cinnamon, name for species of the genus *Cinnamomum,* tropical and semitropical trees and shrubs, and for their aromatic bark of commercial value Cinnamon is obtained chiefly from the Ceylon cinnamon (*Cinnamomum zeylanicum*), an evergreen shrub or small tree native to Ceylon and also cultivated elsewhere in the tropics It has glossy leaves and inconspicuous yellow flowers The plants are cut back to produce a large number of shoots, which are cut when two or three years old The thin central part of the bark is taken from between the inner and outer barks and, in layers, dried and marketed as stick cinnamon, a fragrant flavoring. The waste and other parts are used for oil of cinnamon, a stimulant, carminative, astringent, and flavoring Ceylon is still considered the center of cinnamon production, but other kinds are grown elsewhere Cassia, cassia bark, or Chinese cinnamon is a species of the genus said to have been in use long before true cinnamon but is usually considered an inferior substitute for cinnamon Cinnamon and cassia (often confused) have been favorite spices since biblical times, used also as perfume and incense Cinnamon trade successively passed (with Ceylon) to the Portuguese, Dutch, and British *Cinnamomum camphora* yields camphor

cinnamon vine see YAM

Cinnamus, John (sĭ'numus), fl 12th cent , Byzantine historian His chronicle deals with the reigns of emperors John II and Manuel I to the year 1176.

Cinnereth (sĭn'rŏth) see CHINNERETH 2

Cino da Pistoia (chē'nō dä pēstō'ya), 1270-1337?, Italian jurist and poet, whose full name is Guittoncino dei Sinibaldi He was a friend of Dante and Petrarch, both of whom mention him in their verse, and was the author of numerous lyrics and of various treatises on jurisprudence His verse, musical, tender, and of striking imagery, foreshadows the work of Petrarch For translations, see D G Rossetti, *The Early Italian Poets* (1904 ed), Lorna de'Lucchi, *An Anthology of Italian Poems* (1922)

Cinq Mars, Henri Coeffier, marquis de (ärē' kŏcfyā' märs', dŭ sămär'), 1620-42, French conspirator, called Ruzé d'Effiat (ruzā'dĕfyä') Introduced at court by Richelieu at the age of 18, Cinq Mars rapidly rose in Louis XIII's favor He joined in a conspiracy with Frédéric Maurice de BOUILLON and Gaston d'ORLÉANS against the cardinal The discovery of a secret treaty they had signed with Spain led to their arrest, and Cinq Mars and his friend, François de Thou, were executed The conspiracy forms the basis of Alfred de Vigny's novel *Cinq-Mars*

cinquefoil (sĭngk'-) [O Fr ,=five leaves], name for any plant of the widely distributed genus *Potentilla* and for somewhat similar and related genera Most cinquefoils are perennial, many but not all of them having leaves of five leaflets, for which they are also called five-finger The flowers are most often yellow Some species have been used for domestic remedies, e g , the tormentil The shrubby cinquefoil (*Dasiphora* or *Potentilla fruticosa*) is weedy in New England but it is cultivated in gardens elsewhere; a number of other species are cultivated, frequently in rock gardens

Cinque Ports (sĭngk) [O Fr ,=five ports], name applied to a group of maritime towns of Sussex and Kent, England. Originally they numbered five, Hastings, Romney, Hythe, Dover, and Sandwich, to these Winchelsea and Rye were added under Richard I as "ancient towns," with similar duties and privileges Later, neighboring places were added to the group as "limbs" or "members " The Cinque Ports were chartered by Edward the Confessor and were reorganized into an almost independent governmental division under William the Conqueror The highest officer was the lord warden of the Cinque Ports, who had extensive and important civil, military, and naval powers The main duty of the ports (until the time of Henry VII) was provision of ships and men for protection against invasion, before England had a permanent navy In return they were allowed various privileges, such as exemption from taxation and independence from certain laws governing other municipalities. From 1688 their importance declined, and their privileges were gradually taken away The office of lord warden still exists, but no great power or heavy duties are attached to it The official residence was established at Walmer Castle, near Deal Distinguished men have held the post of lord warden, including the duke of Wellington (1829–52) and Winston Churchill (1941-) Dover Castle was the scene of some of the meetings of the courts of the Cinque Ports Cases of salvaging came before the court in later times See K M E Murray, *The Constitutional History of the Cinque Ports* (1935)

Cinthio see GIRALDI, GIOVANNI BATTISTA

Cinto, Monte (mōn'tā chōn'tō), peak, 8,982 ft high, Corsica, France, NW of Corte It is the highest point on Corsica

Cintra, Port *Sintra* (sēn'tru), town (pop 6,307), Portugal, in old Estramadura prov , a few miles NW of Lisbon The region has orange groves and vineyards, and there are marble quarries, but Cintra is known less for its products than for the beauty of the mountain on which the picturesque town is placed The view is superb, and Cintra has been rapturously described not only by Portuguese writers but also by foreigners. It flourished as a Moorish city, and there are still ruins of a Moorish fortress It was permanently won by Alfonso I with Lisbon in 1147 and was thereafter a favorite residence of the Portuguese monarchs Cintra has an old royal palace and an old monastery surrounded by a lovely park Near here in the Peninsular War the Convention of Cintra was agreed upon (1808) by the French, British, and Portuguese, under its terms the French troops under Junot were permitted to withdraw from Portugal

Cipriani, Giovanni Battista (jōvän'nē bat-tē'sta chēprēä'nē), 1727-85, Italian painter, draughtsman, and engraver, who worked in London He painted historical pictures and mural decorations for Buckingham Palace and Somerset House, but is best known for his pen-and-ink drawings, most of them engraved by Bartolozzi Fine collections are in the British Museum and the Victoria and Albert Museum Cipriani was himself a distinguished engraver and was one of the original members of the Royal Academy

Circassia (sŭrkă'shŭ), general term formerly used for the region comprised between the Black Sea, the Kuban river, and the Greater Caucasus, now largely the KRASNODAR TERRITORY of the RSFSR The Circassians are a Moslem people speaking North Caucasian dialects, they are identical with the Adyge and the Cherkess who inhabit the ADYGE AUTONOMOUS OBLAST and the CHERKESS AUTONOMOUS OBLAST Though Christianized at an early period, the Circassians accepted Islam in the 17th cent Circassia was a dependency of the Ottoman Empire until it was ceded (1829) to Russia in the Treaty of Adrianople The Russians, however, were able to occupy only the Black Sea coast, while they met desperate resistance inland The Russian conquest of Circassia was completed only in 1864 and was followed by the emigration of hundreds of thousands of Circassians to Turkey The men were warlike, proud, and handsome, the women were famous for their beauty, and many were sold into slavery in Turkey

Circe (sûr'sē), in Greek legend, celebrated enchantress, daughter of Helios and sister of Aeëtes and Pasiphaë She changed the companions of Odysseus into swine, but he forced her to break the spell A late legend says that she bore him a son, TELEGONUS

circle, a closed plane curve every point of which is equally distant from a point within called the center A circle is also defined as a CONIC SECTION cut by a plane perpendicular to the axis of the CONE The surface within the curve is also called a circle and the curve itself the circumference of the circle A line segment with both ends on the circumference is a chord A diameter is a chord through the center Any line segment joining the center to a point on the circumference is a radius The area bounded by a circle is π (see PI) times the square of the radius ($A=\pi r^2$) A tangent is a straight line touching the circle at only one point, called the point of contact or tangency The tangent to a circle is always perpendicular to the radius drawn to the point of contact Two or more circles are tangent when they all touch at only one point A circle is inscribed in a polygon if each side of the polygon is tangent to the circle, a circle is circumscribed about a polygon if all the vertexes of the polygon are on the circumference The circle figures importantly in many cultures In religion and art it frequently symbolizes heaven or eternity, perhaps because it has perfect symmetry and unvarying curvature The Greek ruler-and-compass geometry, which might well be called line-and-circle geometry, left many unsolved problems about circles These included the Three-Circle Problem of Apollonius of Perga, which was solved in the late 19th cent., and the impossible problem of squaring the circle This problem demands that one construct, in a finite number of steps, a square equal in area to a circle by using only a ruler and compass Mathematicians in the late 19th cent proved this to be impossible by proving that it was not possible to solve the equivalent algebraic problem, i e , to solve the equation $x^2=\pi$ using only certain kinds of numbers. In modern mathematics the circle is the basis for such theories as inversive geometry and examples of non-Euclidean geometries Applications of this curve in practical life are evident

Circleville, city (pop 7,982), co seat of Pickaway co , S central Ohio, on the Ohio and Erie Canal and the Scioto river and S of Columbus, inc 1853 It was laid out in 1810 within the remains of a circular fort erected by the mound builders Its manufactures include canned foods, strawboard, and grain products Pumpkin exhibits are held annually Near by are several historic sites

circuit, electric see ELECTRIC CIRCUIT

circuit rider, itinerant preacher of the Methodist denomination who served a "circuit" consisting usually of 20 to 40 "appointments " The circuit system, devised by John Wesley for his English societies in their formative period and developed in America by Francis Asbury, proved especially adapted to the conditions of the American frontier and came into its own in the trans-Allegheny region Its success was a factor in establishing Methodism in America The circuit rider, traveling usually on horseback because it was economical and suited to the forest pathways, preached nearly every day and twice on Sundays, thus covering his circuit every four or five weeks His appointments were usually in pioneer cabins, schoolhouses, or tavern barrooms Often his educational equipment was limited, but he knew his particular message well, delivered it effectively, and exemplified it in his own devout and self-sacrificing life His was a life of adventure and hardship, and he has become one of the picturesque types in American history and literature See E K Nottingham, *Methodism and the Frontier* (1941)

circulation of the blood, continuous passage of the blood from the heart through the arteries, capillaries, and veins back to the heart There are two main divisions of the circulatory system, the systemic circulation serves the body as a whole except for the lungs, and the pulmonary circulation carries the blood to and from the lungs In the systemic circulation the oxygenated blood is forced from the left ventricle of the heart, by contraction of its muscular walls, through the semilunar aortic valves into the aorta (the main vessel of the arterial system), from which other arteries branch throughout the body The smallest branches terminate in a network of capillaries, which unite with the smallest veins These in turn join larger veins which finally merge to form the inferior *vena cava*, which returns blood from the trunk and legs, and the superior *vena cava*, which returns blood from the head, neck, and arms The two *venae cavae* return the deoxygenated blood to the right auricle of the heart, which contracts and sends the blood through the tricuspid valve into the right ventricle Contraction of the right ventricle forces the blood through the semilunar pulmonary valves into the pulmonary arteries (the only arteries carrying deoxygenated blood) In the lungs carbon dioxide is eliminated from the blood and oxygen is secured The oxygenated blood then returns through the pulmonary veins to the left auricle of the heart and passes through the bicuspid valve into the left ventricle, which again sends it into the aorta The circulating blood distributes food as well as oxygen to all parts of the body The food enters the blood in the process of absorption (see INTESTINE) For the lymphatic circulation, see LYMPHATIC SYSTEM

circumcision (sûrkumsi'zhun) Cutting off the foreskin of males is a religious practice of unknown antiquity The custom was known in Egypt before it was introduced among the Hebrews by Abraham It is best known as prevalent among the Jews and the Mohammedans, but it has been practiced by peoples native to all of the continents. Explanations of the origin of circumcision are entirely conjectural It is related to rites of initiation. That Christians were not obliged to practice circumcision is recorded in Acts 15, there was never, however, a prohibition of circumcision, and it is practiced by Coptic Christians It is widely practiced in modern times also as a sanitary measure Circumcision of females is known in Islam and in certain African tribes

circus [Latin,=circle, e g , in Piccadilly], associated historically with the horse and chariot races and various contests known in ancient Rome as the Circensian games The Roman circus was a round or elliptical structure with tiers of seats for spectators, enclosing a space in which the races, games, and gladiatorial combats took place Underneath were dressing rooms, dens for wild beasts, and rooms where properties were stored The Circus Maximus, built in the reign of Tarquin I (c 616–c 578), was rebuilt by Julius Caesar and is said to have had a seating capacity of 350,000. Other

famous circuses of Rome were the Circus Flaminius (220 B C.); the circus of Nero, where many Christians perished; and the Circus Maxentius Outside of Rome are those of Arles and Orange, in S France The circus of Septimius Severus at Constantinople and many others were often scenes of riot and bloodshed between factions of charioteers The games, aside from races, were brutal and bloody, and for this reason the Greeks, even under Roman domination, never accepted the circus The modern circus, which dates from the closing years of the 18th cent., is a tent show with wild animals, acrobats, freaks, and clowns Even before 1830, traveling circuses were common in the United States and in England Philip Astley and George Sanger were famous English circus managers The most celebrated circus in America was the "Greatest Show on Earth" of P T Barnum This was succeeded by Barnum and Bailey's and finally became Ringling's See M W Disher, *Clowns and Pantomimes* (1925) and *Greatest Show on Earth* (1937), R E. Sherwood, *Here We Are Again* (1926), E. C May, *The Circus from Rome to Ringling* (1932), D. W Fellows and A A Freeman, *This Way to the Big Show* (1936)

Cirencester (sĭs'tur, sī'runsĕstûr), urban district (1931 pop 7,209, 1943 estimated pop 8,200), Gloucestershire, England It is the site of the ancient Corinium, of which there are vestiges Of interest are Cirencester Park (seat of the earl of Bathurst), the 15th-century parish church, the remains of an abbey (1117), and the Royal Agricultural College

Cirey (sērā'), town (pop 2,178), Meurthe-et-Moselle dept, NE France, in Lorraine Its official name is Cirey-sur-Vezouze The château was the residence of Voltaire and Mme du Châtelet from 1734 to 1749.

Cirrha (sĭr'ŭ), ancient city of Greece, in Phocis, on the Gulf of Crisa (an inlet of the Gulf of Corinth) Cirrha levied tolls on the pilgrims to Delphi, and the Great Amphictyony declared a sacred war in which Cirrha was destroyed (c 590 B C), the citizens went to Crisa Cirrha seems to have been refounded in 339 B C, but Philip II of Macedon forced its abandonment

cirrus see CLOUD

Cirta see CONSTANTINE, Algeria

Cis (sĭs), same as KISH 1

Cisalpine Republic (sĭsăl'pĭn), Italian state created by Napoleon Bonaparte in 1797 by uniting the Cispadane and Transpadane republics, which he had established (1796) N and S of the Po The Cisalpine Republic included the former duchies of Milan, Parma, and Modena, the legations of Bologna and Ferrara, and the Romagna By the Treaty of Campo Formio the Venetian territories to the Adige, the duchy of Mantua, and the formerly Swiss Valtellina were added The republic was in theory an independent state, in fact, it was subject to France Its constitution was based on the French model. In 1799 the Austro-Russian armies occupied it, but Bonaparte recovered it in 1800 By the Treaty of Lunéville (1801) its nominal autonomy was restored In 1802 it became the Italian Republic and in 1805, with the addition of Venetia, the Napoleonic kingdom of Italy

Cisco (sĭs'kō), city (1940 pop 4,868, 1947 estimated pop 7,000), N central Texas, WSW of Fort Worth; settled 1851, inc 1919 It boomed as an oil town soon after Ranger, but is today primarily a town of processing plants and small factories There is a municipal junior college Near-by artificial Lake Cisco attracts fishermen

Cisleithania: see AUSTRO-HUNGARIAN MONARCHY

Cisneros, Francisco Jiménez de see JIMÉNEZ DE CISNEROS, FRANCISCO

Cispadane Republic see CISALPINE REPUBLIC

Cistercians (sĭstûr'shŭnz), monks of a Roman Catholic religious order founded (1098) by St Stephen Harding in Cîteaux, Côte-d'Or dept., France They are called White Monks St Bernard of Clairvaux was their "second founder" The Cistercians attempted to reinstate the life of the first Benedictines, in so doing they were reformers, opposing the pomp and worldliness of the Cluniac order They had phenomenal expansion, especially in St Bernard's lifetime, at the end of the 12th cent there were 530 Cistercian abbeys Part of the popularity was due to Cistercian enthusiastic emphasis on the love of God and of Jesus Christ, including cheerful practice of extreme austerities The Cistercians restored farming as a chief occupation of monks and became leaders in the development of new agricultural techniques in Europe Thus, the English Cistercians were a serious factor in the growth of English wool culture The White Monks' farm system was aided by numerous lay brothers—laymen who lived in the abbeys under their own and less ascetic discipline In the 13th cent the role of chief reforming organism in the Church below the papacy passed from the Cistercians to the new orders of friars (especially Dominicans and Franciscans) Decline in numbers and fervor did not ruin the Cistercians, but they ceased before 1400 to have a prominent place in Europe. Most important of later reform movements was that begun at La Trappe, France; those who accepted the new reform are called Trappists. In the 20th cent., apart from two small congregations, most Cistercians belonged to two independent units—the Common Observance and the Stricter Observance (the Trappists) They do not differ greatly in austerity The unit of Cistercian life is the abbey, its members composing a permanent communal entity, but the abbeys join in close federation. Cistercian nuns (founded in the 12th cent) have rules and customs paralleling those of the monks, they lead contemplative lives in complete seclusion from the world A 17th-century reform of Cistercian nuns produced the remarkable development of Port-Royal Famous Cistercian abbeys include Cîteaux, Clairvaux, Fountains, Rievaulx, and Alcobaça See MONASTICISM See A J Luddy, *The Order of Cîteaux* (1942) For Cistercian mysticism, see É H Gilson, *The Mystical Theology of St Bernard* (1940)

Citadel, The—The Military College of South Carolina, at Charleston, state supported, for men, chartered 1842, opened 1843 Legally the South Carolina Military Academy until 1910, it was always called The Citadel It has liberal arts and engineering courses See O J Bond, *The Story of The Citadel* (1936)

Cîteaux, France see CISTERCIANS

Cithaeron (sĭthē'rŭn), Gr *Kithairon* (kēthī'rôn'), mountain ridge, c 10 mi long, central Greece, between Boeotia in the north and Attica and Megaris in the south It rises to 4,623 ft The ridge was the scene of many events in Greek mythology and was especially sacred to Dionysus

cithara see KITHARA

cithern. see CITTERN

Citium (sĭ'shēum), ancient city of Cyprus, on the southeast coast, on the site of Larnaca Founded by the Phoenicians, it was a major port and had valuable saltworks It is apparently identical with the biblical Kittim Zeno was born here

citizens, subjects of a government who enjoy the most privileged type of NATIONALITY Citizens are at the furthest extreme from nonnationals resident in a state, (i e, ALIENS), and in former times they were distinguished from subjects with a servile status (e g, slaves and serfs) In ancient Greece property owners in the CITY-STATES were citizens and as such might vote and were subject to taxation and military service In the Roman Empire citizenship, at first limited to residents of the city of Rome, was extended by A D 212 to all free inhabitants of the empire Under feudalism the concept of national citizenship disappeared in Europe. In time, however, burgesses purchased the immunity of their cities from feudal dues and thereby achieved a privileged position and a power in local government, these rights were akin to citizenship and supplied much of the content of later legislation respecting citizenship Today each country determines what class of persons are its citizens In some countries citizenship is according to the *jus sanguinis* [Latin,=law of blood], whereby a child if legitimate takes its citizenship from its father and if illegitimate from its mother In other countries the *jus soli* [Latin,=law of the soil] governs, and citizenship is determined by the place of birth The Constitution of the United States nowhere defined the term *citizen*, although in Article 1, section 8, it empowered Congress to enact uniform NATURALIZATION laws Congress may also regulate the IMMIGRATION to the United States of persons who wish to become citizens The Fourteenth Amendment (adopted 1868) provided that "All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State where they reside" Former Negro slaves thereby were made citizens Until the 1940s the United States recognized several classes of nationals who were not citizens e g, Filipinos and Puerto Ricans Today there is no status of national other than citizen in the United States (For the rights of U S citizens, see FOURTEENTH AMENDMENT) As the Fourteenth Amendment indicates, the United States generally follows the *jus soli* It also observes the *jus sanguinis* in that children born of American citizens abroad are citizens during their minority and retain citizenship if they reside in the United States before majority or at majority declare their intention to be citizens The United States recognizes the right of voluntary EXPATRIATION, (i e, renunciation of citizenship), but since 1922 has not viewed the marriage of a woman to a noncitizen as such renunciation *per se*

citrange (sĭt'rĭj), citrus-fruit hybrid of several varieties resulting from a cross between sweet and trifoliate oranges The tree is ornamental and hardier than the orange, being cultivated in parts of the Cotton Belt Its fruit, more acid than the orange, is used for beverages

citric acid (sĭt'rĭk), white, crystalline substance with a tart but not unpleasant taste, a compound of carbon, hydrogen, oxygen, and one molecule of water It is an organic acid found in nature in such fruits as lemons (from which it was first obtained by K. W Scheele in 1784), citrons, oranges, limes, pineapples, and gooseberries It is soluble in water and in alcohol. When heated, it loses its water of crystallization and at higher temperatures (over its melting point, 153°C) undergoes decomposition With the alkaline earths and alkali metals, it forms salts known as citrates In medicine these are common as laxatives and cathartics, the acid itself is employed as an antalkali It is used also in calico printing and as a substitute for lemon juice in certain soft drinks For commercial use it is prepared from lemon juice This is first strained, then treated with slaked lime (calcium hydroxide) to yield calcium citrate, which with sulphuric acids reacts to form citric acid It is prepared also by the fermentation of glucose

Citrine, Walter McLennan Citrine, Baron (sĭtrēn'), 1887–, English trade-union leader, b Liverpool An electrician, he became district secretary of the electrical trade union in 1914 and rose to be general secretary of the Trades Union Congress in 1926, president of the International Federation of Trades Unions in 1928, and president of the World Trade Union Conference in 1945. He led the conservative wing in labor and became powerful in the Labour government of Clement Attlee He was made a baron in 1946, was a member of the national coal board (1946–47), and was made chairman of the British Electricity Authority in 1947 His writings include *My Finnish Diary* (1941), *My American Diary* (1941), *In Russia Now* (1942), and *British Trade Unions* (1942)

citron (sĭ'trun), tree (*Citrus medica*), native to tropical Asia and related to other citrus trees and shrubs It is cultivated in the Mediterranean regions and to some extent in the West Indies, Florida, and California The tree is a small evergreen about 10 ft in height, with spiny, irregular branches, large leaves, and purplish blossoms The fruit is large, lemon shaped, from 6 to 10 in long, with a rough, furrowed surface and a thin outer rind of yellowish-green color The inner rind is thick, white, and tender, and the pulp small and acid The juice is sometimes used as a beverage or syrup The rind, candied and preserved, is used in confectionery and cookery Before being candied, the rinds are treated or preserved in sea water or brine, which produces a degree of fermentation, and much of the Mediterranean product is shipped in brine to the United States and there candied The name is also applied to a small variety of watermelon with a thick rind, used to make preserves

Citronelle (sĭt"runĕl'), town (pop 1,057), SW Ala., NNW of Mobile, in a farm and timber area. The tung-oil industry was developed in 1906.

citrus fruits (sĭ'trus), widely used edible fruits of tropical evergreen trees and shrubs belonging to the genus *Citrus* Included are the ORANGE, TANGERINE, LEMON, GRAPEFRUIT, LIME, CITRON, CITRANGE, and tangelo More than 900 varieties have been developed from about a half dozen natives of tropical Asia and the Malay Archipelago The KUMQUAT, though closely related to this group, is now considered to be in another genus Citrus fruits were introduced into Florida and S California by early Spanish settlers Commercially they are the most important group of tropical and subtropical fruits in the world Their vitamin C content makes them of value in the human diet See H H Hume, *The Cultivation of Citrus Fruits* (1926, reissue, 1937), H J Webber and L D Batchelor, ed, *The Citrus Industry* (Vol. I, 1943, Vol II, 1948)

Città Vecchia (chĕt-ta' vĕk'kyā) [Ital.,=old city], **Città Notabile** (nōtä'bēlā), or **Mdina** (umdē'nā), town (pop 1,384), central Malta Former capital of Malta, it was supplanted by Valetta It contains a large cathedral and the old palace of the grand masters of the Knights of Malta (Knights Hospitalers)

cittern (sĭ'turn), stringed musical instrument having an oval body, a flat back, and a fretted neck Its strings, made of wire and usually nine in number, were plucked It was first made in the Middle Ages and then usually called citole The name cittern was given it in the 16th cent in England, where it became very popular in the 18th cent It has also been called cister, cistre, cithern, cither, cithara, and gittern

city, concentration of persons which is not economically self-contained. Cities have appeared in diverse cultures, e g, among the Aztec, Maya, and Inca, in China and India, and in the twin cradles of Western European culture, Mesopotamia and Egypt In all these civilizations the cities were the centers of internal change and development Thus the history of ancient Europe is that of the Greek cities and of Rome (See also CITY-STATE) From the decline of Rome the cities were in eclipse, and in Western Europe their role as centers of learning and the arts passed to the monasteries, which were not urban but subsistent units The 11th cent saw the resurgence of vigorous cities in Italy, and by the 13th cent the dynamic life of the Middle Ages was centered in the cities From this time dates the importance of great modern cities, e g, Milan, London, Paris, and the Hanseatic cities The giant modern city is a product of the Industrial Revolution, which introduced large-scale manufacturing Sheer bulk now made old problems of urban life acute, some of these, e g, sanitation, utilities, and distribution, have been better solved than others, such as HOUSING

and transport. As urban life came to furnish more remunerative and colorful opportunities, rural populations began to be attracted, and by the 20th cent. some nations were faced with actual shortage in producers of food on the land. Among movements to reform urban life some aim really at abolishing cities as known today, this is the tradition exemplified by William Blake, Thoreau, William Morris, Eric Gill, and Lewis Mumford. There are also less radical designs, like CITY PLANNING, the garden city, and the encouragement of rapid transit to distant suburbs, in England after the Second World War much thought was given to decentralization and avoiding congestion in rebuilding the cities. There are many reforms aimed at restoring community life to the rootless strangers so frequent in modern cities, such is a common function of settlement houses, community centers, church centers, city missions, union centers, boys' clubs, athletic clubs, political clubs, women's clubs, fraternal lodges, and other philanthropic and cooperative enterprises. The aerial bombardments of the Second World War brought up new problems of city defense. Statistical study of cities is difficult because figures are usually given by political units, and rarely is an entire urban area a single, exclusive political unit. Cities are often complex, with suburbs within them, e.g., the Newark area inside the New York metropolis. See CITY GOVERNMENT and LOCAL GOVERNMENT. See also Gustave Glotz, *The Greek City and Its Institutions* (Eng. tr., 1929), Henri Pirenne, *Medieval Cities* (Eng. tr., 1939), National Resources Committee, *Our Cities: Their Role in the National Economy* (1937), Lewis Mumford, *The Culture of Cities* (1938) and *City Development* (1945).

City College of the College of the City of New York, mainly for men; chartered 1847, opened 1849, through the efforts of Townsend Harris, as the Free Academy. It granted degrees after 1854 and was called the College of the City of New York from 1866 to 1929. After this the name was applied to the group of municipal colleges. City College includes a college of liberal arts and science, schools of business and civic administration, education, and technology, a public-service training division, an educational clinic. The Lewisohn Stadium, designed by Arnold W. Brunner, is used for summer musical performances.

city government, political administration of urban areas. The English tradition of incorporating urban units (cities, boroughs, villages, towns) and allowing them freedom in most local matters is general in America (see CITY and LOCAL GOVERNMENT). The traditional city government had a mayor and council, whose members (aldermen) represented districts (wards). As the complexity of urban life increased in the 19th cent., the old system became less efficient, there were also overlapping of old offices with new, bad methods of accounting and taxation, and much blatant graft. Hence arose movements for municipal reform, which have become a recurrent feature of American political life. They have familiarized Americans with a gallery of city political figures—Tweed, Penrose, Quay, Thompson of Chicago, Pendergast of Kansas City, and many more. They have also obscured the fact that corruption is found extensively in other than city politics and is not uniquely American. Reform brought two new types of government. The commission form has a board both legislative and administrative, usually elected nonpartisan and at large, many cities have adopted it, e.g., Galveston (1901), Des Moines, and Jersey City. The city-manager plan gives the administration to one professional nonpolitical director. The system has gained steadily in popularity, notable trials have been in Staunton, Va., the first (1908), in Dayton and Cincinnati, Ohio, and in Kansas City, Mo. A perennial problem of U.S. urban government is the division of urban areas among several independent city governments, survivals of old separate communities. The Eastern metropolises all provide examples, aggravated in some (e.g., New York and Philadelphia), where state lines run through the heart of the metropolitan area. Attempts at efficiency have produced some new forms, e.g., the PORT OF NEW YORK AUTHORITY, a corporation set up by joint state action and assigned specific powers formerly held by local governments. In the rest of the English-speaking world and wherever else there is much local self-government, American forms and problems are paralleled. Elsewhere, as typically in France, the local officers, albeit elected mayor and councilors, are figureheads, serving mainly to carry out the regulations of the central bureaucracy. See W. B. Munro, *The Government of European Cities* (rev. ed., 1927), H. A. Stone, D. K. Price, and K. H. M. Stone, *City Manager Government in the United States* (1940); C. M. Kneier, *City Government in the United States* (rev. ed., 1947).

city manager: see CITY GOVERNMENT.

City of David, epithet of BETHLEHEM, the birthplace of David, and of JERUSALEM, his capital.

city of refuge: see SANCTUARY.

city planning, art of planning for the growth of urban centers in order to secure healthful living conditions, convenient communication, and beauty. The plan which also includes outlying communities and highways is termed regional planning. Many ancient cities were built from definite plans. The fundamental feature of the plans of Babylon, Nineveh, and the cities of ancient Greece and of 12th-century China was the construction of main streets running north and south and east and west, with a forum in the center. This gridiron plan was also carried out in Roman towns, such as Lincoln and Chester in England, in all their towns the Romans emphasized drainage and water supply and practiced zoning. In medieval cities, built for military security, with their extremely narrow streets, the monumental groupings of buildings with open spaces formed the only relief. The living conditions of the poorer citizens were given little attention. With the Renaissance came truly monumental conceptions—wide avenues and long approaches creating vistas of handsome buildings. The new aim is seen first in special sections of a city, such as Michelangelo's grouping on the Capitoline at Rome and Bernini's piazza of St. Peter's. In most European cities, through the 17th and 18th cent. there was fragmentary replanning of medieval streets. After the fire of 1666 in London, Sir Christopher WREN devised a superb plan for a complete rebuilding of the city, but this unfortunately was not put into execution. In the 18th cent., Mannheim and Karlsruhe, Germany, were laid out geometrically, Emmanuel Héré planned Nancy, France, John Wood produced grand architectural streets and squares at Bath, and the new part of Edinburgh was laid out. In the early 19th cent. John Nash planned certain sections of London, central Vienna was improved, and Baron HAUSSMANN remodeled Paris to produce the celebrated boulevard system. Legislation which enabled cities to make and carry out planning designs was enacted earlier in Europe than in the United States. Such laws were passed in Italy in 1865, in Sweden in 1874, and in Prussia and England in 1875. Planning in Great Britain was especially concerned with slum elimination, its greatest exponent was Sir Patrick GEDDES. At the turn of the century Sir Ebenezer HOWARD was the founder of the modern garden-city movement. The first English GARDEN CITY, Letchworth, was begun in 1903. In America early New England towns, formally disposed along wide elm-lined central roadways or commons, exhibit a conscious planning. Annapolis, Md., Philadelphia, and Paterson, N.J., were built after plans; but America's especially celebrated example is the city of Washington, laid out in plans from bare land by L'ENFANT, in 1791, under the supervision of Washington and Jefferson—a rectangular plan with diagonal main thoroughfares superimposed and with the Capitol as the central feature. In the 19th cent. Frederick L. Olmsted was a pioneer in city planning, especially in developing parks. State legislation enabling cities to appoint planning commissions and in some cases giving them authority to carry out the plans began in Pennsylvania in 1891. The work of D. H. Burnham for the World's Columbian Exposition, Chicago, 1893, was a stimulus to city planning, and Burnham, with E. H. Bennett, drew up a plan for Chicago, much of which has been put into execution. In 1901 a commission composed of Burnham, C. F. McKim, and F. L. Olmsted, Jr., devised a scheme for the modern development and beautification of Washington, D.C., adhering to L'Enfant's original plan as a basis for all new operations. A wide influence has been exerted by the ZONING laws of New York city (1916), which control the uses of each district of the city, the areas and heights of buildings as related to street widths, and many other factors of public well-being. The important Regional Survey of New York and Environs, completed in 1929, took into consideration legal and social factors, as well as internal transit problems and the various modes of approach to the metropolitan area. Governmental efforts to provide employment during the depression of the 1930s led to the building (under the Federal Resettlement Administration) of three experimental model communities—Greenbelt, Md., Greendale, Wis., and Greenhills, Ohio. The increase of traffic and the crowding together of tall buildings have crippled the street plans of many cities—especially American cities which have been handicapped by their rectangular or checkerboard layouts. In the larger cities everywhere, three processes are concurrently at work: decentralization, the enforced movement of industries and homes away from high rents and congestion; amelioration of conditions at the congested centers by utilizing new devices for the liberating of traffic, such as vehicular tunnels and elevated highways, with the future possibility of streets built on several levels, and addition of low-cost HOUSING projects and elimination of slum areas. In the plan for the modern city, communications must be integrated into a single, smoothly functioning mechanism—the approaches by land, water, and air, with their passenger and freight terminals, the street plan; and the internal transit system. For these elements all distances must be viewed in terms of the time spent in transit. See works of Lewis Mumford, a disciple of Sir Patrick Geddes, especially his *Sticks and Stones* (1934) and *City Development* (1945), Werner Hegemann, *City Planning: Housing*, Vol. I (1936); Ludwig Hilberseimer, *The New City* (1944); H. S. Churchill, *The City Is the People* (1945); Percival Goodman and Paul Goodman, *Communitas* (1947).

City Point, Va.: see HOPEWELL.

city-state. From the beginning of Greek history to its climax in the 5th and 4th cent. B.C., the Greeks were organized in autonomous neighborhoods now known as city-states. Aristotle analyzed the constitutions of 154 of them. One Greek word, *polis*, meant both city and city-state. The city-state is not peculiar to Greece or to ancient times, but the Greek city-state is typical and has been well studied. Plato and Aristotle did not doubt that Greece owed its leadership in civilization to its form of government. Both were clear that the form was not possible to a large or populous state. In the *Laws*, Plato gave 5,040 households as the ideal population. Aristotle thought this number obviously too large. The object of the state was "the good life" for the individual, the state, they held, must not be so large that the individual could not be known and utilized. Since the city-state was autonomous, different states and the same state at different times varied through all degrees from absolute monarchy to pure democracy, the state might be ruled as it wished and might change at will. Economic self-sufficiency was an ideal, though some states, as Athens, had relatively large commercial interests, in Sparta, commerce was forbidden. Households commonly were supported directly by their little farms. Unemployment was unknown, and extremes of wealth and poverty were exceptional and speedily remedied. The good life was held to be hindered by excess in material possessions as by other excess. Various city-states have appeared in the history of other lands (see COMMUNE). The Greek city-state is well interpreted by A. E. Zimmern, *The Greek Commonwealth* (1931), and Gustave Glotz, *The Greek City and Its Institutions* (ed. by N. Mallinson, 1930).

Ciudad (Span. thyōōdhädh', in Latin America usually syōōdhädh') [Span., =city]. For cities whose names begin thus but are not so listed, see under the following name, e.g., for Ciudad Juárez, see JUÁREZ.

Ciudad Bolívar (syōōdhädh' bōlē'vär), city (pop. 19,789), E Venezuela, a port well inland on the ORINOCO river. Founded in 1764 and called Angostura, it was renamed for the liberator, Simón BOLÍVAR. The congress of Angostura on Feb. 15, 1819, made Bolívar president of Venezuela and on Dec. 17, 1819, decreed the formation of the republic of Greater Colombia with Bolívar president and Francisco Antonio ZEA vice president. Ciudad Bolívar is the commercial center of the eastern llanos, the Orinoco basin, and the GUIANA HIGHLANDS. Exports include balata, hides, cattle, egret plumes, tonka beans, and gold.

Ciudad Guzmán, Mexico: see GUZMÁN.

Ciudad Juárez, Mexico, see JUÁREZ.

Ciudad Porfirio Díaz, Mexico: see PIEDRAS NEGRAS.

Ciudad Real (thyōōdhädh' rāäl'), city (pop. 30,015), capital of Ciudad Real prov., central Spain, in New Castile. It was founded (13th cent.) by Alfonso X of Castile. The medieval walls and the late Gothic cathedral are noteworthy. In 1809 the French defeated the Spanish near here.

Ciudad Rodrigo (thyōōdhädh' rōdhrē'gō), city (pop. 3,872), Salamanca prov., central Spain, in Leon. It is an important fortress near the Portuguese border. The Roman settlement was abandoned, and the place was resettled in the 12th cent. In the Peninsular War it fell to the French (1810), but in 1812 was taken by Wellington. There is a 12th-century cathedral.

Ciudad Vieja (syōōdhädh' vyä'hä) [Span., =old city], small town (pop. 6,011), at the foot of the volcano AGUA, S central Guatemala. Founded in 1527 by Jorge Alvarado, brother of Pedro de ALVARADO, the town, called Santiago de los Caballeros de Guatemala, was the first permanent capital of the captaincy general. In 1541, during the governorship of Doña Beatriz de la CUEVA, it was destroyed by flood and earthquake. The survivors founded a new capital at ANTIGUA.

civet (sĭ'vĭt) or **civet cat,** mammal of the family Viverridae, related to the cats and native to Asia and Africa. The fur is dark gray with streaks or spots of black, and the face resembles that of the weasel more than the cat. It is chiefly nocturnal. The civet is hunted and also kept in semi-captivity for a fatty yellow secretion found in a double pouch near the genital organs. This material can be removed with a spoon usually every 14 to 20 days. It is used in the Orient as a perfume base. The fur of the Indian civet of India and SE Asia, called in the trade Chinese civet, is used to trim cloth coats. The little spotted skunk of North America is incorrectly called civet cat.

civics, branch of learning that treats of the activity of the citizen in his relation to society and the state, originally called civil government. With the large immigration into the United States in the latter half of the 19th cent., civics became a subject in the

secondary schools and colleges through the influence of the National Education Association, the American Political Science Association, the American Historical Association, the National Municipal League, and the U S. Bureau of Education See J M. Gathany, *Civics of Society* (1927), E. A Ross. *Civil Sociology* (rev. ed , 1932).

Civil Aeronautics Board: see AIR, LAW OF THE.

civil engineering: see ENGINEERING

Civilian Conservation Corps (CCC), established in 1933 by the U S Congress as a measure of the New Deal program Created in a period of severe depression, the CCC provided useful work and vocational training for unemployed single young men through conserving and developing the country's natural resources Membership was voluntary, and enrollees received a base pay of $30 a month, of which the greater part went to their families if they were on relief At its peak in 1935, the organization had more than 500,000 members in over 2,600 camps The CCC added to the nation's material wealth through forest and wildlife protection, flood control, soil conservation, development of new state parks, and similar activities Camps were usually operated by the War Dept , but the men were not subject to military control The CCC was in 1939 made part of the Federal Security Agency Beginning in 1940, greater emphasis was placed on projects aiding national defense Against President F D Roosevelt's request Congress abolished the CCC in 1942

Civilis (Claudius or Julius Civilis) (sĭvī'lĭs), fl. A D 70, Batavian chief who chose the unsettled period at the fall of NERO to raise a revolt in Germany, which quickly spread to Gaul (69–70) Its chief effect was to remove from VITELLIUS, who was struggling with VESPASIAN, any real support from Gaul After Vespasian had become emperor, he sent Cerealis to put down the revolt The rebels were treated with the greatest consideration and Civilis entered the Roman service It has been suspected, reasonably, that Civilis had been encouraged by Vespasian at the beginning Tacitus' last two books are almost an encomium on Civilis

civil law, As used in this article, the term "civil law" signifies a modern legal system based upon ROMAN LAW In common usage, however, it also means the rules which govern private legal affairs; in this sense civil law contrasts with public law and criminal law With a few exceptions, the countries on the continent of Europe, the countries which were former colonies of such continental powers (e g , the Latin American countries), and other countries which have recently adopted Western legal systems (e g , Japan and China) follow civil law It is also the foundation for the law of Quebec prov and of Louisiana Modern countries which do not adhere to the civil law (this includes all of the United States except Louisiana) for the most part were founded by England and apply the system of common law prevailing there The law which had been in force throughout the Roman Empire when it controlled most of Europe and the Near East was to some extent supplanted by GERMANIC LAWS during the period when Germanic tribes carried out their great conquests The principle of personal (as opposed to territorial) law was observed by the barbarians, and the former Roman subjects and their descendants were permitted to follow the Roman law (*leges romanorum*) in their affairs with one another The great CORPUS JURIS CIVILIS of Justinian, compiled in the 6th cent and in use in the Byzantine Empire, served also to keep the old law alive Barbarian law, although at first adequate, did not have legal concepts which suited the commercial requirements of the late Middle Ages, and there was then heavy borrowing of Roman ideas As part of a concurrent revival of interest in classical culture the late 11th cent. and the 12th cent saw the resumption of systematic study of Roman law, chiefly in N Italy (notably at Bologna), in S France, and in Spain Extensive glosses and commentaries on the *Corpus Juris Civilis* and on other classical texts were produced Through the agency of scholars and of judges whom they trained, Roman law principles (though strongly modified) came to be observed in national courts in all classes of legal disputes, although for a long time courts of local jurisdiction continued to enforce customary law The revived legal principles, however, initially were not formulated in precise terms for the most part, but instead gave general guidance to the judiciary. The next step, emulating the systematizing of Justinian, was to state these principles in exact, ordered form, i e , as a CODE The CODE NAPOLÉON (1804), the earliest of such works, had many successors The tendency of civil law is to create unified legal systems by working out with the maximum exactness the conclusions to be drawn from basic principles The judge is not permitted to develop new doctrines to meet unforeseen problems, but in all cases must base his decision squarely on the terms of the code. In this respect civil law may be contrasted with COMMON LAW, which is largely the product of judges' decisions and which has developed empirically (and sometimes in contradictory directions) in response to newly arisen legal situations

civil liberty: see LIBERTY.

civil rights, the rights which a state's inhabitants enjoy by law The term is broader than "political rights," which refer only to rights devolving from the franchise and which are held usually only by citizens. Unlike "natural rights," civil rights have a legal as well as a philosophical basis In American history the **Civil Rights Acts** refer to legislation passed in 1866, 1870, and 1875 to grant Negroes a legal and political status equal to that of the whites The first act, passed over President Johnson's veto, was of dubious constitutionality and was reenacted in 1870 only after the passage of the FOURTEENTH AMENDMENT. These acts bestowed on the Negro such common freedoms as the right to sue and be sued, to give evidence, and to hold real and personal property. The third Civil Rights Act attempted to guarantee to the Negro the social rights still withheld It penalized innkeepers, proprietors of public establishments, and owners of railroads and other carriers for discriminating against the Negro in accommodations, but was largely voided by the decision of the Supreme Court in the chief of the Civil Rights Cases in 1883 on the ground that these were not properly civil rights and hence not a field for Federal legislation The 1883 decisions seemed to leave the way open for state action, and civil rights laws were subsequently passed by many states

civil service, entire body of those employed in the civil administration, excluding the military forces and elected officials The term was used in designating the British administration of India and was first applied elsewhere in 1854 in England The extent and power of the civil service has varied throughout history according to the greater or lesser complexity of government In the modern period civil service grew with the rise of the national monarchies and the increase of state functions It has historically been the domain of the middle class and has acquired importance as modern governments have increasingly taken over functions formerly in private hands The growth of the Federal civil service of the United States illustrates modern trends The institution and growth of government commissions and agencies, especially in periods of depression or war, have multiplied the personnel and functions Owing doubtless in part to the spoils system so strongly established in the Jacksonian era, the United States lagged far behind other nations in standards of civil service competence and probity Agitation for reform began shortly after the Civil War In 1871 Congress authorized the President to prescribe regulations for admission to the public service and to appoint the Civil Service Commission, which lasted only a few years The scandals of the GRANT administration lent weight to the arguments of the reformers George W CURTIS, Dorman B EATON, and Carl SCHURZ President Hayes sympathized with reform and began to use competitive examination as a basis for appointment to office The assassination of President Garfield in 1881 by a disappointed office seeker finally precipitated the passage of the Pendleton Act of 1883, reestablishing the Civil Service Commission after a nine-year lapse The commission draws up the rules governing examinations for those positions which Congress places in the classified civil service All Presidents since Cleveland have expanded the classified list, and the great majority of Federal employees during peacetime are now classified In 1939 the merit system was extended to state service receiving Federal grants The Hatch Act of 1940 forbade campaign contributions by officeholders and hence tended to divorce the civil service from politics The appointive power is shared by the President, who appoints the heads of all government departments and may remove any appointee at will, by Congress, which controls its own employees, and by the Civil Service Commission and departmental appointing officers, in whose charge are vacancies in the classified service On national and state levels where classification does not exist, the civil service still provides an important source of political patronage Of the world's civil services, the most outstanding on several counts is still the British, extremely powerful because of its permanency, its extensive grants of power from Parliament, and its reputation for absolute honesty, though it is criticized for a lack of flexibility and for class exclusiveness in its upper ranges A Civil Service Commission and the beginnings of a system of competitive examinations were established in Great Britain in 1855, and the influential Whitley Councils, representing both government employees and administrators in questions dealing with service conditions, were set up after the First World War British civil servants are strictly excluded from politics In totalitarian nations, on the other hand, the official party and the civil service tend to interpenetrate. The secretariat of the League of Nations and of the United Nations are possible precursors of an international civil service See J D Kingsley, *Representative Bureaucracy and Interpretation of the British Civil Service* (1944); Leonard White and others, *The Civil Service in Wartime* (1945).

civil war, in English history. see PURITAN REVOLUTION and ROSES, WARS OF THE.

civil war, in Roman history: see MARIUS and SULLA; POMPEY and CAESAR

Civil War, in U S history, the conflict (1861–65) between the Northern states (the Union) and the Southern states which seceded from the Union (see CONFEDERACY) It is generally known in the South as the War between the States and is also called the War of the Rebellion (the official Union designation), the War of Secession, and the War for Southern Independence The name Civil War, although much criticized as inexact, is most widely accepted Actually this name is somewhat misleading, for the war was not a class struggle, but a sectional combat having its roots in such complex political, economic, social, and psychological elements that historians still do not agree as to its basic causes It has been characterized, in the words of William H SEWARD, as the "irrepressible conflict." In another judgment, the Civil War was criminally stupid, an unnecessary bloodletting brought on by arrogant extremists and blundering statesmen Both views accept the fact that in 1861 there existed a situation which, rightly or wrongly, had come to be regarded as insoluble by peaceful means Earlier, in the days of the American Revolution and of the adoption of the Constitution, differences between North and South were dwarfed by their common interest in establishing a new nation But sectionalism steadily grew stronger In the 19th cent the South remained almost completely agricultural, with an economy and a social order largely founded on Negro SLAVERY and the plantation These mutually dependent institutions produced the staples, especially cotton, from which the South derived its wealth The North had its own great agricultural resources, was always more advanced commercially, and was also expanding industrially Hostility between the two sections grew perceptibly after 1820, the year of the MISSOURI COMPROMISE, which was intended as a permanent solution of the issue in which that hostility was most clearly expressed—the question of the extension or prohibition of slavery in the Federal territories of the West Difficulties over the tariff (which led John C CALHOUN and SOUTH CAROLINA to NULLIFICATION and to an extreme STATES' RIGHTS stand) and troubles over internal improvements were also involved, but the territorial issue nearly always loomed largest In the North an increasingly high moral tone was injected into the quarrel with the rise of the ABOLITIONISTS in the 1830s Since Negro slavery was unadaptable to much of the territorial lands, which eventually would be admitted as free states, the South became more anxious about maintaining its position as an equal in the Union Southerners thus strongly supported the annexation of Texas (sure to be a slave state) and the Mexican War and even agitated for the annexation of Cuba (see OSTEND MANIFESTO). The COMPROMISE OF 1850 marked the end of the period which might be called the era of compromise Henry CLAY and Daniel WEBSTER were succeeded by more intransigently sectional leaders, such as Seward, Charles SUMNER, and Salmon P CHASE in the North and Jefferson DAVIS and Robert TOOMBS in the South With the KANSAS-NEBRASKA BILL (1854) and the consequent struggle over "bleeding" KANSAS the factions first resorted to shooting The South was ever alert to protect its "peculiar institution," even though many Southerners recognized slavery as an anachronism in a supposedly enlightened age Passions aroused by arguments over the FUGITIVE SLAVE LAWS (see also DRED SCOTT CASE) and over slavery in general were hardly tempered by the activities of the Northern abolitionist John BROWN or by the vigorous proslavery utterances of William L YANCEY, one of the leading Southern FIRE-EATERS The "wedges of separation" caused by slavery split large Protestant sects into Northern and Southern branches and dissolved the WHIG PARTY Most Southern Whigs joined the DEMOCRATIC PARTY, one of the few remaining, if shaky, nation-wide institutions. The new REPUBLICAN PARTY, heir to the FREE-SOIL PARTY and to the LIBERTY PARTY, was a strictly Northern phenomenon The crucial point was reached in the presidential election of 1860, in which the Republican candidate, Abraham LINCOLN, defeated three opponents—Stephen A DOUGLAS, (Northern Democrat,) John C BRECKINRIDGE, (Southern Democrat), and John BELL of the CONSTITUTIONAL UNION PARTY Lincoln's victory was the signal for the SECESSION of South Carolina (Dec 20, 1860), and that state was followed out of the Union by the six other states of the Lower South—Mississippi, Florida, Alabama, Georgia, Louisiana, and Texas Immediately the question of Federal property in these states became important, especially the forts in the harbor of Charleston, S.C. (see SUMTER, FORT) The outgoing President, James BUCHANAN, a Northern Democrat who either was truckling to the Southern, proslavery wing of his party or was sincerely attempting to avert war, pursued a vacillating course At any rate the question of the forts was still unsettled when Lincoln was inaugurated, and meanwhile there had been several futile efforts to reunite the sections, notably the Crittenden Com-

promise (see CRITTENDEN, JOHN JORDAN). Lincoln resolved to hold Sumter The new Confederate government under President Jefferson DAVIS and South Carolina were equally determined to oust the Federals

Sumter to Gettysburg When, on April 12, 1861, the Confederate commander P G T BEAUREGARD, acting on instructions, ordered the firing on Fort Sumter, hostilities officially began Lincoln immediately called for troops to be used against the seven seceding states, which were soon joined by Arkansas, North Carolina, Virginia, and Tennessee to complete the 11-state Confederacy In the first important military campaign of the war untrained Union troops under Irvin MCDOWELL, advancing on RICHMOND, now the Confederate capital, were routed by equally inexperienced Confederate soldiers led by Beauregard and Joseph E JOHNSTON in the first battle of BULL RUN (July 21, 1861) This fiasco led Lincoln to bring up George B MCCLELLAN (1826–85), fresh from his successes in western Virginia (admitted as the new state of WEST VIRGINIA in 1863) After the retirement of Winfield SCOTT in Nov , 1861, McClellan was for a few months the chief Northern commander The able organizer of the Army of the Potomac, he nevertheless failed in his PENINSULAR CAMPAIGN (April-July, 1862), in which Robert E LEE succeeded the wounded Johnston as commander of the Confederate Army of Northern Virginia Lee planned the diversion in the Shenandoah Valley, which, brilliantly executed by Thomas J (Stonewall) JACKSON, worked perfectly Next to Lee himself Jackson, with his famous "foot cavalry," was the South's greatest general Lee then went on to save Richmond in the SEVEN DAYS BATTLES (June 26-July 2) and continued his winning way in the second battle of Bull Run (Aug 29-30), thoroughly trouncing John POPE However, he also failed in his first invasion of enemy territory In September, McClellan, whom Lincoln had restored to the command of the Army of the Potomac, checked Lee in Maryland (see ANTIETAM CAMPAIGN) When McClellan failed to attack the Confederates as they retreated, Lincoln removed him again, permanently Two subsequent Union advances on Richmond, the first led by Ambrose E BURNSIDE (see FREDERICKSBURG, BATTLE OF) and the second by Joseph HOOKER (see CHANCELLORSVILLE, BATTLE OF), ended in resounding defeats (Dec 13, 1862, and May 2–4, 1863) Although Lee lost Jackson at Chancellorsville, the victory prompted him to try another invasion of the North With his lieutenants Richard S EWELL, James LONGSTREET, Ambrose P HILL, and J E B (Jeb) STUART, he moved via the Shenandoah Valley into S Pennsylvania There the Army of the Potomac, under still another new chief, George G MEADE, rallied to stop him again in the greatest battle (July 1-3, 1863) of the war (see GETTYSBURG CAMPAIGN) In the meantime, with the vastly superior sea power built up by Secretary of the Navy Gideon WELLES, the Union had established a blockade of the Southern coast, which, though by no means completely effective, nevertheless limited the South's foreign trade to the uncertain prospects of blockade-running In cooperation with the army the Union navy also attacked along the coasts The forts guarding New Orleans, largest Confederate port, fell (April 28, 1862) to a fleet under David G FARRAGUT, and the city was occupied by troops commanded by Benjamin F BUTLER (1818–93) The introduction of the ironclad warship (see ERICSSON, JOHN, and MONITOR AND MERRIMAC) had revolutionized naval warfare, to the ultimate advantage of the industrial North On the other hand, CONFEDERATE CRUISERS, built or bought in England (see ALABAMA CLAIMS) and captained by men such as Raphael SEMMES, destroyed or chased from the seas much of the U S merchant marine Britain never formally recognized the Confederacy (neither did France) and maintained peaceful relations with the Union despite the provocation late in 1861 of the TRENT AFFAIR, which was adroitly handled by Secretary of State Seward Charles Francis ADAMS (1807–86) at London and John BIGELOW at Paris were able diplomats, but probably more important in winning popular support for the Union in England and France was the EMANCIPATION PROCLAMATION, which Lincoln issued after Antietam This act also appeased for a time the anti-Lincoln radical Republicans in Congress, among them Benjamin F WADE, Zachariah CHANDLER, Thaddeus STEVENS, and Henry W DAVIS, with whom Secretary of the Treasury Salmon P Chase and Secretary of War Edwin M STANTON were allied Not all Unionists were abolitionists, however, and the Emancipation Proclamation did not apply to the border slave states —Delaware, Maryland, Kentucky, and Missouri— which had remained loyal For Lincoln and kindred moderates, such as Postmaster General Montgomery BLAIR, the restoration of the Union, not the abolition of slavery, remained the principal objective of the war The Union victories at Gettysburg and Vicksburg in July, 1863, marked a definite turning point in the war Both sides now had seasoned, equally valiant soldiers, and in Lee and Ulysses S. GRANT each had a superior general. But the North, more populous and with its comparatively enormous industry, enjoyed a tremendous material advantage Both sides also had resorted to conscription, which was more effective in the North, even though it met some resistance (see DRAFT RIOTS) Again, under Stanton, successor to Simon CAMERON, the over-all administration of the Union army was more efficient

Grant and Sherman Lead to Victory That the "war was won in the West" has become axiomatic Here the rivers, conveniently flowing either north (the Cumberland and the Tennessee) or south (the Mississippi), invited Union penetration, as they did not in Virginia In Feb , 1862, the Union gunboats of Andrew H FOOTE forced the Confederates to retire from their post on the Tennessee (see HENRY, FORT) to their stronghold on the Cumberland (see DONELSON, FORT) There, on Feb 16, 1862, Grant, commanding the Army of the Tennessee, won the first great Union victory of the war, and Nashville promptly fell without a struggle Farther down the Tennessee, Grant was lucky to escape defeat in a bloody contest (April 6–7) with Albert S JOHNSTON and BEAUREGARD (see SHILOH, BATTLE OF) Minor Union successes at IUKA (Sept 19) and CORINTH (Oct 3-4) followed, while the counterinvasion by the Confederate Army of Tennessee under Braxton BRAGG was stopped by Don Carlos BUELL at PERRYVILLE, KY (Oct 8, 1862) William S ROSECRANS, Buell's successor, then stalked Bragg through Tennessee, fought him to a standoff at MURFREESBORO (Dec 31, 1862–Jan 2, 1863), and finally, by outmaneuvering him, forced the Confederate general to withdraw S of Chattanooga Union gunboats had cleared the upper Mississippi (see ISLAND NO 10 and PILLOW, FORT), leading to the fall of Memphis on June 6, 1862 Grant's VICKSBURG CAMPAIGN, at first stalled by the raids of Confederate cavalrymen Nathan B FORREST and Earl VAN DORN, was pressed to a victorious end in a brilliant movement in which the navy, represented by David D PORTER, also had a hand The Union now controlled the whole Mississippi, and the trans-Mississippi West was severed from the rest of the Confederacy The fighting in that area (see WILSON CREEK, PEA RIDGE, PRAIRIE GROVE, ARKANSAS POST) had held Missouri for the Union and led to the partial conquest of Arkansas, but after the fall of Vicksburg, the war here, except for the unsuccessful Union Red River expedition of Nathaniel P BANKS and a last desperate Confederate raid into Missouri by Sterling PRICE (both in 1864), was largely confined to guerrilla activity Back on the Georgia-Tennessee line in Sept , 1863, Bragg, done for the moment with retreating, severely jolted the Federals, who were saved from a complete rout by the magnificent stand of George H THOMAS, the Rock of Chickamauga (see CHATTANOOGA CAMPAIGN) Grant, newly appointed supreme commander in the West, hurried to the scene and with William T SHERMAN, Hooker, and Thomas's fearless troops drove Bragg back to Georgia (Nov 25) Since Knoxville, occupied in September, withstood Longstreet's siege (Nov - Dec), all E Tennessee, hotbed of Unionism, was now safely restored to the Union In March, 1864, Lincoln, long an admirer of Grant, made him commander in chief Leaving the West in Sherman's capable hands, Grant came east, took personal charge of Meade's Army of the Potomac, and engaged Lee in the WILDERNESS CAMPAIGN (May-June, 1864) Outnumbered but still spirited, the Army of Northern Virginia was slowly and painfully forced back towards Richmond, and in July the dogged Grant began the long siege of PETERSBURG Although Jubal A EARLY won at MONOCACY (July 8), giving Washington a fright, the Confederates were unable to repeat Jackson's successful diversion of 1862, and Philip H SHERIDAN, victorious in the grand manner at Cedar Creek (Oct 19), virtually ended Early's activities in the Shenandoah Valley For his part, Sherman, opposed first by the wily Joe Johnston and then by John B HOOD, won the ATLANTA CAMPAIGN (May-Sept , 1864) On the political front, a movement within the Republican party to shelve Lincoln had collapsed, and, with Andrew JOHNSON, his own choice for Vice President over the incumbent Hannibal HAMLIN, the President was renominated in June, 1864 The Democrats nominated McClellan, who still had a strong popular following, on an ambiguous peace platform (largely dictated by Clement L VALLANDIGHAM, leader of the COPPERHEADS), which the ex-general repudiated Even so Lincoln was easily reelected After the fall of Atlanta, which had contributed to Lincoln's victory, Sherman "bummers" had a lark in their destructive march through Georgia Hood had failed to draw him back by invading Union-held Tennessee, and after the battle of Franklin (Nov 30) Hood's army was almost completely annihilated by Thomas at Nashville (Dec 15–16, 1864) Sherman presented Lincoln with the Christmas gift of Savannah, Ga., and then moved N through the Carolinas Farragut's victory at Mobile Bay (Aug. 5, 1864) had effectively closed that port, and on Jan 15, 1865, Wilmington, N.C , was also cut off (see FISHER, FORT). After Sheridan's victory at FIVE FORKS (April 1), the Petersburg lines were breached and the Confederates evacuated Richmond (April 3) With his retreat blocked by Sheridan, the noble Lee, wisely giving up the futile contest, surrendered to Grant at APPOMATTOX COURTHOUSE on April 9, 1865 The surviving Confederate armies also yielded when they heard of Lee's capitulation.

The New Nation The long war was over, but for the victors the peace was marred by the assassination of Abraham Lincoln, the great statesman of the war The ex-Confederate states, after enduring the further unpleasantness of RECONSTRUCTION with its corruption and vindictiveness, were readmitted to the Union, which had been saved and in which slavery was now abolished The Civil War brought death to more Americans than did any other war, including the Second World War Photographs by Matthew B. BRADY and others reveal some of the horror behind the statistics The war cost untold billions and nourished rather than canceled the hatreds and intolerance which persisted for decades It established many of the patterns, especially a strong central government, which are now taken for granted in our national life As the most important single epoch in U S history up to that time and for a long time afterwards, it has continued to fascinate Americans and even foreigners, notably the British Virtually every battlefield, with its graves, is either a national or a state park Monuments commemorating Civil War figures and events are conspicuous in almost all sizable Northern towns and are unavoidable in the Upper South Unfortunately, most of the artistic creations it inspired are unworthy of their subjects The reams of fiction written about the Civil War are mostly of the romantic type There are, however, some realistic pictures of the war in Stephen Crane's *Red Badge of Courage* (1896) and Margaret Mitchell's *Gone with the Wind* (1936) and one outstanding work in verse—Stephen Vincent Benét's *John Brown's Body* (1928) The quantity of historical literature on the Civil War is staggering to contemplate, and there is no single, adequate bibliographical guide For a useful, brief bibliography, see J G Randall, *The Civil War and Reconstruction* (1937), the best short study of the period in all its complexities On the causes of, and events leading up to, the war, see A C Cole, *The Irrepressible Conflict, 1850–1865* ("History of American Life" series, Vol VII, 1934), G F Milton, *The Eve of Conflict* (1934), A O Craven, *The Coming of the Civil War* (1942), Allan Nevins, *Ordeal of the Union* (Vols I and II, 1947) The most valuable published sources on the war itself are U S War Dept , *The War of the Rebellion a Compilation of the Official Records of the Union and Confederate Armies* (4 series, 70 vols in 128 vols , 1880–1901) and U S Dept of the Navy, *Official Records of the Union and Confederate Navies in the War of the Rebellion* (2 series, 30 vols , 1894–1922) Standard, older works on the military phase are Comte de Paris, *History of the Civil War in America* (Eng tr , 4 vols , 1875–88), C C Buel and R U Johnson, ed , *Battles and Leaders of the Civil War* (4 vols , 1877), J C Ropes, *The Story of the Civil War* (2 vols , 1898–99, completed by W R Livermore, 2 vols , 1913), and Sir Frederick Maurice, *Statesmen and Soldiers of the Civil War* (1926) *R E Lee a Biography* (4 vols , 1934–35) and *Lee's Lieutenants* (3 vols , 1942–44), both by Douglas Southall Freeman, and *Lincoln Finds a General* (Vols I and II, 1949), by Kenneth P Williams, are definitive in their respective fields See also T L Livermore, *Numbers and Losses in the Civil War in America, 1861–1865* (1901), Gamaliel Bradford, *Union Portraits* (1916), J F Rhodes, *History of the Civil War, 1861–1865* (1917); J B McMaster, *A History of the People of the United States during Lincoln's Administration* (1927), E C Smith, *The Borderland in the Civil War* (1927), R S Henry, *The Story of the Confederacy* (1931, new and rev ed , 1936), C R Fish, *The American Civil War an Interpretation* (1937), J B Egan and A W Desmond, *The Civil War Its Photographic History* (1941) See also the appropriate articles for memoirs, biographies, and special works on the personalities, questions, and events of the Civil War

Civitali, Matteo (mät-tä'ō chēvētä'lē), 1436–1501, Italian sculptor and architect, born and worked in Lucca He was a leader in the early Renaissance He is represented in the churches of Lucca. His *Angel of the Annunciation* is in the Metropolitan Museum

Civitavecchia (chē'vētä-vĕk'kēä), city (pop 24,822), Latium, central Italy, on the Tyrrhenian Sea The harbor was favored by Trajan, and the city still is the chief port of Rome, it also handles traffic for the industrial area of Terni and is the main point for communications with Sardinia The arsenal was built by Bernini, and the powerful citadel by Bramante and Michelangelo

Cl, chemical symbol of the element CHLORINE

Clackmannan (klăkmă'nŭn), parish (pop. 2,585), county town of Clackmannanshire, Scotland, near the north bank of the Forth. It has a tower of the Bruce family and an old market cross.

Clackmannanshire (klăkmă'nŭnshĭr) or **Clackmannan**, county (55 sq. mi., 1931 pop. 31,948, 1948 estimated pop. 36,186), S Scotland, situated at the head of the Firth of Forth. Clackmannan is the county seat, but near-by ALLOA is of greater importance. Clackmannanshire is the smallest county of Scotland. The land is largely cultivated, oats being the chief crop. Some coal is mined. Manufactures include textiles, ale, and whisky. See T. C. Gordon, *The History of Clackmannan* (1936).

Clacton, urban district (1931 pop. 15,848, 1943 estimated pop. 25,000), Essex, England, SE of Colchester. It is a seaside resort. Remains of a 12th-century abbey are near by.

Claflin, Tennessee, 1845–1923, lecturer on woman's suffrage, sister of Victoria WOODHULL. She married Sir Francis Cook in 1885.

Claiborne, William (klā'bŭrn), c 1587–c 1677, Virginia colonist, b. Westmorland co., England. He came to Virginia in 1621 as official surveyor and then served as secretary of state (1626–37, 1652–60) of that colony. He traded with the Indians, explored toward the head of Chesapeake Bay, and established a fort and settlement on Kent Island in the Chesapeake. He opposed the grant of Maryland to Lord Baltimore, and after Baltimore's order (1634) for his arrest, Claiborne undertook armed resistance from his stronghold. Claiborne went (1637) to England to justify his conduct, but the issue was decided in favor of Lord Baltimore. In 1642 Claiborne was made treasurer of Virginia, and several years later, claiming the authority of Parliament, he invaded Maryland and drove out the governor, Leonard Calvert. He controlled Maryland for several years and was a member (1652–57) of its governing commission.

Claiborne, William Charles Coles, 1775–1817, governor of Louisiana, b. Sussex co., Va. After studying law, he began practice in Sullivan co., Tenn., and was appointed a judge of the state supreme court in 1796. As a Congressman (1797–1801) he supported Jefferson, and in 1801 the President made him governor of Mississippi Territory. In 1803 Claiborne was one of the commissioners appointed to receive Louisiana from France after the Louisiana Purchase, and he was governor (1804–12) of the newly organized Territory of Orleans. He had a difficult time. American government was not well received by the Creoles, and Claiborne had many quarrels with legislators and others. He was also criticized for his apparent approval of the questionable activities of Gen. James WILKINSON. However, when the Territory of Orleans was admitted to the Union in 1812 as the state of Louisiana, Claiborne was elected governor and served till 1816. In 1817 he was elected to the U.S. Senate but died before he could take his seat. See Dunbar Rowland, ed., *Official Letterbooks of W. C. C. Claiborne, 1801–1816* (6 vols., 1917).

Clair, René (ŭnā' klăr'), 1898–, French moving-picture director. His films include *Sous les toits de Paris*, *À nous la liberté*, *Le Million*, *Le Dernier Milliardaire*, *The Ghost Goes West*, and *The Southerner*. Clair's films are filled with sophisticated wit and fantastic satire.

Clairaut, Alexis Claude (ălĕksēs' klōd' klĕrō'), 1713–65, French mathematician. He assisted P. L. M. de Maupertuis in measuring (1736) a degree of an arc of a meridian in Lapland. He is noted for his work on differential equations and on curves and for formulating Clairaut's theorem dealing with geodesic lines on the surface of an ellipsoid.

Clairon, Mademoiselle (klărôN), 1723–1803, French actress, whose real name was Claire Josèphe Hippolyte Léris de la Tude. She began in opera, appearing first at the Académie royale de Musique in 1743, before she played at the Comédie Française. Here, as a protégée of Voltaire, she acted with great success in his tragedies and in Racine's *Phèdre* and was associated with the innovator Lekain in reforming artificial costuming and technique. See her reminiscences, *Mémoires d'Hippolyte Clairon et réflexions sur la déclamation théâtrale* (1799).

Clairton, city (pop. 16,381), SW Pa., on the Monongahela and SE of Pittsburgh, inc. as a borough 1903, as a city 1922. Its manufactures include glass, brick, steel, chemicals, and coke by-products. Peters Creek Burying Ground has many pioneer graves.

Clairvaux (klărvō'), former abbey, Aube dept., NE France. It was founded by St. BERNARD OF CLAIRVAUX (1115) and became the real center of the CISTERCIANS. The abbey was suppressed in the French Revolution. Clairvaux was much studied for the architecture of medieval abbeys until Napoleon established a prison here.

clairvoyance (klărvoi'ŭns) [Fr., =clear seeing], power to perceive, as though visually, objects or persons not discernible through the ordinary sense channels. The word is used in connection with TELEPATHY, SPIRITISM, and PSYCHICAL RESEARCH and sometimes, loosely, to include all types of supernormal perception, such as SECOND SIGHT, and prophetic "visions" and "dreams." Clairvoyance may occur in a supposedly normal state (second sight) or more generally in a trance induced by various agencies, such as drugs, fasting, illness, hyperesthesia, or CRYSTAL GAZING.

Clallam Indians (klă'lŭm), North American Indian tribe of Salishan linguistic stock. They occupied the south shore of Puget Sound, in the present Washington.

clam, bivalve mollusk with a tough muscular foot with which it burrows into sand or mud. The hinged valves of the shell are closed by two large muscles and are marked by concentric rings of growth. The shell is a secretion of the mantle or fold of skin which covers the body. Respiration is carried on by the mantle and gills. The cilia of the gills create a current which carries water containing oxygen and food in through one siphon and water with wastes out through the other. The hard or round clam found from the Gulf of St. Lawrence to Texas is widely used for food. It was named quahog by the American Indians, who used the purple portion inside the shell as WAMPUM. When young, this species of clam is known as the little neck or cherry stone. The common edible soft or long clam is found from the arctic to Cape Hatteras. The common razor clam is found in mud flats and shallow water from Labrador to W. Florida. Often used for bait is the surf or sea clam. The giant clam found near tropical islands in the Indian and Pacific oceans sometimes weighs 500 lb. The name clam is applied to some fresh-water mussels.

clambake, form of seashore PICNIC peculiar to the United States. The custom was originally derived from the Indians who lived near the New England coast. As a repast, a clambake consists of a quantity of clams baked on a bed of hot stones in a hole in the ground. Often the clams are covered by a layer of potatoes, Indian corn, or fish. Over the food to be baked is placed a thick covering of seaweed, or some substitute, to retain heat. The clambake, a survival of primitive cookery, is well suited to political rallies and other large public gatherings.

clan, social grouping based on the common, unilateral descent of its members. It provides a pattern of relationship within the larger tribal or community organization and includes a number of family groupings. It differs from the family in tracing descent exclusively through one parent, male or female. Within the clan, family relations are extended beyond biological lines, and among many tribes which are organized as clans, marriage to a member of the same clan, is either prohibited or discouraged. Mutual duties and obligations among clan members are observed for life. Clans are found among peoples of every continent. They are useful in carrying out the social functions of the FAMILY, the clan, a larger group with common obligations and relations, is a framework for putting the family ideals into social action, for attaining social solidarity.

Clanricarde, Ulick de Burgh, 5th **earl of** (u'lĭk du bûrg', klănrĭ'kurd), 1604–57, Catholic Irish nobleman. He assisted the lord deputy, James Butler, 12th earl of ORMONDE, in his attempt, during the Puritan Revolution, to unite Catholics and Protestant royalists and hold Ireland loyal to Charles I. When Ormonde left Ireland (1650), he named Clanricarde his deputy. The earl made peace with Oliver Cromwell (1652) at the request of Charles II.

Clanton, town (pop. 3,982), co. seat of Chilton co., central Ala., NW of Montgomery, in a farm area, inc. 1873. A textile mill is here, and power dams are on the near-by Coosa river.

clapboard, board used for the exterior finish of a wood-framed building and attached horizontally to the wood studs. The word, in its original and strict use, refers to a product of New England, boards of similar type made elsewhere are termed siding. Clapboards are particularly characteristic of the United States, having been steadily used since the earliest years of the colonial settlements. They vary in width, but average 6 to 8 in., and taper from ⅝ inch thickness at the butt end, which is laid downward, to ⅛ inch thickness at the top. Each clapboard overlaps the one below it, leaving about 4½ in. exposed to the weather. White pine is considered the best wood for clapboards, cedar, cypress, and spruce are also used.

Clapham (klăp'ŭm), residential district of Wandsworth metropolitan borough, SW London, England.

Clapperton, Hugh, 1788–1827, Scottish explorer. After serving with the British navy in the East Indies and in Canada, he made two journeys of exploration into Nigeria (1822–25, 1825–27). Accompanied by Richard Lander, he reached (1827) the Niger river. After Clapperton's death at Sokoto, Lander returned to the coast with Clapperton's records, which were published (1829) as *Journals of a Second Expedition into the Interior of Africa*.

Clare or **Clara, Saint,** 1193?–1253, Italian nun of Assisi, devoted from her youth to St. FRANCIS, to whom she took a vow of poverty. She led a life of great austerity. Her companions she formed into the Franciscan nuns or Poor Clares. She struggled a long time for the preservation of the primitive poverty of her order. Her feast: Aug. 12.

Clare, John, 1793–1864, English poet, called the English Burns. *Poems Descriptive of Rural Life* (1820) made him famous, but Clare, essentially a peasant, did not utilize his opportunities. Other volumes, including *The Village Minstrel* (1821) and *Rural Muse* (1835), showed talent but were not so well received. In 1837 he became insane. See his *Poems* (ed. by J. W. Tibble, 1935) and autobiographical *Sketches* (ed. by Edmund Blunden, 1931), biography by J. W. Tibble and Anne Tibble (1932).

Clare, John Fitzgibbon, 1st **earl of,** 1749–1802, Irish statesman. He was called to the bar in 1772, was appointed attorney general of Ireland in 1783, and was made lord chancellor in 1789. He opposed James Napper TANDY, initiated legislation to suppress the WHITEBOYS, and bitterly opposed Catholic Emancipation. He was one of the earliest advocates of the union of Great Britain and Ireland and was so violently hated by the Irish people that a mob broke up his funeral.

Clare, Richard de see PEMBROKE, RICHARD DE CLARE, 2D EARL OF.

Clare, maritime county (1,231 sq. mi., pop. 85,064), Munster prov., Ireland, between Galway Bay and the Shannon. The county town is Ennis. The surface is broken and hilly, with many bogs and lakes, and the coastline is especially rugged. Much of the land is completely barren. The chief river is the Fergus. Fishing and farming (sheep, cattle, pigs, poultry, and the cultivation of oats and potatoes) are the chief occupations. The population has declined steadily for the last hundred years. There are a number of round towers and other relics of ancient occupation. Once part of the Irish subkingdom of Thomond, the region came under the control of the Anglo-Norman family of Clare in the 13th cent.

Clare, city (pop. 1,844), N Mich., NW of Bay City and on the Tobacco river, inc. as a village 1879, as a city 1891. It is in an area of lakes and streams, dairy farms, and gas and oil wells.

Clare College see CAMBRIDGE UNIVERSITY.

Clare Island, 4 mi. long and up to 2 mi. wide, off W Ireland, in Co. Mayo, S of Achill and at the entrance to Clew Bay. A lighthouse is on the northeast coast. There are ruins of a 13th-century Carmelite abbey and of the 16th-century castle of Grana or Grace O'Malley, queen of the island.

Claremont 1 City (pop. 3,057), in San Jose township, S Calif., E of Los Angeles, inc. 1907. It is a packing and shipping point in a citrus-fruit region. CLAREMONT COLLEGE is here. 2 Town (pop. 12,144), SW N.H., on the Sugar river near its junction with the Connecticut and S of Lebanon, settled 1762, inc. 1764. Its water power, used from c 1790, helps produce the city's mining and milling machinery, textiles, paper, and shoes. The oldest Roman Catholic church in the state (begun 1823) is here, and in near-by West Claremont is Union Church, the state's oldest Episcopal church (begun 1773). Constance Fenimore Woolson was born in the town, and Albert Ball lived here.

Claremont College, at Claremont, Calif., nonsectarian, coeducational, chartered 1925 as Claremont Colleges, renamed 1944. The graduate school maintains a central library and museum and shares the joint activities of its associated colleges: Claremont Men's College (opened 1946), emphasizing business and public administration, Pomona College (coeducational, chartered 1887, opened 1888 by Congregationalists), and Scripps College (for women, chartered 1926, opened 1927), which pioneered with humanities courses. The students may interchange courses.

Claremore, city (pop. 4,134), co. seat of Rogers co., NE Okla., NE of Tulsa, settled in the late 19th cent. on the site of an Indian town, inc. as a town 1896 as a city 1908. Will Rogers was born near by and lived in Claremore, a memorial to him was dedicated in 1938. A U.S. Indian hospital and a state military academy are here. The site of a famous Indian battle (1817) is outside the city.

Clarence, George, duke of (klă'rŭns), 1449–78, son of Richard, duke of York. In defiance of his brother, Edward IV, Clarence married Isabella Neville and joined her father, Richard, earl of WARWICK, in rebellions against the king in 1469–70. He deserted this party in 1471, however, and was pardoned by the king. In 1478, exasperated by Clarence's continued factiousness, Edward had him arrested for treason and thrown into the Tower. Before sentence could be passed he was killed. Legend declares that he was drowned in a butt of malmsey wine. He is one of the prominent characters in Shakspere's *Richard III*.

Clarence, Lionel, duke of (lī'ŭnul), 1338–68, third son of EDWARD III of England, b. Antwerp. His marriage (1352) to Elizabeth de Burgh gained him the title and lands of the earl of Ulster. Governor of Ireland from 1361 to 1367, he presided at the assembly where the notorious Statute of Kilkenny was adopted, forbidding all dealings between the English in Ireland and the Irish. He died soon after his later marriage to Violante Visconti of Milan. His daughter, Philippa, married Edmund Mortimer, earl of March. Their granddaughter, Anne Mortimer, married Richard, earl of Cambridge (d. 1415), and their son, Richard, duke of

York, derived his claim to the throne through his descent from Lionel

Clarence, city (pop. 1,157), NE Mo , NE of Moberly; founded 1857. It is a grain-shipping point

Clarendon, Edward Hyde, 1st earl of (klă'rŭndŭn), 1609–74, English statesman and historian He entered Parliament in 1640 and there supported the impeachment of the king's powerful minister, Thomas Wentworth, earl of Strafford He believed in a constitutional monarchy, however, and aided Charles I by drafting a reply to the Grand Remonstrance and by attempting to secure money for him from Parliament At the end (1645) of the civil war he represented the king in negotiations Hyde followed Prince Charles (later Charles II) into exile in 1646 and was one of his chief advisers Pursuing Hyde's policy, Charles awaited the appearance of a strong and friendly faction in England and successfully negotiated his own restoration Hyde was created Baron Hyde in 1660 and earl of Clarendon in 1661 Also in 1660 his daughter Anne was married to James, duke of York (later James II). As lord chancellor (1660–67) he worked to obtain a lenient religious settlement for non-Anglicans Overborne in this by Parliament (he opposed the adoption of the Clarendon Code), unsuccessful in his diplomacy with Holland (see Dutch War 2), and unpopular with the licentious court, he was removed (1667) from office Although his impeachment failed, he fled England and lived the remainder of his life in exile As a statesman he was consistent and moderate, in sharp contrast to most of his contemporaries at court. His famed *History of the Rebellion* (3 vols , 1702–4), written partly from memory and partly from documents, is an indispensable account on the civil war See his autobiography (1759), biography by T H Lister (3 vols , 1838), study by C. H Firth (1909)

Clarendon, George William Frederick Villiers, 4th earl of, 1800–1870, English statesman His numerous early missions abroad included intervention (1833–35) in the Spanish civil wars, and he was (1839–41) lord privy seal As lord lieutenant of Ireland (1847–52), he made efforts to ease disorder and distress during the famine He was foreign secretary (1853–58) during the Crimean War, kept together the French Alliance with England, and was one of the negotiators of the Peace of Paris (1856) He was twice again foreign secretary (1865–66, 1868–70), and in his second administration the Alabama claims of the United States were settled See biography by H. E. Maxwell (2 vols., 1913); George Villiers, *Vanished Victorian* (1938)

Clarendon. 1 Shipping city (pop 2,551), co seat of Monroe co , E Ark , at the junction of the White and Cache rivers, in a rich farm and fishing area, settled c 1819 A state game refuge is near by 2 City (pop 2,431), co seat of Donley co , extreme N Texas, ESE of Amarillo in the Panhandle, inc 1901. Settled by ministers and intellectuals in the golden days of cattle ranching in the 1870s, it was known to the cowboys as "Saints' Roost " In 1887 it was moved to the railroad and now is the shipping and processing point for the cattle, grain, and cotton of the area There is a junior college

Clarendon, Constitutions of, 16 articles signed in 1164 at Clarendon Park, Wiltshire, England, by the Great Council of Henry II They are important in the development of English law because they extended the jurisdiction of the king's (the civil) courts at the expense of the church courts Henry claimed that the constitutions were based on the customs of the kingdom, especially those established in the reign of Henry I Thomas à Becket, archbishop of Canterbury, agreed to the constitutions under pressure, but later with papal permission repudiated them, and his quarrel with Henry ended only with Becket's murder in 1170

Clarendon Code, English statutes adopted by the Cavalier Parliament between 1661 and 1665 to strengthen the position of the Established Church There were four The Corporation Act (1661) required all officers of incorporated municipalities to take the sacrament according to the rites of the Church of England and to abjure the Solemn League and Covenant (Presbyterian) The Act of Uniformity (1662) required all ministers in England and Wales to use and subscribe to the Book of Common Prayer; over 2,000 ministers were forced to resign by this act The Conventicle Act (1664) forbade the assembling of five or more persons for religious worship other than Anglican. The Five-Mile Act (1665) forbade any nonconforming preacher or teacher to come within 5 mi of a corporate town or any place where he had served as minister. These laws, named after Edward Hyde, earl of Clarendon, chief minister of Charles II at the time of their passage, decreased the following of numerous dissenting sects, especially the Presbyterians Clarendon himself opposed their enactment, but after their passage labored for their enforcement. Charles II, to court popularity with dissenters and to ease the position of the Catholics (with whom he was in sympathy), attempted to interfere with the operation of these laws by his unsuccessful Declaration of Indulgences in 1662 and 1672. As a political device to weaken the Whigs, the Clarendon Code was largely superseded by the Test Act of 1673, although some of the statutes, in modified form, remained in force for some time.

Clarendon Hills, village (pop. 1,281), NE Ill., western suburb of Chicago, inc. 1924.

Clarens (klärĕ'), village, Switzerland, on the Lake of Geneva near Montreux It is a resort and was a residence of Byron, its vicinity is described in Rousseau's *Nouvelle Héloïse*

Claresholm, town (pop. 1,306), S Alta., S of Calgary and N of Macleod It is in a mixed farming and ranching district

claret see wines.

Claretie, Jules (shül' klärtē'), pseud of **Arsène Arnaud** (ärsĕn' ärnō'), 1840–1913, French journalist and author A correspondent in the Franco-Prussian War, he was known for his excellence of reporting In 1885 he became director of the Comédie Française and in 1888 was elected to the French Academy His novels *Un Assassin* (1866) and *Monsieur le ministre* (1881, Eng tr , 1882) were extremely successful, as were his plays of the Revolution, *Les Muscadins* (1874), *Le Régiment de Champagne* (1877), and *Les Mirabeau* (1879). It is his history and criticism, however, which are particularly outstanding, especially *Histoire de la révolution de 1870–1871* (1875–76) and *La Vie moderne au théâtre* (1869–75)

Clarinda (klurĭn'dù), city (pop 4,905), co seat of Page co , SW Iowa, on the Middle Nodaway river near the Mo line, inc 1866 Dairy products are made here It is the seat of a state hospital for the insane

clarinet (klărunĕt'), in music, wind instrument of cylindrical bore employing a single beating reed The clarinet family comprises all single-reed instruments, including the saxophone and several obsolete instruments A simple clarinet was made of cane by the ancient Egyptians The predecessor of the modern clarinet was the French chalumeau, parts for which appear in the opera scores of Gluck and Rameau Keys were added by J C Denner of Nuremberg in 1690, and his son, in 1720, made other improvements In 1732 it was called the clarinet Mozart made extensive use of it Improvements in the 19th cent , employing the principles of Theobald Boehm, were slow to gain acceptance because additional keys necessitated new systems of fingering The clarinet in B flat is the standard orchestral one of today, and the gentler one in A is often used in chamber music, the shrillier ones in C and E flat have been used mainly in military bands Various others have had limited use in certain periods All except the one in C are transposing instruments See Adam Carse, *Musical Wind Instruments* (1939)

Clarion. 1 City (pop 2,971), co seat of Wright co., N central Iowa, SW of Mason City, inc 1881. 2 Borough (pop 3,798), co. seat of Clarion co , W Pa , on the Clarion river (a tributary of the Allegheny) and SE of Franklin, laid out 1840, inc 1841 The area yields natural gas, bituminous coal, and clay A state teachers college is here

Clark, Abraham, 1726–94, American patriot, signer of the Declaration of Independence, b Elizabethtown (now Elizabeth), N J After holding several local offices, Clark became, at the beginning of the American Revolution, a member and later secretary of the New Jersey committee of safety He was a member (1775) of the New Jersey provincial congress, which appointed him (1776) delegate to the Continental Congress Clark served three further terms in Congress, and in the interim periods he served in the New Jersey legislature

Clark, Alvan, 1804–87, American astronomer and maker of astronomical lenses, b Ashfield, Mass The firm of Alvan Clark & Sons was established at Cambridgeport, Mass , it became famous as the manufactory of the largest and finest telescope lenses The first achromatic lenses made in the United States were produced there Clark's son, **Alvan Graham Clark,** 1832–97, b Fall River, Mass , became a partner in the business Among lenses made under his direction are the 26-inch lens at the U S Naval Observatory, Washington, D C , the 36-inch lens at Lick Observatory, and the 40-inch lens at Yerkes Observatory The younger Clark discovered a number of double stars as well as the companion star of Sirius

Clark, Austin Hobart, 1880–, American biologist, b. Wellesley, Mass., grad. Harvard, 1903 He made various scientific expeditions to Venezuela (1901), to the Lesser Antilles (1903–5), and elsewhere and conducted research in marine biology, ornithology, entomology, and oceanography. His works include *Animals of Land and Sea* (1925), *Nature Narratives* (2 vols., 1929–31), and *The New Evolution* (1930)

Clark, Bennett Champ, 1890–, U S Senator from Missouri (1933–45), b Bowling Green, Mo , grad Univ. of Missouri, 1913, LL.B. George Washington Univ., 1914, son of Champ Clark. He wrote a biography of John Quincy Adams (1932). In 1945 he became a justice of the Federal court of appeals in the District of Columbia.

Clark, Champ, 1850–1921, American legislator, b. near Lawrenceburg, Ky., educated at the Cincinnati Law School. His full name was James Beauchamp Clark. After a career as lawyer, newspaper editor, and politician in Missouri, he was a member of the House of Representatives (1893–95, 1897–1921). In 1907 he became Democratic leader in the House, and in 1910 he led the successful fight to curtail the powers of Joseph G Cannon as speaker He was speaker himself (1911–19) in the busy years of Woodrow Wilson's first administration and in the First World War. In 1912 he was a leading candidate for the Democratic nomination for President but lost out after W J Bryan shifted his support to Wilson. See his autobiographical *My Quarter Century of American Politics* (1920)

Clark, Charles Edgar, 1843–1922, U S admiral, b Bradford, Vt , grad Annapolis, 1863 As an ensign he took part in David G Farragut's victory at Mobile Bay in the Civil War In 1898 as commander of the *Oregon*, he received (March 19) the order to join the Atlantic fleet and arrived off Florida (May 24) after a 14,000-mile voyage around Cape Horn in time to take part in the blockade of Santiago de Cuba and the defeat and destruction of Admiral Cervera's Spanish fleet He was promoted rear admiral in 1902 and retired in 1905. See his autobiographical *My Fifty Years in the Navy* (1917)

Clark, Charles Heber, 1847–1915, American author, b Berlin, Md A successful journalist in Philadelphia, he wrote books under the pen name Max Adeler His first and most popular book was *Out of the Hurly Burly* (1874), farcical stories of suburban life He wrote several serious novels, among them *The Quakeress* (1905).

Clark, Francis Edward, 1851–1927, American Congregational clergyman, founder of Christian Endeavor. He was born of American parentage in Aylmer, Que , and was graduated from Dartmouth College in 1873 While serving as pastor of the Williston Congregational Church, Portland, Maine, he organized (1881) the first Young People's Society of Christian Endeavor He was a lifelong leader in this movement

Clark, George Rogers, 1752–1818, American Revolutionary general, conqueror of the Old Northwest, b near Charlottesville, Va , brother of William Clark. A surveyor, he was interested in Western lands, served (1774) in Lord Dunmore's War, and later went to Kentucky for the Ohio Company In 1776, after the Revolution was well begun, he went as representative of the settlers and secured Virginia's assertion of sovereignty over the region and the framework of local government He returned in time to repel British and Indian attacks on Harrodsburg, Ky , and other posts In 1778 he made plans for aggressive action against the British in the Old Northwest and, going to Virginia, persuaded Gov Patrick Henry and his council to send an expedition At its head, he swept into the Illinois country and took the British-held settlements of Kaskaskia, Cahokia, and Vincennes The British under Gen Henry Hamilton advanced from Detroit and retook Vincennes after Clark had left Winter and Ohio floods halted Hamilton there, but Clark and his men, defying cruel conditions of cold and hardship, braved the flooded bottom lands to come back With the heroic aid of Francis Vigo, François Bosseron, and Father Gibault, he struck at the British fort and surprised and captured Hamilton and the garrison in Feb , 1779 After this, the greatest of his exploits, Clark hoped to capture Detroit, but adequate supplies never came from Virginia to the fort he had built (Fort Nelson, where Louisville now stands), and he remained inactive In 1780 he blocked a British plan to take St Louis and in the present Ohio defeated a party of Shawnee Two years later, after the British and Indians had disastrously defeated the Kentuckians in the battle of Blue Licks, Clark, who had not taken part in the battle, led another expedition northward against the Indians and again demonstrated control of the region His services had been rewarded by the rank of brigadier general in the Virginia militia, and he was made an Indian commissioner In 1786 he led another expedition against the Indians in Ohio. His own narrative of the capture of Vincennes is in Milo M Quaife, ed., *The Capture of Old Vincennes* (1927). See biography by James A James (1928).

Clark, Henry James, 1826–73, American botanist and zoologist, b. Easton, Mass., grad Univ. of the City of New York (now New York Univ), 1848 He studied under Asa Gray at Harvard and there met Louis Agassiz, whom he assisted in preparing parts of his *Contributions to the Natural History of the United States of America* (4 vols , 1857–62) He taught zoology at Harvard (1860–65). Clark contributed to the cell theory and to knowledge of the histology of the Porifera and Coelenterata.

Clark, John, 1766–1832, governor of Georgia (1819–22), b. Edgecomb co., N C. As a boy he served with his father, Elijah Clarke, in the American Revolution and afterwards won distinction as an Indian fighter He became the hero and leader of the democratic frontiersmen of Georgia in their political struggle with the planters of the coast and the wealthy farmers of the uplands, led by George M. Troup and William H. Crawford.

Clark, John Bates, 1847–1938, American economist, b. Providence, R.I., Ph D. Amherst, 1890, studied in Germany. He was on the Columbia Univ. faculty from 1895 to 1923. He criticized, extended, and refined many concepts in the tradition of classical economics and was the chief exponent of marginal utility in the United States In his most distinguished work, *The Distribution of Wealth* (1899), he attempted to find laws controlling the distribution of wealth in an unchanging or static (as opposed to dynamic) society He was also concerned with the ethical bases of economics His influence was enormous in his time His other writings include *The Philosophy of Wealth* (1885) and *The Essentials of Economic Theory* (1907) See *John Bates Clark a Memorial* (1938), published by his children His son, **John Maurice Clark,** 1884–, b Northampton, Mass , is also an economist A graduate of Amherst (1905), he received his Ph D (1910) from Columbia and has been professor of economics there since 1926 He has also been a consultant for several government agencies Departing from the orthodox economics of his father, J M Clark has sought to widen the scope of the discipline by considering the psychological and social factors of economic life and analysing the institutional background In *Studies in the Economics of Overhead Costs* (1923), *Social Control of Business* (1926, 2d ed , 1939), and *Strategic Factors in Business Cycles* (1934) he has made original contributions Among his other works are *Preface to Social Economics* (1937) and *Alternative to Serfdom* (1948), in the latter he advocates social and economic planning

Clark, Jonas Gilman, 1815–1900, founder of Clark Univ , b Hubbardston, Mass After a long career in business and finance, he became interested in higher education, making extended trips of observation abroad and interviewing American college presidents In 1880 he moved to Worcester, Mass , and in 1887 announced the founding there of Clark Univ with an endowment of $1 000,000, to which, by will, was added his residuary estate for the establishment of Clark College, the undergraduate school

Clark, Joshua Reuben, Jr., 1871–, American diplomat, b Grantsville, Utah, grad Columbia School of Law, 1906 J Reuben Clark rose in the service in the Dept of State and was (1928–29) Undersecretary of State before serving (1930–33) as ambassador to Mexico He gave a nonintervention interpretation to the Monroe Doctrine and helped to smooth out troubles between the United States and Mexico

Clark, Josiah Latimer, 1822–98, English engineer and electrician He is known for his standard Clark cell While chief engineer of the Electric and International Telegraph Company he made a special study of electrical measurements With his partner, Sir Charles Tilston Bright, he invented an insulated covering for submarine cables and later assisted in laying the first S Atlantic cable, from Pernambuco to Senegal He invented a pneumatic dispatch tube and a stereoscopic single-lens camera and was a leader in the movement for the systematization of electrical standards He wrote *An Elementary Treatise on Electrical Measurement* (1868), *Dictionary of Metric Measures* (1891), and (with Robert Sabine) *Electrical Tables and Formulae* (1871) His brother, Edwin Clark (1814–94), invented the Clark hydraulic-lift graving dock

Clark, Lewis Gaylord, 1808–73, American editor, b near Syracuse, N Y , grad Onondaga Academy He edited (1834–60) the *Knickerbocker Magazine*, and made it the leading literary publication of its day He wrote *Knickerbocker Sketch-Book* (1845) and *Knick-Knacks from an Editor's Table* (1852) See *The Letters of Willis Gaylord Clark and Lewis Gaylord Clark* (ed by L W Dunlop, 1940).

Clark, Mark Wayne, 1896–, American general, b Madison Barracks, N Y , grad West Point, 1917 A captain in the First World War, he rose to become (1940) army ground forces chief of staff During the Second World War, he commanded (1943–44) the U S 5th Army in North Africa and in Italy, became (1944) Allied commander in Italy, and was promoted (1945) full general He served (1945–47) as head of the U S occupation forces in Austria

Clark, Tom Campbell, 1899–, Associate Justice of the U S. Supreme Court (appointed Aug , 1949), b Dallas, Texas, grad Univ of Texas (B A , 1921, LL B , 1922) A protégé of Tom Connally, Clark became (1937) special assistant to the Attorney General, coordinated (1942) war relocation of the West Coast Japanese, and headed the antitrust division (1943) and the criminal division (1945) of the Dept of Justice As Attorney General (1945–49) he was noted for suits against trusts and disloyal groups. He succeeded Frank Murphy on the Supreme Court bench

Clark, Walter, 1846–1924, American jurist, b. Halifax co , N C., grad Univ. of North Carolina, 1864 He entered the Confederate army at 15 and was commended for gallantry at Antietam and Fredericksburg. After the war, Clark was graduated (1867) from the Columbia School of Law, was appointed judge of the superior court (1885) and later (1889) of the supreme court of North Carolina. He gained a national reputation for his independent decisions He supported many progressive causes in addresses and articles Clark prepared an *Annotated Code of Civil Procedure* and *Supreme Court Reports* (164 annotated volumes), edited 16 volumes of the *North Carolina Records*, and did other writing and translating See biography by Aubrey L Brooks (1944).

Clark, William, 1770–1838, American explorer, one of the leaders of the LEWIS AND CLARK EXPEDITION, b Caroline co , Va , brother of George Rogers Clark He was an army officer (1792–96), serving in a number of Indian engagements In 1803 he was chosen by his friend Meriwether Lewis to accompany the overland expedition to the Pacific He contributed greatly to the success of the expedition through his interest in natural history and through his journals and maps, which provided valuable records In 1807, after the expedition had returned, he was appointed superintendent of Indian affairs, with headquarters at St Louis, and from 1813 to 1821 he was governor of Missouri Territory In 1814, during the War of 1812, he led an expedition against the British and Indians in the upper Mississippi valley, upon reaching Prairie du Chien, Wis , he built Fort Shelby Later, with Auguste Chouteau, he negotiated a number of important treaties with the Indians and aided in suppressing the Winnebago and Black Hawk uprisings He was again superintendent of Indian affairs from 1821 until his death

Clark, William Andrews, 1839–1925, U S Senator and copper magnate, b Fayette co , Pa He moved to Montana, where he amassed a large fortune from the development of the copper mines He wielded immense power and had a long feud with Marcus DALY for control of the copper deposits and of political forces—virtually of Montana Clark had political ambitions and was president of the Montana constitutional conventions of 1884 and 1889 but was defeated in the race of 1888 to be territorial delegate to Congress Daly blocked Clark's moves skillfully, and though Clark claimed election as one of Montana's first Senators, the Senate instead seated his Republican opponent In 1893 the state legislature was deadlocked, and Montana was left with only one Senator In 1899 there was another deadlock, and Clark was declared elected only to resign in face of a Senate investigation and a pending resolution to void his election In 1901 he was duly elected and this time served his term and retired He tied the exploitation of copper to Eastern capital, winning over such brilliant rivals as F Augustus Heinze, and was powerful in copper development in Arizona as well as in Montana

Clark, William Smith, 1826–86, American educator, b Ashfield, Mass , grad Amherst, 1848, and studied chemistry and botany at Gottingen (Ph D , 1852) He taught at Amherst until the Civil War, fought in many battles, and emerged from the struggle a brigadier general He was elected to the Massachusetts General Court in 1864, 1865, and 1867 and while there secured the location at Amherst of the Massachusetts Agricultural College (which is the present-day Univ of Massachusetts) He was president of this institution from 1867 to 1879, helped organize its work, and taught botany and horticulture He went to Japan (1876–77) to establish the Imperial College of Agriculture at Sapporo

Clark, Willis Gaylord, 1808–41, American editor and poet, twin brother of Lewis Gaylord CLARK At one time an editor of the *New-York Mirror*, he became editor and owner of the Philadelphia *Gazette* His *Literary Remains* (1844) includes the sketches and verse which he contributed to the New York *Knickerbocker Magazine*

Clark, city (pop 1,291), co seat of Clark co , E S Dak , W of Watertown, founded 1882 It is the trade center of a grain and stock-raising area.

Clark College, at Atlanta, Ga , Negro, Methodist, coeducational, opened 1870, chartered 1877, named for a donor It cooperates with the Atlanta Univ System

Clarkdale, unincorporated town (pop 1,684), central Ariz , on the Verde river and NE of Prescott It was founded to smelt (after 1915) copper mined at Jerome Many Verde valley Indian ruins are near by, including those of Tuzigoot

Clarke, Sir Caspar Purdon, 1846–1911, English art connoisseur and architect, studied in France and England He made the plans for remodeling the houses of Parliament and served under the royal commission at the Paris exposition of 1878 He became director of South Kensington Museum, London, and while in India collecting art works he supervised plans for the Colonial and Indian Exhibition of 1885 He was director of the Metropolitan Museum, New York, 1905–10

Clarke, Charles Cowden, 1787–1877, English schoolmaster, friend of Keats (who was a pupil of Clarke's father) and of other eminent men of letters His lectures on Shakspere were published as *Shakespeare Characters* (1863). With his wife, **Mary Victoria (Novello) Cowden Clarke,** 1809–98, he wrote *Recollections of Writers* (1878) and *The Shakespeare Key* (1879) Mrs Clarke compiled *The Complete Concordance to Shakespeare* (1844–45) See R. D Altick, *The Cowden Clarkes* (1949)

Clarke, Edward Daniel, 1769–1822, English traveler and mineralogist He was appointed professor of mineralogy (1808) and librarian (1817) at Cambridge He collected valuable relics in Egypt and the Near East, writing accounts of his finds and of his journeys See biography by Bishop William Otter (1825)

Clarke, Helen Archibald, 1860–1926, American author, editor, and musician, b Philadelphia, grad Music School, Univ of Pennsylvania, 1883 She edited the works of Robert and Elizabeth Barrett Browning and the First Folio edition of Shakspere and with Charlotte Porter founded the magazine *Poet Lore* (1888) Her works include *Browning's Italy* (1907), *The Poet's New England* (1911), and *Browning and His Century* (1912)

Clarke, James Freeman, 1810–88, American Unitarian clergyman and author, b Hanover, N.H , grad Harvard, 1829, and Harvard Divinity School, 1833 While in charge of the Unitarian church in Louisville, Ky , 1833–40, he was for three years editor of the *Western Messenger* He helped found the Church of the Disciples in Boston in 1841 and was its pastor until 1888, except the years 1850–54, and was a nonresident professor in the Harvard Divinity School, 1867–71 The Transcendental Club, with such members as Bronson Alcott and Emerson, included Clarke, and he was active in the antislavery, woman-suffrage, and other reform movements Among his books, influential in their day, were *Ten Great Religions* (2 vols , 1871–83), *Orthodoxy Its Truths and Errors* (1866), and *Essentials and Non-Essentials in Religion* (1878). See biography by E E Hale (1891), which includes a fragmentary autobiography

Clarke, John, 1609–76, one of the founders of Rhode Island, b Westhorpe, Suffolk, England He came to Boston in 1637 Sympathetic to Anne HUTCHINSON in the antinomian controversy, he joined her and William CODDINGTON in founding Portsmouth on Aquidneck (Rhode Island) in 1638 Clarke supported Coddington in his contest with the Hutchinson-Gorton party and in 1639 withdrew with him to found Newport He was both physician and Baptist pastor at Newport. Unlike Coddington, Clarke favored the union in 1647 of the Aquidneck settlements with Providence and Warwick and in 1651 went with Roger WILLIAMS to England There they succeeded in having revoked the Coddington commission Clarke remained in England as colonial agent and was the most influential figure in securing from Charles II the liberal charter of 1663 On his return he served (1664–69) in the general assembly and was thrice deputy governor His *Ill Newes from New England* (1652) was an arraignment of Massachusetts authorities for their hostility to religious liberty

Clarke, John Hessin, 1857–1945, American jurist and writer on international affairs, b Lisbon, Ohio, grad Western Reserve Univ (B A , 1877, M A , 1880) A lawyer in Lisbon, then in Youngstown then in Cleveland, he associated himself with the reform group around Tom L JOHNSON and in 1893 was the reform candidate unsuccessfully opposing Mark Hanna for the U S Senate He was a Federal judge in Ohio before he was appointed (1916) an Associate Justice of the Supreme Court by President Wilson He resigned to devote himself to the cause of world peace and was a strong advocate of U S entrance into the League of Nations He wrote *America and World Peace* (1925)

Clarke, John Mason, 1857–1925, American paleontologist, b Canandaigua, N Y , grad Amherst, 1877 He studied abroad, taught at Smith (1881–84), and was (from 1894) professor of geology at Rensselaer Polytechnic Institute He was associated with the paleontological and geological surveys of New York state from 1886, succeeding James Hall in 1898, and from 1904 was state geologist and director of the state museum at Albany He was an authority on the Devonian period and wrote many books and papers on geology and paleontology

Clarke, Marcus Andrew Hislop, 1846–81, Australian author, b London He emigrated to Australia in 1863 He wrote a number of plays and novels, including that classic of Australian fiction, *For the Term of His Natural Life* (London, 1874), a somber and powerful story of life in a penal settlement.

Clarke, Mary Victoria (Novello) Cowden: see CLARKE, CHARLES COWDEN

Clarke, Richard W . see DEADWOOD DICK

Clarke, Samuel, 1675 1729, English philosopher and divine He held various rectorships, was chaplain in ordinary to Queen Anne, translated Greek and Latin classics, and wrote on scientific, philosophical, and religious subjects He supported the theories of Newton and argued with Leibniz in defense of the existence of absolute space Clarke maintained that ethical law is as constant as mathematical law His published works include many translations, lectures, sermons, and commentaries. His treatise *The Scripture Doctrine of Unity* appeared in 1712 The Leibniz correspondence was published in 1717.

Clarke, Thomas Shields, 1860–1920, American painter and sculptor, b Pittsburgh, studied at the Art Students League of New York and in Paris and Italy He painted *A Fool's Fool* (Pa Acad of the Fine Arts) and *Night Market in Morocco* (Philadelphia Art Club) His sculptures include *The Cider Press,* Golden Gate Park, San Francisco, the caryatids of the *Four Seasons* on the Appellate Courthouse, New York, and *Alma Mater,* Princeton Univ

Clarke, Walter, c 1638–1714, colonial governor of Rhode Island, b Newport, R I He was deputy governor (1679–86, 1700–1714) and was three times governor (1676–77, 1686, 1696–98) of Rhode Island He is chiefly remembered for his refusal to surrender the Rhode Island charter upon the demand of Sir Edmund Andros

Clarke, William Branwhite, 1798–1878, English geologist and clergyman He made 15 geological trips to the European continent before going, in 1839, to New South Wales, where he had a church for 25 years He discovered gold, tin, and diamonds and developed the coal fields in Australia

Clarke College see DUBUQUE, Iowa.

Clark Fork [for William Clark], river, c 360 mi long, part of the Columbia river system, rising in SW Montana near Butte and flowing N to Deer Lodge and then NW past Missoula and on to Pend Oreille Lake in the Idaho Panhandle The PEND OREILLE river, which flows westward from the lake, is sometimes called a continuation of Clark Fork The early headwater near Butte is Silver Bow Creek, and parts of its course are also called Hell Gate and Missoula Its chief tributary is the Bitterroot

Clarksburg. 1 Textile town (pop 1,317), NW Mass, near the Vt line, settled 1769, inc 1798 Briggsville is the population center 2 City (pop 30,579), co seat of HARRISON co, N W Va, SSE of Wheeling at the confluence of Elk Creek and the West Fork of the Monongahela, chartered 1785 It is an industrial city producing glass, toy marbles, chemicals, tin plate, food products, and building blocks and is the trading center for an area of coal mines, oil and gas fields, and grazing lands It was an important Union supply base during the Civil War Stonewall Jackson was born here

Clarksdale, city (pop 12,168), co seat of Coahoma co, NW Miss, on the Sunflower and SSE of Memphis, Tenn, in a rich cotton area, settled 1848 on the site of an Indian fortification, inc 1882 It has a notable public library and holds an annual cotton festival

Clarkson, Thomas, 1760–1846, English abolitionist He devoted most of his life to agitating against slavery and the slave trade, doing a great amount of investigation With William WILBERFORCE, he shares the chief credit for the act of 1807 abolishing British slave trade His best-known books are *History of the Rise, Progress, and Accomplishment of the Abolition of the African Slave Trade by the British Parliament* (2 vols, 1808) and *Memoirs of the Private and Public Life of William Penn* (2 vols, 1813) See E L Griggs, *Thomas Clarkson, the Friend of Slaves* (1936)

Clarkson College of Technology see POTSDAM, N Y.

Clarks Summit, residential borough (pop 2,691), NE Pa, NW of Scranton, settled 1799, inc 1911

Clarkston, city (pop 3,116), SE Wash, on the Snake river at the Idaho border, in a grain, fruit, and livestock area, inc 1902

Clarksville. 1 City (pop 3,118), co seat of Johnson co, NW Ark, near the Arkansas river E of Fort Smith, in a region producing peaches, coal, and natural gas The College of the Ozarks (Presbyterian, coeducational, 1891) is here 2 Town (pop 2,386), S Ind, on the Ohio and near Louisville, Ky, laid out 1783 3 Town (pop 1,240), NE Iowa, on the Shell Rock River and NW of Waterloo, inc 1874. Heery Woods State Park is near 4 City (pop. 11,831), co seat of Montgomery co, N Tenn, on the Cumberland at the mouth of the Red River and NW of Nashville, platted 1784. It is an important dark-tobacco center, other products include flour and rubber Austin Peay State College and an experiment station of the Univ of Tennessee College of Agriculture are here Near by is Dunbar Cave. 5 City (pop 4,095), co seat of Red River co., E Texas, NE of Dallas, settled 1828, inc 1837 The area has blackland farms, livestock raising, and lumbering

Clark University, at Worcester, Mass; nonsectarian, coeducational, chartered 1887, opened 1889 (see CLARK, JONAS GILMAN) Under G Stanley Hall, the first president, it became one of the pioneer graduate schools, specializing in education and psychology It now has a school of geography and the undergraduate Clark College

clary: see SAGE

classicism, in literature and art, originally the tendency to look to the cultures of Greece and Rome for models of balance, proportion, elegance, and simplicity As principles were derived from the rules of the ancients and their works of art, classicism came to mean adherence to ancient academic canons, as, for instance, in 17th-century French tragedy, where Aristotle's *Poetics* furnished rules for playwrights and critics alike. In a wider application of the term, classicism means clearness, elegance, symmetry and repose, produced by attention to traditional and recognized forms In music it is objectivity of conception, emphasis on balance of structure, and absence of violent passions The late 18th cent is the modern classical period in music, in which the so-called Viennese classicists—Haydn, Mozart, Beethoven, and, in some respects, Schubert—were the leading composers Classic qualities exist in the works of Bach and Handel and may be found side by side with romanticism in every age Incidentally, musical use is a good example of the loose usage of *popular* as opposed to *classical* The term *classicism* is often applied to the purely literary aspects of HUMANISM An important extreme form of classicism was the Ciceronianism of 15th- and 16th-century Europe In French literature, Ronsard and others of the PLÉIADE attempted to write on classical lines Boileau-Despréaux was the critical genius of French classicism, and Racine and Corneille its principal poets In Germany, Lessing and Winckelmann advocated classic principles in art, but the stream of classicism was deflected by STURM UND DRANG until the years at the end of the 18th cent when Goethe and Schiller produced great classic drama In England the tendencies of 18th-century writers such as Pope and Dryden is called NEOCLASSICISM In 20th-century England and America there has been a renewal of interest in Greek literature, and classical models have been somewhat revived in free verse Classicism is to be contrasted with ROMANTICISM, for they are fundamentally different, but romanticism is also more than a reaction against another school See CHINESE LITERATURE, CLASSIC REVIVAL, articles on literature of European nations, such as FRENCH LITERATURE, those on art, such as RENAISSANCE ART, and RENAISSANCE See Gilbert Highet, *The Classical Tradition* (1949)

classic revival, widely diffused phase of taste (known as neoclassic) which influenced architecture and the arts in Europe and the United States during the last years of the 18th and the first half of the 19th cent The era was characterized by enthusiasm for classical antiquity and for archaeological knowledge, stimulated by the excavations of Roman remains at Pompeii and Herculaneum and by the commencement of archaeological investigation in Greece by James Stuart and Nicholas Revett in 1751 The results were embodied in their joint work, *Antiquities of Athens,* of which the first volume (1762) is considered to have been more responsible than any other single factor for a changed direction in taste Stuart's garden temple in Greek Doric style at Hagley, England, was the first example of Greek design in Western Europe, but the utilizing of Greek material was delayed until the latter part of the revival, and the earlier phase confined itself to Roman models In France the imitation of ancient Rome predominated in the crystallizing of the Empire style sponsored by Napoleon In the United States, after the Revolution, this same spirit served in the formation of a style for public buildings The Palladian system of design lost popularity, and Thomas Jefferson's design for the Virginia state capitol (1785) at Richmond marks the return to the monumental Roman temple for inspiration The Church of the Madeleine, Paris (1804), is the first of the Roman temple reproductions in Europe In America the Greek phase, known as neo-Greco Greek revival, achieved its first expression, and an exceedingly influential one, in the Bank of Pennsylvania, Philadelphia (1799), by Benjamin H Latrobe, designed to imitate a Greek Ionic temple The Roman and the Greek aspects of the classic revival eventually allied themselves in a Greco-Roman form, bringing the entire movement to a height of popularity c 1820, the Greek forms attained their chief diffusion after this date and until c 1850. The influence of the revival was felt everywhere in Europe, and particularly in Great Britain But in no country did it dominate as in the United States, where classic colonnades were appended to state capitols and to modest farm houses throughout the land After the Civil War its dry and literal later phase was extinguished by the romanticist styles of the Victorian period Among the important buildings of the American classic revival are the Washington monument, Baltimore (1815), by Robert Mills, Bank of the United States, Philadelphia (1819–24), by B H Latrobe, campus buildings, Univ of Virginia (1817–26), by Thomas JEFFERSON, Merchants' Exchange, Philadelphia (1834), by William Strickland, main building, Girard College, Philadelphia (1833–47), by T. U. Walter, Subtreasury, New York (1834), by Town and Davis, and dome and wings of the Capitol at Washington (1851–65), by T. U Walter See Talbot Hamlin, *Greek Revival Architecture in America* (1944)

Clatsop Indians, North American Indian tribe of the Chinook linguistic stock They lived on the Northwest Coast S of the Columbia river

Clauda (klô'dù) or **Cauda** (kô'dù), modern Gr. *Gavdos* (gäv'dhôs, gäv'dhô), small Mediterranean island, Greece, c.40 mi S of Crete. Acts 27.16.

Claude, Jean (zhäⁿ klōd'), 1619–87, French Protestant theologian. He was Protestant pastor at Paris. Although inferior as a controversialist to the contemporary Catholic apologist Jacques Bossuet, Claude received considerable attention for his disagreements with Bossuet, Pierre Nicole, and the Jansenist Antoine Arnauld He was expelled from France after the revocation of the Edict of Nantes

Claudel, Paul Louis Charles (pōl' lwē' shärl' klôdĕl'), 1868–, French diplomat, poet, and dramatist He held diplomatic posts in the United States, South America, China, Japan, Italy, and Belgium Though a disciple of Rimbaud, Claudel admired particularly the symbolism of Catholic theologians Excellent examples of his lyric poetry may be found in *Cinq Grandes Odes* (1910), *Corona Benignitatis Anni Dei* (1914, Eng tr, *Coronal,* 1943), and *La Messe là-bas* (1919) His plays include *Tête d'or* (1890), *Le Partage de midi* (1906), and *L'Annonce faite à Marie* (1912, Eng tr, *Tidings Brought to Mary,* 1916) The last two are considered his masterpieces He composed an enormous play in four cycles, *Le Soulier de satin* (1928–29; Eng tr, *The Satin Slipper,* 1931) In spite of its length, it was performed successfully in France during the Nazi occupation His views on art and aesthetics are found in *L'Œil écoute* (1946). A group of essays called *Contacts et circonstances* appeared in 1940

Claude Lorrain (klōd' lôrăⁿ'), whose real name was **Claude Gelée** or **Gellée** (zhulā'), 1600–1682, French landscape painter, b Lorraine At the age of 12 he worked for his brother, a wood engraver in Freiburg im Breisgau Later he went to Rome, where he worked with the landscape painter Augustino Tassi In 1625 he visited Venice and then returned to France, where he was assistant to Claude de Ruet, painter to the duke of Lorraine In 1627 he settled in Rome and under the patronage of Pope Urban VIII rapidly rose to fame He kept a book with tinted drawings of his paintings and names of the purchasers (Duke of Devonshire Coll, Chatsworth) Claude's landscapes, usually painted against the light, but wholly luminous, are in the best classical tradition and exercised a lasting influence on the art of landscape painting Examples of his work are to be found in the National Gallery, London, the Doria Palace, Rome, the Louvre, the Prado, and the Metropolitan Museum His etchings are also highly prized See studies by M F Sweetser (1878) and Lady Dilke (1884, in French), both with catalogues of paintings

Claude Michel see CLODION

Claudia, Christian who sent greetings to Timothy 2 Tim 4 21

Claudian (Claudius Claudianus) (klô'dēun), d 408?, last Latin classic poet Probably born in Alexandria, he flourished at court under Arcadius and Honorius Besides panegyrics, idyls, epigrams, and occasional poems, he wrote several epics, the most ambitious of which is the *Rape of Proserpine,* perhaps inferior to his epic attack upon Rufinus He has been highly regarded as a writer vigorous, skillful, and imaginative See T Hodgkin, *Claudian, the Last of the Roman Poets* (1875)

Claudius I (Tiberius Claudius Drusus Nero Germanicus) (klô'dēus), 10 B C–A D 54, Roman emperor (A.D 41–A D 54), son of the elder Drusus and thus nephew of TIBERIUS When CALIGULA was murdered, the soldiers found Claudius, who had been of utterly no importance, hiding behind a curtain in the palace in abject terror They hauled him forth, and the Praetorians proclaimed him emperor This act offended the senators, who never forgave Claudius It also made him favor the army He annexed Mauretania and landed in A D. 43 in Britain, which he made a province Agrippa's kingdom of Judaea and the kingdom of Thrace were reabsorbed into the empire, and the authority of provincial procurators was extended He caused MESSALINA, his third wife, to be executed and was in turn supposedly poisoned by her successor, AGRIPPINA II (his niece), after she had led him to pass over his son BRITANNICUS as heir in favor of NERO, her son by a former husband. Claudius was much reviled by his enemies and accused of being a tool in the hands of his freedmen-secretaries and his wives, but he actually seems to have had considerable ability. Claudius' literary works are lost He is the chief figure in two novels by Robert Graves, *I, Claudius* (1934) and *Claudius the God* (1935).

Claudius II (Marcus Aurelius Claudius), d 270, Roman emperor (268–70), called Gothicus. He had been a successful general under Valerian, and he put down the revolt in which GALLIENUS was killed. Claudius succeeded Gallienus and went to the East to resist the Goths who were overrunning the empire In 269 Claudius overwhelmed the barbarians at Naissus (now Nish or Nis, Yugoslavia). He was succeeded by AURELIAN

Claudius, famous Roman gens **Appius Claudius Sabinus Inregillensis** or **Regillensis** (ă'pēus, sŭb'-nŭs In"rĕjĭlĕ'nus, rĕjĭlĕn'sĭs) formed a tribe in Rome (c 504 B C) and, while consul (495 B C), caused withdrawal of the plebeians to the sacred mount because of his severe interpretation of the laws of debt. **Appius Claudius Crassus** (kră'sŭs) was consul (471 and 451 B C.) and decemvir (451–449 B.C.). He seems to have sought to placate the plebeians and was known as a lawgiver, but his

career ended in failure. Legend says that his attempt to rape VIRGINIA caused a revolt, in which he was killed. **Appius Claudius Caecus** (sē'kus), while censor (312–308 B C), disregarded the political disabilities of freedmen and landless citizens He was consul (307 and 296 B C) and later led the opposition to the invasion of PYRRHUS He constructed the first Roman aqueduct and began construction of the Appian Way. **Publius Claudius Pulcher** (pŭ'blēŭs, pŭl'kur), while consul (249 B C), attacked the Carthaginian fleet at Drepanum and was defeated because (it was believed) he threw the sacred chickens into the sea. **Appius Claudius Pulcher,** d c 48 B C, campaigned in Asia (72 B C), he became praetor (57 B C), proprietor in Sardinia (56 B C), consul (54 B C), and proconsul of Cilicia (53 B C) He had to seek through Pompey the assistance of his rival Cicero to secure his acquittal from impeachment He joined Pompey in the civil war and died in Euboea For Publius Claudius Pulcher, see CLODIUS

Claudius Lysias (lĭs'ĭŭs), official at Jerusalem who saved Paul from the mob Acts 21–23

Claus, Émile (āmēl' klous'), 1849–1924, Belgian landscape and genre painter, studied at the Antwerp Academy Most of his work was done in his studio at Astène, Belgium Views along the Thames and landscapes of the Belgian country and river scenery, painted in the impressionistic manner, are in the Luxembourg Museum, Paris, and in the galleries of Brussels, Antwerp, Ghent, and Liége

Clausel or **Clauzel, Bertrand** (bĕrtrā' klōzĕl'), 1772–1842, marshal of France Having served in the French Revolutionary Wars and in the Napoleonic campaigns, particularly in the Peninsular War, he was created count (1813) He joined Napoleon in the Hundred Days (1815) and after the Restoration spent some time in exile in the United States returning to France to become a deputy of the opposition After the July Revolution he was sent as commander in chief to Algeria (1830–31) and was made marshal (1831) Again commander in chief and governor general in Algeria (1835–37), he was blamed for French reverses there

Clausen, Sir George (klô'sun), 1852–1944 English figure and landscape painter He studied in Paris with Bouguereau, but his mature style is rather suggestive of Bastien-Lepage His *Girl at the Gate* and *Gleaners Returning* (Tate Gall) are characteristic He enjoyed many honors, and his lectures as professor of painting at the Royal Academy were published under the titles *Lectures on Painting* (1904) and *Aims and Ideals in Art* (1906)

Clausewitz, Karl von (karl' fŭn klou'zuvĭts), 1780–1831, Prussian general and writer on military strategy, of Polish descent He served in the Rhine campaigns (1793–94), won the regard of Scharnhorst at the Berlin Military Academy, and served in the wars against Napoleon In the service of Russia from 1812 until 1814, he helped negotiate the convention of Tauroggen (1812), which removed YORCK VON WARTENBURG and his Prussians from the service of Napoleon and marked the beginning of the War of Liberation Later he reentered the Prussian army, fought at Waterloo, and was appointed director of the German War School (1818) His masterpiece, *On War*, was unfinished and was published after his death The doctrines expounded in it, including that of total war (that all of the citizens, territory, and property of the enemy nation should be attacked in every way possible), had an enormous effect on military strategy and tactics

Clausius, Rudolf Julius Emanuel (rōō'dôlf yōō'lyōōs ämä'nōōĕl klou'zyōōs), 1822–88, German mathematical physicist A pioneer in the science of thermodynamics, he introduced the concept of entropy and restated the second law of thermodynamics heat cannot of itself pass from a colder to a hotter body He applied his researches on heat, electricity, and molecular physics to the development of the kinetic theory of gases and in formulating a theory of electrolysis wherein he states that electric forces are merely directing agents in the interchange of ions A professor at the Polytechnic Institute, Zurich (1855–67), and at the universities of Würzburg (1867–69) and Bonn (from 1869), he wrote *Die Potentialfunktion und das Potential* (1859) and *Die mechanische Warmetheorie* (1864–67, Eng tr, *The Mechanical Theory of Heat*, 1879)

Clausthal-Zellerfeld (klous'tal-tsĕ'lurfĕlt), town (pop 14,904), in the former Hanover prov, N Germany, in the Harz mts An old mining center (copper and lead, formerly silver), it also is a resort

Clauzel, Bertrand see CLAUSEL, BERTRAND

Claverack, unincorporated residential village (pop c 400), E N Y, near Hudson Among its fine old houses are the Van Rensselaer manor house and the first courthouse of Columbia co

Claverhouse, John Graham of: see DUNDEE, JOHN GRAHAM OF CLAVERHOUSE, 1ST VISCOUNT

clavichord (klă'vĭkôrd), keyboard musical instrument invented in the Middle Ages. It consists of a small rectangular wooden box containing a sounding board and a set of strings Keys caused the strings to be struck with small wedges of metal called tangents, which not only set the string into vibration but determined its vibrating length, thus one string sufficed for about four keys. Early in the 18th cent, clavichords were built with a string for each key; such instruments were more expensive and harder to tune but gradually supplanted the older ones. The clavichord became musically important in the 16th cent and remained popular until the end of the 18th cent It is a drawing-room instrument with a delicate, expressive tone

Clavière, Étienne (ātyĕn' klávyĕr'), 1735–93, French financier A merchant and banker of Geneva, he participated (1782) in the popular revolution at Geneva and was forced to leave Switzerland when the aristocrats returned to power in the same year He was an adviser of Mirabeau on financial policy and became the financial bulwark of the French Revolutionists and finance minister (1792–93) Clavière fell with the Girondists and committed suicide rather than face the Revolutionary Tribunal He wrote *Of France and of the United States* (1787, Eng tr, 1787)

Clavijero, Francisco Javier (fransĕ'skō hávvĕr' klavvēhā'rō), 1731–87, Mexican scholar and historian Becoming a Jesuit (1748), he taught in Jesuit colleges in Mexico until the expulsion of the order (1767) From his refuge in Italy he wrote several works on the history of Mexico His most important work, *The History of Mexico* (Eng tr, 1787), shows an immense knowledge of Indian languages, customs, and history

Clavijo y Fajardo, José (hōsā' klavē'hō ē fähar'dhō), 1730?–1806, Spanish journalist, b Canary Islands He visited France, where he met Buffon and Voltaire and became a Gallicist and follower of the Encyclopedists His writings after 1762 in the newspaper the *Pensador* attacked Spanish traditionalism Clavijo's duel with Beaumarchais is the basis of Goethe's play, *Clavijo*

Clawson, city (pop 4,006), SE Mich, near Detroit, inc 1920 There are machine shops here

Claxton, Philander Priestly, 1862–1939, American educator, b Bedford co, Tenn, grad Univ of Tennessee (B A, 1882, M A, 1887) and studied at Johns Hopkins and in Germany After several years' experience as a superintendent of schools in North Carolina, he taught at the North Carolina State Normal and Industrial College (1894–1902) and later was professor of education at the Univ of Tennessee (1902–11) He served (1911–21) as U S commissioner of education, his administration being distinguished by marked expansion of the activities of the Bureau of Education in civic, industrial, agricultural, and Negro education He was afterwards provost (1921–23) of the Univ of Alabama and superintendent of schools (1923–29), Tulsa, Okla, and from 1930 was president of the Austin Peay Normal School, Clarksville, Tenn

Claxton, city (pop 1 808), co seat of Evans co, SE Ga, W of Savannah and on the Canoochee river, in the coastal plain

Clay, Cassius Marcellus, 1810–1903, American abolitionist and diplomat, b Madison co, Ky, grad Yale, 1832 In 1845 he established at Lexington, Ky, the *True American*, an abolitionist paper In his absence his enemies moved his press to Cincinnati, and he continued its publication there and at Louisville He served as a captain in the Mexican War, was captured, and was for a time imprisoned In 1849 Clay was an unsuccessful candidate for governor of Kentucky on an anti-slavery ticket He was minister to Russia (1861–62, 1863–69) and served briefly (1862–63) in the Civil War as a major general of volunteers

Clay, Clement Claiborne, 1816–82, U S Senator (1853–61), b Huntsville, Ala, grad Univ of Alabama, 1834 A legislator and then a judge in his native state, he was twice elected to the U S Senate and became an ardent defender of the states' rights doctrine He left the Senate upon Alabama's secession and entered the Confederate senate, refusing the appointment as Secretary of War in the Confederacy In 1864 he was sent by Jefferson DAVIS with two others on a diplomatic mission to Canada, which was intended to open peace negotiations with the Federal government Lincoln finally decided not to see them, and after a year in Canada, Clay returned to the South After the assassination of Lincoln, he was accused of having taken part in a conspiracy, hatched in Canada, upon Lincoln's life and also of having planned raids across the border, and a reward was offered for him He gave himself up and was confined in Fortress Monroe almost a year without trial, then was freed His wife, Virginia Clay-Clopton, wrote a description—which appeared as *A Belle of the Fifties* (1904)—of their Washington home when it was a gathering place of capital society

Clay, Henry, 1777–1852, American statesman, b Hanover co, Va His father died in 1781, and Henry Clay's formal schooling was limited to three years His stepfather secured (1792) for him a clerk's position in the Virginia high court of chancery Here he gained the regard of George WYTHE, who directed his reading. He also read law under Robert Brooke, attorney general of Virginia, and was licensed (1797) to practice. He moved (1797) to Lexington, Ky, and quickly gained wide reputation as a lawyer and orator He served (1803–6) in the Kentucky legislature and was professor of law (1805) at Transylvania Univ Having spent the short session of 1806-7 in the U S Senate, he was returned (1807) to the state legislature, became (1809) speaker, and remained there until he was chosen to fill an unexpired term (1810–11) in the U S Senate In 1811 he was elected to the U S House of Representatives and served (1811–14) as speaker As spokesman of Western expansionist interests and leader of the "war hawks," he stirred up enthusiasm for war with Great Britain and helped bring on the War of 1812 He resigned (1814) from Congress to aid in peace negotiations leading to the Treaty of Ghent He again served (1815–21) in the House, again was speaker (1815–20), and began to formulate his American system, a national program including internal improvements, rechartering of the BANK OF THE UNITED STATES, and tariff protection of American industries In 1821 Clay, to pacify sectional interests, pushed the MISSOURI COMPROMISE through the House In the House for the last time (1823–25), he once more became (1823) speaker—an office in which he did much to set precedent In this session he secured the western extension of the NATIONAL ROAD and the rechartering of the bank, and against much opposition he eloquently carried through the Tariff of 1824 As a candidate for the presidency in 1824, Clay stood fourth in electoral votes, and, with no candidate having a majority, the election went to the House, where the three highest were to be voted upon It became Clay's duty to vote for one of his rivals Despite Andrew Jackson's Western interests and despite the instructions of Kentucky to vote for him, Clay's dislike for the military hero was so intense that he voted for John Quincy Adams When Adams appointed Clay Secretary of State, Jackson's friends charged Clay with political collusion Evidence has not been found to prove this, but the accusation impeded Clay's future political fortunes As Secretary of State (1825–29), he secured congressional approval—which came too late for the American delegates to attend—of U S participation in the Pan American Congress of 1826 In 1828 Clay again supported Adams for President, and Jackson's success bitterly disappointed him He refused appointment to the Supreme Court and intended to retire from politics He was heartened, however, by his constituents and by his friend John J CRITTENDEN Clay was elected (1831) to the U S Senate and now led the National Republicans, who were coming to call themselves Whigs He was prepared to run for President in 1832 and directed Senate legislation to oppose President Jackson Yet when the election came Jackson won overwhelmingly Clay's chagrin was buried in the crisis developing over the tariff The Compromise Tariff of 1833 was largely his work, South Carolina's NULLIFICATION of the tariffs of 1828 and 1832 as well as Jackson's threats of armed invasion of that state forced Clay to conciliate the two sides and to modify his own protectionist views Clay opposed the Jackson regime at every turn, particularly on the bank issue When the latter had the deposits removed (1833) from the Bank of the United States to his "pet banks," Clay secured in the Senate passage of a resolution—later (1837) expunged from the record—censuring the President for his act Refusing to run for President in 1836, Clay continued his opposition tactics against Van Buren's administration and fought the subtreasury system in vain In 1840 Clay lost the Whig nomination to William H Harrison, mainly because of Thurlow Weed's adroit politics He supported Harrison and, when Harrison was elected, was offered the post of Secretary of State, but he chose to stay in the Senate He now planned to reestablish the Bank of the United States, but the unexpected accession of John TYLER to the presidency and his vetoes of Clay's bills caused Clay to resign his Senate seat In 1844 he ran against James K POLK, an avowed expansionist Earlier publicly opposed to the annexation of TEXAS, Clay restated his position in the "Alabama letters," agreeing to annexation if it could be accomplished with the common consent of the Union and without war This maneuver probably lost him New York state, with which he could have won the election His failure was crushing for him and for the Whig party In 1848 his party refused him its nomination, feeling that he had no chance, so that his presidential aspirations were never fulfilled. He reentered (1849) the Senate when the country faced the slavery question in the territory newly acquired by the Mexican War Clay denounced the extremists in both North and South, asserted the superior claims of the Union, and was chiefly instrumental in shaping the COMPROMISE OF 1850. It was the third time that he saved the Union in a crisis, and thus he has been called the Great Pacificator and the Great Compromiser See his works (7 vols, 1896), biographies by Carl Schurz (1887), Bernard Mayo (1937), and Glyndon Van Deusen (1937).

Clay, Lucius DuBignon, 1897–, American general, b Marietta, Ga., grad. West Point, 1918. An en-

gineering officer, he held many army administrative posts and became (1944) deputy director of the office of War Mobilization and Reconversion Clay was (1945–47) deputy chief of U S Military Government in Germany before he directed operations in the Berlin blockade as U S military governor (1947–49). He was made full general upon retirement (May, 1949) from the U S. army He wrote *Decision in Germany* (1950).

Clay, town (pop 1,429), W Ky , NE of Paducah, in a farm, coal, and timber area

clay [Old Eng], name applied in common usage to certain fine-grained, earthy materials which are mixtures of hydrous aluminum silicates with small amounts of oxides and carbonates and are usually somewhat colloidal In general clays are plastic when wet, are therefore easily molded into a form which they retain when dry, and become hard and lose their plasticity when subjected to heat Clays are divided into two classes, residual clay, found in the place of origin, and transported clay, also known as sedimentary clay, removed from the place of origin by an agent of erosion and deposited in a new and possibly distant position Residual clays are most commonly formed by surface weathering, which gives rise to clay in three ways— by the chemical decomposition of rocks, such as granite, containing silica and alumina, by the solution of rocks, such as limestone, containing clayey impurities, which, being insoluble, are deposited as clay; and by the disintegration and solution of shale One of the commonest processes of clay formation is the chemical decomposition of FELDSPAR. In chemical composition clays vary, but many, especially those derived from feldspar, approximate the composition of KAOLINITE Practically all clays contain, as impurities, various compounds of iron, lime, potassium, sodium, and magnesium. The extent and nature of these impurities in each individual clay affect its usefulness as a raw material for manufacturing From prehistoric times, clay has been indispensable in architecture, in industry, and in agriculture As a building material, it is used in the form of BRICK, either sundried (ADOBE) or fired Clays are also of great industrial importance, e g , the manufacture of TILE for wall and floor coverings, of porcelain, china, earthenware, and of pipe for drainage and sewage Properties of the clays to be used in such products which must be taken into consideration include *plasticity, shrinkage* under firing and under air drying, fineness of grain, color after firing, hardness, cohesion, and capacity of the surface to take decoration On the basis of such qualities clays are variously divided into classes or groups, products are generally made from mixtures of clays and other substances The purest clays are the china clays and kaolins (see CHINA CLAY) Ball clay is a name for a group of plastic, refractory clays used with other clays to improve their plasticity and to increase their strength Bentonites are clays composed of very fine particles derived usually from volcanic ash They are composed chiefly of the hydrous magnesium-calcium-aluminum silicate called montmorillonite Much of the highly absorbent bentonite is used in foundry work for facing the molds and preparing the molding sands for casting metals The less absorbent bentonites are used chiefly in the oil industry, e g , as a filtering and deodorizing agent in the refining of petroleum and, mixed with other materials, as drilling muds to protect the cutting bit while drilling Other uses are in the making of fillers, sizings, and dressings in construction, in clarifying water and wine, in purifying sewage, and in the paper, ceramics, plastics, and rubber industries Clay to the farmer is one of the three principal types of soil, the other two being sand and loam A certain amount of clay is a desirable constituent of soil, since it binds other kinds of particles together and makes the whole retentive of water. Excessively clayey soils, however, are exceedingly difficult to cultivate Their stiffness presents resistance to implements, impedes the growth of the plants, and prevents free circulation of air around the roots They are cold and sticky in wet weather, while in dry weather they bake hard and crack Clods form very often in clayey soils Clays can be improved by the addition of lime, chalk, or organic matter, sodium nitrate, however, intensifies the injurious effects. In spite of their disadvantages, the richness of clay soils makes them favorable to the growth of crops that have first been started in other soil See also FULLER'S EARTH See Heinrich Ries, *Clays: Their Occurrence, Properties, and Uses* (3d ed , 1927), A. B Searle, *Clays and Other Ceramic Materials* (2d ed , 1933); C W Parmelee, *Clays and Some Other Ceramic Materials* (6th ed., 1937)

Clay, Mount: see PRESIDENTIAL RANGE

Clay Center, city (pop 4,518), co seat of Clay co., NE Kansas, on the Republican river and NW of Manhattan, laid out 1862, inc. 1875 The city is a shipping center for an area producing wheat, corn, poultry, and dairy products

Clay City. 1 Village (pop 1,136), SE Ill , S of Mattoon, settled as Maysville in the early 1830s, inc. 1869. It is a trade and shipping center for a farm area. Oil was struck near by in 1937. **2** Town (pop. 1,117), W Ind., SE of Terre Haute; settled 1873, inc 1888 Clay and coal are obtained from this area

Claymont, unincorporated town (pop 3,736), NE Del , near Wilmington Oil-refining and chemical plants are near by and a state industrial school for girls is here

Clays, Paul Jean (pôl' zhā' klā'ēs), 1819–1900, Belgian marine painter Clays is best known for his pictures of the waters of Belgium and Holland, including *The Port of Antwerp* and *Bay of Ostend* (Brussels), *The Meuse at Dordrecht* (Antwerp), *Dutch Boats in the Blushing Roads* (National Gall., London), *Marine* (Metropolitan Mus), and *Dutch Shipping* (N Y Public Library)

Clayton, Henry De Lamar, 1857–1929, U S Congressman, b. Barbour co , Ala., grad Univ of Alabama (B A , 1877, LL B , 1878) An Alabama lawyer and a Democratic politician, he was a member of the House of Representatives from 1897 to 1915 and later a Federal district judge He is chiefly remembered as the author of the CLAYTON ANTI-TRUST ACT

Clayton, Henry Helm, 1861–1946, American meteorologist, b Murfreesboro, Tenn He was twice on the staff of the Blue Hill Observatory (1886–91, 1894–1909) His invention of a box kite for use in sounding the atmosphere was widely adopted, and he was important in the development of the science of aerology Clayton served (1910–19) as meteorologist in Argentina He wrote *World Weather* (1923) and, for the Smithsonian Institution, *Solar Radiation and Weather* (1925), *Solar Activity* (1926), and *Atmosphere and the Sun* (1930)

Clayton, John, c 1685–1773, American botanist, b England He made a collection of plants of Virginia which was the basis for the *Flora Virginica* (1739–43, rev ed , 1762) of John Frederick Gronovius

Clayton, John Middleton, 1796–1856, American statesman, b Sussex co , Del , grad Yale, 1815 Admitted (1819) to the bar, he practiced at Dover, Del , held many state offices, and was twice (1826, 1845) elected to the U S Senate In the presidential election of 1848 he gave his support to Zachary Taylor and was rewarded with the position of Secretary of State, which office he held until Taylor's death in 1850 As Secretary of State he negotiated the CLAYTON-BULWER TREATY, which checked British expansion in Central America and temporarily settled a rivalry which was bringing England and the United States to hostilities He reentered the Senate in 1852 He carefully supervised his estate near New Castle, Del , and won fame as a scientific agriculturalist

Clayton. 1 Town (pop 1,813), a co seat of Barbour co , SE Ala , E of Troy, in a cotton and lumber area **2** City (pop 1,088), co , seat of Rabun co , extreme NE Ga , in the Blue Ridge and in Chattahoochee National Forest, inc 1821 It is a resort near lakes **3** Village (pop 1,028), W Ill , ENE of Quincy, inc 1837 **4** Suburban city (pop 13,069), co seat of St Louis co , E Mo , near St Louis **5** Borough (pop 2,320), SW N J , S of Glassboro, settled c 1775, inc 1924 **6** Town (pop 3,188), co seat of Union co , NE N Mex , near the Texas and Okla lines, laid out 1887, inc 1908 It is a trade and shipping center for a ranch and farm area **7** Resort village (pop 1,999), N N Y , a port of entry on the St Lawrence and NW of Watertown, in the Thousand Islands region, inc 1872 Sailing races are held during the summer Snowplow manufacturing is the chief industry. **8** Town (pop 1,711), central N C , SE of Raleigh It has lumber and cotton mills

Clayton Anti-Trust Act, 1914, passed by the U S Congress as an amendment to clarify and supplement the SHERMAN ANTI-TRUST ACT of 1890 It was drafted by Henry De Lamar Clayton The act prohibited exclusive sales contracts, local price cutting to freeze out competitors, rebates, interlocking directorates in corporations capitalized at $1,000,000 or more in the same field of business, and intercorporate stock holdings Labor unions and agricultural cooperatives were excluded from the forbidden combinations in the restraint of trade The act restricted the use of the injunction against labor, and it legalized peaceful strikes, picketing, and boycotts It declared that "the labor of a human being is not a commodity or article of commerce " The Clayton Anti-Trust Act was the basis for a great many important and much-publicized suits against large corporations

Clayton-Bulwer Treaty (–bo͝ol'wur), concluded (April 19, 1850) at Washington, D C , between the United States, represented by Secretary of State John M Clayton, and Great Britain, represented by the British plenipotentiary Sir Henry Bulwer. American and British rivalries in Central America, particularly over a proposed isthmian canal, led to the treaty Its most important article provided "that neither . . . will ever obtain or maintain for itself any exclusive control over the said ship canal . . . that neither will ever erect or maintain any fortifications commanding the same . . . or occupy, or fortify, or colonize or assume, or exercise any dominion over Nicaragua, Costa Rica, the Mosquito coast, or any part of Central America." Although the treaty was soon ratified by the Senate, it was one of the most unpopular in U.S history, viewed by some as a betrayal of the Monroe Doctrine. In the long run it was a compromise against the best interests of the United States. Successive Secretaries of State tried in vain to secure modifications which would enable the United States to build its own canal and exercise, under restrictions, political control over it, but it was not until 1901, with the HAY-PAUNCEFOTE TREATY, that this end was finally achieved See M. W Williams, *Anglo-American Isthmian Diplomacy, 1815–1915* (1916)

Clazomenae (klŭzŏ'mĭnē), ancient city of W Asia Minor, some 20 mi from the present Smyrna, Turkey. It was one of the 12 Ionian cities of Asia Minor, but the later inhabitants were not Ionians. The city was founded on the mainland but was later moved to a small island, and Alexander the Great built a causeway to it The town continued to flourish through the Hellenistic and Roman periods It was the birthplace of Anaxagoras and was famous for its terra-cotta sarcophagi

Cleanthes (klēăn'thēz), 3d cent B.C , Greek philosopher, head of the Stoic school following Zeno

Clearchus (klēär'kŭs), d. 401 B C , Spartan officer Sent in 410 B C to govern Byzantium, he made himself unpopular by his harsh discipline, and ALCIBIADES took the city in 408 B C Clearchus later returned and made himself virtual ruler, thereby incurring Spartan anger He had to leave and became a supporter of Cyrus the Younger, recruiting the Greek force to support the Persian claimant At CUNAXA, Clearchus fought boldly, but it is said that his refusal to help Cyrus in the center of the line brought on the defeat. After the battle he led the Greek force (the Ten Thousand) in retreat, but was lured into a conference by TISSAPHERNES and treacherously murdered The story of the retreat is told by XENOPHON in the ANABASIS

Clearfield. 1 Borough (pop 9,372), co seat of Clearfield co , W central Pa , on the West Branch of the Susquehanna and in the Alleghenies N of Altoona, laid out 1805, inc 1840 The area yields coal and clay Airplane and marine instruments and leather goods are made here It is at the southeastern edge of the Moshannon State Forest **2** Town (pop 1,053), N Utah, S of Ogden, in an irrigated farm area The Ogden Ordnance Depot is near by

clearing, in banking, the periodic settling of bankers' claims against each other For this purpose banks form clearinghouse associations Clearinghouses are said to have existed in Florence by A D 800, they were certainly perfected in Lyons by 1463 Their use was widespread in 18th-century Europe The first modern clearinghouse was either at Edinburgh (1760) or at London (1773), clearinghouses were then established in Dublin (1846), New York (1853), Paris (1872), and Berlin (1883) Before the introduction of clearinghouses, each bank periodically sent runners to other banks For this practice, the clearinghouse substitutes meetings of representatives of all banks in a given area to adjust claims The New York Clearing House, for example, clears five times daily Each bank sends a delivery clerk and a settling clerk to the house, they bring with them bundles of checks and other obligations due their banks from other banks, each bank being represented by a separate package Lists of these obligations are handed to an inspector before clearing begins, the total of the lists is the total amount to be settled that day When clearing begins, each delivery clerk passes from one desk to another, depositing on each his bank's claims upon the bank represented at that desk When a settling clerk at any one desk has received all his packages, he draws up a statement of the demands made upon his bank, as shown by the totals of the packages He sends this to the manager of the clearinghouse, along with the total that his bank is owed When all settling clerks have done this, the accounts are examined and proved, and the manager certifies the amounts that each bank owes to and is entitled to receive from the other banks A settlement in cash or credit is then made or received by each bank Thus settlements are effected without the transfer of cash or by the transfer of a much smaller amount than would otherwise be needed All packages of claims are accepted at the clearinghouse desks without examination, they are later carried back to the banks receiving them and are there examined If any claims are found invalid, the banks concerned rectify the error without using the clearinghouse. Obviously, the clearinghouse is a major labor-saving device From $500,000,000 to $700,000,000 have been cleared daily by the New York Clearing House without the transfer of cash Dues, usually in proportion to the number of checks presented by each bank per year, support the clearinghouse. Clearinghouses, because of the demand for their facilities, have been able to regulate certain practices of banks in their areas With the consent of the clearing association, nonmembers may be permitted to clear through members. Intercity balances in the United States are settled on the books of the Federal reserve

banks daily by telegraphic transfers Clearing is practiced also by stock and commodity exchanges Railroad clearinghouses enable the use of through tickets over many lines In international exchange, foreign bills have long been cleared by settlement in London, thus reducing the transfer of gold from country to country.

Clear Island, 3 mi long and 1 mi wide (pop 704), off SW Ireland, in Co Cork, SW of Skibbereen At the southern end is Cape Clear, with a lighthouse

Clear Lake, city (pop 3,764), N Iowa, on Clear Lake just W of Mason City, inc 1871 It is in a popular resort area near Clear Lake State Park

Clear Lake, c 30 mi long, W Calif, in wooded hills NNW of San Francisco It is a fishing resort Mt Konocchti rises nearly 3,000 ft on the west shore

clearstory: see CLERESTORY

Clearwater, residential city (pop 10,136), co seat of Pinellas co, W Fla, on the Gulf W of Tampa, on a high coastal eminence It was settled after the establishment of Fort Harrison here in 1841 and incorporated in 1891 The city has numerous packing and canning plants which serve near-by fruit areas A causeway extends across Clearwater Bay to a sandy spit, Clearwater Beach, a popular resort Many fine homes are here

Clearwater, river rising in several branches in N Idaho, in the Bitterroot Range near the Mont line It flows west to join the Snake at Lewiston near the Washington line Gold was discovered on the South Fork in 1860 Mining camps were established, and the gold-mining era in Idaho was begun

cleavage of rocks, the tendency of certain varieties of metamorphic ROCK to split easily into thin layers, usually not parallel to the planes of deposition of the rock Cleavage has been produced by the pressure exerted upon the earth's crust in the process of deformation Under this pressure the mineral particles of the rock tended to become flattened and rearranged, so that their longer axes were perpendicular to the direction of the pressure, and the new particles which were crystallized set themselves in the same position The fact that some of the component minerals already had a tendency to split longitudinally accentuated the condition thus developed Since the bedding planes of rock are in general horizontal and since the pressure which caused metamorphism was usually exerted horizontally, planes of cleavage bear no fixed relation to the bedding planes but are commonly at highly inclined or right angles to them Cleavage of rocks may be slaty (see SLATE) or schistose (see SCHIST)

Cleaveland, Moses, 1754–1806, American pioneer, b. Canterbury, Conn, grad Yale, 1777 After serving (1777–81) in the American Revolution, he practiced law in his native town and entered (1787) the state legislature When the Connecticut Land Company purchased (1795) land in the WESTERN RESERVE region of Ohio, Cleaveland was chosen one of the directors and surveyors of the company In 1796 he led a party of men to the mouth of the Cuyahoga, where he determined to develop the main settlement The surveyors named the place Cleaveland, which name it bore until c 1830, when it became Cleveland Cleaveland resumed his law practice and political interests in Connecticut

Cleaveland, Parker, 1780–1858, American geologist and educator, b Byfield, Mass, grad Harvard, 1799 In 1805 he became professor of mathematics and natural philosophy at Bowdoin College His *Elementary Treatise on Mineralogy and Geology* (1816) was the first work of its kind in the United States From 1807 to 1858 he kept meteorological data which later appeared in the Smithsonian *Contributions to Knowledge*, Vol XVI (1870)

Cleburne, Patrick Ronayne (klē'burn), 1828–64, Confederate general, b Co Cork, Ireland He came to America in 1849 and was practicing law in Helena, Ark., when the Civil War broke out Cleburne, who had served in the British army, was made a brigadier general in March, 1862 He commanded a brigade at Shiloh (April) and a division at Richmond (Aug) and Perryville, Ky (Oct) Promoted major general (Dec), he distinguished himself further at Murfreesboro and in the campaigns around Chattanooga and Atlanta His last service was under Gen. J B Hood in the Tennessee campaign of 1864; he was killed at the battle of Franklin (Nov.). Cleburne was one of the ablest Confederate division commanders See Ella Lonn, *Foreigners in the Confederacy* (1940)

Cleburne (klē'bŭrn), city (1940 pop 10,558; 1947 estimated pop 16,000), co seat of Johnson co, N Texas, 8 of Fort Worth; founded 1867, inc as a city 1907. Weathered houses and many trees keep the old farm-town atmosphere in a city busy with small industries Blackland cotton is handled in gins, compresses, cottonseed-oil mills, and garment and mattress factories, dairies supply the creameries, limestone is processed; and there are railroad shops and small plants.

Cleef, Cornelis van: see CLEEF, JOOS VAN

Cleef, Jan van (yän' vän klāf'), 1646–1716, Flemish painter; pupil of De Crayer, whose style he followed with notable success. His religious paintings adorn the churches of Ghent. The most famous is in the Convent of the Black Nuns and depicts the sisters succoring victims of the plague

Cleef or Cleve, Joos van (yōs' vän klāf', klā'vu), c 1485–1540, early Flemish portrait painter Much of his life was spent in Antwerp His portraits of Henry VIII (Hampton Court) and Francis I (Johnson Coll., Philadelphia) are beautiful examples of his work. He has been customarily confused with his son **Cornelis van Cleef** (kôr'nā"lĭs), c.1520–1567?, who was called Zotte van Cleef because he went mad He painted religious pictures in an Italianate style His *Saints Cosmo and Damian* (cathedral, Antwerp) is characteristic. He was also a successful portrait painter His *Artist and Wife* (Windsor Castle) is a well-known portrait

Cle Elum (klē" ĕl'um), coal-mining city (pop 2,230), central Wash, on the Yakima river near the influx of the Cle Elum, founded c 1885, inc 1904

Cle Elum, river rising in the Cascade Range, central Wash, and flowing south c 28 mi through Cle Elum Lake to the Yakima

Cleethorpes (klē'thôrps), urban district (1931 pop 28,621, 1947 estimated pop 29,690), in the Parts of Lindsey, Lincolnshire, England, on the Humber estuary and near Grimsby It is a resort

clef, in music see MUSICAL NOTATION

Cleisthenes (klīs'thĭnēz, klīs'–), fl 582 B C, tyrant of Sicyon He was a leader in the sacred war that brought the destruction of Cirrha. He was famed for wisdom, moderation of rule, and interest in the arts He was the grandfather of the Athenian statesman Cleisthenes The name also appears as Clisthenes.

Cleisthenes, fl. 510 B C, Athenian statesman, grandson of Cleisthenes, tyrant of Sicyon He was the head of his family, the ALCMAEONIDAE, after the exile of Hippias, and by 506 B C he had with Spartan help made himself undisputed ruler of the city He reorganized the social and political constitution on so stable a basis that civil war disappeared from Athenian life The Alcmaeonidae thus became leaders of a democratic party, a reorientation making them anti-Spartan instead of pro-Spartan as earlier An attempt of his rival, Isagoras, to overturn the reforms of Cleisthenes after Cleisthenes had been sent into exile failed, and Cleisthenes was recalled Sparta aided Isagoras, and Spartan hatred of the Alcmaeonidae began with Cleisthenes. The name also appears as Clisthenes.

Cleveland, John: see CLEVELAND, JOHN

clematis (klĕm'–), any plant of the large genus *Clematis* (sometimes divided into three genera, *Clematis*, *Atragene*, and *Viorna*), widely distributed herbs or vines, many of them native The vines are the more popular and are usually profuse bloomers, some have an irritating juice, leafstalks serving as tendrils, and small dry fruits with a feathery tail-like appendage There are roughly three types of flowers of various colors small and clustered, bell or vase shaped, and large and anemonelike The most popular in North America are the large purple Jackman clematis and the Japanese clematis (*Clematis panculata*) with small white flowers Some clematises are called virgin's-bower, traveler's-joy, and old-man's-beard. See Ernest Markham, *Clematis* (1935)

Clemenceau, Georges (shôrsh' klāmăsō'), 1841–1929, French statesman, twice premier (1906–9, 1917–19), called "the Tiger" He began a medical career, but his republicanism brought him into conflict with the government of Napoleon III, and he went (1865) to the United States, where he spent several years as a teacher and a journalist Returning to France in 1869, he aided GAMBETTA in overthrowing the empire (1870) His political career, beginning in the tumult of revolution, continued to be a stormy one, punctuated by duels As a Socialist he opposed the opportunist Gambetta, drove Jules FERRY from power, first supported, then bitterly opposed, General BOULANGER, and was a passionate defender of Dreyfus in the DREYFUS AFFAIR A member of the chamber of deputies (1876–93) and a senator from 1902, he became (1906) minister of the interior and premier In his tenure the first crisis over MOROCCO was settled, the alliance with England strengthened, and the separation of Church and state carried out Clemenceau's severe measures against strikers caused the fall (1909) of his cabinet and his final breach with the Socialists Aristide BRIAND became premier The next years Clemenceau spent attacking Germany in the press and urging military preparedness His paper *L'Homme libre* (after its suppression in 1914, *L'Homme enchaîné*) attacked the government for its lack of vigor even after the outbreak of the First World War In Nov, 1917, Clemenceau succeeded Paul PAINLEVÉ as premier and set up a coalition ("Sacred Union") cabinet which pushed the war vigorously until the final victory At the Paris Peace Conference, Clemenceau was the main antagonist of Woodrow WILSON, he regarded the Versailles Treaty as inadequate in guaranteeing the security of France Ironically, he was defeated in the 1919 elections because of what was regarded as his moderation toward Germany Alexandre Millerand succeeded him as premier. Clemenceau retired to his native Vendée, where he wrote *Grandeur and Misery of Victory* (Eng tr, 1930) and *In the Evening of My Thought* (Eng tr, 1929) Other works include a novel, *The Strongest* (Eng. tr, 1920) and *American Reconstruction* (Eng. tr, 1928) See biographies by George Adam (1930), Jean Martet (Eng. tr., 1930), Léon Daudet (Eng tr, 1940), Geoffrey Bruun (1943), and J H Jackson (1946), Wythe Williams, *Conversations with Clemenceau* (1949)

Clemens, Samuel Langhorne: see TWAIN, MARK.

Clement I, Saint, or **Clement of Rome**, pope (A D 88?–A D 97?), martyr, successor of St Cletus and predecessor of St Evaristus He was highly honored even in the 2d cent, and a letter he wrote was considered canonical by some in the 4th cent Thus, the Epistle of St Clement to the Corinthians, was written by him c 96 to bid the church at Corinth, which was torn by faction, cease its quarrels The most remarkable feature is the tone of authority he takes, as bishop of Rome, in reproving the erring Corinthians and in enjoining the need for order in the Church St Clement was the first Christian writer to use the myth of the phoenix as an allegory of the Resurrection Many writings have been wrongly attributed to St Clement, particularly the so-called Second Epistle of St Clement to the Corinthians There are half a dozen other spurious epistles of St Clement of the general type of the PSEUDEPIGRAPHA He is represented in frescoes in the Church of San Clemente, Rome Feast Nov 23 See J A Kleist, tr, *The Epistles of St Clement of Rome and St Ignatius of Antioch* (1946)

Clement III, antipope see GUIBERT OF RAVENNA.

Clement IV, d 1268, pope (1265–68), a Frenchman named Guy Foulkes or, in Italian, Guido Fulcodi, successor of URBAN IV and predecessor of GREGORY X He was a lay adviser of Louis IX, but after his wife's death he entered the Church He was made bishop of Le Puy (1257) archbishop of Narbonne (1259), and cardinal (1261) He was elected pope after a long, uncertain conclave He continued the struggle against the Hohenstaufen by confirming the agreement with CHARLES I (Charles of Anjou) giving Charles the crown of Naples, by raising an army for him, and by investing him with the kingdom When CONRADIN attacked Charles, Clement had a crusade preached against him He was a strong opponent of nepotism, and he was the patron of Roger BACON.

Clement V, 1264–1314, pope (1305–14), a Frenchman named Bertrand de Got, successor of BENEDICT XI and predecessor of JOHN XXII He was made archbishop of Bordeaux by BONIFACE VIII, who trusted him, surprisingly, he was also in some favor at the court of PHILIP IV After the death of Benedict XI the conclave lasted 11 months, and Bertrand was elected because of his French sympathies He was crowned at Lyons in Philip's presence and lived the rest of his life in France In 1309 he settled at Avignon, beginning the long residency of the PAPACY there The pontificate of Clement is one long chronicle of dictation by the French king In at least two matters Clement effectively delayed doing Philip's bidding, these were the effort of Philip to have Boniface posthumously condemned and Philip's enmity to Emperor HENRY VII, whom Clement supported Clement's behavior in the proceedings against the Knights Templars was disgraceful The Council of Vienne (1312) would not find the Templars guilty of the charges, and Clement, to satisfy Philip, dissolved the order as a matter of policy, not because of any proven guilt The property of the order was assigned to the Knights Hospitalers He issued (1313) the *Constitutiones Clementinae*, important in canon law Clement enriched his family at the expense of the Church

Clement VI, 1291–1352, pope (1342–52), a Frenchman named Pierre Roger successor of Benedict XII and predecessor of INNOCENT VI He lived at Avignon He had been archbishop of Sens, archbishop of Rouen, and cardinal (1338) The principal event of the pontificate was the Black Death (1348–50), Clement did what he could for sufferers He tried to stem the wave of anti-Semitism brought on by the plague, and he did much to protect the Jews In Roman affairs he at first favored RIENZI, then helped to defeat him He had a quarrel with Emperor Louis IV over the annulment of Margaret Maultasch's marriage, the struggle was aggravated by enmity between the pope and the German archbishops, caused by the erection of Prague into an archbishopric, detaching it from Mainz The years before the Black Death were the heyday of papal Avignon, which Clement purchased (1348) Clement spent extravagantly, had an elegant court, patronized the arts, and vastly favored his relatives He was completely pro-French

Clement VII, antipope (1378–94) see ROBERT OF GENEVA.

Clement VII, 1478–1534, pope (1523–34), a Florentine named Giulio de' Medici, successor of ADRIAN VI and predecessor of PAUL III He was the son of Giuliano de' Medici, who was the younger brother of Lorenzo de' Medici, Clement was therefore first cousin of Pope LEO X In 1513 he became a cardinal and, as archbishop of Florence, was noted

as a reformer. He was a chief supporter and adviser of Adrian As pope, he showed himself vacillating and unaware of the menace of Lutheranism to the Church, certainly not the man for the opening battles of the REFORMATION His relations with Emperor CHARLES V were never very good, for Clement allied himself with FRANCIS I of France in the League of Cognac (1526) As a result of his hostility to the empire, the imperial troops under Charles de Bourbon attacked Rome in 1527, sacked the city, and held the pope for some months Eventually (1529) peace was patched up between Clement and Charles V, and he crowned Charles emperor About 1527 the first stage of the struggle of HENRY VIII against the Church began Clement's behavior in the matter of the divorce and the dispensations for a new marriage has been called vacillating, but when the situation became critical, he put the irreproachable CAMPEGGIO in charge of the case with Cardinal Wolsey Later canon lawyers have steadily maintained that, whether he was influenced by Charles V or not, Clement followed the only course possible on legal grounds He patronized Raphael, Michelangelo, and Benvenuto Cellini He was a man of exemplary life

Clement VIII, 1536–1605, pope (1592–1605), a Florentine named Ippolito Aldobrandini, successor of Innocent IX and predecessor of Leo XI He reversed the policy of his predecessors by allying the Holy See with France rather than with Spain, which had assumed a dictatorial attitude over the papacy Clement absolved HENRY IV after his abjuration of Protestantism, and the two rulers were thereafter on most friendly terms Henry prevented the Spanish from interfering when Clement desired to annex Ferrara, on the failure of the ducal family Clement was distinguished for his piety, and he labored for the improvement of the clergy and of the charitable institutions of Rome His confessors were St PHILIP NERI and BARONIUS, whom he created cardinal

Clement XI, 1649–1721, pope (1700–1721), an Italian (b Urbino) named Giovanni Francesco Albani, successor of INNOCENT XII and predecessor of Innocent XIII He was known in his youth for his prodigious learning and brilliance, and he was patronized by Queen Christina, he became cardinal in 1690 As pope he was involved in the struggle between France and Austria over the throne of Spain, he recognised PHILIP V but later was forced into recognising Charles of Hapsburg, the other claimant The chief spiritual concern of his pontificate was the Jansenist problem, which arose acutely in 1702 with a declaration of the principle that the pope's infallibility does not extend to matters of fact, i e , the pope may condemn a proposition as heretical, but he cannot say infallibly that a certain statement or book contains that proposition The brief *Vineam Domini* (1705) condemned the idea In 1713 he issued the bull *Unigenitus*, which condemned certain propositions of JANSENISM

Clement XIV, 1705–74, pope (1769–74), an Italian (b near Rimini) named Lorenzo Ganganelli, successor of Clement XIII and predecessor of PIUS VI He was prominent for many years in pontifical affairs at Rome, and he was created cardinal in 1759 He was a Conventual Franciscan He inherited from his predecessor the hostility of every state of Catholic Europe The ecclesiastical question of the day was the fate of the Jesuits, and the courts of France and Spain were leading in a demand for their suppression (see JESUS, SOCIETY OF) By 1772 Maria Theresa and the German Catholic princes were detached from supporting the Jesuits, and in 1773 the pope published the brief *Dominus ac Redemptor* suppressing the order and disposing of its property The suppression was ignored and the Jesuits were given refuge by Frederick the Great and Catherine the Great Clement XIV's part in the suppression has been greatly discussed, he was probably bullied into it The suppression removed the pope's only independent support and put the Church wholly into the hands of the princes

Clement, one of Paul's co-workers Philip 4 3 He is traditionally identified with St Clement

Clément, Jacques (shāk' klāmā'), 1567–89, French Dominican monk, assassin of HENRY III of France An adherent of the LEAGUE, he thought Henry a danger to the Church because of his recognition of a Protestant successor He was killed by the king's attendants immediately after the stabbing

Clementi, Muzio (mōō'tsēō klāmĕn'tē), 1752–1832, Italian piano virtuoso, composer, and conductor He gave definitive form to the sonata and was the first to compose in a style for piano rather than harpsichord His studies, *Gradus ad Parnassum* (1817), and his many sonatas are widely used From the disordered manuscripts of his symphonies, four were reconstructed, 1934–36, by Alfredo Casella Clementi taught John Field and J. B Cramer.

Clement of Alexandria (Titus Flavius Clemens), d. c 215, Greek theologian Born in Athens, he traveled widely and was converted to Christianity He studied and taught at the catechetical school in Alexandria, where ORIGEN was his pupil, until the persecution of 202. He probably died in Caesarea, Cappadocia He was one of the first to attempt a synthesis of Platonic and Christian thought, in this his successors in the Alexandrian school were more successful Only a few works survive. The *Address to the Greeks* (*Protrepticus*) sets forth the inferiority of Greek thought to Christianity. Appended to the *Tutor* (*Pedagogus*) are two hymns, among the earliest Christian poems A little essay, *Who Is the Rich Man? Who Is Saved?* is a well-written fragment The *Miscellanies* (*Stromateis*) is a collection of notes on contemporary thought In it he attacked Gnosticism, with which he himself was tinged, for he held that intellectual knowledge of divine things sets one above the mass of Christians Nevertheless, he was convinced of the whole truth of Christianity, and he was not a compromiser with pagan doctrine Photius believed Clement a heretic, his contentions caused Clement's name to be removed from the Roman Martyrology

Clement of Rome see CLEMENT I, SAINT

Clementon, borough (pop 2,866), SW N J , SE of Camden, inc 1925 Its charcoal industry was begun in 1879

Clements, Frederic Edward, 1874–1945, American plant ecologist, b Lincoln, Nebr , grad Univ of Nebraska, 1894 From 1917 to 1941 he was in charge of ecological research at the Carnegie Institution, Washington Among his works are *Research Methods in Ecology* (1905), *Plant Succession* (1916), *Flower Families and Ancestors* (with Edith Clements, 1928), and *Plant Ecology* (with J E Weaver, 1929)

Clemson Agricultural College, at Clemson, S C , near Anderson, land-grant and state supported, for men, chartered 1889, opened 1893 with a bequest from Thomas G Clemson It has schools of agriculture, arts and sciences, chemistry, engineering, textiles, and vocational education The campus was formerly John C Calhoun's plantation

Clendenin (klĕndĕn'ĭn), oil town (pop. 1,200), W central W Va , on the Elk river and NE of Charleston, in the Blue Creek oil fields, inc 1904

Cleobis. see BITON

Cleobulus (klēōbū'lus), fl 6th cent ? B C , one of the Seven Wise Men of Greece, tyrant of Lindus on Rhodes, and a writer of verse He was said to have first put riddles in literary form His daughter Cleobuline wrote riddles also

Cleomedes (klē"ōmē'dēz, klē"ō-), 2d cent ?, Greek astronomer In a treatise on the circular theory of heavenly bodies, he recorded several hypotheses established by later scientists, e g , the earth's spherical form and the moon's revolutions

Cleomenes I (klēō'mĭnēz), d c 489 B C , king of Sparta after 518 B C In accordance with Sparta's policy of helping oligarchies in other states at the expense of tyrants or people, Cleomenes joined the Athenians in ousting the tyrant Hippias but to Cleomenes' dismay CLEISTHENES, the principal aristocrat, sided with the people and took the power (510 B C) Twice Cleomenes attacked democratic Athens The first time he expelled Cleisthenes, who was, however, recalled and ended Spartan influence The second time Corinth checkmated Sparta by refusing to help in an attack which would disturb the balance of power Cleomenes owed his reputation for ruthlessness chiefly to a battle in which he slaughtered 6,000 Argives—an exploit giving Sparta the hegemony in S Greece for many years

Cleomenes III, d 219 B C , king of Sparta (235–c 221 B C) He was probably the most energetic king Sparta ever had, a conscious imitator of AGIS III In his determined effort to restore the prestige of the city he fought with the ACHAEAN LEAGUE, and in two battles he was successful (c 227 B C and c 224 B C) At home his reforms were revolutionary the kingship was made the supreme power, the ephorate was abolished, and the citizenship was widely extended, apparently to decrease the danger of discontent and to ally the people with the king Cleomenes came to his downfall suddenly in 222 (or possibly 221) when the Achaean League, allied with ANTIGONUS III of Macedon, routed the Spartan army Cleomenes fled to Egypt and died there, apparently by suicide

Cleon (klē'ŏn), d 422 B C , Athenian political leader The son of a tanner with little education, he was, nevertheless, a gifted speaker He began his political career with a series of relentless attacks on PERICLES, He was antagonistic to Sparta and successfully opposed a treaty (425 B C) In the same year he was given command of the Athenian force blockading Sphacteria (an island in the Ionian Sea) and was brilliantly successful against the Spartans Three years later he was given another command against the Spartan BRASIDAS at Amphipolis, but he failed and was killed in action His later reputation as a vulgar and unprincipled demagogue was forwarded by his enemies Thucydides and Aristophanes

Cleona, borough (pop 1,108), Lebanon co , SE Pa , near Lebanon

Cleopas (klē'ōpŭs), one of the two who met the risen Jesus on the way to Emmaus Luke 24.18 Perhaps the same as CLEOPHAS

Cleopatra (klēŭpā'trŭ, -pă'trŭ, -pă'trŭ), 69 B.C.–30 B.C , queen of Egypt, one of the great romantic heroines of all time. She bore a name much used in the Ptolemaic family; there were many earlier Cleopatras The daughter of Ptolemy XI, she was at 17 married (as was the family custom) to her younger brother PTOLEMY XII The force and character in the royal pair was, however, concentrated in the alluring (though apparently not beautiful) and ambitious queen. She led a revolt against her brother, and, obtaining the aid of Julius Caesar, she won the kingdom Her young brother-husband was accidentally drowned in the Nile She then married her still younger brother PTOLEMY XIII, but she was the mistress of Caesar and followed him to Rome and bore a son, Caesarion (later PTOLEMY XIV), who was said to be his Back in Egypt after the murder of Caesar and the battle of PHILIPPI she was visited by Marc ANTONY, who came to demand an account of her actions He fell hopelessly in love with her, and Cleopatra, conscious of her royalty and even her claims to divinity as the Pharaoh's daughter, seems to have hoped to use Antony to reestablish the Egyptian throne in real power Most of the Romans feared and hated her, and Octavian (later AUGUSTUS) undertook to destroy the two lovers Antony and Cleopatra were defeated at Actium in 31 B C and sought to defend themselves in Egypt They were defeated again at Alexandria, and Antony committed suicide by falling on his sword Cleopatra, faced by the cold and unmoved Octavian, also killed herself by having an asp bite her Her great schemes had failed, but her ambition, capability, and remarkable charm have left an impress on history that has not been erased Shakspere's *Antony and Cleopatra*, based on Plutarch, describes the tragic end of the queen's career, and Dryden's *All for Love* is a reworking of Shakspere *Caesar and Cleopatra*, the crisp and ironic comedy by G B Shaw, deals instead with the early years of her story

Cleopatra's Needles, name in popular use for two obelisks of red granite from Egypt Originally erected at Heliopolis (c 1475 B C) by Thutmose III, they were carried to Alexandria (c 14 B C) under Augustus and in the 19th cent were sent as gifts of Ismail Pasha to England (1878) and the United States (1880) The British OBELISK, 68½ ft high, stands on the Thames embankment, London The American one, 69½ ft high, is in Central Park, New York The hieroglyphic inscriptions of Thutmose III and Ramses II covering its sides have suffered more from erosion, because of weather changes, in the few years since the stone came to the Western world than in the many centuries before it left Egypt

Cleophas (klē'ōfus), husband of one of the Marys who stood at the foot of the Cross John 19 25 This is apparently Mary the mother of St James the Less Mat 27 56, Mark 15 40 But the father of James the Less is Alphaeus Mat 10 3, Mark 3 18, Luke 6 15 An explanation is that Cleophas is the Aramaic, and Alphaeus the Greek, form of the same name Some identify CLEOPAS with Cleophas

clepsydra (klĕp'sĭdrŭ) or **water clock,** ancient device for measuring time by means of the flow of water from a container A simple form of clepsydra consisted of an earthenware vessel with a small opening through which the water dripped, if the size of the container and the hole were such that the water passed through at a steady rate in 24 hr and if the bowl was marked off into 24 divisions, it served to measure time fairly accurately More elaborate clepsydras were later developed. Some were double vessels, with the larger one below containing a float which rose with the water and marked the hours on a scale A form more closely foreshadowing the clock had a cord fastened to the float so that it turned a wheel, the movement of which indicated the time A further step was the use of gear wheels and a turning pointer. It is believed that clepsydras were used in Egypt c 2000 B C , from Egypt they were introduced into Greece and later from there into Rome

clerestory or **clearstory** (both klēr'stōr"ē), a part of a building whose walls rise higher than the roofs of adjoining parts of the structure It is chiefly a device for obtaining extra light It had an early use in certain Egyptian temples, as at Karnak, and was used later in the great halls of Roman basilicas It became a characteristic element of medieval churches, receiving its fullest development in churches of the Gothic period

clergy : see MINISTRY, MONASTICISM, ORDERS, HOLY

clergy, benefit of: see BENEFIT OF CLERGY

Clergy Reserves, those lands set apart in Upper and Lower Canada under the Constitutional Act of 1791 "for the support and maintenance of a Protestant clergy" "Protestant clergy" was interpreted to mean the clergy of the Church of England This interpretation was fiercely upheld by John STRACHAN and others, but dissatisfied other Protestant denominations and became an issue in the Rebellion of 1837 The method of allotting reserves (interspersed with crown lands) kept discontinuous plots out of cultivation and prevented settlement and the expansion of roads. In 1840 the assembly of Upper Canada passed an act providing for the sale of the Clergy Reserves and

distribution of their proceeds among the chief Protestant denominations, but this act was disallowed by the British government It was not until 1854 that the government succeeded in passing a law for the secularization of the reserves, but the Anglican and Presbyterian churches retained the endowments that had been granted them.

Clericus, Johannes. see LE CLERC, JEAN

Clerk, Sir Dugald (klärk), 1854–1932, British engineer and inventor He invented and patented (1877) a gas engine, a later two-stroke cycle engine (patented 1881) was called the Clerk-cycle gas engine In 1917 he was knighted An authority on internal-combustion engines, he wrote, besides many technical papers, *The Gas Engine* (1886, rev ed , *The Gas, Petrol, and Oil Engine*, 1909–13)

Clerke, Agnes Mary (klärk), 1842–1907, British astronomer, b Ireland Her astronomical observations included those made in 1888 at the Cape of Good Hope, South Africa, and in 1890 from a yacht on the Baltic Sea Among her works are *A Popular History of Astronomy during the 19th Century* (1885), *The System of the Stars* (1890), *The Herschels and Modern Astronomy* (1895), and *Problems in Astrophysics* (1903)

Clerkenwell (klär'kŭnwŭl, -wĕl), district of Finsbury metropolitan borough, London, England, named from a well near which the London parish clerks held performances of miracle plays There are many shops of jewelers, watchmakers, and opticians

Clerk-Maxwell, James. see MAXWELL, JAMES CLERK

Clermont, city (pop 1,631), central Fla , near Lake Apopka, in a farm area Diatomite is found near by

Clermont-Ferrand (klĕrmō'-fĕrä'), city (pop 93,695), capital of Puy-de-Dôme dept , SE France It is an industrial center, the seat of the Michelin and other tire factories The capital of the former province of Auvergne, it was formed in 1731 by the merger of Clermont and Montferrand (pop c 7,000) Clermont was built in Roman times near the site of Gergovia, which Vercingetorix held against Julius Caesar in 52 B C and which was later dismantled An episcopal see since the 3d cent , it was the site of several church councils, notably that of 1095, where Pope Urban II preached the First Crusade (see CRUSADES) The city is picturesquely situated near the Puy de Dôme peak Its old section is built largely of the dark volcanic rock of the region The Romanesque Church of Notre Dame (12th cent) and the Gothic cathedral (12th–15th cent) are among the many notable buildings, Montferrand is remarkable for its Gothic and Renaissance houses Clermont-Ferrand has a university (founded 1854) and several museums Gregory of Tours and Blaise Pascal were born here

Cletus (klē'tus) or **Anacletus, Saint** (ănŭklē'tus), pope (A D 76?–A D 88?), martyr, a Roman, successor of St LINUS and predecessor of St CLEMENT I Nothing is known of him Feast April 26

Cleve, Joos van see CLEEF, JOOS VAN

Cleve, Germany see CLEVES

Clevedon (klĕv'dŭn), urban district (1931 pop 7 029, 1943 estimated pop 8,000), Somerset, England, on the Severn estuary near the Bristol Channel It is a seaside resort "Clevedon Court," built in the 14th cent , is the "Castlewood" of Thackeray's *Henry Esmond* Arthur Hallam is buried in the parish church of St Andrew

Cleveland, Barbara Villiers, duchess of (vĭ'lĭurz, vĭl'vûrz), 1641–1709, mistress of Charles II of England The king made her husband, Roger Palmer, earl of Castlemaine Lady Castlemaine was the archenemy of Edward Hyde, earl of Clarendon, the lord chancellor, and Pepys records in his diary her glee at the downfall of the minister She was made duchess in 1670 and by 1674 was supplanted in Charles's affections by Louise de Kérouaille She had borne the king several children See Margaret Gilmour, *The Great Lady* (1944)

Cleveland, Frederick Albert, 1865–1946, American economist, b Sterling, Ill , studied at DePauw Univ and the Univ of Chicago, Ph D Univ of Pennsylvania, 1900 He taught at the Univ of Pennsylvania (1900–1903) and was professor of finance at New York Univ (1903–5) He was a leader in budget reform and a member of several committees investigating public finances, serving as director (1907–17) of the bureau of municipal research in New York and Philadelphia, as financial adviser (1910–13) to President Taft, and as financial adviser (1929–35) to the Chinese government From 1919 until his retirement in 1939 he was professor of U S citizenship at Boston Univ He wrote many books on finance and government, including *Funds and Their Uses* (rev ed , 1922), *American Citizenship* (1927), and *Modern Scientific Knowledge* (1929).

Cleveland, Grover (Stephen Grover Cleveland), 1837–1908, 22d President of the United States (two terms, 1885–89, 1893–97), b Caldwell, N J , son of a Presbyterian clergyman A lawyer in Buffalo, he became (1881) the "veto mayor" who drove corruption from the city administration. He won the attention of Daniel MANNING and the reform Democrats and was elected governor of New York. He further built his reputation as an enemy of machine politics by breaking violently with the Tammany leader, John KELLY, and supporting the bills prepared by Theodore ROOSEVELT to improve the government of New York city By 1884 he was a national figure, and he was nominated as Democratic "clean-government" candidate for President to oppose James G BLAINE Cleveland, hated by Tammany and favored by political reformers, got the votes of many reform Republicans—the "mugwumps," who voted against their party The campaign was notably bitter and was marked by the "Rum, Romanism, and Rebellion" speech of a Blaine supporter, which deeply offended Roman Catholics and may have swung the vote to Cleveland in the key state of New York Cleveland as President continued his independent, reformist, but conservative course He did not go far enough in civil service reform to satisfy the zealots, but at the same time by keeping Republican government employees who were not "offensive partisans" he offended the Democratic spoilsmen He vetoed many individual pension bills and also turned down (1887) the general pension for relief to all disabled veterans (including those not disabled in army service) The surplus revenue accumulating in the treasury largely because high Civil War tariffs were still in force fostered much "pork barrel" legislation Cleveland vetoed such laws and argued for a lower tariff, devoting the whole of his annual message to Congress in 1887 to the question The tariff was a major issue in the 1888 election Cleveland received a popular majority but lost the electoral majority to his Republican opponent, Benjamin HARRISON A romantic note in his first administration was his marriage (1886) in the White House to his former ward, Frances Folsom In 1889 he retired to private life as a New York city lawyer, but opposition to measures of the Republican administration, notably the McKinley Tariff Act of 1890, brought him new following In 1892 he was again elected President The panic of 1893 struck a hard blow at his administration Though the more radical Democrats saw salvation in free coinage of silver, the independent President sought to improve the economic situation by securing repeal of the SHERMAN SILVER PURCHASE ACT with the help of conservative Republicans The best opportunity for a lowered tariff had passed, since the treasury now had a deficit rather than a surplus The Wilson Bill, embodying Cleveland's tariff ideas, passed the House of Representatives but was so altered by Senator A P GORMAN and other protectionist Democrats that Cleveland, in disgust, allowed it to become law without his signature The rift between the President and the radical Democrats widened, especially over the gold standard, which Cleveland upheld In the Pullman strike in 1894, Cleveland, on the grounds that the movement of U S mail was being halted by the strikers under Eugene V DEBS, sent troops into the area over the protest of Gov J P ALTGELD The strike was broken by the use of Federal injunctions and the arrest of the strike leaders In foreign affairs both of Cleveland's administrations were marked by a strong stand on the VENEZUELA BOUNDARY DISPUTE, which called forth a statement greatly enlarging the scope of the Monroe Doctrine He refused to recognize the government set up in Hawaii by a revolution which was engineered by Americans expecting speedy annexation to the United States, and he tried to discourage help to the revolutionists in Cuba The more radical wing of the Democrats—the silver Democrats—got control of the party in 1896 and nominated William Jennings Bryan, repudiating Cleveland His strong second term had put him at odds with many, and his *Presidential Problems* (1904) was mainly a defense of his own attitude on some of the major issues See biographies by Robert McElroy (1923) and Allan Nevins (1932)

Cleveland or **Cleiveland, John,** 1613–58, English poet One of the most popular poets of his day, he was a satirist for the royalists His poetry originally went through 20 editions, but he is remembered chiefly for "Fuscara" and "Mark Anthony " See edition of his poems by J M Berdan (1911)

Cleveland. 1 City (pop 4,189), a co seat of Bolivar co , NW Miss , NE of Greenville, in a rich cotton area It has a state teachers college 2 City (pop 878,336), co seat of Cuyahoga co , NE Ohio, a port of entry on Lake Erie at the mouth of the Cuyahoga river It is Ohio's largest city and in 1940 was sixth in size in the United States Accessible to the coal fields of Pennsylvania and (by the Great Lakes) to the Minnesota iron mines, Cleveland became one of the great ore ports and an important center of iron and steel production Other leading industries are chemical factories and various metalworking establishments Among its products are paints and varnishes, electrical appliances, men's and women's clothing, and aircraft engines The town was laid out in 1796 by Moses CLEAVELAND, it was chartered as a city in 1836, and Ohio City (across the river) was annexed in 1854 It developed rapidly after completion here of the Ohio and Erie Canal (1832) and the arrival of the railroad (1851) Iron production was begun in the 1850s, developed under the demands of the Civil War, and expanded in the latter half of the century Large rail, oil, and electrical ventures helped boom industry Rockefeller began his oil dynasty, Mark Hanna built his fortune here Civic evils attending the city's growth were checked by progressive men, such as Mayor Tom L Johnson, who inaugurated many reforms Schools in the city are the CASE INSTITUTE OF TECHNOLOGY, Fenn College (Y M C A , coeducational, 1881), WESTERN RESERVE UNIVERSITY, Ursuline College for Women, John Carroll Univ (see UNIVERSITY HEIGHTS), the Cleveland Institute of Music, the Cleveland Law School, Schauffler College of Religious and Social Work, and St John College Its numerous places of interest include the Mall (civic center), the museum of natural history, the Western Reserve Historical Society Museum, Wade Park, with the CLEVELAND MUSEUM OF ART and the Fine Arts Garden, Rockefeller Park, enclosing the Cleveland Cultural Gardens, Severance Hall, where concerts of the Cleveland Symphony Orchestra are performed, the Cleveland Play House, and the zoological gardens The Cleveland Public Library is known as one of the best in the country Near by is Nela Park, research laboratory headquarters of the General Electric Company In 1936–37 the city held an elaborate Great Lakes Exposition, celebrating its centenary 3 City (pop 2,510), NE central Okla , on the Arkansas river and NW of Tulsa, in an oil-producing region, founded 1893 4 City (pop 11,351), co seat of Bradley co , E Tenn , ENE of Chattanooga, inc 1838 Woodworking is among its industries The city is headquarters of a branch of the Church of God (a fundamentalist group), as well as of the Cherokee National Forest 5 City (pop 1,783), E Texas, near the San Jacinto and NNE of Houston, in a lumber and farm area, inc 1929

Cleveland Heights, city (pop 54,992), NE Ohio, eastern residential suburb of Cleveland, inc as a village 1905, as a city 1921

Cleveland Museum of Art, at Cleveland, Ohio, founded and incorporated in 1913 It is supported by a large endowment and by annual subscriptions The building, in Greek style, designed by the firm of Hubbell and Benes of Cleveland, was opened in 1916 Among important collections of the museum are the John Huntington and the Horace Kelley bequests, upon both of which the permanent collection is founded, in 1944 the Elizabeth Severance Prentiss collection was left to the museum Among the museum's outstanding acquisitions are works by Holbein, Rembrandt, Andrea del Sarto, Ingres, Watteau, and Constable

Clevenger, Shobal Vail (klĕv'jĭur), 1812–43, American sculptor, b Middletown, Ohio Apprenticed to a stonecutter in Cincinnati, he won the interest of Nicholas Longworth, who later (1840) sent him to Italy to study His figure of a North American Indian, executed at Rome in 1840, was described as the "first distinctively American sculpture" His portrait busts were good likenesses, especially that of Daniel Webster, which was reproduced on a postage stamp, other examples are the busts of Henry Clay (Metropolitan Mus) and Washington Allston (Pa Acad of the Fine Arts)

Cleves (klēvz), Ger *Kleve* or *Cleve* (both klā'vu), city (pop 23,152), in the former Rhine Prov of Prussia, NW Germany, historical capital of the duchy of Cleves In the Second World War it suffered much damage The collegiate church (14th–15th cent), containing the tombs of the dukes of Cleves, and the 11th-century Schwanenburg [swans' castle], associated with the legend of Lohengrin, were almost completely destroyed

Cleves (klēvz), village (pop 1,871), SW Ohio, W of Cincinnati and on the Great Miami near the Ohio, platted 1818

Cleves, duchy of, former state, NW Germany, on both sides of the lower Rhine, bordering on the United Netherlands Cleves was the capital A county from late Carolingian times, it was raised to a duchy in the 15th cent The dukes of Cleves acquired extensive territories on both sides of the Rhine besides the county of Mark, in Westphalia (acquired in the 14th cent), Duke John III of Cleves inherited (1524) the duchies of JÜLICH and BERG and the county of RAVENSBURG His daughter, ANNE OF CLEVES, was married to Henry VIII of England In 1609 the male line became extinct, and a complicated dynastic quarrel for the succession followed Brandenburg acquired (1614) Cleves, Mark, and Ravensburg, the Palatinate-Neuburg line of the house of WITTELSBACH took Jülich and Berg The succession was not finally settled until 1666, when the Treaty of Cleves confirmed the division

Clew Bay, inlet, 15 mi long, on the west coast of Co Mayo, Ireland There are numerous cultivated islets Clare Island is at the entrance

Clewiston, city (pop 1,338), S central Fla , on the south shore of Lake Okeechobee, founded 1921 It is a resort in a farm area producing sugar cane

cliff dwellers, Indian builders of the ancient cliff dwellings found in the canyons and on the mesas of the U S Southwest, principally on the tributaries of the Colorado and the Rio Grande rivers in New Mexico, Arizona, Utah, and Colorado. It was once thought that these ruins were the work of an extinct

aboriginal people, but it has been established that they were built by the ancestors of the present PUEBLO INDIANS The dwellings were large communal habitations built on ledges in the canyon walls and on the flat tops of the mesas They were very difficult of access and were thus highly defensible against nomadic predatory tribes such as the Navaho. The cliff dwellers were sedentary agriculturists with fields of crops in the river valleys below their high-perched houses They were experts at irrigating the fields Their lives were highly organized on the communal pattern, and the many kivas (ceremonial rooms) show that their religious ceremonies were like those of the Pueblo Indians today Many of the dwellings are now in national parks and monuments and are much visited by tourists Some of the better-known ones are those of the Mesa Verde National Park, in Colorado, where there are more than 300 dwellings, Yucca House, also in Colorado, Hovenweep, in Utah, and Casa Grande, Montezuma Castle, and Wupatki, in Arizona There is a large literature on the cliff dwellers Their form of life has been admirably described by Adolph Bandelier in *The Delight Makers* (1890)

Clifford, Sir Hugh, 1866–1941, British colonial governor and author, b London Among distinguished offices he held was that of high commissioner (1927–29) of the Malay States, and he wrote novels and stories of Malay life His wife, **Elizabeth Lydia Rosabelle Bonham, Lady Clifford,** 1866–1945, was formerly Mrs Henry de la Pasture Under that name she is known for several pleasant novels, including *Peter's Mother* (1905), successfully dramatised, and *The Lonely Lady of Grosvenor Square* (1907) Lady Clifford was the mother of E M Delafield

Clifford, Lucy Lane, d 1929, English novelist and dramatist, b Barbados, wife of William Kingdon Clifford She wrote *Mrs Keith's Crime* (1885), *Love Letters of a Worldly Woman* (rov ed , 1913), and *Miss Fingal* (1919) Her plays include *The Likeness of the Night* (produced 1901) and *A Woman Alone* (produced 1914)

Clifford, Nathan, 1803–81, American jurist, b Rumney, Grafton co , N.H. Admitted to the bar in 1827, he began law practice at Newfield, Maine Clifford, a Jacksonian Democrat, was a state legislator (1830–34), attorney general of Maine (1834–38), a U.S Representative (1839–43), and U S Attorney General (1846–48) under President James K. Polk With Ambrose H. Sevier he was sent to Mexico in 1848 to secure signature of the amended treaty of peace and remained there some months as minister plenipotentiary From 1858 until his death he was an associate justice of the U S Supreme Court. Presiding over the Hayes-Tilden electoral commission in 1877, he advocated going behind the state returns, but was overruled He refused to enter the White House while it was occupied by Hayes, whom he regarded as a usurper See biography by P G Clifford (1922)

Clifford, Rosamond: see ROSAMOND, d 1176?

Clifford, William Kingdon, 1845–79, English mathematician and philosopher, husband of Lucy Lane Clifford. From 1871 he was professor of mathematics and mechanics at University College, London. Especially notable are his papers on biquaternions and on the dissection of a Riemann's surface, both reprinted in his *Mathematical Papers* (1882) His works include also *Elements of Dynamic* (1878–87) and the posthumously published *Lectures and Essays* (1879) and *The Common Sense of the Exact Sciences* (completed by Karl Pearson, 1885)

Clifford of Chudleigh, Thomas Clifford, 1st **Baron** (chŭd'lē), 1630–73, English statesman Member (1666–73) of the CABAL at Charles II's court, he held numerous offices, rising to be acting secretary of state and lord treasurer (1672) He was in 1672 created Baron Clifford Henry Bennet, earl of Arlington, and Clifford, both Catholics, knew of the secret clauses of the Treaty of Dover (1670) which provided for the reestablishment of Roman Catholicism in England. He was forced to resign by passage of the Test Act (1673), which excluded Catholics from office, and he committed suicide

Cliffside Park, suburban borough (pop 16,892), NE N J., NE of Jersey City near the Hudson, inc 1895

Clifton, Chalmers, 1889–, American conductor, b Jackson, Miss , studied at the Cincinnati Conservatory, at Harvard, and with D'Indy in Paris He was director of the American Orchestral Society in New York from 1922 to 1930 In 1935 he organized the Federal Music Project in New York and was its director from 1937 to 1939

Clifton, resort and residential suburb of Bristol, England, high above the Avon gorge, crossed by I K Brunel's suspension bridge It is the seat of Clifton College, a boys' public school.

Clifton. 1 Town (pop 2,668), co seat of Greenlee co , E Ariz , on the San Francisco river near the N. Mex line, settled 1872 In a mining region, it has a copper smelter Hot springs bubble up near the town's center 2 Former city, Ky · see NEWPORT 3 Industrial city (pop 48,827), NE N.J , near Passaic; inc. 1917 Rubber products and airplane propellers are made here 4 City (pop 1,732), central Texas, on the Bosque and NW of Waco; inc. 1902. Cattle and oats and other grains are handled. There is a Lutheran junior college

Clifton Forge, city (pop 6,461), western Va., N of Roanoke, in the Jackson river valley; settled 1880, inc. 1884 It has railroad shops and an iron industry A state park is near by

Clifton Heights, borough (pop 4,921), SE Pa , W of Philadelphia; settled c 1850, inc. 1885 It has several large textile mills

Clifton Springs, village (pop 1,413), W central N.Y., SE of Rochester, inc 1859. There are mineral springs and a sanatorium

climacteric. see MENOPAUSE.

climate, the sum total of the weather elements, including averages and extremes over a long period of time of temperature, precipitation (see RAIN), HUMIDITY, WIND, barometric pressure, and other items The major influences governing the climate of a region is its latitude, and thus is modified by one or more secondary influences including position relative to land and water areas, altitude, TOPOGRAPHY, prevailing winds, OCEAN CURRENTS, and prevalence of cyclonic storms A broad latitudinal division of the earth's surface into climatic zones includes the equatorial zone or DOLDRUMS, characterised by high temperatures with small seasonal and diurnal change and heavy rainfall, subtropical, including the trade-wind belts and the HORSE LATITUDES, a dry region with uniformly mild temperatures, intermediate, the region of the prevailing westerlies which, due to several secondary influences, displays wide temperature ranges and marked changeableness of weather, and polar, a region of short summers and long winters, where the ground is perpetually frozen except for a thin surface layer The transition belt between the subtropical and intermediate zones, known as the Mediterranean type, is found on the west coasts of continents and is characterized by mild temperatures with moderate rainfall in winter under the influence of the moisture-laden prevailing westerlies and dry summers under the influence of the horse latitudes or of the trade winds Climatic types combining the basic factor of latitude with one or more secondary influences include the continental, which, except in the equatorial region, is marked by dry sunny weather with low humidity and seasonal extremes in temperature, noteworthy examples being the Sahara Desert (with the highest temperature on record, 136°F , at Tripoli) and Siberia (with the lowest recorded surface temperature of −93 6°F at Verkhoyansk), and the marine, which is characterized by small annual and diurnal temperature variation and by copious rainfall on the windward side of mountainous islands, exemplified in the mean annual precipitation of 451 in at Mt Waialeale, Kauai, Hawaii The coastal or littoral climate is one in which the direction of the prevailing winds plays a dominant role, the east coasts having generally the heavier rainfall in the trade-wind belts, and the west coasts, in westerly belts, both have a climate resembling the continental during the season when the wind is blowing from the interior of the continent An instance of the coastal type, in which the precipitation is accentuated by the nearness of a mountain barrier, is the west coast of North America from Alaska to Oregon, where the mean annual precipitation averages 80 to 100 in , practically all of it falling during the winter months Also included are the mountain and plateau climates, where elevation is the controlling factor (the temperature decreasing 3° per 1,000 ft of ascent on an average, and rainfall increasing up to c 6,000 ft , then decreasing with further elevation) Climatology, the study or science of climate and its relation to plant and animal life, is gaining increased recognition in many fields, notably in agriculture, aviation, medicine, botany, zoology, geology, and geography The effect of climate on man is evident when one considers that the highest types of civilization have thus far developed in lands of variable climate, usually in middle latitudes, where there is a productive soil and an annual temperature range conducive to both mental and physical activity Changes in climate affect the plant and animal life of a given area Fossils of animals discovered in North America, Greenland, and Siberia and the presence of coal beds in North America and Europe, on one hand, and evidence of glaciation in these same areas, on the other, indicate that they must have experienced alternately warmer and colder climates than they now possess Despite yearly fluctuations of climatic elements, there has been, apparently, little over-all change during the period of recorded history Climatic cycles (variations in weather elements which recur with considerable regularity) have been claimed to exist—the 35-year cycle of Brückner was well investigated in Europe, and an 11-year sunspot cycle has been advanced. There is some evidence that temperatures in the central and eastern portions of the United States have had a general upward trend during the past 50 years. See Julius Hann and R DeC Ward, *Handbook of Climatology* (1903), Ellsworth Huntington, *Civilization and Climate* (1915); R DeC Ward, *The Climates of the United States* (1925); G. T. Trewartha, *An Introduction to Weather and Climate* (1943); S. F. Markham, *Climate and the Energy of Nations* (2d ed., 1947).

Climax, Saint John: see JOHN CLIMAX, SAINT.

climbing lily: see GLORY LILY.

climbing perch, spiny-finned, perchlike, walking fish, genus *Anabas*, found in quiet fresh waters of India and SE Asia. The adult is dark brown and reaches about 10 in. in length It has a blunt, hard head and a body covering of thick skin and scales. By movements of the fins and tail and aided by the spines on the fins and gill covers it can progress awkwardly over land and can climb up banks and tree trunks It has a supplementary breathing apparatus which enables it to use atmospheric oxygen, and it will die if not allowed to rise to the surface for air.

climbing plant, any plant that in growing to a height requires some support. Climbing plants may clamber over a support (climbing rose), twine up a slender support (hop, honeysuckle), or grasp the support by special processes such as adventitious aerial roots (English ivy, poison ivy, trumpet creeper), tendrils (see TENDRIL), or hook-tipped leaves (glory lily, rattan) Some climbing plants when not supported become trailing plants (English ivy). Climbing plants are to be found in nearly every type of plant, as the ferns (climbing fern), palms (rattan), grasses (some bamboos), lilies (glory lily), and cacti (night-blooming cereus) Tropical kinds—usually called lianas—are particularly abundant A sturdy vine may strangle a supporting tree See Charles Darwin, *The Movements and Habits of Climbing Plants* (1864), A C Hottes, *A Little Book of Climbing Plants* (1924)

Clinch, river, c.300 mi long, formed by the junction of two forks in Tazewell co in the western part of Virginia and flowing generally SW across E Tennessee to the Tennessee river at Kingston Its waters and those of its tributary, the Powell, are used to make the giant reservoir at Norris Dam, and the Clinch again becomes a reservoir at its mouth, it is thus an important part of the system of the TENNESSEE VALLEY AUTHORITY. In late colonial days the Clinch was one of the routes for settlers going to Tennessee, and it is celebrated in an old folk song

Clinedinst, Benjamin West (klīn'dĭnst), 1860–1931 American illustrator and portrait and genre painter, b Woodstock, Va., studied at the École des Beaux-Arts and with Cabanel and Bonnat in Paris He is best known as an illustrator for popular magazines and of books by Hawthorne, Stevenson, Mark Twain, Bret Harte, and others Among his portraits are those of Theodore Roosevelt, Gen E W Nichols, and Admiral Peary He became a member of the National Academy in 1898

clinic (klĭ'nĭk), name for a number of kinds of institutions providing medical diagnosis and treatment for ambulatory patients Present-day clinics include those maintained by hospitals and various public and private organizations, as well as private clinics operated by groups of physicians Originally the clinic served only those who could not afford to pay a fee, and its chief function was the dispensing of free drugs, such institutions, called dispensaries, were the forerunners of modern clinics Dispensaries began to be established in London near the close of the 17th cent In the United States the first free dispensary was founded (1786) in Philadelphia through the efforts of Benjamin Rush, a dispensary was founded in New York in 1791, and one in Boston in 1796. Home care was often provided for by the early dispensaries, but later the clinic evolved as a place for treatment of those who could visit the institution. As the clinic movement grew, facilities for providing diagnosis and treatment improved In the 20th cent there has been much progress in the establishment of preventive clinics, many of which provide for vaccination and other measures against the spread of disease, some are established to promote and maintain the health of babies and mothers, and others to facilitate the early diagnosis of tuberculosis and other diseases by means of the X ray and other methods In some areas mobile units travel from place to place providing various kinds of medical and dental care Many clinics are connected with hospitals and medical schools, and these in addition to affording certain advantages to the patient have educational value for the students and doctors. Some clinics are maintained by schools, business offices, and industrial plants for treating their own personnel Many clinics cooperate with other social agencies in order to improve, when necessary, not only the patient's physical health but also his environment and mental health Of the clinics maintained by organizations some are free, some charge a nominal fee, and in others the fee is voluntary or in proportion to the ability to pay See M. M. Davis, *Clinics, Hospitals, and Health Centers* (1927), and, with Anna Richardson, *New Clinics for Old* (1927), Franz Goldmann, *Public Medical Care* (1945); L I Bigley, *Community Clinics* (1947).

Clink, former district, seat of the famous prison in Southwark, London, England, on the Bankside, near the palace of the Winchester bishops.

Clinton, De Witt, 1769–1828, American statesman, b New Windsor, near Newburgh, N.Y., grad Columbia, 1786; son of James CLINTON. He was admitted (1790) to the New York bar, but soon became secretary to his uncle, George CLINTON, first governor of the state, and in that position (1790–95) gained considerable political experience and influence at an early age. In 1797 he entered the state legislature. Chosen (1801) for the state council of appointment, he helped overthrow the custom of allowing the governor to propose all names and instituted a general replacement of Federalist officeholders by Republicans. As U S Senator (1802–3) Clinton introduced the Twelfth Amendment to the Constitution and opposed sentiment for hostilities against Spain. In 1803 he became mayor of New York city, and in 10 annual terms, between 1803 and 1815, he promoted public education, city planning, city fortifications, public sanitation, and relief of the poor. While mayor he was successful in dictating the nomination of two governors and he also held office as state senator (1806–11) and lieutenant governor (1811–13). He advocated removal of the political disabilities of Roman Catholics, abolition of slavery, and amelioration of severe punishment for debt and misdemeanors. He ran unsuccessfully for President against James Madison in 1812, with support both from Federalists, who recognized his insurgency, and from Republicans. As canal commissioner after 1810 he sponsored the ERIE CANAL and the Champlain-Hudson Canal, and in 1816 the legislature adopted his plan. From 1817 to 1821 he was governor and gave constant support to the canal projects. However, partly because of his reluctance to call a badly needed state constitutional convention, Clinton suffered temporary political reverses and through the opposition of the ALBANY REGENCY and TAMMANY was deprived in 1824 even of his post as canal commissioner. Again governor from 1825 until his death, he celebrated the completion of the canals and promoted public and normal schools, manufacturing, and legal reform. Clinton was genuinely interested in art and natural science, to which he made valuable contributions. He was also concerned with education, actively sponsoring the system of Joseph Lancaster. He was a founder and president (1817) of the New York Historical Society. See biography by Dorothie Bobbé (1933), H L McBain, *De Witt Clinton and the Spoils System* (1907), Dixon Ryan Fox, *Decline of Aristocracy in the Politics of New York* (1918).

Clinton, George, 1739–1812, American statesman, b Little Britain, Ulster co (his birthplace is now in Orange co), N Y. Before he was 20 he served on a privateer and accompanied the regiment of his father, Charles Clinton, in the expedition against Fort Frontenac led by John BRADSTREET. After studying law in New York city he began practice in Ulster co and was elected (1768) to the provincial assembly, where he became a leader of the patriot party. In 1775 Clinton was elected one of the state's delegates to the Second Continental Congress. Military duties prevented his signing the Declaration of Independence. His courageous but unskillful defense of the Hudson, as brigadier general in the Continental army, resulted in the capture of Fort Clinton and Fort Montgomery by the British general, Sir Henry CLINTON. Under the new state constitution, which Clinton helped to frame, he was elected (June, 1777) the first governor of New York. His energy and leadership as governor for SIX successive terms (1777–95) led to his being called the father of New York state. He managed trade and public welfare problems ably and successfully, settled the Indian troubles in W New York. He advanced New York's claims to the NEW HAMPSHIRE GRANTS (now Vermont), initiated action on building canals (later realized by his nephew, De Witt CLINTON), and unsuccessfully fought the transfer from New York to the United States of the right to collect duties at the port of New York. An advocate of state sovereignty, Clinton was one of the chief opponents of the Federal Constitution, writing seven letters, signed Cato, in the New York *Journal* against ratification. These were answered by Alexander HAMILTON in his letters signed Caesar in the *Daily Advertiser*. Clinton presided over the convention at Poughkeepsie which did ratify the Constitution, but not until enough other states had acted to insure its operation. His views on the Constitution were opposed by a rapidly growing party, the Federalists, under the leadership of John JAY. Jay lost the election of 1792 only by a questionable manipulation of returns on the part of the Clintonians, and in 1795 Jay won with ease, Clinton having declined to become a candidate. As a result of his alliance with the Livingstons and Aaron BURR, he became governor for a seventh term in the Republican triumph of 1800. In 1804 he was elected Vice President. He sought the presidency in 1808, having received some support for that office in previous elections, but again he received only the vice presidency. As presiding officer of the U.S. Senate he cast the determining vote against the bill to recharter the Bank of the United States (1811). He died in office. See his *Public Papers* (ed. by Hugh Hastings and J. A. Holden, 10 vols., 1899–1914), biography by E. W. Spaulding (1938).

Clinton, Sir Henry, 1738?–1795, British general in the American Revolution, b Newfoundland, son of George Clinton, colonial governor of Newfoundland and later of New York. He was an officer in the New York militia and then in the Coldstream Guards. He had distinguished himself in America by service in the French and Indian War long before he arrived in 1775 with reinforcements for Gov. Thomas Gage in Boston. He took part in the battle of Bunker Hill, commanded (1776) an unsuccessful expedition against Charleston, S C., and served under Sir William HOWE in the battle of Long Island, in the occupation of New York, and at White Plains. In 1777 he was efficient in heading the British occupation of Rhode Island. When Howe moved on Philadelphia, Clinton assumed the command of New York. He did not fulfill the part expected of the New York command in the British plan that ended with the SARATOGA CAMPAIGN, he advanced up the Hudson valley, capturing the patriot strongholds—Fort Clinton (strongly defended by James Clinton) and Fort Montgomery—but after burning Kingston, he turned back. Sir Henry Clinton (knighted 1777) succeeded Howe in the supreme command in America in 1778. Acting on orders from London, he evacuated Philadelphia and, after Washington's attempt to halt him (see MONMOUTH, BATTLE OF) failed, reached New York. He complained that Lord George Germain did not answer his requests for supplies and twice tried to resign. In Dec., 1779, he left Baron KNYPHAUSEN in command in New York and redeemed his failure of 1776 by capturing Charleston (1780). After placing Cornwallis in command in the Carolinas, he returned to New York. In 1781 he remained there too long, expecting Washington to attack, and failed to aid Cornwallis in the YORKTOWN CAMPAIGN. He resigned and was succeeded by Sir Guy CARLETON. He was later (1794–95) governor of Gibraltar. He wrote an account of his campaigns, and his headquarters papers are in the William L. Clements Library at Ann Arbor, Mich.

Clinton, James, 1733–1812, American Revolutionary general, b Orange co, N Y., brother of George Clinton and father of De Witt Clinton. He served in the French and Indian War, and early in the Revolution he took part in the disastrous Quebec campaign. His most noted exploit was his heroic defense of Fort Clinton (near Kingston, N Y.) against the British drive up the Hudson valley under Sir Henry CLINTON in 1777. James Clinton later fought (1779) with Gen. John SULLIVAN against the Indians and served at Yorktown (1781).

Clinton, town (pop. 1,896), S Ont., SE of Goderich at the junction of the old London and Huron roads. It is a manufacturing center with salt wells near by.

Clinton. **1** Resort town (pop. 1,791), S Conn., on Long Island Sound E of New Haven, settled 1663, set off from Killingworth 1838. Cosmetics are made here. **2** City (pop. 6,331), co. seat of De Witt co., central Ill., N of Decatur, in a farm area, settled 1836, inc. 1855. It has railroad shops. Clinton was on the circuit of the eighth judicial district, and Abraham Lincoln frequently argued cases here. **3** City (pop. 7,092), W Ind., on the Wabash and 15 mi. N of Terre Haute, settled 1818, laid out 1829. Bituminous coal is mined here on a large scale. The site of Fort William Henry Harrison is near by. **4** City (pop. 26,270), co. seat of Clinton co., E Iowa, on the Mississippi and NE of Davenport, laid out 1838, replatted 1855, inc. 1857. It is an industrial and rail center in a rich agricultural area and grew as an important lumber-producing city in the 1880s. Flour, cellophane, and millwork products are made. Mt. St. Clare Junior College (for girls) is here. **5** Town (pop. 1,540), co. seat of Hickman co., SW Ky., near the Mississippi. SW of Paducah, platted 1826, inc. 1831. It is a shipping point for corn and cotton. Columbus-Belmont Battlefield State Park is near by; it is on the old site of the city of Columbus (now moved to higher ground), scene of early settlement and a Confederate stronghold early in the Civil War. **6** Town (pop. 1,436), S Maine, on the Sebasticook and NE of Waterville, settled c.1775, inc. 1795. It has varied small industries. **7** Industrial town (pop. 12,440), central Mass., near Wachusett Reservoir, settled 1654, inc. 1850. Its products include steel goods. **8** Village (pop. 1,126), S Mich., on the Jackson Branch of the Raisin and SW of Detroit, in a rich farm region, inc. 1838. Wool and flour are made here. Indian mounds are in the vicinity. **9** Town (pop. 916), W central Miss., just W of Jackson, settled c.1823 on the site of an early Indian agency, inc. 1830. Mississippi College (Baptist, coeducational, 1826) is here. **10** City (pop. 6,041), co. seat of Henry co., W Mo., SE of Kansas City, in a dairy, poultry, grain, and coal area. **11** Town (pop. 1,066), W N J., ESE of Phillipsburg, settled in the mid-18th cent., inc. 1865. **12** Village (pop. 1,478), central N Y., SW of Utica, inc. 1843. Sweaters are made here. Clinton is the birthplace of Elihu Root and the seat of HAMILTON COLLEGE. **13** Town (pop. 3,557), co. seat of Sampson co., E central N.C., SSE of Raleigh; laid out 1818. It is in a lumber and farm area noted for huckleberries. **14** City (pop. 6,736), W Okla., on the Washita river, founded 1903. A shipping center for a wheat and livestock area, it is also the seat of a U S. soil conservation camp, a state hospital, and a state tuberculosis sanatorium. **15** Town (pop. 5,704), NW S C., S of Spartanburg, in a cotton area. It is the seat of Presbyterian College and an orphanage. Near by is the state school for the feeble-minded. **16** Town (pop. 2,761), co. seat of Anderson co., E Tenn., near the Clinch river and NW of Knoxville, in a farm area. Its name was changed from Burrville to Clinton in 1809. Near by is OAK RIDGE.

Clintonville, industrial city (pop. 4,134), central Wis., WNW of Green Bay and on the Embarrass river, in a farm area, settled 1855, inc. 1887. Trucks and cheese are made.

Clintwood, town (pop. 1,106), extreme SW Va., in the Cumberlands, inc. 1894. The courthouse of Dickenson co. is here.

Clio. see MUSES.

Clio (klī'ō), city (pop. 1,711), S Mich., N of Flint, inc. as a village 1873, as a city 1928.

clipper, type of sailing SHIP, designed for speed. Long and narrow, they had the greatest beam aft of the center, the clipper bow cleaved the waves, and the ship carried, besides topgallant and royal sails, skysails and moonrakers, a veritable "cloud" of sails. The clipper was therefore the fastest of all sailing ships. The type originated in the United States. The Baltimore clippers were only forerunners of the real clipper, which may be said to have begun with the *Ann McKim*, completed in Baltimore in 1832. The type was brought to perfection by Donald McKAY of Boston, who built such vessels as the *Flying Cloud*, the *Glory of the Seas*, and the *Lightning*. The clippers dominated commerce to far places of the world, to China and Australia, and from the U S. Atlantic coast around the Horn to California in the days of the gold rush. They steadily cut the time needed for these long voyages and had famous races. The clipper came into being only after its finally successful rival, the steamship, was engaging in transoceanic voyages, but in the early days the clipper easily outran the plodding steam vessel. In the 1860s the improved steamship began to forge ahead, and though some of the most beautiful and the fastest of the clippers were built after 1860, the days of the clipper and of the sailing ship died slowly away. See O T Howe and F C Matthews, *American Clipper Ships, 1835–1858* (1927), Hawthorne Daniel, *The Clipper Ship* (1928), H I Chapelle, *The Baltimore Clipper* (1930), Helen La Grange, *Clipper Ships of America and Britain, 1833–1869* (1936), A B Lubbock, *The Romance of the Clipper Ships* (1939, new ed., 1949), A K Laing, *Clipper Ship Men* (1944).

Clipperton Island, in the Pacific, SW of Mexico. It was used as a base by John Clipperton, an English pirate. The French claimed it in 1858, the Americans held it for a time in the Spanish-American War, and Mexican troops occupied it in 1897. The conflict between France and Mexico was referred to the king of Italy for arbitration in 1908. The award was made (1931) in favor of France, and Mexico surrendered the island in 1932.

Clisson, Olivier de (ōlēvyā' du klēsôN'), 1336–1407, constable of France, b Brittany. He was involved in the War of the BRETON SUCCESSION but entered the French service (1370) as companion in arms to Bertrand du Guesclin. He defeated the insurgents of Ghent under Philip van ARTEVELDE at Roosebeke (1382). Clisson, one of the MARMOUSETS, made use of his position to satisfy his boundless avidity, he was one of the few millionaires of his time. After Charles VI became insane (1392), he retired into Brittany.

Clisthenes see CLEISTHENES.

Clive, Catherine (Kitty Clive) (klīv), 1711–85, English singer and actress, of an Irish family named Raftor. She made her debut at Drury Lane under the management of Cibber, Wilks, and Booth c.1728, playing a minor part in Nathaniel Lee's *Mithridates*. Her wit and vivacity, linked with a fine singing voice, brought her great success in such comedies as Colley Cibber's *Love in a Riddle*, Henry Fielding's *Lottery*, Gay's *Beggar's Opera* and, especially, Charles Coffey's *The Devil to Pay*. A favorite with Handel (she sang in the first production of *Samson* in 1742), she was a friend of Samuel Johnson, of Fielding, in whose plays and adaptations she appeared, and of Horace Walpole, who pensioned her. See Walpole's *Letters*, E M Gagey, *Ballad Opera* (1937).

Clive, Robert, Baron Clive of Plassey (plā'sē), 1725–74, British soldier and statesman. After a turbulent youth in England, he went (1743) to India as a clerk in the employ of the East India Company, but entered the military service of the company in 1744 and distinguished himself (1748) at Pondicherry against the French under Dupleix. With a handful of Europeans sent to relieve Trichinopoly (1751), he captured Arcot, capital of the Carnatic, and held it against great odds. This exploit gave him a wide reputation. Made governor of Fort St. David near Madras, he recovered (1756) CALCUTTA from Siraj-ud-daula, who was supported by the French, and avenged the outrage of

the Black Hole of Calcutta. After his victory at Plassey (1757) he supplanted Siraj-ud-daula with Mir Jafar, the British candidate, as nawab of Bengal. In Madras and Bengal, as governor, he proved a great administrator. In 1760 he returned to England and was given an Irish peerage as Baron Clive of Plassey in 1762. Disorder and corruption, however, appeared in India, and he resumed his duties as governor of Bengal in 1765, in which year he also brought Behar and Orissa under British control. Despite a vigorous and honest administration, he was attacked on his return to England (1767) on charges that he had formerly accepted large presents, and after a long investigation he was acquitted and commended for his services. Broken in health, he committed suicide. Besides destroying French power in India by his military genius, Clive reformed corrupt practices in administration and instituted administrative and economic reforms. He believed that the British government should take over the interests of the East India Company. See the famous *Essay on Clive* by T. B. Macaulay, biographies by A. J. Arbuthnot (1899), G. W. Forrest (1918), and A. M. Davies (1939).

clock, instrument for measuring and indicating time. Predecessors of the clock were the SUNDIAL, the HOURGLASS, and the CLEPSYDRA. When the first mechanical clocks were invented is not definitely known. Some authorities attribute the first wheel clock to Boethius in the 6th cent. and the first weight-driven clock to Pacificus, archdeacon of Verona, in the 9th cent. Gerbert, a learned monk who became Pope Sylvester II, is often credited with the invention of a mechanical clock, c. 996. It is recorded that in 1232 the sultan of Egypt sent to Frederick II of Germany a horologium operated by weights and wheels. Mechanical figures which struck a bell on the hour were installed in St. Paul's Cathedral, London, in 1286, a dial was added to the clock in the 14th cent. Clocks were placed in a clock tower at Westminster Hall, London, in 1288 and in the cathedral at Canterbury in 1292. In France, Rouen was especially noted for the skill of her clockmakers and watchmakers. One of the most famous clocks is in the cathedral of Strasbourg, the clock was first placed in the cathedral in 1352, and in the 16th cent. it was reconstructed. In the 19th cent. a new astronomical clock similar to the first two clocks was constructed. Its elaborate mechanical devices include the Twelve Apostles, a crowing cock, a revolving celestial globe, and an automatic calendar dial. Probably closest of the early clocks to the modern ones was that constructed in the 14th cent. for the tower of the palace (later the Palais de Justice) of Charles V of France by Henry de Vick (Vic, Wieck, Wyck) of Württemburg. Until the 17th cent. few mechanical clocks were found outside of cathedral towers, monasteries, abbeys, and public squares. The early clocks driven by hanging weights were bulky and heavy. When the coiled spring came into use (c. 1500), it made possible the construction of the smaller and lighter-weight types. Christiaan Huygens by applying Galileo's law of the pendulum invented (1656 or 1657) a pendulum clock, probably the first. Early clocks used in dwellings in the 17th cent. were variously known as lantern clocks, bird-cage clocks, and sheep's-head clocks; they were of brass, sometimes ornate, with a gong bell at the top supported by a frame. Before the pendulum was introduced, they were spring-driven or weight-driven, those driven by weights had to be placed on a wall bracket to allow space for the falling weights. These clocks, probably obtained chiefly from England and Holland, were used in the Virginia and New England colonies. Clocks with long cases to conceal the long pendulums and weights came into use after the mid-17th cent.; these were the forerunners of the grandfather clocks. With the development of the craft of cabinetmaking, more attention was concentrated on the clock case. In France the tall cabinet clocks or grandfather clocks were often of oak elaborately ornamented with brass and gilt. Those made in England were at first of oak and later of walnut and mahogany, simpler in style, their chief decoration was inlay work. Among the well-known clocks of the world are the clock in the tower next to Westminster Bridge in the British Houses of Parliament, with its 13½-ton bell known as Big Ben, and the tower clock in the Metropolitan Life Insurance Company building, New York city, which has four dials each 26½ ft. in diameter. Electric clocks were made in the second half of the 19th cent. but were not used extensively in homes until after c.1930. Until the 19th cent. the clock-making industry centered chiefly in France and England, it was later in developing in Germany. From the 19th cent. the United States was a leading producer of clocks. See N. Hudson Moore, *The Old Clock Book* (1911, new ed., 1936), F. J. Britten, *Old Clocks and Watches and Their Makers* (6th ed., 1933), Herbert Cescinsky, *Old English Master Clockmakers and Their Clocks, 1670–1820* (1938), M. Ilin (pseud.), *What Time Is It?* (1941), C. W. Dreppard, *American Clocks and Clockmakers* (1947), G. F. C. Gordon, *Clockmaking, Past and Present* (2d ed., 1949); S. F. Philpott, *Modern Electric Clocks* (4th ed., 1949).

Clodia (klō'dēə), fl. 1st cent. B.C., sister of Publius CLODIUS, famous among the ancient Romans for her beauty. She was suspected of murdering her husband, Q. Caecilius Metellus Celer (see METELLUS, family), and she accused her lover, M. Caelius Rufus (see CAELIUS, family), of trying to murder her. Among her many lovers was the poet CATULLUS, who has immortalized her as Lesbia.

Clodion or **Claude Michel** (klōdēō', klōd' mēshĕl'), 1738–1814, French sculptor. He executed several important commissions under Louis XVI, but is best remembered for his bas-reliefs and little figure groups in bronze and terra cotta representing fauns, nymphs, and children. He is represented in the Louvre and in the Metropolitan.

Clodius (Publius Clodius Pulcher) (klō'dēəs), d. 52 B.C., Roman politician. He belonged to the Claudian gens (see CLAUDIUS), and his name is also written as P. Claudius Pulcher; he was brother of Appius Claudius Pulcher and of the notorious Clodia. In 62 B.C. he created a tremendous scandal by entering the house of Julius CAESAR, disguised as a woman, at the time of the women's mysteries of Bona Dea. CICERO prosecuted him for sacrilege, but Clodius, probably by heavy bribery, won an acquittal. The results were that Caesar divorced his wife POMPEIA, and Cicero earned Clodius' unswerving hatred. In 58 B.C., Clodius was tribune of the people, put into office by the First Triumvirate (Caesar, Crassus, and Pompey) probably under the mistaken impression that he would be a tool. Instead, he proved himself a demagogue, seeking popularity in every way. He exiled Cicero on specious charges arising from the conspiracy of Catiline, and he sent Cato the Younger to Cyprus. Clodius spent much of his money in organizing gangs of bullies to intimidate the city. Pompey and MILO organized a conservative gang, and Rome was plagued with bloody rioting until Clodius was killed by Milo's gang. His irresponsible actions had prepared the way for more trouble and for the civil war of Caesar and Pompey.

Clogher (klŏkh'ur), village (pop. 903), Co. Tyrone, Northern Ireland, on the Blackwater. It has been a religious center since the time of St. Patrick. The seat of the Protestant bishop is here, the cathedral was rebuilt in the 18th cent. The cathedral of the Roman Catholic bishop of Clogher is at Monaghan, Ireland.

cloisonné (kloizunā', -sunā'), method of decorating metal surfaces, such as vases, plaques, jewel boxes, and cigarette cases. It consists in attaching to the surface metal filaments (which form the *cloisons* or separating elements) at right angles to it, outlining the design to be used. These miniature compartments are filled with colored enamel in paste form, and the object is then heated in order to fuse the enamel to the surface and develop its transparency and permanent colors. When finished, the enamel and *cloisons* are closely joined in a smooth, even surface showing the pattern in various colors defined by the metal partitions which prevented their fusing with one another. Cloisonné has been highly perfected by the Chinese, the Japanese, and the French, from whom is borrowed the name applied to both the work and the object so decorated. Fine cloisonné is much prized.

cloister, unroofed space forming part of a religious establishment and surrounded by the various buildings or by enclosing walls. Generally it is provided on all sides with a vaulted passageway consisting of continuous colonnades or arcades opening to a court. The cloister is a characteristic part of monastic institutions (see ABBEY), serving both as sheltered access to the various units of the group and for the recreation and social intercourse of the monks. The first cloisters were built in the 11th cent., a period marked by active monastery building all over Europe. They were not limited to monastic houses, but were built in some English colleges, as at Oxford and Eton, and in some churches, mostly in England and Spain. In N. France many of the original cloisters have disappeared, but superb Romanesque cloisters remain in S. France, Italy and Sicily, and Spain. In the typical ones the arches are supported by delicate columns, generally coupled, the elaborate capitals of the paired columns sometimes being interlaced. The 13th-century cloisters of two Roman churches, St. John Lateran and St. Paul's without the Walls, are notable Romanesque examples, distinguished by twin spiral columns inlaid with rich glass mosaics. Of the Gothic period, the English cloisters are especially fine, as at Salisbury, Wells, and Westminster Abbey. The Renaissance cloisters are confined chiefly to Italy and Spain. In the New World from the 16th cent. the Spanish colonists built simple cloisters, generally arcaded, in Mexico, Cuba, and California.

Cloisters, the, museum of medieval art, at Fort Tryon Park, New York city, overlooking the Hudson. A branch of the Metropolitan Museum of Art, it was opened to the public in May, 1938. The building includes five French cloisters, a 12th-century Romanesque chapel, and a chapter house. The core of the collection it houses consists of six or seven hundred examples of medieval painting, sculpture, and other forms of art gathered in France by George Grey BARNARD. This collection was bought by John D. Rockefeller, Jr., in 1925 and presented to the Metropolitan Museum. Later additions to it include a series of 15th-century tapestries, *Hunt of the Unicorn*.

Clonakilty (klŏnŭkil'tē), urban district (pop. 2,824), Co. Cork, Ireland, at the head of Clonakilty Bay, an inlet of the Atlantic SW of Cork. In an English-Irish battle in 1641 the town was nearly destroyed. There are castles at Galley Head, Dunmycove, and Dunowen. Clonakilty is an agricultural market, with slate quarries. Michael Collins was born here.

Clones (klōnz), urban district (pop. 2,092), Co. Monaghan, Ireland, WSW of Monaghan. It has the remains of a 6th-century abbey with a round tower. A rail center, it is a market for farm produce and manufactures lace and clothing.

Clonmacnoise (klŏnmăknoiz'), historic religious center, Co. Offaly, Ireland, on the Shannon and S. of Athlone. There are ruins of an abbey founded in 541 by St. Kieran, the Seven Churches of Clonmacnoise, a castle, a bishop's palace, two round towers, and several crosses. Inscribed stones are preserved in the abbey. An annual feast of St. Kieran is held at Clonmacnoise.

Clonmel (klŏnmĕl'), Irish *Cluain Meala*, urban district (pop. 9,861), county town of Co. Tipperary, Ireland, on the Suir river. It is a farm market and a tourist, salmon-fishing, and hunting center. It was chartered by Edward I. In 1516 Clonmel was besieged by the British and in 1650 by Cromwell. Laurence Sterne was born here.

Clontarf (klŏntarf'), suburb of Dublin, Co. Dublin, Ireland. It was the scene of a decisive defeat (1014) of the Danes by the Irish under Brian Boru.

Clootz, Anacharsis (anakarsēs' klōts'), 1755–94, agitator in the French Revolution, self-styled Orator of the Human Race. Born near Cleves into a family of the lesser German nobility and originally called Jean Baptiste, he discarded his name in favor of Anacharsis when he became fanatically devoted to republican and humanitarian ideas. He traveled about, spending his large fortune for the advancement of these ideas. Coming to France after the outbreak of the Revolution, he headed a delegation of alleged foreigners as ambassadors of the human race to the National Assembly, became a French citizen, and was elected to the Convention. His influence was seen in the abolition of titles of nobility. Robespierre distrusted the rich leveler, and Anacharsis Clootz was executed with the Hébertists.

Cloquet (klōkā'), city (pop. 7,304), NE Minn., on the St. Louis river and W. of Duluth, settled 1879, inc. as a village 1880, as a city 1904. A wood-products and paper-mill town, it was almost destroyed by forest fire in 1918 and was rebuilt with state aid. The state university has a forest experiment station near here.

closed shop and open shop. The term "closed shop," or sometimes "union shop," is used to signify an establishment which employs only members of a labor union. An open shop, strictly speaking, is one which does not restrict its employees to union members. The medieval trade guilds acted as closed shops, as did the 18th-century trade clubs. Among European workers the issue of the closed shop has not been so sharply fought as in the United States, where since c. 1840 the closed-shop policy has been adopted by most labor unions. The railroad brotherhoods are an outstanding exception, but they nevertheless have exclusive bargaining rights with the railroads. Judicial decisions from 1850 to 1898 usually went against the closed shop. It was further obstructed by the decision of the anthracite coal strike commission of 1902 and the Panic of 1907. After the passage of the Wagner Act (see NATIONAL LABOR RELATIONS BOARD) in 1935, decisions of the Federal courts tended to uphold the legality of the closed shop. Many states, however, either by legislation or by court decision, banned the closed shop, among these are New Jersey, California, Florida, and Georgia. It is argued in favor of the closed shop that unions can win a fair return for their labor only through solidarity, since there is always—except in wartime—an oversupply of labor, that all employees of a plant share in the advantages won through collective bargaining and therefore all should contribute to union funds, and that freedom from the necessity for organizing activities relieves both employees and employers. Arguments in favor of the open shop are that forcing unwilling workers to pay union dues is an infringement of their rights, that union membership is sometimes closed to certain workers or the initiation fee may be so high as to be an effective bar to membership, that in some cases union funds are mismanaged, and that employers are deprived of the privilege of hiring competent workers or firing incompetent ones. The closed shop is generally considered most successful where union membership is open to all and where the employer can hire any worker with the proviso that he must join the union which has bargaining power in that plant. See C. R.

Daugherty, *Labor Problems in American Industry* (5th ed , 1941), J E. Johnsen, comp , *The Closed Shop* (1942), a summary of the arguments on both sides

Closter (klŏs'tûr), borough (pop 2,603), NE N J , near the Hudson NE of Paterson, inc 1903

Clotaire I (klōtâr'), d 561, Frankish king, son of CLOVIS I His capital was at Soissons In 524 he divided with his brothers, THEODORIC I and CHILDEBERT I, the kingdom of his deceased brother Clodomer, whose children they murdered With Theodoric he conquered Thuringia In 534 Clotaire and Childebert seized and divided the First Kingdom of Burgundy, and in 542 they attacked the Visigoths of Spain but were repulsed before Saragossa The deaths of Theodebald, Theodoric's grandson (555), and of Childebert (558) made Clotaire sole king of the Franks His sons, Chilperic I and Sigebert I, inherited Neustria and Austrasia respectively

Clotaire II, 584–629?, Frankish king, son of CHILPERIC I and FREDEGUNDE He succeeded (584) his father as king of Neustria and became king of all the Franks after the deaths of his cousins Theodebert II and Theodoric II (613) He put BRUNHILDA to death, restored peace with the help of the nobility, and drew up a charter granting far-reaching privileges to the nobles and the clergy (614) His son, DAGOBERT I, succeeded him

clotbur see COCKLEBUR

clothes moth, name for several species of moths of the family Tineidae, the larvae of which feed on wool, furs, feathers, upholstery, and a variety of animal products Clothes moths are of Old World origin Those commonest in North America are the case-bearing clothes moth and the webbing clothes moth The adults are yellowish or buff moths, often called millers, with a wingspread of about ½ in They eat no fabrics, but lay 100 to 150 eggs on the material which provides food for the larva The life cycle is completed most rapidly at average room temperature and about 75 percent humidity The tapestry or carpet moth attacks upholstery Fumigation, sunning, cleaning, brushing, and cold storage help to prevent damage

clothing, inclusive term for all articles of dress, considered from a practical, economic, or industrial point of view, rather than in the sense of costume Modern clothing is characterized by an enormous increase in the number and variety of garments worn, by increased emphasis on a superficial, standardized fashion, and by a decline, generally, in quality of material and workmanship The apportionment for clothing in the family budget, although it varies greatly according to conditions, is traditionally about 15 percent The remarkable development of clothing manufacture, together with all related enterprises, such as fashion designing, shows, publications patterns, and advertising, has stimulated the desire for fashionable, though standardized, dress The mass production of clothes to suit the means, taste, and figures of various types of people is one of the notable business developments of the 20th cent Causes contributing to the rapid advance of the industry are the specialization of machinery and factory organization, increased earnings (particularly by women), cheap transportation, intensive advertising, and the spread of democratic ideas Women's ready-to-wear garments are supposed to have originated in Germany, where a few shopkeepers began, c 1850, to display stock sizes of cloaks, in order to use up the surplus of the textile mills, which were then beginning to flourish In 1830 a Paris tailor made army clothing In America (1815–30), New Bedford and Boston tailors attempted to supply sailors with slops Later, factories in the South made garments for slaves and, after 1849, for miners The Civil War stimulated the business, and uniforms were made by contract The advent of the SEWING MACHINE was of revolutionary importance to the development of the industry, especially when power was applied to it The knife machine, designed to cut many layers of cloth, and the specialized pressing machine, together with high division of labor, have given great impetus to mass production During and after the Civil War the contract system was in operation, from 1882 to 1892, much of the labor was done in sweatshops Public opinion being aroused, many of the abuses were ended, and the modern factory is in general well conducted Various organizations, such as the Consumers' League and the Woman's Trade Union League, have pioneered in safeguarding the interests of the public, the workers, and the employers Clothing unions, notably the International Ladies Garment Workers Union and the Amalgamated Clothing Workers, cooperating with employers on the basis of a protocol of 1910, have improved wages, hours, and sanitary conditions in the industry and have led in collective bargaining and welfare activities.

Clotho: see FATES.

cloth of gold. From remote times gold has been used as material for weaving either alone or with other fibers. In India tapestries were made from gold threads as fine as silk Cloth of gold was woven on Byzantine looms from the 7th to the 9th cent and on those of Sicily, Cyprus, Lucca, and Venice in the 10th cent Some narrow webs were woven in England, as well as palls of gold and silver cloth Cloths of estate were magnificent gold tissues used to canopy or cover thrones Baldachin, or fine cloth with gold warp and silk weft, was used ceremonially and also for rich clothing The use of gold textiles and embroideries in the Middle Ages was symbolized by the meeting at the FIELD OF THE CLOTH OF GOLD (1520) Gold thread for weaving and embroidery is still made in India, Delhi alone producing many miles per annum, working in the ancient manner Gold or silver gilt wire is drawn through holes, successively smaller, in a specially devised metal plate, and is used either round or flattened In many early Asiatic fabrics strips of metal were used The Sicilian, Cyprian, and Italian weavers used thin metal, either alone or wrapped round a silk or linen thread The Saracens used a strip of gilded parchment Catgut gilded was sometimes employed Modern metallic cloth is commonly made of a core yarn wound with a thin strip of metal (lamé) or metal coated See H C Candee, *Weaves and Draperies* (1930)

Clotilda, Saint, d 545, Frankish queen A Burgundian princess, she was married (493) to CLOVIS I, in whose conversion to Christianity she was instrumental She ended her life in religious works Feast June 3

clotting of blood, process of the coagulation of blood in which red and white corpuscles and blood platelets are caught in a network of fibrils The fibrils consist of fibrin which forms whenever there is a wound or a break in the skin Explanations of the manner in which clot formation occurs differ, W H Howell's theory of blood clotting is most generally accepted The blood stream contains a ferment (thrombin) and two anticoagulants (heparin and prothrombin), these prevent clotting within the blood vessels When blood is shed, a substance known as thromboplastin or thrombokinase is released from the injured tissues and the blood platelets This substance, aided by calcium ions in the blood, converts prothrombin to thrombin, fibrinogen is then activated by the thrombin, forming fibrin Blood coagulates normally in about 4 min In hemophiliacs or "bleeders," the coagulation time is greatly prolonged (see HEMOPHILIA) In blood transfusions, in operations upon blood vessels, and in cases of thrombosis, certain anticoagulants have been used to prevent clotting of the blood Heparin, first obtained from liver, now known to be present in spleen, heart, thymus, and muscle tissue, will prevent the clotting of blood or prolong the coagulation time when injected intravenously Dicoumarin (dicoumarol), a more recent preparation, is used for the same purpose

Cloud, Saint see SAINT-CLOUD

cloud, aggregation of minute drops of water or particles of ice suspended in the air Clouds are formed when air containing water vapor is cooled below the dew point, the moisture condensing into droplets on microscopic dust particles (condensation nuclei) in the atmosphere The process normally involved is dynamic cooling produced by expansion resulting from the upward movement of air, however clouds are occasionally produced by a reduction of pressure aloft or by the mixing of warmer and cooler air currents Upward flow of air in the atmosphere may be caused by convection resulting from intense heating of the ground, by a cold wedge of air near the ground, causing a flow of warm air to be forced aloft, or by a mountain range at an angle to the flow of air A classification of cloud forms was first made by Lamarck (1801) The one in use today is based upon Luke Howard's classification (1803) and was proposed by the International Meteorological Commission (1929) It comprises four main divisions high clouds, 20,000 ft and above, middle clouds, 6,500 to 20,000 ft , low clouds, near ground level to 6,500 ft , and clouds with vertical development, 1,600 ft to over 20,000 ft High cloud forms include *cirrus,* detached clouds of delicate and fibrous appearance, without shading, generally white in color, often resembling tufts or featherlike plumes, and composed entirely of ice crystals, *cirrocumulus* (mackerel sky), composed of small white flakes or very small globular masses, arranged in groups, lines, or ripples, and *cirrostratus,* a thin whitish veil, sometimes giving the entire sky a milky appearance, which does not blur the outline of the sun or moon but frequently gives rise to a halo Middle clouds include *altocumulus,* a layer or patches composed of flattened globular masses, arranged in groups, lines, or waves, with individual clouds sometimes so close together that their edges join, and *altostratus,* resembling thick cirrostratus, without halo phenomena, more or less like a gray veil, through which the sun or the moon shows vaguely or is sometimes completely hidden Low clouds include *stratocumulus,* a cloud layer or patches composed of fairly large globular masses or flakes, soft and gray, with darker parts, arranged in groups, lines, or rolls, often with the rolls so close together that their edges join, *stratus,* a uniform layer resembling fog but not resting on the ground, and *nimbostratus,* a nearly uniform, dark gray layer, amorphous in character and usually producing continuous precipitation in the form of RAIN OR SNOW Clouds with vertical development are *cumulus,* a thick, detached cloud, generally associated with fair weather, usually with horizontal base, whose upper surface is dome shaped and exhibits protuberances, which frequently resemble a head of cauliflower, with strong contrasts of light and shadow resulting when the sun illuminates these clouds from the side, and *cumulonimbus,* the thunderstorm cloud, heavy masses of great vertical development, whose summits rise in the form of mountains or towers, the upper parts having a fibrous texture and often spreading out in the shape of an anvil Cumulonimbus generally produces showers of rain, snow, or hail or thunderstorms Cloudiness (or proportion of the sky covered by any form of cloud), measured in tenths, is one of the elements of CLIMATE WEATHER is called clear when the sky is less than $^2/_{10}$ clouded, partly cloudy when it is $^3/_{10}$ to $^7/_{10}$ clouded, and cloudy when it is more than $^7/_{10}$ clouded, the extremes are cloudless and overcast The cloudiness of the United States averages somewhat less than 50 percent (i e , the country receives somewhat more than 50 percent of the possible sunshine), the Great Lakes region and the coast of Washington and Oregon are most cloudy (60–70 percent), and the SW United States —Arizona and adjacent areas—are least cloudy (10–30 percent) In aviation, the base of any cloud layer is often termed the *ceiling* Information about clouds may be secured from the U S Weather Bureau, Washington, D C See also W J Humphreys, *Fogs, Clouds, and Aviation* (1943)

cloud chamber see WILSON CLOUD CHAMBER

Cloud Peak, 13,165 ft high, N Wyo , in the Bighorn Mts W of Buffalo, highest of the Bighorns It has a notable glacier

Clouet, Jean (zhäⁿ' klōō-ā'), called **Janet** or **Jehannet,** c 1485–c 1541, portrait and miniature painter He was court painter and *valet de chambre* to the French king, Francis I He is thought to have been Flemish and may have been related to Jehan Cloët, painter to the duke of Burgundy in the late 15th cent None of the work attributed to Jean Clouet can be proved to have been by his hand, but it is of the highest quality It includes portraits of Francis I (Louvre), the dauphin Francis (Antwerp), and Charles de Cossé (Metropolitan Mus), seven miniature portraits (Bibliothèque nationale), and a large number of portrait drawings His son, **François Clouet** (frāswä'), c 1516–c 1572, also called Janet or Jehannet, inherited his father's talent and position, serving as court painter successively under Francis I Henry II, Francis II and Charles IX He enjoyed a high reputation and was patronized by all the notables of the court Attributed to him are portraits of Francis (one in the Uffizi, the other in the Louvre), portraits of Catherine de' Medici (Versailles) and Elizabeth of Austria (Louvre), and a large number of portrait drawings preserved in Chantilly and in the Bibliothèque nationale and the Cabinet des Estampes, Paris The work of the two Clouets is very similar They are unsurpassed in the clarity and precision of their draughtsmanship At a time when Italian influence was gaining the ascendancy in France they successfully upheld the Flemish tradition See Louis Dimier, *French Painting in the Sixteenth Century* (Eng tr , 1904), Alphonse Germain, *Les Clouet* (1907, in French), Étienne Moreau-Nélaton, *Les Clouet et leurs émules* (1924, in French)

Clough, Anne Jemima (klŭf), 1820–92, English educator, sister of Arthur Hugh Clough She was the first principal of Newnham College, Cambridge, and was a pioneer and leader in the education of women She established and taught schools in London and in Ambleside, where one of her pupils was Mary Arnold (Mrs Humphry Ward)

Clough, Arthur Hugh, 1819–61, English poet He was taken as a small child to Charleston, S C , but returned to England to be educated at Chester, Rugby, and Balliol College, Oxford At Balliol he numbered among his friends Matthew Arnold and Benjamin Jowett After graduation (1841) he was fellow and tutor of Oriel, but resigned both positions when the reexamination of his religious beliefs forced on him by the Tractarian movement drove him into skepticism (1848) He subsequently translated Plutarch and was an examiner in the Education Office *The Bothie of Toper-na-Fuosich,* later called *The Bothie of Tober-na-Vuolich,* which in spite of occasional humorous touches is essentially preoccupied with social problems, was published in 1848, and *Ambarvalia,* a collection of lyrics, in 1849 His posthumous poems, collected by F T Palgrave (1862), included "Amours de voyage", "Dipsychus," a series of verse dialogues between a man and a spirit akin to Goethe's Mephistopheles, "Mari Magno," tales, and short lyrics Clough is best known through his lyric, "Say not the struggle naught availeth," and through Arnold's "*Thyrsis,*" a monody on his death See biography by Goldie Levy (1938)

clove, name for a symmetrically pyramidal evergreen tree (*Eugenia aromatica* or *caryophyllata* or *Caryophyllus aromaticus*) and for its unopened flower bud, an important spice. The plant grows from 15 to 40 ft high and produces terminal clusters

of small red flowers The flower buds, nailike in shape, are gathered before opening and dried The Chinese (c 3d cent. B C) and the Romans made use of the spicy fragrance and warm aromatic taste of cloves, although it was not until the Portuguese discovered the Spice Islands that the tree was found growing wild. The Portuguese and later the Dutch held the clove trade in monopoly until about 1770, when the French established clove trees on some of their islands The trees are now cultivated elsewhere in the tropics Cloves for culinary purposes are used either whole or ground for flavoring relishes, pastries, confections, and ham Cloves contain about 18 percent of a volatile oil—clove oil—which is obtained by distillation It is antiseptic and stimulative, in medicine used particularly as a local anesthetic for toothache and as a flavoring for other medicinal preparations It is also utilized in perfuming or flavoring toilet preparations, in making an artificial vanilla, and in microtechnique Mother clove is obtained from the less aromatic dried fruits of the clove tree

Clovelly (klŏv'ĕlĭ'), village, Devonshire, England, on Barnstaple Bay WSW of Bideford On a steep hillside rising 400 ft above the bay and surrounded by woods, it is much visited by tourists The main street is a cobbled, winding staircase leading up from the quay Clovelly Dykes, an ancient British encampment, is near

Clover, town (pop 3,067), N S C, near the N C line ENE of Spartanburg, in a farm area. Kings Mountain National Military Park is near by

clover, leguminous forage and hay plant and cover crop of about 300 species, characterized by three-lobed leaves Most species are native to the north temperate regions Clover has long been known to all north European peoples, as is shown by the similarity of names in the various languages All American cultivated forms come from Europe, including the red, crimson, white, and alsike or Swedish clovers, all of the genus *Trifolium* There are four native species in the United States, and over 50 others introduced on the Pacific coast Other plants not of the same genus but called clovers are sweet clover, Japan clover, prairie clover, and Mexican clover The clover was used by the Greeks in garlands and other decorations The druids held it sacred It is said to have been the early emblem of Ireland from which the shamrock is derived, and it is an emblem of the Trinity English and American poets have celebrated it The four-leaved clover is thought to be a portent of good fortune The dried flowers and seed heads of the common white or Dutch clover have been used for bread in famine times in Ireland The leaves are eaten as a salad in some parts of the United States The clovers are excellent honey plants "To be in clover" is a synonym for abundance The red clover is the state flower of Vermont See bulletins of the U S Dept of Agriculture and state experiment stations

Cloverport, city (pop 1,402), W Ky, on the Ohio and NE of Owensboro, in a farm area, founded 1808

Clovio, Giorgio Giulio (jôr'jō jōō'lyō klō'vyō), 1498–1578, Italian illuminator, miniaturist, and painter, also called Macedo or Il Macedone because of his supposedly Macedonian origin He studied at Rome with Giulio Romano and at Verona under Girolamo de' Libri, from whom he learned illuminating, and was greatly influenced by Michelangelo and Raphael He is regarded as one of the greatest Italian miniaturists and illuminators, a masterly technician and colorist Clovio was employed by Louis II of Hungary, Cardinal Farnese at Rome, and other princely patrons Among the best known of the many works ascribed to him are the illuminations for the Book of the Hours of the Blessed Virgin, his masterpiece, containing 26 miniatures upon which he labored for nine years; the manuscript biography of Frederick, duke of Urbino (Vatican Library); the poems by Eurialo da Ascoli (imperial library, Vienna), Cardinal Grimani's *Commentary on the Epistle to the Romans* (Sloane Mus., London), *The Victories of Emperor Charles V* (12 miniatures, British Mus), and *Crucifixion* (Uffizi)

Clovis I (klō'vĭs), c 466–511, Frankish king (481–511), son of Childeric I and founder of the Frankish monarchy Originally little more than a tribal chieftain, he became sole leader of the Salian Franks by dint of perseverance and by murdering a number of relatives. In 486 he defeated the Roman legions under Syagrius at Soissons, thus ending Roman influence in Gaul After his marriage (493) to the Burgundian princess, Clotilda, he had his children baptized but was not immediately converted himself In 496, while locked in battle with the Alemanni, he vowed to become a Christian if he gained the victory Clovis defeated the Alemanni and was baptized, with 3,000 of his followers, by St Remi, who spoke the well-known words, "Adore what thou hast burned, and burn what thou hast adored" Thereafter Clovis was the champion of orthodox Christianity He defeated the Burgundians (500) at Dijon and the Visigoths (507) under Alaric II at Vouillé. When he died, he was master of most of Gaul, except Burgundy, Gascony, Provence, and Septimania, and of SW Germany. Shortly before his death he probably had the Salian Law revised and put into writing Having united all Franks under his rule and extended his conquests into Germany, Clovis laid the foundation, which even 400 years of chaos and misrule could not destroy, of the French monarchy and foreshadowed the conquests of Charlemagne He was succeeded by his four sons, Theodoric I, Clodomer, Childebert I, and Clotaire I See the history of Gregory of Tours, F Funck-Brentano, *Earliest Times* (Vol I of *National History of France*), Michael Fessier, *Clovis* (1948)

Clovis 1 City (1940 pop 1,626, 1948 special census pop 2,650), S central Calif, near Fresno in the San Joaquin Valley, inc 1912 It is a trade center in a farm and vineyard area. 2 City (pop 10,065), co seat of Curry co, E N Mex, on the Llano Estacado near the Texas line, settled 1907, inc 1909 An important railroad division point, it is a food-processing and commercial center in an agricultural and cattle area Artifacts of the Folsom period (see Folsom culture) have been found near here

clown, a jester or buffoon, in a circus or a pantomime see fool

Cloyne, town, Co Cork, Ireland, E of Cork The 14th-century cathedral dedicated to St Colman, who founded a bishopric here in the 6th cent, contains a memorial to George Berkeley, bishop of Cloyne (1734–53) A round tower is opposite the cathedral, and limestone caves are near

clubfoot or **talipes** (tā'lĭpēz), deformity of the foot resulting from changes in the ankle joint and also in the smaller joints At first there is some muscle defect from faulty development, injury, or paralysis If this is not treated early, the ligaments of the joints change and eventually there may be changes in the bone The foot may turn in or out, up or down, or there may be a combination of two conditions Manipulation, splints, and other mechanical means often overcome the muscle defect if applied early, later, surgical operation is necessary.

club moss, name for any plant of the genera *Lycopodium* and *Selaginella*, related to the ferns but with small needle or scalelike leaves Early geologic predecessors of club mosses were often treelike and contributed to coal deposits Today they more nearly resemble mosses Species of *Lycopodium* are usually low, either creeping or erect, evergreen plants, which in North America frequent wooded regions, in many the leaves are so arranged as to give the branches a cylindrical appearance The spores (commonly borne on terminal club-shaped spikes or in the axils of the leaves), particularly those of *Lycopodium clavatum*, are sold as lycopodium powder or vegetable sulphur, a highly inflammable, smooth, yellow powder used for various pharmaceutical purposes (e g, as an absorptive powder), and sometimes in fireworks Some species of *Lycopodium* are called ground pine, especially those that resemble miniature hemlocks with flattened fan-shaped branches, and have been used extensively for Christmas decorations Species of *Selaginella*, often incorrectly called *Lycopodium*, are in general tropical, but some are native to North America and many are cultivated in conservatories and greenhouses In these the branches typically appear flat because of the leaf arrangement One of the best known is a resurrection plant

clubroot, disease of cabbages, turnips, radishes, and other plants of the mustard family It is induced by a slime mold which attacks the roots, causing, in the cabbage, undeveloped heads or a failure to head at all The disease can be partially or in some cases completely controlled by the application of lime (if the soil is acid), by rotation of crops, and by soil sterilization It is also called finger and toe disease from the shape it gives to roots

club rush. see bulrush and cattail

Cluj (klōzh), Ger *Klausenburg* (klou'zŭnbŏŏrk), Hung *Kolozsvár* (kô'lôzhvär), city (pop 117,915, of whom 67,977 are Hungarians), W Rumania, chief city of Transylvania It is an important commercial center, with a large metallurgical industry and various manufactures Possibly dating from Roman times, it was first mentioned in the 12th cent, and in 1405 it was made a free city It became the chief cultural, artistic, and religious center of Transylvania Stephen Bathory founded here (1581) a Jesuit academy; there now are a university and several academies Among the many interesting buildings are a 14th-century Gothic church, the house in which Matthias Corvinus was born, many houses dating from the 16th, 17th, and 18th cent., and the ruins of an 11th-century church

Cluniac order, medieval organization of Benedictine monks centered in the abbey of Cluny, France This abbey was founded in 910 and soon became the heart of an expansive reform of religious life, directed by a series of zealous abbots (the second was St Odo of Cluny) Men flocked to Cluny, new priories were opened, and established abbeys adopted the reform, some of them even joining the Cluniac obedience. Domestically the reform affected especially worship and learning: churches were built, the liturgy was beautified, schools were opened, and scriptoria were greatly expanded. Outside the monastery the Cluniac monks worked for reform of Christian life and ecclesiastic independence, they stoutly supported the papacy, notably the reform of Hildebrand (Pope St Gregory VII). From c 950 to c 1130 Cluny was the principal religious force in the West after the pope There were hundreds of Cluniac houses, located in every country. Their influence was enhanced by a unique constitutional feature—exemption from local jurisdiction, guaranteed (1016) by the popes Rivalry with princes and bishops became critical in the 12th cent, when primitive zeal had waned and popularity was passing to the Cistercians. Recruits fell off, and the Cluniacs faded slowly into a group of undistinguished French monasteries The abbey of Cluny was wrecked by the French Revolution The autocratic and centralized organization of Cluny was a source of strength in its heyday, but it set Cluny apart from Benedictine life with its tradition of the permanent autonomous community The Cluniac system was used by later religious orders (e g, the Jesuits) See monasticism

Cluny (klōō'nē, Fr klünē'), former abbey, E France, in the present Saône-et-Loire dept, founded (910) by St Berno, a Burgundian monk He and his successors, all vigorous reformers, made their abbey the center of the Cluniac order, Cluny became one of the chief religious and cultural centers of Europe The abbey remains now house a national school of arts and trades, damaged in the Second World War The abbey church (10th cent in part), once the largest church in the world, and the churches of Notre Dame (13th cent) and of St Marcellus (12th cent) were likewise damaged

Cluny lace see lace

Cluny Museum, 14th- and 15th-century Gothic and Renaissance structure in Paris, built by Pierre de Chaslus, abbot of Cluny, and rebuilt by Jacques d'Ambroise The site is that of the ancient Roman baths of Emperor Julian Acquired by the nation after the Revolution, it was subsequently purchased by the antiquarian Du Sommerard, who installed his collection of art objects of the Middle Ages and the Renaissance, especially French The city of Paris purchased the entire property at his death (1842) and presented it to the state

Clusium: see Chiusi, Italy

cluster, in astronomy, a group of stars resembling each other in certain characteristics which suggest a common origin for the group Stars in the same cluster are at almost equal distances from the earth, and they move at the same rate and in the same direction The number of stars in a cluster ranges from a few stars to many thousands Clusters are of two kinds—open clusters, also called galactic clusters because so many are in the Milky Way region, and globular clusters More than 300 open clusters have been catalogued, most of which can be seen only with the telescope Among those which can be detected with the unaided eye are the Hyades cluster in Taurus (the nearest of the clusters, about 120 light years distant), the Coma Berenices cluster, the Pleiades cluster, and the Praesepe cluster The stars in the open clusters are loosely scattered as compared with the symmetrical, nearly spherical, globular clusters Globular clusters are composed of many thousands of stars which, in photographs taken through a telescope, are so densely massed in the central region as to appear to be touching (Actually, even in the densest part, they are said to be a light year apart) Two of the globular clusters visible to the naked eye were at first taken for stars, they are Omega Centauri and Tucanae, both of the southern skies These, the nearest of the globular clusters, are about 20,000 light years away In Hercules is a large cluster faintly visible to the unaided eye in the middle northern latitudes Barely visible without a telescope are two clusters in Sagittarius, one in Serpens, and one in Canes Venatici In all, about 100 globular clusters are known

clutch, mechanical device for controlling the transmission of power from a drive shaft to another shaft It must be capable of rapid connection and disconnection, usually without interfering with the continued rotation of the drive shaft In an automobile, the motive power is transmitted from the engine to the wheels through a clutch which is engaged or disengaged without stopping the motor The clutch often consists of friction plates held together by springs and may be of the dry or wet (oil-bath) type In the less common cone clutch, a cone fits into the end of a flywheel in the driven member The band clutch (or expanding-segment clutch) and the magnetic fluid clutch are in limited use. The clutch is also commonly used in automatic machinery In a simple type often used on large power shafts in mills, power is transmitted through friction produced by the contact of sets of thin plates on the shafts.

Clute, Willard Nelson (klōōt), 1869–, American botanist, b Painted Post, N.Y., studied at the Univ of Chicago. After teaching high school biology (1903–28) he served as instructor in botany and director of the botanical gardens at Butler Univ. (1928–38). An authority on ecological and economic botany, ferns, agronomy, and plant names, he founded and published the periodicals

Plant World, Bryologist, Fern Bulletin, and *American Botanist.* His works include *Our Ferns in Their Haunts* (1901; 2d ed., *Our Ferns Their Haunts, Habits, and Folklore,* 1938), *The Useful Plants of the World* (1928), and *Common Names of Plants and Their Meanings* (1931, 2d ed., 1942)

Clwyd (klōō'id), river of Denbighshire, Wales. The Clwydian Hills (highest point, 1,820 ft.) are east of the river, in Flintshire and Denbighshire. There are traces of ancient British camps and of Roman workings in quarries and lead mines.

Clyde, Colin Campbell, Baron: see CAMPBELL, COLIN.

Clyde, 1 City (pop. 1,060), N Kansas, on the Republican river and NW of Manhattan, laid out 1866, inc. 1869. 2 Village (pop. 2,356), W central N.Y., on the Barge Canal between Rochester and Syracuse, in a farm area, inc. 1835. Shoe counters are made here. 3 Village (pop. 3,174), N Ohio, SE of Fremont, in a farm area, settled c. 1820. Its products include canned fruits and vegetables, cutlery, and electric refrigerators.

Clyde, river of SW Scotland. It rises in S Lanarkshire (the longer headstream is the Daer) and flows 106 mi. first generally north and then northwest to the firth. Near Lanark are four series of falls—Bonnington, Corra, Dundaff, and Stonebyres. Below this is Scotland's most important industrial region, with Glasgow as the head of navigation for large vessels. Its shipyards and factories were heavily bombed in 1940–41. The Clydesdale HORSE, a leading draft breed, originated in the Clyde valley. See George Blake, *Down to the Sea* (1937).

The Firth of Clyde, 64 mi. long from Dumbarton to Ailsa Craig, is from 1 to 37 mi. wide. On its shores are ports of commercial and industrial importance and many small resorts. Arran, Bute, and the Cumbraes are the chief islands.

Clydebank, burgh (1931 pop. 46,952, 1948 estimated pop. 38,330), Dumbartonshire, Scotland, on the north bank of the Clyde below Glasgow. Its chief industry is shipbuilding. The *Queen Mary* and the *Queen Elizabeth* were built here. Clydebank suffered severe damage from air raids in 1940–41.

Clydesdale horse: see HORSE.

Clymene (klī'mənē), in Greek mythology. 1 Daughter of the Titan Oceanus. The wife of Iapetus, she bore him Atlas, Prometheus, Epimetheus, and Menoetius. 2 Nymph, wife of Helios and mother of Phaëthon.

Clymer, George (klī'mur), 1739–1813, American patriot, signer of the Declaration of Independence, b. Philadelphia. As his uncle's partner, Clymer became a prosperous merchant. He ardently supported the colonial cause before the American Revolution and served (1775–76) as one of the first two Continental treasurers. In 1776 he served as delegate to the Continental Congress, where he signed the Declaration of Independence. He was sent (1776) as one of the two inspectors of the Northern Army and in 1777 helped to investigate conditions in Washington's commissariat, in the same year he was sent to treat with the Indians and investigate charges of treason at Fort Pitt. He was again (1780–85) a delegate to Congress. Clymer was the first president of the pioneering Bank of Philadelphia, and he helped to organize the Bank of North America. While in the Pennsylvania legislature (1785–88), he wrote a report leading to penal code reforms. Clymer was also a delegate to the Federal Convention. In 1788 he was elected a member of the first U.S. Congress.

Clymer, borough (pop. 3,082), W Pa., NE of Indiana, Pa., inc. 1905. It produces coal and clay.

Clytemnestra (klī"təmnĕ'strə), in Greek legend, the daughter of LEDA and Tyndareus. She was thus the half sister of HELEN. Clytemnestra married AGAMEMNON and was the mother of ELECTRA, ORESTES, and IPHIGENIA. While Agamemnon was off fighting in the Trojan War, Clytemnestra betrayed him with Aegisthus. When the husband returned, the lovers plotted and brought about his murder. Orestes, compelled to avenge his father's death, killed his own mother as well as Aegisthus.

Cm, chemical symbol of the element CURIUM.

Cnidus or **Cnidos** (both nī'dəs), ancient Greek city of Caria, SW Asia Minor, on Cape Krio, in present SW Asiatic Turkey. It was one of the cities of the Dorian Hexapolis and sought to maintain independence but fell under Persian rule. The city was partly on an island made by cutting through the peninsula, partly on the peninsula itself. It had a large trade, particularly in wine, and was also noted for its medical school and other institutions of learning. Here was one of the most famous statues of the ancient world, that of Aphrodite by Praxiteles. In the waters off Cnidus the Athenians under Conon defeated the Spartans under Pisander in 394 B.C. Cnidus retained its importance in Roman times and is mentioned in the Bible. Acts 27:7; 1 Mac. 15:23.

Cnossus or **Knossos** (both· nŏ'səs), ancient city of Crete, near the sea on the north coast and near modern Candia. The site was occupied long before 3000 B.C., and it was the center of an important Bronze Age culture. It is from a study of the great palace (which seems to have been destroyed twice, possibly by earthquake, before 1500 B.C.) that knowledge of the MINOAN CIVILIZATION is drawn. Another destruction occurred c. 1400 B.C., and another phase of the Minoan culture followed, this was the last. Cnossus later became an ordinary but flourishing Greek city, and it continued in existence through the Roman period until the 4th cent. A.D. In Greek legend, it was the capital of King MINOS and the site of the Labyrinth. The name also appears as Cnosus and Knossus. See Sir A. J. Evans, *Palace of Minos* (4 vols., 1921–35), J. D. S. Pendlebury, *Archaeology of Crete* (1939).

Co, chemical symbol of the element COBALT.

coach see CARRIAGE and STAGECOACH.

coach dog, see DALMATIAN DOG.

Coachella Valley (kō"əchĕl'ə), arid region, SE Calif., N of the Salton Sea. Irrigation by artesian wells since the 1890s and the Coachella Main Canal, completed in 1948 to bring water from the ALL-AMERICAN CANAL, has made it produce dates, citrus fruits, truck, and alfalfa. Indio and Coachella are in the valley.

coagulation (kōăg"yəlā'shən), the collecting into a mass of the minute particles of one substance which are dispersed throughout another substance and their subsequent PRECIPITATION or separation from that other substance. Since the particles in a colloidal solution have the same electric charge and consequently repel each other, when the charges are neutralized the particles, upon collision, remain together and form a precipitate—i.e., they coagulate. For example, the coagulation of casein results when acetic acid is added to warm milk. In a similar manner milk taken in liquid form undergoes coagulation in the stomach through the action of the gastric juice. For the coagulation of blood, see CLOTTING OF BLOOD.

Coahuila (kōäwē'lä), state (58,067 sq. mi., 1946 estimated pop. 681,773), N Mexico, on the northward bulge of the Rio Grande, S of Texas. SALTILLO is the capital. In the eastern part of the state, where peaks of the Sierra Madre Oriental rise, are quantities of largely unexploited minerals—silver, copper, lead, iron, and zinc. Coahuila is the largest coal-producing state of Mexico. Lumber is important, and northeast of the mountains, in the drainage area of the Rio Grande, there is considerable cattle raising. Across W Coahuila and E Chihuahua lie vast arid plains broken by barren mountains, most notable of these plains is the Bolsón de Mapimí (extending into Chihuahua), which was inhabited by Tarahumaran Indians prior to the Spanish Conquest. South of the Bolsón is a fertile lake region, center of a tremendous inland basin, which absorbs rivers with no outlet to the sea. Metropolis of the LAGUNA DISTRICT here is TORREÓN. Coahuila produces cotton, corn, grapes, and most temperate grains and tropical fruits; a dye is extracted from desert weeds. Railroads and highways link the border city, PIEDRAS NEGRAS, with NUEVA ROSITA, PARRAS, and Saltillo. Exploration of the territory, principally by Francisco de Urdiñola and his son, was begun in the middle of the 16th cent. After playing some part in the war against Spain, Coahuila was combined (1830) with Texas, a proceeding that led to dissatisfaction among the American minority and helped contribute to the Texas Revolution (1835–36). During the Mexican War, Saltillo was of strategic importance, and the battle of BUENA VISTA was fought near by. Although joined with Nuevo León by the constitution of 1857, Coahuila regained its independence in 1868. To the revolution that began in 1910 the state gave two important leaders, Francisco I. MADERO and Venustiano CARRANZA.

coal, fuel substance of plant origin, largely or almost entirely composed of carbon with varying amounts of mineral matter. There is a complete series of carbonaceous fuels, which differ from each other in the relative amounts of moisture, volatile matter, and fixed carbon they contain. Of the carbonaceous fuels, those containing the largest amounts of fixed carbon and the smallest amounts of moisture and volatile matter are the most useful to man. The lowest in carbon content, PEAT, is followed in ascending order by LIGNITE and the various forms of coal—subbituminous coal or black lignite (a slightly higher grade than lignite), bituminous coal, semibituminous (a high-grade bituminous coal), semianthracite (a low-grade anthracite), and anthracite. Lignite and subbituminous coal, because of the high percentage of moisture they contain, tend to crumble on exposure to the air. Bituminous coal, being more consolidated, does not crumble easily, it is a deep black in color, breaks with a conchoidal fracture, burns readily, and is used extensively as fuel in industries and on railroads and in making COKE. Anthracite, which is nearly pure carbon, is very hard, black, and lustrous, breaks with a conchoidal fracture, and is extensively used as a domestic fuel. Cannel coal, a dull, homogeneous variety of bituminous coal, is composed of pollen grains, spores, and other particles of plant origin. It ignites and burns easily, with a candlelike flame, but its fuel value is low. Coal is found in beds or seams interstratified with shales, clays, sandstones, or (rarely) limestones. It is usually underlaid by an underclay (a layer of clay containing roots of plants). The vegetable origin of coal is supported by the presence in coal of carbonized fibers, stems, leaves, and seeds of plants, which can be detected with the naked eye in the softer varieties and with the microscope in harder coal. Sometimes carbonized tree stumps have been found standing in layers of coal. The general interpretation of these facts is that coal originated in swamps similar to present-day peat bogs and in lagoons, probably partly from plants growing in the area and partly from plant material carried in by water and wind. From the thickness of coal seams, it is assumed that the coal swamps were located near sea level and were subject to repeated submergence, so that a great quantity of vegetable matter accumulated over a long period of time. The initial processes of disintegration and decomposition of the organic matter were brought about by the action of bacteria and other microorganisms. Peat, the first product formed, is altered to form lignite and coal through metamorphism. The pressure of the accumulated layers of overlying sediments and rock upon the submerged plant matter forced out much of the water and caused some of the volatile substances to escape and the nonvolatile carbon material to form a more compact mass. The greater the stress exerted in the process of metamorphism, the higher was the grade of coal produced. Cannel coal was probably formed in ponds, rather than in lagoons or swamps, as it occurs in lenticular masses and is frequently found to contain fossil fish. Coal was formed chiefly in the CARBONIFEROUS PERIOD of geologic time, but valuable deposits date also from the Permian, Triassic, Jurassic, Cretaceous, and Tertiary. The chief coal fields of the United States are the Appalachian (from N Pennsylvania into Alabama), the Eastern Interior (Illinois, Kentucky, and Indiana), the Northern Interior (Michigan), the Western Interior (Iowa, Kansas, Missouri, Oklahoma, and Arkansas), the Rocky Mountain (Colorado, Wyoming, Utah, New Mexico, Montana, and North Dakota), the Pacific (Washington), and the Gulf Coast (Texas, Arkansas, and Louisiana). In Europe the chief coal-producing countries are Germany, Great Britain, Russia, Poland, France, and Belgium. There are valuable coal fields in China, India, South Africa, and Australia but few in South America. See W. A. Bone and G. W. Himus, *Coal: Its Constitution and Uses* (1936), E. S. Moore, *Coal* (2d ed., 1940), D. H. Rowlands, *Coal* (1949).

Coalbrookdale, district of Wenlock municipal borough, Shropshire, England, near the Severn SE of Shrewsbury. Here, at works founded by Abraham Darby in 1709, pig iron was smelted by the use of coke for the first time in England.

Coal City, city (pop. 1,852), NE Ill., SW of Joliet, in a coal area, founded 1875, inc. 1881.

Coal Creek, Tenn. see LAKE CITY.

Coaldale, anthracite-mining borough (pop. 6,163), E central Pa., NE of Pottsville, settled 1868, inc. 1871. Clothing is made here.

coal gas, a gas obtained in the destructive distillation of soft coal, as a by-product in the preparation of coke. Its composition varies, but in general it is made up largely of hydrogen and methane with small amounts of other hydrocarbons, carbon monoxide, carbon dioxide, and nitrogen. It is used as a fuel and illuminant. Alone or mixed with WATER GAS, it is a component of illuminating gas.

Coalgate, city (pop. 2,118), co. seat of Coal co., SE Okla., NE of Ardmore. A former coal-mining center, it is now a farm supply point.

Coal Grove, village (pop. 2,351), S Ohio, on the Ohio river and S of Ironton.

Coal Hill, town (pop. 1,040), NW Ark., near the Arkansas river E of Fort Smith. Convict coal miners won a strike here in 1886.

Coalinga (kō"əling'gə), city (pop. 5,026), S central Calif., NW of Bakersfield in the San Joaquin Valley, inc. 1906. It is the processing and trade center of an oil and dairy area.

Coalport, borough (pop. 1,121), W central Pa., in the Allegheny Mts. NW of Altoona, inc. 1883. Coal is mined here.

coal tar, product of the destructive DISTILLATION of coal. Coal tar can be fractionally distilled into many portions, yielding a variety of organic products, among the most important of which are benzene, toluene, xylene, naphthalene, anthracene, and phenanthrene. These substances, called the coal-tar crudes, form the starting point for the synthesis of numerous products including dyes, drugs, explosives, flavorings, perfumes, preservatives, synthetic resins, and paints and stains. The residual pitch, left from the fractional distillation, is used for paving, roofing, waterproofing, and insulation.

Coalville, urban district (1931 pop. 21,880, 1943 estimated pop. 25,000), Leicestershire, England, NW of Leicester. Of modern growth, it has coal mines, ironworks, and brick factories.

coast, land bordering an ocean or other large body of water. Sometimes the words *coast* and *shore* are used synonymously, but often *shore* is interpreted to mean only the zone between the shore line at high tide and the shore line at low tide, and *coast* indicates a strip of land of indefinite width back of

the shore. On a basis of relative movements of the land and the level of the sea within fairly recent geologic time, shore lines are generally designated as submergent or emergent. Sometimes two other groups are recognized, i e., those that show evidence of both emergence and submergence and those that show no visible evidence of either. Coasts are also divided according to the extent to which they have been modified by agents of erosion as either young (or primary) coasts or mature (or secondary) coasts. Young submerged coasts usually are irregular and have deep water offshore and many good harbors, either bays (formed from drowned river valleys, e g , New York harbor and San Francisco Bay) or estuaries (drowned river mouths). Much of the coast of New England and most of the Atlantic coast of Europe are young submerged coasts. Gradually the submerged coast, subjected to erosive attacks of the ocean and other agents, becomes mature. Headlands are worn back to form cliffs, at the base of which deposits of eroded material accumulate as fringing beaches, spits and bars also grow up from the part of this material which is carried by currents and deposited in deeper water. Finally the shore line is called mature when it is smooth, the headlands having been cut away and the bays either filled up or closed off by spits. Emergent shore lines are usually characterized by having shallow water for some distance offshore. Such shore lines are exemplified in the Atlantic coast of the SE United States and part of the coast of Argentina near the Río de la Plata. The Pacific and Gulf coasts of North America, like the Atlantic coast, show evidence of both submergence and emergence. Other factors affecting the character of coasts are volcanic activity, glaciation, faulting, and the building up of coral reefs and atolls. The nature of the coast line of a country or a state is, because of its obvious relations to overseas commerce, to fishing, and to recreation, an important factor in its economic development.

coast guard, special naval force assigned to seaboard duties. Those duties consist mainly of suppressing contraband trade, assisting vessels in distress and rescuing persons from trouble off the coast, and maintaining protection and aid for maritime commerce and air commerce over the sea. In the United States the coast guard unit was formed in 1915 when an act of Congress combined the Revenue Cutter Service with the Life Saving Service. The cutter service was established by Congress in 1790 at the suggestion of Alexander Hamilton to prevent smuggling. For some years it was the only U S armed service afloat until the navy was created. The Life Saving Service developed later (see LIFESAVING). The coast guardsmen are charged with varied duties. In enforcing the laws on the high seas and navigable waters, they not only operate against smugglers but also enforce the measures designed to protect the fisheries, the navigation rules, and various other regulations; it is also in their province to put down mutinies at sea. In saving life and property, they not only aid ships and aircraft in distress but also offer flood relief (as in the great Mississippi flood of 1927). The maintenance of weather-observation service and of ice observation and ice patrol in the N Atlantic are regular duties. In 1939 the Lighthouse Service was consolidated with the coast guard, which has many lights, lighthouses, stations, buoys, and the like to warn vessels of dangers. It also maintains a system of Loran aid and has all of the other recently developed aids for navigation. These are extended to airplanes as well as to ships. In 1942 the Bureau of Marine Inspection and Navigation was joined to the service, which now has supervision of the regulations concerning the construction and equipment of merchant ships, the transportation of dangerous cargoes, and navigation practices. It also carries on investigations of marine disasters and controls licenses and certificates (for motorboats as well as ships). The Coast Guard Academy for training officers is near Groton, Conn., and there are several training stations. In peacetime the coast guard is under the Treasury Dept , in wartime and for such other periods as the President may direct it is under the control of the navy. Coast guardsmen offered much and good service in the First World War and the Second World War. A special woman's reserve, called the SPARS was created in the Second World War, the name was derived from the Latin motto of the service, "Semper Paratus" [always ready.] The British coast guard originated in a service established to prevent smuggling just after the Napoleonic Wars. The Coast Guard Act of 1856 put this under the direction of the admiralty. It was reorganized later and performs coast-watching and lifesaving duties.

coast protection. Means of preservation of valuable lands and buildings from the encroachment of the sea include sea walls (e g , that of Galveston), dikes or levees, and groins. Sea walls are usually of masonry, extending below the low-water mark, and are most effective in breaking the force of the waves if the front is slanted or concave and built so that the wave is deflected back into the sea. Often an apron is laid down in front of the wall, to prevent scouring and undermining by backwash. Groins are low walls extending at right angles from the shore into the water, and are used either in conjunction with sea walls or independently. They are usually built of wood and serve to slow up the current of water and cause the deposition of whatever detritus the water carries, as well as to reinforce the accumulation which affords protection to the land behind it. They usually extend from low-water level to high-water level. Sometimes sand is piled up as a temporary protection.

Coast Ranges, series of mountain ranges along the Pacific coast of North America, extending from the St. Elias Mts. in Alaska southward through British Columbia, Washington, Oregon, and California to a point c 500 mi. S of the U S.–Mexico boundary. In the United States they are usually considered to include the Olympic Mts. in Washington, the Coast Range in Oregon, and many ranges in California, some of which are the Diablo Range, the Santa Lucia Range, the San Rafael Range, the San Gabriel Mts., the Santa Monica Range, the San Bernardino Mts., the San Jacinto Mts., and the north portion of the Peninsular Range. The Coast Ranges are rugged and in most parts well wooded. They are geologically young mountains, formed by upheaval and composed mainly of granitic rock. See Roderick Peattie, ed., *The Pacific Coast Ranges* (1946).

Coatbridge, burgh (pop 43,050), Lanarkshire, Scotland, near Glasgow, in an industrial region.

Coates, Albert, 1882–, Russian-English conductor and composer, b St. Petersburg, studied at the Leipzig Conservatory under Nikisch. After conducting in Germany (1906–8), he returned to Russia and conducted there until the revolution. He then toured extensively, mostly in England, where he introduced modern Russian music, and in America. Among his compositions are the operas *Samuel Pepys* (1929) and *Pickwick* (1936).

Coates, Florence Earle, 1850–1927, American poet, b Philadelphia, grad Convent of the Sacred Heart, Paris. She contributed to magazines and wrote *Poems* (1898), *Lyrics of Life* (1909), *The Unconquered Air and Other Poems* (1912), *Poems* (2 vols., 1916), and *Pro Patria* (1917).

Coatesville, city (pop 14,006), SE Pa., on Brandywine Creek and c 35 mi. W of Philadelphia; settled c 1717, inc as a borough 1867, as a city 1915. It is a steel center. Joseph Heidesheimer wrote of this region in *The Three Black Pennys*. A U S veterans' hospital is here.

Coaticook (kōā'tĭkōōk), town (pop 4,414), SE Que., on the Coaticook river and S of Sherbrooke. The trading center for a thickly populated agricultural district, it also has textile manufactures.

coat of arms see BLAZONRY and HERALDRY.

Coatzacoalcos (kwätsäkwäl'kōs) [Nahuatl,=serpent sanctuary], city (pop 13,740), Veracruz, E Mexico, a port on the Gulf of Campeche, formerly called Puerto México. It is at the mouth of the Coatzacoalcos river (navigable for c 125 mi.) and is the northern terminus of rail traffic across the Isthmus of Tehuantepec. Since the opening of the Panama Canal, its transcontinental trade has declined, but oil and timber are still exported. Harbor facilities have been improved.

coaxial cable see CABLE.

Cobalt (kō'bôlt), town (pop 2,376), E Ont., NE of Sudbury and on a steep hillside above Cobalt Lake. It is the center of one of the world's richest silver districts, there are a score of large mines in the immediate vicinity. Valuable cobalt ores, found in association with silver ores, gave the town its name. Discovered in 1903, the mines reached their maximum c 1911, each census since 1911 has shown a decline in population, in 1946, however, both silver and cobalt mines began to be worked again. Many of the businessmen live at near-by Haileybury on Lake Timiskaming.

cobalt [Ger.,=goblin], metallic element, silvery white, lustrous, magnetic, and very similar to iron and nickel (symbol=Co, for physical constants, see ELEMENT, table). The element is active chemically, forming many compounds, e g , the series of cobaltous and cobaltic salts and the extremely complex cobaltammines which are derived from cobaltic salts and ammonia. Cobalt yellow, green, and blue are pigments of high quality which contain cobalt. Another blue pigment, smalt, is made by powdering a fused mixture of cobalt oxide, potassium carbonate, and sand, although once widely used, it is being replaced by cobalt blue. A compound of cobalt and chlorine called cobalt chloride is used in an invisible ink. Being almost colorless in dilute solution, when applied to paper and heated it turns blue, undergoing dehydration. It loses this blueness when the heat is removed and water is taken up into the molecule again. The element occurs by itself in nature but rarely, it is found in meteoric metal. It is a constituent of COBALTITE, SMALTITE, and other ores usually in association with other metals. The pure metal is prepared by reduction of a compound by aluminum (the Goldschmidt process), by carbon, or by hydrogen. Cobalt was discovered by Georg Brandt in 1735. It acquired its name because its ores, being mistaken for those of copper and iron, did not yield the expected metals upon smelting. This failure was attributed to the work of a demon or goblin. For a long time cobalt metal had no commercial use. Today it is a component of certain STEEL alloys, called high-speed steels, from which very hard cutting tools are made. Carboloy contains cobalt.

cobaltite (kō'bôltīt, kōbôl'tīt), opaque, silver-white, sometimes reddish or grayish mineral of the pyrite group, a compound of cobalt, arsenic, and sulphur. It occurs in crystals of the cubic system, also in compact to granular masses. It is an important ore of cobalt, found chiefly in Sweden, Norway, Cornwall (England), and Ontario (Canada).

Cobb, Frank Irving, 1869–1923, American journalist, b Shawnee co., Kansas. At first a newspaperman in Grand Rapids, Mich., he was invited by Joseph Pulitzer in 1904 to join the New York *World* as an editorial writer. By 1911 Cobb was editor in chief and had great influence as a leader of independent Democrats. He supported Woodrow Wilson and his administration steadily from the time of his nomination in 1912. See *Cobb of "The World"* (ed by J. L. Heaton, 1924).

Cobb, Howell, 1815–68, American statesman, b Jefferson co., Ga., grad Univ. of Georgia, 1834. In 1837 he became solicitor general of the western judicial circuit of Georgia, a district populated largely by small farmers of Unionist sentiments. He championed their cause and from 1843 to 1851 represented them in the House of Representatives. He was elected floor leader of the Democrats in 1848 and speaker in 1849. Cobb united with the Whigs in Georgia to get the Compromise of 1850 approved. His followers and the Whigs formed the short-lived Constitutional Union party, which elected him to the governorship (1851–53). Cobb was returned to Congress in 1855, and in 1857 President Buchanan appointed him Secretary of the Treasury. After Lincoln's election he resigned, advocated secession, and was chairman of the convention in Montgomery which organized the Confederacy. In the Civil War he rose to the rank of major general (1863), but saw little active fighting. See B. J. Hendrick, *Statesmen of the Lost Cause* (1939).

Cobb, Irvin Shrewsbury, 1876–1944, American humorist, b Paducah, Ky. He had little formal education. In 1905 he became staff humorist on the New York *World*, and he was war correspondent for the *Saturday Evening Post* during the greater part of the First World War. His best-known books, such as *Old Judge Priest* (1915), use a Kentucky background. Other works include *Speaking of Operations* (1916), *Red Lakker* (1929), and *Roll Call* (1942). *Exit Laughing* (1941) is autobiographical. See biographies by F. G. Neuman (1938) and Elizabeth Cobb (1945).

Cobb, Thomas Reade Rootes, 1823–62, American lawyer, b Jefferson co., Ga., grad Univ. of Georgia, brother of Howell Cobb. He edited 20 volumes of the Georgia supreme court reports (1849–57), prepared *A Digest of the Statute Laws of the State of Georgia* (1851), and compiled (1858–61) a new state criminal code. A militant secessionist, Cobb in the Georgia secession convention was chairman of the committee which wrote a new state constitution (1861) and was later a delegate to the convention in Montgomery. In the Civil War he organized and led Cobb's Legion. Promoted brigadier general in Nov., 1862, he was killed at Fredericksburg.

Cobb, Tyrus Raymond (Ty Cobb), 1886–, American baseball player. In 1905 he joined the Detroit Tigers as center fielder and in his 24 years in the American League was one of the most spectacular and brilliant players of the game. Cobb, called the "Georgia Peach" by his admirers, had a .367 lifetime batting average, made 4,191 major-league hits, stole 892 bases, and made other records. He was (1920–26) manager of the Detroit team, played (1927–28) with the Philadelphia Athletics, and then retired from baseball. In 1936 he was elected to the National Baseball Hall of Fame.

Cobbett, William (kŏb'bĭt), 1763?–1835, British journalist and reformer. Born on a farm in Surrey, he ran away at 14 and later joined the British army. He resigned in order to expose abuses in the military service of the day, but, unable to produce his proofs, fled to France to escape suit and thence went to the United States. In America his intense British patriotism led him to champion the Federalists against the Republican (Jeffersonian) friends of France, and he wrote pamphlet after pamphlet savagely attacking the pro-French party. His writings, violent, sarcastic, and witty in turn, were tremendously effective. Threats of mobs and libel suits failed to stop him, and he opened a bookstore in Philadelphia and published *Porcupine's Gazette*. He also wrote the autobiographical *Life and Adventures of Peter Porcupine* (1798). Benjamin RUSH secured a verdict of $5,000 against him for libel in 1799, and soon afterward Cobbett returned to England. At first a Tory and a friend of Pitt, he gradually became a radical, and by 1807 he opposed both Tories and Whigs and supported parliamentary and economic reforms. His *Political Register*, begun in 1802 and continued until his death, became the most influential reform paper in

the country In 1805 he purchased a farm at Boley and, seeing there the misery of the dispossessed rural laborers, became himself the great apostle of agrarianism and one of the most influential leaders of the working classes As a writer of pointed controversial prose he was probably unexcelled in his era, and at one time he was imprisoned for two years for his fearless attacks His paper was not silenced, but he was financially ruined and forced to sell his other publishing businesses, including the *Parliamentary Debates*, bought and continued by his printer, Hansard The Gagging Bills passed in 1817 to suppress radicalism caused him to flee again to the United States Thus time he settled as a farmer on Long Island and wrote there his famous *Grammar of the English Language* (1818) and *Journal of a Year's Residence in the United States* (1819) He returned to England to become a central figure in the agitation for parliamentary reform until the passage of the Reform Bill of 1832, but found time to write many books, of which *Cottage Economy* (1822), *Advice to Young Men* (1829), and his most famous work, *Rural Rides* (1830), show his graphic style, his wide information, and his interest in the situation of the rural workers When the Reform Bill was finally passed in 1832, Cobbett was elected to Parliament, but he there remained a member of the radical minority See G D H Cole, *William Cobbett* (1925), G K Chesterton, *William Cobbett* (1926), Marjorie Bowen, *Peter Porcupine* (1936)

Cobden, Richard (kŏb'dun), 1804–65, English statesman, a major influence in securing the repeal of the CORN LAWS He made a fortune as a calico printer and after 1838 devoted himself to the work of the ANTI-CORN LAW LEAGUE In Parliament after 1841, he worked in the House and, more effectively, outside for repeal He, John BRIGHT, Sir Robert PEEL, and Lord John RUSSELL largely carried the policy Cobden opposed factory laws as an invasion of individual rights, though he disapproved of child labor After 1849 he was a great exponent of peace and international conferences, became unpopular for his opposition to the Crimean War, and helped keep England out of the Schleswig-Holstein affair in 1864 In 1859 60 he converted Napoleon III to a measure of free trade and negotiated the Cobden Treaty" for reciprocal tariffs with France Like Bright, he favored the North in the Civil War in the United States (which he had twice visited) His many speeches, letters, and pamphlets have been published See biographies by John Morley (1882, new ed , 1908) and J A Hobson (1919), W H Dawson, *Richard Cobden and Foreign Policy* (1926)

Cobden, village (pop 1,098), S Ill , N of Cairo, in an agricultural area, inc 1875

Cobequid see TRURO, N S

Cōbh (kōv) [Irish,=cove], urban district (pop 5,615), Co Cork, Ireland, a seaport on the south shore of Great Island in Cork Harbour, ESE of the city of Cork The town was called Cove of Cork before a visit of Queen Victoria in 1849, when its name was changed to Queenstown The name Cōbh was resumed in 1922 It is an important port of call for U S mail steamers and has large docks and stations of naval stores Situated on slopes above the harbor and having a fine climate, it has become a seaside resort It is the headquarters of the Royal Cork Yacht Club, the oldest yacht club in the world (founded in the early 18th cent), there is an annual regatta Cōbh is the seat of the Roman Catholic diocese of Cloyne Haulbowline, Spike Island, and Rocky Island are in the harbor near the town

Cobham, John Oldcastle, Lord: see OLDCASTLE, JOHN

Coblentz, William Weber (kō'blĕnts), 1873–, American physicist, b North Lima, Ohio, grad Case School of Applied Science (B S , 1900), Ph D Cornell, 1903 From 1905 to 1945 he was physicist of the National Bureau of Standards, he conducted valuable researches on infrared and ultraviolet radiation, the measurement of stellar radiation and planetary temperatures, and the optical properties of iodine

Coblenz or Koblenz (both kō'blĕnts), city (1946 pop 52,414, 1939 pop 91,098), W Germany, at the confluence of the Rhine and the Moselle It is an important trade center for Rhine wines, with manufactures of machines, furniture, and pianos Formerly the capital of the Rhine Prov of Prussia, it was, after 1945, the provisional capital of the French-occupied Rhineland-Palatinate It was founded (1st cent B C) by Drusus as Confluentes and was an important city of the Carolingian empire In the 11th cent it passed to the archbishop of Trier Coblenz was taken by the French in 1794 and passed to Prussia in 1815 It was occupied by the U S 3d Army (1919–23) and by French troops (1923–29) and was the seat of the Interallied High Commission for the Rhineland Heavily damaged in the Second World War, it was captured (March, 1945) by the U S 3d Army Among the ancient buildings of Coblenz the oldest is the Church of St. Castor, founded in the 9th cent The fortress of EHRENBREITSTEIN, across the Rhine, has been part of the city since 1937

Cobleskill (kō'bŭlskĭl'), village (pop. 2,617), E central N Y , W of Albany, in a truck-farm region, settled 1752, inc 1868 Pancake flour and refrigerator equipment are produced A state school of agriculture is here Howe Caverns are near by

Cobourg (kō'bûrg), town (pop 5,973), S Ont , on Lake Ontario E of Toronto A manufacturing town, it has an excellent harbor and has steamship connections with other lake ports It is a popular summer resort and serves a rich farming, dairying, and apple-raising country

Cobourg Peninsula, c 50 mi long and 25 mi wide, Northern Territory, Australia, opposite Melville Island across Dundas Strait It is a reserve for native flora and fauna The name is sometimes spelled Coburg

cobra (kō'bru), highly poisonous snake native to Africa and Asia The common cobra of India and the Egyptian cobra are often displayed by snake charmers The hood of the Indian cobra has a spectacle-like pattern The Asiatic king cobra or hamadryad, which attains a length of from 14 to 18 ft , has an unmarked hood which it spreads, as does the common cobra, when angered or startled Several of the seven African species can eject a spray of venom to a distance of at least 6 ft The poison of the spitting cobra of the southern regions of Africa usually strikes the victim's eyes, causing great pain If not washed out promptly it causes temporary blindness The Asiatic krait, the African mamba, the Australian tiger snake and "death adder," and the coral snakes of the New World are related to the cobra

Cobre, El (ĕl kō'brā), town (pop 1,990), SE Cuba, in the Sierra Maestra, just W of Santiago de Cuba Its rich copper mines are among the most productive in Cuba

Coburg (kō'bûrg, Ger kō'bo͝ork), city (pop 42,390), Upper Franconia, N Bavaria, on the Itz river It manufactures precision instruments and ceramics First mentioned in 1056, Coburg came to the house of WETTIN in 1353, became the capital of Saxe-Coburg-Gotha in 1826, and joined Bavaria in 1920 The imposing ducal castle, residence of Martin Luther in 1530, is now a museum

Coburg Peninsula, Australia see COBOURG PENINSULA

Coburn, Charles Douville, 1877–, American actor, b Savannah, Ga He began as a program seller in a Savannah theater in 1891, eventually becoming its manager In 1906 he married Ivah Wills and together they organized the Coburn players, their work composed largely of Shaksperian productions directed toward cultivated audiences One of the plays in which they were consistently popular was George C Hazelton's *Yellow Jacket* In 1935, with Dixon Ryan Fox, the Coburns founded the Mohawk Drama Festival at Union College, Schenectady, N Y After the death of Mrs Coburn in 1937, Coburn won distinction for his numerous roles in moving pictures

coca, name for South American shrubs of the genus *Erythroxylon*, particularly *Erythroxylon coca* from which most of the COCAINE is derived The dried, tealike leaves of this plant when chewed have an effect similar to that of tobacco The plant was cultivated by South American Indians before the Spanish occupation Use of the plant as a drug is generally strictly regulated Coca is cultivated chiefly in South America, to a lesser extent in the Old World tropics Coca should not be confused with cacao, the cocoa plant

cocaine (kōkān', kō'kān), an alkaloid, a compound of carbon, hydrogen, nitrogen, and oxygen Prepared from the leaves of the COCA shrub, it is used medicinally as a local anesthetic and, illegally, as a NARCOTIC In small doses it has a stimulating effect and increases physical energy It is habit forming, and its continued usage leads to debility of the nervous system and even to insanity Other local anesthetics have, to some extent, replaced it

Cocanada (kōkunu'dă), town (pop 75,140), NE Madras state, India, a port on the Bay of Bengal and on the delta of the Godavari It was ceded to the British in 1825 Its chief exports are cotton, oil seeds, sugar, and tobacco

Cocceius, Johannes (kŏksē'us), 1603-69, Dutch theologian, whose surname was originally Koch or Koken He was professor at Bremen and later at Leiden He produced many learned writings, among which is his great dictionary of the Hebrew language (1669), often reprinted Coccеius held a theory of life based upon the Bible The central idea of his theology was a covenant between God and man In his examination of the Old Testament he found Jesus Christ prefigured through it all His followers, Coccеians, perpetuated and emphasized his teachings

cocco. see TARO

Cochabamba (kōchăbăm'bă), city (1948 estimated pop 83,000, alt c 8,400 ft), capital of Cochabamba dept , W central Bolivia, second largest city in Bolivia Founded in 1570 but not begun until 1574, Cochabamba is on the eastern watershed of the Andes and has a mild, pleasant climate The long valley of which it is the commercial center is an agricultural region long known to the Indians, and grains, fruits, and cattle are shipped to La Paz and other cities of the barren highlands Industries include canneries, a flour mill, and a tobacco plant An attractive city, Cochabamba has fine buildings and luxuriant gardens

Cochet, Henri (ärē' kŏshā'), 1901–, French tennis player, b Lyons Cochet, who came into prominence as a tennis player in 1922, was a member of the French team that won the Davis Cup in 1927 and held it for five years He also was winner of the U S (1928) and the British (1927, 1929) tennis championships

Cochin, Charles Nicolas (shärl' nēkôlä' kŏshĕ'), 1715–90, French engraver, designer, writer on art, and painter to the French court His works, more than 1,500 in number, include historical subjects, such as the *Marriage of the Dauphin*, vignettes and frontispieces, book illustrations, and pencil and crayon portraits One of the best is the drawing of the *bal masqué* at Versailles (Louvre, Paris)

Cochin (kō'chĭn') former native state (1,493 sq mi , pop 1,422,875), SW India, bordering the Arabian Sea Its coastal lagoons afford safe passage for small vessels While agriculture is the chief economic activity, much timber is cut in the eastern hills In 1949 Cochin joined Travancore-Cochin

Cochin, town (pop 26,320), its port (governed by Madras state), is one of the busiest on the Malabar Coast, it handles agricultural produce After Vasco da Gama visited it (1502), a Portuguese settlement was established under Afonso de Albuquerque The Dutch captured Cochin in 1663, and the British took it in 1795 At adjoining Mattancheri (pop 53,346) there is a community composed of descendants of Jews expelled from Portugal in the 16th cent

Cochin China (kō'chĭn, kŏ'–), Fr *Cochinchine* (kŏshĕshēn'), southernmost state (25,000 sq mi , pop c 5,000,000), INDO-CHINA It is bounded by Cambodia on the north, Annam on the northeast, the China Sea on the east and the south, and the Gulf of Siam on the west The capital is SAIGON Apart from the south spurs of the Annamese cordillera in the northeast, where French colonists cultivate rubber, oil palms, and sugar cane, Cochin China is a flat alluvial plain drained by the MEKONG river, which, with the Vaico and smaller streams, forms a means of communication and irrigates one of the world's great rice-growing regions Some 2,000,000 tons of rice are grown yearly, as well as coconuts, pepper, betel nuts, and cotton Only the *Plaine des Jones* [reed plain] and the mangrove-covered Ca Mau peninsula are not cultivated Next to agriculture, the chief occupation is fishing The native population is largely Annamese, other groups are Cambodians, Chams, and Chinese (c 400,000) Industry is mostly processing of natural resources — rice milling, fish curing, and spinning of silk and cotton In early times Cochin China formed part of the KHMER EMPIRE The name of Cochin China was applied by the Portuguese (16th cent) to the east coast of Indo-China in general and by Europeans thereafter to the Annamese lands ruled from Hué (see ANNAM) In the late 17th and early 18th cent the Annamese took by colonization and conquest the six provinces of Cambodia bordering the China Sea and extending up the Gulf of Siam, thus these provinces became Lower Cochin China Of these six provinces, the three to the west, including Saigon, were ceded by Annam to France in 1862, and the three to the east in 1867, the territory was thereafter ruled as the French colony of Cochin China After the Second World War its status became a major issue in the relations between France and VIET NAM Constituted (1946) as an independent republic within the Federation of Indo-China, Cochin China was later (1949) permitted by the French government to join with Annam and Tonkin in Viet Nam

cochineal (kŏchĭnēl', kŏ'chĭnēl), natural dye obtained from an extract of the bodies of the females of a scale insect (*Coccus cacti*) found on certain species of cactus, especially *Nopalea coccinellifera*, native to Mexico and Central America Formerly widely used to produce a scarlet-red color in wool and silk, the dye has been largely replaced by synthetic products The insects' bodies contain the pigment called carminic acid, which was obtained by subjecting a mass of the crushed insects to steam or dry heat, such large numbers of the insects are needed to produce a small amount of dye that the cost is high

Cochise (kōchēs', kŏchē'să), c 1815–1874, Apache Indian chief of the Chiricahua band in Arizona He was noted for his courage, integrity, and military skill In 1860, when the Apache were at war with U S forces and Cochise had been the victim of treachery, he made a pact with T J Jeffords, who had the contract to carry mail from Silver City to Yuma, that his mail riders would not be molested Cochise kept his word in spite of intense provocation In 1872 President Grant sent Gen O O Howard to make a peace treaty with Cochise, and his tribe was restricted to reservation lands, the treaty was kept until after the chief's death. A county and a mountain in Arizona are named for Cochise

Cochran (kŏ'krŭn), city (pop 2,464), co. seat of Bleckley co., central Ga , SSE of Macon, in a farm

area, inc 1870. It has varied industries. Near by is a state junior college.

Cochrane, Thomas: see DUNDONALD, THOMAS COCHRANE, 10TH EARL OF

Cochrane (kŏ'krŭn), town (pop 2,844), E Ont It is the commercial center of E Ontario and W Quebec and the outfitting point for prospecting and hunting parties. Its tributary area includes the Porcupine gold-mining district, discovered in 1896 There are several pulp and paper mills Founded in 1908, the town was named for Francis Cochrane, minister of lands, forests, and mines in Ontario

Cock or Kock, Hieronymus (both hē"rō'nĭmŭs kŏk'), 1510–70, Flemish painter and engraver While in Rome he is said to have helped Vasari with his biographies of Dutch engravers In Antwerp he was the first great publisher of prints and made numerous plates after Bruegel, Bosch, and Floris

Cockaigne or **Cockayne, Land of** (both kŏkān'), legendary country described in medieval tales, where delicacies of food and drink were to be had for the taking The word *cockney* is sometimes mistakenly thought to be derived from cockaigne *The Land of Cockaygne* is a 13th-century English poem satirizing monastic life

cockatoo, name for various crested parrots, native to Australia and the near-by regions It is a gregarious woodland bird which usually eats seeds and insects There is a pink cockatoo, and some species are white with yellow or scarlet on the crests, while others have dark plumage The great black or palm cockatoo can crack kanari nuts, which usually require a hammer blow to break them

Cockburn, Alicia or **Alison,** 1712?–1794, Scottish poet She wrote a famous song, based on an ancient Border ballad and called *The Flowers of the Forest*

Cockburn, Sir George, 1772–1853, British admiral He served in the Mediterranean, and in the War of 1812, in which he participated in the Chesapeake Bay expeditions and in the burning of Washington He conveyed Napoleon in the *Northumberland* to St. Helena, remaining there as governor (1815–16)

Cockerell, Charles Robert (kŏk'ŭrul), 1788–1863, English architect, archaeologist, and writer While excavating at Bassae, Aegina, and other places in Italy, Greece, and Asia Minor, he studied the remains of ancient architecture and designed restorations for the temple of Zeus at Agrigento, Sicily In 1819 he was appointed surveyor of St Paul's Cathedral, London, and in 1833 he became chief architect of the Bank of England, designing the buildings at Bristol, Liverpool, and Manchester and making alterations in the one in London From 1840 to 1857 he served as professor of architecture in the Royal Academy and during 1860–61 was president of the Royal Institute of British Architects His works include the Taylor buildings, Oxford; Hanover Chapel, London, and the National Monument, Edinburgh. He completed the interior of St George's Hall, Liverpool Most of Cockerell's works bear the stamp of the classic revival, of which he was a notable exponent

Cockerell, Theodore Dru Alison, 1866–1948, American zoologist, b England, studied at the Middlesex Hospital Medical School, London In 1887 he came to the United States and from 1904 taught at the Univ of Colorado (professor emeritus, 1934) He wrote on the geographic distribution of life, on variation and other problems of evolution, on the natural history of various regions, and on fossil insects and plants.

Cockermouth (kŏk'urmouth, -muth), urban district (1931 pop 4,789, 1943 estimated pop 5,114), Cumberland, England, on the small Cocker river at its confluence with the Derwent It has textile and shoe factories There are an 11th-century ruined castle (prison of Mary Stuart and dismantled by parliamentarians), Pap Castle (with remains of a Roman camp), the tumulus of Toot's Hill, and Wordsworth's birthplace

cockfighting, the sport of pitting gamecocks against each other. Popular in Asia, in Latin America, and, although illegal, in some areas of the United States, it is an ancient form of amusement, having been practiced in Persia, Greece, and Rome In England, cockfighting enjoyed royal patronage for many centuries, but in 1849 an act of Parliament penalized any person having a connection with the sport. There are several forms of cockfighting, including the single battle and the round-robin tournament. The jousts are usually held on a small circular stage upon which the gamecocks—specially bred and trained for fighting—are placed beak to beak by their handlers and then released. Local rules prevail, and a combatant is defeated when he refuses to fight, is unable to fight, or is killed Metal spurs are sometimes attached to the shanks of the animals to make action deadlier

cockle, marine bivalve mollusk. The shell is marked with ridges which radiate from near the hinge From the hinge end it appears heart shaped. It lives in sand or mud and feeds on microscopic sea life Some species move about in the water, others dig below the bottom surface by means of a muscular foot The majority of the numerous species are found in tropical and subtropical waters. Several are found in Atlantic waters One species (*Cardium edule*) is commonly used for food in Europe. The scallop shell formerly known as a cockle has been frequently used as an emblem.

cocklebur or **clotbur,** any species of the genus *Xanthium*, widely distributed coarse annual plants They are often persistent weeds; the two-seeded oval burs are particularly troublesome to sheep growers and the very young plants are poisonous to livestock Cockleburs are often confused with burdock See *Cockleburs as Poisonous Plants* (U S Dept of Agriculture, Dept Bul 1274)

cock of the plains: see SAGE GROUSE

Cockran, William Bourke, 1854–1923, American political leader, b Co Sligo, Ireland He emigrated to New York city at the age of 17 and in 1876 was admitted to the bar At first opposed to Tammany Hall, W Bourke Cockran later joined (1883) the organization, although he subsequently remained independent in action As a member (1887–89, 1891–95, 1904–9, and 1921–23) of the U S. House of Representatives, Cockran was a supporter of organized labor and an opponent of restrictions on immigration He defended Thomas J Mooney in 1918 See biography by James McGurrin (1948)

Cockrell, Francis Marion, 1834–1915, Confederate general and U S Senator, b Johnson co., Mo., grad Chapel Hill College, 1853 He studied law and began practice in Warrensburg, Mo., in 1855 Enlisting as a private with Confederate forces in the Civil War, he became a brigadier general in 1863 Cockrell's Brigade was a famous unit in the Western fighting After the war Cockrell entered politics, and in 1874 Missouri elected him to the U S Senate He served there until 1905, failing of reelection for a sixth term Though a Democrat he was immediately appointed by Roosevelt to the Interstate Commerce Commission, on which he served till 1910

Cockrell Hill, city (pop 1,246), N Texas, near Dallas

cockroach, orthopterous insect of which there are about 1,200 species, of world-wide distribution but most numerous in the tropics. Cockroaches have flat, oval, usually brownish bodies with long antennae and large eyes Their unpleasant odor is produced by a glandular secretion. They are omnivorous feeders, are found both outdoors and indoors, especially in damp places, and are chiefly nocturnal In the United States the CROTON BUG is found in the northeastern part, the wood cockroach in the eastern regions The Oriental cockroach, or black beetle, and the American cockroach, often transported on ships, now inhabit most mild and tropical areas Dusting with sodium fluoride is a method of control Borax, pyrethrum, sulphur, and phosphorus paste are also useful The cockroach was abundant in the CARBONIFEROUS PERIOD See *Cockroaches and Their Control* (U S Dept of Agriculture, Leaflet 144)

cockscomb, cultivated variety (*Celosia argentea cristata*) of a tropical plant related to the amaranth, usually grown as a tender garden annual but sometimes as a pot plant It is popular for its showy dense spikes of small flowers, commonly red or gold and in various forms, as fan shaped or ruffled, rounded (also called Chinese woolflower), or plumelike Cockscomb is used as an EVERLASTING

cocksfoot. see ORCHARD GRASS

cocktail, a short mixed drink originating in the United States and served as an appetizer. It generally has a basis of gin, whisky, rum, or brandy combined with vermouth or fruit juices and often flavored with bitters or grenadine It is blended by stirring or shaking in a vessel containing cracked ice The term is applied to nonalcoholic beverages served as appetizers, e g, tomato juice cocktail, and also to mixed, cut-up fruits and to shellfish and oysters served with a sharp sauce

Coco, river see SEGOVIA.

Cocoa, city (pop 4,098), E Fla., on Indian River and ESE of Orlando, inc 1895 It is a citrus-shipping center and a resort

cocoa, cocoa butter, and **cocoa nibs:** see CACAO

coconut, fruit of the coco palm (*Cocos nucifera*), a tree widely distributed through tropical regions The seed is peculiarly adapted to dispersal by water since the large pod holding the nut is buoyant and impervious to moisture The trees therefore establish themselves naturally on small islands and low shores bordering the tropic seas The tree grows to a height of from 60 to 100 ft., with a smooth cylindrical stem marked by the ringlike scars of former leaves It bears at the top a crown of frondlike leaves and yellow or white blossoms, growing in inflorescences surrounded by a spathe The number of nuts varies, well-cared-for trees may yield 75 to 200 or more annually The mature fruit as it comes from the tree is encased in a thick, brown fibrous husk The nut itself has a hard woody shell, with three round scars at one end, the embryo lies against the largest scar and emerges through it as a developing plant. Through this easily punctured spot the milk of the young coconut may be drained. Usually the trees bear in the sixth or seventh year, and they may continue to bear to an age of from 60 to 80 years. Its constantly growing commercial value has led to extensive cultivation of the coconut, especially in the Malay Archipelago, Ceylon, and India. A few are found in the southern extremity of Florida The coco palm is probably the most useful tree in existence, every part of it having some value The fruit, either ripe or unripe, raw or cooked, is a staple food, the terminal bud, called palm cabbage, is considered a delicacy, and the inner part of young stems is also eaten, the oil has been used from ancient times The milk of the young nut is a nutritious drink A sweet liquid obtained from the flower buds ferments readily and is used as a beverage, both when fresh and when distilled to make arrack, it may be boiled down to make a sugar called jaggery The leaves are used for making fans, baskets, and thatch The coir (coarse fibers obtained from the husk) is made into bagging, matting, door mats, brushes, sails, ropes, and cables, it becomes more buoyant and elastic than hemp in salt water The hard shell and the husk are used for fuel The fibrous center of the old trunk is also used for ropes, and the timber, known as porcupine wood, is hard and fine grained and takes a high polish From the nutshells are made containers of various kinds—cups, ladles, and bowls—often highly polished and ornamentally carved The root is chewed as a narcotic Commercially the greatest value of the coconut lies in the oil, which is extracted from the dried kernels of the fruit The nuts when ripe are apt to spoil or become rancid Therefore when they are gathered they are broken open and the flesh is dried and exported under the name of copra The oil content of copra ranges from 50 to 70 per cent depending upon the method of drying Coconut oil is used in making vegetable margarines and cooking fats, soap, and other products Primitive methods of drying and expressing the copra are giving way to modern machinery, such as rotary driers and hydraulic presses Usually two pressings are required to remove the oil, but some machines complete the extraction in one pressing The residue, known as coco cake, makes excellent cattle food, as it usually contains a remnant of from 6 to 10 percent of oil Large quantities of shredded or desiccated coconut made from copra and many whole coconuts are exported for use chiefly in the making of cakes, desserts, and confectionery

cocoon see PUPA

Cocopa Indians (kōkō'pŭ), a tribe belonging to the Yuman linguistic stock They formerly lived near the mouth of the Colorado river and in the mountains of Lower California Today some are on a reservation in California, and some in Mexico, where they are known as the Cucupá

Cocos Islands (kō'kŏs) or **Keeling Islands,** group of 27 coral islets (pop 1,811), in the Indian Ocean, SW of Java First settled in 1827 by John C Ross, a Scottish captain, the group was claimed by Great Britain in 1857 Since 1946 the islands have been part of the colony of Singapore Copra is the only export

Cocteau, Jean (zhā' kôktō'), 1891–, French poet and dramatist He was leader of the younger literary group in France before the First World War and continued to be spokesman for literary modernism and for surrealism He wrote successful novels, e g, *Le Grand Ecart* (1923, Eng tr, 1925) and *Les Enfants terribles* (1929, Eng tr, 1930), and with Stravinsky composed the book (later translated into Latin) for the opera-oratorio *Oedipus Rex* (1927) His versatility is further displayed by his surrealistic moving pictures, *The Blood of a Poet* (1933) and *Beauty and the Beast* (1947), and his accomplished drawings, many of which have been collected in book form

Cocz, Gonzales. see COQUES, GONZALES

cod, common food fish most abundant in the N Atlantic and also found in the N Pacific It usually ranges from 10 to 35 lb, rarely over 75 lb Smaller fish and other marine life are devoured by cod The pelagic eggs are usually laid in mid-ocean Important centers for the codfishing industry are in Norway, in Newfoundland, and in Massachusetts, where since colonial days it has been a vital factor in the state's economic and social history The flaky, white, rather tasteless flesh is an important food in America and Europe It is sold fresh, salted, dried, and canned Oil from the liver is used when crude in tanning leather, in tempering steel, and in making poor grades of soap When refined the cod-liver oil is used medicinally as a source of vitamins

Cod, Cape· see CAPE COD.

Coddington, William, 1601–78, one of the founders of Rhode Island, probably b Boston, England He came to America in 1630 as an officer of the Massachusetts Bay Company and was treasurer of it from 1634 to 1636 He was bold enough to support Anne HUTCHINSON in the antinomian controversy With her, John CLARKE, and other Puritan exiles, he purchased the island of Aquidneck (Rhode Island) from the Narragansett Indian friends of Roger WILLIAMS and founded Portsmouth (1638). Deposed as leader of the settlement by Mrs. Hutchinson and Samuel GORTON in 1639, Coddington, with Clarke, withdrew and founded NEWPORT. The two towns were joined under Coddington's governorship in 1640. He opposed, how-

ever, the union with the mainland settlements of Providence and Warwick, which took place in 1647 under Roger Williams's patent of 1644 The commission he received in 1651 to govern Aquidneck and neighboring Conanicut Island for life was denounced by the island people, and Williams and Clarke succeeded in having it revoked in 1652 Coddington, a wealthy and prominent Quaker, remained influential in Newport affairs and was governor of the united colony of Rhode Island and Providence Plantations in 1674, 1675, and 1678.

code, in communication: see CRYPTOGRAPHY, MORSE CODE; SIGNALING.

code, in law In its widest sense a code is any body of legal rules expressed in fixed and authoritative written form A STATUTE thus may be termed a code Codes contrast with customary law (including common law), which is susceptible of various nonbinding formulations, as in the legal opinions of judges The earliest codes (e g , the Roman TWELVE TABLES) met the popular demand that regulations which were formerly oral be written down so that legal chicanery might be prevented In later Roman law, however, the term *code* acquired its modern meaning of a precisely formulated statement of the principles underlying some branch of law (e.g., contracts) or an entire legal system One of the greatest codes was the Roman CORPUS JURIS CIVILIS In Europe, in the late 18th cent., after the general adoption of CIVIL LAW by the continental countries, jurists asserted that similar codes were needed, and the parent modern European codification, the CODE NAPOLÉON, appeared (1804) and was followed by many others The civil law code is an attempt to determine in advance what legal exigencies will arise and to furnish the means for meeting them. Basic legal principles (e g , that contracts express the will of the parties) are worked out in systematic detail and great attention is given to consistency The movement for codification, however, has been largely unsuccessful in countries where COMMON LAW prevails, such as the United States, despite the argument that the principles of common law are sometimes uncertain and often contradict one another Advocates of the common law assert that civil law makes possibly futile attempts to predict and control the course of developments In the United States the term *code* is sometimes also applied to the statutes of a state or of the Federal government edited so as to eliminate duplication and inconsistencies and arranged under appropriate headings

Code Civil see CODE NAPOLÉON.

codeine (kō'dēn), alkaloid found in opium It is a poisonous and bitter-tasting sedative used to reduce sensibility to pain It is often used in the form of the salts, codeine phosphate and codeine sulphate

Code Napoléon (kōd' năpōlĕō') or **Code Civil** (sēvēl'), first modern CODE of France, promulgated by Napoleon I in 1804 The work of J J Cambacérès and that of a commission of four appointed by Napoleon I in 1800 were important in making the final draft The Code Napoléon embodied the private law of France and, as modified by amendments, it is still in force in that country It states the modern ROMAN LAW, i e , the CIVIL LAW, which prevailed generally on the Continent It shows, of course, many specific French modifications, some based on the Germanic law which had been in effect in N France The code follows the Institutes of the Roman CORPUS JURIS CIVILIS in dividing civil law into personal status (e g , marriage), property (e g , easements), and the acquisition of property (e.g , wills), and it may be regarded as the first modern analogue to the Roman work Not only was it applied by Napoleon to the territories under his control—N Italy, the Low Countries, and some of the German states—but it exerted a strong influence on Spain (and ultimately on the Latin American countries) and on all European countries except England It was the forerunner, in France and elsewhere, of codifications of the other branches of law, including civil procedure, commercial law, and criminal law. Quebec prov and the state of Louisiana owe much of their law to the Code Napoléon.

codling moth (kŏd'-) or **codlin moth,** small moth, the larva of which is the apple worm, the cause of enormous damage to the apple crop every year Believed to have come to America from Europe c 1750, it is now found wherever apples are grown and also attacks other fruits. There are often two or three generations a year The eggs are usually laid on the surface of the developing fruit The larva eats into the apple and remains there until mature Spraying the trees with an arsenate of lead solution after the blossoms fall is a method of control.

cod-liver oil, yellowish fixed oil with a high content of vitamins A and D, procured from the liver of the codfish It has been used in a number of diseases, e g , tuberculosis, catarrh, conjunctivitis, and anemia. The vitamin D factor in cod-liver oil is effective in the prevention and treatment of RICKETS. Synthetic vitamin A and D compounds have replaced cod-liver oil to a great extent.

Codreanu, Corneliu Zelea (kôrnā'lyōō zā'lyä kō"drēä'nōō), c.1899–1938, Rumanian political leader and anti-Semitic terrorist He founded and led the IRON GUARD until his conviction for treason in 1938. He shot and killed the prefect of Jassy in 1924 and instigated the murder of Premier Ion Duca in 1933. Both times he was acquitted Shortly after his imprisonment in 1938 he and several of his followers were killed "while trying to escape"

Codrington, Sir Edward (kŏd'rĭngtun), 1770–1851, British admiral He held commands in the French Revolutionary Wars, in the War of 1812, and in the Mediterranean and took an important part at Trafalgar (1805). He commanded the combined British, French, and Russian fleet which in 1827 destroyed the Turkish and Egyptian fleets at Navarino, thus making possible the success of the Greek war of independence.

Cody, William Frederick: see BUFFALO BILL.

Cody (kō'dē), town (pop 2,536), co seat of Park co , NW Wyo , on the Shoshone river, in a livestock, farm, and dude-ranch area, platted c 1895, inc 1901 Oil is refined here Named for Col William F Cody (Buffalo Bill), the town has a Cody museum and a statue and celebrates Buffalo Bill's birthday It is tourist center for Yellowstone National Park (to the west) and headquarters for Shoshone National Forest Shoshone Cavern National Monument and SHOSHONE PROJECT are near by

Coe College: see CEDAR RAPIDS, Iowa.

coeducation, instruction of both sexes in the same classes It is generally practiced in the public school systems of the United States The great economies effected by joint classes and the increasing participation of women in industrial, professional, and political activities have been strongly influential in stimulating the spread of coeducation Opposition to coeducation generally stresses the distracting effect of mixed classes and sometimes alleges difference in intelligence between the sexes. There were scattered examples of coeducation in the late 17th cent in Scotland and in the American colonies, but there was no general trend until the great expansion of public education between 1830 and 1845 in the developing W United States There the distance between schools and the small number of pupils caused elementary schools to admit girls The movement spread naturally to the secondary schools during the reorganization of public education after the Civil War Oberlin College gave degrees to women in 1837, but it was the development of state universities as part of the public educational system which standardized collegiate coeducation See Willystine Goodsell, *The Education of Women* (1923), Thomas Woody, *A History of Women's Education in the United States* (1929), J H Newsom, *The Education of Girls* (1948)

coefficient, in algebra, a number, a letter, a group of letters, or a combination of numbers and letters which precedes another letter and by which that letter is to be multiplied For example, in the expressions $2xy$ and ab, the number 2 is the coefficient of x, and $2x$ is the coefficient of y, and a is the coefficient of b Fractional coefficients are also used, as in the expression $\frac{1}{2}x$, which is x divided by two, i e , $x/2$. In the same way, $\frac{3}{4}x$ may be written $3x/4$ In the addition and subtraction of simple expressions, the numerical coefficients are added or subtracted only when the letters of the expressions are identical, e g , $2xy+3xy=5xy$ and $6ab-2ab=4ab$ On the other hand, when $2xy$ and $6ab$ are added or subtracted, the operation may be indicated, as $6ab+2xy$ or $6ab-2xy$, but the two terms may not be combined in one term to represent the sum or difference (see ALGEBRA) In the multiplication of simple expressions, as $2xy$ times $6ab$, the product may be expressed in one term, $12abxy$, in which the numerical coefficients 2 and 6 have been combined in 12 In the division of simple expressions, the numerical coefficients may be combined if possible, as, when $6xy$ is divided by $2ab$, the result of the operation may be written $3xy/ab$ For coefficients of expansion and friction in physics, see EXPANSION and FRICTION

Coehoorn, Menno van (mĕ'nō vän kō'hôrn), 1641–1704, Dutch military engineer and nobleman, of Swedish extraction He invented a portable bronze siege mortar called the coehorn He was also in his day considered a rival of VAUBAN in the construction of fortresses He served (1701–3) in the army of the duke of Marlborough in the War of the Spanish Succession. The name also appears as Coehorn or Cohorn

Coele-Syria: see BIKA, EL

Coello, Alonso Sánchez (älōn'thō sän'chäth kōāl'yō), c 1531–c 1588, Spanish portrait painter He was a follower of Antonio Moro, whom he succeeded as court painter to Philip II His portraits of Philip (National Gall , London) and of the Infantes Carlos and Isabella (Prado) are among his best-known surviving works Their somber dignity reflects the character of the Spanish court of the period Coello also painted numerous religious pictures, including *San Sebastian* (San Jerónimo, Madrid) and *Marriage of St. Catherine* (Prado).

Coello, Claudio (klou'dyō), c 1630–1693, Spanish fresco painter With José Donoso he painted the vestry of the cathedral in Toledo, and as court painter to Charles II he decorated many churches and public buildings of Madrid His most famous work is the monumental altarpiece for the sacristy of the Escorial containing over 50 life-sized portraits Coello's work is characteristic of the ornate decorative painting of the Spanish baroque

coercion, in law, the unlawful act of compelling a person to do, or to abstain from doing, something by depriving him of the exercise of his free will, particularly by use or threat of physical or moral force It has recently played a large part in questions of labor-management relations and in testamentary law In many states of the United States statutes declare a person guilty of a misdemeanor if he, by violence or injury to another's person, family, or property, or by depriving him of his clothing or any tool or implement, or by intimidating him with THREAT of force, compels that other to perform some act which the other is not legally bound to perform Coercion may involve other crimes, such as ASSAULT In the law of contracts, coercion which affects the obligations of the parties is DURESS

Cœur, Jacques (zhäk' kûr'), c 1395–1456, French merchant prince and chief adviser of Charles VII, who made him chief of finances and sent him on important diplomatic missions His reforms restored order to the confused financial situation brought about by the Hundred Years War Cœur was the founder of French trade in the Levant, he employed agents throughout the Orient, owned factories and mines in France and abroad, and rivaled the great Italian merchant republics Through his monopolies he amassed a fabulous fortune, but he spent a large part of it to finance the campaigns which ultimately drove the English from France In 1451 he was arrested on the charge, concocted by his debtors and enemies, of having poisoned Agnès SOREL He was sentenced (1453), after an unfair trial, to imprisonment and a fine of several million dollars In 1454–55 he escaped to Rome. He died in Chios while leading a papal fleet against the Turks His house in Bourges, which still stands, is one of the finest examples of secular medieval architecture See A B Kerr, *Jacques Cœur* (1927)

Coeur d'Alene (kûrdulān'), city (pop 10,049), co seat of Kootenai co., N Idaho, on Coeur d'Alene Lake, W of the Coeur d'Alene Mts and E of Spokane, Wash , inc as a city 1906 Gold (1860) and rich silver and lead lodes (1882) were discovered in the region, and in 1884 the area was the scene of a mining boom To mining and lumbering have been added farming and dairying The city is the headquarters of Coeur d'Alene National Forest, a beautiful summer resort and winter sports section To the northwest is the Rathdrum Prairie irrigation project, where water was delivered in 1946

Coeur d'Alene Indians, North American Indian tribe of Salishan linguistic stock They occupied N Idaho Approximately 400 remained on their reservation in 1942, just a century after Father Pierre Jean de Smet established the first mission among them

Coeur d'Alene Lake, N Idaho, E of Spokane, Wash It is fed by the Coeur d'Alene and St Joe rivers, which rise in the Coeur d'Alene Mts to the east, and it is drained by the Spokane river

Cœur de Lion: see RICHARD I, king of England

Coeus (sē'ŭs), in Greek religion, Titan, husband of Phoebe and father of Leto and Asteria.

coffee, a tree, its seeds, and the beverage made from them The Arabian coffee tree (*Coffea arabica*) is an evergreen shrub or small tree of the family Rubiaceae It is believed to be native to Ethiopia but was early introduced into Arabia, probably during the 15th cent Borne in the axils of the smooth, ovate leaves are clusters of fragrant white flowers which mature into deep red fruits about ½ in long. The fruit is a drupe, sometimes called a cherry, and usually contains two seeds, the coffee beans Sometimes only one seed develops, the fruit is then called a peaberry Varieties of Arabian coffee have long provided the bulk of the world's supply Coffee requires a hot, moist climate with a rainfall of at least 50 in and a rich soil, it thrives on well-drained slopes, particularly where the soil is of volcanic origin It can be grown from sea level to c 6,000 ft The better grades are generally produced above 1,500 ft Frost is injurious The plants are propagated from seed Other taller vegetation is usually planted to control the amount of sunlight reaching the coffee trees and to protect them from the elements A coffee tree produces its maximum yield sometime between the 5th and the 10th year and continues to bear for about the next 30 years Other species of some commercial importance are Liberian coffee (*C liberica*) and Congo coffee (*C robusta*) Both are now grown in the tropics of both hemispheres. They are more vigorous and more blight resistant than Arabian coffee Wide variations in production and demand have caused frequent surpluses disastrous to planters, laborers, and the national economy of producing countries. Experiments designed to employ the surplus for industrial purposes have shown the

possibility of making such coffee derivatives as cattle fodder, alcohol, fusel oil, caffeine, and glycerin A plant in São Paulo, Brazil, manufactures a plastic, caffelite A coffee quota agreement (1940), administered by the Inter-American Coffee Board (1941), attempts to stabilize the market by allocating the U S importation of coffee from Latin America A considerable quantity of coffee is exported as parchment coffee (seeds within the husklike covering, from which the outer pulp has been removed) to be finally cleaned and roasted at points of distribution Heat acts upon the essential oils, developing the aroma and flavor Roasts range from light brown to the very dark, almost charred, Italian roast A wide variety of machines and theories for coffee making all aim to preserve the aroma Whatever the method used the prime requirements are properly roasted, freshly ground coffee, freshly boiling water, and absolute cleanliness of utensils, as coffee is easily contaminated by foreign odors "Turkish" coffee, finely powdered and heavily sweetened, is drunk unfiltered by most Eastern peoples Westerners favor clear coffee The French use for breakfast *café au lait*, coffee combined with scalded milk The unique mocha from the Yemen region of Arabia and some Sumatra, Java, and Colombian coffees are prized by connoisseurs Various adulterants, including CHICORY, carrots, parsnips, iris root, beans, rice, and cereals, roasted and ground, may usually be detected by soaking in cold water, which is not discolored by genuine coffee beans Opinion has differed as to the value of coffee It has become a popular beverage because of its aroma and the exhilarating and fatigue-allaying properties of its CAFFEINE constituent, to which is attributed a medicinal value in cases of shock, pneumonia, and poisoning Taken in excess it is said to cause irritability, depression, and indigestion The early history of coffee is shrouded in legend Known in Ethiopia before A D 1000, it is believed to have been used first as a food, a ball of the crushed fruit molded with fat was a day's ration for certain African nomads Later, wine was made from the fermented husks and pulps Coffee made from the ground and roasted beans was used in Arabia by the 15th cent and spread to Egypt and Turkey Despite early suppression on religious and political grounds, it rapidly became a universal beverage of Mohammedans At first opposed by Italian churchmen as an infidel drink, it was Christianized by Pope Clement VIII and by the mid-17th cent it had reached most of Europe Although introduced in North America c 1668, coffee took first place as the staple American beverage only after tea had met with popular disapproval following the Boston Tea Party See W H Ukers, *All about Coffee* (2d ed , 1938) **Coffeehouses** dispensed coffee before it was made in the home in Mohammedan countries and in Europe and America and were known as centers for gossip, gambling, and literary and political discussions Periodically government restrictions were imposed in the belief that coffeehouses were meeting places of political malcontents Will's Coffee House in London was famous as a resort of wits and poets Johnson, Addison, Steele, Sheridan, Dryden, Swift, Goldsmith, Hogarth, and other notables were the centers of coteries in the houses they frequented In France also the spread of the coffeehouse was rapid and influenced the development of literature and of the stage The coffeehouse was the forerunner of the *modern club*

cofferdam, a temporary barrier against water, made of wood or steel sheeting and used for protective purposes in the construction of dams and bridges and in similar work The sheeting is sometimes a single, sometimes a double, barrier, if double, the space between the two walls is usually packed with clay and gravel When great strain or pressure is likely to occur, the cofferdam is not usually employed, in water more than 30 ft deep the pneumatic CAISSON is generally used Cofferdams are also used, to save the expense of dry dock, for repairing ships and also in battleships for emergency protection of vital parts of the engine See Lazarus White and E A Prentis, *Cofferdams* (1940)

Coffeyville, city (pop 17,355), SE Kansas, on the Verdigris near the Okla. line, settled 1869, inc 1872 With the coming of the railroad (1870), it grew as a cattle-shipping point It is a trading and distributing center for a farm region and boomed with the discovery (1902) of oil and natural gas in the area. It has farm-produce processing plants, oil refineries, railroad shops, and paint manufacture In 1892 the notorious Dalton gang was shot down, here, in an attempted bank robbery

Coffin, Charles Carleton, 1823–96, American journalist, b Boscawen, N H., educated at the village school During the Civil War he was correspondent for the Boston *Journal*, using the pseudonym Carleton, he served in the same capacity in the Austro-Prussian War He wrote *My Days and Nights on the Battlefield* (1864), *Following the Flag* (1865), and *Four Years of Fighting* (1866, republished as *The Boys of '61*) He also wrote several books for boys, including *The Boys of '76* (1876). See biography by W E. Griffis (1898).

Coffin, Henry Sloane, 1877–, American Presbyterian clergyman, b New York city, studied at Yale (B A 1897, M A , 1900), in Edinburgh (1897–99) and in Marburg (1899), and at Union Theological Seminary (B D , 1900) He was pastor of the Madison Ave Church, New York city (1905–26), lecturer at Union Theological Seminary (1904–9), associate professor of pastoral theology there (1909–26), and its president (1926–45) He was moderator of the Presbyterian Church in the United States (1934–44) Dr Coffin's publications include *The Meaning of the Cross* (1931), *What Men Are Asking* (1933), *God's Turn* (1934), and *Religion Yesterday and Today* (1940)

Coffin, James Henry, 1806–73, American mathematician and meteorologist, b Williamsburg, Mass , grad Amherst, 1828 He was professor of mathematics and natural philosophy at Lafayette College from 1846 In an observatory which he built on Mt Greylock, he developed a self-registering anemometer He wrote *Winds of the Northern Hemisphere* (1853), *Psychometrical Tables* (1856), and *The Orbit and Phenomena of a Meteoric Fire Ball* (1869)

Coffin, Levi, 1789–1877, American abolitionist, b North Carolina. In 1826 he moved to the Quaker settlement of Newport (now Fountain City), Ind , where he kept a store until 1847 His home became a leading depot of the UNDERGROUND RAILROAD, of which he was stylod "president" See his *Reminiscences* (1876)

Coffin, Robert Peter Tristram, 1892–, American author, b Brunswick, Maine, grad Bowdoin, 1915, M.A Princeton, 1916, B Lit Oxford Univ , 1921. At Oxford he was a Rhodes scholar He has written verse, essays, biographies, and novels, most of them about Maine *Strange Holiness* (1935) won for him the 1936 Pulitzer Prize in poetry A revised and enlarged edition of his *Collected Poems* (1939) appeared in 1948 Among his more recent works is *Maine Doings* (1950), essays

Coffin, William Anderson, 1855–1925, American painter and art critic, b in Pennsylvania, studied at the Yale School of Fine Arts and under Léon Bonnat in Paris He served as art critic on the New York *Evening Post*, the *Nation*, and the New York *Sun;* as art director of the Buffalo, N Y , Pan-American Exposition, 1901, and on the advisory board of the Panama-Pacific Exposition, San Francisco, 1915 In 1919 the French government appointed him president of a commission to arrange an exhibition of American art at the Luxembourg Museum He is best known for his landscapes, many of Pennsylvania scenes, and is represented in the Metropolitan Museum, Brooklyn Museum, Albright Art Gallery, Buffalo, and other public collections

coffin, closed receptacle for a corpse Its purpose is usually to protect and to aid preservation of the body, but some have believed that it may confine the spirit of the deceased An early prototype is the stone-lined cist grave of Neolithic times Hollowed oak coffins have been preserved in Bronze Age barrows The Chaldeans and the early Greeks enclosed a corpse in clay, sealing the coffin by firing it. The largest known stone coffins (see SARCOPHAGUS) are Egyptian These were ingeniously locked and inscribed with attractive descriptions of the afterlife—to dissuade the spirit from returning to mingle with the living Wood and papier mâché were also used in Egypt for mummy chests. Metal-lined coffins, usually of lead, came into use in the Middle Ages Today copper and bronze are common linings.

Coghlan, Charles (kŏg'lun), 1841–99, American actor, b Paris He came to the United States in 1876, joined Augustin Daly's Fifth Avenue Company, and later appeared at the Union Square Theater in *A Celebrated Case*, which had a long run and made his reputation He supported Mrs Langtry on her tours (1885–91) and created the role of Alec d'Urbervilles in Mrs Fiske's production of *Tess of the d'Urbervilles* His sister, **Rose Coghlan,** 1851?–1932, came to the United States in 1872 She was a leading lady in Wallack's Company (1878–89), where she appeared with great success in the first American production of *Diplomacy* in 1878 and gave a memorable portrayal of Stephanie in Merivale's *Forget-me-not* in 1880 She appeared in many plays by Herne and Belasco

Cognac (kōnyăk'), town (pop 16,106), Charente dept , W France, in Angoumois, on the Charente river It has been since the 18th cent the most famous distillery and export center for French brandy, to which it has given its name It was the birthplace of FRANCIS I, who in 1526 formed here an alliance against Emperor Charles V Cognac was a Huguenot stronghold in the 16th cent

Cogswell, Joseph Green, 1786–1871, American librarian and bibliographer, b Ipswich, Mass , grad Harvard and studied, with his friends Edward Everett and George Ticknor, at Göttingen Univ He taught mineralogy and geology at Harvard and became librarian in 1821. With George Bancroft he founded (1823) the Round Hill School at Northampton, Mass He aided in founding the Astor Library in New York city (now part of New York Public Library) and was librarian from 1848 to 1861 and trustee to 1864 Sent abroad to purchase books, he spent 14 years in rounding out the Astor collection He prepared for the library an alphabetical and analytic catalogue which, printed at his own expense, was the basis for the later card catalogue See biography by A. E Ticknor (1874)

Cohan, George Michael (kō'hăn, kōhăn', kō'ŭn), 1878–1942, American playwright, producer, and actor, b Providence, R I He appeared originally in vaudeville as one of "The Four Cohans," a well-known variety and musical-comedy group including his father, mother, and sister, Josephine Cohan's first New York play, *The Governor's Son* (1901), although not very successful, set new standards in musical comedy for speed, fewer encores, and a laugh on the final curtain His first successful play, *Little Johnny Jones* (1904), opened on Broadway, and Cohan's preoccupation with this thoroughfare and with flag waving is seen in his titles for both plays and songs—*Forty-five Minutes from Broadway* (1906) and *Broadway Jones* (1912), *I'm a Yankee Doodle Dandy* and *It's a Grand Old Flag* In 1913, already a recognized dancer, Cohan revolutionized the mystery farce with his dramatization of Earl Derr Biggers's novel *Seven Keys to Baldpate* Inspired by the entry of the United States into the First World War, he wrote the words and music to the now classic *Over There* and in 1933 was recognized for his acting in Eugene O'Neill's *Ah, Wilderness!* His last appearances were as President Roosevelt in *I'd Rather Be Right* (1937) and in his own play *Return of the Vagabond* (1940) See his *Twenty Years on Broadway* (1925); biography by Ward Morehouse (1943)

Cohasset (kōhăs'ĭt), resort town (pop 3,111), E Mass , on the South Shore of Massachusetts Bay, settled c 1647, inc 1770 It has a summer theater A lighthouse has been maintained off the shore here since 1850, and Cohasset had the first U S. lifeboat service

Cohen, Hermann, 1842–1918, German philosopher He was a member of the Neo-Kantian Marburg school and was known for his commentaries on Kant His own works include *Logik der reinen Erkenntnus* (1902), *Ethik des reinen Willens* (1904), and *Aesthethik des Gefühls* (1912)

Cohen, Morris Raphael, 1880–1947, American philosopher, b Russia, grad College of the City of New York, 1900, Ph D Harvard, 1906 He came to the United States in 1892 At first an instructor in mathematics at the College of the City of New York, Cohen transferred to the department of philosophy, where he taught from 1912 until 1938, becoming famous for his use of Socratic irony He then taught at the Univ of Chicago until 1942 His influence, through his students and his books, has been far-reaching, and he is rated as one of the most important American philosophers since William James Cohen's most important books are *Reason and Nature* (1931) and *Law and the Social Order* (1933) Other works include *Preface to Logic* (1944), *The Faith of a Liberal* (1945), and *Reason and Law* (1950) See his autobiography, *A Dreamer's Journey* (1949)

Cohn, Ferdinand (fĕr'dēnănt kōn'), 1828–98, German botanist He is considered a founder of the science of bacteriology From his early studies of microscopic life he developed theories of the bacterial causes of infectious disease and recognized bacteria as plants He aided Robert Koch in preparing his famous work on anthrax Cohn's writings cover such diverse subjects as fungi, algae, insect epidemics, and plant diseases

Cohoes (kuhōz'), industrial city (pop 21,955), E N Y , N of Albany, at the confluence of the Mohawk with the Hudson and on the Barge Canal, settled by Dutch, inc 1869 Knitted goods, paper products, and shoddy are made The Van Schaick mansion (1735) contains historical relics

cohosh (kōhŏsh'), name for several plants, among them BANEBERRY and BLACK SNAKEROOT (black cohosh)

coil see INDUCTION

Coimbatore (kwĭmbutôr'), town (pop 130,348), W Madras state, India Commanding the approach to the Palghat Gap, it was important in the wars of Hyder Ali and Tippoo Sahib The British obtained undisputed possession in 1799 It is a junction of rail lines connecting the east and west coasts Cotton thread and cloth, fertilizer, and sugar are important products.

Coimbra (kwēm'brŭ), city (pop, 35,437), capital of Coimbra dept , W central Portugal, on the Mondego river The old capital of Beira, it is a market center with small industries but is known chiefly for its history and for the famous university, which was founded by King Dinis in Lisbon but was moved to Coimbra in 1306. Coimbra, then known as Conimbriga, was an important town in Roman days It continued to flourish down through Moorish times and after its reconquest (1047) by Ferdinand I of Leon It became the capital of Alfonso I, first king of Portugal, and continued as an important royal residence after the capital was transferred to Lisbon in the 13th cent. There is a fine 12th-century cathedral. The romantic heroine, Inés de Castro, was murdered here.

coin, a piece of metal, usually a disk of gold, silver, nickel, bronze, or copper, stamped by authority of a government as a guaranty of its value and used as MONEY. Coinage was probably invented independently in Lydia or in the Aegean Islands and in China before 700 B C and in India in the 4th cent B.C. The earliest known example is an electrum coin (c.700 B.C) of Lydia. Roman coinage dates from about the 4th cent B C. The first coins struck in the American colonies were issued by the Massachusetts Bay colony (see HULL, JOHN) The first U S. MINT was established in 1792 Mottoes used on many U.S coins are "E Pluribus Unum" (1795) and "In God We Trust" (1864) Early coins were die-struck by hand and showed many individual variations Standardized coins date from the use (in the 17th cent) of a mill and screw machine (invented c 1561) Coins are usually stamped from rolled metal blanks, are milled, and have a design impressed upon them between the upper and lower dies of a coining press Milled or lettered edges have been used since the 17th cent to discourage the removal of slivers of metal, especially from gold or silver coins See also NUMISMATICS See Sir John Lubbock, *A Short History of Coins and Currency* (1902), Joseph Coffin, *Our American Money* (1940)

Coire, Switzerland see CHUR.

Cokato (kŏk'utō), village (pop 1,175), central Minn , W of Minneapolis, platted 1869, inc 1878 It is the trade center of a farming and poultry-raising area settled mainly by Swedes and Finns

Coke, Sir Edward (kōōk), 1552–1634, English jurist, one of the most eminent in the history of English law He was elected to Parliament and rose rapidly, becoming solicitor general and speaker of the House of Commons In 1593 he was made attorney general, his rival for that office being Sir Francis Bacon, one of Coke's bitterest enemies He prosecuted noted men and earned a name as a severe prosecutor The accession of James did not affect Coke's favorable position at court In 1606 he was made chief justice of the common pleas In this position Coke became the champion of Parliament against the king, attacking the royal prerogative and declaring royal proclamations contrary to law null and void He upheld the supremacy of common law and enunciated doctrines of individual liberty that were to have a profound effect on history Though his historical arguments were frequently based on false interpretations of early documents, as in the case of the Magna Carta, his reasoning was brilliant and his conclusions impressive His constant disputes with the king and the numerous enmities he developed—especially that with Thomas Egerton, Baron ELLESMERE, the chancellor—brought about his fall Bacon was one of the foremost figures in engineering his dismissal in 1616 By personal and political influence, Coke got himself back on the privy council and was elected (1620) to Parliament, where he became a leader of the popular party in opposition to James I and Charles I He was important in the drafting of the Petition of Right (1628) Coke was the greatest of all English common lawyers Of his writings the most important is his *Institutes*, which includes his commentaries on Littleton's *Tenures* See W H. Lyon and Herman Block, *Edward Coke* (1929)

Coke, Richard (kōk), 1829–97, governor of Texas (1874–76) and U S Senator (1876–95), b. Williamsburg, Va , grad William and Mary, 1849 After being admitted to the bar he moved (1850) to Waco, Texas, and became prominent in his profession there He was a member of the Texas secession convention and was a Confederate captain in the Civil War. Coke was an associate justice of the state supreme court from 1866 to 1867, when he was removed by Gen. Philip H. Sheridan as "an impediment" to Reconstruction. In 1873, with Coke as their gubernatorial candidate, the Democrats thoroughly defeated the radical Republicans The Republican governor, Edmund J Davis, protested the result, but when President U S Grant refused to come to his aid, Coke was inaugurated and Reconstruction in Texas was ended Coke restored order on the frontier, where lawlessness had reigned, and rehabilitated the state's financial and political systems (the present constitution was ratified in 1876) Reelected in 1876, he resigned to enter the Senate See C. W. Ramsdell, *Reconstruction in Texas* (1910).

Coke, Thomas (kōōk, kōk), 1747–1814, English clergyman and early bishop of the Methodist Episcopal Church in America After taking orders (1777) in the Church of England, he openly allied himself with the Methodists He was president of the Irish conference in 1782 and two years later was designated as superintendent for America by John WESLEY When Coke was styled bishop shortly after the American conference of 1784, the change was not approved by Wesley Nine times Coke visited America, the last time in 1803. He was always deeply interested in Methodist missionary work To extend the field to India, he sought (1813) an appointment by the government as bishop of India, agreeing to return to the Established Church. As the request was not granted, he himself secured funds for a Methodist mission, but died on the way to Ceylon See biography by W. A Candler (1923).

Coke, Thomas William: see LEICESTER OF HOLKHAM, THOMAS WILLIAM COKE, EARL OF.

coke, fuel prepared by the destructive DISTILLATION of bituminous COAL, much used when a porous fuel with few impurities and high carbon content is desired, as in the BLAST FURNACE It is used also in the manufacture of WATER GAS Coke bears the same relation to coal as does charcoal to wood The preparation of coke in beehive ovens results in the loss of volatile by-products Only a small amount is still made by this method For industrial purposes, it is now prepared in retorts or ovens of silica brick, and the by-products, of which the chief are ammonia, coal tar, and illuminating gas, are saved Natural coke or carbonite is formed by METAMORPHISM from bituminous coal when intrusive igneous rock cuts across a vein of coal

Cokeburg, industrial borough (pop 1,415), SW Pa , S of Pittsburgh, inc 1906

cola. see KOLA

Colberg, Pomerania see KOLBERG

Colbert, Charles (sharl' kôlbĕr'), 1625–96, French diplomat, brother of Jean Baptiste Colbert He represented France at the conference of Aix-la-Chapelle (1668), was in charge of the preliminary negotiations of the Treaty of Dover (1670), and in 1679 became secretary of state for foreign affairs Louis XIV created him marquis of Croissy

Colbert, Jean Baptiste (zhäⁿ' batēst'), 1619–83, French statesman The son of a draper, he was trained in business and was hired by Mazarin to look after his financial affairs On his deathbed, Mazarin recommended Colbert to Louis XIV, who made him his chief minister Colbert had been aware of the mismanagement of Nicolas FOUQUET and helped to procure Fouquet's conviction for fraud He scaled down the public debt by repudiating some obligations and reducing the value of others and set up a rigid system of accounts in order to keep the government within its income His efforts to reform taxation so as to eliminate injustices had little success Financial reform was only a part of Colbert's aim, which was to make France economically self-sufficient He was one of the most successful exponents of MERCANTILISM, he encouraged the growth of industry through subsidies and tariff protection, rigidly regulated the qualities and prices of manufactured and agricultural products, tried to break down trade barriers within France, initiated a vigorous road-building program, and restricted the use of natural resources Given control of shipping (1669), he constructed shipyards, arsenals, and harbors, among them Brest and Rochefort, and began the construction of a large navy as a first step in the development of commerce and colonization He also protected the arts and aided the French Academy and the Academy of Sciences His efforts at economy were soon menaced by the extravagance of the king, and the opening of Louis XIV's wars began the decline of Colbert's power and the ascendancy of LOUVOIS To meet the military expenses, Colbert was obliged to resort to increased taxation, the sale of offices, borrowing, and the anticipation of future revenues, his new taxes caused serious disturbances Despite his unpopularity at the time of his death, he was later ranked among the greatest of French statesmen See C W Cole, *Colbert and a Century of French Mercantilism* (1939)

Colbert, Jean Baptiste, marquis de Seignelay (markē' dŭ sānvulā'), 1651–90, eldest son of Jean Baptiste Colbert He collaborated with his father in developing the French navy

Colbert, Jean Baptiste, marquis de Torcy (tôrsē'), 1665–1746, leading French diplomat in the War of the Spanish Succession, son of Charles Colbert. He negotiated the peace of UTRECHT

Colborne, John. see SEATON, JOHN COLBORNE, BARON

Colby, Bainbridge, 1869–1950, 'U S Secretary of State (1920–21), b St Louis, grad Williams, 1890 After studying law at Columbia Univ and New York Law School, he was after 1892 a successful New York lawyer In politics he was a Republican assemblyman (1901–2), a follower of Theodore Roosevelt, and, as one of the leaders of the PROGRESSIVE PARTY, a candidate for the U S Senate in 1914 and 1916 In the presidential campaign of 1916 he swung his support to Woodrow WILSON Colby was commissioner of the U S Shipping Board and a member of the Emergency Fleet Corporation in the First World War and was chosen to succeed Robert LANSING as Secretary of State Very close to the failing President in the last year of the administration, Colby was later briefly Wilson's law partner His marriage to the novelist Nathalie Sedgwick Colby ended in divorce

Colby, Frank Moore, 1865–1925, American editor, essayist, and educator, b Washington, D C , grad Columbia (B A , 1888, M A , 1889). He taught at Columbia and at New York Univ Later, succeeding Harry Thurston Peck, he became editor of *The New International Encyclopaedia* and of *The New International Year Book*. Works which show him as a distinguished critic are *Imaginary Obligations* (1904) and *Constrained Attitudes* (1910) See *The Colby Essays* (ed by Clarence Day, Jr., 1926)

Colby, city (pop 2,458), co seat of Thomas co , NW Kansas, inc 1886 It is a shipping and trade center for a wheat-growing area An agricultural experiment station is near by

Colby College. see WATERVILLE, Maine

Colchester (kōl'chĭstŭr, -chĕs"tur), municipal borough (1931 pop. 48,701, 1947 estimated pop 50,710), Essex, England, on the Colne, in an agricultural region Here was one of the great cities of pre-Roman Britain, the capital of the leader Cymbeline The Romans after their conquest built its successor, Camulodunum, an important Roman colony and the particular object of attack (A D 61) by Boadicea. To the Anglo-Saxons the place was known as Colnecoaster. The witenagemot met here in 931 Of interest are the Roman walls (more complete than elsewhere in England) and the massive Norman castle, part of which houses a museum of Roman antiquities St Botolph's priory and other buildings contain Roman brickwork The town was taken (1648) after a long siege by parliamentarians under Fairfax The oyster fisheries of the Colne are important, an annual event is the October oyster feast The government maintains a permanent military station at Colchester Other industries are chemical engineering, flour milling, and the making of boilers, shoes, and farm machinery.

Colchester. **1** Town (pop 2,338), E central Conn E of Middletown, settled and inc 1699 It includes Westchester village and Colchester borough (pop 1,234, chartered 1824) Leather goods are made here The old Comstock covered bridge became state property in 1934 **2** City (pop 1,426), W Ill , E of Keokuk, Iowa, in a farm area, inc 1867 **3** Rural town (pop 3,031), NW Vt , near Burlington and Winooski, chartered 1763 Ira Allen and Remember Baker were early settlers, Allen built mills and an iron forge in the area after 1783 Winooski was set off from Colchester in 1922

colchicine (kōl'chĭsēn, -sĭn, kōl'kĭ-), alkaloid obtained from the meadow saffron or autumn crocus, *Colchicum*, used in plant and animal experimentation When sprayed on the surface of plant tissues or injected into them, the drug interferes with the separation of daughter nuclei at cell division, resulting in cells with chromosome numbers which are multiples of those present in untreated tissue Sometimes colchicine is used in medicine, chiefly for relieving pain in gout and rheumatism

Colchis (kōl'kĭs), ancient country on the eastern shore of the Black Sea and in the Caucasus region It corresponds to modern Mingrelia in the Georgian SSR Colchis centered about the fertile valley of the Phasis river (the modern Rion) and was also noted for forest products In Greek legend it was the home of Aeetes and MEDEA, the land where the Golden Fleece was sought by JASON and the Argonauts Greek trading posts were established in Colchis, but the land remained independent until conquered (c 100 B C) and held briefly by Mithridates VI of Pontus After the time of Trajan to the end of the Roman Empire, Rome exerted considerable influence on the region

Colden, Cadwallader (kōl'dun), 1688–1776, colonial scholar and political leader of New York, b Ireland, of Scottish parents, grad Univ of Edinburgh, 1705 After studying medicine in London, Colden arrived (1710) in Philadelphia to practice He removed (1718) to New York, where he was appointed (1720) surveyor general He was chosen (1721) to the governor's council and became influential during the administration of George Clinton (1686–1761), whose official papers and addresses Colden in large part prepared After 1761 he was lieutenant governor of New York, and he became more and more unpopular among the radicals opposed to the British measures In his 55 years of active public life, Colden was able to make himself one of the most learned men in the colonies He studied Newton's principles and wrote his own critique, *The Principles of Action in Matter* (1751) He became a botanist of the new Linnaean system of classifying flora (as did his daughter, Jane Colden) and made significant contributions to the medical literature of the colonies He also published his *History of the Five Indian Nations* (1727), a valuable source on the Iroquois tribes His letter books (1877–78) and letters and papers (7 vols , 1918–23) were published by the New York Historical Society See biography by A M Keys (1906)

Colden, Jane, 1724–66, American botanist, daughter of Cadwallader Colden She mastered the Linnaean system of botanical classification and prepared an illustrated work on the flora of New York state Her scientific descriptions ranked with those of leading botanists of her day. Among her correspondents were Alexander Garden and John Bartram In 1759 she married William Farquhar

cold frame, sun-heated board frame covered with a removable top of glass or other transparent material and sunk into the ground Its greatest value is in providing a means of starting seeds in early spring while the outdoor temperature is still cold Most seeds may be sown in a cold frame from four to six weeks before the average frost-free date. It may

also be used as a propagating bed for cuttings, for wintering plants not hardy enough to remain in the open ground, and for hardening plants from the greenhouse or hotbed preparatory to setting them outside. A cold frame which is heated becomes a HOTBED Experiment stations issue directions for construction

Cold Harbor, Old, and **New Cold Harbor,** two localities, c 10 mi NE of Richmond, Va In the Civil War the battle of Gaines's Mill in the SEVEN DAYS BATTLES (1862) was fought near Old Cold Harbor, New Cold Harbor was the scene of the last battle of Grant's bloody WILDERNESS CAMPAIGN in 1864

colds, infections of the upper respiratory tract involving the mucous membrane of nose, throat, or larynx. Colds occur especially at the change of seasons and in some persons are associated with chilling No one bacterium is known to be the cause, there is some evidence that the cause is a virus In addition to the nasal discharge, obstruction to breathing, loss of sense of smell and taste, and loss of voice if the larynx is affected, there is some degree of toxemia, evidenced by fatigue, and there may be fever A cold usually clears up in from 3 to 10 days There may be a spread of infection to the sinuses, bronchi, lungs, and (in children) to the middle ear and the mastoid cells. The infection may be spread by coughing, and sneezing, isolation is therefore advisable Rest, especially in the early stages, inhalation of steam from water containing tincture of benzoin, and the intake of ascorbic acid (vitamin C) and fluids, e g , water and fruit juices at frequent intervals, are effective in treatment Also helpful are local applications of argyrol and nose drops containing either penicillin or epinephrine

cold sores, fever blisters, and **herpes** (hûr'pēz) The occurrence of single or grouped blisters on mucous membranes of the mouth, nose, and genitals or on the skin is often associated with infections of the respiratory tract, such as COLDS and PNEUMONIA, and also with epidemic MENINGITIS and MALARIA In some persons there are recurrent attacks, possibly caused by an unsuspected focus, such as sinus infection, while in others the sores are attributed to digestive upsets They usually ulcerate and a scab forms which falls off in from 7 to 10 days, leaving no scar Astringents are soothing, or the sores may be protected with collodion, but when they are ulcerated, zinc oxide ointment is advised See also SHINGLES.

Cold Spring, 1 Village (pop 1,427), central Minn , SW of St Cloud and on the Sauk, in a region of farms and granite quarries **2** Residential village (pop 1,897), SE N Y , on the east bank of the Hudson and S of Beacon, in a dairy region, settled before the Revolution, inc 1846

Cold Spring Harbor, unincorporated village, on the north shore of Long Island, SE N Y , on Cold Spring Harbor It is included in the town of Huntington. In the early and middle 19th cent it was a whaling port, with several industries connected with whaling A noted marine biological station (part of the Long Island Biological Association), the department of genetics of Carnegie Institution, and a state fish hatchery are here

cold storage · see REFRIGERATION

Coldstream, burgh (pop 1,233), Berwickshire, Scotland, near the Tweed General Monck (later duke of Albemarle) here raised troops in 1659–60 for his march into England, which resulted in the restoration of Charles II to the throne The regiment became known as the Coldstream Guards, one of the regiments of guards of the royal household

Coldwater, 1 City (pop 1,214), co seat of Comanche co , S Kansas, SE of Dodge City near the Oklahma line, inc 1884 It is a trade center for a wheat area **2** Industrial city (pop 7,343), co seat of Branch co., S Mich., SSE of Battle Creek and on the Coldwater tributary of the St Joseph, settled 1830, inc as a village 1837, as a city 1861 It is a farm trade center in a lake region The old Sac Trail crossed here. The city's varied products include cement and plastics The Coldwater State Home and Training School is in the city 3 Village (pop 2,019), W Ohio, SW of Lima. Farm implements are made here

Coldwell, Major James, 1888–, Canadian political leader, b. England He went to Canada in 1910, and after teaching in rural schools in Alberta and Saskatchewan, he became (1919) principal of a school in Regina. He served (1921–32) as alderman in Regina. As a CO-OPERATIVE COMMONWEALTH FEDERATION candidate, Coldwell was elected (1935) to the Canadian House of Commons He became parliamentary leader of the party in 1940 and its national leader in 1942, upon the death of J. S. Woodsworth His *Left Turn, Canada* (1945) discusses the objectives of the Co-operative Commonwealth Federation.

Cole, Arthur Charles, 1886–, American historian, b. Ann Arbor, Mich , educated at the Univ. of Michigan (B.A., 1907; M.A., 1908) and the Univ. of Pennsylvania (Ph D , 1911). He taught at Michigan (1907–8) and at the Univ. of Illinois (1912–20) before becoming professor of history at Ohio State Univ. (1920–30) and at Western Reserve Univ. (1930–44). In 1944 he became professor of history at Brooklyn College. Among his works are *The Era of the Civil War, 1848–1870* (1919; Vol. III of *Centennial History of Illinois*), *The Irrepressible Conflict, 1850–1865* ("History of American Life" series, Vol VII, 1934), and *A Hundred Years of Mount Holyoke College* (1940).

Cole, Charles Woolsey, 1906–, American historian and educator, b Montclair, N.J., grad Amherst (B A., 1927) and Columbia (M.A., 1928; Ph D , 1931) He was an instructor (1929–35) and professor (1940–46) of history at Columbia and associate professor (1935–37) and professor (1937–40) of economics at Amherst In 1946 he became president of Amherst He wrote *French Mercantilist Doctrines before Colbert* (1931), *Colbert and a Century of French Mercantilism* (1939), *Economic History of Europe* (with Shepard B. Clough, 1941, rev ed , 1946), *French Mercantilism, 1683–1700* (1943), and *History of Europe since 1500* (with Carleton J H Hayes and Marshall J Baldwin, 1949)

Cole, George Douglas Howard, 1889–, English economist and novelist He was educated at Oxford and was a university reader in economics (1925–44) A leading exponent, for many years, of GUILD SOCIALISM, he later returned to his original Fabianism, acting as chairman of the FABIAN SOCIETY from 1939 to 1946 He has written a vast number of books, including *Self-Government in Industry* (1917), *Guild Socialism Restated* (1920), *Principles of Economic Planning* (1935), *Socialism in Evolution* (1938), *Local and Regional Government* (1947), and *World in Transition* (1949) His wife, **Margaret Isabel (Postgate) Cole,** 1893–, collaborated with him in writing *The Intelligent Man's Review of Europe Today* (1933) and other political works and over 30 detective stories Mrs Cole has lectured at Cambridge and is the author of *Marriage Past and Present* (1938), *Beatrice Webb a Memoir* (1945), *Growing Up into Revolution* (1949), and other works

Cole, Sir Henry, 1808–82, British official and art critic He shared in establishing the Record Office and was an organizer of the Great Exhibition of 1851 He was a founder of the South Kensington Museum, London, and of the National Training School, from which developed the Royal College of Music, London

Cole, King, in British tradition, a king of the 3d cent A false etymology connected him with Colchester His latter-day fame he owes to a nursery rhyme, "Old King Cole was a merry old soul "

Cole, Margaret Isabel (Postgate): see COLE, GEORGE DOUGLAS HOWARD

Cole, Thomas, 1801–48, American landscape painter, b England His large allegorical paintings, such as *The Expulsion from Eden* (Metropolitan Mus), were popular, but he is best known as a pioneer of the Hudson River school, whose landscapes of New York state and New England may be seen in many leading collections

Cole, Timothy, 1852–1931, American wood engraver, b London In 1875 he settled in New York and entered the employ of the *Century Magazine* (then *Scribner's*) For 29 years, before the advent of photoengraving destroyed the popularity of the wood engraving as a reproduction process, his reproductions of the great paintings of Europe appeared in that magazine and won for him wide recognition at home and abroad His tonal treatment of the woodengraving reproduction represented a final stage in the development of the process His work was published in book form—*Old Italian Masters* (1892), *Dutch and Flemish Masters* (1901), *English Masters* (1902), and *French Masters* (1910) He also wrote *Wood Engraving* (1916) and *The Magic Line* (1917) See R C Smith, *Wood Engraved Work of Timothy Cole* (1925), A P Cole, *Timothy Cole, Wood Engraver* (1936)

Colebrook, 1 Town (pop 547), NW Conn. It was settled in 1765 and incorporated in 1779 and includes the little villages of Colebrook, North Colebrook, Colebrook River, Mill Brook, and Robertsville Colebrook village still has 18th-century houses, notably that of the younger Jonathan Edwards, pastor here from 1795 to 1799 The town had ironworks c 1800 A beautiful region of hills and streams, it is favored as a summer resort. **2** Agricultural town (pop 2,096), NW N H , on the Connecticut at the confluence of the Mohawk and W of Dixville Notch, granted 1770 to Sir George Colebrook and others, inc 1795 Beloit, Wis., was settled from Colebrook

Coleman, Charles Caryl, 1840–1928, American painter of landscapes and religious subjects, b Buffalo, where he was a pupil of William Beard He finally settled in Capri, where he painted Vesuvius in many phases, one painting of an eruption is now in the Brooklyn Museum.

Coleman, Glenn, 1887–1932, American painter and lithographer, b. Springfield, Ohio. He studied at the Indianapolis Industrial Art School and at the New York School of Art under Henri and Shinn He is famous for his paintings and lithographs of New York street scenes and spent most of his life in the poorer sections of lower Manhattan. Often obliged to support himself by other work, he continued to paint and late in life achieved a high reputation. He is represented in the museums of Brooklyn, Newark, and Washington, D C., the Metropolitan Museum, and the Luxembourg Museum, Paris. *Speakeasy, Minetta Lane at Night,* and *Downtown Street* are among his well-known paintings See monograph by C. A Glassgold (1932).

Coleman, town (pop 1,809), SW Alta , on Crowsnest river and SSW of Calgary It is in a coalmining, ranching, and lumbering district

Coleman, city (1940 pop 6,054; 1947 estimated pop 7,800), co seat of Coleman co , W central Texas, NW of Brownwood; founded 1876, inc 1877. The city, with stone houses and wide streets, is the market and processing center of a region yielding oats and other grains, cotton, oil and gas, cattle, sheep, and turkeys Lake Scarborough, the city reservoir, and a newly projected reservoir near by are included in plans for the Colorado river

Colepepper, John: see CULPEPPER, JOHN CULPEPPER, 1ST BARON

Coleraine (kōlrān'), municipal borough (pop 9,180), Co Londonderry, Northern Ireland, on the Bann river 4 mi from its mouth It is a port with an improved harbor Coleraine's industries include distilling, linen milling, the curing of ham and bacon, bog iron mining, and salmon fishing. The site of the town was given (1613) to the corporations of the City of London by James I There is a stone bridge across the Bann to Waterside

Coleraine (kō"lūrān'), village (pop 1,325), NE Minn , on Trout Lake NE of Grand Rapids and on the Mesabi iron range, in a region of farms, woods, and lakes It was built by a mining company for its employees

Coleridge, Hartley (kōl'rĭj), 1796–1849, English author, eldest son of Samuel Taylor Coleridge Reared in the household of the poet Southey after the estrangement of his parents, Hartley Coleridge went to Oxford and gained a fellowship at Oriel, but was removed because of intemperance Shy and introspective, he tried teaching in London, at which he was a failure His *Biographia Borealis,* a series of critical biographies, appeared in 1833, as well as a volume of poems Coleridge retired to the Lake District, where he remained until his death In 1840 he edited Massinger and Ford, with biographies His brother Derwent published several volumes of his verse and prose in 1851 See his letters (ed by E L Griggs and G E Griggs, 1937), biography by E L Griggs (1927)

Coleridge, Samuel Taylor, 1772–1834, English poet, critic, and philosopher, b Ottery St Mary, Devonshire As a charity pupil at Christ's Hospital, London, he was a friend of Charles Lamb His early interest in the classics, medicine, metaphysics, and finally poetry displayed precocity and imagination, but his instability appeared when in 1793 he interrupted his Cambridge career (1791–94) with a short interval in the army as Silas Tomkyn Comberback With his friend Robert Southey he projected in 1794 a utopian scheme in America called pantisocracy, which came to nothing In 1795 Coleridge married Sara Fricker, sister of Southey's fiancée He started an unsuccessful periodical, the *Watchman* (1796), and collected his *Poems on Various Occasions* (1796) Shortly after he took his family to live at Nether Stowey, William Wordsworth and his sister Dorothy settled near by (1797) In the stimulating discussions which followed, Wordsworth and Coleridge planned their joint volume, *Lyrical Ballads* (1798), both for its preface and for its poems a seminal book in the romantic movement in English literature Coleridge's chief contribution was "The Rime of the Ancient Mariner" By the end of 1798 he had written also "Christabel," Part I, and "Kubla Khan" (pub 1816) After Coleridge had spent a year (1799–1800) in Germany, where he made his excellent translation of Schiller's *Wallenstein,* he and his family settled in the Lake Country with the Southeys There Coleridge wrote the rest of his better poetry—"Christabel," Part II, "Dejection an Ode," and "The Pains of Sleep" His drug habit, begun with laudanum c 1796, was fixed by 1802, and a year in Malta (1804–5) failed to restore his health Returning to England, he gave several series of lectures on literature By 1808 he was completely estranged from his family He conducted another ill-fated periodical, the *Friend* (1809–10), and his drama *Remorse* was successfully produced in London (1813) Finally, in an attempt to cure his opium addiction, he went in 1816 to live under the care of Dr James Gillman at Highgate, and remained the rest of his life In 1817 his *Sybilline Leaves,* poetry, and *Biographia Literaria,* a platonic dialogue on imagination, both appeared, and in 1818 he gave another series of lectures to popularise his ideas of rules for judgments of imaginative works. His later publications include *Aids to Reflection* (1825) and an *Essay on Church and State* (1830) In the growth of the romantic spirit in English literature, Coleridge was an important philosophic leader. He was a valuable literary critic, a fascinating conversationalist, and a poet whose power to produce musical verse tinged with the supernatural places him among the great figures of literature. *Specimens of the Table-Talk* (2 vols., 1835), *Literary Remains* (4 vols.,

1836–39), and *Confessions of an Enquiring Spirit* (1840) were edited by his nephew, H N. Coleridge, and *Biographia Literaria* (1847) by him and S. T. Coleridge's daughter Sara. Besides editions of his poetic works, see *Anima Poetae* (ed by E H Coleridge, 1895); *Shakespearean Criticism* (1930) and *Miscellaneous Criticism* (1936), both ed by T. M Raysor; collections of letters ed. by E H. Coleridge (1895), E. A. Turnbull (1911), and E. L Griggs (1932), R. W. Armour and R F Howes, *Coleridge the Talker* (1939) See J L Lowes, *The Road to Xanadu* (enl ed , 1930); biographies by J D. Campbell (1894), H I'A Fausset (1926), E K Chambers (1938), and Lawrence Hanson (1939), studies by J H Murhead (1930), I. A Richards (1935), and C. R Sanders (1942) His daughter, **Sara Coleridge**, 1802–52, has literary standing in her own right Her translation of *An Account of the Abipones* (1822) shows unusual feeling for both Latin and English. Her best work is *Phantasmion* (1837), a fairy tale which is still read See *Memoir and Letters* (1873), biography by E L Griggs (1941)

Coleridge-Taylor, Samuel, 1875–1912, English composer, son of a Negro physician of Sierra Leone and an Englishwoman He studied violin and composition at the Royal College of Music in London He wrote many songs and some chamber music but is best known for his cantatas—the Hiawatha trilogy (1898–1900) and *A Tale of Old Japan* (1911) See J F Coleridge-Taylor, *Genius and Musician* (1943)

Coleroon, river, India see CAUVERY

Colet, John (kŏ'lĭt), 1467?–1519, English humanist After his graduation from Oxford, he studied in Italy and France Returning, he won renown by his exegetical lectures (1497–1504) at Oxford on Pauline theology He was one of a group of humanists which included Grocyn, Thomas Linacre, Sir Thomas More, and Colet's friend, Erasmus In 1505 Colet became dean of St Paul's, London, and in 1509 he planned the new St Paul's School, which he refounded and endowed from his private fortune With William Lyly, the school's first headmaster, and Erasmus, he collaborated on a Latin grammar which was later called the Eton grammar and used by generations of schoolboys Colet died before the Reformation was fairly begun, and his relation to it has been disputed It is true that he criticized abuses in the Church and called upon individual men, especially churchmen, to reform, but so did many others who remained staunch Catholics in the Reformation In the spread of humanism his writings were less important than his influence See Frederick Seebohm, *The Oxford Reformers of 1498* (1867), biographies by J H Lupton (rev ed , 1909) and J A R Marriott (1933)

Colet, Louise Révoil (lwēz' rāvwal' kōlā'), 1810–76, French poet and novelist She was the hostess of a salon, to which the intellectuals of the time, Victor Cousin, Gustave Flaubert, and others, resorted She is best known for the publication of the correspondence of Mme Récamier with Benjamin Constant (1849) and for *Lui, roman contemporain* (1859), a fictionized account of her relations with Flaubert

Colette (Sidonie Gabrielle Claudine Colette) (sēdônē' gäbrēĕl' klôdēn' kôlĕt'), 1873–, French novelist Her first novels, the famous *Claudine* stories, were published in collaboration with her first husband Willy (pseud of Henri Gauthier-Villars) They include *Claudine à l'école* (1900, Eng tr , *Claudine at School*, 1930), *Claudine à Paris* (1901, Eng tr , *Young Lady of Paris*, 1931), and *Claudine s'en va* (1903, Eng tr , *The Innocent Wife*, 1934) Her analytical studies of women have made her famous, and among the many which have been translated into English are *Chéri* (1920, Eng tr , 1929) and *La Chatte* (1933, Eng tr , *The Cat*, 1936) In 1910 she married Henri de Jouvenel

Colfax, Schuyler (skī'lur kōl'făks), 1823–85, Vice President of the United States (1869–73), b New York city He moved in boyhood to Indiana First a Whig editor, he later helped to organize the Republican party in Indiana He served in the U S. House of Representatives (1855–69), being speaker from 1863 to 1869 In 1868 he was elected Vice President under Ulysses S Grant Colfax was involved in the CRÉDIT MOBILIER OF AMERICA scandal, which effectually ended his political career. See biography by O J Hollister (1887)

Colfax. **1** City (pop 2,252), central Iowa, on Skunk river and E of Des Moines, in a coal-mining area, inc 1875 It developed with the exploitation of mineral wells **2** Town (pop 1,354), parish seat of Grant parish, central La , on the Red River, founded c.1870, inc 1878 It was a busy port in the early steamboat days The Colfax riot occurred here in April, 1873, when Negroes, claiming they had been elected, tried to assume parish offices, many Negroes and three whites were killed **3** City (pop 2,853), co seat of Whitman co., SE Wash , on the Palouse river and S of Spokane, in a rich farm area; settled 1870, inc 1878

Colgate, William (kōl'gāt), 1783–1857, American manufacturer and philanthropist, b. Kent, England. Arriving in the United States in 1795, Colgate learned candlemaking in Baltimore and New York. In 1806 he set up a tallow factory in New York, and later engaged in soapmaking. In 1847 he moved his factory to Jersey City, and by 1850 Colgate began producing fancy soaps and toilet preparations He helped organize several Bible societies and a nonsectarian religious society and contributed amply to the institution later called Colgate Univ

Colgate University, at Hamilton, N Y ; nonsectarian, for men; chartered 1819, opened as a Baptist seminary 1820, called Madison Univ 1846, renamed for William COLGATE 1890 The university is a pioneer in individualized education and survey courses

Colhozeh (kōlhō'zĕ) [Heb ,=all seeing], Judahite of Nehemiah's time Neh 3 15, 11 5

colic (kŏ'lĭk), intense pain caused by spasmodic contraction of one of the hollow organs, e g , the stomach, intestines, gall bladder, and ureter It may last from a minute to hours and may be accompanied by nausea and vomiting and by spasmodic movements of the legs Intestinal colic may be caused by gas or by irritant food This type in infants may follow a sudden large feeding, improper feeding, or constipation The local application of heat, oil of peppermint by mouth, and enemas give relief from the attack To prevent attacks, the diet must be regulated and constipation treated The presence of a calculus or stone within an organ may cause colic See also LEAD POISONING

Coligny, Gaspard de (gaspär' dŭ kōlēnyē'), 1519–72, Huguenot leader A nephew of Anne, duc de MONTMORENCY, he made an early appearance at the French court He distinguished himself at Ceresole (1544) in the Italian Wars, was promoted colonel general of infantry, and in 1552 became admiral of France He defended Saint-Quentin against Emmanuel Philibert of Savoy (1557), but was taken prisoner and was not released until 1559 In the same year he made public profession of his conversion to Protestantism He was called in by CATHERINE DE' MEDICI as an adviser or hostage at the time of the conspiracy of AMBOISE (1560) He and Louis I de CONDÉ commanded the Huguenots after the massacre at Vassy (1562) and also in the second of the wars of RELIGION (1567–68) An unsuccessful attempt to capture Coligny and Condé at Noyers (1568) brought on the third war, in which Coligny became sole leader, nominally as adviser to the young Henry of Navarre (later HENRY IV of France) Defeated at Moncontour, he was victor at Arnay-le-Duc (1570) and negotiated the Peace of St Germain (1570) Reconciled with Catherine and CHARLES IX (1571), he became the king's favorite adviser To circumvent Spain he invaded the Low Countries but the plan was broken by the defeat at Mons On Aug 22, 1572, he escaped the assassination ordered by Catherine and by François de GUISE because of Coligny's increasing influence over Charles, two days later he was the first victim to perish in the massacre of SAINT BARTHOLOMEW'S DAY See Sir Walter Besant, *Gaspard de Coligny* (1879), Eugène Bersier, *Coligny the Earlier Life of the Great Huguenot* (1884)

Colima (kōlē'mä), state (2,010 sq mi ; 1946 estimated pop 91,546), W Mexico, on the Pacific One of the smallest in area and the smallest in population of the Mexican states, Colima is wedged between Jalisco, which nearly surrounds it, and Michoacán It includes the islands of Revilla Gigedo off the coast On the mainland coast tropical plains produce cotton, sugar, and rice Most of the state is within the cool highlands of the Sierra Madre Occidental The smoking volcano, Colima (12,631 ft high), and the neighboring peak, Nevado de Colima (14,235 ft high), are just across the state line in Jalisco On the mountain slopes grows some of Mexico's finest coffee Iron, copper, and some gold are mined, and cattle are raised The port is MANZANILLO The largest city is **Colima** (pop 22,601), the capital, founded in 1523 by Gonsalo de Sandoval It has a pleasant semitropical atmosphere. Frequent and severe earthquakes, the most recent in 1941, have caused recurrent and serious damage

Colin, Alexander: see COLINS, ALEXANDER

Colines, Simon de (sēmôN' dŭ kōlēn'), d 1546, Parisian printer. He was associated with the elder Henri ESTIENNE and continued his work Colines used beautiful roman and italic types and a Greek type, with accents, that was better than its predecessors He is believed to have designed some of his types, some were designed by Geofroy TORY His books, often in small formats, show excellent taste and craftsmanship

Colins, Colin, or **Colyn, Alexander** (ălĭksän'drŭ kōlĭn'), c 1527–1612, Flemish sculptor He executed most of the reliefs in marble on the tomb of Maximilian I at Innsbruck

Coliseum: see COLOSSEUM.

Coll, island (pop. 322), off W Scotland, in Argyllshire, one of the Inner Hebrides It is NW of Mull

collar. Torques (metal circlets, usually twisted) date from the Bronze Age and are worn by primitive peoples Livery collars were neck chains introduced in the 14th cent as badges of alliance or fealty Neck chains are also worn as insignia of European orders of knighthood, such as the Order of the Garter. A medieval forerunner of the collar as a dress adjunct was the gorget, which enveloped the throat and is now seen in the dress of nuns. The 16th and 17th cent. saw the ruff, at first a circular fluted collar of fine starched material, become a winglike extension often made of fine lace or embroidery and rising above the coiffure This gave way to the broad, falling collar Later, neckcloths and cravats led the fashion for men, while women's collars have varied widely from fichus to the high, tight structures of the 1890s In armor the neckpiece was called the gorget A band of metal forged about the throat has figured as a symbol of the enslaved See K. M Lester and B V Oerke, *Illustrated History of Accessories of Dress* (1940)

collateral, something of value given or pledged as security for payment of a loan Collateral consists usually of financial instruments, such as stocks, bonds, and negotiable paper, rather than physical goods, although the latter may also be accepted as such In case of default, the creditor may sell the collateral and apply the money thus acquired to payment of the debt, charging the debtor with any deficiency or crediting him with any surplus The borrower may usually substitute other collateral for that held by the lender if it is acceptable to the latter Such a privilege is particularly useful to borrowers who buy and sell securities Merchandise collateral—such as negotiable warehouse receipts, bills of lading, and trust receipts—is also used, as is personal collateral, including deeds, mortgages, leases, and other rights in real estate Other good collateral may include bills of sale of movable goods, such as crops, machinery, furniture, livestock, and savings-bank passbooks

collect (kŏl'ĕkt) [Late Latin,=meeting], in Western liturgies, short prayer proper to an occasion, often asking a particular favor The collect is said, typically, at MASS just before the epistle and at vespers It occurs correspondingly in the Anglican offices Many collects are very ancient, especially those of the Sundays and great old feasts. Their language is very terse

collective bargaining, process of discussion and negotiation between two parties as to the terms or conditions under which a continuing service is to be performed In labor relations it is a procedure by which an employer or employers agree upon the conditions of work by bargaining with representatives of a labor organization appointed by the union The purpose is to secure higher wages, shorter hours, better working conditions, and job security The merits of collective bargaining have been argued by both opponents and proponents of the process, the former maintain that it deprives the worker of his individual liberty to dispose of his service, while the latter point out that without the union's protection the worker would be subject to the dictation of the employer Juridically speaking, the refusal by the employer to bargain collectively with the representatives of his employees was made an unfair labor practice by the National Labor Relations Act of 1935, and the same restraint was imposed upon labor unions by the Taft-Hartley Act of 1947 See W H Hutt, *The Theory of Collective Bargaining* (1930), Z G Dickinson, *Collective Wage Determinant* (1941); L. J. Smith, *Collective Bargaining* (1946).

college: see UNIVERSITY

Collège de France (kôlĕsh' dŭ frās'), institution founded in Paris c 1530 by Francis I primarily for the encouragement of humanism It has always been independent of any university and free from supervision Its lectures are open to the public without matriculation or any fee, it gives no examinations, and it grants no certificates or degrees The range of its studies has broadened, and its distinguished faculty has increased in number

College of Physicians and Surgeons. see COLUMBIA UNIVERSITY

College of the City of New York: see NEW YORK, COLLEGE OF THE CITY OF, and CITY COLLEGE

College Park. **1** City (pop 8,213), NW Ga , southern suburb of Atlanta, inc 1891 **2** Unincorporated town, W central Md , NE of, and near, Washington, D C It is the seat of part of the Univ of Maryland (see MARYLAND, UNIVERSITY OF)

Colleges of the Seneca, The, at Geneva, N Y , since 1943 the corporate title of Hobart College (affiliated Episcopalian, for men) and William Smith College (nonsectarian, for women, opened 1908) Hobart College, chartered in 1822, was called Geneva College until 1852 A pioneer medical school was transferred to Syracuse Univ. in 1872 Citizenship education is stressed Benjamin HALL was president of Hobart from 1836 to 1858.

College Station, city (pop 2,184), E central Texas, near Bryan; inc 1938 The Agricultural and Mechanical College of Texas (see TEXAS, AGRICULTURAL AND MECHANICAL COLLEGE OF) is here

Collegeville, borough (pop 976), SE Pa , NW of Philadelphia near Norristown It is the seat of Ursinus College (coeducational; 1869)

Colleoni, Bartolomeo (bärtōlōmā'ō kōl-lāō'nē), 1400–1475, Italian soldier of fortune He fought in the wars of Venice and Milan, changing sides so often that he came to be distrusted by both In 1454 he deserted Milan for the last time and became

generalissimo of Venice, a post he held till his death Two works of art are associated with him—the Cappella Colleoni in his native city, Bergamo, and the celebrated equestrian statue by Verrocchio in Venice

Colles, Christopher (kŏls), 1738–1816, American engineer, b Ireland He came to the United States possessed of a good scientific education He was an instructor in artillery in the Continental army, one of the first to propose and plan a waterworks system for New York city, an ardent advocate of canals, roads, and other forms of internal improvements, an inventor and manufacturer of ingenious devices, and, in his later years, superintendent of the American Academy of Fine Arts His *Survey of Roads of the United States* (1789) and *The Geographical Ledger and Systematized Atlas* (1794) have historical value His *Proposals for the Settlement of Western New York* (1785) contains one of the first proposals for a canal across the state

Collett, Camilla (Wergeland) (kämē'la vĕr'gulän kŏl'lĕt), 1813–95, Norwegian novelist, sister of Henrik Wergeland She wrote a series of novels which were predecessors of the social and feminist dramas of Henrik Ibsen Among them are *Daughters of the County Magistrate* (1853–55), *In the Long Nights* (1863), *Last Leaves* (1868–72), and *Against the Stream* (1879) Oslo has a statue to her memory

Colletta, Pietro (pyā'trō kōl-lĕt'ta), 1775–1831, Neapolitan general and historian Though he held important posts under King Joachim Murat, he was made commander of Salerno after the Bourbon restoration He took part in the unsuccessful revolution of 1820 and was exiled He retired to Tuscany, where he took up writing His major work is *History of the Kingdom of Naples, 1734–1825* (1834, Eng tr , 2 vols , 1858)

collie, dog bred originally as a shepherd dog, probably first in Scotland From the latter part of the 19th cent it has been known as a show dog and a pet Of the two varieties the rough-coated or long-haired collie is more common than the smooth-coated Except for the difference in length of hair they are very similar It is believed that in early times the rough-coated collie herded the sheep and that the smooth-coated drove animals to market The collie has a flat skull, tapering muzzle, and small ears Males stand from about 22 to 24 in at the shoulder The rough-coated variety has an abundant mane and frill but the face is smooth In color the collies are usually mixtures of some shade of brown or tawny with white or black or are all white

Collier, Arthur, 1680–1732, English philosopher His *Clavis Universalis, or, A New Inquiry after Truth* (1713) sets forth the idea that reality lies in imagination and sense perception, varying degrees of the same phenomenon, and that the imitation of sensation occurs through the operation of a divine power By this and by his denial of the reality of the external world, Collier's speculations, which are established as independent, coincide remarkably with the subjective idealism of Berkeley

Collier, Jeremy, 1650–1726, English clergyman He was imprisoned as a nonjuror and later was outlawed (1690) because of his action in absolving on the scaffold two of those involved in the assassination plot against William III Collier's principal fame comes from his *Short View of the Immorality and Profaneness of the English Stage* (1698), which caused much bitterness in theatrical quarters In 1713 he was ordained a nonjuring bishop

Collier, John, 1884–, American social worker and author, commissioner of Indian Affairs (1933–45), educated at Columbia and the Collège de France He was civic secretary (1909–19) of the People's Institute, New York city, and in 1910 he helped found the National Board of Review for Motion Pictures, of which he was secretary until 1914 From 1915 to 1919 he was director of the National Training School for Community Centers, then director of community organizations (1919–20) for the state of California He was director of social science training (1921–22) at the State Teachers College, San Francisco, but in 1922 he became executive secretary of the American Indian Defense Association, Inc , and in 1926 editor of the magazine *American Indian Life*, holding both positions until 1933 In 1941 he became director of the National Indian Institute, U S A , and in 1945 he retired He became professor of sociology, however, at the College of the City of New York in 1947 In addition to works in verse, he is author of *Indians of the Americas* (1947) and *Patterns and Ceremonials of the Indians of the Southwest* (1949)

Collier, John Payne, 1789–1883, English critic, editor, and forger, b London As librarian to the duke of Devonshire, he was able to forge marginalia and signatures on so many original documents, especially Shakesperian ones, that his writings on them must be used warily

Collier, Peter, 1835–96, American agricultural chemist and research worker, b. Chittenango, N Y. His investigation of sorghum was the first important chemical research problem worked out in the U S Dept of Agriculture As director of the Geneva experiment station in New York state, he influenced scientific investigations toward practical applications

Collierville, town (pop 1,042), SW Tenn , ESE of Memphis, in a cotton, dairy, and livestock area.

Collingdale, borough (pop 8,162), SE Pa , near Philadelphia, inc 1891

Collingswood, borough (pop 12,685), SW N J , near Camden, settled 1682, inc 1888

Collingwood, Cuthbert Collingwood, Baron (kŭth'bŭrt kŏ'lĭng-wo͝od), 1750–1810, British vice admiral He commanded his ship brilliantly at Cape St Vincent in 1797 and in other engagements. Vice admiral at the battle of Trafalgar (1805), Collingwood had command after Admiral Horatio Nelson was fatally wounded He became commander in the Mediterranean in 1807 See biography by Geoffrey Murray (1936)

Collingwood, municipality (pop 29,789), northeast suburb of Melbourne, Victoria, Australia There are woolen and hosiery mills

Collingwood, town (pop 6,270), S Ont , at the south end of Georgian Bay With a well-protected harbor, it has one of the largest shipbuilding plants and one of the largest dry docks in Canada, many of the lake freighters are constructed here There is also a government fish hatchery The town is named for Baron COLLINGWOOD

Collins, Anthony, 1676–1729, English theologian, friend of John Locke He set forth the position of the deists and defended the cause of rational theology His *Discourse on Free Thinking* (1713) was answered by many divines and was satirized by Jonathan Swift His *Inquiry Concerning Human Freedom* (1715) is an admirable statement of the necessitarian standpoint

Collins, Archie Frederick, 1869–, American electrical physicist, b South Bend, Ind He invented a wireless telephone (1899) and a rotating oscillation arc (1909) and discovered the effect of electric waves on brain cells His writings include *Wireless Telegraphy* (1905)

Collins, Edward Trowbridge, 1887–, American baseball player, b Millerton, N Y He played at second base with the Philadelphia Athletics (1906–14, 1927–30) and the Chicago White Sox (1915–26) in the American League He made over 3,300 base hits, maintained a lifetime batting average of .333, and stole over 740 bases during his major-league career He was elected (1939) to the National Baseball Hall of Fame

Collins, Frank Shipley, 1848–1920, American botanist, b Charlestown, Mass An authority on algae, in his work *The Green Algae of North America* (1909) and other studies he made important contributions to the biological theories of sex

Collins, James Franklin, 1863–1940, American botanist, b North Anson, Maine He taught at Brown (1899–1911, 1913–38) and was curator of the herbarium there (1894–1911, 1924–38) From 1911 to 1933 he was a pathologist of the U S Dept of Agriculture With H W Preston he wrote *Key to New England Trees* (1909) and *Illustrated Key to Trees of Northeastern United States and Adjacent Canada* (1912)

Collins, Michael, 1890–1922, Irish leader of the SINN FEIN He spent the years from 1907 to 1916 in England, during which period he joined the Irish Republican Brotherhood (Fenians) and the National Volunteers He took part, under Patrick Pearse, in the Easter Rebellion in Dublin in 1916 and was imprisoned the rest of the year His leadership in Sinn Fein began when he was one of the few rebels to escape the general arrest of June, 1918 Thereafter he organized alone the battle which resulted in the breakdown of British government in Ireland and eventually forced the British to sue for peace He organized the loan which raised £400,000 in Ireland and supervised the guerrilla warfare In 1921 he went to London and signed the treaty, returning to join Arthur GRIFFITH in setting up the Free State Ten days after Griffith's sudden death Collins was assassinated Collins's success was due not only to his energy and imagination, but also to a brilliant personal magnetism and to daring exploits See biographies by Piaras Béaslaí (1926) and Frank O'Connor (1937)

Collins, Wilkie (William Wilkie Collins), 1824–89, English novelist, son of the painter William Collins His first published work was a biography of his father (1848) The author of some 30 novels, Collins is best known for two mystery stories, *The Woman in White* (1860) and *The Moonstone* (1868), which is considered the first full-length detective story in English and one of the best of its genre Wilkie Collins was an intimate friend of Dickens, in whose various periodicals many of Collins's novels first appeared, they collaborated on two plays, *A Message from the Sea* (1861) and *No Thoroughfare* (1867) See *Letters of Charles Dickens* (1880), S M Ellis, *Wilkie Collins, Le Fanu, and Others* (1931)

Collins, William, 1721–59, English poet, educated at Oxford His *Persian Eclogues* (1742), published when he was 17, show his precocity and lyric vein. He had written less than 2,000 lines when insanity overtook him, but he had established himself as one of the earliest romantic poets Among his odes are "To Evening," "To Simplicity," and the "Ode Written in 1746," beginning "How sleep the brave " See biographies by H. W. Garrod (1928) and E. G. Ainsworth, Jr (1937).

Collins, town (pop 1,100), co seat of Covington co., S central Miss., NW of Hattiesburg, in a farm area

Collinsville. 1 City (pop 9,767), SW Ill., NE of St Louis, in a coal and farm area, settled 1817, inc as a village 1855, as a city 1872. Chemicals, food products, and bricks are among its manufactures **2** City (pop 1,927), NE Okla , NE of Tulsa, in an agricultural area producing also livestock and some oil and gas

Collodi, Carlo (kär'lō kōl-lō'dē), pseud of **Carlo Lorenzini** (lōrĕntsē'nē), 1826–90, Italian author A prolific journalist, he wrote didactic tales for children, the most famous being *Pinocchio the Story of a Puppet* First written in 1880 for the *Giornale dei bambini*, the story appeared in book form in 1883 and soon became one of the most read of all juvenile classics Collodi, however, received little for it Of the book Benedetto Croce said, "The wood out of which Pinocchio is carved is humanity itself " Since the first English translation (1892) there have been several others in innumerable editions, perhaps the best is that by May M Sweet (1927) *Pinocchio* was filmed by Walt Disney in 1939

collodion (kulō'dēun), a solution of PYROXYLIN in a mixture of alcohol (one part by volume) and ether (three parts) Upon exposure to air, the mixed solvents evaporate, leaving a thin, colorless, elastic film covering the surface upon which the collodion has previously been spread It has been used extensively in photography in preparing dry plates, it acts as the carrying agent for the salts affected by light In medicine, it is employed to supply a protective covering for open cuts, but only in those cases where infection has not set in, since it is not antiseptic

colloid (kŏ'loid) A substance which is dispersed in a solvent in particles larger than molecules, but still too small to be seen is called a colloid, and its mixture with the solvent, a colloidal solution Colloidal solutions are not true solutions, for in a true SOLUTION the particles are considered to be of molecular fineness They differ from true solutions in other ways colloidal particles do not pass through certain membranes, whereas the particles of a true solution do (see DIALYSIS), the presence of colloidal particles in a liquid affects only slightly, if at all, the freezing and boiling points of that liquid, although the colloidal particles cannot be seen, yet by the use of the ultramicroscope (see MICROSCOPE) they appear, owing to reflection, as dancing points of light, an effect not observed in a true solution A colloidal solution is not a SUSPENSION, for colloidal particles, besides being ordinarily invisible, do not settle upon standing There is no definitely marked point of division, however, between colloidal solutions and true solutions and between colloidal solutions and suspensions Various common substances are colloids, e g , milk, mayonnaise, blood, solutions of starch, soap, and gelatin, and certain other substances Water dispersed in air in the form of fog and solid particles dispersed in air as smoke are other examples Foam is the dispersion of a gas in a liquid Upon the addition of certain agents to a colloidal solution, the colloidal particles collect in masses and are precipitated (see COAGULATION) Protective colloids are colloids which when added to another colloid, prevent its precipitation Gels are the gelatinous substances resulting when certain colloidal solutions are cooled or evaporated They are important in jelly making ABSORPTION is characteristic of colloids, since, because of the fineness of division, a large surface of the colloidal substance is exposed See G G Hawley, *Small Wonder the Story of Colloids* (1947)

Collot d'Herbois, Jean Marie (zhäⁿ' marē' kŏlō' dĕrbwa'), 1750–96, French revolutionist, originally an actor and playwright At first he favored a constitutional monarchy, his *Almanach du Père Gérard* (1791), though it won a prize from the Jacobins for its patriotism, was criticized for its royalist tinge But he became more and more radical Elected to the Convention, he supported Robespierre, persecuted the Girondists, and suppressed the counter-revolutionary attempt in Lyons in a blood bath Although he turned against Robespierre on 9 Thermidor (1794), he fell in the Thermidorian reaction and was deported to Guiana

collotype: see PRINTING

collusion, conspiracy to defraud a person of his legal rights or to obtain some illegal objective by misusing the forms of law In suits for divorce, collusion is a conspiracy between the husband and the wife, or one or both of these and a third party, to obtain a DIVORCE on manufactured testimony, usually on pretense of adultery Such a conspiracy is a bar to divorce

Collyer, Robert, 1823–1912, American Unitarian clergyman, b. England. At 14 he became a blacksmith He became a Methodist preacher in 1849 and, emigrating in 1850 to the United States, he settled near Philadelphia, where for a time he combined his labors as a blacksmith with preaching In 1859 Collyer turned to Unitarianism; in Chicago, he founded the Unity Church, where he

served as pastor (1860–79) with marked success In 1879 he became minister of the Church of the Messiah, New York city He was widely known as a lecturer *Clear Grit* (1913) contains some of his lectures, addresses, and poems Among his many other works are *The Life That Now Is* (1871) and *Father Taylor* (1906) See biography by J H Holmes (2 vols , 1917).

Colman, Saint, c 605–676, Irish abbot of Lindisfarne (from 661) He founded the monastery-diocese of Mayo He had been trained at Iona, and at Whitby he led those who favored the Celtic date of EASTER Feast Feb 15 and, in Ireland, Aug 8

Colman, George, the elder, 1732–94, English dramatist and manager He was manager of the Covent Garden theater from 1767 to 1774 and of the Haymarket theater from 1777 to 1789 A friend of Garrick, he collaborated with him in *The Clandestine Marriage* (1766) and was the author or adapter of about 30 dramatic works, including *Polly Honeycombe* (1760) and *The Jealous Wife* (1761), an adaptation of Fielding's *Tom Jones* See biography by E R Page (1935) His son, **George Colman**, the younger, 1762–1836, succeeded him as manager of the Haymarket and wrote or adapted many dramatic works, including *Inkle and Yarico* (1787), *The Heir at Law* (1797), *John Bull* (1803), and *Who Wants a Guinea?* (1805) See his autobiography, *Random Records* (1830), biography by J F Bagster-Collins, (1946)

Colman, Norman Jay, 1827–1911, American agriculturist and lawyer, b near Richfield Springs, N Y , grad Univ of Louisville law school, 1851 He promoted the passage of the Hatch Act (1887), which authorized the creation of agricultural experiment stations As commissioner of agriculture (1885–89) he was influential in causing the Dept of Agriculture to be made an executive department (1889) represented in the cabinet, he was the first Secretary of Agriculture He established (1865) and edited *Colman's Rural World*, a Missouri farm paper

Colman, Samuel, 1832–1920, American landscape painter, b Portland, Maine He was first president of the American Water Color Society His early works belong to the Hudson River school, but his later oils and water colors are in a broader manner Colman is represented in the Metropolitan Museum and the Art Institute of Chicago His *Tow Boats in the Highlands, Hudson River* (Union League Club, New York) is characteristic

Colmar or **Kolmar** (both kôl'mär), city (pop 43,514), capital of Haut-Rhin dept , E France, in Alsace It has textile manufactures Made a free imperial city in the 13th cent , Colmar was annexed by Louis XIV in 1673 It was the seat of a provincial PARLEMENT The old section of Colmar has kept its medieval architecture St Martin's Church (13th cent) contains the *Madonna of the Rose Arbor* by Martin SCHONGAUER, who lived here all his life The museum, housed in a 13th century convent, is one of the most remarkable in Europe, it contains the Isenheim altarpiece by Mathias GRÜNEWALD and numerous masterpieces of the Rhenish school of the 15th cent

Colmar Manor, town (pop 1,480), W central Md , near Washington, D C , inc 1927

Colne (kōn, kōln), municipal borough (1931 pop 23,791, 1943 estimated pop 21,960), Lancashire, England, N of Manchester and ENE of Preston There are textile factories and tanneries Relics of Roman habitation have been found near here

Cologne (kŭlōn'), Ger *Köln* or *Köln am Rhein* (kûln ăm rīn), city (1946 pop 491,380, 1939 pop 772,221), in the former Rhine Prov of Prussia, NW Germany, on the Rhine, a historical, religious, and commercial center Though largely destroyed in the Second World War, it continues to be an important rail junction and river port, with manufactures of iron, steel, heavy machinery, chemicals, textiles, and EAU DE COLOGNE In A D 50 a Roman colony was established here by Emperor Claudius and was named Colonia Agrippinensis for his wife The episcopal see, established in the 4th cent , was made an archdiocese under Charlemagne The archbishops, who ruled a strip of land on the west bank of the Rhine as princes of the Holy Roman Empire, acquired great power and ranked third among the ELECTORS Their constant feuds with the citizens resulted in the transfer of their residence to near-by Brühl and later (1263) to Bonn Cologne became a free imperial city in 1474 and, as a member of the Hanseatic League, flourished as a commercial center until the 16th cent Its decline was hastened by the expulsion of the Jews (15th cent) and restrictions imposed on Protestants (16th cent) Cologne was seized by the French in 1794, and the archbishopric was secularized officially in 1801 After the annexation (1814) of the RHINE PROVINCE by Prussia, the archdiocese was reorganized in 1824 Cologne recovered in the 19th cent and became the main transit port and depot of NW Germany The industrial town of Deutz, on the right bank of the Rhine, was united with Old Cologne, on the left bank In the Second World War, Cologne was the first major target of Allied air raids American troops took it in March, 1945 Among the least damaged buildings is the famous Gothic cathedral, containing the relics of the WISE MEN OF THE EAST It was begun c 1248 on the site of an older church, but the nave and the two spires (515 ft high) were built only in 1842–80, after the original plans The choir is a replica of that of the Amiens cathedral The Church of St URSULA also suffered only slight damage Of the many remarkable Romanesque churches are those of St Maria im Kapitol (11th cent), of St Gereon, and of the Holy Apostles, all heavily damaged The Gothic and Renaissance city hall and the *Gürzenich* (built c 1450), meeting place of the imperial diet, were gutted As the center of north German Catholicism, Cologne has long been famous for its impressive religious processions and for its exuberant Mardi Gras celebrations The city figures prominently in German romantic literature The university, established in 1388 and later discontinued, was resumed in 1919.

Coloma, unincorporated town (pop c 500), N central Calif , on the American river and NE of Sacramento Gold was discovered at Sutter's Mill here by James W Marshall in 1848 Marshall State Historic Monument commemorates the event

Colomb or **Colombe, Michel** (both mēshĕl' kôlō'), c 1430–1512, French sculptor, one of the masters of the early French Renaissance Among his few surviving works are the sculpture for the tomb of Francis II, duke of Brittany (Nantes), and a relief, *St George and the Dragon* (Louvre)

Colombia (kulŭm'bēu, Span kōlōm'byä), republic (439,828 sq mi , 1950 estimated pop 11,259,730), NW South America The capital is BOGOTÁ. The only South American country with both an Atlantic and a Pacific coast line, it is bounded on the northwest by Panama (part of Colombia until 1903) and on the northeast and east by Venezuela The Amazon basin skirts its southeastern boundary with Brazil In the south, where it borders on Ecuador and Peru, Colombia is crossed by the equator The republic also includes tiny San Andrés y Providencia archipelago in the Caribbean c 115 mi E of Nicaragua Truly a land of contrasts, Colombia rises from disease-infected jungles to majestic Andean peaks, some over 18,000 ft high and perpetually snow-capped Varied topography and the consequent difficulty in communications have had a determining effect on Colombian economy and history By far the most prominent physical factor are the three great Andean chains which fan N from the Ecuadorian line near the volcano Galeras, though they occupy only about a quarter of the country, they have virtually dominated its social and economic life To the east of the Andes lies more than half of Colombia's territory, a vast lowland, rich in natural resources, but harassed by an excessively tropical climate The plains are crossed by navigable rivers, tributary to the Orinoco and Amazon systems This region's northern section consists of savannas (the LLANOS), which are devoted to a large extent to cattle and sheep grazing Villavilencio has developed, particularly since the Second World War, into a flourishing trading town for the rich region, which promises to become Colombia's expanding frontier The densely forested transandean southern half of the eastern region (see SELVAS), though interesting for its colorful fauna and flora, is of negligible economic importance, except for some balata and rubber gathered by primitive Indians Leticia, the country's southernmost town and only port on the Amazon (also a military outpost), was returned (1934) to Colombia after border troubles with Peru Somewhat similar in physiography is the land of the Pacific west, which is featured by a low range, the Serranía de Baudó Soaked by rains all year round, this western area has little agriculture and lives on its mines—platinum (Colombia is among the world's leading producers of that precious metal) and gold (placer) These are chiefly in the valleys of the Atrato and San Juan rivers The rain forests, as in the alluvial north, yield dye- and hardwoods, tonka beans, tagua nuts (vegetable ivory), vanilla, kapok, palm fibers for Panama hats, balsam, resins, and other forest products These are exported through BUENAVENTURA and Tumaco, the principal Pacific ports, which also ship coffee and cacao from the slopes of the cordilleras A fine deep-sea port, Buenaventura is linked by rail with the interior upland towns, notably Cali, Armenia, and Manizales But Colombia's chief transoceanic ports lie in the Caribbean north There the Spanish conquistadors made their first settlements—SANTA MARTA, CARTAGENA, and BARRANQUILLA The main Caribbean exports (coffee, petroleum, forest products, gold, and hides) go predominantly to the United States Barranquilla is now the leading commercial center and the largest coastal city and has substantial processing industries Situated on the all-important MAGDALENA river, it has since the recent dredging of the Boca de Ceniza also been opened to deep-draft vessels, and its rail link to Puerto Colombia has become obsolete Historic Cartagena, once the first port of colonial South America, is connected with the Magdalena by the Canal del Dique (long unnavigable but now again opened) and by a railroad to Calamar At adjacent Mamonal is the terminus of the long pipe line from the rich Barranca Bermeja oil field. Colombia's petroleum industry is second only to Venezuela's in South America Santa Marta formerly drew much wealth from the near-by extensive banana plantations, but exports have declined in recent years because of plant disease The Caribbean coastlands also yield rice, cacao, and sugar cane Magnificent Sierra Nevada de Santa Marta, which rises near the ocean abruptly from a triangular base to the highest elevation in the country (Cristóbal Colón Peak reaches 18,950 ft), presents on a smaller scale the vertical vegetation pattern of the interior highlands, above the tropical *tierra caliente* is the semitropical coffee belt, higher, up to 10,000 ft , is a grain- and potato-growing zone, still higher are the bleak, tundralike *páramos* (used only for grazing), which finally yield to the perpetual snow fields In all the coastal regions the Negro element predominates Only the isolated regions—the Sierra Nevada de Santa Marta, the Guajira peninsula (where pearl fishing is carried on), and the Serranía de Motilones along the Venezuelan border—retain large uncivilized Indian tribes The more healthful Andean interior is the white man's country, as it was in pre-Columbian days the country of the highly advanced CHIBCHA, with whom the Europeans intermarried Here is the largest concentration of population, and Colombia's chief crop, coffee, is grown on large scale, accounting sometimes for 80 percent (in volume) of the exports Colombia ranks next to Brazil as producer of coffee, and the high quality of its mild variety is distinctively Colombian and keeps the prices high The main areas of cultivation are the lower slopes of the mountains of the Cauca and Magdalena valleys Of the three principal Andean ranges, which run roughly north and south, the Western Cordillera (the *Cordillera Occidental*) is of the least economic consequence, especially N of CALI, an important airport and the chief center of the sugar-growing south The Central Cordillera (the *Cordillera Central*) has a towering chain of volcanoes (e g , Tolima) and is the divide between the valleys of the Magdalena and the Cauca It was until the late 19th cent a backward region, but with better transportation, the introduction of coffee culture, the exploitation of high-grade coal reserves, and an enormous increase of the white population, its cities, MEDELLÍN and MANIZALES, have become the economic and industrial core of the republic Only here does the white creole population control trade and industries, which in other parts has fallen into the hands of Germans and Syrians The Eastern Cordillera (the *Cordillera Oriental*) is the largest chain, forking at the Venezuela border, the northward branch becomes the Sierra de Perijá, and the eastward runs into the Sierra de Merida and the Venezuelan coastal range The western slopes yield coffee, and the intermontane basins yield wheat, corn, barley, potatoes, and cattle Best known of these basins is the Sabana de Bogotá, it was the original home of the Chibcha and the nucleus of Spanish culture in N South America It also produces the world's largest quantity of emeralds from the famed Muzo mines Salt works are at Zipaquira Among the leading cities of the plateaus are TUNJA, BUCARAMANGA, CUCUTA, and above all Bogotá, the country's political and cultural focus, seat of an old university (founded 1572) and next to Medellín the principal manufacturing center There is a steelmill at Paz del Río Colombia's industrial activity made great strides in the 1930s and 1940s While processing of the chief exports is the most important activity, consumer industries, such as the milling of cotton textiles, food processing, liquor distilling, and manufacture of cement, clothing, chemicals, and pharmaceuticals, have been increasingly important, profiting from hydroelectric power projects and improved communications Communications still offer difficulties, passenger and cargo traffic still depend largely on the Magdalena, which is, because of rapids, far from satisfactory as a lifeline of transport Goods have to be transferred to railroads to go around the falls, as at Girardot, Honda, and La Dorada Most transport follows a combined rail, river, and muletrail route Railroads are few and expensive, but are pushed energetically Apart from a short mountain stretch, traversed by highway, Bogotá is now linked by rail with Buenaventura on the Pacific and with most of the cities of the interior Airplanes serve the country widely A continuous highway from Caracas (Venezuela) to Guayaquil (Ecuador) traverses the Andean region In Colombia one of the first commercial airlines was operated, and air transport is of the utmost importance After the Spanish Conquest the country formed the nucleus of New Granada (for European discoveries and the colonial period, see NEW GRANADA) The struggle for independence was, as in all Spanish-American possessions, precipitated by the Napoleonic invasion of Spain It was, however, foreshadowed by the rising of the COMUNEROS Prominent among the first revolutionary leaders was Antonio NARIÑO, who took part in the uprising at Bogotá on July 20, 1810 The revolution was to last nine years before Simón BOLÍVAR by the decisive victory at BOYACÁ (1819) secured the independence of Greater

Colombia (Spanish, *Gran Colombia*), the new state he created to include present-day Venezuela, Panama, and (after 1822) Ecuador, as well as Colombia Cucutá was chosen as capital While Bolívar, who had been named president, headed campaigns in Ecuador and Peru, his able vice president, Francisco de Paula SANTANDER, administered the new nation. Political factions soon crystallized. Santander advocated a union of federal sovereign states, while Bolívar championed a centralized republic. Though Bolívar's authority prevailed by and large in the constitutional assembly, Greater Colombia soon fell apart Yet the concept of a federation of N South America was not to die and has been revived in recent times In 1830 Venezuela under José Antonio PÁEZ and Ecuador under Juan José FLORES became separate nations. The remaining territory emerged as the republic of New Granada Through the 19th cent and into the 20th cent political unrest reappeared constantly Strong parties, following more or less the principles of either Bolívar or Santander, developed along conservative and liberal lines, the conservatives favored centralism and participation by the Church in government and education, the liberals supported federalism, anticlericalism, and some measure of social legislation and fiscal reforms Partly because of an even balance in political groups backed by differing regional and economic interests, conditions were unfavorable to the rise of a strong man (*caudillo*) As in the United States (the Constitution of the United States was a perennial inspiration to Colombians), a two-party system became the norm During the 19th cent three statesmen stand out—Tomás Cipriano de MOSQUERA, Rafael NÚÑEZ, and Rafael REYES While Mosquera was president, a treaty was concluded (1846) granting the United States transit rights across the Isthmus of Panama. A new constitution in 1858 created the confederation of Granadina, which consisted of nine states Three years later (1861) under Mosquera, the country's name was changed to the United States of New Granada, only to revert with the adoption of a new constitution in 1863 to the United States of Colombia Then Mosquera was again elected president The antifederalist revolution of 1885 led one year later in the presidency of Núñez to the formation of the republic of Colombia, and the conservatives were in control After the United States had acquired the right (though the agreement was later rejected by the Colombian congress) to complete the PANAMA CANAL, the republic of Panama declared (1903) independence and with U.S. support achieved it During the Reyes administration (1904–9), closest of any of the administrations to being a dictatorship, the country's trade and productivity was vigorously expanded. Reyes, nevertheless, had to resign because of public discontent over his handling of the Panama issue Soon afterward Colombia recognized (1914) Panama's independence in exchange of their rights in the Canal Zone Until the disturbances after the Second World War the country then enjoyed stable, democratic government It settled (1917) its boundary disputes with Ecuador A border clash with Peru over the Leticia Trapezium was settled (1934) by the League of Nations in Colombia's favor Under the enlightened leadership of Olaya Herrera and Alfonso López, Colombia embarked upon a sober and progressive course Foreign immigration was, however, during the 19th cent and the first half of the 20th cent negligible Colombia entered the war on the Allied side in 1943. A merchant fleet, jointly owned by Colombia, Ecuador, and Venezuela, was set up and the Quito Charter promised (1948) to establish an economic, social, and cultural union among the former members of Greater Colombia Colombia adhered to Western Hemisphere loyalty, as was demonstrated in the Inter American Conference held (1948) in Bogotá During the session, however, violent street riots broke out, following the assassination of the liberal leader Jorge Gaitán While the internal political situation deteriorated, the conservative party, in power after 1946, increased its foothold The conservative president-elect in 1950 was Laureano Gómez See William McFee, *Sunlight in New Granada* (1925); J F Rippy, *Capitalists and Colombia* (1931); E T Parks, *Colombia and the United States* (1935); J M Henao and Gerardo Arrubla, *History of Colombia* (Eng tr, 1938); Kathleen Romoli, *Colombia, Gateway to South America* (1941)

Colombo (kŭlŭm'bō), city (pop 355,374), capital of Ceylon, a port on the Indian Ocean Before the opening of Ceylon to trade with Europe, Colombo, on the southwest coast, was relatively unimportant, because it was not easily accessible to ships from India It lay directly on the trade routes from Europe, however, and in 1565 the Portuguese established headquarters here and built a fort. The city was successively the capital of the Dutch rule of the island and British rule and since 1948 has been the capital of the dominion of Ceylon The port is on the shore of a small open bay protected by breakwaters The focus of the rail and, to a less extent, the road systems of Ceylon, Colombo has by far the largest foreign trade of any port in the country Rubber, coconut fiber, copra, and tea are among the exports. The city has expanded so much in recent years that little remains of the Portuguese and Dutch settlements.

Colón (kōlōn') [Span., =Columbus], city (pop 44,393), Panama, at the Caribbean end of the Panama Canal Originally named Aspinwall, after William Henry ASPINWALL, one of the founders of the Panama RR, Colón, although surrounded by the Panama Canal Zone, is not part of it The adjacent town, CRISTOBAL, within the zone, is the American residential section Colón is a thriving commercial center, exporting tropical fruits and woods The city has a wet climate and was often scourged by yellow fever until American sanitary work was begun under W. C GORGAS.

colon, in anatomy see INTESTINE.

colon, in writing see PUNCTUATION.

Colonia (kōlō'nyä), city (pop c.7,700), capital of Colonia dept., S Uruguay, on the Río de la Plata The city was founded by the Portuguese in 1680 and was the center of bitter fighting between the Portuguese and the Spanish before it ultimately was secured by the Spanish. It was moved to its present location in 1797 A small port in a rich agricultural district, it is more important as a resort Its name in full is Colonia del Sacramento.

Colonial Beach, resort town (pop 1,105), E Va., on the Potomac and E of Fredericksburg, inc 1892

Colonial Conference, British: see IMPERIAL CONFERENCE

Colonial Heights, town (pop 3,194), SE Va, a suburb of Petersburg; inc 1926

Colonial National Historical Park, SE Va., mainly on the peninsula between the York and James rivers, created 1930 as Colonial National Monument, renamed 1936 The park embraces a historic area of 7,129 acres which includes YORKTOWN, JAMESTOWN, WILLIAMSBURG, and Cape Henry (added in 1939, see HENRY, CAPE), the Colonial Parkway, part of the park, links the three old towns A research program includes archaeological and historical studies and restoration and reconstruction of old places of interest

colonial preference, term used when the import or export duties of a colony are lower for products of the mother country than for those of other countries There are three main policies which colonial powers may adopt towards their colonies, the Open Door policy, whereby the mother country concedes to other nations free access to the colonial market, a system of preferential tariffs for intra-imperial trade, or the extension of the home country's tariffs to colonial borders Certain colonial powers, such as the United States and Great Britain, use all three systems with regard to different parts of their possessions. In the period after 1875 Great Britain and her colonies installed a system of empire preference in regard to tariffs on raw materials and manufactured products, though British colonial preference rates were among the world's lowest, they were important because of the volume of empire trade Imperial preference was reinforced by a series of agreements, notably the Ottawa Agreements of 1932, but though imperial preference has benefited certain colonial activities such as the raising of tobacco, it has never approximated Joseph Chamberlain's dream of empire free trade within one tariff wall and has been increasingly subordinated to the economic autonomy of the component colonies Since the Second World War, economic thinking has increasingly favored free trade on a world basis Colonial preference may include nontariff preferences such as preferential access to capital markets In addition to colonial preference there are regional preference and customs-union agreements such as link nations in Scandinavia, Western Europe, or the Americas. See CUSTOMS, TARIFF, PROTECTION

Colonie, village (pop 1,407), E N Y, near Albany; inc 1921

colonization. Colonization implies the extension of political control over an area by the state whose nationals have occupied it and connotes the settlement of a district by a people whose material culture or world political power is superior to that of the natives It may consist in an extensive migration of nationals to an outlying district, or it may be the assumption of control over the territory by military or civil representatives of the dominant power Overpopulation and social unrest are causes of colonization, but imperialism, economic distress, aggressive humanitarianism, and desire for adventure or individual improvement may also be dynamics Colonization may be official, or it may be a private project sponsored by chartered corporations or by associations and individuals Before colonization can be effected, the natives may be subjected or wiped out, confined to reserved areas, assimilated or converted to the culture of the colonists, otherwise, a *modus vivendi* must be established by the imposition of a treaty or alliance Colonization has been an effective means of spreading cultures. The Phoenicians founded trading posts throughout the Mediterranean area and later exercised political dominion over these commercial colonies The Greeks, because of political difficulties, began the great colonization movement which stimulated trade and disseminated Hellenic culture. Their colonies were founded in Crimea, Asia Minor, North Africa, Italy, Sicily, and Gaul. Greek colonies were patterned after the parent state and were at first subject to its jurisdiction in external affairs The early Romans, unlike the Phoenicians and Greeks, were not a great trading people, but many of their colonies were essentially commercial With the development of the empire, colonization received impetus from imperialism The Roman colony was an integral part of the empire, was coordinated with it by a remarkable system of communication and transportation, and received its political directions from Rome In their colonization, the Romans usually did not completely destroy native culture, and in some instances they bestowed Roman citizenship upon the natives Venetian and Genoan colonization consisted in the establishment of commercial colonies along trade routes Over these the city-states exercised the strictest supervision. The Portuguese and Spanish became great colonizing nations at the close of the Middle Ages Portuguese colonization, which began with the establishment of trading ports in Africa and the East, received impetus with the discovery of improved methods of navigation, and Emperor Charles V sought to create an empire in America Both the Spanish and Portuguese exercised strict governmental control over their colonies and used them merely as a basis for a lucrative trade with the parent government The Iberian powers not only failed to develop the agricultural resources of their colonies, but, like other nations adhering to the mercantilist theory, discouraged them from becoming industrially self-sufficient. The internecine strife between native and foreign-born colonists (see CREOLE) and between lay and clerical officials further obstructed Spanish and Portuguese colonial development Though the French adhered to the mercantilist theory in establishing their colonies, there was some attempt, especially with chartered companies, to settle occupied districts The Dutch introduced the great private trading companies, which founded an extensive colonial empire tributary to the corporations The English colonists in North America were, in many respects, virtually independent of the parent country, the most serious restriction being the establishment of a trade monopoly by the home government with the Navigation Acts Because their territory was suitable for settlement, rather than exploitation, the residence of the British colonists tended to be permanent The INDUSTRIAL REVOLUTION stimulated colonization and made England the greatest colonial power The French, stripped of one colonial empire in the colonial wars of the 18th cent, founded another in the 19th century Germany, after emerging as an industrial empire, found the colonies of other powers closed to German products She, therefore, embarked upon colonial ventures and was followed by Japan, also recently industrialized These ambitions helped to bring about the First World War and the Second World War Germany was stripped of colonies after the first conflict, Japan was stripped of colonies after the second Meanwhile, the settlement of Siberia by Russia and of the trans-Mississippi region by the United States presented another phase of colonization Modern colonization, frequently preceded by an era in which missionaries and traders were active, has been largely exploitative, securing markets for consumers' goods evolved into an effort to Europeanize colonies by the introduction of producers' goods, or to secure an unrestricted supply of necessary raw materials While colonization may result in a monopolization of privileges in a certain locality, it is usually not directly lucrative, for it involves a heavy drain upon the treasury of the home government. Colonization may result not only in a loss of population and capital by the parent nation, but may cause the development of competitive industries See IMPERIALISM, MANDATES, TRUSTEESHIP, TERRITORIAL For a brief note on the present state of colonization, see COLONY See David Hannay, *The Great Chartered Companies* (1926), Ramsay Muir, *The Expansion of Europe* (6th ed., 1939), M E Townsend and C H. Peake, *European Colonial Expansion since 1871* (1941), M F Perham, *Colonial Government* (1950).

Colonna (kōlōn'nä), noble Roman family, which played a leading part in the history of Rome from the 12th to the 16th cent They were hereditary enemies of the ORSINI family and generally sided with the Ghibellines against the popes. **Sciarra Colonna** (shär'rä), d 1329, a bitter enemy of Pope BONIFACE VIII, was excommunicated, fled to the court of Philip IV of France, and led, with Chancellor Nogaret, the French expedition that captured (1303) Boniface He slapped the pope's face. Later, as senator of Rome, Sciarra supported Emperor LOUIS IV during his Italian expedition, but was forced into exile after Louis's departure. Despite its antipapal attitude, the family produced in Pope MARTIN V (Oddone Colonna) one of the most successful advocates of papal authority. **Fabrizio Colonna** (fäbrē'tsyō), d 1520, was a general of the Holy League against Louis XII of France. His daughter was Vittoria Colonna (see separate ar-

ticle). **Prospero Colonna** (prō'spārō), 1452–1523, Fabrizio's cousin, also fought the French in the Italian Wars and defeated them (1522) at La Bicocca. **Marcantonio Colonna** (märkäntō'nyō), 1535–84, commanded the papal forces in the battle of Lepanto (1571). Numerous other members of the family distinguished themselves in the service of the Holy See and of Spain. Three lines of the family, all of princely rank, are still in existence. The Colonna Palace in Rome was begun by Martin V.

Colonna, Vittoria, marchesa di Pescara (vēt-tō'rēä kōlōn'nä märkä'zä dē päskä'rä), 1492–1547, Italian poet; daughter of Fabrizio Colonna. The death (1525) of her soldier husband, to whom she was greatly devoted, was the inspiration of much of her verse, which deals also with religious themes. Much admired for her character as well as for her poetry, she was a friend of Michelangelo, who wrote sonnets to her. For a translation of her verse, see Lorna de' Lucchi, *An Anthology of Italian Poems* (1922).

colonnade (kŏlŭnād'), columns arranged in a straight or curved row and supporting an ENTABLATURE. Though colonnades have been largely used as purely decorative elements beginning with Roman architecture, their function is primarily structural. The colonnade is the finished expression of trabeated construction, of which a row of wood posts supporting a horizontal wood beam would be the rudimentary form which must have preceded the use of stone. The Egyptians were the first to develop the architectural possibilities of colonnades in the HYPOSTYLE halls of their temples. In Greek architecture, colonnades were the dominant feature, the greatest study being given to proportioning the columns, to their spacings (intercolumniation), and to all details which would yield maximum harmony. The rectangular chamber (NAOS) of Greek temples was surrounded on all sides by free-standing colonnades, those at front and rear forming the porticoes, while in Roman construction the side colonnades were generally attached to the walls of the CELLA as "engaged" columns. The use of colonnades continued through the Renaissance and the 18th and 19th cent. In the CLASSIC REVIVAL in America they came to be the popular feature throughout the country. In recent times they are less employed.

Colonne, Édouard (ādōōär' kōlōn'), 1838–1910, French conductor and violinist, studied at the Paris Conservatoire. He appeared as a conductor in Europe and England and was leading violinist of the Paris Opéra until 1873. In that year he founded in Paris the Concert National, which later became known as the Colonne Concerts.

Colonsay (kōl'unsā), island (area with Oronsay 11,076 acres, pop. with Oronsay 238), off W Scotland, in Argyllshire, one of the Inner Hebrides.

colony. In common usage, any noncontiguous territory of a state subject to its jurisdiction is considered a colony, although the term specifically applies either to a distant settlement of nationals which retains political connections with the parent state or to a group of nationals residing in, and under the jurisdiction of, a foreign state. A settlement colony is usually founded in an uninhabited region or one sparsely inhabited by people of a lower material culture. The colonists generally duplicate the essential features of the home government, yet may greatly modify them to suit new conditions. Such colonies early secure autonomy and may become dominions or independent states. An exploitation colony is established for the purpose of exploiting a region rich in resources, or with commercial possibilities, where the inhabitants may or may not possess a high level of culture. Such colonies, furthermore, may have dense native populations. Colonists in an exploitation colony will chiefly consist of military and administrative officers, and commercial and financial representatives. A variation of the exploitation settlement, the culture colony, is found in tropical countries where the plantation system prevails. Frequently slavery and forced labor are employed in the cultivation of specialized agricultural products. After the conquest or occupation of a colony, authority usually passes from military officials to civil representatives of the sovereign. In an exploitation colony the government tends to be highly centralized and is frequently upheld by the presence of a strong police force, in a settlement colony there is generally a rapid evolution from a purely military or autocratic government to autonomy or incorporation within the parent state. As their colonial empires expand, nations establish colonial offices to formulate definite policies and to integrate colonial administration. The tendency of Great Britain to grant some measure of autonomy led to the dominion system and ultimately to the formation of the British Commonwealth of Nations (for a brief account, see BRITISH EMPIRE). In the mid-20th cent. the forces working toward independence of colonies in Asia and Africa has had very profound results, notably in India, Burma, Ceylon, Indo-China, and Indonesia. The organization of the French Empire was changed profoundly with the creation of the FRENCH UNION in 1946. The emergence of Indonesia reduced the great imperial possessions of the Netherlands to a shadow. Thus, the status (and even nature) of the colony in general has altered and promises to change even more in the future as the old types of exploitation and culture colony tend to disappear altogether in well-settled and developed areas, leaving only the islands and undeveloped areas in true colonial status, and even the administration of these is changing with the times. For bibliography, see COLONIZATION.

colophon [Gr.]. Before the use of printing in Western Europe a manuscript often ended with a statement about the author, the scribe, or the illuminator. The first printed book to have a comparable concluding statement was the Mainz Psalter, the last paragraph of which gives the information that the book was printed in 1457 by Fust and Schöffer. After this, a printed book commonly ended with a statement of the kind, now called a colophon, until the information came to be given on the title page—the usual practice after c 1520. The name colophon is applied also to a like statement near the beginning of a book and to a printer's mark or a publisher's device on a title page or elsewhere. A colophon of some kind is customary in limited and de luxe editions.

color. Light transmitted from an object to the human eye causes the different color cones of the retina to react, thus making possible perception of different color phenomena in the objects. When sunlight passes through a glass prism, dispersion takes place and a band of color called the solar spectrum is produced. Since the colors which compose sunlight or white light have different wave lengths, they travel at different speeds through the glass. The colors of the visible spectrum are red, orange, yellow, green, blue, indigo, and violet, the red light has the longest wave length and travels more rapidly through the glass than the blue light, which has a shorter wave length. Color is therefore a property of light which depends upon wave length. When light falls upon an object, some of it is absorbed. That which is not absorbed is reflected, and the apparent color of an object depends upon the wave length of the light that it reflects, e.g., a red object observed in daylight appears red because it reflects only the long waves producing red light. The color of a transparent object depends upon the wave length of the light that it transmits. An opaque object that reflects all wave lengths appears white, and one that absorbs all wave lengths appears black. Black and white are not generally considered true colors, black is said to result from the absence of color, and white from the presence of all colors mixed together. Certain colors are sometimes called primary colors since they can, as a result of various combinations, produce all the color sensations. According to some investigators the primary colors of light or spectral colors are red, green, and blue (or blue-violet, or violet). The process of combining these colors is said to be an "additive" one, i.e., the sensations produced by different wave lengths of light are added together. White can be produced by combining all three primary colors. Any two colors which together produce white are called complementary colors, e.g., yellow and blue or red and bluish-green. When pigments are mixed, however, the resulting sensations differ from those of the spectral colors, the method in this case being a "subtractive" one, since subtraction or absorption of some of the wave lengths of light occurs. Red, yellow, and blue are called the primary pigments. A mixture of blue and yellow pigments yields green because green is the only color not absorbed by one pigment or the other. A mixture of the three primary pigments produces black. Color has long been used to represent affiliations and loyalties and as a symbol of various moods and qualities. A well-known use of the symbolism of color is in the liturgical colors of the Western Church, according to which the color of the vestments varies through the ecclesiastical calendar, e.g., purple (i.e., violet) is the color of Advent and Lent, white of Easter, and red of the feasts of the martyrs. See also LIGHT, PAINTING, PROTECTIVE COLORATION, SPECTRUM, VISION. See R. M. Evans, *Introduction to Color* (1948).

Colorado (kŏlŭrä'dō, -rä'dō, -rä'dō), state (104,247 sq. mi., 1940 pop. 1,123,296; 1949 estimated pop. 1,215,000), W United States, one of the Rocky Mt. states, admitted 1876 as the 38th state (and therefore known as the Centennial State). DENVER is the capital, by far the largest city, and the center of state activity. Colorado is in the center of the vast western area between the Mississippi river and the Pacific Ocean, midway between the Canadian and Mexican borders. It is bounded on the north by Wyoming and Nebraska, on the east by Nebraska and Kansas, on the south by Oklahoma and New Mexico, and on the west by Utah. The plains of the eastern section, part of the high Great Plains, still retain the characteristics of the tidal flats that they once were. Gentle slopes rise to foothills, and beyond tower the pinnacles of the Front Range, the most famous of them PIKE'S PEAK. Westward a series of well-watered amphitheaters lie—the natural parklands of Colorado, including the North Park, the Middle Park, the South Park, and the San Luis Park. Beyond rise other complex ranges of the Rockies with high, snow-capped peaks. Among them winds the Continental Divide. In this area of basins and mountains are some of the most famous scenic spots in the United States, including Rocky Mountain National Park, Estes National Park, the Great Sand Dunes National Monument, and Wheeler National Monument. To the southwest of the Continental Divide lies a formidable but beautiful country of mesa and canyon, once the home of the cliff dwellers. In the northwest part of the state are the remote canyons of the Yampa river and the Green River, formerly used by cattle thieves and highwaymen, still a favorite hunting ground for deer, bear, and mountain lion. Colorado, with a mean elevation of c.6,800 ft. and with 51 of the 80 peaks of North America over 14,000 ft., lays claim to the name "top of the world." Down from these vast heights rush the melting snows which have gathered on the peaks, radiating out to form important river systems and nourish the water-hungry lands beyond. The broad timber belt, largely coniferous and mostly protected as national forest reserves, acts as a huge reservoir. The mighty COLORADO river originates in Rocky Mountain National Park, and the headwaters of the PLATTE, the ARKANSAS, and the RIO GRANDE also gather in Colorado's mountains. By irrigation this state, where the average yearly rainfall is only 16.62 inches, has been able to develop otherwise unusable land, and it ranks second only to California in acres of irrigated land. Farming is the major industry, and the rudimentary cultivation of the Indian has been succeeded by a well-developed agricultural system with diversified crops, including sugar beets, potatoes, melons, fruits, and feed crops, while canneries and sugar refineries are an industrial outgrowth of this agricultural production. The fuel resources of the state are considerable, for Colorado ranks first among the states in coal reserves and 11th in potential water power and has valuable oil fields and oil reserves. Gold, the lure to exploration and settlement, was the first of over 200 useful minerals to be discovered, 35 of them are now being mined. Important among these are molybdenum, silver, copper, vanadium, zinc, and uranium, as well as large deposits of valuable stones. The milling and smelting of these minerals initiated Colorado's manufacturing industry, and the processing of minerals and the production of machinery and metal products continues to be important. Except for primitive cultivation of the soil, the early inhabitants of Colorado left these resources untouched. The Basket Makers, earliest-known Indians, settled in the mesa country around the beginning of the Christian era. When white men entered Colorado, they found the Ute Indians in the mountain areas, while the Comanche, the Cheyenne, the Arapaho, and the Kiowa roamed the Great Plains. Intertribal warfare between plains and mountain Indians was intermittent, and on the plains the nomadic tribes carried on ceaseless raids. The Ute attacked the whites in mountains and foothills until a Ute chief, Ouray, brought peace in 1873. The Ute Consolidated Agency in SW Colorado is today the only Indian reservation in the state. On the plains the four nations combined forces in 1840 to combat the invasion of their homelands and hunting grounds, and the settlement of Colorado by the Americans was accompanied by massacres, lootings, and subsequent reprisals. Efforts by the Federal government failed to achieve peace, and the warfare culminated in victory for the white men after the Indian Wars (1861–69) and the Buffalo War (1873–74). Behind them the Indians left permanent traces in the place names—Ouray, Arapahoe, Cheyenne—just as did the Spanish and the French, the miners and the cattlemen. Probably a Spanish conquistador was the first white man to enter Colorado, although the French *voyageurs* and trappers were exploring the area early in the 18th cent. The search for gold lured Juan María Rivera into the San Juan valley in 1765, and later (1776) Silvestre Vélez de Escalante journeyed through part of the state. This region was practically virgin territory to the white man when the United States bought the area N of the Arkansas and E of the Rockies in the Louisiana Purchase of 1803. The achievements of expeditionary parties sent out by the Federal government under Zebulon M. PIKE (1906), Stephen H. LONG (1819–20), and John C. FRÉMONT (1842–43 and 1845) were considerable, they gathered much scientific information and made routes well known. Those routes had already been opened, however, by fur traders, the famous mountain men, including William H. ASHLEY, James BRIDGER, Thomas FITZPATRICK, Jedediah S. SMITH, Kit CARSON, "Uncle Dick" Wooton, and the Bent brothers. BENT'S FORT, in Colorado, was indeed one of the best known of all Western trading posts. Settlement did not begin, however, until the United States had acquired the remainder of present Colorado after the Mexican War by cession from MEXICO in 1848 (with Texas yielding some territory in 1850). It

was not until the cry "Pike's Peak or Bust" swept the nation that any substantial number of people entered Colorado In 1859 John Gregory made his "lucky strike" on the site of present Central City, and the lusty, lawless days of the mining boom began Many cities, including Denver, were founded in 1859, and as early as 1858 the first comers, self-styled the Argonauts, organized the gold fields as Arapahoe co of Kansas Territory The region was divided into districts, and miners' and people's courts were set up to provide quick justice After the voters rejected a move toward statehood in 1859, the illegal Territory of Jefferson was formed and operated until the bill for territorial status was passed by Congress in 1861 William Gilpin, the first governor, chose the name Colorado [Span ,= red or colored] After being vetoed by Andrew Johnson in 1867, the congressional measure for statehood passed in 1876, and Denver became the capital with J L Routt the first governor Before this time, in the middle '60s, the surface gold had been extracted, and mining areas were, and in many cases remain, studded with ghost towns—the machinery abandoned and shacks deserted Other towns, such as Central City with its famous opera house to remind it of its days of opulence, managed to keep going Later booms also left their ghost towns The lean mining years were partially counterbalanced by the development of huge ranches, and the extension of farming was stimulated by increasing railway construction The fortunate discovery (1875) of lead ore bearing silver marked the beginning of a new era, and boom days were on again Population increased almost five-fold between 1870 and 1880, and Colorado, education-conscious since its early mining days, established institutionsof higherlearning—Colorado Seminary, now the Univ of Denver, the Colorado Agricultural and Mechanical College at Fort Collins, the School of Mines at Golden, Colorado College at Colorado Springs, and the Univ of Colorado at Boulder Prosperity was short-lived, for while the '90s brought a rich silver strike at Creede and the discovery of the state's richest gold field at Cripple Creek, it also brought the collapse of the silver market, industrial strife, disputes over railway franchises, and warfare between sheep and cattle interests Many of labor's battles were fought in the mines of Colorado, continuing into the 20th cent , and the lawlessness and ruthlessness of both employers and miners were reminiscent of days of Indian warfare and of the early mining camps A system of state industrial control was instituted (1896) with the state board of arbitration and has since been supplemented by legislative enactments When the silver market broke, Colorado turned politically to a fusion Populist-Democratic ticket on the platform of return to bimetallism The move was unsuccessful, but by 1910, with the improvement of national conditions, Colorado had settled down to a predominantly agricultural economy The establishment of large national parks in the early 1900s provided an additional source of revenue through the tourist trade In the First World War the price of silver soared again, and the total economy prospered The stock crash of 1929 and the droughts of 1935 and 1937 brought hardship to many, but Colorado survived to provide food and valuable minerals and metal products for the Second World War While the natural beauties and healthful air of this mountain state continue to attract visitors from all over the world, modern Colorado, through the projection of large irrigation and power developments, moves toward a greater utilization of its natural wealth See M L Baggs, *Colorado Queen Jewel of the Rockies* (1918), J H Baker and Le Roy Hafen, *History of Colorado* (1927), George F Willison, *Here They Dug the Gold* (1931), Le Roy Hafen, *Colorado the Story of a Western Commonwealth* (1933); Percy Stanley Frits, *Colorado, the Centennial State* (1941), Federal Writers' Project, *Colorado a Guide to the Highest State* (1941), *Colorado. Short Studies of Its Past and Present* (1927).

Colorado (kŏlōrä'dhō), river, 534 mi long, rising from tributaries in the Andes and flowing SE across S central Argentina to the Atlantic It is considered as marking the northern limit of Patagonia

Colorado, 1 (kŏlurä'dō, -rä'dō) River rising in Colorado at the Continental Divide and flowing roughly SW through Colorado, Utah, and Arizona, then between Nevada and Arizona and between Arizona and California, and into Mexico to empty into the Gulf of California. It is the great river of the SW United States, c.1,400 mi long and draining about 8 percent of the area of the United States The Gunnison river joins it at Grand Junction, Colo , the Green (coming from Wyoming) joins it in Utah, the San Juan and the Little Colorado join it above the GRAND CANYON The chief tributary of the lower reaches is the Gila. The mouth of the river was seen (1539) by Francisco de Ulloa, the lower part explored (1540) by Hernando de Alarcón Later it was much used for navigation in the lower part It has canyons, most spectacularly the Grand Canyon, which challenged explorers and scientists It is used for power and irrigation, especially by means of HOOVER DAM, Davis Dam (main structure completed 1950), the ALL-AMERICAN CANAL, and PARKER DAM The river above the entrance of the Green is sometimes called Grand River See U S Bureau of Reclamation, *The Colorado River* (1946) **2** (kŭlurä'dŭ) River rising in NW Texas in the Llano Estacado and fed by "draws" in E New Mexico It flows more than 600 mi generally southeastward through Austin to Matagorda Bay Destructive floods which prevented private development of power led the state legislature to set up boards to undertake projects for flood control, power plants, and some irrigation Of these, the Lower Colorado River Authority since its founding in 1934 has been especially active, with Federal assistance, the most important results have been Buchanan Dam near Burnet, the Roy Inks Dam a few miles further downstream, the Marshall Ford Dam or Mansfield Dam, which impounds Lake Travis, and the Tom Miller Dam, which impounds Lake Austin These projects have been of immense benefit to Austin and a large part of the Southwest The Upper Colorado River Authority and the Middle Colorado River Authority have also initiated projects, and the waters of the river and its tributaries are used for various municipal reservoirs and power plants All such uses are coordinated in the over-all plan

Colorado, University of (kŏlurä'dŭ,-rä'dō,-rä'dō), mainly at Boulder, state supported, coeducational, chartered 1861, opened 1877 It has colleges of arts and sciences (with education and journalism), engineering, music, and pharmacy and schools of medicine (at Denver, with a nursing school and general and psychopathic hospitals), business, and law The buildings include an auditorium, a noted science museum, and a large, modern library.

Colorado Agricultural and Mechanical College, at Fort Collins, with land-grant support, coeducational, chartered 1870, opened 1879 as an agricultural college, renamed 1935 It has divisions of agriculture, engineering, forestry and range conservation, home economics, science and arts, and veterinary medicine The FORT LEWIS School near Durango is a branch

Colorado-Big Thompson project, proposed by the Federal government to divert water from the headstreams of the Colorado river E across the Continental Divide to irrigate lands in NE Colorado and to supply power The water is to be diverted by several dams, notably Granby Dam, 295 ft high and 885 ft long, in the Colorado and Green Mountain Dam (est 1943), 309 ft high and 1,150 ft long, in the Blue River It is to be stored in Granby Reservoir, Shadow Mountain Lake, and Grand Lake before it is pumped through the Alva B Adams Tunnel (est 1947), 13 1 mi long, to fall down the eastern slope and flow into the Big Thompson river, a tributary of the South Platte Dams near Fort Collins and Estes Park divert the water for use, and plants at Green Mountain Dam and at Estes Park generate power

Colorado City (kŭlurä'dŭ), city (1940 pop 5,213, 1947 estimated pop 7,300), co seat of Mitchell co , W Texas, on the Colorado and WSW of Sweetwater It got wealth from shipping cattle in the late 19th cent and increased it later by processing cotton and by refining oil It is now the center for dairying and for farms growing grains, peanuts, hairy vetch, and other crops as well as cotton

Colorado College (kŏlurä'dŭ,-rä'dō,-rä'dō), at Colorado Springs, nonsectarian, coeducational, chartered and opened 1874, a pioneer in this region Research on Western history and on tuberculosis is carried on here

Colorado National Monument: see NATIONAL PARKS AND MONUMENTS (table)

Colorado potato beetle or **potato bug,** black-and-yellow-striped beetle, destructive in both the adult and larva stages chiefly to the potato plant The adults winter underground and emerge in spring to lay the orange-yellow eggs on the underside of the leaves The larvae are reddish and spotted with black. In 1824 the insect was discovered in the E Rocky Mt region It fed on BUFFALO BUR and other wild relatives of the potato Potato culture provided it with more desirable food It began to spread eastward from Colorado in the late 1850s and reached the Atlantic coast by 1874 During the First World War it was carried to Europe Spraying the plants with poison is the usual method of control The first general use of Paris green was against this insect Later arsenic compounds were also used In 1939, when the beetle threatened the potato crop in Switzerland, DDT, which had just been rediscovered, was found effective

Colorado School of Mines, at Golden, state supported, mainly for men, chartered 1874 It is a pioneer mining and engineering school of university grade It owns an experimental mine, a field laboratory, and an experimental plant

Colorado Springs, city (pop 36,789, alt c 6,000 ft), co seat of El Paso co , central Colo , on Monument and Fountain creeks and S of Denver, at the foot of Pikes Peak; founded 1871, inc 1886 It is a residential city and health resort near mineral springs (at Manitou Springs) In the city are COLORADO COLLEGE, the Fountain Valley School, the fine arts center, the state school for the deaf and the blind, and the city museum The Garden of the Gods adjoins the city on the northwest, and near by are the Will Rogers Shrine and several noted private sanatoriums The city is headquarters for Pike National Forest, to the west

coloration, protective see PROTECTIVE COLORATION.

color blindness or **Daltonism,** usually a congenital defect resulting in the inability to recognize colors, especially red and green The vision is otherwise normal, usually both eyes are affected The defect occurs in from 5 to 10 percent of men and in less than 1 percent of women There is also color blindness caused by actual disease of the optic nerve from infection, intoxication, or atrophy Recognition of the importance of detecting the condition in candidates for certain occupations, e g , railroad engineer, airplane pilot, and a driver of any motor vehicle, led to the devising of tests Used in diagnosis are mosaic patterns of dots in which the color-blind person cannot correctly identify a partially concealed figure, number, or pattern and color-matching tests using wools and, more recently, enameled chips

color photography. see PHOTOGRAPHY.

Colossae (kulŏ'sē), ancient city of SW Phrygia, Asia Minor, S of the Maeander (modern Menderes), now in W Asiatic Turkey It flourished as a trading town until eclipsed by neighboring Laodicea It was the congregation of the early Christian Church here to whom St Paul addressed the epistle to the COLOSSIANS

Colosseum or **Coliseum** (both kŏlŭsē'um), common name of the Flavian Amphitheater in Rome, near the southeast end of the Forum, between the Palatine Hill and the Esquiline Hill Begun by Vespasian in A D 72 and completed by Titus of the Flavian family in A D 80, it is the most imposing of existing Roman antiquities The vast four-storied oval (617 ft x 512 ft), much of which is still standing, had tier on tier of marble seats accommodating c 50,000 spectators It encloses an arena (250 ft x 151 ft) where gladiatorial combats were held (see GLADIATORS) According to tradition persecuted Christians were thrown here to beasts

Colossians (-lŏsh'-), epistle of the New Testament, the 12th book in the usual order It was written to the Christians of Colossae and Laodicea (1 1, 4 16) by St PAUL, probably under the same circumstances as those under which he wrote EPHESIANS The writing was provoked, apparently, by the appearance in the churches addressed of some sort of gnostic doctrine involving angels (2 18) Colossians is like Ephesians in tone, especially in the emphasis on the doctrine of the mystical body of Christ (1 15–20, 1 24–25, 2 9–10) This little book contains several well-known passages, on the apostleship of St Paul (1 24–29), on baptism (2 12–15), on death and resurrection "with Christ" (2 20–3 4)

colossus (kulŏ'sus), name given, in antiquity, to a statue of very great size In Egypt were many colossi, 50 to 60 ft high The Pallas Athene on the Acropolis at Athens and the Zeus in the temple at Olympia in Greece were other examples The **Colossus of Rhodes,** one of the SEVEN WONDERS OF THE WORLD, was a large bronze statue of the sun god, Helios, in the harbor of Rhodes It was built wholly or in part by Chares of Lindus (Rhodes) between 292 and 280 B C Its height probably was something over 100 ft The cost was defrayed by the sale of armaments left by DEMETRIUS I It fell in an earthquake in 224 B C , and its huge fragments lay about for several centuries A modern legend says that ships could pass between its legs Among colossi of later times the Great Buddha at Kamakura, Japan, and the Bartholdi Statue of Liberty in New York harbor are notable Of two colossal figures of Christ in South America, one is at Rio de Janeiro, and the other, the Christ of the Andes, between Argentina and Chile

Colquhoun, Patrick (kŏhōōn'), 1745–1820, British economist and statistician, b Scotland Active in Glasgow (where he founded the chamber of commerce) and London civic affairs, he became known for his *Treatise on the Police of the Metropolis* (1795, 7th ed , 1806), an exposé The most noted of his works is *Treatise on the Population, Wealth, and Resources of the British Empire* (1814), in which he set forth statistical estimates of the distribution of national income His figures, demonstrating the exploitation of the working classes, long influenced social and economic reformers.

Colquitt, city (pop 1,416), co seat of Miller co , SW Ga , on Spring Creek and WNW of Thomasville, inc. 1860 It is a farm trade center

Colrain (kŏlrān'), textile town (pop 1,497), NW Mass , in the Berkshires NW of Greenfield, settled 1735, inc 1761

Colt, Samuel, 1814–62, American inventor, b. Hartford, Conn In 1835 he patented a revolving-breech pistol and founded at Paterson, N.J , the Patent Arms Company, which failed in 1842 An order for 1,000 revolvers from the U.S. government in 1847 in the Mexican War made possible the reestablishment of the manufacturing business. He later

built the Colt's Patent Fire-Arms Manufacturing Company factory at Hartford He also invented a submarine battery used in harbor defense and a submarine telegraph cable. So popular did his revolving-breech pistol become that today the word Colt is frequently used as a generic term for the revolver. See Jack Rohan, *Yankee Arms Maker* (1935)

Colter, John (kōl'tur), c 1775–1813, American trapper and guide, b. Virginia In 1803 he enlisted in the Lewis and Clark expedition and in 1806, on the return trip, was granted a discharge to join a party of trappers The following year, on his way to St Louis, he met the expedition of Manuel Lisa and was engaged to guide the party to the mouth of the Big Horn, where a post was built Lisa sent Colter on a mission to the Crow Indians His exact route is not certain, but he is believed to have crossed, alone and on foot, the Wind River Mts and the Teton range, and he may have been the first white man to see the region which he traversed—now included in Yellowstone National Park He was severely wounded in a battle between the Crow and Blackfoot Indians, but he escaped and made his way back to the post In 1809 he guided an expedition of the St Louis Missouri Fur Company to the Three Forks of the Missouri, returning to St Louis in 1810 He furnished valuable data to Clark, who was compiling maps for the report of the Lewis and Clark expedition See biography by Stallo Vinton (1926)

Colton, Walter (kōl'tun), 1797–1851, American journalist and clergyman, b Rutland co , Vt , grad Yale, 1822, and Andover Theological Seminary, 1825 He became a naval chaplain in 1831, *Ship and Shore* (1835), *A Visit to Constantinople and Athens* (1836), and *Deck and Port* (1850) are the results of this experience In 1846 he was appointed alcalde of Monterey and founded the *Californian*, California's first newspaper *Three Years in California* (1850) is an excellent historical account of this period His *Sea and the Sailor* (1851) has a memoir by H T Cheever

Colton (kōl'tun), city (1940 pop 9,686, 1946 special census pop 12,717), S Calif , near San Bernardino, inc 1887 It processes and ships citrus fruits and has railroad shops

coltsfoot, Eurasian perennial herb (*Tussilago farfara*), naturalized in North America The scaly flower stalk bears a yellow flower head and downy fruits somewhat dandelionlike The leaves—appearing after the flowers—are large and vaguely heart shaped Coltsfoot is a weed in many places but is sometimes cultivated in gardens It was long a popular cough remedy Other plants are sometimes called coltsfoot, e g , the winter heliotrope or sweet coltsfoot, similar but with clustered purple or lilac flower heads

Colum, Padraic (pa'drĭk kō'lum), 1881–, Irish-American poet and dramatist, b Longford, Ireland Interested in the Irish literary renaissance, he wrote several plays produced by the Irish National Theatre In 1914 he came to the United States, where he has remained, lecturing and writing His use of Ireland for source material has familiarized Americans with Irish mythology and literary trends His volumes of verse include *Wild Earth* (1907) and *The Story of Lowry Maen* (1937) He also wrote *The Road round Ireland* (1926) His wife is **Mary (Maguire) Colum,** Irish-American critic, b Sligo, Ireland Her first book, *From These Roots* (1937), was not as popular as *Life and the Dream* (1947), her literary autobiography, read for its succinct portraits and evaluations of figures in Irish and American literary circles

Columba, Saint [Latin, =dove], or **Saint Columcille** (kŏlumkĭl'ē) [Irish, =dove of the church], 521–97, Irish missionary to Scotland, called the Apostle of Caledonia A prince of the O'Donnells of Donegal, he was educated at Moville and Clonard In Ireland he founded the monastery schools of Derry (545), Durrow (553), and Kells (c 554) In 563 Columba and several companions sailed to evangelize Scotland They landed at IONA and established their center there Thence they went about the Highlands and the northern Lowlands spreading the gospel Before Columba's death N Scotland was entirely Christian St Columba ranks with St Patrick and St Bridget as one of the three patron saints of the Gael, he was buried with them at Downpatrick A life of him was written by St ADAMNAN Feast June 9 See Hugh De Blacam, *The Saints of Ireland* (1942)

Columban, Saint (kŭlŭm'bun), c 540–615, Irish missionary to the continent of Europe, also called Columbanus He was trained in the abbey at Bangor He and 12 companions, including St Gall, sailed to France (c 585), where they set out to eradicate the general impiety that had grown up under the successors of Clovis He went into seclusion in the Vosges, and in 590 he founded the abbey at LUXEUIL St Columban apparently fell out with ecclesiastical and civil powers soon after his arrival, involved in the hostility between Queen Brunhilda and the Frankish bishops and generally feared by them all, he was exiled He went to Switzerland and to Bregenz, reestablished Christianity in the whole of the region, and in 612 arrived at Milan At BOBBIO he set up an abbey. There he died and lies buried St Columban was a considerable scholar, and all his foundations became known for their learning He composed a rule for monks, which was later completely replaced by the longer and less austere rule of St Benedict Feast Nov 21 and, in Ireland, Nov 24 See the classic work of Montalembert, *The Monks of the West,* Dom Louis Gougaud, *Christianity in Celtic Lands* (1932)

Columbia, 1 Town (pop 853), E Conn , W of Willimantic Its villages are Columbia, Hop River, and Chestnut Hill The town, organized in 1804, was originally part of Lebanon, it was settled probably c 1695 It is a scenic region of hills and streams, at Columbia Lake (375 acres), northwest of the village, is a resort In the town Eleazar WHEELOCK established the school for Indians which became Dartmouth College **2** City (pop 1,871), SW Ill , near the Mississippi below East St Louis, inc 1859 Limestone quarries are in the area **3** Town (pop 1,372), co seat of Adair co , S Ky , SSE of Louisville, settled c 1793 It produces lumber and flour Lindsey Wilson Junior College (coeducational) is here **4** City (pop 6,064), co seat of Marion co , S Miss , W of Hattiesburg and on the Pearl It was formerly a lumber center (naval stores are still produced) in an area now primarily engaged in agriculture Columbia was state capital for part of 1821 The state industrial and training school is near by **5** City (pop 18,399), co seat of Boone co , central Mo , NNW of Jefferson City, laid out 1821, inc 1826 Trade center of a farm and coal area, with some small industries, it is best known as the seat of the Univ of Missouri (see MISSOURI, UNIVERSITY OF), STEPHENS COLLEGE, and Christian College (junior, for women) The state cancer hospital is here There are several houses dating from the 1820s **6** Town (pop 1,090), co seat of Tyrrell co , NE N C , in the fertile tidewater area, on the Scuppernong just S of Albemarle Sound The town was a trading post before 1700, its name was changed several times before it became Columbia in 1810 **7** Industrial borough (pop 11,547), SE Pa , on the Susquehanna below Harrisburg and W of Lancaster, settled 1730, laid out 1788, inc 1814 It produces tobacco, textiles, and metal products John Wright, a Quaker, came to preach to the Indians here in 1726 **8** City (pop 62,396), state capital, and co seat of Richland co , central S C , at the head of navigation on the Congaree It is in the heart of a rich farm area and has many large textile mills and fertilizer, cottonseed-oil, printing, and farm-produce plants A trading post flourished near by in the early 18th cent In 1786 the site was chosen for the new capital, the legislature first met in its new quarters in 1790 In the Civil War most of the city was burned on the night of Feb 17, 1865, the day it was entered by Sherman's army Columbia is a cultural center the Univ of South Carolina (see SOUTH CAROLINA, UNIVERSITY OF), Allen Univ (Negro, Methodist Episcopal, coeducational, 1871), and Benedict College (Negro, Baptist, coeducational, 1871) are here Also in the city are the state penitentiary, the state hospital, and a U S veterans' hospital Notable buildings include the statehouse (begun 1851), Woodrow Wilson's boyhood home, and several fine ante-bellum houses Near by are U S Fort Jackson and Lake Murray (formed by the dammed Saluda) Important annual events are Columbia include state fairs and the Columbia Music Festival See H K Henning, *Columbia, Capital City of South Carolina, 1786 1936* (1936) **9** City (pop 10,579), co seat of Maury co , central Tenn , on the Duck river and SSW of Nashville, settled 1807, inc 1817 It is a noted mule market and the trade and processing center of a fertile farm area which also has phosphate mines The James K Polk home is here, other fine old houses are in the area Near by are Columbia Military Academy and an experiment station of the Univ of Tennessee College of Agriculture In Feb , 1946, the city was the scene of a race riot, the subsequent trials attracted wide interest

Columbia, river, c 1,210 mi long, rising in Columbia Lake, SE British Columbia It flows first northwest, then hooks sharply about the Selkirk Mts to flow S through Upper Arrow Lake and Lower Arrow Lake and receive the Kootenai (spelled Kootenay in Canada) and enter the United States after a course of some 400 mi It continues S through Washington, receives the waters of the Clark Fork—Pend Oreille system from the Rockies and just below the mouth of the Spokane is forced by lava beds to make a great bend westward before veering south again, running the while entrenched in a narrow valley through the Columbia plateau Its greatest tributary, the Snake, joins it just before it turns west again and acts as the boundary between Oregon and Washington on its way to the Pacific It has created regal gorges by cutting through the Cascades and the Coastal Range, and it is enriched by the Cowlitz and Willamette rivers, which drain the Puget Trough between those ranges This river, commanding one of the great drainage basins of the United States, was discovered by Robert GRAY in 1792 and is named for his vessel, the *Columbia* It was first actually entered by a British naval officer, William R. Broughton, later that same year Long before this time the Indians were busy fishing salmon in season from the river, and today the fisheries are of great importance, though the heavy settlement along it and its tributaries and the human use have reduced the salmon runs The first whites to arrive overland were the LEWIS AND CLARK EXPEDITION and the fur traders, notably DAVID THOMPSON of the North West Company and the founders of Astoria The river was the focus of the American settlement that created OREGON, and the river was itself sometimes called the Oregon and the River of the West Irrigation began early, and the waters of some tributaries were used to build agriculture and orchards, as in, e g , the valleys of the Yakima and the Wenatchee After 1932 plans gradually developed to use the Columbia to its ultimate possibility The goals have been to establish flood control, which would alleviate the destruction seen in the Columbia's greatest flood, that of 1894, and somewhat lesser but damaging floods, such as that of 1948, to improve navigation, which has always been significant and may be regulated even up the Snake above Lewiston, Idaho, to extend irrigation, to make optimum use of the water of the Columbia and its tributaries, and to produce hydroelectric power to supply industries and homes of the Pacific Northwest The first big dams on the Columbia proper were BONNEVILLE DAM, GRAND COULEE DAM (which created Franklin Delano Roosevelt Reservoir, with the water of the Okanogan, the Spokane, and other streams), and the privately owned Rock Island Dam Projects on the river and its tributaries, some constructed, some authorized by Congress, and some merely proposed by the Bureau of Reclamation or the U S Army Corps of Engineers, numbered more than 200 in 1950 and included the MCNARY DAM, irrigation projects on the Snake and flood controls and irrigation projects on the Willamette, projects to use the JOHN DAY and the Deschutes, the VALE project, and expansion of the use of the YAKIMA The power development already proved its industrial worth in the Second World War, and afterward it promised to change the whole economic pattern of the Pacific Northwest See W D Lyman, *The Columbia River* (3d ed , 1918), U S Dept of the Interior, Bureau of Reclamation, *The Columbia River* (1947), Murray Morgan, *The Columbia, Powerhouse of the West* (1949)

Columbian Exposition see WORLD'S COLUMBIAN EXPOSITION

Columbia University, in New York city, founded 1754 as King's College by grant of King George II Its first president was Samuel JOHNSON The administration of his successor, Myles COOPER, was interrupted by the Revolution, the college was closed but was reopened as Columbia College (1784) Title was at first vested in the regents of the Univ of the State of New York but in 1787 was transferred to the trustees of the college, who elected William Samuel JOHNSON president Presidents in the 19th cent included Charles King, F A P Barnard, and Seth Low, in whose administration the college moved to Morningside Heights There under President Nicholas Murray BUTLER (1902–45) it was greatly expanded In 1948 Gen Dwight D EISENHOWER became president The gradual addition of professional and graduate schools resulted in assumption of the name Columbia Univ in 1896, in 1912 the name became Columbia Univ in the City of New York Columbia College remained the undergraduate school Of the other schools, the oldest (est 1767) is that of medicine, which was absorbed into the independent College of Physicians and Surgeons (chartered 1807) and with that body reabsorbed by Columbia in 1891 In 1945 the Faculty of Medicine became responsible also for the educational programs of the School of Dental and Oral Surgery, founded (1916) as the School of Dentistry and merged (1923) with the College of Dental and Oral Surgery of New York (founded 1905), the School of Public Health (1921), and the School of Nursing Other schools and faculties, with their dates of founding, include School of Law (1858), School of Engineering (est 1864 as School of Mines, divided 1896 into schools of Mines, Engineering, Chemistry, and Architecture, School of Architecture separated 1902, other three united 1929 as School of

Engineering), Faculty (earlier School) of Political Science (1880); Faculty of Philosophy (1890), Faculty of Pure Science (1892), Graduate School of Journalism (est. 1912 as School of Journalism and endowed by Joseph PULITZER, present standing, 1935); School of Architecture (in Faculty of Applied Science, 1896–1902, combined with Dept of Music, 1906–14, separate status, 1914), Graduate School of Business (est 1916, present standing, 1949); School of Library Service (1926), a merger of the New York State Library School and the Library School of the New York Public Library, School of International Affairs (1946), School of General Studies (1947), founded in 1910 as University Extension; School of Dramatic Arts (1948), and School of Painting and Sculpture (1948). The Russian Institute was established in 1946, and the East Asian Institute in 1948 Independent corporations forming part of the university educational system include Barnard College, the undergraduate college for women (1889, obtained present standing in the university, 1900), Teachers College (1888, present standing, 1898), College of Pharmacy (1829, present standing, 1904), and New York School of Social Work (1940) There is a reciprocal educational relationship with UNION THEOLOGICAL SEMINARY The School of Tropical Medicine of the Univ of Puerto Rico is maintained in part by Columbia Univ The university has a large cyclotron at "Nevis," an estate near Irvington Columbia Univ Press was organized in 1893, primarily for publishing the results of original research See *A History of Columbia University, 1754–1904* (1904), *The Rise of a University* (excerpts from the annual reports of F. A P Barnard and N M Butler, 2 vols , 1937)

Columbine (kŏ'lumbĭn), a stock character derived from the harlequinade or pantomime of the Italian *commedia dell' arte*, who also appeared in early Italian and French comic opera She was usually the daughter of Pantaloon and the beloved of Harlequin Columbine was witty, bright, and given to intrigue and is the forerunner of the soubrette See Allardyce Nicoll, *Masks, Mimes, and Miracles* (1931)

columbine, any of the plants of the genus *Aquilegia* (ăk''wĭlē'jŭ), perennials popular both as wild flowers and as garden flowers Columbines have delicate and attractive foliage and in spring or early summer long-spurred, usually pendent blossoms. The common Eastern red-and-yellow-flowered wild columbine (*Aquilegia canadensis*), frequenting rocky places, is also called rockbell, it is a favorite of hummingbirds, and the Indians made an infusion of the seeds for headache and fever The blue-and-white-flowered *Aquilegia coerulea* of the Rockies is the state flower of Colorado The common European columbine (*Aquilegia vulgaris*), blue, white, or purple flowered and escaped from gardens in the United States, has been the source of many of the garden kinds—some double and of various soft colors

Columbium see NIOBIUM

Columbus, Christopher, Ital *Cristoforo Colombo* (krēstô'fôrô kôlôm'bô), Span *Cristobal Colón* (krēstô'bäl kôlōn'), 1451?–1506, discoverer of America, b. (almost certainly) Genoa, Italy He spent some of his early years at his father's trade of weaver and some years at sea He voyaged to the E Mediterranean in 1475 and was probably in England in 1476, the story of his visiting Iceland in the same year is possibly true, but not generally accepted In 1477 he settled in Lisbon, marrying the daughter of a Portuguese navigator and living in the atmosphere of the great period of Portuguese exploration Recently discovered documents disclose that as a sugar buyer for a large Genoese mercantile house in the Portuguese islands off Africa (the Azores, Cape Verde, and Madeira groups), he met pilots and navigators who believed in the existence of islands farther west His younger brother, Bartholomew, was an expert chart maker in Lisbon and possibly accompanied Bartholomew Dias on his voyage to the Cape of Good Hope His influence on his older brother is thought by some to have been very great, as was also, possibly, that of Martín Alonso PINZÓN, the pilot who commanded the *Pinta* on the first voyage Columbus was but one among many who believed in these western lands and his uniqueness lay rather in the persistence of his dream in the face of repeated rebuffs and disappointments The story of his failure to secure support at the court of John II of Portugal and of his eight years of supplication at the court of Spain until, after the conquest of Granada, Ferdinand and Isabella decided to risk the enterprise, is a familiar one. On Aug 3, 1492, he sailed from Palos, Spain, with three small ships, the *Santa María*, commanded by Columbus himself, the *Pinta* under Martín Pinzón, and the *Niña* under Vicente Yáñez PINZÓN After halting at the Canary Islands, he sailed due west from Sept 6 until Oct 7, when, at Martín Pinzón's instigation, he changed his course to the southwest On Oct 10 a small mutiny was quelled, and on Oct 12 he landed on a small island (Watling Island, see SAN SALVADOR) in the Bahama group He took possession for Spain and, with impressed natives aboard, discovered other islands in the neighborhood. On Oct. 27 he sighted Cuba and on Dec. 5 reached Hispaniola. On Christmas Eve the *Santa María* was wrecked on the north coast of Hispaniola, and Columbus, leaving men there to found a colony, hurried back to Spain on the *Niña* in an effort to return before Martín Pinzón, who had become his rival His reception was all he could wish; according to his contract with the Spanish sovereigns he was made "admiral of the ocean sea" and viceroy and governor general of all new lands he had discovered or should discover, and he was fitted out with a large fleet of 17 ships, with 1,500 colonists aboard, for his second expedition in Oct , 1493. Sailing from Cádiz, he made his landfall this time in the Lesser Antilles, and his new discoveries included the Leeward Islands, St. Kitts, the Virgin Islands, and Puerto Rico He arrived at Haiti to find the first colony destroyed by the Indians, founded a new colony near by, then sailed off to explore the southern coast of Cuba and discovered Jamaica. Before his return to Spain he ordered the site of the colony changed to Santo Domingo Upon his third voyage, not until 1498 as the novelty of the New World was wearing off, Columbus sailed still farther south and made his landfall on Trinidad. He discovered the mouth of the Orinoco in Venezuela (in the region of the later colony of New Granada) and realized that he saw a continent, but without further exploration he hurried back to Haiti to administer his colony In 1500 an independent governor arrived, sent by Isabella and Ferdinand as the result of reports on the wretched conditions in the Haitian colony, and he sent Columbus back to Spain in chains The admiral was immediately released, but his favor was on the wane, other navigators, including Amerigo VESPUCCI, had been in the New World and established much of the coast line of NE South America It was 1502 before Columbus finally gathered together four poorly equipped ships for a fourth expedition by which he hoped to reestablish his reputation If he could sail past the islands and far enough west he hoped he might still find lands answering to the description of Asia or Japan He struck the coast of Honduras in Central America and coasted southward along an inhospitable shore, suffering terrible hardships, until he reached the Gulf of Darien, where he was forced to abandon his hopes and return to Spain It is true the Vikings (see LEIF ERICSSON and THORFINN KARLSEFNI) had previously discovered America (c 1000), but their knowledge had been converted into saga so that Columbus was no less a discoverer Although his voyage was of great importance and the beginning of American history, Columbus died in neglect, almost forgotten Historians have disputed for centuries his skill as a navigator, but it has been recently proved that with only dead reckoning Columbus was unsurpassed in charting and finding his way about unknown seas *The Voyages of Christopher Columbus* (tr and ed by Cecil Jane, 1930) is a modern edition of his journal and other documents See biographies by Washington Irving (1827–28), C R Markham (1892), J B Thacher (1903–4), and Filson Young (1906), S E Morison, *Admiral of the Ocean Sea* (2 vols., 1942), which can be regarded as the most authoritative work

Columbus 1 City (pop 53,280), co seat of Muscogee co , W Ga , at the head of navigation on the Chattahoochee and WSW of Macon, on the fall line It is an important industrial and shipping center with textile mills (the first was established in 1838), ironworking plants, and farm-product processing plants Founded in 1828 as a trading post on the site of a Creek Indian village, it was a busy river port until the arrival of railroads in the 1850s During the Indian war of 1836, the Mexican War, and the Civil War, Columbus was an important supply point The city was taken by Federals in April, 1865 With the development of hydroelectric power plants in the early 20th cent its industrial growth was given added impetus Fort Benning, a large army training post, is 9 mi south 2 City (pop 11,738), co seat of Bartholomew co , SE Ind , on the East Fork of the White River and c 40 mi SE of Indianapolis, settled c 1819 Its manufactures include automobile accessories and parts and household appliances Tipton Knoll, one of the largest prehistoric Indian mounds in the state, is here 3 City (pop 3,402), co seat of Cherokee co , extreme SE Kansas, SSW of Pittsburg, laid out 1868, inc 1871 It is a trade center for a farming area In the region are coal, zinc, and lead deposits 4 City, SW Ky see CLINTON 5 City (pop 13,645), co seat of Lowndes co , NE Miss , on the Tombigbee near the Ala line, settled 1817, inc 1821. It is the shipping and industrial center for a cotton, livestock, and timber area Franklin Academy, the first free school in the state, now part of the public school system, was opened in 1821 MISSISSIPPI STATE COLLEGE FOR WOMEN is here. There are a number of fine ante-bellum houses. 6 City (pop. 7,632), co seat of Platte co., E Nebr., in a prairie region, at the junction of the Loup with the Platte W of Omaha, founded 1856 It is a railroad, manufacturing, and trade center for a livestock, dairying, and grain area and is the headquarters for the Loup river power project. 7 City (pop. 306,087), state capital, and co. seat of Franklin co , central Ohio, on the Scioto and Olentangy rivers, inc as a borough 1816, as a city 1834. Laid out as state capital in 1812, Columbus actually took over the government from Chillicothe in 1816 An industrial, railroad, air, and trade center of a rich farm area, it produces such varied goods as fire-fighting apparatus, airplanes, foundry and machine-shop and other iron and steel products, shoes, glass, stoves, and packed meat It is a port of entry Transportation facilities stimulated its growth in 1831 a feeder canal was opened to the Ohio and Erie Canal, by 1833 the National Road reached here; and in 1850 the first railroad arrived The city is the seat of OHIO STATE UNIVERSITY, Capital Univ (at Bexley), St. Mary of the Springs College, and Franklin Univ. Its numerous landmarks include the state capitol, the Columbus Gallery of Fine Arts (1931); state institutions for the deaf, the blind, the feebleminded, and the insane, a state penitentiary, Battelle Memorial Institute (for industrial research in metallurgy, graphic arts, ceramics, and other fields), the Ohio State Office Building, with the state library, the state fairgrounds, Fort Hayes, U.S. army post, the library and museum of the state archaeological and historical society, and a Confederate cemetery with the graves of soldiers who died in a Civil War prison camp here Near by are the municipal airport and the zoo. 8 City (pop 2,422), co seat of Colorado co , S Texas, on the Colorado and W of Houston, founded 1823, inc 1928 The old city has wide, oak-bordered streets and yards but also has gravel pits and small industries It has the thriving trade of a diversified farm area 9 City (pop 2,760), central Wis., NE of Madison and on the Crawfish river, in a farm and dairy region, settled c 1840, inc 1874 Louis H. Sullivan designed a local bank building.

Columbus Day, celebrated Oct 12 in 34 states of the United States and in Puerto Rico It is also observed in several of the Latin American republics and in certain Spanish and Italian cities. It commemorates the discovery of America

Columbus Grove, village (pop 1,727), NW Ohio, N of Lima It has small manufactures

Columcille, Saint see COLUMBA, SAINT

Columella (Lucius Junius Moderatus Columella) (kŏlūmĕ'lu), fl 1st cent A D , Latin writer on agriculture, b Gades (now Cádiz, Spain) Of his work there remains a 12-book *De re rustica*, treating general husbandry, the care of domestic animals, and farm management The 10th book, modeled on Vergil, is in hexameters . A little essay on trees also survives Columella's Latin is facile and elegant, and his information is surprisingly accurate

column, vertical architectural support, circular or polygonal in plan as distinguished from a pier which is square or rectangular, and widely variable as to proportions and adornment Columns arranged in a row form a COLONNADE In the trabeated or post-and-lintel system of construction the column is the perfected form given to the supporting element The columns of classic architecture represent the attempt to design proportionings and details which would create maximum structural harmony It is in the Greek temples of the Hellenic period (700–146 B C) that these ideals reached their perfect fulfillment In Greek, Roman, and Renaissance architecture the various column types, taken together with the entablatures which they support, form the classic ORDERS OF ARCHITECTURE The classic column has the three fundamental elements of base, shaft, and capital. The shaft has a gradual upward tapering (entasis), and the capital which crowns it provides a decorative transition between the circular column and the rectangular entablature Early forms of masonry columns can be seen in the rock-cut tombs at Beni Hassan in Egypt, with their polygonal shafts and block capitals In fully developed Egyptian architecture the columns were of gigantic size, spaced very closely together, and were reserved for inner courtyards and halls In the Aegean area, in pre-Hellenic times, the only column type known to have been used is one with a cushionlike cap and with its shaft tapering downwards Subsequent order types were the archaic forms of Doric, developed by the Dorians after their coming (before 1000 B C) into the region By the 7th cent B C this Greek Doric had been established in its design After this time, the Doric, Ionic, and Corinthian column types advanced toward perfect proportions and details and formed the basis for the columnar architecture of the Romans Though Greek columns always had vertical channels or flutes cut in their shafts, those of the Romans were often without them In Greek buildings the columns were always structurally indispensable, but the Romans and later the Renaissance and modern architects used them largely as a decorative feature, mostly following fixed rules of proportions The columns of Romanesque, Byzantine, and Gothic buildings were organically structural elements and were without canons of proportioning. The columns of Chinese and Japanese architecture are

circular or polygonal wood posts, with bases but without capitals, having instead an ornamented projecting bracket. In Indian architecture columns exhibit great variety of detail· shafts, bases, and capitals are intricately ornamented. In modern fireproof construction the word *column* designates the vertical structural members of steel See CORINTHIAN ORDER; DORIC ORDER, IONIC ORDER

columnist, newspaper, a journalist who conducts a column in the daily press. Although originally humorous in character, the column in many cases has supplanted the editorial for authoritative opinions on world problems. Independent of the policy of his paper, the columnist is allowed to attack political and social institutions as well as individuals Among well-known American columnists are Eugene Field, George Ade, Bert Leston Taylor (B L T), Finley Peter Dunne, Don Marquis, Heywood Broun, Ernie Pyle, and the contemporary writers F P Adams (F P A) and Walter Winchell See Charles Fisher, *The Columnists* (1944).

Colusa (kŭlō'sŭ), town (pop. 2,285), co seat of Colusa co, N central Calif, on the Sacramento river and NW of Sacramento, in an irrigated farm area; inc 1870.

Colville (kŏl'vĭl), city (pop. 2,418), co seat of Stevens co, NE Wash, on the Colville river, and NW of Spokane, founded 1826 as a Hudson's Bay Company post, inc 1890.

Colville Indians, North American tribe, one of the largest divisions of the Salishan linguistic stock Reduced to a few hundreds by 1872, they were placed on a reservation in NE Washington, since that time their numbers have markedly increased

Colvin, Sir Sidney (kŏl'-), 1845–1927, English man of letters Slade professor of fine arts at Cambridge and keeper of prints at the British Museum, he was a friend of Stevenson, whose works and letters he edited. Besides many articles on literature and art, he wrote studies of Landor (1881) and Keats (1887), as well as *A Florentine Picture Chronicle* (1898), *Early Engraving and Engravers in England* (1905), and *Memories and Notes of Persons and Places* (1921) See E V Lucas, *The Colvins and Their Friends* (1928)

Colwyn (kŏl'wĭn), borough (pop 2,202), SE Pa, near Philadelphia

Colwyn Bay (kŏl'wĭn), municipal borough (1931 pop 20,886, 1943 estimated pop 24,873), Denbighshire, Wales It is a popular seaside resort, with a promenade and good bathing

Colyn, Alexander. see COLINS, ALEXANDER

coma (kō'mŭ) Deep loss of consciousness from which a person cannot be roused may result from APOPLEXY or other brain injury, EPILEPSY, DIABETES, uremia, alcoholic intoxication, morphine poisoning, SHOCK, SUNSTROKE, or HEMORRHAGE Each condition requires special treatment In the period before the physician's arrival any apparent cause of trouble should be treated It is important to distinguish between a condition which requires stimulation, such as shock and morphine poisoning, and one which requires absolute rest, such as apoplexy

Coman, Charlotte Buell, 1833–1924, American landscape painter, b Waterville, N Y Her works include *A French Village, Near Fontainebleau, Early Summer* (National Gall, Washington, D C), and *Clearing Off* (Metropolitan Mus)

Comanche (kōmăn'chē) **1** City (pop 1,533), S Okla, NW of Ardmore, in a farm, ranch, and oil region, founded 1892 on the site of an Indian village **2** Town (pop 3,209), central Texas, SW of Fort Worth, founded 1858, inc 1873 Long a cow town, Comanche keeps an Old West air though its business is processing peanuts, pecans, and dairy products and dressing and hatching poultry There are small industries

Comanche Indians, North American Indian tribe belonging to the Shoshonean group of the Uto-Aztecan linguistic stock They were a nomadic people with a typical Plain culture They separated from the Shoshone of Wyoming relatively recently and then appeared (c 1680) in the region around the Texas Panhandle and W Oklahoma This region became their regular habitat, though they were excellent horsemen and inveterate raiders, often pushing far S into Mexico They were extremely warlike and effectively prevented white men from passing safely through their territory for more than a century. They are said to have killed more whites in proportion to their own numbers than any other Indian tribe They were associated with the Kiowa, the Cheyenne, and the Arapaho in a loose confederacy They considered themselves superior to their associates, and their language served as trade language for the area They did not adopt the sun dance but probably did introduce the peyote ritual to the Plains tribes Never a large tribe despite their wide range, they were greatly reduced by warfare and disease. They numbered c.1,500 when they were attached to the Kiowa agency in present Oklahoma in 1904 They have since increased somewhat in numbers.

Comayagua (kōmäyä'wä), town (pop. 4,828), W central Honduras. Founded in 1540 on the Comayagua river, an important tributary of the ULÚA, Comayagua was the most important city of colonial Honduras, but with independence from Spain (1821) came bitter rivalry between it, as a Conservative stronghold, and the Liberal city, TEGUCIGALPA. In the political struggles following independence, the cities alternated as capital of the republic, but in 1880 Tegucigalpa became permanent capital. Today Comayagua is the center of an agricultural and mining region, but little remains of its former wealth

Comayagüela (kōmäyägwā'lä), town, S central Honduras Twin city of the capital, TEGUCIGALPA, across the Choluteca river, Comayagüela is expanding rapidly

comb, a toothed implement for arranging, confining, or ornamenting the hair Specimens have been found among the relics of lake dwellers and among Egyptian, Greek, and Roman antiquities Wood, bone, horn, ivory, stiff fibers of bamboo and cocoanut, tortoise shell, or metal combs, ornamented with carving, inlay, and inset work, jewels, and colored glass, have been a feature of headdress in different periods and places The old process of combmaking was to form a plate of the material chosen and then cut out the teeth with a double saw. By the modern method, a plate of a size sufficient for two combs is cut (usually with a die) so that the teeth of one comb are formed by the interstices of the other India rubber is first molded, then vulcanized Metal is cut, celluloid and other compositions may be either molded or cut The name is also given to tools for graining painted work, for pressing home the weft in a primitive loom, and for carding or combing fibers in preparation for spinning

Combaconam or **Combaconum,** India see KUMBAKONAM

Combe, George (kōōm, kōm), 1788–1858, Scottish phrenologist He practiced law for a time before becoming actively interested in phrenology He was responsible for the founding of the Phrenological Society and the *Phrenological Journal* and traveled and lectured in America and Europe He wrote on a wide range of subjects, including education, social reforms, and, in his later life, the relation between science and religion He is chiefly remembered for his *Constitution of Man* (1828), which was very popular in his day

Combe, William, 1741–1823, English satirist and miscellaneous writer As he was heavily in debt most of his life, his writing was mainly hack work, issued anonymously to avoid seizure of the proceeds by his creditors Combe is chiefly remembered for the "Dr Syntax" series, for which he wrote doggerel verse to accompany the illustrations of Thomas ROWLANDSON *The Tour of Dr Syntax in Search of the Picturesque* appeared in 1812, the second volume (*in Search of Consolation*), 1820, the third volume (*in Search of a Wife*), 1821

Combes, Émile (āmēl' kōb'), 1835–1921, French statesman An able politician of the left democratic group, he was minister of education under Léon Bourgeois (1895–96) and, succeeding Waldeck-Rousseau, was premier (1902–5) Anticlericalism, growing out of the DREYFUS AFFAIR, was at a peak, and Combes initiated the separation of Church and state in France Under the law of 1901 requiring religious associations to seek government authorization he abolished religious education Abrogation of the CONCORDAT OF 1801 was formalized by law in 1905 Combes was a member of the Briand cabinet of 1915–17

Combin, Grand (grā kōbē'), peak, 14,164 ft high, Valais, Switzerland, in the Alps near the Italian border

combination, in business see TRUST

combine, harvesting machine see REAPER

combing, a process which follows CARDING in the preparation of fibers for spinning, lays the fibers parallel, and removes noils (short fibers) The modern combing machine is a specialized carding machine Combing produces a fine sliver suitable for drawing out and spinning into strong, smooth yarn The process, used for long staple cottons and worsted yarn, is expensive, since up to 25 per cent of the card sliver is eliminated. Hackling is a form of combing, often by hand, used for linen See W E Morton, *An Introduction to the Study of Spinning* (1937)

combining weight of an element is computed by dividing the atomic weight of the element by its valence It is also defined as the proportion by weight in which an element combines, with hydrogen as equal to one or oxygen as equal to eight usually taken as a standard

combustion, commonly called burning, is the rapid OXIDATION of a substance with characteristic liberation of heat and light. In some cases, however, chemical reactions not involving oxygen exhibit similar characteristics, e g., hydrogen burns in chlorine with the liberation of heat and light, the two gases combining to form hydrogen chloride The PHLOGISTON THEORY advanced in the late 17th cent. by G E. Stahl to explain the combustion of substances in air received wide support until finally LAVOISIER succeeded in demonstrating the true nature of the phenomenon Before a substance will burn or undergo combustion, its temperature must be raised to a point called its kindling TEMPERATURE Factors such as the presence of a CATALYST, the air pressure, and the amount of oxygen in the air mixture affect the kindling temperature. A substance will begin to burn at a lower temperature when finely divided than when in large lumps or masses **Spontaneous combustion** (a name applied before its nature was understood) is a phenomenon in which a substance bursts into flame "spontaneously" without apparent cause It occurs sometimes in haystacks, in the holds of ships carrying coal, and in closets or boxes where oily rags have been allowed to collect When a substance undergoes slow oxidation and the heat evolved in the reaction is not lost (e g., when oil on a rag oxidizes and the folds of cloth keep in the heat), the temperature of the substance gradually rises until finally its kindling point is reached, and it bursts into flame The **heat of combustion** of a fuel is the total amount of heat evolved when a given amount of the fuel is burned This is used as a basis for comparing the heating value of fuels.

Comédie Française (kōmādē' frāsĕz') **or Théâtre Français** (tāä'trŭ frāsĕ'), state theater of France on the Rue de Richelieu in Paris. It was officially established by a royal decree of 1680 which merged the two French companies of comedians at Paris, the troupe of the Hôtel Guénégaud (see MOLIÈRE and BÉJART) and the troupe of the Hôtel de Bourgogne The following year an annual grant of 12,000 livres was allotted from the royal treasury, and a new theater was built for the company. In the Revolution its actors were scattered and the theater closed By decree of Napoleon in 1803 the institution was revived, and the company was given the organization it still maintains The system has no stars, all the permanent members, called *sociétaires* or associates, enjoy the same status, roles being apportioned by common agreement. In 1900 fire destroyed the historic building, but most of the works of art and all of the archives were saved, and the theater was rebuilt

comedo see BLACKHEAD

comedy, a light and amusing play or any literary work so presented as to leave a pleasant or happy impression European comedy originated in the ancient boisterous choruses and dialogue of the fertility rites at the feasts of Dionysus in Greece These celebrations with their broad jests developed into dramas designed to arouse mirth. comedy thus was the antithesis of TRAGEDY. What became known to historians as Old Comedy in Greece satirized real persons under their own names, the chorus was the mouthpiece of the author and in the usual interval in the middle of the play addressed political comments to the audience The plays of Aristophanes are the greatest examples of Old Comedy In New Comedy, which is generally considered to have begun in the mid-4th cent B C, the real characters, the chorus, and the political comment disappeared, only the story of events happening to imaginary figures and still designed to amuse remained, and the plays were more literary and decent, usually less satirical Menander was the most famous writer of New Comedy and was closely imitated by the Latin dramatists Plautus and Terence After the Middle Ages, when the drama developed from Christian liturgy (see THEATER), there were comic elements in the MIRACLE PLAY and the morality play and in the INTERLUDE In England the tradition of the interlude blended with that of the Latin classic comedies in the 16th-century plays by Nicholas Udall and others and in the later work of John Lyly The romantic comedy of the Elizabethans culminated in the great plays of Shakspere, whose comedies ranged from farcical to tragicomic, the latter called comedy only because the denouement is not tragic In France after the Middle Ages, the classical influence was stronger than in England, and it was combined with that of the Italian COMMEDIA DELL' ARTE by the greatest comic and satiric writer of France, Molière His work shaped that of the English Restoration playwrights—the comedy of manners written by Dryden, Wycherley, Congreve, and others. The moral tone of Restoration comedy was so low that the reaction against it started by Richard Steele resulted in the sentimental comedy written by him and by Richard Cumberland Meanwhile broad FARCE flourished The later 18th cent saw a resurgence of brilliant satirical character comedies in the plays of Goldsmith, Sheridan, and the two George Colmans Royall Tyler, one of America's earliest playwrights, was an imitator of this school The comedy of manners was carried on in the 19th cent by Oscar Wilde, and the modern social comedy was worked out by Pinero, Henry Arthur Jones, G B Shaw, Noel Coward, Galsworthy, and Maugham in England and by Howells and Clyde Fitch among others in the United States. Barrie and Milne may be said to have continued sentimental comedy The BALLAD OPERA of the 18th cent was one ancestor of English comic opera, made famous in the 19th cent. by W S Gilbert and A S Sullivan, and of 20th-century musical comedies, some of the best of which were written by the American G M Cohan See A H. Thorndike, *English Comedy* (1929), C. M Gayley, *Representative English Comedies* (3 vols, 1912), H. T. E.

Perry, *Masters of Dramatic Comedy* (1939). See also bibliography under THEATER

Comenius, John Amos (kŏmē'nēŭs), Czech *Jan Amos Komenský*, 1592–1670, Moravian churchman and educator, last of the Moravian bishops Comenius advocated relating education to everyday life by emphasizing contact with objects in the environment and systematizing all knowledge Teaching was to be in the vernacular rather than in Latin, and languages were to be learned by the conversational method He worked for a universal system of education offering equal opportunities to women His *Didactica magna* (1628–32, Eng tr by M W Keatinge in *Comenius*, 1931) contains an exposition of these principles He also wrote *Janua linguarum reserata* (1631, Eng tr , *The Gate of Tongues Unlocked*, 1659) and *Orbis sensualium pictus* (1658, Eng tr , *The Visible World*, 1659), one of the earliest illustrated books for children His collected works were first published in 1867 See S S Laurie, *John Amos Comenius* (1893), Will S Monroe, *Comenius and the Beginnings of Educational Reform* (1900)

comet (kŏ'mĭt) [ultimately Gr , = long haired], one of a number of heavenly bodies, nebulous in character, traveling in paths around the sun and sometimes visible on earth for a time varying from a few days to several months. Comets were for ages regarded with awe and sometimes with terror Many had been noted and recorded, but never had the return of one been predicted before 1682 At that time Edmund Halley concluded that the comet then under his observation must be the same as those which had been described in 1531 and 1607, and he predicted the date for its next appearance as the end of 1758 or early in 1759 Its actual arrival was in the spring of 1759, and it was observed again in 1835 and in 1910 Most periodic comets have orbits of elongated ellipses, and others appear to move in hyperbolic orbits The periods required for covering the known orbits range from 3 3 years (for Encke's comet) to several thousand years Donati's comet, with a period of c 2,000 years, was first observed by Donati in 1858 In earlier times it was thought that comets came into the solar system from some region beyond, but they are now considered to belong permanently to the system Ordinarily a comet has a head of cloudy brightness, within which a bright nucleus, or sometimes two or more nuclei, usually may be seen Sweeping from the head curves the tail, which sometimes extends to a length of over 100,000,000 mi , sometimes, however, the tail is short The head seems to be made up of widely distributed particles of rock or sand with gaseous matter between Materials appear to be thrown out from the nucleus; these, acted upon by the radiation pressure of the sun's light, which is strong enough to overcome the attractive force of the sun, are driven off in a direction opposite to the sun and spread along the heavens, forming the comet's tail So tenuous are comets that it requires no very great disturbing force to overcome the attraction holding their particles together Although some comets are commonly known by the name of the discoverer, in astronomical catalogues each is designated by the year in which it passes perihelion (i e , is closest to the sun) followed by a Roman numeral indicating its order of passage A newly discovered comet is temporarily designated by the year of its discovery followed by a small letter indicating the order of discovery, e g , comet 1911b would indicate the second comet to be discovered in 1911 See G F. Chambers, *The Story of Comets* (1909), Charles P Olivier, *Comets* (1930), F G Watson, *Between the Planets* (1941), B F Griffith, *Historic Stars & Comets an Outline in Pictures* (1948)

Comfort, unincorporated town (pop c 1,000), S central Texas, in the Guadalupe river valley and NW of San Antonio; founded 1854 by Germans A center of sheep and goat ranches, it also attracts campers and tourists

comic strip, combination of caricature with a story line, laid out in a series of pictures across a page and concerning the same character or set of characters. It grew out of the cartoon popular in the late 19th cent and developed as a circulation builder for newspapers The first advance toward the present form was *The Yellow Kid* (New York *World*, 1896) by R F Outcault This little boy, wearing a bright yellow nightshirtlike garment, appeared in a single cartoon and found such favor that he was established as a cartoon character Soon words began to appear on his shirt, the first time that a caption appeared inside the frame *The Katzenjammer Kids* (New York *American*, 1897) originated by Rudolph Dirks, started with one picture at a time and soon developed into a four-panel square describing consequent actions and using balloons for dialogue The enormous influence of comic strips on the reading public, later repeated with Al Capp's *Li'l Abner* (1934), was first demonstrated by Outcault's *Buster Brown* (1902), a refined but wicked small boy who owned a talking dog named Tige and who swamped America with Buster Brown fashions in the early 20th cent Before Bud Fisher's *Mutt and Jeff* (1907), comic strips did not appear regularly nor were they laid out with the panels in a line. By this time newspapers were featuring comics regularly, commonly in black and white during the week and in full color on Sunday Among the best known of the humorous strips were *Foxy Grandpa* (1900), by Charles E. Schultze, *Krazy Kat* (c 1910), by George Herriman, *Bringing Up Father* (1913), by George McManus, *Barney Google* (1919), by Fred Laswell, and *Boob McNutt* (1924), by Rube Goldberg With *Polly and Her Pals* (1912), by Cliff Sterrett, a pretty girl became the heroine, and new formulas of adventure, romance, and family life soon gained immense popularity The best known of the family strips are *Mr and Mrs* (c 1915), originated by Clare Briggs, *The Gumps* (1917), by Sidney Smith, *Gasoline Alley* (1919), by Frank King, and *Blondie* (1930), by Chic Young Among the most popular of the adventure strips are *Dick Tracy* (1931), by Chester Gould, and *Superman* (1938), by Jerry Siegel and Joe Shuster See Sheridan Martin, *Comics and Their Creators* (1942), Coulton Waugh, *The Comics* (1947)

Comines, Commines, or **Commynes, Philippe de** (all fēlēp' dŭ kōmēn'), c 1447–c 1511, French historian, courtier, and diplomat He left the service of Charles the Bold of Burgundy in 1472 to enter that of Louis XI of France, who rewarded him richly. After Louis's death he plotted against Charles VIII and was banished from court, but he later regained favor, accompanied Charles to Italy, and was briefly ambassador to Venice His *Mémoires sur les règnes de Louis XI et de Charles VIII* (available in many editions and translations) is a historical and literary work of the highest rank It contains striking portraits of Charles of Burgundy, Louis XI, and Charles VIII and is remarkable for its penetrating analysis of men and motives

Cominform (kŏ'mĭnfôrm), abbreviated name of the Communist Information Bureau, set up in 1947 by the Communist parties of the USSR, Bulgaria, Czechoslovakia, France, Hungary, Italy, Poland, Rumania, and Yugoslavia Its stated aim is to facilitate the exchange of experience of the parties and, if necessary, their cooperation Although its decisions are not binding (as were those of the Comintern), and although membership in the Cominform is not obligatory for Communist parties, the Cominform is a powerful instrument in the shaping of Communist policy and tactics throughout the world The first headquarters of the Cominform was at Belgrade, Yugoslavia, but it was moved to Bucharest, Rumania, in 1948 after the Cominform's denunciation of the Yugoslav Communist party, which was expelled from the organization

Comintern (kŏ'mĭntûrn) [from Communist International] or **Third International,** organization founded at Moscow in 1919 with the purpose of furthering the establishment of Marxist socialism in the world It originally consisted only of the Russian and German Communist parties—the only ones then in existence—and a number of left-wing Socialist splinter groups from other countries The Comintern thus was instrumental during the early 1920s in the formation of Communist parties out of the extremist groups that seceded from the more moderate elements of the world's Socialist parties The Comintern included all Communist parties, which met in Communist world congresses at Moscow and coordinated their policies by permanent committees Thus Communists anywhere were actually members of a single world-wide organization Asserting that they wished to protect the world against the Third International, Germany and Japan concluded, for their own purposes, the so-called Anti-Comintern Pact of 1936, which became closely coordinated with the Rome-Berlin AXIS Renewed in 1941, the Anti-Comintern Pact included Bulgaria, Croatia, Denmark, Finland, Germany, Italy, Hungary, Japan, Manchukuo (Manchuria), Rumania, Slovakia, Spain, and the Japanese-controlled Nanking government in China In 1943, in order to allay the misgivings of its allies in the Second World War, the government of the USSR brought about the dissolution of the Comintern The Cominform, created in 1947, is in theory at least, not a successor to the Comintern, for it does not include all the Communist parties in the world and it possesses no policy-making authority

comma see PUNCTUATION

Commagene (kŏmăjē'nē), district of ancient N Syria, on the Euphrates river and S of the Taurus range, now in SE Asiatic Turkey Its metropolis was Samosata The fertile agricultural district was made part of the Assyrian Empire and later of the Persian Empire In the period after Alexander the Great, it gradually assumed independence under the Seleucid kings of Syria and revolted, declaring absolute independence, early in the 2d cent B C. The ruling dynasty was related to the Seleucids The king in 64 B C. had his territory enlarged by Pompey as a Roman ally, but the kings later aided the Parthians and were in trouble with Rome Vespasian finally (A D 72) annexed it to the province of Syria

Commager, Henry Steele (kŏ'mĭjûr), 1902–, American historian, b Pittsburgh, Pa , educated at the Univ. of Chicago (Ph B , 1923, M.A , 1924; Ph.D , 1928) and at the Univ of Copenhagen (1924–25). He taught history at New York Univ from 1926 to 1938 and in 1938 became a professor of American history at Columbia Univ. His writings, often in collaboration with other historians, are extensive. Among them are *The Growth of the American Republic* (with Samuel E Morison, 1930, 3d ed , revised and enlarged, 2 vols , 1942), *Theodore Parker* (1936; 2d ed , 1947), *Our Nation* (with Eugene C Barker, 1941), *Majority Rule and Minority Rights* (1943), and *The American Mind* (1950) He edited *Documents of American History* (1934, 5th ed , 1949), *The Heritage of America* (with Allan Nevins, 1939, revised and enlarged ed , 1949), *Readings in American History* (with Allan Nevins, 1939), *America in Perspective the United States through Foreign Eyes* (1947), and *The St Nicholas Anthology* (1948) Commager also contributed (especially book reviews) to various magazines and periodicals and was made editor of "The Rise of the American Nation" series (40 vols.; in process in 1950)

Commandments, Ten see TEN COMMANDMENTS

commando, small military raiding unit of a type first used by the Boers in the South African War Commando forces were organized (1940) by the British in the Second World War They were at first under the command of Admiral Sir Roger J. B Keyes and later under Lord Louis Mountbatten Specially trained for dangerous work, they carried raids and scouting missions into enemy-held territory The most celebrated of their raids were at Dieppe in 1942 and on the Lofoten Islands off Norway They also did excellent service in preparing the way for attacks, especially in sabotage work The U S army ranger units were somewhat similar and were also popularly called commandos See *Combined Operations the Official Story of the Commandos* (1943)

commedia dell' arte (kōm-mā'dēa dĕl-lar'tā), a popular form of comedy employing improvised dialogue and masked characters which flourished in 16th-century Italy It may have derived from the Byzantine mimes of the Eastern Roman Empire or have been a continuation of the *Fabulae Atellanae* of the Oscans and Romans, but the most widely accepted view is that it was an imitation of the Greek and Roman mimes *Commedia dell' arte* presented satiric songs, dancing, and farces It gave rise to the traditional characters of pantomime, Harlequin, Clown, Pantaloon, Scaramouche, and Columbine, which such performers as the ANDREINI made famous Of great importance in the history of the theater, it admitted women to the stage and freed the theater from the artificialities of early Italian drama See P L Duchartre, *The Italian Comedy* (Eng. tr , 1928), Winifred Smith, *Italian Actors of the Renaissance* (1930), Allardyce Nicoll, *Masks, Mimes, and Miracles* (1931), K M Lea, *The Italian Popular Comedy* (1934)

Commerce 1 City (pop 3,294), NE Ga , NE of Atlanta, in a farm area, inc 1883 2 City (pop 2,422), extreme NE Okla , in a region of lead and zinc mining 3 City (pop 4,699), E Texas, NE of Dallas, settled 1874 A cotton center in the northeast corner of the state, it is the seat of East Texas State Teachers College

commerce, traffic in goods, usually conceived as other than domestic trade Engaged in by all peoples from earliest times, it has been carried on in some areas and by some peoples more than others, because of special advantages or aptness The Egyptians, the Sumerians and later inhabitants of Mesopotamia, the Cretans, the Syrians, the Phoenicians, the Greeks, the Arabs, and the Western Europeans have thus excelled, tapping the resources of the East, Oceania, the Americas, and Africa Thus the center of commerce has changed from the Mediterranean to the North Sea and the Atlantic The Crusades did much to widen European trade horizons and prefaced the passing of trade superiority from Constantinople to Venice and other cities of N Italy In the 15th and 16th cent with the sudden expansion of Portugal and Spain the so-called commercial revolution reached a climax In N and central Europe, the earlier supremacy of the Hanseatic League, the Rhenish cities, and the cities of N France and Flanders was eclipsed by the rise of national states Antwerp began its long career of glory when the Spanish were losing hegemony, and the Dutch briefly triumphed in the race for world commerce in the 17th cent The Dutch in turn lost to British-French rivalry which by 1815 left Britain paramount The Industrial Revolution of the 18th and the 19th cent further aided the development of commerce The rise of the CHARTERED COMPANY under the auspices of the national state had much to do with this expansion of trade, as did the modern corporation, which later displaced the chartered company World commerce was also aided materially by the invention of the astrolabe, the mariner's compass, and the sextant; by the development of iron and steel construction, by the application of steam to both land and water transport, and by the more recent development of

communication devices such as the telephone, telegraph, cable, and radio and of new inventions such as refrigeration, the gasoline engine, the electric motor, and the airplane The theory of commerce as imposed by the national state has varied from the MERCANTILISM of the 17th and 18th cent and the protective tariff of the 19th and 20th cent, to the free trade which Britain long upheld The **United States Department of Commerce** was organized in 1903 as the Dept of Commerce and Labor Before 1903 its work had been handled mainly by the Treasury Dept In 1913 the Dept of Labor and the Dept of Commerce were separated The latter includes the Bureau of the Census, the Coast and Geodetic Survey, the Bureau of Foreign and Domestic Commerce (including the work of commercial agents and attachés at home and abroad), the Inland Waterways Corp, the National Bureau of Standards, the Weather Bureau, the Patent Office, and the Civil Aeronautics Administration The Interstate Commerce Commission and the Federal Trade Commission are separate government agencies See Clive Day, *A History of Commerce* (4th ed, 1938), M A Heilperin, *The Trade of Nations* (1947).

commercial law. In modern usage the term "commercial law" is generally confined to the laws which govern business transactions, except those relating to the carriage of goods (see MARITIME LAW) Commercial law as a distinct body of jurisprudence is probably coeval with the beginning of large-scale trade Formal documents and other evidences of regularized trade practices are known from Egypt and Babylonia In many parts of the ancient world foreign merchants were allowed to regulate their affairs without interference and were settled in special sections of commercial cities where they might follow their own religions and customs ROMAN LAW incorporated features of the already-developed commercial law, which, however, was no longer segregated for handling in special courts but was treated simply as part of the whole legal system The barbarian invasions of Europe caused much social disruption and a consequent decline in trade When, in the late Middle Ages, long-range commerce again became possible in Europe, merchants were once more able to determine the rules under which they would function In the cities of N Italy and S France the merchant class frequently dominated the state and could enact the needed rules as legislation In other parts of Europe associations of merchants bought protection from powerful lords or kings who permitted them to conduct fairs and to establish regulations and methods of enforcement (usually ostracizing infringers) Both classes of merchants established special courts where summary judgment was granted without regard for the technicalities of procedure and doctrine in the regular courts and without the use of lawyers The term "law merchant" was applied to the substantive principles which eventually emerged from this judicial activity The law merchant developed later in England than on the Continent, and it was perhaps not fully established there until the mid-16th cent, when English trade with the New World became important In England the law was administered by special courts having jurisdiction only over those engaged in trade, these were the courts of piepoudre [Fr *pied poudré*=dusty foot, an allusion to the dusty shoes of merchant judges who perhaps had been trudging the roads] The royal courts in early days refused to hear merchants' suits, but in the 17th cent they reversed this position and obtained exclusive jurisdiction At first, however, the litigants were required to present proof of the law merchant in each case The uncertainty and delay which resulted from this requirement demanded reform, and in the 18th cent Lord Chief Justice Mansfield made the law merchant a part of the common law and abolished the requirement of special proof In the United States the principles prevailing in England in the late 18th cent were adopted In distinction to the United States and England, on the continent of Europe commercial law remains a separate subject matter with its special courts. It has been argued that the continental system is superior in that it distinguishes the business affairs of formally established enterprises from those entered into casually by private persons The Anglo-American system, on the other hand, has been defended as affording no favoritism to any form of business activity In the United States, however, the extensive use of commercial arbitration is comparable to the former private courts of merchants The American states to an unusual degree have adopted uniform commercial statutes, which considerably facilitate the flow of trade throughout the nation

commercial paper, comprehensive term for all kinds of short-term negotiable instruments which call for the payment of money and which may be used as COLLATERAL The term is sometimes loosely applied to contracts and agreements More strictly it includes only those instruments that are used in commerce in place of money, as distinguished from paper used in investment, personal, estate, speculative, and public transactions. It includes short-term notes, drafts, bills of exchange, checks, acceptances, bills of lading, warehouse receipts, orders for the delivery of goods, and express orders By borrowing on bills of lading or warehouse receipts (receipts from a transportation company or a warehouse showing that specified goods have been delivered to it), wholesale merchants are enabled to handle goods greatly in excess of their capital The salability of commercial notes is based on the financial strength of the borrower, as they are not backed by collateral Express orders are issued by express companies for small amounts, payable at any office of the company They may also be banked like checks See A O Greef, *The Commercial Paper House in the United States* (1939)

commissar (kŏ'mĭsär), in the USSR, the head of an administration or commissariat, approximating the minister of Western Europe The Council of Peoples' Commissariats of the Soviet Union, appointed by and in theory responsible to the Supreme Soviet, is in effect a cabinet administering the government departments and supervising the economy of the Soviet Union A parallel system prevails in the constituent and autonomous republics of the USSR, though the acts of the local commissars may be overruled by those of the central council Political commissars in the Russian Revolution were agents of the Petrograd Soviet attached to the various military commands and having a strong political and propagandistic mission This system, based on French Revolutionary practice, was also in use in the armies of the Spanish republic, but was abolished in the Russian forces during the Second World War

commission government see CITY GOVERNMENT

committee, one or more persons appointed from a superior body to take action for them Thus, the guardianship of a lunatic or of his estate is entrusted by old English law to 'committees" of various kinds Legislative committees of varying function have assumed much of the work of legislatures in many nations Standing committees are appointed in both houses of the U S Congress at the beginning of every session to deal with bills in the different specific classes Important congressional committees include those on ways and means, appropriations, interstate commerce, and military, naval, and foreign affairs The number, but not the scope, of the committees was much reduced in 1946 Members of committees are in effect elected by caucuses of the two major parties in Congress, the majority party is given the chairmanship and a majority on each committee, and chairmanships are gained by seniority The presiding officer of either house may appoint special committees, including those of investigation, which have the power to summon witnesses and compel the submission of evidence The presiding officers also appoint committees of conference to obtain agreement between the two houses on the content of bills of the same general character To expedite business, the House of Representatives, emulating British practice, frequently converts itself into a committee of the whole, including the entire membership At such times the speaker calls on another member to act as chairman, and ordinary procedure is speeded up by special rules The American legislative committee system conducts most congressional business and is in some sense a check on the executive through its powers of scrutiny and investigation of government departments In France committees of the legislature are even more powerful in the conduct of government, but in Britain, though devices such as committees of the whole and of ways and means are used in the consideration of money bills and though large standing committees of the House of Commons exist, legislative committees are not as important in the system of government

Committee for Industrial Organization see CONGRESS OF INDUSTRIAL ORGANIZATIONS

Commodus (Lucius Aelius Aurelius Commodus) (kŏ'mōdŭs), 161–92, Roman emperor (180–92), son and successor of MARCUS AURELIUS He was a licentious prodigal who vaunted his strength in gladiatorial combats and decreed that he should be worshiped as Hercules Romanus He changed his own name to Marcus Commodus Antoninus and wished to rename the city of Rome after himself Many plots to assassinate him failed, but eventually he was strangled by a wrestler PERTINAX succeeded him

common, in agriculture, an unenclosed tract of land to uses of which a community or the members of a group are entitled In primitive communities, ownership of the soil typically has been communal When individual ownership has developed, common rights are rights that hold against the landlord's ownership of the soil In England before the Norman Conquest, the citizens of a neighborhood or town had common rights in at least some of the uses of land After the Conquest, what was left of these rights, as against those of the lord of the manor who had title to the soil, was the right of common The commons were then usually not arable but pasture or waste, and the rights of common concerned such matters as pasturage and heather or peat for fuel In various ways, especially through acts of INCLOSURE, landlords encroached more and more on rights of common until the middle of the 19th cent Many communities in England, however, managed to preserve their ancient commons, which today serve principally as city or village parks In the United States the commons of villages have even more usually become parks Boston Common, for example, retains the old name, and many New England villages have greens that are old common lands preserved See N S B Gras, *A History of Agriculture in Europe and America* (2d ed, 1940)

common law, in the widest sense, the legal system which first developed in England and was adopted by the countries which England colonized In more precise use, the term signifies only that portion of the system which has not been reduced to statutory formulation and which did not arise out of EQUITY, maritime law, or other special branches of practice The narrower meaning of common law epitomizes the method and history of the system In method it is law created by judges to meet the problems presented by actual cases, hence, unlike modern CIVIL LAW, it is not based upon the legislatively enacted STATUTE and CODE In its early historical development common law is largely a product of three English courts—King's Bench, Exchequer, and the Court of Common Pleas—which competed with other courts for jurisdiction and developed a distinctive body of doctrine Common law was originally (13th cent) so called because it was common to all England and, unlike the older customary law, was not limited to particular localities The application of a single system of law to England was among the chief methods used to consolidate royal power Early common law was somewhat inflexible It would not adjudicate a case which did not fall precisely under the purview of a particular WRIT, and except for a few types of lawsuit in which the object was to recover real or personal property, the only remedy which it provided was money damages Equity was created partly to overcome these deficiencies Until comparatively recent times there was a sharp division between common law (or legal jurisprudence) and equity (or equitable jurisprudence) Common law usually displayed a mixture of conservatism and progress On the one hand, the doctrine of *stare decens* [Latin,=stand by the decided matter] required that a court follow exactly the principles it had previously enounced, on the other, a constantly expanding body of precedents would permit the selection within limits of legal propositions to adjust doctrine to changing necessity In many instances, however, the courts failed to keep pace with social developments, and it was necessary to enact statutes to bring about needed changes Statutes, indeed, in recent years have superseded much of common law, notably in the fields of commercial law and criminal law Typically, however, in statutory interpretation courts have recourse to the doctrines of common law Increased legislation thus has limited but has not ended judicial supremacy, i e, the power of the courts to make a final determination of the law All Canada except Quebec and all of the United States except Louisiana, Puerto Rico, and the Virgin Islands follow common law American statutes usually provide that the common law, equity, and statutes in effect in England before the American Revolution shall be deemed part of the law of the jurisdiction See O W Holmes, *The Common Law* (1881), Sir Frederick Pollock and F W Maitland, *The History of English Law before the Time of Edward I* (1895), Sir Frederick Pollock, *The Expansion of the Common Law* (1904), T F Plucknett, *Concise History of the Common Law* (2d ed, 1936)

Commons, John Rogers, 1862–1945, American economist, b Hollansburg, Ohio, grad Oberlin, 1888 He also studied at Johns Hopkins and taught for many years (1904–32) at the Univ of Wisconsin Influenced by the other social sciences, Commons tried to broaden the scope of economics, especially in his noted *Legal Foundations of Capitalism* (1924) and *Institutional Economics* (1934) He was also interested in immediate social problems, chiefly those dealing with labor, and served on many government commissions which influenced legislation His other works include *Principles of Labor Legislation* (with J B Andrews, 1916, 4th ed, 1936) and *Industrial Government* (1921) He was one of the editors of *A Documentary History of American Industrial Society* (10 vols, 1910–11) and *History of Labor in the United States* (4 vols, 1919–35) See his autobiography, *Myself* (1934)

Commons, House of see PARLIAMENT

commonwealth, form of administration signifying government by the people and generally applied to self-governing bodies which are part of a whole Certain states of the American Union are known as commonwealths (Massachusetts, Pennsylvania, Virginia, and Kentucky), and the federated states of the dominion of Australia are known collectively as the Commonwealth of Australia In the same sense, the self-governing components of the British Empire are described as the British Commonwealth

of Nations The **Commonwealth** in English history was the government set up by the victorious army power in 1649 The monarch, Charles I, was beheaded and the Commonwealth was dominated from the first by Oliver Cromwell, who was by the Instrument of Government in 1653 made lord protector of the Commonwealth The subsequent government is usually known as the PROTECTORATE See A N. Holcombe, *Foundations of the Modern Commonwealth* (1928)

Commonwealth Fund, established in 1918 by Mrs Stephen V Harkness "for the welfare of mankind " Its headquarters are in New York city Contributing in its first 20 years to the early development of child guidance clinics and the strengthening of rural hospitals and health departments, the Fund later emphasized the broadening and integration of medical education, experimental health services, and medical research The Commonwealth Fund fellowships are offered to graduate students and civil servants from the British Commonwealth for study in the United States, and fellowships for advanced training in medicine and allied fields are given to aid teaching and research here The Fund publishes an annual report and books and pamphlets growing out of work which it helps to support

Commonwealth of Australia, British dominion including continental AUSTRALIA and TASMANIA

commune (kŏ'mūn), in medieval history, any town which grew up in continental Europe after the fall of the Roman Empire More particularly, a commune was a city to which charters of liberties were granted by the sovereign or the feudal overlord To build defenses, regulate and improve trade, raise taxes, and maintain order, organization was necessary The earliest attempts at united action of the burghers involved an oath binding them together in a personal bond By the late 12th cent., when cities were well established, all who chose to live in them had to take an oath acknowledging the authority of the commune As part of the demesne of a lay or ecclesiastic suzerain or of a king or emperor (see FEUDALISM), the town owed allegiance to its lord and paid him tribute and, in wartime, service As sources of wealth, the communes were often favored by their suzerains, who confirmed their rights in liberal charters Disputes, however, often arose between communes and their overlords In the struggle between kings and nobles, the kings usually strengthened the communes and sought alliance with them By the 16th and 17th cent , when European states (notably France and Spain) became centralized, the privileges of the communes were gradually withdrawn The extent of their liberties and the details of their organization varied widely A common feature was the presence of elected councils The magistrates were usually called consuls, *podestàs*, and *capitouls* in Italy and S France, *échevins* and *jurés* in N France and the Low Countries, senators and *Ratsherren* in Germany Guilds and corporations gained a prominent share in the government Militia insured the defense The earliest communes arose in N Italy In the struggle between emperors and popes, the communes forming the LOMBARD LEAGUE gained virtual independence, later usurped by local tyrants The commune of ROME was established by Arnold of Brescia in 1144 The movement spread north In Germany, cities such as FRANKFURT, COLOGNE, NUREMBERG, AUGSBURG, and LÜBECK became republics immediately subject to the emperor (imperial and free imperial cities) Others, such as MAGDEBURG, held charters that became models for numerous towns in N Germany, Bohemia, and Moravia. In the Low Countries, e g , in FLANDERS, communes arose very early and enjoyed very wide privileges. In S France, ARLES and TOULOUSE were outstanding examples of self-governed communes, such in Spain was BARCELONA In Western Europe, notably France and England, rural communes were also formed to protect the common interests of villagers; these persisted in modified forms In modern usage the word *commune* thus usually denotes a rural administrative division

Commune of Paris. In times of conflict or anarchy, Paris, like many other cities of Western Europe, has tended to revert to a communal form of government. This happened in the Hundred Years War (see MARCEL, ÉTIENNE), during the FRONDE, and in later revolutions. In the FRENCH REVOLUTION, the Commune of Paris, led by Marat, Chaumette, and Hébert, represented the will of the urban proletariat pressing upon the central government and the provinces In the Revolution of 1848, tension between the Parisian proletariat and the conservative provinces was shown in the JUNE DAYS At the end of the FRANCO-PRUSSIAN WAR, in 1871, the Parisians opposed the national government headed by Adolphe THIERS and the national assembly at Versailles as too conservative and too ready to accept a humiliating peace with Prussia Thiers, after failing to disarm the Parisian national guard, fled (March, 1871) to Versailles, the Parisians set up a communal government, and reconciliation between *communards* and *Versaillais* became impossible, while the victorious Prussians looked on with neutral eye. The *Versaillais* troops began a **siege** (the second siege of Paris in three months) Though the *communards*, by no means all communists, represented many shades of political opinion (followers of BLANQUI, of PROUDHON, and of the First International as well as neo-Jacobins such as DELESCLUZE), they fell, as the long siege drew to an end, under the sway of the extremists, who shot hostages (including the archbishop of Paris) and burned the Tuileries palace, the city hall, and the palace of justice On May 28 the Versaillais forces under MacMahon and Gallifet entered the city. Severe reprisals followed, with more than 17,000 people executed, including women and children Communes had also been formed and suppressed in other cities, notably Saint-Étienne, Le Creusot, Marseilles, and Toulouse See Frank Jellinck, *The Paris Commune of 1871* (1937)

communicable diseases, those diseases caused by minute living organisms and transmissable from an infected person or animal to another person or animal. Formerly those diseases transmitted by direct contact with an infected person or animal or his infected secretions were commonly called contagious diseases, but the tendency today is to refer to all transmissible infections as infectious or communicable diseases. Among those that are usually spread by direct contact are some caused by bacteria (e g , diphtheria, scarlet fever, and acute infectious conjunctivitis) and some caused by viruses (e g , chickenpox, measles, mumps, smallpox, influenza, and the common cold) Infectious diseases which are usually contracted indirectly through milk, water, or other food substances taken into the body include typhoid fever and cholera, both caused by bacteria Infectious diseases spread by insect carriers include yellow fever, caused by a virus, and malaria, caused by a protozoan (a one-celled animal) Rabies is caused by a virus, and the disease is contracted through the bite of an infected dog or certain other mammals Tetanus is an infectious disease usually contracted through contamination of a wound with soil or other material containing the causative bacteria Rocky Mountain spotted fever is caused by a rickettsial organism (a microorganism similar to a bacterium) and is transmitted by the bite of certain ticks Other communicable diseases of which the mode of transmission is not fully understood include poliomyelitis and encephalitis lethargica or sleeping sickness Programs for the reduction of communicable diseases in a community include education of the public to the need for building up the resistance of all individuals through proper diet and other means and stressing the necessity for vaccination and for inoculations *against* diphtheria and other diseases to which immunity can be acquired The attending doctor reports certain communicable diseases to the health department, for some of these isolation of the patient is required until the period of communicability is thought to be ended Those who have been exposed to a readily transmissible disease are usually quarantined until the incubation period for the particular disease has passed Fumigation as a means of destroying germs after an illness is no longer considered of value Of great importance in preventing the spread of a disease to others in a household is the constant disinfection or sterilization of all utensils, clothing, bedding, and other articles which have been in contact with the patient and the thorough cleansing of the room with soap and water See H L Mustard, *An Introduction to Public Health* (2d ed , 1944), T L Waterman, *Nursing for Community Health* (1944)

communication, the transfer of thoughts and messages, as contrasted with transportation, the transfer of goods and persons The basic forms of communication are by signs (sight) and by sounds (hearing, see LANGUAGE) The reduction of communication to WRITING was a fundamental step in the evolution of society for, besides being useful in situations where speech is not possible, it permits the preservation of communications, or records, from the past It marks the beginning of recorded history Except for certain devices of limited application (e g , wigwagging, smoke signals, the heliograph by day and lights or fires at night, sounds such as bugles or firearms, and the use of carrier pigeons), messages before the invention of the telegraph could be carried only as fast as a man could travel Improvements in traveling facilities were thus improvements in communication But with the invention of the TELEGRAPH the two were divorced The TELEPHONE and RADIO extended the field of practically instantaneous communication which electricity made possible The revolution which instantaneous communication has worked in human society is profound It made possible greater centralization in business and government, and it widened the horizons of every community. It tends to produce an amalgamation of cultures, arts, techniques, and languages In the United States, radio and television communication are controlled by the FEDERAL COMMUNICATIONS COMMISSION The international phases of transport and communications are under the direction of the Office of Transport and Communications of the Dept. of State. An International Telegraph Union was established at a convention in Paris in 1865, and in 1885 provision was made for regulation of international telephone services. In 1906 the first international radiotelegraph conference was held in Berlin. A convention in Madrid (1932) provided for the fusion of the International Telegraph Union and the International Radio-Telegraph Union into a single organization, the International Telecommunications Union In 1947 the Madrid convention was revised by a plenipotentiary conference at Atlantic City, N J. See Keith Clark, *International Communications* (1931), D. O Woodbury, *Communication* (1941), M M. Willey and S A. Rice, *Communication Agencies and Social Life* (1933), Alfred Still, *Communication through the Ages* (1946)

communion see EUCHARIST

communism. Even before the vague misuse of the word *communism* in recent years by some persons to mean any radical or even liberal policy of social reform, it was somewhat loose in meaning Fundamentally, communism is the system of society in which property (especially real property and the means of production) is held in common, i e , by all members of the society and not by individuals Thus, the EJIDO of the Mexican Indians and the property-and-work system of the INCA were both communist, though the one was a matter of more or less independent communities cultivating their own lands in common and the other a type of community organization within a highly organized empire headed by an emperor (the Inca) and nobles Usually the term is defined to include such types of community living as that of the Jesuit REDUCTIONS in Paraguay and occasionally is extended to mean even the communal life instituted in MONASTICISM There is evidence that the life of the early Germans at least had communal aspects, and in the 19th cent and early 20th cent there was fierce argument as to whether or not "primitive" society in Europe was essentially communist This dispute, when the academic dust had settled, was left unresolved, its effect, however, was far reaching There is some question as to whether it is possible to speak of any concept of property (except immediate personal property) among nomadic tribes, and a proper distinction between tribal organization and communal property holding is not easy to draw The idea of the Golden Age, which appeared very early among the Greeks, is a concept of a pristine and paradisiacal world of communal bliss and harmony without the institution of private property Communism as a theory of government and social reform may be said, in a limited sense, to have begun with this Greek vision of the Golden Age and particularly with Plato, who in the *Republic* outlined a society with communal holding of property, but also with a hierarchic social system including slavery, this has by some been called "aristocratic communism " The Neoplatonists revived the idea of common property, which was also strong in some religious groups such as the Jewish ESSENES and certain early Christian communities These religious opponents of private property held that property holding is evil as being worldly and that God had created the world for the use of all mankind The first of these ideas was particularly strong among Manichaean and Gnostic heretics, such as the Bogomils, the Cathari, and the Albigenses, but both were known among both the orthodox and the heretical (e g , the Franciscans and the Waldenses) Paradoxically feudalism, which had as its base the ubiquity of private ownership of land (no land without a lord) also had on the lower level of the MANORIAL SYSTEM common cultivation of the fields and communal use of the village commons, which might be vigorously defended against the lord It was partly on the basis of these common rights that the rebellious peasants headed by Wat Tyler in 14th-century England and the insurgents of the great Peasants' War in 16th-century Germany advocated common ownership of land and of the means of production. The older religious elements were, however, also powerful, the Anabaptists under Thomas Münzer were the real upholders of communism in the Peasants' War, and they were savagely punished for their beliefs This same mixture of religious enthusiasm and economic reform was shown in 17th-century England by the Levellers, and more particularly by the tiny sect of the Diggers, headed by Gerrard Winstanley The Diggers actually sought to put their theories into practice on expropriated land, thus undertaking unimportant but significant action in protest against the inclosures of land In general, however, the religions that came into being with the Reformation offered (according to the theories of Max Weber and R. H Tawney) a favorable climate for the development of capitalism Capitalism, reinforced by the Industrial Revolution, which began in the 18th cent , brought about the conditions that gave rise to modern communism. The living conditions of the workers in the new industrial factories were by the beginning of the 19th cent. so appalling that even highly conservative humanitarians saw the necessity of some relief and favored such measures as the

early factory acts in England The less conservative evolved more drastic schemes to cure this evil and the bad situation of the workers on the land. On the Continent the thinkers of the Enlightenment challenged accepted beliefs and prepared the way for the French Revolution Jean Jacques Rousseau incorporated the idea of the primitive Golden Age into his theory of government, and in Germany Immanuel Kant attacked the institution of private property The French Revolution itself established principles of social and political liberty and social equality, but it was in the end a victory for the property-conscious bourgeoisie The voice of BABEUF was, indeed, raised against economic inequality and the power of private property, and in some ways he may properly be considered the first modern communist Though he was guillotined, his movement (Babouvism) lived on, and the organization of his secret revolutionary society on the "cell" system was to be developed later as a means of militant revolution In the early 19th cent ardent opponents of the waxing industrial society of soot and smoke created all sorts of protest theories, most extreme among them the idealistic anarchy typified by the young poet Shelley Already what is generally known as utopian communism had been well launched by the comte de Saint-Simon Others took up the idealistic movement called after the literary idealism expressed in the 16th and 17th cent by such works as Sir Thomas More's *Utopia*, Tommaso Campanella's *City of the Sun*, and James Harrington's *Oceana* In the 19th cent the idealists were not content with literary expression They gathered followers, founded small cults, and attempted to launch COMMUNISTIC SETTLEMENTS, particularly in the United States Most notable among such men were Étienne CABET and Charles FOURIER Pierre Joseph PROUDHON, though he did not adopt the principle of common ownership, exercised great influence by his attacks on the evils of private property holding in his day A host of critics and idealistic revolutionists arose in Germany More important was the survival or revival of Babouvism in secret revolutionary societies in France and Italy, intent on overthrowing the established governments and establishing a new, propertyless world It was among them that the words *communism* and *socialism* took root The terms were used vaguely and more or less interchangeably, although there was an ill-marked tendency to call those who stressed a strong state as the owner of all means of production socialists and those who stressed the abolition of all private property (except immediate personal goods) communists Among the chief leaders of such men were the Frenchmen Louis BLANC and the far more radical Louis Auguste BLANQUI They had great influence on the Revolution of 1848 In the epoch-making year of 1848 appeared also *The Communist Manifesto* of Karl MARX and Friedrich ENGELS. With it the radical movement took a completely new turn, for very soon Marxian theories and programs (see MARXISM) dominated left-wing thought Although the party (founded 1847) for which the manifesto was written was called the Communist League, the whole movement which went forward with the founding of the First INTERNATIONAL and of Social Democratic parties in the various countries of the Western world is generally called SOCIALISM and is sketched under that heading The modern form of Communism (written with a capital C) began its development with the split in 1903 within the Russian Social Democratic party (founded by Plekhanov in 1898) The more radical wing, the Bolsheviks, were led by LENIN and advocated immediate and violent revolution instead of gradual and constitutional means of bringing about the downfall of capitalism and the establishment of an international socialist state across the world (see BOLSHEVISM AND MENSHEVISM) The triumph of the Bolsheviks within the Russian party and even more their triumph in the RUSSIAN REVOLUTION of 1917 gave them the leadership in socialist action They constituted the Communist party in 1918 Meanwhile the First World War had shaken the socialist movement as a whole by splitting those who cooperated with the governments in waging the war from those who maintained a stand for revolution against all capitalist government Chief among the stalwart revolutionists were the Communist party in Russia and the SPARTACUS PARTY in Germany These radicals were far more active and tended to attract the more fiery reformers across the world The success of the revolution and the establishment of a working socialist state in the USSR tended to give Russia leadership and Leninism grew stronger Communist revolts immediately after the war failed in Germany and the attempt of the Spartacus party to seize control of the German republic was put down in Jan , 1919. The briefly successful Communist state under Bela KUN in Hungary was also repressed with great bloodshed. The active Leninist group withdrew totally from other Socialists; with the German Communist party and various splinter groups of left-wing Socialists the Russians founded the Third International or COMINTERN in 1920. Henceforth, the term Communism meant the beliefs of the adherents to the parties founded under the aegis of the Comintern; the more moderate and less active older parties are generally meant by the term Socialism. The program of the Leninists—and, therefore, of all the Communist parties—called for uniting all the workers of the world for the coming world revolution, which would be followed by establishment of the dictatorship of the proletariat and state socialism, as the ends of the revolution were achieved a classless society would develop, the state would wither away, and there would emerge a universal, international Communism, with work and plenty for all and never-ending peace The parties were organized on a hierarchic basis with secret and active cells of believers as the broad base; there was established the rule of iron discipline, and not even the least individual or group deviation from the established policy of the party was tolerated The party is made up only of the elite, only those approved by the higher members of the party as being reliable, active, and subject completely to party rule Thus, although the party in practice has the full weight of political power in Russia, it constitutes only a relatively small number of people (for a brief description, see UNION OF SOVIET SOCIALIST REPUBLICS) Communist parties were organized in the countries of the world and were most active, particularly in trying to win control of labor unions and in fomenting labor strife so as to bring about sooner the downfall of capitalism Naturally the Communist program as well as the international character of the Comintern and the secrecy of the organization caused violent reaction in the other countries of the world, heightened by fears of the bloodshed that had accompanied the Russian Revolution and the experiment in Hungary (though the bloodletting by the counterrevolutionists was not much publicized) Violent antipathy has led occasionally in the democracies to fierce and hysterical "Red hunts," which have unfortunately claimed as their victims a great many non-Communist liberals as well as the Communists, who in their theory anticipate such reactions and by their actions provoke them The Communist parties because of Russian success became more and more tightly bound to the USSR, and all Soviet government policies became a part of the party "line" The local parties continued to have a hand in purely local matters, and because the Moscow influence is so patent at times of international political crisis, non-Communists perhaps tend to exaggerate that influence greatly and fail to appreciate the coordination of the action of the individual (obliged to accept party ruling without question), the cell, and the party as a whole The death of Lenin (1924) brought on a struggle for power in the USSR which was ideological as well as practical After the triumph of STALIN, his rival TROTSKY in exile created a Fourth or Trotskyist International, with the idea of "permanent revolution" as its fundamental doctrine, this form of Communism had a considerable number of followers for a time but ultimately did not flourish Stalin's program of building Russia as the model and base of Communism in the world had the effect of tying Communist and Russian policy even more closely together, an effect intensified by the "monolithic unity" produced by the "purges" of members accused of disidence in the USSR Another effect was even more increase in the power of the state, which showed no signs of withering away Except for the inconsiderable Mongolian People's Republic no other Communist state was created before the Second World War, when the Baltic republics were absorbed after the war had begun, they were incorporated into the Soviet Union Though in the 1920s the Communist push in China was not successful, in the 1930s it was resumed and gained great power in N China In the Second Chino-Japanese War there was some cooperation of the Communists and the Chinese Nationalists against the Japanese invader, but the cooperation was halting and unsatisfactory In several Western countries in the 1930s, the Communists adopted a policy of coordinating their efforts with those of other leftist and liberal parties for liberal legislation and government though without compromising their own beliefs. Notable fruits of this move were the Popular Front governments in France and Chile There were never any formal alliances and there was always a tendency to return to the older Communist policy of unqualified political opposition—a return which became fixed soon after the end of the Second World War in 1945 In the war the USSR perforce was made an ally of the Western capitalist nations by the German attack in 1941 As part of cooperation with the Allies, the USSR brought about (1943) the dissolution of the Comintern, and in many quarters great hopes were entertained of continued cooperation, hopes that were intrinsic in the formation of the United Nations. Those hopes were dashed by the widening rift between the USSR and the Western democracies, especially the United States. Communism had been vastly strengthened by the winning of many new nations in the zone of Soviet influence and strength in E and E central Europe Governments strictly modeled on the Russian Communist plan were installed in the "satellite" states—Poland, Czechoslovakia, Hungary, Rumania, and Bulgaria A Communist government was also created under Marshal TITO in Yugoslavia, and Yugoslavia was a member of the COMINFORM, the coordinating international Communist body, but trouble between Tito and the other Communist countries led (1948) to the expulsion of Yugoslavia from the Cominform and the branding of Titoism as deviationist and not true Communism In Greece a prolonged struggle between the non-Communist government and Communist-dominated rebels came to a halt in 1949 with the government still in control It should be noted that, although there had been at some time in the past a Communist movement of more or less strength in each of these countries, there had been a Communist majority in none In China, however, the movement had grown increasingly strong in the war, and open warfare between the Communists and the Nationalists under CHIANG KAI-SHEK led to the failure of Chiang's divided administration and the consequent Communist victory in 1949 In May, 1950, they held all of China except Formosa Thus two of the three most populous nations of the world (India is the other) are Communist A Communist administration was also installed in N Korea and in effect a Communist regime was set up in the Russian Occupation Zone of Germany. The guerrilla forces in Indo-China have set up a Communist government in opposition to the established one, and rebels in the Philippine Islands have a quasi-government of Communist stamp The other Communist parties of the world vigorously and actively support the unified policies of these established Communist governments—policies which are commonly viewed by non-Communists as being Russian-dictated The party is particularly strong in Italy and in some Latin American countries (particularly in the labor unions) It also commands considerable strength in France and has at least some following in the other countries of the world, even those (e g , Spain) where Communist activities are strictly banned See also COMMUNIST PARTY See *Bolshevism, Fascism, and Capitalism* (a symposium, 1932), Sidney and Beatrice Webb, *Soviet Communism* (2d ed , 1941), Harold J Laski, *Faith, Reason, and Civilization* (1944), E H Carr, *The Soviet Impact on the Western World* (1947)

communistic settlements, communities practicing common ownership of goods Communistic settlements were known in ancient and medieval times, but the flowering of such groups occurred in 19th-century America Here a number of German pietistic sects established such communities as the AMANA SOCIETY, Iowa, Harmony, Pa (see HARMONY SOCIETY), ZOAR, Ohio, and AURORA, Oregon Similar settlements were founded by the Shakers, Mormons, Mennonites, Dukhobors, and Jansonites (see BISHOP HILL) Unique religious settlements were the ONEIDA COMMUNITY, HOPEDALE, Mass , and the Brotherhood of the New Life (see HARRIS, THOMAS LAKE) Another group were non-Christian, often antireligious, and utopian The leading communities in this group were of two types, those founded by the followers of Robert OWEN (including NEW HARMONY and NASHOBA) and the numerous "phalanxes" (notably BROOK FARM) formed on the principles of Charles FOURIER Belonging to neither of these groups were the Icarian settlements, led by Étienne CABET, the anarchistic villages of Josiah WARREN, and various other communities, some of which still exist The religious groups, unified by strong faith and authority, tended to prosper and outlive the secular groups, the latter, however, often attracting brilliant and original personalities, provided a ferment of new thought The chief recent attempts at setting up such colonies have been made in Palestine, where there are a number of successful agricultural collectives See W A. Hinds, *American Communities* (2d ed , 1908), Charles Gide, *Communist and Cooperative Colonies* (1928, Eng tr , 1930), V F Calverton, *Where Angels Dared to Tread* (1941)

Communist party, in the United States, a part of the world-wide political movement of Communism which has Karl Marx and Lenin as its prophets and Joseph Stalin as its mentor It had its beginnings in 1919 when at least three Communist factions, overwhelmingly foreign-born in origin, were organized by dissident left-wing elements of the American SOCIALIST PARTY They were almost immediately driven underground in the hysterical anti-Red drive of U S Attorney General A. Mitchell PALMER. The two most important underground groups merged in May, 1920, and in Dec , 1921, several other factions joined them in a political organization which bore the official name Workers' (Communist) party for most of the 1920s. The party was under the aegis of the Third (Communist) International or COMINTERN. With the decline of the INDUSTRIAL WORKERS OF THE WORLD, the party became the leading revolutionary organ-

nation in the United States, having as its avowed aim the overthrow of capitalism and the establishment of a dictatorship of the proletariat in a Soviet America. Trade unions offered the most fruitful field for its activities, and Communists provided the leadership in many industrial strikes in the 1920s, notably the strike of furriers in New York city and the strike of textile workers in Passaic, N J. in 1926 Not particularly successful at first in capturing established trade unions, it followed from 1929 to 1935 an equally unsuccessful policy of setting up its own rival unions Meanwhile it exploited the weaknesses of American democracy and played a large part in making *causes célèbres* out of the SACCO-VANZETTI CASE, the SCOTTSBORO CASE, and the imprisonment of Thomas J MOONEY (in the last two cases the Communists were accused of diverting defense funds to party purposes) In 1935, following the new line laid down at the Seventh World Congress of the Comintern of that year, the U S Communist party began "cooperating" with liberal groups It set up, or infiltrated into, all sorts of organizations concerned with various aspects of American life These, ostensibly directed and supported mostly by nonparty members, including those called "fellow travelers," who were in complete sympathy with Stalinism, came to be known as "Communist fronts" The party's Trojan-horse technique of boring from within brought many trade unions under its control, and Communists were the invaluable allies of John L Lewis in establishing the CONGRESS OF INDUSTRIAL ORGANIZATION (in 1949–50 the C I O. expelled most of its Communist-dominated unions) Vociferously anti-fascist, the party recruited American volunteers (the Abraham Lincoln Brigade) for service in the Loyalist cause in the Spanish civil war However, its ceaseless attacks on Nazi Germany ended abruptly with the signing of the Hitler-Stalin nonaggression pact in Aug., 1939, and the Second World War, which immediately followed, was denounced as an "imperialist" war on the part of Great Britain and France. American defense preparations and aid to the Western democracies were vigorously opposed as "war-mongering," and Communist-dominated unions struck often and long in 1939–41 In Dec , 1940, the party severed its affiliation with the Comintern in order to avoid penalties under new Federal laws which required foreign-controlled organizations to register with the Federal government The party nevertheless continued to follow the Comintern line, and in June, 1941, when the Nazis attacked Russia, the character of the war, for Communists, was changed overnight from "imperialist" to "democratic" The party now went all out in its support of the war and faithfully echoed the Stalinist demand for a second front One year after the Comintern was formally dissolved in May, 1943, the U S Communist party "disbanded" as a political party to become the Communist Political Association, which adopted a resolution deprecating class war and announced that it favored cooperation with "progressive" capitalism With the end of the war, however, the Communists returned to their traditional Marxist-Leninist program Earl R BROWDER, Communist chief accused (April, 1945) of "right deviationism" by Jacques Duclos, French Communist leader, was summarily deposed and later expelled from the party, which was reconstituted in July, 1945 After the "cold war" with Russia set in, the party came under increasing attack in the United States In March, 1947, President Harry S Truman barred Communists or those aiding or sympathetic to Communism (and fascism) from employment in the executive branch of the Federal government, prescribed certain standards of loyalty for employees in that branch, and appointed the Loyalty Review Board For its part, Congress passed in the same year, over the President's veto, the TAFT-HARTLEY LABOR ACT, which, among other provisions, denies the facilities of the National Labor Relations Board to unions which fail to file affidavits avowing that their officers are not Communists The confessions of ex-Communists such as Louis Budenz and Whittaker Chambers (see HISS, ALGER) and increasing evidence of Communist espionage led to highly publicized investigations by Congress (especially by the House Un-American Activities Committee), the Federal Bureau of Investigation, and Federal grand juries On Oct 14, 1949, 11 top Communist leaders, including Eugene Dennis, the party's general secretary (its chief officer), were convicted on charges of conspiring to overthrow the U S government after a hectic nine-month trial before Federal Judge Harold R Medina in New York city Sentences of five years in prison and fines of $10,000 each were imposed on 10, the 11th was given three years and also fined. The Communist party's well-disciplined membership has always been small, and its frequent changes of political belief in accordance with every change in the political policy of the USSR have been stigmatized as contemptible or ludicrous, thus causing a lessening of its influence, which is strongest among the groups that are victims of discrimination in U S society, idealists (especially young idealists) who wish to eliminate the evils of industrial society, and direct-action trade unionists. The party made its best showing in the depression year of 1932, when its presidential candidate, William Z FOSTER, polled slightly over 100,000 votes However, its political influence extends beyond the number of enrolled party members Communists have been prominent in the AMERICAN LABOR PARTY of New York state since its founding in 1936, and in the 1944 primary a Communist-led faction won control of that party Communists also took credit for and enthusiastically supported the presidential candidacy of Henry A WALLACE in 1948 (see also PROGRESSIVE PARTY) *The Communist Party: a Manual on Organization* (1935), an official party pamphlet by one J Peters, has frequently been cited as evidence of its subversive aims See Eugene Lyons, *The Red Decade the Stalinist Penetration of America* (1941), James Oneal and G A Werner, *American Communism a Critical Analysis of Its Origins, Development, and Programs* (new and rev ed , 1947)

community chest, cooperative organization of citizens and social welfare agencies in a city. It has two purposes, to raise funds through an annual campaign for its member agencies and to budget the funds raised The chest is administered by a community welfare council or a council of social agencies, to represent the idea of administering, as well as collecting, the funds, the national association in 1927 took the name Community Chests and Councils The idea of cooperative collecting for charitable purposes originated in Liverpool, England, in 1873 and, in the United States, in Denver in 1887 In 1900 the Cleveland chamber of commerce went a step further and assumed responsibility for endorsing the agencies seeking funds, as a result Cleveland in 1913 brought almost all its welfare organizations together in the Cleveland Welfare Council

commutation of sentence, in law, reduction of a sentence for crime by action of the executive head of the government Like PARDON, commutation of sentence is a matter of grace, not of right, it is distinguished from pardon, however, in that the conviction of crime is not nullified The commutation, hence, may be granted on condition that the criminal observe certain restrictions for the balance of his original sentence

Comnenus (kŏmnē'nus), family name of the Byzantine emperors ISAAC I (1057–59), ALEXIUS I, JOHN II, MANUEL I, ALEXIUS II, and ANDRONICUS I (1183–85) and of the historian, Princess ANNA COMNENA Though unable to turn back the forces which made for the eventual downfall of the BYZANTINE EMPIRE, they temporarily reestablished the imperial authority and were generally able rulers Their reign saw a revival of Hellenism and great intellectual ferment A branch of the family founded the empire of Trebizond (see TREBIZOND, EMPIRE OF) after the fall of Constantinople in 1204

Como (kō'mō), city (pop 42,569), capital of Como prov , Lombardy, N Italy, at the southwestern end of Lake Como, N of Milan, near the Swiss border First a Roman colony, it became an independent commune in the 11th cent and was frequently at war with, and ruled by, Milan Later under Spanish and Austrian domination, it was liberated when Garibaldi entered the city in 1859 In the Middle Ages and Renaissance, craftsmen, architects, and sculptors from Como were much appreciated throughout Italy The city is a tourist center and manufactures silk It has a remarkable cathedral (14th–18th cent), a town hall (1215), and several Romanesque churches

Como, Lake, Ital *Lago di Como* or *Lario*, c 30 mi long and from ½ to 2½ mi wide, Lombardy, N Italy, in the foothills of the Alps It is formed by the Adda river, which enters it near Colico and leaves it at Lecco, and is shaped like a reversed Y A road along its eastern shore connects Milan with the Engadine (Switzerland) The lake is famous for its beauty Handsome villas line its shores, especially at the resorts of Tremezzo, Cadenabbia, Menaggio, Bellagio, and Varenna

Comodoro Rivadavia (kōmōdhō'rō rēvädhä'vyä), town (estimated pop 22,000), SE Argentina, on the Gulf of San Jorge It is an important center of oil production Wool and hides are also shipped

Comonfort, Ignacio (ēgnä'syō kōmônfôrt'), 1812–63, Mexican general and president (1855–58) He was one of the leaders in the liberal Revolution of AYUTLA, which in 1855 overthrew SANTA ANNA and installed Juan ÁLVAREZ in the presidency Comonfort became acting president upon the resignation of Álvarez, with his cabinet, particularly Benito JUÁREZ and Miguel LERDO DE TEJADA, he continued the anticlerical liberal program and embodied it in the constitution of 1857 In Dec , 1857, Comonfort took office as president, elected under the new constitution The reform program created a furor and awoke rebellion. Comonfort—a paltering, half-hearted liberal—attempted to moderate and was deserted by the liberals He allowed the reactionaries to seize power, then turned against them Unsupported by either party and opposed by public opinion, he resigned and fled (Jan , 1858) to the United States. He returned to fight against the French invaders and was killed in battle

Comoro Islands (kŏ'mûrō), French overseas territory (c 650 sq mi , pop 141,754), an archipelago in the Indian Ocean, between Madagascar and Mosambique. The capital is Dzaoudzi. The islands (Grande Comoro, Mayotte, and Anjouan are the largest) are an archipelago of volcanic origin. They grow and export coffee, vanilla, and cacao France acquired the islands in 1886, and from 1914 to 1946 they were administered with Madagascar The Comoros are represented in the French parliament

Companys, Luis (lwēs' kômpä'nēs), 1873–1940, Catalan statesman After the Spanish revolution of 1931 he proclaimed Catalan autonomy within the Spanish republic, and in 1933 he was elected president of CATALONIA Pressed by extremists, he declared (1934) Catalonia fully independent, but the subsequent revolt failed, and he was jailed The leftist electoral victory of 1936 brought him back to power, and he headed the Catalan government until Francisco Franco's victory in 1939. He was executed

company union: see UNION, LABOR

compass. 1 In mathematics, an instrument for making circles and measuring distances Frequently called a pair of compasses, it consists of two legs which are attached to a pivot and are pointed at the free ends, usually a pen or pencil may be substituted for one of the points **2** In navigation, an instrument for determining direction The mariner's compass consists of a magnetic needle freely suspended so that in the earth's magnetic field it indicates the north and south poles Use of the compass by the early Chinese is probably legendary The first known reference in European literature dates from the 12th cent "Boxing the compass" is naming the 32 points in order starting from north (N, N by E, NNE, etc) A compass first used on airplanes during the Second World War is known as a flux-gate compass or gyro flux-gate compass It contains a gyroscopic stabilizer to keep it in a horizontal plane despite the movements of the airplane and a set of coils which are sensitive to the earth's magnetic field The magnetic currents are converted to electrical impulses which operate a hand on a dial This type of compass can be used much nearer to the poles than can the ordinary magnetic compass See also GYROSCOPE

compass plant or rosinweed, large, coarse North American perennial plant (*Silphium laciniatum*) with resinous juice, sunflowerlike blossoms, and deeply cut leaves that tend to point north and south It has been used medicinally and is sometimes cultivated Other plants of similar leaf arrangement are sometimes called compass plants

compensation, workmen's · see WORKMEN'S COMPENSATION

competition, in economics, rivalry in supplying an economic demand or in acquiring an economic service or good Sellers compete with other sellers, and buyers with other buyers In ancient times competition among merchants in foreign trade was common, but that among retail dealers and among producers is largely modern, a characteristic of mercantile and industrial expansion after the Middle Ages By the 19th cent economic competition, at least within the national state, had come to be regarded as the total of the particular forces causing the buyer to buy and the seller to sell, the prices being fixed by SUPPLY AND DEMAND Early capitalist economists, such as the Manchester school, argued that these forces worked better without any effort at regulation or control Perfect competition supposed conditions of absolute freedom of trade, widespread knowledge of market conditions, easy access of buyers to sellers, and the absence of all action restraining trade by agencies of the state After c 1850 practical limitations to perfect competition became evident, as industrial and commercial combinations, cooperatives, and trades unions arose to hamper it Some governments attempted to impose competition by legislation, e g , the SHERMAN ANTI-TRUST ACT of 1890, but the litigation involved in enforcing such legislation proved cumbersome and uncertain A later development was the acceptance of the fact of industrial and commercial combination by governments, together with an effort to apply regulation, whether administered by the state or by the activity concerned, such a theory was inherent in the development of cartels in Germany and in the American National Industrial Recovery Act of 1933 Governments have also accepted the existence of practical monopolies in the field of public utilities, where competition has proved wasteful, and have regulated and sometimes administered such services in the public interest. See A R Burns, *Decline of Competition* (1936).

Compiègne (kōpyĕn'nyu), town (pop 15,392), Oise dept , N France, NE of Paris Dating from Roman times, it was a royal residence from the Merovingian period The château, rebuilt for Louis XV by J. A Gabriel, was used by Louis XVI, Napoleon I,

and Napoleon III The town hall is a handsome early Renaissance structure. Compiègne was the scene (1430) of Joan of Arc's capture by the Burgundians In a railroad car in the nearby Forest of Compiègne the armistice of Nov 11, 1918, was signed; in 1940, Hitler forced the French to sign the armistice of June 22 in the same car Taken to Germany, the car disappeared The national monument was destroyed by the Germans

complex, term commonly used to indicate a group or system of ideas which originates in the mind of an individual as the result of an experience or set of experiences of high emotional content Repressed from the conscious mind, it continues, nevertheless, to show its presence through the subsequent mental activity and behavior of that individual The more or less complete dominance of a group of ideas making up a complex over the mental activity of an individual gives to a complex its abnormal or pathological significance See INFERIORITY COMPLEX and OEDIPUS COMPLEX

composite order see CORINTHIAN ORDER

composition, in primitive and medieval law, prevention of retribution for acts of violence by payment of money to the injured person or his family Failure to make the payment may justify retaliation in kind against the offender or his family In many societies the amount paid varied according to the rank of the person injured or slain Composition reflects a transition from a system of feuds or blood revenge (see VENDETTA) to one where socially dangerous acts are primarily a concern of the state rather than of private persons and their families alone The exaction of the payment still recognizes the outrage to the person and the family as the prime offense, but it tends to discourage disorder by providing a substitute for retributive killing or other violence When, in addition to composition, a fine must be paid to the state, the dangerous act approaches the modern conception of a crime (see CRIMINAL LAW) One of the most striking instances of composition is wergild [Old Eng , =man's price], the payment made by a murderer to the family of a murdered person This institution was known in all Germanic cultures and was widespread in many parts of the world

compost (kŏm'pōst), material mostly of organic origin which may act as a FERTILIZER for the field or garden but which is applied mainly to increase the HUMUS content of the soil, thereby improving its physical condition It is usually made by collecting animal MANURE and vegetable wastes mixed with a small proportion of soil and storing the mixture in heaps or bins until it has decayed Clippings from the lawn, plant prunings—except diseased parts which should be destroyed and woody material which is resistant to quick decay—fallen leaves, vegetable tops, and most garbage (except fats) can be profitably used for compost for the garden

Compostela, Santiago de, Spain see SANTIAGO DE COMPOSTELA

compound, any substance composed of two or more elements in chemical combination and having a definite composition by weight A compound is homogeneous, i e., each MOLECULE of it is like any other molecule For example, water is a compound of hydrogen and oxygen, its molecule contains two atoms of hydrogen in chemical combination with one of oxygen A compound has certain definite properties which are peculiar to itself and are distinct from the properties of its constituents Table salt, for example, although composed of the metal sodium and the greenish gas chlorine, exhibits properties peculiar to itself and does not resemble either of its constituents In general, compounds can be decomposed by heat and by CHEMICAL REACTION with certain other compounds or elements A compound is indicated in chemistry by a formula which is a collection of the symbols of all the elements constituting it For example, NaCl is the formula for common table salt and indicates that one atom (wt =23) of sodium (chemical symbol=Na) combined with one atom (wt =35 5) of chlorine (chemical symbol=Cl) constitutes sodium chloride or salt The molecular weight is the sum of the atomic weights From such a formula, then, the constituents of a compound and the number of parts by weight of each can be determined by inspection Mixtures differ from compounds in that their components are not chemically combined and can therefore be separated by mechanical means Furthermore, the components of a mixture retain their own properties and are not present in any definite proportion by weight

compress (kŏm'prĕs), pad of gauze used either dry or wet In case of bleeding a dry compress is used for pressure Wet compresses may be cold or hot; the cold are made by saturating pads of gauze in ice water or in cold solutions of antiseptics and are used in headache, fever, and hemorrhage beneath the skin and to ease pain They lessen congestion in the part to which they are applied. Any wet compress covered with a waterproof material becomes warm. This, or a hot compress made by wetting gauze with hot solutions, is used to stimulate tissues, to relieve muscle spasm and local inflammation (as in arthritis or lumbago), and to induce sweating.

compressed air. Air is compressed for commercial use by a wide variety of compressors ranging from hand pumps to large compressors driven by steam, gasoline, or electric motor (see PUMP) Formerly it was sometimes obtained by the use of natural water power Compressed air was first used commercially on a large scale in building the Cenis Tunnel, which was opened in 1871. Today it is used in innumerable ways as motive power One of its greatest advantages is the ease with which it can be stored and transported, it can be carried for long distances through pipes with relatively small loss of power It is not dangerous to use in conditions where other forms of power might be, as in the manufacturing of explosives It is much used in mining, tunneling, and hundreds of diverse operations It is put to a great many uses in PNEUMATIC APPLIANCES See W L Saunders, *Compressed Air Data* (2d ed , 1924)

compression, the application of pressure to a substance, causing a decrease in volume Gases can be compressed easily, liquids and solids with great difficulty and to a very small degree, if at all Water, for example, is practically incompressible According to the kinetic molecular theory, when the molecules of a gas are brought close enough together by compression, the gas (under certain conditions of temperature) undergoes LIQUEFACTION BOYLE'S LAW deals with the decrease in the volume of a GAS in relation to the increase of pressure upon it In the gasoline engine, the compression stroke compresses the mixture of air and gasoline vapor and raises its temperature preparatory to combustion In the Diesel engine, the heat generated by the compression of the air in the cylinder is so great (800°F or over) that the crude oil is instantly ignited when it is sprayed into the cylinder

Compromise of 1850. The annexation of Texas to the United States and the gain of new territory by the Treaty of GUADALUPE HIDALGO at the close of the MEXICAN WAR (1848) aggravated the growing hostility between North and South concerning the question of the extension of SLAVERY into the territories The antislavery forces favored the proposal made in the WILMOT PROVISO to exclude slavery from all the lands acquired from Mexico. This, naturally, met with violent Southern opposition When California sought admittance to the Union as a free state (1849), a grave crisis approached Other questions also caused friction The boundary claims of Texas (which extended far westward into territory claimed by the United States) were hotly contested The questions of the slave trade and the FUGITIVE SLAVE LAWS had long been vexing There was some fear lest, in the event of strong antislavery legislation, the Southern states might withdraw from the Union altogether The possibility of a crash of the Union was deprecated by many but was alarming to some, among them Henry CLAY, who emerged from retirement to enter the Senate again President Zachary Taylor was among those who did not feel that the Union was threatened, he favored admission of California as a free state, encouragement of New Mexico to enter as a free state, and coercion of Texas These sentiments were voiced in Congress by William H SEWARD John C CALHOUN and other Southerners, particularly Jefferson DAVIS, maintained that the South should be given guarantees of equal position in the territories, of the execution of fugitive slave laws, and of protection against the ABOLITIONISTS Clay proposed the compromise measures, which had largely originated with Stephen A DOUGLAS They were the admission of California as a free state, the organization of New Mexico and Utah territories without mention of slavery, the status of that institution to be determined by the territories themselves when they were ready to be admitted as states (this formula came to be known as SQUATTER SOVEREIGNTY), the settlement of Texas boundary claims by payment of $10,000,000 on the debt contracted by the republic of Texas, the prohibition of the slave trade in the District of Columbia, and a more stringent fugitive slave law These proposals faced great opposition, but Daniel WEBSTER virtually assured their acceptance in his famous speech on March 7, 1850 As a result of favoring the compromise he lost the support of all his antislavery constituents Taylor's death and the consequent accession of conservative Millard FILLMORE to the presidency made the task of the compromisers easier, and after long debates Congress passed the measures as separate bills in Sept , 1850. Most people, North and South, hailed the compromise as a final solution to the national menace, the question of slavery in the territories, but the same old issue cropped up again in 1854 (see KANSAS-NEBRASKA BILL), and seven years later the sections were fighting the CIVIL WAR See Allan NEVINS, *Ordeal of the Union* (Vols I and II, 1947)

Compton, Arthur Holly, 1892–, American physicist, b Wooster, Ohio, grad College of Wooster (B S , 1913), Ph D. Princeton, 1916 He was professor and head of the department of physics at Washington Univ , St. Louis (1920–23), and professor of physics at the Univ of Chicago (1923–45). In 1945 he returned to Washington Univ. as chancellor For his discovery of the COMPTON EFFECT he shared with C T R Wilson the 1927 Nobel Prize in Physics In addition to his work on X rays he has made valuable studies of cosmic rays and was associated with the development of the atomic bomb His writings include *X-Rays and Electrons* (1926; 2d ed , with S K Allison, *X-Rays in Theory and Experiment*, 1935) and *Human Meaning of Science* (1940)

Compton, Karl Taylor, 1887–, American physicist, b Wooster, Ohio, grad College of Wooster (Ph B , 1908), Ph D Princeton, 1912, brother of A H. Compton He taught at Princeton from 1915 to 1930 (as professor from 1919) and was president of the Massachusetts Institute of Technology from 1930 to 1948 From 1948 to 1949 he was chairman of the research and development board of the National Military Establishment He has done notable research on photoelectricity, radar, ionization of gases, ultraviolet spectroscopy, and electric arcs

Compton, city (1940 pop 16,198; 1948 special census pop 42,789), S Calif , S of Los Angeles, settled 1867, inc 1888 An industrial center in an oil and farm area, it manufactures oil-well equipment and various products

Compton effect [for A H Compton], an increase in the wave length of X rays resulting from a scattering of the energy quanta (believed to make up the X rays) upon collision with electrons of atoms of elements having low atomic weights

compurgation, in medieval law, legal defense by oath of the person accused, supported by the oaths of a required number of persons that they believed he swore truthfully Compurgation, also called wager of law, was found in early Germanic law and in English ecclesiastical law until the 17th cent In common law it was substantially abolished as a defense in felonies by the Constitutions of Clarendon (1164) Compurgation was still permitted in civil actions for debt, however, and vestiges of it survived until its final abolition in 1833 It is not probable that compurgation ever existed among the Indian tribes of America.

Comstock, Ada Louise, 1876–, American educator, b Moorhead, Minn , grad Smith 1897, M A Columbia, 1899 Until 1912 she taught and served as dean of women at the Univ of Minnesota, then was dean at Smith College (1912–23) and president of Radcliffe College (1923–43) In 1943 she married Wallace Notestein, professor of English history at Yale She was the only woman member of the Wickersham Commission (1929) on law observance and enforcement

Comstock, Anna Botsford, 1854–1930, American naturalist and wood engraver, b Cattaraugus co , N Y , grad Cornell Univ , 1878 A teacher of nature study at Cornell from 1913, she wrote *Handbook of Nature-Study* (1911, 24th ed , 1939) *A Manual on the Study of Insects* (1895, 22d ed , 1938) was written in collaboration with her husband, **John Henry Comstock,** 1849–1931, an American entomologist, b Janesville, Wis , grad Cornell (B A , 1874) He too was a teacher at Cornell (1875–1914) He wrote several books on insects, including *An Introduction to Entomology* (1888, 9th ed , 1940)

Comstock, Anthony, 1844–1915, American moral crusader, b New Canaan, Conn He served with the Union army in the Civil War and later was active in advocating the suppression of obscene literature He was the author of the comprehensive New York state statute (1868) forbidding immoral works, and he secured stricter Federal legislation against obscene matter in 1873. That same year he organized the New York Society for the Suppression of Vice As secretary of the society until his death, Comstock was responsible for the destruction of 160 tons of literature and pictures He became for his liberal enemies the symbol of licensed bigotry and for his supporters the symbol of stalwart defense of conventional morals Comstock also inspired the Watch and Ward Society of Boston See biography by Heywood Broun and Margaret Leech (1927)

Comstock, Daniel Frost, 1883–, American physicist, b Newport, R I , grad Massachusetts Institute of Technology, 1904, Ph D , Univ of Basel, 1906. From 1904 to 1917 he taught at the Massachusetts Institute of Technology He is known for his share in the invention and development of the technicolor process for moving pictures and for his researches in theoretical physics, electricity, and refrigeration

Comstock, George Cary, 1855–1934, American astronomer, b Madison, Wis , grad Univ of Michigan, 1877 He was professor of astronomy at the Univ of Wisconsin (1887–1922), director of Washburn Observatory (1889–1922), and director and dean of the graduate school of the Univ of Wisconsin (1906–20) His works include *A Text-Book of Field Astronomy for Engineers* (1902).

Comstock, Henry Tompkins Paige: see COMSTOCK LODE.

Comstock, John Henry: see COMSTOCK, ANNA BOTSFORD

Comstock, John Lee, 1789–1858, American physician and textbook writer, b Lyme, Conn. After serving as assistant surgeon in the War of 1812,

practiced medicine in Hartford until 1830 He wrote and illustrated elementary textbooks on astronomy, chemistry, history, natural history, physical geography, and physiology, which went into countless editions from 1830 to 1860 and were used by most Americans schooled in that period His *System of Natural Philosophy* (1831), translated into several languages, is said to have sold 900,000 copies The *Introduction to Mineralogy* became the handbook of early miners of the Far West.

Comstock Lode, richest known silver deposit, W Nev., on Mt. Davidson in the Virginia Range It was discovered in 1857 by Ethan Allen Grosh and Hosea Ballou Grosh, sons of a Pennsylvania minister, miners from the California gold fields who died under tragic circumstances before their claims were recorded News of the discovery was not made public, however, until 1859, when Henry Tompkins Paige Comstock, known as Old Pancake, laid claim to the lode which bears his name He was a sheepherder and prospector who had taken possession of the Grosh brothers' cabin and supposedly found their records. He later disposed of his holdings for insignificant sums News of the discovery spread rapidly, attracting promoters and traders as well as miners, and the lode was the scene of feverish activity Among early arrivals who became wealthiest were Eilley Orrum Bowers and her husband and William Morris Stewart Camps and trading posts in the area became important supply centers, and VIRGINIA CITY, a mining camp on the mountain, was for several decades the "capital" of the lode and a center of fabulous wealth and luxury Great fortunes were made, notably by the "silver kings," John W Mackay, James Graham Fair, James C. Flood, and William S O'Brien, and by Adolph Sutro. Silver determined the economy and development of the state until exhaustion of the mines by wasteful methods of mining and the demonetization of silver started a decline in the 1870s. By 1898 the Comstock was virtually abandoned See C B Glasscock, *Big Bonanza* (1931), Nevada State Bureau of Mines, *The History of the Comstock Lode, 1850–1920* (1943), G. D Lyman, *The Saga of the Comstock Lode* (1944).

Comtat Venaissin. see VENAISSIN

Comte, Auguste (ōgüst' kōt'), 1798–1857, French philosopher, founder of the positivist school, educated in Paris From 1818 to 1824 he contributed to the publications of Saint-Simon, and the direction of much of Comte's future work may be attributed to this association Comte was primarily a social reformer His aim in life was to reorganize society so that both individuals and nations could live and grow in harmony and comfort His system for achieving this aim is presented in his *Cours de philosophie positive* (1830–42, Eng tr , *The Course of Positive Philosophy*, 1853) In these volumes Comte analyses social evolution and social dynamics He sees intellectual development in what is called the Law of the Three Stages—theological, largely attributing cause to supernatural forces, metaphysical, in which metaphysical abstractions were viewed as causes, positive, when phenomena are explained through observation, hypotheses, and experimentation The sciences themselves, so essential to the promotion of the positivist position, are classified on the basis of increasing complexity and decreasing generality of application, in the order mathematics, astronomy, physics, chemistry, biology, and sociology Each science depends, in part at least, on the science preceding it, each may be valued for its contribution to sociology (a name which Comte himself originated), the science ranked at the top of the hierarchy Positivism in sociology would supply the means for achieving the ends of harmony and well-being which Comte desired. Another series, called *Le Système de politique positive* (1851–54, Eng tr , *System of Positive Polity*, 1875–77), instituted religion as the highest science, shorn, however, of metaphysical implications, with humanity as the object of worship and an elaborate ritual and priesthood Important among his other writings are *Catechisme positiviste* (1852, Eng tr , 1858) and *Synthèse subjective* (1856) Published posthumously were his *Testament* (1884) and *Lettres* (1902–5) See POSITIVISM. See R L Hawkins, *Auguste Comte and the United States, 1816–1853* (1936) and *Positivism in the United States, 1853–1861* (1938), F S Marvin, *Comte, the Founder of Sociology* (1937)

comuneros (kōmōonā'rōs), in Spain and Spanish America, citizens of a city or cities when organized to defend their rights against arbitrary encroachment of government The first great revolt of *comuneros* in Spain was the uprising (1520–21) of the *comunidades* (autonomous cities) of Castile against the measures of CHARLES V In Spanish America, the revolt of the *comuneros* of Paraguay, led by ANTEQUERA against Gov. Diego de los Reyes Balmaseda and continuing against viceregal and Jesuit opposition from 1723 to 1735, was one of the first considerable democratic uprisings of Latin America In the *comunero* insurrection of New Granada (1780–81), Juan Francisco Berbeo was the leader, 60 *cabildos* rejected new taxes and sought reforms.

Comus (kō'mŭs), Greek god of mirth, represented as a winged youth bearing a torch and a drinking cup He was, like a SATYR, a lover of song, dance, and wine and a follower of Dionysus See Milton's poetic masque, *Comus*

Comyn, John (kŭ'mĭn), d c 1300, Scottish noble. Known as the Black Comyn, he became, in 1286, one of the six guardians of the realm. In 1289 he was one of the signers of the treaty by which MARGARET MAID OF NORWAY was to marry the eldest son of Edward I of England After Margaret's death, he became a claimant for the vacant throne, but eventually he submitted to Edward I and received—along with the other "guardians" of Scotland—a new commission of regency Meanwhile he pushed the claim of his brother-in-law, John de BALIOL, to the throne. His endeavors were successful, and in Nov , 1292, Baliol was named king and Comyn's seven-year regency came to an end. The name also appears as Cumming.

Comyn, John, d 1306, Scottish statesman. He was called the Red Comyn, to distinguish him from his father, the Black Comyn Aiding his uncle, John de BALIOL, in the struggle against Edward I, he was for a time held hostage by the English. After the battle of Falkirk (1298) he was appointed by the Scots guardian of the realm to succeed Sir William WALLACE He renewed the struggle with Edward, but surrendered to Edward on condition that he should retain his lands He was murdered at Dumfries either by Robert Bruce (later ROBERT I) or his followers probably because Robert feared him as a rival claimant to the throne. The name also appears as Cumming

Conakry (kŏ'nŭkrē, Fr kônākrē'), city (pop c 8,000), capital of French Guinea, a port on the Atlantic Ocean Bananas, palm-oil products, and hides are exported The name also appears as Konakry

Conaniah (kŏn"ŭnī'ŭ) [Heb ,=God has established], Levite of Josiah's time 2 Chron. 35 9

Conanicut Island: see JAMESTOWN, R I

Conant, Alban Jasper (kō'nŭnt), 1821–1915, American portrait painter and archaeologist, b. Chelsea, Vt He executed numerous portraits of distinguished Americans, among them Lincoln, Sherman, Henry Ward Beecher, and Bishop Potter His portrait of James McCosh, president of Princeton Univ , is in the Metropolitan Museum He wrote *Archaeology of Missouri* (1876) and *Footprints of Vanished Races in the Mississippi Valley* (1879)

Conant, James Bryant, 1893–, American educator and chemist, b Dorchester, Mass , grad. Harvard (B A , 1913, Ph D , 1916). Except for his army service (1917–19), he taught chemistry at Harvard from 1916, being Sheldon Emery professor of organic chemistry (1929–33) and chairman of the department (1931–33) In 1933, he was elected president of Harvard One of the nation's leading chemists, Conant has conducted outstanding research in the field of organic chemistry and is the author of *Organic Chemistry* (1928), *Chemistry of Organic Compounds* (1933), and *Growth of the Experimental Sciences* (1949) He was chairman (1941–46) of the National Defense Research Committee In Conant's administration of Harvard the number of scholarships has been increased, and the trend has been toward greater democracy Conant's educational writings include *General Education in a Free Society* (1945) and *Education in a Divided World* (1948)

Conant, Roger, 1592–1679, one of the founders of Massachusetts, b East Budleigh, Devonshire, England. He was a salter in London before he came to Plymouth in 1623. Conant lived at Nantasket from 1624 to 1625, when he was appointed to manage the Dorchester Company's settlement on Cape Ann In 1626, with c 20 settlers, he founded Salem (Naumkeag) and later was the leading citizen of Beverly, which was incorporated (1668) largely because of his efforts See biography by C K Shipton (1944)

Conant, Thomas Jefferson, 1802–91, American biblical scholar and editor of many translations of books of the Bible He aided in the English revision of the Old Testament, completed in 1881

concentration camp After Hitler's rise to power in 1933, prison camps were set up throughout Germany for detaining persons considered undesirable by the Nazis, especially Jews and Communists No legal procedure was required for commitment to the camps Inmates performed hard labor under the supervision of SS guards (see NATIONAL SOCIALISM) notorious for their brutality In the Second World War, concentration camps mushroomed throughout German-occupied Europe Of the millions of slave laborers of many nationalities detained in them, a large proportion died of mistreatment, malnutrition, and disease Several camps were equipped as "extermination camps." In the best-known of these—Majdanek, Treblinka, and Oswiecim, in Poland—more than 6,000,000 men, women, and children (mostly Jews and Poles) were killed in gas chambers. Documented proof of these horrors, used in later war-crimes trials, includes unmentionable details of sadism, sometimes perpetrated under pretext of "medical experiments." Among the most notorious camps liberated by American and English troops in 1945 were Buchenwald, Dachau, and Belsen Occasionally, though erroneously, the term "concentration camp" is also used for forced-labor camps in which political prisoners are confined, such as those in the USSR.

Concepción (kônsĕpsyōn'), city (pop. 85,818), capital of Concepción prov , 8 central Chile, near the mouth of the Bío-Bío. Founded in 1550 by Pedro de VALDIVIA, Concepción is one of the largest of Chile's cities and is a major shipping center through its port, TALCAHUANO Its industries include tanneries, shoe factories, and textile mills; their manufactured products plus the agricultural produce of the hinterland (wine and grains) constitute its chief exports. During its first years after its founding, Concepción maintained a precarious existence against attacks of the Araucanian Indians. In 1570, 1730, and 1751 it was completely destroyed by earthquakes In 1939 all the cities of the region, notably CHILLÁN, were leveled by an earthquake, and Concepción had to be almost completely rebuilt It is modern and advanced in plan and architectural development

Concepción del Uruguay (dĕl ōōrōōgwī'), city (1945 estimated pop. 30,037), NE Argentina, on the Uruguay river It grew rapidly with the development of the Argentine Mesopotamia and is one of the commercial capitals of that beef and grain country. It is served by railroad and river steamer

conceptualism (kŭnsĕp'tŭlĭzm), in SCHOLASTICISM, position midway between realism and nominalism The realists, like Plato, taught that universals (general concepts) possess a reality independent of the particular objects to which they refer The nominalists insisted that only particulars exist and that the terms whereby their common qualities are designated are only words (*nomina*) Conceptualism agrees that only particular objects exist outside the mind, but admits the reality of universals in the mind, as concepts

concert, in music, public performance of a group of musical compositions Originally the word referred simply to a group of musicians playing together. concerts by a solo performer are more properly called recitals The earliest recorded public concerts were organized by a London violinist, John Banister, in 1672 Many orchestral concerts were given in the 18th cent , and early in the 19th cent , which saw great development of concert life, public concerts of chamber music were given The solo recital grew popular in the time of Liszt and Clara Schumann Paganini was the model for the traveling virtuoso In the American colonies, the first concert on record took place in Boston in 1731

concertina (-tē'nŭ), musical instrument whose tone is produced by free reeds. It was invented by Sir Charles Wheatstone in 1829 It is similar to the ACCORDION, but its bellows are attached to hexagonal blocks having handles and buttons, and it is smaller Its artistic possibilities are greater than those of the accordion, and more music has been composed for it, however, it is mainly associated with popular music and salon music

concerto (kunchâr'tō), musical form which originated in the early baroque period The *concerto grosso*, in which a small group of solo instruments alternated with a larger ensemble, became standardized in the works of Corelli and VIVALDI in the late 17th cent Giuseppe Torelli in the same period gave the concerto its three-movement form Bach's Brandenburg concertos brought the form to its artistic height The form of the classical concerto —three movements, the first of which is in sonata form as in the symphony, for solo instrument and orchestra—was established in the works of Mozart See D F Tovey, *Essays in Musical Analysis: Concertos* (1937), Abraham Veinus, *The Concerto* (1944)

conch (kŏngk), name applied to certain marine mollusks with spiral univalve shells, especially to those of the families Strombidae and Cassididae. Some are called cameo or helmet shells Conches are scavengers, but they eat live animal food too Although the shells are heavy the animals can leap and jump quickly through the water In color the shells range from white to red Those of tropical waters are especially beautiful They are made into buttons, cut into cameos, and carved as ornaments Some shells are ground up as a source of lime In parts of America the shells are used as horns. The queen conch, the largest gastropod of the Atlantic coast, has a shell about one foot long It is found commonly near the Florida Keys and the West Indies and is one of the species on which the poorer people of those regions depend so much for food that they are called "conchs " Univalve mollusks of the genus *Buccinum* are commonly known as whelks Some Atlantic coast forms of the genus *Busycon* (or *Fulgur*), such as the knobbed whelk and the channeled whelk, are also called conchs Egg cases of these whelks are often washed up on the seashore. They are parchmentlike flattened capsules attached to a common cord.

Conchos (kŏn'chōs), river rising in the southern and southwestern mountains of Chihuahua, N Mexico. It flows east and is joined by the Florido, then runs N and NE to the Río Grande. Dams in its middle course provide water for extensive irrigation and hydroelectric power for mining.

conciliation: see MEDIATION.

Concini, Concino (kŏnchē'nō kŏnchē'nō), d. 1617, Florentine adventurer and favorite of MARIE DE' MEDICI, who made him marshal of France (1613). He exerted great influence after Henry IV's death and succeeded Sully as minister. His greed and his spy system won him the hatred of all classes, but a revolt of noblemen, led by Henri II de CONDÉ (1615), was unsuccessful. In 1617 Louis XIII had Concini assassinated He was marquis d'Ancre His wife, Leonora Galigai (1571?–1617), lady in waiting and favorite of the queen, was beheaded and burned for sorcery

Concord. 1 (kŏng'kûrd) Town (1940 pop. 1,373, 1948 special census pop 6,009), W Calif , NE of San Francisco and S of Suisun Bay, in an oil and farm area, inc. 1905 2 (kŏng'kûrd) Town (pop 7,972), E Mass , on the Concord river and NW of Boston; settled 1635 The site of the Revolutionary battle of Concord on April 19, 1775 (see LEXINGTON AND CONCORD, BATTLES OF), is marked by Daniel Chester French's bronze *Minuteman* Concord has many fine old houses, some preserved as memorials to noted occupants—Emerson, the Alcotts, Hawthorne, Thoreau, Sanborn (see his *Sixty Years in Concord*), and other writers and philosophers who lived here The Old Manse, made a public shrine in 1939, was built by Emerson's grandfather in 1765 In Sleepy Hollow Cemetery are the graves of many illustrious Concord residents Walden Pond, celebrated by Thoreau, is 1¼ mi south of the village Ephraim Bull developed the Concord grape in the town 3 (kŏng'kûrd) City (pop 27,171), state capital (since 1808), and co seat of Merrimack co , S N H on the Merrimack above Manchester, settled 1725–27 The town, long disputed between Massachusetts and New Hampshire, was incorporated as Rumford in 1733 (Count RUMFORD later took his title from this name) and was renamed in 1765, it became a city in 1853 The building of the Middlesex Canal (1815) and the coming of the railroad from Boston (1842) aided Concord's growth Its granite gave Concord fame Printing is an important industry Concord is the seat of the noted St Paul's preparatory school (Episcopal, for boys, chartered 1855, opened 1856) Among Concord buildings, the granite and marble capitol is outstanding The historical society's fine collections include portraits by Samuel F B Morse The society's museum occupies the Franklin Pierce home and law office, remodeled in 1923 Several state institutions are in Concord Mary Baker Eddy was born a few miles away, at Bow 4 (kŏn'kôrd') City (pop 15,572), co seat of Cabarrus co , W central N C , NE of Charlotte and near the edge of the piedmont; settled 1796, inc 1837 It has textile, lumber, and flour mills and is the seat of Barber-Scotia College (for Negro women) 5 (kŏng'kûrd) Town (pop 923), NE Vt , E of St Johnsbury, chartered 1781, settled 1788 In 1823 Samuel R Hall opened here one of the first normal schools

Concord, river, E Mass , short tributary of the Merrimack, which it joins at Lowell Thoreau's first book, *A Week on the Concord and Merrimack Rivers* (1849), records a boat trip with his brother

concordat (kônkôr'dăt), agreement, specifically between the pope, in his spiritual capacity, and the temporal authority of a state Its juridical status is now generally accepted as being a contract between CHURCH AND STATE The term *concordat* was also applied to other agreements, thus, in the Swiss Confederation before 1848 federal decisions were called concordats The fundamental antithesis between Church and state found particularly violent expression in the quarrels over INVESTITURE during the Middle Ages and gave rise to the practice of concluding concordats The earliest agreement called concordat (see WORMS, CONCORDAT OF, 1122) was a dual proclamation rather than a bilateral act. The Concordat of 1516 between Pope Leo X and Francis I of France, which abolished the Pragmatic Sanction of Bourges (see PRAGMATIC SANCTION) gave the king the right to nominate bishops, abbots, and priors, but reserved to the pope the right of confirmation and special rights of appointment. This was revoked at the States-General of Orléans in 1561, and the struggle between GALLICANISM and ULTRAMONTANISM was resumed to last till the French Revolution The Concordat of 1801 (see separate article), most famous of all concordats, regulated the status of the Church in France for a century. In the 19th and 20th cent. numerous concordats were concluded. The appointment of bishops still remained an important issue, but the advance of secularism gave increasing importance to the status of religious education, monastic orders, and church property and to the seemingly conflicting loyalties of Catholics to the state and to the Church In the Catholic countries of Latin America the conflicts and adjustments between Church and state gave rise to a number of concordats The concordat of 1855 with Austria gave vast rights to the Church, but was abrogated by Austria upon the proclamation of papal infallibility. The KULTURKAMPF between Bismarck and the papacy ended (1887) with a *modus vivendi*, which was not called a concordat. The threat of National Socialism to the Roman Catholic Church prompted the concordat of 1933 with Hitler, who violated it from the start In Spain, where Francisco Franco had abrogated the concordat of 1931, a provisional agreement with the Vatican over the appointment of bishops was reached in 1941 After the Second World War a number of concordats (notably that with Poland) were abrogated by Communist regimes The status of the papacy in Italy was regulated in 1929 by the LATERAN TREATY

Concordat of 1801, agreement between Napoleon Bonaparte and Pope Pius VII which reestablished the Roman Catholic Church in France after its disruption by the French Revolution Bishops were to be nominated by the government, but the pope was to confer the office Parish priests were to be appointed by the bishops, subject to government approval Confiscated church property which had been sold to private persons was not to be restored, but the government was to provide adequate support for the clergy Napoleon issued (1802) the so-called Organic Articles to implement the concordat, these restated the liberties of the Gallican church, but they were not considered by the pope as obligatory in any sense A century later anticlericalism, intensified by the Dreyfus Affair, led to severe restrictions imposed on the Church by Émile COMBES and culminated in 1905 in the repudiation of the concordat and the separation of CHURCH AND STATE In ALSACE and Lorraine the Concordat of 1801 remained valid even after their recovery (1918), from Germany by France

Concorde, Place de la (plăs' dû lă kôkôrd'), large square of Paris. It lies between the Tuileries gardens, the Pont de la Concorde (a monumental bridge across the Seine leading to the chamber of deputies), and the Champs Élysées, the fourth side is closed by the vista of the MADELEINE church and by palatial buildings occupied by ministries. The square was designed by J A. GABRIEL The OBELISK of Luxor and the two monumental fountains, by J I Hittorf, were later placed in its center. Originally named Place Louis XV, the square was used for public executions during the French Revolution

Concordia (kŏng-kôr'dhyă), city (1945 estimated pop. 40,012), NE Argentina, a port on the Uruguay river opposite SALTO, Uruguay One of the chief towns in the Argentine Mesopotamia, it exports preserved meat, mate, quebracho, and grain and is the distributing center of an agricultural and stock-raising district.

Concordia (kônkôr'dēă) 1 City (pop 6,255), co seat of Cloud co , N Kansas, on the Republican and N of Salina, founded 1870, inc 1872 It is an agricultural trade center, and dairy products are made 2 City (pop 1,077), W Mo , ESE of Kansas City, in a farm area, platted 1868 St Paul's College (junior, Lutheran, for men) is here

concrete, structural masonry material made by mixing broken stone or gravel with sand, CEMENT, and water and letting the mixture harden into a solid mass The cement is its chemically active element, called the matrix, while the sand and stone are the inert elements, called the aggregate The use of artificial masonry similar to modern concrete dates from a remote period, but was never part of a definite structural technique until the Romans employed it for roads, immense buildings, and engineering works after the 2d cent B.C This so-called concrete of the Romans, formed by pozzuolana—a volcanic earth—combined with lime, broken stones, bricks, and volcanic tuff, was easily available and had great durability, as seen in the Pantheon of Rome and the Baths of Caracalla It also required only unskilled labor It proved suitable for temples, basilicas, the forum, and baths, as enormous spaces could be roofed with vaults cast in a rigid homogeneous mass without lateral thrusts Scientifically proportioned concrete formed with cement is purely an invention of modern times, the name not being used until c 1830 Concrete was unknown for centuries after the fall of Rome In 1756 John Smeaton rediscovered hydraulic cement Portland cement, patented in England in 1824 by Joseph Aspdin and first manufactured in the United States in 1871, has revolutionized the production and potentialities of concrete and has superseded the natural cements, to which it is vastly superior Reinforced concrete or ferroconcrete is plain concrete in which a metal framework is embedded This form of construction was patented in 1857 by its French inventor, F Joseph Monier, and a private house at Portchester, N Y , in 1875 demonstrated its first scientific use in the United States Exact rules (based upon the fact that the compressive stresses are sustained by the concrete and the tensile stresses resisted by the steel of the framework) have been formulated and developed for properly and economically designing reinforced concrete structures The fact that the two materials have practically equivalent rates of expansion and contraction under temperature changes causes them to act efficiently in combination. The component materials of concrete are mixed in varying proportions, dependent upon the strength required and the function to be fulfilled. The ideal mixture is that which solidifies with the minimum of voids, the mortar and the small particles of aggregate filling all interstices A statement of proportioning is 1 2 5, indicating one part of cement, two parts of sand, and five parts of broken stone or gravel, with the proper amount of water for a pouring consistency The important mixing process is now done largely by concrete-mixing machines For hardening into the required shape, the mixture is poured into wood or steel molds, called forms Among the advantages of concrete as a building material are its adaptability to numberless modern structural needs, its practically universal availability, its excellent fire resistance, and the ease with which it can be used The perfecting of reinforced concrete has exerted a profound influence throughout the world, both upon the structural technique of modern building and upon the evolution of new architectural forms See *Plain Concrete for Farm Use* (U.S Dept of Agriculture, Farmers' Bul. 1279) and *Small Concrete Construction on the Farm* (Farmers' Bul 1480), E E Bauer, *Plain Concrete* (2d ed , 1936), H L Childe, *Concrete Products and Cast Stone* (7th ed , 1940).

concretion (kŏn-krē'shŭn), nodule or rounded mass of mineral matter, spherical, ellipsoidal, or irregular in shape, occurring in sedimentary rock and differing from it in composition About a center (such as a fossil) in the enveloping rock some minor constituent of the rock is slowly deposited and forms a solid mass—a concretion. Concretions range in diameter from a fraction of an inch to many feet The best-known are the flint nodules found in chalk Concretions marked by radiating cracks in which foreign matter is deposited are called septaria

Condamine, La see MONACO

Condé (kôdā'), family name of a cadet branch of the French royal house of BOURBON The name was first borne by **Louis I de Bourbon, prince de Condé** (lwē' dŭ bôrbō'), 1530–69, Protestant leader and general He fought the Spanish at Metz (1552) and Saint-Quentin (1557) but won little favor at court After his conversion to Protestantism he became involved in the conspiracy of AMBOISE (1560) and escaped execution only through King Francis II's premature death He was restored to favor by Catherine de' Medici, but took command of the Huguenots in the Wars of RELIGION and was captured at Dreux (1562) Released in 1563, he once more took up arms in 1567 and was killed at the battle of Jarnac His son, **Henri I de Bourbon, prince de Condé** (ārē'), 1552–88, was also a Huguenot general **Henri II de Bourbon, prince de Condé,** 1588–1646, French political leader, son of Henri I. was forced to leave France (1609) because of the attentions paid his wife by King Henry IV In 1615 he formed a conspiracy against CONCINI, but he was bought off and later imprisoned (1616–19). He later made his peace with the government, fought against the Protestants in the religious wars, and in 1643 became a member of the council of regency for Louis XIV His elder son, Louis II de Bourbon, prince de Condé (see separate article), was known as the Great Condé Another son, Armand, founded the cadet branch of CONTI. Both sons and a daughter, Mme de LONGUEVILLE, were leaders in the FRONDE Louis II's great-grandson, **Louis Joseph de Bourbon, prince de Condé** (shôzĕf'), 1736–1818, fought with distinction in the Seven Years War At the beginning of the French Revolution, he emigrated and formed a corps known as the army of Condé, which he allied with the Austrians In 1797 he offered his services to Russia, in 1800 he entered English pay, but he was obliged to dissolve his army in 1801 He returned to France at the Restoration His son, **Louis Henri Joseph de Bourbon, prince de Condé,** 1756–1830, followed his father into exile, fought in his army, and headed an unsuccessful revolt in the Vendée during the Hundred Days He died, probably by suicide His son was the ill-fated Louis Antoine Henri de Bourbon-Condé, duc d'ENGHIEN See H E P L d'Aumale, *History of the Princes de Condé in the XVIth and XVIIth Centuries* (Eng tr , 1872)

Condé, Louis II de Bourbon, prince de, 1621–86, celebrated French general, called the Great Condé, son of Henri II de Condé Among his early victories in the Thirty Years War were those of Rocroi (1643), Freiburg (1644), Nördlingen (1645), and Lens (1648) In the FRONDE he was at first loyal to the court, but his intrigues and ambitions caused his arrest in 1650 Released (1651), he led the rebellious army of the princes and allied himself with Spain against France At the end of the Fronde (1653), he fled to Spain and was made generalissimo of the Spanish armies He was repeatedly defeated by TURENNE, notably in the Battle of the DUNES (1658) After the Peace of the Pyrenees (1659), he was pardoned and returned to court He fought in the Dutch War for Louis XIV, defeating William of Orange at Seneff (1674) and forcing Montecuccoli to retreat from the Rhine (1675) His last years were spent in retirement at Chantilly See Walter FitzPatrick, *The Great Condé* (2 vols., 1873).

Condell, Henry, d 1627, English actor in Shakspere's company A partner in the Globe and Blackfriars theaters, he edited, with John Heming, the First Folio of Shakspere's plays in 1623

condensation, in physics, the change of a substance from the gaseous (vapor) state to the liquid state In DISTILLATION the vapor is condensed by cooling Many marine steam engines are equipped with a condenser which changes the exhaust steam back into water so that it may be used again in the boiler The explanation of condensation is found in the kinetic molecular theory The velocity and the distance between the molecules of a substance in the form of a gas are decreased by the withdrawal of heat to such an extent that the substance becomes a liquid, or condenses Condensation is the reverse of VAPORIZATION In some cases a gas changes directly to a solid (see SUBLIMATION) Certain natural phenomena, such as dew, fog, mist, and clouds, are the result of the condensation of water vapor in the atmosphere The formation of DEW illustrates well the fundamental principles involved in such phenomena For the condensation and rarefaction of sound waves, see SOUND

condensed milk see MILK

condenser, in electricity, a device to increase the capacity of a conductor for electricity, i e , for receiving and holding a greater charge The LEYDEN JAR is a simple condenser. Another type of condenser consists of several conductors in the form of plates, separated by an insulator (called the dielectric) such as glass, paraffin, or mica The principle involved is that of INDUCTION The capacity of the conducting plates is increased by an increase in their size, by a decrease in the distance between them, and by the nature of the insulator Condensers are used in various electrical instruments, such as the telephone and the radio A condenser (variable condenser) found commonly in radio sets is composed of two sets of semicircular plates, one set fixed and one movable, arranged so that the plates of one set can be moved between or away from the plates of the other, by these movements either increasing or decreasing the surface exposed to the fixed plates In this way the capacity is increased or decreased at will The GRID condenser is also important in radio A condenser is used in the IGNITION system of automobiles to intensify the spark That part of a DISTILLATION apparatus or other apparatus which causes the CONDENSATION of a gas is also called a condenser

Conder, Charles, 1868–1909, English decorative painter. He is known for his paintings on silk and his lithographs See John Rothenstein, *The Life and Death of Conder* (1941)

Condillac, Étienne Bonnot de (ātyĕn' bônō' du kôdēyak'), 1715–80, French philosopher, who developed the theory of sensationalism He took holy orders, and in 1768 he became a member of the French Academy of Sciences His major works were *Essai sur l'origine des connaissances humaines* (1746) and *Traité des sensations* (1754) In these he tried to simplify Locke's theory of knowledge by arguing that all conscious experience is simply the result of passive sensations He sought to eliminate every form of activity from psychology but nevertheless retained a Cartesian dualism of soul and body He attempted to harmonize his deterministic psychology with his religious profession See Z Q Schaupp, *The Naturalism of Condillac* (1926)

Condon, Thomas (kŏn'dŭn), 1822–1907, American clergyman and geologist, b Ireland He came to the United States in 1833 Having graduated from Auburn Theological Seminary in 1852, he went in the same year by boat to the Oregon Territory, where he spent the remainder of his life as a missionary He studied and recorded the geology of Oregon and taught at the Univ of Oregon, later specializing in paleontology there He discovered a number of fossil remains and combined his earlier writings in *The Two Islands and What Came of Them* (1902; revised as *Oregon Geology*, 1910) See biography by E C. McCormack (1928)

condor (kŏn'dûr, -dôr), vulture native to South America On the high peaks of the Andes it nests and raises its young, which do not fly until they are about a year old. In North America among the western coastal ranges is found the related and now very rare California condor or California vulture Largest of the birds of prey, condors are nearly 50 in. long with a wingspread of from 9 to 10 ft They have black plumage with white patches on the wings The unfeathered neck and head are reddish or orange Carrion is their chief food

Condorcet, Marie Jean Antoine Nicolas Caritat, marquis de (marē' zhā' ātwăn' nēkôlà' karētà' märkē' dŭ kôdôrsā'), **1743–94,** French mathematician, philosopher, and political leader, educated at Rheims and Paris He became a member of the Academy of Sciences in 1769 and of the French Academy in 1782. His work on the theory of probability (1785) was a valuable contribution to mathematics Condorcet took part in the Revolution, but, opposing the extremes of the Jacobins, he was condemned and died in prison. His best-known work is *Esquisse d'un tableau historique des progrès de l'esprit humain*, which was posthumously published (1801–4) In that work Condorcet traced human development through nine epochs to the French Revolution and predicted in the 10th epoch the ultimate perfection of man See A E Burlingame, *Condorcet, the Torch Bearer of the French Revolution* (1930), J S Shapiro, *Condorcet and the Rise of Liberalism* (1934)

condottiere (kôndôt-tyā'rā) [Ital., =leader], leader of mercenary soldiers in Italy in the 14th and 15th cent , when wars were almost incessant there The condottieri hired and paid the bands who fought under them, they dealt directly with the cities or states which requested their services and were responsible solely to them. They fought for the highest bidders, passing easily from one lord to another, this game proved dangerous and even fatal to more than one Some condottieri had small states of their own, either inherited or acquired The most famous were the Attendolos, founders of the SFORZA family, COLLEONI, CARMAGNOLA, and Sir John de HAWKWOOD

Condouriotis, Paul see KONDOURIOTIS, PAUL

conducting, in music, the art of unifying the efforts of a number of musicians simultaneously engaged in musical performance In the Middle Ages and Renaissance the conductor was primarily a time-beater, using a roll of music as a baton, keeping together all the parts in complex polyphonic music During the baroque era the harpsichordist, playing the *basso continuo*, was the conductor When the *continuo* disappeared, the first violinist, even today called concertmeister, became the leader or shared the function with a keyboard player A few 18th-century conductors, such as Johann Stamitz (1717–57), of the Mannheim orchestra, later praised by Mozart, achieved a high standard of performance With the accession of the non-playing conductor in the early 19th cent came the gradual return of the baton, used by Beethoven, Mendelssohn, and Spohr In his classic treatise *Über das Dirigieren*, Wagner laid down the principles of modern conducting, and under his influence Hans von Bülow became the first of the virtuoso conductors Although a fairly conventional set of gestures is used for time-beating, modern conducting is highly individual and requires greater knowledge and technical proficiency than any other type of performance See Felix Weingartner, *On Conducting* (Eng tr , 1906), Adrian Boult, *A Handbook on the Technic of Conducting* (1920), Hermann Scherchen, *Handbook of Conducting* (Eng tr , 1933), Lazare Saminsky, *Music of Our Day* (rev ed , 1939)

conduction. **1** Conduction of HEAT is the transfer of heat energy from one part of a substance to an adjoining part farther from the source of heat It is explained by the molecular theory (see MOLECULE), e g , when a rod of iron is held with one end in a flame, the heat (or kinetic) energy is said to be passed on from molecule to molecule, thus being transferred from the part of the rod in the flame along its length to the other end Substances which transfer heat readily are called conductors, and those which transfer it very slowly are known as insulators The metals in general, such as silver, copper, gold, aluminum, and iron, are good conductors, the nonmetals such as wood, glass, and many others are poor conductors and, therefore, good insulators The rate at which a body conducts heat depends also, in addition to the nature of the substance of which the body is composed, upon the difference in the temperature of the two points between which heat is transferred and upon the thickness or area of cross section Liquids and gases are poor conductors **2** Some substances will carry a charge of ELECTRICITY readily from one point to another (conductors) and others will not (insulators) In general, the metals which are good conductors of heat are also good conductors of electricity Many of the nonmetals such as rubber, paraffin, and glass are such poor conductors of electricity that they are used as insulators Such substances are called dielectrics The property of electrical conductivity is a relative one, for most substances will conduct electricity to some degree When a current of electricity is flowing along a conductor, the charge is found to be entirely on the surface of the conductor, and for this reason electric wires are insulated to prevent the escape of the charge

Condylis, George see KONDYLIS, GEORGE

cone, characteristic fruit of most conifers (members of the order Coniferales) Usually the staminate (male) and the ovulate (female) cones are borne on the same tree Scales of the staminate cones have pollen-producing structures, and scales of the ovulate cones bear ovules in which the egg cells are produced The staminate cones are generally small and short-lived Their pollen is carried by the wind and some of it reaches the ovulate cones and effects fertilization The ovulate cones are the ones commonly observed In a few the scales are fleshy at maturity but the majority are hard and woody The cones of a number of species are between 1 and 6 in. long and among the largest are the 10- to 20-inch cones of the sugar pine (*Pinus lambertiana*) of the W United States

cone or conical surface, in mathematics, the surface generated by a moving line (the generator) which passes through a given fixed point (the vertex) and continually intersects a given fixed curve (the directrix) An element of a cone is the generator in any of its positions Half of a regular conical surface is called a nappe of the cone. The solid bounded by a conical surface and a plane (the base) whose intersection with the conical surface is a closed curve is also called a cone The altitude of a cone is the perpendicular distance from its vertex to its base The volume is equal to one third the product of the altitude and the area of the base The lateral area is the area of its conical surface The frustum is the solid bounded by the conical surface and two planes parallel to the base of the cone. A right circular cone is one in which the base is a circle and the line drawn from the vertex to the center of the base is perpendicular to the base

Conecuh, river see ESCAMBIA, river

coneflower. see RUDBECKIA

Conegliano, Cima da. see CIMA, GIOVANNI BATTISTA

Conemaugh (kŏn'umô''), river of SW Pennsylvania rising in the Alleghenies and flowing northwest to a branch of the Allegheny river A Federal dam and reservoir for flood control are under construction at the lower end of the Conemaugh A similar project has been completed on Loyalhanna Creek, a tributary

Conestoga Indians (kŏnustō'gu), North American tribe of Iroquoian linguistic stock They lived in the 17th cent on the lower reaches of the Susquehanna river and about the head of Chesapeake Bay and were sometimes called Susquehannocks From this area they were driven southward and westward by the Iroquois Confederacy Survivors of this warfare were massacred by whites when Indian wars had broken out on the Pennsylvania frontier in 1763

Conestoga wagon, heavy freight-carrying vehicle of distinctive type which originated in the Conestoga region of Pennsylvania c 1725 It was used by the farmers to carry heavy loads long distances before there were railroads to convey produce to markets Later it was used to carry manufactured goods across the Alleghenies to frontier stores and settlements and to bring back the frontier produce This developed into a major business employing thousands of wagons before the railroads crossed the mountains c 1850 (see WAGON TRAIN) The larger Conestoga wagons, usually drawn by six horses, carried loads up to eight tons The bottom of the wagon box was curved, rising at both ends, so that in going up and down hills the goods would shift less easily and the endgate be subjected to less strain The same curve was carried out in the white hood, at first made of hempen homespun and later of canvas, which rose up and out at each end, covering the front and rear openings with a poke-bonnet effect and keeping out sun, rain, and dust The wagons were striking and graceful vehicles as they moved over the hills and were not undeserving of the appellation "ships of inland commerce," which was frequently given them An arch of bells was fastened to the hames of each horse The drivers usually rode the left wheel horse and are credited with originating the American custom of turning out to the right The PRAIRIE SCHOONER was a modification of the Conestoga wagon

coney see CONY

Coney Island (kō'nē), beach resort and amusement center of S Brooklyn borough of New York city, SE N Y , on the Atlantic The tidal creek once separating the island from the mainland has been filled in, so that the area is now a peninsula Over a million persons throng to Coney Island on hot Sundays and holidays, attracted by the beach, the 2-mile boardwalk, and the many entertainment devices, eating places, and souvenir stands. The resort is more than a hundred years old See O R Pilat and Jo Ranson, *Sodom by the Sea* (1941)

confectionery, delicacies or sweetmeats which have sugar as a principal ingredient, combined with coloring matter and flavoring and often with fruit or nuts In America it is usually called candy, and in England sweets or boiled sweets Sweetmeats, long known to the Orient, were at first preserved or candied fruits, probably made with honey One of the earliest functions of candy was to disguise unpleasant medicine Medieval physicians often used for this purpose sugarplate, a sweetmeat made of gum dragon, white sugar, and rosewater beaten into a paste One of the earliest confections still surviving is marchpane or marsipan, which seems to have been known throughout Europe It is made of almonds, pistachios, or other nuts, pounded to a paste, blended with sugar and white of egg In the Middle Ages it was sometimes molded into fancy shapes and stamped with epigrams Sugarplums, made of boiled sugar, were known in England in the 17th cent , but it was not until the 19th cent. that candymaking became extensive. The display of English boiled sweets at the exhibition of 1851 stimulated manufacture in other countries, especially in France In the United States in the middle of the 19th cent. about 380 small factories were making lozenges, jujube paste, and stick candy, but most fine candy was imported With the development of modern machinery and

the increasing abundance of sugar, confectionery making became an important industry. Candy is roughly divided into two classes, hard and soft, the distinction being based on the fact that sugar when boiled with water passes through definite stages during the process of crystallization. Fondant, or sugar cooked to the soft stage, is the basis of most fancy candies, such as chocolate creams Modern chemistry has made noticeable changes in the ingredients used, for instance, glucose and invert sugar often replace sucrose See A H Austin, *The Romance of Candy* (1938)

Confederacy, name commonly given to the **Confederate States of America** (1861–65), the government established by the Southern states of the United States after their SECESSION from the Union (For the events leading up to secession and for the military operations of the Confederacy in the conflict between North and South which followed, see CIVIL WAR) South Carolina, the first Southern state to secede (Dec 20, 1860) after the election of the Republican President Abraham LINCOLN, was soon followed out of the Union by six more states of the Lower South—Mississippi, Florida, Alabama, Georgia, Louisiana, and Texas On Feb 4, 1861, delegates from these states (except the Texans, who were delayed) met at Montgomery, Ala , and organized a provisional government Jefferson DAVIS of Mississippi and Alexander H. STEPHENS of Georgia were elected (Feb 9) president and vice president respectively The convention also drafted a constitution (adopted on March 11) and functioned as a provisional legislature pending regular elections The constitution closely resembled the Constitution of the United States, even repeating much of its language, but naturally had STATES' RIGHTS provisions, which were modeled on the old Articles of Confederation (see CONFEDERATION, ARTICLES OF) Slavery was "recognized and protected," but the importation of slaves "from any foreign country other than the slave-holding States or Territories of the United States of America" was prohibited Protective tariffs and appropriations for internal improvements were also forbidden There were other, less important, departures from the U S Constitution, e g , the president and vice president were to be elected for six years, but the president was not "reëligible", members of the president's cabinet might be granted seats in either house of the Confederate congress to discuss legislation affecting their departments, and amendment to the constitution (by two thirds of the states, with congress having no voice) was made easier The new government seized or pressed its claims for U S property within its domain, especially forts and arsenals (see SUMTER, FORT), and, when the Union declined to surrender Fort Sumter, ordered the firing (April 12–13) which formally began the hostilities Lincoln's immediate call for troops brought four more Southern states—Arkansas, North Carolina, Virginia, and Tennessee—into the Confederacy, which now was composed of 11 states. Large sections of the population in the border slave states of Maryland, Kentucky, and Missouri were pro-Confederate, but those states were held for the Union In May it was decided to transfer the capital from Montgomery to Richmond, Va , because of Virginia's prestige, a move, which, considering Richmond's proximity to the North, has generally been held to have been a serious mistake The new constitution was ratified (the approval of only five states was needed), general elections for congress and for presidential electors (as under the Federal Constitution) were held in Nov , 1861, and on Washington's birthday in 1862, the "permanent" government, headed by Davis and Stephens, who had been chosen without opposition, was inaugurated at Richmond Judah P BENJAMIN, successively attorney general, secretary of war, and secretary of state, was the most important figure in Davis's cabinet Only two other men remained in the cabinet for its entire brief existence—Stephen R MALLORY, secretary of the navy, and John H REAGAN, postmaster general The story of the Confederacy is essentially the story of the loss of the Civil War Even with its early military triumphs, the Confederacy experienced trying days For one thing, it never won recognition as an independent government, although Southerners had been confident that "king cotton" would bring this about In 1861 they instituted an embargo on the export of cotton and voluntarily limited cultivation of the staple on the theory that these self-imposed and unofficial restrictions would make a cotton-hungry England eager to acknowledge the new nation which could supply in abundance the most important raw material in Britain's industrial system But, as it turned out, the British were well provided with cotton from previous boom years and when their stocks finally became depleted, other sources of supply were soon available Furthermore, Lincoln's EMANCIPATION PROCLAMATION enhanced the Union cause in the eyes of the average Briton, and the British government, no matter how pro-Confederate most of its individual members were, was not disposed to fly in the face of popular opinion. The CONFEDERATE CRUISERS built or bought in England were a scourge to the U S merchant marine, and Great Britain was later adjudged partly responsible for their depredations (see ALABAMA CLAIMS), but beyond this the Confederate missions of James M MASON, John SLIDELL, William L YANCEY, and others in Europe achieved little Napoleon III would have been only too happy to follow Britain in recognizing the Confederacy, but not even the Confederate offer to recognize the French-dominated government of Maximilian in Mexico could induce the emperor to go off on this diplomatic venture alone On the other hand, both the British and French recognized the blockade of the South, which the Union had proclaimed at the beginning of the war This was particularly galling to Southerners because at first the blockade was not very effective, it is estimated that not more than a tenth of the ships running the blockade in 1861 were captured But as the war progressed the blockade became more powerful, and by 1865, one of every two blockade runners was being taken When, in Oct , 1863, Davis expelled the British consuls who had remained in the South, the Confederacy had about resigned itself to European nonrecognition, which was mostly influenced by the rising tide of Union successes in the war The Confederate army early found that volunteers alone were insufficient, and the first conscription law was passed in April, 1862 By a later act (Feb , 1864), white men within the ages of 17 and 50 were drafted into military service Provisions permitting the hiring of substitutes and exempting one owner or overseer for each 20 Negroes were highly unpopular among the yeomanry, who grumbled about "a rich man's war and a poor man's fight" Joseph E BROWN and Zebulon B VANCE, the governors of Georgia and North Carolina, led the denunciation of conscription and further berated Davis for the assumption of state troops into the Confederate army, the suspension of the writ of habeas corpus, and the Confederate tax program Their extreme states' rights views represented a logical development of the theory which had led the Southern states to secede, but their insistence on maintaining them at a time when unity was imperative was an added factor in the Confederate defeat The fact that Brown, Vance, and others like them were able men and no less set on victory than was Davis only points up this glaring deficiency in the nature of the Confederacy From the very beginning, the Confederacy, lacking in both specie and banks, was in bad financial condition It had difficulty in negotiating loans and was forced to finance its operations through issues of paper money, which by 1864 reached $1,000,000,000 in face value, more than twice that of the greenbacks issued by the Union The decline in gold value of these notes, from 90 in 1861 to 6 3 in late 1863 and finally to 1 7 early in 1865, tells a story in itself Christopher G MEMMINGER, secretary of the treasury, was forced to resign in 1864, but the situation was beyond the abilities of any man With the men at war, the women of the Confederacy, those supposedly frail, delicate creatures of the Southern chivalric legend, bravely carried on at home, working hard on the plantations and supporting the cause as best they could They did not face wholesale death as did the soldiers in the field, but all the other horrors of war were brought to them in the mighty Union invasion of 1864 65 Already lacking the bare necessities of life—shoes, iron goods, paper, clothing—because the South was nonindustrial (the armies were kept supplied with ammunition, but beyond that industry was negligible) and also felt the pinch of the blockade, they now saw their country devastated by the Sherman and the Sheridans Many, both men and women, cried for peace, but the Union price was too great (see HAMPTON ROADS PEACE CONFERENCE) and most Southerners hung on grimly Benjamin's proposal that Negroes who willingly enlisted in the fight be freed indicates how desperate affairs were Not long after that came the collapse That the Confederacy was able to continue the war as long as it did is a tribute to its stout soldiers and a few brilliant commanders, notably Robert E LEE For the South, largely made up of scattered agricultural communities less populous than the North, there could have been no other result but defeat That so much intelligence, courage, and ordinary human worth should have been expended in a struggle largely arising out of defense of a vicious institution—slavery—made it all the more a tragedy Yet the South still reveres the "lost cause" of the Confederacy as its greatest tradition, though perhaps not so strongly as in the late 19th cent See Jefferson DAVIS, *The Rise and Fall of the Confederate Government* (1881), J T Scharf, *History of the Confederate States Navy* (1887), John Bigelow, *France and the Confederate Navy, 1862–1868* (1888), C A. Confederate cruisers. At the outbreak of the Civil War the United States ranked next to Great Britain in merchant marine Since practically all of the tonnage belonged to the North, the Confederacy set out to destroy it Privateering flourished only briefly because the increased effectiveness of the Union blockade forestalled attempts to bring prizes into Southern ports for adjudication But in the course of the war some 18 cruisers, constituting the South's seagoing navy, were engaged in this activity Only eight achieved results of any consequence Of these, the *Florida*, the *Alabama*, and the *Shenandoah* were outstanding The *Florida*, built in Liverpool in 1861–62, began her active career in Jan , 1863 Commanded by John N Maffitt and later by Charles M Morris, the *Florida*, along with several of her captures that were in turn commissioned Confederate cruisers, took about 60 prizes She was captured by the U S S *Wachusett* in the harbor of Bahia, Brazil, Oct , 1864 Most famous of the cruisers was the *Alabama*, also built at Liverpool in 1861–62 Under the command of Raphael Semmes she took almost 70 prizes Her damage to U S shipping was valued at more than $6,000,000 in the settlement of the ALABAMA CLAIMS In a famous naval action off Cherbourg, France, on July 17, 1864, the *Alabama* was sunk by the U S S *Kearsarge* The *Shenandoah*, bought at London in 1864, was commanded by James I Waddell Many of her 38 prizes, principally Pacific whalers, were taken after the fall of the Confederacy, of which Waddell was not apprised until Aug , 1865 On returning to England the *Shenandoah* reverted to the United States The indirect damage inflicted on the U S carrying trade by the cruisers had far more effect than the direct losses they caused Insurance rates rose and hundreds of ships transferred to foreign flags, especially to Great Britain's The raiders were in good part responsible for the decline of the nation's merchant marine See George W Dalzell, *The Flight from the Flag* (1940), Murray Morgan, *Dixie Raider* (1948)

Confederate States of America: see CONFEDERACY

Confederation, Articles of, in U S history, ratified in 1781 and superseded by the CONSTITUTION OF THE UNITED STATES in 1789 The imperative need of unity among the new states created by the AMERICAN REVOLUTION and the necessity of defining the relative powers of the CONTINENTAL CONGRESS and the states led Congress to entrust the drafting of a Federal constitution to a committee headed by John DICKINSON Three points in the Articles of Confederation submitted to the Second Continental Congress, on July 12, 1776—the apportionment of taxes according to population, the granting of one vote to each state, and the right of the Federal government to dispose of public lands in the West—provoked much argument After several revisions were made, however, this constitution, with a preamble and 13 articles, was adopted by Congress on Nov 15, 1777 In their final form, the Articles retained the vote by states, but based the apportionment of taxes on the value of buildings and land and specified that no state should be deprived of territory for the benefit of the United States The preamble and Article 1 established a perpetual union of the Thirteen Colonies under the style of the United States of America Article 2 asserted that each state retained its sovereignty and every right not expressly delegated to the central government, while Article 3 characterized the confederation as a "league of friendship," for common defense In Article 4, the free inhabitants of each state were granted the privileges of free citizens in all the states, extradition was provided for, and it was stipulated that full faith and credit be given the records, acts, and judicial proceedings of the courts of one state in the courts of every other state Article 5 provided that each state send annually not less than two nor more than seven delegates to Congress, though each state was to have only one vote Article 6 left the conduct of war to Congress, and Article 7 empowered the state legislatures to appoint military officers up to and including the rank of colonel Article 8 provided that the charges of war and other expenses incurred for the common defense should be defrayed out of a common treasury Besides placing the conduct of foreign affairs in the hands of Congress, Article 9 authorized a system of settling disputes between states, granted Congress partial control over the currency, sanctioned the establish-

ment of post offices by the Congress, and established the Committee of the States, with one delegate from each state, to sit in recess of CONGRESS The authority of the central government was drastically restricted by this article, which forbade Congress to engage in war, negotiate treaties or alliances, coin money, emit bills of credit, or borrow and appropriate money without the consent of a majority of the states Provisions for the functioning of the Committee of the States and for the possible admission of Canada were made in Articles 10 and 11 Article 12 stated that pecuniary obligations of Congress were to be deemed a charge against the United States Article 13 stipulated that the Articles of Confederation were to be unanimously ratified by the states before going into effect and that no alteration could be made unless agreed to both by Congress and by the legislature of every state. By 1779 all the states had ratified the Articles but Maryland, which refused its assent until states claiming territory NW of the Ohio river would relinquish their claims, thus guaranteeing the equitable right of all states to the Western lands When New York, followed by Virginia and Connecticut, offered to cede to Congress its claims to Western territory, Maryland ratified (March 1, 1781) the articles. While this constitution was a contribution to the techniques of government and a step toward national unity, the Articles of Confederation proved wholly unsatisfactory because of the subordinate position occupied by the central government Congress, dependent upon the states for its funds and for the execution of its decrees, became a legislative-executive body attempting to reconcile the policies of the various states. It could not extend its jurisdiction to individuals, command respect abroad by stabilizing credit, unify foreign and domestic policies, pass navigation regulations, or enforce treaty obligations Because of its inherent weaknesses, the government commanded little respect, and its prestige was further diminished by its inability to cope with internal uprisings (see SHAYS'S REBELLION) Many capable statesmen—e g., Robert MORRIS, John JAY, and Benjamin LINCOLN—who held key posts were thwarted by this organization of government, while others, equally able, shunned Congress in favor of state politics. The unanimity rule enabled one state to prevent the passage of a measure desired by 12 states. Thus, New York alone blocked the establishment of a tariff vitally necessary at the time. When it was apparent that government under the Articles of Confederation was, in the words of George Washington, "little more than the shadow without the substance," agitation for a stronger Federal government began It resulted in the Annapolis Convention of 1786, and the FEDERAL CONSTITUTIONAL CONVENTION of 1787, which drafted the Constitution of the United States. Perhaps the most significant event of the Confederation period was the adoption of the ORDINANCE OF 1787 concerning the NORTHWEST TERRITORY. See Allan Nevins, *The American States during and after the Revolution, 1775-1789* (1924); Merrill Jensen, *The Articles of Confederation* (1941)

confederation, Canadian: see BRITISH NORTH AMERICA ACT

Confederation of the Rhine, league of German princes formed in 1806 under the protection of Napoleon I The chief members were the kings of Bavaria, Württemberg, Saxony, and Westphalia and the grand duke of Baden The members disavowed their allegiance to the Holy Roman Empire, and Francis II, already styled emperor of Austria, relinquished the title Roman emperor in 1806 After Napoleon's retreat from Russia (1812–13), its members, by changing sides in the war, caused the collapse of the confederation

confession, in law, formal admission of criminal guilt. It is usually obtained in the course of examination by the police or prosecutor or at the trial For a confession to be admissible against an accused it must have been procured voluntarily If a confession is obtained by torture or by a false promise of immunity from prosecution made by a responsible party, it is inadmissible. A signed confession is prima facie voluntary, and the accused must introduce proof that it was extorted if he wishes to prevent its introduction at the trial Usually a person who does not plead guilty may not be convicted solely on the basis of his confession, and in most cases there must be at least some independent proof that the crime was committed.

confession, in religion see PENANCE.

Confession of Augsburg: see CREED.

confirmation, Christian rite supplementing baptism. In the Roman Catholic and Orthodox churches it is a SACRAMENT by which a Christian is strengthened in his faith. In the Anglican and Lutheran churches it is universally used, but it is not a sacrament In the East it is conferred by the priest on the newly baptized person of whatever age In the West it is ordinarily an episcopal function and the recipient is arrived at a canonical age of discretion It consists of the laying on of hands and anointing with chrism, a mixture of oil and balm; Protestants have abandoned the anointing. A sponsor is usually essential at confirmation. Scriptural passages cited as authority for confirmation include Acts 8.14–17, 19.

conflict of laws, legal rules governing situations where the law of more than one territorial unit is or may be involved. An alternative term, widely used on the European continent, is private international law An example of a legal relation which may be affected by the different laws of two places is that of a contract signed in one state and mailed to another Complications may arise if one of the states provides that a contract so delivered is effective when mailed, while the other state provides that it is not effective until received. The rules of conflicts of law which a court applies in these disputed situations are commonly designed to decide the case by the law of the territory having the closer or closest connection with the transaction. An often expressed ideal is that of making the decision the same regardless of where the case is decided In the United States the existence of many states with legal rules often at variance makes the subject of conflict of law especially urgent. Certain provisions of the U.S Constitution deprive the states of complete freedom to determine how they will decide cases in this field. Most important is Article 4, Section 1, which provides, in part, "Full Faith and Credit shall be given in each State to the Public Acts, Records, and judicial Proceedings of every other State." The U.S. Supreme Court has interpreted this to require each state to treat as valid any judgment rendered by another state which had jurisdiction and to lend its powers of enforcement to the judgment Jurisdiction in this context is defined as the capacity of the state to interpose its authority in a transaction because of intimate connection with it. There are especially difficult jurisdictional problems in the field of divorce There is usually no problem if both husband and wife appear in the trial, because the court then had personal jurisdiction of both parties The chief problem occurs when only one of the parties appears and the other is merely notified of the action In such cases the Supreme Court has ruled that the state had jurisdiction to divorce if the party appearing was domiciled there. The court has defined domicile as the place where one is living with the intention of making it his home A person who obtains a divorce under these circumstances may claim alimony in any state and is immune from the charge of bigamy if there is a remarriage See W W Cook, *The Logical and Legal Bases of the Conflict of Laws* (1942).

Confluence, borough (pop 1,035), SW Pa., on the Youghiogheny and SW of Somerset, inc 1873

Confucianism (kunfū'shunizĭm), moral and religious system of China Its origins go back to the *Analects* (see CHINESE LITERATURE), the sayings attributed to Confucius, and to ancient commentaries, including that of MENCIUS In its early form (i e, before the 3d cent B C) Confucianism was entirely a system of ethical precepts for the proper management of society It envisaged man as essentially a social creature who is bound to his fellows by *jen*, a term often rendered as "sympathy" *Jen* is expressed through the five relations —sovereign and subject, parent and child, older and younger brother, husband and wife, and friend and friend Of these, the filial relation is usually stressed. The relations are made to function smoothly by an exact adherence to *li*, a term denoting a combination of etiquette and ritual In at least some of these relations a person may be superior to some and inferior to others If in his subordinate status he wishes to be properly treated he must—applying a principle similar to the Golden Rule—treat his own inferiors with propriety Correct conduct, however, proceeds not through compulsion, but through a sense of virtue inculcated by observing suitable models of deportment The ruler, as the moral exemplar of the whole state, must be irreproachable, but a strong obligation to be virtuous rests upon all men It was recognized by the early philosophers that the millennial "great commonwealth," the union of mankind under ethical rule, must be long delayed It might be constantly advanced, however, by practicing the "rectification of names" This is a critical examination of the degree to which the behavior of a functionary or an institution corresponds to its name, thus, the title of king should not be applied to one who exacts excessive taxes, and the criticism of the undeserving claimant should force him to reform. The absence of a theological element in Confucianism was supplied (about the 2d cent. B C) when Shang-Ti [ruler of heaven] (apparently an old nature god) was identified as the superior of the emperor on earth. Heavenly displeasure with the emperor's conduct would be shown by natural calamities A method of divination was developed to determine exactly what had been remiss. In the 1st cent. A.D began the practice of offering sacrifices and other veneration to Confucius in special shrines; it continued even through the period of Kuomintang rule in the Chinese republic. Confucianism had often to contend with supernatural religious systems, notably TAOISM and BUDDHISM, and at times, especially from the 3d to the 7th cent., it suffered a virtual eclipse. Under the T'ang dynasty (618–906) it enjoyed a renascence and was the state religion. In the Sung dynasty (960–1279) occurred the development of Neo-Confucianism. This opposed to the meditative and quietistic techniques of self-improvement advocated by Buddhism and Taoism an active quest for knowledge, and by some it has been deemed an early statement of scientific method. Neo-Confucianism, however, in time became conservative and endorsed the belief that the status quo represented the highest order Hence it has fallen into disrepute with many modern thinkers See Richard Wilhelm, *Confucius and Confucianism* (Eng tr by G. H. Danton and A. P. Danton, 1931), J. C. Shryock, *The Origin and Development of the State Cult of Confucius* (1932), Lin Yutang, *The Wisdom of Confucius* (1943), H G. Creel, *Confucius: the Man and the Myth* (1949).

Confucius (kunfū'shus), Chinese *K'ung Fu-tse*, c 551–479? B C , Chinese sage Positive evidence concerning the life of Confucius is scanty Modern scholars base their accounts largely on the *Analects*, a collection of sayings and short dialogues apparently collected by Confucius's pupils, and discard most of the later lore Confucius was born in the feudal state of Lu, in modern Shantung prov Distressed by the constant warfare between the Chinese states and by the venality and tyranny of the rulers, he urged a system of morality and statecraft which would preserve peace and afford the people the stable, just government they required. He gathered about him a number of disciples, some of whom occupied high positions, although Confucius himself, possibly because of his extremely outspoken manner toward his superiors, was at most granted an insignificant sinecure From about his 55th to his 65th year he toured several neighboring states, but was still unable to induce any ruler to grant him high office so that he might introduce his reforms Later tradition depicts Confucius as a man who, seeking to restore an older social order, made special study of ancient books It was said that he was a minister of state and the author (or at least the editor) of the Five Classics (see CHINESE LITERATURE) His supposed doctrines are embodied in Confucianism For bibliography, see CONFUCIANISM

Congaree (kŏng'gərē), river of central South Carolina formed by the junction of the Broad and Saluda rivers near Columbia It flows 52 mi southeast and joins the Wateree to form the Santee

Conger, Edwin Hurd (kŏng'gur), 1843–1907, American diplomat, b near Galesburg, Ill He was a Congressman from Iowa from 1885 to 1890 As minister in Peking during the BOXER REBELLION, Conger handled critical matters with courage and wisdom He remained in China, gaining the people's affection and confidence, until 1905, when he became ambassador to Mexico His wife, Sarah P Conger, wrote *Letters from China* (1909).

congestion or **hyperemia** (hīpurē'mēu) [Gr , =too much blood], increase of blood in the vessels of a part of the body owing to increased arterial flow (active) or to diminished flow in the veins (passive) Active congestion occurs in exercise, from heat, during active function of an organ, and in the process of INFLAMMATION Passive congestion results from pressure or any obstruction of veins In the skin, congestion is evident as swelling, warmth, a red color in case of active, and a reddish-blue color (cyanosis) in case of passive, congestion The pains of ARTHRITIS, NEURALGIA, LUMBAGO, and muscle CRAMPS and some other pains are relieved by causing congestion through application of heat

Congo (kŏng'gō), great river of equatorial Africa It is c.3,000 mi long and is second in Africa only to the Nile The drainage basin of the Congo system is c 1,450,000 sq. mi , it includes all of the Belgian Congo and much of S French Equatorial Africa and of N Angola The upper course of the Congo, i e , from its rise in SE Belgian Congo N to the STANLEY FALLS, is called the Lualaba. The Lualaba is fed by a major eastern tributary, the Luvua, which in NE Northern Rhodesia is called the Chambezi and on its course along the Northern Rhodesia–Belgian Congo border is called the Luapula. The Congo proper makes a great arc through N Belgian Congo, turning southwest to receive the Ubangi The united rivers flow along the Belgian Congo–French Equatorial Africa border and receive the Kasai, which comes from Angola. The river broadens to the STANLEY POOL, on which are situated Brazzaville and Leopoldville On the final part of its course the Congo cuts across the western extremity of the Belgian Congo, and its wide estuary forms the border with Angola Much of the Congo is navigable, and it is the principal avenue of trade in the Belgian Congo Ocean steamers can proceed up the river 95 mi. to Matadi, where there is a railroad to Leopoldville. There is also a line running from Brazzaville to Pointe Noire on the coast From the Stanley Pool the river is navigable without a break to the Stanley Falls, which are skirted by a short railroad. The river is then navigable to Kindu, which is connected by rail and by intermediate navigable stretches with the rich metal-producing Katanga area. The mouth of the Congo was discovered by the Por-

tuguese navigator Diogo Cão in 1482. David Livingstone discovered and explored (1867–73) the Chambesi and Lualaba and believed that these streams were the headwaters of the Nile Sir Henry Stanley made (1876–77) the first known descent of the river to its mouth

Congo, Belgian: see BELGIAN CONGO.

Congo Free State: see BELGIAN CONGO

Congregationalism, type of Protestant church organization in which each congregation, or local church, has free control of its own affairs The underlying principle is that each local congregation has as its head Jesus Christ alone and that the relations of the various congregations are those of fellow members in one common family of God Congregationalism eliminates bishops and presbyteries The movement to which the name came to be applied began in the 16th and 17th cent in England, in a revolt against the formalized worship, unregenerate membership, and state control of the Established Church Those holding such views found themselves unable to remain within the Church of England Robert BROWNE published in 1582 the first theoretical exposition of Congregational principles and expressed the position of some of these SEPARATISTS Churches established on these lines were started very early in the 17th cent in Gainsborough and Scrooby, but government opposition drove them into exile in Holland Not until the Protectorate did the Congregationalists make much progress About that time the name INDEPENDENTS was first introduced, a term long used in Great Britain but seldom in America In 1658, when the Savoy Synod met in London, over 100 churches were represented With the Restoration came repression for the Independents, partly relieved by the Toleration Act of 1689 A marked tendency among English Congregationalists in the 19th cent was toward combination in larger fellowship Churches of this denomination formed a union in Scotland in 1812, in Ireland in 1829, in 1831 the Congregational Union of England and Wales was established The Congregational Union and the Evangelical Union were united in 1896 Congregationalism was brought to America in 1620 by the Pilgrims, who were members of John Robinson's congregation in Holland, originally of Scrooby, England For some years Congregationalism in New England was practically a state religion In 1648 in the CAMBRIDGE PLATFORM a summary of principles of church government and discipline was drawn up Congregationalists took a leading part in the Great Awakening which, in New England, was started in 1734 by the preaching of Jonathan EDWARDS As the country expanded, Congregational churches were established in the newly opened frontier regions In 1810 the American Board of Commissioners for Foreign Missions began its work, in 1826 the American Home Missionary Society was formed These were followed, in 1846, by the American Missionary Association, primarily devoted to the interests of Negroes and Indians The early part of the 19th cent brought the Unitarian secession, when over 100 churches left the main Congregational body Congregational churches began to meet in local and then in state-wide "conferences," out of which developed (1871) the National Council of the Congregational Churches of the United States But each local church is free to make its own declaration of faith and free to decide its own form of worship, in the conduct of the local church each member has an equal voice The principal assistants of the pastor are the deacons In education Congregationalists have always been prominent, but the institutions of their founding—Harvard (1636), Yale (1701), Williams, Amherst, Oberlin, and many others—have been free from sectarianism The trend toward broader fellowship and larger cooperation was notably indicated in the merging in 1931 of the National Council of the Congregational Churches of the United States and the General Convention of the Christian Church (see DISCIPLES OF CHRIST) to form the General Council of the Congregational and Christian Churches of the United States A move to unite the Congregational Christian Churches with the Evangelical and Reformed Church was opposed by part of the membership and was barred (1950) by the courts See Williston Walker, *The Creeds and Platforms of Congregationalism* (1893), A W W Dale, *The History of English Congregationalism* (1907), C E Jefferson, *Congregationalism* (1910), G G Atkins and F L Fagley, *History of American Congregationalism* (1942)

congress. In its international sense the term *congress* has been applied to conferences of great importance attended by sovereigns or plenipotentiaries. The Congress of Vienna was one of the most noted In the case of the American Continental Congress the word is used in a similar sense Even the present Federal Congress was conceived as of representatives of states, hence the unusual name was not misapplied. Lesser international meetings are usually termed *conferences*, but the distinction has lapsed since the First World War, the peace meeting at its close being usually called the Paris Peace Conference. The term *congress* is used also of meetings of private organizations, especially if they are international.

Congress, Library of: see LIBRARY OF CONGRESS

Congress of Industrial Organizations (C I O) In Nov, 1935, John L Lewis led eight affiliates of the American Federation of Labor in forming a federation called the Committee for Industrial Organization Its drive to unionize mass-production industries on an industrial (vertical) basis was opposed by the craft (horizontal) unions in the A F of L. The Federation suspended (1936) 10 unions then in the C I O (including the United Mine Workers and the Amalgamated Clothing Workers) and expelled them in 1937 Aggressive unionization drives in the steel, automobile, rubber, maritime, textile, coal, electrical, and other industries, accompanied by widespread strikes for union recognition, rapidly augmented C I O membership in the later '30s and produced powerful unions such as the United Steel Workers and the United Automobile Workers Later drives extended particularly to government and white-collar workers The C I O changed its name in 1938 and became a permanent organization, with Lewis as president Several unions withdrew during 1938–39, including the International Ladies Garment Workers and a faction of the United Automobile Workers In 1940 Lewis resigned the presidency to protest C I O endorsement of President Roosevelt. Lewis's United Mine Workers left the C I O in 1942 Philip Murray followed Lewis as president The C I O Political Action Committee, headed by Sidney Hillman, was formed in 1943 to promote policies and candidates favorable to labor, it was influential in the 1948 presidential election The post-war period saw many strikes by C I O unions for higher wages, shorter hours, and greater social benefits The C I O became a member of the International Federation of Trades Unions (formed 1945) but withdrew in 1949, because of the Federation's Communistic affiliations

Congress of the United States, the legislative branch of the Federal government, instituted (1789) by Article I of the U S Constitution (see CONSTITUTION), which prescribes its membership and defines its powers Congress is composed of two houses, the Senate and the House of Representatives The Senators, two from each state, have six-year terms and were chosen by the state legislatures until 1913, when the Seventeenth Amendment, providing for their direct popular election, went into force Actually, many states, especially in the West, had already in effect adopted this reform through use of the direct PRIMARY The terms of one third of the Senators expire every two years A Senator must be at least 30 years old, not less than nine years a U S citizen, and a resident of the state in which he is elected The Senate is presided over by the VICE President of the United States, who has no part in its deliberations and may vote only in case of a tie, in his absence his duties are assumed by a president pro tempore, elected by the Senate Representatives are apportioned among the states according to their populations in the Federal census Every state is entitled to a least one Representative, Delaware Nevada, Vermont, and Wyoming each had (1949) a Representative at large, i e , elected by the whole state, in the 81st Congress The legislatures of those states entitled to more than one Representative have been required since 1842 to divide their states into congressional districts When a reapportionment is made and until a new districting is carried out, a state whose quota is changed may also elect Representatives at large Representatives are chosen for two-year terms, and the entire body comes up for reelection every two years A Representative must be 25 or older, at least seven years a U S Citizen, and an inhabitant of the state from which he is elected Though they have no vote, one delegate each from the territories of Hawaii and Alaska and one resident commissioner from Puerto Rico sit in the House The presiding officer of the House, the speaker, is elected by the members of the House and may designate any member of the House to act in his absence In 1910 a revolt against the dictatorial speaker, Joseph G. CANNON, deprived that office of most of its powers and influence and placed them in the hands of House committees. In both houses the work of preparing and considering legislation is done by standing committees, and in addition there are special committees in each house as well as joint committees composed of members of both houses The two houses have an equal voice in legislation, though revenue bills must originate in the House of Representatives. Bills, after having been passed by each house separately, must be signed by the President within 10 days of their submission, or they become law automatically, unless Congress is not in session If vetoed by the President, a bill may become law only by its repassage by a two-thirds majority in each house The Constitution requires a regular annual meeting of Congress, which, since the passage of the Twentieth Amendment in 1933, begins on Jan 3 each year. The President may call an extra session of Congress or of either house. Only the House of Representatives may impeach the President or other Federal officers and the Senate alone has authority to try impeachments, but each house is the sole judge of the qualifications of its own members. The Senate must ratify all treaties and confirm important presidential appointments to office, including cabinet members, judges of Federal courts, and officers of the army and navy Because of this and because there are fewer Senators, who also enjoy longer terms of office and unlimited debate, today the Senate is regarded as the more powerful body Congress, as a whole, reached the zenith of its power during RECONSTRUCTION. The proceedings of each house are recorded in the *Congressional Record* See De Alva Alexander, *History and Procedure of the House of Representatives* (1916), W F Willoughby, *Principles of Legislative Organization and Administration* (1934), Charles Warren, *Congress, the Constitution, and the Supreme Court* (1935), E. S Bates, *The Story of Congress, 1789–1935* (1936), G H Haynes, *The Senate of the United States* (1938), C C Dill, *How Congress Makes Laws* (2d ed , 1939), L H Chamberlain, *President, Congress, and Legislation* (1946), W E Binkley, *The President and Congress* (1947), F M Riddick, *The United States Congress* (1949).

Congreve, Richard, 1818–99, English philosopher, chief representative of positivism in England. He translated *The Catechism of the Positive Religion* (1858) from the French of Auguste Comte.

Congreve, William, 1670–1729, English Restoration dramatist, b near Leeds, educated at Trinity College, Dublin, and studied law in the Middle Temple After a novel, *Incognita, or, Love and Duty Reconciled*, was published (1692), he wrote a comedy, *The Old Bachelor* (1693), which achieved tremendous popularity *The Double Dealer* (1693) followed *Love for Love* (1695) was popular in its day and was many times revived, it was produced in New York by John Gielgud in 1947 Congreve's tragedy, *The Mourning Bride* (1697), was approved by his contemporaries, though it is now known chiefly as the source of "Music hath charms to soothe the savage breast" and "Hell hath no fury like a woman scorned" (as popular usage has improved on Congreve's couplet) Congreve, along with Vanbrugh, Dryden, and other dramatists, was attacked by Jeremy COLLIER in his *Short View of the English Stage* (1698), to which Congreve wrote a reply (1698) His masterpiece of cynical, witty, and epigrammatic comedy, *The Way of the World* (1700), failed, possibly because of Collier's earlier attack, and thereafter Congreve wrote no more dramas He held various minor political positions, had many friends, and was sought out by VOLTAIRE Congreve was buried in Westminster Abbey See his works (ed by F W Bateson, 1930), biographies by D C Taylor (1931) and J C. Hodges (1941)

Coniah (kōnī'u) see JEHOIACHIN.

conical surface see CONE

conic section (kŏ'nĭk), any curve formed by the intersection of a right circular conical surface and a plane These curves are known as the CIRCLE, the ELLIPSE, the PARABOLA, and the HYPERBOLA When the plane passes through the vertex, the result is a point, a straight line, or a pair of intersecting lines, these are called degenerate conic sections

conifer (kō'nĭfûr) [Latin,=cone-bearing], tree or shrub of the order Coniferales, e g , the PINE, SPRUCE, CYPRESS, and SEQUOIA Most conifers bear cones and most are evergreens, though a few, such as the larches, are deciduous Some have globular fruits Conifers are widely distributed over the world, but are mostly found in the highlands of temperate regions

Coningh, Philips de see KONINCK, PHILIPS DE

Coningham, Sir Arthur (kŏ'nĭng-um), 1895–1948, British air marshal, b Brisbane, Australia, educated in New Zealand He saw service in the First World War and in 1916 joined the Royal Flying Corps, a two-year forerunner of the Royal Air Force After the war he remained in the air force and became in the Second World War air vice marshal (1941) and air marshal (1946) While on duty in the Middle East (1941) he took over and developed the tactics of the German *Luftwaffe* in close cooperation with ground forces These were successfully applied in support of the British 8th Army against Gen Erwin Rommel Later, as commander of the 2d Tactical Air Force, Coningham was active both in reconnaissance and in air support in the invasion of Normandy. He retired from the air force in 1947 and was lost at sea in an airplane crash in Jan , 1948

Coninxloo or Koninksloo, Gillis van (gĭl'ĭs vän kō'nĭngkslō), 1544–1607, Flemish landscape painter His *Latona* (Hermitage, Leningrad) and especially his fine *Landscape with Figures* (Liechtenstein Gall , Vienna) are well known.

Coniston (kō'nĭstun), town (pop 2,245), S Ont., E of Sudbury Incorporated in 1934, it is chiefly engaged in nickel and copper smelting

Conjeeveram (kunjē'vurŭm), town (pop 74,635), E central Madras state, India Several temples in the Dravidian style survive from the period

when it was the capital (c 300–c.750) of the Pallava empire of S India and a center of Brahmanical and Buddhist culture It was occupied by the Chola (11th–13th cent), Vijayanagar (c 1400–c 1468), and Orissa (after c 1468) kingdoms and by several Mohammedan sultanates Clive captured it from the French in 1758 Sacred to Hindus, it has many temples and is known proverbially as the Benares of the South. The native name is Kanchipuram or Kanchi

conjugation. see INFLECTION

conjunction, in English, PART OF SPEECH serving to connect words or constructions Most languages have connective particles like English conjunctions

conjunctivitis, congestion of the membranous covering of the eyelids and the front of the eyeball The condition may be caused by bacteria and some forms are contagious Gonococcal conjunctivitis may occur in newborn infants and in adults The newborn acquires the disease at birth from infected mothers, inflammatory symptoms occurring during the first 24 to 48 hr A prophylactic standard procedure for newborn infants is required by law in most states in order to prevent resulting blindness, silver nitrate placed in each eye is the treatment employed Another form of contagious conjunctivitis is acute catarrhal conjunctivitis, caused by the Koch-Weeks bacillus, the pneumococcus, and other organisms The condition commonly referred to as PINKEYE is characterized by intense redness of the lining membrane of the eye A noninfectious form, vernal conjunctivitis, is thought to be of allergic origin and occurs chiefly during the spring and summer months

Conklin, Edwin Grant, 1863–, American biologist, b Waldo, Ohio, grad Ohio Wesleyan Univ (B S, 1885) He taught zoology (1896–1908) at the Univ of Pennsylvania and biology at Princeton from 1908, becoming professor emeritus and special lecturer in 1933 His principal researches were in cytology (particularly cell division), embryology, and heredity He wrote *Heredity and Environment* (1915) and many other works in his field

Conkling, Roscoe, 1829–88, American politician, b Albany, N Y On his admission to the bar in 1850, he was immediately appointed district attorney of Albany The son of Alfred Conkling, Congressman and Federal judge, he became a U S Representative (1859–63, 1865–67) and Senator (1867–81) and undisputed leader of the Republican party in New York Conkling's machine was built upon Federal patronage, which was entirely his during the Grant administrations But in 1878 President Rutherford B HAYES, an advocate of civil service reform, removed Chester A ARTHUR and Alonzo B CORNELL, Conkling lieutenants, from the management of the New York customhouse in defiance of Conkling, who claimed that a Senator had the right to control Federal patronage in his state Conkling was reelected, and another lieutenant, Thomas C PLATT, became his colleague in the Senate, while Cornell won the governorship Conkling headed the third-term movement for Grant in 1880 and placed him in nomination at the Republican national convention Although his Old Guard or "Stalwart" faction was unsuccessful he prevented the nomination of James G BLAINE, his bitter personal enemy The deadlocked convention chose James A GARFIELD as a compromise candidate, and Arthur was named for Vice President as a sop to the "Stalwarts" Conkling gave Garfield only lukewarm support, but claimed afterwards that the President-elect had promised him the patronage in return Garfield denied this and further antagonized Conkling by making Blaine Secretary of State When an anti-Conkling man was appointed collector of the port of New York, Conkling resigned from the Senate in protest Platt soon followed his leader, earning for himself the nickname "Me Too" The two expected vindication through reelection by the state legislature, but both were defeated Conkling then retired to the private practice of law, in which he was highly successful See biography by his nephew, A R Conkling (1889), D B Chidsey, *The Gentleman from New York* (1935)

Connacht. see CONNAUGHT, Ireland

Connally, Tom (Thomas Terry Connally) (kŏ'nălĭ), 1877–, U S Senator (1929–), b. McLennan co, Texas, grad. Baylor Univ (B A, 1896) and Univ of Texas (LL B., 1898) Connally, a Democrat, was a representative (1901–4) in the state legislature and prosecuting attorney for Falls co, Texas He served as Congressman (1917–29) and then as Senator He headed (1941–46) the Senate Committee on Foreign Relations and urged the resolution, favoring U S leadership in world organization. He was appointed to the San Francisco Conference of 1945, which drafted the Charter of the United Nations, and was U S delegate (1945–47) to the UN General Assembly In 1949 he returned to Senate committee chairmanship

Connaught, Arthur William Patrick Albert, duke of (kŏ'nôt), 1850–1942, English prince; son of Queen Victoria and Prince Albert. Trained for a military career, he served in Egypt (1882) and India (1886–90) and as commander in chief in the Mediterranean (1907–9). He was (1911–16) governor general of Canada. His son, **Prince Arthur of Connaught,** 1883–1938, was (1920–23) governor general of South Africa

Connaught or **Connacht** (both· kŏ'nôt, kŏ'nŭkht), province (6,611 sq mi, pop 492,816), W Ireland, comprising the counties of MAYO, SLIGO, LEITRIM, ROSCOMMON, and GALWAY It was one of the ancient kingdoms of Ireland, whose rulers, the O'Connors, were supplanted by the Anglo-Norman De Burghs in the 13th cent Though Connaught is an agricultural district, the soil is poor and the people have migrated in vast numbers in the last century.

Conneaut (kŏ'nēŏt'), city (pop 9,355), extreme NE Ohio, on Lake Erie at the mouth of Conneaut Creek and near the Pa line, settled 1799 It is a port of entry, an important ore-receiving port, and a coal and steel loading center Gardening and farming tools, tin cans, underwear, canned goods, and leather are made here

Conneaut Lake, NW Pa, S of Lake Erie It gives its name to the boroughs of **Conneaut Lake** (pop 598) and **Conneautville** (pop 965)

Connecticut (kunĕ'tĭkut), state (4,899 sq mi, 1940 pop 1,709,242, 1949 estimated pop 2,019,000), NE United States, southernmost of the New England states, one of the Thirteen Colonies HARTFORD is the capital and largest city, with NEW HAVEN, BRIDGEPORT, and WATERBURY next in size Rectangular in outline, the state extends c 95 mi from east to west and c 60 mi from north to south, it is bounded on the north by Massachusetts, on the east by Rhode Island, on the south by Long Island Sound, and on the west by New York Connecticut is divided into two nearly equal sections, usually called the eastern highland and the western highland, by the Connecticut river and its valley (the central lowland) From the low, rolling coastal plain along Long Island Sound the land rises gradually to a general elevation of c 1,000 ft at the state's northern boundary, except in the Connecticut valley, which reaches only c 100 ft The western highland, with the TACONIC MOUNTAINS and the Litchfield Hills, is the more rugged one A few isolated peaks here reach more than 2,000 ft, Bear Mt (2,355 ft), in the extreme northwest corner, being the best known Rivers emptying into the THAMES drain the eastern highland, and the HOUSATONIC, with its chief tributary, the NAUGATUCK, waters the western highland The climate is that of the northeast temperate zone Though it is famed for its rural loveliness, Connecticut draws its wealth overwhelmingly from industry, and much of its manufacturing involves a high degree of precision The leading industrial categories, in terms of employment, are machinery, including machine tools and a wide variety of special machines, iron and steel, nonferrous metals (the state leads the nation in the fabrication of such metals, except aluminum, and produces well over half of all the brass products made in the United States), electric and communication equipment, textiles (largely concentrated in the eastern half), aircraft and shipbuilding, apparel, rubber, and printing and publishing Hardware, felt hats, typewriters, clocks, firearms and ammunition, and sewing machines are just a few of the many products long associated with the state's name High-grade broadleaf tobacco for cigar wrappers has been a specialty of Connecticut agriculture since the 1830s Shade-grown in the fertile Connecticut valley, it is still the most valuable crop, though production has been adversely affected by the increased smoking of cigarettes and cheap cigars Dairy products, poultry products, livestock, potatoes, and truck rank next in value on the farms Stone and clay are the most valuable minerals Many varieties of fish, including oysters, lobsters, and other shell-fish, come from Long Island Sound Adriaen BLOCK sailed through Long Island Sound and discovered the Connecticut river in 1614, but the Dutch did nothing about their claim to the area until 1633 Then, aroused by the activities of the English there, they built a small fort, the House of Hope, on the site of Hartford, but were finally forced to abandon it in 1654 Edward WINSLOW of Plymouth Colony, apparently the first Englishman to visit (1632) Connecticut, sent William Holmes to establish a trading post, not far from the Dutch one, on the site of WINDSOR in 1633 This small Pilgrim foundation was, however, soon completely absorbed by the wave of Puritan settlers from Massachusetts Bay, who had been influenced by the excellent reports brought back by John OLDHAM in 1633. Returning with several others in 1634, Oldham established still another trading post, which became WETHERSFIELD Puritans flocked in such numbers to the Connecticut valley the next year that 1635 marks the official date for the beginning of the colony In 1635 also Lion GARDINER, under the direction of John WINTHROP, the younger (1606–76), who himself was acting for a group of Puritan lords and gentlemen in England, founded SAYBROOK (named for Viscount SAYE AND SELE and Baron Brooke) at the mouth of the Connecticut river At Winthrop's insistence the Massachusetts Puritans about to go to, or already in, Connecticut acknowledged the supposedly superior land claim of the Puritan lords (who had actually received a worthless patent from the earl of Warwick) and recognized Winthrop as governor for a year. The desire for more and better land rather than religious differences prompted the Puritan migration, although Connecticut's most conspicuous leader, Thomas HOOKER, pastor at Hartford, did not like Massachusetts government and plainly said so John HAYNES and Roger LUDLOW also looked forward to establishing a somewhat more liberal commonwealth Their departure, however, was without bitterness, and the Connecticut venture had the official blessing of Massachusetts Bay Land was purchased from the natives, who were on the whole friendly Another set of invaders, the PEQUOT INDIANS, created a slight stir, but they were virtually wiped out by the English under John MASON (c 1600–1672) and John UNDERHILL in the short Pequot War of 1637 Not until King Philip's War (see PHILIP) in 1675–76 was there further serious trouble with the Indians Representatives of the three Connecticut river towns—Hartford, Windsor, and Wethersfield—met at Hartford in 1638–39 and on Jan 14, 1639, adopted the FUNDAMENTAL ORDERS establishing "an orderly and decent Government according to God" Under these statutes any householder of "honest conversation" who had taken a Trinitarian oath of fidelity to the commonwealth was admitted to town meeting, which acted on local affairs and voted for deputies to the colony's General Court Women, servants, apprentices, and those found guilty of scandalous offenses (and these last were not a few) had absolutely no part in government However, "admitted inhabitants" could not themselves be deputies unless the General Court or a magistrate considered them worthy to be "freemen," and probably less than a third achieved that distinction Those freemen elected to the General Court, which met at Hartford, chose the magistrates, one of whom was selected to be governor (Haynes was the first one) The governor, who had to be a member of some approved congregation, held office for one year only, but was reeligible after the lapse of another year (this limitation was repealed in 1660) His authority was dwarfed by the great power of the General Court, which exercised both legislative and judicial functions The colonists, numbering c 3,000 by 1643, raised much corn and other grains and smaller crops of tobacco, flax, and hemp They kept horses, cattle, swine, and sheep and from the surrounding forests (still constituting more than half the total area) made timber for building, pitch and tar for their boats (their chief means for transport and communication), and staves Corn and staves were sometimes exported, though the colony did not have much seagoing trade There was neither great wealth nor extreme poverty, and Connecticut, "the land of steady habits," expanded gradually By 1662 there were over a dozen towns, including Saybrook, which was acquired in 1644, NEW LONDON, Fairfield, and Norwalk, as well as East Hampton and Southampton on Long Island Meanwhile another Puritan settlement, New Haven, not connected with Connecticut colony, had its beginnings in 1637–38 Theophilus EATON, who dominated affairs there, and John DAVENPORT, who was pastor, were its chief promoters These Puritans from London hoped to make New Haven a center for commerce, which was what they knew best, but failing this they were forced to turn to agriculture in a region not well adapted to it New Haven, where the basic law code (1639) was doubtless influenced by Davenport's friend, John COTTON, was an extreme Puritan theocracy Its freemen, unlike those of Connecticut, had to be church members, and a select group among them formed the General Court Milford, Guilford, Stamford, Southold (on Long Island), and Branford were dominated by New Haven, and in 1643 they formed with the mother town the loose confederation called New Haven colony This new jurisdiction was necessitated by the organization (1643) of the NEW ENGLAND CONFEDERATION, to which both New Haven and Connecticut colonies belonged. To government by the few, New Haven added severe regulation of community morals (see BLUE LAWS), and it was unique among the Puritan colonies in denying trial by jury Neither New Haven nor Connecticut had any legal standing in England as colonies, and the restoration of Charles II in 1660 was disconcerting to both But Connecticut, having adroitly wooed Winthrop away from New Haven in 1657 by making him governor, sent him to London, where he secured a royal charter, dated May 10, 1662 By the charter Connecticut not only won its legal right to exist as a corporate colony but also acquired New Haven, since the charter ignored the existence of that colony in defining Connecticut's boundaries Most of New Haven's satellites quickly went over to Connecticut, but New Haven itself bitterly resisted absorption until, faced with the even more unpleasant prospect of becoming part of the proprietary grant to the west given (1664) to the duke of York, it formally submitted on Jan. 5, 1665. The duke of York surrendered his claim W to the Connecticut river in return for the Long Island towns,

and Connecticut's size has varied little since then, though boundary squabbles with Massachusetts, Rhode Island, and New York continued endlessly The outstanding fact about the charter, however, was its confirmation of the Fundamental Orders and subsequent laws, so that government went on much as before, with a brief interruption (1687–89) under the royal administration of Sir Edmund ANDROS that inspired the legend of the CHARTER OAK By the Saybrook Platform (1708), CONGREGATIONALISM was established as the official religion of the colony (it always had been, in fact) and a modified Presbyterian type of church government was adopted In 1708 the General Court also passed a limited toleration act, and later the Anglicans (1727) and the Baptists and the Quakers (1729) were exempted from contributing to the support of the Established Church However, other dissenting groups, lacking the political influence in England possessed by those three sects, were treated harshly Connecticut thus occupied a position midway between the more autocratic ecclesiastical system of Massachusetts and the liberal one of Rhode Island Nevertheless religious harmony generally prevailed until the 1730s, when the Great Awakening split the Congregational church into radical and conservative factions which carried their differences over to nonreligious questions Thus the "New Lights" or radicals, especially strong in New London and Windham counties in the east, generally supported the SUSQUEHANNA COMPANY in its scheme to settle the WYOMING VALLEY of Pennsylvania In this they were opposed by the "Old Lights" or conservative Congregationalists and by the even more conservative Anglicans, who flourished especially in Fairfield co in the west There was need for expansion because the colony's old, simple agrarian economy was being transformed The land was now almost fully occupied, and a small but vigorous merchant class had arisen Most of Connecticut's trade (agricultural products exported and manufactured goods imported) was controlled by New York and Boston merchants The ports, on Long Island Sound, however, maintained commercial relations with the West Indies, and for the most part the colony became resentful of England's increasingly burdensome commercial and colonial policy The years 1750–76 saw much bitter controversy between radicals and conservatives In 1766 the radicals, by exploiting the Stamp Act issue, achieved a political upset, ousting the conservative governor, Thomas FITCH, and four of his like-minded assistants The conservatives never did recover their power in colonial days, and they disintegrated rapidly after the radical (Whig) victory of 1774 Most of the conservative Congregationalists ultimately supported the patriot cause, but the Anglicans made up the bulk of the state's die-hard Tories, probably some 2,000 or 2,500, who paid dearly for their devotion to the king In 1776 the patriot governor, Jonathan TRUMBULL, was reelected almost unanimously (Connecticut and Rhode Island were the only colonies privileged to elect their chief executives), and he was the only governor of any colony to be retained in office after the outbreak of the American Revolution There was little fighting in Connecticut—skirmishes at Stonington (1775), Danbury (1777), New Haven (1779), and New London (1781)—but the state was the principal supply area for the Continental army Native sons Ethan ALLEN, Israel PUTNAM, Nathan HALE, and Benedict ARNOLD all won fame, and in the last case ultimately notoriety, for their parts in the war, and Trumbull, Roger SHERMAN, Oliver WOLCOTT, and Silas DEANE were outstanding political personalities of the period After the war the long and bloody dispute with Pennsylvania over the Wyoming Valley was settled (1782), and the state relinquished (1786) its claims to Western lands, except the WESTERN RESERVE, to the United States Connecticut was one of the first states to approve the Federal Constitution, which was largely shaped by Oliver ELLSWORTH, who, with Sherman and William Samuel JOHNSON formed Connecticut's delegation to the FEDERAL CONSTITUTIONAL CONVENTION Conservative Connecticut remained politically content until Thomas Jefferson ended the hegemony of the Federalist party in national affairs His Embargo Act of 1807 was denounced throughout New England (the ports on Long Island Sound and on the Connecticut river had developed a lively carrying trade), and the War of 1812, fought under his collaborator and successor, James Madison, was so unpopular that New England Federalists, meeting at Connecticut's capital, seriously considered secession But the HARTFORD CONVENTION sounded the death knell of the Federalists, and in 1818 the Jeffersonians came into power in the state A new constitution, replacing the ancient charter of 1662, was adopted It disestablished the Congregational church and greatly extended the franchise, although universal manhood suffrage was not proclaimed until 1845 Meanwhile, with its shipping industry ruined by the embargo and the war, the state had turned to manufacturing Artisans and craftsmen had become increasingly numerous in late colonial days, and Connecticut forges had turned native iron ore into guns for the patriot soldiers When Eli WHITNEY, probably the best known of a host of Connecticut inventors, established (1798) a firearms factory at New Haven which began making guns with standardized, interchangeable parts, modern mass production had its beginnings The growth of railroads (especially in the 1840s and 1850s) and canals fostered industry The manufacture of notions (buttons, pins, needles, metal goods, and clocks) gave rise to the versatile Yankee peddler, who, with horse and team, covered the nation, hawking his wares He was unfairly maligned, especially in the South, as a seller of wooden nutmegs (hence Connecticut is called the Nutmeg State), when actually what he had was the faculty for overcoming sales resistance (the fact that Hartford is both the leading insurance center in the United States and the home base of the Fuller brush man is not without significance) The rise of industry, however, did not check the old individual urge to move on Connecticut people settled throughout the nation in the 18th and 19th cent, especially in N New England, upstate New York, Pennsylvania, Ohio, and Texas Connecticut, which had abolished slavery in 1784, provided nearly 60,000 troops and an able Secretary of the Navy, Gideon WELLES, for the Union in the Civil War During and after the war, industry expanded greatly, and immigration maintained the cheap labor supply English, Scotch, and especially Irish immigrants began arriving in large numbers even before the war, and they were followed by French Canadians and, in the late 19th and early 20th cent, by Italians, Poles, and others Next to Rhode Island the state has the highest percentage of foreign-born in the Union However, the old Yankee stock (generally Republican), dominant in the small towns, has lost little of its political power, since the legislature is still the most important arm of government In a reversal of the usual system in U S legislatures, Connecticut has a senate elected from districts based on population and a house of representatives based solely on geographical distribution, i e, the towns Those towns that have more than 5,000 population or were incorporated before 1818 (when the present constitution was adopted) send two representatives each, all others send one Thus the state's seven largest cities (containing well over half of the total population) are grossly underrepresented in the government, which, reflecting small-town sentiment, is usually cautious and conservative Nevertheless, progressive legislation of the type represented by the state fair employment practices act (1947) is not lacking Connecticut has prospered and suffered along with the national industrial economy The depression of the 1930s was flanked by the boom periods of war years Like all Puritan-founded colonies, Connecticut has been interested in public education, and, largely because of the efforts of Henry BARNARD in the 19th cent, Connecticut has fine public schools Yale Univ has influenced the nation as well as the state Trinity College at Hartford and Wesleyan Univ at Middletown are also old, influential establishments Other institutions of higher education are the Univ of Connecticut, at Storrs, the U S Coast Guard Academy, Connecticut College, at New London, Albertus Magnus College, at New Haven, and St Joseph College, at West Hartford See G L Clark, *A History of Connecticut Its People and Institutions* (1914), R J Purcell, *Connecticut in Transition, 1775–1818* (1918), J M Morse, *A Neglected Period of Connecticut's History, 1818–1850* (1933), Marguerite Allis, *Connecticut Trilogy* (1934), I M Calder, *The New Haven Colony* (1934), C M Andrews, *The Colonial Period of American History*, Vol II (1936), Federal Writers' Project, *Connecticut a Guide to Its Roads, Lore, and People* (1938), I H Sterry and W H Garrigus, *They Found a Way the Story of Connecticut's Restless People* (1938), Odell Shepard, *Connecticut, Past and Present* (1939), J F Kelly, *Early Connecticut Meetinghouses* (1948), Oscar Zeichner, *Connecticut's Years of Controversy, 1750–1776* (1949)

Connecticut, river, c 350 mi long, rising in lakes in extreme N New Hampshire and flowing S along the Vt–N H line, then across Massachusetts and Connecticut to enter Long Island Sound between Old Saybrook and Old Lyme Its upper course is used for power, and much of its valley is good farm land, onions are an important crop in Massachusetts, and tobacco in Massachusetts and Connecticut Springfield, Mass, and Hartford, Conn, are the largest cities on the river A flood in March, 1936, reached a stage of 38 ft at Hartford and caused widespread destruction, in Sept, 1938, a hurricane and floods did much damage in the valley A flood-control project, first authorized by Congress in 1936, is planned to include 20 dams and reservoirs on tributaries of the river in New Hampshire, Vermont, and Massachusetts See Walter Hard, *The Connecticut* (1947)

Connecticut, University of, mainly at Storrs, land-grant and state supported, coeducational, chartered and opened 1881 as Storrs Agricultural School It became a college in 1893, Connecticut Agricultural College in 1899, and a university in 1939. It includes colleges of agriculture and liberal arts and sciences and schools of business administration, education, engineering, home economics, nursing, pharmacy (at New Haven), social work, and law and insurance (at Hartford)

Connecticut College, at New London, nonsectarian, for women, chartered 1911, opened 1915 The headquarters of the Institute of Women's Professional Relations is on the campus A nursery school and a plant-hormone laboratory are noteworthy

Connecticut Lakes, three lakes, N N H, source of headstreams of the Connecticut river

Connecticut Reserve, see WESTERN RESERVE

Connecticut Wits, literary group of the late 18th and early 19th cent, also called Hartford Wits Stimulated by awakening literary interests at Yale, which many of them attended, they tried to create an American literature The political ferment of the period turned them to attack the Anti-Federalists in jointly written satirical verse—the *Anarchiad* (in the New Haven *Gazette*, 1786–87), the *Political Greenhouse* (in the *Connecticut Courant*, 1799), and the *Echo* (in the *American Mercury*, 1791–1805) Members of the group were at various times Joel BARLOW, Timothy DWIGHT (1752–1817), David HUMPHREYS, John TRUMBULL (1750–1831), Lemuel HOPKINS, Richard ALSOP, Theodore DWIGHT (1764–1846), and Doctors Elihu H Smith and Mason F Cogswell See V L Parrington, ed, *The Connecticut Wits* (1926), Leon Howard, *The Connecticut Wits* (1943)

Connellsville, city (pop 13,608), SW Pa, on the Youghiogheny river and c 50 mi SE of Pittsburgh, settled c 1770, inc as a borough 1806, as a city 1911 Its manufactures include metal products, glass, and paper boxes Lafayette was entertained by Albert Gallatin here in 1825 The attack on Henry C Frick, steel magnate, by the anarchist Alexander Berkman occurred in the city (1892) during the Homestead strike

Connelly, Henry (kŏ'nulē), 1800–1866, governor (1861–66) of the New Mexico Territory and pioneer trader, b Nelson co (now Spencer co), Ky, M D Transylvania Univ, 1828 He began the practice of medicine in Liberty, Mo, but left with a trading party for Santa Fe and Chihuahua, Mexico There he became a merchant and (c 1832) a Mexican citizen, making many trading trips to Independence, Mo When U S troops entered Santa Fe in 1846, he was chosen by the Spanish governor to represent Mexico in negotiations After the American occupation he reassumed American citizenship and became the leading merchant in New Mexico When a new state was projected, he was elected governor in 1850, but he became territorial governor instead after Congress organized New Mexico as a territory

Connelly, Marc (Marcus Cook Connelly) (kŏ'nulē), 1890–, American playwright, b McKeesport, Pa He contributed verse and articles to magazines, and he collaborated with George S Kaufman on the plays *Dulcy* (1921) and *To the Ladies* (1922), they also dramatized several novels His Negro fantasy *The Green Pastures* (1930), based on Roark Bradford's book *Ol' Man Adam an' His Chillun*, received the 1930 Pulitzer Prize for drama and was appraised as the finest folk play yet produced in America In 1947 Connelly became associate professor at the Yale Drama School

Connemara (kŏnumä'rŭ), wild, mountainous region, Co Galway, Ireland, lying between the Atlantic and Loughs Corrib and Mask To the north is Clew Bay and on the south is Galway Bay It has few towns, but many lakes, streams, mountains, and glens

Conner, David, 1792–1856, American naval officer, b Harrisburg, Pa Appointed a midshipman in 1809, he distinguished himself on the famous sloop *Hornet* in the War of 1812, being promoted (1813) lieutenant and twice decorated Conner rose to become (1835) a captain and held various commands in Mediterranean and West Indian waters As commander (1843–47) of the forces in the Gulf of Mexico at the beginning of the Mexican War, he occupied Tampico in Nov, 1846, blockaded Mexican ports, and landed Gen Winfield Scott's army for the attack on Veracruz Conner was, however, overcautious, and in March, 1847, Matthew C Perry succeeded to his command His son, P S P Conner, wrote *The Home Squadron under Commodore Connor in the War with Mexico* (1896)

Connersville, city (pop 12,898), co seat of Fayette co, E Ind, on the Whitewater river and E of Indianapolis, laid out 1817 A railroad center, it manufactures kitchen sinks, cabinets, refrigerators, and jeep bodies A fur-trading post was established here in 1808

Connolly, Cyril (sĕr'ul kŏ'nulē), 1903–, English editor and critic, educated at Oxford He is the editor of *Horizon*, a small literary magazine of catholic representation which was founded by him in 1939 As a literary critic he is known for his penetrating, although sometimes brusque, analysis of literary pitfalls. He wrote *The Unquiet Grave* (1945) and *The Condemned Playground* (1946) His *Enemies of Promise* (1939) contains a short autobiography

Connolly, James, 1870–1916, Irish republican leader and socialist Early a convert to socialism, Connolly spent seven years (1903–10) in America as a worker for the socialist cause and helped to organize the I W W. He went to Belfast (1911) as an organizer among the dock workers, and in 1913, in Dublin, with Jim LARKIN, he organized the great strike of the transport union Later in the year he formed the citizen army in imitation of the rival bands in Northern Ireland He joined Patrick Pearse and the national volunteers in the Easter Rebellion of 1916, was wounded and captured in the fighting, and was executed after a court-martial Connolly's conviction in his later years was that the cause of socialism in Ireland could not be successfully furthered until the question of Irish nationalism was settled See biographies by Desmond Ryan (1924) and R M Fox (1946).

Connor, Patrick Edward, 1820–91, American army officer, b Ireland At an early age he was brought by his parents to New York He enlisted in the army, serving (1839–44) on the Western frontier and (1846–47) in the Mexican War, attaining the rank of captain In 1850 he went to California, where he engaged in mining and prospecting and joined the California Rangers At the beginning of the Civil War he was appointed to command the 3d California Infantry with the rank of colonel and was ordered (1862) to Utah to protect the settlers and the mails from Indian attack He established Camp Douglas (later Fort Douglas) near Salt Lake City, thereby incurring the resentment of the Mormons, who regarded with suspicion the presence of U S forces In 1863 he defeated the Shoshone and Bannock Indians on Bear river, a feat which is commemorated by the Bear river battle monument near Lewiston, Utah He commanded one of the three columns of the Powder river expedition to establish forts and help to open the Bozeman Trail The expedition was unsuccessful, Connor's command was bitterly criticised, and in 1866 he resigned from the army He then made his home in Utah, where he developed silver mines which he had discovered earlier in the Wasatch Range and where he established the *Union Vidette*, the first non-Mormon newspaper in Utah He was a consistent opponent of the Mormons and they hated him, while to the non-Mormons of Utah he was a hero See F B. Rogers, *Soldiers of the Overland* (1938)

Conner, Ralph · see GORDON, CHARLES WILLIAM

Conolly, John (kŏ'nulē), 1794–1866, English physician He was professor (1827–29) at University College, London Especially known for his introduction of humane treatment of the insane at Hanwell Asylum, where he abolished mechanical restraints, he wrote *The Construction and Government of Lunatic Asylums and Hospitals for the Insane* (1847) See memoir by Sir James Clark (1869)

Conon (kō'nŏn), d after 392 B C , Athenian commander He was an admiral in the PELOPONNESIAN WAR and was one of the leading commanders after the downfall of Alcibiades. The Athenian fleet under his general command was badly defeated (405 B C) at AEGOSPOTAMOS, but Conon escaped with his ship and went to visit Cyprus, where EVAGORAS was in power He later became a commander of a Persian-Greek fleet and with the help of PHARNABAZUS soundly defeated (394 B C) the Spartans off Cnidus He returned in triumph to Athens, completed the rebuilding of the Long Walls, and prepared the way for the remaking of the power of Athens and the Delian League When Persia turned away from Athens toward Sparta, Conon's fortunes sank His death was obscure

Conon, 3d cent B C , Greek astronomer and mathematician of Samos He traveled in the western part of the Greek world making astronomical observations, then settled at Alexandria He was a student of solar eclipses and discoverer of the constellation Coma Berenices His mathematical studies included an investigation of conic intersections

Cononiah (kŏn"ōnī'ù) [Heb ,=God has established], Levite of Hezekiah's reign 2 Chron 31 12,13

Conover, town (pop. 1,195), W central N C , NNW of Charlotte It has textile and furniture plants

Conowingo Dam (kŏn"ùwing'gō), NE Md , on the Susquehanna; completed 1927 It is 4,648 ft long and 105 ft high. The hamlet of Conowingo is here, and Conowingo Lake, formed by the dam, extends 14 mi north

conquistador (kŏnkwī'stùdôr, Span kŏng-kē"-städhôr'), leader in the Spanish Conquest of the New World in the 16th cent Francisco PIZARRO, the conqueror of Peru, and Hernán CORTÉS, the conqueror of Mexico, were the greatest of the conquistadors The name is frequently used to mean any daring, ruthless adventurer.

Conrad I, d 918, German king (911–18). As duke of Franconia, he distinguished himself by his military exploits, and in 911 he was elected successor to LOUIS THE CHILD Although supported by the bishops, he never succeeded in establishing his authority over the great feudal dukes in a long series of wars Lorraine broke away and acknowledged the rule of CHARLES III of France; the Swabians attacked a bishop favorable to Conrad and, although two of their leaders were captured and executed after the synod of Hohenaltheim (916), kept up the war till Conrad's death, the duke of Bavaria, expelled, was successful in returning The most able of Conrad's foes, however, was Henry the Fowler, duke of Saxony, who, in accordance with Conrad's own deathbed advice, was elected to succeed him as HENRY I (919) Conrad's reign saw the continuation of the invasions of the Hungarians.

Conrad II, c 990–1039, emperor (1027–39) and German king (1024–39), first of the Salian dynasty of the Holy Roman Empire. Since the Saxon line ended with HENRY II, the candidates at the election of 1024 were drawn from the descendants of Henry I through the female line Conrad, duke of Franconia, who was supposedly opposed to the reforms of CLUNY, was elected with the support of the great prelates and over the opposition of the monastic party His accession was contested by his nephew, Ernest of Swabia, by the Lorrainers, and by the Italians The revolts of Ernest and the Lorrainers having collapsed, Conrad brought N Italy into submission (1026–27) and was crowned emperor at Rome He suppressed two more revolts of his nephew (1027, 1030) and in 1033 annexed the kingdom of Burgundy (see ARLES, KINGDOM OF) under the terms of a treaty made (1006) between Rudolf III, last independent king of Arles, and Emperor Henry II Conrad was crowned king of Burgundy at Geneva in 1034 In 1036 Conrad returned to Italy, where war was raging between the greater and the lesser nobles He deposed Archbishop Aribert of Milan, a powerful ally of the great nobles, and made the fiefs of the lesser nobles hereditary by issuing (1037) the Constitution of Pavia In Germany also Conrad tended to favor the small nobility, thus reversing the policy of Otto I and Henry II, who had depended for support on the Church He pursued the same objective by promoting serfs to hold household offices and encouraging the rise of a hereditary class of *ministeriales* to replace the ecclesiastics in the civil service Conrad's administration was economical, and he encouraged commercial enterprise by granting market and mint privileges He was succeeded by his son Henry III

Conrad III, c 1093–1152, German king (1138–52), nephew of Emperor Henry V and founder of the HOHENSTAUFEN dynasty He joined his brother Frederick (defeated in the election of 1125) in rebelling against Emperor LOTHAIR II Set up as antiking in 1127, he went to Italy (1128) and, despite excommunication by Pope Honorius II, was crowned king at Milan Failing, however, to make any progress, he submitted to Lothair in 1135 After Lothair's death he was elected king by the nobles and ecclesiastics who feared to increase the power of Lothair's son-in-law, HENRY THE PROUD of Bavaria Conrad deprived Henry of his duchies, giving Saxony to ALBERT THE BEAR and Bavaria to Leopold of Austria A civil war broke out and was continued after the death of Henry the Proud by his son HENRY THE LION Out of this strife emerged the parties of the GUELPHS AND GHIBELLINES A truce was negotiated in 1142 At Christmas, 1146, Conrad was induced by St Bernard of Clairvaux to join in the Second Crusade (see CRUSADES) with LOUIS VII of France Leaving in 1147, he took part in the unsuccessful siege of Damascus and returned in 1149 An expedition against Roger II of Sicily was prevented by the activities of Henry the Lion Conrad was succeeded by his nephew, Emperor Frederick I

Conrad IV, 1228–54, German king (1237–54), king of Sicily and of Jerusalem (1250–54), son and successor of Emperor FREDERICK II He was elected king of the Romans at Vienna (1237) after the deposition of his brother Henry The election of an antiking at the behest of Pope INNOCENT IV (1246) plunged Germany into disorder, which was only increased when WILLIAM, COUNT OF HOLLAND, became antiking after the death of the original contender (1247) Removing to Italy (1251) after his father's death, Conrad was received with general favor in Sicily and brought order to his kingdom by taking Capua and Naples The pope, after the failure of negotiations, offered the crown of Sicily to RICHARD, EARL OF CORNWALL, to Charles of Anjou, who refused at this time, though he later became CHARLES I of Naples and Sicily, and to Edmund, earl of Cornwall, who accepted In 1254 Conrad was excommunicated Just as war was about to begin he died of fever It was left for his son, CONRADIN, to witness the final doom of the house of Hohenstaufen

Conrad, d 1192, king of Jerusalem (1192), marquis of Montferrat, a leading figure in the Third Crusade (see CRUSADES) He saved Tyre from the Saracens and became (1187) its lord In 1189 he joined GUY OF LUSIGNAN at the siege of ACRE, but a year later he was seeking to displace Guy as king of Jerusalem. To establish a claim to the crown he married Isabella, daughter of Amalric I. A compromise (1191) was short-lived. In 1192 Conrad was acknowledged as king, but a month later he was mysteriously assassinated. The royal title passed to the two later husbands of his widow, Isabella—Henry, count of Champagne (1192–97), and AMALRIC II.

Conrad, Joseph, 1857–1924, Polish-born English novelist, originally named Teodor Josef Konrad Korzeniowski; son of a writer who was exiled for political activities. He attended school in Cracow and in 1874 went to sea In 1884 Conrad became a master mariner in the British merchant fleet, and in 1886 a British citizen. He retired from the sea in 1894, with rich and varied experience, and began his career as a novelist *Almayer's Folly* (1895), *An Outcast of the Islands* (1896), *The Nigger of the Narcissus* (first published as *The Children of the Sea*, 1897), *Lord Jim* (1900), and his short story *Youth* (1902), all written in English, an acquired language, are remarkable for a distinctive prose style His other works include *Typhoon* (1903), *Nostromo* (1904), *Victory* (1915), *The Arrow of Gold* (1919), *The Rescue* (1920), *The Rover* (1923), and the unfinished work *Suspense* (1925). Conrad's novels are compounds of realism and romanticism. He portrays the tragic isolation and moral deterioration of men unable to reach their highest capabilities See Ford Madox Ford, *Joseph Conrad a Personal Remembrance* (1924), Arthur Symons, *Notes of Joseph Conrad, with Some Important Letters* (1926), Georges Jean Aubry, *Joseph Conrad Life and Letters* (1927), biographies and critical studies by his wife, Jessie Conrad (1926, 1935), R L Megroz (1931), Edward Garnett (1937), J H Retinger (1943), and Albert Guerard (1948), bibliography by G T Keating (1929)

Conrad, Michael Georg (mē'khäl gā'ôrk kôn'rät), 1846–1927, German critic and novelist He espoused the cause of Zola and in 1885, with Karl Bleibtreu, founded the *Gesellschaft* [society], a naturalistic review which was a rallying point for writers of the modern German school His works include a volume of criticism, *Madame Lutetia* (1883), and *Was die Isar rauscht* [what the Isar murmurs] (1887), the first of a series of Zolaesque novels

Conrad (kŏn'răd), city (pop. 1,471), co seat of Pondera co , N Mont , NNW of Great Falls, inc 1910 The town, founded as a grain-shipping center, is near oil fields

Conrads, Hermann (hĕr'mun kônrä'dĕs), 1862–90, German author He was one of the most enthusiastic exponents of the naturalistic school His best work is perhaps in the volume of verse *Lieder eines Sünders* [songs of a sinner] (1887) *Adam Mensch* (1889) is remembered as the cause of a prosecution for immorality which was forestalled by the author's death

Conradin (kŏn'rudĭn), 1252–68, duke of Swabia, titular king of Jerusalem and Sicily, the last legitimate HOHENSTAUFEN, son of CONRAD IV While he was still a child in Germany his uncle, MANFRED, made himself king of Sicily (1258) When Manfred died and the kingdom was seized (1266) by CHARLES I (Charles of Anjou), young Conradin was persuaded to come to Italy to recover his kingdom Several Ghibelline cities rallied to his support, but he was defeated (1268) by Charles at Tagliacozzo, was captured, and was executed at Naples

Conrad of Marburg, d 1233, German churchman He was confessor of St ELIZABETH of Hungary (1225–31) and administrator of her husband's benefices in his absence. His zeal against heresy earned him appointment (1231) as first papal inquisitor in Germany His harshness made him much disliked. He was murdered

Conrad of Würzburg (würts'bûrg), d 1287, German poet, pupil of Gottfried von Strassburg He was the author of epics, narrative poems, and romances in verse, which are among the best in Middle High German. His works include *Alexius*, *Silvester*, *Die goldene Schmiede*, *Der Welt Lohn*, *Otto mit dem Barte*, *Der Trojanerkrieg*, and *Das Herzemaere*

Conrad the Red, d 955, duke of Lorraine (944–53) He accompanied his father-in-law, the German king (later Emperor OTTO I), to Italy against Berengar II (951) Left behind after Otto's return to Germany (952), Conrad came to an agreement with Berengar and, when Otto refused to ratify it, joined in a conspiracy with Otto's son, Ludolf, and Frederick, archbishop of Mainz Expelled from his duchy (953), Conrad allied himself (954) with the Hungarians, who were invading the empire. However, the invasion united the people behind Otto, and Conrad submitted He distinguished himself fighting under Otto at the Lechfeld, but was killed near the close of the battle.

Conrad von Hötzendorf, Franz, Graf (fränts' graf' kôn'rät fün hût'sündôrf), 1852–1925, Austro-Hungarian field marshal Appointed chief of staff in 1906, he reorganized the army and led the so-called "army party," which pressed for war with Serbia His differences with the foreign minister, Count Aehrenthal, led to his dismissal (1911) Reappointed in 1912, he was successful against the Russians in the First World War, but his critical attitude toward Emperor Charles I led to a second dismissal (1917). He held a command on the

Italian front until 1918. Conrad wrote memoirs (*Aus meiner Dienstzeit*, 5 vols., 1921–25).

Conrart, Valentin (välätē' kôrär'), 1603–75, French writer, student of modern languages, and an authority on style His home was the center of a distinguished literary circle. In 1635 this group, fostered by Richelieu, was officially organized as the French Academy, of which Conrart became the first perpetual secretary His compilations were copious, but his own writings, poems, letters, and memoirs were few

Conroe (kŏn'rō), city (pop. 4,624), co seat of Montgomery co., S Texas, NNW of Houston, founded 1881, inc 1906 Previously a pine-lumbering town, it shot into prosperity after oil was struck here in 1931 It has a recycling plant, a carbon-black plant, and other industries

consanguinity (kŏn"säng-gwĭ'nĭtē) [Latin,=relationship by blood] Proximity of kinship everywhere not only provides socially recognized standards of mutual obligations and attitudes, but also often defines permissible marriages Infringement of such mating regulations is INCEST. Consanguinity is usually reckoned in terms of degree parents, brothers, and sisters stand in first degree relationship, uncles, aunts, and their offspring may be considered a second degree removed, and from these extend, in succeeding generations, third and fourth degree relatives Systems of reckoning often differ First cousins may or may not be within the proscribed degree The Christian churches are not in agreement In parts of the United States marriage between first cousins is prohibited by law The Roman Catholic Church has strict rules on consanguinity as an impediment to the marriage, though dispensations to marry may be obtained except for close relatives, the Orthodox Church prohibits second-cousin marriage Canonical and civil law have held that relatives of a deceased spouse are counted as related in the same degree as the widowed person's own family

Conscience, Hendrik (hĕn'drĭk kōsĕns'), 1812–83, Flemish novelist, a founder of modern Flemish literature Of his many novels not a few have appeared in English translation After early historical novels, including the very successful *De Leeuw van Vlaenderen* (1838, Eng tr., *The Lion of Flanders*), he devoted his talents to rather idealized stories of Flemish village life, notable among these are *The Conscript* or *The Recruit* (1850, Eng tr., 1864), *The Poor Gentleman* or *The Poor Nobleman* (1851, Eng tr., 1856), and *Rycke tycke tack* (1851, Eng tr., 1856).

conscience. Moral consciousness or sense of right and wrong has been variously explained by moralists and philosophers In the history of ETHICS the conscience has been looked upon as the rule of a divine power expressing itself in man's judgments, an innate intuitive sense of right and wrong resulting from man's unity with the unity of the universe, an inherited intuitive sense evolved in the long history of the human race, and a set of values derived from the experience of the individual Psychologists also differ in their analyses of the nature of conscience It is variously believed to be an expression of values differing from other normative organizations only in the subject matter involved, a feeling of guilt for known or unknown actions done or not done, the manifestation of a special set of values introjected from the example and instruction of parents and teachers, and the value structure which essentially defines the personality of the individual

conscientious objector, a person who passively resists the authority of the state, especially its power to compel military service, on the grounds of conscience Such resistance, emerging in time of war, may be based on membership in a pacifistic religious sect, such as the Society of Friends, the Dukhobors, or Jehovah's Witnesses, or on personal religious or humanitarian convictions Political opposition to the particular aim of conscription, such as that maintained by the Copperheads during the Civil War or by radical groups during the First World War and a portion of the Second, may be based on conscience but is usually considered in a separate category The problem of conscientious objectors, though present in different forms ever since the beginning of the Christian era, became acute in the First and Second World Wars because of the stringent demands for man power of the governments waging them. The United States and Great Britain allowed diversion from actual combat service into the noncombat branches of the military forces, into related activity outside the service, or into work of a socially valuable character apart from the war effort to members of religious groups recognized as pacifistic; those who did not fit readily into categories established by the draft authorities for exemption were liable to harsher treatment. In all c 5,000 conscientious objectors were imprisoned in the United States between 1940 and 1945. The treatment of conscientious objectors is in democracies a test of the state's ability to reconcile the exercise of its sovereignty with the protection of the individual and of minorities European treatment of the problem has always been more severe than Anglo-American practice. See M Q Sibley and A. W Wardlaw, *Conscientious Objectors in Prison, 1940–45* (1945); G. C. Field, *Pacifism and Conscientious Objection* (1945).

consciousness, in psychology, a term of no universally accepted definition, but commonly used in a general way to indicate a state of being aware of things and conditions as a whole in the environment In this sense it is distinguished from unconsciousness (see UNCONSCIOUS), another mode of behavior or mental and physical activity, which is held to involve activity with a less degree of conative quality The Freudian psychology (see PSYCHOANALYSIS) is based fundamentally in a distinction between the so-called conscious and unconscious, offering a technique for the study of the unconscious On the other hand, the behaviorists question the existence of either consciousness or unconsciousness and deny that any distinction can be made on this basis between one kind of human behavior and another A number of other psychologists use it without precise definition to indicate the total common integrated activities of an individual which constitute the personality

conscription, compulsory enrollment of personnel for service in the armed forces, in contradistinction to voluntary enlistment Although the ancient Greek and Roman forces were so recruited by custom, conscription by national law was introduced in the 1790s by the French in the French Revolutionary Wars Conscription enabled Napoleon Bonaparte to mold his tremendous fighting forces, and in 1808 compulsory recruitment was introduced, in peacetime, by Prussia The institution of conscription, which was increasingly justified by statesmen on the grounds of national defense and economic stimulation, spread to many of the European nations in the 19th cent England adopted conscription only after the outbreak of the First World War In the United States, conscription—more commonly today called SELECTIVE SERVICE—dates from the Civil War

consent, in law, voluntary concurrence or assent by a person legally capable of consenting (see AGE OF CONSENT) It may be evidenced by words or acts or by silence when silence implies concurrence Actual or implied consent is necessarily an element in every CONTRACT and every agreement In criminal charges, the consent of the party injured is a defense for the accused, unless a third party or the state is injured

conservation of energy see ENERGY

conservation of natural resources, prevention of waste of man's physical environment, including timber, fish, game, fertile topsoil, pasture, and minerals, and also the reclamation of wasteland by means of drainage or irrigation Deforestation and tillage have caused soil EROSION, destroying great areas of useful land, especially in China, the Mediterranean region, and North America Mineral resources have been rapidly depleted In North America the dissipation of natural resources has gone on more rapidly than in the Old World The conservation movement in the United States began effectually with the creation in 1871 of a U S commissioner of fish and fisheries The Forestry Bureau of the Dept. of Agriculture created the first national forest reserve in 1891 The Irrigation Division in the U S Geological Survey developed into the Bureau of Reclamation The Geological Survey has catalogued and classified the resources of the public domain In 1906 an act protected the Alaskan fisheries. Much of the impetus to this and similar legislation was given by President Theodore Roosevelt In 1907 President Roosevelt appointed the Inland Waterways Commission, which emphasized the connection between forests, water supply, and stream flow In 1909 he appointed the National Conservation Commission, which published the first inventory of the country's natural resources Roosevelt in 1907 also began to withdraw large areas of Western public land from sale and settlement, that their resources might be investigated, and he also set apart forest reserves, following the example of President Cleveland. Approximately one fifth of all standing timber is held by the government Reclamation of eroded lands, begun in 1880, was aided by the Newlands Act of 1902, withdrawing areas of water supply from future settlement In 1920 the development of water power on navigable streams was placed under the control of the Federal Power Commission The National Park Service was created in 1916 In the 1930s the erosion of much arable land in the Middle West emphasized the need for land reclamation and for conservation in general The National Industrial Recovery Act of 1933 contained provisions for conservation The Civilian Conservation Corps, founded in 1933 to relieve unemployment, furnished the personnel for many conservation projects The Tennessee Valley Authority set up in 1933 was an outstanding attempt to apply principles of conservation, soil reclamation, and electrification to an entire area. The New Deal era as a whole was outstanding for legislation on conservation The United States has participated in international agreements concerning ocean fisheries throughout its history. The conservation movement has slowed, if it has not halted, the exhaustion of natural resources Technical processes and the principle of substitution, such as of electricity for coal, are analogous processes in the case of privately owned resources European nations, with fewer resources and a tradition of state supervision, have been more conscious of the need for conservation than has the United States See Stuart Chase, *Rich Land, Poor Land* (1936), G T Renner, *Conservation of National Resources* (1942); A F Gustafson and others, *Conservation in the United States* (1944), publications of the National Resources Planning Board

conservation of wildlife: see WILDLIFE REFUGE

Conservative party, British political party. The name was first popularized by J W Croker in the *Quarterly Review* of Jan., 1830, but the party itself might be said to have a history long antedating this period It was an outgrowth, or continuation, of the TORY group which had begun to establish itself as a political organization as early as the latter part of the 17th cent., at the same time as its counterpart, the Whigs, who came during the 19th cent to be known as Liberals By the 1820s the Tory party had come to a reactionary position, but within its ranks there grew up a reform element, represented by George Canning (who used the term *Conservative* as early as 1824), William Huskisson, and Robert PEEL The Reform Bill of 1832, enfranchising some 500,000 new middle-class voters, was a death blow to the old-line Tory party Peel, however, accepted the implications of the Reform Bill in the Tamworth Manifesto of 1834 and rallied the Conservatives by his appeal to the new trading and manufacturing vote The Conservatives held office from 1841 to 1846 under Peel, but the party split on the question of the repeal of the corn laws Peel succeeded in passing the repeal, thus alienating the protectionists, headed by Lord George Bentinck and Benjamin DISRAELI and bringing about his own downfall The "Peelites" eventually merged with the Liberals, and the Conservatives were out of office, except for three brief ministries, until 1874 The party which returned to power at that time had been revitalized by Disraeli's program of "Tory democracy" and imperialism Disraeli pursued a vigorous program of social reform and colonial expansion, but the Conservative hegemony was broken in 1880 by the Liberals under W E Gladstone The Liberals, however, divided on the question of Home Rule for Ireland, and the Conservatives recaptured the House of Commons in 1885, maintaining control, with two brief intervals (1886, 1892–95) until 1905, when the party split once more on the question of the tariff reform—this time over reforms advocated by Joseph CHAMBERLAIN The Liberal ascendancy which began at this time continued until the First World War, when party differences were put aside for a coalition government which lasted until 1922 At that time the Conservatives, who had a majority in Commons, declined to continue under the coalition The Conservatives took office under A Bonar LAW, who resigned in favor of Stanley BALDWIN the following year. The party for years maintained its leadership, which was interrupted by victories of the Labour party in 1924 (with a short-lived Labour cabinet) and in 1929 The Labour government was expanded in 1931 to a coalition formed to meet the emergency of the great depression, and the new government was from the first dominated by the Conservatives The party lost greatly in prestige by the failure of the "appeasement" policy of Neville Chamberlain in the period preceding the Second World War, but the country rallied to the support of the vigorous war program of Conservative Winston CHURCHILL, who took office as prime minister at the head of a new coalition in May, 1940 At the end of the war Churchill eliminated Labour representatives from his cabinet and called for new elections In these elections of 1945 the socialistic reform program of the Labour party appealed to the voters over the cautious policies of the Conservatives Labour was returned to the House of Commons with a large majority In the elections of Feb., 1950, the Conservatives, who called for a halt in future socialization but maintained themselves willing to accept the changes that had already been instituted, succeeded in recapturing many votes, but fell short by a narrow margin of a majority in Commons Churchill continued as party leader See W F Ogburn, *Social Change* (1922), Arthur Bryant, *The Spirit of Conservatism* (1929)

Conshohocken (kŏn"shuhō'kun), industrial borough (pop 10,776), SE Pa., on the Schuylkill and NW of Philadelphia, settled 1831, inc 1850 Its industries include automobile tires, metal products, and textiles

Considérant, Victor Prosper (vēktôr' prōspâr' kōsēdārä'), 1808–93, French social theorist and reformer, follower of Charles FOURIER He edited Fourierist newspapers, including the *Phalanstère* and the *Phalange*, and published works on the subject, notably a digest of Fourier's writings, *Destinée sociale* (2d ed., 1847–49). In 1848, as a

member of the national assembly, he tried to reconcile the bourgeois and the workingmen, he later took part in the JUNE DAYS insurrections At the request of Albert Brisbane, Considérant tried unsuccessfully to establish a phalanx in Texas His several books include *Principes du socialisme* (1847), an argument favoring Fourierism over other kinds of socialism See biography by Maurice Dommanget (1929)

consideration: see CONTRACT

consols (kunsōlz', kŏn'sōls), contraction of "consolidated annuities" The government of England had incurred its debt by borrowing money at different periods on special conditions, usually the payment of an annuity The variety of stocks thus created caused great confusion, and they were therefore consolidated between 1750 and 1757 into annuity stocks Interest was paid by the Bank of England, which held the stock The consols bore no maturity date A fixed rate of interest was maintained, and premiums were given if the market justified higher rates The price of annuities was long regarded as an index to the national credit, for they constituted most of the national debt before the First World War

conspiracy (kunspĭr'ŭsē), in law, agreement of two or more persons to commit a criminal or otherwise unlawful act The crime of conspiracy consists in making the agreement and taking at least some overt step to accomplish the act It is not necessary for guilt, however, that the act be fully consummated, nor is it a defense that the wrongful purpose was abandoned In the 14th cent in England the crime consisted only of combining to abuse legal procedure by falsely prosecuting criminal or civil charges Its scope was gradually expanded to include combinations for many other purposes Many acts which would not be criminal if accomplished by an individual alone may nevertheless be the object of a conspiracy Thus, if a single person without cause refuses to patronize a business he does not commit any crime, but if two or more persons combine in a boycott they may be guilty of conspiracy In England and in the United States the law of conspiracy was for a long time directed against trade-union activities The courts held that while an individual employee might lawfully abstain from work, the concerted stoppage of a group of employees in a strike might be criminal Strong agitation in Great Britain produced the Conspiracy Act of 1875, which exempted trade unions from prosecution for conspiracy At a later date in the United States, however, the SHERMAN ANTI-TRUST ACT (1890) and the CLAYTON ANTI-TRUST ACT (1914) were interpreted as applying to trade-union combinations The NORRIS-LaGUARDIA Anti-Injunction Act (1932), which limited the power of Federal courts to restrain union activities, and changing legal conceptions have virtually ended the subjection of unions to conspiracy charges See P W Winfield, *The History of Conspiracy and Abuse of Legal Procedure* (1921)

Constable, Henry, 1562–1613, English poet His sonnet collections include *Diana* (1592) and *Spiritual Sonnets* (1815) He is represented in *England's Helicon* (1600) by four pastorals

Constable, John, 1776–1837, English painter, b Suffolk, famous for his inspired landscapes of Suffolk, Hampstead, Salisbury, and Brighton The son of a prosperous miller, Constable was not permitted to devote himself to his art until he was 23 In 1824 one of his paintings, *The Hay Wain*, was exhibited at the Louvre, where it created a sensation and is said to have made a profound impression upon the young Delacroix During his life Constable received but modest recognition in England and was tardily admitted to the Royal Academy in 1829 Although an ardent admirer of classical painting, he got his inspiration direct from nature and painted with a freedom in the use of broken color extraordinary in his day Splendid examples of his work are contained in the National Gallery, London, and in the Victoria and Albert Museum In the United States he is represented in the Metropolitan Museum and the Frick Collection, New York, in the National Gallery, Washington, and in the galleries of Philadelphia, Toledo, and Chicago See C R Leslie, *Memoirs of the Life of John Constable* (enl ed, 1937).

Constance, 1152–98, empress, consort of Emperor HENRY VI, and aunt of King William II of Sicily, who designated her as his successor The Sicilians instead crowned her illegitimate nephew, TANCRED of Lecce Her husband, who claimed her kingdom after their marriage (1186), conducted an unsuccessful campaign against Tancred (1190–91) Constance was captured during the campaign but was soon released After Tancred's death (1194) Henry was crowned at Palermo He died in 1197, and Constance secured from Pope Innocent III the investiture of her infant son (later Frederick II) with Sicily, which thus passed to the Hohenstaufen family She was regent for her son till her death

Constance, Ger *Konstanz* (kŏn'stants), city (pop 39,286), S Baden, SW Germany, at the western end of the Lake of Constance and near the Swiss border There are textile and clothing manufactures The city, undamaged in the Second World War, is rich in history Founded as a Roman fort in the 4th cent A D, it became an episcopal see c 580 The bishops became powerful, holding large territories as princes of the Holy Roman Empire, and the city, on a trade route between Germany and Italy, became a free imperial city in 1192 Here in 1183 Emperor Frederick I recognized the LOMBARD LEAGUE At the Council of Constance (1414–18) John Huss was burned In 1531 the city, which had accepted the Reformation, joined the Schmalkaldic League Emperor Charles V, after defeating the League, deprived Constance of its free imperial status and gave it to his brother, later Emperor Ferdinand I Constance remained in Austrian hands till its cession (1805) to Baden The bishopric was secularized in 1802–3 and the diocese abolished in 1827 Among the many historical buildings of Constance are the cathedral (begun 11th cent, rebuilt 15th cent) and the former Dominican convent, scene of the council, now converted into a hotel

Constance, Council of, 1414–1418, council of the Roman Catholic Church, some of its sessions being reckoned as the 16th ecumenical COUNCIL It was summoned to end the church schism in which three men were claiming to be pope—GREGORY XII (since recognized as canonical pope), John XXIII (see COSSA, BALDASSARRE), and Benedict XIII (see LUNA, PEDRO DE, and SCHISM, GREAT) Reform of Christian life and extirpation of heresy were also aims of the convocation, which was issued by John at the insistence of Emperor SIGISMUND Sigismund chose the place, Constance, an imperial city During the council enormous crowds visited the city, there was much pageantry The first session was Nov 16, 1414, the 45th and last was April 22, 1418 It was dominated by theologians, especially French, who held the conciliar theory that had appeared at the Council of Pisa (see PISA, COUNCIL OF) Instead of the traditional assembly of bishops, theoretically moved by the Spirit to speak of the faith handed down in their churches this was organized as a convention of nations (German, Italian, French, and English, the Spanish entered later) each having one vote The decisions were made in caucuses of the nations between sessions The council declared in the Articles of Constance (April 6, 1415) that it was an ecumenical council and supreme in the Church Next it declared John deposed (May 29, 1415) Gregory XII, meanwhile, sent legates with a formal decree to convene a council, this was accepted by the council, and the legates ceremonially opened it, then Gregory resigned the papacy By allowing the legates' action the council cast legal doubt on its own preceding acts, if Gregory was the canonical pope, the council only begins as a canonical general council with this action (July 4, 1415) Benedict provided a hard problem, at last, after a trial in absence, he was deposed (July 26, 1417) This ended the schism, and the council disputed over procedure for months Eventually an elaborate method of electing the pope was adopted which would reduce the power of the cardinals The conclave soon agreed on MARTIN V (Nov 11, 1417) The council had previously (Oct 5, 1417) enacted a complex plan to govern the Church by periodic councils, subsequently (March 20, 1418) it produced its measures of general reform Apart from a decree on clerical dress, these provided for changes in the taxation and fiscal administration of the popes As a supplement, the pope and representatives of each nation drew up agreements, the first concordats, amplifying the general decrees These enactments were trivial in the picture of reforms the Church needed, they reflect clearly a council of bishops and princes dominated by self-interest In its supreme role in Christendom the council had other problems The most serious was that of the Hussites John Huss, although he had come with the emperor's safe-conduct, was tried and burned at the stake (1415) The next year JEROME OF PRAGUE was burned There were also constant political troubles, e g, the French and English were at war Since Martin ratified decrees of the last four sessions only, no others are regarded by Roman Catholics as binding This includes the reforms, but not the changes of church government There is no detailed account of the council in English, publication of the journal (*Acta*, in Latin) was completed only in 1928 See E F Jacob, *Essays in the Conciliar Epoch* (1943)

Constance, Lake of, Ger *Bodensee* (bō'dunzā"), lake, 208 sq mi, 46 mi long with a maximum depth of 827 ft, bordered by Switzerland, Germany, and Austria It is formed by the Rhine and divides near Constance into two arms On its fertile shores are Constance and Friedrichshafen (Germany), Bregenz (Austria), and Rorschach (Switzerland) Remains of lake dwellings have been found Fishing is an important industry

Constans I (kŏn'stănz), b. 320 or 323, d 350, Roman emperor, youngest son of Constantine I At his father's death in 337 he received Italy, Africa, and Illyricum, while his brothers, Constantine II and Constantius II, received other portions of the empire There was trouble among them, and in 340 CONSTANTINE II invaded Italy He was, however, killed from ambush, and Constans was left to rule until his vices and extortions led to his assassination 10 years later.

Constans II, 630–68, Byzantine emperor (642–68), son and successor of Constantine III and grandson of Heraclius I Early in his reign Armenia and Asia Minor were invaded by the Moslems, who also took Cyprus and threatened Sicily and Constantinople Constans, an able and vigorous ruler, sought to end the religious controversy centering about MONOTHELETISM by issuing a decree (648) forbidding its discussion This involved him in conflict with Pope MARTIN I, whom he finally had arrested and banished In 662 Constans removed to Italy, with the purpose of establishing his capital at Rome, checking the Arabs in Africa, and restoring Roman power in the West He fought with little result against the Lombards and finally settled at Syracuse From there he directed a generally successful resistance to the Moslems During the reign of Constans the Byzantine Empire underwent an administrative reorganization designed to strengthen the emperor and to facilitate defense He was assassinated His son, Constantine IV, succeeded him

Constant, Benjamin (Henri Benjamin Constant de Rebecque) (ärē' bāzhamē' kôstā' du rubĕk'), 1767–1830, French Swiss writer and political theorist, b Lausanne His life was dominated by a series of tempestuous feminine attachments, and it was the friendship of Mme de Staël (begun in 1794, broken off in 1809) which turned him to political interests Constant was a tribune (1799–1801) under the first consul, Napoleon, but followed Mme de Staël on her banishment (1802) After the battle of Leipzig, Constant wrote a pamphlet attacking Napoleon and urging constitutional government and civil liberties, he returned to Paris supporting the Bourbons, but on Napoleon's return from Elba, Constant accepted an office of state Then, after Waterloo, he supported the Bourbons again He soon became one of the opposition, first as a pamphleteer, then as a deputy (1819–22 1824–30), his favorite theories were constitutional monarchy and civil liberties Constant gained a great reputation as a liberal publicist and pamphleteer, and his funeral (after the July Revolution 1830, which he had supported) was the occasion for great demonstrations Constant's political works are now of historical importance only, their theories of government on the English model were not new in France, but they helped to popularize liberal and laissez-faire principles His chief work of literary importance is a sentimental, introspective, quasi-autobiographical *nouvelle*, *Adolphe* (1816, Eng tr, 1908), parts of his correspondence and journals have been published, the latter as *Le Journal intime* (1887–89) and *Le Cahier rouge* (1907) See biographies by E W Schermerhorn (1924) and Harold Nicolson (1949)

Constant, Jean Joseph Benjamin (Jean Joseph Benjamin-Constant) (zhäʼ zhōzĕfʼ bāzhämēʼ kôstäʼ), 1845–1902, French portrait and subject painter He was a pupil of Cabanel and studied at the École des Beaux-Arts With the hanging of his first Salon picture, *Hamlet et le roi* (1869), he became widely recognized A journey to Morocco influenced his art and resulted in a group of Oriental scenes, remarkable in color, drama, and technique These include *Last Rebels* and *Justice in the Harem* (both Luxembourg Mus, Paris) and *Moroccan Prisoners* (Bordeaux) After 1880 he devoted himself to mural decorations, such as *Paris Convoking the World* (Hôtel de Ville, Paris) and *Literature* and *The Sciences* (both Sorbonne, Paris), and to portraiture, the best-known examples being those of Queen Victoria, Queen Alexandra, M de Blowitz, and *Mon fils Andre* (Luxembourg Mus, Paris) Other paintings by Constant are *Samson and Delilah*, *Valley Farm* (National Gall, London), *Entrance of Mohammed II into Constantinople* (Toulouse), and *Justinian in Council* (Metropolitan Mus)

Constant, Paul Henri Benjamin, baron d'Estournelles de, see ESTOURNELLES DE CONSTANT, PAUL HENRI BENJAMIN, BARON D'

Constanta (kônstänʼtsä), city (pop 78,586), SE Rumania, in the Dobruja It is the chief Rumanian Black Sea port and is connected by oil pipeline with Ploesti It was founded (4th cent A D) by Constantine I near the site of ancient Tomi, where Ovid lived in exile An early episcopal see, it has an Orthodox cathedral and several synagogues and mosques

Constant de Rebecque, Henri Benjamin: see CONSTANT, BENJAMIN

Constantine I (Constantine the Great) (kŏn'stuntēn, -tīn), 288?–337, Roman emperor, b Naissa (modern Nis, Yugoslavia) He was the son of CONSTANTIUS I and St HELENA and was named in full Flavius Valerius Constantinus When his father was made Caesar (subemperor), Constantine was left at the court of DIOCLETIAN, where he was under the watchful eye of the other Caesar, GALERIUS. When Diocletian and MAXIMIAN resigned in 305, Constantius and Galerius succeeded as emperors Constantius requested that Constantine be sent to him in Britain, and Galerius reluctantly com-

plied Constantius died at York the next year, and his soldiers there proclaimed Constantine emperor There was, however, much rivalry for the vacated office. In Italy, MAXENTIUS, supported by the Romans and by his father Maximian, vied with SEVERUS and Galerius Constantine, accepting the lesser title of Caesar from Galerius, stayed aloof while Maxentius and Maximian defeated Severus and Galerius He made an alliance with Maximian, marrying Maximian's daughter Fausta and recognising Maxentius after a fashion When Maximian, falling out with his son, fled to Constantine, Constantine received him and sheltered him until Maximian undertook (310) a revolt against Constantine's rule in Gaul The old emperor was then forced to commit suicide Constantine had already declared against Maxentius and was acting as emperor, ignoring the fact that Galerius had recognized LICINIUS in the East When Galerius died in 311, still another claimant to imperial honor appeared in MAXIMIN, who allied himself with Maxentius against the combination of Licinius and Constantine While Licinius moved against Maximin, Constantine showed his ability as a general by moving down Italy against Maxentius The rivals for Italy met at the Milvian or Mulvian Bridge over the Tiber near Rome in 312 Before the battle Constantine, who was already interested in Christianity, is said to have seen a cross flaming in the sky as the sign by which he would conquer He adopted the cross as his sign and did conquer magnificently Maxentius was routed and killed The fate of Christianity hung on that battle In 313 Constantine and his fellow emperor, Licinius, met at Milan and there issued the EDICT OF MILAN, which established toleration of Christianity throughout the empire (but did not, as is sometimes said, make Christianity the state religion) Licinius, having rid himself of Maximin, fell out with Constantine, and a brief struggle followed Constantine, victorious, took (315) control over Greece and the Balkans, and an uneasy peace followed until in 324 Licinius again challenged Constantine This time he lost his throne and ultimately his life Constantine was now sole ruler of the whole empire, and in a reign of peace he set about rebuilding the strength of the old Rome His interest in Christianity continued but he was not baptized a Christian until on his deathbed Meanwhile he not only tolerated paganism but even encouraged the strictly anti-Christian imperial cult He did, however, set out to make Christianity a unified, single establishment He convened a synod at Arles in 314 to regulate the Church in the West, and in 325 he convened a council at NICAEA to deal with the troubles over Arianism (see NICAEA, FIRST COUNCIL OF) The half-Christian emperor thus evolved the idea of the ecumenical COUNCIL For a time he seems to have favored compromise with Arianism and therefore exiled St Athanasius, but later he supported the council Constantine decided to move the capital to Byzantium, which he rebuilt as CONSTANTINOPLE It was dedicated (330) to the Virgin, and no pagan religion was allowed in it Constantine believed himself the beginner of a new era, and time was to prove that to a certain extent he was, as the founder of the Christian empire He believed thoroughly in absolutism and brought to completion the tendency toward despotic rule shown by Diocletian He was noted for his bursts of violent temper He had his son Crispus put to death on charges brought by his wife Fausta and later had Fausta put to death for bringing false charges His legal reforms however were marked by great humanity, perhaps a result of Christian influence Though he had done much to unify the empire, at his death he divided it again, providing for his three surviving sons and also to some extent for the sons of his half brother These nephews were soon killed (though others, notably Julian the Apostate, survived), but long contests ensued between Constans I, Constantine II, and Constantius II See C M Firth, *Constantine the Great* (1905), G P Baker, *Constantine and the Christian Revolution* (1930), L B Holsapple, *Constantine the Great* (1942), Jacob Burckhardt, *The Age of Constantine the Great* (Eng tr , 1949)

Constantine II, 316–40, Roman emperor, son of Constantine I When the empire was divided at the death (337) of Constantine I, among the brothers Constantius II, Constans I, and Constantine II, Constantine II received Britain, Gaul, and Spain He felt that he had been cheated and demanded some of the territory given CONSTANS I In an invasion of Italy intended to win some of that territory, he was killed from ambush

Constantine IV (Constantine Pogonatus), d 685, Byzantine emperor (668–85), son and successor of Constans II He defended Constantinople against the annual naval attacks of the Moslems, who finally withdrew in 677, GREEK FIRE was a conspicuous weapon in the defense Severely defeated (679) by the Bulgars, he ceded to them territory S of the Danube, where they founded a kingdom In 680 he summoned the Third Council of Constantinople, which reestablished peace between the Eastern and Western churches by condemning MONOTHELETISM. Constantine was succeeded by his son, Justinian II

Constantine V (Constantine Copronymus), 718–75, Byzantine emperor (740–75), son and successor of LEO III An able general and administrator, he fought successfully against the Arabs, Slavs, and Bulgars, improved the water supply of Constantinople, forcibly resettled the city after a great plague, and continued his father's financial and religious policies In 753 he summoned a council at Constantinople which sustained ICONOCLASM He rigidly enforced a decree forbidding the use of images in worship and cruelly persecuted monasticism A serious result of his religious policy was the loss to the Byzantines of Rome and, ultimately, of Italy Pope ZACHARIAS broke with Constantine, and Pope Stephen III placed Rome under the protection of PEPIN THE SHORT Constantine was succeeded by his son Leo IV

Constantine VI, b c 770, Byzantine emperor (780–97), son and successor of Leo IV His mother, IRENE, was regent until 790, when she was deposed by a military revolt Constantine recalled her in 792 and made her joint ruler His subsequent acts of cruelty and his divorce and remarriage (795) alienated his supporters, his actions were probably instigated by Irene, who thus found general support when in 797 she deposed her son and had him blinded Irene assumed the imperial title, and Constantine died in obscurity During his minority the Second Council of NICAEA took place (787) Constantine fought without success against the Bulgarians and against the Arabs under Harun-al-Rashid

Constantine VII (Constantine Porphyrogenitus), 905–59, Byzantine emperor (912–59), son and successor of Leo VI His reign before 945 was purely nominal A regency (912–19) was followed by the rule (919–44) of the usurper ROMANUS I In 945 Constantine expelled the sons of Romanus and began his personal rule His main interests lay in legal reforms and in the encouragement of art and learning He was himself a scholar and an assiduous writer He was succeeded by his son, Romanus II, who probably poisoned him

Constantine XI (Constantine Palaeologus), d 1453, last Byzantine emperor (1448–53), brother and successor of John VIII To secure Western aid against the Turkish assault on what remained of the empire, he proclaimed (1452) the union of the Roman and the Eastern churches No help came, however, and in 1453 Constantine, with some 8,000 Greeks, Venetians, and Genoese faced 150,000 Turkish besiegers under Sultan Mohammed II After almost two months of heroic defense directed by the emperor, the city fell Constantine died fighting with his last men

Constantine, 1868–1923, king of the Hellenes eldest son of George I, whom he succeeded in 1913 In the First World War he opposed the pro-Allied policy of the Greek premier, Eleutherios VENIZELOS, and was forced to abdicate in 1917 under Allied military pressure His second son, ALEXANDER, succeeded on the throne Recalled (1920) on Alexander's death, he continued the war against Turkey although the Allies withdrew their support from Greece The Turkish victory at Smyrna caused a military rebellion, and Constantine in 1922 was again deposed and exiled His eldest son, George II, succeeded

Constantine, d 411, Roman general He was proclaimed emperor by the troops in Britain in 407 and raised the banner of revolt against the Western emperor, Honorius Constantine conquered Gaul and, through his son, took Spain He forced recognition from Honorius as joint emperor, but his triumph was short The counterrevolt of GERONTIUS halted him, and he was defeated by Honorius' general Constantius (later Emperor CONSTANTIUS III) Constantine was beheaded His withdrawal of Roman troops from Britain had greatly weakened the Roman hold on that island (see BRITAIN)

Constantine, anc *Cirta*, city (pop 80,233), capital of Constantine dept , E Algeria It is an important market and industrial center, handling grain and manufacturing textiles and leather goods On a plateau that is deeply cut by ravines, Constantine is directly on the gorge of the Rhumel river It was originally a Carthaginian settlement, and as Cirta it was the capital and commercial center of Numidia and an important shipping point in the Roman grain supply Destroyed (A D 311) in the war that preceded the accession of Constantine I, it was rebuilt by Constantine himself and renamed for him It later sank in importance, but attained some prominence under the Turks in the 18th cent The French took it in 1837 and in the 20th cent developed it The population is more than half Moslem The city is modern but has interesting reminders of the past, especially ruins of Roman fortifications

Constantine (-tēn), village (pop 1,384), SW Mich , on the St Joseph near the Ind line and S of Kalamazoo, settled 1828, inc 1837 Butter is produced by the cooperative creamery

Constantine, Donation of, Latin *Constitutum Constantini*, forged document, probably drafted in the 8th cent It purported to be a grant by Emperor Constantine I of great temporal power in Italy and the West to the PAPACY Its purpose was apparently to enhance papal territorial claims in Italy by giving them greater antiquity The document also recognised the spiritual authority of the popes, but this statement had no weight, since at no time was it argued in the Roman Catholic Church that spiritual authority could emanate from the emperor It was not, as a matter of fact, ever of great practical value, nor was it, as is sometimes asserted, universally accepted in the Middle Ages It owes its great fame to the fact that the scholar Lorenzo VALLA demonstrated the falsity of the document by critical methods that became the model for later textual criticism and are said by some to be the beginning of modern textual criticism

Constantine Nikolayevich (nĕkôlīyā'vĭch), 1827–92, grand duke of Russia, brother of Alexander II He supported all the liberal policies of his brother, who gave him command of the fleet and made him governor general of Poland in 1862 There his conciliatory policy could not prevent the insurrection of 1863 He resigned and in 1865 was appointed president of the council of the empire Suspected of conspiracy in the reign of Alexander III, he fell into disgrace

Constantine the African, c 1020–c 1087, translator of Arabic works into Latin He was probably born at Carthage, lived for a time at Salerno, and finally retired to the Benedictine monastery at Monte Cassino His translations had an important influence on European medicine from the 12th to the 17th cent

Constantine the Great see CONSTANTINE I, Roman emperor

Constantinople, former capital of the BYZANTINE EMPIRE and of the OTTOMAN EMPIRE, since 1930 officially called Istanbul (for location and description, see ISTANBUL) It was founded (A D 330) at ancient BYZANTIUM as the new capital of the Roman Empire by CONSTANTINE I, after whom it is named The largest and most splendid European city of the Middle Ages, Constantinople shared the glories and vicissitudes of the Byzantine Empire, which in the end was reduced to the city and its environs Though besieged innumerable times by various peoples, it was taken only three times—in 1204 by the army of the Fourth Crusade (see CRUSADES), in 1261 by MICHAEL VIII, and in 1453 by Sultan MOHAMMED II An early inner wall was erected by Constantine I, and the enlarged Constantinople was surrounded by a triple wall of fortifications, begun (5th cent) by Theodosius II Built on seven hills, the city on the Bosporus presented the aspect of an impregnable fortress enclosing a sea of magnificent palaces and gilded domes and towers At its greatest period, in the 10th cent it had c 1,000,000 inhabitants, representing nearly every race in the world The church of HAGIA SOPHIA, the sacred palace of the emperors (a city in itself), the huge hippodrome, center of the popular life, and the Golden Gate the chief entrance into the city, were among the largest of the scores of churches, public edifices, and monuments that lined the broad arcaded avenues and squares Constantinople had an almost inconceivable wealth of artistic and literary treasures before it was sacked in 1204 and in 1453 Virtually depopulated when it fell to the Turks the city soon flourished again under the sultans (whose court was called the Sublime Porte) as one of the great political and commercial centers of Europe After the First World War it was occupied (1918–23) by the Allies In 1922 the last sultan was deposed, and Ankara became the new Turkish capital

Constantinople, First Council of, 381, the second ecumenical council, convened by Theodosius I to confirm the acts of the Council of NICAEA (see NICAEA, FIRST COUNCIL OF) and to decide who was bishop of Constantinople There was no representative from the West The council reinstated St GREGORY NAZIANZEN as bishop of Constantinople and appointed his successor when he resigned soon afterward Meanwhile, the president of the council, St MELETIUS, died, the council elected FLAVIAN OF ANTIOCH in his place, and the Antiochene schism went on The council confirmed the dogmas of Nicaea and, according to tradition, composed the Nicene Creed (see CREED) It condemned all the current heresies, particularly Arianism and Apollinarianism One canon, making the bishop of Constantinople second only to the pope in precedence, was not admitted in the West until the Fourth Lateran Council (1215) The council as a whole was admitted as ecumenical by the Emperor Marcian (452) and by Pope Hormisdas (c 520).

Constantinople, Second Council of, 553, regarded by Roman Catholic and Orthodox churches as the fifth ecumenical council It was convened by Emperor Justinian to deal with the question of the Three Chapters and the dispute with Pope VIGILIUS It was completely dominated by the emperor There were no Western bishops present, except for six Africans The council condemned the Three Chapters without prejudice to the Council of Chalcedon (see CHALCEDON, COUNCIL OF), which

had exonerated them. The council also seems to have judged Vigilius deposed The results of the council were to alienate both the Nestorians and the West. Vigilius subsequently made a pronouncement agreeing doctrinally with the council. The ecumenicity of this council was only slowly accepted in the West; but the papal confirmation of its canons gave it the necessary prestige. The original canons are lost

Constantinople, Third Council of, 680, regarded by Roman Catholic and Orthodox churches as the sixth ecumenical council It was convoked by Emperor Constantine IV to deal with MONOTHELETISM. The council was attended by more than 150 bishops from all over the world, and it was presided over by the papal legates. It condemned Monotheletism very clearly by defining the orthodox faith to accept a separate will and operation in each of the natures of Christ It also condemned several churchmen as Monothelites, among them HONORIUS I. The condemnation of Honorius is a much-discussed point in church history. The Orthodox Church accepts as an ecumenical part of the Third Council of Constantinople the Oriental Council of 692, summoned by Justinian II. This is called in the West the Trullan Synod because it met in Trullo, i.e., in the dome of the palace, or the Quinisext Synod [Latin,=fifth-sixth] because it is considered in the East to supplement the fifth and sixth ecumenical councils. The Trullan Synod was entirely legislative, and its principal work was the pronouncement of the obligation to observe the canons of the Apostolic CONSTITUTIONS. There was apparently in the legislation an anti-Western tone, and certain practices of the West were condemned

Constantinople, Fourth Council of, 869–70, regarded as the eighth ecumenical council by the modern Roman Catholic Church It has never been accepted by the Orthodox Church, which recognizes instead the council of 880 that supported PHOTIUS The council of 869 was convoked at the suggestion of Basil I, the new emperor, to confirm the restoration of St IGNATIUS OF CONSTANTINOPLE to the see which Photius had resigned. Only 12 bishops attended at first, and never more than 103 The legates of Adrian II presided Photius had already been condemned, without a hearing, at a Roman synod. At Constantinople his defense was cut short, and when he refused to sign his own condemnation, he was excommunicated. The result of these councils was to intensify the bitterness between East and West

Constantinople, Latin Empire of, 1204–61, feudal empire established in the S Balkan Peninsula and the Greek archipelago by the leaders of the Fourth Crusade (see CRUSADES) after the fall (1204) of the Byzantine Empire It was modeled on the Latin Kingdom of JERUSALEM Its core was the empire of Romania, on both sides of the Dardanelles, its rulers were also suzerains of the kingdom of Thessalonica, the principality of Achaia, and other fiefs. BALDWIN I, HENRY OF FLANDERS, Peter of Courtenay, ROBERT OF COURTENAY, JOHN OF BRIENNE, and BALDWIN II were the rulers. The empire deteriorated immediately after its creation, being beset by the Greek emperors of Nicaea (see NICAEA, EMPIRE OF) and despots of Epirus (see EPIRUS, DESPOTAT OF), by the Bulgars under IVAN II (Ivan Asen), by the Turks, and by internal discord In 1222 Thessalonica fell to the despot of Epirus By 1224 the Nicaean Emperor JOHN III had recovered Asia Minor Constantinople, nearly captured by Ivan Asen in 1234, fell to Emperor MICHAEL VIII in 1261. Venice, however, retained possession of most of the Greek isles, the duchy of ATHENS passed under Catalan rule, and Achaia stayed in the hands of the VILLEHARDOUIN family until 1278.

Constantius I, (Constantius Chlorus) (kŭnstăn'shŭs), c.250–306, Roman emperor (305–6) An able general, he put away St. Helena to marry the daughter of MAXIMIAN He was made Caesar (subemperor) under MAXIMIAN in 293 and added to the luster of his name when his forces defeated the rebel Carausius. He went to Britain, where he put down a rebellion in 296 Back in Gaul in 298 he defeated the Alemanni His vigor and his moderation made him popular with the people of the colonies as well as with his soldiers He was, however, viewed suspiciously by the other Caesar, Galerius The two emperors, Diocletian and Maximian, abdicated in 305, and Constantius and Galerius became emperors. The next year, however, Constantius died at York. His imperial office was claimed by his son Constantine (CONSTANTINE I), but there was a long contest for it.

Constantius II, 317–61, Roman emperor, son of Constantine I When the empire was divided (337) at the death of Constantine, Constantius II was given rule over Asia Minor, Syria, and Egypt, while his brothers, Constans I and Constantine II, received other portions. He fought successfully against the Persians and built up his power When in 350 the murder of Constans I threw the West into disorder, Constantius II defeated the usurping Magnentius and became sole emperor He gave great power to his cousin Julian (JULIAN THE APOSTATE) in Gaul, and Julian proved unexpectedly successful. New trouble having broken out with the Persians, Constantius ordered Julian to the East, but Julian's men revolted and proclaimed (360) Julian emperor in the West Constantius set out to repress this rebellion, but died on the way, naming Julian as his successor. A confirmed Arian, Constantius was involved in a struggle with St. Athanasius and at the same time repressed paganism vigorously.

Constantius III, d. 421, Roman emperor of the West (421) In 411, as the general of HONORIUS, he defeated GERONTIUS and CONSTANTINE (d. 411), thereafter he was the virtual ruler of the West Aspiring to the hand of the emperor's sister GALLA PLACIDIA, he was the leading opponent of peace with his rival ATAULF the Visigoth, whom he drove from Gaul into Spain shortly after Ataulf's marriage to Galla Placidia (414). In 416, after Ataulf's assassination, he made peace with the new Visigothic king, Wallia, and in 417 he married Galla Placidia. He was the prime mover in granting local government to Gaul (418) and in settling the Visigoths in Aquitaine (419). In 421 Galla Placidia persuaded her brother to take Constantius as his colleague, but he lived to suffer the inconveniences of his new dignity only a few months. He was the father of Valentinian III.

Constellation (kŏnstĭlā'shŭn), U.S. frigate, launched in 1797 The frigate was built to serve against the pirates of the Barbary States, but after the outbreak (1798) of the near-war between the United States and France, she was stationed in Caribbean waters After the *Constellation*, commanded by Thomas Truxtun, encountered and captured (Feb., 1899) the vessel *Insurgente*, she won (Feb., 1900) a hard-fought victory over another French frigate, the *Vengeance* The *Constellation* was blockaded at Norfolk, Va., during the War of 1812, but further victories followed in the Mediterranean in 1815. The *Constellation* was assigned to blockade patrol in the Civil War and was used (1873–93) as a training ship at Annapolis, Norfolk, and Philadelphia before being made (1894) a stationary ship at Newport, R.I.

constellation (kŏnstĭlā'shŭn), name used originally for a group of stars which seemed to form a configuration in the sky The meaning of the word has been extended to refer to a definite area of the sky, and the positions of heavenly bodies are located in terms of these areas. The 88 recognized constellations fill the entire sky, and the boundaries were established in 1928 by the International Astronomical Union. In antiquity 48 constellations were identified Constellations bear the names of mythological heroes, e.g., Hercules, Perseus, and Orion, of animals, e.g., Draco the Dragon, Cygnus the Swan, and Leo the Lion, and of objects, e.g., Libra the Scales and Corona the Crown Those recognized after the early Greek and Roman period were given Latin names The movement of the earth in its orbit causes the sun, in the course of a year, to appear to move in a circle through the heavens The 12 constellations in this apparent path (called the ecliptic) are known as the zodiacal constellations (see ZODIAC) In 1603 Johann Bayer introduced a system of designating the brighter stars of a constellation in order of their brightness (or according to their relative positions in cases where several are of about the same brightness) by using Greek letters and the Latin genitive of the constellation name In the constellation Taurus the Bull, for example, Aldebaran, the brightest star, is called Alpha Tauri, and the second brightest star is Beta Tauri

constipation, disturbed intestinal function accompanied by delayed or incomplete passage of feces Prolonged constipation results in other disturbances, the symptoms of which may be headache, fatigue, loss of appetite, and INDIGESTION Constipation may be caused by faulty diet, lack of exercise, irregular habits, mechanical obstruction of the intestinal tract, or muscular spasm caused by psychological factors Treatment includes drinking plenty of water, general exercise, local massage, forming regular habits of elimination, and a diet including roughage, fruits, and vegetables Treatment varies, however, with the type of constipation A bland diet is sometimes necessary. Cathartics and enemas should be administered only when prescribed by a physician

Constitution, U.S. 44-gun frigate, nicknamed *Old Ironsides* She was perhaps the most famous vessel in the history of the U.S navy Authorized by Congress in 1794, she was launched in 1797 and was commissioned and put to sea in 1798 in the near-war with the French She participated in the Tripolitan War. In the War of 1812, serving as flagship for Isaac HULL, she won a battle with the British vessel *Guerrière* on Aug 19, 1812, and under the command of William Bainbridge she defeated the *Java* on Dec 29, 1812. Charles Stewart was commanding the *Constitution* when on Feb. 20, 1815, she overcame the *Cyane* and the *Levant* (though the *Levant* was later recaptured by the British) The *Constitution* was condemned as unseaworthy, but public sentiment, aroused by Oliver Wendell Holmes's poem, "Old Ironsides," saved the ship from dismantling, and she was rebuilt in 1833. She was laid up at the Portsmouth navy yard in 1855 and was there used as a training ship In 1877 she was rebuilt, and the next year she crossed the Atlantic. In 1897 she was stored at the Boston navy yard, and in 1925, under authorization of Congress, she was rebuilt by public subscription After a tour of important U.S. seaports in 1931, the *Constitution* returned in 1934 to Boston See James Barnes, *Naval Actions of the War of 1812* (1896), Ira N. Hollis, *The Frigate Constitution* (1901); Elliot Snow, *On the Deck of "Old Ironsides"* (1932)

constitution, the fundamental principles of government in a nation, either implied in its laws, institutions, and customs or embodied in one document or in several. In the first category—customary and unwritten constitutions—is the British constitution, which is contained implicitly in the whole body of common and statutory law of the realm and in the knowledge of the workings of the government. It is termed *flexible*, for it may be modified by an ordinary act of PARLIAMENT or by judicial decisions. In the 18th, 19th, and 20th cent.—as a result of the American Revolution, the French Revolution, the revolutions against Spain in Latin America, and the Revolution of 1848 in Europe—many countries, having made sharp political and economic departures from the past, had little legal custom to rely upon and therefore set forth their organic laws in written constitutions. While the written constitutions of several countries could, in theory, be drastically changed overnight by legislative enactment (and thus are also termed *flexible*), **the Constitution of the United States** is classified as *rigid*—one that has superior sanction to the ordinary laws of the land and that is subject to a gradual process of amendment Its so-called rigidity, however, has been counterbalanced by growth and usage, statutory elaboration (see CONGRESS OF THE UNITED STATES) and judicial construction (see SUPREME COURT, UNITED STATES, and MARSHALL, JOHN) were erected on the base of the written document drawn up at the FEDERAL CONSTITUTIONAL CONVENTION at Philadelphia in 1787 The Constitution (see FEDERALIST PAPERS, HAMILTON, ALEXANDER, MADISON, JAMES), signed on Sept 17, 1787, and ratified by the required number of states (nine) by June 21, 1788, superseded the original charter of the United States in force since 1781 (see CONFEDERATION, ARTICLES OF) and established the system of federal government which began to function in 1789 The Constitution is concise, and its very brevity and its general statement of principles have, by accident more than by design, made possible the extension of meaning that has fostered growth There are but seven articles and a Preamble, 21 amendments have been adopted. The Preamble does not confer power but has been of great importance because of the weight placed on its first words, "We the People of the United States," by the advocates of a strong union arguing against the proponents of STATES' RIGHTS Another phrase of the Preamble, "to promote the general Welfare," has been of great importance in upholding much recent social legislation, for which no warrant could be found in the enumerated powers of Congress Article 1 of the Constitution sets up the U.S. Congress, in two divisions—the Senate and the House of Representatives—and enumerates its powers in Section 8 The last paragraph of this section gives Congress the implied power "to make all Laws which shall be necessary and proper for carrying into Execution" the enumerated or expressed powers Vital assurances of liberty to American citizens (e.g., clauses guaranteeing the writ of HABEAS CORPUS and prohibiting bills of attainder and ex post facto laws) and limitations on state powers are included in Sections 9 and 10 respectively Article 2 creates an executive branch of government headed by the President, elected, along with the Vice President, for a term of four years (see PRESIDENT and ELECTORAL COLLEGE) Article 3 provides for a judiciary and defines TREASON Article 4, dealing with relations of the states (see CONFLICT OF LAWS), establishes interstate comity Section 2 provides that "the Citizens of each State shall be entitled to all Privileges and Immunities of the Citizens in the several States" and for the extradition of criminals. The admission of new states into the Union and the government of territories is provided for by Section 3, and Section 4 guarantees to every state a republican form of government Article 5 provides for amending the Constitution (see AMENDMENT) Article 6 assured the validity of debts contracted before the adoption of the Constitution and asserts the supremacy of the Federal Constitution and laws in case of conflict with those of the states It also provides for an oath of office and specifically forbids any religious test for office Article 7 declared that the Constitution should go into force when ratified by nine states. An outstanding feature of the Constitution is the provision for the separation of the legislative, executive, and judicial branches of government and for a system of checks and balances among these branches. The Constitution has undergone gradual alteration with the growth of the country. Some of the 21 amendments

were brought on by Supreme Court decisions. However, the first nine amendments, which constitute the Bill of Rights, were added within two years as a result of widespread feeling that the Federal Constitution, unlike the majority of state constitutions, insufficiently guaranteed individual liberties. They guarantee (First Amendment) the freedom of worship, of speech, of the press, of assembly, and of petition to the government for redress of grievances; (Second Amendment) the right to bear arms—adopted with reference to state militias; (Third Amendment) freedom from the quartering of soldiers without the consent of the owner of the house; and (Fourth Amendment) freedom from search except with warrant They further guarantee (Fifth Amendment) that no person shall be held for an infamous crime without indictment, be twice put in "jeopardy of life or limb" for the same offense, be compelled to testify against himself, or "be deprived of life, liberty, or property, without due process of law" and establish that private property may not be taken for public use, without just compensation The Sixth Amendment guarantees the right of a speedy and public trial by an impartial jury in all criminal prosecutions, while the Seventh Amendment guarantees the right of trial by jury in all common-law suits "where the value in controversy shall exceed twenty dollars," and the Eighth Amendment prohibits excessive bail and fines and "cruel and unusual" punishment. The Ninth Amendment states that "the enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people" By the Tenth Amendment, generally considered with the first nine (they all went into effect in 1791), "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people" Powers reserved to the states are often termed "residual powers" The Eleventh Amendment (1798) prohibits suits against any state by citizens of another state or by foreigners (see SOVEREIGNTY) The Twelfth (1804) revises the method of electing the President and Vice President. The Thirteenth (1865), Fourteenth (1868), and Fifteenth amendments, arising out of the Civil War and Reconstruction, abolish slavery and guarantee civil rights and the suffrage to U S citizens, including former slaves The FOURTEENTH AMENDMENT enjoins on states the "due process" clause of the Fifth Amendment and forbids abridgment of the "privileges or immunities" of U S citizens and denial of their "equal protection" under the law The Sixteenth amendment (1913) authorizes the INCOME TAX and the Seventeenth (1913) institutes the direct, popular election of Senators The Eighteenth (1919)—repealed by the Twenty-first (1933)—introduced PROHIBITION The Nineteenth (1921) grants WOMAN SUFFRAGE The Twentieth (1933) abolishes the "lame-duck" Congress and alters the date of the presidential inauguration The wording of the Constitution is general, necessitating interpretation, and any short summary is only rough and approximate From its very beginnings, the Constitution has been subject to violent controversies, not only in interpretation of some of its phrases, but also between the "loose constructionists" and "strict constructionists" The middle of the 19th cent saw a tremendous struggle concerning the nature of the Union and the extent of states' rights The Civil War decided the case in favor of the advocates of strong union, and since that time the general tendency has been toward the centralization and strengthening of Federal power See C A Beard, *An Economic Interpretation of the Constitution* (1925), W B Munro, *The Constitution of the United States* (1930); F A Magruder and G. S. Claire, *The Constitution* (1933), C H McIlwain, *Constitutionalism, Ancient and Modern* (1940); C. B Swisher, *The Growth of Constitutional Power in the United States* (1946); B J Hendrick, *Bulwark of the Republic* (rev ed , 1947), D H J Chalmers, *Constitutional Laws of Great Britain* (6th ed , 1948), E S Corwin, *The Constitution and What It Means Today* (10th ed , 1948), R H Fitzgibbon, *Constitutions of the Americas* (1948); A H Kelly and W A Harbison, *The American Constitution* (1948), C F Strong, *Modern Political Constitutions* (3d ed , 1949).

Constitutional Convention: see FEDERAL CONSTITUTIONAL CONVENTION.

Constitutional Union party, in U S. history, formed when the conflict of North and South broke down the older parties The Constitutional Union group, composed of former Whigs and remnants of the Know-Nothings and other groups in the South, was organized just before the election of 1860 Delegates from 20 states attended the party convention at Baltimore in May, 1860, and John BELL, of Tennessee, and Edward EVERETT, of Massachusetts, were nominated for President and Vice President The party recognized "no political principle but the Constitution of the country, the union of the states and the enforcement of laws." Kentucky, Tennessee, and Virginia were carried in the election

Constitution Island, in the Hudson river opposite West Point and in the U.S. military reservation It is joined to the east bank of the river by railroad bridges. The ruins of old Fort Constitution (1775) are here. In the Revolution a chain was stretched across the Hudson between the island and West Point to prevent the ascent of British ships The island was long the home of Susan WARNER.

Constitution of Athens, treatise by Aristotle It was lost until discovered in Egypt in the late 19th cent It is a history of Athenian government and an account of its operation in the time of Aristotle It is invaluable as a source.

Constitution of the United States: see CONSTITUTION.

Constitutions, Apostolic, late 4th-century compilation, in eight books, of administrative canons for the clergy and the laity and of guides for worship. They were supposed to be works of the apostles, but actually included portions of apocryphal letters, most of the DIDACHE, and fragments from Hippolytus and PAPIAS The whole is a valuable primary source on early church history and practice The Third Council of Constantinople made the Apostolic Constitutions binding.

consubstantiation: see LORD'S SUPPER

consul, title of the two chief magistrates of ancient Rome. The institution is supposed to have arisen with the expulsion of the kings, traditionally in 510 B C , and it was well established by the early 4th cent B.C. The consuls led the troops, controlled the treasury, and were supreme in government At first only patricians were eligible, but the Licinian law in 367 B.C opened the office to plebeians Generally before being consul a man had to have experience as quaestor, aedile, and praetor, and the minimum age for a consul was normally set at 40 or 45 Ex-consuls became provincial governors as proconsuls. The year was identified as the time when So-and-So and Such-and-Such were consuls Under the empire the title of consul was continued but became a mere title of honor, conferred sometimes on small boys or infants

consular service, organized body of agents maintained by a government at the important ports and trade centers of a foreign country to protect the persons and interests of its nationals and aid them in every way possible The duties, for instance, of U S consuls in foreign countries include the certification of invoices of merchandise valued at more than $100, execution of landing certificates, disinfection of merchandise from districts having infectious diseases, issuing and visaing of passports for his country, certification of the sanitary condition of cargo, crew, and passengers of vessels clearing from foreign ports for ports of the United States, settlement of estates of citizens dying intestate in foreign countries, protection of citizens of the United States, reclamation of deserters, examination of prospective immigrants to the United States, adjustment of differences between crews and masters, and the shipment, discharge, and relief of seamen of American vessels The consular service must be distinguished from the DIPLOMATIC SERVICE usually, but there has been a recent tendency, because of the interrelated duties of the two branches, to combine them This was done in the United States by the Rogers Act of 1924, which consolidated both into the Foreign Service of the Dept of State The Dept of Commerce and the Treasury Dept may, however, have commercial attachés at a consulate to aid in the gathering of statistics and promotion of trade The persons of consuls and the premises of consulates enjoy immunity and EXTERRITORIALITY similar to those of diplomatic personnel.

Consulate, 1799–1804, in French history, the form of government established after the coup d'état of 18 Brumaire (Nov 9–10, 1799), which ended the DIRECTORY Three consuls were appointed to rule France—Bonaparte (see NAPOLEON I), SIEYÈS, and Roger Ducos Sieyès and Ducos were shortly replaced by CAMBACÉRÈS and Charles François LEBRUN, and the Consulate was little more than a scheme of autocratic government for First Consul Bonaparte, who was made first consul for life in 1802 and emperor in 1804 See Adolphe Thiers, *History of the Consulate and the Empire* (1845–62, new ed of Eng tr , 12 vols , 1893–94)

Consumers' League, National, formed in the United States in 1899 to promote better conditions among workers by encouraging the purchase of articles made and sold under good working conditions The movement started in England in 1890 The American national federation was founded by a group led by Florence Kelley The league undertook to investigate factories and to educate consumers in purchasing habits The stitched cotton underwear industry was chosen for the first investigation because of its many unskilled workers, low wages, long hours, sweatshop work, and generally unsanitary conditions For many years the league used a label for goods which had passed inspection, and many consumers learned to purchase only those goods thus labeled Many of the objectives of the league are now a matter of law, e g , shorter hours, a minimum wage, payment for overtime, and the abolition in most states of child labor See Maud Nathan, *Story of an Epoch-making Movement* (1926), publications of the National Consumers' League.

consumption, in economics, utilization of wealth which destroys that wealth or utilization of wealth which gives direct satisfaction to the one who uses it. French economists divided consumption into various component parts under the first definition Thus, productive consumption may be thought of as wealth used in the process of producing other wealth, and unproductive consumption as using up wealth in the direct satisfaction of human wants English economists preferred to understand consumption in the second sense, that satisfaction is susceptible to quantitative measurement is a doctrine of the utilitarian philosophers. The process of consumption is central to any system of economics, Adam Smith made it the sole end of production Production, the wholesale and retail trades, and consumption are closely linked, and the exchange of goods and services for money along the various stages from producer to ultimate consumer is the foundation of modern capitalist economy Advertising is today the chief means by which manufacturers and retailers seek to increase consumption, and an effort is also made by them to shift this and other costs of production and distribution to the consumer See W. C. Waite and Ralph Cassady, *The Consumer and the Economic Order* (1939)

consumption, in medicine see TUBERCULOSIS.

Consus (kŏn'sŭs), in Roman religion, harvest god, probably worshiped with the goddess OPS.

contagious abortion or **brucellosis** (brŏsĕlō'sĭs), infectious disease of cattle resulting in premature expulsion of the fetus It is caused by the bacterium *Brucella abortus*, which also affects the horse, mule, rabbit, guinea pig, and some other animals Two other species of *Brucella* cause the disease in swine and in sheep Any of these three species can cause undulant (Malta) fever in humans In cattle the first symptom is generally the premature birth of a dead or of a live calf Retention of the placenta after an otherwise normal calving may also indicate brucellosis. Infection occurs most commonly through the intake of food or water containing the germs Humans may contract the disease through contaminated raw milk and by contact with the animals Infected cattle can be sold for slaughter Methods of preventing the disease include vaccination of calves, removal of infected animals, and the testing of all new livestock before adding them to the old The disease in cattle has been called Bang's disease, after Bernard Bang, who discovered (1897) the causative agent in cattle In 1887 David Bruce had identified the germ causing abortion among goats on the island of Malta, and after the close relationship between the germs affecting cattle, goats, and swine was recognized, the name brucellosis was generally adopted for the disease in any of these animals It is also called infectious abortion See *Brucellosis of Cattle* (U S Dept of Agriculture, Farmers' Bul 1871)

contagious diseases: see COMMUNICABLE DISEASES

Contarini (kŏntärē'nē), ancient Venetian family, which produced eight doges, a cardinal, and several artists Its most celebrated member was **Andrea Contarini** (ändrā'ä), 1300?–1382 He was doge (1368–82) at the time of the War of Chioggia between Venice and Genoa and proved his patriotism by melting his gold and silver plate and mortgaging his lands to raise money for the state.

contempt of court, interference with the functioning of a court Contempts are classified as criminal or civil. Criminal contempts are those which lessen the dignity of a court or tend to limit a judge's freedom of action A direct criminal contempt is one committed in the courtroom, it may consist in creating a disorder or disobeying a direction of the judge, who is empowered to administer summary punishment by fine and imprisonment Indirect criminal contempts (also called constructive contempts) are acts committed outside a courtroom which are deemed prejudicial to justice They may include comment on a pending cause or unfavorable criticism of a judgment or opinion. In some jurisdictions these contempts also may be punished summarily, but in others, the apparent danger to freedom of expression has led to the requirement of indictment and trial by jury for the alleged offense Civil contempts of court are primarily injuries to private parties occasioned by disobeying an INJUNCTION or a court order that a judgment be satisfied The usual punishment is a fine and imprisonment until the guilty party purges his contempt by obedience Civil contempt originally was a device of EQUITY alone, but with the virtual disappearance in England and in most of the American states of a separate equity system, it now occurs more generally Among other uses, civil contempt punishes refusal to pay ALIMONY.

Conti (kōtē'), cadet branch of the French royal house of BOURBON Although the title prince of Conti was created in the 16th cent., the founder of the continuous line was **Armand de Bourbon, prince de Conti** (armä'dù bōōrbō'), 1629–66, son of Henri II de CONDÉ He led rebel armies of the FRONDE but reconciled himself with the court (1653), married a niece of MAZARIN (1654), and was given command of the army in the Italian and

Spanish campaigns (1654–57). Toward the end of his life he turned toward religious mysticism and retired (1657) to his estates, where he wrote several theological and moral treatises He was a friend and protector of Molière His son, **François Louis de Bourbon, prince de Conti** (frāswä'lwē'), 1664-1709, criticised Louis XIV while on the Hungarian campaign (1683) of CHARLES V of Lorraine and was banished to Chantilly Later he returned to service and fought in the Dutch War In 1697 he competed unsuccessfully with Augustus II (Frederick Augustus I, elector of Saxony) for the Polish throne **Louis François de Bourbon, prince de Conti,** 1717–76, French general, grandson of François, fought in the War of the Austrian Succession In 1744 he received command of the army in Piedmont He also distinguished himself in the campaigns in Germany (1745) and Flanders (1746) He resigned his commission in 1747 and for a while was a candidate for the Polish throne. Disliked by Mme de POMPADOUR, however, he lost favor at court In opposition to the king, he was on the side of the parlement against Maupeou, later he opposed the reforms of Turgot He was a writer and a friend of J J Rousseau His son, the last of the line, **Louis François Joseph, prince de Conti** (shōsĕf'), 1734–1814, fought in the Seven Years War, notably at the battles of Hastenbeck (1757) and Krefeld (1758) He was the only prince of the blood to favor the edicts of MAUPEOU (1771) He signed the protest of the princes in 1789 and left France but returned in 1790 He was arrested in 1793 and detained at Marseilles In 1795 he was freed but was exiled

Conti, Niccolò dei (nĕk-kōlō' dā kōn'tē), 15th cent., Venetian traveler He left Venice c 1419, visited Arabia, Persia, and India and after continuing his journey as far as Java returned (1444) to Venice by way of Indo-China, the Red Sea, and Cairo His account of his travels was recorded by Poggio Bracciolini, the papal secretary, and published (1723) in the fourth book of Bracciolini's *Historiae de varietate fortunae* An English translation appeared in a publication of the Hakluyt Society, *India in the Fifteenth Century* (ed by R H Major, 1857)

continent, largest unit of land mass The continents of the earth are Eurasia (conventionally regarded as two continents, EUROPE and ASIA), AFRICA, NORTH AMERICA, SOUTH AMERICA, AUSTRALIA, and Antarctica (see ANTARCTIC REGIONS) Of these, the larger land masses (Asia, North America, Europe, most of Africa, and part of South America) are grouped in the Northern Hemisphere or the land hemisphere, while only Australia, Antarctica, and the southern parts of South America and Africa lie within the Southern Hemisphere or the water hemisphere The total area of the continents comprises about 29 percent of the total surface area of the earth The continental masses properly include, in addition to the lands elevated above sea level, the submerged continental shelves, which slope off gently from the margins of the exposed areas to a point c 600 ft (100 fathoms) below the surface of the water, where the very much steeper continental slopes begin their descent into the depths of the ocean The continents and oceans are probably permanent features of the earth's surface, though the continents have frequently been covered by shallow seas, ocean depths have never, apparently, lain over the present sites of the continents Certain areas of the continents have remained practically untouched throughout the successive great floods of geologic history, examples of these stable areas or shield areas are the Baltic Shield of N Europe and the Canadian Shield of North America The average height of the land above sea level is said to be c 2,707 ft above sea level, and the highest point on any continent is Mt Everest, with a height of over 29,000 ft The greatest known ocean depth is more than 34,000 ft in the Pacific Ocean, E of the Philippines Isostasy is a term used for the condition of gravitational balance that maintains the heights of continents and the levels of the ocean floor The bulk of the crust of continents is composed of granitic rocks, often collectively known as sial (from a contraction of the names of the two chief constituents, silica and aluminum) The rock underlying the ocean floor and extending under the sial of the continents is composed of dark basalt and related rocks and is sometimes called sima (a contraction of silica and magnesia) It is held that because the sial is less dense than the sima it is buoyed up and thus a state of equilibrium exists (as it does between floating objects and water) and that because of the difference in density and the variations in thickness of the sial the great mountain ranges, large plateaus, and other major relief features are maintained It is believed that isostatic adjustments through a flow of the denser sima deep in the earth tend to cause a compensatory uplift of mountains as erosion wears them down and adds the weight of the eroded material to the ocean floor Such adjustments also accompany changes such as the growth and melting of ice sheets How the continents originated and came to occupy their geographic positions has from early times been a subject of controversy The theory of continental drift, i e, of the separation of the continents from an original continuous or nearly continuous land mass, was advanced chiefly by Alfred L Wegener of Germany c 1910 Elements of such a theory had been foreshadowed by early observations of Francis Bacon, and the concept was put forward also by Antonio Snider (in his book published in France in 1858), by F B Taylor c 1908, by Howard Baker c 1911, and others Wegener postulated a drifting apart of the continents beginning in the Mesozoic era and a shifting of the poles A general westward movement and a drift of the continents away from the poles were suggested to explain the present geographical positions The way in which the bulge of E South America can be fitted into the coast of W Africa is offered as supporting evidence for the theory Formation of the Rocky Mts and the Andes was explained as a result of crumpling of the land as it encountered the resistance of the Pacific Ocean floor The theory has aroused controversy and has stimulated geologic research Alexander du Toit and others have supported it See also EARTH See A L Wegener, *The Origin of Continents and Oceans* (Eng tr, 1924), A L du Toit, *Our Wandering Continents* (1937).

Continental, village (pop 1,059), NW Ohio, NW of Lima

Continental Congress, 1774–89, Federal legislature of the Thirteen Colonies and later of the United States in the AMERICAN REVOLUTION and under the Articles of Confederation (see CONFEDERATION, ARTICLES OF) Colonial indignation against England's colonial policy reached fever pitch after the passage (1774) of the INTOLERABLE ACTS, and the idea of an intercolonial assembly similar to the one held (1765) at the time of the STAMP ACT was promoted by the Sons of Liberty and the committees of correspondence The First Continental Congress (Sept 5–Oct 26, 1774) was made up of delegates from all the colonies except Georgia It met in Carpenter's Hall, Philadelphia, and Peyton Randolph was chosen to preside In general the object was to express colonial grievances against the British policy and only a few radical members considered the possibility of breaking with England The plan of Joseph GALLOWAY for reconciling Great Britain and the colonies under a new imperial scheme was introduced but rejected The most important act was the creation of the Continental Association, which forbade importation and use of British goods and proposed prohibition of colonial exports Several petitions of grievances, largely written by John DICKINSON, were sent to the king and the meeting was adjourned until May 10, 1775 Smoke from the battles of Lexington and Concord (April 19, 1775) had scarcely cleared when the Second Continental Congress met on the appointed day in Philadelphia Armed conflict strengthened the radical element, but only gradually did the delegates swing farther toward independence A Continental army was created to oppose the British and, through the agency of John ADAMS, George Washington was appointed (June 15, 1775) commander in chief The reconciliation plan offered (1775) by Lord North's government was tabled A diplomatic representative, Silas DEANE, was sent (March, 1776) to France American ports were opened in defiance of the Navigation Acts Finally, the momentous step was taken Congress on July 4, 1776, adopted the DECLARATION OF INDEPENDENCE The Congress, a young and unsteady organization, had little money and poor means of obtaining more Nevertheless, it struggled to prosecute the warfare in the Revolution while moving from place to place under force of military circumstances, it was at Philadelphia (1775–76), Baltimore (1776–77), Philadelphia again (1777), Lancaster, Pa (1777), York, Pa (1777–78), and Philadelphia once more (after 1778) There was friction between the Congress and the military leaders, and the soldiers, contemptuous (sometimes justly) of the politicians, were constantly trying to obtain their pay and their rights The Congress, jealous of its powers, not infrequently hindered Washington in his strategy After the war ended and the Articles of Confederation went into force, the quality of the Congressmen in general declined, since state offices were more desirable The Congress of that period has, however, been underrated by many Though shackled by the weaknesses of the Federal structure, which sharply curtailed its power and particularly its ability to get money, the Congress did have some accomplishments to its credit, notably the Ordinance of 1787, which set up the Northwest Territory, decision of the WYOMING VALLEY territorial dispute, and adoption of the decimal system of currency See *Journals of the Continental Congress* (34 vols, 1904–37), *Letters of Members of the Continental Congress* (ed by E C. Burnett, 6 vols, 1921–33), E. C. Burnett, *The Continental Congress* (1941), Cornelia L Meigs, *The Violent Men: a Study of Human Relations in the First American Congress* (1949); Lynn Montross, *The Reluctant Rebels the Story of the Continental Congress, 1774–1789* (1950)

Continental Divide, the "backbone" of a continent In North America it is the great ridge of the Rocky Mt summits which separates westward-flowing streams from eastward-flowing waters In the United States this ridge has sometimes been called the Great Divide, a name also occasionally used to designate the whole Rocky Mt system, especially the southern section where the high, rugged ranges presented an almost impenetrable barrier to westbound explorers and settlers Glacier, Yellowstone, and Rocky Mountain national parks lie on the Continental Divide

Continental Guinea. see SPANISH GUINEA

Continental System, the scheme of action adopted by NAPOLEON I in his economic warfare with England from 1806 to 1812 Economic warfare had been carried on before 1806, but the system itself was initiated by the BERLIN DECREE and extended by the Warsaw Decree (1807), the MILAN DECREE (1807), and the Fontainebleau Decree (1810), which forbade trade with Great Britain on the part of France, her allies, and neutrals Napoleon expected that the unfavorable trade balance and loss of precious metals would destroy England's credit, break the Bank of England, and ruin English industry Great Britain retaliated by the ORDERS IN COUNCIL, which forbade nearly all trade between any nations obeying the Berlin Decree One of the most dramatic results of the commercial warfare was the English bombardment of neutral COPENHAGEN (1807) and the seizure of the Danish fleet. England had control of the sea, and the Continental System was doomed from the start Large-scale smuggling throve all along the European coast (with citizens of the United States taking a large part in the illegal trade) Napoleon himself, unable to carry on his wars without British manufactures, issued special licenses for trade bringing in colonial goods on the payment of duties Napoleon's Russian campaign of 1812 was brought on by Russia's refusal to conform to the decrees, and the war between England and the United States, known as the WAR OF 1812, was also to some extent a result of the economic warfare But so difficult was the enforcement of the system that in his effort to impose it on Russia, Napoleon had to violate it in France Napoleon's failure, though it delayed the introduction of the Industrial Revolution in France, resulted in the creation of several new industries on the Continent, notably the manufacture of beet sugar It was the first major attempt at creating an autarchy and foreshadowed the forced economies of the two world wars See F E Melvin, *Napoleon's Navigation System* (1919), E F Heckscher, *The Continental System* (1922)

continuation school see VOCATIONAL EDUCATION

contour (kŏn'tōōr"), in geography, the physical configuration of an area Contour is now usually represented on maps by means of contour lines—lines drawn through points of equal elevation above sea level Such topographic maps have been drawn for most of the United States by surveyors and civil engineers employed by the government The interval between lines, or the contour interval, varies with the scale of the map and with the type of surface to be represented, a small interval (5 ft) may be used on a large-scale map of a relatively level area, while in representing mountains, to avoid the crowding of lines, a larger interval must be used, the U S Geological Survey uses an interval of 100 ft on its topographic sheets of Rocky Mt areas The shape of the lines indicates the shape of the elevations and depressions, valleys and peaks are as easily recognizable as they would be on an aerial photograph, and the space between the lines indicates, more accurately than a photograph, the slope, if the slope is steep, the contour lines will be very close together Hachures (rows of closely set parallel lines representing slope), shading, and altitude tints (differential coloring between a few key contour lines, used on small-scale maps) are other means of indicating relief

contraband, goods necessary or useful in the prosecution of war which a belligerent may lawfully seize from a neutral who is attempting to deliver them to the enemy The term is sometimes also applied to the goods carried into a country by SMUGGLING International law has not precisely defined all classes of goods which are contraband of war per se Munitions are certainly "absolute" contraband, but the status of food and other "conditional" contraband at least indirectly needed for war is often in doubt In many wars virtually no goods were treated as "free" commodities and hence immune from seizure as a PRIZE of war At the second (1907) of the HAGUE CONFERENCES a vain attempt to define the classes of contraband was made In the First World War many powers at first agreed to abide by the terms of the Declaration of London respecting contraband, but in time unconditional BLOCKADE of all goods was adopted At the beginning of the Second World War the belligerents drew up lists of absolute and conditional contraband, but the total absorption of the economy in warfare led to proscription, so far as possible, of all shipping to the enemy

contrabassoon, large, deep-toned instrument of the oboe family, also called double bassoon Its tube, over 16 ft. long, is doubled upon itself four times. It was first made by Hans Schreiber of Berlin in

1620 Handel, Haydn, and Beethoven used it for special pictorial effects, but it was characterized by faulty intonation until a German, Wilhelm Heckel, in the late 19th cent, made the type generally used today

contraception: see BIRTH CONTROL

contract. In a general sense, all civil obligations fall under TORT or CONTRACT law Torts are usually characterized as violations of duties which have been entirely established by law In contracts, on the other hand, the parties determine, at least in part, what will be their obligations to one another This article considers contracts in general, special types are given separate articles, e g , NEGOTIABLE INSTRUMENT, INSURANCE, DEED A contract may be defined as a promise to perform or to refrain from some specified act The parties must decide upon the precise terms of their agreement This is accomplished when one party submits an offer which the other accepts within a reasonable time or a stipulated period If the terms of the acceptance vary from the offer, in law a counteroffer is made, which the original offering party may accept or reject At any time prior to acceptance the offer may be rescinded on notice unless the offering party is bound by a separate option contract not to withdraw If the parties conduct their negotiations by mail or telegraph, ordinarily the contract is concluded on the day the acceptance is dispatched; in some jurisdictions, however, the offering party may revoke any time prior to receipt of the acceptance at his usual place of business For a contract to be binding it must not have an immoral or a criminal purpose Most contracts, moreover, are not enforceable unless there was a consideration, i e , a *quid pro quo*, something of value, however slight, which one party gave the other to induce his performance, the consideration need be no more than a promise to do something In a contract by specialty, however, the obligation ensues from compliance with formalities of execution, usually including the affixation of the seals of the parties to the paper embodying the contract, and consideration is not required In a number of American states (e g , New York) contracts by specialty have no effect and consideration is needed for all contracts except a few limited classes, usually voluntary agreements to pay an indebtedness for which suit no longer can be brought Contracts to be enforceable must also comply with the Statute of Frauds This, existing in some form in every jurisdiction, is designed to prevent dubious claims based upon alleged oral contracts, it requires that a contract for the sale of an interest in land or one which by its terms cannot be discharged in one year (e g , a contract employing a person for two years) be in writing and signed by the party who is obligated Any contract is either unilateral or bilateral A unilateral contract involves a promise to perform when the other party (who makes no promise) completes a certain performance The classical example is an offer to pay a man money if he will cross a bridge As in all unilateral contracts, the promise may be revoked any time prior to complete performance, i e , before the man sets foot on the far end of the bridge In a bilateral contract each party makes a promise and both are immediately bound The tendency of courts is to interpret contracts as bilateral, because mutuality of obligation is thereby achieved Since a contract is an agreement, it may be made only by parties with capacity to reach an understanding The insane and the feeble-minded, thus, are unable to make binding contracts At early common law married women also were without contractual capacity, being deemed the creatures of their husbands and without will of their own (see HUSBAND AND WIFE), this disability has been removed all but universally The only contracts which unconditionally bind a minor are those which he makes to procure necessaries of life Otherwise he may denounce his contracts at any time and on attaining majority may elect whether to affirm or repudiate them (see AGE OF CONSENT) A contract must also be the uncoerced agreement of the parties, thus, if it is procured by DURESS it is void While a contract is still wholly or partly unperformed it is termed executory, contracts may terminate, however, in other ways than by being fully executed If the object of the contract becomes impossible or unlawful, if the parties make a novation (a new superseding agreement), or if the death of one party prevent him from rendering personal services he had agreed to perform, the contract is terminated The injured party may also treat the contract as a nullity if the other party refuses to perform The law provides several remedies for breach of contract The most usual is money DAMAGES for the loss incurred In cases where some action other than the payment of money was contracted for, a court may grant the plaintiff an INJUNCTION ordering specific performance If one party may be unjustly enriched by a contract which he then repudiates, restitution may be required A typical example of this is ordering a minor who revokes a contract to restore the things of value which he obtained.

contract bridge: see BRIDGE.

contraction, in physics see EXPANSION.

contraction, in writing see ABBREVIATION

Contrecœur (kôtrükûr'), village (pop 1,043), S Que , on the south bank of the St Lawrence below Montreal

Contreras (kôntrā'rus, Span kôntrā'rās), village, central Mexico, near Mexico city Here was fought, Aug 19–20, 1847, one of the important battles of the Mexican War Gen Winfield Scott, continuing his advance after the battle of CERRO GORDO, approached Mexico city The Mexicans under Santa Anna were drawn up for defense, but they were suffering from rivalry between Santa Anna and his chief subordinate, Gabriel Valencia Scott sent out Gideon Pillow to open the way for circling around the Mexicans, and Pillow mistakenly ordered an attack which ended by isolating some of his advanced troops as darkness and a storm came on The situation seemed desperate, but brilliant night strategy by Scott's subordinates, supported by reestablishment of American communications by R E Lee, prepared the way for a daybreak attack Valencia had to retreat, and Santa Anna was forced to retire to Chapultepec Fierce fighting took place later on that same day at Churubusco, closer to Mexico city, where Mexican troops, defending a convent they had fortified, temporarily stemmed the American advance The American attack was ragged and ill-advised, but perseverance finally forced a Mexican retreat

Contucci, Andrea see SANSOVINO, ANDREA

convection, form of heat transmission in fluids, i.e., liquids and gases It depends upon the fact that, in general, a rise in the temperature of a fluid results in a decrease in density It is characterized by the movement of those portions (of the liquid or gas) that have been raised to a higher temperature through the surrounding portions For example, when a quantity of some liquid is heated in a container, that portion of the liquid nearest the point of application of the heat is the first to undergo a rise in temperature and a consequent decrease in density The cooler, heavier portion of liquid above it forces it upward and flows into its place As the temperature of this cooler portion is raised and its density decreased, it too is forced upward Thus, a current is started, moving upward through the liquid from the point at which the heat is applied Such a current is called a convection current, and heat is transferred from one point in a liquid to another by these moving, heated portions of the liquid The same process is found in the transmission of heat in gases The convection currents set up when the atmosphere of the earth is heated by contact with warm areas of land cause cloud formation and hence precipitation For example, when a rising current of heated air strikes a layer of cooler air, it is cooled below its dew point, and some of the moisture it is carrying is condensed to form clouds In ventilation and in cooling systems convection currents are used to circulate the gas or liquid In hot-air heating systems the movement of the hot air to the various rooms in the building is owing to convection currents, this is true also in hot-water heating systems Artificial drafts are set up in rooms when a means of escape is afforded the heated air rising upward in a convection current and a means of entrance is given the colder air at the bottom of the room In ventilating mines, air passages are provided for the entrance of air from the surface and others for the escape of air from the mine The ancients built fires at the air-exit shafts to aid circulation In the deep mines of modern times fans and blowers are often used

convent: see MONASTICISM

convention, gathering of persons, usually delegates, for any purpose, but especially to draw up a new CONSTITUTION or to nominate candidates for elective offices Convention parliaments in England often determined the succession to the crown, and in colonial America conventions several times superseded royal or proprietary governments with those of their own choosing A convention proclaimed the first French republic in 1792, and others formed the state constitutions in the former American colonies after 1776, most of which were later submitted to popular referendums The Constitution of the United States was drawn up at Philadelphia by delegates from the various states in 1787, and this Constitution provided for the drawing up of a constitution by a convention in any territory subsequently desiring admission as one of the United States New state constitutions have been adopted and existing ones revised by conventions called for the purpose State constitutional conventions are usually called by the legislature and proceed much as do other deliberative bodies, working mainly in committee of the whole or through subcommittees, usually without restriction save by rules which may be self-imposed The constitution resulting is usually submitted to popular vote In the United States, nomination of candidates for office by mass meeting and CAUCUS preceded the institution of the national nominating convention, of which the first was held at Baltimore by the Anti-Masonic party in 1831 The most important nominating conventions are those held every four years by the two major American parties to nominate the party candidates for President and Vice President of the United States Despite the relatively standardized procedure, these conventions frequently result in complex and important political struggles and decisions by the respective parties The direct primary has now superseded the delegate convention in many states The term *convention* is used also of a temporary international agreement See E F Clymer, *Presidents of the United States Conventions, Elections, and Parties* (1931)

Converse, Frederick Shepherd, 1871–1940, American composer, b Newton, Mass , studied with J K Paine and G W Chadwick and in Germany with Rheinberger His *Pipe of Desire* (Boston, 1906) was given at the Metropolitan Opera House, New York, in 1910, it was the first American opera performed there His orchestral works include *Flivver Ten Million* (1927) and *American Sketches* (1929) He was dean of the faculty (1930–38) of the New England Conservatory of Music

Converse College see SPARTANBURG, S C

conversion, in psychology see DEFENSE MECHANISM and HYSTERIA

conversion, experience, common among men in all ages, of definitive turning to a different way of thought or action, involving some reorganization of one's life Famous cases are those of the Buddha, St Paul (Acts 9), St Augustine, and St Francis of Assisi Conversions through preaching are a specialty of Christian history, among the preachers who excelled in making converts are St John Chrysostom, St Vincent Ferrer, Savonarola, John Calvin, John Knox, George Fox, John Wesley, and Jonathan Edwards The phenomenon of conversion has been explored extensively in the 20th cent by psychologists of many schools, including psychoanalysts A classic study is that of William James, *The Varieties of Religious Experience* (1902).

convict labor, work of prison inmates Until the 19th cent , labor was introduced in prisons chiefly as an added punishment and was often unproductive Such work is now considered a necessary part of the rehabilitation of the criminal, it is also useful in keeping discipline and reducing the costs of prison maintenance The main types of work in prison communities are maintenance activities, outdoor public works (farming, road building, reforestation), and industrial labor Considered a source of cheap labor, convicts were formerly put to work on contract, lease, or piecework bases for private industries In recent decades these methods have been condemned and prison industries are devoted chiefly to the production of goods to be used in state institutions Because of competition with regular labor, interstate commerce in the products of convict labor has also been restricted since 1934 Wages are paid in many state and Federal prisons in the United States and in many European countries The notorious chain gangs of some Southern states, in which convicts are chained and forced to do heavy labor, are disappearing Modern road camps, sometimes operated on an honor system, have been successful in many cases See L N Robinson, *Should Prisoners Work?* (1931)

convulsion, spasmodic muscular contraction, usually of sudden onset and often followed by a semicomatose state The stimulating mechanism is obscure, but convulsions may occur in such toxic conditions as lead poisoning and in diseases of the nervous system, e g , hydrophobia, tetanus, epilepsy, and hysteria In young children convulsions are caused by tetany, either active or latent, and by acute infectious diseases associated with sudden high fever, e g , pneumonia, scarlet fever, and malaria Treatment consists of complete quiet and sedation In asphyxia, oxygen has reduced the convulsions The underlying cause should be sought and treated

Conway, Henry Seymour, 1721–95, English soldier and statesman, nephew of Robert Walpole In his early years he entered upon concurrent and distinguished military and parliamentary careers He fell into disfavor with George III for defending John Wilkes Sympathetic to the American colonies, he secured the repeal of the Stamp Act (1766) and helped bring about Lord North's downfall (1782) for his handling of the struggle with the North American colonies

Conway, Sir Martin, see CONWAY OF ALLINGTON, WILLIAM MARTIN CONWAY, 1ST BARON

Conway, Moncure Daniel, 1832–1907, American social reformer and preacher, b Stafford co , Va , grad Dickinson College, 1849, and Harvard Divinity School, 1854 An ardent abolitionist, Conway lectured in England during the Civil War in the interests of the North Brought up as a Methodist, he became a Unitarian minister and later a preacher of free thought Conway edited the works of Thomas Paine (4 vols , 1894-96) and wrote studies of Carlyle (1881), Hawthorne (1890), and others. See his autobiography (1904)

Conway, Thomas, 1733–c 1800?, Irish soldier of fortune, general in the Continental army in the American Revolution Educated in France, he was a

soldier there before coming (1777) to America He fought valiantly as a patriot leader at Germantown, but Washington blocked his promotion from brigadier to major general as unfair to officers with longer service. Congress nevertheless did in Dec, 1777, appoint him major general and made him inspector general. His part in the intrigue called the CONWAY CABAL was small In 1778 Conway resigned and returned to France

Conway. 1 City (pop 5,782), co seat of Faulkner co., central Ark, NW of Little Rock, settled 1871, inc. 1875 Its trade and industries are based on the cotton and farm products of the area Hendrix College (Methodist, coeducational, 1876) and Arkansas State Teachers College (coeducational) are here. 2 Town (pop. 3,651), E N H; settled 1764, inc 1765 It includes the villages of Conway, at the confluence of the Swift with the Saco, and North Conway, a resort on the Saco and seat of an art colony. The town has granite quarries. 3 Borough (pop 1,865), Beaver co, W Pa, NW of Pittsburgh and on the Ohio. The town has railroad repair shops 4 Town (pop 5,066), co seat of Horry co, E S C, on the Waccamaw and SE of Florence, in fertile country producing lumber, tobacco, melons, and other truck crops There are good hunting and fishing grounds in the area.

Conway or Aberconway (k"bŭrkŏn'wā), municipal borough (1931 pop. 8,772; 1943 estimated pop 11,300), Caernarvonshire, Wales, at the mouth of the Conway, over which are two bridges A high wall with ruins of 21 round towers encloses the old town, and there are remains of a Cistercian abbey and a 13th-century castle. The Royal Cambrian Academy of Art occupies the Elizabethan mansion Plas Mawr

Conway Cabal (kubăl'), 1777, intrigue in the American Revolution to remove George Washington as commander in chief of the Continental army Washington had been defeated at Brandywine and Germantown, and Horatio GATES was flushed with credit for the victory of the Saratoga campaign. Some Congressmen and some army officers favored Gates as commander in chief Gen Thomas CONWAY, personally irritated at Washington, wrote to Gates a letter severely criticising Washington James WILKINSON of Gates's staff quoted to William ALEXANDER (Lord Stirling) a phrase purportedly from this letter, and Alexander repeated it to Washington, who sent the quotation to Gates without comment Gates wrote an elaborate defense of himself in reply and sent it to Washington through Congress Public opinion supported Washington, and the plot—if such it was—came to nothing. As it turned out, the much-quoted phrase was not in Conway's letter at all, and his name has been unfairly used to designate the cloudy scheme.

Conway of Allington, William Martin Conway, 1st Baron, 1856–1937, explorer, art historian, and writer He filled several university positions and in 1918 represented the combined English universities as Conservative member in the House of Commons He began mountain climbing at 16 and conducted expeditions of exploration in Spitsbergen (1896–97) and the Bolivian Andes (1898) He was the author of numerous books on art and exploration, among them *Mountain Memories* (1920), *Art Treasures of Soviet Russia* (1925), and *Giorgione as a Landscape Painter* (1929)

Conwell, Russell Herman, 1843–1925, American Baptist minister and lecturer, b Worthington, Mass. After practicing law, he became a minister in 1879 He was the first president of Temple Univ., which he opened in 1884, and he dedicated (1891) the Baptist Temple, Philadelphia For over 60 years Conwell was active as a lecturer His lecture "Acres of Diamonds," delivered more than 6,000 times, is said to have produced funds for the education of at least 10,000 young men It is included in the biography by A R Burr (1917)

cony or coney, name used for the rabbit (*Oryctolagus*) and for its fur, for the pika (*Ochotona*), a small rodent found at high altitudes in both hemispheres; and for the hyrax, a small herbivorous, hoofed animal of Arabia, Syria, and Africa, probably the cony mentioned in the Scriptures

Conybeare, William Daniel (kŏ'nĭbēr, kŭ'–), 1787–1857, English clergyman and geologist, dean of Llandaff. With William Phillips he wrote *Outlines of the Geology of England and Wales* (1822) ably summarizing the geological knowledge of his day

Conyers (kŏn'yŭrs), city (pop 1,619), co seat of Rockdale co., N central Ga., ESE of Atlanta, in a farm area, inc. 1854

Cooch Behar (*kōōch' bĭhär'*), former native state (1,318 sq. mi; pop. 639,898), now part of N West Bengal state, India. It lies in a low, poorly drained plain Rice, vegetable oils, tobacco, and jute are exported The chief town, Cooch Behar (pop. c 16,000), is a trading center.

Cook, David J., 1840–1907, American law-enforcement officer, b. near La Porte, Ind. He moved (1855) with his family to Kansas, went (1859) to the Colorado gold fields, and returned to enlist (1861) in the Union army in the Civil War. Army service as a sort of military policeman led him to found the volunteer Rocky Mountain Detective Association to suppress outlawry in Colorado, and he had a long career as marshal, sheriff, and police chief, mostly around Denver He brought many train, bank, and express-company robbers to book, helped to quell the Ute Indian revolt of 1878, and was arbitrator in the mine strike at Leadville in 1880 See biography by W. R. Collier and E V. Westrate (1936)

Cook, Frederick Albert, 1865–1940, American explorer, the center of much controversy about exploration, b. Sullivan co, N.Y., M.D. New York Univ., 1890 Dr. Cook early became interested in the arctic and accompanied the expedition of Robert E PEARY in 1891–92 as surgeon Later he accompanied the Belgian expedition (1897–99) to Antarctica, and he made other voyages In 1906, after unsuccessful attempts to reach the summit of Mt. McKinley, Dr Cook remained behind when most of the party returned He later announced that he and a companion had successfully scaled the peak In 1907 he set out with an expedition for the arctic, and on Sept 1, 1909, he emerged into civilization again, claiming that he had reached the North Pole in April, 1908 A few days later Peary announced that he had reached the pole in April, 1909, and accused Cook of fraud The argument was sensational Cook was deprived of some of the honors that had been accorded him and disappeared from the public eye for a time Later he was involved in an oilfield promotion scheme in Texas and served five years (1925–30) of a long sentence for using the mails to defraud To the end of his life, however, Cook fought for vindication of his polar and Mt. McKinley claims in the face of a generally hostile public, and he was supported by some well-known explorers as well as some ardent admirers

Cook, George Cram, 1873–1924, American author and playwright, b Davenport, Iowa, grad Harvard, 1893, and studied abroad A university teacher and later literary editor of the Chicago *Evening Post*, he is chiefly remembered as the founder (1915) and director of the Provincetown Players. With his wife, Susan Glaspell, he wrote the play *Suppressed Desires* (1915) After 1921 he lived in Greece See biography by Susan Glaspell, *The Road to the Temple* (1926)

Cook, James, 1728–79, English explorer and navigator. After an apprenticeship to a firm of shipowners at Whitby, he joined (1755) the royal navy He surveyed the St Lawrence Channel (1760) and the coasts of Newfoundland and Labrador (1763–67). Cook was commissioned a lieutenant in command of the *Endeavour* and sailed (1768) on an expedition to chart the transit of Venus, he returned to England in 1771, having also circumnavigated the globe and explored the coasts of New Zealand and E Australia He commanded (1772–75) an expedition to the S Pacific of two ships, the *Resolution* and the *Adventure* On this expedition he disproved the rumor of a great southern continent, explored the Antarctic Ocean and the New Hebrides, discovered New Caledonia, and by the observance of strict dietary and hygienic rules prevented scurvy, heretofore the scourge of long voyages As captain of the *Resolution*, Cook sailed (1776) to search for a practical passage from the Pacific Ocean to the Atlantic along the northern coast of North America After a year in the S Pacific, the expedition rediscovered the Sandwich Islands and unsuccessfully searched the northwest coast of North America for a passage to the Atlantic On the return voyage Cook was killed by natives on the Hawaiian Islands An account of Cook's first voyage was printed in Vols II and III of John Hawkesworth's *Voyages* (1773) and in Cook's journal (ed by W J L Wharton, 1893) The official account of the second voyage was published in 1777, of the third in 1784, selections (ed by Christopher Lloyd) were published in 1950 See biographies by Hugh Carrington (1939) and J. R Muir (1939)

Cook, Sir Joseph, 1860–1947, prime minister of Australia (1913–14), a leader of the Liberal party His term as premier was followed by service as minister of the navy (1917–21) and high commissioner to London (1921–27). He was Australian representative at the Paris Peace Conference and a delegate (1922) at the League of Nations.

Cook, Orator Fuller, 1867–1949, American botanist, b Clyde, N Y, grad Syracuse Univ., 1890 He spent six years with Liberia College in Africa (as president, 1896–97) and was a member of expeditions to Central America. From 1900 he was connected with the U.S. Dept of Agriculture, in charge of investigations in tropical agriculture. He developed the single-stalk method of cotton culture and wrote numerous treatises on many phases of botany and agriculture.

Cook, Thomas, 1808–92, English travel agent In Leicester in 1841, after the success of his first arranged tour to a temperance meeting, he founded the travel agency which bears his name The success of the idea of the guided tour was quick, and by 1852 Cook had moved his office to London. Shortly thereafter he set up (1856) his circular Tour of Europe, and 10 years later he was arranging tours of the United States. Cook felt that there were few aspects of travel with which his agency was unable to cope and was thus called upon for many unusual tasks Perhaps his most spectacular achievement in this respect was the transportation of an entire expeditionary force (18,000 men) up the Nile for the attempted relief of Gen. Charles George Gordon in 1884. At his death, Cook's son succeeded him in the agency.

Cook, Mount, 12,349 ft. high, on W South Island, New Zealand, in the Southern Alps, highest peak of New Zealand It is sometimes called Aorangi

Cooke, Jay, 1821–1905, American financier, b. Sandusky, Ohio He founded Jay Cooke & Company, which marketed the huge Civil War loans of the Federal government. He later turned to railroad bonds and in 1870 undertook to raise $100,000,000 for the Northern Pacific and financed construction to Bismarck, N Dak The burden was too great and continuing the financing proved impossible. In 1873 Cooke's New York branch closed its doors and helped to precipitate the panic of 1873. See biographies by E. P Oberholtzer (1907) and Henrietta M. Larson (1936)

Cooke, John Esten, 1830–86, American novelist, b Winchester, Va. He wrote novels of old Virginia—*The Virginia Comedians* (1854), his best, and *Henry St John, Gentleman* (1859) He served throughout the Civil War and later wrote military biographies of Stonewall Jackson (1866) and Robert E Lee (1871) and many novels, including the popular *Surry of Eagle's Nest* (1866) and *Mohun* (1869). See biography by J O Beaty (1922).

Cooke, Josiah Parsons, 1827–94, American chemist and mineralogist, b Boston, grad Harvard, 1848 From 1849 he taught at Harvard, where he was instrumental in founding the departments of mineralogy and chemistry and the chemical laboratory He determined the atomic weight of antimony and wrote several books on chemistry.

Cooke, Mordecai Cubitt, 1825–1912, English botanist, an authority on fungi Among his works are *British Fresh-Water Algae* (2 vols, 1882–84), *British Desmids* (1887), and his handbooks on British and Australian fungi. He also wrote on British reptiles and batrachians

Cooke, Rose Terry, 1827–92, American poet and short-story writer, b West Hartford, Conn, grad Hartford Seminary, 1843 She is known for her sketches of New England country life—*Happy Jodd* (1878), *Root-bound* (1885), and *Huckleberries* (1891) Her complete poems appeared in 1888

cookery, among savages, is practiced in the simplest forms with rude appliances The natural foods—such as eggs, fish, game, wild honey, fruits, and vegetables—known to primitive man required little cooking In a higher stage of culture, with the food supply varied by agriculture and the keeping of flocks and herds, BREAD, BUTTER, CHEESE, WINE, and malted drinks came into use. Very early in the world's history, flour, yeast, sugar, and condiments were known, and cooking became an established art Like other arts it is influenced by conditions of wealth, commerce, and general interchange of ideas, geographical position, climate, and fuel supply have also been of great importance in determining the food tastes and habits of different peoples The Egyptians had fine flour and bakeries with domed ovens, where leavened bread was made and sold. Roasting and boiling were well known, and beer and other drinks were brewed The Greeks of the wealthier classes made a fine art of gastronomy, as of the other pleasures of living. Bread was made in a variety of ways, early authors mention cabbage, onions, leeks, olives, fruits, nuts, and honey Meat was scarce, fish was baked in fig leaves, soaked in oil, or browned in a skillet with herbs Forcemeat and sausage were made of different kinds of meat and fish, and cheese was much used. The Asiatic conquests brought more luxurious standards in food The poorer people made much use of barley bread and a poor lentil soup. The staple food of the early Romans was a lentil gruel, *puls* With the development of the empire, wealthy Romans indulged in extravagant banquets and brought the art of cookery to an extreme of aesthetic development. Lucullus and Apicius were noted gourmets. Late Roman customs were influenced by the Goths, who ate simply of wholesome food and preferred wild fruit, curdled milk, game, and horseflesh. The best cooking in the Middle Ages was probably done in the monasteries, noted for their well-equipped kitchens, usually in separate buildings. The numerous fast days encouraged the ingenious preparation of many common materials They had fine gardens, in which they raised not only medicinal herbs, but also herbs used for skilful seasoning Modern cookery derives from Italy and dates from the Renaissance When Catherine de' Medici went to Paris, she took Italian cooks, and so great was the interest aroused in the revival of an ancient art, that noblemen took to cooking, and cooks were enriched and honored The use of the fork, greatly ridiculed at first, was epoch-making in its effects on cookery. The French Revolution checked the progress of cookery as well as other arts, but Napoleon gave it a new impetus by scattering chefs in his course among the countries of Europe,

and his period produced Beauvilliers—author of *L'Art du cuisinier* (1814)—CARÊME, and BRILLAT-SAVARIN. In England rich and elaborate cooking has been regarded with a certain disfavor, simple foods, dressed rather at the table than in the saucepan, have been characteristic. Yet England has had distinguished cooks and some interesting cookbooks and authors. *The Widow's Treasure* (1625), Dr. Pegge's *Forme of Cury* (1780), and Mrs Hannah Glasse's *Handbook* (1750) were among the earlier works, Thomas Walker's *Original* (1835) combined comments on cookery and philosophy, Alexis Soyer was both cook and author Present-day interest in chemistry, biology, and physiology and research and experiment in the field of dietetics and NUTRITION have combined to give a new significance to the reasons for cooking and a new accuracy to its various processes The reasons for cooking may be summarized as follows to render food more digestible; by softening tough substances, such as the connective tissue of meat, and by bursting starch granules, to make it more appetising, by improving its appearance and odor and by releasing juices and gases which change flavors, to sterilise and to destroy parasites and disease germs, to preserve food All the scientific aspects of present-day cooking are peculiarly characteristic of large-scale commercial food preparation, as in the CANNING and baking industries The processes of cooking divide into two classes—hot air, as in baking, roasting, and broiling, and hot liquid, as in boiling and frying Broiling or grilling brings food into close contact with heat or coals and is suitable for tender portions Roasting, as applied to poultry, animals (see BARBECUE), or large pieces of meat, means placing the meat near an open fire until seared, then basting and turning it on a spit or in an oven Baking is cooking by dry heat in an oven or enclosed chamber Frying may be done in two ways In true frying, known as French or deep-fat frying, the food is dropped into a kettle of fat heated to from 345° to 400°, so that a quick crust is formed and the fat cannot penetrate the food, in shallow frying, which includes sautéing, the food is turned in a small amount of fat Boiling, stewing, and simmering are cooking in water, boiling, at 212°, simmering or stewing, at a lower temperature, usually about 185° To fricassee is to combine frying and stewing Braising is a combination of frying, stewing, and baking It was formerly done in a utensil having a cover on which hot coals could be placed for the final browning, a casserole is now used Smothering or pot roasting is a similar process, calling for a quick searing all over in fat, then a slow simmering, tightly covered, in just enough water to prevent burning Steaming is good for a number of flour foods, with the pressure cooker for vegetables and meats Cooking schools began to make their appearance c 1870, first as departments in women's colleges and later in state universities and agricultural colleges Gradually public schools began to offer courses in cookery and to equip HOME ECONOMICS laboratories Most countries are celebrated for one or more distinguishing features of their cookery The United States has inherited or borrowed from almost every quarter of the world Among borrowings from Europe are pie, doughnuts, cheese, chowder, and malted drinks Some ideas were borrowed from the Indians, such as the use of maize in meal and hominy Native American foods include turkey, clam chowder, baked beans, corn bread (hoecake, johnnycake), Boston brown bread, beaten biscuit, pumpkin pie, gumbos, some oyster and terrapin dishes, corn on the cob, and strawberry shortcake In the Southwest, tamales and tortillas and various chili dishes preserve the customs of the native people A standard cookbook is Fanny Farmer's *Boston Cooking-School Cook Book*, first published in 1896 See also Louise Lampray, *The Story of Cookery* (1940)

Cookeville, town (pop 4,304), co seat of Putnam co, central Tenn., E of Nashville, founded 1854 It is a trade and industrial center in a farm, timber, and coal area Tennessee Polytechnic Institute is here

Cook Islands, formerly **Hervey Islands**, group (84 sq mi, pop 12,380), with Manihiki group pop, 14,519), S Pacific, SE of Samoa It comprises two volcanic islands, RAROTONGA and MANGAIA, and six coral islands. Some of the islands were discovered in 1773 by Capt James Cook, and the others were discovered by John Williams in 1823 The group was proclaimed a British protectorate in 1888 and was annexed in 1900 In 1901 the islands were placed under the government of New Zealand Rarotonga is the headquarters of the Cook Islands administration, which also governs seven islands N of the Cook Islands (see MANIHIKI) The inhabitants are Polynesians. The chief exports are copra and fruits.

Cook Strait, channel, c 15 mi wide, between North Island and South Island, New Zealand. It was discovered in 1770 by Capt. James Cook.

Cookworthy, William, 1705–80, English porcelain maker. He is notable for discovering (c 1755) the Cornish china clay and the china stone in St. Stephen's parish, near St. Austell, on the property of Lord Camelford, who assisted him in establishing porcelain works at Plymouth. Here in 1768 was manufactured the first English porcelain similar to the Chinese

Coolbrith, Ina Donna, 1842–1928, American editor and poet, b Illinois She helped Bret Harte edit the *Overland Monthly* She wrote poems of Western pioneer days and in 1915, by act of legislature, became California's poet laureate Her verse collections include *A Perfect Day and Other Poems* (1881) and *Songs from the Golden Gate* (1895).

Cooley, Charles Horton, 1864–1929, American sociologist, b Ann Arbor, Mich., grad, Univ of Michigan (B A , 1887, Ph D , 1894), son of Thomas M Cooley He taught at the Univ. of Michigan after 1892 His concepts of the interaction of the individual and society and of primary social groups are widely accepted as basic principles He wrote *Human Nature and the Social Order* (1902, rev ed , 1922), *Social Organization* (1909), *Social Process* (1918), and *Sociological Theory and Social Research* (1930).

Cooley, Thomas McIntyre, 1824–98, American jurist, b near Attica, N Y. His education was limited, but his intellectual worth earned him positions as a judge (1864–85) of the supreme court of Michigan and as first chairman (1887–91) of the Interstate Commerce Commission Cooley's chief work is *A Treatise on the Constitutional Limitations upon the Legislative Powers of the States* (1868, 8th ed , 1927) He argued that the U S Constitution contained not only direct limitations on the power of the states (e g , the prohibition in Article 1, Section 10, against a state's impairing the obligations of contract) but also implied limitations which could be deduced from the political theory underlying the Constitution For example, from the division of American governments into executive, legislative, and judicial branches he inferred the freedom of the judiciary from legislative interference. Cooley's study was highly influential in the early interpretation of the due process clause of the FOURTEENTH AMENDMENT to the Constitution His other works include treatises on taxation (1876), torts (1879), and constitutional law (1880)

Coolgardie, Western Australia see EAST COOLGARDIE GOLDFIELD

Coolidge, Calvin, 1872–1933, 29th President of the United States (1923–29), b Plymouth, Vt , grad Amherst, 1895. From a law practice in Northampton, Mass , his political progress took him swiftly and smoothly to local and state offices He was a member of the state senate from 1912 to 1915 (its president after 1914) and was lieutenant governor (1916–18) before serving two terms as governor (1919-20) He rushed to national prominence when he showed brisk decision by using the militia to end the Boston police strike in 1919 In 1920 he was enthusiastically nominated as Republican candidate for the vice presidency and was elected with Warren G Harding Noted for his New England simplicity and personal honesty, he was untouched by the charges of corruption leveled at the Harding administration After Harding died, Coolidge took (Aug 3, 1923) the oath of office as President He was nominated and elected in 1924 and throughout his term had strong popular backing The time was one of almost hectic national prosperity, which cast a glow upon him He twice vetoed the McNary-Haugen bill to aid agriculture (1927, 1928) because of its price-fixing features, and he strongly favored a laissez-faire policy toward business, economy in government, and tax cuts In his cabinet were Herbert C Hoover, Frank B Kellogg, and Andrew W Mellon, who by their positive policies gave the administration an aggressive tone In 1928 Coolidge did not choose to run for the nomination, which he probably could have gained, but instead backed Hoover and in 1929 retired to Northampton to write newspaper and magazine articles and his autobiography (1929). As first lady, his wife, Grace A Goodhue Coolidge, was much admired for her poise and charm See William A White, *A Puritan in Babylon* (1938), Claude M Fuess, *Calvin Coolidge, the Man from Vermont* (1940)

Coolidge, Charles Allerton, 1858–1936, American architect, b Boston, grad Harvard, 1881 After working (1882–86) in the architectural offices of H H. Richardson in Boston, he became a partner in several firms, heading Coolidge, Shepley, Bulfinch, and Abbott (1924–36) and also Coolidge and Hodgdon (until 1930) in Chicago Among buildings designed by him are many at Stanford Univ , the medical school, freshman halls, and Memorial Chapel at Harvard, the law school, commons, medical school, and hospital at the Univ of Chicago, the Art Institute of Chicago, buildings at Vanderbilt and Western Reserve universities, and parts of the Rockefeller Institute in New York.

Coolidge, Susan, pseud. of **Sarah Chauncey Woolsey**, 1835–1905, American writer of juvenile stories, b Cleveland Some of her work appeared in *St. Nicholas* after 1870. She wrote the series *What Katy Did* (1872–86), still popular with children, *A Guernsey Lily* (1880), and other wholesome, natural books free of sentimentality.

Coolidge, William Augustus Brevoort, 1850–1926, American mountaineer and author, the historian of the Alps, b New York city A graduate of Exeter College, Oxford, and life fellow and later modern history tutor at Magdalen College, he retained his American citizenship He ascended nearly all the highest Alpine peaks His books include *The Alps in Nature and History* (1908)

Coolidge, William David, 1873–, American physical chemist, b. Hudson, Mass , grad Massachusetts Institute of Technology, 1896. He joined the General Electric Company in 1905 and served as director of its research laboratory (1932–40) and as vice president and director of research (1940 44). He made special studies of X rays, invented an X-ray tube, and invented and developed ductile tungsten

Coolidge, town (pop 1,102), E central Texas, NE of Waco, in a farm area, settled 1903, inc 1905

Coolidge Dam, E Ariz , in the Gila river, SE of Globe, authorized 1924, built 1927–28, for irrigation and power It is c 900 ft. long and c 250 ft high The water, impounded in the San Carlos reservoir, is available to the areas around Florence, Casa Grande, and the town of Coolidge (1945 pop 3,300) Of the 100,000 acres irrigated, one half are Indian lands in the San Carlos Reservation

coolie labor, term applied to unskilled laborers from Asia, especially from India and China. The emigration of Chinese and Indian contract labor to British and French colonies came mainly as a result of the discontinuance of slavery Indenture of Indian coolies was usually for a term of five years—in return for wages, certain benefits, and the cost of passage, the terms were enforceable by penal sanctions At the expiration of their terms, the coolies were free to reindenture or to seek other employment They frequently became peasant proprietors, though they were entitled to free return passage to India The practice was discontinued by the British Indian government, which in 1922 prohibited assisting the emigration of unskilled laborers, except to a few countries Emigration of Chinese coolies began c 1845, though it was nominally prohibited before 1859 Between these dates the conditions were notoriously bad, the victims were shipped mainly to Cuba and Peru, where they died by the thousands The British Chinese Passenger Act of 1885 regulated British ships in the trade and resulted in the traffic's falling mainly into the hands of the Portuguese, under whom it resembled the African slave trade In 1859 Britain arranged with Canton for legal emigration to the British West Indies and elsewhere on five-year contracts In 1860 an Anglo-Chinese convention sanctioned such emigration to British territory, and the regulations were agreed to by the other powers in similar conventions In 1904 Britain arranged with China the hiring of 50,000 Chinese coolies to work the Transvaal gold mines In the 19th cent large numbers of Chinese coolies went to California and Australia Opposition in Australia to this influx of cheap labor resulted in the passage of the Emigration Restriction Act for the gradual elimination of Asiatics, by providing that no one should enter the country who failed to write 50 words in any prescribed language Coolies were important in building the first U S transcontinental railroad, but immigration into the United States was practically ended by the Chinese Exclusion Act of 1888 and by stringent Federal laws against contract laborers In 1904 Canada excluded coolies by a head tax of $500 See P. C Campbell, *Chinese Coolie Emigration to Countries within the British Empire* (1923)

cooling system. In many industrial processes and for the practical operation of certain engines it is necessary to install an efficient cooling system Engines of the internal-combustion type generate so much heat in the cylinders that, if they are not cooled, the lubricating oil will be burned and serious damage will be done to the various parts through unevenness of expansion Most internal-combustion engines are either water- or air-cooled Around each cylinder of a water-cooled engine, e g , an automobile engine, is a hollow jacket through which water is circulated. The jackets are connected at the top and the bottom to a radiator, generally by a rubber hose The radiator has a large cooling area and is assisted by a fan which draws air through it The water passing through the radiator is thus cooled before returning to the engine The two systems of circulating the water are by thermosiphon and by pump The temperature in cold weather can be controlled by fitting shutters on the radiator to reduce the influx of cold air In very cold weather it is necessary to mix with the water an efficient ANTIFREEZING SOLUTION In the Diesel engine, in which the heat is very great, the cooling of the cylinder walls alone is not sufficient—the cylinder covers and the pistons as well must be cooled. These parts are also supplied with water jackets. Blast furnaces, cupolas, gas generators, molds for casting, and many other contrivances in which the temperatures are high are cooled by water circulating through jackets Rapidly moving machinery is frequently cooled and lubricated at the same time

by running in an oil bath. The cylinders of an air-cooled engine are built with a number of metal fins projecting from the sides These assist the dissipation of heat by increasing the area exposed to the air Radial airplane engines are air-cooled, the arrangement of the cylinders around the crankshaft, like spokes around a hub, exposes each cylinder directly to the air stream Engines with cylinders set one behind the other are air-cooled with much more difficulty and are less commonly used For cooling systems in buildings, see AIR CONDITIONING

Coomaraswamy, Ananda Kentish (ä″nündä′ kĕn′-tĭsh koomä″ruswā′mē), 1877–1947, art historian, b Ceylon He was active in educational movements in India After 1917 he was fellow for research in Indian, Persian, and Moslem art in the Museum of Fine Arts, Boston, and he is largely credited with having built up the museum's great Far Eastern collection He was critical of Western institutions and sought, as in his *Am I My Brother's Keeper?* (1947), to apply to them standards derived from Oriental philosophy and history Among his other books are *Dance of Siva* (1918), *History of Indian and Indonesian Art* (1927), *Elements of Buddhist Iconography* (1935), and *The Transformation of Nature in Art* (2d ed , 1935)

Coon Rapids, town (pop 1,533), W Iowa, on the Middle Raccoon river and WNW of Des Moines, inc 1882 Dairying and poultry raising are carried on here

Cooper, Alexander: see COOFFR, SAMUEL

Cooper, Alfred Duff, 1890–, British statesman Elected to Parliament as a Conservative (Unionist) in 1924, he served as secretary of state for war (1935–37) in the coalition cabinet and was first lord of the admiralty in 1938 when he resigned in protest against the Munich Pact He returned to the cabinet as minister of information (1940–41) under Winston Churchill He was appointed resident minister of Far Eastern affairs in Singapore in Dec , 1941, and was recalled the following month, shortly before the fall of Singapore His wife, the former Lady Diana Manners, appeared in the U S production of Max Reinhardt's spectacle, *The Miracle* (1924)

Cooper, Anthony Ashley: see SHAFTESBURY, ANTHONY ASHLEY COOPER, 1ST EARL OF

Cooper, Sir Astley Paston, 1768–1841, English surgeon, pupil of John Hunter He was noted as a lecturer on anatomy and for his operations on hernia and aneurysms He was knighted after performing a slight operation on George IV He wrote several medical and surgical treatises See biography by B B Cooper (1843), study ed by G L Keynes (1922)

Cooper, Henry Ernest, 1857–1929, American official in Hawaii, b New Albany, Ind , grad Boston Univ , 1878 After practicing law in San Diego, Calif , he went (1891) to Hawaii He took part in the revolution that deposed Queen LILIUOKALANI and, when the United States delayed recognition, he held various cabinet posts As foreign minister he conducted negotiations with Japan concerning Japanese immigration to the islands He also held various posts after the U S annexation of Hawaii

Cooper, Hugh Lincoln, 1865–1937, American hydraulic engineer, b Houston co , Minn He was engineer for many important projects, including the hydroelectric plant at Keokuk, Iowa, the Dnepropes dam and plant in the Ukraine, the power plants at Niagara Falls, Canada, and at Holtwood, Pa , the Wilson Dam project at Muscle Shoals, Ala

Cooper, James Fenimore, 1789–1851, American novelist, b Burlington, N J In 1790 his family moved to Cooperstown, N Y , a frontier settlement founded by his father near Otsego Lake Sent to Yale at 13, he was dismissed in his third year The next five years he spent at sea, the last three of them as a U S midshipman After his marriage in 1811 he lived in Westchester co , N Y , and later at Cooperstown His first novel was *Precaution* (1820), a failure *The Spy* (1821), a story of the American Revolution, was an instant success, and during the rest of his life he wrote steadily for a large public. In 1826 he went to France, nominally as American consul at Lyons, and spent several years abroad He defended his countrymen in *Notions of the Americans* (1828), but on his return his criticisms of America, among them *The American Democrat* (1838) and the fictional *Home as Found* (1838, sequel to *Homeward Bound*, 1838), made him most unpopular His later life was marred by quarrels and lawsuits over his works Cooper's most popular novels are those of the frontier and those of the sea In the first group are the *Leatherstocking Tales*, so called from their chief character, Natty Bumppo, or Leatherstocking. The order of the narrative is *The Deerslayer* (1841), *The Last of the Mohicans* (1826), *The Pathfinder* (1840), *The Pioneers* (1823), *The Prairie* (1827). The two Indians, Chingachgook and Uncas, are romanticized savages, able, good, and unspoiled by civilization Cooper's novels of the sea, the best of which are *The Pilot* (1823), *The Red Rover* (1828), and *The Wing-and-Wing* (1842), reflect the same nautical knowledge which appears in his excellent *History of the Navy of the United States* (1839) Among his many other novels are the Littlepage trilogy on New York state antirentism, *Satanstoe* (1845), *The Chainbearer* (1845), and *The Redskins* (1846) See his correspondence (ed by his grandson, J F Cooper, 2 vols , 1922); biographies by T R Lounsbury (1882), R E Spiller (1931), and James Grossman (1949), studies by J F Ross (1933) and Dorothy Waples (1938), bibliography by R E Spiller and P C Blackburn (1934)

Cooper, Myles, c 1735–1785, second president of King's College (now Columbia Univ), b England, educated at Oxford. He was ordained priest in 1761 and came to King's College (1762) as professor of moral philosophy and assistant to the president In 1763 he was made president, succeeding Samuel Johnson Though his early administration was marked by the founding of a grammar school, a medical school, and a hospital, with changes in the curriculum and great increase of prestige, the college fell on evil days with the American Revolution Cooper was a Loyalist and in 1775 was forced to flee before the patriots' hatred to a warship in New York harbor He returned to Oxford and lived out his life in England

Cooper, Peter, 1791–1883, American inventor, industrialist, and philanthropist, b New York city After working as a carriage maker, machinist, cloth cutter, salesman, and grocer, he purchased (1813) a glue factory in New York city and developed the business until he supplied almost the entire American market With two partners he erected (1828) the Canton Iron Works in Baltimore and there constructed the *Tom Thumb*, the first railway locomotive built in America His success in trials on the Baltimore & Ohio RR probably saved that pioneer line from bankruptcy He rapidly expanded his holdings in the next 20 years, developing a rolling mill and wire factory at Trenton, N J , blast furnaces in Philipsburg, Pa , a rolling mill in New York city, and foundries at Ringwood, N J , and Durham, Pa He also owned iron mines in N New Jersey, and in 1870 he was awarded the Bessemer gold medal for rolling the first iron for fireproof buildings Cooper invented and patented several other practical devices and processes His faith in the success of the Atlantic cable led him to invest heavily in the New York, Newfoundland, and London Telegraph Company after banks refused to finance the operation He was president of this company for 20 years while he led the North American Telegraph Company, which controlled more than half of the telegraph lines in the country An outstanding leader in the civic affairs of New York city, Cooper led the successful fight to secure a public school system and did much to improve several of the municipal departments His lasting monument is COOPER UNION in New York city, chartered in 1859 and built after his own plans to provide for education for the working classes He supported the GREENBACK PARTY in national politics, and in 1876 he was the party's presidential candidate, polling nearly 100,000 votes Many of his addresses were collected in *Ideas for a Science of Good Government* (1883) Abram S Hewitt was his son-in-law, Peter Cooper Hewitt his grandson See biographies by R W Raymond (1901) and E C Mack (1949)

Cooper, Samuel, 1609–72, one of the greatest English miniaturists Specimens of his work are to be found at Windsor Castle, in the collections of the duke of Buccleuch and the duke of Devonshire (the latter containing the famous portrait of Cromwell, familiar through engravings), in the Rijks Museum, and in the Metropolitan Museum of Art His brother, **Alexander Cooper,** d 1660, was for many years miniature painter at the court of Queen Christina of Sweden

Cooper, Thomas, 1759–1839, American scientist, educator, and political philosopher, b London, educated at Oxford His important works include *Political Essays* (1799), the appendixes to the *Memoirs of Dr Joseph Priestley* (2 vols , 1806), in which Cooper reviews Priestley's life and works at length, *Lectures on the Elements of Political Economy* (1826), *Treatise on the Law of Libel* (1830), and (as editor) *The Statutes at Large of South Carolina* (5 vols , 1836–39) Cooper came to America in 1794 and, settling near his friend Joseph Priestley in Northumberland, Pa , was his partner in scientific research As a supporter of the Jeffersonian opposition to the Federalists, he wrote many political pamphlets, especially against the Alien and Sedition Acts of 1798 Convicted under the acts, he was imprisoned and fined $400, after his death this fine was repaid to his heirs He taught at Dickinson College and the Univ of Pennsylvania and was president (1820–34) of South Carolina College (now Univ of South Carolina) See Dumas Malone, *The Public Life of Thomas Cooper* (1926).

Cooper, town (pop 2,537), co seat of Delta co , E Texas, NE of Dallas, in a blackland cotton area of the northeast corner of the state, settled in the 1870s.

Cooper, river: see CHARLESTON, S C

cooperation, voluntary association of people for any desired end. The term refers specifically to the formation of cooperatives for nonprofit-making self-management of economic enterprises. Consumers' cooperatives, in which a group organizes for wholesale or retail distribution of agricultural or other products, are the most prevalent. Membership is open, and anyone may buy stock. Goods are sold to the public, usually at prevailing market prices, and any surplus above expenses and a small reserve is turned back to the members in amount proportional to their purchases Each member has one vote regardless of the amount of stock he holds Money is saved through direct channeling of goods from producer to consumer, thus the expenses of the middlemen and of advertisement are eliminated Producers' cooperatives are organizations of workers who own and control enterprise in their own interest. These are still relatively few Cooperative banks and CREDIT UNIONS constitute another important type of cooperative There has also been cooperative activity in insurance, medical services, housing, and other fields In most countries cooperatives are politically neutral, although in some cases they have worked actively with or against socialists The germ of the philosophy of cooperation is found in the writings of Robert OWEN and others After some 18th-century activity, consumers' cooperation took permanent form with the establishment (1844) of the ROCHDALE SOCIETY OF EQUITABLE PIONEERS Since then the movement has had considerable growth throughout Great Britain, where local cooperatives have been federated into tremendous national wholesale and retail distributive enterprises and where a large proportion of the population has membership Foods are among the chief products so handled Insurance and banking activities are also important Other parts of the British Empire have important cooperatives, especially Canada, where the rural population has led in the formation of marketing organizations, SAINT FRANCIS XAVIER UNIVERSITY in Nova Scotia has been particularly successful in its educational program for cooperative action The most outstanding examples of genuine participation are found in Denmark, Sweden, Finland, and Iceland, where cooperatives perform social and cultural as well as business functions and where there is much cooperative activity in housing, medicine, and similar services Denmark is outstanding for its rural cooperatives and for its cooperatively run folk schools In Sweden the formation of strong cooperatives resulted in the breaking of several trusts and monopolies without political action The movement had taken a strong hold in most of Europe before the Second World War and though destroyed or weakened in fascist countries has been revived The groups in Russia, called artels, were put under government control by the Soviets Palestine has vigorous cooperative development Japan had the most highly developed system in Asia before the Second World War In the United States, with its strongly competitive, individualistic society, the development of cooperatives was slow until after the First World War The movement started among the farmers, chiefly in the north central states, where the large Scandinavian and Finnish population carried on cooperative traditions Today, agricultural cooperatives have become an important force in the distribution of major farm products and supplies Cooperatives for the marketing of consumers' goods, especially groceries, have also spread in the cities Activity has been extended on a limited scale to the distribution and refining of oil and to the organizing of cooperative restaurants, bakeries, laundries, hospitals and medical plans, housing, power, and a few production plants An international alliance for dissemination of information and similar service was founded in 1895 Since then there has been increasing development of international cooperation and a trend toward the establishment of actual international cooperative distribution See Charles Gide, *Consumers' Cooperative Societies* (Eng tr , 1921), James P Warbasse, *Cooperative Democracy* (3d ed , 1936), Bertram Fowler, *Consumer Cooperation in America* (1936) and *The Cooperative Challenge* (1947), Horace Kallen, *The Decline and Rise of the Consumer* (1946)

Co-operative Commonwealth Federation, Canadian political party, popularly known as the CCF It was founded (Aug , 1932) at Calgary, Alta , where representatives from farmer, labor, and socialist parties (largely of the Western provinces) met to discuss the formation of a national party with the ultimate objective of replacing the present competitive society in Canada with a planned cooperative commonwealth At its first annual convention (1933) at Regina, Sask , the Co-operative Commonwealth Federation issued the so-called Regina Manifesto, which outlined the party's aims—socialization of finance, social ownership of public utilities, aid to agriculture, insurance for the aged, ill, and unemployed, tax reform, encouragement of cooperative societies, and other measures. J S WOODSWORTH was its first leader; after his death, M J COLDWELL was elected to the post. In 1944 the party secured a majority in the Saskatchewan legislature and established the first CCF government in Canada, with T C Douglas as provincial premier; it again captured the province in the elec-

tions of 1948 In 1948 it became the official opposition party in the Ontario legislature The CCF is also represented in other provincial legislatures as well as in the Canadian House of Commons, where it won 7 seats in 1935 and later increased its strength See Dean E. McHenry, *The Third Force in Canada the Cooperative Commonwealth Federation, 1932–1948* (1950)

Coopersburg, industrial borough (pop 1,193), E Pa, SE of Allentown, settled 1780 as Fryburg, name changed to Coopersburg 1832, inc 1879 A zinc plant and textile mills are here

Cooperstown, 1 Village (pop 2,599), co seat of Otsego co, E central N Y, W of Albany, on the Susquehanna river and Otsego Lake, inc 1807 The town was founded by William Cooper, who brought his family here in 1790 His son, James Fenimore Cooper, made his home in Cooperstown after his return from abroad in 1833, and the region is described in his *Leatherstocking Tales* Abner DOUBLEDAY is said to have originated BASEBALL in Cooperstown, and there is a national baseball museum The quarters of the New York State Historical Association and the Knox School for girls are here **2** City (pop 1,077), co seat of Griggs co, E N Dak, NW of Fargo, founded 1882, inc 1907 It is in a stock-raising and farm area

Coopersville, village (pop 1,083), S Mich, on Deer Creek and NW of Grand Rapids, in a farm area, settled 1845, inc 1871

Cooper Union, in New York city, nonsectarian, coeducational, chartered and opened 1859 Founded by Peter Cooper, it pioneered with evening art and engineering schools, day schools were added in 1900 The public reading rooms, library, museum for the arts of decoration, art galleries, and the free lectures are important Oratory and debating were early courses Cooper's son Edward Cooper, his son-in-law Abram S Hewitt, and Andrew Carnegie contributed to the development of the school Abraham Lincoln made a famous speech here in 1860 The Green Engineering Camp in the Ramapos belongs to Cooper Union

Coorg (kōōrg), state (1,593 sq mi, pop 168,726), SW India, on the southwest border of Mysore state Macara is the capital An independent Hindu dynasty ruled Coorg from the late 16th cent until overthrown by the British in 1834 Coorg, situated mainly in the Western Ghats, produces coffee and timber Rice is the principal lowland crop

Coornhert, Dirck Volckertszoon (dürk' vôl'kurtzōn kôrn'hârt), 1522 90, Dutch humanist Although he served William the Silent against Spain, he opposed Calvinists as well as Roman Catholics and occupied a nonpartisan Protestant position strong for tolerance His literary works consist of a moralizing philosophical exposition (1586), a book of poems (1585?), translations (Cicero, Boethius, the *Odyssey*, Boccaccio), allegorical plays, and many pamphlets

Coos (kōōs), island, the modern Kos Acts 21 1

Coosa (kōō'sŭ), river of Alabama Its chief headstreams join at Rome, Ga, and the main stream flows generally west and south c 282 mi to the Tallapoosa (with which it forms the Alabama) a little above Montgomery Jordan, Lay, and Mitchell dams produce widenings in the lower course of the partly navigable river

Coos Bay (kōōs), city (pop 5,259), SW Oregon, a port of entry on Coos Bay of the Pacific, founded 1854 as Marshfield, inc 1874, name changed 1944 It is a shipping, fishing, dairying, and lumber-manufacturing center

coot, marsh bird related to the rail and the crane and found in North America and Europe The American coot or mud hen or marsh hen is slaty gray, with a black head and neck and with white markings on the wings It has partially webbed feet and is a skillful swimmer and diver It pats the water with its feet to help it rise into the air Aquatic plants form its diet The European species inhabits the northern parts of the Old World The bird is familiar through Tennyson's 'Brook' "I come from haunts of coot and hern"

copaiba (kōpā'bu, kōpī'bu), oleoresin obtained from several species of tropical South American trees of the genus *Copaifera* Maracaibo copaiba from Venezuela is the product of *Copaifera officinalis*, and Para copaiba from Brazil is obtained from *C langsdorfii* Copaiba, also called copaiba balsam, is used in making varnishes and lacquers Medicinally it is used as a disinfectant, laxative, and diuretic and to allay inflammation of the mucous membranes, especially of the genitourinary tract

copal (kō'pŭl), resin produced by certain trees of tropical and subtropical regions It is procured chiefly in fossil and semifossil form, but some is obtained also from living trees Copals are a source of hard-surfaced lacquers and varnishes Those of commercial value include the copals of Zanzibar, Mozambique, Madagascar, W Africa, New Zealand (from the kauri pine), the Dutch East Indies, the Philippine Islands, and tropical South America

Copán (kōpän'), city of the Old Empire of the MAYA, W Honduras, near Copán village. Noted for fine sculptured steles and in particular for the Hieroglyphic Stairway (with between 1,500 and 2,000 glyphs), Copán was, perhaps, the scientific center where Mayan astronomical learning, as applied to chronology, reached its peak

Cope, Edward Drinker, 1840–97, American naturalist, b Philadelphia, studied at the Academy of Natural Sciences, Philadelphia, and at the Smithsonian Institution He taught at Haverford College (1864–67, 1871–78) and at the Univ of Pennsylvania (1889–97) and served as geologist and paleontologist on the surveys of F V Hayden and of G W Wheeler (west of the 100th meridian) His contributions to American paleontology include a large collection of fossil mammals (now in the American Museum of Natural History), the classification of extinct reptiles and fish, and many published works, including *The Vertebrata of the Tertiary Formations of the West* (1883), a report on the Hayden survey The bitter rivalry between Cope and O C MARSH was responsible for the suppression of a second volume of reports Cope strongly supported Lamarck's theory of the inheritance of acquired characters See biography by H F Osborn and H A Warren (1931)

Copeau, Jacques (zhak' kōpō'), 1879–, French theatrical producer He was dramatic critic for two Parisian newspapers and was one of the founders (1909) and later editor in chief of the *Nouvelle Revue française* His famous repertory theater, the Théâtre du Vieux Colombier in Paris (1913–24), had a wide influence toward simplification and imagination in stage settings Copeau became director of the Comédie Française in 1940

Copeland, William Taylor, 1797–1868, English porcelain manufacturer His father had been a partner of Josiah Spode, and Copeland became head of the firm and of the Spode pottery manufactory at Stoke-on-Trent He ranks with Herbert Minton as a reviver of the porcelain industry His products had a high reputation, especially his Parian groups and statuettes which were designed by well-known artists He held various public offices and in 1835 was lord mayor of London

Copenhagen (kō'punhā"gun), Dan *København* [merchants' harbor] city (pop 731,707, with suburbs 1,078,892), capital of Denmark, on E Zealand and N Amager islands and on the Oresund It is a major commercial, fishing, and naval port and a commercial, industrial, and cultural center There are large shipyards, iron foundries, machine shops, and manufacture of the celebrated COPENHAGEN WARE A fishing village, Copenhagen was first fortified (12th cent) by Archbishop Absalon, its charter was granted (1254) by the bishop of Roskilde In 1443 Copenhagen replaced Roskilde as the Danish capital It withstood numerous attacks (13th–16th cent) by the Hanseatic League Having resisted (1658–59) a Swedish siege Copenhagen was relieved by the Dutch, in 1660 peace was made here between DENMARK and Sweden In 1807 the city fell victim to the war between England and Napoleon I The news that Denmark, by a secret convention, was about to join Napoleon's CONTINENTAL SYSTEM and join in the war on England decided the British government to send an expedition to seize the Danish fleet, which had already been mauled (1801) in the battle of Copenhagen (see separate article) Upon the Danish refusal to surrender, the British landed troops and bombarded Copenhagen with terrible effect The Danish fleet surrendered, but Denmark declared war on England More than a century later in the Second World War, Copenhagen was occupied (1940–45) by the Germans, the shipyards were bombed by the Allies, but otherwise the city —one of the handsomest in Europe—remained undamaged The inner harbor of Copenhagen is the channel dividing Zealand and Amager islands The center of the city stretches from the inner harbor, on the east, to three long and narrow lakes, which separate Copenhagen from its western suburbs From the harbor extends a narrow arm, the Nyhavn, lined with picturesque old houses and closed off by the Kongens Nytorv, an irregular square from which the main arteries of the city radiate The Charlottenborg palace (17th cent) and the royal theater are on Kongens Nytorv Other famous landmarks include Amalienborg Square, enclosed by four palaces—the present royal residence, the domed Marble Church or Frederikskirke (18th–19th cent), the citadel (17th cent), the Rosenborg park and palace (17th cent), Trinity Church, with a famous round tower, the university (founded 1479, rebuilt after 1807), and the Cathedral Church of Our Lady (12th cent, rebuilt after 1807), with sculptures by Thorvaldsen The island of Slotsholm [Dan, =castle island], surrounded by a moat on three sides and the harbor on the fourth, supports an impressive complex of buildings, notably the Christiansborg palace (18th cent, restored), which houses the Rigsdag, the royal library, the Thorvaldsen Museum, and the exchange (17th cent) Nearby is the Tivoli, a favorite recreation park Among the western suburbs, Frederiksberg (pop. 113,589) is the largest, it contains the 17th-century Frederiksborg palace On Amager island is Christianshavn, a modern quarter, with an arsenal and naval installations

Copenhagen, battle of, 1801 In Dec, 1800, Denmark joined Russia, Sweden, and Prussia in declaring the armed neutrality of the northern powers in the French Revolutionary Wars and in announcing that they would not comply with the British rules on neutral navigation England considered this a threat and, without declaring war, sent a fleet under Admiral Sir Hyde PARKER and Admiral NELSON into the Baltic On April 2, 1801, Nelson attacked the Danish fleet at the roadsteads of Copenhagen and, fixing the telescope to his blind eye, naturally did not see Parker's signal to discontinue action The Danes were defeated after a hard battle

Copenhagen ware, several types of pottery, both underglaze and overglaze, produced in Copenhagen since c 1760 At that time a Frenchman, Louis Fournier, made soft-paste chinaware in the French style Hard porcelain was introduced in 1772, when pieces with peasant figures were in high favor The Royal Porcelain Works and other factories have produced especially fine tableware and fluted porcelain of the blue Danish pattern—borrowed from China but soon transformed in native spirit The modern white underglaze porcelain was first made by Arnold Krog in the late 19th cent and was found to be well adapted to the animal and figure sculptures, including some of Andersen's fairy-tale characters, that have distinguished the Copenhagen product of the 20th cent, each piece from the hands of a clever artist Brilliance and gayety characterize the floral designs of the popular Danish faience

Copernicus, Nicholas (kōpûr'nĭkus), Pol *Mikołaj Kopernik*, 1473–1543, Polish astronomer, b Torun After studying astronomy at the Univ of Cracow, he spent a number of years in Italy studying various subjects, including medicine and canon law He lectured c 1500 in Rome on mathematics and astronomy, in 1512 he settled in Frauenburg, East Prussia, where he had been nominated canon of the cathedral There he performed his canonical duties and also practiced medicine But the work that immortalized him is the treatise setting forth his beliefs concerning the universe It was probably completed by 1530, but was not published until 1543, when its author lay dying This work, *De revolutionibus orbium coelestium*, dedicated to Pope Paul III, described the sun as the center of a great system, with the earth, one of the planets, revolving about it Upon the foundation of the Copernican system modern astronomy was built See studies by Angus Armitage (1938), S P Mizwa (1943), and Hermann Kesten (1945)

Cophetua (kōfē'chōōŭ), legendary African king, chief figure in a ballad The legend tells how he wooed and won a beggar maid The ballad appeared in Bishop Thomas Percy's *Relques of Ancient English Poetry* (3 vols 1765) Shakspere and Ben Jonson allude to the tale

Copiapó (kōpyäpō'), city (pop 15,693), N central Chile, on the Copiapó river Founded in 1540 by Pedro de VALDIVIA, it was severely damaged by earthquakes in 1819 and 1922 It handles copper, gold, and silver ores The city is a green haven in arid country, and the climate is mild and pleasant First of the rivers to reach the Pacific S of the LOA the Copiapó is usually considered the southern boundary of the ATACAMA desert

Copland, Aaron (kōp'), 1900–, American composer b Brooklyn, N Y He was a pupil of Rubin Goldmark and of Nadia Boulanger, who introduced his work to the United States in 1925 when she played his Symphony for Organ and Orchestra in Boston and New York This work he rescored without organ as his First Symphony (1928) His earliest works show European influences With *Music for the Theatre* (1925), a suite for chamber orchestra, the idiom of jazz is introduced into his music Interested in the wider audience for music of the radio and moving pictures, he constructed his later works with greater simplicity than when he was composing for a more sophisticated audience His play-opera, *The Second Hurricane* (1937), for high school performers, and his orchestral works *Music for Radio* (1937) and *Music for Movies* (1942) were well received His ballets include *Billy the Kid* (1938), *Rodeo* (1942), and *Appalachian Spring* (1944), he composed music for the films *Of Mice and Men* (1939), *Our Town* (1940), and *North Star* (1943) Important orchestral works are *El Salón México* (1936) and *A Lincoln Portrait* (1942) His music is distinguished by economy of means and an architectural feeling for form With Roger Sessions he founded the Copland-Sessions Concerts (1928–31) and in 1932 organized the American Festivals of Contemporary Music at "Yaddo," Saratoga Springs, N Y He wrote *What to Listen for in Music* (1939) and *Our New Music* (1941)

Coplay (kōp'lē), borough (pop 3,109), SE Pa, on the Lehigh river and near Allentown. Cement is made here

Copley, John Singleton (kŏp'lē), 1738?–1815, American portrait painter, b Boston. He studied with his stepfather, Peter Pelham, and undoubtedly frequented the studios of Smibert and Feke An early work, the *Gore Children*, shows him an accomplished artist at the age of 16, and at 20 he was

already a successful portrait painter with a mature style remarkable for its brilliance, clarity, and forthright characterization In 1766 his *Boy with the Squirrel* was exhibited in London and won the admiration of Benjamin West, who urged him to come to England. However, he remained for eight years longer in America and worked in New York and Philadelphia as well as in Boston In 1774 he visited Italy and then settled in London, where he spent the remainder of his life, enjoying many honors and the patronage of a distinguished clientele In England his style gained in subtlety and polish but lost some of the vigor and individuality of his early work His large historical painting *The Death of Lord Chatham* (National Gall , London) gained him admittance to the Royal Academy However, his reputation today rests largely upon his early American portraits which are treasured not only for their splendid pictorial qualities but also as the most graphic record of their time and place Portraits such as those of Nicholas Boylston and Mrs Thomas Boylston (Harvard Univ.), Daniel Hubbard (Art Inst , Chicago), Governor Mifflin and Mrs Mifflin (Historical Society of Pennsylvania, Philadelphia), and Paul Revere (Mus of Fine Arts, Boston) are priceless documents in which the life of a whole society seems mirrored Among his later portraits those of Samuel Adams (Mus of Fine Arts, Boston) and the Copley family (privately owned) are splendid examples The Museum of Fine Arts, Boston, has an excellent collection of his works Copley's son became Baron Lyndhurst in 1827 See study by B N Parker and A B Wheeler (1938), biography by J T Flexner (rev ed , 1948)

Copley, John Singleton · see LYNDHURST, JOHN SINGLETON COPLEY, BARON

Coppard, Alfred Edgar, 1878–, English short-story writer and poet, b Folkestone, Kent His education stopped at the age of nine His tales, written in a poetic and fanciful vein, include *Adam and Eve and Pinch Me* (1921), *Nixey's Harlequin* (1931), *Selected Tales* (1946), and *Dark-eyed Lady* (1947) His poems, lyric verse, include *Hips and Haws* (1922), *Pelagea* (1926), *Collected Poems* (1928), and *Cherry Ripe* (1935) See G B Saul, *A E Coppard* (1932), bibliography by Jacob Schwartz (1931)

Coppée, François (frāNswä' kôpā'), 1842–1908, French poet and dramatist A member of the Parnassians, he achieved fame with *Le Passant* (1869, Eng tr , 1881), a one-act verse play presented by Sarah Bernhardt His poetry, concerned mostly with the sorrows of the underprivileged, includes *Le Reliquaire* (1866), *Intimités* (1868), and *Les Humbles* (1872) *La Bonne Souffrance* (1898) was written after his return to the Church Two political dramas, *Severo Torelli* (1883) and particularly *Pour la couronne* (1895), received great acclaim He was elected to the French Academy in 1884

Coppée, Henry, 1821–95, American educator, b Savannah, Ga Educated at Yale and West Point (grad. 1845), he served with distinction in the Mexican War and afterwards taught at West Point until he resigned (1855) from the army From 1855 to 1866 he was professor of belles-lettres and English literature at the Univ of Pennsylvania Although a Georgian, Coppée decided for the North in the Civil War and wrote several manuals for the Union army In 1866 he became the first president of Lehigh Univ He also served as professor of English literature and after resigning (1875) as president stayed on at Lehigh to teach literature and international and constitutional law until his death In his last two years he was also acting president of the university His most important works were *Grant and His Campaigns* (1866), *English Literature Considered as an Interpreter of English History* (1873), which ran through many editions, *General Thomas* (1893), and *History of the Conquest of Spain by the Arab Moors* (1881; 2d ed , 1892)

Copper, river rising in the Wrangell Mts , SE Alaska, and flowing S through the Chugach Mts to the Gulf of Alaska The Indians got copper from the deposits near the upper river and attracted the attention of the Russians and later of the Americans, but exploration was difficult because of the river's currents and the glaciers near its mouth The great Kennecott mine was finally developed and was reached by the building (1908–11) of the Copper River and Northwestern RR from Cordova, which in part followed the course of the lower river The line was abandoned in 1938.

copper, common metallic element (symbol = Cu [Late Latin *cuprum*], for physical constants, see ELEMENT, table) It is malleable, ductile, and an extremely good conductor of both heat and electricity It is relatively soft, being less hard than iron but harder than zinc It changes slowly in air, becoming covered with a greenish substance (a basic carbonate), but the reaction is not extensive since the coating serves as a protection and prevents further action Copper resists ordinary dilute acids, not displacing hydrogen, but reacts with the oxygen acids Salt water has corrosive action, a chloride being formed, fresh water does not have this effect. Because of the metal's resistance, it is used extensively in roofing, in making copper utensils, and for coins and metalwork Its chief commercial use is based upon its electrical conductivity (second only to silver), about half its total output being employed in the manufacture of electrical apparatus and wire. An important use of copper is in alloys such as BRASS, BRONZE, GUN METAL, MONEL METAL, and GERMAN SILVER Copper occurs free in nature and has been mined extensively, particularly in the Lake Superior region in Michigan In combination, it is found in various parts of the world—in the United States (its greatest source) in Arizona, Michigan, Montana, Nevada, and Utah, in South America, in Chile and Peru, and in Russia, the British Isles, Europe, and Africa Its chief ores are CHALCOPYRITE (or copper pyrites), CHALCOCITE (or copper glance), the reddish-brown mineral bornite (the sulphide of copper and iron), the red cuprite (copper oxide), the green MALACHITE, the blue AZURITE, and the bluish-green chrysocolla (a silicate of copper) BLUE VITRIOL, or bluestone, is the sulphate, and VERDIGRIS is copper acetate The metal is prepared commercially in various ways, the process employed depending upon the ores used and the concentration of copper in them The sulphide ores are roasted and then treated in a blast furnace, where copper matte is formed, in a converter similar to the Bessemer converter the molten matte becomes blister copper Ores containing only a small percentage of the metal are concentrated by the flotation process Copper is refined by ELECTROLYSIS, the crude copper being used as the anode and pure copper as the cathode The metal is deposited at the cathode Copper was one of the first metals known to man and was probably mined in the uncombined state several thousand years before Christ Cyprus, from which the metal's name ultimately comes, was the important source in the ancient world Mixed with tin, copper yields the ancient alloy of the BRONZE AGE

Copper Age see BRONZE AGE

copperas (kŏ'pûrûs) [ultimately from a word meaning copper] or **green vitriol,** common name for ferrous sulphate, a hydrous compound consisting of iron, sulphur, and oxygen It is a green, crystalline salt, very soluble in water Found usually in connection with pyrite, it is prepared by oxidation of this compound and also by treating iron with sulphuric acid It is used in the manufacture of ink, in the dyeing industry, and as a substitute for aluminum sulphate in the purification of water

Copper Cliff, town (pop 3,732), S Ont , SW of Sudbury It is adjacent to the smelters of the International Nickel Company

copper glance · see CHALCOCITE

copperhead, poisonous snake found in the E United States, which, like the rattlesnake and the water moccasin, is a pit viper It is about 2 or 3 ft long and has a coppery head The body is hazel brown with hourglass-shaped markings of chestnut above and pinkish white with dark spots underneath It is not aggressive but will strike swiftly if startled or attacked The bite is dangerous but not often fatal

Copperheads, in the American Civil War, a reproachful term for those Northerners sympathetic to the South, mostly Democrats outspoken in their opposition to the Lincoln administration Most of them were the so-called Peace Democrats They were especially strong in Illinois, Indiana, and Ohio, where Clement L VALLANDIGHAM was their leader The KNIGHTS OF THE GOLDEN CIRCLE was a Copperhead secret society They were so closely identified with the Democrats that not until years after the Civil War did the party live down the association See Wood Gray, *The Hidden Civil War: the Story of the Copperheads* (1942)

Copperhill, town (pop 1,005), E Tenn , near the point where Georgia, Tennessee, and North Carolina meet, in a mountainous copper-mining area

Coppermine, river, 525 mi long, Mackenzie dist , Northwest Territories It rises in the barren grounds of Great Slave Lake, meanders northwestward, and falls into an inlet at the west end of Coronation Gulf in the Arctic Ocean Coppermine government station is at the mouth of the river, opposite Victoria Island.

copper pyrites see CHALCOPYRITE

Coppet (kôpā'), village, Vaud canton, Switzerland, on Lake Geneva Its château was a residence of Jacques Necker and his daughter, Mme de STAËL

Coppini, Pompeo (pômpā'ô kôp-pē'nē), 1870–, American sculptor, b Italy His works include 41 public monuments, 16 portraits, and 75 portrait busts. His statue of Washington in Mexico city was an American gift to Mexico

copra · see COCONUT

Copt (kŏpt), member of the native Christian minority (5 to 10 percent) of Egypt Copts are not ethnically distinct, they are a cultural remnant, i e , the Christians who have not been converted to Islam in the 14 centuries since the Moslem invasion The **Coptic language,** now extinct, was the form of the ancient Egyptian language spoken in early Christian times (see LANGUAGE, table), it was superseded by Arabic. Most Copts belong to the **Coptic Church,** an autonomous Christian church officially holding MONOPHYSITISM, which was declared (451) a heresy by the Council of Chalcedon. The Church is in communion with the Jacobite Church (also Monophysite) and has an organic relation with the Church of Ethiopia, whose head (the abuna) is named by the Coptic patriarch In rites and customs the Coptic Church resembles other Oriental churches. Coptic, Greek, and Arabic languages are all used ceremonially. The chief bishop, the patriarch of Alexandria, is in direct succession to the 5th-century patriarchs who embraced Monophysitism. Among the Copts a small minority are in communion with the pope, these "Catholic Copts" have their own organization and churches but share the rites and practices of the Coptic Church This community began to develop in the 18th cent Protestant missions have had some success among the Copts. Besides Copts there are other Christian communities in Egypt, mainly Greek and Syrian The Greeks and many Syrians are Orthodox, under the Orthodox patriarch of Alexandria (who traces his succession to the Catholic patriarchs of the 5th cent) There are also many Catholic Syrians, mainly Melchites and Maronites See De Lacy E O'Leary, *The Saints of Egypt* (1938), Donald Attwater, *The Christian Churches of the East* (1947, 1948)

Coptos (kŏp'tŏs, -tôs) or **Coptus** (kŏp'tŭs), ancient city of Egypt, on the right bank of the Nile, c 27 mi. N of Luxor A granite pillar with the name of Thutmose III was found here, but the importance of the town came from Hellenistic times, when it was the terminus of a caravan route to Berenice on the Red Sea

copyright. Except for limited measures taken in Roman times, protection of rights in literary property did not appear necessary in Europe before the appearance of printing from movable type in the 15th cent The earliest device was for the sovereign to vest in guilds of printers the exclusive rights of publication The guilds kept order among their members and were supposed to prevent pirating In England this function was assigned to the Stationers' Company (chartered 1556), comprising a hundred or so printers and booksellers. The only protection which the common law extended to the author was against publication of his work without his permission, once he allowed publication, the work passed completely out of his control The first English copyright act (1710), while not abolishing the common-law right, allowed the author to copyright his work for 14 years (with a like period of renewal) and required deposition of copies and a notice that the work was copyrighted This law was the model for the earliest American copyright statute, passed in 1790 pursuant to Article 1, Section 8 of the U S Constitution The American statute in force today was adopted in 1891 It provides for a term of 28 years and a single renewal of the term Material for copyright must be deposited with the Library of Congress In addition to literary matter, maps, photographs, works of art, textile and other designs, musical compositions, and photoplays may be copyrighted In the United States prior to 1891 it was almost impossible for books by foreign authors to be copyrighted The most popular British books were published in cheap unauthorized editions, and the writers often received no royalties Since 1891 material in foreign languages has been easily copyrighted in the United States, material in English, however, usually cannot be copyrighted if it is imported, unless, in addition, type is set and material printed and bound in the United States Most of the major countries of the world, however, adhere to the Bern Convention, effective in 1887 and since modified. It provides that literary material copyrighted in a signatory country automatically enjoys copyright in all the signatory countries See Philip Wittenberg, *The Protection and Marketing of Literary Property* (1937); Margaret Nicholson, *A Manual of Copyright Practice* (1945)

Coquelin, Benoît Constant (bunwa' kôstā' kôklē'), 1841–1909, French actor, known as Coquelin aîné. He made his debut in 1860 as Gros-René in Molière's *Le Dépit amoureux* at the Comédie Française, where in reputation he soon became the successor to Got. He excelled in such plays as Beaumarchais's *Figaro* and Augier's *Paul Forestier*, but his greatest role was Cyrano de Bergerac, which he first gave in 1897, the year that he managed the Théâtre Porte-Saint-Martin In 1900 he toured the United States with Sarah Bernhardt and returned to Paris to play opposite her in Rostand's *L'Aiglon*. His works include *L'Art et le comédien* (1880) and *Les Comédiens, par un comédien* (1882) His brother, **Ernest Alexandre Honoré Coquelin** (ĕrnĕst' älĕksä'dru ônôrā'), 1848–1909, known as Coquelin cadet, also acted at the Comédie Française. He gained fame in many popular plays and in monologues which he wrote and recited in Paris salons Under the pseudonym Pirouette he wrote *Le Monologue moderne* (1881), *Le Rire* (1887), *Pirouettes* (1888), and other works.

Coquerel, Athanase Laurent Charles (ätänäs' lôrä' shärl' kôkrĕl'), 1795–1868, French Protestant cler-

gyman, noted for his eloquence as a preacher From 1830 he was pastor of the Reformed Church in Paris. He founded and edited liberal periodicals. Among his publications are *Biographie sacrée* (1825–26), *L'Orthodoxie moderne* (1842), and *Christologie* (1858). His son **Athanase Josué Coquerel (shōswā')**, 1820–75, was also a well-known Protestant minister in Paris From 1849 to 1870 he edited the *Lien* In 1852 he helped to found the *Nouvelle Revue de théologie* Among his works are *Jean Calas et sa famille* (1857) and *Histoire de l'Eglise réformée de Paris* (1860)

Coques or **Cocx, Gonzales** (gōnsā'lĕs kōks'), 1618–84, Flemish portrait painter He excelled in painting diminutive portraits and family groups of the aristocracy, in which the backgrounds were often painted by other artists The elegance of his paintings won him the title "the little Van Dyck" Cocques is represented in the galleries of Paris, London, and Vienna and in the John Wanamaker Collection in Philadelphia

coquilla nut (kōkē'yū, kōkēl'yū) [Span ,=little coconut], fruit of a Brazilian palm (*Attalea funifera*), closely related to the coconut palm Its fruit, 3 or 4 in long, is very hard, of a richly streaked brown, and capable of taking a fine polish and is used in cabinetwork and for such turned articles as bell-pulls, umbrella handles, and walking-stick knobs A stiff, wiry, bright chocolate-colored fiber, called piassava or piassaba, obtained from the petioles of the same palm, is exported. It is used in making brooms and rope

Coquille (kōkēl'), city (pop 3,327), co seat of Coos co, SW Oregon, SSE of Coos Bay and on the Coquille river near the Pacific coast, inc 1901. It is a lumber and dairying center

Coquimbo (kōkēm'bō), city (pop 18,863), N central Chile On a beautiful sheltered bay of the Pacific, it is the port for La Serena Exports are chiefly agricultural produce and some minerals In 1922 it was severely damaged by a tidal wave following an earthquake

coral, small marine invertebrate allied to the sea anemone, characterized by its outer skeleton of either horny or limy material and by its sedentary habit of life Among the many forms are the precious red coral (*Coralium*), found chiefly in the Mediterranean region, and the corals which build reefs and islands Most corals live in colonies although there are some solitary forms, in both forms the individual coral animals, known as polyps, are similar Each polyp consists in general of a jelly-like body surrounded by a skeleton or theca, usually of calcium carbonate, of which projections, known as septa, extend toward the center The body is mainly a hollow digestive tract with a single opening at the free or unattached end of the body This opening, or mouth, is surrounded by tentacles, and it leads into the gullet, which in turn leads into the main part of the digestive cavity Mesenteries, thin sheets of tissue, extend as vertical partitions inward from the body wall, some mesenteries join the gullet and others extend only a short distance inward Each of the septa lies between two mesenteries Reproduction occurs both by budding and by the production of eggs and sperm formed in the mesenteries The great variety in the form of various colonial corals (e g , the treelike branching forms, the compact, rounded species, and the organ-pipe coral) depends chiefly on what method of budding takes place Reproduction by means of eggs and sperm results in the production of an individual which moves about freely in the water before attaching itself and secreting its skeleton As the colonial forms produce more polyps, the lower members die, and new layers are built up on the old skeletons Coral skeletons are broken up by the action of waves, by animals, and by other agents, and when this material is piled up sufficiently, vegetation may become established and thus islands and reefs may eventually form The name **coral reefs** is applied both to certain calcareous deposits in which coral is the chief constituent and to similar calcareous deposits of which coral forms only a small part. Other forms of life which contribute their skeletal material to coral reefs include algae (e g , *Lithothamnion*), foraminifera (a group of protozoa), and mollusks Members of the group Madreporaria, the true stony corals, are the most abundant reef-forming corals Coral reefs form only in tropical and subtropical waters in a belt lying no more than 30° north and 30° south of the equator. The three general forms of reefs are the fringing reef, which is separated from the shore by a narrow, shallow lagoon and is partially exposed at low tide; the barrier reef (an example of which is the Great Barrier Reef), which is farther from the coast and is separated from it by a wider lagoon, often with deep channels, and the atoll, a ring-shaped reef enclosing a circular lagoon Less well known is a fourth type of reef, coral pinnacles, found within the lagoons. It is generally believed that fringing reefs formed as a result of upward and outward growth of corals which became established on rocks near shore. There is disagreement among scientists over the origin of atolls and barrier reefs, and research has not yet yielded convincing evidence to support fully any theory. The subsidence hypothesis of Charles Darwin assumes a slow steady sinking of the sea floor in the areas of the coral reefs and a simultaneous upward and outward growth of coral. By these processes of growth and sinking, the fringing reefs are converted into barrier reefs In some places entire volcanic islands became submerged and only the atoll remains above water Alexander Agassiz and Sir John Murray, Reginald A. Daly, and others proposed theories opposed to that of Darwin. Daly's theory differs from the others in that it is based on changes in the level of the oceans resulting from the formation of glaciers during the Pleistocene epoch and their subsequent melting

Coral Gables, residential city (pop 8, 294), SE Fla , part of Greater Miami, on Biscayne Bay, inc. 1925. It is a fine example of a planned city, built at the height of the Florida land boom The Univ of Miami (see Miami, University of) is here Near by is the Tropical Park race track

coral reefs: see CORAL

Coral Sea, southwest arm of the Pacific, E of Australia and SE of New Guinea, W of the New Hebrides and New Caledonia, and connected with the Arafura Sea by Torres Strait In the Second World War it was the scene (1942) of a Japanese defeat by U S forces, the battle, fought by aircraft near the Louisiade Archipelago, was a major U S victory which checked the southward expansion of the Japanese

coral snake, poisonous snake of the Western Hemisphere belonging to the genus *Micrurus*, related to the cobra Only two of the approximately 26 known species are found in the United States, the others inhabit Mexico, Central America, and tropical South America The coral snake or harlequin snake (*Micrurus fulvius*) is found in the SE United States and ranges into Mexico It is a burrowing snake with a cylindrical body averaging about 2½ ft long, and the head is small and blunt Throughout its length the body is ringed with broad bands of black and of red (sometimes spotted with black) with a narrow band of yellow on either side of the black The tail has yellow and black rings only It can be distinguished from a number of similarly colored harmless snakes because it is the only one with red bands touching the yellow ones Its venom acts upon the nervous system, causing paralysis The fangs through which the venom enters the victim are short, and the snake chews the flesh to impregnate the wounds with poison The mortality rate among humans bitten by coral snakes is high It feeds on other snakes and on lizards The Sonoran coral snake (*M euryxanthus*) found from Arizona to N Mexico is from 1½ to 2 ft long, with yellow bands often wider than the red.

Coram, Thomas (kō'rŭm), 1668?–1751, English philanthropist and colonizer He lived for some years in Massachusetts and on his return to England became a trustee of James Oglethorpe's Georgia colony and sponsored a colony in Nova Scotia for unemployed artisans He established the London Foundling Hospital (1740), a pioneer institution of its kind. See biography by Herbert Compston (1918)

Coraopolis (kō"rēō'pŭlĭs), industrial borough (pop 11,086), SW Pa., on the Ohio and NW of Pittsburgh, inc 1886 Its manufactures include glass and metal products Oil and gas are obtained here

Corato (kōra'tō), rural city (pop 43,907), Apulia, S Italy The region produces grapes, olives, almonds, and vegetables

Corbett, Harvey Wiley (kôr'bĭt), 1873–, American architect, b San Francisco, grad Univ of California, 1895, and École des Beaux-Arts, Paris, 1900 He entered the office of Cass Gilbert in New York in 1901 In 1903 Corbett formed a partnership with F J Helmle Their Bush Terminal Building (1920) in New York was one of the first impressive solutions in modern skyscraper design Other important works were Bush House, London, the Roerich Building, New York, and the George Washington Masonic National Memorial, Alexandria, Va In 1929 a new firm was formed, Corbett, Harrison, and MacMurray, one of three architectural organizations engaged in the Radio City development, New York Corbett was chairman of the architectural commission of the Century of Progress Exposition (1933–34), Chicago, and consulting architect to several public works commissions, including that of the Westchester County Park Helectured on modern architectural questions His wife is **Gail Sherman Corbett,** 1873–, American sculptor Her dignified monuments and other public sculptures are in Syracuse, N Y , Springfield, Mass , and other cities

Corbett, James John, 1866–1933, American pugilist, b San Francisco "Gentleman Jim" Corbett won (1892) the heavyweight boxing championship by knocking out John L. Sullivan at New Orleans and lost the title to Robert Fitzsimmons in 1897 at Carson City, Nev. He failed (1900, 1903) to regain the title in fights with James J. Jeffries He later appeared on the stage and in moving pictures and wrote *The Roar of the Crowd* (1925)

Corbin, Henry Clark, 1842–1909, American army officer, b Clermont co , Ohio. He was advanced to be brigadier general of volunteers in the Civil War, entered (1866) the regular army, and spent 10 years on the Western plains in various Indian campaigns Adjutant general of the U.S. army during the Spanish-American War, Corbin, under the existing organization became the virtual head of the army. His administrative ability was recognized, but jealousy on the part of other officers developed, and President Theodore Roosevelt transferred him (1903) to command of the Eastern Dept He later was sent (1904) to command the U S army in the Philippines and was advanced (1906) to lieutenant general.

Corbin, Margaret, 1751–1800, American Revolutionary heroine, b Franklin co , Pa Upon the death of her husband in the attack on Fort Washington (Nov 16, 1776), she commanded his cannon until she was seriously wounded She was the first woman to be pensioned by the government In 1916 her remains were moved from Highland Falls, N Y., to West Point, where a monument was erected in her honor

Corbin, city (pop 7,893), S Ky , NW of Middlesboro A railroad center, with repair shops, and a shipping point for the region's coal, the city lies on the old Wilderness Road in the Cumberland Plateau It developed with the railroad's arrival in 1883 and was incorporated in 1894 Near by are Levi Jackson Wilderness Road and Cumberland Falls state parks

Corbino, Jon (kôrbē'nō), 1905–, American painter, b Vittoria, Sicily, studied at the Art Students League of New York and Pennsylvania Academy of the Fine Arts He worked as a magazine illustrator before establishing his reputation as an imaginative and gifted painter His work, modern in its expressive freedom, is baroque in spirit

Corbulo (Gnaeus Domitius Corbulo) (kôr'bygŏlō), d A D. 67, Roman general He was a praetor under Tiberius and, as legate, governor of Lower Germany under Claudius The canal he had his troops dig from the Meuse to the Rhine is still in use He was sent to Asia, and there he commanded (A D. 58–A D. 59) the Roman armies against the Parthians with great success, defeating them at Artaxata and Tigranocerta The war broke out anew in A D 61 Corbulo with some assistance forced Tiridates from power in Armenia, but Nero was jealous of him, recalled him to Greece, and forced him to commit suicide. Corbulo's daughter was married to Domitian

Corcoran, William Wilson (kôr'kŭrun), 1798–1888, American financier, philanthropist, and art collector, b Georgetown, D C After becoming a successful banker, he retired in 1854 and devoted himself to his philanthropic activities, which included gifts to many educational and religious institutions, as well as the founding of the Louise Home for Women in Washington His chief gift was the **Corcoran Gallery of Art,** in Washington, which had as its nucleus Corcoran's art collection The present marble building, designed by Ernest Flagg, was opened in 1897 The gallery has collections of paintings, sculpture, and ceramics, as well as a free art school

Corcoran, city (pop 2,092), S central Calif , SSE of Fresno in the San Joaquin Valley, inc 1914 It has cotton gins and cottonseed-oil mills

Corcoran Gallery of Art see CORCORAN, W. W.

Corcyra. see CORFU

cordage, collective name for rope and tying materials Early man used strips of hide, animal hair, and plant materials Hemp and flax were formerly standard in Europe and America, but were largely replaced in the 19th cent by hard fibers, especially Manila hemp and sisal The fibers are straightened, usually by combing, then spun into yarn Cordage is divided into three main classes —binder twine, a single yarn used primarily to tie harvested crops, wrapping twine, two or more yarns twisted to form a cord, and rope, composed of three or more cords and usually at least an inch in circumference A cable is formed of three or more ropes twisted together Ropes may be impregnated with oil, tar, or other compounds and are commonly made of Manila hemp, about 25 percent stronger than sisal, whose chief use is for binder twine Most household wrapping twine is of cotton or jute Steel wire, often with a fiber core, is also used for rope See Ludwig Weindling, *Long Vegetable Fibers* (1947)

Corday, Charlotte (Marie Anne Charlotte Corday d'Armont) (kôrdā', märē' ăn' shārlôt', dārmō'), 1768–93, assassin of Marat Though of aristocratic background, she sympathized with the Girondists in the French Revolution and felt that Marat in his persecution of the Girondists was acting as the evil genius of France She resolved to emulate the action of Brutus and to destroy the "tyrant" Leaving her native Normandy for Paris, she gained an audience with Marat by promising to betray the Girondists of Caen and stabbed him (July 13, 1793) when he was in his bath She went to the guillotine calmly, but her crime and her death served to injure rather than aid her party. See Austin Dobson, *Four Frenchwomen* (1923), Joseph Shearing (pseud of G. M. V C Long), *The Angel of the Assassination* (1935)

Cordele (kôrdēl′), city (pop 7,929), co seat of Crisp co, S central Ga, SSW of Macon; founded 1888 It is a shipping, commercial, and processing center in a farm area A hydroelectric power plant (1928–30) on near-by Flint river is run by the county

Cordeliers (kôrdŭlyā′), political club of the French Revolution It was founded (1790) as the Society of the Friends of the Rights of Man and of the Citizen but later was called after its original meeting place, the suppressed monastery of the Cordeliers (Franciscan Recollects) In 1793 the club was instrumental in the destruction of the GIRONDISTS Its early leaders, DANTON and DESMOULINS, having withdrawn, the club drifted to the extreme left under the leadership of MARAT and HÉBERT Controlling the Paris commune and the army, it threatened the power of the JACOBINS but was dissolved after Robespierre had Hébert executed (March, 1794)

Cordell (kôrdĕl′), city (pop 2,776), co. seat of Washita co, W Okla, near the Washita river, in a cotton-growing and farming area

cordial. see LIQUEUR

Cordilleras (kôrdlĭ′luruz, Span kôrdēyā′ras) [Span, originally = little string], general name for the entire chain of mountain systems of W North America, extending from N Alaska through Canada, the United States, and Mexico to Panama In the United States the Cordilleras include the Rocky Mts, the ranges of the Great Basin, the Sierra Nevada, and the Coast Ranges The name was first applied to the similar systems of South America, where the mountains stretching from Panama to Cape Horn are known locally as the Cordillera de los Andes Some geographers use the term *cordillera* for any extensive group of mountain systems

cordite. see POWDER.

Córdoba, Francisco Fernández de: see FERNÁNDEZ DE CÓRDOBA, FRANCISCO

Córdoba, Gonzalo Fernández de. see FERNÁNDEZ DE CÓRDOBA, GONZALO

Córdoba (kôrdō′vu, Span, kôr′dōvä), city (pop 351,044), capital of Córdoba prov, central Argentina, on the Río Primero Córdoba—the third city of Argentina and a cultural, intellectual, and commercial center—is situated on the eastern flank of the Sierra de Córdoba and the western margin of the PAMPA The great dam in the Primero for irrigation and electric power is one of the most important in South America, and the surrounding country, formerly devoted almost solely to cattle ranches, has been transformed into orchards and grainfields Flour, lime, fruits, linseed, wood, marble, cattle, and hides are exported, and important local industries have developed because of hydroelectric power Founded in 1573 by Jerónimo Luis de Cabrera, Córdoba has many buildings, especially the cathedral, which recall its colonial days The university (founded 1613) early made the town an intellectual center of South America With the railroad came prosperity, and in the later 19th cent it became a flourishing city Córdoba is a popular tourist and health resort

Córdoba, city (pop 17,865), Veracruz, E Mexico Founded in 1618, Córdoba is in a fertile agricultural district producing coffee, sugar, cotton, and tropical fruits The climate is hot Here in 1821 was signed the treaty between the Spanish viceroy, O'Donojú, and Augustín de ITURBIDE, which established the independence of Mexico

Córdoba or **Cordova** (both kôrdō′vu, Span, kôr′dōvä), city (pop 116,046), capital of Córdoba prov, S Spain, in Andalusia, at the foot of the Sierra de Córdoba, on the Guadalquivir Of Iberian origin, Córdoba flourished under the Romans, then passed to the Visigoths (572) and the Moors (711). Under the OMAYYAD dynasty it became the seat (756–1031) of an independent emirate, later called caliphate, which included most of Moslem Spain The city was then one of the greatest and wealthiest in Europe, renowned as a center of Moslem and Jewish culture and for its architectural glories, notably the mosque, begun in the 8th cent, which is one of the finest of all Moslem monuments It has been a cathedral since 1238 Córdoba has ruins of the alcazar, and the Moorish bridge was recently restored The city reached its zenith under ABDU-R-RAHMAN III, but declined after the fall of the Omayyads and became subject to Seville in 1078 Ferdinand III of Castile conquered it in 1236 Córdoba never recovered its former splendor, but remained famous for its work in gold, silver, and leather. Other industries and commerce have been developed in the 20th cent The Senecas, Lucan, Averroës, and Maimonides were born here

Cordova (kôrdō′vu), town (pop. 938), S Alaska, a port on Prince William Sound Founded as the terminus of the Copper River and Northwestern RR to the Kennecott copper mine, it declined with the closing of the mine and the railroad in 1938 and now depends largely on a fish cannery and a cold-storage plant.

Cordova, Spain see CÓRDOBA

Cordova (kôrdō′vu), cotton town (pop 1,881), NW central Ala, NW of Birmingham, in the coal and industrial area, inc 1902.

Core (kō′rē), variant of KORAH

Corelli, Arcangelo (ärkän′jälō kôrlē′lē), 1653–1713, Italian composer and violinist He composed a set of variations on an air, *Folies d'Espagne*, which is the best known of his many violin sonatas He gave definitive form to the *concerto grosso* In the palace of his patron, Cardinal Ottoboni, he gave weekly chamber concerts

Corelli, Marie (kurĕl′ē), 1855-1924, English novelist of Italian-Scottish parentage, educated in France She became known with the popular and melodramatic novel *A Romance of Two Worlds* (1886) Her other works, in purple and pretentious prose, include *Thelma* (1887), *Ardath* (1889), *Barabbas* (1893), *The Sorrows of Satan* (1895), and *The Secret Power* (1921) She was Queen Victoria's favorite novelist See biography by George Bullock (1940)

coreopsis (-ŏp′-) [Gr, = like a bug (of the seed)] or **tickseed,** names for plants of the genus *Coreopsis*, easily cultivated annuals or perennials with daisy-like heads of flowers in various colors—commonly yellow or variegated Many species grow wild in North America Garden kinds are sometimes called calliopsis

Corfe Castle (kôrf), village, Dorsetshire, England, in the Isle of Purbeck NW of Swanage It has ruins of a castle reputed to be the scene of the murder of Edward the Martyr by Ælfrida, his stepmother, in 978 In 1643, under Lady Bankes, the castle withstood a long siege by the parliamentarians who later took it

Corfu (kôr′fōō, fū), Gr *Kerkyra* (kĕr′kēra), Latin *Corcyra*, island (229 sq mi, pop 106,593), off W Greece, in the Ionian Sea, the second largest of the Ionian Islands It is separated by a narrow channel from the Albanian and Greek coast Though rising to c 3,000 ft at Mt Pantokrator in the northeast, Corfu is largely a fertile lowland producing olive oil, wine, and fruit Livestock raising (poultry, hogs, and sheep) and fishing are important sources of livelihood The main industries are centered in the capital, also called Corfu The island has been identified with Scheria, the island of the Phaeacians in Homer's *Odyssey* Settled (8th cent B C) by Corinthian colonists, Corcyra shared with Corinth in the foundation of Epidamnus (see DURAZZO) on the mainland, but became the competitor of Corinth in the Adriatic Sea In 435 B C it made war on Corinth over the control of Epidamnus, and in 433 it concluded an alliance (often renewed) with Athens, this alliance helped to precipitate (431) the PELOPONNESIAN WAR In 229 B C, Corfu passed under Roman rule It was seized several times from the Byzantines by the Normans under ROBERT GUISCARD and his successors and by the Venetians, who in 1386 obtained a hold that ended only with the fall of the Venetian republic in 1797 Sharing the subsequent history of the IONIAN ISLANDS, Corfu passed to Greece in 1863 It was occupied (1916) by the French in the First World War, and the Serbian army was evacuated here In 1917 the union of Serbia, Croatia, and Slovenia (see YUGOSLAVIA) was concluded here Corfu became the object of an international incident in 1923 Several Italian officers belonging to a commission that was to delimit the Greek-Albanian boundary were slain on Greek soil, an Italian ultimatum was rejected by the Greek government, and Italy bombarded and occupied Corfu The League of Nations turned the matter over to the council of ambassadors in Paris, which persuaded Italy to evacuate Corfu and the Greek government to apologize for the murder of the Italians In the Second World War, Corfu was again bombed and occupied by the Italians

Corfu, Gr *Kerkyra*, Latin *Corcyra*, city (pop 33,777), on Corfu, capital and largest city of the island, a port on the channel separating the island from the mainland It exports olive oil, grain, wine, and citrus fruit and manufactures olive oil, soap, and paraffin Corfu, which dates from the 8th cent B C, is an important commercial center, a tourist resort, and the see of a Greek Orthodox archbishop and of a Roman Catholic bishop Not far from the city is the Achilleion, a palace built for Empress Elizabeth of Austria and later bought by William II of Germany

Cori, Carl Ferdinand (kō′rē), 1896–, and his wife, **Gerty Theresa** (**Radnitz**) **Cori,** 1896–, American biochemists They were both born in Czechoslovakia and received M D degrees (1920) from the German Univ of Prague In 1920 they were married and in 1922 they came to the United States, where they later (1928) were naturalized Carl Cori became professor of pharmacology and biochemistry (1931) at the school of medicine at Washington Univ, St Louis, and Gerty Cori became professor of biological chemistry at the same institution (1947), with which she also had been associated from 1931 For their contributions to biochemistry, especially their research on carbohydrate metabolism and enzymes, the Coris shared with B A Houssay the 1947 Nobel Prize in Physiology and Medicine

coriander (kŏ′-), strong-smelling Old World annual herb (*Coriandrum sativum*), related to the carrot and cultivated for the fruits Dried coriander seed contains an aromatic oil used as a flavoring, as a medicine, and in liqueurs

Corinna (kurĭ′nŭ), fl. c 500 B.C., Greek poet of Tanagra. She was an older critic and competitor of Pindar, perhaps his teacher Her verse, fragments of which remain, dealt with mythological themes and was written in Boeotian dialect.

Corinna, town (pop 1,515), S Maine, NNE of Pittsfield, inc 1816 It manufactures woolen goods and lumber products

Corinth, Lovis (lō′vēs kō′rĭnt), 1858–1925, German postimpressionist painter. He succeeded Max Liebermann as president of the Berlin secessionists Corinth painted many fine landscapes and still lifes and is noted for his excellent portraits, including those of Liebermann, Graf Keyserling, Konrad Ansorge, and a self-portrait

Corinth (kŏ′rĭnth), Gr *Korinthos*, city (pop 12,715), Greece, in the NE Peloponnesus, a port on the Gulf of Corinth It trades in currants (named after the city), silk, citrus fruit, and olive oil Founded in 1858 after the destruction of Old Corinth by an earthquake, it was rebuilt after another earthquake in 1928 It formerly was known as New Corinth Old Corinth, 3 mi SW of modern Corinth, is now a village (pop 1,473) Strategically situated on the Isthmus of Corinth and protected by the ACROCORINTHUS, it was one of the oldest, most powerful, and wealthiest cities of ancient Greece and a great intellectual center A town of the Dorians, it existed as early as Homeric times In the 7th cent B C, under the tyrants Cypselus, his son PERIANDER, and their successors, it became a flourishing maritime power Syracuse, Corfu, Potidaea, and Apollonia were among its colonies The natural rival of Athens, Corinth was traditionally allied with Sparta Athenian assistance to the rebellious Corinthian colonies was a direct cause of the PELOPONNESIAN WAR After the battle of Chaeronea (338 B C) Corinth had a strong Macedonian garrison It became (224 B C) a leading member of the ACHAEAN LEAGUE and in 146 B C was destroyed by the victorious Romans Julius Caesar restored it and also reestablished the ISTHMIAN GAMES Early in the 13th cent, Corinth was conquered by Geoffroi de Villehardouin as a sequel to the Fourth Crusade It was held by various Latin princes, was taken by the Turks in 1458, and in 1687 was seized by Venice, which again lost it to the Turks in 1714 In 1822 it was taken by the Greek insurgents Ancient ruins at Old Corinth include the market place, fountains, the temple of Apollo, and a Roman amphitheater

Corinth. 1 City (pop 7,818), co seat of Alcorn co, extreme NE Miss, near the Tenn line, in a live-stock and farm area, founded c 1855 It has dairy, cottonseed, and textile plants In the Civil War, Corinth was a strategic railroad center, abandoned to Gen H W Halleck's Union army in May, 1862 after the battle of SHILOH General Rosecrans repulsed the Confederates under Generals Van Dorn and Sterling Price here, Oct 3–4, 1862 **2** Village (pop 3,054), E N Y, on the Hudson and N of Saratoga Springs, inc 1886 Clothing is produced

Corinth, Gulf of, inlet of the Ionian Sea, 80 mi long and 3 to 20 mi wide, between central Greece in the north, the Peloponnesus in the south, and the Isthmus of Corinth in the east It is connected by the Corinth Canal, (which pierces the isthmus) with the Saronic Gulf and through Rion Strait (formerly known as the Strait of Lepanto) with the Gulf of Patras Corinth lies on a bay in the southeastern part of the gulf

Corinth, Isthmus of, 20 mi long and from 4 to 8 mi wide, connecting central Greece with the Peloponnesus It is crossed by the ancient Isthmian Wall, which was repeatedly restored by Byzantine emperors to defend the Peloponnesus Near the eastern end of the wall there are ruins, including those of a temple to Poseidon Here the ISTHMIAN GAMES were held Parallel to the wall runs the Corinth Canal, built in 1881–93, which was damaged in the Second World War.

Corinthian order, most ornate of the orders of architecture It was also the latest, not arriving at full development until the middle of the 4th cent B C The Greeks made small use of it, though several isolated capitals have been found, the chief example is the circular structure at Athens known as the choragic monument of Lysicrates (c 335 B C) The temple of Zeus at Athens (started in the 2d cent. B C and completed by Emperor Hadrian in the 2d cent A D) was perhaps the first great Corinthian temple The Greek Corinthian, aside from its distinctive cap, is similar to the Ionic (see IONIC ORDER), but the column is somewhat more slender The capital, which may have been devised as suitable for circular structures, is of uncertain origin Callimachus is the legendary originator of the design, the delicate foliated details make plausible an original in metal workmanship The Romans used the Corinthian in countless monumental works of imperial architecture. They gave it a special base, modillions and carved additions to the cornice, and numerous cap variations with sculptured floral leafage and human and animal figures. Of the special types, a fine example is the cap of the round temple of Vesta at Tivoli (1st cent B.C.). The prevailing form of Roman Corinthian is seen in the Pantheon and the Maison

Carrée, and it was embodied in the order as later systematised by the Italian writers of the Renaissance (e g , Vignola) At the base of this cap, shaped like an inverted bell, are 16 ACANTHUS leaves, eight of which rise to form an upper row. Between the upper leaves eight volutes spring and meet in pairs beneath the four corners of the abacus to support its overhang, while, from the same points, spring smaller volutes which combine together with a rosette or other ornament beneath the four center points of the abacus The abacus itself differs from that of the other orders in having concave faces and chamfered corners The Renaissance sculptors and metalworkers, especially in Italy, France, and Spain, found the Corinthian capital a medium for their full virtuosity The volutes became either mere light scrolls or were replaced by birds, rams' heads, or grotesque figures. The Composite order, so christened by the 16th-century codifiers, is actually but a variation of the Corinthian, devised by the Romans as early as the 1st cent A D , by forming a capital in which were combined Corinthian foliage and the volutes and echinus of the four-cornered type of Ionic

Corinthians (kûrĭn'thēənz), epistles of the New Testament, occupying the seventh and the eighth place in the usual order They were written to the church at Corinth by St PAUL First Corinthians, written probably at Ephesus early in A D 55, is one of the longest and most important epistles The first main part (1 10–4 21) attacks factionalism at Corinth, giving as its remedy the mystery of the Cross (1 18–3.4) and showing the true nature of Christian ministry (3 5–4 5) St Paul then takes up several irregularities—incest (5), litigation (6 1–11), and sensuality (6 12–20) After answers to questions on the married state and celibacy (7) and on the scandal involved in eating meat previously offered in pagan sacrifices (8, 10 14–11 1), there is a digression on freedom and how a Christian uses it (9–10 3) The rest of the epistle contains five famous passages the institution of the Eucharist (11 17–34), the doctrine of the mystical body of Christ, i e , Christian believers conceived as a unity (12), an eloquent panegyric on Christian love (13), the functions of prophecy among Christians (14), and a splendid chapter on Christ's resurrection and that of men dependent thereon (15) The epistle closes with a discussion of plans (16) Second Corinthians is shorter, it was written perhaps within a year of the other Its burden is Paul's apostleship, his authority, and his motives After particulars of his relations with the Corinthians (1 15–2 17), there follow statements about the Christian ministry (3–4 6) and about Paul's motives rooted in personal union with Jesus (4 7–6 10), these lead to an exhortation (6 11–7 16) A digression (8–9) follows about collection of alms for poor Christians of Jerusalem The last portion of the epistle contains a magnificent defense of the apostle's mission, citing his authority (10) and recounting his behavior (11–12 13) The announcement of an impending visit of the apostle to Corinth ends the book Many critics consider this—on internal evidence—to represent the accidental combination of two letters, the last four chapters being then separate from the rest See C J Callan, O P , *The Epistles of St Paul*, Vol I (1922), James Moffatt, *The First Epistle of Paul to the Corinthians* (1938)

Corinto (kôrēn'tō), city (1946 estimated pop 5,581), NW Nicaragua, a port on the Pacific A railroad terminus, Corinto handles about 70 percent of Nicaragua's exports of coffee, sugar, hides, and woods. Here U S marines landed in 1912

Coriolanus (Gnaeus Marcius Coriolanus) (kō"rēōlā'nus), legendary Roman patrician He is said to have derived his name from the capture of the Volscian city Corioli The story has it that he was expelled from Rome because he demanded the abolition of the people's tribunate in return for distributing state grain to the starving plebeians He joined the Volscians and led (491? B C) them in an attack on Rome Only the tears of his wife and his mother caused him to spare the city The angry and frustrated Volscians put him to death Plutarch tells the story, and Shakspere's *Coriolanus* is based on Plutarch.

Cork, Richard Boyle, 1st earl of: see BOYLE, RICHARD.

Cork [Irish,=swamp], maritime county (2,881 sq. mi , pop 343,668), S Ireland, in Munster prov. The capital is Cork Largest and southernmost of the Irish counties, it has a rocky and much-indented coast line (Bantry Bay and Clonakilty Bay and Kinsale, Youghal, and Cork harbors) The interior is varied, with wild rugged mountains rising as high as 2,000 ft. and fertile valleys (notably of the Blackwater, the Lee, and the Bandon) Farming, fishing, and dairying are the main occupations There are some coal deposits, and marble is quarried Manufacturing (textiles, whisky, and leather goods) is mostly centered around the city of Cork Near-by Cóbh is an important transatlantic harbor Cork was organized as a county by its English invaders early in the 13th cent , but it long resisted English influence. There are prehistoric remains (dolmens and stone circles) and ruins of medieval abbeys and churches.

Cork, county borough (pop 75, 361), county town of Co. Cork, Ireland, on the Lee river near its mouth on Cork Harbour The oldest part of the town is on an island between the north and south branches of the Lee, now crossed by numerous bridges St Finbar is supposed to have founded an abbey here early in the 7th cent In the 9th cent the Danes occupied Cork and walled it Diarmuid MacCarthy ousted the Danes and in 1172 swore allegiance to Henry II Oliver Cromwell occupied it in 1649, and Marlborough in 1690. Many public buildings were destroyed in the disturbances of 1920, and the lord mayor was murdered by the constabulary Terence MacSwiney succeeded him The entrance to the harbor is fortified, Cóbh (formerly Queenstown) and Passage, on the estuary shores, are important ports, Cóbh especially for transatlantic ships Spike Island and Haulbowline Island serve as military and naval depots In 1938 Spike Island was transferred to Ireland by an agreement with Great Britain Exports are largely of farm produce (dairy products, grain, livestock), cloth, and fish Leather goods, cotton and woolen goods, flour, and whisky are manufactured Educational institutions include University College (constituent of the National Univ of Ireland) and schools of science, art, and agriculture The Protestant cathedral (designed by William Burges), the Catholic cathedral, the Church of St Ann's, Shandon, and the Carnegie library are noteworthy There is a racecourse near the city, and the first yacht club in the world was established here in 1720 (headquarters are at Cóbh)

cork oak, evergreen species of OAK (*Quercus suber*), native to the Mediterranean region, where most of the world's commercial supply is obtained It is also cultivated elsewhere because of its ornamental and economic value The bark, or cork, is thick, light, and elastic It is made into bottle stoppers, insulating material, life preservers, shoe soles, cigarette tips, linoleum, and a myriad of household and industrial articles Cork can be harvested about every 10 years from the time the tree is around 20 years old California is growing young cork oaks with the hope of beginning a new industry there There is a cork layer in all trees but it is not as extensive as in the cork oak

corkwood see BALSA.

Corliss, George Henry, 1817–88, American inventor, b Washington co , N Y He invented and patented a sewing machine which antedated that of Elias Howe In 1844 he moved to Providence, R I , where he began to build engines for New England textile mills In 1856 he formed the Corliss Steam Engine Company, he became an international authority on steam engines, for which he designed numerous improvements, including the valve gear and the automatic cutoff

corm, short, thickened underground stem A corm grows upright, producing buds at the upper nodes and roots from the lower surface The scaly covering found around many corms consists of the remains of leaves or leaf bases The crocus and the gladiolus form corms, which are often inaccurately called bulbs

Cormac mac Cuilenan (kôr'măk mukŭ'lûnûn), 836–908, bishop of Cashel and king of Munster in Ireland He was author of the *Glossary of Cormac*, a prime source for Irish antiquity Cormac was killed fighting for the high kingship

Cormenin, Louis Marie de la Haye, vicomte de (lwē' mārē' du la ă' vēkôt' du kôrmunē'), 1788–1868, French jurist and pamphleteer He wrote polemics, signed Timon, against the government of Louis Philippe and tracts in defense of religious liberty His works include the compilation *Droit administratif* (1822), *Le Livre des orateurs* (1836), and *Entretiens de village* (1846)

cormorant (kôr'murŭnt), large aquatic bird related to the gannet and the pelican and found chiefly in temperate and tropical regions, usually on the sea but also on inland waters Cormorants are 2 to 3 ft long, with thick, generally dark plumage and green eyes The feet are webbed, and the bill is long with the upper mandible terminally hooked Expert swimmers, cormorants pursue fish underwater In the Orient they are used by fishermen who collar the leashed birds to prevent them from swallowing the catch The double-crested cormorant of the eastern Atlantic coast and Brandt's cormorant of the Pacific coast are common forms. The glossy black European cormorant is widely distributed in the Northern Hemisphere A South American cormorant is a source of guano

corn, in agriculture The name corn is given to the leading cereal crop of a region In England, corn means WHEAT, in Scotland and Ireland, OATS The grain called corn in America is Indian corn, or maize (*Zea mays*) The plant is a grass that was domesticated and cultivated in America long before white men reached the New World It is so changed from the ancestral wild grass that this has not been identified with certainty, and it has been so adapted to cultivation that it never reverts to a wild state, it requires the care of man The Indians had many varieties of corn, e g , sweet corn, popcorn, and corn for corn meal, the last with strains for short seasons and for long seasons. White, yellow, red, and blue corn were grown as distinct strains. The corn varieties grown today differ from many of the Indian strains from which they were evolved in their higher yield and increased sugar and lowered starch content. Corn has been introduced from America into other parts of the world. In the United States it is the leading grain crop. It is used for human food and is made into starch, sugar, and many other products, but its chief use is as food for animals, the grain for horses, hogs, and fowl, the fodder for cattle The part of the United States where most of the corn is grown, including the states of Illinois, Indiana, Iowa, Kansas, Missouri, Nebraska, and Ohio, is known as the Corn Belt See E G Montgomery, *Productive Farm Crops* (5th ed , 1938), Dorothy Giles, *Singing Valleys the Story of Corn* (1940), A R Crabb, *The Hybrid-Corn Makers* (1947), publications of the U S Dept of Agriculture

corn, in medicine, horny tubercle of the skin, resulting from friction and pressure It is a cone-shaped mass which extends into the tissues and causes pain when it presses on sensory nerve filaments Corns are common on the foot, especially over the joints of the toes and on the sole beneath the transverse arch Treatment consists of removing the cause of friction and pressure, e g , ill-fitting shoes, the corn may be removed by salicylic acid preparations. Soft corns between the toes may lead to painful inflammation

Cornaro, Caterina (katārē'na kôrna'rō), 1454–1510, queen of Cyprus A celebrated Venetian beauty, she was married in 1472 to James II of Cyprus, who was eager to secure the support of the republic; Venice was in turn interested in intervening on the island James II died in 1473, and his infant son, James III, in 1474 Caterina reigned amidst diplomatic intrigue and hostilities of native anti-Venetian factions until she was recalled (1489) to Venice, which openly took the island Caterina retired to Asolo, where she held a small but brilliant court A famous portrait of her by Titian is in the Uffizi

Cornaro, Luigi or **Ludovico** (lwē'jē, lōdōvē'kō), 1467–1566, Venetian nobleman, advocate of temperance in diet In middle age, after several severe illnesses, he gave up all reliance upon medicine and began to study his own constitutional needs, especially as to diet, regaining his health as a result. He published in 1558 *Discorsi della vita sobria*, a group of treatises on the advantages of a temperate life often reissued and translated.

Corn Belt, term applied to that part of the United States whose soil and climate are best suited to the production of CORN and corn-fed livestock, particularly hogs The region more or less corresponds to the western part of the Midwest, its heart is in Illinois and Iowa Indiana and Missouri are always included in the varying usage of the term

corn borer or **European corn borer,** small moth which in the larval stage is a serious pest of corn It is believed to have been transported to the United States c 1910 in some shipments of broomcorn from S Europe It was discovered near Boston in 1917 In some regions there is one brood a season, in others two When mature, the larva is about an inch long, with a pinkish body and a brown head It bores into any part of the corn plant and often attacks other plants, such as the dahlia and gladiolus and large-stemmed weeds Methods of control include destruction of infected plants, dusting with rotenone or nicotine, quarantine, importation and breeding of natural enemies, and the developing of resistant corn See *Strains of European Corn Borer in the United States* (U S Dept of Agriculture, Technical Bul 869)

Cornbury, Edward Hyde, Viscount, 1661–1723, colonial governor of New York and New Jersey (1702 8) He deserted the army of James II and ingratiated himself with William of Orange (William III) Appointed governor by William, he became extremely unpopular, and his administration was a period of turmoil in both provinces After his removal, he was imprisoned for debt in New York, but upon becoming 3d earl of Clarendon in 1709 he was able to free himself and return to England See Herbert L Osgood, *The American Colonies in the Eighteenth Century*, Vol II (1924)

Corneille, Pierre (pyĕr' kôrnā'yu), 1606–84, French dramatist, ranking with RACINE as a master of classical tragedy, b Rouen Educated by the Jesuits, he practiced law briefly and moved to Paris from Normandy after the favorable reception of his first play, *Mélite* (1629), a comedy His first tragedy, *Médée* (1635), was followed by *Le Cid* (1637), a masterpiece of French drama It is a romantic love story based on a Spanish play about the CID The play took Paris by storm and "beautiful as the *Cid*" passed into French proverb Its success did not prevent the newly founded French Academy from having CHAPELAIN attack the play as faulty of construction and plagiaristic The *Cid* controversy was effective in forcing Corneille to adhere thereafter to rigid classical rules, which cramped his genius Of the score of tragedies that followed, the greatest are undoubtedly *Horace* (1640), *Cinna* (1640), and *Polyeucte* (1643) His comedy *Le Menteur* (1643) was also successful.

Corneille's tragic style exalts the will at the expense of the emotions; and the expression "Cornelian man," applied to a person who sternly subordinates passion to duty, recalls any hero of Corneille. At its best Corneille's style rises to almost unsurpassed dignity and grandeur, but in his last plays he fell into monotonous and unreal declamation Corneille's last years were embittered by the rise of Racine, who replaced him in popular favor in 1660 Most of Corneille's plays have been translated into English. See the standard F P G Guizot, *Corneille and His Times* (1855), L H Vincent, *Corneille* (1901); J B Segall, *Corneille and the Spanish Drama* (1902)

cornel · see DUNCBERRY and DOGWOOD.

Cornelia, fl 2d cent B C , Roman matron; daughter of Scipio Africanus Major She was the wife of Ti Sempronius Gracchus and mother of the Gracchi She refused to remarry after her husband's death, devoting herself to her children, whom she educated well and inspired with a sense of civic duty and a desire for glory When a wealthy patrician lady spoke of her jewels, Cornelia pointed to her two sons, saying, "These are my jewels!" Whether she supported the revolutionary tendencies of her sons or tempered them is a matter of debate

Cornelia, city (pop 1,808), NE Ga , NE of Atlanta, in the Blue Ridge foothills; inc 1887 It is a trade center of the apple-growing region Near by are Piedmont College (at Demorest) and a state tuberculosis sanatorium

cornelian · see CARNELIAN

cornelian cherry: see DOGWOOD

Cornelius, centurion of an Italian cohort stationed at Caesarea, one of the first Gentile converts and traditionally first bishop of Caesarea Acts 10

Cornelius, Peter (pā'tûr kôrnā'lēôs), 1824–74, German composer and poet, nephew of the painter Peter von Cornelius, friend and follower of Liszt and Wagner. He wrote music criticism, songs, and poetry but is best known for his operas *Der Cid* (Weimar, 1865) and *Der Barbier von Bagdad* (1858)

Cornelius, Peter von, 1783–1867, German painter He studied at Düsseldorf and in Rome, where he joined the German Nazarene group and collaborated with other members in the decoration of the Casa Bartholdy In 1820 he was commissioned by Louis I of Bavaria to paint the fresco decorations in the Glyptothek, Munich He was director successively of the Düsseldorf and Munich academies and contributed much to the later rebirth of German art in the 20th cent Cornelius revived the art of fresco painting and was a sincere and able craftsman. His masterpiece, *The Last Judgment*, was one of his fresco decorations for the Ludwigskirche, Munich His favorite themes were religious or philosophical. His oils are less successful than his frescoes In addition to his painting, Cornelius produced notable illustrations for *Faust* and the *Nibelungenlied* and designs for the decoration of the royal mausoleum, done for Frederick William II of Prussia.

Cornelius, cotton-mill town (pop 1,195), W central N.C., N of Charlotte, settled 1880, inc 1905.

Cornelius Nepos: see NEPOS, CORNELIUS

Cornell, Alonzo B. (kôrnĕl'), 1832–1904, American businessman and politician, b Ithaca, N Y He was educated at Ithaca Academy Cornell was a director (1868–99) and vice president (1870–76) of the Western Union Telegraph Company, founded by his father, Ezra Cornell A supporter of Senator Roscoe CONKLING, he was surveyor of customs (1869–73) at the port of New York, chairman (1870–78) of the Republican state central committee, and speaker (1873) of the New York assembly President U S Grant, just before leaving office, appointed him naval officer in the New York customhouse, but President Rutherford B Hayes brought pressure upon him to resign because of his official party connection Cornell refused, and though strongly supported by Conkling, he and Chester A Arthur, the collector, were removed in 1878 Cornell was promptly chosen governor of New York for the term 1880–83. He modernized the state finances, made good appointments, and vetoed much extravagant legislation. By not taking sides in the patronage fight between President James A Garfield and Conkling in 1881, he contributed to Conkling's defeat in the legislature and was himself defeated for renomination as governor He wrote a biography of his father (1884). See his public papers (3 vols., 1880–82)

Cornell, Ezra, 1807–74, American capitalist and founder of CORNELL UNIVERSITY, b Westchester Landing, N Y. Cornell, who began life as a laborer, was of an ingenious mechanical bent and had a shrewd business mind. He aided in constructing the telegraph line between Baltimore and Washington over which Samuel F. B. Morse sent the first test message Having devised the method of stringing wires on poles, he threw himself into line construction in the East and the Middle West. He was a founder, director, and for a time largest stockholder of the Western Union Telegraph Company, which was formed in 1855 to end cutthroat competition in the field His interest in agricultural education led to his association in the New York senate with Andrew D. WHITE, and together they mapped and secured legislation for founding at Ithaca, N.Y. (Cornell's home since 1828), Cornell UNIV., with a charter embracing many of Cornell's ideas. He made many gifts to the university, including an initial $500,000, and was responsible for the successful financial returns on the university's Federal land grant. See biography by his son, Alonzo B. Cornell (1884); *Autobiography of Andrew D. White*, Vol. I (1905).

Cornell, Katharine, 1898–, American actress, b Berlin, Germany She made her debut (1916) with the Washington Square Players in *Bushido* and later, playing in stock companies, appeared in such plays as *Fanny's First Play*, *Captain Kidd, Jr.*, and *Lilac Time*. Her other successes include *A Bill of Divorcement*, *The Green Hat*, *The Letter*, the very popular *Barretts of Wimpole Street*, *Candida*, *The Three Sisters*, *Antigone*, and *Antony and Cleopatra*. See her autobiography, *I Wanted to Be an Actress* (1939)

Cornell, village (pop 1,759), central Wis , on the Chippewa and NE of Chippewa Falls; inc. 1913.

Cornell College · see MOUNT VERNON, Iowa.

Cornell University, mainly at Ithaca, N Y.; nonsectarian, with land-grant, state, and private support, coeducational, chartered 1865, opened 1868 It was named for Ezra CORNELL. The university has colleges of architecture, arts and sciences, engineering, and medicine (in New York city, part of the New York Hospital medical center); schools of law, nutrition, and business administration, and New York state colleges of agriculture (with an experiment station, extension service, and short courses) and schools of industrial and labor relations, home economics, and veterinary medicine There are an aeronautical laboratory (at Buffalo), an archaeology museum, a paleontological research institution, a herbarium, an observatory, a U S weather bureau, an arboretum, a veterinary museum, and a university press. The library has unusual collections of materials on Dante, Petrarch, law, technology, agriculture, China, and Iceland. Andrew D WHITE and Jacob G SCHURMAN were famous presidents.

corner, the securing of all or nearly all the supply of any commodity or stock so that buyers are forced to pay exorbitant prices In stock exchanges, corners are made possible by the practice of short selling stocks and commodities on MARGIN Corners may be planned deliberately or may be brought about unintentionally, as through a fight for the control of a corporation in which two or more groups seek to buy a controlling interest in its stock. In the first type the operator acquires control of the particular commodity or shares and then induces operators to promise to sell the commodity or stock by raising the market price to an apparently unwarranted level. The cornerer purchases these promises to sell. When the cornerer thinks he can make the biggest profit, he withdraws all his shares from the market, and those who have promised to sell find themselves "cornered" and have to buy from the cornerer at his own price in order to fulfill their contracts The cornerer sets the price just low enough to keep the dealers from repudiating their contracts To be successful, cornerers must have enough money to buy the necessary amount of shares or commodity The Bible describes Joseph's corner of the grain in Egypt Lysias condemned a similar corner on grain in the Athens of his day Famous deliberate corners were those of Jim Fisk and Jay Gould of the gold supply of the United States in 1869 (frustrated by the Federal government's placing its gold on sale) and the Joseph Leiter wheat corner of 1898 (frustrated by refusal of consumers to buy and an unusually large new crop). Notable illustrations of the unintentional corner were those on the stock of the Northern Pacific Railway in 1901, Stutz Motors in 1920, and Piggly Wiggly Stores in 1923. Various agencies are seeking to prevent corners In 1913 the Supreme Court declared that a corner in any commodity that enters into general use or into interstate trade amounts to a restraint of trade and is therefore a criminal offense under the Sherman Anti-Trust Act Certain states have made corners illegal, and laws of other states allow repudiation of contracts in the event of a corner Exchanges try to prevent corners and may fix a reasonable settlement price, though this is hard to determine. See S. S. Huebner, *The Stock Market* (1922).

Corner Brook, town (pop. 3,196), W N F , on the Bay of Islands. It has large paper mills. Corner Brook West has a population of 5,439

cornet (kôrnĕt') **or cornet-à-pistons** (-ä-pēstôN'), [Fr , =horn, horn with pistons], brass wind musical instrument, originally regarded as belonging to the family of the French horn, hence its name. It is now regarded as a TRUMPET. It was invented in France in the early 19th cent. and quickly became universally popular Berlioz described its tone as less noble than the horn and less lofty than the trumpet; nevertheless he used it in his instrumentation. It has often been described as coarse or vulgar, owing more to the style of playing than to the instrument itself. Shorter, easier to play, and more flexible than the trumpet, it has most often been used in military and dance bands. It should not be confused with the *cornett*, an instrument of the bugle family, of medieval origin, which was used as late as the time of Gluck.

cornflower, garden flower in America but a weed in the grainfields of Europe. It is called bluebottle or bluet in England and bluebonnet in Scotland, in North America the cornflower shares with other plants the names ragged robin, bachelor's-button, or ragged sailor The long-stemmed blue heads of the flowers, having radiating bottle- or vase-shaped florets, yield a juice which, mixed with alum, has been used as a dye. The cornflower is a hardy annual that will reseed itself, often escaping from cultivation. There are also forms in different colors and dwarf varieties useful for rock gardens. The cornflower is known botanically as *Centaurea cyanus*, but should not be confused with the centaury

cornice (kôr'nĭs), the molded or decorated projection which forms the crowning feature at the top of a building wall or other architectural motive; specifically, the uppermost of the three principal members of the classic entablature, hence by extension any similar crowning and projecting element in the decorative arts. The cornice undoubtedly had its origin in the primitive eaves projection the Greek Doric and Ionic cornices recall early wooden roof forms, and the Egyptian cavetto-and-fillet cornice is a derivation of the overhanging papyrus stalks which formed the eaves of primitive shelters The cornice early lost its structural significance and became a stylized decorative element, in the Greek and Roman eras it assumed firmly standardized forms in the classic orders which have been retained, with variations, through the Renaissance and later periods As an element in the classic entablature the cornice is composed of the cymatium, or crown molding, above the corona, the projecting flat member which casts the principal shadow, in this shadow, and supporting the corona, are a group of moldings called the bed molds, which may be elaborated with dentils. The Corinthian and Composite cornices are further embellished with modillions, or brackets, under the corona, the soffit of the Doric corona is decorated with square flat projections called mutules, having guttae, or small knobs, depending from their lower surfaces

Corning, James Leonard, 1855–1923, American physician and neurologist, b Stamford, Conn , studied at Heidelberg and Würzburg In 1885 he reported his method of inducing anesthesia by injection of the drug through the spinal route August Bier later used this method His works include treatises on hysteria, epilepsy, and pain

Corning. 1 City (pop 1,619), a co seat of Clay co , NE Ark , near the Mo line Billiard tables are made here **2** City (pop. 1,472), N Calif , NNW of Sacramento, inc 1907 It is the processing and shipping center of an extensive olive-growing region **3** City (pop 2,162), co. seat of Adams co , SW Iowa, WSW of Creston, in a farm, livestock, and dairy area; platted 1855, inc 1871 An Icarian communist settlement was here from 1858 to 1898 (see CABET, ÉTIENNE). **4** City (pop 16,212), S N Y , NW of Elmira and on the Chemung, in a dairy area, settled 1788, inc as a village 1848, as a city 1890. The glass industry, for which the city is famous, began in 1868. The research laboratory of the Corning Glass Works has invented various kinds of glass, it made the 200-inch telescope mirror for Mt Palomar (Calif) Observatory **5** Village (pop. 1,433), SE central Ohio, S of Zanesville

Cornish, Vaughan, 1862–1948, English geographer His work dealt mainly with geography in its relation to military strategy, with the action of waves and tides, and with the preservation of natural scenery. His books include *Great Capitals* (1923), *The Poetic Impression of Natural Scenery* (1931), *Ocean Waves and Kindred Geophysical Phenomena* (1934), and *Photography of Scenery* (1946).

Cornish, rural town (pop 790), SW N H , near the Connecticut R of Claremont; inc 1763. It is a resort and an art colony Augustus Saint-Gaudens became a summer resident in 1885; his estate, "Aspet," is a memorial Salmon P. Chase was born here See W H Child, *History of the Town of Cornish, New Hampshire* (1910)

Cornish, language belonging to the Brythonic group of the Celtic subfamily of Indo-European languages. See LANGUAGE (table)

Cornish literature. The literature of the Celtic language of Cornwall, which disappeared before 1800, consists mainly of a few miracle plays, mostly of the 15th cent They are usually on biblical subjects, with the exception of the *Life of St. Meriasek* Their resemblance to the Breton play is very close See studies and translations by Henry Jenner (1904), Edwin Norris (1859), and Whitley Stokes (1854)

Corn Islands, two islands, Great Corn and Little Corn, off E Nicaragua, opposite Bluefields. They were leased (1916) to the United States by the Bryan-Chamorro Treaty concerning the NICARAGUA CANAL

corn laws, regulations restricting the export or import of grain, particularly in England. As early as 1361 export was forbidden in order to keep grain

cheap. Subsequent laws, numerous and complex, either forbade export unless the price was very low, or import unless it was high. The most famous corn laws, in 1791 and 1815, employed this latter principle, in an effort to revive farming at a time when the INDUSTRIAL REVOLUTION was turning England toward manufacturing. Instead of arresting this trend, the corn laws made food expensive, arousing the resentment of both laborers and manufacturers Following a campaign by the Anti-Corn-Law League, they were repealed by Robert Peel in 1846, despite the opposition of conservatives led by Lord George Bentinck and Benjamin Disraeli See D. G Barnes, *A History of English Corn Laws from 1660 to 1846* (1930).

Corno, Monte, or **Corno Grande:** see GRAN SASSO D'ITALIA

Cornouaille (kôrnōō'), region, NW France, in Brittany, comprising parts of Finistère, Côtes-du-Nord, and Morbihan depts One of the counties of medieval Brittany, it had Quimper as its capital The name was brought by the Britons who fled Cornwall at the time of the Anglo-Saxon invasion (c 500). Many inhabitants still speak Breton.

Cornplanter, c 1740–1836, chief of the Seneca Indians The half-breed son of an Albany trader, he acquired great influence among the Seneca and in the American Revolution led war parties for the British against the patriot forces, particularly against Gen John Sullivan in New York He later favored friendship with the whites and signed the Treaty of Fort Stanwix (1784) He was given a grant of land on the Allegheny river, where he lived to a very old age His views were opposed by the energetic RED JACKET but supported by Handsome Lake (Cornplanter's half brother)

cornstarch, material made by pulverizing the ground, dried residue of the corn grains after the preparatory soaking and the removal of the embryo and the outer covering It is used as laundry starch, in the paper and tanning industries, and as a constituent of cosmetics, explosives, and adhesives DEXTRIN, corn syrup, and corn sugar are produced by the hydrolysis of cornstarch See STARCH

Cornu, Marie Alfred (mārē' älfrĕd' kôrnü'), 1841–1902, French physicist From 1867 he was professor at the École polytechnique, Paris He made accurate studies of the velocity of light and made contributions to acoustics, optics, and astronomy

cornucopia (kôr"nūkō'pēü) [Latin,=horn of plenty], in Greek religion, horn of the goat AMALTHAEA, which became full of anything the owner desired. Because Amalthaea's horn was filled with fruits and given to Zeus, the cornucopia is frequently pictured with fruits It is the symbol of plenty

Cornwall, Barry, pseud of **Bryan Waller Procter,** 1787–1874, English poet; friend of Lamb and Hazlitt His sentimental songs had considerable vogue in his lifetime His longer works include *Dramatic Scenes* (1819), *Mirandola* (1821), a tragedy, and *Charles Lamb a Memoir* (1866) Adelaide PROCTER was his daughter See biography by R W. Armour (1935) and autobiographical fragment ed. by Armour (1936).

Cornwall (kôrn'wôl, -wul), maritime county (1,365 sq mi ; 1931 pop 317,968, 1948 estimated pop. 331,641), extreme SW England The county town is Bodmin A peninsula bounded seaward by the English Channel and the Atlantic Ocean and landward by Devonshire, Cornwall ends in the west with the rugged promontory of Lands End The county includes the Scilly Isles, off the southwest tip of the county, famous for their export flower trade The region is a low-lying plateau, sloping from the rocky northern coast to the south and rising to its greatest height at Brown Willy (1,375 ft) in Bodmin Moor The principal rivers are the Tamar, which forms most of the Devonshire border, the Fowey, the Fal, and the Camel, in the beautiful river valleys are productive market and dairy farms. The uplands are used for sheep and cattle pasturage The climate is mild and moist, subtropical along the southern coast The history of the county has been distinct from that of the rest of England Cornish tin mines were known to ancient Greek traders (possibly to the Phoenicians) and have continued important as recently as the Second World War, when the old mines (mainly in the Camborne-Redruth district) were once more reworked The county long resisted Saxon penetration and Norman influence It was organized as a duchy in the 14th cent , rather than on the usual shire basis Cornwall was slow to accept the Reformation In the 16th cent 10,000 Cornishmen marched to defend the Roman church service The Cornish language, related to the Welsh and Breton tongues, did not die out until the 18th cent In the same century the Wesleyan dissent took a firm hold on Cornwall, which has remained predominantly Methodist until the present day. Cornwall's location has made it a great fishing center (pilchard, herring, and mackerel), and the county has produced many of Britain's finest sailors. The climate, the picturesque coastal towns (Penzance, Falmouth, and St. Ives), and the romance of Cornwall's past, interwoven with Arthurian legend and tales of piracy, have made the region popular with tourists. See Arthur Mee, *Cornwall* (1937).

Cornwall, manufacturing town (pop. 14,117), SE Ont., on the St. Lawrence and SE of Ottawa It is at the lower end of the Cornwall Canal, 11 mi long, with six locks, completed around the Long Sault rapids in 1843 and enlarged and deepened in 1902. A mixed farming and dairying region is tributary to the town The historical Indian village of St. Regis is across the river on the Quebec–New York boundary

Cornwall. 1 Town (pop 907), NW Conn , in the Litchfield Hills and bordered on the west by the Housatonic, settled 1738, inc. 1740 The town, with several acres of state park and forest, includes the hamlets of Cornwall (seat of Rumsey Hall school for boys on the site of Cornwall Mission School, operated from 1817 to 1827 for Hawaiians and Indians), Cornwall Center, West Cornwall, North Cornwall, Cornwall Hollow, and Cornwall Bridge Matthew Lyon was a resident of Cornwall 2 Resort and residential village (pop 1,978), SE N Y , on the Hudson below Newburgh, inc 1884. Cornwall is the seat of the New York Military Academy and two other boys' schools 3 Borough (pop 1,680), SE Pa , E of Harrisburg, inc 1926. The area has rich deposits of magnetite ore

Cornwallis, Charles Cornwallis, 1st **Marquess,** 1738–1805, British general, educated at Eton He was commissioned an ensign in 1756 in the British army and saw service in Europe in the Seven Years War As a member of Parliament, he opposed the tax measures which helped bring on the American Revolution When the war came, however, he placed himself at the king's service and was sent (1776) to America He served under Gen William Howe at the battle of Long Island, in the New Jersey campaigns, and at the battle of Brandywine, acquitting himself with credit in all the engagements In 1778 Cornwallis became second in command to Sir Henry Clinton, British commander in America Two years later Cornwallis began the fateful CAROLINA CAMPAIGN His major success against Horatio Gates was followed by less successful operations against Nathanael Greene, and this campaign led directly to the YORKTOWN CAMPAIGN and the major British defeat that in 1781 ended the fighting in the American Revolution Cornwallis was not held responsible for the disaster, but was made (1786) governor general of India There he reformed the civil service and the judiciary and distinguished himself in the campaigns for Mysore After he returned (1794) to England, he was once more given a high post, being sent as viceroy to Ireland He had nothing to do with bringing on the rebellion there of 1798, but as commander in chief of British forces he was stern in repressing it and in preparing for the Act of Union (1800) that instituted the unhappy experiment of uniting Irish government with the British Cornwallis was then commissioned British minister plenipotentiary and helped to draw up the Treaty of Amiens, which temporarily halted the wars with Napoleon I In 1805 he was again appointed governor general of India There was a great deal of trouble, and Cornwallis set out with his troops up the Ganges to suppress the anti-British forces He died on the way, at Ghazipur, where he is buried See his correspondence (ed by Charles Ross, 3 vols , 1859); Arthur Aspinall, *Cornwallis in Bengal* (1931)

Coro (kō'rō), port (pop 18,962), NW Venezuela, on an arm of the Gulf of Venezuela Founded in 1527, it became a base for Spanish exploration under German commanders, notably Federmann There are oil refineries on the Paraguaná peninsula to the north Here also goats are raised, and the skins, along with cattle, coffee, and hardwoods, are exported Near by are extensive coal fields

corolla (–rŏl'–) [Latin,=little crown], the part of a FLOWER, usually brightly colored, borne just within the CALYX The corolla may be united (as in the morning glory and snapdragon) or composed of separate parts, i e , petals (as in the rose), it is not always present The outer petals occasionally grade into the sepals (as in the white water lily), and the inner petals of some plants grade into the stamens (peony and white water lily) It is this tendency of stamens—when there are many—to become petal-like that often enables the horticulturist to develop double flowers. The corolla is usually evanescent, dropping before the fruit ripens, but it sometimes persists

Coromandel Coast (kŏrōmăn'dŭl), east coast of Madras state, India, from Point Calimere, opposite the northern tip of Ceylon, to the Kistna river. Inland it is bounded by the Eastern Ghats. The name probably derives from Cholomandalam, i e , country of the Cholas, a dynasty ruling from the 9th to the 12th cent The coast has the deltas of several rivers, notably the Godavari and the Cauvery, and is very fertile. Madras city is the only good harbor.

Corona (kûrō'nû), city (pop 8,764), S Calif , ESE of Los Angeles; inc. 1896 It is a shipping center for citrus fruits, with manufactures of orchard equipment

corona (kûrō'nû), luminous envelope surrounding the sun, outside the chromosphere, visible only at the time of totality during a total eclipse of the sun. It then appears as a halo of pearly-white light with an irregular outer edge, radiating from the sun's surface and contrasting with the dark lunar disk, which it borders It is divided into the inner corona, the ring of pale yellow light against which the crimson prominences are outlined, and the outer corona, the pearly-white halo which extends far out into space. Scientists are nearly in accord in believing that it consists of extremely fine particles of matter and that its luminosity results partly from sunlight reflected by them and partly from its own light. By means of the coronagraph, an instrument developed by Bernard Lyot c.1930, the corona can be studied and photographed in full daylight. The term *corona* is also applied to a ring of colored light about the sun or the moon, caused by the diffraction of light in a mist or dust-laden atmosphere

Coronado, Francisco Vásquez de (fränthŏs'kō väs'käth dā kōrōnä'dhō), c 1510–1554, Spanish explorer in the Southwest, b Salamanca He came to Mexico with Viceroy Antonio de Mendoza and was in 1538 made governor of Nueva Galicia The viceroy, dazzled by the report of Fray MARCOS DE NIZA about the great wealth of the Seven Cities of Cibola to the north, organized an elaborate expedition to explore by sea (see ALARCÓN, HERNANDO DE) and by land Coronado, made captain general, set out in 1540 from Culiacán, crossed modern Sonora and SE Arizona, and reached Cibola itself—the Zuni country of New Mexico He found neither splendor nor wealth in the Indian pueblos. Nevertheless he sent out his lieutenants Pedro de Tovar visited the Hopi villages in N Arizona, García Lopez de Cárdenas discovered the Grand Canyon, and Hernando de Alvarado struck out eastward and visited Acoma and the pueblos of the Rio Grande and the Pecos Alvarado came upon a Plains Indian nicknamed the Turk, who told fanciful tales of the wealthy kingdom of QUIVIRA to the east Coronado, still hopeful, spent a winter on the Rio Grande not far from modern Santa Fe, waged needless warfare with the Indians, then set out in 1541 to find the promised land of Quivira under the lying guidance of the Turk Just where the party went is not absolutely certain, but is generally thought they journeyed in the Texas Panhandle, reached Palo Duro Canyon (near Canyon, Texas), then turned N through Oklahoma and into Kansas They reached Quivira, which turned out to be no more than Indian villages (probably of the Wichita), innocently empty of gold and silver and jewels The Spanish turned back in disillusion and spent the winter of 1541–42 on the Rio Grande, then in 1542 left the northern country to go ingloriously back to Nueva Galicia into the terrors of the MIXTON WAR Coronado was in 1544 dismissed from his governorship and lived the rest of his life in peaceful eclipse in Mexico city Though he had found no cities of gold, no El Dorado, yet his expedition had acquainted the Spanish with the PUEBLO INDIANS and had opened the Southwest Subsidiary expeditions from Nueva Galicia to S Arizona and Lower California make the sweep of Coronado's achievement even more astonishing See F W Hodge and T Hays Lewis, eds , *Spanish Explorers in the Southern United States*, Vol II (1907), G P Hammond and E F Goad, *The Adventure of Don Francisco Vásques de Coronado* (1938), G. P Hammond and Agapito Rey, eds , *Narratives of the Coronado Expedition* (1940), A Grove Day, *Coronado's Quest* (1940); Herbert E Bolton, *Coronado on the Turquoise Trail* (1949)

Coronado (kō"runä'dō), city (1940 pop 6, 932, 1945 special census pop 25,382) S Calif , on a peninsula on the west side of San Diego Bay, inc 1890 The development of the aircraft industry and the augmented use of San Diego Bay during the Second World War account in part for the recent growth of the city Coronado has a magnificent beach and a fine airport

coronary thrombosis: see THROMBOSIS

coronation, the ceremony of crowning a sovereign on his accession to the throne Its origins are of great antiquity, and the ritual is usually of some religious as well as political signification, as is evidenced in the custom, still followed in England, of anointing the sovereign with oil, a rite probably of biblical derivation In England the pageantry of the coronation is still that of medieval times Since 1066, English kings and queens have been crowned in Westminster Abbey The kings of Scotland were crowned at Scone on the **Coronation Stone, which** was brought to Westminster in 1296 by Edward I and now forms part of the coronation chair. According to tradition it was the "pillow" Jacob used at Bethel and was long the Lia Fail, or Stone of Destiny, of early Irish kings, before it was taken to Scotland

Coronea (kŏrōnē'ù), town of ancient Greece, in Boeotia, ENE of Thebes It was an important point on the road and was the scene of two great battles In 447 B C the Athenians were here defeated by the Thebans, and in 394 B.C. AGESILAUS II of Sparta here won a hollow victory over the Thebans and their allies.

Coronel (kōrōnĕl'), city (pop. 14,799), S central Chile, a Pacific port 17 mi. S of Concepción. With

a good harbor and near-by coal mines, it is the major coaling station on the coast Off Coronel on Nov. 1, 1914, in the First World War, Admiral Graf von Spee with four ships defeated four British ships under Admiral Sir Christopher Cradock Two British vessels were sunk The German triumph was offset later by the battle of the Falklands

coroner (kŏ'rŭnŭr), judicial officer charged with investigating deaths occurring through violence or under suspicious circumstances The office has been traced to the late 12th cent Originally the coroner's duties were primarily to maintain records of criminal justice and to take custody of all royal property In England this second function persists in his jurisdiction over TREASURE-TROVE In his present-day work of determining the cause of deaths, the coroner proceeds by means of the INQUEST whenever there is doubt In several American states the medical examiner has been substituted for the coroner and works in cooperation with the public prosecutor

coronet (kŏ'runĕt, kŏrunĕt'), head attire of a noble of high rank, worn on state occasions It is inferior to the crown British peers wear their coronets at the coronation of their sovereign The coronet of a duke is bordered by eight strawberry leaves, that of a marquess, by four alternating with four pearls or silver balls on low points, that of an earl, by eight strawberry leaves alternating with eight pearls on high points, that of a viscount, by 16 pearls on the gold rim, that of a baron, by six pearls on the gold rim Coronets are part of the armorial devices of those entitled to them

Coronis (kŭrō'nĭs), in Greek legend, mother of ASCLEPIUS by Apollo, who killed her for infidelity

Corot, Jean Baptiste Camille (kō'rō, kurō', Fr zhăn' bătēst' kămē'yŭ kōrō'), 1796–1875, French landscape painter His parents were shopkeepers and his early years after leaving school were spent behind a counter At 26 he was permitted to study with Victor Bertin, and in 1825 he went to Rome, where he stayed three years Except for two later trips to Italy, in 1834 and again in 1843, most of his uneventful life was spent in Fontainebleau or Ville d'Avray A genial bachelor, Corot led a sheltered and happy life, devoted to his art Late in life he achieved a reputation and honors and made a considerable fortune He was notoriously generous and in 1871 gave $10,000 to the poor of Paris His landscapes, much simpler and more direct than those of the classical landscape painters are famous for their atmosphere and poetic mood Corot preferred to depict the misty hours before dawn, using a very cool and restricted palette of silvery grays and greens with a moderate use of red and brown An exquisite sense of values was the basis of his art He is generally considered the greatest of the Barbizon school of landscape painters His immense vogue at the close of the century was short-lived, but his best work, including many fine figure studies and portraits as well as landscapes, is still highly prized Among his well-known works are *Morning* and *Dance of the Nymphs* (Louvre) and *Ville d'Avray* (Metropolitan Mus) He is represented in most of the prominent galleries of England, France, and America See Charles Holme, *Corot and Millet* (1902), Julius Meier-Graefe, *Corot und Courbet* (1905, in German), Everard Meynell, *Corot and His Friends* (1908)

corozo · see TAGUA

corporal punishment, chastisement of the body of an offender It may include the death penalty (see CAPITAL PUNISHMENT), but the term usually refers to such activities as flogging, mutilating, branding, and confinement in the pillory or stocks Until c 1800 most crimes were punished thus, especially by flogging, which was also used to keep order among the insane and the feeble-minded and in schools A movement against the use of corporal punishment was led in the late 17th cent by American Quakers who achieved local reforms in Pennsylvania and New Jersey The 18th cent saw a reaction against the whole concept of violent punishment and the substitution of more humane methods Its effectiveness also has been disproved by modern criminologists and educators Flogging, however, is still used in Great Britain, in Delaware, and in some countries of Europe and Asia and is used, often unofficially, to maintain discipline within some British and American prisons See H E Barnes, *The Story of Punishment* (1930), G R Scott, *The History of Corporal Punishment* (1938)

corporation, in law, organization enjoying legal personality for the purpose of carrying on certain activities Most corporations are businesses for profit, they are usually organized by three or more subscribers who raise capital for the corporate activities by selling shares of STOCK, which represent ownership and are transferable Besides business corporations there are also charitable, cooperative, municipal, and religious corporations, all with distinctive features In the United States all governmental units smaller than a state (e g., counties, cities) are municipal corporations. Certain religious functionaries, e g, Roman Catholic archbishops, legally are corporations sole The legal personality of a corporation is symbolized by its seal and its distinctive name As a legal person, the corporation continues in existence when the organizers lose their connection with it. In most cases its liability is limited to the assets it possesses and creditors may not seize property of persons associated with the corporation as stockholders or otherwise. Legal personality gives the corporation many of the capacities of a natural person, e g , it can hold property and can even commit crimes (for which it may be fined and its directors imprisoned) The corporate form was known in Rome, although the notion of its personality was not fully developed In Norman England and on the Continent in medieval times municipal and ecclesiastical corporations were common In the overseas trade expansion of the 16th and 17th cent , associates bought shares in a ship and divided the profits The Muscovy Company (chartered 1555) and the Dutch East India Company (chartered 1602) were perhaps the earliest trading companies with what came later to be called a permanent capital Partial government subsidization of trading corporations was usual, but gave way in the 18th cent to the protective device of limited liability, especially after the failure (1720) of the MISSISSIPPI SCHEME, which was sponsored by the French minister J B Colbert At the same time the bursting of the South Sea Bubble in England led to more stringent fiscal regulation of business corporations, especially in the matter of capital The Industrial Revolution encouraged many new corporations to finance larger economic units, such as railways and steam-power-driven machinery in factories In the United States the state legislatures became the chief authorities to grant charters to corporations, though the Federal government incorporates in a limited field Both of the Banks of the United States were given Federal charters, for the years 1791 1811 and 1816–36 respectively, and Federal charters were given to certain railroads after the Civil War Corporations owned by the Federal government and financed by government appropriations include the Reconstruction Finance Corporation, the Community Credit Corporation, and various corporations established to meet emergencies and later liquidated At first states passed a special act for each incorporation, but in 1811 New York state enacted a general incorporation law enabling the secretary of state to give charters Since the Dartmouth College Case of 1819, when a charter was held to be a binding contract between a state and a corporation, unalterable and unamendable by the state without the corporation's consent, fewer perpetual charters have been granted, the right of the legislature to alter or annul being specifically reserved in the charter Variability in state incorporation laws and the ability of corporations incorporated in one state to do business in all other states have allowed corporations to incorporate in the state having the most lenient incorporation laws Thus was formerly New Jersey, but since 1913 has been Delaware, Maryland, and Maine A recent type of corporation is the holding company, organized to buy a controlling interest in other corporations The amount of cash needed to control a concern is lessened by pyramiding holding companies This is done by creating a company to hold a voting control of one or more operating companies A third company is created to hold a controlling interest in the second, and so on The control of the last holding company is sufficient to control all, and such control, because of the scattering of stock among many small holders, may need the ownership of only 10 or 20 percent of the stock available New Jersey first permitted such companies in 1889 In the interstate distribution of power, holding companies above the second level are prohibited The large business corporation has strongly influenced the control of property in the modern world Approximately 200 corporations are thought to own more than half the wealth of the United States, they are typically controlled by a small minority of the stockholders See also TRUST See A A Berle and G C Means, *The Modern Corporation and Private Property* (1932), N S Buchanan, *The Economics of Corporate Enterprise* (1940), P F Drucker, *Concept of the Corporation* (1946)

corporation tax, a tax on corporations, their income, or their peculiar attributes, such as charters, capitalization, dividends, and franchises In the United States such taxes were brought about by the difficulty of taxing bonds and stocks and by the growth of corporations beyond state bounds, with consequent difficulty of assessment and taxation Such special state corporation taxes now include fees and licenses for incorporation or for an increase in capitalization or for filing the corporation's charter in another state, taxes on gross earnings, taxes on lump sums, tonnage, and instruments or transactions, franchise taxes, capital stock taxes, and net income taxes In 1909 the Federal government imposed on corporations an excise tax, measured by the net income This tax was superseded by a corporation INCOME TAX after the Sixteenth Amendment (1913). A tax on corporations was levied in Britain in 1920, including foreign companies of limited liability doing business in the United Kingdom, but exempting certain classes of corporations for three years and the profits of corporations receiving income from other corporations already taxed. In the United States a tax on the undistributed profits of a corporation was a feature of the Revenue Act of 1936. An EXCESS PROFITS TAX was imposed in both the First and the Second World Wars See Roswell Magill, *The Impact of Federal Taxes* (1943), C J Gaa, *Taxation of Corporate Income* (1944), G E Lent, *The Impact of the Undistributed Profits Tax, 1936–1937* (1948).

corporative state, concept to which the economic system inaugurated by the Fascist regime in Italy after 1922 gave rise The system was based upon practically unlimited government control of economic life while preserving the framework of capitalism Legislation of 1926 and later years set up 22 guilds of employees and employers to administer various sectors of the national economy. These were represented in the national council of corporations Professional and civil service groups were covered by separate legislation The guilds, or corporations, while in principle representative, were administrative devices of the government and did not assume the separate legal personality of corporations in Anglo-American practice The organization was syndicalist (see SYNDICALISM), and there were confederations of syndical organizations including both employers and workers Thus, the freedom of both workers and employers was strictly abrogated, the former losing the right to strike while the latter were deprived of the lockout weapon in industrial disputes and freedom of economic choice in the conduct of business The government exercised appointive power over the officials of the guilds and insisted on Fascist party representation on the governing boards of each As practiced in Italy, the economy of the corporative state aimed in general at reduced consumption in the interest of militarization The corporative state was adopted by Francisco Franco for the reorganization of Spain, more or less on the Italian model The *Novo Estado* [new state] set up in Portugal under Salazar is a refinement of the corporative state, much less military and much more efficient than that of Italy or Spain

Corpus Christi (kôr'pus krĭs'tē) [Latin,=body of Christ], feast of the Roman Catholic Church, observed on the Thursday after Trinity Sunday (or on the following Sunday) It is a commemoration of the institution of the Eucharist, supplementing the anniversary on MAUNDY THURSDAY The feast was established generally in 1264, with an office by St Thomas Aquinas, which includes the splendid hymn PANGE LINGUA Corpus Christi is especially a flowery feast, and in many countries the day's procession is held outdoors with great pageantry

Corpus Christi (krĭs'tē), city (1940 pop 57,301; 1947 estimated pop 112,000), co seat of Nueces co , S Texas, inc 1852 It is on Corpus Christi Bay at the entrance of Nueces Bay, an inlet at the mouth of the Nueces river Corpus Christi Bay was discovered on Corpus Christi Day, 1519, and was visited infrequently by Spanish mariners and buccaneers In 1840 Col H L Kinney founded a trading post, and settlers collected in a raffish colony on land claimed by both Texas and Mexico The small port and terminus for overland wagon-train traffic boomed in the Mexican War, was briefly captured (1862) in the Civil War, and later shipped out sheep and cattle and supplied a ranch area Oil was discovered in the region, and after recovering from a destructive hurricane in 1919, the city grew as an oil center The deepwater channel past Mustang Island was completed in 1926, and the city, important as a port of entry, developed industrially It boomed again in the Second World War after a huge naval air-training station was built in 1941 Corpus Christi has oil refineries, a zinc refinery, an alkali plant, other chemical works, and establishments processing the cotton, milk, sea food, and truck of the region Its beaches make it a much-frequented resort It is the seat of a junior college

Corpus Christi College · see CAMBRIDGE UNIVERSITY and OXFORD UNIVERSITY

corpuscles, cells carried in the liquid or plasma of the blood Red blood corpuscles are microscopic yellowish discs, circular and biconcave in shape, containing hemoglobin, a protein combined with iron, which carries the oxygen of the blood Although individually they have a yellowish tint, the red corpuscles en masse give the blood its red color A cubic millimeter of blood contains, in males, about 5,000,000 red corpuscles and in females about 4,500,000 In some diseases, the number, size, shape, and hemoglobin content of the red blood cells are modified (see ANEMIA) White corpuscles or white blood cells differ from red blood corpuscles in many respects each white blood cell contains a nucleus, white cells are much less numerous than red ones, they contain no hemoglobin, their principal function is to combat infection The number of white cells in a cubic millimeter of blood varies between 6,000 and 10,000, in pathological conditions, the number may be greatly increased There are several varieties of these cells (see WHITE CORPUSCLE).

Corpus Juris Civilis (kôr'pŭs jōs'rĭs sĭv'ĭlĭs), most comprehensive CODE of ROMAN LAW. Compiled by order of JUSTINIAN I, it was largely issued between 529 and 535 and was the work of a commission of jurists headed by TRIBONIAN. The Corpus, intended to make an orderly statement of about 1,000 years of Roman legal development, was far more comprehensive and exhaustive than any previous work of that nature, including the THEODOSIAN CODE. The four parts of the Corpus are the Codex or Code, a collection of imperial constitutions since the time of Hadrian; the Digest or Pandects, selections from noted classical jurists, chiefly Gaius, Paulus, Ulpian, Modestinus, and Papinian; the Institutes, an elementary treatise, and the Novels or Novellae, constitutions which followed the earlier collection. The constitutions and the extracts from classical jurists were to a large extent altered to conform with current practice. Many copies of the Corpus were issued. It not only furnishes knowledge of law in late Roman times, but also incorporates extracts from some of the earlier materials which would otherwise have been entirely lost. In the 11th cent., when interest in Roman law was revived, notably at Bologna, the Corpus was exhaustively studied and commented upon. In the 19th cent. it was an important source for law codes.

Correctionville, town (pop. 1,151), NW Iowa, on the Little Sioux river and E of Sioux City, in a livestock area, settled 1855–56, inc. 1882.

Correggio (kŭrĕ'jō), 1494–1534, Italian painter, whose real name was Antonio Allegri, called Correggio for his birthplace. He studied the human figure under the anatomist Dr. Lombardi and learned the rudiments of his art from his uncle, Lorenzo Allegri. His style was greatly influenced by the study of the works of Mantegna. While still a minor Correggio executed a beautiful altarpiece, *The Madonna of St. Francis*, for the Franciscans at Correggio. Another early work is *The Virgin and Child with Angels*, one of the gems of the Uffizi. This panel was at one time attributed to Titian. Correggio's first important works in fresco, considered among his finest productions, were a series of mythological subjects painted for the Convent of San Paolo at Parma. His most famous work is the fresco on the octangular cupola of the cathedral at Parma, the *Assumption of the Virgin*, a conception of grandeur, showing an audacious use of foreshortening and of frolicsome movement in its numerous little angels. His influence over Italian art of the 16th and 17th cent. was almost as great as that of Michelangelo. His forms are tender and beautiful, whether sacred or profane, his pictures are characterized by joyousness, sentiment, and a soft play of light and shadow. Correggio's wife, Girolama Merlino, a young girl of great beauty, is said to have been the model for *The Madonna with the Rabbit*, in the Naples Gallery. See biography by Corrado Ricci (1930).

Correggio (kurĕ'jō), town (pop. 3,856), Emilia-Romagna, N central Italy, seat of a small principality of the Da Correggio family (12th–17th cent.). Their palace is a good example of early 16th-century architecture. The painter Correggio, born here, was called after the city.

Corregidor (kurĕ'gĭdôr"), fortress island, area c.2 sq. mi., off Bataan peninsula of Luzon, Philippine Islands, at the entrance to Manila Bay. Fortified by the Spanish, Corregidor was taken over by the United States in 1898 after the Spanish-American War, and Fort Mills and Kindley Field were established. In the early phase of the Second World War the island was the last Allied stronghold in the Philippines. After the fall of Bataan, Allied forces under Lt. Gen. Jonathan M. Wainwright gallantly fought on for a month, they surrendered in May, 1942. Corregidor passed to the jurisdiction of the Philippine republic in 1947.

Corrèze (kôrĕz'), department (2,273 sq. mi.; pop. 254,601), S central France, in LIMOUSIN, watered by the Dordogne and its tributary, the Corrèze Tulle (the capital) and Brive-la-Gaillarde are the chief towns.

Corrib, Lough (lŏkh kŏ'rĭb), lake, Counties Galway and Mayo, Ireland. It is irregular in shape, 27 mi. long and up to 10 mi. wide. It drains into Galway Bay and is connected by a partly subterranean channel with Lough Mask.

Corrientes (kôrēĕn'tĕs), city (estimated pop. 59,323), capital of Corrientes prov., NE Argentina, a port on the Paraná river. From Corrientes, the center of a rich cattle and agricultural district, are exported sugar, tobacco, cotton, cochineal, ostrich feathers, cabinet woods, and livestock. It was founded in 1588.

Corrievrekin or **Corryvreckan** (both kŏ'rēvrĕkŭn), whirlpool in Corrievrekin passage N of Jura island, off W Scotland, in Argyllshire.

Corrigan, Michael Augustine (kŏ'rĭgŭn), 1839–1902, American Roman Catholic churchman, b. Newark, N.J. He was bishop of Newark (1873–80), the diocese including all New Jersey. He was especially interested in Catholic education and in the establishment of hospitals, orphanages, and other charitable institutions. In 1880 he became coadjutor to the archbishop of New York, Cardinal McCLOSKEY, with the title archbishop of Petra, and in 1885 he became archbishop of New York. His work was to accommodate the church to the large number of immigrants. The principal event of his episcopate was a dispute with Edward McGlyn, a priest who was supporting Henry George, over the suitability of Henry George's doctrines for Catholics. After Father McGlyn's reinstatement in the Church, the archbishop appointed him to a church and at his death presided at his funeral Mass.

Corrigan, town (pop. 1,402), E Texas, NE of Houston and near Livingston; inc. 1938.

corrosion · see RUSTING.

corrosive sublimate, heavy, white, crystalline substance. Chemically it is mercuric chloride or bichloride of mercury, a compound of mercury and chlorine having one atom of mercury and two atoms of chlorine in its molecule. It is a deadly poison (for antidote, see POISONING, table). It is somewhat soluble in water, its degree of solubility increasing with the temperature. Its solution has an acid taste. A dilute solution (1 1000) is used as an antiseptic in medicine, especially in surgery. It is prepared by sublimation from a mixture of mercuric sulphate and sodium chloride (common salt). When heated with mercury it is reduced to calomel, which when exposed to sunlight slowly reverts to corrosive sublimate.

corrupt practices, in politics and government, fall under several headings. Bribery, the sale of offices, letting of public contracts to favored firms or individuals, and grants of land or franchises by public officials in return for monetary rewards have been frequent throughout history. But in modern times the term usually refers to frauds connected with elections. Such fraud may consist of efforts to influence or intimidate the voter or to tamper with the official BALLOT or election count. To eliminate these practices nearly all democratic self-governing units have passed laws to safeguard the honesty of political campaigns and elections. In Great Britain the Acts of 1883 and 1918 frequently amended, define election abuses and limit political spending by or in behalf of candidates for Parliament. In the United States individual states have their own election laws and they preceded Congress in enacting corrupt practices acts. Campaign spending is limited either to a percentage of the salary of the office at issue or to a sum in proportion to the number of voters or is fixed at an arbitrary figure. The Corrupt Practices Act of 1925 is the definitive law regulating campaign spending for election to either house of Congress. Spending by banks or corporations in behalf of candidates is forbidden, publicizing of expenditures and donations is provided for, and a campaign fund of $10,000 for election to the House of Representatives and $25,000 to the Senate stands as the limit permitted by the law. Each house of Congress is under the Constitution allowed to judge the election and qualifications of its members, has defined corrupt practices independently of existing statutes, and has on occasion excluded members from Congress. See E. R. Sikes, *State and Federal Corrupt Practices Legislation* (1928).

Corry (kŏ'rē), city (pop. 6,935), NW Pa., SE of Erie, settled 1795, inc. as a borough 1863, as a city 1866. Its industrial plants include steel-product and furniture factories. Gas and oil are found in the region.

Corryvreckan, see CORRIEVREKIN, Scotland.

corsair · see PIRACY.

corset, article of dress designed to support or modify the figure. Greek and Roman women wrapped broad bands about the body in the manner of puttees. In the early Middle Ages a short, close-fitting, laced outer bodice or waist was worn, by the 16th and 17th cent. it had become, in France, a tight inner bodice, stiffened with whalebone, wooden splints, or steel, and was worn by both men and women. Fashion demanded the slenderest possible waist in contrast with the enormous farthingales and breeches of the period. Stays and tight lacing continued in fashion for women through the 18th cent., except for a period following the French Revolution, until c.1820 when the dress-reform movement changed public taste, and the corset was gradually modified to conform to the natural lines of the body. See K. M. Lester, *Historic Costume* (3d ed., 1942).

Corsica (kôr'sĭkŭ), Fr. *Corse*, island (3,367 sq. mi., pop. 267,873), a department of metropolitan France, SE of France and N of Sardinia, in the Mediterranean. AJACCIO (the capital) and BASTIA are the chief towns and ports. The island is largely mountainous, culminating in Monte Cinto. Olive oil, wine, and timber are the main exports. Communications are poor, and much of the island is wild, covered by undergrowth [Fr. *maquis*], thus providing ideal hideouts for the bandits. Blood feuds (see VENDETTA) were a traditional occupation until they were largely suppressed by the French government. Outside the chief towns an Italian dialect is spoken. After having belonged to the Romans (3d cent. B.C.–5th cent. A.D.), the Vandals (5th–9th cent.), and the Arabs (9th–11th cent.), Corsica was ceded by the pope, who laid claims to it, to Pisa (1077). The Pisans were expelled (1312) by the Genoese. Genoese rule was unpopular and was marked by chronic unrest. The episode of "King" Theodore I (see NEUHOF, THEODOR, BARON VON) was typical. In 1755 Pasquale PAOLI headed a successful rebellion and set up a dictatorship at Corte which controlled all but the coastal areas. French intervention in his war against the Genoese led in 1768 to the cession of Corsica to France. In the following year NAPOLEON I was born at Ajaccio. He and his family supported the French central government in the Revolution. As a result of Paoli's return, their efforts were defeated, the French were expelled, and in 1794 Corsica voted its union with the British crown. Lord Minto ruled the island as viceroy until 1796, when the French recovered it. French possession was guaranteed at the Congress of Vienna (1815). In the Second World War, Corsica was occupied after 1942 by Italian and German troops. Late in 1943 the population revolted and seized Ajaccio, a Free French task force came to the rebels' assistance, and the liberation of the island was completed on Oct. 4, 1943.

Corsicana (kôrsĭkă'nŭ), city (pop. 15,232), co. seat of Navarro co., E central Texas, SSE of Dallas and NE of Waco, inc. 1848. The commerce and the lively small industries of the city depend on the cotton (long dominant), other varied crops, beef cattle, dairy products, eggs and poultry, and oil of the area. The discovery of oil when a city water well was being dug (1894) caused early dismay but led to the drilling (1895) of the first important commercial oil well and the building (1898) of the first refinery in Texas. Corsicana is the seat of Navarro Junior College and of two children's homes, one state-owned and one private (International Order of Odd Fellows).

Corson, Hiram, 1828–1911, American scholar and educator, b. Philadelphia. He served as a librarian in the Smithsonian Institution and later was professor of language and literature at Cornell Univ. Distinguished by thorough scholarship are his *Introduction to the Study of Robert Browning's Poetry* (1886), *Introduction to the Study of Shakespeare* (1889), and *The Aims of Literary Study* (1895). He was interested in spiritualism and wrote *Spirit Messages* (1911).

Cort, Cornelis (kôr'nā"lĭs kôrt'), c.1536–1578, Dutch engraver. Employed by Titian c.1565, he executed many fine engravings after his paintings and those of Raphael, Clovio, Floris and others. His work set a standard for Italian engraving. Agostino Carracci was his pupil.

Corte (kôrtā'), town (pop. 5,089), central Corsica, France. An old, fortified city, it was the capital of PAOLI from 1755 until 1768.

Cortelyou, George Bruce (kôr'tulyōō), 1862–1940, American public official and business executive, b. New York city, grad. Georgetown Univ. (LL.B., 1895). He taught school, and after learning stenography, he became secretary to several New York city and Federal officials. Appointed (1895) stenographer to President Grover Cleveland, Cortelyou also became secretary to President William McKinley (1900) and President Theodore Roosevelt (1901). He also served under Roosevelt as Secretary of Commerce and Labor (1903–4), Postmaster General (1905–7), and Secretary of the Treasury (1907–9). He then left government service and became prominent as an executive of public-utility companies.

Corte Madera (kôr'tā mudă'ru), residential town (pop. 1,098), W Calif., N of San Francisco, inc. 1916.

Corte Real or **Corte-Real, Gaspar** (gushpär' kôr'tu rēal'), c.1450–1501?, Portuguese explorer. Sent out by King Manuel I to search for the Northwest Passage, he is said to have discovered Greenland in 1500 and may have touched on the North American coast. He made a second voyage with his brother, Miguel Corte Real or Corte-Real, in 1501, but the two were separated. Gaspar Corte Real was lost. In 1502 Miguel Corte Real went in search of him but was also lost. The brothers certainly reached Newfoundland and made sweeping discoveries, but the results were shadowy and discouraging. See H. P. Biggar, *Voyages of the Cabots and the Corte-Reals* (1903).

Cortés, Hernán, or **Hernando Cortez** (kôrtās' Spanĕrnän', -ārnän'dō, kôrtās'), 1485–1547, Spanish CONQUISTADOR, conqueror of Mexico. He went to Hispaniola (1504) and later (1511) accompanied Diego de VELÁZQUEZ to Cuba. In 1518 he was chosen to lead an expedition to Mexico. Although Velázquez later sought to recall his commission, Cortés sailed (Feb., 1519). In Yucatán he rescued a Spaniard who had learned the Maya language, after a victory over Indians in Tabasco, the Spanish acquired the female slave Malinche—baptized Marina—who knew both Maya and Aztec. Having proceeded up the coast, Cortés founded Villa Rica de la Vera Cruz and was chosen captain general by the CABILDO, thus he discarded Velázquez's authority and became responsible only to Charles V. Cortés, learning that the Aztec empire of MONTEZUMA was honeycombed with dissension, assumed the role of deliverer and rallied the coastal Totonacs

to his standard; he also began negotiations with Montezuma Scuttling his ships, thus preventing the return of any Velásques sympathisers to Cuba, he began his famous march to Tenochtitlán, capital of the Aztec empire. He defeated the Tlaxcalan warriors, then formed an alliance with the so-called republic of Tlaxcala, practically destroyed CHOLULA, and arrived at Tenochtitlán in Nov., 1519 There the superstitious Montezuma received the Spanish as descendants of QUETZALCOATL Cortés seized his opportunity, took Montezuma as a hostage, and attempted to govern through him In the spring of 1520 Cortés went to the coast, where he defeated a force under Pánfilo de NARVÁEZ Pedro de ALVARADO, left in command, impetuously massacred many Aztecs, and soon after Cortés's return, the Aztecs besieged the Spanish A fight ensued, and Montezuma was killed The Spanish, seeking safety in flight, fought their way out of the city with heavy loss on the *noche triste* (June 30, 1520) Still in retreat, they defeated an Aztec army at Otumba and retired to Tlaxcala The next year an attack was made on the capital, and after a three-month siege Tenochtitlán fell (Aug 13, 1521) With it fell the Aztec empire As captain general, Cortés extended the conquest by sending expeditions over most of Mexico and into N Central America In 1524–26 Cortés himself went to Honduras, killing CUAUHTÉMOC, the Aztec emperor, on the expedition. In Cortés's absence his enemies gradually triumphed, and after his return his power was made by the *audiencia* more fictitious than real Though on his visit to Spain (1528–30) Cortés was made marqués del Valle de Oaxaca, Charles V refused to name him governor Returning to Mexico, he vainly sent out maritime expeditions, frustrated more than once by Nuño de GUZMÁN Subsequently he quarreled with the viceroy, Antonio de MENDOZA, and in 1540 he again sought justice in Spain There, neglected by the court, he died The best-known contemporary account of the conquest is that of Bernal Díaz del Castillo See the letters of Cortés (ed in English by F A. MacNutt, 1906), biography by H D Sedgwick (1926), W H Prescott, *Conquest of Mexico;* Henry R. Wagner, *The Rise of Fernando Cortes* (1944)

Cortes (kôr'tĕz, Span kôr'tās), representative assembly in Spain The institution originated (12th-13th cent.) in various Spanish regions with the Christian reconquest; until the 19th cent the local cortes of Leon, Castile, Aragon, Catalonia, Navarre, and Valencia, and other states met separately The three estates—clergy, nobility, and burghers—voted the taxes, recognized the kings upon their accession, and indirectly exercised some legislative influence The cortes of Aragon and Catalonia were particularly powerful After the consolidation of the royal power (15th cent.) and the unification of Spain, the *cortes* were seldom convoked except to pay homage, and their powers were curtailed The first national Cortes of Spain met at Cádiz in 1812 in the Peninsular War, which was also the Spanish war of liberation from Napoleonic rule They voted a liberal constitution, later (1814) revoked by Ferdinand VII Thereafter the status of the Cortes frequently changed in its struggle for power with the king At the fall of the monarchy in 1931, a constituent Cortes promulgated a republican constitution, and the Cortes was the parliament of Spain until 1939 Under Francisco Franco's dictatorship a Cortes was preserved but stripped of effective legislative power. The name of the Portuguese legislative body is Cortes Gerais (see PORTUGAL)

Cortez, Hernando: see CORTÉS, HERNÁN

Cortez (kôrtĕz'), town (pop 1,778, alt 6,198 ft.), co. seat of Montezuma co., SW Colo., in a fruit, grain, and livestock area, founded 1887, inc 1902 Near by are Mesa Verde National Park and Yucca House National Monument and several Indian reservations

cortin: see ADRENAL GLAND

Cortina d'Ampezzo (kôrtē'nä dämpĕd'zō), village, Venetia, NE Italy, in the heart of the DOLOMITES It is one of the most-visited summer and winter resorts in the Alps

Cortissoz, Royal (kôrtĭ'sōz), 1869–1948, American connoisseur and lecturer on art He was the New York *Herald Tribune* art critic from 1891 and was noted for his lectures at the Metropolitan Museum and at other museums throughout the United States. He wrote biographies of Augustus Saint-Gaudens (1907), John La Farge (1911), and Whitelaw Reid (1921), as well as *Art and Common Sense* (1913), *American Artists* (1923), *Personalities in Art* (1925), and *The Painter's Craft* (1930). He edited editions of *Don Quixote* and *The Autobiography of Benvenuto Cellini*

Cortland. **1** City (pop. 15,881), co seat of Cortland co., central N Y., S of Syracuse, in a rich farm area, settled 1791, inc as a village 1853, as a city 1900 It is the seat of a state teachers college. Wire mills are among its varied industries. **2** Village (pop 1,014), NE Ohio, NE of Warren. It has grain and lumber mills.

Cortona, Pietro da (pyä'trō dä kôrtō'nä), 1596–1669, Italian painter and architect, whose real name was Pietro Berrettini, b. Cortona. He is famous chiefly for his frescoes and easel paintings. His best-known frescoes are the ceiling in Barberini Palace and those in Santa Maria in Vallicella, both in Rome, and several large paintings in the Pitti Palace, Florence. Among his outstanding easel pictures are *Daniel in the Lion's Den* (Venice), *Battle of Arbela* (Louvre), and *Nativity* (Prado) His architectural activities consisted mainly of designs for churches in Rome, among which were those for the Santa Martina and the portico of Santa Maria della Pace

Cortona (kôrtō'nä), town (pop 3,736), Tuscany, central Italy, on a hill covered with olive groves It was one of the 12 important Etruscan cities and has Etruscan walls, a burial chamber, and a museum of antiquities The character of the city is medieval In its churches are paintings by Fra Angelico and by Luca Signorelli, who was born here

Cortot, Alfred Denis (älfrĕd' dünē' kôrtō'), 1877–, French pianist and conductor, authoritative interpreter of Chopin Among his appearances as a conductor were those at Bayreuth from 1898 to 1901 From 1903 he presented new works at the Société de Concerts Cortot He joined the faculty of the Paris Conservatoire in 1907 and in 1919 founded the École normale de Musique, Paris, of which he is director For many years he played trios with Jacques Thibaud and Pablo Casals Among his writings is *French Piano Music* (Eng. tr., 1932)

Corum (chôrōōm'), city (pop 20,307), N central Turkey It manufactures earthenware and leather goods

Corumbá (kôrōōmbä'), city (pop 13,319), Mato Grosso state, W Brazil, a port on the Paraguay river Founded in 1778, it is today not only a river port but also a junction point on the railroad to Bolivia and an important port of entry It ships the products from pastoral and forest areas of SW Brazil and E Bolivia and is also near manganese and iron mines and is a center of a new metal industry as well as light industries It was a strategic point in the War of the Triple Alliance and changed hands often

Coruña, La (kurŭ'nyä, Span lä kôrōō'nyä), city (pop. 92,189), capital of La Coruña prov., NW Spain, in Galicia, an Atlantic port An English form of the name is Corunna The old city is high on a promontory, the modern section occupies a narrow strip connecting the promontory with the mainland Fish, cigars, and paper are the chief exports Anciently a city of the Celts, the Phoenicians, and the Romans, it reached its height as a port and a textile center in the late Middle Ages From its harbor the Armada sailed in 1588. La Coruña was sacked by Sir Francis Drake in 1598 In the PENINSULAR WAR it was the scene of the battle in which Sir John Moore was mortally wounded (1809) The Roman Torre de Hércules and the Church of Santa María del Mar are the chief landmarks There are many handsome modern buildings along the sea front

corundum (kŭrŭn'dŭm), a mineral, mainly pure aluminum oxide The finer varieties are used as gems and the coarser as ABRASIVE materials Corundum occurs in crystals of the hexagonal system and in masses It is transparent to opaque and has a vitreous to adamantine luster The transparent gem varieties are colorless, red, blue, green, yellow, and violet, the common varieties are dark gray to black Emery is a common corundum, used as an abrasive and distinguished by its impurities of magnetite and hematite The chief corundum gems are the RUBY, SAPPHIRE, Oriental TOPAZ, Oriental EMERALD, and Oriental AMETHYST The term *Oriental* is used to distinguish corundum gems from other, softer stones having the same name Yellow, pink, green, and white stones are also called yellow, pink, green, and white sapphires Corundum is successfully made artificially The chief sources of natural corundum are Burma, Ceylon, India, the Union of South Africa, and the United States (North Carolina, Georgia, and Montana). Most of the emery is mined in Naxos and the other Cyclades and in Asia Minor.

Corunna, Spain, see CORUÑA, LA

Corunna (kōrŭn'ŭ), city (pop 2,017), co seat of Shiawassee co., S Mich., on the Shiawassee and W of Flint, inc as a village 1858, as a city 1869 Furniture is made

Corvallis (kôrvăl'ĭs), city (pop 8,392), co seat of Benton co., NW Oregon, on the Willamette and SSW of Salem, settled 1846, platted 1851, inc 1857 It is a fertile dairying and fruitgrowing valley, and its industries have developed from the agriculture and lumbering in the area. It is the seat of OREGON STATE COLLEGE

corvée (kôrvā'), under the feudal system, obligatory services rendered to a lord or king and the system of such services in general There were national and local variations, but in broad terms the *corvée* proper included work on the lord's portion of the manorial property, or demesne, and many attendant duties. Military service also came under the general terms of the *corvée* The *corvée* included both regular and exceptional demands. The real *corvée* included the duties attached to the ownership or tillage of certain lands; the personal *corvée* had reference to the duties of specific individuals. Highly developed during the feudalization of the late Roman Empire, the *corvée* system was an integral part of the non-moneyed social and economic system of the Middle Ages, but towns and all individuals who were able liberated themselves when possible by money payment instead of services In France the royal *corvée*, compulsory work on the roads, was introduced in the 18th cent., and both this and the seigneurial *corvée* bore heavily and almost exclusively upon the peasantry and helped cause the French Revolution Austria abolished the last European *corvée* system in 1848

Corvinus, Jakob: see RAABE, WILHELM

Corvinus, Matthias: see MATTHIAS CORVINUS

Corvisart des Marets, Jean Nicolas, Baron (zhäⁿ' nēkôlä' bärō' kôrvēzär' dā märā'), 1755–1821, French physician Noted as a professor of clinical medicine (1797) at the Collège de France, he made valuable studies of the heart and reintroduced the percussion method of diagnosis devised by Leopold Auenbrugger He was made a baron in 1805

Corvus (Marcus Valerius Corvus), c 370–272 B C., Roman general, a legendary figure. He was consul many times and is said to have defeated the Volscians, the Samnites, the Etruscans, and others. Indeed, the account of his exploits contains enough events for the life of four men He derived his name Corvus from a story that when he was engaging a giant Gaul in single combat a bird [Latin *corvus*= raven] fluttered in the Gaul's face and enabled the Roman to win

Corwin, Norman, 1910–, American writer, director, and producer of radio dramas, b Boston His radio experiments with poetry and his radio productions of plays and documentary dramas introduced many new techniques His radio plays are found in *The Plot to Overthrow Christmas* (1940), *Thirteen by Corwin* (1941), *More by Corwin* (1943), *On a Note of Triumph* (1945), and *Untitled and Other Works* (1947)

Corwin, Thomas, 1794–1865, American politician, b Bourbon co., Ky A lawyer, he was an Ohio legislator in the 1820s, a U.S Representative (1831–40), and governor of Ohio (1840–42) In the U S Senate (1845–50) Corwin, a Whig, violently opposed the Mexican War, infuriating the soldiers and scandalizing the nation by suggesting that the troops should be welcomed to hospitable graves in Mexico He was Secretary of the Treasury (1850–53) under President Millard Fillmore, and although he did not entirely approve of the Republican position on slavery, he reentered (1859–61) the House as a member of that party In the Civil War he was minister to Mexico from 1861 to 1864 See biography by Josiah Morrow (1896)

Cory, Charles Barney, 1857–1921, American ornithologist, b Boston At his home in Hyannis, Mass., he established one of the first American bird reserves When the Field Museum in Chicago was opened, he gave his private collection to that institution, where he served as ornithologist from 1906 His many books include *Beautiful and Curious Birds of the World* (1880-83) and *Catalogue of Birds of the Americas* (1918-19)

Cory, William Johnson, 1823–92, English poet, educated at Eton and Cambridge *Ionica* (1858) contains his well-known translation of Callimachus' epitaph on Heraclitus It begins, "They told me, Heraclitus, they told me you were dead."

Coryate, Thomas (kôr'ĕāt), 1577?–1617, English traveler He spent some time at the court of James I and was the willing butt of most of the court jokes In 1608 he went on a journey that covered much of the Continent and resulted in the publication of his *Crudities* (1611) In 1612 he set out again, voyaged in Asia Minor and Egypt, then back to Palestine and E to Persia and India, reaching Agra in 1616 His letters from Agra were published in 1616 and 1618, some were reprinted in *Early Travels in India* (ed by Sir William Foster, 1921)

Corybantes (kôr"ĭbăn'tēz), in Greek religion, dancers who followed CYBELE They resembled DACTYLS, CURETES, and Telchines, as well as BACCHAE

Corydon (kôr'ĭdŭn) **1** Town (pop. 1,865), co. seat of Harrison co., S Ind., W of Louisville, Ky.; laid out 1808. It was the territorial capital from 1813 to 1816 and then the state capital until 1825 The center of a dairying area, it has quarries and natural-gas resources It was the scene of the only Indian battle of the Civil War (July 8, 1863), when it was attacked by the Confederates who had crossed the Ohio river near by. The Wyandotte Cave is near here **2** Town (pop. 1,872), co seat of Wayne co., S Iowa, S of Chariton, inc. 1867

Cos: see KOS.

Cosa, Juan de la (hwän' dā lä kō'sä), c.1460–1510, Spanish navigator. He sailed with Columbus in 1492 as pilot of the flagship *Santa María*, and again in 1498. After accompanying Alonso de OJEDA in 1499, he drew (1500) a world map (a manuscript copy exists in Madrid) that seems to be the first to question the identity of the new lands with Asia and to furnish evidence that the Cabots coasted farther S along the Atlantic shore than other documents reveal. In 1501 he was with

Bastidas, and later (1504) he again explored the northern coast of South America Securing for Ojeda a commission to colonize and explore that coast, Cosa accompanied him (1509) to the site of Cartagena and was there killed by the Indians

Cosam (kō'-), ancestor of St. Joseph, in Luke's geneslogy. Luke 3 28

Cosenza (kōzĕn'tsä), city (pop 30,038), capital of Cosenza prov , Calabria, S Italy, at the junction of the Busento and Crati rivers Chief city of the ancient Bruttii, it was taken by the Romans in 204 B.C. According to tradition, Alaric I, Visigothic king, was buried here in the bed of the Busento A castle built by Emperor Frederick II dominates the medieval town, there are a cathedral and a museum of antiquities The city has suffered repeatedly from earthquakes

Cosgrave, William Thomas (kŏz'grāv), 1880–, Irish statesman He was a Dublin businessman and entered city politics as a young man. A member of the radical wing of Sinn Fein, he fought in the Easter Rebellion of 1916 and was imprisoned for a year After the amnesty he was elected to the British Parliament and to the revolutionary Sinn Fein government of 1918, in which he served as minister of local government When Sinn Fein divided in 1922 he stood by the Free State, and after the death of Arthur Griffith and the assassination of Michael Collins, Cosgrave was elected president of the executive council This office he held until 1932, when the republicans headed by Eamon De Valera won the election Cosgrave became opposition leader, a position he maintained until 1944, when he resigned the leadership of his Fine Gael, or United Ireland, party

Coshocton (kŭshŏk'tun), city (pop 11,509), co seat of Coshocton co , E central Ohio, N of Zanesville at the confluence of the Walhonding and Tuscarawas rivers, in an industrial area, laid out 1802 Cast-iron pipe, electrical products, advertising novelties, and leather goods are made here Flood-control dams have been built near by

Cosimo de' Medici see Medici, Cosimo de'.

Cosmas and Damian, Saints (kŏz'mus, dā'-), 4th cent ?, Christian martyrs, physicians who took no fees They are remembered daily in the Mass By tradition they were Arabian twins, killed under Diocletian They are patrons of physicians and apothecaries Feast Sept 27.

Cosmati work see mosaic

cosmetics [Gr ,=ornamental], preparations externally applied to enhance the beauty of skin, hair, and eyes The use of body paint for ornamental and religious purposes has been common among primitive peoples from prehistoric times Many cosmetics originated in the Orient In Egypt their use is recorded 6,000 years ago, and ancient tombs have yielded cosmetic jars and applicators The Egyptians excelled in eye make-up, using kohl on lashes and brows and green eye shadow Fingers, palms of hands, and feet were dyed with henna Greek women used charcoal pencils and rouge sticks and coated their faces with powder, which often contained dangerous lead compounds Beauty aids reached a peak in imperial Rome, and ladies required the services of slaves adept in their use Many cosmetics survived the Middle Ages, and Crusaders brought back rare Eastern oils and perfumes Men and women of the Renaissance used cosmetics extravagantly, and from the 17th cent recipes and books on the toilet abounded During the 19th cent make-up virtually disappeared except for a light dusting with powder At the turn of the century came a revival of the use of cosmetics, accompanied by the manufacture of beauty aids on a scientific basis in France, still a leading producer of fine cosmetics The industry has grown to tremendous proportions with the rapid development of beauty culture In the United States, cosmetics intended for interstate commerce are controlled under the Federal Food, Drug, and Cosmetic Act of 1938

cosmic rays, radiation of unknown origin coming to the earth from outer space These rays, carrying large amounts of energy, are able to penetrate nearly all substances Since the early research on cosmic rays undertaken by V F Hess and Werner Kolhörster c 1911, many scientists have studied their nature and occurrence in all parts of the world from the depths of lakes, mines, and glacial crevasses to mountain peaks and into the stratosphere It is believed that the primary rays coming from beyond the earth's atmosphere are chiefly protons traveling at various speeds Many of these collide with air particles, the collisions becoming more frequent in the denser atmosphere close to the earth It is believed that the collisions cause the nuclei of the atoms that are hit to break into particles including secondary protons, neutrons, mesons, and electrons, all of which may become secondary cosmic rays. Further collisions with atomic nuclei are believed to create tertiary and quaternary rays with the process continuing until the energy of the primary ray is dissipated Only a few primary rays reach sea level. Valuable contributions to knowledge of cosmic rays have been made by Robert Millikan, Carl D. Anderson, Arthur H. Compton, Bruno Rossi, and others, but much research must be completed before these rays are fully understood. See Pierre Auger, *What Are Cosmic Rays?* (rev. and enl. American ed., 1945); D X J Montgomery, *Cosmic Ray Physics* (1949)

Cosmo de' Medici see Medici, Cosimo de'

cosmogony (kŏzmŏ'gŭnē) [Gr ,=birth of the world], hypothesis on the origin of the solar system and the nature of the universe Newton, the first modern astronomer to have a system of his own, held that by the force of gravity particles of matter diffused through space were brought together about points of condensation, or nuclei, and so bodies began to take form His ideas were further developed in 1755 by Kant, who added his own belief that heat is generated by the impact of molecules Another of his views, which later was proved to be incorrect, was that the molecular impacts would cause a condensing body to rotate Independently, in 1796, Laplace announced a somewhat similar system, the nebular hypothesis In place of Kant's mistaken notion regarding the cause of rotation, Laplace assumed that the nebulous matter acted upon by forces of gravity already had some degree of rotation and that as it condensed and shrank it would whirl faster and faster, changing shape from a globular mass to a spheroid with flattened poles. Scientists at last became convinced by their calculations that the explanation does not fit our own solar system, although it may hold true in some parts of the universe Later theories are the meteoric hypothesis of Sir Norman Lockyer, the tidal theory of G H Darwin, and the planetesimal hypothesis of T C Chamberlin and F R Moulton, combining the nebular and meteoric theories

Cosmopolis (kŏzmŏ'pulĭs), town (pop 1,207), W Wash , on the Chehalis river near Grays Harbor, inc 1891

cosmos (kŏz'mus), name for garden plants of the tropical American genus *Cosmos* The most common garden kinds are annuals with heads of flowers in crimson, pink, white, or orange

Cossa, Baldassarre (bäldäs-sar'rā kŏs'sä), c 1370–1419, Neapolitan churchman, antipope (1410–15, see Schism, Great) with the name John XXIII He had a military career before entering the service of the Church He was made a cardinal by Boniface IX (1402) and proved himself able, especially in financial matters In 1408 he deserted Gregory XII and helped to bring about the Council of Pisa (see Pisa, Council of) to end the schism between the Roman and the Avignon popes The council, declaring both Gregory XII and Benedict XIII deposed, set up a third claimant as Alexander V On Alexander's death a year later, Cardinal Cossa was elected Of the three rival "popes," John had much the greatest following He immediately sought the aid of Sigismund and helped to elect Sigismund emperor John allied himself with Louis II of Anjou to make war on Lancelot of Naples and his ally Pope Gregory XII They routed the forces of Lancelot, but in 1412 John made peace with Lancelot, who, nevertheless, turned against him and took Rome in 1413 An ineffective council at Rome (1412–13) was followed by the Council of Constance (see Constance, Council of), which John convened under pressure from Sigismund At the opening of that council he reluctantly promised (1415) to abdicate if his rivals would do so Then, surreptitiously, he fled to the lands of his ally Frederick of Hapsburg He was forced to return The council formally deposed him, and he submitted He was held as prisoner in Germany until 1418, then returned to Italy In his lifetime he had a bad reputation for unscrupulousness, even simony, he certainly devoted himself to self-aggrandizement

Cossa, Francesco, or Francesco del Cossa (fränchä'skō dĕl kŏs'sä), c 1435–1477?, Italian painter He was a leading representative of the Ferrarese school and regarded, with Ercole Roberti, as the founder of the Bolognese school His principal works include *The Glorification of March, April, and May,* frescoes in the Schifanoia Palace, Ferrara, some admirable portraits of the artist's contemporaries, *Madonna Enthroned* (Bologna), *Madonna and Child with Angels, St Liberal,* and *St Lucy* (National Gall of Art, Washington, D C), altarpiece representing scenes from the life of St Vincent Ferrer (National Gall , London) See Bernhard Berenson, *North Italian Painters of the Renaissance* (1907), E G Gardner, *The Painters of the School of Ferrara* (1911)

Cossa, Pietro (pyä'trō), 1830–81, Italian dramatic poet His historical dramas in verse include *Nero, Cleopatra, Messalina, Cecilia,* and *Borgia* He is considered the leading Italian dramatist of the transition from romanticism to naturalism

Cossacks (kŏ'săks, kŭ'săks, -sŭks), Rus. *Kazaki,* peasant-soldiers of several regions in Russia, who under the tsars held certain privileges in return for rendering military service as Cossack cavalry The Cossacks (c 4,000,000 before the Russian Revolution) formed 11 communities named for their location—Don, Kuban, Terek, Astrakhan, Ural, Orenburg, Siberia, Semirychensk, Transbaikalia, Amur, and Ussuri The Don and Kuban Cossacks were the most numerous and important. The descendants of Russian and Ukrainian serfs who had fled from servitude in the 16th and 17th cent., the Cossacks settled on the border steppes, which they defended against raids and invasions Their villages, called *stanitsas,* were largely self-governed until 1918 In the Ukraine, they set up a separate state, which in 1654 became a vassal of Russia Throughout the 17th and 18th cent the Cossacks were prominent in the social rebellions in Russia and the Ukraine, which ended with the defeat of Pugachev In the second half of the 19th cent , the lands of their thinly populated regions attracted many peasants, whom the Cossacks despised The Cossacks turned reactionary, and the tsars came to rely on them to suppress revolution Having supported the counterrevolution in the civil war of 1918–20, they lost their privileges, but in 1936 the Soviet government resuscitated the name of the Cossacks, extending it to the whole population of the regions inhabited by them. Their uniforms and cavalry units were reinstated, but not their administrative privileges

Cossimbazar (kŭsĭm'buzär'), small town, West Bengal state, India It was the chief overseas port of Bengal from the 16th to the 18th cent., when Calcutta surpassed it and Cossimbazar declined

Costa, Isaäc da (ē'sä-ăk dä kŏ'stä), 1798–1860, Dutch poet, b Amsterdam, of an aristocratic Sephardic Jewish family He entered the Reformed Church (1822), and much of his poetry is fervently Christian Da Costa's period of poetic maturity is placed between the political poem *Vijfen-twintig Jaren* (1840), revealing unusual social consciousness, and the narrative poem *De Slag bij Nieuwpoort* [the battle of Nieuport] (1859) He was a distinguished scholar in Protestant biblical theology and the classics His work on Jewish history was translated into English as *Israel and the Gentiles* (1855) A reprint of the translation of Book III (the most significant portion) appeared as the title piece in the Jewish historical collection, *Noble Families among the Sephardic Jews* (1936)

Costa, Lorenzo (lōrän'tsō kŏ'stä), 1460–1535, Italian painter of the Ferrarese and Bolognese schools Costa's finest works are the *Madonna and Child with the Bentivoglio Family* and *Triumph of Life and Death* in San Giacomo Maggiore, the *Madonna with Saints* in the Bacciocchi Chapel, San Petronio, and the *Madonna* in San Giovanni in Monte, all in Bologna, *Madonna and Child Enthroned* (National Gall , London), *The Court of Isabella d'Este* (Louvre) *Three Saints* is in the Metropolitan Museum

cost accounting see accounting

Costa Rica (kŏ'stŭ rē'kŭ) [Span ,=rich coast], republic (19,238 sq mi , 1944 estimated pop 725,149), Central America The capital is San José Costa Rica is bounded on the north by Nicaragua, on the northeast by the Caribbean, on the east by Panama, and on the south and west by the Pacific The northeastern section is a broad, jungle plain, and in the northwest are jungles and low mountains, an extension of the massive cordillera that dominates the country from coast to coast and separates it from Panama. Within the mountain belt and under the very shadow of volcanoes such as Irazú lies the central plateau (the *meseta central*) of the highlands This, a land of "eternal spring," is the heart of the country There, however, Spanish conquest was delayed Not until 1563, with the founding of Cartago, was the region conquered and brought under the captaincy general of Guatemala The small Indian population that survived conquest and disease retreated into the mountains Unable, therefore, to establish a hacienda system based on Indian labor, the colonists generally became relatively small landowners, creating an agricultural economy that was ultimately the basis for a strongly coherent national life The language is Spanish, the prevailing religion Roman Catholic In the northwest a mestizo population (about 14 percent) developed, and the region became one of large cattle ranches From Cartago, westward expansion into the plateau began in the 18th cent , the three other great cities of the plateau, San José, Heredia, and Alajuela, were settled With independence from Spain (1821) Costa Rica was nominally annexed to the empire of Agustín Iturbide of Mexico Later it was a member (1823–38) of the Central American Federation After Francisco Morazán vainly attempted (1842) to use the republic as the nucleus of a new federation, Costa Rica consistently opposed later efforts toward union, but the little nation violently resisted the invasion of Nicaragua by the American filibuster William Walker and contributed to his defeat in 1857 Introduction of coffee early in the 19th cent formed the Spanish families into a coffee hierarchy that remained in control until the administration of Tomás Guardia (1870–72) The coffee, which is of a good quality, was the chief source of Costa Rican income and the base of the stable society largely made up of whites of Spanish descent (about 82 percent) In 1874 Minor Cooper Keith founded Limón and began to develop United Fruit Company banana plantations on the Atlantic coastal plain. These are worked by Jamaica Negroes (about 5 percent of the population). These tropical fruits contrib-

uted a good deal to Costa Rican prosperity, but in recent years a leaf blight has caused vast tracts to be abandoned. Many of these banana plantation workers have been forced to become small farmers as well as they may, but they threaten to be a serious social problem Other fissures have appeared in plateau society, but the nation—which exports abacá, cacao, balsam, hardwoods, and tuna fish as well as coffee and bananas—has generally maintained its stability Although the INTER-AMERICAN HIGHWAY is incomplete, the central plateau is crossed by a network of paved roads, and both a highway and an electric railroad lead to the Pacific port, PUNTARENAS Costa Ricans are proud of their tradition of democratic government and of a long record of friendly relations with neighbors, combined with complete independence Costa Rica after the attack on Pearl Harbor declared war on Japan on Dec 8, 1941, even before the United States did (declarations against Germany and Italy followed on Dec 11), and the republic has played an active part in Pan-Americanism, though there were disputes over the question of the NICARAGUA CANAL The tradition of solid and democratic government is strong, though there have been interruptions such as the administration (1917–19) of Federico Tinoco Granados, which came into power by revolution In the 1940s new trouble was brewed After the disbandment of the Comintern in 1943, the Communist party in Costa Rica became the Vanguardia Popular and with the National Republican party helped to secure the election (1944) of Teodoro Picado There was considerable opposition from the moderates, which reached a crescendo in preparation for the elections of Feb , 1948 The moderate candidate, Otilio Ulate, came off victor with a slight margin The government then charged that fraud had been used, and the congress declared that a new election would be necessary A revolution followed in March, 1948 The rebels were successful and set up (May, 1948) a junta under José Figueres, a Socialist, who, by arrangement with Ulate, took over rule temporarily A small band of rebels in Dec , 1948, crossed the border from Nicaragua, and Costa Rica, charging Nicaragua with a part on the revolt, asked for an investigation by the Council of the Organization of American States This was held, the Nicaraguan border was closed to rebels, and Costa Rica was asked to suppress activities of the Caribbean League, an international organization formed with the express purpose of attacking dictatorships (including the government of Nicaragua) In Nov , 1949, the junta yielded the government to Otilio Ulate, who was inaugurated under a new constitution Thus Costa Rica returned to its usual democratic forms See Ricardo Fernández Guardia, *History of the Discovery and Conquest of Costa Rica* (1913), D G Munro, *Five Republics of Central America* (1918), John Biesanz and Mavis Biesanz, *Costa Rican Life* (1944), Ralph Hancock, *The Rainbow Republics* (1947)

Coster, Charles de: see DE COSTER, CHARLES

Coster, Laurens Janszoon: see KOSTER, LAURENS JANSZOON

Coster, Samuel (sä'mŭĕl kōs'tur), 1579–c 1665, Dutch man of letters, a physician His importance lay less in the farces and tragedies he wrote than in his leadership of a group of promising liberal writers, including Vondel, Hooft, and Bredero Their literary academy at Amsterdam (1617) did not realize its ambitions, but it had influence on Dutch letters, especially in the theater

cost of living, cost of goods and services bought by a certain economic class to maintain a certain standard of living in a specified geographical area In estimating such cost, food, clothing, rent, fuel, lighting, furnishings, and other miscellaneous items, such as recreation, transportation, and medical services, are included in the data analyzed Index numbers based on any norm of 100 are used to show changes in the cost of living, and any deviation from that norm will reveal the rise or fall of the cost of living in a particular year, as compared to the normal year or years used as a basis The first attempt to gather data on the cost of living in the United States was made by the U S Bureau of Labor Statistics in 1890 During the Second World War and immediately following it, many employers established systems of wage changes based on changes in the cost of living, but such attempts were denounced by labor spokesmen as establishing a standard of living "which must remain fixed " However, an agreement using the cost of living index as a basis for the determination of wage rates was signed in May, 1948, between General Motors and the United Automobile Workers of America Attempts to compare index numbers of wages and costs of living of various countries have been made by the International Labor Office, but variations in the methods of gathering statistics have curtailed their usefulness

costa, legal: see DAMAGES

costume, dress in its distinctive forms as worn by different peoples, at different periods, and including official or ceremonial attire, such as vestments, coronation robes, and academic gowns Costume properly extends to accessories such as gloves, veils, collars, girdles, jewelry, weapons, headdress; to styles of wearing hair and beard, to primitive methods of painting, scarring, or tattooing the body, to head and foot binding and waist compression, and to ear, lip, and nose piercing for the wearing of ornaments or insignia. The use of ornament precedes, apparently, the use of protective garments, its purpose being to enhance personal importance by wearing trophies, valuables, charms, and the like and to increase sex attractiveness Climate, or the need of protective covering, is a powerful influence in the evolution of dress The southern peoples have been called the skirted races, the skirt supposedly developing from the girdle, while Pliny spoke of the northern tribes, the Gauls, Franks, and Britons, as the breeched or trousered ones and considered their garb an index of their barbarism Some eastern peoples also were trousered, as the Medes and Persians Caste distinctions have always greatly affected modes of dress Primitive man adorned himself with the mementos of his prowess, his paint and scars were symbolic, the Chinese aristocrat marks his immunity from toil by the length of his fingernails and his voluminous robes Chinese dress has always been distinguished by the use of magnificent textiles and embroidery, of pearls and jade, and by its subtle symbolism of rank and wealth India, having a diversified people and great caste traditions, has had divided usage in many details, but in general presents the same elements, for the women the long draped shawl or sari, sandals, jewelry in profusion, and for the men a similar drapery and headdress significant of tribe or caste Exquisite muslins, "painted" cottons, gold and silver flowered fabrics, the Cashmere shawl, and CLOTH OF GOLD have from antiquity beautified the Indian garments Early Egyptian costume was a sort of apron or kilt, variously wrapped and ornamented, of light transparent linen or other fabric Massive jewelry, wigs, and elaborate headdress were general among the upper classes Assyrians wore rich, opaque textiles, embroidery, fringe, and gorgeous jewelry To show any part of the body indicated lowly condition, and the long tunic was sleeved and girdled Greek costume is noted for its extreme of tasteful simplicity The characteristic woman's dress was the chiton, a long loose robe, drawn in soft folds over a girdle about the waist In the Doric chiton the top was turned to fall in a flap, the Ionic chiton was joined at intervals along the top to form sleeves The himation, a large, rectangular mantle, was draped at pleasure Wool, linen, and later silk in white and delicate colors were worn Jewelry was restrained and hairdressing simple, a fillet being generally used Men and women dressed much alike Men wore their hair long until the Persian wars Roman dress, influenced by that of the Greeks, was simple and dignified The TOGA, variously draped, was the distinctive garment of the Roman citizen Women wore the stola, and both wore the tunic The palla, a shawl for outdoor wear, functioned as well for bed or couch cover or for shroud White wool was much worn No tailoring or dressmaking in the modern sense existed, as garments were complete as they came from the loom, except for sewing up the tunic The change from ancient to modern costume began with the Roman conquest The conquerors adopted the close, trousered garb of the barbarians, while the Gauls, Franks, and Britons assimilated many features of the Roman clothing In the early Byzantine period various influences, pagan, Roman, and Christian, mingled The result in medieval European costume was characterized by a large number of separate garments, elaboration of detail, the fitting of garments to the body, and the beginnings of fashion The dress of the Byzantine period consisted of a long tunic or robe, some form of trousers, the dalmatic and the stole, which survive in clerical VESTMENTS Frankish dress became splendid Men wore knee-length tunics, rich girdles, furred and fringed mantles, clasps, and brooches The Crusades tremendously influenced dress by increasing commerce with the East and introducing rich fabrics Armor, armorial bearings, heraldic embroidery, insignia of all sorts, and the beginnings of uniform appeared The Norman Conquest substituted more shapely and ornamental clothing for the sober English cloak and tunic In the 16th cent , costume was of extravagant magnificence, as on the FIELD OF THE CLOTH OF GOLD Velvets, brocades, gold cloth and gold-shot fabrics, embroidery, and LACE characterized the dress of both sexes. Before the 15th cent the long robe of men had disappeared, except for scholars, and was followed successively by the rochet, the cotte, the doublet or pourpoint, and finally the coat, with which were worn the long closely fitted hose which had evolved from the early loose trousers and covered the body from waist to toes They were diversified by trunks called trunk hose and later were separated into distinct garments, trunks and HOSE (or stockings) The word *breeches* came into use c 1600. Armor was abandoned in the 17th cent The hennin or steeple headdress of the 14th and 15th cent. and the bombasted trunks, high ruffs, and extreme farthingales of the 16th cent gave way to the graceful and harmonious costume of the early 17th portrayed by Van Dyck—for men the short, full cloak, shapely doublet, wide collar, and broad, plumed hat, for women the bodice and stomacher and the full skirt Coats with skirts and waistcoats introduced at the court of Louis XIV soon became the general garb for men and in the 18th cent were marked by rich colorful materials Women adopted the long bodice, stiff corset, full skirts draped over a wide hoop, and towering hair arrangements. The period saw an elaboration of jewelry and accessories, such as snuffboxes, muffs, fans, and veils High heels became fashionable. The French Revolution, in reaction against caste distinctions, abolished elegance and made permanent changes in dress, such as the introduction of long trousers Although a number of eccentric fashions followed it, costume may be said at this time to have given way to a modern, more or less universal style National dress is fast giving way to standardized modes The peasant costume of some countries is colorful and picturesque, often elaborately fashioned and embroidered and augmented by kerchief, headdress, and apron Particularly interesting are those of the Netherlands, the Tyrol, Czechoslovakia, Lithuania, and Brittany The stage has done much to keep alive knowledge and appreciation of the apparel of bygone ages In the early religious drama of all nations theatrical costume was highly symbolical Deities, heroes, and personifications of qualities and forces, such as vice and virtue, all have their traditional colors, garments, insignia, MASKS, and wigs In the Greek theater, dress was conventional in colors and accessories, the sock and buskin (*soccus* and *cothurnus*) standing respectively for comedy and tragedy The Roman drama became more realistic and elaborate, and masks were gradually given up In medieval plays divinities were garbed in the style of contemporary religious paintings, devils were characterized by masks As the drama passed out of the control of the church into that of the courts, it became spectacular and splendid The modern stage has developed the greatest possible freedom in the use of costume, which may vary from strict historical accuracy to the furthest extreme of artistic suggestiveness See K M Lester, *Historic Costume* (3d ed , 1942), J R Planché, *A Cyclopaedia of Costume* (2 vols , 1876-79), R Turner Wilcox, *The Mode in Costume* (1947)

Cosway, Richard (kŏz'wā), 1740?–1821, English miniaturist There is a collection of his works in Windsor Castle Perhaps best known is the portrait of Mme du Barry A self-portrait is in the National Portrait Gallery, London See biography by G C Williamson (1905).

Côte-d'Or (kōt-dôr') [Fr ,=golden ridge], department (3,392 sq mi , pop 335,602), E France, a part of BURGUNDY It is named for a low mountain chain whose slopes are covered with some of the finest vineyards in the world DIJON (the capital) and BEAUNE are the chief centers

Cotentin (kôtätăⁿ'), region of Normandy, N France, roughly coinciding with the peninsula formed by the MANCHE dept An old Norman county, it takes its name from its old capital, Coutances The region is characterized by the numerous hedgerows which divide the hilly landscape into small fields and apple orchards

Cotes, Roger (kōts'), 1682–1716, English mathematician and philosopher He was Plumian professor of astronomy at Cambridge from 1706 He wrote the preface to the second edition of Sir Isaac Newton's *Principia*

Cotes, Sara Jeannette Duncan: see DUNCAN, SARA JEANNETTE

Côte Saint Michel, Que see SAINT MICHEL

Côtes-du-Nord (kōt'-dü-nôr') [Fr ,=northern shores], department (2,787 sq mi ; pop 526,955), NW France, in Brittany, on the English Channel. Saint-Brieuc is the capital

Cöthen, Germany see KOTHEN.

cotillion (kutil'yun, kō–), ballroom dance which flourished in the 19th cent in the United States and England It appeared in France during the reign of Louis XIV, but the number of dancers it then permitted was limited The cotillion was danced to polkas, waltzes, and mazurkas, and it allowed a great variety of steps and figures which were suggested by a leading couple, the other dancers imitating them. It was often used at the close of a ball

Cotman, John Sell, 1782–1842, English landscape painter and etcher, a leading representative of the Norwich school His father was a well-to-do mercer. Cotman studied in London, where he knew J M W. Turner and Girtin. He had a small income and never succeeded in making much by his painting For the last nine years of his life he was a drawing master at King's College, London. Although Cotman's work was but little appreciated in his day, it is now highly prized for its fine color, decorative and structural qualities, and sustained poetic mood He is best known for his water colors and drawings, of which the British Museum possesses many, including the famous *Greta Bridge*. Cotman's oil

paintings are in many British galleries The Metropolitan Museum possesses two His sons Miles Edmund (1810–58) and Joseph John (1814–78) and his nephew Frederick George Cotman were able painters See biography by S C K Smith (1926), Laurence Binyon, *John Crome and John Sell Cotman* (1897)

Cotopaxi (kōtōpäk'sē, kōtōpäk'hē), active volcano, 19,344 ft high, N central Ecuador A magnificent snow-capped cone, Cotopaxi is one of the most superb peaks of the Andes It is continuously active and eruptions have caused severe damage

Cotrone, Italy see CROTONA

Cotswold Hills, broken plateau of oolitic limestone, mainly in Gloucestershire, England, extending c 50 mi NE from Bath Its crest (average elevation less than 600 ft) is the Thames-Severn watershed The region is famous for Cotswold sheep and for its picturesque houses Noteworthy are the many megalithic monuments and long barrows here Among the ancient churches is Havles Abbey, founded in 1246 The Cotswold games were held here from ancient times until the 19th cent See O G S Crawford, *The Long Barrows of the Cotswolds* (1925), H J Massingham, *Cotswold Country* (1937), J C Moore, *The Cotswolds* (1937)

Cotswold sheep, old breed of long-wool English sheep, native to the Cotswold Hills of Gloucestershire, England The Cotswold is a large sheep with a long, coarse, lustrous wool hanging in ringlets It is often crossed with the Down and Merino breeds In the United States it is found mostly in the northwestern ranges The American Cotswold Registry Association promotes the interests of the breed in America

Cotta, Heinrich von (hīn'rĭkh fŭn kô'tä), 1763–1844, German forester In 1795 he founded near Eisenach a school of forestry, he became director (1810) of the forestry school at Tharandt, which in 1811 absorbed the Eisenach school He developed new methods of tree culture and of forest management His standard works on forestry include *Anweisung zum Waldbau* (1817)

cottage cheese, unripened soft cheese known also as pot, baker's, or Dutch cheese or smearcase It is usually made of pasteurized skim milk and set with a starter of lactic acid bacteria The separation of curd and whey is facilitated by low heat The curd is stirred and seasoned with salt, cream, and, in some localities, molasses or sugar The use of skim milk yields a cheese low in fat and vitamin A Cottage cheese is subject to mold spoilage and must be refrigerated and used fresh

Cottage City, town (pop 1,044), W central Md , residential suburb of Washington, D C

Cottage Grove, city (pop 2,626), W central Oregon, S of Eugene and on the Coast Fork a tributary of the Willamette, in a lumbering and fruitgrowing area, inc 1900 The Cottage Grove Dam, 6 mi south of the city, completed in 1942 is part of the Willamette river basin project (see WILLAMETTE)

cottage holding, term used in England for a tract of not more than three acres of agricultural land farmed by the household of a cottage to provide food for the household, which secures its money income from some source other than marketing the produce of the farm Possession of cottage holdings has proved advantageous to families engaged in local industries Their farming is not subject to the discouragements of business farming and materially improves their standards of living Holdings for subsistence farming are not limited to England, they are customary in many countries, and before the centralization of industry they were usual possessions of American mechanics and others who were not business farmers See also SMALL HOLDING See Ralph Borsodi, *This Ugly Civilization* (2d ed , 1933) and *Flight from the City* (3d ed , 1947)

cottar see COTTER

Cottbus or **Kottbus** (both kôt'bŏŏs), city (pop 49,131), Brandenburg, E Germany, on the Spree It has textile and machine-tool manufactures

Cotte, Robert de (rôbĕr' dŭ kôt'), 1656–1735, French architect He designed Parisian residences and public works such as the façade of the Church of St Roch in Paris and the episcopal palace at Strasbourg At Versailles, in association with J H Mansart, he built the Grand Trianon and completed the palace chapel He completed the high altar of Notre Dame de Paris Cotte succeeded Mansart as architect to Louis XV

cotter, cottar, or **crofter** in Highland Scotland, a tenant who rents a croft, or small holding of land The removal of many cotters from their land in the 19th cent aroused much agitation and started legislation in their behalf The humble lot of this agricultural type is described in Robert Burns's well-known poem, "The Cotter's Saturday Night."

Cottereau, Jean: see CHOUANS

Cottet, Charles (shärl' kôtā'), 1863–1925, French landscape and genre painter, studied at the École des Beaux-Arts His paintings of Brittany include the fine series of landscapes called *The Country of the Sea* (Luxembourg Mus , Paris), *Going to Church in Brittany* (Vienna), and *Burial in Brittany* (Lille) Travels in Egypt, Italy, and Spain resulted in paintings of those countries

Cotton, Charles, 1630–87, English poet and translator. He contributed to his friend Izaak Walton's *Compleat Angler* Cotton's verse, pleasant and unaffected, includes "An Ode to Winter" and "The Retirement " Among his translations from the French is a version of Montaigne's *Essays* (1685–86) See C J Sembower, *Life and Poetry of Charles Cotton* (1911)

Cotton, George Edward Lynch, 1813–66, English clergyman and educator, grad Trinity College, Cambridge, 1836 From 1837 until 1852 he was an assistant master at Rugby and is the "young master" in Thomas Hughes's *Tom Brown's School Days* He later became (1852) headmaster of Marlborough College and after 1858 served as bishop of Calcutta, where he did extensive missionary work and established numerous schools for Eurasian children See memoir by his wife (1871)

Cotton, Henry (Thomas Henry Cotton), 1907–, British golfer, b Cheshire, England He took the British open golf championship in 1934 and 1937, won many European championships, and was the Professional Golfers' Association of America winner in 1932, 1939, and 1946 Cotton also was captain of the British Ryder Cup team in 1939 and 1947 He wrote *The Game of Golf* (1949)

Cotton, John, 1584–1652, Puritan clergyman in England and Massachusetts, b Derbyshire, educated at Cambridge (M A Trinity College, 1606, B D Emmanuel College, 1613) Imbued with Puritan doctrines, he won many followers in the 20 years when he was vicar of the rich and influential parish of St Botolph's Church, Boston, Lincolnshire He was summoned to appear before the High Court of Commission (1632), but instead of appearing he resigned and fled Some of his flock sailed (1633) with him to Massachusetts Bay, where the young city of Boston was so named primarily to honor him He and John Winthrop were the leading figures of the colony, and Cotton was chiefly responsible for the exile of Anne HUTCHINSON because of her antinomian doctrines and for the expulsion of Roger WILLIAMS He was one of the molders of the Congregational Church, and his arguments in such treatises as *The Keys of the Kingdom of Heaven* (1644), *The Way of the Churches of Christ in New England* (1645), and *The Way of the Congregational Churches Cleared* (1648) were cogent and profound He was a firm believer in the right of the Congregational minister to dictate to the faithful, and thus he has been viewed as a strong upholder of theocracy His *Milk for Babes* (1646) was a well-known catechism for children His daughter was the wife of Increase MATHER and the mother of Cotton MATHER

Cotton, Sir Robert Bruce, 1571–1631, English antiquarian The Cottonian collection of books, manuscripts, coins, and antiquities became a part of the British Museum when it was founded in 1753 Cotton collected especially Hebrew and Greek manuscripts and Anglo-Saxon characters An unprinted classified catalogue of the collection is in the Harleian MSS of the British Museum The House of Commons Committee Parliamentary Report of 1732 gives a description

cotton, most important of the vegetable fibers Cotton has been spun, woven, and dyed since prehistoric times It formed the staple clothing of India, Egypt, and China Hundreds of years before the Christian era cotton textiles were woven in India with matchless skill, and their use spread to the Mediterranean countries In the 1st cent Arab traders brought the fine muslins and calicoes to Italy and Spain Moors introduced the cultivation of cotton into Spain in the 9th cent Fustians and dimities were woven there and in the 14th cent in Venice and Milan, at first with a linen warp Little cotton cloth was imported to England before the 15th cent , although small amounts were obtained chiefly for candlewicks By the 17th cent the East India Company was bringing rare calicoes and other fabrics from India Before the arrival of the white man in the Western Hemisphere, cotton was skillfully spun and woven into fine handkerchiefs, mantles, bags, breeches and poncholike garments and dyed tapestries, counterpanes, and carpets Cotton fabrics found in Peruvian tombs are said to belong to a pre-Inca culture In colors and texture, the ancient Peruvian and Mexican textiles resemble those found in Egyptian tombs The cotton plant belongs to the mallow family (genus *Gossypium*) and is related to the hibiscus and hollyhock It is generally a shrubby plant having broad three-lobed leaves and seeds in capsules, or bolls, each seed is surrounded with downy fiber, white or creamy in color and easily spun The fibers, when dried, are flattened and twisted Cotton is of tropical origin but is most successfully cultivated in temperate climates with well-distributed rainfall In the United States nearly all of the commercial cotton crop comes from varieties of upland cotton (*Gossypium hirsutum*), but small quantities are obtained from sea-island and American-Egyptian cotton (both belonging to the species *G. barbadense*) The upland varieties are hardier than the others, they have white flowers which turn red before dropping and white fiber ranging in length from about ¾ in to about 1½ in. Most of the sea-island and American-Egyptian cottons now grown in the United States are found in irrigated regions of the SW United States They have white or cream-colored flowers which turn yellow before falling, and the plants require a longer growing season than the upland cotton The fibers of both are cream-colored or buff Sea-island cotton was formerly, before invasion of the South by the BOLL WEEVIL, the chief type grown in Florida and the coastal regions of Georgia and South Carolina, since it thrives in a moist, salty atmosphere Its long silky fibers are used in fine fabrics, lacework, and thread Cotton, although actually a perennial, is usually treated as an annual in cultivation The Cotton Belt in the United States extends from Texas to North Carolina The land is plowed, bedded up in ridges 3 or 4 ft wide, and the seed planted in furrows The planting season extends from March 1 in Texas to May 1 farther north Sunshine and moisture are required by the young plants (which are thinned by "chopping"), and dryer weather for maturing the bolls After six or eight weeks the bolls burst and are ready for picking Since the bolls ripen at different times, the picking is a laborious process requiring care, and long done by hand After the Second World War the use of mechanical pickers increased A chemical defoliant, which causes the foliage to drop before stripping has increased the efficiency of machine picking In the ginhouse the ripe cotton is separated from the seeds and baled The usual plantation bale weighs 500 lb , is covered with jute, and is bound with iron hoops The U S Dept of Agriculture has established official standards for grades of cotton In the S United States, research has been carried on with a view to improving methods of cultivation and handling Diseases and insect pests are numerous and destructive, of these the most deadly is the boll weevil, which causes enormous losses, especially to sea-island cotton The leading cotton-producing countries are the United States, India, China, the USSR, Egypt, and Brazil, it is produced also in Argentina, Peru, Mexico, and parts of Africa Leading states, in order of production, are Texas, Mississippi Arkansas, Alabama, Georgia, South Carolina, Louisiana, North Carolina, Oklahoma, and Tennessee Cotton cultivation began in America in the Jamestown colony (1607) The invention of the COTTON GIN (1793) increased production enormously, and the amount exported by 1800 was over 17,000,000 lb Weaving was begun by settlers who brought their wheels and looms The manufacture of cotton into cloth involves many processes—cleaning, ginning, carding, and spinning, which bring the raw fiber to a yarn or thread strong enough for weaving Under modern conditions, the weaving is mostly done in large factories on highly specialized power looms, dyeing, printing, and finishing conclude the making of the textile The manufacturing of cotton goods is a great industry in Great Britain (where it centers about Lancashire) and in the United States The earliest manufacturers used cotton yarn imported from the Orient In 1773 Arkwright was weaving CALICO at Derby on hand looms When new machines came into use in England, e g , Kay's fly shuttle, Hargreave's spinning jenny, and Arkwright's mule, the colonies were prohibited, under severest penalties, from obtaining or copying them, and not until Samuel SLATER, in 1790, designed in America machines for spinning cotton similar to those used in England could the American industry be said to be fairly launched For some years manufacture was centered in the North, at present many of the factories are in the cotton-producing states Commodities made from cotton are innumerable They comprise fabrics used in making clothing as well as cord fabrics for tires, fabrics for covering airplane wings, and mesh materials used as an inner layer in paved roads, small wares, such as elastic webbing, shoelaces, machine belts, and labels, knit goods, and mixed fabrics From the linters are made batting, wadding, and absorbent cotton, stuffing for mattresses, upholstery, and comforts, yarn, twine, and candlewicks Linters are also a valuable source of CELLULOSE for products including rayon, writing paper, guncotton, smokeless powder, varnishes, waterproofing materials, celluloid, collodion photograph films, and numerous others Cotton hulls are used for fertilizer, fuel, and packing, fiber of the stalk, for pressed paper and cardboard Production of the chief by-product, **cottonseed oil,** has assumed the importance of a separate industry The ripe pod or boll contains numerous seeds which constitute about two thirds the bulk, the remaining third being lint or fiber Some attempts had been made before the invention of the cotton gin to utilize the seeds A few planters plowed seeds under as fertilizer or fed them to their stock, but on the whole they constituted an enormous waste Experiments were begun among the Moravians of Pennsylvania to utilize the seeds In the mid-19th cent France made an edible butter substitute from Egyptian cottonseed In America the oil produced was at first used for lamps and for medical purposes After experiments in using

the oil for lighting, soapmaking, and cattle food, it began to be used, in the mid-century, as an adulterant of lard, butter, and olive oil and in packing sardines Not until the latter part of the 19th cent did the processing of cottonseed oil become a well-established industry The oil content of cotton seeds is about 20 percent After being freed from the linters the seeds are shelled and then crushed and pressed to obtain the crude red or brown oil; the refining process removes much of the color. Another method of obtaining the oil is by extraction with a solvent In its highly refined state cottonseed oil is employed in many ways, e g , as shortening, as salad oil, as a frying medium, and in the manufacture of margarine and of cosmetics Paint makers use it to some extent as a semidrying oil In the manufacture of soap, candles, washing powder, roofing tar, oilcloth, and artificial leather, as well as many other commodities, the less refined grades are used See M DeC Crawford, *The Heritage of Cotton* (1924, reprint, 1948), Harry Dickson, *The Story of King Cotton* (1937), G R Merrill and others, *American Cotton Handbook* (1941), Josephine Perry, *The Cotton Industry* (1943), Cotton Textile Institute, *Cotton from Raw Material to Finished Product* (3d ed , 1944)

Cotton Belt, term applied to that part of the United States where for many years cotton was the principal agricultural crop This area included the greater part of North Carolina, South Carolina, Georgia, Alabama, Mississippi, Louisiana, Arkansas, Oklahoma, and Texas and sections of Virginia, Kentucky, Tennessee, Florida, and Missouri Although large quantities of cotton are still grown in many parts of this region, there is now crop diversification In later years the Cotton Belt has been extended into the Southwest Texas has taken the lead in cotton production, and cotton is raised in the Imperial Valley and other areas in California and in regions in Arizona and New Mexico

cotton boll weevil: see BOLL WEEVIL

cotton gin (jĭn), machine for separating cotton fiber from the seeds The charkha, used in India from antiquity, consists of two revolving wooden rollers through which the lint is drawn, leaving the seeds A similar gin was early used in the S United States for long-staple cotton In the modern roller gin, rollers covered with rough leather draw out the fibers, which are cut off by a fixed knife pressed against the rollers This type of gin cleans only about two bales per day but it does not snarl or break the fibers The saw gin, invented by Eli Whitney in 1793 and patented in 1794, consisted of a toothed cylinder revolving against a grate which enclosed the seed cotton The teeth caught the lint, pulling it from the seeds, and the lint was removed from the cylinder by a revolving brush This device, especially suited to short- and medium-staple cotton, has been mechanized and is used in surviving small plantation gins and in the more usual commercial gins, where the fiber is conveyed from farm wagon to baler by air suction Such plants have one or more gin stands, each with a series of from 70 to 80 circular saws set on a shaft The fiber, freed from dirt and hulls, is pulled through a grid by the saw teeth, from which it is removed by a revolving brush or by a blast of air (in more modern plants), and it is carried by air blast or suction to a condenser and finally to the baling apparatus

cottonmouth see WATER MOCCASIN

Cotton Plant, town (pop 1,778), E Ark , near the White River, in a cotton region, laid out 1840

Cottonport, town (pop 1,196), central La , SE of Alexandria, in the Cotton Belt

cottonseed oil see COTTON

cottonwood. see POPLAR

Cottonwood Falls, city (pop 1,078), co seat of Chase co , E central Kansas, SW of Topeka, founded 1858 by Free State settlers, inc 1872 It is a trade and shipping center in a farm and livestock area Near by is the Knute Rockne Memorial

Cottrell, Frederick Gardner (kŏt'rul), 1877-1948, American chemist, b Oakland, Calif , grad Univ of California (B S , 1896), Ph D, Univ of Leipzig, 1902 From 1902 to 1911 he taught at the Univ of California He served the government in the Bureau of Mines (1911–20), the National Research Council (1921–22), and several branches of the Dept of Agriculture (1922–42) He was an authority on nitrogen fixation and mineral fertilizers and developed the Cottrell method of dust precipitation, which uses an electric current at high potential to precipitate out suspended particles

Cotulla (kŭtŭ'lŭ), city (pop 3,633), co seat of La Salle co , SW Texas, on the Nueces and SW of San Antonio, inc 1910 It has developed from a cow town in mesquite-brush country to a shipping center for truck and livestock and a tourist stop on the Pan American Highway There are oil fields near by

couch grass, name for several grasses, among them the QUACK GRASS

Couchiching, Lake (kōō'shĭchĭng), S Ont , N of Lake Simcoe, connected with it by a channel, the "Narrows" It discharges through the Severn into Georgian Bay A summer resort, it is the scene of the Couchiching Conference, an annual gathering for the discussion of public questions

Coucy, Robert de (rôbĕr' dŭ kōōsē'), d. 1311, French architect, celebrated for his part in the building of Rheims cathedral, which he carried on as master of the works after the death of Hugues Libergier in 1263 Probably the Robert de Coucy traditionally known as the original architect of Rheims cathedral, after the fire of 1211, was his father, their separate works on the cathedral have been confused

Coucy, ancient castle, Aisne dept , N France, notorious in the 12th cent for its robber barons It was damaged in 1917 One of its lords, Guy II of Coucy, known as Le Châtelain de Coucy (d 1203?) was a trouvère

Coudersport (kou'dûrspôrt), industrial borough (pop 3,197), co seat of Potter co , N central Pa , on the west bank of the Allegheny river and E of Smethport, laid out 1807, inc 1848. Its manufactures include toys, textiles, leather goods, and surgical appliances The borough is a resort center There are many examples of Greek revival style in houses here The famous Bucktail Regiment of the Civil War was recruited largely in this area

Coudert, Frederic René (kōōdâr'), 1832–1903, American lawyer and public official, b New York city, grad Columbia, 1850 He practiced law in New York city and for many years was counsel in the United States for the French, Italian, and Spanish governments He was (1880) a member of the international conference at Bern for the codification of the law of nations, served (1893–95) as counsel for the United States in the Bering Sea fur-seal arbitration at Paris, and was (1896–98) a member of the Venezuela Boundary Commission He was active in political reform movements in New York city and was a trustee of many educational institutions He wrote *Certainty and Justice* (1913)

Coué, Émile (kōōā', Fr āmēl' kwā'), 1857–1926, French psychotherapist He is remembered for his formula for curing by optimistic autosuggestion, "Day by day, in every way, I am getting better and better" His teaching achieved a vogue in England and the United States in the 1920s

Coues, Elliott (kouz), 1842–99, American ornithologist, b Portsmouth, N H , grad Columbian College, later Columbian Univ and now George Washington Univ (B A , 1861, M D , 1863, Ph D , 1869) He served as an army surgeon in the Civil War and as naturalist on government surveys and taught (1877–87) at Columbian Univ He was a founder of the American Society for Psychical Research and a leader in the theosophist movement He wrote *Key to North American Birds* (1872), *Birds of the Northwest* (1874), *Birds of the Colorado Valley* (1878), and *Fur-bearing Animals* (1877); he edited the journals of Lewis and Clark (1893), Zebulon M Pike (1895), and Alexander Henry and David Thompson (1897)

cougar see PUMA

cough, forceful expiration, with partly or completely closed glottis, which tends to remove obstructing material or irritants from the air passages It may be caused by irritation of the nerves in the air passages even when there is nothing to be coughed up It may be caused by inflammation from irritants, such as smoke, or by infection of the respiratory tract from ordinary sore throat, pneumonia, or tuberculosis of the lungs Special types occur in ASTHMA and WHOOPING COUGH Material coughed up is known as sputum It may contain bacteria in case of infection or blood where there is hemorrhage into the air passages In heart disease combined with poor circulation there may be coughing In general, no attempt is made to prevent a cough which gets rid of material in the air passages If it is exhausting, however, or if there is hemorrhage, sedatives are used to prevent coughing

Coughlin, Charles Edward (kŏ'glĭn), 1891–, Roman Catholic priest in America, b Ontario, Canada, grad Univ of Toronto, 1916 After study at St Michael's College, Toronto, he was ordained (1916) and became (1926) pastor of the Shrine of the Little Flower at Royal Oak, Mich After 1930 his radio addresses brought him to public notice, and in 1936 he bitterly opposed President F D Roosevelt's administration after earlier (1933–34) supporting him His political and economic doctrines were expressed in his magazine, *Social Justice*, which was barred from the mails by the U S government for violation of the Espionage Act and which ceased publication in 1942 Meanwhile Father Coughlin was silenced by his superiors

Coulanges, Numa Denis Fustel de. see FUSTEL DE COULANGES, NUMA DENIS

Coulomb, Charles Augustin de (kōō'lôm, kōōlôm', Fr shärl' ôgüstē' dŭ kōōlô'), 1736–1806, French physicist In 1789 he retired from his posts as military engineer and as superintendent of waters and fountains and devoted himself to continuing his scientific research. He was known for his work on electricity, magnetism, and friction, and he invented a magnetoscope, a magnetometer, and a torsion balance which he employed in determining torsional elasticity and in establishing COULOMB'S LAW The unit of quantity (coulomb) of electricity is named in his honor.

coulomb (kōō'lôm, kōōlôm') [for C. A de Coulomb], the unit quantity of electricity. It is defined (electrochemically) as the quantity of electricity required to deposit 0 001118 g of silver from an aqueous solution of silver nitrate, i e, the quantity of electricity which a current of one AMPERE transfers in a second

Coulomb's law [for C A de Coulomb], concerning magnetic and electrostatic forces between two charges, states that the force of attraction or repulsion is inversely proportional to the square of the distance between charges and directly proportional to their product

Coulonge (kōōlôsh'), river of SW Quebec, 120 mi long, rising in a series of small lakes and falling into the Ottawa river opposite Pembroke, Ont It is navigable only for canoes and small boats

Coulter, Ellis Merton (kōl'tûr), 1890–, American historian, b near Hickory, N.C., grad Univ of North Carolina, 1913, and Univ. of Wisconsin (M A., 1915, Ph D , 1917) He taught at Wisconsin and at Marietta College before going to the Univ of Georgia in 1919 In 1923 he became professor of history at Georgia. One of the more prominent historians of the South, and of the Civil War and Reconstruction periods in particular, Coulter has written *The Civil War and Readjustment in Kentucky* (1926), *William G Brownlow, Fighting Parson of the Southern Highlands* (1937), *Thomas Spalding of Sapelo* (1940), *Georgia a Short History* (1947, rev and enl ed of *A Short History of Georgia*, 1933), *The South during Reconstruction, 1865–1877* ("A History of the South" series, Vol VIII, 1947), *Travels in the Confederate States a Bibliography* (1948), and *The Confederate States of America, 1861–1865* ("A History of the South" series, Vol VII, 1950)

Coulter, John Merle, 1851–1928, American botanist, b China, of missionary parents, grad Hanover College, Hanover, Ind (B.A , 1870, Ph.D , 1882), Ph D Indiana Univ , 1884. He was a pupil and friend of Asa Gray and edited the sixth edition of Gray's *Manual* He was professor of botany (1896–1925) at the Univ. of Chicago, where he trained many leaders in botanical research He was influential in founding the Boyce Thompson Institute for Plant Research and was its adviser from 1925 In 1875 he founded the *Botanical Gazette*, which he edited for 50 years His works include *Plant Structures* (1899), *Plant Relations* (1899), *Plant Studies* (1900), *A Text-Book of Botany* (1906), *Fundamentals of Plant Breeding* (1914), *Plant Genetics* (1918), and valuable manuals on plants of Texas and the Rockies

Coulterville (kōl'tûrvĭl), village (pop 1,284), S Ill , SE of Belleville, in a farm and coal area, inc 1874

council, ecumenical (ĕ"kūmĕ'nĭkul, ē"-) [Gr ,=universal], in Christendom, council of church authorities accepted by the Church as speaking officially. A synonym is "general council" The utterances of such a council are called canons, the first being usually a detailed statement of the common faith The acceptance of the canons is unequal, thus, Roman Catholics regard them as binding ("canonical") only when a pope has subsequently ratified them, and many canons of several councils have never been accepted The following is the list of the general councils recognized by Roman Catholics (the numbering is a customary one) (1) 1 NICAEA, opened 325 (see NICAEA, FIRST COUNCIL OF), (2) 1 Constantinople, 381, (3) Ephesus, 431, (4) Chalcedon, 451, (5) 2 Constantinople, 553, (6) 3 Constantinople, 680, (7) 2 Nicaea, 787, (8) 4 Constantinople, 869, (9) 1 Lateran, 1123, (10) 2 Lateran, 1139, (11) 3 Lateran, 1179, (12) 4 Lateran, 1215, (13) 1 Lyons, 1245, (14) 2 Lyons, 1274, (15) Vienne, 1311, (16) Constance, 1414, (17) Basel and Ferrara-Florence, 1431, 1438, (18) 5 Lateran, 1512, (19) Trent, 1545, (20) Vatican, 1869 The Orthodox recognize the first seven and count the Trullan Synod of 692 as an ecumenical extension of the Third Council of Constantinople The first council was the model for the rest The common purpose of the first eight councils was to determine whether specific theological novelties were orthodox (i e , consonant with the Bible faith as handed down) or heretical (not orthodox) The rest of the councils, all held in Western Europe, have dealt extensively with church discipline and morals Two of them, the Second Council of Lyons and the Council of Ferrara-Florence, were occupied with abortive reconciliations between East and West In the Great Schism arose the "conciliar theory," that an ecumenical council is superior to the pope, this was in its heyday at the Council of Constance (see SCHISM, GREAT) The traditional opinion is that when the bishops of the world unite to define belief in the light of what they have received from their predecessors, God will protect them from error This is a manifestation of the infallibility of the teaching Church, and papal infallibility is compared to it in the definition published by the Vatican Council (see INFALLIBILITY) Two famous councils that claimed to be ecumenical in vain are the Robber Council of Ephesus (see EUTYCHES) and the Council of Pisa in the Great Schism Protestants, rejecting the teaching role of the Church, are little interested in the councils. In the 1930s and 1940s Protestants of Europe and the United States

have joined in a movement called ecumenical, intended to reduce the sectarian barriers among Christians; there is no pretension to establish an authoritative organism. See Clement Raab, *The Twenty Ecumenical Councils of the Catholic Church* (1937); H J. Schroeder, *Disciplinary Decrees of the General Councils* (1937).

Council Bluffs, city (pop 41,439), co seat of Pottawattamie co., SW Iowa, on the Missouri opposite Omaha, Nebr Site of a trading post (late 1820s) and of a Potawatami Indian mission (established by Father De Smet, 1838–40), it was settled in 1846 by Mormons, who changed the name from Hart's Bluff to Kanesville, it was named Council Bluffs in 1852, when the Mormons departed for Utah, and incorporated in 1853 It is an important rail focus, with repair shops and roundhouses, and a trade and industrial center for a large agricultural area. A council between Lewis and Clark and the Indians, said to have been held near by in 1804, is commemorated by a monument (1935) An important supply point during the gold rush (1849–50), the city was made the eastern terminus of the Union Pacific RR in 1863 and then grew rapidly. The city has large grain elevators and many manufacturing plants, the surrounding country grows corn, grain, and grapes. There is a Lincoln monument in honor of Lincoln's visit here in 1859. Near by is the state school for the deaf

Council Grove, city (pop 2,875), co seat of Morris co., E central Kansas, SW of Topeka and on the Neosho, in an agricultural and cattle-raising region at the edge of the Flint Hills, inc 1858 Under Council Oak, here, traditionally, a treaty was concluded in 1825 with the Osage Indians The spot became an important camping station on the old Santa Fe Trail In 1847 a trading post, the city's first settlement, was established Coronado is said to have reached Council Grove in 1541 The building of an unsuccessful Methodist Indian mission established in 1849 is still standing

Council of Europe, Council of Foreign Ministers, Council of Ten, etc., see EUROPE, COUNCIL OF, FOREIGN MINISTERS, COUNCIL OF, TEN, COUNCIL OF

counselor at law: see BAR, THE

counterfeiting (koun'turfĭt'ĭng), manufacturing spurious coins, paper money, or evidences of governmental obligation (e g , bonds). The offense may be regarded as a special variety of FORGERY Under an early English statute (1350), counterfeiting the king's seal or his gold and silver coinage was a grave crime against the state amounting to high TREASON and was punishable by death The statute left unchanged the common-law misdemeanors of counterfeiting copper coinage and passing counterfeit foreign currency Other early statutes were directed against debasing the coinage by clipping or filing off the edges to sell the metal In the 19th cent counterfeiting was no longer considered a form of treason, previously the nature of the crime had been altered to make felonious the coinage of base metals and of paper and foreign currency Article 1, Section 8, of the U S Constitution authorizes Congress to "provide for the punishment of counterfeiting the Securities and current Coin of the United States" Under this power statutes have been enacted making criminal the counterfeiting of the currency and bonds of the United States, of the evidences of indebtedness (e g , checks) of the Federal Reserve System, and of foreign money used for exchange The counterfeiting of postage stamps has been prohibited under the power of Congress to establish a post office system To commit the crime of counterfeiting one does not necessarily have to make a whole coin or bill It may be accomplished by plating coins, by raising the amount of a bill, or by any other alteration calculated to deceive the recipients Knowingly to retain counterfeit money or government obligations is also a criminal offense, regardless of how possession was acquired The knowing utterance (passing) of counterfeit currency or securities is also criminal In short, it is the duty of all persons in possession of counterfeit material to deliver it to the proper authorities While the ownership of equipment especially designed for counterfeiting is of course criminal, it is not criminal to have tools, dies, and the like which can be so used unless the owner's purpose is criminal. For the further protection of the currency or of postage stamps, statutes forbid making certain types of photographs (e g , in color) where there would be danger of deception All of the American states have statutes protecting their own securities from counterfeiting, and many extend like protection to the national currency, postage, and securities See Laurence D Smith, *Counterfeiting. Crime against the People* (1944).

counterpoint, in music, the art of combining melodies each of which is independent though it forms part of a homogeneous texture The academic study of counterpoint was long based on *Gradus ad Parnassum* (1725, Eng tr., 1943) by Johann Joseph Fux (1660–1741), an Austrian theorist and composer. This work, highly esteemed by Bach, Beethoven, Haydn, and Mozart, formulates the five species of counterpoint—note against note, two notes against one, four notes against one, syncopation, and florid counterpoint, which combines the other species Countless textbooks have followed this outline, laying down such arbitrary rules as to divorce the study of counterpoint from actual musical practice In recent years, several theorists have based their courses in counterpoint on a direct study of 16th-century musical practice See also POLYPHONY. See A T Merritt, *Sixteenth-Century Polyphony* (1939), Walter Piston, *Counterpoint* (1947), G. F. Soderlund, *Direct Approach to Counterpoint in 16th Century Style* (1947)

Counts, George Sylvester, 1889–, American educator, b. near Baldwin City, Kansas, grad Baker Univ , 1911, Ph.D Univ of Chicago, 1916 He taught in the educational departments of several universities before joining the faculty of Teachers College, Columbia Univ , in 1927 A strong advocate for teachers' unions, he ran for public office on the American Labor party ticket and was president (1939–42) of the American Federation of Teachers Counts was a founder (1934) and the first editor (1934–37) of the educational magazine *Social Frontiers* His works include *The American Road to Culture* (1930), *The Prospects of American Democracy* (1938), and *The Education of Free Men in American Democracy* (1941)

county, organ of LOCAL GOVERNMENT in the United States and elsewhere. The county (or shire) was in England a local unit of magistrates, its officers being sheriff and judges Throughout the English-speaking world the courts are still organized by counties The English counties never got real power, for the cities freed themselves from county rule, and the crown has increasingly supervised rural government In the S United States and much of the West analogous processes made settlements become urban and self-governing at the same time State governments, usually for efficiency, increase their control of rural matters, e g , in welfare and relief. So the county has been left with a residue of concerns of rural government, it is still normal for elected sheriffs to keep order in rural territory In much of America the county seat is a local rural community center, with perhaps a library and hospital, a high school, and churches and lodge halls, all clustered about the courthouse Counties in the United States are governed mostly by elected boards (commissioners, supervisors, chosen freeholders) Louisiana has parishes, not counties As urban areas are incorporated there is often a lagging duplication of function between county and city Thus overlapping is slowly eliminated, as in New York city, where the five counties have been shorn of administrative significance, and in Denver and San Francisco, where city and county are consolidated See J A Fairlie and C M Kneier, *County Government and Administration* (1930)

coup (kōō) [Fr ,=blow], among North American Indians of the Plains culture, a war honor in a complex system of warrior prestige A warrior earned coups by acts of bravery, which were valued according to the degree of recklessness, the most reckless, such as striking an armed enemy with the bare hand, counted highest Killing an enemy, wounding him, scalping him, and stealing his horse or gun—all these were coups of value Recital of the deeds performed was an important social function, and a warrior with a high coup count had status at feasts, ceremonials, and in the tribe After warfare was halted, coups became transferable property, passing from the old men to the younger, who needed coups to acquire warrior status in the tribe

Couper, James Hamilton (kōō'–), 1794–1866, American planter of Georgia, grad Yale, 1814 Influential in promoting agricultural research and experimentation, he was a pioneer in the cultivation of rice, long-staple cotton, and sugar cane and introduced new plants, including Bermuda grass

Couper, William (kōō'–), 1853–1942, American sculptor, pupil and son-in-law of Thomas Ball He has produced portrait busts, reliefs, and graceful winged figures Among his works are a bust of Longfellow, Washington, D C., and the Col Alexander Hawkins Memorial, Pittsburgh

Couperin, François (frăswȧ' kōōpürĕ'), 1668–1733, French harpsichordist and composer, called "le Grand" to distinguish him from the rest of his family His works represent the summit of rococo style His style of harpsichord playing, formulated in *L'Art de toucher de clavecin* (1716), was one much advanced for his day Bach was influenced by Couperin's four books of harpsichord suites (1713–30), which were usually series of short, graceful, highly ornamented pieces, with descriptive titles such as *Les Abeilles, Les Papillons, La Voluptueuse,* and *Le Rossignol en amour* Couperin was organist (1698–1733) at St Gervais, Paris, a position held by members of the Couperin family from c.1650 until 1826 The Couperin line of musicians had begun with three brothers—Louis (c 1626–1661), an organist and composer of harpsichord suites; François (c 1631–c 1701), a harpsichordist and violinist, and Charles (1638–79), an organist, the father of Couperin le Grand It extended to the great-grandsons of François, the second brother—Pierre Louis (1755–89) and François Gervais (1759–1826), who were organists at St. Gervais and composers

Couperus, Louis Marie Anne (lwĕ' mărē' ăn' kōōpārōōs), 1863–1923, Dutch novelist Many of his novels, popular at home and abroad, have been translated into English Especially well known is the collection of four realistic novels, *De Boeken der kleine Zielen* (1901–3, Eng tr., *The Book of the Small Souls,* 1932), containing *Small Souls, The Later Life, The Twilight of the Souls,* and *Dr Adriaan.* Noteworthy also is *Old People and the Things That Pass* (Eng tr., 1918)

Courbet, Gustave (gustăv' kōōrbĕ'), 1819–77, French painter, b. Ornans He studied in Paris, but learned chiefly by copying masterpieces in the Louvre An avowed realist, Courbet was always at odds with vested authority, aesthetic or political In 1844 his *Wounded Man* (Louvre) was rejected by the Salon He first won wide attention with his *L'Après-Dîner à Ornans* (Lille) in 1849 The next year he exhibited his famous *Funeral at Ornans* (Louvre) These were followed by other realistic canvases—portraits, studies of landscape and animals—and, in 1855, by the well-known *Painter's Studio* (Louvre) Despite much official criticism, his prestige and influence were enormous, reaching their height with his rejection of the cross of the Legion of Honor offered him by Napoleon III in 1870 An atheist, a socialist, and a democrat, Courbet under the Commune was elected to the chamber and in consequence was later held responsible for the destruction of the Vendôme column A council of war condemned him to pay 300,000 francs In 1873 he escaped to Switzerland, where he spent his few remaining years in poverty and exile, but always painting Although his aesthetic theories were not destined to prevail, his painting is greatly admired for its frankness, vigor, and solid construction Courbet is represented in galleries throughout France and America The Metropolitan Museum has 28 fine examples See Julius Meier-Graefe, *Corot und Courbet* (1905, in German)

Courcelle, Daniel Rémy, sieur de (dănyĕl' rămē' syür' du kōōrsĕl'), d 1698, governor of New France (1665–72) He arrived with the intendant Jean Talon, and together they inaugurated a period of peace and prosperity Courcelle led (1666) an unsuccessful winter raid upon the Mohawk Indians, but a campaign the next autumn under the marquis de Tracy and Courcelle induced the Iroquois to conclude a peace which was kept for a number of years In 1671 he led to Lake Ontario an expedition which chose the site for a fort later established as Fort Frontenac Ill-health led him to request his recall to France in 1672, and Frontenac took his place as governor

coureurs de bois (kōōrür' dŭbwȧ'), unlicensed traders during the French regime in Canada They escaped to the woods and lived with the Indians Traders were required to be licensed, but to only a favored few were licenses granted Towards the end of the 17th cent it was estimated that one third of the able-bodied men of the colony were *coureurs de bois,* though this may be an exaggeration They played an active historical part in the fur trade and in exploration.

Courier, Paul Louis (Paul Louis Courier de Méré) (pôl' lwĕ' kōōryā, du mārā'), 1772–1825, French political writer and classical scholar His translation (1810) of the Greek text of *Daphnis and Chloë* is considered excellent After the Restoration he devoted himself to writing trenchant political pamphlets, the best known of which are *Simple Discours* (1821), for which he was jailed, and *Le Pamphlet des pamphlets* (1824), remarkable for its stylistic brilliance His memoirs and correspondence (1828) have the same original charm that make his literary works memorable He was assassinated, presumably by one of his servants

Courland or **Kurland** (both kûr'lŭnd, Ger kōōr'länt), Lettish *Kurzeme,* region and former duchy, W Latvia, on the Baltic Sea, an agricultural and wooded lowland Liepaja (Ger *Libau*) and Ventspils (Ger *Windau*) are the chief ports JELGAVA (Ger *Mitau*) was the historic capital The early Baltic tribes—Letts and Kurs—who occupied the region were subjected in the 13th cent by the LIVONIAN KNIGHTS In 1561 the order disbanded and its grand master became the first duke of Courland, under Polish suzerainty In the Northern War, it was taken (1701) by Charles XII of Sweden Empress Anna, who was, by marriage, duchess of Courland before her accession in Russia, forced (1737) the nobles of Courland to elect her favorite, Ernst Johann von BIRON, their duke. Russian influence became paramount, and with the third partition of Poland (1795) the duchy passed to Russia In 1918 Courland was incorporated into Latvia, except for a strip of the southern coast which went to Lithuania

Cournot, Antoine Augustin (ătwăn' ôgüstă' kōōrnō'), 1801–77, French mathematician and economist. He developed mathematical theories of chance and probability and was one of the first to attempt the application of mathematics to economic problems His writings include *Researches into the Mathematical Principles of the Theory of Wealth* (1838, Eng. tr , 1897)

Court, Antoine (ătwăn' kōōr'), 1696–1760, French Protestant preacher, called the Restorer of Protestantism in France He was successful in reorganising the remnants of the persecuted Calvinists in France With a price on his head, he escaped to Lausanne in 1730, where he spent the remainder of his life directing the theological seminary which he founded

court, in law, official body charged with adjudicating legal cases The term is also applied to the judge or judges who fill the office and to the courtroom Distinct courts originate when legal relations are no longer entirely a private matter Thus, courts do not exist in a society governed by VENDETTA, and they are of little consequence in one where COMPOSITION for wrongs is the rule The most ancient courts known, e g , those of Egypt and Babylonia, were semiecclesiastical institutions which used religious rituals in deciding the issue In Greece the functions of a court were chiefly undertaken by assemblies of the people which heard the arguments of orators In Rome there is a clear evolution of the court system from priestly beginnings to a wholly secular, hierarchal organization staffed by professional jurists (see ROMAN LAW) Western Europe (after the collapse of Rome) and Anglo-Saxon England had mainly feudal courts of limited territorial jurisdiction These courts were largely independent, and they administered customary law, which differed from place to place In England, after the Norman Conquest, royal authority was gradually extended over the feudal lords By the early 13th cent , although purely local courts had not been abolished, there was established the supremacy of the central courts which had evolved from the Curia Regis [Latin, = king's court], namely, the Court of EXCHEQUER, the Court of Common Pleas, and King's Bench The Court of Common Pleas heard cases between ordinary subjects of the king, while King's Bench acted as a court to hear appeals and cases involving persons of high rank Soon itinerant royal courts were established to spare civil litigants the labor of coming to the capital at Westminster and to afford hearings to persons held on criminal charges in county jails By the 14th cent the principal function of the central courts was to hear appeals from the circuit courts Unity was at least temporarily disrupted by the emergence (16th cent) of EQUITY as a distinctive body of law administered by the chancery The conflict of jurisdiction continued to some extent until 1875, when the Judicature Act of 1873 went into effect It provides for a supreme court of judicature, comprising the high court of justice and the court of appeal The high court of justice (with jurisdiction over England, Wales, and Northern Ireland) is divided, purely for administrative purposes, into three divisions chancery, probate, divorce, and admiralty, and King's (or Queen's) Bench Appeals may be taken from the court of appeals to the House of Lords The judicial committee of the privy council hears appeals from overseas territories of the British Empire In the United States there are two distinct systems of courts, Federal and state, each supreme in its own sphere Whenever a matter simultaneously affects the states and the Federal government, the Federal courts, of course, have the decisive power. The district court is the lowest Federal court Each state constitutes at least one district, and some of the more populous states (e g , New York) contain as many as four districts There are 10 circuit courts of appeals (each with jurisdiction over a definite territory) and a court of appeals for the District of Columbia, these hear appeals from the district courts in the first instance There are, in addition, various specialized Federal courts, including the Court of Tax Appeals and the Court of Claims Heading the Federal court system is the U S SUPREME COURT The court systems of the states vary to some degree At the bottom of a typical structure are local courts of limited jurisdiction (e g , court of the justice of the peace and POLICE COURT) and special courts (e g , court of PROBATE) County courts, or the equivalent, exercising general criminal and civil jurisdiction are on the next level All states have a highest court of appeals, and some also have intermediate appellate courts In a few states separate courts of equity persist In addition to law courts there are ecclesiastical courts, arbitral tribunals (e g , for commercial and labor cases), administrative tribunals (e g , of the Interstate Commerce Commission), and courts-martial (see MILITARY LAW)

court, a square or enclosed place, which came to mean the household and establishment of the sovereign, in feudal times of a lord of high rank as well In empires and absolute monarchies, the court was the paramount political and cultural influence; in modern usage its application is confined to the residence, surroundings, and distinguished associates of sovereign princes in their private and public capacities and loosely denominates the government of the sovereign Presentation at court (the honor of being formally introduced to the sovereign) survives as a social ceremony

Courtdale, borough (pop 1,039), Luzerne co., NE Pa., near Wilkes-Barre, inc. 1897.

Courtenay, William (kôrt'nē), c.1342–1396, English prelate; son of the earl of Devon As archbishop of Canterbury (1381–96), he was important for his condemnation of the doctrines of Wyclif and for suppressing the Lollards

Courtenay, city (pop 1,737), on the east coast of Vancouver Island, SW British Columbia, on the Courtenay river and NW of Victoria

Courthope, William John (kôrt'ŏp), 1842–1917, English scholar He completed in 1889 the standard edition of Pope's works begun by Whitwell Elwin, wrote his own conservative *History of English Poetry* (6 vols , 1895–1910), and was professor of poetry at Oxford from 1895 to 1901

court-martial see MILITARY LAW

Courtney, Leonard Henry Courtney, 1st Baron (kôrt'nē), 1832–1918, British statesman and journalist After working for the London *Times*, he was elected as a Liberal to Parliament in 1875, but disagreed with William Gladstone on the feasibility of Irish Home Rule and eventually lost his seat in Commons (1900) for his opposition to the South African War He was made baron in 1906 He consistently advocated a negotiated peace in the First World War See biography by G. P Gooch (1920)

Courtois, Bernard (bĕrnär' kōōrtwä'), 1777–1838, French chemist In 1811 he discovered iodine and isolated it from seaweed ash

Courtois, Jacques (zhäk' kōōrtwä'), 1621–76, French painter, also known as Le Bourguignon A pupil of Guido Reni, he spent much of his life in Italy He is best known for his spirited little pictures of cavalry engagements, four of which are in the Louvre

Courtrai (kōōrtrā'), Flemish *Kortrijk* (kôrt'rĭk), town (pop 39,701), West Flanders, W Belgium, on the Lys river A textile center (linen, cotton, rayon), it was one of the earliest and most important cloth-manufacturing towns of medieval Flanders Here in 1302 the Flemings defeated the French in the first BATTLE OF THE SPURS In the First World War, Courtrai was an important German base for the Ypres front The Church of Notre Dame (13th cent) contains Van Dyck's *Elevation of the Cross*, the Church of St Martin and the Gothic town hall date from the 15th and 16th cent respectively

courts of love see KNIGHTHOOD AND CHIVALRY

court tennis is believed to have originated (about the 14th cent) in medieval France and is the game from which most modern racquet games descend Court tennis was patronized after 1500 by both French and English royalty—and is often called tennis royal—but it died out in the 18th cent The game was revived in the 19th cent , and in 1876 the first court was opened in the United States Court tennis is played on an indoor, cement court 110 ft by 38 ft , which is surrounded by four walls 30 ft high A player hits the ball—made of tightly-wound cloth—with a 16-ounce racquet, over the center net and plays the surface of the floor, the walls, and the ceiling to put the ball out of reach of the opponent The scoring of the game is intricate, and points are also made by hitting the ball into a number of openings in the walls Tom Pettitt and Pierre Etchebaster, professionals, and Jay Gould, amateur, have been the greatest court tennis players in the United States In Dec , 1949, the 56-year-old Etchebaster successfully defended the world's professional championship, which he has held since 1927, against Ogden Phipps, eight-time winner of the U S amateur title See Allison Danzig, *The Racquet Game* (1930)

Courville, town (pop 2,011), S Que , on the north bank of the St Lawrence and NE of Quebec

Couse, Eanger Irving (kous), 1866–1936, American painter, b Saginaw, Mich , studied at the National Academy of Design, New York, and with Bouguereau in Paris He worked for some years in Taos, N Mex , and is best known for his scenes of American Indian life He is represented in leading galleries throughout the United States

Coushatta (kou"shă'tu), cotton town (pop 1,289), parish seat of Red River parish, NW La , near the Red River SE of Shreveport, settled c 1870. It was the scene of Reconstruction riots

Cousin, Jean (zhăⁿ' kōōzaⁿ'), c 1490–c 1560, celebrated French painter, designer, sculptor, and writer To him have been attributed the designs for the windows in Sainte-Chapelle at Vincennes and various churches of Sens and Paris, a painting, *The Last Judgment* (Louvre), some of the sculpture of the tomb of Admiral Chabot (Louvre), a series of wood engravings illustrating Jean Le Clerc's Bible, and treatises on perspective and portraiture The last-named treatise, as well as some of the glass painting, is now attributed rather to his son and pupil, Jean Cousin (c 1522–c 1590), whose work has been confused with that of his father

Cousin, Victor (vēktôr'), 1792–1867, French educational leader and philosopher, founder of the eclectic school He lectured at the Sorbonne from 1815 until 1821, when political reaction forced him out Recalled to teaching in 1828, Cousin was named in 1830 to the council of public instruction and was made councilor of state In 1832 he became a peer of France, and in 1840 he accepted the position of minister of public instruction. He became virtually the arbiter of educational and philosophical matters His chief works in education were the complete reorganisation and centralisation of the primary system and the establishment of a policy of philosophical freedom in the universities. Cousin was a remarkable lecturer He did not develop a system of his own but sought to combine the empirical elements of the Scottish school with the idealism of Hegel and Schelling He argued, in his eclecticism, that each philosophy is an interpretation of consciousness from a particular point of view and therefore has elements of truth within it Through intuition one can grasp the truth in each theory and arrive at a complete theory His grasp of the history of philosophy was unusual, his presentation was brilliant, and his wide understanding of diverse positions was sympathetic Cousin's works include *Fragments philosophiques* (1826), *Du vrai, du beau et du bien* (1836, Eng tr , *Lectures on the True, the Beautiful, and the Good*, 1854), various studies of educational systems, a brilliant translation of Plato, and histories of philosophy See George Boas, *French Philosophies of the Romantic Period* (1925)

Cousin-Montauban, Charles Guillaume Marie: see PALIKAO

Cousins, Samuel, 1801–87, English mezzotint engraver He is famous for his interpretations in mezzotint of the work of Sir Thomas Lawrence, but his plates, over 200 in number, also include reproductions of the work of Thomas Gainsborough, Sir Joshua Reynolds, Sir John Millais, and Sir Edwin Landseer A collection of his mezzotints is in the British Museum See biography by Alfred Whitman (1904)

Coustou (kōōstōō'), family of French sculptors **Nicolas Coustou** (nēkôlä'), 1658–1733, studied with his uncle, Antoine Coysevox, with whom he later collaborated on the decorations at Marly and at Versailles He became rector and chancellor of the Académie royale de Peinture et de Sculpture Among his best-known works are *La Seine et la Marne, La Saône* (Tuileries Gardens), and the basrelief, *Passage du Rhin* (Louvre) His brother, **Guillaume Coustou** (gēyōm'), 1677–1746, studied with Coysevox and in Rome Returning to Paris he worked at Versailles and at Marly He is famous for his colossal group, *The Ocean and the Mediterranean*, at Marly, and above all for his *Horses of Marly* at the entrance of the Champs Élysées, Paris His son, **Guillaume Coustou,** the younger, 1716–77, was also a noted sculptor

Coutchiching see ARCHEOZOIC ERA

Couthon, Georges (zhôrzh' kōōtô'), 1755?–1794, French revolutionist An able lawyer, he was elected to the Legislative Assembly (1791) and the Convention (1792), joined the Committee of Public Safety (1793), and shared with ROBESPIERRE and Saint-Just in the triumvirate of the Terror, having gradually turned from moderate views to the most fanatic Jacobinism Though partially paralyzed, he led the army that took Lyons from the counterrevolutionists (1793), but as a commissioner there he proved surprisingly lenient, in contrast with his successor, Collot d'Herbois Couthon fell on 9 Thermidor and was guillotined

Couture, Thomas (tômä' kōōtür'), 1815–79, French painter, pupil of Gros and Delaroche He achieved fame with his *Love of Money* (Toulouse) and *Romans in the Decadence of the Empire* (Louvre) Unable to adapt himself to the life of an official painter under Napoleon III, he retired to the country at the height of his career His *Day Dreams* is in the Metropolitan Museum See "Couture" in J C Van Dyke, *Modern French Masters* (1896)

Couza, Alexander John. see CUZA, ALEXANDER JOHN

Couzens, James (kū'zĭnz), 1872–1936, U S Senator, industrialist, and philanthropist, b Ontario, Canada He moved (1887) to Detroit, and after he entered (1903) into partnership with Henry Ford, he became vice president and general manager of the Ford Motor Company In 1919 he sold his interests to the Fords for $35,000,000 As mayor (1919–22) of Detroit, Couzens installed municipal street railways Serving (1922–36) in the U S Senate, he acted with the Progressive Republicans, advocating such measures as high, graduated income taxes and public ownership of utilities He established the Children's Fund of Michigan with $10,000,000, gave $1,000,000 for relief in Detroit, and began a loan fund for the physically handicapped His support of the New Deal cost him (1936) the senatorial renomination

Covadonga (kōvŭdŏng'gu, kō'vadōn'gä), hamlet, Oviedo prov , N Spain, in Asturias It gave its name to a battle fought near by sometime between 718 and 725, this first victory of the Christians over the Moors had great symbolic significance in the Christian reconquest of Spain Legend says that a cave near Covadonga was the refuge of King PELAYO

Covarrubias, Miguel (mēgäl' kōvär-rōō'bēäs), 1902–, American artist, b Mexico city, self-taught. He went to New York in 1923 and won prompt recognition as a brilliant illustrator, stage designer, and caricaturist His caricatures and drawings for *Vanity Fair* and the *New Yorker* are probably his

best-known work. Covarrubias is also a painter, lithographer, and writer His *Island of Bali* was published in 1937

covenant (kŭ'vununt) [O Fr ,=agreement], in the Bible and in theology, explicit promise of God to man In law a covenant is a contract under seal or an agreement by deed In Scottish history the various pacts among the religious opponents of episcopacy were called covenants (here pronounced kŭvŭnănts'), those who agreed to the pacts were the COVENANTERS The constitution of the League of Nations was called the Covenant of the League A covenant is made upon condition of the fulfillment of certain obligations The covenants in the Bible are not contractual because they are not agreements between equal parties, in general, God promised gratuitously to man some specific good if man should have given God the obedience and love due Him In the covenant of God and Noah, He agreed never again to destroy man by a flood and set the rainbow in the sky as the sign of the covenant (Gen 9) The covenants with Abraham, Isaac, and Jacob established Israel as God's chosen people and promised Canaan to them (Gen 17, 26 1 5, 28 10–15, 32 24–32) The culmination of God's covenants with Israel comes in His promises and delivery of the Law of Moses This provides the theme of Exodus Leviticus, Numbers, and Deuteronomy The great covenant with Israel is called in Christian theology the Old Covenant, because Jesus is believed to have come to fulfill it and set up a new and better covenant (Mat 5 17,18, Gal 4, Heb 8–10) This theology is behind the conventional names of the two parts of the Bible, for *testament* in the expressions "Old Testament" and "New Testament" is derived from a Latin mistranslation of a Greek word used in the Septuagint for *covenant* In Protestant theology the covenant is especially prominent in the teaching of COCCEIUS In English law, covenants are agreements entered into by deed One of the parties promises to perform or not to perform certain acts, or states that something has or will be done, or has not or will not be done Covenants are bound by the same rules as other contracts and are variously classified There are affirmative, alternative, auxiliary, collateral, concurrent, declarative, dependent, executory, express, and independent covenants, and covenants in law, covenants for title, covenants of seizin, covenants of warranty, and others The express promise contained in a covenant is its most characteristic feature and distinguishes it from a bond, which is a simple record of indebtedness The sealing and delivery of a covenant is an essential element of its validity The covenantor is the party bound to perform the stipulation of a covenant, the covenantee is the party in whose favor the covenant is made

Covenanters (kŭvŭnăn'turz), in Scottish history, groups of people bound by oath to sustain each other in the defense of Presbyterianism The covenant of 1581 sought to combat Catholicism in Scotland The National Covenant of 1638, copied after it, aimed to unite the Scots in opposition to the episcopal innovations of Archbishop LAUD, especially the use of the English Book of Common Prayer The Covenanters successfully resisted the king's armies in the BISHOPS' WARS (1639–40) In the wars of the PURITAN REVOLUTION, they supported Parliament only after Parliament had accepted (1643) the Solemn League and Covenant, which provided for the establishment of a Presbyterian state church in England and Ireland This possibility was destroyed, however, when the Independents in the army secured control of affairs and broke the power of Parliament (1648 49) Charles II accepted the Solemn League and Covenant in 1650 in order to secure Scottish help in his unsuccessful attempt to regain the throne The power of the Covenanters was broken by Cromwell's conquest of Scotland (1650) After the Restoration the Covenanters continued to resist the attempts of Charles II and James II to impose episcopacy on them This was the period when the Covenanters were subjected to alternate attempts to pacify them and to hunt them down They stubbornly opposed all attempts at persuasion or coercion The result was a series of new compacts of resistance among the Covenanters and new attempts to suppress them Such battles as that of Bothwell Bridge (1679) were notable, and the opposition of Richard Cameron and his followers, who issued the Sanquhar Declaration in 1680, was repressed in blood Yet the spirit, and even the sect, of Cameron went on The troubles ended with the Glorious Revolution of 1688 See J K Hewison, *The Covenanters* (1908)

Covent Garden (kŭ'vunt), opera house in London on the site of the theater opened in 1732 by John RICH The names of many famous actors are associated with the old playhouse—Garrick, Mrs Siddons, Peg Woffington, and the Kembles It burned in 1808 and was replaced in 1856 by a theater which burned in the same year The present opera house was built in 1858, in it Patti, Malibran, Albani, and Caruso performed See E B Chancellor, *Annals of Covent Garden and Its Neighborhood* (1930)

Coventry (kŏv'ŭntrē), city (1931 pop 167,083, 1947 estimated pop 248,400), Warwickshire, England, on the Sherbourne river and NNE of Warwick Narrow streets, old houses, vestiges of town walls, and remains of old churches testify to the city's 14th-century founding Its industry was first connected with textile manufacture ("Coventry true blue" woolens), its products now include automobiles and bicycles, aircraft and aircraft engines telephone and electrical equipment, watches, artificial silk and other textiles, and tools Since 1914 it has been an important center for the production of airplanes and munitions On Nov 14–15, 1940, Coventry was subjected to an air raid of intense destructiveness Homes, business premises, factories, hospitals, churches, and public utilities were destroyed, there were many casualties, and thousands were rendered homeless The 14th-century Cathedral of St Michael was destroyed (except the spire) Factories were operating shortly after the bombing, and plans for a new, interdenominational cathedral were laid In a later raid (April, 1941) St Mary's Hall, a guild meeting place in the 14th cent , was destroyed Other notable buildings, most of which were damaged to some extent in the air raids, include Bablake and Ford's hospitals (16th cent), Christ Church, the Church of the Holy Trinity, and the council house A Benedictine abbey was founded here c 1043 by Lady Godiva and her husband, Leofric Later Coventry became the seat of a bishopric, its monastic cathedral was demolished under Henry VIII There is a monument to martyrs burned in the reign of Henry VIII From 1678 until recently pageants of Lady Godiva and Peeping Tom were held, perpetuating the legend, celebrated by Tennyson, of Godiva's ride to free the townspeople from burdensome taxes The Coventry Plays (15th cent) are among the most famous miracle plays The city was the meeting place of Bolingbroke (later Henry IV) and the duke of Norfolk, as related in Shakspere's *Richard II*, and of parliaments under Henry IV and Henry VI (called the Parliament Diabolicum because attainders were passed against Richard, duke of York) The phrase "to send to Coventry," meaning to ostracize socially, is of uncertain origin See M D Harris, *The Story of Coventry* (1911)

Coventry 1 Town (pop 2,102), NE Conn , bordered by the Willimantic, settled c 1700, inc 1711 Silk goods are produced Nathan Hale, Revolutionary hero, was born here **2** Town (pop 6,998), W R I , SW of Providence set off from Warwick and inc 1741 Washington village is the administrative center Lace and textiles are produced

Coventry Plays see MIRACLE PLAY

cover crop, green temporary crop sown for improving the soil, especially in connection with fruit-growing Seed sown in late summer or fall attains enough growth to protect the ground in winter It also stores up food which becomes available to the orchard later, helps check erosion, and is sometimes used to check the growth of some fruits when they reach maturity by supplying a plant that will compete with the tree for the nutriment in the soil Cover crops are often the first means used to rehabilitate land which has become run down as the result of poor farming practices and neglect Leguminous plants, such as clovers, vetches, and soybeans, and nonleguminous, such as rye, barley, wheat, buckwheat, and turnips, and various combinations of crops are used for this purpose See also CATCH CROP

Coverdale, Miles, 1488–1569, English translator of the BIBLE, educated at Cambridge He was ordained (1514) and entered the Augustinians He was a friend of Thomas More and Thomas Cromwell and early distinguished himself for his lack of orthodoxy and his study of the Bible In 1535 Coverdale published an English translation of the whole Bible, probably largely with the aid of German versions, Tyndale's Pentateuch and New Testament, and the Vulgate He was a principal collaborator in the Great Bible (1539) and edited that of 1540, known as Cranmer's Bible On the fall (1540) of Thomas Cromwell, Coverdale went to the Continent, but he returned (1548) and enjoyed high favor under Edward VI He assisted with the first BOOK OF COMMON PRAYER and served as bishop of Exeter from 1551 to 1553 On Mary's accession he lost his bishopric and again left England After Elizabeth's succession, he resumed his life in England, where he was widely known for his eloquent sermons and addresses Coverdale was rector of St Magnus, London Bridge, from 1563 to 1566 See his writings and letters (ed by George Pearson, 2 vols , 1844–46), Henry Guppy, *Miles Coverdale and the English Bible* (1935)

covered wagon. see CONESTOGA WAGON and PRAIRIE SCHOONER

Coverley, Sir Roger de see ROGER DE COVERLEY

Covilhã (kôvēlyã'), town (pop 10,488), E central Portugal, in Beira Baixa prov , NW of Castelo Branco and E of Coimbra It had a famous fair in medieval times and is still a trade center as well as a textile milling town

Covina (kōvē'nŭ), city (pop 3,049), in El Monte township, S Calif , E of Los Angeles, laid out 1885, inc 1901 Citrus fruits are packed and shipped

Covington (kŭv'-) **1** City (pop 3,900), co seat of Newton co., N central Ga , SE of Atlanta, inc as a town 1822, as a city 1854. It is a processing and market center in a cotton area **2** City (pop 2,096), co seat of Fountain co , W Ind , on the Wabash and N of Terre Haute, laid out 1826 **3** City (pop 62,018), a co seat of Kenton co , N Ky , on the Ohio where the Licking enters Bridges connect with Cincinnati across the Ohio and with Newport across the Licking A ferry and a tavern were established here c 1801, the city was settled in 1812, laid out in 1815, and incorporated in 1834 The second largest city in Kentucky, Covington is an industrial center, with railroad shops and tobacco and meat-packing plants, numerous manufactures include X-ray equipment, liquor, machine tools, and wire goods Among the points of interest are the suspension bridge to Cincinnati (designed by J A Roebling), Devou Park, St Mary's Cathedral, the tiny chapel at Monte Casino, Latonia race track, the Carneal House (1815), the boyhood home of Daniel Carter Beard, and the birthplace of Frank Duveneck The city is the seat of Villa Madonna College **4** Town (pop 4,123), parish seat of St Tammany parish, SE La , near Lake Pontchartrain, settled 1769 as Wharton, inc 1813, renamed 1816 It is in an orange-growing area, and a near-by state park offers recreational facilities **5** Village (pop 1,945), W Ohio, NNW of Dayton, settled 1807, inc 1835 It is a farm trade center with creameries and tobacco warehouses **6** Town (pop 3,513), co seat of Tipton co , W Tenn , near the Mississippi and Hatchie rivers NNE of Memphis, in a cotton area **7** Industrial town (pop 6,300), western Va , SW of Staunton, in the Jackson river valley surrounded by mountains, laid out 1819 inc 1902 It is near iron and coal fields and has textile, pulp, and paper mills The courthouse of Alleghany co is here

cow see CATTLE and DAIRYING

Cowan (kou'un), town (pop 1,461), S Tenn , WNW of Chattanooga, in a farm area, settled 1826, inc 1921 Near by is the Cumberland Mt railroad tunnel

Cowansville, town (pop 3,486), S Que , on the south branch of the Yamaska and SE of Montreal

Coward, Noel, 1899–, English playwright, actor, director, and musical composer He first appeared on the stage in 1910 and became known when he acted in his play *The Vortex* (1924) His great versatility and sophisticated wit are found in such works as *Fallen Angels* (1925), *Hay Fever* (1925), *Easy Virtue* (1925), *Sirocco* (1927), *This Year of Grace* (1928), a musical revue, *Bitter Sweet* (1929), an operetta *Private Lives* (1930), *Cavalcade* (1931), *Design for Living* (1933), *Conversation Piece* (1934), *Point Valaine* (1934), *Tonight at 8 30* (1935), a series of nine short plays, *Blythe Spirit* (1941), and *Present Laughter* (1943) He wrote, directed, and acted in the stirring film, *In Which We Serve* and wrote, directed, and produced *This Happy Breed* and *Brief Encounter* See his autobiographical works, *Present Indicative* (1937) and *Middle East Diary* (1944)

cowbird, New World bird of the blackbird and oriole family The male eastern, or common, cowbird (sometimes called cow blackbird) is a glossy black bird, about 8 in long, with a brown head and breast Most species lay their eggs in other birds' nests, victimizing especially vireos, warblers, sparrows, and flycatchers A few birds recognize the alien egg and toss it out, desert the nest, or cover it with a new floor, but most of them incubate the egg and labor to feed the oversized intruder, while their own smaller offspring are crowded out or starved Known in early days as buffalo birds because they attended the buffalo, cowbirds now follow cattle in order to feed on insects which the animals stir up as they walk Cowbirds also eat seeds Related birds are the bronzed, the California, the dwarf, the Nevada, and the red-eyed cowbirds

cowboys, in American history **1** Tory marauders adherents to the British cause in the American Revolution, who infested the neutral ground in Westchester co , N Y , and plundered their patriot opponents Patriot marauders, in the same territory at the same period, were called skinners **2** Mounted men employed as herders on cattle ranches of the W United States They were more important and picturesque in the days before the vast ranches were fenced, when their duties consisted of driving cattle to pasture and water, branding them at the roundup, protecting them from wild animals and thieves, and driving them to the shipping point At the present time their duties are not as dangerous as formerly, but cowboys are still fearless and expert horsemen, skilled with the lasso and in all details of their work See ROUNDUP and RODEO See Emerson Hough, *The Story of the Cowboy* (1912), Douglas Branch, *The Cowboy and His Interpreters* (1926), Philip A Rollins, *The Cowboy* (rev ed , 1936), E E Dale, *The Range Cattle Industry* (1938) and *Cow Country* (1942), John A Lomax and Alan Lomax, *Cowboy Songs and Other Frontier Ballads* (new ed , 1948).

Cowdry, Edmund Vincent (kou'drē), 1888–, American biologist, b Macleod, Alta., grad. Univ of Toronto, 1909, Ph D Univ of Chicago, 1913 In

1909 he came to the United States and became a naturalized citizen in 1930 He taught anatomy at the Univ of Chicago (1909–13), at Johns Hopkins (1913–17), and at Peking Union Medical College (1917–21) From 1921 to 1928 he was an associate member of the Rockefeller Institute As a member of scientific expeditions he traveled widely From 1928 he taught at Washington Univ, first as professor of cytology (to 1941), then as professor of anatomy (after 1941) He edited *General Cytology* (1924), *Special Cytology* (1928), *Human Biology and Racial Welfare* (1930), and *Problems of Ageing* (1939) and wrote *Textbook of Histology* (1934) and *Microscopic Technique* (1943)

Cowell, Henry Dixon (kou'ŭl), 1897–, American composer and pianist, b Menlo Park, Calif, largely self-educated, studied musicology in Berlin (1921–32) He has experimented much with new musical resources, in his piano compositions he introduced the tone cluster, played with the arm or the fist, and wrote compositions to be played directly on the strings of the piano He founded (1927) *New Music*, a quarterly for the publication of music by contemporary American and European composers In 1932, with the help of Leon Theremin, he invented the rhythmicon, a device which produces all kinds of rhythms and cross-rhythms mechanically, and for it he wrote a concerto (1932) His appointments include the directorship of music (1930–36, 1940–) of the New School for Social Research He wrote *New Musical Resources* (1930) and edited *American Composers on American Music a Symposium* (1933)

Cowes (kous), urban district (1931 pop 10,171, 1943 estimated pop 18,022), on the Isle of Wight, England, SSE of Southampton It is a seaport, shipbuilding center, and resort Henry VIII had strong forts here Cowes became headquarters of the Royal Yacht Club in 1856, and regattas are held annually Queen Victoria lived in OSBORNE HOUSE, near the eastern part of the town

Cowets (kō'wĕ'tu), town (pop 1,455), E Okla, SE of Tulsa Settled first by Indians and incorporated in 1900, it remains an Indian center

Cowles, Henry Chandler (kōlz), 1869–1939, American botanist, b Kensington, Conn, grad Oberlin, 1893, Ph D Univ of Chicago, 1898 He taught at the Univ of Chicago from 1902 to 1934 (as chairman of the botany department from 1925) From 1925 to 1934 he was the editor of the *Botanical Gazette*. He contributed to the early development of plant ecology, including the physiographic and comparative phases and ecological relations of sand-dune vegetation

Cowley, Abraham (kōō'–, kou'–), 1618–67, English poet, one of the METAPHYSICAL POETS He lived in Chertsey, where his home is preserved Strongly influenced by Spenser, Cowley produced a precocious volume of verse, *Poetical Blossoms* (1633), four years before entering Cambridge At the university he became a fellow in 1640, and during his residence he wrote three plays and began his scriptural epic *Davideis* (1656), in which he used the couplet as a vehicle for narrative verse A royalist, he left Cambridge in 1643 and for the next 12 years served as an agent for Queen Henrietta Maria *The Mistress* (1647) shows his debt to Donne, and *Poems* (1656) includes "Pindarique Odes," modeled after PINDAR, and his famous elegies on Richard Crashaw and William Hervey *Verses on Several Occasions* (1663) includes "To the Royal Society," an ode celebrating the society whose cause he had taken up in the prose essay *Proposition for the Advancement of Experimental Philosophy* (1661) Largely because of the excessive cleverness of his verse, his popularity waned in the face of the neoclassical reaction, his return to favor has come in the last 50 years See biography by A H Nethercot (1931)

Cowley, Hannah, 1743–1809, English poet and dramatist One of the DELLA CRUSCANS, she contributed under the name Anna Matilda sentimental verses to the *World* Her most successful comedy was *The Belle's Stratagem* (1782)

cow lily: see POND LILY

Cowloon: see HONG KONG.

cowpea or black-eyed bean, tender annual plant (*Vigna sinensis*) of many varieties, grown for forage, to some extent for human food, and as a COVER CROP To the S United States it is what alfalfa and clover are to the West and North It is also called the China bean See *Cowpeas Culture and Varieties* and *Cowpeas Utilization* (U S Dept of Agriculture, **Farmers' Buls** 1148 and 1153)

Cowpens (kou'pĭnz, kŭp'–), town (pop. 1,343), NW S C, c 8 mi ENE of Spartanburg. The battle fought (Jan 17, 1781) in the CAROLINA CAMPAIGN of the American Revolution is marked by a national battlefield site (one acre, est 1929), just north of the town

Cowper, William Cowper, 1st **Earl** (kōō'pur), c 1664–1723, English jurist He became lord keeper of the great seal in 1705 and in 1706 took a leading part in negotiating the union of England with Scotland He was made the first lord chancellor of Great Britain (1707–10), and as such he presided at the trial of Henry SACHEVERELL and was forced out of office with the Whigs in 1710 He was lord chancellor again (1714–18) under George I, for whom he wrote a still useful description of English political parties of the time. See his private diary for the years 1705–14 (ed by E C Hawtrey, 1833) and the diary of his wife, Mary, Countess Cowper (ed. by C S. Cowper, 1864)

Cowper, William (kōō'pur), 1666–1709, English surgeon After serving an apprenticeship he became a successful practitioner in London His works on human anatomy were, in their time, important contributions He discovered the glands known as Cowper's glands (kou'pŭrs, kōō'–) or the bulbo-urethral glands, a pair of small glands connected with the male urinogenital system. They lie on either side of the prostate gland, and their secretion forms part of the seminal fluid

Cowper, William (kōō'pur, kou'–), 1731–1800, English poet He was admitted to the bar, but never practiced Subject to melancholia, after treatment for an attack of insanity he was fortunately placed in the home of the Unwin family at Huntingdon and later at Olney Since his was a religious mania, Mrs Unwin's serene faith and care gave him peace, and she encouraged him to write Some of his best hymns, notably "Oh for a Closer Walk with God," were written for *Olney Hymns*, edited by John Newton, the local evangelical curate Cowper's volume of 1782 included "Table Talk" as well as the famous "Verses supposed to be written by Alexander Selkirk" Starting from a casual suggestion that he write about "the sofa," he produced his poem in six books, *The Task* (1785), which was at once popular In it the descriptions, in Miltonic blank verse, of the sights and sounds of country life are very early notes of what was later to be called romanticism Cowper made a translation of Homer (1791), but after the death of Mrs Unwin in 1796, his old malady overtook him and he wrote little except the anguished poem, "The Castaway" Among Cowper's other poems, "The Colubriad" and "John Gilpin" are famous Only slightly less so are "On the Loss of the Royal George," "To Mary," and the fine sonnet "To Mrs Unwin" Cowper's letters, among the most brilliant in English literature, were edited by Thomas Wright (1904, additions, 1925) See biographies by William Hayley (1835 ed), Goldwin Smith (1880), Thomas Wright (1921), H I Fausset (1928), David Cecil (1929), and L C Hartley (1938), Gilbert Thomas, *William Cowper and the Eighteenth Century* (1935).

cowpox, infectious disease of cows caused by a virus related to that of SMALLPOX It induces a mild infection of the hands in persons who milk infected cows The fact that such persons had IMMUNITY to smallpox led Edward JENNER to attempt VACCINATION with this virus, instead of using the dangerous method of vaccinating with material from the sores of smallpox which often caused the disease and left the person pockmarked Jenner's method was successful and is the basis of the modern vaccination against smallpox Cowpox is also known as vaccinia Horses and sheep may contract a similar disease

cowrie or **cowry** (both kou'rē), marine gastropod mollusk found in warm waters The smooth, shiny, often beautifully marked shell is rounded on the upper surface and flattened on the lower and usually is at least partially covered by an expanded portion of the mantle The shells of the money cowrie (*Cypraea moneta*) and of some related species are among those most anciently and most widely used for SHELL MONEY Various species are used for personal adornment and in some primitive cultures they indicate the rank of the wearer. Cowries are abundant in the Indian Ocean, particularly in the East Indies and the Maldive Islands Species of cowries inhabit the waters around S California and the warm waters southward from the SE United States

cowslip, name in the United States for the MARSH MARIGOLD, VIRGINIA COWSLIP, and SHOOTING STAR (American cowslip), in England a PRIMROSE

Cox, David, 1783–1859, English landscape painter, a follower of John Constable He is best known for his water colors of Welsh scenery, of which he produced a great number Cox is well represented in the British and the Victoria and Albert Museum and in the Birmingham Art Gallery See biographies by N N Solly (1875) and William Hall (1881), study by F G. Roe (1924)

Cox, George Barnsdale, 1853–1916, American politician, Republican boss of Cincinnati, b Cincinnati A former bootblack, he turned to real estate and local politics after selling his Mecca Saloon in 1881 Cox acquired political control of the city in 1886 and held power to 1911, except for defeats in 1897 and 1905 His machine, in other hands, won again in 1913

Cox, Jacob Dolson, 1828–1900, Union general in the Civil War and American statesman, b Montreal, of a New York city family, grad. Oberlin College, 1851 Admitted to the Ohio bar in 1853, he was active in organizing the new Republican party there and served (1859–61) in the state senate Cox, made a brigadier general of volunteers early in the Civil War, served ably in the Kanawha valley and Antietam campaigns and commanded in West Virginia (1862–63) and Ohio (April–Dec., 1863). He later led a corps in the Atlanta campaign (1864), fought at Nashville (Dec., 1864), and closed out his service with Sherman in North Carolina. He had risen to be a major general of volunteers and, returning home a hero, was elected governor of Ohio for the term 1866–68 Because he supported President Andrew Johnson on Reconstruction against the radical Republicans, he was not renominated Nevertheless U S Grant, on assuming the presidency, made Cox his Secretary of the Interior This was one of Grant's few good appointments. Cox, however, advocated and practiced civil service reform and opposed the President on other points, notably the move to annex Santo Domingo The Republican spoilsmen had long been hostile to him, and in Oct, 1870, rather than yield to Grant's pressure concerning a land claim, Cox resigned from the cabinet and became identified with the Liberal Republicans He later served one term in Congress (1877–79), was dean of the Cincinnati Law School for 16 years beginning in 1881, and also served as president of the Univ of Cincinnati from 1885 to 1889 Military book critic for the *Nation* from 1874 till his death, he himself wrote ably on military affairs His books include *Atlanta* (1882), *The Battle of Franklin* (1897), *The March to the Sea* (1898), and *Military Reminiscences of the Civil War* (1900) Kenyon Cox was his son.

Cox, James Middleton, 1870–, American political leader and journalist, b Butler co, Ohio After he served on the editorial staff of the Cincinnati *Enquirer*, he bought the Dayton (Ohio) *Daily News* (1898) and subsequently acquired several other papers in different states He served in the U S House of Representatives (1900–1913), and as governor of Ohio (1913–15, 1917–21) he became prominent as a supporter of President Woodrow Wilson Nominated in 1920 as presidential candidate by the Democratic party with Franklin D Roosevelt as his running mate, Cox staunchly supported the League of Nations. He was defeated by Warren G Harding, Cox winning over 9,000,000 popular and 127 electoral votes He later (1933) was vice chairman of the American delegation to the World Economic Conference. See his autobiography, *Journey through My Years* (1946)

Cox, Kenyon, 1856–1919, American painter, draughtsman, and art critic, b Warren, Ohio, studied in Cincinnati, at the Pennsylvania Academy of the Fine Arts, and with Carolus Duran and Gérôme in Paris, son of Gen J D Cox He worked in New York city, where he became an influential teacher at the Art Students League and the National Academy of Design His portraits, figure pieces, and murals are academic in style and distinguished by fine draughtsmanship He is perhaps more remembered for his drawings than for his paintings He painted murals for the Library of Congress, the state capitols of Iowa and Minnesota, and the public library of Winona, Minn His portrait of Saint-Gaudens is in the Metropolitan Museum Cox's writings on art include *Old Masters and New* (1905), *The Classic Point of View* (1911), and *Concerning Painting* (1917) Louise Cox was his wife

Cox, Louise Howland King, 1865–1945, American painter, b San Francisco She studied at the National Academy of Design and at the Art Students League, New York, under Kenyon Cox, whom she married in 1892 She is best known for her portraits of children and for her decorative paintings Among her works are *Psyche*, *My Children*, *Master Austin Smithers*, and *Mrs Homer Saint-Gaudens and Child* *May Flowers* is in the National Gallery of Art, Washington, D C

Cox, Palmer, 1840–1924, American author and artist, b Granby, Que, grad Granby Academy He is famous as the writer and illustrator of the Brownie stories for children (13 vols, 1887–1925)

Cox, Ross, 1793–1853, American fur trader He joined John Jacob Astor's Pacific Fur Company in 1811 and went to the Astoria post on a supply ship, the *Beaver* He was active in trade in the Columbia river valley, entering the employ of the North West Company after Astoria was sold to that firm His *Adventures on the Columbia River* (1831) is an entertaining as well as valuable historical source

Cox, Samuel Sullivan, 1824–89, American statesman and legislator, b Zanesville, Ohio, grad Brown, 1846 He traveled widely, studied law, and after 1849 he practiced in Cincinnati He became editor of the *Ohio Statesman*, was (Feb–Aug, 1855) secretary of legation in Peru, and served (1857–65) as a Congressman from Ohio before he removed (1866) to New York city. Again (1869–March, 1873, Nov, 1873–1885) in the U S Congress, Cox advocated civil service reforms, worked for extension of the scope of the census, and championed legislation for the development of the West. After serving (1885–86) as minister to Turkey, he once more entered (1886) Congress Among his books were *A Buckeye Abroad* (1852), *Puritanism in Politics* (1863), and *Three Decades of Federal Legislation* (1885)

Coxe, Tench, 1755–1824, American political economist, b Philadelphia. He entered his father's mercantile business in 1776, but after 1790, when he became assistant to Alexander Hamilton as Secretary of the Treasury, he remained in public office,

although he never attained one of importance. A firm believer in a balanced national economy, he supported Hamilton in his efforts to put the finances of the country on a sound basis Politically, however, he was Anti-Federalist. He assisted Jefferson on two reports to Congress—one on fisheries, the other on foreign commerce In Coxe's *Enquiry into the Principles on Which a Commercial System for the United States of America Should Be Founded* (1787) he first urged the necessity of an economy balanced between agriculture and manufacturing Especially did he advocate the culture and manufacture of cotton Many of his essays are collected in his *Views of the United States* (1794) His *Statement of the Arts and Manufactures of the United States of America for 1810* is an official digest of the census data collected in that year See study by Harold Hutcheson (1938)

Coxe, William, 1762-1831, American pomologist, b Philadelphia His experiments and his book, *A View of the Cultivation of Fruit-Trees and the Management of Orchards and Cider* (1817), had a pronounced effect on the early development of fruitgrowing in America He was instrumental in introducing the Seckel pear into England

Coxetter, Louis Mitchell (kŏk'sŭtûr), 1818-73, Confederate privateersman and blockade runner, b Nova Scotia He settled in Charleston, S C, and in the Civil War he captained the ship *Jefferson Davis*, which captured 10 prizes in 1861 When, because of the increasing effectiveness of the Union blockade, profiteering declined, Coxetter turned to blockade-running and was equally successful See W M Robinson, *The Confederate Privateers* (1928)

Coxey, Jacob Sechler (kŏk'sē), 1854–, American social reformer, b Selinsgrove, Pa He began his career as a stationary engineer, later turning to the scrap-iron business and then to sandstone quarrying He was interested in the problem of the unemployed, however, and arranged to have introduced in Congress a bill for road improvements, calling for the issue of fiat money to be spent in public construction work which would provide employment He was a candidate for Congress in 1894, for governor of Ohio in 1895 and 1897, and for the Senate in 1916 From 1931 to 1933 he was Republican mayor of Massillon, Ohio, and was Farmer-Labor candidate for President in 1932 and 1936 He wrote three books on monetary problems, topics of such concern to him that he named one of his sons Legal Tender In 1937 he put forth a flood-control plan involving the digging of a new Mississippi river channel straight from Cairo, Ill, to the Gulf of Mexico, financed by fiat money and giving work to countless unemployed But he was most famous as the leader of **Coxey's Army,** a band of unemployed men who marched to Washington, D C, following the Panic of 1893, to petition Congress for measures which they hoped would relieve unemployment and distress Coxey was aided by Carl Browne (1849–1914), a skilled agitator with curious religious notions By wide advertising Coxey gathered over 100 men and left Massillon with them on Easter Sunday, 1894, intending to reach Washington for a May Day demonstration The "army," named "The Commonweal of Christ" by Browne, was met by crowds in every city through which it passed It had an anticlimactic and ineffectual ending when, reaching Washington with c 500 men instead of the proclaimed 100,000, its leaders were arrested for walking on the Capitol lawn Coxey's was only one of several industrial "armies" which in these months started from different sections of the country for the capital Coxey himself led a small "army" to Washington in 1914 to agitate for a revised program. See D L McMurry, *Coxey's Army* (1929)

Coxsackie (kŏksŏ'kē), village (pop 2,352), SE N Y, on the west bank of the Hudson and S of Albany, settled before 1700 by Dutch, inc 1867. Valves are made, and there are granite works here

Coxwell, Henry Tracey, 1819–1900, English aeronaut One of the most noted balloonists of his day, he made the first of his hundreds of ascents in 1844 In 1862 with Dr James Glaisher he achieved a height of c 7 mi, a record for balloon ascension at that time During the Franco-Prussian War he operated military balloons for Germany He wrote *My Life and Balloon Experiences* (2 vols, 1887–89)

Coyoacán: see MEXICO, city

coyote (kīō'tē, kī'ōt, kīōt') or **prairie wolf,** small wolf native to W North America It has thick, long, tawny fur and a black-tipped bushy tail It hunts a variety of small animals and in packs attacks larger mammals It destroys some domestic animals but is a valuable scavenger and destroyer of rodents It has a yelping, doglike cry It ranges from Mexico through the W and central United States, Alaska, and S Canada

Coypel (kwäpĕl'), family of French painters **Noël Coypel** (nōĕl'), 1628–1707, director of the Académie de France à Rome and later of the Académie royale de Peinture et de Sculpture in Paris, was employed on the decorations of the palaces of the Louvre, Tuileries, Fontainebleau, and Versailles. One of his best paintings is the *Martyrdom of St. James* (Notre Dame de Paris) **He was succeeded as director of the Académie by his son, Antoine Coypel** (ätwän'), 1661–1722, who was made court painter in 1716 His Aeneid series painted for the Palais-Royal are among his best-known works He was also an accomplished etcher Antoine's half-brother **Noël Nicolas Coypel** (nōkōlä'), 1692–1734, and Antoine's son **Charles Antoine Coypel** (shärl'), 1694–1752, were also well-known painters.

coypu: see NUTRIA

Coysevox, Antoine (ätwän' kwäzvôks'), 1640–1720, French sculptor He enjoyed the patronage of Louis XIV and produced a great part of the sculpture at Versailles His *Winged Horses*, at the entrance to the Tuileries gardens, and his portrait and memorial sculptures show free, vigorous, and original treatment The bust of Condé (Le Havre), that of Colbert (Versailles), and the tomb of Massarin (Louvre) are notable works

Coz [Heb, =thistle], Judahite 1 Chron 4 8

Cozad (kō'zăd'), city (pop 2,156), S Nebr, on the Platte river and SE of North Platte, in a hay region, founded 1874 It has an alfalfa-processing plant

Cozbi (kŏz'bī) [Heb, =deceptive], Midianite woman whom Phinehas killed Num 25 6–18

Cozens, John Robert (kŭz'ĭnz), 1752–99, English water-colorist, son of Alexander Cozens, artist and writer He is best known for impressionistic and poetic landscapes His work is in marked contrast to the conventional and colorless aquarelle landscape painting of his day Examples are in the Victoria and Albert and the British Museum, London

Cr, chemical symbol of the element CHROMIUM.

Cr, the, constellation see CANCER

crab, crustacean with a broad, flat carapace or exoskeleton, a short abdomen which is bent under the body, stalked eyes, and five pairs of legs, the first pair bearing claws or pincers Crabs are chiefly marine, but some are found in fresh water and some are terrestrial for long periods They are omnivorous, some are scavengers, and others predatory The blue crab of the Atlantic coast of the United States is much used for food It is marketed as a soft-shelled crab after it has molted and before the new shell has hardened Females of the oyster and mussel crabs live inside the shells of bivalve mollusks Often seen scurrying about near their burrows in muddy banks are the fiddler crabs, the males of which have one claw much enlarged Swimming crabs have the last pair of legs flattened to form paddles Some of the spider crabs disguise themselves with pieces of seaweed or sponge The giant spider crab of Japan has legs about 4 ft long and a carapace more than a foot wide The KING CRAB, or horseshoe crab, and the HERMIT CRAB are related crustaceans

crab apple, popular name for a type of APPLE tree and for its fruit, which is usually small hard, and sour Native generally to Asia and North America, crab apples are very hardy and often strikingly beautiful, having fragrant, single or double flowers ranging in color from white to deep pink They are cultivated for ornament and for their fruits, which make excellent preserves, jellies, and pickles Two native American ornamental varieties are the wild sweet or garland crab apple (*Malus coronaria*) and the prairie crab apple (*M ioensis*), from which the popular double-flowered Bechtel's crab was developed One of the oldest known and most widely cultivated is the Siberian crab (*M baccata*), which, with the common apple, is the parent of many hybrids, some of which are much used as rootstocks for grafting apples in cold climates The Florentine crab (*M florentina*) of Italy is one of the few species native to Europe and is a handsome tree in autumn when its leaves turn orange and scarlet In England the wild common apple is called the crab apple See Donald Wyman, *Crab Apples for America* (1947)

Crabb, George, 1778–1851, English writer, b Palgrave, Suffolk, grad Oxford He is known for his *Dictionary of English Synonymes* (1816)

Crabbe, George, 1754–1832, English poet, b Aldeburgh, Suffolk After practicing medicine for some time, he turned to literature and wrote *The Library* (1781) He took orders the same year and held various livings, he was rector from 1814 at Trowbridge, where is his tomb *The Village* (1781), written in reply to Goldsmith's *Deserted Village*, made him famous He also wrote *The Parish Register* (1807), *The Borough* (1810), *Tales in Verse* (1812), and *Tales of the Hall* (1819) Crabbe is the great realist of English poetry His narrative verse, written chiefly in heroic couplets, deals with the sordid life of the very poor, in a natural setting accurately described See biography by his son (ed by E M Forster, 1932), studies by T E Kebbel (1888), A C Ainger (1903), René Huchon (1907), and J H Evans (1933)

Crab Island, Puerto Rico see VIEQUES.

Crabtree, Lotta, 1847–1924, American actress, b New York city She was a popular child actress in California mining camps, having been taught by Lola Montez In 1867, in a dramatization of Dickens's *Old Curiosity Shop*, she scored a success in New York. Despite the shoddiness of most of her plays, her verve, spontaneity, and sprightly grace captivated large audiences until her retirement in 1891. See C. M Rourke, *Troupers of the Gold Coast; or, The Rise of Lotta Crabtree* (1928)

cracking of petroleum: see PETROLEUM.

Cracow (krā'kō, krä'kou), Pol *Kraków*, Ger. *Krakau*, city (pop 299, 396), S Poland, on the Vistula Founded allegedly c 700 and made a bishopric c 1000, it became (14th cent) the residence of the kings of Poland The Cracow fire (1595) caused the transfer of the royal residence to Warsaw, but the kings continued to be crowned and buried in Cracow The city passed to Austria in the third partition of Poland (1795) and was included (1809) in the grand duchy of Warsaw In 1815 the Congress of Vienna made the city and its vicinity into the republic of Cracow, a protectorate of Russia, Prussia, and Austria, which was included (1846) in Austria The city reverted to Poland in 1919 In the Second World War, Cracow suffered relatively little damage The university (known sometimes as the Jagiellonian Univ), founded in 1364 by Pope Urban V, has long been a bulwark of Polish culture and a leading European center of learning. Copernicus was one of its students Standing on a hill, the Wawel, are the royal castle, rebuilt (16th cent) in Italian Renaissance style, and the Gothic cathedral (rebuilt in the 14th cent), which contains the tombs of great Poles The Rynek [market] square is noted for the Church of Our Lady (13th cent), which had carvings by Veit Stoss, for the 14th-century cloth hall, and for the remaining tower of a 14th-century town hall Chiefly a trade center, Cracow also has several industries Cracow prov (6,140 sq mi, pop 2,133,389) is partly in the Carpathians In the northwest the Cracovian Jura (c 1,650 ft) extends from Cracow to Czestochowa The soil (largely arable) contains coal, iron, salt (notably at WIELICZKA), oil and natural gas, and other deposits There are resorts and spas, principally in the Carpathians The chief cities are Cracow, Tarnow, and Nowy Sacz

Craddock, Charles Egbert, pseud of **Mary Noailles Murfree,** 1850–1922, American novelist, born on a plantation near Murfreesboro, Tenn She was educated well by her lawyer-father, except for the years 1881 to 1890, which the family spent in St Louis, Miss Murfree lived in Tennessee and wrote her best works about the mountain people Recognition came to her for her short stories *In the Tennessee Mountains* (1884), they had appeared in the *Atlantic Monthly* since 1878, but her identity was unknown even to her publishers until 1885 *Where the Battle Was Fought* (1884) and *The Prophet of the Great Smoky Mountains* (1885) were her best novels of local color. See biography by E W Parks (1941)

cradle, in furniture, an infant's bed Primitive cradles made of hollowed tree trunks or of basketry were followed by oblong boxes swung on pivots or set upon rockers Henry V's cradle was a wooden chest swung between posts Wooden hoods and, later, draperies were used as a protection against drafts The old-type cradle has been superseded by the stationary crib

cradle scythe or **cradle,** SCYTHE specially adapted for reaping grain It has a framework of wooden "fingers" parallel with the blade, to lay the grain straight for raking and binding In progressive agricultural regions, it largely took the place of the sickle and was itself superseded by the reaping machine, but both the sickle and the cradle scythe are still used in backward regions and under exceptional conditions elsewhere When it was the standard implement for reaping, especially in America before the Civil War, it was brought to the refinement and effectiveness characteristic of farm implements Cradle scythes made by Erskine Bouck, of Mineral Springs, N Y, are said to have been in their way "as much of a triumph as a Stradivarius violin" For the fingers of his cradles, Bouck made use of ash roots curved naturally in the right way

Crafton, residential borough (pop 7,163), SW Pa, W of Pittsburgh, inc 1894 It has a stove factory

Crafts, James Mason, 1839–1917, American chemist, b Boston, grad Harvard, 1858 At the Massachusetts Institute of Technology he taught chemistry (1871–80, 1892–97) and later was president (from 1898 to 1900) He made studies of silicon compounds and arsenic ethers and of thermometry With Charles Friedel he developed the Friedel-Crafts reaction for preparing certain hydrocarbons and ketones

crafts. see ARTS AND CRAFTS

Craig, Edward Gordon, 1872–, English actor, stage designer, and producer The son of Ellen Terry, he began his career as an actor and appeared with the Lyceum company (1885-97) His interest turned to stage design and production, and his first work in revivals of operas by Handel and Purcell, his settings for Ibsen's *Vikings* (1903) and Shakspere's *Much Ado about Nothing* (1903), and his later work for *Hamlet* (with the Moscow Art Theatre in 1912) were great contributions to the development of the modern theater. His settings had fantasy and mystery and though they often failed to regard the architectural restrictions of the theater were poetic and beautiful At Florence, Italy, he edited a magazine, the *Mask* (1908–29),

and founded the Gordon Craig School for the Art of the Theatre He is the author of *The Art of the Theatre* (1905), *Towards a New Theatre* (1913), *Scene* (1923), *Henry Irving* (1930), *Ellen Terry and Her Secret Self* (1931), and other works See Huntly Carter, *The New Spirit in Drama and Art* (1912), Enid Rose, *Gordon Craig and the Theatre* (1931)

Craig, James: see CRAIGAVON, JAMES CRAIG, 1ST VISCOUNT

Craig, Sir James Henry, 1748–1812, British soldier, governor in chief of Canada (1807–11), b Gibraltar He served in America throughout the American Revolution, participated (1794) in the Netherlands campaign, and was in joint command of the force which captured (1795) the Cape of Good Hope colony from the Dutch Knighted in 1797, he commanded (1797–1802) a division in India, was promoted lieutenant general, and later (1805–6) led an English army to Italy and occupied Sicily In 1807 Craig was appointed governor in chief of Canada His lack of sympathy with representative government and with the French Canadians found expression in dissolving (1809) the assembly of Lower Canada and in imprisoning the sponsors of the newly established journal the *Canadien* The French Canadians consolidated and strengthened their position through the political ammunition which his actions furnished, and Sir George Prevost was sent to replace him in 1811 Craig was promoted general shortly before his death

Craig, John, 1512?–1600, Scottish minister of the Reformation He joined the Dominican order, but, through reading the *Institutes* of Calvin, he adopted Protestantism Imprisoned at Rome for heresy, he was rescued from death at the stake in 1559 Craig went to Vienna, where he preached before the archduke Maximilian Returning to Scotland in 1560, he shortly became the colleague of John KNOX in Edinburgh, upon the death of Knox in 1572, he was accepted as leader of the Scottish Church Chaplain to James VI after 1579, he was the author of the *King's Confession* (1581), upon which was based the National Covenant of 1638 Craig's *Short Summe of the Whole Catechisme* (1581), reprinted in 1883, has a memoir by T G Law

Craig, Malin, 1875–1945, U S general, chief of staff (1935–39), b St Joseph, Mo , grad West Point, 1898 He fought in the Spanish-American War, served in China (1900) and the Philippines (1900–1901, 1907–9), and was chief of staff of the 3d Army (1918–19) in the First World War He held many army administrative posts and was promoted general on becoming chief of staff He was succeeded by George C Marshall

Craig, town (pop 2,123, alt 6,200 ft), co seat of Moffat co , NW Colo , on the Yampa river, inc 1908 It is the center and shipping point for an oil, stock-raising, and grain area

Craigavon, James Craig, 1st **Viscount** (krāgă'vun), 1871–1940, Ulster statesman He was a strong supporter of Edward Henry Carson, Baron CARSON, in rousing Ulster against Home Rule in the crisis preceding the First World War, and he organized armed resistance against any attempt to enforce Home Rule In 1921 he became prime minister of the newly established government of Northern Ireland, a position he held until his death See biography by St John Ervine (1949)

Craigenputtock (krāgŭnpŭ'tŭk), moorland home of the Carlyles from 1828 to 1834, S Scotland, near Dumfries

Craighead, Edwin Boone (krāg'hĕd), 1861–1920, American educator, b Callaway co , Mo , grad Central College, Mo , 1883, studied at Leipzig and Paris In 1890 he became professor of Greek at Wofford College He served as president successively of Clemson Agricultural College (1893–97), of Central College (1897–1901), of the Missouri State Normal School (1901–4) of Tulane Univ (1904–12), and of Montana State Univ (1912–15) His work of reorganization at Tulane won him special recognition in the educational world He edited at Missoula the *News Northwest*, an independent newspaper of much influence in the region See C J Keyser, "No Braver Man," in *Mole Philosophy and other Essays* (1927)

Craigie, Pearl Mary Teresa (Richards), pseud **John Oliver Hobbes,** 1867–1906, English novelist and playwright, b Boston, Mass Her first novel, *Some Emotions and a Moral* (1891), won her a wide audience, but was followed by less consequential works Her only successful play, *The Ambassador* (1898), ran for a year Her works were noted for their wit and epigrammatic style See her autobiographical *Life of John Olver Hobbes* (1911).

Craigie, Sir William A., 1867–, British lexicographer, b Dundee, Scotland. Educated at the Univ. of St. Andrews and at Oxford, he studied Scandinavian languages at Copenhagen before beginning (1893) his career as lecturer at St Andrews and as lecturer and professor at Oxford Generally considered the foremost lexicographer of his time, he was engaged on the *New English Dictionary* (commonly called the *Oxford Dictionary*) after 1897 and was joint editor from 1901 to 1933 He was persuaded to come to the United States and was the chief editor of *A Dictionary of American English on Historical Principles* (issued in parts after 1936; published as 4 vols , 1938–43). He also edited other dictionaries, made critical editions of texts, and wrote monographs and textbooks on the English language

Craik, Dinah Maria Mulock: see MULOCK

Crail, burgh (pop 1,059), Fifeshire, Scotland. It is a seaside resort and fishing center

Craiova (krayô'vă), city (pop 84,574), SW Rumania, in Walachia, a commercial center, former capital of Oltenia Built on the probable site of a Roman settlement, it has several museums containing prehistoric and Roman relics

Cram, Ralph Adams, 1863–1942, American architect and writer, b Hampton Falls, N H , studied at Westford, Mass , Academy. He established an office in Boston in 1889, and in 1892 he became associated with C F Wentworth and B G GOODHUE Later this firm changed to Cram, Goodhue, and Ferguson, and after 1913 it was known as Cram and Ferguson An ardent exponent of Gothic architecture, Cram produced many distinguished works designed in this style, chiefly collegiate and ecclesiastical structures, in various parts of the United States In 1911 he became the architect for the Cathedral of St John the Divine, New York, after the choir had already been built by Heins and La Farge Among his numerous church designs are Calvary, Pittsburgh, Fourth Presbyterian, Chicago, St Stephen's, Cohasset, Mass , and St Paul's, Detroit, Michigan His college buildings include the graduate school and chapel, Princeton, buildings for Williams College, Phillips Exeter Academy, and the Rice Institute, Houston, Texas, and the chapel and other buildings at the U S Military Academy at West Point, in association with B G Goodhue Cram's many writings, chiefly upon medieval architecture and thought, include *Church Building* (1901), *Ruined Abbeys of Great Britain* (1905), *The Gothic Quest* (1907), and *The Substance of Gothic* (1916) See his autobiography, *My Life in Architecture* (1936)

Cramer, Johann Baptist (yôhan' baptĭst' krā'mur), 1771–1858, German pianist He studied with Clementi in London, where he taught after a tour in 1788 His piano compositions include many sonatas and several concertos, but he is chiefly remembered for his 84 technical studies (1804)

Cramp, William, 1807–79, American shipbuilder In 1830 he founded a shipbuilding company in Philadelphia and was its president until his death The company gained its fame, however, from his son, **Charles Henry Cramp,** 1828–1913, b Philadelphia. He became a partner in the company in 1849, and he designed the ironclads built for the U S navy in the Civil War More important were his designs for the battleships of the "new navy" after 1887—the *Maine* (the center of a famous incident when she was sunk in Havana harbor), the *Massachusetts*, the *New York*, the *Colorado*, and the *Pennsylvania* The Cramp shipyard also built fine merchant vessels and designed and constructed warships for Russia and Japan Charles Henry Cramp became president of the company after his father's death

cramp, painful contraction of a muscle or group of muscles without the person's control It is of some minutes' duration and is common in the foot and leg As it results from cold, strain, and disturbance of circulation, it is common in swimmers The muscle is tender afterwards Rubbing, kneading, and the local application of heat are useful in relaxing the muscle and thus relieving the pain When the muscles in a hollow organ contract in this way it is called COLIC A "stitch" in the side is due to a cramp in the muscles between ribs See also MENSTRUATION and WRITER'S CRAMP

Cranach or **Kranach, Lucas** (both: lo͞o'käs kra'näkh), the elder 1472–1553, German painter and engraver His real name was either Müller or Sunder He settled in Wittenberg c 1504 and was court painter successively under three electors of Saxony There he maintained a flourishing workshop and was twice burgomaster Cranach was a friend of Luther, whose doctrine he upheld in numerous pictures and woodcuts, and he has been called the painter of the Reformation He was a rapid and prolific painter, and the work turned out by his studio is uneven in excellence Naïve and fanciful, often awkward in draughtsmanship, it has freshness and originality and a warm rich color His portraits are particularly successful Among his best-known works are *Repose in Egypt*, *Marriage of St. Catherine*, and *Crucifixion* (Weimar) This last contains figures of Luther and Cranach Famous portraits include those of Elector John Frederick, *Unknown Female* (National Gall , London), and *Self-Portrait* (Uffizi) Cranach was also an accomplished miniaturist He produced a few copperplates and designs for woodcuts His son and pupil **Lucas Cranach,** the younger, 1515–86, continued the tradition of his father whose workshop, signature, and popularity he inherited Their work is often indistinguishable His *Unknown Woman* (Mus of Fine Arts, Boston) is a good example of his work.

cranberry, name for low creeping BOG plants of the genus *Oxycoccus* (or *Vaccinium*), which has tart berries used for sauces, jelly, pie, and beverages. The European or small cranberry is found in North America, but the cranberry of commercial cultivation is the native American or large cranberry (*Oxycoccus macrocarpus*), having a larger berry. The leaves of both are small, evergreen, and somewhat hemlocklike; the berries are bright red. The large cranberry has been in cultivation since about 1840, chiefly in New Jersey, Massachusetts, and Wisconsin bogs that are especially prepared for annual flooding The serving of cranberry sauce with the Thanksgiving turkey is traditional in the United States Other species of the genus are also called cranberry, but are of less importance The HIGH-BUSH CRANBERRY or cranberry tree is not related See J J White, *Cranberry Culture* (enl ed , 1912), proceedings of the American Cranberry Growers Association

cranberry tree: see HIGH-BUSH CRANBERRY

Cranbrook, city (pop 2,568), SE British Columbia, in the Kootenay valley between the Selkirk Mts and the Rocky Mts , W of Lethbridge, Alta The first settlement was made c 1884

Cranbrook Foundation, at Bloomfield Hills, Mich , Episcopal, chartered 1927 by George G and Ellen Booth, with a large endowment It includes an elementary school, preparatory schools for boys and girls, an art academy, and a science institute (with a museum and an observatory) Many of the buildings were designed by Eliel Saarinen

Cranbury, unincorporated village (pop 733), central N J , N of Hightstown, settled 1682 David Brainerd, missionary to the Indians, lived near by A pyrotechnic factory is here

Cranch, Christopher Pearse, 1813–92, American poet and painter, b Alexandria, Va , grad Columbian College, 1831, and Harvard Divinity School, 1835 He served for some years as a Unitarian minister In Boston he was popular among the transcendentalists, contributed to the *Dial*, and was a friend and admirer of Emerson In 1843 he left the ministry to follow his bent for painting and thereafter spent long periods in Europe His writings include several volumes of poetry, a translation of Vergil's *Aeneid*, children's stories (illustrated by himself), and recollections of Browning See biography by his daughter, Leonora Cranch Scott (1917)

Crandall, Prudence, 1803–89, American educator and abolitionist, b Hopkinton, R I In 1831 she opened a school for girls in Canterbury, Conn Her decision to admit a Negro was protested, and in 1833 she decided to devote the school entirely to the education of colored girls She was arrested and tried, the judgment against her being reversed on appeal in 1834 In that year she gave up her work, married the Rev Calvin Philleo, and moved to the Middle West

Crandon, city (pop 2,000), co seat of Forest co , NE Wis , E of Rhinelander, in a lake and woods region, inc 1898 It is a resort and makes wood products

Crane, Hart, 1899–1932, American poet, b Garrettsville, Ohio After an undisciplined and promising youth, he was for a time an advertising writer in New York An acknowledged disciple of Walt Whitman, Crane used emotion and association as the subject matter of his experimental, modernistic poetry *White Buildings* (1926), inspired by New York, was followed by his most ambitious work, *The Bridge* (1930), a series of closely related long poems on the United States in which Brooklyn Bridge is a symbol of development Returning from a winter in Mexico, Crane jumped overboard from his ship and was drowned See his *Collected Poems* (ed by Waldo Frank, 1933), biographies by Philip Horton (1937) and Brom Weber (1948)

Crane, Stephen, 1871–1900, American novelist, short-story writer, journalist, and poet, b Newark, N J , attended Lafayette College and Syracuse Univ His first book, a realistic novel called *Maggie a Girl of the Streets* (1893), went unnoticed, but his purely imagined, remarkable story of soldiers under fire in the American Civil War, *The Red Badge of Courage* (1895), made him famous As a result, he was sent as a war correspondent to the Greco-Turkish and Spanish-American wars Some of his best writing is in the realistic tale stories of *The Open Boat and Other Tales* (1898) and *The Monster and Other Stories* (1899), as well as in a series for boys, *Whilomville Stories* (1900) *The Black Riders and Other Lines* (1895) and *War Is Kind* (1899) contain experiments in epigrammatic free verse Because his private life was unjustly criticized at home, he lived his last years in England and died of tuberculosis in Germany See the collection of his stories *Men, Women, and Boats* (ed by Vincent Starrett, 1921), *The Sullivan County Sketches of Stephen Crane* (ed by Melvin Schoberlin, 1949), and his complete works (12 vols , 1925–26) and *Collected Poems* (1930), both ed by Wilson Follett, biography by Thomas Beer (1923)

Crane, Walter, 1845–1915, English illustrator, painter, and decorator As a painter he is grouped with the later Pre-Raphaelites, but he is better known for his illustrations of the works of Spenser and of Hawthorne's *Wonder Book* and Grimm's *Fairy Tales* Seeking with William MORRIS to ally art with everyday life, he designed textiles, glass windows, tapestries, and house decoration. Crane's in-

terest in socialism is expressed in his cartoons for *Commonweal* and *Justice* In 1888 he founded the Arts and Crafts Exhibition Society of London See study by P G Konody (1902)

Crane, William Henry, 1845–1928, American comedian, b Leicester, Mass He appeared in opera (1863–74), but turned to the drama and became associated with Stuart Robson (1877–89) In *The Henrietta* (1887), written for Robson and himself by Bronson Howard, Crane had his greatest success He won praise in *On Probation* (1890) and *Peter Stuyvesant* (1899) by Howard and in D D Lloyd's *Senator* (1889), Augustus Thomas's *For Money* (1891), and George Ade's *Father and the Boys* (1908)

Crane, Winthrop Murray, 1853–1920, American manufacturer and public official, b Dalton, Mass He became a partner in the paper firm founded by his grandfather and became prominent in Republican party politics He served as lieutenant governor (1897–99) and then as governor (1900–1902) of Massachusetts He declined three cabinet posts offered him by President Theodore Roosevelt, who frequently conferred with Crane on important matters W Murray Crane was appointed in 1904 to the U S Senate to fill a vacancy and was elected (1906) for a full term He retired in 1913 See biography by S B Griffin (1926)

Crane. 1 City (pop 1,013), SW Mo , SW of Springfield in the Ozarks, inc 1906 **2** City (pop 1,420), co seat of Crane co , W Texas, N of the Pecos and S of Odessa, founded 1926, inc 1933 The region produces oil and also has sheep and cattle ranches and some commercial use of salt and clay

crane, large wading bird, chiefly of the Old World but with several North American species It is sometimes confused with the heron Cranes perform rhythmical dances during the mating season They eat small animals and vegetable food The whooping crane of North America, a white bird almost 5 ft tall, is nearly extinct The sandhill crane is about 4 ft tall and has gray plumage It is found chiefly W of the Mississippi and in Florida The little brown crane breeds mainly in N and W North America The Florida crane is a brownish-gray bird with a reddish warty head

crane, hoisting machine for lifting heavy loads and transferring them from one place to another It consists of a projecting beam fastened at one end and free at the other, from which the load is suspended Cranes have been in use from early times, being actuated by either manual or animal power Modern cranes are of varied types and sizes, are actuated by steam, electricity, Diesel, and hydraulic power as well as by manual power, and are indispensable in industries where heavy materials are handled constantly Commonly used inside machine shops and other buildings in which heavy products are manufactured is the bridge crane or overhead traveling crane, this moves along a steel girder spanning fixed rails laid either in the walls of the building or on special steel framework The girder, being supported at both ends on a wheeled carriage, can travel the length of the shop or building The hook or other lifting apparatus (the form depending on the kind of load) is supported on the trolley or rolling carriage mounted on the girder The gantry crane is a modification of an overhead traveling crane generally used out of doors and mounted on a structure which spans an area over which the crane operates Some gantry cranes are portable, i e , the legs of the trestles on which the crane bridge rests have wheels and operate on tracks, others are fixed Depending upon its use, the gantry has mounted on the bridge a trolley carrying a hoist, a derrick, a rotating pillar or jib crane, or a hammerhead crane Gantry cranes are used on docks and in storage yards for such purposes as handling bulk materials, e g , coal, cement, and ore, and also for moving heavy freight A simple crane of the rotary or revolving type consists of an upright post free to revolve about its vertical axis, with an attached jib or swinging arm Suitable hoisting tackle runs from the base of the vertical post to the top of the jib, over a pulley, and down to the load The derrick crane, used in building operations, is similar, except that the vertical post is held in position by guy ropes or struts which limit the swing of the jib There are a number of forms of the jib type of crane Hammerhead cranes are built on the cantilever principle, consisting essentially of a steel tower rigidly supported, across the top of which runs a horizontal truss extending on both sides, the whole having the appearance of a hammer head The extending side carrying the load is the longer of the two, and the other, shorter end contains the hoisting machinery The load is lifted and carried back and forth along the head truss on a traveling trolley, the whole top being designed to swing horizontally about the tower Cranes of this type are built to carry heavy loads and are used extensively in ship construction and repair work A portable or locomotor crane is a rotary crane with its turntable mounted on a wheeled car traveling on tracks, on a caterpillar tread enabling it to travel over rough ground and thus making it useful in many kinds of construction work, or on a truck which enables it to be moved quite rapidly to wherever it may be needed For use on water, cranes are mounted on pontoons

cranial index: see CEPHALIC INDEX

cranium: see SKULL

Cranmer, Thomas (krăn'mur), 1489–1556, English churchman Educated at Cambridge, he became a lecturer in divinity at Jesus College In 1529 he came to the notice of HENRY VIII by proposing a method by which the king could divorce KATHARINE OF ARAGON through the ordinary ecclesiastical courts and without recourse to Rome Cranmer defended (1530) his argument at Oxford, at Cambridge, and at Rome He was ambassador to Emperor Charles V in 1532 In 1533 he was made archbishop of Canterbury and, as Henry expected, was entirely subservient to the king He declared void Henry's marriage to Katharine of Aragon and that to Anne Boleyn valid In 1536 he declared Anne's marriage invalid Though he tried to save the lives of the Catholic martyrs John Fisher and Sir Thomas More, he himself abjured allegiance to the pope He was a friend also of Thomas CROMWELL and one of the few to defend Cromwell after his fall Influenced strongly by the German Reformation, Cranmer believed in the right of the state (i e , the king) to determine the religion of the country He was influential in placing the Bible in English in the churches, and the translation known as the Great Bible is often called Cranmer's Bible The archbishop was one of the regents for EDWARD VI, and in that reign he largely determined the course of the English Church Cranmer's *Litany* had been written in 1545 and was incorporated in the BOOK OF COMMON PRAYER (1548) The revision (1552) contains the most famous of Cranmer's distinguished and sonorous prose, although his homilies, the proposed Forty-two Articles of Edward VI (never adopted), and other ecclesiastical writings were very influential in their day Cranmer supported the claims of Lady Jane GREY after Edward's death Upon the accession of the Catholic Queen Mary (1553), Cranmer was tried for treason, then convicted of heresy, excommunicated, and condemned A few days before his death he recanted, but when asked to repeat the recantation in public at the stake, he refused and placed the hand which had written it into the fire See the memorials by John Strype (1694 and modern editions), biography by A C Deane (1927), studies by A J Pollard (1904) and C H E Smyth (1926)

crannog see LAKE DWELLING

Crannon (krăn'un), small town, central Greece, in Thessaly, SW of Larissa It was of some prominence in ancient times Here in 322 B C Antipater won his final victory in the Lamian War (see LAMIA)

Cranston, city (pop 47,085), central R I SW of Providence, inc as a town 1754, as a city 1910 Its industrial products include textiles and machinery, and it is the seat of state training schools and a state mental hospital Several pre-Revolutionary buildings remain

crape see CREPE

crape myrtle or **crepe myrtle** (both krāp), ornamental flowering shrub (*Lagerstroemia indica*) native to China, much cultivated in the S United States It has a long blooming period Its abundant crinkled flowers are usually deep pink but vary to white or purple In the Northern states the plant is grown in greenhouses

craps see DICE

Crapsey, Adelaide (krāp'sē), 1878–1914, American poet, b Brooklyn, N Y , grad Vassar, 1901, daughter of Algernon Sidney Crapsey After teaching in girls' schools she became an instructor at Smith College A year after her early death from tuberculosis appeared a slender volume, *Verse*, which won high praise from critics, a new edition with 20 additional poems was issued in 1934 Her special contribution to verse form is the cinquain—a compressed five-line verse resembling the Japanese hokku in its fragile precision and expressive delicacy See biography by M E Osborn (1943)

Crapsey, Algernon Sidney, 1847–1927, American Episcopal clergyman, b Fairmount, Ohio, grad General Theological Seminary, 1872 In 1879 he became rector of St Andrew's Church, Rochester, N Y Admirable social work developed under his charge there, but in 1906 he was expelled from the ministry for heresy because of beliefs concerning the physical being and life of Christ His books include *Religion and Politics* (1905), *The Rise of the Working Class* (1914), *The Ways of the Gods* (1920), and the autobiographical *The Last of the Heretics* (1924)

Crashaw, Richard (krăsh'shô), 1612–49, English poet The son of a Puritan clergyman, he was graduated from Cambridge (B A , 1634) and remained there as a fellow at Peterhouse His High Church sympathies were intensified by frequent visits to an Anglican religious retreat founded by Nicholas Ferrar at Little Gidding, and he probably was ordained When the Puritans took over Cambridge during the civil war, Crashaw went into exile (1643) on the Continent Sometime after 1646 he was converted to Catholicism and eventually became a canon at the shrine of Loreto, Italy, there he died of a fever Although he wrote secular poetry in Latin and Greek as well as English, Crashaw's fame rests on his intense religious poetry He is called one of the METAPHYSICAL POETS His strange mixture of sensuality and mysticism, as in his poems on St Theresa, is unusual in English literature and has been compared to the baroque art of Italy and Spain His *Epigrammatum sacrorum liber* (1634) is Latin sacred poetry, *Steps to the Temple and Delights of the Muses* (1646, enlarged 1648) contains sacred and profane poetry, with only a few pieces in Latin, *Carmen Deo Nostro* (1652) is entirely English and sacred His complete poems were edited by Leonard Martin in 1927 See Austin Warren, *Richard Crashaw a Study in Baroque Sensibility* (1939)

Crassus (krăs'sus), ancient Roman family, of the plebeian Licinian gens It produced men who achieved great note in the 2d cent and 1st cent B C One of the well-known members was **Lucius Licinius Crassus** (lōō'shus lĭsĭ'nēŭs), d 91 B C , a noted orator and lawyer (much admired by Cicero) He was a strict follower of constitutional forms, and he and Scaevola as consuls in 95 B C proposed a law—called the Licinian Law, the Lex Licinia, or the Lex Licinia Mucia—to banish from Rome those persons (the Latins) who had gained Roman citizenship by illegal means (or what the law set as illegal means) This greatly aggravated anti-Roman sentiment among the allies and helped bring on the Social War **Publius Licinius Crassus** (pŭ'blēus), d 87 B C , was consul in 97 B C He was the financial backer of the Roman colony of Narbo (modern Narbonne) in Gaul and achieved fame by his victories in Spain after his consulship He was a partisan of SULLA and, after being proscribed by Marius, committed suicide His son, **Marcus Licinius Crassus** (mar'kus), d 53 B C , was the best-known member of the family He was a man of considerable personal charm and almost unbounded avarice and ambition He was a partisan of Sulla and commanded some of Sulla's forces He was also a highly successful dealer in real estate, and it is said that he bought property that was confiscated or deserted in the period of the bloody Sullan proscriptions It is also said that he organized his private fire brigade and bought burning houses cheap putting out the fire after the sale was made At any rate he became the principal landowner in Rome He was a rival of POMPEY for power, and he gained immense prestige—along with Pompey—for suppressing the uprising of SPARTACUS The two of them were consuls together in 70 B C , and Crassus' jealousy was stimulated He followed a devious course concerning Catiline, apparently secretly encouraging the conspiracy but not taking part He and Julius CAESAR drew closer together, Crassus hoping to use Caesar's ability, Caesar (deep in debt) hoping to use Crassus' money Caesar, seeing that he needed stronger support than Crassus, created (60 B C) the First Triumvirate of Crassus, Pompey, and Caesar With Crassus' envy of Pompey and Pompey's scorn of Crassus, the arrangement worked only because of Caesar's consummate ability in handling men Crassus seems to have backed the political maneuvers of the notorious Clodius, and trouble was stirred up between Crassus and Pompey Caesar called both of them to Lucca, where in 56 B C a conference reaffirmed the alliance Crassus and Pompey were consuls together in 55 B C Crassus managed to get Syria assigned for his proconsular service in 54 B C Avid for military glory, he left even before his term as consul was up to undertake a campaign against the Parthians His ambition outran his ability After early successes, his army was completely routed at Carrhae (modern Haran) by Parthian archers in 53 B C Crassus in this disgrace was murdered by treachery, and C Cassius Longinus had difficulty in saving even the remnants of the army

crater (krā'tur) [Gr , = cup or bowl], mouth of the vent of a VOLCANO or a GEYSER, often of symmetrical cone or cup shape Among active volcanic craters Kilauea is notable for its size Many regions have the eroded craters of extinct volcanoes Frequently a lake forms in a crater, such a lake is often of unusual beauty, since it is at a high elevation where the air is clear, and it is very deep and still

Crater Lake National Park, 160,290 33 acres, SW Oregon, in the Cascade Range NNW of Klamath Falls It was established (1902) to preserve an area of interesting geological formations and scenic beauty, including Crater Lake The lake, almost round, c 6 mi wide and 1,983 ft deep, was formed by volcanic action, at the crest of a mountain It lies at an elevation of 6,164 ft above sea level, surrounded by cliffs 500 to 2,000 ft. high A small crater, Wizard Island, rises 776 ft above the lake's surface The lake was discovered (1853) by a party of prospectors, who called it Deep Blue Lake because of the intense blue of the water In 1869 it was named Crater Lake A scenic highway follows the rim of the lake See Howel Williams, *Crater Lake* (1941) and *The Geology of Crater Lake* (1942)

Craters of the Moon National Monument. see NATIONAL PARKS AND MONUMENTS (table)

Craterus (krā'tûrŭs), d. 321 B.C., Macedonian general under Alexander the Great. He was trusted by Alexander and distinguished himself in the wars in the East, especially in Bactria and India. Alexander in 324 B.C. sent him back from India to lead the discharged Macedonian soldiers home and to take over the reins from Antipater. After Alexander's death he promised to be one of the leading figures among the DIADOCHI, but he was killed in battle soon after the troubles had begun.

Crates (krā'tēz), fl. c. 449 B.C., Athenian comic poet. He is said to have introduced into comedy themes other than those of personal satire and he was one of the first to show the comic possibilities of the drunkard. Fragments of his plays survive.

Cratinus (krutī'nus), d. c. 422, Athenian comic poet. He won the prize when Aristophanes competed with *The Clouds*, but neither the prize-winning nor any other comedy by Cratinus is extant. He attacked Pericles violently in his plays.

Crauk, Gustave Adolphe Désiré (güstav' adôlf' dāzēā' krouk'), 1827–1905, French sculptor. His Admiral Coligny, in Paris, is a dignified monumental work. In Valenciennes, his native city, a museum is devoted to his sculptures.

Craven, Avery Odelle, 1886–, American historian, b. Randolph co., N.C., grad. Simpson College, 1908, M.A. Harvard, 1914, Ph.D. Univ. of Chicago, 1923. He taught at several other colleges in the Midwest before returning in 1928 to Chicago, which made him professor of American history in 1929. Craven is perhaps the leading light of that school of American historians which holds that the Civil War could have been avoided. His chief works are *Soil Exhaustion as a Factor in the Agricultural History of Virginia and Maryland, 1606–1860* (1926), *Edmund Ruffin, Southerner: a Study in Secession* (1932), "The Advance of Civilization into the Middle West in the Period of Settlement," in Dixon Ryan Fox, ed., *Sources of Culture in the Middle West* (1934), *The Repressible Conflict, 1830–1861* (1939), *Democracy in American Life: a Historical View* (1941), and *The Coming of the Civil War* (1942).

crawfish see CRAYFISH

Crawford, Francis Marion, 1854–1909, American novelist, b. Bagni di Lucca, Italy, son of Thomas Crawford. He studied at Trinity College, Cambridge, and in Karlsruhe, Heidelberg, Rome, and India. After editing the *Indian Herald* in Allahabad, he returned to America for the years 1881–83 and there wrote his first novel, *Mr. Isaacs* (1882), immediately successful. Thereafter he made his home in Italy. His very popular novels were vivid, romantic stories of historical or modern European and Oriental life. Some of them are *Doctor Claudius* (1883), *Saracinesca* (1887), *Marzio's Crucifix* (1887), *Sant' Ilario* (1889), *Greifenstein* (1889), *Don Orsino* (1892), *Via Crucis* (1899), *Marietta* (1901), *The Heart of Rome* (1903), and *The White Sister* (1909). *A Cigarette-Maker's Romance* (1890) was successfully dramatized, and another play, *Francesca da Rimini* (1902), was produced by Sarah Bernhardt in Paris. His three books about Italy's past show his considerable gifts as a historian. See M. H. Elliott, *My Cousin F. Marion Crawford* (1934).

Crawford, Isabella Valancy, 1850–87, Canadian poet, b. Dublin, Ireland. In 1858 her family migrated to Upper Canada. The remote, woodland region of her childhood is depicted in her long poem, "Malcolm's Katie." This poem, "Old Spookses' Pass," and other poems were published in a single volume in 1884. She died in poverty in Toronto. Her *Collected Poems* (1905) brought the recognition that the poet had not enjoyed in her lifetime. See biography by Katherine Hale (1923).

Crawford, Thomas, 1813–57, American sculptor, b. New York city. He was apprenticed to a wood carver and later worked for a firm of tombstone cutters. He achieved his first success in decorations for the Capitol at Washington, which include *Armed Freedom*, the figure above the dome, and the bronze doors and pediment statues for the Senate wing. He designed the Washington monument, Richmond, Va., for which he executed the equestrian figure and the figures of Patrick Henry and Jefferson. A pupil and follower of Thorvaldsen, Crawford lived and worked in Rome most of his life. He married Louise Cutter Ward, sister of Julia Ward Howe. The novelist Francis Marion Crawford was their youngest son.

Crawford, William Harris, 1772–1834, American statesman, b. Amherst co., Va. (his birthplace is now in Nelson co.). He moved with his parents to South Carolina and later to Georgia. After studying law he practiced at Lexington and served in the state legislature (1803–7). In the stormy state political battles of the time he was the leader of the upcountry forces allied with the followers of James Jackson and later George M. Troup, of the tidewater region. He killed in a duel a partisan of John Clark, head of the opposite faction, and in another duel was wounded by Clark. In the U.S. Senate (1807–13) Crawford staunchly advocated rechartering the Bank of the United States. From 1813 to 1815 he was minister to France. He was then appointed Secretary of War by President Madison, but in 1816 was made Secretary of the Treasury, a post he held through both of Monroe's administrations. He had strong support for the presidency in 1816 but disavowed his candidacy. In the presidential election of 1824, Crawford, a leading candidate, suffered a paralytic stroke during the campaign and finished third to Andrew Jackson and John Quincy Adams. Since no candidate received a majority of the electoral votes, the election went to the House of Representatives. Henry Clay, who had received even fewer votes than Crawford, threw his support to Adams, who was elected. Crawford later served as a judge in Georgia. See biography by J. E. D. Shipp (1909).

Crawford, city (pop. 1,845), NW Nebr., SW of Chadron and on the White River near the Badlands, in a grazing and dairying area, founded 1885. A U.S. fish hatchery is here. Fort Robinson is near by.

Crawford Notch, steep defile in the White Mts., N central N.H., through which the Saco flows. It is named for Abel Crawford, an early settler. The state bought the area in 1911.

Crawfordsville, city (pop. 11,089), co. seat of Montgomery co., W. Ind., NW of Indianapolis, laid out c. 1822. The city is commercially important as the center of a long-settled farming and stock-raising region. Its manufactures include wire, fences, and nails. It is the seat of Wabash College (for men, 1832). There is a memorial to Lew Wallace.

Crawfordville, city (pop. 1,056), co. seat of Taliaferro co., NE Ga., W of Augusta, inc. 1826. Alexander H. Stephens Memorial State Park (with Liberty Hall, Stephens's home) is here.

Crayer, Gaspar de (gäs'pär du krī'ur), c. 1582–1669, Flemish religious and portrait painter, much influenced by Rubens. While lacking the genius of Rubens, he almost rivaled him in productivity and maintained a high standard of work. His paintings are to be seen in countless Flemish provincial churches and in the museums and churches of Brussels and Ghent. His *Assumption* (Brussels) is among the best.

crayfish or **crawfish,** fresh-water crustacean smaller than the related and very similar lobster and found in most parts of the world except Africa. Crayfish are usually found in ponds and streams or swamps. A few are partially terrestrial. Some can burrow underground to avoid drought. They eat mainly small aquatic animals and carrion. The eggs develop while attached to the swimming legs of the female. Crayfish are usually dull brownish green in color. A red-clawed species is a food delicacy in Europe. *The Crayfish* (1880) by T. H. Huxley is a classic zoological study.

Crazy Horse, d. 1877, Indian chief of the Oglala Sioux. He led southern Sioux raids against the Mandan and the Crow Indians and against the whites, and when the attempt was made to force him into reservation life, he resisted. He defeated George A. Crook on the Rosebud river in 1876, and in the destruction of Custer's force on the Little Bighorn in 1876, Crazy Horse and GALL were assistants to Sitting Bull. In Jan., 1877, his village was destroyed by Gen. Nelson A. MILES, and a few months later Crazy Horse and more than 1,000 followers surrendered at the Red Cloud agency. He was accused of planning a revolt and was shot when resisting imprisonment. His bravery and skill were acknowledged by all. See biography by Mari Sandoz (1942).

crazyweed. see LOCOWEED.

creamery see DAIRYING.

cream of tartar, substance obtained from argol, a crystalline crust which forms in tanks in which wine is fermenting. It exists naturally in grape juice and to a certain extent in tamarinds, mulberries, pineapples, and unripe beets. The deposit of argol from grapes is the main source of the tartaric acid of commerce. Argol when partly purified by recrystallization is tartar and when fully purified, decolorized, and finally ground to a fine powder is cream of tartar. In this form it is used in cookery, being combined with soda to lighten dough. It is also an ingredient of the best baking powders. Medicinally, combined with sodium bicarbonate, it forms ROCHELLE SALT, combined with antimony oxide it forms TARTAR EMETIC.

Creasy, Sir Edward Shepherd (krē'sē), 1812–78, English historian. A lawyer, a professor of London Univ., and an author of several historical works, he is best remembered for his *Fifteen Decisive Battles of the World* (1851, see BATTLE). In 1860 he was knighted and made chief justice of Ceylon.

creationism see SOUL.

Crébillon, Prosper Jolyot de (prôspĕr' zhôlyō' dŭ krābēyō'), 1674–1762, French dramatist, whose full name was Prosper Jolyot, sieur de Crais-Billon. His plays include *Idomenée* (1705), *Électre* (1708), and *Rhadamiste et Zénobie* (1711), which is considered his best. Unsuccessful and in retirement for many years, he was persuaded by Mme de Pompadour, who was seeking a rival to Voltaire, to write *Catilina* (1748), a great success. Voltaire's savage attacks have immortalised him. In 1731 he was elected to the French Academy. His son **Claude Prosper Jolyot de Crébillon** (klōd'), 1707–77, was the author of many witty, licentious tales of which the best known are *Les Égarements du cœur et de l'esprit* (1736) and *Le Sopha* (1745).

crèche (krĕsh, krāsh), also called Christmas Crib, a representation of the Infant Jesus in the manger, usually surrounded by figures of Mary, Joseph, shepherds, animals, and the Wise Men. The crèche has been displayed in churches from Christmas Eve to Jan. 6 since the Middle Ages, especially after St. Francis of Assisi instituted the custom in 1223 at Greccio, Italy. It is a Christmas tradition in many homes. Munich has a noted collection of crèches. See also DAY NURSERY.

Crécy (krĕ'sē, Fr. krāsē'), officially **Crécy-en-Ponthieu** (-ā-pōtyû'), town (pop. 1,331), Somme dept., N France, N of Abbeville. Here, on Aug. 26, 1346, Edward III of England defeated Philip VI of France in the HUNDRED YEARS WAR. The English suffered few losses, while the flower of the French nobility was destroyed by the English longbows, which then made their first appearance in continental warfare. Among the combatants were EDWARD THE BLACK PRINCE and the blind king of Bohemia, JOHN OF LUXEMBURG. Crécy is also known in English as Cressy.

Credi, Lorenzo di. see LORENZO DI CREDI.

credit. The credit system is founded upon the lender's confidence in the borrower or in his COLLATERAL and general possessions. The chief function of credit is the transference of capital from those who own it to those who can use it in the expectation of profit exceeding the interest on the loan. Thus credit increases the productive power of capital. Credit permits the exchange of commodities without the use of cash or with the use of very little cash, but credit dissolves with lack of confidence, helping to cause economic crises, panics, and depressions. Credit may be classified according to the industry using it, according to the length of time the money is hired, and as to quality or liquidity. In the larger banks credit-analysis departments determine the amount of credit which may safely be given to applicants. Data as to credit risk is supplied by agencies organized for that purpose. The chief agency in the United States is Dun & Bradstreet, formed by a merger (1933) of R. G. Dun & Company (1841) and the Bradstreet Company (1849). If more credit than the community can liquidate is granted, there is inflation, if too little, deflation. In BOOKKEEPING, the credit side is the side of the account on which payments are entered, hence, sometimes, the payments themselves. See also DEBT, PUBLIC; INSTALLMENT BUYING AND SELLING. See Frederick Soddy, *Money versus Man* (1933), Ludwig von Mises, *The Theory of Money and Credit* (Eng. tr., 1934), R. B. Westerfield, *Money, Credit, and Banking* (1947).

credit, letter of, commercial instrument written by a banker or other person to his agent in another place authorizing the bearer to receive money from the agent. The document is called a circular letter of credit when it is addressed to more than one agent. In effect, a letter of credit is a DRAFT, save that the amount is merely stated as a maximum not to be exceeded. Letters of credit are most used by travelers. Those who issue such letters are usually so well known that any bank will honor the letter, whether an agent or not, upon proper identification. Travelers' checks are a modified form of letter of credit. They are issued in coupons, upon whose face a value is usually expressed in terms of the currency of a particular country. In the United States such checks are issued chiefly by express companies. Circular letters of credit require that each payment, as it is made, be endorsed by the firm making payment so that other banks may know how much of the total credit has been used.

Crédit Mobilier of America (krĕ'dĭt mōbĭlyā', krādē'), ephemeral construction company, connected with the building of the Union Pacific RR. and with one of the major financial scandals in American history. Oakes AMES, Thomas C. DURANT, and a few other inner stockholders of the Union Pacific organized the construction company under an existing Pennsylvania charter, which they took over with changed purposes. Thus acting for the Union Pacific and for their construction company, they made contracts with themselves. Oakes Ames, as head of the Crédit Mobilier, in 1867 assigned contracts to seven trustees to build the remaining 667 mi. of road for a total sum that brought profits variously estimated at from $7,000,000 to $23,000,000. This process depleted generous congressional grants to the Union Pacific and left it under a heavy debt by the time of its completion in 1869. The scandal became political when Ames, to forestall investigation or interference by Congress, sold or assigned shares of the Crédit Mobilier stock to members of Congress at par, though the shares were worth twice as much at the time. He wrote to Henry S. McComb, an associate, that he had placed the stock "where it will produce the most good to us" and subsequently forwarded a list of Congressmen who had received or were to receive shares. Later friction between Ames and McComb facilitated the publication of these letters in Charles A. Dana's New York *Sun* in the midst of the presidential election campaign.

of 1872. A subsequent investigation by Congress badly smirched the political reputations of Vice President Schuyler Colfax, Senator James W Patterson of New Hampshire, Representative James Brooks of New York, and others—most of all, of course, Ames himself Ames and Brooks were censured by Congress, but there were no prosecutions. In that age of gross public corruption, people were inclined to regard the frankness with which most of those involved admitted their parts in the affair as somehow mitigating their offenses

Crediton (krĕd'-), urban district (pop 3,490), Devonshire, England, NW of Exeter It is on the Creedy, a tributary of the Exe Crediton is the traditional birthplace of St Boniface and was the seat of a bishopric from early in the 10th cent until the middle of the 11th Farm machinery and leather are products

credit union, bank conducted on cooperative principles, usually by an association of members of the same occupational group or of the same local community Cooperative banking originated in Germany in the middle of the 19th cent , it was developed by Hermann Schulze-Delitzsch and later was particularly adapted to rural communities by F W Raiffeisen Credit unions in Canada are chiefly in the province of Quebec, where the first union was established by Alphonse Desjardins in 1900 In the United States the Credit Union National Extension Bureau, founded in 1921 by Edward A Filene, has been instrumental in organizing credit unions American credit unions are of many types, they agree in seeking to make loans on reasonable terms to farmers and wage earners and to offer them security and a fair return for their savings See R F Bergengren, *Credit Union* (1940)

creed [Latin *credo*=I believe], summary of basic doctrines of faith The following are historically important Christian creeds **1** The Apostles' Creed, beginning, "I believe in God the Father Almighty, creator of heaven and earth And in Jesus Christ " It does not appear in its present form before 650, but its predecessors probably arose in Rome in the 2d or 3d cent It has two material differences from the Nicene Creed (1) "He descended into hell," omitted in the Nicene, (2) "resurrection of the body," in the Nicene "of the dead " It is used by Roman Catholics privately and at baptism, it is much used by Protestants **2** The Nicene Creed, beginning, "I believe in One God the Father Almighty, maker of heaven and earth, and of all things visible and invisible, and in One Lord Jesus Christ " It is usually described as a revision by the First Council of Constantinople (381) of the creed adopted at Nicæa in 325, although there are good grounds for the belief that it represents substantially a creed written or used by St Cyril of Jerusalem In the Western Church since the 9th cent it has differed from the original in the italicized words "And in the Holy Ghost Who proceedeth from the Father *and the Son*" (qui ex Patre *Filioque* procedit) The controversy between the Orthodox and Roman Catholic churches on these words has made a shibboleth of the *Filioque* The Nicene Creed is an official creed of Orthodox, Roman Catholic, and some Protestant churches **3** The Augsburg Confession (1530), the official statement of the Lutheran churches It was written by Melanchthon and endorsed by Luther for the Diet of Augsburg **4** The Thirty-nine Articles date in their present form from the beginning of Elizabeth's reign, when they were written by a group of bishops They are Calvinistic in theological emphasis and enounce clearly the royal supremacy in the Church of England They are official in the Church of England and, with occasional changes, in its various daughter churches (usually Episcopalian) **5** The Westminster Confession (1645–47), the most celebrated pronouncement of English-speaking Calvinism It is official in the Church of Scotland, with occasional changes in most of its daughter churches (usually Presbyterian), and among Congregationalists **6** See ATHANASIAN CREED.

Cree Indians, North American Indian tribe of Algonquian stock, formerly inhabiting Manitoba S of the Churchill river Members of one branch of the Cree, allying themselves with the Sioux Assiniboin Indians, moved southwestward into buffalo territory and became the Plains Cree It is probable that they introduced the method of hunting buffalo by driving them into enclosures, since the Woodland Cree used this method in hunting deer The culture of the Woodland Cree greatly resembles that of the Ojibwa Indians, who are probably their close relatives The Cree were warlike and were a powerful tribe in the late 18th cent but were later decimated by disease.

Creek Indians, North American Indian confederacy The peoples forming it were mostly of Natchez-Muskogean linguistic stock They lived primarily in Alabama and Georgia and were settled agricultural people. There were more than 50 towns, generally called tribes, in the confederacy, which was formed chiefly for protection against the tribes to the north. Certain villages were set aside for war ceremonies, others for peace celebrations. Each had its annual Green Corn dance This festival was a time for renewing social ties and was a period of amnesty for criminals Old pots were broken, new fires lit, and new clothing put on, and religious ceremonies were performed The Creek impressed the early white men (De Soto saw them in 1540) by their height, their proud bearing, and their love of ornament They were hostile to the Spanish and therefore friendly to the British in colonial days, but, frightened by white encroachment and fired by the teachings of TECUMSEH, they rebelled in the Creek War of 1813–14 They massacred a large number of whites and Negroes at Fort Mims, and Andrew Jackson won part of his reputation by defeating them thoroughly They had to cede much of their land, and in 1825 they ceded their lands in Georgia to that state They were moved to the Indian Territory, where they became one of the Five Civilized Tribes At the time of the Civil War there was considerable dissension among the Creek A treaty was made with the Confederacy, but many denounced it, and there was great bitterness of feeling In 1906 the Creek abandoned their autonomy and became American citizens See J R Swanton, *The Early History of the Creek Indians* (1922) and *Social Organs and Social Usages of the Indians of the Creek Confederacy* (1928), Grant Foreman, *The Five Civilized Tribes* (1935)

creeper, name for various small birds with long decurved bills and usually inconspicuous plumage The true creepers are an Old World family (Certhiidae) related to the wrens and nuthatches They are represented by one New World species, the brown creeper, and its subspecies The brown creeper is an unobtrusive bird which breeds in Canada and parts of the United States, chiefly in rather densely wooded and mountainous regions It hitches up tree trunks, using the stiff, pointed feathers of its long tail as a prop while hunting for minute insects When part way up a tree it is apt to swoop to the base of another to begin again its upward, usually spiral, progress Related birds are the Mexican or Sierra Madre, the Rocky Mt , the Sierra, and the California creepers Some warblers are called creepers The honey creepers (family Coerebidae) are found chiefly in tropical and subtropical America

Creevey, Thomas (krē'vē), 1768–1838, English diarist His journals and letters record, from the viewpoint of a Whig member of Parliament and minor officeholder, the history and manners of the late Georgian period See the edition by John Gore (1948)

Crefeld, Germany see KREFELD

Creighton, Mandell (măn'dŭl krī'tun), 1843–1901, British historian and churchman He was professor of ecclesiastical history at Cambridge from 1884 to his appointment (1891) as bishop of Peterborough In 1896 he was made bishop of London He was a founder of the *English Historical Review* and wrote biographies of Cardinal Wolsey, Queen Elizabeth, and Simon de Montfort His masterwork was his *History of the Papacy during the Period of the Reformation* (5 vols , 1882–94, new ed , with title *History of the Papacy from the Great Schism to the Sack of Rome*, 6 vols , 1897, new ed of Vol I and reprint of Vols II-VI, 1901) See his life and letters (ed by his wife, Louise Creighton, 1913)

Creighton (krā'tŭn), city (pop 1,272), NE Nebr , NNW of Norfolk, in a hay region, laid out 1885

Creighton University, at Omaha, Nebr , Catholic (Jesuit), for men, chartered 1877 and 1879, opened 1878 It includes colleges of arts and sciences, commerce, and pharmacy, schools of dentistry, journalism, law, medicine, and nursing, lower schools, and University College for women

cremation, disposal of a corpse by burning It is a widespread practice, second only to BURIAL First evidence of the practice occurs during the Neolithic period In almost all of its later occurrences, it appears as a preferred trend, both because of its religious associations and because of its convenience Belief in the use of cremation is sometimes considered to be related to the belief in the properties of fire as a purification agent and as a vehicle for the immaterial essence of things it consumes In Polynesia, as in early Scandinavia, it was a mode of funeral allowed only to persons of great rank The public cremations of the Hindus, especially those performed along the Ganges, are among their most sacred observances Certain American Indian tribes practiced cremation Only during the last two centuries have Christians cremated their dead, among certain denominations it remains expressly forbidden Usually, the ashes from cremation are provided interment according to local FUNERAL CUSTOMS

Crémazie, Octave (Joseph Octave Crémazie) (ôktav' krāmäzē', shôzĕf'), 1827?–1879, French Canadian poet, b Quebec, educated at the Quebec seminary, His influence was of great importance in French Canadian poetry. With his brothers he was proprietor of a bookshop in Quebec, the gathering place for a literary group which included such figures as F X Garneau and H. R. Casgrain. With the appearance of his "Le Vieux Soldat canadien" (1855), Crémazie won instant fame and was raised to the rank of leader among French Canadian poets His poems, which show the influence of French romanticism, are filled with patriotic feeling, they appeared in newspapers, and some 20 are included in his so-called *Œuvres complètes* (1883) In 1862 the poet got into business difficulties and fled to France, where he lived in poverty under an assumed name He wrote a journal of the siege of Paris (1870) and died at Le Havre

crème de menthe (krĕm' dŭ mĭnt', Fr krĕm du mät'), a mint-flavored LIQUEUR, usually green, and often served with finely crushed ice

Cremer, Sir William Randal (krē'mur), 1828–1908, British pacifist At first active in trade unionism, he gradually expanded his work and interests, becoming one of the most active advocates of international arbitration In 1871 he became secretary of the Workmen's Peace Association, and he held this position until his death For his efforts toward international arbitration, he was awarded the 1903 Nobel Peace Prize He gave most of the stipend in trust to the International Arbitration League See biography by Howard Evans (1909)

Crémieux, Isaac (Adolphe Cremieux) (ēzäk' krāmyö'), 1796–1880, Jewish-French statesman and political writer He was president (1876) of the Alliance Israélite Universelle, through which he advocated international Jewish emancipation, and founded Jewish schools in Cairo and Alexandria As minister of justice of France, he achieved abolition of the death penalty for political offenders and abolition of slavery in the colonies He secured (1870) full citizen's rights for Jews in Algeria

Cremona, Luigi (lwē'jē krāmō'nä), 1830–1903, Italian mathematician After teaching at Bologna (1860–66) and at Milan (1866–73), he became (1873) director of the school of engineering at Rome He held several government posts and served as senator from 1879 Translations of two of his important works appeared in English as *Elements of Projective Geometry* (1885) and *Graphical Statics* (1890)

Cremona (krĭmō'nu), city (pop 54,564), capital of Cremona prov , Lombardy, N Italy, on the Po, in the heart of a rich agricultural district Once a Roman colony, it was in the Middle Ages an independent commune frequently at war with Milan until its surrender to that city in 1344 Cremona was noted in the Middle Ages as a center of learning, in the late Renaissance for a school of painting founded by Giulio CAMPI, and later for the violins made by the AMATI the GUARNERI, the STRADIVARI, and their successors The cathedral (12th–16th cent), the high campanile, the baptistery, the city hall (13th cent), and the Loggia adorn the impressive main square

creole (krē'ōl) [perhaps from Span ,=servant or child], term originally applied in Latin America to the native-born descendants of the French and Spanish conquerors The creoles were distinguished from the natives, from the Negroes, and from men of European birth The sharp distinction of interest always lay between the creoles, whose chief devotion was to the colony, and the foreign-born officials, whose chief devotion was to the mother country Never precise, the term acquired various meanings in different countries Mulattoes and half-breeds generally adopted the name for themselves Usage varies, but generally creole is the name applied to those of French or Spanish blood, it is now commonly employed only historically in Latin America The term was early adopted in Louisiana, where it is still used, a distinction usually being drawn between the creoles who are descendants of the original French settlers, and the "Cajuns," who are at least partially descended from the Acadian exiles The term does not mean persons of mixed white and Negro blood, although it is applied to mixed bloods and Negroes, frequently with the adjective colored The picturesque Louisiana Creole life has been ably depicted in the works of George W Cable, Lafcadio Hearn, and Grace King The term is also used in places distant from Latin America, such as Mauritius, but there it is a borrowed word, which has lost most of its original meaning

Creon (krē'ŏn), in Greek legend, brother of Jocasta He became regent of Thebes after the banishment of OEDIPUS Creon helped ETEOCLES to take the kingdom from his brother POLYNICES When the brothers died he buried Eteocles with honor and had ANTIGONE put to death because she secretly performed funeral rites for Polynices

creosote (krē'ŭsōt), volatile, heavy, oily liquid, colorless when pure but commonly pale yellow, with a penetrating, smoky odor and a sharp taste It is a strong antiseptic Originally it was prepared by fractional distillation from beechwood tar, and this substance is the one chiefly used in pharmacy today for its preparation Its active principle is guaiacol (a compound of carbon, hydrogen, and oxygen known chemically as o-metho-xyphenol), which constitutes about 70 percent and is sometimes used pure The remainder is made up of a number of other organic compounds Its chief use in pharmacy is as an internal antiseptic (guaiacol carbonate), as in intestinal infections and in

chronic bronchitis, but its value in the treatment of tuberculosis of the lungs has been questioned Creosote is not pleasant to take and is usually administered in gelatine capsules or in other ways to disguise its taste or in compounds The doses are small Creosote oil obtained from coal tar and other tars is commonly employed as a preservative for timber and also for ment It is a mixture of a number of compounds, among which are various phenols, e g , the three isomeric cresols (ortho, meta, and paracresol)

crepe (krāp), thin fabric of crinkled texture, woven from raw silk in the natural gummy state There are two kinds of crepe the hard-finished, usually dyed black and used for mourning (which retains the old spelling *crape*), is made of hand-twisted silk yarn and finished by a rather complex trade process after weaving, the soft crepes include the Canton or Oriental weaves, crepes de Chine (krāp' du shēn'), and the like, in plain or damask weaves Their crisped or wavy appearance results from the peculiar arrangement of the weft, which is formed of yarn from two different bobbins twisted together in opposite directions or which uses alternately a right-twisted and a left-twisted thread Wool and cotton may also be given the crepe weave

crepe myrtle · see CRAPE MYRTLE

Crépy, Treaty of (krāpē'), 1544, concluded by Emperor Charles V and King FRANCIS I of France at Crépy-en-Laonnois (formerly spelled Crespy), Aisne dept , N France The emperor renounced his claim to the duchy of Burgundy, the king renounced his pretensions to Naples, Flanders, and Artois

Créquy or **Créqui, François, chevalier de** (frāswa' shuvalyā' du krākē'), c 1625–1687, marshal of France He fought in the Thirty Years War, on the government side in the Fronde, and in the War of Devolution He refused to serve under Turenne in the third Dutch War and was exiled but soon submitted In 1675 he suffered two serious defeats, and was captured at Trier He later restored his reputation by brilliant campaigns in Alsace and in 1684 occupied Luxembourg

Crerar, Henry Duncan Graham (krēr'ar), 1888–, Canadian general in the Second World War, b Hamilton, Ont , educated at Upper Canada College, Toronto, and Royal Military College, Kingston After the First World War, in which he served with distinction, he joined the permanent force and held various high military positions in Canada and England In 1939, as brigadier, he became senior officer of Canadian military headquarters in London In 1940 he returned to Canada as chief of the Canadian general staff In 1941 he was appointed to command the Canadian 2d Division Overseas, later (1942) he became commander of the 1st Canadian Corps, and finally (1944) he was given command of the Canadian Army Overseas and promoted full general, a post he filled with distinction during the campaigns in Europe He retired in 1946.

Crerar, John (krēr'ar), 1827–89, American capitalist and philanthropist, b New York city A wealthy manufacturer in Chicago, he was a liberal giver to many causes He is remembered chiefly for the **John Crerar Library,** a scientific and technical reference library in Chicago, for which he provided in his will The library has special collections on medicine, Chinese literature, Dutch history, floriculture, woman, trade unions, and social science in general It is noted for its fine bibliographical work

Crerar, Thomas Alexander, 1876–, Canadian political leader, b Ontario He grew up on his father's farm in Manitoba and was later a farmer and a grain-elevator operator Under his able direction the United Grain Growers, Ltd , of which he was president (1907-29), became one of the most successful farmers' cooperative movements in W Canada Sir Robert Borden in 1917 called Crerar, a Liberal, into his coalition cabinet as minister of agriculture, a post from which he resigned in 1919 in protest against the government's high tariff policy He was leader (1920–21) of the new National Progressive party and of the Progressives in the dominion House of Commons, retiring in 1922 to private life He reentered the political scene as minister of railways and canals (1929–30) in Mackenzie King's Liberal government and later served (1935–45) as minister of mines and resources in King's cabinet In 1945 Crerar was called to the Canadian Senate

Cres, Yugoslavia see CHERSO

Cresap, Michael (krē'sāp), 1742–75, American frontiersman and soldier, b Allegany co , Md An Indian fighter, he was accused by Thomas Jefferson and others of massacring the family of the friendly Indian chief Logan and thus starting (1774) Lord Dunmore's War A letter from George Rogers Clark, however, states that Cresap was with him at the time of the massacre Cresap fought in the war, and after the American Revolution broke out he became (1775) captain of a company of riflemen So fast did he take his men to support the patriots at Boston - 550 mi in 22 days—that he died as a result of exhaustion

Crescens (krē'sənz) [Lat , =increasing], companion of Paul, a missionary in Galatia 2 Tim 4 10.

Crescent, town (pop 1,301), central Okla , NW of Oklahoma City, settled 1891, inc 1893

crescent, emblem representing the half-moon with the horns turned upward The crescent and star were ancient Byzantine symbols which became the emblems of Constantinople and were assumed as the standard of the Ottoman Turks after their capture of that city It is a symbol of the Islamic culture See also BLAZONRY

Crescent City. 1 City (pop 1,363), co seat of Del Norte co , N Calif , on the coast near the Oregon line, in a fishing and timber area, laid out 1852, inc 1854 Gold was discovered near by in 1946 **2** Town (pop 1,124), NE Fla , on Crescent Lake and SSE of Palatka It is an orange-growing center and a resort

Cresco, city (pop 3,530), co seat of Howard co , NE Iowa, near the Minn line, inc 1868 It is a trade and processing center for a farm, dairy, and livestock area

Cresilas (krĕs'ĭlus), fl c 450 B C , Greek sculptor, b Crete He worked at Athens His statue of Pericles is the earliest Greek portrait statue that has been identified

Crespi, Giovanni Battista (jōvan'nē bat-tē'sta krā'-spē), 1557–1633, Italian painter, architect, and sculptor of the Milanese school, also called Il Cerano

Crespi, Giuseppe Maria (jōōzĕp'pā marē'a), 1665–1747, Italian portrait painter, etcher, and caricaturist of the Bolognese school, called Lo Spagnuolo The Pitti and Uffizi galleries in Florence contain examples of his work The National Gallery of Art, Washington, D C , has *Cupids with Sleeping Nymphs* and *Portrait of a Girl*

Crespí, Juan (hwän'), 1721–82, Spanish explorer in the Southwest, a Franciscan He came to America in 1749, and in 1767 he went to the peninsula of California in charge of Mission Purísima Concepción In 1769 he joined the expedition of Portolá to occupy San Diego and Monterey and continued up the coast with Portolá The following year he founded the Mission San Carlos Borromeo, in the present Carmel-by-the-Sea, which became his headquarters He was chaplain of the expedition to the N Pacific conducted by Juan Pérez in 1774 His diaries, published in H E Bolton's *Fray Juan Crespi* (1927), provided valuable records of these expeditions

Crespo, Joaquín (hwakēn' krā'spō), 1841?–1898, president of Venezuela (1884–86, 1894–98) He served his first term under the dominance of Antonio GUZMÁN BLANCO In 1892 he led a revolt establishing a military dictatorship His second term was notable for the sharp feeling between the United States and England occasioned by the VENEZUELA BOUNDARY DISPUTE When he chose his successor, revolts occurred, and Crespo was killed defending the presidency The next year Cipriano CASTRO came into power

Crespy, France see CRÉPY

cress, name for several plants often used for salads, e g , the WATER CRESS, garden CRESS or PEPPERGRASS and Indian CRESS or NASTURTIUM

Cressent, Charles (shärl' krĕsä'), 1685–1768, French cabinetmaker, one of the chief creators of the Regence style, son of a cabinetmaker Though at first a sculptor and bronze craftsman, he studied under the furniture designer Boulle and became official cabinetmaker to the regent Philippe II, duc d'Orléans Examples of his furniture display a strong and majestic beauty, with subtly curving supports and swelling surfaces Against their veneers of mahogany and ebony stand lavish relief adornments in superbly modeled gilt bronze—the scrolls, shells, and dragons typical of Regence decoration and, above all, the female busts characteristically mounted at the corners Pieces by Cressent are in the Louvre and in the Wallace Collection, London

Cressida see TROILUS AND CRESSIDA

Cresskill, suburban borough (pop 2,246), NE N J , near the Hudson opposite Yonkers, N Y , inc 1894

Cresson, residential borough (pop 2,500), SW Pa , in the Alleghenies SW of Altoona, inc 1906 A summer resort, it has a state tuberculosis sanatorium The birthplace of Robert E Peary is near by Mount Aloysius Junior College is here

Cressona (krĭsō'nu), borough (pop 1,695), SE Pa , on the Schuylkill and S of Pottsville, laid out 1847, inc 1857 A branch of the Aluminum Company of America (ALCOA) is here

Cressy, Hugh Paulinus (krĕ'sē), or **Serenus de Cressy,** 1605–74, English Benedictine monk He was educated at Oxford and converted to Catholicism in Rome in 1646 His *Exomologesis* (1647) is an apologia for his conversion His most ambitious work, however, is his *Church History of Brittany or England* (1668), one of the first attempts at objective church history He edited the work of several Catholic mystics—Walter Hilton's *Scale of Perfection*, Friar Augustin Baker's *Sancta Sophia*, and the *Revelations of Divine Love* by Juliana of Norwich. Cressy served as chaplain to Catherine of Braganza, wife of Charles II.

Cressy, France: see CRÉCY

crest, in feudal livery, an ornament of the headpiece that afforded protection against a blow Crests were widely used in the 13th cent by feudal chiefs, as they had been by ancient Greek warriors and the Roman centurions The earlier forms were usually of stuffed leather, gilded, silvered, or painted, later they were of wood or metal The crest came to be used in HERALDRY, first only by persons of high rank, then by all those entitled to a coat of arms It surmounts the escutcheon, its tinctures are those of the coat of arms The dragon, wivern, and plume of feathers are common crests The lion, used by Edward III of England, still is the crest of the English sovereigns See also BLAZONRY.

Crested Butte (būt), town (pop 1,145, alt c 9,000 ft), W central Colo , N of Gunnison, inc 1880. A gold camp in the early 1880s, it is now a resort town in a livestock and coal area

Crestline, village (pop 4,337), N central Ohio, W of Mansfield, laid out 1851 as Livingston, later united with Crest Line It is a railroad center, and clothing, road-making machinery, furnaces, and dairy products are made

Creston, town (pop 1,153), SE British Columbia near the southern end of Kootenay Lake, SE of Nelson and near the U S border It is the center of a fruitgrowing area

Creston. 1 City (pop 8,033), co seat of Union co , SW Iowa, SW of Des Moines, inc 1871 It is a trade, rail, and manufacturing center for a bluegrass and corn area Livestock is raised in the region, and the city has processing plants and railroad shops A junior college is here Two artificial lakes supply the city's water **2** Village (pop 1,110), N Ohio, SW of Akron

Crestview, town (pop 2,252), co seat of Okaloosa co , NW Fla , near Choctawhatchee National Forest

Creswell, John Angel James (krĕs'-), 1828–91, U S Postmaster General (1869–74), b Port Deposit, Md , grad Dickinson College, 1848 He was a lawyer, U S Representative (1863–65), and U S Senator (1865–67), but his important work was done later as Postmaster General He reorganized the Post Office Dept to meet the expanding needs of the United States One-cent post cards were introduced, the cost of sending ocean mail was reduced from eight cents to two cents, postal treaties were revised, postal laws were recodified, money-order business was facilitated, free delivery was extended, methods of contracting with railways were improved, and the franking privilege was limited Some reforms which Creswell advocated, such as a postal savings bank and postal telegraph, were adopted later

Cret, Paul Philippe (krā), 1876–1945, American architect, b Lyons, France After studying at the École des Beaux-Arts he came (1903) to the Univ of Pennsylvania as critic of design and professor of architecture From 1907 he practiced architecture and is responsible for such buildings as the Philadelphia Federal Reserve Bank and the Folger Shakespeare Library at Washington, D C , he also designed several war memorials in France on American commissions He was awarded (1938) the gold medal of the American Institute of Architects and was a member of the National Federal Arts Commission

Cretaceous period (krĭtā'shus) [Latin, =chalky], third period of the MESOZOIC ERA of geologic time The Cretaceous period was marked, both in North America and in Europe, by unusually extensive submergences of the continents and by changes both in the earth's surface and in its flora and fauna, which brought the Mesozoic to a close At the beginning of the Lower Cretaceous in North America, the Mexican sea of the late JURASSIC PERIOD spread over Texas, depositing the Trinity sandstone and limestone Retreating at the end of Trinity time, it returned in Fredericksburg time to submerge Texas, Oklahoma, New Mexico, and parts of Arizona, Kansas, and Colorado Reaching its maximum late in Fredericksburg or early in Washita time, it was drained by a general emergence, which brought the Lower Cretaceous to a close Fredericksburg and Washita deposits were chiefly limestone, but some continental sediments (such as sandstone, shale, and conglomerate) mark the late Washita emergence The Comanchean series (Trinity, Fredericksburg, and Washita) reaches a thickness of some 1,500 ft in central Texas, and in Mexico is several times as thick The Comanchean seas were probably separated by a land barrier from contemporaneous seas in the California area, where 26,000 ft of Shastan shales, with sandstone and thin limestone, were laid down as a result of rapid erosion from the recently elevated Sierra Nevada and Klamaths In Montana, Alberta, and British Columbia were formed the Kootenai deposits of sandstone and sandy shale, which contain workable deposits of good coal, along the Atlantic coast was deposited the unconsolidated sandy clay, gravel, and sand of the Potomac series The Upper Cretaceous opened in W North America with the deposition of continental sands (now the Dakota sandstone) over the bottom exposed by the Washita retreat Some of these sands were worked over by the Colorado sea, which, advancing from Mexico, finally extended to the Arctic The eastern border of this, the greatest of North American Mesozoic seas, passed through Texas, Kansas, NW Missouri, Iowa, Minnesota,

SW Ontario, Manitoba, Saskatchewan, and Mackenzie, while the western border crossed Arizona, Utah, E Idaho, W Montana, British Columbia, Yukon, and NE Alaska Branches extended eastward into the Gulf and Atlantic coast regions and southward over Mexico and Yucatan The Colorado deposits are composed chiefly of shales and limestone, but there is chalk in Kansas and South Dakota Slight shifting of the sea was followed by the deposition of Montana shale and sandstone and then by withdrawal of the sea In Laramie time conditions in the West were similar to those of the CARBONIFEROUS PERIOD in other regions swamps and bogs were formed which later became valuable deposits of COAL In the Gulf region the Upper Cretaceous progression is from nonmarine sand and clay, with lignite (Tuscaloosa), to marine sands (Eutaw), chalk or soft limestone (Selma), and continental sand, with clay (Ripley) On the Atlantic coast the late Upper Cretaceous is represented by continental sands, gravel, and clay, with lignite, followed by clays and sands with glauconitic greensands The Pacific Coast Upper Cretaceous (Chico) is marine sandstone and shale, with local conglomerate and coal At the close of the Cretaceous occurred the Laramide revolution—at least two different epochs of mountain building and one of relative quiet In this disturbance the Rockies and the E Andes were first pushed up, and there were extensive flows of lava The Appalachians, which had been leveled almost to base level by erosion, were rejuvenated, and the seas retreated from all parts of the continent The intermittent character of the Laramide disturbance makes difficult the demarcation of the Mesozoic and the succeeding CENOZOIC ERA The Lower Cretaceous opened in NW Europe with the deposition of a continental and fresh-water formation, the Wealden sand and clay, best displayed in England The sea, meanwhile, expanded from the Mediterranean, finally overlaying successive Wealden stages with limestone There was at the same time an extensive sea in N Europe At the close of the Lower Cretaceous, there was probably some recession of the seas In the Upper Cretaceous a great transgression submerged lands which had been emergent since the Paleozoic The striking feature of the European Upper Cretaceous is a great chalk deposit, now exposed in the cliffs of the English Channel In India, the late Upper Cretaceous was marked by an outflow of lava in the Deccan plateau The area covered by igneous rocks dating from this period comprises over 200,000 sq mi and was formerly much larger, having been reduced by erosion Near Bombay the formation is 10,000 ft thick The Lower Cretaceous saw a revolution in the plant life with the sudden appearance of flowering plants (angiosperms), such as the beech, fig, magnolia, and sassafras By the end of the Cretaceous such plants were more numerous than all others, the willow, elm, grape laurel, birch, oak, and maple having made their appearance, as well as grass and the sequoias of California This prepared the way for the dominance of mammals in Cenozoic animal life The marine invertebrates of the Cretaceous included nautiluses, barnacles, lobsters, and crabs, sea urchins and foraminifera were common, ammonites, though plentiful, were increasingly degenerate Reptiles continued their supremacy of the Jurassic New kinds of dinosaurs were Triceratops, Tyrannosaurus, Stegosaurus, Brontosaurus, and Iguanodon Flying reptiles were highly developed, while in the sea there were ichthyosaurs, plesiosaurs, and mosasaurs None of these survived the MESOZOIC Of other reptiles there were crocodiles and turtles, while snakes and lizards made their first appearance Among the mammals, the marsupials and the first placental mammals appeared The climate of the Cretaceous as indicated by fossils was probably varied early in the period and generally mild later

Crete (krēt), Gr *Kríti* (krē'tē), island (3,235 sq mi, pop 438,239), off SE Greece, in the E Mediterranean, c 60 mi from the Greek mainland The largest of the islands of Greece, it extends c 160 mi from west to east and forms the southern limit of the Aegean Sea, the southern part of which is also called the Sea of Crete CANEA is the capital, CANDIA is the largest city The northern coast of Crete is deeply indented, and the interior is largely mountainous, culminating in Mt Ida (8,058 ft) Crete produces olive oil, raisins, wine, carobs, almonds, citrus fruit, and vegetables Sheep and goats are extensively raised, and dairying is an important source of livelihood Mineral resources include iron ore, lignite, and gypsum Crete had one of the world's earliest civilizations, the MINOAN CIVILIZATION, named after King MINOS, the mythical author of Cretan institutions, in the ruined palace at CNOSSUS invaluable finds have been made There are indications that inhabitants of Asia Minor and of Egypt settled at a very early time in parts of Crete The Cretan kingdom reached its greatest power, prosperity, and civilization c.1600 B C Its power collapsed suddenly later, for reasons still obscure Its civilization was interrupted, but Crete flourished after the Dorian Greeks settled on the island in large numbers and established city-states. Among the most powerful of the cities (100 in number, according to Homer) were Cnossus and Cydonia (modern Canea) Though important as a trade center, Crete played no important part in the political history of ancient Greece It became the base of pirates in the 3d cent B C, but was conquered (68 B C–67 B C) by the Romans under Quintus Metellus The Arabs took (A D 826) Crete from the Byzantine emperors, but Nicephorus II reconquered it in 961 As a result of the Fourth Crusade, the island fell to Venice in 1204 After expelling (1212) the Genoese rival colonists, the Venetians set up a new administration, headed by a governor, called duke Under Venetian rule Crete was generally known as Candia, after the duke's residence Insurrections against the Venetians were frequent, and the Cretans were not displeased at changing masters when the Turks conquered (1669) virtually the whole island after a long war Two fortresses remained in Venetian hands until 1715 The Cretan insurrection of 1896–97 led to war (1897) between Greece and Turkey Greece was utterly defeated, but the pressure exerted by the European powers forced (1898) Turkey to evacuate Crete The Cretan national assembly, led by VENIZELOS, declared in favor of union with Greece, but the powers rejected its demand and merely allowed Greece to send a high commissioner (Prince George of Greece and, after 1906, Alexander Zaimis) The Young Turk revolution of 1908, however, enabled the Cretans to proclaim their union with Greece, and in 1909 England, France, Russia, and Italy withdrew their occupation troops Cretan representatives were admitted to the Greek parliament in 1912, and in 1913, as a result of the Balkan Wars, Crete was officially incorporated into Greece The followers of Venizelos controlled Crete during their uprising (1935) against the imminent restoration of the monarchy, but were defeated after some fighting by Gen George Kondylis A new revolt (1938) against the dictatorship of John Metaxas was also suppressed In the Second World War, Crete was used as a British military and naval base late in 1940 The British and Greek forces on the Greek mainland were evacuated to Crete in April, 1941, after their defeat by the Germans They were quickly overwhelmed after the invasion (May, 1941) of the island by the Germans in a large-scale airborne attack, the first of its kind Only about half of the Anglo-Greek forces could be evacuated, but many of those that were left behind continued to wage guerrilla warfare from their mountain hideouts Late in 1944 British ships isolated the German occupation troops, who eventually surrendered to the guerrilla forces See bibliography under MINOAN CIVILIZATION

Crete. 1 Residential village (pop 1,772), NE Ill, SE of Joliet, platted 1849, inc 1880 It is a farm trade center Lincoln Field race track is near by **2** City (pop 3,038), SE Nebr, SW of Lincoln and on the Big Blue, in an agricultural area, platted 1870, inc 1871 Dairy products are made It is the seat of Doane College (coeducational, 1872)

cretinism (krē'tĭnĭzm), condition resulting from lack of thyroid secretion in fetal life or in infancy There is stunted physical and mental development, the cretin being one type of dwarf In some places (e g, parts of Switzerland), lack of iodine in the mother's diet results in cases of cretinism in children It is not common in the United States and when it occurs may be caused by lack of iodine, this type being associated with GOITER, or may result from complete absence of the thyroid gland Treatment consists of regulating the diet of mothers to include sufficient iodine The infant is treated with an extract of the thyroid gland See also FEEBLE-MINDEDNESS

Creus (krē'ŭs), TITAN, father by Eurybia of PALLAS ASTRAEUS, and Perses

Creusa (krōō'sə), in Greek and Roman legend **1** Princess of Corinth JASON, unhappy with his wife, MEDEA, wished to marry Creusa, instead Medea then sent to Creusa a magic wedding gown which burned her to death **2** Daughter of King Erechtheus of Athens The wife of XUTHUS she bore him a son, ACHAEUS She was violated by Apollo and tried unsuccessfully to kill their son, ION Her sons are eponymous heroes of the Greeks **3** Daughter of Priam and wife of Aeneas She died in fleeing from Troy

Creuse (krŭz), department (2,164 sq mi, pop 188,669), central France, on the northern slope of the Auvergne Mts Taking its name from a tributary of the Vienne, it occupies part of the old province of MARCHE Guéret (the capital) and Aubusson are the principal towns

Creusot, Le (lu krŭzō'), city (pop 17,133, 1936 pop 22,304), Saône-et-Loire dept, E central France In a coal-mining region, it is the seat of the large Schneider iron and steel mills and munitions manufactures (founded 1836) The town was severely damaged by the Allies in the Second World War

crevasse (krŭvăs'), large crack in the upper surface of a GLACIER, formed by tension acting upon the brittle ice Transverse crevasses occur where the grade of the glacier bed becomes suddenly steeper, longitudinal crevasses, where the glacier spreads over a wider valley or a plain Marginal crevasses usually point upstream at an angle of about 45° and are due to the strain set up by the central part's moving faster than the sides In the United States, the word *crevasse* is applied to a crack in the bank of a river, especially the Mississippi

Crevaux, Jules Nicolas (zhül' nēkôlä' krŭvō'), 1847–82, French explorer and surgeon During 1877–81 he made four trips into the interior of South America, especially in the regions of the great rivers, where he found Inca relics and was reputed to be the first white man to cross the Tumuc Humac mts His adventures are related in *Voyages dans l'Amérique du Sud* (1883)

Crèvecœur, J Hector St. John (krĕvkûr'), 1735–1813, American author and agriculturist, b France Originally his name was Michel Guillaume Jean de Crèvecœur It is believed that he served under Montcalm in Canada After traveling in the Great Lakes region and the Ohio valley and working as a surveyor in Pennsylvania, he settled (c 1769) on a farm in Orange co, N Y, where he wrote *Letters from an American Farmer* (1782) Other letters found in 1922, were published as *Sketches of Eighteenth Century America* (1925) The two books give outstanding descriptions of American rural life of the period He wrote, over the signature Agricola, agricultural articles for American newspapers He introduced the culture of European crops, notably alfalfa, into America and of the American potato into Normandy As French consul in New York (from 1783) he sought to improve commercial relations between France and the United States He lived in France from 1790 See biography by J P Mitchell (1916)

Creve Coeur (krĕv' kûr'), village (pop 3,545), N central Ill, near Peoria, inc 1921 Near by is Fort Creve Coeur State Park

Crewe, Robert Offley Ashburton Crewe-Milnes, 1st **marquess of** (krōō'-mĭlz'), 1858–1945, British statesman A member of the Liberal party, he was lord lieutenant of Ireland (1892–95), lord president of the council (1905–8, 1915–16), lord privy seal (1908, 1912–15), secretary of state for the colonies (1908–10), secretary of state for India (1910–15), president of the Board of Education (1916), British ambassador to France (1922–28), and leader of the Liberal party in the House of Lords until his resignation in Dec, 1944

Crewe (krōō), municipal borough (1931 pop 46,069, 1947 estimated pop 51 810), Cheshire, England It is an important railway junction with large locomotive and car works

Crewe, railroad town (pop 2,048), S Va, SW of Richmond, inc 1888

cribbage (krĭb'ĭj), card game played by two persons with a deck of 52 cards and a scoring device known as a cribbage board The game was probably first played in England in the 17th cent For the rules of cribbage, see R L Frey, ed, *The New Complete Hoyle* (1947)

Crichton, James (krī'tun), 1560?–1582, Scottish adventurer and scholar, called the Admirable Crichton, M A Univ. of St Andrews, 1575 He spent some time in France, possibly in military service In 1579 he was in Italy, where he attracted great attention by his scholarly accomplishments and personal charm Reputedly he spoke 12 languages and showed amazing erudition and powers of memory in public disputations He entered the service of a Mantuan nobleman as tutor to his son and was slain by his charge in a street brawl Crichton is of little scholarly or historical importance His fame is due to the extravagant praise given him by Aldus Manutius and by his 17th-century biographer, Sir Thomas Urquhart The play *The Admirable Crichton* (1903) by James M Barrie has a butler as hero and has nothing to do with the historical James Crichton See Douglas Crichton, *James Crichton of Eliock* (1911).

cricket, insect of the order Orthoptera related to the grasshopper and the katydid The typical species have long antennae and powerful hind legs Some are winged, others wingless They are often destructive to vegetation Some also eat insects Usually they are nocturnal The males produce the chirping by elevating the front wings and rubbing the hardened portion, or scraper, of one wing against the ridged, filelike region of the other wing, causing vibration The rate of chirping and the pitch vary with the temperature of the air Observers have worked out formulas for calculating temperature from the number of chirps per minute Included in the family of true crickets are the field cricket, a black species with brown wings, which is common in the United States and the northern half of South America the tree crickets, of which a white species (the snowy tree or temperature cricket), a pale green species, and a dark species are common in the Americas, and the Old World house cricket or "cricket on the hearth," now established in the New World The mole cricket of a related family is a burrowing insect The sand, Mormon, and cave or camel crickets are really grasshoppers In parts of the Old World crickets are caged like songbirds Cricket fighting is popular in China

cricket, the national sport of England. It is played by two opposing teams of 11 men each on a level, closely cut, green turf preferably measuring about 525 ft by about 550 ft. Two wickets are placed 66 ft apart near the middle of the field At each wicket, which is made of three wooden stumps 27 in. high and has two small wooden crosspieces known as bails, stands a batsman If the bowler of the opposing team bowls down the bails of the wicket opposite him, the batsman defending that wicket is retired In bowling the hard, leather-covered ball, the bowler may not bend his arm, and the ball usually approaches the batsman on one bounce When the bowler has made a certain number of throws (usually 6 or 8) to the batsman at one wicket, an umpire (there is one at each wicket) calls "over," and an alternate bowler begins bowling to the batsman at the other wicket The players in the field shift their positions according to which batsman is batting For his part, the batsman tries to hit the ball with his cane-handled, paddle-shaped bat far enough so that his partner and he may run to exchange places, thereby scoring a run If the ball is hit for a long distance (in any direction, since there are no foul lines in cricket), several exchanges or runs may be made However, if the opposing team recovers the ball in time to knock down the bails of a wicket before the batsman reaches it, he is out A batsman is also retired if the ball he hits is caught on the fly (as in baseball) and may be retired for several other, more technical reasons Each team has two innings each, in an inning all the men of a team bat twice in fixed order, it may take several days to complete one game The team scoring the most runs wins Except in case of serious injury, no substitutions are allowed Cricket was played in medieval England, and in 1774 the London Cricket Club drew up the first authoritative set of rules In 1787 the Marylebone Cricket Club, still the governing body of the game, was founded. Annual matches between English and Australian teams, between Eton and Harrow, and between Oxford and Cambridge are played at Thomas Lord's cricket field in London and have become national events Cricket is popular throughout the British Commonwealth of Nations In the United States the game was supplanted in popular favor by baseball, which was derived in part from cricket, and now cricket is most often played in the United States only in centers of recent British immigration, usually in the northeast William G Grace, John B Hobbs, Walter R Hammond, Donald G Bradman (Australia), and J Barton King (United States) were famous cricket players See C B Fry, *Cricket* (1930), D G Bradman, *How to Play Cricket* (1935); John Arlott, *Concerning Cricket* (1949)

Crieff (krēf), burgh (pop 5,543), Perthshire, Scotland, on the north bank of the Earn It is a health resort with a large hydropathic establishment Drummond Castle (1491) with its famous gardens and the market crosses are noteworthy

Crile, George Washington (krīl), 1864–1943, American surgeon, b Cleohoton co, Ohio, M D Univ of Wooster medical school (later merged with Western Reserve Univ), 1887 He taught at the Univ of Wooster (1889–1900) and at Western Reserve Univ (1900–1924) and was a founder and director (from 1921) of the Cleveland Clinic Foundation. He worked on hemorrhage and transfusion, surgery of the thyroid, and shock, developing the technique known as anociassociation to prevent surgical shock Among his many works are *Diseases Peculiar to Civilized Man* (1934), *Phenomena of Life* (1936), and *Intelligence, Power, and Personality* (1941)

Crillon, Louis des Balbes de Berton de (lwē' dā bälb' du bĕrtŏ' dŭ krēyŏ'), c 1541–1615, French general He fought under François de Guise in Italy and in the first wars against the Huguenots (1562–70) and under Don John of Austria in his Turkish campaign. Crillon distinguished himself at Lepanto (1571) He fought for Henry III against the League and was one of the best captains of Henry IV, under whom he took part in the battle of Ivry and the siege of Paris

crime, in its broadest sense, a violation of social rules and an act that is held to be detrimental to the group Since cultures vary in organization and values, what is considered criminal may also vary, although such types of behavior as parricide, treason, and violation of certain sexual taboos tend to be uniformly condemned In modern societies a crime is a violation of the law (see CRIMINAL LAW) Legally, an act to be criminal must be consciously committed by a sane adult, and punishment is meted out by the government So far, there has been no adequate legal definition of sanity, however Determination of amount of crime is difficult because of variations in definition and in method of recording it In the last few decades there has been a general rise in recorded crime in Western countries This is partly a result of the enormous multiplication of regulatory laws necessitated by the development of a complex industrial society Offenses against property (burglary and theft) have risen in the United States and in other urbanized countries Crimes of violence (murder, rape, aggravated assault) have decreased. In the United States organized crime (see GANG) became significant in the early 20th cent Crime rates tend to fluctuate with social trends, rising in times of depression, after wars, and in other periods of social disorganization Cities have a much higher proportion of serious property offenses than do rural areas, but crimes of violence tend to occur in equal or greater proportion in the country Within cities, areas in which large groups of underprivileged persons are crowded have the highest crime rates This applies especially to JUVENILE DELINQUENCY The fact that law enforcement is more strict in poor neighborhoods and among minority groups than among middle-class groups accounts for part of the difference in criminality A large number of criminals are characterized by recidivism (repeated criminality) The causes of crime are complex. Such mental traits as feeble-mindedness may account for a small number of criminals The theory that hereditary physical and psychological traits characterize and determine criminals, as well as the idea that criminals can be detected by their physical structure (shape of head, ear lobes, and the like), has been largely disproved Sociologists claim that many offenders are born into an environment (such as extreme poverty) which must automatically force the individual into a pattern of criminality, while others are caught between immediate and general culture conflicts Environmental factors are also said often to determine the situation in which the potential criminal becomes an actual one and the direction which the aggressive behavior takes The relative values and variance of what is considered crime from one group to another leads to the anthropological point of view, which considers the criminal as a deviate from his cultural pattern The more differentiated the society, the more laws are needed to sustain it, and the more laws, the greater the number of offenders Likewise crime is not necessarily antisocial behavior, nor is antisocial behavior always considered a crime Deeper than these factors lie the emotional disturbances from which a majority of criminals suffer Psychiatry considers all crime to result from emotional disorders which usually stem from maladjustment in childhood to the family group The criminal symbolically enacts a repressed, unconscious wish or desire, and such crimes as pyromania and kleptomania are specific expressions of a personality disorder Therefore, psychiatrists hold that crime prevention and the cure of criminals is a matter of psychiatric treatment rather than coercion Although detection and apprehension of criminals are undertaken by the police and punishment is determined by the court, there has been a gradual shift in emphasis in modern countries from punishment to rehabilitation and prevention Increased use of probation and parole, psychiatric treatment, training in prison, and betterment of general social conditions have become accepted in the theory of criminology, though they have not been put into universal practice See Clifford Shaw, *Delinquency Areas* (1929), Sheldon Glueck and Eleanor Glueck, *Five Hundred Criminal Careers* (1930), *Later Criminal Careers* (1937), and *Criminal Careers in Retrospect* (1943), Franz Alexander and William Healy, *Roots of Crime* (1935), Thorsten Sellin, *Culture Conflict and Crime* (1938), David Abrahamsen, *Crime and the Human Mind* (1944), E H Sutherland, *Principles of Criminology* (4th ed., 1947)

Crimea (krīmē'ə), Rus *Krym* or *Krim* (both krĭm), peninsula, S European RSFSR, on the north shore of the Black Sea, connected with the mainland by the Perekop Isthmus It forms an oblast (c 10,000 sq mi, pop c 1,050,000), with Simferopol its capital Other cities are Sevastopol, Kerch, Feodosiya, and Yevpatoriya The eastern tip of the Crimea is the Kerch peninsula, separated from the Taman peninsula, a projection of the mainland, by the KERCH STRAIT, which connects the Black Sea with the Sea of Azov The northern (and larger) part of the Crimea is a dry steppe, drained by intermittent streams, of which the Salgir is the largest, it produces fine wheat and cotton In the south rise the Crimean or Yaila Mts, which reach 5,062 ft in the Roman-Kosh Protected by their steep slopes, the Black Sea littoral, called the Russian Riviera, has a subtropical climate, it produces fruit, wine, and tobacco and has many beautiful resorts, notably Yalta and Sochi The KERCH peninsula has mineral wealth and heavy industries Food processing is the major industry in the rest of the Crimea The earliest known inhabitants were Cimmerians, followed (8th cent B C) by Scythians Ionian Greeks colonized (7th cent B C) the coast, and in 438 B.C most of the peninsula came under the rule of the Spartocids, a Thracian dynasty of Greek culture, who after 304 B C took the title kings of the Bosporus (i e, the Cimmerian Bosporus, now the Kerch Strait). The region was a major source of wheat supply for ancient Greece MITHRIDATES VI, king of Pontus, seized (c 110 B C) the peninsula, which in the 1st cent. A D became a Roman protectorate Its Greek name was Latinized into Chersonesus Taurica. It was overrun by the Ostrogoths (3d cent.), by the Huns (4th cent.), by the Khazars (7th–11th cent.), by the Cumans (11th–13th cent.), and by the Mongols under Batu Khan (1239). Meanwhile the southern coastline was mostly under Byzantine control from the 6th to the 12th cent. In the 13th cent Genoa established prosperous commercial colonies in the Crimea, notably at FEODOSIYA. These were captured (1475) by the Crimean TATARS, whose khan became a vassal of the Ottoman Empire in 1478 The khans of the Crimea, or Little Tartary, residing at STARY KRIM and later at BAKHCHISARAI, were powerful rulers whose sway extended over S Russia from the Kuban to Bessarabia They were the scourge of Russia and Poland, although their alliance was often sought by these and other powers In 1572 they burned Moscow The Crimea was first invaded by the Russians in 1736 CATHERINE II, in 1774, forced Turkey to recognize the independence of the khanate from the Dniester to the Terek, and in 1783 she annexed it outright The Treaty of Jassy (1792) confirmed it in Russian possession The province of Taurida, as the Crimea was then called, was settled by Russians, Ukrainians, Bulgarians, Germans, Armenians, and Greeks, while many Tatars, who are Moslems and Turkish-speaking, emigrated to Turkey The western part of the Crimea was the scene (1854–56) of the Crimean War. In 1918 German forces occupied the Crimea, which until 1920 was the refuge of the White Army under Baron Piotr Wrangel Again, in 1941–42, the Crimea fell to the German invaders after some of the most devastating battles of the Second World War (see SEVASTOPOL) It was reconquered by the Russians in 1944 In 1921 the Crimea had been made an autonomous Soviet republic, however, the disloyalty of the Tatars during the war caused the Russian government to settle them "farther east" and to dissolve the republic The cities and resorts of the Crimea suffered heavily during the war.

Crimean War (krīmē'ən) The general causes of this war between Russia on the one hand and Turkey, England, France, and Sardinia on the other were inherent in the unsolved EASTERN QUESTION The more immediate occasion was a dispute between Russia and France over the Palestinian holy places Challenging the claim of Russia to guardianship of the holy places, France in 1852 secured from Sultan Abdul-l-Mejid certain privileges for the Latin churches Russian counterdemands were turned down (1853) by the Turkish government, largely under the influence of the English ambassador, STRATFORD DE REDCLIFFE In June, 1853, Russia retorted by occupying the Turkish vassal states of Moldavia and Walachia, and in October, after futile negotiations, Turkey declared war In March, 1854, England and France, having already dispatched fleets to the Black Sea, declared war on Russia, Sardinia followed suit in Jan, 1855 Austria remained neutral, but by threatening to enter the war on the Turkish side forced Russia to evacuate Moldavia and Walachia, which were occupied (Aug, 1854) by Austrian troops In Sept, 1854, allied troops landed in the Crimea, with the object of capturing SEVASTOPOL The Russian fortress, defended by TOTLEBEN, resisted heroically until Sept, 1855 Allied commanders were Lord RAGLAN for the British and General Saint-Arnaud, succeeded by General Canrobert, for the French Military operations, which were marked on both sides by great stubbornness, gallantry, and disregard for casualties, remained localized Famous episodes were the battles of BALAKLAVA and of INKERMAN (1854) and the allied capture (1855) of MALAKHOV and Redan, which preceded the fall of Sevastopol On the Asiatic front the Russians gained advantages and occupied Kars. The accession (1855) of Tsar Alexander II and the capture of Sevastopol led to peace negotiations which resulted (Feb, 1855) in the Treaty of Paris (see PARIS, CONGRESS OF). The Crimean War ended the dominant role of Russia in SE Europe, the cooling of Austro-Russian relations was an important factor in subsequent European history. The scandalous condition of the troops and the dead and wounded, depicted by the first war correspondents, prompted the work of Florence NIGHTINGALE, which was perhaps the most positive result of the war See E B Hamley, *War in the Crimea* (1890)

criminal, see CRIME

criminal law, rules governing the definition and trial of crimes This article treats only the legal aspects of the subject, for a discussion of sociological and psychological factors involved in criminal behavior, see CRIME Legal wrongs are either civil or criminal A civil wrong is the violation of a personal right, and vindication must be pursued by the injured party himself (see TORT and CONTRACT). A crime, on the other hand, while it may also cause personal injury subject to redress, is deemed detrimental to the state, which seeks out and punishes the offender. In legal usage, then, acts repugnant to morality or custom which are not punishable by the state do not constitute crimes, and the criminal law cannot be said to operate in regard to acts for which the retribution is private, as in VENDETTA or

composition. The British criminal law did not take clear form until after the Norman Conquest. In place of the Anglo-Saxon system of composition for wrongs and of designating a serious malefactor an OUTLAW, there grew up the king's peace and the appeal of felony. In its origin the king's peace was no more than the decorous, obedient behavior which the king, like any feudal lord, could exact in his domain. It was soon extended to protect from violence and contumely the officers who carried out the royal functions, whether at the capital or on the roads and in the towns, which were under royal protection. With the consolidation of royal power and the resultant subordination of the feudal lords, the king's peace was extended to the whole English realm, and the courts of the feudal manors were substantially divested of their criminal jurisdiction. The appeal of felony (see FELONY) was a private proceeding initiated by a wronged person; from the offenses which were recognized as felonious many specific crimes were derived The English law of crimes belonged to the common law for the most part, because most offenses were established by judicial precedent and comparatively few had their source in statutes Both the common law of crimes and the major English criminal statutes were carried to America by settlers, and after the American Revolution they were formally adopted by the states In time, however, the occasional uncertainty and confusion of common law led many states to substitute criminal codes Usually, however, the code provisions are interpreted in the light of precedents in common law In the United States state systems of criminal law and a Federal system coexist No court will punish infractions of the criminal law of another jurisdiction, but by means of EXTRADITION a fugitive from justice may be delivered to the competent authorities Federal criminal law deals with all subjects in the territories of the United States and with cases regarding American ships at sea, otherwise the Federal government has criminal authority only in fields where the U S Constitution authorizes it to legislate (e g , in regard to the post-office system and the national armed forces) The states are free to enact any criminal laws which they deem necessary, subject to the provisions of the FOURTEENTH AMENDMENT of the Constitution Procedural aspects of criminal law are also affected by the U.S. Constitution and by state constitutions All crimes, whether common law or statutory, must be sufficiently definite to give due warning There may be no ex post facto laws, i e , statutes making acts committed prior to their enactment into crimes Bills of attaindер—legislative findings of criminal guilt without a trial—are also prohibited The procedure in criminal cases is substantially the same throughout the United States The person suspected of crime is taken into custody by a police officer, usually by service of a WARRANT of arrest The case is first presented to a grand jury, which draws up an INDICTMENT if there is sufficient evidence to justify trial, otherwise it discharges the accused While action is pending, the party charged may be released on BAIL Trial is by JURY or before a judge alone The government presents its case (i e , attempts to prove the allegations of the indictment) through the public prosecutor, usually called the district attorney, while the accused is represented by counsel chosen by himself or appointed by the court The legal presumption of innocence puts the burden of proving guilt on the prosecution, unless, of course, the defendant pleads guilty to the charge Special rules restricting the introduction of EVIDENCE in criminal trials further protect the defendant If the accused is adjudged innocent, he is discharged, if he is found guilty, the judge pronounces SENTENCE upon him (For types of criminal penalties, see CAPITAL PUNISHMENT, CORPORAL PUNISHMENT; PRISON) The procedure outlined above is followed in the case of a felony. When the charge is merely one of MISDEMEANOR or some minor legal offense (e g , a traffic violation), the proceedings are far more summary, because the punishment (a fine or a short term of imprisonment) is of relatively little consequence In addition to the regular national and local systems of criminal law there are special systems of MILITARY LAW applying to members of the armed forces and of MARTIAL LAW applying to a territory under military control The criminal categories of INTERNATIONAL LAW are PIRACY and WAR CRIMES. See J F Stephen, *A History of the Criminal Law of England* (3 vols , 1883); Roscoe Pound, *Criminal Justice in America* (1930)

crinoid (krī'noid, krĭ'–), marine animal, an echinoderm of the class Crinoidea, related to the starfish and sea urchin and represented by the sea lily and the feather star. The body usually consists of a central disk with plumelike arms. Many forms have stalks and are attached during at least part of their lives. They are found in the deep sea and in tropical waters. Fossilized forms, especially from the Paleozoic era, are abundant. Many limestone beds are composed chiefly of fossil forms

crinoline (krĭ'nŭlĭn, –lēn), a stiffening fabric, made originally of horsehair or horsehair mixed with other fibers and used to distend the FARTHINGALES and breeches of the 16th and 17th cent. The term was also used interchangeably with hoop skirt Later, crinoline was used for facing women's skirts The modern crinoline is made of coarsely woven linen or cotton sized with glue

Cripple Creek, city (pop. 2,358; alt 9,375 ft), co. seat of Teller co , central Colo , SW of Colorado Springs, inc. 1892 The discovery of gold in 1891 on a cattle ranch created one of the richest camps of a famous gold-producing area, with a turbulent town life. In 1901 the district had an estimated population of c 50,000 Although gold production declined after that year, mining has continued; when a drainage tunnel was opened (1941), some flooded mines became productive and new veins were disclosed. Violence marked miners' strikes here in 1893 and 1904 Few landmarks of the old camp remain. See H J Newton, *Yellow Gold of Cripple Creek* (1928)

Cripps, Sir Stafford, 1889–, British statesman, son of Lord Parmoor and nephew of Beatrice Webb. With varied knowledge from his training as a chemist at University College, London, his learning in law, and his experience as assistant superintendent of a munitions factory in the First World War, he was brilliantly successful as a patent and corporation lawyer He was knighted in 1930 A far-left Labour party leader, he was solicitor general in the Labour government in 1930–31 but was thrown out of the party for urging a united front with the Communists in 1939 Winston Churchill, when he became prime minister, appointed (1940) Cripps ambassador to the USSR, made him (1942) lord privy seal and leader in Commons, and in the same year sent him to India with a self-government plan This, though rejected by the Indian leaders, did something to create good will towards Great Britain He was shortly thereafter made minister of aircraft production and served from Nov , 1942, to May, 1945 He was in 1945 readmitted to the Labour party and appointed president of the Board of Trade, initiating Britain's austerity program of recovery By 1947 Cripps was in virtual control of the economy of Great Britain through the new post (minister of economic affairs) created for him by Prime Minister Clement Attlee, and later in the same year he added the post of chancellor of the exchequer to his portfolio It was at this time that he went on record against devaluation of the pound as a solution to Britain's dollar shortage—a position which he was to reverse late in 1949 when the country's gold reserves were dwindling too rapidly As nationalization of industry proceeded in Great Britain, Cripps sought to balance the budget by every means, including rationing at home, increased exports, loans from the dominions and the United States, and trade agreements He retained his post after the elections of Feb , 1950 See biographies by Patricia Strauss (1942) and Eric Estorick (1949)

Crisa (krī'sə), ancient city of Greece, in Phocis, on the Gulf of Crisa When CIRRHA was destroyed (c 590 B C), the people moved to Crisa, but Crisa itself was destroyed in the sacred wars

Crisana-Maramures (krĭshä'nä–märämōō'rĭsh), historical province (9,241 sq mi , pop 1,391,672), NW Rumania, between Transylvania and Hungary Arad, Oradea, and Satu-Mare are the chief cities The region was part of Hungary proper until 1919, and there remains a Hungarian minority of 365,745 The region occupies the easternmost part of the Hungarian plain and the western foothills of the Transylvanian Alps It is largely agricultural

Crisfield, city (pop 3,908), Eastern Shore Md , on Tangier Sound, an arm of Chesapeake Bay It is a port of entry and processes and ships sea food.

crisis, economic, a period of depression in commerce, finance, and industry, characterized by falling prices, restriction of credit, attempts to liquidate, numerous bankruptcies, and possible long-term consequences The short periods in which fear takes hold of the minds of businessmen are more properly called PANICS and do not necessarily occur in every crisis, but lack of business confidence is always present Crises usually mark the downward swing in the curve of the business cycle and are caused by a disequilibrium between the quantity of goods produced and the consumers' ability to buy. Rise in production costs, lessened demand, or both factors force a curtailment of production, the dismissal of employees, or a wage cut. Raw-material orders are canceled, whereupon the crisis spreads to the industries which supply them Unemployment and lowered wages further decrease purchasing power and make the crisis more acute Recovery is slow, depending on the return of confidence, depletion of the stock of goods, or, as recently, upon remedial action by governments. Crises now tend to be world-wide, because of the international scope of trade and credit Loss of confidence by investors, overexpansion of commerce or industry, bad harvests, a stock-market crash, the failure of a great banking or industrial firm, or war may be among the precipitating factors In antiquity and even up to the 18th cent , crises had chiefly noneconomic causes, such as crop failures. From c 1700 to 1825 crises were in the main speculative or commercial, since 1825 they have been basically industrial The existence of reserve banks such as the Federal Reserve System of the United States, created after the panic of 1907, has hindered at least financial and commercial crises Such banks participate in the money market, regulate the discount rate, and hence help stabilize economic conditions No such central reserve bank failed in the crisis of 1929 and the following years Cartels, such as became common in Germany after the crisis of 1890, and trusts may allay crises by price regulation and by orders for materials spread over a term of years The economic crises of the 20th cent saw the entrance of governments into large areas of the economy which had previously been in private hands See J. M Clark, *Strategic Factors in Business Cycles* (1934), Edwin Frickey, *Economic Fluctuations in the United States, 1866–1914* (1942), Dixon Wechter, *The Age of the Great Depression, 1929–1941* (1948)

Crispi, Francesco (franchā'skō krĕ'spē), b 1818 or 1819, d 1901, Italian statesman, b Sicily After participation in the Sicilian revolt of 1848, he went into exile to Piedmont, to France, and to England, where he befriended Mazzini After his return to Italy, Crispi helped Garibaldi to take Sicily A deputy to the Italian parliament from 1861, he was at first a leftist republican, but later became an outspoken monarchist He was minister of the interior (1877–78) and premier (1887–91) Through his personal relations with Bismarck, friendship with Germany was furthered, while Italian relations with France deteriorated He was much interested in colonial policies, Eritrea was organized under him Crispi was again premier from 1893 to 1896, when the victory of the Ethiopians over the Italians at Aduwa forced him from office.

Crispin and Crispinian, Saints, 3d cent , brothers, missionaries in Gaul martyred under Diocletian Shoemakers by trade, they are patrons of leather workers Feast Oct 25

Crispus [Gr , =curled], prominent Corinthian Jew converted by St Paul Acts 18 8, 1 Cor 1 14

Cristobal (krĭstō'bəl), Span *Cristóbal* (krēstō'bäl) [Christopher], town (pop 826), Panama Canal Zone, near the Atlantic end of the canal. Virtually a suburb of Colón, Cristobal is the American residential quarter Cristobal dist comprises the Atlantic half of the zone

Cristus, Petrus · see CHRISTUS, PETRUS

Critias (krĭ'shēəs,–tēəs) d 404 or 403 B C , Athenian political leader and writer He was an aristocrat and had early training in philosophy with Socrates and wrote poems and tragedies He is best remembered, however, as one of the Thirty Tyrants imposed on Athens by the Spartans. He was soon at odds with Theramenes, who was put to death Critias earned a name for rapacity and bloodthirstiness, although Plato seems to have admired him When THRASYBULUS led his force against the Thirty, Critias was killed in battle.

criticism, judging or evaluating works of art or literature Matthew Arnold's definition of it as "a disinterested endeavor to learn and propagate the best that is known and thought in the world" applies to literary criticism primarily, but there is, as well, dramatic criticism, music criticism, and art criticism In biblical criticism, the "lower" criticism seeks to determine the original text of a document, whereas the "higher" criticism seeks evidence as to its authorship and date of composition for their bearing on its meaning Critics since the days of Aristotle have had canons, the rules according to which a thing was called good or bad, and those canons have changed with the tastes of the periods Yet some masters have been acknowledged by many schools of thought to be great, as are Homer and the psalmists Notable in the history of criticism have been Aristotle, Horace, Quintilian, Boileau-Despréaux, Alexander Pope, Samuel Johnson, Lessing, Sainte-Beuve, F A Wolf, Matthew Arnold, Hazlitt, Ruskin, Walter Pater, Santsbury, Taine, Samuel Taylor Coleridge, Poe, Brunetière, Benedetto Croce, Remy de Gourmont, Virginia Woolf, W C Brownell, Vernon L Parrington, George E Woodberry, Irving Babbitt, Paul Elmer More, I. A Richards, T S Eliot, and Roger Fry (in art) In the early 20th cent , established neo-humanism was rivaled by the economic and sociological theories of interpretation The pervading interest in psychology was used by most critics whatever their school Impressionist critics laid stress especially on semantics See C M Gayley and F. N Scott, *Methods and Materials of Literary Criticism* (1899), W C. Brownell, *Criticism* (1914) and *Standards* (1917), I A Richards, *Principles of Literary Criticism* (1925), Norman Foerster, *Toward Standards* (1930), Bernard Smith, *Forces in American Criticism* (1939); Edmund Wilson, *The Wound and the Bow* (1941), J C. Ransom, *The New Criticism* (1941).

Critius (krĭ'shus) and **Nesiotes** (nēshō'tēz), 5th cent B C , Greek sculptors, in the time of the Persian Wars They made statues of the Tyrannicides, Harmodius and Aristogiton, to replace a group by Antenor taken from Athens by Xerxes and later

returned Critius, probably a pupil of Antenor, established a school of sculpture at Athens

Crittenden, Eugene Casson (krĭ'tundun), 1880-, American physicist, b Oswayo, Pa, grad Cornell, 1905 Long associated with the National Bureau of Standards, he was physicist (from 1909), chief of the electrical division (1921-46), assistant director (1933-46), and associate director (from 1946) He is an authority on the measurement and light

Crittenden, George Bibb, 1812-80, Confederate general, b Russellville, Ky, grad West Point, 1832, son of John J Crittenden and brother of Thomas L Crittenden Upon the outbreak of the Civil War, he left the U S army to become a Confederate brigadier general At MILL SPRINGS (Jan, 1862), he was badly defeated and resigned, but he reenlisted and thereafter served without rank for the rest of the war

Crittenden, John Jordan, 1787-1863, American statesman, b Woodford co, Ky After completing his law studies at the College of William and Mary, he began (1807) to practice in Kentucky He served in the War of 1812 and was a member of the Kentucky legislature from 1811 to 1817, when he entered the U S Senate Resigning in 1819, Crittenden returned to Kentucky There he was U S district attorney (1827-29), speaker of the state legislature (1829-32), and secretary of state (1834) After a full term in the Senate (1835-41), he served as Attorney General under Presidents William H Harrison and John Tyler from March to Sept, 1841, when all the cabinet except Webster resigned Crittenden was appointed (1842) and subsequently elected (1843) to fill the senatorial vacancy caused by the resignation of his friend Henry Clay, whose policies he followed He was governor of Kentucky, 1848-50, and was again Attorney General, 1850-53, under Millard Fillmore During his last term in the Senate (1855-61), Crittenden was foremost in attempting to conciliate North and South In the Crittenden Compromise, he proposed to settle the slavery issue through constitutional amendments, the most important providing for the restoration of the Missouri Compromise line His plan was defeated When the Civil War broke out, Kentucky adopted the neutrality policy he advocated He was chairman of the Border State Convention (May, 1861), which failed to secure peace Elected to the House of Representatives (June), Crittenden introduced a series of resolutions that defined the preservation of the Union as the sole purpose of the war He opposed the military regime in Kentucky and the Emancipation Proclamation, among other acts of the administration, on the ground that they exceeded that purpose His sons, George B Crittenden and Thomas L Crittenden, fought on opposing sides in the war See biography by his daughter, Ann Mary Coleman (1873)

Crittenden, Thomas Leonidas, 1819-93, Union general in the Civil War, b Russellville, Ky, son of John J Crittenden and brother of George B Crittenden He served in the Mexican War and was U S consul at Liverpool, 1849-53 A major general in the Kentucky militia as the Civil War began, Crittenden became a Union brigadier general (Sept, 1861) and was promoted major general (July, 1862) for his service at Shiloh He commanded under Rosecrans at Murfreesboro and in the CHATTANOOGA CAMPAIGN After being exonerated for the rout of his corps at Chickamauga, he served for a time in the Army of the Potomac Crittenden resigned his commission in Dec, 1864 but, reentering the army in 1867, served until 1881

Crittenden, Thomas Theodore, 1832-1909, governor of Missouri (1881-85), b Shelby co, Ky, grad Centre College, 1855, nephew of John Jordan Crittenden He moved to Missouri in 1857 and became a successful lawyer. In the Civil War he served (1862-65) as lieutenant colonel of a Missouri cavalry regiment in the fighting in Missouri and Arkansas He was state attorney general for a brief period after the war and served in the U S House of Representatives (1874-75, 1877-79) As governor Crittenden brought an end to outlawry in the state, especially by breaking up the Jesse JAMES gang In President Grover Cleveland's second term (1893-97) he was consul general in Mexico city. See *The Crittenden Memoirs* (compiled by H H Crittenden, 1936)

Crittenden Compromise. see CRITTENDEN, JOHN J

Crivelli, Carlo (krēvĕl'lē), b c 1430, d after 1493, Venetian painter He worked chiefly in the Marches His paintings, executed always in tempera, include the *Virgin and Child*, an altarpiece in the Ascoli cathedral, the great altarpiece, in 13 parts, painted for San Domenico, Ascoli (now in the National Gall, London), and *The Coronation of the Virgin* (Milan) Examples in the United States include *St George on Horseback* (Gardner Coll, Boston), *Pietà* (Mus. of Fine Arts, Boston), *St George*, *St Dominic*, and *Pietà* (Metropolitan Mus.), and *St Francis*, *St Nicholas*, and *Madonna and Child* (National Gall of Art, Washington, D C).

Crna Gora, Yugoslavia see MONTENEGRO.

Croaghpatrick (krō'ăpă'trĭk, krō'nkh-), mountain, 2,510 ft high, Co Mayo, Ireland, S of Clew Bay Legend connects it with St Patrick, and its summit has long been a place of pilgrimage

Croatan (krō"ătăn') When John White, governor of the colony, returned to ROANOKE ISLAND off North Carolina in 1591, he found the colonists gone and the unexplained letters CROATOAN carved on a tree Some have claimed that the word indicated that members of the "lost colony" had joined the Indians and that the coastal Croatan Indians were descended from them The name, in the form Croatan, is popular in the region and is perhaps best known in the name of Croatan Sound, N C

Croatia (krōā'shə), Croatian *Hrvatska*, autonomous republic (c 20,500 sq mi, pop 3,749,039), NW Yugoslavia It includes Croatia proper, SLAVONIA, DALMATIA, and most of ISTRIA ZAGREB is the capital, other important cities are FIUME, OSIJEK, SPLIT, and ZARA The western part lies in the DINARIC ALPS, the eastern part, drained by the Sava and Drava rivers, is mostly flat and agricultural A part of the Roman province of Pannonia, Croatia was settled (7th cent) by the Slavic Croats, who in the 9th cent accepted Christianity The fact that they accepted Roman Catholicism has ever since set the Croats apart from their neighbors, the Serbs, who also constitute a large minority within Croatia A kingdom from the 10th cent, Croatia conquered surrounding districts, chief among these was Dalmatia, which, chronically contested with Venice, had its own history The dynasty became extinct, and in 1091 King LADISLAUS I of Hungary conquered Croatia, in 1102 his successor was crowned king of Croatia In personal union with Hungary, Croatia retained its own diet and was governed by a native ban From the battle of Mohacs (1526) until the Treaty of Karlowitz (1699), most of Croatia was under Turkish rule From 1809 to 1813 it was part of Napoleon's Illyrian Provs Although in 1848 Croatia under JELLACHICH sided against the Hungarian revolutionists, its autonomy was abolished in 1849 In 1868, however, a compromise was reached, united with Slavonia, Croatia became an autonomous Hungarian crownland governed by a ban United (1918) with Serbia to form the kingdom of the Serbs, Croats, and Slovenes (see YUGOSLAVIA), Croatia became increasingly restless in its demands for greater autonomy Agitation, which resulted (1928) in the assassination of the Croatian leader, Stefan RADICH, was partially suppressed when King ALEXANDER established his dictatorship (1929) Encouraged by Hungary and Italy, a Croat nationalist terrorist organization, the Ustachi, was organized The Ustachi eventually procured the assassination of Alexander Legal opposition was represented by the Croatian Peasant party led by Vladimir Machek In 1939 Croatia was belatedly granted autonomous rights When the Germans invaded Yugoslavia in 1941 the Ustachi seized the power and declared Croatian independence under the dictatorship of their leader, Ante Pavelich Shortly afterward Aimone, duke of Spoleto, a prince of the royal Italian family, was made nominal king of Croatia, which came under the military control of Italy while the Ustachi continued their sadistic excesses Croatia declared war on the United States in 1941 In 1943 Pavelich made Aimone renounce his throne and placed Croatia under German control Meanwhile, a large part of the population was actively fighting in the Yugoslav "underground" forces After the Allied victory, the new Yugoslav constitution (1946) made Croatia one of the six People's Republics of Yugoslavia

Croce, Benedetto (bānādĕ'tō krō'chā), 1866-, Italian philosopher, historian, and critic He has lived mostly in Naples, devoting himself entirely to studying and writing He founded and edited (1903-44) *Critica*, a review of literature, history, and philosophy, which in 1944 became *Quaderni della critica* Croce was made a senator in 1910 and was minister of education from 1920 to 1921 A staunch opponent of Fascism, he lived in retirement until 1943, when he became a leader of the Liberal party Croce's system of philosophy is related to the idealistic school in that the spirit, monistic in manifestation, constitutes the only reality The general title of the work presenting his system is *Philosophy of the Spirit* (1902-17, Eng tr, 1909-21), which is divided into four parts, *Aesthetic as Science of Expression and General Linguistic*, *Logic as the Science of Pure Concept*, *Philosophy of the Practical*, and *History Its Theory and Practice* Among other works is *A History of Italy, 1871-1915* (1927, Eng tr, 1929) See his essays, *My Philosophy* (Eng tr, 1949)

crochet work (krōshā'), form of knitting done with a hook, by means of which loops of thread or yarn are drawn through other, preceding loops Crochet stitches are all based on the chain or single crochet, i e, a single loop In double crochet the thread is thrown once about the hook before the loop is drawn All other stitches and patterns are merely varying combinations of the single or double loop, The art finds its highest expression in Irish crochet, done with the finest thread and hooks in intricate patterns, usually displaying a motif of leaves or flowers set in an open weblike ground Whole garments, as well as trimmings, hats, and bags, are made by the skillful Irish needlewomen.

Crocker, Charles, 1822-88, American railroad builder, b Troy, N Y In 1836 he moved with his family to Marshall co., Ind, where he set up a small foundry. He joined a party to seek gold in California in 1849 He and a brother opened a store to sell supplies to miners, and as it prospered they started others, later consolidating them in Sacramento Here Crocker met Mark HOPKINS, Hopkins's partner, Collis P HUNTINGTON, and Leland STANFORD and with them organized (1861) the Central Pacific Railroad Company of California, Crocker undertaking responsibility for actual construction His difficulty in maintaining an adequate labor force for the arduous work led to his employment of Chinese coolies, who were kept in a state of virtual slavery In 1871 Crocker sold out his interest to his partners, but in the Panic of 1873 he returned as director and vice president. See Oscar Lewis, *The Big Four* (1938)

Crocker, William, 1876-1950, American botanist, b Medina, Ohio, grad Univ. of Illinois (B A., 1902), Ph D Univ of Chicago, 1906 He was associated with the Univ of Chicago from 1907 to 1921 and from 1921 was director of the Boyce Thompson Institute for Plant Research He is known for his research on the physiology of seed germination, on the effect of toxic and stimulative materials on plants, and on tropisms He wrote *Growth of Plants* (1948) and, with L V Barton, *Twenty Years of Seed Research* (1948)

Crockett, David, 1786-1836, American frontiersman, b Limestone, near Greeneville, Tenn After serving (1813-14) under Andrew Jackson against the Creek Indians in the War of 1812, he settled in Giles co, Tenn and in 1821 was elected to the state legislature In 1823 Davy, having moved to the extreme western part of the state, was reelected from his new constituency When it was jokingly suggested that he should run for Congress, he took the proposal seriously and served three terms in the House (1827-31, 1833-35) His dress, language, racy backwoods humor, and naïve yet shrewd comments on city life and national affairs made him a popular figure in Washington Crockett became a political opponent of Jackson, and the Whigs took him up so assiduously that he became the showpiece of conservatism. Resenting his defeat for reelection in 1834, Davy left Tennessee for Texas, where he heroically lost his life in the defense of the ALAMO *A Narrative of the Life of David Crockett* (1834), *An Account of Col Crockett's Tour to the North and down East* (1834), and *Col Crockett's Exploits and Adventures in Texas* (posthumous, 1836) were supposedly written by Crockett himself in his own immitable idiom, but they do not match, either in content or style, those letters which are definitely known to be his See *The Autobiography of David Crockett* (with an introduction by Hamlin Garland, 1923), Constance Rourke, *Davy Crockett* (1934), Richard M Dorson, ed, *Davy Crockett, American Comic Legend* (1939), Irwin Shapiro, *Yankee Thunder the Legendary Life of Davy Crockett* (1944)

Crockett, town (pop 4,536) co seat of Houston co, E Texas, 88E of Palestine, founded in the 1830s The region is forested with pines and post oaks, and farms yielding truck and other produce are in clearings The town, where streets are lined with pecan trees, makes pine crates, boxes, and lumber Many of the people of Crockett are Negro, and Mary Allen Junior College is for Negroes Some 25 mi to the northeast near Weches is a replica of the first Spanish mission in E Texas, San Francisco de los Tejas, founded, probably at this spot, in 1690 and abandoned in 1693 It was established on a new site near by in 1716, abandoned in 1719, and succeeded by San Francisco de los Neches in 1721

crocodile (krŏ'kudĭl), large carnivorous reptile of the order Crocodilia, covered by tough scales with underlying bony plates and having powerful jaws, short legs, and a vertically flattened tail It has a narrower, more pointed head than the ALLIGATOR, and the long fourth tooth of the lower jaw is visible when the mouth is closed, not concealed in a cavity as in the alligator The American crocodile, which inhabits fresh and sometimes salt water near S Florida, in the West Indies, and in Central and N South America, is not hostile to humans Among the man-eaters are the estuarine crocodile of parts of Asia and N Australia and the tropical Pacific islands and the Nile crocodile of Africa, which was worshiped and embalmed by some ancient Egyptians The Indian and Malayan gavials (gharials, garials), which have very narrow jaws, and the mugger of India are crocodiles

crocus, any species of the genus *Crocus*, low plants very popular for their early-spring blossoms, commonly purple, yellow, or white There are also fall-blooming species The grasslike leaves and the flowers (which have three stamens) are produced from a corm Native to the Mediterranean and SW Asia, crocuses are cultivated as garden plants and for naturalizing in a lawn One species, the SAFFRON, is cultivated for commercial purposes The MEADOW SAFFRON, or autumn crocus, and the PASQUEFLOWER, or wild crocus, are not related

Croesus (krē'sus), d. c 546 B.C, king of Lydia (560-c.540 B.C.), son of Alyattes. He continued

his father's policy of conquering the Ionian cities of Asia Minor, but on the whole he was friendly to the Greeks, and he is supposed to have given refuge to Solon. Among the Greeks he had a reputation for almost incredible wealth. Threatened by CYRUS THE GREAT of Persia, Croesus allied himself with Amasis II of Egypt and Nabonidus of Babylonia against the Persian might, but the alliance was of no avail Cyrus defeated and captured Croesus. There are varying legends about his death

crofter · see COTTER

Croghan, George (krō'gŭn), d. 1782, American Indian agent, b Ireland He migrated to North America in 1741 and became (1756) deputy superintendent of Indian Affairs under Sir William JOHNSON Croghan was to a good extent responsible for Johnson's success and reputation among the Indians In the French and Indian War he caused many tribes to desert the French cause See A T Volwiler, *George Croghan and the Westward Movement* (1926).

Croghan, George, 1791–1849, American military officer, b near Louisville, Ky , nephew of George Rogers Clark and William Clark He won public acclaim and congressional award for his defense of Fort Stephenson in the War of 1812 Croghan later served under Zachary Taylor in the Mexican War

Croix, Carlos Francisco de Croix, marqués de (kär'lōs fränthē'skō dā kruwä' märkäs' dā krûwä'), 1702 86, Spanish colonial administrator, b Lille As viceroy of New Spain (1766–71), he was a genial, honest, and industrious official, but the real ruler was José de GÁLVEZ Many reforms were instituted, the Jesuits were expelled (1767), and the natives of NW Mexico were subdued in order to open the California frontier His nephew, **Teodoro de Croix** (tāōdhō'rō), 1730–92, was military commander and provincial governor in Mexico before becoming viceroy of Peru (1784–90) He put into operation the reforms in Indian administration which resulted indirectly from the revolt of TUPAC AMARU

Croker, John Wilson (krō'–), 1780–1857 British Tory politician and author, b Ireland He was a member of Parliament from 1807 to 1832 and secretary of the admiralty from 1810 to 1830 Most famous of his regular contributions as a critic to the *Quarterly Review* was his virulent attack on Keats's *Endymion* in a review (1818) Croker's best work was his careful edition (1831) of Boswell's *Life of Johnson*, although he wrote many essays, poems, and criticisms See *Croker Papers* (ed by L J Jennings, 3 vols , 1884), biography by M F Brightfield (1940)

Croker, Richard, 1841–1922, American politician, head of Tammany Hall from 1886 to 1902, b Co Cork, Ireland He became prominent as a political leader of New York city's East Side and as an aide of John KELLY He was elected (1868) alderman and held minor appointive offices, which increased in importance after Kelly succeeded (1871) William M Tweed as boss Croker became Kelly's chief lieutenant, and after Kelly's death (1886) Croker was the acknowledged Tammany boss Croker was (1889 90) city chamberlain and brought about the elections of Hugh Grant (1889), Thomas F Gilroy (1893), and Robert Van Wyck (1897) as mayors The election (1901) of Seth Low as mayor of New York caused Croker's abdication as Tammany leader, and he was succeeded by Charles F MURPHY Croker spent the remainder of his life in leisure in England and Ireland See Lothrop Stoddard, *Master of Manhattan* (1931)

Croker, Thomas Crofton, 1798–1854, Irish antiquary, b Cork One of the first to collect Irish folklore, he wrote *Fairy Legends and Traditions of the South of Ireland* (1825-28), *Legends of the Lakes* (1829), and *Popular Songs of Ireland* (1837)

Croll, James (krōl), 1821–90, Scottish geologist and physicist He was associated with the Geological Survey of Scotland from 1867 to 1880 He contributed studies on climate and the glacial epoch and on stellar evolution See his autobiography (1896)

Croly, David Goodman (krō'–), 1829 89, American journalist, b Ireland He came to the United States as a child Croly was managing editor of the New York *World* and editor (1872–78) of the *Daily Graphic* Philosophically inclined, he wrote *Miscegenation* (1864) and *A Primer of Positivism* (1871)

Croly, George, 1780–1860, English author, b Ireland His writings include *Catiline* (1822), a tragedy, and *Salathiel* (1829) and *Marston* (1846), two historical romances

Croly, Herbert, 1869–1930, American editor, b New York city, son of David Goodman Croly and Jane Cunningham Croly He edited the *New Republic* from its beginning (1914) until his death

Croly, Jane Cunningham, pseud **Jennie June,** 1829–1901, American journalist, b. England. She came to the United States at the age of 12 and in 1857 married David Goodman Croly She was one of the earliest American newspaperwomen and was editor of *Demorest's Quarterly Mirror of Fashion* (later *Demorest's Illustrated Monthly*) She specialized in women's features and was one of the first to syndicate her articles In 1868 she founded Sorosis, the only woman's club of importance at that time, and in 1889 the New York Women's Press Club She wrote *The History of the Woman's Club Movement in America* (1898)

Cro-Magnon man (krō"-măg'nŏn), human being of the upper Paleolithic period, known through skeletal remains found in parts of S and Central Europe Discoveries were first made in the rock shelter of Cro-Magnon in Les Eyzies, Dordogne, France, later finds, differing slightly from each other in skeletal characteristics, were made in a number of caverns, especially in the Dordogne valley, Solutré, and Grimaldi (NW Italy, at the French border) and in parts of Spain, Germany, Czechoslovakia, and Poland Cro-Magnon man is generally accepted as a race of the same species as modern man (*Homo sapiens*) Unlike Neanderthal man, whom he superseded, Cro-Magnon man was straight and tall (the males probably 6 ft or more), with straight thigh bones, the head was balanced as in modern man and the forehead was high, the brain large, and the chin well developed Evidences of an advanced culture are remains of skillfully made implements of bone and flint, jewelry of shell and ivory, associated with the very late part of the period, and polychrome paintings found on the walls of some caves in S France and N Spain.

Cromarty, county see ROSS AND CROMARTY

Cromarty (krō'murtē), burgh (pop 837), Ross and Cromarty co , Scotland, on the south shore of the entrance to Cromarty Firth

Cromarty Firth, deep narrow inlet of Moray Firth, on the east coast of Scotland, in Ross and Cromarty co It provides excellent anchorage, its narrow entrance being protected by the headlands of the Sutor rocks, over 400 ft high It was a naval base in the First World War

Cromberger, Juan · see PABLOS, JUAN

Crome, John, 1768–1821, English landscape painter, founder of the Norwich school, b Norwich He is often called Old Crome The son of a poor weaver, he first got his taste for painting as an apprentice to a sign painter By dint of perseverance he rose to the position of a provincial landscape painter, earning his living by giving drawing lessons and selling an occasional picture In 1814 he made a short trip to Paris to see the Italian paintings there Otherwise most of his life was passed in Norfolk Crome's work was influenced by Gainsborough and by the Dutch masters (whose paintings he saw in the wealthy homes of his district), but it has a fine and distinctive character quite its own His landscapes are notable for simplicity and serenity Beautiful examples are to be seen in many British galleries and private collections *Mousehold Heath* and *Poringland Oak* are in the National Gallery, London The Metropolitan Museum has *The Old Oak* and *Hautbois Common* Crome's etchings were published after his death under the title *Norfolk Picturesque Scenery* See biography by C H C Baker (1921), Laurence Binyon, *John Crome and John Sell Cotman* (1897), G A Stephen, *Norfolk Artists* (1915) His son **John Bernay Crome,** 1794–1842, painted landscapes in his father's style

Cromer, Evelyn Baring, 1st **earl of,** (ēv'lĭn ba'rĭng, krō'mur), 1841–1917, British administrator and diplomat in Egypt As commissioner of the Egyptian public debt office (appointed 1877), he initiated inquiries by France and England into the bankrupt administration of the ISMAIL PASHA, and when dual control of Egypt was reestablished in 1879, Major Baring represented England He was finance minister in India (1880-83) and returned to Egypt after Arabi Pasha's revolt to become British agent and consul general in 1883 Until he resigned in 1907, the history of Egypt is also his, for he was virtual ruler, reforming finances, administration, and education He became Baron Cromer in 1892 and was made an earl in 1901 Of his several books, *Modern Egypt* (1905, rev ed , 1916) and *Ancient and Modern Imperialism* (1910) are most informative He was also a Greek scholar See biography by L J L Zetland (1932)

cromlech (krŏm'lĕk) [Welsh or Breton, = crooked stone], archaeological term for one type of megalithic monument It is usually considered equivalent to DOLMEN, but it may particularly signify a circular arrangement of monolithic pillars, as at STONEHENGE

Crommelynck, Fernand (fĕrnä' krômülăk'), 1888–, Belgian poet and dramatist Closely connected with the theater, Crommelynck earned his living as an actor before the tremendous success of his tragic farce *Le Cocu magnifique* (1921) Other plays, *Le Sculpteur de masques* (1908), in verse, *Le Marchand de regrets* (1913), and *Carine, ou, La Jeune Fille folle de son âme* (1934) show him as an expert dramatist of strong lyric power

Crompton, Samuel, 1753–1827, English inventor of the MULE spinner, or muslin wheel, an important step in the development of fine cotton spinning Working as a lad in a spinning mill, he knew the defects of the Hargreaves jenny and set himself to produce something better After five years of secret work, he perfected (1779) a machine which combined the features of the jenny and Arkwright's frame and, which, in one operation, by drawing, twisting, and winding the cotton, produced a very fine yarn. Too poor to obtain a patent for his invention, he sold his rights for £60 Later Parliament granted him £5,000

Crompton, R I see WEST WARWICK

Cromwell, Oliver, 1599-1658, lord protector of England, b. Huntingdon He came of a good but not noble family and entered Sidney Sussex College, Cambridge (1616), but probably left the next year As a member of Parliament from 1628 he stood firmly with the Puritans, and in the Long Parliament he was active in the Puritan cause though not a conspicuous leader During the first civil war (see PURITAN REVOLUTION) he rose rapidly to leadership because of his military ability and his genius for organizing and inspiring the parliamentary armies He and his sturdy Puritan regiment called the Ironsides distinguished themselves at Edgehill (1642), at Marston Moor (1644), and in numerous minor engagements In the dissension between Parliament (controlled by Presbyterians) and the army, in which all forms of Puritanism (the Independents) flourished, Cromwell proposed (1644) the reorganization of the army He and Sir Thomas Fairfax (later Baron Fairfax) were given command of the resulting New Model Army and defeated Charles at Naseby in 1645 Cromwell repelled the Scottish royalist invasion at Preston and became even stronger after the Presbyterian leaders were removed from Parliament by Pride's Purge (1649, see PRIDE, THOMAS), an act which he approved, but for which he disclaimed responsibility To the time of the flight of Charles I (1646) Cromwell had labored for compromise and continuance of the king in office, thereby arousing charges of double-dealing, especially in the army After 1646 he lost hope of further dealings with Charles, and at the king's trial (1649) he was the leading spirit in demanding execution In 1649 under the government of the Commonwealth he led a punitive expedition into Ireland Apart from the long-remembered cruelty of the massacre at Drogheda and other incidents, his visit had lasting consequences, since he carried forward a policy, begun by James I and completed by William III, of settling Englishmen upon the lands of dispossessed Irish In 1650 Cromwell invaded Scotland and beat the royalist Scots at Dunbar, later he defeated Charles II himself at Worcester, and left the rest of the conquest of Scotland to General Monck The Scottish and Irish Parliaments were abolished, representation was given to Scotland and Ireland in the English Parliament, and various legal and administrative reforms were effected Cromwell dissolved the Rump Parliament in 1653 when it had failed to frame needed new laws and had sought to perpetuate its power His attempt to replace it by the Barebone's Parliament, appointed by himself from the nominations of the congregations, resulted in a body so feeble and incompetent that it dissolved itself He finally (1653) accepted the Instrument of Government, drawn up by certain army officers, and became lord protector (see PROTECTORATE) The ineffective Parliament of 1654 was followed by Cromwell's rule with the major generals The Parliament of 1656 drew up the *Humble Petition and Advice* and offered Cromwell the crown, which he declined By a new constitution of 1657 Cromwell's powers were strengthened, and he assumed more of the pomp of royalty In foreign affairs Cromwell, still fearing Charles II, sought to build up a Protestant league His policy was, however, as fully governed by the necessity for England to have foreign trade as that of any English sovereign He had approved the Navigation Act of 1651, which largely caused the first (1652–54) of the DUTCH WARS, and though he ended that war as soon as he could, he appreciated the prestige which the naval victories gave England He did not hesitate to use Catholic France as an ally in his war on Spain (1655–58) to force trade rights for the English in Spanish colonies This war strained England's finances and brought Jamaica as its only gain Although he professed love for both toleration and democratic government, only Jews and non-Anglican Protestants were tolerated in his time, and he found it impossible to cooperate with Parliament in governing Opinions of Cromwell have always varied widely His military skill and force of character are universally recognized He met the task of holding together the gains of the civil war and the disharmonious groups in the Puritan party in what seemed the only practical way This involved cruelty, force, and intolerance which were evidently alien to him personally His government, dependent on his own strong character, costly in its foreign policy, representing a break in English institutions and a minority religious viewpoint, could not survive him long His son, Richard Cromwell, could not maintain the Protectorate See the writings and speeches of Oliver Cromwell (ed by W. C. Abbott and others, 4 vols , 1937–47), biography by Sir Charles H Firth (1900), historical writings on the period by S R. GARDINER and Sir Charles H FIRTH, Godfrey DAVIS, *The Early Stuarts* (1937)

Cromwell, Richard, 1626–1712, lord protector of England, third son of Oliver Cromwell. He was the eldest surviving son at the death of his father (Sept 3, 1658), who had nominated him as his successor Although he had served in Parliament and on the council of state, Richard lacked the energy and ability to manage the complicated affairs of state. Army and Parliament struggled for power, and Richard was forced to dismiss Parliament on April 22, 1659. His Protectorate had really collapsed, but continued in name until May 25, when the Rump Parliament reestablished the Commonwealth He lived abroad (1660–80) and later in England under an assumed name. A man of virtue and dignity, he was unfortunate in being forced into a situation too difficult for his talents See biography by R. W. Ramsay (1935)

Cromwell, Thomas, earl of Essex, 1485?–1540, English statesman. He left his home in Putney (c 1504 and perhaps after a family quarrel) and served as soldier and later as merchant abroad He returned (c.1513) to England, where he flourished as a moneylender and in the wool trade and eventually as a lawyer Cardinal WOLSEY used him as a revenue collector, probably helped him enter Parliament (1523), and made him his legal secretary. For the cardinal Cromwell led the suppression of small monasteries, but he avoided being disgraced with Wolsey in 1529 His adroit management of the House of Commons brought him to the notice of HENRY VIII, and his conviction that the king should be both spiritual and temporal head of the state made him a willing tool for Henry's ecclesiastical policies. A privy councilor in 1531, he became the king's secretary in 1534 and drafted, though he did not originate, most of the Reformation acts A more ruthless man than Archbishop Cranmer, Cromwell was, as Henry's vicar general after 1535, in charge of the visitation and suppression of monasteries (1536–39) that followed on the Act of Supremacy (1535) He dictated changes in the church service and the creed and gave orders to the clergy on their conduct and duties He was made baron and lord privy seal, and some of the confiscated lands and wealth of the monasteries became his own, despite his avowed intention of making the king wealthy In 1539 he became lord great chamberlain He negotiated the king's marriage to ANNE OF CLEVES, presented to Henry as a means of securing the North German princes as allies against the Catholic Emperor Charles V When Anne proved unattractive and the alliance failed, Henry did nothing to prevent charges of treason and heresy from being brought against Cromwell by Thomas Howard, 3d duke of Norfolk By act of attainder Cromwell was condemned and was beheaded See R B Merriman, *The Life and Letters of Thomas Cromwell* (1902)

Cromwell, industrial town (pop 3,281), central Conn , on the Connecticut below Hartford; settled c 1650, set off from Middletown 1851

Cronaca, Il. see POLLAIUOLO, SIMONE DEL

Cronin, Archibald Joseph, 1896–, Scottish novelist He gave up his London medical practice to devote himself to writing after the great success of his first novel, *Hatter's Castle* (1931) Among his later very popular novels are *The Stars Look Down* (1935), *The Citadel* (1937), *The Keys of the Kingdom* (1941), *The Green Years* (1944), and *Shannon's Way* (1948) Though successful moving pictures have been made from many of his novels, Cronin's play *Jupiter Laughs* (1940) failed on the stage He came to the United States to live in 1939

Cronje, Piet Arnoldus (pēt' ärnōl'dŭs krōn'yĀ), 18357–1911, South African commander A Boer, he commanded the Transvaal forces that frustrated the raid against the Transvaal led by Sir L. S. JAMESON In the South African War (1899–1902) he conducted the unsuccessful siege of Kimberley Before the advance of Lord Roberts he retreated west, but was surrounded (1900) at Paardeberg and forced to surrender.

Cronstadt, RSFSR, see KRONSTADT

Cronstedt, Axel Fredrik, Baron (äk'sŭl frä'frĭk, krōn'stĕt), 1722–65, Swedish mineralogist and chemist. In 1751 he discovered in niccolite an impure form of nickel, reported it as a newly discovered element, and proposed the name nickel for it He was one of the first to recognize the importance of the chemical constituents of minerals and rocks and to use the blowpipe in the study of minerals He wrote *An Essay towards a System of Mineralogy* (1758, Eng. tr., 2d ed , 1788).

Cronus (krō'nŭs), or Gr *Kronos* [time], in Greek legend, the youngest TITAN, son of URANUS [heaven] and GAEA [earth] He led the Titans in the revolt against Uranus and ruled the world He married his sister RHEA and fathered the great gods—ZEUS, POSEIDON, DEMETER, HERA, and HESTIA He is also called the father of CHIRON Because he was fated to be overthrown by one of his children, he swallowed them all as infants until Rhea hid Zeus and tricked Cronus into eating a stone instead He then disgorged his children Zeus led the Olympian gods in overthrowing Cronus in the battle called the TITOMACHY, and Cronus was relegated to ruling the Islands of the Blessed. He is equated with the Roman SATURN and shows strong resemblance to various agricultural gods His rule was the Golden Age

Crook, George, 1828–90, U.S general, b. near Dayton, Ohio, grad. West Point, 1852 In the Civil War he served first as colonel of a regiment of Ohio volunteers which was active in West Virginia After commanding a brigade in the Antietam campaign (Sept., 1862), Crook was promoted brigadier general of volunteers and led a cavalry division in the Chattanooga campaign (1863) He commanded in West Virginia in 1864, ably led a corps under Philip H Sheridan in that general's Shenandoah Valley campaign, and directed a cavalry division in the final fighting around Richmond After the war Crook operated so successfully against the Paiute and Snake Indians in Idaho and then against the Apache in Arizona that he was promoted (1873) brigadier general in the regular army Made commander of the Dept of the Platte in 1875, he was engaged in the hard-fought Sioux War of 1876 At the battle on the Rosebud river (June 17, 1876), the Indians, vastly superior in both man power and fire power, were victorious; it was the only major defeat Crook ever suffered at their hands The Sioux, however, were soon forced to capitulate Back in Arizona in 1883, Crook led an expedition into the rugged mountains against a Chiricahua band of the Apache and finally succeeded in persuading GERONIMO to surrender (1884) Geronimo later broke his pact with Crook and escaped, only to surrender to Crook's successor, Gen Nelson A Miles, in 1886. In 1888 Crook was promoted major general and made commander of the Division of the Missouri, with headquarters at Chicago, a post he held till his death. Crook was not only an able soldier but had the patience and integrity to settle Indian troubles without resorting to shooting In his dealings with, and aspirations for, the unhappy redmen he was far in advance of his times. See his autobiography (ed. by Martin F. Schmitt, 1946); John G Bourke, *An Apache Campaign in the Sierra Madre* (1886) and *On the Border with Crook* (1891).

Crooked Island: see BAHAMA ISLANDS

Crookes, Sir William (krŏŏks), 1832–1919, English chemist and physicist After serving at the Radcliffe Observatory, Oxford, and teaching chemistry at Chester Training College, he retired to work in his own laboratory in London. He discovered the element thallium and made special studies of radioactive substances (in the course of which he invented the spintharoscope and the radiometer) and also of selenium, the rare earths, and diamonds, he devised spectacles to protect the eyes of glassworkers. One of his chief inventions is the Crookes tube, with which J J Thompson, W C Roentgen, R A Millikan, and others conducted important research He founded the *Chemical News* and was the author of numerous scientific papers and of *Select Methods in Chemical Analysis* (1871), *A Practical Handbook of Dyeing and Calico Printing* (1874), and *Diamonds* (1897) He was interested also in psychical research See biography by E E Fournier d'Albe (1923).

Crookes tube, high-vacuum tube, invented by Sir William Crookes It is essentially a glass bulb from which the air has been almost completely exhausted and in the walls of which are set two electrodes (a cathode and an anode) Cathode rays, consisting of electrons, emanate from the cathode when a high-voltage electric current is used and cause the glass of the tube opposite this electrode to exhibit a yellowish-green fluorescence.

Crooks, Ramsay, 1787–1859, American fur trader, b Scotland After some experience in the fur trade, he joined the overland expedition to Astoria and heroically suffered great hardship on the journey (1811–12) Soon after crossing the continent westward, he joined the party of Robert Stuart and crossed it again eastward In 1816 he joined the AMERICAN FUR COMPANY and was second in command only to John Jacob Astor. He thus was one of the most powerful figures in the American fur trade When Astor retired in 1834, Crooks became president of the northern independent branch (still called the American Fur Company) and remained so until the company was dissolved

Crookston, city (pop 7,161), co. seat of Polk co., NW Minn , on Red Lake River and SE of Grand Forks, N Dak , settled 1872, inc 1879 It is a trade and shipping center for livestock and farm products and has the Northwest School of Agriculture of the state university The annual Red River valley stock show is held here

Crooksville, village (pop 2,890), S central Ohio, S of Zanesville Pottery is made here.

Cropsey, Jaspar Francis, 1823–1900, American landscape painter of the Hudson River school, b Staten Island, N Y His works include *Landscape, Wyoming Valley,* and *Pompton Plains* (Metropolitan Mus); *View near Rome, Sunset: Lake George,* and *Lake George* (belonging to N.Y. Public Library), and *Niagara Falls* (Brooklyn Mus.). He was a member of the National Academy.

croquet (krōkā'), lawn game in which the players hit wooden balls with wooden mallets through a series (9 or 10) of wire arches. The first player to hit the posts placed at each end of the field wins. It was a favorite game in Ireland in the 18th cent. and has enjoyed several periods of popularity in France, England, and America. A variant is called roque.

Crosby, Bing, 1904–, American singer and moving-picture actor, whose real name is Harry Lillis Crosby, b Tacoma, Wash. He sang with dance bands (1925–30) and in 1931 began radio work and made his moving-picture debut Among the many songs that have made him famous are *Down the Old Ox Road, The Last Round Up,* and *White Christmas.* Some of the films in which he has appeared are *College Humor, Pennies from Heaven, Road to Singapore, Going My Way, The Bells of St Mary's,* and *The Emperor Waltz.* See Ted Crosby, *The Story of Bing Crosby* (1946); Barry Ulanov, *The Incredible Crosby* (1948).

Crosby, Fanny (Frances Jane Crosby), 1820–1915, American song and hymn writer, b Putnam co , N.Y., blinded in infancy. Educated at the New York Institute for the Blind, she taught there until 1858, when she married Alexander Van Alstyne, a blind music teacher. Some of her lyrics were set to music by George F. Root, better known are a few of her nearly 8,000 gospel hymns, such as *Blessed Assurance.* See her autobiography (1906), S. A W Duffield, *English Hymns: Their Authors and History* (1886).

Crosby, Percy Leo, 1891–, American cartoonist, artist, and writer, b Brooklyn, N Y , studied at the Art Students League. His original prints and water colors have been widely exhibited, and his books, such as *Dear Sookey* (1929), *A Cartoonist's Philosophy* (1931), and *Always Belittlin'* (1933), had wide popularity, but he is best known for his popular syndicated comic strip *Skippy,* which first appeared in 1923

Crosby. 1 Village (pop. 2,954), central Minn., NE of Brainerd and on the Cuyuna iron range. It is a lumber center as well as an iron-mining town. 2 Town (pop 1,489), SW Miss , SE of Natchez, in a farm area, named Stephenson until 1934 3 City (pop 1,404), co seat of Divide co , extreme NW N.Dak , near the Canadian boundary, inc. 1911. It is a port of entry and a trade center for a farming region, with coal mines near by

Crosbyton, town (pop. 1,615), co seat of Crosby co , NW Texas, ENE of Lubbock, in a farm and ranch area of the Llano Estacado, founded 1908

Cross, Charles Frederick, 1855–1935, English chemist He originated with E J Bevan the viscose process (patented in 1892) of preparing artificial silk from cellulose and later founded a company to develop the spinning of the silk His writings deal with cellulose and papermaking

Cross, Wilbur Lucius, 1862–1948, American educator and public official, b Mansfield, Conn , grad Yale (B A , 1885, Ph D., 1889) He was instructor (1894–97), assistant professor (1897–1902), and professor (1902–30) of English at Yale, where he also was dean (1916–30) of the graduate school Cross became well known as a literary critic, edited the *Yale Review* for almost 30 years, and was the author of *The Life and Times of Laurence Sterne* (1909) and *The History of Henry Fielding* (1918) and books on the English novel After he retired (1930) from Yale he turned to politics As Democratic governor of Connecticut (1931–39), he brought about much reform legislation—abolition of child labor, governmental reorganization, and improved factory laws. See his autobiography, *Connecticut Yankee* (1943)

cross, widespread symbol It has been used by American Indians of diverse cultures and by ancient Egyptians; it is found in the megalithic monuments of Western Europe The most important use, and one of known origin, is among Christians, to whom it recalls the CRUCIFIXION of Jesus and man's redemption. The Christian form of blessing by tracing a cross over oneself or another person or thing originated before A.D 200 The oldest Christian remains contain drawings of crosses and crucifom artifacts, and the fact that the cross was the Christian emblem before the toleration of Christianity is shown by the vision of CONSTANTINE I His mother, St HELENA, is supposed to have found the True Cross at Calvary in 327, and the event is commemorated on May 3 as the Finding of the Cross Splinters of the relic are widely distributed and honored by Roman Catholics and Orthodox In 614, to the scandal of Christendom, Khosru II of Persia took the largest piece of the relic from Jerusalem It was replaced by Heraclius I in 627; the anniversary is Sept 14, the Exaltation of the Cross The relic was lost in the Moslem occupation of Jerusalem Use of the cross was one of the popular practices attacked by Byzantine iconoclasm and vindicated (787) by the Second Council of Nicaea The crucifix—the cross with the figure of Jesus upon it—had already been established in use, at first, the figure was painted or in bas-relief, a style surviving in the Christian East Older Western crucifixes often presented the Savior reigning, in robe and crown, the realistic dying figure, dating from the Renaissance, is universal in the small crucifixes used privately by Roman Catholics In the medieval Roman Catholic Church

the cross, as material object and as a concept, was integrated into the love for the Passion. This devotion (from the 11th cent.) is an outstanding development in the history of Christian thought, it has ever since been an essential part of the public and private religious life of Roman Catholics Manifestations are seen in the ROSARY, in the PASSION PLAY, in Cistercian MYSTICISM, in the *Imitation of Christ* of Thomas à Kempis, in cases of STIGMATA, and in the wayside calvaries of Catholic Europe (e g , in Austria and Brittany), further, it is seen in the cultus of Our Lady of Sorrows (see MARY and PIETÀ), in the cultus of the Five Wounds, and in that of the RELICS of the Passion Many observances of LENT and HOLY WEEK and the devotion of the Stations (or Way) of the Cross (14 meditations on the stages of the journey of Jesus to Calvary, represented in paintings and sculptures in churches) recall the Passion Protestants have been generally sparing in using the cross, even in blessings, and have abandoned the crucifix, but the symbolism has been retained in their literature (e g , in the hymn, *When I Survey the Wondrous Cross*) The cross was the badge of the Crusades taken at Clermont in 1095 Thence it became the emblem of the Templars, of the Knights Hospitalers (Knights of Malta), and of the Teutonic Knights From KNIGHTHOOD it passed into heraldry, into the FLAG, and into DECORATIONS There are many shapes of crosses The Latin cross, the commonest, has upright longer than transom With two transoms it is called an archiepiscopal or patriarchal cross, with three it is a papal cross A cross widely used by Slavs and by others of Eastern rites has two transoms and a slanting crosspiece below The Greek cross has equal arms St Andrew's cross is like an X, and the tau cross is like a T The Celtic, or Iona, cross bears a circle, the center of which is the crossing The Maltese cross and the swastika are still more elaborate An example of artistic effort spent on crosses is seen in the monumental crosses of market, town, and wayside in Europe (e g , at Cheddar, Malmesbury, and Winchester, England) and in calvaries and cemeteries Some of the finest art products of the Anglo-Saxons were stone crosses (For the later Eleanor Crosses, see ELEANOR of CASTILE) Processional crosses (on poles) lend themselves to elaboration Crosses are also worn for personal adornment Pectoral crosses and necklace crosses have given scope for fine enameling

crossbow: see BOW AND ARROW

Cross City, town (pop 1,869), co seat of Dixie co , NW Fla , between the Suwannee and the Gulf, inc 1924 It is a trade, shipping, and processing center for lumbering, farming, and fishing industries

Crossett (krŏ'sĭt), lumber "company town" (pop 4,891), SE Ark , near Louisiana Lumber, paper, and chemical plants are here, and scientific reforestation methods are demonstrated

cross-examination see EVIDENCE

cross-eye or **strabismus** (strŭbĭz'mus) The turning in of one or both eyes towards the nose often commences between one and four years of age It may be the result of errors of refraction which affect the muscles controlling the motion of the eyeballs Early correction with glasses and exercises of the eye muscles may overcome this condition If it is untreated before the child is six, operation may be necessary The opposite condition, in which the eye or eyes turn away from the nose, occurs in cases where vision in one eye is poor and that eye is unconsciously not used, therefore assuming a relaxed position in which the muscles pull it outward

cross-fertilization · see FERTILIZATION

Cross Keys. see PORT REPUBLIC

Cross Plains, town (pop 1,229), W central Texas, SE of Abilene, in an oil area, settled c 1876, inc 1911

Crossville, town (pop 1,511), co seat of Cumberland co , central Tenn , W of Knoxville, in an area of stone quarries, coal, timber, and small farms, founded c 1850, inc 1901 A school for mountain children and a sanatorium for tubercular patients are near by

cross vine: see BIGNONIA

crossword puzzle, word game usually played on a rectangle marked with white and black squares which may or may not form a design Two lists of numbered definitions are given, one for the horizontal words, the other for the vertical words The puzzle is solved when all the words are correctly supplied In the diagramless puzzle, the solver has no key to the length of the words used Crossword puzzles started in England in the 19th cent. as a game for children, and after 1920 it became a very popular adult game in England and the United States

Croswell (krŏz–), city (pop. 1,381), S Mich , on the Black River and N of Port Huron, inc as a village 1881, as a city 1905

Crothers, Rachel (krŭ'dhûrs), 1878–, American dramatist, b Bloomington, Ill , grad Illinois State Normal Univ , 1892, and Wheatcroft School of Acting, New York city. Her plays are notable for their craftsmanship and clever dialogue, many of them are social comedies written from the modern woman's point of view. Among her chief successes are *The Three of Us* (1906), *A Man's World* (1909), *Old Lady 31* (1916), *Let Us Be Gay* (1929), and *Susan and God* (1937).

Crothers, Samuel McChord, 1857–1927, American essayist and Unitarian clergyman, b Oswego, Ill , grad Princeton, 1874, and Union Theological Seminary, 1877 He was first a Presbyterian and later a Unitarian pastor in churches in Nevada, California, Minnesota, and Vermont In 1894 he went to Cambridge, Mass , as minister of the First Parish and preacher to Harvard Univ and remained there until his death An essayist of rare ability, humorous and urbane, he contributed to periodicals and wrote, among other works, *Mrs Muffet's Christmas Party* (1901), *The Gentle Reader* (1903), and *The Cheerful Giver* (1923)

Crothersville, town (pop 1,169), Jackson co , SE Ind , S of Seymour

Croton, Italy see CROTONA

Croton (krō'tŭn), short river of SE N Y , flowing S and SW to the Hudson near Ossining In Croton Lake are impounded its waters for part of New York city's water supply

Crotona (krōtō'nu) or **Croton** (krō'tun), ancient city, S Italy, on the east coast of Calabria, a Greek colony of MAGNA GRAECIA, founded at the end of the 8th cent B C In the second half of the 6th cent a great military, spiritual, and scientific development took place Pythagoras established here his school, which exerted a notable political and moral influence The near-by temple of Hera Licinia was the religious shrine of Magna Graecia Crotona's athletes won fame at the Olympic games The height of the city's prosperity was reached after the army, led by the athlete MILO, destroyed the rival town of Sybaris (510 B C) After that Crotona became involved in wars and soon declined After capture by the Romans in 277 B C , it was never more than a provincial town It was called Cotrone from the Middle Ages until 1928, when its name was changed to Crotone (pop 19,163)

Croton Aqueduct, 38 mi long, SE N Y , carrying water from the Croton basin to New York city, built 1837–42 It begins at Croton Lake, central Westchester co , follows the Croton river to the Hudson, then the Hudson to Yonkers, and crosses the Harlem River over High Bridge built especially for the aqueduct John B Jervis was the chief engineer It has been supplemented by a second aqueduct (built 1885–91), c 30¼ mi long, which passes underneath the Harlem River

Croton bug, small species of cockroach believed to be of European or Asiatic origin Its American name was given it because it was first noticed in New York when the Croton Aqueduct was built

Crotone, Italy see CROTONA

croton oil, transparent, pale yellow to brownish, viscid oil that does not evaporate upon exposure to the air It is pressed from the seeds of a plant (*Croton tiglium*) native to India, and SE Asia In medicine it is administered only in very small doses since its purgative action, even in small quantities, is extremely violent It should be given only at the direction and under the supervision of a physician It was used formerly also as a vesicant, applied externally to relieve congestion

Croton-on-Hudson, residential village (pop 3,843), SE N Y , in Westchester co , on the east bank of the Hudson and S of Peekskill, settled 1609, inc 1898 It is an artists' and writers' colony Hessian Hills School (coeducational) is here

Crotty, village (pop 1,235), N Ill , NE of Peoria, inc 1865

croup (krōōp), spasm of the larynx, occurring particularly in children between the ages of six months and four years The disease is associated with allergies and with infections, e g , WHOOPING COUGH (pertussis), DIPHTHERIA, tetany, and upper respiratory infections Treatment consists of relaxation of the larynx by means of emetics, hot fomentations, and sedatives The underlying cause should be treated

crow, partially migratory black bird of the same family as the raven, the magpie, the jay, and the ROOK and the JACKDAW of Europe The American, or eastern, crow, about 19 in long, has a wingspread of over 3 ft Crows eat some eggs and nestlings and grain, but destroy many injurious insects and rodents In winter they gather at night by thousands in communal roosts Easily tamed, though mischievous, crows can learn to pronounce some words The cruel practice of splitting their tongues does not improve their speech The throaty "caww" is familiar, but a musical warble is produced only when they think themselves unobserved The fish crow of the Atlantic and Gulf coasts is smaller than the common crow The common crow of Great Britain is a flesh-eating carrion crow 18 to 20 in long

crowbar: see SPADE and LEVER

crowberry, low evergreen shrub of the genus *Empetrum*, bearing inconspicuous purplish flowers and black, red, or purple berrylike fruits. It is an arctic or alpine plant suited to rockeries.

crowd: see MOB.

Crowder, Enoch Herbert (krou'dûr), 1859–1932, U S army officer and statesman, b. Grundy co , Mo., grad. West Point, 1881 After serving in campaigns against Geronimo and Sitting Bull, he was professor of military science at the Univ of Missouri, where he received (1886) a law degree After 1891 he was judge advocate, and in 1891 Major Crowder became associate judge of the Philippine Supreme Court He was (1904–5) a military observer in the Russo-Japanese War, was (1906–8) secretary of state and justice in Cuba, and became (1911) judge advocate general of the U S army He is perhaps best known for his work as provost marshal general in the First World War, when he helped to frame and administered the Selective Service Act These activities were discussed in *The Spirit of Selective Service* (1920) In 1919 Crowder, now a major general, was invited by the Cuban government to act as adviser on electoral reforms, and in 1921 he became the personal representative of President Warren G. Harding He was the first to serve (1923–27) as U S ambassador to Cuba

Crowe, Sir Joseph Archer, 1825–96, English art historian and journalist, a consular official He is the author, with Giovanni Battista Cavalcaselle, of *Early Flemish Painters* (1857) and the monumental *History of Painting in Italy* (5 vols , 1864–71) See Crowe's autobiography (1895)

Crowell, town (pop 1,817), co seat of Foard co , N Texas, W of Wichita Falls, settled 1887, inc 1908 This center of a region yielding cotton, wheat, and cattle has been rebuilt after destruction by a tornado in 1942

crowflower, name once used for the RAGGED ROBIN, but now given to various other plants, e g , the crowfoots

crowfoot, any of a number of plants with some part resembling the foot of a crow, particularly the BUTTERCUP

Crow Indians, North American Indian tribe of Siouan linguistic stock, who call themselves the Absaroka They ranged chiefly in the area of the Yellowstone river and its territories and were a hunting tribe of typical Plains culture They seem to have been closely kin to the Hidatsa Indians and apparently separated from them only in the 18th cent They were enemies of the Sioux and helped the white men in the Sioux wars See R H Lowie, *The Crow Indians* (1935).

Crowland (krō'–) or **Croyland,** village, in the Parts of Holland, Lincolnshire, England, NE of Peterborough There are ruins of an abbey founded in the 8th cent by Æthelbald of Mercia

Crowley (krou'lē), city (pop 9,523), parish seat of Acadia parish, SW La , SW of Baton Rouge, founded 1886, inc 1888 It is a shipping, milling, and storing center for a great rice-growing area The state university and the U S Dept of Agriculture maintain a rice experiment station here

crown, circular head ornament, symbolizing sovereign dignity (For crowns worn by nobles, see CORONET) The use of the crown as a symbol of royal rank is ancient in Egypt and the Orient In ancient Greece and Rome, however, crowns—sometimes made of leaves—were merely wreaths worn by victors in athletic or poetic contests or marks of honor bestowed in recognition of an act of public service The crown as used in medieval and modern times is an elaboration of the DIADEM It became so thoroughly identified with the functions of monarchy that the term *crown* is often used without reference to the sovereign personally, as in crown lands, crown lawyers, crown colonies, and crown debt Among famous crowns of historic interest are the Lombard iron crown, kept at Monza, Italy, the crown of Charlemagne, at Vienna, Austria, and the sacred crown of St Stephen of Hungary, which from 1920 to 1944 was in fact the supreme authority of the kingless monarchy These, however, are exceptional in that they were used repeatedly over centuries for coronation ceremonies Most crowns are of recent origin, though the jewels they contain are often taken from older crowns The ancient crowns of England were destroyed under Oliver Cromwell There are two crowns used by the British sovereigns —the crown of Edward the Confessor (or rather, an approximate replica, much altered, of the original crown), which is used for the coronation ceremony, and the imperial state crown, worn by the king after leaving Westminster Abbey and on state occasions The British state crown and crown jewels are normally kept in the Tower of London Crowns are also worn by the consorts and families of sovereigns The triple crown of the popes is known as a tiara Regardless of their actual shape, crowns are usually represented in heraldry as closed at the top by four arched bars called diadems and surmounted by a globe and a cross In religion and art, a crown symbolizes sovereignty (Rev. 19 12) and honor, especially the reward of martyrdom (Heb 2 9)

crown gall see GALL

Crowninshield, Frederic, 1845–1918, American decorative artist, b Boston He studied in London, in Paris, and in Rome, where he spent many years and was director of the American Academy He painted, in addition to murals, numerous landscapes—*Perugia*, *Taormina*, *Capri Cliff* (all Mus of Fine Arts, Boston). He also executed admirable

stained glass windows, *Hector and Andromache* (Memorial Hall, Harvard Univ) and the Goodrich window (Church of the Ascension, New York), as well as murals in the Municipal Building, Cleveland. He wrote *Mural Painting* (1887), *A Painter's Moods* (1902); and *Tales in Metre* (1903), poetry.

Crown Point. 1 Residential city (pop 4,643), co seat of Lake co, NW Ind, c 40 mi SSE of Chicago, settled 1832, inc 1868 2 Town (pop 1,661), NE N.Y., on Lake Champlain and N of Ticonderoga It is a summer resort Samuel de CHAMPLAIN explored the lake and near the present town supported (1609) the Hurons in a battle with the Iroquois The French realized the strategic importance of this point on the New York-to-Canada trail and in 1731 built Fort St Frederic In the French and Indian War the fort successfully resisted (1755 56) early English attacks, but was demolished (1759) before the advance of Jeffrey Amherst The British began building Fort Amherst (renamed Fort Crown Point) in 1759 Early in the American Revolution, Crown Point was captured (MAY 12, 1775) by Seth WARNER and a detachment of Green Mountain Boys, but it was abandoned (June 22, 1777) to Gen John Burgoyne in the Saratoga campaign Crown Point Reservation, with ruins of colonial forts, a museum, and bathing and fishing facilities, is here

Croydon, county borough (1931 pop 233,032, 1947 estimated pop 247,340), Surrey, England, S of London, of which it is a suburb In the Second World War, the airport here was used for military purposes and was a target for air raids In 1946 it was returned to civilian service Addington Park near by was the seat of the archbishops of Canterbury, who also had a palace in Croydon John Whitgift founded a hospital and a grammar school in Croydon John Singleton Copley died here

Croyland, Lincolnshire, England see CROWLAND

crucifix see CROSS

crucifixion, hanging on a CROSS, in ancient times a most shameful death It was practiced widely in the Near East, but not by the Greeks The Romans, who may have borrowed it from Carthage, reserved it for slaves and despised malefactors They used it frequently, as in the civil wars and in putting down the Jewish opposition Crucifixion was probably at first a modification of hanging on a tree, and from such a connection come the synonyms *tree* and *rood* (i e, rod or pole) for Jesus' cross The Romans used mostly the T cross, the Latin cross, or St Andrew's cross The tradition that Jesus died on a Latin cross has corroboration in the fact that it was the customary type when a title was affixed to the cross as a label The sufferer was nailed, or tied, to his cross, either on the ground before the cross was raised or after it had been set up The Gospel accounts of Jesus' crucifixion give no detail not in accord with usual procedure Mat 27 24–61, Mark 15 15–47, Luke 23 13–56, John 19 13–42 Crucifixion was abolished when the empire became Christian See CALVARY and GOOD THIEF

Cruden, Alexander, 1701?–1770, British scholar, b Aberdeen He became a bookseller in London and later a proofreader, especially of Greek and Latin texts In 1737 was published his *Complete Concordance to the Holy Scriptures*, which went through several editions and is the basis of later biblical concordances Subject to attacks of madness, Cruden considered himself a censor of public morals See Edith Olivier, *Alexander the Corrector* (1934).

cruelty, prevention of. In the 19th cent many laws were passed in Great Britain and the United States to protect the helpless from willful and malicious acts dangerous to health and life—especially to protect children, lunatics, and domestic animals At first, cruelty to animals was criminal only when severe enough to constitute a public nuisance But in 1822 the English Parliament passed the Martin Act for animal protection, and two years later Richard Martin formed the Society for the Prevention of Cruelty to Animals This English society began a movement which spread to Germany, France, and especially to the United States In the United States, the first S P C A was formed by Henry Bergh in New York in 1866 By 1849 English laws forbade beating, ill-treating, overdriving, abusing, or torturing various domestic animals In the United States, protection of children came after that of animals, the first Society for the Prevention of Cruelty to Children having been formed in New York in 1875 In most states, parents guilty of bodily cruelty to, or moral corruption of, their children may now be lawfully punished, and the children may be taken from them to become wards of the state Most humane societies protect both animals and children Societies of both types—for children and for animals—promote better legislation and enforcement, investigate alleged cruelties and report to courts, establish shelters and, in some cases, hospitals for animals, and carry on propaganda against cruelty While most of these societies are private, philanthropic corporations, those in New York, Philadelphia, and a few other places have some public funds In Indiana, boards of children's guardians have been organized by the state since 1889 to investigate and prosecute cases of cruelty and neglect and to have subsequent oversight of the victims See M. C McCrea, *The Humane Movement* (1910).

Cruikshank, George (krōōk'–), 1792–1878, English caricaturist, illustrator, and etcher, younger son of Isaac Cruikshank (1756–1810), caricaturist Practically self-taught, George early gained a reputation for his humorous drawings and contributed to such publications as the *Meteor*, the *Scourge*, and the *Satirist* Separate collections of his drawings were also published Among the best of his many illustrations are the famous *Life in London* (in collaboration with his brother), his masterly etchings for Grimm's *German Popular Stories*, the 12 etchings in Richard Bentley's miscellany, which include the notable illustrations of *Oliver Twist*, and the designs for W H Maxwell's *Irish Rebellion* In his old age Cruikshank made many drawings depicting the evils of intemperance, such as *The Drunkard's Children*, *The Bottle*, and *The Gin Trap* Fine collections of his drawings and etchings are in the British and the Victoria and Albert Museum See biographies by Blanchard Jerrold (1882), F G Stephens (1891), and W H Chesson (1908) His brother, **Robert Isaac Cruikshank,** 1789–1856, was best known as a caricaturist and satirist He also painted miniatures and was a wood engraver

cruiser, large, fast, moderately armed WARSHIP, type intermediate between the battleship and the destroyer The cruiser must be able to protect and to destroy commerce but must also be able to fight side by side with battleships in naval encounters Modern cruisers are divided in two distinct classes, battle cruisers and light cruisers Battle cruisers are small battleships and appear in most naval statistics in one category with the latter The *Hood* was an example of this type These ships represented the effort to combine maximum quality of gun caliber, armor protection, and speed in one The disadvantages of the type were seen in the Second World War when the *Hood* was sunk by a single hit in a short engagement with the German battleship *Bismarck*, on MAY 25, 1941 Another battle cruiser, the *Renown*, was torpedoed by the Japanese off the Malay Peninsula on Dec 10, 1941 Light cruisers are of moderate tonnage, lightly armed and armored, and very fast They are used for scouting, police duties, and other jobs where speed is needed and great defensive strength is unnecessary

crullers see DOUGHNUTS

Crummell, Alexander, 1819–98, American Negro writer, b New York city, studied in an Episcopal Seminary, Boston, grad Queens' College, Cambridge, 1853 He was in Liberia as a missionary, 1853–73, and returned to become rector of St Luke's, Washington The best of his orations appear in *The Future of Africa* (1862) See Vernon Loggins, *The Negro Author* (1931)

Crump, Edward Hull, 1876–, Tennessee political boss, b near Holly Springs, Miss At first (1905 9) a municipal administrator in Memphis, Tenn, he was later mayor (1909 10, 1939 41) and Congressman (1931–35) from Tennessee Meanwhile, he built an efficient political machine which dominated Tennessee elections Crump's boss rule was upset in the 1948 Tennessee Democratic primaries, when his favored candidates for Senator and governor were beaten

Crusades, series of wars undertaken by European Christians between the 11th and 14th cent to recover the Holy Land from Islam In the 7th cent Jerusalem was taken by the caliph OMAR Pilgrimages (see PILGRIM) were not cut off at first, but early in the 11th cent the mad FATIMITE caliph Hakim began to persecute the Christians and profaned and despoiled the Holy Sepulcher Persecution abated after his death, but relations remained strained and became more so when Jerusalem passed from the comparatively tolerant Egyptians to the Seljuk Turks, who in the same year (1071) defeated the Byzantine emperor Romanus IV at Manzikert Late in the 11th cent Emperor ALEXIUS I, threatened by the Moslems, appealed to the West for aid This was not the first appeal of the kind, while it may have helped to determine the time and the route of the **First Crusade,** 1095–99, its precise import is difficult to estimate The direct impetus was given the crusade by the great speech of Pope URBAN II at the Council of Clermont (now Clermont-Ferrand) in 1095 Urban exhorted Christendom to go to war for the Sepulcher, promising that the journey would count as full penance and that the homes of the absent ones would be protected by a truce The speech found immediate response From the crosses that were distributed at this meeting the Crusaders took their name Bishop ADEMAR was designated as papal legate for the crusade, and Count RAYMOND IV of Toulouse was the first of the great leaders of the expedition to take the cross Preached by many wandering preachers, notably by PETER THE HERMIT, the movement spread from France to neighboring countries. The chief factors that made for this enthusiastic response were the high point which religious devotion had reached in Western Europe, the prospect of territorial expansion for the nobles and of rich loot for all, the colonial projects of the Normans (directed against the Byzantine Empire as much as against the Moslem world), the desire, particularly of the Italian cities, to expand trade with the East; and a general awakening to the lure of travel and adventure The conflict between spiritual and material aims, apparent from the first, became increasingly serious The organized host of the crusade was preceded in the spring of 1096 by several undisciplined hordes of French and German peasants WALTER THE PENNILESS led a French group, which passed peacefully through Germany and Hungary, but sacked the district of Belgrade The Bulgarians retaliated, and Walter reached Constantinople with a few scattered bands only They were joined there by the followers of Peter the Hermit, whose progress had been similar A German group started off by massacring and robbing the Jews in the Rhenish cities and later so provoked the king of Hungary that he attacked and dispersed them The bands which had reached Constantinople were speedily transported by Alexius I to Asia Minor, where they were defeated by the Turks The survivors either joined later bands or returned to Europe Alexius began to take fright at the proportions the movement was assuming When, late in 1096, the first of the princes, Hugh of Vermandois, a brother of Philip I of France, reached Constantinople, the emperor persuaded him to take an oath of fealty GODFREY OF BOUILLON and his brother Baldwin (later BALDWIN I of Jerusalem), Raymond of Toulouse, BOHEMOND, TANCRED, Robert of Normandy, and Robert II of Flanders followed early in 1097 All save Tancred and Raymond (who promised only to refrain from hostilities against the Byzantines) took the oath to Alexius, which bound them to accept Alexius as overlord of their conquests Bohemond's subsequent breach of the oath was to cause endless wrangling The armies crossed to Asia Minor, took Nicaea (1097), defeated the Turks at Dorylaeum, and took Antioch (1098) and Ashkelon or Ascalon (1099) Their campaign was crowned in July, 1099, by the taking of Jerusalem The election of Godfrey of Bouillon as Defender of the Holy Sepulcher marked the beginning of the Latin Kingdom of Jerusalem (see JERUSALEM, LATIN KINGDOM OF) Other fiefs, theoretically dependent on Jerusalem, were created, these were the counties of EDESSA (Baldwin) and TRIPOLI (Raymond) and the principality of ANTIOCH (Bohemond) The First Crusade, which thus ended in victory, was the only crusade that achieved more than ephemeral results Until the ultimate fall (1291) of the Latin Kingdom the brunt of the fighting in the Holy Land fell on the Latin princes and their followers and on the great military orders, the KNIGHTS HOSPITALERS and the KNIGHTS TEMPLARS, that rose out of the Crusades The later Crusades were for the most part only expeditions to assist those who already were in the Holy Land, they are a single current, and dates are given them only for convenience The **Second Crusade,** 1147 49, was preached by St BERNARD OF CLAIRVAUX after the fall (1144) of Edessa to the Turks It was led by Emperor CONRAD III, whose army set out first, and by King LOUIS VII of France Both armies passed through the Balkans and pillaged the territory of the Byzantine emperor, MANUEL I, who provided them with transportation to Asia Minor in order to be rid of them The German contingent, already decimated by the Turks, merged with the French, who had fared better, at Acre (1148) A joint attack on Damascus failed because of jealousy, and possibly treachery, among the Latin princes of the Holy Land Conrad returned home in 1148 and was followed (1149) by Louis The Second Crusade thus ended in dismal failure The **Third Crusade,** 1189–92, followed on the capture (1187) of Jerusalem by SALADIN and the defeat of GUY OF LUSIGNAN, REGINALD OF CHÂTILLON, and RAYMOND of Tripoli at Hattin The crusade was preached by Pope Gregory VIII, RICHARD I of England, PHILIP II of France, and Emperor FREDERICK I took part Frederick set out first, but was hindered by the Byzantine emperor, ISAAC II, who had formed an alliance with Saladin Frederick forced his way to the Bosporus, sacked Adrianople, and forced the Greeks to furnish transportation to Asia Minor His progress was broken off by his death in Cilicia (1190) Richard and Philip arrived at ACRE in 1191 The city had been besieged since 1189, but the siege had been prolonged by dissensions between the two chief Christian leaders, Guy of Lusignan and CONRAD, marquis of Montferrat, both of whom claimed the kingship of Jerusalem The city was nevertheless starved out by July, 1191, shortly afterward Philip went home Richard removed his base to Jaffa, which he fortified, and rebuilt Ascalon, which the Moslems had burned down In 1192 he made a truce with Saladin; the Christians retained Jaffa with a narrow strip of coast (all that remained of the kingdom of Jerusalem) and the right of free access to the Holy Sepulcher. Antioch and Tripoli were still

in Christian hands; Cyprus, which Richard I had wrested (1191) from the Byzantines while on his way to the Holy Land, was given to Guy of Lusignan In Oct , 1192, Richard left the Holy Land. The achievements of the Third Crusade were thus slight, and they were almost entirely due to the genius and honesty of Richard and the generosity of Saladin Innocent III, who became pope in 1198, launched the **Fourth Crusade,** 1202–4, which—for reasons that are still debated—was totally diverted from its original course The Crusaders, led mostly by French and Flemish nobles and spurred on by FULK OF NEUILLY, assembled (1202) near Venice To pay some of their passage to Palestine they aided Doge ENRICO DANDOLO and his Venetian forces in recovering Zara from the Hungarians The sack of Zara (1202), violently denounced by the pope, prefaced more serious political schemes Alexius (later ALEXIUS IV), son of the deposed Byzantine emperor Isaac II and brother-in-law of PHILIP OF SWABIA, a sponsor of the crusade, joined the army at Zara and persuaded the leaders to help him depose his uncle, ALEXIUS III In exchange, he promised large sums of money, aid to the Crusaders in conquering Egypt, and the union of the Roman and the Eastern churches The actual decision to turn on Constantinople was largely brought about by Venetian pressure The fleet arrived at the Bosporus in 1203, Alexius III fled, Isaac II and Alexius IV were installed as joint emperors while the fleet remained outside the harbor In 1204 ALEXIUS V overthrew the emperors As a result the Crusaders stormed the city, sacked it, divided the fabulous spoils with the Venetians, and set up the Latin Empire of Constantinople (see CONSTANTINOPLE, LATIN EMPIRE OF). The shameful outcome of the expedition was perhaps partly responsible for the pathetic interlude of the **Children's Crusade,** 1212 Led by a visionary French peasant boy, Stephen of Cloyes, thousands of children embarked at Marseilles, hoping that they would succeed where their elders had betrayed the cause They were sold into slavery by unscrupulous skippers Another group, made up of German children, went eastward by land, most of them perished of hunger and disease Soon afterward Innocent III began to preach the **Fifth Crusade,** 1217–21 King Andrew II of Hungary, Duke Leopold VI of Austria, and JOHN OF BRIENNE were among the leaders of the expedition, which was aimed at Egypt, the center of Moslem strength Damietta was taken in 1219 but had to be evacuated again after the defeat (1221) of an expedition against Cairo The **Sixth Crusade,** 1228–29, undertaken by Emperor FREDERICK II, was simply a peaceful visit, in the course of which the emperor made a truce with the Moslems, securing the partial surrender of Jerusalem and other holy places Frederick crowned himself king of Jerusalem, but did nothing when the Moslems later reoccupied the city THIBAUT IV of Navarre and Champagne, however, reopened (1239) the wars, continued in 1240 by Richard, earl of Cornwall They were unable to compose the quarrels between the Knights Hospitalers and the Knights Templars In 1244 the Templars, who advocated an alliance with the sultan of Damascus, rather than with Egypt, prevailed Indeed, without an alliance with one of the disunited Moslem powers the Christian position seemed untenable A treaty (1244) with Damascus restored Palestine to the Christians, but in the same year the Egyptian MAMELUKES took Jerusalem and utterly routed the Christians at Gaza This event led to the **Seventh Crusade,** 1148–54, due solely to the enterprise of LOUIS IX of France Egypt again was the object of attack, Damietta fell again (1249), and an expedition to Cairo miscarried (1250) Louis, after his release from captivity, spent four years improving the fortifications left to the Christians in the Holy Land The fall (1268) of Jaffa and Antioch to the Moslems caused Louis IX to undertake the **Eighth Crusade,** 1270, which was cut short by his death before Tunis The **Ninth Crusade,** 1271–72, was led by Prince Edward (later EDWARD I of England) He landed at Acre, but retired after concluding a truce In 1289 Tripoli fell to the Moslems, and in 1291 Acre, the last Christian stronghold, followed

Heritage of the Crusades After the fall of Acre no more Crusades were undertaken in the Holy Land, though several were preached Even before that date, however, the term *crusade* was also used for other expeditions, sanctioned by the pope, against heathens and heretics ALBERT THE BEAR and HENRY THE LION led (1147) a crusade against the WENDS in NE Germany, Hermann von Salza in 1226 received crusading privileges for the TEUTONIC KNIGHTS against the Prussians, the pope proclaimed (1228) a crusade against Emperor Frederick II, and several crusades were fought against the ALBIGENSES and the Hussites (see HUSSITE WARS). Moreover, war against the Turks remained the chief problem of Eastern Europe for centuries after 1291. Campaigns akin to crusades were those of John HUNYADI, Don JOHN OF AUSTRIA, and JOHN III of Poland In their consequences, the crusades in Europe were as important as those in the Holy Land. However, though the Crusades in the Holy Land failed in their chief purpose, they exercised an incalculable influence on Western civilization by familiarizing the relatively barbarous Occident with the luxury of the East, by stimulating trade, and by increasing geographical knowledge At no time since the crusading period have the Occident and the Orient been as separate as they had been before In the Levant the Crusades left a lasting imprint Monumental castles built by the crusaders remain, such as that of KRAK, and French was the basis of the lingua franca The chief material beneficiaries of the Crusades were Venice and the other great Mediterranean ports The chief spiritual beneficiary was the pope, whose prestige was enhanced by his position as leader of the highest enterprise of united Christendom In the arts, and particularly in literature, the influence of the Crusades was tremendous The ideal of chivalry was also developed by the Crusades The chief collection of sources is *Recueil des historiens des croisades* (16 vols , 1841–1906), several chronicles are translated in the "Records of Civilization" series Outstanding among eyewitness accounts are those of WILLIAM OF TYRE, RICHARD OF DEVIZES, Geoffroi de VILLEHARDOUIN, and Jean de JOINVILLE Recent treatments in English include T A Archer and C L Kingsford, *The Crusades* (1895), W B Stevenson, *Crusaders in the East* (1907), D C Munro, *The Children's Crusade* (1914), A C Krey, *The First Crusade the Accounts of Eye-Witnesses and Participants* (1921), Ernest Barker, *The Crusades* (1923), J K Wright, *Geographical Lore of the Time of the Crusades* (1925)

crustacean (krŭstā'shŭn), animal of the class Crustacea of the phylum Arthropoda Included in the class are the CRAB, LOBSTER, SHRIMP, CRAYFISH, BARNACLE, water flea or daphnia, cyclops, pill bug, and sow bug All have jointed appendages The body and the appendages have a covering or exoskeleton which contains chitin. Some forms eat only flesh, some eat only plants, and others are omnivorous Many are parasites There are no true blood vessels, but there is usually a heart to circulate the almost colorless blood Crustaceans breathe by means of gills During development most forms undergo a metamorphosis The rigid body covering is molted periodically as the animal grows

Cruveilhier, Jean (zhäⁿ' krüvĕy ā'), 1791–1874, French physician A professor at the Univ of Paris from 1836, he introduced the descriptive method into the study of pathology His works include *The Anatomy of the Human Body* (2 vols , 1829–42, Eng tr , 1844)

Cruz, Juana Inés de la : see JUANA INÉS DE LA CRUZ.

Cruz, Juan de la see JOHN OF THE CROSS, SAINT

Cruz, Ramón de la (rämōn' dā lä krōōth'), 1731–94, Spanish dramatist He wrote tragedies, translated many French and Italian plays, and made the first Spanish version (1772) of HAMLET He owes his fame to his *sainetes* (about 300), short comedies and musical plays depicting the life of the middle and lower classes, especially of Madrid The *sainetes* are masterpieces of wit and realism

cryolite or **kryolite** (both krī'ulīt) [Gr , = frost stone], a mineral usually pure white or colorless but sometimes tinted in shades of pink, brown, or even black and having a luster like that of wax Chemically, it is a double fluoride of sodium and aluminum Because of its hardness, comparatively low melting point, and translucence, it is used in the manufacture of lamp shades, extremely hard glass and porcelain, and ornaments It is used also as a source of soda, aluminum salts, fluorides, hydrofluoric acid (by the action of sulphuric acid), and aluminum It was discovered in Greenland in 1794 and occurs almost nowhere else Cryolite has been produced synthetically

crypt (krĭpt) [Gr , = hidden], burial chamber beneath the main level of a church In the 9th cent , church burial for clergy and some laymen became popular There already had been, since the CATACOMBS, in many churches, a small chamber beneath the high altar, containing relics or the tomb of a martyr over which the church had been built Such chapels were developed into the extensive crypts of the Middle Ages which, in many churches of the 11th and the 12th cent , occupied the entire space beneath the sanctuary An early small crypt is that of Sant' Apollinare in Classe (A D 534) at Ravenna, Italy At Canterbury the 12th-century crypt forms a large and complete lower church in itself At Chartres and Bourges are crypts of the developed Gothic type Sometimes crypts were only partly sunk, the level of the chancel being raised to provide sufficient height for the crypt beneath, as in the 11th-century churches of San Miniato at Florence and San Zeno at Verona The chamber of relics developed in another direction also—into a recess in the altar stone, this is now universal in the Western rite of the Roman Catholic Church

cryptography (krĭptŏ'grŭfē) [Gr , = hidden writing], art of secret writing, employed from ancient times A cryptogram is a secret message or the form in which it is couched In the latter sense the term includes codes, ciphers, invisible writing, or any of the devices by which the true meaning is concealed from the casual reader and is discernible only to one who holds the proper key Codes used in the transaction of business are usually systems of pronounceable words with meanings listed in code books held by the sending and receiving firms Ciphers, on the other hand, often consist of unpronounceable words made up by the transposition of letters within the message or the substitution of one letter for another Numbers may also be used as substitutes for letters Francis Bacon's celebrated cipher (1605) was an arrangement of the letters *a* and *b* in five letter compounds Many elaborate devices for writing in cipher and for decoding the enciphered message have been invented Complex cipher systems in which the message is couched according to one series of letter substitutions and the resulting cryptogram recouched according to one or more new series are difficult to decode In modern times cryptography and the solution of cryptograms are jealously controlled by governments, and even knowledge of general methods is kept secret See H. F. Gaines, *Elementary Cryptanalysis* (1939)

Crystal, suburban village (pop 2,373), E Minn., NW of Minneapolis

crystal, solid having a definite internal structure which is the result of the arrangement of the atoms of its constituents and a definite external form—that of a polyhedron bounded by natural plane surfaces—which is the manifestation of the internal structure The assumption of the crystal form by a substance when it passes from a liquid, gaseous, or molten state to the solid state or when it goes out of solution (as when a quantity of the solvent is evaporated) is called crystallization. When some substances crystallize from a solution, the crystals hold a definite amount of water in chemical combination This water, known as water of crystallization, can be driven off by heat, and when this is done the substance generally loses its crystalline form and becomes amorphous In their internal structure, crystals are not considered to be "solid," i e , one continuous mass, but to be formed by the arrangement of the atoms in a latticework, each having a relatively fixed position in space The study of crystal structure was notably advanced by the work of Sir W H Bragg and Sir W L Bragg Chemically, crystals have a definite composition A crystal of calcium carbonate, for example, is composed of definite parts by weight of calcium, carbon, and oxygen From a consideration of this substance, however, it is found that the crystalline form is not necessarily determined by the chemical composition, for calcium carbonate crystallizes in two distinct forms of crystals In the same way the element carbon appears as graphite and diamond In nature, crystals seem, upon superficial examination, to be of infinite variety, because of differences in the size, shape, and number of their faces Nevertheless, definite similarity in form does exist and permits classification into species, throughout each one of which the angles between corresponding intersecting faces are constant Crystalline species are grouped, according to the type of symmetry which they display, into 32 classes, which in turn are grouped into six systems on the basis of the relationships of their axes, i e , imaginary straight lines passing through the ideal centers of the crystals Crystals may be symmetrical with relation to planes, axes, and centers of symmetry Planes of symmetry divide crystals into equal parts (mirror images) which correspond, point for point, angle for angle, and face for face Axes of symmetry are imaginary lines about which the crystal may be considered to revolve, assuming, after passing through a revolution of 60°, 90°, 120°, or 180°, the identical position in space which it originally had Centers of symmetry are points from which imaginary straight lines may be drawn which will pass through points equidistant from the center on opposite sides The crystalline systems are cubic or isometric (three equal axes, intersecting at right angles), hexagonal (three equal axes, intersecting at 60° angles in a horizontal plane, and a fourth, longer or shorter, axis, perpendicular to the plane of the other three), tetragonal (two axes equal, horizontal, and at right angles and one axis longer or shorter than the other two and perpendicular to their plane), orthorhombic (three unequal axes intersecting at right angles), monoclinic (three unequal axes, two intersecting at an oblique angle and the third perpendicular to the plane of the other two), and triclinic (three unequal axes intersecting at oblique angles) In all systems in which the axes are unequal, there is a definite axial ratio for each crystal species This ratio is simpler in the hexagonal and tetragonal systems than in the orthorhombic, monoclinic, and triclinic systems In the triclinic and monoclinic systems the angles at the intersection of the axes must also be given as a part of the elements of crystallization Crystals are sometimes compound, staurolite, for example, often occurs in the form of cruciform twinned crystals Crystals differ in physical properties, i e , in hardness, cleavage (splitting along a plane), optical properties, heat conductivity, and electrical conductivity. These properties are especially important since upon

them is based the use to which the crystals are put in industry For example, certain crystals, *e g*, those of galena and molybdenite, were formerly much used for the so-called crystal detector in radio receiving before the application of the vacuum tube It was discovered that these crystals permit an electric current to flow along one axis (in one direction), but offer a high resistance to its flow along another, this difference in conductivity makes it possible (when such a crystal is introduced into a receiving circuit) to group waves of radio-frequency *to which* neither the diaphragm of a telephone receiver nor that of the human ear are sensitive and produce waves of audio-frequency. See E S Dana, *A Textbook of Mineralogy* (4th ed, revised and enlarged by W E Ford, 1932), E H Kraus and W F Hunt, *Mineralogy* (1932), F C Phillips, *Introduction to Crystallography* (1947)

Crystal City. 1 City (pop 3,417), E Mo, on the Mississippi below St Louis, settled 1900, inc 1911 It is a "company town," owned by the Pittsburgh Plate Glass Company Silica pits are in the area 2 City (1940 pop 6,529, 1947 estimated pop 8,000), co seat of Zavala co, SW Texas, SW of San Antonio In an irrigated winter-garden area, it boasts of being the "spinach capital of the world" and has in its city square a statue of the spinach-eating comic character, Popeye the Sailor There is a state experimental farm near by

Crystal Falls, city (pop 2,641), co seat of Iron co, W Upper Peninsula, N Mich, near falls on the Paint river, inc as a village 1889, as a city 1899 It is a thriving mining city on the Menominee iron range, and near-by lakes attract tourists Woodenware is made here

crystal gazing, ancient and widespread mode of divination, in which a clairvoyant state is induced by gazing on a clear surface, such as a crystal ball, a pool, a mirror, or some other bright object It is said that persons or scenes, distant in time or space, may appear to the gazer Phenomena such as the capture of criminals and the recovery of lost or stolen goods have been claimed See APPARITION and TELEPATHY

Crystal Lake, summer resort city (pop 3,917), NE Ill, NW of Chicago, in a farm area, inc 1914 Radio equipment is made

Crystal Palace, building designed by Sir Joseph Paxton and erected in Hyde Park, London, for the Great Exhibition in 1851 In 1854 it was removed to Sydenham, where, until its damage by fire in 1936, it housed a museum of sculpture, pictures, and architecture and was used for concerts In 1941 its demolition was completed because it served as a guide to enemy air raiders

Crystal Springs, town (pop 2,855), SW Miss, SSW of Jackson It is the shipping center for a cotton and truck (especially tomatoes) area

Cs, chemical symbol of the element CESIUM

Csaba, Hungary see BEKESCSABA

Csepel (chĕ'pĕl), city (pop 46,171), on Csepel island, Hungary It has aluminum and iron mills and machine and munitions factories

Csepel, island 30 mi long, Hungary, in the Danube, S of Budapest In the northern section are the city and harbor of the same name The rest of the island is agricultural

Csongrad (chōn'grad), Hung *Csongrád*, city (pop 25,594), S Hungary, on the Tisza and Koros rivers It is an agricultural market center

Ctesias (tē'shēus, tē'sēus), 5th cent B C, Greek historian and physician of Cnidus He lived many years in Persia as court physician Photius' abridgments alone remain of Ctesias' histories, *Persica* and *Indica*, in them Ctesias hoped to show Herodotus' unreliability

Ctesibius (tĭsĭ'bēus), 2d cent B C, Alexandrian Greek mechanical genius He is reputed the first to discover and apply the expansive power of air as a motive force Among the inventions ascribed to him are a water clock (clepsydra), a hydraulic organ, and a force pump

Ctesiphon (tĕ'sĭfŏn), fl 340 B C, Athenian orator He was accused (330 B C) by AESCHINES of having proposed illegal honors for DEMOSTHENES, in the form of a gold crown Demosthenes defended him The orations of Aeschines and Demosthenes on the occasion, both called *On the Crown*, are among the greatest Greek orations

Ctesiphon, ruined ancient city, near Baghdad, Iraq, on the left bank of the Tigris opposite Seleucia and at the mouth of the Diyala. After 129 B.C it was the winter residence of the Parthian kings Ctesiphon grew rapidly and was of renowned splendor The Romans captured it in warring against Parthia It became the capital of the Sassanidae in c.266 In 636 it was taken and plundered by the Arabs The ruins of the Sassanid palace are impressive Its site marks the farthest advance of Great Britain against Turkey in the First World War.

Cu, chemical symbol of the element COPPER

Cuauhtémoc (kōō-outā'mōk), d. 1525, Aztec emperor Succeeding the brother of MONTEZUMA II in 1520, Cuauhtémoc failed to unite the Indian city-states of the Valley of Mexico against the Spanish after the expulsion of Cortés from TENOCHTITLÁN. He courageously defended his capital, but was taken prisoner when it fell (1521) after a three-month siege Tortured to reveal his treasure, Cuauhtémoc replied that it lay at the bottom of the lake—where the Spaniards had perished with it in their flight on the *noche triste* Cortés took Cuauhtémoc with him on his march to Honduras and, accusing the chief of treason, had him hanged The name occurs also as Cuauhtemoctzín, Guatémoc, Guatemozín, and Quauhtémoc.

Cuautla (kwou'tlä), city (pop 6,431), Morelos, central Mexico Its mild climate, hot springs, and lovely scenery make it a resort It is also the center for a district producing sugar, rice, and wine Cuautla is most important, however, for the heroic defense against Spanish siege made here in 1812 by patriot forces under José María Morelos y Pavón, who finally cut through the besieging forces Its fuller name is Cuautla Morelos, and it is sometimes called Ciudad Morelos

Cuba (kū'bu, Span kōō'vä), republic (44,218 sq mi, pop 4,778,583, including the Isle of Pines), coextensive with the island of Cuba (and the Isle of PINES), westernmost island of the West Indies HAVANA is the capital and the largest city (also the largest city of the West Indies) The island (c 700 mi long east and west and averaging 50 mi in breadth) is the largest of the West Indies and lies strategically at the entrance to the Gulf of MEXICO, with the western tip only 90 mi S of Key West, Fla The south coast is washed by the Caribbean, the north by the Atlantic, and in the east the Windward Channel separates Cuba from Hispaniola (on which are Haiti and the Dominican Republic) The shores, often inundated, are generally marshy and are fringed by coral reefs and cays Bottlenecked bays offer many fine harbors for the ports—Havana, MATANZAS, CÁRDENAS, NUEVITAS, GUANTÁNAMO (with a U S naval base), SANTIAGO DE CUBA (the second city in size), and CIENFUEGOS In the interior there are still forests, yielding timber and naval stores Of the many rivers (rainfall averages 50 in annually but increases inland) most are very short, and only the CAUTO is important There are three mountainous regions In the east the SIERRA MAESTRA is wild and rough, rising to 6,560 ft in the PICO TURQUINO, these mountains yield iron (Cuba is said to have extensive deposits), manganese, copper, nickel, chromium, and barite The lower slopes of the mountains are given over to coffee growing In the west there is a lower range, the Sierra de los ÓRGANOS, noted for its limestone cliffs In the west too is the VUELTA ABAJO, a tobacco-growing region that has helped to make Havana cigars a world standard of high quality The third mountainous region is the Sierra Trinidad, a jumbled mass of hills interrupting the plains and rolling country of central Cuba, the region of vast sugar plantations The topography, the semitropical and generally *uniform climate* (marred occasionally by hurricanes, particularly in the west), and the soil are suitable for various crops, but after it was introduced in the late 18th cent by refugees from Hispaniola, sugar cane became dominant Attempts at diversification since the disastrous sugar slump of the 1920s have been successful, and Cuba is self-sufficient in most agricultural products Yet sugar (and its derivatives such as molasses and rum) still is dominant, accounting for about three quarters of Cuba's exports by volume Sugar *centrales* [mills] dot the countryside and are served by a dense railroad net The renowned tobacco, grown since pre-Columbian days and coming mostly from Pinar del Río prov (outside the sugar belt), is second in the list of exports The bulk of these and other exports (bananas, coffee, pineapples, henequen, honey, winter vegetables, sponges, hides, and minerals) goes to the United States Economic ties with the North American coast have been strong since colonial days, when much of the trade between the British colonies and the Spanish colony of Cuba was illegal Cuba was discovered in 1492 by Christopher Columbus By 1508 the Spanish had explored the coast line and by 1511 they had gained a permanent foothold under the leadership of Diego de VELÁZQUEZ, who founded BARACOA near the eastern tip While Santiago de Cuba and Havana (settled at its present location in 1519) were being firmly founded, Cuba was already serving as the base for Spanish explorations of the Americas It became an assembly point for treasure fleets from the viceroyalty of New Spain and therefore offered a target for French and British buccaneers, who attacked the little island cities incessantly The native ARAWAK Indians soon died off and were replaced as laborers by Negroes, and Negroes contributed a great deal to the social and political evolution of the island, partially by revolts against their miserable lot. The white element has, however, been continuously replenished by immigration (chiefly from Spain), today about a quarter of the population is classified as Negro Despite the trade restrictions of Spanish mercantilist policies and despite the attacks of pirates, Cuba, the Pearl of the Antilles, prospered. In the imperial wars of the 18th cent other nations looked covetously on Spanish possession, and in the Seven Years War (the last of the French and Indian Wars in North America), a British force under Sir George Pocock and the earl of Albemarle captured and briefly (1762–63) held Havana Cuba, however, remained Spanish and continued so even when by revolutions against Spain in the early 19th cent most of the Spanish Empire in the Americas was being transformed into new republics In the wealthy sugar-producing island, however, the frequent risings were quickly crushed The urge for independence stiffened when representation in the Spanish Cortes, granted in 1810, was withdrawn, yet neither internal unrest nor filibustering expeditions (1848–51) led by Narciso LÓPEZ achieved anything The desire of U S Southerners to acquire the island as a slave state also failed (see OSTEND MANIFESTO). Spain, uneasy, promised liberal reforms, but they were sporadically applied with intervals of repression, and discontent grew, to break forth with the proclamation (the Grito de Yara) issued by Carlos Manuel de CÉSPEDES, which initiated the TEN YEARS WAR The revolt, which included among its leaders MÁXIMO GÓMEZ Y BÁEZ, Calixto GARCÍA Y ÍÑIGUES (later of *The Message to Garcia* fame), and Tomás ESTRADA PALMA, was ultimately crushed by Martínez de Campos, but its heritage was increased bitterness and new abortive revolts Finally in 1895 a revolt broke out with the brilliant poet José MARTÍ as its chief spokesman There was strong sentiment in the United States in favor of the rebels, which ultimately after the sinking of the *Maine* in Havana harbor led the United States to declare war on Spain (see SPANISH-AMERICAN WAR) The Cuban and U S forces were triumphant, and the treaty ending the war in 1898 (ratified 1899) established Cuba as an independent republic, though under U S protection U S military occupation of the island continued until 1902 The republic was then actually launched with Estrada Palma as president and Enoch H CROWDER as first U.S ambassador The Platt Amendment (see PLATT, THOMAS COLLIER) tied Cuba to the United States by provision for the right of the United States to intervene in Cuban affairs This arrangement was loudly decried in Latin America as imperialism and met also with liberal opposition in the United States The right to intervene was however, exercised sparingly The American regime, notably under Leonard WOOD, brought improved material conditions, and the conquest of yellow fever through Walter REED, Carlos J FINLAY, and others was a heroic achievement, of inestimable value to Cuba U S investment in Cuban enterprises increased, and plantations, refineries, railroads, and factories passed to American (and thus absentee) ownership The economic dependence of Cuba on the United States led to charges of "Yankee imperialism," strengthened when a revolt led by José Miguel GÓMEZ against Estrada Palma led to new American military occupation (1906–9) William Howard TAFT and Charles MAGOON acted as provisional governors After supervising the elections, the U S forces withdrew, only to return to guarantee order in the Negro insurrection of 1912 Foreign investments in the sugar plantations and industries encouraged the one-crop economy The government of Mario G MENOCAL was generally criticized as corrupt, but the First World War raised sugar prices to the point where Cuba enjoyed its "dance of millions" The ephemeral wealth was followed by collapse when the revival of the European beet-sugar industry and the declining U S sugar quota brought stringency The bad economic situation played its part in bringing on revolutions, fraudulent elections, and dictatorships A hurricane that devastated Havana prov aggravated the situation ,Gerardo MACHADO as president instituted vigorous measures He forwarded crop diversification, exploitation of mineral wealth, introduction of new industries, and encouragement of the tourist trade The central east-west highway across the island was completed in 1931 Yet the regime, facing democratic opposition, abandoned its great projects in favor of suppressing opponents A period of chaos and bloodshed followed With F D Roosevelt's administration a new era in U S relations with Cuba began Sumner Welles was sent as ambassador The Platt Amendment was abandoned in 1934 The United States sugar quota was revised, and tariff rulings were changed to favor Cuba Machado, overthrown by revolution, fled Ramón GRAU SAN MARTÍN, Carlos MENDIETA, and Miguel Mariano Gómez were briefly heads of the Cuban state, but the influence of Fulgencio BATISTA Y ZALDÍVAR, a former army sergeant, grew strong, and he was the most prominent figure in Cuban politics to 1944 Cuba declared war on the Axis Powers in the Second World War in 1941 Ramón Grau San Martín was constitutionally elected president in June, 1944, and pushed social reforms, despite opposition of Communist labor unions and despite vested interests In 1948 Carlos Río Jocarrás was elected San Martín's successor against a Communist-sponsored candidate and a Batista-sponsored candidate. The government set out bravely to attack the economic and international problems of Cuba, which are complicated by the fact that in the cane-harvesting time labor is short and laborers must be imported while in slack season there is much unem-

ployment. The added difficulties of U.S. ownership of many of the sugar *centrales* and the need for further diversification make the proper use of the rich Cuban resources a problem of statesmanship. See W. F. Johnson, *The History of Cuba* (4 vols with an extra volume on resources, 1920), C. E. Chapman, *A History of the Cuban Republic* (1927), R. H. Fitzgibbon, *Cuba and the United States* (1936), Erna Fergusson, *Cuba* (1946).

Cuba. 1 City (pop. 1,620), central Ill., SW of Peoria, in a farm and coal area, inc. 1853. 2 City (pop. 1,033), E. Mo., SW of St. Louis, in an Ozark farm and resort area, laid out 1857, inc. 1877. 3 Village (pop. 1,699), W. N.Y., NE of Olean; inc. 1850. Cheese is made here. Cuba Lake, near by, is a resort.

Cuba City, city (pop. 1,259), extreme SW Wis., NE of Dubuque, Iowa, inc. 1925.

Cubberley, Ellwood Patterson, 1868–1941, American educator, b. Andrews, Ind., grad. Univ. of Indiana, 1891, Ph.D. Columbia, 1905. He served as president (1891–96) of Vincennes Univ. and as superintendent of schools (1896–98) in San Diego, Calif. In 1898 he joined the faculty of Stanford, becoming professor of education in 1906 and in 1917 dean of the school of education, which he administered until his retirement in 1933. His works include *A History of Education* (1920), *Public School Administration* (1929), and *Public Education in the United States* (1934).

cube, in geometry, a regular solid bounded by six equal squares. All adjacent faces of a cube are perpendicular to each other. Any one face of a cube may be its base. The dimensions of a cube are the lengths of the three edges which meet at any vertex. The volume of a cube is equal to the product of its dimensions, and since its dimensions are equal, the volume is equal to the third power or cube of any one of its dimensions. Hence, in arithmetic and algebra, the cube of a number or letter is that number or letter raised to the third power. For example, the cube of 4 is $4^3=4\times4\times4=64$. Hence the cube of a number is the product of the number and its square. The problem to find a cube with a volume equal to twice that of a given cube is known as the problem of the duplication of the cube. Like the problem of squaring the circle, it was first posed in ancient times and has been proved by modern mathematicians to be impossible with only Euclidean constructions.

cubeb (kū'bĕb), dried, brownish, unripe berry of a climbing PEPPER plant, *Piper cubeba*, and also of some other species, native to the East and West Indies. For use as a condiment, cubebs are ground or crushed like ordinary black pepper, but the resulting substance is more aromatic and less biting. Various chemical compounds are present in the berries, including a resin, an acid (cubebic acid), and a volatile, essential oil. Cubebs have been used in medicine in the treatment of catarrhal conditions of the nose and throat, in treating gonorrhea, and sometimes as a stimulant in digestive disorders. They are administered in various ways. For treating catarrh they are ground and packed in cigarettes, taking the place of the tobacco.

cube root, the third root of a number. For example, the cube root of 27, written $\sqrt[3]{27}$, is 3, since 3 cubed or 3 to the third power, $3\times3\times3$, equals 27. See ROOT.

cubism, art movement primarily in painting, originating c. 1910 in France. It was a revolt against representational art and tended to reduce painting to design in space based on three-dimensional geometry. One of the earliest forms of modern ABSTRACT ART, cubism was perhaps the most fruitful. While few painters have remained faithful to its tenets, many are indebted to its discipline. Among the early cubists were Picasso, Braque, Jean Metzinger, Juan Gris, Marcel Duchamps, and Fernand Léger. Some of them found inspiration in the painting of Cézanne and in Negro sculpture. See Alfred H. Barr, Jr., *Cubism and Abstract Art* (1936), Guillaume Apollinaire, *The Cubist Painters* (1913, Eng. tr., 1949), D. H. Kahnweiler, *The Rise of Cubism* (1915, Eng. tr., 1949).

Cuchulain (kōōkhū'lĭn, kōō'khōōlĭn) [Irish,=the hound of Culan], Irish legendary hero of Ulster, of prodigious strength and of remarkable beauty. He is probably to be identified with a solar deity. He is the central figure of the Ulster legends, the greatest work of which is the *Táin Bó Cualnge* (tän' bō' kōōl'nĕ) [the cattle raid of Cooley]. The great feature of this is Cuchulam's stand at a ford on the boundary of Ulster, defending singlehanded his province against the armies of the rest of Ireland. The high points are the duels of Cuchulain with his dearest friend, Fer-diad, and with his own son.

cuckoo (kōō'kōō), name for a number of birds, most abundant in the tropics, but widely distributed in both hemispheres except in the colder regions. Cuckoos are mainly insectivorous, arboreal birds, with slightly decurved bills, long tails, and usually dull plumage. Also included in the family are the ROAD RUNNER, the ani, the trogon, and the KINGFISHER. The common European cuckoo, a grayish bird with a barred breast, makes no nest. Each female visits the nests of smaller birds in a selected territory and replaces an egg of the nest builder with one of her own which sometimes resembles that of the species she chooses to parasitize. The young cuckoo, after thrusting the remaining eggs or young from the nest, is the sole care of the foster parents. The bird's simple but musical song of two notes gives it its name. References to the cuckoo appear in English poetry and in mythology, and the song has been imitated in Beethoven's Pastoral Symphony. In Asia are found the related Baker's and Himalaya cuckoos. The black and the yellow-billed cuckoos of the United States are slender, long-billed, olive-brown birds of great value because they consume destructive insects, especially hairy caterpillars, which few birds eat. They almost always rear their own young. Their songs or calls are similar, mainly a series of "kuks" and "kows," those of the black-billed species being generally the softer. Maynard's cuckoo, found from S. Florida to the Bahamas, and the California cuckoo are related.

cucumber, common garden vegetable, the fruit of a trailing annual vine (*Cucumis sativus*), descended from a long-cultivated Asian plant. It is much used for salads and pickling. Of several varieties, the white spine is most grown in America. The cucumber is an important garden and field crop and is forced in greenhouses. The immature fruits are sometimes called gherkins, but the true gherkin is a related species (*Cucumis angurus*).

cucumber tree: see MAGNOLIA.

Cúcuta (kōō'kōōtä), city (pop. 37,323), NE Colombia, c. 10 mi. from the Venezuelan border, on the eastern cordillera of the Colombian Andes. Cúcuta grew as the center of a rich coffee-raising region, with outlets by rail to Lake Maracaibo and by highway to Bogotá and Venezuela. At Cúcuta the constituent congress of 1821 met to draft the constitution of Greater Colombia (present Venezuela and Colombia). In writing the constitution the delegates largely followed the ideas of Simón BOLÍVAR. Cúcuta was rebuilt after an earthquake in 1875.

Cudahy, Michael (kū'dūhē), 1841–1910, American meat packer, b. Co. Kilkenny, Ireland. He went (1849) to Milwaukee and after 1856 worked for meat-packing firms. In the 1870s he introduced refrigeration into the meat-packing industry. He became a partner of Philip D. Armour and later, with his brother John, established a packing company in Omaha, Nebr.

Cudahy (kū'dūhē), industrial city (pop. 10,561), SE Wis., on Lake Michigan between Milwaukee and South Milwaukee, inc. 1906. In 1892 Patrick Cudahy, brother of Michael Cudahy, founded the city and its meat-packing industry.

Cuddalore or **Kudalur** (both kŭdŭlôr'), town (pop. 60,632), E. central Madras state, India, a port on the Bay of Bengal. The oldest architectural monument is Fort St. David, a stronghold of Tippoo Sahib. Peanut products, cashew nuts, and textiles are the chief exports.

Cudworth, Ralph, 1617–88, English theologian and philosopher. He was one of the CAMBRIDGE PLATONISTS, a group which appealed to mysticism as against both materialism and divine authority. Cudworth's most ambitious work, *The True Intellectual System of the Universe*, was never completed. The first part, a critique of atheism, appeared in 1678, and two parts were published posthumously as *A Treatise concerning Eternal and Immutable Morality* (1731) and *A Treatise on Freewill* (1838). Cudworth attacked the materialism of Hobbes and held that moral ideas have transcendent existence.

Cuenca (kwĕng'kä), city (1944 estimated pop. 52,519, alt. c. 8,000 ft.), S central Ecuador. Founded in 1557, Cuenca is in one of the two richest agricultural basins (the other is Quito) of the Ecuadorian Andes. Chiefly raised are grains, subsistence crops, and some cattle. Rail and highway connections make it the commercial center of S. Ecuador. The chief industry is the weaving of Panama hats from the leaf of the *toquilla* palm, brought from the coast.

Cuenca, city (pop. 23,038), capital of Cuenca prov., E. central Spain, in New Castile, on a rocky hill circled by the Júcar and Huécar rivers. Taken (1177) from the Moors by Alfonso VIII of Castile, it received (c. 1190) a very liberal charter. It was taken (1706) by the English in the War of the Spanish Succession and was sacked (1808, 1810) by the French in the Peninsular War. There is an old castle above the town. The Gothic cathedral dates from the 13th cent.

Cuernavaca (kwĕrnävä'kä), city (pop. 14,336), capital of Morelos, central Mexico. With a mild climate, Cuernavaca is a popular tourist and health resort. There are beautiful churches, monasteries, a palace built by Cortés and now decorated with murals by Diego Rivera, and a formal garden, frequently used by Maximilian and Carlotta. Near by is the Toltec ruin, Xochicalco, built over limestone caves and utilizing the caves as part of the ancient city plan.

Cuero (kwâ'rō), city (pop. 5,474), co. seat of De Witt co., S Texas, on the Guadalupe and ESE of San Antonio; founded 1872, inc. 1873. Early an important cow town, it now processes cotton, milk, and other produce of the rich farm area. The Turkey Trot each November publicizes turkey raising.

Cueva, Beatriz de la (bäätrēs' dā lä kwā'vä), d. 1541, governor of Guatemala. After the death of her husband, Pedro de ALVARADO, she maneuvered her own election and became probably the only woman to govern a major American political division in Spanish times. A young, beautiful, and ambitious woman who styled herself the "hapless one," she was drowned a few weeks later in the destruction of CIUDAD VIEJA by a mysterious flood from the volcano Agua.

Cueva, Juan de la (hwän' dā lä kwā'vä), 1550?–1610?, Spanish dramatist, one of the forerunners of Lope de Vega. He spent three years in Mexico (1574–77). Juan de la Cueva wrote many plays inspired by Spanish history and legends, the most famous of which is *Los siete infantes de Lara*, presented in the year 1579. Another important play is *El infamador* [the libertine], presented in 1581, a precursor of the plays of cape and sword written during the Golden Age.

Cui, César Antonovich (tsāsär' äntô'nôvĭch kōō'), 1835–1918, Russian composer and critic, by profession a military engineer. As critic of a large daily newspaper he proclaimed the ideals of the Russian nationalist composers. His own compositions, however, do not fulfill these principles. Although he had little technical ability or originality, he wrote operas, over 200 songs, orchestral music, and salon music. See V. I. Seroff, *The Mighty Five* (1948).

Cuiabá (kōōyubä'), city (pop. 18,861), capital of Mato Grosso state, W Brazil, at the head of navigation on the Cuiabá river. Founded in the gold rush of the early 18th cent., it has been the capital of Mato Grosso since shortly before Brazil gained independence. Gold mining has declined but the city is a shipping point for cattle country. The name formerly was spelled Cuyabá.

Cujas or **Cujacius, Jacques** (zhäk' küshäs', kūjā'shŭs), 1522–90, French jurist and scholar of Roman law. He taught at Toulouse, Bourges, and elsewhere. Unlike previous scholars, he was relatively unconcerned with the practical applications of Roman law and wished primarily to study the ancient texts in their relation to history and literature. He is often considered the founder of the historical school of jurisprudence. Much of his critical effort was directed to reconstructing in the original form the excerpts from eminent Roman jurists quoted in the Corpus Juris Civilis. Cujas prepared critical editions of works of Ulpian and Paulus.

Culberson, Charles Allen (kŭl'bûrsŭn), 1855–1925, U.S. Senator (1899–1923), b. Dadeville, Ala., grad. Virginia Military Academy, 1874, son of David Browning Culberson. He studied law at the Univ. of Virginia, was admitted (1877) to the bar, and practiced law in Texas. He served as attorney general (1890–94) and governor (1894–98) of Texas. As U.S. Senator, C. A. Culberson was chairman (1913–19) of the judiciary committee and Democratic minority leader for a time. See biography by J. W. Madden (1929).

Culberson, David Browning, 1830–1900, U.S. Congressman (1875–97), b. Troup co., Ga., father of Charles Allen Culberson. After he was admitted (1851) to the bar, he practiced in Dadeville, Ala., and then (1856) moved to Texas. He was a member (1859) of the state legislature and served in the Confederate army in the Civil War. In Congress, D. B. Culberson, a Democrat, was particularly known as a staunch defender of the Sherman Anti-Trust Act.

Culbertson, Ely (ē'lē kŭl'bŭrtsun), 1893–, American expert on contract bridge, b. Rumania. His father was an American engineer then living in Rumania, and his mother was of Russian parentage. He met with many adventures in his youth, and after removing to Russia with his family, he traveled to Spain, Switzerland, Canada, and Mexico and then settled in the United States. Culbertson published *The Contract Bridge Blue Book* (1930), won several bridge tournaments, widely publicized contract bridge, and became one of the leading figures of the game. After the Second World War he wrote and lectured on world peace, setting forth his plans in the book *Must We Fight Russia?* (1946). See his autobiography, *The Strange Lives of One Man* (1940).

Culdees (kŭldēz') [Irish,=servant of God], ancient monks of the Celtic church, found especially in Ireland and Scotland, but also in England, Wales, and on the Continent. The 8th and 9th cent. seem to have been their best period. How they differed from other monks is not known, their characteristic was perhaps a community of anchorites' cells. There are only occasional examples of Culdees after the reforms of St. Malachy.

Culebra Cut see PANAMA CANAL.

Culiacán (kōōlēäkän'), city (pop. 22,025), capital of Sinaloa, NW Mexico. Founded in 1531 by Nuño de GUZMÁN, Culiacán figured prominently in the early Spanish colonial period as a point of departure for northern expeditions, notably that of Coronado in 1540. Culiacán is on the Culiacán river and is c. 40 mi. inland on a hot coastal plain, which produces tropical fruits, sugar, and cotton.

from its Pacific port, Altata, come fine oysters. Some minerals are found in the region The capital is on the West Coast rail line between the United States and Mexico city. Within the city are numerous government buildings and plazas, an impressive cathedral, and luxuriant tropical gardens

Culion (kōōlyōn'), and island (150 sq mi , 1939 pop 7,328), 20 mi long and 10 mi wide, one of the Calamian Islands, in the Philippines It is S of Busuanga and has a large leper colony

Cullen, Countee (koun'tē'), 1903–46, American Negro poet, b New York city, grad New York Univ , M A Harvard, 1926 His lyrical gift is most apparent in his early books, *Color* (1925), *Copper Sun* (1927), and *The Ballad of the Brown Girl* (1927) A student of classical forms, he handled them skillfully He wrote other poetry and a novel, compiled an anthology of Negro verse, *Caroling Dusk* (1927), and collaborated on a play, *St Louis Woman* (produced 1946) He made a collection of his verse, *On These I Stand* (pub posthumously, 1947)

Cullman, city (pop 5,074), co seat of Cullman co , N Ala , N of Birmingham, settled 1873 It is the shipping and trade center for a farm area noted for its strawberries and yielding also coal and sandstone Near by is a junior college

Culloden Moor (kulō'dun, -lō'dun), moorland, Inverness-shire, Scotland, ENE of Inverness It was the scene (April 16, 1746) of the decisive defeat of the Highlanders under Prince Charles Edward by English troops under the duke of Cumberland Cumberland Stone marks the battle

Cullom, Shelby Moore (kŭ'lŭm), 1829–1914, American political leader, b Wayne co , Ky He began to practice law at Springfield, Ill , in 1855, and that same year he became city attorney He then served in the state legislature, in the U S House of Representatives (1865–71), and as governor of Illinois (1876–83) In the U S Senate (1883–1913), Cullom was chairman of the committee which drew up the bill establishing (1887) the INTERSTATE COMMERCE COMMISSION He also was chairman of the committee which drafted a system of laws for the Hawaiian Islands, and after 1901 was chairman of the Committee on Foreign Relations In 1911 he became chairman of the Republican party caucus See his autobiography, *Fifty Years of Public Service* (1911)

Cullum, George Washington (kŭ'lum), 1809–92, American army officer, b New York city, grad West Point, 1833 In the Civil War, Cullum, made a brigadier general of volunteers (Nov , 1861), served as chief of staff to General Halleck (1861–64) and as superintendent of West Point (1864–66) He is chiefly known for his excellent *Biographical Register of the Officers and Graduates of the U S Military Academy* (1850, 3d ed , 3 vols , 1891), which furnishes sketches of the graduates of West Point

Culp, Julia (kŭlp, Dutch yül'yä kŭlp'), 1881–, Dutch contralto, especially noted as a lieder singer She first appeared in the United States in 1913, later she taught in Vienna

Culpeper or **Colepeper, John Culpeper, 1st Baron** (both kŭl'pĕ'pur), d 1660, English statesman He took the popular side in the Long Parliament, but broke with the Puritans on the matter of church legislation in 1642 He served Charles I as privy councilor and chancellor of the exchequer and remained a useful and moderate counselor of Charles II during his exile

Culpeper, Thomas Culpeper, 2d Baron, 1636–89, British colonial governor of Virginia, son of the 1st Baron Culpeper of Colepeper In 1673 he was granted, with the earl of Arlington, all lands in Virginia not previously patented He was, in addition, granted (1675) the right of succession to the governorship of Virginia and soon replaced Sir William Berkeley Culpeper ruled through deputies until 1680, when Charles II required him to go in person to Virginia His general pardon of all those who had participated in Bacon's Rebellion made him popular for a brief time, but after about four months he returned to England When disturbances, arising out of the low price of tobacco, broke out in the colony, he was threatened with removal unless he remained in Virginia During his second stay (1682–83) Culpeper hanged some of the planters who had destroyed tobacco plants and quarreled violently with the burgesses Upon leaving the colony again in 1683 he was deprived of the governorship However, in 1688 he procured from James II a renewal in perpetuity of his vast Northern Neck proprietary (see FAIRFAX, THOMAS FAIRFAX, 6TH BARON) See T J Wertenbaker, *Virginia under the Stuarts, 1607–1688* (1914)

Culpeper, town (pop 2,310), N Va , WNW of Fredericksburg, founded 1759, inc 1898 It is the trade center for a rich farm and dairy area The courthouse of Culpeper co is here In 1775 the famous Culpeper minutemen were organized Several engagements were fought in the region during the Civil War, and the town was occupied by Union forces

cultivation, manipulation of the soil for the purpose of improving its condition by mixing or loosening its particles, adding humus, and destroying weeds For this purpose tools, from the simplest HOE or PLOW to the tractor-drawn cultivator and harrow, are used The American Indians, who grew various crops—e g , potatoes, corn, tobacco, and squash—used implements made of buffalo bones, deer and elk horn, wooden sticks, and shells in cultivating their gardens Very primitive plows were used by prehistoric man and are still used in parts of the world IRRIGATION, fallowing, and ROTATION OF CROPS are farming practices which aid cultivation.

cultivator, agricultural implement for opening up and pulverizing soil, either before planting or as an aid to the removal of weeds and the aeration and loosening of the soil after the crop has begun to grow Cultivators usually stir the soil to a greater depth than do harrows In large-scale farming they are drawn by tractors

culture, in anthropology, the way of life of a society There are no implications of refinement or of advanced knowledge in the scientific usage of the term Culture, from the earliest beginnings of mankind, has provided human society with its most significant difference from the societies of animal groups The habits, ideas, and attitudes shared by a group are historically derived and are transmitted as a social heritage to its succeeding generations Language is the chief agent of culture transmission, but many behavior patterns and attitudes are acquired by means of nonverbal conditioning Material culture refers to that part of culture content represented by such things as tools, weapons, clothing, and art forms Each society has its distinctive culture The tendency of any given culture to become integrated in varying degrees about certain dominant interests contributes to its uniqueness A culture may therefore be described by such terms as "hunting" or "food-gathering" or characterized as "cooperative" or "aggressive" or the like The degree of complexity of cultural organization helps to distinguish "higher" from "lower" culture, civilized societies from primitive See Clark Wissler, *Man and Culture* (1923), G E Smith and others, *Culture* (1927), Ruth Benedict, *Patterns of Culture* (1934), C E Ware, ed , *The Cultural Approach to History* (1940), Abram Kardiner and others, *Psychological Frontiers of Society* (1945), Stuart Chase, *The Proper Study of Mankind* (1948), Clyde Kluckhohn, *Mirror for Man* (1949)

Culver, town (pop 1,605), N Ind , on Lake Maxinkuckee c 30 mi SSW of South Bend It is the seat of Culver Military Academy (1894)

Culver City, residential city (1940 pop 8,976, 1947 special census pop 17,143), in Venice township, S Calif , between Los Angeles and the Pacific, laid out 1913, inc 1917 Several large moving-picture companies maintain studios here

Culver's root see SPEEDWELL

Culver-Stockton College, at Canton, Mo ; coeducational (probably the first W of the Mississippi), chartered 1853, opened 1855 by the Disciples of Christ as Christian Univ , renamed 1917

Cumae (kū'mē), ancient city of Campania, Italy, near Naples Strabo says that it was the earliest Greek colony in Italy or Sicily, and it seems to have been founded in the 9th or 8th cent B C from Chalcis The area has yielded earlier non-Greek archaeological finds A number of colonies were founded by Cumae, which grew to great power and repulsed Etruscan and Umbrian attacks, but fell in the late 5th cent B C to the Samnites Cumae supported Rome in the 2d cent B C and adopted Roman culture, ultimately its inhabitants became Roman citizens As neighboring cities rose to power, Cumae declined, although it did not disappear until the 13th cent A D There are extensive Greek and Roman ruins, and the cavern where the famed Cumaean Sibyl (the priestess of Apollo mentioned by Vergil) uttered her prophecies may still be seen

Cumaná (kōōmänä'), Caribbean port (pop 25,893), NE Venezuela It was founded in 1520 to exploit the pearl fishing on MARGARITA island The climate is tropical, and, with abundant rainfall in the region between coast and cool highlands, there is a variety of agricultural produce for export—coffee, tobacco, hides, sugar, cacao, and rum Coconut oil and cotton textiles are manufactured Cumaná has several times been damaged by earthquakes, most recently and most severely in 1929

Cumans (kū'mŭnz), nomadic people of Turkic language, also called Kipchaks and, in Russian, Polovtsi Probably originating in NW Asiatic Russia, they conquered S Russia and Walachia in the 11th cent A D , and for about two centuries warred intermittently with the Byzantine Empire, Hungary, and Kiev The Mongols decisively defeated them c 1245 Part of the Cumans fled to Hungary, where they were allowed to settle, and merged with the Magyars The khanate of the GOLDEN HORDE (also called the Western Kipchaks) was organized on the former Cuman territory in Russia

Cumberland, Richard, 1631–1718, English philosopher He was bishop of Peterborough from 1691 In his *De legibus naturae* (1672) he first propounded the doctrine of utilitarianism and opposed the egoistic ethics of Thomas Hobbes.

Cumberland, Richard, 1732–1811, English dramatist and diplomat; great-grandson of the 17th-century philosopher Cumberland. He wrote 40 plays, mostly sentimental comedies, among which are *The Brothers* (1769), *The West Indian* (1771), and *The Wheel of Fortune* (1795) Secretary to the Board of Trade, he went on a mission to Spain with Abbé Hussey See his memoirs (2 vols , 1806–7), study by S T. Williams (1917), S F Bemis, *The Hussey-Cumberland Mission and American Independence* (1931)

Cumberland, William Augustus, duke of, 1721–65, British general, third son of George II. As captain general (1745–57) he excelled in organization but was not brilliant in battle In the War of the Austrian Succession he lost to the French at Fontenoy (1745) Then, having defeated Prince Charles Edward and the Jacobites at Culloden Moor (1746), he punished the Scots ruthlessly and earned the nickname the Butcher Once more on the Continent, he averted the fall of Maestricht (now Maastricht), but the French again defeated him (1747), at Laffelt In the Seven Years War he signed (1757) a capitulation to the French (the Convention of Kloster-Zeven), for which he was dismissed See two biographical studies by Evan Charteris (1913, 1925)

Cumberland, county (1,520 sq. mi , 1931 pop 263,151, 1948 estimated pop 275,600), extreme N England, bordering on the Irish Sea and Solway Firth to the west and Scotland to the north. The county town is Carlisle, famous for its cathedral The region, with adjacent Westmorland and Lancashire, is known as the LAKE DISTRICT Cumberland is largely mountainous in the southwest and east and low in the north (the Vale of Carlisle). Scafell Pike (3,210 ft) is the highest point in England The chief streams are the Derwent, the Eden, and the Esk It is a pastoral region (dairy farming and sheep and cattle grazing), with some mining (coal and iron), quarrying (granite, limestone, and slate), textile manufacturing, and smelting The district has remains of the great walls built during the Roman occupation Cumberland was not annexed to England as a shire until the 12th cent It was the scene of many centuries of border strife between England and Scotland The Lake District was extremely popular with literary figures in the 19th cent , many of whom made their homes in Cumberland See Cuthbert Headlam, *The Three Northern Counties* (1939)

Cumberland, town (pop 885), on Vancouver Island, SW British Columbia, near the east coast and on the Courtenay river Coal was discovered in the neighborhood in 1891 In 1931 Cumberland had a population of 2,371

Cumberland **1** City (pop 4,149), E Ky , NE of Harlan, in the Cumberlands near the Va line Until 1926 it was called Poor Fork Coal, corn, tobacco, and potatoes are among the products of the region **2** Town (pop 1,491), SW Maine, N of Portland, inc 1821 Textile, paper, and woodworking mills are here **3** City (pop 39,483), co seat of Allegany co , NW Md , on the North Branch of the Potomac and W of Hagerstown, in a coal-mining region It is a railroad and manufacturing center, producing automobile tires, artificial silk, glass, steel, tin plate, and limestone As a natural gateway through the Appalachians to the Ohio valley, it grew up around the site of a trading post established by the Ohio Company in 1750 Fort Cumberland was built several years later and was base of operations for the ill-fated Braddock expedition against the French and Indians The city became the eastern terminus of the Cumberland or NATIONAL ROAD, a division point for the Baltimore & Ohio RR, and the western terminus of the Chesapeake and Ohio Canal The site of Fort Cumberland and the near-by fairgrounds are points of interest **4** Town (pop 10,625), NE R I , between the Blackstone river and the Mass line, in a farming and textile-producing section, included in Massachusetts until 1746, inc 1747 Near Lonsdale village is a Trappist abbey, almost completely destroyed (March, 1950) by fire Ballou Meetinghouse dates from c 1740. **5** City (pop 1,539), NW Wis , on Beaver Dam Lake WNW of Rice Lake, in a farm area, settled 1874, inc 1885

Cumberland, river, 693 mi long, rising in E Kentucky, near Harlan in the Cumberland Plateau, and winding generally SW through Kentucky and Tennessee past Nashville and then NW to the Ohio above Paducah, Ky To control floods, improve navigation, and provide hydroelectric power the U S Corps of Engineers has undertaken a program including dredging, locks, dams, and levees The TENNESSEE VALLEY AUTHORITY is authorized to market power from three established dams the Wolf Creek Dam (begun 1941) in the Cumberland in Kentucky, the Dale Hollow Dam (completed 1943, power plant est 1948) in a tributary, the Obey river, in Tennessee, and the Center Hill Dam (begun 1942) in the Caney Fork in Tennessee

Cumberland Gap, natural passage through the mountains, near the point where Virginia, Kentucky, and Tennessee meet. It was discovered and named by Dr Thomas Walker, leader of a party exploring for a land company, in 1750; through it ran Boone's WILDERNESS ROAD. A strategic point in the Civil War, Cumberland Gap was held alternately by Confederates (1861, 1861–63) and Fed-

erals (1861, 1863–65) Congress has authorized the establishment of a national historical park here

Cumberland House, Canadian fur-trading post of the Hudson's Bay Company, on Cumberland Lake and near the Saskatchewan river, near The Pass, Man It was built (1774) by Samuel Hearne near an earlier (1772) post of Joseph Frobisher and was named for Prince Rupert, duke of Cumberland First permanent settlement on the Saskatchewan and first of the Hudson's Bay Company posts in the interior, it occupied a strategic position, commanding the routes of fur trade and exploration to the upper valleys of the Saskatchewan and the Churchill

Cumberland Island: see SEA ISLANDS

Cumberland Plateau or **Cumberland Mountains,** southwestern division of the Appalachian Mt system, extending NE–SW through S West Virginia, extreme SW Virginia, E Kentucky, and E Tennessee into N Alabama On the east, the plateau rises sharply from the Great Valley of E Tennessee, on the west, the slope is rough and broken It is the source of the Cumberland river and certain tributaries of the Tennessee The region, which offers a variety of scenery—fertile valleys, beautiful forested areas, and rugged, inaccessible sections—yields various minerals especially coal

Cumberland Presbyterian Church, branch of the Presbyterian Church in the United States founded in 1810 Many of its congregations were united with the main body of the church in 1906 It arose as a revival movement in the "Cumberland country," a newly settled region of Kentucky and Tennessee To fill the insufficient ranks of ministers, the presbytery, controlled by the revivalists, ordained men who lacked the academic training usually required The Synod of Kentucky laid a prohibition upon their preaching until they could pass examination in all requisites The Cumberland Presbytery was dissolved, but under the leadership of Finis Ewing and others it was reorganized in 1810 as an independent presbytery, a synod was constituted in 1813 The Negro members organized separate churches and in 1869 were legally set apart as the Colored Cumberland Presbyterian Church

Cumberland Road· see NATIONAL ROAD

Cumberland University see LEBANON, Tenn

Cumberland Valley, part of the great Appalachian valley, N of the Shenandoah Valley, extending from the Potomac river in Maryland to the Susquehanna in Pennsylvania

Cumbraes (kŭmbrāz'), islands, Buteshire, W Scotland, in the firth of Clyde Great Cumbrae (c 5 sq mi, pop 2,144), with a good climate, provides fishing, farming, and summer sports (Millport is the center) Little Cumbrae (1 sq mi) has a lighthouse

Cumbrian Mountains, hills of the Lake District, England Studded with lakes and narrow valleys, the range extends through Cumberland, Westmorland, and N Lancashire

cumin or **cummin** (both kŭm'ĭn), low annual herb (*Cuminum cyminum*) with thready foliage, long cultivated for the aromatic seedlike fruits The fruits, similar to caraway, are used, chiefly in the Old World, on bread and in cheese, soup, and curry powder, the oil is used for liqueurs and in veterinary practice and was formerly used in medicine Cumin is mentioned in the Bible For black cumin, see LOVE-IN-A-MIST.

Cumming, John. see COMYN, JOHN

Cummings, Bruce Frederick. see BARBELLION, W N P, pseud.

Cummings, Edward Estlin, 1894–, American poet and painter, b Cambridge, Mass, grad Harvard, 1915 His first book, *The Enormous Room* (1922), is a prose account of his war internment in France It demonstrates, as does his poetry, flashing originality and an extreme attempt to uncover a new form of expression Although Cummings's omission of capital letters and other typographical eccentricities often render his work unintelligible, his lyrical and imaginative powers are acknowledged, and his technical virtuosity and defiance are unable to conceal the preoccupation with love and death which reveal him as a romantic His poetry includes *Tulips and Chimneys* (1923), *Is 5* (1926), *Collected Poems* (1938), *1 × 1* [one times one] (1944), *Santa Claus* (1946), and *Xaipe Seventy-one Poems* (1950) He exhibited his paintings in 1944

Cummings, Homer Stillé, 1870–, U S Attorney General (1933–39), b Chicago, grad Yale (Ph B, 1891, LL B, 1893) He practiced law in Stamford, Conn, served as mayor, and rose to prominence in the state Democratic machine Cummings was a strong supporter of the New Deal, and on the death of Thomas J WALSH, F. D Roosevelt made Cummings acting Attorney General and then Attorney General

Cummings, Thomas Seir, 1804–94, American miniature painter and writer, b England, pupil of Henry Inman in New York city. He painted in water color and was recognized as the outstanding American miniaturist of his day. He was a founder, and for 40 years the treasurer, of the National Academy of Design, of which he wrote a history.

Cummington, rural town (pop 608), W Mass, in hills E of Pittsfield, settled 1762, inc 1779 Marcus Whitman lived here William Cullen Bryant was born in the town, his home is a memorial

Cummins, Albert Baird, 1850–1926, U S Senator from Iowa (1909–26), b Green co, Pa, grad Waynesburg College He studied law in Chicago and in 1878 joined his brother in practice in Des Moines As governor of Iowa (1901–8) Cummins worked to break up railroad domination in politics and to inaugurate progressive policies in the state He was elected (1908) to the U S Senate and was co-author there of the Esch-Cummins Transportation Act of 1920

Cummins, Maria Susanna, 1827–66, American novelist, b Salem, Mass She wrote *The Lamplighter* (1854), a best seller of its day Her later books were not so well received

cumulus see CLOUD

Cunard, Sir Samuel (kūnärd'), 1787–1865, Canadian pioneer of regular transatlantic steam navigation, b Halifax, N S The son of a United Empire Loyalist, he became a leading businessman of Nova Scotia, engaged in banking, lumbering, shipping, and shipbuilding enterprises His fleet at one time numbered some 40 vessels He was interested in the development of steam navigation and owned shares in the *Royal William*, first Canadian steamboat to cross the Atlantic (1833) from Canada to England When the British government invited bids (1838) for carrying the mails to and from Liverpool, Halifax, and Boston, Cunard went (1839) to England and laid before the admiralty such carefully considered plans for a line of steamships that he received the contract In association with Robert Napier, George and James Burns, David MacIver, and others, he formed the British and North American Royal Mail Steam Packet Company, which in 1840 placed four ships in operation, the first regular steamship service between the continents This was the beginning of the noted Cunard Line, which was amalgamated (1934) with the White Star Line to form the Cunard White Star Ltd He was created baronet in 1859 and spent most of his last years in England

Cunaxa (kūnăk'sə), small town of Babylonia, near the Euphrates NE of Ctesiphon It was the scene of a battle (401 B C) between CYRUS THE YOUNGER and ARTAXERXES II, described by XENOPHON in the ANABASIS CLEARCHUS, Spartan mercenary leader under Cyrus, chose to attack the Persian left wing (under Tissaphernes), which he completely routed and pursued When he and his Ten Thousand returned, they found that Cyrus had fought hard in the center, had broken Artaxerxes' bodyguard, but in the moment of victory had been killed Cyrus' army, demoralized, had broken up, and the Persians had taken the field The retreat of the Ten Thousand northward is the most famous feature of the campaign

cuneiform (kūnē'ĭfôrm) [Latin,=wedge shaped], WRITING developed in the lower Tigris and Euphrates valley, probably by the Sumerians The characters consist of arrangements of four kinds of wedge strokes impressed into the prevalent brick or stone The history of the script is strikingly parallel to that of the Egyptian HIEROGLYPHIC (see also ALPHABET and INSCRIPTION) The normal Babylonian and Assyrian writing used a large number of arbitrary cuneiform symbols for words and syllables, some had been originally pictographic There was an alphabetic system, too, making it possible to spell a word out, but because of the adaptation from Sumerian, a different language, there were many ambiguities Cuneiform writing was used outside Mesopotamia also, notably in ELAM and by the HITTITES There are many undeciphered cuneiform inscriptions, apparently representing several different languages A very late use of cuneiform writing was that of the Persians, who established a syllabary for Old Persian This is the writing of the Achaemenidae, whose greatest monument is that of Darius I at Behistun Key finds of cuneiform inscriptions have been at Nineveh, Lagash, Erech, Tel-el-Amarna, Susa, and Boghazkeui Two great names in the interpretation of cuneiforms are those of Sir Henry C RAWLINSON and of G F GROTEFEND.

Cunene (kōōnä'nē), river rising in W central Angola and flowing c 750 mi S and W to the Atlantic Ocean Its lower course forms part of the boundary with South-West Africa

Cuneo (kōō'nāō), city (pop 18,852), capital of Cuneo prov, Piedmont, NW Italy, on a high plain near the Maritime Alps A fortified city, it was a possession of the house of Savoy after 1382 and withstood repeated sieges It is an important market for silk, chestnuts, and cereals

Cunha, Euclides da (ā"ōōklē'dĭsh dä kōō'nyu), 1866–1909, Brazilian writer His short life was rather turbulent, after a brief but checkered career in the army, he was a civil engineer and a journalist He wrote several historical works, but is remembered for only one book, *Os sertões* (1902, Eng tr, *Rebellion in the Backlands*, 1944, abridged Eng tr, *Revolt in the Backlands*, 1947) In 1896 97 a religious fanatic called Antonio Conselheiro and a group of his followers defied the Brazilian government and defended themselves in Canudos, a stronghold in the undeveloped interior [*o sertão*] in the state of Bahia The revolt was pitiful and a bit mad and would have been of little significance except that Euclides da Cunha accompanied the conquering government forces as a reporter He made his account of the campaign a thorough and rather gloomy study of the conditions, prospects, and national soul of Brazil This "most Brazilian of all books" is a narrative embellished with lengthy descriptions of landscape and living conditions, but above all it is a brooding inquiry into the state of man in Brazil To a present-day reader it is marred by overcomplex writing and racistic doctrine, but its force, sincerity, and depth overcome all criticism

Cunha, Tristão da (trēshtă'ō), c 1460–c 1540, Portuguese navigator His most important voyage was that undertaken in 1506, when he set out with 15 ships for India He discovered three volcanic islands in the S Atlantic, one of which is named for him After taking Socotra, in the hope of establishing control over the Red Sea, Tristão da Cunha went on to India, while Afonso de Albuquerque, under secret royal orders, detached part of the fleet. On his return to Portugal, Tristão da Cunha served as Portuguese ambassador at the papal court A son, Nuno da Cunha (1487–1539), was governor of India and, as such, took Basra in 1529

Cunningham, Sir Alan Gordon (kŭ'nĭng-ŭm), 1887–, British general, brother of Admiral Viscount Cunningham In the Second World War he was field commander in the conquest of Ethiopia (1940–41) and briefly headed (1941) the British 8th Army in North Africa In 1945 he was made high commissioner for Palestine and Trans-Jordan, and he carried out the British evacuation of Palestine in 1948

Cunningham, Sir Alexander, 1814–93, English archaeologist and army engineer He retired (1861) as a major general after 30 years of service with the Bengal engineers and then was head (1861–65, 1870–85) of the archaeological survey of India. He was knighted in 1887 Among his books are *Bhilsa Topes* (1854), a history of Buddhism based on architectural remains, *The Ancient Geography of India* (1871), of which only one volume was written, *The Book of Indian Eras* (1883), and *Coins of Ancient India* (1891) Of his collection of rare coins, part was lost at sea, but most of the remainder are in the British Museum He was a son of Allan Cunningham

Cunningham, Allan, 1784–1842, Scottish poet, biographer, and miscellaneous writer His collection of *The Songs of Scotland, Ancient and Modern* (1825) included his own "A Wet Sheet and a Flowing Sea," one of the best known sea ballads in the language. His six-volume *Lives of the Most Eminent British Painters, Sculptors, and Architects* appeared from 1829 to 1833 See biography by David Hogg (1875).

Cunningham, Andrew Browne, 1st **Viscount Cunningham of Hyndhope** (hĭnd'hōp), 1883–, British admiral A long-seasoned naval officer—he was at Gallipoli in the First World War—Cunningham was commander in the Mediterranean from 1939 to 1942 and kept the inland sea open to the British He was later naval commander in the expedition against North Africa (1942–43), commander in chief of the Allied naval forces in the Mediterranean (1943), and first sea lord and chief of the naval staff (1943–46) He was created viscount Jan. 1, 1946

Cunninghame-Graham, Robert. see GRAHAM, ROBERT

Cunninghame Graham, Robert Bontine (kŭn'ĭngəm), 1852–1936, Scottish author and traveler, b London, educated at Harrow He lived as a cattle rancher in Argentina, traveled widely in Latin America, Morocco, and Spain In Scotland he served as a member of Parliament, took part in the dock strike of 1887, and, with James Keir Hardie, founded the Scottish Labour party His writings include collections of sketches and tales, such as *The Ipané* (1899) and *Rodeo* (1936), and historical studies of Spanish conquistadors See biography by A. F. Tschiffely (1937)

Cuno, Wilhelm (vĭl'hĕlm kōō'nō), 1876–1933, German chancellor (1922–23) He headed a nonpartisan ministry responsible only to President Ebert. His attempt to reduce reparations and his program of passive resistance to French occupation of the Ruhr both failed, and he could not rehabilitate German finance

Cunobelinus. see CYMBELINE

cup-and-ring mark see PETROGLYPH

Cupar or **Cupar-Fife** (both kōō'pur), burgh (pop. 4,595), co seat of Fifeshire, Scotland, on the Eden and WSW of St Andrews School Hill is the site of a 12th-century castle of the Macduffs, earls of Fife The estate of Sir David Lindsay was near by. The town has varied industries

Cupid (kū'pĭd) [Latin,=desire], Roman equivalent of EROS, Greek god of love He was sometimes called Amor and was the son of Venus and Mars. For the story of Cupid and Psyche, see PSYCHE.

cupping, a treatment for relief of congested or inflamed tissues, more used formerly than now The principle is to reduce the pressure under a glass applied to the skin, so that the skin is drawn into

the rim of the glass and its blood vessels are filled with blood The glass, 1 to 2 in wide, may be heated gently in an alcohol flame and applied, or it may be heated by touching a lighted match to the inside, which has been wiped with alcohol, the flame being extinguished when the glass is applied This is known as dry cupping If aseptic incisions are made so that blood is actually drawn, it is called wet cupping

Curaçao (kū'rūsō, kōōrusou'), Dutch colony (366 sq mi ; pop 143,052), West Indies The capital is WILLEMSTAD The colony is in widely separated parts; the islands of Curaçao (174 sq mi , pop 88,323), Bonaire or Buen Ayre (98 sq mi , pop 5,550), and Aruba (68 sq mi , pop 45,907) are off Venesuela, but St Martin, St Eustatius, and little Saba (5 sq mi , pop 1,143) are in the NW Leeward Islands Since Curaçao itself and the neighboring islands are semiarid and much of the plant life is of desert character, little agriculture is possible, and grazing, except for goats, is restricted Water from wells is insufficient and must be supplemented by imports Tempered by trade winds, the climate, in spite of the hot sun, is pleasant The population, largely Negro, has small Dutch and Venesuelan elements The even temperature and the curious blend of Afro-Spanish-Dutch culture—the patois and music of the Negroes, the neat Dutch cities with their gabled roofs—are of increasing attraction to tourists Discovered by Ojeda and Vespucci in 1499, Curaçao was not settled by the Spaniards until 1527 In 1634 the Dutch took control and, except for brief periods (1798, 1807–14) when the island was occupied by the English, have held it since. The making of curaçao liqueur was long a leading industry until it was transferred to the Netherlands The discovery and exploitation of enormous petroleum reserves at Lake Maracaibo, Venesuela, and the shallow channel from lake to sea at MARACAIBO city led to the construction of two oil refineries, among the world's largest, on Aruba and Curaçao Phosphates and crude salt are also mined and exported There is some fishing, and native cheeses are made After the fall of the Netherlands in the Second World War, Curaçao declared war (1940) on Germany, and the oil refineries were protected by U S troops in the war See P H Hiss, *Netherlands America* (1943)

curaçao (kyōōrūsō', a LIQUEUR sweet or dry, distilled from dried orange peel and spirits and flavored with rum Originally made by the Dutch in Curaçao from an orange native to the island, it is now produced principally in the Netherlands Grand Marnier and Cointreau are varieties of curaçao made with fine brandy

curare (kyōōrä'rē), aqueous poisonous extract obtained from certain South American plants Long employed by South American Indians to treat the tips of arrows for use both in warfare and in hunting animals, it causes paralysis of the muscles Death usually follows from inability to breathe caused by the paralysis One of the chief sources of curare is *Strychnos toxifera*, in which the poisonous principle is the alkaloid curarine Generally extracts of several different plants are mixed to obtain the proper consistency Some curare is obtained from species of *Chondrodendron*, in that from *Chondrodendron tomentosum* the alkaloid curine has been identified Curare has sometimes been named according to the kind of container in which it was sold on the market, tubocurare appeared in bamboo tubes, calabash or gourd curare in containers made from gourds, and pot curare in unglazed clay jars Some medical use has been made of curare in treating certain types of paralysis and to relax muscles to facilitate surgery See *Curare: Its History, Nature, and Clinical Use* (1947)

curb market. Formerly unorganized customary street meetings of brokers, most curb markets are now well organized and well housed Their main function is to provide primary markets for introducing new securities, whether of new or old firms, or speculative issues in their "formative" period and for other active stocks and bonds not listed on other exchanges In New York city early informal groups of traders organized successively the Curb Market Agency (1906), the Curb Market Association (1910), and the New York Curb Exchange (1929), under a president and board of 32 governors who administer a constitution and manual of trading rules The New York curb market lists about 950 securities, including many old and established ones and others which later "graduate" to the stock exchange Since 1934 the curb market has been under the general regulation of the SECURITIES EXCHANGE COMMISSION The curb market is comparable to the coulisse of the Paris bourse, and equivalent institutions exist in most capitalist nations See S S Huebner, *The Stock Market* (1939)

curculio (kûrkū'lēō), any typical snout beetle with a beak which is decurved and long in most species (sometimes twice the body length) and short and wide in some There are over 1,800 species in the United States Among them are serious pests, e.g., the apple and plum curculios, the imbricated snout beetle, and many species of WEEVIL.

Curé Island, T H · see KURE ISLAND.

Curel, François de (frăswä' dù kürĕl'), 1854–1928, French dramatist An early contributor to the Théâtre Libre and an expert craftsman, Curel won popular success only with *L'Âme en folie* (1919), a comedy His early plays, *L'Envers d'une sainte* (1892), *L'Invitée* (1893), and *La Danse devant le miroir* (1913) were followed by plays whose interest was the use of ideas on the stage. These include *Les Fossiles* (1892), *Terre inhumaine* (1922), and *La Vieuse et le morbond* (1925) He was elected to the French Academy in 1919

Curetes (kūrē'tēz), in Greek legend, young male divinities, who by dancing noisily about the infant Zeus protected him from his father, Cronus They are sometimes represented as attendants of Rhea and are confused with the Corybantes, the Cabiri, and the Dactyls

curfew (kûr'fū) [O Fr ,=cover fire], originally a signal, by the ringing of a bell, to cover up the fire, extinguish all lights in the dwelling, and retire for the night The custom originated as a precaution against fires and was common throughout Europe in the Middle Ages, applying to all classes of people It was abolished in England in the early part of the 14th cent , as it aroused considerable opposition The custom of ringing a bell at a certain time of night as a means of apprising the inhabitants of the time, rather than as a complete prohibition of further activity, has survived down to the present day The curfew is used today chiefly in times of turbulence such as revolution It is a restrictive measure designed to force all persons into their homes and thus reduce activity against the government or the foreign, occupying force

Curia Regis · see PARLIAMENT

Curia Romana · see CARDINAL

Curiatii, see HORATII

Curicó (kūrēkō'), city (pop 21,153), capital of Curicó prov , central Chile, 120 mi S of Santiago Founded c 1743, Curicó is a market for cattle and agricultural produce Flour mills and distilleries are the main industries

Curie, Ève Denise (kyōōrē', Fr ĕv' dunēz' kürē'), 1904 , French writer, lecturer, and pianist, daughter of Marie and Pierre Curie Her outstanding biography of Mme Curie, published in 1937, was translated into some 25 languages Ève Curie gave her first concert in Paris in 1925 and later became known also as a music critic In the Second World War she was active in the Free French movement, as a war correspondent she visited (1941–42) the major battle fronts and wrote an account of her trip, *Journey among Warriors* (1943) In 1945 she became copublisher of *Paris Presse*

Curie, Pierre (pyĕr'), 1859-1906, French chemist and physicist, and **Marie Sklodowska Curie** (marē' sklôdôf'ska), 1867 1934, chemist and physicist, b Warsaw They are known for their work on radioactivity and on radium Pierre Curie's early work dealt with crystallography and with the effects of temperature on magnetism, he discovered (1883) and, with his brother Jacques Curie, investigated piezoelectricity (a form of electric polarity) in crystals Marie Sklodowska's interest in science was stimulated by her father, a professor of physics in Warsaw In 1891 she went to Paris to continue her studies at the Sorbonne In 1895 she married Pierre Curie and engaged in independent research in his laboratory at the municipal school of physics and chemistry where Pierre was director of laboratories (from 1882) and professor (from 1895) Following A H Becquerel's discovery of radioactivity, Mme Curie began to investigate uranium, a radioactive element found in pitchblende In 1898 she reported a probable new element in pitchblende, and Pierre Curie joined in her research They discovered (1898) both polonium and radium laboriously isolated (1902) one gram of radium salts from about eight tons of pitchblende, and determined the atomic weights and properties of radium and polonium The Curies refused to patent their processes or otherwise to profit from the commercial exploitation of radium For their work on radioactivity they shared with Becquerel the 1903 Nobel Prize in Physics The Sorbonne created (1904) a special chair of physics for Pierre Curie, Marie Curie was appointed his successor after his death in a street accident. She also retained her professorship (assumed in 1900) at the normal school at Sèvres and continued her research In 1910 she isolated (with André Debierne) metallic radium As the recipient of the 1911 Nobel Prize in Chemistry she was the first to be awarded a second Nobel Prize She was made director of the laboratory of radioactivity at the Curie Institute of Radium, established jointly by the Univ of Paris and the Pasteur Institute, for research on radioactivity and for radium therapy During the First World War she devoted her energies to providing radiological services for hospitals In 1921 a gram of radium, a gift from American women, was presented to her by President Harding; this she accepted in behalf of the Curie Institute A second gram, presented in 1929, was given by Mme Curie to the newly founded Curie Institute in Warsaw. Among the very numerous and valuable writings of the Curies are Marie Curie's doctoral dissertation, *Radio-active Substances* (1902, 2d English ed., 1904); *Traité de radioactivité* (1910); *Radioactivité* (1935); and her biography of Pierre Curie (1923, Eng tr , 1923). Pierre Curie's collected works appeared in 1908 A biography of Marie Curie was written by a daughter, Ève Curie See also JOLIOT-CURIE, IRÈNE

Curitiba (kōōrētē'bù), city (pop 99,440), capital of Paraná state, SE Brasil Though founded in 1654 in the 17th-century gold rush, it was actually of little significance until the early 20th cent when immigrants began to develop the Paraná hinterland A cool and pleasant plateau town, it is a commercial and processing center for an expanding agricultural and ranch area and has minor manufactures It exports mate, coffee, sugar, lumber, and livestock products It is connected by rail with the Atlantic port of Paranaguá (c.50 mi away) The Univ of Paraná is at Curitiba The name was formerly commonly spelled Curityba, other variants in older works are Curytiba, Corritiba, and Corytiba,

curium (kyōō'rēum), violently radioactive chemical element (symbol=Cm, for physical constants, see ELEMENT, table) Curium can be prepared by bombarding plutonium with helium nuclei or by radiating americium with neutrons Curium emits alpha particles and has a half life of about five months, its disintegration product being plutonium Curium hydroxide has been isolated Curium, which was first identified in 1944 (and reported in 1945) by Glenn T. Seaborg and his co-workers, was produced with the aid of the cyclotron at the Univ of California

Curius Dentatus, Manius see DENTATUS

curlew (kûr'lū), any of a number of large shore birds of both hemispheres, generally brown and buff in color and with decurved bills The long-billed curlew, its bill almost one third the body length (about 2 ft), once abundant, is now rare in the E United States, it frequents salt marshes, prairies, and tidal creeks in the West In summer it eats locusts and other injurious insects The Hudsonian and the nearly extinct Eskimo curlews migrate from arctic breeding grounds to South America The bristle-thighed curlew summers and nests in Alaska and winters on S Pacific islands Some of the godwits and ibises are called curlews

Curley, James Michael, 1874 , American political leader, b Boston He held many municipal offices, served (1902–3) in the Massachusetts legislature, and became a power in the Democratic party of Boston before he served (1911–14) in the U S House of Representatives Curley—whose colorful personality and shrewd political manipulations steadily increased his vote-getting abilities—served three terms as mayor of Boston (1914–18, 1922–26, 1930–34) before he was governor of Massachusetts (1935–37) and again U S Congressman (1943–46) After Curley was once more elected (1945) as mayor of Boston, he was convicted (1946–47) of mail fraud He served (1947) five months in prison before his sentence was commuted by President Harry S Truman After he fulfilled his duties as mayor (1947–50) and was defeated (1949) for reelection to that post, Curley was given (1950) a full pardon by Truman

curling, winter sport, similar in principle to bowls and quoits, played on an ice court by teams of four Each player hurls a squat, circular stone—weighing 44 lb , dished on bottom and top and having a handle on top for the player's grip—at the tees, or fixed goals, which are placed 38 yd apart Around each tee a circle is drawn with a radius of 7 ft Each man is provided with a crampit, or spiked metal plate, to get a foothold on the ice, and a broom to sweep the ice in front of the swerving stone—one of the eye-catching features of the game. The men on both teams, alternating, send the stones toward one tee, the stones lying nearest the tee at the end of play count toward the score The play is then made toward the opposite tee Curling is the major winter sport of Scotland, where it was perhaps played as early as the 16th cent The Grand Caledonia Curling Club, founded in 1838, is the governing body of the sport Curling is also popular in Canada and is played to some extent in the United States and other countries where ice is found

Curll, Edmund (kûrl), 1675–1747, London bookseller, who, along with many fine books, printed a number of obscene works for the publication of which he was pilloried and imprisoned He quarreled with Pope over the publication of *Court Poems* and Pope's letters and was lampooned by the latter in *The Dunciad* See Ralph Straus, *The Unspeakable Curll* (1927)

Curragh, the (kûr'ukh) [Irish,=moor], undulating plain or common, 4,885 acres, Co Kildare, Ireland, E of Kildare town It has been a military camp since 1646 The Curragh racecourse is also long established

Curran, John Philpot (kŭ'rŭn), 1750–1817, Irish statesman and orator He became the best-known trial lawyer in Dublin when he was still very young, and he sat for a while in the Irish Parliament. He fought for Catholic Emancipation and vigorously opposed the repressive policy of the

British government in Ireland. He was defense lawyer for many of the rebels at the turn of the century; as such, he defended Wolfe TONE and Lord Edward FITZGERALD. He opposed the union of Ireland with England. Subsequently he sat in the privy council of the United Kingdom. His daughter, Sarah, was in love with Robert EMMET, who was captured and hanged when he came to Dublin to visit her. Their tragic love affair inspired Thomas Moore's verses beginning, "She is far from the land where her young hero sleeps" and "Oh! breathe not his name."

currant (kŭ'rŭnt), garden shrub of the genus *Ribes* native to the colder climates, having black, red, or white edible fruit, very tart, used for jellies, sauces, and pies. The common currant cultivated in American gardens is an Old World species (*Ribes sativum* or *vulgare*), red or white fruited. The currant acts as a host of the white-pine blister rust, and for that reason cultivation has been discouraged by the government in recent years. The buffalo or Missouri currant and others are grown for ornament. Indians used dried currants in making PEMMICAN, but the "dried currant" of commerce is a RAISIN. Indian currant is a name both for a West Coast currant and for the coralberry (see SNOWBERRY).

current, electric: see ELECTRICITY

curriculum, course of study in a school of any grade. A typical curriculum, with a great history, is that in LIBERAL ARTS.

Currie, Sir Arthur William (kŭ'rē), 1875–1933, Canadian commander in the First World War. In April, 1917, he succeeded Sir Julian Byng as commander of the Canadian Corps with the rank of lieutenant general. His men distinguished themselves particularly at Ypres (1915), at Vimy Ridge (1917), and in the last months of the war when they broke the Amiens salient, penetrated the Hindenburg Line between Arras and Cambrai, and drove through to Mons on the Belgian frontier. He was knighted for his services. From 1920 until his death he was principal and vice chancellor of McGill Univ.

Currier & Ives, American lithographers and print publishers, whose prints of contemporary scenes and events of American life over the last two thirds of the 19th cent. have now become scarce and much-sought-after collectors' items. Nathaniel Currier (1813–88), born in Roxbury, Mass., founded the business in New York city in 1835, and in 1850 he took into partnership J. Merritt Ives, an artist. After 1857 their prints all bore the legend Currier & Ives. Currier retired in 1880, but his son, William, continued in the business with Ives. See H. T. Peters, *Currier & Ives, Printmakers to the American People* (1929; special ed., 1942), F. A. Conningham, *Currier & Ives Prints an Illustrated Check List* (1949).

Curry, Jabez Lamar Monroe, 1825–1903, American educator, b. Lincoln co., Ga., grad. Univ. of Georgia, 1843. He studied law at Harvard and later became a member of the Alabama legislature, of Congress (1857–61), and of the Confederate Congress (1861–64). After the Civil War, Curry served as president of Howard College (1865–68), as professor of English and public law at Richmond College (1868–81), and as U.S. minister to Spain (1885–88). After 1881, as administrative agent of the Peabody Fund for Southern Education, Curry established state normal schools and fostered better rural schools throughout the South, further extending his work after 1890 as agent of the Slater fund for Negro schools. He became (1901) supervising director of the Southern Education Board. See biography by E. A. Alderman and A. C. Gordon (1911), study by J. P. Rice (1949).

Curry, John Steuart, 1897–1946, American painter, b. Dunavant, Jefferson co., Kansas. He spent his youth on his father's farm. In 1916 he entered the Kansas City Art Institute and later studied in Chicago and New York and in Paris. His early paintings of Kansas life, such as *Baptism in Kansas*, aroused interest by their simple and authentic character. In 1932 Curry traveled with Ringling Brothers, making circus sketches. One of the resulting paintings is his *Flying Cadonas* (Whitney Mus., New York). In 1933 his painting *Tornado* (Hackley Art Gall., Muskegon, Mich.) won him an award and wide recognition. After serving as instructor in the Art Students League of New York, Curry was appointed artist in residence at the Univ. of Wisconsin in 1936. In addition to his oil paintings in numerous galleries and private collections, Curry is known for his murals in the high schools of Norwalk and Westport, Conn., the Dept. of Justice Building, Washington, D.C., and the statehouse, Topeka, Kansas. See L. E. Schmeckebier, *John Steuart Curry's Pageant of America* (1943).

curry [Malayalam], condiment much used in India and the East generally, in combination with rice, meat, and a variety of other dishes, and therefore called the salt of the Orient. It is compounded of such spices as turmeric, fenugreek, ginger, black and cayenne pepper, coriander, and caraway. When the pungent leaf of an East Indian tree of the rue family is included, the curry powder is used not only as a stimulating flavor, but as a remedy for dyspepsia and diarrhea. Curry paste is made from the slightly acid, jellylike pulp of the tamarind pod, combined with a variety of spices.

cursive: see PALEOGRAPHY

Cursor Mundi (kûr'sôr mûn'dī) [Latin,=courier of the world, intended to mean *course of the world*], a long 13th-century English poem giving the history of the world from a theological point of view, from the beginning to the end. It is written in the northern dialect, and it is one of the most valuable records of the English of the period. It has been edited by the Early English Texts Society.

Curtea-de-Argeş (kôr'tä-dā-är'zhĕsh), town (pop. 9,180), S central Rumania, in Walachia, of which it was once the capital. Its cathedral, built in the 16th cent. in Byzantine style, became the burial place of the kings of Rumania.

Curtin, Andrew Gregg, 1817–94, Civil War governor of Pennsylvania, b. Center co., Pa. Having vigorously devoted himself to politics, Curtin in 1860 was nominated for governor in hope that he would swing the pivotal Pennsylvania to Lincoln. As governor he rallied the state to the cause of the Union. His popularity returned him to office in 1863 by a large majority. He was considered for Vice President in 1868, but after the nomination went to Schuyler Colfax, Grant appointed (1869) him minister to Russia, where he served three years. His popularity in the Republican party was lost when he supported Horace Greeley for President in 1872, and later he went over to the Democratic party and served (1881–87) in Congress as a Democrat. See William H. Egle, ed., *Andrew Gregg Curtin* (1895), W. B. Hesseltine, *Lincoln and the War Governors* (1946).

Curtin, John, 1885–1945, Australian prime minister (1941–45). A labor-union secretary, he edited (1917–28) a labor weekly and was later a member of the lower house—from 1928 to 1941, except for three years. He became Labour party leader. As wartime prime minister, he vigorously organized the defense of Australia in the Second World War, and though he worked closely with the United States, he also helped plan closer cooperation within the British Empire. He died in office.

Curtis, Benjamin Robbins, 1809–74, American jurist, Associate Justice of the U.S. Supreme Court (1851–57), b. Watertown, Mass., grad. Harvard, 1829. After studying law at Harvard, he practiced at Northfield, Mass., and served several terms in the state legislature. He wrote one of the two dissenting opinions in the DRED SCOTT CASE. One of the nation's leading lawyers, he was chief counsel to Andrew Johnson at the President's impeachment trial. See biography by his son B. R. Curtis (1879), which includes a memoir by G. T. Curtis.

Curtis, Charles, 1860–1936, Vice President of the United States (1929–33). He was born on Indian land now included in Topeka, Kansas, his mother was half Kansa Indian. Admitted to the bar in 1881, he practiced in Topeka and was county attorney (1884–88) of Shawnee co. He was a member of the House of Representatives (1893–1907) and later of the Senate (1907–13, 1915–29). He was elected Vice President on the Republican ticket, serving with Herbert Hoover.

Curtis, Cyrus Hermann Kotzschmar, 1850–1933, American publisher and philanthropist, b. Portland, Maine. He began work as a newsboy at the age of 12. After working in Boston from 1869, he went to Philadelphia in 1876, worked on the Philadelphia *Press*, and, with financial backing, started a periodical, the *Tribune and Farmer*, a section of which later developed (1883) into the *Ladies' Home Journal*. Curtis founded (1890) the Curtis Publishing Company and in 1897 purchased the *Saturday Evening Post*, which, with his editor George Horace Lorimer, he built up to a position of eminence. *Country Gentleman* was bought in 1911, and in 1913 he purchased the Philadelphia *Public Ledger*. This was the first of his newspaper ventures. Among others purchased were the Philadelphia *Press* (1920), the New York *Evening Post* (1924), and the Philadelphia *Inquirer* (1930). Curtis gave large sums to many colleges, hospitals, and charities. See E. W. Bok, *A Man from Maine* (1923).

Curtis, George Ticknor, 1812–94, American lawyer and writer, b. Watertown, Mass., grad. Harvard, 1832. He studied at Harvard Law School and, admitted to the bar in 1836, practiced in Boston and (after 1862) in New York city, becoming a highly successful patent attorney. Curtis served in the Massachusetts legislature (1840–43) and as U.S. commissioner at Boston under the Fugitive Slave Act of 1850 incurred the wrath of the abolitionists by returning (1852) a runaway Negro, Thomas Sims, to slavery. He was, however, one of the defense counsel in the DRED SCOTT CASE, heard by the U.S. Supreme Court at a time when his older brother, Benjamin R. CURTIS, was on that bench. Closely associated with Daniel Webster, he was one of the so-called "Cotton Whigs" who became Democrats. He wrote a memoir of his brother (1879), biographies of Daniel Webster (1870) and James Buchanan (1883), and many legal treatises. His *Constitutional History of the United States to the Close of the Civil War* (Vol. I, 1889, Vol. II, ed. by J. C. Clayton, 1896), his most notable work, is the classic Federalist interpretation of the Constitution.

Curtis, George William, 1824–92, American author, editor, orator, and reformer, b. Providence, R.I. An admirer of Emerson and once a student at Brook Farm, Curtis carried unusually high ideals into public life. As an author notable in his time, he wrote travel books, such as *Nile Notes of a Howadji* (1851), essays, and magazine articles. *Prue and I* (1856), his most famous work, was a series of gentle essays republished from *Putnam's Magazine*. For over 40 years he conducted "From the Editor's Easy Chair" for *Harper's New Monthly Magazine*. Both as a distinguished orator and as political editor of *Harper's Weekly* after 1863, he devoted himself to public service, first championing the anti-slavery cause and later promoting civil service reform, woman suffrage, and clean politics. In 1890 he was appointed chancellor of New York Univ. after long service on the board of regents. See biography by Edward Cary (1894).

Curtis, Harvey Lincoln, 1875–, American physicist, b. Mason, Mich., grad. Univ. of Michigan (Ph.B., 1900). He joined the National Bureau of Standards in 1907, serving as head physicist from 1928 to 1946. His chief work has been research in electricity and in ballistics.

Curtis, Samuel Ryan, 1805–66, Union general in the Civil War, b. Clinton co., N.Y., grad. West Point, 1831. Resigning from the U.S. army in 1832, Curtis became a lawyer and later an engineer in Ohio, served in the Mexican War, and resumed engineering work in Iowa and Missouri. In 1856 he was elected to Congress from Iowa, resigning in 1861 to become a Union brigadier general. At PEA RIDGE (1862) he won a decisive victory which brought him a major generalcy. He commanded the Dept. of Missouri (1862–63), the Dept. of Kansas (1864–65), and the Dept. of the Northwest (1865). His last services (1865–66) were in negotiating treaties with the Indians and in reporting on the construction of the new Union Pacific RR.

Curtis Institute of Music, in Philadelphia, coeducational, founded 1924 by Mary Louise Curtis Bok (later Mrs. Efrem Zimbalist) and named for her father, Cyrus Curtis. The institute operates entirely on a scholarship basis, with a faculty made up principally of concert artists. The library includes the Burrell collection of Wagneriana.

Curtiss, Glenn Hammond, 1878–1930, American inventor and pioneer in aviation, b. Hammondsport, N.Y. He opened a bicycle shop which he turned into a motorcycle factory as his light Curtiss engines for motorcycles began to attract attention. He was one of the members of Alexander Graham Bell's Aerial Experiment Association (1907–9), and with planes built in this period he began in 1908 to give the first public flights in America, the work of the Wright brothers still being conducted secretly. In 1909 he established the first flying school in America. His greatest triumph was the then daring and spectacular flight from Albany to New York city in 1910 to win the $10,000 New York *World* prize. By 1912 he had developed his "flying boat" or seaplane. In 1916 he organized the Curtiss Aeroplane and Motor Corp., which built many planes for the Allied nations and, after 1917, for the United States. Curtiss continued to contribute radical improvements in design of both planes and motors. His Wasp planes were especially successful, as were also his NC (Navy-Curtiss) seaplanes, one of which, the NC-4, achieved the first crossing of the Atlantic (1919). See biography by Clara Studer (1937).

Curtius, Ernst (ûrnst' kôōr'tsĭ-ŭs), 1814–96, German archaeologist and historian. He secured for Germany the exclusive right of excavating at OLYMPIA, Greece, and taught at the universities of Gottingen and Berlin. His works include *History of Greece* (1857–61, Eng. tr., 5 vols., 1868–73).

curvature of the spine, abnormal curves of the spinal column resulting in deformity. Lateral curvature (scoliosis) occurs more frequently than forward curvature (lordosis) or backward curvature (kyphosis). Scoliosis is usually associated with rotation of the vertebrae. Spinal curvature has a number of causes, e.g., faulty posture, congenital factors, pathological bony changes (as in rickets and decalcification or osteomalacia of the vertebrae), infantile paralysis, and tuberculosis. Treatment consists of corrective exercises, corrective supports or appliances, and surgery (particularly in cases of marked deformity in adolescence).

curve, in mathematics, a line no part of which is straight. Sometimes a curve is considered to be any one-dimensional collection of points, thus including the straight line as a special kind of curve. In analytic geometry the plane curve is considered chiefly as the graph of an equation or function, and the properties of curves are seen to depend largely on the degree of the equation in the case of algebraic curves (i.e., curves with algebraic equations) or on the particular function in the case of transcendental curves (i.e., curves whose equations are not algebraic). For examples of plane curves, see CIRCLE, ELLIPSE, HYPERBOLA, PARABOLA. A twisted or skew curve is one which does not lie

all in one plane, e g, the helix, a curve having the shape of a wire spring

Curwensville (kûr'winzvĭl"), industrial borough (pop 3,422), W central Pa, on the West Branch of the Susquehanna and SW of Clearfield, settled c 1800, inc c 1832 It produces brick, sandstone, clay, and leather

Curzola, Yugoslavia see KORCULA

Curzon, George Nathaniel, 1st Marquess Curzon of Kedleston (kûr'zun), 1859–1925, British statesman; son of the 4th Baron Scarsdale (whom he succeeded in 1916) He showed early brilliance in politics and was undersecretary of state for India (1891–92) and undersecretary for foreign affairs (1895–98) Travels in Asia resulted in several books—*Russia in Central Asia* (1889), *Persia and the Persian Question* (1892), and *Problems of the Far East* (1894) As viceroy of India (1899–1905), he vigorously undertook administrative reform there, and his greatest achievements were pacification of the northwest border and encouragement of higher education Some of his brusque actions aroused antagonism, and he resigned after a quarrel with Lord Kitchener, commander of the army in India, who was supported by the home government Back in England, he was an able chancellor of Oxford, was made Earl Curzon of Kedleston in 1911 (raised to marquess 1921), and became a prominent Conservative as leader in the House of Lords, as lord privy seal (1915–16), and as foreign secretary (1919–24) He presided over the Lausanne Conference of 1922–23 and expressed strong disapproval of French occupation of the Ruhr and other French measures in Germany He paved the way for the Dawes Plan settlement of reparations See official biography by Lord Ronaldshay (1928)

Cusa, Alexander John see CUZA, ALEXANDER JOHN

Cusa, Nicholas of see NICHOLAS OF CUSA.

Cusco, Peru see CUZCO

Cush (kŭsh) **1** Asiatic nation, perhaps the same as one of similar name in E Mesopotamia flourishing c 1500 B C Gen 10 8, 1 Chron 1 10 **2** Benjamite opposed to David Ps 7, title **3** All other biblical references to Cush are for Ethiopia, i e, roughly the present Anglo-Egyptian Sudan Compare, in this regard, the genealogies of the eponyms of various nations, according to which Cush was Ham's son Gen 10 6, 1 Chron 1 8

Cushan (kŭ'shăn), obscure name in Hab 3 7 Some identify it with the Asiatic or the African Cush

Cushi (kū'shī) [Heb, = Cushite] **1** Messenger of Joab 2 Sam 18 19–33 **2** Ancestor of one of Jehoiakim's courtiers Jer 36 14 **3** Zephaniah's father Zeph 1 1

Cushing, Caleb (kŏŏ'shĭng), 1800–1879, American statesman, b Salisbury, Mass, grad Harvard, 1817 For some years he devoted himself to law and to writing political essays Service in the Massachusetts state legislature was followed by four terms in Congress (1835–43) He loyally supported William H Harrison, and after Harrison's death he remained a Whig and chose to stand by John Tyler rather than follow Henry Clay in his opposition program As the first American commissioner to China, Cushing negotiated (1844) the Treaty of Wanghia providing for the opening of the ports of China to U S trade He continued prominent in politics, engineered (1852) the nomination of Franklin Pierce at the Democratic convention of 1852, and served efficiently as Pierce's Attorney General (1853–57) When Stephen A Douglas was nominated (1860) for President, Cushing led the Democrats who nominated J C Breckinridge Secession convinced him that conciliation was impossible, and he supported Lincoln, thereafter remaining Republican He later acted (1871–72) as counsel for the United States at the arbitration of the Alabama Claims and was (1874–77) minister to Spain See biography by Claude M Fuess (1923)

Cushing, Frank Hamilton, 1857–1900, American ethnologist and archaeologist, b North East, Pa Associated with the U S Bureau of Ethnology from 1879, he was an authority on the Pueblo Indians, especially the Zuni He lived among the Zuni for three years, was adopted into the tribe, wrote several books on them, and translated *Zuñi Folk Tales* (1901) In 1896 he investigated remains of lake dwellings in the Florida Keys

Cushing, Harvey Williams, 1869–1939, American neurosurgeon, b Cleveland, grad Yale (B A, 1891), M D Harvard, 1895 Associated with Johns Hopkins (1896–1912), Harvard (1912–32), and Yale (1933–37), he was noted for his great contributions to surgery of the brain and also as teacher and as author For his life of Sir William Osler he won the 1925 Pulitzer Prize in biography Among his other works are a famous treatise on the pituitary body, *Tumors of the Nervus Acusticus* (1917), *Intracranial Tumours* (1932), and the autobiographical *From a Surgeon's Journal, 1915–1918* (1938) See biographies by J F Fulton (1946) and E H Thomson (1950)

Cushing, Luther Stearns, 1803–56, American lawyer, b Lunenburg, Mass, grad Harvard Law School, 1826 His best-known work is his short *Manual of Parliamentary Practice* (1844, many later editions), usually known as *Cushing's Manual.* It is still used in the United States in conducting meetings and legislative activities Cushing's fuller treatment of the subject is *Elements of the Law and Practice of Legislative Assemblies* (1856). He also wrote *An Introduction to the Study of Roman Law* (1854)

Cushing, William Barker, 1842–74, Union naval hero in the Civil War, b Delafield, Wis, educated at Annapolis Cushing became noted for a series of daredevil exploits, particularly for his sinking of the Confederate ram *Albemarle* at Plymouth, N C, in Oct, 1864

Cushing (kŏŏ'shĭng), city (pop 7,703), central Okla, near the Cimarron river SW of Tulsa, settled 1892, inc as a town 1894, as a city 1913 It is the trading and industrial center of a farm and oil-producing area

Cushite (kŭ'shīt), group of Hamitic languages, spoken S of Egypt See LANGUAGE (table)

Cushman, Charlotte Saunders (kŏŏsh'mŭn), 1816–76, American actress, b Boston, Mass The loss of her singing voice turned her from opera to drama, and in 1835 she played Lady Macbeth at New Orleans This role and Queen Katharine in Shakspere's *Henry the Eighth* were always her greatest triumphs, but she was popular in such melodramatic parts as Meg Merrilies in an adaptation of Scott's *Guy Mannering* and in her portrayals of male characters such as Romeo, Hamlet, Cardinal Wolsey, and Claude Melnotte Her appearances in England in 1845–49 were a great success She had a powerful voice and a regal bearing See biographies by Emma Stebbins (1878), Lawrence Barrett (1889), and W T Price (1894)

Cushman, George Hewitt, 1814–76, American miniature painter and engraver, b Windham, Conn He was known as an illustrator and as an engraver of bank notes and bookplates His miniatures were highly prized

Cushman, Pauline, 1835–93, Union spy in the Civil War, b New Orleans She lived in Grand Rapids, Mich, before becoming an actress at 18 in New York city In 1863 she was banished to Confederate lines as a supposed Southern sympathizer, when in reality she had already performed valuable services for Union intelligence in Louisville and Nashville Captured with compromising papers upon her, she was taken to Gen Braxton Bragg's headquarters, court-martialed, and sentenced to be hanged However, in Bragg's hasty departure (June, 1863) from Shelbyville, Tenn, she was left behind and was thus able, for the last time, to help the Union cause with information about Confederate strength and plans Dressed in a Federal uniform, she lectured afterwards about her experiences Her later life was unhappy, and she died a suicide in San Francisco

Cushny, Arthur Robertson (kŭsh'nē), 1866–1926, Scottish physician and pharmacologist. He came to the United States and was professor at the Univ of Michigan (1893–1905) Returning to Britain, he taught at the universities of London (1905–18) and Aberdeen (1918–25) He studied the action of digitalis on the heart, the secretion of urine, the effects of optical isomers, and the correlation of certain heart symptoms with auricular fibrillation His works include *A Text-Book of Pharmacology and Therapeutics* (1899, 13th ed, *Pharmacology and Therapeutics*, 1947)

custard apple see PAPAW

Custer, George Armstrong, 1839–76, b New Rumley, near Cadiz, Ohio, grad West Point, 1861 He immediately saw action in the Civil War at the first battle of Bull Run and then distinguished himself as a member of Gen G B McClellan's staff in the Peninsular campaign Custer was made a brigadier general of volunteers in June, 1863 (he was the youngest general in the Union army), and ably led a cavalry brigade in the Gettysburg campaign He became a national celebrity in 1864 for his fighting under Gen P H Sheridan in the great cavalry battle at Yellow Tavern and in Sheridan's Shenandoah Valley campaign, especially at Winchester Made a divisional commander in Oct, 1864, he defeated Gen Thomas L Rosser at Woodstock (Oct 9, 1864) After dispersing the remnants of Gen Jubal A Early's command at Waynesboro on March 2, 1865, he was in the advance in pursuit of Lee's army beyond Richmond Custer received the Confederate flag of truce, was present at the surrender at Appomattox Courthouse, and was promoted major general of volunteers His record (he had also been brevetted a major general in the regular army), considering his youth, was one of the most spectacular of the war In the reorganization of the U S army after the war Custer was assigned to the 7th Cavalry with the rank of lieutenant colonel, and he remained the acting commander of this regiment until his death In 1867 he was court-martialed and set down for leaving his command at Fort Wallace, Kansas, without permission, but in Sept, 1868, he was reinstated, mostly through the efforts of Sheridan, with whom he had always been a prime favorite In massacring the Cheyenne and their allies at the battle of the Washita (Nov, 1868) he was accused of abandoning a small detachment of his men, who were annihilated by the Indians He served on the Yellowstone in Dakota Territory (1873) and in 1874 commanded the expedition into the Black Hills which led to renewed hostilities with the Sioux. In the comprehensive campaign against the Sioux planned in 1876, Custer's regiment was detailed to the column under the commanding general, Alfred H Terry, that marched from Bismarck to the Yellowstone At the mouth of the Rosebud, Terry sent Custer forward to locate the enemy while he marched on to join the column under Gen John Gibbon Custer discovered the Indian encampment on the Little Bighorn on June 25 and decided to attack at once despite the great number of Indians, most of whom lay concealed in ravines He divided his regiment into three parts, sending two of them, under Major Marcus A Reno and Capt Frederick W Benteen, to attack farther upstream, while he himself led the third (over 200 men) in a direct charge The Indians killed them to a man Reno and Benteen were themselves kept on the defensive, and not until Terry's arrival was the extent of the tragedy known The men (except Custer, whose remains were reinterred at West Point), were buried on the battlefield, now a national monument in Montana Custer's spectacular death made him a popular but controversial hero, still the subject of dispute Custer, who was a Democrat, had placed himself on President U S Grant's blacklist by forthrightly testifying against Secretary of War William W Belknap, accused of taking bribes from Indian post traders Anxious to reap a large measure of glory for himself alone and thereby offset Grant's hostility, he ordered the foolhardy attack—thus runs one theory Considering Custer's immodest, not to say arrogant, character, it is not an improbable one Custer wrote *My Life on the Plains* (1874), and his wife, **Elizabeth Bacon Custer,** 1842–1933, who devoted much of her life to upholding his memory, wrote *Boots and Saddles* (1885), *Tenting on the Plains* (1887), and *Following the Guidon* (1890) See also biographies by F S Dellenbaugh (1917), Frazier Hunt (1928), and F F Van de Water (1934), W A Graham, *The Story of the Little Big Horn Custer's Last Fight* (1926, 2d ed, 1941), Charles A Windolph, *I Fought with Custer* (as told to Frazier Hunt and Robert Hunt, 1947), Marguerite Merington, ed, *The Custer Story the Life and Intimate Letters of General George A Custer and His Wife, Elizabeth* (1950)

Custer, city (pop 1,845, alt 5,301 ft), co seat of Custer co, SW S Dak, SSW of Rapid City Oldest town in the Black Hills, it was laid out in 1875 as Stonewall after gold was discovered near by and was soon renamed for G A Custer It has an active tourist trade and is in a mining, timber, and livestock region Near by are Custer State Park, Wind Cave National Park, Jewel Cave and Fossil Cycad national monuments, Harney Peak, and Mt Rushmore National Memorial

Custer Battlefield National Monument see LITTLE BIGHORN, river

Custine, Adam Philippe, comte de (adă' fēlĕp' kōt' du kustēn'), 1740–93, French general He served in the Seven Years War and the American Revolution Elected to the States-General (1789), he later took up arms in the FRENCH REVOLUTIONARY WARS His failure in the campaign of 1793 led to accusations of treason and he was guillotined

Custis, George Washington Parke, 1781–1857, American dramatist, b Mt Airy, Md, educated at the College of New Jersey (now Princeton) He was the grandson of Martha Washington, and, adopted by Washington, he grew up at Mt Vernon and became heir to part of the Washington estate Chiefly a planter and an active promoter of agriculture, he also wrote several plays produced in American theaters in the second quarter of the 19th cent, notably *The Indian Prophecy* (1827), *Pocahontas* (1830), and *The Railroad* (1830) His daughter, **Mary,** married Robert E LEE

custom refers to those group patterns of habitual behavior which tend to be transmitted from one generation to another Custom is enforced by informal sanctions which require some degree of conformity from the members of a society As social habits, such patterns are strengthened by repetition, but ultimately they are characterized only by their duration For example, certain fashions may, at a given time, dominate a culture and yet unaccountably fail to become "customary," i e, become embodied in its tradition

customs, government taxes on imports or exports Such taxes have been used by governments from ancient times Originally they were payments for the use of the facilities of ports and markets where collected, and they were levied at any important trade center, regardless of whether the goods had been taxed previously within the same country In the 18th and 19th cent they came to be levied only at the boundary of a country, and internal customs have now given way to excise. There are two common types of duties—specific duty, a tax levied on the quantity, whether by weight, measure, or number, of the goods, and ad valorem duty, a percentage of the price The ad valorem duty is preferable, but more difficult to levy, necessitating

complex methods to determine the value of goods Specific duties are best applied on goods comparatively uniform in quality and value and for protectionist purposes The United States uses both types and adds a mixed class Since 1922 the United States has given the President power to change rates within limits to meet changing trade conditions Some countries have schedules giving maximum and minimum rates, the former for general use and the latter for nations giving similar concessions through commercial treaties A nation's whole schedule of customs duties, or TARIFF, forms the basis for negotiating such treaties Low preferential rates are frequently granted by reciprocal tariff treaties, and within political unions such as the British Empire there may be special low rates Although customs were originally merely sources of government revenue, they have become a means of raising the prices of foreign goods to give home manufacturers PROTECTION Certain duties are designed to offset DUMPING Countervailing duties, on goods given a bounty by the exporting country, offset the bounty Compensatory duties are levied on manufactured goods to offset those levied on raw materials Few countries now levy many export duties, and those levied are entirely for revenue See F W Taussig, *Free Trade, the Tariff, and Reciprocity* (1920), B A Levett, *Through the Customs Maze* (1923), P W Bidwell, *Tariff Policy of the United States* (1933) A C Pigou, *Protective and Preferential Import Duties* (1935), H R G Greaves, *Raw Materials and International Control* (1936), R C Snyder, *The Most-Favored-Nation Clause* (1948)

Custozza (kōōstōd'zä), village, Venetia, N Italy, near Verona It was the scene of an Austrian victory over Sardinia in 1848 (see RISORGIMENTO) and of an Austrian victory over Italy in 1866 (see AUSTRO-PRUSSIAN WAR)

Cüstrin see KÜSTRIN

cut see WOUND

Cut Bank, town (pop 2,509), co seat of Glacier co, N Mont, at the point where Cut Bank Creek and Birch Creek form the Marias river and NW of Great Falls It is the center for a petroleum and gas field and has an oil refinery The Blackfeet Indian Reservation is west of the town

Cutch see KUTCH

cutch see CATECHU

Cuth (kūth) or **Cuthah** (kū'thä), ancient city of Mesopotamia, near Babylon The inhabitants, when settled in Samaria, introduced the worship of Nergal In later times the Jews called the Samarians Cuthites 2 Kings 17 24,30

Cuthbert, Saint, c 635–687, Celtic monk, bishop at Lindisfarne (685–86) He spent some time in the monastery at Ripon When St WILFRID introduced the Roman computation of EASTER there, he left, but later he accepted the change Cuthbert preached for some years in his native Scotland and to the Picts of Galloway He became prior at Lindisfarne but resigned to live in solitary retreat on Farne Island Nine years later, with great reluctance, he accepted the bishopric of Bernicia at Lindisfarne, retiring to Farne for his last weeks His relics were taken to the cathedral at DURHAM, where they have been tentatively identified Feast March 20 See Bertram Colgrave, *Two Lives of Saint Cuthbert* (1940)

Cuthbert, city (pop 3,447), co seat of Randolph co, SW Ga, S of Columbus, inc 1834 It processes farm products and manufactures plywood Andrew College (junior, for women) is here

Cutler, Manasseh (munā'sē), 1742 1823, American clergyman, scientist, and colonizer, b Killingly, Conn, grad Yale, 1765 A student of both law and theology, he was admitted to the bar in 1767 and was ordained (1771) pastor of the Congregational church at Hamilton, Mass He also studied medicine and became a practicing physician In science Cutler used both telescope and microscope and contributed his observations to the *Proceedings* of the American Academy of Arts and Sciences, of which he was a member His botanical papers, taken together, form the first systematic description and classification of New England flora He aided (1786) in forming the OHIO COMPANY OF ASSOCIATES, and in 1787 he was sent as agent to the Continental Congress to secure a grant of land on the Ohio river for settlement By skillful lobbying he succeeded where his predecessor, Samuel H Parsons, had failed, and for about $80,000 the company purchased 1,500,000 acres While at Congress, Cutler was consulted and took part in framing the famous ORDINANCE OF 1787 In 1788 he drove in a sulky to Ohio, where he remained nearly a year to help establish the settlement at MARIETTA He was (1801–5) a member of the U S House of Representatives, but declined renomination He kept up a large correspondence and a full diary from 1765 to his death He wrote, in addition to his scientific papers, *Description of Ohio* (1787, reprinted 1896) See W P Cutler and J P Cutler, *Life, Journals, and Correspondence of Rev Manasseh Cutler* (1888)

cutlery. The history of cutlery begins with the shell and the sharp flint used for cutting before man made tools The primitive craft of chipping flint began by improving naturally sharp edges The chipped flint knives of the Neolithic period show great skill Knives were made of copper and bronze when those metals came into use Finally steel and alloys of steel have displaced other materials for the blades of instruments for cutting The primitive generalized cutting instrument has been differentiated into specialized instruments of wide variety, e g, the sword, the razor, and shears Table knives were introduced c 1600, until then, individuals brought to the table their own knives, which served also as daggers The penknife was originally a knife for pointing quill pens The pocket knife, with the blade folding into the handle, was invented c 1600 The cutler's craft or industry, which supplies knife sharpeners and steel table forks as well as the finer cutting tools, was long marked by the successful resistance of the handicraftsman to mass production Small shops, with from one workman to a half dozen, are characteristic Handwork is requisite for some operations and is adequate for all Certain localities have become known for the excellence of their cutlery The Toledo blade was famous when the sword was an important weapon Solingen, in Germany, and Sheffield, in England have been noted for their cutlery since the Middle Ages The best knives are forged from high-carbon steel Cheaper grades are beveled from steel bars thick in the center and tapering toward the edges or are stamped from sheets of metal In hollow-ground blades the sides are concave For stainless blades, the steel is usually partly replaced by, or coated with, chromium Scissors blades commonly are either cast in molds or stamped Most razor blades are die-stamped See L J Peet and L E Sater, *Household Equipment* (2d ed, 1940)

Cuttack (kutăk'), town (pop 74,291), E central Orissa state, India, founded in the 10th cent A D Its gold and silver filagree work was long famous Today Cuttack is an important trade center

Cutter, Charles Ammi, 1837–1903, American librarian, b Boston, grad Harvard, 1855 and Harvard Divinity School, 1859 His experience in cataloguing the library of the Harvard Divinity School led him to prefer librarianship to the ministry, and in 1860 he became assistant to the librarian of Harvard As librarian of the Boston Athenaeum (1868–93) he was a pioneer in subject cataloguing The Athenaeum catalogue (5 vols, 1874–82) served as a model for later dictionary catalogues His *Rules for a Dictionary Catalog* (1875), the first work of its kind, went through four editions Cutter's system of classification, *Expansive Classification* (1891–93), used letters of the alphabet instead of numbers as in the Dewey decimal system, it was the basis of the Library of Congress classification Cutter also evolved an alphabetical scheme for arrangement on the shelf by author From 1893 until his death he was librarian of the Forbes Library, Northampton, Mass See biography by W P Cutter, his nephew (1931)

Cutter, George Washington, 1801–65, American poet, b Quebec, Canada He lived later in Indiana and Kentucky He wrote one vigorous battle poem, included in *Buena Vista and Other Poems* (1848), and his *Song of Steam and Other Poems* (1857) is original for its use of a modern theme

cutter, small, one-masted sailing vessel, with a rig similar to that of a SLOOP Cutters were notable for their speed and from 1800 to 1830 were used in service between England and France They were also employed to pursue smugglers, their easy handling and speed fitting them admirably for the task These revenue cutters were so well known that the name was applied to the revenue vessels even after steam had replaced sails, and the vessels of the coast guard are called cutters The name cutter is also used for a heavy rowboat carried on large ships

cutting, part of a plant stem, leaf, or root cut off and used for producing a new plant It is a convenient and inexpensive method of propagation, not possible for all plants but used generally for grapes, chrysanthemums, verbenas (stem cuttings), blackberries (root cuttings), African violets (leaf cuttings), and for many other plants Cuttings, as soon as made, are usually placed in moist sand, frequently heated from below, if taken in the fall, as hardwood cuttings of trees or shrubs, they are placed in unheated sand over winter and planted in the spring The word *cutting* alone usually means stem cutting, *slip* is a common synonym

cuttlefish, marine mollusk of warm and temperate coastal waters with a shield-shaped body, a distinct head (with well-developed eyes), and 10 arms It has an internal calcareous plate or cuttlebone which is used as a source of lime for cage birds It is used also in making abrasives and fertilizers A glandular ink sac secretes sepia which is ejected to form a concealing cloud in case of danger When dried the secretion is made into the sepia used by artists

Cuttyhunk see ELIZABETH ISLANDS

cutworm, the larva of various noctuid or owlet moths The eggs are laid in midsummer They soon hatch into larvae which feed on young shoots and roots In the fall the larvae go underground, emerging the next spring They cut the stems of young plants in cultivated fields, destroying more than they devour and working by night Methods of control include baits of poisoned bran mash or greens, placing metal or paper collars on young plants, or making holes in the ground from which the worms cannot emerge

Cuvier, Georges Léopold Chrétien Frédéric Dagobert, Baron (zhôrzh' lāôpōld' krātyĕ' frādārĕk' dägôbĕr' bärō' küvyā'), 1769–1832, French zoologist and geologist, a founder of the sciences of comparative anatomy and paleontology Outstanding for applying the comparative method to zoological classification and to paleontology, he also made notable studies in systematic zoology, especially on the bone structure of mammals and on the anatomy of fishes In *Leçons sur l'anatomie comparée* (5 vols 1800–1805) he emphasized the form (as opposed to the function) of organs and the correlation between organs in the same body as the basis of systematic classification He applied the correlation theory to the study of fossils and embodied his method of deducing the form of soft parts of fossil animals from their skeletal remains in *Recherches sur les ossemens fossiles des quadrupèdes* (1812) In *Le Règne animal* (1817) he opposed the arrangement of living forms in one continuous series, he divided animals into four groups (Vertebrata, Mollusca, Articulata, and Radiata) and compared forms only within each group His study of fossils and of the earth's development led him to reject theories of continuous evolution and to support the theory of CATASTROPHISM Cuvier was professor at the Collège de France (1800) and at the Jardin des Plantes (1802) and chancellor of the Univ of Paris (1819) As inspector of education (1802) and head of committees on education, he influenced the organization of higher education in France He became a baron (1819) and a peer (1831)

Cuvilliés, François de (frāswä' dù küvēyĕs'), 1698–1767, French architect, decorator, and engraver He introduced into Germany the ROCOCO style of decoration then popular in France He became architect to Charles Albert, elector of Bavaria, and when the latter became Emperor Charles VII (1742) was appointed architect to the imperial court His two best works, both at Munich, were the Residenz-Theater (1751–53) and the pavilion called the Amalienburg, in the park of Nymphenburg The brilliant interiors of the pavilion represent the highest achievements of German rococo decoration His son, **François de Cuvilliés,** the younger, 1734–1805, succeeded his father as architect of the Bavarian royal court He published architectural studies

Cuxhaven (kŏōks'hä'fun), city (pop 42,542), Hanover, N Germany, a port at the mouth of the Elbe, c 60 mi NW of Hamburg It passed to Hamburg in 1394, was chartered in 1907, and became the docking place for ocean steamers too large to reach Hamburg In 1937 it was transferred to Hanover prov, former Prussia Its naval yard was often bombed in the Second World War

Cuyabá, Brazil see CUIABÁ

Cuyahoga (kī"uhō'gu), river of NE Ohio, flowing SW then NNW to Lake Erie at Cleveland

Cuyahoga Falls, city (pop 20,546), NE Ohio, near Akron and on the Cuyahoga river, laid out 1837 It is a residential and industrial town Chemicals, rubber goods, and machinery are among its varied products

Cuyp or **Kuyp** (koip), family of Dutch painters of Dordrecht **Jacob Gerritszoon Cuyp** (yä'kŏp gĕ'rĭtzŏn), 1594–c 1651, pupil of Abraham Bloemaert, was a portrait and landscape painter His nephew and pupil, **Benjamin Cuyp,** 1616–52, painted figure compositions and peasant scenes in the style of Rembrandt Few examples of his work exist **Aelbert Cuyp** (ăl'burt), 1620–91, son and pupil of Jacob Gerritszoon Cuyp, was one of the foremost Dutch landscapists Little is known of his life He first painted still life, interiors with figures, and animals, but later specialized in the pastoral landscape for which he is famous Many of his pictures were inspired by the banks of the Meuse and the Rhine They are characterized by a fine breadth and simplicity of treatment and a golden luminosity His light effects have been compared to those of Claude Lorrain Many of his best works are in England Representative are his *Piper with Cows* and *Promenade* (Louvre) and *Horseman and Cows in a Meadow* (National Gall, London) The Metropolitan Museum contains six fine landscapes

Cuyuna, iron range in Minnesota see MESABI

Cuza, Alexander John (kōō'zä), or **Alexander John I,** 1820–73, first prince of Rumania (1859–66), b Moldavia For taking part in the abortive revolution at Jassy (1848), he was for a time under arrest, but subsequently he became (1850) prefect of Galati In 1859 he was elected prince of both Moldavia and Walachia and in 1861 was recognized by Turkey as sovereign of the united principalities, thenceforth known as Rumania His corrupt regime soon alienated his subjects, and in 1866 conspirators forced him to abdicate He went into exile in Paris. His name also appears as Cusa and Couza.

Cuzco or **Cusco** (both· (kōō'skō), city (pop 45,158, alt 11,207 ft), capital of Cusco dept, S Peru On a site probably actually occupied by pre-Incan tribes, Cuzco was founded, according to legend, by MANCO CAPAC, first of the Incan rulers In Cuzco stood massive palaces and temples, particularly the Temple of the Sun, lavishly decorated with gold medallions and ornaments, which were plundered by FRANCISCO PIZARRO after his entry into the Inca capital in Nov, 1533 On the ruins of the Inca city the conquerors and their descendants built the colonial city, using the ancient walls (in many instances still visible) as foundations for new buildings, the Convent of Santo Domingo was constructed on the walls of the Temple of the Sun The mixture of Incan and colonial gives the city a picturesque atmosphere Predominantly Indian in population, it is a trading center for agricultural produce and for the woolen textiles of the Cuzco mills There are rail and highway connections SE to the Lake Titicaca area Near by are the ruins of the Incan fortress SACSAHUAMAN

cyanide (sī'unīd), a salt or ester of HYDROCYANIC ACID (prussic acid) composed of a metal or a radical combined with the carbon-nitrogen (cyanogen) radical Important cyanides are those of sodium and potassium They are both deadly poisons (for treatment and antidote, see POISONING, table), are soluble in water, and in the presence of moisture give off the poisonous prussic acid They are used as insecticides and in processes such as casehardening, electroplating, and the extraction of gold and silver from their ores Potassium cyanide, a compound of potassium and the carbon-nitrogen radical, is white and crystalline It is active chemically By its interaction with ferrous and ferric salts "yellow prussiate of potash" (potassium ferrocyanide) and "red prussiate" (potassium ferricyanide) are formed The ferrocyanide and a ferric salt yield PRUSSIAN BLUE, while the ferricyanide and a ferrous salt yield Turnbull's blue (a reaction used in the making of a BLUEPRINT) Potassium cyanide is used also to prepare hydrogen cyanide for fumigation purposes Sodium cyanide, which is also white and crystalline, is a compound of sodium and the carbon-nitrogen radical It has largely taken the place of potassium cyanide in industry, because of its lower cost This is especially true in the extraction of gold and silver from their ores **The cyanide process** for this purpose is based upon the fact that gold (or silver) dissolves in a sodium (or potassium) cyanide solution, when air or oxygen is present, to form a compound of sodium, gold, and the cyanide From this substance the precious metal is precipitated by the action of another metal, such as zinc The cyanide process has largely taken the place of the amalgamation process (see AMALGAM)

cyanogen (sīă'nujĭn), colorless, inflammable, extremely poisonous gas, a compound of carbon and nitrogen, having a characteristic odor somewhat like that of prussic acid It liquefies at −21°C and solidifies at −35°C, it is very soluble in water and is soluble also in alcohol and ether It is prepared either by heating mercuric cyanide which decomposes to mercury and cyanogen (this reaction led originally to its isolation by Gay-Lussac) or by the reaction between solutions of copper sulphate and sodium or potassium cyanide Cyanogen is active chemically and reacts with many metallic and nonmetallic elements and compounds **Cyanogen chloride** is a very poisonous liquid boiling at about 14°C Because of its toxic properties, it has been used as a POISON GAS

cyanotype see BLUEPRINT

Cybele (sĭ'bulē), in Phrygian religion, the GREAT MOTHER OF THE GODS She rode in a chariot drawn by lions, attended by CORYBANTES and DACTYLS Her love for ATTIS and his early death were celebrated in a spring festival, which has been considered as the archetype of fertility rites Her worship was imported to Greece, where she was identified with DEMETER and RHEA It was later well known in Rome, particularly under Emperor Claudius She is indistinguishable from various other mother goddesses, notably Agdistis

Cyclades (sĭ'kludēz), Gr *Kyklades* [Gr, =circular], island group (1,023 sq mi, pop 129,015), Greece, a part of the Greek archipelago, in the Aegean Sea stretching SE from Attica The name was originally used to indicate those islands forming a rough circle around DELOS The Cyclades now include the islands of ANDROS, TENOS, NAXOS, MELOS, PAROS, and KEOS Hermoupolis, on SYROS, is the chief town Largely mountainous, with a dry and mild climate, the islands produce wine, fruit, wheat, olive oil, and tobacco In 479 B C the Cyclades became an Athenian dependency From the 3d cent. B C until the reign of Augustus they frequently changed hands After the establishment (1204) of the Latin Empire of Constantinople, the Cyclades formed the major part of the Duchy of the Archipelago, ruled by Italian nobles and by Venice until its fall to the Turks in 1566.

cyclamen (sĭk'-), name for plants of the genus *Cyclamen*, tuberous-rooted Eurasian herbs, one species (*Cyclamen indicum* or *persicum*) popular in America as a pot plant. This has nodding flowers with reflexed petals, white or in shades of rose or purple, and sometimes crested It is usually grown from seed *Cyclamen europaeum*—called sowbread —has tubers relished by swine

cycle (sī'kŭl) [Gr, =circle], in astronomy, a period of time required to bring about the recurrence of certain relative positions or aspects of the heavenly bodies It often involves a comparison of the period of revolution of one of those bodies with the 24-hour period of the earth's rotation on its own axis When a year or a month is measured by means of hours or days, there is a fractional part left over The revolution of the earth about the sun, producing what we call a year, takes place once in 365 days 5 hr 48 min 46 sec The moon revolves about the earth once in about 29½ days, a lunar month Because even results cannot be obtained by thus measuring with our units, the hour and the day, sometimes many years pass before a series of relations repeats itself in exactly the same order as before For instance, the solar cycle requires 28 years for its completion At the end of that time the sun will have reached the same position with relation to the earth that it occupied when the cycle started, and the order of days on the calendar through the year will be the same as that at the beginning of the cycle Because the orbits of the earth and the moon are not exactly in the same plane, eclipses of the sun do not occur in a yearly cycle After 18 years 11 days the moon and the earth are in nearly the same relative positions again, so the eclipse cycle is 18 or 19 years Another important cycle is that of the PRECESSION OF THE EQUINOXES, caused by a slow movement of the earth's axis in such a manner that in the course of 25,796 years it will have traced out a complete cone At the end of that time the equinoxes again occupy the positions in the ecliptic that they held when the period opened Astronomers make use of various other cycles, e g, those of SUNSPOTS and variable stars.

cycle, business see CRISIS, ECONOMIC

cyclone (sī'klōn) [Gr, =going in a circle], any storm area of low barometric pressure, more or less circular in shape, and characterized by wind blowing spirally inward (counterclockwise in the Northern Hemisphere, clockwise in the Southern Hemisphere) The term extratropical cyclone is applied to the large storms (from several hundred to a thousand or more miles in diameter) of the temperate latitudes, as opposed to the tropical cyclone (see HURRICANE) and to the smaller, intense storm, common in the Middle Western United States, known as the TORNADO According to Bjerknes, the extratropical cyclone, or "low," originates as a "wave," or "eddy," in the surface of separation (POLAR FRONT) between the cold polar easterly winds of the north and the warmer prevailing westerlies of the south This wave, once induced by the opposing air currents, is accentuated by a northerly flow of warm moist air in advance of the center of low pressure and by a southerly flow of cold dry air behind the center It thus inherits a frontal structure of its own—the outstanding characteristic of an extratropical cyclone In its subsequent development, marked by an increase in area affected and a reduction of pressure at the center, it moves generally in an easterly direction with a speed of 300 to 700 mi a day, attended by cloudiness, precipitation, and a change in temperature In the United States, these storms usually enter (or originate in) the western portion of the country and leave by the east or northeast

Cyclopean (sĭklupē'un), name often applied to a primitive method of masonry construction of prehistoric times, found chiefly in Greece, Italy, Asia Minor, and Syria The term is derived from Cyclopes, the race by whom, according to Greek fable, these walls were supposed to have been built The massive Cyclopean walls were usually of huge, roughly dressed stones, laid upon one another, the interstices filled with small pieces and the binding produced by a clay mortar They were characteristic of the Minoan and Mycenaean architecture (c 3000–1100 B C), which preceded Greek architecture in the Aegean basin and which centered in the island of Crete Remaining examples are found at Cnossus in Crete and at Mycenae, Tiryns, and Athens on the Greek mainland Here remain also examples of more careful masonry, built of fitted rectangular blocks or of accurately fitted polygonal stones apparently derived from the rough Cyclopean masonry From Etruscan architecture (750–100 B C) in Italy, there are many Cyclopean remains Similar examples are seen in China and Japan and, in Peru, in the ruins of vast structures built by the Inca probably about the 12th cent A D.

Cyclops (sī'klŏps), plural **Cyclopes** (sĭklō'pēz), in Greek religion, one of a group of one-eyed giants, descended from URANUS and GAEA Some of the Cyclopes were shepherds, like POLYPHEMUS, who captured ODYSSEUS Others worked in the smithy of HEPHAESTUS, forging thunderbolts for Zeus In the battle called the TITANOMACHY, they helped Zeus to defeat their kinsmen, the Titans.

cyclotron (sī'klutrŏn, sĭ'-), magnetic resonance accelerator invented by E O. LAWRENCE Applying the principle of resonance, it accelerates enormously the particles used to split target atoms, by employing a rapidly oscillating (high-frequency alternating) electric current in a constant magnetic field which causes the particles to move in curved paths The particles, such as a proton, deuteron, or helium nucleus (ALPHA PARTICLE), are introduced near the center of a special chamber, which looks something like a large pillbox split in half, with the halves slightly separated, and set between magnetic poles When the device is in operation, the particles introduced move faster and faster in a widening circle until, imparted with an enormous amount of energy, they reach the outer edge of the chamber, where they escape into a receptacle and bombard the atoms contained therein One of the advantages of the cyclotron is that excessively high voltage need not be applied The first cyclotron designed by Lawrence in 1930 imparted over 1,200,000 electron volts of energy to protons The Univ of California's 184-inch cyclotron at Berkeley, Calif, has imparted over 300,000,000 electron volts to the particles Powerful cyclotrons are in operation at other nuclear research centers including Columbia Univ's center at "Nevis," near Irvington, N Y, and the Univ of Rochester The cyclotron has made it possible to make ordinarily nonradioactive elements radioactive, thus leading to the transmutation of elements, the discovery of new elements, and the production of radioactive isotopes valuable as tracers in medical diagnosis and treatment

Cydippe (sĭdĭ'pē), in Greek legend **1** Young woman loved by ACONTIUS **2** Priestess see BITON

Cydnus (sĭd'nus), ancient name of the river of Cilicia on which Tarsus stands It rises in the Taurus range and flows to the Mediterranean Its waters were noted as being clear and cold

Cydonia see CANEA, Crete

Cygnaeus, Fredrik (frā'drĭk sŭng-nā'ŭs), 1807–81, Finnish poet and literary historian He was educated at the Univ of Abo, where for four years he taught literature In 1854 he became professor of aesthetics and literature at the Univ of Helsinki His best work, including two national dramas, is contained in *Skaldestycken* (6 vols, 1851–70) He wrote in Swedish

cylinder printing see CALICO PRINTING

cymbals (sĭm'bulz), percussion instruments of ancient Oriental origin, introduced fairly late into ancient Greece, and used also by the Egyptians and the Assyrians They consist of a pair of slightly concave metal discs which are sounded in various ways, always producing a sound of indeterminate pitch Introduced into Europe in the Middle Ages, they were then struck together lightly to give a gentle, ringing sound In 1680 they were introduced into European opera by Nikolaus Adam Strungk but were generally used for exotic effects until the 19th cent The best ones were imported from Turkey or India Besides the medieval method of playing them and the modern way of crashing them together, one cymbal, suspended, may be struck with a drumstick, or they may be violently swept past each other, in the Turkish fashion

Cymbeline (sĭm'bulēn) or **Cunobelinus** (kū"nōbĭlī'nus), fl A D 40, British king A wealthy and powerful ruler and the father of Caractacus, he died before the Roman invasion He gives his name, but little else, to Shakspere's *Cymbeline* (written c 1610) The plot of Shakspere's play is only partially derived from the pseudo-British history in Holinshed's *Chronicles* It concerns Imogen, daughter of Cymbeline, and her husband Posthumus, from whom she is separated by her stepmother, the queen, and with whom she is eventually reunited

Cyme (sī'mē), ancient Greek city of W Asia Minor, on the Ionian Sea and N of the present Smyrna in W Asiatic Turkey It was the largest and most important of the 12 cities of Aeolis Cyme struggled to be free of Persian domination but was only intermittently successful Later it was a city of the Seleucids and ultimately of Rome

Cymru and **Cymry** see WALES

Cynewulf (kĭn'uwo͝olf), fl early 9th cent ?, Old English religious poet of Northumbria or Mercia Four poems, *Juliana*, the middle section of *Christ*, *Elene*, and *Fates of the Apostles*, have been ascribed to him on the evidence of his signatures in runes in the text of each of these poems Other poems, including *The Phoenix*, formerly thought his, are now attributed to other poets of the "Cynewulf school" See *The Poems of Cynewulf* (tr by C W Kennedy, 1910)

Cynics (sĭn'ĭks) [Gr, =doglike, probably from their manners and from their meeting place, the *Cynosarges*], ancient school of philosophy founded by ANTISTHENES, a disciple of Socrates He seized upon one aspect of Socrates' ethics, "Virtue is the highest good" Antisthenes said, "Virtue is the only good" Everything else—riches, honor, freedom, health, life itself—is not merely indifferent, but contemptible Hence the Cynics paraded their poverty, their antagonism to pleasure, and their indifference to others as the essence of their virtue. They lived without family, society, or religion.

After Antisthenes the principal Cynics were Diogenes of Sinop, Crates, Menedemus, and Menippus.

Cynoscephalae (sīnŭsĕ'fŭlē, sĭnŭ-) [Gr.=dogs' heads], two hills in Thessaly, Greece, SSE of Larissa The place was noted as the scene of the victory of Pelopidas over Alexander of Pherae in 364 B C. and of the victory of Flamininus over Philip V of Macedon in 197 B C.

Cynthiana, city (pop 4,840), co seat of Harrison co., N Ky., NE of Lexington and on the South Fork of the Licking, in a farm area; founded 1793, inc. 1806 It has tobacco warehouses, food-processing plants, and a distillery. In the Civil War it was the scene of two of Gen John H. Morgan's raids Among the points of interest are the log house (1790) in which Henry Clay appeared as a lawyer, the covered bridge (c 1837), and the burying ground established in 1793

Cynthus: see Giraldi, Giovanni Battista.

cypress, popular name for trees or shrubs belonging to three genera related to the pines and having nearly globular cones Those of the genus *Cupressus*, the true cypresses, are resinous evergreens with a fragrant, durable wood and scalelike leaves. Species are found in S Europe, in China, and in W North America The Monterey cypress (*Cupressus macrocarpa*) is native to a limited region around the Bay of Monterey, Calif., but is cultivated in many parts of the world It is sometimes planted as a hedge The cypress of classical literature is the European *Cupressus sempervirens* or Italian cypress It has since early times been symbolic of mourning and, more recently, of immortality The gates of St Peter's at Rome, which stood for 1,100 years, were made of its wood The bald cypress species are of the genus *Taxodium*, closely related to the sequoia. They are called "bald" because of their character (somewhat unusual for conifers) of losing their leaves for a season Bald cypresses may reach an immense size and a great age, notably certain specimens in Mexico of *Taxodium mucronatum*, the Mexican bald cypress The common bald cypress of North America (*T. distichum*) is native chiefly in swamps and on stream banks of the SE United States When growing in water it produces upright root projections called knees The wood is valued for shingles and exterior and interior trim and construction Lawson's cypress or Port Orford cedar, a valuable timber tree, and the Nootka, Sitka, or yellow cypress belong to the genus *Chamaecyparis*

Cypress Hills, SW Sask and SE Alta The main line of the Canadian Pacific Railway is close by The name is derived from the jack pine (or cypress) forests in this section

Cyprian, Saint (sĭ'prēun), b 200? or 210?, d 258, Father of the Church, bishop of Carthage after 248 or 249 A pupil of Tertullian, he was far less puristic than his brilliant teacher In the persecution under Decius, many Christians apostatized Some bishops took the position that the apostates could not be reinstated (a view which culminated in Donatism) Cyprian, on the contrary, agreed with Pope St Calixtus I—he was strict with his flock, but would not refuse absolution. St Cyprian was also opposed to the schism of Novatian In his treatise *On the Unity of the Catholic Church* Cyprian pleaded for a united Church founded on the authority of the bishop His works, such as *On the Lapsed*, and his letters helped establish many orthodox tenets, and his doctrine of grace influenced St Augustine Feast, as a martyr Sept 16 See *De unitate ecclesiae*, (tr and ed by E H Blakeny, 1928)

Cypris: see Aphrodite

Cyprus (sī'prus), Gr *Kypros*, British colony (3,572 sq mi., pop 450,114), an island in the E Mediterranean, c 40 mi S of Turkey and c 60 mi E of Syria The seat of the governor is at Nikosia Limassol, Larnaca (ancient Citium), Famagusta, and Paphos are the other chief towns The majority of the population are Orthodox Greeks, but there are c 80,000 Moslems, mostly Turks Two mountain ranges traverse the island, rising to 6,406 ft. at Mt. Olympus Between the two ranges lies a wide plain The rainless summers of Cyprus create a water-supply problem, but the island is nevertheless rich in agricultural products, notably wine, wheat, olives, and tobacco Sheep and goats are raised, and silk worms are cultivated Among the mineral resources are pyrites, ochre, chrome, asbestos, and copper (which derives its name from *Kypros*). Excavations have proved the existence of a Neolithic culture on Cyprus in the period from 4000 B C to 3000 B C Contacts with the Orient and, after 1500 B C., with Greece greatly influenced Cypriot civilization The Phoenicians settled on the island c 800 B C Cyprus subsequently fell under Assyrian, Egyptian, and Persian rule, though local kings continued to reign Passing (333 B C.) to Alexander the Great, Cyprus after Alexander's death again became an Egyptian dependency until its annexation by Rome in 58 B C Ancient Cyprus was a center of commerce and also a center of the cult of Aphrodite The apostles Paul and Barnabas introduced Christianity. In 1191 Richard I of England conquered Cyprus from the Byzantine Empire, and in 1192 it was bestowed as a kingdom on Guy of Lusignan. The Lusignan dynasty, ending with Caterina Cornaro, ruled the island until 1489, when Cyprus was annexed by Venice The Turks conquered it in 1571 At the Congress of Berlin (1878) the Ottoman Empire, by a separate agreement, placed Cyprus under British administration, and in 1914 Britain annexed it outright It received the status of a colony in 1925 In 1931 the legislative council, established in 1882, was abolished A proposal (1947) for a more liberal government was rejected by the majority of the population, which instead demanded to be united with Greece From 1945 to 1948 Cyprus was used by the British as a detention center for "illegal" Jewish immigrants to Palestine See Stanley Casson, *Ancient Cyprus* (1937), G F Hill, *History of Cyprus* (1940)

Cyrano de Bergerac, Savinien (sävēnyĕ' sĕrənō' dŭ bĕrshŭrăk'), 1619–55, French novelist He is the author of two rambling satirical romances on journeys to the moon and sun—*L'Autre Monde, ou, Les Estats et empires de la lune* (1657) and *Les Estats et empires du soleil* (1662), later editions have usually given the works together, as in the translation by Richard Aldington, *Voyages to the Moon and the Sun* (1923) Cyrano de Bergerac's chief renown depends on his swaggering personality, evinced by the number of duels he fought against persons who had insulted him because of the unusual size of his nose This character has been romanticized by Edmond Rostand in the verse drama *Cyrano de Bergerac* (1897)

Cyrenaica (sīrunā'ĭkŭ, sīru-), region about the ancient city of Cyrene on the northern coast of Africa Other cities were also founded in the region, which was important for its production of wheat, wool, and silphium Barca achieved some prominence, but Cyrene maintained hegemony The Roman province of Cyrene was sometimes called Cyrenaica, and the name was revived to mean the eastern part of the Italian colony of Libya It was important in the North African campaigns of the Second World War

Cyrenaics (sīrĭnā'ĭks, sīrĭ-), one of the minor schools of Greek philosophy, flourishing in the 5th and 4th cent B C., that drew upon certain aspects of Socratic doctrine Cyrenaic philosophy was hedonistic (see Hedonism), teaching that pleasure is the highest good Aristippus of Cyrene, the founder, did not confine the good merely to bodily pleasures, but emphasized the value of spiritual satisfactions and social advancement Some of his followers, however, favored the notion of painlessness as being a more permanent form of the good Thus Theodorus maintained that man's happiness consists in a state of cheerfulness, while Hegesias (called the Death-Persuader) taught that a state of indifference is best and that death is the only perfect realization of that end Annieris emphasized the pleasures of friendship, society, and patriotism See John Watson, *Hedonistic Theories from Aristippus to Spencer* (1895)

Cyrene (sīrē'nē), ancient city on the northern coast of Africa, in Cyrenaica (now E Libya). A port c 10 mi from the sea, it was a Greek colony founded (c 631 B C.) by Aristoteles of Thera, who became king of Cyrene as Battus For eight generations the monarchs were alternately named Battus and Arcesilas The little state throve, having important commerce with Greece, especially in exporting wheat, wool, and silphium Arts and sciences were cultivated as well as commerce. Other cities were founded in Cyrenaica, notably Barca, but Cyrene retained power Cyrene submitted to the Persians under Cambyses, but later (after 450 B C.) was independent again, the state being modeled on Sparta, with which Cyrene had close connections Cyrene was overshadowed by Alexander the Great and was practically annexed by the Ptolemies of Egypt but seems to have had nominal independence until the marriage of Berenice (d 221?) to Ptolemy III It remained part of Greece until 96 B C., it then went to Rome Cyrene later was the center of a Roman province Under Trajan there were severe Jewish outbreaks, which were even more severely punished, and Cyrene declined At its prime Cyrene was a large and beautiful city, noted for its schools of medicine and philosophy Aristippus, Callimachus, Eratosthenes, and Synesius were born here There are extensive ruins.

Cyrenius (sīrē'nēus) or **Quirinius** (kwĭrĭ'nēŭs) (Publius Sulpicius Quirinius), Roman administrator, consul (12 B C.), governor of Syria (6–9 A D.) Luke 2 2 connects him with the census at the time of Jesus' birth We know that Roman governors could have but one term The higher critics reconcile the apparent inconsistency of dates by accepting Luke and blaming the translators, reading the Greek to mean not *governor* but *ruling*, they then make Quirinius a joint administrator of Syria after 4 B C.

Cyril, Saint (Saint Cyril of Jerusalem) (sĭ'rul), 315?–386?, Doctor of the Church, bishop of Jerusalem after 348. He was exiled three times for his objections to the dominant Arianism, but steadfastly joined St Basil the Great in trying to unite the Church on the teaching that Christ is like the Father in substance (homoiousianism). His *Catechetical Lectures* are a lucid exposition of 4th-century doctrine, including transubstantiation. St Cyril may have been the ultimate author of the Nicene Creed (see creed) Feast March 18.

Cyril, Saint (Saint Cyril of Alexandria), d 444, patriarch of Alexandria, Doctor of the Church, distinguished for his animosity toward heretics and heathen. Under his rule Hypatia was killed The great episode in his career was his struggle against Nestorianism, which culminated in the Council of Ephesus in 431 (see Ephesus, Council of) There Cyril presided and had the full support of Pope Celestine I He came back triumphant, but disliked by the Antiochenes, who, accusing him of sharp practice, stayed out of communion with Alexandria, and so with the Church, for two years In 433 he consented to a compromise with Antioch and affirmed his orthodoxy by declaring that Christ had two natures, human and divine, and that in speaking of one nature he meant one Person St Cyril wrote much on theology, particularly on the problem of the Trinity His doctrines, though considered orthodox in his time, were in a sense a preface to those of Eutyches and of Monophysitism Feast Feb 9

Cyril and Methodius, Saints (-thō'-), d 869 and 885 respectively, Greek missionaries, brothers, called the Apostles to the Slavs They were sent (863) as missionaries to the Moravians Their success aroused the dislike of German rulers and ecclesiastics, who feared that Christianity emanating from a non-German source might make the Moravians independent They contrived the recall of the brothers to Rome on charges of heresy The missionaries were exonerated, but Cyril died before they could leave Methodius went back, but was captured by Germans, who "deposed" him from the archbishopric of Moravia, which he had received from the pope The pope got him released and reinstated him St Methodius completed liturgical and biblical translations into Slavic which he and St Cyril had begun The Cyrillic alphabet, used in Russian, Serbian and other languages, is named for St Cyril, but he did not invent it Feast July 7.

Cyril Lucar see Lucaris, Cyril

Cyrus the Great (sī'rus), d 529 B C., king of Persia, founder of the greatness of the Achaemenidae and of the Persian Empire According to Herodotus, he was the son of an Iranian noble, the elder Cambyses, and a Median princess, daughter of Astyages Many historians, following other ancient writers (such as Ctesias), deny this genealogy The whole of Cyrus' life is encrusted with legend, and it is hard to arrive at a clear picture of the man or his career Whether or not Astyages was his grandfather, there is no doubt that Cyrus overthrew him at some time between 559 B C and 549 B C., probably in either 550 or 549 He entered Ecbatana and, taking over the Median kingdom, began to build a great empire after the Assyrian model Like a strong wind blowing, he swept over the Near East Croesus of Lydia, Nabonidus of Babylonia, and Amasis II of Egypt tried to build a strong alliance against him, but to no avail He met, defeated, and captured Croesus, and Lydia was his by c 546 B C The Chaldaean empire of Babylonia fell (538 B C.) to his touch Egypt he did not conquer, but he prepared the way for later Persian victories there The Greek cities of Asia Minor, which had been threatened or actually controlled by Croesus, immediately felt Cyrus' power, and the Persian king seems to have become a legend among the Greeks even in his lifetime He was also much admired by the Jews, whom he favored, setting them in power in Palestine His motive was probably to create a buffer state between Persia and Egypt, but the result was a rehabilitation of Israel He figures prominently in the Bible (e g., 2 Chronicles and Ezra), is viewed as God's appointed agent (Isa 40–48), and is approved by Daniel (Dan 6 28). Whether or not his justice, equanimity, and clim nobility are legendary, his military capacity and genius at organization are clearly historical. At his death his son Cambyses succeeded him, despite the ambitions of another son, Smerdis Cyrus is buried at Pasargadae, where he built a splendid palace.

Cyrus the Younger, d 401 B C., Persian prince His father, Darius II, favored him and gave him several satrapies in Asia Minor, and he aggrandized his power by playing Greek politics, particularly by giving aid to Lysander Cyrus was at court when Darius died (404 B C.) and was accused (probably with truth) by Tissaphernes of a plot to murder his elder brother and the legitimate heir, Artaxerxes II Cyrus was saved only by the pleas of his mother and was restored to his satrapies Whatever his earlier intentions, he at this point began careful plans for a rebellion He collected an army and through Clearchus hired a large troop of Greek mercenaries (the Ten Thousand) for the campaign On the pretext of setting out to put down brigands in Pisidia, the army was marched E from Sardis to Tarsus and then into Syria Many local rulers came over to Cyrus, but Tissaphernes rushed to court with the news, and

Artaxerxes set out to meet the rebels Many of Cyrus' men threatened mutiny when they learned of the true intent of Cyrus, but his charm and bravery mastered them and they went forward to fight In the battle of CUNAXA the handsome young pretender was killed and his hosts were defeated. The loss was followed by the heroic retreat of the Ten Thousand The revolt of Cyrus and the battle of Cunaxa have a prominence in world history far beyond their intrinsic importance because the story of the retreat and the events preceding it were told by one of the greatest masters of narrative of all time, XENOPHON, in the justly celebrated ANABASIS

Cythera (sĭthēr'ŭ), Gr *Kythera* (kē'thērä), island (109 sq mi, pop 7,932), Greece, in the Mediterranean, southernmost of the IONIAN ISLANDS, 15 mi SW of the S Peloponnesus On the south shore is the chief village, Kythera (pop 1,235), formerly called Kapsali Olive oil, wine, figs, and raisins are the chief products Ancient Cythera was a center of the cult of APHRODITE

cytoplasm: see PROTOPLASM

Cyzicus (sĭ'zĭkŭs), ancient city, at the neck of the Cyzicus Peninsula, NW Turkey Strategically situated, it rivaled Byzantium in commercial importance Founded (756 B C) by Greek colonists from Miletus, it was a member of the Delian League It remained a free city under Roman rule until A D 25 In 410 B C Alcibiades defeated a Spartan fleet off Cyzicus, and in 74 B C the city withstood a siege by Mithridates VI of Pontus Cyzicus was largely destroyed by the Arabs in A D 675 There are ruins of a large temple built by Emperor Hadrian and of other public buildings

Cyzicus Peninsula, NW Turkey, in Asia Minor, projecting into the Sea of Marmara Its modern name is Kapidagi Peninsula It is c 19 mi wide and 8 mi long and rises to 2,640 ft

Czajkowski, Michael, Pol *Michał Czajkowski* (mĕ'khou chĭkôf'skē), 1804–86, Polish novelist He often changed both his political and his religious outlook. Having participated in the insurrection of 1831, Czajkowski went to France and later to Turkey. There he accepted Mohammedanism, organized the Ottoman Cossacks, and, under the assumed name Sadyk Pasha (Pol *Sadyk Pasza*), participated in the Crimean War against Russia He died, by suicide, as a Russian citizen Czajkowski wrote novels on the life of the Cossacks and the South Slavs and on Polish history His *Black Pilgrim* has been translated into English

Czartoryski (chärtôrĭ'skē), Polish princely family Though of ancient lineage, it rose into prominence only in the 17th cent and in the 18th cent under the Saxon kings of Poland virtually ruled the country. **Prince Michael Czartoryski,** 1697–1773, was grand chancellor of Lithuania His brother, **Prince Augustus Czartoryski,** d 1782, was palatine of Polish Russia Failing in their efforts to reform the Polish constitution, the brothers fell out with King Augustus III and, securing the support of Catherine II of Russia, succeeded in elevating their nephew, Stanislaus Poniatowski (see STANISLAUS II) to the Polish throne after Augustus's death **Prince Adam Jerzy Czartoryski** (yĕ'zhĭ), 1770–1861, grandson of Michael, was a hostage at the Russian court after the failure of the Polish insurrection in 1794 There he befriended the future emperor, Alexander I, who after his accession appointed Czartoryski (1803) foreign minister He resigned in 1806 but remained a close adviser of Alexander, whom he accompanied to the Congress of Vienna and from whom he obtained the Polish constitution of 1815 Opposing the later Polish policy of Alexander and of Nicholas I, Czartoryski took part in the insurrection of 1830 and headed (1830–31) the provisional government He emigrated to Paris, where until his death he was the leader of the Polish aristocratic party From 1803 to 1823 Czartoryski was curator of the university at Vilna and greatly furthered the Polish school system His memoirs have been published (Eng tr, 1888)

Czech language (chĕk), a Western Slavic language of the Indo-European family See LANGUAGE (table)

Czech literature dates from the 11th cent Before the 15th it consisted mostly of chronicles in Latin (Cosmas of Prague, 1125) and Czech (Dalimil Mezericky, 1316), as well as Czech hymns, romances in verse on such international themes as Tristan and Isolde, and tales of chivalry based on the exploits of figures like Alexander the Great In 1394 Smil Flaska of Pardubice laid the foundation of modern Czech literature, which is predominantly realistic, with an allegorical admonition in verse, *New Council* In similar vein were the sermons in prose of Thomas Stitny (c 1331–c 1401) and the works of the peasant mystic Petr Chelcicky (*The Net of the True Faith,* 1440–43) By the language reforms of John Huss and the example of the Kralice Bible (a translation made by the Czech Brethren and published in 1579–93), the Czech language was rendered an effective literary instrument, worthy of the great pioneer in educational theory, Jan Amos Komensky (Comenius) The Czech defeat at White Mt (1620) resulted in wholesale destruction of works in the Czech language, which gradually became a mere peasant dialect Through the labors of men like Dobrovsky and Safarik, Jungmann and Palacky, it was rehabilitated, and writing in Czech was revived The revival was greatly spurred by Vaclav Hanka (1791–1861), who in 1817 and later claimed to have discovered manuscripts containing heroic verses in Czech dating from the 13th cent The verses at once became a part of the Czech literary tradition and whether genuine or spurious, as Thomas Masaryk and others assert, cannot be neglected In the 19th cent, with the works of Kollar, Macha, Cech, Neruda, and Halek, Czech poetry achieved importance, and with Bozena Nemcova and Alois Jirasek, the Czech novel Later writers such as Jaroslav Vrchlicky, J V Sladek, J S Machar, Petr Bezruc, and Otokar Brezina won fame at home, while Karel Capek through his widely translated dramas brought Czech literature into the general stream of world letters In the period 1918–38 Czech literature reflected every current from abroad and was of all the Slavonic literatures the most cosmopolitan At the same time native themes were cultivated, especially in the drama and the novel The German occupation saw a decline in Czech letters and the death of many outstanding figures After the Second World War a reorientation of Czech writing toward Russia ensued See František Chudoba, *A Short Survey of Czech Literature* (1924), Barrett Clark, *A History of Modern Drama* (1947), Paul Selver, ed and tr, *A Century of Czech and Slovak Poetry* (1946)

Czechoslovakia (chĕk"ŏslōvăk'ēŭ), Czech *Československo* (chĕs"kōslōvĕn"skō), republic (49,354 sq mi, pop 12,164,631), central Europe It is bounded by Poland on the north, Germany on the north and west, Austria and Hungary on the south, and the USSR on the east Its natural boundaries are the CARPATHIANS and the SUDETES in the north, the ERZGEBIRGE chain in the northwest, the BOHEMIAN FOREST in the west, and the Danube in the south The republic, founded in 1918 as a result of the breakup of the AUSTRO-HUNGARIAN MONARCHY, was divided in 1949 into the constituent states—the Czech Lands (BOHEMIA, MORAVIA, and Silesia) and SLOVAKIA Prague (the capital), BRNO, and BRATISLAVA are the chief cities The former eastern province of RUTHENIA was ceded to the Ukrainian SSR in 1945 Czechoslovakia is rich in minerals, forests, and agricultural land and has highly developed industries (For more detailed descriptions and historical accounts, see the articles on the individual provinces) The population is largely Slavic, consisting of Czechs (8,088,000), Slovaks (3,131,000), Ukrainians (115,000), and Poles (85,000), of the once large German and Magyar minorities there remain 197,000 Germans and 450,000 Hungarians Roman Catholicism is the majority religion, but there are large Protestant (notably Hussite) groups in Bohemia and Moravia and Orthodox Eastern and Uniate churches in Slovakia The creation of Czechoslovakia, the culmination of the long struggle of the Czechs against their Austrian rulers, was largely accomplished by its first and second presidents, T G MASARYK and Eduard BENES During the First World War, Czech units fought on the Allied side The Czech legion in Russia became involved there in the civil war and in the Allied intervention, fighting the Bolsheviks After an odyssey through Siberia it returned home by way of the United States Economically, Czechoslovakia was the most favored of the Hapsburg successor states A hard-working, enterprising, and well-educated nation, benefiting from a very liberal and democratic constitution and led by outstanding statesmen, the Czechoslovaks had the promise of a bright future Redistribution of some of the princely estates of the ex-nobility and the Church, despite some disadvantages, raised the general standards of the peasantry In foreign politics, Czechoslovakia relied on its friendship with France and on its LITTLE ENTENTE with Yugoslavia and Rumania Yet, with its antagonistic and nationalistic ethnic elements, the state reflected the inherent weakness of the Hapsburg empire Hitler's rise in Germany, the German annexation of Austria, the resulting revival of revisionism in Hungary and of autonomous agitation in Slovakia, and the appeasement policy of the Western powers exposed Czechoslovakia to a hostile Germany and Hungary on three sides and to an unsympathetic Poland on the fourth The nationality problem led to a European crisis when the German nationalist minority, led by Konrad Henlein and vehemently backed by Hitler, demanded the union of the predominantly German districts with Germany Attempts at compromise failed and Hitler, threatening war, extorted through the MUNICH PACT (Sept., 1938) the cession of the Bohemian borderlands (*Sudetenland*) Poland and Hungary shared in the spoils In Nov, 1938, the truncated state, renamed Czecho-Slovakia, was reconstituted in three autonomous units—Bohemia and Moravia, Slovakia, and Ruthenia Benes resigned the presidency and was succeeded by Emil Hacha In March, 1939, Hitler forced Hacha to surrender Czecho-Slovakia to German control, made Bohemia and Moravia into a German "protectorate," gave Slovakia nominal independence, and awarded Ruthenia to Hungary After the outbreak of the Second World War, Benes set up a provisional Czechoslovak government in London, Czech units fought with the Allied forces Except for the brutalities of the German occupation, of which the fate of LIDICE remains a symbol, Czechoslovakia suffered relatively little from the war In April, 1944, Russian forces, accompanied by a Czech coalition government headed by Benes, entered Czechoslovakia, American forces entered from the west, and the fall (May 12, 1945) of Prague marked the end of military operations in Europe Russian and American troops were evacuated in 1945 At the POTSDAM CONFERENCE of 1945 the expulsion of c 3,000,000 Germans from Czechoslovakia and an exchange of minorities between Czechoslovakia and Hungary were approved In the elections of 1946 the Communists emerged as the strongest single party and became the leading party in a coalition cabinet headed by the Communist Klement Gottwald Foreign policy became increasingly oriented toward Russia, and sweeping measures, begun in 1945, to nationalize industries were continued In Feb, 1948, the Communists seized the government by a coup d'état A constitution on the Soviet model was voted, providing notably for a unicameral legislature and a measure of autonomy for Slovakia Communist control of the government was established Benes resigned and was succeeded by Gottwald as president The new legislature enacted a five-year plan for 1949–54 and proceeded to nationalize nearly every branch of economic life In 1949 conflict between Church and state flared up See R I Kerner, *Czechoslovakia Twenty Years of Independence* (1940)

Czeged, Hungary see CEGLED

Czermak, Jaroslav (yä'rōslăf chär'mäk), Czech *Čermák,* 1831–78, Bohemian historical and genre painter He studied in Prague, Antwerp, Brussels, and Paris and traveled in the Balkans After 1858 he devoted himself chiefly to genre paintings of Slavic life His style is vigorous and colorful

Czernin, Ottokar, Graf (ô'tōkar gräf' chĕr'nĭn), 1872–1932, Austro-Hungarian statesman As foreign minister (1916–18) he sought peace with honor but had no part in the private peace feelers of Emperor CHARLES I He was one of the negotiators of the Treaty of BREST-LITOVSK

Czernowitz see CHERNOVTSY

Czerny, Karl (chĕr'nē), 1791–1857, Austrian pianist, pupil of Beethoven and teacher of Liszt He is known for his technical studies for the piano, his numerous other works having been long forgotten

Czerny George see KARAGEORGE

Czestochowa (chĕn"stukô'vu), Pol *Częstochowa,* city (pop 101,255), S Poland, on the Warta river Its monastery, situated on the Jasna Gora [mountain of light], contains an image of Our Lady, supposedly painted by St Luke and brought here in the 14th cent This is one of the world's most celebrated goals of pilgrimage In 1655, when CHARLES X of Sweden overran Poland, the prior with a handful of soldiers defended the monastery and its relic for 40 days The Swedes abandoned the siege Fired by the miracle, the Polish people rose to successful resistance The event figures prominently in Sienkiewicz's novel *The Deluge* The image, venerated since 1656 as the "Queen of Poland," has in later crises and sufferings of the Poles been the symbol of national survival Czestochowa suffered relatively little damage in the Second World War, but pilgrimages were stopped by the Germans The city has iron, textile, chemical, and food industries

Czolgosz, Leon F. (chōl'gŏsh), c 1873–1901, American anarchist, b Detroit, Mich He shot and killed William McKinley in Buffalo on Sept 6, 1901, saying that the President was "an enemy of good working people" He was adjudged sane and executed

Czuczor, Gregory (tsōō'tsôr), Hung. *Czuczor Gergely,* 1800–1866, Hungarian philologist and poet A Benedictine monk, best known as editor (with John Fogarasi) of a Hungarian dictionary, he also wrote charming folk poetry and several epics He was imprisoned (1849–51) for his poem *The Alarm,* in which he summoned Hungary to revolt against Austrian rule.

D

D, fourth letter of the ALPHABET. It corresponds to the Greek delta It is a usual symbol for a voiced dental or, as in English, alveolar stop The capital represents in MUSICAL NOTATION a note in the scale and in Roman numerals the number 500. The minuscule represents British pence

Dabareh (dă'bŭrĕ), same as DABERATH

Dabbasheth (dă'bŭ-), border city of Zebulun. Joshua 19 11

Daberath (dă'bē-), town, N Palestine, probably the modern Deburieh, on the slope of Tabor E of Nazareth Joshua 19 12, 1 Chron 6 72 Dabareh: Joshua 21 28

D'Abernon, Edgar Vincent, 1st **Viscount** (dă'bûrnŏn), 1857–1941, British diplomat Ambassador to Germany from 1920 to 1926, he was instrumental in the realization of the Dawes Plan (1924) and the agreements of the LOCARNO PACT (1925)

Dablon, Claude (klōd' dăblō'), 1619?–1697, French missionary in North America, a Jesuit He went from France to Canada in 1655 and worked first among the Onondaga in New York, then among the Cree in the Hudson Bay region In 1669 he went to take charge of the Western missions, with headquarters at Sault Ste Marie He accompanied Father Allouez on one exploring journey in the Green Bay–Fox river country Made superior of the Jesuits in Canada, he served from 1670 to 1680 and from 1686 to 1693 and was director of the great expansion of missionary and exploring work done by the Jesuits

Dabney, Charles William, 1855–1945, American educator, b Hampden-Sydney, Va, grad Hampden-Sydney College, 1873, and studied at Göttingen (Ph D, 1880) He was director (1880–87) of the North Carolina Agricultural Experiment Station and held a similar post in Tennessee while serving as president (1887–1904) of the Univ of Tennessee From 1904 until his retirement in 1920 he was president of the Univ of Cincinnati He wrote *Universal Education in the South* (2 vols, 1936)

Dabo, Leon (dă'bō), 1868–, American landscape and mural painter, b Detroit Among his landscapes are many scenes along the Hudson river He executed the friezes in Flower Memorial Library, Watertown, N Y, and the murals *Ascension* and *The Life of Christ* in the Church of St John the Baptist, Brooklyn, N Y He is represented in the Imperial Art Museum, Tokyo, the National Gallery, Ottawa, and leading American museums Among his best-known paintings are *Moose Park* (Luxembourg Mus, Paris), *Hudson in Winter* (Mus of Fine Arts, Boston), *Dawn beyond the Hudson,* and *The Cloud* (Metropolitan Mus)

Dabrowa Gornicza (dămbrô'vä gôrnē'chä), Pol *Dąbrowa Górnicza,* Ger *Dombrowa,* city (pop 28,070) Silesia prov, SW Poland A center of the KATOWICE mining area, it has coal mines dating from 1796 The city passed to Prussia (1795) and to the Russian Empire (1815) It reverted to Poland in 1919

Dabrowska, Maria, Pol *Marja Dąbrowska* (mär'yä dôbrôf'ska), 1892–, Polish novelist After a career as a social worker, she turned to fiction as a weapon in bringing about social changes *Nights and Days* (1932–34) and *The Crossroads* (1937) won her literary success

Dabrowski, Jan Henryk (yän' hĕn'rĭk dămbrôf'skē), 1755–1818, Polish general He distinguished himself in the unsuccessful Polish campaign (1792) against Russia and in the insurrection of Kosciusko in 1794 After its failure he went to France, organized (1796) a Polish legion, and led it in Bonaparte's Italian campaign In 1806 Napoleon had him recruit an army in Poland, and he subsequently distinguished himself in Napoleon's campaigns against Prussia, Austria, and Russia Returning to Poland in 1813, Dabrowski entered the service of Tsar Alexander I and began to organize the new Polish army, but he retired in 1816 He is sometimes referred to as Dombrowski

Dacca (dă'ku), city (pop 213,218), capital of East Bengal prov, Pakistan A palace, the Bara Katra (1644), and the Lal Bagh fort (1678) reflect Dacca's glory as the 17th-century Mogul capital of Bengal In the late 19th cent, competition of British cloth virtually destroyed the manufacture of the city's world-famed muslins Dacca, the industrial and commercial heart of East Pakistan, processes jute and hides and has a trade in agricultural products The largest of its many schools (chiefly Moslem) is the Univ of Dacca (opened 1921)

Dachau (dă'khou), town (1946 pop 18,158), Upper Bavaria, 10 mi NNW of Munich. Here was (1933–45) an infamous CONCENTRATION CAMP

D'Ache, Caran. see CARAN D'ACHE

dachshund (dŏks'hŏnd, dăks–, dăsh'hŭnd) [Ger, =badger dog], small hound with a long body and short legs, with the forefeet turning outward The dog has an elongated, tapered head with the long, wide ears set high It is courageous, intelligent, and affectionate Both the miniature and the full-sized dachshunds are bred in three coats—the short-haired or smooth, the wire-haired, and the long-haired. In Europe the dachshund was developed to hunt badgers and other animals which live in holes Egyptian carvings from as early as the 15th cent B C show dogs which resemble the dachshund See H C Sanborn, *The Dachshund or Teckel* (1937)

Dachstein · see SALZKAMMERGUT

Dacia (dā'shu), ancient name of the European region, corresponding roughly to modern Transylvania and Rumania, inhabited before the Christian era by a people who were called Getae (jē'tē) by the Greeks and were called Daci (dā'sī) by the Romans They were a people of advanced material culture, with a tribal organization Augustus claimed them as tributary allies, but the Daci were not much interested in Rome, and Domitian in A D 90 after inconclusive campaigns against them was forced to pay tribute to keep them quiet TRAJAN invaded the country and established a large number of colonies there in A D 105, and Dacia became a Roman province AURELIAN was obliged to withdraw the Roman colonists to Moesia when the Goths invaded Dacia It was these colonists in Dacia who formed the Latin-speaking nucleus that established the Romance tongue, Rumanian, still spoken in that region

Da Costa, Isaäc see COSTA, ISAAC DA

Da Costa, Jacob Mendez (dŭ kŏ'stu), 1833–1900, American physician, b St Thomas island, Virgin Islands, M D Jefferson Medical College, Philadelphia, 1852 After studying abroad, he was professor of medicine at his alma mater (1872–91) An outstanding teacher and diagnostician, he wrote a standard work on diagnosis (1864) and described a malfunction of the heart known as "irritable heart," a condition among Civil War soldiers which has become familiar in military medicine

Da Costa, Uriel · see ACOSTA, URIEL

Dactyls (dăk'tĭlz), in Greek religion, group of divinities who followed RHEA or CYBELE They were metalworkers, inventors of the rhythm of music They are obscure, were perhaps dwarfs, and are often confused with the Cabiri, the Curetes, and the Corybantes From their home on Mt Ida they were called Idaean Dactyls

Dada (da'dä) or **Dadaism** (dä'dăĭzm), international and nihilistic movement (1916–21) among European artists and writers It was originated by the poet Tristan Tzara, it attacked all conventional standards of aesthetics and behavior and "spat in the eye of the world" Dadaism was a doctrine of utter formlessness, words, or even syllables, were used without regard to meaning, as in the speech of a small child The movement was not long lasting, but it did have a jarring effect on contemporary aesthetic and had a significant result in encouraging surrealism and other radical movements Marcel Duchamps and Max Ernst, for example, became surrealists

daddy longlegs, name applied to the harvestman, which is an arachnid, and to the crane fly, an insect related to the mosquito The harvestman has a small body and eight slender legs which in most species are long It sucks the fluids from fruits and other vegetable matter and from insects (whether it eats whole insects is controversial) Crane flies have two pairs of wings and slender bodies The majority of the species have long legs and are much larger than mosquitoes They are usually found in damp places and in pastures and meadows

Dade City, city (pop 2,561), co seat of Pasco co, W central Fla, NNE of Tampa It is a trade center for a truck and citrus-fruit area To the north, near Bushnell, is Dade Memorial Park (est 1935), honoring Major Francis L Dade and his men, who in 1835 were massacred here by Indians

Dadeville, town (pop 2,025), co seat of Tallapoosa co, E central Ala, near the Martin Lake widening of the Tallapoosa, in a timber and mineral area, inc 1837 A textile mill is here Just north, on the Tallapoosa at a site called Horseshoe Bend, Andrew Jackson defeated the Creek Indians in March, 1814, a state monument marks the battlefield

Daedalus (dĕ'dulus), in Greek myth, sculptor and artist who built the labyrinth for the Minotaur Imprisoned by MINOS, he made wings for himself and his son Icarus Icarus flew too near the sun and, the wax joints of the wings melting, he fell into the sea Daedalus arrived in Sicily. Stories of the marvels he constructed are many

daffodil. see NARCISSUS

Dafoe, Allan Roy (dă'fō), 1883–1943, Canadian physician, b Madoc, Ont, grad Univ. of Toronto (M B, 1907) He attended the birth of the DIONNE QUINTUPLETS, and under an act of the Ontario legislature, he was appointed a member of the board of guardians for them Dafoe wrote *Guide Book for Mothers* (1936) See biography by Frazier Hunt (1939)

Dafoe, John Wesley, 1866–1944, Canadian newspaper editor, b Ontario In 1883, when he became parliamentary correspondent at Ottawa for the Montreal *Star,* he entered upon his long and distinguished career in journalism. As editor in chief (1901–44) of the Manitoba *Free Press* (later the Winnipeg *Free Press*), he made the paper the chief voice of Western agrarian liberalism. Although the owner of the paper, Sir Clifford Sifton, withdrew (1911) from the Liberal party in opposition to Laurier's reciprocal-trade policy, Dafoe vigorously supported this policy editorially However, in 1917 Dafoe broke with the Liberal party over the question of conscription In 1919, appointed press representative by the Dept of Public Information to the Paris Peace Conference, he accompanied Sir Robert Borden to Paris Thereafter Dafoe became the chief Canadian advocate of the League of Nations. From 1934 he was chancellor of the Univ of Manitoba He was a member of the royal commission on dominion-provincial relations, headed by N W ROWELL Dafoe's writings include a study of Sir Clifford Sifton (1931) and *Canada, an American Nation* (1935). See biography by G V Ferguson (1948)

Dafydd ap Gwilym (dă'vĭdh ap gwĭ'lĭm), 1340?–1400?, Welsh poet Many critics consider him the greatest poet the Celts have produced He introduced new themes and meters into Welsh poetry, in a diction free of archaisms The love theme, formalized in medieval poetry, he treated with refreshing gusto and great melodic effect, but it is his nature poetry which gives him his stature among medieval poets His influenced Welsh poetry for 200 years See Sir Idris Bell, *Development of Welsh Poetry* (1936)

Dagenham (dă'gənŭm), urban district (1921 pop 9,127, 1931 pop 89,362, 1947 estimated pop 111,330), Essex, England With the establishment of a huge Ford plant in 1929, the city mushroomed Other industries include steel casting and chemical engineering

Dagestan or **Daghestan** (both dăgŭstän'), autonomous republic (14,750 sq mi, pop c 900,000), SE European RSFSR, between the Terek river, the Greater Caucasus, and the Caspian Sea Makhachkala, the capital, and DERBENT are the chief cities Dagestan consists mainly of bare mountains, with an average altitude of 5,000 ft, and is difficult of access Mineral resources include petroleum, natural gas, and sulphur The mountains are used for grazing, the irrigated lowlands produce fruit, wine, cotton, corn, and wheat The population of Dagestan comprises about 30 nationalities, (mostly Moslems), including AVARS, Lezghians, and Russians Dagestan was ceded by Iran to Russia in the Treaty of Gulistan (1813), but the Moslem mountaineers under their native khans resisted Russian domination until 1877, when their revolts were finally suppressed It came under Soviet rule in 1920 and was made an autonomous Soviet republic in 1921

Dagobert I (dăg'ŏbûrt), d c 639, Frankish king (629?–c 639) He was the son of Clotaire II and with him ruled Austrasia as coregent after c 622. By reuniting Aquitaine with Austrasia and Neustria (630), he became king of all the Franks, he was, however, forced by popular demand to give Austrasia its own king in the person of his son, Sigebert III (633) The last of the MEROVINGIANS to exercise personal rule, he made himself independent of the great nobles, especially of PEPIN OF LANDEN, mayor of the palace Dagobert maintained a brilliant court and extended his influence over the Basques and the Bretons

Dagon (dā'gŏn), god of Canaan, perhaps a fish god. Scholars generally connect him with a fertility cult Judges 16 21–30, 1 Sam. 5 1–9, 1 Chron. 10 8–10, 1 Mac 10 83,84, 11 4 His name appears in the place name BETH-DAGON

Daguerre, Louis Jacques Mandé (lwē' zhăk' mädā' dagâr'), 1789–1851, French scene painter and physicist, inventor of the daguerreotype (dŭgâ'rŭtīp, –gâ'rēu-), a photograph produced on a silver, or silvered, plate treated with iodine vapor He first attracted attention as the inventor and exhibitor, with C M Bouton, of the diorama, which was shown at the Diorama in Paris In 1826 his experiments with the daguerreotype were joined with those of J Nicéphore NIEPCE, who had been experimenting along the same lines since 1814, and until Niepce's death in 1833 they worked together upon the photographic process, but Daguerre completed the invention of the daguerreotype alone, and in 1839 it was made public and ceded to the Academy of Sciences He wrote two books on the daguerreotype process The daguerreotype was introduced into the United States by J. W Draper and S F B Morse

Daguesseau, Henri François. see AGUESSEAU, HENRI FRANÇOIS D'

Dahl, Johan Christian Clausen (yōhän' krĭs'tyän klou'zŋ däl'), 1788–1857, Norwegian painter. His works, somewhat in the manner of the old Dutch masters, are chiefly Norwegian landscapes

Dahl, Michael (däl), 1656–1743, Swedish portrait painter In 1688 he settled in England, where he enjoyed a high reputation, painting Queen Anne and members of the aristocracy. His paintings are

to be seen in the National Portrait Gallery, London, and in Windsor Castle

Dahlak Archipelago (dä'läk' ärkĭp'ə-lā'gō), island group, off Eritrea, in the Red Sea There are two large and 124 small islands The pearl fisheries here were known to the Romans and still produce pearls and mother-of-pearl

Dahlberg, Erik Jonsson, Count, Swed *Jönsson* (ā'rĭk yün'sün, däl'bĕrg), 1625–1703, Swedish military engineer and field marshal In 1658 he conveyed Charles X's army across the frozen Great Belt in a daring march on Copenhagen As governor of Livonia, he held Riga through two sieges

Dahlgren, John Adolphus Bernard (däl'grən), 1809–70, American naval officer, b Philadelphia Appointed a midshipman in 1826, he had a long and honorable naval career In charge of ordnance at the Washington navy yard after 1847, he expanded the ordnance facilities and designed the 9-inch and 11-inch guns called Dahlgrens and much used by the navy In the Civil War, Dahlgren succeeded Franklin Buchanan in command of the Washington navy yard and soon became also chief of the Bureau of Ordnance Promoted rear admiral in 1863, he replaced Admiral S F Du Pont as commander of the South Atlantic Blockading Squadron, cooperated (1863) with Gen Q A Gillmore in the unsuccessful attempt to take Charleston, helped to place troops in Florida in 1864, cooperated with Sherman in taking Savannah, and in Feb, 1865, helped to occupy Charleston He later held high posts and wrote widely on naval ordnance See biography by his wife, Madeleine V Dahlgren (1882)

Dahlgren, Ulric (däl'grən), 1870–1946, American biologist, b Brooklyn, N Y., grad Princeton, 1894 From 1895 to 1939 he taught at Princeton (as professor of biology from 1911) Dahlgren specialized in histology and zoology, he studied especially the production of light and electricity by animals and wrote on these subjects

dahlia (dăl'–, dăl'–, dāl'–) [for Anders Dahl, 1751–89, Swedish botanist], any plant of the genus *Dahlia*, tuberous-rooted perennials native to Mexico, widely cultivated in gardens The composite flowers bloom in the late summer and are of a variety of shapes and colors, some of the popular types being known as cactus, decorative, peony-flowered, single, pompon, and collarette dahlias Many varieties have been developed from the single species originally introduced into cultivation at the end of the 18th cent, but other species and hybrids have contributed to the production of the modern dahlias A type of sugar is obtained from dahlia tubers The American Dahlia Society fosters cultivation of the plant See F F Rockwell, *Dahlias* (1929), L K Peacock, *The Dahlia* (1931), W H Waite, *Modern Dahlia Culture* (1931)

Dahlmann, Friedrich Christoph (frē'drĭkh krĭs'tôf däl'män), 1785–1860, German historian A liberal, he was one of the seven Göttingen professors who in 1837 protested when King Ernest Augustus of Hanover abrogated the constitution, and he was consequently dismissed After 1842 he taught at Bonn Dahlmann played a prominent part in the Frankfurt Parliament (1848–49) His *Quellenkunde der deutschen Geschichte* [sources of German history] (1830) has been enlarged in numerous subsequent editions and has become an indispensable aid to the study of German history Other works include a history of Denmark, completed by Dietrich Schäfer (*Geschichte von Dänemark*, 5 vols, 1840–92)

Dahlonega (dălŏn'ə-gə), city (pop 1,294), co seat of Lumpkin co, N Ga, NNE of Atlanta, inc 1833 Now a mountain trade center, it was settled with the opening of the gold mines in 1828, gold is still mined A U S mint was here, 1836–61 Points of interest are the county courthouse, dating from 1833, and North Georgia College

Dahlstjerna, Gunno Eurelius (gü'nō ä-ōō'rā'lēŭs däl'shĕr'nä), 1661–1709, Swedish poet, the first to use native themes in his writings He is best known for *The King's Song* (1698), an elegy on the death of Charles XI Another popular work is his lively **ballad**, in dialect, *Battlesong about King Charles IX and Tear Peter*

Dahna: see RUB AL KHALI

Dahomey (dŭhō'mē, Fr dàsōmā'), French overseas territory (c 45,500 sq mi, pop 1,458,000), French West Africa, on the Slave Coast of the Gulf of Guinea. The capital is Porto Novo Dahomey is bordered on the west by French Togoland, on the north by the Niger territory (from which it is separated in part by the Niger river), and on the east by Nigeria Mangroves along the coast give way to hardwood forests and, in the neighborhood of the Niger river, to treeless savannas Corn, manioc, and yams are grown for local consumption, and cotton, coffee, and palm oil are produced for export Cattle thrive in the north There is a railroad along the coast with branches extending some distance into the interior Dahomey is represented in the French parliament The territory is inhabited by Negro tribes who speak various Ewe languages The region first came to European attention in the 17th cent, when it was divided among several powerful native states. By the mid-18th cent the state of Dahomey was supreme It had a large army, notable for its female contingents Dahomey fell under the control of France in the late 19th cent. See Melville J. Herskovits, *Dahomey, an Ancient West African Kingdom* (1938)

Daibutsu (dī'bōōtsōō) [Jap.,=great Buddha], Japanese name applied to large statues of Buddha The most notable are those at Nara, Kamakura, and Kyoto The one at Nara, frequently restored, is 53 ft high and dates from the 8th cent. The Buddha of Kamakura, some 40 ft high with gold eyes several feet long, is the most famous, it was constructed in 1252 The Buddha of Kyoto, 58 ft high, is of wood rather than bronze and replaced an old figure destroyed in 1596.

Dáil Éireann (dôl' ā'rən, dīl' ā'run) [Irish,=diet of Ireland], the popular representative body of the *Oireachtas*, or National Parliament, of the republic of Ireland The second chamber, the *Seanad Éireann*, or Senate, has very limited powers, and the executive, as represented by the prime minister, is responsible to the Dáil, whose members are elected by universal adult suffrage The members of the first Dáil were elected in Dec, 1918, ostensibly to the British Parliament, but established themselves as a revolutionary body. It first convened at Mansion House, Dublin, in Jan, 1919, and proclaimed the Irish republic The Dáil existed precariously until the creation of the Irish Free State in Dec, 1921, and established itself firmly in the period of civil war that followed See IRELAND

Daimiel (dīmyĕl'), town (pop 19,277), Ciudad Real prov, central Spain, in New Castile It produces brandy, vermouth, and alcohol.

Daimler, Gottlieb (dīm'lur, Ger. gôt'lēp dīm'lûr), 1834–1900, German engineer, inventor, and pioneer automobile manufacturer His improvements in the internal-combustion engine, made in the 1880s, contributed largely to the development of the automobile industry

daimyo or **daimio** (both dīm'yō) [Jap.,=great name], the great feudal landholders of Japan, the territorial barons as distinguished from the kuge or court noble Great tax-free estates were built up from the 8th cent onward and were increased in number by alienation of lands to members of the imperial family who could not be supported at court By the 12th cent the power of the daimyo actually overshadowed that of the imperial government itself. This situation was forcefully revised by the reforms of Yoritomo, who in the 12th cent established a centralized feudalism The fierce civil wars of the 14th cent, the 15th cent (especially the Onin War), and the 16th cent were ended by the triumph of Ieyasu, but by 1600 most of the old daimyo families had yielded to a new group After 1600 the daimyo were divided into the *fudai* (the hereditary vassals of the Tokugawa family) and the *tozama* (the Outside Lords) The *tozama* were generally viewed with suspicion by the shogun and were ultimately to play a part in the overthrow of the shogunate In the 18th and early 19th cent the daimyo, with their tastes for luxury and their need for show in long stays at the court, were hard pressed by the limits of their agricultural incomes from the peasants and tended to sink deeper and deeper in debt while their social and economic usefulness approached the vanishing point With the overthrow of the shogun and the establishment of the Meiji restoration, all daimyo lost their feudal privileges in 1871

Dainan, China see TAINAN

Daingerfield, Elliott (dān'jurfēld), 1859–1932, American painter and writer, b Harpers Ferry, W Va, studied at the Art Students League, New York He first exhibited at the National Academy in 1880 and was made a member in 1906 His religious paintings in particular are notable for their rich, glowing color They include the murals in the Lady Chapel of the Church of St Mary the Virgin, New York, *Christ Stilling the Tempest* (Metropolitan Mus), and *The Story of the Madonna*, awarded the Clarke Prize of the National Academy in 1902 Among his principal landscapes are *Slumbering Fog* (Metropolitan Mus), *Midnight Moon* (Brooklyn Mus), *Storm Breaking Up* (Toledo Art Mus); and *The Valley of the Dragon* (Art Inst, Chicago).

Daingerfield, town (pop 1,032), co seat of Morris co, E Texas, near the northeast corner of the state The area yields pine and garden truck Iron deposits to the south supply an iron industry built up by the U S government in the Second World War and sold in 1947 to a private company. A state park is near by

Dairen, China see TALIEN.

dairying, the industry concerned with producing milk and milk products. In the United States c 250,000 persons are employed in the industry, which supplies an estimated 20 percent of the food consumed by the average person and which represents the largest single source of revenue of the American farmer About one third of the milk produced is used for BUTTER, almost as much for market MILK, and the remainder is devoted to farm uses and the making of CHEESE, concentrated milks, ice cream, and by-products such as dried milk solids (e g., LACTOSE and CASEIN). Commercial dairy products are processed or manufactured and then marketed by creameries, some of which, especially in Denmark, are farmers' cooperatives Modern dairying dates from 1850, its development paralleling the growth of urban populations Large-scale dairying was stimulated by the invention of specialized machines, notably the cream separator (see SEPARATOR, CREAM), by research in chemistry, physics, and bacteriology, by the discovery of PASTEURIZATION, by the introduction of the test devised by S M BABCOCK for determining the fat content of milk, by improved refrigeration and transportation, by the increase in output resulting from the scientific study of the breeding and feeding of CATTLE, by the greater consumption of dairy products resulting from increased knowledge of their nutritional value, and by the finding of new uses for the by-products of factory operation. See C H Eckles and others, *Milk and Milk Products* (3d ed, 1943)

daisy [O E.=day's eye] The daisy of literature, the true daisy, is *Bellis perennis*, called in the United States English daisy. This is a low composite-flowered European plant, cultivated in the United States mostly in the double form, with heads of flowers of white, pink, or red, sometimes smaller heads are clustered about the main one The English daisy, which closes at night, has long been considered the flower of children and of innocence There is a purple species of *Bellis* native to the lower Mississippi basin and called western daisy The common, often weedy, daisy of the United States (*Chrysanthemum leucanthemum*), called also oxeye daisy, is native to Europe but naturalized in America and is accepted as the state flower of North Carolina A composite, it has white petal-like rays with a golden center Both of these daisies are sometimes called MARGUERITE Other plants, daisylike, share the name of daisy, particularly species of *Chrysanthemum*, as the Shasta daisy and painted daisy or PYRETHRUM

Dakar (dŭkär', də-), city (pop c 132,000), Senegal, capital of French West Africa, a port on the Atlantic Ocean at the end of the Cape Vert peninsula Dakar, the westernmost point of Africa, is c 1,800 mi from Natal, Brazil It has rail connections with much of the interior of Senegal Food processing is the chief industry, and there are exports of peanuts and animal products In the Second World War, Gen Charles de Gaulle, with British assistance, vainly attempted (Sept, 1940) to take the heavily defended city In Dec, 1942, Dakar peaceably joined the Allied camp

Dakin, Henry Drysdale (dā'kĭn), 1880–, American research chemist, b England, grad Victoria Univ, Manchester, England After carrying on research in Leeds, London, and Heidelberg, he was associated with the Herter Laboratories, New York city, from 1905 to 1920 He was made a fellow of the Royal Society and a chevalier of the Legion of Honor He wrote *Oxidations and Reductions in the Animal Body* (1912) and, with E K Dunham *A Handbook on Antiseptics* (1917) **Dakin's solution,** known also in a modified form as Dakin-Carrel solution, is widely used in surgery as an antiseptic and in the sterilizing and dressing of infected wounds It is essentially a dilute, almost neutral, solution of sodium hypochlorite (0 5 percent) and owes its antiseptic properties to its instability and the liberation of free chlorine

Dakota Indians see SIOUX INDIANS.

Dakota Wesleyan University: see MITCHELL, S.Dak

Dal (dāl), Swed *Dalälven* (dal'ĕl"vun), river, central Sweden, rising in the border mountains of Norway and flowing into the Gulf of Bothnia at Skutskar With two large tributaries, it is 325 mi long Its numerous cascades furnish power for the industries of KOPPARBERG co

Daladier, Édouard (ādōōär' dalädyā'), 1884– French politician, a Radical Socialist After the First World War he was one of the semipermanent fixtures of the successive French cabinets, whose members were virtually interchangeable He was premier from Jan to Oct, 1933, and again from Nov, 1933, to Feb., 1934, when the STAVISKY AFFAIR, in which Daladier was not personally implicated, caused serious riots in Paris and forced his resignation. In April, 1938, Daladier obtained the premiership of a much-watered-down Popular Front cabinet, retaining his post as minister of war, which he had held since 1936 He did his best to nullify the social and economic legislation enacted by the four previous Popular Front cabinets and signed (Sept, 1938) the MUNICH PACT. He resigned in March, 1940, because his failure to aid Finland in its defense against Russia was unpopular, but he remained minister of war until May 18, when he was shifted to the post of foreign minister During the French collapse in the Second World War he left (June) the cabinet altogether. Arrested by the Vichy government in 1940, he was one of the defendants at the uncompleted Riom war-guilt trial (1942), was interned by the Germans, and was liberated from prison in Austria in 1945. Daladier reentered politics and was elected a deputy to the national assembly in 1946.

Dalaiah (dă'lā'ə), descendant of David. 1 Chron. 3 24.

Dalai Lama: see LAMAISM.

Dalarna (dä'lärnä") or **Dalecarlia** (dälükär'lēü), historical province of central Sweden Administratively it is nearly identical with KOPPARBERG co. In 1521 the peasants of Dalarna, led by Gustavus Vasa (see GUSTAVUS I), freed Sweden from Danish rule Old customs and home industries have survived in many villages, notably RATTVIK

Dalbeattie (dälbē'tĭ), burgh (pop 3,011), Kirkcudbrightshire, Scotland, SW of Dumfries, founded 1780 The near-by Craignair quarries supplied granite for the Thames embankment and the Liverpool and Odessa docks

Dalberg, Emmerich Joseph (Emeric Joseph, duc de Dalberg) (ĕmürĭk' zhōzĕf' dälbärk'), 1773–1833, French diplomat of German origin, nephew of Karl Theodor von Dalberg The foreign minister of Baden, he entered (1810) the service of Napoleon I, who created him duke In 1814 he helped to restore Louis XVIII, whom he served as French plenipotentiary at the Congress of Vienna and as ambassador at Turin and Vienna

Dalberg, Karl Theodor, Freiherr von (tä'ōdôr frī'hâr fŭn däl'bärk), 1744–1817, German statesman, of an ancient noble family prominent in the imperial service He was archbishop-elector of Mainz (1802-3) and, as such, archchancellor of the Holy Roman Empire Even after the secularization of his see, he remained archchancellor to 1806 A faithful collaborator of Napoleon I, he became (1806–13) prince-primate of the CONFEDERATION OF THE RHINE and grand duke of Frankfurt (1810 13) Dalberg was known as humane and enlightened

D'Albert, Eugen Francis Charles see ALBERT, EUGEN FRANCIS CHARLES D'

Dalcroze, Émile Jaques see JAQUES-DALCROZE

Dale, David, 1739–1806, Scottish cotton manufacturer and philanthropist He preceded (1785) his son-in-law, Robert OWEN, in organizing for the workers at New Lanark a model community with good housing and schools Dale worked up from humble beginnings to considerable wealth, gave generously to religious work, and built the community made famous by Owen He withdrew in 1770 from the Scottish church, founding the Old Independents, or Dalites, whom he served as minister

Dale, Sir Henry Hallett, 1875–, English scientist For his study of acetylcholine as agent in the chemical transmission of nerve impulses he shared with Otto Loewi the 1936 Nobel Prize in Physiology and Medicine He also investigated the pharmacology of ergot and histamine shock He was director of the National Institute for Medical Research (1928-42), professor of chemistry and director of the Davy-Faraday Laboratory at the Royal Institution (1942-46), and president of the Royal Society (1940–45) and of the British Association for the Advancement of Science (1947) In 1932 he was knighted

Dale, Richard, 1756 1826, American naval officer, b Norfolk co, Va At the outbreak of the American Revolution he joined the Virginia navy Captured by the British, he served in the British navy until recaptured by the patriots, he then declared his loyalty to the patriot cause and was advanced because John Paul Jones recognized his ability In 1801 he was sent to the Mediterranean to hold the pirates of the Barbary States in check The *President* was his flagship He was relieved of this command in 1803 and retired

Dale, Sir Thomas, d 1619, acting governor (May–Aug, 1611, 1614-16) of the Virginia colony His earlier life was spent as a soldier in Scotland and in the Low Countries, and he was knighted (1606) by James I Sent by the Virginia Company to restore order, he arrived (1611) in Virginia with three ships of settlers and governed four months until another fleet under Sir Thomas GATES arrived When Governor Gates departed (1614) Dale again ruled Though the administration of Dale and his assistant, Sir George Yeardley, was severe, famines, epidemics, insubordination, and Indian attacks were overcome, private holdings were instituted, cultivation of tobacco was begun, and the colony was settled in a more favorable location at Henrico Upon return to England, Dale received command of a fleet bound for India, fought the Dutch en route, and died soon after arrival

Dale, borough (pop 3,291), SW Pa, in the Alleghenies c 5 mi SE of Johnstown, inc 1891 Coal is mined here

Dalecarlia, Sweden see DALARNA.

D'Alembert, Jean le Rond: see ALEMBERT

D'Alembert's principle. Jean le Rond d'Alembert introduced (1742) and established (1743) in his *Traité de dynamique* a principle of mechanics which shows that Newton's third law of motion applies to bodies free to move as well as to stationary bodies

Dalen, Nils Gustaf, Swed *Dalén* (nĭls' güs'täf dälān'), 1869–1937, Swedish scientist, a specialist in the use of acetylene gas From 1906 he was associated with the Swedish Gas Accumulator Company His many inventions include an automatic regulator (sun valve) for turning on and off the acetylene-gas lights used as marine buoys and beacons and railway signals and lights Mainly for the invention of this device he received the 1912 Nobel Prize in Physics. A laboratory explosion blinded him

Dalhart (dăl'härt), city (pop 4,682), co seat of Dallam co, extreme N Texas, NW of Amarillo in the northwest corner of the Panhandle, founded 1901, inc. 1903 Born with the coming of the railroad to cattle-ranching country, it has railroad shops and stockyards as well as grain elevators to serve the wheat growing introduced later. Near by Rita Blanca Creek (of the Canadian river system) is dammed for irrigation

Dalhousie, James Andrew Broun Ramsay, 1st marquess of, (dălhōō'zē, -hou'-), 1812–60, British statesman, educated at Oxford After serving as president of the Board of Trade (1845–47), he was governor general of India (1847 56) He annexed (1849) the Sikh territory of the Punjab after British victory in the Second Sikh War He advanced India economically by introducing railroads and telegraphs, by reforming the postal system, and by building irrigation works His many social reforms included authorization of the remarriage of widows despite Hindu prohibition His policy of annexing princely states when there were no natural heirs to the rulers may have been a factor in the Sepoy Rebellion See biography by Sir William Lee-Warner (1904)

Dalhousie (dălhou'zē, -hōō'zē), town (pop 4,508), N N B, at the mouth of the Restigouche river, at the head of Chaleur Bay, and at the foot of Dalhousie Mt (715 ft high) With a good harbor and a fine beach it is a seaside resort There is lumbering near by, and Dalhousie has a paper mill Many of the inhabitants are fishermen

Dalhousie University (dălhou'zē), at Halifax, N S, nonsectarian, coeducational, founded by the 9th earl of Dalhousie, chartered 1821, opened 1838 Associated or affiliated with it are the Univ of King's College (chartered 1789, opened 1790, became the first university in Canada by royal charter, 1802, moved from Windsor, N S, 1923), the Maritime College of Pharmacy, and the Fisheries Research Board In the university proper there are faculties of arts and science, law, medicine, and dentistry

Dalí, Salvador (salvadhôr' dä'lē), 1904–, Spanish surrealist painter He tried futurism and cubism By 1929 he had abandoned abstract art to become a leading surrealist His paintings—of fine draughtsmanship—express a bowdlerized Freudian pseudo-dream world, tending more and more toward irrationalism His *Persistence of Memory*, with limp watches, has become well known in America In 1940 Dalí came to live in the United States He wrote *The Secret Life of Salvador Dalí* (1942) and a novel, *Hidden Faces* (1944) He has made surrealist ventures in moving pictures, advertising, and the ballet

Dalin, Olof von (ōō'lôv fŭn dälēn'), 1708–63, Swedish historian, poet, and journalist, foremost literary figure of his day Educated at the university in Lund, he entered the civil service His periodical, the *Swedish Argus* (1733–34), was at first issued anonymously In the next few years he wrote *Thoughts about Critics* (1736), a comedy, *The Jealous* (1738), the political satire, *April Activities* (1737), and also lyric poetry, humorous prose, and political articles He was royal librarian (1737–39), traveled for two years as a tutor in Germany and France (1739–40), and returned to Sweden to publish two satirical poems, *Story of the Horse* (1740) and *Swedish Liberty* (1742) As tutor (1750–56) to the crown prince (later Gustavus III) he was ennobled in 1751 He was appointed secretary of the Swedish Academy of Literature in 1753 and royal historiographer in 1755 Involved in court intrigue, he was banished in 1756 and in exile finished the third volume of his popular *History of the Swedish Kingdom* (1746–62) Restored to favor, he became a councilor to the king in 1763

Dalkeith (dulkēth'), burgh (pop 7,502), Midlothian, Scotland, SE of Edinburgh between the North Esk and the South Esk It is an important grain center, with metalworks, and is near one of the few oil fields in Britain Dalkeith House, with a large park, the seat of the duke of Buccleuch, was built in 1700 by Sir John Vanbrugh, replacing an earlier 13th-century fortress

Dalkey (dô'kē, dôl'-), town, Co Dublin, Ireland, on the south horn of Dublin Bay It is an old town, important in the Middle Ages, and has ruins of two churches and a tower Dalkey Island, separated from the mainland by a narrow sound, was famous in the 18th cent for the election of the mock "king of Dalkey"

Dall, William Healey (dăl), 1845–1927, American naturalist, b Boston, studied under Louis Agassiz He spent some time in Alaska with the International Telegraph Expedition (1865–68) and the U S Coast Survey (1871–84) From 1884 to 1911 he served the Geological Survey as paleontologist, studying especially the mollusks, on which he wrote numerous reports. He also wrote *Alaska and Its Resources* (1870) and biographies of S F Baird (1915) and T N Gill (1917).

Dallas, Alexander James, 1759–1817, U.S. Secretary of the Treasury (1814–16), b Jamaica, West Indies He went (1783) to Philadelphia, practiced law, and was secretary of state (1791-1801) and U.S. district attorney (1801–14) in Pennsylvania He was appointed by James Madison as Secretary of the Treasury to succeed George W CAMPBELL toward the close of the War of 1812, when treasury affairs were in an extremely critical condition He pushed Congress to levy taxes heavier than any that had hitherto been borne in the United States and asked for the reestablishment of the BANK OF THE UNITED STATES Under Dallas's administration, confidence in U.S currency was restored. After securing Madison's veto on the first bank bill, which did not suit him, Dallas largely dictated the second bill, which John Calhoun forced through congress and which became law in 1816 Dallas in 1815 also carried the duties of Secretary of War See biographies by his son, George Mifflin Dallas (1871) and Raymond Walters, Jr (1943).

Dallas, George Mifflin, 1792–1864, American statesman, Vice President of the United States (1845-49), b Philadelphia, grad Princeton, 1810, son of Alexander James Dallas He read law, was admitted (1813) to the bar, and was secretary to Albert Gallatin After he served as solicitor (1815-17) of the Bank of the United States, Dallas was city attorney (1817 19) and mayor (1819) of Philadelphia An active Democrat, he was appointed (1829) U S district attorney for E Pennsylvania, then rendered service as a U S Senator (1831–33), as attorney general (1833–35) of Pennsylvania, and as minister (1837–39) to Russia He returned to his law practice, and a sharp political rivalry developed between him and James Buchanan in Pennsylvania In 1844 Dallas was elected Vice President on the Democratic ticket along with James K Polk Though he believed in a high tariff, Dallas cast (1846) the deciding vote in the Senate for the low Walker Tariff and thus abided by the party platform Dallas was later (1856) appointed minister to Great Britain and was succeeded (1861) in that post by Charles Francis Adams He conducted the negotiations leading to the Dallas-Clarendon Convention, signed in 1856, which set a basis for the settlement of difficulties in Central America He also secured from Great Britain a disavowal of the right of search He wrote a biography (1871) of his father See his letters from London (1869) and his diaries (1892) while a minister to Great Britain and Russia

Dallas 1 Town (pop 1,922), co seat of Paulding co, NW Ga, NW of Atlanta, in a farm area, inc 1854 2 Textile-mill town (pop 1,704), W central N C, WNW of Charlotte, inc 1848 3 City (pop 3,579), co seat of Polk co, NW Oregon, W of Salem in the Willamette valley, founded 1852, inc 1874 It is in a lumbering and fruitgrowing region 4 Borough (pop 1,484), Luzerne co, NE Pa, NW of Wilkes-Barre, inc 1879 It is the seat of College Misericordia 5 City (1940 pop 294,734, 1947 estimated pop 370,000), co seat of Dallas co, N Texas, E of Fort Worth, inc as a town 1856, as a city 1871 It is on the Trinity, which is formed here by the junction of the Elm Fork and the West Fork Since the time when John Neely Bryan first built (1841) a hut here, Dallas has grown soberly and ambitiously French artisans and gentlemen who survived the failure (1858) of the Fourierist colony, La Réunion, came to Dallas along with other solid citizens from over the nation and the world Even before the railroads arrived in the 1870s Dallas was shipping the cotton of the rich blacklands, and now cotton-gin machinery is made, cotton is shipped, processed, woven, and made into clothing, and the city is a regional style center Oil brought new interests in the 20th cent, with offices of oil companies and making of oil-well machinery and like industries In the Second World War, varied manufactures expanded greatly in the city and the metropolitan area (e g, GRAND PRAIRIE and GARLAND), which in 1947 was estimated to have 483,000 inhabitants Dallas is the banking, financial, insurance, commercial, and industrial center of much of the Southwest and among Texas cities is second only to Houston in population Love Field handles much air transport, and there is a military air-training field A city improvement program, begun in the 1920s, has done much to make Dallas a model city In the suburb of University Park is SOUTHERN METHODIST UNIVERSITY, and Dallas is notable for its interest in books, music, and the Little Theater The old reservoir, White Rock Lake, is now in a large park, the newer one, Lake Dallas (see TRINITY, river) is near Denton The Texas State Fair is held annually in State Park, where buildings erected for the Texas Centennial Exposition of 1936 are used as museums.

Dallin, Cyrus Edwin, 1861–1944, American sculptor, b Springville, Utah He was especially known for his statues of Indians, which include *The Appeal to the Great Spirit* (Mus of Fine Arts, Boston), *The Medicine Man* (Fairmount Park, Philadelphia),

The Signal of Peace (Lincoln Park, Chicago), and *The Scout* (Kansas City, Mo) His *Pioneer Monument* is in Salt Lake City His design for an equestrian statue of Paul Revere to be placed in Copley Square, Boston, won a competition in 1884, but the statue was not accepted by the city until 1940 It was finally placed on Paul Revere Mall.

Dalmanutha (dălmănū'thu), region, near the Sea of Galilee Mark 8 10 From a parallel passage it should be near MAGDALA

Dalmatia (dălmā'shu), Serbo-Croatian *Dalmacija*, region of Yugoslavia, extending along the Adriatic coast, approximately from Fiume to Kotor A long and narrow plateau, it rises to the Dinaric Alps The coast, which is famed for its scenic beauty and its resorts, has many bays and excellent harbors (ZARA, SPLIT, and DUBROVNIK), protected by a chain of islands Long in conflict with Rome, Dalmatia was definitively subdued by Augustus (35 B C–33 B C) and was incorporated with part of Illyria as a Roman province It was overrun by the Ostrogoths (5th cent A D), reconquered by the Byzantine Empire (6th cent), and settled, except in the coastal cities, by the Slavs in the 7th cent By the 10th cent it was divided between the kingdoms of Croatia (north) and Serbia (south), while Venice held several ports and islands After centuries of struggle, chiefly between Venice and the crown of Hungary and Croatia, the coastal islands and most of Dalmatia were under Venetian control by 1420 Hungary retained the Croatian part, which in 1526 passed to the Turks but was recovered by the Treaty of Karlowitz (1699) The Treaty of Campo Formio (1797) gave Venetian Dalmatia to Austria, and the Treaty of Pressburg (1805) gave it to Italy By the Treaty of Schonbrunn (1809) all Dalmatia passed to France and was incorporated into the Illyrian Provs (see ILLYRIA), but the Congress of Vienna restored (1815) the borders of 1797 The Croatian part of Dalmatia remained with Hungary, the former Venetian part formed an Austrian crownland, with its capital at Zara In 1919 Yugoslavia received all Dalmatia save Zara and several islands, which passed to Italy The Italian peace treaty of 1947 gave the remainder of the coast to Yugoslavia

Dalmatian dog or **coach dog**, sleek, short-haired white dog with black or liver spots The standard shoulder height for both sexes is between 19 and 23 in and the weight from 35 to 50 lb For many centuries the dog has existed in its present form Evidence points to Dalmatia as the place where it was first known The dog was long associated with horses and showed endurance and alertness in its capacity as a coach dog or follower of carriages It has also served as a sentinel, draft, shepherd, and sporting dog

Dalmău, Luis (lōōēs' dalmou'), fl 1428–60, Spanish primitive painter, court painter to Alfonso of Aragon He is thought to have visited Flanders, and his only undisputed work, *Virgin with Councilors* (Barcelona), shows the influence of Van Eyck

Dalny, China see TALIEN

Dalou, Jules (zhul' dalōō'), 1838–1902, French sculptor, popular under the Third Republic Exiled to England from 1871 to 1879 for his revolutionary sentiments, he taught in London His bronze *Maternity* is in front of the Royal Exchange there His best-known works are his *Triumph of the Republic* (Place de la Nation, Paris), his reliefs for the chamber of deputies, and his *Silenus* (Luxembourg Gardens) Dalou is represented in the Metropolitan Museum

Dalphon (dăl'fŭn), one of Haman's sons Esther 9 7.

Dalrymple, Alexander (dăl'rimpul, dălrim'pul), 1737–1808, British hydrographer, b near Edinburgh In the service of the East India Company, to which he became hydrographer in 1779, he traveled in the S Pacific He was later made hydrographer to the British admiralty He collected nautical memoirs, charts, and records and wrote historical accounts relating to the South Seas

Dalrymple, David, Lord Hailes, 1726–92, Scottish jurist and antiquarian In 1766 he became a judge in the court of session, receiving the title Lord Hailes He was a friend of Samuel Johnson and James Boswell His *Annals of Scotland* (1776–79) is a chronicle of medieval Scotland

Dalrymple, James. see STAIR, JAMES DALRYMPLE, VISCOUNT

Dalrymple, John: see STAIR, JOHN DALRYMPLE, EARL OF

Dalsland (dals'länd), historical province of central Sweden It is now administratively part of ALVSBORG CO

Dalton, John (dôl'tun), 1766–1844, English scientist He revived the ATOMIC THEORY, which he formulated in the first volume of *A New System of Chemical Philosophy* (2 vols, 1808–27) He had already applied the concept to a table of atomic weights (1803), in a paper (1805) on the absorption of gases, and in developing his famous law of partial pressures, known also as DALTON'S LAW His interest in weather conditions led him to keep daily records from 1787 and to write *Meteorological Observations and Essays* (1793) Dalton, himself afflicted with color blindness, investigated (c 1794) the condition, which is known also as Daltonism From 1793 he taught mathematics and physical sciences at New College, Manchester He was a member of the Royal Society (from 1822) and in 1825 received its medal for his work on the atomic theory

Dalton, John Call, 1825–89, American physiologist, b Chelmsford, Mass, M D, Harvard, 1847 He studied in Paris under Claude Bernard, whose methods of experimental physiology he introduced in the College of Physicians and Surgeons, in New York city, where he was professor (1855–83) and later president (from 1884) Besides a treatise on physiology (1859), he wrote works on anatomy and *Doctrines of the Circulation* (1884).

Dalton. 1 City (pop 10,448), co seat of Whitfield co, extreme NW Ga, in the Appalachian Valley, inc 1847 An industrial center in a cotton and lumber area, it has a large candlewick-bedspread industry developed after 1919 Yarn, thread, and hosiery are also made In the Civil War, Dalton, Confederate headquarters after the CHATTANOOGA CAMPAIGN, fell to Sherman in the ATLANTA CAMPAIGN (1864) **2** Town (pop 4,206), W Mass, in the Berkshires NE of Pittsfield, settled 1755, inc 1784 Its paper industry (including bank-note paper) dates from 1801 Woolen goods are also made here **3** Residential borough (pop 1,090), NE Pa, near Scranton, inc c 1890

Dalton plan see PROGRESSIVE EDUCATION

Dalton's law [for John Dalton] states that the total pressure exerted by a mixture of gases is equal to the sum of the pressures of the different gases making up the mixture, each gas acting separately and independently of the other gases The pressure of a gas containing water vapor can be determined by subtracting, from the total pressure, the pressure of the water vapor (called aqueous tension) for the existing temperature

Daly, Arnold, 1875–1927, American actor, b Brooklyn, N Y He made his debut in *Pudd'nhead Wilson* (1895) Inspired by Mansfield's production of *The Devil's Disciple* (1897–98), Daly determined to present Shaw on the American stage and in 1903 played successfully in *Candida Mrs Warren's Profession* (1905) caused the arrest of the principal actors, but they were immediately acquitted and the following year Daly toured with *Arms and the Man*, *Candida*, and *The Man of Destiny* His reputation was based on the Shaw plays which he introduced into the United States with financial and artistic success See biography by B H Goldsmith (1927)

Daly, Augustin, 1838–99, American playwright and theatrical manager, b Plymouth, N C From 1859 he was dramatic critic for several New York papers and adapted many plays from French and German In 1867 he made his debut as manager with his melodrama, *Under the Gaslight*, and in 1869 he opened his first theater, the Fifth Avenue There he produced plays with E L Davenport, Fanny Davenport, Clara Morris, and other stars A few years later he established his famous Daly's Theatre on Broadway, with a stock company headed by John Drew and Ada Rehan Daly presented largely magnificent productions of Shakesperian comedies and adaptations of French and German comedies In 1893 he established a London theater, known later as Daly's, where he took his company annually, his famous players were enthusiastically received on both sides of the Atlantic Daly's meticulous concern with details earned him both devotion and hatred, the first for his inspired direction and the second for misguided attempts to subjugate his entire company See biography by J F Daly (1917)

Daly, Charles Patrick, 1816–99, American lawyer, b New York city He was admitted to the bar in 1839 He was a judge (1844–85) of the court of common pleas of New York city, serving as chief justice in the last 27 years Daly was strongly interested in geography and for 35 years was president of the American Geographical Society

Daly, Marcus, 1841–1900, American copper magnate, b Ireland He came to New York city at 15 and later went to California, where he labored as a miner He went into the employ of the "silver kings," J G Fair and J W Mackay, at the Comstock Lode In 1876 he was sent by a large company to investigate the silver mines at Butte, Mont Discovering that there was rich copper beneath the silver, he purchased the Anaconda silver mine and tested the copper Then with the backing of George Hearst and others, he quietly bought up neighboring mines and formed a mining company He built a smelter at Anaconda and connected it by rail with Butte So dazzlingly successful was he that Anaconda became almost a household word in the United States Daly purchased coal mines to fuel his furnaces, bought forests to supply his timber, and built power plants to supply the mines He also established a number of banks. His great rival was William A CLARK, and their bitter struggle for control kept the copper country in turmoil, which was not lessened by the ambitions of other men, notably F. Augustus Heinze Though Daly was not himself desirous of public office, he built up an enormous political machine primarily to thwart the plans of Clark. The feud dominated Montana politics and economy Daly to further his interests also established a newspaper, the Anaconda *Standard*, which had great influence See C G Glasscock, *The War of the Copper Kings* (1935)

Daly, Thomas Augustine, 1871–1948, American journalist and humorous poet, b Philadelphia He was on the staff of several Philadelphia papers and was associate editor (1918–29) of the *Record* From 1929 until his death his humorous column, "Rhymes and Ripples", appeared in the *Evening Bulletin* He is best known for his humorous verse in Italian dialect, especially *Canzoni* (1906) and *McAroni Ballads* (1919) His last volume, *Late Lark Singing*, appeared in 1946

Daly City, city (pop 9,625), W Calif, adjoining San Francisco, inc 1911 It is a residential city, with truck and dairy farms in the area

Dalyell or **Dalzell, Thomas** (both dăl'yul, dŏŏl'), c 1599–1685, Scottish soldier He fought for Charles II at the battle of Worcester (1651), was captured, escaped, and went to fight in Russia He became commander of the forces in Scotland after the Restoration and was given the task of suppressing the Covenanters

Dam, Henrik (hăn'rĕk dăm'), 1895–, Danish biochemist A war refugee, he lectured in the United States and Canada (1940–41) and was research associate at the Univ of Rochester (1942–45) Appointed (1941) professor of biochemistry at the Polytechnic Institute, Copenhagen, he assumed his post in 1946 In 1934 he identified vitamin K The 1943 Nobel Prize in Physiology and Medicine was awarded jointly to Dam and to E A Doisy for their work on vitamin K His later work has been concerned especially with the role of vitamin E in nutrition

dam, barrier for holding back water and often forming a reservoir or lake Dams are made of timber, rock, earth, masonry, or concrete or of combinations of these materials Timber dams are seldom used because they do not last long and their height is limited Rock-fill dams consist of an embankment of loose rock with either a core impervious to water or a watertight face on the upstream side Earth dams may be either simple embankments of earth or embankments reinforced with a core of cement or with an upstream surface made watertight Masonry and concrete dams are either gravity dams (those dependent upon their own weight for resistance to the pressure of the water) or arch dams (either single-arch or multiple-arch dams) Single-arch dams are horizontally curved upstream and are usually constructed in narrow canyons or gorges where the rocky side walls are strong enough to withstand the tremendous thrust of the dam Some dams are of the multiple-arch type, consisting of a number of single arches supported by buttresses Dams have from early times been constructed to provide a ready supply of water for irrigation and other purposes One of the earliest large dams for this purpose was a marble structure built c 1660 by Rana Raj Singh in Rajputana (Rajasthan) Many modern dams are constructed for multiple purposes, e g, to provide for irrigation, to aid flood control, and to furnish power for hydroelectric plants Some dams are built to improve the navigability of waterways Within recent years many dams have been constructed in the United States (see CENTRAL VALLEY PROJECT, MISSOURI RIVER BASIN PROJECT, TENNESSEE VALLEY AUTHORITY) Among the largest are BONNEVILLE DAM, GRAND COULEE DAM, and HOOVER DAM Mexico, too, has undertaken a number of dam-building projects A large dam of the Panama Canal forms GATUN LAKE Notable dams are found in Egypt across the Nile (see ASWAN and SENNAR) and along many other important rivers (e g, the Dnieper, Tigris, Euphrates, Indus, Ganges, and Yellow rivers)

damages, money award which the judgment of a court requires the defendant in a suit to pay to the plaintiff as compensation for the injury inflicted Damages are the form of legal redress most commonly sought With a few exceptions, in England courts of law traditionally afforded only this remedy, while courts of EQUITY granted damages solely as an incident of other relief, such as INJUNCTION The purpose of damages is to compensate the injured party for the loss which he has suffered and will probably suffer from the defendant's misconduct Thus, in a suit for physical injuries the plaintiff may seek recovery for the pain he endured and his accrued medical expenses and for probable loss of earnings due to disability during the remainder of his normal life expectancy In suing for breach of contract the plaintiff need not prove the extent of his loss if the contract specified the "liquidated" damages, i e, the probable loss from breach Where there is a question as to the amount of damages, the jury usually makes the assessment While the ordinary object of damages is simply to compensate the injured party to the extent of the injury, where there was fraud or deliberate wrongdoing, exemplary or punitive damages may be allowed. Many statutes

also provide for double or treble damages. In some instances where the extent of the loss cannot be determined or the injury is slight, nominal damages (e g , a penny) may be granted The award of legal costs is related to damages. Usually the losing party is required to reimburse the winning party for having put him to legal expense In some states of the United States, however, even the winning party may be required to pay compensation if by delay or other improper conduct he added to his opponent's legal charges When damages and legal costs are awarded they become a lien on the debtor's property, which the creditor may seize and sell if the debtor does not meet his obligation In some states, if the debtor attempts to put his property out of reach, an injunction ordering him to pay may be issued

Daman (dumän′), Port *Damão*, Portuguese colony (86 sq mi , pop 63,521), India, bordered by Bombay state It was acquired in 1558 It consists of a coastal section, Daman proper, and a detached inland section, Nagar-Aveli The capital is Daman, which before the decline of Portuguese power in the 18th cent enjoyed a large overseas trade, especially with E Africa

Damanhur (dämänhōōr′), city (pop 84,983), N Egypt It is a center of communications and of the cotton trade Industries include cotton ginning, weaving of woolen cloth, and watch manufacturing It was in ancient times Hermopolis Parva.

Damão see DAMAN

Damar or **Dhamar** (both dämär′), town, Yemen, in an oasis The name of Damar is connected with both high-bred horses and an ancient Moslem university

Damaris (dăm′–), woman converted at Athens Acts 17 34

Damariscotta (dăm″ərĭskŏt′u), town (pop 844), S Maine, SE of Augusta, inc 1847 It includes Damariscotta village, on the east side of the tidal inlet known as the Damariscotta river, opposite Newcastle, and Damariscotta Mills, site of St Patrick's Church (1803), said to be the oldest Catholic church in New England Near the river north of the village are shell mounds, parts of which seem to be many centuries old Clams are still taken here This region was the site of trading posts c 1640

Damascene, John see JOHN OF DAMASCUS, SAINT

damascening (dămusē′nĭng) or **damaskeening** (–skē′nĭng), the art of decorating iron, steel, or bronze with inlaid threads of gold or silver or producing a watered effect in forging, as in sword blades, gun barrels, or other parts of arms, and various metal objects The method, long practiced in Persia, China, and Japan, was highly developed in Damascus The process involves chasing the design lightly and laying the wire within the burr thus raised, which is then worked down to hold the inlay, forming a delicate and intricate pattern upon the contrasting background The whole fabric is penetrated by the ornamental treatment, so that grinding does not remove it

Damascus (dumä′skus), Arabic *Esh-Sham*, Fr. *Damas*, city (pop c 275,000), S Syria, capital of Syria, on the Barada river The waters of the Barada are used to support wide orchards of apricots, figs, almonds, and pomegranates in an oasis on the desert's edge E of the Anti-Lebanon heights The white towers of the city rise above the green of these trees, a delight to the eyes of travelers This favored spot, which also has grainfields about it, has been inhabited since unknown antiquity A city was there before the time of Abraham (Gen 14 14, 15 2) It was probably held by the Egyptians before the Hittite period, and later it was under Israelite and Aramaean rule The kings of the rising Assyrian Empire coveted it, and after earlier rulers had attacked and even held it for a time Tiglath-pileser III made it (c 733 B C) a part of Assyrian territory Later it was a provincial capital of the Persian Empire until it passed (332 B C) without a struggle to the armies of Alexander the Great After his death Damascus was one of the prizes over which his successors fought bitterly The Ptolemaic dynasty of Egypt tried to wrest it from the Seleucidae When Seleucid power waned, Damascus was briefly an independent state but soon fell to new conquerors. Tigranes of Armenia took it, and after the surrender to the Romans, Damascus too went (64 B C.) to the Romans under Pompey One of the cities of the Decapolis, it was alienated again several times from Roman rule but was usually under Roman influence until the breakup of the empire It was a city of rich commerce, noted for its woolen cloth and its grain, and it continued to thrive It was early converted to Christianity, and it was on the road to Damascus—still a well-traveled highway—that Paul experienced his dramatic conversion, and from Damascus he escaped by being let down by the wall in a basket to evade persecution (Acts 9; 2 Cor. 11 32). Emperor Theodosius I had a Christian church built (A D c 375) on the foundations of the Roman temple of Zeus, and Damascus was a Byzantine provincial capital The Arabs had, however, been attacking and sporadically holding the city since before the days of Paul, and in 635 they occupied it in permanent fashion. The city became Moslem, and the great Christian church became the Great Mosque, now partly in ruins but still the principal "sight" of the city Damascus was the seat of the caliphate under the Omayyads from 661 to 750, when the triumphant Abbasids made Baghdad the center of the Moslem world Damascus fell prey to new conquerors—the Egyptians, the Karmathians, and the Seljuk Turks The Christian Crusaders failed in their several attempts to annex the city but ravaged the rich plain several times, when the Saracen rulers, notably Nureddin and Saladin, were absent on campaigns Damascus continued to prosper, with its bazaars selling the silks, wool, furniture inlaid with mother-of-pearl, and the famous swords and other ware of the Damascene metalworkers In 1260 Damascus first fell to the Mongols under Hulagu Khan, and more than a century later it was sacked by Tamerlane, who took away the swordmakers and armorers In 1516 Damascus passed to the Ottoman Turks, and for more than 300 years it remained in the Ottoman Empire fairly quietly, disturbed only by such events as the great massacres of the Christians and Jews in 1840 and 1860 and the disastrous fire of 1893, which damaged the Great Mosque In the First World War, Col T E Lawrence helped to prepare the way for the British capture of Damascus, which was entered by Allenby in 1918 An independent Syrian government was set up but had to yield in 1920 to the establishment of a French mandate Damascus was the center of a state, which was joined in 1925 to the state centered on Alep In 1925 the Damascenes joined the rebellion of the Druses The French, shelling the city from the hills, did great damage then and again in May, 1926 The fortunes of the Second World War turned favorably for Damascus After the entrance of British and Free French forces in June, 1941, the independence of Syria was proclaimed in Sept , 1941, and Damascus became the capital of the new nation (confirmed 1943) Though it is reputedly the oldest continuously occupied city in the world, it has few marks of its long habitation, apart from the Great Mosque and the medieval citadel The "street which is called Straight" still runs from the eastern to the western gate, flanked by bazaars Damascus has a decidedly old Oriental aspect though as a center of commerce it is linked to the other cities of the Middle East by a good highway and by rail Damascene steel is known no more, but fine textiles, fruits, and Damascus ware are still the pride of the ancient city

Damascus, town (pop 1,441), extreme SW Va , near the Tenn –N C line, laid out 1892, inc 1904 Dyes are produced Near by are White Top Mt and Mt Rogers

Damascus ware, the early siliceous-glazed semiporcelain produced in DAMASCUS The decoration is in turquoise blue, aubergine purple, sage green, and a rare red, on white or colored grounds Plates and dishes are also gadrooned or fluted

damask (dă′musk) [from Damascus], a fabric of silk, wool, linen, cotton, or rayon, with a pattern formed by the weaving, e g , the ground may be in twill weave, and the contrasting design in satin True damasks are flat and reversible thus differing from brocades Splendid patterns, silks, and dyes were used by the Damascus weavers, sometimes with the addition of gold or silver thread Fine linen table damask is one of the most beautiful examples of the modern weavers' art, both as to pattern and texture Double damask has more picks, or threads, to the inch than single, compound damask has one or two warps and two fillings

damaskeening see DAMASCENING

Damasus I, Saint (dă′mŭsus), c 305–384, pope (366–84), a Spaniard, successor of LIBERIUS and predecessor of St SIRICIUS He was elected by a majority of the factions of Liberius and of FELIX, but was opposed by an antipope, Ursinus, elected by a few extremist Liberians He is remembered for efforts to memorialize the early martyrs with inscriptions on their tombs Damasus encouraged St JEROME in his work on the Vulgate Feast Dec 11

Dambul (dămbōōl′) or **Dambulla** (dambōō′lu), village, central Ceylon It has notable cave temples of the 1st cent B C and is a place of Buddhist pilgrimage There is a recumbent Buddha 47 ft. long

Damian, Saint see COSMAS AND DAMIAN, SAINTS.

Damiani, Pietro see PETER DAMIAN, SAINT

Damien, Father (dă′mēun, damyĕ′), 1840–89, Belgian missionary priest, named Damien de Veuster He went to Hawaii (1864) as a Picpus Father (Father of the Sacred Heart of Jesus and Mary) He was ordained (1864) in Honolulu and worked among the natives for several years In 1873, at his request, he was sent to the lepers' colony in Molokai island, where he labored until his death of leprosy Attention was called to Father Damien by a tract in his defense by R L Stevenson, *An Open Letter to the Reverend Dr. Hyde*, written against a minister who had made some slanderous insinuations about him shortly after his death. In 1936 his body was removed in great state from Molokai to Antwerp. See John Farrow, *Damien the Leper* (1937).

Damietta (dămē̆′tù), city (pop 53,620), Egypt, on Manzala lake near the Mediterranean Sea Of commercial and strategic importance in the Middle Ages, Damietta was pillaged by the Byzantines and the Sicilian Normans and was captured and held (1219–21) by Crusaders and again (1249–50) under Louis IX of France The city was later destroyed and rebuilt by the Egyptians Dimity (named for the city) was first made here, today cotton and silk fabrics are woven Damietta Institute is a branch of El Azhar religious university in Cairo

Damocles (dă′mŭklēz), in classic legend, Syracusan at the court of Dionysius He glorified the riches and power of the tyrant, and Dionysius, to demonstrate the dangers and the unhappiness of high estate, gave a banquet in his honor Damocles enjoyed the splendor of the banquet to the full, until, looking up, he beheld a sword suspended above his head by a single hair

Damodar (dä′mōdar), river, c 370 mi long, rising in Bihar state, India It flows through West Bengal state to the Hooghly

Damon and Pythias (dā′mun, pĭ′thēus) [*Pythias*, probably for *Phintias*], two faithful Syracusan friends Pythias, condemned to death, was released on bail to go home to arrange his affairs while Damon stood as his pledge On Pythias' return in the nick of time, the tyrant Dionysius, impressed by the mutual love of the friends, released them both and asked to be admitted as a third friend

Damophon (dă′mufŏn), fl 2d cent B C , Greek sculptor of Messene He is remembered for colossal heads of Demeter and Artemis, found in Arcadia He was a skilled worker in ivory and gold

damp, in mining, any one of several kinds of gases or vapors Firedamp is found in coal mines Since it is almost entirely methane, a highly combustible gaseous compound of hydrogen and carbon, it forms an explosive mixture with air Until the introduction of the Davy lamp it was a continual danger to miners, since it is formed in large quantities by the decomposition of matter containing carbon and is not easily detected The gaseous mixture remaining after an explosion of firedamp is called afterdamp It is comprised largely of carbon dioxide and nitrogen and contains water vapor and carbon monoxide Chokedamp consists largely of carbon dioxide, a heavy, colorless, odorless gas which neither burns nor supports combustion Because it is more than one and one-half times heavier than air, it collects readily in the bottom of pits, valleys, caves, wells, and holes It will not support animal life and, being imperceptible, has caused the loss of many lives When it is present in quantities it is dangerous to human life, and a burning torch, candle, or lantern is immediately extinguished Since in mines an unprotected light may cause explosions, miners have used canaries, which are overcome by relatively small quantities of gas, to warn them of both carbon dioxide and carbon monoxide

Dampier, William (dăm′pēr), 1651?–1715, English explorer and buccaneer His adventurous career started when he went to sea (1669) He fought as an able seaman (1673) in the Dutch War, managed a plantation in Jamaica, then worked with logwood cutters in Honduras (1675–78) After taking part in a buccaneering expedition against Spanish America (1679–81), he sailed from Virginia in 1683 on a piratical voyage along the coast of Africa, across the Atlantic, and around Cape Horn to prey on Spanish cities on the west coast of South America The party split up, and Dampier joined a group that crossed to the Philippines Dampier was marooned (probably voluntarily) on the Nicobar Islands After many hardships, he returned to England in 1691 He published an account of his experiences in *A New Voyage round the World* (1697), supplemented by *Voyages and Descriptions* (1699), which included *Discourse of Trade-Winds*, a masterly treatise showing his skill as a hydrographer Dampier was made a naval officer and commanded an expedition (1699–1701) to Australia, New Guinea, and New Britain (which he discovered to be an island and named) Other discoveries included Dampier Archipelago and Dampier Strait His vessel, the *Roebuck*, finally foundered off Ascension island Dampier commanded an unsuccessful privateering expedition (1703–7) in the course of which Alexander Selkirk was voluntarily marooned Dampier's account was published in his *Voyage to New Holland* (Part I, 1703, Part II, 1709) He was pilot to Woodes Rogers on a voyage round the world (1708–11) See edition of Dampier's writings by John Masefield (1906), biography by Clennell Wilkinson (1929), W H Bonner, *Captain William Dampier, Buccaneer-Author* (1934)

Dampier Archipelago, rocky group in the Indian Ocean, just off the northwest coast of Australia, named for its discoverer, William Dampier

Dampierre, Auguste Henri Marie Picot, marquis de (ōgüst′ ärē′ marē′ pēkō′ märkē′ dù dăpyĕr′), 1756–93, French general in the French Revolutionary Wars. He distinguished himself at Valmy and

Jemappes and opposed the treason of DUMOURIEZ, whom he succeeded He was killed in battle.

Dampier Strait (dăm'pēr) [for William Dampier]. 1 Channel, c 15 mi wide, between E New Guinea and New Britain 2 Narrow channel, c 100 mi long, between NW New Guinea and the small island of Waigeo.

Damrosch, Frank Heino (hī'nō, dăm'rŏsh), 1859–1937, German-American conductor and educator, attended the College of the City of New York, son of Leopold Damrosch In 1885, after a few years in Denver, he became chorus master and assistant conductor of the Metropolitan Opera, New York, remaining in that position until 1891 He organized the Musical Art Society, an *a cappella* chorus, in 1893 He supervised (1897-1905) the music of the public schools of New York and conducted (1898-1912) the Oratorio Society and the Symphony Concerts for Young People His most important work was the founding in 1905, with James Loeb, of the Institute of Musical Art (later a unit of the Juilliard School), which he directed until 1933 See biography by L P Stebbins and R P Stebbins (1945)

Damrosch, Leopold, 1832–85, German conductor After taking a degree in medicine, he decided to make music his profession In 1855 he became solo violinist in the grand duke's orchestra at Weimar, where he was the friend of both Liszt and Wagner He conducted for a number of years in Breslau and in 1871 came to New York, where he founded the Oratorio Society in 1873 and the New York Symphony Society in 1878, conducting both organizations until his death The seasons of German opera at the Metropolitan, New York, began in 1884 with Damrosch as conductor Many works of Brahms and Wagner received their first American performances under his baton His own compositions include violin concertos, cantatas, and a symphony

Damrosch, Walter Johannes, 1862–, German-American conductor and composer, son of Leopold Damrosch At his father's death in 1885, he finished the season as conductor at the Metropolitan Opera and conducted there with Anton Seidl until 1891 In 1894 he organized the Damrosch Opera Company, which introduced opera in many American cities In 1900 he returned to the Metropolitan for two seasons After a season with the New York Philharmonic, he conducted the New York Symphony until the two orchestras merged in 1928 He remained one season with the combined orchestras, leaving to devote his time to radio broadcasting His outstanding contribution in that field was his series of children's concerts during school hours His compositions include the operas *Scarlet Letter* (1896), *Cyrano de Bergerac* (1913, revised 1937), and *The Man without a Country* (1937), *Abraham Lincoln Song,* a choral work, and incidental music for Euripides' *Medea* and *Iphigenia in Tauris* (1915) and Sophocles' *Electra* (1917) His style is derived from 19th-century German romanticism See his autobiography, *My Musical Life* (1923, rev ed , 1930), memoirs of his daughter, Gretchen Finletter, *From the Top of the Stairs* (1946).

Damville, Henri, comte de. see MONTMORENCY, HENRI, DUC DE, the elder

Dan [Heb ,=judge] 1 Son of Jacob and Bilhah and founder of one of the 12 tribes of Israel Their allotment in SW Palestine was the smallest, and its occupants, the Amorites, were most hostile This hostility caused the larger part of the tribe to march north where they established themselves They shared the lot of the northern Hebrews Gen 30 6, 46 23, 49 16,17, Ex 31 6, Num 1 38,39, 2 25,31; 10 25, 26 42, Deut 27 13, 33 22, Judges 1 34, 5 17, 18, Joshua 19 40–48, 1 Chron 12 35, 27 22, 2 Chron 2 14. 2 Unidentified city, northernmost landmark of Palestine, hence the expression "from Dan to BEERSHEBA" Its original name was Laish or Leshem, it was renamed by the conquering Danites Gen. 14 14, Deut 34 1, Joshua 19 47, Judges 18 29, 1 Sam 3 20, 1 Kings 15.20, 2 Chron 16 4, 30 5 See DAN-JAAN 3 Apparently the name of a trading center associated with Tyre Ezek 27 19.

Dan, river, 180 mi long, rising in SW Virginia in the piedmont It twice crosses into North Carolina in its easterly course to the Roanoke in S Virginia

Dana, Charles Anderson (dā'nu), 1819–97, American newspaper editor, b. Hinsdale, N H He studied at Harvard, after which he was a member of the BROOK FARM community for five years In 1847 he began 15 years on the New York *Tribune,* most of that time as managing editor When Dana's views on the conduct of the Civil War became too militant for the editor, Horace Greeley, Dana resigned His reports as a special investigator in the West for the War Dept did much to build up official confidence in General Grant In 1864 Dana became Assistant Secretary of War His valuable *Recollections of the Civil War* (1898) are thus based on experience His great career as editor of "the newspaperman's newspaper" began in 1868 when Dana became editor and part owner of the New York *Sun* Though his editorials were erratic, often cynical, as a news editor he established high canons of readability and maintained a famous staff of writers He also wrote *The Art of Newspaper Making* (1895) and *Eastern Journeys* (1898) See biographies by J H. Wilson (1907), C J Rosebault (1931), and (for juveniles) A H Fenton (1941); study by Candace Stone (1938)

Dana, Edward Salisbury. see DANA, JAMES DWIGHT

Dana, Francis, 1743–1811, American diplomat, b Charlestown, Mass , grad Harvard, 1762 Son of a prominent lawyer, he was himself a lawyer He went as a colonial agent to England, then served as a delegate to the Massachusetts provincial council (1776–80) and the Continental Congress (1776–78), before accompanying (1779) John Adams on his mission to Paris In 1780, Dana was sent to the court of Catherine the Great of Russia Though he stayed at St Petersburg for two years (1781–83), he was never recognized or accredited He later was a justice of the Massachusetts supreme court (1785–1806) The poet, Richard H DANA, was his son See biography by W P Cresson (1930)

Dana, James Dwight, 1813–95, American geologist, b Utica, N Y , grad Yale, 1833 In 1837 he was appointed geologist and mineralogist on the U S exploring expedition to the Northwest Coast and the South Seas commanded by Charles Wilkes (1837–42) Dana's reports, published in large folio volumes with elaborate plates and an atlas, included *Zoophytes* (1846), *Geology* (1849), and *Crustacea* (1852–55) He had become editor of the *American Journal of Science* and in 1850 succeeded Benjamin Silliman at Yale as professor of natural history and geology His *System of Mineralogy* (1837) and *Manual of Geology* (1862) became standard works of many editions, and his *Corals and Coral Islands* (1872) and *Characteristics of Volcanoes* (1890) were also valuable See biography by D C Gilman (1899) His son, **Edward Salisbury Dana,** 1849–1935, b New Haven, Conn , grad Yale (B A , 1870, Ph D , 1876) was professor of physics at Yale from 1890 to 1917 He completed (1892) the sixth edition of his father's *System of Mineralogy* and wrote *Minerals and How to Study Them* (1895)

Dana, John Cotton, 1856–1929, American librarian and museum director, b Woodstock, Vt , grad Dartmouth, 1878 He was a lawyer and a civil engineer before he joined the staff of the Denver (Colo) Public Library in 1889 From 1898 to 1902 he was librarian of Springfield (Mass) City Library and in 1902 became head of the Newark (N J) Public Library, which under his direction led in offering new services to the public It was the first to install a branch for businessmen In 1909 the Newark Museum was founded, with Dana as its director His lively interest in machine art gave rise to interesting and original exhibitions Dana was a pioneer in library advertising and in library printing and was one of the founders of the Special Libraries Association and its first president He was president (1895–96) of the American Library Association Among his many publications are *A Library Primer* (1899), *Notes on Bookbinding for Libraries* (1906), and *The New Museum* (1917) See biographies by Frank Kingdon (1940) and Chalmers Hadley (1943)

Dana, Richard Henry, 1787–1879, American poet and essayist, b Cambridge, Mass , son of Francis Dana He entered Harvard in 1804 but left before graduation and was admitted to the bar in 1811 Critic and poet, he was an editorial associate on the *North American Review* and also wrote for other periodicals See his collected *Poems and Prose Writings* (1850) His son, **Richard Henry Dana,** 1815–82, American writer and lawyer, b Cambridge, Mass , after spending two years at Harvard shipped as a common sailor around Cape Horn to California The narrative of this voyage, published as *Two Years before the Mast* (1840), was written to secure justice for the sailor and has become an American classic of the days of sailing ships Dana returned to graduate at Harvard in 1837 and entered law practice He liked maritime cases and published *The Seamen's Friend* (1841), a standard manual of the law of the sea Interested in politics, he helped found the Free-Soil party, later he was a Republican His edition of Wheaton's *Elements of International Law* was standard in 1866 See biography by C F Adams (1890)

Dana, Samuel Luther, 1795–1868, American chemist, b Amherst, N H , grad Harvard, 1813 He aided cotton goods manufacture by devising a new method of bleaching. Valuable contributions to agricultural chemistry were his books *Muck Manual for Farmers* (1842) and *An Essay on Manures* (1850)

Dana, William Parsons Winchester, 1832–1927, American marine and genre painter, b Boston He became a member of the National Academy in 1867 His works include *Heartsease* (Metropolitan Mus) and *Ruby's Admiral* (Pa Acad of the Fine Arts)

Danaë (dă'năē), in Greek legend, daughter of Acrisius When it was prophesied that should Danaë have a son he would kill Acrisius, her father imprisoned her in a brazen tower. However, ZEUS came to her in the form of a shower of gold, and she bore him a son, PERSEUS. Acrisius put Danaë and Perseus into a chest and threw them into the sea, but they floated safely to land To punish the king of that land and his people for mistreating Danaë, Perseus turned them into stone with Medusa's head

Danann. see TUATHA DE DANANN

Danaïds (dă'năĭds), in Greek myth, brother of Aegyptus, Danaüs had 50 daughters, the Danaïds (dă'năĭds) or Danaïdes (dănăĭ'dēz), and Aegyptus 50 sons Danaüs fled to Argos to escape the wrath of Aegyptus' sons, but they followed and demanded the Danaïds in marriage Danaüs consented, telling each bride to murder her husband on the wedding night All agreed, but Hypermnestra did not kill her husband, Lynceus, who was said by some to have killed his father-in-law later. His descendants were the Danai, another name for the Greeks

Danbury, city (pop 22,339) in Danbury town (pop 27,921), SW Conn , a co seat of Fairfield co , settled 1684, town inc 1687, city 1889 Its important hat industry dates from 1780 It became known also through the lectures and writings of James Montgomery BAILEY and for its fairs, annual since the early 19th cent Danbury, a military depot, was the object of Tryon's 1777 raid, which resulted in the death of Wooster and the destruction of part of the village, Wooster is buried in Wooster Cemetery A state teachers college, the Wooster School for boys, and a Federal prison (1940) are here

Danbury Hatters' Case, decided in 1908 by the U S Supreme Court In 1902 the hatters' union instituted a nation-wide boycott of the products of a nonunion hat manufacturer in Danbury, Conn and the manufacturer brought suit against the union for unlawfully combining to restrain trade in violation of the Sherman Anti-Trust Act The holding of the Supreme Court that the union was subject to an injunction and to treble damages was precedent for interference by the Federal courts in labor activities See also INJUNCTION

Danby, Francis, 1793–1861, British historical and landscape painter He painted many romantic and imaginary scenes and excelled in depicting sunrise and sunset A good example of his work is *Fisherman's Home* (National Gall , London)

Danby, Thomas Osborne, earl of, 1631–1712, English statesman He was one of the chief ministers of Charles II and promoted the marriage of Mary, daughter of the duke of York (later James II) and William of Orange He was impeached (1678) by opponents of the king's French policy and was imprisoned until 1684. Danby became reconciled with the Whigs after his release and joined in inviting William of Orange to England Despite his suspected Jacobite sympathies, he continued influential under the new monarchs and was virtual premier from 1690 to 1695 He was created marquis of Carmarthen in 1689 and duke of Leeds in 1694

Danby, town (pop 1,112), SW Vt , between Manchester and Rutland, chartered 1761, settled 1765 Marble quarrying and supplying ferns to florists are the chief industries Many early settlers were Friends

Dance, George, the elder, 1700-1768, English architect He designed many public buildings in London, the most important being the imposing Mansion House (1739–53) He built the churches of St Botolph, Aldgate, St Leonard, Shoreditch, and St Luke's, Old Street His son, **George Dance,** the younger, 1741–1825, also was an architect He built St Luke's Hospital (1782) and did the impressive design for the rebuilding of Newgate prison (1770) Among his many other London works were the College of Surgeons in Lincoln's Inn Fields, a new façade in Gothic style for the medieval Guildhall, and designs for Finsbury Square and for Alfred Place and Crescent

dance. Among primitive people, dancing developed not as a form of play but as a natural expression of united feeling and action Many primitive dances have survived in the FOLK DANCE of modern times American Indian dances illustrate most of the purposes of primitive dancing and are usually of a ritualistic and ceremonial nature the war dance, expressing prayer for success and thanksgiving for victory, the dance of exorcism, performed by medicine men to drive out evil spirits, the dance of invocation, calling on the gods for help in farming, hunting, the fertility of men and animals, and other tribal concerns, imitation dances for secret societies, mimetic dances, illustrating events in tribal history, legend, or mythology; dances representing cosmic processes, and, more rarely, the dance of courtship, an invocation for success in love. The dance of religious ecstasy, in which hypnotic or trancelike states are induced (a characteristic phenomenon of the East and of Africa), was represented in America by the remarkable GHOST DANCE. American Indian dancing is always performed on the feet, but in many islands of the Pacific and in the Orient some of the dances are performed in a sitting posture, only the hands, arms, and upper parts of the body participating

Ancient Egyptian dances, often of a religious character, were derived from primitive African forms. In Greece the choral dance in honor of Dionysus played a part in the development of the drama. In India dance and drama are inseparable, both usually having spiritual significance and opening with a prayer. A complicated series of gestures and expressions is an important feature of Indian dancing, of which a famous example is the NAUTCH dance The early dances of Japan, probably influenced by ancient Chinese forms, became definitely institutionalized with the establishment of a national school of dancing in the 14th cent Soon the dances became associated with the famous *no* drama (see JAPANESE DRAMA) Secular dances are performed by the GEISHA In medieval Europe the repeated outbreaks of dance mania, a form of mass hysteria sometimes caused by religious frenzy, are reflected in the allegory of the dance of death (see DEATH, DANCE OF), which was often interpreted by artists and poets in later times Dancing as a social activity and a form of entertainment is of relatively recent origin During the Middle Ages, especially in France, dancing was a feature of the more enlightened and convivial courts Some medieval dances, such as the *volta*, precursor of the waltz, became the sources of modern dance steps In the 16th cent two types of dance were popular, the solemn and stately *danse basse* of the court of Charles IX and the lively *danse haute* of the peasants The BALLET first appeared in Italian courts in the 15th cent , and it became popular in France In the time of Catherine de' Medici an elaborate series of ballets, using the galliard, the *volta*, and other dances, was introduced In the reign of Louis XIV dancing reached its height in France Under the king's patronage the Royal Academy of Dancing was founded in 1662 Among the dances of this period were the courante, SARABAND, pavan, MINUET, GAVOTTE, QUADRILLE (or *contredanse*), and COTILLION Music, which had always accompanied dancing, now developed many forms and rhythms which were used by later composers, often in ways which had nothing to do with the dance French dances made their way into England in the 17th cent , though the ROGER DE COVERLEY remained a favorite there Villages and towns still saw the MORRIS DANCE performed Subsequent national dances include the MAZURKA and POLONAISE from Poland, the czardas from Hungary, the FANDANGO, BOLERO, and *seguidilla* from Spain, the TARANTELLA and saltarello from Italy, the WALTZ and galop from Germany, the POLKA and schottische from Bohemia, the STRATHSPEY and HIGHLAND FLING from Scotland; and the JIG from Ireland America initiated the barn dance, VIRGINIA REEL, clog dance, cakewalk, and Paul Jones in the 19th cent , the TWO-STEP c 1890, and the FOX TROT c 1912 The popularity of JAZZ in the early 1920s produced a number of new dances, of which the most popular was the Charleston From South America came the Argentine TANGO and the Brazilian MAXIXE, from Cuba, the RUMBA Early in the 20th cent , dancing as a form of art was profoundly affected by Isadora DUNCAN, who rejected the conventional ballet style and introduced a new technique of natural pose and gesture Later dancers, more or less under her influence, used the dance as a medium for the expression of complex emotions and abstract ideas See Curt Sachs, *World History of the Dance* (1937), Mary P O'Donnell and Sally T Dietrich, *Notes for Modern Dance* (1937), Lincoln Kirstein, *Book of the Dance* (rev ed , 1942, with a chronological table), Beth Tolman and Ralph Page, *The Country Dance Book* (1944), John Martin, *The Dance* (1947), Paul D Magriel, *A Bibliography of Dancing* (1936)

D'Ancona, Alessandro (älĕs-sän'drō dänkō'nä), 1835–1914, Italian scholar He was professor at the Univ of Pisa from 1861 At 18 he published a definitive essay on Tommaso Campanella He was active in the Risorgimento and after 1859 edited a Liberal newspaper, the *Nazione* His greatest work (not translated), *Manuale della letteratura italsana* (1892), is a magnificent six-volume selection of Italian literature, with critical essays on the authors Orsino Bacci was joint editor

dandelion [Eng form of Fr ,=lion's tooth], any plant of the genus *Taraxacum* (or *Leontodon*), milky-juiced perennial herbs of wide distribution The dandelion has a rosette of deeply toothed leaves (the name is usually attributed to this), a hollow flower stalk, and a composite flower head of bright yellow, followed in fruit by a round head of white down The common dandelion (*Taraxacum officinale* or *Leontodon taraxacum*) is native to Europe but widely naturalized It is considered in the N United States chiefly as a lawn pest because of the easily dispersed seeds and the deep root, but it is also cultivated both for medicine and for food It is rich in iron. The young leaves, usually blanched for the market and resembling chicory, are used for salad greens and as a potherb The roots are roasted and used as a coffee substitute—mostly in the Old World. The flower heads are utilized for dandelion wine and are good forage for bees. In medicine the dried roots are used as a hepatic and tonic.

Dandolo (dän'dōlō), ancient Venetian family which produced four doges, many admirals, and other prominent citizens **Enrico Dandolo** (ĕnrē'kō), c 1108–1205, became doge in 1192 He is considered the founder of the Venetian colonial empire In the Fourth Crusade (see CRUSADES) he was responsible for diverting the Crusaders first to ZARA (1202), then to Constantinople (1203) Though aged and blind, he commanded the Crusaders' fleet in the capture (1204) of Constantinople and secured for Venice the most valuable share of the spoils and of the conquered Greek territories In 1205 he and Emperor BALDWIN I of Constantinople were defeated near Adrianople by the Bulgars Baldwin having been captured, Dandolo led the remnants of the Latin forces back to Constantinople and soon died **Andrea Dandolo** (andrā'ä), c 1307–1354, doge of Venice (1343–54), was professor of jurisprudence at Padua before his election He subdued rebellious Zara, fought successfully against Genoa, and reorganized the laws of Venice He wrote a chronicle of Venetian history and was a friend of Petrarch

dandruff, disease of the scalp, characterized by branny scales and often associated with itching and loss of hair. The cause is sometimes attributed to a budding fungus, a yeastlike growth Treatment calls for frequent shampoos and application of ointments containing sulphur and salicylic acid.

Danegeld (dān'gĕld'), medieval land tax, originally raised to buy off raiding Danes In England it was first levied by ÆTHELRED in 991 and was collected by later rulers irregularly until 1163. In France the monks of Saint-Denis paid a Danegeld in 845 and several times later, as did Charles the Bald in 860

Danelaw (dān'lô"), originally the body of law which prevailed in the part of England occupied by the Danes after the treaty of King ALFRED with Guthrum in 886 It soon meant also the area in which Danish law prevailed, according to the treaty the boundary between England and Danelaw ran "up the Thames, and then up the Lea to its source, then straight to Bedford and then up the Ouse to Watling Street " The Danelaw contained four main regions Northumbria, the shires dependent on the boroughs of Lincoln, Nottingham, Derby, Leicester, and Stamford, E Anglia, and the SE Midlands Danish law was so strongly established that one of the law codes of Æthelred II recognizes its legal customs, which were different from the rest of England Even in the 11th cent the Domesday Book records suggest that Danish soldiers were settled in the Danelaw according to a plan, perhaps military See F M Stenton, *Danelaw Charters* (1920) and *The Danes in England* (1927)

Danforth, Moseley Isaac, 1800–1862, American engraver and painter, b Hartford, Conn. He was one of the founders of the National Academy of Design Danforth spent 10 years in London executing drawings of the Elgin Marbles and engraving portraits of many notables On his return to America, he devoted himself chiefly to bank-note engraving His principal engravings are *Sir Walter Scott*, *The Sentry Box*, *Washington Irving*, *Lady Arabella Johnson*, *Don Quixote*, *The Landing of Columbus*, and *The Landing at Jamestown*

Danforth, Thomas, 1703–86, American pewterer, founder of a family of celebrated pewterers, b Taunton, Mass In 1733 he opened a pewter shop in Norwich, Conn , where he made a wide variety of pewter tableware of excellent form, quality, and workmanship, using marks in the English mode Two sons, Thomas Danforth (1731–82) and John Danforth (1741–99), a grandson, Thomas Danforth (1756–1840), and a great-grandson, also named Thomas Danforth (1792–1836), succeeded him in the craft The grandson established a shop in Philadelphia in 1807, the great-grandson also worked there and later in Augusta, Ga Sarah Danforth, supposedly a granddaughter, married (1781) Oliver Boardman, of Hartford, Conn , whose son, Thomas Danforth Boardman, was the first of that name to carry on the Danforth tradition, a century's unbroken continuity of able craftsmanship

Danforth, town (pop 1,348), E Maine, S of Houlton, settled 1829, inc 1860 It includes Danforth and Eaton villages Lumber and pulp are produced

Dangerfield, Thomas, c 1650–1685, English criminal and conspirator. He invented the story of the Mealtub Plot (1679), which incriminated Catholics in a nonexistent conspiracy against Charles II Dangerfield was murdered when returning from the pillory following his conviction for libel

Dangerous Archipelago see TUAMOTU ISLANDS

Dania (dā'nēū), city (pop 2,902), SE Fla , on the Atlantic coast just S of Fort Lauderdale, settled 1896 by Danes It is a tomato-canning and shipping center Near by is the Seminole Indian Reservation

Daniel [Heb ,=God is my judge] 1 Prophet, central figure of the book of DANIEL 2 See CHILEAB. 3 Sealer of the covenant. Ezra 8 2; Neh 10 6.

Daniel, Antoine (Saint Antony Daniel) (ätwän' dänyĕl'), 1600–1648, French missionary in the New World, a Jesuit priest. He came in 1632 to Canada and in 1634 went with Father Jean BRÉBEUF as missionary to the Huron Indians He was killed by the Iroquois One of the Jesuit Martyrs of North America, he was beatified in 1925 and canonized in 1930 Feast March 16 (among the Jesuits) and Sept 26

Daniel, Samuel, 1562–1619, English poet. He is known chiefly for *Delia* (1592), a collection of sonnets His other poetry includes a narrative, *The Complaint of Rosamund* (1592), a tragedy, *Cleopatra* (1594); a defense of learning, *Musophilus* (1599), and an epic, *The Civil Wars between the Two Houses of Lancaster and York* (1609) The *Defense of Rhyme* (1603) and the *History of England* (1631) are his major prose works

Daniel, book of the Old Testament, fourth of the books of the Major Prophets It tells a series of events and visions of the life of Daniel, a Jew of the 6th cent B C , who spent his career at the court of Mesopotamian rulers, where he was called Belteshazzar (bĕl"tēshă'zär) Some parts of the work occur not in Hebrew but in Western Aramaic, and others are found originally in Greek versions only, the passages peculiar to Greek originals are treated as apocryphal in AV but as canonical in the Greek and the Western canon, including Roman Catholic versions The book divides easily, as follows Daniel and his friends remain faithful to the Law even in the Persian court (1), a dream of Nebuchadnezzar is interpreted by Daniel (2), Nebuchadnezzar, demanding divine honors, tries to punish three recalcitrant Jews in a furnace (3), there being in the Greek here a long, famous hymn (see THREE HOLY CHILDREN), a second dream of Nebuchadnezzar is interpreted by Daniel to foretell the king's madness (4), Daniel interprets the handwriting on the wall at Belshazzar's feast (5), he escapes alive from the lion's den (6), Daniel has four apocalyptic visions (7, 8, 9, 10–12) The Greek book has two more chapters, for which see SUSANNA 1 and BEL AND THE DRAGON The difference between Greek and Hebrew-Aramaic texts in chapter 3 causes a different numbering, thus, AV 3 24–30, 4 1–3, and 4 4–37 correspond to Douay 3 91–97, 3 98–100, and 4 1–34, respectively Daniel was proverbial for wisdom, even in the Bible. Ezek 14 14–20, 28 3 The book presents many critical problems, not least being the date some, denying its prophetic quality, set it in the mid-2d cent B C See Mat 24 15 For bibliography, see OLD TESTAMENT

Daniell, John Frederic (dă'nyul), 1790–1845, English chemist and meteorologist From 1831 he was professor of chemistry at King's College, London He invented the Daniell CELL, a HYGROMETER, and a pyrometer He wrote *Meteorological Essays* (1823) and *An Introduction to the Study of Chemical Philosophy* (1839)

Daniels, Fred Harris (dă'nyulz), 1853–1913, American mechanical engineer, b Hanover, N H , grad Worcester Polytechnic Institute, 1873 A manufacturer of steel and wire in Worcester, Mass , he devised many improvements, especially in making wire rods

Daniels, Jonathan Worth, 1902–, American newspaper editor and author, b Raleigh, N C , educated at the Univ of North Carolina (B A , 1921, M A , 1922) and Columbia Univ School of Law (1922–23) In 1925 he joined the staff of the Raleigh *News and Observer*, was its editor (1933–42) while his father, Josephus Daniels, was ambassador to Mexico, and succeeded to the editorship after his father's death in 1948 The paper ably reflects his views, those of a leading Southern liberal During the Second World War, Daniels was assistant director of the Office of Civilian Defense (1942), administrative assistant to President F D Roosevelt (1943–45), and press secretary to the President (1945) In 1947 he was made U S member of the United Nations subcommittee on prevention of discrimination and protection of minorities Daniels wrote a novel, *Clash of Angels* (1930), and contributed widely to magazines and periodicals, but is perhaps best known for his well-written, discerning reportorial books—*A Southerner Discovers the South* (1938), *A Southerner Discovers New England* (1940), *Tar Heels* (1941), and *Frontier on the Potomac* (1946)

Daniels, Josephus, 1862–1948, American statesman, newspaper editor, and author, b Washington, N C He became editor of the Raleigh *State Chronicle* in 1885 (he was admitted to the bar the same year) and in 1894 consolidated three newspapers into the Raleigh *News and Observer* He was in charge of the Democratic publicity bureau in the presidential campaigns of 1908 and 1912 Throughout both of Wilson's administrations, including the period of the First World War, he was Secretary of the Navy He was much criticized for pacifistic tendencies and administrative inefficiency before the U S entry into the war, but his record in 1917–18 quieted these charges. After leaving office, he continued to be a force in both state and national politics He was (1933–42) ambassador to Mexico His books include *Our Navy at War* (1922), *Life of Woodrow Wilson* (1924), and *The Wilson Era* (1944–46) *Tar Heel Editor* (1939), *Editor in Politics* (1941), and *Shirt Sleeve Diplomat* (1947) are autobiographical.

Danielson, industrial borough (pop 4,507) in Killingly town, NE Conn , on the Quinebaug, chartered 1854 Textiles are the chief products

Danilo I (Danilo Petrovich of Niegosh) (dä'nē'lō), 1677–1735, last elected prince-bishop (*vladika*) of MONTENEGRO (1696–1735) In 1702 he was seized in Turkish territory and narrowly escaped death by impalement After being ransomed by his subjects, he instigated (Christmas Eve, 1703) the "Montenegrin Vespers," in which all the Moslems in Montenegro were slain In 1715 Danilo visited Tsar Peter I at St Petersburg and secured his alliance against the Turks—a journey which became traditional among his successors He subsequently recovered Zeta from the Turks and restored the monastery at Cetinje Empowered to choose his successor, Danilo designated his nephew This became the usual order of succession, the prince-bishops being bound to celibacy

Danilo II (Danilo Petrovich of Niegosh), 1826–60, prince of MONTENEGRO (1851–60) He secularized (1852) his principality (chiefly in order to be able to marry) and transferred his ecclesiastic functions to an archbishop Danilo and his brother Mirko defeated the Turks at Ostrog (1853) and at Grahovo (1858) Assassinated by a Montenegrin exile, Danilo was succeeded by his nephew, Nicholas I

Danish language, Indo-European language See LANGUAGE (table)

Danish literature. The earliest period of Danish letters, from the 13th to the 16th cent , yields collections of laws, legends, and religious writings and, later, miracle and morality plays Pedersen, in the first half of the 16th cent , translated the Bible into Danish Prominent in the Renaissance period were the poet Anders Arreboe and the great hymn writer, Kingo The so-called father of Danish literature appeared in the 18th cent —the gifted and versatile Ludvig Holberg, in poetry, the works of Johannes Ewald rank high The 19th cent gave rise to Heiberg, critic and dramatist, Oehlenschläger, Grundtvig, Blicher, M A Goldschmidt, the religious and philosophical writer Kierkegaard, and the giant of Danish letters, Hans Christian Andersen Great names of the later 19th and early 20th cent include an important critic, Georg Brandes, as well as the novelists Drachmann, Jacobsen, H J Bang, Johannes Jorgensen, and Pontoppidan The work of the contemporary writers is diverse but often characterized by an absorption in social and economic problems Among these are the dramatist Abell, the novelists Andersen Nexo and Johannes Jensen, and the dramatist and patriot Kaj Munk See Frederika Blankner, ed and tr , *History of the Scandinavian Literatures* (1938), H A Larsen, ed , *Denmark's Best Stories* (1938), Alrik Gustafson, *Six Scandinavian Novelists* (1940), C W Stork, tr , *Second Book of Danish Verse* (1947)

D'Annunzio, Gabriele (gäbrēä'lā dän-nōōn'tsyō), 1863–1938, Italian poet, novelist, and dramatist, b Pescara He went to Rome in 1881 and there began his literary career Even his early poetry—*Primo vere* [spring] (1880) and *Canto novo* [new song] (1882)—was filled with a richness of imagery, a sensuousness, a skill in handling the language which was equaled by no Italian poet of his day His novels—*Il piacere* (1889, Eng tr , *The Child of Pleasure*, 1898), *L'innocente* (1892, Eng trs , *The Intruder*, 1898, and *The Victim*, 1914), *Giovanni Episcopo* (1892, Eng tr , *Episcopo & Company*, 1896), and *Il trionfo della morte* (1894, Eng tr , *The Triumph of Death*, 1896)—show the same genius in the command of words, which has enriched the Italian language but which loses flavor in translation This skill is combined with theatricality, shallowness of philosophy, eroticism, and lack of feeling for humanity His life was crowded with sensation, but empty of real emotion. At the beginning of the First World War, D'Annunzio was in France, where he had lived since 1910, he hurried back to Italy, and his oratory had much to do with bringing Italy to join the Allies. He fought with spectacular bravery in the air force, losing an eye in combat In Sept., 1919, he led an expedition (known as the march on Ronchi) against Fiume and established a rule opposed by the Italian government and a hostile Europe that lasted until Jan , 1921 His troops in the Fiume raid wore the black shirt which was later the uniform of the Fascists After the war D'Annunzio was an early exponent of fascism He was one of the few men whom Mussolini courted D'Annunzio did little writing in his later years, but the list of his works is a long one Among his plays are *Il sogno d'un mattino di primavera* (1897, Eng tr , *The Dream of a Spring Morning*, 1902), *Il sogno d'un tramonto d'autunno* (1898, Eng tr , *The Dream of an Autumn Sunset*, 1904), *La città morta* (1898, Eng tr , *The Dead City*, 1902), and *Francesca* (1902, Eng. tr , *Francesca da Rimini*, 1902) Most of his plays were written during his love affair with Eleonora Duse, which he described with cruel candor in the novel *Il fuoco* (1900, Eng trs , *The Flame of Life*, 1900, and *The Flame*, 1906, 1914) Mussolini appointed him (1937) president of the Royal Italian Academy, but he did not live to preside over it See F V Nardelli and Arthur Livingston, *Gabriel, the Archangel* (Eng tr , 1931)

Dansville, village (pop 4,976), W central N Y., S of Geneseo, in a nursery and garden-truck area, settled 1795, inc 1845 Shoes and paper are made. Clara Barton founded (1881) in Dansville the first local chapter of the American Red Cross

Dantan, Antoine Laurent (ätwän' lôrä' dätä'), 1798–1878, French sculptor He executed public monuments and portrait busts His brother, **Jean Pierre Dantan** (zhäN' pyâr'), 1800–1869, also a sculptor, was known chiefly for his caricature portraits of noted persons

Dantan, Joseph Édouard (zhôzĕf' ädwär'), 1848–97, French painter, son of Jean Pierre Dantan His works include *Corner of a Studio* (Luxembourg Mus , Paris), *Monk Carving a Crucifix* (Nantes), *Entr'acte during a First Night* (Théâtre Française, Paris), and *Vocation of the Apostles Peter and Andrew* Dantan illustrated some of the works of Zola and Victor Hugo

Dante Alighieri (dän'tā, Ital dän'tä älēgyä'rē), 1265–1321, Italian poet, author of the DIVINE COMEDY, b Florence His first name was a contraction of Durante He was a pupil of Brunetto Latini, and among his friends were Cavalcanti and Giotto. It is probable that he took part in military expeditions in his youth In 1292 Dante wrote *La vita nuova* [the new life], a prose narrative with inserted lyrics, telling the story of his love for BEATRICE PORTINARI, whom he first saw in 1274 In 1293 he married Gemma Donati, who remained in Florence when Dante went into exile From 1295 to 1300 he was occupied with public affairs, was made one of the priors of Florence, and went on an embassy to Rome Upon the rising of the Black Guelphs, Dante, a White Guelph, was fined and banished (1302) He spent the rest of his life wandering through Italy and never returned to Florence, although he was later permitted to do so He died at the court of Guido da Polenta in Ravenna, where he is buried Dante is one of the great figures of world literature and the outstanding figure of Italian letters, he is likewise the interpreter of all medieval Europe He fixed the character of Italian poetry, surpassed all Italian writers before him, and gave rise to a vast literature His works include *La vita nuova*, the *Divine Comedy* (*La commedia*, the *Divina* was added by a later generation), *Convivio*, an allegorical encyclopedic poem; and various lyrics He also wrote, in Latin, treatises on the Italian vernacular (*De vulgari eloquentia*) and on monarchy (*De monarchia*), besides some epistles and eclogues His verse is musical, his thought lofty, and his imagination vivid, and his ability to describe in detail is remarkable Dante Gabriel Rossetti translated *La vita nuova* and various lyrics in *The Early Italian Poets* (1861; ed. by E G Gardner, 1904) · selections are translated in Lorna de' Lucchi, *An Anthology of Italian Poems* (1922) See DIVINE COMEDY for translations of that work The first biography of Dante was by Boccaccio, others include those by A J Butler (1902), C H Grandgent (1916), and C A Dinsmore (1919) For criticism, see J. A Symonds, *Introduction to the Study of Dante* (1872), Benedetto Croce, *The Poetry of Dante* (Eng tr , 1922), G A Scartazzini, *Handbook to Dante* (Eng. tr , 1924), Étienne Gilson, *Dante, the Philosopher* (Eng tr , 1949).

Danton, Georges Jacques (zhôrsh' zhäk' dätô'), 1759–94, French statesman, one of the leading figures of the FRENCH REVOLUTION A Parisian lawyer, he became a leader of the CORDELIERS early in the Revolution and gained the favor of the mob through his powerful oratory. He became a member of the Paris commune and then of the Legislative Assembly (1791–92), where he championed the lowest class Danton was the prime mover in the radical revolution that led in 1792 to the storming of the Tuileries and the overthrow of the monarchy In the new republic he was minister of justice and head of the Provisional Executive Council Danton sought foreign war in order to spread French institutions to all Europe He built up a strong government, instituted (March 10, 1793) the Revolutionary Tribunal, and dominated the first Committee of Public Safety (April–July, 1793), but the growing bitterness of partisan strife soon endangered his position Now an advocate of peace, he was accused of peculation and of complicity in the treason of DUMOURIEZ The hostility of the GIRONDISTS had driven him into alliance with the MOUNTAIN, but by July, 1793, the leftward course of the Revolution left him a moderate He was not included in the new Committee of Public Safety, the extremists under ROBESPIERRE were rising to triumph Danton continued to support the Committee and to uphold the Terror, though he did advocate (1793–94) moderation of the rigors of the Revolution Yet his influence was declining and his desire to soften the Revolution led to an increasingly severe conflict with Robespierre Robespierre overcame him On March 30, 1794, Danton and his followers were proscribed and charged with a conspiracy to overthrow the government The trial was a mockery, and Danton was guillotined The conflict between Robespierre and Danton was one of personal animosity rather than political principle Danton, in fact, developed no coherent political doctrines except, perhaps, the theory of opportunism in revolutionary action There has been much controversy as to Danton's character, particularly between Aulard, who defends him as a far-seeing idealist, and Mathiez, who views him as a demagogue See his *Speeches* (Eng tr , 1928), biographies by Hilaire Belloc (1899), Hermann Wendel (Eng tr , 1935), and Louis Madelin (1914, in French)

Danube (dă'nūb), Ger *Donau*, Czech *Dunaj*, Hung *Duna*, Serbo-Croatian and Bulgarian *Dunav*, Rumanian *Dunarea*, Rus *Dunai*, great river of Central and Southeastern Europe About 1,750 mi long and with a drainage basin of c 320,000 sq mi , it is second only to the Volga among European rivers It rises in two sources in the Black Forest, SW Germany, flows NE through Württemberg and Bavaria past Ulm and Regensburg, where it turns southeast to enter Austria below Passau It continues its southeastern course through Upper and Lower Austria, past Linz and Vienna, this section is particularly famous for its lovely scenery It then forms the border between Czechoslovakia and Hungary from Bratislava to Esztergom, where it turns sharply south and flows through the great Hungarian plain past Budapest After entering Yugoslavia above Belgrade, it again turns southeast, then east, and forms large sections of the borders between Rumania and Yugoslavia and Rumania and Bulgaria After passing the IRON GATE, the Danube broadens again Near Silistra it leaves the Bulgarian border and turns generally north, separating the Rumanian provinces of Dobruja and Walachia, below Galati it divides into a delta before entering the Black Sea The northernmost branch of the delta, on which Izmail is situated, forms the frontier between Rumania and the Ukraine (USSR) The final tract is characterized by many lakes and swamps The Danube receives more than 300 affluents, notably the Inn, the Drava, the Theiss, the Sava, and the Pruth Navigable from Ulm, it is a vital traffic artery and has been a link of many cultures In volume, however, Danubian commerce is far below that of the Rhine Under the Roman Empire (when it was known as Danubius and, in its lower section, as Ister), the Danube was the northern border against the barbarian world As Rome declined, the Danubian plains for centuries attracted invading hordes—Goths, Huns, Avars, Magyars, Petchenegs, Cumans, Mongols, and others The Danube increased in commercial importance in the era of the Crusades, but commerce suffered again after the Turks gained control (15th–16th cent) of its course from Hungary to the sea The Congress of Paris in 1856 appointed the first European Danube Navigation Commission to clear the mouth of obstructions This commission dissolved in 1939 By the Treaty of Versailles (1919) the Danube was internationalized and an international commission was set up with jurisdiction over the course from Ulm to Braila, the point where the authority of the old commission began After having repudiated the internationalization in 1936, Germany also forced the international commission to dissolve in 1940. In 1948 delegates from Czechoslovakia, Hungary, Yugoslavia, Rumania, Bulgaria, the Ukraine, the USSR, the United States, Great Britain, and France met at Belgrade to determine the international status of the Danube When, instead of a general international commission, a body composed of only the seven riparian nations was set up, the three Western powers refused to sign the convention. See Emil Lengyel, *The Danube* (1939).

Danvers, town (pop. 14,179), NE Mass, NW of Salem, settled 1636, set off from Salem 1757 Shoes and electric fixtures are the chief products Danvers was the birthplace of Israel Putnam, and Whittier spent his later years here Some old buildings remain

Danville, village (pop 1,332), SE Que, N of Sherbrooke The first settlers were from the vicinity of Danville, Vt

Danville. 1 Town (pop 1,010), a co seat of Yell co, W central Ark, on Petit Jean Creek and in the Ouachitas, founded 1841. **2** City (pop 36,919), seat of Vermilion co, E Ill, on the Vermilion river at the Ind line, platted 1827, inc 1839 Danville is a commercial and industrial center in a dairy, farm, and coal area. It has railroad shops, and among its numerous manufactures are brick and metal products, mine machinery, shoes, lumber, and candy Gurdon S HUBBARD had a trading post here, 1828–33, and Joseph G CANNON (whose home is preserved) lived here Abraham Lincoln maintained a law office in Danville for five years, in partnership with W H Lamon The city is the seat of a U S veterans' hospital **3** Town (pop 2,093), co seat of Hendricks co, W central Ind, c 20 mi W of Indianapolis, settled 1824, inc 1835 It is a farm trading center and the seat of Canterbury College **4** City (pop 6,734), co seat of Boyle co, central Ky, SSW of Lexington, settled 1775, est 1787, inc 1836 In an agricultural region, it has stockyards and flour and lumber mills It is also a railroad division point One of the oldest settlements in Kentucky, it was a seat of government (1784–92) by act of the Virginia legislature The Kentucky constitutional conventions were held here, Weisiger Memorial State Shrine (the old courthouse square) preserves their setting Among other points of interest are Centre College of Kentucky (Presbyterian, coeducational, 1819), the state school for the deaf (1823), and the Dr Ephraim McDowell State Shrine (scene of the first ovariotomy) TRANSYLVANIA COLLEGE was opened near Danville in 1785 The city has many fine ante-bellum houses and old trees The Kentucky and Dix rivers are near by To the northeast are Herrington Lake and Dix Dam; to the northwest is a national cemetery **5** Borough (pop 7,122), co seat of Montour co, NE central Pa, on the Susquehanna and NE of Harrisburg, laid out 1790, inc 1849 A farm trading center, Danville has iron and steel works and textile mills A state hospital for the insane is here **6** Town (pop 1,472), NE Vt, W of St Johnsbury, settled 1784 Thaddeus Stevens was born here The village West Danville is a resort on Joe's Pond **7** Industrial city (pop 32,749), S Va, on the Dan and SE of Roanoke, near the N C line, founded 1793, inc as a city 1870 One of the largest markets in the world for bright-leaf tobacco, it also has cotton mills The city operates the huge Pinnacles of Dan hydroelectric development (82 mi west), the project, built with Federal aid, was completed in 1938 In April, 1865, Danville became the "last capital of the Confederacy" when Davis and his cabinet fled from the Richmond area and came here. Danville has two girls' junior colleges

Danzig (dăn'sĭg) or **Gdansk,** Pol *Gdańsk,* city (pop 117,894, 1941 pop 267,251), a Baltic seaport on a branch of the Vistula and on the Bay of Danzig Formerly a free city, it was transferred to Polish administration in 1945 Originally a Slavic settlement, Danzig was an important center as early as the 10th cent, it became the capital of Pomerelia (see POMERANIA) After its settlement by German merchants, it joined (13th cent) the Hanseatic League, became German in culture, and rose to be an important Baltic port In 1308 Danzig passed to the Teutonic Knights Ceded to Poland by the Treaty of Torun (1466), Danzig became autonomous, in 1577 it unsuccessfully tried to sever its allegiance to the Polish crown After the Thirty Years War it began to decline Danzig resisted the invasion (1655–60) of Poland by Charles X of Sweden In the War of the POLISH SUCCESSION, King Stanislaus I took refuge in Danzig until its fall (1734) after a heroic defense The first partition of Poland (1772) made Danzig a free city, in the second partition (1793) it was given to Prussia Napoleon I made it a free city again (1807–14) Reverting to Prussia in 1814, it was a fortress and the provincial capital of West Prussia until 1919, when the Treaty of Versailles made Danzig once more a free city Though included in the Polish customs territory and placed under a high commissioner appointed by the League of Nations, Danzig had its own legislature It was increasingly troubled after 1935 by the growth of National Socialism, as the League's authority waned, Danzig came under absolute Nazi control, and clamor for union with Germany increased Hitler's demand (1939) for the reunion of Danzig with Germany was the principal immediate cause of the German invasion of Poland and the Second World War Danzig was annexed to Germany from Sept 1, 1939, until its fall to the Russian army early in 1945 After the First World War, friction between the Free City and Poland led to the construction by Poland of the rival port of GDYNIA As a result, Danzig lost much of its trade After 1945, Polish plans for Danzig envisaged Danzig as the chief Polish seaport, with Gdynia and ZOPPOT, a near-by resort, merged with Danzig in a single new city Most of the German population has been replaced by Poles The port of Danzig—the only part of the city that escaped the destruction of the Second World War—handled almost 4,000,000 tons of freight in 1946 It is principally located at Neufahrwasser (Pol *Nowy Port*), a northern suburb Before its destruction, Danzig had preserved its medieval aspect and architecture, notably the Gothic Church of St Mary's (1343) and the city hall (1379) The former abbatial church (begun c 1175, completed 1836) at the well-known suburb of Oliva serves as a cathedral Gdansk prov (c 2,900 sq mi, pop 604,975) is a largely agricultural lowland The main cities are Gdynia and Tczew Administered by the province is also the territory (c 2,000 sq mi, pop 327,232), which includes the former free city and sections of Pomerania and East Prussia

Daphne (dăf'nē), in Greek myth, nymph who attracted the love of Apollo He pursued her, she prayed for escape, and she was changed into a laurel tree

Daphnis (dăf'nĭs), in Greek literary legend, shepherd in love with a Naiad After swearing fidelity, he was made drunk, was unfaithful, and was punished with blindness He tried to comfort himself by playing sad songs upon the shepherd's pipes His friends also lamented for him in song Thus pastoral melody was born.

Daphnis and Chloé (klō'ē), Greek pastoral romance, attributed to one Longus of the 3d cent A D The very names (Daphnis means "laurellike", Chloé, "blooming") suggest the idyllic character of this improbable but charming story of the love of a goatherd and a shepherdess *Daphnis and Chloë* was very popular in France and England in the 17th and the early 18th cent

Da Ponte, Lorenzo (lōrĕnd'zō da pōn'tā), 1749–1838, Italian poet, librettist, and one of the pioneers in spreading Italian culture in the United States He wrote the librettos of three of Mozart's operas, *Così fan tutte* (1790), *The Marriage of Figaro* (1786, Eng tr, 1819), and *Don Giovanni* (1787, Eng tr, 1826) In 1805, after a varied career in Italy, Dresden, Vienna, and London, he went to New York, where (except for a few years as storekeeper in Elizabethtown, N J, and Sunbury, Pa) he spent the rest of his life teaching the Italian language and literature He was appointed professor of Italian language and literature at Columbia Univ in 1830, and his library, bought by the university when the chair was established in 1825, was the nucleus of its collection of Italian poets and miscellaneous literature In 1833 he succeeded in having built the Italian Opera House, where 28 performances of Italian opera were given before it was transferred to other management That opera house, soon destroyed by fire, represented the first attempt to establish Italian opera permanently in New York Da Ponte's last years were marred by want and the loss of pupils. See his memoirs (1823, Eng tr, ed by Arthur Livingston, 1929), J L Russo, *Lorenzo Da Ponte* (1922)

Dara (dā'ru), in the Bible see DARDA

Darab (darab'), village, SW Iran It is surrounded by orange and lemon groves Here Shapur I had the rocks sculptured in bas-relief to commemorate his victory over Valerian

D'Arblay, Madame see BURNEY, FRANCES

Darboux, Jean Gaston (zhäʹ gästôʹ darbōōʹ), 1842–1917, French mathematician He is known for his work on orthogonal surfaces and for his application of infinitesimal calculus to geometry He was professor from 1881 and dean from 1889 at the Faculty of Sciences, Paris, and perpetual secretary of the Academy of Sciences from 1900

Darboy, Georges (zhôrzhʹ darbwäʹ), 1813–71, French churchman, bishop of Nancy (1859–63) and archbishop of Paris (1863–71) In the Franco-Prussian War he behaved with notable heroism When the Commune of Paris was set up, he was imprisoned as a hostage and subsequently shot

Darby, John Nelson, 1800–1882, most noted of the founders of the PLYMOUTH BRETHREN, b England In 1827 he left a curate's post in Wicklow, Ireland, and joined with others in Dublin to found the Brethren Later he formed congregations on the Continent, in Switzerland, France, and Germany Between 1859 and 1874, Darby paid a number of visits to the United States and Canada His followers, especially those on the Continent, came to be called Darbyites or Exclusive Brethren His collected writings fill 32 volumes

Darby, residential borough (pop 10,334), SE Pa, near Philadelphia, settled 1682, inc 1853 One of the oldest settlements in the state, it has many colonial landmarks The Darby Library Company was founded in 1743 by Friends John Bartram, botanist, was born near here

Darcy, Thomas Darcy, Baron, 1467–1537, English statesman and rebel He served Henry VII in peace and war and continued important in Henry VIII's reign. He disapproved of the king's divorce from Katharine of Aragon, and he was involved in secret plots with the agents of Emperor Charles V against Henry After the outbreak of the rebellion in the north of England known as the PILGRIMAGE OF GRACE (1536), Darcy yielded Pontefract Castle to the rebels and became one of their leaders He was pardoned but was later convicted of treason and beheaded

Darda (där'dŭ), wise man 1 Kings 4 31 Apparently the same man as Dara 1 Chron 2 6

Dardanelle (därdŭnĕlʹ), city (pop 1,807), a co seat of Yell co, W central Ark, on the Arkansas river It was platted in 1843 on the site of an Indian post Mt Nebo State Park is near by

Dardanelles (därdŭnĕlzʹ), strait, c 40 mi long and from 1 to 4 mi wide, connecting the Aegean Sea with the Sea of Marmara and separating the Gallipoli peninsula of European Turkey from Asiatic Turkey It was called the Hellespont in antiquity and was the scene of the legend of HERO and Leander Its modern name is derived from Dardanus, an ancient Greek city on its Asiatic shore Controlling navigation between the Black Sea and the Mediterranean, the Dardanelles and BOSPORUS straits have been of immense strategic and commercial importance since the dawn of history Ancient Troy prospered at the western entrance to the Hellespont Xerxes I crossed (c 481 B C) the strait over a bridge of boats, as did Alexander the Great in 334 B C. Throughout the existence of the Byzantine and Ottoman empires the Straits were essential to the defense of Constantinople By 1402 the Dardanelles were under the control of Sultan Bajazet I Mohammed II began (15th cent) to fortify the passage, which, with brief interruptions, has remained in Turkish hands until the present day Russian expansion along the Black Sea (18th cent) and the resulting weakening of the Ottoman Empire became of great concern to the Western powers (see EASTERN QUESTION), notably England and France, which from 1841 joined forces to prevent Russia from gaining control over, or special rights in, the Straits In 1841 England, France, Russia, Austria, and Prussia agreed to close the Straits to all but Turkish warships in peacetime This convention was formally reaffirmed by the Congress of Paris (1856) at the end of the Crimean War and, theoretically at least, remained in force until the First World War Early in 1915 an Anglo-French fleet, commanded first by Admiral Carden and later by Admiral Sir John de Robeck, sought unsuccessfully to force the Dardanelles and take Constantinople A second attempt, known as the GALLIPOLI campaign, was also unsuccessful, but after the final Turkish collapse an Allied fleet passed (Nov, 1918) the Straits and occupied Constantinople The Treaty of Sèvres (1920) with Turkey internationalized the Straits zone, but it was superseded by the Treaty of Lausanne (1923) The zone was restored to Turkey, but was to remain demilitarized, the Straits were to be open to all ships in peacetime and in time of war if Turkey remained neutral, if Turkey was at war, it could not exclude neutral ships Secretly, however, Turkey soon began to refortify the zone, and in 1936, by the MONTREUX CONVENTION, was formally permitted to remilitarize it The Montreux Convention was essentially enforced by Turkey through the Second World War until Jan, 1945, when it was modified by the opening of unrestricted passage for Allied supplies to Russia After the war Russia sought, with fluctuating energy, to have the Montreux Convention revised in its favor The Dardanelles are also called Chanakkale Bogazi or Canakkale Bogazi See J T Shotwell and Francis Deak, *Turkey at the Straits* (1940)

Dardanus (därʹdunus), in Greek mythology, founder of Troy, son of ZEUS and the Pleiad ELECTRA His descendants, the Trojans, were sometimes called the Dardani

Dardic languages, Indo-European languages See LANGUAGE (table)

Dare, Virginia, b 1587, first white child of English parents to be born in America She was the daughter of Ananias and Elinor Dare, members of Sir Walter Ralegh's ill-fated colony which settled on ROANOKE ISLAND on the North Carolina coast Since no trace remained of the colony when the relief expedition reached Roanoke in 1591, the child's fate is unknown The recently discovered but debated Virginia Dare stones say she was killed in an Indian attack

Dares Phrygius (dā'rēz frĭ'jĭŭs), supposed author of a history of the Trojan War Dares of Phrygia is mentioned by Homer in the *Iliad* as a priest of Troy, and to him was attributed a history, which appeared in Latin translation, probably in the 5th cent A D Actually the Latin work, *De excidio Troiae historia* [history of the destruction of TROY], was probably original This and the supposed diary of DICTYS CRETENSIS became, through Benoît de Sainte-Maure's *Roman de Troie,* the most popular sources for medieval stories of the Trojan War

Dar-es-Salaam (där'-ĕs-sulām') [Arabic,=house of peace], city (pop 66,379), capital of Tanganyika, a port on the Indian Ocean, founded in the 19th

cent The city has wide, shaded streets and a fine botanical garden It is the terminus of a railroad across the country to Kigoma on Lake Tanganyika Cotton, sisal, copra, and hides are chief among the exports

Dargomijsky, Aleksandr Sergeyevich (älyĭksän'dur sĕrgāyä'vĭch dargŏmē'skĭ), 1813–69, Russian composer He and Glinka brought nationalism to Russian music, strongly influencing the next generation of composers Among his works are three operas *Esmeralda*, with libretto by Victor Hugo (1847), *Russalka* (1856), and *The Stone Guest* (1872), on a play by Pushkin See M D Calvocoressi and Gerald Abraham, *Masters of Russian Music* (1936)

Dariel, Georgia, USSR see DARYAL

Darien (dâ'rēĕn', dâ'rēn'), Span *Darién* (därvän'), eastern part of Panama Properly today the Isthmus of Darien is that part of the Isthmus of Panama between the Gulf of Darien on the east and the Gulf of San Miguel on the west The name was, however, formerly much used to mean the entire Isthmus of Panama Visited by Rodrigo de Bastidas in 1501 and by Christopher Columbus in 1502, Darien was granted to Diego de NICUESA His attempted colony failed until revived by Martín Fernández de ENCISO After he had been forcibly removed from office by Vasco Núñez de BALBOA, Enciso complained bitterly, and a new governor, Pedro ÁRIAS DE ÁVILA (Pedrarias) was sent out He established harsh rule over the entire isthmus and in 1519 moved the capital from the old settlements in Darien to Panama city The attempt at Scottish settlement on the Isthmus of Panama, generally called the DARIEN SCHEME, failed miserably, leaving as its only trace a place name, Puerto Escocés [Scottish port]

Darien. 1 (dâ'rēĕn') Residential town (pop 9,222), SW Conn , E of Stamford, settled c 1641, inc 1820 Many 18th-century houses remain **2** (dâ'rēn) City (pop 1,015), co seat of McIntosh co , SE Ga , a fishing port on the Altamaha, N of Brunswick It was founded in 1736 by a group of Scotch Highlanders recruited by James Oglethorpe to supersede Spanish influence in the area The town was first named New Inverness, for the settlers' home, and the surrounding area was called Darien Near by are Santo Domingo State Park, where tabby ruins (said to be either of a Spanish mission, est 1595, or of a sugar mill, built c 1816), and the site of Fort King George (1721–27), the first English settlement in Georgia

Darien Scheme, Scottish colonial project begun by the act (1695) of the Scottish Parliament that chartered a company for trading with Africa and India William PATERSON directed the first efforts of the company to founding a colony on the Isthmus of Panama to compete with the Dutch and Spanish for trade Stock was subscribed in England and Scotland, but opposition by the English government and by the East India Company caused English investors to withdraw English discrimination against Scotland in the NAVIGATION ACTS was underlined by passage of a new act in 1696 The company's three expeditions failed (1698, 1699) with the loss of many lives, because of poor leadership and equipment, disease, and the hostility of the Spanish The failure, with its immense losses to Scottish investors, vividly demonstrated Scotland's commercial disadvantage outside the British "realm" By the terms of the Act of Union with England (1707), Scotland secured equality in trade Investors in the Darien venture were partially indemnified for their losses See G P Insh, *The Company of Scotland Trading to Africa and the Indies* (1932)

Darío, Rubén (rōōbĕn' därē'ō), 1867–1916, Spanish American poet, whose real name was Félix Rubén García Sarmiento, b Segovia dept , Nicaragua A child prodigy, he acquired through reading a thorough knowledge of Spanish and French culture, widened during his many years abroad both in South America and Europe as the diplomatic representative of various Spanish American countries He was particularly familiar with the writings of the French Parnassians Darío was the leader of MODERNISMO, with its emphasis on metric form and beauty of diction, in Spanish American and Castilian poetry *Azul* [blue] (1888) was followed by *Prosas profanas* (1896), a departure from pure form and content to grace, beauty, and exoticism *Cantos de vida y esperanza* [songs of life and hope] (1905) and *El canto errante* [the wandering song] (1907) show Darío's elegance and grace strengthened by vigor and power, technical mastery, and the achievement of poetic universality

Darius I (Darius the Great) (dərī'əs), c 549 B C – 485? B C , king of ancient Persia (521–485? B C), called also Dariavaush and Darius Hystaspis (after his father, Hystaspes or Vishtaspa) A distant cousin of CAMBYSES, he succeeded to the throne after the fall of the impostor claiming to be SMERDIS Darius put down revolts in Persia itself, in Media, in Babylonia, and in the East Then he proved himself the true successor of CYRUS THE GREAT and one of the most able of the ACHAEMENIDAE by setting up the administrative system of the satrapies—provinces under satraps, who were like viceroys and were responsible only to the Great King, but were checked by generals, ministers of home affairs, and secret police, all of whom were also responsible to the Great King alone This system proved so efficient that it outlasted even the Achaemenid empire, being adopted by Alexander the Great and later by the Parthians Darius also undertook lengthy campaigns That against the Scythians began in 512 B C , it involved taking Thrace and Macedonia and building a bridge across the Danube, its merits and results are still subject to debate He was involved in trouble with the Greeks after giving refuge to the tyrant HIPPIAS, but more serious quarrels began with the revolt (c 500 B C) of the Ionian cities against Persian rule Having put down the rebels, Darius sent out to punish the Greek city-states that had aided in the insurrection (see PERSIAN WARS) His first expedition was turned back by storms, his second met defeat in the memorable battle of Marathon (490 B C) Darius consolidated Persian power in the East, including NW India He also continued Cyrus' policy of supporting and encouraging the rehabilitation of the Jewish state, and he is mentioned favorably in Ezra, Haggai, and Zechariah He is responsible for one of the greatest of all inscriptions of history, that at BEHISTUN When he died he was succeeded by his son XERXES I

Darius II, d 404 B C , king of ancient Persia (423?–404 B C), son of Artaxerxes I and a concubine, hence sometimes called Darius Nothus (nō'thus) [Darius the bastard] After his half brother, XERXES II was murdered by another half brother, Sogdianus, Darius killed Sogdianus and made good his own claim to the throne His rule was not popular or successful, and he spent most of his reign in quelling revolts He lost Egypt, but through the diplomacy of PHARNABAZUS, TISSAPHERNES, and CYRUS THE YOUNGER secured much influence in Greece in the Peloponnesian War ARTAXERXES II succeeded Darius, but the succession was challenged by Cyrus the Younger

Darius III (Darius Codomannus) (kōdŭmā'nus), d 330 B C , king of ancient Persia (336–330 B C) A cousin of ARTAXERXES III, he was raised to the throne by the eunuch Bagoas, who had murdered both Artaxerxes and his son, Arses Darius in turn murdered Bagoas, but his rule was not firm When ALEXANDER THE GREAT invaded Persia, Darius was defeated in the battle of Issus (333 B C) and again in the battle of Gaugamela or Arbela (331 B C) He showed himself a coward in the fighting, and he fled to Ecbatana and then eastward to Bactria There on Alexander's approach the satrap of Bactria, Bessus, murdered his royal cousin and took command himself in the unsuccessful opposition to the Macedonian conqueror Darius III is probably the Darius the Persian of Neh 12 22

Darius the Mede, in the Bible, king of the Chaldeans after the defeat of Belshazzar , he is called the son of Ahasuerus (Xerxes) He is not easily identified with any known monarch Dan 5 31, 9 1, 11 1

Darjeeling (darjē'lĭng), town (pop 25,873), N West Bengal state, India The town, at an elevation of c 7,000 ft in the Himalaya foothills, is a hot-weather resort and commands majestic views of lofty mountains, including Mt Everest and Kanchenjunga

Dark Ages. see MIDDLE AGES

dark horse, in U S politics, a comparatively unknown man chosen by a major party as a candidate for public office, especially the presidency A dark horse is usually chosen at a party national convention when there are two or more powerful rivals for the nomination whose ambitions bring the convention to a deadlock The first important example of a dark horse was William Henry Harrison, who was chosen as Whig party candidate in 1840 Other dark horses who went on to win the presidency were James K Polk, Franklin Pierce, and Warren G Harding

Darkon (dar'kŏn), ancestor of a family who returned with Zerubbabel Ezra 2 56, Neh 7 58

Darlan, Jean François (zhäN' frôNswä' dälä'), 1881–1942, French admiral He was made commander of the French navy in 1939 and joined the VICHY GOVERNMENT in 1940 as minister of the navy After the fall of Pierre LAVAL, Darlan was made (Feb , 1941) vice premier, foreign minister, and successor-designate to Marshal Pétain, taking over also the interior and defense ministries Darlan used his power to champion economic collaboration with Germany Laval returned to power in April, 1942, Darlan lost his cabinet posts but remained Pétain's successor-designate and was given command of the French armed forces In Algiers at the time of the Allied landing in North Africa (Nov 7, 1942), Darlan reversed his position and ordered (Nov 11) the cessation of French resistance to the Allies Repudiated by Pétain, he nevertheless assumed control over French North and West Africa in the marshal's name and brought them to the side of the Allies, who supported him in the name of expediency As high commissioner, he exercised authoritarian rule until his assassination (Dec , 1942) by a young French anti-fascist. He was succeeded by Gen. H H Giraud.

Darley, Felix Octavius Carr, 1822–88, American painter, illustrator, and lithographer, b. Philadelphia, self-taught His paintings, usually depicting incidents from American history, are in water color He is best known, however, for his pen-and-ink drawings, which, for their inventiveness, versatility, vigorous style, and technical facility, placed him in the front rank of American illustrators He illustrated the works of Cooper, Hawthorne, Irving, Longfellow, and others *The Cooper Vignettes* is a collection of drawings reproduced on steel for bank notes

Darley, George, 1795–1846, British poet, critic, and mathematician, b Ireland He wrote a series of popular, scientific textbooks (1826–30), a fairy opera, *Sylvia* (1827), and the poem *Nepenthe* (1836) See biography by C C Abbott (1928)

Darling, Grace Horsley, 1815–42, English heroine She was the daughter of a lighthouse keeper on the Farne Islands In Sept , 1838, she aided her father in rescuing five persons from the wrecked vessel *Forfarshire*

Darling, Jay Norwood, 1876–, American cartoonist, b near Charlevoix, Mich , who is known as "Ding" He was reporter for the Sioux City, Iowa, *Tribune* and *Journal* (1899–1900) and became cartoonist for the *Journal* in 1901 and for the Des Moines *Register* in 1906. Since 1917 he has been cartoonist for both the *Register* and the New York *Tribune*, later the *Herald Tribune*, which heads the syndicate for his cartoons He is actively interested in the preservation of wildlife and the provision for parks and was chief (1934–35) of the U S Bureau of Biological Survey Darling in 1924 was recipient of the Pulitzer Prize for the best cartoon published in 1923 He wrote *Ding Goes to Russia* (1932)

Darling, river of SE Australia, mainly in New South Wales, flowing generally southwest and forming part of the New South Wales Queensland boundary Longest tributary (1,702 mi) of the Murray, it is known variously as the Barwon or the Macintyre It was explored in 1844 by Charles Sturt

Darling Downs, tableland, 27,610 sq mi , SE Queensland, Australia, W of the Great Dividing Range It comprises the state's wheat belt

Darling Range, Western Australia, extending 200 mi parallel with the southwest coast and rising to 1,910 ft in Mt Cooke Mundaring Weir and Canning Dam are in the range, the suburbs of Perth are on its slopes

Darlington, William, 1782–1863, American botanist, b Chester co , Pa He wrote biographies of several botanists and was the author of *American Weeds and Useful Plants* (1859) The California pitcher plant was named *Darlingtonia* in his honor

Darlington, county borough (1931 pop 72,086, 1947 estimated pop 84,780), Durham, England, on the Skerne near its junction with the Tees It is a railroad center, with extensive locomotive works, iron foundries, steel plants, and woolen mills The locomotive which drew the first passenger train (1825), on the Stockton-Darlington line, is preserved in Bank Top Station St Cuthbert's Collegiate Church (12th cent) is noteworthy Institutions include teachers' training and technical colleges and an Elizabethan grammar school

Darlington 1 Town (pop 6,236), co seat of Darlington co , NE S C , just NW of Florence, in a cotton and tobacco area, settled 1798, inc 1835 It has a textile mill and a furniture plant **2** City (pop 2,002), co seat of Lafayette co , S Wis , on the Pecatonica and SW of Madison, inc 1857

Darmesteter, Arsène (ärsĕn' därmstĕtĕr'), 1846–88, French lexicographer, author of works on the history of the French language, of German-Jewish origin His knowledge of medieval Hebrew materials gave him a unique opportunity for the study of French phonology through words borrowed from French into Hebrew His brother, **James Darmesteter,** 1849–94, was a distinguished student of Iranian philology, his studies in Pahlavi were original He wrote much on Zoroastrianism, and his best-known work was a translation of the Avesta into French

Darmstadt (därm'shtät, därm'shtät), city (pop 76,266, 1939 pop 115,196), former capital of Hesse-Darmstadt (see HESSE), W Germany, a commercial center and seat of a chemical industry In the Second World War, Darmstadt was severely damaged by air raids

Darnley, Henry Stuart or **Stewart, Lord,** 1545–67, claimant to the throne of England and second husband of MARY QUEEN OF SCOTS Darnley's mother was Margaret Douglas, the daughter of Archibald DOUGLAS, earl of Angus, and Margaret Tudor, daughter of Henry VII, this made Darnley a candidate for succession to the English throne after ELIZABETH His father was the powerful earl of Lennox In 1561 Darnley was confined by Queen Elizabeth for scheming to strengthen his claim to the succession, but he was released the next year and attended her at court In 1565, at the age of 19, he was allowed by Elisabeth to follow his father to Scotland, and within a short time he married Queen Mary The motives of the Scottish queen were predominantly political, Darnley's sympathies were Catholic, and his right of succession to the English throne reinforced Mary's own

His handsome appearance and courtly manners, however, may also have impressed Mary. The Protestant lords, dismayed at what appeared a Catholic triumph, now revolted, but Mary defeated them handily Within a short time Darnley, dissipated and vicious, had shown himself unfit for kingship, and Mary denied him the crown matrimonial Wounded in pride and suspicious of Mary's relationship with her secretary, David Rizzio, Darnley was easily persuaded by a promise of the crown matrimonial to join the conspiracy of several Protestant nobles On March 9, 1566, accompanied by Darnley, they seized Rizzio in the queen's presence and stabbed him to death They may have hoped simultaneously to shock the pregnant queen into fatal illness, but she defeated the threatening coup by winning over Darnley and escaping from her captors to the help of loyal nobles Darnley soon found himself without a friend in either camp Although Mary made efforts toward reconciliation after the birth of their son, Darnley continued intractable, and the council demanded that the queen rid herself of him Probably with Mary's knowledge, there was then formed a plot, one of whose leaders was almost certainly the earl of Bothwell The earl of Morton confessed to a part in it, and the earl of Murray may have had a hand Recovering from an illness Darnley arrived in Edinburgh early in 1567 and lodged in Kirk o' Field, a house just outside the city On the night of Feb 9, after a visit from Mary, the house was blown up by gunpowder In the morning the bodies of Darnley and a page were found strangled in an adjoining garden Details of the murder remain a historical mystery Mary's subsequent failure to punish Bothwell and her hasty marriage to him led to the revolt which soon dethroned her Darnley, through his son James I, is the ancestor of the Stuart and succeeding English kings.

Darrow, Clarence Seward, 1857–1938, American lawyer, b Kinsman, Ohio He first practiced law in Ashtabula, Ohio In 1888 he moved to Chicago, where he was corporation counsel for several years and conducted the cases which the city brought to reduce transit rates He resigned (1894) his position as general counsel for the Chicago and Northwestern RR to defend Eugene V Debs from imprisonment in connection with the Pullman strike The defense was successful Darrow renounced his lucrative practice at this time and resolved to spend his life in defense of the "underdog" A staunch opponent of capital punishment, he exerted his tremendous courtroom skill in behalf of over 100 persons charged with murder, none of his clients was ever sentenced to death Darrow procured, in 1906, the acquittal of William J Haywood and his associates on the charge of murdering former Governor Steunenberg of Iowa He offended many socialists (with whom he had been popularly identified) by introducing a plea of guilty in his defense of the McNamara brothers in the Los Angeles *Times* dynamiting case (1911) Darrow was himself tried for allegedly bribing a juror in the trial, but he was acquitted In the Chicago "thrill" murder trial (1924) of Nathan Leopold and Richard Loeb he saved the defendants from execution by a plea of temporary insanity Long an agnostic, Darrow fought fundamentalist religious tenets in the Scopes evolution case (1925) Pitted against William Jennings Bryan, he defended without success a schoolteacher charged with violating a Tennessee statute which prohibited teaching that man descended from lower forms of life Many felt, nevertheless, that Darrow's examination of Bryan on the witness stand did much to discredit fundamentalist interpretation of the Bible Among Darrow's books are a novel, *Farmington* (1905), and *Crime Its Cause and Treatment* (1925) See his autobiography, biographies by C V Harrison (1931) and Irving Stone (1941)

D'Artagnan, Charles de Batz-Castelmore see Artagnan, Charles de Batz-Castelmore d'

Dartford, urban district (1931 pop 28,871, 1947 estimated pop 38,530), Kent, England, SE of London, in the valley of the Darent a little above its junction with the Thames In 1355 Edward III founded an Augustinian convent in Dartford St Edmund's Chantry was once a popular place of pilgrimage. Wat Tyler's Rebellion started in Dartford late in the 14th cent Here the first paper mill in England was built in Elizabeth's time Other manufactures include flour, leather, machinery, and pharmaceuticals

Dartmoor, upland, c 25 mi long, Devonshire, England It is mostly a picturesque wasteland with bare granite peaks (tors) rising above the general level The highest points are High Willhayes (2,039 ft) and Yes Tor (2,028 ft) The ancient Royal Forest of Dartmoor occupies the center There are tin, copper, and iron mines, granite quarries (now more important than the mines), extensive grazing lands, and numerous prehistoric remains

Dartmoor Prison, English prison, at Princetown, Devonshire, built (1806–9) to house French captives during the Napoleonic Wars During the War of 1812 many American prisoners, including impressed seamen, were confined there. In 1815 the guard fired upon some prisoners who were mistakenly suspected of mutiny, several were killed or wounded, and the incident had repercussions It was settled by the American and British governments In 1850, after it had been unoccupied for more than 30 years, Dartmoor was adapted for a convicts' prison From 1917 to 1919, conscientious objectors to the First World War were imprisoned there See A J Rhodes, *Dartmoor Prison* (1933)

Dartmouth (därt'məth), industrial town (pop 10,847), S N S, on Halifax Harbour opposite Halifax There are sugar and oil refineries and other factories and the provincial hospital for the insane

Dartmouth, municipal borough (pop 6,708), Devonshire, England, on terraces on the south bank of the Dart estuary Of interest are the Church of St Saviour (14th and 15th cent), the ruins of a castle of Henry VII overlooking the harbor, and the Royal Naval College Here, in 1190, Richard Cœur de Lion embarked with his followers for the Crusades The port was attacked by the French in 1404 Shipping, boatbuilding, and yachting are local activities

Dartmouth, town (pop 9,011), SE Mass, on Buzzards Bay SW of New Bedford, settled c 1650, inc 1664 A center of Quakerism, it still has an 18th-century Friends' meetinghouse

Dartmouth College, at Hanover, N H, nonsectarian, for men, chartered 1769, opened 1770, the ninth colonial college (see Wheelock, Eleazar) A state college connected (1868–93) with Dartmouth later developed into the Univ of New Hampshire Stressing liberal arts, Dartmouth also has schools of business administration (Tuck), civil engineering (Thayer), and medicine (two years, with an eye institute and a hospital) Unusual features are a selective admission process and a famous outing club which runs a winter sports carnival Among its buildings are the Baker Library and a science museum See histories by Frederick Chase (1891), J K Lord (1913), and L B Richardson (1932)

Dartmouth College Case, decided by the U S Supreme Court in 1819 The legislature of New Hampshire, in 1816, without the consent of the college trustees, amended the charter of 1769 to make the institution public The trustees brought suit Daniel Webster argued successfully that the amendment violated Article 1, Section 10, of the U S Constitution in that the state thereby impaired the obligation of a contract The opinion of the court, delivered by Chief Justice John Marshall, was that a charter was in effect inviolable The opinion, while highly influential, was limited by Chief Justice Taney in the Charles River Bridge Case (1837).

Daru, Pierre Antoine (pyĕr' ätwän' dərü'), 1767–1829, French soldier, administrator, statesman, and writer He served in the French Revolutionary Wars, was imprisoned in the Terror, and became chief of the army commissary under Napoleon, who created him count His exemplary administration vastly contributed to Napoleon's victories Daru also filled various cabinet posts under Napoleon and was made a peer in the Restoration His writings include histories of Venice and Brittany and translations of Horace

Darusmont, Frances Wright see Wright, Frances

Darwen (där'wĭn, dăr'ĭn), municipal borough (1931 pop 36,012, 1947 estimated pop 30,600), Lancashire, England, on the Darwen river and S of Blackburn It has cotton mills and makes paper, machinery, plastics, paint, and soap

Darwin, Sir Charles Galton, 1887–, English physicist, a son of Sir G H Darwin After serving as professor at the Univ of Edinburgh (1923–36) and at Cambridge Univ (1936–38), he became director of the National Physical Laboratory, Teddington, in 1938 He wrote *The New Conceptions of Matter* (1931) He was knighted in 1942

Darwin, Charles Robert, 1809–82, English naturalist, b Shrewsbury, grandson of Erasmus Darwin His father, Robert Darwin, was a physician, and his mother was a daughter of Josiah Wedgwood, the famous potter He studied medicine according to his father's wish, at Edinburgh, but lacking inclination to follow this profession, he began to study for the ministry at Cambridge His interest in natural history led to an acquaintance with John S Henslow, the geologist and botanist Through him came the opportunity to make a five years' cruise as official naturalist on the Beagle, starting Darwin on the career of exploration, observation, investigation, and written correlation of facts which led to the formulation of his conception of evolution, known as Darwinism (A R Wallace worked out, independently, a similar theory) In Darwin's *Origin of Species* (1859) he sets forth the structure and support of his theory in a superbly organized work Darwin formulated a theory, accepted by many, of the origin of coral reefs Others of his works are *Descent of Man and Selection in Relation to Sex* (1871) and *Variation of Plants and Animals under Domestication* (1867) See his *Life and Letters* (ed by Francis Darwin, 1887), G A Dorsey, *The Evolution of Charles Darwin* (1927), study by Geoffrey West (1937), Jacques Barsun, *Darwin, Marx, Wagner* (1941)

Darwin, Erasmus, 1731–1802 English physician and poet During most of his life he practiced medicine in Lichfield and cultivated a botanical garden He was a prominent member of the literary circle which included Anna Seward and Thomas Day In a long poem entitled *The Botanic Garden* (1789–91), Darwin expounded the botanical system of Linnaeus His *Zoonomia* (1794–96) explains organic life according to evolutionary principles and thus anticipates later theories Erasmus Darwin was the grandfather of Charles Darwin and of Francis Galton See Hesketh Pearson, *Doctor Darwin* (1930)

Darwin, Francis, 1848–1925, English botanist, assistant to his father, Charles Robert Darwin He was reader in botany at Cambridge, foreign secretary of the Royal Society, and a president of the British Association He edited *Life and Letters of Charles Darwin* (1887) and wrote *Elements of Botany* (1895) and *Foundations of the Origin of Species* (1909)

Darwin, Sir George Howard, 1845–1912, English astronomer and mathematician, second son of Charles Darwin He was Plumian professor (from 1883) of astronomy and experimental philosophy at Cambridge, and a recognized authority on cosmogony He wrote *The Tides* (1898) and *Scientific Papers* (5 vols, 1907–16)

Darwin, port (pop 2,538), capital of the Northern Territory, Australia, on Port Darwin, an inlet of the Timor Sea Remotely situated on the sparsely settled north coast, Darwin has no rail connection with any of the major Australian cities It is important largely because of its strategic position as an airport on the Singapore-Sydney route In the Second World War the city was heavily bombed by the Japanese, later a military airdrome, fuel-oil installations, and a wharf were built, and Darwin became a key Allied base The meager products include pearl shell, *bêche-de-mer*, and fish, the exports are chiefly meat and peanuts There is a large Chinese population Originally called Palmerston, the town was renamed for Charles Darwin

Darwinism, concept of evolution developed by Charles Robert Darwin As a result of years spent in making careful scientific observations and in studying and correlating these studies Darwin formulated his theories, which had a profound and lasting influence not only on biology but also on philosophy and other fields of knowledge His studies led him to question the belief in special creation of each species (a theory generally accepted by scientists of the time) and to present his evidence for descent of all life from a common ancestor Citing a wealth of examples as evidence, Darwin clearly presented his evolutionary theory embodying the principles which have become synonymous with Darwinism From his observations of the tendency of all organisms to increase in a geometrical ratio and of the fact that in general, despite this increase, the numbers of a given species remain more or less stable, Darwin deduced that there is a struggle for existence or a struggle for survival He emphasized the significance of variation or the existence of individual differences in members of the same species Some variations are helpful to a plant or animal in its struggle for existence, and those with such favorable variations are more apt to survive and reproduce, many variations are transmitted to offspring and thus will be preserved from generation to generation This is the principle of natural selection (or survival of the fittest, an expression used by Herbert Spencer) Darwin was influenced in developing the theory by the work of T R Malthus Among animals the choosing of mates (sexual selection) plays a part Darwin's evidence for the operation of evolution in shaping organisms rested on the infinite variety of forms of animals and plants, the recapitulation of past racial history in individual embryonic development, the existence of rudimentary organs (some of which are now called vestigial organs), geographical distribution, and evidence furnished by fossil forms In the late 19th and early 20th cent the Darwinian concept of slow continuous variation suffered attacks from supporters of the mutation theory As originally formulated by Darwin, the theory did not distinguish between the variations which were acquired characters or modifications not transmissible by heredity and genetic characters which are inherited With modifications made necessary by modern knowledge of heredity, Darwinism is almost universally accepted by scientists See also evolution See Geoffrey West, *Charles Darwin* (1937), Julian Huxley, ed, *Living Thoughts of Darwin* (1939), P B Sears, *Charles Darwin* (1950)

Daryal (dăryäl', Rus dăryal') or **Dariel** (dărēl'), defile, c 5,900 ft deep, Georgian SSR, in the central Greater Caucasus below Mt Kazbek It is noted for the wild grandeur of the granite precipices above the rapid Terek river The Georgian military road traverses the gorge, which has long been significant as an invasion route It probably is identical with the Caucasian or Iberian Gates known to the ancients The gorge has been celebrated in Lermontov's poem *The Demon*

Das, Chitta Ranjan (däs), 1870–1925, Indian politician, leader of the Swaraj [Sanskrit, =self-rule]

party in Bengal prov He split with Gandhi, who favored boycotting the provincial legislature, while Das's policy was to accept ministerial office only to obstruct British policy Das was (1924) the first popularly elected mayor of Calcutta See biography by P C Ray (1927)

Dasent, Sir George Webbe (dā'sunt), 1817–96, English scholar, b West Indies, educated at Oxford He stimulated English interest in Icelandic literature, notably in the translation *The Saga of Burnt Njal* (1861) He was knighted in 1876

dash: see PUNCTUATION

dasheen (dăshēn'), tropical plant, *Colocasia esculenta*, of the same genus as the elephant's ear, native to Asia but cultivated in the S United States It is a variety of TARO with an edible tuber somewhat resembling the potato

Daskam, Josephine Dodge see BACON, JOSEPHINE DODGE DASKAM

Dass, Petter (pĕ'tur dăs'), 1647–1707, Norwegian poet and clergyman Few of his writings were printed in his lifetime, they were circulated in manuscript or told from memory The still popular *Norway's Trumpet* was not published until 1739 In 1696 *The Norwegian Song of the Valley* appeared, followed by a collection of religious verse, *Spiritual Pastime* (1711) His collected works, with biography by A E Erichsen, were published in three volumes in 1874

date, name of a palm (*Phoenix dactylifera*) and its edible fruit Probably native to Arabia and North Africa, it has from early times been a principal food in many desert and tropical regions For some 4,000 years it has been grown near the Tigris and Euphrates rivers It is cultivated in many other warm regions including parts of the SW United States and Mexico The trees sometimes reach a height of 100 ft and yield fruit for generations Staminate (male) and pistillate (female) flowers are borne on separate trees, and pollination of those grown commercially is usually done by hand Heavy, pendent clusters of the sweet nutritious fruits are produced, the yield of fruit after maturity (10 to 15 years) being usually from 100 to 200 lb or more annually Each fruit is from 1 to 3 in long, reddish brown or yellowish brown, and somewhat cylindrical or oblong In the Old World a sugar and a fermented drink are made from the sap, and the seeds are sometimes roasted and used as a coffee substitute or pressed for oil, leaving a residue useful for stock feed, the wood of the trunk is often used in construction

date line, international, hypothetical line following the meridian of 180°, with divergence to include the Aleutian Islands with Alaska and some of the South Sea Islands with Australia The arbitrary line was adopted by mariners as the most convenient place for "changing dates" Going west, one day is lost, going east, one day is gained A change of the full day must occur somewhere, since 24 hours (one hour for every 15°) is gained or lost in making a complete circumnavigation of the globe

Dathan (dā'-), Levite who, with his brother Abiram and with KORAH, was consumed by fire from heaven Num 16 1–35, 26 8–10, Deut 11 6

Datia (dŭ'tēă), town (pop 22,086), Vindhya Pradesh, India Its extensive square palace (17th cent), one of the finest examples of Hindu domestic architecture in N India, is relieved by an octagonal tower at each corner and by stone latticework between its stories

dative (dā'-) [Latin, =for giving], in Latin grammar, CASE typically used to refer to a secondary recipient of an action For example, *him* in *I gave him a book* is translated in Latin by a dative case The Latin dative has also some other uses, and the cases called dative in other languages correspond in their grammatical function only in part to that of the Latin

Daubenton, Louis Jean Marie (lwē' zhā' marē' dōbătôⁿ'), 1716–1799?, French naturalist He was a professor at the Collège de France from 1778, his work touched on many fields—comparative anatomy, plant physiology, mineralogy, and experimental agriculture He is known especially for his work on the anatomy of mammals in Buffon's *Histoire naturelle* and is credited with introducing the Merino sheep into France He died during the night of Dec 31, 1799–Jan 1, 1800

D'Aubigné, Jean Henri Merle see MERLE D'AUBIGNÉ, JEAN HENRI

Daubigny, Charles François (shärl' fräswä' dōbēnyē'), 1817–78, French landscape painter, son of a minor painter He went to Italy early in life and later studied in Paris with Paul Delaroche Although usually classed with the Barbizon school, he never lived in Barbizon From 1838 he exhibited at the Salons, receiving several medals His last 30 years were spent largely in his houseboat on the Seine and the Oise, and he is best known for his pictures of the banks of those rivers He was particularly successful in his atmospheric depiction of dawn, twilight, and moonlight His later pictures are handled with great breadth He is well represented in the Louvre, the Mesdag Museum (The Hague), and the Metropolitan Museum Characteristic are his *Return of the Flock—Moonlight, Bords de l'Oise,* and *Moonlight* His son **Karl Pierre Daubigny** (pyĕr'), 1846–86, painted in his father's manner See studies (in French) by Frederic Henriet (1875) and Jean Laran (1912), D Croal Thomson, *The Barbizon School of Painters* (1890)

Daudet, Alphonse (älfôs' dōdā'), 1840–97, French writer, b. Nîmes (Provence) At 16, after his father had suffered financial loss, he was obliged to serve as study master (*maître d'études*) in a school at Cévennes With the help and encouragement of his older brother, he went to Paris, where he began his literary career with the publication of a small volume of poetry, *Les Amoureuses* (1857) His career was assured with the success of *Lettres de mon moulin* (1866), a group of delightful, Provence-inspired short stories *Le Petit Chose* (1868), a semi-autobiographical novel touchingly descriptive of his life at the boarding school and sometimes compared to Dickens's *David Copperfield,* was followed in rapid succession by *Tartarin de Tarascon* (1872), *Contes du lundi* (1873), *Fromont jeune et Risler aîné* (1874), *Jack* (1876), *Le Nabab* (1877), *Les Rois en exil* (1879), *Numa Roumestan* (1881), *L'Evangéliste* (1883), *Sapho* (1884), *La Belle Nivernaise* (1886), and *L'Immortel* (1888), as well as his autobiographic papers, *Trente Ans de Paris* (1888) and *Souvenirs d'un homme de lettres* (1888) He was at once objective and personal, and his works, permeated by an engaging sense of humor and a rather subtle irony, are drawn largely from his own experience Virtually all his works have been translated into English His brother, Louis Marie Ernst Daudet (1837–1921), was a historian Alphonse Daudet's wife, **Julia Allard Daudet** (zhulya' alär'), 1847–1940, was herself an author and a critic and served as his secretary His son was **Léon Daudet** (lāôⁿ'), 1867–1942, author, editor for some time of the *Action française,* and a member of the Goncourt Academy He was a bitter opponent of the Third Republic and of democracy in general, serving as deputy from 1919 to 1924, but failing to be elected senator in 1927 He wrote a biography of his father, but his most valuable work is probably *Souvenirs des milieux littéraires, politiques, artistiques et médicaux* (6 vols , 1914–21, Eng tr of selections, *Memoirs of Léon Daudet,* 1925)

Daugava see DVINA (Western Dvina)

Daugavpils (dou'gafpĕls), Ger *Dunaburg,* Rus *Dvinsk,* city (1935 pop 45,100), SE Latvia, in Latgale, a rail junction and market center on the Western Dvina It was founded (1278) by the Livonian Knights and became a strategic fortress Passing (1561) to the combined kingdom of Lithuania and Poland, it was ceded to Russia in the first partition of Poland (1772) Before 1914 there were c 115 000 inhabitants, but Daugavpils was largely destroyed in the fighting that raged here in the First World War and in the Russian Revolution

Daugherty, Harry Micajah (dô'ûrtē), 1860–1941, American political leader, b Fayette co , Ohio, grad Univ of Michigan, 1881 He became a successful corporation lawyer in Columbus, Ohio, and served (1890–94) in the state legislature He was a power in the Republican party of his state and was in charge of Warren G Harding's successful campaign for the presidential nomination in 1920 Daugherty, rewarded (1921) by Harding with the office of U S Attorney General, became the President's confidant and influenced his subsequent appointments He was charged with being implicated in the Teapot Dome scandal, and after President Calvin Coolidge forced (1924) his resignation, Daugherty was prosecuted (1927) for alleged conspiracy to defraud the U S government, but the case with dismissed after two juries failed to agree He wrote, with Thomas Dixon, *The Inside Story of the Harding Tragedy* (1932)

Daughters of the American Revolution, one of the leading patriotic societies in the United States, open to women having one or more ancestors who aided the patriot cause in the American Revolution The society was organized (1890) at Washington, D C , and has its national headquarters at the Memorial Continental Hall there Dissension in the organization in 1937 resulted in the formation of a new, more liberal group called Descendants of the American Revolution The refusal of the Daughters of the American Revolution to permit the use of Constitution Hall, its auditorium, to "nonwhite" entertainers brought much public condemnation and the resignation from the group of Eleanor Roosevelt in 1939 There is a similar, but unrelated, organization known as the Daughters of the Revolution The society has done much for the preservation and marking of historic places

Daulatabad (doulutubăd'), village, S Hyderabad state, India The 13th-century fortress is built on a conical rock c 500 ft high The Chand Minar (1294), a minaret of Turkish style, is one of the finest examples of Mohammedan art in S India.

Daumat, Jean: see DOMAT, JEAN

Daumier, Honoré (ônôrā' dōmyā'), 1808–79, French painter, cartoonist, and lithographer Son of a Marseilles glazier, he accompanied his family to Paris in 1816 There he was apprenticed, first to an attorney, then to a bookseller, but nevertheless found time to study under Lenoir and to learn lithography He early began to contribute cartoons to *Caricature* In 1832 he was imprisoned for six months for his political cartoon *Gargantua* After the suppression of *Caricature* his work appeared in *Charivari,* where he mercilessly ridiculed the bourgeois society of his day Relished as popular cartoons in his time, Daumier's lithographs, of which he produced almost 4,000, are now considered masterpieces of the art Despite an enormous production of lithographs and drawings, he found time to paint about 200 small canvases of power and dramatic beauty Among these are *Christ and His Disciples* (Rijks Mus), *Republic* (Louvre), *The Good Samaritan,* and *Don Quixote* and *The Third-Class Carriage* (both Metropolitan Mus.) Daumier's life was a constant struggle with poverty and misconprehension As a painter he was recognized a year before his death At that time he was a blind old man living in Valmondois in a cottage given him by the generous Corot See studies by M T Sadler (1925) and Ynez Ghirardelli (1941) For collections of prints, see *Married Life* (1944, 24 lithographs) and *Honoré Daumier,* with notes by Wilhelm Wartmann (1946, 240 lithographs)

Daun, Leopold Joseph Maria, Graf von (lā'ōpōlt yō'zĕf marē'ä grät' fûn doun'), 1705–66, Austrian field marshal In the War of the Austrian Succession he drove the French from Bohemia (1742) In the Seven Years War he defeated FREDERICK II of Prussia at Kolin (1757) and Hochkirch (1758), but was routed by Frederick at Torgau (1760)

Dauphin (dô'fĭn), town (pop 4,637), W Man , on the Vermilion river and NW of Winnipeg It is a milling and agricultural center

dauphin (dô'fĭn, Fr dōfĕ') [Fr , =dolphin], French title, borne first by the counts of Vienne and later by the eldest son of the king of France or, if the dauphin came to die before the king, by the dauphin's eldest son The origin of the title is somewhat obscure, it probably was the family name of the counts of Vienne, who adopted the dolphin as their heraldic device (12th cent). Their territory thus came to be called the dauphiné, or dauphinate of Vienne or simply the Dauphiné (see separate article) Another dauphinate, that of Auvergne, ruled by a branch of the house of Vienne, came into existence when Auvergne broke up in the 12th cent The title dauphin passed, with the Dauphiné, to the direct heirs of the French kings when (1349) Dauphin Humbert II of Vienne sold them—without consulting his suzerain, the emperor—to Philip VI of France After Louis XI the title was merely honorific Louis Antoine, duc d'Angoulême, was the last dauphin Louis, eldest son of Louis XIV, was known as the Great Dauphin, he was a competent military leader Louis XVII is known in America as the LOST DAUPHIN

Dauphiné (dōfēnā'), region and former province, SE France, bordering in the east on Italy It is now divided into three departments, Hautes-Alpes, Isère, and Drôme, In the east the Alps culminate in the BARRE DES ÉCRINS, their magnificent scenery attracts many tourists The lower districts are fertile and warm, with vineyards and mulberry shrubs (for silk worms) Some iron is mined, and water power is developed for industry Grenoble (the historical capital), Vienne, and Valence are the chief towns In the kingdom of Provence (879) and after 933 in that of ARLES, Dauphiné was nominally part of the Holy Roman Empire The rulers assumed the title dauphin (see separate article) In 1349 Dauphiné was sold by Dauphin Humbert II to Philip VI of France The imperial suzerainty was not recognized after Emperor Charles IV had made the dauphin (later Charles VI of France) imperial vicar in the kingdom of Arles (1378) Louis XI was the last dauphin actually to rule Dauphiné, which after his reign continued as a province, under the jurisdiction of the PARLEMENT of Grenoble

Daurat or **Dorat, Jean** (zhā' dōrä'), 1508?–1588, French classical scholar Among his pupils at the Collège de Coqueret at Paris (where he taught 1540–56) were the poets Ronsard, Du Bellay, Baïf, and Belleau, who included him in the PLÉIADE out of devotion Daurat was later professor at the Collège de France (1556–67)

Dauthendey, Max (maks' doutĕn'dī), 1867–1918, German poet and novelist He traveled over Europe and in the East During the First World War he was interned in Java, where he died His exotic, impressionistic, and somewhat extravagant verse appeared in many volumes, and he wrote a number of novels, stories, and plays, among the last *Caprices of an Empress* (1910, Eng tr , 1912) He was comparatively little known in his lifetime See H G Wendt, *Max Dauthendey, Poet-Philosopher* (1936)

Davao (dävou'), city (1948 pop 111,263), on SE Mindanao, capital of Davao prov , Philippine Islands, on Davao Gulf It is the center of a hemp-producing area and has an airfield

D'Avenant or **Davenant, Sir William** (dăv'unŭnt), 1606–68, English poet and playwright-manager His best-known comedy, *The Wits,* appeared in 1633, *The Temple of Love,* a masque for Queen Henrietta Maria, in 1634, and *Luminalia,* written with Inigo Jones, in 1638 In 1638 also he succeeded Ben Jonson as poet laureate For his services in the royalist cause he was knighted in 1643 by Charles I,

and imprisoned by the Commonwealth in 1651; his release was secured by John Milton and others. *Gondibert*, his epic poem, was published in 1651, and in 1656 Cromwell permitted him to produce *The Siege of Rhodes*, the first English opera (second part, 1659) Under Charles II, D'Avenant and KILLIGREW were granted (from 1601) exclusive rights to produce legitimate dramas D'Avenant managed the company known as the duke of York's players, in adapting and "improving" Shakspere for them he sometimes had the help of Dryden See biographies by Alfred Harbage (1935) and A H Nethercot (1938)

Davenport, Charles Benedict, 1866–1944, American zoologist, b Stamford, Conn As director (1904–34) of the experimental station of Carnegie Institution at Cold Spring Harbor, N Y , he conducted researches in eugenics and heredity Results of anthropometric studies of American troops, made with A G Love, were published (1919–21) He was associate editor of the *Journal of Experimental Zoology* (from 1898), *Genetics* (from 1916), and the *Journal of Physical Anthropology* (from 1918)

Davenport, Edward Loomis, 1816–77, American actor, b Boston He began his career at Providence, R I , in 1836, as Parson Willdo, when he supported Junius Brutus Booth in Massinger's *New Way to Pay Old Debts* In 1845 he became associated with Anna Mowatt Ritchie, and their tour to England (1848) had great success In 1856 he gave a memorable performance as Hamlet with Fanny Vining (an English actress whom he had married in 1849) as Ophelia In 1862 he joined James W Wallack at the Booth Theatre and culminated this association in 1876 with his appearance as Brutus in a production of *Julius Cæsar* Davenport had great charm and a versatility that enabled him to play roles from William in Jerrold's *Black-eyed Susan* to Edgar in Shakspere's *King Lear*, in which he made his last appearance (1877) See biography by E F Edgett (1901) His daughter, **Fanny Lily Davenport,** 1850–98, b London, appeared (1869–77) in Augustin Daly's company and had great success with roles in the plays of Sardou

Davenport, Eugene, 1856–1941, American agriculturalist and educator, b Woodland, Mich , grad Michigan Agricultural College He was dean (1895–1922) of the college of agriculture, Univ of Illinois His publications include *Principles of Breeding* (1907), *Domesticated Animals and Plants* (1910), *The Farm* (1927), and numerous experiment-station bulletins

Davenport, Fanny Lily see DAVENPORT, EDWARD LOOMIS

Davenport, George, 1783 1845, American Indian trader, b Lincolnshire, England He went to sea when a boy and at 21 quit sailing to settle in New York city He served for some years as a soldier, and after the War of 1812 he went to the West and entered the fur trade He and Russel Farnham became partners in an American Fur Company post on Rock Island, Ill , and had much influence in the settlement of that region After Farnham's death Davenport continued alone, living in a fine house he built (1833) on the island He was quartermaster general of the U S forces in the Black Hawk War, and his influence among the Indians made him invaluable in treaty making He and others in 1835 bought the land on the Iowa shore opposite Rock Island Here was laid out the town of Davenport, named in his honor

Davenport, Herbert Joseph, 1861–1931, American economist, b Wilmington, Vt , Ph D Univ of Chicago, 1898 He taught at the Univ of Missouri and at Cornell In *Value and Distribution* (1908) and *The Economics of Enterprise* (1913) he followed the principles of classical economics, attempting to purify them of nonscientific elements He made contributions to the theories of cost, interest, and taxation

Davenport, Homer Calvin, 1867–1912, American cartoonist, b Silverton, Oregon, self-taught He was for a while on the staff of the San Francisco *Examiner*, later, on the New York *Evening Journal*, he won international fame with his cartoons in the silver campaign of 1896, the Spanish-American War, and the McKinley campaign In Theodore Roosevelt's campaign of 1904 he produced, for the New York *Evening Mail*, the famous *He's Good Enough for Me* Among his most celebrated drawings are his representation of *Uncle Sam*, Senator Mark Hanna's $-marked suit of clothes, *The Boss* (Sam Rainey), and portrayals of the leading characters in the Dreyfus trial

Davenport, John, 1597–1670, Puritan clergyman, one of the founders of New Haven, Conn , b Coventry, England, educated at Merton and Magdalen colleges, Oxford Starting as a regular Church of England cleric, Davenport was largely influenced by John Cotton to turn more and more to nonconformity As pastor of an influential London parish he fostered the Puritan cause and in 1633 had to flee to Holland There he also got into theological troubles and, after returning to England, he and Theophilus EATON headed a party of Puritan colonists who sailed (1637) to New England In 1638 Davenport led the colonists to a spot chosen by Eaton, and New Haven colony was founded Davenport was minister in New Haven and a powerful figure in the colony until after he lost (1664) the bitter fight to prevent the union of New Haven colony and Connecticut He sheltered the regicides who had fled to New Haven In 1667 he accepted the call to the First Church in Boston, where new theological disputes caused many of his congregation to secede and form the Third or Old South Church

Davenport, 1 City (pop 66,039), co seat (since 1838) of Scott co , E Iowa It is on the Mississippi, here spanned by bridges to the Illinois cities ROCK ISLAND, MOLINE, and EAST MOLINE The four communities are known as the Quad Cities Industrial and commercial Davenport lies along the river, while the residential sections climb the limestone bluffs to the west Davenport is an important rail, commercial, and industrial center, shipping and processing farm produce, iron and steel, aluminum, cement, and other goods Flour, beer, and heavy machinery are made here The town was founded in 1836 by George Davenport on the site of an early trading post and was incorporated in 1839 It prospered with the arrival of the first railroad to bridge the Mississippi (1856) and had a heavy river traffic in the late 19th cent The government built a large roller-gate dam and locks here which raise the water level of the river The city is the seat of St Ambrose College, several denominational academies, Iowa Soldiers' Orphans' Home, the Palmer School of Chiropractic (developed by the son of D D PALMER), a municipal art gallery, a public museum (a function of the Davenport Academy of Natural Sciences), and several parks, including Credit Island, site (1814) of a battle in the War of 1812 Arthur Davison Ficke was born in Davenport, and Alice French lived here **2** Town (pop 1,337), co seat of Lincoln co , E Wash , W of Spokane, in a wheat area

Daventry (dăv'untrē, dān'-), municipal borough (pop 3,609), Northamptonshire, England, W of Northampton There was a large ancient Roman camp on Borough Hill, just east, now the site of the British Broadcasting Corp empire transmitter

Davey, John, 1846–1923, American tree surgeon, b England Among his writings are *The Tree Doctor* (1902) and *A New Era in Tree Growing* (1905)

David, Saint, d 588?, patron saint of Wales, first abbot of Menevia (SAINT DAVID'S) He apparently established a strict rule and was a zealous missionary, and his cult, popular in Wales from very early days, made the pilgrimage to his shrine important in the Middle Ages On his feast, March 1, the national Welsh festival is still celebrated An ancient form of his name is Dewi

David [Heb , =beloved], d c 972 B C , king of the ancient Hebrews (c 1012–c 972 B C), successor of SAUL His story is in several narratives in the Old Testament, with repetition and, according to critics, interpolations of later date Many of the most interesting and beautiful narratives in the Bible deal with the story of David, such as the fight of David and Goliath, the friendship of David and Jonathan, and the revolt of Absalom To him were ascribed many of the PSALMS David's reign seems to mark the change of the Jews from a somewhat rude confederation of tribes to a settled national state Indicative of this is the rise of Jerusalem, to which he moved his capital from Hebron, and he was largely responsible for making this city the eternal center of the Jews David is one of the greatest of Hebrew national heroes His descendants, the House of David, retained the kingdom at Jerusalem until 586 B C When the Messianic hope appeared in Israel, it centered in this house, and according to the Gospels, Jesus was of this royal seed 1 Sam 17 12–1 Kings 2 12, 1 Chron 11–29

David I, 1084–1153, king of Scotland (1124–53), son of Malcolm III and St Margaret of Scotland During the reign of his brother ALEXANDER I, whom he succeeded, David had been earl of Cumbria, ruling S of the Clyde and the Forth, and his marriage to Matilda, heiress of Northumbria, made him an important factor in English politics In the long struggle for the English crown between MATILDA (his niece) and STEPHEN, David fought for Matilda with no great success and in 1141 made peace with England His rule was wise and momentous for Scotland—the feudal organization was strengthened and reorganized, the burghs played a more important part in commerce, and the Church was improved by new sees, religious foundations, and provisions for their support He was succeeded by Malcolm IV, his grandson

David II (David Bruce), 1324–71, king of Scotland (1329–71), son and successor of ROBERT I David's guardians were not strong enough to prevent the invasion (1332) of Scotland by Edward III of England and Edward de BALIOL, who won the battle of Halidon Hill The young king had been sent to France and was sheltered in the Château Gaillard He returned in 1341 to rule In 1346 he invaded England to aid the French king and was captured and held prisoner until, in 1357, he was ransomed by the promise of 100,000 marks His nephew Robert II succeeded him

David, Félicien César (fālēsyē sāzăr' dăvĕd'), 1810–76, French composer His tone poem *Le Desert* (1844) and his opera *Lalla-Roukh* (1862) contain Oriental elements, presaging the exoticism of late 19th-century French romantic music.

David or Davit, Gerard (gā'rärt dă'vĕt), c 1450–1523, Flemish painter, one of the best of the Early Flemish school He painted *Baptism of Christ* (Bruges Acad), *Pietà* (National Gall , London), *Descent from the Cross* (Cavallo Coll , Paris), and the two magnificent altarpieces, *Madonna with Angels and Saints* (Rouen) and *The Marriage of St Catharine* (National Gall , London) David is well represented in America—*St Anne*, an altarpiece (National Gall of Art, Washington, D C), *The Crucifixion*, the *Madonna Feeding the Child*, and *Christ Taking Leave of His Mother* (Metropolitan Mus), and others See study by W H J Weale (1895), Eberhard von Bodenhausen, *Gerard David und seine Schule* (1905)

David, Jacques Louis (zhăk' lwē' dăvĕd'), 1748–1825, French painter He studied with Vien and, after winning the Prix de Rome, accompanied his master to Italy in 1775 His first important painting, *Blind Belisarius Asking Alms*, won him immediate recognition It was followed by his *Andromache* and *Oath of the Horatii* (Louvre), which secured his fame as the leading exponent of the classical reaction in painting He was admitted to the Académie royale de Peinture et de Sculpture in 1783 and became court painter to Louis XVI Despite these honors David was an ardent republican, in the Revolution elected to the Convention, he voted for the king's death and for the suppression of the Académie royale in France and the Académie de France à Rome In this period he painted *Assassination of Marat* (Brussels) Under Napoleon he became first painter to the emperor, painting *Coronation* (of Josephine), *The Distribution of the Eagles*, *Napoleon on Horseback* and a portrait of Pius VII Under the Restoration he spent his last years in Brussels, where he continued to paint and enjoyed an unfailing popularity Probably no French painter exercised, during his own lifetime, such a great influence on the whole art of Europe as David Today, however, his more ambitious compositions seem a little cold and lacking in color His striking portraits, to which he gave little importance, are much more congenial Among them are Mme Récamier (Louvre), Mlle du Val d'Ognes (Metropolitan Mus), Boissy d'Anglas, and Michel Gerard See studies (in French) by E J Délécluze (1855) and J L Jules David, a grandson (1880), and (in English) by Léon Rosenthal (1904)

David, John Baptist Mary (dā'vĭd), 1761–1841, French missionary in the United States, b Brittany He was educated at Nantes, joined the Sulpicians, and because of the French Revolution came to America First he worked in Maryland and taught in St Mary's Seminary, Baltimore In 1811 he crossed the mountains to Bardstown, Ky , where he continued his frontier missionary work At Bardstown he founded a seminary (St Thomas) and schools for boys and girls He also established a community of Sisters of Charity at Nazareth, Ky From 1819 he was bishop coadjutor of Bardstown, on succeeding as bishop (1832) he resigned immediately Bishop David's devotional works were popular for a generation, notably *True Piety* (1814), a catechism (1825), and *A Spiritual Retreat for Eight Days* (1864) See biography by Sister Columba Fox (1925)

David, Pierre Jean see DAVID D'ANGERS

David, Sir Tannatt William Edgeworth (dā'vĭd), 1858–1934, British geologist He was professor of geology (1891–1924) at the Univ of Sydney, New South Wales He led an expedition (1897) to Funafuti (one of the Ellice Islands), where borings were made through the coral in an attempt to determine the origin of atolls As geologist for the Shackleton antarctic expedition, he led the expedition which first reached the south magnetic pole, Jan 16, 1909 He was geologist to the British armies on the Western Front in 1918 19 David wrote part of Shackleton's *Heart of the Antarctic* and many papers dealing with Australian geology and prepared a notable geological map of Australia See biography by M E David (1937)

David (dăvēd'), town (pop 9,222), W Panama Cattle raising is the principal occupation in the region, but maize, sugar cane, and coconuts are also produced David is connected with Panama city by the Inter-American Highway

David City (dā'vĭd), city (pop 2,272), co seat of Butler co , E Nebr , S of the Platte, in a prairie region W of Omaha, inc 1878 It is a farm commercial center

David d'Angers (dăvēd' dāzhā') or **Pierre Jean David** (pyĕr' zhă'), 1788–1856, French sculptor His works are numerous and present national figures in statues, busts, reliefs, and medallions The pediment of the Panthéon in Paris shows a group of distinguished Frenchmen receiving wreaths from the hand of France Other representative works are statues of the Great Condé (Versailles), of Philopoemen (Louvre), and of Jefferson and Lafayette (Washington, D C.) The Musée David,

at his birthplace, Angers, has a fine collection of his sculptures

David Harum see WESTCOTT, EDWARD NOYES

Davids, Thomas William Rhys (rēs), 1843–1922, English Orientalist He went (1866) as a civil servant to Ceylon, where he became interested in Buddhism. Rhys Davids became a leading authority on that religion and on the Pali language Besides writing many works on Buddhism, including *Buddhism* (1878) and *Buddhism Its History and Literature* (1896), he translated many Pali texts His wife assisted him in this work and was also an authority on the subject

Davidson, George, 1825–1911, American geographer and astronomer, b England Becoming (1845) secretary to Alexander Bache, superintendent of the U S Coast and Geodetic Survey, he remained on the staff of the Survey until 1895 In 1850 he was sent to take charge of the charting of the Pacific coast for navigation purposes The results of his 10 years' work were embodied in the *Pacific Coast Pilot* From 1860 to 1866 Davidson was in the East surveying the Delaware river and mapping the district around Philadelphia for fortifications In 1867 he made a reconnaissance survey of the Isthmus of Darien to determine its suitability for a canal and in the same year was sent to Alaska to report upon its resources His survey of the Alaskan coast resulted in the publication by the government of the *Coast Pilot of Alaska* (1869 and later editions) From 1867 to 1887 he had charge of the Survey's work on the Pacific, and he planned all expeditions He measured the great base lines known as the Davidson quadrilaterals, upon which the primary triangulation of the Pacific coast states is based, and inaugurated reconnaissance surveys of the Sierra Nevada and Coast ranges In 1879 he built in San Francisco the first observatory on the Pacific coast He headed the American expedition to Japan in 1874 to observe the transit of Venus and that to New Mexico in 1882 for the same purpose, he also made observations of the transit of Mercury and total solar eclipses He published catalogues of star positions and made valuable studies on meteors, on latitude pairs, and on the advantages of altitude in astronomical observation As a member of the Irrigation Commission of California he studied irrigation in the Orient and Egypt He wrote *The Discovery of San Francisco Bay* (1907), *Francis Drake on the Northwest Coast* (1908), and *The Tracks and Landfalls of Bering and Chirikof* (1901)

Davidson, Jo, 1883–, American sculptor, b New York city, studied at the Art Students League and the École des Beaux-Arts, Paris He is known especially for his portrait busts, among them one of Woodrow Wilson, Anatole France (Luxembourg, Paris), Franklin D Roosevelt, and Robert M La-Follette (Capitol, Washington, D C)

Davidson, John, 1857–1909, British poet After teaching in Scotland and writing unsuccessfully, he went to London There, during his struggles with poverty and illness, he wrote *Fleet Street Eclogues* (1893, Ser 2, 1896), *Ballads and Songs* (1894), *New Ballads* (1897), literary dramas, and novels His work won recognition, but little money He committed suicide in 1909

Davidson, Randall Thomas, 1st **Baron,** 1848–1930, archbishop of Canterbury (1903–28) He edited *Five Lambeth Conferences, 1867, 1878, 1888, 1897, and 1908* (1920) As archbishop, he used his influence toward extending Christian unity See biography by G K A Bell (2 vols, 1936)

Davidson, Thomas, 1840–1900, American scholar and philosopher, b Scotland, grad Univ of Aberdeen, 1860 In 1866 he came to Canada and then to the United States On a visit to London in 1883 he founded the Fellowship of the New Life, out of which the Fabian Society developed, and later established a summer school at his home in the Adirondacks as well as lecture classes for workers in New York city He acted as tutor, traveled extensively in Europe, and wrote several books on philosophy and education, including *The Philosophical System of Antonio Rosmini-Serbati* (1882), *Aristotle and Ancient Educational Ideals* (1892), and *History of Education* (1900) See *Memorials of Thomas Davidson* (ed by W A Knight, 1907), William James, *Memories and Studies* (1911)

Davidson, town (pop 1,550), W central N C, N of Charlotte The town has cotton and lumber mills It is the seat of Davidson College (Presbyterian, for men, 1837)

Davie, William Richardson, 1756–1820, American Revolutionary soldier and statesman, b Egremont, Cumberland, England, grad College of New Jersey (now Princeton), 1776 In the American Revolution he served under Casimir Pulaski and later took an active part in the Carolina campaign, becoming Gen Nathanael Greene's commissary general After the war he practiced law in Halifax, N C, served in the state legislature (1786–98), and drew up the act for establishment of the Univ of North Carolina (1789) Davie was governor of North Carolina (1798–99) and one of the peace commissioners John Adams sent (1799) to France after the XYZ Affair

Davies, Arthur Bowen (dā'vēs), 1862–1928, American painter and lithographer, b Utica, N.Y., studied at the Art Institute of Chicago and the Art Students League, New York. He worked as a magazine illustrator for a few years, then succeeded in interesting William Macbeth, the art dealer, in his paintings. In 1893 he traveled in Europe and exhibited successfully on his return Always an imaginative and romantic artist, Davies more and more devoted himself to symbolic pictures of the female nude in idyllic landscapes A president of the Society of Independent Artists, he was largely responsible for the famous Armory Show of 1913, to which he gave a year of hard work and invaluable discrimination He was also a member of The EIGHT For a period Davies's work showed the influence of cubism, but its spirit remained unchanged As a colorist he had subtlety and charm, and his compositions are classical in their graceful simplicity Characteristic are his *Maya, Mirror of Illusions* (Art Inst, Chicago) and *The Dawning* and *Every Saturday* (both Brooklyn Mus) His oils are in most leading American galleries Perhaps less known, but equally important, are his lithographs and water colors Davies also worked as a mural painter and tapestry designer See study by Royal Cortissoz (1931)

Davies, Emily (Sarah Emily Davies) (dā'vĭs), 1830–1921, English feminist, founder of Girton College, Cambridge From 1862 to 1869 she was secretary of a committee to obtain admission of women to university examinations and succeeded (1865) in obtaining at Cambridge such admissions to senior and junior local examinations In 1869 she was instrumental in organizing a woman's college at Hitchin, Hertford, which in 1873 was transferred to Cambridge and became Girton College She was honorary secretary of the college (1869–1904) and mistress (1873–75) From 1866 she was closely associated with the English woman-suffrage movement and was active in organizing the first woman-suffrage petition presented to Parliament by John Stuart Mill in 1866 She wrote *Thoughts on Some Questions Relating to Women* (1860) and *Higher Education of Women* (1866) See Barbara Stephens, *Emily Davies and Girton College* (1927)

Davies, Henry Walford see DAVIES, SIR WALFORD.

Davies, Hubert Henry (dā'vĭs), 1876–1917, English dramatist He was a journalist in San Francisco After his return to England in 1901, he wrote several delightful comedies, of which *Cousin Kate* (1903) and *The Mollusc* (1907) were popular in the United States as well as in England

Davies, John (dā'vĭs), 1565?–1618, English poet of Hereford, a writing master *The Scourge of Folly* (1610?), epigrams, is his most famous work, but his serious poetry is in the moralizing *Mirum in Modum* (1602), *Microcosmus* (1603), and similar works

Davies, Sir John (dā'vĭs), 1569–1626, English poet He studied law, was disbarred and reinstated, and in 1603 was appointed solicitor general for Ireland and was knighted by James I His principal work is *Nosce Teipsum* (1599), a philosophical poem Others include *Orchestra, or, A Poeme on Dauncing* (1596) and *Hymns to Astraea* (1599), acrostics on the name Elizabeth Regina

Davies, Joseph Edward (dā'vēs), 1876–, American diplomat, b Watertown, Wis, grad Univ of Wisconsin (B A, 1898, LL B, 1901) Chairman (1915–16) of the Federal Trade Commission, he acted (1919) as Wilson's economic adviser at the Paris Peace Conference He served as ambassador to the USSR (1937–38), ambassador to Belgium (1938–40), and special assistant (1940) to Secretary of State Cordell Hull He was (1942–46) chairman of the President's War Relief Control Board. In 1945 he attended the Potsdam Conference His book, *Mission to Moscow* (1945), gives a glowing picture of the USSR

Davies, Sir Louis Henry (dā'vĭs), 1845–1924, Canadian jurist, b Charlottetown, P E I, studied law in England After serving (1876–79) as prime minister of Prince Edward Island, he was elected (1882) as a Liberal to the Canadian House of Commons, in Laurier's administration he was minister of marine and fisheries (1896–1901) Appointed (1901) a judge of the Supreme Court of Canada, Davies became chief justice in 1918 He was knighted in 1897

Davies, Samuel (dā'vēs), 1723–61, American Presbyterian clergyman, b New Castle co, Del., attended Samuel Blair's school at Fagg's Manor, Pa In 1748 he went to Hanover co, Va There he was soon the center of a revival which became part of the movement known as the GREAT AWAKENING He went with Gilbert TENNENT to England and Scotland in 1753 to raise funds for the support of the College of New Jersey (now Princeton Univ.) and was its president from 1759 to 1761

Davies, Sir Walford (Henry Walford Davies) (dā'vĭs), 1869–1941, English organist, choirmaster, and composer, studied (1890–94) at the Royal College of Music As a boy he sang in the choir of St George's Chapel, Windsor, where he was assistant organist (1885–90) to his teacher, Sir Walter Parratt He served Temple Church, London, as organist and choirmaster (1898–1923), was director of music for the Royal Air Force (1918–19), and was professor of music (1919–26) at the University College of Wales in Aberystwyth. He became known as a composer with the performance of his cantata *Everyman* at the Leeds Festival in 1904 He wrote church music in a conservative style, cantatas, including *Five Sayings of Jesus* (Worcester Festival, 1911), orchestral music; and songs His influence on English church music was great He edited several songbooks and hymnals and wrote *Music and Worship* (with Harvey Grace, 1935) and *The Pursuit of Music* (1936) Knighted in 1922, in 1934 he succeeded Elgar as Master of the King's Musick

Davies, William Henry (dā'vĭs), 1871–1940, English poet, b Wales Leaving school early, Davies lived for some years as a peddler and a beggar in America and England His first attempt at poetry, *The Soul's Destroyer* (1905), printed at his own expense, won the favorable attention of G B Shaw Thereafter Davies's success was assured *The Autobiography of a Super-Tramp* (1908) describes his vagabond life Davies was a prolific poet, his favorite themes were nature and the trials of the poor At his best he has been compared with Blake and Wordsworth Of his individual poems, "Days Are Too Short," "Treasures," "Sheep," and "Leisure" have proved very popular Collections of Davies's poems were published in 1916, 1923, 1928, and 1935, *Songs of Joy and Others*, a selection of favorite poems, appeared in 1937

Dávila, Gil González see GONZALEZ DE ÁVILA, GIL

Dávila, Pedrarias see ARIAS DE ÁVILA, PEDRO

Da Vinci, Leonardo see LEONARDO DA VINCI

Davis, Alexander Jackson, 1803–92, American architect, b New York city He was the partner of Ithiel Town of New Haven, with whom he designed many important buildings, including the New York Customs House (1832), now the Subtreasury, the Patent Office at Washington, D C (1832), and the state capitols of Indiana (1832–35), North Carolina (1831, in association with David Paton), Illinois (1837), and Ohio (1839) The most prolific practitioner of his time, Davis was notably successful in his Greek revival style, he also anticipated, in a New York shop front designed in 1835, the architectural use of iron He was a founder of the American Institute of Architects in 1837 See R H Newton, *Town and Davis, Architects* (1942)

Davis, Andrew Jackson, 1826–1910, American spiritualist A predecessor of the wave of spiritualism in the 19th cent, he did much to establish the terms and principles of the movement by his many works on "Harmonial philosophy" He is said to have performed astonishing intellectual feats when in a state of trance

Davis, Arthur Powell, 1861–1933, American civil engineer, b Decatur, Ill, grad Columbian Univ, now George Washington Univ (B S, 1888) He was topographer with the U S Geological Survey (1884–94), was hydrographer for the government (1895–1901), and served with the Reclamation Service as chief engineer (1906–14) and as director (1914–23) He served on many important irrigation and water-supply projects—in Turkistan, in Panama, and in the San Francisco Bay area—and wrote several books on hydrographic subjects

Davis, Benjamin Oliver, 1877–, American general, b Washington, D C After study (1897–98) at Howard Univ, Davis became a lieutenant in the Spanish-American War, enlisted (1899) in the regular army as a private, and rose through years of service to become (1940) the first Negro general in the U S army He retired briefly from the army in 1941 but returned to duty as inspector general (1945–48)

Davis, Charles Harold, 1856–1933, American landscape painter, b Amesbury, Mass, studied in Boston and Paris Among his paintings are *Evening* and *August* (both Metropolitan Mus), *Twilight* (Art Inst, Chicago), *The Brook* (Pa Acad of the Fine Arts), *Deepening* Shadows (Corcoran Gall), *Landscape* (Mus of Fine Arts, Boston), and *Late Afternoon* (Union League Club, New York) Other works are in the St Louis, Syracuse, Minneapolis, and Worcester art galleries and in the Rhode Island School of Design, Providence He became a member of the National Academy in 1906

Davis, Charles Henry, 1807–77, American naval officer and scientist, b Boston Educated at Harvard, he was appointed a midshipman in 1823 Davis directed operations of the Coast Survey for a time along the New England coast He established the *American Ephemeris and Nautical Almanac* in 1849 and published several hydrographic studies While commanding the *St Mary's* in the Pacific, Davis, on his own responsibility, rescued (1857) the American filibuster William WALKER, besieged in Rivas, Nicaragua. In the Civil War he was fleet captain and chief of staff to S F Du Pont in the successful expedition (Nov, 1861) against Port Royal, S.C. On May 9, 1862, he replaced A H. Foote in command of the Upper Mississippi flotilla of gunboats The next day he repulsed the attack of a Confederate fleet near Fort Pillow, and on June 6 he annihilated the Confederate fleet before Memphis, taking the city the same day. He then joined Farragut in an unsuccessful attempt to take Vicksburg. Davis was chief (1862–65) of the

Bureau of Navigation and superintendent (1865–67, 1874–77) of the Naval Observatory. For his victories at Fort Pillow and Memphis he was promoted rear admiral in Feb, 1863 See biography by his son Charles H Davis (1899)

Davis, Charles Henry, 1845–1921, American naval officer, b Cambridge, Mass, grad Annapolis, 1864, son of Charles Henry Davis (1807–77). He rose to the rank of rear admiral by 1904 He led expeditions to determine exact longitude telegraphically by use of submarine cable and wrote reports published in three volumes (1880–85).

Davis, David, 1815–86, American jurist, b Cecil co, Md, grad Kenyon College, 1832, and Yale Law School, 1835; cousin of Henry Winter Davis In 1836 he settled as a lawyer in Bloomington, Ill, his home thereafter From 1848 to 1862 Davis presided over the eighth judicial circuit in Illinois, famous because Abraham Lincoln practiced in its courts An intimate of Lincoln (the corpulent Davis and the tall, spare Lincoln often bunked together in traveling the circuit), he successfully managed his friend's campaign to secure the Republican nomination for the presidency at Chicago in 1860 Davis and Leonard Swett, another lawyer from the eighth circuit active in Lincoln's cause, made several political deals without Lincoln's knowledge (notably one with Simon Cameron of Pennsylvania) which their man was reluctantly forced to accept Lincoln appointed (1862) Davis himself to the U S Supreme Court Not especially learned in the law, he nevertheless wrote one of the most important opinions in the history of the court in *Ex parte Milligan* (1866) The decision, denouncing arbitrary military power, became famous as one of the bulwarks of civil liberty in the United States Davis, who did not allow his judicial position to interfere with his political ambitions, was nominated for President by the Labor Reform Convention at Columbus, Ohio, in 1872, but withdrew when he failed to win the nomination of the LIBERAL REPUBLICAN PARTY as well In 1877 he resigned from the court to become U S Senator from Illinois (1877–83), thereby winning the abuse of previously friendly Democrats, who had expected him to serve (and decide for Samuel J Tilden) on the electoral commission of 1877 A man of great wealth, accumulated in real estate, he gradually came around to be a consistent supporter of the Republican administrations

Davis, Dwight Filley, 1879–1945, American sportsman and public official, b St Louis, grad Harvard, 1900, and Washington Univ law school An outstanding tennis player, Davis donated in 1900 a cup as an international tennis trophy, this donation brought about the annual Davis Cup matches He held several public offices in St Louis, and after service (1917–18) in the First World War, he was director of the War Finance Corporation (1921–23), Assistant Secretary of War (1923–25), and Secretary of War (1925 29) He succeeded Henry L Stimson as governor general (1929–32) of the Philippines In the Second World War, Davis was (June Nov, 1942) director of the Army Specialist Corps

Davis, Elmer (Elmer Holmes Davis), 1890–, American author, radio commentator, director (1942–45) of the Office of War Information, b Aurora, Ind, grad Franklin College (B A, 1910, M A, 1911) A Rhodes scholar (1912–14) at Oxford, he was for 10 years (1914–24) on the staff of the New York *Times* and later became a popular radio news analyst When he was head of the OWI his delay in releasing foreign news caused controversy and criticism His work includes *History of the New York Times* (1921), several novels, short stories, and two volumes of essays—*Show Window* (1927) and *Not to Mention the War* (1940)

Davis, George Breckenridge, 1847–1914, American army officer and jurist, b Ware, Mass, grad West Point, 1871 His early military service was divided between duty on the Western frontier and teaching at West Point He wrote *Outlines of International Law* (1887) Davis joined the judge advocate general's department in 1888 and in 1891 was graduated from the Columbian Univ (now George Washington Univ) law school He became judge advocate general in 1901 He edited *The War of the Rebellion Official Records of the Union and Confederate Armies* (see bibliography of CIVIL WAR) In 1896 he returned to West Point and taught law and history until 1901 He was an American delegate (1907) to the Second Hague Conference Other books include *The Elements of Law* (1897) and *A Treatise on the Military Law of the United States* (1898). He retired as major general in 1911

Davis, Henry Gassaway, 1823–1916, American industrialist and public official, b Woodstock, Md Employed by the Baltimore & Ohio RR after 1842 as a brakeman and conductor, Davis left the railroad (1858) to develop timber and coal interests in West Virginia His speculations brought him great wealth, and he later projected and organized the West Virginia Central and Pittsburgh RR (1880) and the Coal and Coke RR (1893) He became president of the Davis Coal and Coke Company and several other corporations Davis was (1865, 1868–71) a member of the state legislature and served (1871–83) in the U S Senate. He was a delegate to the first two Pan American Congresses (1889–90, 1901-2), and in 1904 he was the Democratic nominee for Vice President on the unsuccessful ticket headed by Alton B Parker He helped found (1903) Davis and Elkins College See biography by C M Pepper (1920)

Davis, Henry Winter, 1817–65, American political leader, b Annapolis, Md, grad Kenyon College, 1837 After practicing law in Virginia, he moved (1849) to Baltimore He was elected (1854) to the House of Representatives on the Know-Nothing ticket and was twice reelected (1856, 1858) with the aid of the Republican party He tried to remain neutral on the slavery issue, but in 1860 cast the vote for a Republican as speaker which enabled the Republicans to organize the House His action was censured by the Maryland legislature, and he was not reelected Davis became the leader of the anti-secession forces in Maryland in opposition to Governor Hicks whose sympathies were Southern Again (1863–65) in Congress, he bitterly attacked Lincoln's gradual assumption of extraconstitutional powers and opposed his Reconstruction program Davis substituted for Lincoln's measures a much more thorough and radical plan of his own and succeeded in forcing it through both House and Senate, only to see it killed by Lincoln's pocket veto (1864) Davis made an angry attack on the President's plan and actions When Davis was defeated, Thaddeus STEVENS took up the fight on the Reconstruction issue Davis was a magnetic speaker, and at his death was, as a private citizen, practically dictating the actions of the radical Republicans in Congress See biography by B C Steiner (1916)

Davis, James John, 1873–1947, American public official, b Wales After migrating (1881) to the United States, he took odd jobs to aid the family income He worked as a puddler in ironworks in Pennsylvania and, removing to Elwood, Ind, became active in local politics and labor activities After 1907 he became well known as director general of the Loyal Order of Moose He was appointed (1921) Secretary of Labor by President Warren G Harding, remained at that post until 1930, and served (1930–45) in the U S Senate See his autobiography, *The Iron Puddler* (1922)

Davis, Jefferson, 1808–89, American statesman, President of the Southern CONFEDERACY (1861–65), b Fairview, near Elkton, Ky His birthday was June 3 His parents moved to Mississippi when he was a boy He was given a classical education at Transylvania Univ, but was appointed to West Point, where he was graduated in 1828 For the next seven years he was in various army posts in the Old Northwest and took part (1832) in the Black Hawk War He married the daughter of Zachary TAYLOR but she died three months later Davis spent the next 10 years in the comparative quiet of a Mississippi planter's life In 1845 he married Varina Howell Elected (1845) to the House of Representatives, he resigned in June, 1846, to command a Mississippi regiment in the Mexican War Under Zachary Taylor he distinguished himself both at the siege of Monterrey and at Buena Vista Davis was appointed (1847) U S Senator from Mississippi to fill an unexpired term, but resigned in 1851 to run for governor of Mississippi against his senatorial colleague, Henry S FOOTE, who was a Unionist Davis was a strong champion of Southern rights and argued for the expansion of slave territory and economic development of the South to counterbalance the power of the North He lost the election by less than 1,000 votes and retired to his plantation until appointed (1853) Secretary of War by Franklin Pierce Throughout the administration, he used his power to oppose the views of his Northern Democratic colleague, Secretary of State William L Marcy Davis favored the acquisition of Cuba and opposed concessions to Spain in the BLACK WARRIOR and OSTEND MANIFESTO difficulties, and he also promoted a southern route for a transcontinental railroad, therefore favoring the GADSDEN PURCHASE He reentered (1857) the Senate and remained there until the Civil War was threatening, then withdrew (Jan, 1861) because Mississippi had seceded He was immediately appointed major general of the Mississippi militia, and shortly afterward he was, as compromise candidate, chosen president of the Confederate provisional government established by the convention at Montgomery, Ala, and inaugurated in Feb, 1861 Elected regular President of the Confederate States, he was inaugurated at Richmond, Va, in Feb, 1862 As the Civil War progressed, the Confederate government required increasing centralization, and Davis assumed more and more power He closely managed the army and was involved in disagreements with the Confederate generals, arguments as to his policies raged long after the Confederacy was dead His strong central rule conflicted with the states' rights policy for which the Southern states had seceded, and many of the Southern leaders combined into an anti-Davis party, charging the President with having assumed too arbitrary a role Lee surrendered without Davis's approval. After the last Confederate cabinet meeting was held (April, 1865) at Charlotte, N C, Davis was captured at Irwinville, Ga He was confined in Fortress Monroe for two years and was released (May, 1867) on bail The Federal government proceeded no further in his prosecution Davis lived 22 years after his release and wrote an apologia, *The Rise and Fall of the Confederacy* (1881) He was buried at New Orleans, but his body was moved (1893) to Richmond, Va See biographies by W E Dodd (1907), H J Eckenrode (1923), Allen Tate (1929), and Robert McElroy (1937), B J Hendrick, *Statesmen of the Lost Cause* (1939), Rembert W Patrick, *Jefferson Davis and His Cabinet* (1944)

Davis or **Davys, John,** *c.*1550–1605, British navigator He made his first voyage in search of the NORTHWEST PASSAGE in 1585, continuing the work of Martin FROBISHER On this voyage he discovered Cumberland Sound of Baffin Island and made explorations that prepared the way for his later voyages in 1586 and 1587 On the third he sailed through Davis Strait into Baffin Bay and coasted down Baffin Island and across the east end of Hudson Strait to discover and name Cape Chidley on N Labrador He clarified much of the geography of that arctic region In 1591 Davis sailed S for the Straits of Magellan, and in 1592 he discovered the Falkland Islands He later made voyages to the East Indies and lost his life in a fight with Japanese pirates A type of quadrant he invented was used for more than a century, and he wrote a manual, *The Seaman's Secrets* (1599) See Sir Albert Markham, ed, *The Voyages and Works of John Davis* (1880), biography by Sir Clements Markham (1889)

Davis, John William, 1873–, American lawyer and public official, b Clarksburg, W Va, grad Washington and Lee Univ (B A, 1892, LL B, 1895) Admitted (1895) to the bar, he taught (1896–97) at Washington and Lee Univ and later practiced (1897–1913) in Clarksburg He served as Congressman (1911–13), U S Solicitor General (1913–18), and ambassador to Great Britain (1918-21) After 1921 he practiced law in New York city He was nominated for President in 1924 on the 103d ballot, when, after a two-week deadlock at the Democratic convention, the forces of Alfred E Smith and James McAdoo agreed to compromise on a third candidate Hampered by his legal affiliation with large corporations, Davis won only 136 electoral votes and 8,386,500 popular votes, even though he carried the South His speeches are collected in *Treaty-making Power in the United States* (1920) and *Party Government in the United States* (1929) See biography by T A Huntley (1924)

Davis, Nathan Smith, 1817–1904, American physician, b Greene, N Y, grad College of Physicians and Surgeons, Fairfield, N Y, 1837 He taught (1849–59) at Rush Medical College, was a founder and faculty member of Chicago Medical College (1859, later a part of Northwestern Univ), and was a founder of the American Medical Association

Davis, Norman Hezekiah, 1878–1944, American banker and diplomat, b Bedford co, Tenn After study (1897–1900) at Vanderbilt and Stanford universities, he was successful in Cuban sugar business and emerged as a banker In the First World War he became U S finance commissioner in Europe and a member of the Supreme Economic Council, then was financial adviser to President Wilson at the Paris Peace Conference After serving as Assistant Secretary of Treasury (1919–20) and as Undersecretary of State (1920–21) under Wilson, he was chief of the American delegation to the disarmament conference in Geneva President Roosevelt elevated (1933) him to the rank of ambassador at large and appointed (1938) him chairman of the American Red Cross

Davis, Paulina (Kellogg) Wright, 1813–76, American lecturer and editor, b Bloomfield, N Y She was active in the early antislavery and woman's rights movements She married, first, Francis Wright of Utica, N Y, and, second, Thomas Davis, member of Congress from Rhode Island She lectured to women on anatomy and physiology, using French anatomical models In Washington, D C, she founded (1853) *Una*, the first woman-suffrage periodical

Davis, Rebecca Harding, 1831–1910, American novelist, b Washington, Pa Her realistic stories were first published (1861) by James Russell Lowell in the *Atlantic Monthly*, and *Margaret Howth* (1862), a tale of life in a mill town, was the first of her several novels dealing with the effects of social problems on individuals Richard Harding Davis was one of her sons See her autobiographical *Bits of Gossip* (1904)

Davis, Richard Harding, 1864–1916, American novelist, playwright, and journalist, most famous war correspondent of his day, b Philadelphia, son of Rebecca Harding Davis He attended Lehigh and Johns Hopkins universities. He became a reporter at 22 in Philadelphia and later was on the New York *Evening Sun* Publication of "Gallegher" in *Scribner's* in 1890 made him famous as a short-story writer A handsome, dashing, and generous man, he became a world traveler and reporter, a person-

ally adventurous war correspondent who covered all the wars of his day—Greco-Turkish, Spanish-American, Boer, Russo-Japanese, and the German invasion of Belgium Davis's romances (mostly long short stories) include *Soldiers of Fortune* (1897), written about his trip to Venezuela, *In the Fog* (1901), *Ransom's Folly* (1902), and *The Bar Sinister* (1903) Among his most popular plays were *The Dictator* (1904) and *Miss Civilization* (1905) See his *Adventures and Letters* (ed by his brother, C B Davis, 1917), bibliography by H C Quinby (1924), biographies by F D Downey (1933) and (for juveniles) L S Miner (1940)

Davis, Robert Hobart (Bob Davis), 1869–1942, American editor and columnist, b Brownsville, Nebr , educated in the public schools After working on papers in the East and West, he became managing editor of the New York *News* in 1904 Joining the staff of the Frank A Munsey Company, he started as well as edited the *All-Story Magazine*, and during his 22 years' association with Munsey magazines, he discovered many young unknown authors, including O Henry Among his works are *Bob Davis Recalls* (1927), *The Caliph of Bagdad* (with A B Maurice, 1931), a biography of O Henry, and *Tree Toad the Autobiography of a Small Boy* (1935) His column, "Bob Davis Reveals," became a noteworthy feature of the New York *Evening Sun*

Davis, Stuart, 1894–, American painter, illustrator, and lithographer, b Philadelphia, studied with Henri At 19 he exhibited in the famous Armory Show of 1913 (see AMERICAN ART) His paintings are consistently abstract and have enjoyed wide popularity owing perhaps to their vigorous and expressive qualities, meticulous execution, and lively color His murals in Rockefeller Center and the WNYC broadcasting station, New York, and at Indiana Univ are well known, and his smaller works are in galleries throughout the United States

Davis, William Morris, 1850–1934, American geographer, b Philadelphia, grad Harvard (B S , 1869, M E , 1870) He taught at Harvard from 1878 until his retirement as professor emeritus in 1912 From 1930 until his death he was professor of physiographic geology at the California Institute of Technology. His investigations carried him to South America, central Asia, Australia, Africa, and all parts of North America He was an eminent authority on land forms and did much to advance the science of physiography Most of his important work is in geographical journals to which he was a prolific contributor *Geographical Essays* (1909) is a collection by D W Johnson of some of these articles His books include *Physical Geography* (1898), the *Handbook of Travel* (1917) of the Harvard Traveller's Club, which he founded, *The Lesser Antilles* (1926), and *The Coral Reef Problem* (1928)

Davis. 1 City (1940 pop 1,672, 1946 special census pop 2,421), central Calif , W of Sacramento in the fertile Sacramento valley, inc 1917 A branch of the Univ of California College of Agriculture is here **2** Town (pop 1,698), S Okla , on the Washita river and in the foothills of the Arbuckle Mts , settled 1889 **3** Coal town (pop 1,454), N W Va , inc 1889 Its altitude is 3,101 ft , the highest of any community in the state

Davis, Mount, peak, 3,213 ft high, SW Pa , in the Alleghenies near the Md border, highest point in Pennsylvania

Davis and Elkins College see ELKINS, W Va

Davis Mountains, W Texas, mostly in Jeff Davis co , SE of El Paso They rise to 8,382 ft in Mt Livermore, also called Baldy Peak and Old Baldy Bare rocky summits, forest-crowned mountains, great springs, and deep canyons attract summer visitors There are two state parks

Davison, city (pop 1,397), S Mich , E of Flint, in a farm area, settled 1836, inc as a village 1889, as a city 1939 Rosemoor Park has a race track

Davisson, Clinton Joseph, 1881–, American physicist, b Bloomington, Ill He became a member of the technical staff of the Bell Telephone Laboratories in 1925 He worked on thermionics, magnetism, and electron diffraction His demonstrations with L H Germer in 1927 confirmed Louis de Broglie's theory of the wave nature of moving electrons by means of diffraction by crystals For this he shared with G P THOMSON the 1937 Nobel PRIZE IN PHYSICS

Davis Strait, between Greenland and Baffin Island, connecting the Atlantic Ocean and Baffin Sea It is c.200 mi wide at the narrowest point John DAVIS sailed through it in 1787

Davit, Gerard. see DAVID, GERARD

Davitt, Michael (dă'vĭt), 1846-1906, Irish revolutionist and labor agitator He joined the FENIAN MOVEMENT in 1865 and was imprisoned for his revolutionary activities in 1870 On his release in 1877 he rejoined the Irish movement and, in 1879, helped C S PARNELL organize the Land League In 1890 he broke with Parnell, but he attempted to reconcile the Parnell and anti-Parnell factions in 1898, when with William O'Brien he established the United Irish League

Davos (dăvōs'), town (resident pop 9,259), Grisons canton, Switzerland, in Davos Valley near Davos Lake It is a winter sports center and a health resort for the tuberculous

Davout, Louis Nicolas (lwē' nēkôlä' dăvōō'), 1770–1823, marshal of France One of Napoleon's ablest generals, Davout defeated a Prussian army at Auerstedt (1806) and played a brilliant part in the victory at Wagram (1809) and in the Russian campaign Napoleon made him duke of Auerstedt, prince of Eckmühl, and, for a time, governor of the grand duchy of Warsaw In the Hundred Days he was minister of war, and in the Restoration he was for several years deprived of rank and titles

Davy, Sir Humphry (dā'vē), 1778–1829, English chemist and physicist The son of a woodcarver, he received his early education at Truro and was apprenticed (1795) to a surgeon-apothecary at Penzance While director (1798–1801) of the laboratory of the Pneumatic Institution, Clifton, he investigated the properties of laughing gas He was lecturer (1801) and professor (1802–13) at the Royal Institution, London His researches in electrochemistry led to his isolation of potassium and sodium in 1807 and of calcium, barium, boron, magnesium, and strontium in 1808 He established the elementary nature of chlorine, advanced the theory that hydrogen is characteristically present in acids, and classed chemical affinity as an electric phenomenon. He was also noted for the invention of a SAFETY LAMP for miners and for his lectures on agricultural chemistry (pub 1813) Knighted (1812) and made a baronet (1818), he was elected (1820) president of the Royal Society His collected works (9 vols , 1839–40) include a biographical memoir by his brother, John Davy

Davy Jones, personification of the danger and menace of the sea The name is best known in the expression "Davy Jones's locker," meaning the bottom of the sea, to which drowned sailors go There seems to be no actual legend of Davy Jones, and the name (perhaps connected with Jonah) is merely a figure of speech

Davys, John see DAVIS, JOHN

Dawes, Charles Gates (dôz), 1865–, American statesman and banker, b Marietta, Ohio, grad Marietta College (B A , 1884, M A , 1887) and Cincinnati Law School, 1886, Admitted (1886) to the bar, Dawes practiced law in Lincoln, Nebr , until 1894 and became interested in various gas and electric companies He was a member of the Republican executive committee in William McKinley's presidential campaign (1896) and served (1897–1901) as comptroller of the Treasury He organized the Central Trust Company of Illinois in 1902, was its president (1902–21) and chairman of the board (1921–25), and was a leading figure in other banking institutions Entering the U S army in 1917, he was sent to France, soon was appointed to General Pershing's administrative staff, and became the general purchasing agent of the American Expeditionary Force He resigned (1919) from the army and was the first to be appointed (1921) director of the U S Bureau of the Budget As head (1923–24) of the reparations committee to investigate the budget of Germany, he forwarded the DAWES PLAN, which led to a reduction in payment of REPARATIONS and the stabilization of German finances The 1925 Nobel Peace Prize was awarded to him for these efforts In 1924 Dawes was elected Vice President on the Republican ticket along with President Calvin Coolidge, and at the end of his term he was made (1929) ambassador to London In 1932 he was president of the Reconstruction Finance Corporation His many books include *Notes as Vice President* (1935), *A Journal of Reparations* (1939), and *Journal as Ambassador to Great Britain* (1939)

Dawes, Henry Laurens, 1816–1903, American statesman, b Cummington, Mass , grad Yale, 1839 After teaching school and doing newspaper work, he became a successful lawyer in Pittsfield, Mass , later serving successively in both houses of the state legislature He was U S district attorney for W Massachusetts (1853–57) and a member of the House of Representatives (1857–75) Elected in 1875 to the Senate, he served three terms, performing his most important service as chairman of the Committee on Indian Affairs He gave his name to the DAWES ACT and the DAWES COMMISSION

Dawes, William, 1745–99, American Revolutionary patriot, b Boston, Mass On the night of April 18, 1775, Dawes rode from Boston, via Brighton Bridge, to Lexington, warning the countryside of the British advance At Lexington, he was joined by Paul REVERE and Samuel PRESCOTT On the way to Concord, Revere was captured, but Dawes or Prescott or both reached Concord with the news

Dawes Act, 1887, passed by the U S Congress to provide for the granting of individual landholdings to civilized Indians who would renounce their tribal holdings Sponsored by H L Dawes while he was chairman of the Committee on Indian Affairs, the act established the modern policy of absorbing the Indians into the body politic of the nation

Dawes Commission, commission to the Five Civilized Tribes, created by the U S Congress in 1893 under the Dawes Act with H L Dawes as chairman Its aim was the reorganization of the INDIAN TERRITORY by securing the assent of the chiefs to the extinguishing of tribal land titles and by allotting lands to individuals

Dawes Plan, presented in 1924 by the committee headed (1923–24) by Charles G. DAWES to the Reparations Commission of the Allied nations It was accepted the same year by Germany and the Allies The Dawes committee, consisting of two representatives from Belgium, France, Great Britain, Italy, and the United States, was entrusted with finding a solution for the collection of the German REPARATIONS debt which was set at 20,000,000,000 marks Germany lagged in payment of this obligation, and the Dawes Plan provided that the Ruhr area be evacuated by Allied occupation troops, that reparation payment should begin at 1,000,000,000 marks for the first year and should rise over a period of four years to 2,500,000,000 marks per year, that the German Reichsbank be reorganized under Allied supervision, and that the sources for the reparation money should include transportation, excise, and custom taxes. The plan went into effect in Sept , 1924 Although German business picked up and reparations payments were made promptly, it became obvious that Germany could not long continue these huge annual payments As a result, the YOUNG PLAN was substituted in 1929

Dawkins, Sir William Boyd, 1837–1929, English geologist and archaeologist He was a member (1861–69) of the Geological Survey of Great Britain, curator (1870–90) of the Manchester Museum, and professor of geology (from 1872) at Owens College (now Victoria Univ), Manchester A consulting geologist in mining and engineering projects, he served (1882) on the Channel Tunnel committee He was noted for his research on fossil mammals and on the antiquity of man He wrote *Cave Hunting* (1874) and *Early Man in Britain* (1880) and was co-author of *The British Pleistocene Mammalia* (6 vols , 1866–1912) In 1919 he was knighted

Dawson, George Mercer, 1849–1901, Canadian geologist, b Pictou, N S , studied at McGill Univ and at the Royal School of Mines, London, son of Sir J W Dawson He was geologist (1873–75) to the North American Boundary Commission On the staff of the Canadian Geological Survey from 1875, he served as its director from 1895 He did pioneer geological work in the Northwest Territories and in British Columbia and explored the Yukon valley He was a member of a commission which investigated (1892) the resources of the Bering Sea Dawson, the capital of Yukon territory, was named for him

Dawson, Sir John William, 1820 99, Canadian geologist and educator, b Pictou, N S , studied at the Univ of Edinburgh As superintendent (1850–55) of education in Nova Scotia he reorganized and modernized the school system From 1855 to 1893 he was principal of, and professor of geology at, McGill Univ He was largely responsible for building up McGill's eminence in the teaching of science and for founding and developing its Redpath museum of botany and geology He served as president of the Royal Society of Canada (1882), the American Association for the Advancement of Science (1892), and other organizations and was knighted in 1884 A pioneer in paleobotany, he was the first to describe EOZOON His numerous papers and books, many of them classics in geology, include *Acadian Geology* (1855, 4th ed , 1891), *The Story of the Earth and Man* (1873), *The Chain of Life in Geological Time* (1880?, 3d ed , 1881), *The Geological History of Plants* (1888), and an autobiography, *Fifty Years of Work in Canada* (1901)

Dawson or **Dawson City,** town (pop 1,043), territorial capital, W Yukon, on the east bank of the Yukon river at the confluence of the Klondike It is the trade center of the Klondike mining region Dawson is usually reached by way of Skagway, Alaska, the White Pass RR , and steamboat from WHITE HORSE on the Lewes river, a route 570 mi in length In the gold rush of 1898 Dawson was a boom town, reported to have a population of c 20,000 It was named for George M Dawson

Dawson. 1 City (pop 3,681), co seat of Terrell co , SW Ga., NW of Albany, settled 1856, inc 1872 It is a trade center in a coastal-plain farm and lumber area **2** City (pop 1,646), W Minn , on the Lac qui Parle river and W of Montevideo, inc as a village 1885, as a city 1911 It is a farm trade center **3** Town (pop 1,086), NE Okla , just N of Tulsa, inc 1923 **4** Town (pop 1,155), E central Texas, NE of Waco and near Corsicana, settled c 1882, inc 1908

Dawson City, Yukon see DAWSON

Dawson Creek, village (pop 518), E British Columbia, near the Alta border, on Dawson Creek and NE of Prince George It is the south terminus of the Alaska Highway and is connected by railroad and road with Edmonton, Alta

Dawson Springs, town (pop 2,560), W Ky , NNW of Hopkinsville and near the Tradewater river It is a health resort with mineral springs, in a coal and farm area Near by are a U S veterans' hospital and Dawson Springs State Park

Dax (däks), town (pop. 12,551), Landes dept , SW France, on the Adour The Aquae Augustae of

the Romans, it has long been famous for its hot mineral springs.

Day, Benjamin, 1838–1916, American printer, son of Benjamin Henry Day A New York printer, he invented a process for shading the plates to print maps and illustrations in color It is known as the Ben Day, or Benday, process The inventor's name has given to English a noun and a verb as well as an adjective (e g, "to give a map a Ben Day," "to Ben Day a map," "to use the Ben Day process")

Day, Benjamin Henry, 1810–89, American journalist He learned the printer's trade in the office of the Springfield *Republican* and opened a printing office in New York Lack of job printing in a financial depression led him to begin publishing (1833) the New York *Sun* The first number consisted of four small pages, he wrote the paper and set the type without assistance The price of the paper was one cent, the price of other New York dailies at the time was six cents The *Sun* was the first paper in the city to employ newsboys It soon had a large circulation, and Day sold it in 1838 to his brother-in-law, Moses Yale Beach, for $40,000 See F. N O'Brien, *The Story of the Sun* (1918)

Day, Clarence Shepard, 1874–1935, American essayist, b New York city, grad Yale, 1896 Bedridden after a business career interrupted by arthritis, Day wrote and illustrated prose and verse and contributed to magazines His first book was *This Simian World* (1920), but it was *God and My Father* (1932), *Life with Father* (1935), and *Life with Mother* (1937) which won him popular recognition Incidents from these three books were used by Howard Lindsay and Russel Crouse for the play *Life with Father*, which began a phenomenally long Broadway run in 1939, *Life with Mother* was somewhat less successful as a play (1948)

Day, Clive, 1871–, American historian, b Hartford, Conn , grad Yale (B A , 1892, Ph D , 1899). He also studied at Berlin and Paris Professor of economic history at Yale from 1907 to 1936, he wrote *A History of Commerce* (1907, new ed , 1922), *History of Commerce of the United States* (1925), and *Economic Development in Europe* (1942, a revision and extension of *Economic Development in Modern Europe*, 1933)

Day, David Talbot, 1859–1925, American chemist and geologist, b Lakewood, Ohio, grad Johns Hopkins (B A , 1881, Ph D , 1884) He joined the U S Geological Survey in 1886, serving as chief of the division of mineral resources and (from 1907 to 1914) as chief of the petroleum investigations, he was consulting chemist for the Bureau of Mines (1914–20) He was editor of *Handbook of the Petroleum Industry* (1922)

Day, Edmund Ezra, 1883–, American educator, b Manchester, N H , grad Dartmouth, 1905, Ph D Harvard, 1900 He taught economics at Dartmouth (1907–10), Harvard (1910–23), and the Univ of Michigan (1923–27), here he also served as dean of the school of business administration He was director (1928–37) for social sciences of the Rockefeller Foundation and a member (1933–37) of the General Education Board, from which he resigned in 1937 to become president of Cornell Univ He wrote *Statistical Analysis* (1925) and *The Growth of Manufactures* (1928)

Day, John, 1522–84, English printer At his London shop he designed and made type for himself, but not for sale His types included musical notes and the first Anglo-Saxon type He printed the first English edition of John Foxe's *Book of Martyrs* (1562), though not under that title (see Foxe, John) Day's printer's mark was a rising sun, a sleeper awakening, and the motto, "Arise, for it is Day "

Day, John, 1574?–1640?, English dramatist, who collaborated with Dekker, Marlowe, and other playwrights His most original work is the allegorical masque *The Parliament of Bees* (performed c 1612, pub 1641) Other plays include *The Isle of Gulls* (1606), *Law Tricks* (1608), *Humour Out of Breath* (1608), and *The Blind Beggar of Bednal Green*, written in 1600 with Henry Chettle

Day, Thomas, 1748–89, English social reformer and author He supported the American Revolution and the abolition of slavery and was interested in improving the lot of the small farmer Under the influence of Rousseau, he unsuccessfully tried to educate a young girl to be his wife His *History of Sandford and Merton* (3 vols , 1783–89) contrasts the "natural" education of Sandford with the conventional one of Merton In Lichfield he was a member of the literary group centering about Anna Seward See biographies by G W. Gignilliat (1932) and S H Scott (1935)

Day, William Rufus, 1849–1923, American statesman and Associate Justice of the U S Supreme Court (1903–22), b Ravenna, Ohio, grad Univ of Michigan, 1870. Admitted (1872) to the bar, Day practiced law in Ohio and served (1886–90) as judge of the court of common pleas He became (1897) assistant to the Secretary of State and then (April, 1898) Secretary of State in the month when war was declared against Spain He was successful in converting France and Germany from an attitude of seeming hostility to definite neutrality As chairman (1899) of the U S. commission to arrange peace after the Spanish-American War, he insisted upon purchase of the Philippines rather than claiming these islands by right of conquest. The treaty therefore provided for the payment of $20,000,000 Day became (1899) a judge of the Circuit Court of Appeals Appointed to the Supreme Court in 1903 by President Theodore Roosevelt, he served as Associate Justice for 20 years See biography by J E McLean (1946)

day and night. The sun "rises" at a given point on the earth's surface when that point, in the course of the earth's rotation on its axis, is no longer shielded from the sun by the curve of the earth, the sun "sets" when the given point has moved around to the hemisphere shielded from the sun The earth rotates on its axis once in 24 hr , and this period of time is called a day, the term *day* is applied also to that part of the 24 hr during which there is sunlight, the other part being called night Day and night would each be 12 hr long everywhere on earth, the year round (with small variations), if the earth's axis were not tilted with respect to its orbit of revolution about the sun (see earth), this tilting is the cause of the difference in the length of the period of daylight from place to place and from time to time, and it is the cause of the seasons The length of the period of daylight varies most at the earth's poles, which have summer days of 24 hr and winter nights of 24 hr , it varies least at the equator The sidereal day, used in all astronomical calculations, is about 4 min shorter than the solar day

Daye, Matthew (dā), c 1620–1649, British printer in Massachusetts Bay colony, son of Stephen Daye He was a trained printer His name appears first on the almanac for 1647, but it would seem probable that he was employed at the Cambridge Press from its beginning and that the early works produced there under the supervision of Stephen Daye were actually printed by Matthew Daye See also Glover, Jose

Daye, Stephen, c 1594–1668, British settler in North America, considered by many to be the first printer in the English American colonies He came to Massachusetts Bay in 1638 under contract to the Rev Jose Glover, who brought along a printing press Glover died on the voyage Daye apparently supervised the establishment of the Cambridge Press, the first printing plant in the colonies From it was issued *The Freeman's Oath*, a broadside published in 1639 It was followed by an almanac and by the Bay Psalm Book (1640), the first book printed in the colonies Stephen Daye was not a printer, but a locksmith, whereas his son, Matthew Daye, was a trained printer There is reason to suppose, therefore, that the actual printing was done by Matthew Daye Samuel Green later was the only printer in the colony

Day Lewis, Cecil, 1904–, English author, b Ireland, grad Oxford He taught until 1935, later he achieved leisure for poetry by writing detective stories under the pseudonym Nicholas Blake He has written several volumes of poetry, which include *Collected Poems* (1933), *A Time to Dance* (1935), *Short Is the Time Poems, 1936–43* (1945), and *Poems 1943–47* (1948) His writings also include novels, children's books, a morality play, *Noah and the Waters* (1936), a translation of Vergil's *Georgics*, and an anthology

daylight-saving time is time reckoned usually one hour later than the standard time of a given time belt Benjamin Franklin when serving as U S minister to France wrote an article recommending earlier opening and closing of shops to save the cost of lighting In England, William Willett in 1907 began to urge the adoption of daylight-saving time During the First World War the plan was adopted in England, Germany, France, and many other countries In the United States, Robert Garland of Pittsburgh was a leading influence in securing the introduction and passage of a law (signed by President Wilson March 31, 1918) establishing daylight-saving time in the United States After the war the law was repealed (1919), but during the Second World War it was again established by law and was known as war time At other times the choice of continuing or discontinuing the practice has been left in the hands of state or local governments Those places making use of daylight-saving time (also called summer time) turn their clocks one hour ahead, usually in March or April, and one hour back, usually in September or October Arguments in favor of the plan are chiefly that it gives more daylight hours for outdoor recreation late in the day and thereby improves the health of the people In time of war it is chiefly a means of conserving fuel and light Some farmers and other rural dwellers oppose the change in time because of such difficulties as getting the milk to market at the earlier hour

day lily, name usually applied to members of the genus *Hemerocallis*, six species of popular hardy Old World perennials with yellow, orange, or reddish flowers Included are the fragrant lemon lily and the orange common day lily, often an escape along the roadsides Recently many improved garden varieties have resulted from hybridization The name day lily is rarely used for the genus *Hosta* (or *Funkia*), the plantain lily, which comprises about 10 species with white or lavender flowers and is native to Japan and China Both genera have short-lived flowers, hence the name

day nursery or **crèche,** institution for daytime care of children of working mothers Originated in France in 1844, day nurseries increased rapidly in Europe and were established in the United States through private charity in New York city in 1854 Lack of public control led to abuses which brought day nurseries into disfavor The National Federation of Day Nurseries was formed in 1898, and today most states exercise some form of regulation See nursery school

Dayton, 1 City (pop 8,379), N Ky , on the Ohio and near Covington, opposite Cincinnati, settled 1848, inc 1867 **2** City (pop 210,718), co seat of Montgomery co , SW Ohio, N of Cincinnati and on the Great Miami where it is joined by the Mad and Stillwater rivers, settled 1796, inc 1805 In a fertile area, it is an industrial, distributing, and aviation center and a port of entry Chief among its products are cash registers, precision tools, electric refrigeration and lighting equipment, electric motors, and auto parts The city grew with the extension of canals (1830s and 1840s) and railroads (1850s) and with the industrial demands of the Civil War Dayton was the home of the Wright brothers, who, after their flight at Kitty Hawk, set up a research airplane plant here It has a U S army aeronautical laboratory at Wright and at Patterson fields, an air force service and supply center at Fairfield Air Depot near by, several commercial fields, and a municipal airport (1936) Following the severe flood of 1913 a flood-control system of the Miami valley was established Dayton was the first large city to adopt the city-manager form of government (1913) The Dayton Art Institute, the Univ of Dayton (Catholic, Marist, coeducational, 1850), the Paul Laurence Dunbar Museum (1938) in the poet's home, the National Cash Register Company plant, and a large veterans' hospital and home are here **3** City (pop 1,870), co seat of Rhea co , E Tenn , near the Tennessee river NNE of Chattanooga, in a farm (especially fruit), coal, and timber area, founded c 1884 In 1925 it was the scene of the Scopes trial Dayton is the seat of William Jennings Bryan Univ **4** Town (pop 1,279), E Texas, NE of Houston, in an oil area, inc 1925 **5** City (pop 3,026), co seat of Columbia co , SE Wash , on the Touchet river and NE of Walla Walla, in a rich grain, fruit, and livestock area, inc 1871

Daytona Beach (dātō'nù), city (pop 22,584), NE Fla , on the Atlantic coast S of St Augustine and on Halifax River (a lagoon), in a citrus-fruit area A popular year-round resort, it was founded (1870) by Mathias Day in an area first settled by Spanish Franciscans, who established missions here in the late 16th and in the 17th cent The present city was formed in 1926 by the consolidation of the towns of Seabreeze, Daytona Beach, and Daytona Development began principally after the arrival of the railroad in the late 1880s The resort is noted for its hard, white beach, c 25 mi long and, at low tide, c 500 ft wide, on which automobile speed trials and races have been held since 1903 The city is the seat of Bethune-Cookman College (Negro, coeducational, 1904)

Daza, Hilarión (ēläryōn' dä'sä), 1840–94, president of Bolivia (1876–79) After entering the army, Daza rose rapidly in rank, chiefly through the favor of Malgarejo In 1870 Daza turned against his erstwhile protector, helped oust him from office, and then in 1876 himself seized control Heading an administration famed for corruption and bacchanalian orgies, he involved Bolivia in the War of the Pacific (see Pacific, War of the) and, after failure as a general in the field, was deposed and exiled When he returned from exile in 1894, he was assassinated

Dead, Book of the see Book of the Dead

Dea Dia (dē'ù dī'ù), in Roman religion, goddess of fields, worshiped by the Arval Brothers She is probably the same as Acca Larentia

deadly nightshade see belladonna and nightshade

dead reckoning, in navigation, reckoning of a ship's position by speed and direction without direct reference to the position of heavenly bodies It is accomplished by reckoning from a fixed point (usually on shore or on an island), and calculations are then made from the latitude and longitude of that point At the time of the great exploring period in the 15th and 16th cent , dead reckoning was much used The results of crude computation naturally were highly erroneous, but the surprising thing is not the defects of dead reckoning but the results that skillful mariners could obtain from it despite its gross flaws The quadrant, the sextant, and the chronometer made dead reckoning more or less obsolete, though it is still used by owners of small craft and is used between astronomical findings by large ships The calculation is made from the point of departure (i e , the point of known latitude and longitude), the course (as shown by the compass), the speed and distance traveled according to the log, and the time elapsed.

Dead River, NW Maine, rising in the Chain Lakes on the Canadian border and flowing generally NE to the Kennebec, in a hunting and fishing region Benedict Arnold followed its course on his march to Quebec (1775)

Dead Sea, salt lake, on the border of Jordan and Palestine It is c 45 mi long and 10 mi wide, and it extends from north to south in a great depression between rocky cliffs This cut, the Ghor [Arabic, =hollow], is continued to the north by the Jordan valley and to the south by the Wadi Araba The Dead Sea is in places more than 1,300 ft deep, and its surface is nearly 1,300 ft below sea level The chief tributaries are the Jordan, the Zerka, and the Arnon The water, far saltier than the ocean, and the shores yield minerals, especially potash and bromides There is a growing resort at Kallia, at the north end Sodom and Gomorrah were on the southwest side of the lake Names of the Dead Sea include the biblical Salt Sea, East Sea, and Sea of the Plain, the Latin *Lacus Asphaltites* [lake of bitumen], and the Arabic *Bahr Lut* [sea of Lot]

Deadwood, city (pop 4,100), co seat of Lawrence co, W S Dak, in the Black Hills, NW of Rapid City and near Lead, settled 1876 after discovery (1875) of gold here In a canyon, Deadwood Gulch (the trees had been killed by a fire), the city boomed and waned with discovery or abandonment of nearby gold and silver mines It is now a tourist center for the Black Hills and a trading point for a mining and livestock region Its colorful early history is commemorated in the Adams Memorial Museum, several monuments, and an annual "Days of '76" celebration in August The graves of such famous Deadwood pioneers as Wild Bill Hickok and Calamity Jane are here, the cabin and grave of Deadwood Dick are near by

Deadwood Dick, American frontiersman, celebrated in many dime novels The original of the character is supposed to have been Richard W Clarke (1845–1930), an Englishman who came to the gold diggings of the Black Hills and became an intrepid scout He is buried in a mountain grave near Deadwood, S Dak Much doubt has been cast on his claims as hero See Robert J Casey, *The Black Hills and Their Incredible Characters* (1949)

Deady, Matthew Paul (dē'dē), 1824–93, American jurist, b near Easton, Md As a boy he moved to Barnesville, Ohio, and was apprenticed to a blacksmith, but studied at the local academy, got a certificate to teach, and was (1847) admitted to the bar It was as blacksmith to a mounted regiment that he made his way to Oregon in 1849 Once there he became a lawyer in the Willamette valley and later a leading jurist and a molder of cultural life in the Pacific Northwest He presided (1857) over the state constitutional convention, was a U S district judge (1859–93), codified state laws, helped to draw up state laws, drafted (1864) the Portland city charter, which was a model for many others, and was president (1873–93) of the board of regents of the state university

deafness, partial or complete loss of the sense of hearing There are many causes of deafness, e g, infected tonsils or adenoids, chronic sinusitis, scarlet fever, syphilis, organic lesions of the nervous system, psychogenic disorders, acute head colds, and chronic suppuration of the middle ear Obstruction of the external auditory canal by cerumen (wax), bony growths, or inflammation of soft parts may cause temporary deafness, this condition may be remedied by removal of the cause Spongy bone forming in the capsule of the labyrinth of the ear, a condition known as otosclerosis, is another cause of deafness Because of the different types and degrees of deafness, diagnosis includes an electroaudiometric examination Hearing devices, e g, electrical aids of the telephone or radio type, are commonly employed to improve hearing The Council on Physical Medicine of the American Medical Association examines hearing aids submitted to it and lists as acceptable those which meet its requirements Education of the deaf and of the hard-of-hearing is the chief factor in enabling them to lead successful lives For centuries, education of such handicapped persons was almost completely ignored In 1755 Abbé Charles Michel de l'Epée founded a school for the deaf in Paris, and in 1778 Samuel Heinicke established one in Germany In 1817 the first permanent public school for the deaf in the United States, now called the American School for the Deaf, was founded at Hartford, Conn, largely through the influence of Thomas Hopkins Gallaudet The work of Alexander Graham Bell and of his father, Alexander Melville Bell, did much to establish the study of speech on a scientific basis and to improve the methods of teaching the aurally handicapped Speech training, given as early as possible to both those who are born deaf and those who become deaf or hard-of-hearing later in life, is a factor in success In educating the partially deaf person, use is made of whatever residual hearing he possesses. Usually children who are hard-of-hearing can attend regular schools when they are helped by hearing aids and by instruction in speech reading (an expression now generally preferred to lip reading). When a child shows inability to hear even with a hearing aid and no improvement through medical treatment seems possible, it is necessary to teach him, in addition to reading and writing, some method of communicating with others Although about three quarters of the children in schools for the deaf are taught to communicate orally, some educators advocate also the teaching of a manual alphabet, which uses the fingers to represent letters Information may be secured from the American Association to Promote the Teaching of Speech to the Deaf at Washington, D C See Hallowell Davis, ed., *Hearing and Deafness* (1947)

Deak, Francis (dĕ'ăk), Hung *Deák Ferenc*, 1803–76, Hungarian statesman He entered the Hungarian diet in 1832 and became minister of justice after the revolution of March, 1848 He vainly opposed the extremism of Louis KOSSUTH, trying to prevent an open break with Austria, and upon his failure he withdrew from public affairs After the defeat (1849) of the Hungarian revolutionists, Deak became the recognized leader of his nation Though always advocating the continued union of Austria and Hungary, he insisted on the restoration of the Hungarian constitution and of Hungarian territorial integrity and on the recognition of Hungary as a separate kingdom. The government of Emperor Francis Joseph having begun, in 1860, to seek reconciliation with Hungarian national sentiment, Deak in the diet of 1866 cooperated with Julius ANDRASSY in drawing up a report on a new constitution This report was the basis of the negotiations (1867) between Deak and the Austrian chancellor, F F Beust, which resulted in the *Ausgleich* [compromise] establishing the AUSTRO-HUNGARIAN MONARCHY

Deakin, Alfred (dē'kĭn), 1856–1919, Australian statesman He aided in the fight for federation of the Australian states and accomplished much in social legislation, irrigation, defense, and preferential tariff First attorney general of the commonwealth (1901), he was prime minister in three different political combinations (1903–4, 1905–8, 1909–10) He is the author of authoritative books on irrigation

Deal, municipal borough (1931 pop 13,681, 1943 estimated pop 23,500), Kent, England, on the coast N of Dover It is the reputed landing place of Caesar in 55 B C, and it became a "member" of the CINQUE PORTS Henry VIII built three castles here, Walmer Castle is the seat of the lord warden of the Cinque Ports Deal is a naval station and shipbuilding center

Deal Island, small island, off the Eastern Shore, Md, in Tangier Sound N of Crisfield It is an important oyster, clam, and crab shipping and processing center

De Amicis, Edmondo (ādmōn'dō dā amē'chēs), 1846–1908, Italian novelist and essayist He was trained for the army, but in 1872 retired to devote himself to literature His books of travel, enthusiastic, frequently over-lyrical in style, were very popular His novels and short stories are sentimental but often genuinely moving *Cuore* (1886, Eng tr, *Cuore an Italian Schoolboy's Journal*, 1887) is one of the most widely read of all Italian books Croce attacked his essay on Italian style

Dean, Bashford, 1867–1928, American zoologist and armor expert, b New York city, grad College of the City of New York, 1886, Ph D Columbia, 1890 He taught zoology at Columbia (1891–1927), served the U S Fish Commission (1889–92, 1900–1901), and was curator of herpetology and ichthyology at the American Museum of Natural History (1903–26) His important works on ichthyology include *Bibliography of Fishes* (1916–23) As an authority on medieval arms and armor he became curator (1903) of the collection at the Metropolitan Museum of Art and made it one of the greatest collections of its kind in the world.

Dean, Jerome Herman, 1911–, American baseball player, known as Dizzy Dean, b Lucas, Crittenden co, Ark. His name may originally have been Jay Hanna Dean. A colorful, skillful, right-handed pitcher, he was an outstanding player (1932–38) with the St Louis Cardinals of the National League After his pitching arm was injured in 1937, he was traded (1938) to the Chicago Cubs and in 1940 was waived out of the major leagues From 1941 to 1949 he described baseball games over the radio in St. Louis, arousing the interest of all but English teachers by his picturesque reports. In 1950 Dean became a television broadcaster for the New York Yankees of the American League

Dean, Forest of, ancient royal forest, Gloucestershire, England, between the Severn and the Wye It is largely reforested, its economic value lies in its coal and iron mines, stone quarries, and timber

Deane, Silas, 1737–89, American Revolutionary patriot and diplomat, b Groton, Conn., grad Yale, 1758. A lawyer and merchant at Wethersfield, Conn, he was elected (1772) to the state assembly and became a leader in the patriot cause He was (1774–76) a delegate to the Continental Congress, which sent (1776) him as diplomatic agent to France There Deane worked with Pierre A C de BEAUMARCHAIS in securing commercial and military aid for the colonies, obtaining supplies which were of material help in the Saratoga campaign (1777). He recruited a number of foreign officers, such as Lafayette, Casimir Pulaski, Steuben, and Johann De Kalb. Late in 1776 Congress sent Benjamin FRANKLIN and Arthur LEE to join Deane. Together they arranged (1778) a commercial and military alliance with France. Deane, however, was soon recalled by Congress and was faced with accusations of profiteering made against him by Lee Embittered, unable to clear himself, and accused as a traitor after publication of some pessimistic private letters, Deane lived the rest of his life in exile In 1842 Congress voted $37,000 to his heirs as restitution and characterized Lee's account as "a gross injustice" See Charles Isham, ed., *The Deane Papers, 1774–1790* (5 vols, 1887–91); biography by G. L Clark (1913)

De Angelis, Jefferson (dē ăn'julĭs), 1859–1933, American comedian and singer, b San Francisco He made his debut in vaudeville at 10, achieved his greatest success in *Fantana* (1904), and made his final appearance at 70 in comic opera He wrote *A Vagabond Troupe* (with A F Harlow, 1931).

Dearborn, Henry, 1751–1829, American general, b Hampton, N H He was a doctor and became a captain of militia When the American Revolution broke out, he led his company to take part in the battle of Bunker Hill Later he saw distinguished service, accompanying Benedict Arnold in the march against Quebec (where he was captured), serving in the Saratoga campaign in 1777, wintering at Valley Forge, and fighting in the battle of Monmouth He led (1779) a regiment in John Sullivan's campaign against Loyalists and Indians in New York and was on Washington's staff at Yorktown After the war he settled in Maine, where he became a general of militia After service (1793–97) as a Congressman, he was Secretary of War (1801–9) under Jefferson When the War of 1812 began, he was a logical choice for the post he was given as major general commanding the northern frontier from Niagara to the Atlantic coast. He distinguished himself, however, chiefly by inaction The British took Detroit, and the American commander there, William Hull, more or less unjustifiably blamed Dearborn Several plans to invade Canada were not even attempted, and though in 1813 Dearborn took York (now Toronto) and Fort George on the Niagara, he lost many men and exposed Sackets Harbor to an almost successful British attack He was relieved of command in 1813 Fort Dearborn, on the site of Chicago, was named for him So was the light dearborn wagon, because he rode in one on his campaigns to the disgust of his troops, who preferred their generals on horseback

Dearborn, city (pop 63,584), SE Mich, on the River Rouge and W of Detroit, settled 1795, inc as a village 1893, as a city 1927 Fordson city was annexed in 1929 A modern highway to Chicago follows the old Sac Trail Early carriage making in Dearborn led to automobile making The city grew mainly after the First World War when Henry Ford's automobile plants were built here Other manufactures include aircraft parts and metal products Dearborn is known as the site of the Edison Institute of Technology, which includes GREENFIELD VILLAGE Henry Ford was born in Dearborn, and his large estate, "Fairhaven," is on the Rouge His birthplace has been restored A veterans' hospital is in the city

Dearborn, Fort, U S army post on the Chicago river, established in 1803 and named for Secretary of War Henry Dearborn The little frontier post was threatened by Indians with the commencement of the War of 1812, and Capt Nathan Heald, the commander, following the order of Gen William Hull, abandoned the post Just as he and his little company of troops, with some civilians and women and children, were leaving, they were set upon (Aug 15, 1812) by Indians on the Lake Michigan dunes Many were slaughtered, most of the rest taken prisoner The fort was rebuilt (1816–17), and around it and the trading posts of John Kinzie and others the city of CHICAGO grew

Dearth, Henry Golden, 1864–1918, American landscape and figure painter, b Bristol, R I, studied at the Ecole des Beaux-Arts and with Ernest Hébert and Aimé Morot in Paris His winters were spent in New York city, his summers in Normandy, where he painted many of his best-known works His paintings are characterized by meticulous drawing, rich and pleasing color, and imagination Outstanding examples include *Cornelia* (Metropolitan Mus), *In the Gloaming* (Detroit Mus.), *Black Hat* (Indianapolis Art Inst), and *Dreamland* (Brooklyn Mus) He became a member of the National Academy in 1906.

Dease, Peter Warren (dēs), 1788–1863, Canadian explorer He was in the North West Company before its merger with the Hudson's Bay Company, and later was a Hudson's Bay Company trader He was in the party of Sir John Franklin's second arctic expedition Later he and Thomas SIMPSON in journeys from 1836 to 1839 explored the coast of the Arctic Ocean in Canada and Alaska from the mouth of the Mackenzie to Point Barrow.

death. The change from life to the nonliving state in an individual is recognized by certain gross

changes, but the change in the tissues extends over a somewhat longer period After breathing has stopped, the heart may still beat, and for a very short time after the heartbeat has stopped, it is possible to stimulate the nervous system For this reason RESUSCITATION, especially ARTIFICIAL RESPIRATION, should be tried in every case where there is the slightest possibility of revival In the human body death is definite if no heartbeat can be detected by the stethoscope over a reasonable period of time, if the circulation is not backed up when a cord is tied around the arm or leg, and if rigor mortis or putrefaction is present Rigor mortis is a stiffened state of the muscles usually starting one or two hours after death, affecting first the facial muscles and spreading to those of the rest of the body Death in human beings may be caused by accident, diseases of heart and blood vessels, and paralysis of the vital centers of the nervous system in disease and intoxications Sudden death in adults occurs in apoplexy, diseases of the arteries of the heart muscle, rupture of organs, and such accidents as electric shock In biology it is a notable fact that, although every living individual dies, the race does not, because of the immortality of the protoplasm of the germ cells During the life of an individual, tissue cells are constantly dying and being replaced (except in the case of nerve cells, which cannot regenerate) See also FUNERAL CUSTOMS, IMMORTALITY, SOUL, VITAL STATISTICS

death, dance of, or **danse macabre** (dans' mŭka'bru, -bûr, dăns'), originally a 14th-century morality play The play was a dialogue between death and representatives of all classes from the pope down By the 15th cent, pictorial representation with verses illustrating the pictures became common The dance, in which death as a skeleton or a corpse led his victims, was painted on walls of churchyards and cemeteries A set of 24 woodcuts, with verses appended, was printed in Paris in 1485 The best-known representations of the dance of death are the drawings of Holbein the younger Goethe wrote a ballad on the theme, *Der Todtentanz*, and in music Saint-Saens used it in *Danse macabre* See L P Kurtz, *The Dance of Death* (1934)

death rate see VITAL STATISTICS

Death Valley National Monument, 1,850,565 2 acres, SE Calif and S Nev, est 1933 Death Valley is a deep and arid basin, walled in the west by the Panamint Range and in the east by the Funeral Range Less than an inch and a half of rain falls a year in this forbidding land, which has in summer some of the highest temperatures in the world The small Amargosa river and Furnace Creek die in the sands There are alkali flats, colored and grotesque rocks, salt flats, and briny pools Badwater, 280 ft below sea level, is the lowest point in North America The name Death Valley was given by gold seekers who in 1849 by mistake undertook to cross this desolate region on their way to the gold fields The valley itself yielded gold in the next decade but later surrendered more wealth in the borax taken out of the desert by mule-drawn wagons The solitude is actually alive with many small animals, and the peculiar desert plant forms have attracted much scientific attention The Panamint Indians (an offshoot of the Shoshone), the only group ever to be self-subsisting in the region, have been given a model village The valley was much publicized by Walter Scott, called Death Valley Scotty, whose ostentatious home, Scotty's Castle, is a showplace there See W A Chalfant, *Death Valley the Facts* (rev ed, 1936), Federal Writers' Project, *Death Valley* (1939), C B Glasscock, *Here's Death Valley* (1940), George P Putnam, *Death Valley and Its Country* (1946)

Deauville (dō'vĭl, dōvēl'), seaside resort (pop 5,438), Calvados dept, N France, on the English Channel A fashionable center, it has a famous racecourse

Deaver, John Blair (dē'vur), 1855–1931, American surgeon, b Lancaster co, Pa, M D Univ of Pennsylvania, 1878 He was professor of surgery at the Univ of Pennsylvania (1918–22) A skilled surgeon, he was noted especially for his methods in performing appendectomies and other abdominal surgery His works include *A Treatise on Appendicitis* (1896) and *Surgery of the Upper Abdomen* (with A P C Ashhurst, 1909–13)

De Bardeleben, Henry Fairchild (dŭ bär'dulăbun), 1840–1910, American industrialist, chief developer of the coal and steel industries of Birmingham, Ala, b Autauga co, Ala He became the ward of Daniel PRATT, whose enterprises he came to manage After Pratt's death, De Bardeleben expanded his holdings and founded Bessemer, Ala His company was merged with the organization generally known as the Tennessee Coal & Iron Company He battled in the 1890s to control it, but lost

De Bary, Heinrich Anton (hĭn'rĭkh an'tōn du bärē'), 1831–88, German botanist He was professor at the universities of Freiburg im Breisgau (1855–66) and Halle (1867–72) and first rector of the Univ of Strasbourg (from 1872) An authority on the life history of fungi and bacteria, he wrote several standard works in these fields and discovered sexual reproduction in fungi and the alternation of generations in rust fungi.

debenture (dŭbĕn'chûr), document acknowledging indebtedness. In England a debenture, being issued under seal and stating an indebtedness of a corporation, is practically the same as a BOND, and debenture stock is similar to preferred stock In the United States the term is usually employed for a corporation certificate without special security, such as a mortgage, to back it up Debentures differ from stock in that they promise to repay the principal on a specified date, with regular interest The term is also used for a document by which a government is bound to pay a creditor money due after some condition has been fulfilled

Debierne, André Louis (ädrā' lwē' dubyĕrn'), 1874–, French chemist He discovered ACTINIUM (1899), collaborated with the Curies in research on radioactivity, and worked with Marie Curie in isolating pure radium He served as professor at the Univ of Paris and director of its laboratory of physics and radioactivity

Debir (dē'bur) **1** King of Eglon Joshua 10 **2** Very ancient place, probably SE of Hebron Joshua 10 38, 11 21, 12.13, 21 15, 1 Chron 6 58 Kirjath-sannah Joshua 15 49 Kirjath-sepher Joshua 15 15,16, Judges 1 11,12 **3** Landmark, S Palestine Joshua 15 7 **4** Place, E of the Jordan between the Sea of Galilee and the Dead Sea Joshua 13 26

Deblin, Pol *Dęblin* (dĕ'blēn), small town, central Poland, on the Vistula and 58 mi S of Warsaw Founded as a fortress by Tsar Ivan III in 1492, it is known in Russian as Ivangorod

Deborah (dĕb'ōru) [Heb, =bee] **1** Judge of Israel, the only woman to hold that office Under her guidance Barak conquered Sisera and delivered Israel from the tyranny of King Jabin The triumphant Song of Deborah is one of the most brilliant poems in the Bible Judges 4, 5 **2** Nurse of Rebecca Gen 35 8

De Bow, James Dunwoody Brownson (dubō'), 1820–67, American editor and statistician, b Charleston, S C He became (1844) editor of the *Southern Quarterly Review* His long article "The Oregon Question" attracted attention in England and France as well as in America In 1846 he went to New Orleans, where he began publishing the monthly *De Bow's Review*, influential before the Civil War Advocating a chair of political economy at the new Univ of Louisiana, he was appointed to fill it He was superintendent of the U S census of 1850, and his *Statistical View of the United States* (1854) was an abstract and an interpretation of the census reports He also wrote *Encyclopaedia of Trade and Commerce of the United States* (1853), *Industrial Resources and Statistics of the Southwest* (1853), *The Southern States* (1856), and many articles for the eighth edition of *The Encyclopaedia Britannica* During the Civil War he was chief agent of the Confederate government in the purchase of cotton

De Brahm, William Gerard (dē brăm'), 1717–c 1799, surveyor of the southern British colonies in America A former captain of engineers in the army of Emperor Charles VI, he led (1751) a colony of Salzburg Lutherans to Georgia, where he founded the prosperous settlement of Bethany De Brahm, appointed surveyor of Georgia in 1754, prepared the first careful map of both Georgia and South Carolina (1757) and built Fort George to defend Savannah (1761) In 1764 he became surveyor general for the Southern District of North America and made a thorough survey of the islands, inlets, and rivers along the east coast of Florida, marking the desirable lands and town sites along the way His report to the king, never published but preserved in the British Museum, is important source material.

Debrecen (dĕ'brĕtsĕn), city (pop 125,936), E Hungary It is an important commercial center and the historical stronghold of Hungarian Protestantism Its university (chartered 1912) grew out of a Calvinist college founded in 1588, it has a large library In the great church of Debrecen the revolutionary government of Hungary, under Louis Kossuth proclaimed (April 14, 1849) the independence of Hungary and the deposition of Francis Joseph In Dec, 1944, a pro-Allied provisional Hungarian government was formed at Debrecen A former spelling was Debreczen

De Bruyn, Cornelis. see BRUYN, CORNELIS DE

Debs, Eugene Victor, 1855–1926, American Socialist leader, b Terre Haute, Ind He left school at the age of 15, became a railroad fireman (1871), educated himself, became important in local politics, and was elected (1884) to the Indiana legislature By outstanding leadership in union activities he became (1880) national secretary and treasurer of the Brotherhood of Locomotive Firemen He resigned (1892) from the Brotherhood and launched (1893), instead of a trade union, an industrial union to include all railroad workers, the American Railway Union, of which he became president After a significant victory over the Great Northern RR, the American Railway Union moved to its greatest test When the workers in PULLMAN, Ill, struck in 1894, Debs's union boycotted the servicing of Pullman cars. An injunction, however, was served against the trainmen, and Federal troops, sent to Illinois by President Grover CLEVELAND over the protest of the Illinois governor, John P ALTGELD broke the strike Debs and others were convicted (1895) of violating the injunction. While he was serving six months in prison, his reading diverted his attention to socialism and he became the leader of American Socialists As presidential candidate (1900) of the Social Democratic party, he polled 96,000 votes, and as candidate (1904) of the new Socialist party, he received 402,000 votes He became editor of the Socialist weekly *Appeal to Reason* and lectured widely to large audiences After 1900, he grew more bitter in his attacks on trade unionism and more vehement in advocating organization of labor by industries He helped to found (1905) the INDUSTRIAL WORKERS OF THE WORLD, but soon withdrew from the movement As Socialist candidate for president he polled 44,000 votes in 1908 and 901,000 votes in 1912. The Socialist party refused to take part in the government war effort in the First World War, and in 1918 Debs, a leading pacifist, was sentenced to 10-year imprisonment for speaking in violation of the Espionage Act Though still in prison, he was Socialist candidate for President in 1920 and gathered 919,000 votes He was released by order of President Harding His health was broken, and his civil rights were not restored He could accomplish little in his last years, but he was widely revered as a martyr for his principles See Ray Ginger, *The Bending Cross* (1949)

debt, obligation in services, money, or goods owed by one party, the debtor, to another, the creditor When contested, debts are now collected by a civil suit upon which the judge renders a judgment, and an execution is levied on the debtor's property The history of debt runs in cycles of measures against insolvent debtors, ending in revolution or general cancellation of debts In ancient nations debt was associated with slavery, for the insolvent debtor and his household were in many cases turned over to the creditor to perform compulsory services In early Rome the insolvent was given into custody of the creditor for 60 days prior to his sale as a slave subject to such treatment as pleased the creditor This arrangement was mitigated in 494 B C by the first of the uprisings of the Roman people, turbulence in Rome afterward was to a large extent occasioned by the desire to restrain creditors In Greece the reforms of Solon had a like origin. In Palestine, in every 50th year—the year of jubilee—Jewish debtors were freed and their obligations were canceled Imprisonment for debt, which once crowded prisons, was ended in theory in England and America by laws enacted in the 19th cent However, imprisonment on other charges, such as concealment of assets, in some instances continues the substance of imprisonment for debt The laws of BANKRUPTCY are designed to apply the resources of debtors to their debts and thereafter to relieve them from such legal obligations

debt, public, indebtedness of a government expressed in money terms The debt is differently computed by nearly every nation, and some authorities exclude all government obligations other than those incurred by public borrowing from individuals About 1800 the idea of a public debt became distinct from the concept of the debts of the sovereign himself These had been common in history, ever since the growth of money markets made large-scale borrowing possible Governments may incur debts for several reasons They may borrow to meet temporary needs, as when estimated revenue falls below estimated expenditures Short-term treasury notes, payable by increased taxes or by greater economy, may be issued, but the debt should not become permanent Public works, especially when widespread unemployment exists, are another source of public debt and are justified in part by their permanent social utility. The largest public debts are incurred to meet emergencies, such as WAR DEBTS, arising from the impossibility of financing the extended activities of government by new taxes or from the need to borrow abroad to finance the war effort Public debts are advantageous in securing part of the national funds at an interest rate lower than that given by private industry and in founding the financial operations of government on a permanent basis The disadvantages are that unjustifiable projects may be undertaken because the full burden of payment is not immediately met, that, if the government's demands become so large that the interest rate rises, money may be diverted from private enterprise, and that too great a debt may induce governments to depreciate currency or default on obligations Public loans, the characteristic form of government debts in modern times, may be in the form of short-term instruments, e g, tax warrants, treasury certificates, treasury notes, and other notes such as those of the FEDERAL RESERVE SYSTEM, long-term government bonds; and various notes which promise yearly payment of interest but without date for payment of principal The number of those holding government obligations has increased in recent history, but governments in times of stress have often converted bonds to issues carrying lower interest rates, have depreciated the value of currency, or have defaulted entirely on their obligations with disastrous results for the

bondholders Default on obligations held by foreigners has been a reason offered for intervention by major powers in Latin America, Egypt, and elsewhere The payment of the public debt improves the national credit Public debts may be paid by sinking funds or by annuities, but both have the disadvantage of committing the government to fixed annual payments, whether convenient or not Another method is to use only surplus revenue, setting a permanent appropriation to be paid against principal over and above annual interest rates, thus amortization of the public debt halts when the government has a deficit The ultimate security of the public debt is the willingness of the people to pay and the ability of the government to collect the taxes The U S national debt originated with the Revolution and stood after the Second World War at approximately $250,000,000,000 See E R A Seligman, *Currency Inflation and Public Debts* (1921), William Withers, *The Retirement of National Debts* (1932), C C Abbott, *Management of the Federal Debt* (1946)

Deburau or **Debureau, Jean Gaspard** (both shĕ' gaspar' duburō'), 1796–1846, French pantomime performer, whose real name was Jan Kaspar Dvorjak, b Bohemia He was the star of the Théâtre des Funambules, where he introduced the pantomime character PIERROT His portrayal of Pierrot had great charm and a certain pathos He is the subject of the play *Deburau* (1918) by Sacha Guitry and of the biography *The Great Debureau* (Eng tr 1940) by Francis Kozik

Debussy, Claude Achille (klōd' ăshēl' dubusē'), 1862–1918, outstanding composer of the French impressionist movement His piano works exploit the subtle coloristic possibilities of the instrument to the utmost Among them are *Suite bergamasque* (pub 1905), containing the popular *Clair de lune*, *Estampes* (1903), *The Children's Corner* (1908), 24 preludes, including *La Cathédrale engloutie* (1910), and 12 études *L'Après-midi d'un faune* (1892), inspired by the poem of Mallarmé, stands out among his orchestral works, in addition to his *Nocturnes* (1899) and *La Mer* (1905) He also wrote many exquisite songs and an opera, *Pelléas et Mélisande* (1892–1902), on the drama by Maeterlinck See biographies by Edward Lockspeiser (1937) and Oscar Thompson (1937)

Debye, Peter Joseph Wilhelm (dēbī'), 1884–, American physicist, b Netherlands He was professor at the universities of Zurich, Utrecht, Göttingen, Leipzig, and Berlin In 1940 he came to the United States and became professor of chemistry at Cornell Univ For his work on the structure of molecules he received the 1936 Nobel Prize in Chemistry He is known also for his studies in the conductivity of electricity by salt solutions and in the heat capacity of solids

decadents (dĭkā'dunt, dĕ'kūdunt) [ultimately from Latin, =decaying] The name is loosely applied to those artists and writers, particularly poets, who at the end of the 19th cent devoted themselves to exploiting the more or less morbid and macabre expressions of human emotions Often confused with the French SYMBOLISTS, from whom the movement originally sprang, the decadents were most evident in England, where Oscar Wilde set an extreme example among such men as Ernest Dowson and Aubrey Beardsley and the writers of the *Yellow Book* While the symbolists were in general identified with the decadents (often largely in connection with the conduct of their personal lives), all decadents were not symbolists See G L Van Roosbroeck, *The Legend of the Decadents* (1927), Mario Praz, *Romantic Agony* (Eng tr, 1933)

Decalogue. see TEN COMMANDMENTS

Decameron, The (dĭkă'murun), or **Il Decamerone** (ēl dăkămārō'nā) [Gr ,=10 parts], collection of 100 tales by Giovanni BOCCACCIO, written in 1348–53 A group of friends, fleeing the plague, entertain each other in a villa outside Florence by telling anecdotes The stories are distinguished by humor and charm and by the occasional licentiousness of the subject matter and language They are valuable also as a picture of 14th-century manners There are a number of editions in English

De Camp, Joseph Rodefer (dĭ kămp'), 1858–1923, American figure and portrait painter, b Cincinnati, studied under Duveneck and at the Royal Academy, Munich After painting with Duveneck in Italy, he settled in Boston, where he taught in the school of the Museum of Fine Arts Among his best works are *Woman Drying Her Hair* and a portrait of Duveneck (Cincinnati Art Mus), *Little Hotel* and a portrait of Dr Horace H Furness (Pa Acad of the Fine Arts), and portraits of his daughter Sally and Daniel Merriman (Worcester, Mass , Art Mus)

Decamps, Alexandre Gabriel (ălĕksăd'ru gábrēĕl' dŭkā'), 1803–60, French painter, pupil of Abel de Pujol He early achieved a reputation for his vivid scenes of Oriental life, painted in strong color, with violent contrasts of light and shade and accurate detail His *Good Samaritan* and *Night Patrol at Smyrna* are in the Metropolitan Museum

De Candolle, Augustin Pyramus: see CANDOLLE.

Decapolis (dĕkă'pŭlĭs) [Gr ,=ten cities], confederacy of (originally) 10 ancient cities, all E of the Jordan, except Scythopolis The others were (according to Pliny) Dion, Pella, Gadara, Hippos, Gerasa, Philadelphia, Damascus, Raphana, and Kanatha The league was constituted after Pompey's campaign (65 B C –62 B C) as a protection against the Jews and the Arabian tribes and as a customs union The Roman governor of Syria exercised general supervision of their affairs, and they were liable to Roman military service and taxation The name was used for the general locality. Mat. 4 25, Mark 5 20, 7 31

decathlon (dĭkăth'lŏn), in modern OLYMPIC GAMES, a composite contest It consists of the broad jump, the high jump, discus throwing, shot putting, javelin throwing, the 100-meter, 400-meter, and 1,500-meter flat races, the 110-meter hurdle race, and pole vaulting The PENTATHLON was the composite contest of the ancient Olympics

Decatur, Stephen (dĕkā tur), 1779–1820, American naval officer, b Snepunxet, near Berlin, Md , son of a naval officer, Stephen Decatur After joining the U S navy in 1798, he rose to fame in the TRIPOLITAN WAR In 1804 he and his men went into Tripoli harbor, where the U S frigate *Philadelphia* had run aground and had been captured (see BAINBRIDGE, WILLIAM) They got aboard and set the frigate afire This daring won Decatur promotion to a captaincy He helped in the bombardment of Tripoli and after peace was concluded (1805) negotiated successfully with the bey of Tunis In 1808 he was one of the judges at the court-martial of James BARRON, thereafter the two men were enemies In the War of 1812 he commanded three vessels, with the *United States* as his flagship On Oct 25, 1812, the *United States* met and captured the British frigate *Macedonian* Afterward the British blockade held him powerless until Jan , 1815—when the peace had already been signed but news had not come Then in the *President* he put to sea, outran three enemy ships and defeated the fourth, the *Endymion*, but the battle delayed him and he had to surrender to the other pursuers In the so-called Algerine War in 1815 he used his squadron with vigor to force the dey of Algiers to sign the treaty which ended American tribute to Algeria As one of the three navy commissioners (1815 20), he was powerful in navy affairs His opposition to reinstating the unfortunate and disgraced James Barron led to bitter words Barron challenged him, and in the duel Decatur was mortally wounded at Bladensburg, Md , on March 22, 1820 He was buried with national mourning and is remembered for his reckless bravery and stubborn patriotism Decatur made at Norfolk the fervent toast, ending, "may she always be in the right, but our country, right or wrong " See biographies by C T Brady (1900), C L Lewis (1937), and Helen Nicolay (1942)

Decatur. **1** Industrial city (pop 16,604), co seat of Morgan co , N Ala , on the Tennessee river and N of Birmingham, founded 1820, inc 1826 It is a market, manufacturing, and shipping center handling iron and steel, textiles, timber, fertilizer, brick and tile, and diversified farm produce, there are also shipyards and a large flour mill TVA power supplies the city In the Civil War the city was all but destroyed **2** City (pop 16,561), co seat of De Kalb co , NW Ga , residential suburb of Atlanta, at the foot of Stone Mt , inc as a town 1823, as a city 1922 Agnes Scott College and Columbia Theological Seminary are here **3** City (pop 59,305), co seat of Macon co , central Ill , E of Springfield and on the Sangamon river (here dammed to form Lake Decatur), founded 1829, inc 1839 It is a railroad and industrial center with railroad repair shops The city makes metal products, processes corn and soybeans, and is the distributing point for a rich farm and livestock area Coal deposits underlie the region The site of the first Lincoln home in Illinois is near by, in Fairview Park is preserved the Lincoln log cabin courthouse, where the young lawyer practiced, and the city library has a Lincoln collection The Grand Army of the Republic was organized here in April, 1866 Decatur is the seat of James Millikin Univ (coeducational, 1901), which includes Decatur College and Industrial School and a junior college at Lincoln **4** City (pop 5,861), co seat of Adams co , NE Ind , SW of Fort Wayne, settled 1837 Its products include dairy and soybean foods and motors **5** Village (pop 1,599), SW Mich , SW of Kalamazoo, in a lake and farm region, inc 1861 Several Indian mounds are near by **6** Town (pop 2,578), co seat of Wise co , N Texas, NNW of Fort Worth Decatur has processing plants and industries in a dairying, cattle-raising, and farming region It is the seat of Decatur Baptist College (junior, coeducational, 1892)

Decazes, Élie (ālē' dukaz'), 1780–1860, French statesman, a close friend of Louis XVIII, who made him a duke in 1820 A lawyer and judge, he was made minister of police in 1815 and practically controlled the French government even before he became (1819) prime minister His government maintained a precarious balance between the ultraroyalists and the radicals His downfall came when the ultras accused him of complicity in the assassination of Charles Ferdinand, duc de BERRY (1820) He resigned, but Louis XVIII sent him as ambassador to England (1820–21). He continued to figure in politics until the Revolution of 1848.

Deccan (dĕ'kăn'), region of India Sometimes defined as all India S of the Narbada river, it is in a more limited sense the plateau of central peninsular India, including approximately all of Mysore and S Hyderabad, SE Bombay, and NW Madras The rich volcanic soil is used for growing cotton. Here in the late 18th cent the British decisively defeated the French in the struggle for India

December see MONTH

Decembrist Conspiracy. The confusion in Russia that accompanied the succession (Dec , 1825) of NICHOLAS I to Alexander I opened an opportunity for the secret revolutionary and patriotic societies which had risen in Russia after the Napoleonic Wars Many members of these societies were army officers It thus was not difficult to persuade several regiments in St Petersburg to refuse their oath of allegiance to the unpopular Nicholas and to demand that his elder brother, Constantine, be made emperor and grant a constitution The rebels were crushed by artillery fire, and five of their leaders were hanged This event, the first attempt at overthrowing the autocracy of the tsars, made a profound impression on Russia It led both to the increasing police terrorism of the tsarist government and to the spread of revolutionary doctrine among the educated classes

decemvirs (dĕsĕm'vurz) [Latin, =ten men], in ancient Rome, a group of 10 men named in a special judicial or executive capacity The most famous were those who developed the Laws of the Twelve Tables, the prime Roman code There was a permanent decemvirate who guarded the Sibylline Books, they were priests

decentralization, in government, seeks to increase the power of the lesser and more localized governmental units at the expense of the central authority The ultimate in governmental decentralization is ANARCHY Since the growth of the concept of nationality in the later Middle Ages and the Renaissance, modern states have tended towards centralization, but groups within the nations have fought against it After the First World War the movement for decentralization bore fruit in the establishment of the new Baltic states and the Irish Free State and in the heightened status of the British dominions as well as in the preservation of considerable autonomy in Scotland by a separate secretary of state In Europe the movement for decentralization has frequently been allied with regionalism, which seeks to promote ethnic and cultural particularism as well as administrative decentralization Modern France, despite its high degree of centralization, is the nation in which regionalist concepts have been most marked In political thought, regionalism stands in an intermediate position between decentralization and federalism In the United States the several states have always been jealous of powers not specifically granted the central government, but the compelling force of modern conditions has allowed the increase of Federal power Regional conferences of governors, interstate organizations, such as the Port of New York Authority, organizations of state officials, such as the American Legislators, the rise of constitutional home rule for cities, and the establishment of public and quasi-public corporations to administer public enterprises—all represent the force of decentralization in the United States Decentralization is advocated as lessening bureaucracy, relieving national legislatures of increasing burdens, increasing citizen interest in government, and more adequately meeting the needs of a given area

deciduous plant see TREE

decimal system (dĕ'sĭmul) [Latin, =of tenths], system of notation for writing numbers based upon powers of 10 A number is written as a row of digits, and each place in the row stands for a certain power of 10 Each place to the left of the decimal point indicates that a number is raised to a higher power of 10, and each place to the right of the decimal point indicates division by 10 or raising the number to a negative power of 10 To give examples $4{,}309 = 4\times10^3 + 3\times10^2 + 0\times10 + 9$, and $43.09 = 4\times10 + 3 + 0\times10^{-1} + 9\times10^{-2}$ It is believed that the decimal system is based upon 10 because man has 10 fingers and so became used to counting by 10's early in the course of civilization In our notation there are still traces of systems with other bases The English score and the French *quatre-vingt* are indications of 20 as a base The minute-second measure for angles is probably a survival of the ancient Babylonian 6x10 base The decimal system was introduced into Europe c 1300 It greatly simplified arithmetic and was a much-needed improvement over the Roman numerals which did not use a place system A number written in the decimal system is called a decimal, although sometimes this term is used to refer only to a proper fraction (see FRACTION) written in this system and not to a mixed number. Proper fractions are written as the sum of fractions whose denominators are powers of 10 (i e., as the sum of terms containing 10's with negative exponents). For example, $\frac{1}{2} = .5 = \frac{5}{10} = 5\times10^{-1}$, $\frac{3}{8} = .375 = \frac{3}{10} +$

$^7/_{100}+^5/_{1000}=3x10^{-1}+7x10^{-2}+5x10^{-3}$. Decimals are added and subtracted in the same way as are integers (whole numbers) except that when these operations are written in columnar form the decimal points in the column entries and in the answer must all be placed one under another In multiplying two decimals the operation is the same as for integers except that the number of decimal places (i e , digits after the decimal point) is equal to the sum of the decimal places in the factors In division, if there is a decimal point in the divisor, the point is shifted to the extreme right, and the decimal point in the dividend is shifted the same number of places to the right If necessary, one or more zeros are added to make this possible The decimal point in the answer is then placed above that in the dividend If the divisor contains no decimal point, the same rule applies except that no shift occurs in either divisor or dividend The decimal system is used in the arithmetic of all civilized countries Except for those in which English is spoken, most countries have their systems of weights and measures and their coinage based upon 10 (see METRIC SYSTEM) The Dewey decimal system of Melvil DEWEY is a system for classifying books in libraries

Decin (dyĕ'chĕn), Czech *Děčín*, Ger *Tetschen*, city (pop 10,639), N Bohemia, Czechoslovakia, on the Elbe A trade center, it also has a chemical industry.

Decius (Caius Messius Quintus Decius) (dē'shus), 201–51, Roman emperor (249 51), b Pannonia He was sent by PHILIP (Philip the Arabian) to quell a mutiny, but when the soldiers hailed him as emperor, he marched at their head, defeated and killed Philip near Verona, and took the purple, adding Trajan (Traianus) to his name He undertook to rebuild the state and in an effort to revive the state religion persecuted the Christians vigorously He was killed in attempts to repel an invasion of the Goths into Moesia and was succeeded by GALLUS

Decius Mus, Publius (mŭs), name of three Romans, father, son, and grandson, who—according to legend—sacrificed themselves for their country The father (d 340 B C) fought in the war against the Samnites as a tribune (343 B C) and, as consul, with Manlius Torquatus, commanded in the war with the Latins Near Mt Vesuvius he "devoted" himself to the gods, and then he deliberately exposed himself to death in the belief that the enemy would thereby be destroyed by the gods His son when consul for the fourth time (295 B C) similarly sought death in the battle at Sentinum against the Gauls, Samnites, and Etruscans His grandson, in the war with Pyrrhus, followed their example at Asculum (279 B C), according to Cicero's *Tusculan Disputations*

Decker, Thomas. see DEKKER, THOMAS

Declaration of Independence, full and formal declaration adopted July 4, 1776, by representatives of the 13 North American colonies announcing the separation of those colonies from Great Britain and making them into the United States Official acts which colonists considered infringements upon their rights had previously led to the Stamp Act Congress (1765) and to the First Continental Congress (1774), but these were predominantly conservative assemblies which sought redress from the crown and reconciliation, not independence The overtures of 1774 came to nothing, discontent grew, and as the armed skirmishes at Lexington and Concord (April 19, 1775) developed into the American Revolution, many members of the Second CONTINENTAL CONGRESS at Philadelphia followed the leadership of John Adams, John Hancock, and Samuel Adams in demanding independence The delegates from Virginia and North Carolina were specifically instructed on independence and on June 7, 1776, Richard Henry LEE called for a resolution of independence On June 11 John Adams, Benjamin Franklin, Thomas Jefferson, Robert R Livingston, and Roger Sherman were instructed to draft such a declaration, the actual writing was entrusted to Jefferson The first draft was revised by Franklin, John Adams, and Jefferson before it was sent to Congress, where it was again changed This final draft was adopted July 4, 1776, and Independence Day has been the chief American patriotic holiday ever since It is interesting to note, however, that the July 4 document is merely a fuller statement justifying the resolution of independence adopted by Congress July 2, 1776 The Declaration of Independence is the most important of all American historical documents, familiar to all educated Americans The opening paragraphs (given here in the form used in the engrossed copy) state the general fundamental American idea of government, based on the theory of NATURAL RIGHTS, which had been held by Marsilius of Padua, John Locke, Jean Jacques Rousseau, and others "When in the Course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume among the powers of the earth, the separate and equal station to which the Laws of Nature and of Nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation —We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty and the pursuit of Happiness —That to secure these rights, Governments are instituted among Men, deriving their just powers from the consent of the governed,— That whenever any Form of Government becomes destructive of these ends, it is the Right of the People to alter or to abolish it, and to institute new Government, laying its foundation on such principles and organizing its powers in such form, as to them shall seem most likely to effect their Safety and Happiness Prudence, indeed, will dictate that Governments long established should not be changed for light and transient causes, and accordingly all experience hath shewn, that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed But when a long train of abuses and usurpations, pursuing invariably the same Object evinces a design to reduce them under absolute Despotism, it is their right, it is their duty, to throw off such Government, and to provide new Guards for their future security" Then follows an indictment of George III for willfully infringing those rights in order to establish an "absolute Tyranny" over the colonies The document states that colonial patience had achieved nothing and therefore the colonists found themselves forced to declare their independence The stirring closing paragraph is the formal pronouncement of independence and is borrowed from the resolution of July 2 "We, therefore, the Representatives of the united States of America, in General Congress, Assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, do, in the Name, and by Authority of the good People of these Colonies, solemnly publish and declare, That these United Colonies are, and of Right ought to be Free and Independent States, that they are Absolved from all Allegiance to the British Crown, and that all political connection between them and the State of Great Britain, is and ought to be totally dissolved, and that as Free and Independent States, they have full Power to levy War, conclude Peace, contract Alliances, establish Commerce, and to do all other Acts and Things which Independent States may of right do —And for the support of this Declaration, with a firm reliance on the protection of divine Providence, we mutually pledge to each other our Lives, our Fortunes and our sacred Honor" Not all the men who helped draw up or voted for the Declaration signed it (Robert R Livingston, for example, did not) nor were all the signers present at its adoption All the signatures except three (Gerry, McKean, and Thornton) were affixed on Aug 2, 1776 The first is that of John Hancock, president of the Continental Congress The remaining 55 are those of Josiah Bartlett, William Whipple, Matthew Thornton, Samuel Adams, John Adams, Robert Treat Paine, Elbridge Gerry, Stephen Hopkins, William Ellery, Roger Sherman, Samuel Huntington, William Williams, Oliver Wolcott, William Floyd, Philip Livingston, Francis Lewis, Lewis Morris, Richard Stockton, John Witherspoon, Francis Hopkinson, John Hart, Abraham Clark, Robert Morris, Boyd (1945)

Declaration of Rights see BILL OF RIGHTS

Declaration of the Rights of Man, a fundamental document of French constitutional history, drafted by SIEYÈS, adopted by the Constituent Assembly on Aug 26, 1789, and embodied in the French constitution of 1791 as a preamble Based on the theories of J J ROUSSEAU and on the American Declaration of Independence, it stated the "inalienable rights" of the individual (a list of duties was, after some debate, omitted by its framers) The rights to "liberty, property security, and resistance to oppression" and the rights to freedom of speech, of the press, and of worship were guaranteed The document asserted the equality of men and the sovereignty of the people, on whom the law should rest, to whom officials should be responsible, and by whom finances should be controlled Its effect on liberal thought in the 19th cent was incalculable

declension: see INFLECTION

De Coninghi, Philips. see KONINCK, PHILIPS DE

Decorah (dĭkō'ru), city (pop 5,303), co seat of Winneshiek co , NE Iowa, 15 mi S of the Minn line, on the Upper Iowa river, inc. 1857 Settled largely by Norwegians, it publishes a Norwegian newspaper, its rich early history is preserved in a museum at LUTHER COLLEGE here Near by is a state game preserve, a fish hatchery, and a limestone ice cave

Decorated style or **Geometric style,** type of construction favored in the second period of Gothic architecture in England in the 14th cent The basic elements of Gothic architecture, as developed in the Early English style (late 12th and 13th cent) remained the same, but tracery, ornamented molding, and other decorations developed from straight geometric designs to more opulent and curvilinear patterns based on shapes in nature As the builders' skill advanced, the stone construction became lighter and more spacious and vaulting attained extraordinary degrees of complication It is exemplified in Bristol Cathedral

decoration, embellishment, enrichment, or ornamentation in architecture of walls (see MURAL PAINTING), public buildings and private houses (see INTERIOR DECORATION), metalwork, and woodwork It is also applied to textiles, pottery, books, and numerous household objects which have surfaces suitable for ornamental DESIGN, to ecclesiastical vestments and appurtenances, and to personal apparel and belongings, including costumes, jewelry, goldwork and silverware, arms and armor, tools, saddles, harness, and automobiles In its proper sense decoration embraces all the fine and applied visual arts

Decoration Day see MEMORIAL DAY

decorations, civil and military. The practice of rewarding civil and military achievements—including, in modern times, achievements in the arts, sciences, and education—grew out of the medieval custom of conferring knighthood At present, orders of knighthood in the feudal sense still exist in Great Britain (For the British orders of the Garter, Thistle, Bath, and others, see KNIGHT) Some recently created British orders—e g , the Distinguished Service Order (1886), the Royal Victoria Order (1896), and the Order of the British Empire (1917)—are decorations for civil and military service rather than true feudal orders In the rest of Europe the old orders of knighthood, where they still exist, have tended to become decorations without feudal connotations Among the best-known of these orders are the Order of the Golden Fleece created (1429 or 1430) by Philip the Good of Burgundy and conferred by Austria (until 1918) and by Spain, the Danish orders of the Dannebrog (1219) and the Elephant (1462), the Italian orders of the Annunziata (1362) and of SS Maurice and Lazarus (1434), the papal order of the Golden Spur (1559), the Prussian orders of the Black Eagle (1701), Red Eagle (1734), and Pour le Mérite (1740), and the Polish orders of the White Eagle and of Polonia Restituta (1919) The French Legion of Honor, created by Napoleon Bonaparte in 1802, is an order, it is composed of an unlimited number of knights, of a limited number of officers, commanders, grand officers, and holders of the grand cross, and of a grandmaster (the president of France) Most other European orders also are graded in several classes, and the stars, crosses, ribbons, and other insignia corresponding to the different classes vary greatly in aspect and value The French Croix de Guerre, instituted in 1915 for bravery, is awarded to enlisted men and, in cases of exceptional heroism, to officers It is not an order, but a decoration, as is also, for instance, the German Iron Cross The highest decoration for exceptional heroism in the United States is the Congressional Medal of Honor, instituted in 1862 Among other American decorations awarded by the Congress are the Distinguished Service Cross and Distinguished Service Medal (1917) and the Distinguished Flying Cross (1942) The Purple Heart (created by George Washington, 1782, revived 1932) is awarded for wounds received in action, the silver star and bronze star are awarded, respectively, for heroism and for outstanding service Oak-leaf clusters (in the navy, gold or silver stars) are marks of repeated awards of the same decoration In the United States a ribbon, indicating by its colors the corresponding medal, rather than the medal itself, is worn over the left breast pocket of the uniform or in the lapel of civilian clothes In some other countries, e g , Russia, the medals themselves are worn suspended on their ribbons Several countries—e g , France—award medals to entire units, every member of which is entitled to wear a *fourragère* (a braided cord) around the left shoulder Campaign ribbons and the battle stars worn on the ribbons are awarded automatically for presence in certain theaters of operation Soviet Russia, which long awarded only one decoration—the Order of the Red Star—now awards many, e g , the orders of Victory, Lenin, Suvarov, and Alexander Nevsky, these are orders in name only and belong to the category of medals.

De Coster, Charles Théodore Henri (du kō'stŭr, Fr. sharl' tāōdôr' ārē' du kôstĕr'), 1827–79, Belgian author, b Munich His collected legends from Flemish folklore (1857), written in old French style, gave him a reputation as a medievalist. His *Contes brabançons* (1861) was followed by his best-known work, *La Légende et les aventures héroïques, joyeuses et glorieuses d' Ulenspiegel et de Lamme*

Goedzak (1867; Eng. trs, 1918, 1921). This remarkable tale, written in archaic style and based on the Germanic folk hero and trickster, Till Eulenspiegel, has been compared with the *Gargantua* of Rabelais However, the book derives more directly from the medieval satiric allegory *Renard the Foz*, fashioned mainly in Flanders.

De Crayer, Gaspar see CRAYER, GASPAR DE.

decree, in law, decision of a suit in a court of equity It is the counterpart in equity of the judgment of a court of law, although in those jurisdictions where law and equity have merged, judgment is sometimes used to include both The difference between the two, however, is fundamental A judgment must be unconditionally for one party or another, setting the amount of damages awarded A decree, being more flexible, is adaptable to the peculiar necessities of each case Thus in a decree the act commanded may be conditioned upon the performance by the adverse party of a certain act The decree may act against the person of the defendant, it is not restricted to the award of money damages It may contain an INJUNCTION against the performance of certain acts One of the most familiar of the decrees given by courts of equity is the decree of DIVORCE, adjudicating the dissolution of a MARRIAGE and awarding ALIMONY Decrees are enforced by proceedings for CONTEMPT OF COURT.

decretals, see CANON LAW

Dedan (dē'-), eponym of a people apparently occupying Arabia S of Palestine The people are called Dedanim or Dedanites Gen 10 7, 25 3, Isa 21 13, Ezek 27 20 See DODANIM

Dedham (dĕ'dum), town (pop 15,508), co seat of Norfolk co, E Mass, SW of, and near, Boston, settled 1635, inc 1636 America's oldest frame house, the Fairbanks house (1636), is here, and Dedham is said to have had the first public school in America (1649) The county courthouse (1827) was the scene of the Sacco-Vanzetti trial. Dedham pottery has gained renown Paper products are made See history by Frank Smith (1936)

deduction [Latin, =leading down], in LOGIC, the form of inference in which particular conclusions are reached by reasoning from certain general principles assumed to be true For example, if we know that all men have two legs and that John is a man, it is then logical to deduce that John has two legs Deduction is contrasted with INDUCTION

Dee, John, 1527–1608, British astrologer He had a remarkable career as magician and scientist He was an accomplished mathematician, who studied not only at Cambridge (where he was a fellow) but also abroad, and he was a clergyman Accused of practicing sorcery against Queen Mary, he was acquitted and later was a favorite of Queen Elizabeth, drawing up valuable hydrographical and geographical materials on newly discovered lands for her He also made calculations in preparation for adoption of the Gregorian calendar in England, which he vainly sought He is better remembered, however, for the more sensational side of his career His interest in crystal gazing, divination, and the occult led to his being patronized by Emperor Rudolf II until dark rumors forced his departure from Prague Dee was also associated with Edward Kelley, who claimed to have discovered the alchemical secret of transmuting base metal to gold He was briefly the head of an occult group, and despite his protests he had an enormous reputation as a magician to the time of his death He wrote many works on mathematics, science, and the occult His diary was edited in 1842 by J O Halliwell-Phillips

Dee, rivers in Scotland **1** Aberdeenshire and Kincardine, celebrated for its beauty It rises in the Cairngorms and flows c 90 mi E past Braemar, Balmoral Castle, and Ballater to the North Sea through an artificial channel at Aberdeen Harbour It is a salmon stream **2** Kirkcudbrightshire, flowing 50 mi SE and S to Kirkcudbright Bay of Solway Firth just S of Kirkcudbright

Dee, river of Wales and England, rising in Merionethshire and flowing NE through Bala Lake and thence 70 mi through a picturesque course NE, N, NW to the Irish Sea At low tide the long, broad, shallow estuary is an expanse of sand, across which the narrow stream flows—Kingsley's "Sands of Dee" Thomas Telford's famous aqueduct crosses the Dee near Trevor SW of Wrexham Chester is the chief city on the river

deed, in law, formal contract conveying an interest in land or other realty A deed may warrant the extent of the conveying party's ownership or, if the party is uncertain of the precise extent, he issues a quitclaim (i e, a sale), without description, of whatever he may own The formalities with which a deed is invested are designed to make the instrument conclusive evidence of the transaction described and to obviate the need for further proof In all states deeds must be formally delivered and their receipt formally attested It is possible to deposit a deed with a third party or a court for delivery to the purchaser, this is termed a delivery in escrow. Most states also require that deeds be acknowledged by a duly authorized commissioner and that a copy be deposited with the clerk of the county where the realty is situated. If the formalities are not observed a deed (or the contract purporting to convey realty) is some, but not conclusive, evidence of the conveyance.

Deephaven, village (pop 1,026), E Minn., on the east shore of Lake Minnetonka W of Minneapolis.

Deep River, Conn see SAYBROOK.

deep-sea exploration: see OCEANOGRAPHY.

deer, ruminant mammal of the family Cervidae found in most parts of the world except Australia The only deer in Africa are small numbers of red deer found in the north in a forested area Antlers, solid bony outgrowths of the skull, develop in the males of most species They are shed and renewed annually The "velvet," a soft, hairy skin covering permeated by blood vessels, dries and is rubbed off as the antlers mature The stem of the antler is called the beam, and the branches are the tines Antlers are used as weapons during breeding-season combats between bucks In the deer which lack antlers (the MUSK DEER and Chinese river deer) the upper canines are long and serve as weapons Deer are polygamous They eat a variety of herbaceous plants, lichens, mosses, and leaves and bark of trees The white-tailed deer which lives in woodlands throughout the United States and in Central America and N South America was a source of food, buckskin, and other necessities for the American Indian and the white settler Slaughter through the years nearly exterminated it, but it is now restored in large numbers in the E United States and to a less extent in the West In summer the upper parts of the whitetail are reddish brown, in winter gravish The mule deer exists in reduced numbers from the plains region westward, and the closely related black-tailed deer is a Pacific coast form Old World deer include the red deer, the fallow deer, and the axis deer See also CARIBOU, ELK, MOOSE, REINDEER, WAPITI

Deer, Book of, ancient manuscript of the Gospels, with Irish notes, found in Aberdeenshire, Scotland It is now at Cambridge Univ

Deere, John, 1804–86, manufacturer of agricultural implements, b Rutland, Vt He was one of the pioneers of the steel PLOW industry A blacksmith by trade, he established (1836) a shop at Grand Detour, Ill Here he was associated with Leonard ANDRUS in making (1837) the first Grand Detour steel plow In 1843 Deere and Andrus formed a partnership for the manufacture of plows This partnership was terminated in 1847, when Deere moved to Moline, Ill Here he established a factory that in time made other farm implements as well as plows and became known throughout the world Deere himself long continued to work at the forge when he could, he refined the shape of the plow and improved other implements made in his factory

Deerfield. **1** Village (pop 2,283), NE Ill, NNW of Chicago, inc 1903 **2** Town (pop 2,684), NW Mass, on the Deerfield river, settled before 1670, inc 1677 Indian raids and alarms hindered the growth of the new village In the massacre of 1704, nearly 50 inhabitants were killed and most of the rest were taken to Canada; many were killed on the way Old Deerfield St is lined with 18th-century houses Deerfield Academy for boys (chartered 1797, opened 1799) is here

Deerfield, river rising in S Vermont and flowing S into NW Massachusetts, then SE to the Connecticut near Greenfield, Mass It furnishes power for many factories

Deerfield Beach, town (pop 1,850), SE Fla, on the Atlantic coast N of Fort Lauderdale, inc 1925 It is a trade center for a farm area

deerhound, dog allied to the greyhound, but stronger and heavier It resembles the Irish wolfhound, but is more delicately built than that breed There are two varieties, the Scottish and the Yorkshire The deerhound has been known since the 16th cent It was bred for deer hunting and therefore is strong, swift, and keen-sighted Its wiry coat is 3 or 4 in long, in color a dark blue-gray is preferred, though brindled and tawny deerhounds are popular The shoulder height of the male should be from 30 to 32 in and the weight between 85 and 110 lb

Deering, William, 1826–1913, American manufacturer of harvesting machinery, b South Paris, Maine, where he became manager of his father's woolen factory In 1870 he was persuaded by Elijah H Gammon to sell his business and go to Illinois and associate himself with Gammon in the manufacture of reapers Gammon & Deering acquired the manufacturing rights to the harvesting machine invented by Charles W. MARSH and the binder and knotting device invented by John F APPLEBY In 1879 Gammon retired and Deering became sole owner After a long series of experiments a suitable twine was perfected by Edwin H Fitler under Deering's direction Deering combined all these devices in one machine, the first successful binder His executive genius built the Deering Company into the largest agricultural-implement factory in the world. In 1902 the company was merged with the International Harvester Company

Deer Island, irregular island, c 10 mi long and 6 mi. wide, in Penobscot Bay, S Maine It comprises the towns **Deer Isle** (pop 1,303, settled 1762, inc. 1789) in the north and STONINGTON in the south.

Deer Lake, town (1945 pop. 1,932), W N F., NE of Corner Brook and on the Humber river. It is here that the electricity used by the mines at Buchans and by the paper mills at Corner Brook is generated from water power.

Deer Lodge, city (pop. 3,278), co. seat of Powell co., W Mont., SW of Helena and on the Clark Fork; inc 1883 Founded in 1862 after gold was discovered in Deer Lodge Valley, it was given the name Deer Lodge in 1864 It has large railroad workshops and is the seat of a state penitentiary

Deer Park. **1** Village (pop 3,510), SW Ohio, N of Cincinnati. **2** Town (pop 1,070), E Wash., N of Spokane, inc 1908. It ships lumber, grain, and fruit

Defense, United States Department of, created in 1947 as the National Military Establishment and reorganized as the Dept of Defense in 1949 The National Military Establishment was designed to provide a comprehensive program for the security of the United States and to coordinate effectively the activities and policies of the army, the navy, and the air force, and also to correlate those with the work of other government agencies relating to national security The Secretary of Defense—appointed from civilian life by the President with the consent of the U S Senate—was empowered to execute the general policies and programs for the National Military Establishment, to assist the President in all national security matters, and to help eliminate unnecessary duplication and overlapping in the fields of military supply, transport, storage, health, and research It was estimated that the integration of the armed services saved the U S government over $60,000,000 in a year and a half The establishment—under civilian control—was made up of the National Security Council (to help integrate domestic, foreign, and military policies), the National Security Resources Board (to help coordinate military, industrial, and civilian mobilization), the Central Intelligence Agency (to coordinate intelligence activities of Federal agencies concerned with national security), the Munitions Board, the Research and Development Board, the joint chiefs of staff, and the War Council (to advise the Secretary of Defense on broad armed-forces policy matters). In the face of much controversy and heavy criticism, James V FORRESTAL pioneered in the organization of the establishment Under the National Security Act of 1949, the National Military Establishment was redesignated the Dept. of Defense, nine military boards were abolished, and the new offices of Deputy Secretary of Defense and three Assistant Secretaries of Defense were created The Secretary of the Army, the Secretary of the Navy, and the Secretary of the Air Force—empowered by the act of 1947 to aid in the organization of the establishment—were subordinated (1949) to give the Secretary of Defense, Louis A JOHNSON, full cabinet authority over his department

defense mechanism, expression brought into popular usage by psychoanalysts Today it is employed widely and loosely to indicate some mode of behavior adopted unconsciously by an individual and designed to enable him to avoid or ward off an anticipated or imagined attack (criticism or condemnation rather than anything of a physical nature) Freud saw these mechanisms, commonly called dynamisms in psychoanalysis, as the result of conflicts between instinctual demands and fear or guilt The more important ones are rationalisation—protection of the ego against awareness of unsocial motives by substituting socially acceptable reasons for behavior, repression—prevention of unacceptable ideas entering the conscious mind, regression—return to infantile behavior and gratification, projection—the assignment to others of urges and wishes one's own ego repudiates, introjection or identification—reacting to another's desires or tendencies as if they were one's own, sublimation (considered a constructive mechanism)—redirection of the libido toward socially acceptable ends; and conversion—transformation of a psychological conflict into a physical symptom See Anna Freud, *The Ego and the Mechanisms of Defense* (1937)

Deffand, marquise du: see DU DEFFAND

Defiance, city (pop 9,744), co seat of Defiance co, NW Ohio, at the confluence of the Auglaize and Maumee rivers SW of Toledo, settled 1790, inc 1836. Its manufactures include machinery, dairy products, beer, and radio condensers Anthony Wayne built (1794) Fort Defiance here and William Henry Harrison built (1812) Fort Winchester near by. Defiance College is here.

deflation: see INFLATION.

Defoe or **De Foe, Daniel** (dĭ fō'), 1660–1731, English writer, author of ROBINSON CRUSOE, b. London As a dissenter, his education and chances of preferment were restricted. He was variously a traveler in Europe, a retail merchant at first successful but finally bankrupt, proprietor of a tile factory, and semiofficial government pamphleteer He was devoted to William III, and his poem *The True-born Englishman* (1701) won him the king's friendship But an ill-timed satire early in Queen Anne's reign, *The Shortest Way with Dissenters* (1702), which ridiculed Tory animus against nonconformists, re-

sulted in Defoe's being pilloried, fined, and imprisoned. Rescued by Robert Harley, he served the Whig minister both as a writer and as political agent in England and Scotland Defoe's *Review* (1704–13; facsimile ed , 22 vols , 1938, index by W. L. Payne, 1948), one of the earliest and best London miscellaneous journals, was independent, Whiggish, and was, incredibly, mostly written by Defoe himself Under George I he wrote moderate articles for the Tory press. In 1719 appeared Defoe's famous *Life and Strange Surprizing Adventures of Robinson Crusoe* and its seldom read sequel, *Farther Adventures of Robinson Crusoe;* in 1720 came the moralizing *Serious Reflections during the Life and Surprizing Adventures of Robinson Crusoe* His *Moll Flanders* (1722) and the less vivid *Fortunate Mistress, or . Roxana* (1724) are matter-of-fact, realistic novels about disreputable characters Defoe's fictitious *Journal of the Plague Year* (1722) and *Due Preparations for the Plague* (1722) are such lively and circumstantial descriptions of the London plague of 1665 that they almost seem the accounts of eyewitnesses Defoe's writing is clear, straightforward, and pungent, and the astonishing quantity of it all shows the man's enthusiastic, minute observation of affairs around him Others of his major works are *An Essay upon Projects* (1698), *History of the Union of Great Britain* (1709), *Captain Singleton* (1720), *Colonel Jack* (1722), and *A Tour through the Whole Island of Great Britain* (4 vols , 1724–42) See biography by James Sutherland (1937), W L Payne, *Mr Review* (1947)

De Forest, John William, 1820–1906, American author and soldier, b Seymour, Conn He served in the Civil War, chiefly as a captain His vivid accounts of battle scenes in Louisiana and with Sheridan in the Shenandoah Valley, published in *Harper's Monthly,* were among the best contemporaneous war records After the war he wrote a novel, *Miss Ravenel's Conversion from Secession to Loyalty* (1867, reissued 1939) He also wrote essays, stories, and poetry *A Volunteer's Adventures* (ed by J H Croushore, 1946) is a collection of his war articles and letters

De Forest, Lee, 1873–, American inventor, b Council Bluffs, Iowa, grad Yale, 1896 He was a pioneer in the development of wireless telegraphy, sound pictures, and television His audion (1921) made practicable transcontinental telephony, both wire and wireless The first high-powered naval radio stations were designed and installed by him He has been granted over 300 patents

De Forest, Lockwood, 1850–1932, American artist and Orientalist, b New York city He traveled in Europe and the Orient and founded workshops for the revival of wood carving at Ahmedabad, India His work exhibited at the First Indian Exhibition, Lahore, in 1882 was subsequently purchased for the India Museum, South Kensington, London A collection of Tibetan jewelry and other art objects was assembled in the Orient by De Forest for the Metropolitan Museum This museum has also a landscape by him, *Mount Carmel, California*

Defregger, Franz von (frănts' fŭn dā'frĕgur), 1835–1921, Austrian genre and historical painter, studied in Munich with Piloty He is known for his popular pictures of Tyrolean life, which depend largely for their interest on their fine characterization and humor Good examples are *The Last Summons* and *Zither Player* (both Vienna) and *German Peasant Girl* (Metropolitan Mus)

De Funiak Springs (dē fū'nēăk), town (pop 2,570), co seat of Walton co , NW Fla , W of the Choctawhatchee In the center of town is a picturesque fresh-water spring a mile in circumference and 80 ft deep

Degas, Hilaire Germain Edgar (ēlĕr' shĕrmĕ' ĕdgär' dŭgä'), 1834–1917, French painter, commonly called Edgar Degas, b Paris, son of a banker Intended for the law, he abandoned it for painting, studying at the École des Beaux-Arts and in Italy He first exhibited in the Salon of 1865 but later ceased showing there and exhibited with the impressionists In 1870 he enlisted in the army and after the Franco-Prussian War spent some time with relatives in New Orleans The last 30 years of his life he lived as a recluse in Paris, only a few old friends were admitted to his company Degas committed suicide alone in his studio at the age of 83 He was a perfectionist and a fanatic in his self-criticism as in his misanthropy An admirable painter, he practically abandoned oils for pastel, foregoing definitely the finished perfection to which he aspired, and despaired of attaining, in oils Favorite subjects of Degas were ballet dancers, modistes, women at their toilet, café life, and racetrack scenes. He was not, however, a *boulevardier;* an aristocrat in a plebeian century, he studied gay life as a detached observer His work is ranked with that of the greatest French artists. In his youthful works, drawing predominates over color, but his first pastels, done in his middle age, are gorgeous in color, in his later work, while color is much subdued, it is subtle and immensely effective. His later oils and particularly his pastels, are daring in composition and free in execution. They exercised a great and liberating influence on such men as Gauguin, Toulouse-Lautrec, and Picasso and constitute a penetrating psychological commentary on his day and generation Famous examples of his work are *La Danseuse au bouquet, saluant sur la scène* and *Les Repasseuses* (Louvre), *Dancer Fastening Her Sandal, Star Dancer,* and *Woman at Her Toilet* (Luxembourg Mus , Paris), and *La Modiste* (Metropolitan Mus) Degas also executed some fine bronzes of dancers and horses See studies by Julius Meier-Graefe (Eng. tr , 1923) and Camille Mauclair (Eng tr , 1941; new ed , 1948), Ambroise Vollard, *Degas an Intimate Portrait* (Eng. tr , 1927; new ed , 1937)

De Gasperi, Alcide (älchā'dā dā gä'spārē), 1881–, Italian statesman Born in the Trentino—then under Austria—he early represented the Italian Irredentists in the Austrian parliament From 1921 until 1924 he was a Catholic deputy in the Italian parliament After 16 months of imprisonment as an anti-Fascist, De Gasperi received (1931) a position at the library of the Vatican, where he organized, during the Second World War, the Christian Democratic party After the Italian surrender in 1943 he held several cabinet posts, and in Dec , 1945, he became premier of a coalition cabinet Although his cabinet was subsequently several times reorganized, De Gasperi remained premier In June, 1947, he excluded Communists and left-wing Socialists from the government, and in April, 1948, his party won a decisive electoral victory De Gasperi championed close cooperation with the United States and caused Italy to adhere to the European Recovery Program and to the North Atlantic Treaty

De Gaulle, Charles see GAULLE, CHARLES DE

degeneration. During infectious diseases and intoxications various tissues suffer from disordered nutrition, which results in changes in function and also in appearance of the cells in the tissue There are many types of change, such as cloudy swelling and fatty, mucous, colloid, amyloid, and hyaline degeneration Deposits of calcium salts and pigments also occur, either within or between cells or in place of groups of cells Fatty changes are not uncommon in the course of long high fevers and often occur in the heart A certain degree of degeneration can be repaired in most kinds of tissue In more severe cases the cells die

degree, academic, bestowed upon a student on the fulfillment of certain requirements or given as an honor to an eminent person The degrees usually conferred in American universities are Bachelor of Arts (B A), at the end of a LIBERAL ARTS course, Bachelor of Science (B S), Bachelor of Laws (LL B), Master of Arts (M A) or of Science (M S), at the end of a prescribed postgraduate course in liberal arts or in science The highest degree conferred by a university is the doctorate Doctor of Philosophy (Ph D), of Medicine (M D), of Divinity (D D), of Laws (LL D) There are numerous other degrees less often given, including purely honorary awards such as Doctor of Literature (Litt D) The requirements for degrees differ in different institutions The gowns and insignia worn at academic convocations indicate the degrees attained by their wearers and the degrees for which they are candidates (see ACADEMIC COSTUME)

De Grey, George Frederick Samuel Robinson, Earl see RIPON, GEORGE FREDERICK SAMUEL ROBINSON, 1ST MARQUESS OF

De Haas, Maurice Frederick Hendrick (dĕ hās'), 1832–95, American marine painter, b Rotterdam, Netherlands, studied at the academy there and at The Hague He settled (1858) in New York city, where he quickly gained recognition He was an original member of the American Water Color Society and became a member of the National Academy in 1867 Among his notable works are *Wreck on the Isle of Jersey, Menhaden Boats off Long Island Beach, The Rapids above Niagara, Tropical Sunset at Sea* (N Y Public Library) His masterpiece is *Farragut Passing the Forts at New Orleans*

De Haven, Edwin Jesse (dŭ hā'vŭn), 1816–65, American arctic explorer He accompanied Charles Wilkes on the naval exploring expedition that reached Antarctica In 1850 he was chosen to head an expedition into the arctic regions financed by Henry Grinnell to search for the lost party of Sir John Franklin Franklin's men were not found, but De Haven discovered Grinnell Land on Ellesmere Island

De Heem, Jan Davidszoon: see HEEM, JAN DAVIDSZOON DE

Dehmel, Richard (rĭkh'ärt dā'mĭl), 1863–1920, German poet After taking his degree in economics, he soon devoted himself to literature Despite his age and pacifist convictions, he fought in the First World War, and the strain led to his death His restless and virile temperament found expression in verse of great variety, composed often of conflicting elements but finely fashioned. A few of his lyrics have a strong social cast In general he represents a revolt against the extreme naturalistic school. His works include the collection *Erlösungen* [redemptions] (1891), *Schöne wilde Welt* [fair wide world] (1913), and the novel in verse *Zwei Menschen* [two souls] (1903)

Dehn, Adolf Arthur (dān), 1895–, American lithographer and painter, b. Waterville, Minn.; son of a German farmer. He studied at the Minneapolis Art Institute and under Boardman Robinson at the Art Students League of New York From 1921 to 1929 he traveled and studied in Europe, supporting himself largely by drawings for German and American magazines After 1929 he lived mostly in the United States, where his satiric figure studies and subtle landscapes made him a favorite black-and-white artist. He devoted himself primarily to lithography from 1927 to 1940, but after that became a successful water-colorist He exhibited widely and is represented in most American, and several foreign, galleries

De Hooch or **De Hoogh, Pieter** see HOOCH, PIETER DE

Dehra (dā'rŭ) or **Dehra Dun** (dōōn), town (pop 78,228), NW United Provs , India The temple (1699) of Ram Rai, founder of the Hindu Udasi sect of ascetics, is the most notable building There is an important institute for research in forestry, with an associated museum and a botanical garden

Deianira (dē"yənī'rə), in Greek legend, daughter of OENEUS and sister of MELEAGER and TYDEUS She became the second wife of HERCULES, who saved her from the centaur NESSUS

Deidamia (dē"īdā'mēə), in Greek legend, daughter of Lycomedes and mother of Neopotolemus by ACHILLES

Deira (dē'rə), Anglian kingdom between the Humber and the Tyne, united (late 6th cent) with Bernicia, to the north, to form NORTHUMBRIA.

Deirdre (dēr'drē, -drā, dār'-), heroine of Irish story. At her birth great misfortunes were foretold, and she was brought up in seclusion to be the wife of King Conchobar of Ulster By accident she saw Naoise, the son of Usnach, and fell in love with him. He and she and his brothers Ainle and Ardan fled to England After a long idyllic stay, they were enticed into returning by Conchobar, who killed the brothers, Deirdre died on their grave This story was a favorite with recent Irish writers, notably J. M Synge, W B Yeats, and James Stephens

deists (dē'ĭsts), term commonly applied to those thinkers in the 17th and 18th cent who held that the course of nature sufficiently demonstrates the existence of God For them formal religion was superfluous, and they scorned as spurious claims of supernatural revelation Many of them believed that God stands apart from human affairs Their tenets stemmed from the rationalism of the period, and though the word *deist* is not now generally used, the tenor of their belief persists The term *freethinker* is almost synonymous Voltaire and J J Rousseau were deists, as were Benjamin Franklin and Thomas Jefferson

De-jima see DE-SHIMA

De Kalb, Johann see KALB, JOHANN.

De Kalb (dē kălb') **1** City (pop 9,146), N Ill , W of Chicago, in a farm area, inc 1861 Among its manufactures are musical instruments, wire and wire products, and canned foods The city is the seat of Northern Illinois State Teachers College and has a memorial library **2** Town (pop 1,287), E Texas, W of Texarkana, in a cotton, truck and timber area

Dekar (dē'-), father of an officer of Solomon 1 Kings 4 9

De Kay, James Ellsworth, 1792–1851, American naturalist, b Lisbon, Portugal, M D Univ of Edinburgh, 1819 He became actively associated with the New York Lyceum of Natural History (later the New York Academy of Sciences), serving as librarian and first editor of its *Annals* He studied (1831-32) Asiatic cholera in Turkey Later he joined the New York state natural history survey as zoologist, reporting the work of his division in the monumental *Zoology of New York* (5 vols , 1842-44)

Deken, Agatha see WOLFF, ELISABETH

De Keyser, Nicaise see KEYSER, NICAISE DE

De Keyser, Thomas. see KEYSER, THOMAS DE

Dekker, Eduard Douwes (ā'dŭart dou'ŭs dĕ'kûr), pseud **Multatuli** (mŭltā'tŭlē), 1820-87, Dutch novelist His experiences in the Javanese colonial service (1838–57) made him an ardent advocate of reform in colonial administration and were the inspiration of the novel for which he is best known, *Max Havelaar* (1859, Eng tr , 1927)

Dekker or **Decker, Thomas,** 1572?–1632, English dramatist and pamphleteer Little is known of him save that he made a precarious living from his plays and pamphlets and that he was in prison for debt from 1613 to 1619 His best plays are *The Shoemaker's Holiday* (1600), *Old Fortunatus* (1600), *The Honest Whore* (with Thomas Middleton, 1604, Part II, 1630), *The Roaring Girl* (with Thomas Middleton, 1611) and *The Virgin Martyr* (with Philip Massinger, 1622) Occasional lyrics in his plays are among the best of the period His vigorous, realistic, affectionate picture of London in his prose writings is tempered with humanitarian indignation and satire *The Bellman of London* (1608) is an exposé of all kinds of roguery, and *The Gull's Hornbook* (1609) is an ironical book of manners *The Wonderful Year* (1603) is a vivid description of the plague See studies by M. L. Hunt (1911) and K L Gregg (1924).

De Koninck, Philips: see KONINCK, PHILIPS DE.

de Koven, Reginald, 1859–1920, American composer and music critic, b Middletown, Conn , grad Oxford, 1879 He received his musical education on the Continent, Délibes was one of his teachers He composed the operas *The Canterbury Pilgrims* (1917) and *Rip Van Winkle* (1920), based on plays by Percy MacKaye, but is best known for his operettas Of these the most famous was *Robin Hood* (1890), containing the song *Oh, Promise Me* He was music critic for newspapers in New York and Chicago See Anna de Koven, *A Musician and His Wife* (1926)

de Kruif, Paul (du krīf'), 1890–, American author, b Zeeland, Mich , grad Univ of Michigan (B S , 1912) He was bacteriologist at the university from 1912 to 1917 Among his books are *Microbe Hunters* (1926), *The Fight for Life* (1938), and *Hunger Fighters* (1939)

De la Beche, Sir Henry Thomas (dŭ lä bāsh', dĕlubĕsh'), 1796–1855, English geologist His privately undertaken work on a geological map of England attracted the attention of the government to the need for geological surveys The project was subsidized in 1832 and the Geological Survey was organized in 1835 with De la Beche as director He wrote several standard works on geology including *A Geological Manual* (1831, 3d ed , 1833), *Researches in Theoretical Geology* (1834), and *How to Observe Geology* (1835), which he enlarged under the title *The Geological Observer* (1851, 2d ed , 1853) He was knighted in 1848

Delaborde, Henri, Comte (ārē' kōt' dulabôrd'), 1811–99, French historical painter and art critic, pupil of Delacroix Examples of his painting are in Amiens and Versailles, but he is best known for his critical works on Flandrin and Ingres and for his history of the Académie des Beaux-Arts, of which he was secretary from 1874 to 1898

Delacroix, Ferdinand Victor Eugène (fĕrdänä' vĕktôr' ûzhĕn' dulakrwä'), 1798–1863 French historical painter He studied with Guérin and at the École des Beaux-Arts, but very early revolted against academic instruction Almost with his first work, *Dante and Vergil* (Louvre), exhibited in 1822, Delacroix became the recognized leader of the romantic movement in French painting In 1824 his *Massacre of Scio* (Louvre) was acquired by the government In 1832 he visited Morocco and in 1834 exhibited his *Women of Algiers* (Louvre) Throughout this period his work continued to arouse hot debate, but the patronage of Thiers secured him numerous public commissions His decorations in the Hôtel de Ville (Paris), in the Gallery of Apollo (Louvre), and for the libraries of the Luxembourg and of the chamber of deputies are splendid examples of his art as a mural painter A man of delicate constitution, Delacroix nevertheless displayed in his work a soul of indomitable energy In color, draughtsmanship, and composition his paintings are consistently dynamic As a colorist in particular he is ranked among the greatest of French painters His work is best seen in the Louvre He is represented in the Metropolitan Museum and in the Walters Art Gallery, Baltimore See his journal (tr by Walter Pach, 1937), study by Dorothy Bussy (1907)

Delafield, E. M (dĕl'ufēld"), 1890–1943, English novelist, whose real name was Edmée Elizabeth Monica de la Pasture, daughter of Mrs Henry de la Pasture and wife of Arthur Paul Dashwood She is best known for her *Provincial Lady* series, which includes *The Diary of a Provincial Lady* (1931), followed by *The Provincial Lady in London* (1934), *in America* (1934), and *in Wartime* (1940) Besides plays, other works include *I Visit the Soviets* (1937) and *No One Now Will Know* (1941)

Delafield, Francis, 1841–1915, American pathologist, b New York city, M D College of Physicians and Surgeons, 1863 After studying under Rudolf Virchow, he became professor of pathology (1876) and director of the newly founded laboratory (1878) at the College of Physicians and Surgeons He studied especially the pathology of nephritis and pneumonia and wrote several works, including a standard textbook of pathology (with T M Prudden, 1885, 16th ed , 1936)

Delagoa Bay (dĕlŭgō'u), large inlet, S Mozambique On its shore is the port of LOURENÇO MARQUES The bay was discovered in 1502 by a member of Vasco da Gama's party, and the adjacent territory was explored (1544) by the Portuguese Lourenço Marques Dutch from the Cape of Good Hope settled along the shores in 1721, but in 1732 they were forced to leave because of malaria In the early 19th cent Great Britain and Portugal both established territorial claims on the basis of conflicting treaties with native chiefs Not until the South African Republic (the Transvaal), seeking an outlet to the sea, attempted to annex a part of the area did the British and the Portuguese reassert their claims France arbitrated the dispute and made an award to Portugal.

Delaherche, Félix Auguste (fālĕks' ôgüst' dûlä-ârsh'), 1857–, French potter, considered the greatest since Bernard Palissy He works alone in the village of La Chapelle-aux-Pots, makes no duplicates, fires his kiln but once a year, and destroys every piece with which he is dissatisfied. He was made first a member and later an officer of the Legion of Honor

Delaiah (dĕlāī'u) **1** Chief priest 1 Chron 24 18 **2** Ancestor of a family who returned with Zerubbabel Ezra 2 60, Neh 7 62 **3** Father of SHEMAIAH 3. **4** Prince of Jehoiakim Jer 36 12,25.

De Lairesse, Gerard: see LAIRESSE, GERARD DE

de la Mare, Walter (dĕl'umâr"), 1873–, English poet and novelist He earned his living as a bookkeeper, and his first books—*Songs of Childhood* (1902), *Henry Brocken* (1904), a novel, and *Poems* (1906)—were produced in his scanty leisure A small government pension finally released him from distasteful work Both his verse and his prose show a delight in imaginative excursions and in the purely fantastic Much of his poetry is written for or about children His fiction includes *The Return* (1911), *Memoirs of a Midget* (1921), and *On the Edge* (1930), a collection of somewhat macabre short stories Of his verse, *Peacock Pie* appeared in 1912, *Down-adown-Derry* in 1921, *Poems for Children* in 1930, *Fleeting and Other Poems* in 1933 He has compiled three anthologies of characteristic charm, *Come Hither* (1923), *Behold This Dreamer* (1939), and *Love* (1943) See study by Forrest Reid (1929)

Delambre, Jean Baptiste Joseph (zhä' bätēst' zhôzĕf' dulä'bru), 1749 1822, French astronomer and mathematician He was a member of the bureau of longitudes from 1795 and professor at the Collège de France from 1807 With P F A Méchain he measured (1791–99) for the French government an arc of the meridian between Barcelona and Dunkirk He is noted also for astronomical computations, especially a table of the motions of Uranus, and for discovering four formulas in spherical trigonometry (Delambre's analogies)

De Lancey (dŭ lăn'sē), family of political leaders, soldiers, and merchants prominent in colonial New York **Étienne De Lancey** or **Stephen De Lancey,** 1663–1741 b Caen, France, was among the more famous of those Huguenots exiled by the revocation of the Edict of Nantes In New York he became one of the city's wealthiest men through his activities as a merchant He married into the Van Cortlandt family and was for 24 years a member of the colonial assembly His town house, built in 1719, was later sold to Samuel FRAUNCES, who made it a notable tavern in the Revolutionary period It still stands, probably the most famous of the old buildings on Manhattan Island His son, **James De Lancey,** 1703–60, b New York city, educated in England, was a noted jurist and one of the most important figures in colonial politics in New York He was a justice (1731–33) and chief justice (1733–60) of the provincial supreme court and served (1753–55, 1757–60) as lieutenant governor His political dexterity enabled him to control both the council and assembly, and after the suicide of the governor, Sir Danvers Osborne, he also assumed control of that office He led the De Lancey faction against Gov George Clinton in politics and against the Livingston faction when that family expressed its Presbyterian opposition to the chartering of King's College (now Columbia Univ) as an Anglican institution He was presiding judge at the trial of John Peter ZENGER and was president of the Albany Congress (1754) His son, **James De Lancey,** 1732–1800, b New York city, inherited the leadership of the De Lancey faction and, although he had opposed British colonial policies, was a Loyalist in the American Revolution He later received $160,000 for his estates, which were confiscated by the patriots His cousin, **James De Lancey,** 1746–1804, b New York city, was also a Loyalist during the Revolution He commanded a cavalry troop in raids outside New York city before fleeing (1782) to Nova Scotia **Oliver De Lancey,** 1718–85, son of Étienne, b New York city, was a British officer who served in the last of the French and Indian Wars and in the American Revolution His son, **Oliver De Lancey,** 1749–1822, b New York city, was also a British officer in the Revolution, succeeding John André as adjutant general of the British forces in America

Deland, Margaret Wade (Campbell) (dulănd'), 1857 1945, American novelist, b Allegheny (now part of Pittsburgh) She married Lorin F Deland of Boston in 1880 Her first successful novel, *John Ward, Preacher* (1888), was followed by her pleasant and sentimental stories of village life, including *Old Chester Tales* (1899) and *Dr Lavendar's People* (1903) *The Awakening of Helena Richie* (1906) and *The Iron Woman* (1911) are novels See her autobiographical works, *If This Be I, as I Suppose It Be* (1935) and *Golden Yesterdays* (1941)

De Land, resort city (pop 7,041), co seat of Volusia co , NE Fla , N of Orlando and SE of Lake George, in a productive citrus-fruit area, founded 1876 John B Stetson Univ (Baptist, coeducational, 1883) and the Royal French Museum are here From the Ponce de Leon Springs near by flow about 94,000 gal a minute

Delane, John Thaddeus (dûlān'), 1817–79, editor of *The Times* (London), 1841–77. See biography by Sir Edward T Cook (1915), The Times (London), *A History of The Times* (1939)

De Langlade, Charles Michel: see LANGLADE

Delano, Amasa (ă'musu dĕ'lunō), 1763–1823, American sea captain, b Duxbury, Mass. In the American Revolution he was a soldier at 15 and later a privateersman His experiences on the sea in the days of New England's supremacy are recorded in his *Narrative of Voyages and Travels in the Northern and Southern Hemispheres, Comprising Three Voyages Round the World* (1817). See J B. Connolly, *Master Mariner* (1943)

Delano, Jane Arminda, 1862–1919, American nurse and hospital administrator, b Schuyler co , N Y., grad Bellevue Hospital School of Nursing, 1886. She was superintendent of nurses at the Univ of Pennsylvania Hospital and at Bellevue Hospital and superintendent of the Army Nurse Corps In the First World War she developed a nursing reserve under the Red Cross With Isabel McIsaac she wrote *American Red Cross Textbook on Elementary Hygiene and Home Care of the Sick* (1913), which went through several editions

Delano, William Adams, 1874–, American architect, b New York city, grad Yale, 1895, studied at the École des Beaux-Arts The firm of Delano and Aldrich (1903) designed many large representative buildings and residences, mostly in the traditional style In 1940 they built LaGuardia Airport Delano was a professor of design (1903–10) at Columbia Univ See Delano and Aldrich, *Portraits of Ten Country Houses* (1924)

Delano (dĕ'lunō) **1** City (1940 pop 4,573, 1946 special census pop 6,630), S central Calif , NNW of Bakersfield in the San Joaquin Valley, inc 1915 It is a shipping point for vegetables and fruits and has a winery and a cotton gin **2** Village (pop 1,094), E Minn , W of Minneapolis and on the Crow, platted 1868, inc 1885. It has granite works and food-processing plants

Delany, Martin Robinson (dûlă'nē), 1812–85, American Negro leader, b Charles Town, Va (now in West Virginia) The son of free Negroes, he attended a Negro school in Pittsburgh and became a journalist and social reformer He studied medicine at Harvard In 1852 appeared his *Condition, Elevation, Emigration, and Destiny of the Colored People of the United States,* which emphasized the practical aspects of Negro problems He worked nobly in a cholera epidemic in Pittsburgh and continued to show humanitarian interests He took up the cause of emigration—the return of American Negroes to Africa—was largely responsible for the first National Emigration Convention in 1854, and headed an expedition to the Niger valley In the Civil War he was an army physician and was the first Negro major in the U S army In the Reconstruction he was in the Freedmen's Bureau, served as a trial judge in Charleston, S C , and was defeated in the election for lieutenant governor of South Carolina in 1874, he was a stern enemy of corruption His ideas of race appeared in *Principles of Ethnology* (1879) See Benjamin Brawley, ed , *Early Negro American Writers* (1935)

De la Pasture, Mrs Henry see CLIFFORD, SIR HUGH

De la Ramée, Louise see OUIDA

Delarey or **De la Rey, Jacobus Hercules** (yäkō'bus hĕi'kulĕs dularī'), 1847? 1914, Boer general in the South African War He scored several victories in the early phase of the war In later guerrilla fighting he was successful in eluding British traps Delarey appeared reconciled to the Boer defeat and sat (1907) in the first parliament which Great Britain permitted in the Transvaal At the outbreak of the First World War, however, he was implicated in a plot against the government and was shot dead by a patrol which was rounding up dissidents

Delaroche, Hippolyte (ēpôlĕt' dularôsh'), 1797-1856, French historical and portrait painter, commonly called Paul Delaroche He studied under Gros The exhibition of his large *Joas Saved by Josabeth* in 1822 brought him a popularity which continued throughout his life He devoted himself chiefly to the painting of large historical canvases *Death of Queen Elizabeth, Children of Edward IV in the Tower* (Louvre), and *Death of the Duke of Guise* (Chantilly) are notable examples Romantic in subject and in sentiment, the painting of Delaroche is studied and academic in handling He became a member of the Institut de France and a professor of the École des Beaux-Arts In 1837 he received the commission for his enormous painting in the hemicycle of the lecture theater of the École, his most ambitious work Late in life he painted his *Young Martyr* (Louvre) His excellent portraits, among which are those of Guizot and Rémusat, are perhaps his best claim to lasting fame

de la Roche, Mazo (mā'zō du la rôsh'), 1885–, Canadian novelist, b Toronto Her most famous novel, *Jalna* (1927), won an *Atlantic Monthly* prize Other books about the Whiteoak family of "Jalna" are *Whiteoaks* (1929), *Finch's Fortune* (1931), *Young Renny* (1935), *Whiteoak Harvest* (1936), *Growth of a Man* (1938), *The Building of Jalna* (1944), and *Mary Wakefield* (1949) Her dramatization of *Whiteoaks* had long runs in London and New York, and a film version of *Jalna* was released in 1935.

De la Rue, Warren (dĕ'lŭrōō, dĕlurōō'), 1815–89, British scientist and inventor Especially noted as an astronomer, he was a pioneer in celestial photography. He adapted the wet-plate process to

lunar photography and invented (1858) for Kew Observatory a photoheliograph, the first device to give good solar pictures His photographs of a solar eclipse in 1860 demonstrated that prominences observed at the sun's edge during eclipses are of solar origin. De la Rue is known also for his research in chemistry, solar physics, and electrical discharge through gases His inventions include an envelope-folding machine (1851)

Delavan (dĕl'uvăn), 1 City (pop 1,181), central Ill , S of Peoria, founded 1837, inc 1888 2 City (pop 3,444), SE Wis , E of Janesville, in a resort, dairy, and livestock area, settled 1836, inc 1897 Knit goods are made A state school for the deaf is here, and Delavan Lake is near by

Delavigne, Casimir (kazēmēr' dŭlăvē'nyu), 1793-1843, French dramatist, poet, and satirist His first publication, a verse diatribe against the Restoration, *Les Messéniennes* (1818), brought him popular recognition and was published in varying editions until 1840 His tragedies were enormously successful, they include *Les Vêpres siciliennes* (1819), *Le Paria* (1821), *Louis XI* (1832), and *Les Enfants d'Édouard* (1833) Delavigne was ranked with Béranger as a national poet

Delaware (dĕ'luwâr, -wur), state (1,978 sq mi ; with water surface 2,370 sq mi , 1940 pop 266,505, 1949 estimated pop 311,000), E United States, one of the Middle Atlantic states and one of the Thirteen Colonies The capital is DOVER, the only large city is WILMINGTON With the Eastern Shore of Maryland, the state occupies the peninsula between Chesapeake Bay and Delaware Bay Delaware is the eastern portion, fronting on the Delaware river, which broadens into Delaware Bay, the bay in turn merges into the Atlantic at Cape Henlopen. The state thus has water along its entire eastern edge (with New Jersey across the river and the bay), elsewhere it is bounded by Pennsylvania in the north and by Maryland in the west and the south The second smallest of all U S states (only Rhode Island is smaller), Delaware is sometimes called the Diamond State, obviously in reference to its size and the fertility of its soil (which, however, suffered from overuse in the 19th cent and had to be restored to vigor by scientific farming). None of the narrow state is very far from water There are fine beaches, notably that at Rehoboth Across the state run many small rivers, parting on a low watershed, some flowing eastward to the Delaware, others westward across Maryland to the Chesapeake, the best known of these streams are two connected rivers in the north, the Christina and the Brandywine The climate is equable, and the vegetation shows Delaware to be what it turned out to be in history, a true border state, a meeting place of South and North The land is all low-lying from the sand dunes in the southern sector to the pleasant little hills on the border of Pennsylvania in the north, the average altitude is c 60 ft , while the highest point, at Centerville (NW of Wilmington and almost on the Pennsylvania border) is but 440 ft Except for the great industrial area around Wilmington, the state is agricultural, producing grain, truck (notably strawberries), and fruit Since the 1930s chicken farming has been prominent The orchards have lost some of their fame for apples and peaches in competition with distant regions such as the West Coast, but they retain their old beauty, giving the land a froth of pink and white blossoms in the early spring. The natural forests have thinned with use over the centuries, but there are still wooded sections, and a little of the area is now preserved in state forests The variegated industries around Wilmington produce much wealth, and the far-reaching activities of the DU PONT family have centered in Delaware, with their accent on explosives and plastics (most of which are manufactured outside the state) Because of Delaware's easy law of business incorporation, many of the country's largest corporations have home offices in Wilmington The land has been in use since time immemorial, for it was occupied by tribes of the agricultural DELAWARE INDIANS—notably the Nanticoke in the south and the Minqua in the north—long before Henry Hudson in the service of the Dutch West India Company sailed into Delaware Bay in 1609 He was followed a year later by Sir Samuel Argall, who was bound for the colony of Virginia and called one of the capes at the entrance to the bay Cape La Warre, after the governor of Virginia, Thomas West, Baron DE LA WARR; hence the name of bay, river, state, and Indians The region was thus from the beginning contested by the Dutch and the English, it was to see much rivalry for ownership, both among nations and later between British proprietors. The first settlement was made by Dutch patroons in partnership with the navigator, David Pieter DE VRIES, it was called Swanendael and was established at the site of the present Lewes in 1631. It did not long survive, for it was attacked and utterly destroyed by the Indians within a year The Indians were, however, generally friendly and willing to trade with the white newcomers Partly because the Dutch West India Company was more interested in this trade on the South River (the Delaware, the North River was the Hudson, in the Dutch colony of New Netherland) than in settlement, several Dutchmen gave their services to Sweden The best known of these was Peter MINUIT, who had been governor of New Amsterdam, in 1637-38 he directed a colonizing expedition for the Swedes Fort Christina was founded in 1638 on the site of present Wilmington and was named in honor of the queen of Sweden The colony was launched and grew with Swedish, Finnish, and Dutch settlers (for its history, see NEW SWEDEN) The most able of the governors was John Bjornson PRINTZ Tentative efforts of the English colonists of Connecticut to establish trading posts in the Delaware river region failed, but the Dutch were not so easily disposed of Peter STUYVESANT, governor of New Netherland, sailed boldly down in 1651 and established on the Delaware shore Fort Casimir, on the site of the present NEW CASTLE This the Swedes took by surprise in 1654, but the triumph was short-lived Stuyvesant came with an expedition in 1655 and conquered all New Sweden, which then became a Dutch colony The old Swedish and Finnish settlers lived peacefully enough under the Dutch regime The Dutch West India Company sold part of the territory to the city of Amsterdam in 1656, the rest in 1663, but the little colony with its capital at New Amstel (New Castle) was not to remain quiet for long After taking the Dutch colony of New Netherland, the British also seized the Dutch holdings on the Delaware in 1664. Except for a brief reconquest (1673-74) by the Dutch, Delaware was to remain in British hands. The duke of York (later James II) annexed the region to his grant, though this move was not legalized until much later, and the claim was clouded That claim he transferred (1682) to William PENN, who wanted unimpeded water entrance to his new colony of Pennsylvania Thus Delaware became the Three Lower Counties (or Territories, as Penn called them) of Pennsylvania—New Castle, Kent (formerly St Jones), and Sussex (formerly Hoornkill, Whorekill, and Deal). The proprietors of Maryland contested the Penn claims, and the boundary dispute was not fully settled until 1750 The men appointed to govern the counties had to be approved by the British royal government More important, the inhabitants of the counties, not liking to be joined to the "radical" Quaker colony or to have their affairs settled in Philadelphia, at first refused the Penn charter of 1701, to which provisions were added giving the Three Lower Counties the right to a separate assembly The separate assembly met first in 1704, and Delaware maintained quasi-autonomy until the American Revolution The lack of complete separation was quite evident, however, in the fact that two of Delaware's leading statesmen in the Revolution—Thomas McKean and John Dickinson—were also prominent in Pennsylvania Though many in Delaware were Loyalists, the colony in 1776 became the sovereign state of Delaware, with a president as its chief executive Regiments from the state rendered valiant service to the patriot cause, especially the Delaware 1st Regiment, which was nicknamed the Blue Hen's Chickens—originally because they carried with them gamecocks bred by a famous hen of Kent, later because they themselves showed the fighting quality of gamecocks, the nickname is occasionally applied today to all Delawareans Two more Delaware men were high in the councils of the budding nation, Caesar Rodney and George Read It was, indeed, Rodney who cast the deciding vote in favor of independence in 1776 Under the Articles of Confederation, Delaware was a leader for revision of the form of government and was in 1787 the first state to ratify the new Constitution of the United States Meanwhile the 18th cent had seen the beginnings of industry with the well-known gristmills on the Brandywine and the Christina, and Wilmington developed as a center of the manufacture of cloth, paper, and flour —all products that helped to build the flourishing industrial economy of N Delaware in the 19th cent —not to mention shipbuilding and the industries that grew from the powder mill established by Eleuthère Irénée du Pont The constitution of 1776, which was superseded by a new constitution in 1791 (making the head of the state governor rather than president), had taken a stand against slavery, and importation of slaves was forbidden in 1787 In the early 19th cent the number of slaves declined, while the number of free Negroes increased Many citizens of Delaware favored manumission of slaves and belonged to the American Colonization Society, but there were few who were in sympathy with the growing abolitionist movement and there was strong sentiment for separation of white and blacks In the Civil War the border state of Delaware remained loyal to the Union, but pro-Southern feeling grew rather than diminished in the course of the war Delaware refused to accept an emancipation proposal made by Lincoln in 1861 and for many decades after the war refused to accept the Thirteenth, Fourteenth, and Fifteenth amendments The industrial section flourished in the later 19th cent while the larger agricultural section, cut off from the main roads of developing life, stagnated somewhat and gained the reputation for staunch conservatism, still characterizing the typical Delawarean The state was solidly Democratic until 1895. Then the political ambitions and brash attempts of the moneyed J E O'S ADDICKS to capture the Republican party threw political life into turmoil and resulted in Delaware's having no representative at all in the U S Senate for a time. The Republican party emerged in 1905 strengthened and able to take a leading role for some years. The conservatism of the farmers was buttressed by the constitution of 1897, which resulted in keeping the political strength of giant Wilmington at a minimum, the strength of rural areas at a maximum Most of the European immigrants in the late 19th and early 20th cent came to the Wilmington area, leaving the rest of Delaware to the homogeneous population of British (and Irish) stock and to the many Negroes The 20th cent saw a revolution in rural life also, particularly with the building of good roads after the First World War, the centralization of the school system, and the adoption of social welfare laws In the Second World War both the factories of the Wilmington area and the farms of lower Delaware contributed hugely to the nation's war effort The leading institution of higher education is the UNIV of Delaware at Newark The standard history of the early period in the middle of the 19th cent was Benjamin Ferris, *A History of the Original Settlements on the Delaware* (1846) See J T Scharf, *A History of Delaware, 1609-1888* (1889), H C Conrad, *History of the State of Delaware* (1908), W A. Powell, *A History of Delaware* (1928), Federal Writers' Project, *Delaware a Guide to the First State* (1938)

Delaware, city (pop 8,944), co seat of Delaware co., central Ohio, on the Olentangy river and N of Columbus, laid out 1808, inc as a city 1903 It is a trade center in a farm area with several factories OHIO WESLEYAN UNIVERSITY is here, and the city is the birthplace of Rutherford B Hayes Near by are the Olentangy Caverns

Delaware, river, 315 mi long, rising in the Catskills, SE N Y , in east and west branches, which meet at Hancock It flows between New York and Pennsylvania SE to Port Jervis, then between New Jersey and Pennsylvania generally S to Delaware Bay Easton (Pa), Trenton and Camden (N J), Philadelphia (Pa), and Wilmington and New Castle (Del) are on its banks It was early significant in commerce, and the Delaware and Raritan Canal (now unused) and the Chesapeake and Delaware Canal connect it with other waterways Reservoirs on its headstreams provide part of New York city's water supply, and the DELAWARE WATER GAP, where it cuts through Kittatinny Mt , has been developed as a summer resort See F B Brandt, *The Majestic Delaware* (1929), H E. Wildes, *The Delaware* (1940)

Delaware, University of, at Newark, Del , land-grant and state supported The university dates from a Presbyterian school in Pennsylvania opened in 1743, it moved to Newark in 1765 and was chartered by the Penns in 1769 as Newark Academy It was reorganized as a college in 1833 and designated a state land-grant college in 1870 It was called Delaware College from 1843 to 1921 From 1921 to 1944 it comprised Delaware College (for men) and the affiliated Women's College In 1944 it became completely coeducational It includes five academic schools, arts and science, agriculture, education, engineering, and home economics. In 1948 the university granted its first Ph D degrees

Delaware and Hudson Canal, former waterway, running from Honesdale, Pa , to Kingston, N Y , to connect the Delaware with the Hudson, built 1825-29 On a rail line built to serve the canal ran (1829) the first locomotive in the United States—the *Stourbridge Lion* The canal, which was later expanded, facilitated transportation of coal from the Pennsylvania fields and operated profitably until the 1860s With railroad competition it began to die, and by 1900 it was abandoned

Delaware and Raritan Canal, abandoned canal, between Bordentown and New Brunswick, N J , connecting the Delaware and Raritan rivers, completed in 1834 Once an important inland waterway, the railroads superseded it as a coal carrier At times some consideration has been given to a scheme for modernizing the canal in order to complete the inland water route from New York to Florida

Delaware Bay, estuarine inlet of the Atlantic between New Jersey and Delaware, receiving the Delaware river

Delaware City, town (pop 1,163), N Del , on the Delaware river and near Wilmington, inc 1851. Fort Du Pont, headquarters of harbor defenses of the Delaware river and Delaware Bay, is here

Delaware Indians, general name given several closely related North American Indian tribes of Algonquian linguistic stock They lived in New Jersey, Delaware, E Pennsylvania, and SE New York in the 17th cent They called themselves the Lenni-Lenape or the Lenape and were given the name Delaware because they lived about the Delaware river In their remarkable chronicle, the *Walum-Olum*, their origin is placed far to the north-

west, a region whence they migrated to the Atlantic They traded with the Dutch early in the 17th cent, sold much of their land, and began moving inland to the Susquehanna valley. In 1682 they made a famous treaty of friendship with William Penn, which was kept by both sides. In 1720 the Delaware fell victim to Iroquois attack and were forced to remove W of the Alleghenies and into Ohio The western Delaware sided with the French in the last of the French and Indian Wars, took part in Pontiac's Rebellion, and sided with the British in the American Revolution Anthony Wayne defeated and subdued them in 1794, and by the Treaty of Greenville (1795) they and their allies ceded their lands in Pennsylvania and Ohio to the whites They crossed the Mississippi and went to Kansas and then to Texas They were later removed to Indian Territory and settled with the Cherokee Some of the Delaware in Pennsylvania had been converted to Christianity by the Moravians In 1782 a settlement of these peaceful Christian Indians at Gnadenhutten was wantonly attacked by whites, men, women, and children were massacred The few survivors fled to Ontario, where some descendants are still living on the Thames river See D G Brinton, *The Lenâpé and Their Legends* (1885), M R Harrington, *Religion and Ceremonies of the Lenape* (1921), F G Speck, *A Study of the Delaware Indian Big House Ceremony* (1931) and *Oklahoma Delaware Ceremonies, Feasts, and Dances* (1937), Vincenzo Petrullo, *The Diabolic Root* (1934)

Delaware Prophet, fl 18th cent, North American Indian leader (see PROPHET) His real name is not known He began preaching (c 1762) among the Delaware Indians of the Muskingum valley in Ohio He spoke against intertribal war, drunkenness, polygamy, and the use of magic, and he promised his hearers that if they would but heed his words the Indians would be strong again and able to resist the white man He prepared symbolical charts of his message on deerskin and left them in various villages to help his converts teach others The religious fervor spread rapidly and was an inspiration to Pontiac After the collapse of PONTIAC'S REBELLION the cult of the Delaware Prophet waned and was largely superseded by that of the MUNSEE PROPHET

Delaware Water Gap, borough (pop 410) and summer resort, E Pa, where the DELAWARE river cuts through Kittatinny Mt, near Stroudsburg On the New Jersey side of the gap for which the town is named is Mt Tammany, and on the Pennsylvania side Mt Minsi, both over 1,500 ft high The gap is noted for its scenery

De la Warr, Thomas West, Baron (dĕ'lŭwur), 1577–1618, governor of the Virginia colony, b Hampshire, England He served in the army of the United Netherlands and was knighted when serving in Ireland before he was in 1609 appointed first governor of Virginia (Sir Thomas GATES governed as deputy until De la Warr arrived) He sailed in April, 1610, with an expedition including Sir Samuel Argall and arrived at Jamestown and found the settlers in such dire need that they were already bound for England He encouraged them, sent Argall for supplies, and had forts built Argall on his voyage sailed into the bay later called (after the governor) Delaware Bay Lord De la Warr returned to England, and the colony was governed by Sir Thomas Gates and Sir Thomas Dale De la Warr in his *Relation of the Colonies Planted in Virginia* pleaded for the colony He died on his return trip to Virginia

Delbrück, Hans (hans'), 1848–1929, German historian, professor at the Univ of Berlin He wrote *Geschichte der Kriegskunst* [history of the art of warfare] (4 vols, 1900–1927), a biography of Gneisenau (1908), and a world history based on his lectures from 1896 to 1920

Delbrück, Rudolf von (rōō'dôlf fŭn dĕl'brŭk), 1817–1903, German statesman He served (1857–76) under Bismarck as president of the chancellery of the North German Confederation and, after 1871, of the German Empire. A protagonist of free trade and liberal economics, he later opposed Bismarck's protectionist policy

Delcambre, village (pop 1,255), S La, N of Vermilion Bay, in the Acadian country, inc 1907

Delcassé, Théophile (tāôfēl' dĕlkasā'), 1852–1923, French statesman From the beginning of his career as political journalist his interest centered on colonial and foreign affairs He became undersecretary, then minister, for the colonies (1893–95) and foreign minister (1898–1905) Beginning with the FASHODA INCIDENT, in which his conciliatory attitude marked the beginning of the Franco-British Entente Cordiale, he exerted a tremendous influence on the alignment of European powers that eventuated in the First World War (see TRIPLE ALLIANCE AND TRIPLE ENTENTE) Delcassé was forced to resign in the crisis over MOROCCO, upon the demand of Emperor William II He returned to politics in 1909, was minister of marine (1911–13), and at the outbreak of the First World War was again foreign minister (1914–15) He helped to bring Italy into the war on the Allied side, but his unsuccessful Balkan policy led to his retirement. See C. W. Porter, *The Career of Théophile Delcassé* (1936).

Deledda, Grazia (grä'tsēä dālĕd'dä), 1875–1936, Italian novelist, b Sardinia. Her first work, a collection of short stories, was published when she was 19 She was awarded the Nobel Prize in 1926. Deledda's work is partly naturalistic, has a strong lyric impulse and touches of violence, and is informed with sympathy and humor She has been compared to George Sand and Chekhov Her novels include *Dopo il divorzio* (1902, Eng tr, *After the Divorce*, 1905), *Elias Portolú* (1903), *Cenere* (1904, Eng tr, *Ashes*, 1908), *Canne al vento* [reeds in the wind] (1913), *La Madre* (1920, Eng tr, *The Mother*, 1922), and *La Fuga in Egitto* [flight into Egypt] (1925)

De Lee, Joseph Bolivar, 1869–1942, American obstetrician and gynecologist, b Cold Spring, N Y, M D Chicago Medical College (later the medical school of Northwestern Univ), 1891 He practiced in Chicago and founded there the Lying-in Hospital (1895) and the Maternity Center (1932). Through his practice and teaching he exerted a far-reaching influence in improving obstetrical methods He was professor at Northwestern Univ (1897–1929) and at the Univ of Chicago (1929–36) He wrote *Obstetrics for Nurses* (1904) and *Principles and Practice of Obstetrics* (1913), both of which went through many editions See biography by Morris Fishbein and S T De Lee (1949)

Delémont (dŭlāmō'), Ger *Delsberg* (dĕls'bĕrk), town (pop 6,625), Bernese Jura, Bern canton, Switzerland Its old château was a residence of the prince-bishops of Basel (1528–1792) It produces knives and watches

De Leon, Daniel (dē lē'ŏn), 1852–1914, American socialist leader Born on the island of Curaçao of Spanish American family, he was educated in Germany and the Netherlands before coming (1872) to New York There he edited a Spanish newspaper, studied law at Columbia Univ (LL B, 1876), practiced law for a time, and then returned to Columbia Univ to lecture (1883–89) on Latin American diplomacy His interest in labor and labor reform grew, and he joined successively the Knights of Labor (1888), Edward Bellamy's "Nationalist" movement (1889), and the Socialist Labor party (1890) His brilliant mind led him to wide grasp of theory, his vivid temperament led him to action He was Socialist Labor candidate for governor of New York in 1891, and for years he edited the Socialist Labor weekly, *The People* He was an inflexible and doctrinaire Marxian revolutionist and consequently fell out with most other liberal leaders He opposed unionization of labor according to trades and led the group that formed the Socialist Labor and Trade Alliance, but his leadership was too radical for some of the members (prominent among them Morris Hillquit), who withdrew in 1899 and ultimately formed the Socialist party De Leon's prestige lessened He helped to found the INDUSTRIAL WORKERS OF THE WORLD in 1905, but in the quarrel over political action he and his followers were expelled The rival Workers' International Industrial Union, which he then organized, did not flourish He wrote a great deal of Socialist polemical literature and translated a work of Karl Marx, but it was primarily the impetus of his personality that made him one of the important figures of American socialism

De Leon (dē lēōn'), city (pop. 1,971), central Texas, SW of Fort Worth, in a peanut-growing area, founded 1887, inc as city 1919.

Delescluze, Louis Charles (lwē' shārl' dulăklüz'), 1809–71, French journalist, radical republican, and leader in the COMMUNE OF PARIS An opponent of the July Monarchy, he spent much of that period in prison or in exile He was disappointed in the Revolution of 1848, and after the severe suppression of the radicals in the JUNE DAYS, he again (1849) sought exile He returned and for his bitter criticism of the Second Empire was sent to French Guiana After a number of years he returned once more (1859), and again his increasingly radical journalistic activities led to prison and to exile The downfall of the empire brought chaos to France Delescluze was elected to the national assembly (1871) He resigned to become, perhaps, the most capable leader in the commune, but he was unable to save it When the victory of the French government troops was unavoidable, Delescluze deliberately threw himself into the line of fire and was killed. He wrote an account of his experiences as a prisoner, *De Paris à Cayenne* (1869)

Delft, municipality (pop 61,610) and town, South Holland prov, W Netherlands, 5 mi. SSE of The Hague, famous for its ceramics (china, tiles, pottery) known as delftware Until superseded (17th cent) by Rotterdam, Delft was an important commercial center The aspect of old Delft has changed little since Jan Vermeer, who was born and lived here, painted his famous *View of Delft*. Its notable buildings include a 13th-century Gothic church (Oude Kerk), the Gothic Nieuwe Kerk (15th cent), with the tomb of William the Silent, who was assassinated at Delft, and the 17th-century town hall and East India House.

delftware. The earliest delftware was a faience of the late 16th cent., brown with opaque white glaze and polychrome decoration in Oriental style. Some of the earliest imitations of Chinese and Japanese porcelain were made at Delft in the 17th cent. Modern delftware is usually blue and white of average quality.

Delhi (dĕ'lē), state (574 sq mi; pop 917,939) India, centrally administered by the Indian government New Delhi (pop 93,733), the capital of India, is on the Jumna river, as is the adjoining ancient city of Delhi (pop. 428,116) The semi-legendary Indraprastha is said to have been situated here, but Anang Pal's construction of the Red Fort in A D 1050 is the first dated event in the history of the region Delhi was first important under Kutb-ud-din, who captured it (1192) and later (1206) made it the capital of the Moslem Slave dynasty. His mosque (1196) is surrounded by a colonnade of exquisitely carved Hindu columns, and in the courtyard is the Kutb Minar, a minaret 238 ft. high Tamerlane sacked Delhi in 1398 or 1399, and in 1526 Baber, the first Mogul emperor, captured it Shah Jehan, who made it (1658) the Mogul capital, built its greatest monuments, including the Jama Masjid [great mosque] and the imperial palace The inscription in the emperor's private audience hall, "If there is a heaven on earth, it is this!" is apt The exquisitely proportioned public audience hall contained the solid gold and jewel-encrusted Peacock Throne, which was carried off (1739) with other booty by the Persian Nadir Shah Delhi was later sacked several times, and in 1803 it fell to the British Great Britain temporarily lost (1857) the city in the Sepoy Rebellion In 1911 Delhi with its historical associations was proclaimed the capital of India in place of the relatively modern Calcutta The projected city of New Delhi, designed to display Britain's imperial role, was not inaugurated as the capital of India until 1931 Its architecture, basically Western, has some Oriental details See Gordon Hearn, *The Seven Cities of Delhi* (1928); Henry Sharp, *Delhi Its Story and Buildings* (1929).

Delhi (dĕl'hī), village (pop 2,062), S Ont, SW of Hamilton

Delhi (dĕl'hī) **1** Town (pop 1,192), NE La, on Bayou Macon and E of Monroe Founded before the Civil War, it was a hide-out of Jesse James It has cotton gins and sawmills **2** Village (pop 1,841), co seat of Delaware co, S N Y, in the Catskills, on the West Branch of the Delaware and SE of Oneonta, settled c 1785, inc 1821 Dairy products are made A state school of agriculture is in Delhi

Delhi Sultanate, Moslem state, ruling most of India from 1206 to 1398 It was founded by Kutb-ud-din, an Afghan general, who captured Delhi in 1192 He and several of the sultans who claimed succession from him were originally slaves, his dynasty is therefore called the Slave dynasty Continually faced with revolts, both of conquered territories in the south and of rival families, the Slave dynasty came to an end in 1290 In the Kulji dynasty (1290–1320) the conquests of Sultan Ala-ud-din brought the Moslem dominion in India to the greatest extent it was to reach until the advent of the Mogul empire The Tughlak dynasty (1321–98) saw the steady loss of territory as revolts, notably of the Hindu Vijayanagar kingdom in the south, raged Although the sultanate fell with the capture of Delhi by Tamerlane in 1398 or 1399, local rulers continued at Delhi until the MOGUL conquest.
