Armed with his magical hammer, which returned when thrown, with his belt of strength, and with his iron gloves he was the implacable enemy of the giants His chariot wheels made the thunder Although Icelandic literature pictures Thor as slow-thinking and burly, he was kind to humanity and protected marriage Thor's cult was the chief religious interest of the Norse, but of his worship among other Germans we know little Thor's identification with Jupiter caused the translation of *Jove's day*, the name of the fifth day of the week, into *Thursday*

thorax, body division found in certain animals In man and other vertebrates it lies between the neck and the abdomen It is also called the chest The ribs and sternum form the supporting skeletal structures of the thorax In mammals the thoracic cavity or chest cavity is separated from the abdominal cavity by a muscular diaphragm Within the thoracic cavity lie the heart, the lungs, some of the respiratory or breathing passages, and the esophagus In insects and other arthropods, the thorax is a body division consisting of several segments lying between the head and abdomen, certain appendages are attached to the thorax

Thorbecke, Jan Rudolf (vän' rōō'dôlf tôr'bĕkŭ), 1798–1872, Dutch statesman An eminent jurist and a liberal leader, he was appointed (1848) by King William II to revise the constitution of 1844 The power of the king was reduced and that of the parliament increased Thorbecke served (1849–52) as the first constitutional premier of the Netherlands and was twice again premier (1862–66, 1871–72) He gave Catholics equal rights with the Protestants, removed trade restrictions, and initiated many projects for the construction of canals and for reclaiming land from the sea

Thoreau, Henry David (thō'rō, thurō'), 1817–62, American poet, naturalist, and essayist, b Concord, Mass , grad Harvard, 1837 One of the group called transcendentalists, Thoreau lived in Emerson's household at two different times and wrote for and helped edit the *Dial*, the transcendentalist journal Living for two years (1845–47) in a small cabin which he built on the shores of Walden Pond, near Concord, Thoreau was primarily acting as an individualist seeking a way of life at once logical and satisfactory In line with his theory that one should work only enough to be independent, he rejected full-time occupation in his family's pencil-making business as well as the life of a schoolteacher and earned what little money his simplified life required by surveying and by working as handyman for Emerson His best-known book is the classic *Walden* (1854), an account of his life at Walden Pond He kept a journal of his thoughts and observations, and bits culled from the journal were rewritten in *Walden* and in *A Week on the Concord and Merrimack Rivers* (1849), it was also the source of the posthumous books, *The Maine Woods* (1863), *Excursions* (1863), *Cape Cod* (1865), and *A Yankee in Canada* (1866) Thoreau lectured on the lyceum platform, but was not well known in his day Since his death he has been recognized as a devoted nonscientific naturalist and a powerful social critic who championed the individual against social organization and materialistic civilization His essay "Civil Disobedience" has inspired such men as Gandhi and the leaders of the British Labour party, and his quiet one-man revolution in living at Walden and refusing to pay a poll-tax to a government whose actions he deplored have heartened and fascinated countless men See the standard Walden edition of his writings (20 vols , 1906), which includes the journal and *Familiar Letters*, and his *Collected Poems* (ed by Carl Bode, 1943), biographies by Ellery Channing (1873), H S Salt (1890), F B Sanborn (1917), and H S Canby (1943), critical studies by Mark Van Doren (1916), George F Whicher (1945), and J W Krutch (1948), Reginald Lansing Cook, *Passage to Walden* (1949)

Thorez, Maurice (mōrēs' tôrĕz'), 1900–, French Communist leader The son of a coal miner of N France, Thorez himself worked in the mines He early joined the Socialist party and in 1920 became one of the original members of the French Communist party Largely self-taught, Thorez acquired a thorough knowledge of Marxist theories as well as a considerable general culture He rose in the ranks and became party secretary in 1930 and leader of the Communists in the chamber of deputies in 1936 Conscripted when the Second World War broke out, Thorez deserted, refusing to serve in an imperialist war (as the Communists designated the conflict between 1939 and 1941), and went to Moscow Though sentenced *in absentia*, he was amnestied (1944) after the liberation of France and was reelected a deputy Under his leadership, the Communists became the largest single party in the elections of 1945 and 1946 He was vice premier in 1946–47, but then returned to the opposition against the moderate government.

Thorfinn Karlsefni (thôr'fĭn kärl'sĕvnē), fl 1002-10, Icelandic leader of an attempt to colonize North America He appeared in Greenland in 1002 and married Gudrid, widow of one of the sons of ERIC THE RED He then set out with an expedition consisting of three ships and 160 men to settle in that VINLAND which LEIF ERICSSON had discovered a few years before There are two sources for this event, the "Saga of Eric the Red" in the collection of sagas known as *Hauksbok*, and a narrative interpolated in the "Saga of Olaf Tryggvason" in the *Flateyjarbok* According to the former, which has been favored by most scholars, the expedition came first to a region they called Helluland from the large flat stones all about Then they passed on to a wooded country which they named Markland, sailed by sandy, desolate beaches called Furdustrands, and settled for the winter in a bay called Straumfjord Still seeking the land of grapes, they proceeded southward the next spring until they reached a place called Hop Here they found vines, and here they settled for the next winter, selecting a spot up a river which widened into a lake Several encounters with the natives, however, in which two of their number were killed, induced them to abandon Hop in the spring and return to Straumfjord, where they spent the third winter One of the ships, commanded by Thorhall, had deserted the first year after a disagreement and had met disaster in Ireland With the prospect of attack, plus growing dissension, it was decided to abandon the whole attempt Returning by Markland Thorfinn's ship reached Greenland safely, the other was wrecked in the Irish Sea and part of its crew saved Much effort has been spent in attempts to identify the lands visited by Thorfinn and to discover his wintering sites, but no theory has won general acceptance Places from Labrador to New England have been suggested, but such identifications are little more than guesses There is also divergence on the dates assigned to Thorfinn's expedition For bibliography, see LEIF ERICSSON and VINLAND

thorium (thō'rēum), gray, metallic, radioactive element (symbol=Th, for physical constants, see ELEMENT, table) Like radium, thorium undergoes disintegration (see RADIOACTIVITY), giving a series of substances, the final product being thorium D, an isotope of lead It forms various compounds, e g , with oxygen, a dioxide commonly called thoria, sometimes included in the RARE EARTHS, with nitrogen and oxygen, a nitrate used in the WELSBACH MANTLE The element is not found uncombined in nature, but is present in a number of minerals, e g , thorite (a compound of thorium, silicon, and oxygen) and monazite, from which it is usually obtained The metal itself is isolated with difficulty and has little commercial use Some of its salts are employed in medicine, their emanations having therapeutic value Thorium can also be used as a source of atomic energy Thorium was discovered (1828) by Berzelius

Thorn, Poland see TORUN

thorn, sharp-pointed projection on some plants Common thorn-bearing plants include the HAWTHORN (often called thorn) and the honey locust Spiny projections of plants are sometimes botanically distinguished as thorns (modified branches, as in the hawthorn), spines (modified leaves, as in the barberry), and prickles (produced from the bark, as in the rose and blackberry) Cacti have both thorns and spines Thorns have become symbolic of sorrow, adversity, difficulties

Thornaby-on-Tees, municipal borough (pop 21,233), North Riding of Yorkshire, England, opposite Stockton It has shipyards and steel mills

Thorndike, Ashley Horace (thôrn'dīk"), 1871-1933, American educator and scholar, b Houlton, Maine, grad Wesleyan Univ , 1893, Ph D Harvard, 1898 He was professor of English at Columbia Univ from 1906 until his death, and besides editing several series of texts, he wrote distinguished studies, including *Tragedy* (1908), *Shakespeare's Theater* (1916), *Literature in a Changing Age* (1920), *English Comedy* (1929), and, with W A Neilson, *The Facts about Shakespeare* (rev ed , 1931)

Thorndike, Edward Lee, 1874-1949, American educator and psychologist, b Williamsburg, Mass , grad Wesleyan Univ , 1895, and Harvard, 1896, Ph D Columbia, 1898 Appointed instructor in genetic psychology at Teachers College, Columbia, in 1899, he served there until 1940 (as professor from 1904 and as director of the division of psychology of the Institute of Educational Research from 1922) His great contributions to educational psychology were largely in the methods he devised to test and measure intelligence and the ability to learn He conducted studies in animal psychology; in the psychology of learning; in vocabulary, compiling dictionaries for children (1935) and for young adults (1941), and in the qualities of the good city The great number of his writings includes *Educational Psychology* (1903), *Mental and Social Measurements* (1904), *Animal Intelligence* (1911), *A Teacher's Word Book* (1921), *Your City* (1939), and *Human Nature and the Social Order* (1940)

Thorndike, Lynn, 1882-, American historian, b Lynn, Mass , grad Wesleyan Univ , 1902, and Columbia (M A , 1903; Ph D , 1905). He taught history at Northwestern Univ (1907-9) and at Western Reserve Univ (1909-24) and has been a professor at Columbia since 1924 Among his books on magic and the beginnings of science in the Middle Ages are *The Place of Magic in the Intellectual History of Europe* (1905), *A History of Magic and Experimental Science* (6 vols , 1923-41), and *Science and Thought in the Fifteenth Century* (1929) He also wrote *The History of Medieval Europe* (1917, 3d ed , 1949), which is widely used in American colleges, *A Short History of Civilization* (1926, 2d ed , 1948), and *University Records and Life in the Middle Ages* (1944)

Thorndike, Dame Sybil, 1882-, English actress She made her debut with the Ben Greet Players and toured (1903-7) the United States with them Her Shakspearian portrayals brought her fame, and she added to her stature as Hecuba in *The Trojan Women*, in the title roles of *Medea* and *Candida*, in Irvine's *Jane Clegg*, and in Shaw's *Saint Joan* She was made Dame of the British Empire in 1931 See biography by Russell Thorndike (1929)

Thornhill, Sir James, 1676-1734, English decorative artist George I made him court painter and later knighted him He executed decorations in Hampton Court and the cupola of St Paul's, London, the hall of Greenwich Hospital, Chatham, England, the great hall of Blenheim Palace, and various chapels at Oxford, where he also painted altarpieces for All Souls and Queen's colleges As a teacher, he found a rare pupil in HOGARTH, who became his son-in-law The limited number of Thornhill's etchings include *Adam and Eve*

Thornton, Matthew, 1714-1803, American Revolutionary patriot signer of the Declaration of Independence, b Ireland He was brought to America as a child He studied medicine and in 1740 began practice at Londonderry, N H Thornton served as an army surgeon in the French and Indian War and held several political posts in New Hampshire before and after his term in the Continental Congress (1776-77)

Thornton, William, 1759-1828, American architect, b Tortola, British Virgin Islands, of English Quaker parents He studied (1781-84) medicine at Edinburgh but received his medical degree (1784) at the Univ of Aberdeen He traveled widely and gained architectural knowledge In 1787 he came to the United States and became a citizen in 1788 His plan for the Library Company in Philadelphia won a competition in 1789 Through Trumbull, the painter, he gained permission to submit a plan for the proposed Capitol at Washington in an official competition opened in 1792 Thornton's designs, submitted in 1793, were approved by President Washington, and their execution was entrusted to the supervision of E S HALLET and James Hoban In 1794, however, Thornton himself, being appointed a commissioner of the District of Columbia, became supervisor and remained in charge until 1802 Notwithstanding changes in detail and later additions, the central portion of the Capitol exterior remains substantially as Thornton designed it In Washington he also designed a number of residences, including the Tayloe house, known as the Octagon, later the headquarters of the American Institute of Architects Thornton was the first to hold the post of clerk in charge of the Patent Office, and he served as commissioner of patents from 1802 until his death

Thorpe, James, 1888-, American athlete, b near Prague, Okla His mother, a Sac Indian, named him Bright Path, and in 1907 he entered the Carlisle Indian School at Carlisle, Pa He joined (1908) the Carlisle football team, coached by Glenn ("Pop") Warner, and in 1911 12 Thorpe, playing left halfback, led Carlisle in startling upsets over such highly rated teams as Harvard, Army, and the Univ of Pennsylvania In 1912 Thorpe took part in the Olympic games held at Stockholm, Sweden, and performed magnificently He won the broad jump and the 200- and 1,500-meter runs of the pentathlon, won the shot put, the 1,500-meter run, and the hurdle race of the decathlon, and was the runner-up in the other events of the pentathlon and decathlon In 1913, however, Thorpe surrendered his awards, at the request of the Amateur Athletic Union and the insistence of Glenn Warner, to the Olympic headquarters in Switzerland, it was discovered that Thorpe had played (1909-10) semi-professional baseball with the Rocky Mountain, N C , team of the North Carolina Eastern League Thorpe afterwards played professional football with the Canton (Ohio) Bulldogs and the Chicago Cardinals and later became supervisor of recreation for the Chicago parks With T F Collison, he wrote *Jim Thorpe's History of the Olympics* (1932)

Thorpe, Sir Thomas Edward, 1845-1925, English chemist He was professor (1885-94, 1909-12) at the Royal College of Science (now Imperial College, Univ of London) and director (1894-1909) of the government chemistry laboratories, which he organized In 1909 he was knighted He is known for his researches in organic chemistry, notably his study of the relation of molecular weight and specific gravity in fluids His works include *Essays in Historical Chemistry* (1894, 3d ed , 1914) and *A Dictionary of Applied Chemistry* (3 vols , 1890-93, 4th ed , 9 vols , 1937-49)

Thorshavn (tôrs"houn'), Faeroese *Torshavn*, city (pop 4,390), capital of the Faeroe Islands, a port on SE Stromo island It is a fishing base and the commercial center of the Faeroes The settlement probably dates from the 10th cent

Thorvaldsen or **Thorwaldsen, Albert Bertel** (al'bĕrt bĕr'tul tō'rvalsun), 1770-1844, Danish sculptor, son of an Icelandic wood carver who had settled in Copenhagen In 1797 he went to Rome, where he won the praise of Canova and with him early shared the leadership of the neoclassicists His adherence to Greek art is shown in his *Jason*, *Cupid and Psyche*, *Venus*, *Hebe*, and *Ganymede* In anticipation of a visit of Napoleon in 1812, Thorvaldsen modeled a frieze in relief, *The Triumph of Alexander*, for a hall in the Quirinal, Rome His most familiar works are the bas-reliefs *Night* and *Morning* Under the patronage of Prince Louis of Bavaria, he made restorations of the ancient Aeginetan marbles In 1819 he designed the famous *Lion of Lucerne*, carved from the native rock at Lucerne by his pupils—a memorial to the devotion of the Swiss Guard in the French Revolution The works executed for Copenhagen are chiefly religious, e g , statues of Christ and the apostles for the Church of Our Lady Among his portrait and historical statues are Pope Pius VII (St Peter's, Rome) and *Conradin, Last of the Hohenstaufen* (Naples) A marble bust, *Vestal*, is in the Metropolitan Museum The Thorvaldsen Museum, Copenhagen, contains in originals and models a complete collection of the sculptor's work He is buried in its courtyard Many of the American sculptors of the period studied with Thorvaldsen

Thoth (thōth, tōt), god of ancient EGYPTIAN RELIGION Since he is represented with the moon symbol, he was probably originally a moon-god He also was the secretary god, who kept the records of the dead and thus was the patron of learning and of the arts He was supposedly possessed of all secret wisdom He was equated with the Greek Hermes, and he is intended by the name HERMES TRISMEGISTUS In Egypt the ibis and the baboon were sacred to him, and he was often represented as an ibis, a baboon, or a man with features of either of those animals

Thothmes see THUTMOSE

Thou, Jacques Auguste de (zhak' ōgust' du tōō'), 1553-1617, French historian and magistrate He was a member of the Parlement of Paris and rendered signal service to Henry IV The first four volumes of his great work, the *History of His Own Times* (1604-8, in Latin), covering the Wars of Religion of the 16th cent , aroused opposition in the Catholic Church because of his strictures against the Catholic League and because of his Gallican leanings The complete work was published at Ge-

neva in 1620 (Eng tr., 2 vols, 1724–34) His son, **François Auguste de Thou** (frăswä'), 1607–42, played a minor role in the conspiracy of his friend CINQ MARS, but was executed for his failure to reveal it to the authorities.

thought reading: see TELEPATHY.

Thousand and One Nights or **Arabian Nights, a** series of Eastern stories in the Arabic language strung together by the story of Scheherasade, or Sheherazade, who kept her husband, Schariar, from killing her by telling these stories over 1,001 nights, until he relinquished his purpose The best known of these stories are those of Ali Baba, Sinbad the Sailor, and Aladdin Nothing is known clearly of the origin of this collection as such, although many of the stories are plainly from India The present form of the *Thousand and One Nights* is completely Moslem in spirit and must be native to Persia or one of the Arabic-speaking countries The European editions began with the free translation by Antoine Galland into French (1704–17) Most subsequent French, German, and English versions lean heavily upon Galland Among the English translations are the expurgated edition of E W. Lane (1840), with excellent and copious notes, the unexpurgated edition by Sir Richard Burton in 16 volumes (1885–88), that of John Payne in 9 volumes (1882–84), and that translated by Powys Mathers from the French text of J C Mardrus (rev ed, 4 vols, 1937)

Thousand Islands, N N Y and S Ont, a group of more than 1,500 islands in the St Lawrence where it issues from Lake Ontario The islands are on both sides of the international boundary, some of them belong to the United States, some to Canada, and many are privately owned The area is a popular summer resort, noted especially for boating and fishing Island steamers make regular summer trips, and a motor highway with an international bridge and viaducts (built 1937–38), crossing several islands and channels, connects the New York and Ontario mainlands

Thrace (thrās), region, SE Europe, occupying the southeastern tip of the Balkan Peninsula and comprising NE Greece, S Bulgaria, and Turkey in Europe Its boundaries varied at different periods It is washed by the Black Sea in the northeast and by the Sea of Marmara and the Aegean Sea in the south The RHODOPE mts separate Greek from Bulgarian Thrace, and the Maritsa river separates Greek from Turkish Thrace The chief cities are Istanbul, Adrianople, and Gallipoli (all in Turkey), but Istanbul (Constantinople) is generally considered as a separate entity All Thrace except the mountainous Bulgarian section is largely agricultural, producing tobacco, wheat, silk, cotton, olive oil, and fruit At the dawn of history the ancient Thracians—a group of tribes speaking an Indo-European language—extended as far west as the Adriatic Sea, but they were pushed east (c 1300 B C) by the Illyrians, and in the 5th cent B C they lost their land W of the Struma to Macedon In the north, however, Thrace at that period still extended to the Danube Unlike the Macedonians, the Thracians did not absorb Greek culture, and their tribes formed separate petty kingdoms Greek colonies—e g, BYZANTIUM on the Hellespont and Tomi (modern Constanta) on the Black Sea—were founded at an early time The Greeks exploited Thracian gold and silver mines, and they recruited Thracians for their infantry Thrace was reduced to vassalage by Persia from c 512 B C to 479 B C It was united as a kingdom under the chieftain Sitalces, who aided Athens during the Peloponnesian War, but after his death (428 B C) the state again broke up S Thrace was subdued in 342 B C by Philip II of Macedon, and after 323 B C most of the country was in the hands of LYSIMACHUS It fell apart once more after Lysimachus' death, and it was conquered by the Romans late in the 1st cent B.C Emperor Claudius created (A D 46) the province of Thrace, comprising the territory S of the Balkans, the remainder was incorporated into Moesia The chief centers of Roman Thrace were Sardica (modern Sofia), Philippopolis (Plovdiv), and Adrianople The region benefited greatly from Roman rule, but from the barbarian invasions of the 3d cent A D until modern times it was almost continuously a battleground The northern section passed (7th cent) to the Bulgarians, the southern section remained with the Byzantine Empire, but it was largely conquered (13th cent) by the second Bulgarian empire after a brief period under the Latin Empire of Constantinople In 1361 the Ottoman Turks took Adrianople, and in 1453 Constantinople itself fell After the annexation (1685) of Eastern RUMELIA by Bulgaria (which had gained independence in 1878), the political meaning of the term *Thrace* became restricted to its southernmost part, which was still in Turkish hands The terms *Eastern Thrace* and *Western Thrace* were used for the territories E and W of the Maritsa In the first of the BALKAN WARS (1912–13) Turkey ceded to Bulgaria all Western Thrace and the inland half of Eastern Thrace, including Adrianople, but after its defeat in the Second Balkan War (1913), Bulgaria retroceded all Thrace E of the Maritsa to Turkey. After the First World War, Bulgaria ceded by the Treaty of Neuilly (1919) the southern part of its share of Thrace to Greece, thus losing its only outlet to the Aegean. By the Treaty of Sèvres (1920) Greece also obtained most of Eastern Thrace except the zone of the Straits and Constantinople, the treaty, however, was superseded by the Treaty of Lausanne (1923), which restored all Thrace E of the Maritsa to Turkey As a result of the subsequent exchange of the Greek, Turkish, and Bulgarian minorities, the ethnic composition of the various parts of Thrace now corresponds largely to the national divisions The Greek-Bulgarian frontier of 1919 and the Turkish-Greek frontier of 1923 were left unchanged after the Second World War, during which Bulgaria had occupied (1941–44) Greek Thrace. The Greek-Bulgarian boundary remains a point of dispute between the two countries

Thrale, Hester Lynch, later **Madame Piozzi** (pŏz'ē, pē̆t'sē), 1741–1821, English woman, noted for her friendship with Dr Johnson Daughter of John Salusbury, she was married at an early age to Henry Thrale, a wealthy brewer, whose home at Streatham Park became a second home to Johnson from 1766 until 1783 Mrs Thrale's second marriage in 1784 to Gabriel PIOZZI, an Italian music master, estranged her from Dr Johnson, who died that same year She later published *Anecdotes of the Late Samuel Johnson* (1786) and his correspondence with her (1788) See her diary, *Thraliana* (ed. by K C Balderston 1942), J L Clifford, *Hester Lynch Piozzi* (1941)

Thrasea Paetus (Publius Clodius Thrasea Paetus) (thrā̆sē'ŭ pē'tŭs), d 65, Roman senator and Stoic philosopher He criticized NERO, who commanded the senate to condemn him to death When he heard the news he opened the veins in his arm.

thrasher, bird of the mockingbird and catbird family The brown thrasher of the E United States is often called the brown thrush although it is not a true thrush Larger than a robin, it is reddish brown above, and its under parts are pale buff with brown streaks It eats many harmful insects and is a tuneful singer The name thrasher probably refers to its habit of vigorously twitching its long tail A number of species are found in the West and the Southwest

thrashing: see THRESHING

Thrasybulus (thrā̆'sĭbū'lŭs), d c 389 B C, Greek statesman A strong supporter of the democratic and anti-Spartan party, he successfully opposed (411 B C) the oligarchical Four Hundred and later had ALCIBIADES recalled In the Peloponnesian War he fought at CYZICUS (410) and Arginusae (406) Banished by the THIRTY TYRANTS, he obtained Theban help, marched with a force from Phyle, and overthrew (404) the Thirty He aided Thebes against Sparta He was leading a campaign in Pamphylia when the excesses of his troops outraged the citizens of Aspendus, who murdered him

thread, a fine twist of fibrous material, distinguished from YARN in general by being smoother, stronger, and more pliable and better suited to sewing, embroidery, and lacemaking Sewing or spool COTTON is made by twisting several fine strands into 3-cord or 6-cord thread, the latter being three 2-ply strands twisted together. The size is controlled by the twisting process The fine linen thread used in making expensive "real" laces is spun by hand and is very costly Much heavy linen thread is used for carpet, shoe, and button sewing A great deal of cotton is used for crochet, spool, and darning cotton, much of it being mercerized

threat, in law, a declaration of intent to injure another by doing an unlawful act, with a view to restraining his freedom of action A threat is distinguishable from an ASSAULT, for an assault requires some physical act which appears likely to eventuate in violence, whereas a threat may consist of words only or of an act that is not violent, e g, unlawful prosecution Threats made to obtain money or property wrongfully are crimes (see BLACKMAIL and EXTORTION), and under some statutes, the mere sending of nonextortionate letters which announce an intent to injure the person or property of another is criminal Any contract concluded while one party is deprived of freedom of the will by a threat (see DURESS) is invalid and may be set aside

three-color process: see PRINTING

Three Emperors' League, informal alliance among Austria-Hungary, Germany, and Russia, announced officially in 1872 on the occasion of the meeting of Emperors Francis Joseph, William I, and Alexander II The chief architects of the alliance were Julius Andrassy, Bismarck, and Gorchakov The aim of the league was to insure peace among the three powers in case any of them became involved in war The Russo-Turkish War of 1877–78 shook the alliance (see BERLIN, CONGRESS OF). Although the agreement was secretly renewed in 1881 and remained in force until 1887, it was eclipsed by the German-Austrian alliance of 1879, which after the adherence of Italy (1882) became the Triple Alliance From 1887 to 1890 all there remained of the Three Emperors' League was a Russo-German reinsurance treaty The German chancellor, Caprivi, refused to renew even this in 1890, thus opening the way for the Franco-Russian rapprochement and the creation of the Triple Entente (see TRIPLE ALLIANCE AND TRIPLE ENTENTE).

Three Holy Children, the three men cast by Nebuchadnezzar into the fiery furnace and delivered by an angel Their names are Shadrach, Meshach, and Abed-nego, in Babylonian, Azariah, Hananiah, and Mishael, in Hebrew; and Azarias, Ananias, and Misael, in Greek Dan 1 7; 3 The Song of the Three Holy Children is one of the portions of DANIEL which appear in the Greek texts but not in the Hebrew-Aramaic versions Hence it is relegated in AV to the Apocrypha; in the fuller version (as in Douay) it is numbered 3 24–90. It recounts the actions of the three men in the furnace, first a prayer by Azarias for the victory of God, then a hymn by all three in praise of God (3 52–90, the portion from verse 57 is called Benedicite, from the first line in Latin)

Three Kingdoms, period of Chinese history from 220 to 265, following the collapse of the Han dynasty The period takes its name from the three states into which China was divided Wei occupied the north and included most of Korea S of Wei were Shu in the west and Wu in the east Each of the states steadily expanded, especially Shu, which moved into modern Yünnan and Burma Wei, however, later steadily increased its strength and crushed Shu in 264, when a usurper seized the Wei throne in 265 and founded the TSIN dynasty, the Three Kingdoms period officially came to an end Wei did not, however, conquer Wu until 680 Disorders during the Three Kingdoms period included not only warfare between the Chinese states but also incursions into the north by the Hsiung-nu (Huns) The era is fondly regarded in China as exemplifying the highest ideals of chivalry and has been depicted in the adventurous novel *San Kuo* [three kingdoms] The violence of the time did not prevent the growth of Chinese culture but seemed rather to open it to new influences, such as the native Taoism From India came Buddhism and many advances in scientific learning As knowledge of the outside world grew, maps were improved and a grid system of coordinates was invented Art was predominantly Buddhistic in inspiration and showed many central Asiatic traits

Three Oaks, village (pop 1,451), extreme SW Mich, inc 1867 The Chamberlain Memorial Museum here contains historical and Indian relics.

Three Rivers, Que see TROIS RIVIÈRES

Three Rivers 1 City (pop. 6,710), SW Mich., S of Kalamazoo, on the St Joseph at the confluence of the Portage and Rocky rivers, settled 1829, inc as a village 1855, as a city 1895 It is a farm trade and industrial city, manufacturing railroad equipment, stokers, and jute board Evidences of Indian villages and large garden beds have been found, and Indian trails crossed the St Joseph at this point Later a French trading post and a Jesuit mission were here **2** Town (pop 1,337), S Texas, SSE of San Antonio, on the Frio river, which receives the Atascosa to the north and flows into Nueces river, inc 1927 It is in a farming, ranching, and oil area and has an oil refinery

Three Taverns see TRES TABERNAE

threshing or **thrashing,** separation of seed from the stalk of crop plants on which they grow The first known method was striking the ear with a stick Ancient as is this final threshing, it is still sometimes practiced Having horses or oxen tread on the grain which was spread on a threshing floor was another early method In 1784, a Scotsman, Andrew Meikle, invented a drum threshing machine, its essential operation is implicit in the highly developed, manifold-operation thresher of today. Steam engines followed horses in supplying motive force for the machines that came into general use in the United States about the middle of the 19th cent Tractors powered by gasoline or kerosene are commonly used to operate threshing equipment The machines feed in the grain, thresh the grain from the head, separate the grain from the straw, and deliver the grain (after it is cleaned) to a weigher and the straw and chaff to their stack A combination machine that first reaps and then threshes is known as a combine. The larger threshers and the combines are profitably used in large-scale farming See H P Smith, *Farm Machinery and Equipment* (2d ed, 1937), A W. Turner and E J Johnson, *Machines for the Farm, Ranch, and Plantation* (1948)

thrift: see SEA PINK

thrips, agile, minute, black, yellowish, or reddish-brown sapsucking insect found in the flower or on other parts of many plants. Some species are wingless, but many have four narrow wings closely fringed with hairs. The foot has no claw but ends in a cuplike depression which surrounds a protrusible bladder. Metamorphosis is gradual, and parthenogenesis is common. Among the species destructive to a variety of plants are the onion, the pear, the greenhouse, and the grass thrips.

throat, region behind the mouth or oral cavity, known also as the oral pharynx The pillars of the fauces, paired lateral, arching tissues which bound the opening of the throat, enclose the palatine ton-

sils. Disorders of the throat include sore throat, quinsy, diphtheria, and other infections Inflammations of the throat commonly result from mouth breathing, adenoids, and tonsillar infections.

Throckmorton or Throgmorton, Francis (thrŏkmôr'tŭn, thrŏg–), 1554–84, English conspirator A nephew of Sir Nicholas Throckmorton, he was educated at Oxford, entered (1576) the Inner Temple, and began (1580) a tour of Europe, spent largely in discussing cooperative measures between French and English Catholics In 1583 he returned to England and organized means of communication between the imprisoned Mary Queen of Scots and the French and Spanish courts His frequent visits to the house of the Spanish ambassador aroused suspicion, and he was arrested (1583) A search of his house revealed a list of English Catholics willing to assist a rebellion against Queen Elizabeth and other incriminating documents Throckmorton was tortured and confessed treasonable plots Although he later retracted his confession, he was convicted and executed

Throckmorton or Throgmorton, Sir Nicholas, 1515–71, English diplomat A relative of Catherine Parr, the last queen of Henry VIII, he became a staunch Protestant and gained the favor of Edward VI, who knighted him in 1547 He supported, for a time, the claims of Lady Jane Grey to the throne, and in 1554 he was tried for complicity in the rebellion of Sir Thomas WYATT Although acquitted, he was kept in the Tower until 1555 Upon Elizabeth's accession, he was made (1559) ambassador to France, where he championed the cause of the Huguenots While in France he negotiated with Mary Queen of Scots and, despite religious differences, became her personal friend In 1565 Throckmorton was sent to Scotland to attempt to prevent Mary's marriage to Lord Darnley, and in 1567 he tried to secure the release of the imprisoned Scottish queen A supporter of the proposed match between the duke of Norfolk and Mary, he came under Elizabeth's suspicions He was imprisoned in 1569 for his supposed complicity in the rebellion of the northern English Catholics, but he was soon released

Throckmorton, town (pop 1,133), co seat of Throckmorton co, N Texas, SW of Wichita Falls, settled before 1880, inc 1917 The rolling hills, once all ranch lands, still support many cattle and also yield grain, cotton, poultry, and some oil

Throgmorton, Francis see THROCKMORTON, FRANCIS

Throgmorton, Sir Nicholas see THROCKMORTON, SIR NICHOLAS

thrombosis (thrŏmbō'sĭs), formation of a clot of blood (called a thrombus) in the blood vessels or the heart If a fragment of a blood clot lodges in a blood vessel or in the heart it may block the circulation, causing instant death Heparin and dicoumarin are used in treating thrombosis See also EMBOLUS

throne, chair of state or the seat of a high dignitary Probably the ancestor of all chairs, the throne was at first a stool or bench and became an ornate armchair, often raised on a dais and surmounted by a canopy Thrones have been made of a variety of materials, including wood, stone, ivory, and precious metals, lavishly decorated, and often flanked by figures of lions or slaves, symbols of supremacy An ancient Egyptian throne displays a vulture with outspread wings, signifying protection, another aspect of empire Descriptions and remains of antique Oriental thrones reveal monumental, even barbaric, splendor Byzantine and medieval examples imitated the grandeur of Solomon's throne, resplendent with gold, and the Renaissance saw the multiplication of precious stones An example of a jeweled throne is Shah Jehan's Peacock Throne at Delhi which displayed two spreading peacocks with jeweled tails Napoleon's choice of throne was a gilded chair displaying eagles, lions, and other symbols, and he used also the supposed bronze replica of Dagobert's golden throne The throne of Great Britain is an oaken Gothic chair in the House of Lords At St Peter's in Rome is the bronze papal throne At the election of a pope the cardinals, each potential sovereigns, occupy thrones surmounted by canopies which, excepting that of the elected pontiff, are lowered when the election is completed The cathedra is the throne of a bishop in his cathedral church.

Throop (trōōp, thrōōp), anthracite-mining borough (pop 7,382), NE Pa, on the Lackawanna river and NE of Scranton

Throop Polytechnic Institute: see CALIFORNIA INSTITUTE OF TECHNOLOGY

thrush (thrŭsh), member of a family of about 700 species and subspecies of birds found in almost every part of the world and noted for their beautiful songs. Although some have bright plumage, the majority are modestly colored, and the under parts are spotted in either the young or the adult stage Among the North American thrushes are the ROBIN; the BLUEBIRD, the solitaire, the hermit, the wood, the olive-backed, and the gray-cheeked thrushes; and the Wilson's thrush or veery The finest singer, the hermit thrush, a shy forest dweller, has brown body feathers above and a ruddier brown tail. The European nightingale, the missel thrush, and the "blackbird" are members of the thrush family. The water thrushes belong to the WARBLER family.

thrush (thrŭsh), infectious disease of the mouth caused by a fungus, *Candida albicans* (formerly called *Monilia albicans*), and characterised by diffuse white patches on the mucous membrane. It occurs chiefly in malnourished children, but also sometimes affects adults.

Thucydides (thōōsĭ'dĭdēz), c.460–c.400 B.C., Greek historian of Athens, one of the greatest of ancient historians His family was partly Thracian As a general in 424 B C he failed to prevent the surrender of the city of Amphipolis to the Spartan commander Brasidas and was exiled until the end of the war He thus had opportunity to acquaint himself with both sides and acquire first-hand information on his subject, the Peloponnesian War His one work is an incomplete history of this, ending in 411 B C His book, for which he began collecting material at the outbreak of the war in 431 B C, marked the beginnings of a new style of history by reason of its generic character Preeminently a military history, chronicling events by the seasons, it completely avoids any reference to social conditions or state policy, unless they have to deal with the progress of the war, and interprets the succession of events in view of the general nature and behavior of man rather than as the result of a fate outside man's influence The outstanding feature of his writing, which is marked by accuracy and a studied impartiality, is his speeches, these he puts into the mouths of important persons to display their motives and beliefs as affecting the war and war in general The most splendid of these is Pericles' funeral oration Thucydides' account of the plague, through which he lived, displays his clinical and descriptive attitude and is a standard of its type There are many good translations of Thucydides

Thugga, Tunisia: see DOUGGA

Thugs (thŭgz), former religious organization of robbers and murderers in India, also called Phansigars (pan'sēgărz, fan'–) [stranglers] They were devotees of the goddess Kali, the consort of Siva (see HINDUISM), and committed their murders as sacrifices to her A pickax (representing the tooth of Kali, which she had bestowed upon the organization) was consecrated after the victim's grave had been dug with it For most of the year Thugs followed ordinary occupations, but in the fall they went about in bands, disguised as merchants or religious mendicants When they encountered wealthy travelers, they would ingratiate themselves and await an opportunity to slay The killing was effected by strangling the victim with a scarf tied in a slipknot Women and members of certain low castes, such as sweepers, washermen, and musicians, were usually exempted from attack The Thugs, whose activities are known as far back as the 13th cent, were protected by their strong organization and by local officials with whom they would divide their spoils Early in the period of British rule in India the decision was made to destroy the Thugs Lord William Cavendish Bentinck accomplished the repression (1829–36) by apprehending more than 1,000 Thugs and executing some 300

Thule (thū'lē, thōō'lē), name given by the ancients to the most northerly land of Europe It was an island discovered and described (c.310 B C.) by Pytheas and variously identified with Jutland, Iceland, Norway, and the Shetland Islands The phrase "Ultima Thule" is used figuratively to denote the most distant goal of human endeavor or a land remote beyond all reckoning

Thule (thōō'lē, tōō'lu), settlement and colony district (pop 322), NW Greenland, N of Cape York It was founded (1910) by Knud Rasmussen in the Etah Eskimo area There are a radio station, a hospital, and a trading post

thulium (thū'lēum, thōō'–), metal of the RARE EARTHS (symbol=Tm, for physical constants, see ELEMENT, table) It forms a number of compounds, characteristically light green in color It is extremely rare and in nature occurs with other metals of the rare-earths group in a few minerals, e.g., gadolinite and euxenite It has no commercial use Discovery of the element (1879) is accredited to P T Cleve

Thummim (thŭ'mĭm) see URIM AND THUMMIM

Thun (tōōn), town (pop 20,249), Bern canton, Switzerland, on the Aar river and the Lake of Thun It is a tourist resort and has manufactures of machinery and munitions The imposing castle of the counts of Zähringen and Kyburg dates from c.1190 The Lake of Thun, area c.18 sq mi, is scenically situated at the foot of the Bernese Oberland

thunder, sound produced when a flash of lightning passes through air, heating the adjacent air and causing it to expand and send out a wave This wave is heard as the crash of thunder Rolling thunder occurs when there is a long flash of lightning, sound waves from the farther parts of which are heard later than waves from the nearer parts, and when clouds, mountains, differing layers of air, or other obstructions cause echoes and reverberations Since sound travels about a mile in five seconds, the distance between a lightning flash and an observer may be reckoned by counting the seconds between the sight of the flash and the sound of the thunder Some lightning is so far distant that no thunder reaches the observer

thunderstorm, violent, local atmospheric disturbance accompanied by LIGHTNING, THUNDER, and heavy rain, often by strong gusts of wind, and sometimes by HAIL The typical thunderstorm caused by convection occurs on a hot summer afternoon when the sun's warmth has heated a large body of moist air near the ground This air rises, is cooled by expansion, condenses, and forms a cumulus cloud If the process continues and is violent, the cloud becomes immense, the summit often attaining a height of 4 mi above the base and the top spreading out in the shape of an anvil as the transition to cumulo-nimbus takes place The turbulent air currents within the cloud cause a continual breaking up and reuniting of the raindrops, building up the strong electrical charges which result in lightning, it is also these violent currents that cause the formation of hail As the storm approaches a given area, the gentle flow of warm air that has been "feeding" the cloud gives way to a strong chilly gust of wind from the opposite direction—blowing outward from its base, the rain begins with an intensity which gradually diminishes as the storm passes Thunderstorms occurring at night are caused by the cooling of the upper layers of air by radiation, resulting in atmospheric instability. Another cause of thunderstorms is the approach of a cold air mass which advances as a "wedge" near the ground, forcing the warmer air in its path to rise Even a forest fire or a volcanic eruption may create a condition of instability conducive to thunderstorm formation The general direction of thunderstorms in the United States is from west to east, and the path, which broadens as the storm proceeds across the country, is usually relatively short—100 mi or less Thunderstorms occur most frequently over land areas in the equatorial zone (some localities having as many as 200 a year) and very seldom in the polar regions In the United States, they are most frequent along the E Gulf Coast (averaging more than 70 a year) and least frequent on the Pacific coast (less than 4 a year)

Thurber, James (thûr'bûr), 1894–, American humorist, b Columbus, Ohio, studied at Ohio State Univ A code clerk for the Dept of State and later a newspaperman, he joined the staff of the *New Yorker* in 1927 His drawings in a few lines of sad, wise hounds and frustrated, wide-mouthed humans and his hilariously funny accounts of his own misadventures soon became widely known Among his most famous early drawings are "The Seal in the Bedroom" and the series "The War between the Sexes" With E B White he wrote and illustrated *Is Sex Necessary?* (1931), a satire on the books of popular psychoanalysis which were prevalent at the time A comedy, *The Male Animal*, written with Elliott Nugent and successfully presented in New York in 1940, was a typically Thurber mixture of slightly mad happenings with an eminently sane approach to them Most of Thurber's drawings and essays have appeared in collections—*The Owl in the Attic* (1931), *The Seal in the Bedroom* (1932), *The Middle-aged Man on the Flying Trapeze* (1935), *My World—and Welcome to It* (1942), *The Thurber Carnival* (1945), and *The Beast in Me and Other Animals* (1948) *My Life and Hard Times* (1934) recounts the troubles of a humorist, and *The Last Flower* (1939) is an effective anti-war fable

Thuret, Gustave Adolphe (gustäv' ädôlf' turā'), 1817–75, French botanist, authority on the marine algae of the French coast With Édouard Bornet he made the notable discovery of the method of propagation of seaweed His celebrated botanic garden at Antibes was given to the state

Thurgau (tōōr'gou), canton (388 sq mi; pop 138,122), NE Switzerland, on the Lake of Constance Watered by the Thur river, it is fertile and cultivated There are several industrial towns, notably Arbon and Frauenfeld, its capital Thurgau passed (1264) from the counts of KYBURG to the Hapsburgs and was conquered (1460) by the Swiss cantons, which ruled it jointly till 1798 In 1803 it became a canton of Switzerland The population is mainly Protestant and German-speaking

Thuri (thū'rē), ancient city of Magna Graecia, S Italy, on the Gulf of Taranto It was founded in 452 B C to replace ruined Sybaris New Greek colonists came later, among them the city planner Hippodamus and possibly Herodotus and Lysias Thurii became an ally of Rome and was pillaged by Hannibal in 204 B C Rome renewed the colony, but it did not thrive

Thuringia (thyōōrĭn'ju), Ger *Thüringen* (tü'rĭngun), state (6,022 sq mi, pop 2,927,497), central Germany Weimar is the capital Thuringia borders on Bavaria in the south, Hesse in the west, Saxony-Anhalt in the north, and Saxony in the east Incorporated after the Second World War into the Russian zone of occupation in Germany, Thuringia was considerably increased from its prewar size (4,541 sq mi, 1939 pop 1,743,624) by the

addition of formerly Prussian enclaves and border areas, notably Erfurt and Mühlhausen The population increase was also due in part to the influx of refugees from devastated areas Thuringia is crossed by the Thuringian Forest (Ger *Thüringer Wald*) (tü'ring-ur vält") a forested range extending from the Werra river in the west to the Thuringian Saale river in the southeast and rising to 3,222 ft in the Grosser Beerberg In the north, Thuringia extends to the foot of the Harz mts The cultivated land is very fertile, and the forested hills are a favorite resort area Some very good wine is also grown here Thuringia has very active industries, producing textiles, precision and optical instruments, machinery, glass, porcelain, and processed foods JENA, GOTHA, EISENACH, GERA, ALTENBURG, ERFURT, MÜHLHAUSEN, and SUHL are among the chief centers Potash, gypsum, and some iron are mined The ancient Thuringians, a Germanic tribe occupying central Germany between the Elbe and the Danube, were conquered by the Franks between the 6th and 8th cent A D and were converted to Christianity by St Boniface Thuringia was made a march (frontier country) against the Slavs in the 9th cent, but it passed under the control of the Saxon dukes in the 10th cent In the 11th cent the landgraves of Thuringia, with their seat at the celebrated WARTBURG, emerged as immediate princes of the Holy Roman Empire and ruled over much the same territory as present Thuringia After the death (1227) of Landgrave Louis II, on a crusade, his widow, St ELIZABETH of Hungary, was expelled by Louis's successor, Henry Raspe, who later was antiking to Conrad IV After Henry's death (1247) the succession to Thuringia was long contested, but the major part eventually fell to the house of WETTIN, i e , to the margraves of Meissen, who in 1423 became electors of Saxony The division (1485) of the Wettin lands left most of the Thuringian territories to the Ernestine branch of the family which also received the electoral title When Elector JOHN FREDERICK I was deprived of his lands in 1547, the Ernestine branch lost the electoral title and all their lands save Thuringia to the Albertine branch Under the Ernestines, Thuringia was split into several duchies (see SAXE-ALTENBURG, SAXE-COBURG, SAXE-GOTHA, SAXE-MEININGEN, SAXE-WEIMAR) Principalities situated in Thuringia but not ruled by any of the branches of the Ernestine line were those of REUSS and Schwarzburg (see SCHWARZBURG-RUDOLSTADT and SCHWARZBURG-SONDERSHAUSEN) Thuringia in the 16th cent had been a center of the Lutheran Reformation, and its population remains thoroughly Protestant Among the Ernestine duchies (which underwent several redivisions in the 17th, 18th, and 19th cent) the most important both politically and culturally, was that of SAXE-WEIMAR-EISENACH Duke CHARLES AUGUSTUS, the patron of Goethe, was raised (1815) to grand ducal rank by the Congress of Vienna As a result of the territorial redistribution of 1826, Duke Ernest III of Saxe-Coburg received Gotha and became ERNEST I of SAXE-COBURG-GOTHA, through his dynastic connections with several major houses of Europe (notably England and Belgium), he and his successors also acquired considerable prominence All the Thuringian duchies except Saxe-Meiningen sided with Prussia in the Austro-Prussian War of 1866 Members of the German Confederation from 1815, the Thuringian states joined the North German Confederation in 1866 and the German Empire in 1871 Their rulers were expelled in 1918, and in 1920 the state of Thuringia was founded under the Weimar Republic by the union of Saxe-Coburg-Gotha (less the city of Coburg, which went to Bavaria), Saxe-Weimar-Eisenach Saxe-Altenburg Saxe-Meiningen, the two sister principalities of Reuss, and the principalities of Schwarzburg-Rudolstadt and Schwarzburg-Sondershausen

Thurles (thûr'lus), urban district (pop 6,012), Co Tipperary, Ireland, on the Suir and NNW of Clonmel It is an agricultural market with beet-sugar refineries Thurles is the seat of the Roman Catholic archbishop of Cashel, who administers the bishopric of Emly as well The town was the scene of Richard Strongbow's defeat (1174) The ruins of Holy Cross Abbey are near by

Thurloe, John, 1616–68, English statesman. He studied law and in 1647 was admitted to Lincoln's Inn Prior to 1652 he held several minor offices in the state department In that year he became secretary to the council of state, and in 1653 he was given charge of the intelligence department, which included foreign and domestic espionage and the post office Through the post office Thurloe was able to intercept information of plots against the government He entered Parliament in 1654, supporting Oliver Cromwell (who was his personal friend) and, later, Richard Cromwell He was deprived of office (1659) by the Long Parliament, reappointed a secretary of state (1660), removed again, and nearly tried for treason (also in 1660) by the Restoration government Thurloe then retired from public life, but remained a valuable authority on foreign affairs and was consulted by various officials. His vast correspondence, an important authority for the history of the Protectorate, is preserved in the Bodleian Library, Oxford, and in the British Museum Part of it was published in 1742 by Thomas Birch

Thurlow, Edward Thurlow, 1st Baron, 1731–1806, lord chancellor of England He was removed (1751) without a degree from Cambridge and articled to a solicitor Called to the bar in 1754, he enjoyed considerable success in practice, gaining fame by his handling of *Douglas* vs *Hamilton* before the House of Lords He was made a king's counsel in 1762 and entered Parliament in 1765 In 1770 he was appointed solicitor general, and in 1771 he was made attorney general He supported the policies of George III and Lord North with respect to the American colonies His support of the king brought him a barony and the lord chancellorship (1778) He held the latter office until Charles Fox insisted upon his dismissal (1783) William Pitt reappointed him, and he retained office until 1792, when Pitt and Lord Grenville demanded his retirement He presided ably over the first part of the trial of Warren Hastings Thurlow consistently opposed parliamentary reform, abolition of the slave trade, and other reforms His manner inspired Fox's remark, "No man ever was so wise as Thurlow looks"

Thurman, Allen Granberry, 1813–95, U S Senator from Ohio (1869–81), b Lynchburg, Va In 1819 his family moved to Chillicothe, Ohio, where, admitted to the bar in 1835, he began to practice law He was a Democratic Congressman (1845–47) and a member of the Ohio supreme court (1851–56), being its chief justice in 1854–56 In the Civil War, Thurman, who had supported Stephen A. Douglas for President in 1860, was a leading "Peace Democrat" Rutherford B Hayes narrowly defeated him for the governorship of Ohio in 1867, but the Democratic legislature chosen that same year later sent him to the Senate He was reelected once, but defeated for a third term Thurman served on the presidential Electoral Commission of 1876, sponsored (1878) the Thurman Act, which forced transcontinental railroads aided by government bonds to fulfill their debts to the Federal authority, and was Grover Cleveland's running mate in the Democratic defeat of 1888

Thurmond, James Strom (thûr'mund), 1902–, American political leader, b Edgefield, S C , grad Clemson College, 1923 He read law while teaching (1923–29) in South Carolina schools and was admitted to the bar in 1930 J Strom Thurmond was elected (1933) to the state senate and became (1938) a circuit-court judge In the Second World War he served (1942–46) in the U S army and was elected (1946) governor of South Carolina Thurmond was chosen presidential candidate by the States' Rights Democrats, Southerners who bolted the Democratic party in 1948 in opposition to President Harry S Truman's civil-rights program Thurmond won 38 electoral votes

Thurmont (thûr'mŏnt), town (pop 1,307), N Md , E of Hagerstown At near-by Sabillasville is the state tuberculosis sanatorium

Thurrock, Essex, England see GRAYS THURROCK and TILBURY

Thursby, Emma (thûrz'bē), 1845–1931, American soprano, b Williamsburg (now part of Brooklyn), N Y , studied in the United States and Italy She was soloist (1868–71) at Plymouth Church, Brooklyn, of which Henry Ward Beecher was pastor, and in other New York and Brooklyn churches until 1877 A coloratura soprano of unusual range and purity of tone, she was highly lauded in concerts both in Europe and the United States, but never sang in opera In the 1890s she ceased concertizing and devoted herself entirely to teaching See biography by R G Gipson (1940)

Thursday see WEEK

Thursday Island (pop 944), N of Cape York Peninsula, Australia, in Torres Strait Partly wooded, the islet is 1½ mi long There are pearl and trepang fisheries In 1912 the islet became a municipality of Queensland

Thurso (thûr'sō), village (pop 1,295), S Que , on the Ottawa river and E of Ottawa, in an area of lumbering, dairying, and stock raising

Thurso (thûr'sō), burgh (pop 2,946), Caithness, Scotland, a seaport at the mouth of the Thurso river It is the most northerly burgh on the Scottish mainland Its industry is wool weaving

Thurstan, d 1140, Anglo-Norman ecclesiastic, archbishop of York (elected 1114, consecrated 1119) He was involved in a lengthy controversy with the archbishop of Canterbury, who would not consecrate him unless Thurstan allowed the jurisdiction of Canterbury over York, and with King Henry I, who would not allow him to appeal to the pope to settle the matter He became reconciled with the king, but never with the archbishop

Thurston, Howard, 1869–1936, American magician, b. Columbus, Ohio He made (1904–7) a tour of the world, performing before many kings and notables He wrote *My Life of Magic* (1929) and a mystery drama called *The Demon.*

Thurston, Robert Henry, 1839–1903, American engineer and educator, b Providence, R I., grad Brown, 1859 He taught at Annapolis (1865–70), at Stevens Institute of Technology (1871–85), where he organized the course in mechanical engineering; and at Cornell, where from 1885 he directed the Sibley College (later Sibley School) of Mechanical Engineering He was a founder and first president of the American Society of Mechanical Engineers His works include *History of the Growth of the Steam Engine* (1878, centennial ed., 1939), *Materials of Engineering* (1883–84), and *Manual of Steam Boilers* (1888). See biography by W F Durand (1929)

Thutmose I (thōōt'mōs, tōōt'–) or **Thothmes I** (thŏth'mēs, tŏthmēs), fl 1540 B C , third king of the XVIII dynasty of ancient EGYPT and successor of AMENHOTEP I, to whom he was perhaps related by marriage He became king c 1540 In a great campaign he subjugated the valley of the Nile up to the third cataract (below the present Dongola) Syria occupied his attention, and he at least temporarily subdued the country as far as the Euphrates Of his three children to succeed —Hatshepsut, **Thutmose II,** and **Thutmose III**—only Hatshepsut, a daughter, had a royal mother, the queen through whom Thutmose I claimed the throne Hatshepsut, heir in spite of her sex, married Thutmose III, who seized the throne (1501 B C) from his aged father Before long Hatshepsut gained equal power with her husband and brother, only to relegate him to the background and call herself "king" Thutmose II's reign was simply a three-year interruption in Hatshepsut's Her reign was peaceful, and she developed the resources of Egypt variously, thus, she revived the mining in Sinai She put up obelisks at Karnak itself, and much building was done in her reign She neglected the old imperialism of her family, and at her death (c 1481) the Syrians conquered by her predecessor had risen in revolt In 1479 Thutmose III advanced into Syria, where a powerful confederation waited to oppose him He was victor at Megiddo and consolidated all Syria, except Phoenicia, in his empire In successive campaigns he reduced every ruler N to the Euphrates to the grade of autonomous tributary and eventually brought low even powerful Kadesh His empire (the zenith of the New Empire), extending from the third cataract to the Euphrates, was used to enrich Egypt with wealth and man power Up and down the Nile he built temples He founded the wealth of the priesthood of Amon, to which he belonged Thutmose, having made his son AMENHOTEP II coregent, died the next year (1447) and was buried in the Valley of the Kings His mummy is at Cairo He is one of the earliest conquering imperialists known clearly to history

Thutmose IV (reign, c 1420–c 1411 B C), son and successor of Amenhotep II, like his father invaded Asia and Nubia, he formed alliances with independent kings neighboring his Syrian tributaries and married a princess of Mitanni, who was mother of his son and successor, AMENHOTEP III

Thwaites, Reuben Gold (thwāts), 1853–1913, American historian, b Dorchester, Mass He was managing editor of the *Wisconsin State Journal* and later superintendent of the Wisconsin Historical Society He was deeply interested in the history of the Old Northwest, and he and a staff of assistants edited some of the most valuable early accounts of Western history in *The Jesuits Relations* (73 vols , 1896–1901) and *Early Western Travels, 1748–1846* (32 vols , 1904 7) He also edited many other early accounts in separate issues and wrote biographies (e g , of Marquette) and special studies (e g , of the Black Hawk War) related to the Old Northwest He also contributed *France in America* to the "American Nation" series and wrote a school history of the United States

Thwing, Charles Franklin (twing), 1853–1937, American educator and congregational clergyman, b New Sharon, Maine, grad Harvard, 1876, and Andover Theological Seminary, 1879 Until 1890 he served parishes in Cambridge, Mass , and Minneapolis He was president of Western Reserve Univ and Adelbert College from 1890 to his retirement in 1921 and a trustee of the Carnegie Foundation after 1905 He wrote many books on religion and education, including *The College President* (1920), *Education and Religion* (1929), and *The American College and University* (1935)

Thyatira (thī"ut'ī'rū), ancient city of Lydia, now Akhisar, near Smyrna, Turkey It was one of the SEVEN CHURCHES IN ASIA and was known for its purple dye (Acts 16 14)

Thyestes (thīĕs'tēz), in Greek legend, son of PELOPS and brother of ATREUS He seduced his own daughter unknowingly and had by her a son, AEGISTHUS When Atreus, in revenge for Thyestes' seduction of Atreus' wife, served all the sons of Thyestes, except Aegisthus, to him at a feast, the horrified father pronounced the curse which brought misfortune to the house of Atreus.

thyme (tīm), any species of the genus *Thymus*, aromatic herbs or shrubby plants of the mint family. The common thyme, which is used as a seasoning herb and yields an essential oil containing THYMOL, is the Old World *Thymus vulgaris*, an erect plant with grayish branches The wild or creeping thyme or mother-of-thyme (*T serpyllum*), occasionally used for seasoning, is an Old World evergreen naturalized in North America and popular as a ground cover, edging, and rock plant; the

small flowers are purplish or, in its varieties, of other colors This was the wild thyme of Shakspere's *Midsummer Night's Dream* The Greeks used thyme as a temple incense, and it was prized even in ancient times as a honey plant

thymol (thī'mŏl, -mōl, -mōl), colorless, crystalline, organic compound (of carbon, hydrogen, and oxygen) with an odor like that of thyme It is prepared from the oil of thyme obtained by distillation from thyme and various other related plants, e g , ajowan Thymol is employed as an antiseptic for the skin, mucous membrane, and intestinal tract It is used in the elimination of the hookworm parasite from the human system and in the treatment of trichinosis In too large or too frequent doses, it is poisonous '

thymus gland (thī'mus), mass of glandular tissue found in humans and some other vertebrate animals In humans it lies in the upper part of the chest cavity and consists of lymphoid tissue resembling the tissue of the adenoids Usually it has two lobes, although these are, in some cases, united to form a single mass The thymus is relatively large in the human fetus and infant and enlarges up to the age of puberty, when it gradually diminishes in size Its function is not definitely known There is some evidence that it functions as an endocrine gland and that its secretion plays a part in the control of growth

thyroid gland (thī'roid), ductless gland found in the neck It consists of two lateral lobes and a connecting isthmus, the lobes lie on either side of the trachea, the connecting isthmus in front of it It is the only organ in the body which stores iodine It secretes thyroxin, a compound with a high iodine content (about 65 percent), directly into the blood stream The primary function of the thyroid gland is the control of the rate of metabolism Enlargement of the thyroid gland is known as goiter, of which there are a number of varieties Simple or endemic goiter, resulting from deficiency of iodine in food or water, is common in certain inland regions, e g , parts of Switzerland and the Great Lakes region of the United States The condition can be prevented or cured by the addition of iodine to the diet A type known as exophthalmic goiter (Graves's disease or hyperthyroidism) is caused by an oversecretion of thyroxin Among the symptoms are protruding eyeballs loss of weight, moist skin, tremor of tongue and hand, great irritability, and increase in the basal metabolic rate Myxedema is a condition produced by thyroid insufficiency in the adult See also CRETINISM

thyrsus (thûr'sus), in Greek religion wand carried by participants in Dionysiac rites It was a staff topped by a pine cone or by a bunch of grapes It probably represented a phallus and as such symbolized Dionysus as a god of fertility

Ti, chemical symbol of the element TITANIUM

Tiahuanaco (tyä'wänä'kō), ancient Indian ruin, W Bolivia, 34 mi S of Lake TITICACA, near the Peruvian border Nearly 13,000 ft above sea level, Tiahuanaco was probably a religious center and is thought to have been built by the AYMARA Much of the construction is unfinished At some time prior to the Classic period (A D c 600–900) building was begun, and there is evidence of additional construction during the decadent period (c 1100–1300) At the end of the Classic period Tiahuanaco influenced several of the cultures of coastal Peru Built of massive blocks weighing up to 100 tons and brought from several miles away, the structures of Tiahuanaco are superb examples of masonry Without mortar the stones were fitted to a precision and exactness in cutting, squaring, dressing, and notching equaled in no other aboriginal South American civilization, not even the Inca Construction is largely of the platform or monolithic type decorated by conventional incised carving or heads in low relief See Arthur Posnansky, *Tihuanacu the Cradle of American Man* (1945).

Tia Juana, MEXICO see TIJUANA

Tian Shan: see TIEN SHAN

Tiaret (tyärĕt'), city (pop 22,344), N Algeria, in the Tell region Since Roman times it has been the center of a prosperous agricultural area It was completely rebuilt after its capture by the French in 1843

Tibaldi, Pellegrino (pāl-lägrē'nō tēbäl'dē), 1527–96, Italian painter and architect, whose real name was Pellegrino di Tibaldo de' Pellegrini He studied in Bologna, and his early painting of the *Marriage of St Catherine* attests the influence of Bagnacavallo, who may have been his first master A trip to Rome in 1547, however, afforded a study of Michelangelo's art which was decisive for the formation of Tibaldi's style He returned to Bologna in 1550 to supervise the completion of Cardinal Poggio's palace (now the Univ of Bologna) Besides designing the façade, he decorated the interior with a vast series of scenes from the *Odyssey* Later he executed decorative frescoes in the Ferretti Palace (Ancona) After 1565 he devoted himself principally to architecture Under the patronage of Charles Borromeo, he was named architect of the city of Milan Characteristic of his work is the courtyard of the archiepiscopal palace and the churches of San Fedele and San Sebastiano in Milan In 1585 Philip II summoned him to Spain, where he worked on frescoes at the Escorial He returned to Milan in 1596 to continue work on the remodeling of the cathedral until his death

Tibbett, Lawrence (tĭ'bĭt), 1896–, American baritone, b Bakersfield, Calif He made his debut at the Metropolitan Opera House in 1923 After a successful appearance as Ford in Verdi's *Falstaff*, he was given leading roles and became especially noted for those he created in American operas, particularly Louis Gruenberg's *Emperor Jones* (1933) and the operas of Deems Taylor He was outstanding in the revival (1932) of Verdi's *Simon Boccanegra* Beginning with *The Rogue Song* (1930) he appeared in a number of moving pictures and was long popular as a radio singer He helped found (1936) the American Guild of Musical Artists, of which he became president

Tiber (tī'bur), Ital *Tevere* (tā'vārā), Latin *Tiberis*, river, 251 mi long, central Italy It rises in the Tuscan Apennines and flows generally S across Tuscany, Umbria, and part of Latium, then SW through Rome, to empty into the Tyrrhenian Sea by two mouths It is connected with the Arno by the Chiana canal, its chief tributaries are the Nera and the Aniene

Tiberias (tībēr'ĭus), town (pop c 12,000), NE Israel, on the west shore of the Sea of Galilee It is a center for agricultural settlements, and near by there are hot springs The town was built by Herod Antipas and named for Emperor Tiberius After the destruction of Jerusalem it became a center for Jews and always had an important Jewish colony There was a destructive earthquake in 1927 and a flood in 1934 Arabic forms of the name are Tabariya and Tubariya The lake is often called the Lake, or Sea, of Tiberias

Tiberius (Tiberius Julius Caesar Augustus) (tībēr'-ĭus), 42 B C A D 37, second Roman emperor (A D 14 A D 37) He was the son of Ti Claudius Nero and LIVIA DRUSILLA and was originally named Tiberius Claudius Nero He campaigned in Armenia (20 B C), became governor of Transalpine Gaul (19 B C), and aided his brother DRUSUS on the Rhine and the Danube (12 B C) AUGUSTUS, his stepfather, compelled him (12 B C) to divorce his wife, Vipsania Agrippina, and to marry Julia, the widow of Agrippa and daughter of Augustus After the death of Drusus (9 B C) he campaigned in Germany, and following a second consulship (7 B C) he retired to Rhodes for seven years On his return he was adopted as heir of the emperor and was sent (A D 4) into Germany Five years later he subjugated Illyricum Tiberius succeeded without difficulty on the death of Augustus He spent his efforts in continuing the policies of Augustus, with one exception, he cut drastically on "luxury" expenses, including public shows By so doing and by reforming the tax situation in the provinces he greatly improved the financial state of the government and made himself extremely unpopular in Rome For years SEJANUS was his chief aid and confidant Tiberius retired to Capri in A D 26 and ruled thereafter by correspondence He grew abnormally suspicious and even had Sejanus killed (A D 31) His unpopularity is mirrored by the Roman historians and much they write of Tiberius has to be carefully checked He is the Tiberius of Luke 3 1 He was succeeded by Caligula See F. B Marsh, *The Reign of Tiberius* (1931)

Tibet (tĭbĕt'), country (c 470,000 sq mi , pop c 4,000,000), central Asia The capital is Lhasa Tibet is bordered by China on the north and east, by Bhutan, Nepal, and India on the south, and by India on the west The country, almost completely surrounded by mountain ranges (including the Himalaya and the Kunlun), is largely a plateau averaging c 13,000 ft high Tibet is perhaps at a loftier elevation than any other country in the world The only important river is the Tsangpo (the Tibetan name for the Brahmaputra), which follows an easterly course through S Tibet North of the river there are many salt lakes, the largest being Tengri Nor in the east In this land of scant rainfall and a short growing season the only extensive agricultural region is the Tsangpo valley, where grains, chiefly barley, and fruits and vegetables are raised. In the valley are nearly all the large permanent settlements, including Lhasa, Shigatse, and Gyangtse Most areas of Tibet are suited only to grazing, yaks, which can withstand the intense cold, are the principal domestic animals, and there are also large herds of goats and sheep. Except for vast salt deposits, much gold, and radioactive ores, it is not known whether Tibet possesses mineral wealth, and mining is prohibited for religious reasons Surfaced roads provide the only commercial routes within Tibet, and they are limited to the Tsangpo area Goods for foreign trade are carried by pack trains (yaks and horses) over difficult mountain passes In exchange for hides, wool, and salt there are imports of brick tea (an important item of Tibetan diet) from China and of cotton cloth from India. The inhabitants of central and N Tibet are nomadic Many of the dwellers in the cities are Lamaist monks, who may comprise as much as one sixth of the country's male population The chief figures of Lamaism, the Dalai Lama and the Tashi (or Panchen) Lama, are at least the nominal heads of the Tibetan government There are several executive bodies and an appointive assembly, the Tsongdu In general, administration is equally divided between lamas and laymen belonging to the feudal aristocracy After adopting Buddhism from India in the 8th cent A D , Tibet, except for minor trade relations, isolated itself from the rest of the world, and even to the present few Westerners have succeeded in visiting this remote land China conquered Tibet in 1720 and thereafter claimed suzerainty —often merely nominal This was disputed by Great Britain, which, in 1904, dispatched to Lhasa Sir Francis Younghusband, who secured valuable trading rights Encouraged by the British, Tibet declared its independence of China in 1913, but the Chinese-Tibetan boundary was not set until 1928 Even today China claims Tibet as a 'special territory " For the early history of Tibet, see LAMAISM See Sir Francis Younghusband, *India and Tibet* (1912), Charles Bell, *Tibet, Past and Present* (1925), Sven Hedin, *The Conquest of Tibet* (1934), Marco Pallis, *Peaks and Lamas* (rev ed 1949) Amaury de Riencourt, *Roof of the World* (1950)

Tibetan art (tĭbĕ'tun) in all its phases, reveals its several origins, India, China, and Persia, not in composite but in parallel expressions, prior to these only such remote beginnings as rock drawings, including the swastika motif, were existent The Tibetans first came under the cultural influence of art in the 8th cent with the introduction of Buddhism from India They accepted the sculptures and paintings accompanying and illustrating Buddhistic teachings, copying the forms and while they developed clever artisans who gave a native interpretation to their work, they failed to produce original, creative artists The architecture, though influenced by local conditions, is reminiscent of India and China, the Chinese roofs being generally adopted The Tibetan tope rises above a masonry base, which frequently encloses a shrine, and its bulbous dome is crowned with a gilded copper parasol and crescent Sculpture was imported in the 8th cent , but native wood carvers acquired excellent technique in low relief, and superior craftsmanship was developed in the cire-perdue process of casting bronze and brass figures The Bon (pre-Buddhistic religion) statues exhibit Chinese feeling, and Buddhist sculptures usually show a strong Indian influence, sometimes these are more truly Tibetan than other expressions Portraiture was sometimes employed in the statuettes of saints, but the grotesque and demonic were in ascendancy, exaggerating or violating the natural human form Tibet holds two of the three most renowned early Buddhist sculptures, said to have come from China One of the figures is the Jokang of Lhasa, another is at the Kumbum monastery, the third remains in China at Peiping Colossal bronze statues of the bodhisattva Avalokiteshvara of many heads demonstrate the skill of Tibetan metalworkers, and an occasional one shows a distinctly Tibetan gesture of the hands not duplicated in Buddhist sculptures elsewhere Tibetan painting usually in tempera but sometimes encaustic, appears most frequently as a temple banner (tanka) It is characterized by crude colors especially vermilion, vivid green, and blue, and a tapestrylike composition, sometimes with a dominant central figure of Buddha or some divinity or with many such figures repeated in balanced order The tanka is of cotton or silk, sized with a coat of glue and chalk and smoothed with a shell previous to having the design traced upon it for painting only the most skilled artisans being able to copy directly from the model So unvarying was the rendering of the restricted subjects, controlled or executed by the lamas, that examples of the 10th cent (British Mus) and modern interpretations confuse their critics In illustrating the life of Buddha or the cult of Siva the traditions of India prevail in decorative detail the Chinese forms are plainly observable The paintings, mounted to roll or hang in Oriental fashion, are provided with soft protecting curtains of bright color which are draped to one side for exhibition of the work Tibetan craftsmen excel in metalwork such as jewelry, silver and gold *repoussé* for reliquaries and other objects, and damascening Even iron is manipulated into lacy and intricate patterns for decorating saddles or quivers The Musée Guimet, Paris, has a rich collection of Tibetan art, and there are examples in the Museum of Fine Arts, Boston, and in the Newark (N.J.) Museum

Tibetan language, Tibeto-Burman language of the Indo-Chinese family See LANGUAGE (table)

Tibhath (tĭb'hăth), unidentified Syrian city. **1** Chron 18 8 Betah 2 Sam 8 8. See TEBAH

Tibni (tĭb'nī), d c 885 B C , unsuccessful contender with OMRI **1** for the throne of Israel after the death of Zimri 1 Kings 16 21, 22

Tibullus (Albius Tibullus) (tĭbŭ'lus), c 55 B C –19 B C , Roman elegiac poet, b Pedum, near Praeneste Probably of the equestrian order, he was a

friend of MESSALA, whom he accompanied on campaign. Two books of verse (concerned, respectively, mostly with "Delia" and "Nemesis"—names symbolic of his loves) were published during his lifetime, some doubtfully attributed posthumous pieces plus works by other poets constitute a third book A master of the Latin love elegy, Tibullus wrote tenderly and sincerely of a love unusually delicate and ingenuous

Tibur, Italy see TIVOLI

tic: see SPASM

Tichborne, Henrietta, Lady see ORTON, ARTHUR.

Ticino (tēchē'nō), Fr and Ger *Tessin* (fr tĕsăN', ger tĕsēn'), canton (1,086 sq mi , pop. 161,882), SE Switzerland, on the southern slope of the central Alps, bordering on Italy Bellinzona is the capital The canton is named after the Ticino river (Latin *Ticinus*), which rises in the northwest and flows through Lago MAGGIORE into Italy, joining the Po below Pavia There are numerous hydroelectric stations along its course The larger part of Ticino is mountainous and has a pastoral economy, in the valleys wine is extensively produced, and there is some agriculture Lago Maggiore and the Lake of LUGANO, both partly in Switzerland, are important resort areas The population is mostly Catholic and Italian-speaking The Ticino river was the scene (218 B C) of Hannibal's victory over SCIPIO A part of Transpadane Gaul under the Roman Empire, the region later shared the history of Lombardy until its conquest (15th–16th cent) by the Swiss confederates from the duchy of Milan It was ruled until 1798 as subject territory by Schwyz and Uri cantons and became a Swiss canton in 1803

tick, an arachnid, almost identical with the mite but larger than most species All ticks are parasitic The majority live on the blood of mammals, some on birds Rocky Mountain spotted fever and tularemia are transmitted by the American dog tick and the wood tick Relapsing fever is carried by certain ticks Texas fever or cattle fever is spread by the cattle tick, as demonstrated by Theobald SMITH Ear ticks attack domestic animals, causing serious injury or death The sheep "tick" is a degenerate fly See *Cattle-Fever Ticks and Methods of Eradication* (U S Dept of Agriculture, Farmers' Bul 1057), *Story of Cattle-Fever Tick* (U S Dept of Agriculture, Miscellaneous Publication 2)

Tickell, Thomas (tĭk'əl), 1685–1740, English poet and translator He contributed to the *Spectator* and was a friend of Addison, to whom he wrote a fine elegy His translation of the first book of the *Iliad*, appearing simultaneously with Pope's (1715), caused a quarrel between Pope and Addison, who praised Tickell's work See R E Tickell's collection of family papers, *Thomas Tickell and the Eighteenth-Century Poets* (1931)

Ticknor, George (tĭk'nur), 1791–1871, American author and teacher, b Boston, grad Dartmouth, 1807 He was admitted to the bar in 1813 With Edward Everett he went to Gottingen, Germany, in 1815 to study and in 1816 was appointed, while abroad, the first Smith professor of French and Spanish at Harvard He continued his studies in Italy, Spain, Portugal, and England and in 1819 returned to Harvard There he improved elementary instruction in languages, introduced thorough German methods of study, and tried to establish a system of electives, but failed except in his own department He resigned in 1835 to collect, abroad, more material for his great *History of Spanish Literature* (1849) At his death he left his valuable Spanish collection to the Boston Public Library, which he had helped found

Ticknor, William Davis, 1810–64, American publisher. In 1832 he went into partnership with a Boston publisher, John Allen, who retired in 1833 John Reed and James T FIELDS later became his partners, and the firm is best known as Ticknor and Fields They published the works of many of the famous Americans of the day, including H W Longfellow, O W Holmes, and J R Lowell, and their offices were the meeting place of literary men. From 1854 to 1864 the firm published the *Atlantic Monthly* and the *North American Review* Ticknor was the first American publisher to pay foreign authors for the rights to their works

tickseed: see BUR MARIGOLD, CORLOPSIS, TREFOIL.

Ticonderoga (tī"kŏndərō'gu), resort village (pop. 3,402), NE N Y , between Lakes George and Champlain; settled in the 17th cent , inc 1889. The falls of Lake George furnish power for its paper mill Graphite from mines here is used in the local pencil industry. At Ticonderoga and near-by CROWN POINT several battles of the French and Indian War took place. Fort Carillon, built here by the French in 1755, was successfully defended by MONTCALM against James Abercromby in 1758 but fell to Jeffrey Amherst in 1759. Early in the American Revolution, Fort Ticonderoga was captured (May 10, 1775) by a detachment of Green Mountain Boys under Ethan ALLEN and troops commanded by Benedict Arnold. In the Saratoga campaign it was abandoned (1777) without a fight by Arthur ST. CLAIR to John Burgoyne. The British gave up the fort after the campaign but reoccupied it for a short time in 1780. The headquarters of the New York State Historical Association is here; the building is a reproduction of John Hancock's house and contains collections of historical material and paintings.

Tidal (tī'dl). see CHEDORLAOMER.

tidal theory, concerning the origin of the solar system, formulated in 1918 by James JEANS and afterwards developed and modified by Harold Jeffreys Based on the PLANETESIMAL HYPOTHESIS, it also assumes that the approach of a second star was the cause of the separation of matter from the great nebulous mass of gas which was the sun. But according to the tidal theory, the separation of the smaller body of gas from the sun was the result of the vast tides that were raised on the surface of the sun by the attraction of the visiting star. When this gravitational pull became great enough to overcome the attraction of the sun itself, the crest of the tidal wave was drawn away and became detached from the principal mass As the stream of gaseous material condensed, it separated into masses of various sizes, which, by further condensation, took the form of our earth and the other planets The earth, first a fiery gaseous mass, liquefied at the center as it cooled, and finally acquired a solid crust over its surface See F R Moulton, *Astronomy* (1932), James Jeans, *The Stars in Their Courses* (1931, reissue, 1947) and *Through Space and Time* (1934)

tidal wave. Although the term is properly applied to the crest of the tide as it moves around the earth, in popular usage it is applied to a destructive wave or to high water not related to tidal phenomena Tidal waves are of two types, seismic sea waves and storm or wind waves Seismic sea waves are caused by submarine earthquakes or volcanic explosions that displace water and result in surface waves usually radiating from the epicenter of the disturbance Such waves may inundate low coastal areas A notable example is the tidal wave that hit the Hawaiian Islands and caused havoc to the town of Hilo in April, 1946 It was caused by an underwater landslide off the Aleutian Islands The wave was felt in the Japanese islands and with greatly diminished force even in Chile Seismic sea waves commonly travel at c 300 mi an hour Tidal waves caused by severe storms may be waves of extra height or sheets of water swept up the coast They occur chiefly in areas subject to tropical storms and bordering on shallow waters In the destructive inundation of Galveston in 1900, a wind velocity of over 100 mi an hour, combined with a very low barometric pressure, brought high water 15 ft above the mean level

tide, alternate rise and fall of waters in oceans and other large bodies of water It is caused by the gravitational effect of the moon and sun and, to a slight degree, of other planets and stars Although the mass of the sun is far larger than that of the moon, the moon, being much closer to the earth, has a tide-producing force about 2¼ times greater, the sun only increases or decreases the effect of the lunar tides The solidity and rigidity of the earth cause it to respond to gravitational attraction as a unit mass in inverse proportion to the square of the distance between its center and that of the moon, but the water on its surface responds as individual particles At a given time there are two high tides on the globe, one (direct tide) on the side facing the moon and the other (indirect tide) on the opposite side, the indirect tide is caused by the greater pull of the moon on the earth, whose center of attraction is c 4,000 mi closer to it than is the water on the far side The earth's rotation and the moon's revolution around the earth, both in the same direction, bring each point on the earth directly opposite the moon once in about 24 hr and 50 min Therefore the average interval between direct and indirect high tides is about 12 hr and 25 min High tide generally does not occur when the moon is directly overhead, a lag or an acceleration (lunar interval) may be caused by other tide-producing forces or by the distribution of land masses or the configuration of the coast or of the ocean floor. Irregularities caused by tide-producing forces other than the moon, e g , by the earth's rotation, by the inclination toward the equator of the orbits of moon and earth, and by other factors, result in three main types of tide semidaily, two high and two low water in a lunar day, daily, one tidal cycle in a lunar day; and mixed, two tidal cycles showing a marked difference in height and duration between both high and low morning and afternoon tides or only between the two high or the two low tides The range of the tide is the difference in level between successive high and low waters The maximum range (spring tide) occurs when the earth, moon, and sun are in line (at the time of the full moon and of the new moon); the minimum range (neap tide) occurs when the sun and the moon are at right angles (first and third quarters of the moon's phases). The tidal range varies also because of coastal configuration and barometric pressure; it may be less than 2 ft. off oceanic islands or may attain a maximum of about 50 ft. in parts of the Bay of Fundy. Tidal currents are caused by the ebb and flow of the tide and are perceptible chiefly in offshore waters and in bays, estuaries, or harbors; they are usually rapid in narrowing estuaries, where they may cause a tidal BORE. Although a relation between moon and tides was early recognized, the first adequate scientific explanation was given by Sir Isaac Newton and was based on his theory of gravitation. Complex mathematical analysis is required to calculate the gravitational effects of celestial bodies and to correlate them with the centrifugal force of the earth's rotation and with other factors The importance of tides for shipping has led to the compilation of tide tables for ports, these predict the time and height of high and low waters and are based on observations corrected for the varying positions of celestial bodies Various contrivances to utilize the power of the tides have been devised, but as yet none has proved widely practicable The plentiful life in tidal waters is an important field of biological study. See H A Marmer, *The Tide* (1926)

tidewater, in U S history, that part of the Atlantic coastal plain extending inland to the area reached by oceanic tides or to the fall line The tidewater or seaboard was naturally settled first and in the Southern colonies became the region of the large plantations and of the important commercial towns The slaveholding tidewater aristocracy, allied with the British colonial officialdom, so completely dominated local government to the detriment of the expanding frontier that the frontier people were several times driven to insurrection, notably in *Bacon's Rebellion* in 17th-century Virginia and in the *Regulator movement* in 18th-century North Carolina This dominance even continued for some time after the American Revolution in certain Southern states, but eventually the well-settled areas beyond the tidewater curbed the practice, and, in the case of West Virginia, used the Civil War as an opportunity to form a new state See Paul Wilstach, *Tidewater Virginia* (1929) and *Tidewater Maryland* (1931)

Tieck, Christian Friedrich (krĭs'tyän frē'drĭkh tēk'), 1776–1851, German sculptor, remembered chiefly for the decorative mythological reliefs in the royal theater, Berlin

Tieck, Ludwig (lōōt'vĭkh), 1773–1853, German romantic poet, dramatist, and novelist In a long career outlasting the romantic school of which he was a leader, he produced a varied list of works, poetic, fantastic, and satirical, made the classic German version (1799–1801) of *Don Quixote*, and completed, with the important help of his daughter Dorothea and her husband Graf Baudissin, the Shakspere translations begun by A W von Schlegel Among Tieck's works are *Der blonde Eckbert* (1796), the *Volksmärchen* [folk tales] (1797) which include *Die schone Magelone*, with interspersed lyrics later set to music by Brahms, the satirical comedy *Der gestiefelte Kater* (1797, Eng tr , *Puss in Boots*, 1913), the verse drama *Genoveva* (1799), the basis of Schumann's opera, the connected stories in *Phantasus* (1812–16, Eng tr , *Tales from the Phantasus*, 1845), numerous *Novellen*, and the historical novel *Vittoria Accorombona* (1840, Eng tr , *The Roman Matron*, 1845) His criticism and satires were a powerful encouragement to the romanticists, but afterwards, especially in his later *Novellen*, he adopted a more realistic standpoint See O F Walzel, *German Romanticism* (1932), study by E H Zeydel (1935)

Tiehling or **T'ieh-ling** (both tyĕ'lĭng'), city (pop 55,656), NE Liaoning prov , China The city has a Buddhist temple (built 890) There is processing of wheat and soybeans

Tiele, Cornelis Petrus (kôrnā'lĭs pā'trŭs tē'lu), 1830–1902, Dutch theologian and author of a number of valuable works on the history of religion. Important is his *Outlines of the History of Religion* (1876, Eng tr , 1878)

Tien Shan (tyĕn' shän') [Chinese, = celestial mountains], mountain system of central Asia, adjoining the Pamirs on the northeast The Tien Shan lie along the northern rim of the Tarim basin in Sinkiang prov , China, and in Russian Turkistan The loftiest peaks are Mt Pobieda (24,406 ft) and Khan Tengri or Tengri Khan (22,945 ft), both on the China-USSR border In the east there are relatively low parallel ranges which extend toward the Gobi Trade is conducted between China and the USSR by several passes, notably the Terek Pass (12,730 ft. high) on the route connecting Kashgar and Samarkand Some of the ALA-TAU ranges are extensions of the Tien Shan. The name formerly appeared as Tian Shan

Tientsin (tĭn"tsĭn', tēn-, tyĕn"-, tĭn"sĭn'), Mandarin *T'ien-ching*, city (pop 1,707,670), in, but independent of, Hopeh prov , China, a port at the junction of the Pei river and the Grand Canal. Although its harbor is poor, Tientsin (which has rail connections with much of China) is the leading port of the N China plain. It is an important manufacturing center, producing glass, porcelain, leather goods, and processed foods Tientsin is strategically situated on the overland route to Manchuria, and it has been a frequent military objective ever since it rose to importance in the late 18th cent. The British and the French occupied it in 1858 and in 1860 and exacted agreements with China which

made Tientsin a treaty port and conceded parts of the city for foreign settlements and garrisons In the Boxer Rebellion (1900) there was a joint foreign occupation. In the Second World War, Japan seized the entire city and held it until the end of hostilities. With the abolition of the last foreign concessions in 1946, Tientsin was completely restored to Chinese sovereignty It fell to the Chinese Communists in 1949.

Tiepolo, Giovanni Battista (jōvän'nē bät-tē'stä tyā'pōlō), 1696–1770, Venetian painter and decorator Born over a century after the death of Veronese, he succeeded in reviving something of the grand manner of the Venetian baroque. His early frescoes in the Labia Palace and the doge's palace won him international fame In 1750 he was summoned to Würzburg, where he decorated the palace of the archbishop with frescoes illustrating the life of Emperor Frederick I and altarpieces depicting the *Ascension of the Virgin* and *Fall of the Angels* In 1763 he went to Madrid, where he passed the remainder of his life and decorated the royal palace with frescoes representing *Spain and Her Provinces* and *The Apotheosis of Spain* In oil he was also prolific Tiepolo's workshare in many European galleries Among them are *Christ in the Garden of Olives* (Vienna), *Holy Family with St Gaetano* (Academy, Venice), and *Madonna in Glory* (Church of the Jesuits, Venice) The Metropolitan Museum has five, and the National Gallery of Art, Washington, D C , has six As pure virtuosity the art of Tiepolo is unsurpassed Lightness and clarity of color, superb draughtsmanship, and scintillating brush work mark his style Particularly in his fresco decorations, where he delighted to send foreshortened deities floating on clouds through sunny skies, his mastery and audacity are amazing It is an art derived from Veronese but with less concern for solid structure and even more surface brilliance Two of Tiepelo's sons, Domenico and Lorenzo, continued his tradition Tiepolo was famous also as a draughtsman and etcher Technically, Goya learned much from him See *Paintings, Drawings, and Prints by the Two Tiepolos*, published by the Art Institute of Chicago (1938)

Tierra del Fuego (tyĕ'rä dĕl fwā'gō), archipelago, area c 18,500 sq mi , off S South America, consisting of one large and several small islands separated from the mainland by the Strait of Magellan (see MAGELLAN, STRAIT OF) A boundary divides it into two sections, the eastern part belonging to Argentina (territory of Tierra del Fuego, capital, Ushuaia) and the larger western part to Chile (see MAGALLANES) The Andes extend through the western part, and the plateau of PATAGONIA continues into the eastern section The coastal plains are bleak, and it grows very cold inland and in the mountains Sheep are raised, timber is exported, and there is some mining The aborigines (called Fuegians) are the Onas, Alakalufs, and Yahgans, their material culture is low The languages of the three tribes probably belong to different families The archipelago was discovered by MAGELLAN in 1520

Tietê (tyĕtā'), river rising in the Serra do Mar, São Paulo state, SE Brazil It flows NW past São Paulo city to the Paraná It has been used for hydroelectric power and canal irrigation, but falls and rapids prevent navigation throughout most of its course

Tietjens, Eunice (Hammond) (tē'junz), 1884–1944, American poet and novelist, b Chicago, educated in Europe She was after 1913 an associate of Harriet Monroe on the magazine *Poetry* Volumes of her own poetry include *Profiles from China* (1917) and *Body and Raiment* (1919), and she also wrote novels and books for children She was married to Paul Tietjens from 1904 to 1914, in 1920 she married Cloyd Head See her autobiographical *The World at My Shoulder* (1938)

Tiffany, Charles Lewis (tĭ'funē), 1812–1902, American merchant, b Killingly, Conn He founded the famous jewelry firm of Tiffany and Company, New York city His improvements in styles of silverware won wide recognition, and when in 1851 he introduced the English standard of sterling silver, the leading silversmiths in America followed his example. Much of his later life was devoted to studying and encouraging the fine arts

Tiffany, Louis Comfort, 1848–1933, American artist and art patron, b New York city, son of Charles Lewis Tiffany After painting in Europe and Morocco, he established an interior-decorating firm in New York, eventually under the name of Tiffany Studios. In this he maintained a large staff of expert designers and specialized in church work, including stained glass windows and mosaics. He established the Tiffany Furnaces, Corona, N Y , for manufacturing stained glass and with a German chemist developed a new expression in iridescent glass, called *favrile* Of this, the Tiffany Furnaces produced lamp shades, vases, and other small forms, as well as glass for mosaics and windows, which won many awards for beauty and craftsmanship. In 1919 Tiffany instituted and endowed the Louis Comfort Tiffany Foundation, deeding to it his rich art library and museum and his summer residence, Laurelton Hall, at Oyster Bay, N.Y., for the resident study of art students. In 1946 the foundation was reorganized, the property liquidated, and provision made for study and travel grants to art students Tiffany is represented in the Metropolitan Museum by a painting, *Snake Charmer at Tangiers*

Tiffin, city (pop. 16,102), co. seat of Seneca co , N Ohio, on the Sandusky river and SE of Toledo Founded c 1820, it was united in 1850 with the village of Fort Ball Glassware, pottery, electrical equipment, dolomite products, and tool-making machinery are made Heidelberg College (Evangelical-Reformed, coeducational, 1850) and an orphanage are here

Tiflis (tĭflĭs, Rus tĭflyēs'), Georgian *Tbilisi* (tublĭ''lēsē', ŭtbŭlyē'sē), city (pop 519,175), capital of Georgian SSR, on the Kura river and at the southern end of the Georgian Military Road It is an important communications center and the economic and cultural capital of Transcaucasia Among its chief industrial products are machinery and silk and cotton textiles Tobacco, food, and wine are processed here Tiflis has a university (founded 1918), a polytechnic school, a medical school, an academy of fine arts, an opera, and several theaters, and is the seat of the Georgian Academy of Sciences The city, first mentioned in the 4th cent , became the capital of Georgia in the 5th cent Its situation on the natural trade route between the Caspian and the Black Sea early gave it commercial prominence but also exposed it to numerous raids by the Huns, Khazars, Persians, Byzantines, Arabs, Mongols, and Seljuk and Ottoman Turks It flourished (12th–13th cent) during the height of Georgian power Last sacked (1795) by the Persians, it passed (1800-1801) to Russia From 1917 to 1921 Tiflis was the capital of an independent Georgia, and from 1921 to 1936 it was the capital of the former Transcaucasian Soviet Federated Socialist Republic It underwent reconstruction and modernization in the late 1930s Hemmed in by spurs of the Greater and Lesser Caucasus, Tiflis rises in terraces from both banks of the Kura In its old section, with picturesque streets and bazaars, are the hot sulphur springs that gave Tiflis its name (*Tbilisi* meaning "warm springs" in Georgian) Old Tiflis, however, is becoming gradually absorbed by the modern city, which has wide thoroughfares (notably Rustaveli Boulevard), fine parks, and handsome modern buildings Among the many churches are the Zion Cathedral, first built in the 7th cent , the 6th-century church of St David, and the 13th-century Metskh Church (now an art museum) There also are ruins of an old fortress Mt David, a favorite excursion point, dominates the city and is accessible by funicular railway It was at Tiflis that Stalin studied theology and entered the revolutionary movement

Tifton, city (pop 5,228), co seat of Tift co , S central Ga , ESE of Albany, settled 1872, inc 1890 Tobacco, cotton, and truck are marketed, and meat is packed Tifton has a state junior college and a state agricultural experiment station

tiger, mammal of the cat family, confined to Asia. Its coat is orange yellow striped with black, and it has no mane Occasionally black and albino specimens occur Male tigers range from about 8 ft to over 10 ft in total length, and some weigh more than 500 lb Tigers are chiefly forest and jungle animals, they hunt their prey (deer, wild pigs, cattle, and smaller animals) mostly at night Man-eating tigers are usually old and unable to capture wild animals The tiger is less gregarious than the lion It seldom breeds in captivity, although it has produced sterile offspring when crossed with the lion The Indian or Bengal tiger is the most numerous. Found in smaller numbers are the Manchurian or Mongolian, Korean, Caspian or Persian, Javan, and Bali tigers See R G. Burton, *The Book of the Tiger* (1933)

tiger lily: see LILY

Tighina, Moldavian SSR see BENDER

Tiglath-pileser I (tĭ'glăth-pūlē'zur, -pĭ), d c 1102 B C , king of ancient Assyria He subdued revolted provinces and conquered tribes in N Syria, Commagene, Cappadocia, Armenia, and Kurdistan He was a great hunter, rebuilt temples and palaces, and records that he repaired all the irrigation works throughout the land In retaliation for an invasion of Assyria he invaded Babylonia and captured the two Sippars and Babylon

Tiglath-pileser III, d 728 B C , king of ancient Assyria He seems to have usurped the throne in 745 B C. He bore the alternative name of Pul, by which he was known in biblical history (2 Kings 15 19) He subdued the Aramaean tribes in Babylonia, and constituted a new Assyrian province on his own borders His general Ashur-danani campaigned against the Medes (farther east) and took forces as far as the Caspian Sea. The king defeated Ararat and became master of Syria He was appealed to by Ahaz, king of Judah, for assistance against Pekah of Israel and Resin of Damascus and responded by defeating his enemies and capturing Damascus. A revolt in Babylonia was crushed by Tiglath-pileser, who became king of Babylon in name as well as in deed He proved himself a great administrator and may justly be considered the most remarkable figure in Assyrian history He is referred to in the Bible as Pul or Tilgath-pilneser See 2 Kings 15; 16, 1 Chron 5 6,26, 2 Chron. 28 20

Tigranes (tĭgrā'nēz), c 140 B C –55 B C , king of Armenia (c.96 B C –55 B C), called also Tigranes I and Tigranes the Great By an alliance with his father-in-law, MITHRIDATES of Pontus, he was able to extend his conquests across Asia Minor He founded Tigranocerta as the capital of his large empire He and Mithridates were, however, at war with Rome, and in 69 B C LUCULLUS captured Tigranocerta POMPEY with the aid of the king's son vanquished Tigranes, who lost all his conquests and had to pay tribute to Rome for Armenia itself

Tigré: see ETHIOPIA

Tigre Island (tē'grā), small island, off Central America, in the Gulf of Fonseca On it is AMAPALA, the Pacific port of Honduras

Tigris (tī'grĭs), river, SW Asia, rising in the Taurus mts in E Turkey and flowing c 1,150 mi , mostly in Iraq, to join the EUPHRATES river, with which it forms the SHATT EL ARAB In the Bible the Tigris is called the Hiddekil (hĭ'dĕkĭl) Gen 2.14; Dan 10 4 On its southeast course through Iraq it flows past Mosul, Tikrit, and Baghdad In antiquity there were on its banks some of the great cities of Mesopotamia, including Nineveh, Ctesiphon, and Seleucia The Tigris is of greater volume than the Euphrates, and it is of considerable use for commerce Rafts, floated by inflated skins, carry much of the trade above Mosul, while between Mosul and Baghdad small steamers ply It is connected by ancient canals with the Euphrates, and it furnishes much of the water for irrigation between the two rivers The tributaries of the Tigris, notably the Great Zab and the Little Zab, all flow in from the east, most of them arise in Iran

Tihama: see TEHAMA

Tihwa, China see URUMCHI

Tijou, Jean (zhä' tēzhōō'), fl 1689–c 1711, French designer of ironwork, known exclusively by his works in England The dates of his birth and death are unrecorded, as are the facts of his training and career He seems to have come to England in 1689 when William and Mary, his lifelong patrons, commenced their reign The purely French Renaissance type of design which he introduced greatly influenced English smithcraft and was perpetuated by his apprenticed artisans and by his *New Book of Drawings* (1693), reproduced in 1896 by J S Gardner with an account of Tijou's life His notable creations are various gates and railings adorning the grounds of Hampton Court Palace and the screens and grilles of St Paul's Cathedral executed under Sir Christopher Wren His choir aisle gates and altar rails in St Paul's rank among England's finest specimens of ironcraft They show his characteristic and lavish use of rosettes, figures, and embossed leafage

Tijuana (tēhwa'nä), city (pop 16,486), Lower California, NW Mexico Just south of the U S border, Tijuana became famous in the prohibition era as a wide-open town It is a popular resort on a semi-arid plain and is noted for the race tracks and gambling casinos at Agua Caliente The name formerly occurred as Tia Juana

Tikal (tēkäl'), ruins of a city of the MAYA, N central Petén, Guatemala The largest and probably the oldest of the Maya cities, it has the tallest Mayan structure (229 ft) Tikal, belonging to the era of the Old Empire, produced some of the best examples of wood carving

Tikvah (tĭk'vu) [Heb ,=expectation] or **Tikvath** (-vāth) [Heb ,=obedience or expectation] **1** Huldah's father-in-law 2 Kings 22 14, 2 Chron 34 22 **2** Jahaziah's father, Ezra 10 15

Tilburg (tĭl'bûrg), municipality (pop 113,090), North Brabant prov , S Netherlands A textile center, it also manufactures clothing, dyes, textile machinery, and leather

Tilbury (tĭl'bĕrĭ, tĭl'burē), town (pop 2,155), S Ont , SW of Chatham Automobile bodies, bricks, and tiles are manufactured here

Tilbury (tĭl'bĕrĭ), former urban district (1931 pop 16,825), since 1936 part of Thurrock, Essex, England, on the north bank of the Thames opposite Gravesend Tilbury Fort originated under Henry VIII, it was later rebuilt and strengthened, Queen Elizabeth, in 1588, reviewed troops here when the Spanish Armada threatened England The Tilbury docks, begun in 1886, are included in the Port of London and are the terminus of several passenger steamship lines The town and docks were heavily bombed in 1940–41

Tilden, Samuel Jones, 1814–86, American presidential candidate in 1876, b New Lebanon, Columbia co , N Y He attended Yale, was graduated from the law school of the Univ of the City of New York (later New York Univ.) in 1841, and was admitted to the bar the same year Tilden was an eminently successful lawyer, with many railroad companies as clients He became a strong partisan of Martin Van Buren and the BARNBURNERS in New York Democratic politics Unlike other "free-soil" Democrats of the 1850s, he did not join the new Republican party and later disapproved of the Civil War As state Democratic chairman after 1866 he sought

reform and gathered much of the convincing evidence of corruption which broke the notorious TWEED RING in New York city Elected governor of New York (1874), he further enhanced his reputation for reform by his successful attack on the corrupt "Canal ring" Tilden thus became the outstanding Democrat in the nation, and in 1876 his party nominated him for President. Rutherford B. HAYES was his Republican opponent The campaign resulted in the most famous election dispute in American history Tilden, it seems clear now, actually won, but there were double and conflicting returns from Florida, Louisiana, and South Carolina and a contest over one Oregon elector To settle the unusual question, not covered by the Constitution, Congress created an electoral commission of five Senators, five Representatives, and five Supreme Court Justices Eight were Republicans and seven were Democrats, as plans for one independent failed The commission, by partisan division, awarded (March 2, 1877) Hayes all the disputed votes, making his total a majority of one (185 to 184) Tilden, a high-minded though not a particularly warm-hearted man, discouraged further contest and gracefully retired from public life, but, quite justifiably, always held that he had been robbed of the presidency The settlement was followed by the return of local government to the Southern states and the end of RECONSTRUCTION Tilden left a large sum toward establishing a free public library in New York city, and in 1895 this trust was joined with the Astor and Lenox Libraries to form the New York Public Library See biographies by John Bigelow (1895) and A C Fluck (1939), P L Haworth, *The Hayes-Tilden Disputed Presidential Election of 1876* (1906, new ed , 1927)

Tilden, Sir William Augustus, 1842–1926, English chemist He was professor (1894–1909) at the Royal College of Science (now Imperial College, Univ of London) and is known for his researches in organic chemistry and especially for his study of the relation of specific heat to atomic weight His works include texts in chemistry and *Chemical Discovery and Invention in the Twentieth Century* (1917, 6th ed , 1936)

Tilden, William Tatem, Jr., 1893–, American tennis player, b Philadelphia, grad Univ of Pennsylvania, 1922 He developed into a brilliant, versatile tennis player, and from 1913 he won several doubles titles in the United States He became one of the foremost tennis players of the world by winning the U S singles championship eight times (1920–26, 1929) and the British singles crown three times (1920–21, 1930) while taking several other national tennis crowns throughout the world "Big Bill," as he was called, was the leading member of the American team that won the Davis Cup and was chiefly responsible for U S retention of the cup until 1926 After turning professional in 1931, Tilden won the professional singles championship in 1931 and 1935 In 1945, at the age of 52, Tilden, along with Vincent Richards, won the professional doubles championship He wrote numerous books on tennis *Aces, Places, and Faults* (1938) and *My Story* (1948) are autobiographical

Tilden, village (pop 1,040), S Ill , SE of St Louis, inc 1901

tile, one of the ceramic products used in building, to which group brick and terra cotta also belong The term designates the finished baked clay—the material of a wide variety of units used in architecture and engineering, such as wall slabs or blocks, floor pavings, coverings for roofs, and drainage pipes In these products the distinction between terra cotta and tile is often vague Also, any small flat slab of ceramic material used for the veneering of wall, floor, or other surfaces is called a tile The making of tiles, an evolution from the primitive uses of clay for pottery, has existed from the earliest times of which there are any architectural traces at all As soon as the art of glazing had been discovered, it became possible to use the thin slabs of hard-burnt clay, decorated in colors, as a polychromatic adjunct in architecture Their purely decorative use as a facing for walls distinguishes them from other ceramic products, such as brick, terra cotta, and roofing units, which are essentially structural Colored glazed tiles assigned to 4700 B C have been found in Egypt However, for lack of fuel, the Egyptians produced no extensive architectural ceramics It was in the Tigris-Euphrates basin of W Asia that ancient ceramics were furthest perfected Large wall surfaces were faced with bas-relief decorations executed in enameled tiles, resembling modern bricks in shape, the most noted discoveries being those of the palace at Khorsabad (722–705 B C) in Assyria, near ancient Nineveh, and the Ishtar Gate (about the 7th cent B C) in Babylon From these regions ancient Persia acquired ceramic techniques which bore fruit in the fine bas-reliefs of animals and archers in the palaces of Susa and Persepolis (5th cent B C) The Persians still remain masters in the making and use of tile decoration Unsurpassed masterpieces of design were produced from the 12th to the 16th cent Among noted examples are the 15th-century Blue Mosque at Tabriz and many structures at Isfahan and Shiraz The earliest tile sewer pipes are those excavated at Crete, in the palace of Cnossus (c 1800 B C). The Greeks also employed tile drains and conduits and tiles for roofing Their architectural ceramics were mostly confined to cornices and cornice adornments and are customarily classed as terra cotta The Romans made wide use of floor tiles of various shapes and of floor mosaics, as well as a variety of wall tiles, including a type similar to modern hollow tiles, which were used in bathing establishments for the passage of warm air and smoke and as insulation But their tiles received no colored and glazed decoration It is in the hands of the Moslem peoples that tile was brought to its greatest splendor as a decorative medium, and in the countries which came under their influence the tradition of a brilliant ceramic art is still active today Developed to the highest opulence of color ornament and surface, tiles peculiarly suited the Eastern love of decoration, and Moslem architecture is distinguished by the lavish tile incrustations upon the exterior surfaces of walls, domes, and minarets, as well as in rooms, mosques, and patios In Spain ceramics, firmly established by the 11th cent , became an integral element of architectural decoration, chiefly for floors and wainscots, their richness notably exemplified in the Alhambra at Granada From Spain the art was transmitted not only to Italy and Holland and from there to England, but also into Mexico by the Spanish conquerors, who developed (16th–18th cent) a distinctive style, especially applied in the external decoration of domes At Delft, Holland, tile manufacturing began early in the 16th cent , and by 1670 numbers of factories were making the celebrated blue-and-white Delft tiles, which enjoyed great popularity in N Europe and were exported to the American colonies for fireplace facings In Holland tiles were used to cover large wall spaces in rooms, being often arranged to form complete pictorial murals In Germany, Austria, and Switzerland tiles were used in building heating stoves as early as the Gothic period and into the 19th cent , and numbers of these, decorated and beautifully executed, still remain In modern times the vastly increased use for tiles, as in bathrooms, kitchens, and swimming pools and in industrial buildings has created an extensive tile industry Great technical advances have been made in composition and manufacture, while the variety of types is without number There has been a revival of handmade tiles, but commercial tiles are made by machine processes, the clay being dried and ground to a powder and then packed into steel dies, submitted to heavy pressure, and thoroughly vitrified

Tilgner, Viktor (vĭk'tôr tĭlg'nur), 1844–96, Austrian sculptor His portrait busts—including those of Emperor Francis Joseph and his wife—won him a reputation in Vienna Later Tilgner turned to decorative sculpture of a baroque tendency He made decorations for the natural history museum and the Hofburg Theater, Vienna, fountains for Pressburg and Vienna, and several monuments, including those to Mozart at Vienna and to Joseph Werndl at Steyr

Tillamook (tĭl'umōōk), city (pop 2,751), co seat of Tillamook co , NW Oregon, near the coast and the head of Tillamook Bay and W of Portland, inc 1891 It is the trade center of a fishing, lumber, and dairy region The Tillamook County Pioneers' Museum, with historical material on the Oregon country, is here

Tillamook Indians, tribe of North American Indians of the Salishan linguistic stock In the early 19th cent they lived on Tillamook Bay in NW Oregon They then numbered some 2,200 By 1849, however, they had been reduced to some 200 Their culture was of the California area but with some Pacific Northwest Coast area traits

Tillett, Benjamin (tĭl'ĭt), 1860–1943, English labor organizer With Tom Mann and John Burns, he led the dock strike of 1889 Tillett helped found several labor organizations, including the Dockers' Union and the General Federation of Trade Unions He was a Labour party member of Parliament (1917–24, 1929–31) He was the author of *Trade Unions and Socialism* (1894) and *Memories and Reflections* (1931)

Till Eulenspiegel see EULENSPIEGEL, TILL

Tilley, Sir Samuel Leonard, 1818–96, Canadian statesman, b New Brunswick He started his own business in St John after serving as clerk to an apothecary He entered the New Brunswick legislature in 1850 as a Liberal and became premier of the province in 1861 Deeply interested in a united Canada, Tilley was an important figure at the conferences (1864) to discuss confederation and carried the project in the New Brunswick elections of 1866 He attended (1866) the Westminster Conference at which the provisions of the British North America Act (1867) were drafted, and in 1867 he was invited by John A Macdonald to join the dominion cabinet, which he entered as minister of customs He was briefly in 1873 minister of finance, but with the downfall of Macdonald's government, Tilley again assumed the lieutenant governorship of New Brunswick As minister of finance (1878–85) in the second Macdonald government, he formulated the protective tariff plan known as the National Policy. Ill-health forced his resignation from the cabinet in 1885 He was again lieutenant governor of New Brunswick, a post he held until his death See biography by James Hannay (new ed , 1926)

Tillier, Claude (klōd' tēlyā'), 1801–44, French novelist He is known for one satirical novel, *Mon Oncle Benjamin* (1842), more read in Germany than in France Written with wit, the novel satirizes the social life of a small French town at the end of the 18th cent

Tillman, Benjamin Ryan, 1847–1918, U S Senator from South Carolina (1895–1918), b. Edgefield co , S C A farmer in the hard years of Reconstruction, he became the leader of the upcountry whites in South Carolina and fostered their discontent with the ruling tidewater "Bourbon aristocracy" Supported by the Farmers' Alliance, he was triumphantly elected governor in 1890 and served two terms (1890–94) His victory meant the downfall of Wade HAMPTON (1818–1902) Tillman supported agricultural education (Clemson and Winthrop colleges were opened) and legislation regulating railroads He dominated the state constitutional convention of 1895, which drastically restricted the suffrage with specific clauses aimed at the Negro Although many of his measures reflected the influence of the POPULIST PARTY, the reactionism of the "Bourbons" made him seem more radical than he actually was In 1894 Tillman defeated Matthew C BUTLER for the U S Senate, where he allied himself with the Populists against the currency program of President Grover CLEVELAND He vigorously attacked Cleveland in the Democratic convention of 1896 and gave support to William Jennings Bryan and free silver The violence of his opinions earned him the nickname of Pitchfork Ben He usually opposed Theodore Roosevelt, but championed the Hepburn Rate Bill for railroads In general he supported Woodrow Wilson's administration, particularly Josephus Daniels's naval expansion program. See biography by F B Simkins (1944)

Tillotson, John (tĭl'utsun), 1630–94, archbishop of Canterbury (1691–94) He was ordained in 1661 At the Savoy Conference (1661) he was present as an auditor on the side of the Presbyterians, but upon the passing of the Act of Uniformity (1662) he yielded to its requirements In 1663 he became rector of Kedington, Suffolk, and preacher at Lincoln's Inn in 1664 In 1670 he was made a prebendary of Canterbury, and in 1672 dean He was chaplain to Charles II and was admitted to the special favor of William and Mary He became (1689) dean of St Paul's and was persuaded in 1691 to accept the archbishopric of Canterbury, left vacant when the nonjuror Sancroft was deposed *The Rule of Faith* (1666), an answer to an English clergyman who had seceded to the Church of Rome, was published with Tillotson's *Sermons* in an edition by Ralph Barker (14 vols , 1695–1704) A biography by Thomas Birch accompanied his *Works* (3 vols , 1752)

Tillsonburg (tĭl'sunbûrg), town (pop 4,002), S Ont ENE of St Thomas, in a tobacco, dairy, and fruit-growing area Agricultural implements, bricks, and shoes are made here

Tilly, Johannes Tserklaes, count of (yōhä'nus tsĕr'klās' tĭl'ē), 1559–1632, imperialist general in the THIRTY YEARS WAR A younger son of a noble family of Brabant, he served under Alessandro FARNESE and against the Turks before entering the service of MAXIMILIAN I of Bavaria After the outbreak of the Thirty Years War, he commanded the army of the Catholic League in putting down the Bohemian forces at the White Mountain (1620) In the next phase of the war, centering about the Palatinate, Tilly was chief commander against MANSFELD, CHRISTIAN OF BRUNSWICK, and others He won battles at Wimpfen and Höchst (1622), and also won at Stadtlohn (1623) After Christian IV of Denmark entered the war, Tilly and WALLENSTEIN were the chief generals to oppose him In 1626, aided by some of Wallenstein's troops, Tilly was victorious at Lutter When Wallenstein was removed from command of the imperialist army in 1630, Tilly was given command of that army also, but against Gustavus II (Gustavus Adolphus) of Sweden he was not successful On May 20, 1631, Tilly and Pappenheim stormed Magdeburg For the resultant long-remembered massacre Tilly was not actually responsible Later in 1631 Tilly was thoroughly defeated by Gustavus Adolphus at Breitenfeld The next year he was again defeated by Gustavus Adolphus at the crossing of the Lech, where Tilly was mortally wounded

Tilman, Harold William, 1898–, English mountaineer. Between periods of service in both world wars he did farming in Kenya In 1936 he participated in the successful expedition to the top of Nanda Devi, the highest summit yet reached, and he led the Everest expedition of 1938 He wrote *The Ascent of Nanda Devi* (1937), *Snow on the Equator* (1938), *When Men and Mountains Meet* (1947), and *Mount Everest, 1938* (1948).

Tilon (tī'lŏn), descendant of Judah. 1 Chron 4.20.

Tilsit (tĭl'sĭt), city (1939 pop 58,468), former East Prussia, a port on the Niemen, NE of Königsberg It was transferred (1945) to Russian administration and was renamed Sovetsk or Sovietsk (both sŭvyĕtsk') It produces leather, a well-known cheese, and lumber Tilsit developed around a castle built (1408) by the Teutonic Knights Here, after having won the battle of Friedland, Napoleon I met Emperor Alexander I of Russia on June 25, 1807, on a raft in the Niemen, and agreed on the general terms of a peace treaty King Frederick William III of Prussia, Alexander's ally, was only later drawn into negotiations, which led to the treaties of Tilsit of July 7 and July 9, 1807 By the first treaty, France made peace with Russia, which recognized the grand duchy of Warsaw and which secretly promised to mediate between France and England, if England should reject the mediation, Russia was to ally itself with France At the same time France gave Russia a free hand in its design on Finland, then a Swedish possession The Russo-French alliance proved tenuous and collapsed altogether in 1812 In the second treaty Napoleon drastically reduced Prussia, which lost all its territory W of the Elbe to France and most of its Polish provinces to the grand duchy of Warsaw Danzig was made a free city, the Prussian army was reduced to 42,000 men, several of the chief Prussian fortresses were to be garrisoned by French troops, and Prussia was to join in the Continental System against England Prussia thus was reduced to virtual vassalage to France, from which it freed itself only in 1813

Tilton, Theodore, 1835–1907, American journalist b New York city After he worked for the New York *Observer* he was (1863–71) editor in chief of the *Independent*, a Congregationalist weekly He later managed (1872–74) his own weekly, the *Golden Age* A popular lyceum speaker, Tilton supported various social reforms such as woman suffrage He and his wife were active parishioners of Henry Ward BEECHER, whom Tilton sued (1874) for alleged adultery with Mrs Tilton The suit lasted for months and ended in the jury's disagreement In 1883 Tilton went to Europe, where he lived for the remainder of his life His publications include a romantic novel, *Tempest Tossed* (1873), and several volumes of poetry

Tilton 1 Village (pop 1,486), E Ill, near Danville, inc 1884 **2** Town (pop 1,748), S central N H, on the Winnipesaukee river and E of Franklin, settled 1768, set off from Sanbornton and inc 1869 Tilton School for boys is here Northfield, across the river, is allied economically with Tilton There are textile mills

Tiltonville or **Tiltonsville,** village (pop 2,360), E Ohio, on the Ohio and S of Steubenville, named Grover until 1930

Timaeus (tĭmē'ŭs), fl 400? B C, Greek Pythagorean philosopher and astronomer of Epizephyrian Locris, Italy, said to have been a teacher of Plato A cosmological treatise in Dorian Greek is ascribed to him He owes his fame to Plato, who gave him the title role in one of the dialogues

Timaeus, c 346–c 250 B C, Greek historian of Tauromenium (Taormina), Sicily Son of the tyrant of the city, he was banished by Agathocles c 312 and lived for 50 years in Athens, where he wrote a history of his native land This history, now lost except for fragments which have survived as quotations in other works, covered the period from earliest times to the events of his own lifetime The work was severely criticized by Polybius, but highly regarded by later historians See J B Bury, *Ancient Greek Historians* (1909)

Timaeus, in the Bible, father of BARTIMAEUS

Timan (tyĭmän'), mountain ridge, c 350 mi long, Komi ASSR, N European RSFSR, separating the basin of the Vychegda and Mezen rivers in the west from that of the Pechora in the east It extends from the upper Vychegda NNW to Chesha Bay and is continued on Kanin Peninsula Consisting of an old sedimentary formation, it rises to 2,020 ft

Timanthes (tĭmăn'thēz), c 400 B C, Greek painter of Sicyon, a contemporary of Parrhasius and Zeuxis His masterpiece, *Sacrifice of Iphigenia*, was considered one of the great ancient paintings Pliny speaks of his skill in depicting emotions

Timaru (tĭ'mŭrōō), borough (pop 18,305, metropolitan pop 19,596), South Island, New Zealand, on the east coast Primarily a grain center, it is also a port, shipping frozen foods

timber: see LUMBER and WOOD

timber line, line beyond which trees do not grow It depends upon conditions affecting temperature —altitude, latitude, winds, and exposure—and is believed to be limited by an isotherm of 50°F for the warmest month The line is at allower altitude in high latitudes, e g, lower in the Temperate Zone than in the Tropical Zone and lower on the shady side of mountains.

timbrel: see TAMBOURINE

Timbuktu (tĭm'bŭktōō', tĭmbŭk'tōō), Fr. *Tombouctou*, city (pop. c.7,000), French Sudan near the Niger It is important in the caravan trade with the cities bordering the Sahara on the north. It was settled in 1087, and it flourished as a commercial mart for Negro tribes over a wide area and as a center of Moslem culture The fame of its gold and slave market spread to Europe Its prosperity was destroyed by a Moroccan army that took Timbuktu in 1591 In the 19th cent it changed hands frequently, and it was little more than a vast ruin when the French seized it in 1893

time, a concept that has been variously defined at different periods and from different aspects, e g, philosophical, physical, psychological, and biological Although no agreement has been reached, a distinction is commonly made between measurable time, determined by the motion of bodies through space, and experienced duration Unresolved problems regarding time include its reality or unreality (associated with its objectivity or subjectivity), the distinction between time and eternity, and the nature of time (whether continuous or atomistic) In the popular view, time is commonly regarded as a real entity that flows uniformly, a distinction is made between past, present, and future and between before and after, and the possibility of absolute simultaneity of events is recognized However, most physicists today regard simultaneity in different moving systems as relative to the motion of the systems and of the observer The intuitive view of time as an independent entity has been superseded in physics by the concept that time and space are inseparable aspects of a four-dimensional universe (see SPACE—TIME) Although methods of measuring time have varied through the ages, all are based on some recurring phenomenon, e g, the apparent daily motion of the sun, the recurrence of the seasons, or the phases of the moon The accuracy of the measurement depends on the constancy of the interval or period of recurrence The most uniformly constant interval is believed to be the apparent daily period of a fixed star (the interval between successive passages of the star across the meridian at the point of observation), this is the basis of sidereal time which is used by astronomers for many calculations However, because the activities of man are geared to the succession of day and night, the time unit most commonly employed since prehistoric times is the apparent daily circuit of the sun, from which solar time is reckoned Both the sidereal and the solar day are based on the rotation of the earth on its axis One complete rotation of the earth taken about 4 min longer in reference to the sun than to a fixed star, there is about one more of the shorter sidereal days in the sidereal year than of solar days in the solar, or tropical, year Because of the precession of the equinoxes, the sidereal year is about 20 min longer than the solar year Divisions of the day are arbitrarily selected units—hours, minutes, and seconds These are reckoned by artificial timekeepers based on some device such as the swing of a pendulum, the gradual release of a spring (see CLOCK), or the passage of sand or water through an orifice The setting and synchronization of mechanical timekeepers depend ultimately on observations of celestial bodies Solar days are not uniform in length, differences are caused by the inclination of the earth's axis and by variations in the speed of the earth's motion in its orbit around the sun Since the rhythm of mechanical timekeepers is constant, modern time reckoning is based on the average (mean) solar day Solar noon may be about 15 min later than mean solar noon in February, or about 16 min earlier in October Since the sun apparently travels toward the west, noon is later at a given place on the earth's surface than it is at more easterly points, local time varies 4 min for each degree of longitude To lessen the inconvenience, especially to railroads, resulting from local time variations, standard time was accepted by most nations at an international conference held in Washington, D C, in 1884 Standard time is based on the mean solar day as reckoned by the Royal Observatory of Greenwich, England, the meridian of longitude at Greenwich is accepted as the prime (0°) meridian The earth's 360° circumference is divided into 24 time belts or zones of 15°, each belt differing from Greenwich time by an integral number of hours Although theoretically the belts are delimited by meridians of longitude, in practice the boundaries are modified for local convenience The continental United States falls into four standard belts known as Eastern, Central, Mountain, and Pacific, the day in these belts starts respectively 5, 6, 7, and 8 hr later than at Greenwich It follows, therefore, that a radio program originating in New York at 8 o'clock Eastern Standard Time will be received in San Francisco at 5 o'clock Pacific Standard Time To avoid confusion in dates, the calendar day is accepted as beginning at an arbitrary line (see DATE LINE, INTERNATIONAL) in the Pacific Ocean See also CALENDAR and HOROLOGY

time, in music see TEMPO, METER, RHYTHM See also METRONOME and MUSICAL NOTATION

time space: see SPACE TIME

Timgad (tĭm'găd), anc *Thamugadi*, ruined city, Algeria, S of Constantine It is called the Pompeii of North Africa because of the extensive remains of the Roman city founded here by Trajan in A.D 100. This was destroyed by Berbers in the 7th cent. and was unknown until excavations were made in 1881 Ruins include a triumphal arch, a theater, a library, and a forum

Timiskaming (tĭmĭ'skŭmĭng) or **Témiscamingue** (tāmēskämĕg'), town (pop 2,168), SW Que, at the south end of Lake Timiskaming and NE of North Bay, Ont, inc 1920 It is a trade center for a dairy and cattle area, with gold, silver, cobalt, and arsenic mining near by The town was originally called Kipawa

Timiskaming, Lake, SW Que and E Ont., an expansion of the Ottawa river extending 62 mi NSE from New Liskeard to Timiskaming There are several islands in the north part of the lake, and Haileybury is on its northwest shore The surrounding area is rich in minerals

Timisoara (tĭmēshwä'rä), Hung *Temesvár* (tĕ'meshvär), city (pop 111,987), W Rumania, chief city of the Banat (the former BANAT OF TEMESVAR) A major commercial and industrial center and a railroad hub, it produces woolen and cotton textiles, electric appliances, rolling stock, and a number of other manufactured articles It is a Roman Catholic and an Orthodox episcopal see, and it has a university (founded 1945), a polytechnical school, and other institutes of higher education The population includes a large Hungarian and a German minority An ancient Roman settlement, Timisoara came under Magyar domination in 896 and was attached (1010) to Hungary Here in the 15th cent John Hunyadi had his castle (now a barracks) An important frontier fortress, Timisoara was held by the Turks from 1552 until its deliverance in 1716 by Eugene of Savoy The Treaty of Passarowitz (1718) formally restored it to Hungary It passed to Rumania in the Treaty of Trianon (1920) The inner city is surrounded by boulevards, which have taken the place of the former ramparts The Roman Catholic cathedral and episcopal palace, the city hall, and other important buildings date from the 18th cent

Timmermans, Felix (fā'lĭks tĭ'murmans), 1886–, Flemish novelist Among his most successful works are *Pallieter* (1916, Eng tr, 1924), the story of a lusty Fleming of gigantic appetites, and *Pieter Breughel* (1928, Eng tr, *Droll Peter*, 1930), a novel about the elder Pieter Bruegel

Timmins, town (pop 28,790), E Ont, on the Mattagami river and NNW of Sudbury It is the commercial center of the rich Porcupine gold-mining district (gold was discovered here in 1909), where are the Dome, Hollinger, and McIntyre mines The town's industries include pulp, paper, and lumber mills and breweries

Timmonsville, town (pop 1,979), NE S C, just SW of Florence, in a tobacco, cotton, and dairy area

Timna or **Timnah** (both tĭm'nu) [Heb, =portion] **1** Concubine of Esau's son Eliphaz Gen 36 12 **2** Daughter of Seir Gen 36 22, 1 Chron 1 39 She may be the same as **1** **3** Duke of Edom Gen 36 40, 1 Chron 1 51

Timnah (tĭm'nu) or **Timnath** (tĭm'năth) [Heb, =portion] 1 Hill town, S Palestine Joshua 15 57 **2** Place associated with Judah Gen. 38 12 It may be the same as **1** or **3** **3** Town associated with Samson's "Timnite" wife and also with Ahaz Joshua 15 10 19 43 Judges 14 1,2,5, 15 6. Thimnathah 2 Chron 28 18 This may be the same as TIMNATH-HERES

Timnath-heres(tĭm'năth-hē'rēs) or **Timnath-sereh** (-sē'rĕh) [Heb, =portion of abundance], city, central Palestine, where Joshua was buried Joshua 19 50, 24 30, Judges 2 9 This may be the same place as TIMNAH **3**

Timoleon (tĭmō'lēun), d after 337 B C, Greek statesman and general, noted as the scourge of tyrants A Corinthian, he heard the appeal of the citizens of Syracuse to the mother city, Corinth, for aid against DIONYSIUS THE YOUNGER Timoleon went (344 B C) with a force to fight Dionysius and his allies, Hicetas, the tyrant of Leontini, and the Carthaginians He drove Dionysius and Hicetas from Syracuse, set up a democratic government, and brought new Greek colonists He defeated Hicetas and a large Carthaginian force, but made peace with Carthage c 338 B C He also ousted the tyrants from the other Sicilian cities before, as he was going blind, he retired to private life in 337

Timon (tī'mun), one of the seven deacons Acts 6 5

Timon of Athens, fl after 450 B C, semilegendary Greek misanthrope Disgusted when friends abandoned him after he lost his wealth, he retired from the society of all except ALCIBIADES, who would, he thought, be the ruin of Athens Plutarch and Lucian portray his character, which is also portrayed in the play *Timon of Athens*, by most scholars attributed to Shakspere

Timon of Phlius (flī'us), c 320–c 230 B C, Greek skeptic philosopher He was a disciple of Pyrrho of Elis and became a rhetor at Chalcedon and Athens After Timon's death the skeptics lost their identity, as they tended to be absorbed into the Academy

Timor (tē'môr), island, area 13,071 sq mi, Indonesia, largest and easternmost of the Lesser Sundas It is long, narrow, and almost wholly mountainous The natives, who are of Malay and Papuan stock, are predominantly Christian. The Portuguese were the first Europeans to establish themselves in

Timor; their claim to the island was disputed by the Dutch, who arrived in 1613. The border between the Dutch and Portuguese territories was settled by treaty in 1859 and finally made effective in 1914 In the Second World War, Timor was occupied in early 1942 by the Japanese With the creation of the United States of Indonesia in Dec., 1949, Dutch Timor became Indonesian territory The colony of Portuguese Timor (7,383 sq mi; 1940 pop. 438,350) comprises the eastern half of the island and the small territory of Oe-Cusse (or Okusi Ambeno) in the western Indonesian section The capital and chief port is Dili Copra, tobacco, coffee, and sandalwood are the principal products Indonesian Timor (5,765 sq mi, 1930 pop 350,064) comprises the western half of the island, with the capital at Kupang The chief products are fish, sandalwood, copra, cattle, and hides

Timorlaut, Indonesia see TANIMBAR ISLANDS

Timoshenko, Semyon Konstantinovich (sēmyôn' kŭnstăntē'nŭvĭch tyĭmushĕn'kō), 1895–, Russian marshal He rose in the civil war of 1917–20 as a brilliant cavalry commander, took much of the credit for the Russian victory over Finland in 1940, and achieved great renown in the Second World War Having replaced BUDENNY on the southern front, he recaptured (Nov, 1941) Rostov from the Germans—their first serious defeat in Russia—and helped to relieve Moscow Later in the war he held commands on the northwest front (1942), in the Caucasus (1943), and in Bessarabia (1944)

Timotheus (tĭmō'thēŭs) see TIMOTHY, SAINT

Timotheus (tĭmō'thēŭs), c 450–357? B C, Greek poet and musician of Miletus He was an innovator in music, generally in the direction of elaboration and complexity He added a string to the cithara His dithyrambs and nomes, fragments of which remain, were redundant and prolix

Timotheus, fl c 376 B C, Athenian statesman and commander He reorganized the Athenian maritime federation, helped bring on a new war with Sparta, and was given command He had no funds and therefore failed and was superseded He went (372 B C) into Persian service, but returned to power after the fall of Callistratus When he was again in Athens his policies brought on war among the confederates Fined (356) because of his conduct as commander, he died in exile

Timotheus, 4th cent B C, Greek sculptor of Athens, recorded as one of the sculptors who worked with Scopas on the Mausoleum at Halicarnassus. About 375 B C, according to an inscription, he furnished models for sculptures on the temple of Asclepius at Epidaurus and executed acroteria (decorative figures placed above the pediments) for this building

Timothy, Saint (tĭ'mŭthē), d c 100, early Christian He was the friend and companion of St Paul Timothy was the son of a Greek father and a Jewish mother He became first bishop of Ephesus and, according to tradition, was martyred there Two epistles bear his name He is also called Timotheus Feast Jan 24 Acts 16 1–3, Rom 16 21; 1 Cor 4 17; 2 Cor 1 1, Philip 2 19, 1 Thes 3 2, 2 Thes 1 1, Philemon 1, Heb 13 23

Timothy, two epistles of the New Testament, occupying the 15th and the 16th place in the usual order With Titus they comprise the Pastoral Epistles, in which Timothy or Titus is addressed by St Paul, with advice on governing his church The authorship and destination of all three are much questioned by critics, who put the composition of the letters late in the 1st cent A D, though seeing in each portions by St Paul First Timothy, after an introduction (1), treats lengthily public prayer (2) and the qualifications of the clergy (3) Then come many details of advice, including admonitions on personal life (4 6–16) and the behavior of widows (5 1–16) and of the clergy (5 17–25) Second Timothy is much more a personal letter The emphasis is on courage and fidelity (1 6–2 26), there are warnings of suffering to come and allusions to Paul's own trials (3 1–4 8) Paul speaks of his impending death (4 6–8,16–18).

timothy or **herd's-grass,** most widely cultivated North American hay grass, introduced from Europe It is a perennial, bunchy grass, with deep roots and a spiked or panicled head It is grown separately and in mixtures and often in crop rotation, producing, on good soil, two tons to the acre the first two years For permanent pastures it is not so good as BLUEGRASS or REDTOP, as it does not live long under continuous grazing It is a late grass—usually sown in the fall with grain—and can be stored soon after cutting In the northeastern states, where it is much planted, it is often called herd's-grass, after John Herd, who was supposed to have found it wild in New Hampshire, c 1700, and to have cultivated it. The name timothy comes from Timothy Hanson or Hanso, who probably introduced the seed into Maryland c.1720. The oldest name is meadow cat's-tail grass

timpani: see KETTLEDRUM

Timpanogos Cave National Monument: see NATIONAL PARKS AND MONUMENTS (table)

Timpson, city (pop, 1,494), E Texas, NE of Nacogdoches and near the Sabine. The red hills around the city produce pine, truck (chiefly tomatoes), lignite, and natural gas.

Timrod, Henry, 1828–67, American poet, b. Charleston, S C., studied at the Univ. of Georgia. Though too frail to be a soldier, he was one of the chief Southern poets of the Civil War. He became editor of the Columbia *South Carolinian* in 1864, but, ruined by the war, died in poverty of tuberculosis, with but one volume of poems (1860) in print. His works were posthumously edited (1873) by his friend P. H. Hayne Timrod's finest poems are his "Ode to the Confederate Dead at Magnolia Cemetery," "The Cotton Boll," "Carolina," and "Ethnogenesis," an ode to the proposed nation of the South See the memorial edition of his *Poems* (1899) and critical editions of his *Last Years* (ed by J B Hubbell, 1941), *Uncollected Poems* (ed by G. A Cardwell, Jr, 1942), and *Essays* (ed by E. W. Parker, 1942)

Timur, see TAMERLANE.

Timurids (tĭmōō'rĭdz), dynasty founded by TAMERLANE (or Timur) After the death of Tamerlane (1405) there was a struggle for power over his empire, which then extended from the Euphrates river to the Jaxartes (Syr Darya) and Indus rivers The western empire, which included Tabriz and Baghdad, lasted only a few years because of internal wars. The "Black Sheep" Turkoman horde brought it to an end when they took (1410) Baghdad Shah Rukh, Tamerlane's son, ruled (1409–46) the eastern empire, including Khurasan and Transoxiana (region E of the Amu Darya or Oxus) He fought the "Black Sheep" and succeeded in recapturing Tabriz and much of W Persia His domain was the focal point of trade between the East and the West, and it attained an unheard-of prosperity Because all the Persian cities were desolated by previous wars, the seat of Persian culture was now in Samarkand and Herat, these cities became the center of the Timurid renaissance This cultural rebirth had a double character, on one hand, there was a renewal of Persian civilization and art (distinguished by extensive borrowings from the Chinese), and on the other, an original national literature in the Turk-Jagatai language, which borrowed from the Persian Ulugh Beg (ruled 1447–49), son of Shah Rukh, was (1409–47) viceroy of Transoxiana He constructed many public buildings and was a patron of Persian art and literature, he made Samarkand a center of Moslem civilization After his succession to the throne the Timurid empire fell into anarchy, the "White Sheep" horde of Turkomans conquered much territory, while the Uzbeks looted Samarkand Petty princes took over the rule, and local dynasties sprang up One of these princes, and the last of the Timurids, was BABER

tin, lustrous, silver-white, crystalline metallic element (symbol=Sn [Latin *stannum*], for physical constants, see ELEMENT, table) The silver-white metal is not stable below 18°C and at the lower temperatures tends to turn into a gray powder, a change commonly designated as "tin pest" or "tin disease" Tin is very soft, being only slightly harder than lead It is malleable and can be rolled, pressed, or hammered into extremely thin sheets known as tin foil When thin sheets of iron or steel are dipped into molten tin upon which is floated a substance such as palm oil to prevent oxidation, a layer of the metal is deposited upon the surface of the sheet The coating can also be applied by an electrolytic method, which requires less tin The iron or steel thus coated is known as tin plate and is used in tin cans, the tin serves to prevent rusting, being itself barely affected by moisture or moist air It is used also for protecting other metals, e g, copper It is a constituent of a number of alloys, e g, antifriction metal, bell metal, Britannia metal, bronze, gun metal, pewter, and solder Chemically the element is relatively active It forms two groups of compounds—stannous, in which it has a valence of 2, and stannic, in which it has a valence of 4 Stannous chloride (one atom of tin and two of chlorine in a molecule) is used as a reducing agent In the air it changes to stannic chloride (one atom of tin to four of chlorine), which is employed as a mordant in dyeing Tin is combined with oxygen as *stannous oxide* (the monoxide) and stannic oxide (the dioxide) and with the hydroxyl radical as stannous hydroxide The dioxide occurs in nature as cassiterite, or tinstone, serves as the chief ore of the metal and as a source of stannic acid (used in the dyeing industry), and is employed also in white enamels Salts of the element are used in weighting or loading silk, in fireproofing various materials, and in medicine Tin very rarely occurs uncombined in nature, but is found in compounds in various parts of the world It is obtained chiefly from Bolivia, Indonesia, the Malay Peninsula, Belgian Congo, and Nigeria The tin mines of Cornwall, England, were formerly the principal source The metal is prepared from its chief ore, cassiterite, by heating in the reverberatory furnace. The ore from the mines is first given special treatment, and the "concentrates" thus obtained are mixed with coal in the furnaces. The coal (carbon), having strong affinity for oxygen, combines chemically with the oxygen of the cassiterite and thus sets the metal free. Tin was known to the ancients at least from the time of the Bronze Age.

tinamou (tĭ'nămōō), South American game bird which resembles the partridge, although it is more closely related to the ostrich It has dark, usually barred plumage; a long, slender bill; short wings, and a rudimentary tail. All species can fly to some extent. They are hunted for their delicious flesh In size they vary from 6 to 18 in.

Tinchebrai, officially **Tinchebray** (both: tănshbrā'), town (pop 1,949), Orne dept., NW France, in Normandy Here in 1106 Henry I of England defeated his brother ROBERT II of Normandy.

Tindal, Matthew (tĭn'dăl), 1653–1733, English deist. For a short time in the reign of James II he was a Roman Catholic, but in 1688 he returned to the Church of England The first of his published writings to excite attention was *The Rights of the Christian Church Asserted against the Romish and All Other Priests Who Claim an Independent Power over It* (1706), which was proscribed His *Defence of the Rights of the Christian Church* (1707) reiterated his position Condemnation of these treatises was violent in England Tindal's *Christianity as Old as the Creation* (1730), in which he set forth his rationalistic views, has been called the bible of deism See Leslie Stephen, *History of English Thought in the Eighteenth Century* (3d ed, 1902)

Tindal or **Tindale, William:** see TYNDALE, WILLIAM

tinea see RINGWORM

Tinian (tĭnē'ăn', tēnēän'), island, area 39 sq. mi, W Pacific, one of the Marianas Islands It is c 3 mi SW of Saipan Composed of madrepore limestone, the island has deposits of phosphate worked by transient laborers In the Second World War, it was taken in 1944 by U.S forces and naval and air bases were established In 1948 it became the site of a leper colony under U S supervision

Tinicum Island (tĭn'kŭm), area in the Delaware river, SW of Philadelphia, near Glenolden, separated from the mainland by creeks and marshes It was the capital (1643-55) of NEW SWEDEN

Tinley Park, residential village (pop. 1,136), NE Ill, near Chicago, inc 1892

Tinnevelly (tĭnuvĕ'lē), town (pop 66,676), S Madras state, India St Francis Xavier conducted missionary activity in this area. There is sugar refining

Tinos: see TENOS.

tinstone see TIN

Tintagel Head (tĭntă'jŭl), cape, Cornwall, England, nearly detached from the mainland by a chasm across a narrow neck It is the site of Tintagel village and of the ruined Tintagel Castle (Norman), the reputed birthplace of King Arthur A partly Norman church is here, and there are traces of British and Saxon forts

Tintern Abbey, ruins of an abbey, Monmouthshire, England, N of Chepstow It was founded in 1131 by Walter de Clare for Cistercians and now consists mainly of 13th- and 14th-century English work It is the subject of a poem by Wordsworth

Tinto, Río, Spain see RÍO TINTO

Tintoretto (tĭntŭrĕ'tō, Ital tēntōrāt'tō), 1518–94, Venetian painter, whose real name was Jacopo Robusti He was called Il Tintoretto [little dyer] from his father's trade According to tradition he studied for a brief time under Titian On stylistic grounds it has been suggested that he trained under Bonifazio Veronese or Paris Bordone and that he was influenced in his youth by Lotto and Parmigiano He is said to have aspired to combine the drawing of Michelangelo with the color of Titian, and it was certainly these masters who most influenced his highly individual genius In 1548 Tintoretto painted the famous *Miracle of St Mark* (Academy, Venice) for the Scuola di San Marco, a work which involves Michelangelesque elements in the treatment of the figures, but which already reveals essentials of Tintoretto's developed style in space and light effects These features are even more marked in the celebrated paintings of c 1560 in the Church of the Madonna dell' Orto—the *Worship of the Golden Calf*, the *Last Judgment*, and the *Presentation of the Virgin*—and in the famous *Marriage at Cana* of 1561, in the sacristy of Santa Maria della Salute Between 1562 and 1566 he executed three more paintings for the Scuola di San Marco, the *Stealing of St Mark's Body from Alexandria* and *St Mark Rescuing the Saracen* (both Academy, Venice) and *St Mark Directing the Search for His Body* (Milan). In 1564 he began a great cycle of paintings in the Scuola di San Rocco (Venice), the execution of which occupied him intermittently until c 1587 The series comprises more than 60 paintings devoted to the glorification of Venetian patron saints and scenes from the Passion It includes the enormous canvas of the *Crucifixion* (1565), in which the master integrated over 80 figures in a poignant representation of the tragedy The works in San Rocco rank with the ceiling in the Sistine Chapel by Michelangelo and the Vatican Stanze of Raphael among the great monuments of the Renaissance In 1568 Tintoretto painted the *Crucifixion* and *Descent into Limbo* in the Church of San Cassiano (Venice) After the fire of 1577 in the ducal palace he and Paolo Veronese were the chief artists employed in reconstruction Tintoretto's work included the *Bacchus and Ariadne* and the *Forge of Vulcan* (ducal palace) and the

Origin of the Milky Way (National Gall , London). Also for the ducal palace he executed with the aid of assistants the great *Paradise*, reputed to be the largest oil canvas in the world (30 ft x 74 ft) and including over 500 figures In Tintoretto's late work he tended to employ an almost phosphorescent lighting and broad impressionistic brushwork exemplified in such works as the *Annunciation*, *Mary Magdalen*, and *St Mary of Egypt* (c 1581–1587, in the Scuola di San Rocco) and in the *Last Supper* and the *Fall of the Manna* (c 1594, in San Giorgio Maggiore, Venice). Tintoretto pursued his art with febrile intensity He won most of his great commissions in open competition with outstanding artists of his time and was famed for the speed with which he executed his canvases Few external events mark his career He married in 1550, and three of his six children, Domenico, Marco, and Marietta, were painters One of the greatest and most original of the Italian decorative painters, he painted for his native city, and most of his work remains there The works in American collections include the *Baptism of Clorinda* (Art Inst , Chicago), the *Miracle of the Loaves and Fishes* and the *Finding of Moses* (Metropolitan Mus), *Portrait of a Lady with Her Daughter* (Walters Art Gall , Baltimore), *Portrait of Alessandro Farnese* (Mus of Fine Arts, Boston), portrait of a Venetian senator (Frick Coll , New York), six paintings in the National Gallery of Art, Washington, D C See study by Hans Tietze (with 300 reproductions of Tintoretto's works, 1949)

Tioga (tī-ō'gu), village (pop 1,300), central La , near Alexandria It was founded as a lumber town, but since 1930 has been a trading center for the near-by U.S veterans' hospital

Tiptonville, town (pop 1,503), co seat of Lake co , W Tenn , at the southern end of Reelfoot Lake, in a cotton-producing and resort region

Tiraboschi, Girolamo (jĕrō'lumō tĕrábō'skē), 1731–94, Italian historian and scholar, a Jesuit One of the most erudite men of his time, he is noted for his elaborate and comprehensive study of historical subjects and for his great history of Italian literature (13 vols , 1772–81), still a standard work

Tirach Mir. see HINDU KUSH

Tirana (tĕrá'nä) or **Tirane** (tĕra'nu), city (pop 59,887), capital of Albania, E of Durazzo, in a fertile plain of central Albania It is the largest city and the chief industrial and educational center of Albania, with manufactures of cotton textiles, soap, alcohol, cigarettes, and flour and dairy products Tirana is linked by railroad and highway with Durazzo, which acts as its port The city was founded in the early 17th cent by the Turkish general Suleiman Pasha, who is buried in its 17th-century mosque It was originally named Teheran, for a Turkish victory in Persia The larger part of Tirana was built after 1920, when it was selected as the capital of Albania A new residential city was built under Italian rule (1939–43), and an industrial sector was developed after the Second World War The center of the city is Scanderbeg Square, with the government buildings and the 18th-century mosque of Etchem Bey The bazaar and the mosque of Suleiman Pasha are near by

Tirano (tĕra'nō), town (pop 3,867), N Italy, in the VALTELLINA, near the Swiss border The Bernina railroad, the highest in the Alps, runs from Tirano to the Engadine

Tiras (tī'rus), Japheth's son Gen 10 2, 1 Chron 1 5

Tiraspol (tyĭrŭspôl'), city (1939 pop c 43,000), SE Moldavian SSR, on the left bank of the Dniester It is a major agricultural processing center, producing canned fruit and vegetables, wine, flour, and vegetable oil Founded in 1793, it was (1930–40) the capital of the Moldavian ASSR

Tirathites (tī'ruthīts), family of scribes living at Jabez 1 Chron 2 55

tire. Iron or steel tires were early used to hold together and protect from wear the wheels of carriages and wagons The tire was usually heated, placed on the wheel, then quenched with water to shrink it into place Hard steel tires are used on railway equipment Rubber tires are of two main types—the solid, in which the resiliency of rubber reduces vibration, and the pneumatic, in which both the rubber and the enclosed air reduce road shock Solid tires were in limited use before 1850 and are still employed on some heavy trucks Although the pneumatic tire was patented in England in 1845, it was first manufactured commercially, for bicycles, c 1889 by John Dunlop in Belfast The development of the automobile gave great impetus to tire manufacture, which has been extended to tires for airplanes and tractors The pneumatic tire in common use today has an inner tube, with a valve to admit air, and an outer casing The casing is built up largely by hand on metal cylinders and consists of alternate plies of rubber-coated diagonal cords of cotton, rayon, or nylon and of sheets of rubber, topped with rubber padding tapering off at the sides and with breaker strips of heavy fabric to prevent penetration by any sharp object Bead wire is used to support the edges, then side walls are added, and finally a tough, wear-resistant rubber tread is applied The tires are vulcanized in steam-jacketed molds which form the nonskid tread pattern Most tires are of the balloon type with a large cross section and thin side walls. Their large size permits a low inflation pressure, and the increased tread area gives better traction and braking qualities A pneumatic tire requiring no inner tube has been developed Certain synthetic rubbers, especially when made by low-temperature processes, give increased mileage and are resistant to oil and sunlight Excessive tire wear is caused by faulty inflation or wheel alignment, sudden braking, and high speed. The United States is the largest consumer and exporter of tires.

Tirebolu (tĭrĕ'bôlōō), anc. *Tripolis*, village (pop. 4,923), NE Turkey, a port on the Black Sea. It exports copper, manganese, and zinc

Tiresias (tīrē'shŭs,-sēŭs), in Greek mythology, celebrated blind prophet of Thebes According to one legend he was blinded when he saw Athena bathing, feeling sorry for him she granted him prophetic powers. Another story has it that Hera blinded him when Tiresias said that women enjoy love more than men; Zeus gave him prophetic powers in compensation Tiresias is mentioned throughout Greek literature and is said to have foretold most great events of Greek mythology

Tirhakah (tĭr'ŭku, tĕrha'ku) or **Taharka** (tuhar'ku), d 663B C , last king of the XXV (Nubian) dynasty of ancient Egypt (688–663 B C), son of Piankhi and nephew of Shabaka, founder of the dynasty Before he was Pharaoh, he led the Egyptians against Sennacherib, who disastrously defeated him He seized the throne by force and established a residence at Tanis He defeated the Assyrians under ESAR-HADDON (673 B C), but later lost Memphis and Lower Egypt to them On the withdrawal of the Assyrians, Tirhakah again entered Lower Egypt, only to be expelled by ASSUR-BANI-PAL He restored the temples at Napata and made the city his capital See also 2 Kings 19 9, Isa 37 9

Tirhanah (tûr'hunu), son of Caleb. 1 Chron 2 48

Tiria (tī'rēu), descendant of Judah 1 Chron 4 16

Tiridates (tĭ"rĭdā'tēz), d 211 B C , king of Parthia (c 248–211 B C), second of the dynasty of the ARSACIDAE He absorbed Hyrcania and, with the ruler of Bactria, successfully resisted the attacks of Seleucus II of Syria

Tiridates, fl A D c 63, king of Armenia He was put on the throne by his brother Vologeses I, king of Parthia, and he was driven from it when the Romans under Corbulo won the Parthian campaign of A D 59 Later he went to Rome and had his crown restored (A D 63?)

Tirlemont (tērlumō'), Flemish *Tienen* (tē'nun), town (pop 22,348), Brabant prov , Belgium, SE of Louvain It has beet-sugar refineries and breweries It suffered numerous sieges and captures in the course of its history Here in 1831 the last fighting in the struggle for Belgian independence took place The Church of Notre Dame du Lac dates from the 13th to 15th cent

Tirnovo, Bulgaria see TRNOVO

Tirol, Austria see Tyrol.

Tirpitz, Alfred von (al'frāt fŭn tĭr'pĭts), 1849–1930, German admiral His influence on German naval policy began with his study of the recently invented torpedo and his subsequent appointment (1871) as chief of the torpedo division of the navy ministry Appointed secretary of state for naval affairs in 1897, he began to build a powerful fleet However, he apparently had no intention then of challenging the naval supremacy of Great Britain and agreed to the establishment of a 10 6 ratio between the two fleets Upon the outbreak of the First World War, Tirpitz began the construction of submarines and advocated unrestricted submarine warfare to destroy Allied commerce He retired in 1916, supposedly because of Chancellor Bethmann-Hollweg's opposition to his submarine policy Tirpitz returned to active political life as a member of the nationalist group in the Reichstag (1924–28) See his memoirs (Eng tr , 1919)

Tirshatha (tĭr'shuthu), Persian title of a governor Ezra 2 63, Neh 7 65–70, 8 9, 10 1

Tirso de Molina (tĕr'sō dā mōlē'nä), pseud of **Gabriel Téllez** (gabrēĕl' tĕl'yāth), 1571–1648, Spanish dramatist, one of the outstanding playwrights of the Golden Age Generally ascribed to him is the famous *El burlador de Sevilla* [the seducer of Seville] (1630, Eng tr by Harry Kemp, *The Love Rogue*, 1924), the first literary version of the Don Juan legend Among the three or four hundred plays by Tirso de Molina are *El vergonzoso en palacio* [the bashful man in the palace], *La prudencia en la mujer* [prudence in a woman], *El condenado por desconfiado* [the man damned by jealousy] *Marta la piadosa* [pious Martha], and *El castigo del pense que* (tr by James Shirley as *The Opportunitie* 1640) He also wrote short novels, included in his prose collection *Los cigarrales de Toledo* (1621) He was a Mercedarian monk and for his order visited the West Indies. He wrote the history of this religious order As a dramatist he excels in wit and sympathetic characterization See A H Bushee, *Three Centuries of Tirso de Molina* (1939)

Tiryns (tī'rĭnz), ancient city, NE Peloponnesus, Greece, 2½ mi N of Nauplia and near Argos The site seems to have been inhabited since the 3d millennium B C It was a city of splendor from c 1400 to c 900 B C Excavations begun by Heinrich Schliemann and Wilhelm Dörpfeld in 1884–85 have revealed not only extensive pre-Homeric palaces but also remains going far back in prehistory The old city was prominent in Greek legend

Tirzah (tûr'zŭ) [Heb ,=delight] **1** Daughter and coheiress of Zelophehad Num 27 1–11 **2** City, Palestine Joshua 12 24, 1 Kings 14 17, 15 21, 16

Tischbein, Johann Heinrich Wilhelm (yō'hän hĭn'rĭkh vĭl'hĕlm tĭsh'bīn), 1751–1829, German classical painter and etcher He was a popular portrait painter of the German royalty In 1787 he accompanied Goethe to Naples, where he became director of the academy There he painted Lady Hamilton and made engravings from the Greek vases of the Hamilton collection The French invasion occasioned his return to Germany, where he was known as a painter of portraits and animals. Many of his etchings are illustrations for Homer.

Tischendorf, Lobegott Friedrich Konstantin von (lō'bùgôt frē'drĭkh kôn'stäntēn fŭn tĭ'shundôrf), 1815–74, German biblical critic In 1844 he discovered in the monastery of St Catherine on Mt Sinai a few pages of one of the oldest Greek manuscripts of the Bible, and in 1859, with the cooperation of the Russian government, he obtained the remainder of the manuscript, the Codex Sinaticus, of which a facsimile was published at St Petersburg in 1862. He made several critical editions of the Bible, his eighth edition of the New Testament (3 vols , 1869–94) being the most important

Tisdale (tĭs'dāl, -dul), town (pop 1,469), E Sask , ESE of Prince Albert It has grain elevators and flour and lumber mills

Tiselius, Arne (ar'nu tēsā'lyŭs), 1902–, Swedish biochemist He received the 1948 Nobel Prize in Chemistry for developing new methods of separating and detecting colloids One system (electrophoresis) employs an electrical apparatus (Tiselius apparatus) for the separation of heavy molecules in solution, the other is a method of adsorption analysis which permits the differentiation and separation of substances, e g , of proteins, sugars, salts, and acids Tiselius isolated the virus of mouse paralysis and developed synthetic blood plasma In 1925 he joined the faculty of the Univ of Uppsala, he did research at the Rockefeller Institute, New York, in 1939

Tishbite, epithet of Elijah, presumably referring to his place of origin or his family 1 Kings 17 1

Tishomingo (tĭshumĭng'gō), city (pop 1,951), co seat of Johnston co , S Okla , NE of Ardmore, on the Washita river and Lake Texoma, first settled 1850 It was long the chief city of the Chickasaw Indians A state junior college is here

Tisi, Benvenuto see GAROFALO, IL

Tisiphone see ERINYES

Tisquantum, see SQUANTO

Tissaphernes (tĭ"sufûr'nēz), d 395 B C , Persian satrap of coastal Asia Minor (c 414–395 B C) He was out of favor with CYRUS THE YOUNGER and rebuilt his fortunes by siding with Artaxerxes II and helping him to defeat Cyrus in the battle of CUNAXA (401 B C) He pursued the retreating Greek allies (the Ten Thousand) and treacherously murdered CLEARCHUS and four other Greek leaders (see ANABASIS and XENOPHON) Tissaphernes and Pharnabazus were the chief figures in Artaxerxes' reign After Tissaphernes asserted supremacy over the Ionian cities, he was involved in war with the Spartans, and AGESILAUS II defeated him in 395 He was removed from office and assassinated

Tisserand, François Félix (frāswȧ' fālēks' tēsrā'), 1845–96, French astronomer In 1873 he became director of the observatory at Toulouse He was a member of expeditions to Malacca for the observation of a solar eclipse in 1868 and to Japan in 1874 and Santo Domingo in 1882 to observe transits of Venus He became professor of celestial mechanics at the Sorbonne in 1883 and director of the Paris Observatory in 1892 He founded (1884) and edited the *Bulletin astronomique* His most memorable work is the *Traité de mécanique céleste* (4 vols , 1889–96), in which he published the results of his research on planetary theories It includes a review of knowledge of celestial mechanics

Tissot, James Joseph Jacques (zhămz' zhōzĕf' zhak' tēsō'), 1836–1902, French painter and etcher, student of Flandrin and Ingres His first exhibit, *Faust and Marguerite* (Luxembourg Mus , Paris), was purchased by the state After taking part in the Franco-Prussian War he stayed for 10 years in London, where he was highly esteemed In 1882 he went to Palestine and devoted the rest of his life to a series of water-color drawings illustrating the Bible Many originals of these illustrations are in the Brooklyn Museum

tissue, in biology, aggregation of cells (similar in form and function) and of the intercellular substances and structures produced by and associated with the cells The term is applied also to dissimilar cells working as a unit The fundamental tissues in animals are epithelial, nerve, connective, and muscle tissue; blood and lymph are commonly classed separately as vascular tissue In the higher plants, the simple (or primary) tissues of which complex tissues are composed are parenchyma (composed of thin-walled cells still capable of division after maturity), collenchyma (made up of elongated, thick-walled cells which retain after maturity the capacity to divide), and sclerenchyma (chiefly for support and protection and composed of cells that form thick walls and usually lose the living protoplasm when mature) Organs are usually composed of several tissues In many diseases there are apparent changes in tissue (see PATHOLOGY) Histology is the study of the structure of tissues

Tisza, Koloman (kō'lōmän tĭ'sô), Hung *Tisza Kálmán* (käl'män), 1830–1902, Hungarian statesman, of an old Calvinist family He entered politics in the Revolution of 1848 Elected (1861) to the Hungarian parliament, he led the radical group that later opposed the *Ausgleich* of 1867 He was influential in maintaining Austro-Hungarian neutrality in the Franco-Prussian War Having become (1875) premier of Hungary, he reversed his stand on the *Ausgleich* and formed the Liberal party, which dominated Hungarian politics during the following decades His close support of the policies of Julius Andrassy, the Austro-Hungarian foreign minister, enabled Tisza to make Hungary an equal partner in the Dual Monarchy During his long premiership (1875–90), Tisza rehabilitated Hungarian finances, introduced compulsory education, and strengthened the economic ties with Austria His policy toward the Slavic and Rumanian minorities was one of Magyarization

Tisza, Count Stephen, Hung *Tisza István* (ĭst'vän), 1861–1918, Hungarian statesman, son of Koloman Tisza He was premier from 1903 to 1905 and again from 1913 to 1917 His government was authoritarian and strongly nationalistic He sought to make Hungary the dominant partner in the Austro-Hungarian Monarchy and took repressive measures against the Serbian and Rumanian minorities of Hungary, seeking to perpetuate the rule of the Magyar oligarchy He strongly opposed the aggressive policy of Count Berchtold, the Austro-Hungarian foreign minister at the outbreak (1914) of the First World War, fearing that the subjugation of Serbia would result in the creation of a Slavic third partner in the Hapsburg monarchy and thus reduce Hungarian influence He at last consented to declaring war on Serbia after being assured that no Serbian territory was to be annexed Tisza's influence waned after the death of Emperor Francis Joseph and the accession of Charles I His ministry was overthrown in 1917, and Tisza took a military command on the Italian front He was assassinated at Budapest by soldiers who believed him a chief instigator of the war

Tisza, river see THEISS

Titan (tī'tun), in Greek mythology, one of 12 male and female giants The females are also called Titanesses They were the children of Uranus and Gaea and the ancestors of the Olympian gods The Titans were Cronus, Iapetus, Hyperion, Oceanus, Coeus, Creus, Theia, Rhea, Mnemosyne, Phoebe, Tethys, and Themis The name, Titan, was sometimes applied to their descendants and other divine beings, such as Prometheus, Epimetheus, Atlas, Dione, Demeter, Ophion, Hecate, Selene, and Helios The Titans deposed their father Uranus, putting Cronus in his stead, and were themselves overthrown by the Olympians, led by Zeus, in the battle called the TITANOMACHY

Titanic (tītă'nĭk), White Star liner sunk on the night of April 14–15, 1912, after crashing into an iceberg in the N Atlantic S of Newfoundland It was one of the greatest of sea disasters, with a loss of 1,517 lives The *Titanic* was the fastest ship afloat and was on her maiden voyage She was thought to be almost unsinkable and was carrying many notables among her more than 2,000 passengers These circumstances made the loss seem the more appalling to the public in England and the United States Official investigations were carried out, private discussions continued long afterward, and as late as 1939 fresh evidence was still being revealed Messages of warning had been sent but had either not been received by the commanding officers or had been ignored by them The ship was trying to make a speed record and had continued at full speed even after the warnings were sent She did not carry sufficient lifeboats, and the handling of the lifeboats was not efficient Other vessels in the vicinity were slow in responding to distress signals All these facts were established, and the disaster did have some good effects in bringing about measures to promote safety at sea, particularly the establishment of a patrol to make known the location of icebergs and stringent regulations about the proper number and proper equipment of lifeboats to be carried by vessels

titanium (tītā'nēum, tĭ-), silver-white, lustrous metallic element (symbol=Ti, for physical constants, see ELEMENT, table) It is about as hard as iron, and the metal itself, when added to various steel alloys, adds to the hardness and increases the toughness or tensile strength Chemically, titanium is active and somewhat like silicon in its behavior It is combined with other elements in a number of compounds e g , with nitrogen it unites readily to form a nitride, with carbon it forms a carbide, with chlorine it gives a tetrachloride which is used in warfare in making smoke screens, and with oxygen it appears as a white pigment, titanium dioxide, employed as a pigment in making paint, rubber, paper, cosmetics, and other products and in the manufacture of textiles to produce a dull finish Other compounds are used as pigments (yellow) and mordants and also as electrodes for the electric arc Titanium is widely distributed in nature, but always in combination with other elements and never then in large quantities Rutile, the native dioxide, and ilmenite, which contains, besides titanium, iron and oxygen, are its chief sources although it is present in a number of other minerals The element was discovered (1791) by William Gregor and rediscovered later (1795) by M H. Klaproth, who gave it its present name

Titanomachy (tī"tunŏ'mŭkē) [Gr ,=battle of Titans], in Greek mythology, battle between the Titans and the Olympians, in Thessaly. The Titans, led by Cronus, held Mt. Othrys, and the Olympians, led by Zeus, Mt. Olympus. The war lasted 10 years and was finally won by Zeus when he released the Hecatoncheires, or the hundred-handed giants, and the Cyclopes, from Tartarus The Cyclopes forged the thunderbolt for Zeus with which victory was assured After the struggle Cronus went to rule the Isles of the Blessed, Atlas was condemned to bear the sky on his shoulders, and Oceanus and Promethus, because they had aided the Olympians, were allowed to remain on Olympus All the other Titans were condemned to Tartarus

Titchener, Edward Bradford (tĭ'chunûr), 1867–1927, American psychologist, b Chichester, England, grad Oxford, 1890 He studied in Leipzig (Ph D , 1892) under Wundt (whose *Principles of Physiological Psychology* he translated), and in 1892 he became head of the new psychological laboratory at Cornell Univ , where he was research professor from 1910 His works include *Experimental Psychology* (2 vols , 1901–5), *Lectures on the Elementary Psychology of Feeling and Attention* (1908), and *Systematic Psychology* (1929)

Tithonus (tĭthō'nus), in Greek mythology, handsome prince of Troy He was the son of Laomedon and the brother of Priam The goddess Eos fell in love with him and bore him Memnon Eos won for Tithonus the gift of immortality but not of eternal youth When Tithonus became old Eos cared for him, but finally changed him into a grasshopper

Titian (tĭ'shun), 1477–1576, Venetian painter, whose name was Tiziano Vecellio (tētsyä'nō vāchĕl'lyō), b Pieve di Cadore in the Dolomites According to tradition, he began his training at nine years under Sebastiano Zuccati, a mosaicist, and then entered the shop of Gentile and Giovanni Bellini His early work was also strongly influenced by Giorgione, with whom he was definitely in contact in 1507 and 1508 when both artists worked on frescoes (now destroyed) on the façade of the Fondaco dei Tedeschi, Venice In 1511 he executed for the Scuola del Santo, Padua, three frescoes of scenes from the life of St Anthony After the death of Giorgione and of Giovanni Bellini, Titian was established as foremost painter in Venice In 1518 he completed the celebrated altarpiece of the *Assumption of the Virgin* (Church of Santa Maria Gloriosa dei Frari, Venice) and a famous fresco, now destroyed, of the *Battle of Cadore*, in the ducal palace Throughout the rest of his career he was showered with commissions and honors His work was eagerly sought by the ducal families of Ferrara, Mantua, and Urbino In 1530 he was introduced to Emperor Charles V, who subsequently made him a count of the Palatinate, Knight of the Golden Spur, and member of the imperial household Both Charles V and his son Philip II were among Titian's most enthusiastic patrons In 1545 he went to Rome, where he was quartered in the Belvedere, visited by Michelangelo, and shown about the city by Vasari and Sebastiano del Piombo At this time he painted the famous portrait of Pope Paul III with his nephews Ottavio and Cardinal Alessandro Farnese (Naples) He returned to Venice in 1546 after a brief visit at the Medici court In 1548 and again in 1550 he was invited to Augsburg by Charles V Here he executed many portraits of dignitaries assembled for the Reichstag and probably, in the course of his conversations with the emperor, first conceived the idea of the magnificent *Trinity*, "La Gloria" (Prado), painted in 1554 for Charles V, who upon his abdication took it with him to the monastery at Yuste In 1553 Titian began work on a cycle of mythological paintings for Philip II which included the *Diana and Callisto* and the *Diana Surprised by Acteon* (Bridgewater Coll , London), the *Rape of Europa* (Gardner Mus , Boston), and the *Perseus and Andromeda* (Wallace Coll , London) Also for Philip II he executed a large number of religious works intended for the Monastery of San Lorenzo del Escorial Among these were the *Adam and Eve* (Prado) and the *Last Supper* (Escorial) After 1550 Titian remained in Venice, living in princely splendor and surrounded by friends who included Pietro Aretino and the architect Jacopo Sansovino He was close to his three surviving children, especially Orazio, who assisted him as a painter, and his daughter Lavinia, who has, probably erroneously, been identified as the model in many of his paintings Titian ranks as one of the great geniuses of all time Throughout his long and prolific career he triumphed over every type of pictorial problem and achieved consummate expression of the coloristic tendencies intrinsic to the Venetian temperament and aesthetic His work may be divided into three phases The first is marked by the strong influence of Giovanni Bellini and Giorgione, exemplified in the so-called *Sacred and Profane Love* (Borghese Gall , Rome) During the second phase (c 1518–c 1550) there is a full development of the dramatic monumentality characteristic of High Renaissance composition and a greater sumptuousness and intensity of color Typical of this phase is the *Pesaro Altarpiece* (1526, Church of Santa Maria Gloriosa dei Frari, Venice), the *Presentation of the Virgin* (1530–34, Academy, Venice), the famous *Venus d'Urbino* (1538, Uffizi),

and the *Christ Crowned with Thorns* (early 1540s; Louvre). Many of Titian's most famous portraits were painted during this period, including the so-called *La Bella* and the *Ippolito Rinaldi*, "the Young Englishman" (both Pitti Palace, Florence), and the equestrian portrait of *Charles V at the Battle of Mühlberg* (Prado). In Titian's last phase (c 1550–1576) there is an intensification of emotional expression. A deeply personal and mystical spirit makes itself felt, especially in terms of an increased unity and luminosity of color, above all in Titian's last work, the magnificent *Pietà* (Academy, Venice), finished after his death by Jacopo Palma Il Giovane and intended for the artist's own tomb. Although the bulk of Titian's work remains in European museums, examples of his painting may be seen in American collections, including the Gardner Museum and the Museum of Fine Arts, Boston, the Metropolitan Museum and the Frick Collection, New York, the National Gallery of Art, Washington, D.C., the Detroit and Kansas City museums. See biographies by Sir Claude Phillips (2 vols., 1897–98) and Charles Ricketts (1910), Hans Tietze, ed., *Paintings and Drawings* (1937, 350 reproductions), A. S. Riggs, *Titian the Magnificent and the Venice of His Day* (1946).

Titicaca, Lake (tēt'ēkä'kä), area 3,205 sq. mi., divided between Bolivia and Peru. The lake, c 12,500 ft. above sea level, has a maximum depth of c 900 ft. and is the largest fresh-water lake in South America as well as the highest large lake in the world. It is an important avenue of communication, with steamer service between Guaqui, Bolivia, and Puno, Peru. A center of Indian life from pre-Incan times, the shores of Titicaca, today crowded with Indian villages and the patchwork patterns of terraced fields, are a major source of subsistence crops for an extensive highland region otherwise largely barren. The almost constant temperature of the water (51°F.) modifies the climate and makes the growing of maize and wheat possible at so high an altitude. Indian balsas, small flat-bottomed reed boats with reed sails, ply back and forth from village to village. Toward the center of the lake is an island that is the legendary birthplace of the first Inca, and near the south shore is the pre-Incan ruin Tiahuanaco. Titicaca is drained by the Desaguadero.

title, in law: see ABSTRACT OF TITLE.

titles of sovereignty, nobility, and honor. The highest-ranking title, that of emperor, derived from the Latin *imperator*, was originally a military title, the leader of a victorious army was saluted *imperator* by his soldiers. It was assumed by Augustus Caesar and the sovereigns of the Roman and Byzantine empires who followed him. The title received its modern meaning when it was conferred on Charlemagne in 800 and was revived when Otto I was crowned (962) Holy Roman Emperor. In Russia it was used from the time of Peter I until the dissolution of imperial Russia. It is the equivalent of the titles of the sovereigns of China, Japan, Persia, the Ottoman Empire, Ethiopia, and India. Napoleon assumed the title of emperor of the French in 1804, and Queen Victoria was proclaimed empress of India in 1877. Continental titles of nobility have evolved since the time of feudalism, when knights came to be regarded as noble and titles became hereditary. Under the Holy Roman Empire a complex nobility, not confined to the territories of the empire, developed, titles were conferred upon many persons outside the imperial boundaries. The title count [Fr. *comte*, Ger. *Graf*, Ital. *conte*] descends from the Latin *comes*, a noble attached to a kingly court and serving as an adviser to the king. The title *Graf* (feminine form, *Gräfin*) was taken over into the Holy Roman Empire from Carolingian and Merovingian times as a noble appointed by the king and having military and legal authority over a certain territory. The creation of border territories (see MARCH) gave rise to the title of *Markgraf* (in English, margrave, the corresponding French title is *marquis*, from which the English title marquess is derived, the feminine is *Markgräfin*). A *Landgraf* (in English, landgrave, the feminine is *Landgräfin*) was a count whose territory included a number of fiefs. There was also the title of *Pfalzgraf* (in English, count palatine, see PALATINATE, the feminine is *Pfalzgräfin*). *Herzog* (in English, duke, the feminine is *Herzogin*) was a title denoting sovereignty over a large territory such as Bavaria or Saxony. After 1806 the title *Grossherzog* (in English, grand duke, the feminine is *Grossherzogin*) was also used. The title *Fürst* (in English, prince, the feminine is *Fürstin*) was below that of duke; there existed also the title *Prinz* (in English, prince, the feminine is *Prinzessin*), which was a courtesy title extended to various persons, notably the sons of a duke or a king. Titles in descending order below emperor and king were *Herzog; Pfalzgraf, Markgraf,* and *Landgraf,* all of about equal rank; *Graf; Baron, Freiherr* or *Freier* (all baron in English); the feminine forms are *Baronin, Freiherrin,* and *Freierin*), and *Ritter* (in English, knight). The prefix *Reichs-* before any of these titles meant that the holder of the title held directly from the emperor, i.e., he was not the vassal of any other lord. At the dissolution of the Holy Roman Empire, the German and Austrian nobility retained the titles they had held under the empire. In addition, the male members of the Austrian imperial family were called archdukes, i.e., dukes of the blood royal. This corresponded to the title of grand duke in the Russian imperial family and to *infante* in Spain. French titles of nobility in descending order are *duc* (in English, duke, the feminine is *duchesse*), *prince* (in English, prince, a prince of the blood royal was above a duke, while an ordinary prince was often the son of a duke and was below a duke, the feminine is *princesse*), *marquis* (the feminine is *marquise*), *comte* (the feminine is *comtesse*), *vicomte* (in English, viscount, the feminine is *vicomtesse*); *baron* (the feminine is *baronne*), *seigneur* or *sire,* and *chevalier* (in English, knight). Other usages are discussed under DAUPHIN and MADAME. Although members of the French nobility have no more privileges, they retain their titles under the law. Titles in England are *prince, duke* (the feminine is *duchess*), *marquess* (the feminine is *marchioness*), *earl* (the feminine is *countess*), *viscount* (the feminine is *viscountess*), *baron* (the feminine is *baroness*), *baronet,* and *knight* (the feminine is *dame*). All have evolved since the Norman Conquest except earl, which is a title of the same descent as the continental titles translated as count. The title of earl was long the highest-ranking hereditary title under that of king, and English earls under the Norman kings enjoyed great power. The title of duke was in use on the Continent long before its introduction into England by Edward III, who created his son, the Black Prince, duke of Cornwall, a title now belonging automatically to the sovereign's eldest son from his birth. The Norman kings were themselves dukes of Normandy, a very high-ranking title, and may have been reluctant to confer similar titles upon their subjects. Originally, in fact, the only English dukes were dukes of the blood royal, and the sons of the sovereign are generally created dukes soon after coming of age. The title of marquess came into English use in 1385 as a title between those of earl and duke. The title of viscount, formerly that of a county sheriff, became a degree of honor and was made hereditary in the reign of Henry VI. Baron, originally a title denoting the chief tenants of the land, subject to summons to the king's court, is the most general title of nobility, and since 1387 the title has usually been created by letters patent (occasionally by writ of summons) and has nothing to do with land tenure. The existing baronetage (below the peerage) dates from 1611, when James I revived the title. The title of baronet is not in the peerage but is heritable, that of KNIGHT is a title of honor rather than nobility. The title of prince of Wales, at first the only prince in England, is reserved for the eldest son of the sovereign, though not invariably conferred upon him, and there is no succession to the title. In the reign of James I, all the sons of the sovereign came to be called prince. Queen Victoria extended the title, along with that of princess, to the royal grandchildren who are children of sons. In Italy, titles of nobility, in descending order, are *duca* (in English, duke, the feminine is *duchessa*), *principe* (in English, prince, the feminine is *principessa*), *marchese* (in English, marquis or marquess, the feminine is *marchesa*), *conte* (in English, count, the feminine is *contessa*), *visconte* (in English, viscount, the feminine is *viscontessa*), and *barone* (in English, baron, the feminine is *baronessa*). In Spain they are *duque* (in English, duke, the feminine is *duquesa*), *príncipe* (in English, prince, the feminine is *princípesa*), *marqués* (in English, marquis or marquess, the feminine is *marquesa*), *conde* (in English, count, the feminine is *condesa*), *vizconde* (in English, viscount, the feminine is *vizcondesa*), and *barón* (in English, baron, the feminine is *baronesa*).

Tito, Josip Broz (yô'sĭp brôz' tē'tô), 1892–, Yugoslav Communist leader and statesman, marshal of Yugoslavia. He was originally Josip Broz, the son of a blacksmith in a Croatian village. He fought in Russia with the Austro-Hungarian army in the First World War and was captured by (or surrendered to) the Russians. In the Russian civil war of 1918–20, Josip Broz volunteered for service in the Red Army and fought with distinction. He returned to Croatia several years later, reportedly as a Comintern agent, and, as a metalworker, was prominent as a union organizer. From 1929 to 1934 he served a jail sentence as a political agitator. There are several conflicting accounts of Tito's activities between 1934 and 1941, when he emerged as a leader of Yugoslav partisan resistance forces after the defeat and occupation of Yugoslavia by the Axis Powers. It was then that he first adopted the name Tito. Though the core of his partisan army was undoubtedly Communist, Tito's rapidly growing forces included many non-Communists. Despite the opposition of the Yugoslav government in exile, which supported the Serbian resistance leader Draja MIKHAILOVICH, Tito's army and its successes soon eclipsed Mikhailovich's *chetniks*. Among the causes of his success were his swift guerrilla tactics, against which the German and Italian occupation forces were almost powerless, his own magnetic personality, and the appeal of his political program—a federated Yugoslavia—to the non-Serbian elements of the population. Though they briefly collaborated at first, Tito and Mikhailovich soon clashed. Tito accused Mikhailovich of collaboration with the Axis, while the charge was never convincingly proved, it seems certain that Mikhailovich no longer fought the Axis with his earlier vigor, apparently trying to save his strength for a showdown with the partisans when the moment was ripe. The initiative thus passed to Tito, who by 1943 headed an army of more than 200,000 and controlled a sizable part of Yugoslavia, centered in Bosnia. His territory was governed by a Council for National Liberation. Tito was supported from the first by the USSR, but in 1944 he also received the full support of England and the United States. In Nov., 1944, after the liberation of Belgrade, he negotiated, with Allied backing, a merger of the royal Yugoslav government and his council, and in March, 1945, he became head of the newly created federal Yugoslav government. Already the virtual dictator of Yugoslavia, he won a major electoral victory in Nov., 1945, at the head of the Communist-dominated National Liberation Front, whose candidates were the only ones permitted to run in the election. With the opposition abstaining, Tito won almost 80 percent of the total electorate. King Peter II was deposed, and a "Federal People's Republic" was proclaimed (see YUGOSLAVIA). As premier and minister of defense from 1945 Marshal Tito ruled Yugoslavia dictatorially. Although Yugoslavia broadly followed the pattern of the other Communist people's republics of E Europe, Tito's position differed considerably from that of other Soviet "satellites," for he enjoyed and encouraged immense personal popularity, especially among the youth, and both his internal and external policies showed signs of a strong and independent spirit of nationalism. Tito's militarist program made Yugoslavia the strongest Balkan power. He suppressed internal opposition by such measures as the execution of Mikhailovich and the jailing of Archbishop Stepinac of Zagreb in 1946, he nationalized Yugoslav industry and undertook a planned economy on the Soviet pattern. He did not attempt to collectivize the land of the Yugoslav small farmers, but he forced them, under severe penalties, to furnish large quotas of their produce to the state. Although Yugoslavia was, next to the USSR, the leading member of the COMINFORM, Tito did not hesitate to curtail the activities of Russian agents, whom he accused of espionage and of plotting his overthrow. The rift with the Cominform came into the open in June, 1948, when the Cominform accused Tito of having deviated from the correct Communist line, of siding with the Western "imperialist" powers, and of exercising a reign of terror against critics in the Yugoslav Communist party. Tito denied the charges but refused to make submission to the Cominform, from which Yugoslavia was expelled. Having transformed Yugoslavia into an armed camp, built up a highly efficient secret police, and purged dissident elements in the Communist party, Tito succeeded in maintaining his position despite the hostility of the USSR and his neighbors. Although he accepted loans from the Western powers to strengthen Yugoslavia against a potential Soviet attack, he refused to give up any part of his Communist internal program. Titoism, the brand of independent and nationalist Communism adopted by Yugoslavia, became a major threat to Russian-dominated Stalinist Communism throughout the world. See Stephen Clissold, *Whirlwind: Tito's Rise to Power* (1949).

Titograd (tē'tōgrad), formerly **Podgorica** (pôd' gô'rĭtsə), town (pop. 12,206), capital of Montenegro, Yugoslavia, 20 mi. from the Adriatic Sea and near the Albanian border. It is a trade center. There are ruins of a Roman castle.

Titov Veles (tē'tôf vĕ'lĕs), town (pop. 14,866), central Macedonia, S Yugoslavia, on the Vardar and SE of Skoplje. It is a rail and road junction and the market center for an agricultural and silk-producing region. An ancient place, it has Roman and medieval ruins. It was known as Kopruhi under the Turks and later (until c. 1945) as Veles.

Tittoni, Tommaso (tōm-mä'zō tēt-tō'nē), 1855–1931, Italian statesman. As minister of foreign affairs (1903–5, 1906–9) he sought closer ties with the Western Powers, though working within the frame of the Triple Alliance. He also tried to improve the position of Italy in the Balkans. He was ambassador to France (1910–16), foreign minister in the Nitti cabinet (1919–20), and president of the senate (1920–29). A Fascist sympathizer, he was named by Mussolini president of the Italian Academy (1929–30). He wrote several books on political economy.

Titulescu, Nicholas (tēt'ōōlĕ'skō), 1883–1941, Rumanian statesman. Educated in Paris, he taught law at the universities of Jassy and Bucharest before entering politics in 1912. He was finance minister (1917, 1920–22) and served as foreign minister from 1927 to 1936. A champion of the

French-sponsored policy of collective security, he was one of the architects of the LITTLE ENTENTE with Czechoslovakia and Yugoslavia He was detested by the Fascist Iron Guard and by the extreme reactionary elements; his resignation was forced in 1936 In 1940 he was compelled to flee to France, where he died One of the principal figures in the League of Nations, Titulescu was known as an excellent and witty speaker

Titus (Titus Flavius Sabinus Vespasianus), (tī'tŭs), A D c 40–81, Roman emperor (A D 79–81) Son of Emperor VESPASIAN, Titus was closely associated with his father in military campaigns and after A D 71 acted as coruler with the emperor He served in Britain and Germany and captured and destroyed Jerusalem in the Jewish War On succeeding his father he pursued a policy of conciliation and sought popular favor He stopped prosecutions for treason and was lavish with gifts to his subjects, a practice which caused financial difficulties for his successor He completed the Colosseum and built a luxurious bath During his reign occurred a great fire at Rome and the eruption of Vesuvius, which overwhelmed Pompeii and Herculaneum On both occasions Titus was active in lending aid to the distressed Though Titus was not friendly with his brother and successor, DOMITIAN, there is no reason to believe the rumor that it was Domitian who arranged his death The **Arch of Titus**, now restored and standing outside the ancient entrance to the Palatine, was erected by Domitian to memorialize the Jewish War

Titus, d c 100, early Christian, a missionary and friend of St Paul According to tradition he was a bishop in Crete Feast Jan 4 2 Cor 2 13, 7 6,7, 8 16–24; Gal 2 3

Titus, epistle of the New Testament, the 17th book in the usual order According to its opening it is addressed by St Paul to Titus, bishop in Crete It is one of the Pastoral Epistles and resembles I TIMOTHY in detail, being made up of points of regulation in governing the church There are two notable passages on Christian motives (2.11–14, 3 4–7)

Titus, Arch of see TITUS, Roman emperor

Titus Andronicus (tī'tŭs ăndrŏ'nĭkŭs), title of a tragedy of revenge ascribed to Shakspere It was written c 1590–1592, early in his career His precise connection with the play remains uncertain Francis Meres in *Palladis Tamia* (1598) refers directly to Shakspere as the author, and some scholars accept this as accurate Others, however, believing Shakspere incapable of so bloody and horrible a drama, either deny him any part or grant only that he collaborated in the composition

Titus Justus, in the Bible see JUSTUS 2

Titusville (tī'tŭsvĭl) 1 City (pop 2,220), co seat of Brevard co , E Fla , on Indian River and ENE of Orlando It is a center for shipping citrus fruit Across Indian River are Canaveral Peninsula and Merritt Island 2 City (pop 8,126), NW Pa , N of Oil City; settled 1796, laid out 1809, inc as a borough 1847, as a city 1866 Its manufactures include steel, tools, and metal products There are deposits of oil and gas here Near by is a state park where the drilling of the first oil well in the United States was completed successfully in 1859

Tiumen, RSFSR see TYUMEN

Tiverton (tĭ'vûrtŭn), municipal borough (pop 9,610), Devonshire, England, at the junction of the Exe and Loman rivers and N of Exeter Blundell's Grammar School (1604), a 15th-century church, and remains of a castle built in 1106 are points of interest John Heathcoat (1783–1861), who invented the bobbin net frame for lacemaking, lived here, and the town has long been a lacemaking center

Tiverton (tĭ'vurtŭn), town (pop 5,018), SE R I , settled 1680, included in Massachusetts until 1746 Its villages are Tiverton, Tiverton Four Corners, and North Tiverton The town has farm, fishing, textile-manufacturing, and resort activities Robert Gray was born in the town The Revolutionary Fort Barton was near Tiverton village

Tivoli (tĭ'vulē, Ital. tē'vōlē), Latin *Tibur*, town (pop 16,886), Latium, central Italy, 16 mi NE of Rome It is beautifully situated on a terrace which is surrounded by olive groves and dominates Rome and the plain to the sea It is celebrated for the waterfalls formed here by the Aniene and for the Villa d'Este There are ruins of several ancient Roman villas, notably that of Emperor Hadrian (see VILLA), and a well-preserved temple, called the Temple of Vesta, which is now a church The cathedral has a fine Romanesque campanile (12th cent) Most of the churches in Tivoli were damaged in the Second World War Near Tivoli there are several hydroelectric plants.

Tiw (tē'ōō), in Germanic religion, god of battle He was called Tyr by the Norse, who placed him in Asgard. Tiw was the courageous wrestler among the gods, and he lost his hand to Fenris the wolf. Tiw's identification with Mars caused the Latin *Mars' day* to be translated into *Tiw's day*, now *Tuesday*, the name of the third day of the week.

Tixtla (tēkst'lä), city (pop 6,130), Guerrero, SW Mexico, ENE of Chilpancingo. It formerly was the state capital and was the birthplace of the revolutionary leader, Vicente GUERRERO. Here in the war against Spain a Spanish force was defeated (1811) by the Mexican patriot MORELOS Y PAVÓN

Tiy (tē), fl 1400 B C , queen of ancient Egypt, wife of AMENHOTEP III (XVIII dynasty). She was remarkable for her influence in state affairs in the reigns of her husband and of IKHNATON, her son She was of humble origin The occurrence of her name with that of Amenhotep III shows a most unusual official recognition of a queen. Her tomb (in the Valley of Tombs) contained when opened (1907) the mummy of a later queen.

Tiy, fl 1167 B C , queen of ancient Egypt, wife of RAMSES III (XX dynasty) She was leader of a palace conspiracy to displace her aging husband by her son, Pentewere At the last minute the plot was discovered, and 32 important courtiers were executed for complicity Tiy's fate is not known

Tiziano Vecellio see TITIAN

Tizite (tĭ'zīt), epithet of unknown meaning given Joha, one of David's mighty men 1 Chron 11.45

Tl, chemical symbol of the element THALLIUM

Tlaxcala (tläskä'lä), state (1,555 sq mi , 1946 estimated pop 260,365), E central Mexico Tlaxcala is the smallest Mexican state Tlaxcala is the capital Except for short boundaries with Hidalgo and Mexico state in the north and west, the state is surrounded by Puebla The western part lies within the central plateau, but the remainder is extremely mountainous, with a climate that is temperate to cold Maguey, cereals, and subsistence crops are grown in the valleys In the mountains of Tlaxcala are the sources of the Río de las BALSAS Never subjugated by the Aztec, although encircled by their tributary tribes, the Tlaxcaltec Indians fiercely resisted Cortés but, when defeated, became invaluable allies against the Aztec In the town of **Tlaxcala** (pop 3,261) is the oldest church in America, founded (1521) by Cortés before he marched on Tenochtitlán, and near by is a famous Mexican shrine, the Santuario y Colegiata de Ocotlán

Tlemcen (tlĕmsĕn'), town (pop 50,272), NW Algeria, in the Tell region Its location on a crossroads between the Mediterranean coast and the Sahara and between Algeria and Morocco has made it a commercial center since ancient times Its prime importance was as a trade center during the Middle Ages It flourished (13th–15th cent) as the capital of a Moslem Berber dynasty, which ruled over much of what is now Algeria Tlemcen has numerous splendid mosques and retains the atmosphere of medieval Moslem life It still exports the carpets, woolens, and leather goods for which it has long been noted

Tlingit Indians (tlĭng'gĭt), group of related North American Indian tribes, speaking a language which forms its own isolated stock (formerly called Koluschan, for a possible relationship, see ATHAPASCAN) The 14 divisions of the Tlingit may reflect a former era when they were entirely independent tribes Important among the divisions are the Chilkat, the Yakutat, the Stikine, the Sitka, the Auk, and the Huna In 1741, when visited by Aleksey Chirikov and Vitus Bering, the Tlingit Indians lived in SE Alaska, along the coast and on the islands that fringe the coast about Sitka, S to Prince of Wales Island and N to the Copper river The Russians built (1799) a fort near the site of Sitka, but the Indians rebelled from the harsh Russian rule and drove them out Aleksandr Baranov, however, later captured the fort, killing many Indians He established a trading post there, which grew into Sitka There was constant trouble between the warlike Tlingit and their Russian masters The Tlingit numbered more than 5,800 in 1835, but today, on reservations in British Columbia and Alaska, they number some 1,000 Tlingit culture, like the Haida and the Tsimshian, was typical of the Pacific Northwest Coast area The name is also spelled Tlinget, Tinkit, and Thinket See Livingston Jones, *A Study of the Tlingets of Alaska* (1914), Theresa Durlach, *The Relationship Systems of the Tlingit, Haida, and Tsimshian* (1928)

Tm, chemical symbol for the element THULIUM.

Tmolus (tŭmō'lŭs), mountain range, W Asia Minor, just S of the Gediz river (anc *Hermus*). Several of its peaks are over 6,000 ft high The present Turkish name is Boz Dagh (bōz'dag')

T.N.T. or **TNT.** see TRINITROTOLUENE

toad, an amphibian, more terrestrial than the related frog Its dry, warty skin is often dull reddish or yellowish brown with a gray median stripe and darker markings. The toad usually lives in a cool, moist place and absorbs moisture through its skin It destroys harmful insects and grubs The eggs are usually laid in water in strings of jelly. The common American toad, Fowler's toad, the western, southern, and red-spotted toads, and the spadefoot toad, a burrowing form, are found in the United States. The HORNED TOAD is a lizard. Contact with toads does not produce warts on the human skin.

toadflax: see BUTTER-AND-EGGS.

toadstool: see MUSHROOM.

Toah (tō'ä), variant reading for NAHATH 3.

Tob (tŏb) or **Ishtob** (Heb ,=men of Tob), petty Syrian kingdom, probably NE of Palestine. Judges 11.3,5; 2 Sam. 10.6,8.

tobacco, plant of the genus *Nicotiana* and the product manufactured from its leaf and used in the CIGAR AND CIGARETTE, SNUFF, and pipe and chewing tobacco. The plant grows best in regions having a mean temperature of at least 40°F. and in rich, well-drained soils. The chief commercial species, *Nicotiana tabacum*, is native to America It is usually grown from seed as an annual Flower heads are pinched off to increase leaf development Most cigar-wrapper leaf is shade-grown The species *N rustica*, a mild-flavored, fast-burning form, was the tobacco originally raised in Virginia, but it is now grown chiefly in Turkey and the Levant, *N persica*, a slow-burning tobacco suitable for the hookah, or water pipe, is grown in the Orient Tobacco leaves may be picked as they mature or harvested all together with the stalk They are cured, fermented, and aged to develop aroma and reduce the harsh pungency of the smoke from fresh leaves. Fire-curing, dating from pre-Columbian times, is done by drying the leaves in smoke, air-curing requires that the tobacco be hung in well-ventilated structures; in flue-curing, used for over half the total crop, the leaves are dried by radiant heat from flues or pipes connected with a furnace The cured tobacco is graded, bunched, and stacked in piles called bulks or in closed containers for active fermentation and aging The United States produces an average annual yield of about 1,400,000,000 lb., of which about one third is exported, it imports tobacco for special purposes, e g , Oriental cigarette leaf for blending, Cuban and Puerto Rican tobacco for cigar filler, and cigar-wrapper leaf from Sumatra and Java In the United States about 60 percent of the crop is grown in North Carolina and Kentucky The possible harmful effects of nicotine, tarry compounds, and carbon monoxide in tobacco smoke vary with the individual limit of tolerance The use of tobacco originated among aborigines in the Western Hemisphere in pre-Columbian times Tobacco was introduced into Spain and Portugal in the mid-16th cent and spread to other European countries, then to Asia and Africa, where its use became general in the 17th cent It probably reached England from Virginia By 1619 tobacco had become a leading export of Virginia, where it was later used as a basis of currency See W W Garner, *The Production of Tobacco* (1946), publications of the U S Dept of Agriculture

Tobacco Nation, North American Indian tribe of the Iroquoian linguistic stock, called also the Tionontati In 1616, when visited by the French, they lived S of Nottawasaga Bay, in Ontario The French called them the Tobacco Nation because the Indians had large fields of tobacco After the dispersion (1648–49) of the Huron tribe by the Iroquois, many of the Huron refugees fled to the Tobacco Nation This brought down the wrath of the Iroquois upon the Tobacco Nation, and in 1649 the Iroquois attacked The remnants of the Tobacco Nation, with the Huron, were forced to flee to a region SW of Lake Superior About 1670 the two tribes were at Mackinac, and soon after they blended into one tribe—known to history as the Wyandot

Tob-adonijah (tŏb'-ădŏnī'jä) [Heb ,=Adonijah is good], Levite 2 Chron. 17 8

Tobago. see TRINIDAD AND TOBAGO.

Tobermory, Argyllshire, Scotland see MULL.

Tobiah (tōbī'ä) [Heb ,=God's goodness] 1 Ammonite opposed to Nehemiah Neh 2 10,19, 4 3, 6 17,19, 13 4,7,8 2 Family returned from exile Ezra 2 60, Neh 7 62.

Tobias see TOBIT

Tobijah (tōbī'jä) [Heb ,=God's goodness]. 1 Teacher of the Law 2 Chron 17.8 2 Emissary to Jerusalem from the Jews in Babylon Zech 6 10

Tobin, Maurice Joseph, 1901–, U S Secretary of Labor (1948–), b Boston, studied at Boston College law school The son of Irish immigrants, he found his fortune in politics and was a member of the General Court (1927–28), mayor of Boston (1938–44), and governor of Massachusetts (1945 46) His sponsorship as governor of liberal labor legislation opened the way for his appointment to succeed Lewis B SCHWELLENBACH as head of the Dept. of Labor in the midst of storms over the Taft-Hartley Act

Tobit (tō'-) or **Tobias** (-bī'-) [Gr from Heb TOBIJAH], book of the Old Testament, placed in the Apocrypha in AV and after Nehemiah in the Western canon It tells of Tobit (Vulgate Tobias), a devout Jew in exile, and of his son Tobias Sent by his father on business to a distant city, the young Tobias and his dog are guided by the archangel Raphael in the form of a young man They come to the house of a Jew whose daughter, Sara, is afflicted by a demon (Asmodeus) who has killed her seven husbands on their wedding day. The young Tobias under the guidance of Raphael exorcises the demon and marries Sara They return to his home, and the young man cures his father's blindness. The book ends with a prophecy by the father of the restoration of Jerusalem. The story inculcates ideals of benevolence, chastity, and prayer. The easy style and the homely realism of the book have made it a favorite. The ancient texts are of great

diversity; hence the two main English versions, the AV-RV translation and the Douay translation, differ materially in detail; thus in AV-RV the story is told partly in the first person (by Tobit), in the Douay wholly in the third The original language of the book is not known; it probably must be dated before 200 B C The young Tobias and his dog with the angel have been a favorite subject of Christian iconography For bibliography, see OLD TESTAMENT

tobogganing (tŭbā'gŭning, tŭbŏ'-), sport of coasting down snowy hillsides on a toboggan, a flat-bottomed vehicle made of hard wood The toboggan, often measuring 3 ft by 8 ft, is curled up at the front end in order to slide over irregularities of surface The bottom is waxed, and sometimes very low, broad, steel runners are added to facilitate speed The toboggan is a development of the simple bark-and-skin runnerless sled of the Indians Steering is accomplished by shifting weight and the use of trailing feet In winter resorts special slides are constructed They are iced to increase speed and have elevated sides so that practically no steering is necessary

Tobol (tŭbŏl'), river, 1,042 mi long, W Siberia, rising in the Mugodzhar Hills, Kazakh SSR It flows NNE past Kustanai, into RSFSR, and past Kurgan to join the Irtysh at Tobolsk and is navigable in its lower course

Tobolsk (tŭbŏlsk'), city (pop 32,200), RSFSR, in W Siberia, on the Irtysh river and at the mouth of the Tobol river It is a market center for furs and fish and has shipyards and sawmills Founded (1587) by the Russians near the former Tatar capital of SIBIR, it was the administrative and commercial center of W Siberia until 1824, when the seat of the government was transferred to Omsk. It declined after the construction of the Trans-Siberian RR, which by-passes it Emperor Nicholas II and his family were exiled here (1917–18) before they were taken to Ekaterinburg (now Sverdlovsk) to be executed Tobolsk has a kremlin, now a museum There is a monument (erected 1839) to Yermak, the Russian conqueror of Siberia. Mendeleyeff was born here

Toboso, El (ĕl tōbō'sō), town (pop 2,714), Toledo prov., central Spain, in New Castile It is an agricultural center of La Mancha Contrary to an unpardonably widespread opinion, El Toboso was not the residence of Dulcinea del Toboso in Cervantes's *Don Quixote* The truth of the matter is that Dulcinea (whose real name was Aldonza Lorenzo) was born at Toboso, but she resided "at a village near his own," i e, "a certain village in La Mancha," never identified by Cid Hamet Benengeli

Tobruk (tōbrŏōk'), town (pop 4,130), Cyrenaica, Libya A strategically located supply port on the Mediterranean Sea, it was a hotly contested objective in the Second World War (see NORTH AFRICA, CAMPAIGNS IN) In the first British invasion of Libya, Tobruk was taken on Jan 22, 1941 When the German commander, Erwin Rommel, drove the British out of Libya (March–April), the Tobruk garrison was isolated Provisioned by sea and ensconced behind strong and flexible defenses, the defenders withstood a violent siege of more than eight months Auchinleck's drive late in 1941 relieved the siege (Dec 10) In Rommel's second great offensive (begun May 26, 1942) Tobruk fell (June 21) after one day of assault, with some 25,000 troops capitulating It remained in Axis hands until the final victorious British drive from Alamein late in 1942

toby jug (tō'bē), small pottery pitcher or mug modeled in the form of a jolly, rotund man wearing a cocked hat, a corner of which serves as pourer. The jug is also called fillpot, both names taken from Toby Fillpot, inebriate character in the 18th-century song, *Little Brown Jug* Popular in England and America of that day, the toby jug has become a collector's piece

Tocantins (tōkăntēnsh'), river, c 1,560 mi long, rising in S central Goiás state, Brazil It flows N to the Pará river, the southern arm of the Amazon, SW of Belém It is only partly navigable because of rapids The main tributary is the Araguaia

toccata (tukā'tu, tō-), type of musical composition which originated about the beginning of the 17th cent Free in form, it was one of the first attempts at idiomatic writing for keyboard instruments, in contrast to the strictly contrapuntal pieces of the Renaissance The toccata was usually rhapsodic, often interspersing passages of brilliant figuration with fugal sections Andrea Gabrieli, Frescobaldi, Sweelinck, Froberger, Buxtehude, and Bach were outstanding early masters of the toccata style. Schumann wrote a toccata for piano. As a brilliant showpiece the toccata persists today in organ composition.

Toccoa (tŏ'kō), city (pop. 5,494), co. seat of Stephens co., NE Ga., in the Appalachian foothills and near the Tugaloo river; inc. 1875 It is an industrial center (with textile mills) in a farm, orchard, and timber area. Near by is Toccoa Falls Institute, a work-and-study-plan high school.

Tochea (tŏ'kēă) [Heb.,=measure], unidentified town, S Palestine. 1 Chron. 4.32

Tochigi, prefecture, central Honshu, Japan: see UTSUNOMIYA.

Tocqueville, Alexis de (älĕksēs' dŭ tôkvēl'), 1805–59, French liberal politician and writer He was prominent in politics, particularly just before and just after the Revolution of 1848, becoming minister of foreign affairs for a short time in 1849 A government mission to the United States, ostensibly to study the penal system, resulted in a book, *De la democratie en Amérique* (2 vols, 1835; Eng tr, *Democracy in America*, 4 vols, 1835–40, further corrections by Phillips Bradley, 2 vols, 1945), one of the classics of liberal literature Still relevant because of its original insight and vision, it discusses the shortcomings and advantages of the political and social system, justifying democracy and predicting its ultimate triumph Other important works are *L'Ancien Régime et la révolution* (1856, Eng tr, 1856) and his recollections (1893, Eng tr, by Alexander Teixeira de Mattos, 1896, complete ed by J P Mayer, 1949) See his correspondence with Nassau Williams Senior (2 vols, 1872), G W Pierson, *Tocqueville and Beaumont in America* (1938)

Todd, David, 1855–1939, American astronomer, b. near Ithaca, N Y, grad Amherst, 1875 He was for three years assistant on the U S Transit of Venus Commission at the naval observatory, Washington, D C, and was chief assistant on the *United States Nautical Almanac* (1878–81) From 1881 to 1920 he taught astronomy and navigation at Amherst In 1882 he was in charge of the transit of Venus observations at the Lick Observatory He conducted astronomical expeditions in many parts of the world While at the head of the Lowell expedition to the Andes in 1907 for the observation of Mars, he made 12,000 photographs of the planet, and in 1925 at Mitchel Field, Long Island, N Y, cooperating with the U S army air service, he obtained the first photograph of the sun's corona taken from an airplane Mabel Loomis Todd was his wife His book *A New Astronomy* (1897) was translated into Hungarian, Turkish, and Chinese He also wrote *Stars and Telescopes* (1899), *Lessons in Astronomy* (1902), and *Astronomy To-Day* (1924)

Todd, Mabel Loomis, 1858–1932, American author, b Cambridge, Mass The wife of David Todd, professor of astronomy at Amherst, she became the friend of Emily DICKINSON Later she edited much of the Dickinson material in her possession in *Poems* (with T W Higginson, Ser 1 and Ser 2, 1890–91), *Letters of Emily Dickinson* (2 vols, 1894), and *Poems* (Ser 3, 1896) Mrs Todd wrote poetry as well as a textbook, *Total Eclipses of the Sun* (1894) See M. T Bingham, *Ancestors' Brocades* (1945)

toddy, sweetened mixture of spirits, water, and flavoring ingredients It is said to have originated as a beverage, generally fermented, made by South Sea Islanders from the buds of flowers of trees identified by the early explorers, Capt James Cook and William Dampier, as fan and date palms It is still made in the Far East and in the Pacific islands

Todhunter, Isaac, 1820–84, English mathematician. From 1849 he was a fellow of St John's College, Cambridge He was noted for his textbooks of mathematics, for his work on equations and calculus, and for his research and writings on the history of mathematics

Todi (tō'dē), town (pop 3,820), Umbria, central Italy, on a hill in the Apennines Important Etruscan remains were found here The impressive main square of the town is surrounded by early medieval buildings The Renaissance Church of the Consolation was probably designed by Bramante. Todi is the birthplace of JACOPONE DA TODI

Todleben, Eduard Ivanovich see TOTLEBEN

Todmorden (tŏd'mûrdŭn, -môr-), municipal borough (1931 pop 22,222, 1943 estimated pop. 21,410), West Riding of Yorkshire, England, on the Rochdale Canal near the Calder river and NNE of Manchester It is a center of cotton spinning and weaving

Todos os Santos Bay (tō'dōōs ōōs sän'tōōsh) [Port., = All Saints Bay], inlet of the Atlantic, 25 mi long and 20 mi wide, Bahia, E Brazil It has a very irregular shore line On the north side of its entrance is the city of Salvador It was discovered in 1501 by Amerigo Vespucci

toga (tō'gu), the distinguishing garment of Roman dress, antique in origin, worn in early days by men and women of all classes, later by men alone Originally a small square or oblong wrap, it later became semicircular in form, about seven feet wide, and three times the wearer's height in length. Worn over the tunic, elaborately draped about the body in prescribed and graceful folds, it expressed the dignity of citizenship and was forbidden to foreigners, subjects, and exiles It was worn by patricians as the ceremonial state dress until the later days of Roman splendor, and became, with variations, the model of European court dress for centuries. It was made generally of wool or linen, and the colors used were significant, pure white (*toga candida*) being worn by the candidate, black by the mourner, and the purple border (*toga praetexta*) by priests, magistrates, and aristocratic boys before they assumed the *toga virilis* of full citizenship. The *toga picta*, richly bordered with emblematic embroidery, was the official garb of emperors and victorious generals The Gauls who became Roman citizens adopted, with some modification, the tunic and toga, but after the first century these garments began to disappear from the everyday costume of the West See M. G Houston, *Ancient Greek, Roman, and Byzantine Costume* (2d ed., 1947)

Togarmah (tōgär'mŭ), unidentified region. Gen. 10 3, Ezek 27 14, 38 6

Toggenburg (tō'gunbŏōrk), district in the Thur valley, St Gall canton, Switzerland Dairying and cotton textiles are its main industries After the death (1436) of the last count of Toggenburg, the territory was claimed by Zurich, and a civil war between Zurich and the rest of the Swiss Confederation resulted (1443–50) The territory was purchased (1468) by the abbot of St Gall. In 1712 the quarrels between the abbot and the Protestant communities of the Toggenburg served as pretext for the **War of the Toggenburg**, between the Catholic and the Protestant cantons of the Swiss Confederation The Catholics were defeated, and religious equality established.

Toggenburg goat see GOAT

Togliatti, Palmiro (palmē'rō tōlyät'tē), 1893–, Italian Communist leader A lawyer, he became a Communist in 1921, and in 1926 he fled from Fascism to Paris and later to Moscow Under the pseudonym Ercole Ercoli he wrote and worked for the Comintern, in which he became a prominent figure He was chief of the Comintern in Spain during the civil war Returning from Moscow to Italy in 1944, he took the leadership of the Italian Communist party, which rose to be the second-largest in Italy Togliatti held several cabinet posts in 1944–45, but later led the Communist opposition to the De Gasperi government He was wounded in an attempt on his life in 1948.

Togo, Heihachiro, Count (hā'hachirō' tō'gō) 1847–1934, Japanese admiral, Japan's greatest naval hero He studied naval science in England, served in the First Chino-Japanese War, and contributed greatly to the development of Japanese sea power In the Russo-Japanese War he defeated the Russian fleet at Port Arthur in 1904 and destroyed the main Russian fleet in 1905 at the battle of Tsushima Later he was chief of the naval general staff and member of the supreme war council See Edwin A Falk, *Togo and the Rise of Japanese Sea Power* (1936)

Togoland (tō'gōlănd') or **Togo** (tō'gō), former German protectorate (34,934 sq mi), W Africa, on the Gulf of Guinea By 1886 Great Britain and France had formally recognized German influence in the area Togoland was occupied by the British and French in the First World War In 1922 the League of Nations divided the territory into two mandates —British Togoland (13,041 sq mi, pop. 378,666) in the west and inland and French Togoland (21,893 sq mi, pop 944,446), with the capital at Lomé, in the east on the coast. The mandates became trust territories of the United Nations in 1946 British Togoland is administered as part of the Gold Coast Togoland's coast (c 30 mi long), entirely in French territory, is flat and has no good harbors The country produces cattle, cacao, and cotton The Ewe are the largest native tribe in both territories

Tohu (tō'hū), variant reading for NAHATH 3.

Toi (tō'ī), king of Hamath, father of JORAM 3. 2 Sam 8 10 Tou 1 Chron. 18 9

Tojo, Hideki (hēdā'kē tō'jō), 1884–1948, Japanese general, originally named Eichi Tojo (ā'chē) He became chief of staff of the Kwantung army in 1937, was vice war minister in 1938, and later served as director general of military aviation and as minister of war in the second Konoye cabinet. His accession to the premiership in Oct, 1941, marked the final triumph of the military party which advocated war with the United States and Britain Under Tojo's leadership Japan won control of most of E Asia, only to lose it as initial victories were followed by a succession of defeats in the Second World War At home, Japanese government and economy were completely totalitarianized Tojo resigned in July, 1944, after the loss of the Marianas In Sept., 1945, he unsuccessfully attempted suicide, but he was arrested as a war criminal, his trial resulted in conviction, and he was executed

Tokaj (tō'koi), town (pop 5,903), NE Hungary, on the Bodrog and Tisza rivers The rich sweet Tokay wine is grown in the region.

Tokat (tōkät'), town (pop 20,078), N central Turkey It is a center for copper refining and an agricultural market center.

Tokay (tōkā'), fine golden wine produced near Tokaj, Hungary The *Aszu* type is very sweet, the *Szamorodni* rather dry The very rare Tokay Essence is made from juice oozed from overripe grapes without artificial pressure

Tokelau (tōkulou') or **Union Islands**, group (c.6 sq. mi, pop. 1,170), S Pacific, c 300 mi. N of Western Samoa. It is composed of three atolls, Atafu, Nukunono, and Fakaofo. Discovered in

1765 by the British, the group was made a British protectorate (1889), included (1916-25) in the Gilbert and Ellice Islands colony, and in 1926 placed under the administration of Western Samoa as part of New Zealand's mandate The natives are of Polynesian stock Apia in Western Samoa is Tokelau's port of entry The chief export is copra.

Tokio, Japan see TOKYO

Tokoly, Emeric: see THOKOLY, EMERIC

Tokugawa (tō"kōōgn'wa), family that held the shogunate (see SHOGUN) and controlled Japan from 1603 to 1867. Founded by IEYASU, the Tokugawa regime was a centralized feudalism The Tokugawa themselves held about one fourth of the country in strategically located parcels, which they governed directly through a feudal bureaucracy The daimyo [barons] owed allegiance to the Tokugawa, but were permitted to rule their own domains Care was taken to see that none of them became strong enough to challenge the Tokugawa They were required to maintain residence at the shogun's capital and to leave hostages there during their absence Travel was closely regulated, and officials called *metsuke* [censors] acted as a sort of secret police Despite its efficient organization, the Tokugawa regime collapsed before a combination of internal and external forces in 1867, and the MEIJI restoration came about

Tokushima (tōkōō'shĭma), city (1947 pop 103,320), capital of Tokushima prefecture, E Shikoku, Japan It is a port and a center of industry and manufacture Mountainous Tokushima prefecture rises to 6,414 ft at Mt Tsurugi There are many farms, and raw silk, charcoal, fish, and salt are produced

Tokyo or **Tokio** (both tō'kō), city (1940 pop 6,778,804, 1947 pop 4,177,548), capital of Japan Tokyo is on central Honshu on the shore of Tokyo Bay The city is intersected by the Sumida river and by many canals The trade of Tokyo's busy port is chiefly domestic, while the near-by port of Yokohama handles foreign trade Tokyo was founded in the 12th cent as the small village of Yedo (called also Yeddo or Edo) It was fortified in 1457 and in 1590 was made the capital of a province It became of great importance in 1603, when Ieyasu, founder of the Tokugawa shogunate, made it his capital The population was increased by the retainers of the shogun (estimated at 80,000) and by the large retinues of the daimyos, whose attendance at the capital was compulsory. In 1868, with the destruction of the shogunate and the imperial restoration, the city became the emperor's capital, succeeding Kyoto It was renamed Tokyo [Jap ,=eastern capital] and was built up rapidly In the earthquake of 1923 fire destroyed nearly half the densely populated city and took c 150,000 lives Tokyo was later rebuilt with a subway system, with many modern buildings of steel and concrete, and with wide streets, which were intended to serve as firebreaks In the Second World War the first air attack (April 18, 1942) was delivered by bombers under Gen *James Doolittle* Bombings were frequent and heavy in 1944 and 1945, and most of the population fled Half the city was totally devastated, many famous landmarks (notably the Meiji shrine) were destroyed or badly damaged Left entirely intact were the imperial palace grounds and the surrounding area where the embassies, the diet building, and the newest office buildings (mostly used as headquarters for Gen Douglas MacArthur and his staff in the American occupation) are situated Bombing destroyed nearly all Tokyo's industrial plant, including shipyards, automobile factories, engineering works, and textile mills, but the city is still preeminent in Japanese finance and education Academic institutions (with dates of establishment) include Keio-Gijuku Univ (1867), Tokyo Univ (founded 1869, for a time it was called Tokyo Imperial Univ.), Rikkyo or St Paul's Univ (1883), Waseda Univ (1882), and Tokyo Women's Medical College (1900). There are great art collections in the Imperial Museum and in the Museum of Arms See K G Samsom, *Living in Tokyo* (1936)

Tola (tō'lə) [Heb ,=worm] **1** Son of Issachar. Gen 46 13 **2** Judge of Israel Judges 10 1,2.

Tolad (tō'-), same as ELTOLAD

Toland, John (tō'lund), 1670–1722, British deist, b. Ireland. While at school he changed his name from Junius Janus Toland He studied at Glasgow, Edinburgh, and Leiden and after 1694 lived at Oxford for several years His important work *Christianity not Mysterious* (1696), in which he contended that God is not necessarily mysterious because He is inscrutable and that the Scriptures are to be accepted as divine only on the basis of reason, was attacked and condemned In Ireland, where Toland went in 1697, the book was burned by the hangman, by order of the Irish Parliament Toland fled back to England and, abandoning religious subjects, wrote a biography of Milton (1698) and *Amyntor; or, A Defence of Milton's Life* (1699). His *Anglia Libera* (1701), in support of the Act of Settlement, brought him favor from the court of Hanover, where he was received by Electress Sophia. To her daughter, Sophia Charlotte, he addressed his *Letters to Serena* (1704), in which is indicated his tendency toward pantheism, which assumed clearer expression in his *Pantheisticon* (1720) A theological work of his later years is *Nazarenus, or, Jewish, Gentile, and Mahometan Christianity* (1718). *A Collection of Several Pieces of Mr John Toland* (with a biography by Pierre Des Maizeaux) appeared in 1726 See Leslie Stephen, *History of English Thought in the Eighteenth Century* (3d ed , 1902)

Tolbukhin, Bulgaria see DOBRICH

Toldy, Francis (tŏl'dĭ), Hung *Toldy Ferenc* (fĕ'rĕnts), 1805–75, Hungarian critic and literary historian He made immense collections of Hungarian poetry and collaborated in various literary journals Among his works are a handbook of Hungarian poetry (1828), written in German, a history of Hungarian poetry (1854), and an excellent history of Hungarian literature (1865)

Toledo, Francisco de (frănthō'skō dā tōlā'dhō), d 1584, Spanish viceroy of Peru (1569–81) He came of one of the noblest families of Spain and had served Charles V and Philip II with distinction before being chosen as viceroy His administration in Peru marked the end of the tumultuous period after the Spanish Conquest He made tours of inspection through the territories, reorganized governmental administration and finance, and made some attempt to reform conditions in the Church Whenever possible, he adopted the ancient Inca laws He broke the power of the *encomenderos* (the owners of the great estates in Peru), reducing them to obedience to the crown and to the viceroy He reorganized the Univ of San Marcos The one great blot on his administration was the unjust execution of the last Inca, Tupac Amaru, after trouble between the Spanish and the Inca. See biography by Arthur F Zimmerman (1929).

Toledo (tulē'dō, Span tōlā'dhō), city (pop 27,427), capital of Toledo prov, central Spain, in New Castile, on a granite hill surrounded on three sides by a gorge of the Tagus Historically and culturally it is one of the most important cities of Spain Of pre-Roman origin, ancient Toletum fell to the Romans in 193 B C It became an early archiepiscopal see, its archbishops, who still wield enormous power, are the primates of Spain Toledo prospered as a capital (after 507 the only capital) of the Visigothic kingdom, and it was the scene of several important church councils (see TOLEDO, COUNCILS OF) Its greatest prosperity began under Moorish rule (712–1085), first as the seat of an emir and after 1031 as the capital of an independent kingdom Under the Moors and later under the kings of Castile, who made it their chief residence, Toledo was a center of the Moorish, Spanish, and Jewish cultures Toledo sword blades were famous throughout the world for their strength, elasticity, and craftsmanship, the art was introduced by Moorish craftsmen, and it is still carried on Other important products were silk and wool textiles In the 15th cent Valladolid superseded Toledo as chief royal residence, but Emperor Charles V again resided here during much of his reign (1516–56) Its commercial decline began in the 16th cent, but at the same time it gained increased importance as the spiritual capital of Spanish Catholicism, in both its best and its worst aspects The somber seat of the Grand Inquisitors, it also was the center of the mysticism symbolized by its citizen by adoption, El GRECO, whose name has become inseparable from that of Toledo Its general aspect has changed little since El Greco painted the famous *View of Toledo* (Metropolitan Mus), although its chief landmark, the alcazar, was largely destroyed (1936) in the Spanish civil war Originally a Moorish structure, the alcazar was restored in the 13th cent and was transformed (1545, 1576) to serve as residence for Charles V and Philip II Its destruction occurred when the Insurgents, with their women and children, shut themselves up in that formidable fortress after Loyalist forces had retaken the rest of the city For more than two months (July–Sept., 1936) the defenders resisted the siege in one of the most extraordinary stands in recent history, and they fought on in the ruins till they were relieved (Sept 28) by Franco's forces Only a fraction of the men, women, and children were still alive The heroism of the action, in consonance with the traditional Toledan spirit, was admired by friend and foe alike The city is surrounded by partly Moorish, partly Gothic walls and gates Of Moorish origin also is the Alcántara bridge across the Tagus The Gothic cathedral, begun in 1227, is one of the finest in Spain It contains El Greco's *Espolio* and other paintings by him, in one of its richly decorated chapels, Mass is still celebrated according to the Mozarabic rite. Among the other many famous buildings are the Church of Santo Tomé, with El Greco's *Burial of the Conde de Orgaz*; the Church of Santa María la Blanca (12th–13th cent.), the Convent of San Juan de los Reyes (15th cent.), with five Gothic cloisters, the Hospital of San Juan Bautista (15th–16th cent), with paintings by El Greco, two former synagogues in Mudéjar style, and the Greco Museum.

Toledo (tŭlē'dō). **1** Town (pop. 2,073), co. seat of Tama co., central Iowa, E of Marshalltown, inc. 1866. The State Juvenile Home is here. Near by is an Indian sanatorium. **2** City (pop 282,349), co. seat of Lucas co , NW Ohio, on the Maumee river near its mouth at the western end of Lake Erie, inc 1837. It was settled in 1817 as Port Lawrence on the site of Fort Industry (1794), in 1833 it was consolidated with Vistula as Toledo A port of entry with a fine natural harbor and a vast system of railroads, it is one of the chief shipping centers on the Great Lakes, exporting coal, oil, farm products, and numerous manufactures and importing principally iron ore. It is also an industrial and commercial center Glassmaking, shipbuilding, and the manufacture of automobiles and parts are important industries, paint, steel, pig iron, coke, Portland cement, fabrics, chemicals, and condiments are produced In 1835–36 occurred the Toledo War, an Ohio-Michigan boundary dispute, settled by Congress in favor of Ohio when Michigan became a state Steps in the development of the city include the opening of the canals in the 1840s, the arrival of numerous railroad lines, the development of the Ohio coal fields, the tapping of gas and oil deposits late in the 19th cent , and the establishment of the Libbey glassworks in the 1880s When Samuel M JONES became mayor in 1897, an era of municipal reform was initiated Jones died in 1904 and was succeeded by Brand WHITLOCK A city-manager plan was installed in 1936 The Toledo plan of labor conciliation (1946) has been adopted by other cities The Univ of Toledo (coeducational), chartered in 1872, was opened in 1875 and became municipal in 1884, it had only polytechnical courses until 1904 It includes colleges of arts and sciences, business administration, education, engineering, law, and pharmacy and a junior college It cooperates with the Toledo Museum of Art Other points of interest are a Catholic cathedral, the Anthony Wayne suspension bridge (1931), a large zoological park, and Bay View Park (with a U S naval armory) There is a state hospital for the insane State memorials on the sites of Fort Meigs and of the battle of Fallen Timbers are south of the city See Brand Whitlock, *Forty Years of It* (1914) **3** City (pop 2,288), co seat of Lincoln co , W Oregon, near Yaquina Bay W of Albany, inc 1905 It has one of the largest spruce-lumber mills in the world and is a shipping point for lumber products

Toledo, Councils of. From the 4th to the 16th cent Toledo was the usual seat for assemblies of the Spanish nation and of the Church in Spain The first known of these councils were held to deal with the Priscillianist heresy (4th cent) and with clerical abuses and clerical jurisdiction In 589 a council was held at which King Recared abjured Arianism and embraced Catholicism, in this his nobles joined him At this council many decrees were passed which reveal that the clergy controlled the kingdom Most of the 7th-century councils deal only with political matters, notably with the power of the king, which the councils naturally tended to restrict (see VISIGOTHS) The principal council at Toledo in the period after the expulsion of the Moslems was that of 1565–66, at which a very important enunciation of ecclesiastical regulations was made, many are embodied in canon law

Toledo, University of see TOLEDO, Ohio

Toledo Osorio, Fadrique de (fadhrē'kā dā tōlā'dhō ōsōr'yō), 1580 1634, Spanish admiral He defeated a superior Dutch squadron off Cape St. Vincent, Portugal, in 1621

Tolentino (tōlăntē'nō), town (pop 5,710), the Marches, central Italy In 1797 Pope Pius VI signed here a humiliating treaty with Bonaparte Near Tolentino, Murat was defeated by the Austrians in 1815 and lost the throne of Naples

Tolland (tŏ'lund), town (pop 1,192), NE Conn , on the Willimantic , settled and inc 1715

Tollens, Hendrik (Hendrik Franciscus Tollens) (hĕn'druk fransĭ'skŭs tŏ'lŭns), 1780–1856, Dutch poet, popular in the Netherlands for his patriotic and homely verse His principal work (1819) was a poetic account of the Barentz expedition (1596–97), translated into English as *The Hollanders in Nova Zembla* (1884) He added a patronymic to his name, calling himself Hendrik Tollens Cornelisszoon

Toller, Ernst (ĕrnst' tō'lûr), 1893–1939, German dramatist and poet of the expressionist school He was imprisoned for five years (1919–24) for participation in the Bavarian revolution. Many of his plays were written in prison In 1932 he left Germany and in 1936 came to New York, where he died by suicide His plays of social protest include *Die Wandlung* (1919, Eng tr., *Transfiguration*, 1935), *Masse Mensch* (1920, Eng tr., *Man and the Masses*, 1924), which was produced in New York by the Theatre Guild, *Die Maschinen-stürmer* (1922, Eng tr , *The Machine-Wreckers*, 1923), based on the Luddite riots in England, *Hinkemann* (1924, Eng. tr , *Brokenbrow*, 1926), also produced in New York, and *Pastor Hall* (Eng tr. only, 1939), which was about Martin Niemoeller. Other works are lyric verse, the autobiography *Eine Jugend in Deutschland* (1933, Eng. tr., *I Was a German*, 1934), and *Briefe aus dem Gefangnis* (1935, Eng. tr., *Look through the Bars*, 1937), an account of his imprisonment. See *Seven Plays*

Tolleson (tŏl'ŭsŭn), town (pop 1,731), S central Ariz., in the Salt River Valley, settled 1911, inc. 1929

Tolosa (tōlō'sä), town (pop 10,114), Guipúzcoa prov., N Spain, in the Basque provs., SSW of Sebastián. It once was the capital of Guipúzcoa, and its old section, with many fine churches, convents, and palaces, has preserved its medieval aspect. The modern section is largely industrial and produces paper, textiles, machinery, and leather goods.

Tolstoy, Aleksey Konstantinovich (tŏl'stoĭ, Rus tŭlyĭksyā' kŏnstäntyē'nŭvĭch tŭlstō'), 1817–75, Russian poet, dramatist, and novelist. He was a distant cousin of Leo Tolstoy. He wrote some of the best humorous and nonsense verse in Russian literature, much of it with two cousins under the pseudonym Kozma Prutkov. He also wrote a number of charming narrative lyrics and epics, one historical novel, *Prince Srebryany* (1863, Eng. tr., *A Prince of Outlawe*, 1927), and a trilogy of historical dramas, *The Death of Ivan the Terrible* (1865, Eng. tr., 1926), *Tsar Fyodor Ivanovitch* (1868, Eng. tr., 1922), and *Tsar Boris* (1870).

Tolstoy, Aleksey Nikolayevich (nyĭkŭlī'ŭvĭch), 1882–1945, Russian novelist and man of letters. He went abroad after the Revolution of 1917, but returned in 1922 to become the outstanding literary figure in the Soviet Union. His early poems and short stories are of slight consequence, and his whole title to fame rests on the historical novels which he produced after the Revolution. These include the trilogy *The Road to Calvary* (1918–23, Eng. tr., 1946), in which he traces the rise of a new society in Russia, *Bread* (1938), a chronicle of the civil war in the region between the Volga and the Don, and his masterpiece, the historical novel *Peter I* (1929–34, Eng. tr., *Peter the Great*, 1936), a rich pageant of one of the great ages of transition in Russian history. In the last years of his life Tolstoy played a leading role in the revival of aggressive Pan-Slavism.

Tolstoy, Leo, Rus. *Lev Nikolayevich Tolstoi* (lyĕf), 1828–1910, Russian novelist and philosopher, one of the world's great writers. Of a noble family, he was born on his parents' estate Yasnaya Polyana, near Tula. Orphaned at nine, he was brought up by his aunts. At 16 he was sent to the Univ. of Kazan, at which he learned little and which he left without a degree. In 1849 he tried to establish a school for peasants at Yasnaya Polyana. This proved abortive, and he devoted himself to pleasure in Moscow and St. Petersburg. In 1851 he saw service in the Caucasus and there wrote *Childhood* (1852), the first part of an autobiographical trilogy which included *Boyhood* (1854) and *Youth* (1857). In 1854 he took part in the defense of Sevastopol, descriptions of which were published in Nekrasov's journal *Contemporary*. His experiences at Sevastopol were part of the raw material out of which grew his greatest novel, *War and Peace*. He left army service in 1855 and for several years divided his time between Yasnaya Polyana and St. Petersburg, where he was one of the *Contemporary* literary group which included also Turgenev. His diary of the period reveals his dissipation and his soul searching and remorse. At Yasnaya Polyana he undertook a project for freeing his serfs and in 1859 tried a second time to found a school for peasants, neither proved practical. In 1857 and 1860 he visited Western Europe and there began to question the very bases of modern civilization. He married Sophia Andreyevna Bers in 1862 and for the next 15 years lived mostly at Yasnaya Polyana, where he raised a large family. He wrote *The Cossacks* (1863), minor pieces, and *War and Peace* (1865–69) and *Anna Karenina* (1875–77). *War and Peace* is a prose epic of the Napoleonic Wars with highly individualized characters and richly evoked incidents, it illustrates the author's view of history as a force proceeding to its own ends, with man but an accidental instrument. *Anna Karenina*, while presenting a vividly realistic picture of St. Petersburg life, also dwells on the inner conflicts of its protagonists. About 1876 the doubts which had beset Tolstoy since youth gathered force, and he passed through a period of intense self-searching, the outcome of which was conversion to the doctrine of Christian love and acceptance of the principle of nonresistance to evil. The steps in his conversion are set forth in his *Confession* (1879). For the rest of his life Tolstoy dedicated himself to the practice and propagation of his new faith, which he expounded in a series of works, among them *A Short Exposition of the Gospels* (1881), *What I Believe In* (1882), *What Then Must We Do?* (1886), and *The Law of Love and the Law of Violence* (1908). He preached not only nonviolence but also a Rousseauistic simplicity of life. A Tolstoyan cult grew up in Russia and abroad, and such was his prestige and influence that the government did not interfere with any of his activities, although the Russian Church excommunicated him in 1901. Moral and social elements play a great role in Tolstoy's works written after his conversion, the best of which are *The Death of Ivan Ilyich* (1884), the drama *The Power of Darkness* (1886), and *The Kreutzer Sonata* (1889). To his last period belong the essay *What Is Art?* (1897–98), in which he argued for the moral responsibility of the artist, denouncing all the accepted masterpieces, including his own earlier works, the novels *Hadji Murad* (1896–1904) and *Resurrection* (1889–1900), and the drama *The Living Corpse* (pub. 1911). Tolstoy's insistence on putting his beliefs into practice and abandoning all earthly goods led to a breach between himself and his wife which was never mended. His children, with the exception of the youngest daughter, Alexandra, sided with their mother. In 1910 Tolstoy left home with Alexandra, but he died on Nov. 8 (N. S.) at the railroad station of Astapovo. Most of his works are available in English translations, among the best of which are those of Louise and Aylmer Maude. For biographical and critical evaluations, see Tolstoy's *Private Diary* (1927), G. R. Noyes, *Tolstoy* (1918), Maxim Gorky, *Reminiscences of Leo Nikolaevich Tolstoy* (1920), A. I. Nazaroff, *Tolstoy, the Inconstant Genius* (1929), Aylmer Maude, *Life of Tolstoy* (1931), Leon Derrick, *Tolstoy, His Life and Work* (1944), Janko Lavrin, *Tolstoy an Approach* (1944), Tikhon Polner, *Tolstoy and His Wife* (1945), E. J. Simmons, *Leo Tolstoy* (1946), Tatiana Kuzminskaya, *Tolstoy as I Knew Him* (1948).

Toltec (tŏl'tĕk), ancient Indian civilization of Mexico. The Toltec language was related to that of the Aztec, but their civilization was earlier. Its history began sometime between the 6th and the 8th cent. A.D. Their capital was Tollán (modern Tula, Hidalgo), and they had centers at Teotihuacan and Cholula. They had the fundamentals of the earlier Olmec culture, and their own civilization was materially far advanced. They knew how to smelt metals, and were the "master builders" of remarkable massive pyramids. Their polytheistic religion in later days seems to have centered about Quetzalcoatl, who may have been a historic chief and hero, later deified. Their ceremonies involved human sacrifice, sun worship, and a sacred ball game, *tlachtli*. They are said to have discovered the making of pulque, and they had considerable astronomical knowledge, shown in their calendar cycle of 52 years of 260 days each. The civilization declined after the destruction of Tollán (c. 1116?) and disappeared. The explanations offered are famine, pestilence, intertribal warfare, and pressure from northern invaders. Many of the Toltec seem to have migrated to Cholula and the south, possibly to Central America. The remainder seems to have merged with northern peoples to create the Chichimec civilization. Archaeological research at sites such as Monte Albán are bringing new facts about the Toltec to light. See G. C. Vaillant, *Aztecs of Mexico* (1941), Miguel Covarrubias, *Mexico South* (1946).

tolu or **tolu balsam** see balsam.

Toluca (tōlōō'kä), city (pop. 43,429), capital of Mexico state, central Mexico. On the southwestern border of the central plateau, Toluca is high (c. 8,760 ft.) and cold. It was established as a settlement in 1530 by Hernán Cortés, who had received the Valle de Toluca as a grant from Emperor Charles V. The surrounding plain is fertile, producing grain, fruits, and vegetables. Cattle raising is important. There are flour, cotton, and woolen mills and a brewery. Toluca is known for its basket weaving. Two small rivers run through the town, and near by is the inactive volcano, the Nevado de Toluca, called also Xinantecatl and Cinantécatl.

Toluca (tulōō'kŭ), city (pop. 1,433), N central Ill., NE of Peoria, in a farm area, inc. 1894.

toluene (tŏl'ūēn), **methylbenzene** (mĕth"thĭlbĕn'zēn), or **toluol** (tŏl'ūŏl, -ōl, -ōl), colorless liquid hydrocarbon of the benzene series or aromatic series, boiling at 110.8°C. and solidifying at −95°C. It is insoluble in water, but very soluble in alcohol, ether, and some other organic solvents. It is obtained from coal and petroleum. Toluene is used as a solvent and in the preparation of various dyes and explosives. When treated with nitric and sulphuric acids (the process is known as nitration or nitrating), the product resulting is trinitrotoluene (T.N.T. or TNT).

Tom (tŏm), river, 440 mi. long, RSFSR, in central Siberia. It rises in the Ala-Tau and flows N through the Kuznetsk Basin past Stalinsk, Kemerovo, and Tomsk into the Ob. It is navigable from Stalinsk.

Tom, Mount, peak, 1,202 ft. high, W Mass., N of Holyoke. It is the highest point of Mt. Tom Range, a state reservation, on the west side of the Connecticut.

Tomah (tō'mŭ), city (pop. 3,817), central Wis., NE of La Crosse, inc. 1883. It has railroad shops.

Tomahawk, city (pop. 3,365), N Wis., N of Wausau and on the Wisconsin, in a lake and woods region, platted 1887, inc. 1891. It is the state headquarters for forest-fire protection.

tomahawk [from an Algonquian dialect of Virginia], war hatchet generally used by North American Indians. It was usually made of stone with an edge or two edges somewhat sharpened (sometimes the stone was globe shaped), the stone was fastened to a wooden handle in various ways, such as putting the stone in a hole bored or burned through the wood, tying the stone to a handle or splitting the handle and tying it about the stone with thongs. The tomahawk was used in battle, but is chiefly spoken of for its use in removing scalps. It was sometimes thrown but more frequently wielded as an axe. After the coming of the white traders, the stone implements were rapidly replaced by European-manufactured tomahawks of steel (trade tomahawks). Some tomahawks were also equipped with a pipe bowl and a hollow stem and could be used for smoking. The ceremonial tomahawk usually was richly decorated with feathers and paint. Some Indians had the custom of ceremonially burying a tomahawk after peace had been reached with an enemy. This custom is supposedly the origin of the colloquial phrase, "to bury the hatchet."

Tomar (tōōmär'), city (pop. 6,246), central Portugal, in old Estremadura, NNE of Santarém. It has paper and textile mills and other industries but is noted chiefly as the center of the Knights Templars and later of the Military Order of Christ. The knights under Gualdim Pais in 1190 resisted the assault of Yakub and his Almohade forces with valor and success—an important event in the reconquest of Portugal. The Templars were suppressed early in the 14th cent., but the Order of Christ was founded (1319–20) immediately afterward. The great convent-castle on the hill overlooking Tomar dates from the most glorious days of the order, just after it was under Prince Henry the Navigator, though there are mementos of the earlier years. There are other churches, principally of this period. The order grew rich from the overseas expansion, and the city flourished. In 1581 it was chosen by Philip II of Spain for the proclamation of his rule. Thereafter it declined.

Tomaszow Mazowiecki, Pol. *Tomaszów Mazowiecki* (tômä'shōōf mäzôvyĕts'kē), city (pop. 30,225), central Poland, SE of Lodz. It has a textile industry.

tomato, plant (*Lycopersicon esculentum*) of the nightshade family, related to the potato and eggplant. It is a rather straggling plant, bearing clusters of very juicy, commonly globular fruits of yellow to deep red color. Though cultivated in Mexico and Peru for centuries before the European invasion, the tomato is one of the newest plants to be used on a large scale for human food. When the Spanish explorers took back seed from South America, the plant was grown merely for ornament, being known as the love apple. Though described as a salad plant before 1600, only within the last century has it become recognized as a valuable food. Now it ranks third among our vegetable crops. It is a popular salad vegetable and is also much used for commercial and home canning and for soups, sauces, and juice. It is the most widely used canned vegetable. The tomato is rich in vitamin content, which is not lost in cooking. The plant grows readily on many soils in practically all parts of the United States, as an annual except in the warmest regions. Many varieties have been developed, ranging in fruit from the small kinds—cherry, grape, and pear—to the very large beefsteak. The currant tomato is *Lycopersicon pimpinellifolium*. Gathered green, the tomato can be ripened in cellars. One of the worst pests is the cutworm. See *Tomatoes as a Truck Crop* (U.S. Dept. of Agriculture, Farmers' Bul. 1338).

tomb, space excavated in the earth or rock for the deposit of a dead body or a vault or chamber constructed either partly or entirely above ground as a place of interment. Of the many forms devised through the ages, none is more imposing than the Egyptian pyramid, probably evolved from the mastaba. Later, rock tombs were cut in cliff sides and sometimes finished with carved façades—in the valley of the Nile near Thebes, near Jerusalem, at Petra (Jordan), and elsewhere in Asia. Early tombs in Greece are of the beehive type, such as the Treasury of Atreus at Mycenae (about the 14th cent. B.C.). In the Greek colonies in Asia Minor, impressive circular tombs were constructed, such as the tomb of Mausolus (see mausoleum) at Halicarnassus (c. 352 B.C.), one of the Seven Wonders of the World. By the sides of the principal roads approaching Greek and Roman cities were rows of tombs, often handsomely ornamented. A form commonly used by the Romans was a circular tower shape, such as the great tomb of Hadrian (now Castel Sant' Angelo), Rome. In the Christian era it became the custom to build a church over the grave of a martyr. From this it followed that kings and other privileged persons were buried within the church buildings. The indoor tomb often took the form of a little shrine or of a sarcophagus bearing an effigy of the deceased and sheltered by a canopy. The custom continued through the Renaissance, resulting in the ornate structures of the 18th cent., with their masses of sculptural decoration. Church tombs sometimes stood so that all four sides could be seen, but more often were placed against a wall or even fastened high upon the wall. The churches and cloisters of Italy, France, Spain, and England are rich in such memorials, many of them perpetuating the names

of the artists who designed them as well as the persons to whom they were erected. The circular tomb surmounted by a dome has been used in many variations, especially by Mohammedans, the supreme example is the TAJ MAHAL at Agra, India (completed c 1648) Notable tombs of recent times are those of Napoleon under the dome of the Invalides, Paris; General Grant, in New York City, Lenin, in Moscow; and the UNKNOWN SOLDIER, Arlington National Cemetery See also BARROW and CATACOMB.

Tombaugh, Clyde William (tŏm'bô), 1906–, American astronomer, b Streator, Ill , grad Univ of Kansas (B A., 1936) From 1929 to 1943 he was affiliated with the Lowell Observatory, Flagstaff, Ariz , and in 1946 he became astronomer at the ballistics laboratories near White Sands, N. Mex In 1930 he discovered the planet PLUTO He also discovered a number of star clusters, variable stars, asteroids, and nebulae

Tombigbee (tŏmbĭg'bē), river, 409 mi long, rising in NE Mississippi and flowing SSE into W Alabama, then generally south, to join the Alabama and form the Mobile river c 30 mi N of Mobile

Tombstone, city (pop 822), SE Ariz , NNW of Bisbee. Ed Schieffelin, a prospector, found (1877) silver here, and named and laid out (1879) the city, which was a large, rich, and very tough mining town until the century's close It was county seat of Cochise co. until 1931, but, despite its attractions to tourists and health seekers and despite some mining, it is interesting chiefly for its past See W N. Burns, *Tombstone* (1927), J M. Myers, *The Last Chance Tombstone's Early Years* (1950)

Tomi: see CONSTANTA, Rumania

Tomlinson, Henry Major, 1873–, English novelist A dock worker, then a journalist and war correspondent, he was (1917–23) literary editor of the *Nation and Athenaeum*. Probably his best-known novel is the sea story *Gallions Reach* (1927) Others include *Pipe All Hands* (1937) and *Morning Light* (1946) *All Our Yesterdays* (1930) is a semifictional history of the First World War Among his other works are *The Sea and the Jungle* (1912), *Norman Douglas* (1931), *South to Cadiz* (1934), and *Below London Bridge* (1935)

Tommaseo, Niccolò (nĕk-kōlô' tōm-mhsā'ō), 1802–74, Italian poet and critic, b Sibenik, Dalmatia He wrote well in almost every field, including history, philosophy, lexicography, and philology, he is perhaps most distinguished in the last, but was an influential critic Besides collecting the popular poetry of Tuscany, Corsica, Illyria, and Greece, he wrote lyric verse. In politics he was a liberal and attacked Austrian rule In 1833 he was forced into exile, but later he returned and played a part in the Revolution of 1848 in Venice The collapse of the revolution forced him again into exile In 1854 he settled at Turin

Tompkins, Daniel D , 1774–1825, American statesman, Vice President of the United States (1817–25), b Westchester co , N Y , grad Columbia, 1795. He was admitted to the bar (1797), went into politics, and became a leader of the Jeffersonian group in New York state Elected to Congress in 1804, he preferred to accept an appointment to the New York supreme court As governor (1807–17) of New York he took active measures for the protection of the Canadian border in the War of 1812 In an effort to prevent the chartering in New York of a banking institution, Tompkins in 1812 took the unique step of proroguing the legislature. In 1816 he was elected Vice President and held that office through both Monroe administrations His college essays were collected in the volume *Columbia College Student in the Eighteenth Century* (ed by R W Irwin and E. L. Jacobsen, 1940)

Tompkinsville, town (pop 1,438), co. seat of Monroe co., S Ky., SE of Bowling Green and near the Tenn. line, in a farm area In a state park near by is the old Mulkey meetinghouse (present structure built 1798).

Tomsk (tômsk, Rus tômsk), city (pop. 141,215), capital of Omsk oblast, RSFSR, in W central Siberia, on the Tom river and on a spur of the Trans-Siberian RR. A cultural center, it has a university (founded 1888), a polytechnic institute, medical and teachers colleges, and various technical schools It has light manufactures and agricultural processing plants, Founded (1604) by Boris Godunov, it early developed into an important trading post and was the leading city of Siberia in the 19th cent By-passed by the Trans-Siberian RR, it lost its commercial importance after 1900.

Toms River, unincorporated village (pop 1,966), co. seat of Ocean co , E N J , on an inlet of Barnegat Bay SE of Lakehurst It is a fishing center The courthouse contains a county museum The village, a privateering center in the Revolution, was burned in 1782 by Loyalists and British.

Tom Thumb, 1838–83, American dwarf and entertainer, whose real name was Charles Sherwood Stratton, b. Bridgeport, Conn. His career as General Tom Thumb began in 1842, when the showman P. T. Barnum gave him the title and arranged with the child's parents for his exhibition as a midget. His height then was less than 2 ft., and at no time did it exceed 33 in. The intense curiosity of people throughout the world, which Barnum aroused through consummately skillful publicity and satisfied through profitable display of the General in many lands, brought Tom Thumb wealth and fame. At the age of 10 he had already been the guest of President Polk, Queen Victoria, Isabella of Spain, and King Louis Philippe of France. His courtship of another of Barnum's dwarfs, Lavinia Warren, 18, led to a fashionable wedding in New York's Grace Church in 1863. In the course of their wedding trip they were received and dined at the White House by President Lincoln The General and his wife continued to entertain audiences in the United States and abroad until their retirement in 1882 Of his enormous earnings Tom Thumb spent tens of thousands of dollars for yachts, horses, and precious stones He died at the age of 45, and Mrs Tom Thumb at 77

tom-tom, name popularly applied to small hand drums, usually barrel-shaped and having either one or two drumheads of skin Supposedly of American Indian or Oriental origin, they are sometimes used in modern dance orchestras for special effects The terms *tom-tom* and *tam-tam* are sometimes used interchangeably, but the latter is usually a name for the gong

tonality (tōnă'lĭtē), in music, the quality by which all tones of a composition are heard in relation to a central tone called the keynote or tonic In music which has HARMONY the terms KEY and *tonality* are practically synonymous, those who make a distinction being unable to state it precisely Some sort of relationship to a tonic is characteristic of all music except that in which it is deliberately avoided (see ATONALITY) The term *tonality* is also used in contrast to *modality* (see MODE).

Tonawanda (tŏnŭwŏn'dŭ), industrial and commercial city (pop 13,008), W N Y., N of Buffalo and on the Niagara at the terminus of the Barge Canal, organized 1836, inc 1903 Chemicals and paper products are made here Near Akron to the east is the Tonawanda Indian Reservation

Tonbridge (tŭn'-), urban district (1931 pop 16,333, 1943 estimated pop 21,000), Kent, England, near the Medway and SE of London It has a ruined ancient moated castle and a grammar school (1553) Its manufactures include the wooden mosaic "Tunbridge ware," chemicals, paper, and agricultural machinery TUNBRIDGE WELLS is south.

Tonder, Dan *Tønder* (tŭ'nur), Ger *Tondern* (tōn'dürn), town (pop 6,778), S Jutland, Denmark, in North Schleswig Brewing, meat packing, and the manufacture of margarine and of automobile bodies are its chief industries Dating from the 13th cent , Tonder belonged (1866-1920) to Prussia Few old buildings remain

Tone, Wolfe (Theobald Wolfe Tone), 1763–98, Irish revolutionary. He studied at Trinity College, Dublin, read law in London and Dublin, and was called to the bar in 1789, but his dislike for the practice of law turned him toward politics He was a founder of the Society of United Irishmen, which labored for the union of Catholics and Protestants in a common cause against English oppression of Ireland He was implicated in the intrigues for a French invasion of Ireland, but was allowed to leave the country for America In Philadelphia in 1795 he negotiated with the French minister concerning French aid in an Irish rebellion. In 1796 he went to Paris and became a *chef de brigade* in the French army He fostered several ill-fated expeditions to Ireland, accompanied one under General Lazare Hoche in 1796, and, after he had been made adjutant general (1798) in the *Armée d'Angleterre*, he joined a new expedition to Ireland, which was defeated by an English squadron off Lough Swilly. Tone was captured, court-martialed, and convicted of treason, he committed suicide before his execution could be carried out He was the author of a number of political pamphlets These, with his autobiography and journals were edited by his son (1826), the work has appeared in a number of editions See his letters (ed. by Bulmer Hobson, 1920), biography by Frank MacDermot (1939).

tone. A musical tone is distinguished from an unmusical noise by its definite pitch, caused by the regularity of the vibrations which produce it. Any tone possesses the attributes of pitch, intensity, and quality. Pitch is determined by the frequency of the vibration, intensity (or loudness) by the amplitude Quality is determined by the overtones (see HARMONIC), the distinctive timbre of any instrument being the result of the number and relative prominence of the overtones it produces. When two fairly loud tones of equal volume but different pitch are sounded together, a fainter resultant tone, representing either the sum of their two rates of vibration (summation tone) or the difference (difference tone), may be heard. The term "whole tone" (also called whole step) refers to the INTERVAL of a major second or its equivalent, a half tone, semitone, or half step being a minor second (see SCALE).

tone poem: see SYMPHONIC POEM.

Tonga (tŏng'gu) or **Friendly Islands,** island group (250 sq mi., pop. 34,130), S Pacific, c.2,000 mi. NE of Sydney, Australia. A British protectorate, the islands comprise three main groups, Tongatabu (the seat of Nukualofa, the capital), Vavau, and Haabai. Most of the islands are coral, but a few are volcanic, with active craters. The natives are Polynesians. The northern islands were discovered in 1616 by the Dutch, and the rest of the group by Tasman in 1643. Visiting the islands in 1773, Capt. James Cook named them the Friendly Islands. English missionaries arrived in 1797 and helped to strengthen English political influence. In 1862 a constitutional monarchy was established, and the group became a British protectorate in 1900 The present ruler is Queen Salote, who is advised by a British agent She is the last hereditary monarch of Polynesia. Because of compulsory primary education, the literacy rate is relatively high Every Tongan is entitled to an allotment of land The chief export is copra

Tonganoxie (tŏng'gunŏk'sē), city (pop 1,114), NE Kansas, E of Topeka, in a farm area, inc. 1871.

Tongareva: see PENRHYN

Tongariro (tŏng"gŭrē'rō), volcanic peak, 6,458 ft high, on central North Island, New Zealand. Hot springs are on its slopes, a lake on the summit.

Tongres (tô'grŭ), Flemish *Tongeren* (tŏng'ürun), town (pop 13,484), Limburg prov , E Belgium, NNW of Liége Dating from Roman times, Tongres was destroyed by the Huns in 451 and by the Norsemen in 881 It long was an important trade center There is a 12th-century church with cloisters dating from the 10th cent

tongue, muscular structure covered with mucous membrane which occupies the floor of the mouth It is about 3½ in. long but varies because of its mobility Small projections called papillae give the normal tongue a rough appearance The tongue is important in speech, chewing, taste, and the swallowing of food. It may be inflamed from irritants, such as mercury, or from infection by bacteria or by fungi (THRUSH) Tumors are not uncommon In fever the tongue becomes coated, and if not kept clean, painful cracks occur In certain anemias the tongue is abnormal Canker sores are associated with lack of vitamins, particularly the vitamin B complex

tonic, in music see HARMONY, KEY, SCALE, TONALITY

tonic sol-fa, in music see MUSICAL NOTATION.

tonka bean (tŏng'kŭ), black-skinned, aromatic, almondlike single seed of the pod of a tall leguminous tree of tropical South America It contains coumarin (whence it is also called coumara nut), a substance which has a vanillalike aroma and is used as a vanilla substitute and in the manufacture of perfumes, sachets, soaps, tobacco, and food It is also sometimes known as tonqua bean and tonquin bean

Tonkawa (tŏng'kuwô), oil city (pop 3,197), N Okla , on the Salt Fork of the Arkansas river, settled 1893, inc 1894 A state junior college is here

Tonkin (tŏn'kĭn', tŏng'-), state (c 44,000 sq mi , pop c 9,800,000), N Indo-China Tonkin in the north and the west is occupied by high mountain masses, continuous with the mountains of the Chinese provinces (Yünnan and Kwangsi) to the north and of Laos to the west and southwest In E Tonkin the mountains give way to an alluvial plain—the delta of the Red River and other streams that empty into the Gulf of Tonkin, an arm of the South China Sea Ranges extending nearly to the gulf separate Tonkin from Annam to the south The lower Red River valley is the heart of Tonkin, here are most of the people, the great rice fields, and the cities of HANOI and HAIPHONG, in which industry and trade are concentrated The mountain regions are sparsely peopled and are given over chiefly to subsistence farming and fishing Besides rice, important crops in Tonkin are maize, garden vegetables, coffee, tea, and indigo. Some cotton and silk are produced Tonkin has the only important coal fields in Indo-China, as well as deposits of zinc, tin, and wolfram. Most of the people are Annamese, but there are also many Chinese, as well as Thais and primitive tribesmen. It was in Tonkin that a state of ANNAM first took form After the division of the Annamese lands in 1558, the northern territories were ruled from the city of Tonkin (modern Hanoi), thus the name of Tonkin came to be applied by Europeans to the whole area. Like the southern Annamese lands ruled from Hué, Tonkin was plunged into disorders in the late 19th cent and was easily brought under the rule of the restored line of Hué as part of the kingdom of Annam To open the Red River to French trade, French expeditions were sent into Tonkin in 1873 and 1882, that of 1882 resulted in a full-scale colonial war, complicated by Chinese intervention against the French. In 1884 Annam accepted a French protectorate, conceding France a separate protectorate over Tonkin, with control more direct than over Annam. In 1887 Tonkin became part of the Union of Indo-China. After the Second World War, Tonkinese and Annamese nationalist leaders joined in demanding independence for the state of VIET NAM, and Tonkin (North Viet Nam) was torn by guerrilla warfare between the French and the nationalists. The name also appears as Tongking and Tonking.

Tonle Sap (tŏn'lē sāp'), lake, Cambodia. It occupies the hollow of the Cambodian plain and is fed

by streams from the north, west, and south; the outlet flows southeast to join the MEKONG at the Quatre Bras near Pnom Penh At low water (Nov.–May), it covers c.1,150 sq mi; in the floods, the waters of the Mekong back up into the Tonle Sap and the lake's area is more than tripled The 2,500 sq. mi. of surrounding forest inundated by the floods provide a breeding ground for fish, of which about 100,000 tons are caught yearly The fisheries of the lake area are an important natural resource of Cambodia

Tönnies, Ferdinand (fĕr'dēnänt tün'yüs), 1855–1936, German sociologist and political scientist He is noted for his analysis of the distinction between the spontaneous community and the secondary groupings of society See his *Gemeinschaft und Gesellschaft* (1887, Eng tr, *Fundamental Concepts of Sociology*, 1940).

Tonopah (tŏnupä'), unincorporated town (pop. 1,703, alt. more than 6,000 ft), co seat of Nye co, S central Nev.; founded 1900 when rich silver mines were discovered

tonqua bean: see TONKA BEAN

Tonsberg, Nor. *Tønsberg* (tûns'bĕr), city (pop 11,883), Vestfold co, SE Norway, a seaport on the Skagerrak near the mouth of the Oslo Fjord It is the oldest city of Norway, and it has been a major whaling base since the 18th cent

tonsils. The palatine tonsils are lymphoid masses of tissue, ovoid in shape, located between the pillars of the fauces (see THROAT) on either side of the soft palate They may become enlarged, thus interfering with breathing Infected tonsils may be a focus of infection and cause disease in other parts of the body Tonsillitis, an acute inflammation of the tonsils, may result in quinsy sore throat Chronically infected or persistently enlarged tonsils should be removed The pharyngeal tonsils are commonly called adenoids

Tonson, Jacob (tŏn'sün), 1656?–1736, English publisher He and his brother Richard were the purchasers and publishers of Milton's *Paradise Lost* In his association with John Dryden he published a series of miscellany volumes (6 vols, 1684–1709), edited by Dryden and often referred to as Dryden's miscellany or Tonson's miscellany Tonson was secretary of a literary club called the Kit-Cat Club which he founded c 1700, was joint publisher of the *Spectator* from 1712, and was publisher of works by Addison, Steele, Pope, and many others The business was carried on by his great-nephew Jacob Tonson (d 1767)

Tonstall, Cuthbert: see TUNSTALL, CUTHBERT

tonsure (tŏn'shur), practice in some Christian churches of cutting some of the hair from the scalp of clerics In the West the tonsure consists of a circular patch on the crown of the head from which the hair is kept cut, some tonsures keep the entire head shaved above the ears, and some retain a broad band of hair around the head Different religious orders have different tonsures In the 6th and 7th cent one of the outstanding questions between the Celtic use and the Roman use was the tonsure, which the Celts made by cutting the hair off the front part of the head

Tonti or **Tonty, Henri de** (both ärē' dŭ tōtē'), c 1650–1704, French explorer in the present Canada and the United States, b Gaeta, Italy, son of Lorenzo Tonti Henri de Tonti served as a cadet in the French army A hand he lost in battle was replaced with an iron substitute, and his skillful use of this appliance was later to lead American Indians to believe him possessed of potent medicine In 1678 Tonti accompanied the explorer LA SALLE to Canada as his lieutenant and was dispatched to Niagara where, among hostile Indians, he constructed the *Griffon*, the first sailboat to ply the Great Lakes W of Ontario. Tonti preceded La Salle westward to Detroit and penetrated into the country of the Illinois Indians, whom he won over to the French interest In 1680, left by La Salle at Starved Rock to construct a fort, he was faced by desertion of his men and the hostility of the Indians and was forced to winter in Wisconsin Meeting La Salle at Mackinac, he voyaged with him down the Mississippi to its mouth, they proclaimed the entire Mississippi watershed the domain of France Tonti returned alone to the Illinois, where he was rejoined by La Salle and together they completed (1682-83) Fort St Louis at Starved Rock When La Salle returned to France, Tonti was left in charge of the fort La Salle did not return, for he failed in his attempt to find the mouth of the Mississippi by sea. Having no word, Tonti in 1686 descended the river in a hopeless search for La Salle The following year he led a band of Illinois in Denonville's raid against the Iroquois Tonti remained at Fort St. Louis, developing the new empire, until 1700, when he joined Iberville's colony at the mouth of the Mississippi Pierre Margry included Tonti's account in *Mémoires et documents pour servir à l'histoire des origines françaises des pays d'outre-mer* (6 vols., 1879–1888; Eng. tr., *Relation of Henri de Tonty*, 1898). See J. C. Parish, *The Man with the Iron Hand* (1913), C. B. Reed, *Masters of the Wilderness* (1913); E. R. Murphy, *Henry de Tonty, Fur Trader of the Mississippi* (1941).

Tonti, Lorenzo (lōrän'tsō tōn'tē), 1630?–1690?, Italian banker. He originated and introduced into France a form of life annuity which was used in French public finances from 1653 to 1762 By the "tontine system" over a million livres were floated in life annuities Borrowing by this method was again resorted to in 1689, 1696, 1733, 1734, 1744, 1759, and 1762 According to the original system, when the last subscriber died, the fund reverted to the state, but the term *tontine* came to be applied to an annuity which increased in value to the survivors as each subscriber died.

Tonto Basin, depression S of the Mogollon Rim, E central Ariz The wild country around Tonto Creek, which flows south from the basin to join the Salt river above Roosevelt Dam, has been much celebrated in cowboy stories

Tonto National Monument. see NATIONAL PARKS AND MONUMENTS (table)

Tonty, Henri de: see TONTI, HENRI DE

Tooele (tōōē'lē), city (pop 5,001), co seat of Tooele co, N central Utah, S of Great Salt Lake and SW of Salt Lake City, settled c 1850 The town depends much on the smelting and reduction of ores, and the region roundabout has grazing The Elton Tunnel (built 1937–42) in the Oquirrh Mts leads from the mining in Bingham Canyon

Tooke, John Horne, 1736–1812, English politician and philologist He entered the Church in 1760, but devoted himself largely to the study of the law and to political agitation He was for a time a strong supporter of John WILKES, but turned against him in 1771 He was a staunch defender of the American colonists in their revolt against England and was fined and imprisoned for attempting to raise funds for the victims of the government "murder" at Lexington and Concord In 1794, with others, he was tried for treason, but acquitted Tooke's radicalism, though erratic, was a forerunner of more serious attempts at reform in the early 19th cent Tooke's later years were devoted to literary pursuits His *Epea Pteroenta; or, The Diversions of Purley* (1786–1805) was an early, though desultory, attempt at scientific language study See biography by Minnie Yarborough (1926)

Tooke, Thomas, 1774–1858, English economist His *History of Prices 1793-1856* (6 vols, 1838–57) is classic He was a free trader, opposing any governmental restriction on foreign trade

tool. Many of the tools used in the various industries are of types known in prehistoric times Before metals were used, there were adzes, awls, axes, hammers, saws, and other tools of stone Polished stone tools are evidence in themselves that fine work in very hard stone was done without metal tools Machine tools (tools operated by machinery) include lathes, drills, planes, and milling and grinding tools The use of power to operate tools makes possible great speed and uniformity of product The metal used for machine tools is subject to much greater strain than that used for most hand tools High-carbon steel has been largely replaced by Mushet steel and other alloys of steel (containing such metals as molybdenum, tungsten, chromium, and vanadium) and by stellite (see STEEL) Such alloys are hard and tough, and they retain their hardness and effectiveness even in the great heat generated by the friction, at high speed, of the tool against the metal machined See also PNEUMATIC APPLIANCES AND TOOLS See Thomas Hibben, *The Carpenter's Tool Chest* (1933), H J Peake, *Early Steps in Human Progress* (1933), W P Turner and H E Owen, *Machine-Tool Work* (2d ed, 1945), A P Morgan, *Tools for Woodworking and Metal Working* (1948)

Toole, John Lawrence (tōōl), c 1830–1906, English comedian He was known for such roles as Samuel Pepys in *The King's Rival*, Weasel in *My Friend the Major*, Caleb Plummer in *Dot* (Boucicault's adaptation of Dickens's novel, *The Cricket on the Hearth*), and the Artful Dodger in *Oliver Twist* See his *Reminiscences* (1889)

Toombs, Robert, 1810–85, American statesman, Confederate leader, b Wilkes co, Ga, grad Union College, 1828 He became a successful lawyer in Georgia and entered politics as a Whig, serving five years in the state legislature and from 1845 to 1853 in Congress He favored the Compromise of 1850 and with Howell COBB and Alexander H STEPHENS canvassed Georgia to have it ratified With them also he organized the moderate Constitutional Union party, which elected him (1852) to the U S Senate, in which he served until 1861 On the dissolution of that party he became a Democrat A brilliant orator, Toombs firmly supported Southern measures, but did not become an avowed secessionist until after the election of Lincoln. He played a leading role in the Georgia secession convention and in the convention in Montgomery at which the Confederacy was organized Made secretary of state in the new government, he soon resigned to become a brigadier general commanding Georgia troops in Virginia. He fought in the Peninsular campaign, the second battle of Bull Run, and the Antietam campaign in the Civil War, resigning when he was refused promotion Toombs, who had coveted the Confederate presidency, was of the faction that opposed the policies of Jefferson DAVIS. After the war he fled to Europe, returning in 1867. He continued to be important in Georgia politics, especially after Reconstruction He himself remained "unreconstructed," refusing to the end to take the oath of allegiance to the United States See biography by U B Phillips (1913), B. J. Hendrick, *Statesmen of the Lost Cause* (1939).

tooth see TEETH

toothache, pain in or associated with a tooth, commonly the result of dental caries Usually there is inflammation of the pulp of the tooth or even exposure of the pulp Abscess occurring at the apex of the root of a tooth may produce severe pain as a result of pressure on or irritation of surrounding sensory nerve filaments Toothache may also be referred from other areas as in such conditions as facial neuralgias Treatment should be administered by a dentist Hot or cold applications to the jaw sometimes give temporary relief

Toowoomba (tuwōōm'bu), city (pop. 33,280), Queensland, Australia, W of Brisbane and on the Darling Downs, 2,000 ft above sea level. It is an agricultural center and a summer resort.

top, toy with a tapering point on which it can be made to spin Tops were known in antiquity and appeared again in Europe during the Middle Ages; they are used by some primitive tribes today. The principle is utilized in the GYROSCOPE.

topaz (tō'păz), aluminum silicate mineral with ether hydroxyl radicals or fluorine, used as a gem. It is commonly colorless or some shade of pale yellow to wine yellow, pale blue and pale green also occur, but natural red stones are uncommon Some natural yellow stones lose their yellow coloring when heated and become permanently pink ("pinked" topaz) The stone is transparent to opaque, with a vitreous luster It possesses a highly perfect basal cleavage, but it is nevertheless hard and durable. The brilliant cut is commonly used Topaz crystals, which are of the orthorhombic class, occur in highly acid igneous rocks, e g, granites and rhyolites, and in metamorphic rocks, e g, gneisses and schists Important sources of topaz are in Russia, Siberia, Brazil, the British Isles, Saxony, Norway, Sweden, Australia, Mexico, and Maine, New Hampshire, Connecticut, Colorado, and Utah in the United States The name topaz is commonly used for various other yellow stones, e g, for citrine QUARTZ The Oriental topaz is actually a yellow sapphire

tope: see STUPA

Topeka (tŭpē'kŭ), city (pop 67,833), state capital, and co seat of Shawnee co, NE Kansas, on the Kansas river between Kansas City and Manhattan, inc 1857 A ferry was established at the site in 1842 On the old Oregon Trail, the city was laid out in 1854 by Free State settlers from Lawrence and from New England and was founded as the center for C K Holliday's projected railroad (the Atchison, Topeka, and Santa Fe) Here the short-lived Free State constitution was framed in 1855 Topeka became the permanent state capital when Kansas was admitted to the Union in 1861 In a rich agricultural region, it has important railway repair shops and offices, insurance offices, flour mills, meat-packing plants, wholesale houses, printing and publishing plants (the CAPPER publications), and other industries It is a favorite convention place Many hospitals (including the Menninger Clinic for psychiatric research and a state hospital for the insane), a reform school, a vocational school for Negroes (1895), several business colleges, Washburn Municipal Univ of Topeka (coeducational, 1865), and a Protestant Episcopal cathedral are here A city of broad, tree-shaded streets, Topeka has the museum and library of the Kansas Historical Society, the Mulvane Art Museum, the state library, a park system which includes a beautiful rose garden, and an airport The capitol is designed after that in Washington Two bridges cross the Kansas here, one, built in 1938, is the longest highway span in the state

Topelius, Zakarias (sükärē'üs tōōpā'lyŭs), 1818–98, Finnish novelist, poet, and playwright His father, also Zakarias Topelius, a physician, had published (1822) the first fragments of the Finnish epic, the *Kalevala*. The younger Topelius is best known for his lyric poetry, his children's stories, and the historical romance *Tales of an Army Surgeon* (6 vols, 1854–66, Eng tr, 1883–87) Many of his stories are available in English, under the titles *Whisperings in the Wood* (1881), *Canute Whistlewinks* (1927), and *Two Times Two Is Four* (1931) He wrote in Swedish

Töpffer, Rodolphe (rôdôlf' tüpfĕr'), 1799–1846, Swiss novelist and artist, b Geneva He wrote charming and humorous novels and stories of Swiss life, including *Nouvelles genevoises* (1835), *Le Presbytère* (1839), *La Bibliothèque de mon oncle* (1843), and *Rose et Gertrude* (1845). His fanciful travel sketches of the Swiss, French, and Italian Alps, *Voyages en zigzag* and *Nouveaux voyages en zigzag* (1853), were illustrated with his own drawings. Töpffer had an immense vogue throughout Europe and is still widely read

Tophel (tō'fĭl) [Heb., =lime], place in Sinai peninsula, near where the Israelites halted. Deut. 1.1.

Tophet (tō'fĭt), place near Jerusalem, part of the vale of HINNOM Tophet became a name for HELL. 2 Kings 23 10; Isa 30,33; Jer 7 31–33

topiary work (tō'pēĕr"rē), artificial shaping of a shrub or tree used in landscape gardening, e g , sheared hedges and clipped shrubs The elaborate formal designs (birds, animals, vases, urns) into which trees and shrubs were popularly clipped for many years are now usually seen only in old gardens. Constant clipping twice a year, or more often, from the time the plant is young is necessary to make it thick and uniform Box, privet, and yews are among the plants most used for topiary gardening

Toplady, Augustus Montague (tŏp'lādē), 1740–78, English clergyman of the Church of England and hymn writer In 1775 he went to London, where he was preacher in a Calvinist chapel His writings include books on religion and philosophy, but he is best known for his hymn *Rock of Ages* (1775)

topography (tŭpŏ'grufē) [Gr ,=the writing of places], the surface physical features and configuration of land. It is indicated on maps usually by means of contour lines, hachures, shading, or coloring to represent elevations, depressions, and bodies of water (see CONTOUR), the location of cities, bridges, tunnels, routes, and other features is also indicated on detailed topographic maps Topography affects temperature, rainfall, soil conditions, and vegetation and is one of the primary elements determining climate

Toppenish (tŏ'punĭsh), farm trading city (pop 3,683), S Wash , S of Yakima, inc 1907 It has food-processing plants

Topsfield, town (pop 1,150), NE Mass , NNW of Salem, settled c 1635, inc 1648 There are sand and gravel deposits The kitchen of the Parson Capen House (1683) is reproduced in the Metropolitan Museum, New York

Topsham (tŏp'sum), town (pop 2,334), SW Maine, on the Androscoggin opposite Brunswick, settled c 1730, inc 1764 A 17th-century settlement here was destroyed by the Indians. There are feldspar and paper mills

Topton, borough (pop. 1,568), SE Pa , NE of Reading, inc 1876.

Torah (tō'ru) [Heb ,=teachings or learning], Hebrew name for the five books of Moses—the Law of Moses or the Pentateuch, the first five books of the Bible The Torah is believed by orthodox Jews to have been handed down to Moses on Mt Sinai and by him transmitted ultimately to the Jews It laid down the fundamental laws of moral and physical conduct The Torah begins with a description of the origin of the universe and ends on the word *Israel*, after the story of the death of Moses, just before the conquest of Canaan by the Israelites

Torcello (tôrchĕl'lō), small island in the Venetian lagoon, NE Italy It has a Byzantine cathedral founded in 641, rebuilt in the 9th and the 11th cent and decorated with fine Byzantine mosaics

Torcy, Jean Baptiste Colbert, marquis de. see COLBERT, JEAN BAPTISTE, MARQUIS DE TORCY

Tordesillas (tôr"dhāsē'lyās), town (pop 3,700), Valladolid prov , N central Spain, in Leon, in a region of vineyards Here in 1494—one year after the discovery of the New World had become known in Europe—Spain and Portugal signed a treaty in which they divided the non-Christian world into two zones of influence In principle the treaty followed the papal bull issued in 1493 by Alexander VI, which fixed the demarcation line along a circle passing 100 leagues W of the Cape Verde Islands and through the two poles This division gave the entire New World to Spain and Africa and India to Portugal However, the Treaty of Tordesillas shifted the demarcation line to a circle passing 270 leagues W of the Cape Verde Islands and thus gave Portugal a claim to Brazil There was little geographic knowledge at the time the treaty was signed, and it remains controversial whether the Portuguese then knew of the existence of Brazil The castle of Tordesillas was the residence (1516–55) of the mad queen of Castile, Joanna

Torgau (tôr'gou), town (pop 18,455), in the former Saxony prov. of Prussia, E Germany, on the Elbe It manufactures chemicals, glass, pottery, and machinery. Chartered in the 13th cent , Torgau was always a strategic crossing place of the Elbe The 16th-century Hartenfels castle was a residence of the electors of Saxony In 1526 the Torgau League of Protestant princes was founded here, the articles of the league were written (1530) by Martin Luther In the Thirty Years War, Torgau was the scene (1631) of an important council of war of Gustavus II of Sweden and his allies In the Seven Years War, Frederick II of Prussia defeated (1760) the Austrians under Daun near Torgau On April 27, 1945, at the end of the Second World War, advance elements of the American and Soviet armies made contact here for the first time.

Torino, Italy see TURIN

tornado (tôrnā'dō), a rotating storm, similar to a HURRICANE in structure, but more violent, considerably smaller in area, of much shorter life, and with much lower barometric pressure at the center It is also known as a "cyclone" or "twister " Tornadoes are caused by violent convection resulting from intense heating of the ground by the sun, aided by opposing winds of greatly different temperatures. A dark, funnel-shaped cloud develops below a heavy cumulo-nimbus cloud mass and extends toward the earth The "funnel" twists about, rises and falls, and where it reaches the earth it causes great destruction. The diameter of a tornado varies from a few feet to a mile, the rotating winds attain velocities of 200 to 300 mi. per hour, while the updraft at the center may reach 200 mi per hour Tornadoes occur most frequently in the central United States, where they travel in a general northeasterly direction with a speed of 20 to 40 mi per hour Their path is short—averaging 300 mi Cyclone cellars are generally constructed near farm dwellings in the tornado belt to afford protection should such a storm approach

Torne (tôr'nu), Finnish *Tornio* (tôr'nēō), Swed *Torne älv* (tôr"nŭ ĕlv'), river, 318 mi long, N Europe It rises in N Sweden, at the Norwegian border, drains Lake Tornetrask (126 sq mi), and flows SW into the Gulf of Bothnia, forming the Swedish-Finnish frontier below its junction with the Muonio, its chief tributary The Muonio forms the Swedish-Finnish frontier from its source at the Norwegian border to its confluence with the Torne. The Torne has several falls and is rich in salmon Haparanda (Sweden) and Tornio (Finland) are located at its mouth

Tornea, Finland see TORNIO

Torngat Mountains, N Labrador, northernmost range of the Laurentian Plateau, between the Atlantic coast and the Que border, extending 120 mi north-south and rising to 5,500 ft in Cirque Mt.

Tornio (tôr'nēō), Swed *Torneå* (tôr'nuō"), town (pop 2,482), W Finland, at the mouth of the Torne (Finnish *Tornio*) river on the Gulf of Bothnia, opposite the Swedish town of Haparanda Incorporated in 1670, it is important for its leather industry and its salmon fisheries

Toronto (turŏn'tō), city (pop 667,457), provincial capital, S Ont , on the north shore of Lake Ontario at the mouth of the Humber and NNW of Buffalo, N Y It is the second largest city in Canada, a port of entry, and an important commercial, financial, and industrial center, with municipally owned power and transportation services and a municipal airport and seaplane base It was an early fur-trading center, and the French here built (1749) Fort Rouillé, to counteract British influence in the Niagara country, but the post was destroyed (1759) and the site occupied by the British as Fort Toronto After the American Revolution it became the home of many United Empire Loyalists It was chosen by John G Simcoe in 1793 as the capital of Upper Canada and named York In the War of 1812 the city was twice taken by the Americans, and many public buildings were destroyed In 3418 it was incorporated as Toronto, and in 1837 it saw the insurrection led by William Lyon Mackenzie The Univ of Toronto (nonsectarian, coeducational) was chartered in 1827 and opened in 1843 by Anglicans as King's College It was renamed in 1850 It has faculties of applied science and engineering (with architecture), arts (with St Michael's, Trinity, University, and Victoria colleges), dentistry, forestry, household science, medicine, and music. Ontario College of Education, schools of Chinese studies, hygiene, law, library science, nursing, physical and health education, and social work, an institute of child study, and Dunlap Observatory Affiliated schools are Knox, Emmanuel, and Wycliffe colleges (theological), Albert College, Ontario College of Art, Ontario College of Pharmacy, and, at Guelph, Ontario Agricultural and Ontario Veterinary colleges The Univ of Toronto Press was established in 1901 The city has many beautiful parks and buildings and is also the seat of the Osgoode Hall Law School, the Royal Ontario Museum, housing a notable collection of Chinese art, the Ontario Museum of Archaeology, and Anglican and Roman Catholic bishoprics See Blodwen Davies, *Storied York* (1931), D C Masters, *The Rise of Toronto* (1947)

Toronto, city (pop 7,426), E Ohio, on the Ohio river and near Steubenville, laid out 1818, successively called Newburg, Sloan's Station, and Toronto (1881) It manufactures clay products, steel sheets, paper, and glass reflectors

Toronto, University of. see TORONTO, Ont

torpedo, in naval warfare, a self-propelled submarine projectile loaded with explosives, used for the destruction of enemy ships In the American Revolution, David Bushnell experimented with a SUBMARINE for attaching underwater explosives to British hulls His attacks were failures, but later Robert Fulton experimented with similar ideas under French, British, and American sponsorship at different times from 1800 to 1810 He, too, had little success, and his work was derided by naval authorities. The Civil War saw the introduction of the spar torpedo, a large bomb attached to a long spar of a boat and rammed against the enemy Ships of both sides were sunk with this contrivance, and the torpedo in various forms has been used in all naval warfare since. The first effective self-propelled torpedo was designed and made in 1866 at Fiume by Robert Whitehead, an Englishman. It was driven by a small reciprocating engine run by compressed air. A hydrostatic valve and pendulum balance controlled the depth at which it ran In 1885 John Adams Howell developed the gyroscope to control the torpedo's direction. The torpedo was widely used in the First World War, and its development and improvement continued Modern torpedoes, such as those used by the U S navy during the Second World War, are 21 in in diameter and from 20 ft to 24 ft long. They may be driven by steam or by electricity actuating coaxial propellers, torpedoes powered by jet engines were developed in the war for use by aircraft The gyroscope and a diaphragm-and-pendulum device control direction and depth Torpedoes carry up to 600 lb. of explosives and have a range of more than 10,000 yd and a speed of 50 knots Modern torpedoes need not hit their target; they can be set to explode under an enemy ship in response to the hull's magnetic field Experiments show this type of underwater explosion to be more devastating than a contact explosion Radio-controlled torpedoes and torpedoes guided by the magnetism of the target's hull have been devised Torpedoes are fired by torpedo boats and larger surface vessels as well as by submarines and airplanes

torpedo boat, type of warship built specially for using the torpedo as a means of attack and defense The first torpedo boat seems to have been simply a fast steam launch built for Norway c 1873 and designed for the towing type of torpedo. The first torpedo boat built for the British navy was the *Lightning* (1877) Torpedo boats were adopted by most of the world's navies, but as they increased in size the DESTROYER was developed as an effective defense against them Torpedo boats diminished in importance after the Russo-Japanese War (1904–5) and were little used until the Second World War In this war small motor-driven boats played an important role American MTB's (motor torpedo boats) were 70 ft long, had top speeds of about 50 knots per hour, and carried four torpedo tubes and two power turrets mounting twin machine guns Relying on their speed and maneuverability for defense, they were credited with sinking ships up to the size of cruisers

Torquay (tôr'kē"), municipal borough (1931 pop 46,165, 1947 estimated pop 50,250), Devonshire, England, on the north shore of Tor Bay The beauty of its site and the unusually equable climate have been factors in the town's development Torquay is now a seaside resort and a yachting center, an annual regatta is held Its industry includes terra-cotta work, pottery making, and marble polishing South Devon Technical College is here There are remains of Tor Abbey, founded in 1196, and, on a near-by hill, the ruins of the 12th-century Chapel of St Michael

Torquemada, Juan de (tôrkwĭmä'du, tôrkĭ–, Span hwän' dā tôrkämä'dha), 1388–1468, Spanish theologian, cardinal of the Roman Church, an uncle of Tomás Torquemada He entered (1403) the Dominican order and later participated in the councils of Constance and Basel, where he strenuously defended the supreme papal authority against the conciliar theory He was made a cardinal by Pope Eugene IV in 1439 and was sent on diplomatic missions He wrote important theological works

Torquemada, Tomás de (tōmäs'), 1420–98, Spanish inquisitor He was a Dominican and was appointed confessor to Ferdinand and Isabella In 1482 he was commissioned an inquisitor by the pope, and in 1483 he became inquisitor general of Castile and Aragon, charged with the centralization of the Spanish INQUISITION In 1492 he was largely instrumental in bringing about the expulsion of the Jews His great authority was several times contested by colleagues, and the pope in some measure diminished it, but he remained preeminent to the end of his life Torquemada owes his reputation for cruelty to the harsh rules of procedure he devised for the Inquisition and the rigor with which he had them enforced The number of executions in his term of office used to be set at 8,800, but is now estimated at less than 2,000

Torrance, city (1940 pop 9,950, 1948 special census pop 17,450), in Inglewood township, S Calif , S of Los Angeles, planned 1911, inc 1921 It has oil wells, railroad shops, steel mills, and metal-products plants

Torre, Carlos de la (kär'lōs dā lä tô'rā), 1858–1950, Cuban zoologist His service as professor (after 1884) of natural history and physiology at the Univ of Havana was interrupted by political exile, and his eminence in science made his political service the more valuable—notably in the revolution against Gerardo Machado and afterward when he was made a member (1934) of the council of state He wrote on paleontology and geology and, particularly, on the marine life of Cuba.

Torre Annunziata (tôr'rā än-nōōntsyä'tä), city (pop 38,606), Campania, S Italy, on the Bay of Naples Arms and macaroni are the chief products.

Torre del Greco (tôr'rā dĕl grā'kō), city (pop 37,052), Campania, S Italy, a port on the Bay of Naples and at the foot of Mt Vesuvius Earthquakes and eruptions damaged it repeatedly The coral industry has been a specialty here since the 16th cent.

Torrence, Ridgely (Frederic Ridgely Torrence) (tŏ'rŭns), 1875–, American poet and dramatist, b Xenia, Ohio, studied at Miami Univ and Princeton He was a librarian in New York, an editor (1905–7) of *Cosmopolitan*, and poetry editor (1920–34) of the *New Republic* Primarily a poet, his poems are in *The House of a Hundred Lights* (1900), *Hesperides* (1925), and *Poems* (1941) He also edited (1940) letters by his friend Edwin Arlington Robinson and wrote *Plays for a Negro Theater* (1917) and a biography of a Negro educator, *The Story of John Hope* (1947)

Torrens, Sir Robert Richard (tŏ'runz), 1814–84, Australian statesman He was born in Ireland and went to South Australia in 1839 There he became collector of customs (1841) and colonial treasurer and registrar general (1852), entered the legislature (1856), and was briefly premier in 1857 He secured the passage (1858) of a landholding reform known as the Torrens Act, which for the old, complicated, and precarious conveyance system substituted public registration (holding by title rather than by deed) The system has since been widely copied Torrens resigned from the assembly to administer the act Pensioned in 1863, he settled in England and served in Parliament from 1868 to 1874

Torrens (tŏ'rŭns), river of SE South Australia, rising in the Mt Lofty Ranges and flowing 50 mi WSW past Adelaide to Gulf St Vincent

Torrens, Lake, shallow salt lake, S central South Australia, N of Port Augusta Partly dry in the summer, it is 120 mi. long, 40 mi wide, and 25 ft below sea level

Torreón (tôrāōn'), city (pop 75,796), Coahuila, N Mexico Across the NAZAS river from GÓMEZ PALACIO, Torreón is the metropolis of the LAGUNA DISTRICT Established in 1893, it is on a broad, flat, alluvial basin broken by scattered ranges of barren mountains The land, under extensive irrigation, is some of the finest in Mexico Cotton and wheat are the major crops Torreón grew rapidly as a modern industrial city, with a rubber factory, foundries, cotton and flour mills, a brewery, and a large smelter Important rail lines, connecting with Chihuahua, Monterrey, Zacatecas, and Durango, help make Torreón one of the leading commercial centers of the north

Torres Strait (tŏ'rĭs, -rēs), channel c 95 mi wide, between New Guinea and Cape York Peninsula of NE Australia, merging with the Arafura Sea to the west and the Coral Sea to the east

Tôrres Vedras (tô'rĕsh vă'drush), town (pop 4,762), W Portugal, in old Estremadura, N of Lisbon It exports much wine and has minor manufactures, but its importance is historical It was captured from the Moors by Alfonso I soon after the fall (1147) of Lisbon, but was reconquered by the Almohades briefly in 1190 Tôrres Vedras was an important fortress and royal residence throughout the Middle Ages and was an important strategic point in the Peninsular War

Torrey, John, 1796–1873, American botanist and chemist, b New York city, M D College of Physicians and Surgeons, 1818 He was professor of chemistry (1827–55) at his alma mater and professor of chemistry and natural history (1830–54) at Princeton From 1853 he was chief assayer in the U S assay office in New York His valuable herbarium was presented (1860) to Columbia, and in 1899 it was transferred to the New York Botanical Garden He was a founder of the New York Academy of Sciences and of the Torrey Botanical Club A genus of evergreen trees, *Torreya*, is named for him Besides numerous reports and papers he wrote *A Flora of the State of New York* (1843) and, with Asa Gray, *A Flora of North America* (2 vols., 1838–43) See study by A D Rodgers (1942)

Torricelli, Evangelista (tôrĭchĕ'lē, Ital āvänjālĕ'sta tôr-rēchĕl'lē), 1608–47, Italian physicist and mathematician. He was Galileo's secretary (1641–42) and his successor as professor of philosophy and mathematics at Florence He invented the BAROMETER (1643), called the Torricelli tube, and a microscope and improved the telescope

Torrid Zone. see TROPICS

Torrigiano, Pietro (pyā'trō tôr-rējä'nō), 1472–1528, Florentine sculptor of the late Renaissance He is said to have broken the nose of Michelangelo in a quarrel when they were fellow students Much of his later life was spent in Spain and England He made the fine tomb of Henry VII and his wife, Elisabeth, and the effigy of the duchess of Richmond, both in Westminster Abbey He spent his last years in Spain, where his best works are a statue of St Jerome and a Madonna, in Seville

Torrington, George Byng, Viscount (bĭng, tŏ'rĭngtun), 1663–1733, British admiral He entered the navy in 1678 and was one of the commanders in the naval battles in the War of the SPANISH SUCCESSION, including the reduction of Gibraltar and the indecisive battle of Malaga (both 1704) In 1708 he drove off the French fleet with which James Edward Stuart (the Old Pretender) had hoped to invade Great Britain, and in 1718 he defeated a Spanish fleet in the Strait of Messina Byng was given a peerage (1721) and made (1727) first lord of the admiralty. See *Byng Papers* (ed. by Brian Tunstall, 1931).

Torrington. **1** City (pop. 26,988), NW Conn., W of Hartford, settled c 1735, inc 1923; coextensive with Torrington town, inc 1740 Machinery and metal products (especially brass) are made here The site of John Brown's birthplace is marked, incidents from his life are depicted in the post office **2** Town (pop 2,344), co seat of Goshen co, SE Wyo, on the North Platte river and NNE of Cheyenne near the Nebr line, in a farming, livestock, oil, and coal area There is a beet-sugar refinery Fossil beds (owned by Harvard Univ) are near by

torsion (tôr'shun). A force can be applied to a solid body—e g, a metal rod, a wire, or a thread—in such a way as to turn or twist one part of it in a plane parallel to an adjoining part Such a stress is known as torsion Because metal shafts employed as rotating parts in machines are required to resist twisting of this kind, materials used in their construction are tested to determine the extent of their capacity to resist without breaking or becoming permanently deformed (see STRENGTH OF MATERIALS) The **torsion balance** is an instrument one type of which is used for measuring small electric or magnetic forces and another type for measuring small weights, like the ordinary balance It is based on the fact that a wire or thread resists twisting with a force that is proportional to the stress The torsion balance consists essentially of a wire or thread attached at one end and arranged in such a way that a force applied at the other, or free, end tends to twist it out of shape The force is measured by the extent to which the wire or thread is so twisted The invention of the torsion balance is commonly accredited to John Michell, who made his instrument c 1750, and to Coulomb, who independently devised such a balance c 1777

Torstensson, Lennart (lĕ'närt tôr'stunsŏn), 1603–51, Swedish general in the Thirty Years War He was one of the generals trained by GUSTAVUS II (Gustavus Adolphus) in the new techniques of war Torstensson was made colonel in 1629 and as commander of the Swedish artillery at Breitenfeld (1631) and the Lech (1632) was responsible for the success of the new mobile, field artillery Taken after an unsuccessful attack on Wallenstein, Torstensson was in captivity in 1632–33 When the war was renewed, he defeated the Saxons at Kyritz in 1635 and fought under Baner at Wittstock (1636) and Chemnitz (1638) and in the invasion of Bohemia (1639) After the death of Baner, Torstensson succeeded to command of the Swedish troops in 1641 He infused new morale into the mutinous army and led the Swedes to numerous victories in Saxony, Moravia, Silesia, and Bohemia, including the second battle of Breitenfeld (1642) In 1643–44 he overran Denmark which was opposed to Sweden but after the indecisive battle of Colberg Heath (1644) he left K G Wrangel in charge of the Danish war and reentered Germany His brilliant victory at Jankau (1645) cleared the way to Prague and Vienna Sickness forced him to resign (1646) command to Wrangel He was made count of Ortola in 1647 and held (1648–51) high civil posts in Sweden He was the military teacher of Charles X

tort. In present-day law civil wrongs are commonly divided into torts and breaches of contract In a breach of CONTRACT the contracting parties, to some extent at least, establish the conditions which result in liability, but in a tort the offense consists in the violation of some duty wholly set by law The duty is imposed equally upon all persons in the jurisdiction, and when it is breached the injured party has the right to institute suit for compensatory DAMAGES Certain torts, e g, nuisance, may be suppressed by INJUNCTION Many crimes are also torts, e g, burglary often constitutes trespass The history of Anglo-American tort law can be traced back to the action for TRESPASS to property or to the person Not until the late 18th cent was the currently observed distinction made between injury willfully inflicted (tortious) and that which was unintentional (nontortious), and both types were punished equally In the early 19th cent negligence was distinguished as a separate tort, and it has come to supply the bulk of tortious litigation The general tendency today is to rule that the breach of any duty constitutes a tort, rather than to rule that an alleged tort must fit into some previously recognized variety, such as assault, false imprisonment, or libel Some courts will treat any willful unjustified injury as tortious (e g, erecting a wall on one's property solely to shut off a neighbor's light), others insist that the act must be tortious, regardless of the perpetrator's motive

tortoise (tôr'tus), reptile of the order Chelonia (or Testudinata), often commonly referred to as a TURTLE In the United States the name tortoise is usually applied only to the terrestrial forms There are numerous species found in S Europe, Africa, Asia, and North and South America North American tortoises which inhabit dry or desert regions are the gopher, desert, and Berlandier's tortoises. The flesh and the eggs of many tortoises are eaten Depredations by man on the giant tortoise once abundant on the Galapagos Islands almost made the species extinct

tortoise shell, horny, translucent, mottled plates covering the carapace of the tropical hawksbill turtle The plates, too thin for most purposes in their original form, are usually built up in layers which are molded or compressed after the surfaces have been liquefied by heat, thus a firm union is effected after resolidification Inlays can be imbedded in the shell with a hot iron Tortoise shell has been used in veneering since ancient times, its chief use today is in the manufacture of toilet articles and small decorative objects It is extensively imitated in products of celluloid and horn, but the laminated structure of most genuine work aids in identifying the real shell

Tortola see VIRGIN ISLANDS, BRITISH

Tortosa (tôrtō'sä), city (pop 11,951), Tarragona prov, NE Spain, in Catalonia, on the Ebro It is connected with the Mediterranean by the Ebro and by a canal, and it is a processing and shipping center for olive oil A Roman colony (then known as Dertosa), the city later fell (8th cent) to the Moors, who held it against repeated Christian onslaughts until its conquest (1148) by Raymond Berenger IV. The women of Tortosa helped to repulse a Moorish attack in the following year The Gothic cathedral dates from the 14th cent Tortosa suffered severe damage (1938) in the Spanish civil war

Tortue, Île de la, Haiti see TORTUGA

Tortuga (tôrtōō'gu) [Span, =turtle], island, c 20 mi. long, off N Haiti It was a notorious rendezvous of pirates in the 17th cent It is called Île de la Tortue by the Haitians

Tortuga, island, off N Venezuela. It is a small island W of Margarita

Tortugas. see DRY TORTUGAS

Torun, Pol *Toruń* (tô'rōōnyu), Ger *Thorn* (tōrn), city (pop 68,085), Pomorze prov, NW Poland, on the Vistula It grew around a castle founded in 1231 by the Teutonic Knights The First Peace of Torun (1411) resulted in a short-lived settlement of the struggle between Poland and the TEUTONIC KNIGHTS The Second Peace of Torun (1466) was more advantageous to Poland, which gained large Prussian territories, access to the sea, and suzerainty over the area left to the Teutonic Knights A synod of Polish and Lithuanian Protestants (1595) and a synod of Polish Protestants and Catholics (1645, known as the Colloquium Charitativum) were held here In the early 17th cent Torun's population (30,000) was equal to that of Warsaw; later the city suffered heavily in the Swedish invasions A religious incident here (1724) caused Russia and Prussia to guarantee each other's right of protecting their respective religious minorities in Poland The city passed to Prussia in 1793 and reverted to Poland in 1919 During the Second World War, in which it suffered relatively little damage, Torun was included in Germany The city has preserved several fine Gothic structures and developed a modern district Chiefly a trade center, Torun has also several industries—food, printing, leather, metal, and chemical It was the birthplace of Copernicus The resort of Ciechocinek is in the vicinity

Tory, Geofroy (tô'rē, Fr zhôfrwä' tôrē'), c 1480–1533, Parisian printer and author, b Bourges After study in Italy, he won distinction as a professor in Paris and became editor to the printer Henri ESTIENNE He took up drawing and engraving and went to Italy to study Interest in printing and related arts led him to leave his other occupations He worked as bookbinder, GROLIER being one of his clients As designer and engraver he produced beautiful initials, borders, and illustrations, his famous printer's mark (the Broken Jar), and that of Robert Estienne (the Olive Tree) His *Book of Hours*, which first appeared in 1525, introduced type design free from dependence on handwriting and established book designing as an art in France His part in earning for French 16th-century printing its high place was recognized by his appointment as printer to the king (Francis I) His writings include *Champfleury* (1529), in French In this book he explains the theory governing his designs of roman capitals and illustrates it by an example of each of the letters, he also, though a humanist, praises the French language and advocates its use, and he introduces accents, the apostrophe, and the cedilla into the printing of French

Tory (tô'rē), English political party name The term was originally applied to certain Irish Roman Catholic outlaws and was adopted as a derogatory name for supporters of the duke of York (later James II) at the time (1680) when the earl of Shaftesbury was proposing York's exclusion from the succession because of his adherence to Roman Catholicism The opposing group came to be known as the Whigs (see WHIG) Thereafter Tory came to designate the party maintaining the doctrine of hereditary right to the throne After the Glorious Revolution (1688) the Tories were the High Church party which favored the landed aristocracy and the restriction of the rights of non-Anglicans and opposed foreign entanglements. The Tory party reached the zenith of its power in the reign of Queen Anne, under the leadership of

Robert HARLEY, earl of Oxford, and Henry ST. JOHN, Viscount Bolingbroke. Their hegemony (1710–14) was broken after the accession of George I, and the party was completely discredited for its Jacobite leanings Leadership for the next 50 years went to the Whigs After the accession of George III (1760) Tory sympathizers supported the power of the sovereign as the "king's friends " Under the younger William PITT, who revitalised the faction although he never identified himself as a Tory, the party became identified with a stronger reliance on popular rule in government. The party again turned reactionary under the impact of the French Revolution, but entrenched itself so firmly in control of the government that it was not dislodged until 1830 In the 1820s the Tories made some attempt to adopt a program of reform, but the great Reform Bill of 1832 demoralised the party and destroyed its strength in the House of Commons The party which grew up thereafter from the remnants of the Tory group came to be known as the CONSERVATIVE PARTY Ultraconservatives to the present day are often referred to as "Tories " In the American colonies during the American Revolution, Tory was used to signify one who adhered to the policies of the mother country, a LOYALIST See Keith Feiling, *History of the Tory Party, 1640–1714* (1924) and *The Second Tory Party, 1714–1832* (1938).

Tory Island (tō'rē), isolated rocky island, 3 mi long and 1 mi wide, 9 mi off the north coast of Ireland, in Co. Donegal According to legend, the island was peopled in ancient times by a race of giants, it retains many ancient laws Fishing is carried on There are ruins of a monastery, a church, and a round tower See T H. Mason, *The Islands of Ireland* (1936).

Toscana, Italy see TUSCANY

Toscanelli, Paolo dal Pozzo (pä'lō dal pôt'tsō tōskänel'lē), 1397–1482, Italian cosmographer and mathematician, a physician It is said that his map of the world was used by Columbus on the 1492 voyage to America.

Toscanini, Arturo (tō"skünē'nē, tü"sku–, Ital ärtōō'rō tōskänē'nē), 1867–, Italian conductor He studied cello at the Parma Conservatory, from which he was graduated in 1885 Having traveled as a cellist with various minor orchestras in Italy, he went to Rio de Janeiro (1886) to play in the opera orchestra Substituting as conductor, he made such a success that he was engaged for the rest of the season, returning to Italy the next season (1886–87) He conducted the premières of Puccini's *La Boheme* (Turin, 1896) and Leoncavallo's *Pagliacci* (Milan, 1892) and the Italian première of Wagner's *Gotterdämmerung* (Turin, 1895) In 1898 Toscanini was appointed chief conductor and artistic director at La Scala, Milan There he presented many new operas and Italian premières of many others, including *Die Meistersinger* (1898) and *Siegfried* (1899) He conducted in Rome, Bologna, Turin, and Buenos Aires from 1903 until 1906, when he returned to La Scala From 1908 to 1914 he conducted at the Metropolitan Opera, where he gave American premières of Puccini's *Girl of the Golden West* (1910), Wolf-Ferrari's *Le donne curiose* (1911), and other works He returned to Italy during the First World War With the newly reorganized La Scala Orchestra he toured Europe and the United States in the season 1920–21. He was artistic director of La Scala until 1929 From 1926 to 1936 he conducted the New York Philharmonic-Symphony, and in 1937 the NBC Symphony Orchestra was formed for him to conduct. Other outstanding engagements include the Bayreuth Festivals (1930, 1931), of which he was the first non-German conductor, the Salzburg Festivals (1934, 1935, 1936), and the Lucerne Festivals (1937–39) Consistently anti-Fascist, he refused several times to play in Fascist-dominated countries. See biography by Paul Stefan (Eng tr., 1936), Lawrence Gilman, *Toscanini and Great Music* (1938).

Tosefta (tōsĕf'tä), plural **Tosefttoth** (–tōth) [Aramaic=additional], collection of elucidated maxims giving the traditional Jewish law more fully than does the Mishna (see TALMUD) The sayings in the Mishna were abbreviated by Akiba ben Joseph to render them easier to learn The expanded sayings of the Tosefta were compiled by Talmudic scholars from the time of Akiba to the 12th or 13th cent.

Tosti, Sir Francesco Paolo (fränchä'skō pa'ōlō tō'stē), 1846–1916, Italian composer and teacher Having been court singing teacher in Rome, he went in 1875 to London, where he became singing master (1880) to the royal family and professor (1894) at the Royal Academy of Music His *Serenade* and *Goodbye* are the best known of his many songs He was knighted in 1908.

Tostig (tŏs'tĭg), d. 1066, son of Earl Godwin of Wessex. In 1051 he and his father were banished to Flanders, returning with an armed invasion in 1052. Made earl of Northumbria in 1055, Tostig jointly invaded (1063) Wales with his brother Harold (later king). The Northumbrians revolted against Tostig's severe rule in 1065 and chose Morcar their earl Tostig fled to Flanders. The next year he harried the English coast, then joined the Norwegian king Harold III in defeating Edwin and Morcar at Fulford. Tostig and his ally were killed by Tostig's brother, Harold of England, at Stamford Bridge.

totalitarianism (tōtă"lĭtă'rēənĭzm, tō"tălĭ–), modern form of absolutist government The intensity of totalitarian rule and the evolution of an appropriate body of doctrine serve to differentiate it from earlier forms of absolutism Totalitarian government is most easily conceived as implying an absolute rejection of the concepts of personal and economic liberty which motivated the democratic revolutions of the 17th to 19th cent. Totalitarianism relies upon the total absorption of social and economic activity into group action, especially state action, and its doctrines stress the duties of the citizen to the state, which becomes an organ distinct from and superior to its components The organization of the totalitarian state is generally "corporative," representing an attempt to amalgamate the political, economic, and social structures into a rigid hierarchy The unifying and directing force in the state is the official party, headed by the dictator, the object of propagandistic glorification assuming the status of a cult The dictator (see DICTATORSHIP) to survive must improvise a program designed to allay or suppress domestic discontent The program of the totalitarian state has tended almost invariably towards foreign aggression based on theories of national or racial hegemony To satisfy the requirements of foreign adventure, the totalitarian economy is concerned with achieving autarchy, reducing public consumption, and increasing armaments through stringent government control of industry and trade Education in a totalitarian state is also aimed at the inculcation of warlike virtues The suppression of elements of the population who prove unamenable to the processes of propaganda and education is carried out by the powerful institution of a secret police Totalitarianism breeds the police state Though much of the policy is of the dictator's own devising, the theoretical background of the system stems from such diverse sources as the philosophy of Plato, Rousseau's doctrine of the general will, the biological findings of Darwin as applied to sociology, and some of the doctrines of Nietzsche and Sorel Disillusionment with democratic processes and social and economic chaos after the First World War allowed the establishment of totalitarian regimes in many European nations, and the efficiency of modern communications and weapons enabled them to extend and consolidate their power Variants of totalitarianism were established as FASCISM in Italy and NAZISM in Germany (see NATIONAL SOCIALISM) COMMUNISM in Russia is also a one-party government in a police state.

totem (tō'tum), an object, usually material, in animistic religion, which a man regards with unusual respect and to which he believes himself to stand in some intimate and special relation, as of kinship or descent By far the commonest object is an animal, less frequently a plant, rarely an inanimate object, and still more seldom an artificial object or artifact. Anthropologists distinguish between the several kinds of totems Clan or sib totems, to which all persons in a clan are related in the same way, are the most common form, sex totems are known in Australia, where the males of a tribe may have one totem, the females another, individual totems are typical of the North American Indians, the totem being thought of as an individual guardian The exact nature of the totem relationship is not clear, it seems to be more or less mystical or supernatural In clan totemism the most objective feature is the totem name, but the name does not stand alone It is associated with a complex of customs and beliefs, some or all of which are present in every case The member of a totemic clan not only bears the totem name, he must marry outside his totem group (exogamy), he believes himself to be descended from the totem, he must not kill, or eat, or touch the totem animal, or call it by its true name, and he looks upon the totem group as a brotherhood. Totemism is largely a phenomenon of Australia, Melanesia, and North America; it is not found in South America, and there is no evidence of it in the culture of Europe Many writers consider totemism as being primarily connected with exogamy, but exogamy is almost universal, while totemism seems to be a late development In Australia descent from the totem is emphasized, it is regarded as the ancestor from whom the soul or spirit of a man emanates Hence some writers find in totemism the earliest form of kinship; but recognition of kinship is universal, while totemism is not The idea of the totem as protector or guardian is prominent in North America. The Indian often represented his individual name by drawing a picture of his totem animal, a custom noted among the Ojibwa, from whose language the word *totem* is derived; among the Indians of British Columbia and Alaska the totem animal took first place in tribal art. It was carved on totem poles to represent characters in clan myths and was pictured also in masks and on household utensils A score of theories have been devised to account for the origin of totemism, but none of them has found general acceptance. See J. G. Fraser, *Totemism and Exogamy* (1910); Clark Wissler, *An Introduction to Social Anthropology* (1929).

Totila (tō'tĭlä) or **Baduila** (bädōō'ĭlä), d 552, last king of the Ostrogoths (541–52) By defeating the Byzantines at Faenza and Mugello (542), and taking Naples (543) and Rome (546), he made himself master of central and S Italy. BELISARIUS, the Byzantine commander, recovered Rome in 547, but requested to be recalled in the following year. Only Ravenna, Ancona, Otranto, and Crotona were left in Byzantine hands Totila sent his fleet against Sicily, Corsica, Sardinia, and Illyria, and made several peace offers to Emperor Justinian I. However, instead of yielding, Justinian sent (552) NARSES to Italy at the head of a well-equipped army Totila was thoroughly routed by Narses at Tagliacozzo, in the Apennines W of Ancona, and perished in the battle Thus Byzantium regained temporary control over Italy.

Totleben or **Todleben, Eduard Ivanovich** (both ĕdwart' ēvä'nŭvĭch tōt'lyĕbyĭn), 1818–84, Russian general and military engineer He won his chief renown in the Crimean War by his defense of SEVASTOPOL (1854–55) Sevastopol was virtually undefended on the land approach when the allied siege began, but Totleben within three weeks converted it into a formidable fortress by a system of improvised earthworks Despite the absence of reinforcements and despite allied bombardments, for nearly a year the garrison held out Totleben is considered the originator of a new technique of fortification He planned the siege of PLEVNA in the later Russo-Turkish War and as reward received the command of the entire Russian army and was created a count

Totnes, George Carew, earl of see CAREW, GEORGE, BARON CAREW OF CLOPTON

Totowa (tō'tuwu), residential borough (pop 5,130), NE N J , western suburb of Paterson, inc 1898

Tottel, Richard (tō'tŭl), c 1530–1594?, London publisher. His chief business was the printing of lawbooks, but his principal claim to fame comes from the fact that he printed the anthology of poetry *The Book of Songs and Sonnets* (1557), known as Tottel's miscellany It is important because it is the only volume which preserves the extant original verse of Sir Thomas Wyatt and Henry Howard, earl of Surrey, and because it inaugurated the long series of poetry anthologies which were popular in Elizabethan England

Totten, Joseph Gilbert (tŏt'tĭn), 1788–1864, American military engineer, b New Haven, Conn , grad West Point, 1805 He assisted in the construction of Fort Clinton and Castle Williams in New York harbor (1808–12), served as chief engineer on the Niagara frontier in 1812 and at Lake Champlain in 1814, and planned the improvement of the U S coast defenses (1819–31) He was appointed colonel and chief engineer of the army in 1838

Tottenham (tŏt'tənəm), urban district (1931 pop 157,772, 1947 estimated pop 130,990), Middlesex, England, N of London, of which it is a residential suburb There are a cross dating from c 1600 and ruins of All Hallows Church. Bruce Castle (16th cent) is on the site of the manor house belonging to the father of Robert the Bruce, it houses a postal museum in memory of Sir Rowland Hill, who once had a school here

Tottori (tōt-tō'rē), city (1947 pop 57,218), capital of Tottori prefecture, S Honshu, Japan, a port on the Sea of Japan It is a manufacturing center, with exports of raw silk and fruit.

Tou (tō'ōō), same as TOI.

Touareg: see TUAREG

toucan (tōōkän', tōō'kän), perching bird of tropical America, with an enormous but thin and light bill, usually brightly colored Some species have dull plumage, but others display bright green, scarlet, and yellow Cries of sentinel birds, warning a feeding flock, can be heard for a mile. The bird is frequently tamed

touch, the one of the senses in man by which the pressure or the motion of a solid or fluid on the body is perceived The stimulus is received in specialised nerve cells or end organs in the skin or membrane and is transmitted (as are other sense stimuli) to the central nervous system. The number of the end organs per unit area, their type, and their sensitivity determine the fineness of the sense of touch possessed by a given part of the body The tongue tip, lips, and finger tips are among the most sensitive parts; the back and massive parts of the limbs are least sensitive It is possible to develop the sense of touch to a remarkable degree; the skill of one who must substitute touch for other senses, as sight and hearing, in the gaining of information is often amazing The Braille system enables the blind to read through use of the touch-sensitiveness of the finger tips.

touch-me-not, impatiens (ĭmpā'shēənz), **or balsam** Touch-me-nots, both wild and garden, belong to the genus *Impatiens*, the name referring to the seed pods, which burst at a touch and catapult the seeds from the plant. The garden touch-me-nots or balsams (*Impatiens balsamina*), also called lady's-slippers, resemble only faintly the wild kind, but

all are characterized by the explosive seed pods and by spurred flowers. The double or camellia-flowered balsam is the one most often cultivated and has been an old-fashioned-garden favorite. Cultivated kinds include greenhouse and pot plants, annuals and perennials. The wild touch-me-nots, also called snapweed and jewelweed, have yellow or orange blossoms that dangle like pendant earrings from the branches. From stem and leaf comes a bright orange juice that has been used as a dye and was applied by Indians to irritations of the skin; other medicinal uses have been found for some species, but at least one (*Impatiens noli-me-tangere*) has been suspected of being poisonous. Touch-me-not flowers are visited by hummingbirds, but are chiefly pollinated by bumblebees, except where these have learned the easier method of boring through the spur to pilfer the nectar without pollinating the flower. In such cases the plant is still able to produce seed by the presence of closed, self-polinating, budlike flowers, called cleistogamous flowers.

Touggourt, Algeria: see TUGGURT.

Toukhachevsky or **Tukhachevski, Mikhail Nikolayevich** (both mĕkhīyĕl' nyĭkŭl'yĭvĭch tōōkhŭchĕf'skē), 1893–1937, Russian marshal. An officer in the tsarist army, he was captured (1915) in the First World War but escaped late in 1917 and after his return to Russia joined the Communist party. He held important commands in the civil war of 1917–20 and in the Russo-Polish war of 1920 and was an important figure in the reorganization (1935–36) of the Red Army. In 1937 he and seven other Soviet generals were accused of taking part in a Trotskyist plot against the Soviet government. They were tried in secret and executed.

Toul (tōōl), city (pop. 8,971), Meurthe-et-Moselle dept., NE France, on the Moselle. An episcopal see from the 5th cent. until 1801, it was in the Middle Ages a free imperial city, its bishops ruled the surrounding lands as vassals of the emperors. Toul was seized by Henry II of France in 1552 along with the bishoprics of Metz and Verdun and was confirmed in French possession by the Peace of Westphalia (1648). Fortified by Vauban, it was long a strategic point in the defense of the French frontier. The city proper is still within the old fortified polygon. The Church of St.-Étienne (13th–15th cent., formerly a cathedral), a splendid structure, and several other old buildings were damaged in the Second World War.

Toulon (tōōlôN'), city (pop. 125,747), Var dept., SE France, a Mediterranean port. It is the chief French naval station. Dating from pre-Roman times, Toulon has been fortified many times, notably (17th cent.) by Vauban. In 1793 royalists surrendered the city to the English under Admiral Hood, but late in that year it was recaptured by the French, young Bonaparte, commanding a battery, won his first fame in that operation, which was followed by a massacre of the Toulon royalists. In Nov., 1942, when German troops proceeded to occupy Toulon after the Allied landings in North Africa, the French fleet (immobilized in Toulon harbor since the Franco-German armistice of 1940), was scuttled to avoid its capture by the Germans. Admiral Jean de Laborde, who gave the order, was sentenced to death in 1947 by a special court for unnecessarily destroying the fleet instead of delivering it to the Allies. Made a submarine base by the Germans, Toulon was heavily bombed in 1944.

Toulon (tōōlôN'), city (pop. 1,230), co. seat of Stark co., N central Ill., NNW of Peoria, in a farm area, inc. 1859.

Toulouse (tōōlōōz'), city (pop. 225,854), capital of Haute-Garonne dept., S France, in LANGUEDOC, on the Garonne. It is one of the great commercial and cultural centers of France. An important city even before the Roman conquest of Gaul, it became an episcopal see in the 4th cent. and later an archdiocese. It was the capital of the Visigoths from 419 until the conquest (507) by Clovis I and of the Carolingian kingdom of AQUITAINE (781–843). Toulouse then became a separate county. At their greatest expansion (late 12th cent.), the counts of Toulouse were suzerains of virtually all Languedoc, their vassals included the lords of FOIX, QUERCY, and ROUERGUE. Ruling with great wisdom and tolerance (particularly toward the Jews, who settled Languedoc in great numbers and contributed to its commercial prosperity), the counts also held a brilliant court, which, attracting the best TROUBADOURS, was the center of southern French literature. Though rival dynastic claims to Aquitaine brought recurrent warfare with England, their domains were little touched. The outbreak of the Catharist heresies of the ALBIGENSES thus offered a temptation to the northern lords to plunder this rich region while stamping out heresy. Within a few years (1208–29) Languedoc was laid waste and the counts fell from power (see RAYMOND VI, RAYMOND VII, Simon de MONTFORT; ALBIGENSIAN CRUSADE; INQUISITION; ALFONSO X). In 1271 the county of Toulouse passed entirely to the French crown; with some smaller territories, the bulk of the county henceforth formed Languedoc province. The counts had granted the city of Toulouse virtual independence. Its prosperous citizens were governed by elected magistrates (*capitouls*) and had their own militia and courts. These privileges, though gradually weakened by the French kings, persisted until 1790. The suppression of Albigensianism was followed by a great cultural rebirth. The famous Univ. of Toulouse was established in 1230. The Académie des Jeux Floraux, founded c.1223, still exists. Among the many outstanding buildings of Toulouse are the large Romanesque Basilica of St.-Sernin (11th-12th cent.), with the tomb of St. Thomas Aquinas, the Gothic Jacobin church (13th cent.), the Gothic Cathedral of St.-Étienne (12th–15th cent.), the Assézat mansion (16th cent.), housing the Académie des Jeux Floraux, the *capitole* [town hall] (18th cent.), several excellent museums, and the whole "old quarter," left intact since the 18th cent. The industrial section of Toulouse suffered damage in the Second World War.

Toulouse-Lautrec Monfa, Henri de (ärē' du tōōlōōz'-lōtrĕk' mōfä'), 1864–1901, French painter and lithographer, son of a wealthy nobleman. He broke both legs when a child and was permanently deformed. After a life of enormous productivity and extreme debauchery in Paris, he was confined to an asylum as mentally deranged. He regained his liberty, however, shortly before his death at the age of 37. He is noted for his studies of music halls, circuses, and low-life types of Paris. His work shows the influence of Degas and the Japanese prints but has a biting, satiric quality quite its own. He was prolific as a painter, poster artist, and illustrator. Today his work is highly prized. He is represented in the museums of Chicago, Washington, D.C., and New York city and in the Luxembourg Museum and the Bibliothèque nationale, Paris. Many of his sketches are in the museum of his native Albi. See studies by Gotthard Jedlicka (1929, in German) and Gerstle Mack (1938).

Toungoo (toung'gōō', toung'ōō'), town (pop. 23,223), S Burma, on the Sittang river and 166 mi. NNE of Rangoon on the Rangoon-Mandalay railroad. From the late 15th cent. it was the center of one of the three chief states of Burma, in the 16th cent. it preceded Pegu as the capital of a unified Burmese kingdom.

Touraine (tōōrān', Fr. tōōrĕn'), region and former province, W central France, centering around TOURS, its capital, and drained by the Loire, Cher, and Vienne rivers. It occupies, roughly, the Indre-et-Loire dept. Touraine, with its fertile valleys, orchards, and vineyards (notably those of VOUVRAY) is known as the "garden of France." Its numerous chateaux (see CHINON, LOCHES, AZAY-LE-RIDEAU, AMBOISE), full of historical associations, attract tourists from the entire world. Descartes, Rabelais, and Balzac were born in Touraine, the latter two have celebrated their rich and easy-living homeland in their writings. Originally the county of Tours, Touraine passed (10th cent.) to the counts of Blois, who ceded it (11th cent.) to the counts of ANJOU. Touraine then passed (1152) under English domination but was retaken (1204) by Philip II of France and incorporated into the royal domain.

Tourane (tōōrän', -rān'), town (pop. c.25,000), central Annam, Indo-China, a port on the South China Sea c.50 mi. SE of Hué.

Tourcoing (tōōrkwĕ'), city (pop. 73,772), Nord dept., N France. With adjacent ROUBAIX, it forms the largest textile center of France.

Tourgée, Albion Winegar (tōōr-zhā'), 1838–1905, American author and lawyer, b. Williamsfield, Ohio, studied at the Univ. of Rochester. After service in the Union army he was for a few years a carpetbagger lawyer and political judge in North Carolina. Of his several novels, the best known are *A Fool's Errand* (1879) and *Figs and Thistles* (1879). They are valuable for their picture of the politics of the Reconstruction period. See biography by R. F. Dibble (1921).

tourmaline (tōōr'mulĭn, -lēn), complex borosilicate mineral with varying amounts of aluminum, iron, magnesium, sodium, lithium, potassium and sometimes other elements used as a gem. It occurs in prismatic crystals, commonly three-sided, six-sided, or nine-sided and striated vertically. Different crystal forms are usually present at opposite ends of the vertical axis. The luster is vitreous. Colors are red and pink (rubellite), blue (indicolite or Brazilian sapphire), green (Brazilian emerald), yellow (Ceylonese peridot), violet red (siberite), and black (schorl). Colorless varieties are called achroite. Two or more colors may occur in the same stone, the colors being arranged in zones or bands with sharp boundaries between. Some Brazilian stones have a red core with a green exterior, separated by a colorless band, stones from California are green within and red outside. The variations in color, are of course, dependent on the variations in chemical composition. Tourmalines are found in pegmatite veins in granites, gneisses, schists, and crystalline limestone. Sources of the gem include Elba, Madagascar, Burma, the Urals, Siberia, Brazil, and Maine, Connecticut, New York, and California in the United States.

Tournai (tōōrnā'), Flemish *Doornik* (dōr'nĭk), city (pop. 31,490), Hainaut prov., W Belgium, on the Scheldt (Escaut). It is an important textile center, producing particularly woolens, linen, and carpets. Dating at least from Roman times, it was a seat of the Merovingian kings of Austrasia. It often changed hands in its long history. Emperor Charles V, who took it (1521) from France, attached it to the Spanish (after 1713, Austrian) Netherlands. It was repeatedly captured by the French in the wars of the 17th and 18th cent. Among the numerous medieval and Renaissance buildings of Tournai are the cathedral (11th cent.), a 15th-century tower, called after Henry VIII of England (who took Tournai in 1513 and who made Cardinal Wolsey bishop of Tournai), and the 17th-century cloth hall. Alternate spellings are Tournay (in French) and Doornijk (in Flemish).

tournament or **tourney**, public contest between armed horsemen in simulation of real battle. In this military game, which flourished from the 12th to the 16th cent., combatants were frequently divided into opposing factions, each led by a champion. In this respect it differed from the joust, which was a single combat, fought with weapons of war. Tournaments perhaps originated in trials by battle (see ORDEAL) or in the earlier gladiatorial combats. The tournament, a typical feature of the Middle Ages, was based on the ideals of chivalry. It was a sport which all could enjoy—the aristocracy as actors and all others as spectators. Tourneys, thought to have originated in France, spread to Germany, England, and S Europe, and laws governing them became more or less universal. Such affairs were usually held at the invitation of kings or nobles and were the occasion of much pageantry. Knights with their entourages camped near the field of combat, and their qualifications were examined by judges of the day. A typical tournament field, or lists, was oval or rectangular and was enclosed by barriers, which kept the knights within bounds and protected the spectators. On the sides were pavilions for important personages, ladies who sponsored the combatants, and judges. Heralds announced the names of the participants, and then, with a fanfare of trumpets, the warriors made their entrance, clad in armor and astride richly caparisoned horses. Their weapons were usually blunted lances or swords. The events of the day normally began with a combat between individuals and ended with a collective contest. Prizes were awarded the victors by the queen of beauty, chosen to preside over the tournament. Knights were often killed or gravely injured at tournaments, and to make the game less dangerous, a tilt or barrier, was stretched along the length of the lists, with the combatants fighting across it. This version of the sport was known as tilting. Rulers of Church and state made attempts to suppress or regulate tournaments, but the practice was not discontinued until changed social conditions caused a decline in its popularity.

Tournefort, Joseph Pitton de (shôzĕf' pētô du tōōrnfôr'), 1656–1708, French botanist. He became professor of botany at the Jardin des Plantes, Paris (1688), and of medicine at the Collège de France (1702) and studied plants in Europe and in Asia Minor. His system of classification, in vogue until it was superseded by that of Linnaeus, based plant genera on similarities in the structure of flowers and fruit and classed plants as herbs, bushes, and trees. He wrote *Éléments de botanique* (3 vols., 1694).

Tourneur, Cyril (tûr'nûr), c.1580–1626, English poet and dramatist. Of his life little is known, and his reputation rests on his two gloomy, violent plays, *The Revenger's Tragedy* (1607) and *The Atheist's Tragedy* (1611). See edition of his complete works by Allardyce Nicoll (1930).

tourney. see TOURNAMENT.

tourniquet (tōōr'nĭkĕt, -kā, tûr'-), device used to control the flow of blood by compression. It may be a special instrument, a rubber tube, cloth, or other flexible material tightened to exert pressure. Such compression should not be employed for more than 20 min. at a time because of the danger of gangrene. In arterial hemorrhage or snake bite compression is applied above the wound, i.e., between the wound and the heart. In hemorrhage from a vein, however, the tourniquet is applied below the wound, i.e., away from the heart.

Tours (tōōr, tōōrs, Fr. tōōr), city (pop. 76,207), capital of Indre-et-Loire dept., NW central France on the Loire. It is a commercial center with numerous specialized industries, notably wine and silk. An old Gallo-Roman town and early diocese, it grew rapidly after the death (397?) of its bishop, Saint MARTIN, whose remains are buried in the Basilica of St. Martin (built 1887–1924). Throughout the Middle Ages, Tours was a center of Christian civilization, which was saved from Mohammedan supremacy by Charles Martel's victory (732) over the Saracens between Tours and Poitiers. GREGORY OF TOURS (6th cent.) and ALCUIN (9th cent.) made Tours a light of learning. It became an archdiocese in 853, its present cathedral was built from 1170 to 1550. Politically, Tours shared the history of TOURAINE, of which it was the capital. Louis XI, who favored Tours as a residence, held several States-General here and introduced the silk industry. His last years were spent, in virtual self-imprisonment, at the near-by castle

of Plessis-lès-Tours. During the Franco-Prussian War (1870–71), Tours was the seat of the government of national defense; in the Second World War it was, briefly (June, 1940) the seat of the French government; among the buildings damaged in the fighting is the house where Balzac was born. Despite the heavy destruction Tours remains, both in its old and its new sections, one of the handsomest cities of France and is the principal tourist center in the Loire valley

Tourville, Anne Hilarion de Cotentin, comte de (ăn' ēlăryō' dŭ kôtät' kôt dŭ tôōrvēl'), 1642–1701, marshal of France As commander of the French fleet in the War of the Grand Alliance, he defeated the English and the Dutch at Beachy Head (1690), was defeated at La Hogue (1692), and in 1693 was victorious at Lagos One of the greatest naval technicians of his time, Tourville also developed new and effective signaling techniques

Toussaint L'Ouverture, François Dominique (frăswä' dōmēnēk' tōōsĕ' lōōvĕrtür'), c 1744–1803, Haitian Negro patriot and martyr A self-educated slave, freed shortly before the uprising in 1791, he joined the Negro rebellion to free the slaves and became its organizational genius Rapidly rising in power, Toussaint joined forces for a brief period in 1793 with the Spanish of Santo Domingo and in a series of fast-moving campaigns became known as L'Ouverture [opening], a name he adopted Though he professed allegiance to France, first to the republic and then Napoleon, he was singleheartedly devoted to the cause of his own people and maintained it in his talks with French commissioners Late in 1793 the British occupied all of Haiti's coastal cities and allied themselves with the Spanish in the eastern part of the island Toussaint was the acknowledged leader against them and, with DESSALINES and CHRISTOPHE, recaptured (1798) several towns from the British and secured their complete withdrawal A revolt in 1799, under the mulatto leader RIGAUD was suppressed after PÉTION, Rigaud's lieutenant, lost the southern port of Jacmel In 1801 Toussaint conquered Santo Domingo, which had been ceded by Spain to France in 1795, and thus he governed the whole island. He reorganized the government and instituted public improvements Napoleon sent (1802) under the command of General LECLERC a large force to subdue Toussaint Haitian resistance was stubborn and a peace treaty was drawn up Toussaint himself was treacherously seized and sent to France, where he died in the dungeon of Fort-de-Joux, in the French Jura His valiant life and pitiful death made him a symbol of the fight for liberty, and he is celebrated in one of Wordsworth's finest sonnets and in a dramatic poem by Lamartine See C L R James, *The Black Jacobins* (1938), Ralph Korngold, *Citizen Toussaint* (1944)

Tout, Thomas Frederick (tout), 1855–1929, English historian Educated at Oxford, he taught at the Univ of Manchester from 1890 to 1925 Considered an outstanding authority on medieval history, Tout emphasized the importance of the administrative aspect of historical development His writings include *Edward the First* (1893), *The Empire and the Papacy* (1898), *The Place of the Reign of Edward II in English History* (1914), and *Chapters in the Administrative History of Medieval England* (6 vols., 1920–33). He wrote numerous textbooks, edited historical works, and contributed to historical journals

Tovey, Sir Donald Francis (tō'vē), 1875–1940, English pianist and musicologist, grad Oxford, 1898, with classical honors As a pianist he concertized in England and on the Continent from 1900 and appeared in the United States in 1925 He was professor of music (1914–40) at the Univ of Edinburgh His outstanding analytical writings on music include *Essays in Musical Analysis* (7 vols., 1935–45), a collection of his program annotations, *Musical Form and Matter* (1934), *A Companion to Beethoven's Pianoforte Sonatas* (1931), and *Beethoven* (1944) He was editorial advisor on music for the 14th edition of *The Encyclopaedia Britannica*, many of his articles for this and previous editions were collected and published in 1945 He edited Bach's *Art of the Fugue* and wrote (1932) a companion essay to it He was knighted in 1935.

Towanda (tŏwŏn'dŭ), agricultural borough (pop. 4,154), co seat of Bradford co, NE Pa, in the Susquehanna valley NW of Scranton, settled 1794, laid out 1812, inc 1828 A trading center for farmers engaged in dairying and wheat crops, it manufactures electrical fixtures. The county historical society has pioneer portraits and Indian and Civil War relics David Wilmot practiced law here.

Tower, Charlemagne, 1848–1923, American industrialist and diplomat, b Philadelphia, grad Harvard, 1872. After travel in Europe and law practice in Philadelphia, he removed (1882) to Minnesota, becoming a railroad president and director of the Minnesota Iron Company He returned (1887) to Philadelphia and expanded his holdings. He was U S minister to Austria-Hungary (1897–99), ambassador to Russia (1899–1902), and ambassador to Germany (1902–8). His writings include *The Marquis de La Fayette in the American Revolution* (1895) and *Essays, Political and Historical* (1914)

tower, structure whose greatest dimension is its height. Towers have belonged to two general classes The first embodies practical uses—as defense and watch, characteristic of the Middle Ages; to carry bells or carillons, as beacons and lighthouses, and to gain maximum floor space on a given area, as in modern skyscraper towers The second class is for symbolic effect—either of religion, as in both Eastern and Western church architecture, or of communal power, as in the town halls of the free cities of medieval Europe The earliest use of tall structures for ritual and symbolism is seen in the Babylonian ZIGGURAT. The temple architecture of India had a variety of pyramidal and highly ornate masonry towers, including the stupas Pagodas in wood, many stories high, were early a part of Chinese and Japanese temple architecture To Mohammedan religious architecture belong the varied minarets, of which at least one is attached to most mosques In the early Middle Ages in Western Europe towers with massive masonry walls and devoid of design served as refuges and lookouts The round towers of the 9th and 10th cent. were probably so used Of these 118 remain in Ireland and a few in Scotland, among them that at Brechin Castles had their donjons or keeps, of which the 11th-century TOWER OF LONDON shows a high development Of the fortified towers which Italian nobles built even for their city dwellings numerous examples remain, notably at San Gimignano The growth of centralized governments made the tower less essential in the great castles of the late Middle Ages But in France the circular tower with steep conical roof lingered in many Renaissance châteaux of the 16th cent, though pierced with large windows and no longer used for defense The earliest existing church towers in Europe, those of Ravenna, Italy, of the 5th and 6th cent, were built as belfries In Italy the tower or CAMPANILE stood detached from the church building itself, the belfries of the town halls had little coordination with the design as a whole In the north, towers became in the 11th cent a common feature of the Romanesque churches and remained an integral element of the design also in the Gothic In English cathedrals of these periods a high tower rises over the crossing of nave and transepts, while the west end generally possesses lower twin towers In France, however, towers are usually restricted to the two rich piles at the west front In some French cathedrals the west towers vary in period and design (e g, Chartres and Bourges) The relatively simple Romanesque towers, generally with square or round shafts enriched by many blind arcades in horizontal tiers and topped by a simple octagonal or conical spire, developed into the higher, elaborate type of the Gothic The shaft surfaces were broken with traceried arches, corners were emphasized by buttresses often rising from the ground to the base of the crocketed spire, decorated with pinnacles and canopied niches Towers of extreme lightness and intricacy resulted in late Gothic, as in the cathedrals at Rouen, Vienna, and Antwerp With the Renaissance the classic orders and other elements of Roman architecture appeared for the first time in vertical compositions, as Greeks and Romans had no towers Particular success was attained in the tapering pyramidal compositions of Sir Christopher Wren's numerous London towers, including those of St Paul's Cathedral In many of these, as in the American colonial churches which they inspired, a single tower rose at the entrance of the building, and its base served as entrance vestibule

Tower City, borough (pop 2,221), E Pa, WSW of Pottsville, laid out 1868, inc 1892. It has textile mills and collieries

Tower of London, ancient fortress and royal residence in London, just east of the City and on the north bank of the Thames, covering about 13 acres Now used mainly as an arsenal, it was for centuries the jail of illustrious prisoners The Tower is enclosed by a dry moat, within which are double castellated walls surrounding the central White Tower Although Roman foundations were discovered as additions and changes were made and tradition makes Julius Caesar the founder, the White Tower was built in the time of William the Conqueror by Gundulf, bishop of Rochester, c 1078, the exterior was restored by Wren Various towers subsequently built were used as prisons; one of them now houses a collection of medieval arms and armor, and another (the Wakefield Tower) contains the crown jewels The Traitors' Gate (giving access by water from the river) and the Bloody Tower are associated with many historically noted persons, including Queen Elizabeth (when still princess), Sir Thomas More, Anne Boleyn, Catherine Howard, Lady Jane Grey, the earl of Essex, Ralegh, and the duke of Monmouth Many persons beheaded within the Tower precincts, or on the neighboring Tower Hill, were buried in the Chapel of St Peter ad Vincula. The Yeomen of the Guard ("Beefeaters"), dressed in Tudor garb, still guard the Tower. The Tower's north bastion was destroyed in air raids in 1940.

towhee (tō'hē, tōhē', tou'hē), North American bird of the FINCH family The red-eyed towhee is found in the United States E of the Great Plains and in parts of Canada, usually in dry thickets. In the male the upper parts are glossy black, and the sides chestnut brown; the breast and abdomen are white, and the tip of the tail and some wing feathers are edged with white It is also known as the chewink, from its call note, and as ground robin because it scratches under dry leaves for insects The southern form is the white-eyed towhee In the West there are a number of subspecies as well as the green-tailed towhee of another genus

town, in the United States In New England states the basic unit of LOCAL GOVERNMENT is the town The states are divided wholly into towns and cities, so that there are no unincorporated areas, as in other states The unique feature is the annual meeting of voters, which elects the town board (selectmen) and decides weighty issues In larger towns representatives attend the meeting The small town meeting is much praised as a nearly pure democracy Elsewhere in the United States the term *town* is little used politically, signifying only a place incorporated as a town or simply a center of population, but *township* has a legal significance—as a geographical division of the COUNTY, established in land surveys and often equal to 16 sections, or square miles. Outside the Middle Atlantic states townships are seldom units of local government

Towneley Plays, 32 plays preserved in a late 15th-century manuscript by the Towneleys, a Lancashire family Intended for production by the crafts of Wakefield, they are sometimes called the Wakefield Plays See MIRACLE PLAY.

town planning: see CITY PLANNING

Townsend, Francis Everett (toun'zund), 1867–, American reformer, leader of an old-age pension movement, b Fairbury, Ill, grad Univ of Nebraska medical school, 1893 He practiced medicine in several Western states before he settled (1919) at Long Beach, Calif In 1933 while America was faced by economic depression, he brought forth the Townsend plan, which called for a pension of $200 per month for citizens of 60 years of age or older, on condition that the $200 be spent in the United States within a month after receipt The funds were to be raised principally by a 2 percent federal sales tax The simplicity of the proposal, the apostolic zeal of Townsend, and the organization of the Townsendites into a formidable pressure group brought increasing support for the plan despite its condemnation by competent economists Bills to establish the Townsend plan were continually defeated in Congress after 1935, and the strength of the movement declined after the economy began to recover and the effects of SOCIAL SECURITY were felt in the United States Townsend modified a few of the provisions of his plan in the 1940s

Townsend. 1 Town (pop 2,065), N Mass, near the N H line, settled 1676, inc 1732 Woolens are produced Part of the town is state forest 2 Town (pop 1,309), co seat of Broadwater co, W central Mont, on the Missouri river, inc 1895 Formerly a mining town, it still has some mines but also has ranching and irrigated farming

Townsend, Mount, 7,260 ft high, SE New South Wales, Australia, in the Australian Alps, near Mt Kosciusko Discovered by Count Strzelecki, a Pole, it was called Mt Kosciusko when it was thought to be the highest Australian peak When a higher peak (now known as Mt Kosciusko) was discovered, the name was shifted to it

Townsend plan. see TOWNSEND, FRANCIS EVERETT

Townshend, Charles Townshend, 2d **Viscount** (toun'zĕnd), 1674–1738, English statesman He succeeded to the peerage in 1687 and studied at Eton and Cambridge In 1697 he entered the House of Lords as a Tory, but soon changed to the Whig interest Townshend served as a negotiator for the union with Scotland and as ambassador (1709–11) to the Netherlands, where he concluded the Barrier Treaty of 1709 guaranteeing the Hanoverian succession He opposed the Tory government of 1710–14 and became a secretary of state and chief minister upon the accession (1714) of George I He crushed the Jacobite Rising of 1715, led the prosecution of the fallen Tory ministers, and concluded (1716) defensive alliances with the emperor and with France In 1716 Townshend's colleagues, James STANHOPE and Charles Spencer (see SUNDERLAND, CHARLES SPENCER, 3D EARL OF), undermined his influence with the king and he was dismissed He served for a short time as lord lieutenant of Ireland (1717), went into opposition, and returned to office after Sunderland's fall in 1720 Townshend shared power with his brother-in-law, Sir Robert WALPOLE, but Walpole's rising influence and the incompatibility of their views on foreign policy led to a series of quarrels. In 1730 he resigned and went into retirement, where he gained fame as an experimental farmer, becoming widely known as "Turnip" Townshend.

Townshend, Charles, 1725–67, English statesman. Educated at Leiden, he entered Parliament in 1747 and rose to the position of secretary at war (1761–62). Although he was opposed to the war with

Spain and the use of general warrants, he accepted the position of paymaster general under George Grenville. Leadership devolved upon him, as chancellor of the exchequer (1766–67) in the earl of Chatham's second administration, during the Chatham's illness To offset the defeat of his proposed land tax, Townshend undertook the ill-starred American import levies, known as the Townshend Acts, on lead, glass, paints, paper, and tea Riots, repressive action, and growing colonial unrest ensued Townshend, however, died shortly after the passage of the measures

Townshend Acts, 1767, originated by Charles Townshend and passed by the English Parliament soon after the repeal of the STAMP ACT. They were designed to collect revenue from the colonists by putting customs duties on imports of glass, lead, paints, paper, and tea The colonials, spurred on by the writings of John DICKINSON and others, again protested taxation without representation The Boston merchants again boycotted English goods, the Massachusetts Assembly was dissolved (1768) for sending a circular letter to other colonies explaining the common plight, and British troops sent to enforce these laws and keep peace were involved in unpleasant incidents, notably the BOSTON MASSACRE. The boycott decreased British trade, and in 1770 most of the Acts were repealed, but retention of the tea tax caused the BOSTON TEA PARTY

township see TOWN

Townsville, town (pop 34,233), Queensland, Australia, on Cleveland Bay and NW of Mackay Founded in 1868 with the gold rush at Ravenswood to the south, it is now the second port of the state Wool, hides, meat, cobalt, copper, and sugar are the chief exports

Towson (tou'sun), unincorporated town (pop 10,606), co seat of Baltimore co , N Md , N of Baltimore, settled c 1750 It is the site of a state tuberculosis hospital and a state teachers college, the new campus of GOUCHER COLLEGE is near by

Towton Field (tou'tun), West Riding of Yorkshire, England, SW of York It was the scene (1461) of a battle in which the forces of Edward IV defeated the Lancastrians

toxin (tŏk'sĭn), poison produced by bacterial action In certain diseases, e g , diphtheria, pneumonia, tonsilitis, and in food poisoning, the toxins liberated by the bacteria are responsible for the symptoms These toxins, circulating in the blood, stimulate the production of antitoxins, which tend to counteract the action of the poison When injected into animals, toxins (e g , diphtheria toxin) stimulate the formation of antitoxins The use of a mixture of toxin and antitoxin to prevent diphtheria has been largely supplanted by the use of toxoid Some plants and snake venom also contain toxinlike substances

toxin-antitoxin, mixture of a toxin with its antitoxin in such proportion that a large percentage of the poison is neutralized by the specific antitoxin It is used to immunize an individual against a specific disease when the use of a toxin alone to stimulate the formation of antibodies is too dangerous Toxin-antitoxin has been largely replaced by use of the specific toxoid as an immunizing agent against diphtheria and certain other diseases The antitoxin alone is used after exposure to, or establishment of, a disease caused by a toxin, since the toxin is assumed already to be in the body

toxoid (tŏk'soid), a toxin treated chemically or physically in such manner that the poisonous property is destroyed but the capacity to stimulate the formation of antitoxins remains Toxoids have virtually superseded toxin-antitoxins as immunizing agents against diphtheria and tetanus since their use does not introduce toxic agents into the body They are sometimes used also in combination with toxin and antitoxins

Toy, Crawford Howell, 1836–1919, American Orientalist and biblical scholar, b Norfolk, Va , M A Univ of Virginia, 1856 He also studied (1859–60) at the Southern Baptist Theological Seminary, Greenville, S C , served as a chaplain in the Confederate army, and continued (1866–68) his studies at Berlin He resigned the professorship he held at the Southern Baptist Theological Seminary (1869–79) because of theological controversy From 1880 until his retirement (1909) he was Hancock professor of Hebrew and other Oriental languages at Harvard, and he was (1880–1903) Dexter lecturer on biblical literature A member (1901–6) of the editorial board of *The Jewish Encyclopedia* and a contributor to learned journals, he wrote *Judaism and Christianity* (1890), *A Critical and Exegetical Commentary on the Book of Proverbs* (1899), and *Introduction to the History of Religions* (1913)

toy. Archaeological research has revealed numerous playthings from prehistoric civilizations, and most remote peoples have used toys Early Egyptian, Greek, and Roman dolls, tops, balls, rattles, hoops, and miniature representations of furniture, carts, and dishes have been preserved Automatons, usually for the amusement of adults, have been popular since the Middle Ages Toys made by individual craftsmen and peasants were early distributed through agents whose chief centers were in Sonneberg and Nuremberg in Germany, they were at first sold chiefly by peddlers at fairs The use of sheet-metal stamping in Nuremberg c 1850 introduced the first large-scale manufacturing methods. The manufacture of toys is an important industry in most countries, but Germany, Japan, and Czechoslovakia lead in exports, although the quantities have been reduced since the United States began to supply its own market after the First World War Although about 100,000 different toys are made, some, especially dolls, balls, art materials, and blocks, retain their popularity year after year among several age groups Educators and psychologists, beginning with Froebel and Maria Montessori, have stressed the role of toys in the mental, emotional, social, and physical development of children See Ethel Kawin, *The Wise Choice of Toys* (2d ed revised, 1938), Ruth Freeman and Larry Freeman, *Cavalcade of Toys* (1942)

Toyama (tōyä'mä), city (1940 pop 127,859, 1947 pop 137,818), capital of Toyama prefecture, central Honshu, Japan, on Toyama Bay It is the main center of Japan's patent-medicine industry and also has other industries

Toynbee, Arnold (tom'bē), 1852–83, English economic historian, philosopher, and reformer A tutor at Balliol College, Oxford, after his graduation in 1878, he was also active in reform work outside the university His influence on his students and contemporaries was great, though he lived to be only 31 He was interested in applying historical method to the study of economics He did not accept Marxism, believing that the best interests of labor and capital lay in cooperation His lectures to workingmen were published as *Lectures on the Industrial Revolution of the 18th Century in England* (1884), a pioneer work in economic history Toynbee Hall, the first social settlement, was named for him See biographies by F C Montague (1889) and Alfred Milner (1901)

Toynbee, Arnold Joseph, 1889 , English historian Educated at Oxford, he remained there as tutor and fellow (1912–15), then served in the British foreign office during the First World War and was a member (1919) of the delegation to the Paris Peace Conference He was professor of Greek language and history (1919–24) at the Univ of London and in 1925 was appointed research professor and director of studies at the Royal Institute of International Affairs From 1920 to 1938 he wrote a distinguished series of yearbooks of current international history entitled *A Survey of International Affairs* During the Second World War he engaged in research for the British foreign office Toynbee achieved his greatest fame for his monumental work, *A Study of History* (6 vols , 1934–39, in 1950 still incomplete), which appeared in a one-volume abridgment by D C Somervell in 1946 In the *Study of History*, an investigation into the growth, development, and decay of civilizations, the problems of history are treated in terms of great cultural and ethical groups rather than in terms of nations The main thesis of the work is that the well-being of a civilization depends upon its ability to respond successfully to its challenges, human and environmental He repudiates any deterministic philosophy and posits the theory that the course of history is controlled by psychic rather than materialistic forces Toynbee has lectured widely and contributed to various English and American publications See his anthologies, *Greek Historical Thought* (1924) and *Greek Civilization and Character* (1924) Among others of his works are *The World after the Peace Conference* (1925), *Turkey* (with K P Kirkwood, "Nations of the Modern World" series, 1926), and *Civilization on Trial* (1948)

Toynbee, Paget, 1855–1932, English critic He wrote many critical works on Dante and edited papers of Horace Walpole His best-known work is a biography of Dante (1900)

Toynbee Hall see BARNETT, SAMUEL AUGUSTUS

Toyohashi (tōyō'hä'shē), city (1940 pop 142,716, 1947 pop 129,355), Aichi prefecture, central Honshu, Japan, on Atsumi Bay A manufacturing center, it was bombed (1945) in the Second World War

Toyokuni (tōyō'kōōnē), 1769–1825, Japanese color-print artist, whose name in full was Toyokuni Utagawa He was one of the leading masters of the period of the popular (*ukiyoye*) school After many failures to appeal to the public taste, he attained great success with portrayals of stage favorites in dramatic situations His work shows vigorous, sweeping lines, and striking color contrasts It attracted numerous imitators and a host of pupils

toyon: see CHRISTMASBERRY

Tozzi, Federigo (fädārē'gō tôt'tsē), 1883–1920, Italian novelist He was a follower of Verga and was influenced by D'Annunzio His work is bitter and dispassionate, and his subjects are presented faithfully Perhaps deficient in psychological analysis, his fiction is powerfully written His best works are probably *Tre crocì* (1920, Eng tr , *Three Crosses*, 1921) and *Il podere* [the farm] (1921) He also wrote short stories, verse, two plays, and miscellaneous prose

Trabzon, Turkey, see TREBIZOND

tracery, bands or bars of stone, wood, or other material, either subdividing an opening or standing in relief against a wall and forming an ornamental pattern of solid members and open spaces The term especially refers to the subdivisions in the arched openings of Gothic architecture. In Romanesque design the enclosing of twin openings within a single arch created a wall space above them, where a circular or quatrefoil opening was pierced as an ornament This plate tracery, reaching high perfection, became more complex in the 12th-century rose windows of the cathedral of Chartres and in English churches of early Gothic Later windows became larger, areas of solid stone smaller, and masonry members more slender, the patterns in the spaces above the arches were created by mere bars of stone rather than by cutting out a design Such bar tracery prevailed in both France and England after 1250, creating circles, trefoils, quatrefoils, and other varied geometrical designs The terminating ends of these shapes, termed *cusps*, were finished in square or sharp points or in ornamental blobs Tracery came gradually to be used also for ornamenting buttresses, gables, and spires, interior walls, and choir screens In France, Rayonnant tracery, so termed from the radiating patterns in the large circular windows of west façades and transepts, prevailed in the 13th and early 14th cent In England, Decorated Gothic brought, late in the 14th cent , a new curvilinear tracery of free, flowing curves The French developed this type into the elaborate flamboyant tracery of the 15th cent It produced windows and architectural adornment of amazing lightness and intricacy, as in the cathedral at Rouen and in the wood choir stalls of Amiens In England, however, the flowing forms were abandoned c 1375, and emphasis passed to perpendicular mullions running the entire height of the windows By the end of the 15th cent the severe tracery of the Perpendicular style, with its closely spaced verticals, was dominant in both windows and wall adornment, as in the Henry VII Chapel in Westminster and King's College Chapel, Cambridge Medieval tracery achieved especial effect in the great French rose windows of stained glass, developing from the simple early wheel windows through examples of the Rayonnant styles, as in Notre Dame de Paris, to rich flamboyant designs as in St Ouen at Rouen

trachea see WINDPIPE

trachoma (trukō'mu), contagious granular inflammation of the lining of the eyelid and eyeball known also as chronic granular conjunctivitis and granular eyelids The disease is caused probably by a virus and is spread by contact with persons having the disease or with contaminated articles Trachoma is common in Egypt and Palestine, in the mountains of Tennessee and Kentucky, among the Indians of South Dakota and Nebraska, and among farmers living near Indian reservations It rarely occurs in large cities The disease, which has an incubation period of 8 to 12 days, passes through a number of stages Symptoms include acute catarrhal conjunctivitis, raspberrylike hypertrophy of the eyelids, formation of scar tissue, which produces an irritating infolding of the eyelid, the formation of ulcers, a drooping of the upper lid, a dry ropy secretion if the ducts of the lachrymal gland are involved, and a reduction in vision Copper in various forms has been used in treatment, but more recently the sulfa drugs have been found effective If therapy is begun in the early stages of the disease, healing occurs with little loss of vision, in later stages, trachoma may be the cause of complete blindness

Trachonitis (trăk"kunī'tĭs) [Gr ,=stony region], region, ancient Palestine It consisted of rough, barren country beginning c 20 mi SE of Damascus Luke 3 1

track and field athletics, athletic events, principally running, jumping, and throwing (as of a javelin), usually conducted on a field comprising an oval track (with cinder surface, for running events) which surrounds an infield equipped for various field events The events are most often contested between two or more teams, though meets held solely on the basis of individual performance are not uncommon In the United States track and field athletics include the following events the 100-, 220-, and 440-yard dashes, the half-mile (880-yard), the mile, and the 2-mile distance runs, the 120-yard high-hurdle and 220-yard low-hurdle races, the mile relay, the broad jump, the high jump, the pole vault, the shot-put, the discus throw, the javelin throw, and the hammer throw The cross-country race, though it is not performed on the field, is usually classed with these events, as is the marathon race In scoring the individual events of a meet, five points are given for first place, three for second place, and one point for third place In the modern OLYMPIC GAMES, track events include the 100-, 200-, 400-, 800-, 1,500-, 5,000- and 10,000-meter runs, a marathon run (over 26 mi), the 110- and 400-meter hurdle races; the 400- and 1,600-meter relay; the 3,000-meter steeplechase, and the 50,000-meter walk The Olympic games include, in addition to the field

events already named, the running hop-step-and-jump. The DECATHLON is the major composite event contested in Olympic track and field competition, while the PENTATHLON is contested in the U S national championships All these events described are primarily men's events. There are also equivalent events for women, and the Olympics include the women's events. In ancient Greece track and field athletics dominated the original Olympic games and the other games, there were also less important and separate games for women These organized contests were also popular in Rome, but lapsed in the early Middle Ages In England they were revived in the 12th cent. and thereafter steadily increased in popularity. The first college track and field meet occurred in England between Oxford and Cambridge in 1864 Other European countries soon turned to the sport Track and field athletics in the United States date from the 1860s, and in 1888 the Amateur Athletic Union held the first championships Under its auspices a number of intercollegiate and preparatory-school track and field meets are held. Famous track and field performers, past and present, are Arne Andersson, Glenn Cunningham, Benjamin B. Eastman, Gunder Haegg, John E Lovelock, Taisto Maki, Ralph Metcalfe, Paavo Nurmi, Jesse Owens, Charles A. Paddock, Mel Patton, James Thorpe, John Torrance, Cornelius A Warmerdam, and Frederick Wolcott See H L Gill, *Track and Field Athletics for Coach and Contestant* (2d ed , 1925); Charles W. Paddock, *Track and Field* (1933), G T Bresnahan and W W. Tuttle, *Track and Field Athletics* (2d ed., 1947); D B. Cromwell, *Championship Technique in Track and Field* (1949).

Tractarian movement: see OXFORD MOVEMENT

tractor, machine used primarily in agriculture to draw such implements as the plow, the cultivator, and harvesting and mowing machines Formerly tractors were driven by steam, they are now generally driven by gasoline The tractor furnishes power for many purposes, e g , for threshing and spraying machines and for sawing firewood Tractors are of two main types, the wheel type and the crawler or caterpillar type The TANK for use in war is an adaptation of the crawler tractor Far more than a mere substitute for draft animals, the tractor initiated profound changes in farm organization and management, it has tended to displace many farm laborers The small tractor adaptable to many types of agriculture was introduced c 1924, and its use has resulted in increasing the number of tractors in the United States to several million Pneumatic tires, used on tractors since c 1933, permit increased speed and greater ease of operation with reduction in fuel consumption and wear See F R Jones, *Farm Gas Engines and Tractors* (2d ed., 1938), A A Stone, *Farm Machinery* (3d ed , 1942), H P Smith, *Farm Machinery and Equipment* (3d ed., 1948)

Tracy, Antoine Louis Claude, Comte Destutt de: see DESTUTT DE TRACY.

Tracy, Benjamin Franklin, 1830–1915, American politician and soldier, b Owego, N Y He was admitted to the bar in 1851 and later served (1853–59) as district attorney of Tioga co , N Y He helped organize (1854) the Republican party in his county and served (1862) in the state assembly In the Civil War he recruited volunteers for the Union army, was wounded in battle, and mustered out as brigadier general As U S district attorney (1866–73) for the eastern district of New York, Tracy defended Henry Ward BEECHER in the suit brought against him by Theodore Tilton. He was (1881–82) judge of the New York court of appeals before he was Secretary of the Navy (1889–93) under President Benjamin Harrison He was (1898) chairman of the commission that drafted the charter for Greater New York and was (1899) counsel for Venezuela in the arbitration of the boundary dispute with England

Tracy, Destutt de: see DESTUTT DE TRACY, ANTOINE LOUIS CLAUDE, COMTE.

Tracy. 1 City (1940 pop 4,056, 1946 special census pop. 7,499), central Calif , E of San Francisco, inc. 1910 It is a shipping, packing, and processing center in the fertile San Joaquin Valley A pumping plant here is part of the CENTRAL VALLEY PROJECT. 2 City (pop. 3,085), SW Minn , SSE of Marshall, settled 1872, inc. as a city 1893 It is a farm trade center

trade, traffic in goods Trade has been historically conducted by GIFT, BARTER, and SALE. Within the family, ownership of goods is often transferred by gift, and this practice has been followed within and between small local communities In the absence of a generally acceptable currency, trade among American Indian groups was largely by exchange of gifts, and in frontier and farm communities it was customary for neighbors to exchange services (especially at busy seasons) and surplus and needed goods for services or goods. Direct barter, as in horse trading, has sometimes been a game rather than a business transaction. Trade is often facilitated by the use of money of account, as in rural stores where a customer may be given a credit for eggs or some other commodity and charged for goods that he receives. International trade is normally on this basis, goods being exchanged for goods and the balances, if any, being paid by shipments of gold. After the early 1930s, when most countries went off the gold standard, they were restricted still further to a careful balancing of imports and exports of commodities. Trade between regions and countries is natural where each produces some commodity that the other needs. Modern industrial countries are especially dependent upon certain metals, which they must obtain by international trade if they do not produce them at home Certain tropical products are equally important to Temperate Zone countries Despite success in developing substitutes, even the largest nations are not self-sufficient, and tariffs, import quotas, and devices for controlling foreign exchange are designed—though they may hamper general trade—to secure for them the commodities that are essential to their economy. The principles of efficient MARKETING have been applied to domestic trade, which has attained enormous volume See P D Converse, *The Elements of Marketing* (1930), H B. Killough, *International Trade* (1938)

trade association, organization of businessmen in the same trade or industry for the advancement of their common interests. The trade association differs from the CHAMBER OF COMMERCE in that membership is by industry rather than by locality The common interests of the trade association may include credit, public relations, relations with employees, sales development, output, and prices Some associations publish official journals, and some maintain bureaus at the national and state capitals The U S Office of Domestic Commerce has a Trade Association Division

trade-mark, distinctive mark placed on or attached to goods by a manufacturer or dealer to identify them as made or sold by him The use of a trade-mark indicates that the maker or dealer believes that the quality of the goods will enhance his standing or good will, and a known trade-mark indicates to a buyer the reputation that is staked on the goods Registration of a trade-mark is necessary in some countries to give exclusive right to it In the United States, Canada, and England, the sufficient use of a trade-mark not previously used establishes exclusive right to it, but registration is provided as an aid in defending this right Imitations of a trade-mark wrong both the owner of the trade-mark and the buyer who is misled as to the source of goods, and such infringements of a trade-mark are punishable at law Registration of trade-marks for use in the United States is in the Patent Office, from which detailed information about requirements may be obtained The ways of securing recognition of trade-marks in other countries are explained in publications of the Bureau of Foreign and Domestic Commerce, U S Dept of Commerce See Milton Wright, *Inventions, Patents, and Trade-Marks* (2d ed , 1933)

trade union: see UNION, LABOR.

trade winds, those winds blowing toward the equator, from the northeast in the Northern Hemisphere and from the southeast in the Southern Hemisphere They are caused by the general motion of the air from the belts of high barometric pressure (the HORSE LATITUDES) to the belt of low barometric pressure (the DOLDRUMS), deflected, in accordance with Ferrel's law, by the rotation of the earth They form part of the system of terrestrial winds and blow with great constancy. The air returning, high over the earth, in the opposite direction and completing the cycle, forms the antitrade winds.

traducianism. see SOUL

Traer (trâr), town (pop 1,493), central Iowa, SSW of Waterloo, inc 1875

Trafalgar, Cape (trufăl'gûr), on the southwest coast of Spain, near the northwest shore of the Strait of Gibraltar The **battle of Trafalgar,** which took place on Oct 21, 1805, off the cape, was the famous naval victory of Nelson over the allied French and Spanish fleets under Villeneuve The strategy successfully employed by Nelson was to divide his own fleet into two sections, one led by himself in the *Victory*, the other led by Collingwood in the *Royal Sovereign*, and to penetrate the enemy line in two places, engaging in separate action the vessels thus detached. This maneuver resulted in the capture of 20 enemy ships (one was blown up) The British lost no ships, 450 men were killed and 1,250 were wounded. Among the dead was Nelson himself, struck by a bullet from the French ship *Redoutable* The English victory, which ended Napoleon's power on the sea, was the most glorious action of the British navy The words signaled by Nelson at the beginning of the battle—"England expects that every man will do his duty"—became immortal See J. S. Corbett, *The Campaign of Trafalgar* (1910).

Trafalgar Square (trŭfăl'gûr), in London, named for Nelson's victory. The statue surmounting the Nelson column here was executed by Edward Hodges Baily The square is the site of the royal mews of the time of Chaucer

traffic regulation. In 1900 there were less than 1,000 motor vehicles registered in the state of New York. About 1903, definite traffic regulation began in New York, a set of *Rules for Driving*, consisting of five short articles, being issued by the police commissioner and a traffic squad of six mounted men being formed. On streets and highways in the United States, the control of traffic at crossings by the traffic light or SEMAPHORE is familiar Traffic lights may be locally operated by a traffic officer, they may be automatic, the lights changing periodically, or they may be remotely controlled In the synchronised block system, a series of lights shows the same color in one direction for a certain period. when the lights are green for north-and-south traffic, they are red for east-and-west traffic Thus system causes delay, and drivers tend to dash forward at as great a speed as possible in order to make the greatest distance before the lights change again In the better but more expensive progressive system, the driver, when starting at the beginning of one traffic block with a green or clear signal, sees at the next traffic block a red light. However, by traveling at a predetermined speed (20 or 25 mi per hour), he arrives at the next block when the red light has turned to green The most serious interferences with traffic flow in any system are slow vehicles, left-hand turns, and parked cars. When slow-moving vehicles keep to the extreme right, much delay is avoided Left-hand turns are forbidden in the main thoroughfares of many large cities, and at very congested corners both right and left turns are forbidden Parking, which lessens the traffic capacity on a street as well as its even flow, is forbidden in certain zones and in others is limited to a stated period between certain hours One-way traffic is necessary where busy streets are narrow and parallel to each other and has done much to facilitate the smoother handling of traffic Rotary one-way traffic around obstructions, such as city monuments and small parks, also diminishes confusion and speeds up traffic The variations in traffic rules in the United States from state to state and from city to city causes confusion, and some moves have been made for greater unity.

Trafford, borough (pop 4,017), Allegheny and Westmoreland counties, SW Pa , near Pittsburgh, inc. 1904 Electrical insulation material is made here

tragacanth (trăg'ukănth), gummy exudation from the shrub *Astragalus gummifer* and related plants of Eastern Europe and Asia It is obtained through incisions in the stem of the plant and is marketed in horny, translucent pieces, the highest quality is whitish, and lower grades are darker in color Tragacanth is almost insoluble in water, but swells in it to form a stiff gel It is used as an emulsifying agent, as a component of pills, hand lotions, and medicinal lubricating jellies, as a demulcent, and as a sizing material

tragedy. The popular idea that the comedy ends happily and the tragedy unhappily is superficial but contains an important element of truth, for tragedy's "unhappy" ending is generally the direct and inevitable result of the conflict or misunderstanding which is tragedy's motivating factor The characters in a tragedy are defeated and usually die, but beyond the outward defeat most critics have seen an inward triumph Both of these elements, the outward calamity and the sense of exultation which the conclusion inspires, are treated in Aristotle's famous discussion of tragedy In his *Poetics* tragedy is said to be an imitation of a painful action (usually resulting in death) which by pity and fear effects a purgation of these emotions Though generally treating serious themes in a serious manner, modern tragedy may contain comic elements or subplots for the purpose of contrast or for relieving emotional intensity Like comedy, tragedy originated in the religious rites of the ancient Greeks, particularly in the Dionysian festivals To the dithyrambic songs of the chorus and the leader spoken dialogue was added, and c 534 B C the actor (said to be Thespis) was introduced He filled in with mimicry and dialogue the intervals between the songs and dances Gradually the ritual nature of tragedy disappeared, and with the plays of Aeschylus, who added a second actor, Greek tragedy became a great literary form. Aeschylus (5th cent B C) was followed by Sophocles, who added a third actor, and Euripides Their tragedies were generally performed in groups of four, with the chorus forming an important and integral part From the conditions of production came the classical unities of time, place, and action which were so important in the Renaissance The outstanding Roman writer of tragedy was Seneca, whose work became a model for dramatists of the Renaissance. During the Middle Ages the classical tragedies were forgotten, but from the liturgies of the Church, such as the tropes in the Easter Mass, a new form of drama developed And from these mystery, miracle, and morality plays, as well as from the rediscovery of Seneca, arose Renaissance tragedy. The first English tragedy is *Gorboduc* (1562). With the works of Christopher Marlowe the tragedy became an important literary form; it reached its greatest heights in the plays of Shakspere. The best-known writers of tragedy in Italy are the marchese di Maffei and Vittorio Alfieri; in Spain, Pedro Calderón de la Barca and Lope de Vega Carpio. In 17th-century France classical tragedy became a distinct modern genre. At its

best, in the plays of Corneille and especially of Racine, it begins the treatment of the theme after the crisis has started, it restricts the action to a few hours and to one scene, and it avoids anything (such as comic relief) which might halt the suspense or lessen the intensity of feeling This unity is in contrast to English tragedy which in Shakspere and John Webster and even in the more classic plays of Ben Jonson was less bound by the classical unities In the Restoration, heroic tragedies, in which heroes were torn by the conflict between love and honor, were written by John Dryden and Thomas Otway. In 18th-century Germany the great writers of tragedy were Lessing, Goethe, and Schiller. In more modern times tragedy in the traditional sense declined In the works of Henrik Ibsen, the most influential dramatist of the late 19th cent, the tragedy is often found in the political and social problems Instead of being great men, the characters are often miserable and weak, and instead of poetry the language of modern tragedy is generally prose. Among the most famous modern writers of tragedy are Hermann Sudermann and Gerhart Hauptmann in Germany, Anton Chekhov in Russia, J. A Strindberg in Sweden, Gabriele D'Annunzio in Italy, J M Synge and Sean O'Casey in Ireland, and Eugene O'Neill and Maxwell Anderson in the United States. In recent years attempts have been made to restore poetry to tragedy, the most successful was T. S Eliot's *Murder in the Cathedral* (1935) See Ashley Thorndike, *Tragedy* (1908); W. M Dixon, *Tragedy* (1924), *Types of World Tragedy* (ed by R M Smith, 1928), Barrett Clark, ed, *European Theories of the Drama* (new rev ed, 1947), M. E Prior, *The Language of Tragedy* (1947); Francis Fergusson, *The Idea of a Theater* (1949)

Traherne, Thomas (trŭhûrn'), b 1637 or 1639, d 1674, English author and clergyman, b Hereford, grad Brasenose College, Oxford (B A, 1656, B D, 1669). His metaphysical poetry is original, his prose is musical, and his work expresses his mystic, enthusiastic faith His prose works include *Roman Forgeries* (1673) and *Christian Ethicks* (1675) His poems were discovered in manuscript in 1896 (pub 1903), together with the partly autobiographical prose *Centuries of Meditation* (1908) See his *Poetical Works* (ed by G I Wade, 1932), biography by G I Wade (1944)

Trail, city (pop 9,392), SE British Columbia, on the Columbia river just N of the Wash border It is a metal-smelting center for a mining area producing silver, lead, zinc, gold, and copper Sulphuric acid and fertilizers are manufactured

trailing arbutus, Mayflower, or **ground laurel,** one of the best loved of American wild flowers, said by Whittier to have been the first blossom seen on these shores by the Pilgrims (introduction to "The Mayflowers") The plant is early-spring blooming, the creeping stems bearing clusters of sweetly fragrant pink or white flowers, sometimes hidden by the hairy evergreen leaves The leaves were once used in making a diuretic tea and were also said to be astringent and tonic Roots of the trailing arbutus live in a partnership arrangement (mycorhiza) with a fungus, each being considered benefited by the association (see SYMBIOSIS). The plant is difficult to cultivate, and its existence is endangered by the zeal of flower pickers In its native habitat, arbutus seems to prefer the acid soil of pinewoods of the eastern part of North America It is the provincial flower of Nova Scotia and the state flower of Massachusetts, where a law protects the plant The botanical genus *Arbutus*, including the strawberry tree and MADROÑA, should not be confused with the trailing arbutus (*Epigaea repens*) The name Mayflower, applied in New England to the trailing arbutus, is used in England for the hawthorn and in some parts of the United States for the hepatica

Traill, Henry Duff (trāl), 1842–1900, English author and journalist He edited *Social England* (1893–97) and wrote *The New Lucian* (1884), two volumes of light verse, three plays, and biographies of Sterne (1882), Coleridge (1884), and William II (1888)

Trainer, borough (pop 1,716), SE Pa, on the Delaware river and SW of Philadelphia It has oil refineries

Trajan (Marcus Ulpius Trajanus) (trā'jŭn), A D. c 53–A D. 117, Roman emperor (A.D 98–A D 117) Born in Spain the son of an illustrious father, Trajan served in the East, in Germany, and in Spain He was adopted in A D 97 by Emperor NERVA, who died shortly afterwards Trajan's accession was unusual in that he was the first non-Italian to become head of the empire A capable man, he set about to bolster his regime by embarking on a vigorous foreign policy. In two wars against Dacia, he brought that area, the parent of modern RUMANIA, under Roman control. This conquest is commemorated by the sculptured Trajan's Column in Rome. Next Trajan annexed Arabia Petraea. In three campaigns he conquered the greater part of the Parthian empire, including Armenia and Upper Mesopotamia. Returning to Italy from this campaign, he died in Cilicia. Trajan's abilities as a military organiser and civic administrator were of a high order. He partially drained the Pontine Marshes, restored the Appian Way, and at Rome built an aqueduct, a theater, and the immense Forum of Trajan, containing basilicas and libraries. See B. W Henderson, *Five Roman Emperors* (1928), Edward T Salmon, *A History of the Roman World* (1944).

Trajan's Wall, name given to each of two walls within what is now Rumania The first ran from the great northward bend in the Danube to Tomi (near Constanta, Rumania) on the sea The second ran from the Pruth river 10 to 20 mi north of its confluence with the Danube to Lake Sasik, a lagoon of the Black Sea. The second was the northern boundary of Lower Moesia

Tralee (trŭlē', trā–), urban district (pop 9,982), county town of Co. Kerry, Ireland, on the Lee river It is a seaport, with a mile-long canal to Blennerville on Tralee Bay Tralee was a seat of the Desmonds and had a Dominican monastery in the 13th cent.

Trelleborg, Sweden see TRELLEBORG.

Tralles (trā'lēz), ancient Carian city, W Asia Minor. It is the modern AYDIN, Turkey.

tramp see VAGRANCY

Trani (trā'nē), city (pop 29,962), Apulia, S Italy, an Adriatic port It is famous for its wine The city reached great prosperity at the time of the Crusades and again in the 15th to 16th cent Its *ordinamenta maris* of 1063 constitute probably the first medieval code of maritime law. There are a famous Romanesque cathedral with fine bronze doors and a lofty campanile, a 13th-century castle, and several fine palaces.

Trans-Alai (trăns"-ălī', trănz"–), mountain range, central Asia, a part of the Pamir system The Trans-Alai extends c 125 mi. W from the China-USSR border into the USSR, where it lies along the boundary of the Kirghiz SSR and the Tadzhik SSR The range rises to Lenin Peak (23,377 ft.) and is separated by a valley from the Alai range

Transandine Railway, between Mendoza, Argentina, and Los Andes, Chile, traversing the Andes at USPALLATA PASS Opened to traffic in 1910, the railroad rises to c 10,500 ft at the long tunnel on the international boundary The distance from the border to Mendoza is c 112 mi., from the border to Los Andes c 44 mi A glacial flood destroyed (1934) 77 mi of the Argentine section

transatlantic flights see AVIATION.

Transbaikalia (trănz"bĭkā'lĭvu, trănz–), Rus *Zabaikalye* (zŭbĭkā'lyĭ), region, RSFSR, in SE Siberia, between Lake Baikal and the upper Amur river It borders on Mongolia in the south and includes the Buryat-Mongol ASSR Chita is the chief city

Trans-Caspian Railroad or **Central Asiatic Railroad,** unofficial names of an important railroad line, linking the central Asiatic republics of the USSR among themselves and with the rest of the Soviet Union It was built in the late 19th and early 20th cent The line describes a wide arc, beginning at Krasnovodsk on the Caspian Sea and passing through (or near) Ashkhabad, Bukhara, Samarkand, Tashkent, Kyzyl-Orda, Aralsk (at the northern tip of the Aral Sea), and Aktyubinsk to end at Chkalov (formerly Orenburg) The line has numerous spurs, notably one to the Fergana Valley, and it connects with the more recent Turkistan-Siberia RR at a point N of Tashkent

Transcaspian Region, USSR see TURKMEN SOVIET SOCIALIST REPUBLIC

Transcaucasia (trănz"kôkā'zhŭ, -shŭ, trănz"–), region of the USSR, extending S from the Greater CAUCASUS to the Turkish and Iranian borders, between the Black Sea and the Caspian Sea It comprises the GEORGIAN SSR, the ARMENIAN SSR, and the AZERBAIJAN SSR From 1922 to 1936 it formed the Transcaucasian Soviet Federated Socialist Republic

transcendentalism (trăn"sĕndĕn'tŭlĭz'ŭm) [from Latin, = overpassing], in literature, a movement which flourished in New England from 1836 to 1860 Stemming largely from the Unitarian reaction against Puritanism, it found confirmation in the ferment of ideas in European philosophy and literature of the period—especially in English and German—and in Oriental religious teachings The New England application of the doctrine of the immanence of God in nature developed a mystical belief in individualism and self-reliance, made famous by EMERSON A group of friends who met occasionally in Boston or Concord to discuss the new ideas was called by outsiders the Transcendental Club, though it had no organisation It included Emerson, F H Hedge, George Ripley, Bronson Alcott, Thoreau, Margaret FULLER, Theodore Parker, and others. A quarterly magazine, the *Dial* (1840–44), was the transcendentalists' journal, and BROOK FARM (1841–47), a cooperative community, was an outgrowth of their ideas on social reform, as were their many individual activities against slavery Their works, especially those of Emerson and Thoreau, exemplify the vitality of American literature which Emerson had proclaimed and reveal the core of the philosophy which was to exert so incalculable an influence on American literature. See O B Frothingham, *Transcendentalism in New England* (1876), H C. Goddard, *Studies in New England Transcendentalism* (1908), Arthur Christy, *The Orient in American Transcendentalism* (1932), Perry G E Miller, ed., *The Transcendentalists: an Anthology* (1950)

transcendentalism, in philosophy, a term descriptive of systems which hold that there are modes of being and principles of existence beyond the reach of mundane experience and manipulation. The term is now closely associated with Kantian theory, though some conception of transcendent being has been common to most forms of philosophical idealism In Kant's work transcendent elements of thought cannot be perceived directly through experience They nevertheless add to empirically derived knowledge These transcendent elements include conception of space and time and categories of judgment For Kant, transcendent objects which cannot be known through the evidence of the senses are the noumena See William Temple, *Nature, Man, and God* (1934)

Transcona (trănskō'nŭ), town (pop. 6,132), SE Man, just E of Winnipeg It is a railroad and industrial center, with railroad shops, grain elevators, tarworks, and a creosote plant.

transcription, in music, an arrangement of a composition for some medium other than that for which it was composed The most common transcriptions are those made for study purposes, in which orchestral scores are transcribed into piano reductions. On the creative level, however, Bach made transcriptions of many of his own works, and four orchestral concertos of Vivaldi are best known in Bach's organ transcriptions. Liszt was a prolific transcriber, outstanding are his transcriptions of some of Schubert's songs

transept (trăn'sĕpt"), term applied to the transverse portion of a building cutting its main axis at right angles or to each arm of such portion Transepts are found chiefly in churches where, extending north and south from the main body, they create a cruciform plan They may consist of a central portion as wide as the church nave, with two side aisles or with only one The rectangular or square space formed by the intersection with the nave is termed the crossing The cross-hall of vaulted Roman basilicas probably inspired the builders of early Christian churches, examples of the elementary form of transept—an unbroken hall passing directly in front of the apse—are seen in early churches, especially in Rome This position of the transept remained unchanged In Romanesque churches the transept became universal, while the development of vaulting unified it organically with the body of the building Its height equaled that of the nave, while the heavy piers of the crossing frequently supported an exterior dome or tower Transepts furnished additional space for altars and chapels In French Gothic cathedrals these were built along the side aisles and at the east end, while transepts projected only slightly from the building Their ends, however, were richly emphasized externally, with sculptured portals and rose windows, as at Chartres and Amiens, or with a tower, as at Le Mans In England the transepts, furnishing practically the only opportunity for altars, were long and of deep projection The need for still more space resulted in the frequent provision of a second and minor transept farther east, behind the choir, as notably at Salisbury

transference: see PSYCHOANALYSIS.

Transfiguration (trăns"fĭgyōrā'shŭn), in the Bible, manifestation wherein Jesus appeared 'shining' before Peter, James, and John Mat 17, Mark 9. The traditional explanation is that in it Jesus' divine glory shone in the earthly body Mt Tabor is usually said to be the mountain where it took place The event has a feast Aug 6.

transformer, in electricity, a device used commonly either to increase the voltage of an alternating current (a "step-up" transformer) or to decrease it (a "step-down" transformer) A transformer consists essentially of two unconnected, insulated coils wound around an iron core It operates on the principle that when an alternating current is led through one of the coils an alternating current is induced in the other coil (see INDUCTION). The coil through which the current is first led is called the primary coil, that in which the current is induced, the secondary coil The difference in voltage (see VOLT) between the two coils depends upon the ratio of the number of turns in the two. If the primary coil has fewer turns than the secondary coil, in the ratio of 1 to 10, for example, then the voltage in the secondary coil is stepped up 10 times that of the primary coil If the number of turns in the primary coil is greater than that of the secondary coil, then voltage in the secondary is less, or stepped down. On the other hand, the current strength or amperage (see AMPERE) in the two coils is in inverse ratio: it is reduced if the number of turns in the secondary coil is more than in the primary coil and increased if the number in the secondary coil is less than in the primary. Because it is cheaper to send alternating current of high voltage over long distances than that of low voltage, transformers are used first to step up the voltage of a current for transmission and then to step it down after transmission

when lower voltage and higher amperage are required for the ordinary needs of towns and cities Because much heat is generated in the magnetic core of the transformer, oil and air are commonly employed for cooling The simplicity and efficiency of the operation of transformers have greatly increased the use of alternating currents Transformers are widely used—in telephones, in radios, and in many other common electrical devices See C. H. Dunlap and others, *Transformers* (1948), W. C. Sealey, *Transformers* (1948)

transfusion of blood: see BLOOD TRANSFUSION.

Trans-Himalaya: see HIMALAYA

Trans-Ili Ala-Tau see ALA-TAU

transit, in astronomy, the term applied to the passing of any of the heavenly bodies across the disk of another heavenly body or across the meridian of any particular place When the moon passes across the face of the sun, the phenomenon is called an eclipse When, under conditions corresponding to those attending an eclipse, a planet, e g , Mercury or Venus, passes directly between the earth and the sun, it is projected against the sun's disk and appears as a small dark dot, too inconspicuous to be observed without optical aid Such a transit of Mercury can take place only in May or November, when the earth crosses the line where the plane of the ecliptic is intersected by the planet's orbit Intervals between the November transits are usually 13 or 7 years, the May transits occur at less frequent intervals Transits of Mercury last occurred in May, 1937, and in Nov , 1940 A transit of Venus can occur only in June or December Usually two of these transits take place within eight years of each other Then an interval of either 105½ years or 121½ years passes before another pair eight years apart The next two transits of Venus are due in June, 2004, and June, 2012 Transits of Venus have been of greater importance astronomically than those of Mercury, because they have been used for determining the earth's distance from the sun

transit instrument, telescope devised to observe stars as they cross the meridian and used for determining time Its viewing tube swings on a rigid horizontal axis restricting its movements to the arc of the meridian In the field of view of the eyepiece are threads of spider web or fine lines ruled on thin glass The threads or lines are parallel in a north-south direction and odd in number Precise adjustment places the middle line exactly on the meridian After the observer has noted the time at which each line is passed by the star, he averages them to learn the instant at which the star was on the meridian In modern transits, known as meridian circles or meridian telescopes, the observer merely presses a button as the star crosses each line Electrical impulses are recorded on a revolving drum at one or two second intervals as they pass through a chronograph. The meridian circle is equipped with precisely graduated circles mounted on the horizontal axis Stationary verniers, or reading microscopes, mounted on the fixed supports of the telescope enable the observer to read the circles The meridian telescope gives the altitude of a star as well as the transit time This information yields the right ascension and declination, or the place of the star in the celestial sphere The meridian circle has largely replaced the transit as the equipment of observatories, although the transit instrument is still used to some extent for determining sidereal time

transit theodolite: see SURVEYING

Trans-Jordan or **Transjordania.** see JORDAN.

Transjuba. see SOMALILAND, ITALIAN

Transkeian Territories (trănskī'un, -kā'un), native reservation (16,554 sq mi , pop 1,246,416), Cape Prov , Union of South Africa, a portion of KAFFRARIA. The capital is Umtata The reservation, bounded on the south by the Great Kei river, comprises Transkei, Tembuland, Pondoland, and Griqualand East The whole area (except for some small settlements with white inhabitants) is ruled by a magistrate and a native council

transmigration of souls or **metempsychosis** (mĭtĕmp'sīk'ə-sĭs) [Gr , =change of soul], passage of the soul from one body to another, either human, animal, or inanimate In higher cultures it becomes a well-developed doctrine with the addition that the condition of the soul in its reincarnation depends upon its record of behavior in previous lives In its simple forms, the doctrine of transmigration is part of the beliefs of many primitive peoples. The term *reincarnation* cannot be properly used in reference to the beliefs of the primitive tribes of Africa, for they have a limited concept of identity or personality In Australia, the aborigines believe that the soul finds its new habitation in an infant born among the dead person's own kindred or that the child is a reincarnation of ancestors with the soul being continually reborn Some Indonesian tribes hold that a sacrosanct animal species is the residence of ancestral souls or that the souls enter the animals in preparation for a new incarnation Metempsychosis is a basic doctrine of the Asiatic Indian religions. The Buddhists do not believe in the soul or in transmigration as such. Their animistic doctrine states that there is an eternal, undifferentiated stream of being (*Samsara*). Out of this, existences are produced and prolonged according to karma which is the matrix and driving force of each being Karma manifests itself in the *bhava* or *dhatu* (characteristics of the individual) The metempsychosis of BUDDHISM stresses the essential solidarity and oneness of the universe The individual is not a separate entity but rather a grouping of elements These revert to the original primal stream when desire, the cause of the transmigratory cycle, ceases Only saints (i e , those who abandon all desire) are able to realize this oneness Metempsychosis is an essential tenet of HINDUISM After death the individual soul enters upon a new existence, karma, in Hindu terminology the sum total of past moral conduct, determines the happiness or misery of this existence The soul has existed eternally, it will continue to exist eternally unless released from the endless cycles of being by knowledge (see VEDANTA) The Celtic version of metempsychosis does not have this ethical aspect. The Druids of Gaul supposedly taught that after death, the soul left one body to enter another, but the second body was not necessarily earthly, little is known of their beliefs There are examples of metempsychosis in pre-Christian Irish legends, but these transmigrations occur only in the lifetime of heroes The belief in transmigration was not very current in Egypt. The forms that intermittently occur are union of the soul with a god; transmigration of the soul into an animal for a lifetime, and voluntary metamorphosis of the person into another form for his own benefit The Greek version was not borrowed from Egypt as many ancient writers thought but was an indigenous product Although it appeared in the ORPHIC MYSTERIES, its best-known proponent was PYTHAGORAS His particular contribution was that souls were reincarnated in various bodily shapes Empedocles, in his poem *Purifications*, took over Orphic and Pythagorean beliefs Plato's views on the subject are derived from the Orphic Mysteries and Pythagoreanism Plotinus believed that future destiny depended on the life of the soul in previous incarnations Jewish treatment of metempsychosis, as found in the CABALA, was limited by the need of having such theories conform to the orthodox scriptures, and the theory of transmigration was tolerated rather than approved The Jewish theories, mostly derived from Gnostic, Manichaean, and Neoplatonic sources, teach that man has an absolute free will but that his soul is tied and sullied by contact with matter Demon (imperfect) souls try to prevent the fulfillment of the finite divine plan To act out this plan, the spotless souls descend from their original abode in heaven and are incarnated Punishment and atonement for sins is achieved by another incarnation, but before this happens, the now impure soul flits about as a disembodied spirit If the pious suffer, it is for sins committed in a previous existence At the end of the cycles, when all the incarnated souls are once again pure, the Messianic period begins No theories of transmigration are admitted into the Christian religion

transmission of power: see POWER

transmutation of elements, conversion of one element into another The transmutation of other metals into gold by means of a substance called the philosopher's stone was one of the two most ambitious quests of the alchemists (see ALCHEMY), the other being the elixir of life that would cure all diseases, restore the old to youth, and make youth eternal The possibility of finding the philosophers' stone harmonized with ideas long generally held, and honest and able men were hopeful of finding it Now and then a charlatan professed to have found it A transmutation from one element to another actually does occur in the process of natural RADIOACTIVITY Transmutation of elements is also achieved by the bombardment of elements with high-speed particles by means of such machines as the CYCLOTRON

Transpadane Republic: see CISALPINE REPUBLIC.

transpiration, in botany, the loss of water by evaporation from the plant Transpiration is an important factor in the rise of SAP in plants Leaves in particular lose water by transpiration because of the presence in the leaf blade of air spaces which are connected with the outside air by means of scattered pores in the leaf surface These pores, or stomata, are usually most abundant on the lower epidermis and are surrounded by two guard cells which are capable of changing their shape to open or close the aperture The pores and intercellular spaces allow the gaseous interchange in the leaf which is essential for photosynthesis Transpiration usually involves considerable quantities of water. It has been estimated that a birch tree on a dry day will lose approximately 500 qts. of water. The rate of transpiration is almost directly correlated with the dryness of the air, although closing of the stomata retards water loss to some extent. Excessive transpiration (i e , when the amount lost exceeds that absorbed by the roots) results in wilting. Many plants, such as grasses and cacti and other desert plants, have modifications of structure which reduce transpiration. Such changes usually include a relatively reduced surface area, sunken stomata, and a thick waxy surface layer Plants may also exude water in liquid form in a process called guttation.

transplanting, in horticulture, the process of removing a plant from the place where it has been growing and replanting it in another. When moving woody plants, except evergreens, it is advisable to prune the top to cut down loss of water. Usually roots need pruning to stimulate new and compact growth, and any injured roots should be cut off Transplanting on cloudy days or in the evening helps to prevent excessive evaporation, and sometimes roots are dipped in thin mud to retain moisture Trees and other perennial plants are commonly transplanted in their dormant season Transplanting is always a shock to a plant and should be done with as little disturbance to it as possible See E. L D Seymour, ed., *The New Garden Encyclopedia* (rev ed , 1946)

transportation, conveyance of goods and people over land, on water, and through the air Nothing is known of the origin of man's two great factors of transportation, the wheel and the boat As long ago as 3000 B C the Egyptians used large cargo boats. Land transportation began with goods carried by men The ancient civilizations of Central America, Mexico, and Peru transported materials in this fashion over long roads and bridges Primitive man used sledges made from a forked tree with crosspieces of wood The North American Indians of the Great Plains made a travois consisting of two poles fastened at one end to the sides of a dog or a horse and the other end dragging on the ground. The first road vehicles were two-wheeled carts, with crude disks fashioned from stone serving as the wheels They were probably used on the roads radiating from Babylon c 2000 B C From these beginnings came the chariot which the Egyptians and Greeks, among others, raised from a lumbering cart to a work of beauty In Asia the camel CARAVAN served to transport goods and people, elsewhere the ox and the ass were the beasts of burden The first great system of transportation by sailing vessels, that of the Phoenicians, connected the caravan routes with seaports, chiefly those about the Mediterranean Goods of high value and little bulk, such as gems, spices, perfumes, and fine handiwork, made up the cargoes, to King Solomon came "ships of Tarshish bringing gold, and silver, ivory, and apes, and peacocks" (2 Chron 9 21) As metropolitan centers developed, the transportation of grain became important Rome made much use of ships and also built a famous network of paved roads throughout the vast empire, primarily for military reasons Leadership in transportation by sea then passed to Spain and Portugal Maritime transportation between Europe and North America began England's dominance of the seas The forests of New England encouraged the building of wooden sailing vessels, and American schooners and clippers came to carry a large share of the world's ocean-borne goods In the Old World four-wheeled carriages were developed toward the end of the 12th cent , they transported only the privileged until the late 18th cent , when Paris licensed omnibuses and stagecoaches began to operate in England In the United States the moving frontier created a need for the CONESTOGA WAGON and the PRAIRIE SCHOONER, so that goods and families could move across the eastern mountains, the Great Plains, and westward The sail gave way to the steam engine, canals were built, and the Hudson and Mississippi river systems flourished with transport The great period of railroad building in the second half of the 19th cent made earlier methods of transportation largely obsolete within the United States Where a self-sufficient settlement might have been established before, a metropolis came into existence, with isolated farms tributary to it The development of paved roads and multi-horsepowered vehicles burning gas and oil has enabled trucks and buses to compete with railroads in carrying goods and passengers In the 20th cent air transport became a reality Regularly scheduled flights now crisscross the nation and convey passengers and freight to and fro across land and sea. See also COMMERCE See Abraham Berglund, *Ocean Transportation* (1931), Vernon Sommerfield, *The Wheel* (1938), Labert St Clair, *Since Time Began Transportation* (rev ed , 1942).

transposing instrument, in music, an instrument whose part in a score is written in one key while the tones produced are in another Such an instrument is usually referred to by the keynote of its natural scale—the clarinet in A, for example, in which case A is sounded when the tone C appears on the score Since A is a minor third below C, the composer or arranger must score the part for this instrument in the key a minor third higher than the key in which the part is to sound. The size in which the instrument is made, determined by technical considerations of intonation and timbre, is responsible for whatever its natural scale is. The alternative to the present method of scoring would be the scoring of all parts of a composition in the same key, thus re-

quiring players of transposing instruments to transpose mentally each time the composition is played. Full scores would then be easier for conductors and listeners to read The CLARINET, the ENGLISH HORN, the FRENCH HORN, the TRUMPET, and the SAXOPHONE are transposing instruments

Trans-Siberian Railroad, rail line, c 4,350 mi long, linking the European RSFSR with the Pacific coast. Its construction began in 1892, on the initiative of Count S Y WITTE, and was completed in 1905 The original line began at CHELYABINSK and ran generally E through Omsk, Novosibirsk, Krasnoyarsk, Irkutsk, and Chita, traversed Manchuria, and reentered Russian territory before ending at VLADIVOSTOK. Until 1906, when the section skirting Lake Baikal was finished, the trains were ferried across the lake The Manchurian section of the line is known as the CHINESE EASTERN RAILROAD. The present Trans-Siberian RR branches off from the original line at Chita to follow, roughly, the Amur and Ussuri rivers and reaches Vladivostok by way of Khabarovsk, it lies entirely in Russian territory The Trans-Siberian RR now has several branch lines, notably the line connecting Omsk with Sverdlovsk, a branch passing N of Lake Baikal is under construction It also is linked with the TURKISTAN-SIBERIA RAILROAD The opening of the railroad was of tremendous consequence in the subsequent history of Russia by opening up SIBERIA to emigration, colonization, and industrialization

transubstantiation · see EUCHARIST

Transvaal (tränsväl') [across the Vaal river], province (110,450 sq mi ; pop 4,271,631), Union of South Africa The capital is Pretoria, the other major city is Johannesburg It is bordered on the north by the Limpopo river, which forms the boundary with Southern Rhodesia and Bechuanaland, on the east by Mozambique and Swaziland, and on the south by the Vaal river, the boundary with Orange Free State Mainly in the veld (3,000 to 6,000 ft high), it has much excellent ranching country and a large European population (1,063,121) Livestock (especially sheep) is raised, and wool, hides, and skins are exported In NE Transvaal is Kruger National Park (c 8,600 sq mi), one of the largest wildlife reservations in the world Grains and citrus and Temperate-Zone fruits are grown where rainfall or irrigation permit agriculture But the wealth has come from the abundant minerals, especially in the Witwatersrand in the west Mines discovered there in 1886 have produced a large share of the world's gold and today earn most of South Africa's foreign exchange The province also furnishes one fourth of the Union's diamonds, two thirds of its coal, and nearly its entire output of asbestos, platinum, and chromium The Transvaal was settled by the Boers (see TREK), who by 1837 had driven out the Matabele, the dominant Negro tribe, and under their leaders, including A W Pretorius and his son, set up a strong government Great Britain recognized (1852) the independence of the Transvaal, which became (1853) the South African Republic It was annexed by Great Britain in 1877 but, after a rebellion (1881), it was restored (1883) to independence and S J P Kruger ("Oom Paul" Kruger) became president The discovery of gold in the Witwatersrand brought a great influx of prospectors (Afrikaans *Uitlanders*=foreigners), most of whom were Englishmen The refusal of political rights to newcomers brought trouble, notably the Jameson Raid (see JAMESON, SIR LEANDER STARR) in 1895. In the ensuing SOUTH AFRICAN WAR, the Transvaal was allied with the Orange Free State against Great Britain When the Boers were defeated and peace had been concluded the Transvaal was made (1902) a British crown colony It became self-governing in 1907 and joined the Union in 1910

Transylvania (trăn"sĭlvā'nēə), Ger *Siebenbürgen* (zē"bənbür'gun), Hung *Erdély* (ĕr'dā), Rumanian *Transilvania* (trăn"sĭlva'nēə) or *Ardeal* (är'dyal), historic province (24,009 sq mi , pop 3,420,829), central Rumania CLUJ (Ger *Klausenburg*, Hung *Kolozsvár*) is the chief city. A high plateau, Transylvania is separated in the south from Walachia by the TRANSYLVANIAN ALPS and in the east from Moldavia and Bukovina by the CARPATHIANS (of which the Transylvanian Alps are a continuation) In the north and west it borders on Crisana-Maramures, in the southwest on the Banat The Transylvanian plateau, 1,000 ft to 1,600 ft high, is drained by the Mures, the Olt, and the Somes, all tributaries of the Danube Its climate is continental Economically and culturally the most advanced part of Rumania, Transylvania is rich in natural resources, including lignite, methane, iron, manganese, lead, and sulphur, and it has the chief metallurgical and chemical industries of Rumania Other industries are textile manufacturing, food processing, and lumbering Stock raising, agriculture, wine production, and fruitgrowing are important occupations Next to Cluj, BRASOV and SIBIU are the principal cities Of the total population, 1,015,947 are Hungarian-speaking and 157,715 are German-speaking. The Rumanian population is largely rural, while the Magyar and German minorities are mostly concentrated in the cities.

The area now constituting Transylvania was part of the province of DACIA under the Roman Empire. It was overrun, between the 3d and 10th cent A D , by the Visigoths, the Huns, the Gepidae, and the Avars, and it was contested in the 10th and 11th cent between the Petchenegs and the Magyars (Hungarians), who finally incorporated it into Hungary It is not known whether the SZEKELY, a Turkic people who adopted the Magyar language, came into Transylvania with or before the Magyars The Szekely were the ancestors of most of the Magyar-speaking population of Transylvania. In the 12th and 13th cent. the kings of Hungary settled large numbers of German colonists in Transylvania, where they were active in building fortified towns. The German settlers and their descendants were (and still are) called Saxons, although they came from various parts of Germany. The German influence became more marked when, early in the 13th cent , King Andrew II of Hungary called on the Teutonic Knights to protect Transylvania from the Cumans, who were followed (1241) by the Mongol invaders under Batu Khan. At that period also began the penetration of Transylvania by the Rumanians, called Vlachs or Walachians, a penetration which continued for centuries The Vlachs were, for the most part, seminomadic shepherds, but most of them soon settled down to agriculture The administration of Transylvania was in the hands of a royal governor, called voivode, who by the mid-13th cent controlled all the seven Transylvanian counties Society was divided into three privileged "nations," the Magyars, the Szekely, and the Saxons These "nations," however, did not correspond to strictly ethnical but rather to social divisions Although the nonprivileged class of serfs consisted mostly of Vlachs, it also included people of Saxon, Szekely, and Magyar origin, while on the other hand many Vlachs had become assimilated with the Magyars and joined the ranks of the nobility Thus John Hunyadi, hero of the Turkish wars of the 15th cent and father of King Matthias Corvinus, was of Rumanian origin After the suppression (1437) of a peasant revolt, the three "nations" solemnly renewed their union, the rebels were cruelly punished and serfdom became more firmly entrenched than ever When the main Hungarian army and King Louis II were slain (1526) in the battle of MOHACS, the troops of John Zapolya, voivode of Transylvania, were saved from destruction through their tardiness Zapolya took advantage of his military strength and put himself at the head of the nationalist Hungarian party, which opposed the succession of Ferdinand of Austria (later Emperor FERDINAND I) to the Hungarian throne As JOHN I, he was elected king of Hungary, while another party recognized Ferdinand In the ensuing struggle Zapolya received the support of Sultan Suleiman I, who after Zapolya's death (1540) overran all central Hungary on the pretext of protecting Zapolya's son, JOHN II Hungary was now divided into three sections—W Hungary, under Austrian rule, central Hungary, under Turkish rule, and semi-independent Transylvania, where Austrian and Turkish influences fought for supremacy for nearly two centuries The Hungarian magnates of Transylvania resorted to a policy of duplicity in order to preserve independence The BATHORY family, which came to power on the death (1571) of John II, ruled Transylvania as princes under Ottoman, and briefly under Hapsburg, suzerainty until 1602, but their rule was interrupted by the incursion of MICHAEL THE BRAVE of Walachia and by Austrian military intervention In 1604 Stephen BOCSKAY led a rebellion against Austrian rule, and in 1606 he was recognized by the emperor as prince of Transylvania He also obtained recognition of religious freedom in Hungary The Reformation had been widely accepted throughout Transylvania except by the Orthodox Rumanians The principality was the chief center of Hungarian culture and humanism, and it was the only country in Europe at that period where Roman Catholics, Orthodox Catholics, Calvinists, Lutherans, and Unitarians lived in mutual tolerance Under Bocskay's successors—among whom the most notable were Sigismund RAKOCZY, Gabriel Bathory, Gabriel BETHLEN, George I and George II RAKOCZY, Emeric THOKOLY, and Francis II RAKOCZY—Transylvania vainly sought to shake off the growing Austrian influence, and its alliance with Turkey under Thokoly and with France under Francis II Rakoczy proved fatal to its independence In 1711 Austrian control was definitely established over all Hungary and Transylvania, and the princes of Transylvania were replaced by Austrian governors The proclamation (1765) of Transylvania as a grand principality was a mere formality. In the revolutionary years 1848–49 the Rumanians rose against the Magyar national state established by the revolutionists, they were aided by Austrian troops, who with the help of Russian intervention put down the Hungarian republic of Louis Kossuth. A period of Austrian military government followed (1849–60), while it was disastrous for the Magyars, it greatly benefited the Rumanian peasants, who were given land and otherwise favored by the Austrian authorities However, in the compromise (*Ausgleich*) of 1867 which established the Austro-Hungarian Monarchy, Transylvania was made an integral part of Hungary, and the Rumanians, after having tasted equality, were once more plunged into subjection to the Magyar magnates. Transylvania was seized by Rumania after the First World War and was formally ceded by Hungary in the Treaty of Trianon (1920) The expropriation of the estates of the magnates and the distribution of the lands to the Rumanian peasants was a major cause of friction between Hungary and Rumania It was now the turn of the Magyar and German nationalists to complain of Rumanian oppression During the Second World War, Hungary annexed (1940) the northern part of Transylvania, which was, however, restored to Rumania after the war A large number of the Transylvanian "Saxons" fled to Germany as displaced persons before the arrival of the Russian armies See Ladislas Makkai, *Histoire de Transylvanie* (1940, in French).

Transylvania College, at Lexington, Ky.; Disciples of Christ, coeducational, chartered 1780 and 1783, opened as a seminary near Danville, Ky , 1785, moved 1789 It was an early institution of higher learning W of the Alleghenies The legal name, given in 1798, is Transylvania University, but after a merger the name Kentucky Univ was used from 1865 to 1908 (see KENTUCKY, UNIVERSITY OF). Since 1915, when its pioneer medical and law schools closed, it has been called a college Among its notable alumni and students were Jefferson Davis and John C Breckinridge The library owns rare medical, law, and scientific books The College of the Bible is affiliated

Transylvania Company, association formed to exploit and colonize the area now comprising much of Kentucky and Tennessee Organized first (Aug , 1774) as the Louisa Company, it was reorganized (Jan , 1775) as the Transylvania Company At Sycamore Shoals on the Watauga river, the Cherokee Indians deeded (March 17, 1775) to Richard HENDERSON and eight other members of the association all the territory embraced by the Ohio, Kentucky, and Cumberland rivers Henderson had already dispatched Daniel BOONE to lead the way to the Kentucky river and, with additional settlers, soon followed Boone over his WILDERNESS ROAD to Boonesboro (or Boonesborough), the first settlement Henderson had grandiose plans for making Transylvania, as the region was called, a proprietary colony similar to Pennsylvania and Maryland, but the project did not have British approval and, more important, was immediately denounced by both Virginia and North Carolina, within whose chartered limits Transylvania lay A provisional, democratic government was organized in May, 1775, but the Continental Congress ignored Transylvania's plea to be recognized as the 14th colony Virginia created (Dec , 1776) Kentucky co in its portion of Transylvania and voided (Nov , 1778) the company's land titles there Henderson then turned to the development of the Cumberland river area, employing James ROBERTSON, founder of Nashville, and John Donelson to lead this project However, North Carolina also voided (1783) this section of the grant Virginia and North Carolina each awarded Henderson and his associates 200,000 acres for their labor and expenses in promoting western colonization See Archibald Henderson, *The Conquest of the Old Southwest* (1920), W S Lester, *The Transylvania Colony* (1935)

Transylvanian Alps, southern branch of the CARPATHIANS, in central and SW Rumania They extend c 170 mi E from the Danube at the Iron Gate, and they separate Transylvania from Walachia to the south Negoiul (8,361 ft) is the highest peak The range is densely forested and is a famous hunting ground Its subalpine meadows are used for extensive sheep raising There are coal, iron, and lignite deposits The range is crossed by several passes, notably the Turnu Rosu

Trapani (tra'panē), city (pop 52,661), capital of Trapani prov , W Sicily, Italy, on a promontory of the west coast The ancient Drepanum, it was an important naval base of the Carthaginians, it fell to Rome after the battle of the Aegates (241 B C) The modern town exports Marsala wine, macaroni, tuna fish, and salt It has several Gothic and baroque churches

Trapezus: see TREBIZOND

trapping, most broadly, use of mechanical or deceptive devices to capture, kill, or injure animals It may be applied to the practice of using birdlime to capture birds, lobster pots to trap lobsters, and seines to catch fish Generally speaking, however, the term usually means the trapping of land animals larger than the rodents (catching a mouse in a spring mousetrap is not called trapping) by means of deadfall, pitfall, and, especially in modern times, spring-snapped, steel-jawed steel traps In societies where hunting and fishing are the staple occupations, trapping is a highly important concern, for it is frequently necessary to supply food and, more essentially in colder climates, furs for clothing It is also used to rid the neighborhood of marauding animals that threaten the lives of humans or domestic animals. As a profession,

trapping has been since unknown antiquity the basis of the fur trade (see FUR) It still occupies a great many people over large sections of the globe, especially in the colder regions, such as N Siberia and N Canada. The cruel results of the usual modern steel trap (the animals frequently suffer greatly) have in recent times caused efforts to bring an end to its use Organizations such as the Anti-Steel Trap League have been formed, and efforts have been made to develop more humane traps

Trappists, Roman Catholic monks, officially the Reformed CISTERCIANS or Cistercians of the Stricter Observance They perpetuate the reform begun at La Trappe, Orne dept , France, by Abbot Jean le Bouthillier de RANCÉ (c 1660) The reformer's aim was to restore primitive Cistercian (hence also primitive Benedictine) life, actually the Trappists outdid both St. Benedict and St. Bernard in austerity The reform was acclaimed in the world, but many Cistercians resisted it The whole order was affected, but some abbeys never accepted the reform as such The life of Trappists is one of strict seclusion from the world Regulated hours are devoted to common and private worship, labor (often manual), and study, there is no recreation, no meat is eaten by the healthy, and silence is observed except under unusual circumstances, but not by vow. Lay brothers do much of the farming, a peculiarly Cistercian interest In the 19th and the 20th cent the Trappists shared in the revival of MONASTICISM and expanded greatly In the United States abbeys were founded at Cumberland, R.I., near Bardstown, Ky., and near Dubuque, Iowa There is also a monastery in Utah The head of the order, the abbot general of Cîteaux, lives in Rome, governing his house through an assistant abbot See Father Raymond, *The Man Who Got Even with God* (1941), Thomas Merton (Father Louis), *The Waters of Siloe* (1949).

trapshooting: see SHOOTING.

Trasimeno (träsēmā'nō), Latin *Trasimenus*, lake, area 50 sq mi., Umbria, central Italy. It is also called Lake of Perugia after the near-by city. The round lake, with a maximum depth of 19 ft., has no natural outlet, but a channel to the Tiber was opened in 1898 In 217 B C. Lake Trasimeno was the scene of Hannibal's great victory over the Romans under Flaminius

Trás-os-Montes (träʹzōsh'mō"tĭsh), former province of NE Portugal, including the districts of Bragança and Vila Real. The capital was Bragança It is now included with other territory in Trás-os-Montes-e-Alto-Douro. The terrain is rough and the winters very cold except in the hilly vineyard district along the Douro and in warm valleys where olives are grown. Many sheep are pastured in the region.

Trastevere. see *Renaissance and Modern Rome* under ROME

Traunsee, Austria see SALZKAMMERGUT

Trautenau, Czechoslovakia see TRUTNOV

Travancore (trăvunkôr'), former princely state (7,622 sq mi , pop 6,070,018), SW India, on the Arabian Sea Travancore comprises coastal lowlands (protected by lagoons) and a rough interior, including the Cardamom Hills Rainfall is heavy, especially in the spring, and two crops are raised a year Rice, sugar cane, coconuts, and cotton are important lowland crops. The coastal sands contain large deposits of thorium The hill region provides half of India's cardamom and much coffee, tea, rubber, and timber Little is known of Travancore's history before the 11th cent Thereafter it was divided into petty states until in the 18th cent. Martanda Varma with a European-trained army gained control Travancore accepted (1788) an alliance with Great Britain for protection against Hyder Ali and Tippoo Sahib In the early 19th cent. there were revolts against British overlordship, which were quickly suppressed. Travancore became noted for its efficient government, its comparatively high rate of literacy (about 50 percent), and its efforts to root out untouchability (see CASTE). In 1949 it merged with Cochin to form the state of Travancore-Cochin.

traveler's-joy: see CLEMATIS.

Travers, Morris William (trăʹvûrs), 1872–, English chemist He directed (1906–14) the Indian Institute of Science, Bangalore, and was honorary professor (1927–37) at the Univ of Bristol With Ramsay he discovered neon, krypton, and xenon He wrote *The Discovery of the Rare Gases* (1928).

Traverse, Lake (trăʹvurs), c. 20 mi. long, on the Minn.–S.Dak. line, drained to the north by the Bois de Sioux, a headstream of the Red River

Traverse City, city (pop 14,455), co. seat of Grand Traverse co , N Mich , N of Cadillac and at the head of the West Arm of Grand Traverse Bay; settled 1847, inc as a village 1881, as a city 1895 In a cherry-growing area, it holds an annual national cherry festival. Manufactures include automobile parts, farm tools, and canned goods. Its lakes attract many summer visitors. Indian trails crossed here, and Indian mounds are in the vicinity

travertine (trăʹvurtĭn,–tēn), form of massive calcium carbonate resulting from deposition by hot springs or rivers. It is often beautifully colored and banded as a result of the presence of iron compounds or other (e.g., organic) impurities. This material is variously known as calc-sinter and calcareous tufa and (when used for decorative purposes) as onyx marble, Mexican onyx, and Egyptian or Oriental alabaster Travertine is generally less coarse-grained and takes a higher polish than stalactite and stalagmite, which are similar in chemical composition and origin.

Traviès de Villers, Charles Joseph (shärl' zhôsĕf' trăvyĕs' dŭ vēlĕr'), 1804–59, French caricaturist and painter. He founded and was a prolific contributor to *Charivari* (1831) and *Carcature* (1838). His witty burlesques of Parisian life were very popular He collaborated in illustrating Balzac's works

Travis, William Barrett (trăv'ĭs), 1811–36, hero of the Texas Revolution, b Edgefield co , S C. He moved to Claiborne, Ala., where he practiced law In 1832 he moved to Texas and soon acquired local prominence. He was ardent in urging the revolt of the American settlers against Mexican rule. In the Texas Revolution he served as a colonel and was chief in command of the forces that settled in the ALAMO The little force was beset by the Mexican army of SANTA ANNA (March, 1836) Heroic resistance was offered and, so far as our scanty knowledge of the tragedy goes, it seems that Travis was especially brave in the defense. The Alamo fell, and all of her defenders, among them Travis, James Bowie, and David Crockett, were massacred

travois (trăvoi'), device used by North American Indians of the Great Plains for transporting their tepees and household goods It consisted of two poles, lashed one on either side of a dog or, later, a horse, with one end of each pole dragging on the ground. It had a net, straps, or wooden crosspieces between the poles near the open end to act as a carrier Like the sledge, the travois was used by Indians before any use of wheels was known to them.

treacle see MOLASSES

treason. This legal term has been used for various acts of disloyalty The English law, first clearly stated in the Statute of Treasons (1350), originally distinguished high treason and petit (or petty) treason Petit treason was the murder of one's lawful superior, e g , an apprentice murdering his master High treason constituted a serious threat to the stability or continuity of the state It included attempts to kill the king, the queen, or the heir apparent or to restrain their liberty, counterfeiting coinage or the royal seal, and waging war against the kingdom Especially cruel methods were used in executing traitors Court decisions developed the English law of treason into an instrument for suppressing resistance to governmental policy Any degree of violence in expressing opposition to parliamentary enactments was held to be a levy of war and a threat to the king's life In the 19th cent the English law was reformed, petit treason was abolished, cruel methods of executing traitors were forbidden, and many types of treason (e g , counterfeiting) were made felonies which involved a lesser penalty than death To avoid the abuses of the English law, treason was specifically defined in the U S Constitution (definitions of other crimes were not deemed necessary). Article 3 of the Constitution thus provides that treason shall consist only in levying war against the United States or in giving aid and comfort to its enemies and that conviction may be had only on the testimony of two witnesses to the same overt act or on confession in open court Most states have similar provisions in their constitutions or statutes There were several convictions for levying war against the United States in connection with the Whisky Rebellion (1794). No other convictions were made under the Federal law until the Second World War, when the provision for giving aid and comfort to the enemy was successfully invoked. The maximum penalty of death for treason has never been inflicted in the United States. See Nathaniel Wehl, *Treason* (1950)

treasure-trove, in English law, buried or concealed money or precious metals without any ascertainable owner. Such property belongs to the crown. The present practice in England is for the crown to pay the finder for the treasure-trove if it is of historic or artistic value In the United States the government does not assert a claim to apparently ownerless property but allows the finder to keep it

Treasury, United States Department of the, executive department of the Federal government, established by act of Congress in 1789. Under the Articles of Confederation the limited financial administration of the United States was taken care of by a superintendent of finance, who was replaced in 1784 by a treasury board. One of the first necessities, after the new government was set up in 1789 under the Constitution, was machinery for the collection of taxes, custody of Federal funds, and keeping of accounts To this end the Dept. of the Treasury was created with the Secretary of the Treasury, the second-ranking cabinet officer, as its head. Alexander Hamilton was the first Secretary. He was charged with the management of national finances and the support of public debt. As the American financial structure expanded, the functions of the department were considerably broadened. Over the years, the offices of the director of the mint (1795), the commissioner of internal revenue (1862), and the comptroller of the currency (1863) as well as the Bureau of Engraving and Printing (1877) were added to the structure of the Dept. of the Treasury. It was also given jurisdiction over many affairs indirectly related to finance Until 1829 the department supervised the U S postal service and until 1849 the General Land Office; before 1903 the department was also charged with many duties pertaining to commerce The Secretary of the Treasury was given charge of the U S. Secret Service (1860), the U S coast guard (1915) during peacetime, the Bureau of the Budget (1921), the Bureau of Customs (1927), the Bureau of Narcotics (1930), and the Bureau of Federal Supply (1933). The Secretary of the Treasury is assisted in his manifold duties by an Undersecretary and two Assistant Secretaries. See also BANK OF THE UNITED STATES; FEDERAL RESERVE SYSTEM; INDEPENDENT TREASURY SYSTEM, SUBTREASURY

Treat, Robert, 1622?–1710, governor of the British colony of Connecticut. Born in England, he came to America when a child; his father was an early settler of Wethersfield, Conn., and a patentee of the royal charter granted in 1662. Robert Treat settled in Milford (1639) and became a prominent citizen, serving in the colonial assembly and on the governor's council. When the colonies of New Haven and Connecticut were united, a group of settlers, discontented with the new arrangement, went to New Jersey, where they founded the city of Newark, Treat was one of their leaders (1666–71) He later returned to Milford, rose to the rank of major in the colonial troops, and was made commander in chief of forces against King Philip He saw some service in the Indian Wars, especially in the fights with the Narragansett. Deputy governor after 1676, he became governor of Connecticut in 1683. When the home government planned to unite the New England colonies, Treat was a leader of the opposition and he fought the surrender of the Connecticut charter. He is supposed to have had some part in concealing the charter in the Charter Oak to prevent its falling into the hands of Governor Andros, but there is excellent reason to believe that the whole Charter Oak story is a myth Treat served on Andros's council, and when that unpopular governor was ousted (1689), he resumed the governorship of Connecticut, retaining it until 1698 He again served (1698–1708) as deputy governor

treaty, in international law, an agreement between sovereign states. A treaty ordinarily deals with the rights and duties of nations, but many treaties also grant specific rights to foreign private persons (e g , the right to engage in business without special licenses) In some countries treaties are a part of the law of the land and are binding upon all persons. In the United States the Supreme Court has held that a treaty automatically abrogates any state or Federal statute in conflict with it Treaties are designed to regularize the intercourse of nations, and, as such, they are the source of most international law The term *treaty* is ordinarily confined to important formal agreements, while relatively minor international accords are called conventions There can be no doubt that treaties have existed ever since states came into existence. Records survive of Mesopotamian treaties dating before 3000 B C , and in the Old Testament many treaties are mentioned The Greeks and the Romans had elaborate ceremonials to emphasize the sanctity of treaties, and many current treaty practices have classical antecedents Although treaties deal with a great variety of subjects, they are commonly classified under a few great heads Political treaties deal (among other things) with alliances, war, cessions of territory, and rectification of boundaries Commercial treaties may govern fisheries, navigation, tariffs, and monetary exchange. Legal treaties concern extradition of criminals, patent and copyright protection, and the like A treaty is negotiated by duly accredited plenipotentiaries, who are the representatives of the executive branch of the government, for the United States negotiations are ordinarily conducted by officials of the Dept of State under the authority of the President. The proceedings are not usually open, but the record of all PROTOCOL (i.e., the minutes) is preserved for use in case the treaty provisions must later be interpreted. Technical experts draft the text, which the plenipotentiaries then sign The treaty is next ratified by the signatory states in accordance with their regular practice. In the United States the Constitution requires that the treaty must be approved by two thirds of the Senate. In Great Britain the king and, ordinarily, Parliament must approve. A treaty comes into effect when the ratifications are formally exchanged. Secret treaties are ratified without publicity. Since the Senate must approve a treaty, this country cannot enter into secret engagements; it has been argued, however, that such wartime agreements as those made by President F. D. Roosevelt

at the Yalta Conference were in effect secret treaties. Members of the United Nations are required to register their treaties with that organization (following the like practice of the League of Nations), and a treaty which was not previously registered may not be the subject of a complaint. The interpretation of treaties, like that of all legal documents, may present great difficulties. There is no tribunal with compulsory and final jurisdiction to interpret a treaty, parties may, however, voluntarily submit a dispute to the International Court of Justice (World Court) or the Permanent Court of Arbitration (Hague Tribunal). Treaties may come to an end in various ways. Most provide for a date of expiration or a time at which notice to terminate must be given if the treaty is not to continue in effect for another specified period. Treaties terminate if one of the signatory states becomes politically extinct or (in the case of political treaties) if the parties are at war with one another; treaties relating to the laws of war, of course, remain in effect during hostilities. A treaty may be terminated by mutual consent, and breach by one party entitles the other to abrogate. See Ralph Arnold, ed., *Treaty-Making Procedure* (1933), Chang I-ting, *Interpretation of Treaties* (1933), A. D. McNair, *The Law of Treaties* (1938)

treaty port, port opened to foreign trade by a treaty. The term is usually confined to ports in those countries which formerly strongly objected to foreign trade or attempted altogether to exclude it. Thus it is used especially in reference to Japan and China. These countries had admitted trade with the West in the 16th cent. but soon reversed themselves, with Japan permitting only a trickle of Dutch commerce through Nagasaki and China shutting off all trade until the opening of Canton in 1834. Great Britain, determined to increase commerce, provoked the OPIUM WAR with China. The Treaty of Nanking (1842), which restored peace, provided for five treaty ports—Amoy, Canton, Foochow, Ningbasi, and Shanghai. As in all the 69 Chinese treaty ports which were finally opened, there were established zones for foreign residence which enjoyed EXTRATERRITORIALITY. Most of the ports were on the seacoast or on large rivers, there were also inland ports. There was a similar system in Japan after the country was reopened to Western trade by Matthew Perry in 1854. With the abolition of extraterritoriality the system of treaty ports also disappeared. This occurred in 1899 in Japan but not until 1946 in China.

Trebbia (trĕb'bya), river, 62 mi. long, N Italy, rising in the Ligurian Apennines and flowing northeast to join the Po near Piacenza. Near that city in 218 B.C. HANNIBAL won a decisive victory over the Romans. In 1799 the Trebbia was the scene of a Russo-Austrian victory over the French.

Trebizond (trĕ'bĭzŏnd", Turkish *Trabzon* (träb"zŏn'), city (pop. 29,824), NE Turkey, in Turkish Armenia, a port on the Black Sea. Food products and tobacco are its chief exports. The ancient Trapezus (trăp'ĭzŭs), the city was founded in the 8th cent. B.C. by colonists from Sinope. It grew in importance after its conquest (1st cent. B.C.) by Mithridates VI and after its incorporation (1st cent. A.D.) into the Roman Empire. Though it suffered from the barbarian invasions after the 3d cent., it again became a prosperous port under the Byzantine Empire, and it reached its greatest splendor after the establishment (1204) of the Greek empire of Trebizond (see separate article), which was to last until 1461, when it was annexed to the Ottoman Empire. Under the rule of Alexius III (1349–90), the city was one of the world's great trade centers and was renowned for its fabulous wealth and beauty. It declined under Turkish rule to the status of a minor provincial port. Trebizond was included (1920) in the ephemeral independent state of Armenia. The large Greek population of Trebizond was deported in 1923. In the old sections of the city there are churches and other mementos dating from the imperial period and from earlier times.

Trebizond, empire of, 1204–1461. When the host of the Fourth Crusade overthrew (1204) the Byzantine Empire and established the Latin Empire of Constantinople, several Greek successor states sprang up. These were the empire of Nicaea, the despotat of Epirus, and the empire of Trebizond. The last of these was founded by a member of the former imperial Comnenus family, Alexius I of Trebizond, and originally comprised the entire southern littoral of the Black Sea, except its westernmost section, which belonged to Nicaea. Trebizond, its capital, and Sinope were the chief cities. The western part of the empire was the conquest of David Comnenus, Alexius' brother, who soon lost his dominions to Nicaea. The Trapezuntine empire was further diminished when Sinope fell (c. 1215) to the Seljuk Turks, and for the remainder of its existence it was restricted to the SE Black Sea littoral. Alexius I (1204–22) took the sonorous titles of Grand Comnenus and emperor, which were carried by all his successors. When the Byzantine Empire was restored (1261) under Nicaean leadership, Trebizond remained separate. Although it was a vassal, for long periods, to the Seljuk Turks and later to the Mongols and to the Ottoman Turks, it experienced tremendous economic prosperity. This was due, in part, to its fertile hinterland, but chiefly to its position on the trade routes from Russia and from the Middle East to Europe. The carrying trade from Trebizond to Europe was largely a monopoly of Genoa. The empire reached its greatest prosperity under Alexius II (1297–1330) and Alexius III (1349–90). The court of the Grand Comneni, though quite Oriental in character, was the last refuge of Hellenistic civilization and was a center of the arts and letters. Byzantine court ceremony probably reached its apex here. Many princesses of the Comnenus dynasty were sought in marriage by European and by Moslem princes and nobles. Relations between Trebizond and the Moslems were generally friendly, but after the Turkish conquest of Constantinople (1453) David Comnenus, last of the Trapezuntine emperors, promoted an alliance of the non-Ottoman Asiatic states against Sultan Mohammed II. In 1461 Mohammed forced David to surrender, had him put to death, and annexed Trebizond to the Ottoman Empire. See William Miller, *Trebizond, the Last Greek Empire* (1926)

treble (trĕ'bul), highest part in choral music, hence synonymous with soprano. The term appeared in 15th-century English polyphony, probably as an Anglicization of the Latin *triplum*, the name given in medieval polyphony to the part which was often the highest (see MOTET). The treble clef, however, is the G clef, one of the two clefs commonly used today for vocal music and for most instrumental music. The soprano clef is a C clef placing middle C on the bottom line of the staff; it was used in vocal music as late as Bach's time but is now nearly obsolete for voice.

Treblinka, Poland. see CONCENTRATION CAMP.

Trebonius, Caius (trēbō'nēus), d. 43 B.C., Roman politician. When tribune of the plebs (55 B.C.) he proposed the *Lex Trebonia* by which Pompey obtained Spain, Crassus obtained Syria, and Caesar obtained Gaul and Illyricum. As Caesar's protégé he became praetor (48 B.C.), propraetor in Spain (47 B.C.), and consul (45 B.C.). Notwithstanding the promise by Caesar of the province of Asia, he was a leading conspirator against his patron. He was later slain in Smyrna.

Tredegar (trĕdĕ'gär), urban district (pop. 23,192), Monmouthshire, England, ENE of Merthyr Tydfil. It has coal mines, ironworks, and steelworks.

Tredyakovsky, Vasily Kirilovich (vŭsē'lyĕ kĭrē'lŭvĭch trĕdyŭkôf'skĭ), 1703–69, Russian poet and translator. The son of a poor priest, he rose through education at home and abroad to full membership (1745) in the Academy of Sciences, only to die in poverty and oblivion. He is remembered chiefly for his treatise *A Brief New Method of Composing Russian Verse* (1735), with which he initiated the reform of Russian prosody that was finally completed by Lomonosov.

Tree, Ellen. see KEAN, CHARLES JOHN.

Tree, Sir Herbert Beerbohm, 1853–1917, English actor-manager, whose original name was Herbert Beerbohm. He was a half brother of Max Beerbohm. First successful (1884) as the curate in *The Private Secretary*, he was lessee and manager (1887–97) of the Haymarket theater, there he produced and acted leading roles in Shakspere, Ibsen, Wilde, and Maeterlinck and such dramas as *Jim the Penman*, Du Maurier's *Trilby*, and Jones's *Dancing Girl*. He built and opened Her Majesty's Theatre in 1897 and for 20 years offered elaborate Shakesperian productions and other plays. He was knighted in 1909. See his *Thoughts and Afterthoughts* (1913), Max Beerbohm, *Herbert Beerbohm Tree* (1920)

tree, perennial plant with a single trunk or stem branching some distance from the ground. A tree reaches a greater height at maturity than a shrub, it usually branches higher on the stem and while a shrub increases in size chiefly by the growth of new shoots, trees increase the number and size of the branches on the main stem; the diameter of the stem characteristically exceeds that of shrubs. Trees and shrubs are known either as deciduous forms (those with broad leaves which are shed regularly at the end of the growing season) or evergreens (those that remain green all year). Most evergreens have needlelike or scalelike leaves which are shed gradually at intervals ranging from 2 to 10 years. However, there are some broad-leaved shrubs which shed their leaves gradually and remain green throughout the year even in relatively cold climates and a few trees with needlelike leaves (e.g., the larch) which are shed at the end of the growing season. Shedding the leaves is chiefly a means of conserving water during the winter when the ground is frozen. The green coloring of leaves is produced by the presence of chlorophyll. Autumn coloration is believed to be caused partly by the destruction of chlorophyll resulting in the unmasking of pigments ordinarily hidden by the chlorophyll and also by chemical changes which produce new pigments. Trees serve many useful purposes—nuts and fruits of numerous trees provide food for man and animals, and the wood furnishes fuel, building materials, and cellulose for use in making paper, rayon, and other products. Turpentine, resins, maple sugar, rubber, quinine, and other useful substances are obtained from trees. See also BARK, CAMBIUM; FOREST, WOOD. See H. L. Edlin, *British Woodland Trees* (2d ed., 1945), R. B. Hough, *Handbook of the Trees of the Northern States and Canada* (1947), R. J. Preston, *Rocky Mountain Trees* (2d ed., 1947) and *North American Trees* (1948); G. C. Taylor and F. P. Knight, *Propagation of Hardy Trees and Shrubs* (new ed., 1947); W. G. Sheat, *Propagation of Trees, Shrubs, and Conifers* (1948), J. J. Levison, *Home Book of Trees & Shrubs* (2d ed., 1949), F. K. Makins, *Identification of Trees and Shrubs* (3d ed., 1949); U.S. Dept. of Agriculture, *Trees the Yearbook of Agriculture* (1949).

tree fern, any FERN having a treelike trunk, chiefly native to tropical regions but cultivated in conservatories elsewhere. In general appearance tree ferns resemble palms (they are sometimes 60 to 70 ft. high), but the large leaves typically are finely divided fern fronds. Predecessors of the tree ferns were a conspicuous part of the vegetation of the Carboniferous period and had a much wider distribution than at present.

tree frog, small arboreal frog with an adhesive disk on each digit. Most tree frogs can change the skin color to harmonize with their background. Among the New World species are the common tree frog, often called the tree toad, the slender, smooth, green tree frog and the squirrel tree frog of the S United States, the pine-woods tree frog; the barking tree frog, about 3 in. long, the largest species native to the United States, the least swamp frog, about ½ in. long, the smallest of the group in North America, found in the coastal region of the SE United States, the cricket frog, which is not arboreal, and the familiar little spring peeper, which inflates a large throat sac when delivering its loud "peeping."

tree of heaven: see AILANTHUS.

tree surgery, practice of repairing cut or injured trees to preserve their appearance and prevent disease. Diseased or injured parts are first removed (even small cavities in the bark may harbor injurious fungi and insects), the surfaces are treated with antiseptics and healing aids, and the cavity may be filled with cement, rubber, or other material to prevent moisture from entering and to improve the appearance of the treated wounds over which the bark later grows. Fresh wounds can be simply treated with shellac, special tree paint or a liquid grafting wax but extensive repair work should always be done by a qualified tree surgeon. See R. R. Fenska, *Tree Experts Manual* (1943).

tree toad: see TREE FROG.

trefoil (trē'foil) [O.Fr., =three-leaf], name for several plants, chiefly legumes, having trifoliate leaves. Best known of the trefoils is clover. The tick trefoil or tickseed (*Desmodium*) has flat scalloped pods that separate into clinging segments particularly troublesome for the woolgrower. The bird's-foot trefoil (*Lotus corniculatus*) is an Old World forage plant and weed, naturalized in North America. The shrubby trefoil is the HOP TREE.

Treitschke, Heinrich von (hĭn'rĭkh fŭn trĭch'kŭ), 1834–96, German historian. Educated chiefly at Leipzig and Bonn, he lectured at Leipzig (1859–63) and was appointed (1863) to a chair of history at Freiburg im Breisgau. A fervid partisan of Prussia, he left Baden at the outbreak of the Austro-Prussian War (1866) and became professor of history at Kiel (1866), Heidelberg (1867), and Berlin (1874). He edited (1866–89) the monthly *Preussische Jahrbücher* and became (1886) Prussian state historiographer. As a young man, he was strongly nationalistic and liberal, as he grew older his political views became more and more nationalistic, less and less liberal. He was a member of the Reichstag, but acquired little fame as a practical politician. All his writings, however, reflected his political views, his deep hope for the unity and greatness of Germany under Prussian leadership, and his admiration of Bismarck and the Hohenzollern dynasty, and he exerted tremendous influence, particularly on the younger generation. Treitschke's histories, stirring and graphic, excellent in workmanship and deep in thought, nevertheless leave much to be desired because his prepossessions and his theories distort his factual narratives. His masterpiece is his *History of Germany in the Nineteenth Century* (Eng. tr., 7 vols., 1915–19). Among his other works are *Zehn Jahre deutscher Kämpfe* [ten years of German strife] (1874), *Politics* (Eng. tr., 1916), and *Origins of Prussianism* (Eng. tr., 1942). See A. Hausrath, ed., *Treitschke: His Life and Works* (Eng. tr., 1914).

trek (trĕk) [Dutch, =draft], South African term, originally meaning merely a journey by ox wagon. In English usage it generally signifies an organized migration, especially of farmers. The best-known trek is the Great Trek (1835–36), Boer farmers left the Cape of Good Hope to escape British domination and founded Natal, Transvaal, and the Orange Free State. A more recent trek was that of some 700 Boers who, after British victory in the South African War, left their homes in Transvaal to settle in S central Kenya. See Eric Walker, *The Great Trek* (3d ed., 1948).

Trelawny, Edward John, 1792–1881, English adventurer; friend of Byron and Shelley He was at Leghorn when Shelley was drowned and later served with Byron in the Greek war of independence He wrote *Recollections of the Last Days of Shelley and Byron* (1858, additions, 1878) and a partly autobiographical novel, *The Adventures of a Younger Son* (1831). See M. N Armstrong, *Trelawny* (1940).

Trelease, William (trĭlēs'), 1857–1945, American botanist, b Mt. Vernon, N Y., grad Cornell Univ (B.S., 1880) He was professor of botany at the Univ of Wisconsin (1883–85), at Washington Univ., St Louis (1885–1913), and at the Univ of Illinois (1913–26) From 1889 to 1912 he was director of the Missouri Botanical Garden in St Louis He made a special study of the genus *Agave* His writings include *Agave in the West Indies* (1913), *Plant Materials of Decorative Gardening* (1917), and *Winter Botany* (1918) His son, **Sam Farlow Trelease,** 1892–, b St Louis, grad Washington Univ (B A., 1914), Ph D Johns Hopkins, 1917, was associated with Columbia Univ from 1925 He became head of the department of botany in 1930 and Torrey professor of botany in 1937 His work in plant physiology includes studies of photosynthesis, plant respiration, and selenium poisoning With O A Beath he wrote *Selenium* (1949)

Trelleborg (trĕlŭbôr'yŭ), city (pop 16,148), Malmohus co., S Sweden, a Baltic port at the southern tip of Sweden From Trelleborg to Gdynia there is a ferry connecting the railroads of Sweden and Poland Normally there also is a connection with Sassnitz, the German ferry terminal on the island of Rügen The city, which dates from the 11th cent., also has sugar refineries and rubber, machinery, and cement factories The name sometimes appears as Tralleborg (Swed *Trälleborg*)

Tremont, 1 (trĭ'mŏnt, trē'munt) Town (pop 1,118), on S Mt Desert Island, S Maine, inc 1848 **2** (trē'mŏnt) Borough (pop 2,314), E Pa., SW of Pottsville, laid out 1844, inc 1866 Anthracite is mined here

Tremonton (trē'mŭntŭn), city (pop 1,443), N Utah, W of Logan, laid out 1903, inc 1906 With near-by Garland, it is the processing center of a poultry-, sugar-beet, and alfalfa area

Trench, Richard Chenevix, 1807–86, British clergyman and author, b Dublin, grad Trinity College, Cambridge He was dean of Westminster, 1856–63, and Protestant archbishop of Dublin, 1863–84, his writings include *The Study of Words* (1851) and *English, Past and Present* (1855) *Collected Poems* (1865) show his skill as a poet

trench mouth, common name for Vincent's stomatitis, an inflammation of the soft tissue of the mouth It is also known as Vincent's infection and is limited in some cases to a gingivitis, or inflammation of the gums Some authorities believe the causative agents to be two associated microorganisms, a fusiform bacillus and a species of spirochete, acting either by themselves or with other microbes Both organisms are generally present (in smaller numbers than occur in the disease) in healthy mouths, but the conditions which induce them to attack the tissue have not been determined Trench mouth has a heavy incidence among soldiers in the field and in camp, a fact to which the condition owes its name Among the predisposing factors cited in the occurrence of the disease are vitamin deficiencies, diseases of the blood and blood-forming organs, allergies, the effects of certain drugs, and several diseases which are characterized by fever and debilitation

trench warfare. Though trenches were used in ancient and medieval warfare, in the Civil War, and in the Russo-Japanese War (1904–5), they did not gain importance until the First World War The introduction of the MACHINE GUN made the infantry charges of earlier wars virtually impossible, and the war bogged down, with the contenders digging thousands of miles of opposing trenches on the Eastern and Western fronts. The trenches were fronted by miles of barbed wire to impede and snare attacking enemy troops Between opposing trench systems was a no man's land To break the stalemate, various methods and new weapons were employed, tremendous artillery barrages sought to devastate the enemy and blow a gap in his trenches, trench mortars, hand grenades, rifle grenades, and poison gas were used The British introduced the tank, but their lack of understanding of the tactics of the new armored warfare minimized its effectiveness. Without a decisive weapon to end the stalemate the war of attrition continued to the end, with artillery duels and infantry attacks behind creeping artillery barrages The idea of an uninterrupted line of defense with the exclusion of flanking held the imagination of the French and German general staffs between the two world wars, and they built lines of field fortifications known as the Maginot Line and the Siegfried Line The increased speed, armor, and firepower of armored and motorized divisions and air-borne troops, however, made such defense illusory In the Second World War trench warfare was reduced to a small scale, whenever an offensive stalled, attacking troops "dug in" until the enemy strong points were destroyed or weakened by air or artillery assault. The fox hole (giving improvised, individual protection) became more common than the trench. See Tom Wintringham, *The Story of Weapons and Tactics* (1943).

Trenck, Franz, Freiherr von der (frănts' frī'hĕr fŭn dĕr trĕngk'), 1711–49, Austrian officer and adventurer, b Reggio di Calabria, Italy He was notorious for his bravery, his disorderly love affairs, and his duels, for which he was cashiered from the Austrian army After service in the Russian army he was imprisoned at Kiev for insubordination Released, he returned to his estates on the Slavonian border, where he took command of a regiment of Pandours (Croatian infantry) He fought for Maria Theresa in the War of the Austrian Succession, but his deeds of violence led to his court-martial (1747) and to his imprisonment in the notorious Spielberg fortress at Brno (Brünn), where he died His memoirs were published in 1770.

Trenck, Friedrich, Freiherr von der (frē'drĭkh), Prussian officer and adventurer, b Königsberg, cousin of Franz von der Trenck He was imprisoned on the order of Frederick II because of a supposed love affair with Frederick's sister, Princess Amalia He escaped, but was later rearrested and spent 10 years in captivity at Magdeburg under the most cruel treatment Released (1763) on the intercession of Maria Theresa, he lived for many years at Aachen, where he published a newspaper and entered the wine business He later retired to his estate in S Hungary, where he wrote his celebrated autobiography (1786–87, Eng tr, 1788) He went to Paris in 1791 and took part in the French Revolution as a member of the extreme left, but he was arrested on suspicion of espionage for Austria and was guillotined

Trendelenburg, Friedrich Adolf (frē'drĭkh ä'dôlf trĕn'dulunbŏrk"), 1802–72, German philosopher His spiritualistic philosophy of movement is best remembered for its then heretical opposition to Hegel His most important work is *Logische Untersuchungen* (1840)

Trengganu (trung-gä'nōō, trĕng), state (c 5,000 sq mi, pop 226,426), NE Malaya, on the South China Sea The capital is Kuala Trengganu The state is bordered on the west by Kelantan and Pahang Tin, iron, and wolfram are mined, rice and rubber are grown Fishing is a major occupation Before the 16th cent, Trengganu was the vassal state of the powers that in turn dominated the Malay Peninsula After the fall of Malacca (1511), it passed under the suzerainty of Siam In 1909 it became a protectorate of Great Britain Before the establishment of the federation of Malaya, Trengganu was classed as one of the Unfederated Malay States

Trent, William Peterfield, 1862–1939, American educator and critic, b Richmond, Va., grad Univ of Virginia (M A., 1884) In 1888 he became professor of English and in 1894 dean at the Univ of the South From 1900 to 1929 he was professor of English at Columbia Among his numerous biographies and critical studies are *William Gilmore Simms* (1892), *Robert E Lee* (1899), and *Daniel Defoe* (1916) An exhaustive 10-volume biography and bibliography of Defoe was left unpublished at Trent's death He was also an editor of *The Cambridge History of American Literature* (4 vols., 1917–21) and of the Columbia Univ edition of Milton (18 vols in 21, 1931–38) as well as of numerous other volumes

Trent, Ital *Trento* (trĕn'tō), Latin *Trudentum,* city (pop 37,290), capital of Trentino-Alto Adige and of Trento prov., N Italy, on the Adige and on the Brenner road It was the seat of a Lombard duchy (6th cent.) and of a Frankish march (8th cent.) To safeguard their road into Italy the emperors invested (12th cent.) the bishops of Trent with temporal powers over a sizable territory The prince-bishops ruled, except for a few short intervals, until 1802, when the bishopric was secularized and became a part of TYROL Trent having always been Italian in language and culture there developed a strong movement for its union with Italy (see IRREDENTISM) This was achieved in 1919 by the Treaty of Saint-Germain Among the landmarks of Trent are the Castello del Buon Consiglio, once the episcopal residence and later a political prison, the Romanesque cathedral, and a famous bronze statue of Dante The Council of Trent met here in the 16th cent

Trent, river, 170 mi long, England. It is the third longest of England, the Thames and the Severn being longer. The Trent rises on Biddulph Moor in Staffordshire, traverses or borders Staffordshire, Derbyshire, Leicestershire, Nottinghamshire, and Lincolnshire, passes the Potteries district, Burton-on-Trent, Nottingham, Axholme Isle, and Gainsborough, and joins the Ouse W of Hull to form the Humber. Its chief tributaries are the Sow, Tame, Dove, Soar, Devon and Idle rivers. There is a high tidal bore in its lower course It is navigable for barges to Nottingham and is connected with other streams and areas by canals

Trent, Council of, 1545–47, 1551–52, 1562–63, the 19th ecumenical COUNCIL of the Roman Catholic Church From the 14th cent. the need for widespread reform in the Church was well known, and there was a general opinion that a council would be the best instrument; a precedent was the Fourth Lateran Council. The Great Schism (1378–1417) of the PAPACY produced councils, but it delayed reform by preoccupying churchmen with politics and vagaries of reorganization of the Church (see SCHISM, GREAT; PISA, COUNCIL OF; CONSTANCE, COUNCIL OF, BASEL, COUNCIL OF, FERRARA-FLORENCE, COUNCIL OF) The prevalence of theories of conciliar supremacy prevented any 15th-century pope from wanting a council, and it was reforming cardinals who forced the convocation of the Fifth LATERAN COUNCIL (1512–17), this was ineffectual. Martin Luther's appeal (1518) to a council was a revival of the conciliar theory, and within a few years the Protestants had gone too far in doctrinal development (e.g., with respect to grace and good works) to meet with Catholics, and a council of conciliation was clearly futile Meanwhile the reforming party within the Church, which was strongly anti-Lutheran, still hoped for a council, and when PAUL III was elected (1534), a council was assured (see REFORM, CATHOLIC). The difficulties took 10 years to overcome, for now that a known reformer was pope, no one outside the papal court was eager for a meeting. The Protestants at first set as a price of attending that it be held in Germany, while the pope insisted on an Italian city Mantua was chosen, but its duke refused, then Venice prevented a meeting at Vicenza Finally Trent, an imperial city, almost in Italy, was a compromise between the papal party and that of Emperor Charles V There was an abortive start in 1542 In 1544 the pope convened the council definitively There were no Protestant delegates The work of the council embraced dogmatic definition and correction of abuses, and it was so planned that discussion of doctrine and of reforms of practices could be carried on at the same time The 10 years of delay bore good fruit, for the reformers arrived at the council intensively prepared in every question likely to be studied The chief functions of the council were occasional solemn one-day sessions (25 in all, of which 10 dealt with formalities only) for the purpose of making the final decisions and declarations, the hard work of the council was done, of course, at informal, sometimes private, meetings, for which purpose the council met at first in three great committees, later as a whole As at every ecumenical council, the presence of the papal legates was necessary to conduct it, and at Trent they drew up the agenda The sessions of the council fell into three periods 1–10 (1545–47), under Paul III, 11–16 (1551–52), under JULIUS III, and 17–25 (1562–63), under PIUS IV The two great interruptions were chiefly occasioned, first, by an impasse over the place of meeting after most of the bishops had left Trent for fear of the plague (1547), and, second, by the lack of interest of Paul IV (1555–59). The kaleidoscope of German politics often made delays seem wise The numbers attending the council varied, in the first group of sessions there were less than 200, in the second group somewhat less, and in the third considerably more The work of the council was confirmed by Pius IV (bull *Benedictus Deus,* 1564), and its most important prescription, the issuance of an explicit account of the beliefs of the Church, was fulfilled by the publication (1566) of the *Catechism of the Council of Trent* or *Roman Catechism,* not catechetical but descriptive in form The dogmatic definitions and the reform decrees of the first group of sessions (at sessions 4–7 from April, 1546, to March, 1547) treated the Scriptures (canon, text, interpretation, and function), original sin, justification, the sacraments in general, baptism, and confirmation, and also the regulation of education, preaching, and alms collecting and the duties and obligations of bishops and beneficiaries, the canons on justification (6th session), the product of seven months of discussion, are among the chief work of the council The second period of the council was notable for the work of the Jesuits, especially LAINEZ The subjects treated were (at sessions 13 and 14, Oct.–Nov., 1551) the Eucharist, penance, and extreme unction and episcopal jurisdiction and office, clerical discipline, and benefices The third period was dominated by St. CHARLES BORROMEO, its definitions and regulations covered (at sessions 18 and 21–25, Feb., 1562, to Dec., 1563) communion in both kinds, the Mass, the sacraments of orders and matrimony, the veneration and invocation of the saints, and the cult of relics and images and the list of forbidden books, the priesthood in all its phases, ecclesiastical foundations, education, marriage, religious orders, feasts and fasts, and the service books of the Church The doctrinal canons of the Council of Trent cover most of the controverted points in Catholic dogma, and the definitions are so clear and lucid that the language of the council is often quoted in definitions. The reform measures of the council were tremendously far reaching and their enforcement was probably the most thoroughgoing reform in the history of the Church. The post-Tridentine Catholic Reform was to a great extent occupied with carrying out the principles and requirements of the council. The modern Roman Catholic Church can be understood

only in the light of the work of the Council of Trent. There is no unprejudiced account of the council in English The most complete history is found in Ludwig Pastor's history of the popes, there is an English translation of the dogmatic canons and decrees and of the *Roman Catechism*, which includes much from the conciliar canons Books on Catholic dogma nearly always quote the Tridentine canons at length and histories of the Church give summaries of the decrees and their consequences

Trent Affair, incident in the diplomatic relations between the United States and Great Britain in the Civil War. On Nov 8, 1861, the British mail packet *Trent*, carrying James M Mason and John Slidell, Confederate commissioners to London and Paris respectively, was halted in the Old Bahama Channel by the U S warship *San Jacinto*, commanded by Capt Charles Wilkes The commissioners and their secretaries were forcibly removed from the *Trent* and taken to Boston, where they were interned in Fort Warren This act was strictly opposed to the laws of the sea as they had been previously upheld by the United States, since Wilkes did not seize the vessel and bring it in for admiralty adjudication but merely exercised search and seizure of the men Nevertheless, Wilkes was greeted with wild acclaim and was even congratulated and thanked by Secretary of the Navy Gideon Welles and the House of Representatives In England the act aroused great popular indignation The British drafted a sharp note to the American government, the terms of which were softened by Prince Albert, they demanded the release of the commissioners and an explanation A seven-day limit was set for reply It seemed for a time that Great Britain would not only recognize the Confederacy but also go to war against the United States However, Lord Lyons, the British ambassador to the United States, delayed presentation of the note for several days, meanwhile notifying Secretary of State William H Seward of its contents The note was presented Dec 23, 1861 By that time popular feeling in the United States had died down, and the threat of war with England was anything but desirable A cabinet meeting on Dec 26 led to a final decision to send to England a note by Seward disavowing Wilkes's act and promising to release the prisoners They were released in Jan , 1862, and trouble with Great Britain was averted See E D Adams, *Great Britain and the American Civil War* (1925)

Trent Canal, waterways system, S Ont , connecting Lake Ontario, from the Bay of Quinte, with Lake Huron, at Georgian Bay It utilizes the Trent river to Rice Lake, the Otonabee river through Peterborough, the Kawartha Lakes and artificial channels to Lake Simcoe and Lake Couchiching, and the Severn river to Georgian Bay The system, 240 mi long, with dams and locks, has only 20 mi of artificial channels It was designed primarily for navigation purposes, to shorten the shipping route between Lakes Ontario and Huron, but has proved more valuable as a source of water power

Trentino–Alto Adige (trăntē'nō-ăl'tō ä'dējā), autonomous region (5,252 sq mi , pop 669,029), N Italy, bordering on Switzerland and Austria From 1919 to 1947 it was called Venezia Tridentina It includes the Tyrolean Alps S of the Brenner Pass and part of the Dolomites and is cut by the upper Adige valley There are many large forests and pastures Cereals, grapes, and fruit are grown, and tourists are an important source of revenue New hydroelectric plants have furthered the development of some industries, particularly chemicals The region is divided into the provinces of Trento (q v , the Trentino), and Bolzano (q v , the Alto Adige) Trent (Ital *Trento*) is the capital Most of the region was comprised from the 11th cent until 1802–3 in the episcopal principalities of Trent and Bressanone, in 1815 it was incorporated with the Austrian Tyrol After 1866 Italian irredentism resulted in agitation for the transfer of the Italian-speaking Trentino to Italy, the Treaty of Saint-Germain (1919) gave not only the Trentino, but also the predominantly German Alto Adige to Italy The roles were reversed, for now Austrian and German nationalists began to agitate for the return of S Tyrol The Fascist Italian government provoked violent opposition by closing all German schools, ruthlessly enforcing Italian as the sole language, and persecuting all recalcitrants In 1938 an agreement between Hitler and Mussolini provided for extensive forced migration of the German population to Germany or to other parts of Italy (according to their choice). This extremely unpopular program soon collapsed After a friendly agreement (1946) between the Italian and Austrian governments, the republican constitution of Italy granted (1947) the region autonomous rights. Both German and Italian were made official languages, German schools were permitted in Bolzano prov.

Trento, Italy. see Trent.

Trenton. **1** Town (pop 2,699), N N.S., on the East River and just N of New Glasgow. Railroad cars and steel products are made here. **2** Town (pop. 8,323), S Ont., on the Bay of Quinte at the mouth of the Trent river and at the south end of the Trent Canal, W8W of Belleville. It has wool, paper, and flour mills, and machinery, silverware, and clothing are manufactured.

Trenton. **1** City (pop 1,316), SW Ill , E of St Louis, in a farm area, inc 1865 **2** Village (pop 5,284), SE Mich , on the Detroit river, settled 1816, inc 1855 It is a farm trade center and port, manufactures phosphate salts, and has an oil refinery, limestone is quarried near by. **3** City (pop 7,046), co seat of Grundy co , N Mo., on the Thompson river and NE of Kansas City, laid out 1841 It is a farm and shipping center, with railroad shops and food-processing plants A group of socialists tried out a cooperative venture in business and education here from 1897 to 1905 Enoch H Crowder State Park is near **4** City (pop 124,697), state capital (since 1790), co seat (since 1719) of Mercer co , W N J , at the head of navigation on the Delaware c 30 mi above Camden, inc 1792 Trenton adopted commission government in 1911 and again in 1939, it was under a municipal manager, 1935–39 Settled by Friends in 1679, it was first called the Falls, then Stacy's Mills, for Mahlon Stacy, and finally Trenton, for William Trent, who bought land here in 1714 The village grew as a commercial center and became the site of many industries, notably the making of wire rope (Roebling works, 1848), pottery (c 1850), cigars, rubber products, and airplane equipment Trenton was (Dec 26, 1776) the scene of a battle in the American Revolution when Washington crossed the Delaware and surprised and captured some 900 Hessians The Americans, avoiding a British relief force led by Cornwallis, then struck at Princeton A 155-foot granite monument topped by a statue of Washington, designed (1893) by John Duncan, commemorates the battle, and the place where the Americans crossed the Delaware is marked in a state park Trenton's noteworthy buildings include the golden-domed capitol (1792), much remodeled and enlarged, the capitol annex (1931), with the state library and museum, the First World War memorial building (1932), the barracks built in 1758 and restored as a museum, Bloomsbury Court (c 1719), Trent's home, and a Friends' meetinghouse (1739) Joseph Bonaparte's mistress, Annette Savage, lived at "Bow Hill" A stone commemorates Fitch's operation of a steamboat on the Delaware at Trenton Zebulon M. Pike was born in Lamberton, now part of Trenton. Controversy has arisen among archaeologists over the age of discoveries made near Trenton since Dr C C Abbott in 1872 claimed to have found evidences of Glacial man Trenton is the seat of an annual farm show in January and of the state fair in September A state teachers college (1855), the state prison, and other state institutions are here See Trenton Historical Society, *A History of Trenton, 1679–1929* (1929) **5** Cotton city (pop 3,400), co seat of Gibson co , W Tenn , on the North Fork of the Forked Deer and NNW of Jackson The site of David Crockett's home is near by

Tresca, Carlo (kär'lō trĕ'ska), c 1877–1943, Italian-American anti-Fascist leader and syndicalist writer, b Italy The son of a wealthy landowner, he nevertheless organized a branch of the Socialist party in his native town and there published a revolutionary newspaper As secretary of the Italian Railroad Workers Union, Tresca was convicted of libel He fled to Switzerland—where he met, and came to dislike, Benito Mussolini—and eventually reached (1904) the United States At first he was attached to Socialist groups, but after 1907 avoided party affiliation He later led numerous strikes throughout the country, attempted to start a syndicalist movement among Pennsylvania coal miners, and was arrested many times He edited the *Martello*, an anti-Fascist publication which was directed at Italian-American workers, and several attempts on his life were made, presumably by agents of Mussolini His trimmed beard, pince-nez, big black hat, and flowing cloak were often portrayed in newspaper cartoons In 1943 he was shot to death in the streets of New York city by an undiscovered assassin.

Tresco: see Scilly Islands

Tresguerras, Francisco Eduardo de (frănsĕ'skō ä"dhwar'dhō dā trăsgĕ'ras), 1759–1833, Mexican architect, painter, and sculptor He made his name in the field of architecture, in which he is noted for his neoclassic buildings Among his best-known works are the Church of Nuestra Señora del Carmen and the Bridge of La Laya, both in Celaya, and a fountain and a church in Querétaro

Tres Marías, Las (las trās' mărē'ăs), archipelago, W Mexico, in the Pacific off the coast of Nayarit Of the four islands, two—Maria Madre, which is the largest (c 11 mi long and 4 mi wide) and is also a federal penal colony, and María Magdalena—produce maguey, salt, and lumber (especially cedar and lignum vitae) which are sent to the mainland.

trespass (trĕ'spus), in law, any physical injury to the person or to property. In English common law the action of trespass first developed (13th cent) to afford a civil remedy for injuries to property where the estate of the owner was not in dispute. The two early forms were trespass *quare clausum fregit*, used in instances of breaking into real property, and trespass *de bonis asportatis*, used when personal property was removed without consent. Although the offense of trespass required the use of force, the courts quickly decided that the mere act of breaking in or of taking goods was in itself forceful. Trespass in time was applied to injuries to the person involving force, such as assault, battery, and unlawful imprisonment. Out of the law of trespass developed many of the torts which are now commonly recognized Today the term *trespass* is usually applied only to unlawful entry into private property If a trespasser refuses a request to leave the premises, he may be removed by any degree of force which appears reasonably necessary. Contrary to common belief, trespassers (e g., poachers) may not be fired upon without warning or be exposed to the dangers of spring guns or of traps

Tres Tabernae (trēs tubûr'nē) [Latin, probably = three shops], ancient town of Latium, Italy, on the Appian Way It is mentioned in Acts 28 15 as the place where St. Paul was met by his friends on his journey to Rome. AV translates as Three Taverns

Trevelyan, Sir Charles Edward (trĭvĕl'yŭn), 1807–86, British administrator in India. As a writer for the East India Company (1826), as assistant (1827) to the commissioner in Delhi, and as deputy secretary at Calcutta (1831–38), he favored public works and education Returning to England (1838), he was (1840–59) assistant secretary of the treasury and was knighted (1848) for his administration of Irish famine relief *The Organization of the Permanent Civil Service* (1853), which he wrote with Sir Stafford Northcote, was the basis of England's later organization of the civil service He was governor of Madras (1859–60) and finance minister in India (1862–65), again promoting public works Trevelyan was father of the historian George Otto Trevelyan and brother-in-law of Lord Macaulay. He wrote on manners, language, military affairs, and Indian policies

Trevelyan, George Macaulay, 1876–, English historian, son of Sir George Otto Trevelyan. He was educated at Harrow and at Cambridge, where he became professor of modern history in 1927 and master of Trinity College in 1940 His writing represents a revolt of the "literary" as against the "scientific" historian. His most ambitious works are an extended study of Garibaldi (3 vols , 1907–11) and a history of *England under Queen Anne* (3 vols , 1930–34). He is perhaps better known for his one-volume *History of England* (1926) and his *British History in the Nineteenth Century* (1922) and *England under the Stuarts* (1907). Other works include biographies of John Bright (1913), Lord Grey (1920), and Grey of Fallodon (1937), *The English Revolution, 1688–1689* (1938), *English Social History* (1942), and *An Autobiography and Other Essays* (1949)

Trevelyan, Sir George Otto, 1838–1928, English historian and politician After study at Cambridge (1857–61) and a year in India (1862–63), he served as a Whig member of the House of Commons from 1865 to 1897 He held posts under William Ewart Gladstone as civil lord of the admiralty (1868–70), secretary to the admiralty (1880–82), chief secretary for Ireland (1882–84), and chancellor of the duchy of Lancaster (1884–85) In 1876 Trevelyan produced a biography of his uncle, Lord Macaulay His *Early History of Charles James Fox* (1880) firmly established his reputation as a historian His study of the times of Fox was continued in the *American Revolution* (4 vols , 1899–1907) and completed with *George the Third and Charles Fox* (2 vols , 1912). Trevelyan's Whig sympathies led to his condemnation of George III and praise for the American revolutionary leaders, an attitude that contributed to the great popularity of his work in the United States See biography by his son, G M Trevelyan (1932)

Treves or **Trèves,** Germany see Trier.

Trevisa, John of (truvē'su) c 1326–c 1402, English writer. He translated into English in 1387 Ranulph Higden's *Polychronicon*, a history of the world, and in 1398 Bartholomew de Glanville's *De proprietatibus rerum*, an encyclopedia of natural science. Both translations became standard authorities of the later Middle Ages and were printed by the early presses

Treviso (trăvē'zō), city (pop 43,949), capital of Treviso prov , Venetia, NE Italy, in the center of the fertile Venetian plain In the early Middle Ages it was the seat of a Lombard duchy, then of a march It later became a free commune, fell under various lords, and in 1339 submitted to Venice Its narrow winding streets, its canals, and its ancient houses (15th–16th cent) give it a mellow charm. The museum and the churches contain valuable paintings, including several by Bordone, who was born here

Trevithick, Richard (trĕ'vĭthĭk), 1771–1833, English engineer and inventor He invented a high-pressure steam engine (1800) and completed and operated a locomotive (1801), which he patented in 1802 A steam-operated carriage which he built was run (1803) in London Later in 1803 he built a steam locomotive, which was operated (1804) on a tram road in Wales, the trips were made with passengers and goods wagons. Trevithick also made steam engines for use in mines and developed

a steam threshing machine. See biography by H. W. Dickinson and Arthur Titley (1934)

trial: see PROCEDURE.

trial by battle: see ORDEAL.

triangle, in mathematics, a plane figure bounded by three straight lines. The three points in which various pairs of these lines intersect are called the vertices of the triangle. The lengths of the lines joining the vertices are called the sides of the triangle. The three sides and three angles are referred to as the six parts of the triangle. Any one of the sides may be considered as the base. The perpendicular distance from one of the bases to the opposite vertex is called an altitude The area of a triangle is equal to one half the product of the base and the corresponding altitude The line segment joining the midpoint of a side to the opposite vertex is called a median. Each triangle has three altitudes and three medians. All three altitudes of a triangle go through a single point, and all three medians go through a single (usually different) point Triangles are usually classified according to the sizes of their angles An equilateral triangle has all three angles the same. An isosceles triangle has two of its angles equal. A scalene triangle is one in which all the angles are different. A right triangle has one right angle Since the sum of the angles of a triangle is exactly equal to two right angles, a triangle can have at most one right or one obtuse angle In geometry it is shown that two triangles are congruent (i.e., are the same shape and size) if, in general, any three independent parts of one are the same as the corresponding three parts of the other This fact makes it possible, in trigonometry, to compute the sides and the angles of a triangle whenever three of its independent parts are known The triangle is a fundamentally important shape in geometry It is the simplest of the polygons (i e., it has the least possible number of sides), and any other polygon can be broken up into a number of triangles by drawing various diagonals. Consequently a complete theory of the measurement of triangles provides also a complete theory of the measurement of all polygons.

triangle, in music, a percussion instrument, consisting of a steel rod bent into an equilateral triangle and struck with a small steel stick. Only since the end of the 18th cent has it been an orchestral instrument although it appeared in Europe much earlier.

triangulation: see GEODESY.

Trianon (trēänô'), two small châteaux in the park of Versailles, Seine-et-Oise dept., N France The Grand Trianon was built by J H Mansart in 1687 as a retreat for Louis XIV, Napoleon I occasionally resided here. The Petit Trianon was built for Louis XV by J A. Gabriel, and was the favorite residence of Marie Antoinette, who had rustic cottages built near by to indulge her pastoral fancies

Trianon, Treaty of, 1920 The internal chaos in HUNGARY that followed the dissolution (1918) of the Austro-Hungarian Monarchy delayed the signing of a peace treaty with the Allies of the First World War (excluding the United States and Russia) until June 4, 1920 The treaty, signed at the Grand Trianon Palace at Versailles, France, reduced the size and population of Hungary by about one third, divesting it of virtually all areas that were not purely Magyar Rumania received Transylvania, part of the adjoining plain, and part of the Banat, including Timisoara Czechoslovakia was confirmed in possession of Slovakia and Ruthenia. Yugoslavia (then the kingdom of the Serbs, Croats, and Slovenes) obtained Croatia, Slavonia, and the western section of the Banat Austria was awarded the Burgenland, but the city of Sopron and its vicinity were returned to Hungary after a plebiscite (1921) Thus Hungary was deprived of access to the sea and of some of its most valuable natural resources The military establishment of the country was reduced to an army of 35,000 The Hungarian delegation signed the treaty under protest Hungarian agitation for revision began immediately and was supported by the majority of the more than 3,000,000 Magyars transferred to Rumania, Yugoslavia, and Czechoslovakia Although Hungary recovered part of its lost territories in 1939–40, it was again reduced to its 1920 boundaries by the peace treaty signed in 1946 at Paris.

Triassic period (trīă'sĭk), first period of the MESOZOIC ERA of geologic time. Throughout the Triassic, E North America, as a result of the mountain making of the late Paleozoic era, was elevated above sea level. California and Nevada, however, were submerged In the Lower Triassic the sea extended E to Idaho, Colorado, and Wyoming, in the Middle Triassic it submerged British Columbia, in the Upper Triassic it extended into Alaska. In Lower and Upper Triassic time the west coast, from Alaska to British Columbia, was disturbed by violent and widespread volcanic activity. The Triassic formations of W North America are chiefly marine shale and limestone, with considerable igneous rock. In the Cordilleran region the Triassic deposits are NONMARINE, with red beds similar to those of the Permian period very much in evidence Near the end of the period, the only Triassic formation of E North America was deposited in downfaulted troughs, parallel to the Appalachians, from Nova Scotia to North Carolina Composed of shale, conglomerate, and sandstone, this Newark series is the product of erosion from the Appalachians It is quite generally interrupted by trap-rock—igneous material in sheets, dikes, and sills—which forms ridges and cliffs, such as the Palisades of the Hudson near New York city The end of the Triassic in North America was marked by extensive faulting and tilting of the Newark series, called the Palisade disturbance, and by the emergence of W North America The Triassic deposits of Germany form three series In the Bunter series, the land was emergent, and red sandstone and sandy shale, with some salt and gypsum, were deposited as the result of erosion from the Central European mountains The Muschelkalk series saw the transgression of the land by the sea and the deposition of marine shale and limestone, the Keuper series saw the land again emergent and shale, sandstone, and gypsum being laid down In England there was no marine phase corresponding to the Muschelkalk, the Triassic of England is commonly called the New Red Sandstone. In the Alps the greater Mediterranean formed limestone and dolomite, the Dolomite Alps are of Triassic age. The climate of the Triassic was semiarid to arid In the plant life, marine algae were abundant, ferns and tree ferns less important than in the Paleozoic, conifers dominant among the trees, and a new group, the cycads, just appearing. Many Paleozoic invertebrates appeared for the last time in the Triassic The ammonites became very important, then were reduced at the end of the Triassic to one species, but were destined to be numerous again in the succeeding Jurassic period Amphibians were apparently not as numerous as in the Paleozoic, but some types were more highly developed The dominant animals of the Triassic were the reptiles, although the Triassic reptiles were less specialized than those of the Jurassic, there were already a number of types of dinosaurs, pterosaurs, and marine reptiles The Triassic rocks contain the fossils of the earliest known mammals

tribe, an aggregate of peoples sharing common descent, dialect, and culture, whose members, except within proscribed relationship groups, may intermarry Tribes always form a territorial unit, even nomad groups follow definite geographical orbits The term lacks precise application. Political and economic autonomy are not always tribal attributes, nor is it in some instances plain whether a single community or a cluster of communities forms the tribal group. Remnants of earlier tribal organization appear to have persisted in such complex societies as those of ancient Greece and Rome

Tribonian (Tribonianus) (trĭbō'nēăn), d 545?, Roman jurist Under the command of JUSTINIAN I he directed the compilation of the CORPUS JURIS CIVILIS. It is not possible to determine exactly what Tribonian himself contributed, in all likelihood he wrote a large part out of his encyclopedic knowledge of Roman law It is possible that Tribonian was also the author of several treatises on astronomy

tribune (trĭ'būn), in ancient Rome, one of various officers The history of the office of tribune is closely associated with the struggle of the plebs against the PATRICIANS to achieve a more equitable position in the state In the republican army, the military tribunes (*tribuni militum*) were the senior officers of the legions, elected by the people and with the rank of magistrate In 444 B C the office of military tribune with the power of consul (*tribuni militum consulari potestate*) was established The office meant that certain of the military tribunes were invested with the political power of the consul, and since a plebeian was eligible to be a military tribune, it represented a gain for the plebs. The office was abolished in 367 B C However, in 494 B C. the plebs had achieved a more permanent gain by effecting the creation of the office of tribune of the plebs (*tribuni plebis*) designed to protect plebeian rights, especially against abuse by magistrates. The original number of such tribunes is uncertain, but by 457 B C. there were 10. These tribunes were plebeians elected by an assembly of plebs. The power of the tribune increased as the plebs grew more influential in the state, and it derived from two basic prerogatives, the right of the tribune to inflict punishment upon a magistrate who disregarded his injunction and the inviolability (*sacrosanctitas*) of his person. Gradually the tribune gained the *intercessio* or the right to veto a decision of a magistrate—which in effect was a veto over any official act of administration—and the right to prosecute corrupt magistrates before a public body He further acquired the power to attend and convene the senate and to lay before it matters for consideration. As the plebeians came to occupy more and more public offices, the tribune became less the champion of a class and more the representative of the individual over the state. With the reforms of the GRACCHI in the late 2d cent B.C., the office of tribune acquired wider significance, but later SULLA, combating these reforms, tried to remove the tribuneship as a factor in Roman government. Pompey restored the tribunes to their old power. Under the empire the tribuneship was held by the emperors This gave to the emperors few powers which they did not otherwise possess, but the tradition of the office as a defender of popular rights and its inviolability was useful to them. Because the directives of a tribune had to be delivered in person and at the time when the action involved was contemplated, the tradition developed that a tribune must remain within close distance of the city and must not close the doors of his house, assuring his easy availability. See F F. Abbott, *A History and Description of Roman Political Institutions* (1911).

Tricca: see TRIKKALA, Greece.

Triceratops (trĭsĕ'rătŏps), herbivorous quadrupedal DINOSAUR of the Cretaceous period of geologic time, characterized by the possession of three horns, one on the nose and one over each eye. A bony shield projecting backward from the skull served as a protection to the neck and fore part of the body The head was large (about 8 ft. long), the body (about 20 ft long), bulky and barrel shaped, the limbs massive and of equal length Bones of *Protoceratops*, a related hornless form, and eggs probably belonging to it were found in Mongolia.

Trichinopoly (trĭchĭnŏ'pulē), town (pop 159,566), SE Madras state, India, on the Cauvery river. The most notable feature is an enormous rock, elaborately carved and topped by a temple of Siva In the 15th and 16th cent Trichinopoly was a capital of the Chola kingdom Today it is a railroad junction, and it manufactures silk cloth and tobacco products

trichinosis (trĭ"kĭnō'sĭs) or **trichiniasis** (trĭ"kĭnī'ŭsĭs), parasitic disease resulting from eating insufficiently cooked pork from pigs infected with larvae of *Trichinella spiralis*, one of the round worms They grow into adults in the intestine and produce young which migrate to various muscles, where they coil up and encyst During their migration, the patient has fever, muscle tenderness, and diarrhea, which may last from one to six weeks and in cases with severe infection may be fatal The early use of purgatives and enemas to evacuate the young as they are produced in the intestine is useful The disease is prevented by cooking pork thoroughly It has been found that the presence of trichinae in swine fed on garbage is more frequent than in grain-fed swine Prohibition of the use of uncooked garbage for feeding the animals and proper meat inspection can reduce the prevalence of the disease

trickle charger, device for use with radio A batteries of the storage type It is plugged into the electric-light socket and automatically charges the battery when the set is not working

trident (trī'dunt) [Latin,=three-tooth], in Greek legend, the three-pronged fork borne by POSEIDON It was probably a representation of a fishing spear (because he was god of the sea), a goad (because he was god of horses and bulls were sacrificed to him), and forked lightning (because he was a god of might)

Tridentum: see TRENT, Italy

Trier (trēr), Latin *Augusta Treverorum*, city (1939 pop 88,150; 1946 pop. 63,420), in the former Rhine Prov of Prussia, W Germany, after 1945 in Rhineland-Palatinate, on the Moselle and near the border of Luxembourg It is also known as Treves (trēvz) in English and as Trèves (trĕv) in French The main center of the Moselle wine region, Trier also has textile manufactures and steel rolling mills It has played an important part in history since Roman times, and it has retained more Roman monuments than any other German city. Founded by Augustus, Trier was the capital of the Roman province of Belgica and later of the prefecture of Gaul It was named for the Treveri, a people of E Gaul Under the Roman Empire, Trier reached a population of c 50,000 and was a major commercial center with a large wine trade It was a frequent residence of the Western emperors from c.295 until its capture (early 5th cent.) by the Franks An episcopal see since the 4th cent., it was made an archiepiscopal see in 815 The archbishops of Trier became powerful temporal princes, whose territories extended along both sides of the Saar and Moselle and across the Rhine They ranked second among the spiritual ELECTORS of the Holy Roman Empire and were, ex officio, archchancellors for Gaul and Burgundy (largely a titular honor). Under the rule of the archbishop-electors Trier flourished as a commercial and cultural center It was the seat of a university from 1473 until its occupation by the French in 1797 The archbishopric of Trier was secularized and was formally ceded to France in 1801 under the Treaty of Lunéville The Congress of Vienna awarded (1815) Trier and the former archbishopric to Prussia (except the territory E of the Rhine, which went to Nassau and with it passed to Prussia in 1866). Trier again became a Roman Catholic episcopal see in 1821; the population is predominantly Catholic. It was occupied by the French after the First World War and suffered considerable damage in the Second World War. The chief Roman monuments escaped war damage. These are the

Porta Nigra (an imposing and well-preserved fortified gate), the amphitheater, and the imperial baths. Among the destroyed buildings were a Romanesque chapel, several Gothic houses, and several museums; the museum collections, including many invaluable relics of Roman civilization, were all saved. The baroque electoral palace was heavily damaged, as was the Gothic Church of Our Lady (Ger. *Liebfrauenkirche*), a gem of 13th-century German architecture. The celebrated Romanesque cathedral, also heavily damaged, embodies part of a 4th-century basilica; its chief treasure is the Holy Coat of Treves, supposed to be the seamless coat of Jesus. The rare exhibitions (e.g., in 1844, 1891, and 1933) of the relic have been the occasions of huge pilgrimages. Trier has a theological seminary (founded 1773) and a school of viticulture. It is the birthplace of Karl Marx.

Trieste (trēĕst', Ital trēā'stā), Serbo-Croatian *Trst* (tûrst), city (pop 234,800), capital of the Free Territory of Trieste, beautifully situated on the Gulf of Trieste at the head of the Adriatic Sea. It is a major seaport, with a fine natural harbor, and is a commercial and industrial center (ironworks, shipyards, and oil refineries). Trieste prospered under the Romans; in the 12th cent. it developed into a free commune. After two centuries of struggle with its rival, Venice, it placed itself (1382) under the control of the duke of Austria—preserving, however, its administrative autonomy until the 18th cent. In 1719 it was made a free port. As the only Austrian port and a natural outlet of Central Europe, Trieste flourished. In spite of its ties with Austria, it preserved its Italian language and culture. A center of IRREDENTISM, it was annexed to Italy in 1919, but its economic prosperity then declined. After the Second World War, the city and the adjoining coast were set up as the Free Territory of Trieste, a free port was also established in the city. There are some Roman remains. On a hill commanding a fine view are the Cathedral of San Giusto (part of it dating from the 6th cent.) and an imposing castle (14th–17th cent.). On a small promontory west of the city is the castle of Miramar, built for Archduke Maximilian of Austria; from here he sailed for his ill-fated Mexican adventure.

Trieste, Free Territory of, free state (287 sq. mi.; pop. c. 340,000), under the protection of the Security Council of the United Nations, S central Europe, on the NE Adriatic. It includes the city of Trieste and a coastal zone of ISTRIA, running from Duino along the Gulf of Trieste to Cittanova. The area belonged to Austria from 1382 to 1919 and to Italy from 1919 to 1947. Outside the city of Trieste the population is predominantly Slovenian; on this and other grounds the area was claimed by Yugoslavia after the Second World War, but the Western powers opposed the claim, and a compromise solution was worked out to end the state of tension. By the annexes to the Italian peace treaty, the Free Territory was set up. On Jan. 7, 1947, these annexes and a provisional and permanent statute for Trieste were approved by the Security Council. The new state came officially into being on Sept. 15, 1947. Both Slovene and Italian are official languages. In the spring of 1950 the governor of the territory, to be appointed by the Security Council, had not been selected and the state was still occupied and administered by the Allied Military Command (British, American, and Yugoslav). Tension remained chronic.

trifoliate orange (trīˈfōˈlēĭt, -lēāt), small spiny tree (*Poncirus trifoliata*), native to China, having white flowers in spring followed by small, aromatic orangelike fruit. The tree is used as an understock for orange and greatly increases its hardiness. It is grown as a hedge plant and ornamental in the S United States and as far north as Philadelphia. The citrange is a hybrid between the sweet and the trifoliate oranges and is hardy enough to be grown in the southern part of the Cotton Belt. The fruit is from 2 to 3 in. in diameter.

triforium (trīfōˈrēŭm). In the interiors of medieval churches each bay of the nave wall had customarily three divisions in its height—arcade, triforium, and clerestory. The triforium thus came beneath the clerestory windows and above the side-aisle vaults and corresponded on the exterior to the lean-to roof over the aisle. In Italian basilical churches this surface was generally decorated with paintings or mosaics. In the north the triforium had arched openings with apertures in the wall behind it to ventilate the roof space over the aisle. In most Romanesque churches it appeared as a second-story vaulted gallery over the aisle and was equal to it in depth and sometimes also in height. In Gothic churches, behind the triforium arcades, the depth was generally limited to the thickness of the nave wall, a narrow passageway built in it to furnish a second-story circulation around the church. Developed French Gothic flattened the pitch of the aisle roofs, thus leaving the outside wall of the triforia exposed and free for glazing. The inside face retained its rich open tracery arcades. Late Gothic subordinated the triforium between the higher main arcades and clerestory and sometimes omitted it entirely.

Triglav (trēˈglăv), peak, 9,394 ft. high, NW Yugoslavia, in the Julian Alps, near the point where Yugoslavia, Italy, and Austria meet. It is the highest peak in the Julian Alps and in Yugoslavia.

trigonometry, literally, the science of the measurement of a TRIANGLE, i.e., the measurement of its sides and angles and, in particular, the ratios of certain pairs of sides. For all right triangles containing a given acute angle, the ratio of a certain pair of sides (e.g., the side opposite the given angle divided by the hypotenuse) is the same. Hence the value of this ratio is a function of the given acute angle only. Six such ratios may be obtained by using various pairs of sides. They are called the trigonometric functions of the given angle. The one mentioned above is called the sine. The others are the cosine, tangent, cotangent, secant, and cosecant. The values of the six functions have been tabulated for acute angles of all sizes. From these values the lengths of all the sides and the sizes of all the angles and the altitudes and area of any triangle can be computed if, in general, any three (independent) parts are known. For example, the height of a vertical cliff arising out of a plain can be found by measuring the angle between the horizontal and a line of sight to the top of the cliff (called the angle of elevation of the top) from some point in the plain at a known distance from the base of the cliff. Furthermore, if these six functions are defined properly for angles of all sizes including negative angles and angles larger than one complete revolution, the functions have certain important properties. They are periodic—after a certain interval or period of angle sizes, their values repeat the previous sequence of values for the next interval of angle sizes. Since many of the phenomena of the physical world, such as light, color, sound, electricity, and the movement of planets and electrons, are also of periodic character, the periodicity of the trigonometric functions makes them indispensable in the application of mathematics to the study of these phenomena. Another application of trigonometry is to the measurement of triangles in such fields as surveying, architecture, and navigation. In navigation spherical trigonometry (i.e., the trigonometry of triangles drawn on the surface of a sphere instead of upon a plane) is sometimes necessary when very large distances are involved. See A. M. Harding and G. W. Mullins, *Plane Trigonometry* (rev. ed., 1937), J. A. Northcott, *Plane and Spherical Trigonometry* (rev. ed., 1950), Moses Richardson, *Plane and Spherical Trigonometry* (1950).

Trikkala (trēˈkälä), anc. *Tricca*, town (pop. 22,852), N Greece, in NW Thessaly. It is the center of an agricultural and pastoral region. Although Tricca shared with other ancient cities the claim to having been the birthplace of Asclepius, it certainly was one of the chief centers of the Asclepian cult. Trikkala was heavily damaged in the Second World War.

Trilby: see DU MAURIER, GEORGE.

trill, in music, an ORNAMENT consisting of the alternation, more or less rapid, of two adjacent notes. Indicated by any of several conventional symbols, it varies in speed and duration and in the manner of its beginning and ending according to context. Originating in the Renaissance, the trill became the most important of ornaments during the baroque period. In British usage the term *shake* is more common.

trillium or **wake-robin** (trĭlˈēŭm), any plant of the genus *Trillium*, attractive spring wild flowers of North America and Asia. The leaves, petals, and sepals are in threes, the single flower (white, pink, dark red, yellow, or green) borne erect or nodding from the center of the whorl of leaves. The plants have a perennial rootstock that in *Trillium erectum* (called also birthroot) was used medicinally by both the Indian and white man.

trilobite (trīˈlōbīt), primitive arthropod having the body divided into three regions (head, thorax, and abdomen). The thorax was divided into segments, each one of which bore a pair of legs. Head and tail shields were formed of several fused segments. The trilobites were the most numerous inhabitants of the seas of the Cambrian period of geological time and were even more abundant in the Ordovician period. Types were more complex and less numerous in the Silurian period, and the process of decline, becoming marked in the Devonian period, continued through the Carboniferous period. The trilobites became extinct in the Permian period.

Trim, urban district (pop. 1,378), co. seat of Co. Meath, Ireland, on the Boyne and NW of Dublin, in a farming district. It has ruins of a castle founded in 1173 by Hugh de Lacy, the Yellow Steeple, a ruined tower supposedly on the site of an abbey founded by St. Patrick; and parts of the ancient town walls. The ruins of a priory of St. John the Baptist, of Newtown Abbey, and of Bective Abbey are in the vicinity.

Trincomalee (trĭngˈkŭmŭlēˈ), town (pop. 29,146), Ceylon, on the northeast coast, a port on the Indian Ocean. It has one of the finest natural harbors in the world. The Hindu Temple of a Thousand Columns, built by early settlers from S India, was destroyed (1622) by the Portuguese. Lying off the main world-trade routes, its harbor ordinarily is not much used, in the Second World War, however, it was the chief British naval base in the Far East after the fall of Singapore.

Trinidad (trĭˈnĭdăd, Span. trēnēdhädhˈ), city (pop. 15,453), S central Cuba. Founded in 1514 by Diego de Velásquez, it is a picturesque old town that flourished as a port in colonial days and was attacked several times by the British. Exports include sugar, coffee, cacao, lumber, honey, and wax.

Trinidad (trĭˈnĭdăd), city (pop. 13,223, alt. c. 6,000 ft.), co. seat of Las Animas co., S Colo., on the Purgatoire river near the N. Mex. line; settled 1859 on the old Santa Fe Trail near Raton Pass, inc. 1876. It is the trade, shipping, and industrial center of a farm, livestock, and coal area. There is a Kit Carson museum, and an annual rodeo is held.

Trinidad and Tobago (trĭˈnĭdăd, tōbāˈgō, tō-), crown colony (1,980 sq. mi.; pop. 557,970), British West Indies. The capital is PORT OF SPAIN. The large island of Trinidad (1,864 sq. mi.) and the small island of Tobago (116 sq. mi.) comprise the colony. Just north of the mouths of the Orinoco in Venezuela, Trinidad is largely flat or undulating except for a range of low mountains (the highest point is Mt. Aripo, 3,085 ft. high) in the north. Mangrove swamps line much of the coast. The climate is warm and humid, and rainfall (from June to Dec.) abundant, particularly where the trade winds sweep in over the eastern coast. Pitch Lake (about 212 acres), on Trinidad, is a seepage of natural asphalt, viscous toward the center but solidified around the edges. The market center for petroleum is SAN FERNANDO. Other island exports include sugar, cacao, grapefruit, rum and bitters, asphalt, lime oil, and tonka beans. In the population, Negroes predominate, but about one third of the people are East Indians, brought in after the emancipation of the slaves, and the remainder is of French, British, and Spanish descent or birth. Discovered by Columbus in 1498, the island did not attract many Spanish colonists because of the lack of precious metals. It was raided by the Dutch (1640) and the French (1677, 1690) and by British buccaneers. In 1783 Spain encouraged immigration of Haitian sugar planters, refugees from the revolution in Haiti. During the war between England and France, Trinidad was captured (1797) by the British and was formally ceded to England in 1802. In 1940 the United States acquired a 99-year lease to military and naval bases. The island of Tobago, just N of Trinidad, is a mountain ridge reaching no more than 2,000 ft. high, densely forested, and with considerable reserves of hardwoods. Exports include copra, cacao, livestock and poultry, and vegetables. Both Trinidad and Tobago are increasing in popularity as winter resorts. See M. J. Herskovits and F. S. Herskovits, *Trinidad Village* (1947).

trinitrotoluene (T.N.T., TNT) (trīˌnīˌtrōtŏlˈūēn), an explosive, pale yellow, crystalline compound of carbon, hydrogen, nitrogen, and oxygen, prepared from TOLUENE. It is a stable compound unaffected by ordinary jarring and shock and can be exploded only by the use of a detonator. It resembles picric acid in this respect and in the violence of its explosion. It is classed with picric acid as a high explosive. Unlike the acid, however, it does not attack metals and can be used consequently in filling metal shells. It is used both by itself and in explosive mixtures (e.g., amatol, a mixture of trinitrotoluene and ammonium nitrate).

Trinity (trĭˈnĭtē) [Latin, =three-foldness], in Christianity, the name of GOD, considered as existing in three persons. The doctrine was defined very early, but received much amplification at the first ecumenical councils. For systems denying the Trinity, see UNITARIANISM. The usual statement of the doctrine is that God exists in three persons, all coequal, coeternal, and indivisible, of the same substance—God the Father, God the Son (who became incarnate as JESUS), begotten of the Father, and God the HOLY GHOST, proceeding from the Father and the Son (see CREED). By most Christian teachers the Trinity is considered a mystery, i.e., its nature cannot be fully understood or known by human intelligence. It is therefore called a truth of revelation. This mystery is commemorated in the Western Church on TRINITY SUNDAY.

Trinity, city (pop. 2,217), E Texas, N of Houston, in a farming and lumbering region about the Trinity river, settled c. 1873, inc. 1903.

Trinity, river rising in N Texas in three forks: the Clear Fork runs into the West Fork at Fort Worth, and the Elm Fork joins the West Fork at Dallas. The Trinity then flows c. 500 mi. SSE to Trinity Bay, an arm of Galveston Bay. The waters of upper tributaries and the main stream are impounded in several reservoirs, notably those supplying FORT WORTH and DALLAS. Extensive projects have been planned to improve soil conservation and river control. Under construction by the U.S. Corps of Engineers in early 1949 were Benbrook Reservoir (on the Clear Fork, near Fort Worth), Lavon Reservoir (on the East Fork, near McKinney), Grapevine Reservoir (near Grapevine), and the Garza-Little Elm Reservoir (which will engulf Lake Dallas).

Trinity Bay, inlet of the Atlantic, 80 mi long, SE N.F., between the Avalon Peninsula and the mainland, WNW of St John's There are small fishing settlements and canneries on its shores Trinity, a small port on the west shore, was the western terminal of the first permanent transatlantic cable laid (1866) by Cyrus West Field

Trinity Peninsula: see PALMER PENINSULA.

Trinity Sunday, first Sunday after PENTECOST, observed as a feast of the Trinity It was an innovation in medieval England and spread through the West in the 14th cent. In the Anglican calendar the Sundays until Advent are counted from Trinity Sunday, this is a survival of the use of Sarum The older practice, as in the Roman rite, is to count from Pentecost The Dominican use counts from the octave of Trinity

Trinity University: see SAN ANTONIO, TEXAS

Trion (trī'ŏn), town (pop 3,800), extreme NW Ga., N of Rome; settled 1847, inc 1863 It has textile mills

Triple Alliance, in European history, name applied to several coalitions The Triple Alliance of **1668** was formed by the Netherlands, England, and Sweden against France after Louis XIV had invaded the Spanish Netherlands in the War of DEVOLUTION Due largely to the initiative of Jan de Witt, the Dutch statesman, the alliance represented a sufficient threat to Louis XIV to induce him to negotiate the Treaty of AIX-LA-CHAPELLE The Triple Alliance of **1717** was a treaty signed by England, France, and the Netherlands Designed to strengthen the terms of the Peace of Utrecht, it was joined in 1718 by the emperor and became the QUADRUPLE ALLIANCE For the Triple Alliance of **1873,** see THREE EMPERORS' LEAGUE For that of **1883,** see TRIPLE ALLIANCE AND TRIPLE ENTENTE

Triple Alliance, War of the, 1865–70, fought between Paraguay on one side and an alliance of Argentina, Brazil, and Uruguay on the other Brazil's military reprisals for injuries to Brazilian subjects in Uruguay's civil war brought a declaration of war from Francisco Solano LÓPEZ, Paraguayan dictator, who favored the Blanco regime in Uruguay War was also declared on Argentina after Bartolomé Mitre refused to allow Paraguayan troops to cross Argentine territory An alliance, made by Brazil and Argentina with Gen Venancio Flores of the Colorado faction, brought Uruguay into the war The heroic defense of Paraguay against powerful invaders lasted until the final stand at Cerro Corá, where even women and children rallied around López By the end of the war Paraguay was devastated and its population reduced by one half

Triple Alliance and Triple Entente, two international combinations of states that dominated the diplomatic history of Western Europe after 1882 until they came into armed conflict in the First WORLD WAR A complete survey of the causes that motivated the alliances would be a detailed study of all the policies of the major European powers, a complete history of their relations would be a survey of all the diplomatic incidents and trends in the period 1870–1914 A short summary is necessarily somewhat misleading In 1871 two new major states of Europe had been formed—the German Empire and the kingdom of Italy The new German Empire, under the hand of BISMARCK, was steered carefully always with an eye upon France, for the Franco-Prussian War (1870–71) had left France thirsting for revenge and for the regaining of the lost provinces of Alsace and Lorraine Germany had allied itself with Russia and Austria-Hungary in the THREE EMPERORS' LEAGUE, but Austria-Hungary and Russia were not the best of friends, partly because Russia represented the Pan-Slavic movement and Pan-Slavism threatened the very existence of Austria-Hungary The Treaty of SAN STEFANO (1878), following the Russo-Turkish War, furthered the cause of Pan-Slavism through the creation of a large Bulgarian state and offended Austria-Hungary as well as England A European conference (see BERLIN, CONGRESS OF), called to revise the treaty, caused a sharp decline in the friendship between Russia on the one hand and Austria-Hungary and Germany on the other, Bismarck formed (1879) a secret defensive alliance—the Dual Alliance—with Austria-Hungary In 1882 Italy, angry at France chiefly because France had forestalled an Italian advance by occupying Tunis, signed another secret treaty, which bound it with Germany and Austria-Hungary Thus was the Triple Alliance formed It was periodically renewed until 1913 Rumania joined the group in 1883, and thus a powerful Central European bloc was created Italy was from the first not so solidly bound to either of its allies as Germany and Austria-Hungary were to each other Instead, Italy was in fact a rival of Austria-Hungary in the Balkans and particularly for control of the Adriatic, and moreover there remained unsettled territorial problems (see IRREDENTISM). The Triple Alliance, however, turned diplomatic history into new channels The Three Emperors' League died a slow death; in 1890 Germany refused to renew its reinsurance treaty with Russia, and Russia as a consequence sought a rapprochement with France. At the same time France, face to face with a hostile Central European combination, felt great need of an ally, and French diplomats began to make overtures to Russia for an agreement to counterbalance the Triple Alliance French capital aided Russian projects, especially the Trans-Siberian RR, friendly diplomatic visits were exchanged In 1891 there was a definite understanding between the powers, this was strengthened by a military convention in 1893, and by 1894 the Dual Alliance between Russia and France was in existence, it was publicly acknowledged as existing in 1895 Meanwhile, the fall of Bismarck, after the accession of WILLIAM II to the throne of the German Empire, was followed by the appearance of new and vigorous foreign policies Germany committed itself to colonial and commercial expansion The German plan for a BAGHDAD RAILWAY was viewed with alarm by the powers having interests in the Near East. The German commercial rivalry with Great Britain not only brought direct trouble but nourished German desire for sea power and a large navy Great Britain, long in "splendid isolation" from the other European nations, was being propelled by its interests to make some move toward protective international alliance There had been some measures with the object of Franco-German rapprochement, but these ultimately had no effect In 1898 Théophile DELCASSÉ took control of French foreign policy, he was opposed to Germany and hoped for a rapprochement with Great Britain, his object being the isolation of Germany Friendship between England and France did not seem possible because of their traditional enmity and, more important, their colonial quarrels in Africa, especially as to Egypt, the Sudan, and Indo-China Friendship between Great Britain and Germany was also traditional, and the two countries were bound by dynastic and cultural ties There had been and continued to be active expressions of Anglo-German amity, but Delcassé's diplomacy, aided by the accession of Francophile Edward VII to the British throne (1901), ultimately bore fruit Although Great Britain and France had been on the very verge of war over the FASHODA incident in 1898, the matter was settled and the way was opened for further agreements between the two powers Though there was no alliance, the Entente Cordiale — a friendly understanding—was arrived at Colonial rivalries of Russia and England had in the late 19th cent made those powers hostile, the field of contest was Asia—Turkish affairs, Persia, Afghanistan, China, and England But after the abasement of Russia by the Russo-Japanese War, and particularly after Sir Edward Grey gained influence in the British foreign office, there was a tendency toward friendly settlement in England This advanced, and in 1907 an understanding was reached between Russia and Great Britain This agreement created the international group opposing the Triple Alliance, France, Great Britain, and Russia had finally completed the Triple Entente Conflict between the two combinations had already begun The two principal problems that caused outright struggles involved MOROCCO and the Balkans The militarism of the chief countries of Europe was prompted by a growing sense of international hysteria, which was, in turn, increased by military preparations The stage was being set for a war between the two alliances The crisis in Morocco almost precipitated the war More serious still were the Balkan crises brought about by the annexation of BOSNIA AND HERCEGOVINA by Austria-Hungary in 1908, the Italo-Turkish War (1911–12), and the BALKAN WARS (1913–14) The trouble between Austria and Serbia reached a peak after the assassination of Archduke Francis Ferdinand (1914) The First World War resulted Italy's interests had long been more or less divorced from the Triple Alliance, as early as 1902 a Franco-Italian accord on North Africa had been reached in a secret treaty With the outbreak of the war, both Italy and Rumania refused to join the Central Powers After much secret negotiation, Italy in 1915 formally renounced the Triple Alliance and joined the Allies, the next year Rumania did likewise Germany and Austria-Hungary gained new support in Turkey and Bulgaria, the war ushered in a new diplomatic period, with new diplomatic alignments See G P Gooch, *History of Modern Europe, 1878-1919* (1923), Charles Seymour, *The Diplomatic Background of the World War* (1918), S B Fay, *The Origins of the World War* (rev ed., 1930); B E. Schmitt, *The Coming of the World War* (1930).

tripod (trī'pŏd) [Gr., =three-foot], three-legged stool, stand, table, or vessel, one of the early standard pieces of furniture Tripods were especially widely used in ancient Greece, in the home and as altars At Delphi was a famous tripod altar at which the Pythian priestess sat to deliver an oracle It was imitated throughout Greece, and small models were awarded the winners in the Pythian games. Later the tripod, like the modern cup, became a standard prize. In the Hippodrome at Constantinople is the base of a noted tripod made from one tenth of the spoils from the battle of Plataea It originally supported a huge golden bowl held by three serpents

Tripoli (trĭ'pŭlē), anc *Tripolis,* Arabic *Tarabulus,* city (pop 59,001, including suburbs 86,371), N Lebanon, a port on the Mediterranean Sea NNE of Beyrouth It was probably founded after 700 B.C., as there is no mention of it until Persian times, when it was the capital of the Phoenician federation of Tyre, Sidon, and Aradus and was divided into three sections The city flourished under the Seleucid and Roman empires and in A D. 638 was captured by the Arabs After a long siege it was taken (1109) by the Crusaders, and in the siege its great library was destroyed It was sacked by the sultan of Egypt in 1289 and was later rebuilt The old part of the city, around the harbor, contains the remains of fortified towers and walls. Tripoli is connected by rail with Beyrouth and with Homs in Syria and exports silk, soap, oil, lemons, oranges, and wool It is the terminus of an oil pipe line from Iraq and has an oil refinery.

Tripoli (trĭ'pŭlē), anc *Oea,* city (pop. 125,541), Libya, a port on the Mediterranean Sea, in Tripolitania It is a tourist, commercial, and manufacturing center There are tobacco and carpet industries, food processing, and sponge and tuna fishing On the edge of a large oasis, Tripoli was the site of a Tyrian colony (7th cent.? B.C.) It was occupied by Rome, the Vandals, Arabs, and Turkey (1551–1911), and in 1911 it passed to Italy and was made the capital of Libya. It was a base of the Barbary corsairs, whom the United States fought in the TRIPOLITAN WAR An important Axis base in the Second World War, Tripoli fell to the British in 1943 Parts of the Roman walls and an arch of Marcus Aurelius remain

Tripoli (trĭpō'lē), town (pop 1,001), NE Iowa, N of Waterloo, settled 1850, inc 1894

tripoli, siliceous material used as an abrasive, as a filler, and as a facing for foundry molds It is found in Arkansas, Illinois, Missouri, Oklahoma, and Pennsylvania

Tripolis (trĭ'pulis), town (pop 14,961), S Greece, in the Peloponnesus, SE of Patras It is a road and rail center, an agricultural center, and a summer resort, and it produces textiles, leather, and cheese Founded c 1467 near the site of the ancient cities of Mantinea, Pallantium, and Tegea, it was the seat of the Turkish pashas of Morea It was devastated (1825) in the Greek War of Independence A former spelling is Tripolitza

Tripolis, Lebanon see TRIPOLI

Tripolitania (trĭ'pŏlĭtā'nēŭ), region, W Libya, along the Mediterranean coast The chief city is Tripoli The coastal strip (c 500 mi. long), with many fertile oases, is backed by a sandy plain which rises to a hilly plateau, the Jebel Nefusa. Beyond the Jebel Nefusa is the Sahara The coast was colonized by the Phoenicians in the 7th cent B.C. and subsequently passed under the control of Carthage, of Rome, of the Vandals, of the Byzantines, of the Arabs (7th cent.), of the Normans, and of the Knights Hospitalers It fell to Turkey in 1553 and was long a stronghold of Barbary pirates Tripolitania was acquired from Turkey by Italy in 1912 It was captured by the British in 1943

Tripolitan War, (trĭpŏ'lĭtŭm) In the BARBARY STATES piracy had become a normal source of income long before the United States came into existence, and the system adopted by European nations of buying immunity from raids by tribute and gifts was accepted by the new republic Thomas Jefferson had objected to it when he was in George Washington's cabinet, and after he became President events led to trouble. In 1800 William Bainbridge, the officer who took the tribute to the dey of Algiers, was compelled to go under the Turkish flag to Constantinople; this humiliation rankled When the ruler of Tripoli in 1800 demanded more tribute than had been agreed upon in a treaty of 1799 the United States refused to agree, and a state of hostility resulted in 1801 Commodore Richard Dale, sent to hold the pirates in check, was not successful, and the whole American attitude was one of reluctant force Richard Valentine Morris, sent out to reach an agreement and at the same time to threaten, accomplished nothing. The port of Tripoli continued under blockade, and Tunis was more or less drawn into the struggle through troubles with William Eaton, the U.S. consul there Eaton and Morris quarreled, and a raid on Tripoli failed The blockade was lifted, and the U.S. government decided to buy peace by paying tribute to Tripoli and Tunis, but Morris was recalled and Edward Preble was sent out with a squadron to the Mediterranean. One of the ships was the frigate *Philadelphia,* under command of the unlucky William Bainbridge She was sent to resume the blockade, but was driven aground by storm in the outer harbor. She was captured, and Bainbridge and all his men were taken and held This prepared the way for the most daring exploit of the war. Stephen Decatur and a small group of men in Feb., 1804, went into the harbor, set fire to the *Philadelphia,* and destroyed her Some attacks were made by Preble on Tripoli, but the city,

though bombarded, was not taken. Preble was in Sept., 1804, succeeded by Samuel Barron, who continued the blockade of Tripoli Meanwhile William Eaton had persuaded the U.S government to back his scheme of supporting a rival claimant for the rule of Tripoli by a land expedition. As "navy agent," he gathered a force in Egypt and after a spectacular march took the port of Derna. Before he could undertake any more important action, the war was ended. John Rodgers, sent out with a good-sized force in May, 1805, negotiated a settlement in June. The U S prisoners were ransomed, and Tripoli agreed to ask no more tribute and to molest American ships no more Though the most favorable agreement yet made with a Barbary power, the treaty was not a diplomatic triumph. The war had, however, served to train many young men, such as Decatur and Thomas Macdonough, for excellent later service in the War of 1812 During the later Napoleonic Wars and the War of 1812 the Barbary pirates increased their raids on commerce. Algiers actually declared war on the United States In 1815 Stephen Decatur was sent out with a squadron, having the famous *Guerrière* as its flagship Almost without a blow he forced the dey of Algiers to sign a treaty renouncing U S tribute, and the so-called Algerine War was ended. The United States no longer paid tribute to Algiers, Tunis, or Tripoli, but the depredations of the Barbary corsairs were by no means over. Nor did the larger and successful British and Dutch force under Edward Pellew, Lord Exmouth, in 1816 do away with the piracy, which continued until the French conquered Algeria

Triptolemus (trĭptŏ'lĭmus), in Greek religion, one of the principal figures of the ELEUSINIAN MYSTERIES Associated, therefore, with DEMETER, his symbol was an ear of wheat He was said to be the inventor of the plow and of agriculture, hence the father of civilization

trireme (trī'rēm) [Latin, =three-oared], ancient warship, a GALLEY, propelled by oars but also having sails It is conventionally said that the oarsmen were arranged in three banks, but there is much question on the subject; the oarsmen may have sat three on a bench The light vessels, some 125 ft long, were easily maneuverable and were after the 6th cent B C used in warfare by Greeks, Egyptians, Carthaginians, and Romans The trireme was steered with large paddles over the stern and fought principally by ramming, until the Romans introduced the *corvus*, or crow, a combination grappling hook and gangway used for boarding enemy vessels Heavier vessels (notably the quinquireme) were used, but were not so manageable in battle

Trissino, Gian Giorgio (jän' jôr'jō trēs-sē'nō), 1478–1550, Italian diplomat and poet He was papal nuncio under Leo X and Clement VII His best-known works are *Sofonisba* (1515), a drama written according to the classical rules in which he imitates Euripides, and an epic poem, *Italia liberata dai Goti* (1547–48)

Trist, Nicholas Philip, 1800–1874, American diplomat, b Charlottesville, Va He attended West Point, studied law under Thomas Jefferson, married Jefferson's granddaughter, and was private secretary to Andrew Jackson He served as consul (1834 36) in Havana and was chief clerk of the Dept of State when he was sent (1847) to Mexico as a special agent to conduct negotiations to end the MEXICAN WAR Touchy Gen Winfield Scott and lofty Trist at first quarreled but later became friendly A short armistice was reached after the battles of CONTRERAS and Churubusco (Aug, 1847), but the Mexican commander, Santa Anna, violated this, and war was resumed President James K Polk, thinking that Trist had been duped, had him recalled Trist had reopened negotiations before his recall arrived and, fearing the collapse of Mexico into chaos, decided to ignore the recall He succeeded in negotiating the Treaty of GUADALUPE HIDALGO Polk supported the treaty but plunged Trist into disgrace Trist did not recover his unpaid salary and expenses until 1871 In his last years he was postmaster of Alexandria, Va

Tristan. see TRISTRAM AND ISOLDE

Tristan da Cunha (trĭs'tän dä kōōn'yù), isolated volcanic group (1945 pop 230), in the S Atlantic, about midway between South Africa and South America The only habitable island of the group is Tristan da Cunha, an extinct volcano rising to c 8,000 ft The inhabitants subsist by potato growing, stock raising, and fishing An important meteorological and radio station is here The other islands of the group are Gough, Nightingale, and Inaccessible, the last being the home of the flightless rail, an almost extinct bird The group was discovered by the Portuguese in 1506 and was visited by whalers, seal hunters, and explorers. In 1816 it was annexed by Great Britain and in 1938 became a dependency of St Helena. See Jan Brander, *Tristan da Cunha* (1940)

Tristan l'Hermite, Louis (lwē' trēstäⁿ' lĕrmēt'), d c 1477, French soldier, provost of the marshals of France under Charles VII and Louis XI His position gave him charge of the execution of many rebels against the royal authority.

Tristram and Isolde (trĭs'trŭm, ĭsōl'dù, ĭsōl'dù), medieval romance that has had a distinguished history. The names of the two chief characters appear in various forms, such as Tristran, Tristrem or Tristan and Isolt, Yseult, or Iseult The earliest extant version (incomplete) in Anglo-Norman French verse was written (c.1185) by Thomas of Britain The treatment in English is a mediocre poem, *Sir Tristram*, of the late 13th cent About 1210 Gottfried von Strassburg wrote in German verse a magnificent version based on that of Thomas The legend, originally independent of the ARTHURIAN LEGEND, became incorporated with it In the 15th cent Sir Thomas Malory included Tristram and Isolde in his *Morte d'Arthur* The scenes of the action are Celtic, chiefly Ireland, Cornwall, and Brittany The story is mainly Irish in origin with details from other sources Sir Tristram is sent to Ireland to bring Isolde to Cornwall to be the bride of King Mark A potion that Tristram and Isolde take unknowingly makes their love irresistible After many trysts and separations, each dies of love for the other Isolde is called Isolde the Fair Tristram's wife, another Isolde, is called Isolde of the White Hand She is of Brittany Modern versions are Matthew Arnold, *Tristram and Iseult*, A C Swinburne, *Tristram of Lyonesse;* Alfred Tennyson, *The Last Tournament*, and E A Robinson, *Tristram* Wagner's opera *Tristan und Isolde* is based on the version of Gottfried von Strassburg For translation of the version by Thomas of Britain, see R S Loomis, *The Romance of Tristram and Ysolt* (rev ed , 1931), for version by Gottfried von Strassburg, see J L Weston, *The Story of Tristan and Iseult* (1899)

Triton (trī'tun), in Greek myth, son of POSEIDON He was a sea being like a merman, the upper half of his body being human, the lower fishlike Later Greek literature speaks of many Tritons, sometimes described as riding over the sea on horses Tritons characteristically blew trumpets of conch shells

triumphal arch, monumental structure embodying one or more arched passages, frequently built to span a road and designed to honor a king or general or to commemorate a military triumph This form of monument was probably invented by the Romans, who built them throughout the empire Examples exist in Italy, France, Spain, Asia Minor, and North Africa, dating from the empire The typical Roman triumphal arch had a single arched opening in the earliest examples, as in the Arch of Titus, Rome (A.D 81), after the 2d cent a large arch flanked by two smaller ones became common The piers were faced with columns and enriched with sculptures or bas-reliefs relating to the events commemorated, while above the entablature was an attic story for dedicatory inscriptions supporting a quadriga, a sculptured four-horse chariot group Among the Roman arches remaining are that of Trajan, at Benevento, Italy (114), relating the story of the emperor's life, and those of Septimius Severus (203) and of Constantine (c 315), at Rome, honoring the military victories of the two emperors In modern times, after the revival of triumphal arches of the Roman type, the most noted examples have been memorials or civic adornments rather than triumphal monuments in the Roman sense Among them are the Porte Saint-Denis and the Porte Saint-Martin, in Paris, both built by Louis XIV to commemorate the military triumphs of his reign, the Brandenburg Gate in Berlin, the Victory Gate in Munich, the Marble Arch in London, and the Washington Arch in New York The term "triumphal arch" designates also in early Christian basilican churches the great arch separating the sanctuary from the body of the church, richly ornamented with mosaics

Triumvirate (trīŭm'vĭrĭt, -vīrāt" [Latin, =groups of three men], in ancient Rome, a board or commission of three men Triumvirates were common in the Roman republic, e g , the *tresviri coloniae deducendae*, a committee for the establishment of a colony, and the *tresviri reficiendis aedibus*, a standing committee on temples The **First Triumvirate** is the familiar but misleading name given the alliance of Julius CAESAR, POMPEY, and CRASSUS formed in 60 B C This was not strictly a triumvirate, since the alliance had no official sanction The three men were able to control Rome, and the alliance aided Caesar's rise to power by giving him the opportunity to pursue the GALLIC WARS The **Second Triumvirate** was legally established as the *tresviri reipublicae constituendae* [triumvirate for reestablishing the public welfare] in 43 B C for five years, it was renewed in 37 B C The members of this triumvirate were Octavian (AUGUSTUS), Marc ANTONY, and LEPIDUS This group was granted enormous power by the senate Lepidus was deposed in 36 B.C , and Antony was defeated at Actium in 31 B C , leaving Octavian at the head of the Roman Empire See F F Abbott, *A History and Description of Roman Political Institutions* (1911),

Trivandrum (trĭvăn'drŭm), city (pop 128,365), capital of Travancore-Cochin state, India The fort contains several palaces and an old temple of Vishnu. The cultural institutions of Trivandrum include two museums of art and a university

trivium: see LIBERAL ARTS

Trivulzio, Gian Giacomo (jän' jä'kōmō trēvōōl'tsēō), or **Jean Jacques Trivulce** (zhäⁿ' zhäk' trēvülś'), 1441?–1518, marshal of France The most illustrious member of an old Milanese family, Trivulzio left the service of his country after the accession (1480) of Lodovico Sforza, who eventually outlawed him Serving Alfonso II, king of Naples, against CHARLES VIII in 1494, Trivulzio suddenly went over to the French. In 1499 he headed the French forces that took Milan, and he was made marshal of France by Louis XII In the subsequent campaigns of the ITALIAN WARS he participated in the victory of Agnadello, was French commander in chief in 1511, and shared responsibility for the rout at Novara (1513) and the victory of Marignano (1515) The jealousy of his colleague, Lautrec, caused Trivulzio's disgrace with Francis I, and the aged marshal died in resentful retirement.

Trnava (tûr'nävä), Ger *Tyrnau* (tür'nou), Hung *Nagyszombat* (nŏj'sōm"bŏt), town (pop 24,226), SW Slovakia, Czechoslovakia, NE of Bratislava It is the center of a fertile agricultural region and is a Roman Catholic episcopal see Founded in the 6th or 7th cent , it was in the Middle Ages a center of Slovak Catholicism, and it is called the Slovak Rome because of its many churches and monasteries Among these the fine Gothic cathedral is outstanding

Trnovo or **Tirnovo** (both tûr'nōvō), town (pop 16,182), N central Bulgaria Here the second Bulgarian empire came into existence when Ivan I was proclaimed tsar in 1186 Trnovo reached its height as the capital of old Bulgaria under Ivan II, who built (1230) the Church of the Forty Martyrs It fell to the Turks in 1393 The full independence of Bulgaria was proclaimed here in 1908

Troas (trō'ăs) or **the Troad** (trō'ăd), region about ancient TROY on the northwest coast of Asia Minor It was traversed by Mt Ida and its branches and watered by the Scamander and Simois rivers Scene of the events of the *Iliad* and an ancient center of Aegean civilization, the Troad has yielded to modern archaeologists a wealth of antiquities For the Troas of the Bible, see ALEXANDRIA TROAS.

Trobriand Islands (trō"brēänd", trō"brēänd'), small volcanic group, off SE New Guinea, part of the Territory of Papua Kiriwina, the largest island, is c 30 mi long The group produces yams, pearl shell, and trepang In the Second World War the islands were occupied in 1943 by Allied forces and used as a base for attacking Japanese-held New Britain

Trochu, Louis Jules (lwē' zhül' trōshü'), 1815–96, French general He fought in Algeria, in the Crimean War, and in the Italian War of 1859 In his *L'Armée française en 1867* he rightly criticized the French army He was military governor of Paris when the Franco-Prussian War broke out (1870) Although he had pledged his life to defend the Napoleonic dynasty, he did nothing to prevent the overthrow, at Paris, of the Second Empire after the French rout at Sedan (Sept , 1870), and he accepted the presidency of the government of national defense Trochu's conduct of the war was severely criticized, although there was little he could have done to save the desperate situation He resigned after the capitulation of Paris in Jan , 1871 Trochu wrote several books to exculpate himself

Troelstra, Pieter Jelles (pē'tur yĕ'lĕs trōōl'strä), 1860–1930, Dutch Socialist In 1893 he founded what later became the *Sociaaldemocrata*, official Socialist paper, and in 1900 he assumed editorship of his party's daily, the *Volk* Opposing the ultra-radical wing of the Socialists, Troelstra organized the Dutch Social Democratic Labor party in 1894 As a member of parliament (1897–1900) he was responsible for some social legislation He wrote several books in Dutch, including his memoirs, *Gedenkschriften* (1927)

Trogir (trō'gĭr), Ger *Trau* (trou), small port, Croatia, Yugoslavia, on an Adriatic island 8 mi W of Split Long contested between Hungary and Venice in the Middle Ages, it eventually was kept by Venice until 1797 Now a seaside resort, the town is of great architectural interest, having kept a splendid 13th-century cathedral, two 15th-century castles, and several medieval and Renaissance palaces

troglodyte: see CAVE DWELLER

Trogus (Cnaeus Pompeius Trogus) (trō'gus; nē'ùs pŏmpē'ùs), fl A D 5, Roman historian of Gallic origin His history of the world, which survives only in excerpts by JUSTIN, treated of the Orient, Greece, Macedon and the other Hellenistic kingdoms, Rome, Gaul, and Spain. His sources were different from those used by other Roman historians

Trogyllium (trōjĭl'ĭum), promontory, W Asia Minor, jutting out into the Aegean Sea just S of Samos St Paul stopped here Acts 20 15

Troilus and Cressida (trō'ĭlus, troi'lus, krĕ'sĭdù), medieval romance distantly related to characters in Greek legend Troilus, a Trojan prince (son of Priam and Hecuba), fell in love with Cressida (Chryseis), daughter of Calchas She was faithless to him with Diomed, and Troilus was killed by Achilles This story appeared first in Benoît de

Sainte-More, from whom Boccaccio drew for his *Filostrato* In this tradition Chaucer and Shakspere followed. See R. K. Gordon, tr. and ed., *The Story of Troilus* (1934)

Trois Pistoles (trōōä" pēstôl'), town (pop. 2,176), E Que., on the St. Lawrence and NE of Rivière du Loup. It is a market center for a dairy and lumber region and has pulp mills

Trois Rivières (trōōä" rēvyĕr') or **Three Rivers,** city (pop. 42,007), S Que., on the St. Lawrence at the mouth of the St. Maurice river and between Montreal and Quebec. It is an industrial center with pulp, paper, cotton, and lumber mills, foundries, grain elevators, and woodworking. Power for its industries is supplied by the hydroelectric station at Shawinigan Falls. It has a Roman Catholic cathedral and bishop's palace. The city was founded (1634) by Champlain and took its name from the three channels through which the St. Maurice enters the St. Lawrence. It became a major French trading post and fortified port and the starting point of many explorers and missionaries. In 1737 the first iron forges in Quebec were built here

Troitskosavsk, RSFSR: see KYAKHTA.

Troitsko-Sergiyevskaya Lavra, RSFSR: see ZAGORSK

Trojan War (trō'jŭn), in Greek mythology, war between the Greeks and the people of Troy. It serves as the setting for the *Iliad* and the background of the *Odyssey*. The strife began when PARIS (son of PRIAM), after the affair of the APPLE OF DISCORD, eloped with Helen, wife of Menelaus. The Greeks, led by AGAMEMNON, who had sacrificed his daughter IPHIGENIA, set sail for Troy. They besieged Troy for 10 years. The Trojan army was much less powerful, but Troy was well fortified, and the Greeks won at last by deceit. They pretended to abandon their camp, but left a large wooden horse, in which warriors were hidden. The Trojans heedless of the prophecies of CASSANDRA and the warning of the priest LAOCOON, carried the horse into the city as an offering to Athena. The warriors secretly left the horse, opened the city gates, and admitted the Greek army. Troy was sacked. Among the Greek heroes who participated in the war were ACHILLES, PATROCLUS, DIOMED, ODYSSEUS, NESTOR, two warriors named AJAX, and PROTESILAUS, husband of LAODAMIA. CALCHAS, a priest, aided the Greeks. The Trojan army was led by Hector, aided by PARIS, AENEAS, SARPEDON, Deiphobus, Troilus, GLAUCUS, MEMNON, and PENTHESILEA, Amazon queen. The gods took a great interest in the war. Poseidon, Hera, and Athena helped the Greeks, while Aphrodite and Ares favored the Trojans. Zeus and Apollo remained impartial. The Trojan War in reality was probably a war (c 1200 B.C.) between the invading Greeks and the people of the Troad, over control of trade through the Dardanelles

troll (trōl), in Scandinavian folklore, a dwarfish or gigantic inhabitant of caves in the mountains. They are sometimes friendly to human beings. In Ibsen's *Peer Gynt* and Grieg's *Peer Gynt Suite*, the mountain king is a troll

Trollhattan, Swed. *Trollhättan* (trōl'hĕ"tän), city (pop. 22,108), Alvsborg co., SW Sweden, on the Göta river and near Vänern lake. The river at this point falls 108 ft. in six falls and rapids, and the water power is utilized by the largest hydroelectric plant in Sweden (state owned), which supplies power and light to the surrounding cities and factories

Trollope, Anthony (trŏ'lŭp), 1815–82, English novelist, b. London, son of Frances Trollope. Trollope was an unpopular schoolboy at Harrow and Winchester and an unhappy clerk at the general post office; it was not until he became post-office inspector in Ireland that he showed his ability. In Ireland, too, he learned to like country life and especially fox hunting. He married in 1844 and about the same time began writing novels. His stories of Irish life, *The Macdermots of Ballycloran* (1847) and *The Kellys and the O'Kellys* (1848), were failures, as was his historical novel *La Vendée* (1850). In his travels over S England as an inspector of rural mail deliveries, he acquired the background for the imaginary county of Barset, in which some of his most successful novels are laid. The *Barsetshire Chronicles* are *The Warden* (1855), *Barchester Towers* (1857), *Doctor Thorne* (1858), *Framley Parsonage* (1861), *The Small House at Allington* (1864), and *The Last Chronicle of Barset* (1867). The clerical life of the cathedral town of Barchester (probably Winchester) and the characters who recur in these novels have seemed so real that at least two later novelists have written about them. A later group of stories are those which share a common reference to parliamentary background—*Can You Forgive Her?* (1864), *Phineas Finn: the Irish Member* (1869), *The Eustace Diamonds* (1873), *Phineas Redux* (1874), *The Prime Minister* (1876), and *The Duke's Children* (1880). Others of his popular novels are *Orley Farm* (1862), *The Belton Estate* (1866), *The Claverings* (1867), *He Knew He Was Right* (1869), *The Vicar of Bullhampton* (1870), *Sir Harry Hotspur of Humblethwaite* (1871), *The American Senator* (1877), and *Is He Popenjoy?* (1878); *John Caldigate* (1879) and *Mr. Scarborough's Family* (1883); a satire, *The Way We Live Now* (1875); and a short book, *Dr. Wortle's School* (1881). His extensive journeys in the service of the post office resulted in several travel books, and after a visit on his own account to the United States he wrote *North America* (1862). Trollope retired from the post office in 1867 and for a time edited *St. Paul's Magazine*. His autobiography, published posthumously in 1883 (ed. by Michael Sadleir, 1923), pictured him as a man who worked at literature as a trade and whose relentless schedule called for so many pages a day. His output was tremendous, more than 60 novels as well as many travel books and biographies resulted from his careful apportionment of his time. In the recent revival of interest in Trollope, he is hailed for his peculiar genius in building up character by the use of commonplace scenes. His people have a comforting normality in their ordinary and often humorous activities. See study by Michael Sadleir (1927, rev. ed., 1947), L. P. Stebbins and R. P. Stebbins, *The Trollopes* (1945)

Trollope, Frances, 1780–1863, English novelist, whose maiden name was Milton. She married (1809) a lawyer, Thomas Anthony Trollope, and was the mother of six children, including Anthony and Thomas Adolphus Trollope. To recoup the family fortunes, she went (1827) with three of her children to the United States. A "bazaar" in Cincinnati was a disastrous failure, and in 1831 she returned to England with the manuscript of *The Domestic Manners of the Americans* (pub. 1832). The book was very offensive to Americans but sold well in England and was the beginning of her career as a successful writer. She continued to write travel books and began a steady stream of novels, of which the best are *The Vicar of Wrexhill* (1837) and *The Widow Barnaby* (1839) and its sequels. See biography by F. E. Trollope (1895), L. P. Stebbins and R. P. Stebbins, *The Trollopes* (1945).

Trollope, Thomas Adolphus, 1810–92, English author, studied at Oxford; son of Frances Trollope and brother of Anthony Trollope. His home in Florence, Italy, after 1843 was a gathering place for literary people. His literary output was tremendous, it included novels and, among several historical works, *History of the Commonwealth of Florence to 1531* (4 vols., 1865). See his reminiscences, *What I Remember* (3 vols., 1887–89), L. C. Stebbins and R. P. Stebbins, *The Trollopes* (1945)

trombone [Ital., =large trumpet], brass wind musical instrument of cylindrical bore, twice bent on itself, having a sliding section which lengthens or shortens it, thus regulating the pitch. It was developed in the 15th cent. from the trumpet; representations of the instrument soon afterward show it in almost its present form. In the 16th cent. it became popular for ceremonial use and was used in church music. In the 18th cent. its use was extended to opera, and Beethoven introduced trombones in his Fifth Symphony (1805–7). With the development of orchestration by Wagner and Berlioz the trombone became an important orchestral instrument, valued for its wide range, both of pitch and dynamics, three or four trombones are used with a bass trombone, which is slightly larger and pitched a fourth lower. It is also commonly used in the modern dance band

Tromp, Cornelis (kôrnā'lĭs trômp'), 1629–91, Dutch admiral in the second and third of the Dutch Wars, son of Maarten Tromp. In 1665 he was made commander of the Dutch fleet, but he was replaced by M. A. de RUYTER in the same year. In June, 1666, he commanded the rear squadron of the fleet in the Four Days battle with Monck, but in Aug., 1666, he lost his command because of De Ruyter's complaints. Tromp was reinstated in 1672, in operations against Sweden he was successful at Gotland and Rügen (1676), and he received the title of lieutenant admiral general

Tromp, Maarten Harpertszoon (mär'tun här'purtsōn), 1597–1653, Dutch admiral. A sailor from childhood, he joined the navy and rose to the rank of lieutenant admiral in 1637. In 1639, by remarkable tactics, he was able to blockade and crush a Spanish fleet in the lee of the Downs, this defeat marked the passing of Spanish sea power. In the first of the DUTCH WARS, he won control of the Channel by his victory (1652) over the English off Dungeness, but he was later forced to withdraw because of superior forces. The inferiority of his fleet caused the loss (June, 1653) of 20 ships near the Gobbard. Effecting a union with De Witt's squadron, Tromp took part in the attack on the English off Scheveningen, this action broke the blockade of the Dutch coast and was the last major conflict of the war. Tromp was killed in the battle. See his *Journal Anno 1639* (Eng. tr. by C. R. Boxer, 1930).

Troms (trōms, trŏ̄ms), county (10,071 sq. mi., pop. 113,722), N Norway, in Lapland. Tromsø is the county seat. Troms co. includes the Vesteralen Islands (see LOFOTEN AND VESTERALEN) and other large islands in the Norwegian Sea. Half of the population lives by fishing; stock raising also is an important source of livelihood. There are copper and iron deposits.

Tromsø (trōm'sö), Nor. *Tromsø* (trōmsœ'û", trŏ̄msœ'û"), city (pop. 10,990), co. seat of Troms co., N Norway. A port on the Norwegian Sea, it was founded c.1870 as a center for herring fishing. It is the chief city of arctic Norway, exporting fish, fish products, and furs. There is a Lapp encampment near by.

Trondheim (trŏn'hām), city (pop. 57,128), capital of Sor-Trondelag co., central Norway, a fortified seaport on Trondheim Fjord. It is also known by its original name, Nidaros, and by the variant spellings Drontheim, Trondhjem, and Throndjem. One of the largest cities of Norway, Trondheim is the commercial center of a fertile agricultural region. It has a hydroelectric power plant and shipyards, and it exports fish, lumber, copper ore, and wood pulp. It is a Lutheran episcopal see and the seat of a polytechnical school. Founded in 997 by Olaf I, first Christian king of Norway, Nidaros was the political and religious capital of medieval Norway. In 1152 Nicholas Breakspear (later Pope Adrian IV), in his reorganization of the Scandinavian hierarchy, made Nidaros an archiepiscopal see. Medieval Nidaros also was an important trade center until the Hanseatic period, when its trade was largely diverted to Bergen. Olaf Engelbrektsson, archbishop of Bergen, strongly resisted the attempt of King Christian III to force the Reformation on Norway and defended the rights of Norway as a separate kingdom. In 1537, however, he was obliged to flee, and in the same year the Reformation was introduced and the Norwegian bishoprics were abolished. Nidaros, renamed Trondheim, declined considerably after this blow to its spiritual supremacy. The treasures of its churches and monasteries were seized by the crown. Its historical role was reaffirmed when, in 1906, Haakon VII was crowned first king of modern independent Norway in the Trondheim cathedral. In the Second World War, Trondheim was seized by the Germans on the first day (April 3, 1940) of their invasion of Norway. It was used as a major German naval base and as a result was severely bombed. The city had suffered much damage in many great fires in previous centuries, and it has retained few old buildings. Its celebrated cathedral, originally a church erected over the tomb of Olaf II (St. Olaf) in the 11th cent., was rebuilt as a Gothic cathedral in the 12th and 13th cent., but it was ravaged by repeated fires and was reduced to an empty, roofless ruin by 1869, when its restoration was begun. The reconstructed edifice, built of native blue soapstone and white marble, is considered by many the finest Gothic cathedral in Scandinavia

Trondheim Fjord (trŏn'hām"), inlet of the Norwegian Sea, on the west coast of Norway. Extending c.81 mi. inland, it is considered a natural boundary between N and S Norway. Trondheim is on a peninsula in the fjord. The valleys draining into the fjord comprise one of the most fertile agricultural regions of Norway

Trophimus (trŏ'fĭmus), Ephesian companion of Paul. Acts 20:4, 21:29, 2 Tim. 4:20

Trophonius (trŭfō'nēŭs), in Greek legend, famous architect. He and his brother Agamedes (ăgămē'dēz) built the temple of Apollo at Delphi. After the death of Trophonius, a famous oracle, in a cave, was sacred to him

tropical medicine, branch of medicine concerned with the study, diagnosis, treatment, and prevention of diseases that occur most frequently in warmer climates. The causative organisms of several diseases breed best in the warmth, humidity, and primitive conditions of life of the tropics. Great advances have been made in the past few decades in understanding and, to a lesser degree, in combating such typical diseases as MALARIA, YELLOW FEVER, amoebiasis (amoebic dysentery), and hookworm. Latin American scientists have pioneered in the work, with some 20 schools or departments of tropical medicine now in existence. The Univ. of Puerto Rico has a noted school of tropical medicine (it was for some time connected with Columbia Univ.). The economic and, on occasion, military involvement of the United States with nations nearer the equator helped to draw the scientific resources of North America to their health problems. In more recent times the "good neighbor" policy and private benefactions have to some extent financed and otherwise aided research and field work in tropical diseases. A number of universities in the United States maintain schools or departments devoted to this branch of medicine. Care of the armed forces in warm climates during the Second World War furthered the development of better means of tropical-disease control and therapy. Atabrine, a synthetic drug, and some other substances replaced scarce quinine in malaria control. Earlier work done by Carlos Finlay, Walter Reed, W. C. Gorgas, and Hideyo Noguchi made it possible for their successors virtually to eliminate from most of the world the common form of yellow fever. A vaccine against dengue fever was developed and some progress made against the ravages of filariasis, which sometimes results in elephantiasis. See C. M. Wilson, *Ambassadors in White: the Story of American Tropical Medicine* (1942); T. T. Mackie and others, *A Manual of Tropical Medicine* (1945).

tropics, in geography, two parallels of latitude (the Tropic of Cancer at 23½° N and the Tropic of Capricorn at 23½° S) marking the outer limits of the tropical or torrid zone, every point within this belt 45° lat. wide, flanking the equator, receives the perpendicular rays of the sun at noon on at least one day of the year. The sun is directly overhead at lat 23½° N about June 22, the summer solstice, and at lat 23½° S about Dec. 22, the winter solstice. Since the entire tropical zone receives more of the direct rays of the sun than areas in higher latitudes and since there is never too much difference in the angle with which these rays strike a point within this belt, the average annual temperature of the tropics is higher and the seasonal change of temperature is less than that of other zones. The SEASONS, in fact, are determined by some climatic element—such as WIND or rainfall (as in the monsoon areas)—other than temperature. Though uniformity of high temperatures is a basic characteristic of torrid zone climates, several different climate types can be distinguished within the tropical belt, for latitude is only one of the factors determining the climate of a given area. The nearness to or distance from the ocean, the prevailing wind conditions, and the elevation are all contributing elements Thus, while the tropics contain the world's largest regions of monotonous tropical rain-forest climate (Amazon and Congo basins), low-latitude savanna, steppe, and desert climates (with decreasing seasonal rainfall) and tropical highland climates (having the characteristics of temperate climates) also occur The world's true rainy tropical regions, despite their enormous potential economic value, notably in their forest and vegetable products (lumber, oils, fibers, fruits, and gum), have remained relatively undeveloped. The evil effect of the climate upon the white man, the lack of energetic native labor, and the cost of exploiting an area in which transportation and settlement are made difficult by the lush natural vegetation have all been advanced as reasons for their backwardness However, recent spectacular developments in tropical medicine, advancing technology, and the need for more foodstuffs are encouraging the large-scale colonization by nonnative farmers (rather than plantation agriculture) Rubber, tea, coffee, cacao, spices, bananas, pineapples, oils and nuts, and lumber are the leading agricultural exports of the countries in the tropical zone

tropism (trō'pĭzm), involuntary response of an organism or part of an organism, involving orientation toward (positive tropism) or away from (negative tropism) one or more external stimuli Tropistic stimuli include heat, light, moisture, gravity, electricity, and chemical agents The sunflower, for example, is heliotropic, i e , the blossom turns toward the sun Response to gravity (geotropism) is common among plants, in many forms the roots are positively geotropic, the stems negatively geotropic The downward growth of the root and upward growth of the stem of certain plants sometimes result also from phototropism The term *taxis* is commonly applied to movement resulting in a change of position of a whole organism, e g , the negative phototaxis or phototropism of certain protozoans that move away from light The mechanism of tropistic responses is not well understood Some investigators have attributed plant tropisms involving unequal growth of tissues to the action of growth-regulating hormones called auxins.

troposphere see ATMOSPHERE

Troppau (trôp'ou), Czech *Opava* (ô'pävä), city (pop 30,191), Silesia, Czechoslovakia, W NW of Morava Ostrava, in a fertile agricultural district It manufactures knit ware, textiles, processed foods, and leather. The capital of former Austrian Silesia, Troppau was the scene (1820) of the Congress of Troppau (see separate article)

Troppau, Congress of, 1820, international conference called by Metternich under the provisions of the Quadruple Alliance to consider means of suppressing the liberal uprisings against FERDINAND I of the Two Sicilies and FERDINAND VII of Spain The Congress met at Troppau, in Austrian Silesia; the Austrian and Russian emperors represented their countries in person but were accompanied by Metternich and Capodistria. Prussia was represented by the crown prince and by K. A. von Hardenberg England, shifting away from European commitments, merely sent the British ambassador at Vienna, and the French representatives also were of secondary rank. No decisions were taken on the problems under consideration, which were referred to later meetings (see LAIBACH, CONGRESS OF, and VERONA, CONGRESS OF) However, at the behest of Tsar Alexander I, who announced his unreserved conversion to Metternich's reactionary principles, Austria, Russia, and Prussia signed a protocol which stipulated that states undergoing a change in government by revolution were to be excluded from the European Concert. If such a change in the status quo were to endanger members of the European alliance, the powers bound themselves to bring back, if necessary by arms, "the guilty state into the bosom of the Great Alliance," i.e., the Holy Alliance. England did not adhere to the protocol, and France adhered with reservations.

Trossachs (trŏs'ăks, -ăuks), wooded valley, about a mile long, Perthshire, Scotland. Between Loch Katrine and Loch Achray, it is overlooked by Ben A'an and Ben Venue It is associated with Scott's *Lady of the Lake* and *Rob Roy*.

Trotsky, Leon (trŏt'skē, Rus lĕ'ŏn trôt'skē), 1879–1940, Russian revolutionist, one of the principal leaders in the founding of the USSR He was born of Jewish parents in S Russia; his original name was Lev Davidovich Bronstein. Largely self-taught, he early became a convert to Marxism and joined the revolutionary movement in 1896. In 1898 he was arrested for the first of many times Exiled to Siberia in 1900, he escaped in 1902 and continued to work for the revolutionary cause in France, Belgium, and Germany. In London he collaborated with Lenin on the revolutionary paper *Iskra* [spark]. After the split (1903) in the Russian Social Democratic party he wavered for many years between BOLSHEVISM AND MENSHEVISM Returning to Russia in 1905, he took part in the revolution of that year. At that time he developed the theory of permanent revolution which declared that in Russia the bourgeois revolution would pass over to a socialist one and that a proletarian revolution in one country must develop into a world proletarian revolution Banished again to Siberia, he escaped to Vienna, where he engaged in journalism; he later went to Switzerland and to Paris, where he was active in pacifist and radical propaganda during the First World War Expelled from France, he moved (Jan , 1917) to New York city, where he edited the radical paper *Novy Mir* [New World] He returned (March, 1917) to Russia after the overthrow of Nicholas II, and after his arrival at Petrograd (now Leningrad) joined the Bolshevik wing and took part with Lenin in the unsuccessful Bolshevik uprising of July, 1917. He was imprisoned by the Kerensky government, but was again released in September One of the chief organizers of the October Revolution, which brought the Bolsheviks into power, Trotsky became (Nov , 1917) people's commissar for foreign affairs under Lenin He was a principal figure in the negotiation of the Treaty of BREST-LITOVSK (1918), by which Russia submitted to humiliating conditions to obtain peace with the Central Powers Trotsky's most important service to the Bolshevik cause was his organization of the Red Army in the civil war that followed the revolution Having taken over as commissar for war, he accomplished the monumental task of welding together an efficient fighting force out of the tattered remnants of the tsarist army and various disparate elements After 1919, however, differences developed between Trotsky and Lenin, whose right-hand man he had been Trotsky remained a member of the Politburo, the highest echelon of the Communist party, but in 1922 it was STALIN, not Trotsky, who was chosen general secretary of the party On Lenin's death (1924) the supreme power passed to a triumvirate consisting of Stalin, KAMENEV (Trotsky's brother-in-law), and ZINOVIEV Trotsky, who later charged that Lenin in his last will had advised the removal of Stalin as general secretary, immediately began to oppose Stalin's policy as rightist Stalin, however, obtained the support of the majority of the Communist party for his policy of compromise with the farmers—a point on which Trotsky was particularly uncompromising Trotsky lost most of his power in 1925 but continued to occupy secondary posts and to oppose Stalin until 1927, when he was expelled from the party and exiled to Alma-Ata In 1929 he was ordered to leave the USSR Refused admission by most countries, he was granted asylum by Turkey, where he lived on the Princes' Islands near Istanbul In 1933 he was allowed to move to France, and in 1935 he found refuge in Norway In the public treason trials held at Moscow in 1936, 1937, and 1938, he was charged with heading a plot against the Stalinist regime Supposedly with the connivance of Nazi Germany, Trotsky, according to the accusations, had directed the alleged treasonable activities of Kamenev, Zinoviev, Rykov, Bukharin, Yagoda, Toukhachevsky, and other high Soviet personalities Trotsky denied these charges as absurd and hurled countercharges at Stalin, whom he accused of manufacturing the evidence in order to rule Russia as an Oriental despot The Soviet government obtained (1937) the expulsion of Trotsky from Norway, and he settled with his family near Mexico city. There he continued to defy the Stalin regime in his writings He also founded the Fourth International, a minor but highly articulate group, recruited mostly from intellectuals, which advocates Trotsky's program of world revolution and the establishment of pure communism. Trotskyites consider Stalinist communism as a betrayal of the revolutionary cause, and their efforts so far have been concentrated on denouncing Stalinism rather than on promoting revolution. An unsuccessful attack on Trotsky's life was made in May, 1940 In Aug , 1940, he was found murdered His assassin, Jacques van den Dresched, *alias* Jacques Mornard, *alias* Frank Jackson, a Belgian born in Iran, had enjoyed Trotsky's confidence for several months before he killed him with an axe. It was alleged that he was a Stalinist agent, but the allegation was not proved in the trial The court sentenced him (1943) to imprisonment for 20 years Trotsky was a prolific writer. All his books, pamphlets, and articles are marked by his superlative intelligence, which was never questioned even by his enemies, his indomitable aggressiveness, and his incisive, always polemical, and sometimes poisonous style; they did immeasurable damage to the Stalinist cause outside the Soviet Union Among his translated writings are *The Defense of Terrorism* (1921), *Literature and Revolution* (1925), *Lenin* (1925), *Whither Russia?* (1926), *The Real Situation in Russia* (1928), *My Life* (1930), *History of the Russian Revolution* (3 vols , 1932), *The Revolution Betrayed* (1937), *The Stalin School of Falsification* (1937), and *Stalin* (1946)

trotting races: see RACING

troubadour (trōō'budôr), medieval poet of S France whose songs were composed in *langue d'oc*, while those of the TROUVÈRE of N France were in *langue d'oïl* Troubadours were often of the nobility —Richard Cœur de Lion, Alfonso II, king of Aragon, and many famous nobles and crusader knights were numbered among them—and their poetry was essentially aristocratic The verse forms included sonnets, pastorals, and chansons of high metrical and poetic skill Although the troubadours wrote on war and politics, their chief subject was romantic love, at that time a new doctrine for whose spread they were largely responsible Custom required that troubadours be able to play six or seven instruments Frequently attached to troubadours were the jongleurs who traveled about to perform their masters' works at different courts Of the 400 or more names of troubadours living between 1090 and 1292, some of the more famous are Jaufre Rudel, Bernard de Ventadour, Peire Vidal, Raimbaut of Vaqueiras, Folquet de Marseille (who became bishop of Toulouse), Bertrand de Born, Arnaud Daniel, Gaucelm Faidit, Raymond de Miravals, Peire Cardinal, Arnaut de Maruelh, Aimeric de Peguilha, the Monk of Montauban, and Thibaut IV The troubadours, many of whom were involved in the Albigensian Crusade, declined after 1216, though an attempt was made to revive the Provençal literary glory through the Jeux Floraux, held at Toulouse After their dispersion in Provence, a number of the troubadours went to Spain and Italy, where they had an important influence on the development of poetry during the 13th cent See H J Chaytour, *Troubadours* (1912), Pierre Aubry, *Trouvères and Troubadours* (Eng tr , 1914), *Oxford Provençal Chansonnier* (ed by W P Shepard, 1927)

Troubetzkoy, Paul, Prince (trōōbĕtskoĭ', trōōbĕts'koĭ, Rus trōōbyĭtskoĭ'), 1866–1938, Russian sculptor, b Italy His father was a Russian nobleman, his mother an American He worked in Russia, France, Italy, and the United States His work, impressionistic and realistic in manner, includes a wide range—bronze statuettes, for which he is particularly noted, portrait busts; and an equestrian monument to Alexander III, in Leningrad Among the subjects of his portrait works are Tolstoy, Rodin, Anatole France, George Bernard Shaw, Paul Helleu, Count Witte, Prince Leon Gallitzin, W K Vanderbilt, and the artist's wife A bust of Tolstoy is in the Luxembourg Museum, Paris, an equestrian portrait in the Detroit Institute of Arts The sculptor is represented in many galleries of Europe and in the museums of New York, Chicago, Buffalo, N Y , and Toledo, Ohio.

Troubetzkoy, Princess. see RIVES, AMÉLIE

Troup, George Michael, 1780–1856, governor of Georgia (1823–27), b McIntosh Bluff, on the Tombigbee river, Ala (then a part of Georgia) He was graduated from the College of New Jersey (now Princeton Univ) in 1797, studied law, and practiced at Savannah In Georgia politics Troup and William H Crawford led the conservative party opposed to the upcountry forces of John Clark As governor, he was an extreme states' rights man The final removal of the Creek Indians from Georgia was due in great part to his belligerent and uncompromising attitude towards both the Indians and the federal government. He was a U S Representative (1807–15) and Senator (1816–18, 1829–33) See biography by E. J. Harden (1859)

Troup (trōōp), city (pop. 1,526), E Texas, SE of Tyler With oil land and truck farms around it, Troup refines oil, ships tomatoes, and makes firebrick from local clay.

trout, game fish of the salmon family, of commercial value as food Of the numerous species and subspecies the majority are found in clear, cold, fresh waters Those of the genus *Salmo* include the brown trout, a brownish fish spotted with red and black, introduced into the United States from Europe (c.1883), which can live in warmer waters than most native forms, the cutthroat trout, marked with red under the lower jaw, which is native to fresh-water streams from California to S

Alaska; and the colorful rainbow trout, a fighter when hooked, native to W North America and introduced in other parts of the continent and in Chile and New Zealand. The steelhead trout is, by some authorities, considered to be the silver-colored salt-water phase of the rainbow trout The European sea trout (*S trutta*) lives in salt water and ascends rivers to spawn The chars, genus *Salvelinus* of the same family, include the common brook or speckled trout, a favorite game fish native to E North America and introduced in the West In some regions it enters the sea and becomes silver-colored The Dolly Varden trout is a similar western form There are a number of varieties of the common European char (*S alpinus*) The lake trout (*Cristwomer*) found in deep lakes of N North America as far south as the Great Lakes and New England, the largest American trout, is said to reach a record weight of over 100 lb

trouvère (trōōvâr'), medieval poet and singer of N and central France, flourishing during the later 12th and the 13th cent The trouvère corresponds to the TROUBADOUR of the south Composed in the *langue d'oïl*, their poetry is of a more courtly and less spontaneous nature and includes the great group of CHANSONS DE GESTE Chief among the trouvères were Conon de Béthune, Le Châtelain de Coucy, Colin Muset, Jacques Betel, and Adam de la Halle See Pierre Aubry, *Trouvères and Troubadours* (Eng tr, 1914)

Trouville (trōōvēl'), town (pop 6,781), Calvados dept, N France, on the English Channel It is a popular bathing resort

Trowbridge, John Townsend (trō'brĭj), 1827–1916, American novelist and writer of juvenile stories, b Ogden township, N Y, largely self-taught His very popular boys' books, some written under the pseudonym Paul Creyton, include *The Drummer Boy* (1863) and *Cudyo's Cave* (1864), perhaps his best *Neighbor Jackwood* (1857) is an antislavery novel From 1870 to 1873 he was editor of *Our Young Folks* (later *St Nicholas*) His *Complete Poetical Works* appeared in 1903, and "Darius Green and his Flying Machine" is often included in anthologies See his autobiography, *My Own Story* (1903)

Trowbridge (trō'brĭj, trou'–), urban district (1931 pop. 12,011, 1943 estimated pop 14,338), Wiltshire, England It is a market town and a long-established center of the manufacture of woolen goods, other industries are brewing and leather manufacture The 13th-century parish church contains the tomb of George Crabbe, the poet, who was rector here from 1814 until his death

Troy, ancient city made famous by the TROJAN WAR It is also called Ilion or, in Latin Ilium Its site is almost universally accepted as the mound now named Hissarlik, in Asiatic Turkey, c 4 mi from the mouth of the Dardanelles Accepting as reliable Greek tradition and details in the Homeric poems, Heinrich Schliemann identified the site and conducted excavations there from 1871 to 1882 Nine successive cities or villages have occupied the site, the earliest dating from the Neolithic period Attempting to determine which stratum of the mound was the Troy of the Trojan War, Schliemann gave this distinction first to the third stratum, then to the second Later excavations conducted by Wilhelm Dorpfeld indicated that the sixth stratum, representing the sixth settlement of the city, was the Homeric Troy However, discoveries of the expedition of the Univ of Cincinnati headed by C W Blegen proved that the seventh level was the Troy of Homer's poem The Troy of the Trojan War was a Phrygian city, it was the center of a region known as TROAS Like the Greeks described by Homer, the Trojans were of the Bronze Age The Romans, believing that they were descendents of Aeneas and other Trojans, favored the city, and the ninth of the settlements on the site was of some importance in Roman times See Walter Leaf, *Troy* (1912), A R Burn, *Minoans, Philistines and Greeks* (1930), H J E Peake and H J Fleure, *The Horse and the Sword* (1931)

Troy. 1 City (pop 7,055), co. seat of Pike co, SE Ala, on the Conecuh and SE of Montgomery, in a diversified farm section of the Black Belt, settled 1824, inc 1843 A state teachers college is here 2 City (pop 1,154), S Ill., near the Mississippi E of St Louis, in a coal and farm area, settled 1814, inc. as a city 1892 3 City (pop 1,049), co seat of Doniphan co, extreme NE Kansas, near the Missouri, founded 1855, inc 1860 It is the shipping center of an apple-growing region. Indian mounds have been excavated NW of Troy 4 City (pop. 1,493), co seat of Lincoln co, E Mo, NW of St Louis, laid out c 1819 The Cuivre river recreational area is near 5 Town (pop 1,321), SW N H, SE of Keene and SW of Mt Monadnock The area was settled in 1762. Troy was formed in 1815 from parts of Swansey, Richmond, Fitzwilliam, and other towns 6 City (pop 70,304), co. seat of Rensselaer co, E N Y, on the east bank of the Hudson and NE of Albany, laid out 1786, inc. 1816. Henry Hudson explored (1609) the territory near present Troy, and the site was included in the patroonship given to Kiliaen Van Rensselaer by the Dutch West India Company. Troy is known especially for its manufacture of collars and shirts Other important products are valves and fire hydrants. Samuel Wilson of Troy, who was concerned with army beef supply in the War of 1812, is said to have been the original of the national figure "Uncle Sam" The city is the seat of RENSSELAER POLYTECHNIC INSTITUTE, RUSSELL SAGE COLLEGE, and the Emma Willard School for girls 7 Town (pop 1,861), co seat (since c 1842) of Montgomery co, central N C, S of Greensboro It is a trade center with textile and furniture plants 8 City (pop 9,697), co seat of Miami co, W Ohio, on the Great Miami river and N of Dayton; settled c 1807, inc 1818 Airplanes are made here 9 Borough (pop 1,228), NE Pa, W of Towanda, settled 1793, inc c 1844 A dairying center, it breeds and auctions pedigreed Holstein cattle 10 Town (pop 1,869) N Vt, W of Newport near the Missisquoi and the Canadian line, in a farm, dairy, and lumber region, granted 1792, organized 1802 It includes North Troy village (pop. 1,077), a port of entry In the War of 1812, when smuggling flourished, fortifications were put up in Troy

Troyes (trwä'), city (pop 53,531), capital of Aube dept., NE France, on the Seine. It is a grain and textile center A Roman town, Troyes became an episcopal see in the 4th cent and the capital of CHAMPAGNE in the 11th cent The counts of Champagne encouraged its two annual fairs, where merchandise from the whole known world was exchanged The fairs brought the town immense prosperity and were of such importance until the 14th cent that they set standards for the rest of Europe, the troy weight having survived to the present day There are several fine Gothic buildings, including the Cathedral of St Pierre (13th-16th cent), the Church of St Urban (13th cent) contains some of the best sculpture of the Champenoise school, which flourished at Troyes in the Renaissance The museum contains exceptionally fine collections Some damage was inflicted on the town in the Second World War

Troyes, Treaty of, 1420, agreement between HENRY V of England, CHARLES VI of France, and PHILIP THE GOOD of Burgundy, intended to settle the issues of the Hundred Years War Henry, who was to marry Charles's daughter Catherine, was recognized as "heir of France," while Charles was permitted to retain the royal title till his death The dauphin, later CHARLES VII, who was disowned for his "great crimes," subsequently repudiated the treaty

Troyon, Constant (kôstäⁿ' trwäⁿyôⁿ'), 1810–65, French painter of the Barbizon school, famous for his pictures of animals, particularly cows, in landscape Among his well-known paintings are *Watering Cattle* (Wallace Coll., London), *Oxen at Work* (Louvre), and *Holland Cattle* and *Road in the Woods* (Metropolitan Mus)

troy weight. see WEIGHTS AND MEASURES

truce of God, in the Middle Ages, an attempt by the Church to limit private warfare Fighting was prohibited from Wednesday or Thursday evening until Monday morning and on certain religious holidays Violators were punished by excommunication It began in France in the early 11th cent and had spread to Flanders, Germany, and Italy by the next century The increasing power of kings and the subsequent rise of strong national governments rendered the truce of God unnecessary and ineffective as a means for enforcing internal peace

Truchas (trōō'chus), three peaks, N N Mex, in the Sangre de Cristo Mts The highest peak is over 13,000 ft

Trucial Oman (trōō'shul ōman'), region (pop c 95,000), E Arabia, occupying the Persian Gulf coast from Qatar to Oman The term *trucial* refers to the fact that the sheiks ruling the seven constituent petty states are bound by truces concluded with Great Britain in 1820 and by an agreement made in 1892 not to engage in relations with other countries Before British intervention the area was notorious for its piracy and was called the Pirate Coast The population is supported by pearl diving, grazing, and some agriculture

truck. Trucks may be powered by gasoline internal-combustion engines, by Diesel-electric engines, or, for short-radius deliveries, by electric storage batteries Carrying capacity ranges from a half ton to 15 tons or more Although constructed on the same general lines as the automobile, trucks use larger and heavier parts and generally have a worm drive or a chain drive Trucks of over two tons are usually fitted with at least four forward speeds, some have a four-wheel drive, and most have doubled rear wheels. Tractors with semi-trailers are commonly used for intercity haulage of heavy loads. As common carriers, motor vehicles have made inroads into the earnings of railroads They are used today in most parts of the world and are replacing in Asia and Africa the camel caravan and human carriers Trucks adapted for special purposes include the fire truck, the tank truck, unlined for oil and glass-lined for milk; and the concrete truck whose circular body slowly revolves during transit to keep the concrete mixed.

Truckee (trŭ'kē), unincorporated town (pop. 696), E Calif., on the Truckee river and SW of Reno, Nev., in a mountain resort area. A state historic monument is at near-by Donner Lake. Lake Tahoe lies a short distance to the south.

Truckee, river, c.100 mi long, rising in NE California in Lake Tahoe and flowing N and E into W Nevada, past Reno to Pyramid Lake Lake Tahoe Dam of the NEWLANDS PROJECT is on the Truckee, and Boca Dam is on a tributary

truck farming, horticultural practice of growing one or a few kinds of crops on a large scale at some distance from the market It is usually not so intensive or so diversified as MARKET GARDENING It was carried on at first in regions with water transportation to markets, but with improved land transportation and refrigeration, truck farms have been opened up on the cheaper lands of the West and South to produce fruits and vegetables out of the regular season Bermuda onions, for example, are grown on truck farms in Texas, muskmelons in Colorado, celery and lettuce in Indiana and Michigan Other truck crops are beets, carrots, radishes, cabbages, and cauliflowers See R L Watts and G S Watts, *The Vegetable Growing Business* (rev ed, 1940).

Trudeau, Edward Livingston (trōō'dō), 1848–1915, American physician, b New York city, M D Columbia, 1871 As a result of taking care of his brother who had tuberculosis of the lungs he developed the disease He went to live in the Adirondacks, spending much time in the open, and regained his health Seeking to aid others suffering from tuberculosis, he founded (1884) at Saranac Lake a sanatorium, where he employed the open-air treatment of the disease and in 1894 organized the first laboratory for the study of tuberculosis See his autobiography (1915), study by G T Hallock and C E Turner (1929), *Edward Livingston Trudeau a Symposium* (1935)

True, Alfred Charles, 1853–1929, American agricultural expert and educator, b Middletown, Conn, grad Wesleyan Univ (B A, 1873) Associated with the U S Dept of Agriculture from 1889, he was director of its Office of Experiment Stations (1893–1915) and of its States Relations Service (1915–23) He was noted for his work in agricultural education and became dean of the graduate school of agriculture of Ohio State Univ in 1923 His writings include *A History of Agricultural Education in the United States* (1929)

True, Rodney Howard, 1866–1940, American botanist, b Sauk co, Wis, grad Univ of Wisconsin (B S, 1890), Ph D Univ of Leipzig, 1895 Known especially for his work in plant physiology, he contributed original research on such problems as growth rate, electrolytic dissociation in, and toxic action of, solutions, the functions of mineral plant foods, and fermentations of tea and tobacco After serving (1901–20) as plant physiologist with the U S Dept of Agriculture, he became professor of botany and director of the botanic garden of the Univ of Pennsylvania In 1937 he became professor emeritus

truffle (trŭ'fŭl) [Fr], subterranean edible fungus, found chiefly in France, Italy, Spain, Germany, and England They are solid, fleshy, and globular, ranging in diameter from about 1 in to about 4 in and growing usually in groups of from 10 to 20, often a foot or more below the surface of the ground They grow in woodlands close to the roots of trees (usually oaks, chestnuts, beech, and birch) There are several species, varying in color from gray or brown to nearly black Their flavor is piquant and aromatic, and they have been esteemed a delicacy from ancient times, recipes for their use are found in Greek and Roman writings The truffles found in the forests of Périgord, France, have been highly regarded since the 15th cent, and their collection is an important industry Some are canned for export Truffles have not been successfully cultivated They thrive best in light, moist, well-drained soil Stirring the soil seems to increase their growth Since they are hard to find, they are usually hunted with dogs or, as in Périgord, with hogs In the United States truffles are occasionally found in small numbers chiefly on the Pacific coast and in scattered sections of the eastern half of the country

Trujillo (Ciudad Trujillo) (trōōhē'yō, svōōdhädh'), city (pop 120,380), S Dominican Republic, capital and largest city of the republic Founded as SANTO DOMINGO, the city, after the almost complete destruction wrought by the hurricane of 1930, was rebuilt and renamed in 1936 for Rafael TRUJILLO MOLINA Of the colonial survivals, the most notable is the cathedral, begun in 1514, the oldest in the Western Hemisphere The ruins of Diego Columbus's house, the Hospital of San Nicolás, and the Torre de Homenaje [tower of homage] can still be seen, but Trujillo is largely a city of broad avenues and modern buildings. With improved harbor facilities, it is the nation's leading port. The Pan American Conference of 1923 authorized the construction near by of a huge lighthouse as a memorial to Christopher Columbus; it was begun in 1948

Trujillo, town (pop. 2,957), N Honduras, a Caribbean port. Founded early in the 16th cent, Trujillo was subjected in that and the succeeding

century to frequent raids from English and Dutch buccaneers, and in 1860 it was captured briefly by the American filibuster, William WALKER. Trujillo's early importance has diminished with the development of PUERTO CORTÉS, but it still exports bananas and hardwoods

Trujillo, city (pop 38,961), NW Peru. It was founded by Diego de Almagro in 1534 Trujillo, a thriving commercial city, is one of the oases in the coastal desert of Peru and is important for sugar cane grown by irrigation in the surrounding region. Industries include the making of cocaine, textile milling, tanning, and rice milling Near by are the pre-Incan ruins of CHANCHAN The Pacific port of Salaverry (pop c 5,000) is 9 mi away

Trujillo (trōōhē'lyō), city (pop 5,771), Cáceres prov, W Spain, in Estremadura Now an agricultural center, it was the birthplace of Francisco Pizarro and of other conquistadores

Trujillo (trōōhē'yō), city (pop 6,954), capital of Trujillo state, W Venezuela, on a branch of the Pan-American Highway It is an agricultural market It was here, in 1813, that Simón Bolívar proclaimed his "war to the death" against the Spanish.

Trujillo Molina, Rafael Leonidas (räfäĕl' läōnē'dhäs trōōhē'yō mōlē'nä), 1891–, president of the Dominican Republic (1930–38, 1942–) Trained by U S marines in the time of U S occupation of the country, he was army chief in the presidency of Horacio VÁSQUEZ, whom he ousted in 1930 He became absolute dictator and retained power even when not in the presidency His autocratic, efficient, and ruthless regime accomplished considerable material progress Terroristic methods were used, however, not only to repress Dominican opposition, but also against neighboring Haiti, in 1937, to stop Haitian infiltration across the border, Dominican troops crossed the boundary and massacred between 10,000 and 15,000 Haitians Generalissimo Trujillo has been constantly embroiled in difficulties with other Caribbean countries, charging that plots were being hatched against him abroad Countercharges were directed at him

Truk (trŭk, trōōk), island group (39 sq mi, pop 9,510), W Pacific, in the E Caroline Islands It is 1,175 mi E of Palau Truk consists of about 55 volcanic islands surrounded by an atoll reef and many islets Kuop atoll, 2 mi south, is generally considered one of the Truk islands The chief products are copra and dried fish In the Second World War, Truk was the site of a Japanese naval base and was heavily bombed

Trullan synod see CONSTANTINOPLE, THIRD COUNCIL OF

Truman, Harry S., 1884–, 32d President of the United States, b Lamar, Mo He was reared on a farm near Independence, Mo, worked at various jobs, and tended the family farm He served as a captain of field artillery in France in the First World War After a brief period as a retail merchant, Truman turned to politics With the backing of Thomas J PENDERGAST, Democratic party boss, he was elected judge (1922–24) and presiding judge (1926–34) of Jackson co, Mo He attended (1923–25) the Kansas City School of Law In 1934 he was elected U S Senator and in 1940 was reelected Truman achieved national prominence through the reports of his Senate committee to investigate government expenditures in the Second World War His vigorous investigations revealed startling inefficiency and bunghing on war contracts and saved the U S government over $1,000,000,000 Largely through the efforts of Robert HANNEGAN, Truman was nominated as Democratic candidate for Vice President in 1944 and was elected to office along with President F D Roosevelt On the death (April, 1945) of Roosevelt, Truman assumed the presidency at a critical time in U S history He at once announced his intentions of following Roosevelt's domestic and foreign policies but gradually the incumbent cabinet officers were replaced In July, 1945, Truman attended the POTSDAM CONFERENCE After the cessation of hostilities (Aug, 1945), however, the relations of the United States with the USSR became increasingly strained and created a major problem for the administration A settlement could not be reached for a peace treaty for Germany, and diplomatic relations became very tense during the Russian blockade (1948–49) of BERLIN Truman, meanwhile, had laid down (March, 1947) the "Truman Doctrine," aimed at aiding Communist-threatened nations to curb the spread of Soviet influence Aid was immediately given to Greece and Turkey in 1948, when the UNITED NATIONS RELIEF AND REHABILITATION ADMINISTRATION expired, the Truman administration brought forth the EUROPEAN RECOVERY PROGRAM Truman's domestic policy, which came to be popularly called the Fair Deal, was largely thwarted by a Republican majority in the 80th Congress (1946–48) Many of the articles of his program—including civil rights, universal military training, increase of minimum wages, price controls, extended Federal housing, and health insurance—were rejected by Congress, and a special session (July-Aug, 1948) accomplished little. Nominated for the presidency at the Democratic National Convention of 1948, Truman was thought to have little chance to return to office. In protest against his civil-rights program, a bloc of Southern Democrats bolted the party and sponsored J Strom THURMOND for President and mainly in protest against Truman's foreign policy, Henry A. WALLACE ran for President on the Progressive party ticket Truman, after campaigning vigorously, swept the Democratic party into office and surprisingly defeated the Republican presidential candidate, Thomas E DEWEY, by winning over 23,600,000 popular votes and 304 electoral votes In 1949 President Truman promoted the NORTH ATLANTIC TREATY, but his efforts to have the TAFT-HARTLEY LABOR ACT repealed were defeated Truman's addresses are found in *The Truman Program* (ed by M B Schnapper, 1949) See biography by Frank McNaughton and Walter Hehmeyer (1948).

Trumann, city (pop 3,381), NE Ark It has a large woodworking plant and a sewing-machine factory

Trumansburg, village (pop 1,130), W central N Y, in the Finger Lakes region, NW of Ithaca, settled 1792, inc 1865

Trumbull, John, 1750–1831, American poet and jurist, b Westbury (now Watertown), Conn, grad Yale, 1767 A leader of the CONNECTICUT WITS, he satirized educational follies in the *Progress of Dulness* (1772–73) and the Tories in his burlesque epic *M'Fingal* (1775–82) He later became a judge in Connecticut and a Federalist See his collected works (1935) with memoir by himself, biography by Alexander Cowie (1936)

Trumbull, John, 1756–1843, American painter, b Lebanon, Conn, grad Harvard, 1773, son of Gov Jonathan Trumbull (1710–85) He served in the Continental army as an early aide to Washington and later as adjutant to General Gates, with rank of colonel He resigned his commission in 1777 and devoted himself to painting In 1780 he went to London, intending to study under Benjamin West There he was imprisoned as an American officer and finally deported In 1784 he returned to London, where, at the suggestion of West and with the encouragement of Thomas Jefferson, he began his famous national history, which occupied most of his life His small paintings (for the engraver), at Yale Univ, such as the *Battle of Bunker's Hill* and *Death of Montgomery at Quebec* (both finished in 1786), are superior to the large *Signing of the Declaration of Independence, Surrender of Burgoyne at Saratoga, Surrender of Cornwallis at Yorktown,* and *Resignation of Washington* (all four Capitol, Washington, D C), completed 38 years later Trumbull excelled in small-scale painting, especially oil miniatures (studies for the historical series), the best of which were done in America between 1789 and 1793 In the latter year he returned to London as secretary to John Jay and remained for 10 years as one of the commissioners to carry out provisions of the Jay Treaty He returned to America in 1804 with a collection of old masters These failed to recoup his fortunes, but in 1808 he again visited London and was obliged to remain there until after the War of 1812 He was back in New York in 1815 and there remained, with the exception of three years in New Haven, Conn, until his death In 1831 he founded the Trumbull Gallery at Yale, one of the earliest art museums in the English-speaking colonies, depositing much of his work in exchange for an annuity He was president (1816–25) of the American Academy, New York He is well represented in the Museum of Fine Arts, Boston, the Wadsworth Athenaeum, Hartford, Conn., Yale Univ, and the Metropolitan Museum, New York city hall, and New York Historical Society. See his autobiography (1841), William Dunlap, *Arts of Design* (1834), J H Morgan, *Paintings of John Trumbull at Yale University* (1926)

Trumbull, Jonathan (trŭm'bul), 1710–85, colonial governor of Connecticut, b Lebanon, Conn, grad Harvard, 1727 He was prominent in the colony after 1736, serving in the assembly, of which he became speaker, and on the governor's council as well as acting as judge of the county court of Windham (1746–60) and probate judge of a district court (1747–67) He was chief justice of the superior court and deputy governor before becoming governor in 1769 He served until 1784 and rendered great services to the patriot cause in the American Revolution There is a tradition that the name Brother Jonathan, for an American, arose from a remark of Washington about Trumbull See biography by a descendant, Jonathan Trumbull (1919).

Trumbull, Jonathan, 1740–1809, governor of Connecticut, b. Lebanon, Conn, grad Harvard, 1759, son of Jonathan Trumbull (1710–85). In the American Revolution he acted as paymaster of the northern patriot troops (1775–78) and later was on George Washington's staff He served as a Federalist in the U S House of Representatives (1789–95), acting as speaker part of the time, and in the U.S. Senate (1795–96), from which he resigned to become lieutenant governor of Connecticut (1796–97) He succeeded to the governorship in 1797 and held that post until his death.

Trumbull, Lyman, 1813–96, U S. Senator from Illinois (1855–73), b Colchester, Conn He taught school (1833–36) in Georgia, where he was admitted to the bar, and in 1837 he moved to Illinois He was elected to the state legislature (1840), served as Illinois secretary of state (1841–43), and was a justice of the state supreme court (1848–53) Trumbull was elected to the House of Representatives as an anti-Nebraska Democrat in 1854, but was advanced to the Senate before Congress convened He became a Republican leader and a staunch supporter of Abraham Lincoln Often allied with the radical Republicans on Reconstruction measures (he helped draft the Thirteenth Amendment and introduced the Civil Rights Bill), he nevertheless refused to follow them in their unsuccessful attempt to remove Andrew Johnson from office, and in the impeachment trial was one of the handful of Republican Senators who supported the President In 1872 he was a leader of the LIBERAL REPUBLICAN PARTY, but eventually returned to the Democratic fold, being one of Samuel J Tilden's counsel in the disputed election of 1876, and was the unsuccessful Democratic candidate for governor of Illinois in 1880. See biography by Horace White (1913)

Trumbull, town (pop 5,294), SW Conn., adjoining N Bridgeport, settled c 1690, inc 1797.

Trümmelbach, Switzerland see LAUTERBRUNNEN.

trumpet, brass wind musical instrument of cylindrical bore, having the shape of a flattened loop and having three piston valves to regulate the pitch Its origin is ancient, records of a type of simple trumpet are found in Chinese history from as early as 2000 B C, and the trumpet is mentioned in the Bible and in Greek and Roman history The modern trumpet was developed in the early 19th cent, when valves were added to the bugle It is a transposing instrument, its natural scale is usually B flat, but it often has an adjustable slide capable of making a B flat trumpet into an A trumpet Of brilliant tone, the trumpet was an important member of the orchestra even before the addition of valves

trumpet creeper or **trumpet vine,** woody climbing plant of the genus *Campsis* (or *Bignonia* or *Tecoma*), often cultivated for the clusters of large trumpet-shaped flowers, attractive to hummingbirds The trumpets are orange red in the native North American species *Campsis radicans*—tall-climbing on stone or wood and quite hardy—and scarlet in the less hardy Chinese trumpet creeper, both are occasionally shrubby

Trumpler, Robert Julius, 1886–, American astronomer, b Zurich, Switzerland, Ph D Univ of Gottingen, 1910 From 1911 to 1915 he was astronomer of the Swiss Geodetic Survey He then came to the United States and for four years was an assistant at the Allegheny Observatory, Pittsburgh From 1919 to 1938 he was at Lick Observatory (as astronomer from 1929), and in 1938 he became professor of astronomy at the Univ of California His researches include determinations of stellar parallaxes, interstellar light absorption, and investigations of Mars

Truro, Thomas Wilde, 1st **Baron** (trōō'rō), 1782–1855, lord chancellor of England He was called to the bar in 1817 and first gained prominence by his defense (1820) of Queen CAROLINE. He entered Parliament (1831) as a Whig, having been made king's sergeant in 1827 He became solicitor general in 1830, was knighted in 1840, and was made attorney general in 1841 Wilde served as chief justice of the court of common pleas from 1846 until he became lord chancellor and Baron Truro in 1850

Truro (trōō'rō), town (pop 10,272), N N S, near the head of Cobequid Bay of the Bay of Fundy, inc 1765 It is a railroad and industrial center, with lumber mills, printing plants, metalworks, and manufactures of clothing and machinery. The Nova Scotia Agricultural College is here and is headquarters of the provincial agricultural extension service An early Acadian settlement, called Cobequid, it was destroyed (1755) when the Acadians were expelled After 1759 it received settlers from New England and Northern Ireland, who named the town for Truro, England

Truro (trōō'rō), municipal borough (1931 pop 11,064, 1943 estimated pop 12,640) and city, Cornwall, England, NNE of Falmouth, at the confluence of the Kenwyn and Allen rivers, which form the Truro river, an inlet at the head of Falmouth Harbour. In 1876 it became the see of a Cornish bishopric The cathedral is of modern construction in Early English style The city was an important tin-mining center There is a museum of Cornish exhibits

Truro (trōō'rō, trŭ'rō), resort town (pop 585), SE Mass, on N Cape Cod, settled 1700, inc 1709. The Highland Light here is one of the most powerful on the Atlantic coast, the first light was installed in 1797 There are also naval radio and coast guard stations

truss, in architecture and engineering, a supporting structure composed of beams, girders, or rods commonly of steel or wood It usually takes the form of a triangle or combination of triangles, since this

design insures the greatest rigidity Trusses are employed when the space is too large to be spanned by a single beam or girder, they are used especially in the construction of roofs and bridges The members are known as ties and struts, their complete upper and lower lines as chords, the distance over which the truss extends is called the span The upper and lower chords are connected by web members

ust, in law, arrangement whereby property legally owned by one person is administered for the benefit of another Three parties are ordinarily needed for the relation to arise the settlor, who bequeaths or deeds his property for another's benefit, the trustee, in whose hands the control of the property is vested and who receives a fee fixed by law, and the beneficiary, for whose use the proceeds of the property are to be applied In some cases the settlor may name himself trustee or beneficiary, but it is indispensable that the trustee (legal owner) and the beneficiary (equitable owner) be different persons The trustee's duty is to make the capital or earnings available to the beneficiary in the manner prescribed by the settlor and to manage the property prudently and honestly The beneficiary may bring suit if this duty is breached In recent years banks and trust companies, with their special facilities for handling investments, are usually named the trustees of substantial properties The arrangement at which the SHERMAN ANTI-TRUST ACT was directed was a business application of the trust form The Standard Oil Company, for example, induced stockholders in various enterprises to assign their stock to a board of trustees and to receive dividend-bearing trust certificates in return The board was thus enabled to manage simultaneously enterprises which many believed should have been in active competition Soon most business combinations in restraint of trade came to be called trusts, whether in the legal form of a trust or otherwise A horizontal trust is a combination of corporations engaged in the same line of business A vertical trust is an organization that controls all or part of a series of operations extending from the procuring of the raw materials to the retailing of the finished product In Europe the term CARTEL is applied to a monopoly or trust, but the term is broader in that it may have international scope, and there, as here, it may be either vertical or horizontal Trusts have been opposed as monopolies, and laws have been enacted to prohibit or control them They have been defended as reducing costs through large-scale operations and avoiding the expenses of competition In the United States trusts grew rapidly from 1880, and by 1905 most of the important mergers in American industry had been formed The Sherman Anti-Trust Act, passed by Congress in 1891, made illegal all "agreements in restraint of trade" and all attempts to monopolize" industry, but the law was not vigorously enforced The Clayton Anti-Trust Act (1914) was designed to stop various practices of "unfair" competition, and the Federal Trade Commission was given power to issue "cease and desist" orders when violations were found To protect small retailers the states in the 1920s began to regulate chain stores by means of heavy taxation In 1936 the Robinson-Patman Act made it legal for sellers to discriminate as to price between large and small buyers in the wholesale market This was followed by the Miller-Tydings Act 1937), which permits manufacturers to fix the price at which retailers may sell their product and prevents large retailers from unfairly underselling smaller ones The effect of much of this legislation was to limit competition and thus favor monopoly, while it tended to equalize the conditions under which large and small retailers do business See A. A. Berle, Jr., and G. C. Means, *The Modern Corporation and Private Property* (1932), Thurman Arnold, *The Bottlenecks of Business* (1940), Wendell Berge, *Cartels* (1944)

isteeship, territorial, system for the control of territories that are not self-governing The system is administered by the United Nations It replaced the MANDATES of the League of Nations Territorial trusteeship, regulated by chapters 12 and 13 of the Charter of the United Nations, is intended to promote the welfare of the native inhabitants and to advance them toward self-government The system is supervised by the Trusteeship Council, which consists of the members of the United Nations administering trust territories and an equal number of other member nations (including always the permanent members of the Security Council) which do not administer such territories Each territory is governed by the provisions of a trusteeship agreement Agreements which cover nonstrategic areas are approved by the General Assembly, and agreements concerning strategic areas are approved by the Security Council Unlike territories under mandate, all territories may be fortified The powers of the administering state usually include all legislative, administrative, and judicial authority and, in certain cases, the right to treat the territory as if it were part of the administering state Equal treatment in social, economic, and commercial matters is to be granted all members of the United Nations Each year the Trusteeship Council submits to the responsible state a detailed questionnaire concerning each territory, with special emphasis on measures taken to increase self-government and educational opportunities The council considers petitions from inhabitants of the territories and periodically makes inspection tours It meets at least twice a year and by majority vote (not subject to veto) adopts recommendations Possessions of the Axis Powers may be placed under trusteeship by act of the General Assembly, but any member of the United Nations must agree to placing territory in its control under trusteeship In 1950 the trust territories were all either former mandates of the League of Nations or former possessions of Italy and Japan Former mandates (all continuing under the control of the original mandatory power) were British Cameroons, British Togoland, French Cameroons, French Togoland, Nauru, Ruanda-Urundi Tanganyika, Western Samoa, and the former German holdings in New Guinea The Union of South Africa refused to surrender its mandate over South-West Africa for a trusteeship The only strategic territory, comprising Japanese islands in the Pacific, was administered by the United States In 1949 the General Assembly, by virtue of the League mandate over Palestine, perhaps ineffectually declared Jerusalem a trust territory under the administration of the whole United Nations In 1950 Italian Somaliland was placed under the administration of Italy (not a member of the United Nations) for 10 years, pending the attainment of independence

Truth, Sojourner, c 1797–1883, American abolitionist, a freed slave, originally called Isabella, b Ulster co, N Y Convinced that she heard heavenly voices, she left (1843) domestic employment in New York city, adopted the name Sojourner Truth, and traveled throughout the North preaching emancipation and woman's rights A remarkable personality, she spoke with much effectiveness even though she remained illiterate See biography by A. H. Fauset (1938)

Trutnov (trōōt'nôf), Ger *Trautenau* (trou'tunou), city (pop 12,201), N Bohemia, Czechoslovakia It is a center of the Bohemian linen industry

Truxtun, Thomas, 1755–1822, American naval officer, b near Hempstead, L I, N Y He went to sea early and is said to have been impressed by a British man-of-war In the American Revolution he served the patriots as a privateer and took many British prizes He was in command until the U S navy was organized (1794–95) He then became master of the *Constellation* and was important in the naval troubles with France and England after 1798 The *Constellation* captured the French frigate *L'Insurgente* in Feb, 1799, and defeated *La Vengeance* in battle in Jan, 1800, though the French vessel escaped capture because a storm injured the *Constellation* In 1802 he resigned the command of the Mediterranean squadron in some anger and was retired. The name is also spelled Truxton

Tryon, Dwight William (trī'un), 1849–1925, American landscape painter, b Hartford, Conn, studied in Paris under C F Daubigny and Jacquesson de la Chevreuse On his return to America he became (1882) director of the Hartford School of Art Later he was professor of art at Smith College and finally established himself in New York, becoming a member of the National Academy in 1891 His poetic landscapes with their delicate color and misty effects reflect the influence of Daubigny Recipient of many honors and awards, Tryon is best represented in the Freer Gallery, Washington, D C, which contains 27 oils His *Moonlight* (Metropolitan Mus) is characteristic

Tryon, William, 1725–88, British colonial governor After a distinguished army career, he was appointed (1764) lieutenant governor of North Carolina and succeeded (1765) Arthur Dobbs as governor Tryon was an able administrator but became unpopular with the colonists because of his rigorous suppression (1771) of the REGULATOR MOVEMENT In 1771 he was appointed governor of New York, and at the outbreak of the American Revolution he was forced to spend nearly a year on a British ship in the harbor Tryon returned to power when William Howe took the city (1776) and later (1777, 1779) led Tory raids in Connecticut

Tryon, resort town (pop 2,043), W N C, in the Blue Ridge SE of Asheville at the S C line, inc 1885. Tryon is a center for handcrafts and weaving

Tryphena (trīfē'nu) and **Tryphosa** (trīfō'su) [both from Gr, =luxurious], two Christian women at Rome Rom 16 12

Tsaidam (tsī'dam'), Mandarin *Ch'i-ta*, swampy region, central Tsinghai prov, China It lies W of Tsing lake and between two branches of the Kunlun range

Tsaldaris, Panayoti (pänäyō'tē tsäl-dhä'rēs), 1868–1936, Greek politician A leader of the Populist (royalist) party, he succeeded VENIZELOS as premier in 1932 and again, after a brief return to power by Venizelos, in 1933 In 1935 the Venizelists rose against the royalist policy of Tsaldaris, but they were crushed by General KONDYLIS Tsaldaris's government won a victory in the election of 1935, from which the republicans abstained. He was, however, accused of excessive leniency toward the rebels by Kondylis, who ousted him by a coup d'état late in 1935 and who secured the recall of George II His relative, **Constantine Tsaldaris,** 1884–, leader of the Populist party, was premier (1946) when King George II was once more recalled to Greece

Tsana, lake see TANA

Tsangpo see BRAHMAPUTRA.

Tsankov, Alexander (tsän'kôf), 1879–, Bulgarian statesman While professor of political economy at the Univ of Sofia, he was instrumental in the overthrow (1923) of the Agrarian dictatorship of Stamboliski, and in the White government which followed, he became prime minister He mercilessly fought the Agrarians and the Communists, who staged an unsuccessful revolt in 1923 and who blew up the cathedral at Sofia during Easter Mass in 1925. During his administration Bulgarian relations with Greece and Yugoslavia were strained He resigned in 1926 and was succeeded by Liaptchev The name is also spelled Tsankoff, Zankoff, or Zankov

Tsankov, Dragan (dra'gän tsän'kôf), 1828–1911, Bulgarian statesman As journalist and later as professor he played an important part in achieving the autonomy of the Bulgarian Church from the patriarchate of Constantinople and in establishing the Bulgarian state He was vice president of the constituent assembly, founded the Russophile Liberal party, and became (1879) diplomatic agent at Constantinople Made premier in 1880, he disagreed with Prince Alexander and was imprisoned (1882–83), but he was reappointed president of the council and eventually compelled the prince to abdicate The name is also spelled Tsankoff, Zankoff, or Zankov

Tsaritsyn, RSFSR see STALINGRAD

Tsarskoye Selo, RSFSR see PUSHKIN

Tschaikovsky, Nikolai Vasilyevich see CHAYKOVSKY, NIKOLAI VASILYEVICH

Tschaikowsky, Piotr Ilich see TCHAIKOVSKY

Tschermak-Seysenegg, Erich (ā'rĭkh chĕr'mak-sī'zunĕk), 1871–, Austrian botanist, a specialist in plant breeding He became professor at the agricultural school in Vienna in 1909 He was one of several scientists who simultaneously in 1900 confirmed Mendel's laws of heredity

Tschudi, Aegidius or **Gilg** (ĕj'dēus chōō'dē, gĭlk'), 1505–72, early Swiss historian He was *Landammann* of Glarus canton His *Chronicon Helveticum* [Swiss chronicle], published long after his death, is inaccurate and legend-filled, but is invaluable because of the copies of early documents in it Tschudi integrated the various conflicting versions of the William Tell legend, later retold by Johannes von Muller and extensively used by Schiller

Tse Hsi see TZU HSI

Tsesis, Latvia see CESIS

tsetse fly (tsē'tsē), African insect of the genus *Glossina*, slightly larger than the housefly Both male and female suck blood A number of the 21 species can transmit to humans the trypanosomes which cause the Gambian and Rhodesian forms of African sleeping sickness The tsetse fly also carries the trypanosomes which cause nagana and other diseases of wild and domestic animals Clearing the brush which the flies inhabit and spraying the area with DDT help to destroy them

Tsientang or Chientang (both chyĕn'tang'), river, Chekiang prov, China, flowing c 250 mi NE to Hangchow Bay It is an important commercial artery The tide rushing into the river from the bay causes a bore from 5 to 15 ft high, which sweeps past the city of Hangchow and menaces shipping in the harbor

Tsimshian Indians (tsĭm'shēun), group of North American Indian tribes, speaking a common language (see PENUTIAN) They live about the Skeena and Nass rivers and southward along the coast of British Columbia and northward into Alaska Their culture is much like that of the Haida and the Tlingit, with whom they form the northernmost group of Pacific Northwest culture They depend largely on fishing for subsistence, on the codfish and halibut of the deep sea as well as the salmon and candlefish (eulachon) that come upstream in spring They hunt seals and sea lions and, in the interior, bear, mountain goat, and deer. They also use hemlock bark, berries, and kelp for food Chimmesyan is another name for Tsimshian Much has been written of the Tsimshian—and especially about the Episcopalian missionary William Duncan He established (1857) a mission at the Tsimshian village of Metlakahtta, which is 15 mi S of Port Simpson, British Columbia Duncan moved, however, in 1887 to Port Chester, or New Metlakahtta, on Annette island, and most of the Indians followed him Today the Tsimshian live on reservations in British Columbia, where they number some 6,100. See Henry S Wellcome, *The Story of Metlakahtta* (1887), Franz Boas, *Tsimshian Mythology* (1916), Theresa Durlach, *The Relationship Systems of the Tlingit, Haida, and Tsimshian* (1928)

Tsin (dzĭn) or **Chin** (chĭn), dynasty of China which ruled from 265 to 420, after the period of the

Three Kingdoms. Tsin was the dynastic name assumed by the Wei, who by 280 had completed the conquest of China (see THREE KINGDOMS) Almost immediately after its official founding the Tsin empire began to contract A revolt deprived it of Szechwan from 302 to 347, and there were extensive losses to the Hsiung-nu (Huns) in the north A series of dynasties, mainly of barbaric origin, ruled N China After the Tsin regained Szechwan, they became stronger and occupied many areas in the southeast, where Chinese culture had not previously penetrated. The population of the Tsin state was greatly increased, and its cultural level was raised by the heavy influx of Chinese refugees from the north The Tsin saw the continued growth of Buddhism and of specialized types of learning, notably regional gazetteers, which were produced in abundance An important material advance was the extensive use of coal In the period between the collapse of the Tsin and the founding of the Sui dynasty, China was never united The most notable of the many local dynasties was the Northern Wei (it had no connection with the Tsin), which conquered most of N China by 439 The Northern Wei were originally a Turkic tribe, the T'oba (or T'opa) They have left many colossal rock carvings, monuments of a mixed Indian and Alexandrian Greek character

Tsinan (tsĭn'än'), Mandarin *Chi-nan*, city (pop 591,490), capital of Shantung prov, China It lies just S of the Yellow River, and it is a railroad junction with connections to many parts of China Silk cloth is manufactured

Tsing (chĭng), Mandarin *Ch'ing*, salt lake, c 65 mi long, NE Tsinghai prov, China It is at an altitude of c 10,000 ft From c 800 until 1928 it marked the China-Tibet boundary The lake is sometimes called Koko Nor [Tibetan,=blue lake] The name is sometimes spelled Ching

Tsinghai (chĭng'hī'), Mandarin *Ch'ing-hai*, province (257,620 sq mi, pop 1,123,219), W China, bordered by Tibet on the west The capital is Sining Until 1928 Tsinghai was the Tibetan province of Koko Nor Tsinghai is mainly a high plateau frozen eight months of the year The swampy Tsaidam occupies much of the central area, and in the east there are many lakes, notably Tsing (Koko Nor) The Yellow, Yangtze, and Mekong rivers rise in Tsinghai A little grain is grown, but the inhabitants are mostly pastoral nomads, both Tibetan and Mongol There is some trade with Tibet, but without railroads, motor roads, or navigable streams Tsinghai is isolated from the rest of China The name is sometimes spelled Chinghai

Tsingling (tsĭng'lĭng') or **Tsinling** (chĭn'lĭng'), Mandarin *Ts'in-ling*, mountain range, NW China, rising to c 20,000 ft It extends east and west across S Kansu and S Shensi provs

Tsingtao (tsĭng'tou', chĭng'dou'), Mandarin *Ch'ing-tao*, city (pop c,60,000), Shantung prov, China, a port on the Yellow Sea It is the terminus of a railroad to Tientsin and a port of entrance for foreign goods As the administrative center of the former German territory of KIAOCHOW, Tsingtao was developed into a modern city From 1914 to 1922 it was held by Japan After the Second World War, Tsingtao was a marine and naval base for the United States until 1949, when it was abandoned and fell to the Communists

Tsingyuan, China see PAOTING

Tsinling, mountain range see TSINGLING

Tsitsihar (tsē'tsō'här', chī'chē'här'), Mandarin *Ch'i-ch'i-ha-erh*, city (pop 113,495), capital of Heilung prov, NE China, on the Nonni river Tsitsihar is connected by rail with Harbin, Mukden, and Talien (Dairen) It is a distributing center for cattle, furs, and rugs

Tskhinval, Georgian SSR see STALINIR

Tsu (tsōō), city (1947 pop 68,662), capital of Mie prefecture, S Honshu, Japan, on Ise Bay It is a commercial and manufacturing center Mie prefecture, with textile, ceramics, woodworking, agricultural, and fishing industries, embraces Yokkaichi and Uji-yamada (a major Shintoist center)

Tsugaru Strait (tsōō'gä'rōō), channel, separating Honshu and Hokkaido islands, Japan, and connecting the Sea of Japan on the west with the Pacific on the east

Tsu Hsi see TZU HSI

Tsunetaka (tsōō'nä'tä'kä), fl 13th cent, Japanese painter He worked also in black and white and is best known for landscapes of distinctive and vigorous drawing He later changed his name to Tosa Tsunetaka, giving the name Tosa to a school of art

Tsuruga (tsōō'rōō'gä), city (1947 pop 28,268), Fukui prefecture, central Honshu, Japan, a port on the Sea of Japan It has steamer connection with Vladivostok

Tsushima (tsōō'shēmä), Japanese island in Korea Strait Near by, in May, 1905, occurred the major naval battle of the RUSSO-JAPANESE WAR The Russian Baltic fleet, under the command of Admiral Rozhdestvenski, set sail (Sept, 1904) for Vladivostok In its encounter with the Japanese fleet under Count Togo it suffered nearly total disaster Only a few of the Russian ships escaped to neutral ports or reached their destination, the majority were sunk or captured. The defeat convinced Russia that further struggle was hopeless, and in August a treaty of peace was signed at Portsmouth, N H

Tsz (dsŭ), Mandarin *Tzu*, river, Hunan prov, China, flowing 350 mi NE to Tungting lake

Tuam (tōō'ŭm), town (pop 3,873), Co Galway, Ireland, NNE of Galway It is a farm market and is the seat of a Roman Catholic archbishop and an Anglican bishop St Jarlath's College is here

Tuamotu Islands (tōōämō'tōō) or **Low Archipelago,** coral group, area c 330 sq mi, S Pacific, part of the FRENCH ESTABLISHMENTS IN OCEANIA They are 300 mi S of the Marquesas Islands and comprise 80 atolls in a 1,300-mile chain The seat of government is at Papeete on Tahiti, Society Islands Hangiroa is the largest island, Fakarava the most important The islands have coconut, pandanus, and breadfruit trees and produce pearl shell and copra MAKATEA is the only phosphate island of the group They were discovered in 1606 by the Spanish and were annexed by France in 1881 A small part of the group is governed with the GAMBIER ISLANDS The group was formerly called Paumotu or Dangerous Archipelago

Tuan Ch'i-jui (dwän'chē'rōōā'), 1864–1936, Chinese general and political leader He studied military science in Germany and held high positions in the army under the Ch'ing dynasty Tuan, a consistent supporter of YUAN SHIH-KAI, served as prime minister and minister of war several times between 1912 and 1918 He was provisional president of China in 1924 and 1925

Tuapse (tōōäpsā'), city (1939 estimated pop 9,600), S Krasnodar Territory, SE European RSFSR, on the Black Sea It is a major petroleum port, connected by pipe lines with the Grozny and Maikop oil fields

Tuareg or **Touareg** (both twä'rĕg), Moslem Berber people, nomads of the Sahara Among the most highly civilized peoples of Africa, they have preserved their ancient alphabet Their social organization is one of hereditary classes The upper classes, organized in tribes, convoy caravans and, until subdued by France, were feared as raiders They maintain a feudal relationship with the partly agricultural lower tribes Menial labor is performed by non-Tuareg servants, formerly by captive slaves Tuareg men go veiled, while the women are unveiled Women enjoy respect and freedom, and descent and inheritance are through the female line The fiercely independent Tuareg resented European hegemony in Africa and long resisted conquest See F J Rodd, *People of the Veil* (1926)

Tuasivi (tōō'äsē'vē), town, on the east coast of Savaii, Western Samoa, headquarters of the resident commissioner and site of a government hospital

Tuatha De Danann (tōō'ŭhu dā' dē'nan, tōō'ŭthu), in Irish tradition, as in the *Book of Invasions*, the last invaders of Ireland before the MILESIANS They were endowed with great supernatural powers, and by means of these they defeated their predecessors, the Firbolgs and the Fomors, in battle They were defeated by the Milesians and retired into the *sidhe* [fairy-mounds] or went to Tir na nOg (the land of eternal youth) and became the gods of pagan Ireland They have become confused in Irish folklore with the fairies

tuba (tōō'bŭ, tōō'bu) [Latin,=trumpet], brass wind musical instrument, resembling a trumpet but larger and therefore lower pitched The term *tuba* is applied rather loosely to that group of instruments which play the lowest brass parts in band and orchestra, these instruments vary slightly in size and in bore and are known by various names, including helicon (of which an American variety is called sousaphone), euphonium, *Flugelhorn*, baryton, saxhorn, and Wagner tuba All of them were developed in the 19th cent, their predecessors were the 16th-century serpent and the ophicleide, invented in 1817 Tubas are regular members of the band and the orchestra They are transposing instruments, made in various keys

Tubal (tōō'bŭl), *son of Japheth* Gen 10 2

Tubal-cain (kān'), in the Bible, son of Lamech He first worked brass and iron Gen 4 22

tube, vacuum or electron, device used in electronics as a rectifier, amplifier, mixer, and detector of audio and radio frequencies and for electrical measurements The simplest form of a vacuum tube consists of a glass tube in which a low vacuum has been produced and which contains, fused in its walls, two electrodes Between these, electricity is discharged, the vacuum making the discharge more readily accomplished Electron tubes known as gas-filled tubes actually enclose only a small amount of the gas so that they, too, contain a relatively high vacuum Under certain conditions during current flow, light appears, its color varying with the gas making up the rarefied atmosphere in the tube Vacuum tubes (also called thermionic valves) employ chiefly the principle of thermionic emission heating the filament (cathode) releases electrons which flow to the positive electrode (anode or plate), the magnitude of current varying with the plate voltage Rays given off from the cathode of a vacuum tube are called cathode rays When these rays are focused upon a metal plate placed directly in their path in a vacuum tube, X rays are produced In radio, diode tubes are essentially of the simple vacuum type In triodes a control grid is inserted between cathode and plate By making the grid positive or negative in respect to the cathode the flow of electrons to the plate may be encouraged or impeded, thus achieving effective control and amplification of the plate current with little or no power expended in circuit Tetrode and pentode tubes have a similar action basically, screen and suppressor grids are added to increase the tube's efficiency Klystron and magnetrons are types used in ultra-high frequency service See also PHOTOELECTRIC CELL

tuber, enlarged underground plant stem, such as the edible part of the potato plant and the Jerusalem artichoke Although it is much modified in structure, it shows all the usual stem parts—bark, wood, pith, and even the nodes and internodes The eyes of the potato are nodes where buds appear The tuber contains a large amount of stored food, commonly starch

tubercle (tōō'bŭrkul) [Latin,=little swelling], small, and usually solid, swelling or nodule, especially in animals and plants In anatomy the term is applied to natural prominences in certain muscles, to nerve nuclei of the central nervous system, and to eminences on bones, especially regions for the attachment of muscles or ligaments In dentistry it refers to the cusp of a tooth In pathology it describes small, morbid growths particularly the lesions of TUBERCULOSIS In botany it applies especially to the nodules on the roots of leguminous plants that result from the activities of NITROGEN-FIXING BACTERIA

tuberculosis, contagious, infectious disease caused by a bacterium (*Mycobacterium tuberculosis*) discovered by Robert KOCH There are several types of the germ, commonly called the tubercle bacillus, including those that cause the human, the bovine, and the avian forms of the disease, as well as those that produce a similar disease in some of the lower vertebrates, e g, fish, amphibians, and reptiles The germs causing the human and the bovine forms of the disease are similar and are usually considered varieties of the same species Formerly children who drank raw milk from tuberculous cows often became victims of the disease Since the movement begun in 1918 by the national and state governments to eradicate the disease through testing cattle and destroying those having tuberculosis this source of infection of humans has been greatly reduced Some cases in children can still be traced to the drinking of milk from tuberculous cows The commonest mode of infection by humans, however is through germs present in the sputum of a person suffering from pulmonary tuberculosis (also called consumption and phthisis) As the bacteria attack and destroy body tissue, small rounded masses called tubercles or nodules are formed, these contain the bacteria, white blood cells, and pus From such lesions formed in the lung tissue in pulmonary tuberculosis the germs enter the sputum, and thereby the infection may be spread to other people As healing takes place the tubercles become surrounded by fibrous or calcified material, and if they remain in this healed condition the sputum does not contain the germs The use of X-ray photographs makes possible early diagnosis of pulmonary tuberculosis Such X rays reveal also that a large percentage of adults, especially those living in cities, have overcome attacks of the disease of which they were not aware Other forms of tuberculosis include tuberculosis of the bones, the intestines, the lymph glands (a form of which was early known as scrofula and the king's evil), and the skin (*lupus vulgaris*) The disease attacks man at any age but is especially prevalent during youth and middle age A normally healthy person has considerable resistance to the disease, however, there is danger to those living in close contact with a tubercular person Overwork, fatigue, insufficient fresh air, and an inadequate diet reduce natural resistance Treatment includes (in addition to medication) rest, fresh air, and a well-balanced and nourishing diet Many sanatoriums for providing such care are maintained by both private and public agencies These follow, in general, the plan of treatment introduced in the United States at Saranac Lake, N Y, by Edward Livingston TRUDEAU The use of skin tests and X rays for early detection of the disease, of vaccines to prevent its development, and of certain sulfa drugs and antibiotic substances has helped to reduce the mortality rates Nevertheless its prevalence still presents a serious problem See H A Pattison, *Rehabilitation of the Tuberculous* (1942), H D Chadwick and A S Pope, *Modern Attack on Tuberculosis* (rev ed, 1946), R G Lovell, *Taking the Cure* (1948), J B McDougall, *Tuberculosis a Global Study in Social Pathology* (1949), publications of the National Tuberculosis Association, New York city

tuberose (tōō'brōz -brōs, tū'-) tuberous-rooted tender plant (*Polianthes tuberosa*), native to Mexico, cultivated in Europe and America chiefly as a garden plant It has waxy white, heavily fragrant flowers blooming in summer or fall, of which the double variety is most popular The tubers, planted

in the spring, are dug and stored over winter or replaced annually.

Tübingen (tü'bing-ŭn), city (pop 34,345), S Württemberg, SW Germany, on the Neckar and SSW of Stuttgart After 1945 it became the capital of the French-occupied state of Württemberg-Hohenzollern. Its industries include manufactures of textiles, machinery, and precision instruments Tübingen is famous for its university (founded 1477), where Melanchthon taught The theological faculty was famous in the 19th cent as the Tübingen School, founded by F C BAUR. The university now has many scientific institutes Chartered c 1200, Tübingen became the second capital of Württemberg in the mid-15th cent. The old center of the city has retained its medieval character It is dominated by the late Gothic Church of St George Other landmarks include the castle, first mentioned in the 11th cent and renovated in Renaissance style, and the city hall (15th–16th cent.). Ludwig Uhland was born and lived here

Tübingen School see BAUR, FERDINAND CHRISTIAN

Tubman, Harriet, c 1820–1913, American abolitionist, b Dorchester co, Md She escaped from slavery in 1849 and became one of the most successful "conductors" on the Underground Railroad, leading over 300 slaves to freedom, forcing the timid ahead with a loaded revolver She was a friend of the principal abolitionists, and John Brown almost certainly confided his Harpers Ferry plan to her In the Civil War, Harriet Tubman attached herself to the Union forces in coastal South Carolina, serving as a nurse, laundress, and spy At Auburn, N.Y., her home for many years, the Cayuga co courthouse contains a tablet in her honor See biographies by Sarah Bradford (1869, 1886) and Earl Conrad (1943), Anne Parrish, *A Clouded Star* (1948)

Tubuai Islands (tōōbōō'ī') or **Austral Islands,** volcanic group, S Pacific, part of the FRENCH ESTABLISHMENTS IN OCEANIA They are S of the Society Islands The group comprises five islands (Rimatara, Rurutu, Raivavae, Tubuai, and uninhabited Maria Island). Tubuai (17 sq mi, pop 1,006), the largest, was discovered in 1777 by Capt James Cook and was annexed by France in 1880 The health and racial purity of the Polynesians of Rurutu and Rimatara are protected by an edict (1938) forbidding nonnatives to visit these islands Coffee, arrowroot, and copra are produced Rapa (16 sq mi, pop 298), a volcanic island 325 mi SE of the Tubuai group, is a dependency

Tuckahoe (tŭ'kuhō), suburban village (pop 6,563), SE N.Y., in Westchester co, S of White Plains, settled 1684, inc 1903 There are marble quarries, and stucco is made.

tuckahoe (tŭ'kuhō) [from Algonquian], name applied to two Indian foods that are known also as Indian bread One of these foods is the rootstock of certain plants of the arum family, especially golden club and arrow arum Although acrid and poisonous when raw, the rootstock when cooked is a nutritious food The other form of tuckahoe is a compacted mass of mycelium (called sclerotium) of certain fungi It is a firm, whitish substance with a hard, brown, barklike surface A commonly used form is sclerotium from a subterranean fungus (*Poria cocos*) found on the roots of trees in the S United States

Tucker, Abraham, 1705–74, English philosopher He studied at Oxford and later devoted himself to writing and study In the field of ethics he advanced the position that each man seeks his own satisfactions and that the will of God blends these into a public good This is similar to the later utilitarian ethics Tucker's major work, *The Nature of Light Pursued* (7 vols, 1768–78), was published in part under the pseudonym Edward Search

Tucker, John Randolph, 1812–83, American naval officer, b Alexandria, Va (then part of the District of Columbia) Appointed a midshipman in 1826, he had seen varied service, including duty in the Mexican War, when he resigned (April, 1861) as commander to take the same rank in the Confederate navy In the Civil War he commanded the *Patrick Henry* in the battle of Hampton Roads (March, 1862), fought at Drewry's Bluff in 1862 and 1864, and was captain in charge (1862–64) of Confederate naval forces at Charleston, S C In 1866 Tucker was rear admiral commanding the naval forces of Peru and Chile in their war against Spain, and as president of the Peruvian hydrographic commission he conducted (1873) an expedition which explored the upper Amazon See biography by J. H Rochelle (1903)

Tucker, Josiah, 1713–99, English economist, b. Wales A clergyman, he was a prolific pamphleteer in a wide range of subjects He maintained that war is a loss even to a victorious nation and that England's colonies could not be held against their will Adam Smith is believed to have been influenced by him For selected writings and an account of the man and his work, see R L. Schuyler, *Josiah Tucker* (1931)

Tuckerman, Edward, 1817–86, American botanist, b Boston, grad Union College, Schenectady (B A, 1837) He is known for his work on lichens Among his writings are *An Enumeration of North American Lichens* (1845), *Genera Lichenum: an Arrangement of the North American Lichens* (1872), and *A Synopsis of the North American Lichens* (Vol. I, 1882; Vol II, ed by Henry Willey, 1888).

Tuckerton, borough (pop. 1,320), SE N.J., near Little Egg Harbor N of Atlantic City, settled c 1700, inc. 1901. Near it is a radio station for marine transmitting Tuckerton was once an important port Ships in its harbor were burned by the British in 1778

Tucson (tōō'sŏn'), city (pop 36,818), co. seat of Pima co, SE Ariz, SE of Phoenix The "Old Pueblo" drew its first Spanish settlers in the late 17th cent, and Father Eusebio Kino founded Mission San Xavier del Bac (9 mi S of Tucson, present building erected by Franciscans in the late 18th cent.) in 1700. Father F. T H Garcés reestablished the village, and the presidio was moved in 1776 to Tucson, which was a military border post of New Spain, of Mexico, and, after its transfer under the Gadsden Purchase, of the United States (Fort Lowell) It became also a trade center for mining, ranching, and some agriculture, territorial capital (1867–77), and later a railroad point, with some industries, among them an airplane-parts plant Sunny Tucson is best known as a winter and a health resort The desert growths of the Saguaro National Monument near by contrast with the cool heights of the easily accessible Santa Catalina Mts, notably Mt Lemmon A fiesta and rodeo is held each February The Univ of Arizona (see ARIZONA, UNIVERSITY OF) and botanical and agricultural experiment stations are in Tucson

Tucumán (tōōkōōmän'), city (estimated pop 169,566), capital of Tucumán prov, NW Argentina The original name was San Miguel de Tucumán It is the metropolis of a large irrigated area which produces sugar Corn, alfalfa, rice, tobacco, and fruit are also grown Lumbering is carried on, and the province is rich in minerals Tucumán was founded in 1565 and was moved to its present site in 1685 Here in Sept, 1812, Manuel Belgrano defeated the Spanish royalists Meeting in the city, a congress proclaimed (July 9, 1816) the independence from Spain of the United Provs of La Plata Tucumán is the seat of a university, and there is a popular shrine of Our Lady of Mercy

Tucumcari (tōō'kumkâ"rē), city (pop 6,194), co seat of Quay co, E N Mex, just S of the Canadian river, E of Albuquerque and near the Texas line, inc 1908 It is a railroad division point and trade center for a farm and stock area Conchas Dam (235 ft high and 6,230 ft long) and Recreational Area is near by

Tudela (tōōthā'lä), city (pop 12,873), Navarre, N Spain, on the Ebro The surrounding fertile region produces fruit, grapes, and olives There are sugar refineries and varied manufactures. Tudela flourished under the Moors and was later the second city of the kingdom of Navarre and a notable fortress In a battle near here, also called the battle of the Ebro, the French won a major victory (1808) in the Peninsular War There is a fine 12th-century cathedral The Ebro is crossed here by an old Roman bridge

Tudor, royal family that ruled England from 1485 to 1603 Its founder was Owen Tudor, of a Welsh family of great antiquity, who was a squire at the court of Henry VI and who married Catherine (of Valois), the widow of Henry V Of their five children, the eldest son, Edmund, was created earl of Richmond (1453), married Margaret Beaufort, a descendant of John of Gaunt, and had one son, Henry, who ascended the throne as HENRY VII after defeating Richard III at Bosworth Field (1585) and ending the Wars of the Roses By his marriage to Elizabeth Woodville, daughter of Edward IV, Henry united the Lancastrian and Yorkist claims to the throne Of his children, his daughter MARGARET TUDOR married James IV of Scotland, his daughter Mary (see MARY OF ENGLAND) married Louis XII of France, and his surviving son succeeded him (1509) on the throne as HENRY VIII All three of Henry VIII's children, EDWARD VI, MARY I, and ELIZABETH, were rulers of England Following the death of Edward VI, there was an attempt to place Mary of England's granddaughter, Lady Jane GREY, upon the throne but this was soon crushed, and she was beheaded The reign of the Tudors marks the emergence of England from feudalism and was distinguished by a vast increase in the power of the monarchy, the rise of England as a naval power and a corresponding sense of national pride, an increase in trade, and considerable religious strife It was a period of a remarkable flowering of English literature and scholarship Upon the death of Elizabeth (1603), the Tudor dynasty was succeeded by the house of Stuart, whose claim to the throne derived from Margaret Tudor.

Tudor, Owen (ō'ĭn), d 1461, founder of the TUDOR dynasty. He belonged to an ancient Welsh family. Presumably for valor at Agincourt, he was made squire to the body of Henry V. In 1429 (?) he married the widowed queen, Catherine of Valois, who had five children by him. Twice imprisoned by Humphrey, duke of Gloucester, during Henry VI's infancy, he finally escaped to Wales, but later Henry made provision for him in England. Owen, a faithful Lancastrian in the Wars of the Roses, was killed by Yorkists at the battle of Mortimer's Cross (1461).

Tudor, William, 1779–1830, American writer, b Boston, grad Harvard, 1796. An influential member of the Anthology Club in Boston, he contributed to its magazine and later was the first editor of the *North American Review* (founded 1815). His writings are *Letters on the Eastern States* (1820), essays in *Miscellanies* (1821), and a biography of James Otis (1823). He was U S consul in Peru from 1823 to 1827 and in Brazil from 1827 to 1830.

Tudor style, descriptive of the English architecture and decoration of the first half of the 16th cent, prevailing during the reigns (1485–1558) of Henry VII, Henry VIII, Edward VI, and Mary I It is the first of the transitional styles between Gothic Perpendicular and Palladian architecture, the other two being Elizabethan and Jacobean The rise of new trading families to wealth and the enrichment of court favorites by Henry VIII with lands and wealth derived from his suppression of monasteries resulted in the building of many manor houses In these the fortified character of earlier times gave way to increased domesticity and privacy Though the great hall still remained the focus of the establishment, its importance now decreased with the introduction of other rooms such as parlors, studies, bedrooms in greater number, and quarters for dining Rooms frequently were fitted with oak paneling, often of linen-fold type, walls and ceilings received rich plaster relief ornament, and articles of furniture came into greater use Exteriors in domestic work exhibited Perpendicular features in modified form, notably square-headed, mullioned windows and arched openings of the four-centered or so-called Tudor type Other characteristics were the use of brickwork combined with half-timber, high pinnacled gables, bay or oriel windows, and numerous chimneys of decorative form Principal Tudor examples are parts of Hampton Court Palace, begun in 1515, and many colleges of Oxford and Cambridge Noted country manors include Sutton Place, Surrey, Layer Marney, Essex, and the splendid Compton Wynyates, Warwick.

Tuesday see WEEK

tufa see TRAVERTINE

Tufts College, at Medford and Boston, Mass; nonsectarian, for men and women, chartered 1852, opened 1855 by Hosea Ballou 2d and other Universalists It cooperates with Harvard in Crane (theological) and Fletcher (law and diplomacy) schools and with Simmons College school of social work It has its own schools of dentistry, engineering (with Bromfield-Pearson School), liberal arts (with Jackson College for women), and medicine (part of New England Medical Center) The P T Barnum natural history museum and the Edwin Ginn international affairs library are at Medford.

Tu Fu (dōō' fōō', tōō'), 713?–770, Chinese poet. Although he began writing at an early age, his first work showed little literary promise He never passed the imperial civil service examinations and spent many poverty-stricken years wandering through nearly all the provinces of China. Whenever Tu Fu did occupy an official position, it was not long before he was dismissed His poetry embodies much of the bitterness of his life An ardent patriot and intensely loyal to the ruling T'ang dynasty, he nevertheless beheld with loathing the corruption and cruelty which prevailed He sympathized intensely with the common people of China, whose sufferings he had himself endured His power is strong in rendering the stark images of war, but in some of his work there is a calmer mood, a delight in nature or in court ceremonial

tugboat, strongly built steam or power vessel. They are used to warp large steamers into and out of port and to tow barges, dredging and salvage equipment, and disabled vessels. Tugboats range in size from 93 ft overall length to 210 ft for the "seagoing" type, with engines generating from 750 hp to 3,000 hp Most harbor tugboats are about 100 ft. long, with engines of about 1,000 hp Steam power long dominated tugboat design, but in recent years Diesel drive and Diesel and electric drive have been adopted Most tugs are built of wood or metal-sheathed wood, the resiliency of a wooden hull preventing damage to both tug boat and vessel in warping operations A modern port cannot operate without tugboats When the tugboat crews went on strike in New York in the winter of 1945–46, the city was deprived of virtually all incoming coal and fuel oil, and harbor traffic was stalled. The modern tugboat is equipped with radio telephone, and some have radar to aid navigation in fog and storm

Tug Fork, river rising in S West Virginia and flowing northwest to make a part of the Ky–W Va. boundary It joins the Levisa Fork to form the Big Sandy River at Louisa, Ky.

Tugurt (tōōgōōrt'), Fr. *Touggourt,* oasis, E Algeria, in the Sahara. It is noted for dates, which have been especially abundant since artesian wells were dug in the late 19th cent

Tugwell, Rexford Guy, 1891–, American economist, b. Chautauqua co., N.Y., grad. Wharton School;

Univ. of Pennsylvania (B.S., 1915, Ph.D., 1922). He taught economics at the Univ. of Pennsylvania (1915–17), the Univ. of Washington (1917–18), and Columbia (1920–37) He was Assistant Secretary (1933) and Undersecretary (1934–37) of Agriculture and a member of the BRAIN TRUST Rexford G Tugwell helped draw up the Agricultural Adjustment Act He was appointed (1938) chairman of the New York city planning commission and later (1941) governor of Puerto Rico After 1946 he was attached to the Univ of Chicago He wrote numerous books on economics and government

Tuileries (twē'lurēz, Fr. tüēlrē'), former palace in Paris Planned by Catherine de' Medici and begun in 1564 by Philibert Delorme, it occupied part of the present Tuileries gardens, between the Louvre and the Place de la Concorde The palace was rarely used as a royal residence before the French Revolution Late in 1789 Louis XVI was forced by the revolutionists to move his court from Versailles to the Tuileries, where he was more easily controlled by the Parisian mob He and his family were brought back here after their attempted flight (1792) to Varennes A few weeks later (Aug 10, 1792), a mob attacked the palace and the royal family took refuge in the Legislative Assembly while the SWISS GUARDS were massacred by the assailants, the royal family was from then on imprisoned in the Temple Napoleon I made the Tuileries his chief residence, and after his fall the palace was the chief residence of Louis XVIII, Charles X, Louis Philippe, and Napoleon III During the Commune of Paris of 1871 a mob, after placing gunpowder at various points of the palace and pouring petroleum into it, set it on fire and burned it down completely Architecturally, this was not a major loss, for Delorme's original design had been much altered in the course of time The gardens, laid out by Lenôtre, are famous for their formal beauty.

Tuke, William, 1732–1822, English merchant and philanthropist He succeeded at an early age to the family business at York in wholesale tea and coffee, in which he was engaged the greater part of his life He is remembered as the chief founder of the York Retreat (opened 1796), an early institution for the care of the insane in an intelligent and humane manner The York Retreat had an important influence on subsequent treatment of the insane His son **Henry Tuke**, 1755–1814, followed his father in the tea and coffee business, became a minister of the Society of Friends, and wrote a number of works on religion Henry Tuke's son **Samuel Tuke**, 1784–1857, continued in the family business and interested himself in the conditions of the insane He wrote *Description of the Retreat* (1813), a work which had great influence in reforming abuses in the treatment of insanity Samuel Tuke's son **James Hack Tuke**, 1819–96, also entered the family business and aided in the management of the York Retreat In the Irish famine years of 1846–47 and 1880, he assisted in the distribution of relief funds raised by the Society of Friends in England and labored for the betterment of Irish conditions His brother **Daniel Hack Tuke**, 1827–95, was an eminent physician who devoted himself to the study of insanity. He produced a valuable treatise, *A Manual of Psychological Medicine* (with J C Bucknill, 1858), and wrote other medical works

Tukhachevski, Mikhail Nikolayevich. see TOUKHACHEVSKY, MIKHAIL NIKOLAYEVICH

Tula (tōō'lù), city (pop 272,404), capital of Tula oblast, central European RSFSR, S of Moscow It is a railroad and manufacturing center in the Moscow lignite basin It produces metalware, machinery, and arms and has flour mills, tanneries, and sugar refineries Founded in the 12th cent, it was repeatedly attacked by the Tatars and Lithuanians in the 14th and 15th cent It became (16th cent) a key fortress of the grand duchy of Moscow, developed (17th cent) its armament manufactures, and became an administrative center In the Second World War, Tula withstood a close siege (1941) during the German drive on Moscow Tula has a 16th-century kremlin, surrounded by a quadrangular turreted wall, which forms the center of the city Yasnaya Polyana, the home of Tolstoy, is near by

Tulane University of Louisiana (tōōlān', tū–), at New Orleans; nonsectarian, private, for men and women, opened 1834, chartered as a state medical college 1835, became the Univ. of Louisiana 1847 It was renamed in 1884 when it was endowed by Paul Tulane The medical school has been noted from its early days The women's division, Newcomb College (chartered 1886, opened 1887 with a gift from Josephine L Newcomb), has art and music schools The university also includes colleges of arts and sciences, commerce and business administration, engineering (with architecture), and law, a school of social work, and a teacher's division It has natural history, medical, and art museums and the Middle American Research Institute (with a Mayan library collection and a museum).

Tulare (tùlâr', tōōlâ'rē), city (1940 pop. 8,259; 1949 special census pop. 12,153), S central Calif., SE of Fresno; founded 1872; inc 1888 It is a processing and shipping center for a rich agricultural and dairying region in the San Joaquin Valley

Tulare Lake, S central Calif., S of Hanford The Kings river brings water, as do the Kaweah and the Kern in unusually wet seasons In dry seasons the lake is almost without water It is connected by a slough with Buena Vista Lake and Kern Lake to the south, but it has no drainage outlet to the ocean It was discovered by the Spanish c 1772, before its waters were put to use for irrigation, Tulare Lake had a length of c 50 mi and a width of c 35 mi

tularemia (tōōlùrē'mēu) or **rabbit fever,** infectious disease of small mammals (particularly rabbits and hares) and of birds, caused by a nonsporebearing aerobic bacillus (*Pasteurella tularensis*) It is transmitted to man in handling, skinning, and dressing diseased animals, infection occurring by way of the skin and mucous membranes Tularemia is also transmitted to humans by the bite of ticks, deer flies, fleas, and lice and has been produced by eating insufficiently cooked infected meats The incubation period varies from three to five days Symptoms of the disease include ulcer at the site of inoculation, regional inflammation of lymph nodes, severe headache, chills, fever, sweats, prostration, and vomiting Streptomycin has been found effective in treatment.

Tularosa (tōōlùrō'su, -zù), village (pop 1,446), S central N Mex, near Alamogordo, laid out 1862 It is a trade, processing, and shipping point for a farming, grazing, and lumber area

Tulchin (tōōl'chĭn), city (pop 17,391), W Ukraine, SE of Vinnitsa It was (1825) the stronghold of the Decembrists in S Russia Today it is a farm center The name is also spelled Tultchin

Tulia (tōō'lēu), city (pop 2,055), co seat of Swisher co, extreme N Texas, S of Amarillo on the plains of the Panhandle, settled 1890, inc 1909 The town, on one of the "draws" that drain into Tule Canyon, is the center of a grain-growing, milk-producing, and ranching area

tulip, any plant of the genus *Tulipa*, hardy, bulbous-rooted Old World plants popular as garden and cut flowers and as potted plants The blossoms are deeply cup shaped and of various rich colors Tulip seeds are said to have been introduced into Europe in 1554 from Turkey, where they were possibly first cultivated In Holland in the 17th cent the wild speculation on tulip bulbs became known as tulipomania single bulbs sometimes brought several thousand dollars until the government was forced to interfere Dumas has told the story in his *Black Tulip* Holland is still an important center of tulip culture In gardens tulips are sometimes allowed to naturalize, but the bulbs are usually either separated and transplanted after maturing their leaves (to avoid diseased conditions and make room for other flowers) or are discarded for new bulbs Tulips having a peculiar color flecking or striping known as "breaking" were formerly very popular and were thought to be different varieties but now are thought to be caused by a virus disease carried by aphids The tulip was so commonly used in the designs of the early Pennsylvania Dutch potters that their ware is often called tulip ware Holland, Mich., a center of tulip growing in the United States, holds an annual tulip festival See *Tulips* (U S Dept of Agriculture, Circular 372)

tulip tree, yellow poplar, or **whitewood,** handsome, deciduous tree of the magnolia family (*Liriodendron tulipifera*), native to the United States E of the Mississippi It is one of the tallest trees of its area, and its towering trunk is free of branches to a great height Because of the value of the soft, straight-grained wood, the larger trees are becoming scarce The wood (sometimes called canary wood) is highly prized for interiors, construction, cabinetmaking, plywood, woodworking, and many other purposes The leaves are often square-tipped The yellow and orange tuliplike flowers were formerly the state flower of Indiana

Tull, Jethro, 1674–1741, English agriculturist and inventor He studied methods of agriculture in England, France, and Italy and influenced British agriculture through his writings, which include *The Horse-Hoeing Husbandry* (1733) Tull advocated pulverizing the soil, planting in drills, and thorough tilling with plough and hoe during the growing period He invented (c 1701) a machine drill

Tullahoma (tŭlùhō'mu), town (pop 4,549), central Tenn, SE of Nashville, settled 1850, inc 1852 It is an industrial town in a timber and farm area In the Civil War it fell (July, 1863) to Federals under Gen W. S Rosecrans, who outmaneuvered Gen Braxton Bragg in the operations preliminary to the CHATTANOOGA CAMPAIGN

Tullamore (tŭ"lumôr'), urban district (pop 5,894), co seat of Co. Offaly, Ireland Durrow Abbey, 4 mi north, was founded (553) by St Columba The town has distilling and woolen milling.

Tulle (tōōl, Fr tül), city (pop 14,744), capital of Corrèze dept, S central France, in Limousin. Today Tulle manufactures arms and textiles It gave its name to tulle material, first manufactured here There are many medieval and Renaissance houses and a cathedral (12th–14th cent.).

Tulloch, John (tŭ'lukh, -luk), 1823–86, Scottish liberal theologian and educator Ordained in 1845, he was a minister of the Church of Scotland until 1854, when he became principal and professor of theology of St. Mary's College, St Andrews In 1859 he was appointed a chaplain to Queen Victoria He was of influence in matters of education and in the affairs of his church In 1878 he was moderator of the General Assembly of the Church of Scotland Among his works is *Rational Theology and Christian Philosophy in England in the Seventeenth Century* (1872). See memoir by M O W Oliphant (1888)

Tully see CICERO

Tulsa (tŭl'su), city (pop 142,157), co seat of Tulsa co, NE Okla, on the Arkansas river east of its junction with the Cimarron First settled by Indian exiles c 1860, the present town was founded in 1880 as a railroad depot, the greatest period of growth came with the discovery of oil in 1901 The city, with its large refineries and company headquarters, is known as the "oil capital of the world" It is also the commercial center of a rich area producing oil, cotton, lead, zinc, farm products, and livestock, its industries include the manufacture of textiles, glass, chemicals, furniture, steel, and machinery In 1941 an important aircraft industry was established here The Univ of Tulsa (coeducational, 1894), Spartan College of Aeronautical Engineering, and an art gallery are here, nearby lakes and park provide recreation

Tultchin, Ukraine see TULCHIN

Tumacacori National Monument see NATIONAL PARKS AND MONUMENTS (table)

Tumaco (tōōmä'kō), city (pop 9,671), SW Colombia, a port on the Pacific, 180 mi SW of Buenaventura It stands on a small island just off the coast and has a very hot climate It exports coffee, cacao, tobacco, vegetables, and other products of the interior The city was partly destroyed by fire in Oct, 1947

Tumbes (tōōm'bās), city (pop 6,355), capital of Tumbes prov, NW Peru Francisco Pizarro landed here in his conquest of Peru

tumblebug or **dung beetle,** name for a number of dark, bronzed, or brightly colored beetles of various genera, e g, *Scarabaeus, Canthon, Copris,* and *Phanaeus* Like the sacred scarab of Egypt, the beetles make balls of dung which they roll with their hind feet, sometimes for long distances, and bury An egg is laid in the ball, which then provides the larva with food, or the maker may use it for its own food supply See also SCARAB

tumbleweed, any of several plants, particularly abundant in prairie regions, that commonly break from their roots at maturity and, drying into a rounded tangle of light, stiff branches, roll before the wind, covering long distances and scattering seed as they go The Russian thistle (*Salsola pestifer*, not a thistle) is one of the most frequent of the tumbleweeds Recently naturalized, it has become a troublesome pest on Western prairies, although in drought years it may serve as forage Russian thistle may be used for range early in the spring, but later, when the spines form, it must be chopped and ensiled and should not be fed alone Some other common tumbleweeds are AMARANTH, winged pigweed, bugseed, and witch grass

tumor, mass of tissue produced by an abnormal growth of cells In some tumors the growth is progressive, in others the process sometimes ceases or diminishes spontaneously The tumor may be enclosed in a capsule or membrane, or it may be infiltrative, the cells of the tumor extending into the surrounding tissue Tumors are either benign or malignant See also CANCER

Tumwater (tŭm'wôtur), historic town (pop 955), W Wash, near Puget Sound just S of Olympia, founded 1845 It is sometimes considered the end of the OREGON TRAIL It was the first American settlement in the Sound area

tuna (tōō'nu) or **tunny** (tŭ'nē), largest game fish of the mackerel family, with a swift, powerful, streamlined body The tuna (*Thunnus thynnus*), also called bluefin and horse mackerel, of warm waters of the Atlantic and Pacific and the Mediterranean travels in schools, often leaping and thrashing about In various localities it may average from 60 to 200 lb in weight and is said to reach an extreme of 14 ft in length and over 1,500 lb in weight The related albacore or long-finned tuna rarely exceeds 65 lb, and its flesh is white and palatable For centuries the tuna fisheries of the Mediterranean and near-by Atlantic coasts have been important The fish is often eaten fresh in Europe but in America it is canned on a large scale

Tunbridge Wells, municipal borough (1931 pop 35,365, 1947 estimated pop 38,350), Kent, England, S of Tonbridge A "royal borough," it is also called Royal Tunbridge Wells Chalybeate springs were discovered here in 1606 by Lord North, and the town developed as a fashionable inland resort Noted visitors included Henrietta Maria, Catherine of Braganza, Queen Anne, Dr Johnson, Garrick, Samuel Richardson, Beau Nash, and Thackeray. There are reminders of Puritan visitors in Mt Ephraim, Mt Sion, and other names. The Pantiles is a parade Toad Rock on Rusthall

Common, to the west, and High Rocks, southwest, are curious sandstone formations Tunbridge wood mosaics are sold.

tundras (tŭn'druz) [Finnish, =marshy plain], arctic lowlands of the N USSR, north of the limit of the growth of trees. The annual precipitation is under 10 in., the warmest month has an average temperature of less than 50°F., and the subsoil is perpetually frozen The region about the Gulf of Ob and the lower Ob river is typical When the surface thaws, extensive swamps and shallow lakes are formed (since drainage is very poor), plants grow suddenly and profusely in the long hours of sunshine, and swarms of mosquitoes and other insects appear During most of the year, the tundras are a frozen desert. The inhabitants (less than two per square mile) are mainly nomadic Samoyedes, Chukchi, Koryaks, and Eskimo, they are hunters, trappers, and fishermen Their herds of reindeer feed upon mosses and lichens Alaska, Canada, the islands N of Canada, Greenland, and Iceland have tundra areas In North America the inhabitants are the Eskimo.

Tung (dōōng) or **East River**, eastern tributary of the Canton river, Kwangtung prov , China The river is called in Chinese Tung-kiang or Tung-chiang [both=east river]

Tunghwa (dōōng'hwa'), Mandarin *T'ung-hua*, city (pop. 81,993), capital of Antung prov , NE China It is a junction of railroads which connect with Korea and with other lines in Manchuria. Soybean products are manufactured.

Tung-kiang, see TUNG.

tung oil, product of the seeds of a tropical tree, the tung tree (*Aleurites fordii*), and of some related species It is known also as China wood oil and nut oil It is amber-colored and contains a high proportion of elaeostearic acid Because of its wide use as a dryer in varnishes and paints, the oil has great commercial importance China has long been the chief producer of the oil, but the tree has been introduced in other areas The U S Dept of Agriculture experimented with tung tree growing early in the 20th cent and afterward encouraged Southern farmers to cultivate it. In recent years an increasing portion of the commercial supply has been obtained from trees grown in Alabama, Georgia, Florida, Louisiana, Mississippi, and Texas While the bulk of the product is utilized by the paint and varnish industry, tung oil has additional uses, e g , as a component of insulating compounds, brake linings, and gaskets and in the manufacture of linoleum and oilcloth The oil itself is expressed from the poisonous seeds found in the heart of the tung fruit, which is the size of a small apple The seeds contain more than 50 percent of tung oil, which is readily obtained when they are heated, ground, and pressed Although propagated chiefly for their oil, tung trees are ornamental and are sometimes grown as shade trees They grow to a height of from 10 to about 25 ft , the flowers hang in loose clusters and have reddish-white petals about an inch or more in length Tung trees can grow on rather poor, dry soil Related species include the candlenut tree (*A moluccana*) and the Japanese wood oil tree (*A cordata*)

tungsten: see WOLFRAM

Tungting or **Tung-t'ing** (both dōōng'tĭng'), lake, NE Hunan prov , China Tungting is fed by many rivers, notably the Siang During the heavy summer rains the lake receives the overflow from the Yangtse and attains its maximum extent of c 4,000 sq mi. The lake area is shrinking

tung tree: see TUNG OIL

Tungus (tōōn-gōōs'), Siberian ethnic group, numbering some 40,000, called also Evenki The majority inhabit the EVENKI NATIONAL OKRUG The Tungus are closely related to the Manchus Certain cultural traits indicate that part of the Japanese population may be descended from this people. Before they were brought under Soviet control the Tungus practiced a shamanistic religion The Tungus or Tungusic languages are a family which includes the Manchu literary language they may be related to the Mongolic and Turkic families The family is sometimes classified as Ural-Altaic

Tunguska (tōōn-gōōs'kŭ), name of three eastern tributaries of the Yenisei river, RSFSR, in E central Siberia Furthest north is the **Lower Tunguska** (Rus *Nizhnyaya Tunguska*) (nyĕzh'nyŭ), 2,175 mi long It rises in the Central Siberian Plateau NW of Lake Baikal and flows N, then WNW past Tura to join the Yenisei at Turukhansk It is navigable (May–Oct) for 1,100 mi The **Stony Tunguska** (Rus *Podkamennaya Tunguska*) (pŭtkă'myĭnĭtŭ), also known as Middle Tunguska (Rus *Srednaya Tunguska*) (srĕd'nyĭtŭ), 980 mi long, rises west of the upper course of the Lower Tunguska and flows generally northwest It is navigable below the rapids in its lower course. **Upper Tunguska** (Rus *Verkhnyaya Tunguska*) is the name given to the lower course of the Angara river (see ANGARA)

Tunguska Basin, large, unexploited coal basin, area c 400,000 sq mi., RSFSR, in E central Siberia, between the Yenisei and Lena rivers. It is drained by the three Tunguska rivers. Its reserves are estimated at 440,000,000,000 tons.

tunic (tū'nĭk, tōō'–), probably the earliest form of shaped garment Made at first of two skins laced together, it was later cut from cloth, seamed at the sides and top, and usually worn with sleeves and girded The Romans used tunics as undergarments and for outer wear. During the empire, as the toga became outmoded, tunics were worn long and were often elaborately decorated. The stola, a long, full tunic, often fastened at the shoulders with brooches, was the characteristic dress of the Roman matron, it usually had long sleeves and was girded. Adaptations of the Roman tunic and stola were worn during the Middle Ages In modern usage the word *tunic* designates a woman's long blouse, usually confined at the waist, and sometimes the jackets of men's uniforms.

Tunica (tū'nĭkŭ, tōō'–), town (pop. 1,322), co seat of Tunica co , NW Miss , near the Mississippi below Memphis, Tenn , in a farm area.

tuning, in music, adjusting the mechanism of an instrument so that its tones will conform to recognised standards of pitch or to the pitch of other instruments with which it is to be played. Stringed instruments are tuned by increasing or decreasing the tension of the strings, and those which are plucked or bowed can be tuned by the player with comparative ease except in the case of the harp The tuning of a piano or an organ is an elaborate procedure requiring a skilled technician The system of tuning usually used today is EQUAL TEMPERAMENT See John Redfield, *Music, a Science and an Art* (1928), W B White, *Piano Tuning and Allied Arts* (rev ed , 1946).

tuning fork, steel instrument in the shape of a U with a short handle When struck it produces an almost pure tone, i e , only a few faint upper partials (see HARMONIC) are heard, and it retains its pitch over a long period of time, thus it is a valuable aid in tuning musical instruments It was invented in 1711 by John Shore, a trumpeter for whom parts were written by Handel and Purcell

Tunis (tū'nĭs), city (pop 364,593), capital of Tunisia, a port on the Lake of Tunis Access to the Gulf of Tunis (an arm of the Mediterranean) is by a canal terminating at a subsidiary port, La Goulette Tunis exports phosphates, iron ore, salt, cereals, and wine It is also a tourist center and a base for fishing fleets There are notable mosques, a Moslem university, and a national museum The ruins of CARTHAGE are near, to the northeast Tunis is probably pre-Carthaginian Surviving from the Middle Ages are walls, an aqueduct, and a mosque Tunis became the capital of Tunisia under the powerful Hafsid dynasty (13th–16th cent) and was a leading center for trade with Europe and the Levant Turks under Barbarossa took it in 1534 but were temporarily (1535–69, 1573–74) dislodged by the Spanish After 1591 the Turkish governors (the beys) were practically independent, and the city throve as a center of piracy and trade After the French occupation (1881) a modern European quarter was built, and the port was improved In the Second World War, Tunis, held by AXIS forces from Nov , 1942, to May 7, 1943, was the base for their final stand in Africa

Tunisia (tūnē'zhŭ, tūnĭ'shŭ), Fr *Tunisie*, protectorate (48,362 sq. mi , pop 3,230,952), North Africa, since 1946 an associated state of the French Union The capital is TUNIS Tunisia, occupying the eastern portion of the great bulge of North Africa, is bounded on the west by Algeria and on the east by Libya It is washed by the Mediterranean on the north and east It has a highly irregular coast line, which affords many bays and several fine harbors, notably BIZERTA, GABÈS, SFAX, and SOUSSE There is extensive fishing N Tunisia is covered by the Atlas Mts , while in the south, below the Chott el Djerid (a great salt lake), stretches the Sahara In the north typical oasis crops are raised, including cereals, olives, grapes, and dates There is, moreover, a large mineral production, especially of phosphates, much iron, lead, and zinc are also dug The south yields hides and meat Roads and railroads link Tunisia with N Algeria and to a less extent with Libya. The region of Tunisia, early settled by the Phoenicians, passed to Carthage in the 6th cent B C Later it was one of the granaries of Rome It was held by Vandals (5th cent) and Byzantines (6th cent.) In the 7th cent it was conquered by Arabs, who founded Kairouan The Berber population was converted to Islam, and in a second wave of Arab conquest (11th cent) it received a large admixture of Arab stock and culture The coasts were briefly held by the Normans of Sicily in the 12th cent. Tunisia attained its greatest power under the Berber Hafsid dynasty (1228–1574). In the last years of the Hafsids, Spain seized many of the coastal cities, but was ousted (1574–79) by the Turks. Under its Turkish governors, the beys, Tunisia attained virtual independence. After 1591 it became a pirate stronghold (see BARBARY STATES) The present Hussein dynasty of hereditary beys was established in 1705 In the 19th cent. the heavy debts which the beys had contracted gave European powers, especially Italy and France, openings for economic intervention A number of incidents, including attacks on Algeria by Tunisian tribes, led to a French invasion of Tunisia. The bey was forced to sign the Treaty of Bardo (1881), establishing a protectorate under a French resident general. The protectorate was opposed by Italy, which has economic stakes and a sizable group of its nationals in Tunisia. In the years immediately preceding the Second World War the attitude of Italy grew more belligerent, and threats of annexation were freely made. After the fall of France (June, 1940) Tunisia remained loyal to the Vichy government. Late in 1942, with the Germans driven W across Egypt and Libya and with Allied forces landing in Algeria, Tunisia became the focus of the war in North Africa (see NORTH AFRICA, CAMPAIGNS IN). On May 12, 1943, the Axis forces in Africa completely capitulated General Giraud, who assumed control of the protectorate, deposed the pro-Axis bey of Tunis on May 15 After the war nationalist agitation for ending the protectorate was intensified, with the Destour (constitutional) and neo-Destour (radical) parties in the lead. There was also much hostility between Arabs and Jews over the establishment of Israel See Sir Reginald Rankin, *Tunisia* (1930); W. B Worsfield, *France in Tunis and Algeria* (1930).

Tunja (tōōn'hă), city (pop 16,597), central Colombia Founded in 1539 on the site of the Zaque CHIBCHA capital, Hunsa, it is today a rail and highway shipping point for products of the region and for cattle from the eastern llanos In the war against Spain, Tunja supported the revolutionists, Bolívar held it and prepared for the victory at BOYACÁ.

Tunkers see DUNKARDS

Tunkhannock (tŭngk-hă'nuk), residential borough (pop 2,161), co seat of Wyoming co , NE Pa , on the Susquehanna and NW of Scranton; settled 1775, laid out 1790, inc 1841 It has many colonial buildings.

tunnel, a more or less horizontal underground passage usually made without removing the overlying rock or soil The origin of tunnel building is disputed The Egyptians built tunnels as entrances to tombs, the Babylonians built a tunnel, c 2180 B C , under the Euphrates They used what is now called the "cut-and-cover" method, the river was diverted, a wide trench dug across its bed, and a brick tube constructed in it and covered up. The ancient Greeks and Romans built tunnels for carrying water and for mining purposes, some of the Roman tunnels are still in use The first tunnel of importance in England was part of the Grand Trunk Canal It was nearly 2 mi long and was completed in 1777. Methods of cutting tunnels vary with the nature of the material to be cut through When soft earth is encountered, the excavation is timbered for support as the work advances, the timbers are sometimes left as a permanent lining for the tunnel Another method is to cut two parallel headings in which the side walls are first built Arches are then built between them, portions of the unexcavated center being left to the last for support A tunnel cut through rocks frequently requires no lining Hard rock is removed by blasting Tunnels must be built with sufficient gradient for proper drainage The Mont Cenis Tunnel, nearly 8 mi long, opened in 1871, and passing through the Alps, was probably the first tunnel built with the use of compressed-air drills The SIMPLON TUNNEL, more than 12 mi long, also through the Alps, is the longest of its type in the world It consists of two single-line tunnels parallel with each other, with connecting tunnels at short intervals. Great difficulty was experienced during its building because of the presence of hot spring water In constructing tunnels under rivers, the ordinary methods can be used as long as a stratum of impermeable earth lies between the tunnel and the river bed In all cases, however, pumping equipment must be installed Where mud, quicksand, or permeable earth is present in underwater tunneling, it becomes necessary to provide some means of holding back the water while the enclosing sections of the tunnel are placed in position. For this purpose the shield was devised and first used in 1825 by M I. BRUNEL when boring between Wapping and Rotherhithe This shield was not considered very successful, and the device was not employed again until 1869, when J. H Greathead, of London, and A E. Beach, of New York, developed improvements at about the same time. Their shields were metal cylinders fitting around the outside of the tunnel, with the forward end closed by a diaphragm plate This shield was shoved forward into the earth, headings being cut through openings in the forward end, while the tunnel walls were being extended within the cylinder Greathead introduced the use of compressed air in conjunction with the shield to keep out water and substituted cast-iron ring sections for brick and mortar as a tunnel lining. Beach introduced the use of hydraulic rams to push the shield forward Tunnels may be ventilated by shafts leading to the surface or by exhaust fans at the ends The first tunnel of importance in the United States was the tunnel through the HOOSAC RANGE in Massachusetts. There are hundreds of miles of tunnels in New York city and its vicinity, e.g., for subways, water systems, and rail-

roads. The Pennsylvania RR tunnel system is noted for its unusual size and for the difficulties encountered in its construction in avoiding disturbance of existing buildings. The Holland Tunnel and the Lincoln Tunnel connect New York city with New Jersey, and the Brooklyn-Battery Tunnel connects Manhattan with Brooklyn. The use of the pneumatic shield is now universal in tunneling under rivers, the pressure used varying with depth and the permeability of the earth being bored. In recent years precast concrete blocks and welded steel plates have been introduced for tunnel lining. See Archibald Black, *The Story of Tunnels* (1937)

Tunney, James Joseph, 1898–, American boxer, known as Gene Tunney, b New York city. He began boxing in neighborhood clubs. In the First World War he served in the U S Marine Corps and won (1919) in Paris the light-heavyweight championship of the American Expeditionary Forces. In 1922 he defeated Battling Levinsky for the American light-heavyweight title, but lost it the same year to Harry Greb—the only fighter to defeat Tunney in the professional ring. Tunney regained this title in 1923. In 1926 Tunney, who regarded boxing as a science, defeated William Harrison (**Jack**) Dempsey in a 10-round decision in Philadelphia and became the world heavyweight champion. In Chicago a year later, Tunney repeated this performance in a return bout with Dempsey; the decision was the subject of much controversy because of the famous "long count" after Tunney was knocked down in the seventh round. Tunney—well proportioned, handsome, and intellectually inclined—retired from the ring as heavyweight champion in 1928 and later successfully engaged in business. In the Second World War he served (1940–45) in the U.S. navy, directing the program to keep navy personnel physically fit. He wrote *A Man Must Fight* (1932) and *Arms for Living* (1942)

tunny. see TUNA.

Tunstall or **Tonstall, Cuthbert** (both tŭn'stul), 1474–1559, English bishop. After studying at Oxford, Cambridge, and Padua, he entered the church and was rapidly advanced. A friend of Thomas More and of Erasmus, Tunstall served Henry VIII on many diplomatic missions, held numerous positions in the church, and in 1530 succeeded Thomas Wolsey as bishop of Durham. Although Tunstall never gave up his belief in Catholic dogma and although he wrote numerous tracts in Latin defending his beliefs, he adopted a policy of passive obedience to the ecclesiastical revolution of Henry VIII. He opposed the Protestant reforms, but after they had already passed he helped carry them out. He supported Henry's oath of supremacy, and in 1537 was made president of the Council of the North. In Edward VI's reign he supported the protectorate of Edward Seymour, duke of Somerset, and was imprisoned and unfrocked after Somerset's fall (1551). Restored to his bishopric at the accession of Mary (1553), he refrained from the persecution of Protestants, and none were executed in his diocese. Tunstall refused to take the oath of supremacy when Elizabeth came to the throne and was placed in the custody of the archbishop of Canterbury

Tunstall, part (since 1910) of STOKE-ON-TRENT, Staffordshire, England, in the Potteries district

Tuolumne (twŏ'lumnē), unincorporated town (pop 1,530), central Calif, E of Stockton. It is a lumber center in the Mother Lode gold region

Tupac Amaru (tōō'päk ämä'rōō), 1742?–1781, Indian leader in Peru, baptized José Gabriel Condorcanqui. A man of some education and of sterling character, he saw with pity the degradation of his people and sought to alleviate their lot. Unable to persuade the government to better conditions in the *obrajes*, the mines, and the villages, Condorcanqui, under the name of his ancestor, the Inca Tupac Amaru, led a rebellion in 1780. The Indians, regarding him with reverence, flocked to support him, and at first Tupac Amaru was successful. He was later captured and executed with incredible brutality. The revolt continued, notably with the siege of La Paz in 1781, but was finally crushed. All of Tupac Amaru's family were executed or imprisoned, but many of the reforms for which he died were granted

Tupelo (tōō'pĭlō, tū'–), city (1940 pop 8,212, 1947 special census pop 10,926), co seat of Lee co, NE Miss, NNW of Columbus, founded 1859, inc 1870. It is the trade, processing, and shipping center for a cotton area and produces dairy and fertilizer products. In 1936 a tornado severely damaged the city. A U.S. fish hatchery is here. On the Civil War battlefield of Tupelo, now a national battlefield site (one acre; est. 1929), Union troops repulsed an attack by Gen. N. B. Forrest (July 14, 1864), but nevertheless retreated. Near by are Ackia Battleground National Monument (49.15 acres; est 1938), scene of a victory of Chickasaw and British over Choctaw and French (May 26, 1736), and Tombigbee State Park.

tupelo: see BLACK GUM.

Tupí Indians; see GUARANÍ INDIANS.

Tupper, Sir Charles, 1821–1915, Canadian statesman, b. Amherst, N S. After studying medicine at the Univ. of Edinburgh (M.D., 1843), he practiced medicine for a time in Amherst. Entering (1855) the Nova Scotia assembly, he became premier of the province in 1864. He played a leading role in the confederation movement, and despite the opposition of Joseph Howe, he eventually succeeded in bringing Nova Scotia into the dominion of Canada. To Sir John Macdonald he gave unswerving friendship and support, and in Macdonald's administrations he held a number of posts, first entering the cabinet as president of the council (1870). As minister of railways and canals (1879–84), it was his responsibility to achieve the completion of the Canadian Pacific Railway. From 1884 to 1896 he was Canadian high commissioner in London, except for an interval (1887–88) when he served as minister of finance in Macdonald's government. In 1896 he became prime minister of Canada and urged the adoption of a preferential tariff with Great Britain and the colonies, but the Conservative party was defeated in the elections of that year, and he yielded his premiership to Laurier. Shortly before his death in England, Tupper's *Recollections of Sixty Years* appeared (1914). See E. M. Saunders, *Life and Letters* (1916), with a supplement by Sir C. H. Tupper (1926), biography by J. W. Longley (new ed., 1926)

Tupper, Martin Farquhar, 1810–89, English author. He is remembered for his *Proverbial Philosophy* (1838–76), a popular collection of moralizations in blank verse. See his autobiography (1886)

Tupper Lake, resort village (pop 5,451), N N.Y., in the Adirondacks near Big Tupper Lake, settled 1890, inc. 1902. Wooden dishes and hardwood flooring are made. Near by is a U.S. veterans' tuberculosis hospital

Tupungato (tōōpōōng-gä'tō), peak, 21,490 ft. high, on the Argentine-Chilean boundary, in the Andes S of USPALLATA PASS. It was first climbed in 1897

Tura, Cosmè or **Cosimo** (kōsmā' tōō'ra, kō'zēmō), c 1430–1495, Italian mural artist. He was a leading master of the Ferrarese school of painting and court painter to Borso d'Este and Ercole d'Este. His work, usually realistic but often symbolic, is characterized by vigorous draughtsmanship and modeling and by clashing colors. It is found in leading European collections and sometimes in its original location, as is the case with two organ panels, *Annunciation* and *St George Slaying the Dragon* (cathedral, Ferrara). Important examples include *Pietà* (Venice), *Christ on the Cross* (Milan), *Madonna* (Bergamo), *St Christopher* and *St Sebastian* (Berlin Mus. collection), *St Jerome* (National Gall., London), and *Portrait of a Man* (National Gall. of Art, Washington, D.C.). Attributed to him is a portrait of Borso d'Este in the Metropolitan Museum

Turan (tōōran'), desert lowland, central Asiatic USSR, S and E of the Aral Sea. The Amu Darya and Syr Darya rivers divide it into the KARA KUM desert in the south, the KIZIL KUM desert in the center, and the Aral Kara Kum desert in the north. The region has very little precipitation and is sparsely populated, except in the fertile irrigated oases along the Amu Darya and Syr Darya, where cotton, fruit, and rice are grown. Part of the region is used for sheep grazing

Turanian (–rā'–), obsolete classification of languages not of Indo-European family. It was applied primarily to the languages of central Asia

turban (tûr'bŭn), headdress worn by most Moslem men and by other men of Eastern nations which varies according to taste, religion, and rank. It consists of a skull cap or tarboosh around which are wound many folds of linen, silk, or cotton, often fastened, in the case of dignitaries, with gems or other insignia. By resemblance, a modern headdress for women is also called a turban, as is a close-fitting hat with no brim or with a tightly upturned brim

turbine (tûr'bĭn, tûr'bēn), an engine which converts the force of moving air, water, or steam into mechanical energy capable of doing work. Its principle, known from ancient times, was not put to practical use until c 1880. A water turbine employs fixed guide vanes to give direction to the stream, curved blades or buckets to receive the water, and a shaft which the wheel turns. The turbine may be of the impulse type actuated by the force of water falling on the buckets or of the reaction type where the impact of expanding pressure and the kinetic energy of the flow provide the movement of a bladed wheel. The smooth continuity of rotation and the more efficient use of the energy of moving water result in wider use of the reaction turbine. Toward the end of the 19th cent. Sir Charles A. Parsons and Gustav de Laval were pioneers in the building of steam turbines. Continual improvements of their basic machines have caused steam turbines to become the prime movers of the largest part of all electric generation equipment. Coal and oil are the two fuels most used to provide steam for the turbines. Jets of steam are directed into and through a series, or a stage, of curved vanes on a rotating wheel and through similar ones on a stationary wheel. Large increases in efficiency at certain speeds result from multistaging or increasing the number of vaned wheels. The steam leaving a revolving wheel is directed by the stationary one onto a second revolving wheel and then by a second stationary wheel against a third revolving one and so on. Maximum propulsion is obtained from the decreasing steam pressure by having it act upon larger buckets. See L. E. Newman, ed., *Modern Turbines* (1944)

turbot (tûr'bŭt), large FLATFISH of European coastal waters. It sometimes reaches a weight of more than 30 lb. and is highly valued as a food fish. In the United States some flounders are incorrectly called turbots

Turckheim (türkĕm'), Ger. *Türkheim* (türk'hīm), town (pop. 2,431), Haut-Rhin dept., E France, in Alsace, W of Colmar. It is noted for its white wine. Here in 1675 the French under Turenne defeated the imperial troops in the Third Dutch War

Turcoman. see TURKMEN SOVIET SOCIALIST REPUBLIC

Turenne, Henri de la Tour d'Auvergne, vicomte de (ärē'du lä tōōr' dōvĕr'nyu vēkōt' du türĕn'), marshal of France, one of the greatest of French commanders. Of high family, he was the son of the duc de BOUILLON and was brought up as a Protestant. He commenced his military career in the Dutch army but soon was serving for France and showing his great capabilities in the Thirty Years War. He distinguished himself under Bernhard of Saxe-Weimar in the victory (1638) over the imperial forces at Breisach. In the successful battles of Freiburg in Breisgau (1644) and Nordlingen (1645) he served with that other great French commander of his day, the brilliant Louis II de Bourbon, prince de Condé, called the Great Condé. The lives of the two were to be intertwined. Turenne, who had been made a marshal in 1643, was—with the Swedish Torstenson—the dominant figure in the last years of the war, and he was driving on from victory to victory when long negotiations finally brought about the Peace of Westphalia (1648). In the war of the FRONDE OR THE PRINCES he was persuaded by Mme de Longueville to take the part of the rebels led by Condé and was defeated (1650) by government forces at Rethel. When the princes of the Fronde had been reconciled with Mazarin, Turenne again became a government commander, and he refused to join Condé in a new revolt, but defeated (1652) him roundly at the Faubourg Saint-Antoine. One of his greatest victories was won later (1658), when in the battle of the Dunes he used a French and English force to defeat the Spanish troops under Condé and Don John of Austria. In the War of DEVOLUTION he commanded (1667) in Flanders, but had no part in the campaign (1669) of Condé (now reconciled to the government) in Franche-Conté. In the third of the DUTCH WARS he and the troops of Louis XIV were checked before Amsterdam by the opening of the dikes, but on the Rhine he won (1674) at Sinzheim, while Condé was winning at Seneffe. Turenne was killed when attacking the troops of Montecuccoli. His emphasis on mobility and surprise and his patient calculation matched by his personal courage and his popularity with his men, won him the admiration of many French generations. Serious almost to fault, he desired the religious unity of France and late in life, after much soul searching, he was converted to Catholicism. See biography by Maxime Weygand (Eng. tr., 1930)

turf: see LAWN

Turfan (tōōr'fan') Mandarin *Tu-lu-fan*, depression, area c 5,000 sq. mi., N central Sinkiang prov., China. At its lowest point it is 300 ft. below sea level. In the 1st millennium A.D., Turfan was the center of a flourishing civilization in which Indian and Persian elements were combined. There are remains of many cities. Archaeological finds include much Nestorian literature and the bulk of the extant Manichaean literature. See Albert von Le Coq, *Buried Treasures of Chinese Turkestan* (1929)

Turgenev, Ivan Sergeyevich (ēvän' sĭrgā'ŭvĭch tōōrgā'nyĭf), 1818–83, Russian novelist, dramatist, and short-story writer. He came of a landowning family of the central province of Orel and was educated in the universities of Moscow, St Petersburg, and Berlin. His early efforts at writing were published in Nekrasov's journal *Contemporary*, as were Leo Tolstoy's. As a writer he won his first success in 1847 with "Khor and Kalinich," a story of peasant life. Later, with other similar stories, it was published in *A Sportsman's Sketches* (1852, 1st Eng. tr., *Russian Life in the Interior, or, The Experiences of a Sportsman*, 1855). With this book he dealt a telling blow to serfdom, after the emancipation he was one of the first landlords to come to terms with his serfs, whom he had inherited from his mother in 1850. Turgenev's most fruitful period was the decade 1850–60, the latter half of which he spent in Western Europe. It was in this period that his best novels appeared, beginning with *Rudin* (1855, Eng. tr., *Dmitri Roudine*, 1873) and *A Nest of Gentlefolk* (1850, 1st Eng. tr., *Liza, or, A Nest of Nobles*, 1873) and followed by *On the Eve* (1860, Eng. tr., 1871). In *Fathers and Sons*

(1861; Eng. tr , 1867), his masterpiece, Turgenev created an immortal figure in Basarov, the young radical The novel was severely criticized by the progressives, and its reception served to fix Turgenev's resolve to remain outside Russia, where his best writing was done and where he could enjoy the company of the singer Pauline Viardot-Garcia, whom he loved Turgenev's last long works were *Smoke* (1867, Eng tr , 1868) and *Virgin Soil* (1876, Eng tr , 1877). He also wrote several plays, the best known of which are the Chekhovian *A Month in the Country* (1850, Eng tr , 1924) and the pleasant comedy *A Provincial Lady* (1851, Eng tr , *The Country Woman*, 1924) As a stylist he is at his best in his short stories, which are not concerned with social problems, outstanding are "First Love" (1870), "A Lear of the Steppe" (1870), "Torrents of Spring" (1871), and "Clara Milich" (1881) Turgenev saw life realistically and depicted it with precision, clarity, and grace Almost all his works are available in English See biographies by Avram Yarmolinsky (1926) and J A T. Lloyd (1942)

Turgot, Anne Robert Jacques (än' rôbĕr' zhäk' türgō'), 1727–81, French economist, controller general of finances (1774–76) He was created baron de l'Aulne The son of a rich merchant, he showed precocious ability at school and at the Sorbonne He early abandoned plans to enter the priesthood, in 1752–53 he held state offices, and from 1761 to 1774 he was intendant of LIMOGES After writing his *Lettres sur la tolérance* (1753–54), Turgot wrote on economic subjects, especially *Réflections sur la formation et la distribution des richesses* (1766) Favoring the free-trade and free-competition principles of Vincent de GOURNAY and a disciple of the PHYSIOCRATS, Turgot considered agriculture the sole source of wealth and advocated complete freedom (including freedom from taxation) for commerce and industry In Limoges, then one of the poorest provinces of France, he applied some of his theories He founded agricultural and veterinary schools, introduced the potato, developed tanneries and paper works, aided cotton and silk industries, built roads, introduced local free trade, instituted public works and public assistance, and removed some tax abuses At the end of his administration, Limoges had attained prosperity This success won him the acclaim of the *philosophes*, with whom he collaborated in the writing of the ENCYCLOPÉDIE In 1774 MAUREPAS made him controller general in his cabinet, thus hoping to propitiate the *philosophes* Turgot's program—"No bankruptcy, no increase in taxes, no borrowing, but economy"—necessitated stringent reforms He abolished sinecures and monopolies, tried to undermine the system of FARMING the taxes, drastically cut government expenses, and redeemed part of the public debt His edict (1774) restoring free circulation of grain inside France, which antagonized the grain speculators, was unfortunately followed by a crop failure In the resulting bread riots, which he firmly suppressed, Turgot lost much of his popularity He aroused the clergy by favoring toleration of the Protestants and provoked a storm of protest from nearly all quarters by his six edicts of Jan , 1776 In those revolutionary measures, Turgot abolished all guilds, established absolute freedom of work and occupation, abolished the CORVÉE, and proposed taxation of the nobles Marie Antoinette, whose enmity he had incurred when he refused favors to her protégés, allied herself with Maurepas and persuaded Louis XVI to ask Turgot's resignation (May, 1776) Refusing the offer of a pension, Turgot retired to a life of scientific, historical, and literary study He was succeeded by NECKER, and his edicts were repealed Subsequently events vindicated Turgot's conviction—expressed as early as 1750—that the only alternative to radical reform was still more radical revolution There is a five-volume edition of his works by Gustave Schelle (1913–23, in French) See Léon Say, *Turgot* (1888, Eng tr , 1888), Douglas Dakin, *Turgot and the Ancien Régime in France* (1939)

Turgutlu, Turkey see KASSABA

Turin (tōō'rĭn, tyōō'-, tyōōrĭn'), Ital *Torino* (tôrē'nō), city (pop 608,211), capital of Torino prov , chief city of Piedmont, NW Italy, on the Po near its junction with the Dora Riparia The most important Roman town of the W Po valley, Turin was a Lombard duchy, then a Frankish county, and succeeded, in spite of the claims of the house of Savoy, in remaining a free commune in the 12th and 13th cent About 1280 it passed definitively to the house of Savoy (see SAVOY, HOUSE OF) Occupied (1536–62) by the French, it was restored to the dukes of Savoy and became the capital of their duchy and, after 1720, of the kingdom of Sardinia During the War of the SPANISH SUCCESSION it suffered a long siege, which ended with the victory of Eugene of Savoy over the French (1706) In 1798 Charles Emmanuel IV of Savoy was obliged by the French to abdicate and to abandon Turin, but Victor Emmanuel I returned in 1814, and the city soon became the center of Italian national aspirations From 1861 to 1864 it was the capital of the new Italian kingdom The wide avenues and open squares of the city were carefully planned and give the impression of great regularity There are few Roman and medieval remains, most of the important buildings dating from the 17th to the 19th cent. The royal palace houses many works of art, the armor collection is one of Europe's best Turin has a Renaissance cathedral, there is preserved the shroud in which, it is said, the body of Jesus was wrapped There are other notable churches, palaces, and museums, one housing an important Egyptian collection The university was founded in 1404 On a hill overlooking the city is the basilica of Superga, containing the tombs of many dukes of Savoy Turin is the center of the Italian automobile industry (Fiat and Lancia) and manufactures airplanes and machinery It is also the headquarters of the vermouth industry Because of its industrial importance Turin suffered severe air raids in the Second World War Many churches and palaces were damaged

Turk see TURKS

Turkamanchai (tōōrkämänchī') or **Turkmanchai** (tōōrkmänchī'), village, NW Iran, in Azerbaijan, 70 mi SE of Tabriz Here, in 1828, a treaty was signed between Persia and Russia, whereby Persia was forced to cede part of Persian Armenia and grant extraterritorial rights

Turkestan see TURKISTAN

Turkey, republic (296,185 sq mi ; pop 18,790,174), Asia Minor and SE Europe Ankara is the capital Asiatic Turkey or Anatolia, which occupies 97 percent of the total area, is bounded by the Black Sea, the BOSPORUS, the Sea of MARMARA, and the DARDANELLES on the north, by the Aegean Sea (a part of the Mediterranean) on the west, by the E Mediterranean, Syria, and Iraq on the south, by Iran on the east, and by the Armenian SSR and Georgian SSR on the northeast Turkey in Europe comprises Eastern Thrace and is bounded by the Black Sea in the northeast, by Bulgaria in the north, and by Greece and the Aegean Sea in the west In the south, it is separated from Asiatic Turkey by the Bosporus, the Sea of Marmara, and the Dardanelles Almost all the islands off the deeply indented Aegean coast of Asia Minor belong to Greece Turkey is administratively divided into provinces, usually named after their chief cities Some of the older regional names have, however, persisted, thus NE Asiatic Turkey forms part of ARMENIA, and SE Asiatic Turkey part of KURDISTAN Turkey in Europe, with ISTANBUL (formerly Constantinople) and ADRIANOPLE, is a rolling agricultural land (see THRACE) Asiatic Turkey has fertile coastal strips, its center is occupied by the vast, semiarid Anatolian plateau (1,500–1,900 ft high), which is surrounded by a fringe of hills and mountains Highest are the TAURUS range and its spurs, in the south of the Anatolian peninsula, and the Transcaucasian ranges in the northeast, culminating in Mt ARARAT on the Soviet border There are several large lakes, notably Lake VAN in the east Turkey has numerous rivers, but none of them is navigable SE Turkey is drained by the upper courses of the TIGRIS and the Euphrates central Turkey by the Kizil Irmak and the Seyhan and W Turkey by the Macander (the Buyuk Menderes) The chief means of communication are roads, coastwise shipping, and a relatively sparse railroad net, which originated with the BAGHDAD RAILWAY The chief ports are Istanbul (which is also the largest city), SMYRNA, TREBIZOND, SINOPE, and MERSIN Other important cities are ANKARA, BURSA, ADANA, KONYA, KAYSERI, and ANTIOCH The climate of Turkey is generally temperate, except in the east, where it is continental Turkey is a predominantly agricultural and pastoral country More than half of its area consists of pastures, used for the raising of cattle, sheep, goats, and water buffaloes The arable land (c 20 percent) produces wheat, barley, oats, rye, maize, tobacco, cotton, flax, hemp, and opium poppies (notably around Afyonkarahisar) Grapes, olives, raisins, figs, apples, hazelnuts, and walnuts are extensively cultivated Only 14 percent of the land is forested Except for the manufactures of tobacco, carpets, mohair, pottery, and articles of copper and brass, Turkish industries are of recent origin and are still in the initial stage of development The most important industry is mining, chiefly of coal (near Zohguldak), lignite and chrome (in the southwest), and copper (in the east) Turkey is one of the world's chief exporters of chrome and of meerschaum (worked in the Eskisehir region) Large iron and steel plants have been established at Karabuk, but Turkey still depends largely on imports of machinery and manufactured goods. Owing to the large-scale massacres and emigration of the Armenians in the late 19th and early 20th cent., and owing to the forced emigration of the Greeks and Bulgarians after 1923, 86 percent of the population is now Turkish-speaking. There is complete separation of Church and state, the vast majority of Turks are nominally Sunnite Moslems. The Kurds are the largest ethnic minority, the Jews and Greek Orthodox and Armenian Christians are the chief religious minorities. The Turks themselves, although they regard the Osmanlis or Ottomans as their ancestors, are a highly composite ethnic mixture, with only a thin strain of Osmanli "blood." Turkey has compulsory primary schooling; there are numerous technical and professional schools, and there are universities at Istanbul and Ankara Though Anatolia is one of the oldest inhabited regions in the world, the history of Turkey as a national state began only with the collapse of the Ottoman Empire in 1918 For the earlier history of the region now constituting Turkey, see (for the ancient period) ASIA MINOR; IONIA, PONTUS, THRACE, BYZANTIUM, (for the medieval period) BYZANTINE EMPIRE; ARMENIA, TURKS, KONYA, KARAMAN, NICAEA, EMPIRE OF, TREBIZOND, EMPIRE OF, (for the modern period before 1918) OTTOMAN EMPIRE and EASTERN QUESTION The Ottoman Empire, which had been agonizing since 1774, was dealt its death blow in the First World War By the Treaty of Sèvres (1920, see SÈVRES, TREATY OF) the victorious Allies reduced the once mighty empire, one of the great universal states of modern times, to a small state comprising the northern half of the Anatolian peninsula and a narrow neutralized and Allied-occupied zone of the Straits Sultan MOHAMMED VI accepted the treaty, but the nationalist elements among the Turks rallied under the leadership of Kemal Pasha, later known as Kemal ATATÜRK, and organized their forces for resistance In April, 1920, even before the signature of the Treaty of Sèvres, a Turkish national government and national assembly began to function at Ankara The nationalists defied the authority of the sultan, took the offensive against the Allies in Anatolia, and concluded (1921) a treaty of friendship with Soviet Russia, which restored the KARS and Ardahan regions to Turkey in exchange for Batum In the meantime the Greeks, encouraged by the Allies, had launched an offensive against the nationalists from their base at SMYRNA The Turkish counteroffensive, beginning in Aug 1922, ended with the complete rout of the Greeks and with the Turkish capture of Smyrna (Sept , 1922) On Nov 1, 1922, the Ankara government declared the sultan deposed, but they allowed his brother, Abdul-l-Mejid, to succeed in the spiritual office of caliph Shortly afterward, a conference opened at Lausanne (see LAUSANNE, CONFERENCE OF) to revise the Treaty of Sèvres The Treaty of Lausanne (1923) established the present boundaries of Turkey, except for the disputed region of Alexandretta (see ALEXANDRETTA, SANJAK OF), which was acquired by Turkey only in 1939 Turkey was to exercise full sovereign rights over its entire territory, except the zone of the Straits (see DARDANELLES), which was to remain demilitarized, this last restriction was lifted in 1936 Turkey was formally proclaimed a republic in Oct , 1923, with Kemal Ataturk its president The caliphate was abolished in 1924, and in the same year a constitution was promulgated The constitution provided for a parliament, called the Grand National Assembly, elected by universal manhood suffrage (extended to women in 1934), and for a cabinet responsible to parliament, but Kemal governed as virtual dictator, and his Republican People's party was the only legal party Within the 14 years of Kemal's rule, Turkey underwent an unparalleled revolutionary transformation Kemal's Westernization of Turkey was more successful than that of Russia under Peter the Great, and it went further than the Meiji reform in Japan, for it changed the religious, social, and cultural bases of Turkish society as well as its political and economic structure. In 1925, after the suppression of a religious rebellion in Kurdistan, the government intensified its antireligious policy, abolished religious orders, forbade polygamy, and prohibited the wearing of the traditional fez In 1926 the Swiss code of civil law, the Italian code of criminal law, and the German code of commercial law were adopted virtually unchanged, and civil marriage was made compulsory In 1928, Islam ceased to be the state religion, and the Latin alphabet was substituted for the Arabic script, all Turks under 40 were compelled to attend schools to learn it In 1930, Constantinople, which had ceased to be the capital, was even deprived of its historic name and renamed Istanbul, a dervish rebellion was put down and further antireligious measures were taken In 1934 women, who under the old Ottoman regime had been little more than chattels, were given the suffrage and were fully emancipated, and in 1935 every Turkish citizen had to adopt a family name. At the death (1938) of Ataturk, Turkey had ceased to be an Oriental state and was well on its way to becoming a state on the standard Western model In the economic field, Turkish policy under Kemal aimed at obtaining economic self-sufficiency without the aid of foreign capital Foreign capital had virtually taken over the finances of the Ottoman Empire, and one of the major problems of the Turkish republic was to pay off the old Ottoman debt; the refusal of foreign loans thus was a basic point in Kemal's nationalist program. The difficulties of building up heavy industries from the bottom without foreign investments and in the absence of domestic capital made a large amount of government control inevitable, and state ownership became the rule for the new industries. In 1934 a Five-

Year Plan was adopted Two major economic problems arose from the compulsory population exchanges among Turkey, Greece, and Bulgaria after 1923 Large numbers of Turks, mostly peasants, from Greece and Bulgaria had to be fitted into the Turkish economy, while Turkish commerce was dealt a severe blow by the departure of the experienced Greek merchants In foreign policy, Turkey sought friendly relations with all its neighbors. It entered the League of Nations in 1932, guaranteed its European borders by joining (1934) in the BALKAN ENTENTE, and concluded (1936) a nonaggression pact with Iraq, Iran, and Afghanistan Although Communism was severely suppressed at home, relations with the USSR were extremely cordial until the Second World War Having gained new international prestige, Turkey was able to obtain a revision of the Straits Convention by the MONTREUX CONVENTION of 1936 and obtained a satisfactory solution of the Alexandretta dispute in 1939 Ismet INONU, who succeeded Ataturk as president in 1938, warily steered a neutral course through the first five years of the Second World War, although Turkey received lend-lease aid from the United States after 1941 The inflation caused by the Turkish mobilization program was checked by the imposition of a capital levy, which hit the Christian and Jewish minorities particularly hard Despite considerable Allied pressure, Turkey declared war on Germany and Japan only in Jan , 1945, and joined the United Nations in Feb , 1945 Relations with Russia became acrimonious after the USSR denounced (1945) its friendship pact with Turkey and demanded a thorough revision of the Montreux Convention and joint control of the Straits Turkey rejected all Russian demands, and in 1947 it became, with Greece, one of the two recipients of American assistance under the Truman Doctrine (see TRUMAN, HARRY S) American influence may have been partly responsible for the relaxation of the Turkish system of state capitalism in favor of free enterprise as well as for the lifting of the ban on opposition parties The sincerity of the government's move toward political democracy was demonstrated in the elections of 1950, when the government party was defeated and Celal Bayar, leader of the Democratic party, succeeded Inonu as president Religious instruction in schools, which had been prohibited was authorized in 1948 See H E Allen, *The Turkish Transformation* (1935), Bernard Lewis, *Turkey Today* (1940), Emil Lengyel, *Turkey* (1941), Selma Ekrem, *Turkey, Old and New* (1947), M W Thornburg and others, *Turkey an Economic Appraisal* (1949)

turkey, large game and POULTRY bird, allied to the pheasant and native to North America In the early days the abundant wild turkey provided food for the colonists Indian tribes obtained food and feathers from wild and domestic flocks Spanish explorers in Central America and in Mexico during the early 16th cent found that turkeys had long been domesticated there Later the birds were successfully introduced into Europe The eastern wild turkey is exterminated in Canada and the NE United States but is found S of Pennsylvania and westward to beyond the Mississippi Similar birds are found in Florida, in the SW United States, and in Mexico The colorful ocellated turkey is found in Central America Turkeys are polygamous During courtship when the male eats little, a fatty breast appendage provides some nourishment Both wild and domesticated turkeys are chiefly greenish bronze and copper in color with black margins on the feathers Turkeys are raised especially for Thanksgiving Day, of which they are a traditional symbol, and for Christmas During recent years the aim of experimental breeding has been to produce smaller, broad-breasted varieties The Beltsville small white turkey introduced in 1941 averages 15 lb for a dressed male and 8 lb for the hen See *Turkey Raising* (U. S Dept of Agriculture, Farmers' Bul 1409).

Turki (tōōr'kē) or **Turkic,** family of languages, to which Turkish belongs See LANGUAGE (table)

Turkish, name given to several languages of the Turkic family See LANGUAGE (table)

Turkistan or **Turkestan** (both türkistän', -stän'), region, USSR, comprising the TURKMEN SSR, the UZBEK SSR, the TADHZIK SSR, the KIRGHIZ SSR, and the S KAZAKH SSR This region is sometimes called Western Turkistan or Russian Turkistan in distinction to Eastern Turkistan or Chinese Turkistan, now in SINKIANG prov , China Much of the western part of the Russian territory is comprised in two deserts, the KARA KUM and the Kizil Kum The east, rough and hilly, rises to include the mountains of part of the Pamir highland and of the Tien Shan system Athwart the eastern section extends the FERGANA VALLEY, one of the most fertile regions of the continent Turkistan is Persian for "land of the Turks," but although nearly all the population speaks Turkic languages, the region is not the oldest known home of the Turks, nor are the majority of Turkish peoples dwellers here Turkistan may be regarded as a single region, however, because a combination of geographical and historical factors made it the bridge connecting the Eastern and the Western worlds and the route taken by many of the great conquerors and migrating peoples The Caspian Sea, the western boundary of Turkistan, presents an obstacle to invasion from the Caucasus region By skirting the southern shores of the Caspian, however, forces from Asia Minor, Arabia, S Europe (e g , the Balkan Peninsula), and Africa have an easier route Invaders from the East (especially from Mongolia) had to cross Turkistan if they were to pass between the marshes of central Siberia on the north and the great mountain barriers of the Tien Shan, the Pamirs, and the Hindu Kush on the south Except in the case of the White Huns, such invaders avoided the only other route into Europe, that going N of the Caspian Sea, perhaps because pasturage for their large cavalry forces was lacking there Moreover, Turkistan, as the focus of trade between Europe and Asia, had great wealth and large cities—BUKHARA, SAMARKAND, and MERV are notable—which could be plundered Perhaps the earliest empire to bring Turkistan under one sway was that of the Persians, who, by 500 B C , had cleared the Lydian empire from the region around the Caspian Sea Persia was destroyed by the march of Alexander the Great through S Turkistan After Alexander's death Turkistan fell to the portion of Seleucus, but by the mid-2d cent B C it was divided between Parthia on the west and Bactria on the east Parthia continued to grow eastward at the expense of Bactria In c 130 B C , Bactria was bordered on the east by China, which controlled much of the area extending from Lake Balkash S to the Hindu Kush In the late 1st cent A D the Kushan domain had taken Bactria's holdings and the Huns were disputing the region near Lake Balkhash with China With the fall of the Han dynasty (220), China lost control of E Turkistan, and when China was reestablished there in the mid-7th cent it came into contact with Persia, which, under the Sassanids, occupied nearly all the rest of Turkistan except the central zone The Persian holdings were swept away by the Arab invasion in the 8th cent , and first the Omayyad caliphate and then the Abbasid caliphate held in their grasp all of Turkistan Zoroastrianism, the religion of the country, was suppressed, and Islam, which today remains its great faith, was imposed upon the populace At the time (mid-9th cent) that the Abbasid caliphate weakened, China also lost its holdings in the east, and many states, notably KHORIZM, occupied parts of Turkistan All Turkistan fell to the Mongols in the late 13th cent , and the territory was mostly bestowed upon the khan Jagatai Tamerlane conquered Turkistan in the late 14th cent , and after his death (1405) his successors, the Timurids, controlled much of the territory for about a century The later internal history of Turkistan is mainly one of prolonged struggle involving the khanates of KHIVA, BUKHARA, and KOKAND and the nomadic peoples of the region, most notably Kirghiz, Kazakh, and Turkmen In the international sphere the region saw a struggle for dominance between Russia and China In the late 17th and the early 18th cent the vigorous young Ch'ing dynasty of China controlled E Turkistan, but gradually it lost more and more territory to Russia until by 1858 Russia had nearly all its present holdings (the final territorial limits were set in 1912) Russian subjugation of the khanates was completed by 1868 when peace was concluded with Bukhara In the previous year the governor generalship of Turkistan had been established with its capital at Tashkent This administrative arrangement persisted until the Russian Revolution of 1917

Turkistan-Siberia Railroad, abbreviated as **Turk-Sib,** important railroad in the SW Asiatic USSR, providing the shortest link between Siberia and central Asia Built from 1926 to 1930, it runs from the Trans-Siberian RR at Novosibirsk SW to the Trans-Caspian RR, which it joins N of Tashkent Its principal stations are Semipalatinsk, Barnaul, Alma-Ata, Dzhambul, and Chimkent The railroad is of vital economic importance, for it carries Siberian grain to central Asia and central Asiatic cotton to the mills of W Siberia

Turkmanchai, see TURKAMANCHAI

Turkmen Soviet Socialist Republic or **Turkmenistan** (türk"mĕnĭstän', -stän', Rus tōōrkmyĕ"nyĭstän'), constituent republic (187,200 sq mi , 1946 estimated pop 1,200,000), central Asiatic USSR It borders on Afghanistan and Iran in the south, on the Uzbek SSR and the Kazakh SSR in the east and the northeast, and on the Caspian Sea in the west ASHKABAD, its capital, and CHARDZHOU, Mary (see MERV), and KRASNOVODSK are the chief cities, they all lie on the Trans-Caspian RR The desert lands of KARA KUM occupy 90 percent of the total area, and the population is concentrated in oases at the foot of the Kopet Dagh mts , in the south, and along the AMU DARYA, MURGAB, and Tedzhen rivers The Turkmen inhabitants (also called Turcomans or Turkomans), who form 72 percent of the total, are a Turkic-speaking Moslem (Sunnite) people, the remaining inhabitants are mostly Uzbeks and Russians In the desert karakul sheep and camels are raised The irrigated oases yield cotton, guavule, sesame, millet, sweet potatoes, dates, palms, figs, and sugar cane Silk, wine, and fruit are produced in the Chardzhou region. There are important fisheries along the Caspian Sea Mineral resources, which furnish the basis for the industries, include petroleum, ozocerite, iodine, bromine, Glauber's salt, sulphur, lignite, and potash The inhabited part of Turkmenistan formed part of the province of Margiana (see MERV) of ancient Persia It was under Arab rule in the 8th and 9th cent , then passed to the Seljuk Turks, who ruled the powerful kingdom of KHOREZM, from them the Turkmen are probably descended Jenghiz Khan conquered the region in the 13th cent , and Tamerlane in the 14th cent After the breakup (late 15th cent) of the Timurid empire, the Turkmen came under Uzbek domination, and c 1800 became subject to the khan of Khiva (see KHIVA, KHANATE OF) The Turkmen also played an important part in the history of Iran and Afghanistan, where large numbers of them live today Until the Russian conquest (1869–95) of Turkmenistan they were feared as brigands. The most spectacular exploit in the Russian conquest was the capture of GEOK-TEPE Incorporated at first into the Transcaspian Region of Russian Turkistan, Turkmenistan became (1924) a constituent republic

Turkoman see TURKMEN SOVIET SOCIALIST REPUBLIC

Turks, term applied in its wider meaning to the Turkic-speaking peoples of Turkey, the USSR, Chinese Turkistan, and E Iran (see LANGUAGE, table) They total c 25,000,000, and they are distributed from E Siberia to the Dardanelles The wide difference of physical appearance and culture among the Uigurs of China, the Uzbeks of central Asia, and the Osmanlis of Turkey (to name random instances) make it impossible to speak of Turks as an ethnic or racial family The only unifying links are Islam, the religion of nearly all Turks, and their very closely related languages In the USSR, all the nationalities classified as Tatars are Turkic-speaking It is probable that many peoples that were unrelated to the original Turks adopted either wholly or in part their speech and their social organization The AVARS were probably Turkic, and the MAGYARS certainly had adopted the Turkic tribal organization when they appeared in Europe, and many Hungarian words are of Turkic origin The original Turks most probably lived in the regions N and W of China, i e , in S Siberia and in TURKISTAN Here the oldest Turkic inscriptions (see ORKHON INSCRIPTIONS) have been found A nomadic and pastoral people, the Turks, for reasons not fully known, repeatedly made excursions into territories to the south and west, and they established several powerful empires The Uigur empire of central Asia, with its capital at Karakorum flourished in the 8th and 9th cent A D The KHAZARS, CUMANS, and PECHENEGS played important roles in the medieval history of S Russia and SE Europe In the history of Europe and W Asia two Turkish groups played dominant parts—the Seljuks and the Osmanli or Ottoman Turks The Seljuks appeared in Iran in the 10th cent , embraced Islam, made themselves masters (11th cent) of Khorezm and Iran, and entered Baghdad in 1055 under their leader ALP ARSLAN they conquered Georgia, Armenia, and much of Asia Minor, overran Syria, and defeated (1071) the Byzantine emperor Romanus IV at MANZIKERT Their irruption was a major factor in bringing about the CRUSADES, during which a three-cornered struggle among Christians, Seljuks, and Egyptian Mamelukes developed Alp Arslan's son, Malik Shah, ably administered his huge empire, he was a protector of OMAR KHAYYAM, who reformed the calendar on his behest The Seljuk empire fell apart in the 12th cent Among the successor states were the Zangid sultanate of Baghdad, whose ruler NUR UDDIN was famous for his victories over the CRUSADERS, the empire of KHOREZM, which at one time nearly attained the limits of the earlier Seljuk empire, and the sultanate of Rum or Iconium (see KONIA), which comprised a large part of Asia Minor All the Seljuk states were overrun in the 13th cent by Genghiz Khan and his successors, whose hordes comprised both Mongols and Turks and became generally known as TATARS The Turco-Tatars now living in the USSR are largely descended from the GOLDEN HORDE of Batu Khan, as are the UZBEKS (see UZBEK SOVIET SOCIALIST REPUBLIC), who ruled a vast empire in the 16th cent In Asia Minor, the sultanate of Konya was taken over, after the Mongol wave had receded, by the emirate of Karamania (see KARAMAN), but it was left for the Osmanli Turks to complete the overthrow of the Byzantine Empire A minor tribe and the last of the Turkish invading peoples, the Osmanli latecomers had been assigned (13th cent) to the border area of the Byzantine Empire by their Seljuk overlords It was largely their undesirable position as guards of a constantly con-

tested frontier that made them keep alive and improve their highly disciplined organisation, which in turn enabled them in the 14th cent to make themselves masters of the ruins of the Seljuk empire in Anatolia. Their first historic ruler, OSMAN I, gave his name both to the nation and to the dynasty that ruled an empire extending, at one period, from the gates of Vienna to the Indian Ocean and from Tunis to the Caucasus (see OTTOMAN EMPIRE). The people of modern Turkey, which was founded after the collapse of the Ottoman Empire in 1918, are called Osmanli Turks. The original Osmanlis had merged at an early stage with the Seljuks, and their descendants mixed extensively with Moslem converts from the many dozens of nationalities that made up their empire.

Turks and Caicos Islands (kī'kŏs), islands (c 224 sq mi, estimated pop 8,920), British West Indies. Geographically the southeastern continuation of the Bahama Islands, the Turks and Caicos are a dependency of Jamaica. They are of low limestone and coral formation and produce salt, sponges, and fibers.

Turk-Sib: see TURKISTAN-SIBERIA RAILROAD.

Turku (tōōr'kōō), Swed *Abo* (ō'bōō), city (pop 75,419), SW Finland, a Baltic seaport at the mouth of the Aura river. Shipyards, sawmills, textile mills, and an excellent harbor kept open during winter make Turku important commercially, it is the second largest and the oldest city of Finland. Growing up around a 13th-century castle, Turku was the capital of Finland until 1812, and sections of it retain a medieval atmosphere. Turku is known as the "cradle of Finnish culture," and it was the seat of the national university from 1640 to 1827, when a fire destroyed almost the entire city, and the university was moved to Helsinki (1828). Turku has a Swedish university (founded 1918), a Finnish university (founded 1922), and a 13th-century cathedral. By the Treaty of Abo (1743) Sweden ceded a section of SE Finland to Russia. Considerable property destruction was caused by Russian bombings of Turku during the Finnish-Russian War (1939–1940) and during the Second World War. Near by is Naantali, one of the oldest towns in Finland, founded in 1445 around a monastery and now a popular bathing resort.

Turlock (tûr'lŏk), city (pop 4,839), central Calif., SE of Stockton, inc 1908. It is the center of the Turlock irrigation district, which uses the waters of the Tuolumne river for a rich and diversified farm area.

turmeric (tûr'murĭk), perennial herb (*Curcuma longa*), related to ginger and cultivated in the tropics for its rootstalk. It has large leaves and a spike of yellow flowers. The yellow rootstalks make a deep yellow, resinous powder of a peculiar gingerlike odor and aromatic taste. In India it is an ingredient of curries and is used medicinally. It is also used as a coloring matter or dye, as an indicator (it changes color in acid and alkali), and in pickles.

Turner, Charles, 1774–1857, English mezzotint and stipple engraver. He was noted for his engravings of the work of the English portraitists—including Reynolds, Raeburn, and Lawrence—and of the landscapes of J. M. W. Turner, many of whose *Liber studiorum* series he engraved. Charles Turner was made engraver to George III.

Turner, Charles Yardley, 1850–1918, American historical and mural painter, b. Baltimore, studied at the National Academy of Design and at the Art Students League and in Paris. He became an instructor (1881) at the Art Students League, which he had helped organize, and a member (1886) of the National Academy. His mural works for New York city include the panels *Equity* and *Law* (Appellate Courthouse) and *Marriage of the Waters* and *Opening of the Erie Canal* (Haaren Cooperative High School), for Jersey City, N.J. *Washington Watching the Assault on Fort Lee* and *Fulton's Clermont Making Its First Trip up the Hudson* (Hudson co. courthouse), and for Baltimore, *The Burning of the Peggy Stuart* and *The Barter with the Indians* (courthouse). Among his genre paintings is the *Bridal Procession* (Metropolitan Mus.). Turner was appointed director of the Maryland Institute, Baltimore, in 1912.

Turner, Frederick Jackson, 1861–1932, American historian, b. Portage, Wis., grad. Univ. of Wisconsin (B.A., 1884, M.A., 1888), Ph.D. Johns Hopkins, 1890. He taught at the Univ. of Wisconsin from 1885 to 1910, except for the year 1888–89, spent in graduate study at Johns Hopkins. Univ. From 1910 to 1924 he taught at Harvard, and later he was research associate at the Henry E. Huntington Library. He at first taught rhetoric and oratory, then shifted to U.S. history, and soon centered on Western history. His doctoral dissertation, *The Character and Influence of the Indian Trade in Wisconsin* (1891, an enlargement of his master's essay), showed the trend of his interest. In 1893 at the meeting of the American Historical Association in Chicago he delivered an address, "The Significance of the Frontier in American History." This outlined brilliantly the history of the receding frontier and its effect in creating American democracy, it was to prove epoch-making in American history writing. Although not much noticed at the moment, it was to supply a large part of a generation of historians with a theme to investigate. Turner's ideas are now incorporated in all the American history texts. The address and various short papers were reprinted in *The Frontier in American History* (1920). He collaborated with Edward Channing and Albert B. Hart in the revision of *Guide to the Study and Reading of American History* (1912). Though he produced few books—*The Rise of the New West* ("American Nation" series, 1906) and two studies in sectionalism, *The Significance of Sections in American History* (1932) and the posthumously published *The United States, 1830–1850 the Nation and Its Sections* (1935)—his influence as a teacher and an opener of a new and important path made him one of the most renowned of all American historians. See *The Early Writings of Frederick Jackson Turner* (with a bibliography by Everett E. Edwards and an introduction by Fulmer Mood, 1938).

Turner, Joseph Mallord William, 1775–1851, English landscape painter, son of a London barber. He received almost no general education but at 14 was already a student at the Royal Academy of Arts and three years later was making topographical drawings for magazines. In 1793 for the first time he exhibited an oil painting at the Royal Academy. In the following 10 years he exhibited regularly, was elected a member (1803), and was made professor of perspective (1808). By 1799 the sale of his work had freed him from the drudgery of topographical drawing, and he devoted himself to the poetic and visionary interpretations of landscape for which he became famous. In 1802 he made a trip to the Continent, where he painted his famous *Calais Pier*. From then on he traveled constantly in England or abroad, making innumerable direct drawings and sketches from which he drew material for his studio paintings in oil and water color. Despite his early and continued success Turner lived the life of a recluse. As his fame grew he maintained a large studio in London for exhibition of his work, but continued to live an obscure existence with his old father. Toward the end of his life his painting became increasingly abstract in an endeavor to depict not so much the surface aspect of landscape as light and space and the elements. He then encountered violent criticism but was passionately defended by the youthful Ruskin. His will, which was under litigation for many years, left over 19,000 water colors, drawings, and oils to the nation. Most of these works are in the National Gallery and the Tate Gallery, London. Turner's early work rivals that of the great classical landscape painters. He knew this and produced the *Liber Studiorum* (1806–19) in emulation of Claude Lorrain's *Liber Veritatis*. These drawings were reproduced by leading engravers under Turner's supervision. To this period belong his *Dido Building Carthage* and *Sun Rising in Mist* (National Gall., London). In his second period (1820–35), however, his work became more individual. *Bay of Baiae* and *Ulysses Deriding Polyphemus* (both National Gall., London) and *Staffa, Fingal's Cave* (N.Y. Public Library) belong to this period, as do many of his finest water colors. In his last period his color became stronger and his style extremely free and personal. Most of the Venetian paintings, e.g., *The Slave Ship* (Mus. of Fine Arts, Boston), *The Fighting Téméraire* and *Snow Storm* (both National Gall., London), *The Whale Ship* (Metropolitan Mus.), and *Approach to Venice* (National Gall. of Art, Washington, D.C.), belong to this period. Many of Turner's oils have faded badly, but they are still treasured as masterpieces of British painting. In water color he is unsurpassed. See studies by W. L. Wyllie (1905) and W. G. Rawlinson (1908), biography by P. G. Hamerton (1882), John Ruskin, *Modern Painters*.

Turner, Nat, 1800–1831, American Negro, leader of the Southampton Insurrection (Aug., 1831), b. Southampton co., Va. Believing himself divinely appointed to lead his fellow slaves to freedom, he incited several other Negroes to revolt. Before the small band of blacks (about 60 eventually) were captured, 55 whites were killed. Turner escaped to the woods and was not taken for six weeks. He and 16 others were hanged. The uprising led to more stringent slave laws in the South and to the demise of manumission societies there. See W. S. Drewry, *The Southampton Insurrection* (1900).

Turner, town (pop 1,415), SW Maine, just N of Auburn, settled c 1773, inc. 1786.

Turners Falls, Mass.: see MONTAGUE.

Turner Valley, village (pop 1,157), SW Alta., at the foot of the Rocky Mts., on the Sheep river and SSW of Calgary. It is the center of a major oil and natural-gas producing area, opened in 1914, it has oil refineries and gas pipe lines to Calgary and Lethbridge.

Turnhout (tûrn'hout), town (pop. 31,806), Antwerp prov., N Belgium, at the junction of two canals and near the Dutch border. It is a market center. The former castle of the dukes of Brabant now is the palace of justice.

turnip, garden vegetable of the same genus as the cabbage, a native of Europe, where it has been long cultivated. The two principal kinds are the white (*Brassica rapa*) and the yellow (*Brassica napobrassica*), which is known as the rutabaga (rōō'tŭbā'gŭ) or Swedish turnip (or swede). The turnip is one of the ROOT CROPS used as a stock feed as well as for human food. The green leaves are often cooked like spinach. The turnip is a biennial cool-weather crop, grown mostly in cool climates. The worst turnip pests are the root maggot and the flea beetle, it is also attacked by clubroot.

Turnor, Philip, 1752?–1800?, British surveyor for the Hudson's Bay Company. He was sent (1778) to Canada by the company to help map out part of their vast and largely unknown territory of Rupert's Land. He traveled up many of the rivers emptying into Hudson Bay and made maps showing routes to various fur-trading posts. From 1790 to 1792 he was engaged in the project of surveying and mapping Lake Athabaska, his journal, edited by J. B. Tyrrell in 1934, describes this undertaking. David Thompson received surveying instruction from Turnor, who returned to England in 1792 and completed there his fine maps of Rupert's Land.

turnpike, road paid for partly or wholly by fees collected at tollgates. The hinged bar that prevented passage through such a gate until toll was paid was the original turnpike from which the road derived its name. In England tollgates were first authorized by law in 1346. American colonists from Scotland and Ireland, as well as from England, knew the turnpike system. It was not introduced in America, however, until after the American Revolution. The business interests of growing cities then required through roads, and these could not be built and maintained by local funds in unsettled and sparsely settled regions. The tollgate, like the later gasoline tax, was a device to make the traffic pay for the road. The first American turnpike road was a state enterprise, authorized by a Virginia act of 1785. The first American authorization of a turnpike to be made and operated by a private corporation was in Pennsylvania (the Lancaster Turnpike) in 1792. Thereafter turnpikes were regularly private enterprises, and turnpike corporations held the leadership in the development of the American corporation system. The making of turnpikes proceeded rapidly, and by 1825 a map of the Eastern states showing the turnpikes would have looked much like a present-day map showing the railroads. Famous turnpikes included the post road from New York to Boston, the two roads from New York to Albany (on the two sides of the Hudson river), and the roads from Albany to Buffalo, main lines of communication with the developing West. The labor of making the road began with felling trees and grubbing stumps. Swamps were crossed by corduroy, made of many layers of logs across the road. The surface of the turnpike was sometimes of earth, but often of broken stone or of planks. The total costs were sometimes as much as $10,000 a mile and were often from $5,000 to $7,000. The great period of American turnpikes was from c 1800 to c 1840, and this was also the great period of the passenger STAGECOACH and the Conestoga wagon. The coach had places for 8 to 14 passengers and was drawn by four or six horses, the wagon, for freight, was drawn by six or eight horses. The traffic over the turnpikes included droves of horses, cattle, and sheep. Settlers going west often made turnpikes the first part of their route. Tollgates were 6 to 10 mi apart, and tolls were commonly from 10 to 25 cents for a vehicle, depending on its type. Turnpikes that were not profitable were abandoned to the states. After the coming of canals and railroads, such abandonment became general.

Turnus (tûr'nus), in Roman legend, and notably in the *Aeneid*, Italian chief, king of the Rutulians. He fought AENEAS for the hand of Lavinia, daughter of Latinus, and was killed. Lavinia had been promised to Turnus, but was given to Aeneas.

Turnu-Severin (tōōr'nōō-sĕvĕrēn'), city (pop 31,296), SW Rumania, in Walachia, on the left bank of the Danube below the Iron Gate and opposite Yugoslavia. It is a river port with large shipyards and it is an agricultural trade center. The surrounding area is known for its extensive rose gardens and for its white wine. Near by are the ruins of a bridge across the Danube, erected (A.D. 103) by Emperor Trajan.

Turnverein (tōōrn'fərīn), society of a type originated in Prussia by Friedrich Ludwig JAHN. The first hall of such a society was built in 1811 on the Hasenheide, near Berlin. The organization emphasized gymnastic exercises, but it had also important social and patriotic functions. In the beginning it was an effective instrument in organizing opposition to French domination of Germany, and it had official approval and support. Similar societies were at once organized throughout Germany. After the fall of Napoleon, German governments disapproved the *Turnvereins* as centers from which liberal ideas might be disseminated. The *Turnvereins* were supported loyally by their members, and new groups were organized in other countries, as in America, by members who migrated to those countries. The example of the *Turnvereins* has encouraged organizations under other names to

combine gymnastic exercises with discussion and social pleasures

turpentine (tûr'puntĭn), in nature, a resinous semi-fluid substance, pale yellow to brown, exuded from the sapwood of various conifers (e g , the pine and fir) Chemically, this substance is principally a mixture of an oil (oil of turpentine) and a resin (see ROSIN) When subjected to steam distillation, the essential oil, a hydrocarbon, passes off and the resin is left The oil of turpentine is the common turpentine or turps of commerce When pure, this substance is a colorless, transparent, oily liquid with a penetrating odor and characteristic taste, but its physical properties are modified by its source In the United States it is obtained chiefly from several species of pines of the southeastern states, not only from the sap of tapped trees but also from the stumps and fallen branches (the product then being known usually as wood turpentine) Norway and France also produce turpentine It is widely used chiefly as a solvent and drying agent in paints and varnishes The purest grades are used in medicines See also CANADA BALSAM

turpentine tree see TEREBINTH.

Turpin, Richard (Dick Turpin), 1706–39, English robber He scarcely deserves, from his short and brutal career of horse stealing and general crime, the notoriety he later achieved—mainly from Harrison Ainsworth's romance, *Rookwood* (1834), based upon his life His famous ride from London to York on his mare, Black Bess, is fiction, and his actual exploits were not of a romantic character

Turquino (tôôrkē'nō), peak, 6,560 ft high, SE Cuba, in the Sierra Maestra range It is the highest point on the island It is also called Pico Turquino

turquoise (tûr'kwoiz, -koiz), a hydrous phosphate of aluminum and copper, used as a gem It occurs rarely in crystal form, but is usually amorphous or cryptocrystalline Turquoise is opaque and has a waxy luster, the color varies from greenish gray to sky blue The sky-blue varieties are the most valued as gems, but because of their porosity they easily absorb dirt and grease and change in color to an unattractive green Exposure to heat or sunlight is also injurious to the color of the turquoise The finest specimens come from PERSIA, other sources are the Sinai peninsula and the SW United States, especially New MEXICO, Nevada, ARIZONA, and Colorado Turquoise matrix is a rock including fragments of turquoise, cut as a gem stone Variscite, the hydrated phosphate of aluminum, is sometimes used as a substitute for turquoise It occurs in crystals of the orthorhombic system and in massive form, large deposits are found in Utah.

Turrialba (tôôrēül'bä), inactive volcano, 11,224 ft high, E central Costa Rica Probably extinct, it is, unlike neighboring IRAZÚ, difficult to ascend The small town of Turrialba on its lower slopes is the seat of the Inter American Institute of Agricultural Sciences for experiments in tropical agriculture

Turtkul (tôôrtkōōl'), city (pop 19,600), S Karakalpak ASSR, Uzbek SSR, on the Amu Darya river It has cotton gins and food-processing plants It was until 1939 the capital of the Karakalpak ASSR

turtle, reptile of the order Chelonia (or Testudinata) In the United States the name turtle is commonly used for any chelonian. TORTOISE is often reserved for the land forms and TERRAPIN for the edible fresh-water species Turtles have strong, sharp, toothless jaws, and the body is encased in an armorlike shell which usually consists of bony plates fused with the ribs and vertebrae and overlaid with horny shields The carapace or upper portion and the plastron or lower part are joined at the sides In most sea turtles the shell is reduced The terrestrial species have stumplike feet, the fresh-water turtles have webbed toes, and the marine species have paddlelike limbs with no distinct toes All turtles lay eggs Marine species return to the shore at egg-laying time Among the common small turtles of the United States are the painted, spotted, and musk turtles The young turtles sold for pets are usually map and Troost's turtles They should be fed bits of raw chopped beef, fish, or worms Painting the shells is harmful Several species of the box turtle or box tortoise are found in North America and in MEXICO They can withdraw into the shell and close the openings The common snapping turtle lives in fresh water or salt marshes from SE Canada to N South America On land it is aggressive and vicious The alligator snapping turtle of the Mississippi valley and the SE United States is the largest fresh-water turtle in the country The largest of all living species is the marine leatherback turtle The average adult weighs over 1,000 lb TORTOISE SHELL is secured from the horny covering of the shell of the marine hawksbill turtle The marine green turtle is the source of turtle soup and of much canned turtle meat See C. H Pope, *Turtles of the United States and Canada* (1939), P. A. Morris, *They Hop and Crawl* (1944)

Turtle Creek, industrial borough (pop 9,805), SW Pa , near the Monongahela ESE of Pittsburgh; settled c 1765, inc. 1892 It has coal mines and factories producing electrical equipment. There was a trading post near here, c.1750, and the region has considerable historic interest.

turtledove, name of several species of wild DOVE native to Europe and Asia, with plaintive song and affectionate ways It is referred to in the Bible—"the voice of the turtle is heard in our land" (Cant 2 12) In America the name is sometimes applied to the mourning dove

Tuscaloosa (tŭskŭlōō'sŭ), city (pop 27,493), co seat of Tuscaloosa co , W central Ala , on the Black Warrior river and SW of Birmingham, settled on the site of an Indian village after the Creek revolt of 1813 It was state capital from 1826 to 1846 It is a farm trade center, industries center around iron, coal, railroads, brick, farm produce, and lumber The Univ of Alabama (see ALABAMA, UNIVERSITY OF) and a state hospital for the insane are near by, a Negro junior college is in the city There are a number of fine ante-bellum houses

Tuscan order see DORIC ORDER

Tuscany (tŭs'kŭnĭ), Ital *Toscana* (tôskä'nä), region (8,876 sq mi ; pop 2,978,013), central Italy, extending along the Tyrrhenian Sea It includes several islands, of which Elba is the largest, and it comprises the provinces of Arezzo, Firenze (Florence), Grosseto, Livorno (Leghorn), Lucca, Massa e Carrara, Pisa, Pistoia, and Siena, all named after their chief cities FLORENCE is the capital, Leghorn the chief port Along the northern coast, which is low and sandy, there are fine pine woods The region is mostly hilly and, except for the MAREMMA, very fertile, producing fine wines, olive oil, and cereals The Arno has the widest of the river valleys Besides the Apennines in E Tuscany, there are two other mountain groups —the Alpi Apuane, where the famous Carrara marble is quarried, and a group in the south where iron, magnesium, and quicksilver are mined The Maremma yields boric acid The most important manufactures are wool and cotton textiles, chemicals, glass, ceramics, and straw hats Modern Tuscany corresponds to the larger part of ancient ETRURIA and most of our knowledge of ETRUSCAN CIVILIZATION is derived from findings here The Romans conquered the region in the 3d cent B C It was a Lombard duchy, with Lucca its capital, and later a powerful march under the Franks MATILDA (d 1115), its last ruler, bequeathed her lands to the church, a fact which caused long wars between popes and emperors In spite of the dual claims, most cities became in the 11th–12th cent free communes, some of them (Pisa, Lucca, Siena, and Florence) developed into strong republics Commerce, industry, and the arts flourished Guelph and Ghibelline strife, however, was particularly ruthless here, both within and among the various cities After the decline of PISA, Florence gained hegemony over most cities in the 14th–15th cent Siena was the last to fall (1555) Under the ruling family of Florence (see MEDICI), Tuscany became (1569) a grand duchy, and thus again a political entity, only the republic of Lucca and the duchy of Massa and Carrara remained independent After the extinction of the Medici line it passed (1737) to the ex-duke Francis of Lorraine (later Emperor FRANCIS I), who was succeeded by Grand Duke Leopold I (later Emperor LEOPOLD II) The French Revolutionary armies invaded Tuscany in 1799, and briefly it was included in the kingdom of Etruria (1801–7) and was ruled under the duchy of Parma before it was annexed to France by Napoleon I In 1814 it again became a grand duchy, under the grand dukes Ferdinand III, LEOPOLD II, and Ferdinand IV of the house of Hapsburg-Lorraine In 1860 it voted its union with the kingdom of Sardinia In the late Middle Ages and throughout the Renaissance, Tuscany was a center of the arts and learning The Tuscan spoken language became the literary language throughout Italy after Dante, Petrarch, and Boccaccio used it Schools of architecture, sculpture, and painting developed after the 11th cent in many cities, particularly Florence, Pisa, Siena, and Arezzo, which were enriched with unsurpassed works of art After the 16th cent , however, intellectual and artistic life was almost wholly concentrated in Florence

Tuscarora Indians see IROQUOIS CONFEDERACY

Tuscola (tŭskō'lŭ), city (pop 2,838), co seat of Douglas co , E central Ill , E of Decatur, in a farm area, platted 1857, inc 1861 Brooms and wood products are made

Tusculum (tŭ'skyōōlum), city of ancient Latium The ruins of this city are near Frascati, 15 mi SE of Rome, Italy Traditionally founded by Telegonus, son of Ulysses, Tusculum was early an important city It was a favorite summer residence of Roman nobles, Pliny the Younger, Cicero, Nero, and Titus being among those who built villas there In 1191 the city was razed by the Romans Ruins include those of villas, an amphitheater, and a theater

Tusculum College see GREENEVILLE, Tenn

Tuscumbia (tŭskŭm'bēŭ), city (pop 5,515), co seat of Colbert co , NW Ala , on the Tennessee near MUSCLE SHOALS, settled c 1815 on the site of a Chickasaw village Helen Keller's birthplace is here

Tuskegee (tŭskē'gē), city (pop 3,937), co seat of Macon co , SE Ala , c 40 mi E of Montgomery, in a cotton, corn, and dairy area, settled in the early 19th cent , inc 1843 A U S Negro veterans' hospital is here **Tuskegee Institute** (Negro; nonsectarian, coeducational), chartered and opened in 1881 as a normal school, was called a normal and industrial institute from 1893 to 1937 • A college department was added in 1927 It has schools of agriculture (with a research department and extension service, the "School on Wheels"), education, home economics and commercial dietetics, mechanical industries, and nurse training (with a hospital) and also departments of business, music, and physical education An aviation school was established in 1941 Booker T WASHINGTON was principal until his death in 1915, when he was succeeded by Robert R MOTON George Washington CARVER taught here Many students contribute labor toward tuition See A P Stokes, *Tuskegee Institute* (1931)

Tussaud, Marie (tōō-sō'), 1760–1850, Swiss modeler in wax, whose maiden name was Gresholtz She learned her art from her uncle, J C Curtius, proprietor of wax museums in Paris from 1762 Mme Tussaud was imprisoned during the Reign of Terror, and many heads of famous persons were brought to her for modeling In 1802 she inherited the museums of her uncle and emigrated to London, where she established Madame Tussaud's Exhibition Her museum soon became a London landmark In 1833 it was moved to Baker St and, after Mme Tussaud's death, to a larger building in Marylebone Road In 1925 fire destroyed the building, but many of the casts were saved, and in 1928 the exhibition was reopened It received only minor damage during the Second World War See J T Tussaud, *The Romance of Madame Tussaud's* (1920)

Tusser, Thomas (tŭs'ur), 1524?–1580, English author He is known for his popular rhymed compendium of advice on farming and housekeeping called *Hundred Points of Good Husbandry* (1557), enlarged in later editions to *Five Hundred Points of Good Husbandry* (1573)

Tut-ankh-amen (tōōt"ăngk-ä'mun) or **Tutenkhamon** (tōōt"ĕngk-amun) (Egyptian, =living image of Amon), fl c 1355 B C , king of ancient Egypt, of the XVIII dynasty He was the son-in-law of Ikhnaton, whose ephemeral successor he succeeded The reaction in favor of the god Amon, replaced by Aton under Ikhnaton, completed its course under Tut-ankh-amen, thus, the king, who had been known as Tut-ankh-aton, changed his name He also abandoned Ikhnaton's new capital, Akhetaton (Tel-el-Amarna), to return to Thebes, sacred to Amon, and he restored the name of Amon, deleted from the monuments by Ikhnaton The chief officer of state, Harmhab (Horemheb), controlled affairs, successfully stemming the tide of dissolution which had threatened to engulf the kingdom under Ikhnaton Later (1350 B C), Harmhab was to become king and founder of the XIX dynasty. The tomb of Tut-ankh-amen was found (1922) by Howard Carter and the earl of Carnarvon in the Valley of the Tombs near Luxor Its great wealth of objects afforded a new store of knowledge on Egyptian sculpture and life of the XVIII dynasty The contents of the tomb, including the mummy and the gold sarcophagus, are in Cairo See Howard Carter and A C Mace, *The Tomb of Tut ankh amen* (1923–33), G R Tabouis, *The Private Life of Tutankhamen* (tr by M R Dobie, 1929, new ed , 1931)

Tuticorin (tōō"tĭkôrĭn'), town (pop 75,614), Madras state, India, a port on the Bay of Bengal It was founded by the Portuguese (c 1540) and captured (1658) by the Dutch, who ceded it (1825) to the British Cotton thread is manufactured, and cotton, coffee, and tea are exported Near by are pearl and conch fisheries

Tuttle, Daniel Sylvester, 1837–1923, American Episcopal bishop, b Windham, N Y In 1867 he was consecrated bishop of Montana, with jurisdiction in Utah and Idaho He became (1886) bishop of Missouri and from 1903 was presiding bishop of his denomination in the United States

Tutuila (tōōtōōē'lä), island (c 40 sq mi , pop 9,842), Samoa, the largest in American SAMOA It has a harbor at PAGOPAGO The island has a rugged eastern area, with a fertile plain in the southwest Near the center is Matafao Peak (2,141 ft), the highest point on the island Tutuila was ceded to the United States in 1900 and placed under the Dept of the Navy as a naval station As in all of American Samoa, the land in Tutuila is privately owned Copra is the chief product

Tuva Autonomous Oblast (tōō'vu, Rus tōōvä') or **Tuvinian Autonomous Oblast,** administrative division (66,100 sq mi , 1946 estimated pop 150,000), RSFSR, in S Siberia, bordering on Mongolia in the south Kizil is the capital Extending between the Savan Mts in the north and the Tannu-Ola Range in the south, it includes the upper course of the Yenisei river It has a dry continental climate Grain is grown in the irrigated lowlands, cattle, sheep, and horses are raised in the central steppes Natural resources include the forests in the mountains and gold, coal, salt, asbestos, and copper Sawmilling and tanning are the main industries The Tuvinians, a Turkic-speaking group, form 75

percent of the population, the rest being mainly Russians. Formerly known as the Uriankhai Territory, the region was part of the Chinese Empire It was a Russian protectorate from 1912 to 1921, was declared independent in 1921 as the Tannu-Tuva (after 1934, simply Tuva) People's Republic, and was incorporated (1944) into the USSR

Tuwim, Julian (yōōl'yan tōō'vēm), 1894–, Polish poet and translator He is regarded as the founder of Polish futurism and one of the chief Polish contemporary figures He has translated Pushkin and other Russian poetry into Polish *Locomotive* (1938; Eng tr , 1940) is a collection of children's verse

Tuxedo Park (tŭksē'dō), unincorporated residential and resort village (pop 1,651), SE N Y , on Tuxedo Lake, in the Ramapos and near the N J line Pierre Lorillard, wealthy sportsman, developed (1886) here an exclusive colony, known for its sports and social functions, and his family has controlled it since In 1941 plans were made to reconstruct the colony with inexpensive homes for professional and business people The tailless dress coat, named for the colony, is said to have originated here

Túxpam or **Tuxpan** (both tōōs'pän), city (pop 13,381), Veracruz, E Mexico, a port on the Gulf of Mexico Túxpam as an oil-pumping and loading station There are also considerable exports of chicle, rubber, vanilla, dyewoods, and hides The climate is hot, and the region tropical

Tuxtla (tōōs'tla) or **Tuxtla Gutiérrez** (gōōtyĕ'rās), city (pop 15,883), capital of Chiapas, S Mexico Made the state capital in 1891, it is a clean, pleasant, and not unhealthful city in the fertile Grijalva valley and at the foot of the Chiapas highlands The rich soil produces food crops, and cattle are raised There is some timber trade The principal industry is a cigar factory Tuxtla is on the Inter-American Highway

Túy (tōō'ē), city (pop 2,871), Pontevedra prov , NW Spain, in Galicia, near the Miño river and on the Portuguese frontier The capital of the Visigothic King Witiza (early 8th cent), Túy played later an important role in the wars between Castile and Portugal There is an imposing fortress like Romanesque cathedral (12th cent , later restored)

Tuzigoot National Monument see National parks and monuments (table)

Tuzla (tōōz'la), city (pop 28,916), Bosnia, central Yugoslavia, N of Sarajevo It has large salt mines, and it is an Orthodox episcopal see Its salt springs were known in Roman times, and the city dates at least from the 10th cent

TVA: see Tennessee Valley Authority.

Tver, RSFSR see Kalinin

Twachtman, John Henry (twakt'mun), 1853–1902, American landscape painter and etcher, b Cincinnati He studied in Cincinnati under Duveneck and in Munich and Paris, but was influenced principally by the impressionist movement, of which he became an outstanding exponent Many of his exquisite and atmospheric landscapes in oil and pastel were inspired by the countryside near his home in Greenwich, Conn He also painted a series of landscapes at Yellowstone Park and at Niagara Falls Twachtman exhibited with liberal groups and exercised a wholesome influence on many painters of the younger generation, notably Ernest Lawson He did not live to enjoy the high reputation his work now holds Twachtman is represented in most of the principal American galleries His *Waterfall* (Metropolitan Mus) is characteristic Comprehensive exhibits of his work were given in New York (1913) and at the Panama-Pacific Exposition (1915)

Twain, Mark, pseud of **Samuel Langhorne Clemens** (klĕ'munz), 1835–1910, American humorist, b Florida, Mo He spent his childhood in Hannibal, Mo , in surroundings which he was later to immortalize in *Tom Sawyer* and *Huckleberry Finn* After the death of his father in 1847, Clemens worked for his brother's Hannibal newspaper for a few years, lived in Eastern cities as a printer, and in 1857 went to New Orleans on his way to make his fortune in South America Instead, he became a pilot on the Mississippi and remained one until the Civil War closed the river In 1859 he first used the pseudonym Mark Twain—from the call of the leadsmen on the river boats when a depth of two fathoms was sounded—to satirize a Capt Isaiah Sellers who had written under that name in St Louis and New Orleans journals Clemens went in 1862 to Carson City, Nev , where his brother had been appointed territorial secretary Failure of various get-rich-quick schemes led him to write for the Virginia City *Enterprise*, under the name Mark Twain Artemus Ward encouraged him, as did Bret Harte later when Clemens became a reporter in San Francisco The story which first made him famous was "The Celebrated Jumping Frog of Calaveras County," published in 1865 in the New York *Saturday Press* and in 1867 as the title piece of a collection When he returned from a trip to the Sandwich Islands for the Sacramento *Union* in 1866, he scored the first success in his long career as a humorous lecturer. The articles he wrote on a journey to the Holy Land were published in 1869 as *Innocents Abroad* and were immediately popular. He married Olivia Langdon of Elmira, N.Y., in 1870 and settled down, as he thought, to the life of a journalist There is disagreement among critics as to whether his wife and his New England friends suppressed or only guided his talents At any rate, some of his best work followed his removal to Hartford, Conn , in 1872—*The Gilded Age* (1873), a satirical novel written with Charles Dudley Warner and later successfully dramatized, *Mark Twain's Sketches, New and Old* (1875), and his masterly recreations of his boyhood, *The Adventures of Tom Sawyer* (1876), *Life on the Mississippi* (1883), and *The Adventures of Huckleberry Finn* (1884) Meanwhile he had written another travel book, *A Tramp Abroad* (1879), and a historical novel, *The Prince and the Pauper* (1880) His second venture into history, *A Connecticut Yankee in King Arthur's Court* (1889), revealed his power as a social satirist *The American Claimant* (1892), *The Tragedy of Pudd'nhead Wilson*, and *In Defense of Harriet Shelley* (both 1894) followed, two sequels to *Tom Sawyer* were forced and humorless In 1893 he was plunged into debt by the failure of the publishing firm of Charles L Webster and Company, in which he was a partner, and by his unsuccessful attempt to manufacture typesetting machines Twain wearily lectured his way around the world to make good his losses and wrote his experiences in *Following the Equator* (1897) An idealistic study, *The Personal Recollections of Joan of Arc*, appeared in 1896 His later life was saddened by the deaths of two of his daughters and the long illness and death in 1904 of his wife Out of his pessimism and sorrow he wrote his later, bitter works, *The Man That Corrupted Hadleyburg* (1899), *What Is Man?* (1906), and *The Mysterious Stranger* (1916) Mark Twain, beginning as a journalist, had become a popular novelist, lecturer, and travel writer in the idiomatic speech of his America An irreverent satirist, a comic artist, and a disturbed equalitarian, he was more a debunker than a constructive thinker, but he has left a vivid record of his era and some timeless, exuberant stories See his autobiography (ed by A B Paine, 2 vols , 1924, with a third volume, *Mark Twain in Eruption*, ed by Bernard De Voto, 1940), his letters (1917) and notebook (1935), both ed by A B Paine, his love letters (ed by Dixon Wecter, 1949), biographies by Paine (1912) and Twain's daughter, Clara Clemens Gabrilowitsch (1931), studies by W D Howells (1910), Bernard De Voto (1932, 1942), Van Wyck Brooks (rev ed 1933), S C Webster (1946), and W F Fear (1948)

Tweed, William Marcy, 1823–78, American politician and Tammany leader, b New York city The son of a chairmaker, he worked at bookkeeping, and after he became (1848) a volunteer fireman, he acquired influence in his ward In 1851 he became alderman and in 1852 was elected to Congress By 1857 he was a power in Tammany As chairman of the Tammany general committee and later as grand sachem, "Boss" Tweed gained absolute power in the city Democratic party, controlling party nominations and party patronage He also became a state senator in 1868 and extended his influence into state politics He engaged in various business deals, and through political services to Jay Gould and James Fisk he became a director of the Erie RR But it was chiefly from the rich plums plucked through the control of New York city expenditures that Tweed made his great fortune For a time the **Tweed Ring,** consisting of Tweed and his henchmen—Peter Sweeny, city chamberlain, Richard B Connolly, city comptroller, and A Oakey Hall, mayor—seemed to have the city completely under control with little fear of interference They defrauded the city at least to the extent of $30,000,000 through padded and fictitious charges and also profited extravagantly from tax favors Votes were openly bought and other nefarious vote-getting methods were employed City judges became notoriously corrupt Attempts within Tammany to oust the Tweed Ring failed, and in 1870 Tweed forced through the state legislature a charter greatly increasing the powers of the ring Tweed maintained personal popularity because of his open-handedness and charity to the poor The immediate cause of Tweed's downfall was the publication in the New York *Times* of evidence of wholesale graft revealed by M J O'Rourke, a new county bookkeeper The effective cartoons of Thomas Nast aroused public indignation A committee of 70, organized to fight Tammany, elected most of their candidates in 1871, though Tweed himself was returned to the state senate. Largely through the efforts of S J Tilden, Tweed was tried for felony, but the jury could not reach a verdict In a second trial he was convicted and was given a 12-year prison sentence, this, however, was reduced by a higher court, and he served one year Arrested once more on different charges, he escaped and went to Cuba and then to Spain, but was extradited (1876) to the United States He died in prison. See D T. Lynch, *"Boss" Tweed* (1927).

Tweed, village (pop. 1,343), S Ont., on the Moira river and N of Belleville. It has flour and lumber mills and makes steel products, leather, and bricks.

Tweed, river, 90 mi. long, mainly in SE Scotland, but partly in England. It rises at Tweed's Well, in Peeblesshire, in the uplands which are also the source of the Clyde and the Annan and flows through or bounds the counties of Peebles, Selkirk, Roxburgh, Berwick, and Northumberland (England) The river passes Innerleithen, Melrose, Dryburgh Abbey, Kelso, and Coldstream, receives the Gala, Ettrick Water, the Leader, and the Teviot, and enters the North Sea at Berwick Peeblesshire is often called Tweeddale.

tweed, rough, unfinished woolen fabric, of a soft, open, flexible texture resembling cheviot or homespun, but closer It is made in either plain or twill weave and may have a check, twill, or herringbone pattern Subdued, interesting color effects (heather mixtures) are obtained by twisting together different-colored woolen strands into a two- or three-ply yarn Genuine tweeds, such as Harris, Lewis, Bannockburn, or Donegal, are desirable for outer wear, being moisture resisting and very durable Many modern so-called tweeds are made from cotton-mixed yarns and are inferior

Tweeddale, John Hay, 2d earl and 1st marquess of, 1626-97, Scottish statesman In the civil war of the Puritan Revolution he turned from support of Charles I and fought for the Parliament at Marston Moor (1644), but turned again when Charles promised to support Presbyterianism and fought for the king at Preston With the Restoration he was made a privy councilor for Scotland in 1660 and advanced to president of the council in 1663 He defended the Covenanters, and John Maitland, duke of Lauderdale, had him dismissed (1674) from office, but he later served Charles II as commissioner of the treasury (1680) and privy councilor. These posts he also held under James II Supporting the Glorious Revolution and the accession of William III, he was again made privy councilor (1689), a lord of the treasury (1689), high chancellor of Scotland (1692), and marquess (1694) In 1695 he conducted the inquiry into the massacre at Glencoe The next year he was dismissed from the chancellorship for approving in the king's name the Darien Scheme

Tweeddale, county, Scotland see Peeblesshire

Tweed Ring see Tweed, William Marcy

Tweedsmuir, John Buchan, 1st **Baron** see Buchan

Tweedsmuir Park (twēdz'myōōr), provincial reserve, 5,400 sq mi , W central British Columbia, W of Prince George, est 1936, and named for Lord Tweedsmuir It lies on the east slope of the Coast Range in a wilderness region of forests, lakes, and streams, with several peaks over 7,000 ft high The largest lakes are Eutsuk, Whitesail, Tahtsa, and Tetachuck Ootsa Lake is on the north boundary of the park

Twelfth Night, Jan 5, the vigil or eve of Epiphany, so called because it is the 12th night from Christmas, counting Christmas as the first In England, Twelfth Night has been a great festival marking the end of the Christmas season and popular masquerading parties are the typical entertainment It was also one of the chief times of conviviality

Twelve Apostles or **Twelve Disciples** see Apostle

Twelve Tables, early code of Roman law Most modern authorities accept the traditional date of 450 B C , but several place the work later The tables were supposedly written in response to the plebeians' protest that the patrician judges were able to discriminate against them with impunity because the principles governing legal disputes were only known orally Decemvirs were appointed to state the law in writing, and they first produced 10 wooden tablets of material and in the next year two more Exact quotations of the Twelve Tables are exceedingly rare, but from references in later Latin writers their content has been approximately reconstructed They appear to have been an exceedingly formalistic statement of the customary law In later times the Twelve Tables were regarded with reverence as a prime legal source

Twenty-one Demands. Japan used its declaration of war against Germany (Aug , 1914) as grounds for invading Kiaochow, the German leasehold in Shantung prov , China Disregarding the Chinese request to withdraw, Japan secretly presented (1915) President Yüan Shih-kai with an ultimatum comprising 21 demands divided into five sections These provided that Japan assume Germany's position in Kiaochow, that Manchuria and Mongolia be reserved to Japan for exploitation and colonization, that Japan control the main coal deposits of China; that the other powers be excluded from further territorial concessions, and that Japan guide China's military, commercial, and financial affairs The demands for control of Chinese policy were dropped, partly at the insistence of the United States. Treaties were signed (May 15) extending Japan's lease of the Liaotung peninsula (see Liaoning) and of the Manchurian railroads and granting Kiaochow to Japan. The demands, setting a pattern for Japanese domination, were thus partially forced on China, but the treaties were not ratified by the Chinese legislature, nor did Japan insist upon their implementation.

Twickenham (twĭk'ənŭm), municipal borough (1931 pop. 39,906; 1947 estimated pop. 107,610), Middle-

sex, England, on the Thames and WSW of London, of which it is a residential suburb Alexander Pope had a house here, and Horace Walpole's "Strawberry Hill" estate was a few miles up the river At Twickenham the Rugby football matches between Oxford and Cambridge are played The manufactures of Twickenham include electric switchgear, chemicals, pharmaceuticals, and asphalt In 1937 Twickenham absorbed near-by areas, including Hampton and Teddington

Twiggs, David Emanuel, 1790–1862, American general, b Richmond co , Ga He was a captain serving in minor capacities in the War of 1812 and later fought in campaigns against the Seminole and in the Black Hawk War In the Mexican War, Twiggs first served under Gen Zachary Taylor, so distinguishing himself at Palo Alto and Resaca de la Palma that he was promoted (June, 1846) brigadier general Transferred to Gen Winfield Scott's army, he fought at Veracruz and led the van in the advance on Mexico city, at Cerro Gordo, Contreras, and Churubusco In Feb , 1861, Twiggs, commander of the Dept of Texas, surrendered his troops and stores to Confederate commander Ben McCulloch, and was thereupon dismissed from the U S army He was made (May) a major general in the Confederate army

twilight sleep, method of anesthetizing during childbirth with the purpose of abolishing memory and pain, but retaining muscular power Various drugs have been used to bring about the condition e g , morphine followed by small doses of scopolamine administered at intervals Although at one time widely popular, the method has since met with much adverse criticism

Twin City, city (pop 1,019), E central Ga , NW of Savannah, inc 1924 as a consolidation of Graymont and Summit

twine see CORDAGE

Twin Falls, city (pop 11,851), co seat of Twin Falls co , S Idaho, in the Snake river valley, laid out 1904, inc as a village 1905, as a city 1907 The city was begun as the center of a private irrigation project, which has been lauded as a model of reclamation Irrigated lands (some 360,000 acres) are in two areas, one north and one south of the river, and the water from the river is used, with support from tributary waters One of the falls of Twin Falls in the near-by gorge is now harnessed for hydroelectric power Fruits, vegetables, sugar beets, and grains are chief among the crops grown and processed

Twins, the see GEMINI

twins, two infants born of one pregnancy They are of two types identical twins result from the division of a single fertilized egg, fraternal twins are of biovular (two-egg) origin, each egg being separately fertilized by a sperm Identical twins are always of the same sex, i e , either two boys or two girls, and in appearance they are physical counterparts one of the other Fraternal twins may be of the same or of opposite sex They resemble each other only to the same degree as do any two offspring of the same parents Twinning (with the meaning restricted to the division of the embryo to form one-egg twins) may take place very early in the pregnancy In such instances each twin has its own placenta When the twinning takes place later, the twins may have a common placenta If considerable development has taken place before the twinning occurs, there is an incomplete separation of the two embryos These are known as conjoined twins, of which the SIAMESE TWINS are the best-known type Only rarely do they survive In the United States twins occur once in approximately every 86 births Of each four sets of twins, one pair is of the one-egg type See H H Newman and others, *Twins* (1937), H H Newman, *Multiple Human Births* (1940)

Two Harbors, city (pop 4,046), co seat of Lake co , NE Minn , on Lake Superior NE of Duluth, settled 1882, inc as a village 1888, as a city 1907 An early shipping point for lumber, since 1884 it has shipped much ore from the iron range A U S coast guard base is here

Two Rivers, industrial city (pop 10,302), E Wis , on Lake Michigan at the mouth of the Twin river and NE of Manitowoc, inc 1878 Its industries include commercial fishing (from the 1830s) and the manufacture of aluminum ware

Two Sicilies, kingdom of the. The name Two Sicilies was used in the Middle Ages to mean the kingdoms of Sicily and of Naples (see SICILY and NAPLES, KINGDOM OF) ALFONSO V of Aragon, who in 1442 reunited the two kingdoms, styled himself king of the Two Sicilies Under his successors the kingdoms were again separate, but the title was revived during the Spanish domination of the two kingdoms (1504–1713) and after the accession of a cadet branch of the Spanish line of BOURBON to Naples and Sicily (1759) Ferdinand IV of Naples (Ferdinand III of Sicily) officially merged the two kingdoms in 1816 and called himself FERDINAND I of the Two Sicilies The Sicilians, who thus lost their autonomy, and the pope, who saw his theoretical suzerainty over the two kingdoms ignored, both protested the change. Secret revolutionary societies were formed (see CARBONARI). The reactionary and terroristic regime of FERDINAND II was continued by FRANCIS II but fell before the forces of GARIBALDI in 1860 In 1861 Gaeta, Francis's last fortress, capitulated to Victor Emmanuel II of Sardinia, who soon afterward proclaimed the kingdom of Italy

two-step, slow dance in 2-4 time It was popular in the United States for several decades prior to 1910 The fox trot succeeded it.

Tyana (tī'unu), town of ancient Cappadocia, at the northern foot of the Taurus, in present S central Turkey It was a powerful military fortress and a prosperous commercial center It was incorporated into the Roman Empire in A D 272 and was for a time the capital of the province of Cappadocia Secunda The city was the birthplace of Apollonius of Tyana There are considerable ruins

Tyard, Pontus de (pôNtüs' dü tēär'), 1521?–1605, French poet of the PLÉIADE, author of a collection of sonnets, *Les Erreurs amoureuses* (1st ed , 1549) He was bishop of Châlons, 1578–92

Tyburn (tī'burn), underground river of London, England It gave its name to the gallows that once stood near the west end of Oxford St After 1783, executions took place at Newgate instead of at Tyburn Perkin Warbeck and Jack Sheppard were hanged at Tyburn

Tyche (tī'kē) [Gr , =chance], in Greek religion, personification of luck, corresponding to the Roman Fortuna She was represented with a rudder, with a wheel, or with a cornucopia

Tychicus (tĭ'kĭkŭs) [Latin from Gr , =fortuitous], companion of Paul Acts 20 4, Eph 6 21, Col. 4 7, 2 Tim 4 12, Titus 3 12

Tycho Brahe see BRAHE, TYCHO

Tydeus (tī'dēŭs), Greek legendary hero, son of OENEUS and brother of MELEAGER He was one of the SEVEN AGAINST THEBES DIOMED was his son

Tydings, Millard Evelyn (tī'dĭngz), 1890–, U S Senator (1927–), b Havre de Grace, Md , grad Univ of Maryland (LL B , 1913) He was admitted (1913) to the bar and soon was successful practicing law, and in 1916 he became a member of the Maryland legislature In the First World War he served in the U S army and saw action in France He again served (1920–23) in the Maryland legislature before becoming a Democratic member (1923–27) of the U S House of Representatives In the U S Senate after 1927 Millard E Tydings opposed much New Deal legislation and on several occasions opposed President F D Roosevelt's foreign policy He became well known for his work on Senate committees He wrote *Before and After Prohibition* (1933) and *Counter-Attack. a Battle Plan to Defeat the Depression* (1933)

Tygart (tī'gurt), river rising in E West Virginia and flowing north to join the West Fork and form the Monongahela at Fairmont Tygart Reservoir Dam, near Grafton, was completed in 1938

Tyldesley (tĭldz'lē), urban district (1931 pop 14,846, 1943 estimated pop 19,423), Lancashire, England, NW of Manchester It has cotton factories and collieries It was formerly Tyldesley with Shakerley

Tyler, John, 1790–1862, 10th President of the United States, b Charles City co , Va , grad College of William and Mary, 1807 He studied law under his father, John Tyler (1747–1813), governor of Virginia from 1808 to 1811, and was admitted (1809) to the bar A state legislator (1811–16, 1823–25) and U S Representative (1817–21), Tyler was an unswerving states' rights Democrat He joined the condemnation of Andrew Jackson's actions in Florida and voted against the Missouri Compromise Governor of Virginia (1825–27) and a U S Senator (1827–36), Tyler reluctantly supported Jackson as the least objectionable of the presidential candidates in 1828 and 1832 Although he did not approve South Carolina's NULLIFICATION act, he violently opposed Jackson's measures against it (see FORCE BILL) The President's fiscal policies further alienated him, so that he was eventually drawn to the new WHIG PARTY He resigned from the Senate rather than abide by the instructions of the Virginia legislature to vote for the motion to expunge Henry Clay's censure of Jackson from the records Because the Whigs felt that this cultured Virginia gentleman would attract Southern votes, they made Tyler running mate to William Henry Harrison in their victorious "Tippecanoe and Tyler too" campaign of 1840 One month after his inauguration Harrison died, and on April 4, 1841, Tyler became the first Vice President to succeed to the presidency His antipathy toward many Whig policies soon became apparent (he had never concealed it), and a rift developed between him and Henry CLAY, the party leader After his second veto of a measure creating a national bank with branches in the states, on the grounds that it violated the constitutional rights of the states, his cabinet, except for Daniel WEBSTER, resigned (Sept , 1841) Webster stayed on as Secretary of State until the negotiations for the Webster-Ashburton Treaty with the British were completed (May, 1843). Bitterly denounced by the Whigs and with few friends among the Democrats, Tyler became a President without a party. Nevertheless he accomplished much towards the annexation of Texas. Abel P. UPSHUR, Webster's successor, was killed when a gun on the U S S. *Princeton* blew up, and John C CALHOUN continued Upshur's negotiations for a treaty with Texas The treaty was rejected by the Senate. Tyler then supported a plan for a joint resolution to annex Texas and had the satisfaction of seeing it accepted by Texas just before he left office in 1845 The completion of annexation was brought about under James K POLK, Tyler's Democratic successor Tyler, nominated by a small faction, had been persuaded to withdraw in the 1844 election In Feb , 1861, he presided over the unsuccessful conference at Washington which attempted to find some last-minute solution to avert the Civil War Elected to the "permanent" Confederate Congress in Jan , 1862, he died before he could take his seat See Lyon Gardiner Tyler (his son), *Letters and Times of the Tylers* (3 vols , 1884 96), P A Bruce, *The Virginia Plutarch* (1929), biography by O P Chitwood (1939)

Tyler, Moses Coit, 1835–1900, American writer on intellectual history, b Griswold, Conn He moved to Michigan as a boy Graduated from Yale (1857) and from Andover Theological Seminary, he entered the Congregational ministry, but remained in it only two years He was professor of English (1867–1881) at the Univ of Michigan and of American history (1881–1900) at Cornell and was an organizer of the American Historical Association. The two books upon which his fame chiefly rests are *A History of American Literature, 1607–1765* (1878) and *The Literary History of the American Revolution* (1897) His life of Patrick Henry for the 'American Statesmen" series and his *Three Men of Letters* (1895) also added to his reputation as a sympathetic and accurate biographer His wide knowledge of both history and literature enabled him to write authoritatively of both. See biography by H M Jones (1933)

Tyler, Royall, 1757-1826, American jurist, author, and playwright, b Boston, grad Harvard, 1776 He served in the Revolution and in Shays's Rebellion Tyler practiced law in Massachusetts and after 1790 in Vermont, where he was chief justice of the supreme court (1807–13) and professor of jurisprudence (1811–14) at the Univ of Vermont He is remembered for his play *The Contrast* (produced 1787), in which "Jonathan" was the first of many stage Yankees and which was the first American comedy produced by a professional company Other plays by him (now lost) and a novel, the *Algerine Captive* (1797), were successes With Joseph Dennie he wrote witty Federalist verse and essays for the *New Hampshire Journal*

Tyler, Wat, d 1381, English rebel His given name also appears in full as Walter, and he is called Tyler, Tegheler, and Helier—all surnames signifying the trade of roof tiler Little is known of his early life or origins He came into prominence as the leader of the great peasant rebellion of 1381, which had its ultimate origins in the Black Death of 1348-49, a plague that had swept away nearly a third of the population of England and left a scarcity of labor The Statute of Laborers (1351) decreed that laborers could not demand, nor employers offer, higher rates of pay than had prevailed before the plague This statute was violated by employers and laborers alike, and the workers enjoyed comparative prosperity Popular hostility to the numerous restrictions was joined in the towns with a desire for municipal liberty and in the country with resentment toward the rigidity of the manorial system This unrest flamed into rebellion when the capital tax was increased The first outbreak came at Dartford, and on June 10, 1381, Tyler led in the seizure of Canterbury Joined by John BALL and an ever-increasing mob, he proceeded toward London In the outskirts of the city they sacked the archbishop's palace, broke open prisons, and created terror in the hearts of the burghers After an unsuccessful attempt to interview RICHARD II, Tyler led the mob into the city, pillaged the houses of government leaders, and burned some public buildings, the Fleet and Newgate prisons, and the documents in the Temple On June 14 Tyler met the king at Mile End and extracted promises that the king would abolish serfdom, all feudal service, all market monopolies, and all restrictions on buying and selling The rebels were to receive free pardons Immediately afterwards Tyler entered the Tower fortress and executed several officials Disorder and crime were rampant Tyler again met the king the following day, this time at Smithfield, where he presented new demands Overhearing a derogatory remark from an onlooker, Tyler drew his dagger to seek revenge Walworth, the mayor, who barred the way, responded to a blow from Tyler with a quick slash of his cutlass Tyler was mortally wounded and died soon afterward The king, with admirable courage, cowed the mob and held them at bay until the mayor brought up armed support The course of the uprising thus turned, the rebels dispersed, and the revolt, which had raged over all England, was put down with severe force King Richard immediately revoked the Mile End grants See Charles Oman, *The Great Revolt of 1381* (1906), A. B. Steel, *Richard II* (1941).

Tyler. 1 Village (pop. 1,005), SW Minn., NE of Pipestone, settled 1879 by Danish followers of Grundtvig It is a dairy and farm trade center There is a Danish folk school here 2 City (pop 28,279), co seat of Smith co, E Texas, ESE of Dallas, founded 1846. On the edge of the rich East Texas oil field, Tyler has lively oil business and refines oil It also has railroad shops and many small industries, but it is to the visitor primarily a land of roses Nurseries grow rose bushes for the national market, and every street and yard is in season colored with blooms The city has a large municipal rose garden The region also has much truck growing and rich diversified farming Tyler Junior College and two colleges for Negroes—Texas College and Butler College—are in Tyler Near by is a state fish hatchery

Tylertown, town (pop 1,376), co seat of Walthall co, S Miss, SE of McComb near the La line, in a farm area

Tylor, Sir Edward Burnett, 1832-1917, English anthropologist His extensive researches helped to develop interest in anthropological science in England Tylor became (1883) keeper of the University Museum and was professor of anthropology (1896–1909) at Oxford Univ His writings include *Researches into the Early History of Mankind* (1865), *Primitive Culture* (1871, rev ed, 1924), and *Anthropology* (1881, rev ed, 1904)

Tyl Ulenspiegel: see EULENSPIEGEL, TIL

tympanum (tĭm'punum) In architecture the term designates the triangular space of a pediment bounded by the horizontal cornice at its base and the two sloping cornices which meet at its apex and also the solid wall space above the spring line of an arch when the portion below that line is occupied by a door or window opening In Greek temples the tympanums of the two end façades were usually filled with sculpture e g, the east pediment of the Parthenon, which has a sculpture representing the birth of Athena Sculptured tympanums of the second type, within round or pointed arches, occurred above the doors of the recessed portals in the medieval churches They were universal in both Romanesque and Gothic periods, and were especially fine in France The usual subjects are biblical and symbolic, often arranged in horizontal tiers with numerous figures to illustrate a complete legend. Over the central doorway of Notre Dame de Paris is a depiction of the Last Judgment In Italy tympanums were sometimes decorated with mosaic or fresco

Tynan, Katharine (tĭ'nun), 1861–1931, Irish poet and novelist She was married (1893) to Henry Hinkson and is often known as Katharine Tynan Hinkson She was a member of the Irish Renaissance and a friend of the leading literary and political figures of Ireland Her poetry reflects her devout Catholicism Besides volumes of verse, including *Ballads and Lyrics* (1890), *Irish Poems* (1913), *Flower of Youth* (1915) and *Collected Poems* (1930), she wrote numerous novels of Irish life, children's books, and miracle plays See her reminiscences in five volumes, including *Twenty-five Years* (1913) and *Memories* (1924)

Tyndale, Tindal, or **Tindale, William** (all tĭn'dul), d 1536, English biblical translator (see BIBLE) and Protestant martyr He was probably ordained shortly before entering (c 1521) the household of Sir John Walsh of Gloucestershire as chaplain and tutor His sympathy with the New Learning led to disputes with the clergy, and he moved to London, determined to translate the New Testament into English Finding that publication could not be accomplished in England, Tyndale went to Hamburg in 1524, visited Luther in Wittenberg, and at Cologne began (1525) the printing of the New Testament Interrupted by an injunction, he had the edition completed at Worms When copies entered England, they were denounced by the bishops and suppressed (1526), Cardinal Wolsey ordered Tyndale seized at Worms A hunted man, living in concealment, Tyndale pursued his labor of translating the Scriptures His tracts in defense of the principles of the English Reformation, *The Obedience of a Christian Man* (1528) and *The Parable of the Wicked Mammon* (1528), evoked denunciation from Sir Thomas More *The Practice of Prelates* (1530), condemning the king's divorce, drew the wrath of Henry VIII In Antwerp, occupied with revising his translations, Tyndale was seized (1535) and confined in Vilvorde Castle, the state prison of the Low Countries His trial ended in condemnation for heresy, and he was strangled at the stake before his body was burned, although Thomas Cromwell interceded for him See biographies by Robert Demaus (1871, rev ed by Richard Lovett, 1886), Henry Guppy (1926), and J F Mozley (1937)

Tyndall, John (tĭn'dul), 1820–93, British physicist, b Ireland He became (1853) professor of natural philosophy at the Royal Institution and in 1867 succeeded Michael Faraday, his friend and colleague, as superintendent there His chief researches were in the fields of light, sound, and radiant heat He made significant studies of Alpine glaciers He was known as a lecturer and writer, and his gifted expositions of science for the layman were widely translated. His books include *Glaciers of the Alps* (1860; rev. ed., 1896), *Sound* (1867; rev ed, 1903), and *Fragments of Science for Unscientific People* (1871).

Tyndall, city (pop 1,289), co seat of Bon Homme co, SE S Dak, NW of Yankton near the Nebr. line, founded 1879 It is a farm trade center.

Tyndareus: see LEDA.

Tyndaris (tĭn'durĭs), ancient Greek colony on the northern coast of Sicily It was founded by Dionysius the Elder in 396 B C As an ally of Timoleon, it aided the Romans in the Punic Wars

Tyne (tīn), river of Northumberland, England. The North Tyne rises in the southwestern part of the Cheviots 80 mi from the mouth of the Tyne and is joined near Hexham by the South Tyne, which rises near Cross Fell, the Tyne proper flows thence c 30 mi partly between Northumberland and Durham to the North Sea It is an important waterway, the lower course is lined with docks, shipbuilding yards, engineering plants, and coal-mining and ironworking towns The Tyne river ports include Newcastle, North and South Shields, Tynemouth, Gateshead, Jarrow, Wallsend, and Newburn

Tynemouth (tīn'mŭth, tĭn'-), county borough (1931 pop 64,922, 1947 estimated pop 65,850), Northumberland, England, on the Tyne and E of Newcastle The borough includes Tynemouth proper, Cullercoats (to which there is a marine parade), Chirton, North Shields (which has the municipal buildings), Preston, and other villages Long piers protect the harbor The peninsula on which the borough stands was very early occupied King Edwin of Northumbria here founded a priory, of which there are remains, early in the 7th cent, it was rebuilt in the middle of the century by King Oswin of Deira and again in the 12th cent A gate remains of an ancient castle Tynemouth is a shipbuilding center and a coal and fishing port

Tyngsboro (tĭngz'burō), town (pop 1,634), NE Mass, on the Merrimack and NW of Lowell, settled c 1660, set off from Dunstable as a district 1789, inc as a town 1809 It has old buildings and is the seat of a Marist (Catholic) school

type, for PRINTING, was invented in China Related devices, as seals and stamps for making impressions in clay, had been used earlier in Babylon and elsewhere Movable types made from molds were used in Korea a half century before they were used in Europe, but there is no evidence that the European invention attributed to Johann GUTENBERG was not independent The first dated printing from movable types in Europe is a papal indulgence, printed at Mainz in 1454 The first dated book printed from movable type was a Psalter printed by Fust and Schoeffer at Mainz in 1457 The MAZARIN BIBLE, completed at Mainz not later than 1456, is believed to be the first book printed in Europe from movable type Gutenberg is believed to have been the printer The type used in these beginnings of European printing was of the kind known as "black letter" or "gothic," represented now by such types as "Old English" and "German" The forms of the letters were derived from the handwriting of the time and place Other styles of handwriting suggested the letter forms of "roman" and "italic" type Roman type was used by several printers before Nicolas JENSON so improved it as to make its triumph as the standard type inevitable Italic type was first used by ALDUS MANUTIUS, who introduced small capitals also Roman type is of two classes, "old style" and "modern" The modern type emphasizes the contrast between light and heavy lines and has conspicuous level serifs, the old-style type keeps its lines of nearly the same weight and has inconspicuous serifs, some of them sloping Qualities of old-style and modern types are often combined Famous designers of types include, in addition to those named above, Geofroy TORY, Claude GARAMOND, Robert GRANJON, Christopher van DYCK, William CASLON, John BASKERVILLE, Giambattista BODONI, François Ambroise DIDOT, William MORRIS, Bruce ROGERS, and F W GOUDY See D B Updike, *Printing Types* (2d ed, 1937), Hellmut Lehmann-Haupt, *One Hundred Books about Bookmaking* (1949)

type metal, alloy of lead with antimony, tin, and sometimes copper, so named because of its extensive use for making type of various kinds The alloy expands upon solidification, for this reason taking a fine and clear impression of the mold in which it is hardening It has a low melting point In addition to its use for type, it is employed also in making the metal parts of various musical instruments and for ornaments of intricate design and pattern The percentages of the metals vary, according to the use to which the alloy is to be put

typesetting machine: see INTERTYPE; LINOTYPE, MONOTYPE

typewriter. The first recorded patent for a typewriter was taken out in England by Henry Mill in 1714 In the United States the typographer of William Austin Burt, patented in 1829, was the first practical writing machine. An improved French machine appeared in 1833 The early models were chiefly for the blind and produced embossed writing A practical commercial machine invented in the United States in 1867 by Christopher Latham Sholes and his associates, Carlos Glidden and Samuel Soulé, was manufactured by the firm of E. Remington and placed on the market in 1874 This early model had only capital letters, A shift-key model permitting change of case appeared in 1878 An electric typewriter requiring less effort than the ordinary manual machine came into use c.1935. The stock ticker, suggested as early as 1867, records on a narrow strip a telegraphed message. The teletypewriter, invented in 1904, transmits typing over an electric circuit such as the telephone or telegraph, an electric impulse actuates the proper key in the receiving typewriter.

Typhoeus. see TYPHON.

typhoid fever, infectious disease and intestinal fever It is caused by a bacterium, the typhoid bacillus (*Eberthella typhosa* or *Salmonella typhosa*), taken into the body in food or water contaminated with feces from a case of the disease or by a carrier From 5 to 14 days after infection there is fever, aching, nosebleed, prostration. Later a rash, known as rose spots, appears on the abdomen The bacteria lodge especially in the small intestine and gall bladder and also pass through the kidneys The course extends over several weeks and relapses are not uncommon There are many complications, the most serious being hemorrhage and perforation of the intestine (often causing fatal peritonitis). Recovery is slow in most cases, as there is a tendency to wasting. Careful nursing, a special diet high in calories, and care in destroying all excreta from the patient are important The patient should be screened to prevent flies from picking up the bacteria and thus spreading the disease Personal hygiene in the case of carriers, protection of water supply, milk supply, and oyster beds, and control of food handlers are important Vaccination against typhoid and paratyphoid is useful Under ordinary conditions it must be repeated every two or three years

Typhon (tī'fŏn), in Greek legend, a fierce and forceful being He is sometimes identified with (and sometimes called the son of) Typhoeus (tĭfē'us) When Typhon and Typhoeus are differentiated, Typhon is the personification of a violent hurricane and father, by ECHIDNA, of Orthus, Cerberus, Chimera, Hydra, and the Sphinx, Typhoeus is a many-headed monster and father of the Harpies

typhoon see HURRICANE

typhus (tī'fus), infectious disease, carried by the body louse and common in crowded, dirty places Epidemic typhus formerly occurred in jails, on ships, and under war conditions where lice were plentiful Only lice infected from biting diseased persons carry the disease It is thought to be caused by a living agent (*Rickettsia prowazeki*) From 8 to 12 days after the bite there are chills, fever, pains, prostration, and later a purplish rash In 14 days the fever falls if pneumonia does not occur A milder type has occurred in the United States and is known as Brill's disease Typhus can be wiped out by eradication of lice A vaccine affords some protection See Hans Zinsser, *Rats, Lice, and History* (1935).

typography (tīpŏ'grufē) The art of PRINTING from movable types was preceded by many centuries of development in related arts. The inscriptions in capital letters on a Roman wall or arch are sometimes stately in the highest degree, in the Middle Ages the making of illuminated manuscripts was for a time the dominant art, and for the period as a whole it rivals architecture as an instrument of artistic expression. Printing began by imitating written manuscripts, but the crisp and uncompromising metal types soon asserted their qualities and made their own requirements As with inscriptions and writing, legibility cannot safely be neglected Words tend to lose in legibility if they depart from the forms in which one is accustomed to see them Typography has special reasons for conservatism, the title page and dedication of a modern book are often reminiscent of a Roman inscription, and in the text the two facing pages of the open book are obviously in a line of development from the medieval manuscript From Gutenberg to our time, typography has interested its practitioners, who have usually been intelligent, some of them have been geniuses The printer's tasks range from the circus poster to the book that will be a treasured heirloom Each task has its own requirements One interested in the subject may well use his own library or a public library as a museum of typography. A good metropolitan newspaper is in its way a masterpiece of typography The advertisements in a good magazine are as effective as experts could make them. Every page of a book from a good publishing house has had the attention of masters If they have been successful, the typography of the book will be found appropriate to its subject matter, and the book will be a unit, with the details rightly related to one another A standard work is D B Updike, *Printing Types* (2d ed, 1937). For bibliography, see Hellmut Lehmann-Haupt, *One Hundred Books about Bookmaking* (1949).

Tyr: see TIW

Tyrannosaurus (tĭrăn"nōsō'rŭs, tī-) [Gr, =tyrant lizard], genus name of a biped carnivorous dinosaur, about 45 ft. in length and about 19 ft. tall,

with an elongated skull and large, sharp, projecting teeth. The short forelimbs had three fingers armed, like the three digits of the powerful hindlimbs, with sharp, recurved claws, on the foot was a spurred toe not reaching to the ground Probably the greatest of the terrestrial carnivores, tyrannosaurs are believed to have existed only for a short time in the late Cretaceous period, parts of a few skeletons have been found in Montana and South Dakota Only one species (*Tyrannosaurus rex*) is known.

Tyrannus (tĭrā'nus) [Gr ,=tyrant], teacher of Ephesus at whose school Paul preached Acts 19 9.

tyrant, in ancient history, ruler exercising absolute authority without legal warrant The word is perhaps of Lydian origin and carried with it at first no connotation of moral censure With the growth of the constitutional, democratic form of government, especially at Athens, the word took on its bad sense Many tyrants ruled well and with benefit to their subjects Greek tyranny was in the main an outgrowth of the struggle of the rising popular classes against the aristocracy or plutocracy The usual procedure was for a leader to win popular support, overthrow the existing government, and seize power for himself Ionia seems to have given rise to the first tyrants, notably Thrasybulus of Miletus About the middle of the 7th cent B C , central Greece was the scene of three important tyrannies, those of PERIANDER of Corinth, Theagenes of Megara, and CLEISTHENES of Sicyon The first quarter of the 6th cent B C saw the rise at Athens of the tyranny of PISISTRATUS, followed by his sons HIPPARCHUS and HIPPIAS, which proved of great value to the city The tyrants of Sicily were the products of more or less the same causes as those in Greece, but tyranny was prolonged by the threat of Carthaginian attack, which facilitated the rise of military leaders having the people united behind them Such Sicilian tyrants as GELON, HIERO I, HIERO II, DIONYSIUS THE ELDER, and DIONYSIUS THE YOUNGER maintained lavish courts and were patrons of culture Some of the poems of Pindar celebrate the rule of Hiero I The THIRTY TYRANTS were not tyrants in the usual sense See P N Ure, *The Origin of Tyranny* (1922)

Tyrconnel, Richard Talbot, duke and earl of (tŏl'bŭt, turkŏ'nul), 1630–91, Irish royalist He escaped from Ireland after Cromwell's punitive campaign there (1649), attached himself to James, duke of York (later James II), and was party to various intrigues to restore the monarchy After the Restoration (1660) he used his influence at court to promote his own interests For his supposed connections with the alleged Popish Plot (see OATES, TITUS) he was exiled (1678), but he returned at the accession of James II Talbot was created earl (1685) and sent as commander in chief of the forces in Ireland In this capacity and as lord deputy (1687–88) he supplanted Protestants with Catholics in many key positions After the Glorious Revolution of 1688, James crossed to Ireland and created Tyrconnel a duke—a title recognized only by the Jacobites Tyrconnel fought for James and fled to France after the battle of the Boyne (1690), but returned in 1691 Kept from further active fighting by illness, he died of apoplexy just before the fall of Limerick

Tyrconnel, Rory O'Donnell, earl of, 1575–1608, Irish chieftain He was the brother of Hugh Roe O'Donnell, lord of Tyrconnel, whom he succeeded as chief of the clan in 1602 After the rebellion in which his brother had been a leading figure, Rory went to London (1603) to submit to King James I He was knighted, created earl, and made sheriff of Donegal However, fearing the effect of the recusancy laws upon the power of the Catholic lords, he apparently engaged in a conspiracy with Spain to seize Dublin Castle and the government and to start a general rising His flight, with Hugh O'Neill, 2d earl of Tyrone, after the discovery of the plot, is significant as the end of political power of the tribal chieftains After going to several continental cities, Tyrconnel died at Rome He was posthumously attainted (1613) by the Irish Parliament

Tyrconnell, ancient kingdom in NW Ireland in what is the modern Co Donegal The kingdom was founded by Conall Gulban in the 5th cent , kings of Tyrconnell reigned until 1071.

Tyre (tīr), one of the great cities of the ancient world and an important center of PHOENICIAN CIVILIZATION It is today Sur (sōōr) in Lebanon, a small town on a peninsula jutting into the Mediterranean from the mainland of Syria S of Beirut and of ancient Sidon It was built on an island just off the mainland, but the accretion of sand around a mole built by Alexander the Great to facilitate his siege of the city (333–332 B C) has formed a causeway half a mile wide The date of the founding of the city is extremely uncertain Some scholars believe that the Phoenicians migrated from around the Persian Gulf c 2800 B.C. and that Tyre was founded shortly afterwards At any rate, by 1400 B.C it was a flourishing city The maritime supremacy of Tyre was established by 1100 B C , and by that date its seamen seem to have sailed past the Gates of Hercules and to have planted colonies at Utica and Gades. Tyrians founded the city of Carthage in the 9th cent. B C. Tyre was famous for its industries, such as textile manufactures, and particularly for the purple Tyrian dye Throughout its long history Tyre frequently came under foreign rule In many cases, however, the stability which resulted from the establishment of a large empire, such as that of the Romans, was advantageous to the trade and commerce of the city, and under these rules, Tyre retained varying degrees of autonomy Tyre fell to the Assyrians, the Babylonians, and the Persians. It was sacked by Alexander the Great but recovered quickly In 64 B C it became a part of the Roman Empire, under which, in spite of competition offered by newer cities, such as Alexandria, it prospered. Christianity was introduced early into Tyre and a splendid cathedral, of which there are remains, was built in the 4th cent A D After the rise of Islam, Tyre came under Moslem rule and later under that of the Crusaders It was destroyed by the Moslems in 1291 and never recovered its former greatness The principal ruins of the city today are those of buildings by the Crusaders There are some Greco-Roman remains, but any left by the Phoenicians lie underneath the present town Tyre is mentioned frequently in the Bible See Wallace B. Fleming, *The History of Tyre* (1915)

Tyrnau, Czechoslovakia see TRNAVA

Tyrol (tĭ'rul, tĭrōl'), Ger *Tirol* (tērōl'), autonomous province or *Bundesland* (4,584 sq mi , pop 429,933), W Austria Almost wholly Alpine, it is traversed by the Inn river, on which the capital, Innsbruck, is located The main part of the province is separated from East Tyrol (Ger *Osttirol*) by a corridor belonging partly to Italy, partly to Salzburg prov. The Tyrolean Alps, which culminate in the ÖTZTAL ALPS, are famed for their idyllic beauty and attract many tourists, thus supplementing the limited natural resources of the country Subsistence farming and cattle raising are the main occupations The saltworks at Solbad Hall are an important source of revenue The now little-worked silver mines of Tyrol, known since antiquity, and its strategic situation commanding the BRENNER PASS, gave the region a fairly important role in European history Tyrol was inhabited by Rhaetic tribes when it was conquered (15 B C) by the Romans in the time of Augustus It was invaded (6th cent A D) by Teutonic tribes, the Alemanni and the Lombards, and later by the Franks, who held all Tyrol by the 8th cent Large parts of S Tyrol (now in Italy) were ruled from the 11th cent to 1802–3 by the bishops of TRENT and by the bishops of BRIXEN (see BRESSANONE) The two bishoprics were secularized and fell to Austria in consequence of the Peace of Lunéville (1801) between France and Austria The northern section (constituting the present Tyrol), first divided into petty counties, was united under the counts of Tyrol and passed, with the abdication (1363) of MARGARET MAULTASCH, to Austria In 1805 the Treaty of Pressburg awarded all the Tyrol to Napoleon's ally, Bavaria, but when war broke out in 1809 between France and Austria the Tyrolean peasants, led heroically by Andreas HOFER, rose in revolt and defied the French and Bavarian troops till they were crushed by the immense numbers of the soldiers French reprisals were ruthless In 1810 Napoleon, at variance with Maximilian I of Bavaria, attached most of S Tyrol to Italy Both parts were restored to Austria by the Congress of Vienna (1815) The Treaty of Saint-Germain (1919) awarded S Tyrol (the predominantly German-speaking province of Bolzano and the predominantly Italian province of Trento) to Italy The ruthless Italianization policy of the Fascist government created much unrest and friction between the two world wars (see TRENTINO–ALTO ADIGE), but the Italian constitution of 1947 gave S Tyrol the status of an autonomous region, with full protection of minority rights

Tyrone, Hugh O'Neill, 2d **earl of** (tĭrōn'), 1547?–1616, Irish chieftain, son of Matthew O'Neill, the illegitimate son of the 1st earl (see also O'NEILL, SHANE) Hugh succeeded his murdered brother, Brian, as Baron Dungannon in 1562 and was reared in England He returned to Ulster in 1568, served with the English against the rebel earl of Desmond in 1580, and in 1585 was made earl of Tyrone In 1593 he was recognized by the Irish as the O'Neill and was the most powerful chief in Ulster Dissatisfied with the English government's persistent policy of playing the chiefs against one another, Tyrone was angered also by the English refusal to restore the lands granted to his grandfather At last he sided with the Irish chiefs, especially Hugh Roe O'Donnell, and sought aid against Protestant England from Catholic Spain He achieved something like unity among his allies, after 1595 defeated some of Queen Elizabeth's best commanders in Ireland, and made a short-lived truce with the earl of Essex in 1599 In 1601 his Spanish allies landed in the south of Ireland Going to meet them, Tyrone attacked Lord Mountjoy at Kinsale (1601) and was defeated, as were the Spanish later O'Donnell fled to Spain, Tyrone retreated to Ulster and in 1603 made peace with the English, surrendering his tribal authority His friend James I pardoned him, but his power in Ireland never returned. In 1607 Tyrone suspected that a summons to London to settle a quarrel was a pretext to obtain his imprisonment, and he fled to Flanders with Rory O'Donnell, earl of TYRCONNEL, and a boatload of other Irish nobility The "flight of the earls" marked the end of tribalism in Ireland Eventually Tyrone lived in Rome, pensioned by Spain and the pope. He was attainted in Ireland in 1613 See Seán O'Faolain, *The Great O'Neill* (1942)

Tyrone (tĭrōn'), inland county (1,218 sq mi , 1937 pop 127,586, 1948 estimated pop 130,058), Northern Ireland, in Ulster The capital is Omagh It is a large, hilly county, drained chiefly by the tributaries of the Mourne and the Blackwater The district is pastoral and agricultural Linen, woolens, and whisky are manufactured The region was dominated from the 5th cent by the descendants of Eogan, from whose line rose the O'Neill family Tyrone was organized as a shire at the end of the 16th cent , when the O'Neills were crushed by Queen Elizabeth

Tyrone (tĭrōn'), industrial borough (pop. 8,845), central Pa , NE of Altoona in the Alleghenies, laid out c 1850, inc 1857 Limestone and lumber are produced here It is an important outlet for bituminous-coal products

Tyrrell, Joseph Burr (tĭ'rul), 1858–, Canadian explorer, geologist, and engineer, b Weston, Ont., grad Univ of Toronto, 1880 In 1881 he joined the Canadian Geological Survey as an explorer and in 1883 accompanied G M Dawson on his expedition to the Canadian Rockies He made other explorations in W and N Canada, but his best-known feat was his crossing (1893) the BARREN GROUNDS from Lake Athabaska to Chesterfield Inlet; his total journey, largely by canoe, covered some 3,200 mi In 1898 Tyrrell left the survey and went as a mining engineer to the Klondike His knowledge fitted him admirably for editing some of the most important narratives of early explorers—*David Thompson's Narrative of His Explorations in Western America* (1916), *Documents Relating to the Early History of Hudson Bay* (1931), and the *Journals of Samuel Hearne and Philip Turnor* (1931) See W J Loudon, *A Canadian Geologist* (1931) Tyrrell's brother, **James Williams Tyrrell,** 1863–1945, accompanied him on the expedition across the barren grounds and wrote an account of it in *Across the Sub-Arctics of Canada* (1897)

Tyrrhenian Sea (tĭrē'nēun), part of the W Mediterranean Its limits are the west coast of Italy, the north coast of Sicily, and the east coast of Sardinia and Corsica

Tyrtaeus (tûrtē'us), fl 7th cent B C at Sparta, one of the earliest lyrists known by name Extant are fragments of his martial elegies in Dorian Greek written to spur on Spartan soldiers An Athenian legend relates that Athens sent him, a lame schoolmaster, to Sparta when Sparta needed help in war

Tyrwhitt, Thomas (tĭr'ĭt), 1730–86, English antiquarian and classical scholar He was noted for his studies (1766) of Shakspere and his edition (1775–78) of Chaucer's *Canterbury Tales* He discovered and exposed (1777) the fraudulent authorship of the "Rowley Poems" by Thomas CHATTERTON His chief classical work was an edition (1794) of Aristotle's *Poetics*

Tyumen (tyōōmän'yu), city (pop 75,537), capital of Tyumen oblast, RSFSR, in W Siberia, on the Tura river and the Trans-Siberian RR Founded in 1586, it is the oldest Russian town in Siberia It has sawmills and various manufactures and is an important transfer point for river and rail traffic The name is sometimes spelled Tumen

Tyutchev, Feodor Ivanovich (fyô'dur ēva'nuvĭch tyōō'chĭf), 1803–73, Russian poet Most of his adult life was spent abroad in the diplomatic service, and his poetry is West European rather than strictly Russian He was not fully appreciated until the rise of symbolism, which he foreshadowed Besides love lyrics and philosophical poems, he wrote strongly nationalistic and venomously anti-Western verses Many of Tyutchev's lyrics have been set to music See Vladimir Nabokov, *Three Russian Poets* (1944)

Tzintzuntzan see TARASCAN

Tz'u Hsi, Tsu Hsi, or **Tse Hsi** (all tsŭ' shē'), 1834–1908, dowager empress of China Her energetic rule is credited with prolonging the Ch'ing dynasty She was a consort of Emperor Hsien Feng (d 1861) and bore his successor, T'ung Chih On her child's death (1875) she appointed her nephew KWANG HSÜ to the throne, although he was not in the direct line of succession In 1898 she forced him to abdicate after he had attempted to institute political reforms against her wishes, and she ruled directly She resisted foreign encroachment by encouraging the unsuccessful BOXER REBELLION (1899–1900) In her last years Tz'u Hsi abandoned her conservatism to some extent and consented to several modernizing measures, schools were established, railroad building was encouraged, and opium cultivation was suppressed Her last official act was the appointment of Pu Yi, a remote claimant, as emperor See biographies by Princess Der Ling (1929) and Harry Hussey (1949).

U

U, 21st letter of the ALPHABET, corresponding to the Greek upsilon (ū′psĭlun) [Gr , -u, without the aspirate] Until the late Middle Ages the capital was V, the minuscule u, no distinction being made between consonantal and vocalic uses of the letter The fixing of modern orthography, however, has restricted u to the vowel, v to the consonant In phonetics u usually represents a high back rounded vowel, rather like o͝o in *foot*, English û is a triphthong of y, o͝o, and w, o͝o is a diphthong of o͝o and w In chemistry U is the symbol of the element URANIUM

Uaxactún see MAYA.

Ubangi (o͞obäng′gē, o͞obăng′gē), Fr *Oubangui* (o͞obägē′), river, c 700 mi long, formed on the border of Belgian Congo and French Equatorial Africa by the confluence of the Uele and Bomu rivers It flows west and south to form part of the international boundary and to empty into the Congo river, of which it is the chief northern tributary The upper course of the Ubangi is navigable

Ubangi-Shari, see FRENCH EQUATORIAL AFRICA.

Ube (o͞o′bā), city (1947 pop 108,728), Yamaguchi prefecture, SW Honshu, Japan, on the Inland Sea It is a coal-mining and industrial center

Ubico, Jorge (hôr′hā o͞obē′kō), 1878–1946, president of Guatemala (1931–44) An army general, Ubico as president established financial stability and political order He built an extensive network of roads, and by arbitrary decisions on the spot modernized local administrations to include increased health and school facilities He put down opposition and twice engineered constitutional changes to extend his term of office His efficient and honest but tyrannical rule ended when he was driven into exile by a democratic revolution following a similar revolution in Salvador

Ucal (ū′kăl), name appearing with Ithiel in translations of Prov 30 I Modern critics agree with the Vulgate in regarding these as mistranslations of common nouns, see the translations in the margin of RV and in Douay

Ucayali (o͞okäyä′lē), river, c 1,000 mi long, E Peru, formed by the confluence of the APURÍMAC and URUBAMBA It flows generally north through a mountain and jungle wilderness to the MARAÑÓN, another headstream of the Amazon The Ucayali is navigable for about half of its lower course

Uccello, Paolo (pä′ōlō o͞ot-chĕl′lō), c 1396–1475, Florentine painter His real name was Paolo di Dono, but he was nicknamed Uccello because of his love for birds Although apprenticed to Lorenzo Ghiberti, he shows rather the influence of his friend Donatello One of the so-called realists of the 15th cent, he helped lay the foundations for the great painting of the late Renaissance He was an important pioneer in linear perspective Uccello is perhaps best known for his highly decorative series of battle scenes depicting the *Battle of San Romano* Of these, three panels have survived, in the National Gallery, London, in the Uffizi, and in the Louvre A group portrait of five Florentine artists (Louvre) is accredited to Uccello Other surviving works include an equestrian portrait of Sir John de Hawkwood (cathedral, Florence) and some badly preserved frescoes in the Church of Santa Maria Novella, Florence

Uccialli, Treaty of, see MENELIK II

Udaipur (o͞odīpo͝or′, o͞odī′po͝or) or **Mewar** (māwär′), former princely state (13,170 sq mi, pop 1,926,698), NW India a part of Rajputana There are thickly wooded hills in the south and the west, but the rest of the country is an alluvial plain watered by numerous intermittent streams Grains and cotton are grown Udaipur was probably founded in the early 8th cent It was a center of resistance to the Moslem invaders of India, who never accomplished its complete subjugation Udaipur accepted British overlordship in 1818 In 1948 it joined Rajasthan Udaipur town (pop 59,648), the former capital of the state, was founded c 1560 The town is surrounded by a battlemented wall, and it is especially noted for the maharaja's palace, which overlooks scenic Pichola lake

Udall, Udal (both ŭ′dul), or **Uvedale, John** (ū′dul, ūv′dāl), 1560?–1592, English clergyman, educated at Cambridge He adopted Puritan sympathies and aided John PENRY in issuing the anticlerical pamphlets published under the pseudonym Martin Marprelate Udall was responsible for two tracts (1588) denouncing the episcopacy, *The State of the Church of England* and *A Demonstration of the Truth* In 1590 he was arrested, charged with the authorship of the pamphlets, and sentenced to death He was pardoned but died shortly thereafter Several volumes of his sermons were published

Udall, Udal, or **Uvedale, Nicholas**, 1505–56, English schoolmaster and comic playwright, b. Hampshire, educated at Oxford (B A , 1524, M A., 1534) He was headmaster of Eton (1534–41) and of Westminster School (from 1554) He made various translations from the Latin, and the influence of classical drama, especially the plays of Plautus and Terence, is shown in his play, *Ralph Roister Doister* (pub 1566 but written between 1545 and 1552) It is generally regarded as the first complete English comedy

Uddevalla (ŭ′dŭvăl″lä), city (pop 21,437), Goteborg and Bohus co , SW Sweden, on the Byfjord, inc. 1498 The city makes textiles, matches, and articles of wood.

Udet, Ernst (ĕrnst′ o͞o′dĕt), 1896–1941, German aviator In the First World War he served with the RICHTHOFEN squadron and is credited with 62 victories In the post-war years he was a stunt flyer, but after 1933 he rose in the ranks of the German air force and became chief of its technical division He developed the dive-bombing technique which was effectively used by the Germans in the Second World War, and in 1940 he was promoted quartermaster general Udet was killed in 1941 while testing a new type of plane

Udine (o͞o′dēnā), city (pop 54,638), capital of Friuli-Venezia Giulia and of Udine prov , NE Italy It is the chief city of FRIULI In the 10th cent Emperor Otto II gave the town to the patriarchs of Aquileia, who made it their capital (13th cent) It passed to Venice in 1420 and to Austria in 1797 and 1814, and it was annexed to Italy in 1866 In the First World War it was the headquarters of the Italian army (1915–17) and was occupied by Austria (1917–18) In the main square are the Gothic town hall, a Renaissance loggia, a clock tower, and a fine fountain The castle (rebuilt in the 16th cent), overlooking the city, was the seat of the patriarchs and of the Venetian governors, it now contains the municipal museum The archiepiscopal palace has frescoes by Tiepolo

Udmurt Autonomous Soviet Socialist Republic (o͞od′mo͝ort, Rus o͞odmo͝ort′), autonomous republic (16,300 sq mi , pop 1,220,007), E central European RSFSR, in the highlands between the Kama and Vyatka rivers Izhevsk is the capital Subject to a humid continental climate, it is a predominantly agricultural region, growing flax, rye, oats, potatoes, and wheat Its main industries are flax processing, food processing, and tanning Natural resources include timber, quartz sand, and limestone, and there are sawmills and glass and brick manufactures Heavy manufactures are concentrated at IZHEVSK and VOTKINSK The Udmurts—formerly called Votiaks or Votyaks—are members of the Finno-Permian linguistic group (see LANGUAGE, table), they constitute 52 percent of the population, the rest being mainly Russians (43 percent) and Tatars (2 percent) Dominated (13th–15th cent) by the Golden Horde, the area was colonized in the 16th cent by the Russians It became the Votyak Autonomous Oblast in 1920, was renamed Udmurt in 1932, and became an autonomous republic in 1934

Uel (ū′ul), one who had a foreign wife Ezra 10 34

Uele or **Welle** (both wĕ′lā), river, rising in NE Belgian Congo and flowing c 600 mi west to join the Bomu and form the Ubangi river on the border of French Equatorial Africa The Uele is navigable

Ufa (o͞ofä′), city (pop 245,863), capital of Bashkir ASSR, E European RSFSR, a port on the Belaya river at its confluence with the Ufa Ufa ships grain and lumber and is also an industrial center, producing airplanes, mining machinery, cotton textiles, and processed foods There are several technical, medical, pedagogical, and scientific institutes and a noted old cathedral Ufa was founded in 1586 as a Russian stronghold on the trade route to Siberia It figured prominently in the Russian civil war, falling to Kolchak's army in 1919

Uffizi (o͞ofē′tsē), palace in Florence, Italy, built in the 16th cent by Giorgio Vasari for Cosimo I de' Medici as public offices It houses the Italian National Library (1,500,000 volumes), the state archives of Tuscany, and the **Uffizi Gallery**, one of the richest art collections in the world Besides the Florentine, all the Italian as well as the Dutch and Flemish schools are well represented, with works by Botticelli, Raphael, Leonardo, Michelangelo, Titian, Rubens, to name only a few The world-famous statue of the Venus of the Medici (Greek, 3d cent B C) is also here with other Greek, Roman, and Renaissance sculpture The palace was damaged in the Second World War but all collections were saved

Ugaki, Kazushige (käzo͞o′shĭgä o͞ogä′kē), 1869–, Japanese general He was war minister (1924–27, 1929–31) and governor of Korea (1931–36). A moderate, nonpolitical general, he attempted to form a cabinet in Jan , 1937, but was prevented by the army high command, which refused to let any general accept the war ministry He served briefly as foreign minister and as overseas minister in the second Konoye cabinet, but retired in Sept , 1938

Uganda (ūgăn′dä), British protectorate (93,981 sq mi , pop c 4,045,200), E central Africa The capital is Entebbe Uganda is bordered on the north by the Anglo-Egyptian Sudan, on the west by the Belgian Congo, on the south by Ruanda-Urundi and Tanganyika, and on the east by Kenya Its natural boundaries include the Ruwenzori mts , Albert Nyanza, and Edward Nyanza on the west and Victoria Nyanza on the south Uganda is largely a fertile plateau (3,300–3,700 ft high) with well-forested hills containing deposits of metallic and nonmetallic minerals. There are swampy lowlands and a desert region. Farming is the livelihood of most of the people, and stock raising is minor. The chief export is cotton, coffee and sugar are also shipped out Communications are mainly by road and by waterways, but in the south there are two rail lines, which connect with Kenya. The majority of the people are Bantu Arabs from Zanzibar attempted to control the land in the 19th cent Among the first Europeans to explore Uganda were John Speke (1862) and Henry Stanley (1875) Anglican missionaries, responding to Stanley's appeal, arrived in 1877 and were followed in 1879 by French Catholic missionaries In 1888 Arab traders and native Moslems destroyed the mission settlements and briefly held the native kingdom of Buganda, with its capital at Kampala British power was reasserted shortly after 1890, when Lord Lugard brought Buganda under the control of the British East Africa Company Great Britain proclaimed a protectorate over Buganda in 1894, and to it were added (1896) several neighboring regions Uganda is ruled by an appointed governor with the aid of an executive council and a legislative council See H B Thomas and Robert Scott, *Uganda* (1935)

Ugarit (o͞ogurēt′), ancient city, capital of the Ugarit kingdom, W Syria The location and history of this city were completely unknown until 1931 The accidental discovery of an ancient tomb at the small Arab village of Ras Shamra near modern Latakia led to an expedition which established the identity of the mound as the site of ancient Ugarit The site has been particularly rich in finds, which have yielded much valuable historical information and from which a partial account of the city may be constructed Ugarit was probably occupied from the first appearance of man in Syria The lowest level of the mound dates from the Neolithic period, the 5th millennium B C It developed as a great center of commerce, having important connections with Mesopotamia By the 4th millennium, Ugarit had reached a high stage of development and was part of the general civilization of ancient Syria Between 3000 and 2000 B C , important ethnic changes took place at Ugarit, brought about by the northward migrations of Amorites and Semitic Canaanites Early in the 2d millennium, because of invasions from the north and east, Ugarit turned to an alliance with Egypt, and from this period Egyptian influence was strong in the city The city was also the most important center of Minoan trade in Syria The 15th and 14th cent B C were the period of highest prosperity for Ugarit Trade developed tremendously, and the city expanded in size The rich and abundant art of this period shows that an important Mycenaean colony existed in the city Foreign invasions and economic change in the 12th cent B C caused Ugarit to decline By the end of the century, though it was not completely abandoned, it had ceased to exist as an important town Among the more important discoveries at Ugarit are tablets from the 14th cent B C Written in a cuneiform script, in a hitherto unknown language, Ugaritic, they record the poetic works and myths of the ancient Canaanites They are written in an alphabet that is one of the earliest known Ugaritic has been identified as a Semitic language, related to classical Hebrew, the language of the Old Testament, and these tablets, the first authentic specimens of pagan Canaanite literature, have been of great importance to students of language and of the Bible See C F A Schaeffer, *The Cuneiform Texts of Ras Shamra–Ugarit* (1939), Julian Obermann, *Ugaritic Mythology* (1948)

Ugarte, Manuel (mänwĕl′ o͞ogär′tā), 1878–, Argentine writer A Socialist, he became a militant propagandist against "Yankee imperialism " He advocates solidarity of the peoples of Iberian descent in his works *El porvenir de la América Latina* [the future of Latin America] (1911), *Mi campaña hispanoamericana* (1922), and *El destino de un continente* (1923, Eng tr , 1925) He is noted for his short stories, especially those in *Cuentos de la pampa* (1903) and *Cuentos argentinos* (1908) These and his poetry are in the *modernista* manner

Uglich (o͞o′glyĭch), city (1939 pop over 10,000), N central European RSFSR, on the Volga Founded in 1148, it was the center of a Russian principality in the 13th and 14th cent In its 15th-century fortress, which has been preserved, the tsarevich Dmitri was allegedly murdered in 1591 Uglich had a population of c 40,000 until its destruction (1609) by the Poles. The city now has food-processing plants, woolen factories, paper mills, and sawmills A large hydroelectric station was completed in 1941

Ugolino della Gherardesca (o͞ogōlē′nō dĕl′lä gārärdä′skä), d. 1289, Italian nobleman. He was made

podesta of Pisa in 1284 Thought to have betrayed his city by negligence in battle, he fell victim to a conspiracy headed by Archbishop Ruggeri, who had him arrested for treason He was shut up in a tower and left to starve to death with his sons and grandsons Dante relates the episode in the Canto 33 of the *Inferno*

Ugrian (ū'grē-ŭn, ōō'–) or **Ugric** (ū'grĭk, ōō'–), group of the Finno-Ugric languages See LANGUAGE (table)

Uhde, Fritz von (frĭts' fŭn ōō'du), 1848–1911, German genre painter, best known for his popular pictures of scriptural subjects in modern costume and setting Well-known works include *Going Home* (Metropolitan Mus), *Suffer Little Children to Come unto Me, Nativity,* and *The Walk to Bethlehem*

Uhland, Johann Ludwig (yō'hän lōōt'vĭkh ōō'länt), 1787–1862, German poet, leader of the Swabian group He studied law at Tübingen and later practiced there, held various official posts, and taught German literature His lyrics and ballads, written almost entirely in his youth, made him one of the most popular German poets of the romantic period, and their polished style won critical admiration His ballads include *The Minstrel's Curse, The Good Comrade,* and *Taxtlefer* Uhland was intimately acquainted with the works of the Middle High German poets, his critical studies of which are excellent His works include *Gedichte* [poems] (1815), *Vaterländische Gedichte* [songs of the Fatherland] (1816), and the drama *Ludwig der Bayer* (1819), which, though not successful as a play, included some of his best verse A nearly complete English translation of his poems by Alexander Platt appeared in 1848, and W W Skeat's English version of *Songs and Ballads* in 1864

Uhler, Horace Scudder (ū'lur), 1872–, American physicist, b Baltimore, grad Johns Hopkins (B A , 1894) Associated with Yale from 1906 to 1925 and from 1926, he became professor emeritus in 1941 He is known for his work in spectroscopy, X rays, and geometrical optics He wrote *Atlas of Absorption Spectra* (with R W Wood, 1907)

Uhrichsville (ū'rĭksvĭl), city (pop 6,435), E Ohio, S of Canton, settled 1804, platted 1833, inc as a city 1921 Clay products (especially sewer tiles) are made

Uigurs or **Uighurs** (both wē'go͝orz), people of Asia, of Turkic stock The Uigurs first rose to prominence in the 7th cent , when they were established along the Orkhon river Unlike other peoples of the region, they were not exclusively nomadic, but practiced some agriculture and founded several cities, including Karakorum The Uigurs rapidly expanded, and in the early 8th cent they seized control of all Mongolia from the T'ang dynasty of China and founded an empire which lasted from 745 to 856, when they migrated to E Turkistan and to the western part of what is now Sinkiang prov , China There they established another empire, which was swept away by the Mongols in the 13th cent Today a large percentage of the inhabitants of Sinkiang speak the Uigur language and may be of Uigur descent

Uinta Mountains (ūĭn'tu), range of the Rocky Mts , running E from NE Utah to SW Wyoming The highest point is Kings Peak (13,498 ft) The High Uintas Primitive Area (243,957 acres) was reserved in 1931

Uist, North (ū'ĭst, ōō'ĭst), and **South Uist,** islands, off NW Scotland, in Inverness-shire, two of the Outer Hebrides North Uist (pop 2,349), SW of Lewis with Harris, is 18 mi long and 13 mi wide, with a much-indented coast (Lochs Maddy, Eport, and others) The east is hilly and boggy, but the west has some fertile land Lochmaddy is the chief town Most of the inhabitants are crofters South Uist (pop 2,810) is c 22 mi long and 7 mi wide, with Lochs Boisdale, Eynort, and Skiport indenting the east coast, the best soil is in the west Lochboisdale is the leading town, and the village of Milton is Flora Macdonald's birthplace Benbecula and smaller islands lie between North Uist and South Uist

Uitenhage (ū'tunhāg", oi'tunhā"gŭ), town (pop, 26,502), S Cape Prov , Union of South Africa, founded 1804 Automobiles are assembled, and woolen textiles milled

Uitlander see SOUTH AFRICAN WAR

Ujhely, Hungary see SATORALJAUJHELY.

Uji (ōō'jē), town, Kyoto prefecture, S Honshu, Japan Here is the noted 11th-century monastery, Byodo-in, with its beautiful pavilion known as the Phoenix Hall The town is also a resort and is noted for its tea

Ujiji (ōō-jē'jē), town (pop c 10,000), Tanganyika, a port on Lake Tanganyika It is a center for native trade Here, on Nov 10, 1871, Henry Stanley successfully ended his search for David Livingstone

Uji-yamada (ōō'jē-yä'mädä), city (1947 pop 65,970), Mie prefecture, S Honshu, Japan, on Ise Bay An ancient city, it is one of the foremost religious centers of Shinto, the site of the shrines of Ise, one of which is dedicated to Amaterasu-o-mikami, "divine ancestress" of the imperial family. The city is the seat of a university and a museum of antiquities.

Ujjain (ōōjīn', ōō'jĭn), town (pop 72,729), Madhya Bharat, India To Hindus, Ujjain is one of the holiest places in India, and it is visited by many pilgrims The town is comparatively new, but two miles north is a ruined ancient city, which may have been inhabited in the late 2d millennium B C This city has been identified as the capital of the semilegendary kingdom of Avanti, described in Buddhist chronicles as one of the greatest Indian states Moslems captured the city in 1235 and destroyed all the Hindu temples It fell to Akbar in 1562, and not until it became a part of Gwalior (c 1750) was Ujjain restored to Hindu control

Ujpest, Hung *Újpest* (o͞o'ĭpĕsht), city (pop 76,001), N central Hungary It is an industrial suburb of Budapest

Ujvidek, Yugoslavia see NOVI SAD

Ukiah (ūkī'u), city (pop 3,731), co seat of Mendocino co , W Calif , NNW of San Francisco, in an area producing fruit and hops, inc 1876 An international latitude observatory is here, and there are hot mineral and carbonated springs

Ukraine (ū'krān, ūkrān') or **Ukrainian Soviet Socialist Republic,** Rus *Ukraina* (o͞okrŭē'nŭ, o͞okrī'nŭ), constituent republic (222,600 sq mi ; 1946 estimated pop 40,800,000), SW European USSR, in Eastern Europe, sometimes called Little Russia KIEV is the capital The Ukraine borders on the Black Sea, the Crimea, and the Sea of Azov in the south, on the RSFSR in the east and the northeast, on Belorussia in the northwest, on Poland, Czechoslovakia, Hungary, and Rumania in the west, and on the Moldavian SSR in the southwest In population, economic value, and historic importance, it ranks second after the RSFSR among the constituent republics of the Soviet Union Drained by the Southern BUG, the DNIEPER, and the DONETS, the Ukraine consists largely of fertile steppes, extending from the Carpathians and the Volhynian-Podolian uplands in the west to the Donets Ridge in the southeast The PRIPET MARSHES extend into the NW Ukraine, wooded steppes occupy the center, and a fertile black-earth steppe covers the south Long called the granary of Russia, the Ukraine is one of the chief wheat-producing regions of Europe, frequent droughts, however, have caused crop failures and periodic famines The W Ukraine is predominantly agricultural, LVOV, DROHOBYCH (a petroleum center), and ODESSA (the chief grain port on the Black Sea) are the only major industrial cities, ZHITOMIR and VINNITSA are the main agricultural centers The central and eastern sections, however, form one of the densest industrial concentrations of the world The heavy metallurgical and machine-building industries and the chemical industry are based on the iron mines of KRIVOI ROG, the manganese ores of NIKOPOL, and the coking coal and anthracite of the DONETS BASIN The DNIPROGES dam powers one of the world's greatest hydroelectric stations and has made the Dnieper navigable in nearly its entire length Among the many industrial centers of this area the greatest are KHARKOV, DNEPROPETROVSK, STALINO, ZAPOROZHE, MAKEYEVKA, ZHDANOV, and VOROSHILOVGRAD Besides Odessa, NIKOLAYEV, KHERSON, and Zhdanov are the main seaports A dense railnet serves the entire Ukraine The majority of the population (c 80 percent) are Ukrainians, a Slavic group speaking a language closely akin to Russian Russians and Poles form the rest of the population The majority of those belonging to a religious faith are Russian Orthodox There is a considerable Jewish minority In the west, where Polish cultural influence has long been paramount, the religious situation is complicated by the historic struggle between the Russian Orthodox and the Roman churches for the allegiance of the Ruthenian Church In ancient times the Ukraine—or, at least, its southern part—was inhabited by the Scythians (see SCYTHIA), later displaced by the Sarmatians (see SARMATIA), and was in contact with the Greek and Roman world Early in the Christian era a series of invaders overran the Ukrainian steppes, the Goths, the Huns, and the AVARS succeeded each other, and in the 7th cent the KHAZARS included most of the present Ukraine in their empire The date when the Slavs first settled here is controversial By the 9th cent , when they definitely entered history, they were a well-developed agricultural nation The dukes of KIEV, rulers of the first Russian state, expanded southward in the 9th and 10th cent (see RUSSIA), though they continually had to fight the PECHENEGS and CUMANS The Kievan state split into principalities in the following centuries Among them were the western principalities of GALICH (see also GALICIA) and Vladimir (see VLADIMIR-VOLYNSKI and VOLHYNIA), these and the western region of PODOLIA, though now part of the Ukraine, had separate histories after the conquest (13th cent) of Kievan Russia by the GOLDEN HORDE In the 14th cent the dukes of Lithuania conquered the major part of the Ukraine, which after the union (1569) of Poland and Lithuania came under Polish rule The Black Sea shore, ruled by the khans of CRIMEA, was absorbed into the Ottomah Empire when the khans became (1478) vassals of the sultan. Russian reconquest of the Ukraine began (late 15th cent) in the east under Grand Duke Ivan III of Moscow Thus torn among Poland, Lithuania, Russia, and Turkey, the Ukraine was, as its name signifies in Russian, a border land, subject to continuous disputes, devastating raids, and exhausting wars After the Polish-Lithuanian union of 1569 the Ukrainian peasants were reduced to serfdom by the Polish nobles, and in 1596 King Sigismund III united the Ruthenian Church to Rome, outlawing the Orthodox Church These measures provoked violent opposition among the ZAPOROZHE COSSACKS, who had formed a virtually independent republic under Polish suzerainty In 1648 the Cossacks rose under the leadership of CHMIELNICKI, and in 1654 they proclaimed their union with Moscow By the Treaty of Andrusov (1667) Poland was obliged to cede the NE Ukraine, including Kiev, to Russia The insurrection of MAZEPPA led to the abolition of Cossack autonomy under Peter I, and the Ukraine became an integral part of Russia The annexation (1783) of the khanate of Crimea completed the Russian conquest of the S Ukraine The Polish partition treaties of 1772, 1793, and 1795 (see POLAND, PARTITIONS OF) awarded Podolia and Volhynia to Russia and Galicia to Austria The emergence of Ukrainian nationalism in the 19th cent brought on agitation for autonomy or independence and for the union of all Ukrainians—including those of Austrian Galicia and BUKOVINA and of Hungarian RUTHENIA—under a single state As a result of the Ukrainian nationalist movement and of the Russian Revolution of 1917 a complex situation arose at the end of the First World War An independent Ukraine having been proclaimed (Jan , 1918) by the nationalists and recognized by the Central Powers, Soviet troops entered the Ukraine The Germans and Austrians then proceeded to overrun the Ukraine and forced the Soviets, in the Treaty of Brest-Litovsk (March, 1918), to withdraw their troops The armistice of Nov , 1918, forced the Central Powers to withdraw their troops in turn, and a four-cornered struggle followed among the Ukrainian nationalists, the counterrevolutionary army of DENIKIN, the Red Army, and, in 1920, the Poles Excesses were committed by all sides, but the nationalists under the leadership of Colonel Petlura perhaps outdid the others by their pogroms of Jews The struggle was not limited to Russia but extended to Polish Galicia The Soviets having regained control late in 1920, the Ukraine became one of the original constituent republics of the USSR In the Second World War the Ukraine was devastated by heavy fighting and by three years (1941–44) of German and Rumanian occupation Several major territorial changes occurred in the Ukraine after 1940 S BESSARABIA, recovered from Rumania in 1940, was incorporated with the Ukraine, while the former Moldavian ASSR was detached from the Ukraine and merged with central Bessarabia as the MOLDAVIAN SSR The northern parts of Bukovina and Bessarabia were added to the Ukraine, as was E Galicia, including LVOV, formally ceded by Poland in 1945 The Carpatho-Ukraine (see RUTHENIA), a part of Czechoslovakia from 1919, was also ceded in 1945 Thus the entire Ukrainian people was united under the Soviet regime The Ukraine was admitted to the United Nations in 1945 The termination (1946) of the union with Rome of the Ruthenian Church in the newly acquired territories was denounced by the Holy See See W E D Allen, *The Ukraine* (1941), Michael Hrushevsky, *A History of the Ukraine* (1941), W H Chamberlin, *The Ukraine* (1944), C A Manning *The Story of the Ukraine* (1947)

Ukrainian literature A written Ukrainian language did not emerge until the 16th cent , the first book printed in it being a translation of the Gospels Early books were usually religious, but a grammar appeared in 1619 and a dictionary in 1625 In the 18th cent in accordance with Russia's policy of Russification, Ukrainian was superseded by Russian in the schools The Ukrainian writers of the period—e g , Ippolit Bogdanovich (1743–1803)—wrote in Russian About the beginning of the 19th cent , however, a renaissance of Ukrainian culture occurred Ivan Kotlyarevsky (1769–1838) was the leading figure in the literary revival, his *Natalka of Poltava* reflected the life of the people Most of the work of the novelist Gregory Kvitka (1779–1843) was in Ukrainian Vasil Gogol, father of Nikolai Vasilyevich Gogol who wrote in Russian, was a follower of Kotlyarevsky With the founding in the 1830s of a university at Kiev, the capital became the cultural center, as it had been earlier The leading scholar of the period was Nikolai Ivanovich Kostomarov (1817–85), who wrote the history of the Ukraine Markian Shashkevich (1811–44) collected the songs and stories of his people The great figure of Ukrainian literature, the poet Taras SHEVCHENKO, persecuted by the Russian government during his lifetime, was revered by his own people Second to Shevchenko was another poet, Ivan Franko (1856–1916), author of an epic, *Moses* (1905), and of novels and folk tales Among prose writers of the late 19th and early 20th cent, were the scholar Michael Hrushevsky (1866–1934), the

teller of moral tales **Maria Alexandrovna Markovich** (1834–1907), and the dramatist **Marko Kropivnitsky** (1841–1910). After the Bolshevist Revolution, Ukrainian nationalism became a political offense and many Ukrainian writers were imprisoned, killed, or driven into exile

ukulele (ūkulā'lē), musical instrument of the guitar family having four strings. Derived from the small Portuguese guitar and brought from the Hawaiian Islands to the United States in the 20th cent., it was especially popular in the 1920s

Uladislaus I, king of Hungary: see **Ladislaus III,** king of Poland

Uladislaus II (o͞o"la'dĭslous), Hung. *Uládzló II* (o͞o'lászlō), c 1456–1516, king of Hungary (1490–1516) and, as Ladislaus II, king of Bohemia (1471–1516), son of Casimir IV of Poland. Designated by George of Podebrad as his successor, he was elected to the Bohemian throne. Matthias Corvinus, king of Hungary, invaded his territories and in 1478 acquired Moravia, Silesia, and Lusatia from him. In Bohemia, Uladislaus openly favored the Roman Church against the Hussites. His weak rule enabled the nobles to pass laws in the diets of 1487 and 1497 which made the peasants virtual serfs. On the death of Matthias Corvinus (1490), the Hungarian magnates elected Uladislaus king in preference to Maximilian of Hapsburg (later Emperor Maximilian I). In Hungary also the nobles exploited the king's weakness, abolishing the reforms of Matthias Corvinus and worsening the lot of the peasants. When Cardinal Bakocz issued the call for a crusade against the Turks, the peasants revolted and were cruelly repressed by John Zapolya (later John I). In 1515 Uladislaus concluded with Maximilian I a treaty which eventually brought Hungary and Bohemia under Hapsburg rule—his daughter Anna was promised to Archduke Ferdinand (later Emperor Ferdinand I), his son and successor, Louis II, was to marry Ferdinand's sister, Mary, if Louis died childless (as he did). Hungary and Bohemia were to pass to the Hapsburgs

Ulai (u'lā), biblical name of the Karun, river in Iran. Dan. 8 2,16

Ulala, RSFSR: see Mountain-Altai

Ulam (u'-) **1** Manassite. 1 Chron. 7.16.17. **2** Family of archers. 1 Chron. 8 39,40

Ulan Bator (o͞olan' ba'tôr, o͞o'lən), city (pop. c 100,000), capital of the Mongolian People's Republic. It is connected by motor roads with Siberia and Manchuria, and it is the chief commercial center of the country. Situated in a stock-raising region, it has a large slaughtering and dairy industry. There is a university partly staffed by Russians. Ulan Bator was formerly called Urga

Ulan-Ude (o͞olan"-o͞odā'), city (1926 pop. 28,918; 1939 pop. 129,417, 1946 estimated pop. 150,000), capital of Buryat-Mongol ASSR, RSFSR, in S Siberia, on the Selenga river and on the Trans-Siberian RR, c 50 mi. E of Lake Baikal. An industrial city and an important rail, river, and road transportation center, it produces locomotives and railroad cars, lumber, woolen textiles, glass, meat products, and sugar. It has an agricultural college, a teachers college, and a tuberculosis sanatorium. Founded in 1666, it was a place of exile until c 1780, when it became a city. It was named first Udinsk, then Verkhneudinsk, and finally (c 1935) Ulan-Ude. Developing rapidly into a commercial center, it experienced a gold boom in the mid-19th cent. and grew further after the construction of the Trans-Siberian RR. It became the capital of the Buryat-Mongol SSR in 1923. The population is 80 percent Russian and only 20 percent Mongol

ulcer (ŭl'sur), open sore which tends not to heal and usually occurs on skin and mucous membranes. It may develop as a result of an injury, especially if the tissue is poorly nourished, e.g., in conditions such as varicose veins of the leg, syphilis, tuberculosis, and leprosy. Some ulcers develop into cancer. The underlying cause must be treated as well as the ulcer. One type of ulcer occurs in the stomach and upper intestine, causing pain, especially after eating solid food. Such ulcers may be serious because of hemorrhage and perforation, followed by peritonitis. Some cases are cured by special diets, whereas others require surgical treatment.

Uleaborg, Finland: see Oulu

Ulenspiegel, Tyl. see Eulenspiegel, Till

Ulfilas (ŭl'fĭlus) or **Wulfila** (wo͝ol'fĭlu) [Gothic,=little wolf], c 311–383, Gothic bishop, translator of the Bible into Gothic. He was converted to Christianity at Constantinople and was ordained (341) by the Arian bishop Eusebius of Nicomedia. Ulfilas then returned to his people as missionary, it was partly as a result of Ulfilas's work that the Goths became and remained Arians for so long in the face of triumphant Catholicism. Of Ulfilas's Bible only fragments remain—parts of Genesis, Nehemiah, most of the Gospels, and the whole of 2 Corinthians, with several more fragments. Ulfilas is said to have invented the alphabet he used. His principal manuscript is the Codex argenteus (Uppsala, Sweden), of purple parchment with silver letters.

Ulithi (o͞olē'thē, ūlē'-), atoll (pop. 402), W Pacific, in the W Caroline Islands. It is ENE of Yap. In the Second World War the island was the site of a Japanese seaplane base. Taken in 1944 without opposition, it became a large U.S. naval base. Ulithi is sometimes spelled Uluthi.

Ulla (ŭ'lù) [Heb.,=yoke], Asherite. 1 Chron. 7.39.

Ulloa, Antonio de (äntō'nyō dā o͞olyō'ä), 1716–95, Spanish scientist and naval officer. As a young man he went to Peru with a scientific expedition, remaining in the country from 1736 to 1744; the result was an account of the people and the country published in 1748. The book was translated into English as *A Voyage to South America* (1758; 5th ed., 1807). Sent to New Orleans (1766) as governor or commissioner of Louisiana after that province had been ceded by France to Spain, he was harassed in his administration by the rebellious attitude of the French colonists and by inadequate military and financial support. After an uprising in 1768 he was forced to leave

Ulloa, Francisco de (franthē'skō dā o͞olyō'ä), d. c 1540, Spanish explorer in Mexico. Against the orders of Viceroy Antonio de Mendoza, Hernán Cortés sent Ulloa to explore the Gulf of California. In 1538 he sailed to the head of the gulf, thus proving that lower California was a peninsula

Ullswater, lake, 7½ mi. long and ¼ to ¾ mi. wide, on the Cumberland-Westmorland co. boundary, England, second largest in the country. It is divided into three reaches. The waterfall of Aira Force and Helvellyn mt. are in the vicinity, the scenery, like that of the rest of the Lake District, has inspired many writers. Gowbarrow, a national park, is west of the lake

Ulm (o͞olm), city (1939 pop. 74,387, 1946 pop. 58,087), Württemberg, SW Germany, after 1945 in Wurttemberg-Baden. It is a port on the Danube, which becomes navigable here, and it has many diverse industries, including iron and brass foundries, machine-building plants, breweries, metal manufactures, manufactures of precision instruments, textile mills, and food-processing plants. A canal to join the Danube at Ulm with the Neckar is projected. First mentioned in 854, Ulm became (14th cent.) a free imperial city and ruled a considerable territory N of the Danube. It was one of the greatest commercial centers and one of the most powerful cities of the medieval empire, reaching its zenith in the 15th cent. The commercial revolution of the 15th to 16th cent. and the religious wars in Germany caused its decline. Ulm accepted the Reformation c 1530 and was a member of the Schmalkaldic League. The city and its territory were awarded to Bavaria in 1802 at the Diet of Regensburg, but were transferred to Württemberg in 1810. Bavaria built Neu-Ulm on the opposite side of the Danube, which forms the state boundary here. The industrial development of Ulm dates from the 19th cent. In the Second World War more than half of the city, including most of its oldest district and its historic buildings, was destroyed. The famous Gothic minster, begun in 1377, escaped damage, it is the largest Gothic church in Germany after the cathedral of Cologne. Ulm is the birthplace of Albert Einstein

Ulpian (Domitius Ulpianus) (ŭlpē'un), d. 228, Roman jurist. He was a member of the council of the jurist Papinian, and he occupied the post of Praetorian prefect from 222 to his death. Despite the favor of the emperor Alexander Severus, he was murdered by the Praetorian guard. Ulpian's *Libri ad edictum* [edicts], a statement of the policy he would follow while in office, survives only in excerpts. Much of the *Corpus Juris Civilis* is extracted from Ulpian's writings

Ulreich, Nura (Woodson) (nō͝o'ru, ŭl'rĭk), American painter, illustrator, and writer, known as Nura, b. Kansas City, Mo. She studied at the Kansas City Art Institute, the Art Students League of New York, the Chicago Academy of Fine Arts, and under John Sloan. She is particularly successful in pictures of children, e.g., *Law and Order*. She is also known as a lithographer, and her lithographs illustrate such children's books as her *Buttermilk Tree* (1934), *Nura's Children Go Visiting* (1943), and *The Milly Children Fix Things* (1946)

Ulrich von Lichtenstein or **Ulrich von Liechtenstein** (both o͞ol'rĭkh fən lĭkh'tunshtīn), c 1200–1276, Middle High German poet, a Styrian knight. His chief work was a long chivalric poem, *Frauendienst* [service of his lady] (1255). His skillfully written songs recall Walther von der Vogelweide and represent the work of the later minnesingers

Ulster, northernmost of the historic four provinces of Ireland. Modern Ulster consists of nine counties. Six (Antrim, Armagh, Down, Fermanagh, Londonderry, and Tyrone) now make up Northern Ireland, which is often referred to as Ulster, the remaining three (Cavan, Donegal, and Monaghan) are in the Irish republic.

Ultima Thule: see Thule.

ultimatum (ŭltĭmā'tum), in international law, **final,** definitive terms submitted by one disputant nation to the other for immediate acceptance or rejection. Since refusal to accept the terms may lead to war or hostile measures, an ultimatum usually constitutes a conditional declaration of war. An ultimatum is written and indicates how its nonacceptance will be regarded. When a brief time limit is imposed, the crisis may be more intense, for there is naturally less opportunity for mediation or arbitration. An evasive or delayed answer may be accepted or rejected at the pleasure of the nation which presented the ultimatum. The contracting powers at the Second Hague Conference (1907) agreed to begin hostilities only after giving warning. Thus the presentation of an ultimatum is now usually recognized as a necessary conventionality preceded to the outbreak of war. A famous ultimatum, the immediate cause of the First World War, was that presented by Austria to Serbia on July 23, 1914. Hitler also presented several ultimatums (to Czechoslovakia and Poland) in the year before the outbreak of the Second World War. Japan, however, began its war with the United States with an attack rather than an ultimatum

ultramarine, blue pigment used chiefly as a coloring material and as a bluing agent. A double silicate of sodium and aluminum with some sulphur, it is prepared commercially from kaolin, sulphur, soda ash, and other inexpensive ingredients. It was formerly produced by grinding lapis lasuli and was very costly

ultramontanism (ŭl"trumŏn'tunĭzm) [Latin,=beyond the mountains, i.e., the Alps], formerly, point of view of Roman Catholics who supported the pope as supreme head of the Church, as distinct from those who professed Gallicanism or other tendencies opposing the papal jurisdiction. The term was used principally in France by Gallicans, especially before the French Revolution, but it was revived in 19th-century Germany by the group which left the Church as Old Catholics after the Vatican Council. The term is now obsolete, since all those in communion with the pope (i.e., Roman Catholics) are agreed in their unconditional submission to him. See papacy

ultraviolet ray, invisible component of the sun's radiation. Ultraviolet radiation can be produced artificially by electrode arc lamps, including mercury arc lamps. Much of the sun's ultraviolet radiation is absorbed by the atmosphere before it reaches the earth, that which does reach the earth is unable to penetrate thick clothing, ordinary window glass, or air heavily laden with impurities. Its wave lengths range from approximately 4,000 to 400 angstrom units, and they lie between those of visible violet light and those of X rays. The rays can be seen when the spectrum of an arc light falls on a fluorescent screen, and they may be detected by their photographic and ionizing effects. Exposure to ultraviolet light induces fluorescence in certain substances. Vitamin D is produced by the action of ultraviolet rays on ergosterol, a substance present in human skin and in some of the lower plants (e.g., yeast). Cod-liver oil and irradiated ergosterol are valuable sources of vitamin D. By exposure to ultraviolet radiation certain foods, e.g., milk, become enriched with vitamin D. In certain diseases, especially in rickets, the treatment includes exposure of the patient's body to ultraviolet radiation (this should be done only under a physician's direction). Methods have been developed for using ultraviolet radiation to destroy germs in the air and in infected body tissues. Ultraviolet light has also been used to treat germs employed in the preparation of vaccines. See F. H. Humphris, *Artificial Sunlight and Its Therapeutic Uses* (rev. ed., 1929), H. C. Dake and J. A. De Ment, *Ultra-violet Light and Its Applications* (1942)

Ulúa (o͞olo͞o'ä), river, W Honduras. Flowing north to the Caribbean, the Ulúa, with its tributaries (the Sulaco, the Comayagua, and the Jicatuyo), drains almost the entire western half of the country. In its lower reaches it parallels the Chamelecón. The valley, once a center of the Chorotega civilization, is one of the most productive in Honduras

Ulugh-Beg or **Ulug Beg** (both o͞o'lo͞og bāg'), 1394–1449, Timurid ruler and astronomer. The grandson of Tamerlane, he succeeded to the Timurid domain in 1447. He established an astronomical observatory at Samarkand and is said to have been the first to compile a star catalogue since Ptolemy's compilation. His work, written in Arabic, was translated into Persian, and a Latin version appeared in England in the 17th cent.

Uluthi, Caroline Islands: see Ulithi

Ulverston (ŭl'vurstun, o͞os'tun), urban district (pop. 9,234), Lancashire, England, in the Furness district NE of Barrow-in-Furness. It is a market and steel-producing town. There is a canal to Morecambe Bay. The Church of St. Mary dates partly from the 12th cent. George Fox established a Quaker meetinghouse near Ulverston.

Ulyanov, Vladimir Ilyich: see Lenin.

Ulyanovsk (o͞olyä'nufsk), city (pop. 102,106), capital of Ulyanovsk oblast, RSFSR, on the right bank of the middle Volga. It is a major river port and a commercial and industrial center. Founded in 1648 as Simbirsk, it was renamed in 1924 for Lenin (whose real name was Vladimir Ilyanov), because he was born here. Ulyanovsk manufactures trucks, lathes, and precision instruments and processes agricultural products (grain, meat, potatoes, fruit, and hops). A funicular railway is planned to facilitate access from the water front to the city, which is built on the high riverbank. Lenin's

former home is now a museum. Another museum is devoted to the novelist Goncharov, who was also born here

Ulysses: see ODYSSEUS.

Uman (ōōmän′), city (pop. 44,812), central Ukraine. Founded in the 17th cent., it became a seat of the wealthy and noble Potocki family and was in the 18th cent. the leading commercial center of the Ukraine. During a bloody Cossack rebellion (1768) 18,000 of its Polish and Jewish inhabitants were massacred. The city passed (1793) to Russia in the second Polish partition. In the Second World War it was held (1941–43) by the Germans. It is today a farm center.

Umanak (ōō′mənäk), settlement (pop. 470) and colony district (pop. 1,477), W Greenland, on an inlet of Baffin Bay. A hunting and fishing base, it has a radio station and a hospital.

Umatilla (ūmətĭl′ə), town (pop. 1,149), Lake co., central Fla., N of Lake Apopka, in a citrus-fruit area, settled 1862. A home for crippled children is in Umatilla.

Umatilla (ū″mətĭl′ə), river, 80 mi. long, rising in NE Oregon in the Blue Mts. It flows W past Pendleton and NW to the Columbia river at the town of Umatilla. Its waters are tapped for irrigation purposes.

umber see OCHER.

umbilical cord (ŭmbĭl′ĭkul). A cordlike structure about 22 in. long extends from the abdominal wall of the FETUS to the PLACENTA. It consists of a continuation of the membrane covering the fetus and encloses a mucoid jelly in which lie two arteries and one vein. The arteries carry unoxygenated blood and the vein carries oxygenated blood. After birth the cord is tied off and cut. Sometimes the cord is abnormal in length, and sometimes it breaks or forms loops and knots which may cause asphyxia. It is subject to infection, e.g., by syphilis.

umbrella, used as a protection against the sun in China, Egypt, and elsewhere in remote antiquity. In many places it has been an emblem of rank, and as such it appears in sculpture, as at Nineveh. Its use in Europe as a protection from rain did not become general until the 18th cent., when it is said to have been introduced in England by Jonas Hanway.

umbrella tree see MAGNOLIA.

Umbria (ŭm′brēə, Ital. ōōm′brēä), region (3,281 sq. mi., pop. 722,544), central Italy, crossed by the Apennines and the upper valley of the Tiber. It is divided into the provinces of Perugia and Terni. PERUGIA is the capital. Mainly agricultural, Umbria produces cereals, wine, olive oil, and fruit. There are several hydroelectric plants, centered mostly around TERNI. The limits of the region varied at different times. Our knowledge of the ancient Umbrians is derived from inscriptions found here. The IGUVINE TABLES are the most important. There also are many Etruscan remains of a later period. Umbria was conquered by the Romans (3d cent. B.C.), and in the early Middle Ages it was usually included in the powerful duchy of Spoleto. Free communes developed in most cities (12th cent.) and local autonomy and petty tyrants prevailed until the fall of Perugia (1540), when practically all Umbria (except GUBBIO) passed under direct papal rule. Umbria was the home of St. FRANCIS. Art flourished in Umbria from ancient times. Its school of painting, founded by Niccolò da Foligno, flourished in the 15th and 16th cent., with such masters as Pinturicchio and Perugino.

Umbrian (ŭm′brēun), language belonging to the Italic subfamily of Indo-European languages. See LANGUAGE (table).

Ume, Swed. *Umeälv* (ū′məĕlv′), river, 270 mi. long, NE Sweden. At its mouth on the Gulf of Bothnia lies **Umea,** Swed. *Umeå* (ū′məō″), a city (pop. 15,898) of Vasterbotten co. Exporting chiefly tar, Umea has important pulp mills, machine shops, and furniture factories. It was incorporated in 1622 and burned by the Russians in 1720.

umlaut (ōōm′lout) [Ger., = transformed sound], in INFLECTION, variation of vowels of the type of English *man* to *men*. In this instance it is the end product of the effect of a *-y-* (long since disappeared) which was present in the plural, the *-y-* caused the vowel before the *-n-* to be pronounced higher and more forward in the mouth in the plural than in the singular, eventually there was replacement of the vowel in the plural. Other examples are *mouse, mice, tooth, teeth, to fall, to fell, doom, deem.* Umlaut is called also mutation and infection. For the variation of *ring, rang,* see ABLAUT.

Ummah (ŭ′mə) [Heb., = yoke], unidentified city, NW Palestine. Joshua 19:30.

Umnak (ōōm′näk), island, 83 mi. long, off W Alaska, one of the ALEUTIAN ISLANDS. Sheep, introduced here in 1923, produced superior wool. The herdsmen were evacuated and flocks destroyed when a U.S. base was established in the Second World War, but the island was restocked in 1944. There are also reindeer.

Umpqua (ŭmp′kwə), river rising in two forks in SW Oregon, in the Cascade Range N of Crater Lake. The united stream flows N, then W, to the Pacific.

Umpqua Indians (ŭmp′kwə), North American Indian tribe of Athapascan linguistic stock. In the mid-19th cent. the Umpqua were settled on the upper Umpqua river in SW Oregon. They then numbered some 400. They lived in houses of boards and mats and subsisted by fishing in the Umpqua river. Part of the Umpqua, the Nahankhuotana, lived along Cow Creek. The Lower Umpqua are distinct from the others, they are part of the Siuslaw linguistic stock. Today the Umpqua live on a reservation in Oregon, where they number some 80.

Umtali (ōōmtä′lē), town (pop. 9,737), E Southern Rhodesia. It is on a railroad to Beira in Mozambique. Industries include hardwood milling and cotton spinning. Gold is mined near by.

Umtata (ōōmtä′tə), town (pop. 7,351), capital of Transkeian Territories and of Tembuland, Union of South Africa. It is the terminus of a railroad to East London. There is trade in wheat and cattle.

Unadilla (ūnədĭl′ə) **1** Town (pop. 1,137), central Ga., SSW of Macon. **2** Village (pop. 1,079), E central N.Y., on the Susquehanna and NE of Binghamton, in a dairy region, settled 1790, inc. 1827. Silos and road machinery are made here.

Unaka Mountains (ū′nukə), range of the Appalachians, forming part of the N.C.–Tenn. border, NE of the Great Smoky Mts.

Unalaska (ū″nälä′skə, ōō″nu–), island, 30 mi. long, off W Alaska, one of the ALEUTIAN ISLANDS. The rough island was discovered by Vitus Bering in 1741 and later was a center of Russian fur trade until Kodiak rose in importance. An Aleut uprising here brought bloody reprisals in 1762. The Russians planted spruce here, some of the few trees in the Aleutians. The village of Unalaska on Unalaska Bay still has its Russian church. On Amaknak island in the bay is Dutch Harbor.

Unamuno, Miguel de (mēgĕl′ dä ōōnämōō′nō), 1864–1930, Spanish writer and scholar, the chief Spanish philosopher of his period, b. Bilbao, of Basque descent. He was professor of Greek at the Univ. of Salamanca and later rector of the university, but his criticism of the monarchy and especially of the dictator, Primo de Rivera, caused his removal in 1920 and his exile from 1924 to 1930. With the establishment of the republic (1931) he was reinstated as rector. At first a supporter of the republic, Unamuno became critical of it and in 1936, not long before his death, declared himself in favor of the rebels. His masterpiece is *Del sentimiento trágico de la vida en los hombres y los pueblos* (1913, Eng. tr., *The Tragic Sense of Life in Men and in Peoples,* 1921), a philosophical work in which he expresses his highly individualistic philosophy—one of faith only in faith, not in any affirmation or negation of faith. Other important volumes are *La vida de don Quixote y Sancho* (1905) and *La Agonía del cristianismo* (1925, Eng. tr., *The Agony of Christianity,* 1928). His poetry, as profound as his essays, includes *Poesías* (1907), *Rosario de sonetos líricos* (1911), and *El Cristo de Velázquez* (1920). He wrote several novels, which also express his impassioned concern with life and death; they are *Niebla* (1914, Eng. tr., *Mist,* 1928), *Tres novelas ejemplares y un prólogo* (1920, Eng. tr., *Three Exemplary Novels and a Prologue,* 1930), and *La tía Tula* (1921). His collected essays were published (in Spanish) in eight volumes (1916–18).

Uncas (ŭng′kus), c.1588–c.1683, chief of the MOHEGAN INDIANS. Uncas was a subchief of the PEQUOT INDIANS, but because of trouble with the chief, Sassacus, he withdrew with his followers and formed a separate tribe, the Mohegan. This tribe flourished under Uncas's leadership, absorbing most of the remaining Pequot after that tribe was defeated by the English in the Pequot War. Uncas was ambitious and sought British support. He was constantly at war with MIANTONOMO, the Narragansett chief. Both sided with the British in the Pequot War, but despite a treaty of peace (1638) signed between them through the instrumentality of the British, trouble continued. Uncas finally captured Miantonomo in 1643 and murdered him, with British acquiescence. Through the rest of his life Uncas was involved in various troubles with the British and other Indians.

uncial see PALEOGRAPHY.

Uncle Remus. see HARRIS, JOEL CHANDLER.

Uncle Sam, name used to designate the U.S. government. The term arose in the War of 1812 and seems at first to have been used derisively by those opposed to the war. Possibly it was an expansion of the letters "U.S." on uniforms and government property, but some sources attribute the origin of the term to Samuel Wilson of Troy, N.Y. Wilson, known as Uncle Sam to many friends and townspeople, inspected army supplies with his brother. The "U.S." stamped on supplies was jokingly referred to as "Uncle Sam" by the workmen, and this identification spread rapidly. Regardless of its origin, the term found wide application and became permanent.

Uncompahgre (ŭn-kumpä′grē), river rising in SW Colorado in the San Juan Mts., S of Ouray, and flowing c.75 mi. NNW past Montrose to the Gunnison river at Delta. Its waters are used for irrigation. Gunnison Tunnel diverts water from the Gunnison river to the Uncompahgre.

Uncompahgre Peak, 14,306 ft. high, SW Colo., in the San Juan Mts. of the Rockies and ENE of Ouray.

unconscious, in psychology, term generally defined as meaning that aspect of mental life which is apart from immediate consciousness and which is not subject to recall at will. It is also called the subconscious. Although J. F. Herbart had given the unconscious an important role in his psychological investigations, it was not until Freud and his work in PSYCHOANALYSIS that the concept took a dominant position in the explanation of mental activity and of neurosis. Freud regarded the unconscious as forming a submerged but vast portion of the mind and as acting as the motivating force in human behavior. It is composed of instinctual drives and contains the residue of unacceptable experiences and desires which the individual hides or represses from conscious recognition. The majority of psychoanalysts, believing that the emotional conflicts underlying neurosis are to be found in the conceptual area of the unconscious, direct their attention towards bringing this material to the surface or consciousness. The strongest empirical evidence for the existence of the unconscious was found by Freud to be the fact that under hypnosis the individual is able to remember experiences which he is unable to recall in a normal state. To the Freudian concept of the unconscious C. G. Jung added an inherited one, the collective experience of man in his total existence as a race. The concept of the unconscious is rejected by some psychological schools and is disregarded by others. See also HARTMANN, EDUARD VON.

unction, extreme see EXTREME UNCTION.

underground, term used during the Second World War to designate secret resistance against enemy occupation. It applied especially to organized opposition to German occupation, although underground movements existed also in Italy, in the Axis satellite countries (notably Bulgaria) and in the countries invaded by Japan. Underground forces came into existence in the order in which European countries were absorbed by the Axis, but their strength, organization, and effectiveness varied widely. Underground operations fell into five categories: military operations, industrial sabotage, espionage, propaganda, and the organization of escape routes for Allied prisoners of war. Military operations ranged from full-scale warfare, as in YUGOSLAVIA, to individual assassinations of German soldiers, as in Denmark. In France, Belgium, the Netherlands, Italy, and the Balkans the underground joined with the Allied forces after the liberation of their countries had begun. In the USSR they continued to harass the Germans from the rear, while in Poland they rose prematurely and were crushed. Arms were supplied through caches prepared before final surrender, through weapons dropped by Allied airplanes, through raids on Axis warehouses and supply convoys, and even through black-market deals with the Axis troops themselves. Military operations also included the sabotaging of bridges, railroads, and public utilities. In France where the resistance movement was particularly effective, the guerrilla groups were known as the MAQUIS, they later became French Forces of the Interior. Industrial sabotage ranged from bomb plots to deliberate mistakes or willful slowdowns in factories. Espionage was conducted with great effectiveness in Western Europe, especially in France, and in close contact with Allied Intelligence Headquarters in London. Propaganda activities, particularly in France, were carried out boldly through secret publishing houses (such as Les Editions de Minuit), newspapers, handbills, and radio stations. The "underground railroad" in France for the return of Allied war prisoners also served for the conveyance of Allied agents—often old underground members who had escaped to England to be trained there—into German-held territory. The composition of the underground was generally leftist. In several countries underground activities continued after the war. In Yugoslavia the *chetniks* were put down with force by the government. In Poland the government also put down an underground movement. In Greece guerrilla warfare swelled to full civil war. Underground forces were also prominent in the formation of ISRAEL.

Underground Railroad, in U.S. history, the irregular, secret system of helping fugitive slaves from the South reach freedom in the free states and Canada. It may have existed as early as 1804 or soon after the War of 1812, when Negro slaves supposedly first heard of Canada from veterans and were told by friendly whites to follow the North Star as a guide. One source has it that the slaveholders, puzzled and frustrated by the number of successful escapes, began saying (c.1831) that the Negro slaves "must have gone on an underground railroad" and that antislavery workers happily took up the metaphor and adopted railroad terminology for their operations. The slaves were guided, usually at night, over generally fixed routes by "conductors" from one "depot" or "station" to another, most often the home of an abolitionist, a "station master," who was ever on the lookout for the next "train." At first mostly a hit-or-miss

affair, the "U.G" had to function more smoothly after professional slave catchers were hired by the masters to recover their human property But it was not, nor could it have been, a thoroughly organized activity, since its operations were illegal, and secrecy was absolutely essential Most workers rarely knew of any but the near-by stations The Quakers, who believed simply that SLAVERY was evil and any effort to end it good, were doubtless first active in the work, which soon attracted other sects and individual humanitarians Levi COFFIN was probably the movement's most prominent figure John BROWN kept a station, and Negroes themselves, notably Harriet TUBMAN, were very important in the operations, which were naturally more dangerous for them than for whites The Underground Railroad existed in every state north of the border slave states, and there were particularly extensive networks throughout Ohio, Indiana, and Illinois Philadelphia was an important Eastern center The more stringent FUGITIVE SLAVE LAWS enacted as part of the COMPROMISE OF 1850 were aimed at the system, but had the opposite effect of increasing antislavery sentiment in the North Although comparatively few of the South's slaves were delivered to freedom (75,000 by the beginning of the Civil War is one estimate), the Underground Railroad was of great value as an active outlet for the bursting moral energy of the ABOLITIONISTS See W H Siebert, *The Underground Railroad from Slavery to Freedom* (1898), Henrietta Buckmaster, *Let My People Go* (1941)

Underhill, John, c 1597-1672, military commander in the American colonies, b Warwickshire, England His varied and stormy career commenced with army service in Spain In 1630 he accompanied John Winthrop to Massachusetts Bay, and in 1637 he distinguished himself as a commander with John MASON (c 1600–1672) in the Pequot War, of which he wrote an account in *News from America* (1638) Because of his ardent support of Anne HUTCHINSON in the antinomian controversy, he had to flee from Massachusetts Bay Later in New Netherland he commanded (1644) for the Dutch against the Algonquin Indians, he opposed Peter Stuyvesant and had to leave the colony but returned after the British conquest of 1664 See biography by H C Shelley (1942)

Underwood, Lucien Marcus, 1854–1907, American botanist and educator, b New Woodstock, N Y, grad. Syracuse Univ, 1877 He is the author of *Our Native Ferns and How to Study Them* (1881), *Descriptive Catalogue of North American Hepaticae North of Mexico* (1884), *Moulds, Mildews, and Mushrooms* (1899), and several books on genealogy

Underwood, Oscar Wilder, 1862–1929, American political leader, b Louisville, Ky He attended (1881–84) the Univ of Virginia, was admitted (1884) to the bar, practiced law in Birmingham, Ala, and became important in Democratic party politics In the House of Representatives (1895–1915), he introduced the Underwood Tariff Act of 1913, which drastically reduced tariff schedules and transferred many articles to the free list The Underwood Tariff, however, was not put in force because of the outbreak (1914) of the First World War As a U S Senator (1915–27), Underwood became the Democratic leader and a leading exponent of President Woodrow Wilson's foreign policy He was a delegate to the Washington Conference on naval limitation (1921–22) and to the Pan American Conference of 1928 Underwood was a prominent contender for the Democratic presidential nomination in 1920 and 1924 He wrote *Drifting Sands of Party Politics* (1928)

Undset, Sigrid (sĭ'grĭd ōōn'sĕt), 1882–1949, Norwegian novelist, daughter of an archaeologist Most of her early novels, such as *Jenny* (1911, Eng tr, 1921), are contemporary in background and theme, but the first of the historical novels for which she is chiefly famous, *Gunnar's Daughter*, appeared in 1909 (Eng tr, 1936) Her great trilogy of medieval Norway, *Kristin Lavransdatter* (1920–22), appeared in translation (1923–27) as *The Bridal Wreath*, *The Mistress of Husaby*, and *The Cross* It was followed in 1925–27 by the tetralogy *Olav Audunsson* (Eng tr, *The Master of Hestviken*, 1928–30, it includes *The Axe*, *The Snake Pit*, *In the Wilderness*, and *The Son Avenger*) The details of period and locale form an unobtrusively authentic background for the play of character and emotions She was awarded the 1928 Nobel Prize in Literature Her writing, always concerned with questions of ethics, deepened in religious intensity after Mme Undset became a Roman Catholic convert in 1924 Her later novels include *Ida Elisabeth* (1932, Eng tr, 1933), *The Faithful Wife* (1936, Eng tr, 1937), and *Madame Dorthea* (1939, Eng tr, 1940) *The Longest Years* (1934, Eng tr, 1935) is autobiographical Driven from Norway in 1940 by the Nazi invasion (in which her oldest son was killed), Mme Undset came to the United States In 1945 she returned to Norway See Alrik Gustafson, *Six Scandinavian Novelists* (1940)

undulant fever (ŭn'dyōōlunt), **brucellosis** (brōōsulō'sĭs), or **Malta fever,** disease of man and animals caused by the brucella organisms (*Brucella melitensis*, *B. abortus*, or *B. suis*). The bacteria and their toxic products circulate in the blood stream. The organisms are nonmotile and nonsporeforming and cause abortion in animals Goats are affected by the *B melitensis*, cattle by *B abortus*, and hogs by *B suis* The disease is transmitted to man through the ingestion of infected food or liquids or by direct contact with infected animal tissues or discharges Farmers, meat handlers, and veterinarians are particularly subject to infection In humans the course of the disease varies, there is usually a long period of disability marked by disturbances of the digestive and other systems, a remittant type of fever of varying lengths (alternating with periods of absence of fever), and other symptoms Diagnosis is made by culture of the blood, guinea-pig inoculation, the agglutination reaction, and skin tests The use of certain antibiotic substances and also autogenous vaccines have been used in the treatment of the disease A protected water supply and the pasteurization of milk and milk products are important factors in prevention

unearned increment, gain in the value of property not due to any act of the owner The progress of a community may enhance the value of land Unearned increment of this kind Henry George proposed to secure for the community by a SINGLE TAX There may be unearned increment also in the value of securities, rarities, and objects of art

unemployment was formerly assumed to be voluntary, and idleness was punishable at law It is now generally recognized that it arises from various factors—e g, cyclical changes in business activity, seasonal fluctuations, technological progress—which are beyond the control of the individual worker It is also maintained that a certain amount of unemployment is inevitable in a free economy Unemployment became a major problem in all countries in the economic crisis which followed the First World War and again in the depression of the 1930s In addition to attempts to stimulate business recovery and thus increase employment opportunities, governments have taken different measures to deal with the problem In the United States, emphasis has been laid on public works, and in 1935 unemployment insurance was introduced, in Great Britain, employment exchanges were set up and a contributory unemployment insurance scheme established In Soviet Russia it is claimed that unemployment has been eliminated by socializing the means of production and distribution and channelizing labor into more productive industries Besides the poverty and ill-health involved in periods of unemployment one of the serious aspects is that unemployed workers lose their skill in specialized work and that there is thus created an increasing number of "unemployables" See VAGRANCY See W H Beveridge, *Unemployment a Problem of Industry* (rev ed, 1930), A C Pigou, *The Theory of Unemployment* (1933), Corrington Gill, *Wasted Manpower* (1939)

unemployment insurance The chief object of such insurance is to stabilize employment or to maintain unemployed workers until they are reabsorbed into industry Compulsory unemployment insurance makes this protection legally obligatory for certain classes of workers under prescribed conditions Voluntary unemployment insurance is maintained by private organizations—sanctioned, encouraged, or subsidized by the state The first attempts to establish unemployment insurance schemes began toward the end of the 19th cent in Germany, Italy, and Switzerland In 1901 Ghent, Belgium, established a public commission to regulate and supervise the payment of public subsidies to unemployed workers Following this pattern most Central and Western European states adopted the scheme in the next 20 years France, 1905, Great Britain, 1911, the Netherlands, 1916 Italy, 1919, and Germany, 1927 In the United States, allocation of unemployment insurance is under the administration of both state and Federal governments The Social Security Act of 1935 provides for a sliding scale of payroll taxes upon industry, based upon the index of production of the Federal Reserve Board (see SOCIAL SECURITY) The Bureau of Employment Security under the Federal Security Agency is responsible for administering the law Exempt from the tax are employers having less than eight workers or those in the following industries shipping, domestic service, agriculture, hotels, laundries, and restaurants, Federal, state, or local services, and nonprofit organizations (charitable, religious, educational, and scientific) See P H Douglas, *Standards of Unemployment Insurance* (1932) and *Social Security in the United States* (1939)

Ungava Bay (ŭng-gā'vŭ, -gā'vŭ), N Que, extending 200 mi S from Hudson Strait, between the N Quebec mainland and the north tip of the Labrador peninsula It is 160 mi wide at its mouth, contains Akpatok Island, and receives the Payne, Leaf, Koksoak, Whale, and George rivers The **Ungava** region (239,780 sq mi), south of the bay, originally a possession of the Hudson's Bay Company, was made a part of the Northwest Territories in 1869 and became in 1895 a separate district. In 1912 it was added to the province of Quebec, and in 1927 its boundary with Labrador was established The region is drained by the Koksoak, with its headstreams, the Kaniapiskau and the Larch, and by the Whale river. It contains valuable minerals and iron deposits, largely unexploited

Ungvar, Ukraine see UZHGOROD

Uni (ōō'nē), c 2635–c 2565 B C, Egyptian official of the Old Kingdom His career is known through his private inscription Rising steadily from an obscure court position, he was at length chosen over men of higher rank to command against the Bedouins, whom he defeated on five successive punitive expeditions and finally pursued, by sea and land, as far as the highlands of Palestine, the farthest point reached by the Egyptians of the Old Kingdom Under the next king, as governor of the south, he established water connections with the quarries just above the First Cataract by a series of five canals cut through granite, built boats of Nubian timber, and shipped granite blocks down river for the royal pyramid

Uniates or **Uniats** see ROMAN CATHOLIC CHURCH

unicorn (ū'nĭ-) [Latin, =one-horned], in fable, an equine beast of India with a long horn jutting from the middle of its forehead It was often considered as a composite monster, having the features of various animals It is usually pure white in color It has been used to represent virginity, and the hunting of the unicorn was a favorite subject in tapestries of the late Middle Ages and the Renaissance The unicorn, representing the Scottish arms, appears in the royal arms of Great Britain The biblical unicorn is probably a wild ox

uniformism or **uniformitarianism,** in geology, the doctrine that changes in the earth's surface occurring in past geologic time are referable to the same causes as changes now being produced upon the earth's surface This doctrine, the basic concept of which was first advanced by James Hutton in his *Theory of the Earth* (1785, 1795), was further expounded by John Playfair in his *Illustrations of the Huttonian Theory* (1802) It made little progress, however, against the teachings of the school of Abraham Gottlob WERNER and as a theory of dynamic geology was overshadowed by the doctrine of CATASTROPHISM of which the prophet was G L Cuvier This was in large measure because of the fact that uniformism, requiring an immensely long period of time for the consummation of geological process (thus disturbing the accepted chronology) and setting aside all remarkable catastrophies (thus, it would seem, denying the Flood), appeared to be contrary to religion Uniformism had its day, however, in the 19th cent, when it was widely accepted as a result of the efforts of Sir Charles LYELL The more recent tendency has been to effect somewhat of a synthesis of the two theories, based mainly upon Lyell's conception of the slow operation, over extremely long periods of time, of forces at work in historic time, but admitting the existence in earth history of periods when such activity was accelerated and intensified

Unimak (ōō'nĭmăk, ū'-), island, 70 mi long, off W Alaska, one of the ALEUTIAN ISLANDS, nearest of the chain to the Alaska Peninsula It is volcanic

Union. **1** Town (pop 1,150), S Maine, between Augusta and Rockland, settled 1774, inc 1786 **2** Town (pop 1,543), E central Miss, NW of Meridian, in a farm area, settled c 1830 on the site of an Indian village **3** City (pop 2,125), co seat of Franklin co, E Mo, near the Missouri and W of St Louis, laid out 1826 It lies in a farm area with lead and coal deposits **4** Township (pop 24,730), Union co, NE N J, SW of Newark, settled from Connecticut as Connecticut Farms in 1749, inc 1808 Machinery is made here Its church and other buildings were burned in the Revolution **5** City (pop 1,398), NE Oregon, SE of La Grande, founded 1862, inc 1878 It is the trade center of a farming and stock-raising area A livestock experiment station of Oregon State College is here **6** Textile city (pop 8,478), co seat of Union co, N S C, near the Broad River NNW of Columbia, in a farm area, settled 1791 Many fine antebellum houses remain

Unión, La (lä ōōnyōn'), city (1946 estimated pop 6,423), SE Salvador, a port on the Gulf of Fonseca With the subsidiary port, Cutuco, La Unión is the southern terminus of the International Railways of Central America and principal port of the republic, handling nearly two thirds of its exports and one third of its imports, though loading must be done by lighter The chief exports are coffee, hides, henequen, and Peruvian balsam In 1947 La Unión was greatly damaged by earthquake and the eruption of near-by Conchagua volcano

Unión, La, city (pop 7,207), Murcia prov, SE Spain, E of Cartagena It is a center for the rich lead, silver, iron, and zinc mines of the vicinity, which have been worked since Carthaginian times

Union, Act of. For the union of England and Scotland (1707), see GREAT BRITAIN; for the union of Ireland (1800) with Great Britain, see IRELAND For both, see UNITED KINGDOM OF GREAT BRITAIN AND IRELAND.

Union, Fort, trading post of the American Fur Company. It was erected in 1828 near the confluence of the Yellowstone and Missouri rivers and controlled converging routes of travel from the mountain region For almost 40 years it was the most important establishment in the U S fur country Kenneth McKENZIE here ruled over a vast extent of territory for years The U S army assumed control in 1867, when Fort Union was torn down and Fort Buford, a military post, erected near by

union, labor, organization of workers for the purpose of improving their economic status, particularly through collective bargaining with employers In present-day parlance there are two chief types of union the horizontal or craft union, in which all the members are skilled in a certain craft (e g , the International Brotherhood of Carpenters and Joiners), and the vertical or industrial union, composed of workers in the same industry whatever their special skill or trade (e g , the United Automobile Workers of America) A company union is an employer-controlled union which has no affiliation with other organizations Although there were associations of journeymen under the guild system, trade unions had their real beginnings with the INDUSTRIAL REVOLUTION, and they are a concomitant of industrialization in all parts of the world In England after the French Revolution fear of uprisings by the working classes led to repressive laws against industrial combinations Their repeal (1824) brought a period of rapid growth of labor unions With the organization in the 1860s of miners and textile workers union membership was greatly increased, and the struggle for legal recognition was waged with vigor After the Reform Act of 1867 British labor became increasingly effective politically, although it required the laws of 1913 and 1915 to free it completely The Labour party was formed at the 1899 meeting of the Trades Union Congress In the '80s and '90s the socialist movement made headway among trade unionists Since 1875 the British trade unions have been federated in the Trades Union Congress On the Continent, countries such as Germany which were early industrialized developed strong trade unions in the 19th cent In Germany the printers' and cigar makers' unions were started after the Revolution of 1848 and continued to be important, unions there until the First World War were responsible for much social legislation In most European countries labor organizations are political parties, usually left wing In the United States, on the other hand, until recent years unions have avoided political affiliation There were associations of journeymen in colonial America, the Federal Society of Journeymen Cordwainers (Philadelphia, 1794) is sometimes considered the first trade union in the country This trade society and societies of printers, carpenters, tailors, weavers, and others were closely restricted craft unions, whose purpose was to keep up their standards and prevent the hiring by employers of untrained workers and the importation of foreigners From 1806 there were numerous prosecutions by employers of unions as combinations in restraint of trade The early 1830s, a period of industrial prosperity and inflation, was a time of union development, however, the financial Panic of 1837 halted this growth After the Civil War, in 1866, the first national labor organization was formed, the National Labor Union, it had such objectives as the abolition of convict labor and the restriction of immigration, but it collapsed with its entry into politics in 1872 Of the early national organizations the KNIGHTS OF LABOR (1869–1917) was the most important, however, with the rise of the AMERICAN FEDERATION OF LABOR in the 1890s under Samuel Gompers, it dwindled in numbers and effectiveness The leaders of the A F of L have always been craft unionists and have opposed the entry of the federation into politics In 1905 a huge, unwieldy, but militant industrial body arose —the INDUSTRIAL WORKERS OF THE WORLD It organized all kinds of unskilled workers—lumbermen, migratory workers, miners With the harrying of left-wing bodies during and after the First World War, the I W W membership shrank, and the organization was dissolved in 1925 In the depression of the 1930s another industrial organization arose, made up at first of dissident unions of the American Federation of Labor, this was the CONGRESS OF INDUSTRIAL ORGANIZATIONS, led at first by John L. Lewis, president of the UNITED MINE WORKERS OF AMERICA The C I O. supported President Roosevelt's New Deal measures, but in the election of 1942 Lewis refused to support the President and led his union back to the A F of L. Such major industries as steel and automobile manufacture were organized by the C I O in the 1930s. Under the NATIONAL LABOR RELATIONS BOARD workers in all plants are enabled to choose by majority the union and therefore the federation to which they wish to belong, this has in some cases led to jurisdictional strikes. The World Federation of Trade Unions was from 1945 to 1949 the international trade-union body. Claiming that it was an agent for Communist propaganda, the American, British, and Dutch delegates withdrew in Jan , 1949 In Dec , 1949, representatives of 53 countries, meeting in London, set up a new federation, the International Confederation of Free Trade Unions, with headquarters in Brussels See CLOSED SHOP AND OPEN SHOP, COLLECTIVE BARGAINING, LABOR, STRIKE For British unions, see Sidney and Beatrice Webb, *The History of Trade Unionism* (new ed , 1920), G D H Cole, *Organized Labour* (1924) For American unions, see J R Commons and others, *History of Labor in the United States* (1921), R. R R Brooks, *When Labor Organizes* (1937), M R Clark and S F Simon, *The Labor Movement in America* (1938); Florence Peterson, *The American Labor Unions* (1945), Van Dusen Kennedy, *Union Policy and Incentive Methods* (1945), H A Millis and R E Montgomery, *Organized Labor* (1945), F R Dulles, *Labor in America* (1949), Elias Lieberman, *Labor before the Bar* (1950) For European unions, see M W. Childs, *This Is Democracy* (1938), Adolf Sturmthal, *The Tragedy of European Labor* (1943)

Union Beach, borough (pop 2,076), E N J , on Raritan Bay SE of Perth Amboy, inc 1925 It has an airport

Union City 1 City (pop 3,535), E Ind , NW of Greenville, Ohio A shipping point for farm produce, it manufactures automobile parts **2** Village (pop 1,339), S Mich , on the St Joseph at its confluence with the Coldwater and S of Battle Creek, in a farm and dairy area, settled 1830, inc 1866 Several Indian trails crossed here, and Indian mounds are in the vicinity **3** City (pop 56,173), NE N J , N of Hoboken, inc 1925 Since 1914 the Passion play *Veronica's Veil* has been presented here annually in Lent under the auspices of Holy Family Church **4** Village (pop 1,497), W Ohio, adjoining Union City, Ind , NW of Greenville, platted 1852 **5** Borough (pop 3,843), NW Pa , SE of Erie, settled c 1785, inc 1863 The opening of oil refineries (1862) stimulated its growth It has furniture factories and woodworking plants **6** City (pop 7,256), co seat of Obion co , W Tenn , near the Ky line, laid out 1854, inc 1861 It is a trade, processing, and shipping center in a livestock, grain, cotton, and dairy region

Union College see BARBOURVILLE, Ky , and LINCOLN, Nebr

Union College, at Schenectady, N Y , nonsectarian, for men, chartered and opened 1795 Under President Eliphalet NOTT (1804–66) Union achieved prominence, it pioneered in its engineering course (1845) It has divisions of engineering, humanities, science, and social studies The Mohawk Drama Festival is held here in summer The college is associated in Union Univ (partly coeducational, formed 1873) with Albany Medical College (founded 1839), Albany Law School (1851), Albany College of Pharmacy (1881), Union Univ School of Nursing (1944), and Dudley Observatory (1852), at Albany, N Y

Union Islands see TOKELAU

Union League Clubs, formed throughout the North in the Civil War after the military defeats and Republican election losses of 1862 A convention at Cleveland (May, 1863) provided for national headquarters of the Union League at Washington The clubs distributed war literature raised money for soldier relief, and recruited both white and Negro volunteers for the army In the South after the war, the league, led by officials of the Freedmen's Bureau, carpetbaggers, and scalawags, developed into a strong Republican political organization that controlled the Negro vote Its influence was curtailed by the rise of the Ku Klux Klan and vanished with the end of RECONSTRUCTION The Union League Clubs of New York, Philadelphia, and Chicago have survived as archconservative social organizations

Union of South Africa see SOUTH AFRICA, UNION OF

Union of Soviet Socialist Republics (USSR), federal state (c 8,570,600 sq mi , 1950 estimated pop 201,300,000), E Europe and N Asia MOSCOW is the capital Covering more than one seventh of the earth's land surface, it is the world's largest state and ranks third (after China and India) in population The USSR stretches from the Baltic and Black seas to the Pacific Ocean, and from the Arctic Ocean to the borders of China, Mongolia, Afghanistan, Iran, and Turkey Its western land frontier touches on Norway, Finland, Poland, Czechoslovakia, Hungary, and Rumania Soviet Russia—as the USSR is commonly called—is the successor of the Russian Empire that ended with the Revolution of 1917, its borders underwent changes between 1918 and 1921 and again between 1939 and 1945 The conventional geographic boundary between the European and the Asiatic USSR follows the Ural mts and the Ural river, the Caspian Sea, and the Greater Caucasus For statistical purposes Transcaucasia and the Ural Region are included in the European USSR, thus, in Soviet statistics, the USSR in Europe has an area of c 2,110,600 sq mi and an estimated population of 162,900,000, the USSR in Asia, an area of c 6,460,000 sq mi and an estimated population of 38,400,000 As of March, 1950, the USSR consisted of 16 constituent republics. The largest and most important of these is the RUSSIAN SOVIET FEDERATED SOCIALIST REPUBLIC (RSFSR), both in Europe and in Asia The Asiatic part of the RSFSR is commonly known as SIBERIA Along the western border of the European USSR are the KARELO-FINNISH SOVIET SOCIALIST REPUBLIC (Karelo-Finnish SSR), ESTONIA, LATVIA, LITHUANIA, BELORUSSIA or White Russia, the UKRAINE, and the MOLDAVIAN SSR In Transcaucasia, between the Black Sea and the Caspian Sea, are the GEORGIAN SSR, the ARMENIAN SSR, and the AZERBAIJAN SSR In Central Asia are the KAZAKH SSR, the TURKMEN SSR, the UZBEK SSR, the TADZHIK SSR, and the KIRGHIZ SSR The incorporation (1940) of Estonia, Latvia, and Lithuania into the USSR was, as of March, 1950, not recognized by the U S government The chief geographic features of the Soviet Union as a whole are the East European Plain, which occupies nearly all of the European USSR W of the Urals and N of the Caucasus, the URALS and the CAUCASUS, the West Siberian Plain, the Central Siberian Plateau, and the great mountain chains of Far Eastern Siberia, and the central Asiatic steppes and deserts, bordering in the south on the TIEN SHAN PAMIR, and ALTAI mountain systems The highest point, Stalin Peak (24,590 ft) is in the Pamir system, in the Caucasus, Mt Elbrus is the highest (18,481 ft) The lowest part (c 425 ft below sea level) of the USSR is in the depression of the CASPIAN SEA, a huge inland saltwater lake Among the many large lakes, Lake LADOGA and Lake ONEGA are the largest in all Europe, and the ARAL SEA, Lake BALKHASH, and Lake BAIKAL the largest in all Asia The East European Plain is drained by the DNIESTER, the Southern BUG, the DNIEPER, and the DON into the Black Sea, by the VOLGA into the Caspian Sea, by the Western DVINA and the NIEMEN into the Baltic, and by the ONEGA, Northern DVINA, and PECHORA into the Arctic Ocean The chief of the mighty Siberian rivers are the OB, the YENISEI, the LENA, and the AMUR The Central Asiatic republics are irrigated by the SYR DARYA and AMU DARYA In a very broad sense, the USSR falls into four distinct latitudinal zones of climate and vegetation The arctic zone is a tundra region, extending from the KOLA PENINSULA to EAST CAPE The central zone is, for the most part, densely forested and has a humid continental climate The southern zone, with a generally dry continental climate, consists mostly of fertile steppes, with rich black-earth soils, this zone is shaped like a huge triangle with its broad base in the west, and its apex in central Siberia The Central Asiatic republics have vast deserts—the KIZIL KUM and KARA KUM—with fertile irrigated oases The USSR possesses a narrow subtropical strip along the Black Sea littoral of the S CRIMEA and of the Caucasus The tremendous natural resources of the USSR make it virtually self-sufficient Chief among these are its forests, which covers about one third of the total area, coal, in the DONETS BASIN (Ukraine), in the MOSCOW BASIN, in the KUZNETSK BASIN (Siberia), and in the unexploited TUNGUSKA BASIN (Siberia), iron, copper, and other ores in the Urals, at KRIVOI ROG (Ukraine), and in many other areas, manganese at NIKOPOL (Ukraine) and CHIATURA (Georgian SSR), petroleum at BAKU, GROZNY, and MAIKOP in the Caucasus, and in the KUIBYSHEV area—the "second Baku"—E of the middle Volga, and gold in Siberia, notably in the KOLYMA and at ALDAN The chief deficiencies are tin, rubber, and tropical crops The main exports are furs (trapped in huge quantities in the northern zone), timber, fish and caviar (the main fisheries being in the Caspian Sea and in the N Pacific), manganese, and chromium The Soviet regime has transformed the USSR from a primarily agricultural into a primarily industrial state, industrial production in 1940 represented 85 percent of the total The main wheat-growing areas are in the Ukraine, in the KUBAN steppe, in the steppes E of the middle Volga, and in SW Siberia Central Asia supplies the major part of the cotton used in the Soviet textile industry The largest cities of the USSR are also its largest industrial concentrations, they are MOSCOW, LENINGRAD, GORKI, KUIBYSHEV, ROSTOV, and STALINGRAD in the European RSFSR, KIEV, KHARKOV, ODESSA, DNEPROPETROVSK, and STALINO in the Ukraine, Baku and TIFLIS in the Transcaucasus, SVERDLOVSK in the Urals, TASHKENT in Central Asia, and NOVOSIBIRSK in Siberia Although the Soviet Union has access to several seas, most of its ports are ice-bound in winter Its only ice-free ports are those on the Black Sea (notably Odessa), KONIGSBERG (since 1945 officially Kaliningrad) on the Baltic, and MURMANSK on the Arctic Ocean Other large ports include Archangel Leningrad, and Riga in Europe, and VLADIVOSTOK on the Pacific The Soviet Union possesses a dense railway net in its European section In Asia, rail traffic is largely limited to the TRANS-SIBERIAN RAILROAD, the TRANS-CASPIAN RAILROAD, and the TURKISTAN-SIBERIA RAILROAD All major rail lines use broad-gauge tracks, unlike those of other European countries The roads are generally poor The great rivers, linked by canal systems (e g., the MARIINSK SYSTEM) provide communications.

Government, Nationalities, and History. Soviet Russia was the first country to adopt MARXISM (see also COMMUNISM) as the basis of its social, political and economic constitution Under the leadership of LENIN it emerged from the RUSSIAN REVOLUTION of 1917 and the ensuing civil war, which was complicated by foreign intervention and by war (1920) with Poland (For earlier history, see RUSSIA) The peace treaty (1921) with Poland (see RIGA, TREATY OF), the independence of Finland, Estonia, Latvia, and Lithuania, and the seizure by Rumania of BESSARABIA greatly reduced the size of the former Russian Empire and established what the governments of Western Europe called a *cordon sanitaire* [quarantine belt] separating Communist Russia from the rest of Europe Temporarily accepting this quarantine, the Communist leaders of Russia set about extricating their state from the devastation into which the revolution and war had plunged it The basis of the constitution of 1922, by which the USSR officially came into existence, remained the dictatorship of the proletariat and public ownership of the land and of the means of production, such as they had been proclaimed in 1917 The underlying features of the 1922 constitution have been preserved in the constitution of 1936, which has remained in force Soviet Russia is ruled and administered by three distinct hierarchies The legislative power is vested in soviets [councils], ranging from local soviets to the supreme council of the USSR The supreme council elects a permanent committee, or presidium, whose chairman acts as president of the republic, his functions are purely representative N M Shvernik was elected (1946) to succeed the late M I Kalinin as chairman of the presidium The supreme council is divided into the council of the Union, elected by universal suffrage on the basis of one deputy for every 300,000 of the population, and the council of nationalities, also elected by universal suffrage, representing the more important of the 140 ethnic groups of the Union The "nationality ladder" is the second of the three hierarchies mentioned above Each ethnic group is entitled to a measure of self-government and cultural autonomy, however, as the groups vary in size and civilization from a few thousand nomads to the more than 100,000,000 Russians that constitute the majority of the population, not every group is entitled to the same representation in the council of nationalities and to the same degree of autonomy At the bottom of the ladder are the national okrugs [areas], each entitled to 1 representative in the council of nationalities , above them are the autonomous oblasts [regions], with 5 representatives each, the autonomous soviet socialist republics, with 11 representatives each, and, at the top, the 16 constituent republics, with 25 representatives each The RSFSR, itself a federation of nationalities, comprises 12 autonomous soviet socialist republics, 6 autonomous oblasts, and 10 national okrugs Provisions have been made allowing each national group, according to its growth and cultural and political development, to climb the rungs of the ladder The four original constituent republics that formed the USSR in 1922 were the RSFSR, the Ukraine, Belorussia, and Transcaucasia The last-named split (1936) into the Georgian, Armenian, and Azerbaijan republics The Turkmen and Usbek republics came into existence in 1924, the Tadzhik republic in 1929, the Kazakh and Kirghiz republics in 1936 Each constituent republic has its own government, and by a constitutional amendment (1944) is entitled to maintain a separate army and to have its own foreign representation The Ukraine and Belorussia were, as a consequence, admitted (1945) as sovereign states into the United Nations. For administrative purposes the larger constituent republics are divided into oblasts, designed to create integrated economic regions The third, and politically the most important, of the hierarchies is that of the Communist party It is the only legal party, and all candidates for elected offices are either chosen from its ranks or must be approved by it The actual policy decisions are reached by the central committee of the party J V STALIN, as the secretary of the party, is the actual head of the state Among the subcommittees of the central committee the most powerful is the political bureau (Politburo) At the bottom of the party hierarchy are the Communist cells, which are responsible for the carrying out of the party policy The executive power in the USSR is vested in a council of ministers (called people's commissars until 1946) appointed by the supreme council Stalin has been premier since 1941 The fundamental policy of the Russian Communist party has been, from its beginning, the complete socialization of the Soviet Union However, initial difficulties forced Lenin to institute (1921) the NEW ECONOMIC POLICY (NEP) in order to put Russian economy back on its feet. This mildly capitalist program was, however, a temporary expedient. After Lenin's death (1924) a struggle for leadership broke out. Of the two main protagonists—Stalin and TROTSKY—Stalin emerged victorious. His program called for a more gradual transformation of society than Trotsky's and had as its primary objective the consolidation of Communism in Soviet Russia rather than Trotsky's plan for immediate world revolution Nevertheless, Soviet Russia continued to guide the Communist parties abroad through the COMINTERN, while at home it replaced the NEP by full governmental planning of economy The first FIVE-YEAR PLAN was inaugurated in 1928 The *kulak* class—the land-owning farmers who had grown prosperous during the NEP—was "liquidated" by drastic means Collective farms (Rus *kolkhoz*) and state-owned farms (Rus *sovkhoz*) were multiplied, until by 1950 they comprised nearly all the farmland of the Union Industrialization was sped up to a spectacular degree The production of desperately needed basic machinery and capital equipment was stressed at the expense of consumer goods One of the major results of the successive Five-Year Plans was the spectacular industrial and agricultural development of the Urals, Siberia, and Central Asia The level of literacy, very low before the Revolution of 1917, was steadily raised in all parts of the Union, and medical and social services, extended to all by the state, penetrated into regions which until then had possessed no such facilities The corollary to those developments was the increasing monopoly of the state over all political, social, and cultural aspects of life All media of education and public information passed under state control All criticism of public policy, once the policy has been adopted, is punished as being disruptive Freedom of movement is severely restricted The SECRET POLICE became a chief organ of political control and much power was given to the civil service Only with regard to religion, severely persecuted in the early years of Communism, was there a measure of relaxation in official policy, especially as antireligious propaganda in schools had taken effect among the younger generation With the restoration (1943) of the patriarchate of Moscow, the ORTHODOX EASTERN CHURCH regained a few of its former rights, but atheism remained official Communist doctrine Toward Islam, the next-largest religious group, the Soviet government proceeded more cautiously The armed forces and the Communist party itself were "purged" of all dissident elements in the years 1935–39 in a series of public and secret trials involving an alleged conspiracy, headed by the exiled Trotsky, against the Stalin regime Among the many thousand victims of the purge were such prominent party leaders as ZINOVIEV, KAMENEV, RADEK, BUKHARIN, and RYKOV, and military figures such as Marshal TOUKHACHEVSKY At this price, "monolithic unity" was achieved by 1939 Soviet foreign policy before 1939 was carried out largely by CHICHERIN and his successor LITVINOV The nations of Europe and America were generally hostile to the Soviet government, and diplomatic recognition came slowly The United States resumed diplomatic relations only in 1933 The USSR sought friendly relations with all its neighbors, declared its renunciation of imperialistic expansion, and advocated total disarmament It was admitted into the League of Nations in 1934 The failure to invite the USSR to take part in the negotiations leading up to the MUNICH PACT (1938) and the imminence of the Second WORLD WAR brought about a radical shift in foreign policy V M MOLOTOV replaced Litvinov as foreign commissar, and on Aug 23, 1939, the USSR concluded a nonaggression pact with Germany, which shortly afterward attacked Poland Soviet troops entered POLAND, which was divided between Germany and Russia Lithuania, Latvia, and Estonia were forced (1939) to allow the establishment of Soviet military bases, and in 1940 were transformed into soviet republics Finland rejected similar demands, the FINNISH-RUSSIAN War of 1939–40 resulted, ending in Russian victory The territories ceded by Finland were incorporated into the newly created Karelo-Finnish SSR Rumania was forced (1940) to restore Bessarabia and to cede N Bukovina, the Moldavian SSR was created At the same time, defense preparations were stepped up in anticipation—despite the nonaggression pact—of a German attack The attack came, without warning, on June 22, 1941 Rumania, Finland, Hungary, Slovakia, and Italy joined in the attack By the end of 1941 the Germans had surrounded LENINGRAD, were converging on Moscow, and had overrun Belorussia and most of the Ukraine A Russian counter-offensive saved Moscow, but in June, 1942, the Germans launched a new drive, directed against Stalingrad and the Caucasus oil fields STALINGRAD held out The surrender (Feb 2, 1943) of 330,000 Axis troops at that city marked the turning point in the war The Russians drove the invaders back in an almost uninterrupted offensive and in the late summer of 1944 entered Poland and the Balkan Peninsula Early in 1945 German resistance in Hungary was overcome while Russian forces entered East Prussia The converging Russian armies closed in on BERLIN in a climactic drive. On May 2 Berlin fell, on May 7 Russia accepted the surrender of Germany jointly with the Western Allies. The Soviet victory was obtained at the price of staggering material and human losses. Much material aid from the United States through LEND-LEASE had contributed to the victory Understandings regarding the conduct of the war and post-war policies had been reached between the USSR and the United States and England at the Moscow CONFERENCES, the TEHERAN CONFERENCE, the YALTA CONFERENCE, and the POTSDAM CONFERENCE In accordance with a secret agreement made at Yalta, Russia declared war on Japan on Aug 8, 1945 A swift campaign had brought Russian forces deep into Manchuria and Korea by the time Japan surrendered (Sept 2) As a result of the war, Soviet Russia received the southern half of Sakhalin and the Kuriles from Japan, the northern part of East Prussia from Germany, and some additional territory from Finland By agreements (1945) with Poland and Czechoslovakia the USSR also vastly increased the area of Belorussia and the Ukraine Wartime cooperation between the USSR and the Western powers unfortunately ceased soon after the armistice, and relations between Soviet Russia and the United States—emerging from the war as the two chief world powers—became increasingly strained Friction became particularly acute in the jointly occupied countries (see GERMANY, AUSTRIA, KOREA) and in the UNITED NATIONS Security Council, preventing the conclusion of peace treaties with Germany, Austria, and Japan and agreement over REPARATIONS and the control of ATOMIC ENERGY Increasing Russian influence over Poland, Czechoslovakia, Hungary, Rumania, Bulgaria, and Communist China created fears in the Western world of unlimited expansion, as did the creation of the COMINFORM The USSR on the other hand, justified its policy with its own fears of encirclement by the capitalist nations Recent guide books to the USSR include Nicholas Mikhailov, *Soviet Russia* (Eng tr , 1948) Two authoritative histories of Russia—Sir Bernard Pares, *A History of Russia* (5th ed , 1947) and George Vernadsky, *A History of Russia* (new ed , 1948)—deal extensively with Soviet Russia A general survey is *USSR A Concise Handbook* (E J Simmons, ed , 1947) See J F Hecker, *Russian Sociology* (1934), Sydney and Beatrice Webb, *Soviet Communism* (1936), Edward Crankshaw, *Russia and the Russians* (1948), S S Balzak and others, *Economic Geography of the USSR* (1949), L S Berg, *Natural Regions of the USSR* (Eng tr , 1950), Theodore Shabad, *Geography of the USSR A Regional Survey* (1950) See also bibliographies under RUSSIA and RUSSIAN REVOLUTION

Union Pacific Railroad In the 1850s, after California had been acquired and the Oregon boundary had been settled, the building of a transcontinental railroad became a pressing political issue Nothing, however, was accomplished because of aggravated sectional interests After the South had seceded from the Union, the Republican members of Congress chartered (1862) the Union Pacific Railway Company to build a line from Omaha, Neb , to the California-Nevada line, where it was to connect with the Central Pacific RR—which was to be built simultaneously from Sacramento, Calif Each railroad company, after completion of an initial 40 mi of track, was to be granted 6,400 acres of public lands and a loan of from $16,000 to $48,000 for each mile of track laid In 1864 Congress doubled the land grant, considerably eased the terms of government loans, and allowed the two railroad companies to borrow private capital, the Central Pacific was authorized to build eastward beyond the Nevada line In 1865 construction of the Union Pacific was begun from Omaha westward, and a long succession of harrowing construction problems, Indian troubles, and delays were encountered Nevertheless, the Union Pacific joined (May 10, 1869) the Central Pacific W of Ogden, Utah, thus connecting the Missouri river and the Pacific Ocean by rail The joining of the roads was marked by the driving of a golden spike Construction of both roads involved tremendous profiteering, and in 1872 the scandal involving the CREDIT MOBILIER OF AMERICA, an ephemeral holding company to which most of the Union Pacific's liquid assets had been transferred (1867), was unearthed This fraud, combined with later mismanagement and overextensions, left the Union Pacific with heavy financial burdens, and in 1893 the Union Pacific went into receivership It was reincorporated (1897) as the Union Pacific Railroad Company in Utah, and under the management of Edward H HARRIMAN the railroad was expanded, vastly improved, and stabilized In 1900 Harriman merged the Union Pacific and the Central Pacific railroads, and his spectacular attempt to control the Northern Pacific led to the formation of the Northern Securities Company—which was dissolved in 1904 Four years later the Supreme Court ordered the Union Pacific Railroad Company to relinquish its control of the Southern Pacific RR, and in 1913 the separation was completed Soon the Union Pacific acquired large holdings in railroads in the East and later gained control over Western motor-coach lines. In 1936 the railroad initiated its development of Sun Valley, Idaho, now a popular winter resort. Today the Union Pacific

operates close to 10,000 mi. of track in the W United States, reaches the Pacific at Los Angeles, and has considerable cross traffic with the Southern Pacific. See G M Dodge, *How We Built the Union Pacific Railway* (1910); Nelson Trottman, *The History of the Union Pacific* (1923); G R Hebard, *Washakie* (1930), W. L Park, *Pioneer Pathways of the Pacific* (1935)

Union Point, town (pop 1,566), NE Ga., near Greensboro, railroad junction, with a fabric plant

Union Springs, city (pop 3,107), co seat of Bullock co., SE Ala., 8E of Montgomery, in the Black Belt, settled 1836

Union Theological Seminary, in New York city, interdenominational, coeducational, opened 1836, chartered 1839 by Presbyterians It has had a reciprocal educational relationship with Columbia Univ since 1928 It includes a school of sacred music (1928) Auburn Theological Seminary (Presbyterian, chartered 1820, opened 1821 at Auburn, N Y.) was associated as an autonomous unit in 1939

Uniontown. **1** Town (pop 1,869), W central Ala., W of Selma, in a farm and dairy area, settled in the early 19th cent **2** City (pop 1,327), W Ky., on the Ohio and W of Henderson, settled c 1810, inc 1840 **3** City (pop 21,819), co seat of Fayette co., SW Pa., between the Monongahela and Youghiogheny rivers 8SE of Pittsburgh, settled c 1767, inc as a borough 1796, as a city 1916 A bituminous-coal center, it also produces iron, glass, lumber, and textiles Gen George C Marshall was born here Near Uniontown, on the old National Road, is Fort Necessity (see NECESSITY, FORT), built by Washington General Braddock is buried near the fort

Union University see UNION COLLEGE, Schenectady, N Y

Unionville. **1** Borough, Conn see FARMINGTON **2** City (pop 2,052), co seat of Putnam co., N Mo., near the Iowa line NW of Kirksville, in a farm, coal, and clay area, inc c 1855

unison, in music, tones identical in pitch produced by two or more parts or voices In popular usage a vocal composition is said to be sung in unison even though some of the voices are separated from others by the interval of an octave

Unitarianism, in general, a form of religious belief based upon the conception of God in one person, in distinction from that of one God in three persons known as Trinitarianism It is claimed that before the orthodox doctrine of the triune nature of God was adopted, an essentially unitarian belief existed in the early Christian Church. Present-day Unitarianism, however, traces its origin to the period of the Protestant Reformation Individual leaders in various places questioned the accepted teachings In Geneva, SERVETUS was burned at the stake (1553) for his antitrinitarian views Under SOCINUS a strong center of Unitarian belief developed in Poland In Transylvania, Francis David laid the foundation (c 1560) for the long history of the Unitarian Church there Socinian influences took root in England in the 17th and 18th cent John BIDDLE is called the father of English Unitarianism The development of a separate Unitarian body came about gradually through the efforts of such men as Joseph Priestley Later James Martineau was a leader of English Unitarian thought In America, Unitarianism had its birth in the Congregational churches of New England At King's Chapel, Boston, in 1785, trinitarian doctrines were removed from the liturgy In 1796 Priestley, who had fled to America to escape persecution, established in Philadelphia a Unitarian church Congregationalists in New England of the liberal order gradually formed themselves into a new denomination, to which the name Unitarian was given (c 1815) by their conservative opponents The final separation was hastened by the choice of Henry WARE, a liberal, for a professorship of divinity at Harvard Univ in 1805 and by the memorable ordination sermon preached (1819) by William Ellery CHANNING at Baltimore Channing's statement of Unitarian beliefs became the platform of the denomination The American Unitarian Association was formed in 1825, and in 1865 a national conference was organized The International Association for Liberal Christianity and Religious Freedom (1930) is the outgrowth of an international council of Unitarian workers, organized in 1900 A congregational form of government prevails in the Unitarian churches, each congregation having control of its own affairs Neither ministers nor members are required to make profession of any particular doctrine No creed has been adopted by the church The covenant in general use is simply, "In the love of truth, and in the spirit of Jesus, we unite for the worship of God and the service of man" One of the characteristics of Unitarianism is tolerance of differing opinions in religion Reason and conscience are considered guides to religious truths In 1949 the Universalist Church in America voted to merge with the Unitarians. See the works of William Ellery Channing, J R Martineau, and Theodore Parker and the *Unitarian Year Book*, G. W. Cooke, *Unitarianism in America* (1903), J F. Clarke, *Manual of Unitarian Belief* (20th ed., revised, 1924); R L. Mondale, *The Unitarian Way of Life* (1943); E. M. Wilbur. *A History of Unitarianism* (1945).

United Brethren in Christ: see EVANGELICAL UNITED BRETHREN CHURCH

United Church of Canada, Protestant denomination formed (1925) by the union of the Methodist, Congregationalist, and Presbyterian churches in Canada The government of the church embraces the session, the presbytery, the conference, and the general council Certain of the Presbyterians have remained outside the United Church

United Colonies of New England: see NEW ENGLAND CONFEDERATION

United Empire Loyalists, name applied to those Canadian settlers who, loyal to the British cause in the American Revolution, migrated from the Thirteen Colonies to Canada Some found their way to Canada during the Revolution, but the greatest number left the colonies in 1783–84, after the Treaty of Paris had failed to make adequate provision for the LOYALISTS Perhaps nearly 50,000 went to British North America—principally to Nova Scotia and Quebec In Nova Scotia so many settled along the St John river that the province of New Brunswick was established in 1784 Others, flocking to the region N of the Great Lakes and the St Lawrence, were numerous enough to cause the creation (1791) of Upper Canada, set off from French Quebec for these English-speaking colonists See W S Wallace, *The United Empire Loyalists* (1914), A G Bradley, *The United Empire Loyalists Founders of British Canada* (1932)

United Fruit Company. Andrew Preston, who headed the Boston Fruit Company which controlled the banana trade in the West Indies, and Minor Cooper KEITH, who dominated the banana-plantation and railroad industries in Central America, combined forces to form (1899) the United Fruit Company The company was incorporated in New Jersey with an authorized capital stock of $20,000,000, and immediately United Fruit became an association of 12 firms with properties in Boston, New York, Philadelphia, Baltimore, New Orleans, Cuba, Jamaica, the Dominican Republic, Costa Rica, Panama, Colombia, and Nicaragua In a short time the company outstripped all competition in growing, transporting, and merchandising bananas At the time of the First World War, United Fruit was experimenting with the growth of other tropical fruit and was shipping to domestic and foreign markets such produce as coconuts, cocoa, sugar, and pineapples United Fruit absorbed several competing organizations and in the Second World War engaged in shipping from the Caribbean several products made scarce by Japanese conquests United Fruit over a period of years came to dominate the communications and transportation facilities in Central America and on frequent occasions played a deciding role in Caribbean politics See C D Kepner, Jr., and J H Soothill, *The Banana Empire* (1935), C M Wilson, *Empire in Green and Gold* (1947)

United Irishmen or **United Irish Society,** Irish political organization Founded at Belfast in 1791 by Wolfe TONE at the suggestion of Thomas Russell, the organization aimed "to obtain a complete reform of the legislature, founded on the principles of civil, political, and religious liberty" Tone, with James Napper TANDY, started a branch at Dublin, this became the center of the movement, which spread rapidly throughout Ireland, especially in the south The society was suppressed in 1794 and became a secret revolutionary organization Aid was sought from the leaders of the French Revolution Tone accompanied an expedition from France under Lazare Hoche in 1796 It proved a failure, as did a number of subsequent expeditions In 1798 a serious rebellion broke out in Ireland French aid failed, the insurrection was suppressed, and the leaders of the United Irish Society were executed or imprisoned See R R Madden, *The United Irishmen* (1858–60), Rosamond Jacob, *The Rise of the United Irishmen* (1937)

United Kingdom of Great Britain and Ireland, political body consisting of ENGLAND, SCOTLAND, and IRELAND It was created by the Act of Union (1800) which united politically GREAT BRITAIN and Ireland The principality of WALES had been joined to England by an Act of Union in 1536 The Act of Union in 1707 had united England with Scotland under the title of Great Britain When the Irish Free State was formed in 1922, no provision was made for a change in the title of the United Kingdom, although frequently on official papers the name **United Kingdom of Great Britain and Northern Ireland** was used This title was officially adopted by an act of Parliament in 1927 In popular speech the United Kingdom is sometimes referred to by its abbreviation, U K

United Methodist Church or **United Methodists,** nonconformist community in England formed by the incorporation in one body, in 1907, of the three branches of METHODISM, the Methodist New Connection, the United Methodist Free Churches, and the Bible Christians The United Methodists, in the still broader reunion of 1932, were merged with the WESLEYAN METHODIST CHURCH and the PRIMITIVE METHODIST CHURCH.

United Mine Workers of America (U.M W.), international labor union formed (1890) by the amalgamation at Columbus, Ohio, of the National Progressive Union (organized 1888) and the mine locals under the Knights of Labor Earlier unions of miners in the United States had been the American Miners' Association (founded 1860), the Miners' National Association of the United States of America (founded 1873), the Ohio Miners' Amalgamated Association (founded 1882), which expanded (1883) to form the Amalgamated Association of Miners of the United States, and the National Federation of Miners and Mine Workers (founded 1885) The newly formed U M W affiliated with the American Federation of Labor It is an industrial union, including all workers in or about the coal mines, it covers both bituminous and anthracite mining and makes no race or color distinctions in its membership The lack of continuity of employment, the prevalence of company-owned towns, and the excessive occupational hazards have led to numerous strikes and constant efforts to improve conditions by collective bargaining It strengthened its position in 1894 and 1897 by successful strikes, and in 1898 under the leadership of John MITCHELL the fight for an eight-hour day was won The years 1900–1914 saw constant breaking off and resumption of conferences between mineworkers and operators A "no-strike" pledge was kept during the First World War, but strikes in 1919–20 led to the establishment by the Federal government of the Bituminous Coal Commission, which awarded the miners a 27-percent increase In 1920 the anthracite operators were forced to recognize the U M W as a bargaining body John L Lewis became president of the union in 1920, and under his militant leadership most of the union's aims have been won, including a health and welfare fund, which assures a pension of $100 per month to all miners over 62 When the C I O was formed in 1935, the U M W was one of its first affiliates, it was expelled from the A F of L in Oct., 1937 However, in 1942 the federation withdrew from the C I O, was readmitted to the A F of L in Jan., 1946, and was again disaffiliated in Dec., 1947, when Lewis refused to sign the non-Communist affidavit required by the Taft-Hartley Act A strike in 1943 for a wage increase and portal-to-portal pay brought about a government seizure of the mines Strikes in 1945, 1946, and 1947, although successful, cost both Lewis and the union heavy fines (1946, 1948) for violation of the injunction barring strikes, and further serious trouble occurred in 1949

United Nations, international organization established immediately after the Second World War to replace the LEAGUE OF NATIONS The name United Nations was coined by President F D Roosevelt in 1941 to describe the countries fighting against the AXIS It was first used officially on Jan 1, 1942, when 26 states joined in the Declaration by the United Nations pledging themselves to continue their joint war effort and not to make peace separately The need for an international organization to replace the League was first stated officially on Oct 30, 1943, in the Moscow Declaration issued by China, Great Britain, the United States, and the USSR At the Dumbarton Oaks Conference (Sept.-Oct., 1944) those four countries drafted specific proposals for a charter for the new organization Not until the YALTA CONFERENCE (Feb 4-11, 1945) of Great Britain, the United States, and the USSR was agreement reached on the "veto" system of voting in the Security Council The Yalta conferees (joined later by France and China) decided to call a founding conference of all the states which had ultimately adhered to the 1942 declaration by the United Nations and which had declared war on Germany or Japan by March 1, 1945 There was a rush of countries to declare war and thus become eligible for the conference, which was held in San Francisco from April 25 to June 26, 1945 There were 46 nations participating at the start, but it was early decided also to admit Argentina, Belorussia, the Ukraine, and Denmark, which had been newly liberated A place among the original members (which thus totaled 51) was reserved for Poland, which could not participate because of a dispute as to the rightful government The remaining original members were Australia, Belgium, Bolivia, Brazil, Canada, Chile, China, Colombia, Costa Rica, Cuba, Czechoslovakia, the Dominican Republic, Ecuador, Egypt, Ethiopia, France, Greece, Guatemala, Haiti, Honduras, India, Iran, Iraq, Lebanon, Liberia, Luxembourg, Mexico, the Netherlands, New Zealand, Nicaragua, Norway, Panama, Paraguay, Peru, the Philippine Islands, El Salvador, Saudi Arabia, Syria, Turkey, the Union of South Africa, the USSR, the United Kingdom (Great Britain), the United States, Uruguay, Venezuela, and Yugoslavia The nations later admitted (up to May, 1950) were Afghanistan, Burma, Iceland, Israel, Pakistan, Sweden, Thailand, and Yemen The San Francisco Conference drafted the governing treaty, the United Nations Charter It was signed on June 26 and ratified by the required number of states on Oct 24 (officially United Nations Day). The General Assembly first met in London on Jan. 10, 1946,

two days later the Security Council held its first meeting. It was decided to place the UN headquarters in the E United States In Dec., 1946, the General Assembly accepted John D Rockefeller's gift of $8,500,000 to buy a tract of land along the East River on Manhattan, New York city, for a permanent headquarters in place of the former temporary accommodations The cornerstone of the first building was laid on Oct 29, 1949.

Organization and Principles UN Charter comprises a preamble and 19 chapters divided into 111 articles. The principal organs of the United Nations, as specified in the Charter, are the General Assembly, the Security Council, the ECONOMIC AND SOCIAL COUNCIL, the Trusteeship Council (see TRUSTEESHIP, TERRITORIAL), the INTERNATIONAL COURT OF JUSTICE, and the Secretariat Other bodies which function as specialized agencies of the United Nations but which are not specifically provided for in the Charter are the FOOD AND AGRICULTURE ORGANIZATION, the INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT, the INTERNATIONAL CIVIL AVIATION ORGANIZATION, the INTERNATIONAL LABOR ORGANIZATION, the INTERNATIONAL MONETARY FUND, the INTERNATIONAL REFUGEE ORGANIZATION, the INTERNATIONAL TELECOMMUNICATION UNION, the UNITED NATIONS EDUCATIONAL, SCIENTIFIC, AND CULTURAL ORGANIZATION, the UNIVERSAL POSTAL UNION, and the WORLD HEALTH ORGANIZATION A temporary agency was the UNITED NATIONS RELIEF AND REHABILITATION ADMINISTRATION The Charter sets forth the purposes of the United Nations as the maintenance of international peace and security, the development of friendly relations between states, and the achievement of cooperation in solving international economic, social, cultural, and humanitarian problems It expresses a strong hope for the equality of all men and the expansion of basic freedoms All UN administrative functions are handled by the Secretariat, with the secretary general at its head There is no prescribed term for the secretary general, but the first person to occupy the post, Trygve Lie, was appointed for five years (1946–50) and may be reappointed for the same period The secretary general transcends a merely administrative role by his authority to bring situations to the attention of various UN organs and by his position as an impartial party in effecting conciliation The Secretariat staff is recruited on a wide geographic basis and is required to pursue the interests of the organization alone and not to further purely national aims The only UN body provided by the Charter on which all members are represented is the General Assembly Here, as throughout the United Nations, the official languages are Chinese, English, French, Russian, and Spanish The working languages of the General Assembly are English, French, and Spanish (in the Security Council only English and French are working languages) The General Assembly meets in a regular annual session beginning the third Monday in September, special sessions are sometimes held The body may make binding decisions in only a few limited fields, such as setting the budget (nearly 40 percent is borne by the United States) For the most part it is limited to conducting studies and making recommendations, with the restriction that it may not discuss any matter relating to peace which the Security Council is considering However, the Charter provides that the Security Council may request the General Assembly to deal with a specific problem In the assembly decisions on routine matters are taken by a simple majority of members voting, a two-thirds majority of those voting is required for matters of importance While the General Assembly is primarily a deliberative body dealing to a large degree with general questions of a political, social, or economic character, the Security Council is an organ with power to enforce measures to preserve the peace as particular dangers arise Unlike the General Assembly, the Security Council functions continuously at the seat of the United Nations and hence is always ready to consider matters brought before it The council has 11 members Five—China, France, Great Britain, the United States, and the USSR—are permanent The six nonpermanent members are elected for two-year terms by the General Assembly, which by the Charter is required in choosing them to consider the contribution to peace made by the candidates and equitable geographical distribution Typically Western Europe, Eastern Europe, the Arab states, the Far East, and Latin America have representation In the council the presidency is occupied for terms of one month in the alphabetical order of the members' names in English There are two systems of voting in the Security Council On procedural matters the affirmative vote of any seven members is necessary, but on substantive matters the seven affirmative votes required must include those of the five permanent members This requirement of "Big Five" unanimity is the so-called veto. In practice, however, the council has not required the actual and positive concurrence of all the permanent members on substantive matters, and abstention from voting (due to absence from meetings of the council or for other reasons) has not been construed as an exercise of the veto. In two situations, at least, it appears that the actual concurrence of all the "Big Five" is mandatory. These are in recommending applicants for membership to the General Assembly (which may then admit them by a two-thirds majority) and in approving proposed amendments to the charter The veto was perhaps the proposal most strongly opposed at the San Francisco Conference Many of the smaller members objected that UN action might be paralyzed and that the guiding principle of sovereign equality of states was violated The position of the "Big Five" was that since the burden of enforcing peace would chiefly rest upon them none of them should be required to enforce a decision it found repugnant Implicit in this answer was the recognition that the United Nations could not function successfully and preserve peace unless the "Big Five" were united in avoiding aggression As the guardian of world peace the Security Council acts for the entire United Nations, and all members are required to provide the necessary material support to carry out decisions of the council Under the Charter there appear to be no occurrences dangerous to world peace with which the council is not empowered to deal It may act upon complaint of a member or of a nonmember, on notification by the secretary general, or of its own volition In general the council considers matters of two sorts "Disputes" which may endanger peace if continued and "situations" which may give rise to a "dispute" comprise one category "Threats to the peace," "breaches of the peace," and "acts of aggression" make up the other category The council makes its own evaluation of the matters brought before it If it finds that the matter falls in the less serious category it is limited to making recommendations to the parties after they have exhausted other methods of reaching a solution In the case of more serious matters the council may also restrict itself to recommendations or it may take enforcement measures Measures range from full or partial rupture of economic or diplomatic relations to military operations of any scope deemed necessary

Disagreements among the "Big Five" The Charter envisaged some sort of regular military force available to the Security Council and directed the creation of the Military Staff Committee to make appropriate plans The committee—consisting of the chiefs of staff (or their deputies) of the "Big Five"—was unable to reach agreement In general China, France, Great Britain, and the United States proposed that the component national units be kept available in such strategic localities as were determined by the committee, while the USSR wanted them garrisoned in the home countries Thus no regular forces were made available to the Security Council and in the event of a warlike situation it would have to improvise a scheme for calling on the members for aid The same split which existed in the Military Staff Committee operated to frustrate the activities of two special Security Council bodies, the Atomic Energy Commission (see ATOMIC ENERGY) and the Commission on Conventional Armaments Hence no arrangements were concluded for regulating the production of atomic bombs or reducing other types of armaments The Charter also anticipated that regional security agreements would supplement the over-all UN system In fact such defensive alliances as are embodied in the NORTH ATLANTIC TREATY and the Act of Chapultepec and the Rio Treaty (see PAN-AMERICANISM) are the main current reliance for security from attack In most of the important questions facing the United Nations this same opposition of the USSR to the remaining "Big Five" has loomed as a major factor In the Security Council in most controversial matters the USSR has had as an ally only a single nonpermanent member—one of the pro-Soviet bloc of East European countries comprising, besides Belorussia and the Ukraine, Czechoslovakia, Poland, and (until 1948) Yugoslavia The USSR often felt impelled to interpose its veto to prevent the adoption of resolutions which would otherwise have passed The opposing powers in the search for a solution have more and more inclined to take their case to the veto-free General Assembly, where they command a large majority on most issues At their insistence in 1947 the assembly established the Interim Committee ("Little Assembly") to meet in permanent session It consists of one representative of each member, except those belonging to the Soviet bloc, which refuses seats on the grounds that the committee usurps the functions of the Security Council The proponents, on the other hand, argue that the committee is legal because it does not deal with matters which are before the Security Council The General Assembly, despite Soviet opposition, has also established commissions to investigate the hostilities allegedly waged against Greece by Bulgaria, Albania, and Yugoslavia and to help establish a republic in S Korea The breach in the organization has also affected the admission of new members The United States proposed in 1946 that the United Nations should embrace all peace-loving countries (this, however, excluded Spain while Franco retained power). The USSR would not then assent to the pending applications of Jordan, Ireland, and Portugal, insisting that they were profascist. The United States soon altered its views and opposed admission of new states sympathetic to Russia—Albania, Bulgaria, Hungary, the Mongolian People's Republic, N. Korea, and Rumania, it alleged that they were not truly independent and, in certain cases, that they had violated the peace or the spirit of the Charter. After the admission of Israel on May 11, 1949, the USSR announced that unless its nominees were accepted it would veto all other applications for membership. This produced an impasse which seemed to prohibit further growth of the United Nations Other situations in which the USSR was in a minority included the complaint of Iran (1946) that Soviet troops had not evacuated Azerbaijan on schedule. The Soviet delegate walked out of several Security Council sessions when the matter was kept on the agenda after the troops had left and Iran had withdrawn its complaint In the disputes over BERLIN in 1948 the USSR vetoed a resolution calling on the occupying powers to confer, conferences were later held which resulted in lifting the "blockade." There were, however, instances of unity among the "Big Five" which undoubtedly helped to restore or preserve peace The first was the settlement (1946) of the complaint of Syria and Lebanon that France and Great Britain were illegally occupying their territory The acute problem in Palestine was settled by two special sessions of the General Assembly in 1947 and 1948 (see ISRAEL) UN commissions also brought to an end hostilities in Indonesia between the Dutch and the newly formed native governments and in KASHMIR checked the dangerous fighting between India and Pakistan Early in 1950 the United Nations was shaken by the question whether the proper representatives of China were to be appointed by the Nationalist government, which by then was confined to Formosa, or by the rival Communist government, which ruled the mainland The USSR had recognized the Communists and insisted on ouster of the Nationalists When this was refused on Jan 19, 1950, the Soviet delegate left the Security Council, announcing that he would not return until a Chinese Communist had been seated He asserted at the time that the Security Council could not take any legal action, but the remaining "Big Five" disputed this and determined to continue functioning and to consider the Soviet absence as an abstention from voting, not a veto The United Nations publishes a series of yearbooks See Hans T Morgenthau, ed., *Peace, Security, and the United Nations* (1946), *Everyman's United Nations* (1948, an official publication of the UN Dept of Public Information), H V Evatt, *The United Nations* (1949), L M Goodrich and Edvard Hambro, *Charter of the United Nations Commentary and Documents* (2d ed., 1949)

United Nations Atomic Energy Commission: see ATOMIC ENERGY

United Nations Commission for the Investigation of War Crimes see WAR CRIMES.

United Nations Commission on Conventional Armaments: see UNITED NATIONS

United Nations Economic and Social Council: see ECONOMIC AND SOCIAL COUNCIL

United Nations Educational, Scientific, and Cultural Organization (UNESCO), agency of the United Nations, with headquarters in Paris Its counterpart in the League of Nations was the International Committee for Intellectual Cooperation In the Second World War the Allied ministers of education met from time to time in London to draw up plans for an organization more comprehensive in scope than the League organ UNESCO was founded in 1945, and in 1946 it became a specialized agency of the UN Economic and Social Council The membership includes several states which do not belong to the United Nations, the USSR is the only major power not in UNESCO The organization's policies are decided by the general conference, which meets annually, it consists of one representative of each member The executive board, with 18 members elected for three-year terms, carries out the program Commissions or cooperating bodies were set up in member states to act as liaison between UNESCO and the national educational, scientific, and cultural organizations UNESCO seeks to further world peace by removing social, religious, and racial tensions, encouraging free interchange of ideas and of cultural and scientific achievements, and improving and expanding education UNESCO labored for the physical reconstruction of the educational facilities of war-devastated countries by building up library and museum collections A book-coupon arrangement was devised for the purchase of books without regard to currency restrictions, and a project to translate the greatest books into the various important languages was initiated in 1948 Bibliographies of reproductions of paintings and of works dealing with various phases of education have also been issued Extensive field studies in Haiti, the Philippine Islands, and Thailand have developed effective methods of combating adult illiteracy. To

protect natural resources, UNESCO established the International Institute of the Arid Zone to study the problems of the Arabian desert lands and the International Institute of the Hylean Amazon for work in the Amazon basin

United Nations General Assembly: see UNITED NATIONS

United Nations Relief and Rehabilitation Administration (UNRRA), organization founded in 1943 to give aid to areas liberated from the AXIS There were finally 52 participating countries, each of which contributed funds amounting to 2 percent of the national income in 1943 A sum of nearly $4,000,000,000 was expended on various types of emergency aid, including distribution of food and medicine and restoration of public services and agriculture and industry China, Czechoslovakia, Greece, Italy, Poland, the Ukranian SSR, and Yugoslavia were the chief beneficiaries UNRRA returned some 7,000,000 displaced persons to their countries of origin and provided camps for about 1,000,000 refugees who did not wish to return More than half the funds were provided by the United States, and the three directors general—Herbert H Lehman, Fiorello LaGuardia, and Gen Lowell Rooks—were American UNRRA discontinued its operations in Europe on June 30, 1947 Its remaining work, chiefly in China, ended on March 31, 1949 The functions of UNRRA were transferred to other UN agencies, chiefly the Food and Agriculture Organization and the International Refugee Organization See George Woodbridge, ed, *UNRRA The History of the United Nations Relief and Rehabilitation Administration* (3 vols, 1950)

United Nations Security Council: see UNITED NATIONS

United Nations Trusteeship Council see TRUSTEESHIP, TERRITORIAL

United Presbyterian Church, denomination of PRESBYTERIANISM In Scotland it was formed by the union (1847) of the United Secession Church with the majority of the congregations of the Relief Church In 1900 the United Presbyterian Church and the Free Church of Scotland joined as the United Free Church of Scotland This United Free Church in 1929 united with the Church of Scotland The United Presbyterian Church of North America was constituted (1858) by the union of the Associate Presbyterian Church with the Associate Reformed Presbyterian Church

United Provinces see NETHERLANDS

United Provinces, state (112,523 sq mi., pop 56,346,456), N India Lucknow is the capital United Provs is bordered on the north by Nepal The northern area falls within the Himalaya zone, and there is a hilly region along the southern border, but most of the state is a low-lying fertile plain formed by the Jumna, Ganges, and Gogra rivers Rainfall is moderate, but is supplemented by a very extensive system of river irrigation The mild climate generally permits two harvests a year, wheat, rice, millet, sugar cane, and cotton are grown The economy is predominantly agricultural Food processing and cotton spinning and weaving are the great industries, the once important manufacture of art wares, such as brocades and ornamental brasses, is declining Building stone and high-grade sand for the glass industry are abundant Adequate rail and road nets insure efficient distribution This rich state supports five universities Considerable wealth is derived from the many Hindu pilgrims who flock to the holy cities along the Ganges, notably Allahabad and Benares The east, as the scene of Buddha's life, remains sacred to Buddhism, although that religion almost entirely disappeared from India about the beginning of the Christian era Hinduism has since been dominant in this area except during the period of Moslem rule from the 12th cent to the 18th cent Great Britain first acquired territory here in 1764 In 1834 the British established the presidency of Agra, which became (1836) the Northwestern Provs, and in 1856 they assumed the rule of Oudh The annexation of Oudh was one of the factors precipitating the Sepoy Rebellion, during which all the provincial area was occupied by rebels The territories were joined in 1877 and in 1902 were named the United Provs of Agra and Oudh After the partition of India (1947) the territories of some princely states were added, and the present official name was adopted in 1950 The state is also called Uttar Pradesh

United Service Organizations (USO), organization which supplied social, recreational, welfare, and spiritual facilities for the armed services and, to a limited extent, for war production workers in the Second World War and for a few years thereafter. The associated agencies were the YMCA, the YWCA, the National Catholic Community Service, the Salvation Army, the Jewish Welfare Board, and the National Travelers Aid Association. USO was organized in 1941, its services, discontinued at the end of 1947, were resumed early in 1949 at the request of President Truman, but were again discontinued on Feb 1, 1950 It was supported by voluntary contributions, and many thousands of volunteers assisted in its programs. At the peak of its activities it maintained over 3,000 clubs, lounges, and mobile units and through its camp shows reached millions of servicemen overseas

United States, republic (3,022,387 sq mi , 1940 pop 131,669,275, 1949 estimated pop 149,452,000, excluding territories and dependencies), North America The capital is WASHINGTON in the District of Columbia The area and population given above are for the "continental" United States, which consists of 48 states and a Federal District The United States also has various territories and possessions On the continent of North America is large ALASKA (purchased from Russia in 1867) In the West Indies are PUERTO RICO (ceded by Spain in the Treaty of Paris after the Spanish-American War, since 1947 it has had the right to elect its own governor) and the VIRGIN ISLANDS OF THE UNITED STATES (purchased from Denmark in 1917) In the Pacific are the Territory of Hawaii (the HAWAIIAN ISLANDS, annexed in 1898), GUAM (ceded by Spain after the Spanish-American War), American Samoa (see SAMOA), WAKE ISLAND, MIDWAY, CANTON ISLAND, ENDERBURY ISLAND, and several other islands The United States also has trusteeship under the United Nations of the Caroline, Marshall, and Marianas (except Guam) island chains, held by the Japanese before the Second World War U S forces in 1950 still occupied the RYUKYU Islands (chief among them Okinawa) and the Bonin Islands as well as Japan itself The United States long had control of the PHILIPPINE ISLANDS, now an independent republic The PANAMA CANAL ZONE is held under perpetual lease from the government of Panama "Continental" United States stretches across North America from the Atlantic on the east to the Pacific on the west, from Canada on the north to Mexico, the Gulf of Mexico, and the Gulf of California on the south The 48 states may be grouped arbitrarily into several loose divisions NEW ENGLAND, including MAINE, NEW HAMPSHIRE, VERMONT, MASSACHUSETTS, CONNECTICUT, and RHODE ISLAND, the Middle Atlantic states—NEW YORK, NEW JERSEY, PENNSYLVANIA, DELAWARE, and MARYLAND, the Southeastern states—VIRGINIA, WEST VIRGINIA, NORTH CAROLINA, SOUTH CAROLINA, GEORGIA, ALABAMA, and FLORIDA, the other states of the SOUTH—KENTUCKY, TENNESSEE, MISSISSIPPI, LOUISIANA, and TEXAS, the states of the Great Lakes region (most of the MIDDLE WEST)—OHIO, INDIANA, ILLINOIS, MICHIGAN, WISCONSIN, and MINNESOTA, the states of the trans-Mississippi West—NORTH DAKOTA, SOUTH DAKOTA, IOWA, MISSOURI, ARKANSAS, OKLAHOMA, the states of the Great Plains and the western mountains—MONTANA, WYOMING, KANSAS, NEBRASKA, COLORADO, NEVADA, UTAH, ARIZONA, NEW MEXICO, the states of the Northwest (Pacific Northwest)—IDAHO, WASHINGTON, and OREGON, and CALIFORNIA The largest state is Texas, the smallest Rhode Island Among the major cities are, in the East, NEW YORK, PHILADELPHIA, BALTIMORE, BOSTON, PITTSBURGH, WASHINGTON, and BUFFALO, in the Middle West, CHICAGO, DETROIT, CLEVELAND, SAINT LOUIS, MILWAUKEE, MINNEAPOLIS, and CINCINNATI, in the Far West, LOS ANGELES, SAN FRANCISCO, and SEATTLE, and in the South and Southwest, HOUSTON, NEW ORLEANS, and DALLAS The easternmost section of the country is an Atlantic lowland area, rising to the eastern mountains Beyond them lies the southern part of the drainage area of the GREAT LAKES and the broad central plains in the valley of the MISSISSIPPI river and its tributaries These prairies rise in the west to the high, treeless plateau of the GREAT PLAINS and, beyond to the ROCKY MOUNTAINS The mountains help to shut in the GREAT BASIN More westerly chains (notably the SIERRA NEVADA and the COAST RANGES) rise high above the deep-cut valleys Beyond them lie the narrow Pacific lowlands The rivers of the Atlantic coastal plains flow east to the Atlantic (among them are the HUDSON, the DELAWARE, the POTOMAC, and the SAVANNAH), they supply little connection between the northern and southern sections, which are connected only by sea and by longitudinal valleys just east of the APPALACHIAN MOUNTAINS The Appalachian Mts is the general name given to the eastern mountains from Maine to Alabama, though not all the chains belong to one system, there are scattered peaks in Maine, and farther to the south such chains as the White Mts, the Green Mts, the Berkshires, the Taconics, the Adirondacks (part of the Laurentian Plateau), the Catskills, the Alleghenies, the Blue Ridge, the Cumberland, the Great Smoky Mts, and the Black Mts (with Mt Mitchell in North Carolina the highest peak in the E United States, 6,684 ft high) The Great Lakes belong to the St Lawrence drainage system The land S and W of the W Great Lakes basin is drained by one of the great river systems of the world—that of the MISSISSIPPI and the MISSOURI rivers The most important affluent apart from the master streams is the OHIO river, among its tributaries are the TENNESSEE, the CUMBERLAND and the WABASH Some of the other streams that feed the great system are the MINNESOTA, the WISCONSIN, the DES MOINES, the YELLOWSTONE (with the BIGHORN and the POWDER as tributaries), the NIOBRARA, the PLATTE, the KANSAS, and the ARKANSAS (with the CIMARRON and the CANADIAN as tributaries) Notable rivers in the S central United States apart from the Mississippi system are the RED RIVER (of the South), the RIO GRANDE, which forms the boundary between Texas and MEXICO, and has a large affluent, the PECOS, and the smaller BRAZOS and COLORADO rivers in Texas The central plain is interrupted by two highland groups, the BLACK HILLS and the complex of the OZARK MOUNTAINS The general name given the master system of rugged and rocky Western mountains is the ROCKY MOUNTAINS, they are much loftier than the older eastern chains, there are numerous complex chains within this system West of the Rocky Mts is the Great Basin, and west of this are the Sierra Nevada (in which is Mt Whitney, the highest peak in the continental United States, alt 14,495 ft), the Coast Ranges, the Cascade Range and the others The Pacific Northwest is the drainage area of the COLUMBIA river with its southern tributary, the Snake There are large arid areas in Montana, Utah, Nevada, New Mexico, Arizona, and California The lowest point in the continental United States is in the desert of Death Valley (see DEATH VALLEY NATIONAL MONUMENT) in California The COLORADO river is remarkable not only because it drains a large area but also, and more, because it is the stream of the GRAND CANYON, one of the most impressive scenic wonders of the United States Other, but less important, streams of the Far West are the HUMBOLDT, which is in an interior drainage system, and the SACRAMENTO and SAN JOAQUIN in California Three of the widely publicized geographical marvels of the United States are NIAGARA FALLS on the Canadian border of New York, the GREAT SALT LAKE in UTAH, and the geysers of the YELLOWSTONE National Park (For some others see the table under NATIONAL PARKS and the articles referred to there) The United States is one of the greatest industrial countries of the world Its mineral and agricultural resources are tremendous, and it has practically all the resources necessary for self-sufficiency The agricultural products include all those of the temperate zone as well as subtropical produce (For accounts of products in detail, see the articles on the states) The industrial development has been spurred by the growth of a complex network of communications not only by railroad, automobile, inland waterways, and air but also by telephone, telegraph, and radio More than half of the population is urban The great majority of the inhabitants are of European descent Something less than 10 percent of the total population is Negro There are smaller groups of Orientals, the Japanese and Chinese on the Pacific coast and in some of the Eastern cities presenting considerable groups There are also, chiefly on reservations, groups of the aboriginal inhabitants, the North American Indians (see INDIANS, NORTH AMERICAN) Until very recent years (it may be said until the immigration law of 1924), the United States was the "melting pot" of nations On the base of the original group of British settlers in the colonies of the Atlantic coast numerous other national groups were imposed by immigration When the United States was developing rapidly with the settlement of the West (where some earlier groups of French and Spanish settlers were absorbed), immigrants from Europe poured into the land One of the early important strains was the Scotch-Irish Just before the middle of the 19th cent Irish and German immigrants were the predominant peoples A little later the Scandinavian nations supplied many settlers After the Civil War, the immigration came mainly from the nations of S and E Europe from Italy, Greece, Asia Minor, Russia, the part of Poland then in Russia, and the variegated peoples of Austria-Hungary and the Balkans There were lesser strains from Portugal and Spain and the Levant, and to some extent the earlier sources continued to supply immigrants There has sometimes been some conflict of cultures between these varied peoples and the older citizens, and there were conscious attempts at AMERICANIZATION, but it may be said in general that the peoples have coalesced into new and roughly homogeneous groups The Negro and the Oriental have offered difficult problems, but even with these groups the tendency has been toward absorption The government of the United States is that of a Federal republic set up by the CONSTITUTION OF THE UNITED STATES, adopted by the FEDERAL CONSTITUTIONAL CONVENTION of 1787 There is a division of powers between the Federal government and the state governments The Federal government has a threefold division of powers into the executive, headed by the PRESIDENT, the Vice President, and the cabinet, which is made up of the Secretaries heading the Departments of State, Treasury, War, Post Office, Navy, Interior, Agriculture, Commerce, and Labor and the Attorney-General, the legislative—the Congress, which is bicameral, being made up of Senate and House of Representatives, and the judicial—the court system headed by the Supreme Court

A Nation Is Born The area now included in the United States was opened to European settlement

after the voyage of discovery by Christopher Columbus in 1492, which was soon followed by the voyages of John Cabot in the English service and Jacques Cartier, a Frenchman These three nations—Spain, England, and France—were the chief nations to establish colonies in the present United States, though others also took part, especially the Netherlands in the establishment of New Netherland, which became New York, and Sweden in a Swedish colony on the Delaware river (see New Sweden) The first permanent settlement in the present United States was St Augustine (Florida), founded in 1565 by Pedro Menéndez de Ávila The Spanish control came to be exercised over Florida, West Florida, Texas, and a large part of the West, including California The chief French stronghold was New France (present Canada), and from there they spread their influence over the Great Lakes country and down the Mississippi to the colony of Louisiana There were also French settlements elsewhere, as in the efforts of Jean Ribaut and René de Laudonnière, to found a French Protestant colony on the Atlantic coast, La Salle's adventure in Texas The British settlements, which were to become the dominant ones, were on the Atlantic coast The first permanent settlement was at Jamestown in Virginia in 1607 The first British settlements were by chartered companies (such as the Virginia Company) The Virginia colony represented one type of colony, in its founding, economic motives were paramount, it early passed from company control to control by the crown and became a characteristic royal colony Another type was initiated by the coming of the Pilgrims to Plymouth in 1620, religious motives played a large part in the founding of this and the other New England colonies, which were governed by theocratic democracies under royal charters these are generally termed corporate colonies Though freedom for a particular religion was a usual goal, only Rhode Island and Maryland had religious toleration A third type of colony was the proprietary, founded by lords proprietors, who had quasi-feudal grants from the king, prime examples are Maryland (under the Calvert family) and Pennsylvania (under William Penn) These colonies became fairly well-settled, compact groups E of the Appalachians—more closely organized than the French and the Spanish settlements in the United States The rivalry of France and England for mastery of the sea and the colonies of the world rose in the later 17th cent and resulted in the French and Indian Wars, which ended in the Treaty of Paris of 1763 with the victory of the English and the expulsion of the French from Canada and the Great Lakes region of the Northwest The tendency in the English colonies was to develop democratic local institutions, especially the colonial assemblies The increasing movement to convert the corporate and proprietary colonies into royal colonies was contested by some of the settlers, but the process of subjecting all colonies to royal control began after the Restoration (1660) in England and went forward relentlessly It is impossible to understand the history of the colonies in the present United States without study of the British colonial system, not only as applied to those colonies but also as applied to the other British colonies "Patriotic" historians formerly condemned the mercantilist system which was at the base of the British colonial policy and cried down the Navigation Acts as harsh repression The later work of such men as Charles M Andrews, Herbert L Osgood, and G L Beer has led to a greater understanding and appreciation of the system. The former wholesale criticism of the administration of the privy council, the Board of Trade, and the colonial governors and administrators has been revised. There were some attempts at union among the colonies, usually temporary and for the purpose of military defense or protection of some general colonial right, among them were the New England Confederation and the Albany Congress After the close of the French and Indian Wars, there was growing alienation of interests and increasing conflict between the colonies and the mother country Such inflammatory quarrels occurred as that over the Stamp Act (the most important), that over the Townshend Acts, and the troubles in Massachusetts (Boston Massacre and the Boston Tea Party) and elsewhere (e g , the burning of the *Gaspee*), and there was vocal discontent over attempts to restrict and regulate settlements in the Western territories and the economic troubles of American debtors The way was paved for the American Revolution The Revolution resulted in the independence of the Thirteen Colonies Massachusetts, New Hampshire, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, North Carolina, South Carolina, and Georgia. These colonies, become states, united under the Articles of Confederation (see Confederation, Articles of) in a loose federal union The conflicting claims of the states in the West were settled by the cession of the Western territories to the Federal government and by the Northwest Ordinance of 1787, which set up a form of territorial government and a method of admitting new states to the Union. The weakness of the central government helped to forward the movement toward a new form of central government. This was set up in the Constitution, which was drawn up by the Federal Constitutional Convention of 1787 and later became effective on ratification by nine states. The first man to be elected President was appropriately the hero of the Revolution, George Washington In his two terms as chief executive, political parties first appeared in the sharp controversy between the followers of Alexander Hamilton, who represented the conservative property-holding classes, and Thomas Jefferson, who preached a liberal democracy that more or less reflected the desires and ambitions of the frontier farmers In the South this partially reflected the conflict between men of the tidewater and men of the frontier The question arose as to whether the Federal power should be strengthened by liberal interpretation (loose construction) of the Constitution, as Hamilton desired, or the rights of the states jealously guarded by strict construction, as Jefferson wished, this introduced the perennial problem of states' rights into the American complex The Hamilton group, the Federalist party, was generally friendly toward England, the Jefferson group, later the Democratic party, toward France The question of maintaining a neutral attitude toward both of those nations in the French Revolutionary and Napoleonic Wars was the most vexing question of American foreign policy It continued to be so after the political upheaval of 1800 had resulted in a victory for Jeffersonian democracy Jefferson succeeded the Federalist John Adams as President The young nation sought to solve the difficulties created by French and English measures against American shipping by the Embargo Act of 1807, which was not as happy in its results as had been anticipated The United States, which had been little more than a strip of settlements on the Atlantic seaboard in 1783, had been expanding into the West New states had been settled and admitted to the Union (Ohio, Kentucky, and Tennessee, as well as Vermont, which managed to have its independent statehood recognized) A new expanse of territory had been added by the Louisiana Purchase of 1803 The frontier was already a great molding force in American life (its importance was later made manifest in American historical writing by Frederick Jackson Turner and his followers) Westerners drove back the Indians and occupied the land They naturally came into some conflict with both the British in the North and the Spanish in the South The hostility to the British and the desire to take Canada combined with old grievances concerning troubles on the sea helped to bring on the War of 1812 The Treaty of Ghent (1814, see Ghent, Treaty of) guaranteed to the United States the possession of the Old Northwest and the dominant theme of the period that followed is usually considered to the great Western expansion In the South the effects of Eli Whitney's invention (1793) of the cotton gin had brought a new staple crop, and the Deep South (Alabama, Mississippi, Louisiana) was developing chiefly on the basis of cotton The plantation economy of the South with its slavery was becoming more differentiated from the industrial and commercial East and the small-farm agriculture of the northern West In the East the Industrial Revolution had introduced the factories that multiplied and improved as the market expanded with the improvement of transportation and the settlement of the West The Jeffersonian Democrats had little but internal opposition after the downfall of the Federalists as the result of the War of 1812 James Madison was succeeded by James Monroe By the end of Monroe's administration, a new movement had seized upon the country Radical doctrines of frontier democracy had focused on the figure of Andrew Jackson, who advocated much more sweeping democracy than the mild Jeffersonian school He was defeated for the Presidency by John Quincy Adams in 1824, but he triumphed in 1828 Sectional animosities were increasing and played a large part in the changing politics of the Jackson era The Nullification controversy and the quarrel over the Bank of the United States both involved the old question of states' rights as well as sectional interests John C. Calhoun emerged as the principal spokesman of the South The other opponents of Jackson amalgamated to form the Whig party, of which Henry Clay and Daniel Webster were the chief figures Partially because of the financial measures of Jackson, the serious Panic of 1837 occurred The Whig party was able to win the election of 1840 by the "Log Cabin and Hard Cider" campaign of William Henry Harrison, who defeated Van Buren. American expansion had reached the point of contact with Spanish settlement. Florida had been purchased in 1819 A little later American settlement began in Texas, which in 1836 after a successful revolution became an independent republic After a serious struggle, the annexation of Texas was agreed upon (1845). The Mexican War followed, and by the Treaty of Guadalupe Hidalgo (see Guadalupe Hidalgo, Treaty of) the United States acquired California and a large portion of the West. These possessions were rounded out by the Gadsden Purchase. When the question of the annexation of Texas was being hotly disputed, a dispute with Great Britain over the Columbia river country (see Oregon) was also going on, the administration of James K Polk saw this settled in 1846 The settlement of California by Americans increased at one tremendous stride after the discovery of gold in 1848, which led to the great gold rush of '49. Mining also played a part in the development of the West and various other factors influenced frontier development An unusual instance was the settlement of Utah by the Mormons Cattle raising also produced the beginnings of ranching before the Civil War

Disunion and Reunion The territorial gains were inextricably mixed with the sectional quarrel between North and South, the chief point of legislative argument hinging on the question of the extension (or rather the possibility of the extension) of the Southern slavery system into the new territories This had become a serious issue with the debate over the Missouri Compromise in 1820 The rise of the abolitionists in the '30s started a vigorous attack by many groups in the North on slavery, and the question became a more and more difficult one The North had gained the West, which was closely bound to the seaboard North by economic ties—the Erie Canal and later the railroads playing a great part in this process The Western states admitted were for the most part areas of small farmers, and the South lost her hold in the House of Representatives Seeking some guarantee against the ruin that threatened her whole economic and social system, the South was driven to an effort to maintain parity in the Senate The Southern leaders desired substantial assurances in fugitive slave laws and in proslavery representation among the new states of the West All the political leaders sought some decisive action on the question, but matters drifted along and became worse The Compromise of 1850 was the last great compromise between the sections New leaders had now appeared, and the views they held were more extreme The conflict became more and more embittered The slavery question broke down the older political parties The Kansas-Nebraska Bill of 1854 aroused deeper trouble, and "bleeding Kansas" saw bloodshed in the quarrel between proslavery and antislavery factions The Free-Soil party arose to oppose the slavery forces and capture a part of the now shattered Whig party The Free-Soilers were succeeded later by the Republican party The Democratic party was also split over the slavery question, Stephen A Douglas was able to gain only a reasonably large following Neither the Southern "fire-eaters" nor the abolitionists were willing to give any ground The question was made somewhat more serious by the decision in the Dred Scott Case In 1860 the Republican Abraham Lincoln was elected President The Southern states, relying on their doctrine of states' rights and feeling that there was no possibility of fair treatment in the Union, had recourse to secession and formed the Confederacy The most tragic period of American history began The Civil War (1861–65) ended in a victory for the North. Abraham Lincoln, the greatest figure of the war, was assassinated shortly after its close The question of Reconstruction of the South was the cause of the bitter struggle that resulted in the impeachment of President Andrew Johnson in 1868 The period of Reconstruction and of ill-feeling between the North and the South continued through the administrations of U S Grant, which was notable for its corruption The disputed election of 1876, in which the decision was given to Rutherford B Hayes over Samuel J Tilden, was the turning point in the restoration of good relations between the sections The South had, however, been ruined by the war and the postwar difficulties, and rebuilt slowly and on a new basis, industrial development there, begun long before the Civil War, increased and, after the last decade of the 19th cent , became an important factor in American life In the North industrial development went on with increasing speed and the section was generally urbanized The age of steel produced immense industrial projects and the revolution of the "machine age" caused more profound changes than the earlier industrial development had brought about. Fortunes were made rapidly, and the urban social structure was overturned The "Gilded Age" followed. With the development of "big business," gigantic corporations were built up, and a few outstanding figures, as John D Rockefeller in industry and J. Pierpont Morgan (see Morgan, family) in the financial world, attained power undreamed of by the capitalists of the ante-bellum era, who, for the most part, had fortunes that were based on commerce. There were no regulations to govern the new conditions of industry, and the worst sort of abuses appeared, especially in the shameless manipulation of the railroads. The excesses of the new capitalism aroused a good deal of opposition, which was increased by the combina-

tion into larger and larger trusts. These trusts were able to crush out opposition and to develop methods generally considered unfair—e.g., the railroad rebates. The result was agitation by labor and particularly by the agricultural classes against the trusts, thus, the POPULIST PARTY had opposition to the large interests as one of its tenets Widespread hatred of the trusts resulted in the SHERMAN ANTI-TRUST ACT (1890), the moves against the corporations in the administrations of Theodore ROOSEVELT and William Howard TAFT, and the CLAYTON ANTI-TRUST ACT (1914) The industrial changes and the great increase in production of manufactured goods had a great influence on the American foreign policy and the emergence of the United States as a world power The expansion of the country was continued by the purchase of Alaska from RUSSIA (1867) and increasing interest in the Caribbean area, shown by the American attitude in the Cuban TEN YEARS WAR It was through the participation in Cuban affairs that the United States emerged as a first-rate power in the SPANISH-AMERICAN WAR As a result of this war American power in the Caribbean was strengthened by the acquisition of Puerto Rico and a protectorate over Cuba by the Platt Amendment The long-standing interest in Central America and the development of the so-called corollary of the MONROE DOCTRINE both tended to expand American imperialism The extended negotiations for an isthmian canal resulted in American intervention in the PANAMA revolt for independence and the construction of the PANAMA CANAL More directly imperialistic were the interventions in Latin-American countries, particularly NICARAGUA, HAITI, and the DOMINICAN REPUBLIC In the Pacific, the United States developed its hold on the Hawaiian Islands, which were ultimately annexed Control over the Philippine Islands came with the Spanish-American War The United States showed much interest in maintaining the Open Door in China and in the development of opportunities there. The chief men to develop the vigorous American foreign policy were Presidents Benjamin HARRISON, Grover CLEVELAND, William MCKINLEY, Theodore ROOSEVELT, and William Howard TAFT and their Secretaries of State, notably James G BLAINE, Richard OLNEY, Elihu ROOT, and Philander C. KNOX In formal politics from 1876 to the First World War the two parties, Republican and Democratic, dominated the scene In general, in the period before the Spanish-American War, they tended to become almost indistinguishable There were policies, especially the tariff, on which they were theoretically diametrically opposed, but sectionalization of political interests led to the aggregation of numerous mutually opposing groups in each party The Republicans were victorious in electing James A GARFIELD (1880), who was succeeded, after his assassination, by Chester A ARTHUR In the election of 1884 Grover Cleveland was successful, the first Democrat to be elected President after the Civil War He was defeated by Benjamin Harrison in 1888, but returned to the Presidency after the election of 1892 Most of the vital issues were avoided in the election campaigns of these years Thus both parties agreed on civil service reforms and both avoided commitment on the monetary question, which had grown serious The argument over the greenbacks (see GREENBACK PARTY) and over the free coinage of silver (see BLAND-ALLISON ACT and SHERMAN SILVER PURCHASE ACT) involved a real issue between the debtor classes and the capitalist classes that was not only a contest between radical and conservative but also to some extent a contest between the rural classes, especially the Western farmers, and the urban classes The agitation of the farmers found expression in the Granger movement A third party arose from this discontented group who were joined by a labor group, this was the Populist party These demands did not become a major issue in national politics until after the severe business depression of the early '90s, the Democratic party adopted many of the Populist demands in 1896 and under William Jennings BRYAN fought the presidential campaign against the conservative Republican, McKinley, on the FREE SILVER issue. The conservatives won with McKinley

Varieties of Reform in the 20th Century Under McKinley's Republican successor, Theodore Roosevelt, a less conservative Republican policy was adopted with moves against "malefactors of great wealth" and such progressive measures as the Pure Food and Drugs Act of 1906 Roosevelt was succeeded by William Howard Taft, but before the end of Taft's term the two broke, the Republicans split into two factions, the "regular" Republican party and the PROGRESSIVE PARTY (see also INSURGENTS) Both Taft and Roosevelt were candidates for the presidency in 1912, but it was the Democratic candidate, the idealistic, reforming, and very liberal Woodrow WILSON, who was victorious. His administration was one of legislation for social reform. The Adamson Law, the Clayton Anti-Trust Act, and finally the Eighteenth (Prohibition) Amendment were adopted. The Federal Reserve system was also established. He did not radically alter the Caribbean policy of his predecessors. Serious trouble with Mexico occurred when Mexico was torn by the struggle between HUERTA, CARRANZA, VILLA, and ZAPATA. The landing of U S forces in Veracruz and the campaign against Villa were the outstanding incidents of hostility The United States had already taken vigorous part in the movement for peace and arbitration, particularly in the HAGUE CONFERENCES, this tendency was strengthened by Secretary of State William Jennings Bryan and his "cooling-off" treaties. The primary issue in foreign affairs was the maintenance of American neutrality in the First WORLD WAR Wilson made strenuous efforts to prevent the United States from being involved and in 1916 was reelected on a peace platform, but neutrality proved impossible On April 6, 1917, the United States entered the war on the side of the Allies against the Central European powers Wilson at the time that peace negotiations started was the leader of the world He went in person to the Paris Peace Conference and took a leading part in the negotiations But reaction in the United States was strong, and the Senate refused to ratify the treaty (see VERSAILLES, TREATY OF) The question of entrance into the LEAGUE OF NATIONS was hotly debated even after the first refusal to enter Later entrance into the WORLD COURT was also hotly debated The Republicans were victorious in the election of 1920 When Warren G HARDING became President there was much talk of a "return to normalcy" The country increased in prosperity, and in the administrations of Harding and his successor, Calvin COOLIDGE, had the biggest boom in its history The First World War, however, marked a definite period in changing attitudes toward economic, political, and social problems In the administration of Herbert HOOVER a severe business depression began in 1929, this was part of the world-wide depression and it was aggravated by the question of foreign debts (see WAR DEBTS and REPARATIONS) In 1931 Hoover proposed the debt moratorium, which did not, however, have the desired effect He undertook measures to combat the depression, but without striking success In the 1932 election he was overwhelmingly defeated by the Democrat Franklin D ROOSEVELT The new President immediately instituted his NEW DEAL with vigorous measures To meet the critical financial emergency he instituted a "bank holiday" Congress, called into special session, enacted a succession of laws, some of them to meet the economic crisis with relief measures, others to put into operation long-range social and economic reforms Some of the most important agencies created were the NATIONAL RECOVERY ADMINISTRATION, the AGRICULTURAL ADJUSTMENT ADMINISTRATION, the PUBLIC WORKS ADMINISTRATION, the CIVILIAN CONSERVATION CORPS, and the TENNESSEE VALLEY AUTHORITY This program was further broadened in later sessions with other agencies, notably the SECURITIES AND EXCHANGE COMMISSION and the Works Progress Administration (later the WORKS PROJECTS ADMINISTRATION) Laws also created a SOCIAL SECURITY program The program was dynamic and, in a sense, revolutionary, for it was intended to create a vast machinery by which the state could promote economic stability and social welfare With a slight lifting of the cloud of depression, opponents of these new measures became vocal, arguing that the program violated individual rights and was extravagant and wasteful Adverse decisions on several of the measures by the U S Supreme Court tended to slow the pace of reform and caused Roosevelt to attempt unsuccessfully to revise the court (see SUPREME COURT, UNITED STATES) Roosevelt was elected by a stupendous majority in 1936 and won easily in 1940 even though he was breaking the no-third-term precedent, which had held since the time of George Washington He was in 1944 elected for a fourth term Nevertheless, his opponents had grown more intransigently bitter, and his supporters more adulatory Many years before 1944, however, the emphasis had shifted from the now-established reform program to the difficulties of foreign affairs The optimistic and hopeful atmosphere of the 1920s that had been signalized by the NAVAL CONFERENCES and especially by the KELLOGG-BRIAND PACT had begun to fade before Roosevelt came to power The chief hopeful continuance was in the policy of friendship toward the Latin American nations This was expanded in the Roosevelt administration to a full-blown "good neighbor" policy, which was to continue and prove generally fruitful for the United States in the years that followed (see PAN-AMERICANISM) The rise of the fascist nations in Europe and of Japan in the Far East, however, threatened the peace of the world, and as wars began in China and Ethiopia, the United States sought first to bulwark its insular security by the NEUTRALITY ACT Events marched on The Axis powers resorted more to threats of force, and intimidation led to the actual outbreak of the European war in Sept, 1939 The United States still strove to remain out of the war, but after the fall of France before German attack in June, 1940, the sympathies of the United States for a Britain beleaguered by Germany became more overt. In March, 1941, LEND-LEASE aid was extended to the British. The threat of war had already caused the adoption of SELECTIVE SERVICE to build the armed strength of the nation Hemisphere defense was enlarged, and the United States drew closer to Great Britain with the issuance of the ATLANTIC CHARTER It was not, however, the European war that drew the United States into the conflict The Roosevelt government had vigorously protested the moves of Japan in its career of conquest and establishment of the "Greater East Asia Co-Prosperity Sphere" Diplomatic relations grew more taut, but the Japanese ambassador in Washington and a special envoy were still carrying on discussions when on Dec 7, 1941, Japanese bombs fell on PEARL HARBOR and the Philippine Islands The United States promptly declared war, and four days later war with the Axis powers also began The fighting was to be long and hard in the global conflict (for an account of military and naval events, see WORLD WAR, SECOND) The country completed mobilization of its vast resources and expended them The creation of war plants, the moving of population, the draining off of all the young men and some young women to the armed services, and the necessity to turn all essential materials to the actual waging of the war, which used prodigious amounts of raw materials dislocated the economy Government control of materials, transportation, and manpower was achieved by the creation of a great number of war agencies The economy expanded despite dislocation and difficulties The war underscored the importance of U S resources and the prestige and position of the United States in world affairs President Roosevelt had established himself as a world leader with his strong economic program He, Winston Churchill, and Joseph Stalin were the three great war leaders A series of important conferences outlined the policies for the war and the programs for the peace after victory, among these were the MOSCOW CONFERENCES, the CASABLANCA CONFERENCE, the CAIRO CONFERENCE, the TEHERAN CONFERENCE, and most important of all, the YALTA CONFERENCE, at which Roosevelt, Churchill, and Stalin outlined the plans for post-war settlement (most of the provisions were not made public until later) Roosevelt was a key figure in the plans for the peace-keeping organization after the war, which was to be created as the UNITED NATIONS He was still busy laying the basis of the new post-war world when on April 12, 1945, he died suddenly Vice President Harry S TRUMAN became President A month later the European war ended when Germany surrendered on May 7 1945 Truman went to the POTSDAM CONFERENCE (July–August), where various questions such as the method of zoning and occupying Germany and various territorial transfers were settled, many on an ad interim basis, pending the conclusion of peace treaties Before the war ended with the defeat of Japan, the United States had introduced a new weapon of war, the ATOMIC BOMB This use of atomic energy presented new problems, both national and international, and was believed by many to have ushered in a new era In a real sense the bomb was still reverberating in 1950 The Japanese surrender, announced Aug 14, 1945, and formalized less than a month later, brought the war to a close The difficulties of the peace soon became apparent Economic readjustments with rising living costs, fear of inflation, and an outbreak of strikes marked the troubles of transition Wartime controls were gradually relaxed, the veterans of the war were reabsorbed, and the much-feared inflation had not taken place by 1950 There was some return to more conservative thought, and the TAFT-HARTLEY LABOR ACT of 1947 drastically amended the functions of the NATIONAL LABOR RELATIONS BOARD set up under the New Deal President Truman, however, stood for moderate liberal reforms, with emphasis on civil liberties and protection for the small man To the intense surprise of most political forecasters he was victorious over Thomas E DEWEY in the presidential election of 1948 A generally conservative Congress, however, refused to accept many of the measures sponsored by the President Meanwhile the international situation had deteriorated, with the late Allies split into two camps, the Western nations against the USSR and the nations where Communism had been established as dominant after the war The chasm widened and threatened to nullify the security powers of the UNITED NATIONS, in which the United States and the USSR were looked upon as the leading world powers Their opposition grew acrimonious The "Truman doctrine," laid down in 1947, was intended to protect nations threatened by Communist influence, and U S financial aid was tendered Greece to help put down Communist guerrillas The EUROPEAN RECOVERY PROGRAM (called the Marshall Plan after Secretary of State George C Marshall) was bitterly opposed by the USSR No agreement was reached in the United Nations on control of atomic energy, and in the Security Council action tended to move perpetually to stalemate, with the Western powers and the smaller Soviet bloc in constant fric-

tion. Interpretations of the agreement reached at the Potsdam Conference differed, and there was sharp conflict in matters of governing GERMANY, which was now virtually split into two countries. This struggle reached a high point in the Russian blockade (1948–49) of BERLIN. FRICTION also occurred in the other jointly occupied countries, AUSTRIA and KOREA. The Western nations drew closer together, and the NORTH ATLANTIC TREATY was signed on April 4, 1949. The United States viewed with alarm the victory of the Communist forces in China and refused to recognize the new government. Thus May, 1950, saw the world divided into two camps and the settlement of peace with Japan and Germany still postponed and the other problems of the Second World War still unresolved. The reaction in the United States showed in strong anti-Communist and anti-Russian feeling and in moves to rearm and recreate armed forces in the troubled world.

List of Presidents. The Presidents of the United States have been (their native states given in parentheses):

1	George Washington (Virginia)	1789–1797
2	John Adams (Massachusetts)	1797–1801
3	Thomas Jefferson (Virginia)	1801–1809
4	James Madison (Virginia)	1809–1817
5	James Monroe (Virginia)	1817–1825
6	John Quincy Adams (Massachusetts)	1825–1829
7	Andrew Jackson (South Carolina?)	1829–1837
8	Martin Van Buren (New York)	1837–1841
9	William Henry Harrison (Virginia) (died in office)	1841–1841
10	John Tyler (Virginia)	1841–1845
11	James K. Polk (North Carolina)	1845–1849
12	Zachary Taylor (Virginia) (died in office)	1849–1850
13	Millard Fillmore (New York)	1850–1853
14	Franklin Pierce (New Hampshire)	1853–1857
15	James Buchanan (Pennsylvania)	1857–1861
16	Abraham Lincoln (Kentucky) (assassinated)	1861–1865
17	Andrew Johnson (North Carolina)	1865–1869
18	Ulysses S. Grant (Ohio)	1869–1877
19	Rutherford B. Hayes (Ohio)	1877–1881
20	James A. Garfield (Ohio) (assassinated)	1881–1881
21	Chester A. Arthur (Vermont)	1881–1885
22	Grover Cleveland (New Jersey)	1885–1889, 1893–1897
23	Benjamin Harrison (Ohio)	1889–1893
24	William McKinley (Ohio) (assassinated)	1897–1901
25	Theodore Roosevelt (New York)	1901–1909
26	William Howard Taft (Ohio)	1909–1913
27	Woodrow Wilson (Virginia)	1913–1921
28	Warren G. Harding (Ohio) (died in office)	1921–1923
29	Calvin Coolidge (Vermont)	1923–1929
30	Herbert C. Hoover (Iowa)	1929–1933
31	Franklin D. Roosevelt (New York)	1933–1945
32	Harry S. Truman (Missouri)	1945–

There are articles on all Americans of major importance and on numerous topics of American history, such as the WHISKY REBELLION, the OHIO COMPANY, INDEPENDENT TREASURY, and STAR ROUTE. There are articles on the towns and cities of the United States. The state articles supply bibliographies for state history. See AMERICAN ARCHITECTURE, AMERICAN ART, AMERICAN LITERATURE. General articles (e.g., SLAVERY and DIPLOMATIC SERVICE) have much American material and useful bibliographies. The writings on American history are very voluminous. A general bibliography is Edward Channing, Albert B. Hart, and F. J. Turner, *Guide to the Study and Reading of American History* (rev. ed., 1912), see also Josephus N. Larned, *Literature of American History* (1902), Grace G. Griffin, *Writings of American History* (various issues after 1906). Important cooperative undertakings by various authors are the "American Nation" series (ed. by Albert B. Hart, 28 vols., 1904–18), "Chronicles of America" (ed. by Allen Johnson, 50 vols., 1918–21), and "History of American Life" (ed. by Arthur M. Schlesinger and Dixon Ryan Fox, 12 vols., 1927–44). Among the longer histories covering a considerable part of the American story are those by Edward CHANNING, John Bach McMASTER, Ellis Paxson OBERHOLTZER, and James Ford RHODES. Prominent among historians of the colonial period are Charles McLean ANDREWS, George Louis BEER, Lawrence Henry GIPSON, and Herbert Levi OSGOOD. There is a wealth of period histories ranging from Henry Adams's unimpassioned *History of the United States* (covering the administrations of Jefferson and Madison, 9 vols., 1889–91) to the controversial *Age of Jackson* (1945) by Arthur M. Schlesinger, Jr., most of these are included in the bibliographies of articles on the chief men of the period and on great events such as the American Revolution, the Civil War, and the like. Shorter general histories include Charles A. Beard and Mary R. Beard, *The Rise of American Civilization* (1927), *America in Midpassage* (1939), and *The American Spirit* (1943), James Truslow Adams, *The Epic of America* (1931); S. E. Morison and H. S. Commager, *The Growth of the American Republic* (1931; later eds.); S. F. Bemis, *A Diplomatic History of the United States* (1936); J. S. Bassett, *A Short History of the United States* (3d ed., rev. by Richard H. Bassett, 1939), J. H. Latané and D. W. Wainhouse, *A History of American Foreign Policy* (rev. ed., 1940), Allan Nevins and H. S. Commager, *Short History of the United States* (1945), J. D. Hicks, *A Short History of American Democracy* (new ed., 1949). See also Ellen C. Semple, *American History in its Geographical Conditions* (1903); F. A. Ogg and P. O. Ray, *Introduction to American Government* (1923, later eds.), V. L. Parrington, *Main Currents of American Thought* (3 vols., 1927–30), W. E. Binkley, *American Political Parties* (2d ed., 1947), Peter Odegard and E. A. Helms, *American Politics* (2d ed., 1947), D. W. Brogan, *American Themes* (1949), Geoffrey Gorer, *American People* (1948).

United States Government Printing Office: see GOVERNMENT PRINTING OFFICE, UNITED STATES.

United States Military Academy, institution founded (1802) at WEST POINT, N.Y., to prepare young men to be officers of the U.S. army. It is popularly known as West Point or Army. The original act provided that the Corps of Engineers stationed at West Point should constitute a military academy, but an act of 1812 laid the basis for a broader establishment. Changes in curriculum and organization made by Sylvanus THAYER, superintendent from 1817 to 1833, earned him the title "father of the Military Academy." After the excellent records made by West Point graduates in the Mexican War and especially in the Civil War (the chief commanders of the Union and Confederate armies—Ulysses S. Grant and Robert E. Lee, a former superintendent of the academy—were West Point men), control of the academy formally passed to the War Dept. in 1866. The present authorized corps of cadets is 2,496, appointed as follows: 8 from each state at large, 4 from each congressional district and territory and from Puerto Rico, 6 from the District of Columbia, 2 from the Panama Canal Zone, 172 from the United States at large, and 180 from the regular army and the National Guard. An additional number of cadets may be appointed from sons of Medal of Honor winners and from foreign countries. Candidates must be 17 to 22 years of age and must meet certain physical and educational qualifications. Cadets undergo a four-year course of instruction, with summers devoted to practical military training, and are paid $936 a year plus a ration allowance. The U.S. Military Academy Museum, containing ordnance and military trophies of historical interest, is among the most important of college and university museums. George W. CULLUM compiled a valuable biographical register of West Point graduates. See Kendall Banning, *West Point Today* (1937, rev. ed., 1940), R. E. Dupuy, *Where They Have Trod* (1940), John Crane and J. F. Kieley, *West Point* (1947), Sidney Forman, *West Point* (1950).

United States National Museum: see SMITHSONIAN INSTITUTION.

United States Naval Academy, institution at Annapolis, Md., for training officers of the U.S. navy. In 1821 a naval school was founded on board the *Guerrière* at New York. By 1833 others were established at Norfolk and Boston. In 1830 the officers of the *Constitution* and the *Vandalia* drew up a petition protesting against existing conditions and urging the establishment of a naval school. Little was done until George BANCROFT, Secretary of the Navy, founded (1845) the Naval School at Annapolis on the site of Fort Severn. The school was reorganized (1850–51) as the United States Naval Academy. During the Civil War it was moved to Newport, R.I., but was returned to Annapolis in 1865. Candidates must be between 17 and 21 years of age and must meet certain physical and educational qualifications. The midshipman receives $936 a year plus a ration allowance, but he is required to pay for clothing, uniforms, textbooks, and the like. The four-year course includes scientific and general studies as well as technical courses on naval subjects and practical work on cruises. The President is allowed to appoint 75 midshipmen each year from sons of service members. The Vice President and each Senator, Representative, and territorial delegate in the U.S. Congress may send 5 midshipmen to Annapolis, or Navy, as the academy is popularly called. Each year 320 enlisted men from the regular and reserve navy and the Marine Corps may be appointed. A total of 40 appointments is authorized for sons of deceased veterans of the world wars. Honor graduates of naval and military schools receive 20 appointments. Other appointments are reserved for the Canal Zone, Puerto Rico, the District of Columbia, sons of Medal of Honor winners, the Philippines, and Latin American republics. The academy has a notable museum. See Park Benjamin, *The United States Naval Academy* (1900); Kendall Banning, *Annapolis Today* (1938), John Crane and J. F. Kieley, *United States Naval Academy, the First Hundred Years* (1945).

United States Naval Observatory, the government astronomical observatory in Washington, D.C. It is under the supervision of the chief of naval operations; formerly it was administered through the Bureau of Navigation of the Navy Dept. Its main functions include the making of astronomical observations and the publishing of astronomical and navigational information, useful especially to the country's naval vessels and aircraft but often serving also to advance the sciences, and the sending out of time signals based on precise star observations. For the determination of the time, transit telescopes are used, and the standard clocks of the observatory are kept in a vault where temperature and air pressure are constant. From 1894 the observatory has published the *American Ephemeris and Nautical Guide*. The observatory began as a depot of charts and instruments, established by the Navy Dept. in 1830. The first small observatory was built (1834) on Capitol Hill at the personal expense of Lt. Charles Wilkes. In 1842 Congress authorized a more adequate building and fuller equipment. The plans were made and carried out by Lt. J. M. Gilliss, and in 1844 Lt. M. F. Maury, who had been in charge of the depot from 1842, assumed the administration of the just completed naval observatory. In 1873 an equatorial refracting telescope with a 26-inch lens made by Alvan G. Clark was installed. With this instrument, then the largest of its kind in the world, Asaph Hall in 1877 discovered the satellites of Mars. In 1893 the observatory was removed to its present site. The clockhouse, set in lat. 38°55′14″ N., is the center of a group of buildings gathered within a radius of 1,000 ft. There an extensive equipment is housed. The library contains a noteworthy collection of mathematical and astronomical works.

United States Supreme Court. see SUPREME COURT, UNITED STATES.

Unity, religious movement incorporated as the Unity School of Christianity, with headquarters at Lee's Summit, Mo. It has used the name Unity since 1891, but it was founded earlier by Charles and Myrtle Fillmore as a faith-healing cult, with affinities to both Christian Science and New Thought. In time it acquired the characteristics of a Christian denomination, including local "centers" or churches, an ordained ministry, and a statement of faith (1921). In 1922 it withdrew from the International New Thought Alliance. Unity professes to follow closely the "Jesus Christ teaching." The Bible has an inner meaning, hence is interpreted allegorically, not literally, but its revelation is not final, for revelation is a continuing process. Men attain salvation through development of their Christ consciousness, and ultimately all men will be saved. Emphasis is placed on man's ability to "heal" ills of mind and circumstances as well as of body. By prayer and right thinking he can regenerate his body and attain eternal life in it. To permit man to reach this goal Unity accepts the necessity of reincarnation. Other Unity teachings are that thought is omnipotent, that God is principle, not person, that God is immanent in man, that pain or evil is real but fleeting and only the good is permanent. To spread its teachings Unity School publishes a number of magazines and books. Authoritative textbooks are Charles Fillmore's *Christian Healing* and H. E. Cady's *Lessons in Truth*. See Marcus Bach, *They Have Found a Faith* (1946).

universal, in philosophy, a term applied to concepts, or general ideas. In modern thought, universals are commonly regarded as including numbers and relations as well as concepts. PLATO regarded universals as possessing reality independent of the human mind. This was the position of the REALISM of the Middle Ages and is the position of neorealism today. Opposed to realism are nominalism and CONCEPTUALISM.

Universalist Church of America, Protestant denomination originating in the 18th cent. and represented almost entirely in the United States. Universalism is the belief that it is God's purpose to save every individual from sin through divine grace revealed in Jesus Christ. The doctrine is old, but no organized body of believers took it as a distinctive feature of their church until modern times. The Universalist denomination in the United States originated with John MURRAY, a convert to Universalism as taught by James Relly in England. Murray arrived in New Jersey in 1770. After preaching there and in New York and New England, he settled in Gloucester, Mass., where there arose (1780) the first Universalist church in the United States. The movement spread, in 1790 a convention in Philadelphia decided upon a congregational polity and drew up a profession of faith. Until the middle of the 19th cent. little thought was given to organization, as attention was chiefly devoted to settling points of doctrine and disseminating the belief. Murray's Universalism was of the Calvinistic type, under Hosea BALLOU, the most influential force in the denomination from c. 1796 to 1852, the movement was separated from its Calvinistic associations. His doctrine of "Christ's subordination to the Father" gave Universalism a position very similar to that of UNI-

TARIANISM. The doctrinal symbol of the church is the Winchester Profession, adopted in 1803 by the General Convention In 1899 a briefer statement of essential principles was accepted These principles are the universal fatherhood of God, the spiritual authority and leadership of Jesus Christ, his son, the trustworthiness of the Bible as containing a revelation from God, the certainty of just retribution for sin, and the final harmony of all souls with God The organization of the church is built upon the Universalist parish as a unit Annual state conventions, with clergy and lay delegates, have jurisdiction within certain state or provincial limits The supreme legislative body is the General Convention, meeting biennially The name Universalist General Convention (adopted 1866) was changed (1942) to the Universalist Church of America In 1949 the biennial assembly ratified a merger with the American Unitarian Association See Abel C Thomas, *A Century of Universalism* (1870), Richard Eddy, *Universalism in America* (2 vols , 1884–86) , J H Allen and Richard Eddy, *A History of the Unitarians and the Universalists in the United States* ("American Church History" series, Vol X, 1894), the *Universalist Church Year Book*

universal language, invented language intended for auxiliary purposes In the expanding commercial and other horizons of the 19th cent there were several such creations Volapük (c 1880) had some prominence, but Esperanto is the only one even moderately successful This, the creation of L L Zamenhof, is a simplified, regular language with Latin-type grammar and European vocabulary Esperanto enthusiasts have held congresses, conducted campaigns, and got some official recognition in many countries The Esperanto associations have published extensively

Universal Postal Union, agency of the United Nations with headquarters at Bern, Switzerland It was established in 1875 with adoption of the Universal Postal Convention The union was brought into relations with the United Nations in 1947 The Universal Postal Congress, the governing body, usually meets every five years to consider the activities of the Executive and Liaison Committee of 19 members elected on a geographical basis Members of the union comprise a unified postal territory with easy international exchange of mail Accounts are cleared through the International Bureau Nearly all nations and subordinate territories in the world belong to the union

universe, in astronomy, the whole cosmic system, consisting of our Milky Way system and all the many extragalactic or spiral nebulae (or islands of matter) scattered through space It is generally believed that the distance between these nebulae averages about 2,000,000 light-years Man has from earliest times speculated about the universe, but the approach to the many problems involved became truly scientific only after higher mathematics and theoretical physics were employed to supplement, interpret, and extend the findings of the telescope and spectroscope The special and general theories of relativity formulated by Albert Einstein directed physical concepts away from a three-dimensional interpretation of physical space and toward an interpretation of events as against a four-dimensional space-time background Einstein presented a work on cosmology (1917) which greatly stimulated other studies He conceived of space as unlimited by finite in extent, the total volume of the universe was finite in amount, and space was bent back upon itself and therefore was curved Willem de Sitter was led from a consideration of the relativity theory to postulate that remote celestial bodies are receding in space Einstein conceived of the universe as filled with matter but static or devoid of motion, while De Sitter's concept was of an empty universe in which dynamic forces operated Abbé Georges Édouard Lemaître propounded a solution lying between the two extremes, he showed that the Einstein universe was unstable, and he set forth a theory of the "expanding universe" closely suggestive of the theory for which later investigators presented evidence Sir Arthur S Eddington and H P Robertson are among the others who have contributed to an understanding of the theory Considerable controversy has arisen between its opponents and proponents In general, the theory holds that there is a constant recession of the nebulae, they are, however, not receding just from our solar system but all members of the universe are moving farther from each other, i e , the whole universe is expanding Spectroscopic studies reveal that there is a displacement of certain lines toward the red end of the spectrum of the spiral nebulae This characteristic is known as the "red shift " The extent of the red shift increases with the distance of the nebulae from the earth It follows, then, that the external galaxies are moving away from our galaxy with a velocity approximately proportional to their distance from us Some scientists deny the possibility that the red shift is an indication of motion, and various other interpretations have been proposed to explain it. Many scientists agree, however, that the universe is continually expanding and that it is probably a finite rather than an infinite universe Attempts to explain the origin of the members of the universe are the province of COSMOGONY. See Sir Arthur S. Eddington, *The Expanding Universe* (1933), Sir James H Jeans, *The Universe around Us* (4th ed , 1944)

university, corporation for the conservation, dissemination, and advancement of learning, consisting of a group of schools, faculties, or colleges Universities arose in the 12th and 13th cent in response to growing demands in the professions of law, theology, and medicine and to increasing knowledge following the rediscovery of Aristotle and of Arabian commentaries on Aristotle and the study of the liberal arts Of the earliest universities, Salerno (9th cent) and Montpellier (13th cent) specialized in medicine, Bologna (1088) in law, and Paris (12th cent) in theology. The organization at Bologna originated among students, at Paris masters formed guildlike corporations independent of, and frequently in conflict with, the city Students were originally organized according to "nations," but their powers within the university diminished as the faculty machinery took form in connection with the teaching and graduation system The development of colleges as administrative and residence units further modified the earlier forms of organization In the Middle Ages universities originated through migrations of students from other universities—as did Oxford (12th cent), Cambridge (12th cent), and Leipzig (1409)—or through royal or ecclesiastical initiative Leading institutions often had many thousands of students, including boys from 12 to 15 and mature men The medieval universities played an important role in public affairs, and they were represented at the great church councils of the 15th cent Universities have multiplied enormously and spread throughout the world Among the most famous foundations are Salamanca (c 1230), Prague (1348), Vienna (1365), Uppsala (1477), Leiden (1575), and Moscow (1755) The oldest universities in the New World are Mexico (1551) and San Marcos of Lima (1551) Occasionally political purposes influenced the founding of universities, as at Bordeaux, at Caen, and in many German provinces In the 19th cent many governments reorganized and nationalized universities, as in Italy after 1870, in Spain in 1876, and in France, where 17 autonomous regional universities were established after 1896 The earliest colleges in the United States—Harvard (1636), William and Mary (1693), Yale (1701), Princeton (1746), Columbia (1754)—were founded by religious groups, but the movement for free public education led to the establishment of 21 state universities by 1865 By 1900 many universities were secularized in administration and curriculum, and religious tests had been largely eliminated (in England by act of Parliament in 1871) There has also been a growing popularization of university study, stimulated by extension movements originating at Cambridge (1872), at Chicago (1892), and at Columbia (1903) and by the admission of women to the universities, which became a general practice after 1870 In the modern university there have been many innovations in methods of instruction, such as the replacing of the disputation by the use of books and the preparation of theses, the elective system, seminars, graduate schools, and the use of laboratories The role of universities in scientific and technical research has increased in the 20th cent Many institutions have expanded their functions to serve demands arising from modern social and economic life, and they have come to vary considerably in organization and number of faculties Modern cooperation among universities is reflected in the University Bureau of the British Empire and the Association of American Universities In the 1930s a movement to stress the humanities rather than technical training in colleges was stimulated by R M Hutchins's *Higher Learning in America* (1936) The Servicemen's Readjustment Act of 1944 (known as the G I Bill of Rights) enabled American veterans to study for four years at any approved college or university, with a subsistence allowance and books and tuition supplied, this provision has greatly extended the number of young people to whom higher education is available and has been of great advantage to the institutions of learning See Abraham Flexner, *Universities, American, English, and German* (1932), D G Tewksbury, *The Founding of American Colleges and Universities before the Civil War* (1932), H S Canby, *Alma Mater* (1936); Hastings Rashdall, *Universities of Europe in the Middle Ages* (new ed , 3 vols , 1936), Norman Foerster, *The American State University* (1937), Mark Van Doren, *Liberal Education* (1942), Lynn Thorndike, *University Records and Life in the Middle Ages* (1944); Jacques Barzun, *The Teacher in America* (1945), A J Brumbaugh, ed , *American Universities and Colleges* (5th ed , 1948); M M Chambers, ed , *Universities of the World outside U S A* (1950).

University City, suburban city (pop ,33,023), E Mo., near St. Louis, inc 1906

university press, publishing house associated with a university and nearly always bearing the university's name in its imprint There is no unanimity of opinion among the American university presses concerning the aims and purposes of the institution Much time and many words have been spent in efforts to define them It is generally agreed that the university press is normally a specialized publishing house emphasizing serious books, monographs, and periodicals which aid in the dissemination of knowledge to scholars and to well-informed laymen The first English-language university presses were those of Oxford and Cambridge, both of which were officially established by the end of the 16th cent These two presses differ basically both in scope and in nature from American university presses Both presses have enjoyed since the 17th cent a monopoly in Great Britain on the publication of the Bible and the Book of Common Prayer granted them by royal charter, giving them a financial resource such as no university press in North America enjoys The younger British university presses (e g , London, Manchester, and Liverpool) are not unlike their American brethren Some American university presses were started in order to centralize the printing and publishing needs of the university They frequently had (as many do now) printing plants to issue the official bulletins of the university and also student and alumni publications Others began with the express aim of publishing the scholarly works of the university's faculty, often arranging for the manufacture and distribution of the books to be handled by commercial publishing houses The first use of the term "university press" in the United States was at Cornell Univ in 1869 This venture, like the one begun at the Univ of Pennsylvania the following year, failed in its early efforts (the presses operating at these universities today were started in 1930 and 1920, respectively), and the oldest American university press in continuous existence is the Johns Hopkins Press (1878), which was followed in 1891 by the Univ of Chicago Press and in 1893 by Columbia Univ Press and the Univ of California Press By 1920 there were recognized presses at the following universities Toronto (1901), Fordham (1907), Yale (1908), Univ of Washington (1909), Princeton (established in its present form 1910), Loyola (1912), Harvard (1913), New York Univ (1916), and Univ of Illinois (1918) In 1935 there were 17 university presses which published five or more books, and they published 6 per cent of all the books produced by publishers in that category By 1940 there were 22 university presses included in the group, and they were responsible for a larger percentage (6 4) of the publications of that group Similarly in 1949, 30 university presses published 7 2 per cent of the books put out, in that year in addition to the presses listed above, university presses included those of Duke Univ , the Univ of Georgia, Iowa State College, Louisiana State Univ , the Univ of Michigan, the Univ of Minnesota, the Univ of Nebraska, the Univ of New Mexico, the Univ of North Carolina, the Univ of Oklahoma, Rutgers Univ , Stanford Univ , and the Univ of Wisconsin and the University Press in Dallas This statistical growth was accompanied, especially in the larger presses, by a broadening of scope University presses undertook more and more to present the results of scholarly research to laymen, to encourage regional literature, and to supply texts for new educational programs of the universities Their growth was phenomenal, and they rapidly expanded into many fields, some even publishing regional novels and juveniles In the early 1920s the American Association of University Presses came into being, and in 1937 it was given formal organization The association conducted (1948–49) a survey of its 35 member presses, upon which was based Chester Kerr's *Report on American University Presses* (1949)

Unknown Soldier A memorial to the American dead of the First World War is in ARLINGTON NATIONAL CEMETERY, Arlington, Va , overlooking the Potomac and, beyond, Washington, D C An unidentified soldier who had been killed in France was buried in a temporary crypt (Nov 11, 1921), over which a marble slab was placed The completed tomb, a sarcophagus of Colorado marble placed on the original base that stands in front of the amphitheater, was dedicated Nov 11, 1932 A tree-lined avenue leads from a balustrade to a flight of steps which approach the tomb Most of the nations that participated in the First World War have memorials to an unknown soldier, the best known are those in Westminster Abbey in London and under the Arc de Triomphe in Paris, where a perpetual flame is kept burning There are innumerable memorials to the war dead more or less associated with the tombs of

unknown soldiers. Especially notable is the cenotaph in Whitehall, London Services honoring the unknown soldiers are usually held on Armistice Day (Nov 11)

unlawful assembly: see RIOT, ROUT, AND UNLAWFUL ASSEMBLY

Unna (ōō'nä), city (pop 23,007), Westphalia, NW Germany, E of Dortmund It is a coalmining center of the Ruhr district and has metallurgical plants. One of the oldest Westphalian cities, Unna was founded by Charlemagne It has a 14th-century castle.

Unni (ŭ'nī) [Heb ,=depressed] **1** Temple musician 1 Chron 15 18,20 **2** Family in the return of Zerubbabel. Neh 12 9

UNRRA: see UNITED NATIONS RELIEF AND REHABILITATION ADMINISTRATION

Unruh, Fritz von (frĭts' fŭn ōōn'rōō), 1885–, German dramatic poet Son of a Prussian general, he was himself an officer in the First World War His early expressionist plays include *Offiziere* (1912), *Louis Ferdinand prinz von Preussen* (1913), *Ein Geschlecht* [a family] (1916), and its sequel, *Platz* (1920) The prose epic *Opfergang* (written 1916 at Verdun, pub 1918, Eng tr , *The Way of Sacrifice*, 1928) is powerful anti-war propaganda The drama *Bonaparte* (1927, Eng tr , 1928) was a warning against the dictatorship which Unruh foresaw and which led to his departure from Germany, he returned, however, in 1947 at the invitation of the mayor of Frankfurt Other works include *The End Is Not Yet* (Eng tr , 1947), a novel about Nazism Unruh was the recipient of the Kleist and Schiller prizes and, during his stay in New York, of the Wilhelm Raabe Prize

Untermeyer, Louis (ŭn'turmīur), 1885–, American poet and anthologist, b New York city Perhaps unjustly, he is known best for his anthologies, the famous *Modern American Poetry* (1919, 7th ed 1950) and *Modern British Poetry* (1920, 6th ed , 1950), *This Singing World* (1923), which is for children, and many others He is a poet in his own right and as an erudite and clever parodist is best represented in his *Selected Poems and Parodies* (1935) His masterly translation of Heinrich Heine's poems and a biography appeared in 1937 He has also written prose, including *The Donkey of God and Other Stories* (1932), and several volumes of criticism See his autobiography, *From Another World* (1939) His first wife was **Jean Starr Untermeyer**, 1886–, poet, b Zanesville, Ohio Her volumes of poetry include *Steep Ascent* (1927) and *Love and Need* (1940)

Untermyer, Samuel, 1858–1940, American lawyer and civic leader, b Lynchburg, Va , grad Columbia School of Law, 1878 Over a period of years he gained fame as a lawyer and took part in some of the country's most important litigation He served as counsel to the Pujo committee of Congress which investigated (1912) money trusts and to the Lockwood committee of the New York legislature, which probed (1921–22) state-wide housing conditions As special counsel until 1933 in the famous New York city transit suits, he helped maintain the five-cent subway fare Untermyer became a staunch advocate of government ownership of railroads, stock-market regulations, and various legal reforms A leading crusader against anti-Semitic propaganda, he was active in the movement to boycott Germany after Hitler rose to power

Unterwalden (ōōn'turvaldŭn), canton, Switzerland A mountainous, forested, and chiefly pastoral region, it is divided into the half-cantons of Obwalden (190 sq mi , pop. 20,340), in the west, with the capital at Sarnen, and Nidwalden (106 sq mi , pop 17,348), in the east, with the capital at Stans In 1291 Unterwalden formed with the cantons of Uri and Schwyz a league which became the nucleus of the Swiss Confederation (see SWITZERLAND) The inhabitants are German-speaking and Catholic

untouchables: see CASTE

Unwin, Sir Raymond (ŭn'wĭn), 1863–1940, English architect and town planner He designed the first English garden city near Letchworth, the New Earwick development in Yorkshire, and Hampstead Garden suburb near London He lectured on housing and city planning at the Univ of Birmingham (1911–14) and at Columbia Univ (1936–40). After the First World War he served in the ministry of health as housing chief and was president (1931–33) of the Royal Institute of British Architects His *Town Planning in Practice* (1909) is a standard work in its field Unwin was knighted in 1932.

Upanishad: see VEDANTA

upas tree (ū'pus) [from Malay,=poison tree], East Indian tree (*Antiaris toxicaria*) of the mulberry family Although reputed to be so poisonous as to kill men or animals approaching within a wide radius of it, it has been cultivated without harmful results. The poisonous milky juice has been used for tipping arrows, and the fiber of its inner bark for making cloth. The name has been applied also to an East Indian tree or shrub (*Strychnos tieuté*) which yields a milky juice also used as an arrow poison

Updike, Daniel Berkeley (ŭp'dīk"), 1860–1941, American printer and historian of typography, b. Providence, R.I. At the Merrymount Press, which he founded in 1893 in Boston, his stated purpose was "to do common work well" Here, the excellence of his printing inspired and instructed other printers At Harvard Univ he taught the first college course in the United States on the history of type and the practice of printing. To the knowledge of a master printer he added the care and scope of the scholar in his books. *Printing Types Their History, Forms, and Use* (1922, 2d ed , 1937) is the standard work on the subject and a basic book for all interested in the graphic arts Other works include *In the Day's Work* (1924) and *Some Aspects of Printing* (1941) See G P. Winship, *Daniel Berkeley Updike and the Merrymount Press* (1947), *Updike. American Printer and the Merrymount Press* (1948), a symposium

Upernivik (ōōpĕr'nūvĭk), settlement (pop 321) and colony district (pop 1,443), W Greenland, on a small island in Baffin Bay, just off the mainland coast A sealing and whaling base, it has a radio station There are notable bird cliffs and graphite deposits in the vicinity

Uphaz (ū'făz), country known for its gold It is perhaps a variant of OPHIR Jer 10 9, Dan 10 5.

upholstery, general term for household fittings, hangings, curtains, cushions, and covers In particular it refers to stuffed, padded, and spring-cushioned furniture such as chairs and sofas or to the materials and fabrics that compose them The first furniture upholstery was probably leather, stretched on without padding Italian Renaissance chairs are cushioned with leather, velvet, or embroidery, French chairs are ornate with tapestries and embroideries, England used some upholstery in Elizabethan and Jacobean reigns Springs are comparatively modern Such fillings as hair, fiber, flock, down, and kapok are used for padding in modern upholstery, and woven fabrics, tapestries, plastics, and leather for coverings

Upjohn, Richard, 1802 78, American architect, b England He came to the United States in 1829. A skilled cabinetmaker and draughtsman, he lived first in Manlius, N Y , and then in New Bedford, Mass , where he set himself up as an architect His first commission (1833) was a private house (now Symphony House) in Bangor, Maine He had executed St John's Church, Bangor (1836–39), and several smaller commissions when in 1839 he was engaged to rebuild Trinity Church, New York city. He moved to New York at that time and established an office there The new Trinity Church, completed in 1846, was carefully modeled on English examples and inaugurated a new phase in the Gothic revival Upjohn designed the old St. Thomas's Church in New York (later burned), several churches in Brooklyn, the chapel of Bowdoin College, other smaller Gothic churches, and many residences He was a founder of the American Institute of Architects and its first president (1857–76) His son, Richard Michell Upjohn (1828–1903), was associated with his father See E M Upjohn, *Richard Upjohn, Architect and Churchman* (1939)

Upland. 1 City (pop 6,316), S Calif , E of Los Angeles, near San Antonio Peak in the San Gabriel Mts , inc 1906 It is the packing center of a citrus-fruit region **2** Borough (pop 2,431), SE Pa , W of Philadelphia, inc 1869 The house of Caleb Pusey, built in 1683, is said to be the oldest English building in the state

Upolu (ōōpō'lōō), volcanic island (430 sq mi , pop. 42,764), Western SAMOA It is under New Zealand mandate and is the most populous of the Samoan islands Vaasfetu (3,608 ft) is the highest peak, the fertile soil yields cacao, rubber, bananas, and coconuts Apia, the seat of government, is the only port visited by liners Saluafata is a U S naval station and harbor The home of Robert Louis Stevenson, VAILIMA, is on Upolu

Upper Arlington, city (pop 5,370), central Ohio, near Columbus

Upper Austria, Ger *Oberösterreich* (ō'burŭ'sturĭkh), autonomous province of *Bundesland* (4,625 sq mi , pop 1,137,528), N Austria, bordering on Czechoslovakia and Germany Linz is the capital Upper Austria is drained by the Danube and two of its tributaries, the Enns and the Traun, and includes a large part of the SALZKAMMERGUT resort area. Agriculture is the chief occupation It was created a duchy in 1156 and given to the dukes of Austria

Upper Avon. see AVON 3, river, England

Upper Palatinate, Germany see PALATINATE

Upper Sandusky (săndŭs'kē), village (pop 3,907), co seat of Wyandot co , N central Ohio, on the Sandusky and NW of Marion, laid out 1843 Its manufactures include dairy products, steam pumps, and metal and clay products The first Methodist Episcopal mission in Ohio was built here c 1823.

Upper Volta (vōl'tu), Fr *Haute-Volta* (ōt-vôltä'), overseas territory (105,000 sq mi , pop. c 3,000,000), French West Africa The capital is Ouagadougou Upper Volta is bordered on the south by the Gold Coast It is mainly high savanna with good farming and ranching country. Cattle, sheep, and goats are raised, and hides and skins are exported. Peanuts, sisal, cotton, and sesame are the main cash crops There are fine native crafts, including tinsmithing and leatherworking. The area was conquered in 1896, and it was organized as a separate territory in 1919. In 1932 it was partitioned among the Ivory Coast, Sudan, and Niger, but in 1947 it was reconstituted as an overseas territory of France and was given representation in the national parliament.

Uppingham (ŭp'ĭng-um), village, Rutland, England It is the site of Uppingham School, founded in 1587, a public school for boys.

Uppland (ŭp'land), historic province of central Sweden It is now administratively divided among UPPSALA, VASTMANLAND, and STOCKHOLM counties

Uppsala (ŭp'sălu, ōōpsä'lä), county (1,977 sq mi , pop 146,415), E central Sweden, N of Lake Malar It comprises the western part of the historic province of Uppland Uppsala is the county seat. A well-cultivated region, it has a large lumber industry and important iron mines and works

Uppsala, city (pop 46,547), co seat of Uppsala co., E central Sweden, NNW of Stockholm It is the seat of the Lutheran primate of Sweden and of the oldest Swedish university, founded in 1477 during the regency of Sten Sture the Elder The city grew up near Old Uppsala, now a village of some 700 inhabitants, which was the pagan capital of Sweden in the 9th cent The archiepiscopal see was established in 1270, and the cathedral of Uppsala, built in the 13th cent , became the usual coronation place of the Swedish kings King Gustavus I, Linnaeus, and Swedenborg are buried in the cathedral The Univ of Uppsala has ranked among the world's great universities since its reorganization in 1595 Its library contains more than 1,000,000 volumes and invaluable manuscripts, notably the Codex argenteus of ULFILAS Other institutions include the Royal Society of Sciences, the Victoria Museum, and the Linnaean Museum

Upsala College: see EAST ORANGE, N J

Upshur, Abel Parker (ŭp'shur), 1790–1844, American cabinet officer, b Northampton co , Va. After study at Yale and Princeton, he read law, was admitted (1810) to the bar, practiced law in Richmond, Va , and held state offices When most of the Whig cabinet resigned in disagreement with President John Tyler, Upshur was in 1841 appointed U S Secretary of the Navy When Daniel Webster resigned, he succeeded Webster and was Secretary of State (1843–44) Upshur played an important role in the moves for the annexation of Texas He was killed by the explosion of a cannon on the battleship *Princeton* The incident for the first time stressed the need of some law of succession in the event of wholesale death of high U S officials Upshur was succeeded to office by John C Calhoun

Upton, town (pop 2,249), S Mass , SE of Worcester, settled 1728, inc 1735

Ur (ûr), ancient city of Sumer, S Mesopotamia The city is also known as Ur of the Chaldees It was an important center of Sumerian culture (see SUMER) and is identified in the Bible as the home of Abraham This great city, the origin of which dates from an indeterminate period in remotest antiquity, disappeared from historical records sometime in the 4th cent B C , and eventually even its site was covered by sand and forgotten Though the location of the city was rediscovered in the 19th cent , not until the careful and thorough excavations conducted under the leadership of C Leonard Woolley had been made could a partial account of its history be constructed Though any statement about the city's beginnings must be still partly conjecture, there is evidence that Ur existed prior to a great flood, which was probably the flood of the biblical account It was a flourishing place by 3500 B C , and its first dynasty of kings (c 3200), which ruled for 177 years, inherited a rich culture from the past After this dynasty came a long period of which practically nothing is known except that a second dynasty rose and fell Ur was captured (c 2800) by Sargon This marks an important step in the blending of Sumerian and Semitic cultures A new dynasty was established (c 2300) under Ur-Nammu (Ur-Engur), who built the great ziggurat which stood, crumbling and covered with sand, throughout the centuries Known later to the Arabs as Tell al-Muqayyar [mound of pitch], it stood out above the level desert and led to the rediscovery of the city Ur continued to be a great commercial city on the Euphrates, and the kings of the third dynasty ruled a large area It fell to the Elamites and later to Babylon and was destroyed and rebuilt throughout the years by various kings and conquerors, including Nebuchadnezzar in the 6th cent. About the middle of the 6th cent , Ur went into a decline from which it never recovered A record dated 324 B.C mentions it (by another name) as being inhabited by Arabs, but by this date its existence as a great city was forgotten. The Euphrates, which was the source of its wealth, probably also, by changing course, caused the city's final decline. Ur is mentioned often in the Bible Gen. 11.28,31, 15.7; Neh. 9 7. See C. J. Gadd, *History and Monuments of Ur* (1930); C. L Woolley, *Ur of the Chaldees* (1930).

Ural (yōō'rŭl, Rus. ōōräl'), river, 1,523 mi. long, RSFSR and Kazakh SSR, part of the conventional

geographic border between Europe and Asia. It rises in the S Urals and flows south, then west, then south again, passes Magnitogorsk, Chkalov, and Uralsk, and enters the Caspian Sea near Guryev after traversing a dry steppe region. Its mouth forms a small delta. It is navigable up to Uralsk and occasionally up to Chkalov. Northbound shipments include petroleum and fish, southbound shipments include grain and livestock. The river has extensive fisheries and is the chief source of water supply for the W Kazakh steppe

Ural-Altaic (yo͝or'o͞ol-ăltā'ĭk), designation of a hypothetical grouping of certain important language families of Europe and Asia—Finno-Ugric, Samoyede, Turkic (or Turco-Tataric), Tungusic or Tunguzic, and Mongolian. The Finno-Ugric and Samoyede families form the Uralian stock. This is a well-established relationship and is not disputed. While the other three families, the so-called Altaic languages, show resemblances to one another, no clearly convincing evidence of relationship has been adduced. It is even more doubtful that any of them is related to Uralian

Urals or **Ural Mountains**, mountain system, USSR, forming, together with the Ural river, the traditional boundary between Europe and Asia. It extends for c.1,300 mi. north and south from the Arctic Ocean to the westward bend of the Ural river, and it is commonly divided into the N Urals (north of lat. 61° N), the central Urals (between lat. 61° N and lat. 55° N), and the S Urals (south of lat. 55° N). The northern section, a rocky, treeless chain rising from the tundra, has the highest peaks of the entire system—Naroda (6,184 ft.), Telpos-Iz (5,558 ft.), and Sablya (5,407 ft.). The central section has many low passes and is traversed by the Trans-Siberian RR at an altitude of only 1,345 ft. The southern section consists of several parallel ridges and rises to 5,377 ft. in the Yaman-Tau. The Urals form the watershed between the Pechora and Volga basins on the west and the Ob-Irtysh basin on the east; they also are a climatic barrier, barring access into Siberia of the moderating air masses of Atlantic origin and thus contributing to the extreme variability of the continental Siberian climate. They are densely forested (except in the north), and they contain some of the world's richest mineral deposits, particularly iron, manganese, nickel, chrome, copper, platinum, gold, bauxite, asbestos, precious stones, coal, and petroleum. Known to medieval Russia as the Stone Belt, the Urals were reached by fur traders from Novgorod in the 12th cent., and the northern section was made a colony of Novgorod. The original population consisted of Finnic and Turkic tribes, such as the Komi and the Bashkirs, who still survive in adjacent regions to the west. Russian colonization on a large scale began only in the 16th cent. under under Ivan IV. The first ironworks were established in the 17th cent., and metallurgy was greatly encouraged by Peter I in the early 18th cent. By the 19th cent., however, the industrial importance was eclipsed by that of the Ukraine, and it was only with the First Five-Year Plan (1929–34) that the tremendous industrial development of the Urals began. Huge industrial centers were created at SVERDLOVSK (formerly Ekaterinburg), MAGNITOGORSK, NIZHNI TAGIL, MOLOTOV (formerly Perm), and CHELYABINSK. American, English, and other foreign engineers were active in the initial stages of the industrialization program. This was largely made possible by the development of the coal reserves of the KUZNETSK BASIN in Siberia, and later of the KARAGANDA basin, for the Urals lack adequate coking-coal reserves. Coal was shipped by rail over 1,400 mi. from the Kuznetsk Basin, which in turn received ores from the Urals. In more recent years, however, the Kuznetsk Basin became increasingly self-sufficient as a result of the exploitation of its own iron reserves, while the Urals have remained largely dependent on Karaganda coal. Increasing use is made of hydroelectric power and of Ural coal mixed with better grades. In the Second World War entire industries were transplanted from the west to the Urals, where they largely remained. The recent development of the PECHORA coal basin and of oil fields E of the Volga will probably contribute to the continued growth of the Ural industrial region. The strategic situation of the Urals in the heart of the USSR favors that development

Uralsk (yo͝orälsk', Rus. o͝orälsk'), city (pop. 66,201), capital of West Kazakhstan oblast, Kazakh SSR, on the Ural river. It is the center of an agricultural area. Founded in the early 17th cent. as a Cossack settlement, it was named Yaitski Gorodok until 1775. It played an important role in the uprisings under Stenka Razin and Pugachev

Urania (ūrā'nēə) [Gr., =celestial], in Greek religion. 1 See MUSES. 2 Manifestation of APHRODITE as goddess of the heavens, patroness of pure and heavenly love

uraninite: see PITCHBLENDE

uranium (ūrā'nēəm), hard silver-white, radioactive metallic element (symbol=U; for physical constants, see ELEMENT, table). Discovery of the element is commonly credited to M. H. Klaproth. In 1789, while experimenting with pitchblende, he concluded that it contained a new element the name for which he derived from that of the planet Uranus. The substance that Klaproth prepared was not the pure element but was an oxide of uranium. This was not discovered until 1841, when E. M. Péligot isolated pure uranium. In 1896 A. H. Becquerel discovered the property now known as radioactivity which is displayed by uranium. Its isotopes include uranium with atomic weights of 235, 238, and 239. Uranium of atomic weight 238 is the parent substance of the uranium series, the series of elements produced by successive disintegrations, i.e., spontaneous emissions of particles; radium occurs in the series, and the final product is lead of atomic weight 206. Uranium and other radioactive elements disintegrate at a measurable rate, and the lead, which is the end product of the disintegration, accumulates in the rock. Since the rate of change has been determined, the age of the uranium mineral can be calculated after ascertaining, by chemical analysis, the ratio of lead to uranium. Uranium occurs in ores, especially in PITCHBLENDE and carnotite. Carnotite is composed of oxides of vanadium, uranium, and potassium. It usually occurs, often in cavities of rocks, as a lemon-yellow crystalline powder; it crystallizes in the orthorhombic system. Colorado and Utah are among the chief sources of the mineral. Uranium forms two groups of salts known as uranous and uranyl salts. Until the U.S. government limited the use of uranium, its compounds, especially the oxides, were used in making various products. Yellowish-green fluorescent glass and pottery having either a certain shade of red or a yellowish tinge owed their color to uranium. Uranium became a strategic material with the discoveries that the nucleus of the uranium atom of atomic weight 235 can be split to release ATOMIC ENERGY or nuclear energy and that uranium of atomic weight 238 can be used to produce plutonium, also a fissionable material

Uranus (ūrā'nəs, yo͝o'rənəs) [Gr., =sky, heaven], in Greek religion, sky-god, first ruler of the universe, son of GAEA, the earth-goddess. He was father of Gaea's children, the Titans, the Cyclopes, and the Hecatoncheires. Fearing that his children would rebel against him, he imprisoned them, but Cronus, a Titan, wounded him and took away his power. From the blood of Uranus which fell on the earth sprang the Erinyes and the giants, while from the blood which fell in the sea arose Aphrodite

Uranus, in astronomy, the planet next to Saturn in order of distance from the sun, i.e., seventh from the central body of our solar system. It was the first member of that system to be discovered in modern times, as all the planets with orbits lying within its own were known from antiquity. William HERSCHEL, at Bath, England, in 1781, discovered it to be a planet, after having first announced it as a comet. The names Georgium Sidus, given by the discoverer, and Herschel were abandoned for Uranus, suggested by J. E. Bode. The mean distance of the planet from the sun is 1,782,700,000 mi., about 19 times that of the earth. It revolves round the sun in a nearly circular orbit in a period slightly more than 84 years. The diameter is given as approximately 30,878 mi., and the form of the planet is probably considerably flattened at the poles. The period of rotation is about 10 hr. 45 min. The density of Uranus is less than one quarter that of the earth, its mass 14.7 times as great as the earth's. The planet receives from the sun about $^1/_{90}$ of the light and heat that the earth does. In reflecting power it is nearly the same as Jupiter and Saturn, and its spectrum resembles theirs. Uranus is attended by four known satellites, called Titania, Oberon, Ariel, and Umbriel. Discovery of a fifth satellite was reported in 1948. Study of the motion of Uranus revealed irregularities that eventually led to the discovery of the planet NEPTUNE

Urartu (o͝orär'to͞o), ancient kingdom of ARMENIA, centered about VAN and sometimes called the Vannic kingdom. More familiar is the Hebrew form of the name, Ararat. Not too much is known about the large state, which flourished from the 13th cent. to the 8th cent. B.C. The agricultural and commercial civilization was on a high material level, and Urartu was powerful. The Assyrians repeatedly attacked it but never completely subdued it. Sargon's invasions late in the 8th cent., however, prepared the way for the downfall and disappearance of Urartu or Ararat in the late 7th cent. B.C. The so-called Vannic inscriptions were supplemented by archaeological findings in 1939 to supply knowledge of Urartu's history

Urawa (o͝o'rä'wä), city (1940 pop. 59,671, 1947 pop. 106,176), capital of Saitama prefecture, central Honshu, Japan. It is principally a residential city. Other centers in Saitama prefecture include Kawagoe and Kawaguchi

Urban II, c.1042–1099, pope (1088–99), a Frenchman named Odo (or Eudes) of Lagery, successor of VICTOR III and predecessor of PASCHAL II. He studied at Rheims and became a monk at Cluny. He went to Rome, as prior of Cluny, early in the reign of St. GREGORY VII. The pope kept him there, finding in Odo one of his ablest assistants in the great reform, he made him cardinal and bishop of Ostia. Odo worked especially as legate in Germany. When he was elected pope, the cause of reform seemed hopeless, but, undaunted, Urban began work in the lands that recognized him, those of the Normans (S Italy), of the Countess Matilda (Tuscany), and the Lombard cities. He could scarcely live in Rome until 1093, when the antipope (GUIBERT OF RAVENNA) had finally lost out. Urban's method and activity was to travel about, summoning great councils of the whole population, to advertise and gain popularity for the reforms. The principal councils were at Piacenza (March, 1095), Clermont (Nov., 1095), Rome (1097), Bari (1098), and Rome again (1099). At Clermont, Urban preached a sermon which brought forth the First Crusade (see CRUSADES). At Bari the reunion of East and West was the theme, St. Anselm was the apologist for the West. Urban's resolute condemnation of Philip I of France in the matter of Philip's repudiating his wife exemplifies his fearlessness. Without Urban's work most of Gregory's reform movement would probably have been ephemeral. Urban was beatified in 1881

Urban III, d. 1187, pope (1185–87), a Milanese named Uberto Crivelli, successor of LUCIUS III and predecessor of GREGORY VIII. He retained his archdiocese of Milan during his pontificate. Urban continued with vigor the dispute with Emperor FREDERICK I, aggravated and made much more serious for the Church by the marriage of Frederick's son Henry (Henry VI) to Constance, Norman princess of Sicily. The dispute over the estates of Countess MATILDA went on as before

Urban IV, d. 1264, pope (1261–64), a Frenchman (b. Troyes) named Jacques Pantaléon, successor of ALEXANDER IV and predecessor of CLEMENT IV. In the pontifical service he was sent on missions into N Germany, then he was made bishop of Verdun (1253) and Latin patriarch of Jerusalem (1255). On his election he inherited the struggle between the Hohenstaufen and the Church, and in his vigor (and success) he resembled more Innocent IV than he did Alexander. Urban it was who dealt the Hohenstaufen the fatal stroke by renewing definitively the offer of the Sicilian throne to Charles of Anjou, thus striking against MANFRED. Urban restored the papal finances to solvency. He created seven French cardinals, a high number, but the Italians remained in the majority in the sacred college until the creations of Clement V. Urban established the feast of Corpus Christi

Urban V, 1310–70, pope (1362–70), a Provençal named Guillaume de Grimoard, successor of INNOCENT VI and predecessor of GREGORY XI. He was a Benedictine and was renowned for his knowledge of canon law. Under Clement VI and Innocent, Guillaume was papal legate in several missions, and he was in Italy at the time of his election by the cardinals at Avignon, where the popes had been residing for 50 years. The great event of Urban's pontificate was the abortive attempt to return the papacy to Rome. Cardinal ALBORNOZ had succeeded in reconquering the Papal States—as it were to prepare for the return—and agitation by holy people for the restoration of the Holy See was increasing. Urban left Avignon in 1367 and arrived in Rome a month later. The return made a great impression in the world. In 1368 the emperor came to visit. But the city itself was disorderly, and Albornoz's death removed the best incentive to order. In 1370 Urban, disturbed by the new war between France and England and urged by the constant commotion in the city, returned to Avignon to try to end the war. He died shortly afterwards. Urban was devoted to education. He founded universities at Orange, Cracow, and Vienna, helped other universities, and financed 1,400 students. He lived a monk's life always and was beatified in 1870

Urban VI, 1318?–1389, pope (1378–89), a Neapolitan named Bartolomeo Prignano, successor of GREGORY XI and predecessor of BONIFACE IX. He was made archbishop of Acerenza (1364) and of Bari (1377). On the death of Gregory the conclave met under the most unfavorable circumstances. It was divided into factions, and it was intimidated by the threatening Roman mob, which kept shouting for a Roman or an Italian, lest the papacy return to Avignon. A majority of cardinals was French. At the suggestion of Cardinal de LUNA, Prignano was elected. Urban, before his election peaceable and modest, now became upbraiding and harsh and alienated all the cardinals. They went to Anagni, then to Fondi, and declared Urban's election invalid as they had been intimidated. With the consequent election of a new "pope," ROBERT OF GENEVA (antipope Clement VII), began the Great SCHISM. Urban was recognized from the first by most of Italy and Germany, by Flanders, and by England and English territories. Until 1380 St. Catherine of Siena lived at Rome, working for Urban's recognition. Urban alienated his political allies by his behavior, he probably murdered five cardinals (he had created a new sacred college) who plotted against him and thus horrified all Europe. Many hold that he was insane. This election is now generally considered canonical.

Urban VIII, 1568–1644, pope (1623–44), a Florentine named Maffeo Barberini, successor of Gregory XV and predecessor of Innocent X Throughout his pontificate the Thirty Years War raged in Germany Urban gave little help to the Catholics, because a Catholic nation, France, was supporting the other side The old story that Urban rejoiced at Protestant victories because he hated the Hapsburgs is, however, false His policy in Italy was unsuccessful, and he was humiliated by defeat at the hands of the Farnese of Parma Urban was very active in church affairs he published the revised breviary, normalized liturgical practice, canonized many saints, instituted new orders, and continued the reformation of the Church He built and decorated extensively in Rome Urban sanctioned the condemnation of Galileo, and later freed him Urban's strict legislation against easy acceptance of miracles is still in effect

Urban, Joseph Maria (ûr'bun), 1872–1933, American architect and stage designer, b Vienna He won distinction with his architectural work, including the bridge across the Neva at Leningrad, and with his decoration work at the Paris exposition, 1900 At the St Louis exposition, 1904, he decorated the Austrian building He moved to the United States in 1911 and was naturalized in 1917 He was successful as art director and designer of stage sets, among them sets for *Othello*, *Tristan and Isolde*, *Parsifal*, the *Ziegfeld Follies*, and *The Garden of Paradise* Urban was art consultant for the Chicago Century of Progress, held in 1933–34, and created a panorama for the New York state exhibit for that exposition

Urbana (ûrbă'nù) **1** City (pop 14,064), co seat of Champaign co, E central Ill, ENE of Springfield and adjoining CHAMPAIGN, with which it is allied economically, settled 1822, inc 1833 It is a trade center in a rich farm area and is known as the seat of the Univ of Illinois (see ILLINOIS UNIVERSITY OF) A tablet in the courthouse commemorates a speech made by Lincoln in 1854 against the Kansas-Nebraska Bill **2** City (pop 8 135), co seat of Champaign co, W central Ohio, N of Springfield, laid out 1805, inc 1868 It is in a rich farm and livestock area, with factories processing metal, wood, and food products The city is the seat of a junior college The soldiers' monument was done by John Quincy Adams Ward, who was born here Simon Kenton is buried in Oakdale Cemetery Near by are the Ohio Caverns

Urbandale, town (pop 1,083), central Iowa, a suburb of Des Moines, settled 1901, inc 1917

Urbane, Roman Christian Rom 16 9

Urbino (o͝orbē'nō), town (pop 5,459), the Marches, central Italy, 19 mi SW of Pesaro From the 12th to the 16th cent it flourished under the Montefeltro family, then (1508–1626) under the dukes Della Rovere The court of Federigo da Montefeltro, 2d duke of Urbino, was a great artistic center The early Renaissance ducal palace was built and decorated by some of the best artists of the time The city was noted for its school of painting (15th–17th cent) and for the manufacture of majolica ware Raphael was born here

Urchard, Sir Thomas. see URQUHART, SIR THOMAS

Urdu (o͝or'do͞o), language of the Indu group of the Indo-Iranian subfamily of Indo-European languages See LANGUAGE (table)

Ure, Andrew (yo͝or), 1778–1857, Scottish chemist He was professor (1804–30) at Anderson's College, Glasgow, and was first director (1809) of Glasgow Observatory, where he introduced classes for workingmen He wrote the widely used *Dictionary of Chemistry* (1821) and *A Dictionary of Arts, Manufactures, and Mines* (1837)

Urey, Harold Clayton (yo͝o'rē), 1893–, American chemist, b Walkerton, Ind, grad Univ of Montana (B S, 1917), Ph D Univ of California, 1923 He taught at Johns Hopkins (1924–29), at Columbia (1929–45, as head of the department of chemistry from 1939 to 1942), and at the Univ of Chicago (from 1945) For his isolation of heavy hydrogen he received the 1934 Nobel Prize in Chemistry, he later isolated heavy isotopes of oxygen, nitrogen, carbon, and sulphur During the Second World War he took part in the research leading to the production of the atomic bomb, his special work was on methods of separating uranium isotopes and the production of heavy water With A E Ruark he wrote *Atoms, Molecules, and Quanta* (1930)

Urfa (o͝or'fa), city (pop 36,356), SE Turkey It is the center of an agricultural area and has a tobacco industry The ancient EDESSA, it had a long and important history in ancient times and again during the Crusades until its fall (1144) to the Moslems It formed part of the domains of the Circassian Mamelukes, which in 1517 became part of the Ottoman Empire Its once large Christian population—mostly Armenians—suffered terrible massacres in the late 19th cent There are remains of the medieval fortifications A former spelling is Orfa

Urfé, Honoré d' (ônôrā' dürfā'), 1567–1625, French novelist, author of *L'Astree* (5 vols, 1607–10), the principal French PASTORAL novel It deals with the affairs of several couples of shepherds and shepherdesses living in Urfé's own Auvergne in the 5th cent This work, a discriminating analysis of the nobler sentiments, had a great influence in literature in France and abroad, and its vogue shows clearly in many attributes of the 17th-century French preciosity It is penetrating and often delightful, but very long

Urga, Mongolian People's Republic: see ULAN BATOR

Urgench (o͝orgyĕnch'), ancient city of central Asia, on the site of present Kunya-Urgench (1948 pop over 2,000), Turkmen SSR, in the Khiva oasis It was the capital of the kingdom of KHOREZM, but was abandoned in the 16th cent when the Amu Darya, on which it was situated, changed its course. Khiva replaced Urgench as capital There are remains of an 11th-century minaret

Urgench, city (1939 pop over 10,000), capital of Khorezm oblast, Uzbek SSR, in the Khiva oasis It is named for ancient Urgench and was known as Novy Urgench until 1937 It has a cotton-textile industry

Uri (ûr'ī) **1** Father of BEZALEEL **1** **2** Father of GEBER **2** **3** Porter Ezra 10 24

Uri (o͞o'rē), canton (415 sq mi, pop 27,302), Switzerland The capital is Altdorf Uri is an Alpine region of glaciers and pastures, with forests and meadows in the Reuss river valley First mentioned in the 8th cent, it became (9th cent) a fief of the Fraumünster convent at Zurich Under Emperor Frederick II it was granted (1231) the status of immediate dependency on the emperor The scene of the William Tell legend, Uri in 1291 formed with Schwyz and Unterwalden the league which became the nucleus of SWITZERLAND In the 15th cent Uri took from Milan the Val Leventina, now part of Ticino canton It rejected the Reformation and in 1845 joined the Catholic SONDERBUND

Uriah (ūrī'u) [Heb, =light of God], husband of BATH-SHEBA 2 Sam 11 Urias Mat 1 6 For others called Uriah in the Bible, see URIJAH

Urias (ūrī'us), Greek form of URIAH

uric acid (yo͝o'rĭk), white, odorless, tasteless, crystalline substance, formed as a result of protein metabolism in humans and in some other vertebrates It is a very weak organic acid composed of carbon, hydrogen, nitrogen, and oxygen, barely soluble in water and insoluble in alcohol and ether The urates are its salts Uric acid is present in human urine only in extremely small amounts, but constitutes a large part of the body waste matter of birds (as in GUANO) and of reptiles It collects sometimes in the human kidneys or bladder in calculi, or stones, and is responsible, when present in tissues or deposited upon bones in the form of urates, for gouty conditions It occurs also in normal human blood The pure acid is obtained from guano and other similar substances Upon decomposition urea is obtained A common test for the presence of the acid in urine depends upon the formation of murexide (an ammonium salt), which is an intense reddish purple Nitric acid is added to the unknown substance, which is then evaporated The murexide is formed when ammonia is added to the residue, its color indicating the original presence of uric acid

Uriel (ûr'rēul) [Heb, =flame of God] **1**, **2** Two descendants of Kohath 1 Chron 6 24, 15 5 11 **3** Husband of Absalom's daughter Tamar 2 Chron 13 2 The name appears in the pseudepigrapha for an angel He is introduced in Milton's *Paradise Lost* as the angel of the sun

Urijah (ūrī'ju) [Heb, =light of God] **1** High priest under King Ahaz 2 Kings 16 10–16 Uriah Isa 8 2 **2** Prophet killed by King Jehoiakim Jer 26 20 **3** Ancestor of a priestly family Neh 3 4, 21 Uriah Ezra 8 33 **4** Companion of Ezra Neh 8 4

Urim and Thummim (û'rĭm, thû'mĭm), name of two lots mentioned in the Bible Ex 28 30, Lev 8 8, Num 27 21 The meaning of the two names is uncertain, so is the nature of the lots, but they were connected in some way with the ephod

urine, fluid secreted by the KIDNEYS, stored in the BLADDER, and passed out from the urethra. As blood circulates it collects excretory products from tissues, and these are eliminated chiefly through the urine The amount passed in 24 hr depends upon fluid intake and other factors Urine consists of 95 percent water in which are salts, urea, uric acid, coloring matter, and mucus In abnormal urine the amount of these substances may be changed, and there may also be present blood, pus, casts, proteins, sugar, bile, epithelial cells, and bacteria or other microorganisms Analysis of the urine is of great importance in detecting diseases of the kidney and other parts of the urinary tract and also in the diagnosis of DIABETES

Urmia (o͝or'mēu, o͝ormēa') or **Urumiya** (o͝orro͞omē'u), shallow salt lake, c 80 mi long and 25 mi wide, NW Iran, in Azerbaijan, at an elevation of 4,000 ft The largest lake in the country, it has no outlet and receives the drainage of the surrounding mountains Its salt waters support no fish The near-by city of REZAIEH was formerly called Urmia

urn, form of VASE, of varying shape and size, with a pedestal base and made of clay, glass, metal, stone, marble, or cement It was used in ancient civilizations to hold the bodies or ashes (in modern times the ashes) of the dead. Other uses are for architectural ornament, as a container for liquids or plants, and as an electoral vase or a vase from which lots were drawn See Sir Thomas Browne, *Hydriotaphia, Urne-Buriall* (1658)

Urquhart, David (ûr'kûrt), 1805–77, British diplomat and author of diplomatic treatises, b Scotland In 1827 he aided the Greeks in their war for independence, and in 1830 he attracted the notice of William IV and his secretary, Sir Herbert Taylor, by reports on the Greek frontier From 1833 to 1837 Urquhart served as an embassy secretary in Constantinople, advocating the defense of Turkish interests against Russia. Subsequently in Parliament and in the press he attacked Lord Palmerston's Near Eastern policy, deprecating the interference in Turkey's domestic affairs before the Crimean War As vehicles for his views, Urquhart founded the *Portfolio* (1835) and the *Free Press* (1855, called the *Diplomatic Review* after 1866) His very numerous writings include *England, France, and Turkey* (1834) and *The Crisis* (1840) See biography by Gertrude Robinson (1920)

Urquhart or Urchard, Sir Thomas (both ûr'kûrt), 1611–60, Scottish author, who fought on the royal side in the civil war He is noted for his translation of three books (first two, 1653, with third added, 1693) of the *Gargantua* of Rabelais

Urquiza, Justo José de (ho͞o'stō hōsā' dā o͝orkē'sä), 1801–70, Argentine general and politician, president of the confederation (1854–60) As the *caudillo* of Entre Ríos prov, he helped sustain the power of Juan Manuel de ROSAS In 1851, resentful of the economic and political dominance of Buenos Aires, he revolted against his chief Supported by Brazil and the Uruguayan liberals, he forced Manuel ORIBE to capitulate, ending the long siege of Montevideo (Oct 1851), and defeated Rosas at Monte Caseros (Feb 3, 1852) Urquiza immediately began the task of national organization He became provisional director of the Argentine confederation in May, 1852 A constituent assembly adopted (1853) a constitution based primarily on the ideas of J B Alberdi, and Urquiza was inaugurated president in March, 1854 In his administration foreign relations were improved public education was encouraged, colonization was promoted, and plans for railroad construction were initiated His work of national organization was, however, hindered by the opposition of Buenos Aires prov Difficulties continued to arise after Buenos Aires seceded in 1852 Open war broke out in 1859 Urquiza defeated at Cepeda the provincial army led by Bartolomé MITRE (Oct 1859), and Buenos Aires agreed to reenter the confederation Amendments to the constitution proposed by Buenos Aires were adopted in 1860 The settlement was short-lived and further difficulties culminated in civil war Urquiza met the army of Buenos Aires, again led by Mitre, at Pavon (Sept, 1861) The battle was indecisive, but Urquiza withdrew from the field, leaving the victory with Mitre He retired to Entre Ríos, where he ruled with patriarchal autocracy until his assassination

Urraca (o͝orrä'kä), d 1126, Spanish queen of Castile and Leon (1109–26), daughter and successor of Alfonso VI Her first husband, Raymond of Burgundy, died in 1107, and in 1109 she was married to ALFONSO I of Aragon Her reign was disturbed by strife among the powerful nobles and especially by her recurrent warfare with her husband, who had seized her lands and who repudiated her in 1114 Urraca succeeded in recovering her lands, with the help of her son by her first husband, who succeeded her as Alfonso VII

Ursa Major (ûr'su) and **Ursa Minor** [Latin, =great bear, little bear], two constellations conspicuous in the northern celestial hemisphere Both are circumpolar constellations when observed from the middle latitudes of the Northern Hemisphere Known to many peoples from ancient times, these constellations have had various names, the seven most conspicuous stars have been called the Bear, *Septentrions* (the seven plowing oxen), the Plow, Charles's Wain, and the Wagon In the United States the two constellations are commonly called the Big Dipper and the Little Dipper Four of the seven bright stars in the Big Dipper form the bowl and three the handle, five of these stars are of second magnitude The middle star in the handle of the Big Dipper is known as Mizar or Zeta Ursae Majoris A fainter star Alcor which appears to be near it was observed from ancient times These two stars are sometimes called a double star, but since they do not revolve around a common center of gravity they are not in the strict astronomical sense true doubles Mizar itself is, however, a visual double star and was the first to be recognized as such—by G B Riccioli in 1650 It was also the first spectroscopic binary to be discovered, this observation resulted (1899) from E. C. Pickering's studies of the spectrum of the brighter component of Mizar which revealed it as a binary, consisting of a pair of stars of almost equal brightness Later both the fainter component of Mizar and Alcor were found (1908) by E B Frost to be spectroscopic binaries The two end stars in the bowl of the Big Dipper are known as the Pointers, By ex-

tending a line through them to about five times the distance between them the North Star, Polaris, is reached Polaris is a second magnitude star at the extreme end of the Little Dipper Including Polaris there are three stars in the handle of the Little Dipper and four forming the bowl The handles of the two Dippers extend in opposite directions, and when one bowl is upright the other one is inverted Part of the constellation Draco, the Dragon, lies between the Dippers. For the mythological story of Ursa Major, see CALLISTO

Ursins, Marie Anne de la Trémoille, princesse des (mȧrē' an' du là trămwä'yu prĕsĕs'dăzursĕ'), 1642–1722, French noblewoman and unofficial diplomat Born into one of the oldest families of France, she, after the death of her first husband, married (1675) Prince Flavio Orsini, whose name was gallicized into Ursins She soon separated from her husband and lived in Paris from 1677 to 1698, when she undertook a voyage to Rome to solicit papal approval for the choice of a French prince, the later Philip V, to succeed Charles II on the throne of Spain She arranged the marriage of Philip V with María Luisa of Savoy, whose lady in waiting she became in 1701 Until the queen's death (1714) Mme des Ursins exerted virtually dictatorial power at the court of Madrid She defied Philip's grandfather, Louis XIV of France, insisting on a Spanish policy of independence from France It was largely due to her energy that Philip V kept the throne in the War of the SPANISH SUCCESSION despite his enemies and despite his allies When María Luisa died, Mme des Ursins advised Philip's marriage with Elizabeth Farnese, this she soon had cause to regret, for the new queen had her expelled (1715) from Spain Ill received in France, she went to the Netherlands and later (1719) to Rome, where she intrigued for the restoration of the Stuarts in England Her correspondence has been published

Ursinus College see COLLEGEVILLE, Pa

Ursúa, Pedro de (pā'dhrō dā ōōrsōō'ȧ), c 1526–1561, Spanish conquistador and explorer in South America Coming to New Granada in 1545, he was temporary governor at Bogotá, reduced the neighboring Indians to subjection, searched for El Dorado and the legendary kingdom of Omagua, and founded towns A restless adventurer, he joined the Peruvian viceroy, the marqués de Cañete, in Panama when he subdued the *cimarrones* (escaped Negro slaves) before going with Cañete to Peru in 1558 The viceroy sent him (1560) to explore the MARAÑÓN and search for EL DORADO On the voyage Lope de AGUIRRE and a band of ruffians mutinied and murdered Ursúa See Pedro Simon, *The Expedition of Pedro de Ursua and Lope de Aguarre in Search of El Dorado and Omagua* (Eng tr, 1861), A F Bandelier, *The Gilded Man* (1893)

Ursula, Saint (ûr'syŏōlu, ûr'sulu), 4th cent ?, virgin martyr of Cologne Many legends attached to her name, the number of companions murdered with her was raised in popular legend to 11,000 Feast Oct 21

urticaria see HIVES

Uruapan (ōōrwä'pän), city (pop 20,583, alt c 5,500 ft), Michoacán, W Mexico It is in a semitropical, mountainous agricultural region, where coffee, sugar cane, rice, bananas, avocados, and wheat are grown The city, founded in 1540, is the center of the manufacture of gourd lacquerware by the TARASCAN Indians There are fine tropical gardens and parks Not far from Uruapan is the volcano PARICUTÍN

Urubamba (ōōrōōbam'bȧ), river, S Peru, rising in the Andes and flowing generally north to join the Apurímac and form the UCAYALI Cuzco, Peru, lies between the Urubamba and the Apurímac, and high above the gorge of the Urubamba is the ruined city of MACHU PICCHU

Uruguaiana (ōōrōōgwīȧ'nȧ), city (pop 21,365), W Rio Grande do sul state, S Brazil, on the Uruguay river, which here forms the Argentine boundary It is a rail junction and cattle-shipping center, with meat-processing plants In 1865 it was captured and held for a short time by Paraguayan troops

Uruguay (yōō'ȧgwī, -gwĭ, Span ōōrōōgwē', ōōrōōwē'), republic (72,172 sq mi, 1941 estimated pop 2,185,626), SE South America The capital is MONTEVIDEO From a short Atlantic coast line Uruguay extends along the northern side of the Río de la PLATA to the Uruguay river, which separates it on the west from Argentina To the north is Brazil The land thus enclosed is a topographical transition between the humid Argentine Pampa and the uplands of S Brazil North of the alluvial plain, known as the BANDA ORIENTAL [Span, =east bank, i e, of the Uruguay and the Río de la Plata], Uruguay generally has long, sweeping slopes and grasslands, wooded valleys with slow-moving rivers, and long ranges of low hills, with some huge granite blocks against the horizon On the land is a faint purplish hue Although Uruguay is within the Temperate Zone, climatic variations are moderate, generally it is warm, with rainfall evenly distributed through the seasons, but in some years there are severe droughts Though wheat and other grains, wine grapes, tobacco, olives, and other fruits and crops are grown, Uruguay still depends largely on the sheep and cattle feeding on the grasslands Uruguay's position, as an isolated area between Spanish and Portuguese settlement, then as a buffer between contending Argentine and Brazilian nationalism, helped determine the emergence of Uruguay as an independent state The aborigines, the Charrúa Indians, after long resistance, were absorbed into the Spanish and Portuguese populations so that in N Uruguay today is found most of the mestizo element, about 10 percent of the total Most of the people, concentrated in the south, are of European descent, Spanish and Italian predominating, there are almost no Negroes or pure Indians Although the Río de la Plata was explored as early as 1515, it was 1624 before the Spanish established the first permanent settlement at Soriano in SW Uruguay The Portuguese founded (1680) a short-lived settlement at Colonia, and in 1717 they fortified a hill at present Montevideo Fearing encroachment and competition, the Spanish drove them out (1724) and from then until the wars of independence controlled the Banda Oriental On the pampas stockraising spread, and the GAUCHO lived his hardy and rough life Gradually the unbounded range gave way to huge *estancias* and small settlements concentrated about the ranch buildings Although the Uruguayan land is not as well suited for raising alfalfa and consequently fatted cattle as the Argentine, so basic are cattle (largely blooded herds today) and sheep in the economy that public rights of way have been built for driving the herds It was the gaucho who fought for independence, and the tradition of the gaucho, his personal loyalties and rivalries, helped to keep the nation in almost continuous strife for three quarters of a century after independence was won When the revolutionary banner was raised in the Argentine in 1810, the leaders of the Banda Oriental, notably ARTIGAS, accepted the cause, but in 1814 Artigas broke with the military junta of Buenos Aires and began a struggle for Uruguayan independence which lasted until Brazilian occupation of Montevideo in 1820 Five years later a small group known as the Thirty-three Immortals under the guidance of LAVALLEJA declared Uruguay independent, in 1827 at ITUZAINGÓ Brazil was defeated Great Britain, opposing Brazilian expansion S to the Río de la Plata, helped ultimately to create an independent Uruguay as a buffer state between Argentina and Brazil The peace (1828) stipulated that the new Uruguayan constitution should be acceptable to both the larger nations When it was adopted in 1830, Fructuoso RIVERA was chosen president He was promptly faced with revolts led by his old rival, Lavalleja, and when he was succeeded in office by Manuel ORIBE, he himself revolted against Oribe, who was in sympathy with Juan Manuel de ROSAS of Argentina In the long fratricidal struggle which ensued the two dominant political parties of Uruguay emerged, Rivera's known as the Colorados [reds] and Oribe's known as the Blancos [whites] Oribe was driven out in 1838, but later with the aid of Rosas returned to begin the long siege of Montevideo The Italian patriot GARIBALDI fought in the Uruguayan wars from 1836 to 1848 In 1851 the Argentinian, URQUIZA, drove out Rosas and brought an end to the Uruguayan civil war When in 1864 Brazil presented a claim for damages to property and nationals during the civil wars, Uruguay refused to accept it Brazil, acting in concert with Venancio Flores, invaded Since Flores won, Paraguay, which under Francisco Solano LÓPEZ had protested the invasion, succeeded only in giving Brazil an ally in the War of the Triple Alliance (see TRIPLE ALLIANCE, WAR OF THE) Until the rise of BATLLE Y ORDÓÑEZ early in the 20th cent, Uruguay experienced many revolutions and counterrevolutions, but in Batlle's second term as president (1911–15) and under his continuing influence began the socialistic and material progress that has made Uruguay one of the most stable and prosperous nations of Latin America By a coup d'état in 1933 Gabriel TERRA suspended the constitution of 1919, and his rule was strongly personalistic Yet the socialistic measures for public welfare were not reversed but forwarded, the labor code was broadened, social benefits increased, and industry further nationalized The program has affected every aspect of Uruguayan life In spite of the basic pastoral economy of the republic, dependence upon imports for most raw materials, and lack of fuel and power resources, there is considerable industrialization Food-processing plants, notably those packing frozen and canned meats at FRAY BENTOS and PAYSANDÚ, account for a large part of the industrial activity, and public utilities are important Also produced in quantity are beverages, textiles, metallurgical products, paper, chemicals, and leather goods Transportation facilities are extensively developed and per capita wealth is high While wool is the leading export item, mutton, beef and beef extract, wheat, flax, and linseed are also important Around SALTO there are many orchards and vineyards Tourists, chiefly Argentinians, vacation on Uruguay's beaches and provide revenue See W H Hudson, *The Purple Land* (1885; rev ed, 1921), W J Koebel, *Uruguay* (1911), S. G. Hanson, *Utopia in Uruguay* (1938).

Uruguay, river, c 1000 mi long, rising in S Brazil near the Atlantic and flowing in an arc W to Argentina and then SW and S to the Río de la Plata It forms Argentina's boundary with W Uruguay and most of its boundary with Brazil Salto and Paysandú (Uruguay) and Concepción del Uruguay (Argentina) are on the river, which is navigable in its lower course by ocean-going vessels

Uruk see ERECH

Urumchi (ōōrōōm'chē), Mandarin *Ti-hwa*, city and county (pop 97,988), Sinkiang prov, China The city is the provincial capital On the main road skirting Dzungaria, it is a trade and communications center Cotton thread and cloth are manufactured Normally Great Britain, the United States, and the USSR maintain consulates here The name also appears as Urumtsi

Urumiya, lake, Iran see URMIA

Urumtsi, China see URUMCHI

urus see AUROCHS

Usedom (ōō'zudôm) or **Uznam** (ōōs'nām), island, area c 160 sq mi, off Pomerania, in the Baltic Sea It is separated from the mainland by the Stettiner Haff and from the neighboring island of Wollin by the Swine The chief town is Swinemünde There are many popular bathing resorts In 1945 the island was transferred to Polish administration

Ushant (ŭ'shunt), Fr *Ouessant* (wĕsäⁿ'), island, 5 mi long, NW France, in the Atlantic c 10 mi. off the tip of Brittany It is a part of Finistère dept and has a population of some 2,500 There are two lighthouses An indecisive battle between the French and the British took place near here in 1778, in 1794 Lord Howe (Richard Howe) defeated a French fleet off Ushant

Usher, James see USSHER, JAMES

Usk (ŭsk), urban district (pop 1,315), Monmouthshire, England, SW of Monmouth and on the Usk river Usk has remains of a 13th-century castle and the church of a 13th-century convent

Usk, river of Wales and England, rising in Caermarthenshire and flowing c 60 mi past Caerleon and Newport, Monmouthshire, to the estuary of the Severn It is noted for its beauty, its associations with King Arthur, and its excellent fishing

Üsküb, Yugoslavia see SKOPLJE

Uskudar, Turkey, see SCUTARI

Uspallata Pass (ōōspäyä'tȧ), c 12 500 ft high, over the Andes between Mendoza, Argentina, and Santiago, Chile A trail—and later a rough road—for men and beasts of burden was used before the TRANSANDINE RAILWAY was built In 1817 San Martín sent part of his patriot army through the pass to fight the Spanish royalists in Chile The CHRIST OF THE ANDES stands in the pass Mt ACONCAGUA towers north of the pass, and TUPUNGATO south and farther away

Uspenski, Gleb Ivanovich (glyĕp' ēvä'nuvĭch ōōspĕn'skē), 1840–1902, Russian novelist He began his career as an extreme populist but lost faith in the capacity of the peasant to improve his lot through education Uspenski by his realistic novel *The Power of the Soil* (1882) helped to undermine the movement, which had already lost much of its drive The peasant is treated realistically also in *From a Village Diary* (1877)

Ussher or **Usher, James** (both ŭ'shur), 1581–1656, Irish prelate and scholar While a fellow (1599–1605) of Trinity College, Dublin, he was ordained (1601) In 1605 he was made chancellor of St Patrick's Cathedral, Dublin In 1615 a convocation of clergy called upon him to draft the articles of doctrine and discipline of the Irish Protestant church These showed a Calvinistic tendency In 1621 he became bishop of Meath and later (1625) archbishop of Armagh He often went to England, where he enjoyed association with noted scholars and statesmen He was there when the civil war broke out, and he never returned to Ireland Although he refused to sit (1643) in the Westminster Assembly and upheld the doctrine of the divine right of kings, he was in 1647 elected preacher of Lincoln's Inn, by Cromwell's own order he was given an elaborate funeral and interment in Westminster Abbey His vast learning, attested by his numerous works in Latin and English, awakened great admiration In his chronological study, the *Annales Veteris et Novi Testamenti* (2 vols, 1650–54), Ussher worked out a system of dates (setting the creation at 4004 B C) afterward long used in the margin of editions of the Authorized Version of the Bible His works were edited by C R Elrington and J H Todd (17 vols, 1847–64) See W B Wright, *The Ussher Memoirs* (1889)

USSR see UNION OF SOVIET SOCIALIST REPUBLICS

Ussuri (ōōsōō'rē), Mandarin *Wu-shu-li*, river rising in the Maritime Territory, RSFSR, and flowing c 500 mi N to the Amur river On the final 300 mi of its course the river forms the China-USSR boundary The Ussuri abounds in fish, and it is used to transport timber

Usti nad Labem, Czech *Ústí nad Labem* (ōōs'tyē nād lä'bĕm), Ger *Aussig* (ou'sĭkh), city (pop 34,410), N Bohemia, Czechoslovakia A port on the Elbe, it is an export center of a coal-mining region As the leading industrial city of N Bohemia, it produces chiefly chemicals, machinery, and foodstuffs.

It is also a railway center The city, founded in the 13th cent, retains Gothic, late Gothic, and Renaissance churches

Ustka, Pomerania see STOLP

Ust-Sysolsk, RSFSR: see SYKTYVKAR

Ust Urt (ōōst″ ōōrt′), desert plateau, area c 62,000 sq mi, USSR, between the Caspian Sea and the Aral Sea It occupies parts of the Kazakh SSR and of the Karakalpak ASSR Its seminomadic population raises sheep, goats, and camels

Usumacinta (ōō″sōōmäsēn′tä), river formed by the Chixoy, the Pasion, and the Lacantún, all rising in N Guatemala In its early course it marks the boundary between Guatemala and Mexico, then flows northwest through the jungles of Tabasco, where some of its channels merge with the Grijalva It empties into the Gulf of Campeche The Usumacinta is navigable for c 300 mi

usury see INTEREST

Utah (ū′tô″, ū′tä′), state (84,916 sq mi, 1940 pop 550,310, 1949 estimated pop 682,000), W United States, one of the Rocky Mt states, admitted 1896 as the 45th state SALT LAKE CITY is the capital and is also the headquarters of the Church of Jesus Christ of Latter-Day Saints (see LATTER-DAY SAINTS, CHURCH OF JESUS CHRIST OF, and MORMONS), which founded and to a large extent still dominates the state Utah is bounded on the north by Idaho and Wyoming, on the northeast by Wyoming, on the east by Colorado, on the south by Arizona and on the west by California At the Southeast corner is the only spot in the United States where four states (Utah, Colorado, New Mexico, and Arizona) meet The altitude of the state averages about a mile above sea level In the east are massive mountains and deep-cut irregular plateaus, and in the west are the lower lands of the Great Basin Running S from the Idaho border, the Wasatch Range marks the abrupt division between the two dissimilar regions To the eastward rise the Uinta Mts, whose snow-capped peaks reach the state's highest elevations in Kings Peak (13,498 ft) Plateaus stretch southward, rugged and uninhabitable except in isolated river valleys The red shades of sandstone deepen, fade, and deepen again through a fantastic wonderland carved by wind and water Deep and tortuous canyons cut by the Colorado and its tributaries impede travel but provide scenery of remarkable grandeur Artifacts of prehistoric man verified by the coexistence of tune-plated fossils, glyph-carved caves, and cliff dwellings add historical and scientific interest In numerous national monuments and in Bryce Canyon National Park and Zion National Park are preserved some of the more spectacular and accessible sites The western part of the state, in the Great Basin, was once submerged beneath a huge Pleistocene lake, Lake Bonneville During many thousands of years the water fluctuated, then subsided, leaving behind a salt-strewn desert, wide expanses of arid but nonalkaline soil, and a series of lakes Through evaporation GREAT SALT LAKE, the greatest of these, has reached a concentration of mineral salts several times that of the ocean Its level quickly fluctuates with the varying intake of its contributory streams, and its shallow waters, at the mercy of winds, may be driven up into huge waves Gulls, pelicans, and blue herons skim across its surface and return to rookeries built on its islands Much of the lake shore is bordered by mud and salt flats The smoky Oquirrh Mts, rising south of the lake, dip to form pleasant beaches at the water's edge, then erupt into islands within the lake, and rise again in the Promontory Mts above the northern lake shore UTAH LAKE, to the south, is the largest body of fresh water in the state and drains into Great Salt Lake through the Jordan river Between Great Salt Lake and the Wasatch Range and curving southwest toward the Arizona border lies a river-crossed strip, which is the center of the life of Utah On terraces, or benches, left by the ancient Lake Bonneville, are located the major cities, notably Salt Lake City, OGDEN, PROVO and (to the north) LOGAN Streams which tumble down the Wasatch slopes are diverted to irrigate the rich and arid lands Major reclamation projects have been sponsored by the government to assist the numerous private enterprises to store water for distribution and aid in flood control The arduous task of converting deserts into productive areas has confined the tilled land to approximately 3½ percent, including isolated farms in river valleys and a considerable amount of dry farming The usual rural pattern is a group of small, intensively cultivated farms situated close to a general store and a Mormon religious edifice Major crops of hay, wheat, sugar beets, and fruits have been supplemented by expanding poultry, turkey, and dairy industries Sheep may graze on the gray-green forage of the desert, but most of the cattle are permitted to range in national forests and on public domain Abundant sunshine provides some compensation for inadequate rainfall, and the climate is moderate, except in the high altitudes Agrarian life was well suited to the principles of the Mormons when they came to found their Zion here, the very difficulties of agriculture in the dry land were an advantage since they offered little inducement to outsiders. The development of resources other than agricultural was more or less frowned upon by the Mormon Church and, in general, was initiated by non-Mormons (called Gentiles by the Mormons) A wealth of minerals made the exploitation of the resources almost inevitable and, in turn, stimulated the construction of railroads Today over 50 percent of the population is directly or indirectly engaged in mining Copper is the chief metal Bingham Canyon has the largest open-pit copper mine in the country From it the ore is transported to Salt Lake City, where it is smelted Both mining and smelting are controlled by Eastern-owned companies The proximity of high-grade iron, coal, and limestone led to the construction of the Geneva steel plant near Provo to serve the needs of the Second World War Its present operation by the U S Steel Corp is encouraging the construction of steel-fabrication plants Coal, lead, gold, and silver are produced in substantial amounts, and further exploitation of mineral resources will largely depend upon accessibility and available power Four major railroads and many branch lines are the most important transport arteries High freight rates and long distances from markets combine with a Mormon distrust of industrialization to discourage extensive manufacturing Modern Utah has a history unique among the states because of its settlement and development by a new religious group and because of the conflict that ensued between that group and the Federal government The accounts of modern settlement of little more than 100 years are well known, but the history of habitation which preceded it is largely circumstantial. Scientists are gradually disclosing the long history of prehistoric man through the unearthing of evidence left in caves and cliff dwellings Somewhat more is known of the large Indian groups—Ute, Paiute, and Shoshone—who lived here when the first white men came, but knowledge of early Utah is scant, even the activities of the first explorers are darkly seen because their geographical ignorance obscure the sparse records Possibly some of Coronado's men under García López de Cárdenas entered S Utah as early as 1540 For the next centuries nothing is known until the Spanish missionaries Silvestre Vélez de ESCALANTE and Francisco Atanasio Domínguez opened the route for the Old Spanish Trail between Santa Fe and Utah Lake in 1776 Lewis and Clark and the expeditions to and from Astoria went N of Utah, but in the 1820s the MOUNTAIN MEN made their way over the difficult terrain and found rich beaver streams They went over the region thoroughly and possibly had greater knowledge of the physical characteristics of some parts than men do today The discovery of Great Salt Lake is generally credited to James BRIDGER, but Étienne Provot, Jedediah S Smith, and others also have claims The Canadian, Peter Skene OGDEN, led four Snake river expeditions into the area and is commemorated in the name of one of Utah's leading cities Between 1824 and 1830 the riches in furs were exhausted and the country waited for the next transients—westering emigrants In 1841 the first California-bound emigrant train, usually called the Bidwell party, left the Oregon Trail and made its way across the great salt desert Several years later Miles Goodyear became Utah's first settler by setting up a trading post at the site of Ogden, naming it Fort Buenaventura The ill-fated DONNER PARTY broke trail over the difficult mountains E of the Great Salt Lake in 1846 and proceeded across the desert to their calamities farther west In 1847 came the hosts of the persecuted Mormons, seeking a "gathering place for Israel" in some undesired and unsettled spot When Brigham YOUNG, their leader, surmounted the mountains and looked over the green valley of Great Salt Lake, he knew that the place had been found On July 24, 1847, he entered the valley, and July 24 is Pioneer Day—the most important holiday of Utah Young was to prove himself one of the greatest administrators and leaders in 19th-century America Under his direction and in communal fashion the ground was plowed and planted, the Temple foundation was laid, and the city was platted directly on compass lines Gradually the Latter-Day Saints assembled, their ranks swelled by streams of emigrants from this country and abroad More and more of the arid land yielded to their pioneering irrigation In the next 50 years they not only had to learn the techniques of wresting a living from the desert and of warding off Indian attacks, but also had to preserve their integrity in the face of opposition from the Federal government In 1848 at the end of the Mexican War the region passed to the United States, and in 1850 a large area, of which the present state is a part, was constituted Utah Territory. The name Deseret [honey bee], chosen by the Mormons, was discarded, but the beehive is a ubiquitous symbol of Mormon activity throughout the state. Major Indian disturbances were the Walker War (1853–54) and the Black Hawk War (1865–68). The battle with the Federal government was far more serious and of greater duration. Numerous petitions for statehood were denied because of the practice of polygamy, publicly avowed by the Mormons in 1852. There was serious trouble between the Mormons and California-bound immigrants In 1857 a "state of substantial rebellion" was declared, and President Buchanan directed U S army troops to proceed against the Mormons The Mormons prepared for warfare, calling in outlying settlers, and guerrilla bands harassed the supply trains of Albert S Johnston's forces as they made a slow trip westward. The affair was finally settled peacefully, but great ill feeling had developed, most startlingly shown in the affair at Mountain Meadows. Some of the disturbed settlers had made an exodus to land S of the Utah Valley, and while many returned to their former homes, some remained to spread colonization there This episode, known as the "Utah War" or the "Mormon campaign," was succeeded by several difficult decades Congressional acts forbidding polygamy were passed in 1862, 1882, and 1887 In the attempt to enforce these laws civil liberties were infringed and some Mormon church properties were expropriated In 1890 a church edict advising members to abstain from the practice of polygamy was ratified, and civil rights and church properties were restored Long before Utah became a state in 1896 its area had been reduced to its present size by the creation of the territories of Nevada and Colorado in 1861 and Wyoming Territory in 1868 The population, which had grown to 207,905 persons, included many non-Mormon groups, and cultural and economic isolation had been broken by the development of mining and the completion of the Union Pacific Agriculture was handicapped by a court interpretation of water rights in 1880, when the principle of regarding water as public property to be developed through beneficial use was discarded for the concept of water as private property Not until the Reclamation Act of 1902 was the idea of beneficial water use restored, buttressed by the state act of 1903 which vested the ownership of water in the state Education was implemented by the comprehensive school law of 1890 which made all common schools free, although state-wide support of secondary schools was not obtained until 1910 The leading institutions of higher learning—the Univ of Utah, Utah State Agricultural College, and Brigham Young Univ (at first an academy)—were founded before statehood was achieved In political life the violent opposition of Mormons and non-Mormons has disappeared, as citizens have largely learned to ignore religious differences and find common cause and understanding in their mutual problems In general the Mormons tend toward conservatism and have been predominantly Republican, although Utah supported Franklin D Roosevelt in three elections The record of the Mormons in the great depression after 1929 was remarkable, as they strove to attain the goal of "no Mormon on relief" The arid soil and rugged terrain make the possible farming area limited even with all possible irrigation schemes Urbanization has gone on apace, but modern Utah faces many problems, some of which it has been forced to recognize because of the departure from the state of increasing numbers of its young people The enormous army installations of the Second World War brought temporary prosperity but failed to solve the basic economic problems A partial solution may have been found in the enthusiastic promotional campaign to make Utah a great tourist center Perhaps the success of this campaign would hasten the more obvious solution—the intensive and extensive manufacturing within the state of products made from Utah's own abundant raw materials See Harry M Beardsley, *Joseph Smith and His Mormon Empire* (1931), Federal Writers' Project, *Utah a Guide to the State* (1941), Robert J Dwyer, *The Gentile Comes to Utah* (1941), Nels Anderson, *Desert Saints* (1942), Wallace Stegner, *Mormon Country*, (1942), Maurine Whipple, *This Is the Place Utah* (1945), Dale L Morgan, *The Great Salt Lake* (1947)

Utah, University of, at Salt Lake City, state supported, coeducational, opened 1850, chartered 1851 as University of Deseret, closed 1851–67 It was empowered to give degrees in 1884 and renamed in 1892 It has schools of arts and sciences, business, education, engineering, fine arts, law, medicine, mines and mineral industries, pharmacy, and social work There are bureaus of educational and economic research, state engineering and U S Bureau of Mines experiment stations, a biological survey, a psychology clinic, an observatory, and a seismograph Museums include art, archaeology, and dinosaur collections

Utah Indians: see UTE INDIANS

Utah Lake, N central Utah A fresh-water lake, it drains through the Jordan river to Great Salt Lake and was also a part of prehistoric Lake Bonneville Its waters have been much used for irrigation and in the 1930s showed signs of exhaustion The Provo river project now supports the irrigation

Utah State Agricultural College, at Logan, with land-grant support, coeducational, chartered 1888, opened 1890. It has schools of agriculture, arts and sciences, commerce, education, engineering, forestry, and home economics.

Utamaro, Kitagawa (kēta'gäwû ōōtä'märō), 1753–1806, Japanese color-print artist, son of a painter of the Kano school His prints were among the first to become familiar in the Occident, as they were especially popular among the Dutch exporters of Nagasaki. Having first followed the traditions of the classic Kano school by painting in the Chinese manner, Utamaro was early led to color-print designing by the great vogue for the work of Kiyonaga. He is noted not only for his landscapes but also for his pictures of insects and his portraits of women His draughtsmanship and use of color (especially reds and black) show the mastery and striking originality that made him the first of the greater masters of the popular school (*ukiyoye*). The New York Public Library has a collection of 130 of his prints

Ute Indians (ūt), North American Indian tribe of Uto-Aztecan linguistic stock The principal bands of the Ute still in existence are the Uinta, the Uncompahgre, and the Yampa In the early 19th cent the Ute occupied W Colorado and E Utah They were fierce, nomadic warriors, who, after the introduction of the horse, ranged into New Mexico and Arizona, menacing and sometimes destroying the villages of the Pueblo Indians The Ute were bellicose and did not yield readily to reservation life, but the process of reducing them was begun c 1850 They then numbered some 5,000 There was some trouble with them, as in the raids in the San Luis valley of Colorado in 1854 The raids brought on the campaign against the Apache and the Ute in the next year Some of the Ute fought under Kit Carson, because they retained their warlike propensities and their hatred for the Navaho and other traditional enemies In 1879 the Ute killed their Indian agent and seven employees of the agency, but a real battle was avoided mainly through the peaceful attitude of Chief Ouray In 1906 a group of Ute destined to give up their allotted lands and retire to a reservation caused considerable uneasiness by their threatening air, but they were subdued Today the Ute live on reservations in Colorado and Utah, totaling some 2,500 They have not flourished under reservation organization Ute culture was typical of the western part of the Plains culture area, they lived in tepees, which were frequently decorated with brilliantly colored paintings, or in brush or sod shelters They had a bear dance, which was performed every spring to drive evil spirits away from the buffalo herds They are sometimes called the Utah Indians See R M Zingg, *The Ute Indians in Historical Relation to Proto-Aztec-Tanoan Culture* (1938)

uterus (ū'tərus), hollow muscular organ in which the fetus develops and from which it is delivered at the end of PREGNANCY In the human it is pear shaped, about 3 in long (but expanding greatly during pregnancy), and normally lies in the pelvis The body of the organ is supported on a neck (cervix) which opens into the vagina A ligament extends from the uterus to the pelvic wall on each side Paired oviducts (or Fallopian tubes) from 3 to 5 in long, with wide-mouthed openings close to the ovaries, open into the uterus and serve as a passageway for the ova Fertilization is believed to occur in the upper part of the oviduct, and the fertilized egg normally continues down the tube and becomes implanted in the lining of the uterus If fertilization does not occur, the ovum disintegrates and is eliminated from the body The chief disorders are abnormality of position, including prolapse, tumors, infection (see PUERPERAL FEVER), hemorrhage, rupture, and functional disturbances, such as dysmenorrhea

Uthai (ū'thāī, ūthā'ī) [Heb ,=God helps]. **1** See ATHAIAH **2** Returned exile Ezra 8 14

Uther Pendragon, father of King Arthur see ARTHURIAN LEGEND.

Utica (ū'tĭkù), ancient city, c 15 mi N of Carthage in Africa Traditionally founded by Phoenicians from Tyre c 1100 B C , it was second in importance to Carthage It allied itself with Rome against Carthage in the Third Punic War, and upon the destruction of Carthage it was made the capital of the Roman province of Africa In the 3d cent A D the town became an episcopal see It fell to the Vandals (430), was recaptured by the Byzantines (534), and was finally destroyed by the Arabs c 700 Excavations at the site have yielded ruins including an amphitheater, baths, and fortifications

Utica. 1 City (pop. 1,022), SE Mich , on the Clinton river and N of Detroit, in a farm area, settled 1817, inc 1838 It grows and ships rhubarb **2** City (pop 100,518), a co seat of Oneida co , central N Y , on the Mohawk and the Barge Canal and NW of Albany in a rich dairying region, inc 1832 Permanent settlement began after the Revolution, and Utica's location on the Erie and other canals and on railroads stimulated its industrial development, it is today a port of entry Its products are varied, but Utica is known especially for the manufacture of sheets, pillowcases, knit goods, and firearms The oldest New York state mental hospital and the New York Masonic Home and Hospital are here In the Oneida Historical Building is housed the county's historical collections. Utica has an extensive park system, with winter and summer sport facilities Its large Welsh population hold an annual eisteddfod **3** Village (pop 1,376), central Ohio, N of Newark A farm trade center, it has varied manufactures

utilitarianism (ūˌtĭlĭtā'rēənĭzm, ūtĭˌ–), in ethics, the theory that the greatest happiness of the greatest number is the *summum bonum* and the criterion of morality Jeremy BENTHAM measured happiness by the intensity, duration, certainty, propinquity, fecundity, purity, and extent of pleasures John Stuart MILL urged that pleasures differ also in virtue and that the highest good involved qualitative as well as quantitative pleasure Herbert SPENCER developed an evolutionary utilitarian ethics in which the principles of ethical living are based on the evolutionary changes of organic development He held that the doctrine identifying pleasure with happiness as the base of morality could be related to physiological and psychological health and to natural sociological development

utility, public, industry required by law to render adequate service in its field at reasonable prices to all who apply for it Such an industry is said to be "affected with a public interest" (a phrase coined by Chief Justice Waite in 1876) and therefore subject to a degree of government regulation from which other businesses are exempt Opinions differ as to the characteristics that an industry must have in order to be a public utility, since all industries in a sense serve the public By its nature a public utility is often a monopoly and so not prevented by competition from charging exorbitant prices It usually operates under a license or franchise by which it enjoys special privileges, such as the right of eminent domain It may supply an essential service, such as water or light, the unavailability of which would injuriously affect the public health and welfare From an early period there was public regulation of canals, turnpikes, toll roads, and ferries, innkeepers, gristmills, and pawnbrokers Docks, sleeping cars, commodity exchanges, warehouses, insurance companies, banks, housing, milk, coal mines, and (more recently) broadcasting are other types of industries held to be affected with public interest Meat packing is a curious exception Among the important utilities on which large populations depend for supplying vital needs are water, gas, and electric companies, transportation facilities, such as street railways, subways, bus lines, and railroads, and communication facilities, such as telephones and telegraphs Unlike most of these, companies supplying water for irrigation and electricity for rural areas are more than local in scope In the United States public-utility rates and standards of service are established by direct legislation and are administered by state regulatory commissions and by such Federal agencies as the Interstate Commerce Commission, the Federal Power Commission, the Securities and Exchange Commission, and the Federal Communications Commission, the Federal agencies supervise utilities doing interstate business Rates are subject to review by the courts, which have held that they must provide a "fair" return on a "fair" valuation of investment, how valuation is to be determined, whether on the basis of prudent investment, present earning power, or present cost of production, has been the subject of much controversy That a utility may not earn excessive profits is an established principle of regulation in all countries The means of regulation include supervision of accounting and control of security issues Municipalities dissatisfied with the results of public regulation have often acquired ownership of local utilities (see PUBLIC OWNERSHIP) To keep rates down and make utilities available to more people, the United States has formed public corporations or agencies, such as the Rural Electrification Administration, which encourages cooperatives to own and manage local electric projects, and the Tennessee Valley Authority, which has served as a yardstick for measuring the efficiency of privately owned utilities In European countries railways, telegraphs, telephones, and radio have long been state property The Labour party government in England after 1945 nationalized all public utilities See Edward Hungerford, *The Story of Public Utilities* (1928), I R Barnes, *The Economics of Public Utility Regulation* (1942), C E Troxel, *Economics of Public Utilities* (1947)

Uto-Aztecan (ūˌtō-ăztā'kun), linguistic family of North America It includes languages spoken in areas from the NW United States to S Mexico A list of major divisions is given in the table under LANGUAGE There are also less well-known Uto-Aztecan languages in the Mexican states of Aguascalientes, Jalisco, Colima, and Guerrero A probable relation between Uto-Aztecan and Tanoan languages has been observed Further ties have been suggested with Kiowa

Utopia (ūtō'pēu) [Gr ,=no place], title of a book by Sir Thomas MORE, published in Latin in 1516 The work pictures an ideal state where all is ordered for the best for mankind as a whole, and the evils of society, such as poverty and misery, have been done away with. The popularity of the book has given the generic name to all the concepts of ideal states created by social philosophers and visionaries. The description of a utopia enables an author not only to set down criticisms of evils in the contemporary social scene but also to outline vast and revolutionary reforms without the necessity of detailing processes by which the ideal situation may be brought about Thus, the influence of utopian writings has generally been inspirational rather than practical, but such works have had immense force in the history of thought The name utopia is applied retroactively to various ideal states described before More's work, most notably to that of the *Republic* of Plato St Augustine's *City of God* in the 5th cent enunciated the theocratic ideal which was to dominate visionary thinking throughout the Middle Ages With the Renaissance the ideal of a utopia became a more worldly one, but the religious element in utopian thinking is often present thereafter, such as in the politico-religious ideals of 17th-century English social philosophers and political experimenters Among the famous utopias before the 19th cent are *The City of the Sun* (1623) by Tommaso CAMPANELLA, *The New Atlantis* (1627) of Francis BACON, and the *Oceana* (1656) of James HARRINGTON There are numerous other early pictures of types of ideal societies, such as François Rabelais's description of the Abbey of Theleme in *Gargantua* (1532) In the Enlightenment in the 18th cent Jean Jacques Rousseau and others gave impetus to the belief in an ideal society—a Golden Age—that had existed in the primitive days of European society before the development of civilization corrupted it This faith in natural order and the innate goodness of man had a strong influence on the growth of a visionary socialism, a type of thought usually referred to as utopian socialism The end in view of these thinkers was usually an idealistic (and commonly, though not always, a predominantly agricultural) communism based on economic self-sufficiency or interacting ideal communities SAINT-SIMON, Étienne CABET, Charles FOURIER, and Pierre Joseph PROUDHON in France and Robert OWEN in England are typical examples of this sort of thinker Cabet's *Voyage en Icarie* (1840) offered a fully rounded picture of an imaginary state, Icaria Actual experiments in such utopian social living were tried in Europe and in the United States, but for the most part the efforts were neither long-lived nor more than partially successful These humanitarian socialists were largely displaced after the middle of the 19th cent by political and economic theorists, such as Karl MARX and Friedrich Engels and their followers, who preached the achievement of the ideal state through political and revolutionary action Other utopias, however, continued to be depicted by a variety of thinkers, and the utopian romance became an extremely popular literary form In these novels were depicted the glowing, and sometimes frightening, prospects of the new industrialism and social change One of the most important of these works was *Looking Backward* (1888) by Edward BELLAMY, who had a profound influence on economic idealism in America In England *Erewhon* (1872) by Samuel BUTLER and *A Dream of John Ball* (1888) and *News from Nowhere* (1891) by William MORRIS were notable examples of the genre, in Austria an example was Theodor Hertzka's *Freeland* (1890) The 20th cent saw a veritable flood of these literary utopias, most of them "scientific utopias" in which mankind enjoys a blissful leisure while all or most of the work is done for him by docile machines Some of these, such as the novels of H G WELLS, were the expression of serious economic thinking, but most were merely naïve glorifications of mechanical progress The adjective utopian has come into some disrepute and is frequently used contemptuously to mean impractical or impossibly visionary The use of the device of describing a utopia as a vehicle for satire or for the exercise of wit is almost as old as the serious utopia The satiric device goes back to such comic utopias as that of Aristophanes in *The Birds* Bernard MANDEVILLE in *The Fable of the Bees* (1714) and Jonathan SWIFT in parts of *Gulliver's Travels* (1726) are in the same tradition Pseudo-utopian satire has been extensive in modern times in such novels as Aldous Huxley's *Brave New World* (1932). The rise of the modern totalitarian state has brought forth a number of similar works describing the unhappy fate of the individual under the control of a supposedly benevolent despotism Connected with the literary fable of a Utopia has been the belief in an actual ideal state in some remote and undiscovered corner of the world The mythical ATLANTIS, described by Plato, was long sought by Greek and later mariners Similar to this search were the vain expeditions in search of the Isles of the Blest or FORTUNATE ISLES and EL DORADO There are many related legends in the various mythologies of diverse peoples See Lewis Mumford, *The Story of the Utopias* (1922), Joyce Hertzler, *The History of Utopian Thought* (1926); Frances Russell, *Touring Utopia* (1932); Vernon Parrington, Jr., *American Dreams* (1947).

Utraquists (ū'trukwĭsts), moderate wing of the HUSSITES in Bohemia during the 15th and 16th cent. Like the radical TABORITES and all other Hussite groups, they insisted on communion in both kinds (Latin *sub utraque specie*), whence their name, they were also known as Calixtines, after the chalice, which was their symbol They differed from the more radical groups in that they substantially agreed with the Roman Catholic Church on most other points of theology and in that they came mostly from the ranks of the upper nobility and the urban bourgeoisie, while the Taborites and Orphans had a large peasant following The Univ of Prague was the chief center of Utraquism, and Master Jan Rokycana was its leading spirit. In 1424 Zizka commenced the siege of Prague to compel the city to submit to his more radical policies, but the struggle was averted at that time by an armistice In 1429 Rokycana obtained the support of the archbishop of Prague, who had gone over to Hussitism, and in 1433, at the Council of Basel, an agreement was reached by the Catholics and the Utraquists—the so-called Compactata By that agreement, the Utraquists were readmitted into the fold of the Catholic Church, which conceded to them the right to take communion in both kinds, this concession applied only to Bohemia and the Bohemian crown lands. The Compactata were rejected by the Taborites, but after the victory (1434) of the Utraquists and Catholics over the Taborites at Lipany, Rokycana was elected (1435) archbishop of Prague, and in 1436 the Czech delegates formally accepted the Compactata at Jihlava in the presence of Emperor Sigismund The Compactata were successfully defended by GEORGE OF PODEBRAD and remained the law of the land until 1567 By that time Protestantism had made great progress in Bohemia and had split the Utraquists into two parties The Old Utraquists remained Catholic, and the New Utraquists compromised with the Lutherans, with whom they drew up (1575) the *Confessio Bohemica*, the articles of Bohemian Protestantism, which received official status (1609) in the Letter of Majesty (Ger *Majestätsbrief*) of Emperor Rudolf II (see BOHEMIA) Though Utraquism was absorbed by the Protestant Reformation on the one hand and by the Catholic Reform on the other, Hussite sects continued in Bohemia

Utrecht (ū'trĕkt, Dutch ü'trĕkht), province (502 sq. mi pop 544,657), central Netherlands, bounded by the Ijsselmeer (formerly the Zuider Zee) in the north Utrecht, its capital, and Amersfoort are the chief cities A low-lying country, drained by the Lower Rhine it is mainly agricultural, producing vegetables, dairy products, and fruit

Utrecht, municipality (pop 183,251), capital of Utrecht prov, central Netherlands, on a branch of the Lower Rhine It is the see of the Roman Catholic archbishop and primate of the Netherlands, and it has a university (founded 1636) Machinery, textiles, and foods are among its chief industrial products Utrecht is the site of a large industrial fair, held twice yearly Possibly dating from Roman times, Utrecht has a long and venerable history It was made (late 7th cent) an episcopal see for St Willibrord, the Apostle to the Frisians The bishops of Utrecht later ruled, as princes of the Holy Roman Empire, the area around the city and the lordship (now province) of Overijssel In constant struggle with its bishops, the city of Utrecht received a liberal charter in 1122, but its difficulties with the bishops revived sporadically until 1527, when the bishop sold his territorial rights to Emperor Charles V Utrecht was the most important commercial center of the N Netherlands in the Middle Ages Charles V incorporated it with the rest of the Hapsburg-held Netherlands Utrecht joined (1577) in the rebellion against Philip II of Spain, and in 1577 the seven provinces of the N NETHERLANDS, from then on known as the United Provinces, drew together for their common defense in the Union of Utrecht In the early 17th cent Utrecht became a center of JANSENISM In 1713 several treaties forming part of the Peace of Utrecht (see separate article) were signed here A picturesque old city, intersected by numerous sunken canals, Utrecht has retained its 14th-century cathedral

Utrecht, Peace of, series of treaties which concluded the War of the SPANISH SUCCESSION It put an end to French expansion and signalized the rise of the British Empire By the treaty between England and France (April 11, 1713), Louis XIV recognized the English succession as established in the house of Hanover and confirmed the renunciation of the claims to the French throne of Louis's grandson, Philip V of Spain The French fortifications of Dunkirk were to be razed and the harbor filled up, and the Hudson Bay territory, Acadia, St Kitts, and Newfoundland were ceded to England By a commercial treaty England and France granted each other most-favored-nation treatment By a treaty with the Netherlands (April 11, 1713) France agreed to surrender to Austria the parts of the Spanish Netherlands still in French hands; these were to be held in trust by the Netherlands till the conclusion of a treaty between the Netherlands and the emperor A commercial treaty between France and the Netherlands was also signed. France furthermore restored Savoy and Nice to VICTOR AMADEUS II and also signed treaties with Portugal and Prussia The Anglo-Spanish treaty (July 13, 1713) confirmed the clauses of the Anglo-French treaties relative to the English and French successions Spain ceded Gibraltar and Minorca to Great Britain and Sicily (exchanged in 1720 for SARDINIA) to Savoy Britain acquired the sole right to the slave trade with Spanish America The Treaty of Rastatt between Louis XIV and Emperor Charles VI (March 7, 1714) and the Treaty of Baden (Sept 7, 1714), which completed the settlement, restored the right bank of the Rhine to the empire and confirmed Austria in possession of the formerly Spanish Netherlands, of Naples, and of Milan The Third Barrier Treaty (Nov 15, 1715) regulated trade relations between the Dutch and Austrian Netherlands See J W Gerard, *The Peace of Utrecht* (1885)

Utrera (ōōtrā'ra), city (pop 26,654), Seville prov, S Spain, in Andalusia, on a branch of the Guadalquivir It is an agricultural center Horses are bred here, and bulls are raised for the ring There are a Gothic church (17th cent) and ruins of medieval walls and a castle

Utrillo, Maurice (mōrēs' ütrēlō'), 1883–, French painter He was the illegitimate son of the painter Suzanne Valadon and was legally adopted (1891) by the Spanish writer Miguel Utrillo His only instructor was his mother He began to paint in 1903 and won an early celebrity for his vivid pictures of the streets and suburbs of Paris Among his paintings are *Église de Groslay*, *Rue des Abbesses*, *Montmartre*, and *Route de Montmagny*

Utsunomiya (ōōtsōōnō'mēa), city (1947 pop 97,075), capital of Tochigi prefecture, central Honshu, Japan It is a tobacco-processing center and a tourist resort The mountainous western area of the prefecture is included in Nikko National Park

Uttar Pradesh, India see UNITED PROVINCES

Uttoxeter (ŭtŏk'sĭtur, utŏk'-, ŭk'sĭtur), urban district (1931 pop 5,909, 1947 estimated pop 7,374), Staffordshire, England, on the Dove river It is a market town making dairy products and farm machinery Dr Johnson's father had a bookstall in the market

Uusikaupunki (ōō'sēkou"pōōngkē), Swed *Nystad* (nu'stad"), town (pop 3,825), SW Finland, a Baltic port on the Gulf of Bothnia It exports timber and local granite Founded in 1617, the town was the scene (1721) of the signing of the Treaty of Nystad (see NORTHERN WAR)

Uvalde (ūvăl'dē), city (1940 pop 6,679, 1947 estimated pop 8,400), co seat of Uvalde co, SW Texas, WSW of San Antonio founded c 1854, incas a town 1886, as a city 1921 A large plaza and many pecan trees lend grace to this town, which draws wealth from ranches and a small irrigated section of truck farms Cattle, mohair, wool, pecans, honey, and asphalt are shipped John Nance Garner's home is here, and Uvalde is the seat of Southwest Junior College

Uvedale see UPDALL

Uxbridge (ŭks'brĭj), town (pop 1,406), S Ont, on the Black River and NNE of Toronto It has flour- and gristmills and dairying

Uxbridge, urban district (1931 pop 31,880, 1947 estimated pop 51,360), Middlesex, England, on the Colne near the Grand Junction Canal It is a market town Charles I and the parliamentarians negotiated in the "Treaty House" in 1645

Uxbridge, town (pop 6,417), S Mass, on the Blackstone and SE of Worcester, settled 1662, set off from Mendon 1727 It was the site of one of the "praying Indian" villages of John ELIOT Woolens and worsteds are produced

Uxmal (ōōshmäl', ōōxmäl'), ruined city, Yucatan, E Mexico, belonging to the Maya New Empire (see MAYA) Uxmal was founded between 987 and 1007 (according to one system of dating) by the Tutul Xiu family and abandoned in 1441 It is the finest expression of the Mayan architectural renaissance The Mexican influence characteristic of other cities of the period is almost entirely lacking There is homogeneity of style in the stone-mosaic friezes of geometric design alternating rhythmically with masks and intertwining serpents The stones, each weighing several hundred pounds, were almost perfectly cut and fitted

Uz (ŭz) **1** Grandson of Shem Gen 10 23, 1 Chron. 1 17 **2** Grandson of Seir Gen 36 28, 1 Chron 1 42 **3** One or more unidentified places or regions. Job 1 1, Jer 25 20, Lam 4 21

Uzai (ū'zāī), father of PALAL

Uzal (ū'zăl), descendant of Shem whose clan settled in SE Arabia Gen 10 27, 1 Chron 1 21.

Uzbek Soviet Socialist Republic (ŏŏz'bĕk, ŏŏzbĕk', Rus ŏŏzbyĕk') or **Uzbekistan** (ŏŏz"bĕkĭstän', -stan', Rus ŏŏzbyĕkĭstän'), constituent republic (157,300 sq mi, 1946 estimated pop 6,000,000), central Asian USSR Tashkent is the capital. The republic borders on Afghanistan in the south, on the Turkmen SSR in the southwest, on the Kazakh SSR in the west and the north, and on the Kirghis SSR and the Tadzhik SSR in the east. The KARAKALPAK ASSR is included in the Uzbek SSR. The western section of the country is part of the desert of the KIZIL KUM, the east has fertile loess soil and touches on the TIEN SHAN mountain system The two chief rivers of Central Asia—the AMU DARYA and the SYR DARYA—pass through Uzbek territory The KHIVA oasis is irrigated by the Amu Darya (ancient Oxus), the fertile FERGANA VALLEY, by tributaries of the Syr Darya; the TASHKENT oasis, by the Chirchik and Angren rivers, and the SAMARKAND and BUKHARA oases, by the ZERAVSHAN Uzbekistan has a dry continental climate It is the most thoroughly irrigated agricultural region of the Soviet Union and is its chief producer of cotton, rice, and silk Other crops are sesame, tobacco, sugar beets, and fruits (including grapes) Livestock—karakul sheep, goats, camels, mules, and donkeys—is extensively raised Mineral resources include petroleum near ANDIZHAN and FERGANA, coal at Angren, and copper, sulphur, ozocerite, tungsten, molybdenum, and marble. Tashkent and Fergana have large cotton textile industries, MARGELAN is the center of the wool industry There also are hydroelectric and metallurgical plants, machinery manufactures, and food-processing plants About three quarters of the population are Uzbeks, a Turkic-speaking group of Persian culture and Sunnite Moslem religion, the rest are Karakalpaks, Tadzhiks, Russians, Kazakhs, Kirghis, Armenians, and Bukhara Jews—a Jewish community distinct in history and tradition from the rest of the Jews Uzbekistan is one of the oldest civilized regions of the world The ancient Persian province of SOGDIANA, it was conquered (c 329 B C) by Alexander the Great It was taken (8th cent A D) by the Arabs, who introduced Islam, and in the 12th cent fell to the Seljuk shahs of KHOREZM Jenghiz Khan took it in the 13th cent, and in the 14th cent TAMERLANE made his native Samarkand the center of his immense conquests Under his successors, the TIMURIDS, the empire was much reduced and by the end of the 15th cent began to fall apart Throughout these turbulent events the cities of Samarkand, Bukhara, and Tashkent, situated on major trade routes to China, India, Persia, and Europe, were centers of prosperity, culture, and nearly fabulous luxury In the early 16th cent the Uzbeks, formerly called Sarts, invaded the region from the northwest A remnant of the GOLDEN HORDE, they took their name from Uzbeg (fl 14th cent), from whom their dynasty claimed descent Later in the 10th cent the Uzbek leader Abdullah extended his rule over parts of Persia, Afghanistan, and Chinese Turkistan, but the empire soon broke up into separate principalities Chief among these were Khiva (see KHIVA, KHANATE OF), KOKAND and Bukhara (see BUKHARA, EMIRATE OF) Long closed to all foreigners, these states were conquered by Russia between 1865 and 1876 Kokand was annexed outright, but Khiva and Bukhara remained under their native rulers as vassal states of Russia until 1920 As constituted in 1924, the Uzbek SSR included also Tadzhikistan, which in 1929 became a separate constituent republic The industrialization policy of the Soviet regime and the linking up of the Trans-Caspian and Turkistan-Siberia railroads have made Uzbekistan one of the most valuable territories of the Soviet Union

Uzhgorod (ōōzh'gurōt, Czech *Užhorod* (ōōzh'hôrôt), Hung *Ungvar* (ōōng'vär), city (1941 pop 45,250), capital of the Transcarpathian oblast, W Ukraine, near the Czechoslovak border It manufactures margarine and alcohol, and it is an agricultural market center The Univ of Uzhgorod was founded in 1945 Dating from the 13th cent, the city was long an important center of Hungarian RUTHENIA, which passed to Czechoslovakia in 1920 and to the USSR in 1945 There are a 13th-century castle and an 18th-century cathedral

Uznam, Pomerania see USEDOM

Uzza or **Uzzah** (ŭ'zu) **1** Israelite who met sudden death after touching the ark 2 Sam 6 3-8 1 Chron 13 7–11 **2** Benjamite 1 Chron 8 7 **3** Descendant of Merari 1 Chron 6 29 **4** One who returned with Zerubbabel Ezra 2 49

Uzzen-sherah (ŭ'zun-shĭ'ru), foundation of SHERAH 1 Chron 7 24

Uzzi (ŭ'zī) [Heb, =God is my strength] **1** High priest 1 Chron 6 5,6,51, Ezra 7 4 **2** Son of Tola 1 Chron 7 2,3 **3** Levitical overseer in Jerusalem Neh 11 22 **4,5** Benjamites 1 Chron 7 7, 9 8 **6** Priest Neh 12 19,42

Uzzia (ŭzī'u), hero of David 1 Chron 11 44

Uzziah (ŭzī'u) [Heb, =strength of God] **1** Died c 735 B C, king of Judah (c 775–c 735 B C), son and successor of Amaziah He rebuilt Elath, port on the Gulf of Aqaba His attack of leprosy and miraculous cure are a famous incident He was succeeded by Jotham 2 Chron 26 He is called Azariah in 2 Kings 15 Ozias Mat 1 8,9 **2** Levite see AZARIAH **5** **3** Father of one of David's officers 1 Chron 27 25 **4** Man with a foreign wife Ezra 10 21 **5** Judahite Neh 11 4

Uzziel (ŭ'zēĭl, ŭzī'ul) [Heb, =God is my strength] **1** Kohathite Levite mentioned often Ex 6 18 **2** Captain of David's 1 Chron. 4 42. **3** See AZAREEL **2** **4** Head of a Benjamite family. 1 Chron 7 7 **5** Levite 2 Chron. 29 14. **6** Goldsmith Neh 3 8

V

V, 22d letter of the ALPHABET (see U) It is a usual symbol for a voiced labiodental spirant, as in *vat* In Roman numerals it symbolizes Arabic 5, in chemistry the element VANADIUM

Vaago, Dan. *Vaagø* (vô′wû), Faeroese *Vágar*, island (69 sq mi , pop 2,256), W Faeroe Islands Fishing and sheep raising are the chief occupations

Vaal (vāl), river, Union of South Africa, rising in SE Transvaal and flowing c 700 mi to the Orange River in Cape Prov On its predominantly southwesterly course it forms most of the boundary between Transvaal and the Orange Free State

Vaasa or **Vasa** (both vä′sä), city (pop 34,083), W Finland, a Baltic port on the Gulf of Bothnia It is a shipping center for timber, and it produces textiles and motors Half the population is Swedish-speaking Founded in 1606, Vaasa was rebuilt closer to the sea after a devastating fire in 1852 It was named Nikolaunkapunki or Nikolaistad (after Tsar Nicholas I) from 1855 to 1918 During the Finnish war of independence Vaasa was the capital of White Finland

Vac, Hung *Vác* (vats), Ger *Waitzen* (vī′tsun), city (pop 22,130), N central Hungary, on the Danube and N of Budapest It is a favorite summer resort of Budapest residents and has an 18th-century cathedral and an episcopal palace It was formerly Vacz or Vacs.

Vaca, Cabeza de see CABEZA DE VACA, ÁLVAR NÚÑEZ

Vaca de Castro, Cristóbal (krēstō′vəl vä′kä dā kä′strō), fl 1540–45, Spanish colonial administrator in Peru A judge of the royal *audiencia* at Valladolid, he was chosen by Charles V to restore order between the Pizarro and the Almagro factions He was a man of integrity, sagacity, and courage Arriving in 1541 and learning of the assassination of Francisco PIZARRO, he assumed the governorship and put down the uprising headed by Almagro the younger (son of Diego de ALMAGRO), who was defeated in 1542 Vaca de Castro was succeeded by the first viceroy of Peru, NÚÑEZ VELA, in 1544 The viceroy, suspecting Vaca de Castro of sympathizing with the rebellion of Gonzalo Pizarro, had him arrested Returning to Spain in disgrace, Vaca de Castro was imprisoned for 12 years before he was cleared of all charges and restored to his honors He probably died at some time after 1571

Vacaville (vā′kəvĭl, vă′–), town (pop 1,614), central Calif , between Sacramento and San Francisco, in a fertile valley, founded 1850, inc 1892

vaccination, means of producing active IMMUNITY to disease by inoculation with a vaccine It was introduced by Edward JENNER to produce immunity against smallpox He injected the smallpox virus into cattle, thus producing cowpox, the cowpox virus procured from pustules was then injected under the skin of man This modified smallpox virus produces a local lesion, but renders the individual immune to smallpox for 5 to 7 years or longer Later the term *vaccination* was extended to similar methods of producing immunity against other diseases Vaccines are usually prepared from the killed or weakened organisms causing the specific disease or from their toxic products, live organisms are sometimes used Vaccination is employed to prevent typhoid fever, diphtheria, hydrophobia, cholera, typhus fever, yellow fever, and recurrence of boils

Vaclav, Saint see WENCESLAUS, SAINT

Vacs, Hungary see VAC

vacuum, theoretically, a space without matter in it In practice, a perfect vacuum has not as yet been obtained although an extremely high vacuum is produced in many of the vacuum tubes in common use Among the ancients, the belief that "nature abhors a vacuum" was held widely and persisted without serious question until the late 16th and early 17th cent , when the experimental observations of Galileo and Torricelli demonstrated its essential fallacy Torricelli obtained a nearly perfect vacuum (Torricellian vacuum) in his mercury BAROMETER Commonly a vacuum is thought of as causing "suction" The concept is convenient but incorrect Actually the apparent "suction" caused by a vacuum is a measurement of the pressure of the atmosphere tending to rush in and fill the unoccupied space The accuracy of the measurement depends upon the nature of the vacuum, a perfect vacuum exerts no pressure for it contains no matter There are various methods for producing a vacuum, and a number of different kinds of vacuum pumps have been devised for removing the air from a confined space A major difficulty is that matter is apparently not continuous but is composed of extremely minute particles called molecules which are in a state of rapid vibratory motion To obtain a perfect vacuum, therefore, it is necessary to remove all the molecules in a given confined space One ingenious method involves, first, as complete exhaustion of the air as possible by physical means and then the breaking down by chemical means of most of the molecules of the gas still remaining in the space into smaller particles and the recombination of these into molecules of a substance which is a solid under ordinary circumstances A pump depends for its operation upon the creation of a vacuum in a cylinder by the action of a piston (which is drawn out against the atmospheric pressure acting to hold it in) When a valve is opened in the cylinder, the liquid or gas around it is forced in by the pressure of the atmosphere Practical use of a vacuum is made in devices such as the vacuum cleaner, vacuum tube (see TUBE, VACUUM OR ELECTRON), vacuum bottle, and barometer

vacuum tube see TUBE, VACUUM OR ELECTRON.

Vacz, Hungary see VAC

Vadso, Nor *Vadsø* (vad′sû″), town (pop 2,107), Finnmark co , NE Norway, on the northern bank of the Varanger Fjord An ice-free port, it trades in reindeer meat and skins, dried fish, train oil, and guano. It is a whaling base

Vadstena (vad′stä″na), town (pop 3,233), S central Sweden, a port on the eastern shore of Vattern lake Vadstena is one of the oldest towns and was the site of the most important medieval cloisters in Sweden, the Convent of St Birgitta founded c 1370 It was a commercial center and the scene of many historic events The town is a stop on the Gota Canal and has a notable lacemaking industry

Vaduz (vä′dōōts), town (pop 2,041), capital of the principality of LIECHTENSTEIN, between Austria and Switzerland

Vaga, Perino del see PERINO DEL VAGA

Vagarshapat, Armenian SSR see ECHMIADZIN

vagrancy, the state of being without work or a home Idleness was formerly held voluntary and in law was considered, as Blackstone says, "a high offense against the public economy " Under English statutes "idle and disorderly rogues and vagabonds" were punished, they were guilty in that "no man wot from whence they come nor where they go " Such statutes have been repealed as inconsistent with the fact of involuntary UNEMPLOYMENT The soliciting of alms is punished by most governments The ordinances of many cities prohibit loitering and obstructing the streets In treating vagrancy, the efforts of local governments are commonly directed to inducing vagrants to move on In times of economic crisis many persons who are ordinarily employed become vagrants, and curative measures would involve curing unemployment In the United States the word *hobo* is loosely applied to a man out of work who is presumably traveling about looking for work, while a *tramp* is a social misfit who prefers a vagrant life See Josiah Flynt, *Tramping with Tramps* (1899), Niels Anderson, *The Hobo* (1923), Thomas Minehan, *Boy and Girl Tramps of America* (1934)

Vah, Slovak *Váh* (vakh), Ger *Waag* (vak), Hung *Vág* (vag), river, 245 mi long, rising in the Tatra mts , E Czechoslovakia It flows SW through Slovakia into an arm of the Danube at Komarno. The resorts of Piestany and Trencianske Teplice lie on the river

Vaida-Voevod, Alexander (vä′ĭda voivōd′), 1871–1950, Rumanian statesman, b Transylvania He was (1906–18) a member of the Hungarian parliament, in which he advocated the cause of the Rumanians in Transylvania In 1918, on the collapse of the Austro-Hungarian Monarchy, he led in the proclamation of the union of Transylvania, and in 1919 he was made premier and foreign minister of Rumania He secured the recognition of the incorporation of Transylvania into Rumania, had Rumanian troops intervene against the Communist regime of Bela Kun, and negotiated the recognition (1920) by the Allies—but not by Russia—of the Rumanian annexation of Bessarabia He resigned in 1920, but was once more premier (1933) at the head of the National Peasant party Withdrawing from that party in 1935, he associated with the reactionary, pro-German, and anti-Semitic elements in politics

Vaigach (vīgach′), island, area 1,130 sq mi , off N European RSFSR, in the Arctic Ocean between Novaya Zemlya and the mainland The native Nenets population (formerly called Samoyedes) subsists on fishing, sealing, and reindeer raising There are two arctic observation stations

Vaihinger, Hans (hans′ fī′hĭng-ur), 1852–1933, German philosopher He contributed to the understanding of Kant's philosophy and founded the "as if" philosophy Educated at Tübingen, Leipzig, and Berlin, he served at Strasbourg first as tutor and then as professor of philosophy In 1884 he went to Halle, where he became full professor in 1892 His studies of Kant culminated in *Kant—ein Metaphysiker?* (1899) His own system was set forth in 1911 and was translated into English as *The Philosophy of "As If"* (1924) He argued that since reality cannot be truly known, human beings construct systems of thought to satisfy their needs and then assume that actuality agrees with their constructions. People act "as if" the real were what they assume it to be

Vail, Alfred (vāl), 1807–59, American inventor, b Morristown, N J , grad Univ of the City of New York (now New York Univ), 1836 A partner of S F B Morse, he provided funds for Morse's work on the telegraph and made improvements in the instrument as well as in the dot-and-dash code for it He wrote *The American Electro Magnetic Telegraph* (1845)

Vail, James Garrett, 1886–, American industrial chemist, b Philadelphia. He is known for his work on soluble silicates and water softeners He wrote *Soluble Silicates in Industry* (1928)

Vailima (vīlē′mu), estate, home of Robert Louis Stevenson, on Upolu island in Western Samoa Stevenson lived here for five years, his tomb is on the summit of near-by Mt Vaea

Vajezatha (vuĭz′uthu), one of Haman's sons Esther 9 9

Valaam, Karelo-Finnish SSR see LADOGA, LAKE

Valais (välā′), Ger *Wallis*, canton (2,021 sq mi , pop 148,319), Switzerland It extends from the Bernese Alps in the north to the Pennine Alps in the south, with the upper Rhone valley between them, and it has some of the highest peaks (Matterhorn, Dufourspitze, Dom, Weisshorn) in Switzerland Principally a stock-raising and agricultural canton, it is also known for its fine wines There are numerous powerful hydroelectric stations and many resorts Taken by the Romans in 57 B C , Valais later passed to the Burgundians and the Franks In 999 Rudolf III of Burgundy made the bishop of Sion lord of Valais, but the country split, the Lower Valais passing to Savoy In 1475 the bishop of Sion and the communes of the Upper Valais, which gained considerable autonomy, defeated the duke of Savoy, and henceforth till 1798 the Lower Valais was held in subjection by the Upper Valais Made a canton of the Helvetic Republic in 1798 an independent republic in 1802, and a French department in 1810, Valais was admitted as a canton into the Swiss Confederation in 1815 Most of the inhabitants are French-speaking and Catholic

Valama or **Valamo,** Karelo-Finnish SSR see LADOGA, LAKE

Valatie (vulā′shu), village (pop 1,208), E N Y , NE of Hudson, in a fruit and dairy region, inc 1856

Valbert, G see CHERBULIEZ, VICTOR

Valcour Island (vălkōōr′), c 2 mi long, NE N Y , in Lake Champlain, near Plattsburg Here on Oct 11, 1776, American vessels under Benedict ARNOLD were attacked by the British and forced to retreat to Crown Point

Valdai Hills (vəldī′, Rus vəldī′), moraine region, NW European RSFSR, forming the watershed of the Western Dvina, Volga, and Lake Ilmen basins Extending in parallel ridges for c 300 mi from northeast to southwest, it rises to 1,053 ft at Mt Kammenuk There are numerous lakes

Valdemar. For Danish rulers thus named, see WALDEMAR

Valdepeñas (val″dāpā′nyas), city (pop 29,891), Ciudad Real prov , S central Spain, in New Castile, on the Jabalón river and in a fertile plain It is noted for its red wines, and it produces vinegar and has alcohol distilleries

Valdés, Armando Palacio see PALACIO VALDÉS

Valdés, Juan de (hwan′ dā valdās′), c 1500–1540, Spanish reformer, b Cuenca He went soon after 1530 to Naples, where he became the center of a circle of men interested in religious reform Valdés had already published an attack on many ecclesiastical abuses He never openly abjured Catholicism, but he was a principal influence on many reformers, e g , OCHINO and VERMIGLI He seems to have held the doctrine of justification by faith alone Many consider him a Socinian or Unitarian

Valdese (vălˈdēs), town (pop 2,615), W N C , in the Blue Ridge foothills E of Asheville, inc 1921 In 1893 Waldenses from the Cottian Alps, N Italy, started a farm colony here Valdese now has textile and other mills and wineries

Valdés-Leal, Juan de (hwan′ dā valdās′-lāal′), 1622? 1690?, Spanish religious painter of the school of Seville He excelled in painting horrible and gruesome subjects, such as *Two Cadavers in Their Worms* Much of his best work is in Seville His *Via Crucis* is in Córdoba, and another version in the Hispanic Society, New York He succeeded Murillo as president of the Seville Academy

Valdez (vălˈdēz′), town (pop 529), S Alaska, on Prince William Sound Its excellent, ice-free harbor was explored and named by the Spanish in 1790 The town came into existence (1898) as a debarkation point for men seeking a route to the Yukon gold fields which would obviate the necessity of paying duty to Canada It has a seaplane base and is the coastal terminus of the Richardson Highway to Fairbanks The town is the shipping and commercial center for a large gold-mining and fur-producing area

Valdivia, Pedro de (pā′dhrō dā vāldē′vyä), c.1500–1554, Spanish conquistador, conqueror of Chile One of Francisco Pizarro's best officers in the con-

quest of Peru, educated, energetic, somewhat less cruel and avaricious than his fellow conquerors, Valdivia obtained permission from Pizarro to subdue Chile In Jan , 1540, he began his march south through the desert of Atacama, following the route used by his unfortunate predecessor, Diego de Almagro Although Santiago was founded in 1541 and other settlements in the next few years, the colony was not prosperous, gold was scarce and the Araucanian Indians warlike To secure additional aid and confirm his claims to the conquered territory, Valdivia returned to Peru in 1547 and helped the viceroy, Pedro de la Gasca, against the rebellion of Gonzalo Pizarro He received the title of governor of Chile and returned to his domain in 1549, continuing his march S to the Bío-Bío river, where he founded Concepción, and farther S to Valdivia (1552). Ostensibly the conquest was complete Toward the end of 1553, however, the Indians under Lautaro revolted Valdivia, sallying forth with 40 men to stamp out the rebellion, was ambushed As each successive wave of Indian attackers was wiped out or beaten off, Lautaro sent another until the entire company, including Valdivia, was massacred See biography by R B Cunninghame Graham (1926)

Valdivia, city (pop 34,496), S central Chile, on the coast Founded in 1552 by Pedro de Valdivia, the city is attractively situated on the Valdivia river 11 mi from its port, Corral The climate is cool, and there is ample rainfall One of the most active of Chilean commercial cities, it also has numerous industries, besides tanneries, sugar refineries, large shipyards, flour mills, breweries, and lumber mills, there are factories producing pig iron and steel, cordage products, and shoes Occupied by Spanish royalists during most of the war for liberation, Valdivia was finally freed when the English admiral and soldier of fortune, Lord Cochrane, captured Corral in 1820

Val d'Or (vȧl dôr'), town (pop 4,385), W Que , ESE of Rouyn, founded 1933, inc 1935 The town is a mining center with an airport Gold was discovered in the region in 1909, and the region also produces copper, zinc, lead, and molybdenum

Valdosta (vȧldŏ'stu), city (pop 15,595), co seat of Lowndes co , S Ga , near the Fla line SW of Waycross, in a fine lake region, founded 1860 Valdosta is a processing, distributing, and commercial center for a large farm area It has railroad shops and chemical works and processes the cotton and lumber of the area Georgia State Womans College (1906) and Emory Junior College are here

Vale (vāl), town (pop 1,083), co seat of Malheur co , E Oregon, on the Malheur near the Idaho line, settled 1864, inc 1889 It has hot springs which are utilized by a sanatorium and is a shipping center for a livestock and farm area, It is the chief town of the Vale irrigation project, established in 1928 by the Bureau of Reclamation and comprising some 32,000 acres which are supplied with water from the Malheur river

Valence (vȧlȧs'), city (pop 34,249), capital of Drôme dept , SE France, on the left bank of the Rhone It manufactures silk It was the capital of the duchy of Valentinois, a dependency of Dauphiné, Louis XII conferred (1498) it upon Cesare Borgia Valence was heavily damaged in the Second World War, but its Romanesque cathedral was preserved

valence (vā'lŭns) [Latin, = power], in chemistry, a number representing the relative ability of a chemical element to combine with another chemical element The basis, or unit of comparison, is commonly taken as the ability of hydrogen to combine For example, in a molecule of water the atom of oxygen is found combined chemically with two atoms of hydrogen It is said, therefore, to exhibit a valence of 2, i e , to show the ability to hold 2 atoms of hydrogen in combination An atom of hydrogen and an atom of chlorine form the molecule of hydrochloric acid The valence of chlorine is 1 On the other hand, certain elements do not combine with hydrogen The number of hydrogen atoms which they displace from a compound indicates the valence For example, an atom of zinc will displace the two atoms of hydrogen in the molecule of sulphuric acid to form zinc sulphate Zinc thus exhibits a valence of 2 Elements having a valence of 1 are called univalent, those of 2, divalent, those of 3, trivalent, and so on Not all elements, however, are confined to one valence Iron, for example, has valences of 2 and 3, phosphorus of 3 and 5 In general, however, elements exhibit a single valence in all the various compounds of which they form a part An explanation of valence is found in the electronic structure of the atom, i e , in the number and arrangement of the electrons around the nucleus of the atom Knowledge of the valences of the various elements is of prime importance in the writing of chemical formulas and equations

Valencia, Guillermo (gēvĕr'mō vȧlĕn'svȧ), 1873–1943, Colombian poet, one of the leaders of *modernismo* He came from an aristocratic family, received solid classical training, was active politically, and was a noted orator. Valencia was a disciple of José Asunción Silva and like Silva showed in austere and subtle verses deep culture and extreme sensibility. His poems are few but polished, his only volumes are *Ritos* (1898) and *Catay* (1928) Valencia was constantly preoccupied with the fate of the poet in an indifferent world.

Valencia (vulĕn'shû, Span vȧlȧn'thċȧ), region (8,998 sq mi , pop. 2,176,670) and former kingdom, E Spain, on the Mediterranean coast. It now comprises the provinces of Alicante, Castellón de la Plana, and Valencia The country is mostly mountainous, with a fertile coastal plain, on which most of the population is concentrated. Irrigation works and the intensive system of cultivation, started by the Moors, have made it the "garden of Spain," producing oranges, lemons, and other fruit, rice, vegetables, cereals, olive oil, and wine Exports of many of these products, especially of Valencia oranges, are very active The mulberry has been cultivated for silk since ancient times, but the silk industry has declined Processed foods, ceramics, and textiles are the chief industrial products Many prehistoric remains have been found in Valencia Inhabited by the Iberians in early times, it was later colonized by the Greeks and Carthaginians and was a battlefield between the Carthaginians and the Romans (see Sagunto) It passed to the Moors in the 8th cent , and at the fall of the caliphate of Córdoba it became (1022) an independent emirate The Cid ruled briefly the city and district of Valencia (1094–99) After the rule of the Almoravides and Almohades, independence was briefly restored until James I of Aragon conquered (1238–52) the region The kingdom of Valencia preserved its political identity first within the Aragonese confederation and later in the Spanish state, but its privileges were completely abolished by Philip V in the 18th cent The 14th and 15th cent were a period of economic prosperity and artistic flowering, followed by decline after the expulsion of the Moors (1609)

Valencia (vulĕn'shû, Span vȧlȧn'thċȧ), city (pop 409,670), capital of Valencia prov , E Spain, the third largest city of Spain It lies in a fertile garden region 3 mi from its busy port, Villanueva del Grao, on the Gulf of Valencia in the Mediterranean It is an active industrial and commercial center producing textiles (mainly silk), chemicals, tobacco, furniture, and *azulejos* [colored tiles] There also are important shipyards Oranges, lemons, raisins, and wine are the chief exports First mentioned in the 2d cent B C , Valencia was a Roman colony Under the Moors from the 8th to the 13th cent , it was twice the seat of an independent state (see Valencia, region) From 1094 to 1099 it was ruled by the Cid After its conquest (1238) by James I of Aragon, Valencia rose to great commercial and cultural importance and rivaled Barcelona Its university was approved c 1500 by Pope Alexander VI A school of painting flourished in the 16th and 17th cent In the Spanish civil war, Valencia was (1936–37) the seat of the Loyalist government The city, which is a popular winter resort, is very picturesque Among its chief landmarks are the cathedral (13th-15th cent), called La Seo, with a Gothic belltower, the Miguelete, the citadel, built (16th cent) by Emperor Charles V, the Torres de Serranos, 14th-century fortifications built on Roman foundations, the Gothic silk market, called La Lonja, and the Renaissance palace of justice There is a fine art gallery

Valencia (vȧlĕn'syȧ) city (pop 53,938), N Venezuela Valencia was founded in 1555 near the western shore of Lake Valencia The lake (c 120 sq mi) is the second largest in Venezuela With no surface outlet, it is bordered by disease-breeding marshes, and early settlers chose to establish Caracas as the capital rather than the more centrally located Valencia The city is in the republic's leading agricultural district Sugar cane, the chief crop, is closely rivaled by cotton Cattle, driven N from the Orinoco llanos for fattening, have made Valencia a cattle mart Industrial activities include cotton mills, dairies, slaughtering, meat packing, shoe factories, and breweries Valencia is linked by highway and railroad to its port, Puerto Cabello, and to Caracas

Valencia or **Valentia** (both vulĕn'shēu), rocky island, (pop 1,198), 7 mi long and 2 mi wide, Co Kerry, Ireland, off the SW coast, S of the entrance to Dingle Bay Valencia is known as the terminus of several transatlantic cables, including that laid to Newfoundland by the *Great Eastern* in 1866, after several earlier unsuccessful attempts Knightstown (pop 343) is across the strait from Valencia, the knight of Kerry had an estate on the isle Slate was once quarried here Fishing boats use the harbor

Valenciennes (vulĕn"sĕĕnz', -ĕn', Fr vȧlȧsyĕn'), town (pop 37,716), Nord dept , N France, on the Escaut (Scheldt) river Famous since the 15th cent for its lace industry, it now chiefly refines sugar and manufactures textiles and machinery Valenciennes, an important place of medieval Hainaut, definitively passed to France in 1678 Its center was destroyed in the Second World War Emperor Baldwin I, Froissart, and Watteau were born here

Valenciennes lace · see LACE.

Valens (vā'lunz), c 328–78, Roman emperor of the East (364–78). Brother and coregent of Valentinian I, Valens followed in most respects his brother's policies but, unlike him, embraced Arian Christianity (see Arianism) He suppressed pagan worship and mildly persecuted Orthodox Christians At the beginning of his reign he put down the revolt of Procopius and initiated warfare against the Visigoths under Athanaric and pursued it successfully until 369 His attitude toward the Persian threat to Armenia was indecisive, and, hesitating to disturb the truce made with Persia by his predecessor Jovian, he intervened only sporadically and ineffectually He admitted the Visigoths under Fritigern into the empire Trouble ensued In 378 Valens was killed in the disastrous battle of Andrianople against the Visigoths, in which two thirds of the Roman army was destroyed This left the Eastern Empire virtually defenseless He was succeeded by Theodosius I

Valentia · see Valencia, island, Ireland.

Valentine, Saint, d c 270, Roman martyr priest His feast is Feb 14 The customs connected with him in English-speaking countries are probably a survival from a period when a pagan festival associated with love occurred about Feb 14 He is now considered popularly the patron of lovers and the help of those unhappily in love The lovers' greeting cards sent on this day (and the parodies of them) are called valentines for him

Valentine, city (pop 2,188), co seat of Cherry co , N Nebr , on the Niobrara near the S Dak line, in a cattle area, settled 1882 Near by are a state fish hatchery, an agricultural experiment station, and a national game preserve A region of lakes lies to the south

Valentine and Orson, French romance, first published in 1489 as *Valentin et Orson* Its theme is the separation of twin brothers in infancy and their recognition when Orson is a wild man in a forest and Valentine a knight See Arthur Dickson, *Valentine and Orson* (1929)

Valentinian I (vă"lŭntĭ'nēun), 321–75, Roman emperor of the West (364–75) He held high military rank under Julian and Jovian After the death of Jovian, Valentinian was proclaimed emperor and appointed his brother Valens coregent in the East He fought and, on several occasions, defeated the Alemanni He sent his general, Theodosius, to defend Britain against invasions by the Picts and Scots and later to Africa to suppress a revolt As part of his defense of the frontiers of the empire, Valentinian caused the construction of fortresses along the Rhine and the Danube He reduced taxation, promoted education, and economized on court expenses An Orthodox Christian, Valentinian permitted religious freedom to Arians and pagans He was succeeded by Valentinian II and Gratian

Valentinian II, 371–92, Roman emperor of the West (375–92) He was proclaimed emperor upon the death of his father Valentinian I and was coregent with his brother Gratian Upon the death of Valens in 378, Gratian made Theodosius I ruler in the East The minority of Valentinian was troubled by the religious struggle between the Arians, supported by the emperor's mother, Justina, and the Nicene Christians led by St Ambrose In 383 Gratian was killed by order of Maximus, and the personal rule of Valentinian in Italy began He was expelled from Italy by Maximus but was restored by Theodosius in 388 Valentinian died four years later, probably murdered by the Frankish general Arbogast, who named the puppet Eugenius as emperor

Valentinian III, 419–55, Roman emperor of the West (425–55) Nephew of Honorius, he was placed on the throne by his cousin Theodosius II His mother Galla Placidia acted as regent during his minority but from 433 to 454 the powerful general Aetius was the actual ruler in the West During Valentinian's reign Africa was lost by Boniface to the Vandals under Gaiseric, who subsequently ravaged the Mediterranean coasts The empire was disturbed by civil war between Aetius and Boniface and by the unrest of the barbarians, especially the Goths in Gaul Valentinian aided the efforts of Pope Leo I (see Leo I, Saint) to enforce ecclesiastical order in the West The closing years of the reign saw the invasion of the Huns under Attila, who after being defeated in Gaul by Aetius (451) made a brief expedition into Italy In 454 Valentinian murdered Aetius with his own hand and shortly afterwards was himself assassinated He was succeeded by Maximus

Valentino, Rudolph (vălŭntē'nō), 1895–1926, American moving-picture actor, whose real name was Rodolpho d'Antonguolla, b. Italy He came to the United States in 1913 and after a brief career as a dancer entered moving pictures His first success was in *The Four Horsemen of the Apocalypse*, and he added to his reputation in such romantic films as *The Sheik, Blood and Sand, The Eagle,* and *Monsieur Beaucaire*

Valentinois: see Valence, France

Valentinus (vălŭntī'nus), fl. c.136–c.160, founder of the Valentinians, the most celebrated of the Gnostic sects (see Gnosticism). The little that is known of his life is found in the works of early

Christian theologians who refuted him, such as St. Irenaeus and Clement of Alexandria. Probably born in Egypt, Valentinus taught in Alexandria, Rome, and Cyprus and gained brilliant converts from both East and West. He refined the doctrines of Gnosticism Valentinus taught that thought (called also grace and silence) is in the essence of God, and this essence produces nous (or mind). The logos (or word) emanates from nous, anthropos or primal man emanates from the logos. Other entities emanate from anthropos; these are grouped in pairs, forming the Pleroma (or collection of divine beings), of which the lowest was Sophia or Wisdom Sophia produced the formless Demiurge who created the material world From God came Jesus, who combined in himself attributes of all the pairs, and who was sent to release Sophia (and, subsequently, men) from the bondage of emotions Valentinus wrote letters, homilies, and psalms, of which fragments survive The *Odes of Solomon* have been attributed to him, but they are probably earlier More reasonable is the attribution of parts of the *Pistis Sophia*, an elaborate exposition of Gnostic ideas and cosmogony See George Horner, ed and tr , *Pistis Sophia* (1924)

Valentinus, Basilius see BASILIUS VALENTINUS

Vale Press, celebrated British fine-printing establishment It was one of the presses established in London in the 19th-century revival of the art and craft of making books The Vale type and the other types (Avon and King's Fount) used by the Vale Press were designed and the printing of Vale Press books was supervised by the artist Charles RICKETTS, the presswork was by the Ballantyne Press The masterpiece of the Vale Press is *The Works of Shakespeare*, in 39 volumes (1900–1903) The work of the press, begun in 1896, ended in 1904, and Ricketts then destroyed the types See also KELMSCOTT PRESS, ASHENDENE PRESS, DOVES PRESS

Valera, Diego de (dyā'gō dā valā'ra), 1412?–1488?, Spanish adventurer and writer He was reared at the Castilian court, was page to John II, and later traveled in France, Bohemia, England, and Denmark as a diplomatic agent of John He took part in the campaigns against the Hussites After the death of John II he lived in retirement, studying history and philosophy, but he returned to public life in 1474 to become majordomo of Isabella I and chronicler of Ferdinand V, whom he incited to the conquest of Granada His works include poems, parodies, philosophical treatises, and genealogies, but his chief importance is as a historian His *Crónica abreviada*, is a universal history from the creation to John II, it is continued by a chronicle of the reign of Henry VI of Castile and a chronicle of the reign of Ferdinand and Isabella

Valera, Eamon de see DE VALERA, EAMON

Valera, Juan (Juan Valera y Alcalá Galiano) (hwan valā'ra), 1824–1905, Spanish novelist, critic, and diplomat, b Córdoba, of a noble family He represented his country at Lisbon, Rio de Janeiro, and St Petersburg and later at Washington, Brussels, and Vienna While he considered diplomacy to be his career, he was noted as a literary critic and novelist Among his works are *Cartas americanas* (1889), four volumes on Spanish American writers, and *Florilegio de poesías castellanas del siglo XIX*, an anthology of Spanish poetry (5 vols , 1902–3) His most popular work is the novel *Pepita Jiménez* (1874, Eng tr , 1886), which won international fame Other novels translated into English are *El comendador Mendoza* (1877, Eng tr , *Commander Mendoza*, 1893) and *Doña Luz* (1879, Eng tr , 1891)

Valerian (Publius Licinius Valerianus) (vulēr'ēun), d after 260, Roman emperor (253–60) He was of good family and held important posts, both civil and military, under the emperors Decius and GALLUS After the short reigns of Gallus and Aemilianus, both of whom were killed by revolting soldiers, Valerian was proclaimed emperor Though not an incapable man, he was nevertheless not suited to rule in such critical times, for N Italy, Greece, and Asia Minor were falling to the barbarians and to the Persians Appointing his son, GALLIENUS, co-regent, Valerian undertook a campaign in the East against SHAPUR I of Persia, who destroyed the Roman army and took the emperor prisoner (260). Valerian died in captivity and was succeeded by Gallienus

Valerian Way see ROMAN ROADS

Valérien, Mont, France see MONT VALÉRIEN.

Valerius Maximus (vulēr'ēus māk'sĭmŭs), 1st cent. B C —1st cent A D., Roman author Little is known of his life He was born probably c.49 B C., accompanied Sextus Pompeius to Asia (27 B C), and died shortly after A.D 30 His work, *Factorum ac dictorum memorabilium libri IX* [nine books of the deeds and words of memorable persons], was written A.D c 30 and is a miscellany of anecdotes about a variety of subjects. The work was very popular, especially as a source for writers and orators, but had little literary merit.

Valéry, Paul (pôl' vālārē'), 1871–1945, French poet and critic. Encouraged by Pierre Louÿs and by Mallarmé, Valéry published a few poems in several small reviews but soon turned from poetry to prose with *La Soirée avec M. Teste* (1896; Eng. tr., *An Evening with Mr. Teste*, 1925). In 1912 Gide and other admirers urged him to publish a collection of his early poems. A brief valedictory, which he had planned to add to the collection, grew into his major work, *La Jeune Parque* (1917) It is a masterpiece, though long and somewhat obscure, and together with *Le Cimetière marin* (1920, Eng tr , *The Graveyard by the Sea*, 1932) offers perhaps the best example of Valéry's poetics In 1920 appeared two other volumes of poetry, *Odes* and *Album des vers anciens* His prose works include five collections of essays, all called *Variété* (1924, 1929, 1936, 1938, 1944, partial Eng tr , *Variety*, 1927, 1938). He succeeded Anatole France in the French Academy in 1925 After the French liberation in the Second World War he presided over the Comité national des Écrivains, which published the *Lettres françaises*, a review. He also wrote *Les Pages immortelles de Descartes* (1946, Eng. tr , *The Living Thoughts of Descartes*, 1947)

Valga (väl'gä) or **Valka** (väl'kä), Ger *Walk* (välk), city on the Latvian-Estonian border It consists of Estonian Valga (pop 10,842) and of Latvian Valka (pop 3,208) and is a rail junction and a sawmilling center A dispute over possession between the two countries after the First World War was settled by partition

Valhalla or **Walhalla** (both väl-hăl'u, -hăl'u) [Norse, =hall of the slain], in Norse mythology, Odin's home for slain heroes It is a sort of martial paradise, to it the VALKYRIES bring the dead warriors. It is in ASGARD

Valka, Latvia see VALGA

Valkyries (välkĭr'ēz) [Norse, =choosers of the slain], in Germanic myth, maidens associated with the dead According to the Icelandic form, they come on horseback to the battlefield, choose those who are to die, and bear the heroes back to VALHALLA They are Odin's daughters or attendants Chief among them was Brynhild (see BRUNHILD) The Valkyries feature in the opera cycle of Richard Wagner The German form of the name is Walküre

Valla, Lorenzo (lōrān'tsō vāl'la), c 1407–1457, Italian humanist He knew Greek well and was chosen by Pope Nicholas V to translate Herodotus and Thucydides into Latin He showed that the Donation of Constantine (see CONSTANTINE, DONATION OF) was a forgery The significance of this has been misunderstood, it was a pioneer work of criticism, but it was not important in church history, since for a long time the document had been given little credence An adventure Valla had on another account with the Inquisition (he was not even imprisoned) has been distorted into persecution for exposing the Donation of Constantine Valla, a typical Italian humanist wrote a treatise, *De voluptate*, attacking chastity as an ideal, and he was given to the cult of paganism

Valladolid (välyä-dhōlēdh'), city (pop 111,253), capital of Valladolid prov , N central Spain, in Leon A communications center, Valladolid is also an important grain market, and it has chemical and textile industries Valladolid has played an important role in Spanish history Of obscure origin (its name is derived from the Arabic), it was conquered by the Christians from the Moors in the 10th cent , rose to prominence in the 12th and 13th cent , and largely replaced Toledo as the chief residence of the kings of Castile in the 15th cent It was famous for its lavish festivals and tournaments under John II, and in 1469 it was the scene of the marriage of Ferdinand and Isabella Christopher Columbus died here, Emperor Charles V often resided here, and Philip II was born here It declined greatly after 1561, when Philip II made Madrid the Spanish capital However, Valladolid remains an important cultural center Its university, founded in 1346, has a rich library with valuable manuscripts The house where Cervantes wrote part of *Don Quixote* and the house of Columbus have been preserved Other landmarks include the late Renaissance cathedral, begun in 1585 and completed by Churriguera, the Colegio de San José, a masterpiece of the plateresque style, now housing a museum, the Colegio de San Gregorio (15th cent), with a lavishly adorned façade, the former royal palace, the baroque university building, and the churches of San Pablo and Santa María Antigua (12th–13th cent).

Vallandigham, Clement Laird (vŭlăn'dĭghăm", -găm"), 1820–71, American politician, b New Lisbon (now Lisbon), Ohio, educated at Jefferson College (now Washington and Jefferson) He became (1842) a lawyer, was elected to the Ohio legislature in 1845 and 1846, and was editor (1847–49) of the Dayton *Empire*, a Democratic weekly A strong upholder of states' rights, Vallandigham was a U S Representative from 1858 to 1863, being defeated for reelection in 1862 On May 1, 1863, in a political speech at Mt Vernon, Ohio, he declared, among other things, that the Civil War was being fought not to save the Union but to free the Negroes and enslave the whites Gen Ambrose E Burnside, then commanding the Dept of the Ohio, accused him of violating "General Order No 38," which threatened punishment for those declaring sympathy for the enemy, and Vallandigham was arrested, court-martialed, and sentenced to close confinement for the rest of the war. The affair embarrassed Lincoln, and he wisely commuted the sentence to banishment behind Confederate lines The Peace Democrats of Ohio nevertheless nominated (July, 1863) Vallandigham for governor, but he was defeated by John BROUGH He made his way from the Confederacy to Canada, whence he returned to the United States and was allowed to go unmolested In the presidential campaign of 1864, the Democratic platform, representing his views, demanded immediate cessation of hostilities Made commander of the Sons of Liberty (see KNIGHTS OF THE GOLDEN CIRCLE), he was the most prominent of the COPPERHEADS See biography by his brother, James L Vallandigham (1872), G H Porter, *Ohio Politics during the Civil War Period* (1911), J G Randall, *Constitutional Problems under Lincoln* (1926) Wood Gray, *The Hidden Civil War; the Story of the Copperheads* (1942), G F Milton, *Abraham Lincoln and the Fifth Column* (1942)

Valle, Pietro della (pyā'trō dĕl'la val'lā), 1586–1652, Italian traveler in Asia He sailed (1614) from Venice, spent a year in Constantinople, where he studied Turkish and Arabic, then traveled in Egypt, the Holy Land, Arabia, Persia, and India, returning to Italy in 1626 An account of his travels based on his letters appeared in two volumes (1650–58), a part appeared in English with a life of Della Valle as *The Travels of Pietro della Valle in India* (ed by Edward Gray, Hakluyt Society, Vols. LXXXIV and LXXXV, 1665)

Vallée Jonction (vălā" zhōksyō') or **Valley Junction,** village (pop 1,175), S Que , on the Chaudière river and SSE of Lévis It is a railroad center with dairying and shoe manufacturing. It was formerly known as L'Enfant Jésus

Valle Inclán, Ramón del (rämōn' dĕl va'lyā ēnklän'), 1866?–1936, Spanish novelist, poet, and dramatist, one of the so-called Generation of '98 A symbolist poet and an exquisite prose stylist, he was an eccentric and something of a poseur His first work, *Femeninas* (1895), short stories, was sensational and erotic. His best-known work is perhaps his *Sonatas* (1902–5), four novels with a Don Juan type of hero, translated as *The Pleasant Memoirs of the Marquis de Bradomín* (1924) *Flor de santidad* (1904) is a picture of peasant life in his native Galicia Among his volumes of poetry are *Aromas de leyenda* (1907) and *La pipa de Kif* (1919) His plays include *Águila de blasón* (1907), *Romance de lobos* (1908) and *Cara de Plata* (1922) in prose, the verse play *La marquesa Rosalinda* (1913), and the farce *La cabeza del dragón* (1914, Eng tr , *The Dragon's Head*, 1918) In his later work he expresses some of the ugly aspects of life in satirical and grotesque caricatures which he called *esperpentos* (ridiculous, absurd persons or things), among which is *Luces de Bohemia* (1920) The later novel *Tirano Banderas* (1926, Eng tr , *The Tyrant*, 1929) is set in a Latin American republic Valle Inclán was given official positions under the republic

Vallejo (vălā'hō, -lā'ō, vu-), city (1940 pop 20,072, 1944 special census pop 42,941), W Calif , on San Pablo Bay at the mouth of the Napa and NE of San Francisco, inc 1866 Created on the property of Gen Mariano G Vallejo to be the state capital, it was the nominal capital from 1851 to 1854 It is a port and a trade and processing center for agricultural products In the bay, just west of the city, is Mare Island navy yard, reached by a causeway

Valletta (vulĕ'tu), seaport (pop 22,779), capital of the British colony of Malta It is strategically located on the northeast coast of Malta on a rocky promontory between two deep harbors An old town, with many relics of the Knights of St John of Jerusalem (the Knights Hospitalers or Knights of Malta), it contains a 16th-century cathedral, the old governor's palace, and a library with a museum of antiquities It was severely damaged by constant air raids in the Second World War

valley, the entire drainage basin of a river system or any considerable elongated depression between elevations The agents of mountain formation also create valleys, a fault is often the cause of valley formation, as the GREAT RIFT VALLEY of Africa and Asia The EROSION of streams is the most common cause of valley formation, glaciers alter valleys already formed, usually producing long depressions with steep sides The shape of a river valley depends upon the age of the stream and the rate of erosion of the river bed and the valley sides "Young" valleys have steep sides, and the floor has a very narrow flood plain or no flood plain, such valleys exist where a stream flows through a region of hard rock If the land along the stream is relatively soft, the valley will have sloping sides, and there will be a broad flood plain of sediment, such a valley is usually very productive Hanging valleys are formed by tributaries of a river or glacier which do not wear down their beds so rapidly as the parent stream Valleys—because they are often sheltered from wind, have deep, fertile soil, are well watered, and usually have a natural route for water transportation—have always been centers of early

settlement The Tigris-Euphrates and Nile valleys were cradles of civilisation, and fertile valleys were sought by pioneers in the United States and other countries

Valley City, city (pop. 5,917), co seat of Barnes co., SE N Dak., on the Sheyenne river and W of Fargo; settled 1872 with the coming of the railroad, inc. 1883 It is the trade center of a farming area, has flour mills, dairy-processing plants, and a municipal power plant, and is the seat of a state teachers college

Valley Falls, city (pop 1,241), NE Kansas, W of Leavenworth, in a farming area, laid out 1855, inc. as a village 1869, as a city 1871

Valleyfield, city (pop 17,052), S Que., at the northeast end of Lake St Francis and SW of Montreal An industrial center, it has cotton and silk mills, distilleries, and plants making chemicals, bronze powder, asbestos, and felt Power is supplied by a provincial hydroelectric plant on the Beauharnois Canal A Roman Catholic cathedral and the Séminaire de Valleyfield (for men), affiliated with the Univ of Montreal, are here

Valley Forge, locality, SE Pa., on the Schuylkill NW of Philadelphia Here in the American Revolution the main camp of the Continental army was established (Dec., 1777–June, 1778) under command of George Washington The winter was severe, food and clothing were inadequate, and there was much sickness and suffering The number of ragged and half-starved troops dwindled through desertion, and the remaining men (c 11,000) talked of mutiny but were held together by their loyalty to Washington and the patriotic cause Two distinguished foreigners, Lafayette and Steuben, shared the misery of the troops, and Steuben drilled and organized the men, transforming the loose-jointed army into an integrated force The site is now a state park See H E Wildes, *Valley Forge* (1938)

Valley Junction, Que see VALLÉE JONCTION

Valley Junction, Iowa see WEST DES MOINES.

Valley of Ten Thousand Smokes See KATMAI NATIONAL MONUMENT

Valley Park, city (pop 2,091), E Mo, on the Meramec and near St Louis

Valley Stream, residential village (pop 16,679), on SW Long Island, SE N Y, inc 1925 It is a suburb of New York city An early "drive-in" moving-picture theater was begun here in 1938 Valley Stream State Park is here

Vallombrosa (väl-lômbrō'zä), village, Tuscany, central Italy, SE of Florence, beautifully situated in the Apennine forests at an altitude of 4,000 ft It is a well-known resort and has a Benedictine abbey dating from the 11th cent

Valmy (välmē'), village (pop 284) Marne dept, NE France, in the Argonne region Here, on Sept 20, 1792, took place the first important engagement in the FRENCH REVOLUTIONARY WARS The cannonade of Valmy was not a real battle but a somewhat inconclusive artillery duel between the French and the Prussians Finding that the French were standing firm, the Prussians began their inglorious retreat across the Rhine, and thus made Valmy a crucial event

Valois (välwä'), royal house of FRANCE which ruled from 1328 to 1589 At the death of Charles IV, the last of the direct CAPETIANS, the Valois dynasty came to the throne in the person of PHILIP VI, son of CHARLES OF VALOIS and grandson of Philip III The direct Valois line ended with Charles VIII (1498), it was continued by LOUIS XII (Valois-Orléans) and, after his death (1515), by the Valois-Angoulême line, of which FRANCIS I was the first to rule At the death of HENRY III, the house of BOURBON, descended from a younger son of Louis IX, ascended the throne in the person of Henry IV

Valois (välwä'), small region, N France, in NE Île-de-France It is now comprised in Aisne and Oise depts Crépy is the chief town A county and later a duchy, it was the appanage of the royal house of Valois, which succeeded the elder Capetian line on the French throne It was incorporated into the royal domain in 1515

Valona (vulō'nù), Albanian *Vlonë* (vlō'nu), *Vlona* (–nä), *Vlorë* (vlō'ru), or *Vlora* (–ra), anc *Aulon*, city (pop 14,640), SW Albania, an Adriatic port on the Bay of Valona It trades mainly in olives and olive oil, bitumen, and petroleum An episcopal see from the 5th cent, Valona was prominent in the struggle (11th–12th cent) between the Normans of Sicily and the Byzantines It passed to Serbia in 1345 and to the Ottoman Empire in 1464 Here Albanian independence was proclaimed in 1912 Valona was held (1914–20) by the Italians It was bombed in the Second World War when the Greeks attempted (1940–41) to take it after the Italian attack on Greece

Valparaiso (välpurī'zō, –rä'zō) Span *Valparaíso* (välpäräē'sō) [Span., =vale of paradise], city (pop 209,945), central Chile, chief port and second largest city in Chile Founded in 1536 by order of Diego de ALMAGRO, but not permanently established until 1544 by Pedro de VALDIVIA, Valparaiso faces north across a wide bay The bay, open during winter months to severe northern gales, has been partly protected by breakwaters. Except for the "northers," the region has a delightful climate, and thousands of tourists come yearly, particularly to near-by VIÑA DEL MAR From a narrow terrace along the curving waterfront steep hills rise to make Valparaiso an amphitheater, with wharves and business section at the base, and residential sections above So steep is the ascent that funicular railways are used Parks, broad avenues, and modern buildings characterize the downtown section, elaborate, colorful houses surrounded by flowering vines and gardens constitute the lower residential portion The most important port of W South America, Valparaiso is also an industrial city manufacturing cotton textiles, sugar, paint products, enamelware, cottonseed oil, shoes and leather goods, chemicals, and metal products It has experienced several disasters—raids by buccaneers in the colonial period, an earthquake in 1822, a bombardment by a Spanish fleet in 1866, and a severe earthquake in 1906 It was after this last catastrophe that the modern city arose

Valparaiso (välpurā'zō), city (pop 8,736), co seat of Porter co, NW Ind, SE of Gary, settled 1834, inc 1865 Its manufactures include electrical insulation, permanent magnets, paints and varnishes, and machine parts Valparaiso Univ (Lutheran; coeducational, 1859) is here

Valtellina (vältäl-lē'nä), Alpine valley of the upper ADDA river, Lombardy, N Italy Sondrio and Tirano are the chief towns Now chiefly known for its wines, the Valtellina once played a turbulent part in European politics With the adjoining counties of Bormio and CHIAVENNA, it was seized (1512) from Milan by the GRISONS, which ruled the district—their richest and most populous possession—as subject territory By the beginning of the Thirty Years War the stoutly Catholic people of the Valtellina were ready for revolt against the Grisons, where the majority was Protestant, in 1620 they rose and massacred their Protestant masters These internal troubles immediately assumed European proportions, for the valley commanded the passages between Austria, the Grisons, Venice, and Spanish-held Milan The Valtellina became the pawn of the participants in the Thirty Years War and the victim of their complicated intrigues The massacre of 1620 set off a series of military interventions by Spain, Austria, the pope, the Catholic party of the Grisons, France, and the Protestant majority of the Grisons (largely financed by Venice) The unhappy valley, sacked in turn by these armies, passed under Spanish control in 1627, the passage of Spanish reinforcements through the Valtellina into Germany contributed to several imperialist victories, notably that of Nordlingen (1634) When France fully entered the war on the Protestant side, a French army was once more dispatched (1635) to the Valtellina Henri de ROHAN conquered the valley, but failed to restore it to the full control of his Grisons allies. Incensed, the Grisons Protestants, led by the preacher-soldier George Jenatsch, secretly negotiated with the Catholic powers, who promised to restore the Valtellina to the Grisons if the French were expelled Ill and weakly supported by the French government, Rohan had to evacuate the Grisons (1637) By the Peace of Milan (1639) the Grisons fully recovered the Valtellina, it remained theirs until 1797, when it was incorporated in the Cisalpine Republic It passed (1815) to the Lombardo-Venetian kingdom, thence (1859) to Italy

value, in economics, is usually thought of as market value or value in exchange, which is the value of an article or commodity in terms of other commodities or of services Expressed in terms of money this value is called price Market value is sometimes distinguished from value in use, or the utility of a commodity for satisfying a human want, which is a subjective thing The subjective value of a loaf of bread to a starving man, for instance, is much greater than it is to a man who has just eaten a full meal, but it can be bought at the same price by both men

valve, in engineering, any device for controlling the flow of a gas, a liquid, or loosely packed solid materials (e g, sand or grain) Valves vary in design, construction, size, and function, they are commonly named for their design or construction, e g, butterfly, gate, globe, lift, needle, piston, rocking, sleeve, and slide valves, or for the operation they perform, e g, check valve (which permits flow in a pipe in one direction only) and cutoff, exhaust, intake, safety (see SAFETY VALVE), and throttle valves Valves are operated automatically or by hand or by special mechanism Canal locks and the gates of dams are often classified as valves Valves are employed in the carburetor, Diesel engine, internal-combustion engine, pump, and steam engine In radio, a valve is a device, such as the thermionic valve, to control the flow of electric current (see TUBE, VACUUM OR ELECTRON). In anatomy and physiology the term *valve* is applied to structures such as the *rings of muscles or sphincters at either* end of the STOMACH and to the flaps of tissue which help to control the direction of the flow of blood in the heart and veins and of the lymph in the lymphatic vessels.

Vambery, Arminius or Hermann (vām'bārĭ), Hung *Vámbéry Ármin* (ār'mĭn), 1832–1913, Hungarian Orientalist and traveler In Constantinople (1857–63) he learned several Oriental languages and dialects and then traveled through Armenia and Persia dressed as an Asiatic He was professor of Oriental languages at the Univ of Budapest from 1865 to 1905 and wrote many books on his travels and on Asiatic languages and ethnology. See his autobiography (1884) and his memoirs, *The Story of My Struggles* (1904), both in English

vampire (vām'pīr) bloodsucking ghost Vampires, in ancient belief, were malignant spirits who left their graves at night to suck the blood of living persons The corpse of a vampire was always fresh A vampire could only be disposed of by driving a stake through the heart of the corpse The vampire was believed sometimes to take animal form, as the werewolf (see LYCANTHROPY) The belief in vampires is particularly prevalent among Slavic people See Montague Summers, *Vampire His Kith and Kin* (1929) and *Vampire in Europe* (1929)

vampire bat: see BAT

Van. For names beginning thus and not listed here, see second element, e g, for Van Gogh, see GOGH, VINCENT VAN

Van (van), town (pop 14,266), SE Turkey, near the eastern shore of Lake Van, at an altitude of 5,659 ft Now the trade center of a wheat-growing region, Van was the cradle of ancient Armenian civilization It was the capital of the ancient Vannic kingdom of Urartu or ARARAT Many of the so-called Vannic inscriptions relating to early Armenian history have been found here, and an archaeological expedition in 1939 discovered fortifications and other finds dating from the 8th cent B C Many of the Armenians were massacred by the Turks in 1895 **Lake Van,** area 1,454 sq mi, is the largest in Turkey It is salty and has no apparent outlet

vanadium (vunā'dēum), silver-gray, lustrous metallic element (symbol=V, for physical constants, see ELEMENT, table) It is grouped with niobium (columbium) and tantalum in the periodic system The element does not corrode in the air, but it is combined with oxygen in a number of oxides and with various other elements in generally unstable compounds Some of these are used in the dyeing industry, in ceramics, in making ink, and as catalysts The element is a constituent of various alloys, e g, steels (including high-speed steels) and alloys of copper and aluminum Vanadium does not occur uncombined in nature, but is present in a number of minerals, among them carnotite, descloizite, patronite, and vanadinite, which are found chiefly in Peru, Africa, and the W United States, especially Arizona, Colorado, Idaho, and Wyoming The metal is prepared with difficulty from the dichloride by the action of hydrogen Discovery of the element is generally credited to N G Sefstrom (Swed *Sefström*) in 1830 Previously (1801) A M del Rio had examined a compound of it carefully and concluded the presence in it of a new element which he called erythronium, later, however, he decided that he was mistaken Following Sefstrom's discovery, Berzelius and later H E Roscoe made extensive studies of the element (which Roscoe isolated) and of its compounds

Van Alstyne (văn ăl'stīn), town (pop 1,650), N Texas, S of Sherman, in a rich blackland farming area

Vanbrugh, Sir John (văn'bru, vănbrō'), 1664–1726, English dramatist and architect, son of a merchant of Dutch descent Born in London, Vanbrugh grew up in Chester and may have studied architecture in France In 1690 he was arrested for espionage and spent two years in a French prison, part of the time in the Bastille There he seems to have begun writing plays He was commissioned an army officer in 1686 and after his return from France became (1696) a captain of marines His first play, *The Relapse* (produced in 1696), was a sequel to Colley Cibber's *Love's Last Shift* Vanbrugh's masterpiece, *The Provoked Wife* (1697), had wit and originality, but also the coarseness of the Restoration comedies It was attacked (1698) by Jeremy Collier in his famous diatribe on the immorality of the English stage Two of Vanbrugh's other plays, *The Confederacy* and *The Mistake*, were produced (1705) at the Haymarket theater, which he had built. In 1699 Vanbrugh submitted designs, which were accepted, for Castle Howard, the seat of the earl of Carlisle near York This masterpiece of Palladian architecture opened his career as a successful architect, particularly of elaborate country houses In 1705 he was chosen as the architect of the magnificent palace at BLENHEIM PARK, the gift of the nation to the duke of Marlborough. Because of the enmity of Sarah, the duchess of Marlborough, Vanbrugh was dismissed and the work completed (1724) after his design by his assistant, Nicholas Hawksmoor. Vanbrugh was knighted in 1714, in 1716 he became architect to Greenwich Hospital Other plays of Vanbrugh, chiefly adapted from earlier dramas, include *The Pilgrim* (1700) and *The False Friend* (1702). His collected works were

published (1927) in four volumes. See biography by Laurence Whistler (1938).

Van Buren, Martin, 1782–1862, 8th President of the United States (1837–41), b. Kinderhook, Columbia co., N Y He was reared on his father's farm, was educated at local schools, and after reading law was admitted (1803) to the bar He practiced law successfully and soon became active in politics After he was (1808–13) surrogate of Columbia co, he served (1813–20) in the state senate and became prominent in the state Democratic party Van Buren was made state attorney general in 1815, but because of his mounting rivalry with De Witt CLINTON, he was removed from this post in 1819 Meanwhile he had helped to secure the election (1816) of Daniel D TOMPKINS as Vice President He served (1821–28) in the U S Senate, where he firmly backed the tariffs of 1824 and 1828 His record there was inconsistent as to states' rights, slavery, and internal improvements; thus wavering was later brought up against him by his political enemies Van Buren was far more important as a political leader than as a legislator He had become one of the principal figures of the closely knit political group known as the ALBANY REGENCY and was a leading supporter of William H CRAWFORD, who ran for President in 1824. After the election of John Quincy Adams he gradually swung his power to the support of Andrew JACKSON Elected (1828) governor of New York state, Van Buren resigned in 1829, after Jackson had become President and had appointed him Secretary of State Probably the most influential of Jackson's advisers, Van Buren did not at first take a conspicuous part in the rising hostilities between Vice President John C CALHOUN and the President, although Van Buren was essentially opposed to the doctrine of NULLIFICATION Van Buren further strengthened his position with Jackson by paying courtesy to Peggy Eaton (see O'NEILL, MARGARET) His resignation (1831) as Secretary of State brought about that of the cabinet officers and enabled Jackson to eliminate the supporters of Calhoun from the cabinet Jackson immediately appointed him minister to Great Britain, but the deciding vote of Calhoun in the Senate prevented him from receiving the post Thoroughly in accord with Jackson's policies, Van Buren was nominated for Vice President by the Democratic party in 1832 and was elected to office along with President Jackson When he was Vice President, his tact and statesmanship greatly aided Jackson, and it was largely through Jackson's influence that Van Buren was chosen as Democratic candidate for President in 1836 The WHIG PARTY was still in the formative stage, and there was no well-organized opposition, Van Buren, therefore, was easily swept into office The new President announced his intention of following Jackson's policies, but the Panic of 1837 and the hard times that followed brought Van Buren a great deal of unpopularity To meet the economic crisis, Van Buren, wary of the existing banking system (see BANK OF THE UNITED STATES), backed after 1837 the INDEPENDENT TREASURY SYSTEM Not until 1840, however, did Congress pass measures establishing it He was again the presidential candidate of the Democratic party in 1840, but he was defeated in the "Log Cabin and Hard Cider" campaign The Whigs unfairly painted Van Buren as a man of great wealth who was ignorant of, and disdainful toward, the common man. William Henry HARRISON was elected In 1844 Van Buren was the leading possibility as Democratic candidate for the presidency, but he flatly opposed the annexation of Texas on anti-slavery grounds Although he held a majority in the nominating convention, he was prevented (largely through the efforts of Robert J WALKER) from gaining the nomination by the two-thirds rule Van Buren, bitterly disappointed, saw the Democratic "dark horse" candidate, James K POLK, elected President He remained prominent in Democratic party politics, and helped lead the BARNBURNERS in their violent struggle with the HUNKERS In 1848 he was the presidential candidate of the newly organized FREE-SOIL PARTY and managed to take enough New York votes away from the Democratic candidate, Lewis CASS, to aid Zachary TAYLOR, the Whig party candidate, in winning the election He supported Franklin Pierce in 1852 and James Buchanan in 1856, and in 1860 Van Buren first opposed and then supported Abraham Lincoln. *An Inquiry into the Origin and Course of Political Parties of the United States* (1867) was written by Van Buren, edited by one of his sons, and published posthumously See biography by E M Shepard (1888); H. M. Alexander, *American Talleyrand* (1935)

Van Buren. **1** City (pop. 5,422), co seat of Crawford co, NW Ark, on the Arkansas river and near Fort Smith, laid out c 1838, inc 1843 It ships farm products, chiefly strawberries, from the area, metal products are made here. Near by is a U.S soil conservation project **2** Town (pop. 5,380), NE Maine, on the St John and N of Caribou, inc. 1881. It is a trade center and port of entry in a lumbering and potato-growing area.

Vance, Zebulon Baird (zē'bvdŏlŭn bârd' văns'), 1830–94, Civil War governor of North Carolina (1862–65), b. Buncombe co., N.C. He was educated at Washington College (now defunct) in E Tennessee and the Univ of North Carolina A lawyer and a Whig, he served in the state legislature (1854) and in Congress (1858–61) Opposed to secession until he was informed, in the middle of a pro-Union speech, of Lincoln's call for troops, he promptly urged support of the Confederacy He distinguished himself as colonel of the 26th North Carolina Regiment in the Seven Days battles (June–July, 1862) before assuming the governorship Like Gov Joseph E Brown of Georgia, Vance stymied the attempts of the Confederate government to conscript and dispose of state troops and suspend the writ of habeas corpus He was loyal to the Southern cause, but for him the interests of North Carolina superseded those of the Richmond government After the war he was arrested but soon released He was elected to the U S Senate in 1870, but was denied his seat In 1876 he was again elected governor, but resigned in 1879 to enter the Senate, where he was an important figure and a popular orator until his death See B J Hendrick, *Statesmen of the Lost Cause* (1939)

Vanceburg, town (pop 1,184), co seat of Lewis co, N Ky, on the Ohio and WNW of Ashland, in a farm area, settled c 1796, inc 1827

Van Corlaer, Arent. see VAN CURLER, ARENT

Van Cortlandt, Jacobus (jukō'bus văn kôrt'lund), 1658–1739, American merchant, b New Amsterdam (now New York city), brother of Stephen Van Cortlandt He served (1719) as mayor of New York city He purchased land in Yonkers and became the founder of that branch of the family whose estate was bought (1899) by New York city and converted into Van Cortlandt Park, a tract of 1,132 acres The manor house in the park was built by Jacobus's son, Frederick, in 1748 See L E De Forest, *The Van Cortlandt Family* (1939)

Van Cortlandt, Stephen or **Stephanus** (stĭfā'nus), 1643–1700, American merchant and politician, b New Amsterdam (now New York city), brother of Jacobus Van Cortlandt A successful merchant, he held a number of high political offices In 1677, 1686, and 1687 he served as mayor of New York city He was also a councilor for many years, judge of the admiralty court, associate justice of the provincial supreme court (of which he was appointed chief justice shortly before his death), and commissioner of customs The owner of large tracts of land in and near New York city, he was granted a royal patent in 1697 making his estates a manor and himself lord of the manor The greater part of the estate was an 87,000-acre tract extending for 10 mi on the east bank of the Hudson river just N of Manhattan See L E De Forest, *The Van Cortlandt Family* (1930)

Vancouver, George (văn'kōō'vur), 1758?–1798, English navigator and explorer As a seaman (1772) he sailed on the *Resolution* on Capt James Cook's second voyage around the world and as a midshipman (1776) on Cook's third voyage In 1780 he became a lieutenant and served under Admiral Rodney in the West Indies, taking part in the great victory (1782) over Admiral de Grasse In 1791, a commander, he set out for the northwest coast of America, charged with a double mission—to take over the territory at Nootka Sound which had been assigned to England by the Nootka Convention and to explore and survey the N Pacific coast Vancouver went around the Cape of Good Hope, made new explorations on the coasts of Australia and New Zealand, and then visited Tahiti and the Hawaiian Islands He arrived at the northwest coast of America in 1792 and for three years (1792–94) thoroughly explored and carefully surveyed it In the course of his journeyings he circumnavigated the island now called Vancouver Island in his honor His work capped that of many explorers, British, American, Spanish, and French After arriving (1795) in England again he began to prepare for publication an account of his great voyage, a task not quite completed at his death His brother, with the aid of Peter Puget, who had served as Vancouver's lieutenant, finished the book which was published as *A Voyage of Discovery to the North Pacific Ocean and round the World* (3 vols and an atlas, 1798) Vancouver was charged with brutality by Thomas Pitt, 2d Baron Camelford, who had sailed under him and, proving something of a troublemaker, had to be put off the ship, although Vancouver was firm in command and intolerant of opposition, evidence does not clearly support these accusations Another first-hand account was that of Archibald Menzies, part of his journal was edited in 1923 by C F. Newcombe See biographies by G. H. Anderson (1923) and George Godwin (1931)

Vancouver, city (pop 275,353), SW British Columbia, on Burrard Inlet of the Strait of Georgia, opposite Vancouver Island and just N of the Wash. border It is the largest city in W Canada and its chief Pacific port, with an excellent year-round harbor, and is the major west terminus of trans-Canadian railroads and airways. Regular steamship service connects it with the Orient, Australia, New Zealand, Hawaii, Alaska, and U S. West Coast ports and with Europe by way of the Panama Canal Its location on hills with views of the harbor and the mountains of the Coast Range and its mild winter climate make it an all-year tourist center The city's industries include shipbuilding, fish canning, grain elevators, sugar and oil refineries, textile and knitting mills, and plants making metal, wood, and mineral products It is the seat of the Univ of British Columbia (see BRITISH COLUMBIA, UNIVERSITY OF, and POINT GREY) Stanley Park (900 acres), one of the city's many parks, has a zoo and famous gardens and specimens of native trees The city was settled before 1875 and called Granville, it was incorporated in 1886, after the arrival of the railroad, and named in honor of Capt George Vancouver The metropolitan area includes Point Grey, North Vancouver, and New Westminster See A E Rothery, *Ports of British Columbia* (1943)

Vancouver, city (pop 18,788), co seat of Clark co, SW Wash, on the Columbia river opposite Portland, Oregon, with which it is connected by a bridge Founded by the Hudson's Bay Company as Fort Vancouver in 1825–26 (see MCLOUGHLIN, JOHN) it was the early center for settlement in the state, in 1846 it became an American possession and was incorporated in 1857 It is an important port, shipping grain and lumber and its manufactures of food products, paper, and textiles Power from the near-by Bonneville Dam has stimulated the building of a large aluminum plant During the Second World War the city, with its shipping, industries, and near-by military post, was especially important Several historic monuments, state schools for the blind and the deaf, and a junior college are here

Vancouver Island, area 13,049 sq mi, SW British Columbia, largest island off the west coast of North America On the east it is separated from the mainland by Queen Charlotte Sound and the Strait of Georgia, on the south Juan de Fuca Strait separates it from NW Washington The Pacific coast line is deeply indented and steep, the east coast is less rugged It has a mild climate and abundant rainfall The island is heavily forested and mountainous, with elevations from c 2,000 ft to 7,219 ft at Golden Hinde Mt, in STRATHCONA PROVINCIAL PARK There are many lakes and streams and much lumber and mineral wealth, especially coal The chief industries are mining, lumbering, fishing, fruitgrowing, and canning Victoria, Nanaimo, Alberni, Port Alberni, Courtenay, Cumberland, Duncan, Ladysmith, and Esquimalt, a naval base, are on the island, as well as many small ports and fishing settlements It was visited in the 16th and 17th cent by Spanish and English explorers and in 1778 by Capt James Cook In 1788 John Meares built a fort on NOOTKA SOUND, and in 1792 Capt George Vancouver circumnavigated the island The settlement of the dispute over Oregon (1846) confirmed British sovereignty over the region, and the island was made a crown colony, the Hudson's Bay Company was encouraged to promote settlement In 1866 it became a part of British Columbia

Van Curler or **Van Corlaer, Arent** (ä'runt văn kûr'lur, văn kôr'lär), 1619–67, Dutch colonist He came (1637) to New Netherland to assist the commissary of "Reuselaerswyck," estate of Kiliaen VAN RENSSELAER, and from 1642 to 1644 was administrator He made staunch friends of the Indians, and on several occasions he successfully interposed for the colonists Purchasing a tract of land on the Mohawk, Van Curler founded (1662) Schenectady there He was drowned in Lake Champlain on his way to Canada

Vandal, Albert, comte (alběr' kôt' vädal'), 1853–1910, French historian He is particularly known for his authoritative and lucid studies on Napoleon I, notably *L'Avènement de Bonaparte* [Bonaparte's rise to power] (2 vols, 1902–7) and *Napoléon et Alexandre I* (3 vols, 1891–96) Vandal also wrote on French diplomatic relations with the Orient in the 18th cent

Vandalia (vănda'lyu) **1** City (pop 5,288), co seat of Fayette co, S central Ill, on the Kaskaskia river and SSE of Springfield, in a farm and oil area, inc 1821, It was the second capital of Illinois, 1820–39, and was on the National Road Lincoln and Douglas served in the legislature here Points of interest include the old capitol (1836), which is now a state memorial, the old Presbyterian church, and the Lincoln collection in the library A state penal farm lies to the north **2** City (pop 2,672), NE Mo, SW of Hannibal, laid out 1871, inc 1874 It is in a region of farms and clay pits, and fire-clay products are made.

Vandals (văn'duls), ancient Germanic tribe Along with other Germanic peoples, the Vandals were settled in the valley of the Oder from about the 5th cent B C They appeared in Pannonia and Dacia in the 3d cent A D, apparently under imperial aegis At the beginning of the 5th cent, the Vandals began a migration which was to take them farther than that of any other Germanic people They invaded Gaul (406), where the Franks re-

fused them permission to settle They then moved into Spain After meeting opposition there, they concluded a peace with the Roman emperor, Honorius, who recognized their right to the land, subject to the imperial throne During their stay in Spain, they continued fighting the Romans, but were able to develop their maritime power In 428 Gunderic, the Vandal king, died and was succeeded by his brother, Gaiseric, whose leadership carried the tribe to its greatest heights. Taking advantage of unsettled conditions in Africa, the Vandals crossed to that continent and defeated the Roman general Boniface The tradition that they came at Boniface's invitation is probably false In 435 the Vandals took Carthage and controlled most of the province of Africa Their vessels preyed upon other ships in the Mediterranean, and they sent plundering expeditions to Sicily and S Italy In 442 Valentinian III recognized Gaiseric as an independent ruler This marks the end of the Vandal migration The next years were spent in consolidating and building a powerful kingdom The Vandals seized the remainder of the African province Their ships ravaged the coasts of Sicily and Italy Their fleet controlled the Mediterranean, and the Eastern Empire began to feel their power In 455 Rome was sacked by Gaiseric's troops, and Empress Eudoxia and her daughter were carried away as hostages The Vandals were Arian Christians and harshly persecuted Orthodox Christianity This was especially true under Gaiseric and his son, Hunneric Under Hilderic more toleration was practiced. Marjorian and Leo I made attempts to destroy Vandal power, but Zeno was forced to make peace (476) with Gaiseric The Vandal king died in 477, and under his successors a rapid decline set in In 533 Justinian sent an army under Belisarius, which after meeting weak resistance captured Carthage, and the Vandals as a nation ceased to exist The Vandals were not an artistic people and left no monuments of their reign The modern use of their name is probably a survival of the fear and hatred felt toward them by African Catholics and a reminiscence of the sack of Rome See J. B. Bury, *The Invasion of Europe by the Barbarians* (1928)

Van de Graaff, Robert Jemison (văn' dĭ grăf"), 1901–, American physicist, b Tuscaloosa, Ala, grad Univ of Alabama (B S , 1922), Ph D Oxford Univ , 1928 He was research associate at Massachusetts Institute of Technology (1931–34) and associate professor (from 1934) He developed an electrostatic generator by means of which nuclear research was extended

Vandegrift, Alexander Archer (văn'dugrĭft), 1887–, American general, commandant of the U S Marine Corps (1944–47), b Charlottesville, Va He attended the Univ. of Virginia and was commissioned in the marines in 1909 He advanced through the grades, and in the Second World War he commanded (1942) the troops on Guadalcanal He succeeded Thomas Holcomb as commandant of the marines and was promoted (1945) general In 1949 he retired from active duty

Vandenberg, Arthur Hendrick, 1884–, U S Senator (1928–), b Grand Rapids, Mich He was associated with the Grand Rapids *Herald* for more than 20 years before being appointed to fill a Senate vacancy in 1928 Remaining in the upper house, he became an influential Republican leader In 1939 he led the fight against revising the Neutrality Act and was generally considered an isolationist, but by 1945 his views on foreign affairs underwent change As chairman (1946–) of the Senate Committee on Foreign Relations, Vandenberg helped direct (1948) the passage of the European Recovery Program He is the author of several studies of Alexander Hamilton

Vandenberg, Hoyt Sanford, 1899–, American general, chief of staff of the U S Air Force (1948–), b Milwaukee, Wis , grad West Point, 1923 He became attached to the Army Air Forces after 1923 and was promoted through the grades He was (1940–41) assistant chief of staff of the Army Air Forces and served (1942–43) in the Second World War with U S air units in the campaigns in North Africa. He was (1943–47) deputy chief of the air staff and was promoted general before he became chief of staff He is a nephew of Arthur H Vandenberg

Van der. For names beginning thus and not listed here, see following element, e g , for Van der Goes, see Goes, Hugo van der

Vanderbilt, Cornelius, 1794–1877, American railroad magnate, b Staten Island, N Y As a boy he ferried freight and passengers from Staten Island to Manhattan, and he gained control of most of the ferry lines and other short lines in the vicinity of New York city He further expanded his holdings and came to be known as Commodore Vanderbilt In 1851 when the gold rush to California was at its height, Vanderbilt opened a shipping line from the East Coast to California, including land transit across Nicaragua along the route for the proposed Nicaragua Canal. In Central America he came to be a violent opponent of the filibuster William Walker. In the Crimean War, Vanderbilt operated ships to European ports. After the outbreak of the Civil War, he entered the railroad field, and by 1867 he had gained control of the New York Central Railroad. Although his efforts to gain control of the Erie RR proved unsuccessful, Vanderbilt, ruthless and domineering, vastly expanded his railroad empire and by 1873 connected Chicago with New York by rail. He amassed a great fortune and gave $1,000,000 to found Vanderbilt University See biographies by A D H Smith (1927) and W J. Lane (1942)

A son, **William Henry Vanderbilt**, 1821–85, b. New Brunswick, N J , succeeded Cornelius Vanderbilt as president of the New York Central RR and augmented the family fortune He gave liberally to Vanderbilt Univ , to the College of Physicians and Surgeons (now part of Columbia Univ), and to various other institutions **Cornelius Vanderbilt**, 1843–99, b Staten Island, N Y , was a son of William H Vanderbilt He took over the family holdings and helped to establish in New York city the Vanderbilt Clinic and the Cathedral of St John the Divine Another son of William H Vanderbilt was **William Kissam Vanderbilt**, 1849–1920, b Staten Island, who helped establish the Vanderbilt Clinic He was a yachtsman, and his wife was a well-known society leader A fourth son of William H Vanderbilt was **George Washington Vanderbilt**, 1862–1914, b Staten Island, N Y He engaged in numerous philanthropies, giving to agricultural research and donating land for the establishment of Teachers College, Columbia Univ He also built the estate "Biltmore" near Asheville, N.C One of the sons of Cornelius Vanderbilt the younger was **Alfred Gwynne Vanderbilt**, 1877–1915, b New York city He was interested in breeding fine horses He went down on the *Lusitania* One of the sons of William K Vanderbilt, **Harold Sterling Vanderbilt**, 1884–, b Suffolk co , L I , N Y , gained even more note as a sportsman He won the *America's* Cup yachting races three times

Vanderbilt, borough (pop 1,063), Fayette co , SW Pa , NE of Uniontown

Vanderbilt University, at Nashville, Tenn ; nonsectarian, coeducational, chartered 1872 by Methodists, rechartered 1873, opened 1875 with aid from Cornelius Vanderbilt Besides an arts and science college, it has schools of engineering, law, nursing, religion, and medicine A geology museum, a social science research and training institute, and a joint library with George Peabody and Scarritt colleges are here Under the administration (1893–1937) of Chancellor James H Kirkland, Vanderbilt became a leading Southern school Among its alumni are many well-known Southern writers, including Allen Tate, Robert Penn Warren, and John Crowe Ransom The *Fugitive*, an influential magazine of verse, was published (1922–25) by a group of faculty and alumni See Edwin Mims, *The History of Vanderbilt University* (1947)

Van der Goes, Hugo. see Goes, Hugo van der

Vandergrift, industrial borough (pop 10,725), SW Pa , on the Kiskiminetas river and NE of Pittsburgh, laid out 1895, inc 1897. It has steelworks and ironworks

Vanderlyn, John (văn'durlĭn), 1775?–1852, American portrait and historical painter, b Kingston, N Y Under the patronage of Aaron Burr he studied with Gilbert Stuart and in Paris From 1796 to 1815 much of his life was spent in Paris and in Rome He achieved a high reputation with such compositions as *Marius amid the Ruins at Carthage* and *Ariadne* (Pa Acad of the Fine Arts) and was able to assist his former patron when Burr fled to Paris in disgrace Vanderlyn returned to America in 1815 His ambitious historical compositions found no market, and his admirable portraits were so slowly executed that few had the patience to pose for him He died impoverished and embittered Late in life he was commissioned to paint the *Landing of Columbus* (Capitol, Washington, D C), but was obliged to employ assistants to execute it A self-portrait is in the Metropolitan Museum The Senate House Museum, Kingston, N Y , has 28 paintings attributed to Vanderlyn

Vanderlyn, Pieter (pē'tûr), c 1687–1778, American colonial painter, b Holland He reached New York c 1718 and became a portrait painter and land speculator and practiced other trades, settling in Kingston, N Y The portrait most certainly ascribed to him is that of Mrs Petrus Vas, his mother-in-law. John Vanderlyn was his grandson.

Van der Meer, Jan or **Johannes,** Dutch painter of Delft see Vermeer, Jan or Johannes

Van der Meer, Jan, two Dutch painters of Haarlem see Meer, Jan van der

Vander Meer, John Samuel, 1914–, American baseball player, b Prospect Park, N.J In 1937 he was signed by the Cincinnati Reds of the National League The next year he established an outstanding major-league record by pitching two consecutive no-hit, no-run games, the first against the Boston Braves and the second against the Brooklyn Dodgers

Van der Stappen, Charles · see Stappen.

Van der Stucken, Frank, 1858–1929, American conductor, b Fredericksburg, Texas, educated in Europe. He was conductor (1895–1907) of the Cincinnati Orchestra and was director (1897–1901) of the Cincinnati College of Music. He was the first conductor to present a full program of American works in the United States (New York, 1885) and abroad (Paris exposition, 1889).

Vandervelde, Émile (āmēl' vändĕrvĕl'dŭ), 1866–1938, Belgian Socialist leader and statesman. He studied for the law at the Univ of Brussels, was elected to parliament in 1894, and was a member of many cabinets, notably as minister of justice (1918–21), foreign minister (1925–27), and vice premier and minister of public health (1936–37) He resigned in protest when the cabinet, headed by Paul van Zeeland, recognized the Franco government in the Spanish civil war One of the most influential figures in Belgian politics and in the European labor movement, Vandervelde also taught political economy at the Univ of Brussels from 1924 to his death and wrote several works on political science.

Van der Waals, Johannes Diderik: see Waals.

Van der Weyden, Roger: see Weyden.

Van Devanter, Willis (văn" dĕvăn'tur), 1859–1941, American jurist, Associate Justice of the Supreme Court (1910–37), b Marion, Ind , grad Cincinnati Law School, 1881 He practiced law (1881–84) in Indiana and, after he removed to Wyoming, became (1889) chief justice of the Wyoming supreme court He had a prominent role in Republican party politics and served as Assistant Attorney General (1897–1903) and U S circuit court judge (1903–10) Appointed to the Supreme Court, Van Devanter sternly adhered to the letter of the U S Constitution In 1938 he returned to judicial service as a U S district court judge

Van de Velde or **Vandevelde** (van"duvĕl'dŭ), 17th-century Dutch family of artists **Jan Van de Velde** (yän), 1593?–c 1641, was a wood engraver, especially of portraits His brother, **Willem Van de Velde** (vĭ'lŭm), the elder, c 1611–1693, marine painter, accompanied the Dutch fleet and depicted its victories over the English He settled in England in 1673 and executed many works preserved at Hampton Court, he is also well represented in Amsterdam His son **Willem Van de Velde,** the younger, 1633–1707, the most celebrated of the family, also was a marine painter He was with his father in the fleet and in England and was commissioned by Charles II to portray naval engagements, being court painter from 1677 Many English and continental collections include his pictures *Cannon Shot* (Amsterdam) is a good example His brother, **Adrian Van de Velde** (a'drēan), 1636?–1672, painter of animals and etcher, was often employed by landscapists to paint the animals in their pictures He also executed many independent works, and as an etcher he stands among the foremost of the Dutch school

The Country Year (1946). He has also written several novels. He wrote the influential *Liberal Education* (1943) and has taken part in many educational radio programs, among them the series known as "Invitation to Learning." His wife is **Dorothy Graffe Van Doren,** 1896–, writer and editor, b San Francisco, grad Barnard, 1918 She was associate editor (1926–36) of the *Nation* and was with the U S Office of War Information (1942–45). She has written short stories and novels, of which the best known is *Dacey Hamilton* (1942)

Van Dorn, Earl, 1820–63, Confederate general, b Port Gibson, Miss , grad. West Point, 1842 He served in the Mexican War and in the Indian wars in Florida and on the Texas frontier On resigning from the U S army (Jan , 1861), he became a colonel in the Confederate army and was assigned to Texas, where most of the Union troops surrendered to him. In Sept , 1861, he was transferred to Virginia and was promoted major general Van Dorn took command of the trans-Mississippi district in Jan , 1862, but after his defeat at Pea Ridge in March, he was transferred to the Army of the Mississippi with headquarters in Vicksburg As a result of his defeat by Rosecrans at Corinth (Oct , 1862), he was superseded by Gen J C Pemberton and placed in command of the cavalry At Holly Springs (Dec , 1862) he led a successful raid on Grant's stores, delaying the Union campaign against Vicksburg In May, 1863, at Spring Hill, Tenn , Van Dorn was murdered by Dr. Peters, a personal enemy

Van Druten, John William (văn drōō'tŭn), 1901–, English dramatist His play of English public school life, *Young Woodley* (1925), was banned for two years in England and later was produced there after the success of its presentation in the United States His other plays include *There's Always Juliet* (1931), *The Distaff Side* (1933), *Old Acquaintance* (1940), *The Voice of the Turtle* (1943), successful also as a moving picture, *I Remember Mama* (1944), dramatization of short stories by Kathryn Forbes, and *The Druid Circle* (1947) He lives in the United States See his autobiographical *The Way to the Present* (1938)

Van Dyck or **Vandyke, Sir Anthony** (both văn dīk'), 1599–1641, Flemish portrait and religious painter and etcher, b Antwerp, son of a well-to-do merchant He entered the studio of Rubens at an early age, became his favorite pupil, and was admitted to the painters' guild of Antwerp in 1618 By 1620 he enjoyed a high reputation and was summoned to England by James I, whose portrait he painted The next five years were spent in Italy, where he studied the works of the great Venetians and painted a series of portraits of the Genoese nobility These pictures, still in the palaces of the Doria, Balbi, Durazzo, and Grimaldi families, show Van Dyck already in possession of his extraordinary gift for aristocratic portraiture Outstanding are certain equestrian portraits, e g , of Antonio Giulio Brignole (Genoa), and the portrait of Cardinal Bentivoglio (Pitti Palace, Florence) Van Dyck returned to Antwerp in 1627 There he rivaled Rubens in popularity and painted a famous series of religious pictures, including *St Martin Dividing His Cloak* (National Gall , London), *Crucifixion* (cathedral, Mechlin), and *Elevation of the Cross* (Courtral) Also of this period are his portraits of Princess Louisa of Tassis (Vienna) and Philip Le Roy (Wallace Coll , London) Van Dyck conferred upon his sitters an elegance, dignity, and refinement all his own and was sought after by many of the crowned heads of Europe In 1632 he was invited to England by Charles I There he was made court painter, was knighted, and was overwhelmed with commissions During the remaining nine years of his life he painted over 350 portraits in England, his early death is sometimes attributed to overwork He amassed a large fortune and lived in great luxury, keeping various mistresses Assistants were employed to enlarge his little black-and-white sketches and to paint the drapery from clothes lent by the sitter With this preparation he was enabled to complete his pictures in a short time From 1634 to 1635 he spent some time in Antwerp, where he painted his masterly *Deposition* (Antwerp) and *Adoration of the Shepherds* (Termonde), as well as some of his best portraits, including that of Helen Fourment (Leningrad). He married, c 1640, Lady Mary Ruthven The work of Van Dyck differs radically from that of his great master, Rubens, although similar in technique The color is much more restrained, and in place of boisterous movement there is a tender melancholy The refinement of sentiment in his portraits is matched by delicacy of color and handling Nevertheless his best work has an essential vigor which the English portrait painters strove in vain to surpass, and he set a standard for craftsmanship hitherto unknown in that country. Van Dyck is well represented in most of the principal European galleries In America splendid examples are in the Art Institute of Chicago, the Museum of Fine Arts and the Gardner Museum, Boston, the Widener Collection, Philadelphia, the Frick Collection, New York, the National Gallery of Art, Washington, D.C., and many others. The Metropolitan Museum has 12, including portraits of James Stuart, the Marchesa Durazzo, and Baron Le Roy. Van Dyck produced a fine series of etched portraits known as the *Iconography* The British Museum has an excellent collection of these prints. See studies by Lionel Cust (1905, 1911) and E V Lucas (1926), M. Knoedler and Company, *The Portrait Etchings of Anthony Van Dyck* (1934)

Van Dyck, Cornelius Van Alen (văn dīk'), 1818–95, American missionary, b Kinderhook, N Y , grad Jefferson Medical College, Philadelphia, 1839 He was especially noted for his mastery of Arabic In 1839 he went to Syria as a medical missionary under the American Board In 1846 he was ordained in the Congregational ministry Besides being the author of textbooks in Arabic and the translator of scientific and religious writings, he translated the Bible into Arabic, completing the work begun by Eli Smith.

Vandyke, Sir Anthony see Van Dyck, Sir Anthony

van Dyke, Henry, 1852–1933, American clergyman, educator, and author, b Germantown, Pa , grad Princeton, 1873, and Princeton Theological Seminary, 1874 He was pastor of the Brick Presbyterian Church, New York (1883–99), professor of English literature at Princeton (1899–1923), U S minister to the Netherlands (1913–16), and a chaplain in the navy (1917–18) Among his popular inspirational writings is the Christmas story *The Other Wise Man* (1896) His other works include poems, essays in *Little Rivers* (1895) and *Fisherman's Luck* (1899), *The Unknown Quantity* (1912), and his translation from Novalis, *The Blue Flower* (1902). See biography by his son, Tertius van Dyke (1935)

Van Dyke, John Charles, 1856–1932, American art critic, b New Brunswick, N J , studied art abroad He was professor of the history of art (1889–1932) at Rutgers Univ and librarian (1878–1932) of the Sage Library, New Brunswick Among his many contributions to the literature of art are *Rembrandt and His School* (1923) and *Rembrandt Drawings and Etchings* (1927), in which he questioned the authenticity of the majority of the works attributed to that master Other writings include *History of Painting* (1894), *The Desert* (1901), and *What Is Art?* (1910)

Vane, Sir Henry, 1589–1655, English courtier, father of the Puritan leader, Sir Henry Vane, the younger He gained the favor of James I, was knighted in 1611, and acquired wealth by the purchase of profitable offices over many years He served in every Parliament from 1614 to 1640 and was successively made comptroller (1629) and treasurer (1639) of the household and secretary of state (1640) He served Charles I on diplomatic missions to Holland (1629–30) and to Gustavus Adolphus (1631) Vane's appointment as secretary of state was opposed by Strafford In the latter's trial, Vane, with genuine or pretended reluctance, testified that Strafford had advocated the use of the Irish army against Parliament He lost his political influence Dismissed from office, he joined the parliamentary opposition and served as member of the committee for both kingdoms and as lord lieutenant of Durham (1642) He never became important in the new government

Vane, Sir Henry, 1613–62, English statesman and author, a consistent friend of moderation and religious toleration during the Puritan Revolution and perhaps the ablest administrator produced by that movement Early converted to Puritanism, he studied at Oxford and abroad and served briefly in the English embassy in Vienna He went to New England in 1635 and became governor of Massachusetts in 1636 His religious tenets and his support of Anne Hutchinson embroiled him in political quarrels, especially with John Winthrop, and he returned to England (1637) His governorship was notable chiefly for the founding of Harvard College and the start of the Pequot War He was made joint treasurer of the navy (1639–41), was knighted in 1640, and sat in the Short and Long Parliaments Vane was both criticized and defended for allowing a paper of his father's to be copied by John Pym, who later used it against Strafford at his trial Vane opposed episcopal government and was a leader of the war party in 1642 As a commissioner, he succeeded in getting the Solemn League and Covenant with Scotland He opposed an established Presbyterian church, and when the Presbyterians gained control (1646), he lost the party leadership he had held since Pym's death He desired the continuation of monarchy and the constitution and even a "moderate episcopacy" and was one of the committee which negotiated vainly with Charles I (1648). Vane had no part in the king's execution. He was made a member of the council of state (1649), served on several commissions under the Commonwealth, and was a close friend of Oliver Cromwell until Cromwell defeated Vane's proposal for the reform of the parliamentary electoral system (1653) He was jailed after writing the pamphlet *A Healing Question* (1656), but was released Vane sat in Parliament under Richard Cromwell but, at the failure of Richard's government, supported the restoration of the Long Parliament. Suspected, probably without reason, of conspiring with Gen John Lambert to establish a dictatorship, he became generally unpopular In 1662 he was convicted of treason by the Restoration government and executed. His numerous writings on religion and government include *The Retired Man's Meditations* (1655) and the pamphlets in *The Trial of Sir Henry Vane, Kt* (1662) See biographies by J K Hosmer (1888), W W Ireland (1905), H M King (1909), and John Willcock (1913)

Vanern, Swed. *Vänern* (vĕ'nûrn), lake, area 2,141 sq mi , SW Sweden, fed by the Klar river and drained by the Gota into the Kattegat It is the third lake in size in Europe and the largest in Sweden

Vanersborg, Swed *Vänersborg* (vĕnursbôr'yû), city (pop 14,594), SW Sweden, on the south shore of Vanern lake It produces bricks, matches, shoes, and machines

Van Gogh, Vincent see Gogh, Vincent van

Van Heemskerck, Maarten see Heemskerck

Van Hise, Charles Richard (văn hīz'), 1857–1918, American geologist, b Fulton Rock co., Wis , grad Univ of Wisconsin, 1879 He taught at the Univ of Wisconsin from 1879 and was president from 1903 A pioneer in microscopic petrology, he served the U S Geological Survey from 1883 His works include *A Treatise on Metamorphism* (1904), *The Conservation of Natural Resources in the United States* (1910), and *The Geology of the Lake Superior Region* (1911) See memoir by T C Chamberlin (1924)

Van Horn (văn' hôrn), unincorporated town (pop c 1,250), co seat of Culberson co , W Texas, in the mountains SE of El Paso Near the site of an old stagecoach stop, Van Horn is a shipping point on the railroad and at a highway junction in a country of cattle and sheep ranches

Van Horne, Sir William Cornelius, 1843–1915, president (1888–99) of the Canadian Pacific Railway, b near Joliet, Ill After positions with railroads in the United States, he became (1882) general manager of the Canadian Pacific Railway, of which he was later vice president (1884–88), president (1888–99), and president of the board of directors (1899–1910) A naturalized citizen of Canada, Van Horne was knighted (1894) for his services to Canadian transportation See biography by Walter Vaughan (new ed , 1926)

Vanish (vunĭ'u), one who had a foreign wife Esra 10 36

vanilla, any plant of the genus *Vanilla*, tropical American climbing orchids cultivated also in the tropical Old World for the fruits which yield vanilla, a popular flavoring Vanilla was cultivated by the Aztecs as a flavoring for their chocolate The common or Mexican vanilla (*Vanilla fragrans* or *planifolia*), with thick stems and leaves and aerial roots, is propagated by cuttings and usually trained on posts or trees Where the natural pollinating agents—commonly hummingbirds—are lacking, the flowers are pollinated by hand Long, slender pods (capsules) are produced, which are picked while unripe and are subjected to a curing process necessary to bring out the flavor The capsule or "bean" is occasionally utilized for flavoring, but usually an extract is made with alcohol A synthetic vanilla is now widely used, the flavor has been obtained from several substitutes, such as clove oil and coal tar Vanilla vines are sometimes grown in greenhouses for ornament

Vanini, Lucilio (lōō'chē'lyō vänē'nē), c 1585–1619, Italian philosopher, who gave himself the name Julius Caesar A freethinker, he was persecuted for his ideas and driven from one European country to another He was finally condemned and burned at the stake at Toulouse, France, for atheism and witchcraft A part of the movement to break with the dogmas of scholasticism and the authority of Aristotle, Vanini made a courageous contribution to the foundations of a new philosophy

Vankleek Hill (văn"klēk'), town (pop 1,435), SE Ont , E of Ottawa It has lumber and flour mills and pump manufacturing

Van Lear, town (pop 1,723), E Ky., S of Ashland and on the Levisa Fork of the Big Sandy, in a farm, coal, and oil region

Vanloo (vänlō'), family of French painters, the first being **Jacques Vanloo** (zhäk), 1614–70, whose portrait of Corneille père hangs in the Louvre His grandson, **Jean Baptiste Vanloo** (zhäⁿ bätēstⁿ'), 1684–1745, became a popular portrait painter and a member of the Académie royale de Peinture et de Sculpture He painted the portraits of Louis XV and Marie Leszczynska and, in London, of Colley Cibber, Sir Robert Walpole, and others He was also known for his historical paintings and frescoes His brother, **Carle Vanloo** (kärl), 1705–65, whose full name was Charles André Vanloo, enjoyed an international reputation as a decorative painter His *Marriage of the Virgin* and *Halt during a Hunt* (both Louvre) are good examples of his work The family tradition was carried on by two sons of Jean Baptiste

van Loon, Hendrik Willem (văn lōn'), 1882–1944, American author and journalist, b Rotterdam, Netherlands. He came to the United States in 1903 and studied at Harvard and Cornell (B A., 1905). He was an Associated Press correspondent in Rus-

sia during the revolutionary outbreak of 1905 and—after studying at Munich (Ph.D., 1911)—in Belgium at the beginning of the First World War He taught history at various colleges and was associate editor of the Baltimore *Sun* in 1923–24 His numerous histories are readable and popular, *Story of Mankind* (1921), illustrated with his highly individualistic drawings, was a best seller, as was *Van Loon's Geography* (1932) Other works are *The Story of the Bible* (1923), *R v R · the Life and Times of Rembrandt van Ryn* (1931), *Ships* (1935), *The Arts* (1937), and *Simón Bolívar* (1943) In 1942 the Order of Lion of the Netherlands was conferred on him for his aid to Holland during the German occupation. See his autobiographical fragment, *Report to St Peter* (1947)

Vannes (văn), city (pop 23,510), capital of Morbihan dept, NW France, in Brittany, near Quiberon Bay Dating from pre-Roman times, it is the center of a region noted for its megalithic monuments and has an exceptionally fine museum of Celtic and Roman antiquities The union of Brittany and the French crown was proclaimed here in 1532 Parts of the ramparts enclosing the inner city date from the 13th cent

Vannucci, Pietro, see PERUGINO.

Vanport, former town, NW Oregon, just N of Portland, on the Columbia opposite Vancouver, Wash Built (1942–43) to house shipyard workers, it had a population of 42,000 during the Second World War After 1945 it became a low-cost housing project On May 30, 1948, the town (estimated pop 18,500) was submerged when an embankment on the Columbia river gave way under pressure of floodwaters, causing some loss of life and destroying the town

Van Rensselaer, Kiliaen (văn rĕn'sŭlur, rĕn'sŭlĕr"), c 1585–1644, Dutch merchant and patroon, b Amsterdam He was a wealthy diamond and pearl merchant and helped found (1621) the Dutch West India Company, later becoming one of the directors He was one of the first to develop a patroonship in New Netherland, having purchased a vast tract of land near the present Albany It was called Rensselaerswyck and comprised a large part of the present Albany, Rensselaer, and Columbia counties He sent his cousin Arent VAN CURLER to manage the estate, which was the largest of its kind His first name is also spelled Killian See Maunsell Van Rensselaer, *Annals of the Van Rensselaers in the United States* (1888), biography by Dunkin H Sill (1926)

Van Rensselaer, Martha, 1864–1932, home economist and pioneer in the development of extension work among rural women, b Randolph, N Y She served as school commissioner of Cattaraugus co, N.Y, and in 1900 joined the faculty of the college of agriculture of Cornell Univ to give extension courses in home economics These courses, with others, developed into New York State College of Home Economics (1925), of which she was a director She was a member (1918–19) of the executive staff of the U S Food Administration, a member of the Commission for Relief in Belgium, and assistant director (1929–32) of the White House conference on child health and protection She was household editor of the *Delineator* (1920–26) Her published works include bulletins and reports and magazine articles and editorials

Van Rensselaer, Stephen, 1764–1839, American statesman and soldier, called the Patroon, b New York city, grad Harvard, 1782. He spent some years managing his property, which included most of the present Albany and Rensselaer counties He became (1786) a major in the state militia and then served as a major general from 1801 until his death. He was twice elected (1789, 1790) as a Federalist to the New York state assembly and then served (1791–95) in the state senate Rensselaer was (1795–1801) lieutenant governor of New York under John Jay He was a delegate to the constitutional convention of 1801 and again served (1807–17) in the state legislature. Appointed (1810) to the commission for choosing a route for the Erie Canal, he later had much to do with its construction In the War of 1812 he commanded the state militia and was badly defeated in an attack on Queenstown Heights in Canada, he thereupon resigned his command and returned to Albany. Van Rensselaer founded (1824) a technical school at Troy, N.Y., which later (1826) was incorporated as Rensselaer Polytechnic Institute Van Rensselaer was a U S Representative from 1823 to 1829 He was responsible for the publication of *A Geological and Agricultural Survey of the District Adjoining the Erie Canal* (1824)

Van Schaick, Goose (gō'su văn skĭk'), 1736–89, American Revolutionary soldier, b Albany, N Y He fought (1760–62) in the last of the French and Indian Wars, becoming lieutenant colonel of a New York regiment. As a colonel in the Revolution, he led (1779) a successful expedition against the Onondaga Indians He succeeded Gen. James Clinton in command of forces completing the Sullivan-Clinton campaign in the Mohawk valley and was brevetted brigadier general in 1783.

Vansittart, Nicholas, 1st Baron Bexley (văn'sĭtărt), 1766–1851, British chancellor of the exchequer. He became a member of Parliament in 1796, was secretary of Ireland for a short time in 1804–5, and was appointed chancellor in 1812. He held office for the unusual period of 12 years, during which he devised new methods of taxation

Vansittart, Robert Gilbert Vansittart, 1st Baron, 1881–, British diplomat He began his diplomatic career in 1902 and served in Paris, Teheran, Cairo, Stockholm, and again in Paris until 1920, when he became Lord Curzon's private secretary He was made permanent undersecretary of state for foreign affairs in 1930 and was inconspicuously influential in that capacity until 1938, advocating a pro-French, anti-German policy He is thought to have helped frame the proposed Hoare-Laval pact of 1935, which was decried as Fascist appeasement Vansittart served as chief diplomatic adviser to the foreign secretary from 1938 to 1941, when he retired from that position and was raised to the peerage He continued throughout the war to advocate a "hard peace" for Germany

Van Slyke, Donald Dexter (văn slĭk'), 1883–, American biological chemist, b Pike, N Y, grad Univ of Michigan (B A, 1905, Ph D, 1907) On the staff of the Rockefeller Institute for Medical Research from 1907 he became a member in 1921 He is known for his work in the chemistry of proteins and amino acids, in blood analysis, in the action of enzymes, and in diabetes and nephritis

van't Hoff, Jacobus Hendricus (yäkō'bus hĕndrē'kus vant hôf'), 1852–1911, Dutch physical chemist He taught at the universities of Amsterdam (1878–96) and Berlin (from 1896) For his work in chemical dynamics and osmotic electrical conductivity (which led to Arrhenius's theory of electrolytic dissociation or ionization) he received the first (1901) Nobel Prize in Chemistry His studies in molecular structure laid the foundation of stereochemistry

Van Twiller, Wouter, b 1606, Dutch director general of New Netherland Succeeding Peter MINUIT, he arrived in New Amsterdam (1633) with nothing to recommend him except being the nephew of Kiliaen VAN RENSSELAER Kind to the Indians but blundering with his opponents, he left to Willem KIEFT (1637) a colony fraught with confusion After Kiliaen Van Rensselaer's death, Van Twiller managed the estate

Van Tyne, Claude Halstead, 1869–1930, American historian, b Tecumseh, Mich, grad. Univ of Michigan, 1896, Ph D, Univ of Pennsylvania, 1900 An assistant professor at the Univ of Michigan (1903–6) and a professor there from 1906 to his death, he became head of the department of history in 1911 Among his books are *The Loyalists in the American Revolution* (1902), *The American Revolution, 1776–1783* ("American Nation" series, 1905), *The Causes of the War of Independence* (1922); *India in Ferment* (1923), *England and America, Rivals in the American Revolution* (1927), and *The War of Independence American Phase* (1929), for which he was posthumously awarded the 1930 Pulitzer Prize in history

Vanua Levu (vänōō'a lă'vōō), formerly **Sandalwood Island,** volcanic island (2,137 sq mi, pop 39,958), S Pacific, second in size of the FIJI ISLANDS Mt Thurston (3,139 ft) is the highest peak, and the Ndreketi the largest river The large east peninsula is connected to the rest of the island by a narrow isthmus There are valuable gold mines and large sugar plantations

Van Vechten, Carl (văn vĕk'tun), 1880–, American music critic, novelist, and photographer, b Cedar Rapids, Iowa, grad Univ of Chicago, 1903 While he was a leading music critic in New York he wrote *The Music of Spain* (1918) and other critical works Among his sophisticated novels, the best known are *Peter Whiffle* (1922), *The Tattooed Countess* (1924), *Nigger Heaven* (1926), and *Spider Boy* (1928) *The Tiger in the House* (1920) is his study of cats His autobiographical *Sacred and Profane Memories* appeared in 1932 He is a well-known photographer as well as a promoter of better relations between the Negro and white races

Van Wert (văn wûrt'), city (pop 9,227), co seat of Van Wert co, NW Ohio, NW of Lima near the Ind line, settled 1835, inc 1848 Overalls, fiber containers, cigars, cheese, and woodworking machinery are made here It has a county library and is the seat of the Marsh Foundation School for underprivileged children. A peony festival is held every June

Van Zeeland, Paul (pōl' văn zā'lănt), 1893–, Belgian statesman After studying at Louvain and at Princeton, he became (1928) professor of law and later director of the institute of economic science at the Univ of Louvain and vice governor of the national bank of Belgium In 1935 he was made premier at the head of a government of national unity Given decree powers, he weathered the Belgian economic crisis by devaluing the currency and by other stringent measures In 1936 Paul van Zeeland instituted a far-reaching program of reform and social legislation similar to the American New Deal and suppressed the turbulent Rexists (the Belgian fascists) after proclaiming martial law. During his administration Belgium denounced (1936) its military alliance with France, reverting to its policy of neutrality, and received (1937) a German guarantee of its inviolability. He resigned late in 1937 after the Rexists accused him of political corruption, despite the fact that he was completely exonerated. He remained active as an unofficial adviser, and in 1938 he released, at the instance of the British and French governments, a report calling for a conference of the great powers to restore international economic cooperation. His report was disregarded. In 1939 he accepted the post of president of the committee on refugees, established at London, and throughout the Second World War he continued to exert himself for international economic cooperation, traveling widely in Europe and the Americas He was made (1944) high commissioner for the repatriation of displaced Belgians, a task which he accomplished with his usual efficiency A leader of the Catholic party, Van Zeeland favored the return of Leopold III to Belgium, and in 1949 he replaced Henri Spaak as foreign minister

Vaphio cups (vă'fēō), pair of gold cups of Minoan workmanship, probably dating from c 1600–1500 B C Shaped like teacups and about 3½ in high, they were formed by fastening together two plates of gold, the inner one smooth, the outer in low-relief *repoussé*, the designs are believed to represent bull hunts Found in a grave at Vaphio in Laconia, the cups are preserved at Athens, models are exhibited at the Metropolitan Museum of Art

vaporization, change of a liquid or solid substance to a gas or vapor There is fundamentally no difference between the terms *gas* and *vapor*, but gas is used commonly to describe a substance which appears in the gaseous state under standard conditions of pressure and temperature and vapor to describe the gaseous state of a substance which appears ordinarily as a liquid or solid Although most substances undergo change of state, in the order of solid to liquid to gas, a few change directly from solid to gas in a process known as SUBLIMATION Any change of state is described by the kinetic molecular theory of MATTER as a specific change in the speed at which the molecules of a substance are vibrating and in the distances between these molecules When heat (which is the kinetic or moving energy of the molecules) is applied continuously and in sufficient quantity to a liquid at its BOILING POINT, the molecules of the liquid move faster and faster and farther and farther apart until finally vaporization is complete The quantity of heat which must be applied to bring about this change of state depends upon the substance itself, for each substance requires a specific amount of heat for each unit of weight For example, the amount of heat necessary to change one gram of water to steam at its boiling point, i e, the heat of vaporization of water, is approximately 540 calories Other substances require other amounts Liquids can also change to gases at temperatures below their boiling points, and such EVAPORATION occurs at any temperature when the surface of a liquid is exposed in an unconfined space When, however, the surface is exposed in a confined space and the liquid is in excess of that needed to fill the space with vapor, an equilibrium is quickly reached between the molecules of the substance going off from the surface and those returning to it A change in temperature upsets this equilibrium, a rise in temperature, for example, increases the activity of the molecules at the surface and consequently increases the rate at which they fly off When the temperature is maintained at the new point for a short time, a new equilibrium is soon established The equilibrium is fundamentally one between the pressure of the molecules of the vapor tending to return to the liquid and the pressure of those tending to fly off The pressure exerted by the vapor of a liquid in a confined space is called its vapor pressure It differs for different substances at any given temperature, but each substance has a specific vapor pressure for each given temperature The vapor pressure of water is 4 58 mm (measured in terms of mercury in a barometer) at 0°C and 760 mm (one atmosphere of pressure) at 100°C (the boiling point of water) Since at its boiling point the vapor pressure of any liquid at sea level is one atmosphere, the boiling point of a substance is commonly defined as that temperature at which its vapor pressure is equal to one atmosphere.

Var (vär), department (2,325 sq mi, pop 370,688), SE France, in Provence Its Mediterranean coast is part of the French RIVIERA Draguignan is the capital, Toulon the chief port Var is named for a mountain torrent

Varanger Fjord (värăng'ûr fyōr"), inlet of the Arctic Ocean, c 50 mi long, Finnmark co, NE Norway, near the Russian border There are iron mines on its southern shore

Varangians (vûrăn'jĭunz), Scandinavian armed merchants and warriors who began to penetrate Russia by the 9th cent. Their leader RURIK established himself in NOVGOROD in 862, the date traditionally accepted as that of the foundation of the Russian state The Varangians, some of whom were also known as Russ or Ross, gradually merged with the Slavs, on whom they exerted little cultural influence From Russia the Varangians made their way down the Volga to the Caspian Sea and down the Dnieper to the Byzantine Empire. In the 9th

and 10th cent they repeatedly threatened Constantinople Other Varangians served in the same epoch as mercenary troops to the emperors at Constantinople Varangian migrations corresponded to those of the NORSEMEN and VIKINGS

Varchi, Benedetto (bānādĕt'tō var'kē), 1502?–1565, Italian poet and historian He was a protégé of Filippo Strozzi and Cosimo de' Medici, who commissioned him to write the history of Florence This *Storia di Firenze* in 16 volumes covers the years from 1527 to 1538

Vardar (vär'där), river, c 200 mi long, rising W of Skoplje, S Yugoslavia It flows W and S past Skoplje and Titov Veles through Yugoslav and Greek Macedonia into the Aegean Sea near Salonica

Vardhamana: see JAINISM

Vardo, Nor *Vardø* (vär'dû"), town (pop 3,104), Finnmark co, NE Norway, on an island in the Arctic Ocean near the entrance to the Varanger Fjord The northernmost fortress in the world (at least until recent times) was established here in 1307 The town was incorporated in 1787 and has long been a trade center for N Norway, Finland, and Russia Its port is ice free Fridtjof Nansen wintered here in 1893 and returned in 1896

Vardon, Harry, 1870–1939, British golfer, b Jersey, A former caddie he became at 20 a professional golfer, and in 1895 he won his first tournament. One year later he won the British Open championship, later retaking this crown five times (1898–99, 1903, 1911, and 1914) Vardon—rated by many as second only to Bobby Jones—was known for his accurate drives and for his introduction of the overlapping grip on the golf club He made several tours in America and in 1900 won the U S Open championship He won over 60 important golf tournaments before he retired from the links in 1934. He wrote *The Complete Golfer* (1913) and *The Gist of Golf* (1923) See his autobiography, *My Golfing Life* (1933)

Vare, William Scott, 1867–1934, American political leader, b Philadelphia He engaged in machine politics and became (1898) a member of the select council of Philadelphia He was recorder of deeds (1902–12) and—with his brothers Edward and George—came to control the Republican machine in Philadelphia William S Vare later succeeded Boies PENROSE as political boss of Pennsylvania He served (1912–27) in Congress but, elected (1926) to the U S Senate, was barred from his seat on the grounds of excessive campaign expenditures He wrote *My Forty Years in Politics* (1933)

Varenius, Bernardus (vurē'nēus), or **Bernhard Varen** (vä'run), 1622–50, Dutch geographer He studied to be a physician, but turned his attention to geography His first work was a geography and history of Japan, *Descriptio regni Iaponiae* (1649), he is best known for his *Geographia generalis* (1650), standard for a century and translated into many languages Newton took part in the production of the English Cambridge edition (1682) and used the work in his teaching Varenius attempted to define the field of geography as a science and to classify, organize, and coordinate its branches

Varennes (varĕn'), officially **Varennes-en-Argonne** (-ānargôn'), village (pop 609), Meuse dept, NE France Here Louis XVI and Marie Antoinette were arrested (1791) when trying to flee France

Varèse, Edgar (vurĕs'), 1885–, French-American composer In Paris he studied mathematics and science in the École polytechnique and composition with Roussel and D'Indy at the Schola Cantorum and with Widor at the Conservatoire After founding and conducting orchestras and choruses in Paris and Berlin, he came in 1916 to the United States, where he founded (1921) the International Composers' Guild Among his works are the symphonic poems *Amériques* (1926) and *Arcana* [mysteries] (1927), *Hyperprism* (1923), for wind instruments and percussion, *Ionisation* (1931), a sonata for percussion instruments, and *Espace* (1937), a symphony with chorus New instruments of electrically produced tone and the extreme registers of orchestral instruments are sometimes employed in a search after unusual sonorities

Varese (värä'zā), city (pop 23,348), capital of Varese prov, Lombardy, N Italy It is a rapidly expanding industrial center and a popular tourist resort in the Alpine foothills, near several Italian lakes On top of a near-by hill is a church originally founded by St Ambrose

Vargas, Getulio Dornelles (zhŭtōō'lyō dôrnĕ'lĭsh var'gŭsh), 1883–, president of Brazil (1930–45). He was a native of Rio Grande do Sul state and, as he rose to national prominence, opposed the rule of the political leaders from São Paulo and Rio de Janeiro state He accepted (1926) the post of finance minister under President Washington Luis, but in 1927 he resigned He served as governor of Rio Grande do Sul from 1928 to 1930, when he ran for the presidency. Charging that his defeat was fraudulent, he led a successful revolt and became provisional president and then president His rule as the head of a coalition of discordant groups became dictatorial. Much socialistic legislation was adopted and the program of industrial expansion was firmly begun Rule by decree, however, caused much opposition. Of several revolts, the most serious was that in São Paulo in 1932. A new constitution was adopted in 1934 guaranteeing states' rights and forbidding reelection of the president. There were soon new disorders, these charged to Luis Carlos PRESTES, who was jailed In 1937 the constitution was arbitrarily altered, and the *Estado Novo* [new state] was established. The power of the government was vastly extended, and programs of industrial development and agricultural diversification were pushed with some immediate results. Opposition was forcibly put down, and Vargas maintained his power until 1945. He then called national elections, endorsed the candidacy of Enrico DUTRA, freed the political prisoners, and allowed political parties to organize Dutra, however, charged that Vargas planned to remain in power and, at the head of a group of army officers, deposed him in Oct, 1945. The importance of the political force Vargas retained, despite his ouster, was shown by his prompt election as a senator.

Vargas Zapata y Luján Ponce de León, Diego de (dyā'gō dā var'gäs thäpä'tä ē lōōhän' pōn'thā dā lāōn'), c 1643–1704, Spanish governor and captain general of NEW MEXICO, b Madrid, Spain From 1692 to 1695 he succeeded in reconquering and resettling New Mexico for the Spanish after the Pueblo revolt in 1680 had driven the Spanish settlers from the region He served as governor and captain general from 1691 to 1697 and from 1703 to his death He carried on campaigns against the Pueblo Indians in 1696 and against the Apache in 1704 See J B Bailey, *Diego de Vargas and the Reconquest of New Mexico* (1940), J M Espinosa, tr and ed, *First Expedition of Vargas into New Mexico 1692* (1940) and *Crusaders of the Rio Grande* (1942)

variable star, star that shows from time to time distinct changes in brightness and often in certain other characteristics (e g, color, temperature, atmosphere, and apparent diameter) Many different classifications of variable stars have been proposed In general, such stars can be grouped in classes known as temporary stars (novae and supernovae), Cepheid variables, long-period variables, eclipsing variables, and irregular variables Novae are not "new" stars as the name implies but are stars that change suddenly from comparative faintness to spectacular brightness and then fade In 134 B C, Hipparchus recorded his observation of a nova Since then many have been observed If the star does not already have a name it is commonly designated by the word *Nova* followed by the genitive case of the name of the constellation in which it appears and the year of discovery, if more than one is discovered in the same year in the same constellation, a number indicating its order of discovery is added The nomenclature of other variable stars usually follows a system employing letters and numbers followed by the genitive case of the constellation name, these designations are assigned to stars recognized by a special commission as true variable stars The changes which produce a nova are believed to be associated with explosions of the stars Some are recurrent novae, one in the constellation Scorpio, for example, was detected in 1863, 1906, and 1936, and one in Ophiuchus was recognized in 1898 and again in 1933 Among other novae that have been well observed are Nova Persei 1901, Nova Aquilae 1918, Nova Pictoris 1925, Nova Herculis 1934, and Nova Puppis 1942 Stars designated as novae usually reach an absolute magnitude of minus 5 (−5) or minus 6 (−6) Novae have less frequently reached a much greater brightness, minus 14 (−14) or minus 15 (−15), and these are called supernovae A bright star believed to be a supernova, associated with the Crab nebula, was recorded in 1054 In 1572 another probable supernova appeared in the constellation Cassiopeia, it was so bright that it was plainly visible in daylight Because Tycho Brahe was one of the first to observe it and to study its variations in light intensity, it is sometimes called Tycho's star Another probable supernova appeared in 1604 A supernova far brighter than Tycho's star was observed in 1885 in the Andromeda nebula Since then a number have been observed in galaxies outside the Milky Way system Cepheid variables are so named because they resemble one discovered (1784) in the constellation Cepheus They are believed to be pulsating stars, i e, their variability is attributed to alternate expansion and contraction of the material composing them They are assumed to be giant yellow stars larger than our sun and of low density, their periods usually range from less than a day to about 50 or more days Long-period variables go through their more or less regular cycles in periods ranging from about 50 days to about two years, although the periods of most of them fall between 250 and 300 days They are red giant and supergiant stars The first long-period variable star definitely recognized as periodically variable is known as Omicron Ceti or Mira Ceti, which has been observed for more than three centuries. Eclipsing variables are really eclipsing binaries, i e, double stars of different magnitudes moving around a common center of gravity The plane of their orbits in relation to the earth is nearly edgewise, so that as they revolve one eclipses the other and thus causes variations in the luminosity as observed from the earth. A well-known example of this group is Algol Persei (or Beta Persei). Generally known as irregular variable stars are those which have varying brightness but which do not fall into one of the other groups See P W Merrill, *The Nature of Variable Stars* (1938), Leon Campbell and Luigi Jacchia, *The Story of Variable Stars* (1941)

variation, in biology: see DARWINISM

varicose vein, condition of chronic enlargement of a superficial blood vessel It occurs generally in a dependent part of the body, e g, the lower part of the legs or the thighs The abnormal congestion of blood characteristic of the condition results from a weakness of the valves in the veins The tendency to weakness of the valve structure is believed by many to be hereditary When the varicosis involves the veins about the rectum, the condition is known as hemorrhoids, or piles, when it affects the veins of the spermatic cord, it is a varicocele More women suffer from varicose veins than do men. Its heavy incidence during pregnancy partially accounts for the disparity Sometimes the condition is accompanied by ulcers and eczema Accidental rupture of the very thin and highly distended vessel sometimes takes place Swelling and pain are the common concomitants of varicose veins Treatment is directed at reducing the pressure of blood in the weakened vessels, and in advanced cases, where the condition requires surgery, a deteriorated section of the vein is sometimes excised

variscite see TURQUOISE

Varley, John, 1778–1842, landscape painter in water color He is best known for his paintings of Welsh mountain country The Victoria and Albert Museum has *Beddgelert Bridge*, *Bolton Abbey*, and many others Varley was also a teacher, a writer, and an astrologer He was a friend of William Blake

Varmland, Swed *Värmlands län* (vĕrm'länts lĕn'), county (7,427 sq mi, pop 272,275), W central Sweden, N of Vanern lake It consists of the larger part of the historic province of Varmland Besides agriculture, the chief occupations are the mining and processing of iron and lumber and paper industries KARLSTAD is the county seat, and KRISTINEHAMN is an industrial center Varmland was the home of Selma Lagerlöf, who immortalized its scenes and legends

Varna (var'nu), renamed **Stalin** (stä'lĭn), city (pop 77,792), E Bulgaria, on the Black Sea It is a major port and a rail terminus, and it has shipyards and metal, textile, and tobacco industries Its beaches are visited as a summer resort Varna has a university (founded 1920), a polytechnical institute, a naval academy, and an archaeological museum It was founded (6th cent B C) as Odessus, a Greek colony, and it became a commercial center under Thracian rule It passed to the Roman Empire in the 1st cent. A D Here in A D 679 the Bulgarians defeated the Byzantine emperor, Constantine IV, and here the Turks under Murad II won a decisive victory (1444) over an army of Crusaders led by Ladislaus III of Poland and Hungary The battle of Varna was the last major attempt of the Christian nations to stem the Ottoman tide In 1949 Varna was renamed in celebration of Joseph Stalin's 70th birthday There are ruins of 16th century Byzantine fortifications

Varnhagen von Ense, Karl August (karl' ou'gōōst farn'hagun fûn ĕn'zu), 1785–1858, German poet, historian, and journalist He was a collaborator of Chamisso and other writers and author of the *Biographische Denkmale* [biographical monuments] (5 vols, 1824–30) His wife, **Rahel Antoine Friederike Levin Varnhagen von Ense** (rä'hĕl antwan' frēdurē'ku la'vĭn), 1771–1833, had a famous salon in Berlin, frequented by Heine, Gutzkow, and Laube and known as a center of the romanticists

varnish, homogeneous solution of gum or of natural or synthetic resins in oil (oil varnish) or in a volatile solvent (spirit varnish) which dries on exposure to air, forming a thin, hard film, usually glossy It is used for the protection or decoration of surfaces and may be transparent, translucent, or tinted. For oil varnishes a hard gum or resin, often a fossilized plant exudation such as kauri or copal, is dissolved in oil (commonly linseed oil or tung oil) and is diluted with a volatile solvent such as turpentine Spirit varnishes are commonly made of soft resins or gums, such as SHELLAC, dammer, mastic, or sandarac, dissolved in a volatile solvent, e g, alcohol, benzene, acetone, or turpentine Enamel is varnish with added pigments Lacquer may be a cellulose derivative dissolved in a volatile solvent or a natural varnish made in the East from the juices of trees Among the varnishes named either for their constituents or for the proposed use are japanner's gold size, cabinet, carriage, bookbinder's, patent-leather, insulating, photographic, shellac, and copal picture varnish Varnish has been known from antiquity; the Egyptians coated mummy cases with a pastelike form made of soft resins dissolved in oil and applied when warm Another early use was for coating oil paintings Stradivarius and other violinmakers used a slow-

drying linseed oil varnish on their instruments. See J S Remington, *Drying Oils, Thinners, and Varnishes* (1946)

Varnsdorf, Ger *Warnsdorf* (both värns'dôrf), city (pop 15,661), N Bohemia, Czechoslovakia, on the German border It produces cotton, velvet, and linen textiles, dyes, and wooden articles It lost most of its German-speaking population after the Second World War.

Varro, Caius Terentius (kā'yus tĭrĕn'shŭs vă'rō), fl 216 B C, Roman statesman and general. Consul with Lucius Aemilius Paulus in 216 B C, he opposed HANNIBAL at the battle of Cannae, where the Roman army was destroyed Probably more blame for this disaster is to be ascribed to the Roman system of alternate command than to Varro's incompetence One of the few survivors, Varro rallied the remnants of his army at near-by Canusium (Canosa di Puglia) After the battle he was formally thanked by the senate for his spirit

Varro, Marcus Terentius, 116 B C –27 B C, Roman man of letters He was known as the most erudite man and the most prolific writer of his times, and his output is estimated to have been about 620 volumes He served as Pompey's legate in Spain and fought at Pharsala, but was reconciled with Caesar, who made him director of the proposed public library At the time of the Second Triumvirate his villa was plundered, and he himself was proscribed He fled, but was pardoned by Augustus In his writing scarcely a field of contemporary learning was left untouched Of his many works only one remains intact, *De re rustica libri III* [three books on farming] This is one of the most important books of its kind extant from antiquity. Six books (V–X) out of the original 25 remain of *De lingua latina* [on the Latin language], and about 600 lines from his *Satirae Menippeae* survive

Varuna · see HINDUISM.

Varus (Publius Quintilius Varus) (vā'rŭs), d. A D 9, Roman general In 13 B C he was consul with Tiberius Claudius Nero (later emperor as TIBERIUS) and later was governor of Syria Though unsuited for the position, he was appointed governor of Germany by AUGUSTUS In A D 9, to suppress an uprising, he led three legions across the Rhine into the Teutoburg Forest, where they were massacred by the troops of ARMINIUS Varus himself committed suicide This defeat was a major catastrophe for the Romans It is said that afterward Augustus would start up from sleep, crying, "Varus, Varus, bring me back my legions!"

Vasa (vä'sä), Pol. *Waza* (vä'zä), royal dynasty of Sweden (1523–1654) and of Poland (1587–1668) GUSTAVUS I, founder of the dynasty in Sweden, was succeeded by his sons ERIC XIV (reigned 1560–68) and JOHN III (1560–92) John III's son was elected (1587) king of Poland as SIGISMUND III and succeeded on his father's death to the Swedish throne as well, but his Catholicism led to his deposition in Sweden, where his uncle CHARLES IX succeeded him The house thus was split into a senior Catholic line (in Poland) and a cadet Protestant line (in Sweden), and the two lines remained in a state of chronic war against each other Charles IX of Sweden was succeeded by GUSTAVUS II (Gustavus Adolphus), on whose death (1632) his daughter CHRISTINA ascended the throne With Christina's abdication (1654) in favor of her first cousin, Charles X, the Swedish throne passed to the ZWEIBRÜCKEN line of the house of Wittelsbach. In Poland, Sigismund III was succeeded by his son LADISLAUS IV, who in turn was succeeded by his brother, JOHN II, who abdicated in 1668

Vasa, Finland see VAASA

Vasari, Giorgio (jôr'jô vaza'rē), 1511–74, Italian architect, writer, and painter He is best known for his entertaining biographies of artists, *Vite de' più eccellenti architetti, pittori e scultori italiani* (1550)—commonly called in English *Lives of the Painters* Though it contains many erroneous statements and plagiarisms, it is a classic of erudition and catholicity of taste, the earliest prototype of modern criticism, and has been many times published in different languages Later English translations include one by A B. Hinds (4 vols, 1927) and an abridged edition by Betty Burroughs (1946). Brought up with two young princes of the Medici family, Vasari was apprenticed at 13 to Michelangelo and later to Andrea del Sarto His paintings include murals in the Vatican and in the cathedral and Palazzo Vecchio, Florence, and numerous portraits of the Medici The Uffizi is his most celebrated achievement as an architect See biography by R W Carden (1910).

Vasco da Gama. see GAMA, VASCO DA.

Vasconcelos, José (hōsĕ' väskōnsā'lōs), 1882–, Mexican educator and writer He headed (1920–24) the National Univ of Mexico and, as minister of education (1920–25) under Álvaro Obregón, worked vigorously and with some success to establish schools, to persuade the Mexican people of the importance of education, and to raise the literacy rate In 1929 he was defeated in the presidential race and was forced into exile by Plutarco E Calles. As teacher, propagandist, and writer, he attracted a large youthful following, and his fierce localism and belief in Latin American culture—as response of peoples to a physical environment—had an effect abroad as well as in Mexico In later years he denounced democracy and tended more and more to glorify force and racism. Well-known works are *La raza cósmica* (1925) and *Indología* (1927) The first volume of his four-volume autobiography (1935–39) is *Ulises criollo*—the general title for the whole work, which includes *La tormenta, El desastre,* and *El proconsulado*

vase, vessel of pottery, glass, metal, stone, or wood The pottery vase was anciently employed as a container for water (HYDRIA), wine, or oil (AMPHORA) or for mixing and serving wine and water (crater), it had one or two handles, sometimes a lip or spout, frequently a base or foot, sometimes it was pointed to thrust into the ground or was set into a frame holder for support. The covered vase of large capacity was early used for storing grain, a similar but smaller one is popular in the Orient for tea The cinerary vase, or URN, has been common throughout historical times, a famous one being the Portland vase (British Mus) For ornamental use vases are frequently made in pairs Modern vases are widely used for flowers Beautiful in form and embellished with incised patterns, modeled or painted figures or scenes, and sometimes inscriptions, the vase became a work of art in early times Greek painted vases in form and color are among the most exquisite examples of ancient art Archaic examples and fragments of vases discovered in burial chambers and through excavations in various countries serve as records of the manners, customs, and history of their peoples Buddhist and Christian altar objects include the vase, usually of silver or gold with chased or modeled designs of exquisite workmanship Bronze and brass are much employed for vases in the Far East, where also Chinese examples in fine porcelain and carved jade and crystal and Japanese Satsuma and Kutani enameled ones are highly prized, here, too, the vase of CLOISONNÉ is much in evidence The Persian pottery type is famous for its blue-green color, French Sèvres for miniature medallions, English Wedgwood for cameo reliefs, and the American Rookwood for deep, rich tones and underglaze painting

Vasek, Vladimir. see BEZRUC, PETR

Vasey, George (vā'zē), 1822–93, American botanist, b England, M D Berkshire Medical College, Pittsfield, Mass, 1848 He became botanist of the U S. Dept. of Agriculture in 1872 He was an authority on, and compiled a catalogue of, the grasses of the United States

Vashti (–tī), same as JOEL 14

Vashti (väsh'tī), queen whom Ahasuerus deposed for disobedience Esther 1

Vasily III (Vasily Ivanovich) (vŭsē'lyĭ ĭva'nuvĭch), 1479–1533, grand duke of Moscow (1505–33) Carrying on the policies of his father, IVAN III, he rounded out the territorial consolidation of the Russian state, annexing Pskov (1510), Ryazan (1517), and Novgorod-Seversk (1523) and gaining Smolensk in a war with Sigismund I of Poland

Vásquez, Horacio (ōra'syō vä'skās), 1860–1936, president of the Dominican Republic (1899–1903, 1903–7, 1924–30) A dominating figure in the nation, even when out of office, Vásquez in his third term attempted to continue the material reforms begun during U S occupation (1916–24) In 1928 he requested Charles G Dawes to head a commission to recommend badly needed fiscal changes He adopted the commission's report, ousted many political henchmen, and extended his term, but was shortly overthrown and exiled by insurgents led by Rafael TRUJILLO MOLINA

Vásquez de Ayllón, Lucas see AYLLÓN

Vásquez de Coronado, Francisco: see CORONADO.

vassal see FEUDALISM

Vassalboro (vă'sŭlbŭrō), town (pop 1,931), SW Maine, on the Kennebec above Augusta, settled c 1760, inc 1771 Many early inhabitants were Friends, Oak Grove, girls' preparatory school, is a Friends' foundation here

Vassar, Matthew (vă'sur), 1792–1868, American philanthropist, b England He came to the United States with his father in 1796 In 1811, after his father's successful brewery in Poughkeepsie, N Y, had burned, the son opened another, which in time became immensely prosperous. In 1861 he founded Vassar Female College, to which he gave more than $800,000, he also contributed to local charities and churches See his autobiography and letters (ed by E H Haight, 1916)

Vassar, city (pop 2,154), S Mich, on the Cass river and E of Saginaw, settled 1849, inc as a village 1871, as a city 1945 Automobile parts are made here Indian mounds are found in the vicinity

Vassar College (vă'sur), at Poughkeepsie, N Y, nonsectarian, for women, chartered 1861 by Matthew VASSAR, opened 1865 as Vassar Female College, renamed 1867. It had pioneer music and physical education departments and the first department of euthenics, devoted to applying scientific principles to living, a nursery school is attached An institute of euthenics is held in the summer The work in experimental drama is notable. The buildings include the massive Main Hall (1865) designed by James Renwick and notable classical, social, and art museums. Henry Noble MacCracken was president from 1915 to 1946. Its first woman president, Sarah G Blanding, took office in 1946

Vasteras, Swed *Västerås* (vĕsturōs), city (pop, 51,034), co seat of Vastmanland co., E central Sweden. On Malaren lake, it is the center of a modern electrical industry Vasteras, with a cathedral and castle dating from the 12th cent., was a medieval commercial center Several important diets convened here, notably the Vasteras Recess (1527), when the church was taken over by the state and Lutheranized

Vasterbotten, Swed *Vasterbottens län* (vĕ'stŭrbô"tŭns lĕn'), county (22,837 sq mi, pop 228,135), N Sweden, consisting of the historic province of Vasterbotten and parts of the historic provinces of Angermanland and Lapland It is chiefly a timber region, with mountains in the west along the Norwegian border At the mouth of the UME, its chief river, on the Baltic Sea, lies Umea, the main port

Vastergotland, Swed *Västergötland* (vĕ'stŭryŭt"land), historic province of S central Sweden It is now administratively comprised in SKARABORG CO. and in part of ALVSBORG CO

Vasternorrland, Swed *Västernorrlands län* (vĕ'stŭrnôr"lănts lĕn'), county (9,924 sq mi, pop 278,707), NE Sweden It is formed, roughly, of two historic provinces, Medelpad, in the south, and the larger part of Angermanland, in the north Its important lumber industry is centered at SUNDSVALL The ANGERMAN is the chief river The county seat is HARNOSAND

Vastervik, Swed *Västervik* (vĕ'sturvēk"), city (pop 14,200), Kalmar co, SE Sweden Known since the 13th cent, it was a trade center in the 16th and 17th cent It has stone quarries, match manufactures, and a machine industry

Vastmanland, Swed *Västmanlands län* (vĕst'mănlänts" lĕn'), county (2,611 sq mi, pop 183,346), central Sweden It consists, roughly, of parts of two historic provinces, E Vastmanland (the western section being in OREBRO CO) and NW Uppland VASTERAS is the county seat, other towns are Arboga and Koping The southern part is a truck-farming and dairying region, in the north there are iron and silver mines, the manufacture of iron and steel goods and electrical appliances is important

Vatel (vätĕl'), 17th cent, French cook, famous in the time of Louis XIV Mme de Sévigné, in her letters, speaks of him as the chef of the prince of Condé and says that on a Friday, when the king was coming to dinner and the fish failed to arrive in time, Vatel committed suicide The authenticity of this story is doubtful

Vatican (vă'tĭkun), residence of the pope at ROME (see PAPACY and "ROMAN CATHOLIC CHURCH) Since the Roman Question was ended by the LATERAN TREATY of 1929 between Pius XI and Victor Emmanuel III (negotiated by Cardinal GASPARRI and MUSSOLINI), the **Vatican City** has been an independent, sovereign state (108 7 acres, pop c 1,000), with the pope as its absolute ruler, it may be said to correspond politically to the old PAPAL STATES, but its origin is unconnected with them It consists of a roughly triangular portion of Rome, lying on the west bank of the Tiber, W of the Castel Sant' Angelo In its southeast corner is the PIAZZA OF SAINT PETER'S CHURCH, surrounded by the splendid colonnade, serving as the entrance to St Peter's Church North of the piazza is a quadrangular area containing a few streets of administration buildings and Belvedere Park West of Belvedere Park are the pontifical palaces, the Vatican proper Beyond the palaces lie the Vatican Gardens, making up half of the area of the little state, which is bounded on the west and south by the Leonine Wall. The Vatican City is thus restricted to the papal residence, the papal church, and some adjoining offices. In the city of Rome certain important basilicas, churches, and other buildings are part of the state, though not in its area The basilicas include the LATERAN, St Mary Major, and St Paul's without the Walls (not inside the city) The palace of San Callisto at the foot of the Janiculum also shares the immunity of the Vatican, so does the papal summer villa, at Castel Gandolfo, some miles from Rome The political freedom of the Vatican, guaranteed and protected by Italy, is signalized by a coinage and postage, a flag, and a diplomatic corps, with a representative from Italy The state has a citizenship of its own The civil government is in the hands of a lay governor and a council, all appointed by and responsible to the pope The law is the CANON LAW and the courts are part of the system of the Church, the only court special to the Vatican City being a court of first instance for civil and criminal cases in the city, consisting of three judges The Vatican is above everything the seat of the central government of the Roman Catholic Church, and the term is commonly used for the government itself Because of the vast and multiform business, there has been developed an elaborate system of administration to assist the pope. His privy council and cabinet is the college of

cardinals (see CARDINAL). He may act as he pleases without their consent, but in practice he relies on the cardinals for the transaction of many of his duties in detail. The whole administrative body surrounding the pope and responsible to him is called the Curia Romana The chief officials of the Curia, with the officers of the guard and others, make up the Pontifical Family, the body of functionaries who attend the pope at great functions is called the Pontifical Chapel The antiquity and importance of the papal court have given it characteristics of royal courts, such as elaborate functions, splendid uniforms, and complex rules of precedence The bodyguard of the pope is the corps of Swiss GUARDS They are a small group of Catholic Swiss, chosen for their intelligence and bodily vigor, their splendid Renaissance uniforms and their handsome appearance impress every visitor to the Vatican The palaces themselves form an irregular mass of buildings, of three or four stories, built in long plain lines, broken by additions and alterations The papal residence and offices occupy the portion near the colonnade, and the rest is given over to the museums and the library The ground plan is generally that of courtyards surrounded with galleries, and this renders easy the isolation of various parts from each other The Vatican museums are among the most important in the world, they are the Museo Pio-Clementino (Clement XIV and Pius VI) in the extreme northwest portion of the buildings, including the BELVEDERE, containing one of the chief collections of antiquities in the world, the Chiaramonti Gallery, along the east side of the Giardino della Pigna, one of the great courtyards, a collection of Greek sculptures and Renaissance imitations, the Braccio Nuovo forming the south side of the Giardino della Pigna, undoubtedly the finest of the museums from a decorative point of view, the Egyptian Museum and the Etruscan Museum opposite the Braccio Nuovo The museums, however, house only a part of the Vatican treasures, for the Renaissance and modern paintings are found in the galleries about the Cortile del Belvedere (S of the Giardino della Pigna) and the Cortile San Damaso, separating the residential palace from the galleries about the Cortile del Belvedere Adjoining the Cortile San Damaso is the building containing the Borgia apartment on the first floor and the Raphael rooms (Stanze and Loggie) on the second The works of Raphael here make one of the most famous artistic monuments of the world The Vatican Library, (see separate article) lies all along the western side of the Giardino della Pigna and the Cortile del Belvedere Of the chapels of the Vatican the principal is the SISTINE CHAPEL The history of the Vatican as a papal residence dates from the 5th cent , when, after Constantine I had built the basilica of St Peter's, Pope Symmachus built a palace near by The pope usually resided at the Lateran until the "Babylonian captivity" at Avignon (14th cent), but Eugene III, Celestine III, and Innocent III did much to improve the Vatican After the return of the papacy to Rome (1377) the Vatican was the usual residence Especially important in causing this was the fact that it lay on the outskirts of Rome, and experience had taught the popes that a defensible quarter would be the safest place to live The Renaissance popes, principally Sixtus IV, Innocent VIII, Alexander VI, Julius II, and Clement VII, were great patrons of the fine arts, they began the assembly of great collections and the construction of wonderful galleries The popes of the Catholic Reform continued the work, but did not begin many new projects of this sort Gregory XIII and Sixtus V expended large sums on the Vatican, but began the Quirinal, which was the papal residence from the 17th to the 19th cent and after 1870 the Italian royal palace Clement XIV, Pius VI, and Pius VII were much interested in the Vatican museums The Vatican is open all year to visitors, and the pope very frequently receives callers in public or private audience The Vatican City has its own railroad station and a great broadcasting station, installed by Marconi under Pius XI See Thérèse Bonney, *The Vatican* (photographs with explanations, 1940), James A Van der Veldt, *Exploring the Vatican* (1947), Ann Carnahan, *The Vatican behind the Scenes in the Holy City* (1949)

Vatican Council, 1869–70, the 20th ecumenical COUNCIL of the Roman Catholic Church, convened by PIUS IX, who announced his intention of calling one in 1864 Because of the Italian political situation (the Papal States were the only bar to a united Italy) the advisability of having a council at all was questioned by the Catholic powers, who always opposed strong action on the part of the Church In 1868 it was widely rumored in Europe that the enunciation of papal infallibility as a dogma was the purpose of the council and that it would confirm the papal denunciations of modernistic rationalism and liberalism. As a result there was a widespread attack on the prospective council in non-Catholic circles of France, England, and Germany. The preoccupation of those outside the Church with the council both before and after its convocation had no effect except to anger Catholics, who felt that the council was entirely their concern. Within the Church several prominent persons denounced the enunciation of infallibility as a dogma, and some even objected to the dogma itself Chief of these were DÖLLINGER in Germany, Baron ACTON in England, and MONTALEMBERT in France The council was convened Dec 8, 1869, in St Peter's, and it was attended by some 600 of the higher clergy (patriarchs, archbishops, bishops, abbots, generals of orders, and theologians) from all over the world The Eastern Churches in schism were invited and the Protestants were officially informed Late in 1870 the council was brought to a halt by the entrance of Italian soldiers into Rome, and a month later the pope prorogued the council indefinitely; it has not been reconvened Two constitutions were promulgated by the Vatican Council and confirmed by the pope The first was on the faith, consisting of four chapters holding chiefly that God is personal, that man knows God by reason and revelation, that faith is a supernatural virtue, and that faith and reason are complementary, never contradictory/ The second constitution concerned the papacy, after defining the primacy of jurisdiction it goes on to enounce definitively the dogma of infallibility This, the one official statement of the doctrine, reads in its significant part as follows "the Roman pontiff when he speaks ex cathedra, that is, when he, in the exercise of his office of his supreme apostolic authority, decides that a doctrine concerning faith or morals is to be held by the entire Church, he possesses, in consequence of the divine aid promised him in St Peter, that infallibility which the Divine Savior wished to have His Church furnished for the definition of doctrines concerning faith or morals, and that definitions of the Roman pontiff are of themselves, and not in consequence of the Church's consent, irreformable " Past definitions are, of course, included In the council there was a long dispute over the enunciation, and in the first vote it stood 451 in favor, 88 opposed, and 62 conditionally in favor At the last vote 433 voted in favor of the promulgation, two opposing, 55 abstaining All the fathers of the council accepted the dogma as true After the council a great deal of discussion of infallibility took place among non-Catholics, violent attacks were made on the pope, the Church, and the council Within the Church the papal infallibility had been generally believed for many centuries A few defections from the Church took place—Döllinger, the OLD CATHOLICS in Germany, and a nunber in Switzerland In France a small group headed by Père Hyacinthe (Charles LOYSON) left the Church The political results were numerous Bismarck gave the definition as the reason for the KULTURKAMPF, and Austria used it as an excuse to abrogate the concordat The French government denounced it in a memorandum, which was acceded to by England, Spain, and Portugal The anger of the states reflected the chief political effect of the enunciation of papal infallibility since GALLICANISM and similar claims were now obsolete, governments could no longer use them to interfere in Church affairs See E C Butler, *The Vatican Council* (1930)

Vatican Library, founded in the 15th cent in Rome, in the section now making up Vatican City It is the oldest public library in Europe and one of the chief libraries of the world today It is constituted primarily as a manuscript library, having one of the greatest manuscript collections of the world The first librarian, Platina, made a catalogue of some 2,500 volumes Today there are about 50,000 manuscripts and 400,000 printed books These figures do not include the vast Vatican archives, a separate collection Facilities of the library have been greatly improved in the 20th cent , especially under the eye of Pius XI before and after he became pope Principally with funds supplied by the Carnegie Endowment for International Peace, American librarians did much work in cataloguing and classifying the contents of the library—an accomplishment of supreme importance to scholars

Vatnajökull (vät'nəy-ō'kōōl), large ice field, area 3,300 sq mi , SE Iceland At an elevation of from 4,000 to 6,500 ft , it covers a volcanic mountain watershed and descends in some 40 glaciers, the largest of which, Skeidararjökull and Brúarjökull, cover c 200 sq mi each

Vattel, Emerich de (ĕ'murĬk du vätĕl'), 1714–67, Swiss philosopher and jurist His first name is also written Emmerich or Emmerichs He served (1746–58) as Saxon minister at Bern and later in the cabinet of Augustus III at Dresden He is famous for one book, *Droit des gens, ou, Principes de la loi naturelle appliqués à la conduite et aux affaires des nations et des souverains* (1758, Eng tr , *Law of Nations*, 1760) This book, founded on the writings of Christian von Wolff, sets forth the principle that there is a natural law which is superior to all artificial legislation It was important chiefly because it supplied a justification for liberal revolution It also illustrated the growing attention to international law, which was considered as resting on natural laws

Vattern, Swed. *Vättern* (vĕ'tûrn), lake, area 733 sq. mi., c.80 mi long, S Sweden, draining to the Baltic Sea by the Motala river It is traversed by the Gota Canal On its shores are Huskvarna, JONKOPING, and MOTALA, its largest island is Visingso

Vauban, Sébastien le Prestre, marquis de (sābästyĕ' lŭ prĕ'trŭ märkē' dŭ vōbä'), 1633–1707, French military engineer He was famous for the system of fortifications by which he defended the cities of France, strengthening more than 300 old fortresses and building 33 new ones, and he was especially famous for his treatise on the capture of enemy fortifications called *Mémoire pour servir d'instruction dans la conduit des sièges* Under Vauban the first recognized military engineer corps was organized His plan of attack called for parallel trenches connected by zigzag communication trenches and for underground explosive mines, planted by digging from the innermost trench His methods offered the greatest protection to the attackers, and their known effectiveness often caused early surrender of a fort with great saving of life He also developed a technique for ricochet fire which increased the destructiveness of mortars In 1703 Vauban was made marshal of France and held high place in the favor of Louis XIV Yet the publication of his *Projet de dime royale*, calling for reform of Chamillart's tax policies, estranged him from the king and he soon died in disgrace In honor of his services to France, Napoleon ordered Vauban's heart buried in the Invalides See studies by Daniel Halévy (Eng tr , 1926) and Sir R T. Blomfield (1938)

Vaucluse (vōklüz'), department (1,381 sq mi , pop 249,838), SE France, in Provence It includes the former Comtat VENAISSIN and the principality of ORANGE Avignon is the capital

Vaucluse, officially **Fontaine-de-Vaucluse** (fōtĕn'-dŭ-), village (pop 556), Vaucluse dept , SE France, c 16 mi E of Avignon It was made famous by PETRARCH, who lived here The "fountain" of Vaucluse, celebrated by the poet, is the source of the small Sorgue river, which during the rainy season springs out, fully formed, from a cave

Vaucouleurs (vōkōōlûr'), town (pop 2,452), Meuse dept , NE France, in Lorraine, on the Meuse and SW of Toul Here, in 1428, JOAN OF ARC first related the story of her visions to Robert de Baudricourt, governor of the town, who, finally persuaded, sent her (1429) with an escort to Charles VII at Chinon

Vaud (vō), Ger *Waadt*, canton (1,239 sq mi , pop 343,398), Switzerland, on the French frontier The capital is Lausanne It lies roughly between the Lake of Geneva, the Lake of Neuchâtel, the Jura, and the Bernese Alps Its large fertile central area produces wines and cereals and other crops There are numerous tourist resorts Conquered by the Romans in 58 B C , Vaud passed (6th cent) to the Franks and was (888–1032) under the rule of Transjurane BURGUNDY It subsequently was ruled partly by the prince-bishops of Lausanne, partly by the counts of Savoy, until it was conquered (1536) by Bern and forced to accept the Reformation In 1798, having revolted under the leadership of Frédéric César de LA HARPE against its Bernese rulers, it became the canton of Leman in the Helvetic Republic In 1803 it joined the Swiss Confederation under its present name The inhabitants are French-speaking

vaudeville (vō'dŭvĬl, vōd'vĬl), originally a light song, derived from the drinking and love songs formerly attributed to Olivier BASSELIN and called *Vau*, or *Vaux, de Vire* American vaudeville was a stage entertainment consisting of unrelated short sketches, songs, acrobatic and magic acts, dances, and humorous skits From humble origin in barrooms and "museums," vaudeville came to be the attraction in hundreds of theaters throughout the United States from c 1880 to c 1932 Its greatest center was the Palace Theatre, New York city The stars of American vaudeville included Lillian Russell, Weber and Fields McIntyre and Heath, Eva Tanguay, George M Cohan, Mae West, Elsie Janis, Harry Houdini, Fay Templeton, W C Fields, Will Rogers, Sophie Tucker, the Marx Brothers, Eddie Cantor, and Fred Allen The arrival of moving-picture and radio entertainment brought about vaudeville's decline See Douglas Gilbert, *American Vaudeville* (1940), W M Marston and J H Feller, *F F Proctor* (1943)

Vaudois see WALDENSES

Vaudreuil de Cavagnal, Pierre François de Rigaud, marquis de (pyĕr' frāswä' dŭ rĕgō' märkē dŭ vōdrû'yŭ dŭ kavanyal'), 1698–1765, last French governor of Canada, b Quebec He was the son of Philippe de Rigaud, marquis de Vaudreuil (c 1640–1725), who was governor general of New France for 20 years (1705–25) He entered the army, became governor of Trois Rivières in 1733, and assumed the governorship of Louisiana in 1742 In 1755 he entered upon his duties as governor general of New France Devoted to those who, like himself, were Canadian-born, he was nevertheless too weak or too stupid to check his thieving intendant, François Bigot A vain man and in his own esteem a military expert, Vaudreuil sought to discredit MONTCALM with the home government and to hamper his conduct of military affairs After Vaudreuil's surrender of all Canada to the British

in 1760, he was charged with maladministration, tried in France, and acquitted

Vaugelas, Claude Favre de (klōd' fȧ'vru dŭ vōzhŭlȧ'), 1585–1650, French grammarian He set up, in his *Remarques sur la langue française* (1647), the usage of cultured people as the standard for correct French

Vaughan, Henry (vôn), 1621–95, British poet, b Newton, Brecknockshire, Wales He called himself the Silurist after the ancient inhabitants of the region, the Silures He attended Oxford and studied in London for the law and seems to have served as a soldier in the royalist forces in the Puritan Revolution He later became a physician in his old home His *Poems* (1646) and *Olor Iscanus* (1651, poems and prose translations) are secular works except for the section of the latter called "Pious Thoughts and Ejaculations" Vaughan's fame as one of the metaphysical poets rests, however, on his sacred poems, strongly mystical and showing knowledge of the hermetical philosophy which his twin brother, Thomas, studied extensively The best known of these poems are probably the two which begin, "I saw Eternity the other night" and "They are all gone into the world of light" His sacred poetry is in *Silex Scintillans* (1650, with second part added, 1655) and a few poems in *Thalia Rediviva* (1678) Meanwhile he also translated religious literature in *The Mount of Olives* (1652) and *Flores Solitudinis* (1654) and wrote some prose treatises included in the same books See his works (ed by L C Martin, 1914), Edmund Blunden, *On the Poems of Henry Vaughan* (1927), Elizabeth Holmes, *Henry Vaughan and the Hermetic Philosophy* (1932), biography by F E Hutchinson (1947)

Vaughan, Herbert, 1832–1903, English churchman, cardinal of the Roman Church He was educated abroad and ordained in 1854 He was a favorite of Cardinal MANNING, and joined the Oblate Fathers He was vice president of the seminary at Ware and left there (1861) to go on a trip to the United States to raise money for foreign missions The fruit of his labor is a college for foreign missionaries at Mill Hill near London In 1871 he made a trip to the U S to examine the spiritual state of the Negroes, which always concerned him On his return Vaughan was made bishop of Salford, E Lancashire When Cardinal Manning died, Vaughan was the best-known living English Roman Catholic prelate, and he was made archbishop of Westminster, the Catholic primate of England, in 1893 he was created cardinal He improved the position of Catholic schools in the archdiocese and the seminaries of England, and he cooperated with non-Catholics Cardinal Vaughan was widely loved for his simplicity and charity

Vaughan, Thomas Wayland, 1870–, American oceanographer, b Jonesville, Texas, grad Tulane Univ (B S , 1889), Ph D Harvard, 1903 He was on the staff of the U S Geological Survey (1894–1939) and of the U S National Museum from 1903 and was professor of oceanography and director of the Scripps Institution of Oceanography, Univ of California (1924–36) An authority on marine geology, he wrote many scientific papers and is coauthor of *International Aspects of Oceanography* (1937)

Vaughan, Victor Clarence, 1851–1929, American physician, b Randolph co , Mo , M D Univ of Michigan, 1878 He was associated with the medical faculty at the Univ of Michigan (1875–1921, as dean from 1891) An expert toxicologist and an authority on the control of communicable diseases, he served with Walter Reed in 1898 as one of a commission to study typhoid fever in U S army camps, his report is considered a medical classic See his autobiography (1926)

Vaughan Williams, Ralph, 1872–, English composer, Mus D Trinity College, Cambridge, 1901, studied at the Royal College of Music, London He also studied with Max Bruch (1897–98) and with Ravel (1909), but his style remains individual and thoroughly English He is the outstanding English composer of his time After the First World War he joined the composition faculty of the Royal College of Music, and he conducted (1920–28) the Bach Choir of London It was his acquaintance with English folk music, dating from 1904, which enabled Vaughan Williams to find his personal idiom. His book *National Music* (1934) expresses his belief in musical nationalism with folk song as a point of departure, and his three Norfolk Rhapsodies (1906–7) are the first fruits of this influence Other influences on his style include English music of the Tudor period—evidenced in his *Fantasia for Double Stringed Orchestra on a Theme by Thomas Tallis* (1910) and his Mass in G Minor (1923)—and the lesser influence of plain song His symphonies—*A Sea Symphony* (1910), which employs soloists and a chorus, *A London Symphony* (1914, revised 1920), *A Pastoral Symphony* (1921), and his fourth (1935), fifth (1943), and sixth (1948) symphonies—present a résumé of all the elements of his style Walt Whitman's verses provided the texts of his *Sea Symphony*, *Toward the Unknown Region* (1907, for chorus), and part of the cantata *Dona nobis pacem* (1936) *On Wenlock Edge* (1909) is a setting of poems by Housman, and the texts for *Fits Mystical Songs* (1911) are George Herbert's Of Vaughan Williams's stage works, best known is the ballet *Job* (1930), inspired by Blake's illustrations for the Bible story Others are *The Shepherds of the Delectable Mountains* (1922), based on a scene from Bunyan's *Pilgrim's Progress;* the ballad opera *Hugh the Drover* (London, 1924); *Sir John in Love* (1929), based on Shakspere's *Merry Wives of Windsor;* and *Riders to the Sea* (1937) a setting of Synge's play Other outstanding works are *Flos campi* (1925), *Sancta civitas* (1925), and *Five Tudor Portraits* (1936) See studies by A E. F. Dickinson (1928) and Frank Howes (1937)

Vaughn, village (pop 1,331), central N Mex., ESE of Albuquerque, in a sheep and cattle area, settled 1905, inc 1916

vault, ceiling over a room, formed in any one of a variety of curved surfaces A vault is generally composed of separate units of material, such as bricks, tiles, or blocks of stone, so shaped or cut that when assembled they form a tightly wedged and stable construction whose weight can be concentrated upon the proper supports Vaults are also formed in a homogeneous material, as when built in concrete In modern work, ceilings in the form of masonry vaults are often merely of plaster applied against a curved framework of wood or metal Vaults constructed of numerous blocks of material pressing against one another exert not only the accumulated downward weight of the material and of any superimposed load but also a side thrust or tendency to spread To avoid collapse, adequate resistance against this thrust must thus be concentrated at the haunches or lower portions of the vault The resistance may take the form of thickened walls at the haunches, of buttresses placed at points of concentrated thrust, as in Romanesque and Gothic architecture, or of vaults so placed that their thrusts oppose and counteract This necessity has controlled the evolution of masonry vaulting and its use in buildings In ancient Egypt brick vaulting was used chiefly for drains The Chaldeans and Assyrians used vaults for the same purpose but seem also to have made architectural use of high domes and barrel vaults The Greeks made no use of vaults The vaulting technique of the Etruscans shown in remains of the 4th and 3d cent B C , was absorbed by the Romans, who started in the 1st cent A D the development of a mature vaulting system Casting concrete in one solid mass, the Romans created vaults devoid of external thrust, of perfect rigidity, and requiring no buttresses Thus vaults and domes could be easily erected over vast spaces, producing the impressive and complex thermae, amphitheaters, and basilicas The dome of the Pantheon at Rome (A D c 120), still intact, has the largest diameter of any dome ever built The Roman vaults were the basis on which more complex and varied forms were developed in the Middle Ages The tunnel or barrel vault spans between two walls, like a continuous arch In Roman work it was always semicircular in section The cross or groined vault is formed by an intersection at right angles of two barrel vaults, producing a surface that has arched openings for its four sides, with concentration of load at the four corner points of the square or rectangle In Roman work the diagonal lines of intersection or groins were often built of brick, probably as temporary supports or centering for the concrete masonry The domes of the Romans were built always over circular apartments Byzantine builders of the 6th cent perfected the PENDENTIVE, which made possible the construction of a circular dome over a square room In Romanesque vaulting throughout Europe the semicircular arch was universally employed, and the Roman cross vault was the type used for covering square or rectangular compartments In the Church of Sant' Ambrogio, Milan (11th cent), ribs to strengthen the groins and sides of a cross vault were first employed The system of using ribs to form a complete organic supporting skeleton was developed and became the basic principle of perfected Gothic architecture The use of ribs led to increasing complexity in vault forms, beginning with the 12th cent The pointed arch, which became dominant in medieval architecture from the 13th cent onward, helped to overcome the difficulties of vaulting oblong compartments exclusively with semicircular sections and to bring the various ribs of unequal spans to a crown at the same height Some vaulting compartments or bays were divided by ribs into six segments and were known as SEXPARTITE VAULTS, but the four-part vault generally prevailed In England the multiplication of ribs for structural and decorative purposes culminated in the elaborate FAN VAULT of the Perpendicular style in the 15th cent The architects of the Renaissance abandoned Gothic methods and returned to the basic Roman vault forms, to which new devices were added, including barrel vaults of semielliptical section, domes mounted on drums, and cross vaults with groins of elliptical section Domes were invariably supported on pendentives Vaulting in plaster was used for ornament In early Christian church architecture vault surfaces were adorned with mosaics; the Renaissance introduced coffers, carvings, plaster decorations, and frescoes. In modern times reinforced concrete produces vaults devoid of thrust and of minimum lightness

Vauquelin, Louis Nicolas (lwē' nēkôlȧ' vōkulē'), 1763–1829, French chemist He was assistant (1783–91) to A. F Fourcroy and became inspector of mines and professor at the school of mines, Paris, in 1795 He was professor also at the Collège de France (1801), at the Jardin botanique (1802–9), and at the Paris Faculty of Medicine (from 1809) In 1798 he isolated chromium from Siberian red lead and analyzed beryl, identifying it chemically with the emerald and discovering beryllium oxide in it

Vauvenargues, Luc de Clapiers, marquis de (lük' dŭ klāpyȧ' märkē' dŭ vōvnärg'), 1715–47, French author and soldier. He served at Metz and Prague Badly crippled by wounds, he spent his last years writing *Introduction à la connaissance de l'esprit humain, suivi de réflexions et de maximes* (1746) was the only work to appear during his life, a complete collection of his works was published in 1857 A moralist who believed strongly in the virtues of action and emotion, Vauvenargues was notable for keen observation rather than for originality See his *Reflexions and Maximes* (Eng tr , 1940), for which he is famous See study by May Wallas (1928)

Vaux, Calvert (vôks), 1824–95, American landscape architect, b London He came (1857) to the United States with A J Downing, with whom he was first associated Later he worked with Frederick Law Olmsted and with him developed Central Park in New York, the state reservation at Niagara Falls, N Y , Prospect Park in Brooklyn, N Y , and other parks He made the plans for the Metropolitan Museum and the American Museum of Natural History Vaux was a member of many important commissions. His published work includes *Villas and Cottages a Series of Designs Prepared for Execution in the United States* (1857)

Vaux (vō) **1** Hamlet, Aisne dept , N France, W of Château-Thierry It was the point of the farthest German advance toward Paris during the last German offensive of the First World War, but it was recovered by American forces (June, 1918) **2** Fort, Meuse dept , NE France, NE of Verdun It was hotly contested during the battle for Verdun in 1916 Taken by the Germans in June, it was retaken by the French in November

Vauxhall (vôks'hôl', vôk'sôl'), district of Lambeth metropolitan borough, London, England, taking its name from the former Vauxhall Gardens Under the earlier name New Spring Gardens, the pleasure resort was first mentioned by Evelyn and Pepys in the 1660s It was popular, and for most of its career fashionable, until its dissolution in 1859 In the 17th and 18th cent the usual approach to the gardens was by the Thames See J G Southworth, *Vauxhall Gardens* (1941)

Vavilov, Nikolai Ivanovich (nyĭkulī' ēvä'nuvĭch vŭvē'luf), 1887–, Russian botanist He is reported to have died in a Soviet concentration camp c 1943 He served as professor at the Leningrad Agricultural Institute and as director of the All-Union Institute of Plant Industry In 1918 he discovered a variety of wheat in Transcaucasia which grows at an altitude of nearly 3,000 ft and is resistant to rust and mildew By genetic study of wheat variations he attempted to trace strains to the locale of original cultivation, seeking to discover where the practice of agriculture first developed In 1936 he reported that his studies indicated Ethiopia and Afghanistan as birthplaces of agriculture and civilization He opposed Trofim Lysenko's theory of heredity His *Immunity of Plants to Infectious Diseases* (1918) includes a summary in English

Vavilov, Sergei Ivanovich (sĭrgā' ēvä'nuvĭch), 1891–, Russian physicist In 1932 he became director of the P N Lebedev Physical Institute, which he organized around the laboratory of the Soviet Academy of Sciences In 1945 he became president of the academy He is known for his work in radiation, luminescence, the creation of cold light through the conversion of ultraviolet rays, and optics

Vaxjo, Swed *Växjö* (vĕk'shû"), city (pop 17,953), co seat of Kronoberg co , S Sweden It is a Lutheran episcopal see Vaxjo is situated on a small lake of the same name The city was an ancient pagan center, and according to tradition its cathedral was founded (11th cent) by an English missionary Several cloisters were established near by Vaxjo contains the Smaland Museum. There is a watch industry

Vazov, Ivan (ĭvän' vä'zŏf), 1850–1921, Bulgarian poet, novelist, and playwright, the first professional man of letters in Bulgaria His work was inspired by love of country and indignation at the sufferings of his countrymen *Under Our Heaven* (1900), *Songs of Macedonia* (1914), and *It Will Not Perish* (1920) contain some of his best poetry. His novel *Under the Yoke* (1893, Eng tr. by Edmund Gosse, 1893) is internationally famous. *Vagabonds* (1894) is his best-known play Among his other works are the novels *New Country* (1894) and *The*

Empress of Kazalar (1902) and the plays *Borislav* (1909) and *Ivaylo* (1911).

veal, flesh of a calf from six weeks to three months old weighing usually less than 300 lb The meat is pale in color, the fat is at first tinged with red, and then turns to white To be wholesome it requires thorough cooking. It contains gelatine in large proportion and is therefore excellent for making soup stock "Bob veal" is from calves less than a month old and is unfit for food Veal is sold almost entirely as fresh meat The main cuts are the leg, loin, ribs (or rack), shoulder, and breast The brains, liver, kidneys, sweetbreads, and tongue are considered delicacies

Veblen, Oswald (vĕ'blun), 1880–, American mathematician, b Decorah, Iowa, grad State Univ of Iowa (B A , 1898) and Harvard (B A , 1900), Ph D Univ of Chicago, 1903, nephew of Thorstein Veblen He taught (1905–32) at Princeton Univ and from 1932 was on the faculty of the Institute for Advanced Study His works include *Introduction to Infinitesimal Analysis* (with N J Lennes, 1907), *Invariants of Quadratic Differential Forms* (1927), and *Foundations of Differential Geometry* (with J H C Whitehead, 1932)

Veblen, Thorstein (thôr'stĭn vĕ'blun), 1857–1929, American economist and social scientist, born on a Wisconsin farm Of Norwegian parentage, he spent his first 17 years in Norwegian farm communities He studied at Carleton College, Johns Hopkins, Yale (where he received a Ph D in 1884), and Cornell and taught at Chicago, Stanford, and Missouri universities and at the New School for Social Research, New York city Detached from the dominant American society by his cultural background, Veblen was able to dissect social and economic institutions and to analyze their psychological bases, thus laying the foundations for the school of institutional economics This he did in a dry, involved, satiric style, creating famous phrases such as "conspicuous waste " In his criticism of the price system, his analysis of the business cycle, and his interpretation of the role of technical men in modern society, there are implications for social engineering Veblen did not achieve popular acclaim in his time, but has since exerted an increasingly pervasive and profound influence His works include *The Theory of the Leisure Class* (1899), *The Theory of Business Enterprise* (1904), *The Engineers and the Price System* (1921), and *Absentee Ownership and Business Enterprise in Recent Times* (1923) He also translated *The Laxdœla Saga* (1925) from the Icelandic *Essays in Our Changing Order* was published in 1934 Anthologies of his writings have been edited with introductions by Wesley Clair Mitchell (1936) and Max Lerner (1948) See biography by Joseph Dorfman (1934, rev ed , 1946), study by R V Teggert (1932), J S Gambs, *Beyond Supply and Demand* (1946)

Vecellio see TITIAN

Veda (vā'du, vē'du) [Vedic word designating sacred lore, cognate with Eng *wit*, from a base "know"], oldest scriptures of HINDUISM, written in Vedic, the parent language of Sanskrit The Veda consists of four *Samhita* [collections] The *Rig- Veda* [*rig*=laudatory stanza], which is the oldest, contains more than 1,000 hymns in praise of different gods They were written by a priestly class to accompany the soma-juice oblation and the sacrifice of melted butter The *Sama- Veda* [*saman*=chant] consists of stanzas taken from the *Rig- Veda* and arranged solely with reference to their place in the soma sacrifices, they were meant to be sung to certain fixed melodies The *Yajur- Veda* [*yajus*=sacrificial prayer] has some stanzas from the *Rig- Veda*, in addition to original prose formulas Here too the arrangement is after the order of the sacrifice All three Vedas were recognized as canonical and named *Trayi Vidya* [the threefold knowledge] The *Atharva- Veda* [*atharvan*=holy charms], written at a much later period, was included in the canon only after a long struggle In form it is similar to the *Rig- Veda*, but it is a book of spells and incantations teaching sorcery both to appease and curse the demon world The *Atharva- Veda* contained the religion of the poor, while the *Trayi Vidya* was the scripture of the wealthier class The immediate inspiration of the Vedas may have been the Aryan invasion (c 1500 B C) of India from the northwest. The Aryan invaders settled in the Punjab They had a practical and utilitarian religion, and their literature contains few references to an afterworld They believed that the real personality of a dead person was imperishable, later they held that the soul of a good person went to heaven and reveled with Yama, the king of the dead, in a glorified life of material joys. In the *Atharva- Veda*, however, there is a place of future punishments The universe in the *Rig- Veda* was divided into heaven, air, and earth, with the gods, beneficent personifications of natural phenomena, more or less corresponding to these divisions However, since the outlines and manifestations of these natural phenomena were vague, the distinctions between the gods were hazy also. In the earlier hymns, the gods were created by an act of natural generation, but in the later ones there are already tendencies toward pantheism, and the gods are conceived as evolving out of some primal eternal material The concept of "heaven" as a divine father, Dyaus, dates to a prehistoric period, Dyaus is usually coupled with Prithvi [earth] INDRA, the warlike thunder god, is the favorite and most important deity of the Vedas. Also of prime importance is Varuna, god of the heavens, he is the upholder of *rita*, the all-powerful physical and moral order of the universe The cult of veneration of fire assumed an ever-increasing importance in Indian worship, its god was Agni The god Soma was also important, he was the deity of the plant out of which the intoxicating beverage used in sacrifices was distilled It was held that the gods acquired immortality by drinking soma juice While the *Yajur- Veda* was being written, the priesthood became hereditary, this helped to solidify the CASTE system and began a new epoch of religious and social life In this transition period, Brahma, which in the *Rig- Veda* meant "devotion," now came to signify "essence of prayer and holiness " The sacrifice now became all-powerful In the *Rig- Veda* it was thought that the valor of the gods was induced by the sacrifice, but now the priests held that the sacrifice controlled the gods and nature, the ritual then became a mystery to all who were not priests Translations of the Vedas are included in the series *Sacred Books of the East*, edited by Max Müller See SANSKRIT LITERATURE and VEDANTA See A A Macdonnell, *A History of Sanskrit Literature* (1900), Maurice Bloomfield, *The Religion of the Veda* (1908), Moriz Winternitz, *History of Indian Literature* (1927–33)

Vedanta (vĭdän'tu, vādän'tu) [Sanskrit,=after the Veda] The term has three applications It designates certain of the *Upanishads*, a group of poetic dialogues on metaphysics written after the Vedas and in part commenting on them Vedanta is also the name of a group of related philosophic systems which deal with the nature of ultimate reality, the knowledge of which it is an aim of the *Upanishads* to impart Lastly, it is the name of one of those systems The *Upanishads* are interpreted according to six systems (six insights, darshanas) which form a series of increasingly profound analyses of the one ultimate reality Each system depends to some degree upon its more superficial antecedent system The systems posit a universal moral order (dharma), which accounts for the eternal cycles of growth and destruction in nature and the regeneration of the human soul They consider the purpose of philosophy to be the extinction of suffering, which is caused by ignorance (avidya) As faith in salvation is not sufficient and no one can know reality by direct experience, a method is necessary to overcome ignorance, this method is YOGA There are three stages to ultimate knowledge faith, whereby one accepts the laws of nature, understanding, which is a rational and logical conviction of these laws, but not amounting to certainty, and realization, when the believer becomes one with ultimate reality The six systems fall into three divisions corresponding to these stages In the division of faith are Nyaya, founded by Gautama (c 550 B C), a system of logic and a methodology of science showing how phenomena come into existence, and Vaisesika, founded by Kanada (3d cent B C), which classifies the world into nine realities and shows how combinations bring all things into being The second division (understanding) includes Samkhya, founded by Kapila (6th cent B C), an account of cosmic evolution according to logical principles It finds in the universe 25 categories produced from two ultimate realities, spirit and a preexisting static matter The other system of the second division, yoga, is the practical application of Samkhya Vedanta and Mimamsa comprise the third division (realization) Mimamsa, founded by Jaimini (fl after 600 and before 200 B C), treats of the correct interpretation of Vedic ritual and texts Vedanta, the best known and most profound of the six systems, was founded by Badarayana (fl between 500 B C and A D 200), his book, the *Vedantasutra*, contains a pantheistic doctrine on the nature of the ultimate principle, Brahma (the all-one) Brahma, if known to man intellectually through the medium of sensation, presents mere illusion (Maya) Only by direct intuition can Brahma be truly known and doubt be dispelled To such direct intuition the name Vedanta is applied Varying interpretations of the *Vedantasutra* gave rise to three schools The school of Sankara (fl c 800) took greatest hold on educated Hindus He believed that the world shows some design and that there must, therefore, be an intelligent agent (he calls it Brahma), which creates, maintains, and destroys all things Brahma has a transcendental and an immanent aspect, and each aspect has two conditions In the transcendental aspect there are the passive condition (*asat*), when all forms become submerged in the One and Pralaya (universal dissolution) results, and the active condition of being (*sat*), which operates as a support of all existence. The immanent aspect has a condition which is without quality, existing as pure spirit (Atman) and also a condition with qualities existing as pure matter (Maya or prakriti). Brahma, although it assumes an infinite variety of forms, remains always pure and essentially the same Atman, itself unchanging, brings about alteration in all things, while Maya (or prakriti) makes these things seem reality To know reality man must look into the depths of his inner self and attain knowledge, which brings with it the understanding that the soul is Brahma, thence follows emancipation from all earthly existence, including one's own To reconcile this impersonal doctrine with the *Upanishads*, which are theistic in places, Sankara developed two systems—the higher or esoteric knowledge, which presented Brahma as being without any qualities, and the lower or exoteric knowledge, which presented Brahma as a personal God and gave a theistic explanation of the universe for those whose ignorance keeps them from absolute truth, the exoteric system is based on faith rather than on realization Deliverance is attainable only by those who know the unconditioned Brahma Besides the monistic interpretation of Sankara, there is the system of Ramanuja (11th cent A D), more qualified in its monism and more theistic in tone He believed that there is but one reality, spiritual in nature, which manifests itself in the world as a duality Ramanuja held that souls are also real and exist after death Unlike Sankara, who was intellectual in his approach, Ramanuja believed that salvation was achieved through devotion There is also a third school which was founded by Madva (13th cent A D) He believed that the ultimate was dual in nature and that the soul has a completely separate existence See Max Müller, *Vedanta Philosophy* (1894) and *Six Systems of Indian Philosophy* (1899), Paul Deussen, *Philosophy of the Upanishads* (1905), Mysore Hiriyanna, *Outlines of Indian Philosophy* (1932), Christopher Isherwood, ed , *Vedanta for the Western World* (1945), Theos Bernard, *Hindu Philosophy* (1947)

Vedder, Elihu (ĕ'lĭhū), 1836–1923, American painter, illustrator, and author, b New York city, studied in Paris From 1867 he made his permanent residence in Rome Among his works are *Cumean Sibyl* and *The Lair of the Sea-Serpent* (Mus of Fine Arts, Boston), *The African Sentinel* and *The Pleiades* (Metropolitan Mus), and *The Keeper of the Threshold* (Carnegie Inst , Pittsburgh) His illustrations for Fitzgerald's translation of *The Rubaiyat* are noted His symbolic and decorative murals include five lunettes representing good and bad government, in the Library of Congress, and a panel at Bowdoin College He wrote *Digressions of V* (1910), *Miscellaneous Moods in Verse* (1914), and *Doubt and Other Things* (1923) He became a member of the National Academy of Design in 1865

Veedersburg, town (pop 1,781), W Ind , near the Wabash W of Crawfordsville Bricks are made

Veen, Maarten van see HEEMSKERCK, MAARTEN VAN

veery or **Wilson's thrush**, American THRUSH of rather dense woodlands It is reddish brown above with faintly spotted buff and white under parts Its delicate song, heard at its best in early morning and before dusk, is a series of rolling notes, descending in spiral fashion and gradually diminishing in volume

Vega, Garcilaso de la see GARCILASO DE LA VEGA

Vega Carpio, Lope de see LOPE DE VEGA CARPIO

vegetable, popular name for many food plants, most of them annuals, and for their edible parts There is no clear distinction between the vegetables and the fruits Most of our common vegetables were brought into cultivation in the Eastern Hemisphere, the Indians of the New World developed cultivation of the potato, tomato, and corn and some varieties of squashes and peppers Most vegetables consist largely of water, plus starches, sugars, proteins, and the mineral salts which are one of their chief contributions to the diet Dried legumes contain a large proportion of proteins and can be used to some extent as meat substitutes Many vegetables, especially those with green and yellow coloring, are valuable sources of vitamins In the United States the demand for fresh vegetables at all seasons has been met by improved methods of handling and shipment and the development of large commercial truck farms and market gardens, especially in California, Florida, and Texas Even vaster acreages supply vegetables for canning and quick freezing Practically all vegetables are easily grown in home gardens

vegetable ivory see TAGUA

vegetable marrow, fruit of a plant that is the same species as the PUMPKIN It is usually long and slender in shape, with a light yellow or green skin or, in the Italian variety, with a dark green skin and orange flesh The latter, which grows to a length of 20 in , is usually eaten in Italy while very small and tender Vegetable marrows are grown more in Europe than in America

vegetarianism, theory or practice which aims to make vegetable foods the sole or principal articles of human diet, to the exclusion of flesh, fowl, and generally fish The basis of the practice may be religious, humanitarian, or hygienic, and its followers differ as to strictness of observance Some groups abstain from all animal foods, even milk,

eggs, and butter, some from all flesh foods; some allow the use of netted fish Certain Hindu sects are vegetarian, as are Seventh-Day Adventists As a general movement vegetarianism arose about the middle of the 19th cent , it made considerable progress in Great Britain and in the United States. Propaganda was spread by means of societies, books, periodicals, and lectures

Vegetius (Flavius Vegetius Renatus) (vĭjē'shŭs), fl 385, Roman writer He is the author of *Epitoma rei militaris* [a summary of military matters], which is an important source of information about the Roman military system

Veglia, Yugoslavia see KRK

Vegreville (vĕ'grĭvĭl), town (pop 1,563), E Alta., on the Vermilion river and E of Edmonton It is a distributing center for a grain, dairy, and stock ranch area

Vehmgericht (fām'gurĭkht), **Vehme** (fā'mu), or **vehmic court** (fā'mĭk) In medieval Germany after the breakdown of the Carolingian empire, incessant feudal warfare and the inability of the emperor to construct a really efficient system of control in the Holy Roman Empire fostered disorder and brought about the activities of the "robber barons" and innumerable brigands To meet the appalling lawlessness, which increased with the centuries, there appeared in Westphalia about the end of the 12th cent a sort of illegal but efficient criminal tribunal These tribunals, the Vehmgerichte, increased in number and were an important element in criminal law in Germany in the later Middle Ages They did not become powerful anywhere except in Westphalia, where they reached their height in the 15th cent The vehmic courts represented a familiar device, which is employed usually when central organization of legal enforcement has broken down or is too weak to enforce justice other instances are the HERMANDAD in Spain and Mexico, the vigilantes in early California, and the Ku Klux Klan of the Reconstruction in the South The Vehmgerichte were operated by "holy bands" of men sworn to the utmost secrecy, and much of the work of the tribunals was secret They achieved much of their salutary effect by a sort of terrorism As is usual with such illegal forms of rough justice, the Vehmgerichte were open to abuse, and eventually they sought to take over more and more of the functions of government The emperor began to find them a menace rather than an aid, and as the power of the petty princes consolidated, there was a general move against the secret Vehmgerichte, which largely disappeared in the 16th cent Their secret proceedings, solemn oaths, and awe-inspiring methods made them fit material for romantic historical novels Perhaps the best-known use of them in English fiction is in Sir Walter Scott's *Anne of Geierstein*. The name is also spelled Fehmgericht or Femgericht The members of the court were known as the "free judges "

Veii (vē'ī), ancient city of Etruria, 11 mi NW of Rome, Italy One of the most powerful member cities of the Etruscan League, it was constantly at war with Rome It fell (c 396 B C) to the Roman army under Camillus after a 10-year siege The city was an important center of ETRUSCAN CIVILIZATION and was especially noted for its statuary Near the modern Isola Farnese there are ruins of the ancient city and tombs, which have yielded Etruscan antiquities

veil, a feature of female costume from antiquity, especially in the East It was worn by women of rank in early Greece and was a favorite headdress among Roman matrons Among Moslems the veil has been used by women of all classes and varies in size and material from thin face coverings of gauze and muslin to large shawllike wrappings of gauze, white cotton, black silk, or richly ornamented stuffs In Europe the veil was first worn in Gallo-Roman times and was used throughout the Middle Ages, usually as a part of an elaborate ornamental headdress In the 10th cent it covered the neck and shoulders; in the 12th and 13th it was often worn with a gold harnet and wimple, in the 14th fine gauze or gold tissue was draped from the pout of a high sugarloaf cap The materials used were often rare and costly, such as Persian gauzes and gold-embroidered India muslins Poorer women wore protective wraps of coarse, dark stuff A North African people, the Tuareg, veils its men, but not its women The veil has always had symbolic meaning Homer spoke of it as the radiant white emblem of modesty Mystery and consecration are signified by the religious veil, as worn by the vestal virgins and various modern orders The wedding veil has acquired something of the same association, although it was probably worn originally to protect the bride from evil spirits Until the Renaissance, European brides wore red veils, and those worn in Bukhara are still of rose color The discarding of the veil in the East today is significant of a changed attitude toward woman. The veil survives in the Spanish mantilla, the Mexican *rebozo*, and the Mohammedan yashmak and in Western wedding and religious garb See K. M. Lester and B V Oerke, *Illustrated History of . . . Accessories of Dress* (1940)

vein, blood vessel which conveys blood from the tissues to the heart. Veins carry deoxygenated blood except for the pulmonary vein, in which the blood is oxygenated Compared with an ARTERY, the wall of a vein is thinner and less muscular, collapsing when empty. With some exceptions, e g , the deep veins of the face, veins contain valves which prevent the backward flow of blood as it moves toward the heart. Veins are subject to dilatation (as in a VARICOSE VEIN), rupture, or blocking by blood clots (see THROMBOSIS).

vein, in mining see ORE

Veit, Philipp (fīt'lĭp fĭt'), 1793–1877, German historical painter, grandson of Moses Mendelssohn and stepson of Friedrich von Schlegel In Rome he joined the Nazarenes and was one of the most interesting members of the group With them he assisted in the fresco decorations of the Casa Bartholdy and Villa Massimi From 1830 to 1843 he was director of the Städel Institute, Frankfurt-am-Main, for which he painted *Introduction of Christianity into Germany* The last part of his life was spent in Mainz, where he designed the decorations for the cathedral

Vejle (vī'lŭ), city (pop 27,107), E Jutland, Denmark, on the Vejle Fjord, an inlet of the Baltic Sea It has a good harbor and is a commercial and industrial center, producing hardware, machinery, textiles, and processed foods The Church of St Nicholas dates from the 13th cent

Vela, Blasco Núñez. see NUÑEZ VELA, BLASCO

Vela, Vincenzo (vēnchān'tsō vā'lä), 1822–91, Italian sculptor His many works include public monuments, portrait statues, and ideal figures Among his works are *Spartacus* and *Dying Napoleon* The latter is at Versailles, with a replica in the Corcoran Gallery

Velasco, José María (hōsā' märē'ä välä'skō), 1840–1912, Mexican landscape painter, teacher of Diego Rivera. Descended from a family of shawl weavers and a gifted craftsman, he entered (1858) the art academy of San Carlos His early work is reminiscent of Corot Feeling a need for scientific knowledge in order to be able to depict most expressively the natural beauty of the Valley of Mexico, he studied anatomy, botany, geology, and other sciences He became extremely fluent in oil technique and developed an immense variety of shades of coloring Whenever his paintings included plants and flowers he depicted them with minute attention to botanical detail, as in his painting *The Bridge of Mallac* (1881), his paintings of rocks manage to convey the effects of time and weather His deviation from academic standards caused his removal (1907) from the professorship at the Mexican National Academy which he had held since 1868 His paintings were also rejected, but when he took them to the Paris exposition (1889), they took first place Altogether he painted more than 400 oils and worked also in pencil and water color Almost forgotten after his death, he commanded new praise at a large retrospective exhibition (1942) in Mexico city

Velasco, Luis de (lwĕs' dā välä'skō), d 1564, Spanish administrator, second viceroy of New Spain (1550–64), successor to Antonio de MENDOZA His rule was remarkably energetic, humanitarian, and free of corruption He did much to improve the condition of the Indians and thus aroused the opposition of many of the powerful Spaniards in Mexico In 1553 the Univ of Mexico was founded Exploring expeditions were sent out—Francisco de IBARRA conquered Nueva Vizcaya, and LÓPEZ DE LEGASPI conquered the Philippines Velasco was beloved by the people of MEXICO, especially the Indians His son, **Luis de Velasco,** 1534–1617, was viceroy of New Spain (1590–95, 1607–11) and of Peru (1595–1604) In Mexico he helped to quell the rather obscure conspiracy in which Martín Cortés, the son of the conqueror, was involved Appointed viceroy after distinguished service in Spain, Velasco continued the work of his father in aiding the Indians, encouraged weaving and other industries, beautified Mexico city, strengthened fortifications at Veracruz, and extended the conquest to the north, pacifying the Indians In Peru he also worked to improve conditions among the Indians, particularly in the mines, tried to ward off buccaneer attacks, encouraged education, and reformed postal service Velasco returned to Mexico but was not allowed to continue long in private life Viceroy of Mexico a second time, he began the drainage of lakes about Mexico city, put down a Negro revolt near Orizaba, and sent out Sebastián VIZCAÍNO on explorations (1611) One of the finest Spanish colonial administrators, Velasco was later president of the Council of the Indies. He was rewarded with the title of marqués de Salinas

Velasco (vulä'skō), unincorporated town (1947 estimated pop 5,200), S Texas, at the mouth of the Brazos opposite FREEPORT Settled early in the 1820s, it was the scene of a battle (1832) in which Texans defeated a Mexican garrison and of the signing (1836) of the treaty that ended the Texas Revolution Once a plantation center, it decayed for decades before it was revived by the Freeport boom

Velay (vulā'), region, E central France, in the Massif Central, between Auvergne and the Cévennes Mts , occupying part of Haute-Loire dept. It consists mostly of arid high plateaus which are partly of volcanic origin. In the center is Le PUY, the chief city, surrounded by a fertile basin. The medieval county of Velay was under the suzerainty, in turn, of the counts of Toulouse and of the English rulers of Aquitaine; after its reconquest by France in the Hundred Years War it was incorporated into Languedoc prov

Velázquez, Diego de (vulä'skwĭz, Span. dēä'gō dā välāth'käth), c 1460–1524?, Spanish conquistador, first governor of Cuba, b Cuéllar, Spain. He sailed with Christopher Columbus on his second voyage (1493) to Hispaniola and in 1511 commanded an expedition sent by Diego Columbus to conquer Cuba. Landing at BARACOA, where he established the seat of government, by 1514 he had completed occupation of the island with the aid of his friend and chief lieutenant, Pánfilo de NARVÁEZ. Velázquez continued the colonization of Cuba and founded many of the principal towns Before he sailed for Cuba, there had been ill feeling between him and Diego Columbus, soon after conquering Cuba, Velázquez established himself as governor of the island and declared himself independent of the other's authority He was connected with the expedition of Fernández de Córdoba to Yucatan (1517) and in 1518 sent out an expedition under Juan de Grijalva, who explored the Mexican coast Late in 1518 the Spanish king made Velázquez *adelantado* of Cuba and any territories which might be discovered under his orders Hernán Cortés was placed in command of a third expedition which sailed in 1519 for the conquest of Mexico Distrusting Cortés, Velázquez in 1520 sent Pánfilo de Narváez to compel his return to Cuba, but Narváez was defeated and the remainder of his forces joined Cortés In 1521 Velázquez was replaced as governor of Cuba, but in 1523 was restored to his post

Velázquez, Diego Rodríguez de Silva y (rōdhrē'gāth dā sēl'vä ē), 1599–1660, most celebrated painter of the Spanish school, b Seville He was the son of Rodrigues de Silva, a Sevillian lawyer of Portuguese descent, and according to Spanish custom added his mother's name, Velázquez At 13 he was apprenticed to Francisco de Herrera, the elder, whom he soon left for the studio of Pacheco, where he remained five years Here he came into contact with the most intellectual society of Seville and with the work of the Spanish naturalist painters His earliest paintings, such as *Christ and the Pilgrims of Emmaus* (Metropolitan Mus), already show great vigor and a strong naturalistic tendency In 1618 Velázquez married Pacheco's daughter Juana, by whom he had two daughters In 1622 he removed to Madrid There, under the protection of the condé de Olivares, he was introduced to the court and painted an equestrian portrait of Philip IV (destroyed) which won him immediate recognition In 1624 he was made court painter and given a studio in the royal palace. From this period dates the friendship of the painter and the king During his first years at court Velázquez painted the portrait of Olivares (Hispanic Society, New York) and two full-length portraits of Philip IV and Don Carlos, a bust portrait of the former, and the celebrated *Borrachos* [the topers] (all Prado) In 1629, shortly after a visit by Rubens to the Spanish court, Velázquez made his first visit to Italy, returning in 1631 During his stay he copied some works of Tintoretto and painted two large figure compositions, *The Forge of Vulcan* (Prado) and *Joseph's Coat* (Escorial), and two exquisite little landscapes of the Villa Medici gardens (Prado) To his second period (1631–49) belong the great equestrian portraits of Olivares and the king, *Christ on the Cross*, and the magnificent *Surrender of Breda* (all Prado) and the three-quarter-length portrait of Philip IV (Frick Coll , New York) In 1649 Velázquez paid a second visit to Italy to buy statues and paintings for the king and returned two years later, having enriched the Spanish royal collection by many masterpieces of Titian, Tintoretto, and Veronese. In Rome he painted the superb portrait of Pope Innocent X (Doria Palace), with which begins his third and greatest period To the last 10 years (1650–60) belong the series of dwarfs and buffoons of the court, the *Aesop*, the *Menippus*, the *Coronation of the Virgin*, *St Anthony the Abbot and St Paul the Hermit*, the famous full-length portraits of Mariana of Austria, Philip's second wife, and the Infanta Margarita, the *Spinners*, and the *Maids of Honor* (all Prado) Also of this period are the head of the Infanta (Louvre) and the portrait of Philip IV as an old man and *Venus with a Mirror* (both. National Gall , London) Throughout his career Velázquez enjoyed the close friendship of the king, although his position at court was hardly more than that of a servant and sometimes seriously interfered with his freedom to paint. He died shortly after organizing the marriage ceremonies of Marie Thérèse of Austria to Louis XIV His development as an artist was uncommonly steady He early acquired the naturalistic approach ("truth not painting," was said to be his motto) and slowly evolved from it an extraordinarily subtle and intellectual art based on exquisite color values, of which he remains the unrivaled master. His cool

palette and consummate use of gray in conjunction with brilliant color sometimes recall El Greco, whose work he knew and admired In spirit, however, his art is far removed from that of El Greco in its dispassionate and almost impersonal aloofness and serene objectivity. Velásques had many followers. **His son-in-law** Mazo imitated his portrait style so successfully that many minor works formerly attributed to Velásques are now thought to be his. Murillo learned much from Velásques. But in his great works Velásques has never been successfully imitated. His mature works are very few—some say not over 100. He was obliged to produce replicas of many of his court portraits Some of these are the work of Mazo and all are naturally inferior to the originals Velásquez can only be fully appreciated in Madrid, although more or less authentic examples of his work are to be seen in many galleries in Europe and America See studies by Carl Justi (Eng tr, 1889), R A M Stevenson (1895), Aureliano de Beruete y Moret (Eng tr, 1906), and A S Riggs (1947)

veld or **veldt** (both vĕlt) [Dutch, =field], term applied to the grassy undulating plateaus of the Union of South Africa and of Southern Rhodesia The veld comprises territory of varying elevation—the high veld (4,000–6,000 ft), the middle veld (2,000–4,000 ft), and the low veld (500–2,000 ft) The veld is principally suited to grazing

Velva, city (pop 1,017), N central N Dak, SE of Minot, in a farm area, laid out 1891, inc 1905

velvet, fabric having a soft, thick, short pile, usually of silk and a plain twill or satin-weave ground The pile surface is formed by introducing an extra set of warp threads which are looped over wires as in Wilton carpet, the rods being withdrawn after the weft thread is placed, leaving a row of loops or tufts across the breadth The loops may remain uncut, forming terry velvet, or be cut, automatically, in machine weaving or by a special tool in hand looming It may be woven double, face to face, then cut apart. Velvet is supposedly one of the silk weaves developed on the ancient shuttle looms of China The most beautiful weaves, such as brocades, are still done successfully only by hand India has used velvet, often richly embroidered, from remote times for the furniture and trappings of royalty Many fine velvets were made in Turkey, and Persia was famous for its beautiful designs and color Magnificent velvets began to be used in Europe in 12th- or 13th-century religious and court ceremonials Lucca and Genoa apparently were the first cities to make fine velvets and excelled through the 16th and 17th cent Genoese velvet was notable for designs formed by contrasts of cut and uncut pile. Venetian and Florentine fabrics were sumptuous brocades, floral designs on contrasting grounds or on cloth of gold Utrecht made a rich, heavy velvet used for wall and furniture coverings Modern velvets are of many types and grades Lyons velvet has a stiff ground and erect pile Transparent velvet has a sheer foundation Panne velvet is a long-napped weave, pressed.

velvetweed, velvetleaf, or **Indian mallow,** tall annual ABUTILON with heart-shaped velvety leaves and yellow flowers It is native to Asia, where it has been cultivated as "Chinese jute" for its fiber Introduced into the United States as an ornamental plant, it has escaped and become a weed, particularly persistent because the seeds remain viable for many years The plant should be cut and burned before the seeds ripen

Ven, formerly **Hven** (both vän), island, area c 20 acres, S Sweden, between Landskrona (Sweden) and Helsingor, Denmark Tycho Brahe built his castle, Uranienborg, and an observatory, Stjarneborg [star castle], on Ven c 1580, ruins still exist

Venaissin (vənĕsĕ') or **Comtat Venaissin** (kōtä'), former papal possession (1274–1791) in Provence, SE France, consisting of the territory around AVIGNON Annexed to France after a plebiscite, it was incorporated into Vaucluse dept Carpentras was the capital

Venantius Fortunatus see FORTUNATUS (d c 600)

Vendée (vädā'), department (2,709 sq mi, pop 393,787), W France, on the Atlantic coast, in POITOU It is named for a small river La Roche-sur-Yon (the capital) and Les Sables-d'Olonne are the chief towns The department gave its name to the counterrevolutionary insurrection of 1793–95, which began here The movement was popular in origin The peasants of the Vendée, who had lived on good terms with the local nobility, began to oppose the French Revolution with violence when it turned against the Roman Catholic Church Peasants and nobles united under such leaders as CATHELINEAU and CHARETTE DE LA CONTRIE, raised an army whose strength at one time exceeded 50,000, and cleared the region of revolutionist authorities They occupied Saumur and resolved to spread the revolt through Brittany, Maine, and Normandy, where the CHOUANS were already harassing the government troops, and then to march on Paris However, the important city of Nantes held out against them, and Cathelineau was killed, LA ROCHEJAQUELEIN now assumed leadership Animated by the heroism of their faith, the Vendeans marched north as far as Granville, but lack of discipline forced their return south late in 1793 Overtaken at Le Mans and at Savenay by the republican army, they were utterly cut to pieces, and terrible reprisals were meted out (see NOYADES) The overthrow of Robespierre led to the peace of La Jaunaie (Feb 15, 1795), by which the government granted an amnesty and freedom of worship to the Vendeans Yet royalist intrigues of the émigrés, backed by Great Britain, drew the Vendée into renewed conflict General Hoche, now in command of the government forces in the west, routed an émigré landing party at Quiberon in Brittany, the count of Artois (later Charles X), who had landed on the isle of Yeu off the Vendée, took fright and abandoned Charette and Stofflet, now the leaders of the Vendeans, to capture and execution Hoche's moderation helped to pacify the ravaged region in 1796

Vendémiaire (vädāmyĕr'), first month of the FRENCH REVOLUTIONARY CALENDAR The 13 **Vendémiaire** of the Year IV (Oct 5, 1795) is remembered as the day when Napoleon Bonaparte, until then an obscure general, gained fame by putting down a serious insurrection The Parisian electorate had revolted against certain decrees designed to perpetuate the power of the leaders of the Convention in the Directory, which was about to be established Napoleon, with the blessings of BARRAS, crushed the rebels by using artillery—a method which he later described as 'a whiff of grapeshot"

vendetta (vĕndĕ'tə) [Ital, =vengeance], obligation of members of a kinship group to avenge a wrong done to a relative The vendetta is found in the folkways of many peoples It normally reflects a state of society where the family is the only social unit with authority and where there is no state to compel order After a society attains such cohesion that it can no longer tolerate private vengeance, COMPOSITION for offenses may be compelled In time the state itself punishes antisocial acts, and a system of CRIMINAL LAW may be said to come into being The obligation to carry on the vendetta may rest primarily on the man next of kin to the wronged person, as in Shakspere's *Hamlet* Among some peoples, vengeance may be taken on any member of the group of the man who has done the wrong Vendettas in some circumstances may almost amount to full-scale wars between family groups The most striking form of the vendetta is the blood feud, or the right to take a life for a life While the vendetta is unlawful in all parts of the civilized world, it nevertheless persists in areas which are remote or without modern police protection. Until recently blood feuds were common in Corsica, in parts of Italy, and in some mountainous areas of the SE United States.

vending machine, coin-operated, automatic device for selling merchandise or service Its active history goes back to c 1888, when penny gum machines became popular. A variety of small, imperishable, and inexpensive goods such as cigarettes, candy, gum, combs, tickets, bottled drinks, and stamps are sold by machines, perishable food is sold in automats, and machines have been devised for marketing hot coffee and ice cream Service machines include gas-meter boxes, telephones, telescopes, scales, turnstiles, lockers, and juke boxes Amusement machines include games of skill Gambling devices, forbidden in many areas by state or local laws, are so lucrative that they have commonly been controlled by racketeers who often seek to wield political influence in the making and enforcement of regulations on slot machines Cooperated machines are sometimes provided with mechanisms for rejecting slugs or for making change Some machines are leased, some are sold, and some are owned by companies which service the units Advantages of selling by vending machines are immediate service at any hour, convenient location, cash sales, release of sales personnel, and the protection of goods from handling

Vendôme, César, duc de (sāsär' dük' du vädōm'), 1594–1665, French general and politician, natural son of Henry IV and Gabrielle d'Estrées Legitimized in 1595, he was made governor of Brittany and a duke in 1598 He rebelled against Marie de' Medici (1614–16) and against Luynes (1620) and was imprisoned (1626–30) for conspiring against Richelieu In 1641 he was forced to flee after being accused of attempting to poison Richelieu. Returning after Richelieu's death, he was exiled (1643) for conspiring against Mazarin However, he fought on the government side in the Fronde, capturing Bordeaux (1653), and in 1655 he defeated a Spanish fleet at Barcelona

Vendôme, François de see BEAUFORT, FRANÇOIS DE VENDÔME, DUC DE

Vendôme, Louis Joseph, duc de (lwē' zhôzĕf'), 1654–1712, marshal of France, grandson of César de Vendôme and son of Laure MANCINI He fought in the major battles of the War of the Grand Alliance In the War of the Spanish Succession he replaced Villeroi in Italy (1702) and decisively defeated his cousin, Prince Eugene of Savoy, at Cassano (1705) Sent to Flanders to repair Villeroi's defeat at Ramillies (1706), he was at first successful against Marlborough and Eugene but was defeated at Oudenaerde (1708) In 1710 he went to the aid of Philip V of Spain and by his victories at Brihuega and Villaviciosa forced the withdrawal of the allies

Vendôme (vädōm'), town (pop 7,907), Loir-et-Cher dept, N central France, in Orléanais It was after the 9th cent the prosperous center of the county of Vendôme, which in 1515 became a duchy Henry IV, who inherited the duchy as part of the Bourbon lands, united it (1589) with the royal domain and in 1598 bestowed the title duke of Vendôme on his illegitimate son, César Louis I de Condé and Marshal Rochambeau were born here, Ronsard was born in a near-by castle

veneer (vənēr'), thin leaf of wood applied with glue to a panel or frame of solid wood Veneering is an art coeval with early civilization, perfected as human skill progressed It produces richly grained effects more cheaply than suitable solid wood and is used also on structural parts which must be cut with the grain for strength Both saw and knife are employed for cutting veneers, and the wood may be crosscut, quarter-sawed, or rotary-cut in a continuous sheet The grain pattern varies with the direction of the cut, woods cut across the grain in general displaying more effective patterns, e g, burr and oyster walnut, bird's-eye maple Rosewood, satinwood, maple, walnut, and mahogany are frequently employed for veneers Hand-cut veneers were $\frac{1}{10}$ to $\frac{1}{8}$ in thick, the modern machine-cut sheets are rarely thicker than $\frac{1}{32}$ in Veneering executed in inlaid sheets is known as MARQUETRY Plywood and beams or planks of compounded woods are developed by a veneering process

venereal disease (vənēr'ēəl), infectious disease acquired usually through sexual relationships SYPHILIS and GONORRHEA are venereal diseases Their contagious nature and the taboo long associated with public discussion of the diseases gave rise to a serious public health problem The physical and mental deterioration of the afflicted tend to increase the number of disrupted families and create problems of providing public support for dependents and of meeting the enormous costs of care in hospitals and mental institutions Syphilis, which in its late stages may affect the spinal cord and produce locomotor ataxia or may attack the brain and cause paresis (general paralysis and insanity), accounts for large numbers of inmates of institutions A nation-wide campaign was initiated in 1937 by Thomas Parran, then serving as U S surgeon general, in the course of which both press and radio discussed the incidence, cause, and cure of venereal diseases The support given the campaign by public health boards, physicians, and laymen spur-

red legislation requiring compulsory premarital examination and the examination of pregnant women for syphilis, such legislation is now effective in a majority of the states The sulfa drugs and penicillin have proved useful in treating venereal diseases The availability of effective treatment and the wide publication of how and where help may be procured has reduced the number of new syphilis cases each year Infant deaths from the disease have also declined Coordinated effort by private and public agencies aimed at quickly identifying and isolating a source of infection is another favorable development See also SOCIAL HYGIENE

Veneti (vē'nutī), Celtic people of ancient Gaul, who inhabited an area of NW France, now in Morbihan dept. The most important of the Gallic maritime states, they rebelled in 57 B C against Roman rule and were decisively defeated by Julius Caesar in a naval battle, in which, according to his account, they lost 220 vessels

Veneti (vē'nutī), people of ancient Italy They occupied the shore of the Adriatic from Trieste to the mouth of the Po river Some scholars have connected them with the Wends However, they probably spoke an Illyrian language Friendly to Rome, they came under Roman rule in the 2d cent B C

Venetia (vunē'shu), Ital *Veneto* (vānā'tō), region (7,098 sq mi , pop 3,566,136), NE Italy. It is separated from Lombardy and Emilia in the east and the south by the Mincio and Po rivers, the Alps rise in the north, where Venetia borders on Austria, in the east it borders on Friuli–Venezia Giulia, and in the southeast on the Gulf of Venice, an arm of the Adriatic Sea Venetia is divided into the provinces of Belluno, Padua, Rovigo, Treviso, Venice, Verona, and Vicenza, all named after their chief cities VENICE is the capital The fertile Venetian plain and the Alpine foothills produce mainly cereals, grapes, fruit, sugar beets, and hemp Mulberry trees are grown for silk production Venice is a commercial, industrial, and maritime center, Chioggia is the main fishing port Venetia derives its name from the ancient VENETI, who came under Roman rule in the 2d cent B C Augustus made Venetia and Istria a separate province, with the capital at AQUILEIA The region suffered heavily during the barbaric invasions About the 10th cent the TOWNS began to acquire importance, ruled at first by their bishops, they later developed into free communes Some of them grew powerful under the rule of noble families, but the republic of Venice grew supreme, and by the early 15th cent its territories included virtually all of present Venetia The Treaty of CAMPO FORMIO (1797) gave Venetia to Austria, and the Treaty of Pressburg (1805) gave it to the Napoleonic kingdom of Italy In 1814 Venetia was restored to Austria, which held it until the end of the Austro-Prussian War (1866), it then was ceded to Italy After the Second World War the eastern province of Udine was detached from Venetia to form, with the remainder of Venezia Giulia, the Italian region of FRIULI–VENEZIA GIULIA.

Venetian point see LACE

Venezia, Italy see VENICE.

Venezia Giulia (vānā'tsya jōō'lya), former region, NE Italy, on the Adriatic, occupying E FRIULI, Trieste, ISTRIA, and part of CARNIOLA It was formed after the First World War with part of the territories ceded by Austria to Italy in 1919 FIUME was added in 1921 Except along the coast, the population is Slovenian, and after the Second World War most (2,991 sq mi , pop 518,905) of Venezia Giulia was ceded by Italy to Yugoslavia Most of Istria was joined with Croatia, part of Friuli and Carniola was combined with Slovenia, another portion (287 sq mi , pop c 340,000) went to form the new Free TERRITORY OF TRIESTE The remainder (183 sq mi , pop 122,092) stayed with Italy and was merged with Udine prov to form the new Italian region of FRIULI–VENEZIA GIULIA.

Venezuela (vĕnuzwā'lù, -wē'lù, Span vānāswā'la), republic (352,141 sq mi , pop 3,850,771), N South America The capital is CARACAS The country faces on the Caribbean Sea in the north, with a long coast line The name, meaning "little Venice," was supposedly given to it by Amerigo Vespucci because the Indian villages on Lake Maracaibo were built above the water on stilts There are four large geographic regions—the Guiana Highlands, the Orinoco basin, the coastal lowlands, and the mountains—as well as various smaller regions The GUIANA HIGHLANDS in the far south rise to a wilderness of steep cliffs and high waterfalls, almost inaccessible and almost unexploited. Much gold has, however, been exported, and SE of CIUDAD BOLÍVAR the large iron deposits are now being opened as roads overcome the difficulties of transportation Almost all the boundary with Brazil is mountainous, but the upper Orinoco is connected with the upper RIO NEGRO by a natural channel, the CASIQUIARE. There are extensive forests that once yielded rubber but now are exploited only for lesser forest products (tonka beans, balata, and resins). The ORINOCO, one of the great rivers of South America, flows from this region, and its basin is a large pastoral area North of it and about the APURE and its tributaries are the LLANOS, the vast, hot Orinoco plains, where there is a great cattle industry, interrupted by the civil wars of the 19th cent , but later rebuilt Stockraising has been urged along by the introduction of high-breed cattle, the opening of new roads, and the establishment of meat-packing plants Hides are an important Venesuelan export By far the greatest export, however, comes from a region on the coastal plain, the lowlands around Lake Maracaibo Here since 1918 Dutch, British and American interests have developed the astoundingly rich oil fields The newest field, in NE Venezuela around Caripito, raised Venezuela's rank to second among oil-producing nations There are some refineries in the country, but much of the produce is sent from Maracaibo to foreign refineries Directly off the coast are the British island of Trinidad and the Venezuelan Margarita (formerly known for its pearls and now a source of magnesite) The coastal lowlands are tropically hot, but the coastal ranges rise abruptly from the Caribbean to cool altitudes of 6,000 to 7,000 ft. In the west the SIERRA NEVADA DE MÉRIDA begins about BARQUISIMETO These mountains are a continuation of the Andes Mountain highlands dominate the most populous part of Venezuela Coffee—which was formerly the chief economic item of Venezuela along with cattle until oil was struck—comes from the cool slopes, and cacao from the lower foothills These are exported through the ports of PUERTO CABELLO, LA GUAIRA, and CUMANÁ The cities of the high mountain basins were dominant economically through the 19th cent and still are politically powerful About CARACAS, VALENCIA, and MARACAY, sugar cane, cotton, and wheat and other grains are grown Cattle from the llanos are also fattened on the rich valley grasses A dairy industry has also been started at Maracay Although the climate of the highland cities is moderate and delightful, the mountains have offered difficulties to Venezuelan development because of the insufficient communications and transportation The airplane has helped greatly to alleviate this trouble, but has not yet solved the problem of shipping for industries The foreign-owned plants are dependent on petroleum, and most other industrial establishments are small—plants processing meat, fish, and dairy products, cotton textile mills, tanneries, cigarette and cement factories, sugar refineries, and plants producing rubber tires The development of these industries, combined with the lure of wages in the oil fields has tended to make for a scarcity of farm labor The powerful landowning class is to a considerable extent of predominantly Spanish descent The great percentage of Venezuelans are, however, of mixed Indian and white blood, with some mulattoes, some zambos or sambos (Indian and Negro), and some Indians The Spanish conquest fastened the landholding system upon Venezuela Columbus discovered the mouths of the Orinoco in 1498 and VESPUCCI and Alonso de OJEDA traveled along the coast in 1499 Settlements were established on the coast at Cumaná (1520) and CORO (1527), but the major task of conquest was begun only after the Welser family, in return for loans to Emperor Charles V, obtained rights in Venezuela German adventurers —Ambrosio de Alfinger, George of Speyer, and Nicolás FEDERMANN—made the country known, partly through a search for the fabled El Dorado The area was in colonial days largely an adjunct of NEW GRANADA (present Colombia) In 1731 it was made a captaincy general but in 1740 was again united to New Granada, only to be detached again in 1777 From the 16th to the 18th cent the long coast line was attacked by British buccaneers and in the 18th cent there was brisk smuggling trade with the British islands in the West Indies. In 1795 there was an uprising against Spanish control that is sometimes regarded as the first movement of the revolution against Spain It was, however, only after Napoleon had taken control of Spain that a real revolution began (1810) under Francisco de MIRANDA In 1811 complete independence was declared The revolution had varying fortune The earthquake of 1812, which destroyed cities held by the patriots, helped to forward the cause of the royalists, who took the calamity as punishment for the rebellion Later, however, Simón Bolívar (born in Venezuela) and his lieutenants, working from Colombia, were able to liberate Venezuela despite setbacks administered by the royalist commander, Pablo MORILLO. The victory of Carabobo (1821) sealed independence from Spain Venezuela was combined with Colombia and other territories in the Greater Colombia, but almost from the beginning Venezuela was restive. José Antonio PÁEZ, who had conquered the last Spanish garrison at Puerto Cabello in 1823, favored independence He was a leader of the hardy cattlemen, the *llaneros*, and a strong personal leader (*caudillo*). In 1830 the Venezuela separatists gained the upper hand, and Venezuela became a separate state Páez was the leading figure Though conservative and liberal parties appeared, the control of Venezuela was actually usually in the hands of *caudillos* drawn from the landholding class After Páez came José Tadeo MONAGAS and his brother, but the struggle to oust Páez was sharp, and civil war became the order of the day A brief liberal regime under Juan Falcón created the United States of Venezuela in 1864 From 1870 to 1888 GUZMÁN BLANCO dominated Venezuela He sought to aid the material advance of the country, which had been much hurt by the constant civil war. Stockraising had been disrupted, and mountain farming had been held back by the constant disturbance He succeeded in some reforms, but he was replaced by Joaquín CRESPO In his regime began the VENEZUELA BOUNDARY DISPUTE with Great Britain. A new dictator came to power in 1899 This was Cipriano CASTRO, and the corrupt financial laxness of his administration helped to bring on a new international incident, that of the VENEZUELA CLAIMS In 1908 began the rule of one of the most long-lasting of all Latin American dictators, Juan Vicente GÓMEZ, who stayed in power until his death in 1935 His rule was that of total and absolute tyranny, though he did force the state (with the help of foreign oil concessions) into national solvency and material prosperity His death was followed by disorders, and the old conflict of landowner and propertyless worker became clearer Eleazar López Contreras was (1935–41) president, then in the administration of Isaías Medina Angarita, Venezuela sympathized with the Allies and finally entered the Second World War on the Allied side in 1945 Later in 1945 a military junta headed by Socialist Rómulo Betancourt gained control of the government A new constitution promulgated in 1947 provided for the first time in Venezuelan history for the election of a president by direct popular vote The first to be elected president under the new constitution was the eminent novelist Rómulo GALLEGOS, who was inaugurated in Feb , 1948 His rule did not, however, last long A conservative military coup in Nov , 1948, overthrew the Gallegos government and a military junta took power Venezuela, debt-free and prosperous because of its oil, still has the problem of landholding by absentee owners of plantations given over to money-producing crops (sugar, coffee, cacao) and scarce agricultural labor The difficulties of terrain and climate have also served to limit agriculture Industrialization, legislation for social welfare, and encouragement of immigration have been forwarded to answer these problems See Leonard V Dalton, *Venezuela* (new ed , 1925), Kenneth G Grubb, *The Northern Republics of South America* (1931), Erna Fergusson, *Venezuela* (1939), H J Allen, *Venezuela a Democracy* (1940), A P Whitaker, *The United States and South America the Northern Republics* (1948), George Wythe, *Industry in Latin America* (2d ed , 1949)

Venezuela Boundary Dispute, diplomatic controversy, notable for the tension caused between Great Britain and the United States Of long standing, the dispute concerned the boundary between Venezuela and British Guiana, the Venezuelan claim, extending E to the Essequibo river (and thus taking in most of the settled areas of British Guiana) had been inherited from Spain and that of Great Britain, stretching W to the Orinoco, was acquired from the Dutch in 1810 The controversy did not gain importance until Great Britain in 1841 had a line (the Schomburgk Line) run provisionally Discovery of gold in the region sharpened feeling Great Britain refused to arbitrate concerning the settled area, Venezuela, however, maintained the British were delaying in order to push settlements farther into the disputed area Venezuela sought aid from the United States and in 1887 broke off diplomatic relations with Great Britain President Grover Cleveland's Secretary of State, Thomas Francis BAYARD, began negotiations, but the matter lapsed In 1895 Secretary of State OLNEY, invoking and employing a new and broader interpretation of the MONROE DOCTRINE, virtually demanded arbitration, basing the United States' right to intervene on the grounds that any state whose interests or prestige are involved in a quarrel may interfere Lord Salisbury, the British prime minister, offered to submit some of the area to arbitration but refused to allow British settlements to be submitted to adjudication The reply, a rebuff to Olney, brought Cleveland's momentous message to Congress Dec 17, 1895, which denounced British refusal to arbitrate and maintained it was the duty of the United States to take steps to determine the boundary and to resist any British aggression beyond the line once it had been determined. The message came like a bombshell, Congress supported the President but, although there was some war talk, neither nation desired to fight. Salisbury, involved in European troubles and disturbed by the difficulties in South Africa threatened by Jameson's Raid (see JAMESON, LEANDER STARR) in the Transvaal, sent a conciliatory note which recognized the broad interpretation of the Monroe Doctrine An American commission was appointed, and the line finally

drawn in 1899 made an award generally favorable to Great Britain.

Venezuela Claims. In 1902, because of frequent civil disorders over a long period and because of the mismanagement of the administration of Cipriano Castro, Venezuelan finances were chaotic. Both public and private loans were in default Great Britain, Germany, and Italy, determined to secure redress for their nationals, sent a joint naval expedition to the Venezuelan coast German vessels seized Venezuelan gunboats, and the seaports were bombarded by British and German warships The matter was of some embarrassment to the United States because of the Monroe Doctrine The powers, anxious not to offend the United States, disclaimed territorial ambitions and Germany in advance brought the claims to U S attention Theodore Roosevelt declined to act as arbiter, but the United States worked for an amicable settlement A further complication arose as to whether preferential treatment in payment of the debts should be accorded the blockading powers over those of neutrals, in 1904 the Hague Tribunal decided in favor of the blockading nations The claims were adjusted by mixed commissions at Caracas in 1903 Because Roosevelt refused to extend the scope of the Monroe Doctrine to include such cases as this, the dispute acquired significance in international law, further, the heated resentment of other Spanish-American nations over the violation of sovereignty to one of them resulted in the Drago Doctrine

Venice (vĕ'nĭs), Ital *Venezia* (vānā'tsyȧ), city (pop 170,830, with suburbs 264,027), capital of Venetia and of Venice prov, NE Italy, built on 118 alluvial islets within a lagoon in the Gulf of Venice (northern end of the Adriatic Sea) The city is connected with the mainland, 2½ mi away, by a railroad bridge and a highway bridge Between the islands run 160 canals, mostly very narrow, crossed by hundreds of bridges, houses are built on piles. The Grand Canal, shaped like a reversed S, is the main traffic artery, its chief bridge is the Rialto, named after the island which was the historical nucleus of Venice Gondolas and other boats are the only means of conveyance, but there are numerous very narrow lanes (*calle*) and a few streets The innumerable splendid churches and palaces of the city speak of past grandeur and wealth as the "queen of the seas" Its beginnings were modest In the 5th cent refugees fleeing the barbarian invaders sought safety on the lowlands, in 697 the communities first selected a doge [variant form of the word for duke], as the head of the resultant republic Favorably situated for handling trade between east and west, the communities grew and by the 9th cent formed the city of Venice The city secured most of the coast of Dalmatia (10th cent), thus gaining control of the Adriatic, and began to build up its eastern empire, obtaining trade and other privileges in the ports of the Levant The influence of the Orient, particularly of Byzantium, which characterizes Venetian art and architecture, is most clearly expressed in Saint Mark's Church (rebuilt 11th cent), on the principal square In 1204 the doge, Enrico Dandolo, led the host of the Fourth Crusade in storming Constantinople Strategic points in the Ionian, the Aegean, and the E Mediterranean were taken, notably Crete (1216) Marco Polo embodied the enterprising spirit of the 13th-century Venice Having defeated (1380) its rival Genoa in the War of Chioggia, Venice was indeed the queen of the seas among European nations, its sea-consciousness was expressed in the symbolic marriage ceremony of the doges with the Adriatic, celebrated with astounding pomp on the huge gilded gondola, the *Bucentaur*. All citizens shared in the prosperity, but the patrician merchants obtained political privileges Membership in the great council, which now had replaced the people in the ducal elections, became restricted to an oligarchy In reaction to an unsuccessful revolution in 1310 the Council of Ten (see Ten, Council of) was instituted to punish crimes against the state The Ten, by means of a formidable secret police, acquired increasing power, while the doge became a figurehead With the 15th cent, Venice entered the apogee of its might All Venetia on the mainland was conquered, Venetian ambassadors, creators of the modern diplomatic service, made the power of their city felt at every court of the known world, and all the riches of Europe and Asia could be seen on its piers and wharves The arsenal was one of the world's wonders The decline of Venice may be dated from the fall of Constantinople to the Turks (1453), which cut off Levantine trade, or from the discovery of America and of the Cape route to Asia, which transferred commercial power to Spain and other nations to the west. The effects were not felt immediately, Venice continued its proud and lavish ways. In the Italian Wars, it challenged both emperor and pope, the League of Cambrai, formed by Julius II to humble Venice, merely resulted in a few minor losses of territory, the victory of Lepanto (1576) gave the republic a new lease on life by undoing Turkish seapower. The Renaissance marked the height of Venetian artistic glory. Architects such as the Lombardo family, Jacopo Sansovino, and Palladio, and the Venetian school of painting, which besides its giants—Titian and Tintoretto —also included Giovanni Bellini, Giorgione, Jacopo Palma (Palma Vecchio), and Veronese, gave Venice its present aspect of a city of churches and palaces floating on water, blazing with color and light and filled with treasures of art. Freedom of expression was complete except to those who actively mixed in politics, Aretino, the "scourge of kings," chose Venice as his residence, and John of Speyer, Nicolas Jenson, and Aldus Manutius made the city a printing center Although Goldoni, the dramatist, and painters such as Tiepolo and Canaletto still made Venice the most original artistic city of 18th-century Italy, they represented to some extent the decadence that accompanied the city's commercial and military decline The fall of Cyprus (1571), Crete (1669), and Morea (1715; see Greece) to the Turks ended Venetian dominance in the E Mediterranean. Politically, the city became increasingly stultified, while culturally it had become the mere playground of Europe's great When, in 1797, Bonaparte delivered Venice to Austria in the Treaty of Campo Formio, the republic fell without a blow During the Risorgimento, however, it played a vigorous role under the leadership of Daniele Manin, having expelled the Austrians in 1848 it heroically resisted siege until 1849. In 1866 Venice and Venetia were united with the kingdom of Italy Old industries such as lace making and the Murano glass manufactures were revived, and new industries—shipbuilding, flour milling, and the manufacturing of objects of art, jewelry, and silk textiles—were introduced Porto Marghera, the modern port of Venice (on the mainland) has considerable commercial importance The tourist trade, a major source of income, is stimulated by frequent festivals The center of animation is St Mark's Square and the Piazzetta, which leads from the square to the sea Here are St Mark's Church, the Gothic palace of the doges (from which the Bridge of Sighs leads to the former prisons), the Procuratie (former courts of justice), the campanile (rebuilt in the 20th cent after its collapse), the Moors' Clock-tower, the Library of St Mark's, the Loggia, and the twin columns supporting the statues of St Theodore stepping on a crocodile and of a winged lion of St Mark (the emblem of Venice) On islands facing the Piazzetta are the baroque churches of San Giorgio Maggiore and Santa Maria della Salute Among the many other palaces, churches, and museums are the Gothic Cà d'Oro, the Vendramin Rezzonico palaces, the Frari church (with paintings by Titian), and the Scuola di San Rocco (with frescoes by Tintoretto) The beach resort of Lido di Venezia, is near by Venice has been celebrated by poets, painters, and musicians of all lands For factual accounts, see H F Brown, *The Venetian Republic* (1902), P G Molmenti, *Venice* (Eng tr, 6 vols, 1906–8), W C Hazlitt, *History of the Venetian Republic* (4th ed, 2 vols, 1915), Charles Diehl, *Une république patricienne Venise* (1915, in French), S J C Brinton, *Venice, Past and Present* (1925)

Venice (vĕ'nĭs), industrial city (pop 5,454), SW Ill, on the Mississippi opposite St Louis, settled 1804 as a ferry landing, platted 1841, inc as a village 1873, as a city 1897 It has steel mills

Veni Creator Spiritus (vā'nē krā'tôr spē'rētōōs) [Latin,=come, Creator Spirit] and **Veni Sancte Spiritus** (sangk'tā) [Latin,=come, Holy Ghost], Whitsun hymns of the Latin church, invocations of the Holy Ghost The first, much the older, has seven four-line stanzas, unrhymed, of iambic eight-syllable lines It is used in the office of Pentecost and at solemnities such as papal elections and ordinations. In translation it is used at Anglican ordinations *Veni Sancte Spiritus*, the sequence of Pentecost, was written before 1200 Its 10 stanzas are of three seven-syllable lines, with the first two lines of stanzas rhyming with each other, the third lines rhyme throughout the hymn

venison (vĕ'nĭsun) [O Fr,=hunting], term formerly applied to the flesh of any edible beast of the chase or game bird but now restricted to the flesh of an animal of the deer family The meat is best if the animal is plump, forest fed, and at least five years old, it is improved by hanging in a cool, airy place The domestication and breeding of reindeer is developing a new meat supply (somewhat resembling beef) of some importance in Alaska and N Canada

Venite (vēnī'tē) [Latin,=come], Ps 95, so called from its opening, "O come, let us sing unto the Lord" It is the opening psalm of matins in the Roman office and of the Anglican morning prayer

Venizelos, Eleutherios (ĕlĕfthá'rēôs vĕnēzĕ'lôs), 1864–1936, Greek statesman, b Crete After studying at the Univ of Athens, he returned to Crete, where he led the movement of emancipation from Turkish rule He played a prominent part in the Cretan insurrection of 1896–97, and in 1905 he led the Cretan assembly to declare the union of Crete with Greece; this union was actually completed only in 1913 Venizelos was instrumental in securing (1906) the removal of Prince George of Greece as high commissioner in Crete In 1909 he was called to Athens by the members of the so-called Military League, who desired to overthrow the corrupt political regime in power and to revise the constitution. The Military League brought Venizelos to power in 1910 During his first term as Greek premier (1910–15), Venizelos completed the revision of the constitution (1911), undertook military and financial reform, and led Greece through the Balkan Wars (1912–13), in which its territory was greatly increased After the outbreak of the First World War, Venizelos strongly favored the Allied cause but was opposed by the pro-German King Constantine and was forced to resign (1915) However, after an electoral victory, he returned to the premiership in the same year and negotiated an agreement with the Allies, who were to land forces at Salonica (see Salonica campaigns) No sooner had the Allies landed than Constantine withdrew support from Venizelos, who resigned once more (Oct, 1915) Venizelos now established a provisional government at Salonica, which declared war on Germany and Bulgaria, and in 1917, on Constantine's abdication, became Greek premier for the third time Greece fully entered the war on the Allied side, and Venizelos played a prominent role at the Paris Peace Conference His cabinet fell in 1920, and King Constantine was restored, but the Greek debacle in the war with Turkey restored power to the Venizelists, who in 1922 once more forced Constantine to abdicate Venizelos returned to the premiership after an overwhelming electoral victory in 1924, and soon afterward a plebiscite declared Greece a republic Having fallen out with the military leaders, Venizelos retired from office even before the plebiscite took place After several years of political chaos, Greece recalled (1928) Venizelos to the premiership He sought to strengthen the republican regime inside Greece and to restore the international position of Greece by securing rapprochments with Italy (1928), Yugoslavia (1929), and Turkey (1930) Growing royalist opposition forced his resignation in 1932, after a brief return to power (1933) he was succeeded as premier by Panayoti *Tsaldaris* Fearing the restoration of the monarchy, Venizelos made a last desperate attempt at stemming the royalist tide by organizing armed uprisings (1935) in Athens, Macedonia, and Crete Crete held out longest against the government forces, but the rebellion was soon put down by General Kondylis Venizelos fled to France, where he died shortly after his party had gained a fruitless electoral victory in Greece The major figure in Greek politics in the 20th cent, Venizelos was revered by the republicans of Greece and was considered outside Greece a diplomat of major stature. His remains were brought back to his native Crete.

Venlo (vĕn'lō), municipality (pop 40,985), Limburg prov, SE Netherlands, on the Maas (Meuse) river and near the German border It has lumber mills and manufactures of chemicals, electric bulbs, and optical instruments Formerly a fortress city, it frequently changed hands in the wars of the 16th, 17th, and 18th cent There are a 15th-century Gothic church and a 16th-century town hall

Ventidius Bassus, Publius (pŭ'blēŭs vĕntĭ'dēŭs bă'sŭs), d after 38 B C, Roman general He served in Gaul and in the civil war under Caesar, and after Caesar's death he supported Antony and became acting consul in 43 B C For his successes against the Parthians and against Quintus Labienus (39 B C), he was accorded a triumph in Rome

ventilation, process of supplying fresh air to an enclosed space and removing from the space air contaminated by unpleasant odors, harmful gases, and smoke Proper ventilation requires also that there be a movement or circulation of the air within the space and that the temperature and humidity be maintained within a range that allows adequate evaporation of perspiration from the skin. It was formerly believed that the discomfort, headache, and loss of vitality commonly produced by remaining in a badly ventilated room were caused entirely by the increase in the amount of carbon dioxide and the decrease in the oxygen content of the air A more recent interpretation is that the injurious effects are largely the result of interference with the heat-regulating mechanism of the body, lack of air currents and the increase in relative humidity and in temperature (especially noticeable in crowded, poorly ventilated places) prevent normal evaporation of perspiration and loss of heat from the surface of the skin The condition of the inside air is largely dependent upon the outside atmosphere The air which enters through openings tends to circulate if the outside air is in relatively rapid motion (i e, if it is windy) or if currents are set up in the enclosed space Circulation of the air can be facilitated by adjusting the windows and other openings and by using mechanical fans, when heating systems are in use the variation in the temperature of the air in different parts of the room favors circulation The creation of currents depends upon the fact that warm air, being lighter than cold air, tends to rise, as it rises, it creates an area of low pressure into which the cooler

air flows, and thus currents are set up. Heating systems using radiators, heated pipes, or grates and vents through which hot air is expelled generally promote the circulation of air by creating convection currents Care must be taken, however, when heating systems are in operation to avoid overheating and extreme lowering of the humidity of the air Any enclosed space in which a stove or other fuel-burning device is in operation must have provision for supplying fresh air, since the burning fuel gradually exhausts the oxygen in the air and produces carbon monoxide, a poisonous gas When simple means of ventilation prove inadequate, it is possible to use mechanical devices, usually power-driven fans with connecting pipes and vents, to allow admission and expulsion of air These are often used in large auditoriums, school buildings, theaters, and other places where numbers of people gather Similar devices made on a smaller scale are increasingly used in private homes to provide better ventilation Deep mines, underwater tunnels, and other subterranean and submarine structures require elaborate mechanically operated systems for maintaining the air supply in a healthful condition The lives of those working in, or traveling through, such areas depend upon a constant supply of fresh air; not only must the systems used be highly efficient but there should be provision for emergencies in case of failure of the apparatus in operation An outgrowth of studies of problems of ventilation is the development of methods of AIR CONDITIONING Such systems, unlike ordinary methods of ventilation, are independent of outdoor atmospheric conditions and can, therefore, maintain the indoor atmosphere at the most healthful temperature and humidity and can free the air of dust and other undesirable materials See H M Vernon, *Principles of Heating and Ventilation* (1934), W. H Severns and J R Fellows, *Heating, Ventilating, and Air-Conditioning Fundamentals* (rev. ed , 1949)

Ventimiglia (vän'tēmēl'yä), Fr *Vintimille* (vētēmēl'), town (pop. 11,216), Liguria, NW Italy, on the Italian RIVIERA and near the French border not far from Menton Part of the town has kept its medieval aspect The near-by resort town of Bordighera is connected with Ventimiglia by a fine road along the Mediterranean coast

Ventnor (vĕnt'nûr), health resort, on the Isle of Wight, England The town is built on a cliff in a series of terraces, and the sea air and mild climate have made it a center for hospitals and tuberculosis sanatoriums Swinburne is buried at Bonchurch near by

Ventnor, city (pop 7,905), SE N J , a resort on Absecon Beach near Atlantic City, inc 1903

Ventôse · see FRENCH REVOLUTIONARY CALENDAR

ventriloquism (vĕntrĭl'lukwĭzm), the art of making the voice appear to come from a source other than the speaker It is a popular form of entertainment, in which the performer frequently uses one or more puppets, giving a separate voice to each The skull of the ventriloquist does not depend upon a malformation of the vocal apparatus but upon practice Ventriloquism was used in the religious rites of the Chinese and by the oracles in Egypt and Greece Edgar Bergen, who uses the dummy "Charlie McCarthy," is a notable American ventriloquist

Ventspils (vĕnts'pĕls), Ger *Windau* (vĭn'dou), city (pop 15,671), NW Latvia, in Kurseme, an ice-free port on the Baltic Sea It exports timber, grain, flax, hemp, and butter and has sawmills, fisheries, and various manufactures The city grew around a 13th-century castle of the Livonian Knights and was chartered in the 17th cent

Ventura (vĕntōō'rə), city (pop 13,264), co seat of Ventura co., S Calif , on the coast and NW of Los Angeles, in an agricultural and oil region, inc 1866 A mission called San Buenaventura (still the official name of the city), founded by Junípero Serra in 1782, has been restored There is a junior college

Venus (vē'nŭs), in Roman religion, goddess of vegetation Later, she became identified (3d cent B C.) with the Greek APHRODITE In imperial times she was worshiped as Venus Genetrix, mother of Aeneas, Venus Felix, the bringer of good fortune, Venus VICTRIX, bringer of victory, and Venus Verticordia, protector of feminine chastity The most famous representations of Aphrodite or Venus in sculpture are the *Venus of Milo* or *Melos* (Louvre), the *Venus of Medici* or *Medicean Aphrodite* (Uffizi), the *Venus of Capua* (national museum, Naples), and the *Capitoline Venus* (Capitoline Mus , Rome) The *Venus of Milo* is a Greek statue in marble, sometimes ascribed to the 4th or 5th cent B C , sometimes to the 2d or 3d cent B C Found (1820) on the island of Melos, it was taken by the French ambassador to Turkey and was eventually presented by Louis XVIII to the Louvre The *Venus of Medici* belongs to the Neo-Attic school about the time of Augustus. It is probably derived from Praxiteles' *Aphrodite of Cnidus*, which was destroyed

Venus, in astronomy, the planet with an orbit between the orbits of Mercury and the earth and second in order from the sun Other than the sun and moon it is ordinarily the brightest object in the sky. No other planet approaches so near to the earth; at the time of inferior conjunction its distance is 25,702,000 mi. The planet passes through phases resembling those of the moon The farther Venus recedes from the earth the more of the disk is visible; the nearer the planet, the thinner is the crescent; but the full disk appears to be that of a much smaller body than that of the crescent phase The mean distance of this planet from the sun is 67,200,000 mi The revolution is about 225 days In size, mass, and density, Venus is very like the earth Its mass has been estimated to be about four fifths as great Its diameter is 7,575 mi As the planet is never more than about 46° from the sun, it can never set much more than 3 hr after or rise much more than 3 hr before the sun. It appears to be a beautiful, brilliant silvery-white star in either the evening or the morning sky (for *morning and evening stars*, see STAR) Little can be learned of the true surface of the planet, as observers cannot penetrate beyond the enveloping layers of clouds or vapor. Lacking definite markings, they have not been able to find a satisfactory way of determining the period of rotation No satellite attends Venus The transits of this planet across the sun's disk occur either in June or in December The first transit known to have been observed was one recorded by Jeremiah HORROCKS and William Crabtree on Nov. 24, 1639 (O S) Since then four transits have occurred—on June 5, 1761, and June 3, 1769, and on Dec 9, 1874, and Dec 6, 1882

Venus's-flytrap, insectivorous or carnivorous plant (*Dionaea muscipula*) native to moist, acid places in the Carolinas The leaves, borne in a low rosette, resemble bear traps and are hinged at the midrib, each half bearing sensitive bristles When a bristle is touched—as by an insect—the halves snap shut, imprisoning the insect and preventing escape by marginal teeth which interlock The halves reopen after the insect has been digested The plant produces a stalk of small white flowers

Veracruz (vĕ"rukrōōz', Span vāräkrōōs') [Span ,= true cross], state (27,759 sq mi , 1946 estimated pop 1,808,954), E Mexico Stretching c 430 mi along the Gulf of Mexico from Tamaulipas in the north to Tabasco in the south and reaching from 30 to 100 mi inland, Veracruz rises from a tropical coastal plain into the temperate vallevs and highlands of the Sierra Madre Oriental. It shares with Puebla the highest peak in Mexico, ORIZABA Most of the central part is mountainous, but the inland northern and southern sectors correspond generally to the coastal topography The few navigable rivers are the Coatzacoalcos, Papaloápan, Pánuco, and Tamesí Geographical location and physical characteristics give the state a variety of climate and products and make it one of the most important agriculturally Rainfall is abundant, and the soil extremely fertile From the tropical forests come dyewoods and hardwoods, chicle, and rubber, in the semitropical and temperate zones cattle are raised, and sugar cane, cacao, vanilla, coffee, tobacco, cotton, fruits and vegetables, cereals, and istle are grown, in the colder altitudes maguey, various cacti, and coniferous forests are found, and the mountains have relatively unexploited deposits of gold, silver, iron, and coal The principal natural resource is oil Manufactures include textiles and products using sugar cane and tobacco In pre-Columbian times Veracruz was populated by Indians of Totonac and HUASTEC stock, who antedated the Aztecs but were tributary to them by the time Juan de GRIJALVA discovered the coast in 1518 In 1824 Veracruz became a state The capital is JALAPA, and other cities are Veracruz, Orizaba, Córdoba, Coatzacoalcos, and Túxpam

Veracruz, city (pop. 71,720) Veracruz, E Mexico, on the Gulf of Mexico and E of Mexico city It rivals Tampico as the republic's most important port In 1519 Cortés landed near the site later (1599) chosen for the present city The spot is a low, sandy plain surrounded by dunes and swamps, some of which have been reclaimed and are very fertile The town was an easy prey to the buccaneers of the 17th and the 18th cent The harbor is guarded by the fortress of San Juan de Ulúa, which was begun in the 17th cent and was the last stronghold of the Spanish before their expulsion in 1821 Veracruz was in 1838 blockaded by the French, who were attempting to collect damages suffered by French nationals; in opposing the French landing General SANTA ANNA lost a leg and mended his political fortunes The claims were adjusted In 1847 the troops of Winfield Scott landed at Veracruz to begin the major campaign of the Mexican War. Benito Juárez spent years in Veracruz in the War of the Reform. In Dec , 1861, according to a European agreement, Spanish interventionist troops under Juan Prim arrived as the first part of a joint force; the next month French and British troops came. When it became apparent that the French were bent on actual conquest, the Spanish and the British withdrew from the joint force. The adventure of the empire of Maximilian began. In 1914 one of the climaxes in the trouble between Woodrow Wilson and Victoriano Huerta came when, U S. sailors having been arrested in Tampico, U.S. forces landed in Veracruz and after a short fight (April 21, 1914) invested the customhouse briefly. Mexico consequently broke off diplomatic relations. The city is today the commercial and industrial center of an important oil region

veratrine (vĕ'rətrĭn, -trēn), mixture of alkaloids (mainly cevadine) extracted from sabadilla seeds and from certain hellebores It is used in insecticides Formerly used also in counterirritant ointments, it is now rarely prescribed because it often has a toxic effect

verb, PART OF SPEECH typically used in referring to an action In English this class is almost identical with the form class of words inflected with *-ing*, as *live, living*, and *give, giving* English verbs are inflected for PERSON, NUMBER, and TENSE and partially for MOOD, compound forms provide a distinction of VOICE In Latin verb INFLECTION, voice and mood are provided in every form Most languages have a form class resembling that of English verbs In many of them, unlike English, these words may form complete sentences, e g , Spanish *canto* [I am singing] is one word

Verbeck, Guido Fridolin (gē'dō frē'dōlĭn vûrbĕk'), 1830–98, American missionary in Japan, b Netherlands He came to the United States in 1852. After study at Auburn Theological Seminary, he was ordained (1859) and sent to Japan as a missionary of the Reformed Church in America At Nagasaki, at the request of the Japanese government, he took charge (1860) of a school for interpreters. In 1869, again at the invitation of the government, Verbeck assumed direction of the school in Tokyo that later became the Imperial Univ. He translated a number of works for the Japanese government and was often sought in consultation His *History of Protestant Missions in Japan* was published in 1883

verbena (vûrbē'nə), any plant of the genus *Verbena*, herbs and shrubby plants native (with one exception) to America Their clusters of flowers of different colors are sometimes fragrant and are variously shaped, in common garden kinds they are flat topped Verbenas are cultivated as garden or pot plants—particularly those species, and their hybrids, native to the warm regions of the Americas They are usually treated in the North as annuals The small moss verbena is popular as an edging and cover plant Most verbenas native to North America, seldom cultivated, are commonly called vervain (vûr'vĭn), as is the single Old World species (*Verbena officinalis*), the European vervain, naturalized in North America. These all have small flowers, borne on slender spikes in colors of white, blue or purple, and sometimes pink The European vervain was venerated by Greeks, Romans, and Druids as an altar plant, a garland, a love charm, and for other virtues It was associated with the Crucifixion in Christian legends This and other vervains have been used medicinally The fragrant lemon verbena (*Lippia citriodora*) belongs to a different genus

Verboeckhoven, Eugène Joseph (ûzhĕn' zhōzĕf vûrbōōk-hō'vun), 1798–1881, Belgian animal painter. His work, with its suggestion of Potter's style, became very popular He is represented in the museums of Belgium, the Netherlands, Germany, England, and the United States Among his pictures are *Landscape with Sheep and Ducks* (Victoria and Albert Mus) and *Interior of a Stable* (Metropolitan Mus)

Vercel, Roger (rōzhā' vĕrsĕl'), 1894–, French novelist He first became internationally known when he was awarded the PRIX GONCOURT for his *Capitaine Conan* (1934, Eng tr , *Captain Conan*, 1935), which deals with the First World War in the Balkans His works are characterized by strange locales and rather violent action Among his other books are *Au large de l'Éden* (1932, Eng tr , *In Sight of Eden*, 1934), *Léna* (1936, Eng tr , 1937), *Remorques* (1935, Eng tr , *Salvage*, 1936), *Sans le sped de l'Archange* (1937, Eng tr , *Tides of Mont St Michel*, 1938), and *Aurore boréale* (1947, Eng. tr., *Northern Lights*, 1948)

Vercelli (vĕrchĕl'lē), city (pop. 32,397), capital of Vercelli prov , Piedmont, N Italy, on the Sesia river It is the most important rice market of Italy. A Roman town and later a free commune, it came under the Visconti of Milan in 1335 and was ceded by them to the house of Savoy in 1427 It has the fine 13th-century basilica of Sant' Andrea, with a Renaissance cloister and a convent The only school of painting in Piedmont flourished here in the 15th and 16th cent In the library of the cathedral is the Vercelli Book or Codex Vercellensis, an 11th-century Anglo-Saxon manuscript which contains a collection of religious poems, including *Elene* by CYNEWULF

Verchères, Marie Madeleine Jarret de (märē' mädlĕn' shärä' dù vĕrshĕr'), 1678–1747, heroine of New France, b near Montreal In Oct., 1692, the 14-year-old Madeleine, in the absence of her parents from her father's seigniory on the St. Lawrence, defended the fort of Verchères against a week-long attack by a band of Iroquois. She had only the assistance of her two young brothers, two soldiers, and an old man of 80. See A. G. Doughty, *A Daughter of New France* (1916).

Vercingetorix (vûr"sĭnjē'tûrĭks), d. 46 B.C., leader of the Gauls, a chieftain of the Arverni. He was the leader of the great revolt against the Romans in 52 B.C. Julius CAESAR, upon hearing of the trouble, rushed to put it down Vercingetorix was, however, an able leader and adopted the policy of retreating to heavy natural fortifications and burning the Gallic towns to keep the Roman soldiers from living off the land Caesar and his chief lieutenant LABIENUS lost in minor engagements, but when Vercingetorix shut himself up in ALESIA and summoned all his Gallic allies to attack the besieging Romans, the true brilliance of Caesar appeared. He defeated the Gallic relieving force and took the fortress Vercingetorix was taken to grace Caesar's triumph in Rome and then was put to death

Vercors (vĕrkôr'), 1902–, French writer and illustrator, whose real name is Jean Bruller (zhäⁿ brülĕr') As a designer and illustrator (1926–39), he worked under his own name While serving in the French resistance movement during the Second World War, he was instrumental in founding Les Éditions de Minuit, an underground publishing firm, and for them wrote *Le Silence de la mer* (1942, Eng. tr., *The Silence of the Sea*, 1944) under his pseudonym. The story, dealing with the corrosive and self-destructive cruelty of the German invaders, achieved a wide surreptitious circulation and was highly acclaimed Continuing the pen name, he also wrote *La Marche à l'étoile* (1943), this was translated as *The Gusdng Star* in *Three Short Novels* (1947), which contains also *Night and Fog* and *The Verdun Press* Among his other works are *Le Songe* [the dreamer] (1944), *Les Armes de la nuit* [the weapons of night] (1946), *Le Sable du temps* [sands of time] (1945), and *Les Yeux et la lumière* [eyes and the light] (1948)

verd antique: see SERPENTINE.

Verde (vûrd), river rising in central Arizona N of Prescott and flowing S to the Salt river above Phoenix The valley supported early Indian civilizations and is dotted with ruins, such as those at Tuzigoot Bartlett Dam is part of the SALT RIVER VALLEY irrigation system

Verde, Cape (vûrd) [Port ,=green], Fr *Cap Vert*, westernmost extremity of Africa, on the coast of Senegal The Portuguese-owned Cape Verde Islands lie c 475 mi to the west

Verdi, Giuseppe (vĕr'dē, Ital jōōzĕp'pā vĕr'dē), 1813–1901, foremost Italian operatic composer of the 19th cent His third opera, *Nabucodonosor* (1842, also known as *Nabucco*, the story of Nebuchadnezzar), was his first successful one *Rigoletto* (1851), *Il Trovatore* (1853), and *La Traviata* (1853) show him to be a master of dramatic composition, his style is further developed in *Un ballo in maschera* (*The Masked Ball*, 1859) and *La forza del destino* [the power of destiny] (St Petersburg, 1862), in *Aida* (Cairo, 1871) all the elements of his earlier style reach maturity He greatly admired Shakspere, on whose plays three of his operas are based—*Macbeth* (1847), an interesting though unsuccessful opera, and the masterpieces of his old age, *Otello* (1887) and *Falstaff* (1893, based on *The Merry Wives of Windsor*), for both of which Boito was his able librettist Critics have seen the influence of Wagner in the last two works, but actually Verdi stands stylistically opposed to Wagner, he represents the culmination of the Italian style of opera After Verdi, exotic influences become more important Verdi greatly admired Meyerbeer, however, and was somewhat influenced by French grand opera He also composed the *Hymn of the Nations* (1862), a great requiem (1874) in memory of the poet Manzoni, and some church music See biographies by Francis Toye (1931) and Dyneley Hussey (1940)

verdict, official decision of a JURY respecting questions of fact which the judge has laid before it Most verdicts must be unanimous, but in some states (e g , New York) agreement of five sixths of the jurors is sufficient in certain civil cases. The jury may be instructed to render a general verdict, a special verdict, or both. A general verdict answers the question whether there was an occurrence of the factual conditions which the judge defined as necessary for a given violation of the criminal or civil law The verdict returned in such cases is "guilty" or "not guilty" (or the equivalent) A special verdict answers a specific question, e g , did a deceased person die naturally or by violence? If the jury is required only to return a special verdict the judge must himself decide whether the law was violated. Perhaps the most usual case in which a jury returns both a general and a special verdict is in civil suits where the defendant's guilt or innocence is determined generally and the amount of the plaintiff's damages, if any, is set In civil suits the judge may often modify or set aside verdicts In criminal cases, however, a verdict of not guilty cannot be modified, and the accused must be discharged; the judge may in certain circumstances disregard a verdict of guilty.

verdigris (vûr'dĭgrēs), grayish-green to greenish-blue substance formed on the surface of copper plates which have been treated with acetic acid Chemically, it is a basic acetate of copper or a mixture of copper acetates, the color of the deposit depending upon its chemical nature It is poisonous, and care should be taken when copper vessels are used in cooking acid foods (e.g., tomatoes) which may bring about its formation (for antidote, see POISONING, table). It is sometimes used as a pigment in green paint and as a mordant in dyeing and in calico printing and is used also in medicine

Verdun (vûrdŭn'), city (pop 67,349), S Que , on the south shore of Montreal island, inc 1912. It is a residential suburb of Montreal

Verdun (vĕrdŭn', vär'dun, Fr vĕrdŭ'), fortified town (pop 12,948), Meuse dept , NE France, in Lorraine, on the Meuse river An episcopal see since the 4th cent , Verdun and the surrounding country was one of the three bishoprics (with Metz and Toul) that Henry II acquired (1552) from the Holy Roman Empire The town itself was a free imperial city before it passed to France The Peace of Westphalia (1648) confirmed Verdun in French possession After 1871 Verdun was made the principal French fortress facing Germany and was surrounded by a ring of defenses Here the longest and bloodiest battle of the First WORLD WAR was fought, 2,000,000 men were engaged, 1,000,000 were killed The battle opened on Feb 21, 1916, with a terrific German offensive, commanded by Crown Prince Frederick William DOUAUMONT was taken in four days, VAUX fell on June 8, but Verdun itself repulsed all assaults "They shall not pass" was the phrase that rallied the French, under PÉTAIN and Nivelle, to their desperate resistance A British offensive on the Somme relieved the immediate pressure on Verdun, and by Dec., 1916, the French had recovered most of the ground lost In 1918 the Americans and French were victorious in the Verdun sector and at SAINT-MIHIEL The town, virtually destroyed, was largely rebuilt after the war In the Second World War, Verdun fell, almost without notice, to the Germans in 1940 and to the Americans in 1944 The Romanesque cathedral (11th cent) was slightly damaged The city and the battlefield of Verdun, with their huge military cemeteries and numerous impressive monuments, form a national sanctuary.

Verdun, Treaty of, the partition of Charlemagne's empire among three sons of Emperor LOUIS I It was concluded in 843 at Verdun on the Meuse or, possibly, Verdun on the Doubs, Saône-et-Loire dept , E France LOUIS THE GERMAN received the eastern portion (later Germany), CHARLES II (Charles the Bald) became king of the western portion (later France), LOTHAIR I kept the imperial dignity and received the central portion (Low Countries, Lorraine, Alsace, Burgundy, Provence, and Italy) Though superseded in 870 by the Treaty of MERSEN, the Treaty of Verdun was a crucial moment in European history For the 11 subsequent centuries European unity was destroyed and wars were fought over the possession of Lothair's lands.

Vereeniging (vûrā'nĭging) [Afrikaans, =union], city (pop 40,455), S Transvaal, Union of South Africa, on the Vaal river Here, in 1902, the treaty ending the South African War was signed Vereeniging, in the largest coal-producing area of South Africa, manufactures iron and steel products

Veregin or **Verigin, Peter** (vĕr'ŭgĭn), d 1924, leader of the Dukhobors in Canada, b Russia About 1903 he came to Canada to assume control, both spiritual and temporal, of the Dukhobor settlements which had a little earlier been established in Saskatchewan He guided his people successfully, and their colonies spread into British Columbia He was killed when a time bomb exploded under his seat in a railroad train His son, Peter Veregin (1885–1939), succeeded him in 1927 as leader of the Canadian Dukhobors See J F C Wright, *Slava Bohu the Story of the Dukhobors* (1940)

Vérendrye, Pierre Gaultier de Varennes, sieur de la (pyĕr' gōtyā' dù varĕn' svûr du lä vărâdrē'), 1685–1749, explorer in W Canada and the United States, b Trois Rivières (Three Rivers), Que His father was the sieur de Varennes, for a time governor of Trois Rivières Pierre entered the French colonial army and served in the French and Indian Wars and for a time (1707–11) in Europe in the War of the Spanish Succession In 1727–28 he was a figure in the extension of New France on its far frontiers and in the search for an overland Northwest Passage to the Western Sea, when he served as commander of the trading posts on Lake Nipigon In 1729 he returned to Quebec and sought to secure official permission and aid in an expedition to search for the Western Sea Obtaining a monopoly of the fur trade in the West, but no financial support, he entered into partnership with some Montreal merchants and set out in 1731 with three sons, Jean Baptiste, Pierre, and François, and a nephew, La Jeremaye The party founded a number of posts—one on Rainy Lake, Fort St Charles on the Lake of the Woods; and Fort Maurepas, which was at first on Red River and later on Lake Winnipeg He returned to Quebec in 1734 but came back to the West with still another son, Louis Joseph In the years that followed the Vérendryes continued to explore in the hope of reaching the Western Sea The eldest of the sons, Jean Baptiste, was killed (1736) by the SIOUX The year 1738 saw Vérendrye's memorable journey from the Assiniboine river to the Missouri river, where he visited the Mandan Indians He returned to Fort La Reine on the Assiniboine, and it is said that he discovered Lake Manitoba in 1739 The most-discussed voyage undertaken by the Vérendryes was that of 1742–43, which was accomplished by two of the sons, probably Louis Joseph (who is generally agreed to have been the son known as the Chevalier) and François They made a fairly long journey westward, but because of the difficulty of identifying places and Indian tribes, there is no certainty at all as to their route The earlier hypotheses were shaken when in 1913 some school children discovered near Pierre, S Dak , the lead plate which had been buried by the explorers when they reached the Missouri on their return Chiefly because of this discovery, it is now generally thought that the journey did not extend farther west than the Black Hills The elder Vérendrye next sent out an expedition that went to the Saskatchewan and also founded two forts—Dauphin and Bourbon—on Lake Winnipegosis, probably in 1741 Just how far the explorers in this region went it is impossible to say, they may have entered Wyoming In 1744 Vérendrye was retired and replaced as commander in the West In 1749 he was again appointed to that post, and he was given the Cross of St Louis He died before he could accomplish anything further in exploration His sons wished to continue the work but received no government aid *The Journals and Letters of Pierre Gaultier de Varennes de la Verendrye and His Sons* were edited by Lawrence J Burpee for the Champlain Society (1927) See also Burpee, *Pathfinders of the Great Plains* (1914)

Verendrye National Monument: see NATIONAL PARKS AND MONUMENTS (table)

Vereshchagin, Vasily Vasilyevich (vŭsē'lyĕ vŭsē'lyuvĭch vyĕrĭshchä'gĭn), 1842–1904, Russian painter, soldier, and traveler, He is best known for his military pictures, which portrayed war in all its horror and brutality He is also known for his studies of Turkistan and Oriental life and the canvases dealing with Anglo-Indian history His painting is vigorous and robust Among his most famous pictures are *Before the Attack*, *After the Attack*, *The Apotheosis of War*, *Left Behind*, *The Presentation of the Trophies*, *All Quiet at the Shipka Pass*, *the Graves at Shipka*, and *Blessing the Dead* Most of his works are collected in the Tretyakov Gallery, Moscow He was killed in the explosion of the flagship *Petropavlovsk* in the Russo-Japanese War See his autobiography (Eng tr , 2 vols , 1887)

Verga, Giovanni (jōvänˈnē vĕr'ga), 1840–1922, Italian novelist, b Sicily He abandoned the study of law for literature and wrote several novels of passion in the style of the French realists before he adopted the method of his later works These have a style characterized by entire simplicity, strict attention to accuracy, and sympathy with the poverty and struggles of Sicilian peasant folk His naturalistic methods caused the school to be called *verismo*, and he has been compared, not with entire justification, to Flaubert and Zola He is generally recognized as one of the great modern novelists of Europe His works include *Cavalleria rusticana* (1880, Eng tr , with other stories in the same volume, by D H Lawrence, 1928), *I malavoglia* (1881, Eng tr , *The House by the Medlar Tree*, 1890), *Novelle rusticane* (1883, Eng tr by D H Lawrence, *Little Novels of Sicily*, 1925), and *Mastro-don Gesualdo* (1889, Eng tr by D H Lawrence, 1923) The dramatization of *Cavalleria rusticana* was produced in 1884, Mascagni's opera based on it, in 1890 A stage version of *La lupa*, one of his best stories, was produced in 1896 (Eng tr , *The Wolf Hunt*, 1921) See prefaces to the translations by D H Lawrence, T G Bergin, *Giovanni Verga* (1931)

Vergani, Orio (ōˈryō vĕrgäˈnē), 1899–, Italian novelist and poet His work may be classed as modernistic realism Among his writings is the novel *Poor Nigger* (1928, Eng tr , 1930)

Vergennes, Charles Gravier, comte de (shärl' gravvä' kōt' dù vĕrzhĕn'), 1717–87, French statesman After serving as ambassador at Trier, Constantinople, and Stockholm (where he participated in the coup d'état of 1772 that made Gustavus III absolute monarch), he was made (1774) foreign minister by Louis XVI He supported the American Revolution, at first secretly through BEAUMARCHAIS, then officially, after signing, with Benjamin Franklin, the alliance of Feb 6, 1778 Vergennes was the chief French representative in negotiating the peace settlement between Great Britain and the United States, France, and Spain (see PARIS, TREATY OF, 1783). He also assisted in negotiating the Treaty of Teschen (1779) between Austria and Prussia at the close of the War of the Bavarian Succession See J J. Meng, *The Comte de Vergennes* (1932)

Vergennes (vûrjĕnz'), city (pop 1,662), W Vt., S of Burlington and on Otter Creek, 7 mi. from Lake Champlain, set off from neighboring towns 1788, inc as a city 1794 It is the trade center of a dairy-

ing region. From the first settlement (by Donald McIntosh, a Scot, 1766) until the rule of the Green Mountain Boys was fully established, the New York and New Hampshire Grants claimants struggled over this area Macdonough's fleet was built here, in the War of 1812. The city is the seat of a state industrial school. In 1937 Indian artifacts were excavated here.

Vergil or **Virgil** (Publius Vergilius Maro) (both: vûr'jĭl), 70 B C.–19 B C , Roman poet, b Andes dist., near Mantua, in Cisalpine Gaul. Vergil's father, a farmer of the yeoman class, began his son's formal education at the age of 12, when, it seems, the boy was taken to Cremona Thereafter he continued his studies in Milan, Naples, and Rome The poet's boyhood experience of life on the farm was an essential part of his education, and to him always the good life was most accessible to the yeoman farmer After his studies in Rome, Vergil is believed to have lived with his father on the farm for about 10 years, engaged in farm work, study, and writing poetry In 41 B C the farm was confiscated to provide land for soldiers Vergil and his father found a little home in the country, probably through the generosity of a friend Vergil went to Rome, where he became a part of the literary circle patronized by Maecenas and Augustus and where his *Eclogues*, or *Bucolics*, were completed in 37 B C In these poems he idealizes rural life in the manner of his Greek predecessor Theocritus From the *Eclogues* Vergil turned to rural poetry of a contrasting kind, realistic and didactic In his *Georgics*, completed in 30 B C , he seeks (as had the Greek Hesiod before him) to interpret the charm of real life and work on the farm His matchless response to his theme and his perfect poetic expression give him the first place among poets of the world in verse of this kind For the rest of his life Vergil worked on the *Aeneid*, a national epic, narrating the adventures of AENEAS (see also AENEID) The misfortune of this great epic is that comparison with Homer (to whom Vergil frankly owes much) is inevitable, and Homer's preeminence in the epic is unquestioned Nevertheless, the *Aeneid* is unquestionably one of the greatest masterpieces of world literature Vergil's fatal illness prevented him from giving the *Aeneid* the final revision that he thought necessary, and he would have burned the manuscript but for the command of Augustus Vergil is the dominant figure in all Latin literature His influence continued through the Middle Ages, when Dante chose him as master and guide and when he was held, despite his paganism, to be a sinless magician Many poets since Dante have acknowledged their great debt to Vergil Minor poems ascribed to Vergil are of doubtful authorship and are not essential to his record The spelling Virgil is not found earlier than the 5th cent A D There are many English translations of Vergil See D L Durling, *Georgic Tradition in English Poetry* (1935), biographical studies by Tenney Frank (1922), F W Jackson Knight (1944), and F H B Letters (1946)

Vergil or **Virgil, Polydore** (pŏ'lĭdôr"), 1470?–1555?, historian and humanist, b Urbino, Italy He studied at Bologna and Padua, served as secretary to the duke of Urbino, was chamberlain to Pope Alexander VI, and was sent to England as subcollector of Peter's pence in 1501 or 1502 He secured the patronage of Henry VII, held many ecclesiastical preferments, and was naturalized in 1510 In 1515 he was briefly imprisoned for his criticism of Thomas Wolsey Vergil remained largely aloof from the religious controversies of the time He returned to Italy a few years before his death His chief work was his *Anglicae historicae libri XXVI* [26 books of English history] (1534), augmented in later editions A careful work, it is especially valuable for the reign of Henry VII He also wrote *Proverbiorum libellus* (1498), called in English *Proverbs*, a collection of Latin proverbs antedating that of Erasmus, *De rerum inventoribus* (1499), called in English *Inventions*, and other lesser works

Vergniaud, Pierre Victurnien (pyĕr' vĕktürnyĕ' vĕnyō'), 1753–93, French revolutionist A brilliant lawyer, he came before the public eye in 1790, when he defended peasants who had burned a castle. Elected as a deputy from the Gironde, he was the leader of the GIRONDISTS and one of the greatest orators of the French Revolution One of his most noted speeches was his address in favor of beginning the war He led the fight against the MOUNTAIN and Robespierre He fell with the Girondists and was guillotined See Henri Béraud, *Twelve Portraits of the French Revolution* (1928)

Verhaeren, Émile (āmēl' vărărĕn', vŭrhä'run), 1855–1916, Belgian poet, a Flemmg who wrote in French. His dominant passion for social reform found expression successively in a naturalistic disgust with men, in pessimism over the growth of urban industrialization, and finally in optimistic glorification of the ever-renewed creative forces of life, wherein he saw the hope of the exploited. His war poems are superior in their genre Verhaeren's feverishly imaginative lyric style has certain analogies with the style of the SYMBOLISTS, with whom he has been sometimes classed. The poet's work is immense; representative volumes are *Les Villages illusoires* [illusory villages] (1895), *Les Villes tentaculaires* [grasping cities] (1895), *Heures claires* (1896, Eng tr , *The Sunlit Hours*, 1916), love poems (Eng tr , *The Love Poems of Emile Verhaeren*, 1917), *La Multiple Splendeur* (1906), and *Les Aubes rouges de la guerre* [the red wings of war] (1917). His dramas are vigorous, the masterpiece is perhaps *Hélène de Sparte* (1912, Eng. tr , *Helen of Sparta*, in *The Plays of Emile Verhaeren*, 1916) Selections of Verhaeren's poems translated by Alma Strettel appear in *Poems of Emile Verhaeren* (2d ed , 1915) See studies by Stefan Zweig (1914) and P Mansell Jones (1926)

Verigin, Peter see VEREGIN, PETER

Verkhneudinsk, RSFSR see ULAN-UDE.

Verkhoyansk (vûrkĭôyänsk', Rus vyĕrkhŭyänsk'), town (1939 pop over 500), N Yakut ASSR, RSFSR, in N Siberia, N of the Arctic Circle A fur-trading post, it lies in the coldest area of the earth, the lowest temperature recorded was −92°F Founded in 1638, it was formerly a place of exile

Verkhoyansk Range, mountain chain, NE Yakut ASSR, RSFSR, in N central Siberia It forms a vast arc along the Lena and Aldan rivers and rises to 8,000 ft in the south There are coal, silver, lead, and zinc deposits

Verlaine, Paul (pôl' vĕrlĕn'), 1844–96, French poet His life was one of wretchedness and degradation He gained some notice with the Parnassian poetry of *Poèmes saturniens* (1866) and *Fêtes galantes* (1869) and became a figure in the bohemian literary halfworld of Paris His marriage ended in misfortune, and Verlaine went to England and Brussels with his protégé, the young RIMBAUD The fantastic life of the two ended in tragedy when Verlaine shot and wounded Rimbaud and was, in consequence, imprisoned in Belgium for two years In prison he was brought back to the Catholic faith of his childhood and wrote some noble religious poetry which appeared in *Sagesse* (1881) From this time also dates his *Romances sans paroles* (1874), which shows Verlaine as one of the first of the SYMBOLISTS. The sensitive appreciation of the common incidents and sights of life, the peculiarly haunting and simple music of his verse, joined with the melancholy, morbid, and unreal disillusion of the decadents, mark his poetry, but more striking than the emotionalism and sensuality of the group is the distinctive and childlike candor of Verlaine himself Through the degrading incidents of his later life which was surrendered to drunkenness, poverty, and debauchery, he preserved his honesty and inverted naïveté *Jadis et Naguère* (1884) and *Parallèlement* (1889) were perhaps the best of his later volumes of poetry Of his prose works the only one of importance is *Les Poètes maudits* (1884), sketches of his fellow symbolists, particularly Mallarmé and Rimbaud In translation, Verlaine's verse loses much of his original (and unorthodox) phraseology and its onomatopoeic music (exemplified in the well-known "Il pleure dans mon cœur" from *Romances sans paroles*) Remarkably fine translations of some lyrics were made by Arthur Symons and Ernest Dowson, and many poems were translated by Gertrude Hall (1912) and by C F MacIntyre (1948) Edmond Pelletier and François Coppée helped to secure after Verlaine's death a truer appreciation of his genius See studies by Stefan Zweig (1913), Wilfrid Thorley (1914), and H G Nicolson (1921)

Vermandois (vĕrmädwä'), agricultural region and former county, N France, now in Somme and Aisne depts Saint-Quentin was the capital An important fief, Vermandois was annexed (c 1200) to the French crown by Philip II, ceded to Burgundy in 1435, recovered by Louis XI in 1477, and incorporated into the province of PICARDY

Vermeer, Jan or **Johannes** (vurmār', Du yän' vurmār', yōhä'nus), 1632–75, Dutch genre and landscape painter He was born in Delft, where he studied with Fabritius and spent his entire life He was also known as Vermeer of Delft and as Jan or Johannes van der Meer In 1653 he married. In the same year he was admitted to the painters' guild, of which he was twice made dean He enjoyed only slight recognition during his short life, and his work was forgotten or confused with that of another during the following century Today he is ranked among the greatest of the Dutch masters and as one of the greatest of all colorists His favorite subjects were intimate interiors, often with the solitary figure of a woman. These little pictures are very bold in design, often obviously geometrical, but are painted with almost mirrorlike naturalism No painter has depicted more exquisitely the subtle gradations of light Vermeer worked long over his pictures, and they are rare and highly prized Only about 38 paintings can be attributed to him with any certainty Among them are *The Milkmaid* and *The Letter* (Rijks Mus.); *Artist and Model* (Vienna), *View of Delft* (The Hague), *Soldier and Laughing Girl* (Frick Coll , New York), *Young Woman with a Water Jug* (Metropolitan Mus); *Young Girl with a Flute* (National Gall. of Art, Washington, D C.); *The Concert* (Gardner Mus., Boston). See study by P. L. Hale (1937); *The Paintings of Jan Vermeer* (1941).

Vermeylen, August (ou'gôst vĕrmī'lün), 1872–1945, Flemish novelist, leader in the Flemish literary revival. He was the chief of the founders of the journal *Van Nu en Straks* (1893–94, 1896–1901), the most influential force in the revival His principal novel is *De wandelende Jood* [the wandering Jew] (1906). See Jethro Bithell, *Contemporary Flemish Poetry* (1917).

Vermigli, Pietro Martire (pyĕ'trō märtē'rā vĕrmē'lyē), 1500–1562, Italian Protestant reformer. He is commonly called simply Peter Martyr He joined the Augustinian canons, and in that order as a scholar and preacher he received high honors At Naples he was influenced by Juan de VALDÉS, and, accused of heresy, he was forbidden to preach for some time In 1541 he was appointed to the important position of prior at Lucca, where he became the center of a group known as the Lucchese Reformers Vermigli began to present publicly his Protestant views in such doctrinal matters as interpreting the Eucharist solely as a spiritual remembrance Threatened with arrest, he fled to Pisa, to Switzerland, and then to Strasbourg At the invitation of Archbishop CRANMER, he went to England, where he was professor at Oxford from 1547 until the restoration of Catholicism by Queen Mary in 1553 While there he had some influence on episcopal changes and was consulted about the revision of the Book of Common Prayer Vermigli returned to Strasbourg as professor until he went to Zurich, where he was professor of theology from 1556 until his death He was a Protestant representative at the unsuccessful attempt at Catholic-Protestant unity at the Colloquy of POISSY (1561) Vermigli's works were widely read and were influential in developing a Protestant theology.

Vermilion (vurmĭl'yun), town (pop 1,630), E Alta , on the Vermilion river, E of Edmonton and near the Sask border It has oil production and refining, in an area of mixed farming

Vermilion, village (pop 1,616), N Ohio, near Lake Erie, on the Vermilion river and E of Sandusky, settled c 1810 It is a fishing and resort center

Vermilion, iron range in Minnesota see MESABI

vermilion, vivid red pigment of lasting and durable quality It is resistant to ordinary acids although it is attacked by aqua regia It is a chemical compound of mercury and sulphur and is known as red sulphide of mercury, it was formerly obtained by grinding a pure cinnabar but is now commonly prepared synthetically Vermilion is a good resistant pigment for protecting iron and steel and is therefore used in paints It is commonly adulterated because of its high cost Certain other materials are sometimes called vermilion, among them is imitation vermilion prepared from a combination of red lead or basic lead chromate and certain other chemicals

Vermilion, city (pop 3,324), co seat of Clay co , extreme SE S Dak , E of Yankton, near the Missouri and on the Vermilion river, settled 1859, inc 1873 It is a trade center in rich farm country Fort Vermilion, a fur-trading post, was built near by (1835) The city was the site of an encampment of Mormons (1845–46) on their way to Utah The Univ of South Dakota (see SOUTH DAKOTA, UNIVERSITY OF) is in Vermilion

Vermont (vurmŏnt') [Fr ,=green mountain], state (9,609 sq mi , including 331 sq mi of water surface, 1940 pop 359,231, 1949 estimated pop 369,000), NE United States, in the New England group, admitted 1791 as the 14th state (a free state) MONTPELIER is the capital, BURLINGTON the largest city Vermont is bounded on the north by the Canadian province of Quebec, on the east by New Hampshire (the CONNECTICUT river forms the entire line), on the south by Massachusetts, and on the west by New York (Lake CHAMPLAIN constitutes more than half of this boundary) Its mountains, although often called collectively the GREEN MOUNTAINS, actually consist of at least four distinct groups, all traversing the state in a general north-south direction Largest and most important are the Green Mts proper, which extend from the Canadian border to the Massachusetts line down the center of the state, dividing it into eastern and western sections. Mt Mansfield (4,393 ft.) in this range is the highest peak in the state. The TACONIC MOUNTAINS, occupying the southwestern portion of the state and spilling over into Massachusetts, are the next most important, not only because of their scenery but also because they contain Vermont's important marble deposits East of the Green Mts and extending from the Canadian line to somewhat below the middle of the state are the Granite Hills, so called from the valuable stone they hold The fourth group, sometimes called the Red Sandrock Hills, extend along the Vermont shore of Lake Champlain. In E Vermont there are also isolated peaks or monadnocks not connected with the principal ranges. The rivers of Vermont, the only completely inland state of New England, flow either into the Connecticut or into Lake Champlain. The WINOOSKI, with its course apparently well established before the formation of the

mountains, rises east of the Green Mts and cuts directly through them to Lake Champlain Next to Champlain, Lake MEMPHREMAGOG, forming part of the boundary with Quebec, is the largest lake in which Vermont has a share Lake BOMOSEEN is the largest of some 400 lakes and ponds entirely within the state Vermont has the variable climate of the northeast temperate zone, but low humidity generally prevails Rainfall is abundant but only rarely excessive and has been so neatly distributed over the years that extremes of drought are unknown The length of the growing season varies from 120 days in the Connecticut valley to 150 in the Champlain valley Winter generally brings heavy snows, which usually cover the ground for at least three full months, but with the state's good roads almost always kept clear, this no longer means complete isolation for rural communities Indeed with the tremendous increase in winter sports activities, snow is a positive economic asset Vermont summers are most often beautiful and comfortable, attracting hordes of tourists, vacationers, and temporary residents Catering to their needs and to those of the ski enthusiasts in wintertime is one of the most important industries in Vermont, now indispensable to the economy of the state With its rugged terrain, still heavily wooded, Vermont has a limited area of arable land but is well suited to grazing (the Justin Morgan breed of horses was developed here) Dairy farming (in Vermont there are more cattle than people) has long been dominant in agriculture, and the state ships milk in huge quantities to the great metropolitan markets of Boston and New York Corn, oats, hay, potatoes, apples, and maple syrup (Vermont produces about 40 percent of the nation's annual supply) are the other chief agricultural products From the state's principal manufacturing and processing industries, a diverse group, come machines, machine tools, and allied products, dairy products, woolen, cotton, and knit goods, furniture, lumber, and woodworking products, granite, marble, and other finished stone, and paper and paper products The granite industry is centered at BARRE, while the commerce of RUTLAND earned it the name of the Marble City Other mineral products are lime, talc, slate, and asbestos The first white man known to have entered the area was Samuel de CHAMPLAIN, who, after laying the foundations of Quebec, journeyed south with a Huron war party in 1609 to the beautiful lake to which he gave his name The French did not attempt any permanent settlement until 1665, when they built a fort and shrine to St Anne on the ISLE LA MOTTE at the northern end of Lake Champlain However, this and later French settlements were abandoned, and until well into the 18th cent the region was something of a no man's land Fort Dummer, built (1724) near the site of BRATTLEBORO to protect the frontier towns of W Massachusetts, is considered the first permanent English settlement in what is now Vermont However, Vermont's history may be said to have really begun in 1741, when Benning WENTWORTH became royal governor of New Hampshire According to his commission New Hampshire extended W across the Merrimack river until it met "with our [i e , the king's] other Governments" Since the king had never publicly proclaimed the eastern limits of the colony of New York, this vague description bred considerable confusion By its charter of 1664 New York claimed the Connecticut river as its eastern boundary, which it early modified in the case of the colony of Connecticut (in return for territorial concessions from Connecticut) so that the New York–Connecticut boundary was established as a line 20 mi E of the Hudson river Massachusetts subsequently claimed the northward extension of this New York–Connecticut line as its own western boundary with New York (and eventually made it stick) Wentworth, assuming that the line would be drawn even farther north to mark New Hampshire's western boundary with New York, granted (1749) the township called BENNINGTON (from his Christian name), with the line 20 mi E of the Hudson as its western limit, to a group including his relatives and friends He was promptly informed by Gov George Clinton of New York (father of Sir Henry Clinton) that he had no authority to make such a grant Wentworth thereupon suggested that the matter be referred to the crown. The outbreak of the last of the French and Indian Wars in 1754 briefly suspended interest in the area, but after the British captured TICONDEROGA and CROWN POINT in 1759, Wentworth resumed making land grants He had parceled out, at a considerable profit to himself, a large part of what is now Vermont, then known as the NEW HAMPSHIRE GRANTS, when an order in council (1764) sustained New York's territorial claim E to the Connecticut river. New York immediately tried to assert its jurisdiction over the territory. Wentworth's grants were declared void, and new grants, for the same lands, were issued under title from New York Those who held their lands from New Hampshire naturally refused to budge, and a hot controversy, long in the making, now exploded. Two rival sets of land speculators had most at stake, with the New Hampshire grantees, first on the scene, having the edge over their New York counterparts. Resistance to the Yorkers was strongest in the west, where Ethan ALLEN organized the GREEN MOUNTAIN BOYS New York courts were forcibly broken up, and armed violence was directed against the Yorkers until the outbreak of the American Revolution in 1775 altered the situation The British replaced the Yorkers as the common enemy as Ethan Allen captured Ticonderoga and Seth WARNER took Crown Point At WESTMINSTER in Jan , 1777, Vermont (as its citizens were soon calling the region) proclaimed itself an independent state, and at WINDSOR in July it adopted a constitution, notable chiefly because it was the first in the United States to provide for universal manhood suffrage Thomas CHITTENDEN was elected the first governor The American victory at Bennington in Aug , 1777 (see SARATOGA CAMPAIGN), assured Vermont's new status Chiefly because of the opposition of New York, however, the Continental Congress refused to recognize Vermont as the 14th colony or state Thus rebuffed, Ethan Allen and his brother Ira ALLEN seemed to have entertained the idea of making Vermont a British province, but the final triumph of the Americans at Yorktown in 1781 put an end to this scheme Not until 1791, after many delays and misunderstandings and, most important, after the dispute with New York was finally adjusted (1790) by payment of $30,000, did Vermont enter the Union, the first state to be admitted after the adoption of the Constitution by the 13 original states In the next two decades Vermont had the greatest population increase in its history, from 85,425 in 1790 to 217,895 in 1810 Most of the immigrants came from S New England, as had those of the earliest days, and since the more desirable lands in the river valleys were soon taken up, many of them settled in the less hospitable hills Although agriculture was dominant, the Embargo Act of 1807 gave rise to many small industries here as elsewhere in New England In the unpopular War of 1812 the large-scale smuggling of supplies into Canada, where they were used by the British army, was partially offset by the Vermont-built ships in Thomas McDonough's victorious fleet on Lake Champlain At this early period in its history Vermont, lacking an aristocracy of wealth, was the most democratic state in New England Jeffersonian Democrats, as a matter of fact, held political control for most of the first quarter of the 19th cent Beginning in the 1820s political and social life in Vermont was considerably affected by the activities of those opposed to Freemasonry, and in the presidential election of 1832 Vermont was the only state carried by William Wirt, candidate of the ANTI-MASONIC PARTY. Anti-Masonry agitation expired soon thereafter, to be succeeded by even more vigorous efforts in behalf of another "anti" cause, the one against slavery In the Mexican War, which it viewed as an undertaking solely to increase slave territory, Vermont was a study in apathy, but no Northern state was more energetic in support of the Union cause in the Civil War One of the most bizarre incidents of the war was the Confederate raid (1864) on SAINT ALBANS, which, after the war, also figured in the equally bizarre attempt of the Fenians to invade Canada in the cause of Irish independence For Vermont the post-war period meant another forced readjustment in agriculture In pioneer days most Vermont farms were self-sufficient, a farmer and his family consumed most of what they produced, sold a few surplus products for the little cash they needed, and manufactured at home the miscellaneous articles their lives required Largely because of the rise of manufacturing in the towns and villages early in the 19th cent , which created a demand for foodstuffs from the non-farming population, commercial agriculture supplanted self-sufficient farming Grain and beef cattle became the chief crops for market However, these commodities were soon supplied more cheaply by the rapidly expanding West, especially after the opening of the Erie Canal in 1825 Vermont then turned to sheep raising, with the new woolen textile industry of S New England at hand After the Civil War the sheep industry rapidly declined and eventually passed away, unable to withstand the competition of Western, Australian, and South American wool The rural population also declined after the war, as some veterans followed the large number of Vermonters who had already migrated to the West Others moved to the large industrial cities Abandoned farms, or, more accurately, unoccupied farms, became a common sight, especially in the uplands Foreign immigration, especially of French Canadians, counterbalanced the exodus somewhat The transition to dairy farming in the 20 years following the Civil War staved off a permanent decline in Vermont's agriculture and ultimately brought it to its present generally sound condition In dairying itself, however, it was necessary to make a readjustment. The dairymen, often associated in cooperative creameries, first concentrated on marketing butter and cheese, but again, competition from the West proved too formidable Vermont then developed into the huge "milkshed" for Boston and New York that it is today. The rapid expansion of the summer recreation industry since the beginning of the 20th cent has also proved a great boon for Vermont Through all these changes much in Vermont life has remained stable, but nothing has been so constant as the complete domination of the Republican party Attracted by its original antislavery stand, Vermonters embraced it warmly from the first In Justin S MORRILL and, more recently, Warren R AUSTIN, the state gave the party leaders of national reputation, and the Republican Presidents Chester A Arthur and Calvin Coolidge were born in Vermont The extent of the state's great devotion to the party is indicated by the presidential elections of 1912 and 1936, when, in each case, Vermont was one of two states that voted Republican (the others were Utah in 1912 and Maine in 1936) Vermont rode out the depression of the 1930s in good style, perhaps because it was so experienced in surviving previous economic upheavals Unlike other states, it relied hardly at all on aid from the national government in the crisis While Vermonters were doubtless grateful for Federal flood-control work to prevent any recurrence of a flood such as the disastrous one of 1927, worst in the state's history, they decided (1936) in a popular referendum that they could do without the Green Mountain Parkway which the New Deal proposed to establish Conveying 35,000 acres of Vermont land to the United States was obviously too much for most Vermonters, who apparently had not forgotten the struggle their forefathers waged with the Yorkers to establish clear title to their land Thus rugged individualism was again exemplified during the Second World War when the state vigorously opposed a new Federal flood-control project which would have meant inundating a few of its villages Dorothy Canfield Fisher, Vermont's leading literary figure, has ably interpreted the Vermont character in many of her writings Institutions of higher education are the Univ of Vermont, Burlington, Middlebury College, Middlebury, Norwich Univ , Northfield, Bennington College, Bennington, and St Michael's College, Winooski Park See Abby M Hemenway, *Vermont Historical Gazetteer* (5 vols , 1871), Walter H Crockett, *Vermont, the Green Mountain State* (5 vols , 1921–23), Walter Hard and Margaret Hard, *This Is Vermont* (1936), Harold F Wilson, *The Hill Country of Northern New England: Its Social and Economic History, 1790–1930* (1936), Charles E Crane, *Let Me Show You Vermont* (1937), Federal Writers' Project, *Vermont a Guide to the Green Mountain State* (1937), Matt B Jones, *Vermont in the Making, 1750–1777* (1939), David M Ludlum, *Social Ferment in Vermont, 1791–1850* (1939), Dixon R Fox, *Yankees and Yorkers* (1940), Frederic F Van de Water, *The Reluctant Republic Vermont, 1724–1791* (1941), Charles M Thompson, *Independent Vermont* (1942), Earle Newton, *The Vermont Story a History of the People of the Green Mountain State, 1749–1949* (1949)

Vermont, University of, and State Agricultural College, at Burlington, with land-grant, state, and private support, coeducational, founded by Ira ALLEN, chartered 1791, opened 1800 The college of agriculture (chartered 1864) was united with the university in 1865 There are also colleges of arts and sciences, engineering, and medicine and a school of education and nursing The library, designed by H H Richardson, holds Vermont's largest book collection Of interest are Fleming (art and science) Museum, a seismograph, and a herbarium

vermouth (vûrmo͞oth'), blend of white wines fortified with additional alcohol and flavored with aromatic herbs, spices, and roots It contains up to 19 percent of alcohol Italian vermouth is sweeter and darker than the French Vermouth is taken as an appetizer and is used extensively in the preparation of cocktails and other mixed drinks

Vernadsky, Vladimir Ivanovich (vlŭdyē'mĭr ēvä'nuvĭch vĕrnät'skē), 1863–1945, Russian scientist His outstanding work in mineralogy was followed by contributions to the study of geochemistry, of isomorphism of chemical elements, and of properties of meteorites Vernadsky introduced the method of determining the age of rocks and minerals which is based on the measurable rate of radioactivity He founded and directed the biogeochemical laboratory of the Academy of Sciences, Leningrad, for the study of the role of microorganisms in biogeochemical processes in the earth's crust

Vernal (vûr'nul), city (pop 2,119, alt 5,322 ft), co. seat of Uintah co , NE Utah, in the Uintah Basin, S of the Uinta Mts and N of the Green River, inc 1879 It is a ranching town near Dinosaur National Monument

Verne, Jules (vûrn, zhül' vĕrn'), 1828–1905, French novelist In 1863 he began a series of romances of extraordinary journeys, often placed in a future of "scientific" development, more than 50 of these books appeared, sometimes more than one a year He is especially known to English readers in translations of his *Five Weeks in a Balloon* (1863), *A Journey to the Center of the Earth* (1864), *From the Earth to the Moon* (1865), *Twenty Thousand*

Leagues under the Sea (1870), *The Tour of the World in Eighty Days* (1873), *The Mysterious Island* (1875), and *Michael Strogoff* (1876). Plays and moving pictures have been made from many of his works

Verner, Karl Adolf (vûr'nûr, Dan kärl ä'dôlf vĕr'nur), 1846–96, Danish philologist He was a librarian at Halle, Germany, and a professor at the Univ of Copenhagen from 1888 His fame rests entirely on **Verner's law**, a linguistic phenomenon in the field of ablaut, notably in the Germanic languages Verner's law explained many features of Germanic philology which had been regarded as arbitrary exceptions.

Vernet (vĕrnā'), French family of painters **Claude Joseph Vernet** (klōd' zhôzĕf'), 1714–89, marine painter, b Avignon studied with his father, Antoine Vernet, a decorative painter, and in Rome, where he acquired a reputation. He was summoned to Paris in 1753 and commissioned by the king to paint the famous series of seaports of France of which he finished 15 (Louvre) His son **Antoine Charles Horace Vernet** (ătwän' shärl' ôrăs'), 1758–1835, called Carle Vernet (kärl'), rose to fame under the empire with his drawings of the Italian campaign and his paintings *The Battle of Marengo* (Versailles) and *Morning of Austerlitz* Under the Restoration he was popular as a lithographer and painter of dogs, horses, and scenes of the hunt His son **Émile Jean Horace Vernet** (ămēl' zhă'), 1789–1863, was one of the most popular military painters of the 19th cent He is best known for his decorations of the Constantine Room at Versailles and his *Defense of the Barrier at Clichy* (Louvre)

vernier (vûr'nĕr), an auxiliary scale, either straight or an arc of a circle, designed to slide along a fixed scale Its unit divisions, smaller than those on the fixed scale, permit reading with a far greater degree of accuracy The vernier is attached to the scales of instruments employed for very accurate linear or angular measurements, these include the transit, sextant, quadrant, barometer, compass, and caliper It was devised by a French mathematician, Pierre Vernier (1580–1637), who described it in his *Construction, usage et propriétés du quadrant nouveau de mathématiques* (1631)

vernis Martin (vĕrnē' märtĕ'), name given to the brilliant lacquer process developed by the four Martin brothers (fl reign of Louis XV) and to the numerous products of their art The popularity of lacquers was part of the 18th-century fashion in *chinoiserie*, and the Martins, originally coach painters, became the most skilled of the French craftsmen who attempted imitations of the Oriental originals However, from copies of the traditional Chinese lacquers the Martins (of whom Robert was the outstanding talent) broadened their accomplishments to include grounds of emerald green, lapis blue, yellow, and a bronze green with gold powdering. Upon these were decorations of flowers and fruits and eventually whole mythological and pastoral scenes, while the surfaces were unsurpassed for their exquisite sheen and translucence In 1748 the Martin workshops were classed as a *manufacture royale* The vogue for *vernis Martin* caused it to be applied not only to furniture and such *bibelots* as fans and tobacco boxes, but to sedan chairs and entire rooms Fine examples are in the museums of Paris, and Sans Souci at Potsdam has salons still preserving their lacquer adornments

Vernon, Edward, 1684–1757, English admiral He served in the navy from 1700 and was a member of Parliament from 1722, violently opposing Robert Walpole's government In the War of Jenkins's Ear he commanded the attack on Spanish possessions which he had strongly advocated His seizure of Puerto Bello (which was scarcely defended) was highly acclaimed, but was followed by defeats at Cartagena (1740) and Santiago de Cuba (1741) and by a quarrel with the commander of land forces Both men were recalled (1741), and in 1746 Vernon resigned from the navy Vernon's nickname, "Grog" (from his coat of grogram cloth), was given to the drink of water mixed with rum which he ordered served to his sailors as a form of rationing to curb their drunkenness The practice was later adopted throughout the navy Lawrence Washington, half brother of George Washington, named his estate Mt Vernon for the admiral, under whom he had served See biography by Douglas Ford (1907)

Vernon, city (pop 5,209), S British Columbia, near the north end of **Okanagan Lake** and SE of Kamloops The center of a fruitgrowing area, it has packing and dehydrating plants and woodworking, cement, and electric-appliances industries

Vernon. 1 Town (pop 8,978), N Conn , NE of Hartford, settled c 1726, inc. 1808 It includes ROCKVILLE **2** City (1940 pop 9,277, 1947 estimated pop 12,000), co seat of Wilbarger co., N Texas, near the Pease river and NW of Wichita Falls, inc 1890 Vernon was founded in 1880 on the cattle trail to Dodge City not far from the crossing of the Red and was the roistering trail town until Swiss and Wendish farmers came. Oil was found later, and the city of today handles rich yields of cattle, cotton, small grains, and oil. It is a highway center and has meat packing and other industries.

Vernonia, town (pop. 1,412), NW Oregon, NW of Portland, inc. 1891. It is a lumber center.

Verny, Kazakh SSR: see ALMA-ATA.

Vero Beach (vē'rō), city (pop 3,050), co. seat of Indian River co , E Fla , on Indian River and NE of Lake Okeechobee; founded c.1888, inc. 1919 as Vero, renamed 1925. It is a fishing and bathing resort and an important shipping center for citrus fruit. Near by are the noted McKee Jungle Gardens (opened 1931), an 80-acre botanical tract.

Veroia or **Veria** (both vē'rēä), town, Macedonia, Greece, c 40 mi. W of Salonica It was anciently Berea or Beroea Paul and Silas preached here Acts 17 10

Verona (vûrō'nû, Ital. vārō'nä), city (pop. 84,862), capital of Verona prov., Venetia, NE Italy, on the Adige Its position on the Brenner road to Germany has given it since Roman times commercial and strategic importance Odoacer made it his fortress, Theodoric his favorite residence. The seat of a Lombard duchy, later of Frankish counts, Verona became a free commune in the 11th cent The Veronese League, an alliance of several communes led by Verona, merged with the LOMBARD LEAGUE against Emperor Frederick I EZZELINO DA ROMANO held sway over the city from 1226 to 1259 The strife between Guelphs and Ghibellines which tore Verona in the 13th and 14th cent is symbolized in the story of *Romeo and Juliet* The Ghibelline Della Scala (or Scaligeri) family became lords of Verona in 1277, under Can Francesco (Cangrande) della SCALA the city reached its greatest power His successors gradually lost all possessions until in 1387 Verona fell to Milan Venice conquered Verona in 1405 The city fared well under Venetian rule (1405–1797) In the Renaissance, Verona produced such architects as GIOCONDO and San Micheli and such painters as PISANELLO and Paolo Veronese, who embellished both their native city and Venice In the 19th cent Austria, which then ruled Venetia, made Verona its chief fortress in N Italy Its stranglehold over Venetia was ended only with the Austro-Prussian War (1866) Despite the heavy damage it suffered during the Second World War, Verona retains many ancient monuments These include a Roman amphitheater (the largest except for the Colosseum) now used for opera performances, the Church of San Zeno Maggiore (9th–13th cent), the 12th-century town hall, the famous Gothic tombs of the Scaligeri, an imposing 14th-century castle, and the Renaissance Loggia del Consiglio The Romanesque cathedral (12th–15th cent) was damaged by bombing, the Ponte della Pietra, an early Roman stone bridge, and the pinnacled Ponte Scaligero (1354) were blown up by the Germans in April, 1945 See A M Allen, *History of Verona* (1910)

Verona (vûrō'nû) **1** Borough (pop 8,957), NE N J , NW of Newark near Montclair, inc 1907 Metal powder is made here **2** Borough (pop 4,356), Allegheny co , SW Pa , on the Allegheny river and NE of Pittsburgh, inc 1871 Chemicals and railroad equipment are made here

Verona, Congress of, 1822, last of the European conferences held (at Verona, Italy) under the provisions of the Quadruple Alliance of 1814 The main question debated was the revolution in Spain against FERDINAND VII The congress decided that a French army, under mandate of the Holy Alliance, should suppress the rebellion The decision was protested by the English foreign minister, George CANNING, and led to the growing rift between Great Britain and the other powers

Veronese, Paolo (pä'ōlō vārōnā'zā), 1528–88, Italian painter of the Venetian school Named Paolo Caliari, he was called Il Veronese from his birthplace, Verona He was apprenticed to the painter Antonio Badile His early work was also influenced by Domenico del Riccio, who, like Badile, belonged to the group of Veronese painters that looked to Venice for inspiration The young Veronese was influenced by the art of Mantua, where he saw the works of Mantegna and of the Romans, Primaticcio and Giulio Romano, and by the Brescian artist Il Moretto Under these influences he began to develop his native sense for limpid purity of color and clear differentiation of tones before he went to Venice in 1553 Battista Zelotti, another pupil of Badile, collaborated with Veronese in the execution of much of his early work, such as the frescoes (1551) for the Villa Soranza (fragments preserved in the cathedral at Castelfranco Veneto) At Venice his genius was soon recognized In 1553 and 1554 he worked on ceiling paintings for the ducal palace, including *Age and Youth* and *Hera Presenting Gifts to Venice.* Between 1555 and 1570 he executed many works for the Church of San Sebastiano, including scenes from the life of Esther for the sacristy ceiling (1555), the organ shutters with the scenes of *Christ Healing at the Pool* and the *Circumcision* (1560), and the *Martyrdom of St. Sebastian* and *St Mark and St. Marcellinus Urged to Martyrdom* (1565) in the main choir Shortly before 1560 he executed the *Supper at Emmaus* (Louvre), the first of many religious feast scenes which Veronese interpreted in characteristically secular and decorative manner, giving emphasis to the splendor of color and opulence of accessories. These feast scenes include the *Marriage at Cana* (1562; Louvre); the *Feast in the House of the Pharisee* (c 1570; Milan); and the famous *Feast in the House of Levi* (1573; Academy, Venice) In 1573 the artist was called before the Inquisition because of one of his feast paintings and required to change details objectionable to the court He began work, c 1566 on the fresco decoration of the Villa Barbaro at Maser in Venetia. These exquisitely fresh mythological, landscape, and portrait frescoes stand as testimony of the master's supreme decorative genius In 1576 he painted one of his most famous works, *The Rape of Europa,* now in the ducal palace After the fire of 1577 he was employed in the reconstruction of the ducal palace where he executed the splendid *Triumph of Venice* and *Venice Ruling with Justice and Peace* Veronese ranks among the greatest of the Venetian painters His use of cool, clear color harmonies was distinct from the warmer tonality of his contemporaries Titian and Tintoretto and anticipated the 18th century style, especially of Tiepolo A few of his works are in American collections, including fine allegorical paintings, *Wisdom and Strength* and *Man between Virtue and Vice* (Frick Coll, New York), *Venus and Mars* (Metropolitan Mus.), *Lady with Her Daughter* (Walters Art Gall., Baltimore), and *Rest on the Flight to Egypt* (Ringling Mus of Art, Sarasota, Fla.).

veronica (vurŏ'nĭku) [Latin, probably connected with Greek *Berenice*], relic preserved in St. Peter's Church, Rome It is said to be a veil which a kind woman gave Jesus to wipe his face as he was on the way to Calvary When he gave it back, the cloth retained the print of his face. The woman, often called Veronica, is not listed in official calendars of saints

veronica, plant see SPEEDWELL

Verplanck, Gulian Crommelin (vûrplăngk'), 1786–1870, American author, b New York city, grad Columbia, 1801 He was admitted to the bar in 1807 and took part in politics, writing against the Clinton faction verse satires collected in *The Bucktail Bards* (1819) Verplanck served in the New York legislature and (1825–33) in the U S House of Representatives He was a professor (1821–24) at the General Theological Seminary and wrote *Essays on the Nature and Uses of the Various Evidences of Revealed Religion* (1824) He was associated (1828–40) with William Cullen Bryant and R C Sands in writing the annual *Talisman* Verplanck edited Shakspere's plays (3 vols , 1847)

Verrazano, Giovanni da (jōvän'nē da vĕr" ratsä'nō, vĕr"uzä'nō), c 1480–1527?, Italian navigator and explorer, in the service of France Sailing west to reach Asia, Verrazano explored (1524) the North American coast probably from North Carolina to Maine Possibly he was the first European to enter New York Bay In 1526, or later, sailing from France, he explored the West Indies, where the natives killed him Based on his discoveries, his brother Gerolamo's maps (1529) showed a new concept of North America

Verres, Gaius (gā'ŭs vĕ'rēz), c 120 B C –43 B C , Roman administrator He held various posts before serving as governor of Sicily (73–71 B C) There his corruption and extortion were notable even in an era when corruption among Roman governors was taken for granted He was brought to trial, and CICERO began to issue his thundering Verrine Orations against him Undeniably the trial was a political maneuver to bolster the senatorial party opposing him and undeniably the denunciations by Cicero were highly colored, but no adequate defense could be offered Verres fled to Massilia (modern Marseilles), where he lived until proscribed by Mark Antony in 46 B C

Verrill, Addison Emery (vĕ'rĭl), 1839–1926, American zoologist, b Oxford co , Maine, grad Harvard (B S , 1862) He was professor of zoology at Yale (1864–1907) and curator of the zoological museum (1865–1910) He served on scientific explorations of the U S Fish Commission, investigating and reporting on the marine biology of the Pacific and Atlantic coasts of America and that of Bermuda

Verrius Flaccus (vĕ'rēŭs flă'kŭs), fl 20 B C , Roman grammarian. Little is known of his life A freedman, he was appointed by Augustus to educate his grandsons and died at an advanced age during the reign of Tiberius Of his numerous works, only one, his treatise *De verborum significatu* [on the meaning of words], survives in an abridgment by Sextus Pompeius FESTUS This work is a source of information about Latin grammar and Roman literature, customs and myths.

Verrocchio, Andrea del (ändrā'ä dĕl vĕr-rôk'kyō), 1435–88, Florentine sculptor, silversmith, painter, and engineer, whose real name was Andrea di Michele di Francesco di Cioni He was a leading figure in the early Renaissance, and his workshop was a center for the training of young artists in Florence, among them Leonardo da Vinci and Lorenzo di Credi. Few of his paintings exist. One attributed to him is the *Baptism of Christ* (Uffizi). He studied the goldsmith's craft under Giuliano Verrocchi and sculpture under Donatello As a sculptor he left a variety of masterly performances

Among the earliest works in Florence are the *Boy with a Dolphin* (Palazzo Vecchio) and *David* (Bargello) In 1480 he completed a relief in silver, the *Beheading of John the Baptist*, for the altar in the baptistery (now in the cathedral museum) Another side of his art is seen in his tombs of the Medici (San Lorenzo). But his finest achievements were the bronze group, *Incredulity of St Thomas* (Or San Michele), and the unsurpassed equestrian statue of the *condottiere* Bartolomeo Colleoni in Venice Verrocchio completed the clay model for this, but the statue itself was cast in bronze after his death by Alessandro Leopardi, who added a bronze frieze for the pedestal. In marble and in terra cotta the master made some celebrated portrait busts and beautiful reliefs Works attributed to him are in museums in Paris and London, a painting, *Madonna and Child*, is in the Metropolitan Museum, and three terra cottas are in the National Gallery of Art, Washington, D C

Versailles (vûrsälz', vûrsī', Fr. vĕrsī'), city (pop 63,114), capital of Seine-et-Oise dept, N France, SW of Paris It was an insignificant village when, in 1629, Louis XIII built a hunting lodge there Louis XIV selected the area for the construction of the palace which to the present day has remained the most famous in the world and the model for hundreds of imitations The labor involved (notably the draining and filling of the terrain) was as staggering as the sum it cost (66,000,000 livres) Work was begun in 1661, in 1682 Louis moved his court to Versailles The huge palace, representing the French classic style at its height, is the work of Louis LE VAU, J H MANSART, and Charles LE BRUN, LENÔTRE laid out the park and gardens, decorated with numerous fountains, reservoirs, and sculptures by artists such as COYSEVOX. To supply water for the fountains and other water displays a huge machine was built at MARLY-LE-ROI The park contains two smaller palaces, the Grand TRIANON and the Petit Trianon, and numerous temples, grottoes, and other decorative structures The construction of the château resulted in the growth of the town of Versailles, with numerous governmental buildings and private mansions, it enormously stimulated the trade and industry of the region and made the French court the focal point of Europe Nevertheless, its tremendous cost was greatly resented Louis XV, who was born here, modified the interior of the palace and the park, where he astonished Europe with the lavishness of his fetes The scene of the beginnings of the French Revolution, Versailles ceased to be a royal residence in 1790 (the Tuileries in Paris replaced it in this function) Louis Philippe made it a national monument and museum (containing more than 7,000 paintings) The palace was the scene of the proclamation of the German Empire (1871) and of the Third French Republic and was traditionally used for joint meetings of the two legislative chambers Several important treaties were signed here

Versailles (vûrsälz', vûr-) **1** City (pop 2,548), co seat of Woodford co, N central Ky, W of Lexington, in a region producing bluegrass seed, tobacco, and hemp, founded 1792 Margaret Hall, a school for girls, is here Near by is Pisgah Church (1812) **2** City (pop 1,781), co seat of Morgan co, central Mo, near the Lake of the Ozarks, founded c 1835 It has tourist and farm trade **3** Village (pop 1,711), W Ohio, NW of Piqua, settled 1819, inc 1855 Overalls are made here **4** Residential borough (pop 2,401), SW Pa, SE of Pittsburgh, inc 1892 Pig iron is made here

Versailles, Treaty of, name of several treaties signed in the palace at Versailles, France For the Treaty of Versailles of **1783**, see PARIS, TREATY OF, 1783 The Preliminary Treaty of Versailles of **1871** was signed at the end of the Franco-Prussian War by Bismarck for Germany and by Thiers for France It was ratified (1871) in the Treaty of Frankfurt France ceded Alsace (except the Territory of Belfort) and part of Lorraine, including Metz, to Germany and agreed to pay an indemnity of $1,000,000,000 (5,000,000,000 francs) German occupation troops were to remain until payment had been completed (only until 1873, it turned out, because of French speed in paying) The most important treaty signed at Versailles (in the Hall of Mirrors) was that of **1919** It was the chief among the five peace treaties that terminated the First World War (the other four were Saint-Germain, for Austria, Trianon, for Hungary, Neuilly, for Bulgaria; and Sèvres, for Turkey) Signed on June 28, 1919, by the representatives of Germany on the one hand and by those of the Allies (save Russia) on the other, the Treaty of Versailles embodied the result of the lengthy and often embittered negotiations of the Paris Peace Conference of 1918–19 Germany was not consulted during the negotiations and was merely requested to accept the final terms The outstanding figures in the negotiations leading up to the treaty were Woodrow WILSON for the United States, CLEMENCEAU for France, LLOYD GEORGE for England, and ORLANDO for Italy—the so-called Big Four. Among the chief causes of Allied dissension was the refusal of Wilson to recognise the secret agreements reached by the Allies in the course of the war, the refusal of Italy to forego the territorial gains promised (1915) by the secret Treaty of London, and French insistence on harsh treatment of Germany. Wilson's FOURTEEN POINTS were, in their essence, sacrificed, but his main object, the formation of the LEAGUE OF NATIONS, was embodied in the treaty Italian claims were only partially met in the Treaty of Saint-Germain, and France also was obliged to make some concessions to Wilson's insistence. However, the Senate of the United States refused to ratify the treaty, and the United States merely declared the war with Germany at an end in 1921 The Treaty of Versailles, containing the Covenant of the League of Nations, is a voluminous and detailed document It formally placed the responsibility for the war on Germany and its allies and imposed on Germany the burden of the REPARATIONS payments It contained clauses (never carried out) for the trial of Emperor William II and other major war criminals The chief territorial clauses were those restoring Alsace and Lorraine to France, placing the former German colonies under League of Nations MANDATES, awarding most of West Prussia, including Posnan and the POLISH CORRIDOR, to Poland, establishing DANZIG as a free city, and providing for plebiscites which resulted in the transfer of Eupen and Malmédy to Belgium, of N Schleswig to Denmark, and of parts of Upper Silesia to Poland The SAAR TERRITORY was placed under French administration for 15 years, the RHINELAND was to be occupied by the Allies for an equal period, and the right bank of the Rhine was to be permanently demilitarized The German army was reduced to a maximum of 100,000 men, the German navy was similarly reduced, and Germany was forbidden to build submarines, military aircraft, tanks, and other weapons of aggression Germany, after futile protests, accepted the treaty, which became effective in Jan, 1920 While STRESEMANN was German foreign minister, Germany by a policy of fulfillment succeeded in having some of the treaty terms eased Reparations payments, the most ruinous part of the treaty, were suspended in 1931 and were never resumed In 1935 Chancellor HITLER unilaterally canceled the military clauses of the treaty, which in practice became dead letter A vast literature has been written on the Paris Peace Conference and on the Treaty of Versailles, and controversy continues as to whether the treaty was just, too harsh, or not harsh enough See J M Keynes, *Economic Consequences of the Peace* (1919), Carnegie Endowment for International Peace, *The Treaties of Peace, 1919–1923* (2 vols, 1924), Georges Clemenceau, *Grandeur and Misery of Victory* (1930), Harold Nicolson, *Peacemaking, 1919* (1933), Lord George Riddell and others, *The Treaty of Versailles and After* (1935), J T Shotwell, *At the Paris Peace Conference* (1937), David Lloyd George, *Memoirs of the Peace Conference* (1939), Paul Birdsall, *Versailles Twenty Years After* (1941)

Verschaffelt, Pieter Anton (pē'tur an'tôn vurskha'fult), 1710–93, Flemish sculptor, known also as Pietro Fiammingo [Peter the Fleming] In 1752 he settled at Mannheim, Germany, where he became director of the academy There are his most important works—decorations for the Jesuit church and for the library of the ducal palace and a statue of Elector Charles Theodore In the cathedral at Ghent is his tomb of Bishop Maximilian Antoine van der Noot, in Rome his monument to Pope Benedict XIV He was one of the best-known representatives of the rococo style

Versec, Yugoslavia see VRSAC

versification, principles of metrical practice in poetry In different literatures poetic form is achieved in various ways, but a definite and predictable pattern in the language seems always fundamental In Greek poetry the pattern is in the quantity of the syllables, by which term was meant the duration of the time required to express a syllable Intricate and effective metrical patterns were devised by the Greek poets and adapted by the Romans Greek terminology is still used in the analysis of metrics, although in modern languages stress has been substituted for quantity The line or verse of poetry is a fundamental unit of meter and is divided somewhat arbitrarily into feet according to the major and minor stresses In the familiar mnemonic stanza beginning, "Thirty days hath September," there are four stresses in the first line, there is no unstressed syllable between the second and third stressed ones The types of feet retain the ancient Greek names iambus ⏑–, trochee –⏑, spondee ––, pyrrhic ⏑⏑, anapest ⏑⏑–, and dactyl –⏑⏑ Accordingly the number and the type of feet determine the name of the meter, e g, iambic PENTAMETER, five iambic feet, iambic hexameter (see ALEXANDRINE), six iambic feet, dactylic hexameter, six dactylic feet. A patterned arrangement of lines into a group is called the stanza RHYME, which developed after the classical period, perhaps to reinforce rhythm when the old quantitative verse was no longer used, is an important element in stanzaic structure Rhyme was developed to a high degree in Romance languages, especially in Provençal and French Germanic poetry, entirely unrelated to Greek origins, developed characteristics of its own, which are reflected in modern poetry Anglo-Saxon and Icelandic poetry had strong accents or stresses, usually four to a line, a caesura or definite break in the middle of the line, and a pattern of ALLITERATION, usually of three of the stressed syllables of the line, sometimes of only two Much of Middle English poetry is alliterative verse, while the rest follows the "French" forms of rhyme and rhythm Chaucer is credited with inventing the first characteristically English stanza form, the rhyme royal (see PENTAMETER) Later popular English forms were the BALLAD stanza, the SONNET, and the stanza developed by Edmund SPENSER and called Spenserian Blank verse became the great dramatic line in the 16th cent, and the heroic couplet was the dominant form in 18th-century English verse Modern poets have recognized both the temporal and the stress measures of verse and have experimented with assonance, alliteration, sprung rhythm (see HOPKINS, GERARD MANLEY), and FREE VERSE. See George Saintsbury, *A History of English Prosody* (3 vols, 1906–10), R M Alden, *English Verse Specimens Illustrating Its Principles and History* (1929), G W Allen, *American Prosody* (1935), Karl Shapiro, *A Bibliography of Modern Prosody* (1948).

vers libre see FREE VERSE

vertebral column see SPINAL COLUMN

vertebrate (vûr'tubrāt"), any animal having a backbone or SPINAL COLUMN In the adults of all forms from the bony fish to mammals the backbone consists of a series of vertebrae The subphylum Vertebrata (Craniata) is divided into classes which include fish, amphibia, reptiles, birds, and mammals In addition to an internal skeleton of bone and cartilage or of cartilage alone, vertebrates have a spinal cord, a brain enclosed in a cranium, a heart divided into two, three, or four chambers, and no more than four limbs (variously modified in the different classes) Three subphyla of primitive marine forms (one of which is represented by the lancelet *Amphioxus*) lack a true vertebral column but have a gelatinous rod or notochord In the lowest forms this is present only in the early life stages Together with the Vertebrata these primitive forms comprise the phylum Chordata

vertigo (vûr'tigō), sensations of dizziness and of inability to maintain equilibrium resulting from many causes Rapidly moving objects followed by the eyes, sudden changes in position of the body, looking down from a height, SEASICKNESS, intoxications, injuries and diseases of the brain, and a disorder associated with the auditory nerve, known as Ménière's disease, cause the condition Vertigo is treated by removing the particular cause

Vertue, George (vûr'chōō), 1684–1756, English engraver and antiquary He gained a high reputation as an engraver by his faithful reproductions of the portraits of Sir Godfrey Kneller and other contemporary artists, of whose work he made over 500 plates He also made engravings of British works of art for the Society of Antiquaries His notebooks (now in the British Museum) were used by Horace Walpole in compiling his *Anecdotes of Painting in England* (4 vols, 1762–71)

Vertumnus (vûrtŭm'nus), in Roman religion, god of the harvest He was particularly associated with fruits A harvest festival held in August, the Vortumnalia, was dedicated to him

Verulamium see SAINT ALBANS, England.

vervain see VERBENA

Verviers (vĕrvyā'), town (pop 40,296), Liége prov, E Belgium, E of Liége It produces metal goods and has manufactures of woolen and cotton textiles

Vervins, Treaty of (vĕr'vĕ'), 1598, peace treaty signed at the small town of Vervins, Aisne dept, N France, by the representatives of Henry IV of France and Philip II of Spain It ended the French Wars of Religion by obliging Philip to withdraw his troops from France, thus depriving the Catholic League of Spanish support

Verwey, Albert (al'bĕrt vĕrvī'), 1865–1937, Dutch poet He was professor of Dutch literature at the Univ of Leiden One of the leaders of the 1880 literary revival, he was all his life influential in Dutch letters, especially as a critic

Very, Jones, 1813–80, American poet, b Salem, Mass He was a friend of Emerson and Thoreau and a contributor to the *Dial*, journal of the transcendentalists Emerson helped him edit his somewhat mystical *Essays and Poems* (1839) See biography by W I Bartlett (1942)

Vesalius, Andreas (vĭsā'lēus), 1514–64, Flemish anatomist He made many discoveries in anatomy and became noted as professor of anatomy (1537?–1546?) at the Univ of Padua There he produced his chief work, *De humani corporis fabrica* (1543), based on studies made by dissection and covering the whole field of human anatomy, the notable illustrations are attributed to Jan von Calcar Vesalius's condensation (1543) appeared in English as *The Epitome of Andreas Vesalius* (1949) His work overthrew many doctrines of Galen and directed a storm of criticism against Vesalius He left Padua, becoming physician to Emperor

Charles V and to his son Philip II In 1563 he made a pilgrimage to Jerusalem and on the return voyage died at Zante, Greece See biography by J. M Ball (1910), H W. Cushing, *Bio-bibliography of Andreas Vesalius* (ed by J F Fulton, 1943)

Vesoul (vuzōl'), town (pop 10,744), capital of Haute-Saône dept, E France, in Franche-Comté A large agricultural center, it dates from the 9th cent Fortified many times, it has a long history of sieges and devastations

Vespasian (Titus Flavius Vespasianus) (vĕspā'zhŭn), A D 9–A D 79, Roman emperor (A D 69–A D 79), founder of the Flavian dynasty He came of a poor family and made his way in the army by sheer ability He served in Germany and Britain (where he reduced the Isle of Wight) and was made consul (A D 51), he later was proconsul in Africa under Nero In A D 66 Nero put him in charge of the war against the Jews, and he was in Judaea when the emperor died He recognized Otho and then Vitellius at first, but on his proclamation as emperor by the soldiers, Vespasian set out to make good his claim He seized Egypt, and his friends in Italy helped him Vespasian arrived in Italy late in A D 69 He set about restoring the state and its finances and gave an example of frugal living contrasting greatly with the life of Nero His son Titus, whom he had left to prosecute the Jewish war, destroyed Jerusalem and returned to Rome to enjoy a triumph with his father To commemorate the beginning of an era of peace (which lasted a century) he closed the gates of the temple of Janus and built the temple of Pax He also erected the Colosseum The two external events of Vespasian's reign were the revolt of the Batavi and the administration and campaign of Agricola in Britain Vespasian's sons were Titus and Domitian

vespers (vĕ'spurz) [Latin,=evening], in the Christian Church, principal evening office In the Roman rite, vespers have consisted since the 6th cent of a few prayers, five psalms, a lesson, the *Magnificat*, and an antiphon The Anglican evening prayer, often called vespers, is made up largely from the Roman vespers and complin

Vespers, Sicilian: see Sicilian Vespers

Vespucci, Amerigo (umārē'gō vāspōō'chē), 1454–1512, Italian navigator, b Florence He entered the commercial service of the Medici and in 1492 moved to Seville He accompanied Alonso de Ojeda in 1499, but by agreement the two separated shortly before land was sighted in the West Indies, and Vespucci alone discovered and explored the mouths of the Amazon Subsequently he sailed along the northern shore of South America and among the islands He returned to Spain in 1500, and in 1501 he entered Portuguese service to explore the southern coast of South America Vespucci found the mouth of the Río de la Plata and probably went as far as lat 50° S He explored c 6,000 mi of coast line, but it is in the scientific application of his discoveries that his achievements are remarkable He evolved a system for computing nearly exact longitude (previously determined by dead reckoning), he arrived at a figure for the earth's equatorial circumference only 50 mi short of the correct measurement Vespucci accepted South America as a new continent, not part of Asia Consequently, cosmography was radically altered, and in 1507 with the publication of Martin Waldseemüller's *Cosmographiae introductio* the name America (to honor Vespucci) first appeared as applied to the continent His voyage completed in 1502, Vespucci returned to Spain, where in 1508 he was made chief pilot (pilot major) He died of malaria contracted on his voyages Vespucci's achievements were long belittled by scholars, but the conclusions of Alberto Magnaghi in the 1920s and 1930s have now been widely accepted and the pilot major is given his due An edition of Vespucci's letters and other documents appeared in English in 1894 See biography by Frederick J. Pohl (1944)

Vesta (vĕ'stu), in Roman religion, goddess of hearth and home, identified with the Greek Hestia She was highly honored in every household from remote times to the beginning of Christianity Her temple in Rome, the oldest in the city, contained an undying fire tended by vestal virgins (see VESTAL)

Vest-Agder (vĕst'-ag"dur), county (2,802 sq mi; pop 93,980), S Norway Kristiansand, on the Skagerrak, is the county seat Agriculture, fishing, and lumbering are the chief occupations There are molybdenum mines

vestal (vĕ'stul), in Roman religion, priestess of Vesta. The vestals of the temple in Rome were at first four, then six, in number. They were daughters of the best families, dedicated to the goddess in childhood and trained in obedience and chastity After serving the goddess for 30 years, they were allowed to leave the temple and marry, but they seldom did so Their duties included the preparation of sacrifices and the tending of the sacred fire The vestals had great influence in the state; thus, if they desired some benefit of an officer, they obtained it, and if a vestal requested the pardon of a criminal, he was pardoned According to the historians the penalty for a vestal virgin's breaking her vows was burial alive after a public funeral See T. C. Worsfold, *History of the Vestal Virgins of Rome* (1932).

Vester-. For Swedish place names beginning thus see Vaster-

Vestfold (vĕst'fōl"), county (903 sq mi, pop. 147,555), S Norway Larvik, the county seat, and Tonsberg are the chief cities. The population is seafaring, agriculture, stock raising, lumbering, and fishing are among its other means of livelihood. The region contains zinc deposits

Vestmannaeyjar, Iceland: see Westman Islands.

vestments, garments worn by ecclesiastics in ceremonial functions The cassock, a close-fitting gown buttoning down the front and reaching to the feet, is not a vestment so much as the daily uniform of the Western priest Among most Protestants the vestments are limited to full gowns, much like academic gowns, sometimes with white bands worn around the neck and tied in front Some Anglicans and Lutherans approximate the Roman Catholic use In the Roman Catholic Church the priest's vestments at Mass are the most important They are often elaborately worked and are usually made of linen or silk They have remained largely the same since the early Middle Ages, in origin they are the upper-class "Sunday dress" of the late Roman Empire Certain of them match in color, this "liturgical color" varies according to the day, e.g., white for Easter, red for the Holy Ghost and for martyrs, black for requiem Masses The vestments for Mass are put on over the cassock as follows the amice, a rectangular white strip covering the shoulders and having strings put around the neck, over this the alb, a long white gown with tight sleeves, the girdle, a rope of hemp or linen with tassels, usually white, confining the alb, the maniple (of the liturgical color), a broad band hanging over the left forearm, the stole (of the liturgical color), a long band hanging around the neck and crossed in front, over all the chasuble (of the liturgical color), a cloak with a hole for the head, cut in at the sides to give the arms freedom of action, often covering only the shoulders and reaching only part way down in front and back. Of these the stole is worn uncrossed when the alb is not worn (as when the priest distributes communion), or diagonally from the left shoulder to the right side (by a deacon) The deacon's vestment par excellence is the dalmatic (of the liturgical color), a coat reaching to the knees, with wide, short sleeves The cope is a great cape worn by the priest in processions, in giving absolution to the dead, at benediction, and some other occasions. The vestments proper to a bishop celebrating Mass, in addition to the priest's vestments, are miter, gloves, buskins (stockings), and sandals (slippers) Not properly a vestment but frequently seen in churches is the surplice or cotta, a loose-fitting white linen garment reaching to the waist or knees The only vestment peculiar to the Anglican communion is the chimer worn by some bishops, a black gown with white balloon sleeves of lawn Related to the chimer, but shorter and sleeveless, is the manteletta of Roman Catholic bishops See pallium For bibliography, see liturgy and Mass

Vestris, Lucia Elizabeth (Bartolozzi) (bartōlōt'sē vĕ'strĭs), 1797–1856, English actress and manager, granddaughter of an Italian engraver and daughter of a professor of music and fencing At 16 she married Armand Vestris, a ballet master, who later deserted her She made a debut in Italian opera in 1815, acted at the Comédie Française with Talma, and made her first appearance at Drury Lane in 1820 in James Cobb's *Siege of Belgrade*, a light comedy In the same year she created a sensation when she played in male attire Don Giovanni in a burletta of Mozart's opera, she later played other roles dressed as a man In 1831 Mme Vestris opened the Olympic theater in London and made it famous by her productions of extravaganzas In 1838, after her husband's death, she married Charles James Mathews on the eve of what was to be an unsuccessful American tour and in 1839 assumed management of Covent Garden theater with him Here they produced Shakspearian comedies with attention to text and historical accuracy, collaborated with Boucicault and brought out (1841) his *London Assurance*, and secured the services of the fine stage designer William Roxby Beverley They relinquished the reins at Covent Garden in 1842, and in 1847 they took over the Lyceum, where they produced extravaganzas Mme Vestris was the first woman to be a lessee of a theater See Rosamond Gilder, *Enter the Actress* (1931)

Vesuvius (vĭsōō'vēŭs), Ital *Vesuvio* (vāzōō'vyō), only active volcano on the European mainland, S Italy, near the eastern shore of the Bay of Naples and ESE of Naples The height of the main cone changes after each eruption; the present height (as of 1950) is 3,891 ft The second summit, Monte Somma (3,714 ft), is a ridge which half encircles the cone The sides of Vesuvius are deeply scarred by lava flow, but its lower slopes are extremely fertile and are dotted with villages and covered with vineyards which produce the famous Lachryma Christi wine. The base of the mountain has a circumference of c.45 mi. and is encircled by a railroad A funicular railway reaches almost to the rim of the crater (diameter c.2,300 ft) On the western slope, at 1,995 ft, there is a seismological observatory (built 1840–45). The outline of Vesuvius forms part of the backdrop of Naples; it is often surmounted by a faint plume of smoke. The earliest recorded eruption (A D. 79) was described by Pliny the Younger in two letters to Tacitus, it buried Pompeii, Herculaneum, and Stabiae under cinders and ashes Pliny the Elder was killed by the eruption, which he had come to investigate Frequent eruptions have been recorded since, notably in 512, in 1631, six times in the 18th cent, eight times in the 19th cent (particularly in 1872), and in 1906, 1929, and 1944 The eruptions vary greatly in severity. The fertility of the region is due to the lava.

Veszprém, Hung *Veszprém* (vĕ'sprām), city (pop 21,557), W central Hungary, c 60 mi SW of Budapest Created a bishopric by St Stephen in 1001, it has a cathedral (14th–16th cent) and a museum with an ethnographic collection. The tall minaret is a memento of Turkish rule

Vetch, Samuel, 1668–1732, British soldier and colonial administrator, b. Scotland, educated in Holland. As an officer in a Scottish regiment, he went (1698) to Panama in connection with William Paterson's Darien Scheme, but shortly thereafter settled in North America Author of a plan for capturing French Canada, he was empowered (1709) by the British government to raise troops for the attack He was adjutant general of the expedition which captured (1710) Port Royal (now Annapolis Royal, N S), of the conquered territory, Vetch was military governor (1710–13) and civil governor (1715–17). See biography by J C Webster (1929)

vetch, common name for several weak-stemmed leguminous herbs of the genus *Vicia*, most of which are annuals Common vetch (*Vicia sativa*), also called Oregon or spring vetch, is a purple- or pink-flowered climber native to Europe, where it is grown for fodder It is extensively grown on the Pacific coast and in other sections of the United States for green fodder and hay and as a cover and green-manure crop Hairy vetch (*V villosa*), used almost as widely, is a hardy biennial, with narrower, silvery leaves and blue flowers It grows almost anywhere in the United States and is considered the best legume to plant where red clover does not thrive It is also known as sand, Siberian, Russian, and winter vetch Seed of these two species were imported from Europe when the supply in the United States was inadequate Other species of vetch in cultivation are the bitter (*V ervilia*), purple (*V atropurpurea*), and Hungarian (*V pannonica*) species Inoculating vetch seed with nitrogen-fixing bacteria is recommended when it is to be grown in soil of low fertility In the Middle Western and NW United States certain vetches, including hairy vetch and the narrow-leaf vetch or wild pea, sometimes escape into grainfields, where they cause trouble See also tare See *Vetches* (U S Dept of Agriculture, Farmers' Bul 1704)

Veterans of Foreign Wars, organization created (1899) at Columbus, Ohio, by veterans of the Spanish-American War The organization later admitted veterans who saw action in subsequent wars and U S military expeditions After the First World War, the Veterans of Foreign Wars, successful in promoting solidarity among its members, sought to rival the American Legion in size and influence At the close of the Second World War, the V F W vastly increased its membership, besides advocating numerous benefits for veterans, the organization took a firm stand on several political issues The V F W supported the United Nations, universal military training, curtailment of the American Communist party, and several domestic reforms

veterinary medicine, diagnosis and treatment of diseases and injuries of animals An early interest in caring for animals is evidenced in ancient Greek writings on medicine. Through many centuries, the importance of the horse in war and peace led to special care of the animal Horseshoers (farriers) often had the skill of veterinarians and were frequently sought when medical care was needed (The term *farrier* was formerly applied to a veterinarian) The distinct profession of veterinary medicine is of recent origin The veterinary art achieved the stature of a science when a pioneer school in the field was established in Lyons, France, in 1761 under royal patronage Not long after, similar schools were established in many parts of Europe In the United States, veterinary schools were established about the time of the Civil War. In experiments with animals veterinary medicine has utilized numerous opportunities to contribute to medical science. Forms of vaccinations, for example, were developed for animals by Louis Pasteur and Robert Koch which were later found effective for man. Veterinarians developed the idea of inspecting meat and milk to prevent the spread of tuberculosis. In the United States there are a number of accredited schools of veterinary medicine affiliated with colleges and universities.

Vetluga (vyĭtlōō'gŭ), city (pop. 6,066), E central European RSFSR. Chartered in 1778, it is a lumber center on the Vetluga river, a left tributary of the Volga used for log driving

veto (vē'tō) [Latin,=I forbid], action of the chief executive in some governments in withholding approval of laws passed by the legislature The veto power of the President of the United States is given him by Article 1, Section 7, of the Constitution, which prescribes the conditions of its use. The President's veto is a qualified or limited one, which may be overridden by a two-thirds vote of the Congress It does not apply to proposed constitutional amendments, questions of adjournment, or concurrent resolutions American states and cities in general have given a like power to their governors and mayors In England the crown has veto power over acts of Parliament, but the power has not been exercised since 1707, under Queen Anne Veto powers were recognized in ancient Roman law but are not generally recognized in modern nations The term *veto* is unofficially applied to the action of any of the five permanent members of the Security Council of the United Nations in casting a negative vote on a proposal, thus blocking action by the Council

Vevay (vē'vē), city (pop 1,209), co seat of Switzerland co , SE Ind , on the Ohio and E of Madison, settled 1796 by Swiss, laid out 1813 Edward Eggleston was born here

Vevey (vŭvā'), town (pop 12,508), Vaud canton, Switzerland, on the Lake of Geneva. It is a resort and has diversified industries

Vexin (vĕksĕ'), region, N France, NW of Paris, along the right bank of the Seine By the Treaty of Saint-Clair-sur-Epte (911) the northern part (Vexin Normand) was assigned to ROLLO of Normandy, the rest (Vexin Français) remained with the French crown These names have been retained Pontoise, Gisors, and Les ANDELYS are the chief towns

Vézelay (vāzulā'), village (pop 460), Yonne dept , N central France Its celebrated abbatial church, built in the 12th cent , was restored by Viollet-le-Duc Here in 1146 St Bernard of Clairvaux preached the Second Crusade, and here Richard I of England and Philip II of France met before beginning the Third Crusade Theodore Beza was born here

Via Appia: see APPIAN WAY and ROMAN ROADS

viaduct (vī'udŭkt") [Latin,=road conveyor], series of bridges or arches over a valley or low ground to carry a highway or railroad It is constructed of wood, iron, steel, stone, or concrete In recent times concrete structures have been reinforced with steel bars The Tunkhannock Viaduct is an example of this type of structure Completed in 1915 on the Lackawanna RR route between Scranton, Pa , and Elmira, N Y , the viaduct is 2,375 ft long and 240 ft high At the time of its construction it was one of the longest concrete bridges ever built Another concrete and steel elevated viaduct is the Pulaski Skyway, 3 mi long, extending from Jersey City to Newark, N J. It was opened to traffic in 1932

Via Mala (vē'u mä'lu), narrow gorge of the Hinter Rhein, a headstream of the Rhine, in Grisons canton, Switzerland It is walled by vertical cliffs 1,600ft high The Spliigen Road is above the gorge

Viana, Charles of see CHARLES OF VIANA

Viardot-Garcia, Pauline (pōlēn' vyārdō'-garsēä'), 1821–1910, mezzo-soprano, b Paris, pupil of her father, Manuel GARCÍA She made her debut in Brussels in 1837, in London in 1839 In 1841 she married Louis Viardot, who then became her manager She created the role of Fidès in Meyerbeer's *Prophète* (Paris, 1849), and Schumann's *Liederkreis*, Opus 24, was dedicated to her She left the stage in 1863 and later taught at the Paris Conservatoire, 1871–75, she composed some songs and operettas Her range was three and one-half octaves

Viareggio (vēärĕd'jō), city (pop 30,384), Tuscany, central Italy, It is a popular bathing resort and fishing center on the Tyrrhenian Sea Shelley's body was cremated here after his death by drowning near La Spezia

viaticum (vīă'tĭkum) [Latin,=provision for a journey], in the Roman Catholic Church, communion given to the dying by a priest who has brought the HOST for the purpose Catholics are obliged to receive the viaticum if they can and to procure it for others The dying person is usually confessed before receiving the viaticum, but he need not be fasting The confession, viaticum, and EXTREME UNCTION are called the last rites of the Church.

Viaud, Julien: see LOTI, PIERRE

Vibert, Jehan Georges (zhäⁿ zhôrzh vēbĕr'), 1840–1902. French genre painter, studied at the École des Beaux-Arts. His small, often satirical pictures, frequently of clerical scenes, were popular Among them are *The Startled Confessor* and *The Reprimand* (both Metropolitan Mus) and *The Schism* (Corcoran Gall)

Viborg (vē'bôr), city (pop 20,084), N central Jutland, Denmark It is a rail and highway junction, and it has manufactures of tobacco, beer, textiles, and machinery Dating from the pagan era, when it was a religious center, Viborg has a fine restored cathedral, founded in 1130.

Viborg, RSFSR: see VYBORG.

Vibo Valentia (vē'bō välĕn'tyä), town (pop. 10,073), Calabria, S Italy, 3 mi from the Tyrrhenian Sea. It was formerly named Monteleone di Calabria Near by are remains of a Greek colony A flourishing Roman town, Vibo was destroyed by the Arabs, and was rebuilt in the 13th cent There are a cathedral, a medieval castle, and the Renaissance Church of San Michele The town suffered repeatedly from earthquakes

vibration, in physics, commonly a kind of motion—a movement first in one direction and then back again in the opposite direction It is exhibited for example, by a swinging pendulum, by the prongs of a tuning fork that has been struck, or by the string of a musical instrument that has been plucked and also by the molecules of any body of matter (see BROWNIAN MOVEMENT) Sound is produced by the vibrations of a body and is transmitted through material media in waves (see WAVE) made up of alternate condensations, i e , a forcing of the molecules of the medium together, and rarefactions, i e , a pulling of the molecules of the medium away from one another In sound the vibration is longitudinal, for the movement is to and fro along the direction which the sound is traveling The frequency of vibration of a sound is a number indicating how many condensations (or rarefactions) of a wave train pass a given point in a second, i e , the number of complete vibrations per second Sound is audible if the frequency falls within certain limits Since the ear is usually not sensitive to frequencies of less than about 20 vibrations per second or more than about 20,000 vibrations per second, sound having a frequency of vibration within these limits is audible and is said to be of audio frequency When a sound wave of one frequency strikes a body which will vibrate in the same frequency, the vibration of the body is called sympathetic vibration A reinforcement of sound resulting from sympathetic vibration is called resonance When the vibrations of a sound-producing body cause another body to vibrate in the same frequency, not normally its own, the vibration is known as forced vibration Light also is propagated in waves, the vibratory movement being, however, a transverse vibration, since the motion is at right angles to the direction that the light waves are taking Heat is commonly defined as the kinetic energy of molecules, i e , as the energy of their continuous vibratory movement

viburnum (vībûr'num) name for plants of the large genus *Viburnum*, shrubs or trees of wide distribution They commonly have showy flat-topped clusters of white flowers in the spring or early summer followed by berrylike fruits, edible in many species The varieties known as snowballs, however, have only sterile flowers that are borne in large rounded clusters Most viburnums are easily cultivated, hardy, and attractive plants widely used in landscaping Some of the better known species are the HOBBLEBUSH, HIGH-BUSH CRANBERRY and its cultivated form the snowball or guelder rose, ARROWWOOD, BLACK HAW, and sheepberry

Vicente, Gil (Port zhēl'vĕsĕnt', Span hĭl' vēcĕn'tā), b 1470 or before, d 1536 or after, Portuguese dramatist and poet Almost nothing is known with certainty of his life beyond the fact that he was attached to the courts of the Portuguese kings, Manuel I and John III, and a few more or less random details recorded in his plays Diligent search among the records has revealed the existence of several men of that name at the period and has thus added to the confusion He may have been identical with, or related to, an accomplished goldsmith attached to the court He wrote entertainments for the court, his dramatic work including masquelike allegories, fantastic sketches, slight farcical interludes, and full comedies and tragicomedies These were written in Portuguese, in Spanish, and in a mixture of the two, and he had considerable influence in shaping the modern Spanish as well as the modern Portuguese theater The works, produced between 1502 and 1536, show the varied influences of the Renaissance in Italy, in Spain, and in France, and Vicente seems to have been a follower of Erasmus Some of the works are profoundly religious, some are satirical, directed at the follies of the court and abuses in the Church, some are homely representations of the Portuguese common man They included a number of the dramatic form of *autos*, such as the *Boat of Purgatory*, the *Boat of Hell*, and the *Boat of Glory* The plays are frequently interspersed with songs, and he is one of the most gifted lyric poets of the period Some of his works were suppressed by the Inquisition, and he passed into semioblivion for some time, but today he is recognized as one of the outstanding literary figures of the Iberian Renaissance.

Vicenza (vēchĕn'tsä), city (pop 48,279), capital of Vicenza prov , Venetia, NE Italy A Roman town, later the seat of a Lombard duchy, it became a free commune and joined (12th cent) the Lombard League It was stormed by Frederick II in 1236 and fell to various rulers until, in 1404, it was annexed by Venice Thanks to Andrea PALLADIO, who was born here, Vicenza became the cradle of the modern interpretation of classical architecture. The basilica, the Loggia del Capitano, the Teatro Olimpico, the Rotonda, the Chiericati Palace (now a museum), all built by Palladio, inspired the Georgian style in England and the Colonial style in the United States The Gothic cathedral (13th cent), almost completely destroyed by bombing in the Second World War, contained frescoes by Bartolomeo MONTAGNA, the foremost painter of the city

Vichy (vēshē, Fr vēshē'), town (pop 29,128), Allier dept , central France, on the Allier river Its hot mineral springs, frequented from Roman times for disorders of the stomach and the liver, have made Vichy the foremost spa of Europe Almost the entire center of the town is occupied by hotels, Vichy water, bottled, is a major export article The town has also given its name to *vichyssoise* soup The **Vichy government** was the government of France set up here by Marshal PÉTAIN in July, 1940, subsequent to the Franco-German armistice of June 22 Its effective control extended only to unoccupied FRANCE and the overseas empire The Third Republic was voted out of existence by a truncated parliament, and a new constitution established a corporative state (see FASCISM) Meanwhile, abroad, Gen Charles de GAULLE had established a Free French committee which was eventually recognized by the Allies as the provisional government of France The Vichy government, which became a German tool in the hands of such men as Pierre LAVAL, Jean François DARLAN, and Jacques DORIOT, made "collaboration" with Germany its chief program, although it never fully satisfied German expectations When the Allies invaded North Africa, Hitler annulled (Nov. 11, 1942) the armistice of 1940 and occupied all France. The Vichy government continued a shadowy existence, eventually fleeing before the Allied advance to Sigmaringen, Germany, where it broke up when Germany fell in 1945

Vicksburg 1 Village (pop 1,774), SW Mich , S of Kalamazoo, inc 1871 It is in a dairy, grain, peppermint, and livestock area and is known for the Egyptian lotuses grown near by The vicinity has Indian garden beds 2 City (pop 24,460), co seat of Warren co , W Miss , on bluffs above the Mississippi at the mouth of the Yazoo river and W of Jackson An important river port, it is the commercial, processing and shipping center for a cotton, timber, and livestock area There was a French fort near here in the early 18th cent , and the Spanish established Fort Nogales here in 1791 The area, known to the English as the Walnut Hills, came into U S possession in 1798 Rev Newitt Vick founded a mission near by c 1812 and in 1819 began laying out lots for a town, Vicksburg was incorporated in 1825 It became a busy river port and in the Civil War was the objective of Grant's VICKSBURG CAMPAIGN River traffic, which fell off greatly in the late 19th and early 20th cent , has been aided by the U S Mississippi River Commission, whose headquarters are at Vicksburg Near by is the U S Waterways Experiment Station In Vicksburg National Military Park (1,323 56 acres, est 1899) are preserved fortifications of the Civil War siege North of the city is a national cemetery (119 76 acres, est 1865) containing the graves of 17,682 Civil War dead

Vicksburg campaign, Nov , 1862–July, 1863 In the Civil War, the control of the Mississippi river was of paramount importance and was hotly contested by Union and Confederate forces Union forces wanted it to split the Confederacy, to sever the South from the Southwest, and to restore free commerce to the politically important Northwest New Orleans and Memphis fell in 1862, but the South still held 200 mi of the river between PORT HUDSON and Vicksburg Early in Nov , 1862, Gen U S Grant, commanding the Dept of the Tennessee, planned a converging assault on Vicksburg Gen W T Sherman led an expedition down the river from Memphis to attack the city from the north, while Grant advanced through Mississippi upon the east Confederate cavalry under Earl VAN DORN and N B FORREST wreaked havoc on Grant's line of communications, forcing him to retreat, and Sherman was repulsed in the battle of Chickasaw Bluffs (Dec 29, 1862) In Jan , 1863, Grant crossed the river and concentrated his army opposite Vicksburg He took over the command of J A MCCLERNAND, who had succeeded Sherman After several unsuccessful experiments to gain an approach to the seemingly impregnable city from the north (Feb –March, 1863), Grant in April began a brilliant movement to take it from the south To divert the attention of the Confederate commander, J C Pemberton, Grant left Sherman before the city and ordered a cavalry raid through central Mississippi He then moved his army below Vicksburg and, with the cooperation of Admiral D D Porter, who had run gunboats and transports down past the fortress, crossed the Mississippi to Brunsburg (c 30 mi S of Vicksburg) On May 1, J A McClernand and J B McPherson defeated the Confederates at Port Gibson, forcing them to abandon their batteries at Grand Gulf, which Grant seized as a base When Sherman joined him on May 7, 1863, Grant left Grand Gulf, marched northeast, and on May 12 defeated the Confed-

erates at Raymond At Jackson (May 14), he met Gen J E Johnston, Confederate commander in the West, who retreated. Turning W towards Vicksburg, Grant defeated Pemberton in successive battles (May 16, 17) at Champion's Hill and at the bridge over the Big Black River, forcing him into the city After two unsuccessful attempts at storming the works, Grant opened siege With the Union forces between them, Pemberton and Johnston were unable to unite, and after about six weeks of gallant resistance Vicksburg's defenders surrendered on July 4, 1863 The consequent fall of Port Hudson a week later placed the Mississippi river entirely in Union hands

Vico, Giovanni Battista (jōvän'nē bät-tē'stä vē'kō), 1668–1744, Italian philosopher and jurist, also known as Giambattista Vico He lived and worked in his native city, Naples, where from 1697 he was professor of rhetoric at the Univ of Naples In 1734 he was appointed historiographer to the king of Naples In the writings of Vico may be found the beginning of modern sociological and anthropological methods Vico attempted to apply to the study of human history the scientific analysis proposed by Francis Bacon Previously history had been written as the biographies of great men or as the development of God's will Vico, with Grotius, accepted the idea that social institutions were human creations and must be explained in terms of living forces Through an analysis of the growth and decline of societies, he developed a cyclical interpretation of civilization Society develops through three periods the Age of Gods (theocracy), the Age of Heroes (aristocracy), and the Age of Men (democracy) Within each period excesses will develop which bring about the collapse of that period, and the cycle continues in a spiraling pattern Vico regarded this development as a law which would operate in all nations In jurisprudence Vico found the same threefold evolution God rules the world through natural laws He gives to all men an innate sense of justice As civilization progresses the concept of law is defined by human reason and consciousness Vico's major theories were developed in a book commonly called *Scienza nuova* (1725), which he revised completely (1730, 1744) His works were long untranslated and recognition of him as a writer of great depth of thought and as the originator of the philosophy of history did not come during his lifetime His influence on such historians as Michelet has been acknowledged He has also influenced modern literature, particularly James Joyce in *Finnegans Wake*, by his belief that the recurrent myth is an expression of the deepest layer of a culture rather than of the conscious mind of an individual poet *New Science* (1948) is a translation of the 1744 edition of *Scienza Nuova* See his autobiography (tr by M H Fisch and T G Bergin, 1944), Robert Flint, *Vico* (1884), H P Adams, *The Life and Writings of Giambattista Vico* (1935)

Vicq-d'Azyr, Félix (fālēks' vēk"-dăzēr'), 1748–94, French comparative anatomist and physician He is noted especially for his studies of the functions of the nervous system and of the flexor and extensor muscles in vertebrates He was a founder (1776) of the Royal Society of Medicine and served as its permanent secretary.

Victor II, d 1057, pope (1055–57), a South German named Gebhard, successor of Leo IX and predecessor of Stephen IX He was related to Emperor HENRY III He became bishop of Eichstätt, NW of Ingolstadt In this see he displayed great energy for reform and diplomatic ability, and before he was 40 he was Henry III's chief adviser In 1054 he was elected to the papacy at Henry's behest Gebhard refused for a year to accept it As pope he zealously supported the reforms of Hildebrand (later GREGORY VII) His legates were sent out especially to reform the clergy and to prevent the alienation of church lands Even from his friend the emperor he insisted on restoration of ecclesiastical property Victor was with Henry III at his death and accepted the guardianship of the young HENRY IV

Victor III, 1027?–1087, pope (1086–87), a Lombard (b. Benevento) named Dauferius, successor of St GREGORY VII and predecessor of URBAN II He entered on the monastic life under the name Desiderius, and in 1055 he joined the community of MONTE CASSINO He rose rapidly in monastic offices and became abbot in 1058 Desiderius was perhaps the greatest of the abbots of his house after its founder He built new buildings, added books to the library, and encouraged the study and industry of his monks. He became widely known through Italy as one of Gregory's reform party and was a recognized mediator in Italian politics. When Gregory died, Guibert of Ravenna was antipope at Rome, and the exiled conclave was protracted Desiderius was elected after a year and accepted 10 months later; in seven weeks he was dead He was beatified in 1887.

Victor, 1766?–1841, duke of Belluno, marshal of France. His original name was Claude Victor Perrin. He rose from the ranks in the French Revolutionary Wars, was briefly governor of Louisiana (1802), and played an important part in the Peninsular War. Joining the Bourbon cause in the first restoration (1814), he followed Louis XVIII into exile during the Hundred Days and later was war minister (1821–23).

Victor. 1 City (pop 1,784, alt c.9,900 ft.), central Colo., WSW of Colorado Springs, in the Cripple Creek gold-mining area, settled c 1892, inc. 1894 **2** Village (pop 1,111), W central N Y., SE of Rochester; inc 1879. Insulators, cider, and food products are made here.

Victor Amadeus II (ämudē'ŭs), 1666–1732, duke of Savoy (1675–1713), king of Sicily (1713–20), king of Sardinia (1720–30) Succeeding his father, Charles Emmanuel II, as duke of Savoy, he found himself caught between the two great European rivals, France and the house of Hapsburg He steered an opportunistic course in foreign policy, guided in part by his desire to rid Savoy of French influence, in part by his appetite for territorial aggrandizement Under French pressure he took (1686) severe measures against the WALDENSES, but in 1690 he joined the League of Augsburg (see AUGSBURG, LEAGUE OF) against Louis XIV and returned to a more tolerant policy at home Though defeated by the French in the War of the GRAND ALLIANCE, he concluded a favorable separate peace in the Treaty of Turin (1696), which restored Pinerolo to Savoy In the War of the SPANISH SUCCESSION (1701–13) he at first sided with France, but changed sides once more in 1703 The French occupied Savoy, but were obliged to lift the siege of Turin after Victor Amadeus and his cousin, Eugene of Savoy, had thoroughly defeated them in 1706 The peace (see UTRECHT, PEACE OF) awarded him Sicily with the royal title and gave him additional territory in N Italy, including Alessandria When the Spanish seized (1718) Sicily, the QUADRUPLE ALLIANCE was formed and humbled Spain. Victor Amadeus in 1720 ceded his claim to Sicily to Emperor Charles VI in exchange for the island of Sardinia and assumed the title of king of Sardinia. He abdicated in 1730 in favor of his son, Charles Emmanuel III

Victor Amadeus III, 1726–96, king of Sardinia (1773–96), son and successor of Charles Emmanuel III He declared war on France in 1792 after French Revolutionary troops had occupied Savoy and Nice With Austrian help he defended Piedmont until 1796, when Bonaparte (see NAPOLEON I) forced him to conclude the armistice of Cherasco His son, Charles Emmanuel IV, succeeded him (see SAVOY, HOUSE OF)

Victor Emmanuel I, 1759–1824, Italian king of Sardinia (1802–21) His brother and predecessor, Charles Emmanuel IV, lost (1798) all his territories save the island of Sardinia to France in the French Revolutionary Wars Victor Emmanuel accompanied his brother to Cagliari, his capital in Sardinia, and succeeded him on his abdication After Napoleon's fall he returned (1814) to Turin, recovered Piedmont, Savoy, and Nice, and received Liguria with Genoa He abolished all Napoleonic reforms and refused to grant a constitution An uprising (1821) in Piedmont, largely the work of the Carbonari, forced him to abdicate in favor of his brother Charles Felix (see SAVOY, HOUSE OF)

Victor Emmanuel II, 1820–78, Italian king of Sardinia (1849–61) and first king of united Italy (1861–78). He fought in the war of 1848–49 against Austria and ascended the throne when his father, CHARLES ALBERT, abdicated after the defeat at Novara With the skillful collaboration of CAVOUR, whom he appointed premier in 1852, he became the symbol and the central figure of the RISORGIMENTO, the national movement for Italian unification While acquiring popularity in his own state through his respect for the constitution and his liberal reforms, he increased Sardinian prestige abroad by taking part in the Crimean War as an ally of France, England, and Turkey. Cavour's interview with Napoleon III at PLOMBIÈRES resulted in the Italian War of 1859, in which France and Sardinia opposed Austria The terrible battle of Solferino was followed by a separate armistice between France and Austria at VILLAFRANCA DI VERONA, Victor Emmanuel was not consulted, but the terms were ratified in the Treaty of Zurich When, in 1860, Tuscany, Romagna, Parma, and Modena voted their union with Sardinia (contrary to the treaty terms), Victor Emmanuel secured French consent to their incorporation in exchange for the cession of Savoy and Nice He favored the expedition (1860) of GARIBALDI into the Two SICILIES and joined forces with Garibaldi after crossing the Papal States and defeating the papal army at Castelfidardo Successive plebiscites in Naples and Sicily and in the Marches and in Umbria (two provinces of the Papal States) favored union with Sardinia, and in 1861 the kingdom of Italy was proclaimed. The capital was transferred from Turin to Florence in 1865. Siding (1866) with Prussia in the AUSTRO-PRUSSIAN WAR, Victor Emmanuel was awarded Venetia in the peace settlement. As long as Napoleon III championed the integrity of what remained of the Papal States, Victor Emmanuel could not complete the process of unification. In 1870, however, on the fall of Napoleon, Italian troops seized the Papal States, and Rome was made the capital of Italy. Pope Pius IX and his successors protested the act, and the Roman Question remained a serious problem until the Lateran Treaty of 1929. The remainder of Victor Emmanuel's reign was spent consolidating the new kingdom. His son Humbert I succeeded him.

Victor Emmanuel III, 1869–1947, king of Italy (1900–1946), emperor of Ethiopia (1936–43), king of Albania (1939–43), son and successor of Humbert I. In 1896 he married Princess Helena of Montenegro. Though the Triple Alliance with Germany and Austria-Hungary was renewed, he sought cordial relations with France and England He favored the war of 1911–12 against Turkey, thus acquiring Libya Though first advocating neutrality, he finally took side (1915) with the Allies in the First World War. He was unable to handle the confused internal situation of ITALY after the war, refused to oppose the Fascist march on Rome, and asked MUSSOLINI to form a government (1922) Under the Fascist regime he was king in name only, but Mussolini's conquests added to his list of titles When the Fascist grand council voted (1943) against Mussolini, the king dismissed the dictator, placed him under arrest, and appointed PIETRO BADOGLIO premier The king fled from Rome to S Italy when German troops occupied his capital after the announcement of the Italian surrender to the Allies. Unpopular because of his long association with Mussolini, he was obliged to renounce (1944) his royal prerogatives in favor of his son, Humbert II, in whose favor he finally abdicated in 1946 He died in exile in Egypt

Victoria, 1819–1901, queen of England (1837–1901) and empress of India (1876–1901) She was the daughter of Edward, duke of Kent (fourth son of George III), and Princess Victoria of Saxe-Coburg Her father died before she was a year old, and she was brought up by her overstrict mother and by her governess, Baroness Lehzen, to whom she was greatly attached. Upon the death of George IV (1830), she was recognized as heir to the throne and was trained as a future ruler by her maternal uncle, Leopold (later LEOPOLD I of Belgium). At the age of 18, she succeeded her uncle, William IV, upon the throne of England With the accession of a woman, the connection between the English and Hanoverian thrones ceased because of the Salic law in Hanover Self-confident and spirited, the young queen asserted her independence of her mother Her counselor was Baron Stockmar, and her first prime minister, Lord MELBOURNE, became her friend and adviser In 1839, when Melbourne's Whig cabinet resigned, Victoria refused to dismiss her Whig ladies of the household, and the Tory leader, Sir Robert PEEL, declined to form a ministry Melbourne thereupon returned to power In 1840 she married her cousin, Prince ALBERT of Saxe-Coburg, a match long planned by her uncle Leopold Albert, with whom she was very much in love, soon became the dominant figure in her life, and their home life was a model of domestic felicity Through Albert's efforts, the queen and the Tories were reconciled by the time Peel became prime minister (1841) Her first child, Victoria, later Empress Frederick of Germany, was born in 1840, and the prince of Wales, later Edward VII, in 1841 Victoria had in all nine children Their marriages and those of her grandchildren allied the English royal house with those of Russia, Germany, Greece, Denmark, Rumania, and several of the German states. At least four months of every year the royal couple spent either at Osborne on the Isle of Wight or at Balmoral Castle in the Scottish Highlands, both built by Albert Albert's (and hence Victoria's) interest in foreign affairs led to friction with Lord PALMERSTON, who served as foreign minister in several cabinets In 1850 the queen sent Palmerston a memorandum outlining her views of the relationship between a sovereign and a foreign minister Her memorandum, however, had little effect In 1851 the royal popularity was increased by the success of the Crystal Palace exposition, which was planned and carried through by Albert In the agitation preceding the Crimean War (1854–56), this popularity was dimmed by mistaken public feeling that Albert was pro-Russian Both Victoria and Albert ardently supported the war after its outbreak, and public confidence was restored In 1857 the queen was able to have her husband named prince consort. After the death of Albert in 1861, Victoria's grief was so great as almost to destroy her popularity She did not appear in public for three years, did not open Parliament until 1866, and only gradually returned to public life. Her reappearance was largely the work of Benjamin DISRAELI, who, together with William GLADSTONE, dominated the politics of the later part of Victoria's reign. Gladstone, in spite of his deference to the queen, was never popular with her. Disraeli, who was adroit in his personal relations with Victoria and paid high tribute to her late husband, was very influential He persuaded her that the prince of Wales, whom she had refused to grant any part in government, should be employed, and in 1875 the prince was sent on a tour of India. In 1876 Disraeli secured for Victoria against great opposition the title empress of India, which pleased

her greatly; she was ardently imperialistic and intensely interested in the welfare of her colonial subjects, particularly the Indians. In Victoria's old age, she was enormously popular. A jubilee was held in 1887 to mark the 50th year of her reign, and at the diamond jubilee of 1897 throngs of people from all over the empire paid enthusiastic tribute to the monarch whose reign was the longest in English history. Her last years were saddened by the South African War (1899–1902). Victoria's reign saw the rise in England of an industrial civilization, accompanied by an extension of political democracy and humanitarian principles at home and by an aggressive imperialism which multiplied Britain's economic importance in the world and made for an intense nationalism. The term "Victorian era" attests the extent to which this honest, conscientious ruler, neither highly intelligent nor imaginative, personified her times. Following as she did a series of rulers who for over a century had been weak, vicious, or unpopular, she restored the influence of the crown as a symbol of public service and imperial unity without disturbing its constitutional position. The literature on her life and reign is extensive, and she has been the subject of several novels and plays. See particularly her letters (for the years 1837–1901, 9 vols., 1907–30), *Letters of Queen Victoria from the Archives of the House of Brandenburg* (1938), *Leaves from the Journal of Our Life in the Highlands* (1868), and *The Girlhood of Queen Victoria* (extracts from her journal, ed. by Lord Esher, 1912); biographies by Sidney Lee (1902), Lytton Strachey (1921), A. A. Ponsonby (1924), E. F. Benson (1935), Edith Sitwell (1936), and Hector Bolitho (1948); J. A. R. Marriott, *Queen Victoria and Her Ministers* (1934).

Victoria (Victoria Adelaide Mary Louisa), 1840–1901, empress of Germany, daughter of Victoria of England. In 1858 she married the German crown prince, later Frederick III. After her husband's death in 1888, she was generally known as the Empress Frederick. Bitterly hostile to Bismarck, she was unable to make her dislike effective. Her letters, a useful source for the period, were published in English in 1929.

Victoria, Guadalupe: see GUADALUPE VICTORIA.

Victoria, Tomás Luis de (tōmäs' lwēs' dā vēktō'ryä), c 1540–1611, Spanish composer. He went to Rome in 1565 to study for the priesthood at the Collegium Germanicum. In 1571 he became music master of the Collegium Romanum, succeeding Palestrina, who may have been his teacher, musical influence is in any case evident in the works of the two men. In 1578 Victoria gave up the position which he had held since 1573 as music master at the Collegium Germanicum to become a resident priest at the Church of San Girolamo, where St. Philip Neri had founded an oratory. He is not known to have written any but sacred compositions. His first book of motets (1572) contains the well-known *O quam gloriosum* and *O vos omnes*. He also composed Masses, canticles, settings of all the hymns for the church year (1581), and settings of the biblical accounts of the Passion. A polyphonic technique equal to any in the Renaissance is used to express a passionate mysticism that is essentially Spanish. In 1594 or 1595 he returned to Spain to be chaplain and choirmaster to Empress Mary (wife of Emperor Maximilian II and sister of Philip II), in whose memory Victoria composed his last and greatest work, *Officium defunctorum* (pub. 1605).

Victoria (vĭktō'rēə), state (87,884 sq. mi., pop. 2,055,252), SE Australia. Melbourne is the capital. It is bounded by New South Wales on the north, the Tasman Sea, Bass Strait, and the Indian Ocean on the south, and South Australia on the west. Victoria is the most densely populated and the smallest state (except Tasmania) of Australia. Over a fourth of the commonwealth population lives in Victoria, which has only a thirty-fourth of the total area of the commonwealth. The Australian Alps and other mountains of the Great Dividing Range traverse the state, rising to 6,508 ft at Mt. Bogong. The climate is generally temperate and pleasant, the Australian Alps are snow-covered from May to September. The large, but frequently dry, rivers such as the Campaspe and Mitta Mitta are important for irrigation purposes. Hume Reservoir on the New South Wales border irrigates an extensive agricultural and pastoral area. The principal products of Victoria are wool, wheat, dairy products, corn, and fruits. The production of gold (discovered in 1851) has declined sharply and is now as limited as the mining of coal. With Port Melbourne and Geelong as the principal ports, the exports consist largely of wool, wheat, textiles, and dairy products. Other centers are Ballarat and Bendigo. Settlements were established at Portland Bay in 1834 and on the site of Melbourne the following year. Known as the Port Phillips District, the area that is now Victoria became part of the colony of New South Wales in 1836. In 1851 the area was separated from New South Wales and constituted a separate colony named Victoria, which was federated as a state of the Commonwealth of Australia in 1901.

Victoria, Brasil: see VITÓRIA.

Victoria, city (pop. 44,068), provincial capital, SW British Columbia, on the southeast tip of Vancouver Island and on Juan de Fuca Strait, inc. 1862. It is the largest city on the island and the major port and business center, with a train ferry to Vancouver and shipping connections to the United States, Alaska, and the Orient. In addition to its importance as the seat of provincial government, it is noted as a residential city because of its mild climate, beautiful scenery, many parks (including Beacon Hill Park), and drives and also as a popular center for American and Canadian tourists. Its industries include sawmills and woodworking plants, canning, varied manufactures, grain elevators, and cold-storage plants. The deep-sea fishing fleet is based here. Founded (1843) as Fort Camosun, a Hudson's Bay Company post, it was later called Fort Victoria. When Vancouver Island became a crown colony, a town was laid out here (1851–52), was named Victoria, and was made the capital of the colony. With the discovery (1858) of gold on the British Columbia mainland, Victoria became the port, supply base, and outfitting center for miners on their way to the Cariboo gold fields. In 1866, when the island was administratively united with the mainland, Victoria remained the capital of the colony and became the provincial capital in 1871. It is the seat of the Dominion Astrophysical Observatory, Victoria College (affiliated with the Univ. of British Columbia), the Royal Canadian Naval Barracks, the provincial Parliament building and library, a provincial museum, a provincial normal school, and a large dominion graving dock. See A. E. Rothery, *Ports of British Columbia* (1943).

Victoria. see HONG KONG.

Victoria or **Ciudad Victoria** (syōōdhädh' vēktō'ryä), city (pop. 19,513), capital of Tamaulipas, NE Mexico. Founded in 1750, Victoria is in a hot, semitropical region at the foot of the Sierra Madre Oriental. It is connected by rail with Monterrey and Tampico and is on the Inter-American Highway. Sugar cane and citrus fruits are the principal products.

Victoria 1 [for Guadalupe Victoria] City (1940 pop. 11,566, 1947 estimated pop. 16,000), co. seat of Victoria co., S Texas, near the Guadalupe river and SE of San Antonio, founded 1824, inc. 1839. The early Mexican town attracted American settlers, and the prosperous American city attracted German immigrants. Victoria in architecture and spirit retains something of a German air. The rich area has cattle ranches, oil fields, and cotton and truck farms, and the city has processing plants, railroad shops, and small industries. In the Second World War it boomed because of military airfields near by. A junior college is here. **2** Industrial town (pop. 1,555), S Va., SW of Petersburg, settled 1909, inc. 1916. It has railroad shops and varied manufactures.

Victoria, Lake: see VICTORIA NYANZA.

Victoria and Albert Museum, in South Kensington, London, opened in 1857 as the South Kensington Museum and renamed when the present building (1899–1901) was completed. Although it originated as a museum chiefly for decorative and applied art, its collections of paintings and sculpture (especially early Italian) are noted. Other collections include ceramics, glass, textiles, medieval enamels, ivories, metalwork, engravings, and furniture. Raphael's cartoons for the Sistine Chapel tapestries are among the most famous treasures. The museum embraces the Royal College of Art, and extensive art library, and the collections of the India Museum, which it absorbed. The present building was designed by Sir Aston Webb. The museum is controlled by the Board of Education.

Victoria Falls, in the upper Zambezi river, on the border of Southern Rhodesia and Northern Rhodesia. The falls (broken by islets) are 1 mi. wide and drop 420 ft. The thick mist and the loud roar produced by the falling waters are perceptible 10 mi. away. The Boiling Pot, the gorge through which the river flows just below the falls, is spanned by a railroad bridge 650 ft. above the water's surface. The falls were discovered (1855) by David Livingstone, who named them for Queen Victoria.

Victoria Harbour, village (pop. 1,026), S Ont., on Georgian Bay and NW of Orillia. It has lumber mills.

Victoria Island, 320 mi. long and 170 to 370 mi. wide, off N Canada, in the Arctic Ocean. It is included in Franklin dist., Northwest Territories. This barren, hilly island, with an area of 80,340 sq. mi., is one of the largest islands of the Arctic Archipelago. It is separated from the Canadian mainland by a series of gulfs and straits. On its southeast coast is Cambridge Bay, a U. S.–Canadian weather station and trading post. The island was discovered by Thomas SIMPSON in his explorations (1836–39) with Peter W. Dease along the Arctic coast and was explored (1851) by John RAE.

Victoria Land, part of Antarctica, S of New Zealand. Bounded on the east by the Ross Sea and on the west by Wilkes Land, it consists of a series of snow-covered mountains, with a high plateau in the interior. It was discovered during the expedition (1839–43) of Sir James Clark Ross; it was formerly also called South Victoria Land.

Victoria Nile, river draining Victoria Nyanza. It flows c. 250 mi. across Uganda to Albert Nyanza, which is one of the sources of the NILE.

Victorian style, in architecture, an eclectic fashion based on revivals of older styles. It is distinguished from its models by excessive and often unjustified decoration. A romantic style on the whole, it glorified the elements of Gothic while confusing them by an overuse of turrets, bays, towers, and other excrescences. The questions of basic design and functional ability were ignored in preference for exterior picturesqueness. Middle-class mansions, outwardly Early English castles, had interiors cut into a multitude of rooms, many of them too small or of awkward shape. While the private Victorian dwelling was based on Gothic models, the public buildings of the time were in imitation of Greco-Roman or Palladian models, though with no attention to the classic proportions. Examples of these are the Birmingham town hall (1834) by J. A. Hansom, the Prudential Building (1879) in Holborn by Alfred Waterhouse, and the Leeds post office (1896). See Rita Wellman, *Victoria Royal* (1939).

Victoria Nyanza (nĭän'zu, nī–), lake, area 26,828 sq. mi., E central Africa. It is bordered by Uganda, Tanganyika, and Kenya. Of the fresh-water lakes of the world, only Lake Superior is larger. Victoria Nyanza is 255 mi. long and 155 mi. wide, and it lies at an altitude of c. 3,725 ft. It is fed by many streams. At the point where it discharges into the Victoria Nile (its chief outlet) the Ripon Falls occur. Ultimately much of the lake's waters go to swell the Nile. There are many small islands in Victoria Nyanza, especially in the north. Steamships regularly make the circuit of the lake-shore towns, including Entebbe. Victoria Nyanza was discovered by John Speke and Richard Burton in 1858, and it was explored in 1875 by David Livingstone.

Victoriaville, town (pop. 8,516), SE Que., on the Nicolet river and N of Sherbrooke, in a dairy and fruitgrowing region. An industrial center, it manufactures furniture, clothing, and bricks.

Victorinus (Caius Marius Victorinus Afer) (vĭktur'-nus), fl. 361, Roman grammarian, b. Africa. He became renowned as a teacher of rhetoric in Rome and as an advocate of Neoplatonism. Becoming a Christian in his later life, he was forbidden to teach by Emperor Julian. His works include a book on definitions, a treatise on Cicero's *De inventione*, an unoriginal grammar, several tracts against Arianism, and some Pauline commentaries. Some hymns and several other treatises have been attributed to him.

Victorville, unincorporated town (pop. c. 2,500), S Calif., N of San Bernardino, in a farm, gold, and granite area. Many early "Western" movies were made here.

Victory of Samothrace: see NIKE.

Vicuña (vĭkū'nu), South American wild mammal (genus *Lama*) of the camel family, smaller than the guanaco and pale fawn in color. It is found in the Andes in parts of Peru, Bolivia, and Ecuador. Reduction of its numbers led to protection by law, but some are still killed for their hides and palatable flesh. Their silky wool is woven into fine cloth.

Vicuña Mackenna, Benjamín (bänhamēn'vēkōō'-nya makā'nä), 1831–86, Chilean historian and journalist. A vigorous opponent of the conservative government of Manuel Montt, he was sentenced to death for his part in the revolution of 1851–52, but escaped and spent some years in exile. He returned to Chile in 1856. He visited Mexico, the United States, and Europe and became a collector of manuscripts on early Chilean history. His historical works, based on immense knowledge and scholarship, number more than 100 volumes and include biographies of Sucre, Bernardo O'Higgins, and Diego Portales and a detailed chronicle of the War of the Pacific.

Vida, Marco Girolamo (mär'kō jērō'lämō vē'da), c. 1490-1566, Italian Latin poet, b. Cremona. He sought an ecclesiastical career and went to Rome, where he joined the humanistic court of Leo X. The pope commissioned him to compose a Christian epic and gave him a priory at Frascati. He became bishop of Alba in 1532. Vida's poem, the *Christiad*, in six cantos, appeared (1535) after Leo X's death, it may now be regarded as a Renaissance *tour de force*. His didactic poems on the silkworm and on chess gained him considerable fame. His most celebrated poem is a long *Ars poetica*, which gained great fame among the later classicists. Vida's Latin is elegant and readable.

Vidal, Peire (pēr' vēdäl'), fl. 1180–1206, Provençal troubadour, b. Toulouse. He began his career at Marseilles, and although he was to return to S France, he soon began his wide travels to Italy, Cyprus, Hungary, Spain, and Malta. Richard I (Richard Cœur de Lion) was one of his patrons. An enthusiastic gallant, he involved himself in numerous escapades. His poems, excellent examples of troubadour love poetry, are notable for their strong personal feeling and simple style.

Vidalia (vĭdāl'yù) **1** City (pop. 4,109), SE Ga., W of Savannah, in a farm area. **2** Town (pop. 1,318),

parish seat of Concordia parish, E La , on the Mississippi First settled c 1800, it was established as Vidalia in 1811. In 1939 the town was moved back from the river when new levees were built

Vidocq, Eugène François (ăzhĕn' frăswä' vēdôk'), 1775–1857, French detective After a career of crime for which he had been imprisoned, he joined the Paris *Sûreté* (1809) as a police spy He became head of the detective branch, but incurred the enmity of his colleagues, and in 1832 he was removed from office on the charge of instigating a crime for the purpose of uncovering it He is the prototype of M Lecoq in the stories of Émile Gaboriau Vidocq's memoirs (4 vols , 1828–29, partial Eng tr by E G Rich, 1935) are thought to be spurious

Vidzeme, Latvia see LIVONIA

Viebig, Clara (klä'ra fē'bĭkh), 1860–, German novelist of the naturalist school In 1896 she married the publisher Fritz Theodor Cohn Among the best of her numerous novels are *Das Weiberdorf* [the women's village] (1900), *Das tägliche Brot* (1900, Eng tr , *Our Daily Bread*, 1909), *Die Wacht am Rhein* [the watch on the Rhine] (1902), *Das schlafende Heer* (1904, Eng tr , *The Sleeping Army*, 1929), *Das Kreuz im Venn* [the cross in Venn] (1908), *Töchter der Hekuba* (1917, Eng tr , *The Daughters of Hecuba*, 1922), and a historical novel, *Der Kampf um die Kelgehasste* [the much-loved man and the much-hated woman] (1936)

Vieira, Antonio (äntō'nyō vyā'ĕru), 1608–97, Portuguese Jesuit pulpit orator and missionary, one of the outstanding literary figures of the 17th cent Born in Lisbon, he was taken as a child to Bahia, Brazil, where he was reared, was educated, and entered the Society of Jesus After Spanish rule was thrown off (1640), he was sent to Portugal as one of the deputation from Brazil to salute the new king, John IV Gaining the favor of the king, he remained as court preacher and was sent on diplomatic missions to various countries of Europe In 1652 he returned to Brazil as a missionary to the Indians of the interior He staunchly championed the rights of the exploited natives and earned the bitter hatred of the aristocracy, who harassed and expelled him Back in Portugal, he was not in favor at the court of Alfonso VI, and he fell afoul of the Inquisition In 1655 he was censured and imprisoned His fortunes rose again with the accession of Peter II He went to Rome and stayed for six years, enjoying his greatest triumphs He was papal preacher of Clement X and the confessor and friend of Queen Christina of Sweden At Rome he pleaded for the persecuted Jews of Portugal His broad humanitarian views and his readiness to excoriate those who opposed his reforms earned him many enemies, who continued to persecute him after he had returned (1681) to Brazil to spend his old age His voluminous and smooth-flowing letters and sermons are couched in spontaneous and classic style, and it is as a writer that he is best remembered today Only rarely did he yield to the stylish floridity of his day, and his gracefulness of phrase was joined to vividness of pictures and noble defense of the oppressed His reputation suffered somewhat at the hands of anticlerical critics, but he is now generally conceded to be the foremost writer of Portuguese prose in the 17th cent and one of the greatest preachers of his day

Vien, Joseph Marie (zhōzĕf' marē' vyĕ'), 1716–1809, French painter A protégé of the comte de Caylus, he early won the Prix de Rome and studied in Italy He was admitted to the Académie royale de Peinture et de Sculpture in 1754 and was a professor there until made director of the Académie de France à Rome in 1775 A precursor of the classical reaction in painting, he is famous as the master and predecessor of David *St Denis Preaching to the Gauls* (Church of Saint-Roch, Paris) is one of his most celebrated paintings

Vienna (vē-ĕ'nu), Ger. *Wien* (vēn), city and autonomous province (409 sq mi , pop 1,731,557), capital of Austria and of Lower Austria It was from the 15th cent the residence of the Holy Roman emperors and after 1806 of the emperors of Austria It is an industrial, commercial, and traffic center, and a melting pot of the Germanic, Slavic, Italian, and Hungarian people and cultures Located in a plain surrounded by the WIENER WALD and the Carpathian foothills, it is an important inland port on the Danube The city is divided into 21 districts grouped roughly in two semicircles around the Innere Stadt, the nucleus Only the district of Floridsdorf, with large oil refineries, is on the left bank of the Danube The western and northwestern districts are residential, industry centers in the east and south with manufactures of machinery, textiles, chemicals, furniture, and food products. Handicrafts (fashion articles, ceramics, and leather goods) occupy a large portion of the population The annual Wiener Messe, an industrial exhibit, attracts buyers from all over the world A Celtic settlement, Vienna, then called Vindobona, became an important Roman military and commercial center, Emperor Marcus Aurelius resided and died here After the withdrawal of the Romans, it rapidly changed hands among the invaders who overran the region. The Magyars, who gained possession of Vienna early in the 10th cent., were driven out by Leopold I of BABENBERG, the first margrave of the Ostmark (see AUSTRIA). The Babenbergs built (1101) a fortress on the KAHLENBERG, several decades later Henry Jasomirgott, first duke of Austria, made Vienna his capital and residence He erected a castle, Am Hof, and dedicated the Church of St. Stephen, now Vienna's famous cathedral The town grew in commercial importance and was chartered in 1221. It was fortified by Ottocar II of Bohemia, who conquered Austria in 1251 and lost it to Rudolf of Hapsburg in 1278 In 1282, Vienna became the official residence of the house of HAPSBURG The city was occupied (1485–90) by Matthias Corvinus of Hungary and was besieged by the Turks for the first time in 1529 In the Thirty Years War, Bohemian Protestants in 1619 and the Swedes under Torstenson in 1645 were easily driven back from its gates In the critical second siege (1683) by the Turks under Kara MUSTAFA and their Hungarian allies under Thokoly, the city, heroically defended by Rudiger von STARHEMBERG, was on the verge of starvation when it was saved by JOHN III (John Sobieski) of Poland Early in the 18th cent a new circle of fortifications was built around the city, including most of the suburbs Many magnificent buildings were erected Johann FISCHER VON ERLACH drew up new plans for the Hofburg (the imperial residence) and built the beautiful Karlskirche, Johann von Hildebrandt designed the Belvedere (summer residence of Prince Eugene of Savoy) and the Kinsky palace, together they planned the Schwarzenberg palace and the winter residence of Prince Eugene Maria Theresa enlarged the old university, founded in 1365, and completed the royal summer palace of SCHONBRUNN, started by her predecessor, Joseph II opened the Prater, a large imperial garden which now contains an amusement park, to the public Haydn, Mozart, Beethoven, and Schubert lived in Vienna and gave it lasting glory In 1805 and in 1809 Vienna was occupied by Napoleon The period of Metternich's reaction and secret police rule which followed the brilliant congress of 1814–15 was enlivened by the waltzes of Joseph Lanner and the Strauss family, the farces of Nestroy, and the comedies of Raimund Grillparzer flourished during these years. The Revolution of 1848, which forced Metternich to resign, had, by October, brought Vienna into the hands of rebellious citizens, but WINDISCHGRÄTZ suppressed the revolutionists and Emperor Ferdinand I abdicated in favor of Francis Joseph The modern city dates from Francis Joseph's reign By 1860 the old ramparts about the inner city had been replaced by the famous boulevard, the Ringstrasse The principal edifices on or near the Ringstrasse are the neo-Gothic Rathaus, with many statues and a tower 320 ft high, the two domed museums of natural history and of art, in Italian Renaissance style, the Votivkirche, one of the finest of modern Gothic churches, the parliament buildings, in Greek style, the palace of justice, the famous opera and the Burgtheater, both in Renaissance style, the Kunstlerhaus, with permanent exhibitions of paintings, the Musikverein, containing the conservatory of music , and the Academy of Art In the late 19th cent and the early 20th cent Vienna flourished again as a cultural and scientific center. Karl Rokitansky, Wagner-Jauregg, and Theodor Billroth worked at the General Hospital, at the same time Sigmund Freud was developing his theory of psychoanalysis Vienna attracted Brahms, Bruckner, Mahler, Richard Strauss, and Arnold Schonberg, who gave it another period of musical greatness. Hugo von Hofmannsthal, Arthur Schnitzler, and Jacob Wassermann dominated the literary scene The First World War hit Vienna hard Starved and torn by revolution (1918), it suddenly found itself the capital of the small republic to which Austria had been reduced In 1922, Vienna became an autonomous province (*Bundesland*) of Austria The highly successful Social Democratic city government headed by Karl Seitz instituted a new program of municipal works In public housing Vienna set an example to the world Model apartment houses for workers, notably the tremendous Karl Marx Hof, began to supplant Vienna's tuberculosis-breeding slums They were badly damaged in the civil war of Feb 1934, which was brought about by the tension between the Viennese Socialists and the clerico-fascistic government of Chancellor DOLLFUSS On March 15, 1935, Adolf Hitler triumphantly entered Vienna, and Austria was annexed to Germany. The large Jewish population (115,000 in 1938), centering mainly in the Leopoldstadt district (designated the official ghetto in the 17th cent) was reduced to a mere 6,000 by 1945, when the Russian Army entered Vienna after a seven-day battle in April. In accordance with the agreements reached at the Potsdam Conference (1945) Vienna was jointly occupied by Russian, French, American and British troops See Richard Kralik, *Geschichte der Stadt Wien* (3d ed., 1933); H. O. Sedgwick, *Vienna* (1933).

Vienna. 1 (vī-ĕ'nŭ, vī'ĕnu) City (pop. 2,063), co. seat of Dooly co., S central Ga , near Cordele S of Macon; inc. 1841. It is a trade and processing center for a farm area producing pecans, fruit, and truck. 2 (vī-ĕ'nu, vī'ĕnŭ) City (pop. 1,173), co. seat of Johnson co., S Ill., NNE of Cairo, in a farm and timber area, inc 1837 3 (vē-ĕ'nŭ) Town (pop 1,237), N Va., W of Washington, D C., inc 1890 4 (vē-ĕ'nŭ) Industrial city (pop 2,338), NW W.Va , near Parkersburg, in a rich truck-farm area; laid out 1774 It manufactures glass, silk, and vitrolite

Vienna, Congress of, Sept , 1814–June, 1815, one of the most important international conferences of European history, called to remake Europe after the downfall of Napoleon I Emperor Francis II (Francis I of Austria) was the host Among the many monarchs that attended the congress the most important were Alexander I of Russia and Frederick William III of Prussia METTERNICH was the chief Austrian negotiator and presided over the congress, Castlereagh and, for a time, the duke of Wellington represented England, the Russian delegation included Nesselrode, Capo d'Istria, and Pozzo di Borgo, among the Prussian diplomats were Karl August von Hardenberg and Karl Wilhelm von Humboldt A peace settlement with defeated France had been reached before the congress convened (see PARIS, TREATY OF, 1814), but France was represented by TALLEYRAND, who by his skillful diplomacy soon obtained an equal voice with the four great victorious powers All other European states, large and petty, that had had legal existence before the Napoleonic upheaval were represented by an army of delegates and agents, but the important work was carried out in committees The problems confronting the congress were extremely thorny and complex, for the French Revolution and Napoleonic Wars had swept away the entire structure of Europe The main principle adopted was that of legitimacy—i e., the territorial and dynastic status prevailing before the French Revolution was to be restored wherever feasible No attempt, however, was made to restore the thoroughly defunct Holy Roman Empire or its several hundred "mediatized" princes, and the GERMAN CONFEDERATION was created instead Major territorial changes were unavoidable, partly because of previous secret agreements reached among individual allies, partly because of the pressure of power politics The principle of national self-determination, though invoked in certain cases, was neglected in practice The congress opened with a round of magnificent balls and entertainments, while its serious business was stalled by intrigues and rivalries Major points of friction were the settlement of the Polish question, the conflicting claims of Sweden, Denmark, and Russia, and the adjustment of the borders of the German states In general Russia and Prussia were opposed by Austria, France, and England, which at one point (Jan , 1815) went so far as to conclude a defensive triple alliance It was not until the shock of the return of NAPOLEON I from Elba had seriously upset all the delegates that the congress began to find a smooth solution for its difficulties The constitution of the German Confederation was accepted on June 8, 1815, and was incorporated into the Final Act of the congress, signed on June 9, nine days before Napoleon's defeat at Waterloo The restoration of Louis XVIII in France and of Ferdinand VII in Spain were confirmed Italy was dealt with as a geographic but not as a political entity, and its hopes for unity were dashed Naples and Sicily were reunited under Bourbon rule, the Papal States were restored, the duchies of Parma, Piacenza, and Guastalla were awarded to Empress Marie Louise for her lifetime, Tuscany and Modena were restored to the house of Hapsburg-Lorraine, the Lombardo-Venetian kingdom was set up under Austrian rule, the formerly Venetian part of Dalmatia also went to Austria Still the nucleus of an Italian state was left in the kingdom of Sardinia, which recovered Savoy, Nice, and Piedmont and received Liguria with Genoa Poland was redivided among Russia, Prussia, and Austria, with Russia benefiting from the territorial changes, part of Poland, with Warsaw, was set up as a kingdom in personal union with Russia, Cracow and its surrounding territory was made a republic under the protection of Russia, Austria, and Prussia The former Austrian Netherlands were united with the former United Provinces as the kingdom of the Netherlands, under the house of Orange England, however, retained the former Dutch colonies of Ceylon and the Cape Colony. Russia retained formerly Swedish Finland The congress confirmed the transfer of Norway from the Danish to the Swedish crown, W Pomerania, the claim to which Sweden had ceded to Denmark in the Treaty of Kiel (1814), was given to Prussia, which compensated Denmark with the duchy of Lauenburg Prussia also received parts of Saxony, Westphalia, and the Rhine Province Bavaria received its approximate present boundaries; as did Württemberg and Baden England retained Malta and Helgoland, made colonial gains in the West Indies at the expense of the Netherlands and of Spain, and obtained a protectorate over the Ionian islands. SWITZERLAND was enlarged and Swiss neutrality was guaranteed.

As regards France, a new peace settlement was reached on Nov. 20, 1815 (see PARIS, TREATY OF) The Final Act of Vienna was subsequently ratified by the powers concerned, but several separate treaties were required to complete the settlement Though the territorial changes did not endure long in entirety, they represented a practical if not always equitable solution and an attempt at dealing with Europe as an organic whole The QUADRUPLE ALLIANCE and the HOLY ALLIANCE, designed to uphold the decisions of Vienna and to settle disputes and problems by means of conferences, were an important step toward European cooperation Serious defects were the disregard of the growing national aspirations and the social changes that brought about the revolutions of 1848, and the failure to include the Ottoman Empire in the settlement and to deal satisfactorily with the Eastern Question See C K Webster, *The Congress of Vienna* (1919), A H Ward, *Period of Congresses* (1919), J G Lockhart, *Peacemakers, 1814–1815* (1932), Guglielmo Ferrero, *The Reconstruction of Europe* (1941), Harold Nicolson, *The Congress of Vienna* (1946).

Vienne (vyĕn), department (2,720 sq mi , pop 313,932), W central France, in POITOU It is traversed by the Vienne river Poitiers is the capital of the department

Vienne, city (pop 19,958), Isère dept , SE France, in DAUPHINÉ, on the Rhone and S of Lyons. It has a textile industry The capital of the Allobroges, Vienne (then Vienna) became one of the chief cities of Roman Gaul, one of the earliest archiepiscopal sees (suppressed in 1790), and the seat of several kings of Burgundy (5th–9th cent , see BURGUNDY, KINGDOM OF) A council held here in 1312 abolished the KNIGHTS TEMPLARS Vienne has an abundance of Roman remains, most of them still buried The temple of Augustus and Livia (c 25 B C) rivals the Maison Carrée of Nîmes Parts of the Church of St Pierre date from the 6th cent The Church of St Maurice (formerly the cathedral) was built in the period from the 12th to the 15th cent

Vienne, river, 230 mi long, W France It rises in the hills of LIMOUSIN and flows W past Limoges, then N through POITOU past Châtellerault and Chinón into the Loire

Vienne, Council of, 1311–12, 15th ecumenical council of the Roman Catholic Church, held at Vienne, France It was convened by Clement V at the behest of Philip IV of France to make a final decision concerning the Knights Templars The French were seeking to abolish the order and had been finding evidence against its members and burning them at the stake in groups, so it was generally known that the council was a scheme to legalize the French actions and justify the pope's connivance in them This was desirable because outside France the charges against the Templars were falling to the ground whenever there was a fair hearing, and public opinion was rallying to them The council met in Oct , 1311, and soon the committee for the matter voted to hear the Templars' side The king and the pope prevented this, and the committee in March reversed itself and recommended that the order be suppressed This action the pope took a few days later without a legal judgment In Philip's and Clement's plans the council was useless Among its few decisions was an important decree condemning the Beghards

Vientiane (vē"ŭntyĕn', vyĕtyan'), town (pop c 10,000), S Laos, Indo-China, on the left bank of the Mekong river It was the capital of a Lao kingdom, tributary at various times to Siam, Burma, and Annam, in 1827 it was sacked by the Siamese Under French rule it became the administrative capital of Laos It is linked by trade routes to Luang Prabang and to Korat in Thailand The ruins of the old capital are near the modern town

Vieques (vyā'kās), island (51 sq mi , pop 10,362), off E Puerto Rico It is hilly, with a dry, warm climate Products are pineapples, cattle, and hogs It was important in U S defense projects in the Second World War. The only town, **Vieques** (pop 2,678), commonly called Isabel Segunda, was founded in 1843

Vierge, Daniel Urrabieta (dänyĕl' ōōrähyā'tä vyĕr'hä), 1851–1904, Spanish illustrator Son of Urrabieta Ortiz, a draughtsman, he took his mother's name He went to Paris at 16 and won early recognition for his drawings of scenes of the Commune of Paris He worked for the *Monde illustré* and the *Vie moderne* and illustrated works of Hugo, Zola, Poe, and Quevedo Most famous, however, are his illustrations for Don Quixote (London, 1907) Paralyzed on his right side at 30, Vierge learned to draw with his left hand and did much of his best work with it He was a master of pen-and-ink drawing and had a marked influence on the art of modern illustration

Vierwaldstättersee, Switzerland. see LUCERNE, LAKE OF.

Viète or **Vieta, François** (frăswä' vyĕt', vyātä', vlē'tŭ), 1540–1603, French mathematician As a founder of modern algebra, he introduced letters as algebraic symbols and correlated algebra with geometry and trigonometry He was a lawyer, attached for a time to the parlement of Brittany and served as privy councilor to Henry IV, for whom he decoded messages sent by Philip II of Spain to his soldiers in the Netherlands

Viet Nam (vēt' năm', vēt'), state (c 122,000 sq mi ; pop. c 22,600,000), Indo-China, formed by the union of the areas largely populated by Annamese These are TONKIN (North Viet Nam), ANNAM (Central Viet Nam and the special administrative district of the southern plateaus), and COCHIN CHINA (South Viet Nam) At the end of the Second World War, the Viet Minh party (the League for the Independence of Viet Nam, a coalition of nationalist and Communist groups) resisted the return of French rule and set up a republic with its capital at Hanoi. In March, 1946, France recognized Annam and Tonkin as the free state of Viet Nam within the federation of Indo-China, but refused to permit the accession of Cochin China to the new state In Dec , 1946, fighting between French troops and the Viet Nam government headed by Ho Chi Minh ushered in a prolonged guerrilla war Having refused to treat further with Ho and the other Viet Minh leaders, the French in 1949 installed Bao Dai, former emperor of Annam (deposed by the Japanese in 1945), as the ruler of Viet Nam, of which Cochin China was recognized to be a part Bao Dai's regime was promised a large measure of autonomy in domestic affairs, although defense and foreign relations were to be kept in French hands As the approach of Chinese Communist forces to the northern border of Indo-China (which they reached in Dec , 1949) increased the chance of effective Soviet and Chinese aid to the Viet Minh forces, who held most of the country outside the thickly settled areas, the French speeded efforts to strengthen Bao Dai's regime A treaty granting Viet Nam independence within the French Union was signed (Dec , 1949) and ratified (Feb , 1950) The new state was promptly recognized (Feb , 1950) by the United States, Great Britain, and other states, meanwhile the Ho regime was recognized by the USSR, the Chinese Communist regime, and other Soviet allies Except for Thailand (which recognized Bao Dai), the states of SE Asia held aloof from both regimes Late in Feb , 1950, France formally asked U S military equipment and other aid for the Bao Dai regime The prestige of the regime, though rising, was still slight in early 1950, many non-Communist Indo-Chinese regarded it as a French puppet, and its authority was limited to areas commanded by French troops

Vieuxtemps, Henri (ŏrĕ' vyŭtā'), 1820–81, Belgian violinist and composer After his first tour in 1833, he traveled extensively, he toured the United States in 1844, 1857, and 1870 From 1846 to 1852 he was court violinist in St Petersburg and professor of violin at the conservatory there He was professor of violin at the Brussels Conservatory from 1871 to 1873 A famous concert violinist, he also composed six violin concertos and other violin pieces, many of which have become part of the standard violin repertoire

Vigée-Lebrun, Élisabeth (ālēzăbĕt' vēzhā'-lŭbrŭ'), 1755–1842, French portrait painter, pupil of her father, Louis Vigée She was influenced by Greuze Winning fame at 20 for her court portraits, she embarked upon a long and successful career Two of her best-known portraits are of Marie Antoinette, her sponsor, one holding a rose and the other with her children (both Versailles) Her salon in Paris was popular At the outbreak of the Revolution she escaped to Italy and in the following years visited Vienna, Berlin, St Petersburg, and London, finding everywhere acclaim and prominent sitters Well known are her self-portrait (National Gall , London), portraits of Mme de Staël, C J Vernet, and two of herself and her daughter (Louvre), and *Young Girl with Flowers* (Metropolitan Mus) She is also well known for her work in pastel

Vigeland, Adolf Gustav (ä'dōōlf gōōs'tăv vē'gulan), 1869–1943, Norwegian sculptor His great undertaking in Frogner Park, Oslo, occupied him for 40 years More than 100 human figures in various positions, carved from granite or cast in bronze, illustrate the development of man

vigil (vĭ'jul) [Latin, = watch], in Christian calendars, eve of a feast, a day of penitential preparation In ancient times the people gathered for vespers before a great feast and then waited outside the church till dawn for the liturgy (Mass) Traces of this practice survive in the East, but the Western Church abolished it early because of disorders in the night watch The Roman liturgy assigns a proper Mass for the vigil of each important older feast, two, Holy Saturday (Easter Eve) and the vigil of Pentecost, have special ceremonies In the Roman Catholic Church FASTING and abstinence are required on great vigils

vigilantes (vĭjĭlăn'tēz), members of a vigilance committee Such committees were formed in U S frontier communities to suppress lawlessness and disorder before a regularly constituted government could be created or have real force They were most needed and therefore most common in mining communities, but were also known in cow towns and in farming settlements The extreme penalty inflicted by the vigilantes was LYNCHING The most famous of the vigilante groups were those formed in San Francisco in 1851 and in 1856 to bring order to the notorious Barbary Coast. The actions of vigilance committees might, and sometimes did, run to excess. The measures taken by them were at best extralegal, and when such committees are formed in a community with a well-constituted government and a police force they are strictly illegal and usually are merely the expression of mob violence See M F Williams, *History of the San Francisco Committee of Vigilance of 1851* (1921), Stanton A. Coblentz, *Villains and Vigilantes* (1936)

Vigilantius (vĭj"ĭlăn'shus), fl 400, Christian priest of Gaul who was violently opposed by St JEROME Jerome's letters and a tract, *Liber contra Vigilantium*, declare that Vigilantius denied the efficacy of veneration of relics, prayers to the saints, almsgiving, celibacy of the clergy, and monasticism His works are not extant.

Vigilius (vĭjĭl'ēŭs), pope (537–55), a Roman; successor of St SILVERIUS and predecessor of St Pelagius I He was made pope through the efforts of Justinian I and Theodora, and his pontificate was legitimized by the bishops after Silverius' renunciation and death Vigilius at first resisted coercion, refusing to condemn the *Three Chapters* in the quarrel over MONOPHYSITISM The emperor made him come to Constantinople, where he eventually consented to their condemnation, if the canons of the Council of Chalcedon were not thereby discredited He died on his way home

Vigne, Paul de (pôl' du vē'nyu), 1843–1900, Belgian sculptor, a leader in the modern academic school of Belgium He spent some time in Italy and in Paris, and his work shows the influence of Donatello and of the modern French school In Brussels are his *Crowning of Art* and the figures *Immortality* and *Poverella* For Bruges he made the monument to Breydel and De Coninck

Vignemale (vēnyumal'), mountain, 10,821 ft high, S France, on the Franco-Spanish border S of Lourdes, highest in the French Pyrenees

Vignola, Giacomo da (jä'kōmō da vēnyō'lä), 1507–73, one of the foremost late Renaissance architects in Italy His real name was Giacomo Barozzi or Barocchio Appointed (1550) papal architect to Pope Julius III, he spent his later life in Rome, where are most of his important works After Michelangelo's death, Vignola succeeded him as architect in charge of the work on St Peter's, the small lateral domes being of his execution His finest productions are the Villa Caprarola, near Viterbo, for Cardinal Alessandro Farnese, and the beautiful Palace of Pope Julius III in Rome As designer (1568) of the interior of the Church of the Gesù, in Rome, mother church of the Jesuit order, he initiated a style of sumptuous church decoration which thereafter was designated the Jesuit style It is largely because of the extravagantly rich aspect of this interior that Vignola has usually been identified with the beginnings of baroque design He is universally known for his treatise (1563) on the five orders of architecture Based upon the work of Vitruvius, it undertook to formulate definite and minute rules for proportioning the classical orders appearing in the buildings of the Romans This work, which has been in continuous use, has by many been scrupulously adhered to as an almost inviolable authority But such was not Vignola's real intention, and his own designs, even when utilizing the classical orders, showed notable originality and freedom

Vignon, Barthélemy (bartālumē' vēnyō'), c 1762–1828, French architect. Although Vignon won only second prize in the competition for converting the Church of the MADELEINE, Paris, into a Temple of Glory, his design was selected by Napoleon for execution The imposing building, with its surrounding Corinthian colonnade, terminates a vista from the Place de la Concorde

Vigny, Alfred Victor, comte de (älfrĕd' vēktôr' kōt' du vēnyē'), 1797–1863, French poet, novelist, and dramatist A precursor of the romantics, Vigny had formed his literary style before he was 30 Though physically weak, he was sent to military school and became an officer in 1814, resigning in 1827 His best-known poems are found in *Poèmes antiques et modernes* (1826), containing "Eloa" and his famous "Moïse," and *Destinées* (1864) His prose works include the novels *Cinq-Mars* (1826, Eng tr , *The Spider and the Fly*, 1925), *Stello* (1832), *Servitude et grandeur militaires* (1835, Eng tr , 1919), and *Chatterton* (1835, Eng. tr , 1908), a play A selection of his own notes comprises *Journal d'un poète* (1867) He is a poet-philosopher writing not of himself, but presenting his ideas through a usually effective and dramatic symbol His reputation, temporarily dimmed by that of Hugo and Lamartine, was revived by the time of Baudelaire See study by Arnold Whitridge (1933)

Vigo, Francis (vē'gō, vĭ'gō), 1747–1836, American frontier trader and merchant, patriot in the American Revolution He was born at Mondovi, Italy, and his name was originally Giuseppe Maria Francesco Vigo After enlisting in the Spanish army, he was sent to Cuba and to New Orleans, where he became interested in the fur trade When his enlistment was ended, he went to St Louis and was secretly an agent of the Spanish governor while

he built up a successful business among the Indians After George Rogers CLARK captured Kaskaskia (1778), Vigo took up the American cause, and he generously supplied money and supplies and information that helped make possible Clark's recapture of Vincennes In 1783 Vigo settled in Vincennes, where he became an American citizen His claims for his advances to Clark were not honored until long after his death. See biography by Bruno Roselli (1933)

Vigo (vē'gō), city (pop 44,188), Pontevedra prov, NW Spain, in Galicia, picturesquely situated on an inlet of the Atlantic Ocean One of the most active ports of Spain, it has a large fishing fleet and is a center of tuna and sardine fishing and canning. There are important shipyards and machinery manufactures The commercial and industrial rise of Vigo is of recent date In 1702 a Franco-Spanish fleet, escorting galleons loaded with American gold and precious stones, was destroyed in the Bay of Vigo by the British and the Dutch, several galleons were sunk, and it is believed that much of the treasure is still at the bottom of the bay, but attempts to recover it have been fruitless

Vipuri, RSFSR: see VYBORG

Vijayanagar (vē"jəyŭn'gur) [Sanskrit,=city of victory], ruined city, N Madras state, India, capital (1336–1565) of the Hindu Vijayanagar empire The empire embraced all India S of the Kistna river Moslem forces after the battle of Talikota (1565) utterly demolished the city and destroyed the empire

vikings (vī'kĭngz), Scandinavian warriors whose raids of the coasts of Europe and the British Isles gave the period from the 8th cent to the 10th cent the name of Viking Age Through the thousands of years of the Neolithic period the Scandinavians had lived in small autonomous communities as farmers, fishermen, and hunters At the beginning of the Viking Age they were the best shipbuilders and sailors in the world, and later they ventured as far as Greenland and North America (see VINLAND) The typical viking warship at the height of the Viking Age, the "long ship," had a high prow, adorned with the figure of an animal, and a high stern (see SHIP) It seated up to 30 oarsmen and had an average crew of 90 Its square sails had large perpendicular stripes in many colors, and the entire ship was vividly painted and elaborately carved On both sides of the ship hung a row of painted round shields Though this is the most familiar type of viking ship, there were many other types, varying according to purpose and period The causes that drove the vikings outside their lands are obscure, overpopulation was certainly one of them At the beginning of the Viking Age the Scandinavian communities were still democratic, but local leaders soon assumed greater authority, gained dominance over other communities, and sought to gain wealth by conquests overseas They were exceedingly cruel and rapacious on their raids, and the dread they inspired facilitated their conquests Many local kingdoms came into existence in Scandinavia, and from them stemmed the kingdoms of Norway, Denmark, and Sweden The vikings' religion was paganism of the Germanic type; their mythological and heroic legends form the content of OLD NORSE LITERATURE The Viking Age ended with the introduction of Christianity into Scandinavia, with the emergence of the three great Scandinavian kingdoms, and with the rise of European states capable of defending themselves against further invasions The vikings were known as VARANGIANS in Russia, where their leader Rurik founded the first Russian state Elsewhere they were known as Danes, Northmen, Norsemen, or Normans For their part in French, Spanish, and Italian history, see NORSEMEN

Vilagos, Hung *Világos* (vĭ'lägōsh), village (pop. 5,878), W Rumania, NE of Arad It is known in Rumanian as Siria Here in 1849 the Hungarian revolutionary army under General GORGEY surrendered to the Russians

Vildrac, Charles (shärl' vēldrak'), 1882–, French poet, dramatist, and essayist In 1906 he joined a group including Duhamel, Romains, and other writers, who for a year lived cooperatively in a house near Paris which they called the Abbaye Vildrac's poetry in *Images et mirages* (1908) and *Le Livre d'amour* (1910, Eng tr, *A Book of Love*, 1923) shows the influence of Walt Whitman His plays, *Le Paquebot Tenacity* (presented 1920, Eng tr, *The Steamer Tenacity*, 1921) and *La Brouille* (presented 1930), are character studies, weak in plot A volume of essays, *Découvertes*, was published in 1912

Viljandi (vĭl'yändē), Ger. *Fellin* (fĕlēn'), city (pop 11,788), central Estonia It was founded (13th cent) by the Livonian Knights, became a Hanseatic town, and after the dissolution (1561) of the Livonian Knights was contested by Russia, Poland, and Sweden. It was in Russian hands from 1710 until the Russian Revolution. It is today a farm market center There are ruins of the castle of the Livonian grand master. The name also appears as Vilyandi.

Villa, Francisco (fränsĕs'kō vē'yä), 1877?–1923, Mexican revolutionist, whose real name was Doroteo Arango. He escaped the peonage of his parents and became notorious as a bandit in Chihuahua and Durango His vigorous fighting in the revolution of 1910–11 was largely responsible for the triumph of Francisco I. MADERO over Porfirio DÍAZ When Victoriano HUERTA overthrew Madero (Feb, 1913), Villa joined Venustiano CARRANZA and the Constitutionalists in the fight against Huerta. Success followed success for the Constitutionalists, Villa gaining control of N Mexico by the violence and audacity of his attacks; Huerta resigned (July, 1914) Antipathy and suspicion had always existed between Villa and Carranza, now with their common enemy eliminated, an open break occurred. A bloody contest ensued, with Álvaro OBREGÓN taking the side of Carranza In the midst of chaos Villa, with Emiliano ZAPATA, occupied Mexico city (Dec., 1914) but later evacuated the capital (Jan, 1915) Obregón pursued Villa, and their armies engaged at Celaya (April, 1915), resulting in the decisive defeat of Villa, who was now driven north and out of military significance In the winter of 1915 he campaigned disastrously against Plutarco E. CALLES in Sonora Villa's waning power was further diminished by President Wilson's recognition of Carranza (Oct, 1915) Villa, piqued by American support of his enemy, now turned his wrath against the United States In Jan, 1916, a group of Americans were shot by bandits in Chihuahua, and on March 9, 1916, Mexican bandits raided Columbus, N Mex, killing a number of American citizens It is not certain that Villa participated in these assaults, but he was universally held responsible Wilson ordered a punitive expedition under General Pershing to capture Villa dead or alive The expedition pursued Villa through Chihuahua for eleven months (March, 1916–Feb, 1917) but failed in its objective Since Carranza violently resented this invasion, relations between Mexico and the United States were greatly embittered Villa continued his activities in northern Mexico throughout Carranza's regime, but in 1920 he came to an amicable agreement with the government of Adolfo de la HUERTA Three years later Villa was assassinated at Parral He was in a sense a rebel against social abuses, and he at times worked a rough justice, but he was a violent and undirected destructive force His daring, his impetuosity, and his horsemanship made him the idol of the masses, especially in N Mexico, where he was regarded as a sort of Robin Hood, and the Villa myth is perpetuated in numerous ballads and tales See M. L. Guzmán, *The Eagle and the Serpent* (Eng tr, 1930), a novel based on Villa's life, Edgcumb Pinchon, *Viva Villa!* (1933)

villa. Though used to designate any country residence, especially in Italy and S France, villa particularly refers to a type of pleasure residence with extensive grounds favored by the Romans and richly developed in Italy in the Renaissance The Roman villa of the empire is described in several contemporary literary accounts and particularly by Pliny Favored locations were at Tivoli near Rome and along the shores of the Bay of Naples The dwelling quarters, consisting of several low buildings, included recreation facilities and lodgings for the servants The farmhouse type (*villa rustica*) had its barns, orchards, and vineyards, and the type used as a pleasure retreat (*villa urbana*) had formal gardens adorned with fountains and sculptures The luxurious villa of Emperor Hadrian near Tivoli, of which extensive ruins remain, is said to have covered more than 7 sq. mi, many works of art were exhumed there during the Renaissance In the 15th cent the classic villas, rediscovered along with the rest of the Roman past, furnished the Renaissance nobles with patterns for pleasure estates of their own Many of these had hillside locations, which called forth the fullest ingenuity of the garden designers. Their pictorial compositions blended with the variable elements of nature, the formal qualities of the house, the incidental garden architecture, and the fountains Fine villas remain from all periods of the Renaissance, the baroque ones displaying the most fanciful variety of garden frivolities—grotesque sculptures, grottoes lined with rock and shell decorations, fantastic water displays, and ingenious transitions between different levels. Isola Bella (1634-1714) on Lake Maggiore is a striking example Among the finest villas are the Villa d'Este at Tivoli, the Villa Caprarola near Viterbo, by Vignola, the Villa Falconieri at Frascati, by Borromini (1648), at Rome the Villa Madama (c 1516) by Raphael, the Villa BORGHESE, and the Villa DORIA PAMPHILI See Edith Wharton, *Italian Villas and Their Gardens* (1904)

Villach (fĭ'läkh), city (pop. 30,686), Carinthia, S Austria, on the Drau river and W of Klagenfurt. It is an industrial and lumber trade center. It belonged to the bishopric of Bamberg until the middle of the 18th cent Warmbad Villach is a near-by mineral spa

Villa d'Este (vē'lä dĕ'stä), name of two famous villas in Italy. One lies near Tivoli, c 20 mi. E of Rome. Built in 1550 for Cardinal Ippolito II d'Este, it is decorated with paintings and statues and is surrounded by one of the most beautiful Renaissance gardens in Italy. The garden is adorned with many picturesque fountains, one of them by Bernini. The other Villa d'Este, built (16th cent) on the west shore of Lake Como, 3 mi N of Como, with an ornamental park, is now one of the celebrated hotels of Europe

Villa Doria Pamphili (vē'lä dô'ryä päm'fēlē), Roman villa, built in the 17th cent for Camillo Pamphili, nephew of Pope Innocent X, from plans designed by Alessandro Algardi It was situated against the western walls of Rome near the San Pancrazio gate. The Romans called it Belrespiro.

Villafranca di Verona (vē'läfräng'kä dē vərô'nä), town (pop 4,986), Venetia, NE Italy, near Verona Here in 1859 Napoleon III and Emperor Francis Joseph of Austria met after the Austrian defeats at Magenta and Solferino and signed a preliminary peace treaty, ratified the same year by the Treaty of Zurich. Sardinia, Napoleon's ally, was not represented. Austria ceded Lombardy, which was added to Sardinia, Venetia remained Austrian, the rulers of Tuscany were to be reinstated, and the Italian states were to form a confederation under the presidency of the pope Sardinia ignored the last two clauses To obtain Napoleon's consent for this course, Victor Emmanuel II of Sardinia ceded Nice and Menton to France (1860) The exclusion of Sardinia from the Treaty of Villafranca, which nearly deprived Victor Emmanuel of his leading role in the RISORGIMENTO, was deeply resented throughout Italy and greatly harmed Franco-Italian relations

village, small rural population unit It is held together by common economic and political ties, and it was the normal unit of agricultural life of the medieval manor (See also LOCAL GOVERNMENT and TOWN) The **village community** is comprised of a group of people living in proximity and together using the land for purposes of cultivation, meadow, and pasturage. The study of the village community, which involves theories of the origin of society and kinship groups, became prominent in the middle of the 19th cent with the works of G. L. von Maurer His theory of the MARK was supported by such men as Sir Henry S. Maine and E. A. Freeman, but the theory was violently attacked by N. D. Fustel de Coulanges and Frederic Seebohm, who thought that property, as in the Roman and Greek states, was owned by a lord and worked by serfs Thus began the Germanic-Roman controversy, never properly resolved, because the evidence on the whole question is so wide in extent and so various in nature that general conclusions are highly debatable The village community is, however, inextricably linked with the development of agriculture, and the study of property holding and of the social structure of population in primitive societies is of great importance The widespread appearance of tribal and subtribal holdings among the aboriginal peoples of North America and the S Pacific islands, where personal property is at a minimum, is usually considered vital in tracing tribal origin to the family group In the Celtic and Slavic countries family village communities, where the family lines were traced in either matrilineal or patrilineal succession, were much in evidence, these have been used not only to trace the origins of private property in communal property but also in support of, and against, theories of the patriarchal origin of communities As to the villages of the Middle Ages and especially of England (see MANORIAL SYSTEM and FEUDALISM), the long argument over the mark has died away, and most scholars maintain some modified form of the theory that agricultural holdings were originally in common. It has been impossible, however, to explain away evidences of early holding of private property. Interesting examples of almost pure communal holdings by villages are to be found in the records of the Inca empire in Peru, and there remain communal villages today in the interior of Mexico (see EJIDO), the interior of Peru, and other remote regions, where Indian life has remained untouched by white conquest The Russian village community, the mir, which antedated feudalism, persisted in its primitive communal form until after the Revolution of 1917 It probably arose from patriarchal holding, and the commune was managed according to tradition, land under cultivation was periodically reallocated among the families This mir arrangement was not greatly disturbed when late in the 16th cent a coordinated military feudalism was based upon it and the villages passed into the ownership of the nobles On the abolition (1861) of serfdom, the mirs once more became independent, but the choice of the lands surrendered to the peasants was unsatisfactory, and the peasants, left with a great land hunger, were plunged into troubles with the landlords The Stolypin reforms of 1908 were not effective Many of the mirs were, however, broken into individual holdings. The Revolution of 1917 abolished private ownership of land, and the communal mir, one of the major problems of new Russia, had no part in shaping the agricultural policy of the Russian Communists. The term "village community" is also used for the model villages constructed to house the workmen of particu-

lar factories or industrial plants or for villages in which arrangement is made for the residence of industrial workers (see GARDEN CITY). See Sir Henry S. Maine, *Village-Communities in the East and West* (1871) and *Ancient Law* (new ed., 1930), Erwin Nasse, *On the Agricultural Community of the Middle Ages* (Eng. tr., 1871), N. D. Fustel de Coulanges, *The Ancient City* (1874) and *The Origin of Property in Land* (2d ed., 1890), Emile de Laveleye, *Primitive Property* (Eng. tr., 1878), Frederic Seebohm, *The English Village Community* (2d ed., 1890, reprinted 1926), Sir G. L. Gomme, *The Village Community* (1890), C. M. Andrews, *The Theory of the Village Community* (1891), Paul Vinogradoff, *Villainage in England* (1892) and *The Growth of the Manor* (1904), H. J. E. Peake, *The English Village* (1922); Radhakamal Mukerjee, *Democracies of the East* (1923), A. S. Altekar, *A History of Village Communities in Western India* (1927), C. F. Petit-Dutaillis and George Lefebvre, *Studies and Notes Supplementary to Stubb's Constitutional History* (1930)

Villa Grove, city (pop. 2,072), E central Ill., E of Decatur, in a farm area, inc. 1913. It has railroad repair shops and a cannery.

Villahermosa (vē"yäĕrmō'sä), city (pop. 25,114), capital of Tabasco, SE Mexico. It was founded very late in the 16th cent. The climate is hot and humid. Well inland on the GRIJALVA river, the city is an important distributing center for the surrounding region. Local manufactures include brick and tile, soap, candles, cigars, rum, cotton materials, and hats.

Villa-Lobos, Heitor (ā'tôr vō'lä-lō'bōs), 1884?–, Brazilian composer, educated in Brazil but self-taught in composition. He early developed an interest in Brazilian folk music, which became the strongest influence on his works. A series of compositions which he called *Chôros*, for various media, employ a synthesis of the different modes of the various types of Brazilian folk and popular music. Outstanding are *Chôros No 7* (1924), for strings and woodwinds, *No 10* (1925), for orchestra and chorus, and *No 11* (1928, première, 1942). He visited Paris (c 1923–1926), conducted various orchestras in Europe, and became well known there, but it was not until concerts of his music were played at the New York World's Fair (1939–40) that he became known in the United States, which he later visited (1944–45) to conduct various orchestras in performances of his works. In 1931 he was appointed director of musical education in Brazil. His compositions, including five symphonies, several operas, concertos, chamber music, and songs, number about 2,000. Although these are extremely uneven quality, his best works, such as *Bachiana brasileira No 1* (1930), written in homage to Bach, display great originality and vitality.

Villani, Giovanni (jōvän'nē vēl-lä'nē), c 1275–1348, Italian historian of Florence. He was a functionary in the Florentine government for many years and took part in some of the events he narrates. His history of Florence in 12 books is in conception a universal history from the earliest times to 1348. It is quite reliable for events in Florence of Villani's own time. This history is one of the early monuments of Italian prose, and it is one of those works which helped to fix the Tuscan language as the standard of Italy. Villani died in the plague described by BOCCACCIO.

Villanova (vĭlunō'vù), village, Delaware co., SE Pa., near Philadelphia. It is the seat of Villanova College (Catholic, for men, 1843).

Villanovan culture, the culture of a people of N Italy in the early Iron Age (c 1000–500 B.C.). The name Villanovan is a modern one derived from the name of the town Villanova, near Bologna, where the first excavations of a Villanovan cemetery were conducted (1853–55). The Villanovans are believed to have come into Italy from Central Europe, bringing with them a reasonably advanced Iron Age culture. They lived over a large part of Italy, including Etruria, Latium, and the region around Bologna. The Villanovans cremated their dead and buried the ashes in urns of a distinctive kind along with many other objects which give evidence as to their material civilization. The Villanovans were followed by the Etruscans (see ETRUSCAN CIVILIZATION). See David Randall-MacIver, *Villanovans and Early Etruscans* (1924), H. J. Rose, *Primitive Culture in Italy* (1926).

Villa Park, residential village (pop. 7,236), NE Ill., west suburb of Chicago, inc. 1914.

Villard, Henry (vĭlärd'), 1835–1900, American journalist and financier, b. Germany. His given name was originally Hilgard. He attended universities in Germany, and after he reached (1853) the United States he did newspaper reporting. He won distinction in 1858 reporting the Lincoln-Douglas debates, and in the Civil War was a correspondent for New York newspapers. In 1873 he acted as agent for holders of Western railroad securities and soon became active in railroad financing. He organized (1879) the Oregon Railway and Navigation Company and gained a solid foothold in the transportation of the Pacific Northwest area. He then obtained a controlling interest in the Northern Pacific RR and became (1881) its president, but went into bankruptcy (1883) by completing the building of this railroad through the mountains. With new capital he once more gained control of the Northern Pacific RR and in 1889 became chairman of the board of directors. He merged (1890) smaller companies to form the Edison General Electric Company (later the General Electric Company) and was its president until 1893. Henry Villard obtained (1881) control of the New York *Evening Post*, which later (1897) came under the management of his son, Oswald Garrison Villard. He generously contributed to the Univ. of Oregon. See his autobiography (1904); biography by J. B. Hedges (1930).

Villard, Oswald Garrison, 1872–1949, American editor and author, b. Wiesbaden, Germany, grad. Harvard (B.A., 1893, M.A., 1896). The son of Henry Villard and the grandson, on his mother's side, of William Lloyd Garrison, he was a lifelong liberal and a pacifist. He began his newspaper career in Philadelphia and in 1897 became an editorial writer on the New York *Evening Post*. He soon inherited the paper from his father and was its editor until he sold it in 1918. He retained its weekly edition, the *Nation*, and as its editor made it a leading liberal journal, he sold it in 1932, remaining as publisher and contributor until 1935, but finally severed all connections when the *Nation* became nonpacifist in 1940. His writings include *John Brown, 1800-1859 a Biography Fifty Years After* (1910), *Germany Embattled* (1915), *Newspapers and Newspaper Men* (1923), *Within Germany* (1940), and *The Disappearing Daily* (1944). See his autobiographical *Fighting Years* (1939).

Villari, Pasquale (päskwä'lā vēl'lärē), 1827–1917, Italian historian, politician, and teacher. He took part in the Revolution of 1848. His first work on Savonarola gained his appointment as teacher of modern history at Pisa, he also taught at Florence and was a member of various academies. His writings include works of history and biography, remarkable for keenness of observation rather than for style. He is especially known for two works, *The Life and Times of Savonarola* (1859–82; Eng. tr., 1863) and *The Life of Machiavelli* (1877–82, Eng. tr., 1891).

Villa Rica (vē'lù rē'ku, vĭ'lu rē"kù), town (pop. 1,522), NW Ga., W of Atlanta, in a cotton area, settled after the discovery (1826) of gold here, inc. 1830.

Villarrica (vē"yärē'kä), city (pop. c 40,000), SE Paraguay. It is a commercial center and shipping point in a region that produces cattle, fruits, tobacco, and mate.

Villars, Claude Louis Hector, duc de (klōd' lwē' ăktôr' dük' dù vēlär'), 1653–1734, marshal of France, the last of the great generals of Louis XIV. He fought in the Dutch War and in 1683 was sent on special mission to Vienna. His service in this post took him to Mohacs, where he fought against the Turks (1687). After serving as ambassador at Vienna (1698–1701), he was given a command in the War of the SPANISH SUCCESSION and made his reputation by his victories at Friedlingen (1702) and Höchstadt (1703). In 1704 he quelled the revolt of the CAMISARDS. Defeated by Marlborough and Eugene of Savoy at Malplaquet (1709), he successfully defended the French frontier during the succeeding years, in 1712 he defeated Eugene at Denain and in 1714 negotiated the Treaty of Rastatt. He was a member of the regency council (1715–23) and of the succeeding administrations and was in supreme command in the War of the Polish Succession at the time of his death. Villars left important memoirs.

Villa Umberto I see BORGHESE, VILLA

Villaviciosa (vē"lyävēthēō"sä), town (pop. 2,219), Oviedo prov., NW Spain, in Asturias, on the Bay of Biscay. It is a major fishing port. Emperor Charles V disembarked here (1517) when he first came to Spain. Near by is the 9th-century Church of San Salvador de Valdedíos.

Villefranche-sur-Saône (vēlfräsh'-sür-sōn'), town (pop. 19,391), Rhône dept., E central France. The old capital of BEAUJOLAIS, it has an important wine trade.

Villegas, José (hōsā' vēlyā'gäs), 1848–1921, Spanish genre painter. He worked in Rome from 1869 to 1901, when he became director of the Prado, Madrid. His paintings include *Examining Arms* (Metropolitan Mus.) and *A Caro Slipper Market* (Walters Art Gall., Baltimore).

Villehardouin (vēlärdwē'), French noble family which ruled the PELOPONNESUS from 1210 to 1278.

Geoffroi I de Villehardouin (zhôfrôā'dù), d. 1218, nephew of the historian and marshal of Champagne and Rumania, set out on the conquest of Morea (as the Peloponnesus was then called) in 1205, with his friend Guillaume de Champlitte. With some 100 knights the two men rapidly subdued the Greeks, who were rent by internal quarrels, and in 1205 Champlitte proclaimed himself prince of all Achaia. On the return of Champlitte to France, Villehardouin succeeded him (1210) as prince. The principality of Achaia, organized on the feudal model of the Latin Kingdom of Jerusalem, comprised virtually the whole Peloponnesus save several ports held by the Venetians, and it was a fief held under the Latin Empire. Its capital was Mistra, near Sparta. The principality prospered under the rule of Geoffroi I and of his son **Geoffroi II de Villehardouin,** d. 1246, who like his father was an excellent administrator. Geoffroi II's brother and successor, **Guillaume** or **William de Villehardouin** (gēyōm'), d. 1278, was a warlike prince and an able soldier. Captured (1259) by Emperor Michael VIII of Nicaea, who in 1261 was to recover Constantinople and to restore the Byzantine Empire, he refused to accept freedom in exchange for the cession of Achaia to Byzantium. In 1262 the "Ladies' Parliament," held by the wives and widows of the captive or slain nobles of Morea, met some of Michael's demands and ceded the Greeks a foothold in S Morea, including Mistra but not Sparta, which became the new Latin capital. Released, Guillaume broke his vow not to wage war against the Byzantine emperor. He sought the alliance of Charles I of Naples, to whom he married his elder daughter, Isabelle, and who received (1267) the nominal suzerainty over Achaia from the exiled Latin emperor, Baldwin II. With Guillaume's death in 1278 the male line of Villehardouin became extinct.

Villehardouin, Geoffroi de, c 1160–c 1212, French historian and soldier, b. probably Villehardouin, near Troyes, Champagne. Marshal of Champagne, he was a leader of the Fourth Crusade (see CRUSADES), which resulted in the conquest (1204) of Constantinople and the creation of the Latin Empire of Constantinople. Villehardouin, in his *De la conqueste de Constantinople* (first pub. 1585), described the events of the Crusade and the subsequent struggles of the Latin nobles against their Greek and Bulgarian neighbors, from 1198 to 1207, with vivid detail and with disarming frankness. Reliable as history, Villehardouin's account stands out as one of the early masterpieces of French prose. For his services in the Crusade he received the title of marshal of Rumania (i.e., at that period, the name given to Thrace) and received a rich fief in Thrace. His nephew, Geoffroi I de Villehardouin, founded the Villehardouin dynasty in Morea. Villehardouin's history has been translated into English and is widely available.

villein (vĭ'lun) [O.Fr.,=village dweller]. It is commonly agreed today that the medieval MANORIAL SYSTEM in its origins had two bases—the surrender of lands once held freely in alod to be received and held as a fief by the former owner, and the granting by owner of a large estate of customary rights of a partially free holding to the slaves on the estate. These processes varied with time and place, in many areas the engulfing of free holdings seems to have been the only method of creating a manor (see MARK and VILLAGE). The localism that was a fundamental characteristic of medieval economy makes the definition of terms exceedingly difficult, and usage of terms is today diverse. It is helpful for a theoretical—and, to a large extent, false—distinction to be made in the beginning by saying that the villein was the man who had descended from full freedom to half-free status and was personally free, though holding land that was not; the serf was the man who ascended from slave status to half-free status and was not personally free. This distinction seems to have been preserved to some extent on the Continent. In England it disappeared completely, and all of half-free status, the entire unfree peasant population, was called villein. The distinction thus came to be freeman, villein, and slave. The question of status of blood law in the determination between free-holder (who is, however, sometimes confusingly termed a free villein) and villein. The term **villeinage** thus connotes a half-free status, or serfdom. The villein was theoretically distinguished from the freeholder by certain services and duties owed to the lord, these included week-work and boon days—work done by the peasant on the demesne of the lord—and payment to the lord for marriage of the villein's daughter, payment of tallage at will, and the like. Actually all land tenures on the manor tended to reach a common level, and the distinctions in a society where all was regulated by custom are hard to make since the actual occurrence of arbitrary exercise of the lord's will was rare. The villein in England was protected by law as against all except his lord and even this was to some extent actually guaranteed by the king's courts. The legal fictions that have grown up about status have obscured the real picture of a confused, but working, economy. Villeinage began to disappear gradually in England in the 14th cent. It is customary to say that the increase of commutation of manual services into money payments was a significant movement in the decline of villeinage, rents replaced services. The Black Death by greatly reducing the population made the demands of villeins easier to enforce and hastened the decline. The growth of towns had some effect on the breakdown of the older class distinctions and the building of new. See SERF. For bibliography, see also FEUDALISM and MANORIAL SYSTEM.

Ville Lasalle, Que. see LASALLE

Villèle, Jean Baptiste Séraphin Joseph, comte de (zhäN' batēst' sārāfē' zhôzĕf' kōt' dù vēlĕl'), 1773–1854, French statesman and premier (1822–

28) After the Bourbon restoration he systematically set out, as an ultraroyalist leader, to nullify all the results of the French Revolution He faced the Carbonari conspiracies, intervened in Spain (1823), violated the constitution by prolonging the term of the chamber of deputies from four to seven years (1824), and procured enactment of an ingenious plan for indemnifying the émigrés out of the public savings Assailed in 1827 by both the liberals and the extreme reactionaries, who found his methods too slow, he dissolved the chamber He was defeated in the new elections, resigned, and was succeeded (Jan , 1828) by Martignac

Villemain, Abel François (abĕl' frāswä' vēlmē'), 1790–1870, French scholar and critic He was a professor at the Sorbonne from 1816, held several government posts after 1830, and was perpetual secretary of the French Academy from 1832 As minister of public instruction (1839–44) he was largely responsible for a reorganization of libraries in France and for promoting the passage of a law assuring academic freedom His reputation as a literary critic was established by his *Cours de littérature française* (1830), several times reedited and enlarged, which included his notable *Tableau de la littérature au moyen âge* and *Tableau de la littérature française au XVIIIe siècle*

Ville Marie (vēl' märē'), village (pop 1,001), SW Que , on Lake Timiskaming and N of North Bay It is a cattle and dairy market in a mining area

Villeneuve, Pierre de (pyĕr' du vēlnûv'), 1763–1806, French admiral He commanded the rear guard of the fleet in the disastrous battle of ABOUKIR (1798) His greatest defeat, the battle of TRAFALGAR (1805), was partly due to the unpreparedness of his fleet Taken prisoner by the English, he was soon released He committed suicide after his return to France

Ville Platte (vēl' plăt'), town (pop 3,721), parish seat of Evangeline parish, S central La , WNW of Baton Rouge, settled by the French in the early 19th cent It is the marketing and processing center for a rice, cotton, and lumber area, and oil fields are near by

Villeroi, François de Neufville, duc de (frāswa' dù nûvēl' duk' du vēlrwa'), 1644–1730, marshal of France and favorite of Louis XIV In the War of the Grand Alliance, he succeeded (1695) to the command in Flanders, where he was unsuccessful against William III of England In the War of the Spanish Succession, he replaced Catinat in Italy, was defeated by Prince Eugene of Savoy at Chiari (1701), and was taken prisoner at Cremona (1702) In 1706 he was defeated by Marlborough at Ramillies Villeroi held several high posts between 1717 and 1722, when he fell into disgrace for intriguing against the regent He died, in virtual exile, as governor of Lyons

Villeurbanne (vēlurban'), city (pop 80,193), Rhône dept , E central France It is an industrial suburb of Lyons and has metallurgical, rayon, and chemical plants

Villiers, Barbara see CLEVELAND, BARBARA VILLIERS, DUCHESS OF

Villiers, Charles Pelham (vĭl'yûrz), 1802–98, English statesman His association with the utilitarians, the followers of Jeremy Bentham, fitted him for service (1832) on a commission to investigate the administration of the poor laws, later (1859–66) as president of the poor-law board he effected important reforms In the beginning of his career in the House of Commons (1835–98), Villiers preceded both John Bright and Richard Cobden as a parliamentary advocate of repeal of the corn laws and was also active in organization for that end outside Parliament He was (1852–58) judge advocate general.

Villiers, George: see BUCKINGHAM, GEORGE VILLIERS, 1ST DUKE OF, and BUCKINGHAM, GEORGE VILLIERS, 2D DUKE OF

Villiers, George William Frederick. see CLARENDON, GEORGE WILLIAM FREDERICK VILLIERS, 4TH EARL OF

Villiers de l'Isle-Adam, Philippe Auguste Mathias, comte de (fēlēp' ōgüst' mätyas' kôt' dù vēyĕ' dù lēl'-ädă'), 1838–89, French novelist His works, in the romantic style, are often fantastic in plot and given to the enthusiastic and the horrible. Important among them are the drama *Axel* (revision, 1890), the novel *L'Ève future* (1886), and the short-story collection, *Contes cruels* (1883)

Villisca (vĭlĭs'ku), city (pop 2,011), SW Iowa, on the Nodaway river and SE of Red Oak, inc 1869

Villon, François (frāswa' vēyô'), b 1431, d after 1463, French poet Knowledge of the facts of his life is drawn mostly from his poems and from court records He was born at Paris as François de Montcorbier or François des Loges Having lost his father at an early age, he was brought up by his "more-than-father," Master Guillaume de Villon, chaplain of the Church of Saint-Benoît-le-Bétourné, near the Sorbonne, and he adopted his benefactor's name He graduated from the Sorbonne (B A , 1449, M A , 1452), however, requirements were lax at the period, and Villon tells us that he studied little He soon fell in with evil company and took part in the turbulent pranks of the students, who were in constant warfare with the police A starving young cleric without a benefice, Villon continued his irregular life after his graduation. In 1455 he fatally wounded a man in a fight He fled and was banished from France. Disobeying the ban, he roamed the provinces and associated with the *coquillards*, one of the criminal gangs that ravaged France at the close of the Hundred Years War For the *coquillards* Villon composed his ballads in thieves' jargon At the same time he remained in touch with his protectors, who obtained (1456) the revocation of his banishment Back in Paris, Villon continued his criminal activities, and a few months after his return he probably took part in a major robbery He thought it discreet to leave Paris again, remaining for about five years in the provinces He took part (c.1457) in a poetic contest held by the duke of Orléans at Blois, after having been amnestied from a prison sentence imposed on him for some other misdeed In 1461 he was once more in jail in the Orléanais, and he was saved only by a general amnesty accorded in the same year on the accession of Louis XI It was after his release that Villon composed his greatest work, the *Testament* He returned to Paris in 1462 and almost immediately found himself in jail on the charge of theft His protectors must have been powerful, for he was once more released, but in 1463 he was sentenced to be hanged for attempted murder, a charge of which he was innocent The prospect of the gallows inspired one of his most famous poems, "Ballade des pendus" [ballad of the hanged] or "Épitaphe Villon", at the same time he appealed the sentence, which was commuted to 10 years' banishment from Paris He probably died shortly afterward, but there are numerous apocryphal traditions of his further adventures Rabelais, for instance, has him take refuge in England The preservation of Villon's extant works was principally due to Clément Marot, who collected and edited them (1533) Villon used the medieval forms of versification, but his intensely personal message and its note of tragic urgency put him in the rank of the moderns Little regarded in the classic 17th and 18th cent , he has had a mounting vogue in the past 100 years Besides his ballads in jargon, Villon's extant work consists of his *Lais* (also known as the *Little Testament*), written in 1456, the *Testament* or *Grand Testament* (1461), and a number of detached poems, including the profoundly moving "Débat du cœur et du corps de Villon" [debate between Villon's heart and body] The *Lais* (a pun on the words *lais*, or lays, and *legs*, or legacy) is a series of burlesque bequests to his friends and enemies The *Testament* follows the same scheme (not uncommon in medieval literature), but is far superior in depth of emotion and in poetic value Irony, bitter repentance, constant preoccupation with death, religious emotion, patriotism, ribald humor, rebellion, pity, and mixed cries of distress and of truculence follow each other, sometimes with unexpected abruptness, sometimes in subtle gradations--all in a language borrowed from the legal profession and from theology, which creates a deliberate effect of incongruity The abjectness of Villon's life can be felt in his "Ballade de la grosse Margot," his bequest to a prostitute, his deep feeling for religion in "Ballade pour prier Nostre Dame," dedicated to his mother, and his pure lyricism in "Ballade des dames du temps jadis," with the famous refrain, "But where are the snows of yester-year?" These are poems interspersed in the text of the *Testament*, which itself contains many passages of moving beauty, such as his regret of his ill-spent youth (stanzas 22–33) Among Villon's English translators were Rossetti and Swinburne His complete works were translated and edited by J U Nicolson (1928, rev ed , 1931) There are several other translations A standard French edition is that of Auguste Longnon (1892, several revisions), which also contains a biographical notice Scholars such as Pierre Champion, Marcel Schwob, Gaston Paris, Lucien Foulet, and Louis Thuasne have greatly contributed to the research which has made it possible to appreciate the wealth of allusions in Villon's work See biography by D B Wyndham Lewis (1928)

Vilna (vĭl'nu), Lithuanian *Vilnius* (vĭl'nĕôs), Pol *Wilno* (vēl'nô), city (1931 pop 196,345), capital of Lithuania, on the Vilya river (Lithuanian *Neris*), a tributary of the Niemen It is a commercial, industrial, and cultural center Its industries, aside from the manufacture of radios and electric motors, are largely geared to the agricultural economy of the country, they produce agricultural implements and fertilizers and process lumber and foods The Univ of Vilna was founded (1578) by Stephen Bathory, king of Poland Dating from the 10th cent , Vilna became (1323) the capital of the grand dukes of Lithuania and (1416) the metropolis of the Lithuanian Orthodox Eastern Church As a result of the merger (1569) of Lithuania and Poland, Vilna lost its importance, and its Lithuanian-Belorussian culture was replaced by Polish institutions By the third Polish partition (1795) it passed to Russia Held (1915–18) by the Germans in the First World War and by Russian, Lithuanian, and Polish troops in the troubled years 1918–20, it remained in dispute between Poland and newly independent Lithuania, which claimed it as its capital. The Allies at the Paris Peace Conference assigned Vilna to the Lithuanians, to whom the Soviets handed it (1920) after capturing it from the Poles However, a Polish free corps captured the city in the same year, and after a plebiscite of doubtful validity it was incorporated (1922) into Poland A theoretical state of war between Poland and Lithuania continued until 1927, and diplomatic relations were resumed only in 1938, when Lithuania abandoned its claim In the Polish partition of 1939 the USSR, having occupied Vilna, transferred it to Lithuania, which in 1940 was incorporated into the USSR During the dispute Kaunas had served as provisional Lithuanian capital In the Second World War, Vilna was held (1941–44) by the Germans and suffered severe damage Vilna was a leading center of Jewish culture in Eastern Europe from the 16th cent until the virtual extermination of its large Jewish population by the Germans in 1941–44 The numerous old churches and synagogues of Vilna include the Roman Catholic cathedral (1387, restored 1801) and the Gothic Church of St Ann and St Bernard Above the Ausros Vartai (Pol *Ostra Brama*), an old city gate, is a shrine containing an image of the Virgin, long the object of pilgrimage There remain ruins of the 17th-century castle of the Jagiello dynasty

Vilyui (vĭlyōō'ē), river, 1,770 mi long, W Yakut ASSR, RSFSR It rises in the central Siberian uplands and flows east through an agricultural area into the Lena It is navigable for 500 mi and abounds in fish Platinum and gold are found along the banks The Vilyui Range, which rises to 3,300 ft , separates the Vilyui and Olenek river basins Vilyuisk, a fur-trading center on the Vilyui river, was the place of exile (1871–83) of Chernyshevsky

Vimeiro (vēmā'rō), village (pop 518), Estremadura, central Portugal, NNW of Lisbon It was the scene of a battle (1808) of the Peninsula War, in which Wellington defeated the French under Junot

Viminal Hill see *Rome before Augustus* under ROME

Vimy (vē'mē, Fr vēmē'), town (pop 2,623), Pas-de-Calais dept , N France, NNE of Arras, in a coal-mining region The near-by Vimy Ridge, 476 ft high, was a strong German position in the First World War The French attacked it unsuccessfully in 1915, but it was taken after very bitter fighting by Canadian troops under Sir Julian Byng with British troops in April, 1917 A memorial to the Canadians who fell in the First World War was unveiled here in 1936

Viña del Mar (vē'nyä dĕl mär') [Span ,=vineyard by the sea], port (pop 65,916), central Chile Practically a suburb of VALPARAISO, Viña del Mar is one of the most famous, attractive, and popular resort cities in South America There are luxurious hotels, villas, clubs, and gardens and fine beaches Besides being the resort capital of Chile, it has several industries—cloth and yarn mills, dyeing and printing plants, an oil refinery, and a large sugar refinery

Vinalhaven (vī"nălhā' vŭn), town (pop 1,629), on Vinalhaven Island, S Maine, in Penobscot Bay, settled 1765, inc 1789 It is a resort and fishing center Granite quarries are on the large irregular Vinalhaven Island

Vincennes, Jean Baptiste Bissot, sieur de (vĭnsĕnz', zhä' batēst' bēsō' sy ür' dù vēsĕn'), 1668–1719, Canadian explorer and leader of the Miami Indians, b Quebec He was sent to the Miami country by Frontenac (1704), he established there a fort and trading post and quickly won the esteem and confidence of the Indians In 1712 he helped to defeat the hostile Fox Indians He died in a Miami village near the site of Fort Wayne His son, **François Marie Bissot, sieur de Vincennes** (frā'swä' märē'), 1700–1738, b Montreal, was called François Margane after his godfather and uncle He served as a cadet under his father from 1718 and, like him, won the high respect of the Miami After 1730 he established a fort on the Wabash (where the French and later the Spanish had previously had a post), and the settlement which developed there took his name

Vincennes (vĭnsĕnz', Fr vēsĕn'), town (pop 48,851), Seine dept , N France, a western suburb of Paris Its huge castle and dungeon were built in the 14th cent Louis IX liked to administer justice to his subjects sitting under an oak tree in the beautiful Forest of Vincennes, as Joinville charmingly relates Several kings of France and Cardinal Mazarin died in the castle The dungeon, made a state prison in the 17th cent , had the Great Condé, Cardinal de Retz, Fouquet, Diderot, and Mirabeau among its illustrious inmates The duc d'Enghien was shot (1804) in a trench by the castle

Vincennes (vĭnsĕnz'), city (pop 18,228), co. seat of Knox co , SW Ind , on the Wabash (here the Ill line) and S of Terre Haute The old city is proud of its long past Though one traditional date for its founding is 1702, almost certainly French fur traders had come long before that time It was fortified by the younger sieur de Vincennes sometime after 1730 (perhaps 1736) and was an important French settlement It was occupied by the British in 1763, and in the American Revolution it was one of the

main objects of the expedition of George Rogers CLARK. Aided by Francis Vigo, François Bosseron, and Father Gibault, he triumphantly took the British Fort Sackville from its commander, Henry Hamilton, in Feb, 1779 Vincennes was capital (1800–1813) of Indiana Territory until succeeded by Corydon, William Henry Harrison was then the leading citizen. A treaty with the Indians was signed here in 1805 (see LITTLE TURTLE) The old French settlement changed as German immigrants, Yankees, and others made it into an American river port Today it is a farm center and has minor manufactures—fiber products, glass, flour, and shoes The past is recalled by remaining old buildings and a magnificent memorial (dedicated 1936) to George Rogers Clark There is a junior college See documents in Milo M Quaife, ed, *The Capture of Old Vincennes* (1927)

Vincent, George Edgar, 1864–1941, American educator, organizer, and sociologist, b Rockford, Ill, grad Yale, 1885, Ph D Univ of Chicago, 1896, son of Bishop John Heyl Vincent He was associated with his father in the Chautauqua movement and was president (1907–15) of the Chautauqua Institution Always a popular lecturer, he became noted for his wit and clear thinking Vincent taught sociology at the Univ of Chicago from 1894 to 1911 and was dean of the faculty of arts, literature, and science from 1907 In 1911 he became president of the Univ of Minnesota From 1917 until his retirement in 1929 he headed the Rockefeller Foundation, which under him expanded its activities, especially in medical aid and research After the First World War, in which he served as one of the leading directors of war relief, he traveled around the world to discover the most effective way to use the Foundation's funds As a sociologist he wrote *An Introduction to the Study of Society* (with A W Small, 1894) and *Social Mind and Education* (1897)

Vincent, John Heyl, 1832–1920, American Methodist bishop, b Tuscaloosa, Ala In 1857 he was assigned to an Illinois conference, in which state he held various pastorates His work in improving teaching methods in Sunday schools had widespread results Vincent founded (1866) the periodical the *Sunday School Teacher,* from 1868 to 1888 he was editor of Methodist Sunday-school publications and corresponding secretary of the Sunday School Union With Lewis Miller he organized (1874) at Chautauqua, N Y, a Sunday-school teachers' institute, which included secular as well as religious instruction, out of which grew the CHAUTAUQUA MOVEMENT He was active in planning and directing (1878–88) Chautauqua programs In 1888 Vincent was made bishop From 1900 until his retirement in 1904 he was head of the work of his denomination in Europe, making his residence in Zurich His books include *The Chautauqua Movement* (1866) and *The Modern Sunday School* (1900) George E Vincent was his son

Vincent, town (pop 1,108), central Ala, ESE of Birmingham near the Coosa, in a farming, lumbering, and mining area

Vincent de Paul, Saint, 1576–1660, French priest renowned for charitable work, b Gascony He was ordained in 1600 He was captured by pirates and enslaved in Tunis There he converted his last master and with him got away to Italy He was welcomed at Rome and sent to France on an ecclesiastical mission As tutor of the children of the commandant of the galleys St Vincent worked to better the physical and spiritual life of the galley slaves, and in 1619 he was made their chaplain He inspired many of the court to an interest in the poor of Paris and was the founder of organized charity in France The foundling hospital was his idea In 1629 he founded an order of secular priests to work in rural areas, this is the Congregation of the Mission, called Lazarists or Vincentians For city work he founded the SISTERS OF CHARITY St Francis of Sales made him director of the Order of the Visitation St Vincent's influence, through his spirit and through his institutions, is incalculable He was canonized in 1737 Feast July 19 See Pierre Coste, *The Life and Works of St Vincent de Paul* (1934–35), Joseph Leonard, ed, *Letters of St Vincent de Paul* (1938), biography by Theodore Maynard (1939)

Vincent Ferrer, Saint (fĕr'ûr), 1350?–1419, Spanish Dominican preacher, b Valencia He studied at Barcelona, taught at Lérida, and later studied at Toulouse After 1379 he became a friend and protégé of Pedro de Luna, later antipope Benedict XIII St Vincent became widely known as a preacher even in his youth He considered himself called to summon sinners to repent and prepare for the Judgment. He was tremendously successful, and many thousands were converted by him St. Vincent traveled over Europe, visiting France, N Italy, Flanders, and the Spanish Jews and Moslems, in whom he was especially interested He preached his last two years in Brittany and died in Vannes St Vincent's life was severely ascetic, and his followers imitated his austerities Many miracles were ascribed to him. St Vincent's surname is also spelled Ferrier. Feast April 5. See Henri Ghéon, *Saint Vincent Ferrier* (1939).

Vincent of Beauvais (bōvā'), c.1190–c.1264, French Dominican friar He was the author of three of the four parts of a Latin *Mirror* or encyclopedia, the *Speculum maius,* of great value as a summary of the knowledge of his time. The part entitled "Morals" is of unknown authorship, but is not by him The three parts written by him are entitled "Nature," "Instruction," and "History" In "Nature," the order followed is that of the six days of creation described in Genesis "Instruction" ranges from the liberal arts to the mechanic arts The "History" epitomizes the story of man since Adam as it was understood by 13th-century scholars

Vinces (vēn'sās), city (1944 estimated pop 21,860), W Ecuador A tropical city, Vinces is the commercial center of the cacao plantations lying along the upper Guayas river and its tributaries Cacao beans are shipped downstream to GUAYAQUIL

Vinci, Leonardo da: see LEONARDO DA VINCI

Vindhya Hills (vĭnd'yu), range, W central India, N of the Narbada river, rising to 5,000 ft

Vindobona see VIENNA, Austria

vine, any CLIMBING PLANT or trailing plant; the GRAPE is often called "the vine"

vinegar, sour liquid consisting mainly of acetic acid and water, produced by the action of bacteria on dilute solutions of ethyl alcohol derived from previous yeast FERMENTATION The coloring and flavoring are characteristic of the alcoholic liquor (as cider, beer, wine, fermented fruit juices, solutions of barley malt, hydrolyzed cereals, starches, or sugars) from which the vinegar is made Vinegar is used as a condiment, a preservative, a household remedy to allay irritations, a mild disinfectant, and, in cooking, to soften tough fibers Vinegar has been known from antiquity as a natural by-product of wine The name is derived from the French *vin aigre* [sour wine] The manufacture as a separate industry began in France in the 17th cent The wasteful slow (or natural) process, a spontaneous fermentation in casks half full of beechwood shavings exposed to the atmosphere by bung holes, was superseded in the early 19th cent by the quick (or generator) method The generator used in present-day commercial manufacture is usually a tall, truncated cone or vertical wood tank with a false bottom perforated to admit air The alcoholic solution is allowed to drip through a filling of hardwood shavings or other material presenting a large surface area Vinegar made by this method must be aged to remove a natural harshness It is generally clarified, then pasteurized Acetic fermentation may be impeded by an excessive growth or mother of vinegar, a slimy mass of bacteria, or of the parasitic vinegar eel, a minute, threadlike worm Wine vinegar is preferred in most of Europe and in California, malt, in England, and cider, in most of the United States

Vineland, borough (pop 7,914), S N J, N of Millville, in a poultry-raising and fruitgrowing region, founded 1861 by Charles K Landis, inc 1880 It is the seat of a large training school for subnormal children known for its valuable research work A soldiers' home and a state home for feeble-minded women are also here The borough has cooperative markets William Lescaze designed the modern offices of large glassworks here

Viner, Jacob (vī'nûr), 1892–, American economist, b Montreal, Que, grad McGill Univ, 1914, Ph D Harvard, 1922 He came to the United States in 1914 and was naturalized in 1924 An authority on international trade, he was long on the faculty of the Univ of Chicago He was consultant to the Treasury Dept from 1935 to 1939 In 1946 he became professor of economics at Princeton Univ Among Viner's writings are *Dumping* (1923), *Studies in the Theory of International Trade* (1937), and *The Customs Union Issue* (1950)

Vinet, Alexandre Rodolphe (dlĕksä'drù rôdôlf' vēnā'), 1797–1847, Swiss Protestant theologian and historian of literature In 1817 he became professor of French language and literature at Basel, and in 1819 he was ordained to the Reformed ministry His reputation as a leader of thought among French Protestants was soon established, and at the same time he won distinction by the fine quality of his critical literary studies He was made (1837) professor of theology at the Academy of Lausanne Liberty of conscience and separation of Church and state were advocated in his *Mémoire en faveur de la liberté des cultes* (1826) and other works In 1845 Protestant liberties were curbed in the canton of Vaud, Vinet soon resigned his professorship and joined the secession in the Free Church of Vaud His works include *Chrestomathie française* (3 vols, 1829–30) and a number published posthumously from notes of his courses—*Études sur Blaise Pascal* (1848), *Études sur la littérature française au XIXème siècle* (3 vols, 1849–51), *Histoire de la littérature française au dix-huitième siècle* (1853), *Moralistes de XVIème et XVIIème siècles* (1859), and *Poètes du siècle de Louis XIV* (1861)

vineyard (vĭn'yûrd), area of ground upon which the cultivation of the GRAPE—known as viticulture—takes place Biblical references to vineyards and allusions made to them by Vergil and Homer indicate their existence in remote antiquity As many as 40 varieties of the genus *Vitis* are known All but the few that grow wild and are generally not used require great care in order to make them produce good fruit The primary purpose of the vineyard in the past has been the production of wine, and on the whole it still is Yet in thousands of vineyards—largely those of the New World—the grapevines are cultivated to provide fresh grapes for eating, grape juice for drinking, and dried grapes or raisins Vine culture is an exacting endeavor with success dependent upon such factors as sunny exposure, congenial soil, suitable vines, moisture, wind, and disease-control methods. A vineyard is begun by transplanting vines from an active vineyard into new soil, these are in turn propagated by cuttings of the past season's growth of wood with two or three buds Traditionally introduced to Europe by the Phoecaans c 600 B C, the cultivation of the vine was widespread in the Mediterranean regions in ancient times Emperor Domitian decreed (A D 81) restrictions in use of Italy's land for vineyards, for fear of grain scarcity Later the Romans carried the vine to England, where its cultivation was attempted sporadically in the south and southwest until the 19th cent., with scant success On the Continent the results were the opposite Large areas of France, Italy, the Rhineland, Spain, and Portugal proved to be most hospitable and the elements most accommodating Greece, North Africa, the Canary Islands, and the Azores were some of the other regions in which *Vitis vinifera* was well received Attempts to transplant it to the New World began early in the 17th cent They continued, but even Tuscan vinegrowers in Virginia (working for Thomas Jefferson) and German immigrants from the Rhineland to Pennsylvania failed *Vitis vinifera* could not be grown E of the Rockies and N of the Gulf states The reason for the failure was not known until the late 19th cent., when it was discovered that the cause was the insect phylloxera Grape growing was first successful in the United States when John Adlum introduced the Catawba grape in 1830 and E W Bull introduced the Concord grape in 1849 These native species were resistant to phylloxera Calamitously, however, the pest was taken to Europe on an American vine Havoc there was prompt and widespread Many of the vineyards were completely ruined, others were seriously damaged France, seeing the possible extinction of the huge wine industry, evolved a technique of using American vines as stock upon which to graft *V vinifera,* the vineyards were thus saved The European vine now grows in the majority of U S vineyards, but that majority is entirely on the Pacific coast Two thirds of the grape vines grown in the United States are in California New York is second among the states The vineyards of the San Francisco Bay area provide the bulk of grapes needed for the growing American wine industry The scourge of grapevines, the phylloxera, is not native on the Pacific coast, nor is its twin as a vine destroyer, mildew, at home there Elsewhere the French innovation of grafting *V vinifera* and native American stocks is used to avoid phylloxera, and mildew is combated by fungicides A few of the other pests and afflictions that beset vineyards in the E United States are the grape-berry moth, which destroys fruit by causing it to color prematurely, the grapevine beetle, which eats the new buds in spring, climbing cutworms, which hide in the ground during the day and feed on the buds at night, and black rot, which shrivels the fruit The *V vinifera* of the Pacific slope is harassed by an even greater variety of pests and diseases, including black measles, little-leaf, nematode, red spiders, rabbits, and gophers Prophylaxis of the healthy vines and treatment of the afflicted ones are but one aspect of the intensive and continuous efforts that go into viticulture From the early stages of tending a vineyard, when appropriate vines have to be selected and congenial soil chosen for them, through the operations of cutting, layering, and grafting, planting and fertilizing, up to the gathering of crops, the skill and the knowledge of the vineyardist must match his industry The blue, black, white, or red cluster, if made up of pale, bitter, or shriveled grapes will quickly disclose his failings, or if rotund, sweet, and juicy will testify to his ability

Vineyard Haven (vĭn'yurd), resort village in Tisbury town (pop 1,966, settled 1660, inc. 1671), on N Martha's Vineyard, SE Mass It has a harbor on Vineyard Sound and was formerly a whaling, fishing, and saltmaking center. The British raided it in 1778

Vinita (vĭnē'tu), city (pop 5,685), co seat of Craig co, NE Okla, NE of Tulsa, founded c 1870. It is an agricultural and livestock center and the seat of a state mental hospital Grand River Dam is southeast.

Vinland or **Wineland,** section of North America discovered by LEIF ERICSSON in the 11th cent A D The sources for the knowledge of Leif Ericsson's exploration differ as to whether it was planned or accidental, but it is definitely known that he found a land containing grapes and self-sown wheat which he called Vinland Later expedi-

tions, particularly that of THORFINN KARLSEFNI, attempted to rediscover that land There has been much speculation as to the identification of Vinland Places from Newfoundland to Virginia have been suggested, but from the examination of the evidence which is available or may be deduced pertaining to directions, distances, topography, climate, and flora and fauna, the southern coast of New England has been generally accepted Efforts such as those by Eben N Horsford, who in the late 19th cent definitely located Vinland on the banks of the Charles river at Gerry's Landing, Cambridge, Mass , have usually met with little agreement Inscriptions and relics have been sought to throw light on the subject The discovery of the KENSINGTON RUNE STONE has been connected by Hjalmar R Holand with the expedition of PAUL KNUTSON to America Holand has further claimed that the Newport Tower (or Old Stone Mill), in Touro Park, Newport, R I , was the headquarters of Paul Knutson's expedition, but some scholars maintain that the tower was built in colonial times See E N Horsford, *The Landfall of Leif Erikson* (1892), William Hovgaard, *The Voyage of the Norsemen to America* (1914); Halldor Hermannsson, *The Problem of Wineland* (1936), H R Holand, *Westward from Vinland* (1940) and *America, 1355–1364* (1946), E I Haugen, *Voyages to Vinland* (1941)

Vinnitsa (vĭ'nĭtsə, Rus vē'nyĭtsŭ), city (pop 92,868), capital of Vinnitsa oblast, W Ukraine, in Podolia, on the Southern Bug river It is the center of an agricultural region The population was 40 percent Jewish until the Second World War, when Vinnitsa was held (1941–43) by the Germans

Vinogradoff, Sir Paul (vĭnŭgrä'dŭf), 1854–1925, English historian, b Russia He became professor of history at the Univ of Moscow (1887), but resigned his position in protest against the repressive measures of the tsarist government in 1901 and went to England the following year From 1903 to his death he was professor of jurisprudence at Oxford. He became an English citizen in 1918 as a result of his disillusionment at the direction of the Bolshevik revolution in Russia His work in the field of medieval institutions and the history of law was marked by his special interest in the historic importance of the village community His principal works are *Villainage in England* (1892), *The Growth of the Manor* (1904), *English Society in the Eleventh Century* (1908), and *Outlines of Historical Jurisprudence* (2 vols , 1920–23)

Vinson, Frederick Moore, 1890–, Chief Justice of the U S Supreme Court (1946–), b Louisa, Ky , grad Kentucky Normal College, 1908, and Centre College (B A , 1909, LL B , 1911) As Congressman (1923–29, 1931–38), Vinson was mainly notable as a fiscal expert He resigned from Congress to become associate justice of the U S Court of Appeals for the District of Columbia and later chief justice of the U S Emergency Court of Appeals He succeeded James F BYRNES as director of the Office of Economic Stabilization (1943–45) and served briefly as Federal loan administrator (March, 1945) and as director of the Office of War Mobilisation (April–July, 1945) before becoming Secretary of the Treasury (1945–46) Chief Justice Harlan F Stone's death led to his appointment as Chief Justice

viol (vī'ŭl), family of stringed musical instruments played with a bow, developed in the 15th cent from the vielle There were by the 16th cent two types, one, the viola da bracco [arm viol], was the predecessor of the VIOLIN family, and the other, the VIOLA DA GAMBA [knee viol], became the prototype of the viol family One arm viol, the VIOLA D'AMORE, survives today The double bass, often called bass viol, resembles the viols in some respects but actually belongs to the violin family The difference between these two families lies in their shape (the viol having a flat back, deep ribs, and a broad neck that is usually fretted) and in the number of strings (the viol having from five to eight strings) The sounds also differ, the viol having a soft and less brilliant tone as compared to the full, resonant, and more variable tone of the violin, which may account for the violin's having superseded the viol A complete set of viols for domestic use was called a chest of viols, for they were usually kept in a large, fitted chest See Curt Sachs, *The History of Musical Instruments* (1940), Karl Geringer, *Musical Instruments* (1943)

viola. see VIOLET.

viola (vēō'lə), musical instrument of the violin family, having the appearance of a large violin Three of its four strings are tuned the same as the three lower strings of the violin, and the fourth is tuned a fifth below. It directly preceded the violino piccolo, which became the present violin. Its tone is deeper and less bright than the violin. It is used in the orchestra and in the string quartet; recently its use as a solo instrument has increased in spite of its comparatively small solo literature.

viola da gamba (vēō'lä dä gäm'bä), musical instrument of the VIOL family, having usually six strings and played held between the knees It was developed in the 16th cent and was popular till the end of the 18th cent It was similar in range to the VIOLONCELLO, which is slightly larger

viola d'amore (vēō'lä dämō'rā), musical instrument of the VIOL family which originated in the 17th cent and was popular in the 18th cent It is often irregular in shape and has from five to seven strings, tuned by thirds and fourths, thus making a variety of chords possible, and an equal number of sympathetic strings running through the bridge and under the finger board It has a sizable repertoire, and its use has been revived in the 20th cent , notably by Paul Hindemith

violet, any plant of the genus *Viola*, commonly low perennial herbs Violets are popular whether as florists', garden, or wild flowers Florists' violets are chiefly obtained from the sweet or English violet (*Viola odorata*), native to the Old World Garden violets are generally hybrids—often called violas—and are purple, blue, rose, yellow, white, or combinations of these, some have double flowers An Old World violet, *V tricolor*, one of several called heartsease and Johnny-jump-up, has blossoms of purple, yellow, and white, from it the common pansy was derived Many violets produce two kinds of flowers—typical flowers and capsulelike cleistogamous flowers The cleistogamous flowers never open but produce seed after self-fertilization The violet has long been regarded as a symbol of modesty It became the flower of Athens, followers of Napoleon, who promised to return from Elba with the violets in the spring, used the blossom as a badge, in the United States a violet is the floral emblem of four states (Illinois, New Jersey, Rhode Island, and Wisconsin). Various species, particularly the sweet violet, have been used for perfume, dye, and medicine and have been candied Some plants not belonging to the genus *Viola* share the name of violet, e g , the African violet See Nelson Coon, *Practical Violet Culture* (1925), F E Dillstone, *Violet Culture* (2d ed , 1943), F V B Baird, *Wild Violets of North America* (1942)

violin, stringed musical instrument having a wooden body whose back and front are slightly convex, the front pierced by two f-shaped slits The four strings, tuned in fifths, run from the tailpiece at the base of the body over a bridge in the lower center, along the finger board, and into the pegbox It is played by drawing a rosined horsehair bow, held in the right hand, across the strings, the neck of the instrument is held in the left hand, and the body is supported by the shoulder and held firm by the chin The pitch of each string may be raised by stopping, i e , the vibrating length is shortened by the fingers of the left hand The evolution of the violin was completed in the 16th cent It was based on the 13th-century vielle and embodied characteristics of the rebec and the VIOL The earliest known makers of this new type of instrument worked in Lombardy in the middle of the 16th cent They were followed by Andrea AMATI, founder of the Cremona school of violinmaking made famous by the GUARNERI and by Antonio STRADIVARI, in whose work the peak of violinmaking seems to have been reached barely a century after the emergence of the instrument itself. The instruments of the violin family (violin, VIOLA, VIOLONCELLO, DOUBLE BASS) have outlasted other bowed instruments because of their versatility and balance of tone and their wide dynamic range A variety of sounds may be produced, e g , by different types of bowing or by plucking the string (see PIZZICATO). The violin plays a very important part as a member of the orchestra, in chamber music, and as a solo instrument The first well-known treatise on the technique of violin playing was written by Leopold Mozart (1756, Eng tr , 1948)

Viollet-le-Duc, Eugène Emmanuel (üzhĕn' ämänüĕl' vyôlā'-lü-dük'), 1814–79, French architect and writer He was the most prominent exponent of the Gothic revival in his country and was internationally celebrated for his restoration work upon historic French buildings He studied architecture in Paris, traveled in Italy, and painstakingly studied medieval monuments throughout France After restoring various churches and town halls in small towns of S France, he was employed, with J. B Lassus, to restore the Sainte-Chapelle in Paris With Lassus he later did important work (1845–55) upon Notre Dame de Paris, including the design of the pulpit and a replacement for the original central spire His other important restorations include the cathedrals of Amiens and of Laon, the château of Pierrefonds, and the town walls of Carcassonne. Viollet-le-Duc held many important official positions in artistic and civic fields and wrote a number of books of permanent archaeological value, in which he emphasized the structurally organic quality of Gothic edifices. They include *Dictionnaire raisonné de l'architecture française du XI au XVI siècle* (10 vols., 1854–69) and *Dictionnaire du mobilier français jusqu'à la Renaissance* (1855), both of these great standard works containing illustrations by Viollet-le-Duc; *Monographie de Notre-Dame de Paris* (1856), with the baron de Guilhermy; and *Essai sur l'architecture militaire au moyen âge* (1854).

violoncello (vē"ŭlünchĕ'lō, vē"ŭlŏn–), musical instrument of the violin family, about twice as large as the violin and having four strings, tuned an octave lower than those of the viola Its development coincides with that of the violin, but its manner of playing was fashioned after that of the VIOLA DA GAMBA. It was used only for accompaniment until certain technical advances, in the 18th cent., made it useful not only in orchestral and chamber music but also as a solo instrument It is commonly called cello.

Vionville (vyôvēl'), village (pop 224), Moselle dept , NE France, in Lorraine, W of Metz In the Franco-Prussian War the French were severely defeated (1870) between Vionville and Mars-la-Tour.

Viotti, Giovanni Battista (jôvän'nē bät-tēs'tä vyôt'-tē), 1753–1824, Italian violinist, considered the greatest of his day He ceased public appearances in 1783 and the next year became court musician to Marie Antoinette After the Revolution he went to London, where he resumed his concerts He returned to Paris and directed the opera, 1819–22 He died in poverty Of his 29 violin concertos, No 22 in A Minor is well known to students.

viper, any of a number of poisonous snakes including the true vipers of Europe, Asia, and Africa and the pit vipers of America and Asia The ADDER is one of the true vipers Among the pit vipers, which have a deep pit on each side of the head, are the RATTLESNAKE, the COPPERHEAD, the WATER MOCCASIN, the BUSHMASTER, and the temple viper All have large erectile fangs which may be folded back against the palate Most vipers bring forth their young alive

Virchow, Rudolf (rōō'dôlf fĭr'khō), 1821–1902, German pathologist, a founder of cellular pathology. He became professor at the Univ of Würzburg (1849) and professor and director of the Pathological Institute, Berlin (1856) He contributed to nearly every branch of medical science as well as to anthropology and introduced sanitary reforms in Berlin He was a member of the Prussian lower house and later of the Reichstag (1880–93) and was a leader of the liberal Progressive party opposed to Bismarck He founded (1847) the *Archiv für pathologische Anatomie und Physiologie und für klinische Medizin* and wrote numerous works, including *Die Cellularpathologie* (1858, Eng tr , 1860)

Virden (vûr'dun), town (pop 1,597), SW Man , near the Assiniboine and W of Brandon, in a wheat and dairy-farming region

Virden, city (pop 3,041), central Ill , SSW of Springfield, in a coal and farm area, inc 1857 It manufactures concrete blocks and tiles

vireo (vĭ'rēō), small, migratory bird of the New World About 12 of the 75 species nest in the United States, the others are tropical Most vireos are greenish above with white or yellow under parts. They are chiefly insectivorous Among the best singers are the red-eyed, the blue-headed, the warbling, the white-eyed, the Philadelphia, and the yellow-throated vireos

Virgil see VERGIL.

virginal, musical instrument see SPINET

Virgin Gorda see VIRGIN ISLANDS, BRITISH

Virginia, in Roman legend, daughter of the centurion Virginius Her father stabbed her to save her from the lust of Appius CLAUDIUS Crassus, a decemvir This precipitated the fall of the decemvirs The story occurs often in literature

Virginia, state (39,899 sq mi , 1940 pop 2,677,773, 1949 estimated pop 3,102,000), E United States, most northerly of the Southern states, the first of the THIRTEEN COLONIES RICHMOND is the capital, and NORFOLK the next largest city Officially styled a COMMONWEALTH, Virginia, roughly triangular in shape, is bounded on the north by Maryland, on the east by the Atlantic Ocean, on the south by North Carolina and Tennessee, and on the west by KENTUCKY and WEST VIRGINIA The coastal plain or TIDEWATER region of E Virginia, generally flat and partly swampy (see DISMAL SWAMP), is cut by four great tidal rivers—the POTOMAC, forming most of the line with Maryland, the RAPPAHANNOCK, the YORK, and the JAMES—which empty into CHESAPEAKE BAY. Across the Chesapeake, at the southern end of the peninsula, is the Eastern Shore, somewhat isolated from the rest of the state At its western end the tidewater rises to c 300 ft. at the fall line and gives way to the piedmont, rolling, generally fertile country which broadens gradually as it extends S to the North Carolina boundary. Rising rather abruptly in the west piedmont is the BLUE RIDGE, with the highest peak in the state, Mt. Rogers (5,720 ft.). Between the Blue Ridge and the Appalachian plateau farther west lies the valley and ridge province, commonly called the Valley of Virginia. Chief of the valleys is the rich, beautiful, and historic valley of the SHENANDOAH. Narrow gaps join the different valleys. The over-

all climate is mild, and rainfall is well distributed. Virginia's economy is among the most diversified in the South, but agriculture is still dominant The leading crops are corn, tobacco, hay, peanuts, wheat, Irish potatoes, apples (especially in the Shenandoah Valley), sweet potatoes, oats and other grains, soybeans, cotton, peaches, and truck Livestock raising is carried on most extensively in the Valley of Virginia and in the northern piedmont E of the Blue Ridge, and dairy and poultry farms are also important The coastal fisheries are large, and Virginia shellfish—oysters, clams, scallops, crabs, and shrimps—are especially valuable Woodlands of the tidewater and the heavily forested mountains yield paper and pulp products, which rank after tobacco products, food products, transportation equipment, and textiles in industrial importance A high proportion of the nation's shipyards are concentrated on the shores of HAMPTON ROADS. Coal, the leading mineral resource, is mined extensively in five counties of the southwest The state's shores and mountains, mineral springs, natural wonders, and historic sites attract thousands of visitors yearly Virginia, from Virgin Queen, for the unmarried English monarch Elizabeth, first referred to that vast area of North America not held by the Spanish or French The colony on ROANOKE ISLAND failed, but the British soon tried again, slightly farther north The venture, sponsored by the LONDON COMPANY (later more often called the Virginia Company) was commercial The company's expedition of three ships and 144 men under the command of Capt Christopher NEWPORT entered Chesapeake Bay in April, 1607, and landed on Cape Henry, named for a royal prince, as was Cape Charles The new colony's local councilors, subject to a royal council at home, were the three ship captains—Newport, Bartholomew GOSNOLD, and John Ratcliffe—Edward Maria Wingfield (who was later elected president), John SMITH, George Kendall, and John Martin They selected a peninsula up the James river and there established (May 13, 1607) the first permanent English settlement in America, which they called Jamestown They experienced great hardships Sickness and death cut their numbers to 38 before the end of 1607 Only the firmness, courage, and ingenuity of John Smith, president of the council from Sept , 1608 to July, 1609, and the arrival of supplies (with additional settlers) in Jan and Oct , 1608, kept the colony together Under a new charter (May, 1609), which replaced its original patent of 1606, the company abolished the local council and appointed Thomas West, Baron DE LA WARR, governor with virtually dictatorial powers The large expedition which sailed from England in May, 1609, carried Sir Thomas GATES as deputy governor Two of the nine ships, including Gates's, were wrecked in the Bermudas, and when Gates finally reached Jamestown in May, 1610, he found a few colonists under George PERCY had survived the terrible winter of 1609–10, known as the "starving time" Gates and the survivors had just set sail for England in June when De la Warr hove into view and ordered them back to the abandoned settlement Disease and Indians then claimed more lives, and De la Warr, stricken himself, departed for England in March, 1611, leaving behind less than 150 men under Percy Fortunately, Sir Thomas DALE came with more stores in May and after Gates returned in August with additional settlers, including 20 women (a shipload of maids arrived in 1620), the English took a firm hold at Jamestown Of the early governors Dale and Sir Samuel ARGALL were said to have been harsh The land and livestock in Virginia were at first under joint ownership, a system which soon outlived its usefulness After the company received another, more liberal, charter in 1612, it initiated the "headright" system, by which 50 acres of land were granted for each individual a person transported at his own expense To further stimulate growth the company also set up subsidiary, private joint-stock companies, which settled larger areas known as "colonies" or "hundreds" (the last term has survived in a few tidewater place names) With this new, personal interest in the soil, the early Virginians really set about becoming farmers The successful experiments (1612) of John ROLFE in raising tobacco had already given them a staple, and his marriage (1614) to POCOHONTAS, daughter of the Indian chief POWHATAN, made possible its increasing cultivation without fear of attack But Pocohontas and her father soon died, and the POWHATAN CONFEDERACY in a surprise attack (1622) killed c.350 of the most seasoned settlers The English retaliation was quick and effective so that, except for another serious uprising in 1644, there were no further warlike troubles with the Indians for some time The company's charter was declared vacated in 1624, and Virginia became a royal colony, the first in English history In providing (1619) under the governorship of Sir George YEARDLEY for a local representative assembly (the house of burgesses) the first in the New World, the company did, however, leave an important legacy. By 1641, when Sir William BERKELEY became governor, the colony was well established. There were plantations and farms growing tobacco (for export) and corn (for home consumption) on both sides of the James up to its falls Three fourths of the settlers (c 7,500 in 1641), including boys and girls from English cities, especially London, had come as indentured servants or apprentices, and about half of these became freemen and small farmers In 1641 there were also, c 250 Negroes (the first arrived in 1619 on a Dutch ship), but in the beginning most of them were indentured, like the whites, not slaves Only a few of the freeholders were of high lineage, but they, together with the merchant class from which many of the First Families of Virginia were descended, controlled the government During the Puritan Revolution in England many wealthy middle-class Englishmen, supporters of Charles I though not actually Cavaliers as they were called, came to Virginia, which was loyal to the crown until the arrival of an expedition sent by Oliver Cromwell in 1652 With the Puritan Commonwealth busy with affairs at home, Virginia was (1652–60) practically independent, enjoying free trade with foreigners, especially the Dutch. The newcomers increased their wealth by opportune investments in tobacco lands and the rising fur trade This prosperous era ended with the Restoration in 1660, as the reduced shipping, higher freight rates, and fewer markets brought about by the NAVIGATION ACTS had the effect of greatly lowering the price of tobacco The wealthy planters met this by enlarging the scale of their activities But the small farmers, with less income and fixed debts, faced ruin Berkeley, serving his second stint as governor, refused to sanction a campaign against the Indians who had been attacking the frontier, and that refusal was the immediate cause for BACON'S REBELLION in 1676 The unfortunate death of Nathaniel BACON left the yeomen leaderless, and they were so ruthlessly put down that Berkeley was recalled to England The aristocracy continued as powerful as ever under equally incompetent governors, e g , the 2d Baron CULPEPER The history from 1690 to the American Revolution is a record of economic and territorial expansion, with tobacco always figuring large in the process The planters came to find slavery profitable, and Negroes steadily increased in numbers Many planters, such as William BYRD, turned to speculation in land, renting or selling to immigrants and starting new plantations of their own Many French Huguenots came to Virginia after 1685, and not a few Germans followed their countrymen whom Gov Alexander SPOTSWOOD imported (1714–17) to work his iron furnaces A large proportion of the newcomers, however, were from Pennsylvania—German Lutherans, English Quakers, Scotch-Irish Presbyterians, and a lesser number of Welsh Baptists—all settling in the Shenandoah Valley beginning c 1730 The OHIO COMPANY grant (1749) led to exploration beyond the mountains and to contact with the French, and Virginians, notably Col George WASHINGTON, were prominent in the last of the FRENCH AND INDIAN WARS From the 1760s until the outbreak of the AMERICAN REVOLUTION, Virginia and Massachusetts led the opposition to George III's obnoxious colonial policies In 1773 the burgesses at WILLIAMSBURG, capital since 1699, led by Richard Henry LEE, formed an intercolonial committee on correspondence The Virginia leaders proposed (MAY, 1774) a congress of all the colonies, the First Virginia Convention (Aug) chose delegates to it, and Virginia's Peyton RANDOLPH was elected president of the First Continental Congress in September The next year, in June, George Washington was made commander in chief of the Continental army After the patriots forced the royal governor, John MURRAY, earl of DUNMORE, to flee, the Fifth Virginia Convention (May 6–June 29, 1776) declared the colony's independence, instructed the Virginia delegates to the Continental Congress to propose general colonial independence (resulting in the Declaration of Independence written by Thomas JEFFERSON), and adopted the declaration of rights drawn up by George MASON and the first constitution of a free American state Patrick HENRY was elected the first governor Although the British had burned Norfolk in Jan , 1776, they did not invade the state in full force until 1779, when they took Portsmouth and Suffolk Continentals under Lafayette came to Virginia in 1780, and the British cause was lost as American land forces and a French fleet combined to bring about Cornwallis's surrender (Oct 19, 1781) in the YORKTOWN CAMPAIGN Meanwhile, George Rogers CLARK and his Virginians had wrested (1779) from the British the NORTHWEST TERRITORY, to which the state yielded its claim in favor of the national government in 1784 In replacing the unsatisfactory Articles of Confederation with the CONSTITUTION OF THE UNITED STATES, Virginians, especially James MADISON, again played leading roles Other able leaders such as Patrick Henry, Edmund PENDLETON, and Edmund RANDOLPH at various times opposed the document, but the state ratified it (June 26, 1788), and another Virginian, Chief Justice John MARSHALL, later gave it much of its strength. The Old Dominion ceded (1789) a portion of its Potomac lands to the United States for the creation of the District of Columbia In 1792, Kentucky, a Virginia county since 1776, was admitted to the Union as a separate state The ALIEN AND SEDITION ACTS prompted an early defense of states' rights (see KENTUCKY AND VIRGINIA RESOLUTIONS) and also led to the downfall of the Federalists and the consequent rise of Jefferson's "Virginia dynasty" Of the first 12 Presidents of the United States, seven were Virginians—Washington, Jefferson, Madison, James MONROE, Wilham Henry HARRISON, John TYLER, and Zachary TAYLOR The foundations of a new society were meantime being laid within the state, with Jefferson as chief architect Entail and primogeniture had been abolished, and the Anglican church had ceased to be the state church Cotton replaced tobacco as the staple in the east, further exhausting the soil, and many planters moved west The western part of Virginia thus grew rapidly, but complained bitterly of the continued political domination of the tidewater Antislavery sentiment was strong early in the 19th cent , but, as the newer Southern states eclipsed Virginia in cotton production, the tidewater became a breeding ground for the slaves they needed Following the slave insurrection of Nat TURNER in 1831, the house of delegates voted down a bill to abolish slavery by the narrow margin of 67 to 60 For the most part Virginians labored to avert conflict between North and South But "fire-eaters" such as Edmund RUFFIN and abolitionists such as John BROWN, of HARPERS FERRY fame, shaped the course that led to the CIVIL WAR Secession came (April 17, 1861) only after all attempts to keep peace had failed Virginia joined the Confederacy and Richmond became the Confederate capital Robert E LEE entered the military service of the new Southern government, but not a few Virginians such as Winfield SCOTT, George H THOMAS, and David G FARRAGUT remained loyal to the Union Most Virginians W of the Appalachians also opposed secession, and on June 20, 1863, this section was admitted to the Union as the new state of West Virginia Virginia was the chief battleground of the Civil War In the beginning the Union armies were repeatedly set back—at the first battle of BULL RUN (July 21, 1861), in the SEVEN DAYS BATTLES of the PENINSULAR CAMPAIGN (April–July, 1862), in which the MONITOR AND MERRIMAC clashed in Hampton Roads, and in lesser but related campaigns such as the triumph of Thomas J (Stonewall) JACKSON in the Shenandoah Valley The second battle of Bull Run (Aug , 1862) was a smashing victory for Lee, but in the ANTIETAM CAMPAIGN (Sept , 1862) he fared no better than Union Gen George B MCCLELLAN in invading enemy country However, in the battles of FREDERICKSBURG (Dec 13, 1862) and CHANCELLORSVILLE (May 2–4, 1863), the Federals under Gen Ambrose E BURNSIDE and then under Gen Joseph HOOKER were again handsomely repulsed Thus encouraged, Lee and his lieutenants—James LONGSTREET, R S EWELL, A P HILL, and J E B STUART—undertook another invasion of the North but failed against George G MEADE in the GETTYSBURG CAMPAIGN (June–July, 1863) That marked the beginning of the end for the Confederacy, although it took considerable bloody pounding by Gen U S GRANT in the WILDERNESS CAMPAIGN (May–June, 1864) and the siege of PETERSBURG (1864–65) before Lee surrendered the remnants of his gallant Army of Northern Virginia at APPOMATTOX COURTHOUSE on April 9, 1865 President Jefferson DAVIS had already fled Richmond, and the Confederacy soon collapsed The war left its marks on the land and the people The Shenandoah Valley was particularly desolate after the campaigns of Confederate Gen Jubal A EARLY and Union Gen Philip H SHERIDAN in 1864 But poverty-stricken as it was from the war, the state, under Gov Francis H PIERPONT, had the consolation of escaping the worst horrors of RECONSTRUCTION Radical Republicans never took over Virginia as they did most of the South, but the state was readmitted to the Union anyway, on Jan 26, 1870 West Virginia refused to assume any part of the large antebellum debt, which Gen William MAHONE and his partisans wanted to readjust, downward, and this question became a bitter issue in state politics Not until 1915 did the U S Supreme Court order West Virginia to assume its share of the obligations Dissatisfied with the Reconstruction constitution of 1868, the state adopted (1902) a new charter which effectively restored "white supremacy" Agriculture meanwhile had recovered somewhat from the destruction of war, and though farm tenancy became an accepted institution in the economy it never gained a strong hold With transportation facilities restored, industry, particularly the manufacturing of tobacco products and textiles and coal mining, grew During the First World War, in which another Virginian, Woodrow WILSON, was President, the state was a large training camp, as it was again in the Second World War Industry boomed both times, especially the shipbuilding of Hampton Roads In the mid-1920s Harry Flood BYRD assumed direction of the state's powerful Democratic organization, formerly headed by U S Senator Thomas S Martin and Methodist Epis-

copal Bishop James Cannon, Jr Since then Byrd, governor from 1926 to 1930 and U S Senator after 1933, has doubtless been the most influential figure in the state As chief executive he put through a sound reorganization of the state government and brought about the passage of the first antilynching law of any state, which has proved completely effective. However, the organization's chief boast is that the state is entirely free of debt due to a rigid "pay-as-you-go" policy Liberals criticize this attractive financial record as having been made at the expense of properly providing for public education and welfare The conservative Byrd organization maintained power, although Virginians balked loudly at the machine's attempt to remove the name of President Harry Truman, who carried the state in 1948, from the Democratic ballot They also voted (Nov , 1949) to retain the poll tax rather than accept the entangled, confusing amendments that supposedly would have abolished it The Univ of Virginia, at Charlottesville, is the state's leading institution of higher education Others are the College of William and Mary, at Williamsburg, the Univ of Richmond, and Virginia Military Institute and Washington and Lee Univ , both at Lexington. Intensely proud of their past, Virginians—among them Mary JOHNSTON, Thomas Nelson PAGE, Ellen GLASGOW, James Branch CABELL, Douglas Southall FREEMAN, Thomas Jefferson WERTENBAKER—have written widely about it and, more unusual, have the reputation of reading what others have written See E G Swem, *A Bibliography of Virginia* (4 vols , 1916–32), L J Cappon, *Bibliography of Virginia History since 1865* (1930), P A Bruce, *Economic History of Virginia in the Seventeenth Century* (1896), *Social Life of Virginia in the Seventeenth Century* (1907), *Institutional History of Virginia in the Seventeenth Century* (1910), and *The Virginia Plutarch* (1929), J E Cooke, *Virginia, a History of the People* (1896), H J Eckenrode, *The Political History of Virginia during the Reconstruction* (1904) and *The Revolution in Virginia* (1916), C H Ambler, *Sectionalism in Virginia from 1776 to 1861* (1910), C. C Pearson, *The Readjuster Movement in Virginia* (1917), C M Andrews, *The Colonial Period of American History* (Vol I, 1934), H T Shanks, *The Secession Movement in Virginia, 1847–1861* (1934), M P Andrews, *Virginia, the Old Dominion* (1937) and *The Soul of a Nation* (1943), Federal Writers, Project, *Virginia a Guide to the Old Dominion* (1940), T T Waterman, *The Mansions of Virginia 1706–1776* (1946), F C Rosenberger, ed , *Virginia Reader* (1948).

Virginia. **1** City (pop 1,418), co seat of Cass co , central Ill , WNW of Springfield, in a farm area, platted 1836, inc. as a village 1842, as a city 1872 **2** City (pop. 12,264), NE Minn , NNW of Duluth and on the Mesabi iron range, settled before 1883, platted 1892. It was rebuilt after disastrous fires in 1893 and 1900 In addition to its mines, open-pit and underground, the city has foundries and is the trade center for a lake resort and farm area

Virginia, Confederate name for the ironclad *Merrimac* See MONITOR AND MERRIMAC

Virginia, University of, at Charlottesville, state supported, mainly for men, chartered 1819, opened 1825 It has a college of arts and sciences (with commerce) and departments of agriculture, education (including nursing), engineering, law, and medicine There are bureaus of industrial and social science research and of public administration, the McCormick Observatory, the Alderman Library, and art and science museums The original buildings, planned by Thomas Jefferson, the first rector, were built on three sides of a rectangular "Lawn," with the Rotunda (burned 1895, restored by Stanford White) at one end and on either side the "ranges," colonnaded dormitories and two-storied houses The organization and curriculum also were planned by Jefferson Joseph C CABELL was instrumental in securing state support Virginia had the first elective system in a university Mary Washington College (at Fredericksburg, for women, chartered 1908) was consolidated with the university in 1944 See J S Patton, *Jefferson, Cabell, and the University of Virginia* (1906), history by P A Bruce (5 vols , 1920–22)

Virginia Beach, town (pop 2,000), SE Va , a resort on the Atlantic E of Norfolk, inc 1906 A state military reservation is near by, and on the north are Fort Story, Cape Henry, and Seashore State Park

Virginia bluebell see VIRGINIA COWSLIP

Virginia City. **1** Town (pop 380, alt. 5,822 ft), co seat of Madison co , SW Mont , SE of Butte. Founded when gold was discovered (1863) in Alder Gulch here, it became a mushroom town of gold miners, was the first town incorporated (1864) and had the first (1864) newspaper printed in Montana Territory Successor (1865) to Bannack as territorial capital, it later lost that honor to Helena **2** Unincorporated town (pop. 952, alt 6,500 ft), co. seat of Storey co., W Nev., SE of Reno. It was founded in 1859, when rich deposits of gold and silver, notably the famous COMSTOCK LODE, were discovered near by. In 1880 the population was c 11,000, and the town had fine residences, clubs, restaurants, and an opera house. The first newspaper printed in Nevada, the *Territorial Enterprise*, on which Mark Twain was a reporter, was published here after 1861 The town is now a tourist center.

Virginia Company, created in 1606 by British royal charter for the purpose of colonizing in North America The charter, given to the Society of Adventurers, provided for two colonies The Virginia Company of London (see LONDON COMPANY) was given permission to plant a colony 100 mi square between lat. 34° N and lat 41° N, while the Virginia Company of Plymouth (see PLYMOUTH COLONY) could establish a colony between lat 38° N and lat 45° N Neither colony was to be planted within 100 mi of the other A local council was to be provided in each colony, but the king, through a council in England, had final authority By a new charter in 1609 the London Company became independent of the Plymouth Company

Virginia cowslip or **Virginia bluebell,** beautiful spring wild flower (*Mertensia virginica*) native to the Eastern and Middle Western states and usually found in moist places It has nodding clusters of blue (or pink) bell-shaped flowers, pink in bud, it is often cultivated

Virginia creeper, native woody vine (*Parthenocissus quinquefolia*), tall growing and popular as a wall covering It has blue-black berries and clings by disk-tipped tendrils, some branches hanging free in graceful festoons The five-fingered leaves—brilliant in the fall—are sometimes confused with the three-fingered poison ivy Other names are American ivy, woodbine, and AMPELOPSIS

Virginia Military Institute, at Lexington, state supported, for men, chartered and opened 1839, called the West Point of the South It has university courses in chemistry, engineering, and liberal arts Gen T J (Stonewall) Jackson and Matthew F Maury taught here and many military leaders are alumni See William Couper, *One Hundred Years at V M I* (1939)

Virginia Mountains, W Nev , W of Pyramid Lake, extending NW to Astor Pass and S to the Carson river valley The area includes the northerly Pyramid Range and the southerly Virginia Range (or Washoe Mts) In the south is Mt Davidson (7,870 ft), the site of the COMSTOCK LODE

Virginia Polytechnic Institute, at Blacksburg, land-grant and state supported, coeducational since 1921, chartered and opened 1872 as an agricultural and mechanical college In 1896 it became Virginia Agricultural and Mechanical College and Polytechnic Institute (legal title) It includes a college and schools of agriculture and engineering A woman's division at Radford (Radford College, formerly a state teachers college) was consolidated with V P I in 1944.

Virginia reel, early American variation of the REEL It is still performed occasionally at country dances, usually to the tune of *Turkey in the Straw*

Virginia Resolutions: see KENTUCKY AND VIRGINIA RESOLUTIONS

Virginia State College, at Petersburg, Negro, with land-grant support, coeducational, chartered 1882, opened as a normal and collegiate institute 1883 It became a normal and industrial institute in 1902, was reorganized as a college in 1922, and was renamed in 1946 It has divisions of agriculture, arts and sciences, education, home economics, and mechanic arts

Virginia Union University. see RICHMOND

Virgin Islands, group of about 100 small islands, West Indies, E of Puerto Rico Discovered by Columbus in 1493, the islands are divided between the United States and Great Britain Though constituting the westernmost part of the Lesser Antilles, the islands form a geological unit with Puerto Rico and the Greater Antilles, being of volcanic origin overlaid with limestone They are subject to occasional hurricanes between August and October and suffer from light earthquakes The population is predominantly Negro The **Virgin Islands of the United States** (132 sq mi , 1940 pop 24,889, 1948 estimated pop 27,000), territory, formerly part of the Danish West Indies, were purchased in 1917 for $25,000,000 The capital is CHARLOTTE AMALIE (St Thomas), other cities are Christiansted and Frederiksted (both on St Croix) Although 68 islands compose the group, only the three largest are of importance, St CROIX (23 mi. long), St Thomas (12 mi long), and St. John (9 mi long) The terrain of the islands differs. Mountainous St. Thomas, almost completely uncultivated, encloses many snug harbors and bays. Much shipping comes through the port of Charlotte Amalie, one of the finest natural harbors in the Caribbean and a center in the slave-trading days, and small boats fish off the shores of the islands St Croix, with a flatter terrain than St. Thomas, is dominated by agriculture, the main crop being sugar cane. The people on all three islands burn charcoal and raise cattle, meat packing is a growing industry The water supply is almost completely dependent on the rainfall and is preserved in cisterns The tropical climate (ranging between 75° F. and 84° F. and cooled by northeast tradewinds), increased vacation facilities, and the picturesque quality of the islands enhanced by Old World Danish architecture have encouraged a growing tourist trade Despite this, as well as government sponsored homesteading and the production of rum and bay rum, the income is not enough to prevent general poverty; the real importance of the islands is their strategic location athwart the Caribbean and Atlantic They were under supervision of the Dept. of the Navy until 1931, when they were transferred to the Dept. of the Interior. The islands are divided into two municipalities (St. Thomas and St. John, St. Croix), each with a legislative council There is an appointed civil governor. An organic act, passed by Congress in 1936, has given the islands a greater degree of self-government Settlement of St Thomas was begun by the Danish West India Company in 1672, St John was claimed in 1683 and St Croix purchased from France in 1733 The company's control lasted until the islands' purchase by Frederick V in 1754, when they became a royal colony In 1801 and again from 1807 to 1815 the islands were in British hands See the current *Annual Report of the Governor of the Virgin Islands to the Secretary of the Interior*, Waldemar Westergaard, *The Danish West Indies, 1671–1754* (1917), J A. Jarvis, *The Virgin Islands and Their People* (1945) Immediately to the northeast, the *British Virgin Islands* (67 sq mi , 1946 pop 6,508), about 30 in number, form a presidency of the LEEWARD ISLANDS colony The principal islands are Tortola (12 mi. long), Anegada (10 mi long), and Virgin Gorda (10 mi long) The capital, Road Town, is on Tortola The islands were acquired by Great Britain in 1666 Although sea-island cotton was long the leading crop and is still raised, it is being supplanted by tobacco A small cigar industry is developing, and grazing is also a major activity They trade mainly with St Thomas and Puerto Rico

Virginius, filibustering ship, fraudulently flying the American flag and carrying arms to the Cubans in the Ten Years War It was captured by the Spanish off Cuba, Oct 31, 1873 The captain, Joseph Fry, and 52 of the crew and passengers—among them several Americans—were executed More would have been killed but for the intervention of the British ship, *Niobe* The incident came near causing war between the United States and Spain, but Hamilton FISH took negotiations out of the hands of Gen D E SICKLES, intemperate U S minister to Spain, and a settlement was reached Spain paid the United States an indemnity of $80,000 See Allan Nevins, *Hamilton Fish* (1936)

Virgin Mary see MARY

virgin's-bower. see CLEMATIS

Virgo (vûr'gō) [Latin,=the virgin], in astronomy, a zodiacal constellation observed from antiquity It is pictured as a maiden holding an ear of grain In mythology she is often identified with the harvest The most prominent star is Alpha Virginis, or Spica, a white star of first magnitude Gamma Virginis is a double star in the constellation, having two components of about equal brilliance Sir William Herschel discovered more than 300 nebulae in Virgo, and later about 200 more were observed In 1936 a supernova was discovered in Virgo by Edwin P. Hubble and Glenn Moore at Mt Wilson Observatory Virgo is the sixth sign of the zodiac

Viriatus (vĭrēā'tŭs), d 139 B C , leader of the Lusitani (see LUSITANIA) One of the survivors of the massacre of Lusitani by the Roman praetor Servius Sulpicius Galba, Viriatus rose as a popular leader and persuaded his countrymen to resist Roman rule Gathering together an army, he defeated (147 B C) the Romans During the next two years, he established control over a considerable area. In 145 Rome sent the consul Fabius Maximus, who managed to restrict the area of Viriatus' activities The next year, however, he defeated the successor of Maximus and reestablished his power. One Roman defeat followed another The victories of Viriatus encouraged the Celtiberians to renew their resistance to Rome The senate next sent an army under Fabius Maximus Servilianus, which Viriatus succeeded in trapping. He might have ended the war by destroying this army, but instead he concluded a peace and allowed the army to leave. For this act of clemency he was declared a friend of Rome by the senate. In 139, however, the successor of Servilianus, Servilius Caepio, with the tacit consent of the senate, renewed the war. Viriatus, probably swayed by his countrymen who were weary of the war, opened negotiations with Caepio, who brought the war to an end by bribing the emissaries of Viriatus to kill him

Viroqua (vûrō'kwu), city (pop 3,549), co. seat of Vernon co., W Wis , SE of La Crosse, in a tobacco and dairy area, settled 1851, inc. 1885.

Virtanen or Wirtanen, Artturi Ilmari (both ärt'tōōrē ĭl'märē vĭr'tänĕn), 1895–, Finnish biochemist. He received the 1945 Nobel Prize in Chemistry for his work on the use of nitrogen by plants. He discovered several important steps in nitrogen synthesis by bacteria in root modules of legumes and

evidence that higher plants can capture nitrogen without the aid of root bacteria and that such plants, contrary to long-accepted theory, can absorb from the soil and use relatively complex organic compounds He originated a method of making silage by treating it with dilute hydrochloric acid to prevent spoilage Virtanen became (1931) director of the Biochemical Institute at Helsinki and taught at the Univ. of Helsinki (1924–48)

virtue [Latin, =manliness], in philosophy, a moral judgment of the good of human conduct. The cardinal virtues, as presented by Plato, were prudence, courage, temperance, and justice They are to be interpreted as descriptive of conduct rather than the initiating force These virtues are achieved through proper training and discipline They have been called natural virtues, as contrasted with the theological virtues of the Roman Catholic Church —faith, hope, and charity The theological (or supernatural) virtues are regarded as dispositions for good residing in men As early as the 14th cent they were combined with the Platonic (or natural) virtues and called the seven cardinal virtues, figuring largely, along with the opposing seven deadly sins, in medieval literature

virus (vī'rŭs), name for a submicroscopic infectious agent capable of causing disease in either animals or plants Viruses exhibit certain characteristics of living organisms Sometimes they are called filtrable (or filterable) viruses, this arose from the fact that these disease-causing particles can pass through certain porcelain filters having pores so fine that bacteria cannot pass through them However, there are problems arising from using the criterion of filtrability as a means of distinguishing viruses from other minute pathogenic organisms It is believed that under certain conditions some bacteria and also some spirochetes will pass through filters There are furthermore some diseases classed by many authorities as virus diseases for which filtrability of the agent has not been proved It has been pointed out, also, that the mechanism of filtrability is dependent upon a number of factors, including the electrical charge on the virus, the electrical charge on the filter, the temperature, and the purity of the material It is therefore suggested by some investigators that filtrability should be considered to be only one factor in determining whether the cause of a given disease is actually a virus In general, viruses can be described as parasites incapable of growth except in the presence of living cells, they can be preserved apparently indefinitely, when frozen or dried, and, as observed in humans, a particular virus seems usually to attack a particular tissue, e g , the rabies and poliomyelitis viruses attack the nervous system and those causing chickenpox and smallpox affect especially the skin An attack of certain virus diseases seems to endow the victim with greater immunity against another attack of the same disease than is conferred by an attack of many bacterial diseases There are often observed, in the cells of certain tissues affected by viruses, structures known as inclusion bodies These are masses of material, varying in size from minute granules to bodies that nearly fill the cell, found either in the cytoplasm or in the nucleus of the cell Mosaic diseases in plants are attributed to viruses, the tobacco mosaic virus was isolated (1935) by W M Stanley in the form of a crystalline protein Other diseases believed to be caused by viruses include (in addition to poliomyelitis, rabies, chickenpox, and smallpox), measles, mumps, typhus fever, Rocky Mountain spotted fever, yellow fever, and probably the common cold See Rockefeller Institute for Medical Research, *Virus Diseases* (1943), F M. Burnet, *Virus as Organism* (1945)

Vis (vēs), Gr *Issa* (ĭ'sə), Ital *Lissa* (lē'sä), island, area 39 sq mi , off the Dalmatian coast in the Adriatic It belongs to Croatia, Yugoslavia, is noted for its wine, and has important fisheries The village of Vis (pop 2,727) lies on the north coast Ancient Issa was a Greek colony from the 4th cent B C and later prospered under the Romans From the 10th cent until 1797 it was a Venetian possession, and in the Napoleonic Wars it changed hands among the Austrians, the French, and the British From the Congress of Vienna (1815) until 1918 the island belonged to Hungary Here in 1811 the British won a naval victory over the French, and here in the Austro-Prussian War of 1866 the Austrians under Admiral Wilhelm von Tegetthoff thoroughly defeated the Italian fleet There are many ancient remains on the island, notably Roman baths, mosaic pavements, and several old Roman Catholic and Orthodox churches The island is a popular resort and excursion point

Visalia (vĭsā'lyə), city (pop. 8,904), co seat of Tulare co., S central Calif , SE of Fresno, founded 1852, inc. 1874. It is a processing center in a farm and dairy area of the San Joaquin Valley A junior college (coeducational) is here

Visayan Islands (vĭsī'ən) or **Bisayas** (bēsä'yäs), island group, in the Visayan Sea, central Philippine Islands, including Samar, Leyte, Negros, Panay, Bohol, Cebu, Masbate, and many smaller islands.

Visby, Sweden see WISBY

Vischer, Friedrich Theodor (frē'drĭkh tā'ōdōr fĭ'shûr), 1807–87, German aesthetic philosopher He taught at Tübingen and later at Zurich and Stuttgart Vischer was not only one of the most individual and independent critics of his century, but also a gifted author. His chief work is his *Aesthetik* (6 vols , 1846–57). He also wrote the humorous and satirical *Auch Einer* [one more] (1878) and a parody of part of Faust, as well as poems and numerous critical and philosophical works.

Vischer, Peter (pā'tûr fĭ'shûr), the elder, c 1455–1529, German sculptor, foremost of the bronze founders in Germany Beginning as the assistant of his father, Hermann Vischer, Peter set up his own establishment at Nuremberg and in time had his five sons working with him It is said that two of them traveled in Italy, and this may account for the Italian influence noticeable in certain works, particularly the bronze canopy over the reliquary of St Sebald at Nuremberg, Vischer's masterpiece, in the rich ornamentation of which medieval and Renaissance characteristics intermingle Of the other tombs from his workshop, the most important are those of Archbishop Ernst (cathedral, Magdeburg) and of Hermann, Graf von Henneberg (Staatskirche, Romhilde) In 1513 Vischer, at the summons of Emperor Maximilian I, went to Innsbruck, where he made two statues (believed to be those of Theodoric and Arthur) for the great tomb of the Hapsburg Of his sons, **Peter Vischer,** the younger, 1487–1528, was the most celebrated

Visconti (vĭskōn'tē), Italian Ghibelline family The Visconti ruled Milan from the 13th cent until 1447 In the 12th cent members of the family received the title of viscount, from which the name is derived **Ottone Visconti** (ō-tō'nā) 1207–95, archbishop of Milan, was recognized (1277) as lord of the city after he had defeated the opposition of the Della Torre family, long leaders of the popular party To keep the lordship in the family, he had **Matteo I Visconti** (mät-tā'ō), 1255–1322, elected captain of the people in 1287 Exiled (1302–10) by the Della Torre faction, Matteo returned with the help of Emperor Henry VII and became imperial vicar He established his overlordship in all Lombard cities, but Guelph opposition obliged him to retire in favor of his son, **Galeazzo I Visconti** (gälāät'tsō), 1277?–1328, who continued the struggle against popes and Guelphs Galeazzo's son **Azzo Visconti** (ät'tsō), 1302–39, consolidated the state, made peace with the pope, and increased the Milanese territories At his death his two uncles, Luchino and Giovanni, were proclaimed dukes **Lucchino Visconti** (lōōk-kē'nō), 1292–1349, who in fact ruled alone, continued his predecessor's conquests, acquiring territory in Piedmont, Tuscany, and the present Ticino canton of Switzerland The expansion of Milan aroused the other Italian states, and coalitions were constantly being formed against Lucchino and his successors Lucchino's brother, **Giovanni Visconti** (jōvän'nē), 1290–1354, took over the government in 1349 At his death the Milanese possessions were divided among his three nephews, Matteo II, Galeazzo II, and Bernabò **Matteo II Visconti,** 1319–55, was probably poisoned by his brothers, who divided his possessions **Galeazzo II Visconti,** 1320–78, an able diplomat, began the transformation of the various communal lordships that made up his lands into an organized state He was a patron of the arts and letters and a friend of Petrarch At Pavia, where he held his court, he built the castle and founded the university and the library **Bernabò Visconti** (bärnäbō'), 1323–85, ruled in Milan His intrigues and territorial ambitions kept him at war with the pope, Florence, Venice, and Savoy He died in prison, arrested by his nephew, **Gian Galeazzo Visconti** (jän'), 1351?–1402, the son of Galeazzo II Left the sole ruler of all Visconti possessions, Gian Galeazzo embarked on a systematic program of conquest, first in Venetia, then in central Italy, and withstood hostile coalitions partly by skillful diplomacy, partly by employing the best condottieri of his time He bought (1395) his investiture as hereditary duke of Milan from Emperor Wenceslaus and defeated (1401) Emperor Rupert when Rupert sought to restore imperial rule over Italy Gian Galeazzo's ambition was to establish an Italian kingdom, but he died of the plague while preparing a final attack on Florence, his stoutest enemy He reformed and centralized the government and promoted the arts and industries During his reign the cathedral of Milan and the Certosa di Pavia were begun He allied his family with the ruling house of France by marrying Isabella, daughter of John II His daughter by a second marriage, Valentina, married Louis d'ORLÉANS, it was through her that Louis XII and Francis I of France derived their claim to Milan in the Italian Wars. See D M. Bueno de Mesquita, *Giangaleazzo Visconti* (1941) During the regency of Gian Galeazzo's widow many cities were lost and political chaos prevailed **Giovanni Maria Visconti** (märē'ä'), 1389–1412, his son by his second marriage, revealed himself a dissolute and cruel ruler upon reaching his majority He was assassinated, and the duchy passed to his brother, **Filippo Maria Visconti** (fēlēp'pō), 1392–1447, who employed both diplomacy and force to restore the duchy He was at first aided, then opposed, by CARMAGNOLA in his wars with Venice and Florence His daughter and sole heir, **Bianca Maria,** married Francesco I SFORZA, who become duke of Milan after the fall of the short-lived republic, the Ambrosian Republic (1447–50), set up after Filippo Maria's death

Visconti, Ennio Quirino (ĕn'nyō kwērē'nō vēskōn'tē), 1751–1818, Italian archaeologist. He was conservator of the Capitoline Museum, Rome, and one of the consuls of the brief Roman republic (1798) A political refugee in Paris from 1799, he became curator of antiquities at the Louvre (1799) and professor and member of the Institut de France (1803) He wrote *Iconographie grecque* (1801) and the first volume of *Iconographie romaine* (4 vols , 1817–26), which was completed by Antoine Mongez His father, **Giovanni Battista Antonio Visconti** (jōvän'nē bät-tē'sta ännē'nyō), 1722–84, was prefect of antiquities at Rome from 1768 He reorganized at the Vatican the Museo Pio-Clementino and edited the first volume of its noted catalogue with the assistance of his son, who continued the work alone

Visconti-Venosta, Emilio, marchese di (ämē'lyō märkā'zā dē vēskōn'tē-vänō'sta), 1829–1914, Italian patriot and politician First a follower of Mazzini, he broke away from him because of his unrealistic policy after the revolution of 1853 in Milan and became a supporter of Cavour He several times held the foreign ministry in rightist cabinets between 1863 and 1901 and tried to promote friendly relations with France

viscose process (vĭs'kōs), method widely used for the commercial preparation of RAYON Sheets of cellulose, prepared from either wood pulp or, less commonly, cotton linters are treated with sodium hydroxide (an alkali) and then with carbon disulphide, the resulting product being a substance called cellulose xanthate Mixed with dilute sodium hydroxide this alkaline cellulose xanthate forms a thick solution called viscose, and rayon yarn is finally obtained when the viscose is forced through tiny openings in a spinneret into an acid solution which coagulates it in the form of fine strands The greater part of the rayon manufactured today is produced by this method, although there are other processes also in use The viscose process was discovered by Charles F Cross

Viscount Melville Sound, 250 mi long and 100 mi. wide, arm of the Arctic Ocean, W Franklin Dist., Northwest Territories Lying between Victoria and Prince of Wales islands on the south and Melville and Bathurst islands on the north, it is a section of the long-sought Northwest Passage Through McClure Strait on the west it is linked with the Beaufort Sea, Barrow Strait and McClintock Channel lead east and southeast A crossroads of arctic waterways, it is navigable only under favorable weather conditions The western part was discovered (1850–53) by Sir Robert McCLURE The sound is sometimes called Melville Sound

Visé (vēzā'), town (pop 4,070), Liége prov., E Belgium, on the Meuse and NNE of Liége, near the Dutch border Here on Aug 4, 1914, the first battle of the First World War was fought, when the Belgian defense was beaten back by the Germans Largely destroyed, it has since then been rebuilt.

Viseu (vēzä'ōō), city (pop 13,499), capital of Beira Alta prov , Portugal, SE of Oporto It was founded by the Romans and in 1058 it was captured from the Moors by Ferdinand I of Castile There are a 12th-century cathedral, some medieval ruins, and a museum The city trades in grain and fruit and manufactures textiles

Vishinsky or **Vyshinsky, Andrei Yanuarievich** (both. ŭndrā' yŭnŭôr'yĭvĭch vĭshĕn'skē), 1883–, Russian jurist and diplomat He studied law at the Univ. of Kiev, early entered the Social Democratic party, and fought in the Bolshevik ranks during the civil wars He was appointed state prosecutor in 1923 and professor of jurisprudence at the Univ of Moscow in 1925 Vishinsky conducted the prosecution at the Moscow treason trials of 1936–38 As attorney general of the USSR, he curbed excessive enthusiasm for further purges He was appointed vice premier in 1938 With the outbreak of the Second World War, Vishinsky became deputy commissar for foreign affairs, and in Sept., 1943, he was appointed Russian representative on the Allied Mediterranean Commission and the Allied Advisory Council for Italy In 1944–45 Vishinsky represented Russian interests in the Balkans, particularly in Rumania Later, as one of the chief Russian figures in the United Nations, he acquired a reputation for biting wit as well as for the violence of his attacks on the United States He replaced (1949) Molotov as foreign minister of the USSR Among his writings is *The Law of the Soviet State* (Eng tr , 1948).

Vishnu see HINDUISM

Visigoths or **West Goths,** division of the Goths, one of the most important groups of the GERMANS They separated from the other division of the Goths, the OSTROGOTHS, early in the 4th cent. A.D

Already the Visigoths were beating upon the border of the Eastern Empire, crossing the Danube in war raids and peacefully infiltrating the cis-Danubian provinces CONSTANTINE I had trouble with them, but it was not until after the middle of the 4th cent that the Visigoths became an actual menace to the empire There were settled groups of Visigoths in Dacia then, and before that time many of the Goths had been converted to Christianity by Ulfilas About 364 a group of Visigoths devastated Thrace Punitive measures were, therefore, undertaken The Goths were also involved in the revolt of Procopius (366), and Emperor VALENS waged a steady and successful war against ATHANARIC and the Visigoths until 369 Athanaric persecuted the Christian Goths and was able to assert his supremacy over a rival Visigothic chief, FRITIGERN, who retired into the Roman Empire Fritigern apparently became an Arian and was given Roman aid to return against Athanaric The pressure of invasion by the Huns threw the Goths into confusion Athanaric seems to have retired into the mountain fastnesses of Transylvania, but most of the Visigoths joined Fritigern, who fled from the fury of the Huns across the border into the empire (376) Trouble naturally followed The Visigothic settlers arose in revolt against the harsh and oppressive measures of the petty Roman officials. Valens undertook a campaign against the Visigoths At Adrianople in 378 was fought one of the most significant battles in history The barbarians won a decisive victory over the Roman forces and the Visigoths swept across the upper Balkan Peninsula, ravaging Thrace Valens was killed at Adrianople, The capable THEODOSIUS immediately took up the warfare against the Visigoths, and his campaigns were more successful after the death of Fritigern and the arrival in the empire of Athanaric, who had been driven from Transylvania by the Ostrogoths Peace between Romans and Visigoths was reached in 382, certain regions being ceded to the Goths for occupation Friction continued and in 390 the Visigoths again broke into rebellion In 395, after the death of Theodosius, ALARIC I was proclaimed king of the Visigoths and he immediately led a ravaging expedition in the Balkan peninsula. Checked by STILICHO, he later became a general under ARCADIUS He began his invasions of Italy about 400, he was halted by Stilicho but after Stilicho's death he was successful in an Italian expedition (408) and forced ransom from Rome The Visigothic hordes were the masters of Italy, and after negotiations between Emperor HONORIUS and Alaric failed, the memorable sack of Rome (410) took place. Alaric died soon afterward and under ATAULF the Visigoths left Italy (412) and went into S Gaul and N Spain They increased their territories in Spain (which was evacuated by their predecessors, the VANDALS) under King Wallia (reigned 415–c.418) and acquired AQUITAINE, extending their kingdom as far north as the Loire Toulouse was their capital The height of Visigothic power was achieved under EURIC (466–84), but in 507 ALARIC II was defeated at Vouillé by the Franks under Clovis, to whom he lost nearly all his possessions N of the Pyrenees Toledo became the new Visigothic capital The history of the Visigoths now became essentially that of SPAIN Weakened by warfare with the Franks and the Basques and by Byzantine penetration in S Spain, the kingdom recovered vigor in the late 6th cent under LEOVIGILD and under RECARED, whose conversion to Catholicism facilitated the fusion of the Visigothic and the Hispano-Roman populations of Spain King RECESWINTH imposed (c 654) a common law on both his Visigothic and his Roman subjects, who until then had lived under different codes (see GERMANIC LAWS) The Church councils of Toledo (see TOLEDO, COUNCILS OF) became the main force in the government, and the royal power was weakened. King Wamba, who succeeded Receswinth, was deposed after a civil war, and through the rest of its existence the kingdom was torn by civil strife When the last king, RODERICK, seized the throne, his RIVALS appealed to the Moslem leader TARIK, whose victory (711) in the battle of the Guadalete ended the Visigothic kingdom and inaugurated the Moorish period in the history of Spain See Thomas Hodgkin, *Italy and Her Invaders*, Vols I–III (2d ed., 1892–96), Eduardo Pérez Pujol, *Historia de las instituciones sociales de la España Goda* (4 vols , 1896)

vision, the sense by which objects and colors are perceived. Vision depends upon the sensitivity of the retina (see EYE) to light Light rays reflected from objects pass through the cornea and then through the lens, by which they are bent and brought to a focus on the retina. The shape of the lens can be changed by the action of the ciliary muscles so that clear images of objects at different distances and of moving objects are formed on the retina. This ability is known as accommodation The retina consists of a number of layers Closest to the choroid (or choroid) coat is a pigmented layer believed to be the area of production and storage of a substance known as visual purple or rhodopsin, which is concerned with the ability of the eye to adapt to light and dark. It is decomposed in light, and vitamin A is believed essential to its regeneration. Next to the pigment cells are nerve cells of two kinds; those bearing rod-shaped processes are called rods and those having cone-shaped processes are called cones These structures form the layer believed to be the light-sensitive portion. Light rays brought to a focus on the rods and cones produce nerve impulses which are transmitted by branches of the nerve fibers to the optic nerve and finally to the vision centers in the cerebrum of the brain. The image formed on the retina is an inverted one because the light rays entering the eye are refracted and cross each other However, the mental image as interpreted by the brain is right side up. A portion of the center of the retina known as the yellow spot or *macula lutea* has a central depression, the *fovea centralis*, a region of most acute vision, in which only cones are found Cones are believed to be concerned with vision in bright light, and rods with vision in the darkness Where the optic nerve passes through the eyeball there are no rods and cones, and this portion is known as the blind spot Perception of color is considered a function of the cones No fully satisfactory theory to explain color vision has been developed The Young-Helmholtz theory, accepted by many, although its inadequacies are recognized, was proposed by Thomas Young (1801) and later modified by H. L F von Helmholtz It is based on the assumption that there are three fundamental color sensations, red, green, and violet, and that there are three different groups of cones in the retina, each group sensitive to one of these three colors The sensation of white is produced by the combination of the three primary colors, and black results from the absence of stimulation Hering's theory (developed by Ewald Hering) also postulates the presence in the retina of three photochemical substances, but these are assumed to produce six primary sensations and are grouped as a red-green substance, a yellow-blue substance, and a white-black substance More recently a polychromatic theory has been proposed which postulates, in addition to the three-color unit of the Young-Helmholtz theory, two subsidiary units, a yellow-blue and a red-blue-green-red unit Man normally has binocular vision, i e , separate images of a visual field are formed by each eye but the two images fuse to form a single impression Because each eye forms its own image from a slightly different angle, a stereoscopic effect is obtained, and depth and distance and solidity of an object are appreciated Defects of vision include ASTIGMATISM, FARSIGHTEDNESS, and NEARSIGHTEDNESS See Matthew Luckiesh, *Light, Vision, and Seeing* (1944), A L Gesell, *Vision Its Development in Infant and Child* (1949)

visit and search: see SEARCH, RIGHT OF.

Visitation of Our Lady see MARY

Viso, Monte (mōn'tā vē'zō), or **Monviso** (mōmvē'zō), peak, 12,605 ft high, on the Franco-Italian border, highest of the Cottian Alps. The Po river rises here

Visscher, Cornelis (kôrnā'lĭs vĭ'sûr), c 1629–c 1662, Dutch draughtsman and engraver outstanding in his period He executed numerous plates from the works of the Dutch masters but is at his best in such original productions as his *Pancake Woman*, *Rats' Bane*, and *Harper* and in his fine engraved portraits, such as those of Gellius Bouma and William de Ryck

Vistula (vĭs'chōōlə), Pol. *Wisła* (vē'swə), Ger *Weichsel* (vīk'səl,) longest river and principal waterway of Poland Navigable for almost its entire length, it rises in the West Beskid range of the Carpathians and flows 667 mi N past Cracow, Warsaw, and Torun to join the Baltic in the Bay of Danzig A system of canals connects it with the Oder, Dnieper, Niemen, and Pregel rivers, the Dunajec, San, Pilica, and Narew are among its tributaries Its estuary comprises the Nogat, which flows past Marienburg, and the Martwa Wisła [dead Vistula], which flows past Danzig Coal is transported from Silesia, and lumber is logged along the lower Vistula

visual education, term denoting the use of nonverbal materials to enrich learning experiences It applies particularly to pictures and other materials developing sense perception Sound has also been incorporated within this field, and the term *audio-visual* is frequently used to cover the combined program Development of visual aids as a planned part of the school curriculum has been restricted largely to the United States, although the idea is gradually being extended to other countries The successful use of visual aids in the U S. armed forces during the Second World War has demonstrated the efficacy of this medium as a tool of instruction. The use of nonverbal materials—until recently confined to maps, graphs, textbook illustrations, and museum and field trips—now includes all the developments of the photographic and film industries as well as the radio, sound recordings, and television. Many universities and government offices and agencies rent films for wide distribution throughout the United States, which, with other rented films, are often used to supplement film libraries collected by local school systems. See bulletins of the National Academy of Visual Instruction, the Visual Instruction Association of America, and the Dept of Visual Instruction of the National Education Association.

visual purple: see VISION.

vital statistics, primarily STATISTICS of births and deaths in a POPULATION. Other factors such as number of marriages and causes of death, by age groups, are regularly included. From these figures can be computed birth rates and death (or mortality) rates from which trends are determined. The English system of vital statistics, established by William FARR in the 19th cent , has served as the model for methods of tabulation. Recent vital statistics for Western countries show striking differences among various economic, occupational, regional, and ethnic groups. The birth rates of people of high economic and social status and of urban dwellers generally are declining. Death rates have decreased tremendously in modern times, and the average expectation of life at birth has been approximately doubled since the 18th cent These rates, too, are sharply differentiated according to social factors, with groups in poor environments having the highest incidence of mortality and the shortest span of life See R R Kuczynski, *Fertility and Reproduction* (1932), Louis F. Dublin and Alfred J Lotka, *Length of Life* (1936), Raymond Pearl, *The Natural History of Population* (1939).

vitamins (vī'təmĭns), name for a group of organic substances essential for growth and the maintenance of normal body structure and function. A well-balanced diet including sufficient amounts of milk, fruits, vegetables (both raw and cooked), eggs, and meats or meat substitutes usually provides adequate minimum requirements of the vitamins However, the amount of a particular vitamin varies in a given food. Vitamins are often divided into two main groups—those that are soluble in fat (vitamins A, D, E, and K) and those soluble in water (vitamin B complex and C) A number can be prepared synthetically **Vitamin A** helps to keep the skin and the mucous membranes of the body in a healthy condition, is necessary for normal growth of the young, and prevents certain eye diseases, e g , xerophthalmia An early symptom of an insufficiency of the vitamin is night blindness, a condition in which adaptation of the eyes to darkness is abnormally slow (see VISION) Experiments with laboratory animals indicate that a high intake of vitamin A postpones senility and lengthens the prime of life Although its chemical structure is known, no chemical name for the vitamin has yet been generally adopted It is a derivative of the carotinoid pigments of plants A process for the synthetic production of vitamin A on a commercial scale was developed in 1947. Among the richest sources of vitamin A are butter, cream, whole milk and cheese and other products made from whole milk, liver, fish-liver oils (e g , from cod and halibut), eggs, dark green leaf vegetables, yellow vegetables (e g , carrots and sweet potatoes), and fruits with yellow flesh The carotene of green and yellow plant foods is sometimes called provitamin A or the precursor of vitamin A, it is converted into vitamin A in the body, chiefly in the liver. Commonly grouped as the **vitamin B complex** are about a dozen water-soluble factors, the importance of some of them in human nutrition has been established Thiamine (formerly thiamin) or thiamine hydrochloride (known also as vitamin B_1 or simply as vitamin B) is concerned with the maintenance of normal appetite, good digestion, and the metabolism of carbohydrates, it is essential to normal growth of the young Another vital function is its part in maintaining the health of the nervous system, it prevents the development of BERIBERI in humans and polyneuritis in animals. Good sources of thiamine are yeast, whole grains (e g , whole-wheat cereals, bread, and other products from which the brown portions of the grain have not been removed by refining); eggs, liver, kidney, pork, and some other meats, peanuts, and dried legumes (e g , beans, peas, and lentils) Lack of such a dietary substance as a cause of beriberi in the Orient was suggested by Christian EIJKMAN Casimir Funk obtained (1911) a crude preparation of the anti-beriberi substance Others continued the research, and in 1936 Robert R. Williams and his associates determined its chemical structure and soon afterward synthesized it Riboflavin (which has also been known as vitamin B_2, vitamin G, and lactoflavin) is a component of one or more of the respiratory enzymes of the human body and is believed to be concerned with oxidation in the body cells Lack of the vitamin in humans is evidenced by skin lesions, especially in the angles of the mouth and on the lips and tongue, and damage to the cornea and conjunctiva of the eye Sources of riboflavin include green leaf vegetables, milk, cheese, eggs, liver, kidney, lean meats, and whole-grain products. Niacin or niacin amide (also called nicotinic acid) is commonly known as a preventive of the disease pellagra (although other deficiencies are also contributary causes). In humans lack of sufficient niacin produces disturbances of the digestive system and of the central nervous system.

Niacin was originally prepared (1867) from nicotine (However, in the body it cannot be formed from nicotine.) Its functions have not been fully investigated, but it aids digestion and stimulates the appetite and is believed to play a part in the oxidation processes in the body A number of investigators contributed to the discovery of its effectiveness in preventing PELLAGRA Experimental studies begun in the S United States in 1914 by Joseph GOLDBERGER and continued by him with G. A. Wheeler and others established faulty diet as the cause of the disease Later pellagra and a disease of dogs called blacktongue were identified as the same condition In 1937 C A Elvehjem and his associates proved that blacktongue in dogs could be cured and prevented by niacin Niacin also proved to be a cure for pellagra in humans even in late stages of the disease Vitamin B_{12} discovered (1948) in liver is believed to be effective against pernicious anemia and other anemias A number of other substances usually considered part of the vitamin B complex have not been fully investigated These include pyridoxine (formerly vitamin B_6); pantothenic acid, identified in 1933 by R J Williams as essential to the growth of yeast and believed to be necessary to normal nutrition in man, para-aminobenzoic acid, sometimes called the anti-gray hair factor, although its ability to prevent grayness is not established, biotin, necessary to normal nutrition in man, choline, believed to be in some way concerned with the metabolism of fats, folic acid, found abundantly in green leaves and believed to be concerned with the formation of blood, and inositol, the function of which is unknown. **Vitamin C** or ascorbic acid is known widely as a means of preventing SCURVY Symptoms of insufficient vitamin C in human beings include tenderness and bleeding of the gums, loosening of the teeth, soreness of the joints, and weakness and fatigue Bleeding, both external and internal, and the tendency to bruise easily are indications of the weakening of the walls of the capillary blood vessels which lack of the vitamin causes Since little of the vitamin can be stored in the body, it is important to have a substantial daily supply Good sources are the citrus fruits and their juices (orange, lemon, grapefruit, lime, and tangerine), tomatoes and tomato juice (both fresh and canned), raw cabbage and some other raw vegetables, and potatoes when baked or boiled in their jackets It is easily destroyed in cooking. **Vitamin D** plays an essential role in the utilization of calcium and phosphorus by the human body and prevents the disease called RICKETS It is especially important during the growing period, to insure the health of the bones and teeth, and during pregnancy and lactation In adults the deficiency disease is called osteomalacia. Few foods contain vitamin D, it is present in fish-liver oils, flesh of herring and sardine, egg yolk, and liver (of beef, chicken, and some other animals) It is sometimes added to milk by irradiation with ultraviolet light, in the form of a concentrate obtained from fish-liver oil, or by feeding to cows irradiated yeast or irradiated ergosterol (viosterol) Exposure to sunlight, causing the irradiation of cholesterol present in the skin, probably satisfies much of the human requirement of the vitamin A number of chemical compounds have **vitamin E** activity, among which alpha-tocopherol, beta-tocopherol, and gamma-tocopherol are the most active. Vitamin E is essential to normal reproduction of some animals, but in humans, although it has been used in treating certain disturbances of the reproductive system, its value is not definitely known It is widely distributed in foods, being especially abundant in oil obtained from the wheat germ and from lettuce **Vitamin K**, identified in 1934 by Henrik Dam, is concerned with maintaining the normal clotting of the blood and with normal functioning of the liver Two components were identified in 1939, vitamin K_1 isolated from alfalfa and vitamin K_2 isolated from putrefied fish meal Sources of the vitamin include green leaf vegetables (especially alfalfa and spinach), cabbage, cauliflower, and soybean oil The danger of hemorrhage in newborn infants has been reduced by the administration of vitamin K either to the mother or to the baby Discovery of **vitamin P** or citrin was reported in 1936 by Albert von Szent-Gyorgyi It was found in paprika and lemon rind. Although its part in human nutrition is not definitely determined, it is believed to function along with vitamin C in preventing permeability of capillary walls. See American Medical Association, *The Vitamins: a Symposium* (1939) and *Handbook of Nutrition* (1943), H C Sherman, *The Science of Nutrition* (1943), *The Chemistry of Food and Nutrition* (7th ed , 1946), and *Food and Health* (rev. ed., 1947); M D Rose, *Foundations of Nutrition* (4th ed , revised by Grace MacLeod and C M. Taylor, 1944) and *Laboratory Handbook for Dietetics* (5th ed., revised and rewritten by C. M. Taylor and Grace MacLeod, 1949); W. H. Eddy, *Vitaminology* (1949)

Vitebsk (vē'tĕpsk, vē'tyĭpsk), city (pop. 167,424), capital of Vitebsk oblast, NE Belorussia, on the Western Dvina river. It has textile and machinery manufactures. Dating from the 11th cent , it was the capital of a Russian principality which came (14th cent) under Lithuanian rule. It suffered much in the wars (16th and 17th cent) between Russia and Poland-Lithuania and passed to Russia in the first Polish partition (1772). Until the Second World War, when Vitebsk was occupied (1941–44) by the Germans, about 45 percent of the population was Jewish

Vitellius, Aulus (ô'lŭs vĭtĕ'lēŭs), A D 15-A D 69, Roman emperor (A D. 69) He had the favor of Tiberius, Caligula, Claudius, and Nero, and GALBA made him commander of the legions on the lower Rhine On Galba's death he was proclaimed emperor at Colonia Agrippina (now Cologne) Generals favoring him defeated his rival, OTHO, in Italy, and Vitellius briefly had the imperial purple He distinguished himself by extravagance, debauchery, and general incompetence When his rival in the East, VESPASIAN, moved into Italy, Vitellius' supporters melted away His troops lost before Cremona, and Vitellius fought with Vespasian's brother in Rome When Vespasian's troops entered Rome, Vitellius was seized in hiding and murdered

Viterbo (vētĕr'bō), city (pop 21,281), capital of Viterbo prov , Latium, central Italy In the 13th cent it was a favorite residence of the popes, and several conclaves were held here The city is rich in works of art, but most of its buildings suffered severe damage in the Second World War There is a picturesque medieval quarter with palaces and houses built in the 13th and 14th cent and with numerous fountains The pope's pinnacled palace and Gothic loggia, the Romanesque cathedral with its fine campanile, the Renaissance town hall, and many interesting churches are other landmarks Near by are warm mineral springs used since Etruscan times

Viti: see FIJI

Viti Levu (vē'tē lā'vōō) or **Naviti Levu** (nävē'tē), volcanic island (4,010 sq mi , pop 176,822), S Pacific, largest and most important of the FIJI islands On Viti Levu is Suva, capital of the colony of Fiji, with the best harbor Mt Victoria (4,341 ft.) is the highest peak in Fiji The fertile deltas of the Rewa, largest river of the group, produce sugar, pineapples, rice, and cotton Sugar is the chief export, dairying and gold mining are important industries

Vitim (vētyĕm'), river, 1,192 mi long, RSFSR, in SE Siberia It rises at 5,530 ft in the Vitim Plateau, a gold-mining area in the NE Buryat-Mongol ASSR, and flows south, then northeast, and finally north to join the Lena at the town of Vitim (1948 pop over 2,000)

Vitória (vētô'rēŭ), formerly **Victoria**, city (pop 42,098), capital of Espírito Santo, E Brazil, a port on the Atlantic It ships great quantities of coffee and iron ore and has processing plants for cotton, sugar, and coffee Among the chief buildings are the government palace and several old churches The city was founded in the mid-16th cent

Vitoria (vētô'rēä), city (pop 44,341), capital of Álava prov , N Spain, in the Basque Provs It is a manufacturing center for machinery, tools, sugar, food products, and paper Founded in the 6th cent by the Visigoths, it was named Vitoria by Sancho the Wise of Navarre to commemorate his victory over the Moors (1180) It was taken (c 1200) by Alfonso VIII of Castile, but preserved its privileges In 1813 Wellington won here the decisive battle of the Peninsular War against the French under Joseph Bonaparte and Jourdan and was given the title duke of Vitoria Vitoria has a Gothic cathedral

Vitré (vētrā'), town (pop 7,390), Ille-et-Vilaine dept , NW France, on the Vilaine An old Breton town, it has preserved its medieval walls and castle and a late Gothic church

vitriol. For oil of vitriol, see SULPHURIC ACID, for green vitriol, see COPPERAS See also BLUE VITRIOL AND WHITE VITRIOL

Vitruvius (Marcus Vitruvius Pollio) (vĭtrōō'vēŭs), 1st cent A D , Roman writer on architecture, of whose life little is known His one work, *De architectura*, discusses in 10 volumes city planning, building materials, temples and the Greek orders of architecture, public and private buildings, interior decorations, waterworks, chronometric instruments, machines to be used in construction, and military machines Its value lies in its uniqueness and its encyclopedic nature Vitruvius was much used by Renaissance architects in the classical revival A translation is in the Loeb Classical Library

Vitry-le-François (vētrē'-lŭ-frāswä'), town (pop 7,066), Marne dept , NE France, on the Marne river It was the headquarters of General Joffre early in the First World War and was partially destroyed in the Second World War. Vitry-le-François was built by Francis I to replace **Vitry-en-Perthois** (-ä-pĕrtwä') or **Vitry-le-Brûlé** (-lŭ-brülā'), which had been burned down in 1144 by Louis VII of France and in 1544 by Emperor Charles V

Vittoria (vēt-tô'ryä), rural town (pop. 34,769), SE Sicily, Italy, W of Ragusa Founded in 1607, it is an important center of wine production and export.

Vittoria Colonna: see COLONNA, VITTORIA.

Vittorino da Feltre (vēt-tôrē'nô dä fĕl'trā), 1378–1446, Italian humanist and teacher, b. Feltre. His real name was Vittorino Rambòldini (rämbōldē'nē). He studied at Padua and later taught there, but after a few years he was invited by the marquis of Mantua to educate his children At Mantua, Vittorino set up a little boarding school, at which he taught the marchese's children and the children of other prominent families, together with many poor children, treating them all on an equal footing He taught not only the humanistic subjects, but placed especial emphasis on religious and physical education Many of his methods were novel, especially in the close contacts between teacher and pupil and in the adaptation of the teaching to the ability and needs of the child He is called an educator in the modern spirit Many of the greatest figures of 15th-century Italy were Vittorino da Feltre's pupils See W H Woodward, *Vittorino da Feltre and Other Humanist Educators* (1921)

Vittorio Veneto (vēt-tô'ryô vānā'tô), town (pop 12,034), Venetia, NE Italy Here in Oct.–Nov , 1918, the Italians won a decisive victory over the Austrians This led to the Austro-Hungarian surrender to Armando DIAS on Nov 3.

Vitu Islands (vē'tōō), volcanic group, SW Pacific, 40 mi N of New Britain, in the BISMARCK ARCHIPELAGO and part of the Territory of New Guinea Garove (26 sq mi) is the largest of several small islands The group, formerly called the French Islands, is the chief copra center of the Territory of New Guinea

Vitus, Saint (vī'tŭs), 4th cent ?, Sicilian martyr. As one of the saints called the Fourteen Holy Helpers he is invoked against many diseases, including St Vitus's dance Guy is the English form of his name His nurse and her husband, St Crescentia and St Modestus, martyred with St Vitus, share his feast, June 15

Vivaldi, Antonio (äntô'nyô vĕval'dē), c 1675–1743, Italian composer He had been ordained as a priest before he taught violin in Venice from c 1709 until his death He also traveled as a composer and producer of operas, but his 46 operas are less well known than his instrumental works, the most important of which are his *concerti grossi* He standardized the three-movement form of the *concerto grosso* and patterned it more and more after the solo concerto Bach made organ transcriptions of four of Vivaldi's concertos

Vivanti, Annie (vēvän'tē), 1868–1942, Italian novelist, b London, daughter of an exiled Italian patriot Her first verse was published in 1890 with the aid of Giosuè Carducci Her novel *The Devourers* was written in English (1910) and translated by herself into Italian (1911) It is perhaps her best work In addition to short stories she also wrote other novels, including *Vae Victis* (1917) and *Mea Culpa* (1927)

Vivarais (vēvärā'), mountainous region, E central France It is similar to the CÉVENNES, which it prolongs to the northeast The Mézenc (5,755 ft) is the highest peak Cattle raising and the cultivation of silkworms are the chief industries It roughly corresponds to Ardèche dept Privas is the chief town The medieval county of Viviers or Vivarais, a part of the kingdom of Arles, was held in fief from the emperors by the counts of Toulouse, who ceded it to the French crown in 1229

Vivarini (vēvärē'nē), Italian family of painters originating in Murano **Antonio Vivarini** (äntô'nyô), b c 1415, d between 1476 and 1484, established with his brother-in-law, Giovanni d'Alemagna, a thriving workshop in Murano A joint work is *Madonna Enthroned* (Academy, Venice) Work signed only by Antonio includes *Adoration of the Magi* (Berlin Museum collection) and the altarpiece in the cathedral at Parenzo His brother, **Bartolomeo Vivarini** (bärtōlōmā'ō), c 1432–c 1499, was one of the first to practice oil painting in Venice Characteristic is his altarpiece depicting St Augustine and companion saints (Church of St John and St Paul) **Alvise Vivarini** (älvē'zā) c 1446–c 1503, son of Antonio, was a celebrated religious painter His paintings include *Madonna and Saints* (Naples) and *The Resurrection* (San Giovanni in Bragora)

Vives, Juan Luis (hwän' lwēs' vē'väs), 1492–1540, Spanish humanist and philosopher, friend of Erasmus At the invitation of Henry VIII he went to England, where he lectured at Oxford and served as tutor for Princess Mary. Opposed to the divorce of Henry and Katharine of Aragon, he left England and until his death lived in Bruges Vives, a vigorous and adventurous thinker, opposed the authority of Aristotle and the conventions of scholasticism He was the forerunner of Francis Bacon by his application of induction to philosophical and psychological inquiry and by pragmatic testing of his hypotheses In *De anima et vita* (1538) Vives produced one of the first works on modern psychology Another of his books, *De disciplinis* (1531), is an important analysis of educational theory

Vivian, oil town (pop 2,460), extreme NW La., near the Texas border, inc 1904

Viviani, René (rənā' vēvyänē'), 1863–1925, French statesman He entered politics as a Socialist,

was labor minister in the Clemenceau cabinet of 1906–9, and became premier in June, 1914. Viviani accompanied Poincaré to Russia in July, 1914, and was returning at the outbreak of the First World War His appeal for a "sacred union" of all parties resulted in the formation of a coalition defense cabinet He resigned in Oct., 1915, but served until 1917 as minister of justice under his successor, Aristide Briand In 1917 he visited the United States, and in 1921–22 he represented France at the naval conference in Washington

Vivien, enchantress see ARTHURIAN LEGEND

Vivien de Saint-Martin, Louis (lwē' vēvyē' du sē-märtē'), 1802–97, French geographer. He wrote several books on the history of France and on ancient geography, but is best known as editor of the *Nouveau Dictionnaire de géographie universelle* (1876–95) and the *Atlas universel de géographie* (1876–1905)

Vizagapatam (vĭ"zŭgŭpŭ'tŭm), town (pop. 70,243), NE Madras state, India, a port on the Bay of Bengal It was established by the British in the 17th cent Cloth and ornamental objects of ivory, horn, and silver are manufactured

Vizcaíno, Sebastián (sāvnstyän' vēthkäē'nō), fl. 1602, Spanish explorer and merchant After an unsuccessful attempt to plant a colony in Lower California (1596), he sailed (1602) to explore the California coast, where he discovered and named Monterey bay In 1611 he was sent out to search for the fabled Pacific islands of Rica de Oro and Rica de Plata and to promote relations with Japan, the venture failed

Vizcaya, Spain see BASQUE PROVINCES

Vlaardingen (vläär'dĭng-ŭn), municipality (pop. 42,987), South Holland prov, SW Netherlands, on the Nieuwe Maas and W of Rotterdam It is a major fishing center, especially for herring and cod

Vlachs: see WALACHIA

Vladikavkaz, RSFSR see DZAUDZHIKAU

Vladimir I or **Saint Vladimir** (vlä'dĭmēr, Rus vlŭdyĕ'mĭr), d 1015, first Christian duke of Kiev (980–1015), son of SVIATOSLAV and grandson of St Olga He conquered distant Slavonic populations and waged successful war on the Lithuanians, the Bulgars, and the Greeks in Crimea At first a fervent pagan, he was influenced by the progress of Christianity at Kiev and by trade relations with Byzantium and was baptized in 988 or 989 He made Greek Orthodox Christianity the religion of his house and of the whole Russian people, using force at Novgorod and other places against the old paganism He was baptized before his wedding with the Byzantine princess, Anna, and after the wedding he returned Kherson in Crimea to Byzantium He enacted several statutes concerning the legal status and courts of the Church

Vladimir II (Vladimir Monomakh), 1053–1125, grand duke of Kiev (1113–25) Called to the throne by popular demand in Kiev, he pacified his state, warred successfully on the Livonians, Finns, Bulgars, and Cumans, and once marched on Constantinople He extended colonization in the northeastern forests, built new towns, and dethroned unruly princes He became immensely popular. His written instructions for his son and his cousin and his eloquent prayers reveal his admirable character

Vladimir (vlŭdyĕ'mĭr), city (pop 66,761), capital of Vladimir oblast, central European RSFSR, ENE of Moscow. It is a rail junction and manufactures machinery, cotton textiles, and plastics Founded in the early 12th cent by Vladimir II of Kiev, it was (c 1150–1328) the capital of the grand duchy of Vladimir-Susdal, which became the chief Russian principality after the breakup of the Kievan state Vladimir was destroyed (1238) by the Mongols under Batu Khan, who slew the grand duke in battle The dukes of Moscow now emerged as the chief Russian princes, and in 1364 they acquired Vladimir; they assumed the title grand dukes and for a long time had themselves crowned here The city declined, but recovered some importance in the 18th cent Among its many monuments of the past are the Uspenski cathedral (1158–94), with a museum of religious art, the Demetrius cathedral (1193–97), the Golden Gate, a city gate erected in 1164, and several monasteries built (12th–13th cent) of white stone in the Vladimir-Susdal style (see RUSSIAN ARCHITECTURE). There also are several museums and art galleries

Vladimir-Volynski (vlŭdyĕ'mĭr-vŏlĭn'skē), Pol *Wlodzimierz* (vwôjĕ'myĕsh), city (1931 pop 24,581), W Ukraine, c 70 mi N of Lvov One of the oldest Ukrainian settlements, it became the capital of the duchy of Vladimir or Lodomeria, founded (c 988) by Duke Vladimir I of Kiev Originally dependent on Kiev, the duchy for some time included all of VOLHYNIA It was united with the duchy of GALICH in 1188 Repeatedly attacked and seized by Poles, Lithuanians, Tatars, Hungarians, and Cossacks, the city eventually (1795) passed to Russia; in 1921 it reverted to Poland, and in 1945 it was ceded to the USSR

Vladislav (vlä'dyĭslăf), Czech version of the name Ladislaus Two kings of Bohemia were thus named, they were Vladislav I (who was LADISLAUS V, king of Hungary) and Vladislav II (who was ULADISLAUS II, king of Hungary).

Vladivostok (vlă"dĭvŏ'stŏk,-vŏstŏk', Rus vlă"dyĕvŏstŏk'), city (1939 pop 206,432; 1946 estimated pop 300,000), capital of Maritime Territory, RSFSR, in Far Eastern Siberia, on a peninsula between Amur Bay and the Golden Horn, two inlets of the Sea of Japan It is the chief Russian port on the Pacific, the terminus of the Trans-Siberian RR and of a branch of the Chinese Eastern RR, and a base for the Russian fishing and whaling fleets Vladivostok exports coal, lumber, vegetable oils, fish, furs, and grain The port is kept open in winter by icebreakers An industrial center, Vladivostok has shipyards, airplane plants, canneries, lumber mills, and food-processing plants There are a polytechnic institute, a marine academy, a teachers college, and the Pacific Institute of Fisheries and Oceanography and other research institutes. The site of Vladivostok was settled by Russians in 1860 Chartered in 1880, the city grew rapidly after the completion (1905) of the Trans-Siberian RR and developed as a naval base after the loss, in the same year, of Port Arthur to Japan In the First World War, Vladivostok was a major supply depot As a result of the Revolution of 1917, the Allies occupied (1918) the city, supposedly to protect their property Most of the occupying forces were Japanese, but there also were some 8,000 Americans and smaller British, Italian, and French contingents By 1920, when Vladivostok was included in the newly proclaimed Far Eastern Republic, the Japanese continued to occupy the area and installed a counterrevolutionary Russian puppet government They withdrew only in 1922, when the city passed under Soviet control In the Second World War, Vladivostok was a major port for lend-lease supplies

Vlaminck, Maurice (mōrĕs' du vlămĕk') 1876–, French painter, writer, and printmaker From 1905 his works were regularly shown at the Salon des Indépendants and Salon d'Automne He is best known for his highly popular landscapes in oil Essentially a romanticist, Vlaminck creates dramatic tension by means of somber color, striking accents, and dynamic design and execution His work is found in collections of contemporary paintings everywhere Vlaminck illustrated his own *Communicatons* (1921) and *Histoires et poèmes de mon époque* (1927). See study by K. G. Perls (1941)

vocational guidance see GUIDANCE

vocational training, designed to advance a person's general proficiency, especially in relation to his present or future occupation The term does not normally include professional training Prior to the Industrial Revolution, the APPRENTICESHIP system and the home were the principal sources of vocational education Since then society has been forced by the decline of handwork and the specialization of occupational functions to develop vocational training institutions Manual training, involving general instruction in the use of hand tools, developed initially in Scandinavia c 1866 in response to the doctrines of Froebel and Pestalozzi It became popular in the elementary schools of the United States after 1880 While the immediate object of this training was not vocational, it developed gradually into extended courses in industrial training Courses in bookkeeping, stenography, and allied commercial work in both public and private institutions were another early form of vocational training Among the early private trade schools were Cooper Union (1859) and Pratt Institute (1887) Hampton Institute (1868) and Tuskegee Institute (1881) were pioneers in industrial, agricultural, and home economics training for Negroes The agricultural high school (1888) of the Univ of Minnesota was the first regularly established public vocational secondary school and introduced extensive public instruction in agriculture Since 1900 the number of public and private vocational schools has greatly increased Under the Smith-Hughes Act (1917) the Federal government assists states in financing industrial, home economics, and agricultural courses This aid was extended in the George-Deen Act (1936) to include teacher training and certain other occupations. Large communities frequently have separate public schools devoted to specific occupational fields, and some counties and states sponsor regional vocational training establishments These public schools work closely with the interested trades and industries in establishing curriculums and in GUIDANCE programs The cooperative training technique, in which the student works part time in the job for which he is preparing, is a common feature of these schools Many industries have instituted extensive vocational training programs for their employees, and virtually all trades require apprenticeship and on-the-job training Vocational correspondence courses in great numbers were formed to meet the growing demand for training. Many of these were poorly designed and without value, but were improved under the informal supervision of the National Home Study Council (1926) working with the Federal Trade Commission. Advances in the techniques of vocational training were made by the armed services during the Second World War The need for technicians was so great that civilian life could not supply them, and special training methods stressing graphic presentation and practical work were used to meet the demand Further impetus to vocational training resulted from the Servicemen's Readjustment Act of 1944 (popularly, the G.I. Bill of Rights, from G.I [general issue], a slang term for a soldier), which allowed veterans to receive tuition and subsistence during extended vocational training This law provides that each training establishment must be approved by the state board of education before it can participate in the program To meet the provisions of the law, states undertook extensive supervisory programs Theorists in vocational training have emphasized that its aim was to improve the worker's general culture as well as to further his technical training This policy is evident in the academic requirements of public vocational schools and in the work of public continuation and evening schools These are provided so that workers who have not completed the public school requirements may do so while engaged on regular jobs In some localities attendance at continuation schools is compulsory for those who come under school age While continuation and evening schools are often primarily vocational, they frequently include general courses which attract older workers. Labor organizations also have established vocational and cultural centers for their members Outstanding programs are sponsored by the International Ladies Garment Workers and the Amalgamated Clothing Workers See SCHOOL See publications of the U S Office of Education, *Objectives and Problems of Vocational Education* (ed by E A Lee, 1938), T R Adam, *The Worker's Road to Learning* (1940), F T Struck, *Vocational Education for a Changing World* (1945)

vocative (vŏ'kŭtĭv) [Latin, = for calling], in the grammar of certain languages (e g, Latin), CASE referring to a person addressed In English a special intonation has the corresponding meaning, e g, in *Look, Jack*

Vodena, Greece see EDESSA

vodka (vŏd'kŭ), national spirituous drink of Russia, popular also in the Baltic states and Poland The best vodka is distilled from rye and barley malt, but cheaper maize and potatoes are commonly employed The high alcoholic strength of over 90 percent is generally diluted before marketing In Russia the manufacture and sale of vodka are a state monopoly

Vogau, Boris Andreyevich see PILNYAK, BORIS

Vogler, Georg Joseph (gā'ôrk yō'zĕf fō'glēr), 1749–1814, German composer and organist, known as Abbé Vogler He traveled widely, giving organ concerts and demonstrating his innovations in organ construction. He went (1775) to Mannheim as court chaplain and was court music director at Stockholm (1780–89) and at Darmstadt (1807–14) He composed operas, organ music, Masses and other church music, and some instrumental music Browning idealized him in his poem "Abt Vogler" Vogler was the teacher of Meyerbeer and Weber

Vogt, Karl (kärl' fōkt'), 1817–95, German naturalist He was professor at the Univ of Giessen (1847–49) and at the Univ of Geneva (from 1852) A collaborator of Louis Agassiz and an ardent supporter of Darwin, he wrote textbooks and popular works on natural science

Vogt, Nils Collett (nēls' kŏ'lŭt vôkt'), 1864–1937, Norwegian lyric poet and novelist He rebelled against the conservative, aristocratic background of his home and, inspired by Bjornson, determined to devote his life to writing His poetry is often concerned with memories of his youth, tinged with melancholy and sometimes bitterness He wrote stories and plays, but he is known chiefly as a poet His poems include *From Spring to Autumn* (1894), *September Flame* (1907), and *Homecoming* (1917) He also wrote an autobiography, *From Boy to Man* (1932)

Vogüé, Charles Jean Melchior, marquis de (shärl' zhă' mĕlkyôr' märkē' du vôgüā'), 1829–1916, French archaeologist, historian, and diplomat He studied antiquities in Palestine and Syria (1853–54) and was ambassador at Constantinople (1871–75) and at Vienna (1875–79) His numerous writings include *Syrie centrale architecture civile et religieuse du Ier au VIIème siècle* (2 vols, 1865–77)

Vogüé, Eugène Marie Melchior, vicomte de (ûzhĕn' märē' mĕlkyôr' vēkôt' dŭ vôgüā'), 1848–1910, French critic He fought in the Franco-Prussian War and was imprisoned for six months at Magdeburg He served (1876–82) in the embassy at St Petersburg and became interested in Russian literature. Influenced by romanticism and disinclined towards naturalism, Vogüé wrote a series of essays, *Le Roman russe* (1886, Eng. tr, *The Russian Novel*, 1913). Introducing the novelists from Pushkin to Tolstoy into France, this book had wide influence on French literary thought.

voice, sound produced by human beings in singing and speaking The source of the sound is the vibration of the vocal cords, which are inside the LARYNX,

and the production of the sounds is called phonation. The vocal cords are set into vibration by air from the windpipe passing over them, and they in turn produce resonance in the column of air enclosed by the pharynx At puberty the vocal cords of the male become approximately double their original length, with the result that the average adult male voice is about an octave lower in pitch than the female The voice is not only man's principal means of communication, but was undoubtedly his first musical instrument. It can be observed in children that to express one's emotions with the singing voice is as natural as to express one's thoughts by means of the speaking voice The principal difference in singing and speaking is that in singing the vowel sounds are sustained and given definite pitch Despite the naturalness of singing, training the singing voice for artistic purposes is perhaps the most subtle and difficult branch of music pedagogy The instrument is within the performer, and not only can he not see it and can never know exactly how the tone is produced, but the condition of the vocal apparatus can never be any better than the physical and mental condition of the singer Since the vocal impulse cannot actually be described, the teacher's task is to provide the pupil with concepts, principally imaginative, which will free the vocal apparatus from restrictive tensions and lead ultimately to the complete coordination of all the faculties involved The differences in the various vocal "methods" of numerous teachers is accounted for by the different concepts that they have hit upon A survey of these concepts is found in *Training the Singing Voice* (1947) by V A Fields The diverse ways in which the singing voice can be used may be illustrated by a comparison of the singing of an Oriental singer, an opera singer, and a blues singer The song of past ages cannot be heard today as it was intended to sound because of the great changes that have taken place in the art of singing within Western musical culture Gregorian chant may well have been sung with something like an Oriental technique The Neapolitan operatic school developed the art of *bel canto*, which was perhaps the most brilliant vocal technique known to Western music The art of the *castrato* (see EUNUCH) was unlike anything which can be heard today—one reason for the lack of performance of the operas of Handel The foundation of the scientific study of the voice was laid in the middle of the 19th cent by Manuel Patricio Rodríguez García, an extraordinarily successful voice teacher, who invented the laryngoscope and wrote *Mémoire sur la voix humaine* (1840) and *Traité complet de l'art du chant* (1847) There is doubt, however, as to how much physiological knowledge of the voice it is necessary or desirable for the singer to have, the laryngoscope probably had little to do with García's success as a singing teacher Singing voices are classified basically according to range as SOPRANO and CONTRALTO, the high and low female voices, with MEZZO-SOPRANO as an intermediate classification, and as TENOR and BASS, the high and low male voices, with BARITONE as an intermediate classification Within these range classifications there are more specific classifications as to the quality of a voice and the type of music that suits it best, e g , coloratura soprano Choral music generally presupposes a range of about an octave and a half for each voice, but a solo singer must have at least two octaves, and some have been known to possess ranges of three, even three and a half, octaves See H P Greene, *Interpretation in Song* (1912), W J Henderson, *The Early History of Singing* (1921) and *The Art of Singing* (1938).

voice, grammatical category according to which an action is referred to as done by the subject (active, e g , *men shoot bears*) or to the subject (passive, e g , *bears are shot by men*) In Latin, voice is a category of INFLECTION like mood or tense In ancient Greek, verbs were conjugated in three voices, active, passive, and middle (reflexive)

Voisin, La see POISON AFFAIR

Voiture, Vincent (vĕs̄' vwătür'), 1597–1648, French man of letters and poet He wrote in the precious manner of the salon of the Hôtel de Rambouillet, in which he was a leading figure

Vojvodina or Voivodina (both voi"vōdē'nə), autonomous province (8,683 sq mi , pop 1,661,632), N Serbia, Yugoslavia Novi Sad is the capital Vojvodina borders on Hungary in the north and on Rumania in the east A part of the great Danubian plain, it is watered by the Danube, the Theiss, and the Sava and constitutes the most densely populated and most prosperous part of Serbia. About 60 percent of the land is under cultivation It is the chief source of grain in Yugoslavia; fruit (notably plums, used for a powerful brandy), grapes, and vegetables are extensively cultivated Cattle raising is also important, and food processing is the largest industry Besides Novi Sad, the chief cities are Subotica, Zrenjanin, Sombor, and Pancevo The region was part of Hungary and Croatia before its conquest by the Turks in the 16th cent , and it was restored to the Hungarian crown by the Treaty of Passarowitz (1699). Parts of the region were included in the military frontier of S Hungary in the 18th cent., and the whole region was settled with Serbian and Croatian fugitives from the Ottoman Empire, as well as by German colonists The present population is still very mixed and includes Serbs, Croats, Magyars, Rumanians, and Slovaks The region was ceded (1920) to Yugoslavia by the Treaty of Trianon, and it received autonomy in 1946 As constituted in 1946, the Vojvodina consists of three sections—the Srem, in the southwest, which was part of Croatia-Slavonia until 1918, the Backa, in the northwest, which was an integral part of Hungary, and the western part of the BANAT OF TEMESVAR, in the southeast.

volcano (vŏlkā'nō) [Ital. = vulcan], aperture in the earth's surface or crust through which gases, molten rock, and solid fragments are discharged The term is commonly applied to both the vent and the cone or conical mountain built up around the vent by the ejected rock materials Often the mountain has at its apex a cavity, or crater, in which is the mouth of the vent Volcanoes are described as active, dormant, or extinct. Some 500 are known to be active, and they are distributed chiefly in two great belts One belt includes the Pacific coasts of South America, Central America, Mexico, and North America, the Aleutians, the Japanese and Malayan archipelagoes, the South Sea Islands, and New Zealand, the other extends from Central America through the West Indies, across the Atlantic, the Mediterranean, and Asia Minor to the East Indies Volcanic activity, known as eruption, may take any one or more of four chief forms or phases, known as Hawaiian, Strombolian, Vulcanian, and Pelée an In the Hawaiian phase there is an effusion of basaltic lava unaccompanied by explosion and ejection of fragments The eruptions of Mauna Loa are typical The Strombolian phase derives its name from the volcano Stromboli in the Lipari or Aeolian Islands, N of Sicily. It applies to continuous but comparatively mild discharges in which viscous lava is emitted in recurring, mild explosions, the ejection of incandescent material produces luminous clouds The more explosive volcanic eruption is Vulcanian In this phase the magma (lava before emission) accumulates in the upper level but is blocked by a plug of hardened lava which forms at the orifice between consecutive explosions When the explosive gases have reached a certain pressure within the volcano, masses of solid and liquid rock erupt into the air and clouds of vapor form over the crater, unlike the Strombolian phase the clouds are not incandescent The Pelée an phase is the most violent of volcanic action, manifesting emission of fine ash, hot gas-charged fragments of lava, and superheated steam in an incandescent "cloud" which travels at great speed This phase derived its name from Mont PELÉE, which erupted in this fashion in 1902, there occurred a series of violent explosions and the formation of the cloud that annihilated all life in its path, finally the mountain itself was blown apart Eruptions are often accompanied by torrential rains caused by the condensation of steam The fragments erupted vary in size, they include minute particles of volcanic dust and ash, *lapilli* (cinders or pellets), bombs (rounded or ellipsoidal masses of hardened magma), and huge masses Explosive eruptions build up steep-sided cones, while the nonexplosive volcanoes usually form broad, low lava cones Eruptions also occur under the sea The causes of volcanic activity are not clearly known, though the explanation for their explosive force lies in the pressure of the gases imprisoned within the molten rock The soil resulting from decomposition of volcanic materials is extremely fertile, and the ash itself is a good polishing and cleansing agent Notable eruptions within historic times have been those of Vesuvius, in Italy (A D 79), Jorullo, in Mexico (1759), Krakatoa, near Java (1883), Bandai, in Japan (1888), Soufrière, on St Vincent (1902), and Santa María, in Guatemala (1902) Other notable volcanoes are Cotopaxi and Chimborazo (Ecuador), Izalco (Salvador), Ixtaccihuatl and Popocatepetl (Mexico), Lassen Peak (United States), Katmai (Alaska), and Etna (Sicily) See also LAVA See G W Tyrrell, *Volcanoes* (1931), C A Cotton, *Volcanoes as Landscape Forms* (1944), S N Coleman, *Volcanoes, New and Old* (1946)

Volcano Islands, Jap *Kazan-retto*, island group (11 sq mi , pop 1,154), W Pacific, 660 nautical mi. S of Tokyo The most important island of the group is Iwo JIMA, the highest peak (3,181 ft) is on Minami-iwo-jima There are sugar plantations and sulphur mines The inhabitants are mostly Japanese, with some Koreans and Formosans Japan annexed the islands in 1887, placing them under the Tokyo prefecture, after the Japanese surrender in 1945, the group was removed from Tokyo's jurisdiction

Volendam (vō'lündăm'), village, North Holland prov , NW Netherlands, on the Ijsselmeer (formerly the Zuider Zee) and NNE of Amsterdam. A picturesque place, virtually unchanged since the 17th cent , it is a famous tourist center and is much frequented by artists

Volga (vōl'gŭ, Rus. vôl'gŭ), river, 2,290 mi. long, central and E European RSFSR It is the largest river of Europe and the principal waterway of the USSR, being navigable in nearly its entire course Rising, at an altitude of only 748 ft , in the Valdai Hills, it winds E past Rzhev and Kalinin, through the RYBINSK RESERVOIR, and past Shcherbakov, Yaroslavl, Kostroma, and Gorki (formerly Nizhni Novgorod) to Kazan, where it turns south and continues its broad, majestic course past Ulyanovsk, Kuibyshev (formerly Samara), Saratov, and Stalingrad At Astrakhan, near its mouth on the Caspian Sea, it fans out into a wide delta Its chief affluents are, from the right, the Oka and the Sura and, from the left, the Vetluga, the KAMA, and the Samara The MARIINSK SYSTEM links the Volga with the Baltic Sea and with the Baltic-White Sea Canal, the Moscow Canal, opened in 1937, connects it directly with Moscow, a canal linking the Volga at Stalingrad with the eastern bend of the Don has been projected. In its upper course the Volga traverses numerous lakes Below Gorki, it broadens considerably and is lined on its right (western) bank by the bluffs of the Volga Hills, which contrast sharply with the steppe that extends from the left bank The ZHIGULI mts cause the river to make a sharp bend, which reaches its easternmost point at Kuibyshev and which is known as the Samara bend The Volga is navigable from late April to late November at Shcherbakov, and from early March to mid-December at Astrakhan A tranquil, regular stream, it has a flood stage in May and June and a low-water stage in the late summer, when shoals and sandbars somewhat impede navigation There are many important hydroelectric stations, notably at Uglich, at Shcherbakov, and at Ivankovo, all along the upper Volga At Ivankovo, NW of Moscow, a dam (completed 1937) creates the vast Volga Reservoir or Moscow Sea, covering an area of 125 sq mi , this is connected with the Moskva river by the Moscow Canal Large hydroelectric stations have been projected at Gorki, at Kuibyshev, and at Stalingrad The Volga has played an incalculably important part in the life of the Russian people, and it is characteristically named in Russian folklore "Mother Volga" Its basin comprises one third of the European USSR For centuries it has served as the chief thoroughfare of Russia and as the lifeline of Russian colonization to the east It still carries one third of the total river freight of the USSR, and it is used for irrigating the vast steppes of the lower Volga region Grain, oil (chiefly from Baku, shipped across the Caspian Sea), salt, fish, and caviar (from the Volga delta and the Caspian) are shipped upstream, lumber is the main commodity shipped downstream The Volga was known to the ancient Greeks as the Rha, but little was known about the river until the early Middle Ages, when Slavic tribes settled along its upper course, the Bulgars (see BULGARS, EASTERN) along its middle course, and the KHAZARS in the south Its importance as a trade route dates from that time The Russians soon extended their control as far as to Nizhni Novgorod (see GORKI), founded in 1221 The Mongol invasion of the 13th cent resulted in the direct control by the Golden Horde of the Volga below Nizhni Novgorod and in the creation of the Tatar khanates of KAZAN and ASTRAKHAN, which fell to Moscow only in the 16th cent Sarai, on the Volga near modern Stalingrad, was the capital of the empire of the Golden Horde The conquest of these territories was largely the work of the Cossacks, who used the Volga and its tributaries for their epic forays into Siberia (under Yermak in the 16th cent) and into the Caspian Sea (under Stenka Razin, in the 17th cent) Many of the Finnic and Turco-Tatar nationalities still live in the middle and lower Volga regions, notably in the Chuvash ASSR, the Mari ASSR, the Mordvinian ASSR, the Tatar ASSR, and the Udmurt ASSR In the lower Volga region the KALMUCKS were settled in the early 17th cent. The lower Volga was the center of the great peasant rebellions under Stenka Razin and Pugachev, and after their suppression Catherine II settled many German colonists in the region around Saratov In the Second World War, when the Volga was briefly reached by the Axis forces at Stalingrad, the GERMAN VOLGA REPUBLIC and the Kalmuck ASSR were dissolved by the Soviet authorities

Volhynia (vŏlĭ'nyu), Rus *Volyn*) vŭlĭ'nyu), Pol *Wolyń* (vô'lĭnyu), historic region, NW Ukraine, one of the oldest Slavic settlements in Europe. The name is derived from the extinct city of Volyn, said to have been situated on the Western Bug. Its early history from c 981 overlaps with that of the duchies of Vladimir (see VLADIMIR-VOLYNSKI) and GALICH, after the disintegration (c 1340) of the duchy of Galich-Vladimir, Volhynia was disputed between Poland and Lithuania When these two rivals united in one state (1569), Volhynia became a quasi-autonomous Polish province In the second and third Polish partitions (1793 and 1795) Volhynia passed to Russia, but in 1921 its western section was returned to Poland, while the rest passed to the Ukrainian SSR In 1945 Poland

ceded its part to the Ukraine; this section includes the Volyn oblast (7,700 sq. mi.; pop 1,100,000), an agricultural lowland Lutsk is the capital.

Volk, Douglas (vōlk), 1856–1935, American portrait and figure painter, b Pittsfield, Mass, studied with Gérôme in Paris, son of Leonard Wells Volk He organized (1893) and directed the Minneapolis School of Fine Arts and later, in New York, was an instructor at the National Academy of Design, Cooper Union, and the Art Students League. Among his paintings are *Little Mildred* and a portrait of Felix Adler (Metropolitan Mus), portraits of General Pershing and King Albert of Belgium (National Gall of Art, Washington, D C), a portrait of Lincoln (Albright Art Gall , Buffalo, N Y); *Puritan Mother and Child* (Carnegie Inst., Pittsburgh), and *Accused of Witchcraft* (Corcoran Gall.)

Volk, Leonard Wells, 1828–95, American sculptor, b Wellstown (now Wells), N Y , son of a stonecutter An itinerant tombstone cutter, Volk went (1848) from New York state to St Louis, where he set up a sculptor's studio He later studied in Rome, through the interest of Stephen A. Douglas, and in 1857 opened a studio in Chicago. There he was active in founding the Chicago Academy of Design In 1860 he made a life mask of Lincoln and cast his hands—of great value to sculptors Among Volk's works are some portrait busts, including one of Lincoln, statues of Lincoln and Stephen A Douglas in the capitol, Springfield, Ill , the Douglas monument, Chicago, and military monuments at Rochester, N Y., and elsewhere Douglas Volk was his son

Vollard, Ambroise (äbrôzwäz' vôlär'), 1867–1939, French art dealer, collector, and publisher, b Réunion He was noted for his early recognition and sponsorship of leading artists of the school of Paris, especially Van Gogh and Cézanne (for whom he held the first one-man exhibitions) and Rouault His interest in publishing dated from the beginning of his career The three *Albums des peintres-graveurs* (1896–99) included prints by Bonnard, Cézanne, Chagall, Degas, Munch, Renoir, and others. In 1900 he published *Parallèlement* by Verlaine, with lithographs by Bonnard, and thereafter concentrated on the production of fine editions illustrated with original prints by such artists as Picasso, Dufy, Redon, and Rouault, works which are now highly prized by rare-book collectors and museums Vollard himself wrote anecdotal biographies of his friends Cézanne, Renoir, and Degas, as well as an autobiographical work, *Recollections of a Picture Dealer* (Eng tr from manuscript, 1936)

volleyball, outdoor or indoor ball game played on a level court An upright net, the top of which stands 8 ft from the ground, divides the court (60 ft long and 30 ft wide) in half Smaller courts are generally used when women or children play the game Three forwards and three backs, each covering an equal area of the court, compose a volleyball team The inflated-rubber volleyball, about 27 in. in circumference, is served from the right side of the back lines of the court The ball is batted with the open hand and must clear the top of the net, it may go into any part of the opponents' court Only one try is allowed on the serve. The ball must be returned without allowing it to touch the ground and must be volleyed within the boundaries of the court Any part of the body above the knee may be used to bat the ball, and a maximum of three volley passes (from player to player on one team) are permitted before the ball is returned. Only the team that is serving scores, and if the receiving team wins the volley, it gains the next serve The team scoring 15 points first wins the game, but if the score is tied at 14, the first team to score two consecutive points wins Volleyball was originated by William C Morgan at Holyoke, Mass., in 1895 The game was fostered by the Young Men's Christian Association in its early years and soon was adopted by many women's and youth organizations In 1929 the United States Volley Ball Association was organized See R. E. Laveaga, *Volley Ball* (1933)

Volney, Constantin François de Chassebœuf, comte de (kônstätē' frəswä' du shäsbûf' kôt' dû vôlnā'), 1757–1820, French scholar He traveled in Egypt and Syria in the 1780s and wrote an account of his journey, *Voyage en Syrie et en Égypte* (1787), notable for its information about inscriptions and Arabic customs, it was useful to Napoleon during his Egyptian campaign. Volney served as deputy (1789) to the States-General, as secretary (1790) of the National Assembly, and later, following a sojourn in the United States, as senator under Napoleon, who made him a count in 1808, and as a member of the chamber of peers under Louis XVIII His principal work, *Les Ruines; ou, Méditation sur les révolutions des empires* (1791), popularizing religious skepticism, was influential not only in France but also in England and the United States; it went through many translations and editions and stimulated much controversy His writings also include works on the United States, on ancient history, and on Arabic.

Volo, Greece: see VOLOS

Vologda (vô'lugdə), city (pop. 95,194), capital of Vologda oblast, N European RSFSR, on the Vologda river (a tributary of the Sukhona) and at the junction of the Leningrad-Kirov and Moscow-Archangel railroads It is a transportation center and has a large dairy industry. Founded in 1147, it was at first ruled by Novgorod; it became (1397) the seat of a Russian principality which passed to Moscow in 1481 In the 16th cent. Vologda flourished as a trade center on the road to Archangel. The city has retained its old kremlin, which contains the 18th-century episcopal palace (now a museum) Other historic buildings are the Cathedral of St Sophia (16th cent) and, in a suburb, the Spasso-Prilukі monastery, founded in 1371.

Volos (vô'lôs), city (pop 54,919), E Greece, in SE Thessaly, beautifully situated on the Gulf of Volos or Pagasaean Gulf, an inlet of the Aegean Sea. A new city, it is near the site of the ancient towns of Pagasae and Demetrias Volos trades in tobacco, wheat, almonds, olives, and fish, and it has a textile industry It was heavily damaged in the Second World War It is also spelled Volo

Volscians (vôl'shun) or **Volsci** (vôl'sī), people of ancient Italy. They occupied the country SE of the Alban Hills They and the Samnites were early opponents of the Romans and Latins, and the story of Coriolanus reflects the fierceness of the Volscian attacks on Rome Warfare apparently continued from the 6th cent B C until the 4th cent B C , when the Volscians were conquered and were promptly and completely Romanized

Volsinii (vôlsi'nēī), ancient city of Etruria, probably on the site of modern Orvieto It was a powerful member of the Etruscan League, and the spirit of the league was broken when Romans conquered and thoroughly sacked Volsinii in 280 B C. A new Volsinii was founded near Lacus Volsiniensis (Lake Bolsena)

Volsk (vôlsk), city (pop 55,053), E European RSFSR, a port on the Volga above Saratov It is a grain-shipping center and has cement plants and other manufactures

Volstead, Andrew Joseph (vôl'stĕd), 1860–1947, American legislator, b Goodhue co , Minn , educated at St Olaf College and Decorah Institute Admitted (1884) to the bar, he practiced law in Minnesota He held several local offices before he served (1903–23) in the U S Congress He sponsored many measures in Congress and became a national figure as the author of the **Volstead Act.** This Federal prohibition act made provisions for the enforcement of the Eighteenth Amendment The Volstead Act—passed in 1919 over the veto of President Woodrow Wilson—defined an intoxicating beverage as one that contains more than 5 percent of alcohol by volume It also provided Federal agents the power to investigate and prosecute violations of the amendment and defined the uses of injunctions against violators The act was modified (1933) to permit the sale of 3 2 percent beer and wine and became void after the repeal of the Eighteenth Amendment late in 1933 See J. A Krout, *Origins of Prohibition* (1925)

Volsungasaga (vôl'sôong-gusä'gu) [Icelandic,=saga of the Volsungs], Icelandic prose saga founded apparently, on earlier poetic materials, which are represented in Germany by the NIBELUNGENLIED It was probably assembled in the 12th or 13th cent Its heroine is GUDRUN, who accomplishes the ruin of the Volsungs, the principal of whom is Sigurd (see SIEGFRIED) The Brunhild of the *Nibelungenlied* is here called Brynhild William Morris translated the saga and also based on it his *Story of Sigurd the Volsung and the Fall of the Niblungs* (1876) See H G Leach, ed , *A Pageant of Old Scandinavia* (1946)

volt [for Alessandro Volta], unit of measurement in electricity It is the unit of electromotive force (written commonly as emf), i e , the unit of measurement of the force driving a current of electricity along a conductor, both emf and the difference of potential (upon which emf depends) are measured in terms of volts An instrument for measuring this voltage is called a voltmeter and is a form of GALVANOMETER The international volt is defined as the electromotive force which produces a current of one AMPERE (international) when acting on a conductor with a resistance of one OHM (international) It is determined by application of OHM'S LAW The Weston normal cell (the Weston portable cell is employed in common practice) is used to standardize the international volt, its emf being taken, at 20°C , as 1 0183 international volts

Volta, Alessandro, Conte (älĕsän'drō kōn'tā vôl'tä), 1745–1827, Italian physicist He was professor of physics at the Univ of Pavia from 1779 and became famous for his work in electricity Napoleon made him a count and a senator of the kingdom of Lombardy He invented the so-called VOLTA'S PILE OR VOLTAIC PILE, the electrophorus, a device consisting of a disk of some substance such as hard rubber, which is charged negatively, and a metal plate (with an insulating handle), in which a charge of electricity is produced by induction; an electric CONDENSER; and the VOLTAIC CELL. The VOLT, a unit of electrical measurement, is named for Volta.

Volta (vôl'tä), river rising in French West Africa and flowing c 800 mi. predominantly S through the Gold Coast to empty into the Gulf of Guinea. It is navigable by steam launch a short distance above its mouth.

voltaic cell (vôltā'ĭk) [for Alessandro Volta], an electric cell consisting of two plates of dissimilar metals, e g , copper and zinc, suspended, without touching each other, in a solution of acid or salt.

Voltaire, François Marie Arouet de (vôltâr', Fr. frəswä' märē' ärwā' dü vôltĕr'), 1694–1778, French philosopher and author, whose original name was Arouet He was born at Paris, the son of a notary, and was educated at the Jesuit Collège Louis-le-Grand. His godfather, the Abbé de Châteauneuf, introduced the boy to the circle of wits whose meeting places were the Temple and the salon of Ninon de Lenclos Because of insults to the regent, Philippe II d'Orléans, wrongly ascribed to him, Voltaire was sent to the Bastille (1717) for 11 months. There he rewrote his first tragedy, *Œdipe*, and began an epic poem on Henry IV, the *Henriade* It was at this time that he began to call himself Voltaire. *Œdipe* won him fame and a pension from the regent Voltaire, who at the time won a large lottery prize, used his funds for successful speculations and acquired a handsome independent fortune Throughout his life he displayed a shrewd business acumen, and he died a millionaire, but at the same time he often distinguished himself through his generosity In 1726 a young nobleman, the Chevalier de Rohan, resenting a witticism of Voltaire at his expense, had Voltaire beaten by a band of hired ruffians Far from obtaining justice, Voltaire was shut up in the Bastille through the influence of the powerful Rohan family, and he was released only upon his promise to go to England The episode left an indelible impression on Voltaire, who for the rest of his long life exerted himself to his utmost in struggling against judicial arbitrariness Voltaire's stay of over two years in England was very fruitful Through the friendship of Lord Bolingbroke he was introduced to the literary men of the period, the greater freedom of thought in England won his admiration The two Englishmen whose thinking influenced him most were Newton and Locke. Voltaire's *Letters concerning the English Nation* were first published in English (1732) and appeared in French as *Lettres philosophiques* (1733) This extremely influential book may be said to have opened the period of Anglomania that characterized the literature of the ENLIGHTENMENT Voltaire praised English institutions at the expense of the French, and he also introduced English literature, particularly Shakspere, into France (Later, when Shakspere became fashionable, Voltaire revised his earlier enthusiasm and called him a drunken barbarian.) The book was formally banned in France While still in England, Voltaire wrote the first of his historical works, a history of Charles XII of Sweden, which remains a classic in biography. After his return to France in 1729, he produced several tragedies, among them *Brutus* (1730) and *Zaïre* (1732) In 1733 he met Mme du Châtelet (see DU CHÂTELET-LOMONT), whose intellectual interests, especially in science, accorded with his own They took up residence together at Cirey, in Lorraine, under the Marquis du Châtelet's tolerant eye The connection with Émilie lasted until her death in 1749 At Cirey, Voltaire dabbled in physical and chemical experiments, began his long correspondence with Crown Prince Frederick of Prussia (later FREDERICK II) and wrote *Éléments de la philosophie de Newton;* a burlesque and undignified treatment of the Joan of Arc legends, *La Pucelle;* and the dramas *Tancrède*, *Mérope*, and *Mahomet* Through the influence of Mme de Pompadour, Voltaire was made royal historiographer, gentleman of the king's bedchamber, and a member of the French Academy He first visited Berlin in 1743, and after Mme du Châtelet's death he accepted Frederick II's invitation to live at his court His relations with Frederick, a man much of the same water as Voltaire, were generally stormy The king forgave him an unsavory lawsuit with a Jewish financier named Hirsch, but Voltaire's interference in the quarrel between MAUPERTUIS and König led to renewed coldness on the part of Frederick, and in 1753 Voltaire hastily left Prussia, taking with him, out of malice, a set of the king's poems which he had promised to correct He was placed under house arrest and searched by Prussian agents at Frankfurt, in violation of international law At a distance, the two men later became reconciled, and their correspondence was resumed Unwelcome in France, Voltaire settled in Geneva, where he acquired the property "Les Délices", he also acquired another house near Lausanne. The Genevese authorities soon objected to Voltaire's holding private theatrical performances at his home and still more to the article "Genève" written for the *Encyclopédie*, on Voltaire's instigation, by D'Alembert. The article, which declared that the Calvinist pastors of Geneva had seen the light and ceased to believe in organised religion, stirred up a violent controversy; Voltaire purchased (1758) an estate, Ferney (see FERNEY-VOLTAIRE), just over the French border, where he lived until shortly before his death as a virtual petty sovereign and was safe from arrest by

either the French government or the Swiss. One of the most active men of all time, he conducted an overpowering correspondence with most of the outstanding men and women of his time; received hosts of visitors who came to do homage to the "patriarch of Ferney"; employed himself in seeking justice for victims of religious or political persecution (e g , in the cases of the family of Jean Calas, of the Chevalier de Sirven, of Lally-Tollendal, of Admiral Byng, and of the serfs of Saint-Claude), contributed to the *Encyclopédie;* managed his estate, took active interest in improving the condition of his tenants, edited the works of Racine and Corneille, and turned out a stream of anonymous novels and pamphlets, which were distributed in all corners of Europe and in which he attacked the established institutions of his time with unremitting virulence Ironically, it is one of these disavowed works, *Candide* (1759), that is most widely read today It is the masterpiece among his "philosophical romances," which also include *Zadig, La Princesse de Babylone, Micromégas,* and the inimitable short tale *Jeannot et Colin,* perhaps the quintessence of Voltaire's style In *Candide* Voltaire attacked the philosophical optimism made fashionable by Leibniz Its conclusion, "Let us cultivate our garden" (instead of speculating on unanswerable problems), expresses succinctly Voltaire's practical philosophy of common sense The secret of *Candide*'s popularity lies chiefly in its style Voltaire reached the most subtly comical effects through an imperceptible turn of a phrase, his sentences flow with the greatest facility, his expressions are always felicitous and unlabored, his irony is the more devastating as its touch is light Brevity and lucidity characterize all his writings The same qualities shine through others among Voltaire's later productions, e g , *L'Homme aux 40 écus,* a devastating satire of the physiocrats, and the *Dictionnaire philosophique,* a compendium of Voltaire's thought on the most varied subjects In his serious poetic works, as in his *Henriade* and his tragedies, the perfection of his style is usually combined with a coldness that has robbed them of lasting appeal, though they tower above those of other 18th-century imitators of Racine Voltaire was responsible for the introduction to the theater of authentic costumes, and he labored successfully for the improvement of the social status of actors In his philosophy, he was almost entirely indebted to the English philosophers, to Montaigne, and to Bayle Its basis is skepticism and rationalism Whatever he could not understand (and that category included many things), he rejected as abstruse nonsense, but despite his cult for clarity and reason he frequently contradicted himself Thus he would maintain in one place that man's nature was as unchangeable as that of animals and would express elsewhere his belief in progress and the gradual humanization of society through the action of the arts, sciences, and commerce In politics he advocated reform but had an aristocratic horror of the people and of revolution His admiration went to "enlightened despots" such as Peter I, Frederick II, and Catherine II In religion, Voltaire felt that Christianity was a good thing for chamber maids and tailors to believe in, but for the use of the élite he advocated a simple deism, contenting himself with the belief in a supreme being, the "great watchmaker " He opposed the atheism and materialism of Helvétius and Holbach His line, "If God did not exist, he would have to be invented," has become proverbial While undermining the established order in France, he had in mind the establishment of an enlightened constitutional monarchy on the English pattern, not the French Revolution which he unwittingly helped to bring about His celebrated slogan, *Écrasez l'infâme!* [crush the infamous one!] has been interpreted as addressed either against the Church or against the outdated, intolerant, and arbitrary *ancien régime* in general Voltaire's influence in the popularization of the science and philosophy of his age was incalculably great Perhaps his most lasting and original intellectual contribution was made in the field of history His *Siècle de Louis XIV* (1751) embodies in part the ideas of his historical masterpiece, *Essais sur l'histoire générale et sur les moeurs et l'esprit des nations* (7 vols , 1756, Eng tr , 1759), the first attempt at writing a history of the world as a whole, Voltaire laid as much emphasis on culture and commerce as on politics and war, and he avoided national parochialism Its chief flaw is Voltaire's prejudice against religion In his 84th year Voltaire left Ferney for Paris to attend the first performance of his tragedy *Irène* His journey and his reception were a triumph and apotheosis, but the emotion was too much for him and he died in Paris soon afterward In order to obtain Christian burial he signed a partial retraction of his writings. This was considered insufficient by the Church, but he refused to sign a more general retraction. To a friend he gave the following written declaration· "I died adoring God, loving my friends, not hating my enemies, and detesting persecution " The archbishop of Paris refused him a Christian burial, but an abbot of his acquaintance put Voltaire's corpse into a carriage and secretly conveyed him to his abbey in Champagne, where he was buried. His remains were brought back to Paris in 1791 and buried in the Panthéon The first "complete" edition of Voltaire's work was the so-called Kehl edition, by Beaumarchais (70 vols in octavo or 92 vols. in duodecimo, 1784–87), a later edition is that of M Beuchot (72 vols , 1828–40, revised and enlarged, 52 vols., 1883) Much of Voltaire's huge correspondence was left unpublished, but is gradually being brought to light (e g , some 500 recently published letters to the Tronchin family of Geneva) There are English translations of Voltaire's most widely read works Biographies and studies of Voltaire reflect continued controversy as to Voltaire's real thought and beliefs, thus the biography by Alfred Noyes (1936) tries to prove that Voltaire was fundamentally an Orthodox Christian See biographies by Gustave Lanson (1906, in French), Georg Brandes (Eng tr., 2 vols , 1930), and H N Brailsford (1935), N L Torrey, *The Spirit of Voltaire* (1938), Adolph Meyer, *Voltaire, Man of Justice* (1945)

Volta Redonda (vôl'tu rudôn'dä), town (1940 pop 1,017, 1950 estimated pop 20,000), Rio de Janeiro state, Brazil, on the Paraíba river and 60 mi WNW of Rio It is a growing industrial community, with an important government-owned steel plant

Volta's pile or **voltaic pile** [for Alessandro Volta], a number of metal disks piled one upon the other with a piece of material wet with a salt solution between each disk The disks are of dissimilar metal, e g , zinc and copper, and the different metals are alternated in the pile Each set of two disks, as one zinc and one copper, correspond to a VOLTAIC CELL, the arrangement as a whole to an electric battery,

Volterra, Daniele da (dänyā'lā dä vôltĕr'rä), 1509–66, Italian painter and sculptor, called for his native town in Tuscany His family name was Ricciarelli As an ardent disciple of Michelangelo, he often worked after the master's designs. He took part in the decoration of the Farnese Palace but is best known for his famous *Descent from the Cross* (Church of the Trinità dei Monti, Rome) He was nicknamed *Il Braghettone* [breeches maker] because of his commission to paint clothes upon the nudes in Michelangelo's *Last Judgment* Other works are *Massacre of the Innocents* (Uffizi) and *David Killing Goliath* (Louvre).

Volterra (vôltĕr'rä), town (pop 11,704), Tuscany, central Italy It was a powerful Etruscan town A free commune in the Middle Ages, it passed to Florence in the 14th cent Of medieval aspect, it has a 16th-century cathedral and a fine square with ancient palaces and the oldest town hall in Tuscany Its powerful fort and towers (14th-15th cent) are now a prison There are well-preserved Etruscan and medieval walls Articles of alabaster are manufactured here

voltmeter: see GALVANOMETER

Volturno (vôltōōr'nō), river, 109 mi long, Campania, S Italy It rises in the Apennines and flows past Capua into the Tyrrhenian Sea In 1860 Garibaldi defeated on its banks the troops of Francis II of the Two Sicilies In the Second World War the river was crossed (Oct , 1943) by American troops after heavy fighting

volume, measure of solid content The units of measurement are either the cube of a linear unit, such as cubic inches and cubic centimeters, or units of dry and liquid measure, such as bushel and gallon, and, in the metric system, liter The formulas for the volumes of certain common solids are given in the following table

Solid	*Volume*	*Solid*	*Volume*
cube	l^3	right rectangular parallelepiped	lwh
prism	Bh	right circular cylinder	$\pi r^2 h$
pyramid	$\frac{1}{3}Bh$	right circular cone	$\frac{1}{3}\pi r^2 h$
sphere	$\frac{4}{3}\pi r^3$		

The abbreviations used are B = area of base, h = height, r = radius, l = length, w = width

Volunteers of America, religious and philanthropic organization, founded (1896) by General and Mrs Ballington Booth (see BOOTH, family) after their withdrawal from the Salvation Army In their religious work the Volunteers' aim is to act as auxiliary to the churches, converts won by evangelistic efforts are urged to join the denomination of their preference However, the Volunteers conduct services, missions, and Sunday schools where they are needed Ministration to social and physical needs has developed into an extensive system of welfare activities, including day nurseries, employment centers, fresh-air camps, maternity homes, hospices for working girls, and clubs and homes for the aged A very important branch of the work is the Volunteer Prison League, founded (1896) by Mrs Ballington Booth Thousands of prisoners have been enrolled in the league, signing the declaration which includes a promise to observe prison rules, and thousands have been assisted to find their way back into normal life. Mrs Booth is credited with having done much to improve prison conditions in America The Volunteers have a democratic form of government, although the society is military in its titles, uniforms, and movements of officers Nine directors, elected by the grand field council, are the officers responsible for finances and are trustees of property. Election of the general, or commander in chief, is held every five years The organization has its headquarters in the United States and is supported by voluntary contributions

Volyn, Ukraine: see VOLHYNIA

vomiting, spasmodic contraction of the stomach, with return of its contents to the mouth, following local stimuli or stimulation of the central nervous system Vomiting may be preceded by NAUSEA It is common in diseases of the organs of the digestive system, and sometimes occurs in pregnancy, migraine, brain tumor, injury, intoxication, shock, airsickness, and seasickness and as the effect of certain drugs, e g , ipecac It is induced mechanically in the spasm of whooping cough and in gagging Black vomit occurs in yellow fever The character of material vomited is often an aid in diagnosis Treatment depends upon the cause

Von. For German names beginning thus, see under the proper name, e g , for Von Bismarck, see BISMARCK

Vondel, Joost van den (yōst' vän dĕn vŏn'dul), 1587–1679, Dutch poet and dramatist, b Cologne Vondel's voluminous work consists mainly of translations, lyric poetry, and dramas He translated from French, Italian (Tasso), Latin (Vergil, Ovid, Horace, Seneca, the Psalter), and Greek (Sophocles, Euripides) His poems are principally patriotic; polemic, attacking the Antiremonstrants and defending the memory of Oldenbarneveldt, and religious, glorifying Roman Catholicism and honoring the saints He became a Catholic in middle life Vondel's 30 dramas are in the classical tragic manner, most of the original ones are on biblical subjects The two most famous are probably *Gysbreght van Aemstel* (1637), on a medieval Dutch theme, and the magnificent *Lucifer* (1654, Eng tr , 1898), which Milton may have known Vondel has been honored by many as the Netherlands' greatest literary figure See A J Barnouw, *Vondel* (1925)

Vonnoh, Bessie Potter (vŏ'nō), 1872–, American sculptor, b St Louis, studied under Lorado Taft at the Art Institute of Chicago She was Taft's assistant in his work for the World's Columbian Exposition, Chicago, 1893 Her small bronzes—*Young Mother, Dancing Girl, Reading Girl,* and others—are in leading museums of New York, Chicago, Detroit, Pittsburgh, and other cities Her fountain figures also are popular She was married in 1899 to **Robert Vonnoh,** 1858–1933, American portrait painter, b Hartford, Conn , studied at Julien's academy, Paris Among his paintings are *La Mère Adèle* (Metropolitan Mus), portrait of his wife and a self-portrait (Pa Acad of the Fine Arts, where he taught, 1891–96), family of Woodrow Wilson (White House, Washington, D C) He became a member of the National Academy of Design in 1906

Von Schrenk, Hermann (vŏn shrĕnk'), 1873–, American vegetable pathologist and timber engineer, b College Point, L I , N Y , grad Cornell Univ (B S , 1893), Ph D Washington Univ , 1898 An authority on the diseases of trees and the preservation of timber, he was consulting timber engineer for various railroads from 1907 and lectured at the forestry school at Yale from 1902 to 1909 In 1907 he became pathologist at the Missouri Botanical Garden, St Louis His writings include *The Decay of Timber and Methods of Preventing It* (1902) and *Seasoning of Timber* (1903)

voodooism (vōō'dōōĭzĕm), name for beliefs and practices attributed to Negroes of the West Indies (particularly Haiti) and the S United States The rites are connected with serpent worship and in extreme phases with human sacrifice and cannibalistic ceremonies Investigation has shown, however, that the secret ritual, which takes place at night, does not indicate a special, barbaric cult, but is reminiscent, rather, of the ecstatic type of magical observance practiced by many peoples See N N Puckett, *Folklore Beliefs of the Southern Negro* (1926), J J Williams, *Voodoos and Obeahs* (1933), M J Herskovits, *Life in a Haitian Valley* (1937)

Voorhees, Stephen Francis (vōō'rēz), 1878–, American architect, b Rocky Hill, N J , grad Princeton, 1900 He practiced from 1902 in New York city, becoming a member of the firms McKenzie, Voorhees, and Gmelin (1910–26), Voorhees, Gmelin, and Walker (1926–39); and Voorhees, Walker, Foley, and Smith (from 1939) He made his name in designing business buildings, such as the Telephone Building and the Irving Trust Building (One Wall Street), both in New York He became (1930) supervising architect of Princeton and headed (1936–40) the board of design for the New York World's Fair

Vophsi (vŏf'sī), father of Nahbi. Num. 13 14

Voragine, Jacobus de. see JACOBUS DE VORAGINE.

Vorarlberg (fōr"ärl'bĕrk), autonomous province of *Bundesland* (1,004 sq mi , pop 191,743), W Austria, adjoining Switzerland, Germany, and Liechtenstein The capital, Bregenz, is on the east shore of the Lake of Constance Noted for its Alpine scenery, Vorarlberg has fine winter sports resorts There is extensive cattle raising and dairy farming, textile mills are found in every town, and beautiful embroidery is produced by artisans Vorarlberg

was part of the Roman province of Rhaetia and was later acquired by the powerful counts of Montfort The Hapsburgs gained possession of it piecemeal in the 14th, 15th and 16th cent, and in 1523 it became a crownland, administered by Tyrol An attempt to join Switzerland as a canton after the First World War failed because of Allied opposition and Swiss indifference

Voronezh (vôrô'nĕsh, Rus vŭrô'nyĭsh), city (1926 pop 120,017, 1939 pop 326,836), capital of Voronezh oblast, S central European RSFSR, on the Voronesh river near its confluence with the Don A major industrial center in a black-earth agricultural region, it produces synthetic rubber, locomotives and railroad cars, aircraft, machinery, and sunflower oil and has flour mills, meat-packing plants, fruit and vegetable canneries, and distilleries The Univ of Voronezh was originally the Univ of Tartu, transferred here in 1918 There also are an agricultural institute and medical and engineering schools Founded in 1586, Voronezh became (1694) a shipbuilding center under Peter I and later developed as a grain and wool market During the Second World War it was largely destroyed in bitter fighting (1942–43), when a German advance was stopped here The poet Koltsov was born at Voronezh

Voronoff, Serge (sĕrzh' vôrônôf'), 1866–, French surgeon and pathologist, b Russia He was naturalized in France in 1897 He performed notable surgery in military hospitals during the First World War and was director of the experimental surgery laboratory of the Collège de France from 1921 He specialized in the transplantation of animal (chiefly monkey) glands in the treatment of thyroid deficiency in children and for rejuvenation in old age His works include *From Cretin to Genius* (1941) and *The Sources of Life* (1943)

Voroshilov, Klimenty Yefremovich (vôrushĕ'lôf, -lôf, vô-, Rus, klyĭmyĕn'tyĭ vŭfrĕm'ŭvĭch vŭrushĕ'lŭf), 1881–, Russian general One of the original members of the Bolshevik faction, he won fame as a Red Army commander in the civil war As commissar for defense (1925 40), Marshal Voroshilov was given much credit for the organization of the Red Army In the Second World War he commanded the defense of Leningrad, and in Jan, 1943, he directed, jointly with Marshal Zhukov, the operations that broke the German ring around that city

Voroshilov (vôrushĕ'lôf, -lôf, vô-, Rus vŭrushĕ'luf), city (pop 70,628), S Maritime Territory, RSFSR, in Far Eastern Siberia, c 45 mi N of Vladivostok It is a rail hub on the Trans-Siberian RR, at the junction with the Chinese Eastern RR, and is a food-processing center Its name until c 1935 was Nikolsk-Ussurisk

Voroshilovgrad (-grăd", Rus vŭrushĕ'lufgrät'), city (1926 pop 71,765, 1939 pop 213,007), capital of Voroshilovgrad oblast, SE Ukraine, in the Donets Basin Until c 1935 it was named Lugansk An industrial city, it produces locomotives, steel pipes, machinery, processed foods, and textiles It was founded in the 18th cent, and its first iron foundry was built in 1797 In the Second World War the city was held (1941-43) by the Germans

Vorosmarty, Michael (vô'rŭshmôr"tē), Hung *Vörösmarty Mihály* (mĭ'hl), 1800–1855, Hungarian poet He is considered one of the greatest Hungarian poets and is the creator of a new poetic language, combining the influence of the national and classical schools He is best known for his patriotic lyrics, especially *The Call* (1837) His epics *Zalan's Flight* (1825), *Ertan* (1825), and *Two Neighboring Castles* (1831) are among his best works He also wrote criticism and dramas and translated the *Thousand and One Nights* and Shakspere

vortex (vôr'tĕks), mass of fluid the particles of which have a whirling or rotary motion In theory, vortex motion is concerned with motions in a frictionless fluid In such a case the absence of friction would make it impossible to create or to destroy vortex motion Motion in such a fluid would be perfectly continuous and the line joining the axes of neighboring particles would be a closed curve Lines drawn so that their direction is that of the axis of rotation of the fluid are called vortex lines, and the closed curves are vortex rings If vortex lines are drawn through every point of a vortex ring, a vortex tube results, the fluid within the tube constituting a vortex filament Hermann von Helmholtz was probably the first to investigate the properties of vortex motion, Lord Kelvin developed a theory of the material atom as a vortex ring, and Clerk-Maxwell worked out a theory of electromagnetism, assuming that every magnetic tube of force was a vortex with an axis of rotation coinciding with the direction of the force Though many properties have been mathematically proved for the perfect frictionless fluid, in practice full realization of them is impossible, because, since no frictionless fluid exists, vortices can be created or destroyed. A continuous energy supply to overcome friction is needed to maintain a vortex motion. A smoke ring is a familiar example of a typical vortex motion where the medium is air. In this case the rings are stable for a short time because of the comparatively slight friction in air. An illustration of vortex motion where the medium is liquid is furnished when water, let out of a washbasin, forms a small whirlpool In nature, illustrations of vortical motion on a larger scale are seen, for example, in waterspouts, whirlpools, and tornadoes Investigations of sunspots reveal enormous vortices in the gases surrounding them.

vorticism (vôr'tĭsĭzm), short-lived 20th-century school of art related to CUBISM but stressing rhythmic movement Its principal exponent was a French sculptor, Gaudier-Brzeska, who died young in the First World War, but the movement had its largest following in England, where Wyndham Lewis, William Roberts, and C R W Nevinson were vorticists See Ezra Pound, *Gaudier-Brzeska* (1916)

Vortigern (vôr'tĭgûrn), 5th cent, tribal king of Britons in Wales and S England Tradition transmitted by Bede says that Vortigern invited the Jutish leaders HENGIST AND HORSA to Kent to help withstand the Picts and Scots Later he quarreled and fought with Hengist and Horsa

Vos, Cornelis de (kôrnā'lĭs dŭ vôs'), 1585–1651, Flemish figure and portrait painter He was a contemporary of Rubens, who sent many sitters to him Although of the school of Rubens, Vos developed an individual style of portraiture in which cool grays predominate Among his many fine portraits are those of Abraham Grapheus (Antwerp) and *Mother and Children* and *Young Lady* (both Metropolitan Mus) His brother, **Paulus de Vos** (pou'lôs), c 1600–c 1654, was an excellent painter of animals and hunting scenes He is represented in the museums at Madrid and Leningrad

Vos, Marten de (mär'tun), c 1536–1603, Flemish painter studied with Floris in Antwerp and with Tintoretto in Venice In 1558 he returned to Antwerp after seven years in Italy and set up a popular art school Vos was a mannerist and painted chiefly ambitious figure compositions in imitation of the Venetians Characteristic are his *Temptation of St Anthony* and *Triumph of Christ* (Antwerp) and *St Paul Stung by a Viper* (Louvre) Much of his work in the churches of Antwerp was destroyed by the iconoclasts

Vos, Paulus de see Vos, CORNELIS DE

Vosges (vōzh), department (2,279 sq mi, pop 342,315), E France, in LORRAINE It is drained by the Moselle and bounded in the east by the Vosges mts Épinal is the capital

Vosges, mountain range, E France, between the Alsatian plain in the east and the plateau of S Lorraine in the west It extends generally north and parallel to the Rhine for c 120 mi from the Belfort Gap Of sandstone and granite formation, the Vosges are worn by the ages, and their summits are gently rounded or almost flat The highest point is the Ballon de Guebwiller (4,672 ft), in the south Below the pasture lands there are wild forests (largely of pine) The steep Alsatian slopes are covered with excellent vineyards (Riesling and other wines) Among the resorts on the gentler western slopes Plombières is best known In 1937 a tunnel was opened, piercing the range between Saint-Dié and Sainte-Marie-aux-Mines The Moselle, Meurthe, and Ill rivers have their sources in the Vosges

Votiak, RSFSR see UDMURT AUTONOMOUS SOVIET SOCIALIST REPUBLIC

voting, method of registering collective approval or disapproval of a proposal The word generally refers to the process used by citizens in choosing candidates for public offices or in deciding controversial questions submitted to them However, it may also describe a formal recording of the opinion of a group upon any subject The term "popular vote" signifies a broad, as opposed to a restricted, suffrage, it may also mean an expression of the public will by the electorate, as opposed to votes by legislative bodies or electoral colleges Preferential voting prevents election by bare plurality by allowing the elector to indicate both first and second choices on the primary ballot of his party Compulsory voting is based on the doctrine that voting is a duty of citizenship, nonperformance of which is punishable by the state Voting, on the other hand, may be a privilege confined to certain classes, if the suffrage is restricted Voting formerly was in the form of a poll Chieftains, after laying proposals before their adherents, called for assent or dissent The people then recorded their approval or disapproval by means of shouts or visible signs. Later, when intimidation and corruption defeated the purpose of this form of voting, the BALLOT came into use Then, as now, the vote of the majority determined the policy to be pursued, and the two forms of voting, viva voce or by ballot, still prevail Those entitled to vote must personally exercise the right, for it cannot be transferred, except in the case of certain business corporations, where proxies are used. Provision may be made for voting by mail when it is impossible for the voter to present himself at the polling place, as in the case of a soldier on active duty. Voting usually exhibits popular interest in debated topics and thus is a register of public opinion if the suffrage is not greatly restricted. Voting is influenced not only by political differences, but also by religious, racial, and economic dissimilarities. Rural and urban voting frequently reveal antagonistic group divisions, and other forms of sectionalism are likewise disclosed See also ELECTION.

voting machine, instrument for recording and counting votes, authorized in New York state in 1892, and now extensively used in various states The voting machine used in New York city consists of a form of switchboard surrounded by a curtain As the voter enters the booth and closes the curtain behind him, the machine unlocks for voting The titles of all elective offices are listed in the first horizontal column on the face of the machine, and succeeding columns list the party candidates for each office Above each name is a lever, by pulling it down the voter indicates his desire to vote for that candidate, the machine being so arranged that he cannot push down more than one lever for each office, unless two or more persons are to be elected to that position If a proposition is to be voted upon, it is placed at the top of the ballot, and levers marked "yes" and "no" are used to record the vote Votes may be cast for persons not nominated by writing in their names in a space provided on a paper roll The voter may change his vote as many times as he wishes while the curtain remains closed, but when he opens the curtain to leave, he automatically registers the vote and clears the face of the machine The machine can be modified for different types of ballot In urging the adoption of the voting machine, its advocates have stressed not only its accuracy and secrecy, but also the speed and economy with which the vote can be tabulated It is also maintained that its use prevents fraud Opponents criticize the voting machine on the ground that it does not afford the voter a record of his vote, that errors cannot be detected or corrected, that the machine itself is expensive, that delays due to mechanical defects are numerous, and that its use does not eliminate corruption, since the machine can be tampered with

Votkinsk (vôt'kĭnsk), city (1932 estimated pop 38,900), E Udmurt ASSR, RSFSR, in the western foothills of the central Urals It is an industrial center with ironworks and steel mills and locomotive, airplane, and machinery plants Founded in 1759 as Votkinski Zavod, it was destroyed by the rebels under Pugachev in 1774 Tchaikovsky was born here

Votyak, RSFSR see UDMURT AUTONOMOUS SOVIET SOCIALIST REPUBLIC

Vouet, Simon (sēmôN' vwā'), 1590–1649, French portrait and decorative painter He early went to Rome, where he established himself as a successful portrait painter Recalled to France in 1627 as court painter to Louis XIII, he decorated several of the royal palaces He also painted decorations for Richelieu and other grandees of the period He established a flourishing art school, and many of his pupils became noted artists Several of his paintings are in the Louvre

Vouillé (vwēyā'), village, W France, NW of Poitiers Here in 507 the Franks under Clovis I routed Alaric II, king of the Visigoths

Vouvray (vōovrā'), town (pop 1,567), Indre-et-Loire dept, N central France, on the Loire near Tours It is famous for its sparkling white and rosé wines Near by are caves used as dwellings

Vrchlicky, Jaroslav, Czech *Vrchlický* (vŭr'khlĭtskē), pseud of **Emil Bohuslav Frida** (ĕ'mĭl bō'hōslaf frē'da), 1853–1912, Czech poet, playwright, and translator By his translations from foreign literatures, 98 volumes in all, he made available in Czech for the first time the world classics Through his original writings, in every literary form, he fixed the Czech literary idiom on a new plane of excellence Two of his plays, *At the Chasm* and *The Vengeance of Catullus*, have been translated into English See Paul Selver, *A Century of Czech and Slovak Poetry* (1946)

Vries, Adriaen de (ä'drēən dŭ vrēs'), c 1560–c 1626, Dutch sculptor. Having studied in Florence under Giovanni da Bologna, he carried into Bohemia and Germany the influence of the Italian Renaissance In Prague he worked under the patronage of Emperor Rudolf II, busts and reliefs of whom are now in Vienna His finest works, done in Augsburg, are the *Mercury and Hercules and the Hydra* fountains Among his bronzes are *Mercury and Psyche* (Louvre) and *Triton* (Metropolitan Mus)

Vries, David Pietersen de (dä'vēt pē'tursun dŭ vrēs'), b 1593, Dutch merchant skipper and colonizer. An experienced skipper, De Vries, in partnership with directors of the Dutch West India Company, founded (1631) a settlement (Swaendael) on Delaware Bay, later destroyed by the Indians After trading trips to America (1634–36), he established patroonships on Staten Island (1639) and at Tappan (1640) When both colonies were ravaged by the Indians, he returned to Holland and wrote his *Korte Historiael* (1655), a valuable source for the history of New Netherland Portions of his book are translated in *Narratives of New Netherland* (ed by J F Jameson 1909)

Vries, Hugo de (hü'gō dŭ vrēs'), 1848–1935, Dutch botanist. He opened a new approach to the study of evolution by using the experimental method to investigate the processes of evolution. His study of discontinuous variations, especially in the EVENING

PRIMROSE, led to his rediscovery (reported in 1900) of Mendel's laws of heredity and to the development of the theory of MUTATION, which he expounded in *The Mutation Theory* (1901–3, Eng tr 1909–10) and in *Plant-Breeding* (1907) He maintained that species remain unchanged between mutations and that each quality subject to change is represented by a single physical unit (called a pangen) He was a professor (1881 1918) at the Univ, of Amsterdam and he established an experimental garden at Hilversum

Vries Island see O-SHIMA

Vrsac, Serbo-Croatian *Vršac* (vŭr'shats), Ger *Werschetz* (vĕr'shĭts), Hung *Versec* (vĕr'shĕch), city (pop. 24,571), N Serbia, Yugoslavia, in the fertile Vojvodina. It is an agricultural market, and it long was a cultural center of the Germans of S Hungary

Vuelta Abajo (vwĕl"tȧ ȧbē'hō) or **Vueltabajo** (vwĕl"tȧbā'hō), district, c 90 mi long and c 10 mi wide, W Cuba, along the southern piedmont of the Organos Mts Famous for the fine quality of its tobacco -some of the world's best—Vuelta Abajo supplies about one half of the total Cuban crop

Vulcan (vŭl'kun), the Roman fire-god, identified with the Greek HEPHAESTUS

vulcanization (vŭl"kunuzā'shun), treatment of rubber to give it certain qualities, e g , strength, elasticity, and resistance to solvents, and to render it unaffected by moderate heat and cold Vulcanization is accomplished usually by a process invented by Charles GOODYEAR in 1839, involving combination with sulphur and heating A method of cold vulcanization (treating rubber with a bath or vapors of a sulphur compound) was developed by Alexander Parkes in 1846 Rubber for almost all ordinary purposes is vulcanized, exceptions are rubber cement, crepe-rubber soles, and adhesive tape Hard rubber is vulcanized rubber in which 30 to 50 percent of sulphur has been mixed before heating, soft rubber contains usually less than 5 percent of sulphur After the sulphur and rubber (and usually an organic accelerator, e g , an aniline compound, to shorten the time or lower the heat necessary for vulcanization) are mixed, the compound is usually placed in molds and subjected to heat and pressure The heat may be applied directly by steam, by steam-heated molds, by hot air, or by hot water The finished product is not sticky like raw rubber, does not harden with cold or soften much except with great heat, is elastic, springing back into shape when deformed instead of remaining deformed as unvulcanized rubber does, is highly resistant to abrasion and to gasoline and most chemicals, and is a good insulator against electricity and heat Many synthetic rubbers undergo processes of vulcanization, some of which are similar to that applied to natural rubber The invention of vulcanization made possible the wide use of rubber and aided the development of such industries as the automobile industry

Vulcano see LIPARI ISLANDS

Vulgate (vŭl'gāt) [Latin *Vulgata editio*=common edition], most ancient extant version of the whole BIBLE. It is the official, Latin version of the Roman Catholic Church It was done by St JEROME at the instance of Pope St DAMASUS I, his protector, and was intended to replace the Old Latin version (the Itala), which had been done from the Greek The Old Testament is a careful translation of the Hebrew Masoretic text, for this purpose Jerome sought the aid of several Jewish rabbis The Psalms had a special history, Jerome made three versions the Roman Psalter, a mild revision of the Old Latin translation of the Septuagint, the Gallican Psalter, a revision of the Old Latin to make it more parallel to the Hebrew Masoretic text, the Hebrew Psalter, a new translation of the Hebrew Masoretic text Texts of the Vulgate now contain the Gallican Psalter As to the deuterocanonical books of the Old Testament, Jerome made hasty translations of Tobias, Judith, and the additions to Daniel, the rest he did not touch, hence the Vulgate includes Old Latin versions of them The New Testament was undertaken by Jerome first, he revised the Old Latin Gospels carefully, leaving the text as it stood unless it was actually incorrect, the Gospels were translated in 382–83 The rest of the New Testament shows many less changes from the Old Latin From the 5th cent the Vulgate was popular in the West, by the early Middle Ages it was used everywhere by the Roman Catholic Church, and all the early vernacular translations were from the Vulgate The texts naturally varied considerably In 1546 the Council of Trent made the Vulgate the official version of the Church, and in 1592 the official text with no variants was promulgated by Clement VIII All subsequent editions of the Vulgate published with the Church's imprimatur represent this Clementine edition In the 20th cent the Benedictines, deputed by the Holy See (1933), began a thorough revision of the Vulgate from all good ancient manuscripts

Vulpius, Christian August (krĭs'tyan ou'gōost vōōl'pyōōs), 1762–1827, German novelist and dramatist He wrote several novels of the picaresque type, among them *Rinaldo Rinaldini* (1797, Eng tr , *The History of Rinaldo Rinaldini*, 1800) His sister **Christiane Vulpius,** 1765–1816, lived with Goethe for many years and was married to him in 1806

vulture (vŭl'chur), bird of prey of the temperate and tropical regions which feeds largely on carrion The Old World vultures are similar to hawks The American vultures are of another family which includes the condor, the turkey vulture or turkey buzzard, and the black vulture or black buzzard They are large birds, graceful in flight but ungainly on the ground The turkey vulture of the S United States is about 30 in long with dark plumage and a red, unfeathered head and neck Its keen vision enables it to sight food on the ground as it circles above the earth, rarely moving its wings in its soaring flight It is highly valued as a scavenger, as is the smaller black vulture of the S United States and South America

Vyatka, RSFSR see KIROV

Vyatka (vyät'kŭ), river, 775 mi. long, E European RSFSR It rises in the foothills of the central Urals and flows NW past Kirov, then SE into the Kama river It is important for logging

Vyazma (vyäz'mŭ), city (pop 20,814), W European RSFSR, on the Vyazma river (a tributary of the Dnieper), between Smolensk and Moscow It is a rail junction and has flax mills, oil presses, and various manufactures Dating from the 11th cent and chartered c 1300, it passed to Lithuania, but was reconquered by Moscow in 1514 In the Second World War it was the center of heavy fighting and was held (1941–44) by the Germans

Vyborg (vē'bôrg, Rus vĭ'bŭrk), Finnish *Viipuri* (vē'pōō-rē), Swed *Viborg* (vē'bôr'y), city (1944 pop 56,687), NW European RSFSR, NW of Leningrad and near the Finnish border, a Baltic port on the Vyborg Bay and the Gulf of Finland An export center for lumber and an industrial city, it produces machinery and furniture The Saimaa Canal connects it with Lake Saimaa Vyborg developed around a Swedish castle built in 1293 on a small rocky island, it became a Hanseatic port and was chartered in 1403 Occupied (1710) by Peter I in the Northern War, it was ceded by Sweden to Russia in 1721 It was incorporated with Finland (then under Russian sovereignty) in 1812 and flourished as a commercial center When Finland became independent it retained Vyborg until 1940, when the city was ceded to the USSR after the Finnish-Russian War of 1939–40, it had been damaged by bombing Recaptured (1941) by Finnish forces and again (1944) by the Russians, Vyborg was awarded to the USSR in 1947 It has retained its 17th-century town hall (now a museum) and several towers of its 16th-century fortifications

Vychegda (vĭ'chĕgdȧ), river, c 700 mi long, rising in the western outhers of the Urals, N European RSFSR It flows generally W past Syktyvkar through a forested and sparsely populated region into the Northern Dvina It is navigable from May to November In the 16th cent the Vychegda was an important water route to Siberia

Vyg (vig), Finnish *Uikujärvi* (ōō'ĕkōōy-är"vē), Rus *Vygozero* (vĭgō'zyĭrŭ), lake, area c 300 sq mi , E central Karelo-Finnish SSR, between Lake Onega and the White Sea It is crossed by the Baltic-White Sea Canal and drains into the White Sea through the Vyg river

Vyshinsky, Andrei Yanuarievich: see VISHINSKY

Vysokaya (vĭsō'kȧyȧ), mountain, c 1,300 ft high, RSFSR, central Urals, WNW of Nizhni Tagil. It has magnesite deposits, mined since 1721.

Vytautas see WITOWT

Vytegra (vĭtyĭgrŭ), river, 45 mi long, NW European RSFSR It flows into Lake Onega and forms part of the MARIINSK SYSTEM of inland waterways The city of Vytegra (pop 5,090) is situated near the mouth of the river at Lake Onega

W

W, 23d letter of the ALPHABET, in form a doubled u or v It is the usual symbol of a voiced bilabial semivowel, as in *wing* The same semivowel occurs as second member of the diphthongs au (as in *house*), ō, and ōō In *twice* the w represents a voiceless semivowel, which is heard also in some dialects which distinguish between *where* and *wear* In chemistry W is used as the symbol of the element WOLFRAM

Waadt, Switzerland see VAUD

Waag, Czechoslovakia see VAH

Waal (väl), main arm of the RHINE river, central Netherlands It branches off the Rhine near the German border and flows W past Nijmegen to join the Meuse (Maas) near Gorinchem The joined rivers form the upper MEUSE

Waals, Johannes Diderik van der (yōhn'nus dē'durĭk vän dur välz'), 1837–1923, Dutch physicist He studied the relationship between the thermodynamic theory of capillarity, the kinetic theory of gases, and the continuity of the gaseous and liquid states of matter for which he evolved an equation In his theory of corresponding states (1880) he used this equation to express the equilibrium of states of matter for homogeneous substances when pressure, volume and temperature are stated in terms of the critical constants for each substance For this work he received the 1910 Nobel Prize in Physics. He was professor (1877–1907) at the Univ of Amsterdam

Wabash (wŏ'bäsh"), city (pop. 9,653), co seat of Wabash co , NE Ind , on the Wabash and WSW of Fort Wayne; settled 1835 It is a trading center for an agricultural area, and it manufactures asbestos and metal products

Wabash, river, c 550 mi long, largest northern tributary of the Ohio river, rising in Mercer co , Ohio, near the Ind. border and flowing generally SW across Indiana. Below Terre Haute it becomes the boundary between Indiana and Illinois and empties into the Ohio c 10 mi above Shawneetown, Ill Chief of its many tributaries are the Tippecanoe and White rivers The principal cities on the Wabash are Huntington, Wabash, Peru, Logansport, Delphi, Lafayette, Covington, Terre Haute, and Vincennes, Ind , and Mt Carmel, Ill See W E Wilson, *The Wabash* (1940)

Wabasha (wä'bushō), city (pop 2,368), co seat of Wabasha co , SE Minn , on the Mississippi at the foot of Lake Pepin, platted 1843, inc 1858 An early fur-trading post was here, Wabasha is now a farm trade, milling, and shipping center

Wabash College. see CRAWFORDSVILLE, Ind.

WAC (Women's Army Corps), created (1942) in the Second World War to enlist women for noncombatant duty in the army Before 1943 it was named the WAAC (Women's Auxiliary Army Corps) The director was Oveta Culp Hobby, who became colonel in 1943 She was succeeded (1945) by Westray Battle Boyce In the Second World War, Wacs served as medical technicians, cartographers, clerks, secretaries, and the like in all theaters of war and in the United States Almost 100,000 had joined the corps by 1945, when enlistment ended Rapid demobilization followed, and in 1946 the War Dept asked for reenlistments to meet shortages in army hospitals and personnel centers In 1948 a bill was passed in Congress establishing the Women's Auxiliary Corps within the regular army, and by 1949 there were over 3,700 women in the U S army

Wace (wäs, wās), c 1100-1174, Norman-French poet of Jersey, a canon of Bayeux, friend of the royal family of England His long rhymed chronicle of British history, *Roman de Brut*, was based on the history of GEOFFREY OF MONMOUTH and dedicated to ELEANOR OF AQUITAINE An English adaptation of this was the *Brut* of LAYAMON, which was in turn an important development of the ARTHURIAN LEGEND Wace's *Roman de Rou* is another narrative poem, on the dukes of Normandy from the first (Rollo) to Robert II, son of the Conqueror It contains a famous description of the battle of Hastings See J A Philpot, *Maistre Wace* (1925)

Wachusett Reservoir (wŏchōō'sĭt), central Mass , NNE of Worcester near Clinton, built 1897–1905 It receives some of its water from QUABBIN RESERVOIR and supplies the Boston area. Wachusett Dam is 114 ft high

Waco (wā'kō), city (1940 pop 55,982, 1947 estimated pop 75,000), co seat of McLennan co , E central Texas, on the Brazos just below the mouth of the Bosque, inc 1856 The Hueco or Waco Indians once had villages about the springs, and the site had attracted white men years before the city was laid out in 1849 Rich blackland supported cotton plantations before the Civil War, and the city was growing to wealth from cotton and cattle before the suspension bridge (still shown to sightseers) was built in 1870 and the railroad arrived in 1881 Today it is a trading and shipping center with an airport and fine highways and has processing plants and factories that make automobile tires, cloth and clothing, glass and bottles, drugs, and sundry other products Broad, shady streets, parkways, huge Cameron Park in a residential area of the city, and artificial Lake Waco (created 1923) on the Bosque near by give an air of ease and opulence Most of BAYLOR UNIVERSITY is here, and the small Paul Quinn College was opened in 1881 for the many Negroes in the region There is a U S veterans' hospital

Waconia (wukō'nyȧ), city (pop 1,315), E Minn., SW of Minneapolis, in a farm area, inc 1921

Wadai (wadī'), former sultanate, NE French Equatorial Africa, E of Lake Chad Founded in the 17th cent , Wadai in the 18th cent. defeated Bornu

and became the strongest power in the central Sudan Wadai was conquered by France in the late 19th cent

Waddell, James Iredell (wŏdĕl'), 1824–86, American naval officer, b Pittsboro, N C He was appointed a midshipman in the U.S navy in 1842 On return from duty in the Orient in 1862 he resigned his commission as lieutenant and in March took the same rank in the Confederate navy From 1864 until after the war had ended he commanded the *Shenandoah*, one of the outstanding CONFEDERATE CRUISERS Waddell was later master of a passenger ship between San Francisco and Yokohama

Waddington, William Henry, 1826–94, French statesman and archaeologist, of English descent He was minister of education (1873, 1876–77) and was appointed foreign minister in 1877 Representing France at the Congress of Berlin (1878), he secured English consent to French action in Tunis in return for French acquiescence in the transfer of Cyprus to England In 1879 Waddington headed a cabinet but was soon replaced by Freycinet, he served as ambassador to Great Britain from 1888 to 1893 He wrote several works on archaeology

Waddington, village (pop. 671), N N Y , a port of entry on the St Lawrence opposite Morrisburg, Ont.

Waddington, Mount, 13,260 ft high, SW British Columbia, in the Coast Range It was first climbed in 1936, after many previous unsuccessful attempts

Wade, Benjamin Franklin, 1800 1878, U S Senator from Ohio (1851–69), b near Springfield, Mass In 1821 he moved to Ohio and, after several years spent in a variety of occupations, studied law and was admitted (1827) to the bar Wade became the law partner and political protégé of Joshua GIDDINGS and was successively prosecuting attorney of Ashtabula co , state senator, and presiding judge of the third judicial district before going to Washington As uncompromising an abolitionist as his benefactor, he denounced the fugitive slave laws, the Kansas-Nebraska Bill, and other proslavery measures, often with witty retorts A man of great personal courage, he was generally respected, even by those who loathed his principles In the Civil War, Wade and his radical Republican colleagues set up the meddlesome Committee on the Conduct of the War. The Wade-Davis Bill, drawn up with Representative HENRY W DAVIS, was approved (July 8, 1864) by Congress as its plan of RECONSTRUCTION Lincoln, who had already begun a more lenient program, killed it with a pocket veto, issuing a proclamation explaining why he opposed it For this he was vindictively attacked in the Wade-Davis Manifesto (Aug 5, 1864) After the war the congressional plan prevailed over the opposition of President Andrew Johnson As president pro tempore of the Senate, Wade was next in line for the presidency, and his eagerness to see Andrew Johnson convicted on the impeachment charges was ill concealed He was denied renomination in 1868 See biography by A G Riddle (1886), T H Williams, *Lincoln and the Radicals* (1941), B J Hendrick, *Lincoln's War Cabinet* (1946)

Wadena (wŏdē'nu), village (pop 2,916), co seat of Wadena co , W Minn , WNW of Brainerd, in a lake region, settled 1871, inc 1881 It is a farm trade center The Finnish community New York Mills is near by

Wadesboro, town (pop 3,587), co seat of Anson co , S N C , near the S C. line ESE of Charlotte, settled c 1785 It has lumber and textile mills.

Wadham College. see OXFORD UNIVERSITY.

Wadi Halfa (wä'dē hăl'fu), town, N Anglo-Egyptian Sudan, on the Nile It is the terminus of a railroad from Khartoum Here goods, chiefly cotton, wheat, and livestock, are transferred to steamers going down the Nile into Egypt Ancient ruins are near

Wadley, town (pop 1,13.3), E central Ga , E of Macon near the Ogeechee river, in the coastal plain

Wad Medani (wäd' mĭdä'nē, mē'dunē), city (pop 56,000), E central Anglo-Egyptian Sudan, on the Blue Nile It is connected by rail with Khartoum Cotton, wheat, barley, and livestock are exported

Wadsworth, industrial village (pop 6,495), N Ohio, SW of Akron; settled 1816, inc 1866 Valves, matches, rubber, iron and steel products, and chemicals are made here.

Waelder (wāl'dur), city (pop 1,018), S central Texas, ENE of San Antonio, in a farm area

Wafd (wŏft), in modern Egyptian history, a political party. It arose out of the delegation [Arabic *wafd* =delegation] headed by ZAGHLUL PASHA which was to have visited Great Britain in 1918 to urge Egypt's independence Zaghlul formed the party in 1919. In addition to espousing independence, the Wafdists called for extensive social and economic reforms. In the first parliament elected (1924) under the constitution of 1923, the Wafd won a majority. KING FUAD I, who bitterly opposed the party, dissolved parliament and would not call a new election until 1926. Again the Wafd won, and in 1927 its new leader, NAHAS PASHA, became prime minister In 1928 the government introduced a measure forbidding the king to rule without parliament. Fuad, asserting that this would give the Wafd absolute control of the country, refused his assent and suspended the constitution Nevertheless, in 1930 the Wafd was again victorious Fuad soon dismissed the new cabinet and appointed a conservative prime minister, who made the party illegal. When the constitution of 1923 was restored in 1935, the Wafd returned to power and formed the cabinet in 1936–37 Relations with the new king, Farouk I, were scarcely more cordial than those with his father In the Second World War the party, which was anti-Axis, was installed in office from 1942 to 1944 at the insistence of Great Britain, which feared pro-Axis elements In the elections of 1950 the Wafd triumphed again, and Nahas Pasha returned as prime minister The Wafd has been accused by its opponents of being a party committed less to principles than to personalities At certain times it has been suspected of implication in assassinations Two of the other important parties, the Saadist and the Kutla, are offshoots of the Wafd

Wagadugu. see OUAGADOUGOU.

wages, payment received by the employee for work done This amount may be in goods or services, but is customarily in money The term in a broad sense refers to what is received in any way for labor Thus the farmer receives wages as part of the price of his product or in the product if he uses it himself The term *salary* is usually distinguished from wages as implying a more fixed and permanent form of income (e g , payment by the month rather than by the hour) Wages reckoned in money are called nominal wages, as distinguished from real wages, i e , the amount of goods and services that the money will buy Real wages depend on the price level, as well as on the nominal or money wages To explain the nature of wages many theories have been advanced The first of these was the subsistence theory of wages, of which Ricardo was one of the main exponents This theory finds an inverse relationship between the working population and the wage rate, a rise in the former bringing a fall in the latter and vice versa Working upon the premise that labor is a commodity, the theory further held that labor has two values—a natural price, which is the cost of subsistence, and a market price, which is determined by the laws of supply and demand If the natural price exceeds the market price, the workingman's purchasing power is low, if on the other hand, the market price is the greater, then the standard of living of the laborer rises The wage-fund theory is that wages are advanced out of a fixed fund of capital, from which an excess withdrawal, either through legislation or through union pressure, will ultimately reduce the amount available for other workers Any increase in wages would also have to be taken out of profits, and their reduction would cause a decline in savings, which provides the capital from which the wage fund is derived The marginal-productivity theory maintains that wages tend to be fixed at that point which represents the employer's estimate of labor's contribution to the marginal or last unit employed This relationship will be determined by the cost of the marginal units of land (rent) and capital (interest) In the surplus-value theory as propounded by Karl Marx, the value produced by the worker in excess of what is paid to him in wages by the employer is called surplus value The bargaining theory further modifies the marginal-productivity theory by taking into consideration other factors (e g , laws and social and political changes) which might affect the determination of wage levels and by acknowledging that certain basic assumptions (the equal bargaining power of the employer and the employee, the free competition between the two, the mobility of labor) which characterize the marginal-productivity theory do not hold in our present economic system. See MINIMUM WAGE See J R Hicks, *The Theory of Wages* (1932), P. H Douglas, *The Theory of Wages* (1934)

Wages and Hours Act, passed (1938) by the U.S Congress, intended to establish minimum living standards for workers engaged directly or indirectly in interstate commerce and to abolish oppressive child labor It is also called the Fair Labor Standards Act. The law provided an initial minimum wage of 25 cents an hour and a maximum work week of 44 hr , set up a seven-year schedule under which minimum wages were gradually lifted to 40 cents an hour and the work week was reduced to 40 hr , and created a Wage and Hour Division in the Dept. of Labor, headed by an administrator. He was enabled to hasten the legal schedule for raising minimum standards in an industry if a committee representing the public as well as employers and labor in that industry recommended the change. Classes of workers exempt from the act included agricultural and seasonal laborers, handlers of perishable foods, and workers in certain industries covered by collective bargaining. A Supreme Court decision (1941) upheld the law Amendments have made overtime calculation more flexible and set up special provisions for Puerto Rico and the Virgin Islands. Since 1942 the Wages and Hours Act has been administered jointly with the Walsh-Healy Public Contracts Act, which requires minimum working standards on government contracts in excess of $10,000. During the war the work of the Wage and Hour Division was coordinated with the National War Labor Board stabilization policies, which permitted raises to eliminate substandard pay. In Jan , 1950, an amendment to the Wages and Hours Act went into effect to meet the rising costs of living. The minimum wage was increased to 75 cents per hour, and the administrator's authority to protect this basic rate was augmented. Regular-time work was redefined, and provisions were amended for time-and-one-half payments for overtime hours worked in excess of the 40-hour week by employees earning less than $75 per week New categories of employees (e g , switchboard operators and those engaged in the fish-canning industry) were included, while other groups of workers (e g , workers connected with forestry and irrigation) were exempted

Wagga Wagga (wŏ'gu wŏ'gŭ), municipality (pop 15,351), New South Wales, Australia, on the Murrumbidgee and W of Canberra It is an agricultural and dairying center of the Riverina dist There is a Roman Catholic cathedral

Wagner, Adolf Heinrich Gotthilf (ä'dôlf hĭn'rĭkh gôt'hĭlf vä̆g'nur), 1835–1917, German economist and socialist, studied at Göttingen and Heidelberg He taught economics at several universities before he became professor of economics at the Univ of Berlin, a post he held for many years He was an authority on banking and public finance and was a member of the Christian Socialist party. He promulgated a theory, known as Wagner's law, that governments increasingly assumed responsibility for the economic welfare of their peoples

Wagner, Charles (vä̆gnur, Fr shärl' vägnĕr'), 1852–1918, writer of moral essays, a French Protestant clergyman One book, *La Vie simple* (1895), translated into English as *The Simple Life* (1901), was very popular in the United States

Wagner, Honus (vä̆g'nur), 1874–, American baseball player, whose original name was John Peter Wagner, b Mansfield (now Carnegie), Pa He played semi-professional ball in Ohio and was given a contract (1896) by the Paterson, N J , club before entering (1897) major-league play with the Louisville (Ky) club of the National League He played infield and outfield positions, and when Pittsburgh replaced (1900) Louisville in the National League, Hans (a nickname also much used) soon anchored himself at shortstop with the Pirates Wagner, called the Flying Dutchman by his fans, came to be regarded as one of the outstanding players of baseball He led the National League in batting eight times (1900, 1903–4, 1906 9, 1911), had a lifetime batting average of 329 (batting over 300 in 17 consecutive years), made 3,430 base hits, scored close to 1,800 runs, and played in 2,785 games Wagner, squat and massively built, excelled at fielding, he also five times led the National League in stolen bases In 1917 he retired from baseball, but returned (1933) to the Pirates as coach In 1936 he was elected to the National Baseball Hall of Fame

Wagner, Otto (ô'tō vä̆g'nur), 1841 1918, Austrian architect A structural rationalism was exhibited in his stations for the Vienna city railroad, built in the 1890s His later works, showing an individual and monumental style, include the Vienna Postal Savings Building and the Steinhof Church (1906) His many executed designs and his projects were widely influential both in Austria and abroad He became a professor at the Imperial Academy of Art in 1894

Wagner, Richard (vä̆g'nur, Ger rĭkh'ärt vä̆g'nur), 1813–83, German composer of operas, b Leipzig Wagner substituted for the principle of sharply differentiated RECITATIVE and aria his "endless melody" and his *Sprechgesang*, calling his operas music dramas to signify the complete union of music and drama which he sought to achieve He felt, rightly, that music could not develop further with the resources it had employed since Beethoven's time, his prediction that the music of the future must be part of a synthesis of the arts was less prophetic, especially since his own music seems to stand out above the other elements of his works. His ideas, however, did enormously affect the work of opera composers who came after him, and his very detractors, such as Brahms, showed by their outraged opposition to his principles the powerful influence Wagner exerted. Having attended the Kreuzschule in Dresden since 1822, Wagner returned in 1827 to Leipzig, studied at the Gymnasium and the university, and took some lessons in harmony—his only formal musical training In Leipzig he studied the works of Beethoven and wrote some rather unoriginal instrumental music In 1833 he assumed the first of a series of theatrical positions which he held—that of chorus master of the theater at Würzburg *Die Feen* (1833), his first opera, was in the German romantic tradition represented by Weber, *Das Liebesverbot* (1835) showed his assimilation of the Italian style In 1839 he went to Paris, via London and Boulogne. In Paris he completed *Rienzi* (1840), but was unable to get it performed there despite letters of introduction from Meyerbeer, whom he had met in Boulogne Its production in Dresden in 1842 was highly successful, and in 1843 Wagner was made musical di-

rector of the theater there. *Der fliegende Holländer* (Dresden, 1843) was less successful. It was based on Heine's version of the legend of the FLYING DUTCHMAN, and it foreshadows the idea, developed in *Tannhäuser* (1843–45) and prevalent in later works, of redemption by love. *Tannhäuser*, based only slightly on the actual life of TANNHÄUSER, and *Lohengrin* (1846–48) bring the German romantic opera to culmination. In *Lohengrin* Wagner for the first time is more interested in his characters as symbols than as actual personages in a drama. Because of his connection with the Revolution of 1848, Wagner fled Dresden in 1849 and with the help of Liszt escaped to Switzerland. There he wrote essays, including *Oper und Drama* (1851), which is perhaps the most thorough and penetrating study of its subject existing. *Der Ring des Nibelungen*, his tetralogy based on the NIBELUNGENLIED, embodies the most complete adherence to the principles outlined in *Oper und Drama*. The poem, begun in 1848, was completed in 1852 in Switzerland. In 1857, having completed the composition of *Das Rheingold* (1853–54), *Die Walküre* (1854–56), and two acts of *Siegfried*, he laid the *Ring* aside without hope of ever seeing it performed, and composed *Tristan und Isolde* (1857–59) and *Die Meistersinger von Nurnberg* (1862–67). *Tristan*, based on the legend of TRISTRAM AND ISOLDE, was so far beyond the operatic conventions of the day that after many rehearsals in Vienna (1862–63) it was given up as impossible. Louis II of Bavaria, however, provided the resources which made possible the first performance, in 1865 in Munich, where *Die Meistersinger*, his only comic opera and the easiest of comprehension for the uninitiated, was completed and in 1868 performed. In 1872, having completed *Siegfried* the previous year, Wagner moved to Bayreuth, there in 1874 he finished *Die Götterdämmerung*. There too he was able to build a theater, Das Festspielhaus, adequate for the proper performance of his works, in which the *Ring* was given complete in 1876. *Parsifal* (1877–82), his last work, is a religious festival play employing the Christian symbolism of the Eucharist, it is a highly complex work but contains some of Wagner's finest music, particularly in the choruses. It was the public rather than other musicians and critics who first acclaimed Wagner, and though opposition to him in his lifetime went to fantastic lengths, his operas held a position of complete dominance in the next generation, retaining their popularity in the 20th cent. See his *Mein Leben* (Eng tr., *My Life*, 1911), Ernest Newman, *Life of Richard Wagner* (4 vols., 1933–46) and *The Wagner Operas* (1949). Wagner's second wife, **Cosima Wagner** (kō'zēmä) 1837–1930, was the daughter of Liszt and the comtesse d'Agoult. From 1857 to 1869 she was the wife of Hans von Bulow. In 1870 she was married to Wagner and identified herself so closely with his work that after his death she was largely responsible for the continuing fame of the Bayreuth Festivals. See biography by R. M. F. Du Moulin-Eckart (Eng. tr., 1930). H. H. Richardson, *The Young Cosima* (1939). Their son, **Siegfried Wagner** (zēk'frēt), 1869–1930, composed several operas but was known chiefly as a conductor. In 1923 he visited the United States.

Wagner, Robert Ferdinand (wäg'nur), 1877–1949, American legislator, b. Germany, grad. College of the City of New York, 1898, and New York Law School, 1900. He arrived with his family in America in 1885 and grew up in poor surroundings in New York city. After he received his law degree, he became attached to Tammany Hall and was elected (1904) to the New York assembly. In the state senate (1910–18), Robert F. Wagner was noted for his investigations of factory conditions, as justice (1919–26) of the state supreme court, he did much to protect the rights of labor. He served (1927–49) in the U. S. Senate where he was one of the chief leaders in directing New Deal legislation, particularly the acts establishing the NATIONAL RECOVERY ADMINISTRATION (1933), the NATIONAL LABOR RELATIONS BOARD (1935), and SOCIAL SECURITY. In the 1940s he sponsored bills calling for the extension of Federal housing. He resigned from the Senate in 1949 because of ill-health.

Wagner (wäg'nûr), city (pop. 1,319), SE S. Dak., NW of Yankton. It is the trade center for a farm area and for Indians from the near-by Yankton Reservation.

Wagner-Jauregg, Julius (yōō'lyōōs väg'nur-you'rĕk), 1857–1940, Austrian neurologist. He was professor at the Univ. of Vienna from 1893 to 1928. A pioneer in fever therapy, he introduced the treatment of paresis by inoculation with the organisms causing malaria, for this work he received the 1927 Nobel Prize in Physiology and Medicine.

wagon: see CARRIAGE.

Wagoner (wă'gŭnûr), city (pop. 3,535), co. seat of Wagoner co., E. Okla., SE of Tulsa, in an agricultural area; founded c. 1887. A museum with Indian and Civil War relics is here, ancient Indian mounds are near by.

wagon train. In the history of American development, wagons replaced PACK TRAINS in the conveyance of freight as soon as proper roads could be built, and they remained predominant in land commerce until the railroad age. The first frontier region in which wagoning was highly developed was across the Allegheny barrier in the late 18th cent. There were but a few popular routes through the mountains, and in the days of the westward movement these were alive with emigrant wagons and the wagon trains of professional wagoners carrying goods between the Ohio settlements and the cities of the coast. This was the birthplace of the CONESTOGA WAGON, the most efficient freight carrier of the age. On the prairies of the Middle West and on the Great Plains wagons could be used immediately without the labor of making roads, and there the covered wagon, or PRAIRIE SCHOONER, of the emigrant came into its own. It was in crossing the Great Plains that the typical emigrant wagon train was developed, because the vast distances through unsettled country and the danger from Indians made it necessary to travel in large parties. Such a train was organized with an almost military discipline for defense. A contract or constitutional paper was drawn up, setting forth the objects of the emigration, the terms of joining, the rules to be followed, and the officers to be elected. All joining signed this paper and then participated in the election of officers. Sometimes both a military captain and a president with civil powers were chosen. More often the offices were combined in one individual. Aides or lieutenants were elected, and a guide was usually hired for the more difficult parts of the route. The order of wagons both on the trail and in camp was strictly regulated. At night the wagons were drawn into a circular corral, and a strict guard was kept to prevent a surprise attack by hostile Indians. Freighters who supplied the early army posts and mining camps also usually traveled in parties for the same reason as emigrants. See OVERLAND TRAIL and OREGON TRAIL. The wagon trains disappeared in the East in the 1840s and '50s, and the Western trails lost importance after the Union Pacific RR was completed in 1869.

Wagram (vä'gram), town (pop. 3,917), Lower Austria, NE of Vienna, in the Marchfeld. Its official name is Deutsch-Wagram. Here on July 5–6, 1809, Napoleon I won one of his most brilliant victories. Despite their heroic conduct and the able leadership of Archduke Charles, the Austrians were forced by the French field artillery to fall back. Napoleon's "grand battery" of 100 guns was the largest concentration of artillery that had until then been used for massed fire. Six days later, Austria was forced to conclude an armistice.

Wahabi (wähä'bē), Arabian reform movement in ISLAM, the religion of the ruling family of Saudi Arabia. It was founded by Mohammed ibn Abd al-Wahab (1703?–1787), who taught that all accretions to Islam after the 3d cent. of the Moslem era—i.e., after c. 950—were spurious and must be expunged. This view, involving essentially a purification of the Sunnite sect, regarded as the chief evils the veneration of saints, ostentation in worship, and luxurious living. Accordingly, Wahabi mosques are simple and without minarets, and the adherents to the cult dress plainly and do not smoke tobacco or hashish. Driven from Medina for his preaching, the founder of the Wahabi sect went into the NE Nejd and converted the Saud tribe. The king, convinced that it was his religious mission to wage holy war (jihad) against all other forms of Islam, began the conquest of his neighbors in c. 1763. By 1811 the Wahabis ruled all Arabia, except Yemen, from their capital at Riad. The Ottoman sultan, nominally suzeran over Arabia, had vainly sent out expeditions to crush them. Only when the sultan called on Mohammed Ali of Egypt for aid did he enjoy success, by 1818 the Wahabis were driven into the desert. In the Nejd they collected their power again and from 1821 to 1833 gained control over the Persian Gulf coast of Arabia. The domain thereafter steadily weakened, Riad was lost in 1884, and in 1889 the Saud family fled for refuge into the neighboring state of Kuwait. The Wahabi movement was to enjoy its third triumph when IBN SAUD advanced from his capture of Riad in 1900 to the reconstitution in 1932 of nearly all his ancestral domain under the name SAUDI ARABIA. The Wahabi movement, though mainly in Arabia, at an early date was also carried to India. There native Moslems under Sayid Ahmed warred against the Sikhs in 1830, even capturing Peshawar for a short time. As late as 1870 bands of Wahabis continued sporadic disorders in India.

Wahiawa (wa'hēäwa'), city (pop. 5,420), on Oahu, T.H., 17 mi. NW of Honolulu, on a plateau in the pineapple district.

Wahlstatt, Silesia: see LIEGNITZ.

Wahoo (wähōō'), city (pop. 2,648), co. seat of Saunders co., E. Nebr., N of Lincoln and W of Omaha, founded 1865. Luther College (junior) is here.

wahoo. see BURNING BUSH.

Wahpeton (wô'pĭtŭn), city (pop. 3,747), co. seat of Richland co., extreme SE N.Dak., on the Red River; inc. 1883. It is a trade center of a dairy area and is the seat of the state school of science (junior college) and of a Federal Indian school.

Waialeale (wī'ä"lāä'lā), peak, 5,080 ft. high, on central Kauai, T.H. It is seamed with deep fissures. Waimea Canyon, 2,000 to 3,000 ft. deep and c. 10 mi. long, resembles the Grand Canyon of the Colorado on a miniature scale. There is an average yearly rainfall of 476 in. on the summit.

Waianae Range (wī'unī'), on SW Oahu, T.H. It contains Mt. Kaala (4,030 ft.), the highest mountain on the island.

Waichow, China: see WAIYEUNG.

Waikato (wī'kä"tō), river rising in Lake Taupo, on North Island, New Zealand, and flowing 220 mi. NW into the Tasman Sea on the west coast. The largest river in New Zealand, it is navigable for 80 mi. by small steamers up to Cambridge, near which is a hydroelectric plant.

Waikiki (wīkēkē'), bathing beach at Honolulu, T.H. Surfboard riding is the major sport at Waikiki. The beach is the site of Fort De Russy. The aquarium of Kapiolani Park is near by.

Wailuku (wīlōō'kōō), city (pop. 7,319), co. seat of Maui co., on the northern coast of W. Maui, T.H. It is the largest town on the island.

Wainewright, Thomas Griffiths (wān'rīt), 1794–1852, English art critic and criminal. Orphaned at an early age, he was raised by his grandfather. He worked in the studio of the painter Thomas Phillips and served in the army for a short time. He contributed essays (1820–23) on the arts to the *London Magazine* under the pseudonyms Egomet Bonmot and Janus Weathercock, exhibited several paintings at the Royal Academy, and wrote *Some Passages in the Life of Egomet Bonmot* (1827). In 1830 his sister-in-law, whose life he had heavily insured, died in great agony. The insurance company refused payment, and in 1831 Wainewright went to France. He returned in 1837 and was arrested on an old forgery charge. At this time he admitted poisoning his sister-in-law, his uncle (whose property he inherited), his mother-in-law, and a friend. Convicted of forgery, he was transported to Van Diemen's Land (Tasmania) for life. His *Essays*, highly commended by William Hazlitt, were collected in 1880. See Thomas Secombe, *Twelve Bad Men* (1894).

Wainwright, Jonathan Mayhew, 1883–, American general, b. Walla Walla, Wash., grad. West Point, 1906. He was in the Philippine Islands when the Japanese attacked Pearl Harbor on Dec. 7, 1941. Wainwright took command of the Philippines after Gen. Douglas MacArthur was ordered to leave and led (March–May, 1942) the gallant but vain fight which ended in the surrender of Bataan and Corregidor. As a prisoner of war, he suffered cruel indignities—vividly described in his autobiography, *General Wainwright's Story* (1946). He was released (1945) from a prison camp in Manchuria. He witnessed (1945) the Japanese surrender in Tokyo Bay, then returned to the United States and was given the Congressional Medal of Honor. He was made a full general in 1945 and in 1949 retired.

Wainwright, town (pop. 1,261), E. Alta., ESE of Edmonton and near the Sask. border. It is a trade center and railroad division point for an area having oil and natural gas, it has oil refineries, grain elevators, and flour mills. Buffalo National Park, near by, was abolished in 1947.

Waite, Morrison Remick (wāt), 1816–88, American jurist, Chief Justice of the U.S. Supreme Court (1874–88), b. Lyme, Conn., grad. Yale, 1837. He became prominent when he represented the United States in prosecuting the ALABAMA CLAIMS. It was Waite's task as Chief Justice to help interpret the amendments to the Constitution which were adopted after the Civil War. His interpretation of the due process clause of the FOURTEENTH AMENDMENT was long influential. Waite maintained that only businesses "clothed with a public interest" might be subject to economic regulation by the states, e.g., a state might set the rates charged by a grain elevator but not the prices of a haberdasher. The Supreme Court essentially adhered to this position until the 1930s. See biography by Bruce R. Trimble (1938).

Waite Park, village (pop. 1,427), central Minn., just W. of St. Cloud.

waits, in England, band of itinerant musicians who celebrate Christmas by the nocturnal open-air singing of carols or other seasonable music, usually in expectation of small gratuities. The waits were originally watchmen, who blew a horn or sang a tune to mark the hours or the change of guard. In the 16th cent. large cities had trained bands of waits, who took part in public ceremonies and festivities. The custom survives, with variations, especially in rural communities.

Waitz, Georg (gā'ôrk vĭts'), 1813–86, German historian. Named professor at Kiel in 1842, he represented Kiel in the Frankfurt Parliament in 1848, where he defended the idea of a unified Germany, including Austria and Prussia, and was professor at Göttingen after 1849. His great knowledge of the literature and sources of history enabled him to direct the *Monumenta Germaniae historica* after 1875 and to prepare with Dahlmann an indispensable *Quellenkunde zur deutschen Geschichte* [sources on German history] (ed. 1869, 1874, 1883, and 9th ed., 1931). Waitz wrote an eight-volume work on the constitutional history of Germany to the middle of the 12th cent. (1844–78).

Waitzen, Hungary· see VAC.

Waiyeung (wī'yŭng'), Mandarin *Hui-yang,* city (pop 35,120), Kwangtung prov, China, 80 mi E of Canton and on the Tung river A commercial center, it was formerly called Waichow

Wakamatfu (wäkä'mätsō̆), **1** City (1947 pop. 59,-024), Fukushima prefecture, N Honshu, Japan Civil war in Honshu ended with the capture (1868) by imperial forces of a castle here **2** City (1947 pop 78,694), Fukuoka prefecture, N Kyushu, Japan, a port on the Hibiki Sea It is the chief coal-loading port of Japan, with exports of steel and sugar and large imports of raw materials for the near-by industrial cities. It was heavily bombed (1945) in the Second World War

Wakarusa (wäkŭrōō'sŭ), town (pop 1,033), Elkhart co, N Ind, NNW of Nappanee

Wakashan (wäkä'shun, wŏ'kŭ-shun", -shŏn"), linguistic family of the Pacific Northwest Coast The languages spoken by the Nootka and the Kwakiutl represent the two subfamilies They were spoken around Vancouver Island See ALGONQUIAN

Wakatsuki, Reijuro, Baron (rā'jĕrō, wäkäts'kē), 1866–1949, Japanese statesman A bureaucrat, he was finance minister (1914–15), and he supported the Peace Preservation Act for "thought control" In 1925 he became leader of the Kenseikai party and later headed its successor, the Minseito As prime minister (1926–27, April Dec, 1931) he pursued a pacific policy toward China, but his hand was forced by the army in Manchuria in Sept 1931, and he resigned soon afterward He was chief delegate to the London Naval Conference in 1930.

Wakayama (wäkä'yämä), city (1947 pop 171,800), capital of Wakayama prefecture, S Honshu, Japan, on the Inland Sea This railroad and manufacturing center is the site of a castle (16th cent) of Hideyoshi The prefecture yields lumber and agricultural products

wake, watch kept over a dead body until burial This practice, found in many different cultures, survives in the English-speaking world In remote areas there are traditional songs and laments Among Roman Catholics prayers are always said for the dead Eating and drinking are features of the wake Wakes are now often interrupted for the night See FUNERAL CUSTOMS

Wakeeney (wŏkē'nē, wŏ'kē"nē), city (pop 1,852), co seat of Trego co, NW Kansas, between the Saline and Smoky Hill rivers, platted 1878, inc 1880 Early settlers marketed fur, fertilizer buffalo bones left on the prairie after the animals had been killed There are wheat fields to the west, and fossils have been found in the area

Wakefield, Edward Gibbon, 1796–1862, British colonial statesman He entered the service of the British envoy to Turin (1814) and later served at Paris, but was convicted of an attempt to marry an heiress by trickery While in prison (1827–30) Wakefield prepared material for a book on prison conditions (pub 1831) and studied colonial affairs, his views on colonization were embodied in several works, including *A Letter from Sydney* (1829), *England and America* (1833), and *A View of the Art of Colonization* (1849) He argued that land should be sold at a nominal price, transportation of criminals should cease, and self-government should be extended, these ideas exerted a powerful influence on colonial affairs and led to the founding of the South Australian Association (1834) and the establishment (1836) of the South Australian colony Wakefield accompanied Lord DURHAM to Canada as an adviser (1838), influenced Durham's report on Canadian government, and was prominent in Canadian affairs for a time In 1839 he founded the New Zealand Land Company, which colonized that territory He went to New Zealand in 1852 and entered into politics there, but suffered a complete breakdown in 1854 See biographies by Richard Garnett (1898) and Irma O'Connor (1929), R C Mills, *The Colonization of Australia* (1915)

Wakefield, county borough (1931 pop 59,122, 1947 estimated pop 58,340) and city, capital of the West Riding of Yorkshire, England, on the Calder and SSE of Leeds It has been a center of the cloth industry from the 14th cent Modern manufactures include woolen goods, chemicals, machine tools, and power presses It is a farm center, with an important cattle market The site was occupied by the Danes and Saxons, there is a 10th-century cross remaining from a Saxon church Richard, duke of York, was defeated and slain in the battle of Wakefield in 1460 The city was taken by Fairfax in 1643. The Towneley Plays (see MIRACLE PLAY) originated in Wakefield Notable buildings are All Saints' Church (15th cent), the chantry chapel on the bridge over the Calder (c 1350), and the grammar school (1591) See J W Walker, *Wakefield Its History and People* (1934)

Wakefield. 1 Shoe-producing town (pop. 16,223), NE Mass, N of Boston, settled 1639, inc 1812 **2** City (pop 3,591), W Upper Peninsula, N Mich, on Sunday Lake E of Bessemer and on the Gogebic iron range, settled 1866, inc as a village 1887, as a city 1919 **3** Town (pop 1,158), E N H, near the Maine line E of Lake Winnipesaukee, settled 1770, inc. 1774 Of its several little villages, Union, a mill settlement, is the oldest.

Wakefield, family estate of George Washington, Westmoreland co, E Va, on the Potomac and E of Fredericksburg. It is incorporated in George Washington Birthplace National Monument (393 68 acres, est 1930). John Washington settled here in 1665 The original house was burned, but on its old foundations a new home, typical of the colonial period, was completed in 1931

Wakefield Plays· see MIRACLE PLAY

Wake Forest, college town (pop 1,562), E central N.C, NNE of Raleigh It is the seat of Wake Forest College (Baptist, mainly for men, 1833).

Wake Island, atoll and three islets, central Pacific, between Hawaii and Guam The island, c 4½ mi long and 2¼ mi wide, was discovered (1796) by the British, claimed (1900) by the United States, and made a U S naval reservation (1934) It became a Pan American air base (1935) on the route to the Orient, and a hotel was built Appropriations were made (1939) for a naval air base and a submarine base here In the Second World War the island was attacked by the Japanese on Dec 7 (Dec 8, Pacific time), 1941, after an epic defense by the small marine garrison, it fell on Dec 23 American forces bombed Wake (1942–45), but made no attempts to regain it In Sept, 1945, the island was formally surrendered by the Japanese For an account of the U S defense, see J P S. Devereux, *The Story of Wake Island* (1947)

wake-robin, name for several plants, particularly TRILLIUM.

Waksman, Selman Abraham (wäks'mun), 1888–, American microbiologist, b Russia, grad Rutgers Univ (B S, 1915), Ph D Univ of California, 1918. He came to the United States in 1910 and was naturalized in 1916 A teacher at Rutgers from 1918, he became professor in 1930 At the New Jersey state agricultural experiment station, where he became microbiologist in 1921, Waksman and his associates made studies of the decomposition of organic matter by microorganisms, of the origin and nature of humus, and of the production of ANTIBIOTIC SUBSTANCES In addition to many scientific papers Waksman wrote *Enzymes* (with W C Davison, 1926), *Principles of Soil Microbiology* (1927, rev ed, 1932), *The Soil and the Microbe* (with R L Starkey, 1931), *Humus* (1936, rev ed, 1938), and *Microbial Antagonisms and Antibiotic Substances* (1945, rev ed., 1947), he edited *Streptomycin* (1949)

Wallachia or **Wallachia** (both wälā'kēu, wŏ), historic division (29,575 sq mi, pop 6,709,271), S Rumania The Transylvanian Alps separate it in the northwest from Transylvania and the Banat; the Danube separates it from Yugoslavia in the west, Bulgaria in the south, and N Dobruja in the east, in the northeast, it adjoins Moldavia BUCHAREST, the Rumanian capital, is its chief city Walachia is divided into two historic provinces, Muntenia or Greater Walachia (20,270 sq mi, pop 4,991,289) in the east and Oltenia or Lesser Walachia (9,305 sq mi, pop 1,717,982) in the west Constituting the major part of the lower Danubian plain, it is an agricultural region producing cereals, fruit, and wine Near PLOESTI are the richest oil fields of Rumania The region was part of the Roman province of DACIA and has retained its Romanic speech despite centuries of invasion and foreign rule Though theoretically part of the Byzantine Empire, Walachia was successively occupied (6th–11th cent) by the Lombards, the AVARS, and the Bulgarians By the 12th cent it had passed under the CUMANS, who in turn succumbed (1240) to the Mongols When the Mongol wave receded, the native population descended from their mountain refuges, and the principality of Walachia was founded (c 1290) by their leader Radu Negru or Rudolf the Black The name Vlachs (or Walachs or Wallachs) was given them by their Slavic neighbors Though it is claimed by some that the Vlachs are the direct descendants of the Dacians (mainly on the ground that they preserved their Latin speech), it is more than likely that they represent a composite ethnical mixture. At about the same time the sister principality, MOLDAVIA, came into existence. CAMPULUNG, the earliest capital of Walachia, was later replaced by CURTEA-DE-ARGEŞ Mircea the Great (reigned 1386–1418) shared in the defeats of KOSSOVO (1389) and Nikopol (1396) at the hands of the Turks and was obliged to pay tribute to the sultan Walachia continued to be governed by its own princes under Turkish suzerainty Like Moldavia, it was torn by strife among the great landowners (or boyars) and among rival claimants to the throne, lawlessness prevailed Prince Vlad the Impaler (reigned 1456–62) restored some order by putting 20,000 persons to death within six years He refused tribute to the sultan, defeated the Turks, and impaled the Turkish prisoners His rivalry with STEPHEN THE GREAT of Moldavia cost him his throne A last attempt to free all Rumanians from foreign domination was made by MICHAEL THE BRAVE (1593–1601), who massacred the Turks in Walachia and conquered Transylvania and Moldavia. His death delivered Walachia back into the hands of the Turks The alliance (1711) of Prince Constantine BRANCOVAN with Peter I of Russia and his subsequent downfall resulted in a tightening of Turkish control Instead of native princes, governors (hospodars), mostly Greek PHANARIOTS, were appointed In the Russo-Turkish Wars of the 18th cent Walachia was repeatedly occupied by Russian and Austrian troops The grasping rule of the Phanariots lasted until 1822, when the Rumanians rebelled against the Greeks, who at the same time began their war of independence against Turkey. Native governors were again appointed, and the Treaty of Adrianople (see ADRIANOPLE, TREATY OF) in 1829 made Walachia an almost autonomous state, tributary to Turkey but under Russian protection A Rumanian national uprising (1848–49) was suppressed by Russian intervention. Russian troops occupied (1853) Walachia and Moldavia early in the Crimean War, however, to purchase Austrian neutrality, they evacuated the lands in 1854, and the two Danubian Principalities (as Walachia and Moldavia were called) passed under Austrian occupation The Congress of Paris (1856) guaranteed the principalities virtual independence under the nominal suzerainty of Turkey With the accession (1859) of Alexander John CUZA as prince of both Moldavia and Walachia the history of modern RUMANIA began

Walafrid Strabo, c 809–849, German scholar. He was educated at the abbey of Reichenau He wrote, at 18, a Latin verse account of a journey to the other world, *Visio Wettini* In 842 he returned to Reichenau as abbot There he encouraged the production and exchange of manuscripts which made the library and scriptorium famous Among Walafrid's writings, renowned throughout the Middle Ages for their distinguished Latin, are *Hortulus,* a poem describing the monastery garden, a scriptural commentary, and notes on contemporary liturgy, still valuable as a source

Walburga, Saint (wôlbûr'gŭ), c 710–777?, English missionary in Germany She went there to assist St Boniface, settling at Heidenheim, near Eichstätt (NW of Ingolstadt), where her brother Wunnebald had an abbey St Walburga's convent became a principal center of civilization in Germany and an important shrine Feast Feb 25 By a confusion with her name or with a local festival, the eve of May Day came to be called *Walpurgisnacht* [Walburga's night], this was a witches' sabbath of German tradition There is a famous literary use in Goethe's *Faust* Another form of her name is Walpurga

Walcheren (wäl'khā-run), westernmost island, area 80 sq mi, Zeeland prov, SW Netherlands, in the North Sea and at the entrance to the Scheldt estuary It is largely agricultural, producing vegetables, fruit, and wheat Middelburg is the chief city, FLUSHING, on its southern shore, is of strategic importance In the Second World War, after the Allied capture of Antwerp (Aug, 1944), German garrisons continued to hold Walcheren and were able to block access to Antwerp Heavy Allied bombardments (Oct, 1944) of Walcheren caused the dikes to rupture, and the island was largely flooded. On Nov 1, 1944, British commando units landed at Flushing, and within three days they reduced the German garrison to surrender, thus opening up the port of Antwerp for Allied use The work of rebuilding the dikes and of drying the land was completed before the end of 1945.

Walcott, Charles Doolittle, 1850–1927, American geologist, b New York Mills, N Y He joined the U S Geological Survey in 1879 and as director (1894–1907) enlarged its field to include the Reclamation Service, the Forest Service, and the Bureau of Mines He made a special study of Cambrian rocks and fauna of the United States He was secretary of the Smithsonian Institution from 1907 to 1927

Wald, Lillian D. (wôld), 1867–1940, American social worker and pioneer in public health nursing In 1893 she organized a visiting nurse service which became the nucleus of the noted Henry Street Settlement in New York city The U S Children's Bureau (founded 1912) was suggested by her, as were other public health services and social reforms See her autobiographical books *The House on Henry Street* (1915) and *Windows on Henry Street* (1934), biographies by R. L. Duffus (1938) and Beryl Williams (1948)

Waldeck (väl'dĕk), former principality (433 sq mi, 1910 pop 61,707), W Germany, now in N Hesse Arolsen was the capital. The region is hilly, forested, and largely agricultural. An immediate county of the Holy Roman Empire from c 1200, Waldeck was united with the county of PYRMONT in the late 17th cent, and its rulers were raised to princely rank In 1867 the prince of Waldeck-Pyrmont renounced most of his sovereign prerogatives in favor of Prussia, the title, however, continued in the family Waldeck-Pyrmont became a republic in 1918 By a plebiscite in 1922 Pyrmont passed to Prussia and was incorporated with Hanover prov, by another plebiscite (1929) Waldeck proper became part of the former Hesse-Nassau prov. of Prussia

Waldeck-Rousseau, René (rŭnā' väldĕk'-rōōsō'), 1846–1904, French statesman Belonging to the republican left, he was minister of the interior

(1881, 1883–85) under Jules Grévy and in 1884 secured a liberalization of labor legislation In 1893 he was defense counsel for LESSEPS President Loubet appointed him to head a cabinet in 1899, at the height of the DREYFUS AFFAIR By securing a presidential pardon for Dreyfus he prepared the ground for Dreyfus's final exoneration (1906). The anticlerical legislation that grew out of the affair began during Waldeck-Rousseau's ministry The right of free association of religious orders was virtually abolished (1901), but Waldeck-Rousseau opposed more extreme measures and resigned (1902) to be succeeded by Émile Combes His term marked the beginning of a crucial period in international relations, starting with the Fashoda Incident of 1899 and ending with the conclusion of the Triple Entente in 1907 His foreign minister was DELCASSÉ

Waldemar I (Waldemar the Great) (wäl'dümär), 1131–82, king of Denmark (1157–82) He became one of the three pretenders to the Danish throne in 1147 After waging war against his rivals, Sweyn III and Canute, he received Jutland as his share of Danish territory He then conducted a campaign against King Sweyn, whom he defeated in a great battle near Viborg Though now supreme in Denmark, Waldemar found his country overrun by the Wends With Henry the Lion and Albert the Bear he subjugated the Wends and forced them to accept Christianity He became the vassal of Emperor Frederick I in order to gain German support, but later was powerful enough to free himself from that control Waldemar codified the laws and gained Norwegian territory The marriages of his daughters to the sons of Frederick I, to Eric X of Sweden, and to Philip II of France increased his prestige

Waldemar II, 1170–1241, king of Denmark (1202–41), second son of Waldemar I In the reign of his brother, Canute VI, he defended Denmark from German aggression and then extended Danish control over Schwerin After his accession, the king of Norway paid homage to him (1204) When his German conquests had been confirmed by Frederick II, he undertook a crusade against the Estonians and became master of much of the Baltic region In 1223 he was treacherously seized by his vassal, the count of Schwerin, and held prisoner for three years He was released only after he had been forced to relinquish much of his territory He then attempted a reconquest, but was defeated at Bornhoved (1227), and spent the remainder of his life in codifying Danish laws and in forwarding internal reform

Waldemar IV (Valdemar Atterdag), c 1320–1375, king of Denmark (1340–75) He became king of a land completely dismembered by foreign rulers, but his great ambition, utter unscrupulousness, and military ability enabled him to unite his kingdom by 1361 Waldemar IV married his daughter MARGARET to the Norwegian king in an effort to unite Denmark and Norway and interfered in Germany on behalf of his kinsman, the margrave of Brandenburg His conquest of Skane, in violation of a treaty with the Swedish king, gave him control of the lucrative fishing industry, and his defeat of the HANSEATIC LEAGUE (1362) secured him temporary possession of GOTLAND In 1368, however, the Hanseatic towns Mecklenburg, Sweden, and Holstein formed a coalition against him Defeated, Waldemar was forced to consent (1370) to the humiliating Treaty of Stralsund See Fletcher Pratt, *The Third King* (1950)

Waldemar. For Russian rulers thus named, see VLADIMIR

Walden, village (pop 4,262), SE N Y , NW of Newburgh, in a dairy area, inc 1855 Underwear and cutlery are made here

Waldenburg (väl'dunbŏŏrk) or **Walbrzych,** Pol *Wałbrzych* (vou'bzhlkh), city (pop 72,976), Lower Silesia, transferred to Polish administration in 1945 (see SILESIA) A coal-mining center, it was greatly damaged in the Second World War, but has been rebuilt, its present population is almost entirely Polish

Waldenses (wôldĕn'sēz) or **Waldensians,** Protestant denomination of medieval origin, called in French *Vaudois* They originated as the Poor Men of Lyons, a band organized by Peter Waldo (d 1217), a wealthy merchant of Lyons, who gave away his property (c 1176) and went about preaching evangelical poverty as the way of perfection Laymen, they were forbidden to preach at Lyons They went to Rome, where Alexander III blessed their life but forbade preaching (1179) They felt called to disobey and were condemned (1184) by Lucius III By 1200 their teachings were definitely unorthodox, as they opposed the teaching on the sacraments and rejected the use of good works for the dead They laid great stress on restoring Gospel simplicity. They had contacts with other similar groups, especially the Humiliati The Waldenses were most successful in Dauphiné and Piedmont, and their permanent communities were in the Cottian Alps SW of Turin In 1487 at the instance of Innocent VIII a persecution overwhelmed the Dauphiné Waldenses, but those in Piedmont defended themselves successfully In 1532 they met with German and Swiss Protestants and accepted some of their views In 1655 the French and Charles Emmanuel II of Savoy began a campaign against them Oliver Cromwell sent a mission of protest, this occasion also prompted Milton's famous poem on the Waldenses At the time of the revocation of the Edict of Nantes (1686) the Waldensian leader, Henri ARNAUD, led a band into Switzerland, then later led them back to their valleys He was also successful as a political negotiator After the French Revolution the Waldenses of Piedmont were assured liberty of conscience, and in 1848 King Charles Albert of Savoy granted them full religious and civil rights A group of Waldensians settled in the United States at Valdese, N C The Waldensian Church is included in the Alliance of Reformed Churches of the Presbyterian Order The principal Waldensian writer was Arnaud See J A Wylie, *History of the Waldenses* (1880)

Waldersee, Alfred, Graf von (al'frät graf' fŭn väl'durzā"), 1832–1904, German general He became (1881) chief assistant to the elder Moltke, whom he succeeded (1888) as chief of the general staff He was in command of the foreign armies sent (1900) to quell the Boxer Rebellion in China

Waldo, Peter see WALDENSES

Waldo, Samuel Lovett, 1783–1861, American portrait painter, b Windham, Conn He painted in Charleston, S C , and then in London (1806–9) and on his return to America gained popularity in New York His pictures include *Old Pat, the Independent Beggar,* a portrait of Andrew Jackson, and a self-portrait (all Metropolitan Mus) and a portrait of Peter Remsen (N Y Historical Society)

Waldo, town (pop 1,240), SW Ark , near Louisiana, in a depleted cotton and lumber region

Waldoboro (wôl'dubŭru), fishing and resort town (pop 2,497), S Maine, SE of Augusta, settled 1748 by Germans, inc 1773 In the 19th cent it had considerable shipping and shipbuilding

Waldron, town (pop 1,298), co seat of Scott co , W Ark , in a lumber, coal, and farm area of the Ouachitas, inc 1852 The Ouachita National Forest is near by

Waldseemüller, Martin (mar'tēn valt'zāmu"lur), Gr *Hacomilus* (hŭkŏ'mĭlus), 1470?–1522?, German cosmographer One of a group of humanists known as the Gymnasium Vosagense, he lived at Saint-Dié, Lorraine, during the latter part of his life He is known as the first cartographer to call the New World *America* He applied the name to South America (which he showed as an island) in two maps which he published in 1507 together with an explanatory treatise, *Cosmographiae introductio,* and Amerigo Vespucci's account of his voyages to the New World A first edition of this rare work is in the N Y Public Library Waldseemüller also prepared with his colleagues a new edition of Ptolemy, published in 1513 See *The Cosmographiae Introductio of Martin Waldseemüller in Facsimile* (U S Catholic Historical Society, 1907)
