Delian League, confederation of Greek states under the leadership of Athens The name is used to designate two distinct periods of alliance, the first 478–404 B C, the second 378–338 B C The alliance of 478 B C was made between Athens and a number of Ionian states, chiefly maritime, for the purpose of opposing Persia All the signatories were given equal votes in a council which was established in the temple of Apollo at Delos, which had the league's treasury The assessments to be levied on the members were originally fixed by Athens, and the fairness with which these were apportioned contributed much to maintain enthusiasm at the start The Athenian presidents of the council also gave satisfaction. The states willingly contributed funds, troops, and ships to form a navy that could defeat Persia In 468 B C. that object was accomplished, and with the death of Xerxes all immediate danger from the East was over. But at this time an event took place which was to commit the league to a new policy Naxos attempted to secede and was coerced to retain allegiance, soon Thasos attempted the same maneuver and was likewise subdued by Cimon. Numerous states began to have apprehensions for the future, but the Athenians were so successful in their aims, using both persuasion and force, that the signatories that had by this time been gained—amounting to between 200 and 300—all remained in the league. In 457 B.C. a Spartan invasion was averted, and, at Oenophyta, Thebes, the traditional enemy of Athens, was subjected Aegina was taken and the Phocians and other allies of Sparta went over to Athens. In 454 B.C., because

of real or pretended danger of Persian attack, the treasury was transported from the temple of Apollo to the Athenian Acropolis The league had become an Athenian empire. This was never a stable unity, thus Athens lost Boeotia in 446 B C., while new colonies were being added, especially in Thrace. The empire came to an end with the disastrous conclusion of the PELOPONNESIAN WAR (404 B.C.). But in 394 B C , CONON reestablished the Athenian mastery of the sea at Cnidus. Proffers of alliance reached Athens, in 378 the second Athenian confederacy was formed. Two years later Athens won a maritime engagement over Sparta; the Athenians and Spartans compromised with a treaty which left Athens supreme on the sea and Sparta on the mainland of Greece In 371 B C , Thebes withdrew from the alliance and gained land predominance over Sparta A division of interests was created, a treaty was made between Athens and Sparta Philip II of Macedon had, by 351 B.C , seriously weakened the status of the league in the north and east, and within a few years it had almost dissolved In 338 B C it was utterly destroyed by the battle of Chaeronea.

Délibes, Clément Philibert Léo (klāmäⁿ' fēlēbĕr' lāō' dālēb'), 1836–91, French composer He wrote several operas, of which *Lakmé* (1883) is the most famous, and ballets, among them *Coppélia* (1870) His works are marked by an elegance of style and capable orchestration.

Delilah (dĭlī'lŭ, dē'lĭlu), [Heb ,=weak], courtesan in the pay of the Philistines who was loved by SAMSON She learned that his strength lay in his long hair and betrayed him to his enemies by cutting it off Judges 16.4–20.

delinquency, juvenile. see JUVENILE DELINQUENCY

delirium (dĭlĭr'ĕum), temporary state of mental confusion because of active uncontrolled imagination and faulty judgment It ranges from mere flightiness to a maniacal state and is a symptom in many disorders Among the causes are intoxications (see DELIRIUM TREMENS), infectious diseases, diseases of the brain itself, exhaustion, and the use of drugs There is not necessarily any apparent change in the brain structure The underlying cause must be treated, and in the meantime the patient must be protected from injury, kept in good nutrition, and quieted, if necessary, by suitable drugs

delirium tremens (trē'mĕnz) [Latin,=trembling delirium], occasional result of continued alcoholic excess It may be precipitated by a disease (e g , pneumonia), by an accident (e g , a fracture), or by a sudden withdrawal of alcohol The attack consists of DELIRIUM, of tremors, especially of the hands and tongue, and of hallucinations (the seeing of demons and snakes) Fatalities may be caused by heart failure or uremia The patient must be protected from injury in his attempts to escape the demons of his hallucinations Sleep is essential, but hypnotic drugs must be used with caution The circulation must be stimulated and nourishment given, beginning with milk

Delisle, Guillaume (gēyōm' dulēl'), 1675–1726, French geographer and cartographer His most important work is a world map (1700), as accurate as the data available at that time permitted and the first map on which the errors of Ptolemy were wholly absent Delisle is called founder of modern cartography He was geographer to Louis XV

Delisle, Joseph Nicolas (zhôzĕf' nēkôlä'), 1688–1768, French astronomer He visited (1726–47) Russia, where he founded a school of astronomy at St. Petersburg. On his return to Paris (1747) he became astronomer to the naval department He suggested new methods for observing the transits of Venus and of Mercury and for finding the sun's parallax, and he proposed the diffraction theory to explain the sun's corona

Delitzsch, Franz (fränts' dā'lĭch), 1813–90, German Lutheran theologian and Hebraist He was professor of theology at Rostock from 1846 to 1850, at Erlangen until 1867, and later at Leipzig He was the author of many commentaries on books of the Old Testament His son, **Friedrich Delitzsch** (frēd'rĭkh), 1850–1922, was an Assyrian scholar, author of works on Assyrian language, literature, and history

Delium (dē'lēŭm), town of ancient Greece, a port in Boeotia It was named for its temple of Apollo similar to the Delos shrine In the Peloponnesian War the Athenians were defeated by the Boeotians here in 424 B C ; Socrates fought in the battle In 192 B.C a Roman force was defeated by Antiochus III here

Delius. see APOLLO.

Delius, Frederick (dēl'yus), 1862–1934, English composer, of German parentage. In 1884 he went to Florida to grow oranges, going thence to Virginia and to New York. From 1886 to 1888 he studied in Leipzig, where his suite *Florida* (1888) was played, the first of his works publicly performed. Germany accepted his works more readily than did his native England. The best of his six operas is *A Village Romeo and Juliet* (Berlin, 1907), in a late romantic style, somewhat influenced by impressionism. Outstanding also are the choral works *Sea Drift* (1903), *A Mass of Life* (1904–5; the text is from Nietzsche's *Thus Spake Zarathustra*), and *Song of the High Hills* (1912; without words) and the orchestral pieces *Brigg Fair* (1907) and *On Hearing the First Cuckoo in Spring* (1912) He also composed chamber music, concertos, and songs In the 1920s he became blind and paralysed His last public appearance was in 1929 at a six-day festival of his music in London See biographies by Claire Delius (1935), Eric Fenby (1936), and Arthur Hutchings (1948)

Dell, Floyd, 1887–, American author, b. Barry, Ill After journalistic experience in Chicago, he was on the staff of the radical journal the *Masses* and its successor, the *Liberator*, from 1913 until 1924 His first and perhaps best novel was *Moon-Calf* (1920), others are *The Briary-Bush* (1921), *Runaway* (1925), *An Unmarried Father* (1927), and *The Golden Spike* (1934) He was a member of the Provincetown group and wrote plays for them, including *The Angel Intrudes* (1918) He also wrote studies of children and the family—*Were You Ever a Child?* (1919), *The Outline of Marriage* (1926), *Children in the Machine Age* (1924)—a biography of Upton Sinclair (1927), and *Homecoming* (1933), an autobiography

Della Bella, Stefano: see BELLA

Della Casa, Giovanni see CASA.

Della-Cruscans (dĕl'u-krŭs'kŭs) [from the Accademia della Crusca, founded for linguistic purity, Florence, 16th cent], a group of English poets living in Italy who published in 1785 *The Florence Miscellany* Robert Merry, writing as "Della Crusca," Bertie Greatheed, William Parsons, and Mrs PIOZZI, under other names, were the contributors In England, their poetry and that of other followers, including Hannah Cowley, was published in the *World* and collected in the *British Album* (1790) Their pretentious, sentimental verse was ridiculed by William Gifford in *The Baviad* (1791) and *The Maeviad* (1795) See R B Clark, *William Gifford* (1930)

Della Porta see PORTA

Della Quercia, Jacopo. see QUERCIA

Della Robbia (dĕ'lŭ rō'bĕu, Ital dĕl'lä rôb'byä), Florentine family of sculptors and ceramists famous for their enameled terra cotta or faïence Much of the Della Robbia ware is still in its original setting in Florence, Siena, and other Italian cities, but the finest collections are in Florence in the cathedral, the Bargello, and the Italian Academy and in London in the Victoria and Albert Museum

Luca della Robbia (lōō'kä), 1400?–1482, founder of the atelier, was known first as a sculptor in bronze and marble He was commissioned (1421) to make the choir gallery of the cathedral at Florence. Later he perfected a process for making clay reliefs and figures permanent by coating them with a glaze compounded of tin, antimony, and other substances A pure religious feeling is expressed in his panels and medallions, where the Madonna and saints and angels appear usually in white on a blue background, sometimes with touches of gold and color in the decorative setting A *Madonna and Child* is in the Metropolitan Museum **Andrea della Robbia** (ändrā'ä), 1435–1525?, nephew and chief pupil of Luca, made a marble altar for a church near Arezzo and extended the use of clay to whole altarpieces (one is in the Church of Santa Croce, Florence), friezes, and fountains His medallions on the Foundling Hospital, Florence, show simple baby forms (*bambini*) on blue ground, but in many of his medallions the central figures are framed in garlands of richly colored fruits and flowers *The Virgin in Adoration*, an unglazed terra-cotta relief, is in the National Gallery of Art, Washington, D C **Luca II della Robbia,** c 1480–c 1550, son of Andrea, became a Dominican monk, his name was originally Marco He is known for his pavement at the Vatican after Raphael's designs **Giovanni della Robbia** (jōvän'nē), 1469–c 1529, was also the son of Andrea He made a lavabo for the sacristy of Santa Maria Novella and a terra cotta statue and frescoes for the Church of Santa Croce (both Florence) and most of a frieze on the Ospedale del Ceppo at Pistoia His work cannot always be distinguished from that of his father **Girolamo della Robbia** (jĕrō'lämō), 1488–1566, another son of Andrea, an architect as well as a sculptor, worked in France for 40 years in the employ of the royal family See books by Allan Marquand on the Della Robbias

Dell Rapids, city (pop 1,706), SE S Dak., on the Big Sioux and N of Sioux Falls near the Minn line, in a farm area, settled 1868, inc 1879 Near by is the beautiful gorge called the Dells

Dells of the Wisconsin, usually called **The Dells,** scenic part of the Wisconsin river, central Wis , near the city Wisconsin Dells The river has cut a gorge through c 8 mi of sandstone, which is carved into caves, pinnacles, towers, and curious shapes, often beautifully colored The name Dalles of the Wisconsin was formerly sometimes used

Delmar, town (pop. in Md , 1,184, in Del., 881) on the Del.-Md. boundary NE of Salisbury, Md. It has two mayors, two town councils, and two school systems It is a trading and shipping center in a farm area which produces chiefly cantaloupes.

Delmonico, Lorenzo (dĕlmō'nēkō), 1813–81, famous restaurateur, b Switzerland. He came to New York city in 1832. With his uncles, John and Peter, he opened c.1834 a restaurant in William St , where many new and well-cooked European dishes were introduced to the American public Delmonico's in its subsequent locations after 1861 became nationally and internationally famous Delmonico made a contribution to American gastronomy, not only by introducing European dishes, but by cooking American food in new ways and encouraging the use of vegetables and salads

Del Norte (dĕl nôrt'), town (pop 1,923, alt c 7,800 ft), co seat of Rio Grande co , S Colo , NW of Monte Vista and on the Rio Grande, settled 1871–72, inc 1885 The area has irrigated farms and gold and silver mines Rio Grande National Forest is near

De Long, George Washington, 1844–81, American arctic explorer, b New York city, grad Annapolis, 1865 In 1873 he was assigned to the *Juniata*, which was sent to the arctic to search for C F Hall's expedition on the *Polaris*. In 1879, backed by the younger James Gordon BENNETT and under the auspices of the U S navy, he sailed from San Francisco on the *Jeannette* with a plan to penetrate Bering Strait and attempt a dash to the North Pole There was then a theory that a current from Japan would speed them north Instead, the vessel was caught in the ice pack and drifted nearly two years till it was crushed and sank The men had abandoned ship with provisions, sledges, and boats and now set out southward for Siberia After reaching open water and embarking in the boats, they were separated One boat was lost A second, with De Long in command landed, but only two men sent ahead for aid survived The third boat, commanded by George W MELVILLE, reached the Lena delta and was rescued The next year Melville returned and found the bodies of De Long and his companions The expedition had proved definitely that Wrangel Island was not the southern tip of a northern continent and had proved essential facts about the polar drift It had also demonstrated to what heights of heroism man could rise in emergencies De Long's diary was edited by his widow as *The Voyage of the Jeannette* (2 vols , 1884) Melville's account was published as *In the Lena Delta* (1885) See Edward Ellsberg, *Hell on Ice* (1938), a fictionalized account; Emma De Long, *Explorer's Wife* (1938)

Delorme, Marion (märyō' dulôrm'), 1613?–1650, French courtesan, mistress of CINQ MARS Her house was a meeting place for Masarin's enemies during the Fronde She is the chief figure in Victor Hugo's *Marion Delorme* and a prominent character in Vigny's *Cinq Mars*

Delorme or de l'Orme, Philibert (fēlēbĕr'), c 1515–1570, French architect One of the greatest French architects of the Renaissance, he was an architect to Francis I and to Henry II Catherine de' Medici employed him in 1563 to design the new palace of the Tuileries, a work which occupied the rest of his life His finest design was the sumptuous château at Anet (c 1550) for Diane de Poitiers, mistress of Henry II, but only fragments of it now remain He completed the ballroom of the palace of Fontainebleau and designed the tomb of Francis I at Saint-Denis He wrote a treatise on architecture, *Nouvelles Inventions pour bien bastir et à petits frais* (1561)

Delos (dē'lŏs), island (c 1 sq mi , pop 158), off Greece, in the Aegean Sea, one of the CYCLADES In Greek mythology, Leto gave birth to Apollo and Artemis on Delos, which was particularly sacred to Apollo Delos was of great commercial and political importance in antiquity The temple of Apollo here was the treasury of the DELIAN LEAGUE until this was removed (454 B C) to Athens, and it later had a flourishing slave market In 88 B C the island was sacked by Mithridates VI of Pontus, it never recovered and was abandoned Remains of temples, commercial buildings, theaters, and private houses and numerous inscriptions have been found

Delphi (dĕl'fī), locality in Phocis, Greece, near the foot of the south slope of Mt. Parnassus, c 6 mi northeast of the port of Cirrha It was the seat of the Delphic or Delphian oracle, the most famous and most powerful of ancient Greece The oracle gave answers to all questions, public and private, religious, political, and social The oracle arose from worship of an earth-goddess, and later legend ascribed it to GAEA It passed to APOLLO, some stories say he won it by killing the Python, others that it descended to him through Themis and Phoebe It was the preeminent shrine of Apollo, but in the winter, when Apollo was absent among the Hyperboreans, Delphi was sacred to DIONYSUS, who was buried there The great temple to Apollo built in the 6th cent B C. housed the oracle The oracles were spoken by a priestess called Pythia, who, seated on a golden tripod, uttered sounds in a frenzied trance, they were interpreted to the questioner by a priest, who spoke in verse. The answers were universally revered in Greece and therefore had great influence. The peculiar thing about Delphi was its universal position in the otherwise fragmented political and social life of Greece. It was the meeting place of the council of the Delphic Amphictyony, the most important league of Greek

tribes, it was also the seat of the Pythian games. Persons seeking the help of the oracle brought rich gifts, and the shrine grew very wealthy After the repute of the oracle had shrunk in Roman times, Sulla and, after him, Nero despoiled the shrine Typical of the art treasures once there is the fine bronze statue of the 5th cent B C excavated at Delphi and called the Delphic Charioteer

Delphi (dĕl'fī), residential town (pop 2,213), co seat of Carroll co, NW Ind, on the Wabash between Lafayette and Logansport.

delphinium · see LARKSPUR

Delphos (dĕl'fus), city (pop 5,746), NW Ohio, NW of Lima, laid out 1845 Its industries include motor manufacture and food canning

Delray Beach (dĕlrā'), resort city (pop 3,737), SE Fla, on the Atlantic coast 18 mi S of Palm Beach, in a truck and fruit area It is a leading polo center and has an annual winter gladiolı festival

Del Rio (rē'ō), city (pop 13,343), co seat of Val Verde co, W Texas, a port of entry on the Rio Grande opposite little Villa Acuña, Mexico, founded 1868, inc 1911 Irrigation from San Felipe Springs here yields alfalfa, truck, fruits, and especially grapes, which are made into wine at Del Rio The city also ships much wool and mohair from ranches of the region Leather goods are manufactured

Delsarte, François (frāswȧ' dĕlsärt'), 1811–71, French teacher of acting and singing He studied singing (1825–29) at the Paris Conservatoire and appeared as a tenor at the Opéra-Comique, but faulty training had ruined his voice He formulated certain principles of aesthetics which he applied to the teaching of dramatic expression in rules coordinating the voice with the gestures of all parts of the body He opened his first *Cours d'esthetique appliqué* in 1839, and his advice was sought by many famous artists, e g, Rachel, Henriette Sontag, and W C Macready Steele MacKaye studied with him in his last years and brought to the United States the Delsarte system, to which he had added many of his own ideas, including elements of gymnastics Some of Delsarte's writings are included in the compilation *Delsarte System of Oratory* (1893). See Percy MacKaye, *Epoch the Life of Steele MacKaye* (1927)

Delsberg, Switzerland see DELÉMONT

Delta, 1 City (pop 3,717), co seat of Delta co, W Colo, on the Gunnison and Uncompahgre rivers and SE of Grand Junction, in a diversified farming area, founded on the site of a trapper's fort (built 1830), inc 1882 It has a beet-sugar refinery Delta is the headquarters for the Uncompahgre National Forest **2** Village (pop 1,773), NW Ohio, WSW of Toledo Gasoline-pumping equipment and evaporated milk are made here **3** Town (pop 1,304), W central Utah, in the Sevier river valley, settled 1906 It was developed as the center of an irrigated region, growing alfalfa and other crops

delta [from triangular shape of the Nile delta, like the Greek letter *delta*], the usually fan-shaped alluvial plain formed at the mouth of a river where, meeting quieter waters, the stream drops part of its load of sediment No delta is formed if the coast is sinking or if there is ocean or tidal current strong enough to prevent deposition of sediment A deltaic plain is usually very fertile, but subject to floods The Nile, Mississippi, Orinoco, Niger, Rhine, Ithone, Danube, Kuban, Volga, Ural, Amu Darya, Lena, Indus, Ganges and Brahmaputra, Irrawaddy, Euphrates, and Hwang are among the rivers which have formed large deltas

Delteil, Joseph (zhōzĕf' dĕltā'yu), 1894–, French novelist, essayist, and poet *Le Cœur grec* (1918), a volume of poems, was crowned (1920) by the French Academy Other works are *Jeanne d'Arc* (1925, Eng tr, 1926) and *Les Poulus* (1926, Eng tr, 1927), novels, *Le Jongue de porcelaine* (1927, Eng tr, *The Porcelain Junk*, 1928), verse, and *Il était une fois Napoléon* (1929, Eng tr, *Once There Was a Man Napoleon*, 1930)

Deluge, in the Bible, the overwhelming flood which covered the earth and destroyed every living thing except the family of NOAH and the creatures in his ARK Gen 6–8, Isa 54 9, Mat 24 38, Luke 17 27, Heb 11 7, 1 Peter 3 20, 2 Peter 2 5 Flood stories resembling the biblical story are found in the folklore of many races American Indians, Fiji Islanders, and Australian aborigines have versions, and some paintings of ancient Mexico portray a flood The earliest known of these stories is Babylonian, one form being found in the record of Berosus (3d cent B C), another on a tablet of the Gilgamesh epic of at least 3000 B C See DEUCALION and UR.

delusion, false belief based upon a misinterpretation of reality It is not, as in a hallucination, a belief with no basis in reality Delusions vary in intensity, a passing delusion being not uncommon in normal people Fixed delusions, however, are characteristic of paranoia and schizophrenia There are several kinds of common psychotic delusions In those of persecution, the individual falsely believes himself to be the target of another person's hostility. In those of influence, the individual feels he is being interfered with, or controlled by, some remote force, such as cosmic rays or electricity In those of grandeur, the individual imagines himself an unappreciated person of great importance Delusions, by their crucial role in the development of mass hysteria, are of prime importance to the social psychologist

demand and supply · see SUPPLY AND DEMAND.

Demarest (dĕmurĕst'), suburban borough (pop. 1,165), NE N J, near the Hudson N of Englewood, inc 1903

Demas (dē'-), companion who forsook Paul Col 4 14, 2 Tim 4 10

Demavend (dĕm'ȧvĕnd) or **Demavand** (dĕmȧvȧnd'), mountain, c 18,600 ft high, N Iran, highest in the Elburz range There is also a town named Demavend or Demavand (pop 9,998) near the mountain It has mineral springs and is famous for its fruits.

dementia (dĭmĕn'shu) [Latin,=being out of the mind], state of insanity characterized by a general weakness of intellect, especially with respect to reason and will It is distinct from the weak intelligence of the feeble-minded, imbeciles, and idiots in that there is deterioration from a previously intact intelligence, whereas the others never possessed more than a limited degree of intelligence Dementia occurs in the later stages of many forms of insanity, including the deterioration of old age and the psychosis dementia praecox (see SCHIZOPHRENIA)

Demerara, river, British Guiana see GUIANA

Demeter (dĭmē'tûr), in Greek legend, goddess of the corn, of harvest, and of fruitfulness, daughter of CRONUS and RHEA and mother of PERSEPHONE by Zeus The earth-goddess, she was connected with the underworld through her daughter, and Demeter and Persephone were chief figures in the ELEUSINIAN MYSTERIES Worship of Demeter was connected with the corn cycle and fertility rites One of her chief festivals was the Thesmophoria, a woman's festival in autumn Grain, poppies, fruit and pigs were sacred to her The Romans identified her with CERES, and her worship is related to that of the mother gods such as Bona Dea (see GREAT MOTHER OF THE GODS).

Demetrius I (Demetrius Poliorcetes) (dĭmē'trĭus, pŏlĭôrsē'tēz), c 337–283 B C, king of ancient Macedon. The son of ANTIGONUS I, he proved himself a very able commander in his father's wars, particularly against Ptolemy I Though Ptolemy defeated him at Gaza in 312 B C, Demetrius was able to expel Ptolemy and Cassander from Athens, defeated the Egyptian fleet at Salamis, and took Cyprus Although he had huge armaments, including new weapons of assault, he failed (305 B C) to take Rhodes by sea When Cassander, Seleucus I, and Lysimachus, fearing the power of Antigonus, allied themselves against him, Antigonus and Demetrius were badly defeated in the battle of Ipsus in 301 B C, and Antigonus was killed Demetrius later became reconciled to Seleucus I and regained Athens for himself in 295 In order to obtain the throne of Macedon he murdered the sons of Cassander and others and succeeded (294) to the throne He still had his father's ambition to conquer all Asia, but his enemies combined against him, and Lysimachus and Pyrrhus invaded Macedonia He was forced (285) to take refuge with Seleucus, who held him until he died His son, Antigonus II, made good his claim to the throne of Macedon

Demetrius II, d 229 B C, king of Macedon (239–229 B C) His reign was a confusion of wars and invasions, mostly concerned with possession of Epirus The Aetolian League and the Achaean League were united against him He was defeated and died, leaving a small son as heir (Philip V)

Demetrius I (Demetrius Soter) (sō'tûr), c 187–150 B C, king of ancient Syria (162–150 B C), son of Seleucus IV He was sent as a hostage to Rome, where he remained during the reigns of his father and his uncle Antiochus IV After Antiochus died, he was succeeded by his son Antiochus V, but Demetrius escaped (162 B C), killed his cousin, and took the throne He put down the revolt of the general Timarchus in Babylon and went out to crush the Maccabees The usurper Alexander Balas rose against Demetrius and was supported by the Maccabean party as well as by Egypt and Pergamum Demetrius was defeated in battle

Demetrius II (Demetrius Nicator) (nĭkā'tur), d c 125 B C, king of ancient Syria, son of Demetrius I He was aided against the usurper, Alexander Balas, by Ptolemy VI (Ptolemy Philometer) and married Ptolemy's daughter, Cleopatra, even though she was already married to Alexander Balas. He got the throne in 146 B C, but in fighting against the Parthians in 141 he was captured Tryphon, Alexander Balas' governor of Antioch, had revolted and had put Alexander Balas' infant son, Antiochus Dionysius, on the throne. Two years later Tryphon murdered the boy and took the throne himself Demetrius, coming back from prison, regained the throne in 128 B C. He soon lost it again and died in battle at Tyre, fighting a war with Egypt

Demetrius. 1 Silversmith of Ephesus who stirred up a riot against Paul Acts 19 23–41. **2** Disciple commended in 3 John 12

Demetrius, in Russian history see DMITRI.

Demetrius Phalereus (fălēr'ŏŏs, fulēr'ēŭs) [Latin,= of Phalerum], d, c 282 B C., Athenian orator. He was governor of his city (317–307 B C.) under CASSANDER, who had appointed him when Demetrius, formerly a democrat, became pro-Macedonian In 307 B C, when Demetrius I arrived with his fleet before Athens, Phalereus was overthrown by the democrats. He escaped to Egypt, where he rose in the favor of Ptolemy I, to whom Demetrius is said to have suggested a library. On the accession of Ptolemy Philadelphus, Demetrius went into exile He died soon afterward

De Mézières y Clugny, Athanase (ätänäz' dū māzyĕr' ē klünē'), c 1715–1779, explorer and Indian agent in Spanish Louisiana, b Paris He came to Louisiana c 1733, and when France ceded the territory to Spain he stayed on in the Spanish service Made lieutenant governor of the Natchitoches dist, De Mézières, by judicious use of his control of the Indian trade and by his tact, kindness, and patience, won the friendship of the previously hostile tribes of the Red River valley and neighboring regions and concluded treaties with them His valuable reports and diaries are translated in H E Bolton, *Athanase de Mézières* (1914)

De Mille, Agnes, 1905?–, American dancer and choreographer, b New York city She made her debut in 1928 She did the choreography for *Black Ritual*, *Three Virgins and a Devil*, *Rodeo*, *Oklahoma!*, *One Touch of Venus*, *Carousel*, *Allegro*, and *The Rape of Lucretia* Her work has made ballet popular in musical comedy

De Mille, Cecil Blount, 1881–, American moving-picture director and producer, b Ashfield, Mass He began to direct in 1913 and became known with his first "spectacle" film, *Carmen* (1915) His later films include *Male and Female*, *The Ten Commandments*, *The King of Kings*, *The Crusades*, *The Plainsman*, and *Union Pacific* See W C De Mille, *Hollywood Saga* (1939)

Deming, Edwin Willard (dĕm'ĭng), 1860–1942, American artist, b Ashland, Ohio, studied at the Art Students League of New York and, in 1864, in Paris under Boulanger at Julien's academy On his return to the United States he began his career of painting and modeling the Indians of the West and Southwest Characteristic works are his murals in the Wisconsin Historical Society, Madison, Wis, and his bronzes in the American Museum of Natural History, New York, the National Museum, Washington, D C, and Herron Art Institute, Indianapolis, Ind

Deming (dĕm'ĭng), village (pop 3,608), co seat of Luna co, SW N Mex, in the valley of the Mimbres river (here underground), settled 1880, inc 1902 It is a health resort and a rail and trade center in a farm, livestock, and mine region

demiurge (dē'mĭûrj) [Gr,=worker for the people], name given by Plato in a half-mythological passage in the *Timaeus* to God the Creator In GNOSTICISM the Demiurge, creator of the material world, was not God, but the Archon, or chief of the lowest order of spirits or aeons According to the Gnostics, the Demiurge was able to endow man only with the psyche (sensuous soul), the pneuma (rational soul) having been added by God The Gnostics identified the Demiurge with the Jehovah of the Hebrews

democracy [Gr,=power of the people], term originating in Greece to designate a government where the people share in directing the activities of the state as well as participate in its rewards, as distinct from governments controlled by a class, select group, or single dictator Democracy has outgrown its purely political connotation, however, and in modern life such phrases as economic democracy, industrial democracy, and social democracy are familiar In this larger sense democracy is essentially a philosophy which insists on the right and, in the long run, the capacity of a people, acting either directly or through representatives, to control their institutions for their own best ends Such a philosophy of necessity exalts the individual and would free him as far as possible from restraints not self-imposed It recognizes, however, that complete individual freedom, which in the political sphere would be ANARCHISM, is practically impossible, but insists that restraints be imposed only by a majority and that they be erected on the principle of equal opportunity for all Democracy first flourished in the GREEK CITY-STATE, reaching its fullest expression in ancient Athens There the citizens, as members of the assembly, participated directly in the making of their laws A system of rotation in executive office existed which gave all citizens their turn Jurors, who acted in the capacity of both judges and jurors, were chosen by lot A democracy of this sort was possible only in a small state where the people were politically educated and where laws were simple and clear That democracy also had its shortcomings in practice is made clear by the keen analyses of Plato and Aristotle; Plato rejected it completely, Aristotle viewed it as the lesser of evils However, on the whole it worked well and encouraged a great flowering of individual genius. It fell before the imperial idea, which also smothered other ancient manifestations of democracy in the

early Italian cities and in the early Church Possibly if the idea of REPRESENTATION had been more fully worked out in the ancient world, democracy would have been better able to compete with empire, but representation as an idea grew up within the imperial framework rather than in a democracy and had later to be released from the former The medieval period also contributed, through feudalism, the idea of contract, which was important in developing the philosophy of modern democracy According to this view, rulers and people were bound to each other by a contract involving mutual duties If the sovereign failed, the people took back the sovereignty with which they had invested him The idea reached its fullest exposition in the social-contract theory of J J ROUSSEAU, which helped form the philosophical justification for the French Revolution In England the power of the people was gradually increased by parliamentary means, the philosophical leader of this constitutional development being John LOCKE It is scarcely correct to think of the British government as more than a class government, however, until after the passage of the Reform Bill of 1832 English settlers in America faced frontier conditions which increased the importance of the individual, also they were released, for several generations, from the class viewpoints of the Old World These were but a few of the factors underlying the American revolt and the establishment in the United States of a radically different type of democratic political structure The 19th cent may be characterized generally as a period when, the philosophy of democracy having triumphed, emphasis was upon the extension of the franchise and the working out of machinery which would enable the will of the people to be more fully and honestly expressed The complicated party system which it has seemed necessary to develop in large democracies has needed constant attention lest it defeat rather than facilitate the registration of public opinion The idea that equality of opportunity can be maintained through political democracy alone has been challenged by the socialists, who insist that economic democracy is the only foundation upon which a true political democracy can be erected COMMUNISM and FASCISM, both dictatorships in the interests of a class, have challenged the wisdom and efficiency of democracy in the face of the rapidly changing conditions of modern life See James Bryce, *Modern Democracies* (1921), John Dewey, *The Public and Its Problems* (1927), T R Glover, *Democracy in the Ancient World* (1927), A E Zimmern, *Prospects of Democracy* (1929), H J Laski, *Democracy in Crisis* (1933), R H Gabriel, *The Course of American Democratic Thought* (1940), A D Lindsay, *The Modern Democratic State* (1943)

Democratic party, in U S history When political parties first arose in Washington's administration, the rival groups were headed by Alexander HAMILTON and Thomas JEFFERSON Jefferson's group, at first called the Republican party, was generally sympathetic with the French Revolution and hostile toward England and was the party of small farmers, mechanics, and the debtors It stood—in opposition to the FEDERALIST PARTY for the ideas that have come to be known as Jeffersonian democracy, with the accent on personal liberty and limitation of the powers of the Federal government The victory of the Jeffersonians in the election of 1800 had virtually the force of a revolution The party was then called the Democratic Republican or simply the Democratic party By 1828 the name was fixed as Democratic The party gained power as the Federalists declined particularly with the Federalist loss of prestige after the HARTFORD CONVENTION From 1815 to 1832, national politics was largely reduced to conflicts within the Democratic party The factions, however, were veritably independent parties, as was proved in the election (1824) of John Q Adams and in the NULLIFICATION conflict The party was divided into the conservative group of businessmen, merchants, and planters and the radical Democrats, who were principally the little men—frontiersmen and mechanics (see also LOCOFOCOS) The overwhelming victory of the radical group under Andrew JACKSON in 1828 brought another virtual revolution with Jacksonian democracy The WHIG PARTY was created out of dissident factions Many Democrats opposed Jackson's successor, Martin VAN BUREN, and the Whigs, led chiefly by Daniel WEBSTER and Henry CLAY, attracted a large Western following and won the election of 1840 with William HARRISON The arguments over slavery, as the struggle between the North and the South grew more bitter, tended to create or deepen factional splits within the party, e g , between BARNBURNERS and HUNKERS in New York Nevertheless, the party remained a unit and won the presidential elections until 1860, except for the Whig victory under Zachary Taylor in 1848 Old party lines were breaking down as sectionalism increased, and by 1860 the Whig party was destroyed and the Democrats divided sharply into Southern and Northern Democrats, as the REPUBLICAN PARTY, succeeding the FREE-SOIL PARTY, had expanded The victory of Abraham Lincoln in 1860 over Stephen A. DOUGLAS (Northern Democrat), John C BRECKINRIDGE (Southern Democrat), and John Bell brought on the Civil War, which all but destroyed the old Democratic party George B MCCLELLAN was the Democratic candidate for President against Lincoln in 1864, and in 1868 the party attempted to rehabilitate itself, but it was not until the disputed election of 1876 that the party revived Reconstruction ended, and the white Southerners gained control of the state governments Because the hated Reconstruction and the political abuses under it were labeled Republican, the "solid South" emerged, the Southern states, except in rare instances, have gone overwhelmingly Democratic In general policy, the two parties, Democratic and Republican, had much the same complexion from 1876 to 1896 Traditionally the Democratic party was more the party of agrarianism and the opponent of protective tariffs, and even the most conservative Democrats were opposed to the control of industry and trade by the trusts and big business, but radical economic and agrarian schemes were as distasteful to the Democratic President, Grover CLEVELAND as to the Republicans The party as a whole still tended to reform and in the 1890s took over much of the program of the Populists In 1896 the radicals took over the party and nominated William J BRYAN for President on a "free-silver" platform He was defeated, and the Democratic party appeared doomed by the impossibility of keeping together its diverse elements—the Southern farmers, the Western farmers, the big-city industrial classes, and a few of the wealthy Again a leader appeared in the idealistic liberal, Woodrow WILSON, who won the presidential election of 1912 against the divided Republicans Wilsonian idealism waned after the First World War and the Republicans gained the elections of 1920 and 1924 The election of 1928 was complicated by the issues of religion and PROHIBITION, the Democratic candidate, Alfred E SMITH was defeated The depression which began in 1929 helped to sweep Franklin D ROOSEVELT and the Democrats back into power in 1932, and again the Democrats were identified as the reform party with the New Deal Roosevelt was reelected by an overwhelming majority in 1936 He became (1940) the first U S President to be elected to a third term In 1944, when the United States had been in the Second World War three years, he was chosen for a fourth term When he died (1945), Vice President Harry S TRUMAN became President In 1948 despite the withdrawal from the Democratic convention of J Strom THURMOND (who captured 39 electoral votes in the South on the Negro civil-rights issue) and despite the disaffection of Henry A WALLACE (who polled over 1,000,000 votes), Truman narrowly defeated the Republican presidential candidate, Thomas E Dewey, and brought the Democrats to a surprising victory See H R Bruce, *American Parties and Politics* (3d ed , 1936), W E Binkley, *American Political Parties* (1943), C E Merriam and H F Gosnell, *The American Party System* (4th ed , 1946)

Democritus (dĭmŏk'rĭtŭs), c 460–c 370 B C , Greek philosopher of Abdera, pupil of Leucippus His theory of the nature of the physical world was the most radical and scientific attempted up to his time He avoided the abstractions of his predecessors, Anaxagoras (mind) and Empedocles (harmony and discord), by employing consistent mechanistic postulates that required no supernatural intervention He held that all things were composed of atoms which he asserted to be tiny particles, imperceptible to the senses, composed of exactly the same matter but different in size, shape, and weight They were undivided, indivisible, and indestructible He postulated the constant motion of atoms and, on this basis, explained the creation of worlds (see ATOMIC THEORY) He held that the whirling motion caused by the falling of the heavier atoms resulted in aggregations—the heavier atoms forming the earth and the lighter ones the heavenly bodies What the senses perceive as quality is merely the result of a specific quantitative distribution of atoms Sense perception yields only confused knowledge, telling us merely how things affect us, thought alone can apprehend the nature of things Democritus' ethics were moderately hedonistic, teaching that the true end of life is happiness achieved by inner tranquillity

De Moivre, Abraham. see MOIVRE, ABRAHAM DE

demon [Gr ,=tutelary spirit], in human belief, a supernatural being not a deity, generally malefic in character. Demons are of almost innumerable variety, all tribes and peoples having their own distinctive types Some are superhuman and include nature spirits, spirits of disease and insanity, spirits of emotion personified, as anger or lust (Asmodeus or Ashmodai in the Bible is apparently of this type), fallen angels like LUCIFER, local deities degraded by the conquest of their land, dream demons like the nightmare, the spirits of houses and places, such as lakes, rivers, springs, and wells, which if offended or neglected could exercise malignant power Other demons are disembodied human souls, malevolent ghosts of those who have committed suicide, died a violent death, or remained for some reason unburied. Peculiarly revengeful and dangerous is the soul of the woman who died in childbirth Demons may assume any expedient form They are supposed, in the East, to dwell in ruins, tombs, and deserts, coming about human habitations at night Demoniacs are persons possessed of demons, i e , in whom demons live, the principal way of expelling demons from demoniacs is exorcism, for which many rites have been developed In ancient times certain diseases now identified as St Vitus's dance and forms of mental disease were said to show possession by demons See SATAN and SATANISM

demonetization (dēmŏ"nĭtīzā'shun, dēmŭ"nĭ–), governmental withdrawal of the monetary quality from particular coinage or precious metal Demonetization renders the former money no longer legal tender, but in certain cases it is still usable as money of exchange, i e , the actual metallic value may, but need not, be accepted in discharge of indebtedness However, in the United States since the demonetization of gold in 1933 gold may not lawfully be used in domestic exchange, although it may be purchased for shipment abroad Other instances of demonetization were the American conversion (1873) of silver into money of exchange and the similar British conversion (1889) of pre-Victorian gold coins See also MONEY

Demopolis (dĭmŏ'pulĭs), city (pop 4,137), W central Ala , SSW of Tuscaloosa at the confluence of the Black Warrior and Tombigbee rivers in the Black Belt, founded 1818 by Bonapartist exiles Some fine homes, built by later cotton planters, remain

De Morgan, Augustus, 1806–71, English mathematician and logician, b India, father of W. F De Morgan A noted teacher, he was professor of mathematics (1828–31, 1836–66) at University College (now part of the Univ of London) and a founder and first president (1865) of the London Mathematical Society Known as a reformer of logic, he developed a new logic of relations which he summarized in *Syllabus of a Proposed System of Logic* (1860) His works include *An Essay on Probabilities* (1838), *Formal Logic* (1847), *Trigonometry and Double Algebra* (1849), and *A Budget of Paradoxes* (1872, 2d ed , 1915)

De Morgan, William Frend, 1839–1917, English novelist, artist, and inventor, son of Augustus De Morgan He was a friend of several of the Pre-Raphaelites and in early life designed glass and tiles, rediscovering a process of making colored lusters He established a pottery business in Chelsea With the decline of his business and of his health, he retired in 1905 At the age of 65 he wrote his first novel, *Joseph Vance* (1906), a long, leisurely story, rich in character and humor It was an instant success In the short time which remained to him he wrote about one novel a year—*Alice-for-Short* (1907), *Somehow Good* (1908), *It Never Can Happen Again* (1909), *An Affair of Dishonor* (1910), *A Likely Story* (1911), and *When Ghost Meets Ghost* (1914) *The Old Madhouse* (1919) and *The Old Man's Youth* (1921) were completed by his wife, Evelyn Pickering De Morgan (d 1919), a painter and sculptor See A M D W Stirling, *William De Morgan and His Wife* (1922), studies by F W Seymour (1920) and W T Hale (1921)

Demosthenes (dĭmŏs'thunēz), 384?–322 B C , Greek orator, generally considered the greatest of the Greek orators He was a pupil of Isaeus, and—though the story of his putting pebbles in his mouth and declaiming is only a legend—he seems to have been forced to overcome a speech defect After years of private practice in the law, he became a political orator in 351 B C when he delivered the first of three *Philippics* Philip II of Macedon had been steadily building power, and Demosthenes saw clearly the danger to Greece in the great Macedonian state The *Philippics* (the second in 344, the third in 341) and the three *Olynthiacs* (two in 349, the third in 348), in which he urged aid for Olynthus against Philip, were all directed toward arousing Greece against the conqueror The third of the *Philippics* is generally considered the finest of his orations His predictions came true, and Philip began to exercise great influence in Greece In *On the Peace* (346) Demosthenes urged an end to the Phocian war In 343 he accused his rival, Aeschines, of accepting Macedonian bribes, this speech is entitled (as was the defense of Aeschines) *On the False Legation* With the battle of Chaeronea (338), Philip was triumphant, and Demosthenes' cause was lost He was greatly honored, however, by his admirers and even by most of his enemies But a proposal by Ctesiphon to give Demosthenes a gold crown caused Aeschines to bring suit Demosthenes roundly defended his own career and attacked that of Aeschines in *On the Crown* (330) The verdict was in favor of Demosthenes Later he was involved in a complex and obscure affair involving money taken by one of the lieutenants of Alexander the Great, it ended with Demosthenes in exile After the death of Alexander he was recalled and attempted to build Greek strength to throw off the yoke of Macedon, but he was unsuccessful as Antipater triumphed Demosthenes fled and took poison before he could be captured

demotic · see HIEROGLYPHIC.

Dempsey, William Harrison, 1895–, American boxer, known as Jack Dempsey, b. Manassa, Colo. Dempsey, called the "Manassa mauler" by his admirers, won the world heavyweight championship from Jess Willard in Toledo, Ohio, in 1919 and lost the title to James J (Gene) Tunney in Philadelphia in 1926 At Chicago in 1927, Dempsey was again defeated by Tunney in the fight which involved the controversial "long count" in the seventh round He then retired, but made a brief comeback tour in 1931–32. He later devoted himself to business interests and to promoting interest in sports In the Second World War he was a commander in the U.S. coast guard See his autobiography, *Round by Round* (written in collaboration with M M Stearns, 1940)

Demuth, Charles (dă'mŭth), 1883–1935, American water-color painter, b Lancaster, Pa At 20 he began his art study under William Chase at the Pennsylvania Academy of the Fine Arts In 1907 and again in 1912 he visited Europe On returning to America he began a series of line-and-wash illustrations for works of Zola, Poe, and Henry James and made drawings of vaudeville performers He is perhaps best known for his beautiful flower studies in water color In these and in his later paintings in tempera and oil of New York scenes the influence of cubism is manifest Demuth is represented in many American galleries His *Cyclamen* (Metropolitan Mus) is characteristic See study by William Murrell (1931)

Denain (dŭnē'), town (pop 22,299), Nord dept , N France, with coal fields and ironworks. Here the French defeated (1712) the imperialists in the War of the Spanish Succession

Denbigh (dĕn'bē), municipal borough (1931 pop 7,249, 1943 estimated pop 8,661), county town of Denbighshire, Wales, in the Vale of Clwyd There are remains of walls and of the 13th-century castle built by Henry de Lacy, earl of Lincoln, on a hill above the town, where Charles I stayed after the battle of Rowton Moor (1645) Sir Henry Stanley was born in Denbigh

Denbighshire (dĕn'bĕshĭr) or **Denbigh,** maritime county (669 sq mi , 1931 pop 157,648, 1948 estimated pop 167,493), N Wales, bounded on the north by the Irish Sea and on the west by the River Conway The county town is Denbigh, but WREXHAM, coal-mining and manufacturing center, is more important The county is largely high pastoral moorland Agriculture (oats and wheat) is pursued as an occupation in the valleys of the Conway, the Clwyd, and the Dee Organized as a county under Henry VIII, modern Denbighshire is chiefly important for its mineral resources (iron, slate, and lead as well as coal)

Denby, Charles, 1830–1904, American diplomat, b Virginia, grad Virginia Military Institute, 1850 After 1855 a lawyer of Evansville, Ind , he was appointed (1885) minister to China and served 13 years He wrote *China and Her People* (1906)

Denby, Edwin, 1870–1929, U S Secretary of the Navy (1921–24), b Evansville, Ind , son of Charles Denby President Harding appointed him to the cabinet In 1924 he was involved in the scandal about the oil reserves (see TEAPOT DOME) He was charged not with fraud but with neglect of duty, and in Feb , 1924, the Senate asked his dismissal Although President Coolidge denied the right of the Senate to dictate, he appointed a special counsel to prosecute the oil cases, and Denby resigned

Dendera (dĕn'dură), village, N Egypt, on the Nile It is on the site of the ancient Greek city Tentyra (tĕn'tĭru) There is a large well-preserved temple of Hathor (1st cent B C), which contained a zodiacal table now in the Louvre, and a temple of Isis

Dendermonde, Belgium see TERMONDE

Denham, Sir John, 1615–69, English poet, b Ireland He served with the royalists and during the Restoration, as a reward for his services, was made surveyor general of works With Cowley and Waller, he was one of the pioneers in the use of the heroic couplet His fame rests largely on his *Cooper's Hill* (1642), one of the first descriptive poems in English He wrote a tragedy, *The Sophy* (1642), and several other volumes of poetry, including *The Destruction of Troy* (1656) See edition of his works by T H Banks, Jr (1928)

Denham Springs, town (pop 1,233), SE La , on the Amite river and E of Baton Rouge, settled in the early 19th cent when mineral springs were discovered

Denikin, Anton Ivanovich (ŭntôn' ēvä'nuvĭch dyĭnyĕ'kĭn), 1872–1947, Russian general The son of a serf, he rose from the ranks In 1917 he joined General KORNILOV, whom he succeeded (1918) in command of the White forces against the Bolsheviks He was successful in S Russia, but his drive on Moscow (1919) failed because of his lack of military cooperation with Admiral KOLCHAK He retreated, his forces were demoralized, and in 1920 Denikin resigned his command to General Wrangel Denikin did not fight for the restoration of the tsars, but was a moderate in politics He lived in exile in France until 1946, when he came to the United States, where he died.

Denis, Saint (dĕn'ĭs, dūnē'), 3d cent.?, patron of France. He is said to have been first bishop of Paris and to have died a martyr on Montmartre. His shrine was Saint-Denis The Latin of the name is Dionysius, he was long identified with DIONYSIUS THE AREOPAGITE. Feast Oct 9

Denis, king of Portugal see DINIZ.

Denis, Maurice (môrĕs' dūnē'), 1870–1943, French muralist and writer on art, best known for his religious paintings and decorations His decorations are to be seen in the chapel of Saint-Germain-en-Laye, the churches of Le Vésinet and Gagny, and the Church of the Holy Ghost (Saint-Esprit), Paris He also decorated the Champs Élysées theater and the cupola of the Petit Palais A disciple of Gauguin, Denis uses much more delicate colors He wrote on Gauguin (1912) and on theories of modern and religious art (1914–21).

Denison, Henry Willard (dĕ'nĭsun), 1846–1914, American diplomat in the service of Japan, b Essex co , Vt , studied law at George Washington Univ Sent to Japan as a U S vice consul, he was later (1880–1914) an adviser to the Japanese government in foreign affairs and had considerable influence on the negotiations that ended the First Chino-Japanese War, on negotiations for a treaty of alliance with Great Britain, and on the deliberations of the conference at Portsmouth which ended the Russo-Japanese War. He was also a judge of the Hague Tribunal

Denison. 1 City (pop 4,361), co seat of Crawford co , W Iowa, on the Boyer river and NE of Council Bluffs, in an area producing poultry, grain, and dairy foods, inc 1876 Indian artifacts have been found near by 2 City (pop 15,581), N Texas, near the Red River and NNE of Dallas, inc 1873 It was a stagecoach station before the Civil War but grew to importance only with the coming of the railroad It is a railroad division point, a shipping center for the area, and a busy industrial city with cheese and milk plants, factories making machinery and heavy metal goods, and establishments processing cotton, wheat, and peanuts Wealth from industry has been used to preserve the spacious and well-shaded look of the old streets Dwight D Eisenhower was born here Near by is the big Denison Dam

Denison Dam, NE Texas and S Okla , in the Red River Denison, Texas, is to the south, Durant, Okla , to the north The main dam is 165 ft high and more than 15,000 ft long The reservoir impounded, Lake Texoma, is one of the largest artificial lakes in the United States and is extensively used for recreation The historic village of Preston in Texas and the site of Camp Washita in Oklahoma were inundated The dam was built by the U S Corps of Engineers principally for flood control and generation of power, water was first impounded late in 1943, and the first power was generated in 1944

Denison University · see GRANVILLE, Ohio

Denizli (dĕnĕzlē'), city (pop 20,162), SW Turkey, near the ruins of ancient LAODICEA It is famed for its beautiful situation and its luxuriant gardens An important center in the Middle Ages, it declined after the 14th cent

Denmark, Dan *Danmark*, kingdom (16,576 sq mi , pop 4,045,232), NW Europe, southernmost of the Scandinavian countries Except for the JUTLAND peninsula (between the North Sea and the Baltic Sea), on which Danish North Schleswig borders Germany, Denmark consists of Baltic islands, notably ZEALAND, FYN, FALSTER, LAALAND, LANGELAND, and BORNHOLM Outlying Danish possessions are the FAEROE ISLANDS and GREENLAND COPENHAGEN is the capital, other important or famous cities include Arhus, Odense, Alborg, Roskilde, and Elsinore A part of the European plain, Denmark is low-lying and highly cultivated Dairy and pork products are the mainstays of Danish agriculture and are widely exported. The coastal fisheries are among the most important in Europe, and the Danish commercial fleet is considerable A constitutional monarchy, Denmark is ruled by Frederick IX. The diet or Rigsdag consists of the Landsting (upper chamber) and the Folketing (lower chamber) The Established church is Lutheran, but there is complete freedom of religion The educational level is one of the world's highest Little is known of Danish history before the age of the VIKINGS The Danes had an important part in the viking (or Norse) raids in Western Europe and were prominent among the invaders of England who were opposed by King Alfred and his successors St Willibrord attempted to convert Denmark to Christianity, and St Ansgar succeeded HAROLD BLUETOOTH (d c 985) was the first Christian king of Denmark His son, SWEYN, conquered England From 1018 to 1035 Denmark, England, and Norway were united under King CANUTE The southern part of Sweden (Skane, Halland, and Blekinge) was, with brief interruptions, part of Denmark until 1658 After Canute's death Denmark fell into a period of turmoil and civil war WALDEMAR I (1157–82) and WALDEMAR II (1202–41) were energetic rulers who established Danish hegemony over the North WALDEMAR IV (1340–75) again brought Danish power to a high point, but was humiliated by the HANSEATIC LEAGUE in the Treaty of Stralsund (1370). His daughter, Queen MARGARET, achieved (1397) the union of the Danish, Norwegian, and Swedish crowns in her person (see KALMAR UNION). SWEDEN soon escaped effective Danish rule, and with the accession of Gustavus I of Sweden (1523) the union was dissolved The union with NORWAY, however, lasted until 1814. In 1448 CHRISTIAN I became king and established on the Danish throne the house of Oldenburg, from which the present ruling family (Schleswig-Holstein-Sonderburg-Glücksburg) is descended He also united SCHLESWIG and HOLSTEIN with the Danish crown. The Reformation was established in the reign (1534–59) of CHRISTIAN III. Shortly afterward Denmark had a brilliant court, with a brisk intellectual life, Tycho Brahe is perhaps best remembered of its figures Denmark continued to be involved in wars with Sweden and other neighbors. The participation of CHRISTIAN IV in the Thirty Years War and the wars of FREDERICK III with Sweden caused Denmark to lose its hegemony in the North to Sweden The Danish-Swedish Treaty of Copenhagen (1660) confirmed most of the Danish losses imposed by the Treaty of Roskilde (1658). Christian's successors, Frederick III and Christian V, aided by their minister, Count GRIFFENFELD, transformed the kingdom into an absolute monarchy, thus overcoming the resistance of the nobles, who for centuries had struggled against the royal authority Denmark maintained an imperial status with its rule over ICELAND and the establishment of the Danish West Indies (see VIRGIN ISLANDS) In the NORTHERN WAR against Charles XII of Sweden, FREDERICK IV gained little for Denmark The later 18th cent was marked by important social reforms carried out by the ministers Johann Hartwig Ernst BERNSTORFF, Andreas Peter BERNSTORFF, and STRUENSEE Serfdom was abolished in 1788 In the French Revolutionary and Napoleonic Wars, Denmark was twice attacked by England (see COPENHAGEN, BATTLE OF, COPENHAGEN) Having sided with Napoleon, it was deprived of Norway by the Congress of Vienna (1815). In 1848, after the adoption of a new constitution under FREDERICK VII, Denmark was involved in the first Prusso-Danish war (1848–49) over the status of SCHLESWIG-HOLSTEIN Denmark was defeated and was obliged to agree, by the London Protocol of 1852, to preserve a special status for the two duchies After the accession of CHRISTIAN IX war broke out again (1864) Humbled by Prussia and Austria, Denmark lost Schleswig-Holstein These losses in prestige were, however, more than offset by the astonishingly successful economic changes that transformed Denmark in the second half of the 19th cent from a people of poor peasants and tenants into the nation of the most prosperous small farmers in Europe This was achieved largely by persuading the farmers that they had to specialize in dairy products Not a little credit for educating the rural and industrial population to this necessity was due to the folk schools, which originated with Nikolai F S GRUNDTVIG and which have exerted a tremendous influence on modern Danish life The cooperative movement also has greatly contributed to Danish prosperity Denmark remained neutral in the First World War, but recovered North Schleswig after a plebiscite in 1920 Although the Social Democratic government of Denmark signed a 10-year nonaggression pact with Germany in 1939, neutral Denmark was invaded and occupied by German forces in April, 1940 King CHRISTIAN X and his government remained, but increasing friction with the German authorities led (Aug , 1943) to the establishment of martial law by the Germans, the arrest of the government, and the placing of the king under house arrest Until its liberation by British troops in May, 1945, Denmark was treated by Germany as an enemy nation Meanwhile the Danish minister in Washington, though disavowed by his government, signed an agreement with the United States granting military bases in Greenland Moreover, 40 percent of the Danish merchant fleet served under the Allies, and a Danish resistance force operated in 1945 under the supreme Allied command, although Denmark was technically at peace with Germany After its liberation Denmark entered (1945) the United Nations Economic recovery was more rapid than in the rest of Europe. The cabinet in 1949 was headed by a Social Democrat See J H. S. Birch, *Denmark in History* (1938); F C Howe, *Denmark: the Coöperative Way* (1936); A E Rothery, *Denmark* (1937).

Denmark, town (pop 2,056), S S C , S of Columbia; settled in 1896, inc. 1903 It is a rail and communications center in a diversified farming area.

Dennett, Tyler (dĕ'nĭt), 1883–1949, American historian and educator, b Spencer, near Marshfield, Wis , grad Williams, 1904. After study at Union Theological Seminary and Johns Hopkins Univ., he was briefly a Congregational minister before entering journalism Dennett was lecturer in American history at Johns Hopkins (1923–24) and at Columbia (1927–28), chief of the division of publications (1924–29) and historical adviser (1929–31) in the U.S. Dept. of State, and professor

of international relations at Princeton (1931–34). As president of Williams (1934–37) he was a sharp critic of the New Deal, but favored the admission of more high school graduates to the institution, saying that a college should not be an exclusive club for the wealthy and well-born. Disagreement with the board of trustees led to his resignation, and Dennett thereafter devoted himself to writing He wrote, in addition to numerous articles in magasines and periodicals, *The Democratic Movement in Asia* (1918), *Americans in Eastern Asia* (1922), *Roosevelt and the Russo-Japanese War* (1924); and *John Hay* (1933), which won the 1934 Pulitzer Prize for biography He also edited *Lincoln and the Civil War in the Diaries and Letters of John Hay* (1939)

Dennie, Joseph, 1768–1812, American Federalist journalist, b Boston, grad Harvard, 1790 As editor, he made the *Farmer's Weekly Museum* at Walpole, N H , an influential paper by his "Lay Preacher" essays printed in it (collected 1796, second collection, 1817, both ed in one volume by H M Ellis, 1943) In Philadelphia he founded the *Port Folio*, a leading weekly, and edited it under the pseudonym Oliver Oldschool, Esq , from 1801 to 1812 In it he attacked Jefferson so violently that Dennie was tried for seditious libel in 1805 but acquitted See his letters (ed by L G Pedder, 1936), study by H M Ellis (1915)

Dennis, James Shepard, 1842–1914, American missionary, b Newark, N J He served (1869–92) in Syria, most of the time at the Presbyterian Theological Seminary at Bevrouth His *Christian Missions and Social Progress* (1897-1906) and other writings on the mission field were influential

Dennis, John, 1657–1734, English critic and playwright He quarreled with Pope when his tragedy *Appius and Virginia* (1709) was satirized as bombastic in Pope's *Essay on Criticism* His real importance lies in his critical works, which include *Grounds of Criticism in Poetry* (1704) and *An Essay on the Genius and Writings of Shakespear* (1712). See H G Paul, *John Dennis* (1911)

Dennis, resort town (pop 2,015), SE Mass , on Cape Cod NE of Yarmouth, settled 1639, set off from Yarmouth 1793 It has a summer theater

Dennison, village (pop 4,413), E Ohio, S of Canton, founded 1864 with the establishment of railroad shops (moved to Columbus after a strike in 1922) Its clay deposits are used in the manufacture of ceramics Sewer pipe, boilers, and sheet iron are also produced

Denon, Dominique Vivant, Baron (dōmēnēk' vēvā' bärō' dunō'), 1747–1825, French artist, writer, and archaeologist He had a brilliant career as artist and diplomat under the *ancien régime* and followed Napoleon on his campaign in Egypt In 1804 he became director general of museums and was instrumental in bringing foreign masterpieces into the Louvre His *Voyage dans la basse et la haute Égypte* and his *Monuments des art du dessin chez les peuples tant anciens que modernes* contain fine collections of his engravings of famous monuments and works of art

Denonville, Jacques René de Brisay, marquis de (zhäk' rənā' du brēzā' märkō' du dənōvēl'), d 1710, governor of New France (1685–89) To subdue the Iroquois he led a force of c 3,000 French and Indians into the Seneca country in W New York in 1687 and destroyed their villages This, followed by several acts of inexcusable treachery on Denonville's part, so infuriated the Iroquois that they descended the St Lawrence in force, massacred the inhabitants at Lachine, and held the country in their grip to the gates of Montreal Denonville was replaced by Frontenac

density, in physics and chemistry, a measurement of the quantity of matter in a unit volume of a substance It is usually expressed in grams per cubic centimeter, grams per liter (1,000 c c), or pounds per cubic foot It is calculated by dividing a given standard weight or MASS of a substance by the volume which that mass occupies under standard conditions of temperature and pressure, i e , 0°C and 760 mm of mercury (one atmosphere) The density of water is an exception, however, since it is measured at 4°C , the point of its maximum density It is one gram per cubic centimeter, or or 62 4 lb per cubic foot Different substances have different densities, and this property is useful in determining the identity of an unknown substance Density tells "how heavy" a substance is A unit volume of iron weighs many times more than the same volume of cork, but a pound of iron weighs no more than a pound of cork When the density of a solid or a liquid is compared with that of water taken as a unit, the abstract number representing the ratio is called the SPECIFIC GRAVITY The density of a gas is compared with that of hydrogen or of air for specific gravity

Dent, Edward Joseph, 1876–, English musicologist. He studied at Cambridge, where he became professor of music in 1926 He is the author of biographies of Alessandro Scarlatti (1905), Busoni (1933), and Handel (1934) and of the critical works *Mozart's Operas* (1913, 2d ed , 1947), *Terpander, or, Music and the Future* (1927), and *Music of the Renaissance in Italy* (1934). In 1922 he founded the International Society for Contemporary Music, of which he was president until 1938.

Dentatus (Manius Curius Dentatus) (dĕntā'tŭs; mā'nēŭs kyŏŏ'rēŭs), d 270 B C., Roman general, distinguished for his simple habits. As consul (290 B C) he defeated the Samnites, Sabines, and Lucani and, in his third consulship (275 B.C), drove PYRRHUS from Italy Many stories are told of his simplicity and incorruptible honor Samnite ambassadors who sought to bribe him found him (according to Plutarch) boiling turnips He refused their offer, saying that it was more glorious to conquer owners of gold than to possess it himself.

Dent Blanche (dänt' blänsh'), peak, 14,318 ft high, Valais canton, Switzerland, in the Pennine Alps

Dent du Midi or **Dents du Midi** (both dä' dü mēdē'), Alpine mountain group, Vaud canton, Switzerland, rising to 10,696 ft in Haut Cime

dentifrice, material used to clean the teeth and gums, available as a liquid, a paste, and a powder Dentifrices which contain strong chemical antiseptics and abrasives may cause injury to the teeth and the oral tissues Approved dentifrices are listed by the American Dental Association, Chicago

dentistry, science which deals with the treatment and care of the teeth and associated oral structures The scope of dentistry includes such highly specialized fields as orthodontia (the prevention and correction of malocclusions of the teeth and malformations of the jaws), oral surgery, periodontia (the prevention and treatment of diseases of the gums or gingival tissues), prosthetics (restoration of missing teeth by artificial means), and public health dentistry Modern dentistry stresses both preventive and corrective measures, the employment of local and general anesthetics in the treatment of teeth and in surgery of the mouth is a routine procedure in dental practice The child of school age is now educated in the care of the teeth The earliest archaeological findings indicate that dental ills plagued man from the time he first inhabited the earth Magic and fetishes were used at first as curative measures, but these began to be replaced by drugs and other remedies in the civilizations of China and Egypt c 4000 B C Artificial dentures were probably first made by the Etrus ans or by the Egyptians The Romans borrowed from the Etruscans and the Greeks and achieved considerable skill in dentistry, most of which was lost in the return of magic in the Middle Ages Modern dentistry evolved from the work of many Ambroise Paré, a surgeon, described in his writings the transplantation of teeth and numerous other operations John Hunter, also a surgeon, performed transplantations and wrote an influential work on diseases of the teeth Important contributions were made by Pierre FAUCHARD, G V BLACK, C A HARRIS, and numerous others Introduction of the use of ether anesthesia was made by Crawford Long, W G T Morton, Horace Wells, and J C Warren Progress in dentistry was aided by the invention of the X ray, the use of local anesthetics, the production of artificial dentures made from porcelain and vulcanized rubber and later from plastics, the discovery of methods of preparing amalgam fillings and gold inlays, and the invention of the drilling machine In early days dentistry was not distinguished from medicine As it became a special and separate field, professional training schools grew up and educational requirements became more stringent In the United States the first dental college, the predecessor of hundreds now in existence, was established in Baltimore, Md , in 1840 See M D K Bremner, *The Story of Dentistry* (1939), A W Lufkin, *History of Dentistry* (2d ed , 1948)

Denton. **1** Trading town (pop 1,572), co seat of Caroline co , Eastern Shore, Md , in a farm area, settled c 1765 It has vegetable canneries and fertilizer and basket factories **2** City (pop 11,192), co seat of Denton co , N Texas, NW of Dallas and NE of Fort Worth, founded 1855, inc 1866 The students of North Texas State College (coeducational, 1890) and of Texas State College for Women (1901) give the city the leisurely look of a college town It is also active with processing plants and small factories in a varied farming area An agricultural experiment station is near by, as is artificial Lake Dallas in the Trinity river system

D'Entrecasteaux Islands (dätrəkästō'), volcanic group, area c 1,200 sq mi , off SE New Guinea, part of the Territory of Papua They comprise Fergusson, Goodenough, and Normanby islands The group is mountainous and contains several extinct volcanoes, hot springs, and geysers Coconuts and pearl shell are the chief products The islands were named for the French navigator, Entrecasteaux

Dents du Midi: see DENT DU MIDI.

Denver, James William, 1817–92, American territorial governor, army officer, and Congressman, b Winchester, Va He moved (1830) with his family to Ohio and taught school in Kentucky and Missouri before graduating (1844) from the Cincinnati Law School and beginning practice in Missouri He commanded a company of Missouri volunteers in the Mexican War, then went (1850) to California, where he was state senator and secretary of state before serving (1855–57) as U S Representative President Buchanan appointed him commissioner of Indian affairs (1857) and territorial governor (1858) of troubled Kansas. Denver as governor established order in the newly discovered Colorado gold mines and helped bring about the separation of Colorado from Kansas (Denver is named for him) In the Civil War he was a brigadier general of volunteers in the Army of the Tennessee, and later he practiced law in Washington, D C

Denver, 1 City (pop 322,412, alt 5,280 ft), state capital, N central Colo , on the South Platte river at the mouth of Cherry Creek, settled 1858, inc. 1861 Denver was made territorial capital in 1867 The mineral wealth of the Rockies laid the foundations for the city; the rich strikes of the late 1870s and the 1880s caused Denver to boom, like many another Colorado city (e g , LEADVILLE) It became the metropolis for bonanza kings, H A W TABOR built the Tabor Grand Opera House, and the Silver Dollar saloon flourished In the late 1890s Denver's steady development began, its metal industries were subsequently subordinated to its role as a great transportation, processing, and distributing center for an extensive agricultural and livestock area Denver is a port of entry and the financial and administrative center for the Rocky Mt region The city has extensive stockyards Among its industries are oil refineries, railroad shops, fruit and vegetable canneries, and feed and flour mills Some of its manufactures are mining and farming machinery, furniture, rubber goods, fiber and cotton products, confectionery, and electrical products Providing for tourists is an important aspect of the city's business The good transportation system (highway, rail, and air) brings many visitors, attracted by the fine climate, the beauty of the city, and its proximity to the Rocky Mt region Numerous Federal agencies have quarters here, including a mint Other places of interest include the park system, with many mountain areas, the Colorado Museum of Natural History, the capitol, the zoological gardens, the Denver Art Museum, and Lowry Field (U S military air station) Among the city's educational assets are the Univ of Denver (see DENVER, UNIVERSITY OF), Loretto Heights College (Catholic, for women, 1891), Regis College, a Methodist theological seminary, the Univ of Colorado medical school (with a fine psychopathic hospital), a junior college, an opportunity school, and a school for crippled children **2** Borough (pop 1,428), SE Pa , NE of Lancaster, settled 1863, inc 1900 Its manufactures include textiles, cigars, and shoes

Denver, University of, at Denver, Methodist, coeducational, chartered and opened 1864 as Colorado Seminary by John EVANS and others. The seminary was reorganized (1880) and the university created as a degree-conferring body It has colleges of arts and sciences, business administration, engineering, and law and schools of aeronautics, architecture and planning, art, education, hotel and restaurant management, librarianship, music (Lamont), social work, and speech There are a social sciences foundation, Chamberlin Observatory, and (in cooperation with other institutions) a high-altitude laboratory on Mt Evans

Denys, Nicolas (nēkôlä' dunā'), 1598–1688, trader and pioneer of New France, b Tours, France He became a master in the Nova Scotia fisheries After 1633 he founded several fishing and lumbering establishments along the northeast coasts of Nova Scotia, and in 1645 he built a fort at Miscou From the Company of New France, Denys purchased (1653–54) the Gulf of St Lawrence coast of Nova Scotia and New Brunswick from Canso to the Gaspé Peninsula, including Prince Edward Island and other islands, and over this territory and Newfoundland he held a commission from the king as governor However, none of his undertakings prospered, and it is for his valuable *Description géographique et historique des costes de l'Amérique septentrionale* (1672) that Denys is remembered This source book of information about Acadia was translated and edited by W F Ganong as *The Description and Natural History of the Coasts of North America (Acadia)* (1908, with a memoir of Denys)

deodar or **deodar cedar:** see CEDAR

deodorizer or **deodorant,** substance employed to absorb or to eliminate offensive odors Chloride compounds, hydrogen peroxide, and charcoal are employed for various deodorizing processes In personal hygiene, deodorants may be applied locally on body surfaces where little evaporation of perspiration occurs, e g , the armpits

department store: see STORE

De Patinir, De Patenier, or **De Patiner, Joachim:** see PATINIR, JOACHIM DE

De Paul University: see CHICAGO, Ill.

De Pauw, Washington Charles (dĭpô'), 1822–87, American manufacturer, b Salem, Ind At first successful at banking, he later established a plate-glass works at New Albany, Ind , which became one of the largest plants in the country. He donated some $300,000 to Indiana Asbury College, which was renamed (1882) DePauw University.

DePauw University see GREENCASTLE, Ind

De Pere (dĭ pēr'), industrial city (pop 6,373), NE Wis, on the Fox and S of Green Bay, inc 1883 It was called Mission des Pères (from which its present name is derived) after Father Allouez founded (1671) the St Francis Xavier Mission here Burned by the Indians in 1687, the mission was rebuilt and used until 1717 Nicolas Perrot presented (1686) a silver ostensorium to the mission, now preserved at the museum in Green Bay De Pere grew in the 19th cent as a lumber town, port, and commercial center St Norbert College is at West De Pere across the river

Depew, Chauncey Mitchell (dĭpū'), 1834–1928, American orator and railroad president, b Peekskill, N Y, grad Yale, 1856 Admitted to the bar in 1856, he was from the beginning interested in Republican politics and stumped for John C Frémont in 1856 He was a member (1862–63) of the state legislature and secretary of state of New York (1863–65) In 1866 he refused the ministry to Japan in favor of serving the railroad interests of Commodore Vanderbilt He served as general counsel (1875–82) vice president (1882–85), president (1885–99), and chairman of the board (1899–1928) of the New York Central lines His oratorical abilities appeared in the Republican conventions, and he was made U S Senator (1899–1911) He failed to secure reelection in 1910, partly because an investigation of life insurance revealed that he received an annual retainer from the Equitable Life Assurance Company He was noted as an after-dinner speaker See his memoirs (1922)

Depew, industrial village (pop 6,084), W N Y, near Buffalo, inc 1894 Metal products are made here

depilatory (dĭpĭl'ătō"rē), chemical agent used to remove hair In hide dressing, lime is the chief depilatory For the removal of superfluous hair from the body, sulphides of the metals are used, e g, barium sulphide, sodium sulphide, calcium hydrosulphide, and strontium hydrosulphide The powdered material is mixed with lime, sugar, chalk, and perfume, sometimes it is made into a paste These reagents convert the hair to a gelatinous mass, but do not prevent the hair from growing again Frequent application may cause grave disfigurement of the skin Sulphide preparations have disagreeable odors and since they are potentially dangerous should be used with caution

deportation, expulsion of aliens from a country by act of the government The term is not applied ordinarily to sending a national into EXILE or to committing one convicted of crime to an overseas penal colony In international law the right to return ALIENS to the country to which they owe ALLEGIANCE (or to any country which will accept them) derives from a government's sovereign control over its own territory Except for the ALIEN AND SEDITION ACTS of 1798 there was no American deportation law until the enactment in 1882 of a statute aimed at some of the Chinese who had come into the United States In 1891 an act authorized deportation of aliens who within a year of arrival became public charges for causes in existence before their entry Succeeding statutes increased the deportable classes to include persons who before their entry into the United States were insane, feebleminded, illiterate, or diseased in various ways In such cases proceedings must be brought within a limited period after entry In the case of criminals or persons espousing the violent overthrow of the government (e g, anarchists and Communists) there is no limit on the time when deportation proceedings may be initiated Deportation is also available against aliens who while in the United States commit crimes involving moral turpitude In recent years much attention has been centered on attempts to deport alleged Communists, but the great majority of recent deportations were of Mexicans who illegally entered the United States in search of employment Deportation was the responsibility of the Dept of Labor until 1940, when it was transferred to the Dept of Justice

Deposit, resort village (pop 2,028), S N Y, on the West Branch of the Delaware and E of Binghamton, settled 1785, inc 1811

depreciation, loss in value In ACCOUNTING it means shrinkage in value of fixed or capital assets, as by use, damage, weathering, or obsolescence Periodic depreciation is usually found by taking the cost of the asset, less its estimated value as scrap, and dividing this by its estimated life in periods Depreciation may be distributed over the life of the asset by equal, irregular, gradually increasing, or gradually diminishing installments Rights of limited duration, such as copyrights and leaseholds, depreciate in value as their date of expiration approaches. The problem of calculating depreciation has special importance because of the need of accurate returns for income taxes Failure to make allowance for depreciation results in over-estimating income

De Predis, Ambrogio (ämbrō'jō dā prā'dēs), c.1455–c 1506, Milanese portrait and miniature painter He worked under Leonardo da Vinci and followed his style so closely that his portrait supposedly of Beatrice d'Este (Milan) was long attributed to Leonardo De Predis went to Innsbruck, Germany, with his patron Lodovico Sforza. There he painted portraits of Bianca Sforza (National Gall. of Art, Washington, D C) and her husband, Emperor Maximilian (Vienna) His *Girl with Cherries* is in the Metropolitan Museum Miniatures by De Predis are in the Trivulzio Collection, Milan, and in the British Museum

depression see CRISIS, ECONOMIC

Depretis, Agostino (ägôstē'nō dāprā'tēs), 1813–87, Italian statesman An opposition leader in the Sardinian parliament after 1848, he held several cabinet posts after the foundation of the Italian kingdom and in 1873 became leader of the leftists He was three times premier (1876–78, 1878–79, 1881–87), maintaining himself in power by heading a coalition of the moderate elements Depretis worked for the Triple Alliance (see TRIPLE ALLIANCE AND TRIPLE ENTENTE) of 1882 and effected useful internal reforms

De profundis (dā prōfōōn'dēs) [Latin,=from the depths], one of the penitential psalms, Ps 130 (or 129) See PSALMS

Deptford (dĕt'furd), metropolitan borough (1931 pop 106,891, 1948 estimated pop 75,670) of SE London, England, S of the Thames Noted in Elizabethan times for its cattle market and royal dockyard, it is now an industrial district In an inn here Christopher Marlowe was killed (1593)

Depue (dĭpū'), village (pop 2,296), N Ill, on the Illinois river and N of Peoria, in a farm area, inc 1867 Lake Depue lies to the south

De Queen, city (pop 3,055), co seat of Sevier co, SW Ark, near the Okla border, inc 1897 It is a rail center, shipping the products of a rich farm area

De Quincey, Thomas (dĭ kwĭn'sē), 1785–1859, English essayist, b Manchester In the winter of 1802–3 he ran away to London, where he suffered great privation When his family found him, they entered him (1803) in Worcester College, Oxford In 1808 he left without a degree because he did not take an oral examination In 1809 he settled at Grasmere, near Wordsworth and Coleridge, and married (1816) It was here the opium habit, started at Oxford to relieve neuralgia, overcame him for a time His literary career began with his "Confessions of an English Opium-Eater" in the *London Magazine* (1821) Driven by the need to support his family, De Quincey became a prolific contributor to various journals, especially after 1825 to *Blackwood's*, Edinburgh Among his best works, written in a polished, highly imaginative, and discursive prose, are "On Murder as One of the Fine Arts," "Suspiria de Profundis," "On the English Mail Coach," and *Autobiographic Sketches* (1853) "On the Knocking at the Gate in Macbeth" reveals him as a critic both scholarly and intuitive See De Quincey's diary for 1803 (ed by H A Eaton, 1927) and *De Quincey at Work* (letters, ed by W H Bonner, 1936), biographies by H A Eaton (1936) and Edward Sackville-West (1936)

De Quincy (dĭ kwĭn'sē), town (pop 3,252), SW La, NW of Lake Charles, settled 1898, inc 1902 It is in a rich lumber, farm, and oil district

Derain, André (ädrā'dürĕ'), 1880–, French painter, studied for a short time under Carrière Derain's friendship with Vlaminck led to his informal association c 1905 with the fauvist painters Although not linked with any one movement, his art attests an adroit assimilation of various influences Characteristic of his work is a simplified architectonic composition and conservative restraint in color and design suggestive of the inspiration of Cézanne He is represented in American public and private collections

Deraismes, Maria (marēä' durām'), 1828–94, French feminist She was a founder (1869) of the first French society dedicated to improving conditions for women and to securing greater educational advantages for them Her complete writings were published in 1895

Derbe (dûr'bē), ancient town, Asia Minor, SSE of Iconium near the Taurus range Paul and Barnabas fled hither from Iconium Acts 14 6

Derbent (dyĭrbyĕnt'), city (pop 23,097), SE Dagestan, SE European RSFSR, on the Caspian Sea It was founded (5th or 6th cent A D) by the Persians at the Iron Gates (probably identical with the Caspian or Albanian Gates of the ancients), a defile between the Greater Caucasus and the Caspian, on a major commercial route There are remains of the Caucasian Wall (also called Alexander's Wall), built by the Persians in the 6th cent as a bulwark against northern invaders The Arabs, who took Derbent in 728, made it a commercial and cultural center Passing (1220) to the Mongols and later recovered by Persia, Derbent was briefly held (1722) by Peter I of Russia and was annexed to Russia in 1813. Today it is a fishing port with nitrogen-processing plants and distilleries

Derby, Edward George Geoffrey Smith Stanley, 14th **earl of** (där'bē), 1799–1869, British statesman He was one of the great forces in liberalizing the Tory party An early admirer of George Canning, he served as Canning's undersecretary for the colonies (1827), but supported the Whig reform program and became chief secretary for Ireland (1830–33) under Earl Grey. Given the colonial office in 1833, he pushed through Parliament the abolition of slavery Attracted to Robert PEEL, he had become a Conservative by 1838 and served as Peel's colonial secretary (1841–45), but resigned because he could not favor repeal of the corn laws. With Lord George Bentinck and Benjamin DISRAELI he now led the Tory protectionists and headed two brief ministries (1852, 1858–59) When the unfortunate Russell government fell, Derby formed a government (1866–68) with Disraeli as chancellor of the exchequer and leader in the House of Commons Through Disraeli's initiative and skill the famous REFORM BILL of 1867 was passed

Derby, Elias Hasket (dûr'bē), 1739–99, American merchant, b Salem, Mass He inherited the considerable wealth and maritime business which his father, Richard Derby (1712–83), also of Salem, had acquired in trade with Spain and the West Indies previous to the American Revolution. In the Revolution, Elias increased his wealth by fitting out a number of successful privateersmen. After the war he was a pioneer in exploring new trade routes, his ships being the first to carry the Stars and Stripes to the Baltic and the Orient His most lucrative trade was with the island of Mauritius in the Indian Ocean The success of his enterprises was partly due to his wise selection of captains and supercargoes His mansion, built in 1797 by Samuel McINTIRE, was reputed the finest in Salem in its day His son, Elias Hasket Derby, Jr. (1766–1826), b Salem, made several remarkable voyages for the firm and took over the business after his father's death

Derby, George Horatio, pseud **John Phoenix,** 1823–61, American humorist, b Dedham, Mass, grad West Point After serving in the Mexican War, he was assigned to the U S Topographical Service in California, where he wrote a series of humorous sketches for the San Francisco magazine *Pioneer* These were collected in 1855 as *Phoenixiana*, and another series appeared as *The Squibob Papers* (1859) See G R Stewart, *John Phoenix, Esq* (1937)

Derby (dar'bē, dûr'), borough (1931 pop 142,403, 1947 estimated pop 142,280), co seat of Derbyshire, England, on the Derwent river It is a rail center with large engineering works and repair shops, manufactures include Rolls-Royce cars, pottery (see DERBY WARE), textiles, and paper It is the birthplace of Herbert Spencer, and George Eliot lived here Noteworthy are the Church of All Saints, with its Perpendicular tower (1509–27), the Roman Catholic Church of St Mary (by Pugin), and the arboretum In the 9th cent Derby was one of the Five Boroughs of the Danes

Derby (dûr'bē) **1** City (pop 10,287), SW Conn, at the confluence of the Naugatuck and Housatonic, founded 1642 as a trading post inc 1893, coextensive with Derby Town, inc 1675 Machinery, tools, and rubber goods are among its products The Yale spring regatta is held on the Housatonic here **2** Town (pop 2,118), N Vt, at the Canadian line, N and E of Newport It includes the villages Derby Center and Derby Line The latter, a port of entry, has an opera house and other buildings on the international line, its Legion Park is a Canadian-American World War Memorial

Derby (dar'bē, dûr'bē), famous horse race, instituted (1780) by the 12th earl of Derby and held annually at Epsom Downs, near London, England The race is open only to three-year-old colts and fillies who must be entered when they are yearlings The course, not level, is more than 1½ mi long Hundreds of thousands of spectators are drawn to the race every year The Derby became so famous that its name was applied to other well-known races, notably the Kentucky Derby (dûr'bē), held each year since 1875 at Churchill Downs, Lexington, Ky

Derbyshire or **Derby,** county (1,002 sq mi, 1931 pop 757,374, 1948 estimated pop 812,100), central England The county town is Derby The surface of the county is flat in the south, rising in the north to more than 2,000 ft in the Peak district The region is drained by the River Trent, with the Dove, the Derwent, and the Wye flowing south to it Derbyshire is extensively cultivated Dairy farming and sheep raising are important occupations In the eastern part of the county there are rich coal deposits Manufacturing of textiles, steel, porcelain, and paper is carried on at Derby, Chesterfield, Alfreton, Glossop, and Ilkeston There are Roman and pre-Roman remains In the Anglo-Saxon period Derbyshire was part of the kingdom of Mercia It was probably organized as a shire by Athelstan There are remains of Norman castles at Bolsover, Castleton, and Duffield, and the great house of the dukes of Devonshire is at Chatsworth. See Arthur Mee, *Derbyshire* (1937).

Derby ware, English china produced at Derby since c 1750, when William Duesbury opened the first pottery there Other potteries were soon opened at Denby, Brampton, Pinxton, Swadlincote, and Woodville in the same district From 1784 the ware was known as Crown Derby and included services for the queen, Gladstone, and many notables, it became Royal Crown Derby in 1890 by permission of Queen Victoria. It was in this ware that the government authorized reproductions of the Rhodian and Persian porcelains in the Victoria

and Albert Museum for exhibiting in the provinces. Japanese Imari porcelain also was successfully reproduced Derby ware is distinguished by delicacy of body and richness of decoration, ivory china and eggshell porcelain are among the types manufactured There have been a score or more of Derby marks, most of which show a crown over a D, sometimes with crossed swords and six dots, the whole in blue or red

derelict (dĕ'rĭlĭkt"), property cast overboard or abandoned at sea by the owner The most usual derelict is a wrecked ship from which the crew fled (see SHIPWRECK) SALVAGE may be claimed by those rescuing such a ship

Derg, Lough (lŏkh' dĕrg'), in Ireland **1** Expansion of the Shannon river, 23 mi long and 1 to 5 mi wide, on the borders of Counties Galway, Tipperary, and Clare There are mountains on the west shore, the east is mostly low On Holy Island or Inisceltra are remains of churches and a round tower **2** Lake, SE Donegal Station Island here, the traditional scene of St Patrick's Purgatory, has extensive religious establishments—hospice and chapels—and is a famous place of pilgrimage Saints' Island has remains of a monastery

De Ridder, city (pop 3,750), parish seat of Beauregard parish, SW La , E of the Sabine river, inc 1907 Industrial and trade center of a lumbering and diversified farming district, it is also increasingly a wool market

Dermot McMurrough or **Diarmid mac Murchada** (both dûr'mut mukmŭ'ru), d 1171, Irish king who brought the English into Ireland While he was king of Leinster, he intensified a feud with a neighbor by stealing his wife His enemies, headed by the wronged husband and the High King RORY O'CONNOR, defeated and banished him (1166) Dermot appealed for help to Henry II of England and, after obtaining promises of aid from Richard de Clare of Pembroke (Richard Strongbow) and other adventurers in Wales, returned to Ireland in 1168 The next year he welcomed the invaders, and by late 1170 they had won SE Ireland, including Dublin, and Strongbow married Dermot's daughter, Eva Although Dermot has been held in disrepute in Ireland for his treachery, he was a patron of the compilation of the valuable Irish manuscript, the Book of Leinster

Dermott (dûr'mut), city (pop 3,083), SE Ark , in a farm area It has sawmills and woodworking plants

Dern, George Henry, 1872–1936, U S Secretary of War (1933–36), b Dodge Co , Nebr , grad Fremont Normal College, 1888 He went (1894) to Utah and engaged successfully in mining and banking He served Utah as senator (1915–23) and, as governor (1925 32), sponsored much progressive legislation A Democrat, Dern was appointed Secretary of War by Franklin D Roosevelt On his death he was succeeded by Harry H Woodring

Derna (dĕr'na), town (pop c 21,000), Cyrenaica, Libya, a port and caravan center on the Mediterranean William Eaton commanded a U S force, comprising marines and hired Arab soldiers, which captured Derna, then a stronghold of the Barbary pirates, in 1805. Derna was an important objective in the North African campaigns of the Second World War

Dernburg, Bernhard (bĕrn'hart dĕrn'bo͝ork), 1865–1937, German financier and statesman As colonial secretary (1906-10), he was an important figure in the growth of German imperialism His efforts (1914–15) to act as German propagandist in the United States were offset by the sinking of the *Lusitania* Dernburg was finance minister in the Scheidemann cabinet (1919) and served as deputy in the Reichstag (1920–30).

derrick crane. see CRANE

Derry, Northern Ireland see LONDONDERRY

Derry. 1 Town (pop 5,400), SE N H , SE of Manchester, set off from Londonderry 1827 It produces textiles, shoes, and other goods Robert Frost farmed here and taught at the Pinkerton Academy Horse races on ice have been held since 1928 **2** Borough (pop 3,003), SW Pa , ESE of Pittsburgh near Greensburg, inc 1881 Porcelain insulators are made here

dervish (dûr'vĭsh) [Persian, =beggar], the friar or monk of ISLAM There are many societies of dervishes, many of them quite similar to religious orders in Western Christendom, with the important difference that final vows are not found, and enclosed or cloistered orders are really unknown Various orders are characterized by extreme forms of mystical practices, as those of the howling dervishes and whirling dervishes There is a strong antinomianism among dervishes, who claim special dispensation on account of their superior favor with God The ALMOHADES and ALMORAVIDES were at first dervish orders, and dervishes still mix in politics See also SUFI and FAKIR

Derwent (dûr'wŭnt), rivers in England **1** Cumberland, in the Lake District, rising near Keswick and flowing 35 mi N and W through Borrowdale, past Cockermouth, into Solway Firth at Workington **2** Derbyshire, tributary of the Trent, flowing 60 mi. S and SE past Chatsworth and Derby. **3** Yorkshire, tributary of the Ouse

Derwentwater, oval lake, 3 mi. long and 1 mi. wide, Cumberland, England, formed by a widening of the Derwent river. It is surrounded by wooded hills, with the Lodore waterfalls at its upper end Its islands include Lord's Isle, site of the former mansion of the earls of Derwent, Isle of St Herbert (a 7th-century hermit), and Floating Isle, a mass of vegetation, sometimes below the surface

Derzhavin, Gavril Romanovich (gŭvrēl' rŭmä'-nŭvĭch dyĭrzhä'vĭn), 1743–1816, Russian classical poet. He was poet laureate to Catherine II His fame rests principally on the *Ode to God,* translated into English by John Bowring (1861)

Desaguadero (däsäwädhä'rō), river of W Bolivia, 200 mi long, flowing SE from Lake TITICACA to Lake Poopó Since in its southern course it flows across salt beds, the Desaguadero is used for irrigation only in the north

Desaix de Veygoux, Louis Charles Antoine (lwē' shärl' ätwan' dusä' du vägōō'), 1768–1800, French general in the FRENCH REVOLUTIONARY WARS He served under Jourdan and Moreau, distinguished himself in the Egyptian campaign as soldier and administrator, and saved the day for Napoleon at Marengo, where he was killed

De Sanctis, Francesco (franchäs'kō dä sangk'tēs), 1818–83, Italian literary critic He was one of the founders of modern Italian literary criticism and one of the greatest of modern literary critics He suffered imprisonment for his political views and was exiled to Malta He was later (1871–77) professor of comparative literature at Naples, supported Cavour, and was by him appointed minister of education Important works are his *Saggi critici* [critical essays] (1866) and his *History of Italian Literature* (1871, Eng tr , 1931) He also wrote studies of Petrarch (2d ed , 1883) and of Leopardi (1885)

Des Arc (dā'z ärk'), town (pop 1,410), a co seat of Prairie co , E central Ark , on the White River, settled in the 1820s by the French, inc 1854 It ships farm products and lumber by rail

Desargues, Gérard (zhărär' duzurg'), 1593–1662, French mathematician and engineer, a founder of modern geometry He discovered the theorems on involutions and transversals known by his name and worked on conic sections His writings, lost for a time, were republished in 1864

Des Barres or **Desbarres, Joseph Frederick Wallet** (dăbar'), 1721?–1824, British army officer, surveyor, and artist He was born of French parents (probably in Switzerland), was educated at Basel and in Great Britain, and became a British citizen He served with British forces in America in the last of the French and Indian Wars and rendered valuable service as an engineer in the taking of Quebec He later spent 10 years in surveying the coasts of Nova Scotia and another 10 years in London editing his data, incorporating the surveys of others, and supervising the engraving of the plates, the result was *The Atlantic Neptune,* which appeared in successive issues and was used by British seamen in American waters for three generations The plates are justly famous for their artistic excellence, and they are collector's items Des Barres was later lieutenant governor of Cape Breton and then of Prince Edward Island The name also appears as Joseph Frederick Walsh Des Barres

Desbiens (dăbyĕ') or **Saint Émilien** (sĕtămēlyĕ'), village (pop 1,018), S Que , on Lake St John at the mouth of the Metabetchouan river

Descartes, René (runā' dākärt'), Latin *Renatus Carteseus* (rē-nā'tus kar-tē'zhus), 1596–1650, French philosopher and scientist He was educated in the Jesuit school at La Flèche and the Univ of Poitiers, then entered the army of Prince Maurice of Nassau In 1628 he retired to Holland, where he spent his time in scientific research and philosophic reflection In 1649 he was invited by Queen Christina to Sweden, but he was unable to endure the rigors of the northern climate and died not long after arriving in Sweden Even before going to Holland, Descartes had begun his great work, for the essay on algebra and the *Compendium of Music* probably antedate 1628 But it was with the appearance in 1637 of a group of essays that he first made a name for himself These essays included the famous *Discourse on Method,* his essay on dioptrics, his essay on meteors, and his essay on analytical geometry Mathematics was his greatest interest, building upon the work of others, he originated the CARTESIAN COORDINATES and Cartesian curves, he is often said to be the founder of analytical geometry To algebra he contributed the treatment of negative roots and the convention of index notation It was with the intention of extending mathematical method to all fields of human knowledge that he developed his methodology, the cardinal aspect of his philosophy He discards the authoritarian system of the scholastics and begins with universal doubt But there is one thing that cannot be doubted doubt itself This is the kernel expressed in his famous phrase, *Cogito, ergo sum* [I think, therefore I am] From the certainty of the existence of God, for which he offered a proof based on Anselm's ontological proof and a proof based on the first cause which must have produced the idea of God in the thinker. Having thus arrived at the existence of God, he reaches the reality of the physical world through God, who would not deceive the thinking mind by perceptions that are illusions. Therefore, the external world, which we perceive, must exist He thus falls back on the acceptance of what we perceive clearly and distinctly as being true and he studies the material world to perceive connections He views the physical world as mechanistic and entirely divorced from the mind, the only connection between the two being by intervention of God This is almost complete DUALISM In science, he discarded tradition and in a way supported the same method as Francis Bacon, but with emphasis on rationalization and logic rather than upon experiences In physical theory his doctrines were formulated by a compromise between his devotion to Catholicism and the scientific method which met opposition in the churchmen of the day He made numerous advances in optics, such as his study of the reflection and the refraction of light He wrote *Traité de l'homme et de la formation du fœtus* (1664), a textbook of physiology, and he also worked in psychology, in which he interpreted emotion as physiological at base and argued that the control of the physical expression of emotion would control the emotions themselves His chief work on psychology is in his *Traité des passions de l'âme* (1650), the development of his philosophy is in *Méditations de prima philosophia* (1641), his *Principia philosophiae* (1644) is also very important His influence on philosophy was immense. Frequently he has been called the father of modern philosophy, but his importance has been challenged in recent years with the demonstration of his great debt to the scholastics He influenced the rationalists Spinoza also reflects Descartes's doctrines in some degree The more direct followers of Descartes, the Cartesian philosophers, devoted themselves chiefly to the problem of the relation of body and soul, of matter and mind From this came the doctrine of occasionalism, developed by Malebranche and Geulincx His influence was very wide in law and theology also See E S Haldane, *Descartes His Life and Times* (1905), *Descartes Selections* (with introduction by R M Eaton, 1927), Jacques Maritain, *The Dream of Descartes* (Eng. tr , 1944)

descent, in law see INHERITANCE, in law.

Deschaillons sur Saint Laurent (dăshäyō' sûr sĕ lôrā'), village (pop 1,078), S Que , on the St. Lawrence The village of Deschaillons adjoins it

Deschanel, Émile (āmēl' dāshänĕl'), 1819–1904, French author and politician Of his numerous works the best-known are such critical studies as *Études sur Aristophane* (1867) and *Le Romantisme des classiques* (1882) His *Catholicisme et socialisme* (1850) offended Louis Napoleon (Napoleon III), and Deschanel spent the years 1851–59 in exile. He was made a professor at the Collège de France and a senator in 1881

Deschanel, Paul Eugène Louis (pôl' ûzhĕn'), 1855–1922, president of the French Republic (1920), son of Émile Deschanel Several times president of the chamber of deputies, he was chosen, over Clemenceau, to succeed Poincaré as president of the republic Ill-health forced his resignation after a few months He was succeeded by Millerand The author of many political books, Deschanel wrote notably *Gambetta* (1920), *Orateurs et hommes d'état* (1888), and *La Question sociale* (1898)

Deschutes (dăshōōts') [Fr ,=rapids], river rising in several lakes in W central Oregon, in the Cascade Range, and flowing NNE to the Columbia Its largest tributary is Crooked River Both the main stream and the tributary have been much used for the development of power and for irrigation An important early project was Crane Prairie Reservoir (created 1922, new dam built 1939) A project to irrigate more than 100,000 acres received water in the northern section in 1946

Deseret see MORMONS and UTAH

desert (dĕ'zurt), arid region, at least partly covered by sand, having scanty vegetation or sometimes almost none, and capable of supporting only a limited and specially adapted animal population. High-altitude deserts, caused by extreme cold and often covered with perpetual snow or ice, are known as cold deserts and are not usually considered with the deserts of warm regions It is estimated that deserts form about one fifth of the land surface of the world The largest desert regions of the world lie between 20° and 30° north and south of the equator, either where mountains intercept the paths of the trade winds or where atmospheric high-pressure areas cause descending air currents and lack of precipitation Other factors contributing to the formation of deserts include the amount of sunshine, rate of evaporation of water, and range of temperature Generally an annual rainfall of anything less than 10 in produces desert conditions Some deserts have no rain for intervals of several years Deserts and semideserts exist in some regions having up to about 20 in of rainfall where evaporation is very high and loss by runoff is great. Temperature ranges in deserts are often extreme. Europe is the only continent without deserts, there are, however, semidesert portions around the Black and Caspian seas, in parts of the

Ukraine and the N Caucasus In Asia a great desert, the GOBI, exists in the middle latitudes chiefly because of its remoteness from water Farther south there are desert areas in W India and through Baluchistan, Afghanistan, Iran, Iraq, and Arabia, these are largely the result of their situation in a subtropical high-pressure belt and of the distribution of pressure areas which produce cold, dry winds in winter and hot, dry winds in summer. In Africa is found the SAHARA, the largest desert in the world Second only to the Sahara in area is the desert region of central and W Australia, lying in a high-pressure belt and in the path of the trade winds (which lose much of their moisture on the windward slopes of the east-coast mountains) South America has deserts on the coast and interior of Chile and E of the Andes in Argentina and Patagonia In North America deserts are found from N Mexico northward through parts of the SW and W United States Extreme desert conditions exist in the MOJAVE DESERT, the IMPERIAL VALLEY, and Death Valley (see DEATH VALLEY NATIONAL MONUMENT) The northern plateau region of Mexico and the adjacent portions of Texas, Arizona, and New Mexico have less extreme desert conditions with a quite abundant growth of mesquite, greasewood, creosote bush, yucca, and various species of CACTUS. Middle-latitude deserts are found in parts of the Great Basin Plants of the desert have leaves and stems adapted to lessen their loss of water, and individual plants are more widely spaced than those in more humid regions, their roots form a spreading network sometimes penetrating to 50 ft underground Among the animals living in deserts of North America are species of squirrels, mice, bats, foxes, rabbits, and deer, reptiles, e g, the Arizona coral snake, species of rattlesnakes, the desert tortoise, and the horned toad, gila monster, and many other lizards, a number of birds, e g, the cactus wren, the road runner, species of owls, sparrows, and hawks, and spiders, scorpions, termites, and beetles See also DUNE, OASIS, CAMEL See E C Jaeger, *California Deserts* (2d ed, 1938), Gayle B Pickwell, *Deserts* (1939), W H Carr, *Desert Parade* (1947)

desertion, in law, the forsaking without justification of a station involving public or social duties In military law, it is the abandonment of (or failure to arrive at) a place of duty without leave and with the intention not to return (or arrive), in time of war desertion, especially in the face of the enemy, is punishable by death In maritime law, a seaman who abandons a ship without leave is rendered liable to damages and forfeits the wages he has already earned In family law, desertion is willful abandonment of the spouse or the children of a marriage without consent of the other party or parties The refusal to renew cohabitation without justification is also desertion, although in only a few states of the United States is mere abstinence from sexual intercourse considered such The refusal by a husband to support his wife has been regarded as desertion if he has the means to support her The wife who refuses to follow her husband when he changes his DOMICILE in good faith deserts him, since the matrimonial domicile is established by the husband's residence In most states, desertion is ground for DIVORCE

Desful, Iran see DIZFUL

De-shima (dā'-shĭma) or **De-jima** (dā'-jĭma), artificial island, c 1/3 mi long and 1/5 mi wide, Japan, in Nagasaki harbor Early Dutch traders were restricted (1641–1858) to the island

Deshler. 1 Village (1,037), SE Nebr, near the Kansas line SW of Lincoln Broommaking is an old industry 2 Village (pop 1,570), NW Ohio, SW of Toledo It manufactures several products

Des Houlières, Antoinette du Ligier de la Garde (ätwänĕt' du lēzhyā' du lä gärd' dāzōōlyĕr'), 1638–94, French poet Her songs and lesser pieces have merit She was prominent in philosophical circles

Desiderio da Settignano (dāzēdā'rēō dä sĕt"tēnyä'nō), 1428–64, Florentine sculptor, a follower of Donatello His marble carving, of exquisite delicacy, is best seen in his church decorations and in his busts of women and children In Vienna is a *Laughing Child*, characteristic and charming His tomb of Carlo Marsuppini in the Church of Santa Croce, Florence, is one of the most beautiful of early Renaissance monuments The National Gallery of Art, Washington, D C, has four examples, and the Detroit Institute of Arts has a bas-relief

Desiderius (dēsĭdēr'ēus), d after 774, last Lombard king in Italy (756–74) He was chosen with the support of the pope and of Pepin the Short, to whose son Charles (later Emperor Charlemagne) he married his daughter His alliance with Duke Tassilo of Bavaria and his subsequent interference in Roman affairs incensed Charlemagne, who repudiated (771) his wife and provoked open conflict Desiderius responded by supporting the claims of the children of Charlemagne's brother Carloman (d 771), by attacking Pope ADRIAN I, and by occupying several papal cities Charlemagne invaded Italy (773), captured (774) Desiderius at Pavia after a long siege, and proclaimed himself king of the Lombards. Desiderius was forced to retire into a monastery.

design, plan or arrangement of line, form, mass, and space in a pattern to produce an effect pleasing to the eye It possesses as many phases as there are fields of art There are exigencies in various processes of execution which must be considered in originating a proper design, thus a design created for one thing may or may not be used, or adapted, for another A lace design, for instance, can be adapted to mediums seemingly as remote as leaded glass, mosaic, jewelry, or textiles, but the boldness and stability requisite in successful architectural or monumental design are to be avoided in costume or jewelry where delicacy and pliancy are sought Architectural and sculptural designs must conform to the nature of the material used, in some cases to its tensile strength, as for marble or bronze in sculpture designing Other factors to be considered are the distance and the angle at which the completed work is to be viewed The term *design* applies also to the drawing, sketch, or model for the proposed scheme of decoration and to the executed work in reference to its arrangement of details, its form, and color For industrial design, see W D Teague, *Design This Day* (1940)

Désirade, see GUADELOUPE

De Sitter, Willem see SITTER, WILLEM DE

Desmarets or **Desmaretz, Jean, sieur de Saint-Sorlin** (both zhäⁿ' dāmärä' syĭr' du sĕ-sôrlĕ'), 1595–1676, French poet and dramatist He was a protégé of Richelieu and one of the founding members of the French Academy His most successful work was *Les Visionnaires* (1637), a comedy In 1670 he precipitated a controversy concerning the literary merits of the ancients which foreshadowed the polemics of PERRAULT and Boileau, Boileau attacked Desmarets de Saint-Sorlin in *L'Art poétique*

Desmarets, Nicolas (nēkôlä'), 1648–1721, French financier and statesman, nephew of Jean Baptiste Colbert Succeeding CHAMILLARD in 1708, he was chiefly responsible for the ingenious but ruinous expedients by which the expenses of the War of the Spanish Succession were met He was created marquis of Maillebois

De Smet, Pierre Jean (dĕ smĕt'), 1801–73, missionary in the U S Pacific Northwest, a Jesuit, b Belgium He came to the United States in 1821, served his novitiate in Florissant, Mo, and was ordained in 1827 He spent years in Europe gathering funds and recruits for missions among American Indians, then began (1838) his long missionary career at a mission near Council Bluffs, Iowa In 1840 he went to Montana with two Flathead Indians who had come to St Louis in search of a "black robe" (Jesuit), and he established missions in Montana and Idaho He traveled widely across the Northwest from 1840 to 1846 and won the friendship of various Indian tribes, including the Coeur d'Alene, the Kalispel, and the dreaded Blackfeet Later he acted often as mediator between Indian and white after Americans had poured west over the Oregon and California trails and the Indians had become restless—notably in the council at Fort Laramie in 1851 and in the Yakima war of 1858–59 He is said to have advised Brigham Young as to a place for the Mormons to settle, and he was a pacificator in the "Mormon War" Several peace missions to the Sioux were climaxed in 1868 when De Smet, after the Sioux and their allies had threatened to kill all white men, walked alone into Sitting Bull's camp and talked the chiefs into at least temporary peace His books are excellent source material in Western history—*Letters and Sketches* (1843), *Oregon Missions and Travels* (1847), *Western Missions and Missionaries* (1859), and *New Indian Sketches* (1863) See biography by H M Chittenden and A T Richardson (1905)

De Smet (dĭ smĕt'), city (pop 1,016), co seat of Kingsbury co, E central S Dak, E of Huron, in a dairying region, settled 1878

Des Moines (dŭ moin'), city (pop 159,819), state capital, and co seat of Polk co, S central Iowa, largest city of the state, at the junction of the Des Moines and Raccoon rivers, in the heart of the Corn Belt Established in 1843 as a military post, Fort Des Moines, it was settled by homesteaders in 1845, incorporated as Fort Des Moines in 1851, chartered as a city in 1857 It became the capital of Iowa by the terms of the state constitution of 1857 and in 1907 adopted the plan of city government known as the Des Moines plan It is an important center of transportation (rail, highway, air) and of industry (mining, farm-product processing, printing and publishing, garmentmaking) Cement, rubber products, and machinery are manufactured Many insurance companies are here Places of interest include the capitol (1871–84), the State Historical, Memorial, and Art Building, the library, the civic center, the coliseum (1910), the U S veterans' hospital, several war memorials, the state fairgrounds, Fort Des Moines (army post), several parks. DRAKE UNIVERSITY, Des Moines Still College of Osteopathy and Surgery, and Grand View College (junior; coeducational) Near by are Camp Dodge and Walnut Woods State Park.

Des Moines, river rising in SW Minnesota and flowing c 535 mi S and SE across Iowa to the Mississippi at Keokuk Its valley is rich in Indian mounds, especially near Des Moines.

Desmond (dĕz'mŏnd) [Irish,=south Munster], ancient division of Munster prov., Ireland, including the present Co Cork and Co. Kerry. The king of England gave it to the Fitzgeralds, and a branch of that family were earls of Desmond.

Desmoulins, Camille (kämēy' dämōōlĕ'), 1760–94, French revolutionist and journalist, whose oratory of July 12, 1789, led to the storming of the Bastille two days later His pamphlets and journals, beginning in 1789 with *Révolutions de France et de Brabant*, were received with immense enthusiasm and caused the outbreak of popular violence His later journal, the *Tribune des patriotes*, became the organ of the CORDELIERS, he attacked the Girondists in the *Histoire des Brissotins;* but late in 1793, with Danton, he counseled moderation, publishing *Le Vieux Cordelier* Twice accused before the Jacobin Club, where he was defended by Robespierre, he finally was arrested with Danton and others and was executed His beautiful wife, Lucile Duplessis, was guillotined shortly after See Jules Claretie, *Camille Desmoulins and His Wife* (Eng tr, 1876).

Desna (dyslnä'), river, 735 mi long, W European USSR, the main affluent of the Dnieper It rises SE of Smolensk and flows S and SW past Bryansk and Chernigov, joining the Dnieper just above Kiev It is navigable below Bryansk for 520 mi. and is used for transporting lumber

De Soto, Hernando (dĭ sō'tō, Span ĕrnän'dō dā sō'tō), c 1500–1542, Spanish explorer in the present United States, b Jérez de los Caballeros or Barcarrota (near Badajoz) After service under Pedrarias in Central America and under Francisco Pizarro in Peru, the dashing young conquistador was made by Emperor Charles V governor of Cuba with the right to conquer Florida (meaning the North American mainland) He led an expedition which left Spain in 1538 and landed in 1539 on the Florida coast, probably near Tampa Bay, certainly not far from the place where Pánfilo de Narváez was wrecked This was the start of an adventure that took him and his band nearly halfway across the continent in search of gold and silver and jewels, which they never found After wintering near Tallahassee they went N through Georgia and the Carolinas into Tennessee, then turned S into Alabama, where De Soto was wounded in a battle with Indians He was so determined to continue his treasure hunt that he refused to tell his men the news that Spanish vessels were off the coast In the spring of 1541 they set forth again and were probably the first white men to see and cross the Mississippi (there is fierce argument as to the spot) A journey up the Arkansas river and into Oklahoma disclosed no treasures, and they turned back, discouraged, to the banks of the Mississippi There De Soto died, and in the river itself he was buried, so that the Indians, whom he had intimidated and ill used, would not learn of his death His men went west again across the Red River into N Texas, then returned to the Mississippi and followed it to the sea A remnant of the expedition made its way down the coast to arrive at Veracruz in 1543 The chief chronicle of the expedition is by a Portuguese called the Gentleman of Elvas See E G Bourne, *Narratives of the Career of Hernando de Soto* (2 vols, 1904), biographies by R B Cunninghame Graham (1924) and Theodore Maynard (1930)

De Soto (dĭ sō'tō), city (pop 5,121), E Mo, SSW of St Louis, founded 1857 It has railroad shops and clothing factories Fishing, farming, quarrying, and lumbering are carried on in the area

Despenser, Hugh le (hū' lu dĭspĕn'sur), d 1265, chief justiciar of England He supported the barons in the struggle against HENRY III and received various offices, becoming chief justiciar in 1260. He lost this office in 1261, but was restored to it in 1263 He fought in the BARONS' WAR (1263–67) and was killed at Evesham in 1265 He was the first prominent member of a family which was important until the 15th cent The two best-known members were **Hugh le Despenser,** the elder, 1262–1326, and **Hugh le Despenser,** the younger, d. 1326 The elder Despenser took part in the Scottish campaigns with Edward I and engaged in negotiations with France On the accession of EDWARD II, Despenser alienated the baronial party by his support of Piers Gaveston and, on the latter's death, became the chief adviser to the king. Edward's defeat at Bannockburn in 1314 forced Hugh to withdraw from the court About 1318 the younger Despenser, who had earlier supported the barons, joined his father and the king, soon gaining more influence with Edward than the elder Hugh. Both became involved in a quarrel with the barons, who formed a league against them and brought about their banishment in 1321 In 1322, however, they returned to England, and after the battle of Boroughbridge they were the real rulers of the kingdom. The elder Despenser was created earl of Winchester in 1322. Their rule was notable for its constitutional spirit, but their greed was enormous and they were bitterly hated by the barons Both Despensers were executed when ISABELLA returned from France and seized control in 1326

Des Periers, Bonaventure (bônävätür' dā pĕrēā'), c 1510–1544, French humanist and poet; protégé of Margaret of Navarre. His chief work, *Cymbalum*

mundi (1537), a series of four skeptical prose dialogues imitated from Lucian, aroused much criticism. His name appears variously as Despériers, and Des Périers

Despiau, Charles (shärl' dāpēō'), 1874–1946, French sculptor. He studied at the École des Arts décoratifs and the École des Beaux-Arts, Paris, and worked in Rodin's studio He is best known for his graceful bronze busts and nudes of young women. Examples of his work are to be seen in many leading galleries in France and in the United States Despiau executed a war memorial for his native Mont-de-Marsan

Des Plaines (dĕs plānz'), city (pop 9,518), NE Ill, on the Des Plaines river and near Chicago, founded in the 1830s, inc 1925 Electrical appliances and radio parts are made An annual Methodist encampment has been held here since 1860

Des Plaines, river rising in SE Wisconsin and flowing c 110 mi south and southwest to be joined by the Kankakee near Joliet, Ill This combined stream is the Illinois river. Part of the Des Plaines is incorporated in the Chicago drainage system

Desportes, Alexandre François (alĕksā'drü frāswà' dāpôrt'), 1661–1743, French painter He is best known for hunting scenes and paintings of animals

despotism, government by an absolute ruler unchecked by effective constitutional limits to his power In Greek usage, a despot was ruler of a household and master of its slaves. The title was applied to gods and, by derivation, to the quasi-divine rulers of the Near East In the Byzantine Empire, despot was a title of honor of the emperors and their relatives and of vassal princes of the tributary states and dignitaries of the Eastern Church The Ottoman Empire perpetuated the term as applied to church officials and territorial princes The 18th-century doctrine of the Enlightenment influenced such rulers as Frederick the Great of Prussia, Catherine II of Russia, and Emperor Joseph II towards a rule of beneficent intent known as benevolent despotism, but despot is now a term of opprobrium See also ABSOLUTISM.

Despoto Dagh see RHODOPE

Des Prés, Josquin see JOSQUIN DES PRÉS

Dessalines, Jean Jacques (zhà' zhāk' dĕsalēn'), c 1758–1806, Negro emperor of Haiti (1804–6), born a slave A shrewd general, he served under TOUSSAINT L'OUVERTURE in the wars that liberated Haiti and was noted for a barbaric cruelty against the mulattoes which Toussaint was unable to control He fought brilliantly against the French under Leclerc in 1802 After the decimation of the French army by yellow fever and the capture of Toussaint, he revolted and overwhelmed the invaders in 1803 Independence was declared Jan 1, 1804, at Gonaïves and Dessalines chosen governor for life Later the Haitians crowned him emperor as Jacques I In attempting to reorganize the nation's shattered economy, the ambitious emperor instituted drastic measures, such as forced labor, and accompanied them with despotic and cruel acts He was ambushed and killed.

Dessau (dĕ'sou), city (pop 88,139), former capital of ANHALT, central Germany, at the junction of the Elbe and Mulde rivers, with machinery manufactures The Marienkirche (16th cent) has an altarpiece by Lucas Cranach, the younger From 1925 to 1932 Dessau was the seat of the BAUHAUS school, headed by Walter Gropius Moses Mendelssohn was born here

Dessye (dĕs'yā), Ital *Dessie,* town (pop 40,000), NE Ethiopia, in the Great Rift Valley Among the many thatched huts there are several churches, palaces, and modern buildings

Destaing, Charles Hector see ESTAING.

Desterro, Brazil see FLORIANÓPOLIS

Destouches, Philippe Néricault (fēlēp' nārēkō' dātōōsh'), 1680–1754, French dramatist. He was famous for his comedies of character

destroyer, warship of 1,500 to 2,000 tons, very fast, with powerful torpedo armament and a few medium caliber guns and anti-aircraft artillery The destroyer, originally called the torpedo-boat destroyer, was introduced in 1892 as an answer to the TORPEDO BOAT, which was considered a great menace to bigger warships In a short time, however, the destroyer took over the very functions of the torpedo boat, and the latter disappeared Destroyers are used for convoying merchant ships and as auxiliary vessels in a battle fleet. They are useful in battle because of speed and maneuverability and may be used to attack the enemy under the cover of the fire of their own battleships, or under a smoke screen, or under conditions of low visibility. They are invaluable in protecting warships from submarines and aircraft. Destroyers played a tremendous part in the Second World War Equipped with new electronic devices, they proved the best antisubmarine weapon Therefore they were the vessels best equipped for accompanying convoys through submarine-infested waters When submarines threatened all supply to Great Britain in the late summer of 1940, F. D. Roosevelt and Winston Churchill made a deal by which the United States gave England 50 destroyers for bases in the Western Hemisphere.

Destutt de Tracy, Antoine Louis Claude, Comte (ätwän' lwē' klōd' kō' dĕstüt' dü träsē'), 1754–1836, French philosopher and psychologist. Although active in the Napoleonic government, he was important for his leadership of the ideologists, disciples of Condillac This group contributed to such later psychological developments as the James-Lange theory of emotions To Tracy sensation was the source of conscious life His most important book was *Éléments d'idéologie* (4 vols, 1800–1815)

Detaille, Édouard (Jean Baptiste Édouard Detaille) (ādōōär' dātà'yü, zhà'bätēst'), 1848–1912, French painter He was noted as a painter of military scenes, especially of the War of 1870, and he imitated the meticulously realistic genre style of his teacher, Meissonier His paintings include *The Passing Regiment* (Corcoran Gall), *The Defense of Champigny* (Metropolitan Mus), and *Napoleon I and His Generals at Austerlitz* (N Y Public Library)

detective story, popular type of fiction in which the solution of a crime is traced step by step Poe's *Murders in the Rue Morgue* is considered the first modern detective story, and Wilkie Collins's *Moonstone* the first detective novel Dickens's *Mystery of Edwin Drood* is an excellent but tantalizing, because unfinished, tale Frequently the same detective appears in a series of such stories, as Sherlock Holmes in the works of Conan Doyle The mystery story, an allied type which grew from the GOTHIC ROMANCE and its predecessors and in which there is no detective and often no crime, only an unexplained situation, is exemplified by Collins's *Woman in White* Other leading detective-story writers include, in England, J S Fletcher, H C Bailey, Mrs Belloc-Lowndes, E C Bentley, John Dickson Carr, G K. Chesterton, Agatha Christie, Anthony Berkeley and Frances Iles (pseuds of A B Cox), F W Crofts, Michael Innes (J I M Stewart), Nicholas Blake (C Day Lewis), Joseph Shearing and Marjorie Bowen (pseuds of G M V C Long), Eden Phillpotts, Dorothy Sayers, Edgar Wallace, John Rhode, and R A J Walling, in France, Émile Gaboriau, Fortune Boisgobey, Maurice Leblanc, Gaston Leroux, and Georges Simenon (Georges Sim), in New Zealand, Ngaio Marsh, in the United States, Anna Katharine Green, E D Biggers, Raymond Chandler, Erle Stanley Gardner, Elisabeth Daly, Dashiell Hammett, E Phillips Oppenheim, Ellery Queen (pseud of Frederic Dannay and M B Lee), Frances and Richard Lockridge, Mary Roberts Rinehart, Rex Stout, George Harmon Coxe, S S Van Dine (W H Wright), and Carolyn Wells See Howard Haycraft, *Murder for Pleasure* (1941), Haycraft, ed, *The Art of the Mystery Story* (1946)

Deterding, Sir Henri (dā'turding), 1865–1939, Dutch oil magnate He built a huge industrial empire around an international organization (Royal Dutch Shell) and controlled a large part of the world's petroleum production He was created honorary Knight of the British Empire in 1920 Late in his life he supported the Hitler movement in Germany See Glyn Roberts, *The Most Powerful Man in the World* (1938)

detergent (dētûr'junt, dĭ-), substance that aids in the removal of dirt Soap is a good detergent although it has some disadvantages, e g, it forms insoluble compounds with certain salts found in hard water thus diminishing its effectiveness, and in acid solutions (used in industry) it is decomposed (thus precipitating the free fatty acid of the soap) Synthetic detergents were produced experimentally in France before the middle of the 19th cent and were further developed in Germany during the First World War However, not until the 1930s were chemical processes developed which made production in quantity feasible in any country In the United States within recent years many synthetic detergents, known also as surface-active compounds, have been produced A number of these are true detergents sold as "soapless soaps" under a variety of trade names, many are effective in hot, cold, and salt water and in acid solutions Others are used to increase the cleansing properties of another material and are incorporated in such products as dry-cleaning solutions, toothpastes, antiseptics, and solutions for removing poison sprays from vegetables and fruit Like soap, detergents act by reducing the surface tension of water

determinism, in ethics, the doctrine opposed to libertarianism or belief in freedom of the will Modern determinism is based on the type of psychology which sees the individual as controlled entirely by his history The doctrine is opposed by the principle of emergence, which states that truly novel and unpredictable events may occur out of the composite of forces in a situation.

Detmold (dĕt'mōlt), city (1946 pop 26,807), former capital of LIPPE, NW Germany Near by is a monument to the victory (A D 9) of Arminius over the Romans under Varus in the battle of the Teutoburg Forest

detonator (dĕ'tünā"tûr), type of EXPLOSIVE which reacts with great rapidity and is used to set off other, more inert explosives. Fulminate of mercury mixed with potassium chlorate is commonly used The word is also applied to equipment which, by flame, spark, percussion, friction, or pressure, is used to set off the chemical detonator.

Detroit (dĭtroit') [Fr, =the strait] **1** City (pop. 1,623,452), co seat of Wayne co, SE Mich., on the Detroit river and between Lakes St. Clair and Erie; inc as a town 1802, as a city 1806 It is a port of entry A fort (Pontchartrain) and settlement founded here in 1701 by Antoine de la Mothe Cadillac were held by the French until 1760, and three years later the British withstood a long siege in PONTIAC'S REBELLION American control, resulting from Jay's Treaty, was established in 1796 Detroit was territorial and then state capital from 1805 to 1847 Fire in 1805 destroyed all but one of the several hundred buildings then at Detroit Rebuilt, the growing settlement was surrendered by William Hull to British forces under Isaac Brock in 1812, it was recovered by William Henry Harrison in 1813 The 1830s saw the city's rapid growth, owing to the development of land and water transportation Well placed for commerce and industry, Detroit assumed importance after the middle of the 19th cent because of its shipping, shipbuilding, and manufacturing Its early carriage industry helped Henry Ford and others to make Detroit the center of the world's automobile industry and the largest city in Michigan Its Great Lakes shipping and rail transportation are tremendous, and its products, numerous and varied, include drugs, chemicals, stoves, rubber tires, Diesel engines, farm equipment paints and varnishes, machinery, and seed A large slum-clearance project was undertaken here in 1935 Among notable mayors were James COUZENS (1919–22) and Frank MURPHY (1930–33) Educational institutions include WAYNE UNIVERSITY, the Univ of Detroit (see DETROIT, UNIVERSITY OF), Marygrove College, the Detroit College of Law, the Detroit Institute of Technology, and the Detroit Institute of Musical Art A symphony orchestra was organized in 1914 Points of interest are the Detroit Institute of Arts, the public library, the Detroit Historical Museum, the Greater Penobscot Building (Detroit's tallest building), and several parks with recreational facilities Belle Isle in the Detroit river has been converted into a park with flower gardens, a conservatory, a zoo, an aquarium, and recreational facilities The Ambassador Bridge spans the river to Windsor, Ont The cities of HAMTRAMCK and HIGHLAND PARK are within the confines of Detroit See Arthur Pound, *Detroit, Dynamic City* (1940) **2** Town (pop 1,064), E Texas, NE of Dallas, in a farm, livestock, and pine area, inc 1935

Detroit, river, c 28 mi long, flowing from Lake St Clair, between SE Michigan and S Ontario, southward into Lake Erie It forms part of the international boundary

Detroit, University of, at Detroit, Catholic (Jesuit), coeducational, opened 1877, chartered as a college 1881, became a university 1911 It has colleges of arts and sciences, commerce and finance, and engineering and schools of dentistry and law

Detroit Lakes, city (pop 5,015), co seat of Becker co, NW Minn, E of Moorhead, settled c 1858, inc as a village 1880, as a city 1900 It is the manufacturing and trade center of a lake resort and farm area

Detskoye Selo, RSFSR see PUSHKIN

Dettifoss (dĕ'tĭfôs), fall, c 200 ft high, in the Jokulsa river, NE Iceland, the most powerful in the country

Dettingen (dĕ'tĭng-ün), village, Lower Franconia, Bavaria, on the Main river Here English, Austrian, and Hanoverian troops under the personal command of George II of England defeated (1743) the French in the War of the Austrian Succession

Deucalion (dūkā'lēün), in Greek mythology, son of PROMETHEUS and father of HELLEN He and his wife, Pyrrha (pĭ'rü), were the only survivors of a great flood An oracle told them to cast behind them the bones of their mother, the stones of the earth These stones became human beings

Deuel (dū'ul), father of Eliasaph the Gadite. Num. 1 14, 7 42,47, 10 20 Reuel Num. 2 14

deuterium see HYDROGEN

deuterocanonical books see OLD TESTAMENT.

deuteron see HYDROGEN

Deuteronomy (dūtûrŏn'ŭmē) [Gr, =second law], book of the Old Testament, last of the five books of the Law (the Pentateuch or Torah) ascribed by tradition to Moses According to the text it gives the final words of Moses to his people and may be outlined as follows first, the introductory discourse reviewing the history of Israel since the exodus from Egypt (1–4), second, an address of Moses to the people (5–30), beginning with general principles of morality (5–11), then continuing with particulars of legislation (12–26) and a conclusion (27–30); third, a chapter of narrative (31), fourth, the Song of Moses, a hymn (32), fifth, the blessing of Israel by Moses (33), and sixth, the death of Moses (34). The legislation is pointed toward life in the Promised Land, with the eventual foundation of a single lawful sanctuary Much of the book is written in a compelling, lofty style For books on Deuteronomy and critical views, see OLD TESTAMENT.

Deutsch, Emmanuel Oscar (doich), 1829–73, Semitic scholar, b Silesia, of Jewish origin He was an assistant (1855–70) at the British Museum His essay on the Talmud in the *Quarterly Review* (Oct., 1867) was translated into several languages, kin-

dling interest in the Talmud among Christian scholars His letters to the *Times* concerning the Moabite stone are also well known

Deutsch, Gotthard (gôt'hart), 1859–1921, Semitic scholar and historian, b Austria He studied at the rabbinical seminary at Breslau, Germany, and at the Univ of Vienna (Ph D , 1881), after which he taught at Brünn in Moravia In 1891 he came to America to become professor of the history and philosophy of religion at the Hebrew Union College at Cincinnati His contributions to Jewish newspapers and journals, besides his many books, made him an outstanding leader among his people He was an editor of the *Jewish Encyclopaedia*, contributing many articles His *Philosophy of Jewish History* (1897) and *History of the Jews* (1910) are well known

deutzia (dō'tsēŭ, doi'tsēu) [from Jan Deutz, a Dutch botanist], any plant of the genus *Deutzia*, popular ornamental shrubs mostly native to Asia The various species bear abundant white, pink, or purplish blossoms, commonly in the spring Some are hardy through most of the United States

Deux-Sèvres (dø-sĕv'ru), department (2,337 sq mi , pop 312,756), W France, in Poitou Its name derives from two small rivers—the Sèvre Nantaise, which joins the Loire opposite Nantes, and the Sèvre Niortaise, which flows into the Atlantic opposite the island of Ré Niort is the capital

Devine, Edward Thomas, 1867–1948, American social worker, b Hardin co , Iowa, Ph D Univ of Pennsylvania, 1893 One of the outstanding figures in early social-welfare practice, he was active as an administrator in the Charity Organization Society of New York (1896–1918), as director of the New York School of Philanthropy (1904–7, 1912–17), and as editor of the *Survey* (1897–1912) His books include *Principles of Relief* (1904) and *When Social Work Was Young* (1939)

Devine (dĭvīn'), town (pop 1,398), SW Texas, SW of San Antonio, in a truck-farm area, inc 1904

De Vinne, Theodore Low (du vĭ'nĕ), 1828–1914, American printer, b Stamford, Conn He learned his trade in the office of the Newburgh *Gazette* and in 1848 entered the shop of Francis Hart in New York city In 1858 he was made a junior partner, and on Hart's death in 1877 De Vinne became owner of the business It continued as Theo L De Vinne & Company until 1908, when it was incorporated as the De Vinne Press De Vinne became the most famous American printer of his day and did much by his writings and by example of workmanship to advance the cause of good printing He printed the *Century Magazine* and the *Century Dictionary*, both of them considered fine specimens of the art in that period He also printed many of the Grolier Club books He was a close student of types, and though his taste is not often followed today, he did much to make American printers type conscious He studied processes of reproductions and helped to bring them to new standards of excellence Besides many magazine articles, he published a number of books, the more notable including *The Invention of Printing* (1876), *Historic Printing Types* (1886), *The Practice of Typography* (4 vols , 1900–1904), *Title-Pages as Seen by a Printer* (1901), and *Notable Printers of Italy during the Fifteenth Century* (1910) He was a founder and president of the United Typothetae of America

Devolution, War of, 1667–68, undertaken by Louis XIV for the conquest of the Spanish Netherlands On her marriage to Louis, Marie Thérèse, daughter of Philip IV of Spain, had renounced her rights of inheritance in consideration of a large dowry Citing the failure of Spain to pay the stipulated dowry, Louis declared war and invoked an old law of Brabant which provided that property might "devolve" upon the children of a first marriage—in this case upon Marie Thérèse rather than upon Charles II of Spain The French easily captured the Spanish Netherlands (1667), and the United Provs , in alarm, formed the TRIPLE ALLIANCE with England and Sweden (Jan , 1668) The French overran Franche-Comté (Feb , 1668) but came to terms with the Triple Alliance in the Treaty of AIX-LA-CHAPELLE (May, 1668)

Devon, county, England see DEVONSHIRE

Devon (dĕ'vun), town (pop 2,337), S N B , on the St John river opposite Fredericton

Devon cattle, breed of CATTLE, one of the earliest developed in Great Britain, which is used for both beef and dairy purposes. They were first brought to America in 1817 and are to be found in nearly every state In color they range from deep red to chestnut

Devonian period (dĭvō'nēun) [from Devon, England, a type section], fourth period of the PALEOZOIC ERA of geologic time At the beginning of the Devonian, the continents were mostly dry land, later a great flood covered large areas of North America and Europe and smaller parts of Africa, South America, and Australia. In the Lower Devonian only the Appalachian and Acadian areas of North America were submerged, formations include the Helderberg limestone, the Gaspé limestone and sandstone, and the Oriskany sandstone. A good type section is that near Cumberland, Md. At the beginning of the Middle Devonian the Appalachian basin was elevated, while the interior was flooded. The Onondaga limestone was deposited over a large area between the Mississippi and the Appalachian region, while in New York the Schoharie and Esopus grits were laid down, apparently by increased erosion from the coastal highlands. The seas at their maximum extension became muddy and deposited the Hamilton shales The Upper Devonian probably saw the seas withdrawing and the eastern coast continuing to rise, with the formation of a delta of alluvium, now represented by the Chemung and Catskill shales and sandstones of New York and Pennsylvania The Devonian flood submerged the Cordilleran area of the Far West, depositing from 4,000 ft to 6,000 ft of limestone and shale in Nevada and 2,400 ft of quartzites and limestones in the Wasatch region of Utah The Devonian period in Europe was marked by considerable volcanic activity and the deposition of two great rock systems—the marine formation of Devonshire, the Rhine valley, and Russia and the OLD RED SANDSTONE The most notable Devonian animals were the fishes, which appeared in great numbers toward the close of the period Conspicuous types were sharks, armored fishes, lungfishes, and ganoid fishes Common invertebrates of the Devonian were corals, crinoids, starfishes, sponges, trilobites, and the forerunners of the ammonites Of land life the chief vestige is the footprint of a primitive salamanderlike amphibian in the Upper Devonian of Pennsylvania The Devonian plants were the earliest to be extensively preserved as fossils, but their high degree of development suggests that more primitive forms existed earlier. They were similar to the plants of the succeeding carboniferous period

Devon Island (dĕ'vun), area 21,606 sq mi , off N Canada, in the Arctic Archipelago It is mostly ice-covered, but supports musk oxen and caribou The Royal Canadian Mounted Police formerly had a post at Dundas Harbour

Devonport, Devonshire, England see PLYMOUTH

Devonshire, Spencer Compton Cavendish, 8th **duke of** (kā'vundĭsh, dĕ'vunshĭr), 1833–1908, English statesman He frequently held office in Liberal cabinets and led the Liberal Unionists who broke (1886) with Gladstone over HOME RULE for Ireland He later left (1904) the Unionists when that group proposed the abandonment of free trade He became marquess of Hartington in 1858 See biography by Bernard Holland (1911) **Victor Christian Cavendish,** 9th **duke of Devonshire,** 1868–1938, succeeded his uncle He was governor general of Canada (1916–21) and colonial secretary (1922–24) His son, **Edward William Spencer Cavendish,** 10th **duke of Devonshire,** 1895– , served as undersecretary of state for dominions (1936–40), undersecretary for India and Burma (1940–42), and undersecretary for colonies (1943–45)

Devonshire or **Devon,** maritime county (2,612 sq mi , 1931 pop 732,968, 1948 estimated pop, 765,459), SW England The county town is Exeter Devonshire is bounded on the north by the Bristol Channel, on the south by the English Channel, and on the west by Cornwall The surface is largely hills, rising to more than 2,000 ft in the wild Dartmoor district in the southwest There are many rivers and streams, the Tamar estuary, on the Cornwall border, forms the harbors of Devonport and Plymouth The region is primarily agricultural and pastoral Oats, wheat, barley, and fruit are grown The county is famous for its rich Devonshire cream Fishing (herring and pilchard) is important There is some mining and quarrying (clay, limestone, and granite) Woolen goods, lace, pottery, paper, and marine fixtures are manufactured Roman penetration did not extend much beyond Exeter When Devonshire was incorporated into Wessex in the 10th cent , it had already been organized as a shire In Elizabethan times the county reached its greatest maritime importance, and its name is associated with Walter Raleigh, Francis Drake, John Hawkins, and Richard Grenville From Plymouth the Pilgrim Fathers sailed for New England Plymouth and Exeter were badly damaged in bombing raids in the Second World War See Arthur Mee, *Devon* (1939)

De Vos: see VOS

De Voto, Bernard Augustine (du vō'tō), 1897–, American writer and editor, b Ogden, Utah, grad. Harvard, 1920, after army service in the First World War He taught at Northwestern Univ. (1922–27) and then at Harvard (1929–36) After 1935 he conducted "The Easy Chair" in *Harper's Magazine* and from 1936 to 1938 was editor of the *Saturday Review of Literature* His most important writing has been in the field of American history and literature—*Mark Twain's America* (1932), *The Year of Decision 1846* (1943), and a Pulitzer Prize winner in history, *Across the Wide Missouri* (1947). As official editor of the Mark Twain manuscripts now at Harvard, he has published *Mark Twain in Eruption* (1940) and *Mark Twain at Work* (1942). *The World of Fiction* appeared in 1950.

Devoy, John (dĭvoi'), 1842–1928, Irish-American journalist and Fenian leader, b Ireland He joined the Irish Republican Brotherhood (see FENIAN MOVEMENT) in 1861 For his proselyting within the British army he was sentenced in 1866 to 15 years in prison He was released in 1871, however, and went to America He rose to the position of foreign editor of the New York *Herald*, but was dismissed when he quarreled with James Gordon Bennett over the Irish question Devoy founded and edited the *Irish Nation* and became one of the leading Irish propagandists in the United States He organized the rescue of Irish prisoners in Australia by the *Catalpa* in 1875–76 and secured American financial support for the Irish Land League movement under Charles Stewart Parnell He founded in 1903 the *Gaelic-American*, which he edited until his death During the First World War he aided SINN FEIN, helped to send Sir Roger Casement to Germany for assistance, and secured much of the financial backing for the Irish Easter Rebellion of 1916. Afterwards he backed the Irish Free State against the republican extremists and helped secure a market for its first bonds See his *Recollections of an Irish Rebel* (1929), Desmond Ryan, *The Phoenix Flame* (1937).

Devrient, Ludwig (lōōt'vĭkh duvrēt'), 1784–1832, German actor In 1804 he abandoned a commercial career to join a traveling theatrical company He was a favorite in Berlin in comedy and tragedy, especially in the works of Shakspere and Schiller His three nephews were actors **Karl August Devrient** (kärl' ou'gōōst), 1797–1872, was popular in heroic and romantic roles such as Lear and Wallenstein **Philipp Eduard Devrient** (fē'lĭp ā'dōōärt), 1801–77, was the brother of Karl August He directed the Court Theater, Dresden (1844–46), and the Karlsruhe Theater (1852–70) He wrote several plays and a history of the German stage (1848–74) **Gustave Emil Devrient** (gōō'stäf ā'mēl), 1803–72, was the youngest and most gifted of the three brothers He gained fame in Germany in the plays of Shakspere and as Marquis Posa in Schiller's *Don Carlos* When he gave Hamlet in London, his portrayal was said to equal that of Edmund Kean **Otto Devrient** (ō'tō), 1838–94, the son of Philipp, edited Shakspere with his father and directed the court theaters at Oldenburg (1874) and Berlin (1899)

De Vries see VRIES

dew, water formed by condensation of some of the moisture (water vapor) in the atmosphere on a surface at temperatures above freezing Formation of dew is brought about by a decrease in the temperature of the air with the consequent decrease in its capacity to hold water The temperature to which the air must be cooled to attain saturation (relative humidity = 100 percent) and for condensation to begin is referred to as the dew point, a quantity which may be determined by means of a dew point hygrometer Leaves and grass cooling rapidly at night may cause the temperature of the near-by air to fall below the dew point, thus causing the formation of dew The phenomenon takes place on the side of a pitcher of ice water on a hot summer day See also FROST

Dewar, Sir James (dū'ur), 1842–1923, British chemist and physicist, b Scotland He was professor of chemistry (from 1877) at the Royal Institution, London, and later was director of the Davy-Faraday Research Laboratory there He is best known for his work on the properties of matter at low temperatures and the liquefaction of gases, in the course of which he invented the DEWAR FLASK and liquefied (1898) and solidified (1899) hydrogen With Sir Frederick Abel he invented cordite He was knighted in 1904. See his *Collected Papers* (1927), biography by J Crichton-Browne (1925)

Dewar flask [for Sir James Dewar], container after which the common thermos bottle is patterned It consists of two flasks, one placed inside the other, with a vacuum between The vacuum prevents the passage of heat from one flask to the other For greater efficiency the flasks are silvered to cause the reflection of heat The substance to be kept hot or cold is contained in the inner flask

dewberry, name for several species of the same genus (*Rubus*) as the BLACKBERRY and resembling it except in having a more trailing or prostrate habit and usually larger fruit Most species of dewberry are native North American plants, the most common of which is *Rubus procumbens* or *flagellaris*, sometimes called running blackberry The European dewberry is *Rubus caesius* The LOGANBERRY is thought to be either a variety of the Pacific dewberry or a hybrid between it and the red raspberry Dewberries are among the plants known as brambles

Dewees, William Potts (dĭwēz'), 1768–1841, American physician, b near Pottstown, Pa, M D Univ of Pennsylvania, 1808, where he taught from 1825 He was noted as an obstetrician and as the author of *System of Midwifery* (1824)

D'Ewes, Sir Simonds (dūz), 1602–50, English antiquarian He collected many old manuscripts and made transcriptions of others with the intention of writing a history of England, these now form part of the Harleian Collection of the British Museum His valuable collection of the journals of the Parliaments of the reign of Elizabeth were published in 1682 D'Ewes was a member of the Long Parliament, sided against the king and then against the army, and was expelled in Pride's Purge Portions of his diary of the period have been edited by Wallace Notestein (1923) and Willson Coates (1942) His autobiography and correspondence were edited by J O Halliwell (2 vols, 1845).

De Wet, Christian Rudolf (dū vĕt'), 1854–1922, Boer general and statesman In the South African War he achieved great success, especially in guerrilla fighting, he described his experiences in *The Three Years' War* (1902) After the war De Wet at first favored amity with the British, but in time he supported a separate Boer state He opposed the entrance of the Union of South Africa into the First World War and led a rebellion He was captured and sentenced to six years' imprisonment, but was pardoned after a short time

Dewey, Charles Melville, 1849–1937, American landscape painter, b Lowville, N Y, pupil of Carolus-Duran in Paris His works, in both oil and water color, are in leading American museums and private collections He became a member of the National Academy in 1907 Among his works are *The Sun Shower* (Metropolitan Mus) and *Edge of the Forest* (Corcoran Gall)

Dewey, Chester, 1784–1867, American naturalist, b Sheffield, Mass, grad Williams College, 1806 He was the first professor (1850–60) of chemistry and natural science at the Univ of Rochester and was an authority on sedges A genus of umbelliferous California plants is named *Deweya* for him

Dewey, Davis Rich, 1858–1942, American economist, b Burlington, Vt, grad Univ of Vermont, 1879, Ph D Johns Hopkins, 1886 From 1886 until his retirement in 1933 he taught economics and statistics at Massachusetts Institute of Technology He was a member of various state investigating commissions and of many government boards of arbitration in labor disputes His books include his standard *Financial History of the United States* (1902) and *National Problems* (1907) He was the brother of John Dewey

Dewey, George, 1837–1917, American admiral, hero of the battle of Manila, b Montpelier, Vt, grad Annapolis, 1858 He saw active service in the Civil War and rose in the navy in service and rank, becoming chief of the Bureau of Equipment in 1889, president of the Board of Inspection and Survey in 1895, and commodore in 1896 He was unpopular with many high in naval command, and it seems to have been through the influence of Assistant Secretary of the Navy Theodore Roosevelt and the direct intervention of President McKinley that Dewey was in 1897 appointed to command the Asiatic squadron He promptly took the fleet from Nagasaki to Hong Kong, where it was provisioned and put in order in expectation of war When the SPANISH-AMERICAN WAR actually broke out, he was ready Dewey sailed to Manila, entered the harbor after midnight on May 1, 1898, and engaged the Spanish fleet at dawn By noon he had destroyed eight Spanish ships with casualties of only eight Americans wounded Manila was at his mercy, but he waited for reinforcements, meanwhile bringing Emilio Aguinaldo back from exile to lead a revolution in the Philippines In maintaining relations with neutral warships at Manila, he had to exercise firmness with the officers of five German ships who would not accede to Dewey's blockade rules When Wesley MERRITT arrived with army forces, the two commanders cooperated in capturing Manila Dewey was promoted admiral of the navy in 1899 He was feted on his return to the United States with almost hysterical enthusiasm and was briefly boomed for President See his autobiography (1913), Laurin Hall Healy and Luis Kutner, *The Admiral* (1944), R S West, Jr, *Admirals of American Empire* (1948)

Dewey, John, 1859–, American philosopher and educator, b Burlington, Vt, grad Univ of Vermont, 1879, Ph D Johns Hopkins, 1884 He taught at the universities of Minnesota (1888–89), Michigan (1889–94), and Chicago (1894–1904) and at Columbia from 1904 until 1930, when he retired as professor emeritus He lectured at the Univ of Peking in 1912 and 1931, and in 1924 he prepared a report on the reorganization of the schools of Turkey Dewey's original philosophy, called instrumentalism, bears a relationship to the utilitarian and pragmatic schools of thought Instrumentalism holds that the various modes and forms of human activity are instruments developed by man to solve his multiple individual and social problems Since the problems are constantly changing, the instruments for dealing with them must also change Truth, evolutionary in nature, partakes of no transcendental or eternal reality and is based on experience which can be tested and shared by all who investigate Dewey conceives of democracy as a primary ethical value, and he has done much to formulate working principles for a democratic and industrial society In the field of education his influence has been a leading factor in the abandonment of authoritarian methods and in the growing emphasis upon learning through experimentation and practice In revolt against abstract learning, Dewey considered education as a tool which would enable the citizen to integrate his culture and vocation effectively and usefully. His contribution to the progressive school movement has been acknowledged throughout the world Dewey has actively participated in movements to forward social welfare, protect academic freedom, and effect political reform Among his writings, which are concerned with almost all philosophical fields except metaphysics, are *Psychology* (1887), *The School and Society* (1899, rev ed, 1915), *Ethics* (with James H Tufts, 1908), *Democracy and Education* (1916), *Reconstruction in Philosophy* (1920), *Human Nature and Conduct* (1922), *Experience and Nature* (1925), *The Quest for Certainty* (1929), *Art as Experience* (1934), *Logic the Theory of Inquiry* (1938), *Freedom and Culture* (1939), *Problems of Men* (1946), and *Knowing and the Known* (with A F Bentley, 1949) See P A Schilpp, ed, *The Philosophy of John Dewey* (1939), Sidney Hook, *John Dewey* (1939) and *Education for Modern Man* (1946), bibliography by M H Thomas and H W Schneider (1930)

Dewey, Melvil, 1851–1931, American library pioneer, originator of the Dewey decimal system, b Adams Center, N Y, grad Amherst, 1874 A man of originality and of enormous energy, Dewey played a large part in the early days of library organization in the United States He became acting librarian of Amherst in 1874, and it was then that he evolved his scheme of book classification, using numbers from 000 to 999 to cover the general fields of knowledge and narrowing the system to fit special subjects by the use of decimal points From 1883 to 1889 he was librarian of Columbia College, and there he established the first school for training librarians He went from Columbia to the New York State Library at Albany where he was librarian until 1906 and where he founded an important library school His interests extended from spelling reform to organizing the Lake Placid Club in the Adirondacks He was a founder of the American Library Association, the New York State Library Association, and the *Library Journal* See biography by G G Dawe (1933), study by Fremont Rider (1944)

Dewey, Thomas Edmund, 1902–, governor (1942–) of New York, b Owosso, Mich, grad Univ of Michigan, 1923, LL B Columbia, 1925 Admitted (1925) to the bar, Dewey practiced law and in 1931 became chief assistant U S attorney for the Southern District of New York After briefly serving (1933) as U S attorney, he was appointed (1935) special prosecutor to investigate organized crime and was elected (1937) district attorney of New York co He won a national reputation for "racket-busting" He was the unsuccessful Republican candidate for governor of New York in 1938, but was elected governor in 1942 His nation-wide prominence when he was only 42 years old brought him the Republican presidential nomination in 1944, but he lost the election to F D Roosevelt Reelected (1946) governor, Dewey again ran for President on the Republican ticket in 1948, and, contrary to general expectation, he once more lost —this time to Harry S Truman by a close margin

Dewey, city (pop 2,114), NE Okla, N of Tulsa, founded 1899, inc 1906 It was named after Admiral Dewey An annual fair and rodeo are held here Near by is a state fish hatchery

De Windt, Harry (dū wĭnt'), 1856–1933, English explorer He served his brother-in-law, Rajah Brooke of Sarawak, in Borneo (1876–78) and traveled overland from Peking to France (1887) and from Russia to India via Persia (1889) In an attempt to travel by land from New York to Paris (1896) he nearly lost his life on Bering Strait, but he made the journey in the reverse direction in 1901–2 His many books include *From Peking to Calais by Land* (1887), *A Ride to India* (1890), *Through the Goldfields of Alaska to Bering Straits* (1898), and *My Restless Life* (1908)

Dewing, Francis, fl 1716–22, early American engraver, b England He settled in Boston in 1716 He engraved coats of arms, silver plate, and designs on wood and was the first copper engraver of importance in America His best-known work is the copper engraving of John Bonner's *Town of Boston in New England* (1722)

Dewing, Maria Richards Oakey, 1845–1927, American flower and figure painter, b New York city She was best known for her paintings of flowers Among her figure pieces are a life-size *Mother and Child*, *The Prelude*, and *Child with a Doll* She married **Thomas Wilmer Dewing,** 1851–1938, American portrait and figure painter, b Boston He studied in Paris under Gustave Boulanger and Jules Lefebvre His pictures include *The Letter* and *Tobit and the Angel* (Metropolitan Mus), *The Lady in Green and Gray* (Art Inst, Chicago), *Summer* (National Gall of Art, Washington, D C); *Lady with a Mask* (Corcoran Gall,), *Lady in Gold* (Brooklyn Mus), and a portrait of his wife About 20 of his works are in the Freer Collection, Detroit Dewing became a member of the National Academy of Design in 1888

De Wint, Peter, 1784–1849, English landscape painter, a leading water-colorist. Most of De Wint's landscapes are distinctly English in subject and treatment, Lincolnshire scenes being favorites. *A Cornfield* and *Landscape with Water* (Victoria and Albert Mus) are among his best works

De Witt, Jan, and **Cornelius de Witt:** see WITT, JAN DE, and WITT, CORNELIUS DE

De Witt. 1 City (pop 2,498), a co seat of Arkansas co , SE Ark It ships timber and livestock and has rice mills and cotton gins A Federal bird refuge is near by **2** City (pop 2,205), E Iowa, N of Davenport; settled 1837, platted 1841 as Vanderburg, renamed 1842, inc 1858.

dew point. see DEW.

Dewsbury, county borough (1931 pop 54,302; 1947 estimated pop 51,490), West Riding of Yorkshire, England, on the Calder and SSW of Leeds There are ironworks, woolen mills, and blanket, carpet, and shoddy factories

Dexippus (Publius Herennius Dexippus) (dĕksĭ'pŭs), fl 268, Greek historian of the Roman period He was a general who commanded troops in an unsuccessful attempt to halt a Gothic invasion in 262 His works, much admired by Photius, included a universal history, and accounts of wars against the Goths and of the Diadochi

Dexter, Henry, 1806–76, American sculptor and painter, born on a farm near Syracuse, self-taught Apprenticed to a blacksmith, he taught himself to paint portraits and set up a studio in Boston Almost by accident he began modeling, invented (1842) a "sculptor's apparatus," and started making portrait busts, including one of Dickens He traveled over the country making busts of most of the state governors

Dexter, Timothy, 1747–1806, American merchant and eccentric, b Malden, Mass A leather dresser in Newburyport after 1770, he gained a fortune from the American Revolution by buying up depreciated Continental currency which was afterwards reclaimed at full value He gained money also by shrewd mercantile transactions He was styled "Lord Timothy Dexter" by his fellows, and he accepted the title Dexter wrote *A Pickle for the Knowing Ones* (1802), remarkable for the totally individual spelling and the absence of all punctuation In the second edition he added a page of "stops" so that readers could "pepper and salt it as they please" See biography by J P Marquand (1925)

Dexter. **1** Industrial town (pop 3 714), central Maine, NW of Bangor, settled 1800, inc 1816 Woolen goods are the chief product **2** Village (pop 1,087), S Mich , NW of Ann Arbor and on the Huron river, settled 1823, inc 1855 It is in a farm area abounding in Indian relics **3** City (pop 3,108), SE Mo , ENE of Poplar Bluff, founded 1873 It is a railroad junction, with plants processing food and cotton **4** Village (pop 1,109), N N Y , at the mouth of the Black River on a bay of Lake Ontario, NW of Watertown, inc 1855

dextrin, any one of a number of compounds of carbon, hydrogen, and oxygen having the same general formula as starch, but a smaller and less complex molecule They are polysaccharides (see CARBOHYDRATE) and are produced as intermediate products in the hydrolysis of starch by heat, by acids, and by enzymes Their nature and their chemical behavior depend to a great extent upon the nature of the starch from which they are derived For example, some react with iodine to give a reddish-brown color, others a blue, and still others yield no color at all The dextrin of commerce, known also as British gum, is a colorless or yellowish, tasteless, odorless powder which when mixed with water forms a strongly adhesive paste For commercial use dextrin is prepared by heating dry starch or starch which has been treated with acids It is used widely in adhesives, e g , for postage stamps, envelopes, and wallpapers, and for sizing the cotton cloth used in printing chintzes, cretonnes, calico, and other textiles

dextrose. see GLUCOSE

Deyssel, Lodewijk van: see ALBERDINGK THIJM, KAREL.

Dezhnev, Cape: see EAST CAPE.

Dhamar, Yemen see DAMAR.

Dhar (där), town (pop 22,015), Madhya Bharat state, India It was (9th to 14th cent) a center of Hindu learning A fort (c 1340) and a mosque, the Lat Masjid (1405), are notable buildings

Dharwar (därwär'), town (pop. 47,992), S Bombay state, India There is a fort which may date from the 15th cent Trading in cotton and the manufacture of cloth are the chief economic activities

Dhaulagiri (dou'lŭgēr'ē), peak, 26,810 ft high, Nepal, in the Himalayas

diabase (dī'ŭbās), an igneous ROCK intermediate in texture between the gabbros and the basalts It consists of narrow rectangular crystals of plagioclase FELDSPAR set in a matrix of ferromagnesian minerals, usually augite and olivine It is common in intrusives and is sometimes found in the interior of extrusive flows The Newark series of the Upper TRIASSIC system, which includes the exposed intrusives of the Connecticut valley and the Palisades of the Hudson, is largely diabase.

Diabelli, Antonio (äntō'nēō dēäbĕl'ē), 1781–1858, Austrian music publisher. He published works by Beethoven and Schubert and composed a waltz theme for Beethoven's Diabelli Variations

diabetes (dīŭbē'tēz, -bē'tĭs) or **diabetes mellitus** (mĕlī'tus), disease characterized by an increased amount of sugar in the blood and usually by sugar in the urine It is caused by a deficiency of INSULIN, an antidiabetic hormone normally secreted by the pancreas, discovered by F G BANTING and C H BEST in 1921 Failure to secrete insulin results in an abnormal amount of sugar in the blood, a loss of protein, which is in part responsible for loss in weight, and a disturbance in fat metabolism which accounts for the accumulation of abnormal products in the blood The presence of these products may cause acidosis and coma Susceptibility to infection is also a complicating factor When diabetes occurs in obese individuals, reduction in carbohydrates is an essential preventive measure Although mild cases are sometimes treated only by a prescribed diet, the more severe cases require injections of insulin In a condition known as renal glycosuria the urine when tested shows the presence of sugar but the sugar level in the blood is normal, such cases do not require insulin or a special diet, but obesity should not be allowed to develop and the sugar content of the blood should be checked regularly See M E Tangney, *Diabetes & the Diabetic in the Community* (1947), Ian Murray and M B Muir, *Good Health with Diabetes* (1947), R D Lawrence, *Diabetic A B C* (1948), J H Barach, *Food and Facts for the Diabetic* (1949)

Diablo Dam, NW Wash , on the Skagit river and NE of Seattle The dam, 386 ft high, was built (1927-30) for hydroelectric power and is owned by the city of Seattle

diadem, in ancient times, the fillet of silk, wool, or linen tied about the head of a king as a distinguishing mark Later it was a band of gold, which gave rise to the crown In heraldry, the diadem is one of the arched bars that support the crown

Diadochi (dīă'dŭkī) [Gr , =successors] The empire of Alexander the Great, the largest that the world had known up to that time, was quickly built At his death in 323 B C it even more quickly fell apart His generals and administrators, all the men who had power, sought immediately to increase their personal power in a bloody scramble These men were the Diadochi Chief among them were Antipater, Perdiccas, Eumenes, Craterus, Antigonus (Antigonus I), Ptolemy (Ptolemy I), Seleucus (Seleucus I), and Lysimachus The first struggle was over the regency, for theoretically Alexander's feeble-minded brother, Philip, and Alexander's posthumous son by Roxane had the real claim to the inheritance Perdiccas had the regency, to which Antipater also had claim Eumenes supported Perdiccas, while Antigonus, Ptolemy, and Craterus supported Antipater In 321 battle was joined, and the allies of Antipater won, though Craterus was killed On the death of Antipater in 319 the struggle was on again in earnest There were shifting alliances, but in general the chief figure was Antigonus, who, with the help of his son, Demetrius Poliorcetes (Demetrius I of Macedon), attempted to rebuild the empire of Alexander He failed After a long period of shifting fortune, Antigonus and Demetrius were defeated in the battle of Ipsus (301 B C) Already the Diadochi had been declaring themselves kings, Antigonus first and then the others The contest was carried on to the next generation, with Demetrius fighting successfully against Cassander, the son of Antipater, and even was pursued further with the wars between the Seleucidae and the Ptolemies Commonly, however, the period of the Diadochi is said to end with the victory of Seleucus I over Lysimachus in 281 Thus left the descendants of Ptolemy, Seleucus, and Antigonus as the chief claimants to power in the Hellenistic age and the empire of Alexander irrevocably split.

Diaghilev, Sergei Pavlovich (sĭrgā' päv'lŭvĭch dyä'gĭlyĭf), 1872–1929, Russian ballet impresario and art critic, grad St Petersburg Conservatory of Music, 1892 In 1899 he founded an influential art journal, *Mir Iskustva* He brought a company of Russian dancers to Paris (1909) and with the assistance of the painter L N Bakst and the choreographer Michel Fokine founded Diaghilev's Russian Ballet Anna Pavlova, Vaslav Nijinsky, Tamara Karsavina, Leonide Massine, Mikhail Mordkin, and Serge Lifar were all at one time associated with him His most famous productions include *Scheherazade*, *The Afternoon of a Faun*, *The Firebird*, *Petrouchka*, and *The Rite of Spring* Stravinsky, Debussy, Ravel, Dukas, and Richard Strauss wrote music which was first performed by his company See biographies by A L Haskell (1935) and Serge Lifar (1940), Romola Nijinsky, *Nijinsky* (1933)

diagnosis, determination of the nature of a disease in a given case A careful history includes symptoms described by the patient. Routine physical examination consists of four basic methods—general observation of the patient; use of the sense of touch to detect abnormal conditions; the use of percussion, especially in examining the chest; and listening to sounds such as breathing and heart sounds. Instruments which aid in physical examination include the stethoscope, to determine sound; the otoscope, to examine the ear; and the ophthalmoscope, to examine the eye. Additional aids in diagnosis are findings resulting from microscopical, chemical, and bacteriological examination of blood, urine, pus, and tissue Electrocardiograms and X rays are of diagnostic importance.

dial: see SUNDIAL.

dialect, variety of a LANGUAGE In usual 20th-century scientific usage, a dialect is the language of a person or group considered as it varies from that of other members of the same speech community A speech community is a group whose native language is intelligible to other (but not necessarily all other) members of the group. For example, imagine a line of persons A, B, C . . . Z, where each one is able to converse with his neighbor using his own native language but A and Z do not understand each other Then A . . Z all belong to one speech community and speak one language, A and Z speak different dialects Similarly, A and B speak different dialects if their speech differs at all The reason such a situation can occur is that A and B can converse even if they speak somewhat differently, yet with increasing isolation the differences may accumulate to the point of mutual unintelligibility There are many such speech communities, e g , the Dutch-German speech community, a continuous area of intelligibility from Flanders to Schleswig and to Styria, but with Flemish and Styrian dialects mutually unintelligible In the area there are standard languages used by educated persons, the official Dutch and German, mutually unintelligible because they are developed from mutually unintelligible dialects An exactly parallel situation exists between French and Italian The attitude of speakers of the standard language toward local nonstandard dialects varies In English areas some local dialects enjoy prestige, but not all (e g , Cockney of London) In France, where the standard language is revered, the local variety (called contemptuously *patois*) is derided The exact study of U S dialects began in the 20th cent See the journal *American Speech* and the monumental *Linguistic Atlas of the United States and Canada* (now in process of compilation)

dialectic (dīŭlĕk'tĭk), in philosophy, a term originally applied to the method of philosophizing by means of question and answer employed by certain ancient philosophers, notably SOCRATES For PLATO the term came to apply more strictly to logical method and meant the reduction of what is multiple in our experience of phenomena to the unity of systematically organized concepts or ideas In modern philosophy Kant uses the term for that part of his system which demonstrates his metaphysics as contrary to knowledge derived from phenomena HEGEL applied the term *dialectic* to the logical method of his philosophy, which proceeds from thesis through antithesis to synthesis

dialectical materialism, method of historical analysis developed by Karl Marx and Friedrich Engels It was presented by Marx in *Das Kapital* (1867) An inversion of Hegel's dialectical idealism, the theory sees social and economic change as the result of materialistic forces The doctrine holds that human beings, by their economic needs, indirectly produce their very form of life This leads to the development of classes, who are inevitably in opposition and whose struggles describe the historical process Eventually, when the proletariat achieves power, a classless society is formed The state, until then an oppressive tool of the dominant class, withers away The theory, absolutely monistic, denies that social change is effected by other than economic forces It has had very great influence in the development of MARXISM and of the political doctrines of Soviet Russia

dialogue [Gr , =conversation], the essence of theatrical performance, just as narrative may be said to be the essence of the story Since every idea conveyed from the stage to the audience normally is portrayed by speech and supporting action, the prime technique of the composition of drama or of anything for the theater is the making of dialogue which will delineate character and its development, narrate events outside the action, and bring to the audience everything that an unrestricted narrative account might, without making the persons acting seem to behave unusually or artificially In ancient Greece, a form popular at concourses of people was the *mime*, a little informal—usually humorous or satirical—scene consisting of a somewhat descriptive dialogue of two persons It was probably as a purely artificial device suggested by the mime that the classical dialogue as a form was developed. PLATO was the first or nearly the first to use the dialogue as a finished artistic form to convey an idea. Plato's distinction as a literary artist in his use of the dialogue is not his subtle climaxes and his ingenious dialectic, but his retention of a truth to nature that he abandoned in the later dialogues and that most of his imitators never achieved. The *Apology* and the *Symposium* are among his dialogues most remarkable for their construction. After him most philosophic writers used the dia-

logue, usually without success. Lucian's dialogues are among the best after Plato. The *Imaginary Conversations* of Landor and Holmes's *Autocrat of the Breakfast Table* are attempts to achieve a modern dialogue form.

dialysis (dīăl'ĭsĭs), in chemistry, method of separating a colloid from a substance in true solution, when both are present in a mixture, by the use of a membrane (natural or artificial) permeable to one and not permeable to the other The particles of the colloidal substance are of too great size to pass through the membrane and are retained; those of the substance in true solution, however, being of molecular fineness, diffuse through it readily A solution of salt or sugar, for example, can thus be separated from one of starch, a colloid The method was originated by Thomas Graham, the substance which remained within the membrane being called a colloid and that which diffused, a crystalloid An extension of the principle makes possible the separation of certain colloids by using an artificial membrane of known permeability, i e , one which will permit the diffusion of one colloid and not of the others

diamond, crystallized pure carbon used as a gem It is the hardest mineral known The crystals occur in the isometric system and are transparent to translucent, white, colorless, yellow, green, or blue Besides the gem varieties there are bort, poorly crystallized or of inferior quality and in fragmentary condition, and carbonado (black diamond), gray to black and opaque, with poor cleavage Bort and carbonados are used as abrasives, in the cutting of diamonds, and for the points of rock drills The earliest sources of gem diamonds were India and Borneo, where they were found in the alluvium of river beds All the famous diamonds of antiquity were Indian diamonds In the early 18th cent similar deposits were found in Brazil, though they may have been known as early as 1670 Since about the mid-19th cent the Brazilian fields, especially that of Bahia, have been important chiefly for the production of carbonados In South Africa, in 1867, a stone found some time before was recognized as a diamond Within a few years a wild search for diamonds was being carried on both in river diggings and inland In 1870–71 dry diggings, including most of the celebrated mines, were discovered These dry diggings are apparently volcanic pipes, filled for most of their length with "blue ground" or kimberlite, a mass of earthy matter largely metamorphosed into SERPENTINE, in which a great variety of minerals is still found Near the surface the "blue ground" is weathered to "yellow ground" The discoveries of 1870–71 led to a "rush," in the course of which a great number of prospectors staked out claims, from which they secured the diamonds by open-pit or quarry mining The damage caused by floods and mudslides, unavoidable when there were so many different claims, was an important factor in the series of amalgamations carried on by Cecil RHODES and Barnett BARNATO, though Rhodes's imperial schemes largely dominated the merging of their interests in the De Beers Consolidated Mines, Ltd , which established an effective monopoly over the diamond industry (1889) Loss of diamonds by theft, which cost hundreds of thousands of pounds annually, was reduced through the passage of the so-called I D B (Illicit Diamond Buying) Act, which limited the trade to licensed buyers, and imposed severe penalties for thievery Thefts were further curtailed by the institution of "compounds" in which the natives live while employed by the company and which they leave only after being thoroughly searched Diamantiferous earth is mined both by the open-pit method and by tunneling After being removed to the surface, it is allowed to crumble on "floors," or else is crushed, and then concentrated Sorting is done by passing the concentrated material over greased tables, since the diamond has been discovered to stick to the grease when other minerals do not The diamonds are then removed from the grease, cleaned, and graded for sale Well-known diamond mines are the Dutoitspan, Bultfontein, De Beers, Kimberley, Jagersfontein, and Premier (near Pretoria) Among famous Indian diamonds have been the Great Mogul, known only through the description of the French jeweler and traveler Jean B Tavernier, the Orlov, which was originally given to Catherine II of Russia, Koh-i-noor, now among the English crown jewels, and the Regent or Pitt From the Cullinan, a South African diamond found and presented to King Edward VII in 1907, 105 stones were cut, two of them being long the world's largest stones. Other notable diamonds are the Hope (blue), Dresden (green), and Tiffany (orange-yellow). See A C Austin and Marion Mercer, *The Story of Diamonds* (rev ed , 1941); J W. Hershey, *The Book of Diamonds* (1940); J. R. McCarthy, *Fire in the Earth* (1946),

Diamond Head, extinct crater, 761 ft. high, on the southeast shore of Oahu, T H. It was once the burial grounds of the ancient Hawaiians The plateau of the crater is the site of U.S. Fort Ruger.

Diamond Mountains, Jap. *Kongo San*, Korean *Kumgang San*, mountain range, N Korea, rising to 5,374 ft. There are scenic ravines and caverns and many ancient Buddhist temples.

Diamond Necklace, Affair of the, a puzzling scandal which took place at the court of Louis XVI of France just before the French Revolution The culpability of the persons involved has never been satisfactorily explained An adventuress who called herself the comtesse de Lamotte duped the Cardinal de ROHAN, the grand almoner, who was out of favor with Queen MARIE ANTOINETTE, into believing that she could through her efforts regain the queen's regard for him Mme de Lamotte and her accomplices then engineered a sham correspondence between the cardinal and the queen and even arranged an interview between him and a woman impersonating the queen The cardinal, fatuously believing that the queen loved him, next (1785) engaged to buy, on installment, supposedly as the queen's agent, a diamond necklace of enormous value, he was apparently told that the queen wished it The necklace, obtained from the jewelers, was taken to London by the husband of the comtesse and was broken up for sale When the cardinal was unable to meet the payments, the jewelers made the affair public, and the cardinal was brought to trial, he was acquitted, but lost his position in court Mme de Lamotte was ignominiously punished and then imprisoned, but she escaped to London, where she wrote her highly questionable memoirs CAGLIOSTRO, at first suspected of complicity, was acquitted Although the queen's share in the scandal has never been established, her enemies hinted that the affair was part of a scheme by the queen to ruin the cardinal, and the belief that she was involved added greatly to her unpopularity at a critical time A vast literature has grown around the subject, notably Dumas's romance *The Queen's Necklace* and Carlyle's *Diamond Necklace* See also Andrew Lang, *Historical Mysteries* (1904), J D Chamier, *The Dubious Tale of the Diamond Necklace* (1939)

Diana (dīă'nu), in Roman legend, goddess of the moon, of forests, of animals, and of women in childbirth, identified with the Greek ARTEMIS She was probably originally a forest goddess and special patroness of women like HECATE, her temple at Aricia, near Lake NEMI, stood in a grove and was frequented by women She was then associated with the GREAT MOTHER OF THE GODS and continued to be related to fertility rites—e g , the Diana of Ephesus in Acts 19 21–41 The temple on the Aventine at Rome, however, honored the virgin goddess of the Greeks

Diane de France (dyan' du frăs'), 1538–1619, duchess of Montmorency and Angoulême, natural daughter of King Henry II of France She was married to François, eldest son of Constable Anne de Montmorency She worked for the alliance of Henry III with Henry of Navarre (King Henry IV) and was influential during the reign of Henry IV

Diane de Poitiers (pwatyā'), 1499–1566, duchess of Valentinois, mistress of Henry II of France Her influence over Henry lasted to the end of his life, with the queen, Catherine de' Medici, she maintained friendly relations while completely eclipsing her In the rivalry between Anne de Montmorency and the Guise family, she took sides against whichever party was more powerful at the moment She supported the king's anti-Protestant policy After Henry's death (1559), she was forced to retire from court See H W Henderson, *The Enchantress* (1928)

diaphragm (dī'ufrăm), muscular partition between the thorax and the abdomen, found only in humans and the other mammals The diaphragm is pierced by large blood vessels, nerves, and the esophagus Because of its importance in RESPIRATION, abnormalities of the diaphragm result in disorders of breathing There may be defects resulting from developmental faults or from injury, leading to hernia, displacement from pressure of near-by organs, paralysis through effect on its nerve supply, as in DIPHTHERIA and POLIOMYELITIS, spasm, as in HICCUP, and infection

Diarbekr, Turkey see DIYARBAKIR

Diarmuid mac Murchada: see DERMOT MCMURROUGH

diarrhea (dīurē'ŭ), frequent discharge of watery feces, which has many causes It results from irritation of the intestines by foods, e g , unripe fruit, drugs, e g , saline cathartics, infection with protozoa and bacteria (see DYSENTERY), and sometimes from stimulation by the nervous system. Summer diarrhea of infants results from infection with various bacteria in contaminated milk Treatment with potassium injections has reduced mortality. The blood fluids and minerals lost from the tissue spaces and the blood plasma in all cases of diarrhea must be replaced Vomiting must be controlled Proper diet is an important factor. Treatment depends on the cause of the condition

Dias, Antonio Gonçalves: see GONÇALVES DIAS, ANTONIO

diastase (dī'ustās) or **amylase** (ă'mĭlās), an ENZYME found in both animals and plants which brings about the conversion of starch into sugar. It converts dextrin and glycogen. It is present in various parts of the higher plants, especially in the seeds, and also in fungi, e.g., the yeasts and bacteria It is the ptyalin of saliva and as one of the enzymes in the pancreatic fluid is known as amylopsin Diastase was first prepared from barley malt; it occurs in the germinating seeds of barley and other grains The commercial product is commonly prepared from malt Diastase is of importance for its activity in digestion and in fermentation

diathermy (dī'uthûr"mē), in medicine, a therapeutic measure employing high-frequency electric currents to generate heat in the body tissues When applied to surface structures, heat dilates the capillaries, increases local blood circulation, and accelerates the process of absorption and repair Diathermy, in addition to bringing heat to surface structures, also warms the deeper tissues Diathermy is employed in pelvic inflammatory disease, in certain kinds of arthritis, in bursitis, and in conditions requiring physical therapy Because of the high-frequency current used in short-wave diathermy, care should be taken to avoid injury to deeper tissues

diatom (dī'ŭtŏm",-tum,-tōm"), microscopic form of plant belonging to the group of algae Some diatoms exist as single cells, and others are joined to form colonies They are usually yellowish or brownish and are found in fresh and salt water, in moist soil, and on the moist surface of other plants They are most abundant in arctic and other cold waters Some 15,000 species are known They are an important source of food for many aquatic animals The living matter of each diatom is enclosed in a shell of siliceous material which it secretes Many of the shells (some are round and some elongated and tapering at both ends) show intricate and beautiful sculpturing Some diatoms can move over moist surfaces by a streaming of the protoplasm, and some aquatic forms can move about in the water When the aquatic forms die they drop to the bottom, and the shells, not being subject to decay, collect in the ooze and eventually form the material known as diatomaceous earth (sometimes called kieselguhr) When it occurs in a more compact form as a soft, chalky, light-weight rock, it is called diatomite Deposits of diatomaceous material, formed under water in past geologic time and now exposed above water, are found in all parts of the world They are scattered over most of the United States, but productive sources exist chiefly in Oregon, Washington, Nevada, Florida, New York, and New Jersey Diatomite is much used as an insulating material against both heat and sound, it is employed in the form of a powder, artificial bricks, or bricks sawed from the deposits It has many other uses, e g , as an absorbent material in making dynamite and other explosives, as a filter for solutions of cane sugar and of fruit juices and other beverages, and in the making of ceramics, cosmetics, polishes, and some kinds of flooring

Diavolo, Fra see FRA DIAVOLO

Diaz, Armando (ärmän'dō dē'äts), 1861–1928, Italian field marshal In the First World War he replaced (1917) Cadorna as chief Italian commander. He defeated (1918) the disintegrating Austro-Hungarian army at Vittorio Veneto and concluded (Nov 3) the armistice, based on unconditional surrender, with Austria-Hungary Created *duca della Vittoria* [duke of Victory], he was later minister of war (1922-24)

Díaz, Bartholomew (dē'ăz), Port *Bartolomeu Dias* (bar"tōlumā'ōō dē'ush), d. 1500 Portuguese navigator, the first European to round (1488) the Cape of Good Hope, which he called Cabo Tormentoso That voyage laid open the road to India Diaz accompanied Pedro Alvares CABRAL on the voyage that resulted in the discovery of BRAZIL, but he perished in heavy seas off the African coast.

Díaz, Porfirio (pôrfē'rēō dē'ăs), 1830–1915, Mexican statesman, a mestizo, christened José de la Cruz Porfirio Díaz He gained prominence in support of JUÁREZ and the liberals in the War of the Reform and in the war against the French and MAXIMILIAN Defeated by Juárez in the presidential election of 1871, Díaz charged fraud and took up arms against the government, his revolt was not completely suppressed until after the inauguration of Sebastián LERDO DE TEJADA Díaz again lost in the presidential race of 1876 and promptly rose against Lerdo He achieved his ambition, gained the presidency, and remained in power until 1911 From 1880 to 1884 Manuel González was president, Díaz having declared for the principle of nonreelection in 1876, later the constitution was altered to permit Díaz's continuance in office His rule was stern and effective—incipient revolutions were crushed, banditry was eliminated, aspirants for political power were shrewdly matched with rivals, leaving the president supreme, elections were smoothly manipulated The regime of Díaz saw the growth of material prosperity in Mexico Foreign capital poured into the country. The natural wealth of Mexico was exploited, principally by foreigners Roads, railroads, and telegraph lines increased in number Díaz reformed the financial organization and gave Mexico a financial soundness that won the favor of other nations. Mexico was a land of peace and prosperity, ruled in the interest

of the few The oppressed masses were neglected. Education stagnated The downtrodden Indians, far from obtaining social justice, lost more of their communal lands Democratic forms were only empty mockery Opposition to Díaz grew, and in the last decade of his rule discontent increased, fostered by fear of conditions when the aged dictator should rule no more The announcement of his intention to restore democratic rule in Mexico created a sensation, but in 1910 he was reelected as usual The upshot was a revolution led by Francisco I MADERO In 1911 Díaz was forced to resign and flee the country He died in exile See biographies by David Hannay (1917) and Carleton Beals (1932)

Díaz de la Peña, Narcisо Virgilio (dyäs' dā lä pānyä'), 1807?–1876, French landscape and figure painter of the Barbizon school, b Bordeaux, of Spanish parents Mainly self-taught, he was influenced by Delacroix and Correggio and, later, by Théodore Rousseau Fine collections of his paintings are in the Louvre (including the *Descent of the Gypsies* and *Sous bois*) and in the Luxembourg, Paris, the museum of Rheims, the Art Institute, Chicago, the Walters Collection, Baltimore, the Metropolitan Museum (including the fine *Forest of Fontainebleau*), and many other European and American collections

Díaz del Castillo, Bernal (bĕrnäl' dĕ'äth dĕl kästē'lyō), c 1492–1581, Spanish conquistador and chronicler He had served in the New World under various commanders—Pedro Arias de Ávila, Diego de Velázquez, Francisco Fernández de Córdoba, and Grijalva—before going to Mexico in 1519 with Hernán Cortés He served in the conquest and his monumental work, written in his old age in Guatemala, is a fresh unstudied account of events and scenes and men he had himself known, with an accent on everyday concerns and on the common soldier It is *The True History of the Conquest of New Spain* (1632, Eng tr, 5 vols, 1908–16, Eng tr by A P Maudslay with variant title, 1928) See biography by R B Cunninghame Graham (1915)

Díaz Mirón, Salvador (salvadhōr' dē'äs mērōn'), 1853–1928, Mexican poet His life was almost as heavily accented with storm—with revolutionary plots, political quarrels, duels, and vigorous journalistic debates—as was his early post-romantic poetry written under the influence of Byron and Victor Hugo His later poetry showed more polish and cultivated smoothness His poem "A gloria" is said to have had considerable influence on José Santos Chocano and Rubén Darío, and his collection *Lascas* [chips from a stone] (1901) marks him as a precursor of MODERNISMO

Dibdin, Charles, 1745–1814, English song writer and playwright He is best known for songs from his ballad operas, such as *The Bells of Aberdovey* from *Liberty Hall* (1785), *'Twas in the Good Ship Rover* and *Tom Bowling* from *The Oddities* (1789)

Dibdin, Thomas Frognall, 1776–1847, English bibliographer His works, undependable because of their inaccuracies, include *Introduction to the Rare and Valuable Editions of the Greek and Latin Classics* (1802), *Bibliomania* (1809), and *Reminiscences of a Literary Life* (1836)

Diblaim (dĭb'lāĭm, dĭblā'ĭm), father of Hosea's wife Gomer Hosea 1 3

Diblath (dĭb'lăth), variant of RIBLAH **2.**

Dibon (dī'–) or **Dibon-gad,** ancient city, on the highland E of the Dead Sea, now a ruin called Dhiban Num 21 30, 33 3,34,45,46, Joshua 13 9, Isa 15 2, Jer 48 18,22. Dimon Isa 15 9 The MOABITE STONE was found here See also DIMONAH.

Dibri (dī'brī), father of SHELOMITH **1.**

Dice. see HORAE

dice [plural of *die*], small cubes used in games They are usually made of ivory, bone, wood, bakelite, or similar materials The six sides are numbered by dots from 1 to 6, so placed that the sum of the dots on a side and the opposite side equals 7 Dice much like those used today were found in ancient Egyptian tombs and in the ruins of Babylon The playing of dice was popular in Greece and even more so in Rome, and dice were used throughout the Middle Ages A simple form of play with dice is for each player to throw, or shoot, for the highest sum The most popular dice game in the United States is called craps It is played with two dice and the underlying principle of the game is the fact that the most probable throw is a 7 On the first throw, if a player shoots 7 or 11 (called a natural) he wins and throws again, but if he shoots 2, 3, or 12 (called craps) he loses If he shoots 4, 5, 6, 8, 9, or 10 that number becomes his point, and he continues to shoot until he makes his point, in which case he wins and retains the dice, or until he shoots a 7, in which case he loses and relinquishes the dice to the next player Usually all others in the game bet against the thrower, and in gambling halls bets are made against the house There are numerous other dice games In poker dice, five dice are used and the principles are similar to POKER. Dice are also used in backgammon, parcheesi, and other games The Chinese use a spinning die, somewhat like a top See R L. Frey, ed, *The New Complete Hoyle* (1947).

Diceto, Ralph de: see RALPH DE DICETO.

Dick, George Frederick, 1881–, American physician, b Fort Wayne, Ind., M D Rush Medical College, 1905 From 1905 he practiced in Chicago, and in 1933 he became head of the department of medicine at the Univ of Chicago With his wife, Gladys H Dick, he isolated the streptococcus causing scarlet fever, devised the skin test, known as the Dick test, to determine susceptibility to the disease, and developed a serum to establish immunity to the disease

Dickens, Charles, 1812–70, English novelist, b Portsmouth The son of a navy clerk, the boy grew up in London During one of his father's imprisonments for debt, the 12-year-old Charles was apprenticed in a blacking warehouse and never forgot the humiliation of his few months there At 17 he was a shorthand reporter in court and later was an expert parliamentary reporter for the *Morning Chronicle* His sketches of London types (signed "Boz") began appearing in periodicals in 1833, and the collected *Sketches by Boz* (1836), illustrated by George Cruikshank, enjoyed a great success Almost immediately he was asked to write the letterpress for a series of sporting pictures by H K Browne ("Phiz"), and the resulting *Posthumous Papers of the Pickwick Club* (1836–37) made Dickens and his characters Sam Weller and Mr Pickwick famous In 1836 he married Catharine Hogart, and early in 1837 the first of their 10 children was born For his eager and evermore numerous readers Dickens worked vigorously, publishing first in monthly installments and then as books *Oliver Twist* (book form, 1838), *Nicholas Nickleby* (1839), *The Old Curiosity Shop* (1841), and *Barnaby Rudge* (1841), a novel dealing with the Gordon riots Sometimes he was working on more than one novel at once The necessity to end each installment with suspense or promise of events to come mars his plots somewhat, but that fault is minor compared with his brilliant creation of characters both individual and typical After an American visit in 1842, he wrote *American Notes* (1842) and a novel, *Martin Chuzzlewit* (1843), both sharply criticizing America's shortcomings His books written for the Christmas trade began with *A Christmas Carol* (1843) and included *The Chimes* (1845), *The Cricket on the Hearth*, and others His next novel was *Dombey and Son* (1848) Then came *David Copperfield* (1850), which was his own favorite and is partly autobiographical, *Bleak House* (1853), *Hard Times* (1854), and *Little Dorrit* (1857) In 1857 he bought his country house, at Gad's Hill, Kent Apparently infatuated with an actress named Ellen Ternan, in 1858 Dickens separated from his wife, retaining her sister, Georgina Hogarth, as housekeeper *A Tale of Two Cities* (1859), a novel of the French Revolution, was followed by *Great Expectations* (1860–61) and *Our Mutual Friend* (1865) He augmented his income by three series of immensely popular and profitable readings from his own work in the British Isles (1858, 1861–65, 1866–67) and one in America (1867–68) A final English series (1869–70) ended in a breakdown of his health The physical and emotional exhaustion induced by these tours, combined with his writing, with his editing successively two magazines, *Household Words* (1850–59) and *All the Year Round* (1858–70), and with managing his amateur theatrical company, hastened his death He died without finishing *The Mystery of Edwin Drood* (1870) His grave is in Westminster Abbey, as befitted the most popular English writer of his day Later generations have criticized his sentimentality, but have continued to praise his evocation of the sights, sounds, and smells of London He wrote out of his own experience a great deal—his father's imprisonment for debt appears in *Little Dorrit*, and his father was evidently the model for both Mr Dorrit and Mr Micawber, his erratic mother is reflected in the mother of Nicholas Nickleby—or from direct investigation, as when he visited a private school before writing *Nicholas Nickleby* Never a professional reformer himself, his powerful, often satirical, novels, such as *Oliver Twist*, hastened needed social reforms See the Nonesuch edition of his works (ed by Arthur Waugh and others, 23 vols, 1937–38, including fullest collection of letters), biographies by his friend John Forster (3 vols, 1872–74, new ed by J W T Ley, 1928), Thomas Wright (1936), Una Pope-Hennessy (1945), and Hesketh Pearson (1949), studies by George Gissing (1898), Stephen Leacock (1933), Edward Wagenknecht (1929), and Thomas A Jackson (1938)

Dickinson, Emily, 1830–86, American poet, b Amherst, Mass There she spent almost all of her secluded life Her father, a lawyer and the treasurer of Amherst College, sustained the older traditions of Puritan New England, and his daughter, the only nonchurchgoing member of her family, was educated with suitable austerity in two of the stricter female academies of the day At 23 she accompanied her father, then Congressman, to Washington and Philadelphia, and it was at that time that she began the mysterious love affair which is supposed to have broken her life She returned to Amherst and retired gradually into seclusion. About 1862 she began writing the poems which have made her one of the classic poets of America The best of her short lyrics rank with the finest of modern poetry, and her work has been a great molding force in 20th-century poetry. Her letters and poems, both uneven in quality, reveal one of the most original and vigorous minds of her period, questioning established concepts and seeking new values Although considered eccentric, she was able to convert her personal idiosyncrasies into startlingly fresh universal language Practically none of her works appeared in her lifetime and she died intestate Her literary discovery has been one of explosive feuds and jealousies between her editors, who have concealed so much material that even today some details have not come to light As she left no instructions, her editors have had the added difficulty of deciding which poems she would have considered complete, and jottings which are often unintelligible are indiscriminately mixed with her finest verse Her fame began when Mabel L TODD and T W Higginson edited and published her poems (1890–91) Other editions are *Poems* (ed by Martha Dickinson Bianchi and A L. Hampson, 1937) and *Bolts of Melody* (ed by M L Todd and Millicent Todd Bingham, 1945) See her *Letters* (rev ed by M L Todd, 1931), M D Bianchi, *The Life and Letters of Emily Dickinson* (1924); G F Whicher, *This Was a Poet* (1939), M T Bingham, *Ancestors' Brocades* (1945)

Dickinson, Goldsworthy Lowes, 1862–1932, British author He was educated at King's College, Cambridge, and became a fellow there He was interested in international relations and won much unpopularity by his pacifistic attitude in the First World War He headed the Union of Democratic Control, which opposed retaliatory measures against Germany and reparations, and generally maintained and propagated liberal opinion in international affairs His writings in this field include *The International Anarchy*, 1904–1914 (1926) He is perhaps best known as author of *The Greek View of Life* (1896), a critical but laudatory work on Hellenic society He also wrote *Revolution and Reaction in Modern France* (1892), *Letters from a Chinese Official* (1903), and *After Two Thousand Years* (1930). See biography by E M Forster (1934)

Dickinson, John, 1732–1808, American patriot and statesman, b Talbot co, Md After studying law in London at the Middle Temple, he returned to America and developed a rich practice in Philadelphia In 1760 he became speaker of the assembly of the Lower Counties (Delaware), and in 1762 he entered the Pennsylvania legislature Dickinson led the conservative wing opposing Benjamin Franklin's attempts to have proprietary government of the Penns abolished The Sugar Act and the Stamp Act led him to write a pamphlet (1765) in protest As a member of the STAMP ACT CONGRESS he helped draw up the petitions to the king, but he opposed all violent resistance to the law The passage of the Townshend Acts (1767) led to the colonial nonimportation agreements and the publication of Dickinson's famous *Letters from a Farmer in Pennsylvania*, which appeared in the *Pennsylvania Chronicle* in 1767 and 1768 He pointed out that these laws were inconsistent with established English constitutional principles, but he favored nonimportation agreements and conciliation rather than revolt Dickinson came to be regarded as the leader of the conservative group, which opposed not only British actions but also the ideas of radicals such as Samuel Adams He was a delegate to the First Continental Congress and drew up a petition to the king, but he still hoped for reconciliation even after the opening of hostilities, and he refused to sign the Declaration of Independence He continued to be the leader of the conservative patriots in Pennsylvania and Delaware and held state posts In 1786 he presided over the Annapolis Convention, and in the subsequent Federal Constitutional Convention, Dickinson was a delegate from Delaware and a leading champion of the rights of the small states He later wrote vigorously in support of the Constitution. He was one of the founders of Dickinson College. See biography by C J Stillé (1891)

Dickinson, Jonathan, 1688–1747, American Presbyterian clergyman, a founder and first president of the College of New Jersey (now PRINCETON UNIVERSITY), b Hatfield, Mass, grad Yale, 1706. He was a leading preacher of the Great Awakening in the middle colonies and supported the revivalists or "New Sides" in the ensuing controversy Next to Jonathan Edwards, Dickinson was probably the most able exponent of Calvinism in the country. Convinced of the need of an educational institution to carry forward the ideals of William TENNENT, he obtained a charter (1746) for the College of New Jersey In 1747 he opened the institution at his house in Elizabethtown, N J

Dickinson, Preston, 1891–1930, American painter, b New York city There he studied at the Art Students League From 1910 to 1915 he traveled in Europe, to which he returned often later in life. His still lifes and landscapes in oil and water color are built up of highly colorful planes and have par-

ticular interest as designs. He is well represented in museums throughout the United States.

Dickinson, city (pop. 5,839), co seat (since 1884) of Stark co., SW N Dak., on the Heart river and W of Bismarck; inc 1919 Known in 1880 as Pleasant Valley Siding, it became Dickinson in 1883. It is a shipping point for livestock and wheat and has some manufacturing Dickinson is the seat of a state teachers college Near by is a state and Federal agricultural experiment station

Dickinson College, at Carlisle, Pa., coeducational, opened as a school 1773, chartered 1783, opened as a college 1784 by Benjamin Rush, John Dickinson, and others It has a law school Benjamin H. Latrobe designed one building Chief Justice Taney and President Buchanan were graduates

Dickman, Joseph Theodore, 1857–1927, American general, b Dayton, Ohio, grad West Point, 1881 He saw varied army service, including the campaign against Geronimo in the Southwest, the Spanish-American War in Cuba, and the Boxer Rebellion in China (where he was chief of staff to Gen A R Chaffee) He wrote manuals for cavalry In the First World War, he was a commander in the second battle of the Marne and in the Meuse-Argonne offensive After the war he commanded the U S 3d Army, which was the U S occupying force in Germany, with headquarters at Ehrenbreitstein

Dickson, Leonard Eugene, 1874–, American mathematician, b Independence, Iowa, grad Univ of Texas, 1893 He studied abroad and joined the staff of the Univ of Chicago in 1900 A leading American algebraist, he wrote on invariants and the theory of finite and infinite groups His chief work is *A History of the Theory of Numbers* (3 vols, 1919–23)

Dickson, industrial town (pop 3,504), central Tenn, W of Nashville, in an iron, timber, and farm area Wood and metal products are made The Montgomery Bell recreation area is near by

Dickson City, industrial borough (pop 11,548), NE Pa., on the Lackawanna river and NE of Scranton, inc 1875 Anthracite is mined, and metal products are manufactured here

Dick test see DICK, GEORGE FREDERICK

dictator, originally a Roman magistrate appointed to rule the state in times of emergency From 501 B C until the abolition of the office in 44 B C after the murder of Caesar, Rome had 88 dictators Dictators were usually appointed by a consul and were invested with sweeping authority over the citizens but were limited to a term of six months and lacked power over the public finances Dictators were held to strict account for their conduct in office Sulla and Caesar abolished the limitations to dictatorship and governed unconstitutionally With the Roman abandonment of the institution the exact meaning of the term was lost, and *dictator* now connotes roughly any absolutist or autocrat Kings, ministers, and presidents have assumed the status of dictators, but most dictators have their origins as adventurers working outside the constitutional framework The organization of the social structure into estates during the Middle Ages was not conducive to dictatorship, but in modern times conditions of economic dislocation and political chaos have permitted the seizure of power by extraconstitutional means by Mussolini in Italy, Hitler in Germany, and others In power, the dictator soon legalizes his position and makes use of the institution of an official party, the secret police, and widespread propaganda glorifying the regime to maintain himself and win public approval As a result of the Second World War many dictatorial regimes of the fascist order collapsed in Europe Dictatorship in Soviet Russia, a concentration of power in the hands of the Communist party, has devolved increasingly upon the individual figure of Stalin Latin American nations have undergone many dictatorships, usually of military adventurers at the head of a personal following See also TOTALITARIANISM See Albert Carr, *Juggernaut the Path of Dictatorship* (1939)

dictionary, published list of the forms of a language The content is governed by the purpose Thus, a descriptive dictionary attempts, ideally, to give the exact meaning of all forms of its language, treating them from an objective point of view School foreign-language dictionaries are of descriptive type The modern dictionary of its own standard language is often rather prescriptive than descriptive, for it attempts to establish certain forms as preferable The most remarkable case of this sort is the dictionary of the French Academy, which is widely admired and ignored The popular American attitude of the 19th cent towards dictionaries gave them a nearly sacred authority, but in the 20th cent the dictionary makers themselves began to replace notions of purity (especially based on ETYMOLOGY) by criteria of use, somewhat ahead of analogous developments in GRAMMAR Nathan Bailey (d 1742) was the author of two English dictionaries so much better than any of their predecessors as rightly to be held the beginning of the line that still continues His *Universal Etymological English Dictionary* was published in 1721, his larger dictionary, *Dictionarium Britannicum,* was published in 1730. An interleaved copy of this larger work was used by Samuel JOHNSON (1709–84) in preparing *A Dictionary of the English Language,* in two volumes, which appeared in 1755. Johnson's definitions evince his scholarship, judgment, and skill and are basic in later lexicography A revision of Johnson's dictionary by the Rev. Henry John Todd (1763–1845), including many words not found in Johnson, was published in 1818 The dictionary of Thomas Sheridan (1721–88), an actor, was published in 1780, and the dictionary of John Walker (1732–1807), also an actor, in 1791. In both these dictionaries special care was given to pronunciation, in which for many years Walker's authority received more deference than it merited. The first great lexicographer after Johnson was an American, Noah WEBSTER (1758–1843) The first edition of the book later known as *Webster's Spelling Book* appeared in 1783 For years the annual sales of this book were more than a million copies. To help those who had mastered the *Spelling Book* to continue their education, Webster published his *Compendious Dictionary of the English Language* in 1806 His larger dictionary, *An American Dictionary of the English Language,* in two volumes, was published in 1828 Authorized publishers have published a series of skillful revisions and abridgments which have retained for Webster's dictionaries their popularity The largest of Webster's dictionaries is now published in one volume Another notable one-volume American dictionary was that by Joseph Emerson Worcester (1784–1865), first published in 1830, an edition revised by the author appeared in 1860 A later one-volume American dictionary is the *Standard,* completed in 1895 *The Century Dictionary,* an American dictionary in six volumes, with encyclopedic features, was completed in 1891 Supplementary volumes were *The Century Cyclopedia of Names* (1894) and *The Century Atlas of the World* (1897) A later edition of this dictionary, including these two supplementary volumes, was in 12 volumes In England, progress in lexicography since Walker's time has been notably in the collection and organization of examples of usage In 1830–37 Charles Richardson (1775–1865) published in two volumes a dictionary richer in illustrative examples than any of its predecessors In 1857 the Philological Society began collecting dated examples of usage This work of the Philological Society made possible the publication of the dictionary variously known as the *New English Dictionary,* the *Oxford English Dictionary,* and *Murray's Dictionary* (for Sir James Augustus Henry Murray, 1837-1915, one of the editors) Publication of this dictionary began in 1884 and was completed in 1928, 70 years after the collecting of the material began A much less ambitious but notable project is the four-volume *Dictionary of American English on Historical Principles,* edited by Sir William Alexander Craigie at Chicago It was completed in 1943 See M M Mathews, *A Survey of English Dictionaries* (1933), Isadore G Mudge, *Guide to Reference Books* (frequently revised in new editions)

Dictys Cretensis (dĭk'tĭs krētĕn'sĭs), supposedly a Cretan hero, a companion of Idomeneus in the Trojan War To him was ascribed a diary of the Trojan War, which first appeared in Latin translation with the title *Ephemeris belli Troiani* in the 4th cent A D The Greek work seems to have been written in the 2d or 3d cent A D Because of Benoît de Sainte-Maure thus work, like that ascribed to DARES PHRYGIUS, became a popular source of medieval stories about the Trojan War

Didache (dĭ'dukē) [Gr.,=teaching], early Christian work written in Greek, called also *The Teaching of the Twelve Apostles* It was composed probably before A D 100 in the Near East The first part is a collection of moral precepts, perhaps based on rabbinical teachings, there are many quotations from the Old Testament The second section gives directions for baptism and the Eucharist, and the third contains directions for ministers The *Didache* may be of composite authorship It has been published in English translations in collections of patristic literature

Diderot, Denis (dēnē' dēdurō'), 1713–84, French encyclopedist and writer on many topics, philosopher of materialism, critic of art and literature He was also novelist, satirist, dramatist He became (1747) editor of the ENCYCLOPÉDIE, enlisting nearly all the important writers of the time and producing with them the most remarkable compendium up to that time His plays are inconsequential, save for the short pieces, *La Pièce et la prologue* and *Est-il bon? Est-il méchant?* [Is he good? Is he bad?] (1834) His vast correspondence, especially the *Lettres à Mademoiselle Voland* (1830), form a brilliant picture of the period As a writer of fiction—particularly of the collection of short tales, *Jacques le fataliste* (1796)—he has remarkable descriptive powers, but he suffers from an unruly imagination His philosophical works include *Pensées philosophiques* (1746), *Lettres sur les sourds et muets* [letters on deaf mutes] (1759), and *Essai sur Sénèque* (1779) Through his *Salons* (1759–71), reports on art exhibitions, he was the founder of literary art criticism. His later years, until he came to enjoy the patronage of Catherine II of Russia, were filled with pecuniary difficulties His influence was very great, both on his immediate successors, Holbach and Helvétius, and on the writers and thinkers of France, Germany, and England He may be summed up as one of the universal geniuses of the modern era See the *Dialogues* (tr by Francis Birrell, 1927), *Concerning the Education of a Prince, with an introductory essay by John M S Allison* (1941), John Morley, *Diderot and the Encyclopedists* (1878), essay in Carlyle's *Miscellanies.*

Didius Julianus (Marcus Didius Salvius Julianus) (dĭ'dēus jōlĭā'nus), d 193, Roman emperor (193) He was consul under Emperor PERTINAX, on whose death the Praetorians received bids for the purple Didius bid highest (25,000 sesterces) and became emperor A few months later he was murdered when it appeared that Septimius SEVERUS would not recognize him Severus succeeded him

Dido (dī'dō), in Roman legend, founder and queen of Carthage As Elissa she was daughter of a king of Tyre, but fled after her brother Pygmalion murdered her husband, Acerbas or Sychaeus Vergil in the *Aeneid* tells how she entertained AENEAS and fell in love with him, when under divine command he abandoned her, she destroyed herself on her own funeral pyre Another story tells that to escape Iarbas, king of Libya, she destroyed herself on a pyre Still another version has her sister Anna die for love of Aeneas

Didon, Henri (ārē' dēdō'), 1840–1900, French Dominican preacher and writer He became known as an eloquent preacher, especially by his eulogy on Archbishop DARBOY He was sent to Corsica by the Dominicans (1880–87) because he was suspected of leaning toward modernistic ideas In 1890 appeared his life of Christ, which was widely read His Lent and Advent series of sermons were always tremendously popular

Didot, François (frāswä' dēdō'), 1689–1757, Parisian printer The son of a printer, Denis Didot, he was the first of the family to win fame in his craft His son, **François Ambroise Didot** (äbrwäz'), 1730–1804, was said by Benjamin Franklin Bache to be "the best printer of this age and even the best that has ever been seen", by his grandfather, Benjamin Franklin, Bache was apprenticed to Didot The scholarly and typographic excellence of Didot's books is unquestioned Influenced by the work of BASKERVILLE, he designed type in the "modern," pseudoclassical style, and his work in turn influenced the work of BODONI He improved the "point" system of measuring and naming sizes of type, first employed by Pierre Simon Fournier, and secured its general adoption in France His sons, **Pierre Didot** (pyĕr), 1761-1853, and **Firmin Didot** (fērmē'), 1764-1836, continued the great tradition of the family, producing handsome books comparable to those of Bodoni, and, unlike Bodoni's books, with well-chosen texts conscientiously and skillfully edited Again unlike Bodoni, the Didot family never overlooked the requirements of students and general readers for good but inexpensive books Firmin Didot was the first in France to print books from STEREOTYPE plates, the process enabled him to make books at less cost The stereotype process had been used earlier for other purposes, as the printing of assignats, he improved it and named it Following the example of Baskerville, he used smooth wove paper Sons of Firmin Didot succeeded him

Didrikson, Mildred Babe (Babe Didrikson) (dĭ'drĭksun), 1913-, American athlete, b Port Arthur, Texas At an early age Babe Didrikson excelled in basketball, baseball, and track In 1932 she became internationally famous by winning many track and field events and breaking four records at the Olympic games held at Los Angeles She later devoted herself to golf In 1938 she married George Zaharias (zähär'ĭus), a wrestler, and she gained wide notice in her golfing career as Babe Didrikson Zaharias She won many titles, including the U S national amateur title (1946) and the British amateur championship (1947) She wrote *Championship Golf* (1948)

Didymus see THOMAS, SAINT

Didymus Chalcenterus (dĭ'dĭmŭs kălsĕn'turus) [Gr.,=bronze-boweled], fl late 1st cent B C, Alexandrian Greek grammarian and expositor He was famous for his prodigious literary output (said to have been over 3,500 works) He collated much of the work of the Alexandrian critics, and though only fragments of his own work are extant, he is probably the source of many surviving classical commentaries

Didymus of Alexandria, d c 396, Greek grammarian and theologian, also called Didymus the Blind His treatise *On the Holy Ghost* was translated by his pupil, St Jerome Although he had been trusted with teaching theology by St Athanasius, he was condemned for Origenism by the Third Council of Constantinople and the Second Council of Nicaea

die, name for various devices used for wire drawing and for blanking, bending, machine forging, and embossing Dies were used for striking, or stamping, coins and medals as early as c 800 B C in Greece The die is cut in intaglio, one for the obverse, another for the reverse, of the coin. Diemak-

ing, or diesinking, formerly entirely a hand process in which the graver, riffler, and chiseler were employed, has been accelerated in modern times by the use of diemaking machines supplemented by hand finishing. A punch, or male die, is commonly developed in relief from the original die, or matrix, and both are preserved as models, duplicates being made from them for working dies Sheet metal or other material is blanked out, shaped, or embossed between the dies by power-operated levers or drop hammers or by die-casting In architecture the term *die* applies to the square base of a pillar and to the face of a podium or pedestal In games the die is a cube (see DICE). See F A Stanley, *Punches and Dies* (3d ed , 1943), James Walker and C C Taylor, *Simplified Punch and Diemaking* (1946)

die-casting, process by which molten metal is forced into a metallic die under pressure maintained until the metal has solidified The development of alloys resistant to high temperatures has permitted the substitution of parts made by die-casting for sheet-metal, forged, and sand-cast parts formerly produced by skilled workers in machine shops The metal is pressed into the die by a plunger or by compressed air Die castings are accurate, sharply outlined, have a good surface finish, and can be made in complicated designs Type-casting machines are specialized die-casting machines See H L Harvill and P R Jordan, *High-Pressure Die Casting* (1945)

Diedenhofen, Lorraine see THIONVILLE

Dielman, Frederick (dēl'mun), 1847–1935, American draughtsman, painter, and teacher, b Germany, studied in Munich. He opened a studio in New York city in 1876 and won success as an illustrator and as a painter of genre and portraits Among his works are the mosaic panels *Thrift* (Albany, N.Y , Savings Bank) and *Law* and *History* (both Library of Congress), and six panels in the capitol, Des Moines, Iowa He was president of the National Academy of Design (1899–1909) and was professor of art at the College of the City of New York (1903–18) and art director at Cooper Union (1905–31)

Diemen, Anton van (än'tōn van dē'mun), 1593–1645, Dutch colonial official As governor general for the Dutch East India Company in the East Indies after 1636, he captured Ceylon and Malacca from the Portuguese. He sent out Abel TASMAN on exploring voyages Tasman called an island that he found Van Diemen's Land, it is today Tasmania.

Diepenbeeck, Abraham van (vän' dē'pbāk"), 1596–1675, Flemish painter and designer of stained glass, pupil of Rubens

Dieppe (dēēp'), town (pop 20,877), Seine-Inférieure dept , N France, on the English Channel, a fashionable resort and a fishing port. Once an important port, the town, which had adopted Protestantism, was ruined by the DRAGONNADES of Louis XIV and by an English raid (1694) Subjected to repeated air bombing in the Second World War, Dieppe was also the scene (Aug 19, 1942) of a commando raid by Canadians, British, and Americans

Dierks (dērks), city (pop 1,459), SW Ark , NE of De Queen, inc 1907 A large coal and lumber company is here, and a state game refuge near by

Dies, Christoph Albert (krīs'tōf al'bērt dēs'), 1755–1822, German landscape painter and engraver His best works are in water color, but he painted also in oil After spending many years in Italy, where he copied the masters and painted Italian scenes, he returned to Germany and published, together with J W Mechau and J C Reinhart, the *Collection de vues pittoresques de l'Italie* (1799), to which Dies contributed 24 fine etchings

Diesel engine (dē'zul), type of INTERNAL-COMBUSTION ENGINE invented by Rudolf Diesel (1858–1913, German engineer, b Paris) and patented in 1892 Since developed for high powers and competing successfully with the steam engine, steam turbine, and electric motor, it is used especially for marine work and for driving locomotives, trucks, electric generators, and pumps It differs from the gasoline engine in that the ignition of its fuel is caused by compression of air in its cylinders instead of by a spark compression raises the temperature of the air so high that it ignites the fuel Because of the high temperatures of operation, a special feature is the cooling system The construction of the Diesel engine is heavier than that of the gasoline engine, there are usually three or more cylinders (supported on a framework and bedplate) and a heavy flywheel The cylinders are set to work alternately to give a smooth-turning effect, and the flywheel further helps smooth action There are two classes of Diesel engines In the two-stroke or two-cycle type there is a complete cycle of operation in every two strokes. This type of engine requires an air compressor to supply compressed air for operating and for starting In the four-stroke or four-cycle type the first downstroke of the piston draws in air only, which is compressed on the upstroke to about 500 lb per square inch. At the top of the stroke a jet of oil is sprayed in. The oil is ignited and the rapid expansion, due to the explosion, forces the piston down in the working, or firing, stroke The next upstroke drives the waste gases out through the exhaust valve, and the cycle is complete. The Diesel engines have an advantage in that they use cheap crude oil for fuel and occupy a comparatively small amount of space, since no boiler is needed. This is particularly important for marine work where the additional space obtained can be used for cargo The Diesel engine has been developed extensively in Europe and the United States Single units may give as high as 20,000 h p See A P Chalkley, *Diesel Engines for Land and Marine Work* (5th ed , 1926); L H. Morrison, *American Diesel Engines* (2d ed , 1939), Orville Adams, *Elements of Diesel Engineering* (2d ed , 1949)

Dies irae (dī'ēs ī'rē, dē'ās ē'rā) [Latin,=day of wrath], hymn of the Roman Catholic Church, one of the six authorized sequences A part of the Requiem Mass, it is a powerful description of the Judgment and a prayer to Jesus for mercy Suggested in part by Zeph 1 14–16, it was probably written by Thomas of Celano It has often been set to music, in polyphonic settings its plain-song tune has frequently been used as a *cantus firmus* Verdi and Mozart composed original music for it which is intensely dramatic

Dieskau, Ludwig August, Baron (lōōt'vĭkh ou'gōōst bärōn' dē'skou), 1701–67, general in French service in the French and Indian War He arrived in Canada in 1755 and was defeated and captured the same year by Sir William JOHNSON on Lake George

diet, daily intake of food of a human or other animal The quality of the human diet from birth to old age is recognized as one of the chief factors in determining both physical and mental health In order to provide for the needs of the body the diet must include foods containing adequate amounts of each of the classes of nutrients Good sources of the nutrient protein are meat, fish, eggs, legumes (e g , peas, beans, and lentils), milk, and cheese, protein is essential to growth and to the maintenance of healthy tissues and good resistance at all ages Starch and sugar, together known as carbohydrates, provide the body with energy Starchy foods include rice, wheat, and other grains, grain products (e g , bread, macaroni, and cake), and potato, fruits, vegetables, honey, and molasses are more healthful sources of sugar than candy and refined sugar Fats are high in energy value, but their excessive use should be avoided, butter and fortified margarine provide vitamin A in addition to fat Among the most important mineral requirements are sufficient calcium for development and maintenance of healthy bones and teeth, for regulation of the heartbeat, for aiding coagulation of blood, digestion, and muscle action, and for other vital functions, phosphorus, also necessary to good bones and teeth and to many body functions, iron and copper to avoid anemia, and iodine, necessary for the proper functioning of the thyroid gland Water is an essential component of all body tissues and fluids, and it aids in ridding the body of wastes VITAMINS are necessary to the maintenance of health at all ages The energy value of foods, i e , their calorie value, must be considered in planning the diet A diet with a higher calorie value than the body requires leads to obesity The choice of foods and the proportions of the nutrients varies somewhat at different ages Generally the requirements are met by including in each day's food intake a serving of meat (or a meat substitute), an egg, a potato, at least one green or yellow vegetable and preferably an additional vegetable or fruit, citrus fruits or tomatoes, milk (a quart for children and pregnant women and at least a pint for others, including that used in cooking), two or more servings of grain foods (some should be whole-grain products), and a moderate amount of fat Cheese made from whole milk may be substituted for part of the milk requirement Special diets are necessary in certain diseases, e g , diabetes and kidney infections, and in conditions such as underweight and obesity, but these should be undertaken only according to a physician's instructions See L. H Gilletti, *Nutrition in Public Health* (1946), H. C Sherman, *Food Products* (4th ed , 1948), M. D Rose, *Laboratory Handbook for Dietetics* (5th ed , revised by C. M Taylor and Grace MacLeod, 1949)

diet, in German history, a deliberative or legislative assembly The imperial diet (Ger *Reichstag*) of the HOLY ROMAN EMPIRE was an assembly of magnates, both lay and ecclesiastic, summoned at irregular intervals The Golden Bull (1356) of Emperor Charles IV solidified its organization, three groups appeared—the ELECTORS, the princes, and the representatives of the imperial cities The Peace of Westphalia (1648) raised the diet above the emperor and made it more distinctly a federal body. It thus became a conference of ambassadors rather than a legislature, while the member states (notably Prussia and Austria) grew into strong nations From 1663 the diet met at Regensburg Among the most important diets were those of Würzburg (1180, see HENRY THE LION); of NUREMBERG (1467), of Worms and Cologne (1495, 1512, see MAXIMILIAN I, emperor), and of the REFORMATION —Worms (1521), Speyer (1529), and Augsburg (1530, 1547, 1555) For the federal diet (Ger *Bundesrat*) of 1815–66, see GERMAN CONFEDERATION. The parliamentary bodies of Poland, Hungary, Bohemia, and the Scandinavian countries were also called diets.

Dietrich, Christian Wilhelm Ernst (krīs'tyän vĭl'hĕlm ĕrnst' dē'trĭkh), 1712–74, German painter and engraver He imitated the Dutch masters with some success but had little originality. His *Itinerant Singers* (National Gall , London) is characteristic. Two paintings, *Surprised* and *Christ Healing the Sick*, are in the Metropolitan Museum.

Dietrich von Bern: see THEODORIC THE GREAT

Dieulafoy, Marcel Auguste (märsĕl' ōgüst' dyülăfwä'), 1844–1920, French highway engineer and archaeologist. He served in both the Franco-Prussian and the First World wars In 1885, while exploring in Persia, he discovered at Susa the palaces of Darius and Artaxerxes, fragments and relics from which are in special rooms at the Louvre He wrote *L'Art antique de la Perse* (1884–85), *L'Acropole de Suse* (1890–94), and *Art in Spain and Portugal* (Eng tr., 1913) He was ably assisted in his archaeological discoveries by his wife, **Jeanne** (or **Jane**) **Rachel Magre Dieulafoy** (zhän' räshĕl' mä' grü), 1851–1916, author and explorer She wrote *La Perse, la Chaldée, et la Susiane* (1887) and was a member of the Legion of Honor

Diez, Friedrich Christian (frē'drĭkh krīs'tyän dēts), 1794–1870, German philologist A professor at Bonn, he is noted as one of the founders of the science of Romanic philology His great works were a grammar of the Romanic languages (1836, later much enlarged) and a dictionary of the Romanic languages (1853, also much enlarged in later editions)

differential, in the automobile a set of gears used on the driving (usually rear) axle It serves to divide the torque equally between the two driving wheels and at the same time to permit one wheel to revolve faster than the other when necessary In a horse-drawn carriage or cart or other vehicle that is pulled or pushed, the wheels are not fixed to the axle and revolve independently of it and of one another However, in an automobile the two wheels on the driving axle must be interconnected in order to receive their energy from the single source—the driving shaft—and at the same time must be free to revolve at different speeds when necessary. These two requirements are met by the differential gearing Furthermore, through it the rotating motion of the driving shaft is transmitted to the axle and the wheels The axle is in two halves, to each half is attached a wheel at one end and, at the inner end, a bevel gear (see GEARING) The end of the driving shaft is also equipped with a bevel gear By an ingenious arrangement of these and other gears, together constituting the differential, a difference in speed of the two wheels is compensated for without a loss of tractive force Without this device, it would be practically impossible to round turns in an automobile without skidding

diffraction Light is held to travel in straight lines through a uniform, transparent medium When, however, its passage is partly blocked by some opaque object in its path, those rays that just pass the edges of the opaque body are bent or deflected slightly although to an almost imperceptible degree Such bending is called diffraction, and it results in the interference of the light waves that pass the opaque body, this in turn explains the lighter quality of the edges of the shadow cast by the opaque body Diffraction occurs when light waves pass through extremely narrow slits or when they are reflected from a surface having many finely scratched lines upon it and results in this case also in interference Sound waves likewise undergo diffraction with resulting interference A **diffraction grating** may be either a transmission grating, consisting of a plate having many small, parallel, evenly spaced slits in it through which the light passes, or it may be a reflection grating, a plate of metal or glass which reflects light from the polished strips between the parallel lines ruled on its surface The number of these slits or lines is not uncommonly 40,000 or more to the inch The ruling is generally done with a fine diamond point Since the light diffracted is also dispersed (see DISPERSION, in physics), these gratings are utilized in diffraction spectroscopes for producing and analysing spectra and for measuring directly the wave length of lines appearing in certain spectra (see SPECTRUM). See also X RAY

diffusion, a process in which the molecules of one substance become uniformly distributed among those of another substance, in seeming contradiction to the laws of gravitation For example, a gas heavier than air, when introduced into the lower part of a vessel containing air, spreads upward through the air until there is a uniform mixture of the two gases The rate at which such diffusion takes place, although constant for a given gas under given conditions, is not identical for all gases. It depends upon the density of the gas diffusing and is inversely proportional to the square root of the density of that gas (Graham's law). The lighter a gas is, the more rapidly it diffuses. Hydrogen, the lightest gas known, shows the greatest speed of diffusion of all gases, intermingling with air, for example, four times more rapidly than does oxygen. Diffusion is seen also in liquids: if two

liquids are miscible, although they are placed in a vessel in two layers with the lighter one above, nevertheless the lower and heavier liquid will gradually spread upward through the less dense. The same condition is seen when a layer of a concentrated solution is covered with a layer of the solvent. Some solids when in contact with others show similar activity. Gold, for example, diffuses into lead, which acts as the dissolving metal The rate of diffusion increases with the temperature. See also OSMOSIS.

Digby, George: see BRISTOL, GEORGE DIGBY, 2D EARL OF.

Digby, John: see BRISTOL, JOHN DIGBY, 1ST EARL OF

Digby, Sir Kenelm, 1603–65, English writer and man of affairs He was the son of Sir Everard Digby, who was hanged for his participation in the Gunpowder Plot In 1625 Kenelm Digby married Venetia Stanley, a childhood friend He turned pirate in 1628 to conduct a raid against a French and Venetian fleet at Alexandretta During the civil war he was imprisoned for two years and then, except for two brief visits, spent the rest of the war abroad His most famous achievement, which overshadows some of his solider scientific work, was the publicizing of the "powder of sympathy," which was supposed to heal wounds without direct application The powder may have been a form of copper sulphate Digby claimed to have received the secret of this panacea from a Carmelite friar in 1622, but the powder was common knowledge in the reign of Henry VII Digby also achieved some notoriety in 1654 by attempting to convert Oliver Cromwell to Roman Catholicism Digby's works include *Observations upon Religio Medici* (1643), *Two Treatises* (1644), *A Late Discourse touching the Cure of Wounds by the Powder of Sympathy* (1658), and his capable address to the Royal Society, *A Discourse concerning the Vegetation of Plants* (1661) His *Private Memoirs* was published in 1827 See biography by J F Fulton (1937)

Digby, Kenelm Henry, 1800–1880, English author A student of the Middle Ages and scholastic theology, he was converted to Catholicism after his graduation from Cambridge His principal works are *The Broadstone of Honour* (1822, enl ed , 4 vols , 1826–27) and *Mores Catholici* (1831-40)

Digby, town (pop 1,657), W N S , on the Bay of Fundy directly opposite St John, N B Loyalists from New England settled here in 1785 The town was incorporated in 1890 Fishing is the main industry, and Digby is a summer resort.

Digest see CORPUS JURIS CIVILIS

digestion, process of converting foods into a simple, soluble form which can be absorbed into the circulation and distributed to and used by the body tissues Chewing prepares food for the action of the enzymes In the mouth, saliva, secreted by glands, contains an ENZYME which digests starch In the stomach, proteins are acted upon by pepsin and hydrochloric acid and also by rennin, a substance which coagulates milk In about four hours the stomach is empty In the small intestine, digestion continues by means of BILE, pancreatic juice (with its enzyme trypsin acting on proteins and other enzymes acting on starches, sugars, and fats), and intestinal juice secreted by the lining of the small intestine, which acts on proteins and sugars Unabsorbed material is passed on by muscular action of the intestines to the rectum In the large intestine water is absorbed from this undigested material See W B Cannon, *Digestion and Health* (1936)

Digger Indians, term indiscriminately applied to many tribes of the central plateau region of the American West, including tribes in Oregon, Idaho, Utah, Arizona, Nevada, and central California The name is supposedly derived from the fact that they dug roots for food It has no ethnological significance and was often a term of opprobrium

Diggers, members of a small English religio-economic movement (fl 1649–50), so called because they attempted to dig (i e , cultivate) the wastelands They were an offshoot of the more important group of Puritan extremists known as the LEVELERS, who flourished at the time Gerrard Winstanley (1609?–1660?) was the leader of the Diggers and exponent of their egalitarian and communistic philosophy in his *New Law of Righteousness* (1649) The little band planted the common land at St George's Hill, Surrey, and at nearby Cobham, but their project was met with suspicion by their neighbors and resistance from the landowners on whose property they encroached In the spring of 1650 their community was destroyed by mob violence, and the experiment was abandoned. Winstanley's *Law of Freedom* (1651) extended his thesis that English law and institutions should be modified immediately to bring equality to all men. See G. H. Sabine, *The Works of Gerrard Winstanley* (1941).

Digges, Sir Dudley (digz), 1583–1639, English diplomat and political leader. Because of his interests in the East India Company and other trading ventures, he was sent by the king on missions (unsuccessful) to Russia (1618) and to Holland (1620). He sat in the House of Commons in every Parliament from 1604 to 1629 and several times incurred royal displeasure. He apparently hoped for preferment from the duke of Buckingham which never came, and in 1626 he had turned against Buckingham Now opposed to the king, Digges was active in pushing the Petition of Right (1628) and in defending free speech, but failed to back Sir John Eliot's extreme position. In 1630 he returned to the royal party, held several offices, and sat in the court of high commission (1633)

Dighton (dī'tŭn), textile town (pop 2,983), SE Mass., on the Taunton river and S of Taunton, settled 1678, set off from Taunton 1712 The origin of inscriptions, probably Indian, on Dighton Rock in the river has caused much speculation.

digitalis: see FOXGLOVE

Digne (dēn'yū), ancient city (pop 5,804), capital of Basses-Alpes dept , SE France, in upper Provence It is now a health resort, noted for its mineral springs

Dihang: see BRAHMAPUTRA.

Dijon (dē'zhŏn, dēzhŏn'), city (pop. 92,686), capital of CÔTE D'OR dept , E France, the old capital of Burgundy It is the principal trade and shipping center for Burgundy wine and one of the richest art cities in Europe Dating from Roman times, it began to flourish when the dukes of Burgundy first made it their residence (11th cent) Under PHILIP THE GOOD it probably had the most splendid court in Europe except Constantinople and was a great manufacturing and commercial center Even after the disintegration of Burgundy (1477), Dijon continued as a cultural center despite the centralizing influence of Paris Bossuet, Rameau, Charles de Brosses, and Rude were born here, and it was an essay contest of the Academy of Dijon that made J J Rousseau famous overnight Dijon is heavily indebted to Flemish artists and craftsmen Claus SLUTER established his school for sculpture here (late 14th cent), his *Well of Moses* is at the Chartreuse de Champmol (1383, largely destroyed in 1793) The funeral statues of the dukes of Burgundy by Sluter and his disciples are at the splendid museum, housed in the town hall, which was originally the ducal palace (12th cent , largely rebuilt 17th and 18th cent) Other remarkable buildings include the cathedral (late 13th cent), the Church of Notre Dame (13th cent , in French Gothic with a façade in Italian Romanesque), St Michael's Church (Renaissance), the Hôtel Aubriot (14th cent , now containing a museum of Burgundian folklore), and the palace of justice (16th cent , once housing the powerful PARLEMENT of Burgundy)

Dike: see HORAE

Diklah (dĭ'klŭ) [Heb ,=palm tree], descendant of Noah and son of Joktan Gen 10 27, 1 Chron 1 21

Dilean (dĭ'lēun, dĭ'-), unidentified town, SW Palestine Joshua 15 38

Dilke, Sir Charles Wentworth (dĭlk), 1843–1911, English statesman A leader in the Liberal party, he helped pass the parliamentary REFORM BILLS of 1884–85 and laws giving the municipal franchise to women, legalizing labor unions, and limiting working hours Dilke was hostile to the crown, calling himself a republican See biography by Stephen Gwynn and G M Tuckwell (1917)

Dilke, Emilia Frances Strong, Lady (dĭlk), 1840–1904, English writer on art She was the Royal Academy art critic for many years Her leading works include *The Renaissance of Art in France* (1879), *Art in the Modern State* (1884), *French Painters of the Eighteenth Century* (1889), *French Architects and Sculptors of the Eighteenth Century* (1900), and *French Engravers and Draughtsmen of the Eighteenth Century* (1902)

dill, Old World annual or biennial plant (*Anethum graveolens*), of which the pungent, aromatic leaves and seeds are used for pickling and for flavoring sauces and soups Dill water (a carminative) and oil of dill are made from the seeds Dill was formerly used in charms against witchcraft

Dillard, James Hardy, 1856–1940, American educator, b Nansemond co , Va , grad. Washington and Lee Univ , 1876 Professor (1891–1907) of Latin at Tulane Univ , where he was also dean (1904–7) of the academic colleges. Dillard resigned to act as president (1907–31) of the Jeanes Foundation for Negro rural schools He was director (1910–17) and president (1917–31) of the John F Slater Fund He contributed much to the improvement of Negro education and interracial relations

Dillard University, at New Orleans, Negro, interdenominational, coeducational, named for James H Dillard, because of his aid to Negro education It was chartered in 1930 and opened in 1935, combining two schools chartered and opened in 1869 (New Orleans Univ , Methodist, and Straight College, Congregationalist)

Dillenius, Johann Jakob (dĭlā'nēŭs), 1687–1747, English botanist, of German birth He published catalogues of the plants of Eltham, Kent, and of Giessen, Germany, and a work on mosses which placed him in the first rank among botanists of his day He was the first professor of botany at Oxford. A genus of tropical trees, *Dillenia,* was named after him by Linnaeus.

Dilley, town (pop. 1,244), SW Texas, SW of San Antonio, in a livestock and winter-garden area; settled 1880, inc 1920.

Dillinger, John (dĭl'lĭnjŭr), 1902–34, American bank robber, probably b Indianapolis Paroled after serving a prison term for attempted robbery, Dillinger in 1933 terrorized the Midwest with an organization of criminals He had been responsible for 16 killings and had looted some $300,000 before he was shot (July, 1934) in a Chicago street by FBI agents.

Dillingham, William Paul, 1843–1923, U S Senator (1900–23), b. Waterbury, Vt , son of Paul Dillingham, governor of Vermont After holding various local and state offices, including (1888–90) the governorship of Vermont, he succeeded J S Morrill as a Republican Senator and earned a name for himself in legislation on immigration He espoused the quota system for immigrants which was adopted after his death

Dillman, August (ou'gōōst dĭl'man), 1823–94, German Orientalist He wrote a well-known grammar of Ethiopic (1857) and compiled an Ethiopic lexicon (1865) A Protestant minister, he also had a reputation for his biblical exegesis

Dillon, John (dĭl'lun), 1851–1927, Irish statesman He began his long parliamentary career in 1880 and was a prominent leader of the Irish Nationalist party, which by its obstructionist tactics in the 1880s and 1890s forced the British Parliament to consider the Irish question He was several times arrested under the Coercion Acts and he supported boycotting, but Dillon always believed that Ireland's freedom could be obtained by constitutional means He supported the Irish Land League and Charles Stewart Parnell until the divorce scandal, when he gave his allegiance to John REDMOND. During the First World War he incurred the enmity of SINN FEIN by encouraging military recruiting in Ireland although he was opposed to conscription He succeeded Redmond in the leadership of the Nationalist party, but his career came to an end when Sinn Fein wiped out the Nationalists in the 1918 election

Dillon, John Forrest, 1831–1914, American jurist, b. Montgomery co , N Y , M D State Univ of Iowa, 1850 He early abandoned medical practice and was admitted to the Iowa bar in 1852 Dillon was an Iowa state judge (1858–68) and a U S circuit judge (1869–79) During his judicial career he wrote *Municipal Corporations* (1872), one of the earliest systematic studies on this subject, and *Removal of Cases from State Courts to Federal Courts* (1876) He was (1879–82) a professor in the Columbia School of Law He practiced in the field of railroad law in New York city

Dillon. 1 City (pop 3,014), co seat of Beaverhead co , SW Mont , on the Beaverhead (see JEFFERSON) river and S of Butte, founded 1880, inc 1885. It ships much wool A state normal school is here 2 Town (pop 3,867), co seat of Dillon co , NE S C , near the N C line NE of Florence, in a farm area producing especially cotton and tobacco, founded c 1886

Dillonvale, coal-mining village (pop 1,652), E Ohio, near the Ohio SW of Steubenville

Dillsburg, borough (pop 1,054), SE Pa , SW of Harrisburg, laid out 1800, inc 1833

Dilthey, Wilhelm (vĭl'hĕlm dĭl'tē), 1833–1911, German philosopher He taught at Basel, Kiel, Breslau, and Berlin One of the first to claim the independence of the spiritual sciences as distinct from the natural sciences, Dilthey laid down a foundation of descriptive and analytic psychology on which to base a study of philosophy His approach emphasized the historical and empirical development of ideas and action to the exclusion of the metaphysical His principal work is *Einleitung in die Geisteswissenschaften* [introduction to the mental sciences] (1883) See biography by H A Hodges (1944)

Dilworth, village (pop 1,068), NW Minn , in the Red River valley E of Fargo, N Dak. It is a trade center and railroad division point.

DiMaggio, Joseph Paul (dĭ mă'jē-ō), 1914–, American baseball player, b Martinez, Calif He began (1932) playing baseball as a shortstop, then was an outfielder for the San Francisco Seals of the Pacific Coast League Recognized early for his versatility and hitting ability, Joe DiMaggio was purchased (1935) by the New York Yankees of the American League and quickly rose to stardom, batting 347 during his second season (1937) In 1941 the right-handed center fielder established a new record by hitting safely in 56 consecutive games In the Second World War he enlisted (1943) in the army, he returned to the Yankees in 1946 See his autobiography, *Lucky to Be a Yankee* (1946)

dime novels, swift-moving, thrilling novels, mainly about the American Revolution, the frontier period, or the Civil War The books were first sold in 1860 for 10 cents by the firm of Beadle and Adams The earliest was *Malaeska. the Indian Wife of the White Hunter,* by Anne Stephens, which is said to have sold 300,000 copies in the first year, and similar novels sold by the thousands throughout the country and especially in the Civil War camps. Such experienced men as Brun Adams, Col Mayne Reid, Col. Prentiss Ingraham, W 'F

Cody, and Ned BUNTLINE wrote of their own adventures for Erasmus BEADLE and his editor, Orville J Victor Among the most famous series were those about DEADWOOD DICK, by Edward L. Wheeler, and those about Nick CARTER, by several authors After 1880, when imitators entered the field with stories which dealt in blood and thunder, the quality of the stories was lowered and the dime novels acquired a bad name Actually they probably emphasized self-reliance in a wholesome way Their popularity lasted until the 1890s, when series of stories such as those about the Rover Boys and Frank Merriwell and pulp magazines and the comic strip began to replace them See Edmund Pearson, *Dime Novels* (1929), Albert Johannsen, *The House of Beadle and Adams* (1950), Charles Bragin, *Dime Novels Bibliography, 1860–1928* (1938)

diminishing returns, law of, in economics, the law that after a certain point an increase in the capital and labor applied to the exploitation of a piece of land or to the production of a commodity under given conditions yields relatively decreasing returns This principle, first thought to apply only to agriculture, was later accepted as an economic law underlying all productive enterprise It governs the maximum size of any undertaking and limits the maximum return under given conditions The point at which the law begins to operate is difficult to ascertain, as it varies constantly with improved productive technique and other factors Anticipated by Turgot and implied by Malthus in his *Essay on the Principle of Population* (1798), the law first came under examination during the discussions in England on free trade and the corn laws See W J Spillman and E Lang, *The Law of Diminishing Returns* (1924)

Dimitrov, Georgi (gĕôr'gĕ dĭmē'trôf), 1882–1949, Bulgarian Communist leader A revolutionist from boyhood, he was an obscure exile in Berlin when, in 1933, he was arrested for alleged complicity in setting the REICHSTAG on fire Dimitrov's cool conduct of his defense and the accusations he directed at his prosecutors won him world renown He was acquitted and went to the USSR, which immediately conferred citizenship upon him and raised him to high office Dimitrov was secretary general of the Comintern from 1934 until its dissolution (1943) In 1944 he returned to Bulgaria to head the Communist party there, and in 1946 he succeeded Kimon Georgiev as premier The execution (1947) of the opposition leader, Nikola Petkov, strengthened Dimitrov's hold on the country Dimitrov died in Moscow, where he was undergoing medical treatment

Dimnah (dĭm'nə), the same as RIMMON 5.

Dimnet, Ernest, Abbé (ĕrnĕst' abā' dēmnā'), 1866–, French writer, canon of the cathedral of Cambrai His popularity as a lecturer in England and the United States created great interest in his writings in these countries His *Figures de moines* [faces of monks] was crowned by the French Academy in 1908 Among his best-known works are *Les Sœurs Brontë* (1910, Eng tr, *The Brontë Sisters*, 1927) and, in English, *Paul Bourget* (1913) and *The Art of Thinking* (1928) *My Old World* (1935) and *My New World* (1937) are autobiographical

Dimon (dī'–), the same as DIBON

Dimonah (dĭmō'nə) [Heb, =wasting], town, extreme S Palestine Joshua 15 22 This is probably the Dibon of Neh 11 25

Dinah (dī'nə) [Heb, =judged], daughter of Jacob and Leah Gen 30 21, 34 1-31

Dinan (dēnā'), town (pop 11,111), Côtes-du-Nord dept, NW France, in Brittany, on a bluff above the Rance river The 14th-century castle of the dukes of Brittany and the medieval ramparts still stand In the Church of Saint-Sauveur (12th–15th cent) the heart of Bertrand du Guesclin is kept The town was damaged in the Second World War

Dinant (dēnä'), town (pop 6,858), Namur prov, S Belgium, on the Meuse It is a railroad junction and market center Fortified since Merovingian times, it was noted in the Middle Ages for its copper-, brass-, and bronzeware It belonged to the bishopric of Liége until the French Revolution and was sacked by Charles the Bold in 1466 in the revolt of Liége Dinant has a Gothic church (13th cent), a 17th-century town hall, and a citadel, rebuilt in the 19th cent

Dinard (dēnär'), town (pop 7,353), Ille-et-Vilaine dept, NW France, in Brittany, facing Saint-Malo across an inlet of the English Channel It is a fashionable bathing resort Dinard suffered great damage in the Second World War

Dinaric Alps (dĭnă'rĭk), mountain range, occupying one third of Yugoslavia It prolongs the main chain of the Alps along the eastern coast of the Adriatic Sea from the Isonzo to the Drin and includes the KARST plateau in the north Its highest peak, the Volynac, rises to c 7,800 ft

Dindigul (dĭn"dĭgŭl'), town (pop 56,275), S Madras state, India It is a railroad junction. Cigars are the principal manufacture, timber, tea, coffee, cardamom, hides, and skins are exported

Dindorf, Wilhelm (vĭl'hĕlm dĭn'dôrf), 1802–83, German classical scholar He edited many Greek texts, particularly those of the poets He wrote a standard study of Greek metrics and edited Demosthenes, but his most important work was his new edition of the great *Thesaurus* of the second Henri Estienne In this work Dindorf was assisted by his less famous but very able brother, **Ludwig August Dindorf** (lōōd'vĭkh ou'gōōst), 1805–71, who was otherwise principally interested in the Greek historians This new edition of the *Thesaurus* was planned and published by the brothers Ambroise Firmin and Hyacinthe Firmin Didot

D'Indy, Vincent. see INDY, VINCENT D'

Dinesen, Isak (ē'sāk dē'nusŭn), pseud of **Karen Blixen** (kä'rŭn blĭk'sŭn), 1885–, Danish author, who usually writes in English On her marriage in 1914 to Baron Blixen, she went to British East Africa and lived on a coffee plantation until 1931 Her *Seven Gothic Tales* (1934) and *Winter's Tales* (1943) are in the genre of the German romances of the 18th cent *The Angelic Avengers* (1947), first published in German-occupied Denmark, was a political allegory written under the pseudonym Pierre Andrézel See her autobiographical *Out of Africa* (1937)

Dingley, Nelson, 1832–99, U S Congressman (1881–99), b Durham, Maine, grad Dartmouth, 1855 Long the editor of the Lewiston (Maine) *Journal*, he was also a state official, serving as governor of Maine (1874-75) His service in the House of Representatives was marked chiefly by his preparation of the highly protective tariff measure called the Dingley Act, which replaced (1897) the Wilson-Gorman Act and remained in force until 1909

dingo (dĭng'gō), wild dog of Australia It is much like the fox but larger and stronger, of stout build and with short legs, sandy brown in color with black markings on the back It resembles the pariah dogs of Egypt and India, from which it may be descended In the wild state it does not bark, but learns to do so in domestication, it has a dismal howl Its chief prey is rabbits but it also destroys sheep and poultry It hunts alone, in pairs, and sometimes in small packs, usually only at night

Dingwall (dĭng'wl), burg (pop 2,553), county town of Ross and Cromarty co, Scotland, near the head of Cromarty Firth

Dinhabah (dĭn'hăbə), unidentified city of Edom Gen 36 32, 1 Chron 1 43

Diniz, Port *Dinis* (dĭnēzh'), 1261–1325, king of Portugal (1279-1325), son and successor of Alfonso III His grandfather was Alfonso X of Castile, and Diniz showed the same interest in literature as that Spanish king His reign, therefore, ushered in the finest period of medieval Portuguese literature He founded at Lisbon the university that is now at COIMBRA He was also interested in more mundane matters and greatly encouraged agriculture, he gave special favors to nobles who would take up farming Diniz is therefore sometimes called *o Lavrador* [the farmer] He laid down strict laws to prevent further alienation of property to the Church, persecuted the Templars and took their lands, and generally worked to increase the royal holdings His wife was Isabella, daughter of Peter III of Castile, better known to history as St Elizabeth of Portugal The reign was relatively peaceful, though at its beginning the king's brother led an unsuccessful revolt, and there was a desultory war with Castile, by which Diniz gained more territory The last years of his reign were darkened by revolts of his son, the later Alfonso IV The greatest efforts of the queen were needed to patch up the quarrels Diniz is also known in English as Denis or Dionysius

Dinkelsbühl (dĭng'kulsbül"), city (pop 6 928), Middle Franconia, Bavaria, the oldest Franconian city It has retained its medieval character Particularly noteworthy are the 10th-century city walls, a 13th-century church, and the Deutsches Haus, with a splendid 16th-century façade

dinosaur (dī'nusôr) [Gr, =terrible lizard], extinct land reptile of the MESOZOIC ERA The dinosaurs ranged in length from 2½ ft to about 90 ft Their fossil remains have been found in the rock of every continent, and they differed widely in structure, habitat, and diet They reproduced by eggs Their intelligence, judged by the size of their brain cavities, was uniformly low Their extinction resulted probably from a combination of factors, among which geographic and climatic changes were especially important Land in the western parts of both North and South America rose (beginning in the Upper Cretaceous), and mountains formed, the swamplands to the east were uplifted and drained, the temperature dropped, and starvation and cold exterminated many dinosaurs Some forms in North America had been wiped out by flooding in earlier Cretaceous times Destruction of herbivorous forms by carnivorous types and the inability of the large, clumsy dinosaurs to compete with the small, fleet mammals which were gradually becoming more numerous at the time also contributed to the dinosaurs' extinction Of the dinosaurs, some were carnivorous bipeds, such as Tyrannosaurus, some, herbivorous quadrupeds, e g, BRONTOSAURUS and DIPLODOCUS. IGUANODON was duck-billed, STEGOSAURUS was armored, and TRICERATOPS was horned. See E H. Colbert, *The Dinosaur Book* (1945).

Dinosaur National Monument: see NATIONAL PARKS AND MONUMENTS (table)

Dinotherium (dīnōthē'rĭŭm) [Gr, =terrible beast], extinct mammal related to the elephant, fossil remains of which have been found in Miocene and Phocene formations of Africa, Europe, and India. It had a short proboscis and a pair of tusks which extended downward, curving backward, from the lower jaw

Dinuba (dĭnū'bə), city (pop 3,790), S central Calif., SE of Fresno in the San Joaquin Valley, inc 1906. It packs raisins figs, and grapes and produces wines and canned fruit

Dinwiddie, Robert, 1693–1770, colonial governor of Virginia (1751–58), b near Glasgow, Scotland He was collector of customs (1727–38) for Bermuda and surveyor general (1738–51) for the Bahamas, Jamaica, Pennsylvania, Maryland, Virginia, and the Carolinas In 1751 he was appointed lieutenant governor of Virginia, but he was really the chief executive of the colony, always known as governor, since the two men who held the titular office during his term never came to Virginia Dinwiddie favored an aggressive policy to forestall the French in the Ohio valley and late in 1753 sent George Washington on a mission to Fort Le Boeuf, c 12 mi south of the site of Erie, Pa, to warn the French to withdraw from the territory claimed by the British The French declined to heed his demand, and early in 1754 Dinwiddie dispatched a force of workmen to build a fort at the junction of the Monongahela and Allegheny rivers, generally called the forks of the Ohio (see DUQUESNE, FORT) Washington, made a lieutenant colonel of the colonial militia, soon followed with a detachment to protect them The French drove the workmen away before Washington arrived and then defeated him on July 3, 1754 (see NECESSITY, FORT) Hostilities in the last of the French and Indian Wars had begun Dinwiddie worked energetically preparing for Gen Edward Braddock's campaign and the others that followed, but failed to win the full cooperation of other colonies that he constantly sought His exertions finally ruined his health, and he left Virginia in 1758 He is best remembered as the man who gave Washington his first chance as a soldier See D S Freeman, *George Washington*, Vols I and II (1948)

Dinwiddie (dĭn'wĭdē), village (pop c 250), SE Va, SW of Petersburg The courthouse of Dinwiddie co is here On April 1, 1865, at near-by FIVE FORKS, Sheridan and Warren defeated Pickett before the fall of Petersburg

Dio see DION

Diocletian (Caius Aurelius Valerius Diocletianus) (dī'uklē'shun), 245 313, Roman emperor (284–305), b Salona, Dalmatia Of humble birth, he obtained high military command under Probus and Aurelian and fought under Carus in Persia The army proclaimed him emperor after the death of Numerian, whom the prefect Arrius Aper was suspected of murdering He slew Aper [Latin, =boar] to fulfill a prophecy that he would reign when he had killed a boar and became sole ruler when CARINUS, joint emperor with Numerian, was murdered by his own officers In order to repel the Germans he appointed MAXIMIAN joint emperor (286) and CONSTANTIUS I and GALERIUS Caesars (292), the four rulers having their respective capitals at Nicomedia, Milan, Trier, and Sirmium In his reign Britain was restored to the empire (296), the Persians were subjugated (298), and the Marcomanni were expelled from the empire The latter part of his reign was memorable for the persecution of the Christians (beginning 303), to which course he had been instigated by Galerius He abdicated (305), and Maximian resigned at the same time Diocletian was the first to divide the empire formally and to set up a genuine autocracy with no theoretical checks The Edict of Diocletian (301) was an economic measure to check speculation in commodity prices It set a maximum price for provisions and maximum wages Its effects were ruinous to agriculture and to the markets This unsuccessful economic measure and the persecution of the Christians were the only black marks against Diocletian's splendid career, ended by his respected retirement in his castle at Salona.

Diodati, Giovanni (jōvän'nē dyōdä'tē), 1576–1649, Swiss Calvinist scholar and theologian, of a family of Italian Protestant refugees He succeeded Beza as professor of theology at Geneva In 1618 one of the deputies to the Synod of Dort, he was chosen to assist in compiling the canons His translation of the Bible into Italian is a celebrated achievement, and he made a revision of the French translation prepared by the professors at Geneva

Diodorus Siculus (dīudô'rŭs sĭ'kŭlŭs), d after 21 B C, Sicilian historian He wrote, in Greek, a world history in 40 books, ending with Caesar's Gallic Wars Fully preserved are Books I–V and XI–XX, which cover Egyptian, Mesopotamian, Indian, Scythian, Arabian, and North African history and parts of Greek and Roman history His compilation is uncritical and unreliable.

Diogenes (dīŏj'unēz), c.412–323 B C, Greek Cynic philosopher, pupil of Antisthenes He was born in Sinop and lived in Athens. He taught that the

virtuous life is the simple life and dramatically discarded the conventions, taking up his abode in a tub He is said to have thrown away his last utensil, a cup, when he saw a peasant drink from his hands When Alexander asked what he might do for him, Diogenes said, "Only step out of my sunlight" His daylight quest with a lantern "for a man" was probably the most striking expression of his contempt for his generation

Diogenes Laërtius (dīŏjĕ'nēz lāûr'shēŭs), fl 3d cent, Greek biographer, b Cilicia Extant is a work in 10 books on the lives and opinions of the philosophers from Thales to Sextus Empiricus The whole of the 10th book is on the Epicurean school His work is an invaluable source

Diogenes of Apollonia (āpŭlō'nēŭ), 5th cent B C, Greek philosopher He reverted to the tradition of a century earlier and sought to explain the constitution of all matter in terms of a single basic stuff He believed with Anaximenes, upon whom he drew heavily, that this substance was air To air, he added certain of the attributes of the "mind" of Anaxagoras, thus ascribing conscious intelligence to the primal force Some of Diogenes' extensive work in physiology was preserved by Aristotle

Diomed (dī'ŏmĕd), **Diomede** (-mēd), or **Diomedes** (dī"ŏmē'dēz), in Greek legend 1 One of the EPIGONI, son of TYDEUS He took a prominent part in the TROJAN WAR 2 Son of ARES who fed his horses on human flesh HERCULES killed him and captured the horses

Diomede Islands (dī'ŭmēd), group of three islands in BERING STRAIT between Alaska and Siberia The international boundary passes between the two larger islands Vitus Bering discovered the group

Dion Cassius (Cassius Dio Cocceianus) (dī'un kă'shŭs), c 155–235?, Roman historian and administrator, b Nicaea (Bithynia) He was a grandson of Dion Chrysostom His rise in civil and military office was steady, he became senator (c 180), aedile, quaestor, and praetor (194), consul (220?), proconsul in Africa (224), legate in Dalmatia (226), legate in Pannonia (227), and consul again (229) He was a good commander, but he remained in favor more for his literary works than for his abilities in office His great work, partially extant, was a history of Rome (written in Greek) from the earliest times until Dion Cassius' own period The surviving portions are a first-class authority for the 1st cent B C Dion Cassius tried earnestly to study all available sources in the light of a moderate skepticism He is also commonly called Dio Cassius

Dion Chrysostom (krī'sustum, krĭsŏ'stum) [Gr, = golden-mouthed], d after A D 112, Greek sophist and rhetorician, b Prusa (modern Bursa) He lived at Rome under Domitian, who subsequently banished him He traveled widely, finally returning to Rome in the favor of Nerva and Trajan He leaned toward Stoicism With Plutarch he shared in the revival of Greek literature in the 1st cent Extant are 80 interesting orations on literary, philosophical, and political subjects They are notable for their earnest moral tone and their clear pictures of everyday life

Dione (dīō'nē), in Greek legend, Titaness, daughter of URANUS and GAEA or of OCEANUS and TETHYS Probably originally an earth-goddess, she was the consort of Zeus at his ancient temple of DODONA and, according to some myths, the mother of APHRODITE by Zeus

Dionne, Narcisse Eutrope (narsēs' utrōp' dyŏn'), 1848–1917, French Canadian historian, b Quebec prov, educated at Laval Univ He was after 1892 librarian of the Quebec Legislative Library He was a prolific writer and produced biographies in French of Champlain, Cartier, Pierre Bédard, and other figures, numerous historical works, and an *Inventaire chronologique* of books, pamphlets, maps, and periodicals published in or about the province of Quebec (4 vols, 1905–9, supplementary volume, 1912)

Dionne quintuplets (dĭŏn'), five daughters born to Oliva Dionne and his wife at Callender, Ont, on May 28, 1934 Since cases of quintuple birth are very rare, their birth caused a sensation Their welfare was considered a state concern, and the Ontario legislature in 1935 made them wards of the province Their names are Annette, Emélie, Yvonne, Cécile, and Marie The fact that all five survived childhood was considered remarkable, and their physician, Allan Roy Dafoe, also gained considerable note

Dion of Syracuse (dī'un, sĭ'rŭkŭs, -kūz), 409?–354? B C, Sicilian Greek political leader, brother-in-law of DIONYSIUS THE ELDER, tyrant of Syracuse Dion became interested in philosophy through his acquaintance with Plato and endeavored to persuade Dionysius and his son that a moderate system of government would be superior to tyranny He thus became unwelcome at court and retired to Athens. Learning, while there, that Dionysius the Younger had taken measures prejudicial to his rights and property, he assembled an armed force and sailed to Sicily. There he was welcomed by the people and was able to defeat Dionysius in battle (357 B.C.). A rival, Heracleides, procured his temporary exile, but Dion was recalled and he assumed control He was murdered by an Athenian, a former companion

Dionysia (dīŭnĭ'shēŭ), in Greek religion, festivals to honor the god Dionysus Besides the two periods known properly as Dionysia—the Lesser or Rural Dionysia in late December and the Greater or City Dionysia in the spring—there were other feasts of Dionysus, notably the Anthesteria (ănthĕstēr'ēŭ) in early spring and the Lenaea in winter Dionysian festivals all stressed fertility and the joys of fertility as shown in the vine and were like the BACCHANALIA and the LIBERALIA Phallic worship was prominent in the rites that commemorated the death and the rebirth of the god in the cycle of the agricultural season The Dionysiac celebrations—particularly the Greater Dionysia—were most important, however, because from them developed the dithyramb, the choral procession, and Greek drama (see COMEDY and TRAGEDY)

Dionysius, king of Portugal see DINIZ

Dionysius Exiguus (dīŭnĭ'shēŭs ĕksĭ'gŭŭs), d c 545, Roman monk, scholar, and translator, a transmitter of Greek thought to the Middle Ages He collected and preserved vital documents of early Christian times Dionysius, in an attempt to improve the reckoning of the date of EASTER, was the first (525) to use our present system of reckoning a date from the time of the Incarnation

Dionysius of Halicarnassus (hă"lĭkärnă'sŭs), fl 1st cent B C, Greek rhetorician and historian He lived at Rome He was one of the most celebrated of ancient critics, acute and painstaking Among his extant rhetorical works are *On the Arrangement of Words*, *On Imitation*, *On the Early Orators*, *On Thucydides*, and *On the Eloquence of Demosthenes* *The Art of Rhetoric* attributed to him may be of later date Of his most important work, *Antiquities of Rome* in 20 books, we have approximately the first half, in which Roman history to the 5th cent B C is covered

Dionysius Periegetes (pĕ"rēŭjē'tēz) [Gr, = the traveler], fl between 100 and 400, Greek poet He wrote the poem *Journey round the Inhabited Earth*, which was very popular in antiquity

Dionysius the Areopagite, Saint (dīŭnĭ'shēŭs, ârēŏp'ăjīt), 1st cent, Athenian Christian, converted by St Paul Acts 17 34 Tradition has made him a martyr and the first bishop of Athens He has been confused with St DENIS During the Middle Ages he was revered as the author of certain philosophical writings erroneously attributed to him since the 6th cent These are 10 letters and four treatises (*The Celestial Hierarchy*, *The Ecclesiastical Hierarchy*, *The Divine Names*, *Mystical Theology*), written in Greek, possibly in Palestine, in the late 5th or early 6th cent It is now customary to refer to their author as Pseudo-Dionysius Their obscure style was no barrier to their study and repeated translation into Latin, notably by Erigena and Robert Grosseteste They exerted a lasting influence on the development of SCHOLASTICISM, particularly through St Thomas Aquinas The treatises provided a medium for transmission to Western culture of the concepts of Neoplatonism and of the theology of angels See F P Cassidy, *Molders of the Medieval Mind* (1944)

Dionysius the Elder, c 430–367 B C, tyrant of Syracuse Of humble origin, he entered politics as a supporter of the poorer classes Having prompted a measure which gave the governing power to the representatives of these classes, he managed to have himself named to the council His next move was to arouse distrust of his colleagues, and so well did he succeed that shortly he became (406 B C) tyrant Fundamentally his reign was characterized by a consistent policy of maintaining the obedience of the Syracusans through fear of the constant menace of the Carthaginians, then masters of a large part of Sicily At the same time he kept alive the enthusiasm of his subjects by expeditions against the cities of the Italian mainland and by his none too successful efforts to repel the Carthaginians He dreamed also of controlling Greek politics and to this end he allied himself with the Lacedaemonians He wrote works of disputed literary merit and patronized literature and art

Dionysius the Younger, fl 368–344 B C, tyrant of Syracuse, son of Dionysius the Elder He succeeded his father in 368 B C and made himself popular, at first, by remitting taxes and freeing several thousand prisoners But he was neither gifted nor trained for administration or warfare, and his banishment of DION OF SYRACUSE destroyed his only valid chance of maintaining his influence In 357 B C the Syracusans welcomed Dion, who came to avenge his family for the ill-treatment they had received, and Dionysius fled The murder of Dion gave him the opportunity to reestablish himself in his native city, whence he was finally expelled by TIMOLEON in 344 B C The remainder of his life was spent chiefly in Corinth, where he is said to have been a teacher of rhetoric

Dionysius Thrax [Latin, = the Thracian], 1st cent. B C, Greek grammarian of Alexandria, Rhodes, and Rome. His *Art of Grammar* touches only upon the formal aspect of language. It was much used as a model for subsequent grammars.

Dionysus (dīŭnī'sŭs), in Greek legend, god of fertility and wine, patron of choral song and the drama, son of Zeus and SEMELE Legends concerning him are profuse and contradictory He was principally a god of fertility, and his worship was said to have been brought from Thrace (see MELAMPUS) One legend has Dionysus wandering across Greece and to India, introducing the culture of the vine He was surrounded by a noisy band of satyrs and maenads (see BACCHAE), singing, dancing, and bearing the THYRSUS The rites connected with his worship were always of an enthusiastic type and constituted a religion of emotionalism The legend of PENTHEUS illustrates the frenzy of the cult The worship in Attica was more decorous, but in the DIONYSIA the emphasis was still on joyous freedom and on fertility, phallic elements were important Pan and Silenus were his companions His grave was supposedly at DELPHI, which was sacred to him in the winter, thus he achieved a sort of parity with Apollo Dionysus was the chief deity in the ORPHIC MYSTERIES and figured in the ELEUSINIAN MYSTERIES As nature god he was confused with many others, notably the Roman LIBER, as well as with Bacchus, more properly the god of wine One legend has him marry ARIADNE after she was deserted by Theseus, another has him the father of PRIAPUS by Aphrodite.

Diophantus (dīufăn'tŭs), 3d cent, Greek algebraist He pioneered in solving a type of indeterminate algebraic equations, work in this field is known as Diophantine analysis Only six of the 13 books with which he is credited are extant The standard edition in Greek was edited by Paul Tannery (2 vols, 1893–95) See study and English translation by T L Heath (2d ed, 1910)

Dioscorides, Pedanius (pĭdā'nēŭs dīŭskô'rĭdēz), 1st cent A D, Greek physician of Anazarbus, Cilicia On his travels while a surgeon in the Roman army he collected information on the remedies of the period and wrote in Greek a work on materia medica which remained standard for centuries See the English translation *The Greek Herbal of Dioscorides* (1934)

Dioscuri see CASTOR AND POLLUX

Diotrephes (dīōt'rĕfēz) [Gr, = nourished by Zeus], ambitious Christian 3 John 9

dip. A method of treating animals infested with various skin parasites consists of dipping the animals in or forcing them to swim through a tank containing a dip—a solution of coal-tar antiseptics, nicotine preparations or other effective substance Recently found effective and nonirritating as a dipping material for livestock is a mixture of derris dust and sulphur in water See publications of the U S Dept of Agriculture

Diphilus (dī'fĭlus), fl c 300 B C, Greek poet of the New Comedy, b Smope His many dramas (perhaps 100) were extensively copied by Plautus and Terence The few fragments which remain of his works show that the high esteem of antiquity was probably deserved

diphtheria (dĭfthē'rēŭ), contagious disease caused by a toxin-producing bacterium (*Corynebacterium diphtheriae*) It occurs in epidemics, especially in the winter, and is most likely to attack children under six years of age The incubation period is from two to five days The infection in the nose resembles a cold, and the throat shows a film or membrane, often on the tonsils Any sore throat accompanied by fever in a child should be examined early to make certain that it is not diphtheria The powerful TOXIN of the bacteria is absorbed into the blood and may injure the heart, nervous system, and other tissues There is also the danger of death from asphyxia if the membrane spreads to the larynx, causing membranous CROUP If one is exposed to the disease, a serum or ANTITOXIN should be injected The use of antitoxin is important in treating the disease, but to be most effective it must be given before the toxin has reached the tissues All children should be vaccinated with toxoid at six months of age to help eradicate the disease Older children and adults may be given the Schick test to determine immunity, and only those who are susceptible need be vaccinated Healthy adult carriers often cause epidemics in children

Diplodocus (dĭplō'dukus) [Gr, = double beam (or rafter)], quadruped vegetarian dinosaur found in the Jurassic strata of the United States It had a small head and a long tail and was probably amphibious Some reached a length of more than 80 ft, but were more slender and lighter in weight than the related Brontosaurus

diplomatic service, organized body of agents maintained by a government to conduct its relations with foreign countries Until the 17th cent international relations were generally carried on by means of ambassadors specially appointed for certain missions or by direct correspondence among heads of states This procedure, however, proved unsatisfactory, and the need for permanent diplomatic contact among friendly nations was felt Venice was the first power to institute, in the late Middle Ages, the custom of maintaining permanent residents in foreign capitals The Venetian ambassadors were acute observers of political and eco-

nomic conditions in the countries where they resided Their detailed reports constitute a prime source of modern historical knowledge To observe and to report on foreign political, economic, and military trends remains one of the prime functions of diplomats The means of securing such information, however, have been limited by international usage, and a suspicion of ESPIONAGE is sufficient for a government to demand the recall of a foreign diplomat by his government as *persona non grata* Permanent legations became general by the end of the 17th cent Confusion of titles and questions of precedence among the diplomatic ranks resulted in the adoption by the Congress of Vienna (1815) of a classification—later revised—which was subsequently recognized by all leading powers The four grades of diplomatic representatives are, in descending rank, ambassador, minister plenipotentiary and envoy extraordinary, minister, and chargé d'affaires Special ambassadors, or ambassadors at large, accredited to no particular country, may be appointed for certain occasions Diplomatic representatives are usually appointed by the sovereign or chief executive, in the United States the appointments are subject to approval by the Senate Large nations, or nations linked by close political or economic ties, usually are represented in each other's capitals by ambassadors Diplomats are usually responsible to their respective foreign ministers The government to which a diplomat is accredited may refuse to receive him or demand his recall, in that event (rare among friendly nations), the diplomat's government must either comply or break off diplomatic relations When the post of an ambassador or minister is vacant, business is usually conducted by a chargé d'affaires The persons of diplomats enjoy "diplomatic immunity," i e , they are inviolate and are exempt from search, arrest, or prosecution by the government to which they are accredited Their mail and baggage are exempt from censorship and customs regulations Their residence, an embassy or legation, enjoys the rights of EXTERRITORIALITY When two states are at war with each other, their interests are usually represented by neutral ambassadors or ministers, if two countries have no diplomatic relations, their interests may be represented by diplomats of other powers The staff of a diplomatic representative consists of secretaries, attachés (e g , military attachés, cultural attachés, and commercial attachés), and sometimes experts and advisers—all holding diplomatic rank—and of clerical workers The collective body of diplomatic agents in a capital forms the diplomatic corps Precedence among heads of legations of equal rank is established by seniority, i e , by the length of time an ambassador or minister has held his post in the capital Wherever a papal nuncio is permanently accredited, he is by general custom dean of the diplomatic corps, a position entitling him to speak, on certain occasions, in the name of the entire body Diplomatic business is generally conducted (according to forms long established by custom) by memorandums, informal oral or written notes, or formal notes Normally the head of legation communicates with the foreign minister of the government to which he is accredited A note requesting a government to comply with a definite demand within a stated period, with the alternative of incurring drastic action, usually war, is known as an ultimatum However, the elaboration of certain formulas, meaningless to those untrained in diplomacy, has made it possible to couch even the sternest notes in words calculated not to give offense Though much attacked in recent times, the graduations and distinctions made in traditional diplomatic language have often helped to smooth over difficult questions without resort to force Until very recently, French was the language most commonly used in diplomacy, but today there are diplomats who speak neither French nor the language of the nation to which they are accredited The diplomatic service must be distinguished from the CONSULAR SERVICE, although there has been a tendency in many countries to combine them This was done in the United States by the Rogers Act of 1924, the two branches now being known together as the Foreign Service The Foreign Service Act of 1946 introduced the merit system for promotions to all but appointive positions and placed the control of the Foreign Service in the hands of a director general, assisted by a board See David Hill, *A History of Diplomacy* (3 vols , 1905–14), A H Feller and M O Hudson, *A Collection of the Diplomatic and Consular Laws and Regulations of Various Countries* (2 vols , 1933); G H Stuart, *American Diplomatic and Consular Practice* (1936), Harold Nicolson, *Diplomacy* (1939); J. R Childs, *American Foreign Service* (1948)

Dipoenus (dĭpē'nus) and **Scyllis** (sĭl'lĭs), c 580 B C , Greek sculptors, who worked jointly in ivory, ebony, and probably marble. They are mentioned by Pliny the Elder.

Dipper, Big and **Little**: see URSA MAJOR.

Dirac, Paul Adrien Maurice (dĭrăk'), 1902–, English physicist For his work in developing Heisenberg's theory of quantum mechanics he shared with Erwin Schrödinger the 1933 Nobel Prize in Physics. Dirac evolved (1928) a theory of the electron and predicted (1931) the positron. He became professor of mathematics at Cambridge Univ in 1932 He wrote *The Principles of Quantum Mechanics* (1930, 2d ed., 1935).

Dirae. see ERINYES

Dirce (dûr'sē), in Greek legend, queen of Thebes, wife of Lycus AMPHION and Zethus punished her for her cruelty to their mother, ANTIOPE, by tying her to the horns of a bull This scene is the subject of a famous Greek statue, the FARNESE BULL

direct action, theory and methods used by certain labor groups to fight employers, capitalism, and the state by direct economic action, without using intermediate organizations Political measures are repudiated, as are arbitration, collective bargaining, and trade agreements According to the theory, workers, acting as a class, must be aroused to bring collective pressure on capitalist institutions to secure rights Such measures as the STRIKE and GENERAL STRIKE, the BOYCOTT, and SABOTAGE —frequently accompanied by physical violence— are used against industry, PROPAGANDA, agitation, and antimilitarism are employed against government The specific reforms gained are seen chiefly as steps toward the ultimate revolution and abolition of capital The theory was developed with the rise of the labor movement in the 19th cent and was formulated as a definite policy in the early 20th cent by anti-Marxist radical groups, notably proponents of SYNDICALISM The method was used in France and spread to other European countries In America the International Workers of the World advocated it The doctrine was repudiated by the Communists of the Third International, who held to the theory of political action See William Mellor, *Direct Action* (1920), L L Lorwin, *Labor and Internationalism* (1929)

direct current: see ELECTRICITY and GENERATOR

direction finder, name for various radio, radar, and other electronic devices used in navigation for determining the position of a ship, airplane, or other craft One radio direction-finding system used on ships and planes employs a simple form of radio compass having a loop antenna by means of which radio waves are received from two or more stations on shore in order to determine the location of the stations in relation to the ship The positions are marked on a map, and by triangulation the ship's location is determined Another method also makes use of stations on shore, the ship's radio operator contacts the shore stations, which, after determining the ship's location in relation to each station, plot the position of the ship and relay to the operator its latitude and longitude Radar devices for determining positions do not depend upon shore stations, in general these send out radio waves from a unit which both transmits and receives, and the waves are reflected back by a ship, a plane, a mountain, or any other obstacle in the path The indicator usually consists of one or more cathode-ray tubes, on the face of the tube (acting as a screen) light appears in the form of points or lines which form the basis of the data to be interpreted In this way is obtained not only the ship's position but also a record of the changing relative positions of the objects in the path of the ship as it proceeds. Considerable progress was made during the Second World War in the development of direction finders A high-frequency direction finder detects radio signals coming from any direction and from long distances, by taking readings from the indicator the location of submarines can be determined A long-range system for determining the location of damaged planes and survivors adrift on the sea was developed This system depends upon the receiving by several shore stations of sound waves produced by a bomb released into the water when a plane is about to crash or by survivors after a crash The bomb explodes by hydrostatic pressure at a depth of several thousand feet, a level at which the waves are transmitted horizontally for long distances In order to locate the point of origin the sound waves must be received by at least two stations, each station reports to a central station immediately after receiving the signal, and from the differences in the time of receipt at the various stations the location can be calculated

Directoire style (dōrĕktwär'), in French interior decoration and costume, the manner prevailing about the time of the Directory (1795–99), from which the name is derived A style transitional between Louis XVI and the Empire, it is characterized by a departure from the sumptuousness of the aristocratic regime A continued taste for classic design emphasized Pompeian forms The architects Percier and Fontaine and the artist J L. David were the chief personal influences. Furniture was more massive, marquetry was replaced by large surfaces of painted or waxed wood, rich fabrics by chintzes and printed cottons, tapestries and wainscoting by wallpaper and plain, tinted walls Women's dress displayed the tight skirt, low neckline, and high waistline; the *incroyables*, dandies of the period, favored long, tight trousers

Directory, group of five men who held the executive power in France according to the constitution of the year III of the FRENCH REVOLUTION (1795). They were chosen by the Council of Elders (or Ancients) and the Council of Five Hundred, each year one director was to be replaced. Bankrupt, corrupt, torn by internal struggles, and at odds with the Councils, the Directory had a stormy history. The coup d'état of 18 FRUCTIDOR (Sept 4, 1797), by which the radicals ousted Lazare CARNOT and François de BARTHÉLEMY from the Directory, was followed by other highhanded measures Discontent rose to a high pitch with the military reverses of 1799, SIEYÈS, who opposed the Directorate, was elected (May) a director, and by the coup d'état of 30 Prairial (June 18) obtained a predominant position in that body With BARRAS he now secretly began to prepare the coup of 18 Brumaire (Nov 9, 1799), which put Bonaparte in power and replaced the Directory with the CONSULATE

Diredawa or **Dire Dawa** (dĕ"rudä'wa), town (pop. 25,000), E central Ethiopia After 1902, when it became the terminus (now at Addis Ababa) of the railroad from Jibuti, French Somaliland, it developed under French direction into one of the most modern and sanitary towns of Ethiopia. There are important railroad shops.

dirigible balloon: see AIRSHIP

Dirschau, Poland see TCZEW

Dis. see PLUTO.

Disarmament Conference, 1932–37 Efforts to limit or reduce armaments on an international scale so as to restore mutual trust among the nations and to relieve the economic burden caused by large military establishments led to the HAGUE CONFERENCES of 1899 and 1907 They failed to prevent the armaments race that precipitated the First World War After the war the Allies (except the United States) committed themselves to disarmament in Part V of the Treaty of Versailles and in Article VIII of the Covenant of the League of Nations Actually, however, only the defeated Central Powers were obliged to limit their armaments A limitation of naval armaments was agreed upon at the Washington Conference of 1921–22 (see NAVAL CONFERENCES), but it was only in 1926 that a preparatory commission for a general disarmament conference met under League of Nations auspices at Geneva Fundamental differences between the English and the French approach to the problem prevented any concrete results in this and in subsequent meetings of the commission The far-going proposals made by the Soviet foreign commissar, Maxim LITVINOV, in 1928 were acceptable only to Germany and Turkey The first general world disarmament conference at last met at Geneva in Feb , 1932, under Arthur Henderson of Great Britain The League members, the United States, and Russia participated The draft convention submitted to the delegates proposed budgetary restriction of armaments, curtailment of periods of military service, limitation of military, air, and naval forces, acceptance of the system of naval disarmament set forth in the London Treaty of 1930 (see NAVAL CONFERENCES), and the appointment of a permanent committee to advise the League on the execution of the proposed treaty France, in the interest of its security, opposed the draft and proposed instead a plan involving an international police force and League control of weapons of aggression Deadlock ensued The proposals by President Hoover to reduce all world armament by one third and to outlaw weapons of aggression were acceptable to some powers, but were rejected by France Germany now demanded the right to rearm if world disarmament to the German level were not accomplished The conference adjourned in March, 1933. When it reconvened in Oct , 1933, Germany withdrew from both the conference and the League, and the conference quickly adjourned It reconvened sporadically until April, 1937, when it was indefinitely postponed Meanwhile Japanese aggression in China, the Italian attack on Ethiopia, civil war in Spain, and German rearmament had begun to shape the events that eventually led to the Second World War After 1945 under strong pressure from all humanitarians the Commission for Conventional Armaments and the Atomic Energy Commission of the United Nations attempted to work out disarmament plans, but they had achieved no success in 1949

disciple· see APOSTLE

Disciples of Christ, sometimes popularly called Campbellites, a Protestant religious body founded early in the 19th cent in the United States. Its primary thesis is that the Bible alone should form the basis for faith and conduct, each individual interpreting the Bible for himself and accepting no man-made creed Thomas CAMPBELL, preaching in W Pennsylvania, was censured by his presbytery because of his breadth of view in trying to gather into the church scattered groups of Christians He made a plea for unity among all Christians with no other platform than the primitive and simple gospel In 1809 he formed the Christian Association of Washington, Pa , but neither he nor his son Alexander CAMPBELL, who joined him in the work, desired that a new denomination should be estab-

lished. An independent church was built (1811) at Brush Run, Pa , with Alexander as the minister. The movement expanded rapidly Another minister, Barton Warren Stone, with several associates had also broken away from the Presbyterian Church and formed a church whose members were known as "Christians " Similar separatist groups, led by James O'Kelley, seceded from the Methodist church in North Carolina and, under Abner Jones and Elias Smith, from some of the Baptist churches in New England Both Stone and Alexander Campbell had adopted immersion, and this brought them for a time into sympathetic relations with the Baptists. In 1832 practically all of Stone's group and many of the other two branches united with the "Disciples" led by Campbell The remainder of the "Christians," who were subsequently organized as the Christian Church, finally merged (1931) with the Congregational Church The Disciples of Christ Church developed strongly and rapidly after the Civil War, particularly in the central and western states Missionary labors have extended the church throughout the world A separation into two churches has taken place during the 20th cent , the progressive group being known as the Disciples of Christ, and the conservatives as Churches of Christ See W E Garrison, *Religion Follows the Frontier a History of the Disciples of Christ* (1931)

Discobolus (dĭskŏ'bŭlus) [Gr ,=discus thrower], famous statue by the Greek sculptor Myron The original is known only through several copies, the best being the Lancelotti Discobolus, formerly in Rome The athlete stands with arm drawn back, ready to throw the discus, a pose with remarkable equilibrium, suggesting suspended action

discount. Bank discount is a fee for lending money, which the banker deducts from the loan when it is given Central banks, as in the U S Federal Reserve System, rediscount notes by taking them at a discount from other bankers When bills of exchange are cashed in advance, a percentage is discounted from the price they would bring at maturity When securities are sold at less than par, they are said to be sold at a discount Trade discount is a deduction from the list price Discounts from transportation rates are called rebates Certain banks specializing in banks' and bankers' acceptances, U S Treasury certificates of indebtedness, U S bonds which are approaching maturity, U S Treasury bills, and other high-quality, short-term credit obligations call themselves discount corporations Such specialization was made possible by the Federal Reserve Act, which allowed American bankers to accept bills of exchange, and can operate with efficiency only in large financial centers

discus throwing, gymnastic exercise of the ancient Greeks, revived in modern times, especially as part of the OLYMPIC GAMES (in which it is an event of the PENTATHLON and of the DECATHLON) and as an event of American track and field meets The discus was a circular plate of some heavy material, stone or metal, 2 or 3 in. in thickness and about 12 in in diameter The thrower held the discus in his right hand, the arm extended backward, and the discus against his forearm The Discobolus shows the position The modern discus is of wood with an iron rim and a leaden center and weighs 4 lb 7 oz To judge by what evidence there is, the modern method of throwing the discus is entirely different from the ancient The thrower rotates several times in a marked-off circle before releasing the discus Three throws are generally permitted, the best one counting

disease. Departure from health may be caused by changes in structure (resulting in organic disease) or in function of tissues Ancient theories of the cause of disease included the pneumatic and the humoral. Rudolf Virchow's study of cellular PATHOLOGY in the 19th cent was an important factor in overthrowing the humoral theory Disease may be considered from the standpoint of cause, contagiousness, course, heredity, epidemicity, or relation to occupation Each disease is considered as to its occurrence, cause (etiology), pathology, patient's symptoms, examiner's findings (signs), DIAGNOSIS, recovery (prognosis), treatment or therapy, prevention, and control See also COMMUNICABLE DISEASE

disease carrier, a person or an animal capable of harboring in the body and of distributing to others the causative agent of a disease Some persons who have recovered from a disease or who are themselves immune to a disease may be chronic carriers of that disease and thus be the means of causing epidemics Among the diseases spread by human carriers are typhoid fever, diphtheria, and cholera It is believed that there are probably carriers of poliomyelitis, the meningococcus form of meningitis, scarlet fever, and some other diseases A disease carrier should not be employed in a food-handling occupation. The most famous carrier was a woman called Typhoid Mary (d. 1938), who was responsible for a series of outbreaks of typhoid fever in the New York city area, where she was employed as a cook. Some people become carriers during convalescence or for a short time after convalescence from typhoid fever and diphtheria. Diseases which can be transmitted to man through animal carriers include psittacosis by birds; rabies by dogs and some other animals, bovine tuberculosis, anthrax, foot-and-mouth disease, undulant fever, and cowpox by the milk of cows; and malaria and yellow fever by insects

Dishan (dĭ'shăn), son of Seir the Horite Gen. 36 21,28,30, 1 Chron 1 38,42

Dishon (dĭ'shŏn) 1 Son of Seir Gen 36 21,26,30 2 Descendant of Seir Gen 36 25; 1 Chron 1 41

disinfectant, agent which destroys pathogenic organisms and their spores It differs from an ANTISEPTIC, which inhibits bacteria so that they do not multiply, although they may remain alive Disinfection is accomplished by burning excreta and dressings, by boiling utensils, instruments, clothes, and bed coverings, by soaking in various strengths of mercuric chloride, carbolic acid, lysol, or Dakin's solution, by sterilization with steam under pressure, as in an autoclave for surgical dressings, bandages, and towels In any infectious disease it is important to take care of excreta, bed linen, and all utensils to prevent spread of disease The attendant should scrub the hands and arms and then soak them in 2 percent lysol Bed pans should be soaked with 5 percent carbolic acid for several hours Cleanliness and sunlight are advisable at all times See also GERMICIDE.

Disko (dĭ'skō), island, area c 3,200 sq mi , off W Greenland, N of Godhavn Telluric iron has been found and lignite is mined here

dislocation, displacement of a part, particularly of a bone This condition may be congenital, e g , dislocation of the hip, knee, or ankle, simple, as in the dislocation of the jaw, traumatic, resulting from injury or violence, habitual or recurrent, as in the case of a "slipping patella", or pathologic, as in tuberculosis of the hip, or it may follow paralysis When a bone is dislocated, ligaments of the joint may be torn, causing severe pain Examination for a possible fracture should be made The patient should be treated for shock resulting from the injury In some conditions, as in congenital dislocation of the hip, surgery may provide increased stability and a useful amount of motion Manipulation and splints or other appliances are often employed in the reduction of dislocations, the treatment depending on the condition

Dismal Swamp, SE Va and NE N C The swamp, now c 20 mi long, was once much larger, heavily forested, and almost impenetrable, into it have fallen trees and other plants, which have formed a large body of organic material It was visited in 1728 by William Byrd, George Washington surveyed it in 1763 and was a member of a company organized to drain it; the canal, completed in 1828, connects Chesapeake Bay with Albemarle Sound There has been considerable subsequent drainage, and the swamp has been used for lumbering Lake Drummond, in the center of the swamp, is c 5 mi long The swamp is the scene of Harriet Beecher Stowe's novel *Dred* and of a poem by Thomas Moore

Disney, Walt (Walter Elias Disney) (dĭz'nē), 1901–, producer of animated cartoons, b Chicago He was brought up on a farm near Marceline, Mo After high school, he studied at the Academy of Fine Arts in Chicago During the First World War he was a Red Cross ambulance driver in France A commercial artist in Kansas City in 1918, he was employed by an agency in making advertising slides for moving-picture theaters In 1923 he began making comic films in Hollywood and in 1928 went to New York in an unsuccessful attempt to raise capital for more ambitious works Undismayed, on his return he began his "Mickey Mouse" pictures The third of these to be released, with sound, took the country by storm, and soon the series gained world-wide popularity There followed *Silly Symphonies*, in which color was added, *Three Little Pigs* (1933), *Snow White and the Seven Dwarfs* (1938), the first full-length animated cartoon, and *Pinocchio* (1940) *Fantasia* (1940), produced in collaboration with Leopold Stokowski, is an attempt to interpret music on the screen After 1928 Disney did none of the actual drawing of the animated strips but employed a large staff of artists In the Second World War, Disney's animated cartoons were used extensively as a propaganda medium See R D Feild, *The Art of Walt Disney* (1942).

dispensary: see CLINIC

dispersion, in chemistry, the scattering or dispersal of fine particles of one substance throughout another substance. A dispersion is classed as a SOLUTION, COLLOID, SUSPENSION, or emulsion (a kind of suspension) depending upon the size and nature of the particles of the substance so scattered. Fog and mist are formed by the dispersion of water droplets in the air (see CLOUD) SMOKE is formed when solid particles of carbon and other products of combustion are so scattered throughout the air

dispersion, in physics, the separating of a beam of white light by means of a prism or a DIFFRACTION GRATING into the various colors of which it is composed. A SPECTRUM is formed because the different colors undergo unequal refraction (are bent in different degrees) in passing through the prism Newton demonstrated the complexity of white light in this way. A defect of lenses (chromatic aberration) is caused by the dispersion of the light passing through them

Disraeli, Benjamin, 1st **earl of Beaconsfield** (dĭsrā'lē, bĕ'kunsfēld"), 1804–81, British statesman and author. He revitalized the Tory party, after its split by Robert PEEL, with a twofold policy of democracy and imperialism He was perhaps the most enigmatic of English statesmen, and his policies and his ambition seem to have stemmed in large part from his aristocratic contempt for the middle class and from unkind treatment occasioned by his Jewish ancestry He was the son of Isaac D'Israeli, the literary critic, who turned Christian and had Benjamin baptized Benjamin's brilliant mind was trained largely at home and in foreign travel (1828–31), and at 22 he began a literary career Several political essays and numerous novels gave him a reputation and a permanent place in English literature, although politics always imparted to his works an artificial character which made them rather vehicles of his opinions than works of literary art His works include *Vivian Grey* (1826), *Coningsby* (1844), *Sybil* (1845), and *Tancred* (1847) First as an independent, then as a liberal Tory, he four times stood unsuccessfully for Parliament, but in 1837 he was elected He followed Peel until 1843 His very happy marriage (1839) contributed moral strength to his later greatness After 1843 he became spokesman for the Young England group of Tories, who charged that Peel's favoring of free trade was a betrayal of Tory ideals of society Though the corn laws fell in 1846, so did Peel's ministry At the death of Lord George BENTINCK (1848) Disraeli became leader of the Tory protectionists He now sought to rebuild the party along lines already made clear in his novels, especially in *Coningsby* and *Sybil* Taking a historical view of the constitution, he favored elevation of crown, church, and aristocracy (all represented by his party) over the middle-class Whigs, who exploited the laboring and agricultural classes This end was to be attained by political partnership with the working classes Such a "Tory democracy" was actually to result from the REFORM BILL of 1867 Disraeli was chancellor of the exchequer in the brief governments of the earl of DERBY in 1852 and 1858–59, and after continued opposition during the Liberal governments of Palmerston and Russell, he again came to power under Derby (1866), whom he succeeded as prime minister in 1867 With consummate political skill Disraeli "educated his party" to pass the fairly radical parliamentary Reform Bill of 1867, which enfranchised c 2,000,000 men, largely of the working class, and greatly benefited his party A punitive expedition to Ethiopia was undertaken, and Canada was made a federated dominion Gladstone returned to power in 1868 Disraeli's second ministry (1874–80) saw many domestic reforms in housing, public health, and factory legislation, but was more notable for its aggressive foreign policy The annexation of the Fiji islands (1874) and of the Transvaal (1877), war against the Afghans (1878–79), and the Zulu War of 1879 proclaimed England a world imperial power more clearly than before Disraeli's purchase (1875) of the controlling share of the Suez Canal stock from the bankrupt khedive of Egypt strengthened British Mediterranean interests, which were jealously guarded in the diplomacy during and after the Russo-Turkish War Disraeli supported Turkey diplomatically and by threat of intervention, during the war, in order to combat Russian influence in the Straits region, and he induced Turkey to cede Cyprus to Great Britain. He forced Russia to submit the Treaty of San Stefano to the Congress of Berlin (1878), in which, with Bismarck's help, he greatly reduced Russian power in the Balkans. Disraeli had Queen Victoria, of whom he was a great favorite, crowned empress of India (1876) See biographies by W F Monypenny and G E Buckle (6 vols , 1910–20), J A Froude (1914), and D L Murray (1927); R G Stapledon, *Disraeli and the New Age* (1944)

D'Israeli, Isaac, 1761–1848, English author of Jewish descent, father of Benjamin Disraeli His best-known work is *Curiosities of Literature* (Ser 1, 1791, Ser 2, 1823), a miscellany of literary and historical anecdotes and original material, the 1849 edition of this work has a sketch of his life by his son Benjamin Other works include *Calamities of Authors* (1812), *Quarrels of Authors* (1814), and *Amenities of Literature* (1840)

Disraeli, village (pop 1,338), SE Que , on Lake Aylmer and NE of Sherbrooke It is an industrial town and a summer resort

dissenters: see NONCONFORMISTS

dissociation, in chemistry, the separation into simpler parts of the molecules of substances It occurs both at high temperatures (thermal dissociation) and when a substance goes into solution (electrolytic dissociation). At high temperatures the hydrogen molecule, which ordinarily consists of two atoms of hydrogen, dissociates to form two new monatomic molecules each made up of one atom of hydrogen Upon going into solution, the molecules of certain substances (electrolytes) dissociate to form IONS (see ION).

distaff see SPINNING

distemper, in art, painting medium in which the binder for the pigment is a simple glue size and the diluent is water It is widely used today for painting stage sets

distemper, in veterinary medicine, term denoting several infectious diseases of animals, especially canine distemper, a contagious catarrhal disease of young dogs The disease is accompanied by fever, weakness, loss of appetite, and inflammation of the mucous membranes, and it is sometimes fatal Treatment includes the maintenance of an even temperature, administering a broth and egg diet, and the use of stimulants and vaccines Colt distemper (strangles) is an infectious respiratory disease of horses

distillation, a process used for the purification of a substance, for the separation of substances from one another, and for the breaking down of one substance into fractional parts It involves a change of state, as of liquid to gas, and subsequent CONDENSATION For distillation the alchemists used the retort Today an apparatus commonly employed in the laboratory, as in the purification of water, consists essentially of two parts—a flask equipped with a thermometer and with an outlet tube from which the vapor is emitted and a condenser, commonly the Liebig condenser, which consists of two glass tubes of different diameters placed one within the other and so arranged that the smaller (in which the vapor is condensed) is held in a cooling stream of water running through the larger The impure water containing dissolved substances is placed in the flask and heated to its boiling point, when it changes to the vapor form, steam The steam is led into the condenser where, upon being cooled, it reverts to the liquid (condenses) and runs off The product so obtained is known as the distillate Those impurities having a higher boiling point than that of the water are left behind in the flask and constitute the residue The distillate is often again distilled to increase its purity (hence the expression "double distilled" or "triple distilled") If impurities of lower boiling point than that of water are present, they are removed first by keeping the temperature in the flask below the temperature at which the water vaporizes until they have been driven off Liquids of different boiling points can be separated, as water and alcohol (boil pt = 78 5°C), by regulating the temperature of the operation, keeping it at a temperature above 78 5°C and below 100°C The alcohol thus obtained, however, is not entirely pure, being 95 percent alcohol, since all the water cannot be separated A number of liquid substances which are essentially mixtures of other liquids of different boiling points are treated to repeated distillations at different temperatures and the parts, or fractions, obtained from each distillation are drawn off and condensed separately This process is known as **fractional distillation.** It is commonly used in refining petroleum, some of the fractions thus obtained being gasoline, benzine, kerosene, fuel oils, lubricating oils, and paraffin Another form of distillation involves heating out of free contact with air such substances as wood, coal, and oil shale and collecting separately the portions driven off, this is known as **destructive distillation.** Wood, for example, when treated in this way yields acetic acid, methyl or wood alcohol, charcoal, and a number of hydrocarbons Coal yields coal gas, coal tar, ammonia, and coke Ammonia is also obtained by the destructive distillation of oil shale In some cases it is necessary to introduce steam—**steam distillation**—at high temperatures, which carries off the volatile material with it Many alcoholic beverages are distilled, e g , brandy, gin, whisky, and various liqueurs The apparatus used, called the still, is the same in principle as that employed in the laboratory, but is made of metal, e g , copper, instead of glass

Distinguished Service Cross, Distinguished Service Medal, and **Distinguished Service Order:** see DECORATIONS, CIVIL AND MILITARY

distribution, amount of goods and services which each worker, employer, or economic group gets from the total produced Distribution, in this sense, does not refer to the physical MARKETING or circulation of goods, which is part of the process of exchange, but to the relative well-being and economic wealth of persons and groups DIVISION OF LABOR, which necessitates exchange, causes various problems of distribution. Regions prosper unequally, one industry may get more return from its labor on the common product than another, some workers get more than others. In territorial distribution, inequalities arise from a region's overproduction of the commodity peculiar to it, such as rubber, which cuts the value of that commodity in exchange for others. Underproduction has the reverse effect, if it is not due to crop failure or disaster. Inequalities in distribution among industrial groups making a common product are explained by the relative number employed in each group when compared to the value of what they produce or to the relative amount they get for a definite amount of work. Unequal distribution arises also from inequality in reward to those in the same industrial classification (capitalist, owner, manager, or laborer). See E G Nourse and others, *Distribution of Income in Relation to Economic Progress* (1936).

District of Columbia (1940 pop 663,091; 1948 estimated pop 863,000), tract of land (c 70 sq mi) on the east bank of the Potomac river, coterminous with the city of WASHINGTON, capital of the United States The District, established by congressional acts of 1790 and 1791, was selected by George Washington Maryland and Virginia granted land on each side of the river including the towns of Alexandria and Georgetown At the request of its residents, Alexandria was returned to Virginia in 1846 A territorial government for the remaining area was inaugurated in 1871, and the present system in 1878 The District is governed by Congress through an executive board of three commissioners (two residents and one officer of the army engineers) appointed by the President with the consent of the Senate The inhabitants have no voice in their local government, no representation in Congress, and no vote for President

Dithmarschen (dĭt'mărshŭn), region of SW Schleswig-Holstein, N Germany, between the Elbe and Eider rivers Cattle raising is extensive in the west The eastern portion is a sandy upland The region was known as Nordalbingia when it was conquered by Charlemagne and Christianized Later in the Middle Ages it became an independent peasant republic In 1474 Emperor Frederick III incorporated it with Holstein and invested Christian I of Denmark with the fief, but the attempts of the Danish kings to take possession were repulsed by the peasants until 1559 Dithmarschen is sometimes called Ditmarsh

dithyramb (dĭ'thĭrăm), in ancient Greece, hymn to the god Dionysus, choral lyric with exchanges between the leader and the chorus It arose, probably, in the extemporaneous songs of the Dionysiac festivals and was developed (according to tradition, by ARION) into the literary form to be found, for example, in the dithyrambs of BACCHYLIDES In its later development it became freer in its meter and more elaborate in its music (see PHILOXENUS and TIMOTHEUS) The TRAGEDY seems to have come out of the dithyramb, but the dithyramb was also cultivated after tragedy was invented See A W Pickard-Cambridge, *Dithyramb, Tragedy, and Comedy* (1927)

Ditmars, Raymond Lee (dĭt'mărz), 1876–1942, American naturalist and author, b Newark, N J , grad Barnard Military Academy, 1891 His early skill in preparing insect collections led to his first position in the division of entomology at the American Museum of Natural History, he remained at the museum for about five years and became assistant curator While serving (1898–99) as a reporter on the New York *Times* he met W T Hornaday, who asked him to join the staff of the New York Zoological Park, Ditmars served as curator of reptiles from 1899 and curator of mammals from 1910 He became a world authority on snakes and through his research, collecting expeditions, and writings contributed greatly to knowledge of reptiles and other animals His works include *The Reptile Book* (1907), *Reptiles of the World* (1909, rev ed , 1933), *Snakes of the World* (1931), *Strange Animals I Have Known* (1931), *Thrills of a Naturalist's Quest* (1932), *Book of Prehistoric Animals* (1935), *The Making of a Scientist* (1937), *The Book of Insect Oddities* (1938), and *Field Book of North American Snakes* (1939)

Ditmarsh. see DITHMARSCHEN

Dittersdorf, Karl Ditters von (dĭt'ŭrs fŭn dĭt'ŭrsdôrf), 1739–99, Austrian composer of many successful operas, symphonies, string quartets, and piano sonatas, some of them still occasionally heard

Ditzen, Rudolf see FALLADA, HANS

Diu (dē'ōō), Portuguese colony (20 sq mi , pop c 17,000), comprising Diu island, just S of Kathiawar peninsula, NW India Diu town, its capital, established by Portugal in 1535, has several splendid Catholic churches built before the overseas trade of Diu declined in the late 18th cent Fishing and salt extraction are the island's chief occupations.

diver, name for many diving birds, e g , the LOON, the GREBE, and some ducks, auks, and penguins

Divernon (dĭvûr'nun), village (pop 1,033), central Ill , S of Springfield, in a farm area, inc 1900

Dives (dī'vēz) [Latin, =rich], the rich man of the parable Luke 16 19–31

dividend, that part of the net earnings of a corporation which is distributed to its stockholders Dividend disbursements are based upon a percentage of the par value of the stock or are a certain sum per share of no-par-value stock They become payable only when approved by the board of directors and are usually declared at regular intervals Obviously, dividends should not be paid unless the company has accumulated a profit or surplus In the United States, dividends may be paid in property of various kinds, bonds and stocks of the company, stocks of other companies first acquired for other purposes, or in scrip, as well as in cash. In England they are payable only in cash Dividends may be paid in stock when the accumulated profits of a company are to be retained by reinvestment in the business. Scrip dividends are paid when the company wishes to conserve its cash holdings. Liquidation dividends are the return of the capital of a business that is being terminated Enterprises with diminishing assets, such as mines, issue a modified form of liquidation dividend Preferred shares yield a fixed percentage that must be paid before the remainder of the profit is divided among other shares If there are not enough profits to pay the whole dividend on preferred stock, future profits may be assigned to pay back dividends on preferred stock before anything is paid on common stock Preferred stock is ranked as to the priority of its obligations, as first and second preferred Preferred dividends differ from interest on bonds in that there is no default if they are not paid The term *dividend* is used also of a fractional payment of the amount owed by a bankrupt firm or creditor

Dividing Range, Australia see GREAT DIVIDING RANGE

divination (dĭvĭnā'shŭn), the searching out of hidden knowledge of matters past, present and future by the use of supernatural agencies It makes use of various means, such as OMENS, ORACLES, signs, and portents and most of the processes known to sorcery and MAGIC Divination may proceed by summoning spirits, or apparitions, to supply knowledge Divination was practiced in early stages of religious culture throughout the world and persists to the present day in CRYSTAL GAZING, PALMISTRY and FORTUNETELLING, in the use of the DIVINING ROD, and in other forms

Divine, Father, c 1882–, American Negro leader of a religious cult, the Peace Mission movement According to the best available information, he was born near Savannah, Ga , as George Baker After preaching in the South, he moved (c 1915) to the North and began styling himself Major M J Divine, later Father Divine Many of his followers are said to believe him the personification of God The movement, with its missions and its "heavens" for regenerate "angels," is nonsectarian and interracial, it has spread beyond New York city, where it had its start in Harlem, to other places in the United States and abroad See R A Parker, *The Incredible Messiah the Deification of Father Divine* (1937)

Divine Comedy, long Italian epic poem by DANTE ALIGHIERI, who entitled it *Commedia* because it ended happily, the epithet *Divina* was added in the 16th cent It is the account of a journey by the poet through Hell, Purgatory, and Heaven, and it is divided into three parts so named Dante is conducted on his journey through the first two by Vergil and through Heaven by Beatrice, for whom the poem was written as a lasting memorial The poem is an embodiment of medieval thought and ideas, strongly colored by Dante's personal opinion It is written in *terza rima*, a difficult Italian meter The poem was composed during Dante's exile (1302–21) There are numerous English translations, among them those of C E Norton, Longfellow, H F Cary, J B Fletcher, L G. White, and Dorothy Sayers (Part I, 1949)

divine right, the doctrine that sovereigns derive their right to rule by their birth alone—a right based on the law of God and of nature Their authority is transmitted from their ancestors, who were appointed by God as rulers, the sovereign was not responsible to the governed In England, HOBBES supported this doctrine, LOCKE opposed it It ceased to be important in England after the Revolution of 1688, but on the Continent it lingered until the early 20th cent , and it still is found in Asiatic countries The doctrine is epitomized in Louis XIV of France See J N Figgis, *The Theory of the Divine Right of Kings* (2d ed , 1914)

diving The act of descending into water and remaining there for an extended period is performed in fishing for sponges, coral, and pearls, in carrying out work on the foundations of bridges, docks, and other structures, and in such work in connection with ships as examining and repairing the underwater structure, recovering valuables from sunken ships, and raising the ships to the surface Before the introduction of modern apparatus, diving was done with the aid of a rope and a stone weight, the diver being naked, using the rope as a guide for position, he scooped up, as rapidly as possible, whatever commodity was being sought Some means whereby a diver could stay under water for an extended period early claimed the attention of inventors Various types of diving dress and water armor were devised, fresh air being supplied by a pipe leading to the surface, where it was kept above the water by a float The present type of diving dress was first devised by Augustus Siebe early in the 19th cent. His first suit was of the open type, consisting of a helmet attached to a jacket of waterproof material. From the helmet a pipe led to the surface, through which air was pumped. The air pressure served to keep the water level below the diver's head, the air finally escaping at the bottom of the jacket. While this type of suit was put to much practical use, the diver had to maintain a more or less upright position and was in danger of being drowned if he happened to fall. This defect led to Siebe's later inven-

tion of the closed-type diving suit, which, with improvements, is the general type used today Modern diving suits usually consist of a waterproof one-piece costume made of canvas and rubber, reinforced at the elbows and knees, which entirely covers the wearer except for his head and hands At the wrists are heavy rubber bands which seal the suit at these points and leave the hands free for use On his feet the diver wears leaded boots, and lead weights are fastened to his chest to maintain equilibrium Around the waist is a belt for carrying a knife, tools, and other equipment Over the head is worn a metal helmet, which is in two parts, the breastplate and the helmet proper The breastplate is a metal frame fitting over the shoulders and arranged so that it can be secured and made watertight to the suit The helmet is fitted with windows at the sides and in front, the front one being removable or hinged for opening Air (a mixture of nitrogen and oxygen or of helium and oxygen) is furnished through a flexible and noncollapsible pipe connected to the helmet and to the source of air supply, which may be from a hand-operated pump or, as in major operations, from a steel air reservoir fitted with an air-control panel To the diver is attached a life line, used for communication and for hauling the diver to the surface Communication is made by jerking the line, a prearranged code being used Telephonic communication is now used extensively, the necessary wires running through the life line When making a descent the diver is lowered in the water by the life line Too rapid rising causes the diver to suffer from CAISSON DISEASE For diving in shallow water (to depths of about 60 ft) a special helmet with an air hose and a belt with necessary apparatus can be used without a diving suit, this equipment is used, for example, in pearl diving and in salvage operations and underwater repair work Various metallic structures have been used in underwater diving from early times Some were rectangular and others bell shaped, they were generally open at the bottom, and compressed air was pumped in to keep out the water, thus enabling men to work within the device A bathysphere, a hollow, globular, steel structure built to withstand tremendous pressure, was designed by Otis Barton and used by Barton and William Beebe in undersea exploration In 1934 Beebe descended to a depth of 3,028 ft off the coast of Bermuda In 1949 Otis Barton descended in a steel globe called a benthoscope to a depth of 4,500 ft near Santa Cruz, one of the Santa Barbara Islands, off California Both the bathysphere and benthoscope were suspended by steel cables and were equipped with oxygen supply, lights, cameras, observation windows, and telephones See William Beebe, *Half Mile Down* (1934), A F Du Pont, *Under Sea with Helmet and Camera* (1940), F E Thompson, Jr , *Diving, Cutting, and Welding in Underwater Salvage Operations* (1944), Clarence Benham, *Diver's Luck* (1949, American title, *Pearl Diver's Luck*, 1950)

divining rod Searching for underground water or mineral with the help of the divining rod or dowsel is an ancient form of divination still in common use in many parts of the world Though some are skeptical, faith in the diviming rod is not limited to the ignorant The instrument is typically a forked twig Preferred woods include witch hazel and the wood of fruit trees, as the apple, willow, beech, and holly also are used The operator is called, like the instrument, a dowser His competence is believed to be a gift, not an acquisition In each hand he holds near his body one of the forks of the twig, with the stem pointing forward When he walks over a spot under which water or the desired mineral may be found, the stem of the diviming rod is supposed to be pulled down The water or mineral may be found at a depth equal to half the distance across the space where the diviming rod is affected by it A skeptic has observed that, as the rod is held, tightening the grip on the forks depresses the stem

division, one of the four fundamental operations of ARITHMETIC The symbol for this operation is + or / The result of dividing one number by another is called the quotient, the number divided is the dividend, the number by which the dividend is divided is the divisor; and the number denoting how many units are left over is the remainder Division is the inverse of MULTIPLICATION, i e , it is the process of finding what number the divisor must be multiplied by in order that this product added to the remainder will give the dividend For division other than that of simple whole numbers, see FRACTION, DECIMAL SYSTEM, ALGEBRA The operation does not have the properties of associativity (see ADDITION) or commutivity, but it does have distributivity, i e , the result of dividing each of two numbers by a third and then adding these quotients is the same as the result of adding the first two numbers and dividing their sum by the third

division of labor, specialization of production Specialization is closely tied with the standardization of production, the introduction and perfection of machinery, and the development of large industrial enterprise. Among the different categories of division of labor are territorial, in which certain regions specialize in producing certain products, exchanging their surplus for those produced elsewhere, temporal, in which separate processes are performed by different industrial groups in manufacturing one product, as the making of bread by farmers, millers, and bakers, and occupational, in which goods produced in the same industrial group are worked upon by a number of persons, each applying one or more processes and skills Modern factory methods are based upon the last type Proficiency at work and the saving of time in passing from one operation to another are such that total production is many times what it would be had each worker made the complete article The classic example is that given by Adam Smith, advocate of free trade (of which the division of labor is the underlying principle), in which 10 men, each performing one or more of the 18 operations necessary to make a pin, together produce 48,000 pins a day, whereas working separately they could not make 200 Separation of employment, as between riveters and plasterers or surgeons and dentists, also produces efficiency Waste of materials is less and the employees' special capacities may be more fully used The cost of learning a trade is reduced and the invention of new machines is facilitated by the small improvements made by those working at the machines Disadvantages in division of labor include the dulling effect of extreme concentration on routine and monotonous tasks, the decreasing need for skilled labor and its replacement by unskilled labor, and the inability of the men to adapt themselves to new employment if their skills are not in demand Occupational division of labor, as well as territorial, takes place between localities and countries Each type has its peculiar problems of distribution See Adam Smith, *The Wealth of Nations* (1776), Peter Kropotkin, *Fields, Factories, and Workshops* (1913)

divorce, partial or total dissolution of the MARRIAGE relation by judgment of a court Partial dissolution is a divorce "from bed and board," a decree of judicial SEPARATION, leaving the parties married Total dissolution of the bonds of a valid marriage is what is now usually meant by divorce It is to be distinguished from a decree of NULLITY OF MARRIAGE, which is a judicial finding that there never was a valid marriage In England, divorce was originally under the jurisdiction of the ecclesiastical courts These courts followed the CANON LAW rules They could grant a divorce from bed and board and could pass on the original validity or nullity of the marriage, but could not grant a total divorce from the marriage bond This power lay only in Parliament In 1857, by act of Parliament, judicial courts succeeded to the jurisdiction over nullity and partial dissolution and were given the added power to grant total dissolution of the marriage In the United States, as ecclesiastical courts were never established, the matrimonial law of England applied by these courts was never received as part of the common law Consequently, suits for divorce can be brought under authority of statute only The statutes usually confer on equity courts jurisdiction over divorce The power to legislate on divorce belongs to the states and not to the Federal government Although created by a contract between husband and wife, marriage is a legal relation of a particular nature with certain mutual rights and obligations, determined not by agreements but by the general law In a sense, the state has an interest in every marriage The parties cannot themselves terminate the relation by a contract of separation The relation can be dissolved only for what the state deems proper grounds The public policy of the several states toward divorce is extremely varied The most common grounds are adultery, DESERTION, and cruelty Habitual drunkenness, incurable insanity, conviction of a crime, nonsupport, and impotence are some of the less common grounds Corrupt consent by a party to the conduct of the other party bars a divorce, as does COLLUSION Forgiveness of the matrimonial offense either express or implied (as from cohabitation) on condition that it be not repeated is a bar to a divorce for that particular offense The fact that the party seeking the divorce is likewise guilty of the matrimonial offense charged is also a bar A decree of divorce is valid only if the court rendering the decree had jurisdiction, and jurisdiction is in the main based on the domicile of the parties Questions as to the validity of a divorce obtained in a foreign country or in another of the states of the United States are of extreme complexity An absolute divorce, as contrasted with a decree of nullity, takes effect from the date of the decree Property rights depending on the marriage, such as DOWER, if the wife is the guilty party are cut off By the divorce decree the custody of the children is usually given at the discretion of the court to one of the parties, the welfare of the children being the principal consideration. The wife retains the husband's name, although in some states she may resume her maiden name Both parties are usually at liberty to remarry, although this rule is not invariable, and a time limit within which the parties may not remarry is sometimes imposed The wife is entitled to ALIMONY at the discretion of the court

Dix, Dorothea Lynde, 1802–87, American social reformer, pioneer in the movement for specialized treatment of the insane, b Hampden, Maine For many years she ran a school in Boston In 1841 she visited a jail in East Cambridge and was shocked at conditions there, especially at the indiscriminate mixing of criminals and the insane She began inspecting other places in Massachusetts and in 1842 wrote a famous memorial to the state legislature Her crusades resulted in the founding of state hospitals for the insane in many states, and her influence was felt in Canada and Europe She also did notable work in penology During the Civil War she was superintendent of women war nurses See H E Marshall, *Dorothea Dix Forgotten Samaritan* (1937)

Dix, John Adams, 1798–1879, American statesman b Boscawen, N H After serving in the War of 1812, he was admitted to the bar, practiced law in Cooperstown, N Y , held high state offices, and served (1845–49) as U S Senator In 1848 he ran on the Free-Soil ticket for governor of New York President Buchanan appointed him Secretary of the Treasury in 1861, and in his two-month tenure of office he secured loans in the face of secession He was a major general in the Civil War and later minister to France (1866–69) Dix was prominent in railroad building and was made (1862) president of Union Pacific with T C Durant as vice president He was long president of the Erie RR In 1872 the Republican party elected him governor of New York His memoirs were edited by his son, Morgan Dix (1883)

Dix, Morgan, 1827–1908, American Episcopal clergyman, b New York city, grad Columbia, 1848, and General Theological Seminary, 1852, son of John A Dix His association with Trinity Church parish, New York, began upon his becoming associate minister in 1855, for almost a half century he was the rector Among his writings are *Memoirs of John Adams Dix* (2 vols , 1883) and *History of the Parish of Trinity Church in the City of New York* (4 vols , 1898–1906) To the *History* was added in 1950 a fifth part on the rectorship of Dr Dix

Dix, Fort, U S army training center, SE of Trenton, N J As Camp Dix, named for John A Dix, it was built in the First World War, it was made a permanent garrison and renamed Fort Dix in 1939 Fort Dix in the Second World War was the largest army training center in the country

Dixfield, town (pop 1,790), W Maine, on the Androscoggin below Rumford, settled 1787–89, inc 1803 Wooden products are made

Dixie, Lady Florence Caroline Douglas, 1857–1905, English explorer and writer, daughter of the 7th marquess of Queensberry and wife of Sir Alexander Dixie She visited Patagonia (1878–79) and wrote *Across Patagonia* (1880), the first of several vivid travel books She was field correspondent (1879) of the London *Morning Post* in the Zulu War and was instrumental in the release and return to Africa of the captured chief Cetewayo

Dixie, song composed by Daniel Decatur EMMETT in 1859 It became the patriotic song of the Confederate States during the Civil War and has remained popular since Dixie is now regarded as those states which lie below the Mason-Dixon line, but originally "Dixie's Land" was the name given a farm on Manhattan by some slaves sent to Charleston by Johaan Dixie, owner of the farm See C. A Browne, *Our National Ballads* (1931)

Dixmoor, village (pop 1,022), NE Ill , near Chicago, inc 1922

Dixon, Roland Burrage, 1875–1934, American anthropologist, b Worcester, Mass , grad Harvard (B A , 1897, Ph D , 1900) From 1901 he taught anthropology at Harvard (as professor from 1916) He was a member of the American delegation at the Paris Peace Conference and served as president of the American Anthropological Society and the American Folk-Lore Society His writings include *Oceanic Mythology* (1916), *The Racial History of Man* (1923), *The Building of Cultures* (1928), and many monographs on the North American Indians

Dixon, Thomas, 1864–, American novelist and clergyman, b Shelby, N C , M A Wake Forest College, 1883, LL B Greensboro Law School, 1886 He entered the Baptist ministry in 1886 and served (1889–99) his chief pastorate in New York city A militant Southerner, he is best known for his novel *The Clansman* (1905), on which the movie *The Birth of a Nation* (1915) was based

Dixon. **1** Town (pop 1,108), central Calif , WSW of Sacramento, in a farming, stock-raising, and dairying region of the Sacramento valley, inc 1878 **2** City (pop 10,671), co seat of Lee co , N Ill , on the Rock River and SW of Rockford, in a farm area, founded 1830, inc 1857 Its manufactures include wire and dairy products On the site of Dixon Blockhouse is a statue of Abraham Lincoln as a youthful captain in the Black Hawk War A state hospital is near the city

Dixville Notch, scenic 2-mile pass in the White Mts , N N H , E of Colebrook The land was granted in 1805 to Col Timothy Dix

Dixwell, John, d 1689, English regicide. He was one of the judges who sentenced Charles I to death in

1649 He served as a colonel in the parliamentary army and was for some years a member of the House of Commons He fled to America after the Restoration (1660) and lived undiscovered at New Haven, Conn , under the name of John Davids

Diyala (dēä'lụ, dēä'lù), river, SW Asia, rising in NW Iran and flowing c 350 mi to the Tigris below Baghdad, Iraq The river is a trade route between the two countries

Diyarbakir (dēyarbēkēr'), city (pop 41,087), E central Turkey, a commercial center on the Tigris, which becomes navigable here It occupies the site of ancient AMIDA Variant spellings are Diarbekr and Diyarbekir.

Dizahab (dĭz'ù-, dĭ'su-), place, in the peninsula of Sinai near where the Israelites halted Deut 1 1

Dizful (dĭzfōōl') or **Desful** (dēs-), city (1947 estimated pop 31,800), W Iran, near the site of ancient Susa The busy market town in a tropically hot section gets its name, which means "citadel bridge," from a bridge erected here by Shapur II.

Dlugosz, Jan, Pol *Długosz* (yan' dwōō'gōsh), 1415–80, Polish historian and churchman, known in Latin as Longinus Late in his life he was archbishop of Lvov His history of Poland, in Latin, is an excellent and well-documented work

Dmitri (dumē'trē) or **Demetrius** (dĭmē'trēus), d 1591, tsarevich, son of Ivan IV (Ivan the Terrible) of Russia He was a child when (1584) his brother, FEODOR I, died and Boris GODUNOV usurped the throne He was murdered, probably on Boris's orders Subsequently four pretenders assumed his name The first (believed to have been a monk, Gregory Otrepiev) appeared in Poland c 1600, claiming that he was Dmitri and had not really been put to death, he enlisted the support of Lithuanian and Polish nobles and finally of King Sigismund III of Poland He invaded Russia in 1604 Boris died suddenly in 1605, and the false Dmitri was crowned as tsar But his unconcealed favor toward Poland aroused opposition, and his marriage (1606) to Marina, a Polish noblewoman, provoked an insurrection in Moscow, led by Prince Vasily Shuiski, in which Dmitri lost his life A boyar was crowned tsar, but in 1607 another Dmitri made his appearance Aided by the Poles after Marina had said that he was indeed her husband, he marched on Moscow and had success for a time, but in 1610 he was killed No further resurrection took place, but in 1612 a man appeared who claimed he was Dmitri's son He was put to death by strangling Another, also claiming to be Dmitri's son, was beheaded in 1613 In that year the chaotic period, known as the Time of Troubles in Russian history, came to an end with the coronation of Michael Romanov, the first of the Romanov line, as tsar

Dmitri Donskoi (dumē'trē dŭnskoi'), 1350–89, grand duke of Moscow (1362–89) He successfully resisted Lithuania and was the first Russian prince since the Mongol conquest who dared to wage open war on the TATARS His victory at KULIKOVO (1380) made him a popular Russian hero, but its effect was counteracted in 1382 by the Tatars' successful surprise attack on Moscow

Dnepr see DNIEPER

Dneprodzerdzhinsk (dŭnyĕ"prudzĭrzhĕnsk'), city (1926 pop 34,150, 1939 pop 147,829), S central Ukraine, on the Dnieper and near Dnepropetrovsk It is a major industrial center with iron and steel mills, chemical plants, and metal-construction shops Until c 1935 its name was Kamenskoye

Dneproges (dŭnyĕprŭgĕs') [Rus abbreviation, = Dnieper hydroelectric station], suburb of Zaporoshe, Ukraine, on the Dnieper It is the site of the largest dam and power station in Europe The dam (built 1927–32) was originally called Dneprostroi H L Cooper was the chief among the American consultant engineers More than ½ mi long and 200 ft high, the dam raised the level of the Dnieper 123 ft. and covered rapids which till then had impeded navigation With a capacity of more than 500,000 kw per hour, the hydroelectric station supplies power for the industrial centers of Dnepropetrovsk and Krivoi Rog. The dam and plant were destroyed (Aug , 1941) by the Russians before their retreat from the Germans; they were partially repaired by the Germans, only to be destroyed by them before their retreat in Oct., 1943. By 1947 the dam was rebuilt and the first turbine put into operation

Dnepropetrovsk (dunyĕ"prŭpētrôfsk'), city (pop 500,662), capital of Dnepropetrovsk oblast, central Ukraine, on the bend of the Dnieper It is a major industrial center (metallurgy, automobiles, machinery, chemicals, clothing, flour) and a hub of rail and water transportation Here are several technical schools and a school of medicine Founded (1787) by Catherine II, it was named Ekaterinoslav (also spelled Yekaterinoslav) for her; the name was changed in 1926. Industrial growth began late in the 19th cent. with exploitation of the adjoining Donets Basin and the Nikopol manganese and Krivoi Rog iron mines; it greatly increased after the completion (1932) of the Dneproges dam and power station In the Second World War, Dnepropetrovsk was occupied by the Germans from Aug , 1941, to Oct , 1943, and suffered in the fighting which raged in the area

Dneprostroi see DNEPROGES

Dnieper (nē'pur), Rus *Dnepr* (dunyĕ'pûr), river, 1420 mi long, USSR, one of the longest in Europe. It was known to the ancients as Borysthenes (bôrĭs'thunēz) It rises in the Valdai Hills, W of Moscow, and flows generally S past Smolensk, Mogilev, Kiev, Cherkassy, Kremenchug, Dnepropetrovsk, Zaporoshe (site of the DNEPROGES dam), Nikopol, and Kherson into the Black Sea, thus traversing Belorussia and the Ukraine Between Kremenchug and Nikopol it describes a vast bend to the east Since the construction (1932) of the Dneproges dam the Dnieper is navigable for virtually its entire course Its tributaries include the Beresina, the Pripet, and the Ingulets from the right and the Desna, the Orel, and the Samara from the left Its right bank is generally low Its left bank is high, except in its middle course through the Dnieper lowland The Dnieper is linked by canals with the Western Bug, the Niemen, and the Western Dvina

Dniester (nē'stur), Rus *Dnestr* (dunyĕ'stûr), river, 850 mi long, rising in the Carpathians in SW European USSR It flows generally southeast, forming the approximate border between the Ukraine and the Moldavian SSR, past Galich, Khotin, Mogilev-Podolski, Bender, and Tiraspol, and empties through an estuary into the Black Sea SW of Odessa Among its tributaries is the Seret Navigable below Mogilev-Podolski, it is used for shipping lumber and grain It formed the Rumanian–USSR border from 1918 to 1940, when Russia recovered Bessarabia Its Rumanian name is Nistru

do, in music, first of the solmization syllables see GUIDO D'AREZZO and MUSICAL NOTATION

Doab (dō'ăb), term applied in India to a tract of land between two rivers The Doab, unqualified by the names of any rivers, designates the tract between the Ganges and Jumna rivers

Doane, George Washington, 1799–1859, Episcopal bishop of New Jersey (1832–59), b Trenton, N J , grad Union College, 1818 He acted as rector of St Mary's Church, Burlington, N J , there he established a school for girls, St Mary's Hall, and Burlington College for boys A leading High Churchman, Bishop Doane was also the author of a number of hymns, including *Softly Now the Light of Day* and *Fling Out the Banner, Let It Float* The *Life and Writings of George Washington Doane* (4 vols , 1860–61) was prepared by his son, **William Croswell Doane**, 1832–1913 He was bishop (1869–1913) of the Protestant Episcopal diocese of Albany and author of the hymn *Ancient of Days*

Doane College, see CRETE, Nebr

Dobbs, Arthur, 1689–1765, British colonial governor of North Carolina (1754–65), b Co Antrim, Ireland A member of the Irish House of Commons (1727–30) and surveyor general of Ireland (1730), he wrote *An Essay on the Trade and Improvement of Ireland* (1729), in which he advocated certain land reforms He also became interested in the search for the Northwest Passage and was largely responsible for the expedition (1741–42) under Christopher Middleton When Middleton returned without result, Dobbs accused him of falsifying his information at the instigation of the Hudson's Bay Company, and an acrimonious controversy developed Dobbs's *Account of the Countries Adjoining to Hudson's Bay* (1744) summarized the information then available As governor of North Carolina, where he already had large landholdings, he became involved in disputes with the legislators, arising from his arbitrary assertion of power without reference to their wishes

Dobbs Ferry, residential village (pop 5,883), SE N Y , in Westchester co , on the Hudson above Yonkers, inc 1873 The Masters School for girls is here Children's Village, a rehabilitation school for problem boys, is near by

Dobell, Sydney Thompson (dōbĕl'), 1824–74, English poet, member of the so-called "spasmodic school" of poetry ridiculed in W E Aytoun's *Firmilian* Dobell's best-known poem is *Balder* (1854), he collaborated with Alexander Smith on *Sonnets on the War* (1855), on the Crimean War, and wrote also *England in Time of War* (1856)

Döbereiner, Johann Wolfgang (yō'hän vôlf'gäng dö'bûrīnur), 1780–1849, German chemist. From 1810 he was professor at the Univ. of Jena He is known especially for his discovery of similar triads of elements, a step in the development of the PERIODIC LAW He discovered furfural, worked on the use of platinum as a catalyst, and invented Döbereiner's lamp, which is ignited by the action of hydrogen on a platinum sponge

Doberman pinscher (dō'burmŭn pĭn'shûr), sleek, short-haired dog of medium size, developed originally in Germany. It was little known before the beginning of the 20th cent., and its ancestry is not definitely established It is named for Louis Dobermann of Apolda, Thuringia, where the dog probably originated, but whether he helped to develop the breed is not definitely known. Males have a shoulder height of from 24 to 27 in., females from 23 to 25 in. The body is well knit and muscular, and the dog has a proud bearing. The coat may be predominantly black, brown, or blue, with markings of rust red. It is a faithful and fearless guardian and companion In order to remain healthy it must have considerable exercise See W. S Schmidt, *The Doberman Pinscher* (3d ed , 1935) and *The Doberman Pinscher in America* (1940), Philipp Gruenig, *The Dobermann Pinscher* (Eng tr , rev ed , 1947), M G Denlinger, *Your Doberman Puppy* (1949)

Döblin, Alfred (ăl'frāt dûp'lĭn), 1878–, German physician and novelist, leading expressionist writer He practiced psychiatry in the workers' district in Berlin His first work, a collection of short stories entitled *Die Ermordung einer Butterblume* [the murder of a buttercup] (1913), was followed by his "Chinese novel," *Die drei Sprünge des Wang-lun* [the three leaps of Wang-lun] (1915) His most widely read book, *Berlin Alexanderplatz* (1929, Eng tr , 1931), shows the influence of James Joyce Later works include *Pardon wird nicht gegeben* (1935, Eng tr , *Men without Mercy*, 1937), a novel, and *Die deutsche Literatur* (1938), an essay Doblin left Germany in 1933, lived in Palestine and the United States, and returned to Germany after the end of the Second World War

Dobrich (dô'brĭch), Rumanian *Bazargic*, city (pop 31,049), NE Bulgaria, in S Dobruja It is an agricultural and commercial center It belonged to Rumania from 1913 to 1940 In 1949 Dobrich was officially renamed Tolbukhin, in honor of Marshal Tolbukhin, who led a Russian army into Bulgaria in 1944

Dobrogea, Rumania see DOBRUJA

Dobrovsky, Joseph (dô'brôfskē), 1753–1829, Hungarian philologist, of Bohemian parentage In 1792 the Royal Bohemian Academy of Sciences commissioned him to recover Bohemian manuscripts lost in the Thirty Years War He is the founder of modern Slavonic studies and the father of modern Czech philology and literature He was criticized by scholars when he questioned the authenticity of *The Judgment of Libussha*, oldest Czech writing, discovered by Hanka in 1817 He wrote much on early Slavic materials, especially Czech

Dobruja (dô'brōōjù, dō'-), Rumanian *Dobrogea* (dô'brōjä), historic province (c 6,000 sq mi , pop 503,217), SE Rumania, between the lower Danube and the Black Sea, bordering on Bulgaria in the south Constanta, its chief city, is also the main Rumanian port Largely agricultural, the Dobruja comprises a low coastal strip and is hilly and forested inland The region was part of Roman Moesia and later belonged to the Byzantine Empire, to the medieval empire of Bulgaria, and, from the 15th cent , to the Ottoman Empire It was awarded (1878) to Rumania by the Congress of Berlin As a result of the Second Balkan War, Bulgaria ceded (1913) to Rumania a strip of territory which became known as S Dobruja, the Treaty of Neuilly (1919) confirmed Rumania in possession of S Dobruja, but in 1940 RUMANIA was obliged to return the area (c 3,000 sq mi., pop c 319,000) to Bulgaria

Dobson, Austin (Henry Austin Dobson), 1840–1921, English poet and essayist From 1856 to 1901 he was employed in the Board of Trade His well-known volumes of light verse include *Vignettes in Rhyme* (1873), *Proverbs in Porcelain* (1877), and *At the Sign of the Lyre* (1885) Dobson used Old French verse forms—the rondeau, villanelle, ballade, and others Among his studies of 18th-century England are *Eighteenth Century Vignettes* (1892–96) and his biographies of Fielding (1883), Steele (1886), Goldsmith (1888), Richardson (1902), and Fanny Burney (1903) See Alban Dobson, *Austin Dobson* (1928)

Dobson, Frank, 1888–, British sculptor, professor of sculpture in the Royal College of Art He founded the X Group of English sculptors Two portrait heads by him are in the Tate Gallery, London.

Dobson, William, 1610–46, English court painter He was probably apprenticed to Van Dyck After the death of Van Dyck, Dobson was made sergeant painter to Charles I and painted some interesting court portraits in the manner of Van Dyck Dobson's death at 36 cut short a promising career

Docetism (dōsē'tĭzm), early heretical trend in Christian thought Docetists claimed that Christ was a mere phantasm who only seemed to live and suffer. A similar tendency to deny Jesus' humanity appeared in the teachings of Simon Magus, Marcion, Gnosticism, and certain phases of monarchianism.

dock, any species of *Rumex*, a large and widely distributed genus of herbs, regarded in the United States chiefly as weeds They have small flowers and small, winged fruits, some species resembling the related rhubarb in both properties and appearance Species of dock having arrowhead-shaped leaves are better known as sorrel The more common of these are the green sorrel (*Rumex acetosa*) and the red, field, or sheep sorrel (*Rumex acetosella*), a red-flowered weed in acid pastures used in colonial

days in dyeing materials black. Both of these sorrels, but particularly the sheep sorrel, have pleasantly acid leaves long used in their native Europe for salads and greens Sorrels contain OXALIC ACID and cases of cattle poisoning have been reported Other species of dock have been used as potherbs, especially the narrow, yellow, or curled dock (*Rumex crispus*), a weedy plant with wavy-edged leaves; the patience or spinach dock (*Rumex patientia*), a tall large-leaved species; and the canaigre (kŭnā'-gûr) (*Rumex hymenosepalus*), a dock native to the Southwest whose stalks, leaves, and roots have been used for food by the Indians (the roots are also a source of tannin)

dock, enclosed basin or water area where ships are provided with facilities for mooring, for loading and unloading, and often for repair work There are several main types of docks A wet dock, usually known simply as a dock, is in general a rather large basin enclosed by walls and provided with a gate or with a lock chamber (enabling ships to enter and leave at either high or low tide) Wet docks are found at many large ports, e g , London, Liverpool, Dublin, Antwerp, Le Havre, Marseilles, Capetown, Buenos Aires, and Hong Kong A tidal dock is a basin similar to a wet dock, but is without a gate or lock and therefore can be used only where the variation in water level resulting from tides is not great This type is common on the Atlantic and Gulf coasts of the United States Most of those in the United States consist of a series of rectangular areas of water between projecting piers, New York city has miles of water front equipped with such docks A stationary dry dock or graving dock is any excavated chamber or basin in which ships can be repaired, it is usually somewhat rectangular in shape and is lined with watertight material It connects with the harbor so that the ship can be floated in through the open end; watertight gates are then closed, and the water is drained from the enclosure Floating docks or floating dry docks are used where it is impractical or undesirable to build masonry dry docks Some are rather permanently fixed, with many of the essential facilities on the near-by shore, others are complete units which can be moved to different parts of a harbor or from one harbor to another Floating docks have a hollow area shaped like the hull of a ship in which the ship can be berthed, they are equipped with pontoons or air chambers By filling these chambers with water the dock is submerged beneath the ship, when the water is pumped out, the dock rises and carries the ship upward out of the water Such docks can be used only where the water is sufficiently deep (usually at least 70 ft) and rather calm A large floating dock is at Southampton, England During the Second World War the United States constructed huge floating dry docks composed of sections that could be assembled at sea in order to repair battleships

documentary film · see MOVING PICTURES

Doczy or **Doczi, Louis, Baron** (both dŏ'tsĭ), Hung *Dóczy* or *Dóczi Lajos* (lŏ'yŏs), 1845–1918, Hungarian playwright and poet His comedy *The Kiss* (1871) won the Hungarian Academy award He is known also for his translation of *Faust* into Hungarian (1872)

Dodabetta, Mount, see GHATS

Dodai (dō'dāĭ, -dĭ dō'dāĭ), the same as DODO

Dodanim (dō'dunĭm, dŏ'–) or **Rodanim** (rō'dunĭm, rō'–), nation, probably the Rhodians Gen 10 4, 1 Chron 1 7 Dedan in Ezek 27 15 probably refers to the same

Dodavah (dō'duvŭ, dōdā'–) [Heb , =beloved of God], father of ELIEZER 3

Dodd, Samuel Calvin Tate, 1836–1907, American lawyer, b Franklin, Pa , grad Jefferson (now Washington and Jefferson) College, 1857 He was admitted to the Pennsylvania bar in 1859 In his early practice he represented many independent W Pennsylvania producers of oil who were resisting the encroachment of John D ROCKEFELLER Dodd was later employed by the Rockefeller interests, he always insisted, however, on receiving only a moderate salary and refused to become a director in any of the enterprises and thus enrich himself He is credited with devising the business TRUST arrangement by which Rockefeller was able to consolidate control of many companies engaged in producing oil Dodd strongly opposed the Sherman Anti-Trust Act (1890), and a collection of his addresses, *Trusts* (1900), defends business combinations He organized (1899) the Standard Oil Company of New Jersey, one of the earliest of the large holding companies

Dodd, William, 1729–77, English author A one-time king's chaplain, he ran heavily into debt, forged a bond, and was sentenced to death Dr Johnson led a movement to obtain clemency, but Dodd was executed His best-known work is *The Beauties of Shakespeare* (1752)

Dodd, William Edward, 1869–1940, American historian and diplomat, b Clayton, N C., grad Virginia Polytechnic Institute (B.S., 1895; M.S., 1897) and Univ. of Leipzig (Ph D., 1900) He was professor of history at Randolph-Macon College (1900–1908) and at the Univ. of Chicago (1908–33). From June, 1933, to Dec., 1937, he was ambassador to Germany. Dodd, an admirer of the German culture he knew in his pleasant student days at Leipzig, returned as U.S envoy with high hopes of improving German-American relations The Nazis, however, recently come to power, soon alienated him, and he became an outspoken critic of Hitlerism He was one of the few diplomats in those years of appeasement who had a clear idea of Hitler's aims His historical writings reflect with vigor his passionate devotion to democracy, and he inspired a whole school of historians, which carries on his Jeffersonian and Wilsonian ideals He wrote biographies of Nathaniel Macon (1903) and Jefferson Davis (1907), *Statesmen of the Old South* (1911), *Expansion and Conflict* (1915), *The Cotton Kingdom* ("Chronicles of America" series, Vol XXVII, 1919), *Woodrow Wilson and His Work* (1920, rev ed , 1932), *Lincoln or Lee* (1928), and *The Old South Struggles for Democracy* (1937) He also edited, with Ray Stannard Baker, *The Public Papers of Woodrow Wilson* (6 vols , 1924–27) See *Ambassador Dodd's Diary, 1933–1938* (ed by his son and his daughter, William E Dodd, Jr , and Martha Dodd, 1941)

dodder, leafless, parasitic twining plant, with small flowers There are about 100 widely distributed species of the genus *Cuscuta*, each parasitic on only one kind of plant—e g , clover, flax, or alfalfa The seeds germinate in the soil After the young plant has attached itself to a host plant, its lower stem and root shrivel, and it secures its nourishment through suckers which penetrate the host Dodder is often introduced into fields by contaminated seed

Doddridge, Philip, 1702–51, English nonconformist minister and noted hymn writer His *Rise and Progress of Religion in the Soul* (1745) was widely translated His many hymns include *Awake, My Soul, Stretch Every Nerve* and *O Happy Day, That Fixed My Choice* Doddridge's *Correspondence and Diary* (5 vols , 1829–31) was edited by his great-grandson

Dodds, Harold Willis, 1889–, American educator, b Utica, Pa , grad Grove City College, 1909, M A Princeton, 1914, Ph D Univ of Pennsylvania, 1917 He taught economics and political science and became well known as an adviser of electoral procedure in Latin America, particularly in Nicaragua (1922–24, 1928) and Cuba (1935) He was adviser (1925–26) to the Commission for the Tacna-Arica plebiscite and secretary (1920–28) of the National Municipal League Appointed professor of politics at Princeton in 1927, he was made president of the university in 1933 A volume of essays, *Out of This Nettle, Danger*, was published in 1943

Dodecanese (dōdĕ"kunēs', -nēz, dō"dĕ–), Gr *Dodekanesos* (dōdĕka'nēsŏs), island group (1,044 sq mi , pop 115,343), Greece, in the SE Aegean Sea, between Asia Minor in the east and Crete in the west Despite its name [12 islands], it consists of some 20 islands and islets, notably RHODES, KOS, KARPATHOS, KALYMNOS, PATMOS, Astypalaia, Kasos, Telos, Symi, Leros, Nisyros, Chalke, and Kastellorizo The city of Rhodes, on Rhodes, is the capital The islands are mostly mountainous Agriculture, livestock raising, fruitgrowing, and sponge fishing are the main sources of livelihood Rhodes is by far the most important of the islands and has the most interesting history, with its fall (1522) to Suleiman I, the Dodecanese passed under a long period of Turkish rule The islands were occupied (1912) by the Italians in the Italo-Turkish War of 1911–12 and were formally awarded to Italy by the Treaty of Sèvres (1922) In the Second World War, after the surrender of Italy, they were held by German troops, who surrendered in May, 1945, On the basis of their Greek population, the islands were awarded to Greece in the Allied peace treaty with Italy.

Dodge, Charles Richards, 1847–1918, American expert on fibers and fiber industries, b Mississippi, educated at Sheffield Scientific School, Yale In 1867 he became associated with the U S Dept of Agriculture, where he served as director of the agricultural museum for 10 years and later as special agent in charge of fiber investigation He wrote *A Descriptive Catalogue of Useful Fiber Plants of the World* (1897).

Dodge, David Low, 1774–1852, American reformer, b. Brooklyn, Conn He was a merchant In 1815 he founded the New York Peace Society, possibly the first such organization to be established In 1828 other peace societies joined with it to form the American Peace Society, Dodge served as a director and a member of the executive committee until 1836

Dodge, Grace Hoadley, 1856–1914, American philanthropist, b New York city; great-granddaughter of David Low Dodge. She played an important part in the founding of Teachers College of Columbia Univ She also promoted working girls' clubs and the New York Travelers' Aid Society

Dodge, Grenville Mellen, 1831–1916, Union general in the Civil War and railroad builder, b. Danvers, Mass., grad. Norwich (Vt.) Univ., 1851 Before the war Dodge, a civil engineer, did railroad work in the West. After he distinguished himself leading a brigade at Pea Ridge (March, 1862), where he was wounded, he was made a brigadier general of volunteers Dodge's skill in rebuilding rapidly the bridges and railroads destroyed by Confederate forces was of great value to Grant and Sherman in their Western campaigns Promoted major general of volunteers (June, 1864), he led a corps in Sherman's Atlanta campaign until he was severely wounded at the siege of Atlanta He commanded the Dept of the Missouri (1865–66) and campaigned against the Indians In May, 1866, he left the army to become chief engineer of the Union Pacific RR His efficient and rapid construction of that line was his greatest achievement In 1871 he became chief engineer of the Texas & Pacific RR and from 1873 to 1884 he was associated with Jay Gould in the railroad development of the Southwest Dodge was a Republican Congressman from Iowa (1867–69) and throughout his long career was a prominent lobbyist for railroads He was president of the commission that inquired into the conduct of the Spanish-American War He wrote about his war and railroading experiences See J R Perkins, *Trails, Rails, and War* (1929)

Dodge, Henry, 1782–1867, American frontiersman, governor, and U S Senator, b Vincennes, Ind He served as sheriff of the Ste Genevieve dist , Mo , and as marshal of Missouri in 1812 In the Missouri militia he rose to the rank of major general, and in the War of 1812 he led a body of troops to the rescue of Boone Lick, 250 mi NW of Ste Genevieve He moved in 1827 to the new lead fields of SW Wisconsin and settled near what became Dodgeville He commanded a body of volunteers in the Winnebago outbreak of 1827 and during the Black Hawk War commanded a battalion and participated in the principal battles He was commissioned by President Jackson colonel of a regiment of dragoons formed to patrol the frontier He led them to the upper Red River (of the South) region in 1834 to prepare the way for peace treaties with the Pawnee, Comanche, and Kiowa tribes, and in 1835 they marched to the Rocky Mts in Colorado on a similar mission of friendship and exploration In 1836, when Wisconsin was set off from Michigan, Dodge was appointed governor of the Territory, which then included Iowa, Minnesota, and a large part of the Dakotas as well When replaced by a Whig appointee in 1841, he was elected to the House of Representatives, but in 1845 he again became governor He served until 1848, when Wisconsin became a state, and was then elected one of the two first U S Senators See biography by Louis Pelzer (1911)

Dodge, Mary Abigail, pseud **Gail Hamilton,** 1833–96, American author, b Hamilton, Mass , grad Ipswich Female Seminary, 1850 Her books, brilliantly written and popular in their day, were ephemeral in subject matter They include *Gala Days* (1863) and *Women's Wrongs* (1868) She was related to Mrs James G Blaine, and her biography of Blaine (1895) is probably better known than her other books See *Gail Hamilton's Life in Letters* (ed by H A Dodge, 2 vols , 1901)

Dodge, Mary Mapes, 1831–1905, American editor and juvenile story writer, b New York city The volume *Irvington Stories* (1864) was popular, but *Hans Brinker, or, The Silver Skates* (1865), which received a prize from the French Academy, is still a juvenile classic In 1870 she became assistant editor of *Hearth and Home*, and from 1873 until her death she edited the *St Nicholas* magazine, which she had named Although she wrote only one more long story, *Donald and Dorothy* (1883), she remained the acknowledged leader in the field of juvenile fiction Collections of her work in *St Nicholas* for youngest readers were published as *Baby Days* (1876) and *Baby World* (1884) See biography by A B Howard (1943)

Dodge, William De Leftwich, 1867–1935, American mural painter, b Bedford, Va , studied at the École des Beaux-Arts in Paris, and also in Munich Among his best decorative works were the dome in the Administration Building, Columbian Exposition, Chicago, and mural paintings in the Library of Congress, Hall of Records, New York, Academy of Music, Brooklyn, Teachers College, Cedar Falls, Iowa, Café de l'Opéra and Folies Bergère, Paris, the Flag Room at the capitol, Albany, N Y , city hall, Buffalo, N Y , and *In Memoriam*, Kenosha co (Wis) courthouse He was a member of the Society of Mural Painters and an instructor at the Art Students League, New York

Dodge Center, village (pop 1,029), SE Minn , W of Rochester, in a rich farming area, settled 1853, inc 1872

Dodge City, city (pop 8,487), co. seat of Ford co , SW Kansas, on the Arkansas river and on the old Santa Fe Trail, laid out 1872 near Fort Dodge (1864), inc 1875 An early important supply base, it flourished as the Santa Fe railhead after 1872 and was called the "cowboy capital" It is the distributing center for a great wheat and livestock area The city hall, with its cowboy statue, is on the site of Boot Hill, a burial ground of early cowboys, many of whom "died with their boots on" Dodge City is at the edge of the Mountain time belt See R. M. Wright, *Dodge City* (1913).

Dodgeville, city (pop. 2,269), co. seat of Iowa co., SW Wis., SW of Madison, settled 1827, inc as a village 1858, as a city 1889. Once a lead center (1827–c 1829), it is now a trade and shipping point for a farm and dairy area. The site of the home of Henry Dodge is near by.

Dodgson, Charles Lutwidge: see Carroll, Lewis.

Dodo (dō'dō) [Heb., =amatory] **1.** Father of Elhanan. **2.** Father of the mighty man Eleazar. 2 Sam. 23 9, 1 Chron. 11 12. **Dodai.** 1 Chron. 27 4. **3.** Issacharite. Judges 10 1.

dodo, flightless forest-dwelling bird of Mauritius, extinct since the late 17th cent. Although related to the pigeon, it was larger than the turkey. The plumage was dark gray, with whitish breast, tail, and wings. The large black bill had a horny terminal cap. Its flesh was tough and unpalatable. Man and the domestic animals he introduced destroyed the bird, its single egg, and the young, and the dodo became extinct. The dodo appears in Lewis Carroll's *Alice in Wonderland*.

Dodona (dōdō'nu), in Greek religion, the oldest oracle, in inland Epirus, c 50 mi. E of Corcyra, sacred to Zeus and Dione. Priests interpreted the words of the oracle from the sound of a holy spring and from the wind in a sacred oak tree.

Dodsley, Robert, 1703–64, English publisher and author. He wrote a drama, *The Blind Beggar of Bethnal Green* (1741), and other plays and poems, but is best known as the editor of *A Select Collection of Old Plays* (12 vols., 1744) and *A Collection of Poems by Several Hands* (1748–58). He projected with Burke the *Annual Register* (1758), which still exists, and published the works of Young, Pope, Johnson, Gray, and Goldsmith. See Ralph Straus, *Robert Dodsley* (1910).

Doe, John, formerly in English law, fictitious plaintiff in an action of ejectment. Ejectment was originally a remedy for restoring a tenant for years to his occupancy of land from which he had been wrongfully ousted. As a more effective method for recovering property than the common law otherwise offered, it was made available to persons other than tenants for years by a fictitious suit. The nominal plaintiff, styled John Doe, a tenant for years, would bring suit against one Richard Roe who had dispossessed him of his land and was preventing the sublease to the actual plaintiff. The name John Doe has come to signify an anonymous person.

Doeg (dō'ĭg) [Heb., =uneasy], tool of Saul in the massacre at Nob. 1 Sam. 21 1–9, 22 6–23, title of Ps. 52.

Doenitz, Karl (dō'nĭts), 1891–, German admiral. He secretly planned a German submarine fleet in the years following the Versailles Treaty, was given command of submarine operations after the outbreak of the Second World War, and in 1943 replaced Admiral Raeder as chief naval commander. On the announcement (May 1, 1945) that Hitler was dead and had designated Doenitz his successor, the admiral formed a new cabinet and ordered the unconditional surrender (effective May 7) of Germany to the Allies. His government, at Kiel, was dissolved by the Allies. Doenitz, found guilty of war crimes, was sentenced (1946) to imprisonment for 10 years.

dog, domesticated mammal believed to be descended from the wolf. There is evidence that dogs were domesticated in the late Paleolithic period and were therefore the first domestic animals. Formerly it was thought that only certain breeds were descended from the wolf and that others were derived from related species, the jackal, coyote, and fox. Comparative studies of the teeth of these animals and those of dogs, as well as other evidence, led to the generally accepted conclusion that dogs of both hemispheres developed originally in Asia from the wolf. In early Egypt (c 3000 B.C.) two breeds were distinct, a short-legged dog and one with longer legs and a lighter but strong body (believed to be the greyhound's ancestor). Records of civilizations dating from c 3000 B.C. of cities in the Indus valley indicate that they had several types of dogs. Through the centuries dogs have been bred for special purposes, by the selective process man has perpetuated and intensified certain desired characteristics and eliminated others. The many present-day breeds fall into a few large groups. One of man's earliest uses of the dog was as a companion and aid in hunting, and many breeds were thus developed for pursuing and retrieving game. Although still used to some extent for such purposes, many of these dogs are now chiefly pets. Included in those generally known as sporting dogs are those that were bred for pointing, flushing, and retrieving game—the griffon, pointer, retriever, setter, and spaniel—and the many breeds of hounds, known for their ability to pursue their quarry. Also developed chiefly for hunting were the numerous breeds of terriers. Among those known as working dogs are the collie, Eskimo dog, German shepherd dog, Samoyede, and St. Bernard. Nonsporting dogs include the Boston terrier, bulldog, chow, Dalmatian, and poodle. Toy dogs are small dogs long bred as pets, among them are the chihuahua, toy spaniel, Mexican hairless, Pekingese, Pomeranian, pug, and toy poodle. See also articles on the separate breeds. See E. C. Ash, *Dogs* (1927) and *Practical Dog Book* (1931); American Kennel Club, *Complete Dog Book* (rev. ed., 1945); W. L. Judy, *Care of the Dog* (3d ed., 1946), May Larson, *Kennel, Show, and Field* (1948), E. V. Connett, *American Sporting Dogs* (1948), B. S. Vesey-Fitzgerald, ed., *Book of the Dog* (1948), H. P. Davis, ed., *Modern Dog Encyclopedia* (1949).

dog days, name for the most sultry period of summer, from about July 3 to Aug. 11. Named in early times by observers in countries bordering the Mediterranean, the period was reckoned as extending from 20 days before to 20 days after the conjunction of Sirius (the dog star) and the sun. In the latitude of the Mediterranean region this period coincided with the hot days plagued with disease and discomfort. The time of conjunction varies with difference in latitude, and because of the precession of the equinoxes it changes gradually over long periods in all latitudes.

dogfish, name for small sharks of several families found in both hemispheres, most abundantly in temperate but also in some tropical waters. Commonest among them is the spiny dogfish (*Squalus acanthias*) of the family Squalidae, which has a stout spine supplied with poison in front of each dorsal fin. It reaches a length of from 3 to 4 ft. It is most plentiful in the North Atlantic, where, traveling in large schools, it is a greedy destroyer of herring, mackerel, and other fish and is injurious to nets. Following unsuccessful attempts to eradicate the dogfish, efforts were made to establish the nutritious flesh as food. It was marketed in England as flake, in Canada and the United States as gray fish, and in Germany as sea eel. Oil from the liver of various dogfish is used in the adulteration of other fish oils.

Dogger Bank (dō'gûr, dŏ'–), extensive sand bank, central North Sea, between England and Denmark, covered by shallow water. It has fisheries.

Dog Star see Sirius.

dogtooth spar see Calcite.

dogtooth violet, originally a name for the Old World plant *Erythronium dens-canis*, now applied also to several North American species of the same genus, particularly two spring wild flowers of the East and Middle West called also adder's-tongue and trout lily. These have a single pair of leaves and a pendent lilylike flower—one yellow flowered with brown-mottled leaves, the other white flowered. Some species of the West are called avalanche, snow, and fawn lily.

dogwood or **cornel** (kôr'nul, –nĕl), shrub or tree of the large genus *Cornus*, chiefly of the Northern Hemisphere. The best known species is the flowering dogwood (*Cornus florida*), a handsome tree with spring flowers in showy bracts of white or sometimes pink, for which it is often cultivated. Most other species have less conspicuous clusters of flowers. All species are rich in tannin, and some have been used medicinally. The bark of *C. florida* has been used as a substitute for quinine and the roots as a dye, it has hard wood valued for shuttles, tool handles, and wood golf heads. The cornelian cherry, an Old World species (*C. mas*), has yellow flowers and usually scarlet fruits, used in preserves and drinks in Europe, it is cultivated in North America. The bunchberry is a species of *Cornus*.

dogy or **dogie** (both dō'gē), name given by cowboys to a motherless calf or to any ill-nourished, scrubby calf and, as a term of contempt, to all cattle. The weak calves naturally lag behind the rest of the herd on a drive and must be continually urged forward. Hence in cowboy songs the chorus frequently has a repetition of "Get along, little dogies" or "Roll along, little dogies." The word also occurs as *doby* and *dobie*.

Doherty, Charles Joseph (dō'urtē), 1855–1931, Canadian jurist and statesman, b. Montreal, educated at McGill Univ. After serving (1891–1906) as a puisne judge of the superior court of Quebec prov., he retired from the bench and entered (1908) the Canadian House of Commons as a Conservative. While serving (1911–21) as minister of justice in the administrations of Sir Robert Borden and Arthur Meighen, Doherty was a Canadian representative at the Paris Peace Conference, signed the Treaty of Versailles on behalf of Canada, and later (1920–21) represented Canada in the Assembly of the League of Nations.

Dohnanyi, Ernst von (ĕrnst' fŭn dō'nänyē), Hung. *Dohnányi Ernő* (ĕr'nŭ), 1877–, Hungarian composer, pianist, and conductor. He studied at the Royal Academy, Budapest, 1894–97, and later became its director. He toured as a pianist until 1908, when he became professor of piano at the Berlin Hochschule. Later he became permanent conductor of the Budapest Philharmonic Orchestra and musical director (1931) of the Hungarian Broadcasting Corp. His compositions, stylistically deriving much from Brahms, include four operas, chamber music, concertos, piano pieces, the orchestral suite *Ruralia Hungarica*, and the witty *Variations on a Nursery Tune*, for piano and orchestra.

Doisy, Edward Adelbert (doi'zē), 1893–, American biochemist, b. Hume, Ill., grad. Univ. of Illinois (B.A., 1914), Ph.D. Harvard, 1920. For his discovery of the chemical nature of vitamin K he shared with Henrik Dam the 1943 Nobel Prize in Physiology and Medicine. Doisy and others synthesized vitamin K in 1939. He has contributed to the knowledge of metabolism, insulin, and blood buffers and has isolated the sex hormones theelin (1929) and dihydrotheelin (1936). Doisy taught biochemistry at Harvard (1915–17) and at the medical school of Washington Univ., St. Louis (1919–23), and became professor of biochemistry at the medical school of St. Louis Univ. in 1923.

Dolabella (Publius Cornelius Dolabella) (dŏlubĕ'lu), c 70 B.C.–43 B.C., Roman general, notorious for his unscrupulousness. He divorced his wife Fabia and married (50 B.C.) Tullia, daughter of Cicero, to gain the support of that statesman. He transferred allegiance from Pompey to Caesar, fought at Pharsala, and accompanied Caesar to Africa and Spain. On the assassination of Caesar he at first favored the conspirators, then, with Antony's help, seized the consulship. He was commander of an army sent against Parthia and Syria, but he murdered the Roman proconsul C. Trebonius at Smyrna to get possession of the town treasure. He was outlawed by the senate and, in despair, caused one of his soldiers to kill him.

Dolbeau (dŏlbō'), town (pop. 2,847), S Que., on the Mistassini river near its mouth on Lake St. John. It is a pulp and paper center.

Dolci, Carlo or **Carlino** (kär'lō, kärlē'nō dōl'chē), 1616–86, Florentine painter. Among his best-known paintings are the heads and half-figures of Christ and the Mater Dolorosa, in which the expressions of patient suffering and sorrow are admirably portrayed. His works are best studied in the Uffizi and Pitti galleries and Corsini Palace, Florence. Among the finest are the celebrated *Magdalen*, *St. Cecelia*, *St. Sebastian* (Corsini Palace), and *St. Andrew Praying before His Crucifixion* (Pitti Palace), and *Christ Breaking the Bread* (Marquess of Exeter's Coll., Burghley House, Stamford, England). Many of Dolci's paintings are familiar through engravings.

doldrums (dōl'drumz) or **equatorial belt of calms,** an area around the earth slightly north of the equator (its location varying with the seasons and with the distribution of land and water), between the two belts of trade winds. The region is characterized by low barometric pressure, hot rising air, high humidity, cloudiness, light variable winds and frequent thunderstorms, calms, and squalls. In this area originate hurricanes. To be becalmed in the doldrums, perhaps for weeks, under the hottest sun in the oppressive, sultry air, like Coleridge's "ancient mariner," was one of the fears of the sailor dependent upon winds.

Dole, Sanford Ballard, 1844–1926, statesman of the Hawaiian Islands, b. Honolulu, of American missionary parents. After education in the United States he returned to Hawaii and became prominent in public life. A leader of the revolution that in 1887 secured a more democratic constitution, Dole became justice of the supreme court under the new government. He looked with disfavor upon the revolution of 1893 which overthrew Queen Liliuokalani, but once it was accomplished he was willing to accept the office of president under the provisional government. The application of the revolutionists for annexation to the United States was refused by President Cleveland, who, after sending James H. Blount to investigate, demanded the restoration of the queen. Dole's reply, in which he defended the revolution and denied Cleveland's right to interfere, was one of his ablest papers. A constitutional convention was then held (1894), and the republic of Hawaii was created. Dole was declared the first president. His administration, during which he made efforts to secure annexation, was successful in spite of attempts at a counterrevolution and difficulties with Japan concerning immigration. After the islands were annexed in 1898 in McKinley's administration, Dole headed a commission to Congress to recommend legislation for Hawaii. The report included the draft of a bill which became the Organic Act of 1900. Dole was appointed first governor of the Territory of Hawaii in 1900. He resigned in 1903 to become U.S. district judge for Hawaii.

Dôle (dōl), town (pop. 16,340), Jura dept., E France, on the Doubs. It was the capital and a fortified stronghold of Franche-Comté until Louis XIV, who conquered the province from Spain in 1674, shifted its parlement to Besançon. The university, founded (c 1422) by Philip the Good of Burgundy, was also transferred to Besançon, and Dôle declined. It has a chemical industry. Louis Pasteur was born here.

dole, distribution to the poor, usually of food or money. In medieval times doles were usually from bequests of money or land, and the income was given to charity or distributed to the local poor at funerals. John Leake in 1792 left £1000 to Trinity Church, New York city, the income of which was to provide wheat loaves to be distributed to the poor every Sunday morning after services. After the First World War the term was applied in Great

Britain to weekly payments to the unemployed—the noncontributory payees under the out-of-work-donation plan of 1918 This fund, terminated in Nov., 1919, was not administered on an insurance basis but rather through the use of exchanges The term was then misapplied to payments made under the National Unemployment Insurance scheme, of which the government's share was 25 percent of the whole, while the employers and employees equally divided the rest (75 percent) In the distribution of benefits no distinction was made as to earnings, sex, or race, the duration of the benefits being limited to 15 weeks in any one year Included in the scheme were all wageworkers between the ages of 16 and 65, with the exception of those in domestic service, public works, and agriculture As this came into operation at the beginning of an industrial depression, men who had not paid a sufficient amount or who had exhausted their benefits received payments also The term has also been applied to payments to unemployed by the Poor Law authorities

Dolet, Étienne (ātyĕn' dōlā'), 1509–46, French scholar and printer of Lyons He wrote treatises on French grammar, poems, a short history of Francis I, and works in Latin about Cicero In 1538 he issued from his own press the important *Commentarii linguae Latinae*, which was of great influence on the French Renaissance The fame and prosperity of his presses and his translation of the Bible and of the *Axiochus* into French got him into trouble with the authorities He was arrested, convicted of heresy, and executed His *L' Enfer d' Étienne Dolet* is a poem on his life in prison

Dolgelley (dŏlgĕth'lē, -gĕ'lē), urban district (1931 pop 2,260, 1943 estimated pop 2,740), co seat of Merionethshire, Wales, on the Wnion at the northern foot of Cader Idris A tourist center, it has leather manufacture, and gold has been mined in the vicinity Here, in 1404, Owen Glendower and the French held a conference

Dolgeville (dōl'vĭl), village (pop 3,195), E central N Y, E of Utica, inc 1891 Felt goods are manufactured here

doll. The many types of small figures found among the relics of primitive peoples were cult objects Egypt, Greece, and Rome have left well-preserved dolls of wood, clay, bone, ivory, and bronze which were used symbolically and probably also by children as playthings The articulated PUPPET was known in ancient Greece Creche dolls, some of them artistic masterpieces, were early used in Catholic lands in representations of the Nativity From the 15th cent , fashion dolls were popular in Europe as gifts among monarchs and courtiers and were important in the spread of costume styles At Venice a French doll dressed in the latest mode was annually displayed on Ascension Day Dolls regularly brought to the American colonies the latest fashions in dress and coiffure By the 17th cent , play dolls were commonly used by both boys and girls Sonneberg, Germany, was noted from the 17th cent as a center for wooden dolls, and in the 19th cent the town led also in the making of dolls' china heads Paris led in developing dolls that could speak and close their eyes and specialized in fine-lady dolls The use of papier mâché early in the 19th cent stimulated large-scale manufacture Wood, papier mâché, china, and wax were used for dolls at this time, hard rubber c 1850, and bisque c 1862 Homemade dolls include the colonial cornhusk man and the rag doll, which has evolved into a commercial product Cutout paper dolls are probably derived from the animated cardboard *pantins* fashionable among French courtiers in the 18th cent See W H Mills, *The Story of Old Dolls and How to Make New Ones* (1940), J P Johl, *The Fascinating Story of Dolls* (1941)

Dollar, burgh (pop 1,485), Clackmannanshire, Scotland, at the foot of the Ochils, near the Devon and NE of Alloa There are ruins of old Castle Campbell

Dollard des Ormeaux, Adam (ădā' dôlar' dāzôrmō'), 1636?–1660, commandant of the garrison at Ville-Marie (Montreal), b France He went to Canada in 1657 In the spring of 1660 he led a small party of Frenchmen up the Ottawa river to wage war on the Iroquois At Long Sault Rapids he and his companions were killed after a week's defense in an improvised fort against a large band of Iroquois, who were, however, forced to give up their plan to attack New France.

Dollfuss, Engelbert (ĕng'ulbĕrt dôl'fo͝os), 1892–1934, Austrian statesman A Christian Socialist, he rose to prominence as leader of the Austrian Farmers' League and became minister of agriculture in 1931 Appointed chancellor in 1932, he obtained a badly needed international loan in return for a pledge to maintain the full independence of Austria For a year Dollfuss governed with a precarious majority, but in March, 1933, he discarded parliamentary government on a technical pretext and assumed quasi-dictatorial powers The increasingly powerful Austrian National Socialist party, backed by Nazi Germany, was the chief threat to the Dollfuss regime and to Austrian independence Dollfuss never wavered in his firm stand against Nazism. Unwilling or unable to cooperate with the Social Democrats, he relied more and more on an alliance with the native Austrian fascists under E R von STARHEMBERG In foreign policy he was ill supported by the Western powers and staked the preservation of Austrian independence on the friendship with Italy. In Feb , 1934, the "little chancellor" (so called because of his diminutive stature) ruthlessly suppressed a Socialist rising Austria became an authoritarian state, with a one-party system, under a "corporative" constitution drafted by SCHUSCHNIGG (April, 1934) Dollfuss was brutally assassinated (July 25) by Austrian Nazis, who made an unsuccessful attempt to seize power See J D Gregory, *Dollfuss and His Times* (1935)

Dollier de Casson, François (frāswa' dôlyā' du kāsô'), 1636–1701, priest and explorer in Canada, b near Nantes, France In 1657 he entered the seminary of Saint-Sulpice, Paris, and in 1666 he went as a missionary to Canada With Father Galinée he set forth (1669) in La Salle's company, bound for the Ohio-Mississippi country, where the two priests planned to carry on missionary activities among the Western Indian tribes At Lake Ontario they parted from La Salle and went W to Lake Erie, on its north shore they wintered (1669–70), claiming the land in the name of Louis XIV Prevented by a series of misfortunes from continuing their missionary travels, they decided to go on to Sault Ste Marie and return to Montreal by way of the Ottawa river In 1671 Dollier de Casson became superior of the seminary at Montreal and later was vicar general of the diocese of Quebec His history of Montreal from 1640 to 1672 was published in 1868, it was translated into English (1928) by Ralph Flenley, who added a life of Dollier de Casson

Döllinger, Johann Joseph Ignaz von (yō'hän yō'zĕf ĭg'nats fän dû'lĭng-ur), 1799–1890, German theologian and historian, leader of the OLD CATHOLIC movement Ordained in 1822, he was subsequently professor of church history and ecclesiastical law at the Univ of Munich, chief librarian of the university, and a member of the Academy of Sciences Between 1845 and 1852 he had considerable influence as representative of the university in the Bavarian chamber and as one of the leading members of the Catholic party in the Frankfurt Parliament Temporarily (1847–49) he lost his professor's chair and his seat in the chamber A German Catholic Church, independent of the state, was the cause to which Döllinger devoted his efforts Some lectures delivered in Rome (1857) were published in English as *The Church and the Churches, or, The Papacy and the Temporal Power* This work, subsequently banned, expressed the opinion that the temporal sovereignty was not an essential accompaniment of the papacy In 1863 followed a work known in English as *Fables respecting the Popes in the Middle Ages* When the Vatican Council was in session, Döllinger opposed the doctrine of papal infallibility in a series of letters and papers, published under the pseudonym Janus as *The Pope and the Council* (1869) When that doctrine was pronounced a dogma in 1870, he refused to accept it. In 1871 he was excommunicated Although he was in sympathy with the Old Catholics, he never had intended that a separate sect should grow out of the movement, and he never formally became a member of the Old Catholic Church He was made rector of the Univ of Munich and in 1873 president of the Academy of Sciences Many of his works were translated into English

Dolliver, Jonathan Prentiss, 1858–1910, U S Representative (1889–1900) and Senator (1900–1910) from Iowa, b Preston co , Va (now in West Virginia), grad Univ of West Virginia, 1876 A lawyer of Fort Dodge, Iowa, he entered politics and was as Congressman one of the most persuasive speakers of his day He was in the early days of his national career a protégé of William B ALLISON and a conservative Republican, but later he swung to Progressive views, especially on railroad and tariff issues, and allied himself with A B CUMMINS

Dollond, John (dŏ'lund), 1706–61, English optician, inventor, and specialist in achromatics His refracting telescopic lens, the first to function without color fringes, won him, in 1758, the Copley medal of the Royal Society, London A silk weaver, entirely self-taught, he became known for his erudition as well as for his scientific achievements With his son, **Peter Dollond,** 1730–1820, he developed a notable optical manufactory in London

dolmen (dōl'mĕn, dōl-) [Breton, =stone table], archaeological term for a rough stone structure, consisting usually of two uprights supporting a capstone or table They are characteristic megalithic monuments and are considered to have formed a burial chamber, as in a BARROW Some authorities consider them to have been erected to substitute for cave burial They are particularly common in Western Europe, especially in Portugal, Brittany, and the British Isles Sometimes the term CROMLECH is substituted for dolmen.

Dolomieu, Dédodat Guy Silvain Tancrède Gratet de (dādōdā' sēlvē' tăkrĕd' gratā' dù dôlômyû'), 1750–1801, French geologist. He made important contributions to the study of volcanic geology, especially through examination and comparison of the products of volcanoes His discovery in Sicily of igneous rock interstratified with submarine sedimentary rock strengthened the belief in the igneous origin of basalt In 1791 he reported on the character of the mineral later known as DOLOMITE. He wrote several works on his findings during geological journeys, especially in S Europe A member of the scientific staff of Bonaparte's Egyptian expedition, he was captured on the return voyage, while in prison he wrote his *Sur la philosophie mineralogique* (1801)

dolomite (dŏ'lumīt) **1** A mineral, calcium magnesium carbonate The crystals may be white, gray, brown, black, or reddish, the luster is vitreous to pearly The magnesium is sometimes replaced in part by iron or manganese **2** A carbonate rock composed chiefly of the mineral dolomite, similar to limestone but somewhat harder and heavier Most dolomites probably originated through the replacement of the calcium of limestone by magnesium Dolomite may be metamorphosed into dolomitic marble The chief uses of dolomite are as a building stone and in the manufacture of linings for refractory furnaces and of basic magnesium carbonate for pipe coverings Formations of dolomite are very widespread (occurring in Europe, the United States, Brazil, and Mexico) and notably in the region of the Alps now called the Dolomites, where the rock was first studied by Dolomieu

Dolomites (dŏ'lumīts) or **Dolomite Alps,** Alpine group, N Italy, between the Isarco and Piave rivers, named for the stone of which it is formed Famous for their strikingly bold outline and for their vivid colors at sunrise and sunset, the Dolomites are ideal for rock-climbing The Marmolada (10,961 ft) is the highest peak Cortina d'Ampezzo and other resorts are among the major tourist centers of Italy

dolphin. 1 Gregarious mammal, a toothed WHALE found in most oceans and sometimes in rivers Dolphins range from 4 to 30 ft in length, the majority are from 5 to 14 ft Some which frolic in the vicinity of ships are called porpoises, but dolphins differ from true porpoises in having pointed muzzles The common dolphin of Atlantic and Mediterranean waters is usually 7 to 8 ft. long and has beaklike jaws It is seldom seen on the North American coast, where the bottle-nosed dolphin, which inhabits all but polar seas, is more often observed The killer whale or grampus (*Orcinus* or *Orca*), a large dolphin with a black and white mottled body, is the worst enemy of seals, porpoises, fish, and sea birds In groups it attacks and bites out the tongue of large whales River dolphins are related fresh-water animals of Asia and South America Dolphins featured in classic sculpture **2** Name for the coryphene, a swift spiny-finned fish of warm seas It has a long dorsal fin and the body is iridescent Some attain a length of 6 ft Flying fish are among its prey It is valued as food

Dolton, residential village (pop 3,068), NE Ill , just S of Chicago, in a truck-farm area, inc 1892

Dom (dôm), peak 14,943 ft high, in the MISCHABELHORNER group, highest peak entirely in Switzerland

Domagk, Gerhard (gā'hart dō'māk), 1895–, German chemist and pathologist A teacher successively at the universities of Greifswald and Münster, he became (1927) director of research at the I G Farbenindustrie laboratory at Wuppertal Because of a Nazi decree he was obliged to decline the 1939 Nobel Prize in Physiology and Medicine In 1947 he received a gold medal in lieu of the prize money The award was made for his discovery of the efficacy of prontosil, the forerunner of the sulfa drugs or sulfanilamide compounds, in treating streptococcal infections

Domat or **Daumat, Jean** (zhā' dômá'), 1625–96, French jurist His *Les Loix civiles dans leur ordre naturel* [civil laws in their natural order] (3 vols , 1689–94) is a restatement of Roman law considered as a system derived from ethical theory and natural theology It is believed to be the earliest work on the subject to depart from the arrangement of the 6th-century Corpus Juris Civilis

Dombasle, Christophe Joseph Alexandre Mathieu de (krēstôf' zhôzĕf' ălĕksā'dru matyû' du dôbāl'), 1777–1843, French agriculturist He established the first model farm and agricultural school (1822) near Nancy, in France, and otherwise promoted the progress of French agriculture by introducing English and German ideas, writing treatises on many practical subjects, and encouraging the cultivation of new products—such as sugar beets—and the raising of better cattle, sheep, and horses. He invented a plow that bore his name

Dombrowa, Poland see DABROWA GORNICZA

Dombrowski, Jan Henryk see DABROWSKI

dome, a roof circular or (rarely) elliptical in plan and usually hemispherical in form, placed over a circular, square, oblong, or polygonal apartment Domes have been built with a wide variety of outlines and of various materials Their earliest appearance was in the valley of the Tigris and Euphrates, where the use of sun-baked bricks led to the dome as a simple method of roofing adapted to the adhesive material. Such primitive domes

were used in the Assyrian period (1275–538 B.C.) and in the Persian and Sassanian periods which followed The Greeks made no use of the dome, but the Romans converted the primitive idea into a magnificent architectural element for covering monumental structures The Pantheon at Rome (2d cent A D), with its superb hemispherical dome, is structurally intact Roofing a circular room and constructed of brick and mortar, it has an internal diameter of 142 ft and is the largest dome in existence and one of the most beautiful internally The Romans, however, failed to discover a proper handling of the PENDENTIVE—the device essential to placing a dome over a square compartment, finally achieved by the Byzantine builders in Hagia Sophia at Constantinople (A D 532–37) The solving of this problem inaugurated a new period of dome construction and the dome of Hagia Sophia exerted profound influence through Italy and France The Byzantine style influenced the Saracens, and domes came into lavish use in all countries that fell under the Mohammedan conquest—in Persia, Turkey, India, and Egypt and in Spain, Sicily, and North Africa Saracenic domes departed from simple circular outlines, and their exterior shapes are, characteristically, pointed or bulbous (pear shaped) and often ribbed, while the interiors have pendentives developed in complex stalactite corbelings The most celebrated example is the superb Taj Mahal (A D 1630) at Agra, India Both the influence of the Roman Pantheon and of the Byzantine pendentive came to bear upon the designers of the Italian Renaissance, and the crossings of most churches of the period were covered by masonry domes on pendentives Between pendentives and dome a circular drum usually was interposed, serving both to give greater elevation and external importance and as a space for the introduction of windows By the addition of an outer shell, the exterior came to be independently designed for maximum effectiveness, and the placing of a lantern at the top of this outer shell provided an apex for the entire composition Celebrated examples are St Peter's, Rome, designed by Michelangelo, with two masonry shells (completed 1590), internal diameter 137 ft, the church of the Invalides, Paris, by J H Mansart (1706), 90 ft, St Paul's Cathedral, London, by Sir Christopher Wren (1675–1710), 112 ft, and the Panthéon, Paris, by J G Soufflot (1775–81), 69 ft The last three domes are built with triple shells, the middle shells serving to support the crowning lanterns In the United States the dome of the Massachusetts state capitol, designed (1795) by Charles Bulfinch, established the dome as a distinctive feature for numerous later state capitols as well as for the national Capitol at Washington The dome of the latter, however, is of cast iron instead of masonry The design by T U Walter, has an inner diameter of 90 ft and possesses great external impressiveness Modern domes usually are constructed of steel and concrete or of tile

Domenichino (dōmānēkē'nō) or **Domenico Zampieri** (dōmā'nēkō tsämpyā'rē), 1581–1641, Italian painter, studied Correggio in Parma and Modena He then went to Rome, where he assisted Annibale Carracci with his frescoes in the Farnese Palace and executed decorative works for Cardinals Aldobrandini, Farnese, and Borghese, as well as numerous frescoes in the churches of Rome In 1614 he painted the superb *Last Communion of St Jerome*, now in the Vatican The outstanding works of his later period are designs for Villa di Belvedere at Frascati and for Villa Ludovisi, Rome, and frescoes for the St Januarius chapel in the Naples cathedral Domenichino ranks as one of the greatest pupils of the school of the Carracci His portraits are among the best of the Bolognese school, and he often employed admirably executed landscapes as backgrounds in his subject pieces

Domenico Veneziano (dōmā'nēkō vānātsēā'nō), c 1400–1461, Florentine painter Only three authentic works remain—the altarpiece of Santa Lucia di Bardi, with its pale but luminous tonal harmonies (central panel in the Uffizi; another fragment in the Fitzwilliam Mus., Cambridge, England); *Madonna and Child* (National Gall., London); and the rugged *St John the Baptist* (Santa Croce, Florence) A fine profile portrait of a girl (Gardner Mus., Boston) is believed to be his work He introduced the technique of finishing tempera works with an oil glaze See Bernard Berenson, *The Florentine Painters of the Renaissance* (1896).

Dome of the Rock: see MOSQUE

Domesday Book (dōmz'dā, dōōmz' dā), the record of the general survey of England made at the order of WILLIAM I (William the Conqueror) in 1086 The survey ascertained the economic resources of most of the country for purposes of more accurate taxation Royal agents took the evidence of local men in each hundred, the latter acting as inquest jurors Descriptions of each piece of land, its present and former holders, the method of holding, and the population on it were included among the facts recorded. For the thoroughness and speed with which it was taken, the Domesday survey as an administrative measure is unsurpassed in medieval history. Written from the data thus gathered, the Domesday Book is an invaluable historical source. It furnished the material for F. W Maitland's masterly survey, *Domesday Book and Beyond* (1921), which treats of social and economic conditions in Anglo-Saxon and Conquest times Many of the Domesday records have been printed by counties in the *Victoria County Histories*, and several portions have been independently published See Adolphus Ballard, *The Domesday Inquest* (1906)

domestication, of plants and animals When early man began to cultivate plants, his habitations became more permanent and his food supply more dependable, these factors contributed importantly to social and cultural development All the major plant crops were domesticated during the Neolithic period Archaeological evidence indicates that emmer wheat was cultivated in Egypt at least by 5000 B C, grains of barley and emmer preserved in Mesopotamia date from c.4000 B C Some authorities believe that rye was developed from a weed that appeared in fields of wheat or barley in W Asia and that oats originated as a weed in fields of emmer The early Egyptians cultivated not only cereals, but also beans, lentils, melons, onions, radishes, garlic, and grapes Olives and flax are believed to have originated also in the vicinity of the Near East. Rice, sugar cane, and probably bananas and cotton were first grown in SE Asia Maize (corn) was the staple grain of the Western Hemisphere and was grown from the times of the pre-Inca civilization of Peru The white potato, the sweet potato, and a number of kinds of beans (e g, lima beans, red kidney beans, navy beans, marrow beans, and snap beans) also originated in the Western Hemisphere and were cultivated in early times Probably the domestication and breeding of most animals began about the same time as that of plants It is believed, however, that the dog may have been domesticated in the late Paleolithic period In Neolithic times draft animals began to be employed. The ass and probably the ox were domesticated first in the Near East, the horse was employed for riding probably first in central Asia, and the camel is believed to have been first domesticated on the steppes or deserts of Asia where they reached Africa The water buffalo originated as a beast of burden in SE Asia, this region was also the place of domestication of many poultry birds (not including the turkey) In the New World the llama and the alpaca were domesticated in the Andean region Although no new animals are known to have been domesticated since the beginning of recorded history, improved types have been developed through BREEDING.

domestic relations. For psychological and sociological aspects, see MARRIAGE For legal aspects, see DIVORCE, HUSBAND AND WIFE, PARENT AND CHILD

domestic science see HOME ECONOMICS

domestic service was performed by slaves in many early civilizations, e g, in Greece and Rome. Under the feudal system the work was done by serfs Under the guild system indentured apprentices performed household duties while learning a trade With the disappearance of feudalism and guilds, servants were recruited from free wage earners Domestic service came to be regarded as an unattractive occupation because of the long hours, low wages, poor living conditions, low social status, and dependence on the personal habits of the employer In the American colonies, domestic service was performed by transported convicts, bond servants who sold themselves into service for stated periods to pay their passage, Indians, and Negro slaves After the Revolution indentured servants were largely replaced except in the South, by free native-born labor not subjected to social discrimination The rapid development of the industrial system in the 19th cent provided more lucrative employment for native-born labor and coincided with a flow of immigrants many of whom drifted into domestic service The immigration quotas established in 1921 cut down this supply In the United States, as in most countries, domestic service has not been regarded as an industry, unionization is weak, and servants are generally excluded from legislation on wages and hours, social security, and workmen's compensation In Sweden there is little social stigma and the unions are strong, in Great Britain domestic workers are covered by national health and unemployment insurance schemes The shortage of domestic laborers in most countries has been partially offset by improvements in working conditions, by the use of labor-saving devices, by an increase in the number of restaurants and communal living units such as apartment houses and hotels, and by the establishment of domestic training schools See J C Brown, *Concerns of Household Workers* (1941), publications of the U S Women's Bureau.

Domett, Alfred (dō'mĭt), 1811–87, English poet. The subject of "Waring," a poem by his friend Robert Browning, he in turn dedicated to Browning his verse in *Flotsam and Jetsam* (1877) Domett spent the years from 1842 to 1871 in New Zealand, where he held many colonial government posts. He used the Anglo-Maori life of the country in his narrative poem *Ranolf and Amohia* (1872).

Domfront (dōfrō'), town (pop. 2,600), Orne dept., NW France, in Normandy. An agricultural center, it has medieval town walls and the imposing ruins of an 11th-century fortress, one of the chief strongholds of medieval Normandy The town and a near-by Romanesque church (11th cent.) were damaged in the Second World War

domicile, one's legal residence This may or may not be the place where one actually resides at any one time The domicile is the permanent home to which one has the intention of returning whenever the purpose for which one is absent has been accomplished One may at the same time possess a temporary lodging for a short time in one place, a more permanent place of abode called a residence at another place, and a domicile at still another place Usually the domicile of the husband and father determines that of wife and children The question of determining the domicile of a person is of importance in application of tax laws and also in determining personal status under international law.

Domínguez, Francisco Atanasio: see ESCALANTE, SILVESTRE VÉLEZ DE

Dominic, Saint (dŏ'mĭnĭk), 1170?–1221, Castilian churchman, named Dominic Guzmán, founder of the Dominicans. He studied at Palencia and became a canon, then prior of canons, of the cathedral of Osma He and his bishop went to Rome (c.1203) seeking permission to evangelize the Tatars, instead, Innocent III sent them to S France to preach to the Albigenses Adopting absolute poverty, they wandered about Languedoc preaching, and were the first Catholic missionaries to have success there St Dominic started a community for women converts at Prouille in 1206 In 1216 he was given a house and church at Toulouse for his band of preachers, now grown to 16 The same year he went to Rome and received from Honorius III approval of his plans for the new little order This, with its novel vocation to study and preaching, grew phenomenally An ancient tradition, often pictured, tells how the saint received the rosary from the Virgin Mary in a vision It is also told that St Dominic and St Francis met and became friends in Rome, Franciscans and Dominicans have been constantly associated, if not always friendly, and to this day each order pays special honors to the founder of the other order Feast Aug. 4 See Bede Jarrett, O P, *Life of St Dominic* (1934), P F Mandonnet, *St Dominic and His Work* (Eng tr, 1944)

Dominica (dŏmĭnē'kŭ), island (304 sq mi; pop 47,682), British West Indies It corresponds to Dominica colony, part of the WINDWARD ISLANDS The capital is Roseau (pop c 9,600) Mountainous and forested, with rugged and beautiful scenery, the island has a rich soil, producing for export vanilla as well as cacao, lime juice and lime oil, coconuts, oranges, bananas, and spices The majority of the population, speaking a French patois, is Negro, presumably with an admixture of Carib Discovered by Columbus in 1493, Dominica was left largely to the Caribs by agreement between France and England However, French settlements increased, and the island changed hands frequently between 1761 and 1815 In 1940, made a colony in itself, it was detached from the Leeward Islands colony

Dominican Republic (dumĭ'nĭkun), republic (19,129 sq mi, 1944 estimated pop 1,969,773), West Indies, on the eastern two thirds of the mountainous island of HISPANIOLA The capital is Ciudad Trujillo, more commonly known as Santo Domingo After Spain by the Treaty of Basel (1795) ceded the colony of SANTO DOMINGO to France, the area now known as the Dominican Republic was conquered (1801) by the Haitians under TOUSSAINT L'OUVERTURE The Spaniards, fearing black rule, supported the French invasion of Haiti under General LECLERC The resident French commander was able later to fend off the attacks of JACQUES DESSALINES, but in 1808 the people, preferring Spanish rule, revolted and in 1809 with the aid of an English squadron captured the city of Santo Domingo The first republic was short-lived By the Treaty of Paris (1814) Spain regained title to its former colony In turn, Spanish rule was brief In 1821 the inhabitants expelled the Spanish governor, but in 1822 they were reconquered by the Haitians under Jean Pierre BOYER Unlike the Haitians, who were almost entirely pure Negro, the Spanish population was more evenly made up of white, mulatto, and Negro, and the culture was dominantly Spanish A revolt broke out in 1844, the Haitians were defeated, a constitution was promulgated, and the Dominican Republic was finally established under Pedro SANTANA Frequent revolts as well as continued Haitian attacks led Santana to make his country a province of Spain in 1861, but opposition under Buenaventura BÁEZ was so severe that Spain withdrew in 1865 Unable to preserve order, Báez himself negotiated a treaty of annexation to the United States, which the Dominicans approved but the U S Senate failed to ratify. All semblance of order vanished. There were kaleidoscopic changes in the presidency and a long (1882–99) ruthless dictatorship under Ulises Heureaux, followed again by assassination

and revolts The republic was hopelessly bankrupt by 1905 and faced intervention from foreign powers President Theodore Roosevelt by executive agreement arranged a U S. customs receivership Although there was marked improvement in finances, fiscal control brought virtual political dominance. Disorder continued, and the island was occupied by U S marines in 1916 Feeling in Latin America and among U S liberals rose steadily against intervention The marines were withdrawn in 1934, the customs receivership terminated in 1941. Absolute dictator since the overthrow of Horacio Vásquez in 1930, Rafael Trujillo Molina has continued the material advancement of his country, but the government has been strictly under his control Although crop diversification was begun in 1925, sugar still leads the list of exports, accounting for about 63 percent Cacao and coffee are also major exports Aside from the sugar centrals and refineries, industries are few, but foodstuffs (yucca starch, meats, peanut oil, dairy products, and chocolate) are increasingly processed The Dominican Republic, nearly twice as large but with only two thirds the population of overcrowded Haiti, made efforts to prevent infiltration of Haitians Frequent border clashes resulted, and in 1937 Dominican troops crossed the boundary and massacred between 10,000 and 15,000 Haitians Pressure from the west is great, the two cultures are sharply divided, and the Dominicans fear absorption by the blacks Consequently, immigration of European refugees to increase the white population and occupy unproductive lands was encouraged See Sumner Wells, *Naboth's Vineyard* (2 vols , 1928), Otto Schoenrich, *Santo Domingo a Country with a Future* (1918)

Dominicans (dümĭ'nĭkŭnz), Roman Catholic religious order, founded by St Dominic in 1216, officially named the Order of Preachers (O P) Though they began locally in evangelizing the Albigenses, before St Dominic's death (1221) there were already eight national provinces The rule and constitutions had novel features For the first time the members of the order (friars) were accepted not into a specific house, but into the whole order The friar's life was to be all preaching and study, the order provided houses of study at centers of learning, and the rule set up dispensations from other duties to promote study Unlike that of most orders, the Dominican plan of government is nonpatrenalistic Priors of houses and provinces are elected for terms, and the councils are largely made up of elected delegates A prior has nothing like the honor and prestige accorded an abbot Dominicans were prominent in the medieval universities, St Thomas Aquinas was a Dominican, and the order has zealously propagated Thomism It has been often called on to provide official theologians, this fact, as well as the coincidence of origin, accounts for the Dominicans' being the order principally in charge of the Inquisition In the 19th cent the Dominicans had a revival in France and England, becoming leaders in Catholic social movements Dominicans came to the United States soon after 1800, their first U S province was founded in 1805 The Dominicans are especially attached to the rosary Their habit is white, with a black mantle, which is worn for preaching They used to be called Black Friars There is a contemplative order of Dominican nuns and a widespread third order Many of the tertiaries are in sisterhoods for teaching and other works St Catherine of Siena was a Dominican tertiary See R G Galbraith, *The Constitution of the Dominican Order* (1925), John-Baptist Reeves, *The Dominicans* (1929), R F Bennett, *The Early Dominicans* (1937).

Dominion, town (pop. 3,279), on Cape Breton Island, N S , on the northeast coast just W of Glace Bay. It is a coal-mining point

dominion (dümĭn'yŭn), territory controlled by a particular monarch or government, usually, in this sense, in the plural The term is most commonly used today in reference to one of the autonomous divisions of the British Empire

Dominion Day, celebrated in Canada, July 1 It is the anniversary of the uniting in 1867 of Upper and Lower Canada, New Brunswick, and Nova Scotia as the dominion of Canada

dominoes, game played with pieces (most often 28) called dominoes—oblong pieces of wood (especially ebony), bone, or ivory, with one face blank and one face marked with pips or dots The marked faces are divided in halves, each half containing (in a 28-piece set) from 0 to 6 pips in every possible combination—0–0, 1–1, 1–0, and so on The most common variation of dominoes is the draw game played by two to four players, who pick a specified number of face-down dominoes The underlying principle of the game is to match the number on one domino half to that of the half already played on the table. The first to dispose of all his dominoes wins. The game was introduced in Europe via Italy in the 18th cent See R. L Frey, ed , *The New Complete Hoyle* (1947).

Domitian (Titus Flavius Domitianus) (dömĭ'shŭn), A.D. 51–A.D 96, Roman emperor (A.D. 81–A.D 96), son of Vespasian. Though intended as the heir to his childless older brother, Titus, he was given no important posts On Titus' death he succeeded to the throne and proved himself at once proud and more absolutist than his father He governed, however, in the interests of order and public welfare in his first years Only indifferently successful in his own campaigns in the east, he out of jealousy recalled Agricola from his successful campaign in Britain As time went on Domitian became more despotic, his despotism caused plots against him, and the plots brought on a reign of terror that drenched Domitian's last years in blood Finally his wife, Domitia, had a freedman, Stephanus, stab him Nerva succeeded Tacitus and Juvenal describe Domitian's terror with bitterness

Domnarvet (dŏmnär'vĕt), largest iron- and steel-manufacturing center in Scandinavia, near Falun, Kopparberg co , Sweden

Domodossola (dō'mōdôs'sōlä), town (pop 9,193), Piedmont, N Italy, on the Simplon RR near the Swiss border

Domrémy-la-Pucelle (dōrāmē'-lä-püsĕl'), village (pop 185), Vosges dept , E France, in Lorraine The house in which Joan of Arc was born in 1412 still stands, and the 15th-century village church still has the baptismal font where she was baptized Outside the village is the handsome basilica of St Joan of Arc, begun in 1881, and near by is the historic Vaucouleurs

Don (dŏn), river of Yorkshire, England, 70 mi long, rising NW of Sheffield, through which it flows, then turns northeast and flows past Rotherham and Doncaster to the Ouse at Goole

Don (dôn, Rus dôn), river, 1,232 mi long, rising SE of Tula, S European RSFSR It flows SE, then SW, into the Sea of Azov Its eastward bend comes to within c 40 mi of the course of the Volga at Stalingrad, and a canal linking the two rivers at that point is projected Rostov is the chief city and port on its course Navigable from above Voronezh and accessible to seagoing vessels as far as Rostov, the Don is an important artery for grain, coal, and lumber shipments Its chief tributary is the Donets, which connects it with the industrial Donets Basin Fisheries, especially in its lower course, are valuable Known to the ancients as the Tanais, the Don has been a trading channel since Scythian times In the 16th cent Cossack settlers (see Cossacks) founded the virtually independent republic of the **Don Cossacks** in the fertile steppes along the lower course of the river The host of the Don Cossacks was governed by a popular council, the Rada, and by an elected chief, called ataman Their daring raids and exploits attained legendary proportions under Stenka Razin Though the Don Cossacks gave allegiance to the tsar in 1614, they continued to govern themselves throughout the 17th cent , but frequent rebellions, culminating in that of Pugachev, resulted in the loss of many of their privileges The Don Cossacks are famous for their magnificent songs and choirs

Don, river of Aberdeenshire, Scotland, rising in a bog near the Banffshire border (alt c 2,000 ft) and flowing 82 mi generally eastward to the North Sea near Old Aberdeen It is roughly parallel to the Dee and like it is a salmon stream

Donaghadee (dŏn"ŭkhudē', -kŭdē'), urban district (pop 2,533), Co Down, Northern Ireland, on the Irish Sea and ENE of Belfast It is the Irish port nearest to Great Britain and is connected by cable with Portpatrick, Scotland The town is a seaside resort and a farm market A rath, 70 ft high, and a holy well are here

Donald, William Henry, 1875–1946, confidential adviser to Chinese leaders, b Lithgow, New South Wales An Australian journalist, he went (1902) to China to edit the Hong Kong *China Mail* and gained fame for eyewitness reports on the Russo-Japanese War As editor of the *Far Eastern Review* after 1911, Donald crusaded for the modernization of China He advised and planned for Sun Yat-sen in the 1911 revolution and afterward during Sun's presidency (1911–12) Donald worked to prevent Japanese domination of China and caused the Twenty-one Demands (1915) to be modified In 1917 he helped to bring China into the First World War After 1928 he was adviser to Marshal Chang Tso-lin and his son Chang Hsueh-liang and was prominent in Kuomintang politics His interests allied (1934) him to Chiang Kai-shek, and Donald (who still could not speak Chinese) was influential in persuading (1936) Chiang to unite all Chinese forces against Japan Continually hunted by Japan, he returned (1941) to Australia, but was stranded (1941) at Manila on his way back to Chungking He was taken prisoner (1942) by the Japanese but he was not recognized and at the end of the war he was released

Donaldson, Jesse Monroe, 1885–, U S Postmaster General (1947–), b. Shelby, Ill He was first to rise through the ranks of post-office employees to achieve a cabinet post

Donaldsonville, city (pop 3,889), parish seat of Ascension parish, SE La , on the Mississippi below Baton Rouge It was founded as a trading post in 1806, and was temporary state capital in 1830 Situated in the center of an area producing sugar, rice, cotton, vegetables, lumber, and oil, it is the site of an annual state fair H H Richardson was born near by

Donalsonville, city (pop 1,718), co seat of Seminole co., extreme SW Ga , near the Chattahoochee river, inc 1897 It is a trade center for a farm, lumber, and naval-stores area

Donatello (Donato di Niccolò di Betto Bardi) (dōnŭtŏ'lō), c.1386–1466, Italian sculptor of the early Renaissance, b Florence Breaking with the traditions of the Middle Ages, he portrayed his subjects with intense realism—especially in his earlier years (the wooden crucifix in Santa Croce) Among the works of his formative period, executed for the churches of Florence, the masterpiece is the figure *St George*, in which the artist definitely abandons his earlier Gothic style It was created for Or San Michele and is now in the Bargello (or Museo Nazionale), which possesses many of Donatello's best original works, as well as casts from his works in other cities The unlovely, but vividly lifelike, Zuccone (Baldhead), in the Campanile, was said to be the artist's favorite work After 1425, working in various cities of Italy, including Rome, Donatello felt the influence of classic art, which had the effect of softening his austerity The supreme achievement of this period is *David* (Bargello) In 1453 he made for Padua the noble bronze equestrian statue, *Gattamalata*, the first of its kind since antiquity Donatello enjoyed the highest recognition accorded to an artist in his day His influence on painting as well as on sculpture was incalculable Among his most popular reliefs are two of *The Young St John Baptist*, one in sandstone in the Bargello, the other in stucco in the Metropolitan Museum His *Singing Gallery*, executed for the cathedral of Florence, is now in the museum of the cathedral *Madonna and Child* and a bust of St John the Baptist are in the National Gallery of Art, Washington, D C

Donati, Giovanni Battista (jōvän'nē bät-tē'stä dōna'tē), 1826–73, Italian astronomer Serving as director of the Florence Observatory from 1864, he succeeded (1864) in obtaining the spectrum of a comet and concluded that the composition of comets is, at least in part, gaseous He discovered (1854–64) six new comets, among them **Donati's comet** which he first saw at Florence on June 2, 1858 It has a period of c 2,000 years

Donation of Constantine see Constantine, Donation of

Donati's comet see Donati, Giovanni Battista

Donatism (dō'nutĭzm), heretical movement among the Christians of North Africa (fl 4th cent), led by two men, both named Donatus These were Donatus of Casa Nigrae (fl 313) and Donatus the Great or Donatus Magnus (d 355) Espousing a position previously defined by Montanism and Novatian, the Donatists declared that Christianity was a sect composed exclusively of pure persons The sinner fallen from grace should not be admitted again to complete fellowship with Christians, not because God would not forgive him, but because he was a danger to others Such emphasis on purity frequently led to extremes that threatened the very expansion of Christianity In times of persecution, many abjured who later returned, particularly in Africa, where the persecutions of Diocletian were especially terrible Many bishops and priests gave up sacred books to the government to save themselves and their flocks Such, the Donatists held, were traitors and by their act lost all sacramental power to confer grace The Donatist opposition also implied, therefore, that the Church was without power to absolve Catholics considered most heretical the Donatist practice of rebaptizing those who had lapsed In 316 Donatus the Great seceded from the Church and formed a separate African sect to which, by 350, the majority of African Christians belonged The Donatists were condemned by the Synod of Arles (314) and by Constantine I and were repressed by later emperors Late in the 4th cent many were turned from Donatism by the excesses of Numidian ascetics, who formed themselves into lawless bands. It was the teaching of St Augustine, as enounced at the Conference of Carthage (411), and in his works, that finally destroyed the theological position of Donatism Church and state also united to suppress the heretics, and by 450 most African Christians were Catholics Donatism vanished with Christianity before the Islamic invaders

Donato di Niccolò di Betto Bardi see Donatello,

Donatus (Aelius Donatus), fl 333, Roman grammarian, teacher of St Jerome His only well-known work, the *Ars grammatica* [elements of grammar], was throughout the Middle Ages the standard elementary Latin grammar

Donauwörth (dō'nouvûrt"), town (pop 7,298), Swabia, Bavaria, on the Danube Developing around a 9th-century fort, the Mangoldstein, it became the seat of the dukes of Upper Bavaria in the middle of the 13th cent , but was made an imperial city in 1348. It adopted the Reformation in 1555. The political crisis engendered by Emperor Rudolf II's attempt to reestablish Catholicism in the city (1607) was one of the causes of the Thirty Years War; it was captured by Gustavus II of Sweden in

1632 and by Emperor Ferdinand II in 1634. Donauwerth passed to Bavaria in the early 18th cent There are several 15th-century churches, a picturesque town hall (1308–9), and the Fugger house (1537–39)

Donbas see DONETS BASIN

Doncaster (dŏng'kŭstur), county borough (1931 pop 63,316, 1947 estimated pop 77,090), West Riding of Yorkshire, England, on the Don It has coal mines, railroad shops, steel mills, and minor manufactures A long-established racecourse is near the city Noteworthy are the parish church of St George (with a 170-foot tower), the technical college, the library, the art gallery, the market hall, the guildhall, and the corn exchange Doncaster is the site of the Roman station Danum, on an ancient highway

Don Cossacks see DON, river

Donders, Franciscus Cornelius (frănsĭ'skus kôrnā'lĭŭs dŏn'durs), 1818–89, Dutch ophthalmologist and physiologist A professor at the Univ of Utrecht from 1847, he promoted the establishment of hospitals for eye diseases in Holland He made improvements in eyeglasses, introduced the present type of ophthalmoscope, and contributed to the study of the physiology of the eye His works include an influential treatise in English, *The Anomalies of Accommodation and Refraction of the Eye* (1864)

Donegal (dŏ'nĭgôl, dŏnĭgôl'), maritime county (1,865 sq mi , pop 136,136), Ulster prov , Ireland The county town is Lifford The extremely irregular coast line extends from Lough Foyle on the north to Donegal Bay on the west and is deeply indented by Lough Swilly TORY ISLAND is the largest of the coastal islands The interior is rugged and hilly, rising to 2,466 ft at Mt. Errigal The chief rivers are the Foyle, the Derg, and the Finn, and there are numerous lakes In this primarily pastoral and agricultural region farming is pursued with difficulty because of the bogginess of the soil. Deep-sea fishing is important There is little manufacturing (some woolens and muslins), and there are no large towns Granite and sandstone are quarried Trade is mostly through Londonderry in Northern Ireland Many old Gaelic customs survive in the county Anciently the kingdom of Tyrconnell, Donegal was not organized as a county until the reign of Elizabeth

Donegal, town, Co Donegal, Ireland, at the head of Donegal Bay It is a seaport with woolen mills Its castle, early stronghold of the O'Donnells, was rebuilt in 1610 There are ruins of a Franciscan monastery, founded in 1474, where the *Annals of Donegal* or *Annals of the Four Masters*, a history of the world, were compiled between 1632 and 1636

Donelson, Andrew Jackson (dŏ'nulsun), 1799–1871, American diplomat, b Cumberland region of Tennessee, grad West Point, 1820 He was brought up at the Hermitage by his uncle, Andrew JACKSON After graduation he accompanied Jackson as aide-de-camp in the Seminole campaign He practiced law in Nashville, but again aided Jackson as private secretary in the presidential campaigns of 1824 and 1828 After Jackson's election to the presidency Donelson was his private secretary, and Mrs Donelson was Jackson's hostess at the White House Her refusal to accept Mrs J H Eaton (see O'NEILL, MARGARET) socially led to a temporary estrangement between uncle and nephew, but Jackson found himself in need of Donelson's aid and recalled him In 1844 he was sent as chargé d'affaires to the republic of Texas to conduct negotiations for annexation After his success in this mission he served (1846–49) as minister to Prussia

Donelson, Fort, Confederate fortification (in the Civil War) on the Cumberland river at Dover, Tenn , commanding the river approach to Nashville at a point c 60 mi northwest Fort HENRY on the Tennessee river having been reduced (Feb 6, 1862), Grant, on Feb 12, marched his three divisions (under Generals J A McClernand, C F Smith, and Lew Wallace) across the 12 mi of intervening country to Fort Donelson, which he proceeded to invest Commodore A H Foote's gunboats sailed around to assist, but on Feb 14 they were repulsed by the Confederates They, in turn, were thrown back by the investing forces on the next day, after attempting to cut their way through to a retreat The commanding Confederate, Gen J B Floyd, and Gen G J Pillow escaped during the night, leaving Gen S B Buckner to surrender the fort to Grant on Feb 16 A large quantity of military supplies and about 13,000 prisoners fell into Union hands The way was now open for the advance on Nashville It is now a national military park (102 54 acres, est 1928)

Donets (dŭnyĕts'), river, 655 mi long, S European RSFSR and S Ukraine, a tributary of the Don It is also called the North Donets (Rus *Severny Donets*). It rises NE of Belgorod, which it passes, and flows generally southeast to join the lower Don Its last 140 mi are navigable

Donets Basin, abbreviated as **Donbas** (dŭnbäs'), region (c 10,000 sq mi), USSR, SW of the Donets river, partly in the Ukraine and partly in RSFSR It is one of the main coal-producing and industrial areas of Russia. Its coal reserves (coking coal in the north and west, anthracite in the east and south) are estimated at 90,000,000,000 tons Among the principal coal and industrial centers are Stalino, Makeyevka, Yenakiyevo, Gorlovka, Shakhty, Voroshilovgrad, Voroshilovsk, and Artemovsk Industries include steel mills, heavy-machinery plants, chemical plants, and power plants The development of the region began in the late 19th cent In the Second World War the Donets Basin was the scene of heavy fighting A large part of the industrial installations were removed (late 1941) to the Urals before the German advance The area was fully under German control by the summer of 1942, but was recovered by the Russians early in 1943 after their victory at Stalingrad

Dongan, Thomas, 1634–1715, colonial governor of New York, b Co Kildare, Ireland He was lieutenant governor of Tangiers before he was appointed (1682) to succeed Sir Edmund Andros Following the instructions of the duke of York (later James II), Dongan called (1683) a legislative assembly, measures, known as the Charter of Liberties and Privileges, were passed granting popular rights and religious toleration These and subsequent (1684, 1685) enactments were not approved by James II, but Dongan secured (1686) a permanent charter for New York city It was chiefly to Dongan that the English owed their protectorate over the Iroquois, which the French recognized in 1713 He was replaced by Governor Andros in 1688 Dongan became 2d earl of Limerick in 1698 See biography by T P Phelan (1933).

Don Giovanni see DON JUAN

Dong Nai or **Donnai** (both dôn'nī'), chief river of E Cochin China, rising in the Annamese cordillera, S Annam, and terminating in an extensive delta on the South China Sea The Saigon river is one of its main tributaries

Dongola (dŏng'gōlu), region, N Anglo-Egyptian Sudan The largest town, Dongola (pop c 15,000), is just above the Third Cataract of the Nile Old Dongola, 75 mi to the south, was the capital of the Christian kingdom of Dongola or Makurra, which was first taken by Egypt in 625 and held briefly It was again taken in 1275 The first Moslem ruler, a puppet of the powerful Mamelukes, ascended the throne in 1316 His successor became independent in 1325, but the Egyptians conquered the land anew in 1366 and the capital was abandoned Dongola was ably ruled (1811–20) by Mameluke refugees from Egypt The Mahdists, in the course of their revolt, held it from 1885 to 1896 The inhabitants, though surrounded now by Arab tribes, are still Nubian in type and in language

Doniphan, Alexander William (dŏ'nĭfun), 1808–87, American lawyer and soldier, b Mason co , Ky , grad Augusta College, 1826 He began (1830) the practice of law in Lexington, Mo , and served three terms in the state legislature, becoming involved in the Mormon issue In 1838 Doniphan, as brigadier general of the state militia, was ordered against the Mormons by Gov Lilburn W Boggs, but refused point-blank to carry out orders to execute Joseph Smith and other Mormon leaders At the opening of the Mexican War he organized a mounted regiment of Missouri volunteers which comprised part of Stephen W Kearny's force in his march on Santa Fe When Kearny continued to California, Doniphan was left in command in New Mexico, where he subdued and made peace with the Navaho In Dec , 1846, turning the command at Santa Fe over to Sterling Price, Doniphan, on Kearny's orders, set out with 856 men for Chihuahua They were to join John Wool's army there Not far along the way his undisciplined but able fighting outfit routed the Mexicans in a farcical engagement at the Brazito river (Dec 25), near El Paso, which was easily occupied They then pushed on to a point c 15 mi N of Chihuahua, where, in the battle of Sacramento (Feb 28, 1847), they again defeated the Mexicans Chihuahua was taken the next day Since Wool was not there as planned, Doniphan began another long march E to Saltillo, which was reached late in May A few days later they were commended by Zachary Taylor at Monterrey, then, their terms of enlistment being up, they went down the Rio Grande, sailed for New Orleans, and returned to Missouri The entire march, covering some 3,600 mi and conducted with small loss under adverse circumstances, is one of the famous expeditions in American history Doniphan, who returned to law practice at Richmond, Mo , opposed secession and favored neutrality for Missouri in 1861 and though offered high command by the Union took no active part in the Civil War See Justin H Smith, *The War with Mexico* (1919)

Doniphan, resort city (pop 1,604), co seat of Ripley co , SE Mo , on the Current river and WSW of Poplar Bluff, in a timber and farm area, settled c 1847

Donizetti, Gaetano (gäätä'nō dōnēdzĕt'tē), 1797–1848, Italian operatic composer His early work was influenced by Rossini, and he later found artistic stimulus in competition with Bellini His operas are full of easily remembered tunes as well as vocal gymnastics for virtuoso singers Most popular of his more than 60 operas are *Lucrezia Borgia* (1833) and *Lucia di Lammermoor* (1835), serious operas, *La Fille du régiment* (*The Daughter of the Regiment*, Paris, 1840), a French *opéra comique*; and *L'elisir d'amore* (1832) and his masterpiece, *Don Pasquale* (1843), examples of *opera buffa* After 1844 further creative work became impossible because of frequent attacks of insanity

Don Juan (dŏn jōō'un, Span dōn hwän'), legendary hero of many literary works, supposedly based on the life of Don Juan Tenorio of Seville Don Juan seduces the daughter of the commander of Seville and kills her father in a duel He visits a statue of his victim, erected over his tomb, and invites it to a feast, it comes, seizes the libertine, and drags him to hell The first dramatization of the story was *El Burlador de Sevilla*, attributed to Tellez (Tirso de Molina, pseud), famous versions were Molière's *Le Festin de Pierre* and Mozart's great opera *Don Giovanni* Don Juan, the brilliant and unscrupulous gallant, is the subject of many other works, including Espronceda's *Estudsante de Salamanca*, Mérimée's *Les Âmes du Purgatoire*, Byron's *Don Juan*, Balzac's *L'Elixir d'une longue vie*, Browning's *Fifine at the Fair*, and Shaw's *Man and Superman*

donkey see ASS

Donna, city (1940 pop 4,712, 1947 estimated pop 6,000), extreme S Texas, WNW of Brownsville, founded c 1902 In the irrigated section of the lower Rio Grande valley, it has canneries, dehydrating plants, and small industries

Donnacona, town (pop 3,064), S Que , on the St Lawrence at the mouth of Jacques Cartier river It has a pulp and paper mill

Donnai see DONG NAI

Donnay, Maurice (mōrĕs' dônā'), 1859–1945, French dramatist Highly successful in the field of light comedy, Donnay showed versatility in many genres—fantasy in *Éducation de Prince* (1900), psychological depth in *Amants* (1895), *L'Autre Danger* (1902), and *Paraître* (1906), and social problems in *La Clairière* (with Lucien Descaves, 1900) He was elected to the French Academy in 1907 Autobiographical works comprise *Pendant qu'ils sont à Noyon* (1917), *Autour du Chat Noir* (1926), and *Mes débuts à Paris* (1937)

Donn-Byrne, Brian Oswald. see BYRNE, DONN

Donne, John (dŭn, dŏn), 1572–1631, English poet and divine Reared a Roman Catholic, Donne was educated at Oxford and Cambridge and at Lincoln's Inn He traveled on the Continent and in 1596–97 accompanied the earl of Essex on his expeditions to Cádiz and the Azores On his return he became secretary to Sir Thomas Egerton (later Baron Ellesmere), lord keeper of the great seal, and achieved a reputation as a poet and public personage His writing of this period, including his *Songs and Sonnets* and *Problems and Paradoxes*, consisted of cynical, realistic, often sensual lyrics, essays, and verse satires Donne's court career was ruined by the discovery of his marriage in 1601 to Anne More, niece of Sir Thomas Egerton's second wife, and he was imprisoned for a short time After 1601 his poetry became more serious, in *An Anatomy of the World* (1611) and *The Progress of the Soul* (1612) He wrote prose on religious and moral subjects, a polemic against the Jesuits, *Bathanatos* (not published until 1644), a qualified apology for suicide, and the *Pseudo-Martyr* (1610) After long uncertainty, during which he was twice a member of Parliament, Donne at the wishes of King James I took orders in 1615 He was made reader in divinity at Lincoln's Inn, a royal chaplain, and in 1621 dean of St Paul's Donne was one of the most eloquent preachers of his day, his *Devotions* (1624) and some of his sermons were printed in his lifetime His profoundly religious and philosophical poetry of this period is some of the finest and most intense of all metaphysical poetry The death of his wife in 1617 deepened the tone especially of his *Holy Sonnets* His original, often paradoxical poetic expression influenced 17th-century metaphysical poets, who tended to spin long-drawn figures, the "conceits" in imitation of him until their meaning was overshadowed In the 20th cent a number of poets, notably T S Eliot, have found inspiration in his work The best collections of his works are *Poems*, edited by H J C Grierson (1929) and R E Bennett (1942), and the *Complete Poetry and Selected Prose*, edited by John Hayward (1931) See the essays, *A Garland for John Donne* (ed by Theodore Spencer, 1931), biographies by Donne's friend Izaak Walton (1658), Edmund Gosse (1899), and Evelyn Hardy (1942), studies by E M Simpson (1924), Pierre Legouis (1928) C M Coffin (1937), M A Rugoff (1939), and M F. Maloney (1944)

Donnelly, Ignatius, 1831–1901, American author and political reformer, b Philadelphia He studied law, was admitted to the bar, and in 1856 moved to Minnesota There he energetically but unsuccessfully tried to promote Nininger, SE of St Paul, as the coming metropolis of the Middle West He then turned to politics and served as Republican lieutenant governor of Minnesota (1859–63) and U S Representative (1863–69). Donnelly, who had been active in the Liberal Republican party, became a leader of other third-party movements on the agrarian frontier. As editor of the weekly *Anti-Monopolist* (1874–79) and later (1894–1901) of the

Representative, a Populist organ, he expounded his radical views. He was a state senator (1874–78) and representative (1887–88) and subsequently held one or the other of these offices almost continually until his death, vainly seeking reforms He built up the Minnesota Farmers' Alliance, was its president from 1890 to 1894, and led it into the POPULIST PARTY, of which he was a founder He wrote the Populist platform of 1892, famous for its ringing preamble, which became the Populist creed Donnelly's nonpolitical writings were, however, more successful His *Atlantis the Antediluvian World* (1882, rev ed, 1949) probably has gone through at least 50 editions or printings and was long a leading best seller In his remarkable work, charmingly written and displaying Donnelly's vast erudition, the author argued that the world's original civilization had developed on ATLANTIS In *Ragnarok the Age of Fire and Gravel* (1883), which also had a large sale, although it did not approach that of *Atlantis*, Donnelly claimed that the earth's clay, gravel, silt, and sand resulted from contact with a mighty comet in some prehistoric time *The Great Cryptogram* (1888) was not a financial success, but its thesis that Francis Bacon wrote the Shaksperian plays stirred up a lively literary controversy Of his three novels *Caesar's Column a Story of the Twentieth Century* (1890) was the most popular. It told of the collapse of civilization from class struggles and foresaw dirigibles, television, and other blessings (or horrors) that have since come into existence Donnelly's lifelong but generally futile fight for the underdog doubtless influenced his gloomy view of the future Styled a "crank" in his day, he was a brilliant if unconventional personality

Donner Party (dŏ'nur), group of emigrants to California who in the winter of 1846–47 met with one of the most famous tragedies in Western history The California-bound families were mostly from Illinois and Iowa, and most prominent among them were the two Donner families and the Reed family In going west they unfortunately took an unknown cutoff after leaving Fort Bridger and were delayed They suffered greatly in crossing the salt flats W of Great Salt Lake, and there was dissension and ill feeling in the party when they reached what is today Donner Lake in the Sierra Nevada They paused (Oct, 1846) to recruit their strength, and early snow caught them, falling deep in the passes and trapping them Their limited food gave out, the cold continued, and suffering in the huts on Alder Creek and Donner Lake grew intense A party that attempted to make its way through the snow-choked passes in December suffered horribly The surviving members of the Donner Party were driven to cannibalism Finally expeditions from the Sacramento valley made their way through the snowdrifts to rescue the hunger-maddened migrants Only about half the party reached California The survivors later disagreed violently as to details of (and particularly blame for) the disaster See C F McGlashan, *History of the Donner Party* (2d ed, 1881, reproduced with notes 1940), G R Stewart, *Ordeal by Hunger* (1936) **Donner Lake,** named for the party, is today a popular mountain resort, near Truckee There is a monument to the party Near-by **Donner Pass** has a U S weather observatory

Donnybrook, suburb of Dublin, Co Dublin, Ireland, part of Pembroke dist It was famous for its fair, licensed by King John in 1204 and suppressed in 1855 because of its disorderliness

Donoghue, John (dŏ'nəhū), 1853–1903, American sculptor, b Chicago, studied at the Academy of Design, New York, and in Paris His *Young Sophocles Leading the Chorus after the Battle of Salamis*, executed in 1885, ranks high among American ideal figure subjects One of his later works, *St Paul*, is in the Library of Congress

Donora (dŭnō'rŭ), borough (pop 13,180), SW Pa, on the Monongahela and S of Pittsburgh, inc 1901. Zinc, iron, and steel works and wire-processing plants are of importance here

Don Quixote de la Mancha (dŏn' kēhō'tā dā lä män'chä, Eng dŏn" kwĭk'sŭt), title of the masterpiece of Miguel de CERVANTES SAAVEDRA Don Quixote, a country gentleman who has read too many chivalric romances, mounts his nag Rosinante and, accompanied by the peasant Sancho Panza as squire, sets out on a series of extravagantly chivalrous adventures of his own, choosing for his lady a country girl, whom he calls Dulcinea del Toboso The adventures of the strangely contrasting pair—the Don with his fantastic imagination, Sancho with his hardheaded practicality—combine to make one of the greatest pictures of human life ever written, a book in which humor, pathos, and philosophy are admirably blended Cervantes published the first part of the novel in 1605 and was working on the sequel when a spurious continuation was published in 1614 by Alonso Fernández de AVELLANEDA Cervantes was spurred by this to bring out his second part in 1615 The first English translation of *Don Quixote* was made by Thomas Shelton (1612–20) The burlesque qualities of the book were overemphasized until the translation by Samuel Putnam (1949).

Dooley, Mr.: see DUNNE, FINLEY PETER.

Doolittle, Hilda, pseud **H. D.,** 1886–, American poet, b Bethlehem, Pa, educated at Bryn Mawr After 1911 she lived abroad In England she came under the influence of Ezra Pound and, with Amy Lowell, became one of the most original of the imagist poets, many of her poems first appearing in the magazine *Poetry* In 1913 she married Richard Aldington, English writer, from whom she was later divorced Her first book of verse, *Sea Garden* (1916), was followed by *Hymen* (1921), *Heliodora and Other Poems* (1924), and *Red Roses for Bronze* (1929, 2d ed, 1931) Her *Collected Poems* appeared in 1925 and 1940

Doolittle, James Harold, 1896–, American general of the Army Air Forces, b Alameda, Calif, grad Massachusetts Institute of Technology, 1925 After serving in the First World War, he became noted for his speed records and speed tests and then engaged in commercial aviation In 1940 he was recalled to the Army Air Corps Doolittle commanded the bombers that raided (April 18, 1942) Tokyo and other Japanese cities from the aircraft carrier *Hornet* He later headed the North African Strategic Air Forces and the 8th Air Force In 1945 he resigned from the army

Doom or **Doomsday** see JUDGMENT DAY

Doomsday Book see DOMESDAY BOOK

Doon (dōōn), river of Ayrshire, Scotland, flowing c 30 mi NW through Loch Doon (6 mi long) to the Firth of Clyde S of Ayr Robert Burns sang of its beauties

door. Apart from the crude flaps of hide or textiles used among primitive peoples, the earliest known type of door was the single heavy wooden slab, with pivots at top and bottom fitting into sockets of the stone head and sill, in the dry climate of Egypt, these did not warp In Syria, where wood was scarce, and elsewhere until the Roman era, similar pivoted doors were sometimes made of stone or marble, usually paneled to lessen the weight, other doors of Syria, Palestine, and Mesopotamia were of wood, as in the famous gates of Balawat (895–825 B C), sheathed with decorated bands of bronze Greek doors, none of which are preserved, were probably of paneled wood Many doors of the Roman and Byzantine eras were formed of bronze sheets hammered in relief designs, and applied over paneled wood Notable examples are the superb doors of the Pantheon (2d cent A D) at Rome and those of Hagia Sophia at Constantinople Doors in the Middle Ages were marked by the advent of the hinge, which replaced the pivot late in the 12th cent Medieval doors, especially of the large cathedral portals, were usually of wood—heavy vertical planks, decorated with intricate foliated wrought-iron hinge plates which often formed a lacework over the whole face of the doors, those of Notre Dame at Paris are noteworthy With the Renaissance in Italy came the solid cast bronze door, a type initiated by those of the baptistery at Florence by Andrea PISANO and GHIBERTI—the most celebrated in history These doors, enriched with modeled ornament and panels of pictorial sculpture, established a type which has been perpetuated in most monumental doors of modern times Besides the ordinary hinged or pivoted door, there are many other types used for special purposes The sliding door is arranged to move, usually on a track, parallel and close to the face of the wall or into a pocket in the wall, it is used chiefly in monumental interiors and commercial structures or for barns where large openings are needed The Dutch door, a form occasionally used in American houses, is divided horizontally near the middle, the upper and lower parts being independently hinged For very wide openings, folding doors, often of the multileaf accordion type, are used The 20th cent has seen the development of many new types of doors to fill the complex needs of modern business and industry The revolving door, used in entrances of public and commercial buildings, consists usually of four leaves, equally spaced at right angles around a central pivot at the axis of a cylindrical structure of glass and metal within which they revolve The overhead door, a recent development originally applied to garage doors, consists of a number of horizontal sections hinged together, counterbalanced, and sliding on a track upward to a horizontal position along the ceiling Fireproof doors, required by law for many purposes, may be either hollow metal doors, a frame of steel shapes sheathed with metal, or kalamein doors, a wooden core incased in sheet metal

Doorn (dôrn), village, Utrecht prov, central Netherlands It was the refuge of Emperor William II of Germany from 1919 till his death in 1941

Door Peninsula (dôr), NE Wis, between Green Bay and Lake Michigan It is crossed by a waterway at Sturgeon Bay Cherry growing is an important industry. The peninsula was visited as early as the 17th cent by French explorers and missionaries

Dophkah (dŏf'kŭ), desert camp Num 33 12

Doppler, Christian Johann (krĭs'tyän yō'hän dŏ'plur), 1803–53, Austrian mathematician and physicist He was professor at the Polytechnical Institute, Vienna (1848–51), and at the Univ of Vienna (from 1851) He formulated **Doppler's principle** in *Über das farbige Licht der Doppelsterne* (1842) This principle states that as the distance between a source of wave motion (e g, sound or light) and an observer becomes less or greater the frequency of the waves received by the observer increases or decreases respectively This effect on the apparent frequency resulting from motion of source or observer is called the Doppler effect It is evident in the case of sound by the rise in pitch as the distance between source and observer decreases and the drop in pitch when the distance increases In the case of light, the approach of source or observer causes a shift of color toward the violet end of the spectrum, while the receding of source or observer causes a shift toward the red of the spectrum This effect is of great importance in astronomy in measuring the motions of stars

Dor or **Dora,** seaport, ancient Palestine, probably not far N of Caesarea It was never a Jewish city, but rather a Phoenician outpost It was rebuilt by the Romans and fortified by the Crusaders, if the identification is correct Joshua 11 2, 12 23, 17 11; Judges 1 27, 1 Kings 4 11, 1 Chron 7 29, 1 Mac. 15 11,13,25

Dora, town (pop 1,032), NW central Ala, NW of Birmingham, in the industrial area

Dora Baltea (dô'rä bältā'ä), river of Piedmont, NW Italy, flowing from Mt Blanc SE through the Val d'AOSTA to the Po below Turin In the valley there are many hydroelectric power plants The **Dora Riparia** (rēpä'rēä) rises near Mt Cenis and flows into the Po at Turin

Dorat, Jean see DAURAT, JEAN

Dorcas or **Tabitha** (tăb'thu) [Dorcas is Gr for Aramaic *Tabitha*=gazelle], Christian woman of Joppa whom St Peter raised from the dead She made clothes for the poor Acts 9 36–43

Dorchester, Guy Carleton, 1st Baron see CARLETON, GUY

Dorchester (dôr'chĭstûr) **1** Municipal borough (pop 10,030), county town of Dorsetshire, England, on the Frome and N of Weymouth William Barnes lived here Thomas Hardy was born here and built "Max Gate," overlooking the city, which is the Casterbridge of the Wessex novels. There are remains of the Roman crossroads station Durnovaria, at Maumbury Rings near by was an amphitheater MAIDEN CASTLE is southwest of the town **2** Village, Oxfordshire, England, SSE of Oxford on the Thame a mile from its confluence with the Thames From the 7th to the 11th cent it was the seat of an important bishopric The abbey church, with its stone Jesse window (showing the descent of Jesus from Jesse), dates partly from the 13th cent

Dorchester, Mass see BOSTON

Dordogne (dôrdô'nyu), department (3,561 sq mi; pop 387,643), SW France, in PÉRIGORD, traversed by the Dordogne river Périgueux is the capital

Dordogne, river, 305 mi long, SW France Rising near the Puy de Sancy in the Auvergne Mts, it flows W through PÉRIGORD and joins the Garonne N of Bordeaux, to form the Gironde There are famous vineyards along its lower course

Dordrecht (dôr'drĕkht) or **Dort** (dôrt), municipality (pop 67,591) and town, South Holland prov, SW Netherlands, at the point where the Lower Merwede divides to form the Noord and Old Meuse (*Oude Maas*) rivers An important rail junction and river port, it also produces heavy machinery and chemicals Founded in the 11th cent and chartered in 1220, Dordrecht was the scene (1572) of the meeting of the Estates of Holland that proclaimed William the Silent stadholder Dordrecht has a 14th-century Gothic church (Groote Kerk) and an art museum (see SCHEFFER, ARY) Jan de Witt was born here The Synod of Dort (1618–19) condemned the REMONSTRANTS

Doré, Paul Gustave (pôl' gŭstäv' dôrā'), 1833?–1883, French illustrator, engraver, painter, and sculptor He is best known for his highly imaginative and dramatic illustrations As first he did his own engraving on wood, but as his success grew, his later work was done in collaboration with numerous engravers His lively illustrations for the Bible, *Paradise Lost*, the *Divine Comedy*, *Don Quixote*, Balzac's *Contes drolatiques*, the works of Rabelais, the *Fables* of La Fontaine, and other classics have made him the best-known illustrator in the world He particularly excelled in weird, fantastic scenes As a painter Doré is represented by *Retreat from Moscow* in the Metropolitan Museum. His monument to Dumas père is in the Place Malesherbes, Paris, and his colossal vase called *The Vintage* is in Golden Gate Park, San Francisco.

Dore, Mont see MONT-DORE

Doremus, Robert Ogden (dûrē'mŭs), 1824–1906, American chemist, inventor, and physician, b New York city, M D Univ. of the City of New York (now New York Univ), 1850 He was a founder (1850) of the first New York Medical College (no longer in existence) In 1852 he became professor of natural history and later (1864–1903) of chemistry and physics at the New York Free Academy (later the College of the City of New York) An authority on toxicology, he also made special researches on light, heat, and gases and produced an arc light, using Bunsen cells for current His son,

Charles Avery Doremus, 1851–1925, American chemist, taught (1882–1904) at the College of the City of New York. He made a special study of toxicology

Doremus, Sarah Platt (Haines), 1802–77, American social worker, feminist, and philanthropist, b New York city She organized a home for discharged women prisoners (1842) and helped found the New York Woman's Hospital (1855) She was the mother of R O Doremus

Doria, Andrea (andrā'ä dô'rēä), 1468–1560, Genoese admiral and statesman, of an ancient family prominent in the history of Genoa He started his career as a condottiere and in the ITALIAN WARS fought for Francis I of France In 1528 he fell out with Francis and went over to Emperor Charles V, under the condition that the independence of Genoa be preserved Doria became virtual dictator of Genoa, but even under the constitution he imposed the republican institutions were preserved He mercilessly suppressed conspiracies against him (1547, 1548) and ended factional strife As admiral of the fleet, Doria assisted the Spanish against the Turks and the pirate BARBAROSSA He helped Charles V in taking Tunis from Barbarossa in 1535 but failed at Algiers in 1541 In 1559 he recovered, with French aid, Corsica for Genoa

Dorians, one of the traditional branches of the ancient Greek people Their name was mythologically derived from Dorus, son of HELLEN They seem to have been the last of the waves of Greek migration into present Greece from the north and supposedly arrived just before 1000 B C , defeating and displacing the Achaeans They settled in the Peloponnesus, but rapidly extended to Crete and spread colonies to Italy, Sicily, and Asia Minor Sparta and Crete are generally considered the Dorian areas par excellence, where the invaders maintained their separate societies and the conquered were kept subject The Dorian dialect was thought by the Athenians to be harsh and rough The Dorians are supposed to have contributed greatly to the development of pottery and sculpture and to have invented the choral lyric The severity of Spartan dress and manners and the plain simplicity of Doric architecture is thought by some to reflect the Dorian spirit

Doric order, the earliest of the orders of architecture developed by the Greeks and the one which they employed for most buildings As possible prototypes for the column with its cap, both the rock-cut columns at Beni Hassan in Egypt and the columns of pre-Hellenic architecture in the Aegean islands have been proposed, while the cornice details, which have a resemblance to carpentry forms, have led to the theory of a wooden origin The type had arrived at a definite form in the 7th cent B C , but further improvements produced the perfected order of the 5th cent B C as it appeared in the PARTHENON and the PROPYLAEA at Athens The Greek Doric column has no base Its massive shaft generally treated with 20 flutes, terminates in a simple CAPITAL composed of a group of annulets, a projecting curved molding called the echinus, and a square slab or abacus at the top The entablature, which is generally about one third the column height, consists of a plain architrave, a frieze ornamented with channeled triglyphs between which are square spaces or metopes sometimes used for sculpture, and a cornice The cornice has projecting blocks or mutules in its soffit, above which is a plain vertical face or corona, finished by a group of crowning moldings The proportions, heavy in the earliest Doric columns, became more slender in the perfected type, the entasis became less sharp, and the echinus projection was diminished The Roman Doric, while derived from the Greek, was probably also influenced by a simple and slender column developed by the Etruscans It was infrequently used, but examples are seen in the Colosseum and the theater of Marcellus The column differs from the Greek in its addition of a base, changes of the cap profile, and greater slenderness In codifying the Roman orders, the 16th-century Italians established as a Tuscan order a form of simplified Doric in which the column had a simpler base and was unfluted, while both capital and entablature were without adornments

Dorigny, Sir Nicolas (dôrē'nyē), 1657?–1746, French engraver, son and pupil of Michel Dorigny, also an engraver He worked for 15 years at Hampton Court and is known for his engravings from the works of Raphael and other masters

Dorion, Sir Antoine Aimé (ätwän' āmā' dôryô'), 1818–91, Canadian politician and jurist, b Quebec prov , educated at Nicolet College After 1842 he practiced law in Montreal, but in 1854 he entered political life, serving first in the legislative assembly of Canada, where he became a leader of the French Canadian liberals, and after confederation (1867) in the Canadian House of Commons Although an opponent of confederation, on the grounds that it would imperil French Canadian interests, he accepted it when dominion status had been won, and in the Liberal government of Alexander Mackenzie, he briefly held (1873) the post of minister of justice, resigning to accept appointment (1874) as chief justice of the court of Queen's Bench, Quebec Over this court Dorion presided until his death. He was knighted in 1877

Dorion (dô'rēŏn), town (pop 1,292), S Que , on the Ottawa river and W of Montreal.

Doriot, Jacques (ăhăk' dôryō'), 1888–?, French Fascist leader Originally a Communist, he was expelled (1932) from the party for adhering to Trotskyism and almost immediately swung to the extreme right, a maneuver then regarded as unprincipled He was nonetheless reelected to the chamber of deputies and founded the French Popular party Recruiting a large number of thugs, his party opposed virtually everything except Doriot and Hitlerism Doriot came into his own after the defeat (1940) of France Though treated coolly by the Vichy government, Doriot was strongly backed by the German occupation authorities He organized an auxiliary youth movement, recruited for a French legion to fight Russia, and sought to control the French laborers in Germany He fled (1944) to Germany with the Vichy government and early in 1945 was—unreliably—reported killed in an air raid

Doris, small mountainous district, central Greece, inland between the Gulf of Corinth and the Malic Gulf Its sole importance was that it was traditionally the home of the Dorians, who may have paused there in their invasion of Greece It was, therefore, favored by Sparta

Dorking, urban district (1931 pop 10,111, 1943 estimated pop 18,115), Surrey, England It is at the edge of the North Downs, near the foot of Box Hill (600 ft high), where George Meredith lived for many years. Dorking is a market and residential town

Dormont, residential borough (pop 12,974), SW Pa , near Pittsburgh, settled c 1790, inc 1909

dormouse, small, squirrellike, nocturnal rodent of the Old World which lives in bushes and trees It has prominent black eyes and a bushy tail Like the squirrel, it sits on its hind legs when eating and stores food for winter The common dormouse of Europe is the smallest of the group (about 5½ in long including the tail) and is mainly yellowish red in color It hibernates from fall to spring The flesh of a gray species with black markings is esteemed as food on the continent of Europe The dormouse appears in *Alice in Wonderland*

Dornier, Claude (klōd' dôrnyā', dôrnēr'), 1884–, German aircraft designer and manufacturer, son of a French father and a German mother He worked for the Zeppelin company from 1910 and from 1927 manufactured at his plant at Friedrichshafen and at its branches many types of seaplanes, fighter planes, and commercial aircraft, including the giant flying boat *DO-X* (1929), which made its first transatlantic flight to New York in 1931

Dornoch (dôr'nŏkh, -nōk), burgh (pop 725), county town of Sutherland, Scotland, on the northeast shore It is near the mouth of Dornoch Firth, an inlet of Moray Firth, and is a vacation resort Of a palace once belonging to the bishops of Caithness only its tower remains The cathedral (13th cent) was burned in 1570 and rebuilt in 1837 as the parish church Dornoch witnessed the last burning (1722) for witchcraft in Scotland The Scottish estate of Andrew Carnegie was at Tain, on the south side of Dornoch Firth.

Dorpat, Estonia see TARTU

Dorr, Rheta Childe, 1866?–1948, American author and feminist, b Omaha, Nebr She became a journalist in New York city in 1902, writing especially on subjects which concern women Her *What Eight Million Women Want* (1910) was successful propaganda for woman suffrage She was war correspondent for the New York *Evening Mail* and other papers (1917–18) and foreign correspondent with headquarters at Prahа (1920–23) A study of liquor laws in the Scandinavian countries resulted in *Drink—Coercion or Control* (1929) Especially notable among Mrs Dorr's books is her biography of Susan B Anthony (1928) See her autobiography, *A Woman of Fifty* (1924)

Dorr, Thomas Wilson, 1805–54, leader of Dorr's Rebellion (1842) in Rhode Island, b Providence, grad. Harvard, 1823 After studying law under Chancellor Kent in New York he practiced in Providence Although of a wealthy Whig family, he became the leader of the popular movement for universal manhood suffrage Rhode Island, still governed under the colonial charter of 1663, restricted the vote to men owning $134 in land Thus, most of the townspeople, whose numbers had greatly increased with the growth of industry, were disenfranchised Since the ruling conservatives were deaf to pleas for reform, Dorr's party called a constitutional convention (Oct , 1841) The People's Constitution was overwhelmingly approved, Dorrites claiming that the legal voters alone gave it a majority Another convention, called by the legislature, drafted the less liberal Freemen's Constitution, which was barely defeated Technically neither convention had been legal under the charter Early in 1842 both Dorr's followers and the charter government forces elected and organized governments, Dorr heading one and Samuel H King the other The Federal government declined to interfere. In May, Dorr, having the sympathy of most of the nation's Democrats, resorted to a show of arms. After an abortive assault on the Providence armory, his government collapsed and he fled the state King declared martial law, many Dorrites were arrested, and the leader himself was indicted for high treason Minor armed clashes and demonstrations caused much excitement The conservatives, finally persuaded of the strength of Dorr's cause, called yet another convention A new constitution, greatly liberalising voting requirements, was accepted by both parties. On its approval by the people in 1843, Dorr returned, was found guilty, and sentenced (1844) to solitary confinement at hard labor for life. The harshness of the sentence was widely condemned, and in 1845 Dorr, broken in health, was released. He was restored to his civil rights in 1851; in 1854 the court judgment against him was set aside See A M Mowry, *The Dorr War* (1901)

Dorrego, Manuel (mänwĕl' dôrā'gō), 1787–1828, Argentine statesman and soldier, governor of Buenos Aires province (1820, 1827–28) After serving for a time in the War of Independence, he returned (1816) to Buenos Aires and became a journalist He attacked the government of Juan Martín de PUEYRREDÓN and was banished (1817) Returning to Buenos Aires in 1820, he was provisional governor of the province (July–Sept , 1820). A leading advocate of federalism, he opposed the unitarian administration of Bernardino RIVADAVIA After Rivadavia's resignation and the dissolution of the national government, Dorrego became governor of Buenos Aires (Aug , 1827) He accepted (1828) on behalf of the nation the treaty of peace with Brazil His government was overthrown (Dec , 1828) by Juan LAVALLE, and Dorrego was executed

Dorset, town (pop 1,128), SW Vt , N of Manchester, settled 1768 It is a resort of artists and writers The first commercial marble quarry in the United States was opened here by Isaac Underhill in 1785 Conventions that led to an independent Vermont were held in Dorset in 1775 and 1776 An 18th-century inn was made a library

Dorsetshire or **Dorset,** maritime county (973 sq mi , 1931 pop 239,352, 1948 estimated pop 272,800), S England, on the English Channel The county seat is Dorchester It is rolling country, crossed by chalk ranges running east and west (the North Downs and the South Downs) The rocky coast line has a fine harbor at Poole The fertile valleys (the Vale of Blackmore, the Stour, and the Frome) are devoted to agriculture Sheep raising and dairy farming are the chief occupations Portland and Purbeck marble are quarried here The pre-Roman antiquities include Maiden Castle, a large earthwork, estimated to have been constructed c 2000 B C Dorsetshire was part of the Anglo-Saxon kingdom of Wessex Thomas Hardy was born in Dorsetshire and treats of the region in his "Wessex" tales See C G Harper, *The Hardy Country* (1925), Arthur Mee, *Dorset* (1939)

Dorsey, George Amos (dôr'sē), 1868–1931, American anthropologist, b Hebron, Ohio, grad Denison Univ (B A , 1888) and Harvard (B A , 1890, Ph D , 1894) He was curator of anthropology at the Field Museum (now the Chicago Museum of Natural History) from 1898 to 1915, and he taught anthropology at the Univ of Chicago (1905–15) The study of the American Indian was his specialty, and he wrote many papers and monographs on their traditions and mythology After service in the First World War, he turned to writing and also lectured at the New School for Social Research in New York city His book *Why We Behave like Human Beings* (1925), an interpretation of human nature and psychology in terms understandable to laymen, was a best seller for months *The Evolution of Charles Darwin* (1927) and *Man's Own Show Civilization* (1931) are others of his books

Dort, Netherlands see DORDRECHT

Dortmund (dôrt'mŏont), city (1946 pop 436,491), in the former Westphalia prov of Prussia, NW Germany. It is an industrial center of the RUHR, on the Dortmund-Ems Canal Its name appeared in the 9th cent , and after 1220 it belonged to the Hanseatic League. Air raids in the Second World War damaged Dortmund.

Dortmund-Ems Canal (dôrt'mŏont-ĕms'), waterway, 175 mi. long, NW Germany, built 1892–99 It connects the industrial Ruhr district with the Ems river and the North Sea

Dorval (dôrvăl'), town (pop. 2,048), S Que , on the south shore of Montreal island and on the St Lawrence. It is the site of Montreal international airport Just offshore is the island of Dorval.

Dorylaeum (dôrĭlē'um), ancient city of N Phrygia, Asia Minor, now in NW Turkey. It was an important trading city of the Romans, but later fell to ruins At this spot on July 1, 1097, the Christians

of the First Crusade defeated the Seljuk Turks Many hold that the modern Eskisehir occupies the site, but the question is not settled

Dos Passos, John Randolph (dŏs pă'sŭs), 1844–1917, American lawyer, b Philadelphia He was admitted to the bar in 1865 and moved (1867) to New York city, where he conducted his practice. His *Treatise on the Law of Stockbrokers and Stock Exchanges* (1882) was a standard work He opposed the Sherman Anti-Trust Act in *Commercial Trusts* (1901) and vigorously advocated extensive legal reforms in *The American Lawyer* (1907)

Dos Passos, John Roderigo, 1896–, American novelist, b Chicago, grad Harvard, 1916 He served in the French and Italian ambulance services and as a private in the U S medical corps during the First World War. *Three Soldiers* (1921), his first successful novel, was a subjective portrait of individual helplessness in a mechanical society *Manhattan Transfer* (1925) presents a modern view of New York, its involved technique is applied to a larger canvas in *U S A* (1937), a trilogy which includes *The 42nd Parallel* (1930), *1919* (1932), and *The Big Money* (1936) A mechanistic chronicle, these novels record with ingenious fidelity the complex lives of American people in an industrial society A second trilogy, begun with *Adventures of a Young Man* (1939), was continued with *Number One* (1943) and concluded with *Grand Design* (1949) He also wrote *Tour of Duty* (1946)

Dosso Dossi (dŏs'sō dŏs'sē), 1479?–1542, Italian painter of the Ferrarese school, whose real name was Giovanni de Luteri Giorgione, Titian, and Raphael influenced him, and he was perhaps a pupil of Lorenzo Costa He often collaborated with his brother Battista (bät-tē'stä) (d 1548), a landscape painter Giovanni's early work is in Modena, but after 1514 he executed many decorative works for the ducal palace and churches of Ferrara, including frescoes, pictures, and cartoons for tapestries Both his landscapes and portraits show originality and imagination He was a friend of Ariosto, who mentions him in *Orlando Furioso* His works include *Circe in the Woods* (Borghese Villa), *The Three Ages of Man* (Metropolitan Mus), *The Standard Bearer*, *Scene from a Legend*, and *Saint Lucretia* (National Gall of Art, Washington, D C) See E G Gardner, *The Painters of the School of Ferrara* (1911)

Dost Mohammed (dōst'), 1793–1863, emir of Afghanistan He and his family struggled to get the emirate for years before he finally succeeded in establishing himself in 1826 He waged continual war with the Sikhs, and trouble with the British, beginning in 1838, led to the first (1839 42) of the Afghan Wars Defeated, he fled to India, but he later returned, and it was at least with British acquiescence that he regained the throne Friendly relations were resumed and an agreement was reached in 1855, but Britain firmly refused to support him against the Persians A strong, capable ruler, he helped to build Afghanistan and sought to play Russian interests against the British

Dostoyevsky, Feodor Mikhailovich (fyô'dur mĭkhĭ'lŭvĭch dŭstyĭ-ĕf'skĭ), 1821–81, Russian novelist, journalist, and short-story writer, b Moscow, son of a physician Sent (1837) to a military engineering school, he read avidly in foreign literature and when he had completed his course in 1843 turned at once to writing rather than the army His first novel, *Poor Folk*, finished in 1845, was praised by the great critic Belinsky and published (1846) by Nekrasov Between 1846 and 1849 Dostoyevsky wrote 12 short pieces of fiction, important chiefly as foreshadowing his later novels. In 1849 he was arrested for political activities as a member of the Fourierist Petrashevski circle Condemned to death, Dostoyevsky underwent the experience of waiting before a firing squad, but a courier arrived with the tsar's commutation order to four years at hard labor in Siberia, with service in the army thereafter These years of suffering and hardship caused him to turn for comfort to religion and were responsible in part for the expression in his novels of an overwhelming pity for humanity The attacks of epilepsy from which he suffered increased in frequency from this period In 1857 he married a widow with a son, whose support continued to be a burden to him long after his wife's death in 1864 In 1859 Dostoyevsky was permitted to return to St Petersburg, where his literary career was resumed With his brother he founded (1861) the magazine *Time*, in which several of his novels were serialized, notably *The House of the Dead* (1862) and *The Insulted and Injured* (1861–62) He made his first journey to Western Europe in 1862 On his second trip in 1863 (after *Time* had been suppressed by the government) he tried to recoup his financial losses by gambling but without success This passion for gambling, at which he always lost, he made use of later in the novels *The Gambler* (1866) and *A Raw Youth* (1875) It was on this journey that he met Polina Suslova, who became his mistress He and his brother revived their magazine in 1864 under the name *Epoch*, in this year appeared his next novel, *Notes from the Underground* (1864). In 1864 both his wife and his brother Michael died In the next years (1864–66) of financial hardship, the first of Dostoyevsky's great novels was taking shape In Raskolnikov, the hero of *Crime and Punishment* (1866), appears the dualism which is typical of Dostoyevsky's characters and perhaps of his own nature Another type which recurs in the novels, the "meek" character, is here represented by Sonya In 1867 Dostoyevsky married his secretary, Anna Grigorevna Snitkina. Her understanding both of his strength and of his weaknesses and her good business sense made his last years the happiest and most productive of his life In a period of about 10 years he wrote the rest of his major novels—*The Idiot* (1869), *The Possessed* (1872), *A Raw Youth* (1875), and *The Brothers Karamazov* (1879–80). Dostoyevsky was recognized in Russia as a great writer in his lifetime, but elsewhere an appreciation of his profound knowledge of human behavior has been slower in developing Most of his works have appeared in English in excellent translations by Constance Garnett and others See his *Diary of a Writer* (Eng tr , 1949) and *The Letters of Dostoyevsky to His Wife* (Eng tr , 1930), *The Diary of Dostoyevsky's Wife* (Eng tr , 1928), biographies by E H Carr (1931), Avrahm Yarmolinsky (1934), and J A T Lloyd (1947), critical studies by J Middleton Murry (1916), André Gide (Eng. tr , 1926), Gerald Abraham (1936), and E J Simmons (1940)

Dothaim (dŏthā'ĭm) or **Dothan** (dō'thăn), ancient city, central Palestine, in the uplands N of Samaria It was in the vicinity of Dothan that Joseph was sold into slavery and that the Syrians were blinded at Elisha's prayer It was later a stronghold Gen 37 17, 2 Kings 6 13, Judith 4 6, 7 3,18, 8 3

Dothan (dō'thun), city (pop 17,194), co seat of Houston co , SE Ala , near the Chattahoochee and the Fla line, in a diversified farm and timber region, inc 1885 It has trade and processing activities

Dou, Dow, or **Douw, Gerard** or **Gerrit** (all dou), 1613–75, Dutch genre and portrait painter of Leiden He first worked at engraving and glass painting His art was based on that of Rembrandt, to whom he was apprenticed for two years After a successful career as a portrait painter, he turned to painting domestic scenes often represented as in lantern light or candlelight, effects which he rendered with great skill Among his most famous works are *Evening School* (Rijks Mus), *Young Man* (The Hague), and *Dropsical Woman* (Louvre) The Metropolitan Museum has a self-portrait

Douai (dōō'ā, dōōā'), town (pop 35,509), Nord dept , N France, in Flanders Under the patronage of Philip II of Spain a Roman Catholic college was established here for English priests The Douay Bible was prepared at the college Louis XIV seized Douai in 1667, it capitulated to Marlborough in 1710, was retaken (1712) by Villars, and was restored to France by the Peace of Utrecht The town was rebuilt in the 18th cent and has kept most of its old buildings Held by the Germans in 1914–18 and 1940–44, it suffered heavy damage in both wars Today it has machine plants and coal mines

Douaumont (dōō-ōmō'), fort on the battlefield of VERDUN, NE France It was lost and recaptured by the French in 1916 The nearby cemetery has the graves of 10,000 unidentified soldiers

double bass, largest and deepest-toned instrument of the violin family, but tuned in fourths and having a flat back like the viol It was known as early as the 16th cent Sometimes it has had five strings, sometimes three, but four became standard in the 19th cent It sounds an octave lower than the notes written for it It is also called contrabass and bass viol

double bassoon see CONTRABASSOON

Doubleday, Abner, 1819–93, alleged originator of BASEBALL and Union general in the Civil War, b Saratoga co , N Y , grad West Point, 1842 The A G. Mills commission (1905–8) investigated the origin of baseball and reported that in 1839 Doubleday invented the game at Cooperstown, N Y — where the National Baseball Hall of Fame and Museum now stands This report has been denounced by many, who point out that a children's game similar to baseball had been played long before Doubleday's time Doubleday served in the Mexican War and in the Civil War He saw action at Fort Sumter, Antietam, Fredericksburg, and Gettysburg He wrote two volumes of Civil War reminiscences See Robert W Henderson, *Ball, Bat, and Bishop the Origin of Ball Games* (1947)

doublet (dŭ'blĭt), in Western Europe, a close-fitting garment for men. Usually extending below the waist and lined, padded, stiffened, or quilted (pourpoint), it was concealed under a fitted overgarment in the 14th cent and later was revealed under a cloak, gown, or jerkin or left uncovered Sleeves, when present, were often detachable It was superseded by the waistcoat in the late 17th cent. The doublet of defense was body armor made of metal plates, often cloth covered.

Doubs (dōō), department (2,031 sq. mi., pop 298,255), E France, in FRANCHE-COMTÉ, bordering on Switzerland along the Jura mts Besançon (the capital) and Montbéliard are the chief towns

Doubs, river, 267 mi long, E France and W Switzerland, rising in the French Jura N of Geneva It first flows northeast, parallel to the Swiss border, and for a short distance near Le Locle it forms that border, then after making a loop into Switzerland S of Porrentruy it runs W into France, turns sharply SW near Montbéliard, and runs southwest roughly parallel to its early course, till it reaches the Saône near Chalon, c 60 mi west of its source In its complicated course it flows through picturesque and geologically interesting gorges

Dougga (dōō'gu), village, Tunisia, SW of Tunis It is a tourist spot noted for ruins of the ancient city of Thugga, including a Punic mausoleum (2d cent B C), temples, arches, a theater, a circus, and an aqueduct of Roman times, and a Byzantine fortress

Dougherty, Denis J. (dō'ŭrtē), 1865–, American prelate, cardinal of the Roman Church, b. Ashland, Pa Educated at St Charles Seminary, Philadelphia, and at the American College, Rome, he was ordained in 1890 After teaching at St Charles Seminary (1891–1903), he was a bishop in the Philippines, first at Nueva Segovia (1903–8) and then at Jaro (1908–15) In 1915 he was translated to Buffalo and in 1918 was raised to the archbishopric of Philadelphia He was created cardinal-priest in 1921

Dougherty, Paul (dō'kurtē), 1877–1947, American marine painter, b Brooklyn, N Y After graduating from the New York Law School, he studied art in Paris, London, Italy, and Munich In 1907 he became a member of the National Academy of Design Among his best works are *The Land and the Sea* (Corcoran Art Gall , Washington, D C), *Lake Louise* and *October Seas* (Metropolitan Mus), and *A Freshening Gale* (Albright Art Gall , Buffalo, N Y) He is also represented in the Luxembourg Museum, Paris, the Art Institute of Chicago, the Carnegie Institute, Pittsburgh, and the Toledo and St Louis art museums

doughnut, small sweetened cakes of leavened dough deep-fried in lard or other fat, called also friedcakes or crullers. Usage differs as to the names Originally, the doughnut was a "nut" or ring of yeast-bread dough, and the cruller, a Dutch cake, differed from it mainly in shape, being twisted, curled, or gashed across The German doughnut, however, was leavened only by much beating and many eggs, although it was similarly seasoned and fried In some places a distinction is made between a doughnut and a friedcake, the former being made with yeast and the latter with buttermilk and soda or sweet milk and BAKING POWDER Old fashioned raised doughnuts are seldom made nowadays, and the three names are generally used in modern cookbooks, without distinction, as meaning cakes of the quick-bread type, flavored to taste, and fried in deep fat

Doughty, Sir Arthur George (dou'tē), 1860–1936, Canadian historian and archivist, b England He migrated to Canada in 1886 As archivist (1904–35) of the dominion, he served with signal success, the public archives of Canada are largely of his creating He wrote *The Canadian Archives and Its Activities* (1924) Doughty's historical works include *The Fortress of Quebec* (1904), *The Cradle of New France* (1908), and *The Acadian Exiles* (1916) With Adam Shortt he edited *Documents Relating to the Constitutional History of Canada, 1759–1791* (1907, rev ed , 1918) and *Canada and Its Provinces* (23 vols , 1913–17)

Doughty, Charles Montagu (dō'tē, dou'tē), 1843–1926, English author and traveler He is best known for his *Travels in Arabia Deserta* (1888), describing in stately and fascinating language his life among the Bedouins His poems include the epic *The Dawn in Britain* (1906). See biography by D G Hogarth (1928)

Doughty, Thomas (dou'tē), 1793–1856, American painter of the Hudson River school, b Philadelphia Though self-taught, he was one of the first American landscape painters to win widespread recognition at home and abroad His paintings, few in number, are mostly of river scenery Among the best are *On the Hudson* and *A River Glimpse* (Metropolitan Mus), *A View of the Schuylkill* (Edinburgh Mus), and others in the Corcoran Gallery, Washington, D C , the Brooklyn Museum, and the Pennsylvania Academy of the Fine Arts

Douglas, Archibald, 5th **earl of Angus,** 1449?–1514, chancellor of Scotland, son of the 4th earl (in the so-called Red Douglas line) In the rebellion (1487–88) of Scottish nobles against JAMES III, Angus earned his nickname of Bell-the-Cat by his audacious capture, according to his promise, of Robert Cochrane, the royal favorite most hated by the nobles He had joined Robert Stuart, duke of Albany, brother of James III, in intrigues against the king, but renounced him later and served James IV from 1493 to 1498 as lord chancellor Two of his sons were killed at Flodden Field (1513) after he had vainly tried to dissuade James from fighting there, and he was succeeded the next year by his grandson

Douglas, Archibald, 6th **earl of Angus** (ăng'gŭs), 1489?–1557, Scottish nobleman, grandson of Archi-

bald Douglas, 5th earl of Douglas. His marriage to Margaret Tudor, sister of Henry VIII and widow of James IV, alienated the Scotch noblemen and caused Margaret to lose the regency to John Stuart, duke of Albany. A struggle for control of the young James V ensued between Angus and Albany, with Margaret favoring first her husband, then Albany. In 1528 Margaret obtained a divorce, and Angus, deprived of his lands because of his alliance with Henry VIII, left for England. At King James's death in 1542 Angus returned to Scotland, was restored to power, and was soon patriotically fighting England. But he continued to correspond with Henry and to contest the power both of the regent James Hamilton, earl of Arran, and his successor, the dowager queen, Mary of Guise. The 7th earl was his nephew, David.

Douglas, Archibald, 8th **earl of Angus,** 1555–88, Scottish nobleman, grandnephew of Archibald Douglas, 6th earl of Angus. During the regency of his uncle, James Douglas, 4th earl of MORTON, from 1573 to 1578, he held a number of important positions, including the lieutenant generalcy of south of the Forth. At the fall of Morton, Angus was declared guilty of treason and escaped to England, but in 1582 he returned to Scotland and was reconciled to King James VI. As an ardent Presbyterian, he opposed James STUART, earl of Arran, and in 1584 after an unsuccessful attempt to remove him from power, Angus again fled to England. In the next year he took part in another rebellion, which brought about the downfall of Arran and his own return to power.

Douglas, Archibald, 3d **earl of Douglas,** 1328?–1400?, Scottish nobleman, illegitimate son of Sir James Douglas. He was knighted for his service in the French war of 1356. In 1361 he was made constable of Edinburgh, and in 1364 he became warden of the Western Marches. In 1369 and 1371 Sir Archibald served as ambassador to France. From 1380 until his death he both arranged truces with the English and engaged them in battle. In 1388, at the death of James Douglas, 2d earl of Douglas, he succeeded to the earldom and the Douglas estates. He had already acquired—by grant, purchase, and inheritance—Galloway and the Bothwell estates. At his death the Douglas family was the most powerful in Scotland.

Douglas, Archibald, 4th **earl of Douglas,** 1369?–1424, Scottish nobleman, called Tyneman [loser], second son of Archibald Douglas, 3d earl of Douglas. In 1390 he married Margaret Stuart, daughter of ROBERT III. During the English invasion of Scotland in 1401 he defeated the earl of March and Sir Henry Percy and held the castle of Edinburgh against Henry IV. In 1402 Douglas was tried and acquitted of the murder of David Stuart, duke of Rothesay, heir apparent to the throne. Later that year Douglas led the Scots against the English and was taken prisoner. He was then induced to join the Percies in a conspiracy against Henry, but at Shrewsbury he was taken prisoner by Henry and held until his ransom in 1408. From 1412 to 1422 Douglas continued his border warfare against England and eventually ransomed his young king, James I, from Henry V. In 1423 he and his Scottish contingent joined the French against the English. He was made lieutenant general of the French army and duke of Touraine. But in 1424 the allies were defeated at Verneuil, and Douglas was slain.

Douglas, Archibald, 5th **earl of Douglas,** 1391?–1439, Scottish nobleman, son of Archibald Douglas, 4th earl of Douglas. He fought in France for the French against the English in 1421 and persuaded his father in 1423 to go to France. Although Douglas was one of the Scottish nobles who accompanied James I home when that king returned in 1424 from his long English captivity, James so distrusted the Douglas power and loyalty that the earl was twice imprisoned for short times by royal order. After James's death in 1437, Douglas was lieutenant general of the kingdom in the minority of James II and the most powerful man in Scotland.

Douglas, Clifford Hugh, 1879–, English engineer and social economist, educated at Cambridge Univ. Author of the economic theory of SOCIAL CREDIT, he became (1935) chief reconstruction adviser to the SOCIAL CREDIT government of Alberta, Canada, but, differing with some of its policies, he shortly resigned. His books include *Economic Democracy* (1920), *Social Credit* (1924), *The Monopoly of Credit* (1931), *The Use of Money* (1935), and *The Alberta Experiment. An Interim Survey* (1937).

Douglas, David, 1798–1834, Scottish botanist. He made several journeys in North America between 1823 and 1834 to study American plants and sent to Scotland more than 200 plants and seeds then unknown in Europe. His journal, published in 1914, is of historical as well as of scientific importance, because he was one of the earliest travelers in the Oregon country and in California. In 1834 he traveled to Puget Sound and the Fraser river, then went to the Hawaiian Islands, where he was killed by a wild bull. The Douglas fir, which he observed c 1825, was named for him.

Douglas, Gawin (gä'win) **or Gavin** (găv'in), 1474?–1522, Scottish poet and churchman; son of Archibald (Bell-the-Cat) DOUGLAS, 5th earl of Angus. His ecclesiastical career was troubled by the jealousy the Scottish nobles felt toward the Douglas family. They prevented him for nearly a year from holding the see of Dunkeld, to which he had been appointed (1515). Involved in political quarrels caused by the queen's marriage to his nephew, the 6th earl of Angus, he suffered imprisonment and, just before his death, exile to England. His poetry was largely composed in the more peaceful period of his life, before 1515. He is one of the principal poets of the Chaucerian tradition, his allegories are often exceptionally fine, and his descriptive passages are remarkable. His poems are *The Palace of Honour*, *King Hart* (i.e., Heart), *Conscience*, and a translation of the *Aeneid*. The first two are long allegories, the third is less important, and the fourth is one of the first classical translations into English directly from the original. His works were edited (1874) by John Small of Edinburgh.

Douglas, George, pseud of **George Douglas Brown,** 1869–1902, Scottish novelist, educated at Oxford. He practiced journalism and was a publisher's reader. His novel, *The House with the Green Shutters* (1901), is a powerful, somber story of Scottish life. See Cuthbert Lennox, *George Douglas Brown: a Biographical Memoir* (1903).

Douglas, Sir Howard, 1776–1861, British general. He was a distinguished teacher of military strategy and an important authority on military and naval engineering. After a command in Canada (1795–99) he served intermittently as commandant of the senior department of the Royal Military College and inspector general of instructions there. Meantime he participated (1809–12) in the Peninsular War and the Walcheren expedition. While governor of New Brunswick (1823–31) he secured a charter for King's College at Fredericton (later the Univ. of New Brunswick) and attempted to settle the Maine boundary dispute with the United States. He was high commissioner of the Ionian Islands (1835–40). Douglas's many technical works include treatises on naval gunnery, steam navigation, armor-plating, land fortifications, national defense, and naval maneuvers.

Douglas, James. see QUEENSBERRY, JAMES DOUGLAS, 2d DUKE OF.

Douglas, James, 2d **earl of Douglas and Mar,** 1358?–1388, Scottish nobleman, son of William Douglas, 1st earl. In 1373 he married Isabel Stuart, daughter of King Robert II. In the raids on the English border made by Douglas and the French Admiral Vienne in 1385, Douglas succeeded in securing the chief advantages for the Scots. In the famous battle of Otterburn, celebrated in the ballads *Chevy Chase* and the *Battle of Otterburn*, Douglas's forces, though he was slain, were victorious, and his opponent, Sir Henry Percy (Hotspur), was taken captive.

Douglas, James, 9th **earl of Douglas,** 1426–88, Scottish nobleman, last earl of Douglas. Following the assassination of his brother William, the 8th earl, in 1452, he led a rebellion against King James II of Scotland. He was opposed by another Douglas, George, earl of Angus, and was defeated. He was reconciled to his king, but soon entered into a conspiracy with the English, and in 1455 he was defeated by James and Angus. Douglas escaped to England, but in 1483 was captured in a raid on Scotland and imprisoned the rest of his life. With him the first line of the earls of Douglas ended and their power passed to the Angus Douglases.

Douglas, James (d. 1581) see MORTON, JAMES DOUGLAS, 4TH EARL OF.

Douglas, James (1658–1712) see HAMILTON, JAMES DOUGLAS, 4TH DUKE OF.

Douglas, Sir James, 1803–77, Canadian fur trader and colonial governor, b. Scotland. In 1829 he went to Canada in the service of the North West Company, soon after its merger (1821) with the Hudson's Bay Company, he accompanied (1824) the noted John McLoughlin to the Columbia river country. By energetic and capable service, Douglas won promotion (1840) to chief factor, and in 1846 he succeeded McLoughlin in command of the Hudson's Bay Company territory W of the Rockies. On Vancouver Island, upon the site of the present Victoria, he built (1843) Fort Victoria, which became (1849) the western headquarters for the company. In 1851 he was appointed governor of Vancouver Island, and in 1858 he also became governor of the new colony of British Columbia on the mainland. At this time Douglas severed his long association with the Hudson's Bay Company. His governorship, which extended until 1864, was marked by a firm control of the colonies' affairs, made particularly turbulent by the gold rushes to the Fraser river and to the Cariboo region. Shortly before his retirement from office he was knighted (1863). See biographies by R. H. Coats and R. E. Gosnell (rev. ed., 1926) and W. N. Sage (1930).

Douglas, James, 1837–1918, Canadian metallurgist, mining engineer, and industrialist, b. Quebec city, educated at the Univ. of Edinburgh and at Queen's Univ., Kingston, grandfather of Lewis Williams Douglas. In his work as metallurgist he specialized in methods of extracting copper from its ore. In 1875 he went to the United States to take charge of a copper plant at Phoenixville, Pa. The copper properties which he bought (1880) in Arizona for a firm in New York city were the nucleus for the successful Copper Queen Consolidated Mining Company, of which he became president, it played a role in the development of the Southwest. An outstanding authority on mining and metallurgy, Douglas effected many reforms in the industry. He was twice president of the American Institute of Mining Engineers, and in 1900 he represented the United States at the mining congress in Paris. In addition to many technical papers, he wrote *Old France in the New World* (1905) and *New England and New France* (1913). See memoir by H. H. Langton (1940).

Douglas, Sir James de Douglas, lord of, 1286?–1330, Scottish nobleman, called the Black Douglas (from his dark complexion) and Douglas the Good, eldest son of William de DOUGLAS, lord of Douglas. In the struggle against Edward I of England he was deprived of his estates and made himself the terror of the border, even burning his own castle of Douglas twice to rid it of English garrisons. He joined ROBERT I (Robert the Bruce), led a force at Bannockburn, and was knighted there. When the Bruce went to Ireland in 1316 he left Douglas and Walter Stewart as regents of Scotland. In 1327 Douglas almost captured the young Edward III and did end the English campaign. After Robert the Bruce died, Douglas started with the Bruce's heart in a casket to bury it in Palestine, but was killed fighting the Moors in Spain. See Froissart's *Chronicles*, Barbour's *Bruce*, and Walter Scott's *Castle Dangerous* and *Tales of a Grandfather*.

Douglas, John Sholto see QUEENSBERRY, JOHN SHOLTO DOUGLAS, 8TH MARQUESS OF.

Douglas, Lewis Williams, 1894–, U. S. ambassador (1947–) to Great Britain, b. Bisbee, Ariz., grad. Amherst, 1916. After service in the First World War, he taught (1919–20) history at Amherst and devoted his attention to the rich copper mines developed by his grandfather and father. He served (1923–25) in the Arizona legislature, then represented (1927–33) Arizona in Congress. Douglas was appointed (1933) director of the budget by President F. D. Roosevelt, but he resigned in 1934 in disagreement with Roosevelt's fiscal policies. He was chosen (1937) by McGill Univ. to be its first American principal and vice chancellor. He served as deputy lend-lease expediter (1942–43) and deputy war shipping administrator (1943–44) before he was appointed ambassador to Great Britain.

Douglas, Norman (George Norman Douglas), 1868–, English novelist and essayist, b. Scotland. The best known of his works is *South Wind* (1917), a novel set in Capri. Other works include *Old Calabria* (1915), *They Went* (1920), *Together* (1923), *Three of Them* (1930), *Good-bye to Western Culture* (1930), *Looking Back, an Autobiographical Excursion* (1933), and *Late Harvest* (1946).

Douglas, Paul Howard, 1892–, American economist, b. Salem, Mass., Ph.D. Columbia, 1921. He joined the faculty of the Univ. of Chicago in 1920, was active as a government adviser, especially on problems of wages and social security, and served (1939–42) as alderman to the Chicago city council. In 1942 he enlisted in the U. S. Marine Corps, where he rose to the rank of major and was decorated. He was elected to the U. S. Senate in 1948. His books include *Real Wages in the United States, 1890–1926* (1930), *The Theory of Wages* (1934), and *Social Security in the United States* (1936, 2d ed., 1939).

Douglas, Stephen Arnold, 1813–61, American statesman, b. Brandon, Vt. He moved to the West as a young man and at Jacksonville, Ill., in 1834 was admitted to the bar. Douglas served two terms (1836–37) in the Illinois legislature and then became register of the land office at Springfield. He was appointed secretary of state for Illinois in 1840 and in 1841 became a judge of the state supreme court. He strengthened the Democratic party in Illinois, was a U. S. Representative (1843–47), and from 1847 until his death was a U. S. Senator. After 1847 he made his home in Chicago, where investments in real estate eventually made him wealthy. In the Senate, Douglas was made chairman of the Committee on Territories, an all-important post in the next decade because of the growing fight over the issue of slavery in the territories. For the COMPROMISE OF 1850, Douglas drafted the bills instituting territorial government in New Mexico and Utah, whose citizens were left free to act for themselves on all subjects of legislation (including slavery) not inconsistent with the Constitution. This was the essence of his doctrine of popular sovereignty (a phrase he coined later, in 1854), or SQUATTER SOVEREIGNTY, as its opponents contemptuously called it. When, in the early 1850s, expanding settlement and the great desire for a transcontinental railroad to the Pacific focused attention on the Nebraska region, Douglas proposed a bill in which, as in New Mexico and Utah, he left all question of slavery to the people of the new territory. A conference of leaders changed the bill to provide for two territories, and in this form the KANSAS-NEBRASKA BILL became law in 1854. Douglas really felt that

popular sovereignty would unite the Northern and Southern wings of the Democratic party and at the same time settle the slavery issue peacefully But he had not foreseen the bitter contest which would develop between proslavery and free-state settlers in KANSAS In his report on the Kansas situation he blamed the organized interference of interests outside the territory for the failure of popular sovereignty At the Democratic national convention of 1856, Douglas, unable to gather enough votes to win the presidential nomination, advised the support of James Buchanan and afterwards campaigned for him. However, when Buchanan decided to support the proslavery LECOMPTON CONSTITUTION, on which only the proslavery forces in Kansas had voted, Douglas rebelled and in one of his major speeches denounced both the Lecompton Constitution and the Buchanan administration It was a courageous and spectacular stand, but it only won him new enemies in the South while not losing old enemies in the North, who held, unfairly, that Douglas was moved by political expediency, for he was coming up for reelection in 1858 In this Illinois campaign the "Little Giant," as his admirers called him, was pitted against Abraham LINCOLN, Republican candidate The contest was made memorable by the Lincoln-Douglas debates, which first gave Lincoln a national reputation Of the seven debates, the second, held at Freeport on Aug 27, 1858, had the most important consequences There Lincoln shrewdly put to Douglas a question exposing the inconsistency between Douglas's doctrine of popular sovereignty and the U S Supreme Court's decision in the DRED SCOTT CASE—"Can the people of a United States Territory, in any lawful way exclude slavery from its limits prior to the formation of a State constitution?" Had Douglas answered No, in line with the Dred Scott decision, he would have offended many of his constituents and doubtless lost his seat in the Senate As it was, he replied that people of a territory could exclude slavery, since that institution could not exist for a day without local police regulations and these could be legislated only with their approval The Republicans won a popular majority in the ensuing election, but the Democrats controlled the legislature and Douglas was returned to the Senate However, his Freeport doctrine, as his answer to Lincoln's question was styled, had made him anathema to Southern Democrats Since they controlled the Senate, he was relieved of the chairmanship of the Committee on Territories The Democratic national convention at Charleston, S C , in 1860 adopted his recommendations in a platform advocating nonintervention with slavery in the territories, the demands of William L YANCEY that the Federal government protect the institution were thus rejected, and Yancey and other Southern delegates withdrew Although Douglas led on all 57 ballots taken there for the presidential nomination he was unable to muster the necessary two thirds of the vote, and the convention adjourned Reconvening at Baltimore, the Democrats finally chose him only after more Southern delegates withdrew to nominate their own candidate, John C Breckinridge Douglas won only 12 electoral votes, although he stood second to the victorious Lincoln in the popular count In the following months Douglas worked hard to effect a compromise between the sections, when that failed and the Civil War broke out, he vigorously supported Lincoln One of the greatest orators of his day, he made a speaking tour to rally the people of the Northwest in the crisis, but after an eloquent speech at Springfield, he was stricken with typhoid fever and died Douglas's reputation suffered with the growth of the Lincoln legend In recent years, however, it has been demonstrated that he was one of the few men of his era with a truly broad national vision, and this was both the basis for his honorable attempts to reconcile differences and for his ultimate political failure, because the age was essentially one of bitter sectional controversy See biographies by W G Brown (1902), Allen Johnson (1908), and C E Carr (1909), G F Milton, *The Eve of Conflict Stephen A Douglas and the Civil War* (1934)

Douglas, William · see LIDDESDALE, WILLIAM DOUGLAS, KNIGHT OF

Douglas, William · see QUEENSBERRY, WILLIAM DOUGLAS, 4TH DUKE OF

Douglas, William, 1st earl of Douglas and Mar, 1327?–1384, Scottish nobleman, son of Sir Archibald Douglas and nephew of Sir James de Douglas About 1348 he returned to Scotland from France and captured the Douglas lands from the English Later he took part in the negotiations for the ransom and release of DAVID II In 1354 he succeeded to the estates of his father and uncle and to the lands of his kinsman, William Douglas, Knight of LIDDESDALE, whom he had slain Douglas engaged in French-incited raids on the English border and fought for the French at Poitiers After the accession of Robert II he was made justiciar S of the Forth and received the lands of the earl of Fife. In 1373 his son James married Isabel Stuart, the king's daughter. At the death of his wife's brother in 1374 he received the lands and title of the earl of Mar. During his last years he fought the English and made peace with them He remained in constant attendance upon Robert Douglas had an illegitimate son by Margaret Stuart, countess of Angus in her own right This was George Douglas, who became 1st earl of Angus

Douglas, William, 6th earl of Douglas, 1423?–1440, Scottish nobleman, eldest son of Archibald Douglas, 5th earl of Douglas In answer to an invitation from the six-year-old King James II, a puppet controlled by Sir William Crichton and Sir Alexander Livingstone, Douglas and his brother visited the royal castle at Edinburgh and were there beheaded William had been 3d duke of Touraine, lord of Galloway and Annandale, and count of Longnville Now the earldom passed to James Douglas, son of Archibald Douglas, 3d earl of Douglas, and Galloway went to Margaret, sister of the 6th earl, who eventually married William Douglas, 8th earl The rest of the lands and titles were lost to the family, and the power of the Douglas clan was for a time broken.

Douglas, William, 8th earl of Douglas, 1425?–1452, Scottish nobleman, son of James Douglas, 7th earl of Douglas By marrying his cousin Margaret Douglas, the Fair Maid of Galloway, he reunited the two chief estates of his family Through the favor of James II he was able to avenge the death of the 6th earl by partially crushing Sir William Crichton and completely ruining Sir Alexander Livingstone When Douglas defied James, however, the king himself slew him at Stirling Castle His brother James succeeded to the title

Douglas, William de Douglas, lord of, d 1298, Scottish nobleman, called the Hardy (from *le Hardi* [the bold]) He was a Crusader and the first of his family to take the title of lord of Douglas For abducting and marrying a widow and royal ward, Eleanor of Lovain, he was deprived of his English estates by Edward I An unwilling subject of John de Baliol and then of Edward I, he at last rose (1297) with Sir William WALLACE, was captured, and died a prisoner in the Tower of London His eldest son was Sir James de Douglas

Douglas, William Orville, 1898–, American jurist, Associate Justice of the Supreme Court (1939–), b Maine, Minn , grad Whitman College, 1920, LL B Columbia, 1925 Professor of law at Yale, Douglas, a Democrat, was appointed (1934) to the Security and Exchange Commission, as chairman (1937–39) he pursued a vigorous policy of reform He was prominent as a liberal and a proponent of the New Deal He was appointed to the Supreme Court bench by President F D Roosevelt Douglas, in collaboration with C M Shanks, compiled (1931–32) many case books on business law See his autobiography, *Of Men and Mountains* (1950)

Douglas, capital (pop 19,328) of the Isle of Man, Great Britain It is a seaport The Tower of Refuge, near the harbor entrance, was built by William Hillary, founder of the Royal National Lifeboat Institution A favorite resort, Douglas has three piers and a 2-mile esplanade

Douglas, parish (pop 2,948), Lanarkshire, Scotland, on Douglas Water and SSW of Lanark Scott's "Castle Dangerous" has been replaced by the modern seat of the earls of Home The Church of St Bride (12th cent) was the burial place of the Douglases until 1761

Douglas. 1 City (pop 8,623), SE Ariz , at the Mexican boundary, inc 1905 The city grew about a copper smelter (built 1900) but is also a ranching center and a border port, with an international airport **2** City (pop 5,175), co seat of Coffee co , S central Ga , NW of Waycross, inc as a town 1895, as a city 1897 Douglas is a farm trade center It has a state junior college **3** Town (pop 2,617), S Mass , near the R I line SSE of Worcester, settled c 1721, inc 1746 Woolen goods are produced here **4** Town (pop 2,205), co seat of Converse co , E central Wyo , on the North Platte river and E of Casper, laid out 1886 It is trade center for a livestock, farm, and oil area The state fairgrounds are here Near by is the site of Fort Fetterman

Douglas and Mar, James Douglas, 2d **earl of** · see DOUGLAS, JAMES

Douglas and Mar, William Douglas, 1st **earl of:** see DOUGLAS, WILLIAM

Douglas fir or **Douglas spruce,** species of *Pseudotsuga, Pseudotsuga taxifolia,* not a true fir or spruce It is an immense coniferous evergreen of W North America and one of the most commercially valuable of native trees The wood, though variable, is usually hard and strong and used for many purposes, particularly construction The bark is used in tanning. Though native from Alaska to Mexico and E to Texas, it is cultivated elsewhere, both in Europe and the United States, for its attractive appearance Named for David Douglas, the tree is also sometimes called red fir, yellow fir, or Oregon pine

Douglass, Frederick, c 1817–1895, American abolitionist, b near Easton, Md The son of a Negro slave, Harriet Bailey, and an unknown white father, he took the name of Douglass (from Scott's hero in *The Lady of the Lake*) after his second, and successful, attempt to escape from slavery in 1838 At New Bedford, Mass , he found work as a day laborer An extemporaneous speech before a meeting at Nantucket of the Massachusetts Anti-Slavery Society in 1841 was so effective that he was made one of its agents Douglass, who had learned to read and write while in the service of a kind mistress in Baltimore, published his *Narrative of the Life of Frederick Douglass* in 1845. Fearing capture as a fugitive slave, he spent several years in England and Ireland, returning in 1847 with money sufficient to purchase his freedom At Rochester, N Y , he established the *North Star* and edited it for 17 years in the abolitionist cause Unlike Garrison, he favored the use of political methods and thus became a follower of James G BIRNEY. In the Civil War he helped organize two regiments of Massachusetts Negroes and urged other Negroes to join the Union ranks During Reconstruction he continued to urge civil rights for his people He was secretary of the Santo Domingo Commission (1871), marshal of the District of Columbia (1877–81), recorder of deeds for the same district (1881–86), and minister to Haiti (1889–91) *Life and Times of Frederick Douglass* (1941) is a final, revised edition of his autobiography See also biography by Booker T Washington (1907), Edmund Fuller, *A Star Pointed North* (1946), Shirley Graham, *There Was Once a Slave* (1947).

Douglas spruce. see DOUGLAS FIR

Douglasville, town (pop 2,555), co seat of Douglas co , NW Ga , W of Atlanta, settled on the site of an Indian village, inc 1875 Textiles are made

Douhet, Giulio (jōō'lyō dōōā'), 1869–1930, Italian military theorist He served in the First World War and was court-martialed for criticizing the Italian high command but was later recalled and in 1921 was promoted general His interest was in air power, and he attracted great interest by maintaining that command of the air could win a war despite land or sea power The matter is still debated The Second War proved the great significance of air power, but most observers felt that it showed that air power alone was not sufficient to win a war.

Doukhobors: see DUKHOBORS.

Doulton, Sir Henry (dōl'tŭn), 1820–97, English potter His revival of graffito, the old agate or salt-glazed stoneware of the late 17th cent , was the forerunner of many glazed wares At the Lambeth pottery he established a school which revived the art pottery industry and brought him the Albert gold medal of the Society of Arts. He was knighted in 1887 His Doulton ware is famous

Doulton ware, English pottery produced at Lambeth after 1815, first by John Doulton and his partners, then by his descendants It won the medal at the Exhibition of 1851 and more than 200 subsequent awards for the perfection of the various products and the beauty of their decoration by skilled artists who signed their work It includes brown stoneware with graffito or scratched designs, other salt-glaze pieces with black, brown, blue, bronze, green, gray, or white bodies, faience, impasto, and Carrara Sculptured terra-cotta plaques by George Tinworth won additional fame for Doulton ware Its factories became the Royal Doulton Potteries

Doumer, Paul (pōl' dōōmâr'), 1857–1932, president of the French republic (1931–32) He became a deputy in 1888, was governor general of Indo-China (1897–1902), was a senator after 1912, and served in several cabinets after the First World War Having succeeded Gaston Doumergue as president, he was assassinated by an insane Russian émigré

Doumergue, Gaston (gästôN' dōōmĕrg'), 1863–1937, president of the French republic (1924–31) and premier (1934) He entered politics in 1893 as a Radical Socialist deputy and served in various cabinets before and during the First World War He was unique in being a Protestant heading the modern French state When the DALADIER cabinet fell in Feb , 1934, as a result of the STAVISKY AFFAIR, Doumergue formed a new cabinet and was hailed by the rightists as the "strong man" of France He failed to obtain the extraordinary powers he demanded to lift France from its financial and political impasse, and in Nov , 1934, his coalition cabinet was succeeded by another under P E Flandin

Doumic, René (rünā' dōōmĕk'), 1860–1937, French literary critic He was editor of the *Revue des Deux Mondes* and from 1923 permanent secretary of the French Academy His criticism, of the type of BRUNETIÈRE, was nonrelativistic in seeking to discriminate between the good and the bad in literature His work appeared as *Études sur la littérature française* [studies in French literature] (1896–1909)

Doura, ancient city, Syria see DURA

Douro (dō'rō) or **Duero** (dōōā'rō), river of Spain and Portugal, more than 475 mi long Douro is the Portuguese, Duero the Spanish name It rises in the Sierra de Urbión, N central Spain, flows W through Old Castile and Leon past Zamora, then follows the Spanish-Portuguese border southwestward, before flowing W across Portugal to reach the Atlantic beyond Oporto Several hydroelectric power plants use its waters.

Douw, Gerard. see DOU.

Dove, Heinrich Wilhelm (hīn'rĭkh vĭl'hĕlm dō'və), 1803–79, German physicist. An authority on meteorology and climatology, he studied especially the distribution of heat on the earth's surface and winds and storms He worked also on induced electricity and on polarized light. He taught at the Univ. of Berlin from 1829

Dove (dŭv), river rising in Derbyshire, England, near Buxton, and flowing 40 mi S and SE to the Trent at Newton Solney It forms much of the Derbyshire-Staffordshire boundary Its watercourse was a haunt of Izaak Walton and still provides fishing The rocky and wood-bordered glen of Dovedale, below Hartington, is celebrated by artists and poets

dove, name applied to some of the smaller birds of the pigeon family, but often used synonymously with the name PIGEON The European rock dove is believed to be the ancestor of the domesticated pigeons The mourning dove is native to North America and is widely distributed over the continent Native also are the Inca and the Mexican ground doves, found from the SW United States to Central America, and the white-fronted dove, which has about the same range In religion and art the dove symbolizes peace, because of the dove which brought a sign of the end of the flood (Gen 8 8–12), it also represents gentleness (Mat 10 16) and a manifestation of the Holy Ghost (Mat 3 16) The TURTLEDOVE was used in Hebrew sacrifices (Lev 14 22) In Greek mythology the dove was sacred to Aphrodite

dove flower, Holy Ghost flower, or **Holy Spirit plant,** Central American ORCHID, *Peristeria elata*, with fragrant white, sometimes purple, spotted flowers thought to resemble a dove It has been cultivated for about a century

Dover, municipal borough (1931 pop 41,097, 1947 estimated pop 36,600), Kent, England, chief of the CINQUE PORTS, ESE of London, on the shores of a Channel bay, beneath chalk heights crowned with forts and castles The small Dour river, which flows through the town, gave it its name The Romans fortified the place and called it Portus Dubris, and in Anglo-Saxon times there was a fort at this "key to England" In 1216 it was defended by Hubert de Burgh against attack by the French In the civil wars it was taken (1642) by the parliamentarians It was the landing place of Charles II in 1660 Easternmost English port (21 mi from France), Dover was the center of English Channel defense and an important naval base in the First World War For four years in the Second World War it was a constant target of German long-range guns In the cliffs a series of subterranean caves and tunnels used formerly by smugglers served as shelters from 1940 to 1944 Dover is an important port for travel and shipping to the Continent and is a resort Improvement of the extensive harbor, protected chiefly by Admiralty and Prince of Wales piers, took place in the late 19th and early 20th cent Noteworthy are Shakespeare Cliff (the first coal in Kent was discovered here in 1822), the 13th-century Maison Dieu Hall, hostel of Hubert de Burgh; Dover Castle, of Roman or Saxon origin, the lighthouse, which is partly Roman, the Church of St Mary, in the castle, also with Roman work, the barracks, and St Martin's priory See J B Jones, *Annals of Dover* (1916)

Dover, 1 City (pop 5,517), state capital, and co seat of Kent co , central Del , on the St Jones river near Silver Lake and S of Smyrna, settled 1683, laid out 1717, inc as a town 1829, as a city 1929 In a rich farming and fruitgrowing region, it is a shipping and canning center with varied industries The old statehouse on the green, built in part in 1722 as county courthouse, has been the capital since 1777 Numerous historic homes and sites remain A home for dependent children is here, and Delaware State College (for Negroes) is near by. 2 Town (pop 1,374), E Mass , SW of Boston, settled c 1635, set off from Dedham 1784 3 City (pop. 14,990), co seat of Strafford co , SE N H , at falls of the Cocheco near its confluence with the Piscataqua; settled 1623, inc as a city 1855 Textiles and shoes are manufactured The town was organized in 1633 but grew slowly partly because of Indian depredations In the raid of 1689 the settlement was nearly destroyed Lord Saye and Sele and his group had large holdings here, 1633–41 A local library originated in 1792 The city has a 17th-century garrison house and an 18th-century Friends' meetinghouse The Woodman Institute (1915) has historical and natural-science collections Lincoln made a speech in Dover in 1860 and stayed overnight at the Lincoln House (built 1831) 4 Industrial town (pop 10,491), N N J , NW of Morristown, settled 1722, inc 1869 It grew as a port on the old Morris Canal The town was formerly an iron center, and powder plants near by brought great expansion in the early 1940s 5 City (pop 9,691), E Ohio, on the Tuscarawas and SSW of Canton, in a coal and fire-clay area, laid out 1807 and settled by German immigrants Electrical equipment, sheet steel, bricks, chemicals, and vacuum cleaners are among its varied products Near by are Atwood and Dover dams

Dover, Strait of, separating England from France and connecting the English Channel with the North Sea. It is 21 mi wide between Dover and Cape Gris-Nez, near Calais, and is called Pas de Calais by the French The Romans called it Fretum Gallicum It has been the scene of naval battles. In 1216 Hubert de Burgh defeated the invading French, and in 1588 the Spanish Armada received its first serious check in the strait.

Dover Center, Ohio see WESTLAKE

Dover-Foxcroft, town (pop 4,015), co seat of Piscataquis co , central Maine, NW of Bangor, formed in 1922 by the union of Foxcroft (settled 1806, inc. 1812) and Dover (settled 1803, inc 1822) towns The two parts are on opposite sides of the Piscataquis, which furnishes power for woolen mills See Mary C Lowell, *Old Foxcroft, Maine* (1935)

Doves Press (dŭvz), one of the leaders in the 19th-century revival of the art and craft of making books It was founded at Hammersmith, London, in 1900 by T J Cobden-Sanderson and Emery Walker, both of whom had been associated with William Morris in the work of the KELMSCOTT PRESS The masterpiece of the Doves Press was the Doves Bible (5 vols , 1903) The Doves type, suggested by type used by Nicolas Jenson in the 15th cent , was designed by Emery Walker The work of the press ended in 1916, when Cobden-Sanderson prevented further use of the type by throwing it into the Thames

Dovrefjell (dō'vrŭfyĕl), rough plateau of central Norway, culminating in Snohetta (Nor *Snøhetta*, 7,498 ft high) and dividing the country in two The sparsely inhabited region is crossed by the Dovre railway, opened in 1921

Dow, Gerard see DOU

Dow, Lorenzo (dou), 1777–1834, American evangelist, b Coventry, Conn Although connected at times with the Methodist Church, he was for much of his life an independent preacher He traveled between the North and the South on horseback, by 1830 Dow was nationally known, not only for his eloquence, but for his oddities of manner and dress He visited Ireland and England, where he introduced camp meetings See biography by C. C. Sellers (1928)

Dow, Neal, 1804–97, American prohibitionist, b Portland, Maine He helped organize the Maine Temperance Union in 1838 and prepared (1851) the famous "Maine Law," which superseded the less rigid prohibition legislation of 1846 Mayor of Portland (1851–59), Dow succeeded with difficulty in making his law operative in that city He lectured on prohibition throughout the United States and in 1857 visited England In the Civil War he rose to be a brigadier general of volunteers, twice wounded at Port Hudson (1863), he was captured and spent eight months in Libby Prison After the war he was the Prohibition party's candidate for President in 1880 See his reminiscences (1898)

Dowagiac (dō'wə'jăk), city (pop 5,007), SW Mich , SW of Kalamazoo, in a farm and lake region, settled 1848, inc as a village 1863, as a city 1877 Its stove industry began in the 1850s, furnaces and fishing tackle are also made Several Indian garden beds and mounds are near by

Dowden, Edward (dou'-), 1843–1913, Irish critic and essayist He is best known as a Shakspearian critic and a biographer of Shelley Dowden was an early and close friend of Walt Whitman

dower, the legal right to a life estate in a husband's real property which a wife acquires by marriage for her use and the use of their children after his death At common law dower consisted of a one-third interest in all the land which the husband owned during the marriage The right to a dower interest in land in the United States is generally determined by the law of the state where the land is situated In many states dower rights have been abolished, and other provisions, especially rights of inheritance, made for the widow Where it still exists, the dower right attaches to the land as soon as it comes into the husband's possession, for that reason it cannot be defeated by a conveyance of the land by the husband in his lifetime unless the wife joins in the deed Divorce if the wife is the guilty party or annulment of the marriage defeats the right of the wife to dower

Dowie, John Alexander (dou'ĭ), 1847–1907, founder of the Christian Catholic Apostolic Church in Zion, b Scotland He emigrated (1860) to Australia, where he was ordained as a Congregational minister, became interested in faith healing, and established the International Divine Healing Association Dowie came to America in 1888, in Chicago he founded his church in 1896 In 1901 he established Zion, Ill , which was composed of his followers and governed by special regulations laid down by Dowie Soon his administration was under criticism, and in 1905 he was deposed See fictionalized biography by Arthur Newcomb (1930)

Dowland, John (dou'-), 1563–1620, English composer, unsurpassed in his day as a lutanist His books of *Songes or Ayres* (1597–1603) established him as the foremost song composer of his time.

Down, maritime county (952 sq. mi.; 1937 pop. 210,687; 1948 estimated pop. 231,996, excluding Belfast, which lies partly within the county), Ulster prov , Northern Ireland. The county town is Downpatrick. The shore line extends along the Irish Sea from Belfast to Carlingford Loughs and is deeply indented by Strangford Lough and Dundrum Bay The undulating surface rises to the beautiful Mourne Mts. in the south The chief rivers are the Lagan and the Bann The area is extensively cultivated (oats, potatoes, wheat, and flax) Linen is manufactured at many towns, the chief of which are Bangor, Newry, Downpatrick, and Banbridge The area was anciently dominated by the O'Neills The date of its organization as a county is uncertain. See John Stevenson, *Two Centuries of Life in County Down* (1920)

Downers Grove, village (pop 9,520), NE Ill , just W of Chicago, settled 1832, inc 1873 Its manufactures include electrical machinery and tools

Downey, June Etta, 1875–1932, American psychologist, b Laramie, Wyo., grad Univ of Wyoming, 1895, Ph D Univ of Chicago, 1907 In 1915 she was appointed professor of philosophy and psychology at the Univ of Wyoming, and her educational contributions were in the field of personality testing Her writings include *Graphology and the Psychology of Handwriting* (1919), *The Will-Temperament and Its Testing* (1923), and *Creative Imagination* (1929)

Downing, Andrew Jackson, 1815–52, American horticulturist, rural architect, and landscape gardener, b Newburgh, N Y With his brother Charles Downing (1802–85) he took over the operation of the nursery which his father had established at Newburgh, and c 1838 Andrew became sole owner His *Treatise on the Theory and Practice of Landscape Gardening, Adapted to North America* (1841) rapidly became a classic and passed through 10 editions (10th ed , 1921) His *Cottage Residences* (1842) was an attempt to point the way to improvement in the homes of country people With his brother Charles, he published, both in England and America, *The Fruits and Fruit Trees of America* (1845), a valuable work that passed through 13 editions in the author's lifetime From 1846 until his early death he edited the *Horticulturist;* his editorials were in part published as *Rural Essays* (1853) In 1850 he published his *Architecture for Country Houses* With Calvert Vaux he designed and constructed the homes and gardens of a great number of country estates along the Hudson He also planned the grounds for the Capitol, the White House, and the Smithsonian Institution in Washington

Downing, Sir George, 1623?–1684, English diplomat Nephew of Gov John Winthrop of Massachusetts, he was graduated in the first class at Harvard (1642), returned to England, and fought for Parliament in the civil war, later assisting in the settlement of affairs in Scotland Cromwell sent him as ambassador to Holland He made his peace with Charles II in 1660, was created baronet, and received grants and offices, including the ambassadorship to Holland His conduct earned him a reputation for subservience Downing St , London, is named for him

Downing, Major Jack see SMITH, SEBA

Downing College: see CAMBRIDGE UNIVERSITY

Downing Street, London Here are located the British colonial and foreign offices and, at No 10, the residence of the first lord of the Treasury, who is usually (though not necessarily) the prime minister of Great Britain Since nearly all prime ministers from the time of Robert Walpole have lived here, the term designates the government in power Downing St is also used figuratively to mean the foreign office

Downingtown, borough (pop 4,645), SE Pa., W of Philadelphia near Brandywine battlefield, settled c 1730, inc 1859 It manufactures metal products, paper, and textiles

Downpatrick (doun pă'trĭk), urban district (pop 3,372) co seat of Co Down, Northern Ireland, SE of Belfast and at the southwest extremity of Strangford Lough The seat of the diocese of Down, it has long been a religious center, St Patrick is said to have founded a church here A.D c 440 The present cathedral dates from 1790 There are remains of Inch Abbey (founded 1180 by Sir John de Courcy) and of the Monastery of Saul (foundation ascribed to St Patrick), and near the town are a large rath, one of the finest Irish earthworks, and the holy wells of Struell The town is a market for a sheep-raising and flax- and oats-growing area and has linen mills It is a hunting center Downpatrick has always been a place of pilgrimage, as the tomb of Ireland's three great saints —Patrick, Columba, and Bridget of Kildare

Downs, city (pop 1,219), N Kansas, on the North Fork of the Solomon, inc 1879 It is a rail center in a farm area.

Downs, the, chalk hills, SE England, less than 1,000 ft. high The North Downs range, in Surrey and Kent, is cut by the Wey, Mole, Darent, Medway, and Great and Little Stour rivers, it is separated by the WEALD from the South Downs in Sussex, cut by the Arun, Adur, Ouse, and Cuckmere rivers The Downs provide excellent pasturage for sheep ("Southdown sheep"). See H. J. Massingham, *The English Downland* (1936).

Downs, the, roadstead between North Foreland and South Foreland, off Deal, Kent, England, in the

English Channel. It is 8 by 6 mi in area and is protected, except from strong south winds, by the Goodwin Sands. Here two naval battles were fought—between Dutch and Spanish in 1639 and British and French in 1666 (see DUTCH WARS).

dowry, the property which a woman brings to her husband at the time of the marriage The institution of the dowry was in origin apparently connected with the giving of marriage gifts by the family of the groom to the bride and by the family of the bride to the groom It has been a well-established institution among the propertied classes of various lands and times, e g , in ancient Greece and Rome, in India, in medieval Europe, and in modern continental countries Generally the husband has been compelled to return the dowry in case of divorce or the death of the wife when still childless One purpose of the dowry was to provide support for the wife on the husband's death, and thus it was related remotely to the rights of dower In civil-law countries the dowry is an important form of property

dowser: see DIVINING ROD

Dowson, Ernest Christopher (dou'-), 1867–1900, English poet From a brief life of squalor and excess which was ridden by tuberculosis, he decanted a few rich and delicate lyrics Dowson's works include *A Comedy of Masks* (1893), a semi-autobiographical novel written with Arthur Moore, *Verses* (1896), *The Pierrot of the Minute* (1897), a play in verse, *Poems* (1905), and various translations from the French Best known of his poems is "Non Sum Qualis Eram Bonae sub Regno Cynarae," with its refrain, "I have been faithful to thee, Cynara! in my fashion" See his *Poems and Prose* (with a memoir by Arthur Symons, 1919), biography (1944) and collected stories (1947) by Mark Longaker

doxology, sacred HYMN of praise The best-known doxologies of the Christian church are "GLORIA IN EXCELSIS," or the greater doxology, "GLORIA PATRI," or the lesser doxology, and the closing stanza of Thomas Ken's morning and evening hymns, beginning, "Praise God from whom all blessings flow," sung to the tune *Old Hundred* from the Genevan Psalter

Doyle, Sir Arthur Conan, 1859–1930, English author, b Edinburgh, who created Sherlock Holmes and Dr Watson Educated at Stonyhurst and at the Royal Infirmary in Edinburgh, he received a medical degree in 1881 A poor medical practice, which he abandoned in 1890, gave him time for writing, and in 1887 the first Sherlock Holmes story, *A Study in Scarlet*, appeared in *Beeton's Christmas Annual* Other detective stories which followed include *The Sign of the Four* (1890), *The Memoirs of Sherlock Holmes* (1894), *The Hound of the Baskervilles* (1902), *The Return of Sherlock Holmes* (1905), *His Last Bow* (1917), and *The Case Book of Sherlock Holmes* (1927) The brilliant and theatrical Sherlock Holmes has his foil in the slow and sober chronicler of the adventures, Dr Watson William Gillette long played Sherlock Holmes on the stage Doyle wrote many historical romances, e g , *Micah Clarke* (1889) and *The White Company* (1891) His play *The Story of Waterloo* (1900) was one of Sir Henry Irving's successes In 1900 Doyle was knighted for writing patriotic pamphlets He became, in later years, an ardent student of spiritualism and in 1926 wrote *The History of Spiritualism* See his autobiography, *Memories and Adventures* (1924), the short sketch by his son, Adrian C Doyle (1946), biography by J D Carr (1949), H W Bell, *Sherlock Holmes and Dr Watson* (1932), E W Smith, *Profile by Gaslight* (1944), Christopher Morley, *Sherlock Holmes and Dr Watson* (1944), B M L Ernst and H Carrington, *Houdini and Conan Doyle* (1932)

Doyle, Sir Francis Hastings Charles, 1810–88, English poet He is distinguished for the martial ring of his ballads, particularly "The Red Thread of Honour," "The Loss of the Birkenhead," and "The Private of the Buffs" He was professor of poetry at Oxford from 1867 to 1877 See his *Reminiscences and Opinions* (1886)

Doyle, Richard, 1824–83, English caricaturist, watercolorist, and illustrator, son and pupil of John Doyle, popular caricaturist His *Journal* (British Mus), a book of sketches done when he was 15, shows his extraordinary precocity He worked on the staff of *Punch*, 1843–50, and drew the famous cover design Later he illustrated various works of Thackeray, Leigh Hunt, Dickens, and Ruskin He also painted water colors of Welsh scenery, introducing figures of pixies and fairies He is represented in many British galleries

Doylestown. 1 Village (pop 1,259), NE Ohio, SW of Akron 2 Borough (pop 4,976), co seat of Bucks co , SE Pa , c 30 mi N of Philadelphia, settled 1735, laid out 1778, inc 1838. The trade center of a dairying and farming area, Doylestown is the seat of the National Farm School It has a historical museum with an especially interesting collection of early farm implements

Drachenfels (drä'khŭnfĕls) [Ger , =dragon's rock], cliff, 1,053 ft high, on the Rhine, S of Bonn, Germany It is of volcanic origin In legend, it is the scene of Siegfried's triumph over the dragon The Drachenburg, a now-ruined fortress, was built on it (probably in 1117) by Archbishop Frederick I of Cologne It was captured by the Swedes (1632) and by the Spaniards (1633) in the Thirty Years War. The cliff and castle are favorite excursion points

Drachmann, Holger Henrik Herholdt (hôl'gûr hänrĭk hĕr'hôlt drăkh'mən), 1846–1908, Danish poet and dramatist. He began to write poetry during a stay in London (1870–71) and contributed to the Danish press brilliant articles on the Franco-Prussian War, the Paris commune, and Danish art Joining the group of writers led by Georg Brandes, he wrote several volumes of verse, *Poems* (1872), *Muted Melodies* (1875), *Songs by the Sea* (1877), *Vines and Roses* (1879), and *Youth in Poetry and Song* (1879), and the travel book *Over the Border* (1877) He also wrote a number of popular plays and several romantic novels, but was preeminently a lyricist His *Collected Poetical Works* appeared in 1906

Draco (drā'kō) or **Dracon** (drā'kŏn), fl 621 B C , Athenian lawgiver, at least semilegendary Of his codification of Athenian customary law only the section dealing with involuntary homicide is preserved From this and from later traditional accounts it appears that the penalty of death was used for many offenses The code adopted the principle that murder must be punished by the state and not by VENDETTA. Draco's work was much modified and ameliorated by SOLON

Dracut (drā'kŭt), wool-textile town (pop 7,339), NE Mass , N of Lowell and on the Merrimack, settled 1664, inc 1702

draft. Similar in form to a CHECK, a draft is an order by one party to another party to pay a stated sum to the person or firm in whose favor the draft is made. Often the drawer and the drawee are the same person A sight draft is payable immediately on presentation to the drawee, a time draft is payable at a fixed date in the future Drafts usually arise out of commercial transactions in which buyer and seller are at some distance from each other The seller draws a draft against the buyer of his goods and sends the draft, together with shipping documents, to his bank The bank or its agent presents the draft to the buyer for his acceptance of the obligation or for payment An accepted draft—also known as a trade acceptance—represents a definite promise by the buyer to pay the amount stipulated A draft is essentially the same as a BILL OF EXCHANGE In shipping, *draft* refers to the extent to which a ship sinks in the water For military draft, see CONSCRIPTION

draft riots, in the Civil War The Union conscription act of March 3, 1863, provided that all able-bodied males between 20 and 45 were liable to military service, but a drafted man who furnished an acceptable substitute or paid the government $300 was excused A defective piece of legislation enforced amid great unpopularity, it provoked nation-wide disturbances that were most serious in New York city, where for four days (July 13–16, 1863) there occurred large-scale, bloody riots Many elements in New York had sympathized with the South, and the populace had been aroused by the statements of Gov Horatio SEYMOUR and other Democratic leaders that the conscription act was unconstitutional Further incited by agitators, laborers, mostly foreign-born, made up the bulk of a tremendous mob which overpowered the police and militia, attacked and seized the Second Ave armory with its rifles and guns, and set fire to buildings Abolitionists and Negroes were especially singled out for attack Many Negroes were beaten to death and a Negro orphanage was fired, leaving hundreds of children homeless Business ceased, and robbing and looting flourished Since the conscription provision which allowed the rich to buy exemption was especially resented, the Tammany city government voted to pay the necessary $300 for anyone who might be drafted Meanwhile New York troops, including the famous 7th Regiment, which had been sent to the front for the Gettysburg campaign, were rushed back, and with the aid of the police, militia, naval forces, and cadets from West Point, they succeeded in restoring order President Lincoln supported a Democratic-dominated commission which investigated the draft in New York, while Governor Seymour urged both adherence to the conscription act and a court test of its constitutionality (which never came about) In August the draft was peacefully resumed The privilege of buying one's way out of service was limited (1864) to conscientious objectors The riots had, however, inflicted property damage of $1,500,000 to $2,000,000, and it has been estimated that total casualties ran as high as 1,000 See F A Shannon, *The Organization and Administration of the Union Army, 1861–1865* (1928), B L Lee, *Discontent in New York City, 1861 1865* (1943)

Draga (drā'gä), 1867–1903, queen consort of King ALEXANDER of Serbia A widow and a lady in waiting to the king's mother, Draga Mashin was accused by general rumor of a shady and promiscuous past However, the infatuated king ignored all warnings and in 1900 shocked his nation by marrying her Her unpopularity, especially in army circles, was aggravated by the subsequent political measures of the king. In 1903 an army clique, headed by Colonel Mashin, a brother of the queen's first husband, plotted against the royal couple A regiment occupied the palace, and the king and queen, found hiding in a cupboard, were killed by some 30 bullets Draga, for good measure, was stabbed by the conspirators, and the premier and several ministers were likewise assassinated

Drago, Luis María (lōō'ēs' märē'ä drä'gō), 1859–1921, Argentine statesman, jurist, and writer on international law As minister of foreign affairs under Julio A ROCA, he dispatched (Dec 29, 1902) a note to the Argentine minister at Washington protesting against the forcible coercion of Venezuela by Great Britain, Germany, and Italy (see VENEZUELA CLAIMS) This protest set forth the **Drago Doctrine,** intended as a corollary of the Monroe Doctrine Drago, apparently under the erroneous impression that the European nations were merely attempting to collect unpaid bonds, maintained that no public debt should be collected from a sovereign American state by armed force or through the occupation of American territory by a foreign power The doctrine was not new in principle, though its concept is narrower than that of the earlier CALVO DOCTRINE, from which it grew The Drago Doctrine was discussed at the Pan-American Congress of 1906 and was brought before the Hague Conference of 1907, where a modified form offered by Horace PORTER was approved instead

dragon, in mythology, a composite winged reptilic beast, generally said to have lion's claws, eagle's wings, and serpent's tail The dragon's breath is usually fiery The conception is found in many parts of the earth and has persisted from ancient Babylonia It was an emblem of the Chinese Empire Among the Romans the emblem was subordinate only to the eagle, and it is the national symbol of Wales The slaying of a dragon by a hero is a widespread story, e g , in the *Nibelungenlied*, in *Beowulf*, and in the story of St George The dragon of the Apocalypse (Rev 12) has given rise to its use as a symbol of Satan, hence the common and popular conception of St Michael the Archangel as the slayer of the dragon

Dragonetti, Domenico (dōmä'nēkō drägônĕt'tē), 1763–1846, Italian double-bass virtuoso He appeared in opera houses in Italy and after 1794 in concerts in England He was a friend of Beethoven and Haydn and left to the British Museum a large and valuable collection of manuscripts and old instruments

dragonfly, large insect of the order Odonata, which also includes the damsel fly Dragonflies are found in most parts of the world but are especially numerous in South America and Japan. Both the dragonfly and the smaller damsel fly lay their eggs in or near water The nymphs are aquatic, and the metamorphosis is incomplete The adults have four membranous wings When at rest, those of the dragonfly are extended horizontally and those of the damsel fly are folded back Some dragonflies surpass the swiftness and agility of the swallow in flight They eat larvae and adults of insects, including mosquitoes, gnats, and flies. Dragonfly nymphs are eaten by fish and ducks Some dragonflies destroy bees Although they cannot bite or sting, their common names include horse stinger and devil's darning needle Fossil remains of a form of the Permian period, more than 2 ft long, were found in Kansas

dragonnades or **dragonades** (both drăgŭnādz'), name given to a form of persecution of French Protestants before and after the revocation (1685) of the Edict of Nantes by Louis XIV It consisted in harassing the Huguenots by billeting soldiers (particularly the rowdy dragoons) in their houses and in disregarding the soldiers' misconduct The outrages committed against the persons and property of the Huguenots contributed—even more than the legal enforcement of the Act of Revocation—to the mass emigration of HUGUENOTS, so that entire cities and regions were ruined and depopulated as if devastated by war

dragon's blood, name for a red resin obtained from a number of different plants It was held by early Greeks, Romans, and Arabs to have medicinal properties Dioscorides and other early writers described it, a chief source was a liliaceous tree, *Dracaena cinnabari* Fifteenth-century voyagers to the Canary Islands obtained it from another species, *D draco* Later supplies were obtained from the East Indies and Malaya (from species of *Daemonorops*) and used in Europe to some extent in medicine but largely for coloring in varnishes. Its use as a coloring material has been largely replaced by synthetics

Draguignan (drägēnyä'), town (pop 8,879), capital of Var dept , SE France, in Provence It is a resort town with several minor industries Of 13th-century Draguignan there remain two city gates and part of the synagogue

drainage, in agricultural practice, a system of removing excess moisture from soil, either by a ditch or by an underground method The ditch method has been practiced in shallow furrow form for a long time, and underground drainage was known to

the farmers of ancient Rome Cylindrical tiles, now made of either burned clay or concrete, are much used in the United States Over large areas, drainage problems are worked out cooperatively by communities or farming districts See W L Powers and T A H Teeter, *Land Drainage* (2d ed , 1932), Q C Ayres and Daniels Scoates, *Land Drainage and Reclamation* (2d ed , 1939), B A Etcheverry, *Land Drainage and Flood Protection* (reissue, 1940), R G Kendall, *Practical Field Drainage* (1945), publications of the U S Dept of Agriculture

drainage. In mining, drainage is an important consideration The shafts themselves are kept dry in various ways (see SHAFT SINKING), but provision has to be made to take care of water entering them from the surface or from the passageways below ground For this purpose, drainage reservoirs called sumps are dug out at the bottom below the lowest level of the mine, and the water flows into them by gravity Pumping systems are used below ground, in addition, special passages are often driven below the lowest level, and into these water seeps from the workings above

drainage basin: see CATCHMENT AREA

Drake, Alexander Wilson, 1843–1916, American artist and critic, b Westfield, N J He studied oil and water-color painting and practiced wood engraving until 1871, when he became art director of *Scribner's Monthly Magazine*, later (1881–1913) filling a similar position on *Century Magazine* and on *St Nicholas* Drake was a connoisseur of paintings and a collector of brasses and ship models (preserved in India House, New York)

Drake, Daniel, 1785–1852, American physician, b near Plainfield, N J , M D Univ of Pennsylvania, 1816 He founded, in Cincinnati, the Medical College of Ohio (chartered 1819, now part of the Univ of Cincinnati), the Commercial Hospital and Lunatic Asylum (1821), the Eye Infirmary (1827), and the Ohio School for the Blind (1837) He taught at Transylvania Univ and, in his later years, at Louisville (Ky) Medical Institute His monumental contribution to medicine was a study of disease as related to geography, *The Principal Diseases of the Interior Valley of North America* (1850–54) His *Pioneer Life in Kentucky* was edited by his son C D Drake (1870) See studies by S D Gross (1853) and Otto Juettner (1909)

Drake, Edwin Laurentine, 1819–80, American oil-well driller, b Greene co , N Y An investor in the Pennsylvania Rock Oil Company, he was sent in 1857 to look over the company's property on Oil Creek In 1858 he was employed to conduct drilling operations, and on Aug 27, 1859, he struck oil at 69 ft The site of this first oil well in the United States is in Drake Well Memorial Park near Titusville, Pa

Drake, Sir Francis, 1540?–1596, English navigator and admiral, first Englishman to circumnavigate the world (1577–80) He was born in Devonshire of middle-class parentage and was early apprenticed to a ship captain He made voyages to Guinea and the West Indies and in 1567 commanded a ship in a slave-trading expedition of his kinsman, John HAWKINS The period was one of growing naval rivalry between Spain and the ascendant strength of Elizabethan England Drake had already come into conflict with the Spanish, and on the voyage with Hawkins the Spanish destroyed all but two of the English vessels Drake made other voyages to the West Indies shortly afterwards About 1570 the English adopted a policy of "reprisals" on Spanish shipping In 1572, with two ships and 74 men, Drake set out on the first of his famous marauding expeditions He took the town of Nombre de Dios on the Isthmus of Panama, captured a ship in the harbor of Cartagena, burned Portobelo, crossed and recrossed the isthmus, and captured three mule trains bearing 30 tons of silver The voyage brought Drake wealth and fame For the next few years he commanded the sea forces against rebellious Ireland Drake sought the favor of Queen Elizabeth and received her secret consent to a raid on Spanish holdings on the Pacific coast of the New World, Elizabeth not daring openly to abandon her professions of friendship for Philip II of Spain Drake sailed with five ships in Dec , 1577, abandoned two ships in the Río de la Plata in South America, and, with the remaining three, navigated the Straits of Magellan, the first Englishman to make the passage A storm drove them far southward, one ship and its crew were destroyed, and another, separated from Drake's vessel, returned to England Drake continued alone in the *Golden Hind* up the coast of South America, plundered Valparaiso and smaller settlements, cut loose the shipping at Callao, and captured a rich Spanish treasure ship making from Lima Armed now with Spanish charts, he continued north along the coast, looking for a possible passage to the Atlantic, feeling it would be unsafe to retrace his course Sailing possibly as far north as the present state of Washington with no success, he determined to cross the Pacific He returned to what was probably San Francisco Bay to repair and provision his ship, evidence recently found seems to show he visited that area He named the region New Albion and took possession of it in the name of Queen Elizabeth Then crossing the Pacific, he visited the Philippines, the Celebes, and Java, rounded the Cape of Good Hope, and arrived at Plymouth on Sept 26, 1580 The value of the treasure Drake brought back to England has been estimated at as much as £2,500,000 Elizabeth endeavored for a time to justify Drake's conduct to Spain, but, failing to satisfy the Spanish, she finally abandoned all pretense and openly recognized Drake's exploits by knighting him aboard the *Golden Hind* In 1585 Drake commanded a fleet of 19 vessels that sacked Vigo in Spain and burned São Tiago in the Cape Verde Islands Proceeding across the Atlantic, he took Santo Domingo, captured Cartagena (which was subsequently ransomed), plundered the Florida coast, including the settlement of St Augustine, and rescued Sir Walter Ralegh's Roanoke colony under Ralph Lane on the Carolina coast Meantime, Spain had begun to prepare for open war In 1587 Drake entered the harbor of Cádiz with 30 ships and destroyed the fleet the Spanish were assembling He had, he said, merely singed the king of Spain's beard and wished to carry out further expeditions against the Spanish ports, but Elizabeth would not sanction his plans He was a vice admiral in the fleet that defeated the Armada in 1588 He was in joint command of an attempted invasion of Portugal in 1589, but failed to take Lisbon Drake's last expedition, in 1595, undertaken jointly with Hawkins, was directed against the West Indies This time the Spanish were prepared, and the venture was a complete failure Hawkins died off Puerto Rico, and Drake shortly afterwards, of dysentery, off Portobelo, where he was buried at sea See J S Corbett, *Drake and the Tudor Navy* (2 vols , 1898), H R Wagner, *Sir Francis Drake's Voyage around the World* (1926), biographies by E F Benson (1927) and A E Mason (1942)

Drake, Francis Marion, 1830–1903, Union Army officer in the Civil War, railroad president, and governor of Iowa (1896–98), b Rushville, Ill He helped defend St Joseph, Mo , against Confederate Gen Sterling Price and as lieutenant colonel of an Iowa regiment fought with distinction in the Western campaigns, being brevetted brigadier general of volunteers in Feb , 1865 Admitted to the bar in 1866, Drake was president of the Iowa Southern RR for a time and later headed (1882–98) the Indiana, Illinois & Iowa, which became part of the Chicago & Alton As governor he called a special session of the general assembly to revise the legal code of Iowa and substantially reformed the state's charitable and penal institutions Drake Univ was named for him

Drake, Joseph Rodman (drāk), 1795–1820, American poet and satirist, b New York city He became a practicing physician there Under the name "The Croakers," he and his intimate friend, Fitz-Greene Halleck, wrote a series of light satirical verses for the New York *Evening Post* (1819, first complete ed , 1840) Drake's longest serious poem is "The Culprit Fay" (1816, in *The Culprit Fay and Other Poems*, ed by his daughter, 1835), his poem "The American Flag" was long a standard patriotic declamation Halleck's elegy beginning, "Green be the turf above thee," was written upon Drake's death See *The Life and Works of Joseph Rodman Drake* (with a memoir and complete text, ed by F L Pleadwell, 1935)

Drakensberg Range (drä'kunzbûrg), South Africa, extending 700 mi NE–SW in Natal, Basutoland, Orange Free State, and Transvaal Mont-aux-Sources (10,750 ft) is the loftiest point. The Natal National Park is in the Drakensbergs It includes Mont-aux-Sources and the gorge and waterfalls (total drop of 2,800 ft) of the Tugela river

Drakesboro, town (pop 1,255), W Ky , S of Owensboro, in a coal area

Drake University, at Des Moines, Iowa, coeducational, chartered and opened 1881 by the Disciples of Christ, named for Francis M Drake It includes colleges of the Bible, commerce and finance, education, fine arts, liberal arts, and pharmacy and a school of law

drama. see THEATER

Drammen (drä'mun), city (pop 26,994), co seat of Buskerud co , SE Norway, on the Drammen river and at the head of the Drammen Fjord It has wood-pulp, cellulose, and paper manufactures

Drammen, river, c 25 mi long, SE Norway, emptying into the Drammen Fjord, a branch of Oslo Fjord Its several falls are utilized by lumber mills and hydroelectric plants

Drangiana (drăn"jēā'nu, ā'nu), ancient country, part of the Persian empire of Alexander the Great, between Aria on the north and Gedrosia on the south The Drangae, a warlike people from whom the country derived its name, inhabited the northern part, the Ariaspae, the southern part Drangiana is now in W Afghanistan and E Persia

Draper, Henry, 1837–82, American scientist, b Prince Edward co , Va , son of John William Draper He was professor of physiology (1870–82) at New York Univ His major contributions to science were in the field of astronomical photography and spectroscopy He built an observatory at Hastings-on-Hudson

Draper, John William, 1811–82, American scientist, philosopher, and historian, b near Liverpool, England He came to America in 1832 (M D Univ. of Pennsylvania, 1836) In 1838 he became professor of chemistry in New York Univ He aided in the organization of the medical school of the university, became its professor of chemistry and physiology, and in 1850 succeeded Valentine Mott as its president His chief contribution to abstract science was research in radiant energy His work on the spectra of incandescent substances foreshadowed the development of the field of spectrum analysis, in which his son Henry Draper became a pioneer It was his researches in the effect of light upon chemicals that led him to take up photography He was said to be the first in New York to use Daguerre's process, announced in 1839, and he improved it so that in 1840 he took the first satisfactory portrait of a human face Most of his papers on radiant energy were republished in his *Scientific Memoirs* (1878) His *Human Physiology* (1856) was the leading textbook of the period in its field, and it contained his own admirable microphotographs, the first ever published This was followed by what is usually considered one of the most brilliant books of the 19th cent , his *History of the Intellectual Development of Europe* (1863) Scarcely less popular was his *History of the Conflict between Religion and Science* (1874), a rationalistic classic, which played an important part in the intellectual debates of the last quarter of the century He wrote also *History of the American Civil War* (3 vols , 1867–70), in which he had the aid of General Sherman, and *Thoughts on the Future Civil Policy of America* (1865)

Draper, Lyman Copeland, 1815–91, American historical collector and librarian, b Erie co , N Y He spent years traveling over an area from New York to Mississippi, gathering the stories of old pioneers and documentary material on frontier history for a projected series of biographies of Western heroes His extensive collection was deposited with the Wisconsin Historical Society at Madison, of which he was secretary and librarian (1854–86), there he built up one of the notable historical libraries of the country He founded and edited the first 10 volumes of the society's *Collections* and wrote *King's Mountain and Its Heroes* (1881), but never completed the intended biographies His collection, valuable to many researchers, contains the George Rogers Clark papers, the Daniel Boone papers, and many other manuscript sources

Draper, Ruth, 1884–, American monologist, b New York city She has written 36 monologues which range from farce to tragedy These often include half a dozen characters, all of whom she plays in turn with few stage accessories or changes of costume Her delicate and sophisticated art has gained world-wide acclaim

Drau see DRAVA

draughts see CHECKERS

Drava or **Drave** (both dra'vu), Ger *Drau* (drou) river, c 450 mi long, central Europe, a tributary of the Danube It rises in the Italian Alps near the Austrian border, flows E through Carinthia (Austria) past Villach and SE through Slovenia and Croatia (Yugoslavia) past Maribor and Osijek, forming part of the Hungarian-Yugoslav border Its lower course is navigable

Dravidian (druvĭ'dēun), name given to the largest group of inhabitants in India before the coming of the Aryans Today the name is given to a large group in S India, presumably descended from the prehistoric Dravidians, they have strong Negrito elements

Dravidian languages (druvĭ'dēun), family of languages of S India, see LANGUAGE, table Attempts have been made to connect them with other groups, especially the Munda language of the Himalayas

Dravosburg (druvōs'bûrg), borough (pop 2,277), Allegheny co , SW Pa , on the Monongahela and near Pittsburgh, inc 1903

drawbridge, movable bridge, generally over a stream or river where water-borne traffic must be maintained and where it is not possible to build a fixed bridge of sufficient height to allow the traffic to pass under it Formerly in fortresses, in some cases as late as the beginning of the 19th cent , the drawbridge played an important part in the system of defense It spanned a ditch or moat, was hinged at the inner end, and rested free on the outer edge of the moat Chains attached to the outer end and passing through the wall over sheaves with counterbalance weights inside were used to hoist the bridge The modern drawbridge may be one of several types Most common are the lifting, bascule, and swing bridges The lifting bridge or lift bridge consists of a rigid frame carrying the road and resting on abutments, over each of which rises a steel frame tower There is no center pier The bridge is hoisted vertically The bascule bridge follows the principle of the ancient drawbridge It may be in one span or in two halves meeting at the center It consists of a rigid structure mounted at the abutment on a horizontal shaft, about which it

swings in a vertical arc. The lower center span of the famous Tower Bridge in London is of the double-leaf bascule type Bascule bridges are sometimes built to swing back on a heavy steel quadrant frame, there being suitable tracks for it to roll in There are several forms of the swing bridge, generally it is mounted on a pier in midstream and is swung in a direction parallel to the stream See Otis Ellis Hovey, *Movable Bridges* (2 vols , 1926–27), G A Hool and W S Kinne, ed , *Movable and Long-Span Steel Bridges* (2d ed , 1943).

drawing, the art of the draughtsman In its broadest sense it includes every use of the produced line and is thus included in the arts of painting, design, calligraphy, and geometry It is commonly used to denote works in pen, pencil, crayon, chalk, charcoal, or similar mediums, in which form rather than color is emphasized For centuries, drawings were produced rather in preparation for paintings than for decoration But today exhibitions of drawings rival those of paintings in popularity, and the sketches of the masters are prized almost as highly as their most ambitious works

Drayton, Michael, 1563–1631, English poet, b Warwickshire The sonnet beginning, "Since there's no help, come let us kiss and part," is probably the most famous of many he wrote in *Ideas Mirrour* (1594) and other volumes Other short works are the eclogues in *Idea, the Shepheards Garland* (1593) and the odes "Ballad of Agincourt" and "To the Virginian Voyage" in *Poems Lyrick and Pastorall* (1606) His several poems on English history culminated in the 15,000-line panoramic *Poly-Olbion* (1612–22) He also wrote at least two satires, *The Owle* (1604) and "The Man in the Moon" (1606), collaborated with Dekker and Webster on plays now lost, and wrote a charming fairyland piece, *Nymphidia* (1627) See his complete works (ed by J W Hebel and others, 5 vols , 1931–41), B H Newdigate, *Michael Drayton and His Circle* (1941)

Drayton in Hales, Shropshire, England see MARKET DRAYTON

dreadnought, term used for a type of heavily armed and heavily armored warship used just before and during the First World War It took its name from the *Dreadnought,* built for the British navy in 1905, which carried 10 guns of 12-inch caliber and had armor 11 in thick to guard against torpedoes Still larger British vessels of the type were called superdreadnoughts in the First World War After that period the term went out of use

dream, mental activity associated with sleep and made up commonly of a number of visual images, i e , of scenes or thoughts expressed in terms of seeing rather than in those of the other senses or in words Dreams are similar to hallucinations in that they are not usually aroused by sense impressions Although it has been demonstrated that some dreams are the result of somatic disturbances (e g , toothache and indigestion) or are motivated by external stimuli (e g , ringing of an alarm clock), these factors merely determine the form of the dream without affecting its content The time length of a dream is disputed, but many authorities believe it takes no more than a few seconds In primitive and ancient cultures dreams played an extensive role, being variously considered as visitations of the gods, prophetic pronouncements, and the meanderings of human souls released by sleep The dreams of Jacob and Joseph and those of Pharaoh interpreted by Joseph are classic. However, with the development of science and its attendant rationalism, particularly during the 18th and 19th cent , dreams ceased to be considered worthy of speculation Freud, in his *Interpretation of Dreams* (1900, Eng tr , 1913), was one of the first to bring dreams forward as mental phenomena worthy of careful and exhaustive scientific study He distinguished the manifest from the latent content of dreams, the former being the dream-image as experienced and the latter the meaning of the dream The language of dreams is symbol, some of so universal and ancient a nature that the interpretation is standard and others significant only through the free association of the patient in psychoanalysis The symbolic nature of dreams is a disguise designed to protect the dreamer from recognizing attempts at wish fulfillment of thoughts and impulses forbidden to his conscious life Freud believed dreams protect sleep by draining off the force of emotional disturbances which would otherwise cause a person to awaken There is considerable disagreement among psychotherapists as to dream motivation. C G Jung considered it a piece of anticipatory thinking in which various possible steps in the future are tested, while Alfred Adler emphasized the compensatory function of dreams. See R L Woods, *World of Dreams* (1947).

Drebbel, Cornelis Jacobszoon (kôrnā'lĭs yā'kôpsŏn drĕ'bŭl), 1572–1634, Dutch inventor, physicist, and mechanician He settled in England, where he won great repute in the service of James I and Henry, prince of Wales An engraver by profession and an expert glassworker, Drebbel turned to the applied sciences. His major inventions and discoveries were a "perpetual motion" machine, patented in Holland in 1598; a true scarlet dye for which tin salts were used as a mordant; and the diving boat (c 1620), the first navigable submarine The air in this craft was renewed from a supply of oxygen, probably the first use of this gas, which Drebbel extracted from saltpeter by a process long kept a secret He was also the reputed inventor of the compound microscope and an improved thermometer Other of his recorded inventions are self-regulating ovens, incubators, automatic musical instruments, magic lanterns, a mirror reflecting seven images, explosive underwater engines, and improved drainage pumps See study by Gerrit Tierie (1932)

dredging, the process of excavating materials under water to clear or deepen channels and entrances of harbors, docks, rivers, and canals The Dutch at an early period cleared their canals of silt with a pole to the end of which was attached a bag held open by a steel ring The arrangement, operated from the side of a stationary barge, was dragged along the bottom and then raised to the surface to be emptied into the barge Modern dredging equipment may be divided into four main classes The **grab dredge** is used where the amount of excavation is relatively small It consists of one or more grab buckets, operated by cranes mounted on a vessel or barge or sometimes, as in the case of canal work, on the shore The bucket is similar to the clamshell bucket used in ordinary shore excavation It is lowered in an open position to the sea or canal bed, filled by a special closing device, raised, and discharged into a hopper barge which takes the material to a disposal area The **dipper dredge** is also similar to the apparatus used in shore excavations and is known as the boom and dipper assembly It is used extensively in canal construction and was used in the cutting of the Panama Canal The **ladder-bucket dredge** is a more elaborate type and is generally mounted on a self-propelling vessel built with a longitudinal well in the center open to the water for a considerable length Over it a long steel frame is mounted and hinged The frame, which may be raised or lowered at will, is equipped with an endless string of buckets passing over sprockets at each end The buckets, operating through the well, scoop up material and discharge it into a chute which projects over the vessel's side to a hopper barge moored alongside or into a receiving hopper in the dredger itself Hopper barges, for carrying away material brought up by dredges, are of a special type The space for the material is fitted at the bottom with hinged doors or flaps, held closed by chains Around the spaces are watertight compartments to give the barge buoyancy When the dredge is above the disposal area, the bottom doors are released and the material is discharged The doors are closed again by hand-operated winches The **suction dredge** is an entirely different type and is used principally where material such as sand or mud is to be removed There is a flexible pipe connected to a powerful centrifugal pump The pipe is lowered to the bottom and the material pumped up and discharged into hopper barges With the material come large quantities of water When discharged into the hopper barge the heavy material sinks to the bottom, and the surplus water flows back into the sea Material from these dredges is sometimes pumped through pipes for long distances and used to build up low-lying ground The first steam river dredge used in America was built by Oliver Evans

Dred Scott Case, argued before the U S Supreme Court in 1856–57 It involved the then bitterly contested issue of the status of slavery in the Federal territories In 1834 Dred Scott, a Negro, personal servant to Dr John Emerson, a U S army surgeon, was taken by his master from Missouri, a slave state, to Illinois, a free state, and thence to Fort Snelling (now in Minnesota) in Wisconsin Territory, where slavery was prohibited by the MISSOURI COMPROMISE There he married and had two children before returning with Dr Emerson to Missouri in 1838 After Emerson's death, Scott sued (1846) Mrs Emerson for freedom for himself and his family on the ground that residence in a free state and then in a free territory had ended his bondage He won his suit before a lower court in St Louis, but the Missouri supreme court reversed the decision and thus reversed its own previous rulings Mrs Emerson now married Dr C C Chaffee, an abolitionist Congressman from Massachusetts. In order to get the case into the Federal courts, a defendant from some state other than Missouri was needed, and since it would have been unseemly to have an abolitionist appear in the role of a slaveowner, Dred Scott was technically sold to the brother of Mrs Chaffee, J F A Sanford of New York Whatever the verdict in the case of *Scott* vs. *Sanford,* Dred Scott and his family were to be set free by agreement of the nominal parties to the suit, which was to be a test case It came on appeal to the Supreme Court, where Montgomery Blair and George T Curtis appeared as counsel for Scott and Reverdy Johnson for the defense In Feb , 1857, the court decided in conference to avoid completely the question of the constitutionality of the Missouri Compromise and to return a verdict against Scott on the ground that under Missouri law as now interpreted by the supreme court of that state he remained a slave despite his previous residence in free territory. However, when it became known that two antislavery justices, John McLEAN and Benjamin R CURTIS, planned to write dissenting opinions vigorously upholding the constitutionality of the Missouri Compromise (which had, in fact, been voided by the KANSAS-NEBRASKA BILL of 1854), the court's Southern members, constituting the majority, were forced to consider the whole question of Federal power over slavery in the territories They decided that Congress had no power to prohibit slavery in the territories, and Chief Justice Roger B TANEY delivered the court's opinion to that effect It was held that a Negro "whose ancestors were sold as slaves" was not entitled to the rights of a Federal citizen and therefore had no standing in court and that the Missouri Compromise was unconstitutional The court's verdict further enflamed the sectional controversy between North and South and was roundly denounced by the growing antislavery host in the North The decision was later nullified by the FOURTEENTH AMENDMENT See Frank H Hodder, "Some Phases of the Dred Scott Case," *Mississippi Valley Historical Review,* XVI (1929), 3–22

Dreiherrnspitze, Austria see HOHE TAUERN

Dreiser, Theodore (drī'sur), 1871–1945, American author, b Terre Haute, Ind , studied at Indiana Univ , brother of Paul Dresser He worked on newspapers in Chicago, St Louis, and Pittsburgh and in 1894 went to New York, where he soon wrote for and edited magazines *Sister Carrie* (1900), his first novel, was suppressed by its publisher and later was attacked for its unsparing realism His next novel *Jennie Gerhardt* (1911), was also attacked as immorally frank, but it sold well enough to enable Dreiser to give up journalism. After *The Financier* (1912) and its sequel *The Titan* (1914), describing a ruthless industrialist, and *The 'Genius"* (1915), concerning an artist in America, which won the acclaim of such critics as H L. Mencken, a larger public approved Dreiser in spite of his ponderous, amorphous style His intense pity and his determinism gave strength to *An American Tragedy* (2 vols , 1925), later dramatized and produced by the Theatre Guild Of his posthumously published novels, *The Bulwark* (1946) is stronger than *The Stoic* (1947), in which Dreiser attempted to return to the characters of *The Titan* and *The Financier* In his later life Dreiser found hope in socialism, reflected in *Dreiser Looks at Russia* (1928) and *Tragic America* (1931) Among his other works are *The Hand of the Potter* (1918, rev. ed , 1927), a tragedy, short stories in *Free* (1918), *Chains* (1927), and *A Gallery of Women* (1929), and studies of actual persons in *Twelve Men* (1919) Autobiographical material is in *A Traveler at Forty* (1913), *A Hoosier Holiday* (1916), *A Book about Myself* (1922), republished as *Newspaper Days* (1931), and *Dawn* (1931) See biography by R H Elias (1948)

Drenthe (drĕn'tu), province (1,029 sq. mi , pop 269,769), NE Netherlands, bordering on Germany Assen is the capital Largely a heath country, it is used for stock raising and dairy farming Long subject to the bishops of Utrecht, Drenthe passed (1536) to Emperor Charles V It was part of the United Provs from 1581, but it sent no delegates to the States-General until 1796

Dresden (drĕz'dun), town (pop 1,662), S Ont , on the Sydenham and N of Chatham

Dresden (drĕz'dun), city (1946 pop 467,966, 1939 pop 630,216), capital of Saxony, E Germany, on the Elbe A manufacturing center (machine tools, optical instruments, glass, chemicals) and a large inland port, it was in the Second World War about three quarters destroyed by air raids and by Russian artillery Originally a Slavic settlement, Dresden was settled with Germans by the margrave of Meissen in the 13th cent From 1485 until 1918 it was the residence of the electors (later kings) of Saxony The Treaty of Dresden (1745) transferred the major portion of Silesia from Austria to Prussia (see AUSTRIAN SUCCESSION, WAR OF THE) and ended the Prussian occupation of the city, but in the Seven Years War, Dresden was again occupied (1756) and shelled (1760) by the Prussians In 1813 Napoleon I defeated the coalition forces near Dresden before his defeat at Leipzig In the late 17th and 18th cent , particularly under the electors Frederick Augustus I and Frederick Augustus II (Augustus II and Augustus III as kings of Poland), Dresden became a center of the arts and an outstanding example of baroque and rococo architecture Among the once famous landmarks, destroyed or damaged in the Second World War, are the city hall, the Zwinger palace and museum, the Hofkirche [court chapel], and the cathedral Most of the fabulous art collections, acquired by the court in the 18th and 19th cent , were safely kept through the war outside Dresden, but many art objects were afterward removed to Russia, the most famous item was Raphael's *Sistine Madonna.* "Dresden china," despite its name, was made in MEISSEN

Dresden (drĕz'dun), 1 Village (pop 1,350), E central Ohio, on the Muskingum and N of Zanesville

It manufactures several products. 2 Town (pop, 1,115), co. seat of Weakley co , W Tenn , W of Paris, in an area of timber, sweet-potato farms, and clay pits, laid out 1825.

dress see COSTUME.

Dresser, Horatio Willis, 1866–, American author, associated with the New Thought movement, b Yarmouth, Maine, grad Harvard, 1895 He published and edited (1896–98) the *Journal of Practical Metaphysics* and, later, *The Higher Law* He was editor of *Spirit of New Thought* (1917) and the *Quimby Manuscripts* (1921) His numerous books, chiefly on philosophy and New Thought, include *Handbook of the New Thought* (1917) and *Spiritual Health and Healing* (1922)

Dresser, Paul, 1857–1911, American song writer His name was originally Dreiser, and he was the brother of Theodore Dreiser Most popular of his songs were *On the Banks of the Wabash, Far Away* and *The Blue and the Gray* (1890), a favorite during the Spanish-American War See J T Howard, *Our American Music* (rev ed , 1946)

Dressler, Marie, 1869–1934, American stage and moving-picture comedienne, whose real name was Leila von Koerber, b Cobourg, Ont She first became known in the company of Weber and Fields (1905) and later entered musical comedy, where her greatest success was the title role in *Tillie's Nightmare* Her performances in the moving pictures *Tillie's Punctured Romance, Anna Christie, Min and Bill Emma* and *Dinner at Eight* made her a great favorite See her autobiography, *My Own Story* (1934), as told to Mildred Harrington

Dreux (drŭ), town (pop 11,528), Eure-et-Loir dept , NW France, N of Chartres Here in 1562 François de Guise defeated the Protestant forces under Louis I de Condé, who was captured

Drew, Daniel, 1797–1879, American capitalist, b Carmel, N Y He became a cattle dealer in early life and by 1834 was successful enough to engage in the steamboat business on the Hudson, which he developed rapidly In 1844 Drew entered Wall St , where he founded the firm of Drew, Robinson & Company After its dissolution a decade later, he became an independent operator of the bold and scheming type In 1857 he forced his way into becoming a director of the Erie RR During the famous "Erie War" (1866–68), Drew manipulated Erie stock so that he and his allies Jay GOULD and James FISK defeated the attempt of Cornelius VANDERBILT to gain control Sometime later Drew, bested by Gould and Fisk, now in association without him, saw the beginning of his downfall, which led to financial ruin in the Panic of 1873 By 1876 he was bankrupt In his heyday Drew, a Methodist, contributed to the establishment of several churches, Drew Theological Seminary (now part of Drew Univ), and Drew Seminary (for girls) at Carmel See C F Adams (1835–1915), *Chapters of Erie* (1871), Bouck White, *The Book of Daniel Drew* (1910)

Drew, George Alexander, 1894–, Canadian political leader, b Guelph, Ont , educated at Upper Canada College, the Univ of Toronto, and Osgoode Hall Law School Appointed assistant master (1926) and master (1929) of the supreme court of Ontario, he was elected (1938) leader of the Conservative party in Ontario In1939 he entered the provincial legislature From 1943 until his defeat in 1948, Drew was premier of Ontario and minister of education, laying the foundation for extensive educational reforms In 1948 he was elected leader of the Progressive Conservative party of Canada

Drew, John, 1827–62, American actor, b Dublin He made his debut in 1846 at the Bowery Theater, New York, afterwards touring various cities and establishing a reputation as an Irish comedian His career for the rest of his life was bound up in the Arch Street Theater, Philadelphia, where he maintained a famous stock company, with his wife as co-star His wife, **Louisa Lane Drew,** 1820–97, b London, came to the United States in childhood When she was scarcely 15 she appeared as Julia in *The Hunchback* and as Lady Teazle in *School for Scandal* She supported Edwin Forrest and other leading actors of the period, until her marriage in 1850 On her husband's death in 1862 she assumed management of the Arch Street Theater, maintaining the high standard of the place and her own reputation as a portrayer of such character parts as Mrs Malaprop Her three children, John and Sidney Drew and Georgiana Drew BARRYMORE, had their early sound training under their mother She wrote *Autobiographical Sketch,* with an introduction by John Drew (1899) See also M J Moses, *Famous Actor-Families in America* (1906)

John Drew, 1853–1927, b. Philadelphia, the eldest son of John and Louisa Lane Drew, began his career in their stock company in Philadelphia In 1875 he joined the Daly Company, New York, supporting Fanny Davenport in plays adapted from the German Later, with the accomplished Ada Rehan as co-star, he played with acclaim in Augustin Daly's remarkable Shakesperian productions In 1892, as the first of the Charles Frohman stars, he left Daly to play in modern comedies with Maude ADAMS In 1921 he appeared with Mrs. Leslie Carter in *The Circle* by Somerset Maugham. He died when on tour in an all-star revival of *Trelawney of the Wells.* His versatility in comedy made him a leading actor throughout his long career. See his autobiography, *My Years on the Stage* (1922); E. A. Dithmar, *John Drew* (1900), Peggy Wood, *A Splendid Gipsy* (1928).

Drew, town (pop. 1,579), NW Miss , near the Sunflower river NW of Greenwood, in a cotton area. Near by is a state penal farm

Drewrys Bluff (drōō'rēz), height on the south bank of the James river, S of Richmond, scene of two engagements in the Civil War Union gunboats were repulsed here, May 15, 1862, in McClellan's PENINSULAR CAMPAIGN. In May, 1864, B. F BUTLER led the Union Army of the James up the peninsula against Richmond while Grant engaged Lee in the WILDERNESS CAMPAIGN Butler advanced to Drewrys Bluff, where on May 16, 1864, he was defeated by a greatly inferior Confederate force under Beauregard He then retreated to Bermuda Hundred (at the confluence of the Appomattox and James rivers), where Beauregard had him bottled up until Grant crossed the James and moved on PETERSBURG The bluff is also called Drewry Bluff and Drury's Bluff

Drew University, at Madison, N J , Methodist, mainly for men, opened 1867, chartered 1868 as a theological seminary, named for Daniel DREW It added Brothers College and became a university in 1928.

Drexel, Anthony Joseph, 1826–93, American banker and philanthropist, b Philadelphia He entered at an early age the well-known banking firm of Drexel and Company, founded by his father, Francis Martin Drexel, an Austrian immigrant, in 1838 Anthony became a partner, and later under his dominant leadership the firm expanded extensively. Drexel Institute, opened in 1892, was the most important of his many philanthropies

Drexel Institute of Technology, in Philadelphia, nonsectarian, coeducational, founded by Anthony J DREXEL, opened 1892, chartered as an institute of art, science, and industry 1894, renamed 1936 It has schools of business administration, engineering, home economics and library science, all of university grade A work and study plan may be used in business and engineering courses

Dreyer, John Louis Emil (drī'ŭr), 1852–1926, Danish astronomer, who worked in Great Britain. He was assistant astronomer at the earl of Rosse's observatory, Parsonstown (now Birr), Ireland (1874–78), and at the observatory of the Univ of Dublin (1878–82) and director (1882–1916) of the observatory at Armagh He compiled the standard *New General Catalogue of Nebulae and Clusters of Stars* (1888, supplements, 1895, 1908), wrote a biography of Tycho Brahe (1890) and *History of the Planetary Systems from Thales to Kepler* (1906), and edited *Second Armagh Catalogue of 3,300 Stars* (1886), the scientific papers of Sir William Herschel (1912), and the first volumes of the collected works of Tycho Brahe (15 vols , 1913–29)

Dreyfus Affair (drā'fus, drī'–) In 1894 a French court-martial convicted for treason and sentenced to degradation and imprisonment on Devils Island a French general staff officer, Capt Alfred Dreyfus (1859–1935) Evidence was based on a *bordereau* (schedule) written on a hand similar to that of Dreyfus, to Major Max von Schwartzkoppen, German military attaché in Paris The *bordereau,* which listed secret French documents that the writer promised to furnish the attaché, had been intercepted by a French spy Dreyfus was the son of a Jewish manufacturer of Alsace who had emigrated to France after the cession of Alsace to Germany The origins of Dreyfus tempted the court-martial, which like the rest of the army was permeated by anti-Semitism, into using this slim evidence to convict Dreyfus, who protested his innocence Temporarily forgotten, the case flared up again in 1896 and soon divided Frenchmen into two irreconcilable factions In 1896 Col Georges PICQUART, chief of the Intelligence section, discovered evidence pointing to Major Ferdinand Walsin ESTERHAZY as the real author of the *bordereau* Picquart was silenced by the authorities, but in 1897 Dreyfus's brother, Mathieu, independently made the same discovery and energetically pressed for a new trial. The case became a major political issue and was exploited to the full by the royalist, militarist, and bigoted elements, on the one hand, and by the republican, socialist, and anticlerical elements, on the other The lines of violent partisanship cut across family ties and disrupted French life for 10 years The anti-Dreyfusards, led by such men as Édouard Drumont, Paul Déroulède, and Maurice Barrès, were placed in the unfortunate position of having the truth against them, many thus felt obliged to resort to perjury and intimidation in the higher interests of patriotism and piety. Esterhazy was tried and acquitted by a court-martial Emile ZOLA, a leading champion of Dreyfus, was sentenced to jail for his famous article, "J'accuse" (1898). Yet the pro-Dreyfus faction (which included Jean Jaurès, Clemenceau, Waldeck-Rousseau, Anatole France, Joseph Reinach, and Charles Péguy) steadily grew in power. They were, for the most part, less concerned with Dreyfus personally (he continued to languish on Devils Island) than with discrediting the rightist government. The event which made revision imperative was the suicide (1898) of Major Henry, who had manufactured evidence against Dreyfus in order to shield Esterhazy. In 1899 Waldeck-Rousseau became premier, and the court of appeals, voiding Dreyfus's conviction, ordered a new court-martial It was a general surprise when the military court at Rennes found Dreyfus guilty (though it reduced his sentence) President Emile Loubet pardoned Dreyfus, but agitation for complete exoneration continued in France and throughout the world. At last, in 1906, the supreme court of appeals cleared Dreyfus, who was reinstated as major and decorated with the Legion of Honor. In the First World War, Dreyfus was made a general, and in 1930 his innocence was conclusively proved by the publication of Schwartzkoppen's papers The Dreyfus Affair had as an immediate result the discrediting of the monarchists and clericalists, and it hastened separation of Church and state in France See Joseph Reinach, *Histoire de l'affaire Dreyfus* (4 vols , 1901–11), Alfred Dreyfus and Pierre Dreyfus, *The Dreyfus Case* (Eng tr , 1937), Wilhelm Herzog, *From Dreyfus to Pétain the Struggle of a Republic* (Eng tr , 1947)

drift, any deposit of heterogeneous rocky materials, especially the mixture of clay, gravel, sand, and boulders transported and laid down by glaciers over large sections of continental Europe and North America The greater part of the drift is unstratified or glacial drift, also known as till or boulder clay Stratified or glacio-fluvial drift is the product of streams flowing from the melting ice, layers of coarser particles are generally deposited nearer the point of origin than layers of finer particles The drift may take the form of a DRUMLIN, a KAME, an ESKER, a MORAINE, or an even plain, its thickness varies noticeably in different regions and is not dependent upon topographical factors Thus and other characteristics of the drift were useful in establishing the existence of GLACIAL PERIODS

Driftless Area, over 10,000 sq mi , largely in SW Wisconsin but extending into SE Minnesota, NE Iowa, and NW Illinois The continental glacier which covered most surrounding regions did not touch this area, which therefore has no glacial drifts It abounds in caves and sinkholes and has residual, well-drained soil

Driggs, village (pop 1,040), co seat of Teton co , E Idaho, in a farm area of the Teton Basin, settled c 1888, inc 1909

drill. Tools of the drill family include the awl, the drill, the auger, the gimlet, and the brace and bit Of these the oldest is the awl, a device for piercing small holes, which in its early forms was a thorn or a tool of bone or chipped flint Prehistoric awls of flint are often found Drills, e g , the bow drill, are used by primitive men, for making fire as well as for drilling The principle of the gimlet, a tool with a cross handle and a screw point for boring small holes, and of the auger was known and used in ancient times, but the tools were much improved in the Middle Ages The brace, a crank-type handle in which bits of various sizes and shapes can be interchanged, is used for boring holes and for setting screws The ball-bearing handle and the ratchet-driven chuck have improved the earlier drills, forms of which have been known since the Middle Ages In drilling rocks, power drills are generally used The percussive type of power drills work their way by chipping, not by cutting or abrading, the process of the rotary drill. The diamond drill, a kind of rotary drill, has its cutting edge faced with black diamonds or other inferior diamonds and removes a solid core of rock that gives excellent evidence as to the strata through which the drill passes An agricultural implement for planting certain seeds or for placing fertilizer in the soil is called a drill Small drills for gardens are pushed by hand, large drills for field work are drawn by horses or tractors The agricultural drill is named for its special uses, e g., the grass drill and the grain drill, or for its construction, as the disk drill and the hoe drill. The fertilizer drill is commonly combined with the seed drill See also PNEUMATIC APPLIANCES AND TOOLS See E L Oldham, *Driller's Handbook* (4th ed , 1941), J E. Brantly, *Rotary Drilling Handbook* (3d ed., 1942), Emanuele Stieri, *Drill Presses* (1944)

Drin (drēn), river, c 170 mi. long, Albania The largest river in the country, it is formed by two streams (the White Drin and the Black Drin), which rise in Yugoslavia and, after joining in NE Albania, flow west and south through deep gorges into the Adriatic Sea

Drina (drē'nä), river, 286 mi. long, Yugoslavia. Its two headstreams rise in Montenegro and unite in Bosnia; the Drina then flows N into the Sava.

Drinkwater, John, 1882–1937, English poet, playwright, and biographer. In 1913 he became manager of the Birmingham Repertory Theatre For it he wrote his first success, *Abraham Lincoln* (1918), which also established his reputation in the United States. Other biographical plays, including *Mary Stuart* (1921) and *Robert E. Lee* (1923), were followed by a highly successful comedy, *Bird in*

Hand (1927). Besides his prose studies of such men as Byron, Pepys, and Charles James Fox, he wrote a novel, *Robinson of England* (pub. posthumously, 1937). His collected poems appeared in 1923, and a later collection, *Summer Harvest*, in 1934. *Inheritance* (1931) and *Discovery* (1932) are autobiographical

Driver, Samuel Rolles, 1846–1914, English clergyman and biblical scholar. He was regius professor of Hebrew and canon of Christ Church, Oxford, and from 1878 to 1884 was a member of the Old Testament Revision Company. Among his works are valuable commentaries, translations, and critical editions of the books of the Old Testament. He collaborated with C. A. Briggs and Francis Brown in preparing *A Hebrew and English Lexicon of the Old Testament* (completed 1906).

Drobak, Norway: see OSLO

Drobisch, Moritz Wilhelm (mō'rĭts vĭl'hĕlm drō'-blĭsh), 1802–96, German philosopher and mathematician. He was a teacher at Leipzig and a follower and adherent of Herbart. Drobisch's works include *Neue Darstellung der logik* [new exposition of logic] (1836) and *Empirische Psychologie* (1842)

Drogheda (drô'ĭdă, drou'du), urban district (pop 15,709), Co. Louth, Ireland, on the Boyne river 4 mi. from its mouth on Drogheda Bay. St. Lawrence's Gate and other gates remain of walls about the town. Drogheda is the site of a Dominican abbey founded in 1224, of which the Magdalen Steeple remains, and of the Abbey of St. Mary d'Urso. POYNINGS'S LAW was enacted here in 1494. The town was taken and the inhabitants were massacred by Cromwell in 1649. The battle of the Boyne was fought near here in 1690. The town's industries include brewing, tanning, flour milling, iron founding, and the making of cotton and linen goods and soap

Drogobych (drŭgō'bĭch), Pol. *Drohobycz* (drôhō'-bĭch), city (pop. 32,622), capital of Drogobych oblast, Ukraine, SW of Lvov. Ceded by Poland to Austria in 1772, it reverted to Poland in 1919 and was ceded to the USSR in 1945. It has old salt mines and now is an oil-field center, with natural gas supplying heat and light. Drogobych oblast (4,000 sq. mi.; pop. 1,200,000) lies in a plateau bordering on the Carpathians in the south. Besides salt (which includes potassium), petroleum, and gas, it has mineral wax and iron ore. A pipe line for natural gas to Kiev was begun after the Second World War. The population, largely Ukrainian, is agricultural. Towns besides Drogobych are Borislav, Sambor, and Stryy.

Drohobycz: see DROGOBYCH

Droitwich (droit'wĭch), municipal borough (1931 pop. 4,515, 1943 estimated pop. 4,553) Worcestershire, England, on the Salwarpe and NNE of Worcester. There is a canal to the Severn river, built by James Brindley in the 18th cent. The site was occupied by the Romans. The borough is noted for its brine baths and salt trade. There is a radio transmitting station at near-by Wychbold

Drôme (drōm), department (2,533 sq. mi.; pop. 268,233), SE France, in DAUPHINÉ, named for a tributary of the Rhone. Valence is the capital

dromedary: see CAMEL

Dromore (drŏmôr', drō'môr), urban district (pop. 2,176), Co. Down, Northern Ireland, on the Lagan river and SW of Belfast. It is a market for an oats-growing and sheep-raising area and has linen mills. The present church, built (1661) by Jeremy Taylor, who is buried and was bishop here, replaces an abbey of the canons regular, said to have been founded by St. Colman and destroyed in 1641 in the civil wars. Thomas Percy also was bishop of Dromore. Ruins of a castle and rath are near by

Drontheim, Norway: see TRONDHEIM

dropsy, accumulation of fluid in the tissues or in a body cavity. Dropsy may occur as the result of mechanical blocking of circulation in heart and in kidney disease (BRIGHT'S DISEASE) or of local blocking of vessels, as in thrombosis. Normally fluid from the capillaries bathes the tissues and reenters the circulation by the veins. Prevention of its return causes accumulation, which is often first noticed in swelling of the feet. One type depends on abnormal composition of the blood. Treatment includes removal of the underlying cause, surgical puncture, elevation and bandaging of a limb, and aiding excretion through kidneys and skin

Drosophila: see FRUIT FLY

Droste-Hülshoff, Annette Elisabeth, Baronesse von (ănĕ'tŭ ālē'zăbĕt brōnĕ'sŭ fŭn drō'stu-hüls'hôf), 1797–1848, German poet. She is highly rated among German women poets, her *Das geistliche Jahr* (1850) has been termed the finest example of religious poetry in German. She is also noted for the ballad "Die Schlacht im Loener Bruch", and, although she wrote comparatively little prose, for one of the finest German novelettes, *Die Judenbuche* (1842; Eng. tr., *The Jew's Beech Tree*, in Kuno Francke and W. G. Howard, *The German Classics of the Nineteenth and Twentieth Centuries*, 1913–14)

Drouais (drōō-ā'), family of French painters. **Hubert Drouais** (ühbâr'), 1699–1767, was a fashionable miniaturist. His son **François Hubert Drouais** (frăswä'), 1727–75, was a follower of François Boucher, whose style he imitated. Under the patronage of the court he painted portraits of Louis XV, Mme du Barry, Mme de Pompadour, and many others. His son, **Jean Germain Drouais** (zhă' shĕrmĕ'), 1763–88, was a favorite pupil of J. L. David, whom he accompanied to Rome, where he died at the age of 25. His *Marius at Minturno* is in the Louvre, and two of his portraits are in the Metropolitan Museum.

drought (drout), period of insufficient rainfall resulting in serious damage to crops and other vegetation. Drought cannot be accurately defined in terms of inches of rainfall or of number of days without rain because other factors, such as the amount of rain before a long rainless period and the distribution of the amount that does fall, also help to determine the presence or absence of drought. Attendant upon prolonged drought are loss of life from famine and damage to soil and property from forest fires and dust storms. Crop failures are caused not only by lack of rain but also by the effect of hot winds accompanying drought. All continents have at times been plagued by drought, in China and India especially, drought has periodically caused untold millions of deaths through starvation and epidemics resulting from lack of food and water. In the United States many sections of the country have suffered. New England had severe droughts in 1749 and 1762. In 1860 much of the Middle West suffered from drought, and in 1881 the entire country E of the Mississippi was affected. A drought of great severity occurred in the Great Plains region in 1894–95. In the years following, increased rainfall restored the land to agricultural use, and by the time of the First World War much of the area was producing grain crops. Then came years with higher average temperatures and less rainfall, and in 1930 drought again devastated the Great Plains, the DUST BOWL developed in the '30s, and its area spread to alarming dimensions (about 50,000,000 acres). Scarcity of rain prevailed through 1939, the NE United States suffered from drought in 1939. In 1938 Great Britain, Italy, and areas in Central Europe experienced drought conditions. In the United States after 1939 the Western drought area again began to be productive, large grain crops were particularly valuable assets during and after the Second World War. The causes of drought are not well understood. There is some evidence that the presence or absence of drought is related to the relative temperatures of ocean and land, the distribution of high and low pressure areas, and the variations in solar radiation (including those indicated by the sunspot cycle). Much remains to be learned regarding the causes as well as the methods of combating the effects of drought. Problems created by drought include not only those concerned with soil conservation but also the social and economic problems of those driven from drought-stricken areas. See Lawrence Svobida, *Empire of Dust* (1940), T. A. Blair, *Climatology* (1942), I. R. Tannehill, *Drought: Its Causes and Effects* (1947)

Drouyn de Lhuys, Édouard (ādwär' drōōē' du lüēs'), 1805–81, French statesman and diplomat under the July Monarchy, the Second Republic, and the Second Empire. He was a bitter enemy of Guizot. After the Revolution of 1848, he became president of the committee of foreign affairs, ambassador to London, and minister of foreign affairs (1851, 1852–55, 1862–66). He had much to do with the part Napoleon III played in the Crimean War and the Austro-Prussian War

drowning. Submersion in a liquid may cause death from ASPHYXIA, since RESPIRATION cannot continue when air is prevented from entering the lungs. In a case of death from drowning, post-mortem examination shows the lungs to be heavier and larger than is normal, filled with fluid, and in a state of congestion. Since the heart does not stop beating instantly and the nervous system can be stimulated even a short time after the heart stops, RESUSCITATION should be attempted. After clothing has been loosened, the larynx cleared, and excess water pressed out of stomach and chest, ARTIFICIAL RESPIRATION is started as soon as possible. The patient should be kept warm, and when he is conscious stimulants may be given.

Droysen, Johann Gustav (yōhän' gōōs'täf droi'zŭn), 1808–84, German historian. A member of the Frankfurt Parliament in 1848, he took part in the movement that led to the unification of Germany under the leadership of his native Prussia. His nationalism is reflected in his *Geschichte der preussischen Politik* [political history of Prussia] (14 vols., 1855–86) and his biography of Yorck von Wartenburg (3 vols., 1851–52). Other works include *Outline of the Principles of History* (1858, Eng. tr., 1893)

drug addiction. The chief drugs leading to addiction are opium and its derivatives—morphine and heroin—cocaine, hashish and marijuana (both derived from hemp), alcohol, and nicotine. An addict has a craving for the drug at all costs, develops a tolerance so that increasing doses are necessary in order to produce an effect, and when not under the influence of the drug shows disturbances of the nervous system. The physiological and mental make-up of an individual is an important factor in the development of addiction

drugs, substances used in medicine either externally or internally for curing, alleviating, or preventing a disease. Drugs are obtained from many sources. Among the inorganic materials used are compounds of iron, silver, mercury, zinc, lead, aluminum, chromium, calcium, magnesium, arsenic, and bismuth; drugs derived from animal tissues include insulin, adrenalin, vaccines, and serums, from plants come numerous drugs including the alkaloids (e.g., cocaine, cocaine, atropine, quinine, morphine, and codeine), tannic acid, digitalis, belladonna, and pectin. Vitamins to be used therapeutically are derived from both plant and animal material. Of incalculable value in the treatment of many infections are the ANTIBIOTIC SUBSTANCES and the SULFA DRUGS. Many drugs are now prepared synthetically, and thus the supply is not dependent upon natural sources. The effect of the action of drugs is to increase, decrease, or stop the normal function of some gland or other body structure. Standards for drugs and tests for their identity, quality, and purity are given in the U. S. Pharmacopoeia, first published in 1820, it was long revised every 10 years and later every five years. The British Pharmacopoeia is a similar publication. The National Formulary published by the American Pharmaceutical Association gives the composition, description, method of preparation, and dosage for drugs. Legislation to safeguard the purchasers of drugs began in the United States with the Food and Drugs Act of 1906; this was superseded by the more inclusive and more stringent Federal Food, Drug, and Cosmetic Act of 1938. Enforcement of such laws has been carried out since 1931 by the Food and Drug Administration (various other titles for the body were previously used), in 1940 the Food and Drug Administration was transferred from the Dept. of Agriculture to the Federal Security Agency. The science of pharmacology embraces a number of sciences, including pharmacodynamics (the study of the action of drugs on a living body), therapeutics (the use of drugs and other agents and methods in treating patients), materia medica (the study of the source, composition, characteristics, and preparation of drugs), toxicology (the study of poisons and their action and methods of treating poisoning), pharmaceutical chemistry (chemistry in relation to drugs), and pharmacy (the preparation and dispensing of drugs for medical use). See H. C. Fuller, *The Story of Drugs* (1922), W. C. Cutting, *Actions and Uses of Drugs* (1946), T. I. Williams, *Drugs from Plants* (1947); Michel Pijoan and C. H. Yeager, *Handbook of Commonly Used Drugs* (1947), E. C. Browning, *Modern Drugs* (2d ed., 1948), F. R. Davison, *Synopsis of Materia Medica, Toxicology, and Pharmacology* (4th ed., 1949)

druids (drōō'ĭdz), priests and medicine men of Celtic Great Britain and Gaul and probably of all ancient Celtic peoples everywhere. Not much is actually and certainly known of them, and the chief reliance for evidence is on the material preserved by Roman authors, notably Julius Caesar. Some facts are definitely known. They constituted an upper priestly class in command of a highly ritualistic religion. They were highly educated and passed their learning from one generation to another without writing it down. They believed in the immortality of the soul and apparently believed in the departure of the soul into another, not earthly, body. Worship of the sun seems to have been a central feature of their religion, but there was a large pantheon of deities. Some of the druids were from the upper ranks of society. All were organized into a confederation, which had a yearly meeting somewhere N of the Loire in Gaul, perhaps on the site of Chartres. This confederation had great political power, and the druids were the core of the rebellions against Rome in Gaul. Rome, therefore, moved to destroy the druidic power and did much to break it down, but it finally yielded only to Christianity. The great mysteries surrounding them and their lore have attracted much interest, and there have been many efforts to piece together the scraps of information obtainable about them. Formerly many of the prehistoric ruins in France and Great Britain were ascribed to them, notably the menhirs of Carnac in Britanny and the megalithic stones of Stonehenge. This attribution is now discarded, and it is agreed that most of the "druid circles," "druid rings," and "druid stones" had nothing to do with the druids. There is much debate about even minor details, such as the plants sacred to the druids and used by them for medical or ritual purposes. These would seem to include mistletoe, vervain, primroses, and the highly disputed *samolus* (perhaps water pimpernel or an anemone, probably not the modern genus *Samolus*). Druids have also attracted much attention from those interested in the occult. See J. A. MacCulloch, *The Religion of the Ancient Celts* (1911), T. R. Kendrick, *The Druids* (1927), Lewis Spence, *History and Origins of Druidism* (1949)

drum, in music, percussion instrument consisting of a frame over which is stretched a membrane (the

drumhead), struck with sticks or with the hands to produce sound Of prehistoric origin, it acquired in the Middle Ages its military associations, it usually accompanied the flute, hence the modern fife-and-drum corps Late in the 18th cent the bass drum, also called Turkish Drum, was introduced into the orchestra and used by Mozart and Haydn See also KETTLEDRUM, SNARE DRUM, TAMBOURINE

Drumclog (drŭmklŏg′) [Scottish,=ridge of stone], moorland, Lanarkshire, Scotland, on the Ayrshire border E of Kilmarnock On June 1, 1679, it was the scene of Bonnie Dundee's defeat by Covenanters

Drumheller, city (pop 2,659), SE Alta , on the Red Deer river and NE of Calgary It is in an agricultural area, with coal mines and clay pits in the vicinity

drumlin (drŭm′lĭn), smooth oval hill of glacial DRIFT, elongated in the direction of the movement of the ice which deposited it Drumlins, which may be more than 100 or 150 ft high and more than half a mile long, are common in Massachusetts, New York, and Wisconsin

Drummond, Henry, 1786–1860, English banker, known particularly as one of the founders of the CATHOLIC APOSTOLIC CHURCH Beginning in 1826, he gathered annually for five years, at his home in Surrey, a group of laymen and clergymen to examine the prophecies in the Scriptures Out of these meetings grew the organization of the Catholic Apostolic Church under Edward IRVING Drummond became an apostle of the church in 1832 From 1847 until his death he served in Parliament

Drummond, Henry, 1851–97, Scottish clergyman and author, educated at the Univ of Edinburgh He was a minister of the Free Church and from 1877 a lecturer on science in Free Church College, Glasgow Deeply interested in the reconciliation of science and religion, he wrote *Natural Law in the Spiritual World* (1893) After travels in Africa he published *Tropical Africa* (1888), in *The Ascent of Man* he collected the Lowell Lectures delivered in Boston in 1893 A sermon, *The Greatest Thing in the World,* has been many times reprinted

Drummond, James Eric see PERTH, JAMES ERIC DRUMMOND, 16TH EARL OF

Drummond, Thomas, 1797–1840, Scottish engineer, inventor, and administrator He entered the Royal Engineers (1815), and in 1820 he took part in a trigonometrical survey of the United Kingdom To aid in making observations in murky weather, Drummond devised his limelight or Drummond light, utilizing the incandescent properties of lime In 1835 he became undersecretary of state for Ireland, an office he administered with wisdom and justice

Drummond, William (William Drummond of Hawthornden), 1585–1649, Scottish poet Educated in Edinburgh and in France, he succeeded in 1610 to his father's estate, Hawthornden, where he spent his life as a gentleman of letters His first volume of verse, *Teares on the Death of Moeliades* (1613), was followed by *Poems* (1616), *Forth Feasting* (1617), and *Flowres of Sion* (1623) His sonnets best reveal his talent and show beneath their conventionalities the poet's sincere love of nature Drummond's prose works include *A Cypresse Grove,* an essay on death (published with *Flowres of Sion*), and *The History of Scotland from the Year 1423 until the Year 1542* (1655) The visit of Ben Jonson to Hawthornden (1618–19) resulted in Drummond's notes of Jonson's conversations See L E Kastner, ed , *The Poetical Works of William Drummond* (1913), David Masson, *Drummond of Hawthornden* (1873)

Drummond, William Henry, 1854–1907, Canadian poet, b Ireland For several years he worked and practiced medicine in frontier communities There he came to know the French Canadians whom he celebrated in his best poems, using the habitants' own dialect of English His published volumes include *The Habitant* (1897), *Johnnie Courteau* (1901), *The Voyageur* (1905), and his complete *Poetical Works* (1912) See biography by J F Macdonald (1925)

Drummond, Lake. see DISMAL SWAMP

Drummond Island see MANITOULIN ISLANDS

Drummond light see DRUMMOND, THOMAS

Drummondville, city (pop 10,555), co seat of Drummond co , S Que , on the St Francis river and ENE of Montreal It is a rayon-milling center

Drumont, Édouard (ādwär′ drümō′), 1844–1917, French journalist and anti-Semitic leader His book, *La France juive devant l'opinion* [Jewish France in public opinion] (1886) and his periodical, *Livre Parole,* were notable for brilliant style and vicious virulence Drumont reached his apex in the DREYFUS AFFAIR

Drumright, city (pop 4,303), E central Okla , near the Cimarron river SW of Tulsa, in an oil region; founded c 1913

drupe. see FRUIT

Drury College see SPRINGFIELD, Mo

Drury Lane, street and district of London, at first a place of fine Tudor residences, among which was that of the Drury family. It was the site of the original Drury Lane Theatre, a cockpit of the early 17th cent , this was replaced by playhouses where in appeared many of England's greatest actors and actresses. The present Drury Lane Theatre was designed by Benjamin Wyatt in 1812.

Druses (drōō′zĭz), people of S Syria and Lebanon, They inhabit the hill country of the Hauran and are spread over much of the Lebanon and the Anti-Lebanon They are quite distinct from their neighbors and insist upon the distinction Their religion, which is obscurantist and is therefore not completely understood by outsiders, is only in one sense a sect of Islam They believe that the sixth Fatimite caliph, Hakim, who in the 11th cent announced his divinity (see FATIMITES) is really God and that therefore he is still living but hidden until his time shall come, this doctrine is like that of the hidden imam, if not identical with it The Druses have their own customs and their own beliefs, which vary considerably from both Sunnite and Shiite doctrines They were not content with control by the Ottoman sultans, and a long series of wars occurred, for the Druses are some of the fiercest fighters in the whole of Asia The result was that, for the most part, the Turks left them undisturbed except when Druse incursions forced them to take punitive action The Druses were more or less autonomous Their hatred for Christians was directed particularly against the MARONITES, and in the 19th cent the Druses sporadically swept down from their hills to perpetrate bloody massacres of the Christians, notably in the 1860s These actions helped to prepare the way for French control in Syria and Lebanon—the last thing that the Druses desired After the French mandate was created, they opposed the foreign control and in 1925–26, supported by the Syrian nationalists, took Damascus and defied the French until a small but full-scale war had been fought In the Second World War, when the British and Free French undertook their campaign against the Vichy government in Syria, the Druses supported them The independence of Syria was proclaimed in 1941, and in 1944 the Druses of Syria agreed to surrender their autonomous rights in the Jebel Druz [**Jebel**= mountain], as their section of the Hauran is called, thus, theoretically at least, the Syrian Druses became amalgamated with the other Syrians in government

Drusilla (drōōsĭl′ə), d A D 79, daughter of Herod Agrippa I, married to Felix the procurator She was killed in the eruption of Vesuvius Acts 24 24

Drusus (drōō′sŭs), Roman family of the gens Livyius (Livy) An early distinguished member was **Marcus Livius Drusus** (mär′kŭs lĭ′vēŭs), d 109? B C , tribune of the people with C GRACCHUS (122 B C) As a member of the senatorial party he led the successful attack on Gracchus by making more extreme democratic proposals than Gracchus had dared ask By these tactics and by still more unscrupulous ones, Gracchus was disgraced In 112 B C , Drusus was made consul by the senatorial party His son **Marcus Livius Drusus,** d 91 B C , was party leader also His policy was to win the people and the Italian allies over to the senate that the senate might recapture from the knights (equites) the control of the courts By huge doles and a general increase in the franchise he won the people and the Italians, but pleasing the Italians soon cost Drusus support in Rome The senate, in alarm over popular unrest, rescinded Drusus' laws, the Italians were infuriated, and the Social War between Rome and the Italians broke out Drusus was assassinated A member of the family by adoption was LIVIA DRUSILLA, mother of **Nero Claudius Drusus Germanicus** (nēr′ō klô′dēŭs, jərmā′nĭkŭs), 38 B C -9 B C , called Drusus Senior, he was stepson of Augustus and began public life before the customary age He took the field against the Rhaetians (15 B C) and gained much credit for his generalship In 13-12 B C he was in Gaul putting down disorder, and on his return to Rome he was made urban praetor (11 B C) He soon went back to the provinces and ravaged Germany E and N of the Rhine He fortified the Rhine, but he put the Germans under no permanent subjection He died in Germany His brother was the emperor TIBERIUS, one of his sons was GERMANICUS CAESAR, and another was CLAUDIUS I Tiberius' son, **Drusus Caesar** or **Drusus Junior,** d A D 23, served in the provinces—in Pannonia (15) and against the Germans In A D 22 he was made tribune Meanwhile, Sejanus, Tiberius' minister, became jealous of Drusus' power and tried to turn Tiberius against him Drusus died the same year, perhaps of poison administered by Sejanus or by his wife under Sejanus' influence

dryad (drī′ăd), in Greek mythology, a tree NYMPH

Dryburgh Abbey (drĭ′burŭ), Premonstratensian abbey, Berwickshire, Scotland, on the Tweed river below Melrose Founded in 1150, it was several times destroyed and rebuilt and is now a beautiful ruin, a favorite subject for etching and painting. It contains the tomb of Sir Walter Scott

dry cell: see CELL

dry cleaning, process of cleaning fabrics by means of chemicals Special solvents and soaps leave unharmed fabrics and colors which will not withstand the effects of soap and water Dry cleaning began in France about the middle of the 19th cent , at first in small plants by hand, but with the development of specialized machinery it has become an important industry. The danger of fire—at first a constant menace because of the large amounts of inflammable materials in use—was largely overcome by concentrating the work in central plants specially designed and by the use of a high-boiling petroleum product still commonly used in the United States Newer chlorinated hydrocarbon synthetic solvents, noninflammable but requiring precautions against their fumes, include carbon tetrachloride and the less volatile tri- and perchlorethylene The process of dry cleaning for ordinary fabrics is to place them in revolving washers containing the cleansing fluid and a special soap, rinse and pass them through centrifugal extractors, and then dry them in warm air Delicate fabrics are done by hand The cleansing fluids are reclaimed and used again Special stain removers include chloroform, ether, and carbon disulphide Unusual stains are given an expert test to determine the proper solvent. A highly specialized knowledge of chemistry and textiles is necessary to deal with fabrics made of synthetic and mixed fibers

Dryden, John, 1631–1700, English poet, dramatist, and critic, b Northamptonshire Educated at Westminster and Cambridge, he went to London c 1657 There he came to notice with *Heroick Stanzas* (1659), commemorating Oliver Cromwell, in 1660, however, he celebrated the return of Charles II with *Astraea Redux* With the Restoration, Dryden began his rise to a commanding place in English letters and society He was elected a fellow of the Royal Society in 1662 and in 1663 married Lady Elizabeth Howard In 1668 he was appointed poet laureate, in 1670 historiographer royal Dryden's best work of this period is *Annus Mirabilis* (1667), a long poem on the Dutch War and the great fire of London Meanwhile Dryden secured in 1668 a contract with the King's Theatre company and by 1681 had written 14 plays Although his comedies—such as *Sir Martin Mar-All* (1667, pub 1668), *Marriage-à-la-Mode* (1672′, pub 1673), and *The Spanish Friar* (1680, pub 1681)—enjoyed considerable vogue, Dryden's fame as dramatist rests on his tragedies, the most famous of which are *The Conquest of Granada* (1670, pub 1672), *Aureng-Zebe* (1675, pub 1676), and *All for Love* (1677, pub 1678), a version of the Antony and Cleopatra story In 1681 appeared the first part of *Absalom and Achitophel,* his heroic-couplet satire on Monmouth and Shaftesbury, in the second part (1682) Nahum Tate collaborated In 1682 also appeared *MacFlecknoe,* an attack on Thomas SHADWELL, and *Religio Laici,* a poetical exposition of the Protestant layman's creed In 1687, however, Dryden announced his conversion to Catholicism in *The Hind and the Panther* The foregoing poems, plus his Pindaric odes, "Alexander's Feast" and "Ode to the Memory of Mrs Anne Killigrew," place Dryden in the first rank of English poets With the accession of the Protestant William III, Dryden lost his laureateship and court patronage He continued to write plays, translated Juvenal, Persius, Vergil, Ovid, and others, and did other literary work Throughout his life Dryden had written brilliant critical prefaces, prologues, and discourses, dealing with both the ancients and the moderns The best example undoubtedly is his *Essay of Dramatick Poesy* (1668) For Dryden's complete works, see edition by Sir Walter Scott, revised by George Saintsbury (18 vols , 1882 92), see also studies by Saintsbury (1881), T S Eliot (1932), James Osborn (1940), and Mark Van Doren (rev ed , 1946)

Dryden, town (pop 1,641), W Ont , WNW of Fort William It is the site of a government experimental farm

dry farming, practice of raising crops in regions of low rainfall where irrigation is impractical It is most successful where the annual rainfall is from 10 to 20 in with some showers in winter and frequent ones in spring The soil must be deep, without a hardpan or bedrock near the surface, and it must permit absorption and retention of moisture. The crops must be somewhat drought resistant Among those successfully produced in the United States are durum wheat, corn, rye, barley, peas, potatoes, cotton, and forage grasses Rotation of crops and letting the land lie fallow alternate years improves the yield See publications of the U S Dept of Agriculture

Drygalski, Erich von (ā′rĭkh fŭn drĕgäl′skē), 1865–1949, German polar explorer A professor of geography at the Univ of Munich, he led an expedition that wintered (1892–93) in W Greenland In 1901–3 he led the German antarctic expedition in the *Gauss,* which discovered Wilhelm II Coast Subsequently Drygalski wrote the narrative of the expedition and edited the voluminous scientific data (18 vols. and 3 atlases, 1905–26).

dry ice is CARBON DIOXIDE in the solid or "frozen" state and is sometimes called carbon dioxide snow It is formed when the pressure under which the gas was liquefied is removed and the liquid allowed to evaporate in a confined space Some of the liquid returns to the gaseous state at once and in undergoing this change of state draws heat from the remaining liquid, thereby "freezing" it to a solid (see

EVAPORATION) This solid form is known as dry ice, because when sufficient heat is available the solid changes to the gas, leaving no traces of moisture behind. Extremely low temperatures are obtainable by its use, and a given quantity can accomplish the same cooling effect as a quantity of ordinary ice about 15 times the weight of the dry ice It is used in commercial refrigeration, especially for foods being transported Although with careful handling it is not dangerous, it causes severe "burns" if pressed against the skin

drying oil, an oil of either plant or animal origin which oxidizes readily, forming a resistant film when a thin layer of the oil is exposed to air For this reason drying oils are used in paint, varnish, lacquer, printer's ink, and other materials One of the commonest of the drying oils is LINSEED OIL, and a high-grade drying oil is tung oil, obtained from the tung-oil tree native to China and introduced in the United States Among the other drying oils are poppy oil, sunflower oil, walnut oil, and various fish oils Sometimes a drier in the form of a metallic oxide or other metallic compound is added to hasten the drying action

dry point, an intaglio printing process in which the lines are scratched directly into a metal plate with a needle and also a print made from such a plate It is distinguished from etching by the fact that no acid is used and from engraving by the type of tool employed and the consequent shallowness of the line In dry point the burr raised by the needle is usually left on the plate, producing saturated darks which are slightly blurred It is characteristically a sketchy medium suitable for improvisation, but it can also be used to render much fine detail Very few good prints can be made from a plate

dry rot, fungus disease that attacks seasoned timber, both hard and soft In the United States it is caused chiefly by a pore fungus *Poria incrassata* and the tear fungus or house fungus *Merulius lachrymans* They cause a brownish discoloration of the wood and give it a dry, crumbly appearance Collapse of timbers frequently results Moisture is essential to the development of the fungus, the disease is therefore best prevented by dryness and good ventilation Woodwork around sinks and in damp cellars and mines is particularly affected The painting of surfaces in buildings and the creosoting of posts which go into the ground help to prevent the growth of the fungus The name is applied also to diseases attacking potatoes, apples, and corn, caused in each case by a different fungus

Dry Tortugas (tôrtōō'gŭz), island group, off S Florida, 60 mi W of Key West On one of the islands, Garden Key, are FORT JEFFERSON NATIONAL MONUMENT and a U S bird refuge

Dual Alliance, 1879–82 see TRIPLE ALLIANCE AND TRIPLE ENTENTE

dualism, any philosophical system that seeks to explain all phenomena in terms of two distinct and irreducible principles It is opposed to monism and pluralism In Plato's philosophy there is an ultimate dualism of being and nonbeing, of ideas and matter Aristotle criticized Plato's doctrine of the transcendence of ideas, but he was unable to escape the dualism of form and matter, and in modern metaphysics this dualism has been a persistent concept Much popular thinking and writing continues to assume the dualism of form and matter In epistemology dualism posits that an idea of an object is different from the object itself—a position held by Descartes and John Locke and opposed by Berkeley and many later philosophers In psychology occasionalism and interactionism both assumed a dualism of mind and matter The term also has a theological application, e g , the Manichaeans explained evil in the world as resulting from an ultimate evil principle, coeternal with good

Dual Monarchy: see AUSTRO-HUNGARIAN MONARCHY

Duane, James (dūān'), 1733–97, American Revolutionary statesman, b New York city Admitted to the bar in 1754, Duane soon gained renown and wealth as a lawyer and developed as a political conservative Recognition of his sincere interest in colonial rights, however, won him a seat in the Continental Congress (1774), where he served until 1783 His support of Joseph Galloway's conciliatory plan and his constant cautious policy in Congress brought numerous attacks on his patriotism He served on various Revolutionary committees and helped draft the Articles of Confederation. Toward the close of the war Duane was a member of George Clinton's council and from 1784 to 1789 served as the first mayor of New York city after the British evacuation He was at the same time state senator and was a member of the convention that ratified the Federal Constitution. From 1789 until his retirement (1794) he was U S. district judge for New York. Duane was long an ardent advocate of New York's claims to the New Hampshire Grants. His last years were spent in Duanesburg in the Mohawk valley, where he carried out colonizing projects on his large landholdings. See biography by E. P. Alexander (1938).

Duane, James Chatham, 1824–97, American army engineer, b. Schenectady, N.Y., grad. Union College, 1844, and West Point, 1848; grandson of James Duane In the Civil War he organized the engineer equipage of McClellan's army (1861–62) and commanded a battalion of engineers in the Peninsular campaign Duane was chief engineer of the Army of the Potomac in the Antietam campaign (1862) and from July, 1863, to the end of the war He was brevetted brigadier general for his service in the siege of Petersburg (1864) From 1886 to his retirement in 1888 he was brigadier general commanding the Corps of Engineers

Duane, William, 1760–1835, American journalist, b. near Lake Champlain, N Y , of Irish parentage. He learned the printer's trade in Ireland and in 1787 went to Calcutta, where he edited the *Indian World* His attacks on the local government there brought about his deportation and the confiscation of his property Unable to secure redress in England, Duane came to Philadelphia and joined Benjamin Franklin Bache in editing the *Aurora* Upon Bache's death (1798), Duane became sole editor An able and courageous writer, he made the *Aurora* the leading Jeffersonian organ His acid criticism, however, led to his arrest (1799) under the Alien Act Acquitted, he was arrested again under the Sedition Act (see ALIEN AND SEDITION ACTS) Charges against him were dismissed when Jefferson came into office Duane's prosperous journal declined after the removal of the government to Washington, but it remained influential in local politics In the War of 1812 Duane served as adjutant general He retired from the *Aurora* in 1822 and traveled in South America, writing upon his return *A Visit to Columbia in the Years 1822 & 1823* (1826)

Duane, William, 1872–1935, American physicist, b Philadelphia, grad Harvard, 1893, Ph D Univ of Berlin, 1897 He taught at the Univ of Colorado (1898 1907), worked at the Curie radium laboratory in Paris (1907–12), and returned in 1913 to teach at Harvard (as professor of biophysics, 1917–34). He is known for his researches in radioactivity and X rays and their application in radiotherapy

Duane, William John, 1780–1865, U S Secretary of Treasury (June-Oct , 1833), b Clonmel, Ireland He came (1796) to Philadelphia with his father, William DUANE (1760–1835), and assisted him in publishing the *Aurora* until 1806 Admitted (1815) to the bar, he became an influential lawyer He served several terms in the Pennsylvania legislature, working energetically for internal improvements Duane held a number of city offices in Philadelphia and was powerful in state politics He was appointed Secretary of Treasury by President Jackson to succeed Louis McLane, who was transferred to the Dept of State because he refused to remove government deposits from the BANK OF THE UNITED STATES to state banks When Jackson made this request of Duane, the new Secretary also refused to carry out the transfer and was replaced by Roger B Taney Duane defended his own position in his documentary *Narrative and Correspondence concerning the Removal of the Deposites* (1838) and then withdrew from public life He later drew up the will of his friend Stephen GIRARD and was a director of Girard College, which the will established

Duarte (dwär'tŭ), 1391–1438, king of Portugal (1431-38), eldest of the five sons of John I He was the "philosopher-king," better known for his learning and as the author of *O leal conselheiro* [the loyal counselor] than for his indecisive statesmanship The great event of his reign was the disastrous defeat (1437) of an expedition to Morocco led by his brother Prince Henry the Navigator

Duban, Jacques Félix (zhäk' fālēks' dubäⁿ'), 1797–1870, French architect, one of the leaders of the Neo-Greek movement in France between 1830 and 1850 He was among the first of the 19th-century designers to revive interest in architectural polychromy, he studied the remains of color decorations in ancient Greek and Roman work and was engaged in restoring the color adornment of Sainte-Chapelle, Paris (1840–49), and in the château at Blois He reconstructed and extended the École des Beaux-Arts buildings in Paris and worked on the restoration of the Louvre, where he completed the façade of the Henry IV gallery and the decorations of the Gallery of Apollo (1848–51)

Du Barry, Jeanne Bécu, comtesse (zhän' bärē' kōtĕs' dŭ bärō', dōōbär'ē), 1743–93, mistress of Louis XV of France A courtesan of illegitimate birth, she was the mistress of one Jean du Barry when she attracted the king's attention (1768) After being fictitiously married to her lover's brother, Guillaume, comte du Barry, she was installed at court (1769) and retained her influence until the king's death (1774). She spent large sums on clothing, jewelry, the furnishing of her apartments, and great fetes Though her position involved her in political intrigues, they were of minor importance, Mme du Barry lacked the ambition and executive ability of her predecessor, Mme de Pompadour At the accession of Louis XVI she retired from court She was arrested by the Revolutionary Tribunal on charges of treason (1793) and was guillotined See biographies by Edmond and Jules de Goncourt (1860, Eng. tr , 1914), H. N Williams (1904), and Karl von Schumacher (1931, Eng tr , 1932)

Du Bartas, Guillaume de Salluste (gēyōm' du sälüst' dŭ bärtäs'), 1544–90, French poet, a Huguenot soldier under Henry IV, known chiefly for his poems, *La Sepmaine; ou, Creation du monde* [the week or creation of the world] (1578) and the unfinished *La Seconde Sepmaine* The English translation by Josuah Sylvester (1608) was widely read by English and American Protestants

Dubawnt (dōōbônt'), river of N Canada, nearly 600 mi long Rising NE of Lake Athabaska, Sask., it flows northeast across the southeast corner of Mackenzie dist through Dubawnt Lake and E across Keewatin dist into Baker Lake at the head of Chesterfield Inlet of Hudson Bay

Du Bellay, Guillaume (gēyōm' dübĕlā'), 1491–1543, French diplomat under Francis I, brother of Jean du Bellay He was employed in negotiations with Henry VIII of England and with the German Protestant princes From 1537 to 1543 he governed the province of Piedmont He left an uncompleted manuscript history of Francis I's reign

Du Bellay, Jean (zhäⁿ), 1492–1560, French humanist and diplomat, cardinal of the Roman church, brother of Guillaume du Bellay and patron of his nephew, Joachim du Bellay He undertook numerous missions to England, Rome, and Germany After the accession of Henry II (1547), he lived for the most part in Rome A religious moderate, he was criticized—as was his brother—for being too favorably inclined toward Henry VIII of England, for whose divorce he secured the support of several French universities

Du Bellay, Joachim (zhōäshē' du bĕlā'), 1522?–1560, French poet of the PLÉIADE He wrote their manifesto, *La Deffence et illustration de la langue francoyse* (1549), which sets forth the principles of the new movement and makes suggestions as to carrying them out His poetic works are broadly imitative of Italian, Greek, and Latin works These include the collections of sonnets *L'Olive* (1st ed , 1549), *Les Antiquités de Rome*, published (1558) with *Un Songe ou vision*, and *Les Regrets* (1558) The last of these is his masterpiece, its 191 sonnets reveal the poet best, especially in the nostalgia he felt during his sojourn at Rome (1553–57) as the secretary of his uncle, Cardinal du Bellay The *Antiquités* and *Songe* were translated by Spenser

Dubinsky, David (dōōbĭn'skē), 1892–, American labor leader, president (1932–) of the International Ladies Garment Workers Union, b Poland He became a baker in his father's shop in Lodz, Poland, and after being active in labor organization there, he was banished (1909) to a Siberian prison He soon escaped and reached the United States by 1911 He became a cloak cutter and joined (1911) the I L G W U He rose rapidly through the executive ranks of the union and, after serving as its secretary-treasurer (1929–32), became president After 1932 he led in considerably expanding the membership, wealth, and scope of operations of the I L G W U while militantly opposing Communist elements He became (1934) a vice president of the American Federation of Labor, but he led his union in joining with the Congress of Industrial Organizations, in 1936—the same year he helped found the AMERICAN LABOR PARTY in New York state In 1938 he broke with the C I O and helped set up the garment union as an independent organization In 1945 he again became vice president of the A F of L He was an outspoken advocate of the New Deal, in 1944 he withdrew support from the American Labor party and led in founding the LIBERAL PARTY He helped found (1947) the Americans for Democratic Action, and after 1948 he actively supported the European Recovery Plan

Dublin [Irish,=black pool], county (327 sq mi , pop 635,876, including the city of Dublin), Leinster prov , Ireland A small area, situated on Dublin Bay, it is dominated by its great city, which is the county seat and capital of Ireland The area is low-lying in the center and north, rising to the Wicklow Mts in the south The chief river is the Liffey, which bisects the city of Dublin and empties into the bay There are several islands off the coast The rural area, upon which the city has increasingly encroached, is devoted to farming and cattle, and fishing is pursued along the coast Balbriggan is a center for the manufacture of hosiery There are several large suburban towns Organized as a county by King John, the county was the heart of the English Pale and was strongly guarded by castles along its boundaries

Dublin, Irish *Baile Átha Cliath* (bä'lĕ ä klĭ'), county borough (pop 506,635) and city, capital of Ireland, and co seat of Co Dublin, on Dublin Bay of the Irish Sea at the mouth of the Liffey Dublin's harbor, with shipyards and extensive docks and quays, dates from 1714 It is connected with the interior by the Royal and Grand canals, as well as by railroad Dublin's chief industries are brewing (the Guinness brewery covers about 600 acres) and poplin milling (introduced by Huguenot refugees in the 17th cent), distilling, and the manufacture of chemicals, soap, textiles, thread, carpets, lace, and machinery. Dublin is the cultural center of Ireland, the Univ. of Dublin or Trinity College (founded

1591 on the site of a 12th-century monastery) has in its library the famous Book of Kells (see KELLS) University College (Roman Catholic) was incorporated in 1909 as part of the National Univ. of Ireland Dublin has a national museum, interesting for its collections of Irish antiquities, and the National Gallery of Art, with a good collection of old masters. Dublin Castle, built c 1200, was the residence of the lords lieutenants of Ireland until 1922 and now houses government offices Leinster House is the seat of the Irish Parliament. The ABBEY THEATRE is world famous The city's earliest church is Christchurch (the Protestant cathedral of the diocese of Dublin and Glendalough), founded in 1038 by the Dane Sigtryg, Strongbow built a new church on its site in 1172, and his tomb is here St Patrick's is the national cathedral of the Protestant Church of Ireland, Jonathan Swift (who is buried here) was dean from 1713 to 1745 Dublin was a stronghold of the Danes in the 10th cent Defeated (1014) at the battle of Clontarf, they reestablished themselves until 1170, when Strongbow took the town for the English In 1172 Henry II held court in Dublin and chartered the city to the "men of Bristol", it became the seat of English government and the center of the PALE In 1209 the Black Monday massacre of English residents occurred Edward Bruce unsuccessfully assaulted the town in the 14th cent In the civil war the city surrendered (1647) to the parliamentarians, and Cromwell landed here in 1649 James II held (1689) his last Parliament in Dublin, which was later taken by William III Dublin saw much bloodshed in the 19th and 20th cent —the insurrection led by Robert EMMET in 1803; the 1867 uprising of the FENIAN MOVEMENT, the murder (1882) in Phoenix Park of Lord Frederick Cavendish, chief secretary for Ireland, and his undersecretary, and the Easter Rebellion of 1916 Among Dublin's famous sons are Swift, Sir Richard Steele, Edmund Burke, Thomas Moore, R B Sheridan, Oscar Wilde, J M Synge, G B Shaw, W B Yeats, James Joyce, and the patriots Robert Emmet and Arthur Griffith For pictures of Dublin life, see the novels of James Joyce and the works of Oliver Gogarty

Dublin, 1 City (pop 7,814), co seat of Laurens co, central Ga, on the Oconee river and SE of Macon, inc 1812 It is a commercial and industrial center in a coastal-plain farm and lumber area 2 City (pop 2,546), N central Texas, SW of Fort Worth, founded 1856, inc 1889 It is a railroad junction, with processing plants in a region of truck farms, dairies, orchards, cattle ranches, and variegated farms

Dubois, Augustus Jay (dubois'), 1849–1915, American civil engineer, b Newton Falls, Ohio, grad Yale (C E, 1870, Ph D, 1873) At Yale he was professor of mechanical engineering from 1877 to 1884 and of civil engineering from 1884 His contributions to the field include *Elements of Graphical Statics* (1875), the first adequate American work on the subject, *Stresses in Framed Structures* (1883), and *Elementary Principles of Mechanics* (3 vols, 1894–95)

Dubois, Guillaume (gēyōm' dübwä'), 1656–1723, French statesman, cardinal of the Roman church He was tutor to Philippe II d'ORLÉANS, who, when he became regent, made Dubois councilor of state (1715) Dubois's policy was one of peace, he formed the TRIPLE ALLIANCE of 1717 and negotiated marriage contracts between the royal houses of France and Spain (1719) After the collapse of the system of John LAW, he reconstructed the public finances, and in 1722 he became chief minister

du Bois, Guy Pène (dü bwä'), 1884–, American painter and critic, b. Brooklyn, N Y, son of a writer and critic He studied in New York under William Chase and in Paris On his return to New York, he worked as police reporter, as music and art reviewer for various periodicals, and finally (1913–22) as editor of *Arts and Decoration* From 1924 to 1930 he lived and painted abroad His work is summary and effective, evoking amusing aspects of city life Fine examples are in leading galleries throughout the country The Metropolitan Museum has his *Doll and the Monster* He is perhaps best represented in the Whitney Museum, New York. See his autobiography, *Artists Say the Silliest Things* (1940)

Dubois, Théodore (tāōdōr), 1837–1924, French organist and composer, pupil of Ambroise Thomas at the Paris Conservatoire. Dubois was director there from 1896 to 1905 His best-known composition is the cantata *Les Sept Paroles de Christ* (*The Seven Last Words of Christ*, 1867).

Du Bois, William Edward Burghardt (dubois'), 1868–, American editor and author, of Negro descent, b Great Barrington, Mass., grad Harvard (B A, 1890, M A, 1891, Ph D., 1895). He taught (1897–1910) at Atlanta Univ and afterwards was director of publications of the National Association for the Advancement of Colored People and editor of its magazine, the *Crisis* His writings, which have a fine literary quality, include *The Suppression of the Slave Trade* (1896), *The Souls of Black Folk* (1903), *John Brown* (1909), *Darkwater* (1920), *Black Reconstruction* (1935), and *Color and Democracy* (1945) In 1940 he founded the *Review of Race and Culture*. His *Dusk of Dawn* (1940) is autobiographical

Du Bois (dōō'bois, dübois'), city (pop 12,080), W central Pa, in the region of the Allegheny plateau NE of Pittsburgh; settled 1812, laid out 1872, inc 1881 It grew with the advent of extensive lumbering and mining operations In a rich agricultural area, the city produces metal goods and soft coal Abundant game and fish are found in this region. Du Bois Undergraduate Center of Pennsylvania State College is here

Du Bois-Reymond, Emil (ā'mēl dü bwä'-rāmōn'), 1818–96, German physiologist of French descent A pupil and successor (after 1858) of Johannes Müller at the Univ of Berlin, he is known especially for his studies of nerve and muscle action in which he demonstrated that electrical changes accompany muscle action He wrote *Untersuchungen über tierische Elektrizität* (1848–84) and *Über die Grenzen des Naturerkennens* (1872)

Duboistown (dōō'boistoun, dōōbois'–), borough (pop 1,047), NE central Pa, near Williamsport, settled 1773, inc 1878

Dubos, René Jules (rünā' shül' dübō'), 1901–, American bacteriologist, b France, Ph D Rutgers Univ, 1927 He came to the United States in 1924, joined the Rockefeller Institute in 1927, and was naturalized in 1938 From soil bacteria he isolated in crystalline form the agent, one of the ANTIBIOTIC SUBSTANCES, which destroys the so-called grampositive germs (see GRAM, H C J) and named it gramicidin, this work laid the basis of a new field of chemotherapy

Dubrovnik (dōō'brôvnĭk), Ital *Ragusa* (rägōō'sä), city (pop 16,060), Croatia, Yugoslavia, a port and tourist center on the Adriatic It was probably founded in the 7th cent A D by Greek refugees and rose to eminence as a powerful and virtually independent merchant republic Ruled (13th-14th cent) by Venetian governors, it regained independence as the result of warfare between Venice and Hungary The city, governed by rectors, later preserved its freedom by paying tribute to the Ottoman sultans, but in 1806 Napoleon I seized it His marshal, Marmont, bore the title duke of Ragusa The Congress of Vienna assigned (1815) Ragusa to Austria as a part of Dalmatia Medieval Dubrovnik was the center of Serbo-Croatian culture and literature The city retains much of its medieval architecture, notably the city walls, the customs house, the mint, the rectors' palace, and the Franciscan and Dominican convents

Dubuque, Julien (dubūk'), 1762–1810, pioneer settler of Iowa, b. Nicolet co, Quebec Setting out early in life for the West, Dubuque reached Prairie du Chien by 1785 and crossed to the Iowa side of the Mississippi, then in Spanish Louisiana He ingratiated himself with a band of Fox Indians encamped at the site of what is today the city of Dubuque, and by a written cession they gave (1788) him sole right to work their lead mines This right was confirmed, and the first land holdings in Iowa to be given to a private individual were granted to him by Baron Carondelet, governor of Louisiana For 20 years Dubuque worked the mines and traded in furs, employing Indians and French Canadian settlers He retained the confidence of the Indians and was buried by them—with the honors of a chief— on a bluff overlooking the city named for him See biography by Richard Herrman (1922)

Dubuque (dubūk'), city (pop 43,892), co seat of Dubuque co, NE Iowa, on bluffs above the Mississippi, organized 1837, chartered 1841 It is rail, trade, and industrial center and river port for a rich agricultural, and dairy region One of the oldest towns in the state, it was named for Julien DUBUQUE who had settled near by in 1788 The Black Hawk treaty of 1833 having ended the Indian title to the territory, the whites began to pour in, and the town grew where Dubuque had settled Iowa's first newspaper, the *Du Buque Visitor*, was established here in 1836 The town developed as a lumbering and milling center It has railroad shops, shipyards, farm-product processing plants, foundries, and woodworking factories. The Univ of Dubuque (Presbyterian, coeducational; 1852), Clarke College (Catholic, for women, 1843), LORAS COLLEGE, and Wartburg Theological Seminary (1854) are here The library with a collection of paintings, St. Raphael's Cathedral (1857), a Federal building (1934), and Eagle Point Park are also of interest Near by are Crystal Lake Cave, the U S locks and dam on the Mississippi, the grave of Julien Dubuque (with a memorial tower built 1897), and a Trappist monastery, New Melleray Abbey A hotel fire in 1946 took many lives

Du Cange, Charles du Fresne, sieur (shärl' dü frān' syûr du käzh'), 1610–88, French medieval scholar He is principally known for his *Glossarium mediae et infimae Latinitatis* [glossary of medieval and late Latin], the greatest collection ever made of the forms of early medieval Latin and of the oldest Romance.

Ducas (dū'kŭs), Greek family of Constantinople Four of its members became Byzantine emperors— Michael VII, ALEXIUS V, JOHN III, and Constantine X.

Duccio, Agostino di: see AGOSTINO DI DUCCIO.

Duccio di Buoninsegna (dōōt'chō dē bwōnēnsā'-nyä), fl. 1278–1319, early Italian painter, founder of the school of Siena and one of its greatest exponents. His strictly religious art departs from the Byzantine tradition, introducing a new type of formal decoration as well as a new human appeal He painted in tempera on gesso with a liberal use of gold He is recorded as a cassone painter in Siena in 1278 and as an illuminator in 1285. In the same year he was commissioned to paint a Madonna for Santa Maria Novella, Florence, today identified with the Rucellai Madonna, formerly attributed to Cimabue His most celebrated and only authenticated work, a double altar in the Siena cathedral, was finished in 1311 and carried to its place by a rejoicing populace While the main panel of the altar remains in the cathedral, the scattered predelle are now in the galleries of London and Berlin, the Frick Collection, New York, the National Gallery of Art, Washington, D C, and several private collections Several other works are attributed to Duccio on stylistic grounds The art which he initiated in Siena remained a devotional and formal one, medieval in spirit despite the personal prominence of its practitioners

Du Cerceau. see ANDROUET

Du Chaillu, Paul Belloni (pōl' bĕlōnē' dü shīyü'), 1831?–1903, French-American explorer in Africa Born probably in Paris, he spent his youth on the west coast of Africa, where his father was a trader in the province of the Gabun There he learned the native languages and became interested in the interior Coming to the United States in 1852, he became a citizen and secured the backing of the Philadelphia Academy of Natural Sciences for an expedition to explore the Gabun country In four subsequent years of travel (1855–59) he secured many rare birds and animals, some of them new to science He brought back the first gorillas to be seen in America His published account, *Explorations in Equatorial Africa* (1861), upset the previous ideas of the region's geography, Du Chaillu made a second expedition (1863–65) to prove the truth of his account In this two-year trip he visited many previously unknown tribes and verified previous reports of a Pygmy race, the story of the trip is told in *A Journey to Ashango-Land* (1867) Later writings include *Stories of the Gorilla Country* (1867), *Wild Life under the Equator* (1868), *My Apingi Kingdom* (1870), and *The Country of the Dwarfs* (1871) He traveled in Scandinavia (1871–78) and published *The Land of the Midnight Sun* (1881) and *The Viking Age* (1889) See biography by Michel Vaucaire (Eng tr, 1930).

Duchamp, Marcel (marsĕl' dushā'), 1887–, French painter He became a resident of the United States in 1942 He is noted especially for his painting *Nude Descending a Staircase*, depicting continuous action with a series of overlapping figures, it was the cause of long and bitter controversy when exhibited (1913) at the New York Armory Show Among his other works are the collage *Monte Carlo Share* (Mus. of Modern Art, New York) and the privately owned stained glass window *The Bride* He was a leader of the Dadaists and was cofounder (1920) with Katherine Dreier of the Société anonyme for the advancement of modern art.

Du Châtelet-Lomont, Gabrielle Émilie le Tonnelier de Breteuil, marquise (gabrĕēl' āmēlē' lu tônulyā' du brütö'yu markēz' dü shatulā'-lômō'), 1706–49, French mathematician and physicist Greatly interested in the ideas of Isaac Newton, she helped to propagate them in France Her companion in her work was Voltaire, who lived at her château at Cirey (Lorraine) for 15 years before her early death See Frank Hamel, *An Eighteenth-Century Marquise* (1910)

Duchenne, Guillaume Benjamin Amand (gēyōm' bāzhamē' āmā' düshĕn'), 1806–75, French physician He is noted for researches on diseases of the muscular and nervous system and for his pioneer work on the application of electricity to diagnosis and treatment of disease

Duchesne, Louis Marie Olivier (lwē' märē' ōlēvyā' düshĕn'), 1843–1922, French Roman Catholic ecclesiastic, educator, and church historian. He made a scientific expedition to Mt Athos, and to Asia Minor (1874–76) His able thesis, *Étude sur Liber pontificalis*, won (1877) for him the professorship of church history at the Catholic Institute, Paris, which he held for eight years He founded the *Bulletin critique* (1880) to disseminate his views on theology, history, and philology and edited and published an edition of *Liber pontificalis* (2 vols, 1886–92) Appointed to the directorship of the French school of archaeology at Rome, he there became president of the papal commission to deliberate revising the breviary (1902). Among his works are *Origines du culte chrétien* (1889) and *Histoire ancienne de l'église* (1906); both have been translated into English

Duchesne, Père: see HÉBERT, JACQUES RENÉ

Duchesne, Rose Philippine (rōz fēlēpēn'), 1769–1852, French educator in the United States, a Roman Catholic nun, b Grenoble, France. She entered the order of the Visitation, but was forced (1791) by the antireligious decrees of the French Revolu-

tion to leave her convent. In 1804 she joined the Society of the Sacred Heart, and in 1818 she was sent to the United States. From the convent and school she founded at St. Charles, Mo.—later moved to Florissant, Mo —she went out over a wide area, founding schools for girls, doing charitable work, and finally ministering to the Indians She was a valiant missionary and a well-known benefactress. She was beatified in 1940. See biography by Lady Leopoldina Keppel (1940).

Duck, river of central Tennessee winding northwestward c 250 mi to join the Tennessee SW of Waverly Columbia and Shelbyville lie on the river

duck, wild and domestic waterfowl smaller than the related goose and swan and prized for its meat, eggs, and feathers Strictly speaking, duck refers to the female and drake to the male. Ducks are usually divided into three groups the river or fresh-water ducks, such as the mallard, the wood duck, the black duck, and the teal, the sea ducks, such as the canvasback, the scoter, the eider, and the redhead, and the mergansers, or fish-eating ducks, which have slender, serrated bills The sea ducks have webbed hind toes and dive under water to feed, while the river ducks usually feed on or near the surface, and their hind toes are not webbed Ducks make long migratory flights. At the time of the postnuptial molt when the power of flight is temporarily lost, most of the Northern Hemisphere drakes assume an inconspicuous "eclipse" plumage similar in coloring to that of the female Among the domestic meat producers the Pekin, or Peking, is the most important, others are the Aylesbury and the Rouen The ancestor of all domestic breeds, except the Muscovy of South American origin, is the mallard, which is found in Europe, Asia, and North America In the mallard drake the head and neck are glistening green, the neck ringed with white, the breast chestnut, and the back grayish brown The canvasback is widely hunted Its flesh is most palatable when it feeds on eelgrass It has a chestnut head and neck, black bill, and whitish back and under parts A swift flier, it is also an expert swimmer and diver It breeds inland from the Dakotas and Minnesota north and winters over most of the continent chiefly near the water The wood duck, which nests in hollow trees, is an ornament to lakes and ponds The blue-winged, the green-winged, and the European teals are small ducks which fly with great speed In northern countries a portion of the down with which the eider duck lines its nest is systematically collected, as are some of the eggs It lays throughout the season, replacing the eggs that are removed It is allowed to hatch one brood a year See F H Kortright, *The Ducks, Geese, and Swans of North America* (1943), *Duck Raising* (U S Dept. of Agriculture, Farmers' Bul 697)

duckbill see PADDLEFISH and PLATYPUS

Duck Lake, central Sask , SW of Prince Albert It was the scene of the first encounter in Riel's Rebellion in 1885 A large body of half-breeds under Gabriel Dumont drove back a small force of volunteers and mounted police

Ducktown, unincorporated copper-smelting town (pop 1,255), E Tenn , near the point where Georgia, Tennessee, and North Carolina meet The surrounding copper-producing area is deeply eroded because sulphur fumes from copper smelters have blighted plant growth

Ducommun, Élie (ālē' dükômū'), 1833–1906, Swiss journalist and pacifist He organized (1831) the International Peace Bureau at Bern and was awarded the 1902 Nobel Peace Prize jointly with Albert Gobat

ductless gland. see GLAND

Duddell, William Du Bois (dŭdĕl'), 1872–1917, English consulting electrical engineer He designed and constructed electrical instruments, particularly an oscillograph His researches in the resistance of the electric arc led to the Poulsen arc

Du Deffand, Marie de Vichy-Chamrond, marquise (märē' dü vēshē'-shärō' märkēz' dü dŭfä'), 1697–1780, French woman of letters, whose salon was frequented (1753–80) by the leaders of the ENLIGHTENMENT. She was blind The letters (1766–80) of Mme du Deffand to Horace WALPOLE, whom she loved deeply, are typical of her brilliant, witty correspondence. See Mrs Reginald De Koven, *Horace Walpole and Madame du Deffand* (1929)

Dudevant, Amandine Lucile Aurore: see SAND, GEORGE

Dudley, John: see NORTHUMBERLAND, JOHN DUDLEY, DUKE OF

Dudley, Joseph, 1647–1720, colonial governor of Massachusetts, b. Roxbury, Mass , grad. Harvard, 1665; son of Thomas Dudley. He took part in King Philip's War and served (1677–81) as one of the commissioners of the New England Confederation. In 1682 he was one of the agents sent to England to protest against the threatened loss of the Massachusetts charter. Having found favor in England, Dudley was appointed head of the temporary government in the colony until Sir Edmund Andros arrived (1686) a few months later as governor of all New England. Under Andros he held several prominent positions, but with Andros's fall (1689) he was sent to England to answer charges brought against him by the colonists Acquitted of the charges, he was appointed chief of the council of New York (1690–92) and acted as chief justice during the trial of Jacob Leisler Back in England again, he was elected to Parliament (1701), but soon returned as governor of Massachusetts (1702–15). Dudley raised and directed military expeditions against Canada, but his administration was marked by dissension because of his old unpopularity in the colony and his uncompromising attitude See biography by Everett Kimball (1911) His son,

Paul Dudley, 1675–1751, b Roxbury, Mass , rose to considerable prominence as a jurist in spite of his father's unpopularity and the hostility of the Mather faction He was chief justice of Massachusetts (1745–51) and was a naturalist of repute

Dudley, Plimmon Henry, 1843–1924, American civil and metallurgical engineer, b Portage co , Ohio, educated at Hiram College His inventions include the dynamometer to record the drawbar pull of a locomotive, an indicator to register graphically all irregularities of a track, and the stremmatograph to register strains in rails under moving locomotives With these and other instruments he checked the roadbeds of most of the important American railroads He initiated the treatment of railroad ties to prevent their deterioration, made investigations into the metallurgy of rails and their response to weather conditions, and designed many of the heavier rails used after 1884

Dudley, Robert. see LEICESTER, ROBERT DUDLEY, EARL OF

Dudley, Thomas, 1576–1653, colonial governor of Massachusetts, b Northampton, England As a young man he served as a clerk and later as steward to the earl of Lincoln In 1630 he emigrated to America as deputy governor of the Massachusetts Bay colony and spent the remainder of his life in one public office or another, being elected deputy governor 13 times and serving four terms as governor He was also one of the first members of the standing council and a founder and one of the first overseers of Harvard. See biography by Augustine Jones (1899)

Dudley, William Russel, 1849–1911, American botanist, b Guilford, Conn , grad Cornell Univ (B S, 1874) He taught botany at Cornell from 1876 to 1892 and in 1892 went to Stanford, where he served as professor of botany until his death He was influential in securing the California Redwood Park, and at Stanford he built up the Dudley Herbarium, one of the most complete collections in the W United States

Dudley, county borough (1931 pop 59,583, 1947 estimated pop 63,330), Worcestershire, England, WNW of Birmingham It is on an elevation in the Black Country and has iron and brass foundries, coal mines, brick factories, and art and technical schools It is the site of a Cluniac priory (12th cent) and of Dudley Castle

Dudley, town (pop 4,616), S central Mass , near the Conn line SW of Worcester, settled 1714, inc 1732 Textiles and lenses are made here

duel, prearranged armed fight between two persons on a point of honor The duel may have originated in the wager of battle, an early mode of trial in which an accused person fought with his accuser under judicial supervision (see ORDEAL) Wager of battle was abolished in France in the mid-16th cent , and the duel in part took its place The institution later spread to England and other countries To initiate a duel the offended party would present a challenge to fight, which had to be accepted on pain of dishonor Negotiations were conducted by seconds, who also observed the combat to see that all agreements and the complex punctilio were observed The object of a duel was not necessarily to kill one of the combatants, and in most cases after the firing of a prescribed number of shots or drawing blood the fight would be stopped. Although dueling was recognized as irrational, it long persisted among aristocrats and army officers In National Socialist Germany the famous student duels were revived In the United States, Alexander HAMILTON was killed in a duel with Aaron BURR and Andrew Jackson took part in several duels Dueling today is illegal in all civilized countries, and a killing in the course of a duel is usually considered willful murder

due process of law see FOURTEENTH AMENDMENT

Duer, John (dōō'ûr), 1782–1858, American jurist, b Albany, N Y , son of William Duer. He studied law in Alexander Hamilton's office and was admitted to the bar within a few years In 1821 he was a member of the state constitutional convention, and later he served as commissioner to revise the state statutes (1825–27) Duer became U S district attorney for S New York in 1827, but in 1829 resumed his law practice in New York city, becoming an expert on insurance law He was elected judge of the superior court of New York city in 1849 and chief justice in 1857 Duer's writings, especially his treatise on law and marine insurance (2 vols., 1845–46), gained him a wide reputation.

Duer, William, 1747–99, American Revolutionary patriot and capitalist, b. Devonshire, England, educated at Eton He served for a time as aide-de-camp to Robert Clive in India, afterward spending some time in the West Indies looking after his father's estates In 1768 he came to New York and, having received a contract to supply the royal navy with masts, purchased a tract of timberland above Saratoga on the Hudson, built himself a mansion, erected mills, and became a gentleman of influence Elected (1775) to New York's provincial congress, he served prominently in the state constitutional convention and acted on the Committee of Public Safety From March, 1777, until Jan , 1779, he was a delegate to the Continental Congress, where he served on seven committees During the war he was one of the largest contractors supplying the army From 1786 to 1789 he was secretary of the Board of the Treasury, and after the Dept. of the Treasury was organized (1789) he became Assistant Secretary under Alexander Hamilton Duer aided Manasseh Cutler in securing the land grant for the OHIO COMPANY OF ASSOCIATES and was a prime mover in the Scioto Company A speculator with great holdings, Duer was probably second only to Robert Morris as a financier of the period His multifold plans did not succeed, however, the government sued him on account of certain irregularities involved in his work with the Treasury Dept He was imprisoned for debt, and his ruin is supposed to have helped create the Panic of 1792 Except for a brief period he spent the rest of his life in prison. See J S Davis, *Essays in the Earlier History of American Corporations* (1917)

Duer, William Alexander, 1780–1858, American jurist and educator, b Rhinebeck, N Y , son of William Duer He was admitted to the New York bar in 1802 He practiced until 1806 in New Orleans Back in New York, he was a member of the state legislature (1814–20) and a judge of the state supreme court (1822–29) From 1829 to 1842 he was the president of Columbia College. There he established scientific courses that did not require Latin, and he increased instruction in modern languages and Hebrew Some of his Columbia lectures were published as *Constitutional Jurisprudence of the United States* (1843) He also wrote *Life of William Alexander* (1847), a biography of his grandfather, a general in the American Revolution, and *Reminiscences of an Old Yorker* (1867)

Duero, river see DOURO

Dufay, Guillaume (dōō'fī', gēyōm' düfä'), c 1400–1474, founder and leading composer of the Burgundian school, probably b Chimay, Hainaut After his early training in the cathedral choir at Cambrai, he sang (1428–37) in the papal chapel in Rome He was in the service of the antipope Felix V from 1442 to 1449 He was a canon of the cathedral of Cambrai, where he lived from 1450 until his death He traveled a great deal, knew many musical styles, and was highly esteemed by his contemporaries His style united Gothic and Italian elements with some English influence from John Dunstable He composed three-part vocal chansons, Masses on a *cantus firmus*, songs with instrumental accompaniment, and motets The faux-bourdon style reached its height in his works See J F R Stainer and Cecie Stainer, *Dufay and His Contemporaries* (1898)

Duff, Alexander, 1806–78, Scottish missionary in India. In Calcutta he opened, in 1830, a mission college which became an important center of education in India, both religious and scientific subjects were taught In 1844 he helped to launch the Calcutta *Review*. Duff was instrumental in founding the Univ of Calcutta

Duff, Sir Lyman Poore, 1865–, Canadian jurist, b Meaford, Ont , educated at the Univ of Toronto and the Ontario Law School For two years (1904–6) he was a judge of the supreme court of British Columbia; in 1906 he was appointed a judge of the Supreme Court of Canada, and in 1933 he became chief justice, serving until his retirement in 1944 He was chairman (1931–32) of the commission (popularly called the Duff Commission) appointed to inquire into the railroad situation in Canada, and twice (1931, 1943) he was administrator of the government of Canada

Duff, Mary Ann Dyke, 1794–1857, English-American actress She married (1810) an Irish actor, John Duff, with whom she went to the United States She made her debut in Boston and won fame as Juliet, Ophelia, Desdemona, and Lady Macbeth In 1821 she supported Edmund Kean in his production of *The Distressed Mother* and in 1823 played Hermione to the Orestes of the elder Booth Until Fanny Kemble came to the United States (1832), Mrs Duff was unrivaled in tragic roles

Duff Cooper, Alfred: see COOPER, ALFRED DUFF.

Dufferin and Ava, Frederick Temple Hamilton-Temple-Blackwood, 1st marquess of (dŭ'fərĭn, ā'vu), 1826–1902, British diplomat He served numerous missions abroad, as undersecretary for India (1864–66), governor general of Canada (1872–78), ambassador to Russia (1879–81), ambassador to Turkey (1881–82), commissioner to Egypt (1882–83), viceroy of India (1884–88), ambassador to Rome (1888–91), and ambassador to Paris (1891–96). He was an imperialist His administration in India saw the annexation of Burma and activity against the Afghans See biographies by Alfred Lyall (1905) and Harold Nicolson (1938)

Duff-Gordon, Lucie (Austin), Lady, 1821–69, English author, daughter of the jurist, John Austin Beautiful, witty, and independent in thought and speech, she is described by George Meredith and other writers of her day, her London home was a literary salon She is remembered for the wit and humanity of *Letters from the Cape* (1862–63), *Letters from Egypt* (1865), and *Last Letters from Egypt* (1875), written in exile in a vain search for health She died of tuberculosis in Egypt See Janet Ross (her daughter), *Three Generations of Englishwomen* (1886), biography by Gordon Waterfield (1937)

Duffus, Robert Luther, 1888–, American author, b Waterbury, Vt , grad Stanford (B A , 1910, M A , 1911) He was a reporter and editorial writer on the San Francisco *Bulletin*, 1911–18, and the New York *Globe*, 1919–23 He was then a free-lance writer until 1937, when he joined the editorial staff of the New York *Times* His work includes *Roads Going South* (1921), *The Arts in American Life* (with F P Keppel, 1933), and *The Innocents at Cedro* (1944), an autobiographical memoir of Thorstein Veblen

Duffy, Sir Charles Gavan, 1816–1903, Irish-Australian statesman, b Ireland He founded the *Nation* (1842), a patriotic Irish literary journal With Daniel O'Connell, Duffy agitated for the repeal of the union of Ireland and England, but went over to the more radical Young Ireland movement He was acquitted of treason in 1848 and helped to found the Independent Irish party Disconsolate over the failure of Catholics and Protestants to unite for land reform, he went to Australia (1855) He became prime minister of the Victoria colony (1871–72) and served later as speaker of the assembly

Duffy, Francis Patrick, 1871–1932, U S army chaplain, b Ontario prov , grad Troy Seminary, 1896 He was ordained a priest in 1896 and in 1898 entered the U S army, seeing service in the Spanish-American War as chaplain of the "Fighting 69th" Division In the First World War, Father Duffy, with the 165th Regiment of the "Rainbow" Division, distinguished himself for courage under fire and was promoted (1919) major A monument of Father Duffy was unveiled (1937) in Times Square, New York city See biography by E M E Flick (1935)

Dufour, Guillaume Henri (gēyōm' ārē' düfōōr'), 1787–1875, Swiss general He served in the French army under Napoleon, and in 1847 he led the federal forces to victory against the SONDERBUND A noted cartographer, he was also the author of several military treatises and histories Dufour presided over the first Geneva Convention, which established (1864) the International Red Cross

Dufourspitze see ROSA, MONTE

Dufrénoy, Ours Pierre Armand Petit (ōōr' pyĕr' ärmä' putĕ' düfrānwa'), 1792–1857, French geologist He collaborated with Élie de Beaumont in making a geological map of France (pub 1841) and was director of the École des Mines, Paris

Dufy, Raoul, (rä'ōōl' düfē'), 1877–, French painter, illustrator, and decorator, studied at the École des Beaux-Arts His decorative and calligraphic style and subtle use of brilliant color recall Matisse, but have a highly personal character He achieved a reputation in 1911 with his illustrations for *Le Bestiaire* by Apollinaire Dufy is represented in leading galleries of contemporary painting Characteristic is his water color *The Palm*, in the Museum of Modern Art, New York See study by K G Perls (1941)

Du Gard, Roger Martin see MARTIN DU GARD

Dugdale, Richard Louis (dŭg'dāl), 1841–83, American social investigator, b Paris While inspecting (1874) county jails for the New York Prison Association, he ran into the facts which gave him material for his famous study of the Jukes (fictitious name of a real family) This was published in an Association report as *The Jukes a Study in Crime, Pauperism, Disease, and Heredity* (1875), with *Further Studies of Criminals* it was republished separately in 1877 One of the first social investigations of familial feeble-mindedness and criminality, it created a sensation at the time, however, most of Dugdale's assumptions and conclusions about "hereditary" degeneracy are no longer accepted The finding of the manuscript (1911), revealing the actual names of the family, enabled Arthur H Estabrook to make his comparative study, *The Jukes in 1915* (with a memoir of Dugdale, 1916)

Dugdale, Sir William 1605–86, English antiquarian His chief works are *Antiquities of Warwickshire* (1656), *The Baronage of England* (2 vols , 1675–76), and the greater part of *Monasticon Anglicanum* (3 vols , 1655–73)

Duggan, Eileen (dŭ'gŭn), New Zealand poet, M A Victoria University College, Wellington, 1918 A Roman Catholic, she has written poetry noted for its strong religious feeling *Poems* (1937) and *New Zealand Poems* (1940) were published in Great Britain and the United States as well as in New Zealand She has also contributed prose and poetry to numerous magazines in these countries

Duggan, Stephen, 1870–, American educator and administrator, b. New York city, grad College of the City of New York, 1890, Ph D Columbia, 1902 From 1896 to 1927 he taught in the department of political science at the College of the City of New York, serving also as director (1919–46) of the Institute of International Education. Influential in the field of international education, Duggan has received many foreign decorations His works include *A History of Education* (1916), *The League of Nations* (1919), *A Professor at Large* (1943), and *The Rescue of Science and Learning* (with Betty Drury, 1948)

Duggar, Benjamin Minge (dŭ'gŭr), 1872–, American botanist, b Gallion, Ala , grad Harvard (B A , 1894), Ph D Cornell Univ , 1898 From 1927 to 1943 he was professor at the Univ of Wisconsin His work includes research on antibiotics, virus diseases of plants, and the physiological effects of ultraviolet radiation on plants Besides many articles on economic botany, he wrote *Fungous Diseases of Plants* (1909), *Plant Physiology* (1911), and several works on the cultivation of mushrooms

Dugger, town (pop 1,406), SW Ind , c 30 mi. SSE of Terre Haute

dugong (dōō'gŏng), herbivorous aquatic mammal of the Red Sea, the Indian Ocean, and the waters around Australia Like the manatee of the same order (Sirenia), it is also called sea cow Sea cows may be the originals of the mermaids of legend The dugong has a brownish or grayish body about 7 to 9½ ft long, with flexible front flippers and a two-lobed, flat tail Hunted for its palatable flesh, for its hide, tusks, and oil, it is in danger of extinction The related Steller's sea cow of the N Pacific became extinct in the 18th cent

Duguay-Trouin, René (rünā' dügā'-trōōĕ'), 1673–1736, French privateer and admiral A member of a Breton family of shipowners, he enlisted as a privateer (1689) Because of his bravery he was given command of a vessel (1691) He was captured by the English (1694) but escaped and raided the coast of Ireland After he captured a Dutch naval squadron he was made captain of a frigate in the French fleet (1697) Duguay-Trouin again defeated the Dutch off Spitsbergen (1702–3) and was appointed captain of a ship of the line (1705) In 1707 he barred the passage of a British troop convoy destined for Portugal His record of captures was reported by 1709 as 300 merchantmen and 20 warships or privateers In 1711 he captured Rio de Janeiro after an 11-day bombardment and forced the city to pay a heavy ransom, and in 1731 he compelled the rulers of Algeria and Tunis to release French sailors from captivity As a reward for his services Duguay-Trouin was ennobled by Louis XIV in 1710 and commissioned a lieutenant general in 1728 He was idolized by his sailors Though the captor of rich prizes, he died poor

Du Guesclin, Bertrand (dügĕs'klĭn, bĕrträ' dü gĕklĕ'), c 1320–1380, constable of France (1370–80), greatest French soldier of his age A Breton, he fought for Charles of Blois in the War of the BRETON SUCCESSION, he distinguished himself in the defense of Rennes against the English (1356–57) and in 1364 won the brilliant victory of Cocherel over the forces of CHARLES II of Navarre He was captured in the same year, however, by Sir John Chandos at Auray, where Charles of Blois was killed Du Guesclin was ransomed by CHARLES V of France, in whose service he remained till his death To rid himself of the "free companies" (bands of discharged soldiers who ravaged France after the Treaty of BRÉTIGNY), Charles put Du Guesclin at their head and sent them to aid Henry of Trastamara (later HENRY II of Castile) against PETER THE CRUEL Du Guesclin, though successful in the campaign of 1366, was defeated and captured by Peter and EDWARD THE BLACK PRINCE at Nájera (1367) In 1369, however, he and Henry won the battle of Montiel, through which Henry gained the throne of Castile Warfare against England was renewed in 1369, and Du Guesclin reconquered Poitou and Saintonge and pursued (1370–74) the English into Brittany He disapproved of the confiscation (1378) of Brittany by Charles V, and his campaign (1379) to make the duchy submit to the king was half-hearted He died when on a military expedition in Languedoc An able tactician, Du Guesclin was notable also for the interest he took in the welfare of his soldiers His personal prowess and loyalty have made him one of the most popular heroes of France and, particularly, of Brittany See biographies by D F Jamison (1864), E V Stoddard (1897), and Roger Vercel (Eng tr , 1934)

Duhamel, Georges (zhôrsh' düämĕl'), 1884–, French novelist and dramatist Like Papa Pasquier in the *Chronique des Pasquier* (1933, Eng tr , 1937), Duhamel began to study medicine in middle age From his experience as a surgeon during the First World War came *Vie des martyrs* (1917, Eng tr , *The New Book of Martyrs*, 1918) and *Civilisation* (1918, Eng tr., 1919) The latter, published under the pseudonym Denis Thévenin, won the Goncourt Prize He was successful as a dramatist; his *Dans l'ombre des statues* was performed in 1912 (Eng. tr , *In the Shadow of Statues*, 1914) and *L'Œuvre des athlètes* in 1920. His most famous character is the somewhat dubious hero Salavin, created in his *Cycle de Salavin* (1920–32, Eng tr , 1936) Duhamel caused some ill feeling in the United States with the publication of *Scènes de la vie future* (1930, Eng tr , *America the Menace*, 1931) This book, however, as well as *Querelles de famille* (1931) and *Défense des lettres* (1936, Eng tr , 1939), is simply an expression of his distaste for overindustrialization and overmechanization of modern life He was elected to the French Academy in 1936

Duhamel du Monceau, Henri Louis (ärē' lwē' dümôNsō'), 1700–1782, French agriculturist and tree expert He did experimental work on plant physiology and ecology and wrote *The Elements of Agriculture* (1762, Eng tr , 1764) and other standard works on agriculture and on the distribution and culture of trees and shrubs

Dühring, Eugen Karl (ougän' karl' dü'rĭng), 1833–1921, German philosopher and economist. He practiced law in Berlin until blindness threatened him and then became (1864) docent at the Univ of Berlin Inability to get along with academic authorities forced his retirement in 1877 A positivist in the manner of Comte and Feuerbach, he looked to the study of man as the basis of his philosophy His political philosophy rested on the retention of capitalism with the elimination of its abuses through a strong labor movement He was violently criticized by Engels in *Anti-Dühring* (1877) His works include *Kritische Geschichte der allgemeinen Principien der Mechanik* (1872) and *Cursus der Philosophie* (1875)

Duhring, Louis Adolphus (dyōō'rĭng), 1845–1913, American dermatologist, b Philadelphia, M D Univ of Pennsylvania, 1867 He was professor at the Univ of Pennsylvania from 1876 A pioneer specialist in skin diseases, he studied abroad, opened a clinic in Philadelphia (1870), and wrote *Practical Treatise on Diseases of the Skin* (1877)

Duisburg (dōō'ĭsbōōrk), city (1946 pop 356,408), in the former Rhine Prov of Prussia, NW Germany, at the junction of the Ruhr and Rhine rivers It is an industrial center of the RUHR district, with steel, machinery, and textile plants, and a large inland port Of ancient origin, Duisburg was tributary (12th–13th cent) to the dukes of Limburg, passed to the duchy of Cleves in 1290, and in 1666 was acquired, with Cleves, by Brandenburg As a center of the German armaments industry (notably the Thyssen steelworks), the city was a favorite target for Allied air raids in the Second World War, from which it emerged about three quarters destroyed

Dujardin, Félix (fālĕks' düzhärdăN'), 1801–60, French zoologist He contributed valuable research on bacteria and on Infusoria In 1835 he described protoplasm in unicellular animals and named it sarcode He taught at the universities of Toulouse and Rennes

Dujardin, Karel (kä'rul duzhärdăN'), 1622?–1678, Dutch painter and etcher He studied with Berchem and in Italy He was particularly successful in painting landscapes with figures and animals, and he made some 51 fine etchings of similar subjects He also painted portraits and allegorical pictures Characteristic are his *Charlatans* and *Cavalry* (both Louvre) and *Landscape with Cattle* (National Gall , London)

Dukas, Paul (pōl dükä'), 1865–1935, French composer and critic He stands between the romanticism of César Franck and the impressionism of Debussy His compositions are few, the best known being a symphonic poem, *The Sorcerer's Apprentice* (1897), and an opera on a poem of Maeterlinck, *Ariane et Barbe-Bleue* (1907)

Duke, James Buchanan, 1856–1925, American industrialist, processor of tobacco products, b near Durham, N C The Civil War left the Duke family poor, but James and his brother, Benjamin Duke (1855–1929), helped their father in building up a local tobacco-processing business, which soon prospered Development of cigarette-making machines and vast advertising gave the Duke firm a lead in tobacco manufacturing Through a long series of mergers with competitors, James Duke organized (1890) and led a trust which, when dissolved by order of the Supreme Court in 1911, controlled 150 factories with a capitalization of $502,000,000 He left to Trinity College a trust fund which provided for the erection of buildings and facilities, the name of the college was changed to Duke Univ He also gave large amounts for hospitals, orphanages, and churches See biographies by J W Jenkins (1927) and J K Winkler (1942).

Duke of York Islands, coral group, area 23 sq mi , SW Pacific, between New Britain and New Ireland, in the BISMARCK ARCHIPELAGO and part of the Territory of New Guinea There are coconut plantations in the islands The group was formerly called Neu Lauenburg

Dukeries, the, park district in Sherwood Forest, Nottinghamshire, England It draws its name from the number of its ducal seats, which include Clumber, Thoresby, Welbeck, and Worksop

Dukes, Leopold, 1810–91, Hungarian Hebrew scholar He made a collection of rabbinical proverbs and wrote on the history of Jewish literature, notably of Hebrew poetry in the Middle Ages.

Duke University, at Durham, N C.; for men and women, opened 1838, chartered 1841 by Friends and Methodists as Union Institute in Randolph County It was reorganized in 1852 as Normal College and again in 1859 as Trinity College (Methodist) It moved to Durham in 1892 After large endowments by James B Duke and his family, it was renamed in 1924 Duke Univ includes engineering and two undergraduate (Trinity and Woman's) colleges and schools of forestry (graduate), law, medicine, nursing, and religion (Methodist) It has a marine laboratory, a large library, and a university press Research is notable in tobacco culture and in medicine See William Blackburn, *The Architecture of Duke University* (1939), Nora C Chaffin, *Trinity College* (1950)

Doukhobors or **Doukhobors** (both dōō'kŭbôrz), [Rus ,=spirit wrestlers], religious sect, which arose in Russia in the late 17th cent The name was not given its members until the late 18th cent , when it was used by Orthodox critics in derision but was adopted by the members of the sect, who now, however, call themselves Christians of the Universal Brotherhood In doctrines and mode of life they have a more or less vague similarity to the early members of the Society of Friends (the Quakers) They believe in the equality of all men before God and therefore reject all authority, including that of the government The members were all recruited from the peasantry, and the group was at first ignored, but their adoption of communal life and their firm resistance to both the state and the Orthodox Church brought persecution upon them under Catherine II Alexander I allowed them to settle near the Sea of Azov, where they built up flourishing agricultural settlements Their resistance to military conscription (regarded as sinful) brought down the wrath of the government, and in 1840 they were forcibly ejected from their lands and moved to a barren section now in the Georgian SSR They built new and thriving communities there In 1887 military conscription was extended to them, and in the 1890s they put into practice their principle of passive resistance to evil Severe persecution followed Leo Tolstoy befriended them, and it is possible that Dukhobor doctrines affected his social thought, certainly his doctrines affected them He and the Quakers were among those who helped make it possible for the Dukhobors to emigrate to Canada Most of them moved to what is now Saskatchewan in 1898–99 Their leader, Peter Veregin, was at first not permitted to leave his exile in Siberia, but a few years later he joined them His son, also Peter Veregin, remained in the Caucasus with a dissident group of the sect Again their agricultural talents resulted in flourishing communities, and they spread into British Columbia The frugal, industrious, and abstemious Dukhobors built their own roads and irrigation projects and developed orchards and farms A division occurred within the sect, and a group known as the Sons of Freedom advocated more ascetic practices (including nudism) As settlement of the frontier progressed, the Dukhobors were involved more and more in struggles with the government—particularly over taxes and the education of their children—and with their non-Dukhobor neighbors Strife sometimes resulted in violence (even occasionally within the sect itself), but more often there were arrests and displays of passive resistance One of the most remarkable forms of this resistance were the mass "nudist strikes," in which the protesting Dukhobors stripped and refused to reclothe After the elder Peter Veregin had been killed by a time bomb in 1924, the younger Peter Veregin was in 1927 brought from Russia to be their leader On his death in 1939 he left a message recommending that the Dukhobors abandon communal life and accept the laws of the country while retaining their religious doctrines The Sons of Freedom continued to get into occasional trouble, but most of the Dukhobors began being absorbed into the Canadian community A lively, journalistic account of the Dukhobors is given in J F C Wright, *Slava Bohu* (1940)

Dulac, Edmund (dülăk'), 1882–, French illustrator of English books. His art is imaginative and decorative Excellent examples are his colorful illustrations for the *Arabian Nights*, Shakspere's *Tempest*, and *The Rubaiyat* of Omar Khayyam

Dulany, Daniel (dŭlā'nē), 1685–1753, political leader of colonial Maryland, b Ireland He came to Maryland in 1703, studied law, and was admitted to the bar He entered the assembly in 1722 and remained a member 20 years, becoming a leader of the colonists in opposition to the proprietor as represented in governor and council The veto of a bill passed in 1722 which implied the introduction of English statute laws into the colony was denounced by Dulany as a violation of the charter To win him over, the proprietor appointed him his agent and receiver general in 1733, a judge of admiralty in 1734, and commissary general in 1736 He was also appointed to the council in 1742 and served in that body until his death. His son, **Daniel Dulany**, 1722–97, was educated in England He gained prominence as a colonial politician in Maryland and was probably the most celebrated lawyer in the American colonies. Dulany opposed the Stamp Act in his *Considerations on the Propriety of Imposing Taxes in the British Colonies* He lost his popularity, however, when in 1773 he engaged in newspaper controversy with Charles Carroll in defense of the fees exacted by government officials for performing certain services

dulcimer (dŭl'sŭmur), stringed musical instrument consisting of a wooden box over which strings are stretched It is a kind of psaltery, whose strings are struck with mallets instead of being plucked Of Oriental origin, it appeared in Europe in the Middle Ages Around the beginning of the 18th cent a German, Pantaleon Hebenstreit, made an enlarged, improved dulcimer called the pantaleon, upon which he gave concerts In general, however, the dulcimer was an instrument of amateurs, and its popularity waned in the 19th cent

Du Lhut, Daniel Greysolon, sieur. see DULUTH

Dulles, John Foster (dŭ'lus), 1888–, U S Senator and U S delegate to the United Nations, b Washington, D C , grad Princeton, 1908, grandson of John Watson Foster, Secretary of State (1892) under President Benjamin Harrison From the time when he attended the Hague Conference of 1907, he had a lively interest in world affairs and international law and served in various international conferences He was appointed (1945) adviser to the U S delegation at the San Francisco Conference, and after 1945 he served as U S delegate to the UN General Assembly and was U S adviser at meetings (1945, 1947) of the Council of Foreign Ministers In 1944 and 1948 he was adviser to the Republican presidential candidate, Thomas E Dewey, Dewey, as governor of New York, appointed (1949) Dulles to the Senate to succeed Robert F Wagner He wrote *War or Peace* (1950)

Dullin, Charles (shärl' dülă'), 1885–, French actor, theatrical director, and teacher of dramatic arts He first became known (1911) through his performance of Smerdiakov in *The Brothers Karamazov* He was the associate of Jacques Copeau and later of Firmin Gémier in producing plays before he opened (1921) his Atelier in Paris, a school for dramatists as well as for actors He has produced plays of Aristophanes and classic dramas of England and Spain

Dulong, Pierre Louis (pyĕr' lwē' dülō'), 1785–1838, French physicist and chemist He was professor (from 1820) and director (from 1830) at the École polytechnique, Paris He worked on thermal expansion with a colleague, A T Petit, with whom he also evolved (1819) Dulong and Petit's law that the specific heats of elements are inversely proportional to their atomic weights and the product of the atomic weight and the specific heat is a constant for all solid elements Dulong discovered nitrogen chloride (1811) and studied the specific heats of gases.

Duluth or **Du Lhut, Daniel Greysolon, sieur** (dulōōth', Fr dülüt'), 1636–1710, French explorer in Canada He went to Canada with his younger brother c 1672 In 1678 he set out on an expedition to Lake Superior to pacify the Indians and end the Ojibwa-Sioux war Going as far as the Ojibwa village at Mille Lacs Lake (in Minnesota), he claimed the upper Mississippi region for France He remained in the West, but his plans for exploration were interrupted by necessary negotiation for the release of HENNEPIN and Aco, members of La Salle's party Returning to Mackinac, he found himself charged with illegal trading and had to go to France to clear himself In 1683 he was off on a new expedition, on which he established his brother in trade on Lake Nipigon and built a fort at Kamanistikwia He was recalled to join Perrot in leading an expedition against the Iroquois Returning to Kaministikwia, he prepared to search for the Western Sea, but was again recalled to fight the Iroquois In 1686 he built Fort St Joseph on the St Clair river He went on his last Lake Superior expedition in 1688 In 1695 he was retired because of lameness Duluth won the Lake Superior and upper Mississippi region for France, his treatment of the Indians gained their lasting friendship

Duluth (dulōōth'), city (pop 101,065), co seat of St Louis co , NE Minn , at the west end of Lake Superior, at head of lake navigation The harbor, shared with Superior, Wis , is protected by long sandspits called Minnesota Point and Wisconsin Point Duluth was incorporated as a city in 1870, returned to village status in 1877, and was reincorporated as a city 10 years later It adopted commission government in 1912 Built largely on rocky bluffs overlooking the lake, the city is the commercial, industrial, and cultural capital of N Minnesota, the gateway to a large resort area, and a port of entry The Skyline Parkway provides fine views Indian settlements were found here by early explorers, including the sieur DULUTH (for whom the city was named) and fur traders Permanent settlement began after 1850 The city was at first a trade and shipping center for the lumber country, but discovery of iron in the Mesabi range made it the chief shipping point for ore for the nation's steel mills. Its docks handle a huge tonnage Alexander MCDOUGALL built shipyards here, foundries, mills, and factories were established In 1915 the U S Steel Corp built, just outside the city, a plant and a town, Morgan Park, to house its employees Duluth has a state teachers college (1902), the College of St Scholastica, and the Northeast Demonstration Farm and Experiment Station of the state university There is an airport and a seaplane base, a U S fish hatchery, and U S coast guard, naval, and weather stations The civic center, designed by D H Burnham, comprises the courthouse (1910), with a historical museum and library, the city hall (1927), and the Federal building (1930) Duluth has a children's museum (1930), a Little Theater, and a civic symphony orchestra and choral society

Dulwich (dŭl'ĭj), residential suburb of Camberwell metropolitan borough, London, England It is the seat of a well-known public school, Dulwich College, which was founded in 1613 by Edward ALLEYN Its art gallery contains paintings of the Dutch and Flemish schools

duma (dōō'mä), Russian name for a representative body, particularly applied to the Imperial Duma established as a result of the Russian Revolution of 1905 The parliamentary organization of 1906, largely the work of Count Witte, provided for a state council—an upper house with some members appointed by the emperor and others elected by the nobility, the zemstvos (see ZEMSTVO), and the university faculties—and for the Duma, a lower house elected by a system of suffrage which was neither equal nor direct, no law was to be passed without the consent of the Duma When Nicholas II found, however, that a majority of opposition candidates had been elected in 1906, he dissolved the Duma after 10 weeks The second Duma (1907), even more hostile to the government, was also dissolved The third Duma (1907–12) was the product of an electoral change which made it the tool of the government It did, however, establish full citizenship rights for the peasantry, did reform the administration of local justice, and did reorganize the educational system The fourth Duma (1912–17) had a conservative majority, called at rare and brief intervals, it was in constant conflict with the tsar Dissolved by Nicholas in Feb , 1917, it refused to disband Revolution (see RUSSIAN REVOLUTION) broke out, and the Duma, after appointing Prince Lvov as head of the provisional government, disintegrated

Dumah (dū'mŭ) [Heb ,=silence] **1** Son of Ishmael Gen 25 14, 1 Chron 1 30 **2** Unidentified town, S Palestine Joshua 15 52

Dumas, Alexandre (ălĕksă'drŭ dümä'), known as **Dumas père,** (pĕr'), 1802–70, French novelist and dramatist, b Villers-Cotterets, Aisne His father, a natural son of the marquis de la Pailleterie, was a general in the Revolution and dropped the family title for the name of his mother, Louise Cossette Dumas, a woman of African descent At 20 Dumas obtained a minor post with the duc d'Orléans in Paris, he was active in the Revolution of 1830 His first successes were the historical dramas *Henri III* (1829), *Christine* (1830), *Antony* (1831), and *Le Tour de Nesle* (1832), notable for its evocation of the Middle Ages After a number of novels, written independently or in collaboration, he produced his great triumphs, *The Three Musketeers* (1844, Eng tr , 1846) and its sequels—*Twenty Years After* (1845, Eng tr , 1846) and *The Vicomte de Bragelonne* (1848–50, Eng tr , 1850?)—and *The Count of Monte Cristo* (1844–45, Eng tr , 1846), which in its dramatic version was made famous by James O'Neill Although these historical novels and their successors, written with the aid of numerous collaborators, especially Auguste Maquet, are scorned by French critics, who prefer his plays, they have delighted several generations of readers and have been translated into nearly every language Among his other works are *Queen Margot* (1845, Eng tr , 1845), *The Lady of Monsoreau* (1845, Eng tr , 1847), *The Forty-Five* (1848), and *The Black Tulip* (1850) A recent translation (1944) introduced *The Journal of Madame Giovanni* to readers of English The elder Dumas's incredible output of novels, travel works, memoirs, and historical studies made him rich, but he spent more than he earned on a horde of pensioners at his home, "Monte-Cristo," near Saint-Germain His memoirs (1852–54) end with the year 1832 He was interested in Italian unification, and among his activities was a part in Garibaldi's expedition in 1860 See H A Spurr, *Life and Writings of Alexandre Dumas* (new ed , 1929), F H Gribble, *Dumas Father and Son* (1930), J Lucas-Debreton, *The Fourth Musketeer* (1928), H S Gorman, *Dumas, the Incredible Marquis* (1929)

Dumas, Alexandre, known as **Dumas fils** (fēs'), 1824–95, French dramatist and novelist, b Paris, son of Dumas père He was the chief creator of the modern comedy of manners, though he began as poet and novelist His first important play, *La Dame aux camélias* (1852, Eng tr , 1856), known in English as *Camille*, was a sensation It was based on a novel of the same title which appeared in 1848 The play has since been the vehicle of many famous actresses, it was the basis of Verdi's *La Traviata* and was made into a film starring Greta Garbo

(1937) *Le Demi-Monde* (1855, Eng tr., 1858) aroused much discussion because of its theme In later plays Dumas preached a revolt against romantic morality, the excesses of the wealthy, and bourgeois puritanism and propounded social and psychological questions His stage works are notable for skillful construction and brilliant dialogue, although the characterizations are somewhat lacking in vitality His novels include *Tristan le Roux* (1850) and *Diane de Lys* (1851) Among his best plays are also *The Money Question* (1857, Eng tr , 1915), *Le Fils naturel* [the natural son] (1858), *Les Idées de Mme Aubray* (1867), *L'Étrangère* [the strange woman] (1876), and *Denise* (1885) His [early essays, *Entr'actes* (1878–79), are mostly on social subjects He was elected to the French Academy in 1874 See H Stanley Schwars, *Alexandre Dumas Fils, Dramatist* (1927), F H Gribble, *Dumas Father and Son* (1930)

Dumas, Jean Baptiste André (zhä' bätēst' ädrā' dumä'), 1800–1884, French organic chemist He was distinguished for his researches on atomic weights, esters, vapor densities, the oxidation products of alcohols, and the laws of substitution He taught in several institutions, served as minister of agriculture and commerce and as senator, and in 1868 became perpetual secretary of the Academy of Sciences His works include *Traité de chimie appliquée aux arts* (8 vols , 1828–45)

Dumas (dōō'mus) **1** Cotton town (pop 2,323), SE Ark , near the Arkansas river, founded c 1878 **2** City (1940 pop 2,117, 1947 estimated pop 5,000), co seat of Moore co , extreme N Texas, N of Amarillo on the plains of the Panhandle, founded 1892, inc 1930 Originally a cattle town, then a wheat-shipping center, Dumas turned to industry with the development of the gas fields It has carbon-black plants, a zinc smelter, a helium plant, an oil refinery, and like enterprises

Dumas fils: see DUMAS, ALEXANDRE (1824–95).

Dumas père: see DUMAS, ALEXANDRE (1802–70)

Du Maurier, George Louis Palmella Busson (dü mōr'ēā), 1834–96, English artist and novelist, b Paris, of a French father and an English mother He studied chemistry, but after his father's death turned to art for a livelihood In spite of the loss of one eye in his youth, he became a successful illustrator and in 1864 joined the staff of *Punch* His profiles of tall and distinguished women fitted his own heroines when later he began writing novels The first, *Peter Ibbetson* (1892) was successfully dramatized and later made into an opera by Deems Taylor (produced 1931), the others, *Trilby* (1894) and *The Martian* (1897), shared a fantastic and romantic charm See Daphne Du Maurier, *The Du Mauriers* (1937) **Daphne Du Maurier**, 1907–, his granddaughter, is the author of popular novels—including *Jamaica Inn* (1936), *Rebecca* (1938), *Frenchman's Creek* (1941), *The Parasites* (1949)—and of a vivid biography of her father (1934)

Dumba, Konstantin Theodor (kônstäntēn' tä'dôr dōōm'bä), 1856-1947, Austro-Hungarian diplomat As ambassador to the United States (1913–15), he was involved, with Franz von Papen and Karl Boy-Ed, in schemes to sabotage the American munitions industry He was recalled on President Wilson's request He wrote *Memoirs of a Diplomat* (Eng tr , 1932)

Dumbarton (dŭmbär'tŭn), burgh (1931 pop 21,546, 1948 estimated pop 24,563), county town of Dumbartonshire, Scotland, at the junction of the Leven with the Clyde NW of Glasgow It is the ancient British Alcluith and was the principal town of the kingdom of Strathclyde It is now a shipbuilding center and manufactures aircraft, pharmaceuticals, whisky, soap, and hosiery The double-peaked basaltic rock above the Leven has remains of a very old castle Here Sir William Wallace was held captive in 1305, and from here in 1548 Mary Queen of Scots was sent to France

Dumbarton Oaks, estate, now in Washington, D C (in Georgetown) Here representatives of the United States, Great Britain, the USSR, and China met in Sept , 1944, and reached an agreement (made public Oct 9) for creating an international organization of the UNITED NATIONS

Dumbartonshire (dŭmbär'tŭnshĭr) or **Dunbartonshire** (dŭn–), county (241 sq mi , 1931 pop 147,744, 1948 estimated pop 157,811), central Scotland The county town is Dumbarton The county is bordered on the east by Loch Lomond, from which runs the river Leven, on the south by the Clyde estuary, and on the west by Loch Long A detached portion lies to the east The region is mountainous, rising to more than 3,000 ft , and agriculture is limited Cattle and sheep are raised Chief industries are fishing, shipbuilding, and cotton manufacturing There are remains of the Roman Wall of Antoninus. The region is part of the Scottish territory of Lennox On Roseneath peninsula is the castle of the dukes of Argyll

Dumdum (dŭm'dŭm), town (pop. 39,434), S West Bengal state, India In the 19th cent its arsenal was the first to manufacture lead-nosed bullets, which spread on impact, inflicting a tearing wound In 1905 Great Britain acceded to the prohibition of dumdum bullets adopted (1899) by the first Hague Conference

Dumfries (dŭmfrēs'), burgh (1931 pop. 22,795; 1948 estimated pop 27,128), county town of Dumfriesshire, Scotland, on the Nith It includes Maxwelltown across the river. Wool weaving and the manufacture of agricultural machinery are among the burgh's industries Robert Burns lived for five years in Dumfries, and his mausoleum is in St. Michael's Church Craigenputtock is not far

Dumfriesshire (dŭmfrēs'shĭr) or **Dumfries,** border county (1,073 sq mi ; 1931 pop 81,047, 1948 estimated pop 86,832), SW Scotland The county town is Dumfries The surface is largely hilly, sloping upward from the Solway Firth on the south The chief rivers are the Annan, the Nith, and the Esk There are beautiful lochs, such as Mahen and Skene Agriculture is confined to the valleys, with cattle grazing important in the uplands Salmon fishing is important, and limestone and sandstone are quarried The history of the county is largely a record of border warfare, which persisted until the 18th cent Robert Burns and Thomas Carlyle lived in Dumfriesshire

Dummer, Jeremiah, 1645–1718, early American silversmith and engraver, b Newbury, Mass He was apprenticed (1659) to John Hull and set up as a silversmith in Boston c 1666 He held several public offices, was known as a merchant, and engraved plates for currency He probably painted portraits of himself and his wife and of John Coney, silversmith, and his wife, these bear his inscription Dummer's silverwork mark is ID enclosed over a fleur-de-lis in a heart or occasionally ID in a rectangle He is well represented in the collections of colonial silver of the Museum of Fine Arts, Boston, and the Metropolitan Museum See H. F Clarke and H W Foote, *Jeremiah Dummer, Colonial Craftsman and Merchant* (1935)

Dummer, Jeremiah, c 1680–1739, colonial agent for Massachusetts and Connecticut, b Boston, grad Harvard, 1699, son of Jeremiah Dummer (1645–1718) He saw little opportunity for business in Boston and settled in England, where he was prosperous at law He became the agent in England of Massachusetts (1710) and of Connecticut (1712) Dummer persuaded Elihu Yale, a wealthy English merchant, to donate books and valuable goods to the Collegiate School of Connecticut—which was renamed (1718) Yale Univ Dummer himself collected nearly 1,000 books which were sent to this institution His most important service for the colonies was his well-reasoned *Defence of the New England Charters* (1721), written to answer the attacks in Parliament Because Dummer recommended and supported the appointment of Samuel Shute as governor of Massachusetts, he was dismissed as colonial agent in 1721 by the Massachusetts General Court and in 1730 by Connecticut

Dumont, Pierre Étienne Louis (pyĕr' ātyĕn' lwē' dumō'), 1759–1829, Swiss jurist He knew Mirabeau well and wrote many of Mirabeau's speeches, His *Souvenirs sur Mirabeau* (1832) is a valuable record of the times An important work of Dumont was his French edition (1801) of Jeremy Bentham's *Principles of Morals and Legislation* (1789)

Dumont (dōō'mŏnt), suburban borough (pop 7,556), NE N J , NE of Hackensack, settled 1730, inc 1894

Dumont d'Urville, Jules Sébastien César (zhül' säbästyĕ' säzär' dümō' dürvēl'), 1790–1842, French navigator While on service (1819 20) in the E Mediterranean, he saw and recognized the importance of the newly discovered Venus of Milo and was influential in having the Louvre secure it In 1826–29 he commanded the *Astrolabe* in a voyage around the world, exploring the coasts of Australia and many of the islands of Oceania With the *Astrolabe* and the *Zelée* he made a second circumnavigation in 1837–40, and in 1840 he penetrated the ice pack S of New Zealand and discovered ADÉLIE LAND in Antarctica

Dumoulin, Charles (shärl' dümōōlă'), 1500–1566, French jurist He was converted to Calvinism and argued, opposing the Catholic position, that the return of moderate interest on investments was in accord with divine law Feudal law courts came under his attack, and he asserted that all legal authority stemmed from the king In the field of contracts he is famous for asserting the principle that the will of the parties should determine what body of law (e g , the law of Paris) will govern their agreements

Dumouriez, Charles François (sharl' frăswä' dümōōrēā'), 1739–1823, French general in the FRENCH REVOLUTIONARY WARS He earlier fought in the Seven Years War and was employed on several secret missions In the Revolution, by professing democracy, he gained influence Becoming minister of foreign affairs (1792), he was the real leader of the Girondist ministry, which sought war with Austria Made minister of war (June, 1792), he resigned to take Lafayette's place as army commander when the latter was charged with treason (Aug , 1792) Dumouriez helped to defeat the Prussians at Valmy (Sept , 1792), drove the Austrians from Belgium at Jemappes (Nov , 1792), and invaded the Netherlands (Feb , 1793) Defeated (March) at Neerwinden, he began negotiations with the Austrians, and after surrendering the commissioners sent from Paris to investigate his defeat he finally (April, 1793) deserted to the Austrian lines. After wandering over Europe, disavowed even by the French royalists, he settled in England (1804) See his memoirs (both English and French eds , 1794, enlarged French ed , 1823), Arthur Chuquet, *Dumouriez* (1914, in French)

dumping, selling goods abroad at less than the normal price It may be done by a producer, a group of producers, or a nation. Usually it is an occasional practice to get rid of a temporary surplus without disturbing home markets, to introduce a commodity abroad, to stop foreign competition, or to offset foreign dumping in the home market As a permanent policy, it is used to obtain the advantages of large-scale production and sale without lowering a high domestic price It is not likely to be systematic unless monopoly maintains a high price in the home market or the product receives an export bounty or competing foreign goods are subject to high import duties Standardized and trade-marked goods are more difficult to dump In the late 19th cent , dumping became part of the trade policy of great European cartels, especially in Germany England, France, Japan, and the United States also have practiced dumping Dumping is disliked because it is irregular and disturbs markets where the goods are dumped Antidumping legislation was first passed by Canada in 1904 In the United States various tariff acts have been passed to deal with different types of dumping, in particular the 1921 Emergency Tariff Act imposed special duties on goods imported for sale at less than fair value or cost of production See Jacob Viner, *Memorandum on Dumping* (1923)

Dúna · see DVINA OR WESTERN DVINA.

Dünaburg, Latvia see DAUGAVPILS

Dunagiri (dōōnŭgēr'ē), peak, c 23,170 ft. high, Nepal, in the Himalayas

Dunajec (dōōnă'yĕts), river of Poland, 128 mi long, rising in the Carpathians and flowing NE past Nowy Sacz into the Vistula

Dunant, Jean Henry (zhä' rē' dünä'), 1828–1910, Swiss philanthropist, b Geneva In 1862 appeared his *Un souvenir de Solférino* (Eng tr , *The Origin of the Red Cross*, 1911), a description of the sufferings of the wounded at the battle of Solferino and a plea for organizations to care for the war wounded There was an immediate response Gustave Moynier and the Société genevoise d'Utilité publique took up the cause An international conference in 1863 led to the conference of 1864 which adopted the Geneva Convention and established the Red Cross Dunant aided other causes and wrote several books **He** shared with Frédéric Passy the first Nobel Peace Prize (1901) See Martin Gumpert, *Dunant. the Story of the Red Cross* (1938)

Dunash ben Labrat (dōō'năsh bĕn lä'brät), 920–70 Hebrew grammarian and poet, b Fez He was also called Rabbi Adonim Halevy (ha-Levi) He wrote an exhaustive criticism of Menahem's Hebrew lexicon, adding to and correcting it, and was the first to adapt the Arabic meter to Hebrew poetry

Dunash ben Tamim (tä'mēm) or **Dunash ibn Tamim** (ĭb'ŭn), c 900–c 960, Hebrew scholar, an astronomer and physician of North Africa A pioneer in the field of scientific comparative philology, he tried to demonstrate that Arabic was merely a corrupt form of the purer Hebrew

Dunbar, Paul Laurence, 1872–1906, American Negro poet, b Dayton, Ohio, educated in the public schools His parents had both been slaves He won recognition with his *Lyrics of Lowly Life* (1896), a collection of poems from his *Oak and Ivy* (1893) and *Majors and Minors* (1895) His dialect poems were especially popular, but he also wrote melodic verse Later volumes were incorporated into his *Complete Poems* (1913) He wrote several volumes of short stories—*Folks from Dixie* (1898), *The Strength of Gideon* (1900), and *The Heart of Happy Hollow* (1904)—and four novels, the best of which is probably *The Sport of the Gods* (1902) See L K Wiggins, *The Life and Works of Paul Dunbar* (1907), biography by Benjamin Brawley (1936)

Dunbar, William, c 1460–c 1520, Scottish poet. He was a Franciscan friar and a diplomat at the court of James IV Dunbar, a follower of Chaucer and a greater artist than any earlier Scottish poet, is hardly surpassed for richness of fancy, exuberance of inventive delight, and metrical felicity His most characteristic poem is "Dance of the Sevin Deidly Synnis," where boisterous humor, power over the grotesque, and ingenuity of phrase produce a unique effect He wrote in a diversity of forms an epithalamium in honor of James IV and Margaret Tudor, "The Thrissil and the Rois" [the thistle and the rose], an allegory, "The Golden Targe", his elegy for the poets, "The Lament for the Makaris", vigorous satires, such as "The Flyting of Dunbar and Kennedie", and ribald verse, such as "The Two Maryit Women " See editions of his poems by John Small (1893) and W M. Mackenzie (1932), study by R. A Taylor (1931).

Dunbar, William, 1749–1810, American scientist in the old Southwest, b near Elgin, Morayshire, Scotland. He came to America in 1771 and finally

settled (1792) on a cotton plantation near Natchez on the Mississippi, then Spanish territory. After serving as Spain's representative in running the boundary line of 1798 (which made the Natchez district American), he became a U.S. citizen Commissioned by President Jefferson to explore the Ouachita and Red River countries, he wrote the first scientific account of the mineral wells at Hot Springs, Ark. Dunbar set up his own private astronomical observatory with instruments imported from Europe, took the first meteorological observations in the old Southwest, studied the rise and fall of the Mississippi and explored its delta, and published his findings on these subjects and on the plants, animals, and Indians of the region in the *Transactions* of the American Philosophical Society, of which he was a member See Mrs Dunbar Rowland, *Life, Letters, and Papers of William Dunbar* (1930)

Dunbar (dŭnbär') [Scottish.=castle headland], burgh (pop. 3,751), East Lothian, Scotland, at the mouth of the Firth of Forth E of Edinburgh It is a resort and a fishing port On a crag above the harbor are remains of a castle which in 1339 was held for six weeks by "Black Agnes," countess of Dunbar, against English siege Mary Queen of Scots was abducted thither by Bothwell in 1567, and in 1568 the castle was dismantled. Oliver Cromwell here defeated (1650) the Covenanters under Alexander Leslie, earl of Leven, and Sir David Leslie, who had espoused the royalist cause Dunbar House, the former seat of the earls of Lauderdale, is now a barracks

Dunbar (dŭn'bar). **1** Borough (pop. 1,390), SW Pa., SE of Pittsburgh near Uniontown **2** Industrial city (pop. 5,266), W W.Va , on the Kanawha river and WNW of Charleston, inc 1921 Glass, enamelware, and farm implements are manufactured here

Dunblane (dŭnblān'), burgh (pop 2,692), Perthshire, Scotland, on Allan Water and N of Stirling The cathedral was founded c 1150 by David I There is an ancient Celtic cross The battle of SHERIFFMUIR was fought near the burgh

Duncan I, d 10407, king of Scotland (1034–1040?), grandson and successor of Malcolm II He was murdered by his general MACBETH MALCOLM III was his son

Duncan, Isadora, 1878–1927, American dancer, b San Francisco She had little success at first in the United States when she created dances derived from Greek classical art But in Europe, at Budapest (1903) and at Berlin (1904), and later in London and New York (1908), she had the triumphs which made her name An innovator, she danced barefoot and in flowing draperies to music which was often not written to be danced Through her many tours, her schools in Berlin, Paris, Moscow, and London, and her daring and dynamic personality, she had a great influence on modern dance In 1922 she married the Russian poet Sergei Yesenin, but they separated in 1923 In 1927 she gave her last concert in Paris and met death when her scarf caught in the wheel of her car while she was motoring at Nice She wrote an autobiography, *My Life* (1927) See essays and studies in *The Art of the Dance* (ed by Sheldon Cheney, 1924) and *Isadora Duncan* (ed by P D Magriel, 1947), biographies by Sewell Stokes (1928), Mary Desti (1929), and Irma Duncan and A R Macdougall (1929), Floyd Dell, *Women as World Builders* (1913), William Bolitho, *Twelve against the Gods* (1929)

Duncan, Robert Kennedy, 1868–1914, American industrial chemist and educator, b. Brantford, Ont , grad Univ of Toronto (B A , 1892) He was professor at the Univ of Kansas (1906–10) and at the Univ of Pittsburgh (1910–14) In Kansas he introduced the system of fellowships for research in industrial chemistry which became the basic plan of the Mellon Institute and which greatly furthered the discovery of new products and new processes His books for laymen include *The New Knowledge* (1905), *The Chemistry of Commerce* (1907), and *Some Chemical Problems of Today* (1911).

Duncan, Sara Jeannette, 1862–1922, Canadian novelist, later Mrs Everard Cotes, b Brantford, Ont. She wrote for the Toronto *Globe* and in 1890 produced her first novel, *A Social Departure* After her marriage in 1891 she lived chiefly in India Her popular stories of Indian life include *The Simple Adventures of a Mem Sahib* (1893) and *The Story of Sonny Sahib* (1894), other novels are *Those Delightful Americans* (1902), *The Imperialist* (1904), and *His Royal Happiness* (1915) Her work is notable for its humor

Duncan, Thomas, 1807–45, Scottish historical and portrait painter He is best known for his painting of subjects from Scottish history, such as *Prince Charles Edward and the Highlanders Entering Edinburgh after the Battle of Prestonpans*

Duncan, city (pop 2,189), on Vancouver Island, SW British Columbia, on the east coast N of Victoria It is a lumbering and farming center.

Duncan, city (pop. 9,207), co. seat of Stephens co , SW Okla , SW of Oklahoma City; founded 1892. A supply and marketing point for an area yielding oil, cattle, cotton, farm and dairy produce, it has oil refineries and cotton gins

Duncannon (dŭnkăn'ŭn), borough (pop. 1,707), S Pa , NW of Harrisburg and on the Susquehanna, inc. 1844 Fire escapes are made here.

Duncansbay Head or **Duncansby Head,** 210 ft high, northeastern extremity of Scotland, in Caithness

Duncansville, residential borough (pop. 1,415), central Pa., in the Alleghenies near Altoona, laid out 1831

Dundalk (dŭndôk'), urban district (pop 18,546), co seat of Co Louth, Ireland, near the mouth of the Castletown river at Dundalk Bay of the Irish Sea It is a seaport with dock installations Its industries include the export of farm produce, brewing, shipbuilding, linen milling, and fishing The town is a railroad center with large car works. In 1315 it was taken by Edward Bruce, whose headquarters it was for three years.

Dundas (dŭn'dŭs), town (pop. 5,276), S Ont , at the head of Burlington Bay and NW of Hamilton It was laid out in 1801 and was first known as Coote's Paradise It is at the head of the Desjardins Canal, which formerly gave it water connection with Hamilton and other ports With the decline of canal transportation the town has receded in importance

Dundas Harbour, post of the Royal Canadian Mounted Police, on the southeast corner of Devon Island, Northwest Territories, on Croker Bay of Lancaster Sound It was the starting point in 1929 for a tour of exploration by dog team of over 1,700 mi among the northern islands

Dundee, John Graham of Claverhouse, 1st **Viscount** (klā'vûrŭs), c 1649–1689, Scottish chieftain and soldier, known as Bonnie Dundee He became a legendary figure in Scotland by virtue of the hatred borne him by the Covenanters and the veneration accorded him by the Jacobites, whose first great hero he was After service abroad he returned to help James Graham, earl of MONTROSE, in the suppression of the Covenanters (1678) and devoted himself to that task for 10 years. He was second in command of the Scottish force vainly sent to help James II repel William of Orange in 1688, and James made him Viscount Dundee. After James's flight, Dundee raised forces in Scotland to help restore him, but was killed in the hour of victory at Killiecrankie His striking personality has been immortalized in ballads and novels, especially in Sir Walter Scott's song usually called *Bonnie Dundee* and in Scott's *Old Mortality* See his memorials and letters (ed by Mark Napier, 1859–62), biographies by C S Terry (1905) and A N Taylor and H A N Taylor (1939)

Dundee (dŭndē'), independent burgh or county of a city (1931 pop 175,585, 1948 estimated pop. 181,805), Angus, Scotland, on the north shore of the Firth of Tay, here crossed by a bridge The land slopes up to Dundee Law (571 ft high) The city has docks and various industries, which include metal casting, oil refining, tar distilling, textile bleaching, and the making of textile machinery, electric appliances, and biscuits Dundee marmalade is famous There are fish canneries in the vicinity Noteworthy are University College, part of the Univ of St Andrews, the town hall (1734), St Mary's Church, with its 15th-century "Old Steeple", Albert Institute (by Sir George Gilbert Scott), and Caird Hall The doctrines of the Reformation were early adopted in Dundee, largely through the influence of George Wishart See R L Mackie, ed , *A Scientific Survey of Dundee and District* (1939–40).

Dundee. **1** Town, NE Ill It is composed of two separately incorporated villages, EAST DUNDEE and WEST DUNDEE, on either side of the FOX river **2** Village (pop 1,699), SE Mich , on the Raisin river, in a farm area, settled 1827, inc 1855 Grain products are made **3** Village (pop 1,168), W central N Y , S of Geneva, in the grape-growing region of the Finger Lakes, settled c 1800, inc 1847

Dundonald, Thomas Cochrane, 10th **earl of** (kŏk'rĭn), 1775–1860, British naval commander He served in the Napoleonic Wars, executing his assignments with a boldness and originality sometimes too radical for the admiralty This fact, together with his outspokenness, and his disregard for convention, prevented as rapid a rise as he might have otherwise merited In 1814 he was falsely accused of implication in a stock-market fraud and dismissed from the navy He went to South America, where, as admiral of the Chilean navy, he was prominent in the liberation of Chile and Peru He aided the newly independent nation of Brazil from 1823 to 1825, and in 1827, he commanded the Greek navy in the war of liberation against Turkey The next year he returned to England, received a pardon, and was reinstated in the navy (1831), eventually becoming admiral. See biography by Christopher Lloyd (1947)

dune (dūn), mound or ridge of wind-blown material, usually sand, formed in arid regions Dunes are seen in parts of most of the great deserts of the world. Often a dune begins to form because material is deposited by the wind as it encounters a bush, a rock, or an irregular ground surface, others form against cliffs, hills, man-made walls or buildings, or other barriers Those that are not restrained by fixed barriers have a tendency to migrate, driven by the prevailing wind. These free-moving dunes are of two main kinds, transverse and longitudinal, and the characteristic form is maintained in migration Transverse dunes usually form where wind blows quite constantly from one direction across expanses of loose sand; the windward slope is typically gentle, and the lee side, where the sand blown over the crest seeks its natural angle of repose, is steep Transverse dune ridges have a tendency, especially with increasing distance from the source of sand, to break up into individual hillocks One of the commonest forms of these is the symmetrical, crescent-shaped, transverse dune called a barkhan, some of which are seen at Pismo Beach, Calif., and near Arequipa, Peru Longitudinal dunes are ridges, with about the same slope on both sides, elongated in the direction of the prevailing wind. These are especially well developed in the African deserts and are also seen in Arizona and in the Imperial Valley, Calif. In the United States great dunes are found also in the Great Lakes region, especially on the eastern shore of Lake Michigan Dunes ranging in height to more than 500 ft exist in the Great Sand Dunes National Monument, gleaming white dunes of gypsum sand are formed in White Sands National Monument Sand dunes may cause destruction as they migrate; in France on the coast of the Bay of Biscay they destroyed villages and farm land In some areas of Europe and the United States this danger has been checked by planting vegetation and by erecting barriers One value of dunes is their absorption of rain which helps to raise the level of the water table and thus produces oases in some areas and also accessible sources of water through rather shallow wells

Dunedin (dunē'dĭn), city (pop. 65,7?1; metropolitan pop 83,351), on South Island, New Zealand, a port on the southeast coast, at the base of Otago Peninsula, founded 1848 It is the seat of the Univ of Otago (1869), the school of medicine of the Univ of New Zealand, Knox College (a theological seminary), and a school of mines There are Anglican and Roman Catholic cathedrals Dunedin has iron and brass foundries and woolen mills Port Chalmers is near by

Dunedin, city (pop 1,758), W Fla , on the Gulf coast, contiguous to Clearwater and W of Tampa, settled c 1865, inc 1899 It is a processing center for a citrus-fruit area, and canning machinery is made There are boating and fishing activities

Dunellen (dunē'lŭn), borough (pop 5,360), N central N J , SW of Newark near Plainfield, laid out 1868, inc. 1887 Printing presses, pumps, and adhesives are made here

Dunes, Battle of the, 1658, decisive engagement in the struggle between France and Spain which had resulted from Spanish intervention in the FRONDE. It was fought near Dunkirk and was won by the French and their English allies under Turenne over the Spanish under Don John of Austria and Louis II de Condé

Dunfermline (dŭnfûrm'lĭn, dŭm–), burgh (1931 pop 35,058, 1948 estimated pop 44,892), Fifeshire, Scotland, near the Firth of Forth It was the residence of Scottish kings from the 11th cent. The abbey, founded by Malcolm Canmore and his queen, St Margaret of Scotland, is the burial place of Robert the Bruce and other Scottish kings Andrew Carnegie, born in Dunfermline, made many gifts to the town, which is headquarters of the Carnegie Trusts There are textile mills (silk and rayon), engineering works, and metal-casting works, ham and bacon are other products

Dungannon (dŭn-gă'nun), urban district (pop 3,930), Co Tyrone, Northern Ireland, NNW of Armagh In a coal-mining area, it has linen and woolen mills and potteries The chief stronghold of the O'Neills was here, the Royal School was founded in the reign of Charles I North of the town is a great earthwork, the rath of Tullaghoge

Dungarvan (dŭn-gar'vŭn), urban district (pop 5,271), Co Waterford, Ireland, on Dungarvan Bay and SW of Waterford It is the site of a castle founded by King John, and in Abbeyside, a suburb, are remains of a castle of the McGraths and of an Augustinian priory Fishing and trade in farm produce are pursued

dung beetle · see TUMBLEBUG

Dungeness (dŭnj'nĕs'), flat shingle headland forming the southeast extremity of Kent, England, ESE of Rye. It has a lighthouse. The Dutch, under Admiral Tromp, defeated the English in a battle off Dungeness in 1652

Dunglison, Robley (rŏ'blē dŭng'glĭsun), 1798–1869, American physician, b Keswick, England, M D Univ of Erlangen, 1823 He came to the United States in 1824 and was professor (at Jefferson's instance) at the Univ of Virginia (1825–33) and at Jefferson Medical College, Philadelphia (1836–68) He translated and edited many foreign works, wrote several texts, and compiled a valuable medical dictionary

Duniway, Abigail Scott, 1834–1915, American editor and woman-suffragist, b near Groveland, Ill. She went to Oregon with her family in 1852 and the next year married Benjamin Charles Duniway For many years she edited the *New Northwest* in

Portland and through her writings and lectures became recognized as the leader of the woman's movement in the Northwest For her account of her part in the movement, see *Path Breaking* (1914)

Dunkards, Dunkers, or **Tunkers,** a sect of German Baptist brethren, divided into five denominations Their popular name derives from the German word "to dip," in description of their way of baptism. Evolving from the Pietist movement in Germany, the first congregation of the sect was organised there in 1708 by Alexander Mack Persecution drove them to America, here, under Peter Becker, they settled in 1719 in Germantown, Pa From this and other settlements in Pennsylvania they spread westward and into Canada Dunkards are distinguished by their simple, conservative garb They are opposed to war, oaths, alcohol, tobacco, and worldly amusements The original group in the United States was organized as Church of the Brethren (Conservative Dunkers) From this body there have been separations into the Seventh-Day Baptists, German (1728, see BEISSEL, JOHANN CONRAD), Church of God (New Dunkards, 1848), Old German Baptist Brethren (1881), and the Brethren Church (Progressive Dunkers, 1882) Dunkards baptize by trine immersion, the kneeling candidate being immersed once for each person of the Trinity They practice foot washing and the love feast The ministry is ordained but for the most part is unsalaried See M G Brumbaugh, *A History of the German Baptist Brethren in Europe and America* (1899)

Dunkeld (dŭnkĕld'), village, Perthshire, Scotland, near Birnam and on the Tay, here crossed by Thomas Telford's seven-arched bridge The village is the site of Dunkeld House, belonging to the duke of Atholl, and of a cathedral, part of which dates from the 12th cent

Dunkers see DUNKARDS

Dunkirk (dŭn'kûrk), Fr *Dunkerque* (dŭkôrk'), town (1946 pop 9,869, 1936 pop 28,450), Nord dept, N France, on the North Sea near the Belgian border Before 1940 it was one of the most prominent ports of France It has a large fishing fleet Founded about the 10th cent and often fortified, it was a key city in the centuries-long struggle among France, the Holy Roman Empire, Spain, England, and the Netherlands It frequently changed hands, generally sharing the history of FLANDERS Captured for France by Louis II de Condé in 1646 and recaptured by the Spanish in 1653, it was conquered once more by Turenne in 1658 after the Battle of the DUNES and given to England, then an ally of France Louis XIV bought it back permanently in 1662 It withstood an Anglo-Dutch bombardment in 1694 and several German bombardments in the First World War In 1940 Dunkirk was the scene of the evacuation of more than 300,000 Allied troops, cut off from retreat on land by the German break-through to the French Channel ports The retreat was carried out by all kinds of available British craft, manned in part by civilian volunteers, and was protected in the air by a concentration of the Royal Air Force One of the most heroic and most memorable actions in naval history, it lasted from May 26 until June 4, when the evacuation was completed The Germans entered the ruins of Dunkirk and held out here until after the surrender of Germany in May, 1945 Among the many gallant sailors born in **Dunkirk, Jean Bart** was the most celebrated

Dunkirk. 1 City (pop 2,942), Blackford and Jay counties, E Ind, near the Ohio boundary S of Fort Wayne and ENE of Indianapolis Glass containers are made here **2** Industrial city (pop 17,713), W N Y, on Lake Erie SW of Buffalo, inc as a village 1837, as a city 1880 Metal tools, heaters and oil-refining equipment are its chief products There are fisheries, and a state park is near by

Dún Laoghaire (dōn lā'rĕ, dŭn lā'ru), borough (pop 44,680), Co Dublin, Ireland, on the Irish Sea and SE of Dublin It was formerly called Kingstown or Dunleary It is the main passenger port for Dublin and a resort, with fishing and yachting

Dunlap, William, 1766–1839, American playwright, b Perth Amboy, N J He was first a portrait painter *The Father* (1789) began Dunlap's career as a playwright, and his output was prolific until the time of his death *The Fatal Deception, or, The Progress of Guilt* (1794, pub 1806 as *Leicester*) and *Fontainville Abbey* (1795) are excellent examples of the so-called Gothic romance school, *André* (1798) is a tragedy In 1796 Dunlap began his career as theater manager by purchasing a quarter interest in the Old American Company then playing in the John Street Theatre, New York City, and he soon became sole director of the New Park Theatre The venture failed in 1805 It was during this period that, endeavoring to supply the demand for new drama, he translated and adapted a great number of French and German plays He was a founder and secretary of the National Academy of Design His *History of the American Theatre* (1832) and his *History of the Rise and Progress of the Arts of Design in the United States* (1834) are invaluable source books and contain important autobiographical material His diary was edited by D C Barck in 1930 See biography by O S Coad (1917)

Dunlap, town (pop 1,550), W Iowa, on the Boyer river and NNE of Council Bluffs, inc 1871.

Dunleary, Ireland see DÚN LAOGHAIRE.

Dunlop, John Boyd, 1840–1921, Scottish inventor. While living near Belfast, where he had a veterinary practice, he devised (1888) a practical pneumatic bicycle tire A pneumatic carriage tire had been patented in England in 1845, but the company established in Belfast to manufacture the Dunlop tire obtained rights to the invention through Dunlop's original patent of 1888 supplemented by accessory patents Dunlop wrote *The History of the Pneumatic Tyre* (1924)

Dunmore, John Murray, 4th **earl of,** 1732–1809, British colonial governor of Virginia, a Scottish peer. Appointed governor of New York in 1770, he remained there for about 11 months before being transferred to Virginia In 1774 he led the Virginians in an Indian campaign usually known as Lord Dunmore's War Sending one expedition under Andrew Lewis west by the Kanawha valley, he personally headed the northern column, which set out from Fort Dunmore at Pittsburgh Lewis defeated the Indians at Point Pleasant, and Dunmore negotiated a final treaty with them in the Scioto valley When the news of Lexington and Concord reached Virginia, Dunmore, who had twice previously dissolved the house of burgesses for its pro-colonial stands, removed the colony's powder stores to a man-of-war The aroused Virginians made him pay for the powder Threats against his life forced him to take refuge (June, 1775) on shipboard, whence he declared martial law and sent out loyal troops, who were defeated at Great Bridge on Dec 9, 1775 In Jan, 1776, he shelled and burned Norfolk, but in July he was forced to return to England From 1787 to 1796 he was governor of the Bahamas See R G Thwaites and L P Kellogg, ed, *Documentary History of Dunmore's War, 1774* (1905)

Dunmore, industrial borough (pop 23,086), NE Pa, near Scranton, settled 1783 It has anthracite mines and silk factories

Dunmore, Lake, c 3½ mi long and c 1 mi wide, W Vt, between Brandon and Middlebury It is a summer resort

Dunmore's War: see DUNMORE, JOHN MURRAY, 4TH EARL OF

Dunmow (dŭn'mō), rural district (pop 15,564), Essex, England Its two villages, Great Dunmow, on the Chelmer river, and Little Dunmow, are agricultural centers At Little Dunmow are remains of an Augustinian priory founded in 1104 The custom of awarding a flitch of bacon (the Dunmow flitch) to the couple who could testify that they had not quarreled or regretted their marriage for a year and a day after their wedding is described in *Piers Plowman*

Dunn, Gano, 1870–, American electrical engineer, b New York city, grad City College, New York (B S, 1889, M S, 1897), E E, Columbia, 1891 In addition to designing electrical equipment for production purposes, he has engineered large-scale construction projects, including a steam plant at Muscle Shoals, a transatlantic radio telegraph station, nitrate plants, oil refineries, and hydroelectric stations President of J G White Engineering Corp since 1913, he has served as consultant to industrial organizations and governmental bodies and as president of Cooper Union

Dunn, town (pop 5,256), central N C, S of Raleigh It is a trade center in a farm area, with lumber and flour mills

Dunne, Finley Peter (dŭn), 1867–1936, American humorist, famous as the creator of "Mr Dooley," b Chicago An experienced Chicago journalist, he was successively on the staffs of the *Evening Post* and the *Times-Herald* and editor in chief (1897–1900) of the *Journal* In 1893, in the Chicago *Evening Post*, he began his series of Irish-American monologues by "Martin Dooley" As a trenchant though humorous critic of the Spanish-American War and of politics and society in America, "Mr Dooley" excelled in deflating the pretensions of politicians In book form the series began with *Mr Dooley in Peace and War* (1898) See *Mr Dooley in His Best* (ed by Elmer Ellis, 1938), biography by Elmer Ellis (1941)

Dunnellon (dŭnĕl'ŭn), town (pop 1,217), N central Fla, on the Withlacoochee and SW of Ocala, near the Gulf coast, inc as a town 1909 At first a plantation and ranch trading center, it turned to quarrying phosphate rock and limestone, discovered here in 1889 Lumbering, farming, and dairying are also carried on Rainbow Springs are near

Dunnet Head, Caithness, Scotland, forming the northern extremity of Great Britain proper

Dunning, John, 1st **Baron Ashburton,** 1731–83, English jurist and statesman He attracted notice in 1762 by his written defense of the East India merchants against their Dutch rivals In 1768 he became solicitor general and in the same year he entered Parliament, where he consistently opposed the government policy toward the American colonies and the attempt to destroy the right of free election and petition in the case of John WILKES. He has been suggested as a possible author of the Junius letters

Dunning, William Archibald, 1857–1922, American historian, b Plainfield, N J, grad Columbia (B A, 1881; Ph D, 1885) After studying in Berlin, he returned (1886) to spend a lifetime at Columbia, becoming the first Lieber professor of history and political philosophy in 1904. His reputation is twofold, first, his scholarly studies of Reconstruction led the way to a new interpretation of that era in American history, second, his *History of Political Theories* (3 vols, 1902–20) was a brilliant survey of a hitherto unanalyzed field Dunning not only wrote two superb studies of Reconstruction—*Essays on the Civil War and Reconstruction* (1898, rev ed, 1904) and *Reconstruction, Political and Economic, 1865–1877* (1907)—but also inspired and directed the long series of books by his students on Reconstruction in the individual states He also wrote *The British Empire and the United States* (1914), an excellent survey of Anglo-American relations J G de Roulhac Hamilton edited his *Truth in History and Other Essays* (1937) See H W Odum, ed, *American Masters of Social Science* (1927)

Dunnottar Castle (dŭnŏ'tûr), Kincardine, Scotland, S of Aberdeen and near Stonehaven, on a rock overlooking the sea The ancient building was taken by Sir William Wallace in 1297 The present structure, with its tower and chapel, dates partly from the late 14th cent, when it was built by Sir William Keith, earl marischal of Scotland In 1652 it was surrendered to the parliamentarians, after an eight-month siege In Whigs' Vault, a dungeon, more than a hundred Covenanters were confined in 1685, the tombstones of nine are in the churchyard

Dunnville, town (pop 4,028), S Ont, on the Grand River near its entry into Lake Erie and S of Hamilton It is a port of entry and has manufactures

Dunois, Jean, comte de (zhäN' kōt' dü dünwä'), c 1403–1468, French general, called the Bastard of Orléans, natural son of Louis, duc d'Orléans He sided with the Armagnacs in the civil war of Charles VI's reign and was captured by the Burgundians in 1418 Released in 1420, he took part in the English war and in the enthronement of CHARLES VII He had charge of the defense of Orléans when it was relieved by Joan of Arc (1429) and joined her in her subsequent campaign After her execution he continued the war, took part in the capture of Paris (1436), and was rewarded with the county of Dunois (1439) He later joined the PRAGUERIE against Charles VII and was (1465) a leader of the League of the Public Weal against Louis XI, but each time he was restored to favor at court

Dunoon (dunōōn'), burgh (pop 8,780), Argyllshire Scotland, on the Firth of Clyde and W of Greenock It is a resort There is a statue of "Highland Mary" (Mary Campbell), celebrated by Robert Burns An annual Highland Gathering is held in August

Dunoyer de Segonzac, André see SEGONZAC

Duns (dŭns, dūns), burgh (pop 1,788), county town of Berwickshire, Scotland, ESE of Edinburgh, in a farming region Duns Law, a hill 700 ft high, was the camping place of Alexander Leslie and the Covenanters in 1639

Dunsany, Edward John Moreton Drax Plunkett, 18th **Baron** (dŭnsăn'ĭ, -sā'-), 1878–, Anglo-Irish soldier and man of letters, educated at Eton and Sandhurst He served in the Boer and First World wars and in 1941 escaped the German invaders in Athens, where he was Byron professor of English literature at Athens Univ His work deals with gods, fairies, and men, hesitating between satire and pure fantasy, and his style is eloquent in its simplicity His plays include *The Glittering Gate, Gods of the Mountain* (both 1914), *A Night at an Inn* (1916), *If* (1921), *Alexander* (1925), and *Lord Adrian* (1933) Among his prose tales are *The Gods of Pegana* (1905), *A Dreamer's Tales* (1910), *The Book of Wonder* (1912), *Travel Tales of Mr Joseph Jorkens* (1931), *My Talks with Dean Spanley* (1936), *The Story of Mona Sheehy* (1939), and *A Glimpse from a Watch Tower* (1946) See the semi-autobiographical *Patches of Sunlight* (1938)

Dunsinane (dŭn"sĭnān'), one of the Sidlaw Hills, 1,012 ft high, Perthshire, Scotland, NE of Perth There are ruins of an ancient fort on the summit, called Macbeth's Castle, supposed to be the scene of the defeat of Macbeth by the earl of Northumbria, as related by Shakspere

Dunsmuir (dŭnz'mûr), city (pop 2,359), N Calif, S of Mt Shasta, inc 1909 It is a mountain resort, with an airport, railroad shops, and lumber mill Castle Crags State Park lies to the south

Duns Scotus, John (dŭnz' skō'tŭs) [Latin *Scotus* = Irishman or Scot], d 1308, scholastic philosopher, called the Subtle Doctor. A native of Great Britain or Ireland, he was a Franciscan who taught at Oxford, Paris, and Cologne The exact canon of Duns Scotus' work is unknown, hence it is not possible to state fully and positively what were his own beliefs The best known of his undoubtedly authentic works are *On the First Principle* and two commentaries on the *Sentences* of Peter Lombard He followed St Bonaventure in putting Aristotelian thought to the service of Christian theology He was the founder of a whole school of SCHOLASTI-

CISM called Scotism and opposed to the Thomism of the followers of St THOMAS AQUINAS The Scotists deny that matter is the principle of individuality and insist that individuation of things is by formal, intelligible determination They place much emphasis on the nature of knowledge Certain knowledge of all finite, particular truths rests upon the infinite Truth, which is God The concept of being is common to both God and his creatures, and he differs from them as infinite from finite It is possible to prove the existence of God, but St Anselm's ontological proof is modified the idea of God's possible existence involves his necessary existence, but knowledge of that possible existence must be demonstrated from sensible things, i e , from experience Scotus taught that the state arose from common consent of the people in the social contract He also denied that private property was sanctioned by natural law Scotism has had great influence on Catholic thought and has been fostered especially by the Franciscans

Dunstable (dŭn'stŭbŭl), municipal borough (1931 pop 8,976, 1943 estimated pop 16,910), Bedfordshire, England, at the foot of the Chiltern Hills and S of Bedford There are interesting traces of Stone and Bronze Age civilization, including earthworks at Maiden Bower and the Five Knolls, one of the Knolls, excavated in 1926, contained relics and ornaments of a woman of c 2000 B C The town is at the meeting point of the ancient Icknield and Watling streets The Priory Church includes part of an Augustinian priory founded in 1131 An Eleanor Cross was erected here (see ELEANOR OF CASTILE)

Dunstan, Saint (dŭns'tŭn), 925?–988, English prelate, archbishop of Canterbury (960–88), b near Glastonbury He was at court from 940 to 945 and was made abbot of Glastonbury He reformed monastic discipline, enforcing a strict Benedictine observance Under King Edred he was a royal counselor, and the favorable peace with the Danes is said to have been largely his doing He was in Flanders (956–58) in exile After his return to England he became bishop of Worcester (958), bishop of London (959), and archbishop of Canterbury (960) He was not in favor with Æthelred He is generally regarded as the greatest of the Anglo-Saxon saints Feast May 19

Dunstan, Sir Wyndham Rowland, 1861–1949, English chemist, an authority on tropical agriculture As director (1907–24) of the Imperial Institute, London, he studied the agricultural and mineral resources of Ceylon, Cyprus, India, and Newfoundland He was an expert on alkaloids, and he isolated the mineral thorianite He was knighted in 1924

Dunster, Henry, c 1612–1659, first president of Harvard College, b Lancashire, England, educated at Magdalene College, Cambridge (M A , 1634) He emigrated to New England in 1640 and was almost at once (Aug 27 1640) appointed president of the new college He formulated its rules and patterned its procedure after the English schools, worked actively for its support, and gave freely of his meager salary for its success Because of his adoption of Baptist principles he was forced to resign in 1654, and he spent the remainder of his life as a pastor in Scituate, Mass.

duodecimal system, a system of notation corresponding to the decimal system but based on 12 instead of 10 It is more convenient in certain respects than the decimal system, for, since 12 has a larger number of factors than 10, more fractions can be expressed evenly in the duodecimal system, e g , ⅓ would be equal to 0 4 and ¼ to 0 3 The Babylonians, who were far advanced in mathematics in early times, used a system of numbers based upon 12 Today, the foot is divided into 12 inches, the year into 12 months, and the face of the clock into 12 hours

Duparquet (dü"pärkā'), town (pop 1,384), W Que , on Lake Duparquet and NNW of Rouyn It is a gold-mining center

Duperron, Jacques Davy (shäk dävē' düpĕrō'), 1556–1618, French churchman, cardinal of the Roman Church A convert to Catholicism from Protestantism, he was an adherent of Henry IV and was made bishop of Évreux He received Henry IV's abjuration and went on the successful mission to Rome to secure the removal of the papal interdict.

Dupetit-Thouars, Louis Marie Aubert (lwē' märē' ôbĕr' düpütē'-twär'), 1758–1831, French botanist and horticulturist He traveled (1792–1802) on Madagascar and other islands in the Indian Ocean and wrote books on their flora While director (from 1802) of the Royal Institute of Arboriculture, Paris, he made valuable studies in plant physiology

Dupleix, Joseph François, marquis (zhōzĕf' frāswä' märkē' düplĕks'), 1697–1763, French governor of Pondichéry, India (1741–54) His initial military successes against the British (notably the seizure of Madras, 1746, and the defense of Pondichéry, 1748) were largely offset by the insubordination of LA BOURDONNAIS and by the Treaty of Aix-la-Chapelle (1748). Dupleix then formed a vast project for establishing French supremacy in India. Intervening in native politics, intrigues, and warfare, he controlled the Carnatic by 1749 and nearly the entire Deccan by 1751 Soon, however, the British began to regain ground under the leadership of Robert Clive, and the French government, anxious to avoid war and uninformed of Dupleix's grandiose schemes, recalled the governor in 1754 With Dupleix, the last hope of a French empire in India vanished Dupleix ended his days in poverty and neglect See G B Malleson, *Dupleix* (1890), Henry Dodwell, *Dupleix and Clive* (1920)

Duplessis, Maurice Lenobiet (mōrēs' lunôblĭā' düplĕsē'), 1890–, Canadian lawyer and politician, b Trois Rivières, Que , educated at Laval Univ Elected in 1927 to the Quebec legislature, he was leader (1933–35) of the provincial Conservative party A founder of a French Canadian nationalist party, Duplessis became premier and attorney general of the province of Quebec in 1936, when the party was victorious in the elections He was defeated in 1939 on the issue of Canadian conscription for the Second World War but was reelected in 1944 when, as head of his party, he again took office as premier and attorney general

Duployé, Émile (āmēl' düplwäyā'), 1833–1912, French stenographer He invented a system of shorthand which was very popular in France

Dupo (dū'pō), village (pop 2,073), SW Ill , on the Mississippi below East St Louis, in a limestone quarry area, inc 1907 It has railroad yards

Du Ponceau, Pierre Étienne, or **Peter Stephen Duponceau** (dūpŏn'sō), 1760–1844, American lawyer and ethnologist, b France He became secretary and interpreter for Baron von Steuben and accompanied him to America in the Revolution Later he became an American citizen When Robert R Livingston was in charge of foreign affairs, Du Ponceau served as his secretary He studied law, was admitted to practice in Philadelphia in 1785, and attained eminence in the field of international law He made a translation, *Treatise on the Law of War* (1810), from the Latin work by Bynkershoek and wrote several original legal treatises His *Mémoire sur le système grammatical des langues de quelques nations indiennes de l'Amérique du Nord* (Paris, 1838) gave him an international reputation as an authority on the languages of North American Indians He translated a work by John Heckewelder from English into French under the title *Histoire, mœurs et coutumes des nations indiennes* (1822) and carried on with Heckewelder a valuable correspondence on Indian languages

Du Pont (dū pŏnt'), family notable in U S industrial history The Du Pont family's importance began about 150 years ago when Eleuthère Irénée DU PONT established a powder mill on the Brandywine Development, continuation, and family control of the E I du Pont de Nemours & Company (dū numôōr') have been the family's chief concern, and its prolific members have kept the company well staffed Outstanding among the Du Ponts was Henry Du Pont, a West Point graduate and son of the company's founder, who set the basis for the family's cohesiveness Lammot I (1831–1884), chemist and inventor, having developed a new and superior blasting powder, gave the Du Pont Company a leading place in the making of explosives Later, Pierre Samuel DU PONT and his cousins Coleman and Alfred brought about the company's incorporation with outsiders, which was a departure from the long-established family partnership But family control is still predominant, despite the company's several thousand stockholders The Du Ponts have actively displayed individuality in politics Coleman and Pierre have increased Delaware's roads, and Pierre has contributed heavily to the state's education Wilmington owes most of its importance to the Du Ponts See J K Winkler, *The Du Pont Dynasty* (1935), Marquis James, *Alfred I Du Pont, the Family Rebel* (1941)

Du Pont, Eleuthère Irénée (dū pŏnt', Fr ālütĕr' ērānā' dü pō'), 1771–1834, American powder manufacturer, b Paris, France, son of Pierre Samuel du Pont de Nemours At the age of 17, Irénée entered the royal powder works, where Lavoisier taught him the trade After Lavoisier's forced leave from the plant, Irénée began managing (1791) his father's printing house, where the Du Ponts published counterrevolutionary pamphlets When the Jacobins sacked the printing house, Irénée and his family left for America to set up a trading and land company Though he met disillusionment upon reaching America (1800), Irénée soon formulated plans to improve the quality of American gunpowder In July, 1802, he began constructing his powder works on the Brandywine, near Wilmington, Del Despite lack of capital, Irénée constantly improved his powder and plant and developed within a few years an extensive business, which he named E I du Pont de Nemours & Company (the firm's present name). His sales were augmented during the War of 1812 and the years following, but his immense debts and family obligations constantly plagued him He was appointed (1822) director of the Bank of the United States, and his judgment on manufacturing and farming was widely sought See W S Dutton, *Du Pont—140 years* (1942)

Du Pont, Pierre Samuel, 1870–, American industrialist, b Wilmington, Del , grad Massachusetts Institute of Technology, 1890 Upon his graduation, Du Pont worked nine years as chemist with the family's company, where he helped develop smokeless powder In 1902 Pierre and his two cousins, Alfred and Coleman Du Pont, bought the E I du Pont de Nemours & Company Pierre became treasurer and later vice president In 1915, after a group headed by Pierre bought Coleman's stock, Alfred brought suit against Pierre for breach of trust After four years in court, the case was settled in Pierre's favor, but Alfred and Pierre remained long estranged When the Du Pont Company acquired control of General Motors, Pierre was its president from 1920 to 1923 Under his presidency, the Du Pont Company also developed scores of chemical manufactures and acquired many other industries From 1925 to 1937 Du Pont was tax commissioner for Delaware Strongly antiprohibitionist, he was (1933–38) the state's liquor commissioner At first an adherent of Franklin Roosevelt, he later opposed him See J K Winkler, *The Du Pont Dynasty* (1935), Marquis James, *Alfred I Du Pont, the Family Rebel* (1941)

Du Pont, Samuel Francis, 1803–65, American naval officer, b Bergen Point, N J , grandson of Pierre Samuel DU PONT DE NEMOURS Appointed a midshipman in 1815, he saw his first active duty in the Mediterranean (1817) In the Mexican War, Du Pont, commanding the *Cyane*, cleared the Gulf of California of Mexican shipping, captured La Paz, and in several raids helped to establish U S control over Lower California Assigned to command the South Atlantic Blockading Squadron in the Civil War, Du Pont directed (Nov , 1861) the successful naval attack against Port Royal, S C , for which he won a rear admiral's commission He later secured further footholds for the Union on the coasts of South Carolina, Georgia, and Florida The blockade which Du Pont organized was generally successful, except at Charleston The Dept of the Navy thought that Charleston could be taken by naval attack and, against his own will, Du Pont attempted to take the harbor, using seven monitors Severely repulsed on April 7, 1863, he expected the department to share the blame for the reverse A dispute followed, and Du Pont asked to be relieved See biography by H A Du Pont (1926)

Dupont, industrial borough (pop 5,278), NE Pa , near the Susquehanna between Wilkes-Barre and Scranton, inc 1917 Anthracite mining and munitions are its industries

Du Pont de Nemours, Pierre Samuel (pvĕr' samüĕl' dü pō' du numôōr'), 1739–1817, French economist, one of the PHYSIOCRATS He early attracted the attention of Quesnay and edited the *Journal de l'agriculture* in 1765–66 and the *Éphémérides du citoyen* from 1768 to 1772 He also edited some of Quesnay's writings under the title *Physiocratie* (1768) and later presented his own views of economy and political philosophy in his *Tableau raisonné des principes de l'économie politique* (1775) and other works He was also active in practical politics After two years as secretary of the council of public instruction in Poland, he became the financial and economic adviser of his friend TURGOT Under Vergennes he was one of the diplomats in the long negotiations (1783) after the American Revolution, and he drew up a trade treaty (1786) with England that expressed his economic principles In the French Revolution he was an important figure in the Constituent Assembly, especially in financial debates He opposed the issue of the assignats, and as the Revolution moved further to the left he fell under the suspicion of his fellow revolutionists and for a time lived in hiding and issued pamphlets against the "radicals" He emerged into notice in the Directory, but, disappointed with the course of events, he migrated (1799) to the United States, where his son E I Du Pont set up a powder mill The elder Du Pont returned to Napoleonic France in 1802 but in 1815 was again in America, where he died He was a correspondent of Thomas Jefferson, and his economic theories had some influence in shaping U S policy

Düppel (dü'pul), village, SE Denmark, in Schleswig Here the Danes were defeated (1849) by Saxon and Bavarian troops and again (1864) by the Prussians It passed to Denmark in 1920

Dupplin Moor (dŭ'plĭn), SE Perthshire, Scotland Here occurred the defeat (1332) of the earl of Mar by Edward de Baliol

Dupré, Giovanni (jōvän'nē duprā), 1817–82, Italian sculptor, b Siena, of French descent His statues of Cain and the fallen Abel are in the Pitti Palace, Florence

Dupré, Jules (zhül' duprā), 1811?–1889, French landscape painter of the Barbizon school He excelled in portraying dramatic and tragic aspects of nature. A frequent and honored exhibitor at the Salon, Dupré spent his last years at L'Isle-Adam, where some of his best work was done. His *Old Oak* and *Hay Wagon* are in the Metropolitan Museum, and he is represented in many American galleries

Dupuy de Lôme, Stanislas Charles Henri Laurent (stänēslas' shärl' ärē' lōrą' düpüē' dü lōm'), 1816–85, French naval engineer, director of French naval construction after 1857. To him France owed its first iron ship and first armored and screw steam warship In 1872 he proved practicable a dirigible balloon He was made a life member of the senate in 1877

Dupuytren, Guillaume, Baron (gēyōm' bärō' düpüētrē'), 1777–1835, French surgeon As professor at the Hôtel Dieu, Paris, from 1812, he was noted as diagnostician, lecturer, and operator He wrote on surgical subjects, described a fracture of the fibula and a contraction of the hand which bear his name, and founded the chair of pathological anatomy at the Univ. of Paris In 1823 he was made a baron

Duquesne, Abraham (äbrääm' dükān'), 1610–88, French naval officer In the Fronde, he suppressed a revolt at Bordeaux (1650) As commander of Colbert's new fleet, he distinguished himself in the Dutch War, engaging De Ruyter off Stromboli and Catania and sharing in the victory of Palermo (1676) He fought the Barbary pirates (1681) and bombarded Algiers (1682–83) and Genoa (1684) Though a Protestant, he was created marquis (1681) and was exempted from proscription when the Edict of Nantes was revoked

Duquesne (dükān', dōō–, dū–), city (pop 20,693), SW Pa , on the Monongahela and near Pittsburgh, settled 1789, inc as a borough 1891, as a city 1910 Ingot and bar steel and pig iron are produced here

Duquesne, Fort, on the site of PITTSBURGH, Pa Because of its strategic location at the junction of the Monongahela and Allegheny rivers (the forks of the Ohio), it was a major objective in the last of the French and Indian Wars. The fort was begun by a small force of Virginians in the spring of 1754 at the instance of Gov. Robert Dinwiddie, but the French appeared in superior numbers and took possession (April 17, 1754) They completed it and named it after Ange de Menneville, Marquis de Duquesne, then governor general of New France George Washington's detachment of Virginia militia had been unable to reach the fort before the arrival of the French, who then defeated him in July (see NECESSITY, FORT) Fort Duquesne was the goal of the unsuccessful expedition under Gen Edward BRADDOCK in 1755 and of the successful one under Gen. John FORBES in 1758 The French, abandoning their position to Forbes without a fight, burned (Nov. 24) the fort, which the English rebuilt and renamed Fort Pitt, whence Pittsburgh

Duquesne University · see PITTSBURGH, Pa.

Duquesnoy, François (fräswä' dükānwa'), 1594–1643?, Flemish sculptor, also called François Flamand and Il Fiammingo. He worked mostly in Italy (where he became a friend of Poussin) and is famous for his reliefs of children in terra cotta, ivory, bronze, and marble Among his works in Rome are *St Susanna* in Santa Maria di Loreto and a statue of St Andrew and groups of children on the columns of the altar in St Peter's

Du Quoin (dōō koin', kwoin'), city (pop 7,515), S Ill , N of Cairo, inc 1861. It is an industrial and trade center in a farm and coal region

Dura (dōō'rü) or *Europus* (yōōrō'püs), ancient city of Syria, on the Euphrates and E of Palmyra, sometimes called Dura-Europus or Dura-Europos Founded (c 300 B.C.) by a general of Seleucus I, it prospered In the 2d cent. A D the Parthians took it Later it was taken by Rome and was a Roman city until it was seized (A D c 257) by Shapur I It was then abandoned to the desert Excavations begun in 1922 were pursued by a series of Yale expeditions and yielded rich finds, supplying much information on life, history, and art in Mesopotamia from Hellenistic through Roman times The name is also spelled Dour See M. Rostovtzeff and others, *Excavations at Dura-Europos* (reports, 1929–39); Rostovtzeff, *Dura-Europos and Its Art* (1938)

Dura, plain, near Babylon, where Nebuchadnezzar set up a golden image Dan 3 1

duralumin (dōōrăl'yumĭn, dyōō–), an alloy of aluminum (over 90 percent) with copper (about 4 percent), magnesium (0.5 to 1 percent), and manganese (less than 1 percent) Small amounts of iron and silicon are sometimes present Before a final heat treatment it is ductile and malleable and easily worked into various shapes, after this treatment it is allowed to stand and, owing to chemical reaction between the aluminum and magnesium, becomes hard and strong Because of its lightness and great tensile strength, it is used in dirigible framework construction

Duran, Durand (both dürä'), or **Durante** (dürät'), family of Jewish scholars, originally from Provence **Profiat Isaac ben Moshe ha-Levi Duran** (prōfĭa' ĭsăk' bĕn mōsh' hă-lāvē'), 1350–1415, called Efodi, was compelled to profess Christianity in 1391, but in reality remained true to his faith He wrote a satiric epistle against Christianity and a Hebrew grammar **Simon ben Zemah Duran** (sĭmō' bĕn zumä'), 1361–1441, a poet, physician, Talmudic authority, and rabbi of Algiers, was the first rabbi to receive a salary His writings were notably in the field of Hebrew scholastic philosophy.

Duran, Carolus · see CAROLUS-DURAN

Durance (dürās'), river, 217 mi. long, SE France. Rising in the Dauphiné Alps, it rushes SW past Briançon, enters Provence, and swings west to join the Rhone near Avignon Its valley in Provence is very fertile.

Durand, family. see DURAN

Durand, Asher Brown (dürănd'), 1796–1886, American painter and engraver, b. near Newark, N.J He was apprenticed to the engraver Peter Maverick and later became his partner He established a reputation by his engravings of Trumbull's *Signing of the Declaration of Independence* and of Vanderlyn's *Ariadne*, followed by a series of engraved portraits of eminent contemporaries. After 1835 he devoted himself to painting, producing portraits of several of the presidents and figure pieces, such as *The Wrath of Peter Stuyvesant* (N Y Historical Society) and *Judgment of Gog* (Metropolitan Mus). After a year of European travel and study, he turned to landscape painting, becoming a founder of the Hudson River school Examples of his work are *In the Woods* and *The Beeches* (Metropolitan Mus), *Woodland Brook* and *Franconia Notch* (N Y. Public Library), and *Mountain Forest* (Corcoran Gall) Durand was a founder of the National Academy of Design and its president from 1845 to 1861 See biography by John Durand (1894).

Durand, Charles Auguste Émile: see CAROLUS-DURAN

Durand, Elias, 1794–1873, American chemist, b. France Originally his name was Élie Magloire Durand In 1816 he came to America and in 1825 opened in Philadelphia a drugstore that was exceptional for its stock of European drugs. He explored the Dismal Swamp and other areas, made large botanical collections, and wrote on botanical and chemical subjects.

Durand. 1 City (pop 3,127), S Mich , SW of Flint, inc as a village 1887, as a city 1933 Railroad shops are here, and gravel screeners are made Several Indian earthworks are near by **2** City (pop 1,858), co seat of Pepin co , W Wis , on the Chippewa and SW of Eau Claire, settled c.1850, inc 1887

Durandus, Gulielmus (gŭlēĕl'mus dyōōrăn'dus) 1237?–1296, French canon jurist He was educated at the Univ of Bologna, and he served under Boniface VIII as governor of the papal state of Romagna Durandus' *Speculum judiciale* [mirror of law] (1473) is an outline of canon and civil law which was long studied His *Rationale divinorum officiorum* [rationale of the divine offices] (c 1286) is an exhaustive treatment, many times reprinted, of the nature and symbolism of the Roman Catholic liturgy Parts have been translated as *The Symbolism of Churches and Church Ornaments* (1843) and *The Sacred Vestments* (1899) His name also appears as Durand Durantus, and Duranti

Durango (dōōrăng'gō, Span dōōrāng'gō), state (47,691 sq mi , 1946 estimated pop 593,913), N Mexico In general, the physical characteristics of Durango are like those of Chihuahua, which bounds it on the north The mountainous western half is dominated by the Sierra Madre Occidental, a rich mining region of silver, gold, lead, mercury, sulphur, and coal The vast semiarid plains of the eastern part are ranching country, farther to the east, on the border of Coahuila, is the extremely fertile LAGUNA DISTRICT, where tremendous desert basin lands are irrigated by the NAZAS river. GÓMEZ PALACIO, across the river from TORREÓN, Coahuila, is the state's chief settlement in this region Particularly in the valley of the Nazas, agriculture is important, cotton is the chief crop, but wheat, sugar cane, tobacco, corn, and grapes are grown Although known early to the Spanish, Durango was not opened up until 1562, when Francisco de IBARRA undertook its exploration and colonization The early settlers of Durango and Chihuahua, which were then called Nueva Viscaya, were frequently attacked by Indians, but the mines and grazing lands continued to attract colonists Durango became a state shortly after the revolution against Spain **Durango,** capital (pop 34,412) of the state, is in the southern part, on the level plain of a fertile valley Founded as a mining town in 1563 by Alonzo Pacheco, serving under Ibarra, it was for a time capital of Nueva Viscaya In addition to minerals, the city ships out some lumber, and it is also an agricultural and commercial center Near by is the Cerro del Mercado, 640 ft high, a fabulous hill of solid iron ore Durango's cathedral is a massive example of early 18th-century architecture.

Durango (dōōrăng'gō), city (pop. 5,887, alt c.6,500 ft.), co seat of La Plata co , SW Colo , on the Animas river, in a farm, ranch, and mine area, founded 1880, inc 1881 It is the headquarters of San Juan National Forest Near by are Fort Lewis School of Agriculture and Mesa Verde National Park The mining of carnotite ore for uranium brought a boom in 1948

Durant, Henry Fowle (dōōrănt', dyōō–), 1822–81, American lawyer and educator, b. Hanover, N H., grad Harvard, 1841. His name was originally Henry Welles Smith After a successful career as a lawyer, he became an evangelist. In 1870 he first obtained a charter for Wellesley College and from that time on devoted himself completely to the college, of which he was officially the treasurer. See biography by F. M Kingsley (1924)

Durant, Thomas Clark, 1820–85, American railroad builder, chief figure in the construction of the Union Pacific RR, b. Lee, Mass., grad. Albany Medical College, 1840 He was successful in building railroads in the Midwest, and, after the Union Pacific was organized (1862) by act of Congress, John A DIX was elected president and Durant vice president of the company The burden of management and money raising was assumed by Durant and, with much money at his disposal, he helped to secure in 1864 the revision of the act which increased the land grants and privileges of the railroad He organized and at first controlled the CRÉDIT MOBILIER, but later he lost control of the company to Oakes AMES and his brother. Durant, however, continued on the directorate of the Union Pacific and furiously pushed construction of the railroad until it met the Central Pacific RR on May 10, 1869 The Ames group then procured his discharge

Durant, William James, 1885–, American educator and author, b. North Adams, Mass., grad. St Peter's College, Jersey City, N.J (B A., 1907, M A., 1908) He was director (1914–27) of the Labor Temple School, New York. His *Philosophy and the Social Problem* (1917) was followed by *The Story of Philosophy* (1926), an immediate best seller, which opened the way for a school of popularized history He has completed three volumes of an intended five-volume *Story of Civilization*

Durant. 1 Town (pop 2,510), central Miss , near the Big Black River NNE of Jackson, in a rich farm area, founded 1858 A state park is near by **2** City (pop 10,027), co seat of Bryan co , SE Okla , near the Red River, settled c 1870 It is the commercial and processing center for an agricultural region producing chiefly cotton A state teachers college and the Oklahoma Presbyterian College for Girls are here Denison Dam is near by

Durante, family see DURAN

Durazzo (dürä'zō, dōōrät'sō), Albanian *Durres* (dōōr'üs), town (pop 14,031), Albania, an Adriatic port It was founded as Epidamnus as a joint colony of Corinth and Corcyra (Corfu) c 625 B C and gained importance from its trade with Illyria The quarrel over Epidamnus between Corinth and Corcyra helped to precipitate (431 B C) the PELOPONNESIAN WAR The city changed its name (c 300 B C) to Dyrrhachium, from which the present name is derived It passed under the kingdom of Epirus and in 229 B C under Rome Made a naval station by Pompey (48 B C), it was also an important Roman military base During the Byzantine period Durazzo was, between intervals of Byzantine rule, seized successively by the Goths, the Serbs, the Bulgars, the Normans, the Crusaders of the Fourth Crusade, Venice and the Angevins of Naples, who made it a duchy in 1267 Venice again held it from 1392 until 1501, when it passed to the Turks The majority of the citizens accepted Islam, which still prevails Under Turkish rule Durazzo declined rapidly and almost disappeared. It was occupied (1912) by the Serbs in the First Balkan War, was assigned to Albania in 1913, and was (1914) the residence of William, prince of Wied It subsequently revived as one of the main Albanian ports Durazzo, with its many mosques, has an Oriental character Three towers of the early Byzantine period and medieval fortifications erected by Venice have survived Occupied, with the rest of Albania, by Italy (1939–43) and by German troops (1943–44), Durazzo was severely bombarded by the British navy in 1943

Durban (dür'bün), city (pop 338,817), Natal, Union of South Africa, a port on the Indian Ocean, founded in the early 19th cent It is the largest city of Natal and its chief commercial center Exports include coal, manganese, and chrome There are railroad workshops, auto-assembly plants, and sugar refineries, in addition to light industries The city is a winter resort with race tracks and beaches. Its cultural resources include a college, botanical gardens, and an art museum

Düren (dü'run), city (1946 pop 27,653), in the former Rhine Prov. of Prussia, NW Germany, between Aachen and Cologne and on the Roer river It was an important center under the Frankish kings In 1242 Emperor Frederick II gave it to the duke of Jülich In 1543 Düren was captured by troops of Emperor Charles V and almost completely burned down. In the Second World War the city was bombed from the air and shelled by American artillery Most of Düren was literally pulverized, and no building remained unharmed

Dürer, Albrecht (äl'brĕkht dü'rur), 1471–1528, German painter, draughtsman, and engraver, most representative and influential artist of the German school, b Nuremberg, son of a goldsmith. His life may be studied in his own writings, translated into English in W M Conway, ed., *Literary Remains of Albrecht Dürer* (1889), and Roger Fry, *Records of Journeys to Venice and the Low Countries* (1913) He was apprenticed for three years to Michael Wolgemut in Nuremberg and then visited various parts of Germany and Venice. He worked for

a time in Schongauer's studio in Colmar In 1494 he established his own studio in Nuremberg The work of his first period (1494–1505) shows traces of the influence of Schongauer and Mantegna To it belong several fine portraits—those of his father (National Gall , London) and of himself (Prado)—and also an *Adoration of the Magi* (Uffizi) During these years he also produced several large copper engravings, including *Adam and Eve*, *The Prodigal Son*, *Nativity*, *Little Horse*, and *Great Horse*, and his famous series of woodcuts for the *Apocalypse*, *Great Passion*, and *Life of the Virgin* From 1505 to 1507 he was in Venice, where he painted the *Feast of the Rose Garlands* and *Christ Crucified* At this time Dürer already enjoyed a European reputation He was the friend of great artists, rulers, and statesmen and of the reformers Luther and Melanchthon A true son of the Renaissance, he had a boundless intellectual curiosity From 1507 to 1520 (his second, and most productive, period) he worked chiefly in Nuremberg, producing several large altarpieces, including *Adam and Eve* (Prado) and *Adoration of the Trinity* and *Martyrdom of the Ten Thousand* (both Vienna), and the portraits of Charles V and Emperor Sigismund To this period also belong many of his most celebrated engravings on both wood and copper The former include the single woodcuts *St Jerome*, *St Christopher*, and *Mass of St Gregory*, the series of 35 blocks entitled *Little Passion*, and three series, *Triumphal Arch*, *Triumphal Procession*, and *Triumphal Car*, done in honor of his patron, Emperor Maximilian I His copper engravings of this period include 15 plates on the themes of the *Little Passion* and his three great masterpieces, *The Knight*, *Melancholia*, and *St Jerome in His Study* These last are generally considered the greatest of all copper engravings In their originality of conception, richness of suggestion, and brilliant execution they are classics of the art In 1520 Dürer visited the Netherlands, where he made numerous fine portrait drawings in charcoal and chalk His last years (1521–28) were devoted chiefly to portrait painting, copper engraving, and literary activities Outstanding paintings of this period include the portrait of Hans Imhoff (Prado), *Unknown Man* (Mus of Fine Arts, Boston), and *Madonna and Child with St Anne* and *Virgin and Child* (Metropolitan Mus) His copper engravings include portraits of Erasmus and Melanchthon Dürer's theoretical works on geometry and perspective and fortification were published shortly before his death, and that on human proportions, just after As a painter Dürer did not equal his great contemporaries in Italy His work, while original and full of vigor, retains the stiffness and tightness of a primitive, and his color is rarely inspired It is in his engravings and drawings that his genius found free expression In these he shows himself an artist of unsurpassed fertility of imagination, tireless energy, keen observation, and superb craftsmanship Priceless collections are in the Albertina, Vienna, and the British Museum See studies by T S Moore (1905), Willi Kurth (1936), and Erwin Panofsky (1943)

duress (dyo͝o'rĭs, do͝o'-, do͝orĕs'), [O Fr from Latin, -hardship], in law, actual or threatened violence or imprisonment, by reason of which a person is forced to enter into an agreement or to perform some other act against his will The constraint or threat of constraint must have been directed toward the person thus compelled or toward the wife, husband, parent, child, or other near relative of the person compelled Anyone who makes a contract under duress is entitled to void it and be free of its obligations, but in order to release him from the contract duress must be shown to have been such as to overcome his mind and will See COERCION

Durfee, William Franklin (dûr'fē), 1843–99, American engineer, b New Bedford, Mass He studied with his father, a mechanic of reputation, and at Harvard He designed and superintended the construction of a plant, together with all its machinery, at Wyandotte, Mich , where in 1864 he produced the first steel made in America by the Bessemer process He also built there the first laboratory in the United States for the study of steelmaking processes At Ansonia, Conn , he constructed the first successful furnaces to refine copper by use of gaseous fuel His extensive library is now part of the library of the Engineering Society, New York city.

D'Urfey, Thomas (dûr'fē), 1653–1723, English song writer and dramatist, of Huguenot descent His comedies, such as *Wonders in the Sun, or, The Kingdom of the Birds* (1706), were forerunners of the ballad opera Writers of ballad opera drew heavily upon his collection *Wit and Mirth; or, Pills to Purge Melancholy* (1719), which included many of his own witty, satirical songs.

Durham, John George Lambton, 1st earl of (dŭ'rŭm), 1792–1840, British statesman A stormy liberal career in Parliament (1813–32), which earned him the nickname Radical Jack, culminated in his playing an important part in drafting and forcing upon the House of Lords the Reform Ball of 1832. After several diplomatic missions he was, in 1838, made governor general of Canada, with special powers to quell the rebellions there Impulsive and tactless, Durham was only moderately successful as a conciliator, but he prepared the masterly recommendations of the *Report on the Affairs of British North America* (1839), which has been called the Magna Carta of the British colonies The proposed remedies for existing defects included union of Upper and Lower Canada, the grant of responsible self-government, improvement of the land laws, and railroad building to unify the country The one (but very large) defect in its liberalism was its advocacy of extinguishing the French national spirit in Canada—a motive behind many of the proposed measures See S J Read, *Life and Letters of the First Earl of Durham* (1906)

Durham, maritime county (1,015 sq mi , 1931 pop 1,486,175, 1948 estimated pop 1,447,597), N England, on the North Sea between the Tees and Tyne rivers The county seat is Durham, site of one of England's finest Norman cathedrals The region is low-lying along the coast, rising inland to the Pennine Chain It is one of the most densely populated counties of England There is dairy farming and cattle raising, but primarily the region is industrial. The coal deposits are rich and extensively worked There are associated iron, steel, chemical, and glass industries Shipbuilding is important along the Tyne Sunderland and Hartlepool are important seaports The area was occupied by the Romans and subsequently became part of the Anglo-Saxon kingdom of Northumbria After the Norman Conquest the county was organized as a palatinate under the bishops of Durham and was governed as such until 1836 See Cuthbert Headlam, *The Three Northern Counties* (1939)

Durham, town (pop 1,700), S Ont , on the Saugeen river and NW of Toronto It is a manufacturing and residential town

Durham, municipal borough (1931 pop 16,224, 1943 estimated pop 19,300), county town of Durham, England, on the sides of a hill nearly encircled by the Wear river Two old bridges are here Noteworthy are the castle (1072), now occupied by the Univ of Durham (which incorporates several colleges—Armstrong, Hatfield's, and others), and the cathedral, on the hilltop In 995 the relics of St Cuthbert were brought to Durham (then Dunholme) and a church was built as his shrine The construction of the present cathedral, on the same site, began in 1093, it is considered the finest example of Norman architecture in the country For the Book of Durham, see LINDISFARNE

Durham 1 Rural town (pop 1,098), S Conn , NE of New Haven, settled c 1698, inc 1708 It makes metal products The public library was started in 1733 2 Town (pop 1,533), SE N H , SW of Dover and on the Oyster river, settled 1635, inc 1732 It is the seat of the Univ of New Hampshire (see NEW HAMPSHIRE, UNIVERSITY OF) The early settlement suffered greatly in Indian wars (1694, 1704) The 18th-century home of Gen John Sullivan is preserved Local blue clay is used for handmade pottery 3 City (pop 60,195), co seat of Durham co , central N C , in the piedmont NW of Raleigh, settled c 1852, inc 1867 It is an important center for the marketing and processing of tobacco and has large textile and hosiery mills Durham is a port of entry The area was settled c 1750, but the town was only a hamlet until after the Civil War, when the tobacco industry began its great development, with James B DUKE a leading manufacturer Negroes have extensive business and industrial enterprises in Durham, and the headquarters of the largest Negro life insurance company in the country is here The city is the seat of DUKE UNIVERSITY and North Carolina College for Negroes

Durham cattle. see SHORTHORN CATTLE.

Durkee, John (dûr'kē), 1728–82, American pioneer and Revolutionary officer, b Windham, Conn Durkee, a leading member of the Connecticut Sons of Liberty, led the group that forced Jared INGERSOLL to resign at the time of the Stamp Act Later he led Connecticut settlers into the WYOMING VALLEY, laid out (1769) Wilkes-Barre, and was the leader of the Connecticut faction in the first of the PENNAMITE WARS He was twice captured by the Pennsylvanians In the Revolution he raised a company that fought well at Bunker Hill, and he saw action in other battles, notably Long Island, Trenton, and Monmouth

Durkheim, Émile (āmēl' dürkĕm'), 1858–1917, chief French sociologist after Comte, a professor at the Sorbonne His approach to sociology was influenced by the positivist philosophy of Comte, of whom he was a critical follower To the collective mind of society Durkheim attributed the origin of religion and morality (through constraint of the individual) and even of such fundamental concepts as space and time To support his theories, he drew extensively on anthropological and statistical materials. His works include *The Division of Labor in Society* (1893; Eng tr , 1933), *The Rules of Sociological Method* (1895, Eng tr., 1938), *Le Suicide* (1897), and *The Elementary Forms of Religious Life* (1912; Eng tr , 1915). See Harry Alpert, *Émile Durkheim and His Sociology* (1939)

Dürkheim: see BAD DÜRKHEIM

Durlach (do͝or'läkh), former town of Baden, W Germany, since 1938 incorporated into KARLSRUHE It was the residence of the margraves of Baden-Durlach (see BADEN, Germany)

Dürnstein (dürn'shtīn), ruined fortress in Lower Austria, on the Danube and 40 mi WNW of Vienna RICHARD I of England was held prisoner here by the duke of Austria.

Duroc, Géraud Christophe Michel (shärō' krēstôf' mēshĕl' dürōk'), 1772–1813, French general He was a close friend of Napoleon, who made him grand marshal of the palace and duke of Friuli He acted as a diplomat, fought in the Napoleonic Wars, and was killed in battle in 1813

durra: see SORGHUM

Durres, Albania see DURAZZO.

Duruy, Victor (vĕktôr' dürüē'), 1811–94, French historian As minister of education (1863–69), he improved the educational system in France His best-known works are his *History of Rome and of the Roman People* (7 vols , 1870–85, Eng tr , 8 vols in 16, 1883–86) and his popular and much-translated *History of France*

Duryea, Charles Edgar (do͝or'yā), 1862–1938 American inventor and pioneer automobile manufacturer, b near Canton, Ill With his brother J Frank Duryea (1870–) he built in Springfield Mass , one of the first practical internal-combustion automobiles in the United States A Duryea car, driven by J Frank Duryea, won the first U S automobile race at Chicago (1895) Charles Duryea is credited with the invention (1892) of the spray carburetor He manufactured automobiles until 1914 and was later a consulting engineer J Frank Duryea, long associated with the Stevens-Duryea automobile manufacturing company, was a leader in establishing the automobile industry

Duryea (do͝or'yā, dûryā'), industrial borough (pop 8,275), NE Pa , on the Lackawanna SW of Scranton, inc 1891 Anthracite and silk are its industries

Duse, Eleonora (do͝o'zē, Ital ālāōnō'rä do͝o'sā), 1859–1924, Italian actress Of a theatrical family, she made a successful appearance at 14 as Juliet and in 1878 gained recognition in Auger's *Les Fourchambault* In 1893, in New York and London, her portrayal of Dumas's *La Dame aux camélias* was considered a rare dramatic event, and in Paris in 1897 she was regarded as the only rival of Bernhardt She added to her stature in such dramas as Sardou's *Fédora*, Goldoni's *La Locandiera*, and Pinero's *Second Mrs Tanqueray* For some years a romantic attachment existed between Duse and the Italian poet D'Annunzio, whose plays she was often the first to present and champion A great interpreter of Ibsen, she made her farewell appearance (1923) in his *Lady from the Sea* in New York She appeared in the moving picture *Cenere* (1916) Duse's acting was characterized by extreme simplicity and lack of theatrical artifice Her emotional power, however restrained, was tremendous in its effect See E A Rheinhardt, *The Life of Eleonora Duse* (Eng tr , 1930), Bertita Harding, *Age Cannot Wither* (1947)

Dushan, Stephen: see STEPHEN DUSHAN

Dussek, Jan Ladislav, Czech *Dušek* (yan' lä'dĕslăf do͝o'shek), 1760–1812, Czech pianist and composer, pupil of C P E Bach, favorite of Marie Antoinette, and protégé of Talleyrand Some of his piano compositions are still taught

Düsseldorf (dü'sĕldôrf), city (1946 pop 420,909), in the former Rhine Prov of Prussia, NW Germany, at the junction of the Rhine and Düssel rivers It is a major industrial and commercial center, with steel mills, machinery plants, and textile manufactures First mentioned in the 12th cent , Düsseldorf became (1288) the capital of the duchy of BERG Under French occupation (1921–25) it was a center of the Rhenish separatist movement In the Second World War the city was a major target of the Allied air forces Captured (1945) by American troops, it was found largely in ruins Düsseldorf has a famous art academy (founded 1819) and gave its name in the 19th cent to the Düsseldorf school, of which BENDEMANN and SCHADOW-GODENHAUS were representative Heinrich Heine was born here

dust, atmospheric, minute particles of predominantly inorganic matter slowly settling or suspended by slight currents and existing in varying amounts in all air There is least dust at high levels over the ocean, and most at low levels over cities, that caused by the smoke of heating and manufacturing is a serious problem of cities Sources of atmospheric dust are winds blowing over dry earth (as plowed fields, deserts, and roads), the various activities of people in cities, volcanic eruptions, salt spray from the oceans, pollen and other material from plants, and the combustion of meteorites by friction with the earth's atmosphere Dust sometimes almost immediately settles visibly on surfaces, but vast quantities are carried to the upper layers of the air and suspended there for long periods of time The effects of volcanic eruptions such as that of Krakatoa have been observed three years after the occurrence Hygroscopic dust particles (those to which water adheres) are the

nuclei of condensation in free air; the nucleus of each droplet in a fog or cloud and of each raindrop and snowflake is one of these invisible particles of inorganic or organic dust When the dust is exhausted from a container, condensation takes place only on the surfaces of the container, while the air remains quite clear John Aitken, who in 1880 invented a dust counter, first correlated dust particles and condensation Dust is also chiefly responsible, through its scattering effect upon light, or diffusion, for one type of HAZE, for sunrise and sunset colors, for twilight, and for the blue color of the sky

Dust Bowl, areas of the prairie states that suffer from dust storms These storms may smother growing crops, destroy pasturage, and injure health, but their most serious effect is the removal of topsoil Dust-storm areas suffered especially in the droughts of 1934, 1936, and 1937 The removal of the natural cover of grass by overgrazing, by burning over, or by plowing aggravates dust-storm conditions Remedies include the return of large areas to grass and the planting of cover crops and trees to anchor the soil

Dustin, Hannah, b 1657, d after 1729, New England heroine She was captured (1697) in an Indian raid on Haverhill, Mass , and taken up the Merrimack river to a place near modern Concord, N H While the Indians were asleep, Hannah and a 10-year-old boy (Samuel Lennardson) killed and scalped 10 of their guards and with another prisoner returned to Haverhill

Dutch and Flemish literature, the literature written in the standard language of the Low Countries since the Middle Ages It is conventional to term the language Dutch when speaking of the modern Netherlands and Flemish when speaking of the Belgians who use the same language, this is inaccurate in making a distinction which does not exist (the standard Netherlands language differs from the standard language of N Belgium somewhat as British and American English do) and in attributing to Flanders more than its share Middle Dutch literature shows the same general characteristics as the contemporary vernacular literatures, thus the bourgeois spirit is expressed in Van Maerlant and in the Dutch versions of Reynard the Fox, Hadewijch, Ruysbroeck, and Gerard Groote spoke the beautiful language of mysticism Among the best known of Dutch medieval dramas are *Mary of Nimmegen* (tr by H M Ayres, 1924) and the morality *Elckerlyc*, closely related to EVERYMAN The greatest Dutch figure of the Renaissance, Erasmus, wrote in Latin, but other humanists used their native Dutch— Van der Noot and the painter and poet Van Mander, then Coornhert, and finally Spieghel Reformation polemics were represented by the Catholic Anna Byns and the Protestant Marnix With the establishment of the republic and the subsequent commercial prosperity came the Golden Age of Dutch literature, this is the period of the influential Coster, of the masters Hooft and Vondel, of the homely verse of Cats, of the comedies of Bredero, and of the work of the elder Huygens A religious poet of the period was the painter Camphuysen In the early 18th cent there is the comedian Langendijk and Addison's imitator, Van Effen Two important women novelists of the later 18th cent are Wolff and Deken Other writers are the Van Haren brothers, Feith, and Bilderdijk In the 19th cent , Dutch literature expanded on European lines with the novelists Van Lennep, Bosboom-Toussaint, Dekker, and the Belgian Conscience and the poets Da Costa, Tollens, Potgieter, and the Belgians Gezelle, Rodenbach, and Pol de Mont Thus was also the period of the sketches of Beets The 1880s saw a reorientation of Dutch letters under foreign influence, especially under that of the French naturalism of Zola, the Belgian parallel movement began slightly after Leaders in the new movements were Verwey and Van Deyssel (son of the critic Alberdingk Thijm) in the Netherlands and Vermeylen and Buysse in Belgium The new forces are seen in the novelists and short-story writers Van Eeden, Couperus, Van Ammers-Küller, Robbers, and Querido and in the Belgian Stijn Streuvels and Timmermans Among the better-known poets are Roland Holst, Boutens, and Gorter in the Netherlands and Van de Woestijne in Belgium. A successful dramatist, the Jewish Heijermans, has a special place in 20th-century Dutch literature See A J Barnouw *Holland under Queen Wilhelmina* (1922), Jethro Bithell, *Contemporary Belgian Literature* (1915) and *Contemporary Flemish Poetry* (1917)

Dutch art, as a distinct national style, dates from about the turn of the 17th cent , when the country emerged as a political entity and developed a clearly independent culture During the Middle Ages, Netherlandish art was subject to the leveling influence of the Romanesque and Gothic styles which prevailed throughout Europe In the 15th and 16th cent the southern or Flemish provinces in general led in quantity and refinement of production and set the artistic pace for the entire region. Consequently, it is very difficult to distinguish a development of national traits in the art of the Dutch provinces before the aesthetic fluorescence of the 17th cent Furthermore, the iconoclasm that attended religious and political upheavals in the mid-16th cent destroyed much of the work. The earliest known Dutch paintings, by such artists as Aelbert Ouwater, Geertgen van Haarlem, and Dierick Bouts date from the second half of the 15th cent and are clearly to be related to the Flemish tradition of the Van Eycks Certain native characteristics are to be distinguished, however, in a feeling for continuous space, in a predilection for rendering effects of light and atmosphere, and in a matter-of-fact tone underlying the interpretation of subject matter An outstandingly original genius was Hieronymus Bosch, whose demoniacal and ironical realism was linked to medieval ideology and at the same time anticipated aspects of the 17th-century style In the 16th cent a profusion of Italian Renaissance motifs appeared especially in decorative sculpture, e g , the fireplace in the town hall of Kampen by Jacob Colyns de Nole, and centers of sculptural production grew up at Dordrecht, Utrecht, and Breda In painting, enthusiasm for Italian art, combined with a kind of late revival of Gothicism, resulted in a mixture of manneristic and classicistic elements in works by such painters as Cornelis Englebrecht (1468–1533), Jacob Corneliszoon van Oostsanen (c 1470–1533), Jan de Mabuse, Jan van Scorel, Maarten van Heemskerck, Hendrik Goltzius, and Cornelis Cornelisz oon (1562–1638, also called Cornelis de Harlem) At the same time there was continued assertion of a native tendency towards sober realism in the works of Jan Mostaert (c 1470–c 1555), Antonio Moro, and the great Lucas van Leyden The current of Italian Renaissance influence persisted well into the 17th cent and is to be noted especially in the work of the most important sculptor, Hendrik de Keyser (1565–1621), whose style continued to be exemplified in the work of his sons Willem and Pieter de Keyser The Twelve-Year Truce with Spain (1609) introduced a period of unprecedented cultural growth and material prosperity Calvinist proscription of church art and the absence of extensive state patronage encouraged the development of private easel painting, and a heightened national pride was reflected in the immense popularity of pictures that portrayed the domestic scene and Dutch burgher activities The art of Frans Hals, Rembrandt, and Jan Vermeer testifies to the originality and vitality of the Dutch school for three successive generations There were many artists who devoted themselves primarily to the rendering of special types of subject matter, e g , Nicolas Elhas, also called Pickenoy (1591–c 1655), Thomas de Keyser, and Bartholomeus van der Helst, who were primarily portraitists Their works include many of the large group portraits of officers of corporations and guilds, a type of painting peculiar to Dutch culture At Utrecht the 16th-century Italianate tradition persisted in the work of Abraham Bloemaert (1564–1651) His followers, notably Gerard van Honthorst and, to a lesser extent, Hendrik Terbruggen (c 1588–1629), were influenced by Caravaggio in their renderings of large-figured genre groups and isolated half-length figures of musicians and drinkers Characteristically the Dutch genre picture was of relatively small dimensions—hence the title "Little Masters"—and represented typical situations and activities of the people Soldier scenes were common, especially in the period of the Thirty Years War, and figured prominently in works by such artists as Willem Duyster and Philips Wouwerman Outstanding as a painter of peasant scenes was Adriaen van Ostade Toward the middle of the 17th cent there was greater interest in the rendering of homely domestic scenes and views of urban life reflected in the paintings of Pieter de Hooch, Gabriel Metsu, and Jan Steen In the '60s and '70s taste began to favor effects of wealthy elegance and refinement A slightly enervated atmosphere was to be felt, not only in works of lesser artists, but in the exquisite paintings of Gerard Ter Borch and the late Vermeer Landscape was also one of the most popular subjects This field offered full scope to the native tendencies toward pictorial realism The painters depicted their countryside with an unpretentious sincerity and a sensitiveness that has made the Dutch school of landscape one of the most influential and esteemed of all time At the beginning of the 17th cent a manneristic, decorative style carried over from the 16th cent in the landscapes of Gillis van Coninxloo and David Vinckboons (1578–1629) A clearer emphasis on straightforward contemplative realism was manifest in work by such artists as Esaias van der Velde (c 1590–1636) and the highly original genius Herkules Seghers (1590–1640), who in his expression of unified mood seemed to anticipate the landscapes of Rembrandt In the second quarter of the century the landscapes of Jan van Goyen and Salomon van Ruisdael reveal emphasis on greater breadth of space and dynamic composition The culmination of these tendencies was reached in the art of Jacob van Ruisdael, Aelbert Cuyp, and Meindert Hobbema and in the great specialists of marine views, Jan van de Cappelle, Willem Van de Velde, and Ludolf Backhuysen. Certain landscapists emphasized animal painting (e g , Paul Potter) or concentrated on unusual light effects of sunsets and moonlight scenes (e g , Aart van der Neer) Outstanding painters of still life included Jan Davidszoon de Heem, Willem Claaszoon Heda, and Willem Kalf (b c 1621). An outstanding painter of birds and wildlife was Melchior d' Hondecoeter. Another distinctively Dutch type of subject matter was architectural interiors Specialists in this field included Pieter Saenredam (1597–1665) and Emanuel de Witte (c 1617–1692) After the middle of the 17th cent a long period of artistic decline set in Even works by the principal artists executed in the last quarter of the century reveal tendencies towards empty elaboration of effects and pomposity or sentimentality of content During the 18th cent a strong wave of French influence encouraged renewed interest in historical and mythological painting and a heavy-handed imitation of rococo elegance There was a tendency to admire and imitate the Italianate landscapists of the 17th cent by such painters as Nicolaes Berchem and Karel Dujardin Among the more original of the 18th-century masters were Jacob de Wit (1695–1754) and Cornelis Troost (1697–1750) Not until the middle of the 19th cent in a period of liberalism that was marked by the constitution of 1848, was there a revival of Dutch artistic culture marked by the emergence of such artists as Johannes Bosboom, Jozef Israëls, Anton Mauve, Hendrik Mesdag, Johann Jongkind, and the Maris brothers The outstanding genius of the second half of the century was Vincent van Gogh, one of the most important figures of the French postimpressionist school During the 20th cent , Dutch painting was strongly influenced by such movements as fauvism, cubism, and expressionism Such artists as the painter and architect Theo van Doesburg and Piet Mondrian played important roles in the cubist and non-objective movements In sharp contrast to the vitality of the Dutch school in painting and the graphic arts is the lack of production of important sculpture Outstanding among Dutch minor arts is the silverwork and goldwork of the 16th and 17th cent There was also extensive production and export of ceramic tiles, of which the finest examples date from the late 16th and 17th cent Dutch trade in Chinese porcelains discouraged the development of extensive domestic production, and although factories for hard porcelains were established in the 18th cent , Dutch ware did not rival the best French and German production See Wilhelm von Bode, *Great Masters of Dutch and Flemish Painting* (Eng tr , 1909), W R Valentiner, *The Art of the Low Countries* (Eng tr , 1920), Karel van Mander, *Dutch and Flemish Painters* (Eng tr , 1936), G H Marius, *Dutch Painters of the Nineteenth Century* (Eng tr , 1908)

Dutch belted cattle, breed of dairy cattle which originated in the Netherlands They are characterized by a broad white belt around the middle of the body, the rest of which is solid black Brought to America probably c 1838, they are not abundant but are found over much of the country They are excellent milkers

Dutch Wars 1 1652–54, war between the English and the Dutch. It marked a crisis in the long-standing rivalry between the two nations as carriers of world trade, a crisis which was precipitated

by English search and seizure of Dutch merchant ships in the course of an unofficial Anglo-Dutch maritime war and, secondarily, by the English Navigation Act of 1651, which was directed against Dutch trade with British possessions Hostilities were opened (May, 1652) by a sea fight between the British and Dutch admirals, Robert BLAKE and Maarten TROMP At the beginning of the war Blake broke up the Dutch herring fleet, while George Ayscue successfully waylaid Dutch ships in the English Channel However, the victory of Tromp over Blake off Dungeness (Nov , 1652) gave the Dutch command of the Channel, and in Jan , 1653, a Dutch treaty with Denmark closed the Baltic to English trade Meanwhile reforms were introduced into the British navy for greater efficiency, and Generals Richard Deane and George Monck were associated with the naval command Tromp was forced to retire after an engagement off Portland (Feb , 1653), and the English regained control of the Channel After Blake's succeeding victory off Gabbard's Shoal (June, 1653) the British were able to blockade the Dutch coast While Dutch trade was thus effectively cut off, England itself was approaching financial exhaustion Negotiations were undertaken but failed On July 31, 1653, Tromp attacked the blockading fleet, he was defeated and killed, but the English ships were forced to return home for refitting Peace was finally signed in April, 1654 The Dutch agreed to salute the British flag in British seas, to pay compensation for English losses, and to submit territorial claims to arbitration **2** 1664–67, another war between Dutch and English The first war had humbled, but had not crushed, the Dutch power, which continued to challenge English commercial supremacy, especially in the East Indian trade and in the West African slave trade In 1664 Robert Holmes raided the Dutch colonies on the coast of Africa, and Richard Nicolls took the Dutch colony of New Netherland in North America War was officially declared by England in March, 1665 The duke of York (later James II) won the battle off Lowestoft (June, 1665), and in September, the bishop of Munster, an ally of the English, overran the eastern province of the Netherlands, he was, however, soon expelled In Jan , 1666, Louis XIV of France declared war on England, yet his interests did not lie on the side of the Dutch, and he took little part in the war The British fleet under Monck and Prince Rupert was defeated in the Four Days battle or battle of the Downs (June 1-4, 1666) by Michiel de Ruyter and Cornelis Tromp, but in August they inflicted a severe defeat on the Dutch and destroyed shipping along the Dutch coast The plague, the great fire, and disaffection in Scotland made England anxious for peace, and negotiations were undertaken, while Charles II let the fleet fall into a state of unpreparedness which enabled De Ruyter to fall on the British ships in the Thames and inflict heavy losses (1667) By the Treaty of Breda (July, 1667) the trade laws were modified in favor of the Dutch, and all conquests of war were retained, the English thus receiving New York, New Jersey, and Delaware and the Dutch keeping Surinam At the same time the English and French made mutual restoration of conquests Breda was a blow to English prestige, but proved in the long run to English advantage **3** 1672–78, first of the great wars of Louis XIV of France. It was aimed at the destruction of Dutch rivalry to French trade and the extension of Louis XIV's empire Having obtained the support of CHARLES II of England by the secret Treaty of Dover (1670) and allied himself with Sweden (see CHARLES XI) and several German states, Louis overran the southern provinces of the Netherlands (May, 1672) The Dutch halted his advance on Amsterdam by opening the dikes, about the same time, under the command of De RUYTER, they defeated the English and French fleets at Southwold Bay Dutch peace proposals made at this juncture having been spurned by the French, a revolution took place, and William of Orange (later WILLIAM III of England) took over Dutch leadership from the ill-fated Jan de WITT (July, 1672) William's attempt to divide the French lines and enter France was countered by the French seizure of Maastricht (1673) By the end of the year the French were forced to retreat, and Spain, the emperor, Brandenburg, Denmark, and other powers entered the war on the side of the Dutch In 1674 England made peace with the Dutch Nevertheless, military operations turned in favor of France In 1674 Louis II de CONDÉ won the battle of Seneff, while TURENNE was victorious at Sinzheim The defeats CRÉQUY suffered in 1675 were made good by the naval campaign of DUQUESNE in 1676, and in 1677 the French defeated William at Cassel and took Freiburg Peace was negotiated at Nijmegen in 1678 Maastricht was ceded to the Dutch and a trade treaty modified the French restrictive tariffs in their favor By a subsequent treaty with Spain, Louis received Franche-Comté and a chain of border fortresses in return for evacuating the Spanish Netherlands. By a treaty with the emperor (1679), France was confirmed in possession of Freiburg and a part of Lorraine

Dutch West India Company, trading and colonizing company, chartered by the States-General of the Dutch republic in 1621 and organized in 1623 Through its agency NEW NETHERLAND (New York) was founded The phenomenal success of the Dutch East India Company was an influential factor in its establishment The United New Netherland Company, which had been trading around the mouth of the Hudson river for several years, was absorbed into the new company By the terms of the charter no citizen of the Netherlands could trade with any point on the African coast between the Tropic of Cancer and the Cape of Good Hope or on the American coast between Newfoundland and the Straits of Magellan without the company's permission The company was responsible in larger matters, such as declaring war, to the States-General, but otherwise had almost complete power in its territory, including the appointment and removal of officers, the making of laws and administration of justice, and the conduct of Indian affairs For a time the company was more interested in Brazil than in North America, but in 1654 Brazil was definitely lost Traders meanwhile had built Fort Orange (1624) on the site of Albany, N Y , Fort Nassau (1624) on the Delaware river, Fort Good Hope in the site of Hartford on the Connecticut river, and finally Fort Amsterdam (1626), on the southern tip of Manhattan island, which was the nucleus of the settlement called New Amsterdam, now New York city England could not afford to antagonize the Dutch at this period because of wars with France and Spain and so permitted the Dutch settlement to be made on lands which England claimed New Netherland remained under the control of the Dutch West India Company until the English finally conquered it in 1664 **New Sweden** was also taken by the Dutch in 1655, but was later sold by the company to the city of Amsterdam before also falling prey to the English

Dutch West Indies · see WEST INDIES

Dutra, Eurico Gaspar (āōōrē'kō gäshpär' dōō'trŭ), 1885–, president of Brazil (1946–) An army officer, he took part in the revolution that put GETULIO VARGAS in power By 1935 he was a general of a division and was minister of war from 1936 to 1945 He was endorsed as presidential candidate by Vargas, but, charging that Vargas planned to remain in power, Dutra led in deposing him (Oct , 1945) Dutra was elected president in Dec , 1945

Dutton, Clarence Edward, 1841–1912, American geologist, b Wallingford, Conn , grad Yale, 1860 He served in the Civil War, first in the volunteer service and after 1864 in the regular army In 1901 he retired from military service He became connected with the U S Geological Survey of the Rocky Mt region under John W Powell in 1875 As a result of his work with the Survey he wrote several reports, including those on the geology of the high plateaus of Utah (1879–80) and the Tertiary history of the Grand Canyon district (1882) In order to study volcanic activity, he visited Hawaii and also the old volcanic region of California and Oregon He was one of the pioneer advocates of the isostatic theory of earth movements and introduced the term *isostasy* He wrote a valuable report (1890) on the Charleston earthquake of 1886 and wrote also *Earthquakes in the Light of the New Seismology* (1904)

Dutton, Joseph Everett, 1874–1905, English biologist Working in Africa, he discovered (1901) the trypanosome of sleeping sickness in human blood and named it *Trypanosoma gambiense*

duty, in taxation see CUSTOMS, INTERNAL REVENUE

Duun, Olav (ō'lāv dōōn'), 1876–1939, Norwegian novelist He taught in public schools until 1927 His monumental series of six novels, *The People of Juvik* (1918–23, Eng tr , 1930–35), is an outstanding work on Norwegian life A trilogy of novels followed, *Fellow Beings* (1929), *Ragnhild* (1931), and *The Last Year of Life* (1933) In 1938 his last book, *The Man and the Powers*, appeared Almost all his work was written in Landsmaal Norwegian

Duval, Claude (dōōvăl'), 1643–70, English highwayman Born in Normandy, he came to England at the Restoration in the train of the duke of Richmond. He led a daring career as a highwayman until he was captured when drunk He was hanged at Tyburn Duval was noted for his gallantry to the ladies, and his memorial inscription in the Covent Garden Church begins "Here lies Du Vall Reader, if male thou art, Look to thy purse; if female, to thy heart "

Duval, William Pope, 1784–1854, American frontiersman, territorial governor of Florida (1822–34), b near Richmond, Va He went to Kentucky as a youth, studied law, and began practicing at Bardstown c 1804 Duval was a U S. Representative from Kentucky (1813–15) and U S judge in East Florida (1821–22). As governor, he accomplished the peaceful removal of the Seminole Indians to the southern district, the compilation and revision of territorial laws, and legislation creating a board of education and improving the schools He was the original of Washington Irving's "Ralph Ringwood" in *Wolfert's Roost* and of James K Paulding's "Nimrod Wildfire "

Duveen, Joseph, 1st **Baron Duveen of Millbank,** 1869–1939, English art dealer Beginning his career in his father's firm, Duveen Brothers, he soon expanded the business to mammoth dimensions He was the benefactor of many musems and galleries, notably the National Gallery and the Tate Gallery, both in London At the Univ of London, Lord Duveen endowed a chair for the history of art He was influential in forming several American art collections which later became public collections and was also active in the movement to save Spanish masterpieces during the civil war He was created baron in 1933 See his *Thirty Years of British Art* (1930)

Duveneck, Frank (dū'vunĕk), 1848–1919, American portrait and genre painter and teacher, b Covington, Ky , studied in Cincinnati and in Munich His work made a great impression when exhibited in America in 1875 because of its boldness and technical proficiency His portraits, painted heavily with marked brushwork, are low in key and reminiscent of the old masters whom he loved, but they are also remarkable for their sensitive and admirable characterization Duveneck was an inspired teacher for many years in Munich and, after 1889, in Cincinnati, where he devoted himself to the art school and museum and exercised a powerful and salutary influence on both He presented a fine collection of his works to the museum in 1915 Duveneck is represented in leading galleries throughout the country His *Whistling Boy* (Cincinnati Art Mus) and *Old Woman* (Metropolitan Mus) are characteristic He was also a talented sculptor and etcher

Duvergier de Hauranne, Jean (zhā' düvĕrzhyā' dü ōrän'), 1581–1643, French theologian He is often called the abbé de Saint-Cyran, from an abbacy he held *in commendam* A personal friend of Cornelis JANSEN, he collaborated with him and was one of the molders of JANSENISM He was also a close friend of the ARNAULD family, and he was largely responsible for the conversion of Port-Royal into the stronghold of Jansenism He was the first of the Jansenist controversialists against the Jesuits, and he also fell afoul of Cardinal Richelieu, who had him thrown into prison in 1638 He was released on the cardinal's death He and his puritanical Augustinianism have been much criticized.

Dúvida, Rio da · see ROOSEVELT, river

du Vigneaud, Vincent (dū vēn'yō), 1901–, American biochemist, b Chicago, grad Univ of Illinois (B S , 1923) He was professor of biochemistry and head of the department at George Washington Univ (1932–38) and at Cornell Univ (from 1938) His researches include the chemistry of insulin, protein, sulphur compounds, and biotin

Duxbury (dŭks'bĕrē), town (pop 2,359), SE Mass , a resort on Duxbury Bay SE of Boston, inc 1637 Plymouth colonists including Miles Standish, William Brewster, and John Alden settled here Alden's house is still standing

Duyckinck, Evert Augustus (dī'kĭngk), 1816–78, American author, b New York city, grad Columbia, 1835 He studied law, but never practiced From 1840 to 1842 he edited *Arcturus, a Journal of Books and Opinion*, and from 1848 to 1853, with his brother George Long Duyckinck (1823–63), owned and edited the *Literary World*, the best literary weekly of the period With his brother he also edited and prepared much of the copy for the *Cyclopaedia of American Literature* (2 vols , 1855), which he revised and enlarged in 1866 and which was a standard work in its time He edited many classics, compiled *Irvingiana* (1860), and wrote the text for the *National Portrait Gallery of Eminent Americans* (2 vols , 1861–62), the *National History of the War for the Union* (3 vols , 1861–65), and other subscription works, besides contributing to magazines His library of 17,000 volumes and his papers and manuscripts are in the New York Public Library

dvi-manganese see RHENIUM

Dvina (dvēnä') or **Northern Dvina,** Rus *Severnaya Dvina*, river, 580 mi long, N European RSFSR, formed near Veliki Ustyug by the union of the Sukhoma and Yug rivers It flows NW past Kholmogory and empties into Dvina Bay, an arm of the White Sea, just below Archangel Navigable in its entire course from May to November, it is connected with the MARIINSK SYSTEM by the Sukhoma and the Northern Dvina Canal

Dvina or **Western Dvina,** Ger *Düna*, Lettish *Daugava*, Rus *Zapadnaya Dvina*, river, 620 mi long, Eastern Europe Rising in the Valdai Hills, RSFSR, it flows generally W through Belorussia, past Vitebsk and Polotsk, and through Latvia, past Daugavpils and Riga, into the Gulf of Riga, an arm of the Baltic Sea Navigable to Vitebsk, it is connected by canal with the Berezina and the Dnieper

Dvinsk, Latvia. see DAUGAVPILS.

Dvorak, Anton (än'tŏn dvôr'shäk) Czech *Antonín Dvořák* (an'tônēn), 1841–1904, Czech composer He studied at the Organ School, Prague, 1857–59, where he was professor and director after its merger with the Prague Conservatory in 1890 He played the viola in the National Theater Orchestra, 1859–

73. A preoccupation with Wagner in his early compositions is finally overcome in his cantata *Hymnus* (1873), his first successful work The piano duets *Ave from Morava* (1876) and the orchestral Slavonic Rhapsodies and Slavonic Dances (both 1878), published in Berlin through Brahms's interest, established his reputation abroad He went to England in 1884 to conduct his *Stabat Mater* (1877, Prague, 1880), which had become popular there His symphony in E minor, *From the New World* (1893), was composed in the United States while he was director (1892–94) of the National Conservatory, New York In it the idiom of Negro folk melody is suggested The influence of Wagner is again felt in six symphonic poems (1896–99), though not in his last operas He composed nine symphonies, several chamber works, a violin concerto (1879) for Joseph Joachim, a Requiem (1890), a *Te Deum* (1892), and a number of piano pieces, including eight humoresques None of his operas became known outside his country See biography by Paul Stefan (1941); Rosa Newmarch, *The Music of Czechoslovakia* (1942)

Dvur Kralove, Czechoslovakia: see KÖNIGINHOF.

dwarf, a plant, animal, or person whose size is less than normal Among humans dwarfism or nanism appears to be the result of endocrine malfunction which causes an arrest of growth Dwarfs are usually born to parents of normal stature and are likely to be sterile The PYGMY is not considered a dwarf since he inherits the stature of his parents and is fecund Such racial differences as stature, however, may possibly prove to be an inherited variation in endocrine function Dwarfs vary in height from 2 to 4 ft , sometimes there occurs a marked increase in stature in middle age They may possess normal body proportions or be achondroplastic, i e , having, as a result of a skeletal disease a trunk approximating normal size but with stunted limbs. The achondroplastic type is portrayed in the paintings of Velásques There are many famous dwarfs in legend and in history They were court favorites, and despite the attitude of considering them subhuman and amusing, they were frequently noted for wit and intrigue The career of Jeffrey Hudson, a dwarf knighted in jest by Charles I, could be matched by few adventurers of any period Most famous in recent times was "General TOM THUMB" (Charles S Stratton)

dwarf cornel see HUNCHBERRY

dwarf tree, in horticultural practice, a tree artificially kept to a smaller size than is normal for average members of the species This is usually accomplished either by limiting its root space, food, and water or by grafting it on rootstocks of a smaller species and keeping it carefully pruned Dwarfing is done for the sake of ornament, as in a Japanese dish garden, or to utilize limited space Dwarf fruit trees are valued for both decoration and fruit production in small gardens. They bear earlier and sometimes have larger fruits and flowers, but usually do not live as long as undwarfed varieties

Dwarka (dwär'ku) or **Jigat** (jĭ'gut), town (pop 10,876), in detached portion of Bombay state, India, at the western extremity of the Kathiawar peninsula Many Hindu pilgrims visit the temple sacred to Krishna

dwelling: see HOUSE

Dwiggins, William Addison, 1880–, American type designer, calligrapher, and book designer, b Martinsville, Ohio He attained prominence as an illustrator and commercial artist, and he brought to the designing of type and books some of the fresh boldness that he displayed in his work on advertisements His type faces—Electra and Caledonia are most widely used—were specifically designed for linotype composition and have the clean spareness of the motor age His scathing attack on contemporary book designers in *An Investigation into the Physical Properties of Books* (1919) led to an association with the publisher Alfred A Knopf A series of finely conceived and executed "trade" books followed and did much to increase public interest in book format The designs are greatly varied, not all in "modern" key He was perhaps more responsible than any other designer for the marked general improvement in book design in the 1920s and 1930s. He gained recognition also as a calligrapher and was the founder of the mythical Society of Calligraphers He has written much on the graphic arts, notably essays collected in *MSS by WAD* (1949), and his *Layout in Advertising* (1928, rev ed , 1949) is standard

Dwight, Harrison Gray Otis, 1803–62, American Congregational missionary to the Armenians, b Conway, Mass , grad Hamilton College, 1825, and Andover Theological Seminary, 1828 He served the Armenian population of Constantinople for 30 years. His travels with Eli Smith were recorded in *Researches of Rev Eli Smith and Rev H. G O Dwight in Armenia* (2 vols , 1833)

Dwight, Henry Otis, 1843–1917, American missionary in Turkey, b Constantinople, studied at Ohio Wesleyan Univ , son of Harrison Gray Otis Dwight In 1867 he returned to Constantinople as secular agent for the American Board of Commissioners for Foreign Missions. From 1872 to 1899 he was editor of the board's Turkish publications. In 1880 Dwight was ordained a Congregational minister. He wrote a number of books and articles on Turkish affairs and edited the *Turkish and English Lexicon* (1890), his *Centennial History of the American Bible Society* was published in 1916

Dwight, John, fl 1671–98, English potter, reputed founder of the Chelsea factory Little is known of his life, the date (1671) of his patent for the "Mistery of transparent earthenware " being the first certain event recorded He is considered to have laid the foundation of the pottery industry in England and to have set a standard not excelled elsewhere There are specimens of his work at the Victoria and Albert Museum and at the British Museum

Dwight, Theodore, 1764–1846, American author and editor, b Northampton, Mass , brother of Timothy Dwight and grandson of Jonathan Edwards He became a leader of the Federalist party in New England, famous for his political pamphlets and articles As one of the younger CONNECTICUT WITS he proved himself a good satirist While he practiced law in Hartford, he served in Congress (1806–7), in the Connecticut state council (1809–15), and as secretary of the HARTFORD CONVENTION He later wrote the challenging journal of the convention (1833) He edited (1809–15) the Federalist Hartford paper, the *Connecticut Mirror*. In Albany he founded and edited (1815–17) the *Daily Advertiser*, and in New York city (1817–36) the New York *Daily Advertiser*

Dwight, Theodore, 1796–1866, American author, b Hartford, Conn , grad. Yale, 1814, son of Theodore Dwight (1764–1846) After traveling widely abroad, he settled in Brooklyn, N Y There he was a teacher, director of educational institutions, author, translator, and editor of various periodicals including his own *Dwight's American Magazine* (which he edited 1845–52) In 1854–58 he was active in the group which sent free-soil settlers to Kansas Among his books are *A Journal of a Tour in Italy* (1824), *Sketches of Scenery and Manners in the United States* (1829), *Dictionary of Roots and Derivations* (1837), and a translation (1861) of Garibaldi's autobiography

Dwight, Theodore William, 1822–92, American lawyer, b Catskill, N Y , grad Hamilton College, 1840 He studied at Yale Law School and was admitted to the bar in 1845 He was professor of law and later head of the law school at Hamilton In 1858 he became the sole member of the faculty of the newly established Columbia School of Law Until 1873, when the faculty was enlarged, he taught all private-law subjects and lectured elsewhere as well From 1873 until his retirement in 1891 he headed the law faculty Dwight was vitally interested in prison reform He collaborated on *A Report on Prisons and Reformatories in the United States and Canada* (1867), served as president of the New York Prison Association, and was (1878) a delegate to the International Prison Congress at Stockholm

Dwight, Timothy, 1752–1817, American clergyman, author, educator, b Northampton, Mass , grad Yale, 1769, and afterward tutored there He renounced legal for theological studies c 1774, in 1777 became a chaplain in the Revolutionary Army, and after 1783 was for 12 years pastor of a Congregational church at Greenfield Hill, Conn During his pastorate he grew famous throughout New England for his preaching and for the excellent private school he established near his church He was one of the CONNECTICUT WITS, and among his once popular poems are *The Conquest of Canaan* (1785), *The Triumph of Infidelity* (1788), *Greenfield Hill* (1794), and several hymns At the death of Ezra Stiles, Dwight was called to the presidency of Yale, and from 1795 to 1817 he presided over the college with signal ability His widely circulated sermons both reflected and molded public opinion of the day His theology owed much to that of his grandfather, Jonathan Edwards, and he presented it to each generation of Yale students in a four-year series of lectures (published after his death as *Theology, Explained and Defended*, 5 vols 1818–19) With vigor he opposed the rising Republicanism of Connecticut and the nation His *Travels in New England and New York* (4 vols., 1821–22) is representative in its contents of his wide range of interests See biography by C E. Cunningham (1942)

Dwight, Timothy, 1828–1916, American educator, b Norwich, Conn , grad Yale, 1849, grandson of Timothy Dwight (1752–1817) Appointed professor of sacred literature at Yale, he assisted in the reorganization of the Divinity School, edited the *New Englander* (1866–74), and served on the American committee on the revision of the Bible (1873–85) In 1886 he succeeded Noah Porter as president of Yale He coordinated and expanded the institution, securing the legislative charter which authorised the title "university" instead of "college," and retired in 1898 He is the author of *Thoughts of and for the Inner Life* (1899) and *Memories of Yale Life and Men* (1903).

Dwight, village (pop 2,499), N Ill., W of Kankakee, in a farm area, inc 1869 Keeley Institute, famed for its treatment of alcoholism, and a veterans' hospital are here

Dy, chemical symbol of the element DYSPROSIUM.

Dyak (dī'ăk), inhabitant of the interior of Borneo. The Dyaks are the aboriginal peoples of the island and are the principal large group living in the interior. They are not followers of Islam Strongly restricted by superstitions and taboos, they have maintained their customs and mode of life largely uninfluenced by modern civilization The Kayan are a representative group of Dyaks One or two (sometimes more) enormous "long houses" provide dwelling places for a whole village; a corridor used for gatherings and for some kinds of work runs the length of the building, and from the corridor open the separate rooms for each family group. Each building has a house chief. The Dyaks are devoted to their families. In clearings made in the jungle, rice, yams, sugar cane, and some other crops are grown cooperatively by the men and women of the whole community By fishing and hunting (with blowguns and poison darts) the food supply is supplemented. Head-hunting persists despite government efforts to eradicate it. Dyaks generally have bronze or brown skin and dark eyes, they are usually slight of build, active, lithe, and muscular. Habitual chewing of betel blackens the teeth and stains the lips. The sea Dyaks are dwellers of the coast, differing in character and customs from those of the interior Sometimes the name is spelled Dayak

Dyar, Harrison Gray (dī'ur), 1866–1929, American entomologist, b New York city, grad Massachusetts Institute of Technology, 1889, Ph D , Columbia, 1895 From 1897 he was custodian of Lepidoptera at the National Museum, Washington, D C. He wrote many articles on the Lepidoptera, and his works on mosquitoes include *The Mosquitoes of the Americas* (1928)

Dyce, Alexander (dīs), 1798–1869, Scottish editor and critic He edited the works of George Peele, Robert Greene, John Webster, Thomas Middleton, Christopher Marlowe, John Skelton, and Beaumont and Fletcher His great work was his valuable edition of Shakspere (6 vols , 1857, rev ed , 9 vols , 1864–67)

Dyce, William, 1806–64, Scottish historical and portrait painter, studied in London and in Rome He practiced portraiture in Edinburgh until 1844, when he was made professor at King's College, London He is perhaps best known for his frescoes, particularly those in the robing room at Westminster which illustrate the legend of King Arthur

Dyck, Sir Anthony van see VAN DYCK, SIR ANTHONY

Dyck, Christopher van, 1601–72 German designer and maker of printing type who worked in Amsterdam Types that he designed were used by the ELZEVIR firm His roman was of the kind known in England and America as "old style" and has caused this kind of type to be known on the continent of Europe as "Elzevir " It was sturdy, legible, without much contrast between light and heavy lines, and with inconspicuous serifs It has strongly influenced Caslon and other designers of old-style types

dye. The substances used to color various materials, especially cotton, silk, and wool, are commonly divided into two general groups Natural dyes are so called because they are obtained from plants (e g , ALIZARIN, CATECHU, INDIGO, and LOGWOOD), from animals (e g , COCHINEAL, KERMES, and Tyrian purple), and from certain naturally occurring minerals (e g , OCHER and PRUSSIAN BLUE) They have been almost entirely replaced, however, in modern dyeing by the artificial or synthetic dyes Most of these are prepared from coal tar, being formed from an aromatic HYDROCARBON, such as benzene, from which indigo is derived (see also ANILINE), or anthracene, which yields alizarin Although some materials, as silk and wool, can be colored simply by being dipped in the dye (the dyes so used are called consequently direct dyes), others, as cotton, commonly require the use of a MORDANT (see also LAKE) Alizarin is a mordant dye and the color it gives depends upon the mordant used Dyers class dyes also as acid or basic according to the medium (acid or base) required in the dyeing process A vat dye, as indigo, is so called for the method of its application, it is first treated chemically so that it becomes soluble and is then used for treating the materials to be colored. When the materials become impregnated with the dye, they are removed and dried, the reduced indigo taking on oxygen and reverting to its original form In what way a dye becomes "attached" to the material it colors is not definitely known One theory holds that a chemical reaction takes place between the dye and the fiber treated, another that the dye is absorbed by the fiber Dyeing is an ancient industry The Chinese, Persians, and Indians used natural dyes centuries ago. Indigo is probably the oldest dye used, Tyrian purple from a species of snail is another The Egyptians achieved some brilliant colors In the 13th and 14th cent in Italy, dyeing assumed importance. The methods employed were carried to other parts of Europe, and as new dyes became known, the industry flourished and grew. Cochineal was brought from Mexico Finally in the 19th cent the work of W. H. PERKIN and Adolf von BAEYER produced the first synthetic

dyes. See C. E. Pellew, *Dyes and Dyeing* (rev. ed., 1927), R. S. Horsfall and L. G. Lawrie, *Dyeing of Textile Fibres* (2d ed., 1946).

Dyer, Sir Edward, 1543–1607, Elisabethan poet, educated at Oxford. He is known for his lyrics collected in *The Writings in Verse and Prose of Sir Edward Dyer* (ed by A. B. Grosart, 1872). See R. M. Sargent, *At the Court of Queen Elizabeth* (1935).

Dyer, Eliphalet (ĭl'ĭfălĕt), 1721–1807, American jurist, b. Windham, Conn., grad. Yale. After serving in the state legislature for several years, Dyer took part in the French and Indian Wars and later was a member of the governor's council (1762–84) and became (1766) an associate judge of Connecticut's superior court. He was one of the organizers of the Susquehanna Company and was an active supporter of the company in its attempts to secure confirmation of its lands in the WYOMING VALLEY. A Connecticut delegate to the Stamp Act Congress (1765), he was also appointed (1774) to the Continental Congress, where he played a leading part. Dyer was chief justice of Connecticut from 1789 until 1793.

Dyer, John, 1700?–1758, British nature poet, b. Wales. His best-known descriptive poem is *Grongar Hill* (1726). *The Fleece* (1757), in blank verse, is about the sheep and wool industry.

Dyer, Mary, d. 1660, Quaker martyr in Massachusetts, b. England. She accompanied (c.1635) her husband to Massachusetts and supported Anne Hutchinson, whom she followed to Rhode Island, where her husband held several public offices. In 1650 she returned to England and there joined the Society of Friends. On her return to America (1657), she was arrested in Boston and banished, but twice returned (1659, 1660) to minister to imprisoned Quakers. Arrested and condemned to be hanged both times, she was reprieved in 1659 but was executed in 1660. See biography by Horatio Rogers (1896).

Dyer, Reginald Edward Harry, 1864–1927, British general. He commanded the troops which on April 13, 1919, fired upon an unarmed mob of some 5,000 Indians assembled in the Jalianwala Bagh, a public square in Amritsar, Punjab, India, killing nearly 400 persons and wounding many hundreds more. Censured by a commission of inquiry, he retired.

Dyer, Sir William Turner Thiselton see THISELTON-DYER.

Dyer, town (pop. 1,186), W Tenn., NNW of Jackson, in a farm area. Shoes are made here.

Dyersburg, city (pop. 10,034), co. seat of Dyer co., W Tenn., near the Mississippi, NNE of Memphis, laid out 1826, inc. 1836. The city has textile mills and is a processing center for a cotton, grain, dairy, and timber region.

Dyersville, city (pop. 2,138), NE Iowa, W of Dubuque and on the North Fork of the Maquoketa, settled 1837–38 by English, laid out 1851, inc. 1872.

dyer's-weed, name for several plants, among them A MIGNONETTE, A BROOM, and species of GOLDENROD.

Dying Gaul, famous statue in the Capitoline Museum, Rome, formerly wrongly called *The Dying Gladiator*. It is an example of the Pergamene school of Greek sculpture (c. 200 B.C.), depicting with skillful realism a fallen Galatian warrior struggling against death and defeat.

Dyk, Viktor (vĭk'tôr dĭk'), 1877–1931, Czech writer and nationalist. As a poet he is seen at his best in *The Window* (1920), based on experiences in an Austrian prison. As a dramatist he is known especially for *The Messenger* (1907), in which he seeks to explain the crucial defeat of the Czechs at White Mt. in 1620, and for the satirical play *Andrew and the Dragon* (1920). See Paul Selver, *Anthology of Czechoslovak Literature* (1929).

Dykes, John Bacchus, 1823–76, English clergyman, composer of some of the best hymn tunes of his period, including those for *Holy, Holy, Holy, Ten Thousand Times Ten Thousand*, Cardinal Newman's *Lead, Kindly Light*, and the tune *Melita*, to which the hymn of the U.S. navy is sung.

Dykh-Tau (dĭkh"-tou'), peak, 17,050 ft. high, USSR, in the central Greater Caucasus.

Dykstra, Clarence Addison (dĭk'strŭ), 1883–, American educator and civic administrator, b. Cleveland, grad. Univ. of Iowa, 1903. After graduate work at the Univ. of Chicago, he taught in Pensacola, Fla., was instructor in history and government at Ohio State Univ. (1907–9) and professor of political science at the Univ. of Kansas (1909–18). From 1918 to 1920 he served as executive secretary of the Cleveland Civic League. He later held a similar position with the Chicago City Club (1920–22) and with the Los Angeles City Club (1922–26). He was also commissioner of water and power in Los Angeles (1923–26) and professor of municipal administration at the Univ. of California at Los Angeles (1923–29). Dykstra was city manager of Cincinnati from 1930 until 1937, when he resigned to become president of the Univ. of Wisconsin. He directed the administration of the Selective Service Act in 1940–41. In 1945 he resigned from the Wisconsin presidency to become provost of the Univ. of California at Los Angeles. He has been a member of several government committees.

dynamics see MECHANICS.

dynamic symmetry, term given to the theories originally developed by Jay HAMBIDGE, which he believed to be a recovery of knowledge once possessed and used exclusively by Egyptian and Greek artists and architects. These formed, in his opinion, a mathematical foundation which was largely responsible for the perfection of their designs. Discovered by the Egyptians, the principle was adopted in the 6th cent. B.C. by the Greeks, who widely increased its application. Hambidge's system was grounded upon measurements of ancient buildings and works of art, he demonstrated it after 1920 in various volumes. It met both with wide support and with skepticism. "Dynamic" symmetry was so called because of its asserted correspondence to the natural organic symmetry in the human figure and in growing plants, as opposed to "static" symmetry, the type seen in such ordered natural forms as the snow crystal and employed unconsciously by most designers. As developed into an operating technique by Hambidge and his followers, the basic principle of dynamic symmetry is the deriving of measures in terms of areas rather than of linear units. By this method harmonious geometrical shapes can be generated in a series. Within the bounding areas so established, the artist can then organize, with a certain degree of latitude, forms and designs whose component parts will possess an essentially correct relationship.

dynamite [Gr. =power], explosive made from nitroglycerin and a porous substance such as wood pulp, sawdust, kieselguhr (a diatomaceous earth), or some other absorbent material. The mass is pressed in cylindrical forms and wrapped in paper. The proportions vary in different kinds of dynamite, often ammonium nitrate or sodium nitrate or sometimes a carbonate is also a constituent. The charge is set off by a DETONATOR. Dynamite was discovered by Alfred B. NOBEL in 1866.

dynamo see GENERATOR.

dyne (dīn), unit of force in the cgs (centimeter-gram-second) system, being that force which produces in a mass of one gram an acceleration of one centimeter per second for each second that the force acts. It is equivalent roughly to one milligram, being 1/980 of a gram. One dyne acting through a distance of one centimeter is an ERG.

Dysart (dĭ'zurt), former burgh, Fifeshire, Scotland, on the Firth of Forth. It was annexed to Kirkcaldy in 1930. There is a chapel to the hermit St. Serf. Dysart House was the residence of the earl of Rosslyn. Carpets are made in Dysart.

dysentery (dĭ'zuntĕ"rē, dĭ'sun-), disorder characterized by inflammation of the intestines, particularly of the colon, and associated with abdominal pain and the frequent passage of blood and mucus in the stool. The causative agents include chemical irritants, bacteria, protozoa, and parasitic worms. Amoebic dysentery, caused by the protozoan *Entamoeba histolytica*, occurs most frequently in the tropics and subtropics. It is an infection of the large intestine and sometimes causes abscesses of the liver. Drugs, including emetine, an alkaloid of ipecac, are used in treatment. The bacterial type, caused by strains of *Bacillus dysenteriae* (or *Shigella dysenteriae*), occurs in tropical and temperate regions, is usually of short duration, and has no specific drug treatment. In all cases of dysentery, infectious material is taken in by mouth. Food or water is contaminated by feces of sick persons or carriers either directly or through flies and dust.

Dyson, Sir Frank Watson (dī'sun), 1868–1939, English astronomer. He was astronomer royal of Scotland (1905–10) and of England (from 1910). As director (1910–33) of Greenwich Observatory he greatly enlarged its field of research and inaugurated (1928) the wireless transmission of Greenwich time. Noted for his study of solar eclipses, he was an authority on the spectrum of the corona and on the chromosphere, his observations of an eclipse (in Brazil, 1919) confirmed Einstein's theory on the effect of gravity on light rays. Dyson plotted the motions of many previously uncharted stars. A fellow of the Royal Society from 1901, he was knighted in 1915. His publications include *Astronomy, a Handy Manual* (1910) and *Eclipses of the Sun and Moon* (with Richard Woolley, 1937).

dyspepsia: see INDIGESTION.

dysprosium (dĭsprō'zhēŭm, -sēŭm), metallic element (symbol=Dy, for physical constants, see ELEMENT, table), found with other members of the RARE EARTHS group in certain minerals, such as gadolinite and euxenite. With oxygen it forms a white oxide known as dysprosia, and with other elements, some other compounds. The metal and its salts are the most highly magnetic (susceptible to magnetization) of all substances. It was discovered by P. É. Lecoq de Boisbaudran in 1886. It is of no commercial importance.

Dyushambe, Tadzhik SSR. see STALINABAD.

Dzaudzhikau (dzoujĭkou'), city (pop. 127,172), capital of the North Ossetian Autonomous SSR, SE European RSFSR, on the Terek river and at the foot of the Caucasus. It is an industrial center with an electric zinc smelter and lead and silver refineries and has several technical and educational institutions. The population is Russian, Ossetian, Armenian, and Georgian. Founded in 1874 as a fortress and named Vladikavkas, it was long the military and political center of the Russian Caucasus. It was renamed Ordzhonikidze in 1939 and Dzaudzhikau in 1944. In the Second World War the German advance in the Caucasus was halted (Nov., 1942) within c.10 mi. of the city.

Dzerzhinsk (dzĭrzhĕnsk'), city (pop. 103,415), Central European RSFSR, on the Oka river and 20 mi. W of Gorki. It has chemical industries (phosphate fertilizers) and flour mills. Dzerzhinsk was formerly known as Chernovo.

Dzerzhinsky, Felix Edmundovich (fyē'lyĭksĕdmōōn'-duvĭch dzĭrzhĕn'skē), 1877–1926, Russian Bolshevist leader, organizer and first chairman (1917–21) of the feared Cheka (see SECRET POLICE). Under his direction, the Red Terror reached its height in 1918. Dzerzhinsky, personally a mild-mannered fanatic, later held other high posts.

Dzhambul (jŭmbōōl'), city (pop. 62,723), capital of Dzhambul oblast, Kazakh SSR, on the Turksib RR and the Talass river. It is the center of a sugar-beet and orchard area. The city established here since the 5th cent. A.D. has had various names, before 1933 it was Aulie-Ata.

Dzierzon, Jan or **Johann** (yän' tsēr'zhŏn, yō'hän), 1811–1906, Polish clergyman and apiculturist. He devised a hive with movable combs, by means of which he was enabled to make his observations on parthenogenesis among bees. He wrote *Theorie und Praxis des neuen Bienenfreundes* (1848) and *Rationelle Bienenzucht* (1861, Eng. tr., *Dzierzon's Rational Bee-keeping*, 1882).

Dzierzoniow, Lower Silesia see REICHENBACH.

Dzungaria, Jungaria, Sungaria, or **Zungaria** (all zōōn-gā'rēu), Mandarin *T'ien Shan Pei Lu*, region of Sinkiang prov., China. It lies N of the Tien Shan range. The confederation of Western Mongols established (17th cent.) a large central Asian empire, including Dzungaria (named for the Dsungar, one of the tribes). Dzungaria is a grazing area inhabited by nomads, chiefly Khirghiz and Khazaks. The Dzungarian Ala-Tau is a mountain chain which lies on the boundary of Sinkiang prov., China, and the Kazakh SSR (see ALA-TAU).

E

E, fifth letter of the ALPHABET. It is a usual symbol for a mid-front vowel, such as ĕ. A mid-front vowel was represented by Greek epsilon (ĕp'sĭlŏn) [Gr., =e without the aspirate], to which E corresponds in form and place (see also H). English ē is a diphthong of I and y. In MUSICAL NOTATION E represents a note in the scale.

Ea (ā'ä), Sumerian water-god, widely known in Mesopotamia. One well-known center of his worship was Eridu.

Ead-. For some Anglo-Saxon names beginning thus, see Ed-; e.g., for Eadward, see EDWARD.

Eadmer or Edmer (both: ĕd'mûr), d. 1124?, English monk and historian. He was in the monastery of Christ Church, Canterbury, when Anselm became archbishop of Canterbury, and his biography of St. Anselm is the basic one. Edmer's *Historiae novorum* is a history of England from 1066 to 1122 from the ecclesiastical point of view and excellent in its kind. He was elected archbishop of St. Andrews, but was never consecrated because the Scots refused to accept the spiritual authority of Canterbury.

Eads, James Buchanan (ĕdz), 1820–87, American engineer, b. Lawrenceburg, Ind. He invented (c.1841) a diving bell and for many years salvaged wrecks in the Mississippi. He knew the river so well that Lincoln consulted him on military operations there in the Civil War. Eads built a fleet of ironclads used in the war. He built (1867–74) a bridge of three steel arches at St. Louis—a triumph of engineering in its day—and crowned his achievements by constructing a system of jetties at the mouth of the Mississippi, whereby the river dredged its own channel. Its success made New Orleans an ocean port. His *Addresses and Papers* (1884) contains much material on river control. See biographies by Louis How (1900) and F. L. Dorsey (1947).

Eadwig: see EDWY.

Eagels, Jeanne (ē'gŭls), 1894–1929, American actress, b. Kansas City, Mo. She gained fame in

1922 as Sadie Thompson in *Rain*, which was adapted from Somerset Maugham's short story "Miss Thompson"

eagle, large predatory bird related to the kite, the hawk, and the falcon and found in all parts of the world Eagles are powerful, solitary birds with keen vision and with great ability in flying and soaring. They kill their prey with their sharp, curved claws and tear it apart with their hooked beaks. The American or bald or white-headed eagle became the national emblem of the United States by act of Congress in 1782 The southern bald eagle is found in all parts of the United States near streams, lakes, and seacoasts The northern form ranges chiefly in Canada and in the N United States It takes three years for the young to develop the adult plumage—white head, neck, tail, and upper tail coverts and dark brown body and wing feathers The lower legs are scaled, not feathered The eagle feeds mainly on fish, sometimes robbing the osprey of its catch Large birds, often those crippled, are also eaten, and it may resort to carrion Nests are usually placed high in a tree, and one is often added to year after year The golden or mountain eagle is a bird of the Old and New Worlds In North America it is found chiefly in the West It is dark brown with tawny feathers on the neck, its legs are feathered to the toes It is the largest bird trained for falconry—in Asia it is used for hunting foxes, antelopes, and wolves The gray sea eagle is found in Greenland, Iceland, Europe, and N Asia The monkey-eating eagle is found in the Philippines A symbol of royal and military power since ancient times, the eagle has appeared on coins, seals, and flags since the pre-Christian era It was carried on standards by the armies of Rome and by Napoleon's troops See F H Herrick, *The American Eagle* (1935)

Eagle Grove, city (pop 4,024), N Iowa, NE of Fort Dodge, inc 1882

Eaglehawk, Victoria, Australia see BENDIGO

Eagle Lake. **1** Town (pop 1,891), N Maine, in a hunting and fishing region, settled 1840, inc 1911 **2** City (pop 2,124), S Texas, WSW of Houston founded c 1840 It is a railroad junction near the lake of the same name The dominant crop of the region is rice Potatoes are also grown

Eagle Pass, city (1940 pop 6,459, 1947 estimated pop 9,700), co seat of Maverick co, W Texas, a port of entry on the Rio Grande opposite Piedras Negras, Mexico The present city was laid out in 1850 beside the border post, Fort Duncan, from which U S soldiers went out on lively forays against the Indians In 1855 trouble with the Mexicans led to the burning of Piedras Negras Eagle Pass, now connected by highway with Mexico city, boasts that it is the world's largest shipper of spinach, which is grown in the irrigated region The city has prospered also from processing food and cotton and from international trade

Eagle River, city (pop 1,491), co. seat of Vilas co, N Wis, on the Eagle river and NE of Rhinelander, in a lake and woods region, inc as a village 1923, as a city 1937 It is a center of summer and winter sports

Eagles Mere, borough (pop 175) and resort, Sullivan co, NE Pa It has an altitude of 2,000 ft

eaglewood see ALOES

Eaker, Ira Clarence (ā'kur), 1896–, American general, b Field Creek, Llano co, Texas, grad Southeastern Normal College, Durant, Okla, 1917 In army aviation after 1917, he established many records and in the Second World War became (1942) head of the U S bomber command in Europe As a lieutenant general, he commanded the 8th Army Air Force (1943) and the Allied air forces in the Mediterranean (1944) In 1945 he was made deputy commander of the Army Air Force and chief of the air staff He retired in 1947 With Henry H Arnold, he collaborated in writing *This Flying Game* (1936), *Winged Warfare* (1941), and *Army Flier* (1942)

Eakins, Thomas (ā'kĭnz), 1844–1916, American painter and sculptor, b Philadelphia, where most of his life was spent He studied art at the Pennsylvania Academy of the Fine Arts and in Paris under Gérôme, Bonnat, and the sculptor A A Dumont He also visited Spain, where the art of Velázquez strongly impressed him On his return to Philadelphia in 1870 he painted portraits and taught at the Pennsylvania Academy, but received only slight recognition Nevertheless, he continued to develop an art of extraordinary sobriety and uncompromising realism and late in life enjoyed a little of the high reputation he now holds for his fine portraiture and characterization Among his most notable works are *The Surgical Clinic of Professor Gross* (Jefferson Medical College, Philadelphia), *The Clinic of Professor Agnew* (Univ of Pennsylvania), *The Cello Player* (Pa Acad of the Fine Arts), and *The Chess Players*, *The Writing Master*, and *The Thinker* (Metropolitan Mus) Eakins excelled in depicting the humble types with whom he largely consorted His pictures of athletes, such as *Biglen Brothers Turning the Stake Boat* (Cleveland Mus), are noteworthy His works in sculpture include the colossal figures of the prophets on the Witherspoon Building, Philadelphia, executed in collaboration with his pupil Samuel Murray, and the horses on the Soldiers' and Sailors' Memorial Arch, Brooklyn, N Y As a teacher, Eakins's original and scientific methods, often severely censured, had a profound and healthy influence which can be traced in the work of such men as Sloan, Glackens, and Henri In a period when many artists were concerned with the exotic or deliberately picturesque, he succeeded in painting the everyday world about him See study by Lloyd Goodrich (1933)

Ealdhelm, Saint see ALDHELM, SAINT

Ealing, municipal borough (1931 pop 117,707, 1947 estimated pop 185,960), Middlesex, England, W of London Largely residential, it has several parks Thomas Huxley was born here

Eames, Emma (ēmz), 1865–, American soprano, b China, of American parentage She studied in Boston and with Mme Marchesi in Europe From 1891 to 1909 she appeared at the Metropolitan Opera, New York, where her personal beauty combined with her fine voice to make her especially successful in such roles as Aïda and Juliet and as Micaëla in *Carmen* See her autobiography, *Some Memories and Reflections* (1927)

Eames, Wilberforce (ēmz), 1855–1937, American bibliographer, b Newark, N J He joined the staff of the Lenox Library in 1885 and was its librarian in 1895 when it became a part of the New York Public Library After 1911 he was bibliographer of the New York Public Library The scholarliness of his work on Americana and North American Indian literature was recognized by honorary degrees from many universities He edited Vols XV–XX (1885–92) of Sabin's *Dictionary of Books Relating to America* and resumed work on it in 1927 He taught himself many languages, ancient and modern See *Bibliographical Essays a Tribute to Wilberforce Eames* (1924)

ear, organ of HEARING, consisting of external, middle, and internal parts The external ear, composed of the pinna or auricle and the external auditory canal, collects the sound waves and transmits them to the eardrum (tympanum), a membrane which closes the external ear internally The middle ear is a cavity extending from the internal surface of the tympanum It contains the ear ossicles (the malleus, incus, and stapes) and communicates with the nasopharynx by means of the EUSTACHIAN TUBE Sound waves are transmitted by the tympanum and the ear ossicles to the internal ear or bony labyrinth located in the petrous portion of the temporal bone of the skull Auditory nerve filaments (eighth cranial nerve) in the labyrinth convey sound to the brain Also included in the structure of the internal ear are three semicircular canals, associated with the maintenance of equilibrium

earache, pain in the ear Inflammation of the external auditory canal and infections of the middle ear are common causes Middle-ear infection requires drainage, if neglected, the mastoid process may become involved, or chronic infection may result in a running ear, a possible cause of deafness in later life Pain in the ear should have medical attention

Earhart, Amelia (âr'härt), 1898–1937, American aviator, b Atchison, Kansas Until 1928 she was a teacher and social worker in Massachusetts She became the first woman to cross the Atlantic in an airplane when she made a transoceanic flight, with others, from Newfoundland to Wales in June, 1928 In 1932 she made a solo flight across the Atlantic, and in 1935 she flew across the Pacific, alone, from Honolulu to California She was the first woman to make both flights unaccompanied In 1937 she attempted, with Frederick J Noonan, to fly around the world, but her plane was lost on the flight between New Guinea and Howland Island in the Pacific, and her fate remained a mystery She was aviation editor of *Cosmopolitan Magazine* (1928–30) and author of *20 Hrs 40 Min* (1928), *The Fun of It* (1932), and *Last Flight* (1937), arranged by her husband, George Palmer Putnam, whom she had married in 1931 He also wrote her biography (1939)

Earl, Ralph see EARLE, RALPH

Earle, Franklin Sumner, 1856–1929, American botanist and agriculturist, b Dwight, Ill, M S Alabama Polytechnic Institute, 1902 He is known for his work in mycology, especially for his research on sugar-cane disease He wrote *Southern Agriculture* (1908)

Earle, John, 1601?–1665, English clergyman, bishop of Salisbury from 1663, and author of *Microcosmographie* (1628), a collection of witty characterizations which is still reprinted

Earle, Pliny, 1809–92, American psychiatrist, b Leicester, Mass, M D Univ of Pennsylvania, 1837 He was the son of Pliny Earle (1762–1832), inventor of a machine for carding cotton and wool Pliny Earle, the younger, is known for his work in institutions for the insane (Bloomingdale, N Y, 1844–49, Northampton, Mass, 1864–85) and for his writings on the subject, notably *The Curability of Insanity* (1887) He was one of the founders of the American Psychiatric Association. See biography by F B Sanborn (1898).

Earle or Earl, Ralph, 1751–1801, American portrait and landscape painter, b Worcester co, Mass He is purported to have painted four scenes of the battle of Lexington as an eye witness, but is best known for his admirable portraits, which may be seen in the museums of Chicago, New York, Worcester, Mass, and Yale Univ Earle studied with Benjamin West in London, but his work shows rather the influence of Copley A slight unevenness in his painting is sometimes attributed to his fondness for drink

Earle, cotton town (pop 1,872), NE Ark, NW of Memphis, Tenn, inc. 1905.

Earlham College: see RICHMOND, Ind

Earlington (ûr'lĭngtŭn), city (pop 2,858), W Ky, near Madisonville and N of Hopkinsville. It is a railroad junction in a coal area

Earlom, Richard (ur'lum), 1743–1822, English mezzotint engraver, studied under Cipriani He was known for his fruit and flower pieces and for the engravings after Claude Lorrain

Earlston, formerly **Erceldoune** or **Ercildoune** (both (ûr'sĭdōōn"), parish (pop 1,689), Berwickshire, Scotland, NE of Melrose and on Leader Water The Rhymer's Tower remains of the traditional abode of the poet and prophet, Thomas of Erceldoune or Thomas the Rhymer

Earlville, city (pop 1,103), N Ill, WSW of Aurora, founded c 1854, inc 1869 It is a railroad junction

Early, Jubal Anderson, 1816–94, Confederate general, b Franklin co, Va, grad West Point, 1837 After fighting against the Seminoles in Florida, he resigned from the army (1838), studied law, and practiced at Rocky Mount, Va He saw brief service in the Mexican War Early voted against secession in the Virginia convention (April, 1861), but when war broke out he became a colonel of Virginia troops Winning his brigadier generalcy at the first battle of Bull Run (July, 1861), he fought in all the campaigns (1862–64) of the Army of Northern Virginia He was prominent at Salem Church (see CHANCELLORSVILLE, BATTLE OF) and in the GETTYSBURG CAMPAIGN (1863) In the WILDERNESS CAMPAIGN (1864) he temporarily commanded A P Hill's corps, and when R S EWELL was forced to retire, Early assumed command of the 2d Corps After Cold Harbor, Lee sent Early against Gen David HUNTER, who was threatening Lynchburg Early drove Hunter westward and then marched down the Shenandoah Valley, crossed the Potomac, and moved on Washington He defeated Lew Wallace in the battle of MONOCACY (July 8, 1864) and was before the capital on July 11 The arrival of troops from Grant's army compelled him to withdraw to Virginia, but later in the month he crossed the Potomac again His cavalry raided far and wide and burned Chambersburg, Pa, when that town refused to pay a ransom In Sept, 1864, P H SHERIDAN moved against Early and, defeating him at Winchester and Fisher's Hill, drove him up the valley Early returned and surprised Sheridan's army at Cedar Creek (Oct 19) but was finally defeated On March 2, 1865, his small force was overwhelmed by Gen George Custer, of Sheridan's army, at Waynesboro Lee, although still confident of Early's ability, was forced by public opinion to remove him At the end of the war Early fled the country and did not return till 1869 He resumed the practice of law and was associated with Gen P G T Beauregard in the Louisiana lottery He remained extremely bitter against the North till his death See his autobiography (1912), D S Freeman, *Lee's Lieutenants* (3 vols, 1942–44)

Early English style, type of construction introduced into England by the Cistercians, the first phase of Gothic architecture in England in the late 12th and the 13th cent Its characteristic features are the sharply pointed arch, ribbed and groined vaulting, the clustered column with foliated capital and circular abacus, and, at the end of the period, tracery and other ornament Examples include the choir of Canterbury cathedral, the choir of Fountains Abbey, Lincoln, Salisbury, and Wells cathedrals, which are outstanding expressions, the transept of York Minster with its celebrated Five Sisters window, and the transept, choir, and chapter house of Westminster Abbey

early man, see MAN, PRIMITIVE

Earn, Loch (lŏkh' ûrn'), lake, 6½ mi long and 1 mi wide, Perthshire, Scotland, surrounded by hills Ardvorlich House, on its shore, is the Darlinvarach of Sir Walter Scott's *Legend of Montrose* St Fillans, a village at the east end, is named for the Irish missionary, St Fillan Earn river, outlet of the lake, flows eastward, 46 mi through Strathearn Valley past Comrie, Crieff, and Bridge of Earn, into the estuary of the Tay

earring, a personal adornment, sometimes an amulet, worn attached to the ear lobe Since prehistoric times the ear has been pierced for the insertion of the earring, certain primitive tribes distort the lobe with plugs several inches in diameter or with heavy stones Among forms used are the ball, crescent, chain, plaque, sacred symbols, and representations of animals—the size and length changing with the fashion The Egyptians favored a gold hoop and, later, the incrusted pendant. In Babylonia and Assyria the earring evolved into an

exquisite work of the goldsmith's art and was developed with great richness in Persia, India, and the Far East. In the East it has been worn by men to denote rank. The finely wrought gold earrings of Greece often had tinkling pendants, and Rome adapted Greek and Etruscan styles, set with precious stones Earrings were little used with the headdresses of the Middle Ages, but the style had a vigorous revival during the Renaissance and was adopted also by men The invention of a screw device for attaching the earring brought a fresh revival c 1900

earth, fifth largest PLANET of the SOLAR SYSTEM and the only one definitely known to support life It is the third in order from the SUN, only Mercury and Venus being nearer, the mean distance from the earth to the sun is c 93,000,000 mi The earth rotates about a line (its axis) which is perpendicular to the plane of the EQUATOR and passes through the center of the earth, terminating at the north and south geographical poles The period of one complete rotation is a day, the rotation of the earth is responsible for the alternation of periods of light and darkness (DAY AND NIGHT) The earth revolves about the sun once in a period of a little more than 365¼ days (a year), the path of this revolution, the earth's orbit, is an ellipse rather than a circle, and the earth is consequently nearer to the sun at some seasons than at others, the difference between its maximum and minimum distances from the sun being c 3,000,000 mi The difference is not great enough to affect climate on the earth When the Northern Hemisphere has winter, the earth is nearest to the sun (in perihelion); when it is summer in the Northern Hemisphere, the earth is farthest from the sun (in aphelion) The change in SEASONS is the result of the fact that the earth's axis is inclined to the plane of its orbit, making an angle of 23 5° When the Northern Hemisphere receives the most direct rays it has its warmest season, summer, at that time the Southern Hemisphere has winter, since it is then receiving indirect rays Halfway between, in spring and in autumn, there is a time (EQUINOX) when all parts of the earth have equal day and night The earth is surrounded by an envelope of gases (the ATMOSPHERE), of which the greater part is made up of nitrogen and oxygen The earth is not an exact sphere, but is somewhat flattened at the poles and bulging at the equator The equatorial diameter is c 7,926 mi and the polar diameter 1/297 less, the circumference at the equator is c 24,840 mi The surface of the earth is divided into dry land and oceans, the dry land occupying 57,469,928 sq mi, and the oceans 139,480,841 sq mi It is exceedingly irregular, but for this irregularity, the earth would be completely covered with water, since the ocean has a mean depth of c 2¼ mi as against a mean elevation of the land of c ½ mi According to the theory of isostasy, the various segments of the earth's crust are in balance (see CONTINENT) Information about the interior of the earth is derived chiefly from study of the behavior of earthquake waves, from consideration of its shape, and from analogies with meteorites It is probably much denser at its core than at its surface, this conjecture is borne out by the fact that while the mean density of the rocks at the surface is 2 7 the mean density of the earth is calculated to be 5 52 Present evidence obtained from the study of earthquake waves, which pass through the earth to a depth of 1,800 mi, would indicate that the interior of the earth is solid to that depth The fact that temperature increases progressively downward does not, moreover, impair the concept of its solidity, since the melting point of rock, as of other substances, is raised by pressure and since the pressures in the earth's interior are great The molten magma which issues from a VOLCANO in the form of LAVA may in all probability owe its origin to radioactivity or to the relief of pressure comparatively near the surface of the earth In the same way, rearrangements under pressure probably account for the setting up of the stresses and strains which are adjusted by the formation of folds and faults The earth is conceived to consist of a series of concentric shells—an outer layer of sedimentary rocks, an underlying granite-gneiss shell, a shell of basic rocks, similar to peridotite, and a core of nickel and iron, with a transitional layer between the basic rocks and the core The age of the earth has been estimated at from 2,000,000,000 to 3,000,000,000 years See R A Daly, *Our Mobile Earth* (1926), Harold Jeffreys, *The Earth* (1929), George Gamow, *Biography of the Earth* (1941), H. H Read, *Geology: an Introduction to Earth-History* (1949)

earthenware, a form of POTTERY fired at relatively low temperatures, so that the clay does not vitrify, as do stoneware and porcelain clays. Occasionally earthenware is used as a general term for all kinds of pottery

earthquake, trembling or shaking movement of the earth's surface Great earthquakes usually begin with slight tremors, rapidly take the form of one or more violent shocks, and end in vibrations of gradually diminishing force. They are most commonly caused by the jar given the earth's surface when a FAULT occurs; other causes are the subterranean movements of gases and lava in volcanic activity and the collapse of the roofs of caves The subterranean point of origin of an earthquake is called its focus; the point on the surface directly above the focus is the epicenter The effects of the earthquake are strongest in a zone some distance from the epicenter, as the ordinary earthquake has several epicenters lying along the plane of the fault, the distribution of these effects shows great irregularity From data registered by the SEISMOMETER, earthquake activity has been analyzed into compressional or longitudinal waves, distortional or transverse waves and surface waves The longitudinal and transverse waves, of which the longitudinal travel more rapidly, pass through the earth and cause the preliminary tremors of the quake, since their velocities depend on the density and elasticity of the material which transmits them, as well as on their own character, their study may lead to some conclusions about the nature of the earth's interior The surface waves cause the violent shocks of the quake Violent earthquakes occur roughly in two zones of the earth's surface, of which one follows a line drawn through the Mediterranean, Asia Minor, the Himalayas, and the East Indies, while the other follows the western, northern, and eastern shores of the Pacific Tsunamis, or seismic sea waves, erroneously called tidal waves, are the results of submarine earthquakes Notable earthquakes have occurred at Lisbon (1755), at Charleston, S C (1886), in California (1906), near Valparaiso (1908), at Messina (1908), in Kansu prov , China (1920), in Japan (1923), and at Ambato, Ecuador (1949) The Lisbon and Valparaiso earthquakes were accompanied by tsunamis See N H Heck, *Earthquakes* (1936), J. J Lynch, *Our Trembling Earth* (1940), L. D Leet, *Causes of Catastrophe* (1948)

earths. see ALKALINE EARTHS and RARE EARTHS

earthworm, segmented worm of the phylum Annelida or Annulata found in most parts of the world except in deserts and extremely cold regions In temperate climates earthworms are usually not more than 10 in long, but forms 4 to 6 ft long and about 1 in in diameter are known in Africa, Australia, and South America *Lumbricus terrestris*, common in Europe and America, is the species usually studied in laboratories It has no head and no organs of sight or hearing, but is sensitive to light and to vibrations It usually emerges from the ground only at night or on dark days In winter and during drought it remains deep in the ground It moves by the action of circular and longitudinal muscles, aided by rows of bristles called setae which line the sides of the body. Leaves and other organic material form its diet A muscular gizzard grinds the food The plasma of the blood contains hemoglobin and the corpuscles are colorless Worms are hermaphrodites but do not fertilize their own eggs Two individuals exchange sperm cells and the eggs and sperms are encased in a cocoon secreted by the clitellum, a band of tissue near the anterior end of the body Fertilization occurs in the cocoon, which is placed in the ground The young emerge as small but fully formed worms Earthworms are of inestimable value to agriculture Burrowing through the ground they aerate the soil and make it easier for roots to grow Nutriment from the soil is absorbed in the intestine, and the residue is deposited as castings outside the burrow This builds up a finely divided layer of surface soil See C R Darwin, *Darwin on Humus and the Earthworm* (reprint, 1945)

earwig, popular name of a small or medium-sized chiefly nocturnal insect of the order Dermaptera, usually black or brown Some tropical species are brightly colored Pincerlike organs, probably used mainly for defense and for capturing and killing prey, are attached to the end of the abdomen They are larger in the male than in the female Some species are wingless The eggs and young are cared for by the female The metamorphosis is gradual In the tropics earwigs are often carnivorous and cannibalistic, while in cooler climates they frequently are garden and household pests Among the numerous widely distributed species are the European, the black, and the maritime or seaside earwigs Superstitions regarding the earwig include the belief that it crawls into human ears and penetrates the brain

easement (ēz'mŭnt), in law, right to the limited use of another's land Easements are divided into easements in gross and servitudes An easement in gross is a right of way across another's land pursuant to a private LICENSE It cannot be disposed of without the consent of the landowner. A servitude, also called an easement appurtenant, is a privilege enjoyed by one parcel of land (the dominant estate) as against another (the servient estate) Servitudes are part of the estate and go with it on sale or lease. They may be created by deed (i e , a sale of the servitude), by prescription, or by implication. A servitude by prescription is one arising from a use of land without protest from the owner for a period of years set by statute or common law. A servitude by implication is one created by a necessary use of the neighbor's land. Examples are the right of drainage over land extending to a river or a sewer and the right, generally recognized only in England and not in the United States, to daylight unobstructed by new buildings

Easley, cotton-milling city (pop 5,183), NW S.C., W of Greenville, in a farm area, founded 1874

East, Sir Alfred, 1849–1913, English landscape painter and etcher, studied in Paris under Bouguereau His landscapes, broadly painted, are low in key and quiet in mood Characteristic are *Returning from Church* (Carnegie Inst , Pittsburgh) and *The Morning Moon* (Art Inst , Chicago) East wrote *The Art of Landscape Painting in Oil Colour* (1906)

East, Edward Murray, 1879–1938, American biologist, b Du Quoin, Ill , grad Univ of Illinois (B S , 1900, Ph D , 1907) He served the agricultural experiment stations of the Univ of Illinois (1900–1905) and of Connecticut (1905–9) and taught at Harvard from 1909 (as professor of experimental plant morphology from 1914 to 1926 and of genetics from 1926) His researches on the genetics and breeding of corn and on tobacco—in part for the Dept of Agriculture—were especially valuable His works include *Mankind at the Crossroads* (1923) and *Heredity and Human Affairs* (1927), he edited *Biology in Human Affairs* (1931)

East Alton, village (pop 4,680), SW Ill , on the Mississippi above St Louis and contiguous to Alton, inc 1894 It has an ammunition plant

East Anglia (ăng'glēu), kingdom of Anglo-Saxon England, comprising the modern counties of Norfolk and Suffolk It was settled in the late 5th cent by Angles Little is known of its early history, but its large size and protection by fens probably made it one of the most powerful kingdoms in the late 6th cent Raedwald of East Anglia (593?–c 627) followed Æthelbert of Kent as overlord of S England and seated Edwin as king of Northumbria This brief ascendancy was eclipsed by the rise of MERCIA, of which East Anglia became an underkingdom for long periods after 650 and c 794 It rebelled from Mercia in 825 to submit to Egbert of Wessex The great Danish invading army was quartered (865–66) in East Anglia and returned (869) to conquer the state completely, destroy its monasteries, and murder its young ruler, St Edmund When King ALFRED of Wessex first decisively defeated the Danes in 878, they retired under Guthrum to an area which included East Anglia, and the treaty of 886 confirmed the region as part of the DANELAW Its Danes gave aid to the viking invaders in 893 and continued to harass Wessex until Edward the Elder finally defeated their army in 917 After this time, East Anglia was an earldom of England

East Angus (ăng'gŭs), town (pop 3,501), SE Que , on the St Francis, and ENE of Sherbrooke Pulp and paper and brickmaking are its chief industries

East Aurora, village (pop 5,253), W N Y , SE of Buffalo, inc 1874 Leather and metal products are made The Roycroft Shops, founded by Elbert HUBBARD in 1895, were sold in 1939

East Avon see AVON **2**, river, England

Eastbourne, county borough (1931 pop 57,435, 1947 estimated pop 54,980), Sussex East, England, S of London, on the coast near Beachy Head and backed by the South Downs It is a popular resort with a 3-mile promenade along the terraced sea front There are traces of Roman occupation The city's growth during the late 19th cent was due largely to the efforts of the 7th duke of Devonshire Devonshire Park contains winter gardens.

East Brady, borough (pop 1,427), W Pa , on the Allegheny river and NNE of Pittsburgh, laid out 1866 It has a rubber-products plant and bituminous coal mines

East Brewton, town (pop 1,340), S Ala , near the Conecuh river and Brewton

East Bridgewater, town (pop 3,832), SE Mass , SE of Brockton, settled 1649, set off from Bridgewater 1823 It produces machinery

East Brookfield, town (pop 1,016), S central Mass , WSW of Worcester, settled 1664, set off from Brookfield 1920

East Broughton (brô'tun), town (pop 1,684), S Que , S of Quebec city, near an area of asbestos mining

East Cape, northeasternmost point of Asia, RSFSR, on Chukchi Peninsula and on Bering Strait Its official Russian name since 1898 has been Cape Deshnev, after the Russian navigator who first reached (1648) the cape, he is commemorated by a monument

Eastchester, town (pop 23,492), SE N Y , in Westchester co , settled 1664 By an act making it a township (1788), Eastchester stretched from the south at Westchester (part of the present Bronx) to the north at Scarsdale and included Mt Vernon When Mt Vernon became a city (1892), Eastchester was divided in two parts, with Mt Vernon between, the southern part was annexed (1895) to New York city Eastchester now includes the villages Bronxville and Tuckahoe On the site of St Paul's Church (c 1761), in present Mt Vernon, the Westchester co. election of 1733 was held, bringing about the arrest of John Peter ZENGER for publishing an account of the election in his weekly newspaper. St Paul's Church is now a national historic site (1943).

East Chicago, city (pop 54,637), NW Ind., on Lake Michigan c 20 mi from Chicago, settled 1888, inc 1889 It is the largest port in the state and has a dense concentration of heavy industry The city manufactures coke, chemicals, steel, gypsum, petroleum, and metal products The lake front of the city, Indiana Harbor, is connected with the Grand Calumet river by a 3-mile-long ship canal

East China Sea or **Eastern Sea**, western arm of the Pacific Ocean It is partly bounded by Japan, the Ryukyu Islands, and China It is connected with the South China Sea by Formosa Strait and opens in the north to the Yellow Sea

East Cleveland, city (pop 39,495), NE Ohio, residential suburb of Cleveland, inc as a village 1895, as a city 1911 Nela Park, seat of General Electric's experimental laboratories, and Forest Hill Park, former Rockefeller estate, are here

East Conemaugh (kŏn'ümô'), coal-mining borough (pop 4,810), SW Pa , on the Conemaugh river and near Johnstown, inc 1891

East Coolgardie Goldfield (kōōlgär'dē), richest gold field in Australia, 632 sq mi., in the arid south central section of Western Australia The chief mining center is the municipality of Kalgoorlie and Boulder, Coolgardie is also important Gold was discovered here in 1892

East Detroit (dĭtroit'), residential city (pop 8,584), SE Mich , a suburb of Detroit; settled 1827, inc 1924 as Halfway village In 1928 it was renamed and incorporated as a city.

East Dubuque (dubūk'), city (pop 1,475), NW Ill , on the Mississippi, connected by bridge with Dubuque, Iowa, inc 1865

East Dundee, village (pop 1,306), NE Ill , on the Fox river and NW of Chicago; inc 1887

Easter [Old Eng., from a spring goddess], chief Christian feast, anniversary of the resurrection of Jesus Christ It falls between March 22 and April 25, inclusive (see CALENDAR) Many dates of the Christian calendar move with Easter There is a preparatory period of penitence, beginning (in the West) with Septuagesima Sunday, 17 days before LENT, and ending in HOLY WEEK With Easter begins the paschal season, liturgically marked with rejoicing; Alleluia is often said, and the paschal CANDLE is set up The five Sundays of this time begin with Low Sunday They are followed by Ascension (Thursday) and, 10 days later, by PENTECOST. The Sunday after Pentecost is Trinity Sunday. Until Advent the days are counted from Pentecost or Trinity A feature of Roman Catholic life is the Easter duty, by which every member is required to receive communion at Easter time (i e , between Ash Wednesday and Trinity Sunday) Failure to do so is commonly regarded as equal to leaving the Church Painting eggs and wearing new clothes are Easter observances, there is no development of festivities comparable with those of Christmas

Easter Island, Span , *Isla de Pascua*, island (c 46 sq mi , pop 563), in the Pacific, c 2,000 mi W of Chile, to which it belongs Of volcanic origin, Easter Island is covered generally with grasslands and is swept by strong trade winds that occasionally bring days of drenching rain The inhabitants speak a Polynesian tongue They raise yams, taro roots, potatoes, bananas, and sugar cane The island has long been known for the indecipherable petroglyphs and remarkable monolithic stone heads, from 30 to 40 ft tall, which have evoked all kinds of legends and theories as to their origin. They are carved from tufa, a soft volcanic stone, and their average weight is from 5 to 8 tons There are conflicting theories as to the origin and the culture of the builders of these monuments One recent theory holds that the statues are no more than 500 or 600 years old and that they were still being carved at the time that the island was discovered—apparently by the British navigator and buccaneer Edward Davis in 1686 or 1687—and was named (1722) by the Dutch navigator Roggeven on Easter, 1722 There is no evidence to support the theory that Easter Island is the remnant of a "lost continent," a belief that is, nevertheless, widely held Their possible connection with the Inca and other South American Indians has been much debated Many scholars believe that the ancestors of the Polynesians, who may have come to the island in the 12th and 13th cent , erected the monuments, despite the fact that the inscriptions are unintelligible See William Churchill, *Easter Island* (1912), J M Brown, *The Riddle of the Pacific* (1925), R J Casey, *Easter Island* (1931), Alfred Métraux, *Ethnology of Easter Island* (1940).

Eastern Church: see ORTHODOX EASTERN CHURCH

Eastern Empire: see *Roman Empire* under ROME and see BYZANTINE EMPIRE

Eastern Question, general term designating the political relations of certain European states with the OTTOMAN EMPIRE in the 18th, 19th, and early 20th cent. The Eastern Question is understood to begin with the rise of Russia as a European power under Peter I, and the problems presented by Russian expansion at the expense of a decaying Turkey It first came into sharp focus during the reign of CATHERINE II with the first two of the RUSSO-TURKISH WARS (1768–74, 1787–92). At this stage Russia, in alliance with Austria, planned the partition of the Ottoman Empire Constantinople was the chief prize coveted by Russia, which lacked an adequate outlet to the sea. These designs aroused alarm in Prussia and, more especially, in Great Britain, which saw its route to India, and perhaps India itself, threatened by Russian ambitions The formation of a diplomatic alliance by Great Britain, Prussia, and the Netherlands, and the Austrian defeats at the hands of the Turks, offset Russian successes, thus the first stage of the struggle, terminating with the Treaty of Jassy (1792), ended without a decisive Russian triumph During the Napoleonic era, when attention shifted elsewhere, Russia after another war with Turkey again secured favorable terms in the Treaty of Bucharest (1812) and pushed its conquest against Persia and in the Caucasus, which were confirmed in the treaties of GULISTAN (1813) and TURKMANCHAI (1828) These developments and the outbreak of national aspirations among the oppressed peoples of the Balkans again made the Eastern Question a major European problem The Holy Alliance was committed to defending the territorial integrity of Turkey, but the rival imperialistic interests of the Great Powers, each of which hoped to profit from Ottoman disintegration, soon caused the abandonment of this principle In the Greek War of Independence (1821–30), both England and Russia assisted the Greek insurgents, each trying to impose its influence on the newly formed state The Russo-Turkish War of 1828–29, connected with the Greek war, ended successfully for Russia (see ADRIANOPLE, TREATY OF), but the subsequent Russian assistance to Turkey against MOHAMMED ALI of Egypt, followed by a Russo-Turkish alliance (1833) greatly disquieted England and France Still, the five Great Powers (England, France, Russia, Austria, and Prussia) acted in concert in the final settlement of the Egyptian question In 1854, however, Anglo-Russian rivalry caused the Eastern Question to explode once again in the CRIMEAN WAR The treaty which ended it (see PARIS, CONGRESS OF) sought to stabilize the situation by accepting Turkey into the concert of European nations, satisfying to some extent the national aspirations of the Rumanians, affording protection to the sultan's Christian subjects, establishing a statute for the DARDANELLES and the Black Sea, and guaranteeing the integrity of Turkey But Turkey had become the "sick man" of Europe and its disintegration could not be arrested Events in BOSNIA AND HERCEGOVINA once more led to a Russo-Turkish War (1877–78), the Treaty of SAN STEFANO was so favorable to Russia that Disraeli became thoroughly alarmed, and war between England and Russia was but narrowly averted The congress (see BERLIN, CONGRESS OF) which revised the Treaty of San Stefano marked a return of British influence Nevertheless, several developments soon were to shift the system of alliances Austria, allied with Russia in the late 18th cent , had long come to fear Russian influence in the Balkans, reoriented to the east after its defeat by Prussia in 1866, it had joined in an alliance with Germany (see TRIPLE ALLIANCE AND TRIPLE ENTENTE) Germany, which had assumed the role of "honest broker" at the Congress of Berlin, became increasingly interested in extending its influence over the Ottoman Empire The German-Austrian *Drang nach Osten* policy became manifest in the reorganization of the Turkish army by German officers, the BAGHDAD RAILWAY affair, the crisis over MOROCCO, and Austrian annexation of Bosnia and Hercegovina Russian PAN-SLAVISM in the Balkans and the almost total disappearance of European Turkey in the BALKAN WARS left Turkey no choice but to seek German and Austrian support and to join the Central Powers after the outbreak of the First World War Even after the liquidation of the Ottoman Empire, many problems inherent in the Eastern Question remained open, but the Eastern Question as such ceased to exist See Sir J A Marriot, *The Eastern Question* (3d rev ed , 1924)

Eastern Rumelia: see RUMELIA

Eastern Sea, see EAST CHINA SEA

Eastern Turkistan, see SINKIANG

East Flanders, province (1,147 sq mi , pop 1,212,103), NW Belgium, bordering on the Netherlands in the north GHENT is the capital. The province is drained by the Scheldt (Escaut), Dender, and Lys and has a very fertile soil Textile manufacturing is the chief industry The population is mostly Flemish-speaking For the history of East Flanders, see FLANDERS

East Flat Rock, town (pop 1,103), W N C , in the Blue Ridge SSE of Asheville, inc 1926 It is the railroad center for a resort area.

East Friesland (frēs'lŭnd), region and former duchy, extreme NW Germany It includes the East Frisian Islands in the North Sea and is separated in the west from the Netherlands by the Dollart, inlet of the North Sea formed by the Ems estuary EMDEN is the chief city and port. The extensive moors and marshlands of the region have been partly reclaimed. East Friesland became a county of the Holy Roman Empire in 1464, was raised to a duchy in 1654, passed to Prussia in 1744, and—after various transfers in the Napoleonic era—was attached to Hanover in 1815.

East Galloway, county, Scotland see KIRKCUDBRIGHTSHIRE.

East Gary, town (pop. 3,401), Lake co., NW Ind., near Lake Michigan.

East Granby, town (pop 1,225), N Conn., set off from Granby 1858.

East Grand Forks, city (pop 3,511), NW Minn., on the Red River opposite Grand Forks, N Dak , in a farm area, settled 1870. There is a beet-sugar refinery

East Grand Rapids, city (pop. 4,899), SW Mich , near Grand Rapids, settled 1835, inc. as a village 1891, as a city 1926

East Greenville, borough (pop 1,776), S Pa , NNW of Philadelphia; settled 1850, inc 1875

East Greenwich (grē'nĭch, grĭ'nĭch), town (pop 3,842), co seat of Kent co , central R I , SW of Providence; inc 1677 Its textile industry dates from 1790 East Greenwich Academy was founded in 1802 The Northeastern Naval Air Station is near here, at QUONSET POINT

East Haddam, textile town (pop 2,217), S Conn , on the Connecticut, settled c 1670, set off from Haddam 1734

East Ham, county borough (1931 pop 142,394; 1947 estimated pop 120,160), Essex, England, eastern suburb of London It has extensive shipyards, docks, chemical factories, and ironworks. Manor Park lies to the north, and Woolwich to the south

Eastham (ēs'tăm", ēs'tŭm), resort town (pop 582), SE Mass , on Cape Cod between Orleans and Wellfleet, settled 1644 from Plymouth, inc 1651 Shipping and fishing flourished here Nauset Light and U S coast guard station are in the town An 18th-century windmill was restored in 1936

East Hampton 1 Town (pop 2,955), central Conn , E of the Connecticut and below Hartford, settled c 1710, inc 1767 Machine parts are made here 2 Resort and residential village (pop 1,756), on E Long Island, SE N Y , near Southampton, settled 1648, inc 1920 The home of John Howard Payne and other historic buildings remain Much of the hurricane damage of Sept , 1938, was repaired

Easthampton, industrial town (pop 10,316), W Mass , S of Northhampton, settled 1664, inc 1809 Williston Academy for boys (1841) is here

East Hartford, town (pop 18,615), central Conn , across the Connecticut from Hartford, settled c 1640, inc 1783 It has an airplane industry

East Haven, town (pop 9,094), S Conn , inc 1785 It produces engine parts

East Helena (hē'lĭnə), town (pop 1,143), W central Mont , near Helena, inc 1927 Zinc and lead are processed here

East India Company, British, 1600–1858, chartered by Parliament for the monopoly of trade with the Eastern Hemisphere The company, after losing to the Dutch in the contest for the trade of Indonesia and the Pacific islands, virtually limited itself to Indian trade, concentrating on exporting textiles Other trading concerns violated its monopoly, which was abrogated in 1698 but restored after it amalgamated (1708) with its leading competitor The victories (1745–61) of Robert Clive over the French rivals for the Indian trade made the British company's position impregnable When its prosperity was threatened by the disorders attending the breakup of the Mogul empire, the company intervened in Indian politics and acquired territory for military establishments The power of the company was enormous Parliament, fearing a private empire, placed (1773) it under cabinet control and appointed Warren Hastings the first governor general of the Indian possessions The company continued to have enormous political and economic power, even in England itself the operations were widespread Parliament in 1813 abolished the monopoly and in 1833 limited the company's activities to administration The Sepoy Rebellion (1857) merely hastened the crown's direct assumption of Indian rule Records and documents concerning the company have been published in great profusion, and there are many monographs as well as general and popular works on its history Some of these are Beckles Willson, *Ledger and Sword* (1903); W R Scott, *Joint-Stock Companies* (3 vols., 1910–12), William Foster, *John Company* (1926), M K E Wilbur, *The East India Company and the British Empire in the Far East* (1945); C L Reid, *Commerce and Conquest* (1948)

East India Company, Dutch, 1602–1798, chartered by the States-General to aid the war of liberation against Spain and Portugal and to expand trade From its headquarters at Batavia (founded 1619) the company drove the British and Portuguese from Indonesia, Malaya, and Ceylon and arrogated to itself the fabulous trade of the Spice Islands A colony, established (1652) in South Africa at the Cape of Good Hope, remained Dutch until conquered by Great Britain in 1814. The company was dissolved when it became scandalously corrupt and nearly insolvent in the late 18th cent , and its possessions became part of the Dutch colonial empire in the Far East. See Albert Hyma, *The Dutch in the Far East* (1942).

East India Company, French, 1664–1769, chartered by the French government to compete with Great Britain for the trade of India. It was combined (1719) under John Law with the other French trading companies to make the Compagnie des Indes (see Mississippi Scheme), but with the collapse of the scheme it resumed independence in 1720. Robert Clive, the British commander, brought about the company's downfall by defeating (1745–61) its attempt under Dupleix and La Bourdonnais to carve out an Indian empire by military conquest. See V. M Thompson, *Dupleix and His Letters* (1933)

East Indies, name used primarily for India and, vaguely, the adjacent regions, but also extended to include SE Asia and Indonesia

East Jordan, resort city (pop 1,725), N Mich , NE of Traverse City and on the Jordan, in a farm area; inc as a village 1887, as a city 1911 Canned goods and dairy products are made

Eastlake, Sir Charles Lock, 1793–1865, English painter and art critic He lived 14 years in Rome and painted Italian landscapes, often with figures In 1855 he was made director of the National Gallery, which owes much to his judgment He translated *Theory of Colors* from Goethe's work and wrote several learned books on painting.

Eastland, city (1940 pop 3,849, 1947 estimated pop 5,000), co seat of Eastland co , N central Texas, on the South Leon river and WSW of Fort Worth, laid out 1875, inc 1897 It is the center of a farming (peanuts, vetch seed, truck), dairying, and oil-producing region and has small factories Much publicity was given in the late 1920s to a horned frog said to have remained alive 31 years in the cornerstone of the old courthouse

East Lansdowne, borough (pop 3,323), SE Pa , near Philadelphia, settled by Friends

East Lansing, residential city (pop 5,839), S Mich , on the Cedar adjoining Lansing, settled c 1850, inc 1907 It is the seat of Michigan State College of Agriculture and Applied Science

East Liverpool, industrial city (pop 23,555), NE Ohio, on the Ohio river and N of Steubenville, settled 1798 and named St Clair, called Fawcett's Town until 1830, inc as a village 1834, as a city 1882 Its extensive clay deposits are used in its chief industry, pottery, begun c 1839 Other manufactures include bricks, barrels, cartons, and paper products A museum houses a historical pottery collection

East London, city (pop 76,016), SE Cape Prov , Union of South Africa, a port on the Indian Ocean, founded in the mid-19th cent It exports the products of its largely agricultural hinterland, including citrus fruit, dairy products, meat, hides, and wool There are foundries and railroad workshops

East Longmeadow, agricultural town (pop 3,403), SW Mass , SE of Springfield, settled c 1740, set off from Longmeadow 1894 Aircraft parts were made here in the Second World War

East Lothian (lō'dhēun), formerly **Haddingtonshire** or **Haddington,** county (267 sq mi , 1931 pop 47,338, 1948 estimated pop 50,789), SE Scotland The county seat is Haddington In the south are the Lammermuir Hills, which slope gently down to the Firth of Forth on the north The Tyne is the chief river The rich lowlands are extensively cultivated, and the highlands are devoted to sheep grazing The people engage in fishing, coal mining, brickmaking and distilling The county was part of the Anglo-Saxon kingdom of Northumbria until the 11th cent , when it was joined to Scotland It continued thereafter to suffer in the border warfare between England and Scotland

East Lumberton, town (pop 1,039), S N C , SSW of Fayetteville, in a farm area

East Lyme (līm), town (pop 3,338), SE Conn., W of Niantic Bay and river, settled c 1660, inc 1839 Surgical dressings are manufactured Its many colonial houses include the Thomas Lee House (1664), near it is the Little Red Schoolhouse (1734?) A state farm for women is here

East Machias (muchī'us), town (pop 1,183), SE Maine, on both sides of the East Machias river, inc 1826 Canning (especially of blueberries) is done

East McKeesport, residential borough (pop 3,026), SW Pa , near the Monongahela SE of Pittsburgh; inc 1895

Eastmain (ēst'mān), river rising in central Quebec in the Otish Mts and flowing 375 mi W to James Bay Three miles from its mouth is one of the oldest Hudson's Bay Company posts, founded in 1685

Eastman, George, 1854–1932, American inventor, industrialist, and philanthropist, b. Waterville, N Y By mass production of his photographic inventions, he enormously stimulated the development of photography as a popular hobby. He invented a dry-plate process and established (1880) a factory at Rochester, N Y , for making the plates; he devised a roll film and the Kodak camera (1888) to use it, as well as a process for color photography (1928) The Eastman Kodak Company, founded in 1892, was one of the first firms in America to establish a plant for large-scale production of a standardized product and to maintain a fine chemical laboratory; its progressive welfare program included a profit-sharing plan. Eastman's philanthropies were estimated at over $100,000,000: the principal recipients were the Univ. of Rochester and the Eastman School of Music, Massachusetts Institute of Technology, Tuskegee and Hampton institutes, Rochester Dental Dispensary, and dental clinics in several European capitals. In 1932 after a long illness Eastman committed suicide.

Eastman, Joseph Bartlett, 1882–1944, U.S. government administrator, b. Katonah, N.Y., grad. Amherst, 1904 Early interested in transportation, he was secretary (1906–13) of the Public Franchise League in Boston, adviser of street-railroad employees (1913–14), and a member (1915–19) of the Massachusetts public-service commission before President Wilson appointed (1919) him to the Interstate Commerce Commission As Federal coordinator of railroads (1933–36), director of the Office of Defense Transportation (1941–44), and a member of the War Production Board, he showed great ability at mobilizing all sorts of transportation for the good of the nation He was at first widely known as a radical, but later his opinions were more conservative

Eastman, Max, 1883–, American author, b. Canandaigua, N Y , grad Williams, 1905 He also studied and taught at Columbia Univ His first book, *Enjoyment of Poetry* (1913), is widely considered as one of the most important of modern studies of the psychology of poetry reading He edited the leftwing Socialist magazine the *Masses* from 1914 until it was suppressed (1917) in the First World War He later edited the *Liberator* His *Enjoyment of Laughter* (1936) is an outstanding study of the psychology of humor He also has written works on Marxism and modern Russian history His autobiography is called *Enjoyment of Living* (1948)

Eastman, city (pop 3,311), co seat of Dodge co , central Ga , SSE of Macon, in a cotton and pecan area; founded after the railroad's coming (1871)

Eastman School of Music see Rochester, University of, and Hanson, Howard

East Mauch Chunk (mô"chŭngk'), borough (pop 3,392), E central Pa , on the Lehigh river and near Mauch Chunk, inc 1853

East Millinocket (mĭl"lĭnŏ'kĭt), town (pop 1,663), central Maine, on the Penobscot and SE of Millinocket, inc 1907 The same year a dam and paper mill were built here

East Moline (mōlēn'), city (pop 12,359), NW Ill , on the Mississippi; inc 1907 It is an industrial suburb of Moline East Moline State Hospital is here, and near by is Campbell's Island State Park

East Montpelier (mŏntpēl'yŭr), town (pop 1,025), central Vt Settled c 1788, it was set off from Montpelier in 1848

East Newark, borough (pop 2,273), NE N J., across the Passaic from Newark, inc 1895

Easton. 1 Rural town (pop 1,262), SW Conn , NW of Bridgeport, settled c 1757 **2** Rural town (pop 1,605), NE Maine, E of Presque Isle, inc 1864 **3** Town (pop 4,528), co seat of Talbot co , Eastern Shore, Md , across Chesapeake Bay SE of Annapolis, settled 1710, inc 1906 It is the trade center of an agricultural area and has canneries and lumber mills A Friends' meetinghouse here dates from c 1683 **4** Industrial town (pop 5,135), SE Mass , S of Boston, settled 1694, inc 1725 **5** Industrial city (pop 33,589), co seat of Northampton co , E Pa , on the Delaware near the mouths of the Lehigh and Bushkill rivers and c 55 mi N of Philadelphia, laid out 1752, inc as a borough 1789, as a city 1886 A ferry was established here in 1739 In canal days a coal-receiving port in the Pennsylvania Dutch region, it now manufactures textiles, chemicals, electrical devices, and quarry cars Lafayette College (Presbyterian, for men, 1826) is here Easton was the seat of Indian conferences in 1756 and 1761 Union Church, built in 1775 and now Reformed, is here

East Orange, city (pop 68,945), NE N J., adjoining Newark, primarily a residential suburb of New York and Newark, settled 1678, separated from Orange 1863, inc 1899 A civic center including a city hall and post office was completed in 1929 Upsala College (Lutheran, coeducational, 1893) and Panzer College of Physical Education and Hygiene are here

East Palestine, city (pop 5,123), NE Ohio, at the Pa line S of Youngstown, in a fine orchard area, founded 1828, inc 1875 The region yields clay, shale, oil, and coal, which are used in the city's pottery plants Other manufactures include fireproofing material, porcelain insulators, and steel tanks.

East Paterson, borough (pop. 4,937), NE N J , industrial suburb of Paterson; inc 1916

East Peoria, city (pop 6,806), N central Ill , on the Illinois river opposite Peoria; inc 1919

East Pittsburgh, industrial borough (pop 6,079), SW Pa , on the Monongahela and near Pittsburgh; inc 1895. Electrical equipment is manufactured here In 1755 Braddock's army was defeated on this site by the French and Indians

East Point, industrial city (pop 12,403), NW Ga., a suburb of Atlanta, inc 1887 Chemicals, automobile batteries, and fertiliser are made here.

Eastport, city (pop 3,346), SE Maine, a resort on Moose Island in SE Passamaquoddy Bay, settled c.1780, inc. as a town 1798, as a city 1893 Fishing and fish processing are the chief industries, the country's first sardine cannery was built here c.1875. The city is a port of entry Fort Sullivan was erected at Eastport after the Embargo Act of 1807, but the village fell to the British in July, 1814. The tidal variation at Eastport averages 18 ft , the Passamaquoddy Bay project was initiated (1935) to convert this tidal power into hydroelectric power for industry

East Prairie, city (pop 2,469), SE Mo , near the Mississippi SW of Cairo, Ill. It has cotton gins and flour and lumber mills.

East Providence, town (pop 32,165), E R I , near the Seekonk river, in a farm and dairy area Originally part of Massachusetts, it was incorporated as a Rhode Island town in 1862 It includes Rumford village Food and petroleum are processed

East Prussia, former province (14,283 sq. mi., 1939 pop. 2,333,301), former Prussia On the map of 1938 it was separated from the rest of Germany by the Polish Corridor and the Free City of Danzig in the west, it bordered Poland and Lithuania in the south and east and stretched to Memel and the Baltic Sea in the north and northeast. At the Potsdam Conference (1945), East Prussia was broken up by two transfers, which are, however, subject to ratification in a final peace treaty with Germany The northern part (c 6,100 sq mi) with the capital, Königsberg, was assigned to the USSR, which incorporated it with the RSFSR as the Kaliningrad oblast The rest, including Allenstein, Elbing, and Marienburg, was placed under Polish administration Heavily wooded and dotted by many lakes (especially in Masuria), East Prussia is largely agricultural, producing rye, oats, potatoes, and livestock In the 13th cent the Teutonic Knights conquered the region from the Old Prussians (a people related to the Liths), displaced the original population, and secured the territory as a fief for their order In 1466 they ceded Pomerelia (later known as West Prussia) and Ermeland to Poland and accepted Polish suzerainty over the rest of their domain In 1525 Albert of Brandenburg, after secularizing the Teutonic order, took the title duke of Prussia, still under Polish suzerainty The duchy was inherited (1618) by the elector of Brandenburg Frederick William the Great Elector won full sovereignty over the duchy at the Peace of Oliva (1660), and in 1701 his son had himself crowned king of Prussia as Frederick I at Königsberg East Prussia, as the original Prussia came to be called, from that state has fully shared the history of Prussia It remained the stronghold of the Prussian land-owning and military aristocracy—the *Junkers*—whose immense estates took up a large part of the province

Ebert, Friedrich (frē'drĭkh ā'burt), 1871–1925, first president of the German republic (1919–25) A saddler, he became a trades union leader and a Social Democratic deputy in the Reichstag In 1913 he became party leader By no means a revolutionary, Ebert supported the war effort during the First World War, favored cooperation with MAXIMILIAN, PRINCE OF BADEN, in the crisis of Oct , 1918, and succeeded Maximilian as chancellor when the monarchy collapsed Ebert would have preferred a parliamentary monarchy on the British model to the republic of which he was elected president in Feb , 1919 He suppressed the uprising of the Communist SPARTACUS PARTY and (1920) the reactionary putsch of Wolfgang KAPP During his presidency Germany accepted the Treaty of Versailles and adopted the Weimar constitution

Eberth, Karl Joseph (karl' yō'zĕf ā'burt), 1835–1926, German bacteriologist and anatomist, b Würzburg, where he studied medicine He was professor of pathological anatomy at Zurich and at Halle and made studies of the anatomy of the parasitic worms Eberth also noted the association of a bacillus with typhoid fever in a post-mortem examination of the spleen and intestine The group of bacteria in which this organism belongs is now called *Eberthella*

Ebiasaph (ĕbī'ŭsăf), variant of ABIASAPH.

Ebionites (ē'bēŭnīts) [Aramaic, =poor], Jewish-Christian sect of rural Palestine, of the first centuries after Christ There were two groups, according to Origen The Judaic Ebionites held closely to Mosaic law and regarded Jesus as a miracle-working prophet and St Paul as an apostate Gnostic Ebionites believed Christ to be a Spirit, invisible to men, giving Him the title Prophet of the Truth.

Ebner-Eschenbach, Marie, Baronin von (mārē' bärō'nĭn fŭn ĕb'nûr-ĕsh'ŭnbäkh), 1830–1916, [Austrian novelist and dramatist. She began writing

lyrics and plays with small success, but in middle age attained great fame as a writer of *Novellen*. Among her best-known works in the style of "poetic realism" are the novels *Komtess Muschi* (1885, Eng tr , *The Two Countesses*, 1893) and *Das Gemeindekind* (1887, Eng tr., *The Child of the Parish*, 1893) and the dog story *Krambambuli* (1894, Eng tr., 1913–15).

Eboli, Ana de Mendoza de la Cerda, princess de (ä'nä dā lä mändō'thē dā lä thär'dä ä'thĕrdä), 1540–92, Spanish noblewoman Though she lost an eye when a girl, she was a beautiful as well as an accomplished woman She was a friend (though probably not the mistress) of Philip II, but lost his favor through her love for Antonio PÉREZ She shared her lover's disgrace after the murder of Juan de ESCOBEDO and spent the years after 1579 in prison and enforced retirement She appears in Schiller's *Don Carlos* and is heroine of Kate O'Brien's novel *For One Sweet Grape* (1946), dramatized in 1949 as *That Lady*, with Katharine Cornell

Éboli (ĕ'bōlē), town (pop 12,057), Campania, S Italy It consists of a medieval town on the slopes of a hill dominated by an imposing castle and of a modern section in the plain Near by are ruins of ancient Eburum, which was colonized by the Greeks, flourished under the Romans, and was destroyed by the Visigoths (5th cent)

ebony, handsome, dark heartwood obtained from a number of tropical trees, especially species of *Diospyros*, the persimmon genus Ebony is hard and heavy and takes a high polish, making it suitable for ornaments, tableware, inlay, and piano keys The trees are most common in Asia and Africa and were valued by the ancients, mention of ebony was made by Herodotus, Theophrastus, and Vergil and in the Bible (Ezek 27 15) The timber of several leguminous trees is also called ebony

Eboracum see YORK, England

Ebro (ĕ'brō, ā'brō), river, c 575 mi long, NE Spain, the longest river entirely in Spain Rising in the Cantabrian Mts , it flows SE between the Pyrenees and the Iberian Mts past Saragossa and empties through a wide delta into the Mediterranean below Tortosa In its middle course the waters are canalized for irrigation The Jalón, the Gallego, and the Cinca-Segre are the main tributaries The Ebro system feeds several large hydroelectric power plants During the Spanish civil war a great battle, ultimately lost by the Loyalists, was fought along the Ebro (Aug –Nov , 1938)

Ebronah (ĕbrō'nu), wilderness camping place of the Israelites Num. 33 34,35

Eça de Queiroz, José Maria (zhōōzā' murĕ'u ā'su du kĭrōsh'), 1846?–1900, Portuguese novelist, educated at the Univ of Coimbra He traveled widely and was also in consular service, so that he was well acquainted with Cuba and England as well as his beloved France, where he died He introduced realism to the Portuguese novel, and some of his works seem steeped in French realism, such as *O crime do Padre Amaro* [Father Amaro's Crime] (1876) and his rather doleful family chronicles, *O primo Basilio* [Cousin Basil] (1878) and *Os Maias* (1880) *A reliquia* [the relic] (1887) shows his charm to good advantage, but his fame rests mainly upon two novels, *A ilustre casa de Ramires* [the illustrious Ramires family] (1900) and *A cidade e as serras* [the city and the mountains] (1901) Many critics consider him the ablest of all Portuguese novelists Sparkling descriptions of scenery, profound character analysis, and exotic local color are virtues of his able and witty writing. His essays and letters exhibit his urbanity, grace, and gently skeptical humor

écarté (ā"kärtā'), card game similar to PIQUET, played by two persons. The pack has 32 cards—7 upward to ace in each suit, though the king is the highest card and the ace rates below the jack and above 10 A trick is won by the higher trump or by the higher card of the suit led. The object of play is primarily to win three tricks. For detailed rules, see R. L. Frey, ed., *The New Complete Hoyle* (1947).

Ecbatana (ĕkbă'tùnu, ĕkbŭta'nŭ), capital of ancient MEDIA, later the summer residence of Achaemenid and Parthian kings, beautifully situated at the foot of Mt. Elvend and NE of Behistun It possessed a royal treasury and was plundered in turn by Alexander, Seleucus, and Antiochus III Its once-imposing ruins are wholly covered by the modern city, HAMADAN, where the traditional tomb of Esther is still honored by the small Jewish community Ecbatana was the Achmetha (ăk'muthŭ, ukmē-) of Ezra 6.2 and the Apocrypha

eccentric, in mechanics, a device by means of which the rotary motion of one part of a machine is used to cause another part of the machine to move to and fro in a straight line The cam finds similar use. The eccentric consists of a disk mounted off center on a rotating shaft and having one end of a rod attached to its outer circumference The other end of the rod is usually arranged to slide to and fro in a slot The revolving disk draws the rod back and forth, thus changing the rotary motion to longitudinal The so-called "throw" or eccentricity of the device is defined as the distance from the center of the disk to the center of the shaft (or center of rotation).

Ecclefechan (ĕk"kulfĕ'khun, -fĕ'kŭn) [Celtic, =church of St Fechin], village, Dumfriesshire, Scotland Here Thomas Carlyle was born, and here he lies buried

Eccles, Marriner Stoddard (ĕ'kulz), 1890–, chairman (1936–48) of the board of governors of the Federal Reserve System, b Logan, Utah After study (1905–9) at Brigham Young College in Logan, he devoted himself to investment banking In 1934 he was appointed to the board of governors of the Federal Reserve System and helped draft the Banking Act of 1935, which strengthened Federal Reserve Board control over currency and credit Eccles favored increased government spending and higher income and inheritance taxes

Eccles, municipal borough (1931 pop 44 416, 1947 estimated pop 42,070), Lancashire, England, W of Manchester and on the Manchester Ship Canal. There are cotton and silk textile factories Eccles cakes are famous

Eccleshall (ĕk'ulshul, -shôl), town, Staffordshire, England It has a castle begun in 1315, the residence of the bishops of Lichfield until 1867

Ecclesiastes (ĕklē"zēăs'tēz) [Gr paraphrase of Heb , =of the assembly], book of the Old Testament, 21st in the order of AV In ancient times it was ascribed to Solomon, partly because the author puts his work into the mouth of a great king Its date is unknown, but some set it as late as 200 B C It is a philosophical essay opening with the theme, Since "all is vanity," therefore life should be enjoyed (1–7 1) This is followed by passages in praise of wisdom and mercy, with increasing emphasis on the universality of death (7 2 12 7), there is a brief epilogue on the fear of God's judgment (12 8–14) The apparent cynicism is said to have distressed the ancient rabbis, some critics ascribe to pious correctors a number of the non-pessimistic observations, e g , 5 1–7 Ecclesiastes is one of the biblical examples of wisdom literature (see WISDOM). For bibliography, see OLD TESTAMENT

Ecclesiasticus (ĕklē"zēăs'tĭ-) [Latin from Gr , =ecclesiastical], book of the Old Testament, placed in AV in the Apocrypha and before Isaiah in the Western canon It is called also the Wisdom of Jesus the Son of Sirach A prologue states that the book was composed in Hebrew by one Jesus, son of Sirach, and translated into Greek by his grandson (or, less likely, descendant) He gives the date of the translation, but because of linguistic ambiguity this may be 132–131 B C or 274–273 B C The excellence of wisdom is the theme of Ecclesiasticus After the prologue there is a declaration of the value of wisdom and then a passage on the fear of God (1–2) The bulk of the book is given over to instructive apothegms, but there are splendid passages Such are the praise of wisdom beginning at 14 20 and leading into a protest against determinism (15 11–20), the praise of wisdom put in her own mouth (24), and the praise of God for the works of nature (42–43). This leads into the praise of famous men, men who wrought well for Israel (44–50). After a statement of authorship the book closes (51) with a psalm. No complete Hebrew version is extant, and there is much textual variation The book is a good example of wisdom literature (see WISDOM) For bibliography, see OLD TESTAMENT.

Ecgberht, king of Wessex see EGBERT

Echegaray, José (hōsā' ĕchāgärī'), 1832–1916, Spanish dramatist, mathematician, and political economist His earlier years were devoted mainly to engineering, and his old age to politics From 1874 to 1905 he produced a number of plays which made him the outstanding playwright of the day in Spain and he shared with Mistral the 1904 Nobel Prize in Literature. Among the 64 plays that he wrote, the best known are *O locura o santidad* (1876, Eng. trs., *Folly or Sainthness*, 1895, *Madman or Saint*, 1912), *El hijo de don Juan* (1892, Eng tr , *The Son of Don Juan*, 1895), *Mariana* (1892, Eng. tr , 1895), and the most famous of all, *El gran Galeoto* (1881, Eng trs , *The Great Galeoto*, 1895, *The World and His Wife*, 1908). Echegaray's theater deals with psychological and moral problems, it is romantic in spirit, sensational in form, but adapted to the prevailing realism of his time The main theme is the clashing of two moral issues, honor and duty.

Echeverría, Esteban (ĕstā'vän ā"chāvĕrrē'ä), 1805–51, Argentine romantic poet, prose writer, and revolutionary propagandist. After five years in Europe he introduced romanticism in Argentina through his long poem *Elvira* (1832) Although he excelled as a prose writer, it was through his poetry that he introduced exploitation of the American landscape in Spanish writing and influenced later writers His most successful poem, "La Cautiva," which has the rich local color of the pampas, appeared in *Rimas* (1837) He was the leading spirit in the Asociación de Mayo, a secret society founded to combat the dictator Jean Manuel de Rosas Echeverría spent the last years of his life in exile in Montevideo.

Echidna (ĭkĭd'nu), in Greek mythology, monster who is half maiden, half dragon, wife of TYPHON She was killed by Argus

echinoderm (ĭkī'nudûrm, ĕ'kĭnō-), invertebrate marine animal of the phylum Echinodermata, characterized by a calcareous, often spiny, exoskeleton and tube feet controlled by a water-vascular system The adults show radial symmetry Many forms have five or more arms Included in the group are the STARFISH, SEA URCHIN, sea lily or feather star (see CRINOID), sand dollar, brittle star, and sea cucumber

Echmiadzin (ĕchmēädzēn'), town (1926 pop 8,436), central Armenian SSR, W of Erivan Dating from the 6th cent B C , it was (2d–4th cent A D) the capital of Armenia From the 2d cent A D until 1945 it was called Vagarshapat Above the town is the celebrated monastery of Echmiadzin, seat of the head (catholicus) of the Armenian Church Behind its high wall and amidst shady gardens stands the massive cathedral, begun, according to tradition, in the 4th cent The cathedral is surrounded by the residence of the catholicus, the cloisters, and the library The Armenian historical archives, long kept here, have been transferred to Erivan

Echo, in Greek mythology, mountain nymph who assisted Zeus in a love affair by keeping Hera busy with her chatter Hera, to punish her, made her unable to speak except to repeat the last words of someone else Echo fell in love with NARCISSUS and pined so for love that she dwindled away into nothing but her voice

echo, in physics, a phenomenon caused by the reflection of sound waves Since the human ear cannot distinguish between sounds striking the eardrum at any interval less than one tenth of a second, if an echo and the original sound reach the ear within one tenth of a second of one another they are indistinguishable For a clear echo, therefore, the reflecting surface must be far enough away from the source of the sound so that more than one tenth of a second is required for the sound to travel to it and return Since at 20°C the velocity of sound is c 1,130 ft per second, the reflecting surface must be at least 56 5 ft from the source of the sound if an echo is to be heard when the air is at this temperature In this case, the sound requires one fifth of a second to reach the surface and the same time to return As the distance between a source of sound and a reflecting surface increases, the echo becomes more distinct Its amplitude, however, decreases When a sound wave strikes a reflecting surface such as a cliff or the wall of a room, it is partially absorbed and partially reflected, sound energy being used in setting the reflecting surface in vibration When an echo is reflected again and again from different surfaces, as by the parallel walls of a tunnel, the condition is known as reverberation See ACOUSTICS

Echternach (ĕkh'turnakh), town (pop 2,660), grand duchy of Luxembourg, on the Sûre river An agricultural center, it has mineral springs frequented since Roman times A colorful pilgrimage and procession takes place every year on Whit-Tuesday Echternach, which has an 11th-century church and a 16th-century town hall, was severely damaged in the Second World War

Eck, Johann Maier von (yō'hän mī'ur fŭn ĕk'), 1486–1543, German Roman Catholic apologist He was of humble origin, the von Eck being taken from his birthplace in Swabia He was a brilliant student and became a professor at Freiburg in his youth He was renowned in Germany for his dialectic skill in public disputation and for his deep knowledge of church history and canon law He had been suspected of unsound theology for some of his relations with humanism, but he had no hesitation in condemning (1518) the new theses of Martin LUTHER, with whom he held a public discussion at Leipzig in 1519 Anxious for the condemnation of the heresy he saw in Lutheranism, he went to Rome and brought back the papal bull condemning Luther (1520) From that time he was a leader in the struggle against the reforming party in Germany He was one of the leading theologians at the Diet of Augsburg (1530) He also attacked the Swiss reforms of Zwingli Eck is usually known as the first theologian who forced Luther into the position of being definitely, openly opposed to the teachings and practice of the Roman Catholic Church

Eckener, Hugo (hōō'gō ĕ'kŭnur), 1868–, German airship pilot He was the pilot of the *ZR-3* (later the *Los Angeles*) on its flight from Friedrichshafen, Germany, to the United States in 1924, the first airship flight across the Atlantic

Eckermann, Johann Peter (yōhän' pā'tur ĕ'kŭrman), 1792–1854, German scholar and author He assisted Goethe in various literary labors, was professor of English and German at the Univ of Jena, and later was librarian at Weimar He wrote *Conversations with Goethe* (1836–48, Eng. tr., 1850), which quotes many of the poet's opinions Nietzsche called it the best German book there is "

Eckersberg, Christoffer Vilhelm (krĭstô'fûr vĭl'hĕlm ĕ'kŭrsbĕrkh), 1783–1853, Danish painter. He studied with J. L David in Paris and in Rome became a friend of Thorvaldsen. After his return to Denmark (1816) he taught at the Copenhagen Academy, becoming its director His finest works are landscapes and marines, good in color and in at-

mospheric effect and painted with a genuine appreciation of nature Among his best works are *Moses Dividing the Waters of the Red Sea*, the series of historical paintings in the Christiansborg palace, and a portrait of Thorvaldsen (all Copenhagen)

Eckhart, Meister (mīs'tûr ĕk'härt) [Meister=master, i e , of arts], c 1260–c 1328, German mystical theologian, b Hochheim, near Gotha His original name was Johannes Eckhardt He studied and taught in the chief Dominican schools, notably at Paris, Strasbourg, and Cologne He held a series of offices in his order Eckhart communicated in various ways his burning sense of God's nearness to men. He exhorted the Dominicans, wrote scholarly tracts, addressed the *Book of Divine Comfort* to the queen of Hungary, and preached everywhere to the humble and ignorant, urging them all to seek the divine spark in man His evangelical activities among the undisciplined were suspect, and his election (1309) to be provincial of the German province was not confirmed Toward the end of his life, he was wrongly accused of connection with the BEGHARDS and charged with heresy He was upheld by his order, but the charge was pressed Eckhart appealed to Rome He died between 1327, when his appeal was denied, and 1329, when John XXII issued a bull condemning 17 of Eckhart's propositions as heretical His disciples tried vainly to have this decree set aside From his influence there sprang up a popular mystical movement in 14th-century Germany, which included among its leaders TAULER, SUSO, and various Dominicans These were all intellectual as well as practical preachers and did not show that tendency to set holiness and learning in opposition which characterised the mystics of the popular school of Gerard GROOTE Eckhart was perhaps the first writer of speculative prose in German, and from then on German, not Latin, was to be the language of popular tracts See R B Blakeney, *Meister Eckhart a Modern Translation* (1941)

eclecticism (ĕklĕk'tĭsĭzm) [Gr ,=selection], in philosophy, a general term usually applied to any doctrine which combines, without modification, various distinct systems of thought The eclectic is usually accused of being a thinker who, unable to evolve an independent system, is content to borrow from others Ideally, however, eclecticism is a selective process which preserves the merits of diverse systems, discards the inadequacies, and achieves a synthetic unity An outstanding example of this type of eclecticism is Victor COUSIN, under whose guidance eclecticism became the popular philosophy in France during the 19th cent

Eclectic school, in painting see CARRACCI

eclipse (ĭklĭps', ē-) [Gr ,=failing], in astronomy, the partial or complete obscuring of one heavenly body by another. Eclipses of the SUN and the MOON are those most familiarly known, but eclipses of Jupiter's satellites have been of great importance in astronomy Since the earth and the moon are opaque bodies, lighted by the sun, each of them casts a shadow which extends into space in the direction away from the sun When the moon is in such a position that it is wholly or partly in the earth's shadow, there is a lunar eclipse When, in its orbit, the moon passes directly between the earth and the sun so that its shadow falls upon the earth, there is a solar eclipse, visible from the part of the earth's surface on which the shadow lies The shadows of both earth and moon are cone shaped, the apex in each case being hundreds of thousands of miles out in space The earth's shadow extends to a length several times the average distance of the moon from the earth, so that the moon may be totally eclipsed for a period averaging 1 hr and 42 min , and the entire period of the eclipse may be about 4 hr The length of the moon's shadow is far less than that of the earth's, and the distance between the moon and the earth varies by c 31,000 mi , so that at times the moon's shadow is not long enough to reach the earth But when it is, a total solar eclipse may be observed from a position on the earth on the line of the centers of the moon and the sun If the orbit of the moon lay in the plane of the ecliptic, there would be eclipses every month, but the plane of its orbit is inclined to the plane of the ecliptic at an angle of nearly 5° 9′ and therefore the moon's orbit crosses the ecliptic at two opposite points called the nodes A lunar eclipse can occur only when the moon is at or near one of its nodes at the time of the full moon (i e , when the sun and moon are at opposite sides of the earth) A solar eclipse can occur only at the time of a new moon (i e , when sun and moon are on the same side of the earth), and then only when the sun is not more than 18° 5′ from one of the nodes of the moon's orbit The ratio of the number of solar eclipses to lunar eclipses is about four to three However, at any given place on the earth many more lunar eclipses are seen than solar, because a lunar eclipse in all its phases can be seen at the same time from all parts of the earth's surface where the moon is above the horizon, while any single solar eclipse is visible within an area limited in diameter, and the phenomenon is observed at different moments in different localities as the moon's shadow progresses rapidly eastward A total solar eclipse is observed only about once in every 400 years at any one place The central or true shadow, the umbra, of the earth or the moon is surrounded by a half-shadow, the penumbra In the umbra all direct rays of the sun are cut off, in the penumbra there is illumination from a part of the sun's face In some positions, the moon during eclipse does not pass entirely into the earth's umbra but some part of it remains outside the deep shadow This is a partial lunar eclipse In the course of its total eclipse (which is longer or shorter according to the part of the umbra through which it passes) the moon, after traveling through the penumbra, begins to show a dimness on the eastern part The moon advances into the umbra until the whole surface is darkened Usually some sunlight is bent, or refracted, into the umbra by the atmosphere, giving the moon's disk a coppery color The earth's shadow, seen on the moon, makes a curve approximating an arc of a circle Aristotle pointed to this as proof that the earth is a sphere An eclipse of the sun is partial when only the penumbra of the moon falls across some part of the earth's surface When the moon is in a position so far from the earth that the cone-shaped umbra comes to a point before it can reach the surface of the earth, an annular (or ring) eclipse can be observed from the region of the earth's surface directly beyond the apex of the umbra, because the sun can be seen all the way around the disk of the moon, making a bright ring A total solar eclipse takes place only when the narrow part of the cone of the moon's umbra rests upon some part of the earth's surface, and only in that region is the eclipse total In this case and in that of an annular eclipse, a partial eclipse is visible at the same time in a wider surrounding area During a total solar eclipse the moon cannot be seen as it approaches the edge of the sun, but it soon appears as a dark object moving across the sun's face, shutting more and more of the bright surface from view, until daylight fades to twilight and there is a noticeable drop in temperature Just before totality, when there is but a slender crescent of the sun in sight, dim rippling shadows ("shadow bands") run over all white surfaces near the observer On the eastern edge of the disappearing sun, seen beyond the irregular edge of the moon, "BAILY'S BEADS" shine for an instant The sky, darkened, shows the brightest stars as at nightfall Then, surrounding the black moon disk, glows the sun's CORONA with solar PROMINENCES sometimes extending far out beyond Gradually the moon moves away, revealing more and more of the sun's surface until normal light returns The moon moves along at c 2,000 mi an hour and the earth is rotating in the same direction The shadow of the moon sweeps rapidly eastward over the area of the eclipse, describing a path on the earth's surface The longest possible duration of totality is 7 min 30 sec at or near the earth's equator when the sun is directly overhead, and the duration of totality decreases with increase in latitude The eclipse of June 8, 1937, had the longest duration of totality (calculated at 7 min 4 sec) in 1,200 years Its path lay almost entirely over water, in the Pacific region Total solar eclipses are of such importance to science that astronomers travel half round the world to have a possible chance of a few minutes of observation From their observations of eclipses the Chaldeans discovered that nearly similar eclipses of the sun come about in cycles of 18 years, 11 32 or 10 32 days (according to the occurrence of leap years) They called the interval the saros Eclipses are predicted far in advance, as the time and the circumstances can be calculated very closely In the same way dates of events in the far past can be determined if an eclipse is known to have occurred at the same time See G F Chambers, *The Story of Eclipses* (1902), I E Lewis, *A Handbook of Solar Eclipses* (1924), S A Mitchell, *Eclipses of the Sun* (4th ed , 1935), F W Dyson and R V D Woolley, *Eclipses of the Sun and Moon* (1937)

ecliptic (ĭklĭp'tĭk, ē-), the great circle in the heavens which marks the path of the sun's apparent yearly journey among the stars This circuit is actually accounted for by the earth's revolution around the sun, and the plane of the earth's orbit is called the plane of the ecliptic The celestial sphere is comprised of two hemispheres, one being the apparent dome of the sky above the horizon and the other its counterpart below the horizon Known as the celestial equator is the imaginary line in the celestial sphere formed by extending the plane of the earth's equator into the sky The plane of the ecliptic is inclined to that of the celestial equator at an angle of about 23 5° This is known as the obliquity of the ecliptic, and it is the cause of the changing seasons on the earth The angle of obliquity varies slightly from century to century The two points where the ecliptic and the celestial equator intersect are the equinoxes The constellations through which the ecliptic passes are known as the constellations of the ZODIAC

Ecnomus, Cape: see LICATA

École des Beaux-Arts (ākôl' dā bōzär') [Fr.,=school of fine arts], French national school of fine arts, on the Quai Malaquais, Paris, founded (1648) as the École académique, the title being changed to the present form in 1793 It includes three departments, painting and graphic arts, sculpture, and architecture, and is free to men and women whose previous training enables them to pass the entrance examination They are prepared in the various courses to compete for the PRIX DE ROME (created 1666), which admits the student to the Académie de France à Rome The high standards of the École des Beaux-Arts in drawing and composition have influenced both French and foreign art Professors are chosen from the ablest French artists Study in the outside studios of the professors may be pursued for a small fee Eight other French cities have similar national academies

ecology (ēkŏl'ŭjĭ), scientific study of plants and animals in relation to their natural environment Ecology is concerned with such problems as anatomical and physiological adaptations of living things to environmental conditions (e g , amount of moisture and light, temperature, wind, and kind of soil), interrelations in plant and animal communities, and succession By succession is meant the series of stages leading to the ultimate establishment of a climax community or climax area A climax community is mature and relatively stable, representing the final stage of development for the existing climatic conditions of a particular region Examples of climax formations in different parts of North America are tundra, boreal forest, deciduous forest, scrub, and prairie Succession is well observed where plant and animal life begin to inhabit land previously bare (exposed by emergence from the sea or by the drying up of a pond or lake or deposited by agents of erosion), it is also observed where the habitat is altered in some way so that it becomes unsuitable for the original species The order of succession varies, depending upon whether the progression begins in water or on dry surfaces of rocks, sand, or rocky talus Wet habitats are said to be hydric, extremely dry ones are xeric, and those that are intermediate are mesic , the different successional trends are known as hydrarch succession, xerarch succession, and mesarch succession See R Sears *This Is Our World* (1937), E E Weaver and F E Clements, *Plant Ecology* (2d ed , 1938), T K Just, ed , *Plant and Animal Communities* (1939), F E Clements and E V Shelford, *Bioecology* (1939), C S Elton, *Animal Ecology* (3d ed , 1947), F E Clements, *Dynamics and Vegetation* (1949)

Economic and Social Council, constituent organ of the United Nations It is established by Chapter 10 of the United Nations Charter and has 18 member nations elected for three-year terms by the General Assembly The function of the council is to undertake investigations of international economic and social questions and to report its conclusions and suggestions to the General Assembly and other organs of the United Nations for action The full council meets at least twice a year, decisions are taken by a majority of members present and voting To facilitate its work the council has established various commissions, including the Economic and Employment Commission, the Transport and Communications Commission, the Population Commission, the Commission on Human Rights, and regional commissions for Europe, for Asia and the Far East, and for Latin America There has been much interest in the activities of the Commission on Human Rights In Aug , 1948, a draft international declaration of human rights, which the commission drew up, was adopted by the General Assembly, and the commission was directed to draft a fuller covenant on human rights with suggested measures of implementation As part of its work for the welfare of children the council administered the United Nations International Children's Emergency Fund (est Dec , 1946) and the United Nations Appeal for Children, which was conducted in 1948 Other activities of the council are in the fields of transport, economic rehabilitation of war-damaged countries, population studies, and control of narcotics At the request of countries belonging to the United Nations various special studies were also undertaken

Economic Cooperation Administration: see EUROPEAN RECOVERY PROGRAM

economic planning. Few kinds of economic activity, however crude, have been carried on haphazardly Pastoral peoples sought to increase their flocks, primitive agriculturalists learned to save a portion of their crops for winter and times of scarcity Families today budget expenditures according to probable earnings, the same process, on a larger and more complex scale, goes into the planning of business and industry Economic planning on the largest scale has been the work of national governments Wages and prices were regulated in Egypt, Greece, Rome, and other ancient societies, a chief aim being to stabilize the prices of staple commodities for fear of political repercussions In the Middle Ages, feudal law secured the position of the manorial agricultural system, and craft and merchant guilds regulated wages and prices to prevent overproduction and to preserve the economic status quo of the cities In the Renaissance and after, strict national economic regulation sought to ac-

quire wealth and develop the commerce and industry of home countries, while colonies were to furnish raw materials and markets. In modern times regulation of prices, wages, and business practices for the benefit of economic classes or of the community as a whole has been increasingly widespread; doctrines such as SOCIALISM, COMMUNISM, and FASCISM propose a varying, but in all cases dominant, degree of control over the national economy by the state Public works have in all ages been a characteristic by-product of economic planning to benefit commerce and create employment Dissemination or withholding of contraceptive information, payment of maternity benefits, exclusion of certain classes of immigrants—all amount to population planning, the result of economic, military, or idealistic considerations Wars, which subordinate all private activity to a unified national effort, have been perhaps the chief promoters of national economic planning Tariff agreements, world banks, reparation plans, and systems of international aid such as the Marshall Plan carry the effects if not the principles of economic planning into the international sphere See G D H Cole, *Economic Planning* (1933), F A Hayek, *The Road to Serfdom* (1944), Karl Landauer, *The Theory of National Economic Planning* (2d ed , 1947)

economics (ē″kŭnŏ′mĭks, ĕ″-), study of the supplying of man's physical needs and wants The first economic writings were the Oriental moral codes, such as that of Moses, which attributed physical well-being to divine will The Greeks stressed the dominance of ethics, but went further in analyzing economic desires Plato advocated a state in which the individual should be subordinate to the needs of the group Aristotle exalted the individual's desires above those of the group and was the first to treat economics rationally rather than metaphysically Roman writers made little advance over the Greeks, though Cicero, Cato, and Varro gave advice about agriculture The medieval period was dominated by the isolating feudal and manorial systems and by scholasticism Although towns, guilds, and commerce were developing in the latter part of the period, significant contributions to economic thought were limited to the canon law then being formed In the transition to modern times (16th–18th cent), with the European expansion overseas and the resultant growth of commerce, the economic policy called MERCANTILISM was developed to secure by tariffs and regulation of commerce as much bullion as possible to the economically successful state In the late 17th cent and the 18th, protest against the governmental regulation characteristic of mercantilism was voiced, especially by the PHYSIOCRATS, who advocated LAISSEZ FAIRE—allowing business to follow freely the "natural laws" of economics—but demanded help for agriculture, mining, and fishing, which they said were alone productive and should therefore bear all taxation In *An Inquiry into the Nature and Causes of the Wealth of Nations* (1776), Adam SMITH established economics as a major study and rounded out the ideas of the physiocrats and of his contemporary, Hume, into a complete economy Instead of production, Smith emphasized consumption as the goal of economic endeavor, as have later writers His discussion of the DIVISION OF LABOR is a classic Smith's theories, including his advocacy of FREE TRADE, particularly suited the INDUSTRIAL REVOLUTION then taking place in England The evil effects of this revolution were examined by MALTHUS, whose belief that population tends to outrun the means of subsistence gave little hope of relief, and by Ricardo, with his gloomy thesis that marginal lands must be increasingly used as DIMINISHING RETURNS set in and that wages follow an "iron law" which keeps Malthus's increasing population at a subsistence level N. W Senior further narrowed economic theory and pointed out the contribution of capital to production through "abstinence " Among critics of free trade outside England were the German Friedrich List and the American Henry C Carey The early exponents of SOCIALISM, especially in France, attacked the idea of the necessity of private property and competition and were interested in revamping the economic and social order Among these were C H Saint-Simon, Robert Owen, Charles Fourier, and Louis Blanc The rising industrialization after Adam Smith required the restatement of the principles of economics which John Stuart Mill gave, in which he emphasized self-interest, demand and supply, and competition. In Germany the historical school arose under Wilhelm Roscher, Bruno Hildebrand, and Karl Knies, who doubted the existence of economic "laws" and the supremacy of self-interest. Böhm von Bawerk of the Austrian school believed in a final utility concept Such Americans as J B Clark, Irving Fisher, Simon Patten, and F A Fetter evaluated money, wages, and profits in terms of utility. The socialists continued to criticize all these schools, and *Das Kapital*, by Karl MARX, became a veritable socialist bible The socialists advocated the increase of the purchasing power of the masses and the socialization of property as the means of avoiding poverty and CRISES. A leading English economist of the late 19th cent was Alfred Marshall. Other American economists include H C Adams, J R. Commons, R T Ely, H J Davenport, D R Dewey, A T Hadley, E J James, J L Laughlin, E. R A Seligman, F W Taussig, F A. Walker, and Thorstein Veblen Political science, sociology, and other studies have become separate disciplines during the development of economics See E R A Seligman, *The Economic Interpretation of History* (2d ed , 1924); Eli Ginzberg, *The House of Adam Smith* (1934); Ernest Teilhac, *Pioneers of American Economic Thought in the Nineteenth Century* (Eng tr , 1936), J M Ferguson, *Landmarks of Economic Thought* (1938), C E Avres, *The Theory of Economic Progress* (1944), C R Noyes, *Economic Man* (1948)

Economy, Pa : see AMBRIDGE, Pa , and HARMONY SOCIETY

écorcheurs (ākôrshûr′) [Fr ,=flayers], brigands who devastated France in the Middle Ages, particularly the free companies—marauding bands of soldiers—during the Hundred Years War Many of their leaders (such as LA HIRE) were capable professional soldiers

Écorse (ēkôrs′), industrial city (pop 13,209), SE Mich , on the Detroit river at the mouth of the Rouge and S of Detroit, settled c 1815, inc as a village 1903 as a city 1941 Steel, chemicals, and automobile parts are made

Écrins, Barre des see BARRE DES ÉCRINS

ectoplasm (ĕk′tuplăzĭm), in SPIRITISM, a mysterious substance, a sort of externalized protoplasm, materializing from the person of the medium It may be visible or tangible, or possibly both It lasts but a short time and must be returned to its source Believers in spiritism assert that ectoplasm has been weighed and may be photographed More skeptical sitters at séances suggest that it should be chemically analyzed In biology, the outer area of the cytoplasm of a CELL is called the ectoplasm

Ecuador (ĕ′kwudôr) [Span ,=equator], republic (estimated area 104,510 sq mi , 1944 estimated pop 3,171,367), W South America The capital is QUITO Although the long boundary dispute between Ecuador and Peru was ended by protocol in 1942, no accurate survey has been made of the region E of the Andes, called the Oriente It is a wilderness of plains and jungle rain forests populated almost entirely by scattered tribes of Indians, notably the JÍVARO, and at present has no commercial value This area is bounded to the west by the Andes, which cut across Ecuador in two ranges separated by a structural fault The mountains, with high, snow-capped volcanic cones, notably CHIMBORAZO and COTOPAXI, dominate the country About 30 volcanoes are active, and on the fault line there have been disastrous earthquakes, such as that of 1949 which leveled Ambato and took some 6,000 lives Mountain pedestals and spurs divide the long rift and create high, generally fertile intermontane valleys To the west of the mountains is the Pacific coast, with hot, humid valleys N of the Gulf of Guayaquil From the coastal region come Ecuador's chief exports—cacao (Ecuador is third among nations producing it), petroleum, gold and cyanide precipitates, tagua nuts, Panama hats, and some bananas, hides, and rubber Guayaquil is the main port Most of the cities of Ecuador are distributing centers with few and small-scale manufactures, principally the processing of agricultural and mineral products, with some textile mills and some small plants making shoes, leather goods, and Panama hats With sufficient resources and manpower, Ecuador has not yet been able to marshal its industry and arrive at a balanced economy Economic and commercial development has taken place in the coastal region, where it is somewhat handicapped by the scarcity of population Most of the Negroes (some 15 percent of the population) and many mestizos live in this region The main bulk of the population is in the highlands and is predominantly Indian or part Indian The basic form of life is communal agriculture The few whites are principally the landholders and are dominant in the political life, which is marked by the activities of small factions and cliques and by rivalry between the coastal region and the highlands Even the development of modern communications has not created sufficient unity to halt the dominance of personal and factional rivalry that began with the Spanish Conquest Francisco Pizarro's subordinate, BENALCÁZAR, entered the territory in 1533 to forestall Pedro de ALVARADO Not finding the wealth of the mythical El Dorado, he and other conquistadors, notably GONZALO PIZARRO and ORELLANA, moved restlessly on The region became a colonial backwash Given an *audiencia* in 1563 and established politically as the presidency of Quito, it was at various times subject to Peru and to NEW GRANADA After an abortive independence movement in 1809, it remained under Spanish control until liberated by SUCRE in the battle of PICHINCHA (1822) and joined by Simon BOLÍVAR to Greater Colombia. With the dissolution of the union in 1830, Ecuador, not because of a strong national sentiment but because of its isolation from Bogotá and Lima, became a separate state under a constitution promulgated by its first president, Juan José FLORES Ecuador was unsuccessful in attempting to get Popayán prov from Colombia by warfare in 1832 but did acquire the GALÁPAGOS ISLANDS Boundary disputes led to frequent invasions by Peruvian forces in the 19th and 20th cent Personalism in government and the rivalry of Conservatives and Liberals has marked the political history The Conservatives, led by Flores and GARCÍA MORENO, supported entrenched privileges and the dominance of the Roman Catholic Church, the Liberals, championed by ROCAFUERTE and ALFARO, sought social reform The disadvantages of topography and lack of education have not yet been overcome by any of the political programs Recently a beginning has been made in working out economic problems by common action of Colombia, Venezuela, Ecuador, and Panama which signed (1948) the Quito Charter, recommending a customs union and political and cultural cooperation Colombia, Peru, and Ecuador have established a common merchant fleet See C R Enock, *Ecuador* (1914), V W von Hagen, *Ecuador the Unknown* (1940), A B Franklin, *Ecuador Portrait of a People* (1943)

ecumenical council see COUNCIL, ECUMENICAL

ecumenical movement (ē″kūmĕ′nĭkûl, ĕ″-), term used to describe a movement aimed at the unification or reunion of the Protestant churches of the world and ultimately of all Christians Protestantism after the Reformation tended to separate into numerous independent sects, more than 200 being formed in the United States alone An early attempt to reverse this tendency, which was believed to make the churches ineffective, was the Evangelical Alliance founded in England in 1846, an American branch was formed by Philip Schaff in 1867 Other organizations that crossed denominational barriers were the Young Men's Christian Association (1844), the Young Women's Christian Association (1884), and the Christian Endeavor Society (1881) In 1908 the Federal Council of Churches of Christ, composed of the larger Protestant denominations in the United States, was organized and strove to represent Protestant opinion on religious and social questions The movement known as Church Reunion in Great Britain and as Christian Unity (1910) in the United States has been active in seeking both a creed and a polity on which all Christians could unite Several world-unity conferences have resulted, including an international missionary conference in 1910, the Universal Christian Conference on Life and Work (Stockholm, 1925), inspired by Nathan SÖDERBLOM of Sweden, the World Conference on Faith and Order (Lausanne, 1927), and the first meeting of the WORLD COUNCIL OF CHURCHES (Amsterdam, 1948), which was attended by representatives from 150 Protestant, Eastern Orthodox, Anglican, and Old Catholic bodies In the meantime progress was made in consolidating Protestant denominations who found themselves close together in belief and usage, including some free churches in England and Scotland and Congregationalists, Presbyterians, and Methodists in Canada and Australia In the United States in 1939 three Methodist bodies united to form the Methodist Church Headed by E Stanley Jones, the Association for a United Church for America was founded in 1947 See C S Macfarland, *Steps toward the World Council* (1938), T O Wedel, *The Coming Great Church* (1945), O F. Nolde, *Toward World-wide Christianity* (1946)

eczema (ĕk′sumu, ĕg′zūmù, ĕgzē′mu), term applied to various forms of skin eruptions A common variety is characterized by a watery discharge and the development of scales and crusts Infantile eczema is caused by a failure to wash the scalp properly Fear of damaging the unclosed portions of the young infant's skull results in the retention of early scales of DANDRUFF on the scalp, these can be removed by careful washing with soap and water Other types of eczema include those caused by plants, chemicals, ultraviolet light, and X rays

Ed [Heb ,=witness], name of an altar raised on the left bank of the Jordan Joshua 22 34

Edam (ē′dŭm, ē′dăm, Dutch ādăm′), town (pop 10,751), North Holland prov , NW Netherlands, on the Ijsselmeer and NE of Amsterdam It is an important market for the cheese to which it gives its name Edam cheese is pressed and made in balls sealed by bright red wax

Edar (ē′dar) [Heb ,=flock], tower, near which Jacob pitched his tent Gen 35 21

Edcouch (ĕd′kouch′) town (pop 1,758), extreme S Texas, WNW of Brownsville, in the irrigated district of the lower Rio Grande valley; inc 1928

Edda (ĕ′du), title applied to two distinct works preserved in Old Icelandic The Edda of SNORRI STURLUSON, also called the *Prose Edda* or the *Younger Edda*, is a work intended as a guide to the scaldic poetry of Iceland The highly allusive quality of this verse and the abundant use of the kenning, a metaphoric synonym, made some kind of explanation necessary to comprehend the poetry at all The first and second parts of the *Edda* are an account of Scandinavian mythology constituting the prime source on the subject The third

part is a compendium of the rules of scaldic poetry, and the fourth is a commentary on some of the author's poems. The preface to the *Edda* is a Christian essay on biblical history. The *Edda* is invaluable as an account of Norse religion by one steeped in the poetic tradition at a time when it was still alive, it is also useful for the understanding of Icelandic poetry. The first half of the *Edda*, the only portion interesting in translation to those acquainted with Icelandic poetry, has been translated by G. W. Dasent (1842), R. B. Anderson (1880), and A. G. Brodeur (1916, reprinted 1923). The *Poetic Edda* or *Elder Edda* is a collection of 33 or 34 heroic lays in Icelandic. The name *Elder* was given when they were supposed to have been collected by the priest Saemund the Wise in the 11th cent., but actually they were compiled later. They are not complete. In spite of its uncritical arrangement and its textual corruption, the poems of the *Elder Edda* make up the most valuable series of texts in Icelandic. Its most remarkable poem is the *Voluspa* (or the *Prophecy of the Sibyl*), giving the Norse mythology so far as it applied to the beginning and end of things. It is beautifully severe and simple. See translation by H. A. Bellows (1923).

Eddington, Sir Arthur Stanley, 1882–1944, British astronomer and physicist. He was chief assistant (1906–13) at the Royal Observatory, Greenwich, and was from 1913 Plumian professor of astronomy at Cambridge, where he was director of the observatory from 1914. He made important contributions to the study of the evolution, motion, and internal constitution of stars and was one of the first physicists to grasp the theory of relativity, of which he became a leading exponent. One of the foremost contemporary expositors of scientific subjects, he wrote *Stellar Movements and Structure of the Universe* (1914), *Space, Time, and Gravitation* (1920), *Theory of Relativity and Its Influence on Scientific Thought* (1922), *Mathematical Theory of Relativity* (1923), *Internal Constitution of the Stars* (1926), *Nature of the Physical World* (1928), *Science and the Unseen World* (1929), *The Decline of Determinism* (1933), *The Expanding Universe* (1933), *New Pathways in Science* (1935), *Relativity Theory of Protons and Electrons* (1936), and *The Philosophy of Physical Science* (1939).

Eddo see TARO.

Eddy, Mary Baker, 1821–1910, discoverer of the principles of CHRISTIAN SCIENCE and founder of the church based on those principles, b. Bow, near Concord, N.H. As her physical frailty prevented regular school attendance, she received much of her early instruction from her brother Albert, a Dartmouth student, who tutored her systematically when he was at home. She also attended Holmes Academy at Plymouth and Sanborn Academy. She early wrote poetry and prose, accepted for publication in periodicals. Widowed a few months after her marriage to George W. Glover, she spent nine years among relatives, teaching at times and often in ill-health. Married in 1853 to Daniel Patterson, a dentist, she lived quietly in the country for some time, going later to Lynn, Mass. Having learned of the success in mental healing of P. P. QUIMBY, she went in 1862 to Portland, Maine. She received benefit from his treatment but later discarded his methods. In 1866 she separated from her husband, she later secured a divorce on the grounds of desertion and infidelity. The year 1866 marks the actual beginning of Christian Science as she apprehended it. Bible study, practice, and writing, in the ensuing years, brought steady development in doctrine and plans regarding the system she revealed to her students and followers. In 1875 the textbook of Christian Science, *Science and Health*, was published. In 1877 she was married to Asa Gilbert Eddy. She founded in 1883, and for a time edited, the *Journal of Christian Science*. Mrs. Eddy herself planned the *Manual* for the conduct of the church and directed every detail in its upbuilding. She lived in Boston for seven years, from 1882, then near Concord, N.H., until 1908, when she made her home in Chestnut Hill, near Boston. As pastor emeritus of the Mother Church in Boston and head of the whole church with all its branches Mrs. Eddy exercised a strong influence, even in the retirement of her later years. Later of her writings include *Retrospection and Introspection* (1891), *Miscellaneous Writings* (1896), and *Messages to the Mother Church* (1900, 1901, 1902). See the official biography by Sibyl Wilbur (1929 ed.) and a later one by J. M. Johnston (1946), an impartial biography by L. P. Powell (1930), and a critical one by E. F. Dakin (rev. ed., 1940).

Eddy, Thomas, 1758–1827, American philanthropist and reformer, b. Philadelphia. He was an active supporter of many philanthropies in New York, where he had become wealthy by his brokerage and insurance business. The reforms and civic projects in which he was active included the Erie Canal project, insane asylums and improved treatment of the insane, free schools, reform in the penal code of New York, and antislavery. His greatest contribution was in prison reform—introducing advanced ideas of a penitentiary system, persuading the New York legislature to authorize new buildings, superintending the new institution, and defending in writing the principles behind his innovations.

Eddystone (ĕd'ĭstun), lighthouse, on dangerous rocks off the coast of Cornwall, England, SSW of Plymouth. The first lighthouse, begun by Henry Winstanley in 1696, was 100 ft. high, of wood with a stone base, and was washed away with its builder in 1703. The second, built of wood in 1706, was burned in 1755. The third, of very strong construction, with a tower 85 ft. high, was erected (1756–59) by John Smeaton, it was made unsafe by the undermining action of the sea, so that the upper portion was taken down and rerected at Plymouth. A fourth lighthouse was built (1878–82) on the Eddystone rocks by Sir James Douglass.

Eddystone, borough (pop. 2,493), SE Pa., near Philadelphia, inc. 1889. It is the site of a steel-products plant and a locomotive works. The locomotive *Old Ironsides* was constructed here in 1832.

Eddyville, city (pop. 2,407), co. seat of Lyon co., SW Ky., on the Cumberland river and E of Paducah. Tobacco and corn are grown in the area, which also yields limestone and timber. The state penitentiary is in Eddyville. Near by are the ruins of an iron furnace where William KELLY invented his method of making steel.

Edelinck, Gérard (zhārär' ādulĕk'), 1640–1707, French engraver. He is known for his faithful interpretations of the work of Raphael, Le Brun, Champagne, and other masters and for his portraits of celebrities of the time, including Louis XIV, Colbert, La Fontaine, John Dryden, and Descartes.

edelweiss (ā'dlvīs) [Ger., =noble-white], plant of the high Alps, reputed to grow in inaccessible places and thus to have brought death to many who have sought to reach it. The plant is an emblem of purity and is highly esteemed in Switzerland, where popular opinion has made it the equivalent of a national flower. It is protected by the government and has appeared on their postage stamps. The plant, botanically *Leontopodium alpinum*, is a perennial herb, usually about 6 in. high. The flowers are small and yellow, but are in a head that is subtended by a number of rays of woolly-white floral leaves, giving the effect of a roughly star-shaped flower. Edelweiss, popular as an alpine plant, is also offered for sale as a rock-garden or pot plant, sometimes under the name *Gnaphalium*. There are other quite similar species of *Leontopodium*.

edema (ĭdē'mu), swelling resulting from an excessive accumulation of fluid in the tissue spaces. Causes of edema include reduction of the protein concentration in the blood, changes in capillary blood pressure, an increase in the permeability of capillary walls, and mechanical blocking of lymph channels. Edema may occur in heart or renal disease, cirrhosis of the liver, malnutrition, and anemia. It may result from the presence of tumors or from the direct action of toxic substances. Because edema is a symptom, the underlying cause should be sought and treated.

Eden. **1** Son of Joah. 2 Chron. 29:12. **2** Priest. 2 Chron. 31:15. Perhaps this is the same as **1**. **3** See EDEN, GARDEN OF. **4** Unidentified trading center, possibly in Mesopotamia. 2 Kings 19:12, Isa. 37:12, Ezek. 27:23. **5** Place somewhere near Damascus. Amos 1:5.

Eden, Anthony (Robert Anthony Eden), 1897–, British statesman, educated at Eton and Oxford. After service in the First World War, Anthony Eden rose as a Conservative member of Parliament (since 1923) and made his mark as champion of peace, internationalism, and the League of Nations when he was lord privy seal (1934–35) and "traveling ambassador." He served (1935) as British minister for League affairs and was made foreign minister in Dec., 1935. His tenure ended in Feb., 1938, after he opposed the "appeasement" of the Axis powers by Neville Chamberlain, but with the Second World War he was called back (Sept., 1939) to the cabinet as dominions secretary. He was briefly (1940) secretary of war before being returned to the foreign office post in Dec., 1940. He was after Nov., 1942, also leader in Commons. His five years (to July, 1945) as foreign secretary in Winston Churchill's war cabinet were dominated by the alliance of Great Britain, the USSR, and the United States and by the building of the UNITED NATIONS organization. See his *Freedom and Order: Selected Speeches, 1939–1946* (1948).

Eden, Emily, 1797–1869, English novelist, b. London, daughter of Baron Auckland. She went with her brother George, Lord Auckland, to India when he was governor general (1836–42). Her two novels, *The Semi-detached House* (1859, ed. by Anthony Eden, 1928) and *The Semi-attached Couple* (2 vols., 1860, with biographical introduction by Anthony Eden, 1947), have had renewed popularity in the 20th cent. as witty, ironic pictures of worldly life in the early 19th cent. See *Miss Eden's Letters* (ed. by Violet Dickinson, 1919).

Eden, village (pop. 1,603), W central Texas, ESE of San Angelo. In the rough hills are sheep and goat ranches, and Eden also handles oats, cotton, and other crops.

Eden, name of several rivers in England and Scotland. The principal one rises in Westmorland, England, and flows 65 mi. NW through Cumberland, past Carlisle, into Solway Firth.

Eden, Garden of, in the Bible, first home of man. God established the garden, with its trees of knowledge and of life, as a dwelling place for Adam and Eve, until, eating of the forbidden fruit, they were banished. Gen. 2, 3. Eden is often called Paradise. In Babylonia there was a legend of a holy place with a tree of life inhabited by a god and a goddess. Eden has been located variously over the Old World, especially in lower Mesopotamia.

Edenhall, village, Cumberland, England, on the Eden river. It is famous for the legend of the Luck of Eden Hall, an enameled goblet belonging to the Musgraves, whose family seat was the mansion Eden Hall. According to the tradition, the family luck depended on keeping unbroken the goblet which had been taken from the fairies near St. Cuthbert's Well. Longfellow's "Luck of Edenhall" is a translation of the ballad by Uhland. Eden Hall no longer exists, but the goblet is in the Victoria and Albert Museum.

Edenton (ē'duntun), town (pop. 3,835), co. seat of Chowan co., NE N.C., SW of Elizabeth City and on Albemarle Sound, settled c. 1658, inc. 1722. Its industries center around fish, peanuts, cotton, and truck produce. In 1774 women of Edenton held the "Edenton Tea Party," at which it was resolved not to use tea or other English goods until the repeal of acts oppressive to the colonies. Historic buildings include the old courthouse (1767) and St. Paul's Church (1736). Near by is a U.S. fish hatchery.

Eder (ā'dur) [Heb., =flock] **1** Levite. 1 Chron. 23:23, 24:30. **2** City of Judah, S Palestine. Joshua 15:21.

Edessa (ĭdĕ'su) or **Vodena** (vōdā'nu), city (pop. 12,994), NE Greece, in Macedonia, W of Salonica. It is an agricultural trading center with cotton and carpet manufactures. In antiquity, when it was also known as Aegae, it was the earliest seat of the Macedonian kings.

Edessa (ĭdĕ'sū), ancient city of Mesopotamia, at the site of modern URFA, Turkey. It emerged into history in the 4th cent. B.C. as Arrhoe and was named Edessa by Seleucus I. From c. 137 B.C. it was the capital of an independent kingdom, Osroene, about which little is definitely known. It later became a Roman city. Here in 260 Shapur I of Persia defeated Emperor Valerian. It was a center of Christianity by the 3d cent., and in the 4th cent. and 5th cent. many monasteries were founded. It was one of the major religious centers of the Byzantine Empire. The city fell to the Arabs in 639 and remained in Moslem hands until captured by the Crusaders in 1097. Baldwin (later Baldwin I of Jerusalem) became the ruler of the county of Edessa, and when he became king he turned it over to one of his cousins. The city, however, fell to the Moslems in 1144, and within a few years the county was overrun. Edessa remained a Christian city under the Turks.

Edfu (ĕd'fōō), village, Upper Egypt, on the Nile. It was in very ancient days the last Egyptian outpost on the border of Nubia. Supposedly an ancient temple was built there in the III dynasty. It is most notable for the great sandstone temple of Horus built after 237 B.C. by Ptolemy III and his successors. Excavations have yielded many Roman remains. The name also appears as Idfu.

Edgar or **Eadgar** (both ĕd'gur), 943?–975, king of England (959–75) son of Edmund. In 957 when the North of England revolted against Edwy, Edgar's elder brother, the young Edgar was chosen king of Mercia and Northumberland. In 959 he succeeded his brother as king of the West Saxons and a reign of orderly prosperity began. Edgar won the title the Peaceful. He recalled St. Dunstan and with him instituted wide-spread monastic reforms. In 973 the king was given a belated but magnificent coronation at Bath and a little later seems to have received the submission of eight kings, including Cumbrians, Scots and Welsh, in token of which they rowed him in a boat on the Dee while he held the rudder. Edgar gave Lothian to Kenneth of Scotland in return for his homage, and granted practical autonomy to the Danes in England (see DANE LAW) in return for their loyalty. Nevertheless he was unable to impose a political unity which could persist after his death. The son of his first wife was Edward (later EDWARD THE MARTYR), who succeeded his father. Edgar's second wife was Ælfthryth of Devon, widow of the East Anglian ealdorman Æthelwold, she bore him ÆTHELRED, who succeeded his half brother.

Edgar Atheling (ă'thulĭng) [O.E. *atheling*=son of the king], 1060?–1125?, English prince, grandson of Edmund Ironside, probably b. Hungary. After Harold's death at Hastings in 1066 he was chosen to succeed to the English throne, but he submitted to WILLIAM I in 1067. He fled (1068) to the Scottish king Malcolm III, who later married Edgar's sister (see MARGARET OF SCOTLAND, Saint). Edgar took part in the unsuccessful Northumbrian uprising (1069) in which the Danes also joined.

After Malcolm made his peace with William in 1072, the Atheling probably was in Flanders until he himself came to terms with William in 1074 and was settled in France After William's death Edgar joined Malcolm in raiding England in 1091, but after that seems to have been at peace with William II of England He led the English expedition which in 1097 dethroned Donald III and seated the Atheling's nephew Edgar (d 1107) on the throne of Scotland With Robert, duke of Normandy, Edgar went on the crusade of 1099, and in Robert's later war with Henry I of England, he was taken prisoner at the battle of Tinchebrai (1106), but was released

Edgartown, resort town (pop 1,370), on E Martha's Vineyard, co seat of Dukes co, SE Mass, settled 1642, inc 1671 Old houses, built when the town was a whaling center, survive

Edge, Walter Evans, 1873–, governor of New Jersey (1917–19, 1944–47), b Philadelphia He became a wealthy newspaper and advertising executive in Atlantic City, N J Important in Republican politics, Edge held many state offices before he served his first term as governor In the U S Senate (1919–29) he opposed the isolationist groups Later he was (1929–33) U S ambassador to France He was long identified with reform legislation in New Jersey See his autobiography, *A Jerseyman's Journal* (1948)

Edgefield, town (pop 2,119), co seat of Edgefield co, W S C, WSW of Columbia, in a cotton area, settled in the 18th cent

Edge Hill, ridge on the border of Warwickshire and Oxfordshire, England A tower built in 1760 marks the scene of the first great battle of the civil war, Oct 23, 1642, between the royalists under Charles I and the parliamentarians under the earl of Essex The result of the battle was indecisive

Edgemont, city (pop 1,002), SW S Dak, on the Cheyenne and SSW of Rapid City near the Wyo line It has a sulphur hot springs sanatorium Near by are sandstone quarries

Edgerton. 1 Village (pop 1,082), extreme NW Ohio, on the St Joseph river and NW of Defiance **2** City (pop 3,266), S Wis, near Lake Koshkonong, settled 1836, laid out 1854, inc 1883 In a tobacco-growing area, it has numerous warehouses, truck trailers are made

Edgewater. 1 Town (pop 1,648), N central Colo, in the Denver metropolitan area, inc 1904 **2** Borough (pop 4,028), NE N J, on the Hudson and S of Fort Lee, inc 1899 Chemicals and vegetable oils are made here

Edgewood, borough (pop 4,697), SW Pa, E of, and near, Pittsburgh, inc 1888

Edgeworth, Francis Ysidro, 1845–1926, British economist, grad Trinity College, Dublin He was professor of political economy at Oxford and first editor (1891–1926) of the *Economist* His special contribution to economics was the application of mathematical measurements, as described in *Mathematical Psychics* (1881) Much of his writing was collected in *Papers Relating to Political Economy* (3 vols, 1925)

Edgeworth, Maria, 1767–1849, Irish novelist, daughter of Richard Lovell Edgeworth *Letters for Literary Ladies* (1795), her first publication, was an argument for the education of women The years spent on her father's estate in Ireland, in close contact with rich and poor alike, resulted in her notable stories of Irish life– *Castle Rackrent* (1800), *Belinda* (1801), *The Absentee* (1812), and *Ormond* (1817)—to which her friend Sir Walter Scott acknowledged a debt Maria Edgeworth was also a successful writer of children's stories, including *Moral Tales* (1801), *Frank* (1801 22), and *Harry and Lucy* (1801 25) See Constance Hill, *Maria Edgeworth* (1910), bibliography by B C Slade (with biographical introduction, 1937)

Edgeworth, Richard Lovell, 1744 1817, British author and educational theorist, b Ireland, educated at Trinity College, Dublin, and at Oxford, father of Maria Edgeworth A member of the literary coterie of Lichfield, he was a close friend of Thomas Day, to whom he suggested writing *Sandford and Merton Practical Education* (written with his daughter, 1798) and Edgeworth's other educational essays show the influence of Rousseau's ideas

Edgeworth, residential borough (pop 1,696), SW Pa, on the Ohio and NW of Pittsburgh, inc 1904 It was the first municipality in Pennsylvania to adopt the borough-manager form of government Ethelbert Nevin, composer, was born here

Edgren, August Hjalmar (ou'gŭst yäl'mar ĕd'grĕn), 1840–1903, Swedish-American scholar He was graduated from the Swedish royal military academy and served for two years with the Union army in the American Civil War He then took up the study of languages in France and Germany and at Yale (Ph D, 1874) and taught languages at Sheffield Scientific School, Yale (1873–80), at the Univ of Lund (1880–85), and at the Univ of Nebraska (1893 1900), where he was also dean of the graduate school In 1900 he became an official of the Swedish royal academy He was remarkable as a polyglot, writing grammars, helping to compile dictionaries, making translations, and pursuing philological studies in various languages.

edile: see AEDILE

Edina (ĕd'nŭ) **1** Village (pop 5,855), E Minn., southwest suburb of Minneapolis **2** City (pop 1,637), co seat of Knox co, N Mo., on the South Fabius river and ESE of Kirksville, in a farm and timber area, inc 1857

Edinburg (ĕ'dĭnbûrg) **1** Town (pop 2,466), S central Ind, SSE of Indianapolis, settled 1821 Canned goods, furniture, and veneer are manufactured here **2** City (1940 pop 8,718, 1947 estimated pop 12,000), co seat of Hidalgo co, extreme S Texas, WNW of Brownsville, inc 1908 as Chapin, renamed 1911 It is a prosperous packing and processing center in the irrigated district of the lower Rio Grande valley, which produces citrus fruit, vegetables, and cotton Edinburg has a junior college.

Edinburgh, Philip Mountbatten, duke of (ĕ'dĭnburu), 1921–, British nobleman, husband of Princess Elizabeth, heiress presumptive to the English throne Prince Philip, who took his mother's name, Mountbatten, when he became a British citizen in 1947, at the same time renounced his Danish and Greek titles He is the grandson of George I of Greece, great-grandson of Christian IX of Denmark, and great-great-grandson of Queen Victoria He was created duke of Edinburgh shortly before his marriage (Nov 20, 1947) to Elizabeth He has spent most of his life in England and served in the British navy during the Second World War

Edinburgh (ĕ'dĭnburu), independent burgh or county of a city (1931 pop 449,010, 1948 estimated pop 488,331) capital of Scotland, and county town of Midlothian, E of Glasgow and near the southern shore of the Firth of Forth In literature it is often referred to as Dunedin, the Scottish form of the name, and its popular nickname is "Auld Reekie," The city is built on a series of ridges, the highest points within the city are Castle Rock at the western edge of the old town and Calton Hill on the east King Edwin of Northumbria occupied the site of Edinburgh Castle c 617 The settlement which grew up about the castle became a burgh in 1329 under Robert the Bruce and in 1437 superseded Perth as capital of the kingdom The town walls were built in 1450 and were extended in the next century The English sacked the town in 1544, and Oliver Cromwell took the castle in 1650 The town declined in importance with the departure of James VI to England in 1603 With the Act of Union (1707) Parliament House, now the seat of the Supreme Law Courts, ceased to be the meeting place of the national assemblies Holyrood palace is at the east end of the city Edinburgh's oldest building (Norman) is the small Chapel of St Margaret on Castle Rock St Giles's Church dates from the 12th cent, and the Cathedral of St Mary (Episcopal) from the 19th cent There are famous art collections in the Royal Scottish Academy, the National Gallery of Scotland, and the Royal Scottish Museum, the National Library contains many valuable manuscripts The Univ of Edinburgh, founded in 1583 under James VI, includes faculties of medicine (perhaps the most noted), law, divinity, arts, science, and music Other interesting features of the city are the famous Princes St, running east and west, and the Royal Botanic Gardens In the 18th and early 19th cent, Edinburgh developed as a center of learning and literature, among its famous men being David Hume, Adam Smith, Francis Jeffrey, John Wilson (pseud Christopher North), and Sir Walter Scott The *Edinburgh Review*, founded in 1802, added to the city's literary reputation Most of Edinburgh's industries—engineering, tanning, metal casting, and the making of machine tools, chemicals, and biscuits—are carried on in its suburbs, Corstorphine, Granton, Restalrig, and Portobello Leith is Edinburgh's port See Sacheverell Sitwell and Francis Bamford, *Edinburgh* (1938)

Edinburghshire, county, Scotland see Midlothian

Edington (ĕd'), village, Wiltshire, England It is traditionally the scene of a defeat of the Danes by Alfred There is a 14th-century church.

Edirne, Turkey see Adrianople

Edison, Charles, 1890–, Secretary of the Navy (Jan–June, 1940) and governor (1941 44) of New Jersey, b West Orange, N J, son of Thomas Alva Edison After study (1909–13) at the Massachusetts Institute of Technology, Charles Edison gradually took over management of his father's industrial holdings A Democrat, he was appointed to many offices in New Jersey before serving (1936–39) as Assistant Secretary of the Navy After Claude Swanson's death he was Acting Secretary until he was in Dec, 1939, appointed Secretary He was succeeded by Frank Knox As governor of New Jersey, Edison broke with Frank Hague by passing (1941) bills providing for payment of railroad taxes

Edison, Thomas Alva, 1847–1931, American inventor, b Milan, Ohio. His schooling was limited to three months in Port Huron, Mich, in 1854 He was a newsboy on the Grand Trunk RR and later a telegraph operator in various cities His first inventions were the transmitter and receiver for the automatic telegraph, the quadruplex system of transmitting four simultaneous messages, and an improved stock-ticker system (to make this he opened a shop in Newark, N J, and moved to Menlo Park in 1876 and to West Orange in 1887) His invention in 1877 of the carbon telephone transmitter for the Western Union Telegraph Company precipitated a legal battle between Western Union and the Bell Telephone Company, who held the patent on the Emile Berliner transmitter This dispute finally ended in an agreement between the companies which separated the two fields of speech and code transmission Edison's phonograph (patented 1878) was the first successful instrument of its kind Although others including M G Farmer had experimented with the obtaining of electric light by incandescence, Edison produced the first commercially practical incandescent lamp in 1879 Moreover, for use with it he developed a complete system for the distribution of electricity for light and power, including generators, motors, light sockets with the "Edison base," junction boxes, safety fuses, underground conductors, and other devices The crowning achievement of his work in this field was the Pearl St plant (1881 82) in New York city, the first central electric-light power plant in the world For many years Edison advocated the use of direct current He built and operated an experimental electric railroad (1880) Edison produced a superior storage battery of iron and nickel with an alkaline electrolyte He developed the kinetoscope or "peep-show" machine and later demonstrated experimentally the synchronization of moving pictures and sound, talking pictures were based on this work Edison held over 1,300 U S and foreign patents During the First World War he helped to develop the manufacture in the United States of chemicals previously imported and served as head of the U S Navy Consulting Board, concerned with ship defenses from torpedoes and mines He later worked on the production of synthetic rubber from American plants, notably goldenrod Edison was not concerned with abstract science, but was a genius in the practical application of scientific principles An Edison memorial tower and light was erected in Menlo Park (1938), Edison's laboratory and other buildings associated with his career are preserved in Greenfield Village. Charles Edison is his son See the autobiographical *Diary and Sundry Observations* (ed by D D Runes, 1948), biographies by G S Bryan (1926), F L Dyer and others (1929), F T Miller (1931), W. A. Simonds (1934), and A. O. Tate (1938)

Edison, city (pop 1,241), SW Ga, W of Albany

Edisto (ĕ'dĭstō), river rising in North and South forks in W central South Carolina and flowing SE and S to the Atlantic Near its entrance into the Atlantic it separates into two channels which form Edisto Island

Edman, Irwin, 1896–, American philosopher, b New York city, grad Columbia (B A, 1917, Ph D, 1920) He began teaching in the department of philosophy at Columbia in 1918, becoming professor in 1935 Both his teaching and his writings have achieved wide popularity, particularly in the field of aesthetics His philosophical position in general follows the direction of William James and John Dewey, although it is closely associated with Platonism His works include *Poems* (1925), *The Contemporary and His Soul* (1931), *The Mind of Paul* (1935), *Candle in the Dark* (1939), *Arts and the Man* (1939), *Fountainheads of Freedom* (with H W Schneider, 1941), and *Philosopher's Quest* (1947) He is editor of the works of Plato (1927) and Santayana (1936) and a frequent contributor to periodicals

Edmer see Eadmer

Edmond, city (pop 4,002), central Okla, N of Oklahoma City, settled 1889 It is a farm trading center with small industries and a huge oil field A state teachers college is here, and a memorial to Wiley Post is near by

Edmonds, Walter Dumaux, 1903–, American author, b Boonville, N Y, grad Harvard, 1926 His popular historical novels about New York state include *Rome Haul* (1929, adapted for the stage and moving pictures as *The Farmer Takes a Wife*), *Erie Water* (1933), *Drums along the Mohawk* (1936), *Chad Hanna* (1940), *Wilderness Clearing* (1944), *In the Hands of the Senecas* (1947), and *Wedding Journey* (1947) His short stories are in *Mostly Canallers* (1944), and his *Matchlock Gun* (1941) is an excellent story for children In 1948 his history of the Oneida Community was privately printed

Edmonds, city (pop 1,288), NW Wash, on Puget Sound N of Seattle, settled c 1866

Edmonton (ĕd'muntun), city (pop 113,116), provincial capital central Alta, chiefly on the north bank of the North Saskatchewan river It now includes the former city of Strathcona on the south bank The Parliament building, on a bold bluff overlooking the river, occupies the site of Edmonton House, a post built by the Hudson's Bay Company—during the 19th cent one of the most noted trading posts of the Northwest Edmonton is in the midst of the fertile northern park country, a prosperous farming area, and is also the gateway for the Peace river and Athabaska river country to the northwest. It is the depot for the entire

northern Mackenzie dist., an outfitting point for northern expeditions, and a focus for the fur trade There are coal, oil, and gas fields in the vicinity Edmonton is the seat of the Univ of Alberta (see ALBERTA, UNIVERSITY OF)

Edmonton, urban district (1931 pop 77,658, 1947 estimated pop. 107,960), Middlesex, England, N of London Charles Lamb spent his last years here Keats and Cowper lived in Edmonton The Bell Inn is made famous by Cowper's "Diverting History of John Gilpin"

Edmund, Saint, d 869, king of East Anglia (from 855) He was martyred by the invading Danes for his adherence to Christianity His shrine was at Bury St Edmunds Feast Nov 20

Edmund, Saint (Edmund Rich), 1170?–1240, English churchman, b Abingdon. He studied at Oxford and Paris and became a bachelor of divinity In 1222 23 he preached the crusade in England The pope made him archbishop of Canterbury in 1233 St Edmund was a zealous reformer and led a very holy life He was soon a leading force in England, and Edmund's reform affected the circle of HENRY III himself Edmund made peace between England and Wales After some years Henry persuaded the pope to send legates who should hold precedence over Edmund and whom he had to obey The bishops of England were thus completely isolated, with the legates, the king, and the lesser clergy all against them Edmund excommunicated his enemies with no decisive result He retired (1240) to Pontigny, a Cistercian abbey in France Feast Nov 16

Edmund, 921–46, king of WESSEX (939–46). He succeeded his half brother ATHELSTAN as king He had fought at BRUNANBURH and was a brave leader, but was unable to prevent an invasion by vikings from Ireland in 939–40 He was forced to cede to them by treaty the territory between Watling Street and the Northumbrian border (occupied partly by Danes), and he succeeded in recapturing it in 944 only because of the quarrels among the Norse leaders. He seems to have made an alliance with Malcolm, king of Scots, and to have fought for him in Strathclyde Edmund was killed while defending his steward against an outlawed criminal and was succeeded by his brother EDRED

Edmund Crouchback: see LANCASTER, HOUSE OF

Edmund Ironside, d 1016, king of England (1016), son of ÆTHELRED He first became prominent in 1015 in the fighting against CANUTE Contrary to the wishes of his father, he married the widow of Sifferth, a thane of the DANELAW who had been murdered, and was accepted as ruler of the Danelaw. The history of Edmund's troubles is obscure, apparently the people felt that Edmund was a rebel against his father, for he found it hard to gain a following without his father's aid At Ætheldred's death, Canute received the support of more than half of England, although Edmund was proclaimed king in London in April, 1016 Edmund fought with the courage and bravery that earned him the appellation Ironside After the great and disastrous battle of Assandun, he and the Dane came to an agreement and a partition of England. Popular legend has it that he and Canute swore brotherhood in arms. Shortly afterward, in Nov 1016, Edmund died and Canute had undisputed possession of the land

Edmundston (ĕd'mŭnstun), town (pop 7,096), NW N B , at the international boundary, on the St John river at the mouth of the Madawaska, inc 1905. It is a pulp-milling center and a hunting and fishing base Settled c 1785 by Acadians, it was known as Petit Sault to the French and Little Falls to the English before being named in 1848 for Sir Edmund Head, later governor general of Canada

Edna, town (pop 2,724), co seat of Jackson co , S Texas, SW of Houston on the Gulf Coast plain, inc 1926. The region has oil fields, cattle ranches, and varied farms

Edom (ē'dŏm), **Idumaea,** or **Idumea** (both ĭdūmē'ŭ), mountainous country, called also Mt Seir, given to Esau and his descendants It extended along the eastern border of the Arabah valley from the Dead Sea to Elath on the Gulf of Aqaba The history of the Edomites was one of continuous hostility and warfare with their neighbors—Jews, Assyrians, and Syrians—until finally they were subdued by the Maccabees and merged with the Jews At one period they occupied S Judah Gen 32 3, 36, Num. 20 14–22, Deut 2 12, 1 Kings 9 26, 11 14–17, 22 47, 2 Kings 8 20–22, Isa 34 5, Jer 49 7–17, Ezek 25 12-14, 35, 36 5, Mark 3 8 The Romans grouped Idumaea with Judaea, Samaria, and Galilee in one procuratorship After the destruction of Jerusalem, Idumaea was included in Arabia Petraea

Edred or **Eadred** (both ĕ'drĕd), d 955, king of England 946-55, son of Edward the Elder He succeeded his brother EDMUND and was faced with invasions of Danish Northumbria by Irish Vikings and by Eric Bloodaxe of Norway The last independent Scandinavian kingdom in England was ended when Edred's control was reestablished in 954 Edred being sickly, he wisely left affairs to his friend Dunstan (see DUNSTAN, SAINT), who allowed the Danes of England to live under their own laws

Edrei (ĕd'rēī) [Heb ,=strong] 1 Capital of Og, king of Bashan, not certainly identified. Num 21.23; Deut 1 4, 3 1,10, Joshua 12 4, 13 12,31 2 Unidentified town of Naphtali Joshua 19 37

Edson, Merritt Austin, 1897–, U S marine officer, b. Rutland, Vt He studied (1915–17) at the Univ. of Vermont, was commissioned (1918) in the marines, and served in France in the First World War In the Second World War, Edson fought in the Pacific area, first commanding a famous batallion of marine raiders His defense (Sept., 1942) of Henderson Field on Guadalcanal won him the Congressional Medal of Honor Promoted (1943) brigadier general, he took Tulagi and fought in the Tarawa and Saipan-Tinian operations He served (1946–47) on the staff of the chief of naval operations before retiring in Aug., 1947 In July, 1949, Edson became commissioner of public safety in Vermont

Edson, town (pop 1,571), W Alta., W of Edmonton Its principal industries are mixed farming, lumbering, and mining

education (Latin, =leading out) includes any process shaping the potentialities of the maturing organism and may be formal or informal Informal education results from the constant effect of environment, and its strength in shaping values and habits can hardly be overestimated Formal education is a conscious effort by society to impart the skills and the modes of thought considered essential Thus, Soviet Russian schools indoctrinate their students in the virtues of that system, while schools in the United States stress the democratic method Techniques of instruction also reflect the attitudes of society, i e , authoritarian groups sponsor dogmatic method, while democratic systems emphasize freedom of thought A classical exposition of totalitarian education may be found in Plato's *Republic* Democratic societies by their nature inevitably move toward universal education, hence the United States has a well-developed system of public schools In ancient Greece education for freemen was a matter of studying Homer, mathematics, and music, as well as gymnastics Higher education was carried on by the Sophists and philosophers before the rise of the ACADEMY and the philosophical schools Most education in medieval Western Europe was a charge of the Church the monastic schools and universities were the chief centers, and virtually all students took orders Lay education consisted of apprentice training for a small group of the common people and education in the usages of chivalry for the more privileged With the Renaissance, education of boys, and of some girls, in classics and mathematics became widespread After the Reformation both Protestant and Catholic groups began to offer formal education more broadly The classical-mathematical curriculum became the substance of lay teaching, while the development of scientific inquiry brought new methods and materials Though many schools were still church-sponsored, there was a great increase in the number of private nonsectarian and public schools Elementary and secondary schools were established, and as larger proportions of the population attended, curriculums became differentiated (see PROGRESSIVE EDUCATION and GUIDANCE) and included aspects of VOCATIONAL TRAINING Opportunities for higher education were more widely provided in the 19th and 20th cent , especially in the United States in the LAND-GRANT COLLEGES A large increase in college and vocational training resulted from the provision of tuition and subsistence by the Veterans' Administration to veterans of the Second World War Various religious groups, notably the Roman Catholic, have PAROCHIAL SCHOOLS which parallel public schools Private schools and colleges have frequently been leaders in educational experiment Education today is generally considered as important for girls as for boys (see COEDUCATION), equality of educational opportunity in the United States is an accepted principle, though not always observed in practice Theories of education have reflected psychologies of learning and systems of ethics An ancient idea, held by Socrates, is that the rightly trained mind would turn toward virtue This idea has actually never been abandoned, though varying criteria of truth and authority have influenced both the content and the techniques of education It was present in the classical curriculum of the Renaissance, the theorists of which included ERASMUS, Sir Thomas MORE, and George BUCHANAN Since the 17th cent the idea has grown that education should be directed to individual development for social living COMENIUS, ROUSSEAU, PESTALOZZI, FROEBEL, MONTESSORI, and Horace MANN were outstanding figures in this development In the 20th cent John DEWEY has emphasized that young people should be taught to use the method of experimentalism in meeting problems of the changing environment See ADULT EDUCATION, KINDERGARTEN, NURSERY SCHOOLS See John Dewey, *Democracy and Education* (1916), E. H Reisner, *Historical Foundations of Modern Education* (1927), J. D Russell and C H. Judd, *The American Educational System* (1940).

Education, United States Office of, established (1867) as an independent governmental agency and transferred (1869) to the Dept of the Interior as the Bureau of Education In 1939 the bureau, by executive order, was transferred to the Federal Security Agency and renamed the Office of Education. It was created to collect and disseminate information on education and to promote better standards of education in the United States These functions were greatly expanded, and the office is now empowered to administer funds appropriated as aids to education and to conduct special studies The office publishes many reports and periodicals Henry BARNARD was the first commissioner of education (1867–70)

Edward I, 1239–1307, king of England (1272–1307), son of HENRY III By his marriage (1254) to ELEANOR OF CASTILE he gained new claims in France and strengthened the English rights to Gascony. He received from his father the huge appanage of all outlying English dependencies, including Wales, Ireland, and the lands in France, but he failed in his first attempt to subdue Wales in 1257 After briefly seeming to approach an alliance with Simon de MONTFORT, he took Henry III's part in the BARONS' WAR (1263–67) and, by revitalizing the royal party and its forces, was responsible for the crown's triumph From this time on the young heir actually wielded control of the realm He went on crusade in 1270 but returned from the Holy Land when he learned of his father's illness He did not arrive until 1274 Edward's vigorous reign was characterized by constant warfare Trouble with the Llewelyns led to his successful conquest (1277–82) of Wales beyond the Marches. In 1284 Edward extended the English administration to Wales In France from 1286 to 1289 he improved the administration of Gascony After the death in 1290 of Margaret, Maid of Norway, Edward asserted his claim to overlordship of Scotland John de Baliol, his choice for the throne, soon entered an alliance with Philip IV of France, with whom Edward was already on bad terms In 1296 the English king began his long attempt to conquer Scotland His first campaign was successful, he deposed Baliol and humiliated Scotland by removing the Coronation Stone from Scone to Westminster But while he was heading an expedition to the Continent the next year, a new Scottish leader arose in William WALLACE, who defeated the English at Stirling Bridge Edward ceased fighting with France, England's claims to Gascony were to be favorably settled finally in the treaties of 1299 and 1303 On a second expedition into Scotland he won a brilliant but inconclusive victory at Falkirk (1298) Campaigns in the following years led to Wallace's defeat and execution (1305), but a new leader, ROBERT I (Robert the Bruce), arose as king of a still-defiant Scotland Edward commenced an expedition against him but died before reaching the border, commending the cause of the conquest of Scotland to his son, EDWARD II An astute general and planner, Edward I is outstanding for his efforts to extend the English rule to all of Britain More important, however, are those developments during his reign in law and constitution that have caused him to be praised as the English Justinian He began to strengthen the central government by *quo warranto* writs, which reduced and restricted private feudal courts, and by his law of 1285, *Circumspecte agatis*, he forced church courts to confine themselves to ecclesiastical cases His three Statutes of Westminster (1275, 1285, 1290, see WESTMINSTER, STATUTES OF) formulated the advances of a century of common law and supplemented them By his statute on mortmain (1279) Edward prohibited grants of land to the church without the king's permission In turn the English clergy, backed by Boniface VIII's bull *Clericis laicos* (1296) refused in 1297 to contribute to Edward's campaign against the French until the king boldly denied protection to them and their goods and even threatened to confiscate all church property Such action was mainly prompted by his need for funds Partly in deference to popular demand, partly in accord with what he conceived as sound economic policy, he expelled (1290) all Jews from England His expensive wars necessitated concessions to the barons and threw him upon the generosity of all his subjects The Model Parliament which he called in 1295 marked a tremendous forward step in the development of a powerful governmental body representative of all three estates The increasing resistance of the barons, merchants, and clergy to heavy taxation for war forced Edward to issue in 1297 the confirmation of the Charters, including the Magna Carta and those signed by Henry III Edward here promised in effect to collect aids and other forms of taxation only with the consent of Parliament Although he later revoked part of the confirmation, this doctrine survived to become the basis of "no taxation without representation" Edward was a handsome, personable man, so tall that he was known as Edward Longshanks He was, however, violent, ambitious, and hasty—a strong but somewhat unstable ruler. See T F Tout, *Edward the First* (1903) and *History of Eng-*

land . . . 1216–1377 (1905); Edward Jenks, *Edward Plantagenet (Edward I), the English Justinian* (1923), F M Powicke, *King Henry III and the Lord Edward* (1947)

Edward II, 1284–1327, king of England (1307–27), son of Edward I and Eleanor of Castile, called Edward of Carnarvon for his birthplace in Wales He served as regent during his father's absence in 1297–98 and became the first prince of Wales in 1301. He accompanied his father in the Scottish campaigns, but the prince's dissipations caused Edward I to banish young Edward's friend, Piers GAVESTON Edward succeeded his father in 1307 and married Isabella of France in 1308 Almost immediately the strains which were to dominate his reign became apparent—internal dissension and the loss of Scotland His insistence of having Gaveston at court and even as regent during his absence caused rebellion of the barons, who appointed (1310) 21 lords ordainers to rule Gaveston was treacherously killed by some of the nobles in 1312. Meanwhile Edward had tried to renew the campaigns against Scotland which Robert I (Robert the Bruce) had forced him to abandon in 1307 At Bannockburn in 1314 the Bruce won a signal victory over Edward's forces England itself was blighted by internal disorders and famines A moderate royalist group of barons under Aymer de Valence, earl of Pembroke, gave promise of stability in government from 1318 to 1321, but Edward found new favorites in the Hugh Despensers, father and son, who virtually ruled from 1322 to 1326 They called a parliament at York in 1322, important not so much for its enactments as for its principle that provisions for the good of the realm should have the consent of commoners as well as of barons, earls, and clergy The Despensers also made (1323) a truce with Robert the Bruce which lasted for 13 years and virtually recognized him as king of Scots Their avarice caused the Despensers to overreach themselves in making enemies Queen Isabella was finally disaffected by Edward's neglect and by mistreatment from his favorites When trouble threatened with the new king of France (her brother, Charles IV) she went as envoy to France in 1325, taking with her her son, the heir to the English throne (later EDWARD III) Refusing to return home while the Despensers ruled, Isabella now entered an adulterous alliance with Roger de Mortimer, who had fled to France With him and her son she married Philippa of Hainault, and in 1330 his first son, EDWARD THE BLACK PRINCE, was born In this year Edward executed a coup and seized power, putting Mortimer to death and forcing his mother into retirement. Edward, who had gone to Scotland on the unsuccessful expedition of 1327, resented the terms of the Treaty of Northampton (1328) by which he had renounced the Scottish throne and decided to support Edward de Baliol against the Scottish king, David II. Edward's victory at Halidon Hill in 1333 did not settle the Scottish question, and trouble with France arose to divide his attention The series of wars known as the HUNDRED YEARS WAR, which was to dominate Edward's reign, began in 1337 Disputes over English holdings in France, trouble between the great Flemish weaving cities (allies of the English) and their French overlords, and French aid to the Scots were chief causes of this war. Edward's assumption of the title of king of France in 1340, based on a claim through his mother, which was first advanced in 1328, was a contributing factor. Edward took an active part in the war, fighting in the naval victory of Sluis (1340), in the famous battle of Crécy (1346), and in the victory at Calais (1346) His son, the Black Prince, achieved a popular reputation for his exploits, such as his victory at Poitiers (1356), where he captured the French king, JOHN II, who had succeeded PHILIP VI in 1350 The Treaty of London (1359) ended this phase of the war but was unpopular in France because of its concessions to England. Fighting was resumed, continuing through the treaties of Brétigny and Calais, by which Edward renounced his claim to the French throne in return for the possession of Aquitaine In 1369 CHARLES V of France repudiated the Treaty of Calais and renewed the war, but Edward took less interest in it Various factors, among them the poor health of the Black Prince, led to a truce in 1375, which proved to be but a pause in the fighting Wars with the Scots, who had been receiving French aid, continued in a desultory manner In 1346 the English had won a victory at Neville's Cross in England and made a prisoner of David II In 1356 Edward had gone on the expedition known as Burnt Candlemas against the Lothians But, like the French wars, the Scottish wars were inconclusive in Edward's reign The great constitutional developments of this period were promoted by the heavy expenditures on the wars Parliament, by withholding money grants, forced concessions from the king, as in the collection of tallage, and it was at this time that Parliament began to take the form it was to retain Equally important in bringing about social change in England were the visitations of the Black Death (see PLAGUE), which struck first in 1348–49 and again in 1362 and 1369 The decimation of the population allowed the lower classes to demand higher wages and social advancement In an effort to combat this and to preserve old conditions, the Statutes of Laborers were passed (first adopted in 1351) Religious unrest during the reign found a spokesman in John WYCLIF Edward quarreled with the Church—first, because of papal and hierarchical threats to his power, secondly, because the pope generally supported the French king, and, thirdly, in order to divert church revenues into his chronically exhausted coffers The Statutes of Provisions (first issued 1351) and Praemunire (first issued 1353) were aimed at breaking down church power In 1371 the clerical ministers were replaced by laymen, but this proved unsuccessful During the last years of his reign, Edward was under the influence of his greedy mistress, Alice PERRERS The political scene was one of rivalry between the court party headed by JOHN OF GAUNT and the clerical and parliamentary party led by the Black Prince and Edmund Mortimer (husband of Edward's granddaughter) Supported by Alice Perrers, John of Gaunt gained control, but at the time of the Good Parliament of 1376, Alice Perrers was expelled from the court, and John's ministers were impeached However, the Black Prince died, and John once again seized power in 1377 Edward died soon afterward, and the son of the Black Prince came to the throne as Richard II Of Edward III's seven sons five lived to figure importantly in history and establish lines of rival claimants to the throne These sons were Edward the Black Prince; Lionel of Antwerp, duke of Clarence, John of Gaunt, duke of Lancaster, Edmund of Langley, duke of York, Thomas of Woodstock, duke of Gloucester See Joshua Barnes, *The History of Edward III* (1688), W P Warburton, *Edward III* (1884), James Mackinnon, *The History of Edward III* (1900), T F Tout, *History of England, 1216–1377* (1903), G M Trevelyan, *England in the Age of Wycliffe* (1909)

Edward IV, 1442–83, king of England (1461–70, 1471–83), b Rouen, France He succeeded (1460) to the leadership of the York party (see ROSES, WARS OF THE) after the death of his father, Richard, duke of York, and the defeat and capture of HENRY VI at Northampton He defeated the Lancastrians at Mortimer's Cross in 1461, entered London shortly thereafter, and was proclaimed king He achieved another victory over the Lancastrians at Towton Field in the same year Between 1462 and 1464 he participated in campaigns in the north, but because he was negotiating a secret marriage with Elizabeth Woodville, he was not present at the defeat of the Lancastrians at Hexham in 1464 Edward's marriage and subsequent favoritism to his wife's family alienated his cousin, the able and ambitious Richard Neville, earl of Warwick The severe reprisals taken by Edward's constable, John Tiptoft, earl of Worcester, caused some discontent Warwick married his daughter to Edward's brother, George, duke of CLARENCE, and openly rebelled Warwick defeated Edward's forces at Edgecote, but the king was strong enough to oppose him, Warwick soon fled to France, where, under the influence of Louis XI, he formed an alliance with MARGARET OF ANJOU, queen of the deposed Henry VI They returned to England with an army, rescued Henry from the Tower, and replaced him on the throne Edward fled to Holland but returned in 1471 to defeat and kill Warwick at Barnet and rout the Lancastrians at Tewkesbury, where Margaret was captured and her son killed With the death of Henry in the Tower in 1471, Edward's position was secure The remainder of his reign was a peaceful one Edward remained popular despite his dissolute, often ruthless, character He had little recourse to Parliament and instituted the system of benevolences as a source of income He did much to promote trade See Charles Oman, *The History of England, 1377–1485* (1906), K H Vickers, *England in the Later Middle Ages* (1914), C L Scofield, *The Life and Reign of Edward IV* (1923)

Edward V, 1470–83, king of England (1483), elder son of EDWARD IV and Elizabeth Woodville His father's death (1483) left the boy king the pawn of the conflicting ambitions of his paternal uncle Richard, duke of Gloucester, and his maternal uncle, Earl Rivers, Gloucester had Rivers arrested and confined the king and his younger brother, Richard, duke of York, to the Tower The young princes were declared illegitimate, and Gloucester, with a show of reluctance, took the throne as RICHARD III The fate of the two children in the Tower remained a mystery for more than 20 years, until Sir Thomas More, seeking a solution, offered proof that they had been smothered in their sleep by order of their uncle, Richard Skeletons, presumed to be those of the princes, were unearthed in the Tower during the reign of Charles II Their pathetic fate has appealed to the imagination of many writers, including Shakspere, who treats their unfortunate careers in *Richard III*

Edward VI, 1537–53, king of England (1547–53), son of HENRY VIII and Jane Seymour Edward succeeded his father under a council of regency, whose composition reflected Henry's desire to forward the Reformation Control of the government went to Edward's uncle, Edward Seymour, earl of Hertford (later duke of SOMERSET), who became protector In general he continued Henry's policies but relaxed the Tudor absolutism by liberalizing the treason and heresy laws The Church became increasingly national, and the government, tempering the zeal of Thomas CRANMER, archbishop of Canterbury, moved slowly toward Protestantism The new order of communion (1548) and the first Book of Common Prayer (1549) increased contention between Catholics and reformers, and an unsuccessful rebellion of Catholics occurred in the west The dissolution of chantries and the destruction of relics, both begun under Henry, proceeded apace A proposal for the union of England and Scotland was refused by the latter, despite the great victory of Somerset at Pinkie (1547) The Scots instead strengthened their alliance with France, the power which increasingly threatened England's safety War between France and England broke out in 1549 over the possession of Boulogne Meanwhile there had arisen at home the pressing agrarian problem of excessive inclosure of common lands By adopting the yeomen's cause, Somerset aroused the opposition of the gentry and the council, thus affording his rival, John Dudley, earl of Warwick (later duke of NORTHUMBERLAND), an opportunity to secure his overthrow (1549) Dudley, after confining Somerset in the Tower, won complete ascendancy over Edward With the prorogation (1550) of Parliament and the expulsion of Catholics from the council, the reformers triumphed, and Dudley gained control of the government By an ignominious treaty with France he secured peace The confiscation of chantry lands and church treasures brought needed revenue A second Act of Uniformity and a second Book of Common Prayer, both more strongly Protestant, were adopted After Somerset's execution (1552), Northumberland's government became increasingly unpopular Fearing the accession of the persecuted Catholic princess, Mary, the duke inveigled Edward into settling the crown on Lady Jane GREY, granddaughter of Henry VIII's sister and wife of Northumberland's son, who was to receive the crown matrimonial At the dying king's insistence the council reluctantly assented, and Northumberland made hurried preparations for the coming unsuccessful struggle against Mary's forces Edward himself had given indications that he might have matured into a strong-willed but intelligent and pious king, but his domination by Northumberland prevents an accurate assessment See A F Pollard, *England under the Protector Somerset* (1900) and *History of England, 1547–1603* (1910), Clements Markham, *Edward VI* (1907), C H Smyth, *Cranmer and the Reformation under Edward VI* (1926)

Edward VII, 1841–1910, king of England (1901–10) The eldest son of Queen Victoria, he was known for 60 years as Albert Edward, prince of Wales He traveled widely on the Continent, in the Near East and in India, and in 1860 he visited the United States and Canada In 1863 he married Alexandra, daughter of Christian IX of Denmark They had six children, the second of whom was to become GEORGE V Victoria lived largely in seclusion for some years after the death of the prince consort in 1861 and upon the prince of Wales devolved the duty of representing the crown at public functions A liberal patron of the arts and sciences, he was also a leader of a notable social group and an enthusiastic sportsman His tactful recognition of Liberal

leaders softened the public's impression of Victoria's partiality for the Conservatives His love affairs, however, often offended his mother's stern moral sense and distressed the proprieties of Victorian England The prince ascended the throne on Jan 22, 1901, his coronation the following year was postponed for some weeks because of an illness As king, Edward was well received on two visits to Ireland In the course of his travels on the Continent he did much, by his tact and personality, to promote better international understanding He had a hand in building the alliance with France and helped bring about a number of arbitration treaties with other powers The end of his reign was marked by the constitutional crisis over the attempt to limit the veto power of the House of Lords Edward cooperated somewhat reluctantly with the Liberal ministry of Herbert Asquith, but the issue was still unresolved at the time of his death See Sidney Lee, *King Edward VII* (2 vols, 1925–27), E F Benson, *Edward VII* (1933)

Edward VIII, 1894–, king of England (1936), known in later years as the duke of Windsor The eldest son of George V, he was born at White Lodge, Richmond, and christened Edward Albert Christian George Andrew Patrick David He was privately tutored and studied at the Osborn Naval College and the Royal Naval College at Dartmouth In 1911 he was made prince of Wales and earl of Chester His studies at Magdalen College, Oxford, which he entered in 1912, were interrupted by the First World War The young prince went to France in 1914 as aide-de-camp to Sir John French at Saint-Omer, France, and later served in Italy and Egypt Between 1919 and 1936, his duties as prince of Wales carried him on many trips He visited the United States Japan, South America, and the dominions—Canada, New Zealand, Australia, South Africa, and India His fondness for hunting and riding gained him the reputation of a sportsman As prince of Wales he manifested interest in such problems as slum clearance and housing After a trip in 1929 to the depressed mining areas of Wales, his sympathetic comments concerning conditions there received much attention On the death of his father in Jan, 1936, he succeeded to the throne, but his intention to marry Wallis Warfield Simpson (see WINDSOR, WALLIS WARFIELD, DUCHESS OF), an American, then suing her husband for divorce, precipitated a crisis The government, headed by Stanley Baldwin, opposed the marriage, and the issue developed into a struggle between monarch and cabinet The king insisted upon his right to marry the woman of his choice The government saw in his refusal to accede to its wishes a threat to constitutional procedure Since no resolution seemed possible, the king executed a deed of abdication, and on Dec 11, 1936, a bill of abdication was passed by Parliament After a moving radio address, the ex-king left for the Continent He was granted the title of duke of Windsor On June 3, 1937, he married Wallis Warfield at Monts, France After a trip to Germany in 1937, a proposed visit to the United States was canceled With the outbreak of the Second World War, the duke went to France as a major general, serving briefly as a liaison officer between British and French headquarters In 1940 he was appointed governor of the Bahamas, a post which he held until 1945 After that time, he lived in France but traveled much, making frequent trips to the United States

Edward Nyanza (nĭăn'zŭ, nē–), lake, area 830 sq mi, in the Great Rift Valley, central Africa, on the border of the Belgian Congo and Uganda It is at an altitude of 3,240 ft The lake is connected by the Semliki river to Albert Nyanza in the north, and it is one of the lakes supplying water to the Nile Edward Nyanza was discovered by Stanley in 1899 It is also called Lake Edward

Edwards, Edward, 1812–86, English library pioneer As assistant in the British Museum, he helped Sir Anthony Panizzi draw up the rules for the catalogue (1839–46) Edwards collected library statistics and advised William Ewart on the free-library legislation for the United Kingdom (1850) He was first librarian of the Manchester Free Library (1850–58) He wrote a biography of Sir Walter Ralegh (1865), *Memoirs of Libraries* (1859), and *Lives of the Founders of the British Museum* (1870)

Edwards, George, 1693–1773, English naturalist He became librarian of the Royal College of Physicians in 1733 His works include *History of Birds* (1743–51) and *Gleanings of Natural History* (1758–64)

Edwards, George Wharton, 1859–1950, American illustrator and author, b Fair Haven (now part of New Haven), Conn, studied in Antwerp and Paris He was art director of *Collier's Magazine* and the American Bank Note Company and was well known for his magazine and book illustrations and water colors A mural painting on Henry Hudson is in the U S Military Academy at West Point His publications include *Thumbnail Sketches* (1886), *Holland of Today* (1909), *Brittany and the Bretons* (1910), *Some Old Flemish Towns* (1911), *Vanished Towers and Chimes of Flanders* (1916), *Vanished Halls and Cathedrals of France* (1917), *Belgium Old and New* (1920), and other travel volumes

Edwards, Haden see FREDONIAN REBELLION.

Edwards, Harry Stillwell, 1855–1938, American author, b Macon, Ga, grad Mercer Univ, 1877 A newspaperman in Macon, he is remembered for his Georgia tales in *Two Runaways and Other Stories* (1889), *Eneas Africanus* (1919), and other volumes and for a novel, *Sons and Fathers* (1896)

Edwards, Henri Milne see MILNE-EDWARDS

Edwards, Jonathan, 1703–58, American theologian and metaphysician, b South Windsor (then in Windsor), Conn He was a precocious boy, early interested in things scientific, intellectual, and spiritual After graduating from Yale at 17, he studied theology, preached in New York city, tutored at Yale, and in 1727 became the colleague of his grandfather, Solomon Stoddard, in the ministry at Northampton, Mass In 1729, on his grandfather's death, Edwards took sole charge of the congregation The young minister was not long in gaining wide spiritual leadership by his forceful preaching and powerful logic These were in the best Calvinist tradition and were enriched by his reading in philosophy, notably Bishop Berkeley and John Locke His favorite themes were predestination and the absolute dependence of humble man upon God and upon divine grace, which alone could save man He rejected with fire the Arminian (see REMONSTRANTS) modification of these Calvinist doctrines He exhorted his hearers with great effect and held in 1734–35 a religious revival in Northampton which in effect brought the GREAT AWAKENING to New England Edwards was stern in demanding strict orthodoxy and fervent zeal from his congregation He was unbending in a controversy over tests for church membership, and in 1750 he was dismissed from Northampton At Stockbridge, Mass, where he went to care for the Indian mission and to minister to a small white congregation, he completed his theological masterpiece, *The Freedom of the Will* (1754), which sets forth metaphysical and ethical arguments for determinism In 1757 he was called to be president of the College of New Jersey (now Princeton), but he did not have time to establish himself there In 1758 he died, far from his beloved wife, Sarah Pierrepont Edwards His influence on American Christian thought was immense for a time Such men as Joseph BELLAMY and Samuel HOPKINS spread the doctrines of Edwards's New England theology Yet it is often said that Jonathan Edwards was the last of the great New England Calvinists His theological writings are perhaps less read today than his more casual writings and some of his burning and poetic sermons, such as *Sinners in the Hands of an Angry God* and *God Glorified in the Work of Redemption by the Greatness of Man's Dependence on Him in the Whole of It* Many of his descendants have attained to high positions in the U S culture A short selection of his works, ed by Clarence H Faust and Thomas H Johnson, appeared in 1935 See bibliography, *Printed Works of Jonathan Edwards* (ed by Thomas H Johnson 1940), introduction by Perry Miller to *Images or Shadows of Divine Things* (1949), biographies by H S Parkes (1930), A C McGiffert (1932), O E Winslow (1940), Perry Miller (1949)

Edwards, Jonathan, the younger, 1745–1801, American theologian, b Northampton, Mass, grad College of New Jersey (now Princeton), 1765, son of Jonathan Edwards (1703–58) His career in some ways paralleled that of his famous father After serving as pastor of a New Haven church from 1769 to 1795, he was dismissed for opposing the HALF-WAY COVENANT He was pastor at Colebrook, Conn, until 1799, then was made president of Union College, but died before he could make much impress on the college He edited some of his father's works and generally held to his doctrines, though in *On the Necessity of the Atonement* the younger Edwards expounded a "governmental theory" of the Atonement, which was more liberal and more popular than the elder Edwards's "satisfaction theory"

Edwards, Ninian, 1775–1833, governor of Illinois, b Maryland A Kentucky lawyer and jurist, he was appointed (1809) governor of Illinois Territory and served in the formative years until 1818 He served as one of the first U S Senators from the new state and, despite growing political opposition, was elected governor in 1826

Edwards, William Henry, 1822–1909, American entomologist, b Hunter, N Y, grad Williams College, 1842 His chief work was the 18-volume *Butterflies of North America* (1872–97) To his *Voyage up the River Amazon* (1847), A R Wallace credited the inspiration for his own famous journey with H W Bates

Edwards, town (pop 1,110), W Miss, W of Jackson The Civil War battle of Champion's Hill in Grant's VICKSBURG CAMPAIGN was fought near here

Edwardsville. **1** City (pop 8,008), co seat of Madison co, SW Ill, NE of St Louis, in a coal area, settled 1800, platted 1813, inc 1837 Radiators and boilers are made here. **2** Industrial borough (pop 7,998), NE Pa, on the Susquehanna near Wilkes-Barre, inc 1884 Anthracite is mined

Edward the Black Prince, 1330–76, son of Edward III of England He was created duke of Cornwall in 1337, the first duke to be created in England, and was made prince of Wales in 1343 After the battle of Crécy, in which the boy established himself as a valorous knight, he seems to have been called the Black Prince by the French, perhaps because he wore black armor, the name is first recorded in England in the 16th cent He was also called Edward of Woodstock He served at the siege of Calais and was sent by his father to lead an expedition which ravaged Aquitaine in 1355 In 1356 the prince won the battle of Poitiers and captured John II of France When by the Treaty of Calais (1360) the English king received Aquitaine, Ponthieu, and Calais, he created a principality of his French holdings and made Edward prince of Aquitaine and Gascony In 1361 the prince had married Joan the Fair Maid of Kent, and with her he maintained at Bordeaux after 1363 a brilliant court When rebellious Castilians tried to set up Henry of Trastamara as king in place of his half brother, Peter I (of Castile and Leon), Charles V of France allowed Bertrand du Guesclin, a Breton noble, to lead French mercenaries to the aid of Henry The Black Prince took Peter's part and temporarily restored him to his throne by the victory of Nájera (1367) The expenses of the war, however, compelled the prince to levy a tax in Aquitaine which was protested by his nobles and by Charles V on their behalf War with Charles resulted, and the prince, though very ill, directed the capture and burning of Limoges (1370) with needless massacre of the citizens By 1372 his bad health forced him to resign his principalities, leaving his brother, JOHN OF GAUNT, to attempt the impossible task of holding them for England The aging Edward III had relaxed his hold on the government, and in the quarrel of powerful noblemen with the church party John of Gaunt headed the anticlerical group and became virtual ruler of England The Black Prince, aware that he would not live to succeed his father, tried to strengthen the hands of the church party so that the accession of his son (later Richard II) would be assured To that end he and the earl of March inspired the Good Parliament of 1376 which, among other things, impeached two followers of John of Gaunt and removed Alice Perrers, the king's mistress, from court These acts were reversed shortly after the prince's death, but John of Gaunt did not oppose the accession of Richard For bibliography, see EDWARD III See biographies by R P Dunn-Pattison (1910) and H D Sedgwick (1932)

Edward the Confessor, d 1066, king of England (1042–66), son of ÆTHELRED and his Norman wife, Emma Queen Emma and her children fled to the Norman court in 1016, and there Edward grew up, although Emma returned to England and married Canute He was brought to England in 1041 by HARTHACANUTE and succeeded him, being elected king in 1042 and crowned in 1043 Edward governed well and was able (1049–51) to discharge his naval vessels and so free his people from burdensome taxes Earl GODWIN was the most powerful noble in the kingdom, especially after the king married his daughter Trouble between the king and Godwin was aggravated by Edward's natural inclination to favor the Normans in England—notably Robert of Jumièges, whom he made archbishop of Canterbury in 1051 A fracas between the king's brother-in-law, EUSTACE II, count of Boulogne, and the men of Dover, for which Godwin refused to punish the Dover citizens, led to the outlawry and exile of Earl Godwin and his family In their absence Edward received William, duke of Normandy (later WILLIAM I) At this time the childless king probably made William his heir, as William later claimed But in 1052 Godwin and his sons returned and demonstrated their power by making STIGAND archbishop of Canterbury instead of Robert Thenceforward the king took less interest in his realm and more in his religion After Godwin's death in 1053 his sons increased their power, especially HAROLD, who suppressed (1062–63) the Welsh Another son, TOSTIG, was earl of Northumbria until 1065, when his people revolted and exiled him Harold's refusal to help Tostig led to a breach between the brothers Edward was disheartened at the prospect of a war after his death, for both HAROLD III of Norway and William of Normandy had claims to his throne, and he recognized the warlike Harold, son of Godwin, as his successor rather than EDGAR ATHELING The crisis of the succession was resolved by the NORMAN CONQUEST Edward's piety was responsible for his name the Confessor, he was remembered with affection by the English during Norman times He was canonized in the 12th cent Feast Oct 13

Edward the Elder, d 924, king of Wessex (899–924), so called to distinguish him from Edward the Martyr and Edward the Confessor. The son of ALFRED, he was of great aid to his father in the wars with the Danes and was apparently joint king with him. At Alfred's death Edward's succession was disputed by his cousin Æthelwold, who gath-

ered adherents in the north and in Mercia and ravaged the land with rebellion. Edward's armies were not victorious, but the death of Æthelwold in battle (905?) put an end to the war. Shortly thereafter fighting with the Danes recommenced. Aided by his Amazonian sister, Æthelflæd, Lady of the Mercians, Edward undertook the partial reconquest of the Danelaw from Ireland and also repelled viking attacks on the shores of England. Victories of the English enabled him to fortify English lands, and he gradually established himself as the ruler of all England S of the Humber. After Æthelflæd's death (918) Mercia lost its semi-independent position and was ruled by Edward. He was accepted as overking by several Welsh rulers, and he is supposed to have received the submission of Constantine II of Scotland, though there is some dispute as to the reality of the submission. The right of the overlordship of Scotland, based on Edward's position, was asserted by the English kings who later conquered Scotland. Athelstan succeeded Edward, his father. Two other sons also ascended the throne, Edmund and Edred.

Edward the Martyr, d 978, king of England (975–78), son of Edgar and his first wife. Despite the opposition of some of the nobles, Edward was crowned, but could not control the kingdom. He was murdered at Corfe by retainers in the service of his stepmother, Queen Ælfthryth or Ælfrida, and of her son Æthelred. There is no proof that Ælfthryth or Æthelred planned his death, as later tradition said. Edward's body was translated to Shaftesbury; miracles occurred there, and he was regarded as a saint and martyr by the people.

Edwin or **Eadwin** (both ĕ'dwĭn), 585?–632, king of Northumbria (616–32). The son of Ælla and heir to the throne of Deira, he was kept from his inheritance by Æthelfrith. Edwin sought refuge with Rædwald, king of East Anglia, who in 616 defeated and killed Æthelfrith and restored Edwin to his throne and gave him the rule of Bernicia also. In a few years Edwin succeeded Rædwald too, and his overlordship included all the heptarchy but Kent. The king was converted to Christianity by Paulinus (Saint), who accompanied the king's bride (a daughter of the king of Kent) to Northumbria in 625. In 627 Edwin and many of his court were baptized at York, and he seems to have assisted Paulinus in the conversion of his people thereafter. Edwin, in one of his raids attacked Cadwallon, king of North Wales. Later Cadwallon and Penda of Mercia defeated and killed Edwin and his son in 632.

Edwy (ĕ'dwē) or **Eadwig** (ĕ'dwĭg), d 959, king of Wessex (955–59), son of Edmund. He succeeded his uncle, Edred. At his accession he was probably chosen king of Mercia and Northumbria as well as Wessex, but within two years Mercia and Northumbria shifted allegiance to his brother Edgar, who succeeded him in Wessex after his death. Little is known of his short reign, except that during it St Dunstan was exiled because of a personal quarrel with the king.

Eeckhout, Gerbrand van den (gĕr'brant vän dĕn āk'hout), 1621–74, Dutch painter and etcher, pupil and close follower of Rembrandt. His works are sometimes confused with those of his master. Among the best known are *Anna Presenting Samuel to the High Priest* (Louvre), *Resting Huntsman* and *Woman Taken in Adultery* (Rijks Mus.), *Four Chiefs of the Wine Guild* (National Gall., London), and *Sodom and Gomorrah* and *Isaac Blessing Jacob* (Metropolitan Mus.).

Eeden, Frederik van (frā'durĭk vän ā'dun), 1860–1932, Dutch novelist and poet, a practicing physician. In 1898 he founded a cooperative farm colony. His work is pervaded by deep mysticism, a tendency contributing to his conversion (1922) to Roman Catholicism. Van Eeden's best-known work is a novel trilogy, *De kleine Johannes* (1885–1906, Eng tr., *The Quest*, 1907). He also wrote dramas, among them the tragicomedy *Ijsbrand* (1908, Eng tr., *Ysbrand*, 1910).

eel, edible fish of the family Anguillidae of the order Apodes. The common fresh-water eel (*Anguilla*) is found in the Atlantic coastal areas of North America and Europe and in the Mediterranean region. The snakelike body is covered with minute scales embedded in the skin, and the dorsal and anal fins are continuous around the tail. Females grow to a length of 4 ft. and males to about 2 ft. Both the American and the European species breed deep in overlapping areas of the Atlantic Ocean S and SE of Bermuda. They hatch as tiny, flattened, transparent larvae, which travel back toward their ancestral shores. After arrival there (the American eels at the end of the first summer, the European the third) they begin to develop into elvers (tiny creatures with the appearance of the adult). The males remain near the mouths of rivers and the females swim upstream, where they remain for from 5 to 20 years. When sexually mature the adults lose their voracious appetites, and in autumn they migrate to the breeding grounds, reproduce, and die. There are no fresh-water eels on the Pacific slopes of the Americas, but several species inhabit Asia. There are a number of related families of marine eels.

eel, electric: see electric fish.

Efate (ĕfä'tē), Fr *Vaté* (vatā'), volcanic island (pop 1,940), S Pacific, most important island of the New Hebrides. It is SE of Espiritu Santo and is the seat of Vila, capital of the Anglo-French condominium. The island produces copra, coffee, and sandalwood. Havannah Harbour was developed in the Second World War. Efate was formerly called Sandwich Island.

Effen, Justus van (yŏos'tŏos vän ĕ'fun), 1684–1736, Dutch man of letters, founder of the *Hollandsche Spectator* (1731–35), a pioneer in Dutch journalism modeled on the journal of Addison and Steele. See W. J. B. Pjenaar, *English Influences in Dutch Literature* (1929).

efficiency: see industrial management, machine; work.

Effingham, city (pop. 6,180), co. seat of Effingham co., SE central Ill., SE of Decatur, in a farm and dairy area, inc. 1861. It is a railroad center and manufactures food products, lumber, and road machinery. Lake Kanaga borders the city.

Égalité, Philippe see Orléans, Louis Philippe Joseph, duc d'.

Egan, Maurice Francis (ē'gun), 1852–1924, American diplomat and author, b. Philadelphia, grad. La Salle College, Philadelphia, 1873, M.A. Notre Dame, 1878, Ph.D. Villanova College, 1907. He taught at Georgetown Univ., was briefly a New York journalist, then was a lay teacher at Notre Dame (1888–95) and at Catholic Univ. (1895–1907). Appointed minister to Denmark in 1907, he remained at that post until 1918, negotiating the purchase of the Virgin Islands, making a fruitful study of Danish farming methods, and conducting himself superbly in a neutral country in the First World War. Among his books, which display ease of style and sunny personal charm are *Ten Years near the German Frontier* (1919), *Confessions of a Book Lover* (1922), and the widely loved *Recollections of a Happy Life* (1924). Other of his writings include poetry, essays, and humorous short stories (notably in *The Wiles of Sexton Maginnis* (1909).

Egan, Patrick, 1841–1919, Irish and American political leader, b. Co. Longford, Ireland. His patriotic interests took him from his grain-milling and bakery business into fervent devotion to the cause of Irish home rule and land reform. He was a member of the Irish Land League from the year of its founding (1879) and was an able lieutenant of Michael Davitt and Charles Stewart Parnell. One of the defendants in the ineffective "state trials" of 1880–81, he fled later before steiner British measures. In Lincoln, Nebr., he again went into grain milling. He continued to work strenuously for the Irish Land League and Irish home rule but also took up American politics and was a minor power in the Republican party until he deserted it for W. J. Bryan and the Democrats in 1896. As minister to Chile (1889–93), he conducted himself well when international relations were strained during the revolt against President José Balmaceda.

Egan, Pierce, 1772–1849, English sports writer and author of *Life in London*, a gay account of the adventures of sporting gallants of the Regency. With its rough-and-tumble humor, slangy style, and timeliness, it was tremendously popular from the appearance of its first number in 1821, and the three chief characters, Jerry Hawthorn, Corinthian Tom, and Bob Logic the Oxonian, were known over all England. Egan was a reporter of sporting events for several journals, he edited a sporting paper, *Pierce Egan's Life in London and Sporting Guide*, which became *Bell's Life in London*. His son, **Pierce Egan,** the younger, 1814–80, wrote numerous popular novels as magazine serials and is known as a pioneer of cheap literature. He was also an illustrator of some talent.

Eganville (ē'gunvĭl), village (pop. 1,088), S Ont., on the Bonnechere river and S of Pembroke. It has lumbering, farming, and manufacturing.

Egbert, d. 839, king of Wessex (802–39), son of an underking of Kent. The name also appears as Ecgberht. He was of the line of Cerdic and was apparently an unsuccessful aspirant for the crown of Wessex against Beohtric. He took refuge at the court of Offa of Mercia, but the alliance of Offa and Beohtric drove him to the court of Charlemagne, where he may have spent three years. At Beohtric's death (802) he became king, apparently without opposition. In 815 he conquered the West Welsh, harrying the present Cornwall. Some 10 years later he was involved in war with Beornwulf, king of Mercia, whom he defeated at Ellandune (or Ellendun). He sent his son Æthelwulf and others to Kent, which was then made an underkingdom of Wessex. East Anglia sought Egbert's protection and revolted against Mercia. Beornwulf was killed in battle, and Mercia submitted (828?) to Egbert. He then secured the nominal submission of Northumbria (829?) without a battle. Thus all the heptarchy recognized his overlordship. In the *Anglo-Saxon Chronicle* he is called eighth Bretwalda (a title of obscure significance), and later historians called him the first king of England (an anachronistic title, for there was no conception of a kingdom of England in his day). His power varied from kingdom to kingdom and year to year. After 834 he had to defend his realm against the Danes and in his last battle defeated the Britons of Cornwall, who had allied themselves with the Danes. Egbert's son, Æthelwulf, succeeded him.

Egede, Hans (häns ā'gudu), 1686–1758. Norwegian Lutheran missionary, called the Apostle of Greenland. He went to Greenland in 1721 and, with the support of the Danish government, founded a mission for the Eskimo. He returned to Copenhagen in 1736. In 1740 he became superintendent of the Greenland mission. His son, Paul, also a missionary to Greenland, translated the New Testament for the use of the Eskimo.

Egedesminde (ā'gudhusmĭ'nu), settlement (pop. 187) in Egedesminde district (pop. 2,413), on NW Greenland, at the mouth of Disko Bay. It is named for Hans Egede, who conducted a mission here.

Eger (ā'gur), Czech *Cheb* (khĕb), city (1948 pop. 14,543), NW Bohemia, Czechoslovakia, near the Bavarian border. King Ottocar II conquered (1266) this old commercial center from Bavaria and lost it (1276) to Rudolf I of Hapsburg. Wenceslaus II recovered it as reward for his support in the election (1298) of Albert I as German king. The city, which suffered greatly in the Hussite Wars, retained a privileged status until the 16th cent. The castle, now in ruins, was built by Emperor Frederick I, it was the scene of the assassination (1634) of the officers who had remained loyal to Wallenstein. The general himself was slain in the town hall. In 1939 the population of Eger was 35,507, the drop is due to the expulsion of the German-speaking inhabitants from Czechoslovakia after the Second World War.

Eger (ĕ'gĕr), Ger *Erlau*, city (pop. 32,482), NE Hungary, on the Eger river. It was created a bishopric by St. Stephen. In 1552 its fortress, commanded by Stephen Dobo, withstood a heavy siege by the Turks, whose advance into Hungary it delayed for several decades. Treachery delivered the city to the Turks in 1596, they held it for almost 150 years. A minaret remains. Francis II Rakoczy used the fortress in his fight against the Hapsburgs, who had it razed. Early in the 19th cent. Eger became an archiepiscopal see, the many churches subsequently built have earned Eger the name "Rome of Hungary." Eger has an active trade, and fine wine is produced in the vicinity. It also has mineral springs.

Egeria (ējēr'ēu), in Roman religion, water goddess. She was particularly invoked as a goddess of childbirth. She was consort and adviser of King Numa.

Egerton, Francis: see Bridgewater, Francis Egerton, 3d duke of.

Egerton, Thomas see Ellesmere, Thomas Egerton, Baron.

egg: see ovum.

Egge, Peter (pā'tur ĕ'gu), 1869–, Norwegian novelist. He was born in Trondheim, the scene of many of his books, and is one of the most prolific writers of Norway. His best-known work is the widely translated *Hansine Solstad* (1925, Eng. tr., 1929). His first success was *The Heart* (1907).

Egg Harbor City, inland city (pop. 3,589), S N.J., NW of Atlantic City, settled 1854 by Germans, inc. 1856. It grew as a center of grape culture and has an annual agricultural fair.

Eggleston, Edward, 1837–1902, American author, a Methodist clergyman, b. Vevay, Ind., educated in the elementary schools of the frontier. Before 1866 he was a Bible agent, circuit rider, farm worker, and minister in Minnesota and Indiana. These circumstances gave him his knowledge of S Indiana and the Hoosier dialect, which he so successfully employed in his fiction. After a few years of journalism in Chicago, he went to New York in 1870 to join the editorial staff of the *Independent*. His literary reputation was established with *The Hoosier Schoolmaster* (1871) and *The Circuit Rider* (1874), and he followed them with other novels and short stories of the Western frontier, of which *Roxy* (1878) and *The Graysons* (1887) deserve special mention. He was pastor of the Church of Christian Endeavor, Brooklyn, from 1874 until 1879, when he retired from all work but writing and historical research. Besides writing juvenile stories and historical lectures and articles, he planned a history of American life, two volumes of which he completed as *The Beginners of a Nation* (1896) and *The Transit of Civilization* (1901). See *The First of the Hoosiers* (1903) by his brother, G. C. Eggleston, biography by W. P. Randel (1946).

Eggleston, George Cary, 1839–1911, American author, b. Vevay, Ind., studied law at Richmond College in Virginia, brother of Edward Eggleston. After a varied career of teaching, plantation life, serving in the Confederate army, and business ventures, he became a journalist in New York city after 1870. He was literary editor (1875–81) of the *Evening Post* and an editorial writer (1889–1900) for the *World*. He wrote a number of boys' stories, biographies, and a good *History of the Confederate War* (2 vols., 1903). *A Rebel's Recollections* (1874) and *Recollections of a Varied Life* (1910) are autobiographical.

eggnog, beverage made of well-beaten eggs combined with cream or milk, to which may be added sugar, wine, spirits, or fruit juices and frequently nutmeg to flavor. A rich eggnog based on bourbon whisky, brandy, or other spirits is a traditional Yuletide drink In certain diets eggnog is useful for its high food value

eggplant, garden vegetable (*Solanum melongena*), grown widely in the tropics, where it is native It is cultivated also in the warmer parts of Europe and the United States Of several varieties, the purple is most popular in the United States and the white in Europe

Egham (ĕg'um), urban district (1931 pop 15,916, 1943 estimated pop *23 563*), Surrey, England, on the Thames and WSW of London In the vicinity are Cooper's Hill, celebrated in a poem by John Denham, Virginia Water, an artificial lake at the end of Windsor Park, and the Royal Holloway College for Women (1886) RUNNYMEDE is a level stretch along the river

Eginhard see EINHARD

Eglah (ĕg'lû) [Heb , =a heifer], one of David's wives 2 Sam 3 5

Eglaim (ĕ'glăĭm, ĕglā'ĭm), place E of the Dead Sea Isa 15 8 See also EN-EGLAIM.

eglantine see SWEETBRIER

Egleston, Thomas (ĕ'gulstŭn), 1832–1900, American geologist, b New York city, grad Yale, 1854, and École des Mines, Paris, 1860 He was superintendent (1861–64) of the mineralogical and metallurgical sections of the Smithsonian Institution In 1863 Egleston organized, with Charles F Chandler, the School of Mines at Columbia Univ He served as professor of mineralogy and metallurgy (1864–97) and assembled the collection now called the Egleston Mineralogical Museum

Eglon (ĕg'-) [Heb , =like a calf] **1** King of Moab. He was murdered by Ehud, who became judge of Israel Judges 3 **2** Ancient city, Palestine, on the southern end of the maritime plain It was one of the cities allied against Joshua, who destroyed it after the battle of Aijalon Joshua 10, 12 12, 15 39

Egmont, John Perceval, 1st **earl of** (ĕg'mŏnt, -munt), 1683–1748, Irish peer, associate of James E OGLETHORPE in founding Georgia, b Co Cork Elected (1727) to the British House of Commons, he served on Oglethorpe's committee investigating penal conditions He was first president of the trustees of Georgia and kept a journal of their transactions, part of which has been printed (1886)

Egmont, Lamoral, count of (lă'mōrăl), 1522–68, Flemish general and statesman, of one of the noblest families of the Netherlands In the service of Philip II of Spain he helped defeat the French at Saint-Quentin (1557) and Gravelines (1558) and was governor of Brabant and Artois Though a devout Catholic, Egmont protested against the persecution inflicted on the Protestants of the Low Countries In 1565 he journeyed to Madrid to induce a change of policy in Philip II, but failed in his mission. When the duke of Alba arrived (1567) at Brussels, he almost immediately had Egmont and Count HOORN arrested Although they had sympathized with WILLIAM THE SILENT, they had actually never entertained the thought of treason against their king Nevertheless, Alba meant to spread terror among the population by securing a death sentence Egmont and Hoorn, both knights of the Golden Fleece, vainly sought to be tried by a court of their order or even to obtain a fair trial by the judges Alba had appointed In 1568 Egmont and Hoorn were publicly beheaded in front of the city hall of Brussels Their death plunged the Low Countries into consternation and fury and was instrumental in the outbreak of open rebellion against Spanish rule Egmont is the central figure of Goethe's tragedy, *Egmont*, for which Beethoven composed an overture and incidental music

Egmont, Mount (ĕg'mŏnt, -munt), extinct volcanic cone, 8,260 ft high, on W North Island, New Zealand. It is symmetrically shaped, with a snow-capped summit

ego see PSYCHOANALYSIS.

egoism (ē'gōĭzm), in ethics, the doctrine that the ends and motives of human conduct are the good of the individual It is opposed to altruism, which holds the criterion of morality to be the welfare of others The term has been variously used, from the broad interpretation of the self and all its concerns and interests (the benevolent self-interest of the utilitarians) to the egoism of Nietzsche in which any self-denial is cowardice Although egoism is most frequently associated with the ethics of the early Greek hedonists and the modern utilitarians, it may be associated with intuitionism, which is by nature ego-centered Herbert Spencer attempted to reconcile egoism and altruism through social discipline, and some modern philosophers attempt this reconciliation through the concept of the growing self who invests his interests in an ever-widening social field

Egorevsk, RSFSR see YEGOREVSK

egret (ē'grĕt'), name for several species of herons of the Old and New Worlds Before they were protected by law the birds were nearly exterminated by hunters who slaughtered them in their nesting colonies to secure, for the millinery trade, their beautiful, white, silky plumage called aigrettes. These feathers develop during the breeding season and in the American egret are straight plumes, about 21 in long, growing on the back The smaller snowy egret or snowy heron, the most beautiful and most hunted, has curved plumes on the back, head, and breast The reddish egret is white part of the year, changing to grayish plumage with brown head and neck The greater and lesser egrets are European species

Egypt (ē'jĭpt), Arabic *Misr* (mĭs'ru), biblical *Mizraim* (mĭzrā'ĭm), kingdom (386,198 sq mi ; pop 19,087,304), occupying the northeast corner of Africa and the SINAI peninsula of SW Asia The capital is CAIRO Egypt is washed on the north by the Mediterranean Sea and on the east by the Red Sea and its two arms, the Gulf of Suez and the Gulf of Aqaba The Sinai peninsula (separated from the rest of Egypt by the Suez Canal) is bordered on the east by Israel and Palestine In Africa, Egypt's land boundaries are Libya on the west and the Anglo-Egyptian Sudan on the south Geographically Egypt is a desert crossed from north to south by the NILE river, which has a fertile valley and delta The Nile is the dividing line between the Western Desert and the Eastern Desert (also called the Arabian Desert), in both of which a small population of pastoral nomads eke out a living The country is also sometimes divided into Upper Egypt (south) and Lower Egypt (north) Egypt is predominantly a plateau averaging under 1,000 ft high The limited mountainous areas are chiefly on the Sinai peninsula (with Mt Sinai, 7,497 ft high, the loftiest peak in the country) and along the Red Sea coast In the mountains oil, Egypt's main mineral resource besides the salt and potash of its deserts, is tapped Comparatively minor, however, are all economic activities outside the Nile valley and delta There some 95 percent of the population lives and nearly all the cultivable land (3 percent of the national area) is found While the density of population in Egypt as a whole (c 50 per square mile) is not large, the density within this zone (c 700 per square mile) is among the greatest in the world The annual inundations of the Nile and carefully controlled irrigation combine with a hot climate and a long growing season to afford Egypt two or even three harvests a year despite the almost total absence of rain (there is, however, winter rainfall on the Mediterranean coast) Agriculture is divided between subsistence crops, including rice, wheat, and green vegetables, and cotton, the main cash crop Industry in Egypt, occupying some 500,000 persons, is confined almost entirely to spinning and weaving cotton The chief industrial center is Cairo, but many of the towns strung along the Nile also contribute their production Most of the cotton, however, is exported, chiefly through the port of ALEXANDRIA, where the foreign trade of the country is concentrated Imports are mainly machinery and luxury goods, in which the country is deficient Egypt also exports some of the products of the Anglo-Egyptian Sudan These are carried down the Nile to Shallal near the First Cataract and there transferred to the southern terminus of the main Egyptian railroad, which parallels the Nile to Cairo and Alexandria There are shorter railroads in the delta and along the Mediterranean coast, and several surfaced roads cross the desert Some 91 percent of the Egyptian population is Moslem, Christians, chiefly of the Coptic Church (see COPT), form about 8 percent, and Jews are a small minority

The Ancient Empire of the Nile The valley of the long river between the deserts, with the annual floods and deposits of life-giving silt and with its equable climate, was the seat of one of the oldest civilizations built by man into an organic whole—rivaled, indeed, only by the somewhat more obscure cultures of Mesopotamia Grain was grown early in the valley of the Nile The earliest known date in world history is that of the adoption of the Egyptian calendar, which has been set at 4241 B C. The antiquity of the regional civilization is thus almost staggering, and whereas the story of other lands is measured in centuries, that of ancient Egypt is measured in millenniums Thanks to the work of Sir William M Flinders Petrie and other archaeologists, much is known even of the period before the actual historic records begin Those records are abundant and, because of the dry climate of Egypt, have been well preserved The inscriptions, such as the Palermo stone (of the V dynasty), have unlocked a wealth of information, both historical and mythohistorical, since the HIEROGLYPHIC writing was deciphered (principally by Champollion) Later historical writings, especially those of MANETHO and, to a lesser extent, those of Greek historians (notably HERODOTUS), illuminate the meaning of the inscriptions. Finally, the great papyrus dumps, preserved in the dry climate, offer an enormous (and not infrequently confusing) amount of information, especially on the later periods of ancient Egyptian history The study of the Egyptian records has become in modern times a science of itself, known as Egyptology The study offers many problems, not the least of which is that of dating events. There is so much argument on the subject that it seems sometimes as if each Egyptologist had developed his own chronology. One system was worked out by the celebrated J. H. BREASTED, and it attained wide enough acceptance to become a sort of conventional dating system, though many critics claim that he makes the early events of Egyptian history much too early Since his system has been much used in textbooks and is supported by his well-established reputation, it has been used throughout *The Columbia Encyclopedia* The division of Egyptian history into 30 dynasties up to the time of Alexander the Great, worked out by Manetho and revised by modern historians, is a convenient frame upon which to hang the biography of the kings and a record of events The table of the dynasties, with the chronology of Breasted, is here given The numbers of the dynasties are given in Roman numbers, and the number is followed by the date of founding and a notation of famous monarchs of that line Since there are many gaps and periods without well-known rulers (occasionally without known rulers at all), those are given simply with dates or are combined with better-recorded periods

The development of a high culture was early, and the artistic and intellectual achievements of the Old Kingdom were notable (see EGYPTIAN ARCHITECTURE, EGYPTIAN ART, EGYPTIAN RELIGION) From the beginning there was a concept of the divinity or quasi-divinity of the king (Pharaoh) that lasted from the time of Menes, who united two earlier kingdoms to make Egypt, to the ultimate fall of Egypt to the Romans Menes, king of Upper Egypt with his capital of Nekheb, near Thebes, conquered the rival kingdom of Lower Egypt in the Nile delta A new capital was set up at MEMPHIS In the unified and centralized state the memory of the two ancient kingdoms was preserved in formalities of administration Trade flourished, for Egypt had to obtain its minerals from abroad. The III dynasty was the first to build extensively in stone and brick. These kings and more especially those of the IV dynasty (which may be said to begin the Old Kingdom proper) were the builders of the great pyramids at GIZEH The Great Pyramid of Khufu has been called "the greatest mass of masonry ever put together by human hands." It is a monument not only to the king but to the unified organization of ancient Egyptian society. This centralization broke down somewhat in the V dynasty, the priests of the sun-god at Hierapolis gained increasing power, and the office of provincial rulers became hereditary, and their local influence was thereafter always a threat to the state In the 25th cent B C the Old Kingdom after a long and flourishing existence fell apart. The local rulers became dominant, and the records, kept by the central government, tended to disappear, leaving the period dark Some order was restored by the IX dynasty, but it was not until 2160 that power was again centralized, this time at Thebes up the Nile. This was to be the capital for the most part of the next millennium. The Middle Kingdom, founded by the XI dynasty, reached its zenith under the XII. The Pharaoh,

however, was not now an absolute monarch but rather a feudal lord, and his vassals held their land in their own power. The XII dynasty advanced the border up the Nile to the Second Cataract Order was preserved, the draining of the Fayum was begun (adding a new and fertile province), a uniform system of writing was arrived at, and civilization reached a new splendor After 213 years this dynasty came to an end, in 1788 B C In the dimly known period that followed, Egypt passed for a century under the Hyksos (the so-called shepherd kings), who were apparently Semites from the east; they may have continued to rule in Palestine as well. They were expelled from Egypt by Amasis I (Ahmose I), founder of the XVIII dynasty The New Kingdom, the New Empire, or the Empire was established The local governors generally opposed both the Hyksos and the new dynasty, those who survived were now made mere administrators, their lands passing to the crown Ancient Egypt reached its height The boundaries were extended into Asia, with a foreign province reaching the Euphrates (see THUTMOSE I and THUTMOSE III). Architecture was at its zenith with the enormous and stunningly impressive buildings at and around Thebes (see LUXOR and KARNAK) The curious religious revolution by which Pharaoh Ikhnaton strove to introduce a monotheism of the sun-god aroused great opposition and wrecked his house Ramses II of the XIX dynasty fought the HITTITES in Syria and concluded a treaty with them Ramses III of the XX dynasty beat off sea raiders (called Achaeans). These invaders did not return, but Egyptian civilization seems to have worn out rapidly There was a succession of weak kings, and the Theban priesthood practically ruled the country and continued to maintain a sort of theocracy for 450 years In the delta the Libyan element had been growing, and with the disappearance of the weak XXI dynasty, which had been ruling from Tanis, a Libyan dynasty came to power This was succeeded by the alien rule of Nubians, Negroes who advanced from the south to the delta under Piankhi and later definitely conquered the land The rising power of ASSYRIA threatened Egypt by absorbing the petty states of Syria and Palestine, and Assyrian kings had come to the very borders of Egypt several times, before ESAR-HADDON actually invaded the land of the Nile, overpowered the Nubians, and sacked Memphis and Thebes Egypt now passed under the control of a great foreign empire Assyrian rule was, however, shortlived, by 650 B C, under Psamtik, Egypt was once more independent and orderly Greek traders became important, and their city of Naucratis, founded by Amasis II, throve Attempts to reestablish Egyptian power in Asia were turned back by Nebuchadnezzar, and Egypt was to fall easy prey to the armies of CAMBYSES of Persia Despite occasional troubles, the Persians maintained their hegemony until 405 B C New dynasties were then established, but they did not regain any of the old splendor Egypt, rich and ill-defended, fell to Alexander the Great with no resistance in 332 B C When his brief empire faded, Egypt in the wars of his successors (the Diadochi) fell to his general Ptolemy who became king as Ptolemy I All the succeeding kings of the dynasty were also named Ptolemy The great city of Alexandria became the center and fountainhead of the new HELLENISM of the Hellenistic world The Ptolemies maintained a formidable empire for more than two centuries and exercised great power in the E Mediterranean The priesthood remained in native hands, but the splendor of the Ptolemaic government weighed heavily upon the overtaxed and hard-working peasantry The Jewish population was large—perhaps as much as a seventh of the total population—and even the Palestinian Jews looked to the Alexandrian Jews for guidance The rising power of Rome early overshadowed Egypt, but it was not until Ptolemy XI through POMPEY got Roman aid to regain his throne that Rome actually obtained (58 B.C.) a foothold in Egypt itself CLEOPATRA, the daughter of Ptolemy XI, tried to win back power for Egypt, especially through Julius CAESAR and Mark ANTONY Octavian (later Emperor Augustus) actually annexed Egypt to Rome, putting to death the putative son of Caesar and Cleopatra who was at least nominally the last of the Ptolemies as Ptolemy XIV Egypt became a granary for Rome, and the emperors from Augustus to Hadrian raised the irrigation system to great efficiency, and Trajan reopened the ancient Nile–Red Sea canal In the 2d cent, strife between Jews and Greeks in Alexandria brought massacres, and a mutiny of the soldiers did irreparable damage The taxes rose steadily to meet increasingly severe and frequent emergencies. Would-be conquerors looked longingly at Egypt, and Zenobia of Palmyra actually took the province, which was, however, soon recovered Christianity was welcomed in Egypt, and several of the most celebrated Doctors of the Church, notably ATHANASIUS, CYRIL (of Alexandria), and ORIGEN, were Egyptians. Egypt gave rise to the Arian and Nestorian heresies, and GNOSTICISM flourished for a time. The patriarch of Alexandria was probably the most important figure in Egypt After Cyril, MONOPHYSITISM became the national faith; out of this arose the Coptic Church The hostility of the people to the Orthodox Byzantine emperors and officials probably helped Khosru II of Persia to gain Egypt in 616 It was recovered (c 628) by Heraclius, but the Persian invasion was but a forerunner of the more serious Arabian invasion. See J H Breasted, *A History of Egypt from the Earliest Times to the Persian Conquest* (2d ed, 1909; many reissues); Sir William M Flinders Petrie, *History of Egypt* (6 vols, 1898–1905, many reissues); E R Bevan, *History of Egypt under the Ptolemaic Dynasty* (1928), James Baikie, *Ancient Egypt* (2d ed, 1932), Allan Chester Johnson, *Roman Egypt to the Reign of Diocletian* (1936), H I Bell, *Egypt from Alexander the Great to the Arab Conquest* (1949)

Islamic Egypt The Arabic conquest of Egypt (639–42), only some 20 years after the rise of Islam, made the country an integral part of the Moslem world Until the 19th cent, Egyptian history was tied up with the general political development of ISLAM, whether unified or divided into warring states Under the OMAYYAD caliphate many of the people continued their adherence to Coptic Christianity despite the special tax exacted from infidels The settling of colonists from Arabia and the financial advantages of adopting Islam eventually reduced the Christian population to a small minority With Arab dominance, the Greek and Coptic languages went out of use and Arabic alone was spoken The ABBASID caliphate (founded 750) at first had Egypt completely in its grip, but the unwieldiness of its vast domain encouraged provincial governors to revolt and to assert their own rule In the 10th cent Egypt fell to the FATIMITE claimants to the caliphate, who invaded from the west The Fatimites founded Cairo in 969 to be their capital, and in 972 with the establishment there of the Mosque of El Azhar as a great (and still active) Moslem university they further signalized the change of Egypt from an outpost of Islam to one of its centers The strain of the CRUSADES may have been responsible for the fall of the Fatimites, which led to the founding by SALADIN of the Ayyubite dynasty The strategic position of Egypt made it a logical target of the Crusaders, who twice (1219–21, 1249–50) held Dametta, then the chief Mediterranean port, but could advance no farther. The later Ayyubite rulers came excessively under the control of their soldiers and advisers, the MAMELUKES, former slaves, who in 1250 seized the country Until 1517, when Egypt was conquered by the Ottoman Turks, the Mamelukes maintained their turbulent rule, with frequent revolts and extremely short tenure for most of the sultans Nevertheless, they built many great architectural monuments Their importance by no means disappeared with the establishment of Ottoman power, for the Egyptian pasha (governor) was compelled to consult the Mameluke beys (princes), who continued in control of the provinces Ottoman control became almost nominal by the administration (1768–73) of Ali Bey, who termed himself sultan Order was not, however, restored, and the Turks by no means gave up attempts to assert power over the unruly beys It was on the pretext of establishing order and restoring Turkish rule that Napoleon Bonaparte (NAPOLEON I) undertook the French occupation of Egypt (1798–1801), though his real object was to strike at Great Britain by cutting off British trade lines and ultimately by detaching India All efforts were bent to establishing French power (in Syria as well as Egypt), and the Turks ultimately joined the British in forcing the French out After the French withdrawal occurred the rise of MOHAMMED ALI, a former common soldier, who was appointed (1805) Egyptian pasha by the Ottoman emperor Mohammed, in 1811, once for all destroyed the Mamelukes' power by massacring their leaders Only the threat of European force could persuade him to desist from using his well-trained army and navy to maintain his conquest of Syria and from threatening all Ottoman power As additional compensation his office of pasha was made hereditary He is the founder of the present Egyptian royal line Succeeding pashas continued his policy of piecemeal annexation of the Sudan and of modernization. All land was confiscated and redistributed in nearly equal shares to the fellahin [Arabic, =peasants], but in time large holdings were built up out of bankrupt estates The cultivation of cotton as a cash crop was inaugurated, the Nile was brought under control through dams, and the SUEZ CANAL was constructed The increasing independence of Egypt from Ottoman rule was manifested by granting (1866) the title khedive (VICEROY) to ISMAIL PASHA. Ismail's extravagance forced him to sell (1875) his shares in the Suez Canal to Great Britain. His successor, Tewfik Pasha, submitted (1880) to joint British-French control over Egypt's finances. An anti-foreign rebellion (1881–82) forced the khedive to appoint a nationalist cabinet. Great Britain and France, supporting Tewfik, compelled the resignation of the cabinet and in May and June, 1882, made a joint naval demonstration off Alexandria. Riots broke out in the city in June. On July 11, after France and Italy refused to join in intervention, the British vessels bombarded Alexandria Troops were then landed, and the rebel forces were rapidly conquered Disapproval of this action led France to withdraw from participation in the Egyptian government in November The British consolidated their control during the period (1883–1907) when Lord CROMER was consul general and *de facto* ruler Lord KITCHENER at this time accomplished the conquest of the Sudan, which was constituted the ANGLO-EGYPTIAN SUDAN, and later (1911–14) he was British consul general in Egypt In the First World War when Turkey joined the Central Powers, Great Britain declared Egypt a British protectorate and deposed ABBAS II, the allegedly pro-German khedive, substituting Husein Kamil, a member of his family After the war Egyptian nationalists of the WAFD party, led by ZAGHLUL PASHA, were especially vigorous in their demands for freedom A treaty providing for Egypt's independence was concluded in 1922 and after some delays went into effect in 1928 A constitution was proclaimed making Egypt a kingdom under FUAD I and establishing a parliament Great Britain, however, might still station troops in Egypt and refused to consider Egyptian claims to the Anglo-Egyptian Sudan The British protectorate was retained until the promulgation of a new treaty in 1936, which made the two countries allies but promised the eventual withdrawal of British troops Fuad was succeeded by his son FAROUK I In 1937, at Montreux, Switzerland, a further step towards sovereignty was accomplished by the agreement (which went into effect in 1949) to end EXTERRITORIALITY in Egypt The country's internal political life was largely a struggle for power between the Wafd party and the throne The constitution was suspended in 1930, and Egypt was under a virtual royal dictatorship until the Wafdists forced its readoption in 1935 In the Second World War, Great Britain undertook the defense of Egypt (and thereby of its empire) according to the treaty of 1936 Egypt did not declare war until Feb, 1945, despite almost continuous danger of Axis engulfment until the British victory at Alamein in Oct, 1942, decisively buried the enemy from the country (for details of the military engagements, see NORTH AFRICA, CAMPAIGNS IN) After the war, demands were made for a revision of the treaty of 1936 Repeated talks failed because of Egyptian insistence that Great Britain allow the incorporation of the Anglo-Egyptian Sudan into Egypt An Egyptian appeal (1947) to the Security Council of the United Nations on this subject was also vain Difficulties were also occasioned by the British announcement that not all military forces in areas other than the Suez Canal zone could be withdrawn Egypt bitterly opposed the United Nations partition of Palestine in 1948 and, joining its forces with the other members of the ARAB LEAGUE, sent troops into the S Negeb. Smaller Israeli forces, however, held the Egyptians to slight gains In domestic politics there were frequent ministerial upsets occasioned by the failure of any party to win a majority in the chamber of deputies Early in 1950, however, the Wafd acquired a majority and formed a one-party cabinet See Lord Cromer, *Modern Egypt* (1908), Stanley Lane-Poole, *History of Egypt in the Middle Ages* (2d ed, 1914), G A Lloyd, Baron Lloyd, *Egypt since Cromer* (1933–34), A E Crouchley, *Economic Development of Modern Egypt* (1938), Charles Issawi, *Egypt, an Economic and Social Analysis* (1947), M A. Rifaat, *Awakening of Modern Egypt* (1948)

Egyptian architecture was formulated prior to 3000 B C Scant tree growth afforded no encouragement for wooden architecture, but from the fine clay deposited by the flood waters of the Nile the ceramic arts developed early and both sun-dried and kilndried bricks were extensively used Fine sandstone, limestone, and granite were available for obelisks, sculpture, and decorative uses, so an architecture of massive, static, and reposeful quality emerged from primitive structures of clay and reeds The incised and flatly modeled surface adornment of the granite buildings apparently was derived from mud wall ornamentation, while the slope given to the masonry walls suggests a method originally used for obtaining greater stability in the mud walls The reeded columns are reminiscent of the original reeds, bound together, which formed the framework The Egyptians developed post-and-lintel construction—the type exclusively employed in their monumental buildings—even though the use of the arch was known to them Walls were immensely thick Columns were confined to the halls and inner courts The massive, sloping exterior walls, containing only a few small openings, as well as the columns and piers which they concealed, were covered with hieroglyphic and pictorial carvings in brilliant colors Many motives of Egyptian ornament are symbolical, such as the scarab, or sacred beetle, the solar disk, and the vulture Hieroglyphics were composed as decorations, in addition to constituting records of historic events Egyptian sculptors possessed the highest capacity for integrating their ornament with the essential forms of the building.

From natural objects, such as palm leaves, the papyrus plant, and the buds and flowers of the lotus, they developed conventionalized motifs Roofs, invariably flat, as suited to the lack of rain, were of huge stone blocks supported by the external walls and the closely spaced columns All dwelling houses, built of timber or of sun-baked bricks, have disappeared, only temples or tombs were constructed in enduring materials and thus survived The great monuments were made possible by the most despotic government ever known the population was put to work on them as each monarch desired to leave behind memorials to his glory The belief in existence beyond death resulted in sepulchral architecture of maximum impressiveness and permanence Egyptian architectural development parallels the chronology (see EGYPT) Old Kingdom, 3400–2475 B C , Middle Kingdom, 2475–1788 B C , New Empire, 1580–1090 B C Old Kingdom remains are almost entirely sepulchral, chiefly the tombs of monarchs and nobles The mastabas, the oldest remaining sepulchers, are rectangular, flat-roofed structures with sloping walls containing chambers built over the mummy pit The PYRAMID of a sovereign was commenced as soon as he ascended the throne Groups of them exist, those at Gizeh, which include the Great Pyramid of Cheops (KHUFU), being among the best-known examples Many Middle Kingdom tombs were tunneled out of the rock cliffs of the west bank of the Nile In a remarkable XII-dynasty group (2000–1788 B C) at Beni Hassan are the earliest-known columns of Egyptian architecture New Empire temples in the neighborhood of Thebes, such as those of Medinet Habu and the Rameseum, derived their form from the funerary chapels of previous ages While remains of earlier temples are almost entirely lacking, the New Empire was the great period of temple construction, those extant exhibiting conformity to a distinct type The doorway in the massive façade is flanked on each side by great sloping towers, or pylons, in front of which obelisks and colossal statues often were placed The more important temples were approached between rows of sculptured rams and sphinxes, and a high enclosing wall screened the building from the common people, who had no share in the temple rituals—these existed solely for the king, the officials, and the priesthood Beyond the open, colonnaded courtyard was the great hypostyle hall with immense columns arranged in a central nave and side aisles, the shorter columns of the latter permitting a clerestory for the admission of light Behind the hypostyle hall were small sanctuaries, where only the king and priests might enter, and, behind these, small service chambers The Great Temple of Amon, at Karnak, is a product of many successive additions, beginning with the XVIII dynasty, the central columns of its hypostyle hall being the largest ever used New Empire temples were also excavated from rock The temple of Abu-Simbel (begun by Seti I), an overwhelmingly impressive monument, has four colossal figures of its builder, Ramses II, who completed it, sculptured from solid rock and flanking the entrance portal in the façade, hewn from the limestone mountainside The temple at EDFU (237 B C), commenced by Ptolemy III, is the best preserved of the Ptolemaic period See Sir W M Flinders Petrie, *Egyptian Architecture* (1918)

Egyptian art. Prehistoric tombs in Egypt have yielded finds of painted pottery and figurines—especially of women—carved ivory tusks, and flint weapons which roughly parallel the European cave drawings of the Paleolithic period Somewhat later, glazed pottery, stone and metal cosmetic utensils, gold ornament, and crude stone reliefs appeared With the beginning of the Old Kingdom period (3400–2475 B C) there was a rapid development of the stylistic conventions which characterize Egyptian art throughout its history In relief sculpture and in painting, the human figure was almost always represented with the head in profile view, the eye and shoulders in front view, and the pelvis, legs, and feet in profile view (the law of frontality) The profile view was favored in representations of animals and objects There was little attempt at plastic or spatial illusionism The reliefs were very low and often sunken below the surface of the stone Color was applied in flat tones and there was no attempt to render effects of linear perspective Corresponding conventions prevailed in statuary in the round Various standing and seated types were developed, but always there was strict adherence to the law of frontality and a tendency to emphasize symmetry and to minimize suggestion of movement Strong emphasis on broad perpendicular planes resulted in a characteristic blocklike effect As religious beliefs emphasized the preservation of all phases of earthly life in order to insure the happy posthumous existence of the dead, what was demanded of the artist was a conceptual and illustrative statement of reality embodied in the most durable materials at his command, rather than the creation of independently beautiful forms Tombs were decorated with a variety of domestic, military, hunting, and ceremonial scenes with full complement of personages and objects. In addition there were statues of the deceased and of his servants and attendants, often shown at their characteristic occupations. Especially in the poorer tombs there were often wooden or terra-cotta statuettes of vassals and slaves frequently arranged in episodical groups Among the earliest examples of Old Kingdom sculpture are stone tablets decorated in low reliefs which probably served as cosmetic palettes Outstanding Old Kingdom examples of sculpture in the round are the *Great Chephren*, in diorite, the *Prince Ra-hetep and Princess Neferet*, in painted limestone, and the *Sheik-el-Beled* (mayor of the village), in painted wood (all Cairo) and the *Seated Scribe*, in painted limestone (Louvre) Because of its relative impermanence, painting was little used as an independent medium, but appears to have served principally as accessory to sculpture A rare example is the painting of geese from a tomb at Medum (Cairo) In the Middle Kingdom period when Thebes was the artistic and political center, there were no innovations in painting and sculpture, which tended toward increased formalism The standardization of art forms resulted in a conventionalized pictorial symbolism that may be associated with the qualities of Egyptian hieroglyphic writing Outstanding for freedom of draughtsmanship are the paintings of the rock-cut tombs at Beni Hassan (e g , *Slaves Feeding Oryxes* and *Cat Stalking Prey*, Tomb of Khnemu-hetep) and elsewhere Superb craftsmanship and richness of design distinguish the minor arts In jewelry often a very fragile, delicately worked mounting is combined with heavy stones and enamel work, suggesting that certain pieces were designed as funerary ornaments rather than for actual wear In both painting and sculpture in the Empire period there was a tendency towards greater elasticity of line and boldness of design, e g , *Nobleman Hunting* (British Mus), Thutmose III, a life-size basalt statue (Cairo), and *Seti I Offering to Osiris*, a limestone relief (temple of Seti I, Abydos) A masterpiece of the 16th cent B C , when a school of artists was producing works at Tel-el-Amarna, is the painted limestone portrait bust of Queen Nofretete, wife of Ikhnaton The style developed at Tel-el-Amarna soon died out Its decline was well advanced in the reign of Tutankh-amen, whose throne chair is a superb example of Egyptian furniture design The body is of cedar exquisitely worked with reliefs covered in sheet gold and inlaid with enamels and semiprecious stones In the Saite period (8th cent B C) there was a conscious return to the simplicity and austerity of the Old Kingdom style Sometimes the imitation is so exact that it is difficult to date a work without an inscription Many finely wrought portrait heads of Saite dignitaries, usually made of close-grained stone such as basalt and highly polished, testify to a recrudescence of realism Yet despite its high level in technical performance, Saite art shows signs of artistic decline even more marked after the Persian conquest of 525 B C During the Ptolemaic dynasty (332 B C –30 B C) the vitality of the ancient architectural tradition was still evident in the construction of great temples (e g , temples of Horus at Edfu, Hathor at Dendera, Isis at Philae), but in the other arts there was servile imitation of Old, Middle, and New Kingdom forms This decadent Egyptian eclecticism could not withstand the infiltration of Greek and Roman forms, and after this period an autonomous Egyptian art did not survive The minor arts, however, continued to flourish Alabaster vases, faience pottery and figurines, glassware, carved ivory, and hammered and enameled metalwork long continued to be produced in the ancient manner, and the traditional Egyptian style predominated in jewelry even though Near Eastern and Greek motifs appear from the end of the Saite period See G C M Maspero, *Art in Egypt* (1922), Sir W M Flinders Petrie, *The Arts and Crafts of Ancient Egypt* (1923)

Egyptian language, chief of the ancient Hamitic languages See HIEROGLYPHIC and LANGUAGE (table)

Egyptian religion. There is no dearth of documents on the religion of the ancient Egyptians Prayers, myths, and legends are known It is true that whole periods of Egyptian history are dark, and the documents cover only certain areas in time, but there is almost a superfluity of material The difficulties in the way of understanding and interpreting the mass of material are, however, enormous because of the innate complexity of the subject Many gods and goddesses seem to be more or less identical and yet coexist Contradictory myths explaining the creation of the world, natural phenomena, and the like were apparently accepted simultaneously There were numerous local deities, and some scholars have sought to find in the history of Egyptian religion a sort of war of the gods, with the dominance of a god following directly the political dominance of the city or region in which his cult centered Others have, however, denied this, pointing out the national prominence of gods whose cults centered in obscure cities or regions that never had political power Attributes were borrowed from one deity for another, and there is much overlapping. The question of the relationship of the gods to particular animals is by no means simple Animals—apparently all animals—were held to be sacred, but only in certain periods was this reverence debased to animal worship Even the sacred Apis bull at Memphis was not simply an animal god but was related to Ptah, the great god, the artificer, the maker of the world, and in a certain sense an earth-god who was identical with the earth The worship of Serapis or Sarapis was also connected with the Apis bull and seems to have arisen at the tomb of the dead Apis bulls Serapis was also the great god, the maker, represented as a bearded man, his cult was late and was promoted chiefly by the Ptolemies in Alexandria Some early cosmological myths represent the heavens as a great, star-studded cow standing above the earth Elsewhere the sky is Nut, the mother goddess, arched over the earth and supported by Shu and Tefnut, gods of the air These three and Keb, god of the earth (both brother and husband of Nut), are in one myth the children of the sun-god, who begat them from himself The connection of Nut with the cow (a symbol of fertility) held also for the other mother goddesses, notably Hathor or Athor, who is frequently represented in art simply as a cow, but more often with a woman's body and a cow's head or a woman with a cow's horns and ears Isis, likewise a mother goddess, is also often represented as a woman with cow's horns Bast, the mother goddess and the "lady of life" whose cult centered at Bubastis, was, however, represented as having the head of a cat or a lioness—and sometimes as a cat or a lioness This correlation of animal and god gives an individual and peculiarly baffling aspect to Egyptian pictured and sculptured representations of the deities The hawk or falcon is connected with the sun-god, particularly with the sun-god Horus Anubis, one of the gods of the dead, who conducted the dead to judgment, is represented as a reclining jackal or a man with a jackal's face Thoth, who also conducted the dead and was, besides, the secretary god who kept the records of the dead and of the gods, was shown as a man with the head or neck of an ibis or as an ibis He also was connected with the baboon Sometimes parts of different animals were combined into one figure, e g , the wings of a falcon and the claws of a lion, or the head of a hippopotamus and the back of a crocodile, occasionally there would be anatomical features from four or five animals combined Other symbols were also attached to the deities Thoth, for instance, was represented bearing the moon symbol Horus and the other sun-gods had the disk as symbol of the sun Neith or Neit, a sky-goddess and the goddess of joy, whose chief temple was at Saïs, had crossed arrows as her symbol The sun-god Ra or Re, whose worship centered at Heliopolis, had the obelisk (again a fertility sign) for his chief symbol Myths are likewise overlapping and seem to present contradictions One of the best known is that of OSIRIS and ISIS These two were brother and sister as well as husband and wife, they were the children of Keb and Nut, as were also Nepthys and Set or Seth, who was the principle of darkness, night, and evil He managed to kill Osiris and hide the body, but Isis found it and partially revived Osiris Set, discovering this, hacked the body of Osiris to bits Isis found them all and with the help of Thoth restored Osiris, who then dwelt in the underworld and became the judge of the dead Horus, the son of Osiris and Isis, avenged his father and took over his father's power since Osiris had gone to the dark underworld Horus it was who sailed the sun boat across the heaven daily The king was looked upon as occupying the place of Horus, and the succession of a new king was celebrated as the replacement of Osiris by Horus In time the name of other sun-gods, particularly Ra and AMON, became much more common in usage than that of Horus, but Horus by no means disappeared Not only did the several sun-gods coexist, but other aspects and other names might be attached to one, e g , Ra as the rising sun was Khepri, as the setting sun Atum The importance of sun worship in Egypt can hardly be overstressed, and it should be noted that the one attempt at establishing monotheism in ancient Egypt—the reforms of IKHNATON—were aimed at making the sun-god the sole god Great emphasis was placed on the cult of the dead, leading to emphasis on the tomb and on the corpse and causing the building of the PYRAMID as the king's tomb, the greatest form of tomb the world has known Hence also the preservation of the bodies of the great by embalming (Anubis, who had helped Isis care for the dead Osiris, was the god of embalming) and mummification (see MUMMY) The dead were provided with food and drink, weapons, and articles of toilet. Tombs were often visited by the family, who brought new offerings A whole body of funerary literature grew up, the most celebrated example being the BOOK OF THE DEAD Most of this dealt with proper precautions and care for the dead so as to insure proper immortality The concept of immortality was complex. The elaborate care for the remains testifies to the belief

in some fashion in the immortality of the body (at least the form of the body), but the fundamental doctrine seems to have been belief in the ka, the vital spirit within a man A man was said at his death to have joined his ka The dead were peculiarly attached to the place of burial, but might also venture abroad as ba, an earthly apparition usually represented in bird form, and tombs were provided with some means of entrance and exit for the ba At least some of the great dead were conceived of as being translated among the stars and thus joining the rhythm of nature Finally the underworld was spoken of as the abode of the dead The evidence, it may be noted, is concerned primarily with the treatment of dead kings and nobles, and much less is known of the funeral customs of the common people and the peasantry The king as successor to the god and as a god himself was the chief of the priests, but in the many centuries of Egyptian history powerful priesthoods grew up, the priests becoming enriched particularly by the service in the cult of the dead They at times exercised actual powers of government in the land The worship of the Egyptian deities was not in late days confined to Egypt Those who were especially adopted by the Romans and the Greeks were Isis, Horus (especially as a child, called Harpocrates and shown with his finger to his lips, thus being sometimes considered the god of silence), and Serapis The worship of Isis as the mysterious and beneficent mother goddess was especially widespread and persisted until well in the Christian era Interest in the occult has always emphasized the secrets of the Egyptian religion and the wisdom of the East The modern believers in the occult often are concerned with the secrets revealed to the initiate by signs and proportions in the Great Pyramid and with lore allegedly handed down within hidden organizations of the initiate Modern scholars have tried to gather together the immense amounts of information on the innumerable gods and to catalogue and classify the abundant materials Many take the view that the frequent contradictions can be explained only by assuming that the Egyptians accepted the many local gods without concern for the contradictions and that, therefore, their polytheism was a matter of conflicting beliefs Some scholars have turned their attention to development within the religion J H Breasted attempted to show, by correlation of data from different periods, that Egyptian thought and religion evolved steadily toward a more spiritual concept and especially toward a broader and deeper ethical view of life Recently H Frankfort has attempted to show an underlying unity in Egyptian thought and to demonstrate that apparent confusions and contradictions resulted only from the use of many approaches to the ineffable problems of being, permanence, and change See Adolf Erman, *A Handbook of Egyptian Religion* (Eng tr, 1907), J H Breasted, *Development of Religion and Thought in Ancient Egypt* (1912) and *The Dawn of Conscience* (1934), Sir E A Wallis Budge, *From Fetish to God in Ancient Egypt* (1934), H Frankfort, *Ancient Egyptian Religion* (1948)

Egyptians, Gospel of the see PSEUDEPIGRAPHA

Ehi (ā'hī), the same as AHIRAM

Ehime (āhē'mā), prefecture, NW Shikoku, Japan see MATSUYAMA

Ehrenberg, Christian Gottfried (krĭs'tyän gôt'frēt ā'runbĕrk), 1795-1876, German naturalist, studied theology and then medicine In 1820 he went to Egypt for scientific exploration and later to Syria and Arabia, describing his travels in several books He went with Alexander von Humboldt into Asiatic Russia in 1829 His principal investigations were studies of the infusoria

Ehrenbreitstein (ā"runbrīt'shtīn), fortress, W Germany, on a high cliff across the Rhine from COBLENZ, of which it has been a part since 1937 It was first built in 1128, probably on earlier foundations, and was rebuilt in the 19th cent It was occupied after the First World War by the Americans and the French, and in 1945 by the French

Ehrenburg, Ilya Grigoryevich (ēlyä' gēgôr'yuvĭch ā'rünbōōrk), 1891–, Russian journalist and novelist, whose name is also spelled Erenburg He is noted for his reports on both the First and Second World Wars Some of his reports are translated in *The Tempering of Russia* (1944) Because of long residence abroad (1921–40), he is the most cosmopolitan of the Soviet writers In 1942 he won the Stalin Prize for a novel, *The Fall of Paris* (Eng tr, 1942), dealing with the decay of French society from 1935 to 1940 Other translated novels are *The Extraordinary Adventures of Julio Jurenito and His Disciples* (1921, Eng tr, 1930), *The Love of Jeanne Ney* (1924, Eng tr, 1929), an ironic spy story, *A Street in Moscow* (1927, Eng tr, 1932), *Out of Chaos* (1933; Eng tr, 1934), and *The Storm* (Eng tr, in Moscow, 1948, American ed, 1949), a panoramic war novel which won the Stalin Prize in 1948.

Ehrlich, Paul (poul' ār'lĭkh), 1854–1915, German bacteriologist. He directed (1896) an institute for serum research at Steglitz, near Berlin, which was transferred (1899) to Frankfurt-am-Main as the Institute for Experimental Therapy For his work in immunology he shared with Élie Metchnikoff the 1908 Nobel Prize in Physiology and Medicine He made valuable contributions also in hematology, in cellular pathology, in the use of dyes in microscopy and in the treatment of disease, in the study of cancer, and in his discovery of salvarsan (or "606," so called from its numerical order in his experimental series) and of neosalvarsan (less toxic than salvarsan) for the treatment of syphilis

Ehud (ē'hŭd) 1 Judge of Israel He delivered Israel from Moab Judges 3 12-30 2 Benjamite 1 Chron 7 10, 8 6

Eichelberger, William Snyder (ī'kŭlbûrgur), 1865–, American astronomer, b Baltimore, grad Johns Hopkins (B A, 1886, Ph D, 1896) He was twice assistant on the *Nautical Almanac* and later served as director (1910–29) From 1900 to 1929 he was professor of mathematics at the U S Naval Academy and after 1902 was in charge of several different departments in the Naval Observatory In 1901 he had charge of the U S eclipse station at Fort de Kock, Sumatra, in 1905, of that at Daroca, Spain

Eichendorff, Josef, Baron von (yō'zĕf bärōn' fŭn ī'khundôrf), 1788–1857, German poet His lyric verse, modeled upon German folk songs, is among the best poetry of the romantic period It reflects the sound and mood of nature with remarkable effect One of his best-known poems, "The Broken Ring," has itself become a folk song Schumann set much of his verse to music Eichendorff wrote also the autobiographical *Memoirs of a Good-for-Nothing* (1826, Eng tr, 1866) and several short tales, such as "The Marble Statue" (1817–26, Eng tr in Pierce and Schreiber, *Fiction and Fantasy of German Romance*, 1927) For selections, see his *Happy Wanderer and Other Poems* (tr by Marjorie Rossy, 1925), M A A Münsterberg, *A Harvest of German Verse* (1916), Norman Macleod, *German Lyric Poetry* (1930)

Eichholtz, Jacob (īkh'hōlts), 1776–1842, American portrait painter, b Lancaster, Pa, pupil of Gilbert Stuart in Boston but mainly self-taught He painted portraits of some of the most prominent men of the day and he also painted family groups He was especially successful in handling textiles Among his portraits are those of Chief Justices John Marshall (Historical Society of Pennsylvania, Philadelphia) and John Bannister Gibson (Philadelphia Law Association), James Buchanan (Smithsonian Institution), Col James Gibson (capitol, Dover, Del), and Nicholas Biddle

Eichler, August Wilhelm (ou'gōōst vĭl'hĕlm īkh'lŭr), 1839–87, German botanist He worked out the symmetry of the parts of a flower and developed a system of plant classification, which, after later work on it by Adolf Engler, was widely adopted by European botanists He wrote a syllabus of pharmaceutical botany

Eickel, Germany see WANNE-EICKEL

eider see DUCK

Eider (ī'dur), river, 125 mi long, N Germany, separating Holstein on the south from Schleswig on the north It rises S of Kiel and flows W into the North Sea

Eidsvold or **Eidsvoll** (both āts'vôl), hamlet, Akershus co, SE Norway, S of Mjosa lake One of the oldest Norse confederacies, the Eidsvalag, held assemblies here from about the 1st cent A D In 1814 Norwegian patriots met at Eidsvold manor (now a national monument), framed a constitution, and declared the independence of Norway

Eielsen, Elling (āĕl'sŭn), 1804–83, Norwegian-American preacher, remembered as the founder (1846) of the Norwegian Evangelical Lutheran Church After itinerant missionary work in Scandinavia, he came to the United States in 1839, preached in Chicago the first Norwegian sermon heard in America, and for many years exercised the strongest religious influence among Norwegian pioneers in the Middle West See J M Rohne, *Norwegian American Lutheranism* (1926)

Eifel (ī'fŭl), plateau, NW Germany, N of the Moselle river and E of the Ardennes The Eifel forms part of the Rhenish Slate Mts (Ger *Rheinisches Schiefergebirge*) and is a barren area characterized by deep valleys, extinct volcanoes, and crater lakes Hohe Acht is the highest point (2,447 ft)

Eiffel, Alexandre Gustave (ĭ'fŭl, Fr älĕksäN'dru gustäv' äfĕl'), 1832–1923, French engineer A noted constructor of bridges and viaducts, he also contributed to the science of aerodynamics and wrote *The Resistance of the Air* (1913, Eng tr, 1913) He designed the **Eiffel Tower,** erected in the Champ-de-Mars for the Paris exposition of 1889 The tower is 984 ft high, of iron framework supported on four masonry piers, from which rise four columns uniting at a height of 620 ft to form one shaft Three platforms at different heights are reached by stairs and elevators On the top of the tower are a meteorological station and a wireless station

Eigenmann, Carl H. (ī'gŭn-), 1863–1927, American zoologist, b Germany, grad Indiana Univ, 1886 From 1891 he taught at Indiana Univ, founding and directing (1895–1920) the biological station at Winona Lake and serving as dean of the graduate school (1908–26) With his wife, Rosa Smith Eigenmann (1859–1947), he studied the fishes of South America and wrote on the freshwater fishes of British Guiana (1912), of NW South America (1922), and of Chile (1927) He also wrote *Cave Vertebrates of America* (1909)

Eiger (ī'gŭr), peak, 13,038 ft high in the Bernese Alps, Switzerland.

Eight, The, group of American artists in New York, formed in 1908 to exhibit paintings They were men of widely different tendencies, held together mainly by their common opposition to academism They were stigmatized as the "ashcan school" The group comprised Arthur B Davies, a romanticist, Maurice Prendergast, Ernest Lawson, and William Glackens impressionists, Everett Shinn, an illustrator, Robert Henri, a singularly honest virtuoso, and John Sloan and George Luks, at that time followers of Henri These men, and above all Davies, were responsible for the Armory Show of 1913, which introduced modern European art to a shocked, recalcitrant, but curious America In 1917, together with George Bellows and other adherents, they organized the Society of Independent Artists Modern American painting owes much to their efforts and example They forced the younger generation to abandon the various forms of nature copying and to accept serious aesthetic and social responsibilities

eight-hour day see LABOR, HOURS OF

Eijkman, Christian (krĭs'tyän īk'män), 1858–1930, Dutch physician He was head of the Pathological Institute of Batavia and later (1898–1928) professor of hygiene at the Univ of Utrecht His work at Batavia on the cause of BERIBERI led to the isolation of the antineuritic vitamins For this he shared with F G HOPKINS the 1929 Nobel Prize in Physiology and Medicine

Eikon Basilike (ī'kŏn bŭsĭ'lĭkē) [Gr, =royal image], described as "the portraiture of his sacred majesty in his solitudes and sufferings," is a work published soon after the execution of Charles I of England in 1649 and generally believed to be an autobiographical work by him It ran into innumerable editions and was translated into several languages John Milton replied to it in his *Eikonoklastes* (1649) After the Restoration, authorship of the book was claimed by John Gauden, and thus claim was a subject of scholarly controversy for generations The name is also spelled *Icon Basilike* and *Ikon Basilike* See edition (1903) and bibliography (1896) by Edward Almack

Eildon Hills (ēl'dun), three conical hills, Roxburghshire, Scotland, S of Melrose The middle and loftiest peak is 1,385 ft high The Roman camp Trimontium was near by The hills are associated with legends of Thomas of Erceldoune

Eilshemius, Louis Michel (īlshĕ'mēus), 1864–1941, American painter, b Laurel Hill Manor near Newark, N J Son of a wealthy Dutch importer, he spent much of his youth abroad After two years at Cornell Univ he studied art at the Art Students League and the National Academy of Design in New York and at Julien's in Paris, where he worked under Bouguereau He returned to New York about 1887 when two of his works were shown at the National Academy Aside from this early notice he received no real recognition for 30 years although he continued to paint At the Armory Show of 1913 his work impressed various artists After 1926 it had widespread recognition His imaginative, atmospheric landscapes of an authentic American character are in many leading galleries *Approaching Storm* (Phillips Memorial Gall, Washington, D C) is an excellent example of his work See William Schack, *And He Sat among the Ashes* (1939)

Einaudi, Luigi (lwē'jē ēnou'dē), 1874–, first constitutional president of Italy (1948–) A noted economist, a senator after 1919, and an opponent of Fascism after 1924, Einaudi taught at the Univ of Turin until 1943, when he fled to Switzerland After his return he became governor of the Bank of Italy (1945) and vice premier and minister of the budget under De Gasperi (1947) His drastic measures helped to curb inflation In May, 1948, he was elected president under the new republican constitution by the Christian Democratic majority of the parliament

Eindhoven (īnt'hō"vun), municipality (pop 132,595), North Brabant prov, S Netherlands Chartered in 1232, it had only 5,700 inhabitants in 1910, before its rapid expansion as an industrial center began Eindhoven is the seat of the Dutch manufactures of electrical appliances and radios, it also produces plastics, textiles, cigars and cigarettes, and other manufactured articles In the Second World War, Eindhoven was one of the chief targets in the landing (Sept, 1944) of Allied airborne troops Unlike the simultaneous landing at Arnhem, the landing at Eindhoven was successful

Einhard (īn'härd) or **Eginhard** (ā'gĭnhärd), c 770–840, Frankish historian Educated in the monastery of Fulda, he continued his studies at Charlemagne's palace school at Aachen He rose to high favor with the emperor, who apparently appointed him superintendent of public buildings Emperor Louis I made him tutor or adviser to his son Lothair Einhard was invested with several abbeys, to one of which he finally retired. In 830 he sought

to reconcile Louis I and the rebellious Lothair. Einhard's reputation rests on his biography of Charlemagne, which is not only a prime contemporary source, but also an eminently readable book. Other writings include a history of the translation of the relics of SS. Marcellinus and Peter (4th-century martyrs) from Rome to Germany and correspondence. The annals that bear his name were almost certainly not written by him. There are many translations of *The Life of Charlemagne*.

Einhorn, David (īn'hôrn), 1809–79, Jewish theological writer and leader of the reform movement in Judaism in the United States, b. Bavaria. A staunch supporter of Abraham Geiger's liberal views on the practice of Judaism, he succeeded in introducing ritual modifications in the religious services of the American Jews. His vigorous anti-slavery campaign in the Civil War forced him to leave Baltimore.

Einsiedeln (īn'zē"dŭln), town (pop. 8,392), Schwyz canton, Switzerland. It is a noted place of pilgrimage and has a Benedictine abbey, founded by St. Meinrad, a 9th-century martyr, and a fountain with a statue of the Blessed Virgin. Zwingli was priest here (1516–18). There is a small printing industry.

Einstein, Albert (īn'stīn), 1879–, American theoretical physicist, known for the formulation of the relativity theory, b. Ulm, Germany, of Jewish parents. He lived as a boy in Munich and Milan, continued his studies at the cantonal school at Aarau, Switzerland, and was graduated (1900) from the Federal Institute of Technology, Zurich. Later he became a Swiss citizen. He was examiner (1902–9) at the patent office, Bern. During this period he obtained his doctorate (1905) at the Univ. of Zurich, evolved the special theory of relativity, explained the photoelectric effect, and studied the motion of atoms, on which he based his explanation of Brownian movement. In 1909 his work had already attracted attention among scientists, and he was offered an adjunct professorship at the Univ. of Zurich. This he resigned in 1910 to become full professor at the German Univ., Prague, and in 1912 he accepted the chair of theoretical physics at the Federal Institute of Technology, Zurich. By 1913 he had won international fame and was invited by the Prussian Academy of Sciences to come to Berlin as titular professor of physics and as director of theoretical physics at the Kaiser Wilhelm Institute. He assumed these posts in 1914 and subsequently resumed his German citizenship. For his work in theoretical physics, notably on the photoelectric effect, he received the 1921 Nobel Prize in Physics. When Hitler became chancellor in 1933, Einstein was visiting professor at the California Institute of Technology, he did not return to Germany, but resided for a few months in Belgium. His property was confiscated (1934) by the Nazi government, and he was deprived of his German citizenship. In the meantime he was offered posts in several universities, including the Collège de France, he accepted (1933) a post at the Institute for Advanced Study, Princeton, from which he retired in 1945. In 1940 he had become an American citizen. Einstein set forth in 1905 a restricted theory (known as the special theory) of relativity in papers (published in *Annalen der Physik*) on the electrodynamics of moving bodies and on the equivalence of mass and mechanical energy (which gave a new turn to research on the atom). In 1911 he asserted the equivalence of gravitation and inertia, and c. 1916 he completed his mathematical formulation of a general theory of relativity which included gravitation as a determiner of the curvature of a space-*time continuum* and represented gravitation as a field rather than a force. He then sought to devise a group of equations applicable not only to gravitation but also to electromagnetic and subatomic phenomena. He announced in 1929 that he had found a key to the formulation of this unified field theory, the mathematical expression of the theory appeared in 1950 as an appendix to *The Meaning of Relativity* (1922, Eng. tr., 4th ed., 1950). Einstein is known also for his contributions to the development of the quantum theory, he postulated (1905) light quanta (photons), comparable to energy quanta, and on these based his explanation of the photoelectric effect, and he developed the quantum theory of specific heat. At the request of a group of scientists, including Niels Bohr, he wrote (1939) to President Roosevelt to stress the urgency of investigating the possible use of atomic energy in bombs. Einstein's chief interests, apart from his scientific work, are pacifism and Zionism, playing the violin is his chief recreation. His writings include *Relativity the Special and the General Theory* (1918, Eng. tr., 1920, reissued 1947) and excerpts (most of them translated) from letters, articles, and addresses collected in *About Zionism* (1930), *The World as I See It* (1934), and *Out of My Later Years* (1950). See also RELATIVITY. See studies by H. G. Garbedian (1939), Philipp Frank (1947), and Leopold Infeld (1950).

Einthoven, Willem (vĭl'hĕm ĭnt'hōvŭn), 1860–1927, Dutch physiologist, b. Java, M.D. Univ. of Utrecht, 1885. He was professor at the Univ. of Leiden from 1886. To measure the electric currents developed by the heart, he invented a string galvanometer and with its aid produced the electrocardiogram, a graphic record of the action of the heart. For this he received the 1924 Nobel Prize in Physiology and Medicine.

Eire see IRELAND.

Eirene (īrē'nē), variant spelling of Irene, one of the Horae and personification of peace.

Eisenach (ī'zənäkh), city (pop. 51,834), Thuringia, central Germany. It is the birthplace of J. S. Bach and was the residence (1498–1501) of young Martin Luther. An ancient city, it has kept the churches of St. Nicholas (12th cent.) and of St. Anne (13th cent.) and other old buildings. Near by is the WARTBURG. Eisenach often served as a residence of the electors of Saxony and, later, the dukes of Saxe-Weimar-Eisenach. Here in 1869, at the Congress of Eisenach, August Bebel and Wilhelm Liebknecht founded the German Social Democratic party. Eisenach manufactures electrical supplies and chemicals and has saline springs.

Eisenerz (ī'zənĕrts), mining town (pop. 12,917), Styria, central Austria, at the foot of the ERZBERG. There are large ironworks here.

Eisenhower, Dwight David (ī'zənhou"ur), 1890–, American general and university president, b. Denison, Texas, grad. West Point, 1915. When he was two years old, his family moved to Abilene, Kansas, where he grew to manhood. After finishing highest in an examination for appointment to West Point or Annapolis, he entered (1911) the U.S. Military Academy. He served in the First World War as an instructor in the tank corps, then was stationed (1922–24) in the Panama Canal Zone, was a member of the American Battle Monuments Commission, and was assistant executive (1929–33) in the office of Assistant Secretary of War. He was in the Philippines from 1935 to 1940. His impressive performance in the 1941 army maneuvers led to his assignment in Washington as chief of operations (1942) and preceded his meteoric rise as military commander in the Second World War. General Eisenhower was named (June, 1942) U.S. commander of the European theater of operations and commanded the Americans in the North African landings (Nov., 1942), in Feb., 1943, he became chief of all Allied forces in North Africa. After he successfully directed the invasions of Sicily (July, 1943) and Italy (Sept., 1943), he was recalled (Dec., 1943) to England to be supreme commander of the Allied Expeditionary Force. He was largely responsible for the cooperation between the British, American, and other forces and for the integration of land, sea, and air forces in the great battle for the European continent. His own account of the Allied defeat of Germany was published in book form as *Crusade in Europe* (1948). In Dec., 1944, he was made general of the army ("five-star general"), and in 1945 he commanded U.S. occupation forces in Germany. He succeeded (Nov., 1945) Gen. George C. Marshall as chief of staff of the U.S. army and advocated the unification of the U.S. armed forces and universal military training. He resigned (Feb., 1948) as chief of staff to become (June, 1948) president of Columbia Univ. Particularly because of his nation-wide personal popularity he was sought for the U.S. presidential candidacy in 1948, but rejected the offers made him. His nickname is Ike. See Alden Hatch, *General Ike* (1944), K. S. Davis, *Soldier of Democracy* (1945), H. C. Butcher, *My Three Years with Eisenhower* (1946).

Eisenstadt (ī'zənshtät), town (pop. 7,299), capital of Burgenland, E. Austria. Joseph Haydn resided here under the patronage of the Esterhazy family.

Eisenstein, Sergei Mikhailovich (sĭrgā' mĭkhī'lŭvĭch ăzunshtyēn'), 1898–1948, Russian moving-picture director. He was an architect and engineer before he began his film career in 1924. Eisenstein's silent film classic *Potemkin* (1925) brought him world-wide fame, and he added to his stature with such films as *October* and *The Old and the New*. In 1930 he visited the United States. Here none of his plans matured, but films made in Mexico were later used in *Thunder over Mexico* and in three short films *Alexander Nevsky* (1938), his first sound film, for which Sergei Prokofiev composed a score, was an international success. *Ivan the Terrible* (1944), his last film, was made in two parts. Part I gained critical acclaim, and Part II was withheld by the Soviet Film Trust. A master of camera craft, he expounded his montage theories and techniques in *The Film Sense* (Eng. tr., 1942).

Eisleben (īs'lābun), city (pop. 29,095), in the former Saxony prov. of Prussia, central Germany, at the foot of the Harz mts. It has been a copper-mining center for 750 years. Martin Luther was born and died here. Eisleben remained unharmed in the Second World War. The house where Luther was born, the house where he died, the church where he was baptized, and several other Gothic 16th-century churches still stand.

Eisner, Kurt (kŏrt' īs'nûr), 1867–1919, German revolutionist, of Jewish descent. He studied at the Univ. of Marburg, joined the Socialist party, and worked on several Socialist newspapers. He was convicted of treason after inciting (1918) a strike among munitions workers. Released, he organized the revolution which overthrew the Bavarian monarchy (Nov. 7, 1918) and became the first republican premier of Bavaria. A separatist, he now opposed the reestablishment of a federal Germany and the convocation of a national constituent assembly. At a Socialist conference in Berne he accepted German responsibility for the First World War. He was assassinated in Feb., 1919, by Count Arco-Valley, an anti-Semitic nationalist. Eisner's collected writings were published in 1919.

eisteddfod (āstĕdh'vŏd) [Welsh, =session], Welsh competitive festival. Contests are held in all the arts and crafts, with special emphasis on music and poetry. The National Eisteddfod is held annually for one week in August, alternately in the north and the south, but local eisteddfods are held throughout Wales during the year. A historical institution (12th cent.), it is important in maintaining national feeling and preserving the Welsh language and culture and is enthusiastically supported by all classes. Its outstanding ceremony is the "chairing" of the winning bard. The bardic assembly (gorsedd) has been a part of the National Eisteddfod since 1819. Other Celtic peoples have somewhat similar institutions.

ejido (āhē'dō) [Span., =common land], in Mexico, agricultural land expropriated from large private holdings and redistributed to small farmers. Communal ownership of land was practiced by the Aztecs, but the institution was in decline before the Spanish arrived. The conquistadors instituted the ENCOMIENDA, which was superseded by the *repartimiento* and finally, after independence (1821), by debt PEONAGE. Although legally abolished by the constitution of 1917, which provided for the *ejido*, peonage remained a general practice until the presidency of Lázaro CÁRDENAS. In the LAGUNA DISTRICT in Oct., 1936, the *ejido* became a fact on a large scale. The intent of the *ejido* system is to remedy the social injustice of the past and to increase Mexican production of subsistence foods. The land is owned by the government, and the *ejido* is financed by a special national bank, which supplies the necessary capital for reclamation, improvement, initial seeding, and the like. In effect, the bank has replaced the colonial *encomendero*, with this difference—the laborer is paid. See E. N. Simpson, *The Ejido* (1937).

Ekaterinburg, RSFSR see SVERDLOVSK.

Ekaterinodar, RSFSR see KRASNODAR.

Ekaterinoslav, Ukraine see DNEPROPETROVSK.

Eker (ē'kur), descendant of Judah through the family of Hezron. 1 Chron. 2:27.

Ekhof, Konrad (kōn'rät ĕk'hōf), 1720–78, German actor and theatrical manager. In 1740 he made his debut as Xiphares in Racine's *Mithridate* with the celebrated Schönemann company, then a group of strolling players but after 1757 established at Hamburg. In this city Ekhof founded (1751) a theatrical academy. In 1764 he left the Schönemann company for the Ackermann group and in 1767 was the star of the newly founded National Theater in Hamburg. In 1775 he became codirector of the Court Theater at Gotha, the first permanently established theater in Germany. Ekhof was one of the founders of the realistic school of acting in Germany, and as a tragic actor he was lauded by Lessing and Iffland.

Ekkehard (ĕ'kūhärt), name of three monks of St. Gall, Swiss monastery. **Ekkehard I** was author of the *Waltharilied* (c. 930), an epic in Latin hexameters celebrating the deeds of Walter, prince of Aquitaine. **Ekkehard II**, fl. 10th cent., was tutor of Hedwig of Swabia, niece of Otto the Great, and appears in Scheffel's novel *Ekkehard*, which contains a translation of the *Waltharilied*. **Ekkehard IV**, fl. 11th cent., contributed to a chronicle of the St. Gall monasteries and revised the *Waltharilied*. See translation of *Ekkehard* by Helena Easson (1911).

Ekron (ĕ'krŏn) [Heb., =eradication], important Philistine city, ESE of Jaffa, not far from the sea. It was on the border of Judah and was the last resting place of the ark before its restoration to the Jews. Judges 1:18; Joshua 13:3, 15:45, 46, 19:43; Sam. 5:10, 6:16, 17, 7:14, 17:52, Jer. 25:20, Amos 1:8, Zeph. 2:4, Zech. 9:5,7. Accaron 1 Mac. 10:89. It is now called Akir.

El. For Arabic and Spanish names beginning thus, see second part of name, e.g., for El Bika, see BIKA, EL, for El Salvador, see SALVADOR.

Eladah (ē'lădu, ēlā'du) [Heb., =whom God adorns], Ephraimite. 1 Chron. 7:20.

Elagabalus: see HELIOGABALUS.

Elah (ē'lu) [Heb., =terebinth]. **1** Died c. 885 B.C., king of Israel (c. 886–c. 885 B.C.), son and successor of Baasha. He was murdered, and succeeded, by Zimri. 1 Kings 16:8–14. **2** Father of Hoshea, last king of Israel. 2 Kings 15:30, 17:1. **3** Duke of Edom. Gen. 36:41, 1 Chron. 1:52. **4** Father of one of Solomon's stewards. 1 Kings 4:18. **5** Son of Caleb the spy. 1 Chron. 4:15. **6** Benjamite. 1 Chron. 9:8. **7** Valley in which David slew Goliath. 1 Sam. 17:2, 19, 21:9. It has been identified plausibly with the Wadi es-Sunt, which empties into the Mediterranean not far N. of Ashdod.

Elaine: see ARTHURIAN LEGEND.

El Alamein, Egypt: see ALAMEIN.

Elam (ē'lŭm), ancient country of Asia, N of the Persian Gulf and E of the Tigris, now in W Iran. A civilization seems to have been established there very early, probably in the 5th millennium B.C. The capital was SUSA, and the country is sometimes called Susiana. The land included a hot rich plain and hill country to the east. Sculpture and tradition attest that in very early times a Negro population occupied the plain. In historical times Elam was known principally as a rival of Babylonia. The population was neither Sumerian nor Semitic. Their language survives in a copious cuneiform literature. The Elamites seem to have maintained their independence steadily despite invasions and counterinvasions. SARGON fought against them, but also signed a treaty with them. The Elamites led forays into S Mesopotamia. They emerged into greater prominence after they had helped other mountain peoples to overthrow Babylonia in the 18th cent. B.C., and the golden age of Elam came after 1200 B.C. The Elamite civilization grew strong; there was a literary renaissance and great development of architecture and sculpture. The rising power of ASSYRIA threatened Elam. SARGON of Assyria, SENNACHERIB, and ESAR-HADDON all attacked the Elamites, but Susa fell (c. 645 B.C.) only to ASSURBANI-PAL, who sacked the city. Possibly the house that in the person of Cyrus took over the rule from the Medes and created the Persian Empire was originally Elamite. At any rate Susa became a favored provincial capital of Persia.

eland (ē'lund) [Dutch, =elk], largest living African antelope. A bull may stand 6 ft. high at the shoulder and weigh over 1,200 lb. The horns are spiral and extend straight upward. Hunted for its hide and flesh and victimized by disease, it survives in reduced numbers. Protection in many areas is inadequate.

Elasah (ē'lŭsŭ, ēlā'su) [Heb., =God made] **1** One of Zedekiah's messengers to Babylon. Jer. 29. **2** Priest. Ezra 10:22.

elasticity, the ability of matter to return to an original shape or an original volume after extension, compression, twisting, or other form of distortion. The elasticity of a substance is measured in terms of the amount of force (see STRENGTH OF MATERIALS) it can resist without becoming permanently deformed. The smallest force which brings about a permanent deformation is known as the elastic limit. The elasticity of a body depends upon the nature of the matter composing it. A rubber band, for example, does not have as great elasticity as a brass spring, for the elastic band, after subjection to great extension (within limits) does not regain its original shape, but is noticeably longer after such stretching than before. A brass spring, on the other hand, shows practically no deformation after stress is removed. The degree of elasticity of a substance is denoted for linear changes by YOUNG'S MODULUS. Gases and liquids possess perfect elasticity. Gases readily fill the space created after removal of pressure, liquids, although permitting very little compression, exhibit the property no less. Elasticity is treated in HOOKE'S LAW.

Elath (ā'-) [Heb., =trees] ancient port, on the Gulf of Aqaba near or on the site of the modern AQABA. Near by was Solomon's port of EZION-GEBER. Elath was built up or rebuilt by King Uzziah of Judah and lost by King Ahaz (8th cent. B.C.). The Roman port succeeding Elath was Aelana or Elana. Deut. 2:8; 2 Kings 14:22, 16:6. Eloth. 1 Kings 9:26, 2 Chron. 8:17.

El Azhar, Moslem university: see CAIRO, Egypt.

Elba (ĕl'bä), mountainous island (86 sq. mi., pop. 29,462), 6 mi. off the coast of Tuscany, central Italy, in the Tyrrhenian Sea. Under many foreign rulers throughout its history, it was briefly (1814–15) a sovereign principality under the exiled Napoleon I. Iron has been extensively mined since Etruscan and Roman times and there are important iron works in the chief town, PORTOFERRAIO.

Elba, city (pop. 2,363), a co. seat of Coffee co., SE Ala., NW of Dothan and on the Pea river, in a farm area.

Elbasan (ĕlbäsän'), town (pop. 14,968), central Albania, on the Shkumbi river. It is the center of a fertile agricultural region. There are remnants of medieval Turkish fortifications.

Elbe (ĕl'bŭ), Czech *Labe* (lä'bĕ), river, 725 mi. long. Czechoslovakia and Germany. It rises in the Giant Mts., NE Bohemia, and traverses Bohemia in a wide arc for 226 mi. It then enters Saxony, after cutting through steep sandstone cliffs, and flows generally NW through Saxony and the North German plain (past Dresden, Wittenberg, Magdeburg, and Hamburg) into the North Sea at Cuxhaven. Its chief tributaries are the Moldau, the Mulde, the Saale, and the Havel. A canal system connects it with the Oder. Navigable for 525 mi., the Elbe is one of the chief waterways of Europe. The Treaty of Versailles (1919) internationalized its course from the entrance of the Moldau to the sea, but Germany repudiated its internationalization after the Munich Pact. The Albis of the Romans, the Elbe marked the farthest Roman advance into Germany under Drusus (9 B.C.) and again the eastern limit of Charlemagne's conquests. The largely Slavic lands E of the Elbe resisted Christianization and German colonization for centuries more, and the Elbe is still a cultural frontier.

Elberfeld, Germany: see WUPPERTAL.

Elbert, Mount, peak, 14,431 ft. high, W central Colo., in the Sawatch Mts., highest summit of the Rocky Mts. in the United States.

Elberton, industrial city (pop. 6,188), co. seat of Elbert co., NE Ga., ENE of Athens near the Savannah river, settled in the 1780s. It is the center of the state's important granite industry, the first quarry was opened here in 1882. Nancy Hart Forest Park is near by.

El-beth-el [Heb., =God of the house of God], name given by Jacob to a place in Canaan because God appeared to him there. Gen. 35.7.

Elbing (ĕl'bĭng) or **Elblag,** Pol. *Elbląg* (ĕl'blōnk), city (1946 pop. 20,924, 1939 pop. 85,952), former East Prussia, E of Danzig, transferred to Polish administration by the Potsdam Conference in 1945. It is a seaport on the Elbing river near its mouth in the Frisches Haff, and it is connected by waterway with Torun. The Teutonic Knights built (1237) a castle here. Elbing was one of the cities of the Hanseatic League, passed to Poland in the 15th cent., and was taken by Prussia in 1772. It has shipyards and other industries.

Elblag, East Prussia: see ELBING.

Elbow Lake, village (pop. 1,150), co. seat of Grant co., W Minn., S of Fergus Falls. It is a farm trade center.

Elbrus, Mount (ĕl'brōōs, ăl'brōōs), highest mountain of the Caucasus and of Europe, NW Georgian SSR, formed by two extinct volcanic cones, respectively 18,481 ft. and 18,356 ft. high. Its glaciers give rise to several rivers, notably the Kuban. The snow line is at c. 11,000 ft.

Elburz (ĕlbōōrz'), mountains, N Iran, S of the Caspian Sea. They rise to their highest point in Mt. DEMAVEND.

El Cajon (ĕl kähōn'), city (1940 pop. 1,471; 1945 special census pop. 3,175), S Calif., E of San Diego, in a region of citrus fruits and grapes, inc. 1912.

El Campo (ĕl kăm'pō), city (1940 pop. 3,906, 1947 estimated pop. 6,575), S Texas, SW of Houston, founded 1884, inc. 1905. The city is a market for a Gulf Coast plain region producing rice, oil, cattle, cotton, and milk, and it has processing plants, bottling works, and metalworks.

El Centro (ĕl sĕn'trō), city (pop. 10,017), co. seat of Imperial co., SE Calif., S of the Salton Sea in the IMPERIAL VALLEY, laid out 1905, inc. 1908. It is a packing and shipping center, with an oil refinery and an airport. Central Junior College (coeducational) and an experiment station of the Univ. of California College of Agriculture are here.

El Cerrito (ĕl surĕ'tō), residential city (1940 pop. 6,137, 1943 special census pop. 16,624) on the eastern shore of San Francisco Bay, inc. 1917.

Elche (ĕl'chā), city (pop. 31,275), Alicante prov., SE Spain, in Valencia. Near by is a celebrated palm grove yielding large crops of dates. Elche also grows figs, pomegranates, and other fruit.

Eldaah (ĕl'dăŭ, ĕldă'ŭ) [Heb., =whom God calls], son of Midian. Gen. 25:4, 1 Chron. 1:33.

Eldad, one of the elders who with Moses received the gift of prophecy. Num. 11:26.

Eldad ben Mahli ha-Dani (ĕl'dăd bĕn mä'lē hä dä'nē), fl. after 850, Jewish merchant and traveler. His account of an independent Jewish state in E Africa and theories of the Ten Lost Tribes were probably responsible for the legend of Prester John. An English translation of *The Tales of Eldad the Danite* appeared in 1855.

elder or **elderberry,** name for any of numerous species of the genus *Sambucus*, deciduous trees and shrubs of wide distribution. Four are native to North America. They have large flat-topped clusters of creamy white flowers. The common elder (*Sambucus canadensis*) has purplish-black berries often used for pies, wine, and jelly; the flowers are sometimes used in making wine. Except for the berries the plant contains properties that have been reported to cause poisoning under certain conditions. Both berries and flowers have been used medicinally. Elder pith is commonly employed to support sections of tissue which are being cut for microscopic study. The red-berried or stinking elder has inedible fruits. The European elder and the "Spirit of the Elder" have figured prominently in north European mythology.

Eldon, John Scott, 1st earl of, 1751–1838, English statesman and jurist. From a successful law practice he entered Parliament (1783) and became solicitor general in 1788 and attorney general in 1793. He prosecuted John Horne Tooke and other sympathizers with the French Revolution, and his was the guiding hand in drawing up the repressive laws of 1793–98. Made chief justice of common pleas and Baron Eldon in 1799, he advanced in 1801 to the lord chancellorship, which office he held almost continuously until 1827. His influence in government during the period was great, and during the weak ministries of the earl of Portland and Spencer Perceval (1807–12) he was virtual prime minister. Eldon was a Tory politician of the most reactionary cast. He was an unrelenting opponent of Catholic Emancipation and of liberal reform. Though he had a brilliant and influential legal mind, he was extremely dilatory and chancery delays became notorious in his time.

Eldon. **1** City (pop. 1,676), SE Iowa, on the Des Moines river below Ottumwa; inc. 1877. Indian mounds are near by. **2** City (pop. 2,590), central Mo., SW of Jefferson City, founded c. 1880. It is a railroad division point and trade center in a farm area, with barite mines. Bagnell Dam is near by.

Eldora, city (pop. 3,553), co. seat of Hardin co., N central Iowa, on the Iowa river and NNW of Marshalltown, settled 1851, inc. 1896. The state training school for boys is here. Near by are Pine Lake State Park and a fish hatchery.

El Dorado (ĕl' dura'dō, -rä'-) [Span., =the gilded man], mythical country of the Golden Man sought by adventurers in South America. The legend supposedly originated in a custom of the CHIBCHA Indians of Colombia, whose young chief was annually anointed (or covered with turpentine) and rolled in gold which he then ceremonially washed off in the waters of Lake Guatavitá, casting sacrifices of gold and emeralds into the waters of the lake at the same time. This custom was apparently discontinued long before the coming of the white man, but tales of it were current. They grew into a legend of a land of gold and plenty. Gonsalo PIZARRO and ORELLANA hoped to find it. From the middle of the 16th cent. a series of conquistadors set out in search, looking for Omagua, the Land of Cinnamon, or the golden land of Manoa. El Dorado passed into European literature and found its way to the maps. The conquistadors of Venezuela and New Granada—FEDERMANN, BENALCÁZAR, JIMÉNEZ DE QUESADA, and Alfinger—all sought El Dorado. Perhaps best known to English-speaking peoples is the expedition of Sir Walter RALEGH in 1595. The location of the mythical land shifted as regions were explored and similar legends appeared in the W United States. CABEZA DE VACA told of the Seven Cities of Cibola, Fray MARCOS DE NIZA also stimulated interest in searching for the treasure cities by his stories, based possibly on the relative wealth of the Pueblo Indian villages. CORONADO went forth on a fruitless search for them. El Dorado is used figuratively to mean any country of wealth or the land of desire.

El Dorado (ĕl durā'du) **1** City (pop. 15,858), co. seat of Union co., S Ark., near Louisiana, settled 1843, inc. 1851. The discovery of oil in 1921 made it the oil center of the state. Other industries include lumber and cotton processing; it is also the trade center for a farm area. A junior college is here. **2** City (pop. 10,045), co. seat of Butler co., SE Kansas, on the Walnut and ENE of Wichita; laid out 1868, inc. 1870. With the discovery in 1915 of oil in the region, the city grew as a shipping and refining point for petroleum. The area also produces grain and livestock. Near by, a great cave, threaded by a stream, has resisted efforts of geological parties to explore it completely.

Eldorado (ĕldurā'du) **1** City (pop. 4,891), S Ill., west of the junction of the Ohio river with the Wabash, inc. 1873. It is a trade and distributing center for a coal and farm area. **2** Town (pop. 1,530), co. seat of Schleicher co., W Texas, S of San Angelo and on the Edwards Plateau. The many sheep ranches supply a woolen mill.

Eldorado Mines (ĕldōra'dō) or **Port Radium,** port, N Northwest Territories, on Great Bear Lake 26 mi. S of the Arctic Circle and 1,400 mi. north of the nearest railhead at Waterways, Alta. It is sometimes called Radium City. Discovered by Gilbert La Bine in 1930, its deposits of pitchblende produced much of the radium used in hospitals throughout the world. In 1944 Canadian scientists found that these ores contained one of the world's richest stores of uranium oxide, a source of atomic energy. The mines were promptly expropriated by the Canadian government.

El Dorado Springs, city (pop. 2,342), SW Mo., NW of Springfield, in the Ozark region, founded 1881. It is a health resort.

Eldred, borough (pop. 1,051), NW Pa., on the Allegheny river and E of Bradford near the N.Y. border, inc. 1880.

Elead (ĕl'lēăd, ēlā'-) [Heb., =God has defended], Ephraimite. 1 Chron. 7:21.

Elealeh (ĕ"lēā'lē) [Heb., =God goes up], ancient city of Reuben. Its ruins are NE of Heshbon. Num. 32:3, 37, Isa. 15:4; 16:9, Jer. 48:34.

Eleanor Crosses see ELEANOR OF CASTILE.

Eleanor of Aquitaine (ăkwĭtān', ă'kwĭtān), 1122?–1204, queen of HENRY II of England. Daughter of William X, duke of Aquitaine, she married the son of Louis VI of France in 1137. Shortly thereafter her husband ascended the throne as Louis VII. Between 1146 and 1149 she accompanied Louis on the Second Crusade. Eleanor bore Louis two daughters, but in 1152 their marriage was annulled. Soon afterward Eleanor married Henry Plantagenet, duke of Normandy, count of Anjou, claimant to the English throne, uniting her vast possessions with those of her husband. Louis VII feared this powerful combination, and when Henry

ascended the English throne in 1154, the stage was set for the long struggle between English and French kings Eleanor bore Henry three daughters and five sons, two of whom, RICHARD I and JOHN, became kings of England Because of Henry's infidelities, especially his relationship with the fair ROSAMOND, Eleanor's relations with her husband grew strained, and in 1170 she established a court of her own at Poitiers She assisted her sons in their unsuccessful revolt against Henry in 1173 and was held in confinement by Henry for many years Her efforts helped Richard secure the throne During his absence on the Third Crusade, she was active in forestalling a plot against him, and during his captivity she energetically collected his ransom She brought about a reconciliation between Richard and his treacherous brother, John, and on Richard's death in 1199 she supported John's claims to the throne over those of Arthur of Brittany Eleanor's court at Poitiers was the scene of much artistic activity and was noted for its cultivation of courtly manners and the concept of courtly love She was the patroness of such literary figures as Wace, Benoît de Sainte-More, and Chrestien de Troyes In literary romance Eleanor appears as the jealous murderess of "the Fair Rosamond," but she was apparently innocent of this crime She was an able and strong-minded woman See Amy R Kelly, *Eleanor of Aquitaine and the Four Kings* (1950), Curtis Howe Walker, *Eleanor of Aquitaine* (1950)

Eleanor of Castile (kăstēl'), d 1290 queen consort of EDWARD I of England and daughter of Ferdinand III of Castile At her marriage (1254) she brought to Prince Edward the territories of Ponthieu and Montreuil and claims to Gascony They went together on the crusade of 1270 and on their return were both crowned (1274), Henry III having died in 1272 After her death Edward is supposed to have had the Eleanor Crosses erected to mark the stages of her funeral journey, at Lincoln, Grantham, Stamford, Geddington, Northampton, Stony Stratford, Woburn, Dunstable, St Albans, Waltham, Westcheap, and Charing The crosses at Geddington, Northampton, and Waltham are extant, though partially restored

Eleanor of Provence (prôvăs'), d 1291, queen of HENRY III of England She was the daughter of Raymond Berenger, count of Provence, and was followed into England after her marriage in 1236 by her unpopular kinspeople and foreign courtiers, and criticism of her extravagance may have been colored by her enemies During Simon de Montfort's ascendancy in 1264–65 she raised mercenaries in France for the royalists She retired to a convent in 1286 but was sometimes consulted by her son, Edward I

Eleasah (ēlē'usə,-lēā'-) [Heb ,=God made] **1** Judahite 1 Chron 2 39 **2** Benjamite 1 Chron 8 37

Eleatic school (ēlēă'tĭk), Greek pre-Socratic philosophical school at Elea, in Lucania, Italy The group is generally represented by its four leading thinkers The notion of the unity of all existence, taught by XENOPHANES, was the foundation upon which PARMENIDES built his philosophy of "being" that was basic to Eleaticism ZENO OF ELEA used a series of paradoxes to undermine the commonsense notion of reality, and Melissus, with some minor divergences, extended the teachings of Parmenides The Eleatic taught that being (that which remains after quality and quantity have been subtracted) is the ultimate and eternal reality and that all testimony of the senses is illusory They denied the possibility of change

Eleazar (ēlē'zur) [Heb ,=God has helped] **1** Son of Aaron Ex 6 23,25, Num 3 32, Deut 10 6, Joshua 24 33 **2** Keeper of the Ark of the Covenant 1 Sam 7 1 **3** Mighty man of David 2 Sam 23 9, 1 Chron 11 12 **4** Priest Ezra 8 33, Neh 12 42 **5** Jew who had married a foreign wife Ezra 10 25 **6** Merarite Levite 1 Chron 23 21,22, 24 28 **7** Man in the Gospel genealogy Mat 1 15 **8** One of the chief martyrs in the Maccabean period An old man, he refused to eat swine's flesh 2 Mac 6 18–31

elecampane (ĕl"ukămpān'), hardy Old World herb, *Inula helenium*, of the composite family, naturalized in America and sometimes cultivated in gardens It has yellow-rayed flowers and a thick root which was formerly regarded as a good tonic and remedy for coughs and diseases of the chest It was used in horse medicine, whence its popular name horseheal According to one tradition, Helen carried the flower in her hands when Paris took her to Troy, according to another, the flower sprang from Helen's tears

election, choosing to office in an organization by the vote of those enfranchised or privileged to cast a BALLOT In ancient Greece public officials were occasionally elected but more often were chosen by lot In Rome the popular assemblies elected the tribunes and voted on certain laws The Middle Ages saw the practical abandonment of popular suffrage and of elections, an exception being the elections to the papacy and, in an even more limited sense, the election of the Holy Roman emperor by a minuscule and in part hereditary body of electors In the modern period, elections have been an inseparable part of the growth of democracy. Elections were associated with the parliamentary process in England from the 13th cent but were only gradually regularized by the adoption of the Septennial Act after the Revolution of 1688, by successive reform bills widening the franchise in the 19th cent, and by the adoption of the secret ballot in 1872 In colonial America the election of church and public officials dates almost from the founding of the Plymouth Colony, and the paper ballot was instituted in elections to the Massachusetts governorship in 1634 Under the U S Constitution the right to hold elections is specified, but the method and place are left to the states, with Congress having the power to alter them regulations The Constitution specified that the elections to the House of Representatives should be direct, or popular, that the election of the Senate and of the President and Vice President should be indirect, Senators being chosen by the state legislatures, the President and Vice President by electors chosen by the people The Seventeenth Amendment (1913) provided for the popular election of Senators, vacancies before election to be filled by state governors Qualifications for voters have varied The Fourteenth Amendment (1868) and the Fifteenth Amendment (1870) were designed to forbid the disenfranchisement of the Negro, and the Nineteenth (1920) in effect conferred the vote on women Residents of the District of Columbia, certain classes of felons, some Indians, and the feeble-minded are deprived of the suffrage by law The age limit of 21 years is specified in the Constitution Voting frauds and disorder at the polls were common after the rise of political machines, and the enactment of registration laws after 1865 did little to ameliorate conditions CORRUPT PRACTICES acts, poll watchers, the institution of PRIMARY elections and the introduction of the VOTING MACHINE after 1892 have had great effect in insuring honest elections Candidates are usually chosen by delegate CONVENTION, direct primary, nonpartisan primaries, or petition The candidate who receives the most votes is usually elected, but an absolute majority of at least 50 percent of the vote cast may be required, it has not been required in the United States since 1850 except in the electoral vote cast for the President and Vice President In presidential nominating conventions, the absolute majority is required, the Democrats requiring a two-thirds vote of the delegates from 1832 to 1936 The existence of the electoral college has on occasion permitted a President to be chosen without a majority, or even plurality, of popular votes, and in 1824, 1860, 1876, 1888, and 1912 candidates lacking either a majority or a plurality succeeded in winning office In some European countries and in some local elections in the United States, proportional REPRESENTATION or some other method of preferential voting is used to represent more adequately the minority groups within the electorate Almost all nongovernmental organizations choose officers through some form of election See E M Sait, *American Parties and Elections* (1942)

electoral college, in U S government, the body of electors in the states which chooses the President and Vice President The Constitution, in Article 2, Section 1, provides "Each State shall appoint, in such Manner as the Legislature thereof may direct, a Number of Electors, equal to the whole Number of Senators and Representatives to which the State may be entitled in the Congress" However, no Senator, Representative, or officer of the U S government may be an elector The electors are directed by the Constitution to vote in their respective states, and Congress is authorized to count their votes To win, a presidential candidate must have a majority in the electoral college Before adoption of the Twelfth Amendment (1804), in the event that no candidate had a majority, the House of Representatives (voting by states, with one vote for each state) was to choose the President from among the five candidates highest on the electoral list Then, "after the choice of the President, the Person having the greatest Number of Votes of the Electors shall be the Vice President", in case of a tie the Senate would choose the Vice President The Twelfth Amendment, however, resulting from the election of 1800 (see JEFFERSON, THOMAS, and BURR, AARON), enjoined the electors to vote for the President and the Vice President separately It also reduced from five to three the number of candidates from among whom the House was to choose --in case no candidate had a majority (only two Presidents, Jefferson and John Quincy ADAMS, have been elected by the House) In early days the electors were most often chosen by the state legislatures, but with the growth of democratic sentiment popular election became the rule After 1832 (and until the Civil War) only in South Carolina did the legislature continue to choose the electors. In some of the states at first the people voted for electors by congressional districts, with two being elected at large from the whole state, but with the growth of political parties this plan was discarded (by 1832 only four states retained it and only for a brief time) in favor of the general-ticket system (the one now prevailing), whereby a party needs only a plurality to carry the whole state. Thus in every state a voter casts his ballot for as many electors as his state is entitled to. However, there is nothing in the Constitution that requires either that the electors be chosen by popular vote or that the general-ticket system be employed, but electors must be elected on the Tuesday following the first Monday in November, as required by a Federal law dating from 1845 As a belated result of the disputed election of 1876 involving Samuel J. TILDEN and Rutherford B HAYES, the Electoral Count Act of 1887 placed the responsibility of deciding electoral disputes mainly on the states themselves Congress now counts the votes (a mere formality) on Jan 6 Only in the very beginning did the electoral college function as planned, and there is widespread dissatisfaction with the institution The outstanding objection is that it has given the nation eight so-called minority Presidents, i e , Presidents who had a majority in the electoral college but lacked it in the total national popular vote—James Buchanan (1856), Abraham Lincoln (1860, but not 1864), Rutherford B Hayes (1876), James A. Garfield (1880), Grover Cleveland (1884 and 1892), Benjamin Harrison (1888), Woodrow Wilson (1912 and 1916), and Harry S Truman, who polled slightly less than 50 percent of the total popular vote in 1948 A constitutional amendment providing that the electoral votes of a state be divided among the candidates in proportion to their popular vote in that state and that a candidate must have at least 40 percent of the total national electoral vote to win was approved by the Senate on Feb 1, 1950 But, even should it pass the House, there are doubts that it would be accepted by three fourths of the states The most populous ones are not likely to surrender the pivotal positions they now hold in a presidential election under the general-ticket system

electors, in the history of the HOLY ROMAN EMPIRE, the princes who had the right to elect the German kings or, more exactly, the "kings of the Romans" Until the reign (1493–1519) of MAXIMILIAN I, an elected king was crowned by the pope before he called himself emperor In practice, it was only from the election of Lothair II (1125) to that of Albert II (1438) that the imperial office was truly elective, later only members of the Hapsburg dynasty were chosen by the electors By the 13th cent the group of electors had narrowed to seven, but there was no agreement as to who they were The frequency of contested elections led Emperor Charles IV to issue (1356) the Golden Bull (so called because of its golden seal), which regulated the procedure and ceremonies of the elections and coronations The electoral right was conferred on the following princes (their imperial household offices are given in parentheses) the archbishops of Mainz, Trier, and Cologne (archchancellors, respectively, of Germany, Gaul and Burgundy, and Italy), the king of Bohemia (archcupbearer), the count palatine of the Rhine (archseneschal), the duke of Saxony (archmarshal), and the margrave of Brandenburg (archchamberlain) The Golden Bull also imposed the law of primogeniture and nondivision of territory on the electors, who became powerful rulers and were considered as one of the three colleges of the imperial DIET The kings were elected at Frankfurt on the Main, they were in early times usually crowned at Aachen, but after 1562 at Frankfurt To punish FREDERICK THE WINTER KING, Emperor Ferdinand II transferred (1623) the vote of the count palatine to the duke of Bavaria, but at the Peace of Westphalia (1648) an eighth vote was created for the count palatine, in 1692 a ninth vote (formally recognized, 1708) was created for Hanover, thus the kings of England became (1714) electors In 1803 Napoleon I radically altered the list of electors Though the office disappeared with the Holy Roman Empire in 1806, the landgraves of Hesse-Kassel, made electors by Napoleon, bore the title until their deposition (1866)

Electra (ĭlĕk'trə), in Greek mythology. **1** Daughter of AGAMEMNON and CLYTEMNESTRA After Clytemnestra and Aegisthus killed Agamemnon, Electra burned for revenge and encouraged and aided the vengeance wrought by her brother, ORESTES Her character as known to readers today is that developed in the dramas of Aeschylus, Sophocles, and Euripides **2** One of the PLEIADES She was the daughter of the Titan Atlas and the nymph Pleione and mother by Zeus of Dardanus, founder of Troy According to one legend she was the lost Pleiad, she left her place in the heavens to avoid seeing the destruction of Troy **3** Daughter of Oceanus and Tethys and mother, by Thaumus, of Iris and the Harpies

Electra, city (pop. 5,588), N Texas, WNW of Wichita Falls, founded 1890, inc 1910 It was early called Beaver, but was renamed when the rancher W T Waggoner struck oil, the oil field was named for his daughter After the boom of 1911, Electra held its gains and today is a busy, small industrial town It manufactures machinery and supplies for oil and gas fields It also handles wheat and poultry.

electrical engineering: see ENGINEERING.

electric circuit, an unbroken path along which a current of electricity flows. A simple circuit, for example, can be set up with an electric cell, two conducting wires (one end of each being attached to each pole of the cell), and a small lamp and socket to which are attached the free ends of the conducting wires leading from the cell When the wires are made fast, the circuit is said to be "closed," and the lamp will light The current is flowing from the cell along one conductor to the lamp, through the lamp, and back along the other conductor in the cell This part of the circuit is called the external circuit to distinguish it from that part of the circuit within the cell itself, the internal circuit, where the current flows from one electrode to the other through the electrolyte of the cell When the wires are disconnected, the circuit is said to be "open" or "broken" In practice, this is accomplished by switches and fuses (see FUSE, ELECTRIC, and SHORT CIRCUITS) When a circuit is so arranged that the current flows through its parts one after another, it is called a series circuit, when the current flows through all its parts at the same time and is divided among them, it is a parallel circuit These two types of circuits differ in resistance (see OHM), voltage (see VOLT), and current strength (see AMPERE) In a series circuit the negative electrode of one cell is connected with the positive electrode of another cell The total resistance offered to the flow of a current of electricity is equal to the sum of the separate resistances, the voltage for the whole circuit is the sum of the voltages for the different parts, the current strength is the same throughout the circuit In the parallel circuit, like electrodes are connected, i e , negative with negative and positive with positive Resistance is less than that of the part having the least resistance, the voltage is the same for all parts of the circuit, the current strength is the sum of the current strengths in the different parts (See OHM'S LAW) Cells may be arranged in series or parallel circuits or in combinations of the two, depending upon the desired current strength, voltage, and resistance The parallel circuit is most commonly used, e g , in lighting and heating equipment and other electrical devices Series connections are impractical for many purposes since devices so connected must all operate at the same time, disconnecting one breaks the circuit Series circuits are generally used for street lighting and in the windings of generators, motors, and transformers when high voltages are needed

electric eye · see PHOTOELECTRIC CELL

electric fish, name for various fish which produce electricity by means of organs developed usually from modified muscle tissue The electric eel (*Electrophorus*), a South American fresh-water fish related to the carp, has organs along the ventral surface capable of producing from 450 to 600 volts of electricity, powerful enough to light a neon bulb Fish produce the electricity at will to paralyze or kill their prey and to repel enemies Other electric fish are the electric ray or torpedo, species of which inhabit warm waters of Europe and the United States, the fresh-water electric catfish (*Malapterurus*), with a jellylike, subcutaneous electric organ, probably of epidermal origin, which extends over the whole body, the marine stargazer (*Astroscopus*) of the Atlantic coast of the United States, and a Mormyrid eel of Africa

electric furnace see FURNACE

electricity [from Gr , amber, named by William Gilbert] According to the modern electron theory, the fundamental nature of all matter is electrical The ATOM, the unit particle of elemental matter, is held to be made up of negative charges (electrons), positive charges (protons), and electrically neutral particles (neutrons) Electrons move within the atom in orbits around the nucleus and under some conditions move from one atom to another Since electrons and protons are balanced in a normal atom, when an electron leaves an atom, the atom becomes positively charged If an electron is added, the atom becomes negatively charged In this way the phenomenon of an electrically charged body is explained, a negatively charged body is one with an excess of electrons, a positively charged body is one with less electrons than it has normally The study of electricity at rest, or static electricity, is concerned with the nature, strength, and effect of charges on bodies Bodies can be given a charge in various ways When, for example, a glass rod is rubbed with silk, it is found to be charged after the silk is removed, i e , it will attract bits of paper and, if suspended by a thread so that it can turn freely, will turn away from another glass rod which has also been rubbed with silk According to the electron theory, negative charges of electricity have been taken off the glass rod and on to the silk by the rubbing, and the rod has excess positive charges A hard rubber rod when rubbed with flannel acquires the same property of attracting bits of paper, and some other materials, but differs in that, instead of repelling an electrified, freely suspended glass rod, it will attract it The rubber rod is said to be negatively charged, i e , to have gained electrons. The terms *negative* and *positive* are arbitrary names given to the two unlike kinds of electricity. Like charges of electricity repel each other, unlike attract A body can also be given a charge merely by being brought near a charged body (see INDUCTION) Substances vary in their ability to receive a charge and to hold it, some, e g , the metals, can be electrified only with difficulty, for they pass on their charge from one part to another very rapidly and lose it readily if they are not insulated Such substances are called conductors (see CONDUCTION) and differ from substances called insulators (see INSULATION), which do not pass on their charges readily from one part to another This passing on, or movement, of electrons along a conductor is called a current of electricity, electricity in motion, or current electricity The direction of the electric current would seem to be definable in terms of the direction of flow of the electrons through a metallic conductor However, in electrolytic conductors and gaseous conductors both positive and negative charges (ions) move in opposite directions Before much was known about the nature of an electric current, the direction of flow was spoken of as if it were entirely from positive to negative, this way of expressing the direction of a current is still generally in use A flow of electrons, or a current of electricity, is set up in a conductor when it is connected across the electrodes of an electric cell forming a closed ELECTRIC CIRCUIT The flow of electricity is in one direction -from one electrode of the cell, along the conductor, to the other electrode —and is called for this reason direct current An electric current set up in a conductor by a GENERATOR (if no commutator is used on the generator) differs from that generated by the cell in that it flows alternately first in one direction and then in the opposite direction along the conductor Such a current is called an alternating current, and its frequency is measured in the number of cycles per second, i e , the number of times the current makes a complete change (from one direction to the opposite direction and back) in one second The simplest form of alternating current generator is a rotating coil, an electromagnet provides the magnetic field, and the coil or armature is wound on an iron cylinder (Sometimes the coil and cylinder together are referred to as the armature) A direct current can be obtained by connecting each terminal of the coil to one side of a split ring called a commutator A current of electricity can be used to produce magnetism (see ELECTROMAGNET) An instrument called a GALVANOMETER is used to measure the force and strength of a current of electricity Various units are used in making electrical measurements for current strength, the AMPERE, for the electromotive force or force causing the current flow, the VOLT, for resistance of a body to the flow of a current along it, OHM, for quantity of electricity, the COULOMB, for electric power the WATT or kilowatt (1,000 watts) The electric MOTOR is based upon the same principle as the generator, that of electromagnetic induction, but the application is reversed, here electric energy is transformed to mechanical energy From a consideration of the working principles of these two electrical machines, the importance of the magnetic effect of an electric current flowing along a conductor may be seen The fact that heat is produced in a conductor carrying an electric current and that the amount of heat produced depends upon the strength of the current and the resistance of the conductor is important in many practical devices In them, electrical energy is exchanged to heat energy The common electric fuse is an example Electric heaters, stoves, toasters, and irons all utilize the heat which an electric current can produce The filament of an electric light bulb is heated to incandescence by it The electric ARC is another example of the production of heat and light in this way The effect of an electric current in passing through certain solutions (see ION, ELECTROLYTE, ELECTROLYSIS) is of great importance to metallurgy in the separation and refining of various metals, in electroplating, and in the preparation of type by plating a wax surface with metal The history of electricity is made up of a number of consecutive discoveries, each of which contributed in turn to the growing knowledge of the different aspects of the phenomenon and later played a specific part in the formulation of the modern theory of the fundamental nature of electricity The phenomenon of static electricity and the fact that amber could be charged by rubbing were known to the ancients (perhaps as early as 600 B C by Thales of Miletus), but the modern knowledge of electricity began its rise with the studies of William Gilbert, reported in 1600, which described the production of static electricity by numerous substances His work was continued by others Robert Boyle showed that electrical attraction was felt even through a vacuum Otto von Guericke invented (1650) a machine, probably the first, for generating electricity by friction, it consisted of a ball of sulphur mounted on a wooden shaft equipped with a crank by which it could be revolved. Francis Hauksbee devised (1709) a similar machine using instead of the sulphur ball a hollow glass sphere in which a glowing light was produced. The distinction between conductors of electricity and insulators was brought out by the work of Stephen Gray (1729), C F. Du Fay (1733), and Joseph Priestley (1767) Du Fay (c 1737) concluded that there were two kinds of static electricity, now distinguished as positive and negative The invention of the Leyden jar and the discoveries of Benjamin Franklin and others concerning atmospheric electricity advanced experimentation The work of Henry Cavendish, Coulomb, Ohm, and Joule made quantitative measurement of electricity possible Attention turned from static to current electricity under the stimulus of Galvani's observations (reported 1791) of the passage of electricity through metal wires connected with frog's muscles and Volta's work which stemmed from it Disagreeing with Galvani's conclusion that the electricity came from the frog's muscles, Volta determined to prove that the current resulted from the contact of two different metals, an outcome of his experiments was the VOLTA'S PILE or voltaic pile, the first real battery capable of delivering a steady current of electricity Using Volta's pile Sir Humphry Davy made numerous experiments and produced an electric arc which led to many developments, including illumination by electricity Davy decomposed a salt solution with an electric current and thereby obtained metallic sodium, electrolysis of water had already been accomplished by Sir Anthony Carlisle and William Nicholson Little practical use was made of electricity until after the discoveries of the relationship of magnetism and electricity made possible the development of generators, motors, and the innumerable other devices employing electromagnets The properties of magnets were studied from early times (see MAGNETISM) Their utilization in electrical devices can be traced through the contributions of Hans Christian Oersted, André Marie AMPÈRE, Joseph HENRY, and Michael FARADAY Faraday's simple motor was the first of the many devised Thomas Davenport, a blacksmith received the first U S patent on a motor Many others contributed to the further development of motors, dynamos, and generators In the United States, William Wallace and Charles F Brush especially forwarded the development of improved dynamos Brush contributed also to the development of electrical engineering in general through his inventions of an electric arc light a storage battery used in automobiles, and other devices Fundamental to the development of the telegraph and of radio were the electromagnetic theory of light propounded by James Clerk MAXWELL and the experimental confirmation of that theory by Heinrich HERTZ William Thomson KELVIN contributed notably to progress Theoretical as well as practical developments were forwarded when in 1897 J J Thomson discovered the ELECTRON, in 1910 R A Millikan measured its charge The work of Thomas A EDISON, Alexander Graham BELL, Michael PUPIN, and Edwin Howard ARMSTRONG form milestones in the history of progress in electricity Modern developments soon introduced applications of electricity into almost every phase of life With the enormously increased demands of industry for electric power came a more extensive use of flowing water to operate the turbines connected with the generators in hydroelectric plants The chief source of electric power, however, is from coal and other fuels The electrical-engineering profession developed into a wide field with many areas of specialization See Ernest Greenwood, *Amber to Amperes* (1931), A P Morgan, *Getting Acquainted with Electricity* (1942), W L McDougal and others, *Fundamentals of Electricity* (2d ed , 1948), H H Skilling, *Exploring Electricity* (1948)

Electric Mills, town (pop 1,205), E Miss , near the Ala line NNE of Meridian, in a timber area At near-by Scooba is a district junior college

electric shock, the effect of the passage of a current of electricity through the body Fatality may result from shocks of from 1 to 2 amperes and 500 to 1,000 volts, the variation depending upon such factors as wetness of the skin and area of contact There is a burn at the site of entry The general disturbances include spasm of the muscles, loss of consciousness, and sometimes death, depending upon the strength of the current If the current cannot be turned off, thick rubber or dry clothes should be used to detach the person from the current, but under no conditions should the rescuer actually touch him, since the current then passes through the second person Wood can be used to detach the victim Treatment for SHOCK and burns and ARTIFICIAL RESPIRATION are necessary

electrochemistry, branch of chemistry concerned essentially with the relationships between certain chemical reactions and electricity It includes the production of an electric current by chemical means, as in the electric CELL, and the chemical effects of electric currents upon various substances It deals with the electrical conductivity of the SOLUTION, with the classification of substances as ELECTROLYTE or nonelectrolyte, with the theory of the ION and the nature and extent of electrolytic dissociation or ionization, and with ELECTROLYSIS and the practical application of its principles.

electrode (ūlēk'trōd), in electricity, commonly a terminal or pole of an electric cell or some other source of current electricity An electrode may be either one of two kinds—a positive electrode (+), called the anode, or a negative electrode (−), called the cathode Electrodes are made of various substances, such as carbon, copper, lead, platinum, silver, and zinc In the carbon ARC both electrodes are of carbon Although electrodes are usually rods, strips, or plates, in ELECTROLYSIS the vessel which contains the electrolyte often serves as one of the electrodes In any external ELECTRIC CIRCUIT the flow of electrons is from negative to positive electrode In a high vacuum (see TUBE, VACUUM), a radiation from the cathode is known as the cathode RAY

electrolysis (ūlēktrŏ'lūsĭs), process which involves the passage of an electric current through a conducting solution (the ELECTROLYTE) and the decomposition of this chemical compound by its action For example, when a cathode or negative (−) ELECTRODE and an anode or positive (+) electrode are introduced into a solution of hydrogen chloride (a compound of hydrogen and chlorine) and a current of electricity is led in, hydrogen gas bubbles off at the cathode, and chlorine at the anode According to one explanation, when the hydrogen chloride goes into solution in the water, its molecules dissociate (see DISSOCIATION) into ions The hydrogen atom loses an electron, or negative charge, and becomes a positively charged ION, the chlorine atom, taking on this electron, becomes a negatively charged ion When the electric current is introduced, the positive hydrogen ions move to the negative pole (cathode), there each receives an electron and becomes a hydrogen atom again These atoms collect in pairs to form molecules of hydrogen gas, which bubble off at the cathode The negative chlorine ions move to the positive pole (anode), give up the extra electron, and revert to chlorine atoms These collect in pairs to form molecules of chlorine gas which bubbles off at the anode Various substances are prepared commercially by electrolysis, e g , chlorine by the electrolysis of a solution of common salt Hydrogen is sometimes prepared by the electrolysis of water The principle involved in electrolysis finds important commercial uses It is applied in the refining of various metals, e g , copper, the pure metal (called electrolytic copper) being deposited at the cathode The PLATING of an object with a metal can be carried out by using that object as the cathode in the electrolysis of a solution of a salt of the metal In the commercial process, the anode is made of a bar of the metal itself, which goes into solution as the metal of the salt already in solution is deposited on the object acting as the cathode ELECTROTYPE plates are prepared in this way Michael Faraday discovered that a definite relationship existed in electrolysis between the strength of the current used, the nature of the metal and the solution employed, the weight of metal deposited, and the time involved He found that the amount of metal deposited is proportional to the quantity of electricity The ratio of the weight in grams of the substance deposited to the quantity of electricity used is called the electrochemical equivalent of the substance A given quantity of current will cause these equivalent quantities to be deposited in a unit time

electrolyte (ūlēk'trulīt), in chemistry, a compound which, in solution, conducts a current of electricity and is decomposed by it An explanation of this phenomenon and of the characteristic properties of electrolytes is offered by the theory of the ION The chemical decomposition which electrolytes undergo when a current is passed through them is called ELECTROLYSIS Acids, bases, and salts are typical electrolytes Nonelectrolytes are substances, such as sugar, which in solution do not conduct electricity

electromagnet, a magnet in which MAGNETISM is produced by means of an electric current It is based upon the principle that if a bar or rod of soft iron is introduced into a coil of insulated wire through which a current of electricity is flowing, the piece of iron becomes a magnet but retains its magnetism only so long as the current is flowing The foundation upon which this principle rests was laid by the work of Michael Faraday and of Hans C Oersted, the practical application of the principle was made in the early 19th cent. by William Sturgeon The strength of an electromagnet depends primarily upon the number of turns in the coil rather than upon the strength of the current, electromagnets of great strength can be made with the use of a small current They are constructed in the shape of a bar or, more commonly, of a horseshoe In addition to their use in lifting and handling scrap iron, steel girders, and other magnetic materials (when they are especially valuable because their attractive power can be turned off and on by a switch), they find application in a number of electrical devices such as the electric bell, TELEPHONE and TELEGRAPH apparatus, and the INDUCTION coil They are essential parts of the electric GENERATOR and the electric motor (see MOTOR, ELECTRIC).

electromotive force: see VOLT.

electromotive series: see METAL.

electron (ulēk'trŏn), the unit charge of negative electricity or the particle carrying this unit charge. In the electronic theory, the electron and the proton (positive charge) are considered to be the fundamental units of which all matter is composed, this theory giving rise to the belief that all matter is ultimately electrical The nucleus, or center, of the atom was formerly believed to consist of protons and electrons, with an excess of protons, thus giving the nucleus a positive charge Now it is thought that the nucleus contains protons and neutrons (which are electrically neutral) Neutralizing the positive charge of the nucleus are a number of electrons moving in orbits around the nucleus The hydrogen atom, for example, the lightest of all atoms, is supposed to have a nucleus of one proton with a single electron revolving around it The valence of a chemical element is dependent upon the number and the arrangement of the electrons revolving outside the nucleus Ions are atoms which have lost or gained an electron Sir J J Thomson showed that cathode rays are composed of electrons He determined the mass of the electron to be about 1/1,847 that of the hydrogen atom and also demonstrated that as its speed approaches the velocity of light its mass increases The size of the electron charge was determined by R A Millikan The radiation from radium has been shown to consist in part of electrons from the nucleus (the beta rays) In this respect and through the breaking down of various atoms, E R Rutherford contributed some basic knowledge necessary for understanding the TRANSMUTATION OF ELEMENTS

electronics (ūlēk"trŏ'nĭks), the science that deals with the use of electrons which are emitted from solids or liquids and made to move through a vacuum or a gas The name electron was first used for the unit of negative electricity by an English physicist, George Johnstone Stoney, in the late 19th cent , the actual discovery of the particle, however, was made by J J THOMSON All electrical phenomena are concerned with the movement of electrons, and electronics forms only one branch of the large field of electrical engineering Electrons do not normally leave the atoms of which they are a part, chiefly because of the attraction of the nucleus of the atom However, electrons in the outermost orbit of an atom of a metal, in which atoms are closely packed, are often attracted no more strongly by their own nucleus than by that of a neighboring atom Such electrons are known as free electrons, and these can, in various ways, be liberated from the surface of the solid or liquid metal This liberation is called emission and it can be brought about by heating the surface (thermionic emission), by allowing light to fall upon certain surfaces (see PHOTOELECTRIC CELL), by bombarding the metal surface with electrons or with ions, i e , charged atoms (secondary emission), and by the use of an intense electric field of high positive potential (high-field emission or cold-cathode effect) Electron emission also occurs in naturally radioactive substances (e g , radium, thorium, uranium, and polonium) and in cyclotron and other atom-disintegrating machines Thermionic emission is the commonest method of obtaining a flow of electrons Among the materials used to yield electrons are wolfram (tungsten), molybdenum, tantalum, thorium, mercury, and barium coated with strontium oxide Edison observed thermionic emission (1883) when he noted a current flowing between the hot filament and the plate in a lamp bulb Utilizing thermionic emission Sir John Ambrose Fleming developed his two-element vacuum tube or diode, a commonly used vacuum tube Lee de Forest inserted a third electrode, the grid, in a thermionic tube, thus producing (1907) the triode, which made possible greater advances in radio In the high vacuum cathode-ray tubes known as X-ray tubes the cathode rays strike a target (usually of wolfram) and thus produce the desired radiation In a number of devices the cathode rays are used directly. One of these is the cathode-ray tube called an oscilloscope, a highly evacuated glass tube Within the tube electrons are emitted from the heated filament and are accelerated toward an anode A narrow beam of the electrons passes through a small hole in the anode and thus strikes the screen, the enlarged opposite end or face of the tube, which is coated on the inner surface with a substance that fluoresces when electrons strike it Also within the tube are an electron gun for collecting the electrons into a beam and a deflecting device (the kind depending upon the purpose for which the tube is used) Such tubes are employed in many ways, chiefly for observing, in the form of tracings of light on the screen, certain electrical processes in industry The image on the screen can be photographed A large cathode-ray tube is an integral part of a television system Radio broadcasting, loran, and radar devices are also outcomes of the science of electronics. Electonic devices of various types are used in industry for many purposes, e g , for detecting flaws in metal products, for sorting goods, and for matching color tints millions of which can be distinguished electronically). The radiotelephone used in traveling vehicles is an electronic device. Biological as well as physical sciences have benefited from the use of the electron microscope (see MICROSCOPE), the BETATRON, and the CYCLOTRON. Electronic medical tools include (in addition to X-ray machines) devices for locating metal embedded in flesh, for producing artificial fevers, for concentrating penicillin extracts, and for use in performing surgical operations. Passage of electrons through gases produces the light of neon signs and of mercury-vapor, sodium-vapor, and fluorescent lamps. In these a discharge of current is set up between cold cathodes in the tubes See James Stokley, *Electrons in Action* (1946); W. J Bends, *Electronics for Industry* (1947); Vin Zeluff and John Markus, *What Electronics Does* (1948), A W Kramer, *Industrial Electronics* (1949), R. R Wright, *Electronics* (1950).

electroplating see PLATING

electrotherapy (ūlēk"trōthĕ'rŭpē), use of electricity for medical treatment and diagnosis For certain purposes the galvanic current (term used in medicine for direct current) is used Application of the galvanic current to a part of the surface of the body is often called medical galvanism, it serves to stimulate the circulation and thus the nutrition of the tissue through which the current passes It has been used successfully in treating some cases of sprains, myositis (inflammation of a muscle), arthritis, rheumatic conditions, neuritis, and neuralgia Surgical galvanism, sometimes called electrolysis, is the use of the galvanic current to destroy tissue It is used to remove superfluous hair and to destroy minor blemishes and benign tumors of the skin A galvanic current is also employed in the introduction of electrically charged particles of certain drugs and the salts of heavy metals into the tissues This has been used in treating some diseases of the skin, ear, nose, and throat and in relieving some cases of arthritis, migraine, and asthma Electrosurgery, known also as surgical diathermy, is the use in surgery of electrical currents of high frequency It is useful as a means of destroying abnormal growths and diseased tissue and for reducing bleeding to a minimum when cutting through normal tissue Electrodiagnosis, the use of an electric current to test the reactions of nerves and muscles, is of great value It is especially useful in determining the degree of degeneration of muscle and nerve tissue DIATHERMY is a form of electrotherapy effective in treating a variety of conditions Both long-wave and short-wave diathermy are used, although use of short-wave diathermy is the more common Electrical methods are used in producing artificial fever (see FEVER THERAPY)

electrotype, in printing, a plate made by electrically coating with copper or nickel a wax mold of type or relief engraving and then pouring melted type metal over this coating Copper or nickel, instead of type metal, thus becomes the printing surface Copper is better than type metal, and nickel is better than copper The electrotype has largely superseded the STEREOTYPE except in the printing of newspapers

elegy, in poetry, originally a poem written in elegiac verse, i e , a couplet consisting of a hexameter line followed by a pentameter line, now a short, subjective, reflective poem of lamentation or regret, generally dealing with the subject of death or of unhappy or unrequited love Usually melancholy in tone, the elegy is dignified and stately and generally adopts the simplest of metrical structures The few Greek elegies now extant treat of war and love and are called elegies because of the form of their verse Elegiac verse reached a height in the work of Catullus, Propertius, Tibullus, Philetas, Callimachus, and Ovid The 16th and 17th cent in England produced some of the greatest elegies, such as Edmund Spenser's "Astrophel," John Milton's "Lycidas," and such Shakesperian works as his 71st sonnet, the dirge from *Cymbeline*, and the song "Full Fathom Five" from *The Tempest* Noted 18th-century English elegies include Pope's "Elegy to the Memory of an Unfortunate Lady," William Collins's poem on the death of Thomson, William Cowper's "Loss of the Royal George," and the best known of all English elegies, Thomas Gray's "Elegy Written in a Country Churchyard." The 19th cent. produced Matthew Arnold's "Thyrsis," Shelley's "Adonais," Swinburne's "Ave atque Vale," Robert Louis Stevenson's "Requiem," William Cullen Bryant's "Thanatopsis," Walt Whitman's "When Lilacs Last in the Dooryard Bloom'd," and Tennyson's "In Memoriam," although the latter has been called "a collection of elegies" A threnody is differentiated from an elegy by being essentially a dirge or funeral song or chant.

El-elohe-Israel (ĕ'lĕlō'hē-, ĕ'lĕ'lōhē-) [Heb ,=God, the God of Israel], name of an altar erected by Jacob in Shechem. Gen. 33 20

element, in modern chemistry, any substance which has not as yet been decomposed into simpler substances by chemical action. In this respect an element differs from a compound. Each element is represented by a specific symbol—one or two letters taken from its English name or from the Latin or Greek. Elements differ from one another in the

ELEMENTS

structure of their atoms upon which depend their physical and chemical properties Listing the elements in order of increasing ATOMIC WEIGHT was important in the formulation of the PERIODIC LAW Elements differ in VALENCE, boiling point, melting point, density and specific gravity, hardness, specific heat, spectrum, and radioactivity, as well as in compressibility, elasticity, thermal expansion, and electrical conductivity. Some elements (e g , carbon, phosphorus, and sulphur) appear in several different forms, called allotropic forms (see ISOTOPE) Some elements occur free in nature, i e , chemically uncombined with other elements, but the majority are found only in compounds Oxygen is the most abundant element Depending upon the state in which they occur at ordinary temperature and pressure, elements are classed as solid, liquid, or gas They are also classed as metals and nonmetals In ancient times the Greeks considered water, fire, air, and earth as the elements, substances of which all things were composed Some of the metals later identified as elements were known to early man In ancient Egypt gold ornaments were skillfully fashioned, and in biblical times gold was a medium of exchange Other elements long known are copper, silver, iron, lead, tin, mercury, carbon, and sulphur Arsenic, antimony, and bismuth were discoveries of the alchemists, but their original discovery is not definitely credited to any one person Probably the first to discover a new element was Hennig Brandt (or Brand) of Hamburg, who prepared phosphorus (1669) from human urine During the 18th and 19th cent most of the remaining known elements were identified With increased understanding of the properties and behavior of elements came the development of the PERIODIC LAW. Until the production by means of the cyclotron of the transuranium elements, uranium (atomic number 92) had the highest known atomic number, and for some time it was believed that no elements would be discovered that would fall beyond it in the periodic table The gaps in the periodic table, representing predicted but undiscovered elements, were gradually filled, and a number of elements with atomic weights greater than that of uranium were discovered (neptunium, 93, plutonium, 94, americium, 95, curium, 96, berkelium, 97, californium, 98) Some of the elements in the periodic table were known by more than one name In Sept , 1949, at the annual meeting of the American Chemical Society, announcement was made of the decisions of the International Union in Chemistry which met in the Netherlands (Sept , 1949) The names for elements 93, 94, 95, and 96 were officially adopted Names adopted for four other man-made elements were for element 43, technetium (formerly known also as masurium), for element 61, promethium (formerly known as illinium), for element 85, astatine (formerly called alabamine), for element 87, francium (formerly also known as virginium) Element 74, long known as tungsten in the United States and England, became, by international agreement, wolfram Other changes were the acceptance of beryllium (instead of glucinum or glucinium), niobium (instead of columbium), lutetium (to replace lutecium), and protactinium (to replace protoactinium) See also separate table of elements See I. Nechaev, *Chemical Elements* (Eng tr , 1942), M E Weeks, *Discovery of the Elements* (5th ed , 1945)

elementary school see SCHOOL

Eleph (ĕ'lĭf) [Heb ,=ox], town, near Jerusalem. Joshua 18 28

elephant, largest living land mammal, member of the order Proboscidea and related to the extinct MAMMOTH and MASTODON Greatly reduced in numbers by hunters for its ivory tusks and by encroaching civilization, it is now under protection It is thought that Egypt was the elephant's ancestral home, from which it migrated to Asia, Europe, and North and South America There are two living genera, the Asiatic or Indian elephant (*Elaphas*) of India and SE Asia and the African elephant (*Loxodonta*) now found only S of the Sahara African bull elephants reach 11 ft or more in shoulder height, Asiatic bulls about 9 ft The African elephants have larger ears and tusks (those of the bulls may weigh from 150 to 200 lb each) Tusks in the female Indian elephant are small or lacking The tusks are enlarged upper incisor teeth, sometimes more than 10 ft long They are used to dig up plant food and to pin enemies to the ground The longer, more wrinkled trunk of the African elephant terminates in two fleshy finger-like protuberances, and the smoother trunk of the Asiatic form has a single protuberance Fruits, leaves, and other plant foods which form the elephant's diet are conveyed to the mouth by the trunk. Water is sucked into the trunk and sprayed into the mouth Adults are mature at about 25 years and old at about 50 Usually one calf is produced at a time and the gestation period is between 18 and 22 months For centuries the Asiatic species has been domesticated and made to labor in the teak forests and to perform other heavy tasks It is the one generally used in circuses, but the famous Jumbo who weighed about six tons was African. **The pygmy elephant, about 5 to 7 ft.**

high at the shoulder, is found in W Africa In Siam albino elephants have long been held sacred

Elephanta (ēlĭfăn'tu), island, area c 14 sq mi , W central Bombay state, India, in Bombay harbor It is noted for six caves, excavated (8th cent) from solid rock and now serving as Hindu shrines The Great Cave, the largest (130 ft long) and most visited, contains gigantic pillars supporting its roof and colossal statuary, notably a three-headed bust of Siva The statue of an elephant, now removed to Bombay city, gave the island its English name The native name is Gharapuri

Elephant Butte Dam see RIO GRANDE

elephantiasis (ĕ"lŭfănt'ĭ'ăsĭs, -fun-) Obstruction of vessels of the LYMPHATIC SYSTEM results in enormous enlargement of the part of the body affected, the final result in some cases resembling elephant skin owing to hypertrophy of the skin and the tissue beneath it It is commonest in tropical regions from infection with a parasite, *Filaria*, a roundworm or threadworm introduced into man by the bite of a mosquito The condition of elephantiasis does not occur in every case of filariasis The leg, scrotum, and breasts are often affected Pressure from a TUMOR or scar may result in elephantiasis

Elephantine (ĕ"lŭfănt'ī'nē), island, Egypt, in the Nile near Aswan Ruins include a granite gateway with carved portraits of Alexander, son of Alexander the Great, and a temple built by Trajan The ancient Nilometer, built to gauge the height of the Nile, was restored in 1870

elephant's-ear see CALADIUM and TARO

elephant's-foot or **Hottentot bread**, twining South African vine (*Testudinaria elephantipes*), called also tortoise plant, it is related to the yam and is sometimes cultivated in greenhouses It has somewhat kidney-shaped leaves and inconspicuous flowers The rootstocks, often huge and protruding from the ground, were formerly a food of the South African natives

Eleta, RSFSR see YELETS

Eleusinian Mysteries (ĕl"ūsĭn'ēən), principal religious MYSTERIES of ancient Greece held at ELEUSIS The mysteries dealt with the legends of DEMETER, Kore (PERSEPHONE), and DIONYSUS They symbolized the yearly decay and resurrection of vegetation, and they were supposed to give the initiated a happy life after death The Lesser Mysteries, celebrated early in the spring, were a preparation for the Greater Mysteries, which took place in the month of Boedromion (Sept.–Oct) The rites included ceremonial purification by bathing in the sea after a fast, a solemn procession from Athens to Eleusis, and the rites themselves at Eleusis The nature of the secret rites is unknown despite ingenious guesses from ancient times to the present

Eleusis (ĭlōō'sĭs), ancient city of Attica, Greece, 12 mi NW of Athens, at the mouth of the Cephisus river. Through ancient times it was the seat of the ELEUSINIAN MYSTERIES There was a large temple to Demeter The Eleusinian games, also held here, were not connected with the mysteries Ruins of the city and temple near the modern village of Eleusis have been excavated and studied

Eleuthera see BAHAMA ISLANDS

elevator, device for transporting people or goods from one level to another The term is applied to the enclosed structures as well as the open platforms used to provide vertical transportation in buildings, large ships, and mines and also to devices consisting of a continuous belt or chain with attached buckets for handling bulk materials Simple hoists were used from ancient times From about the middle of the 19th cent , power elevators, often steam-operated, were used for conveying materials in factories, mines, and warehouses In 1853 Elisha Graves Otis demonstrated at the Crystal Palace exhibition a freight elevator equipped with a safety device to prevent falling in case a supporting cable should break This increased public confidence in such devices and served as an impetus to the industry Otis established a company for manufacturing elevators and patented (1861) a steam elevator After the introduction by Sir William Armstrong of the hydraulic crane (1846), the hydraulic principle was applied to the elevator, and in the early 1870s the hydraulic machines began to replace the steam-powered elevators In the operation of a hydraulic elevator a heavy piston enclosed in a cylinder is an essential part of the machinery, this piston is operated by water (or oil) pressure produced by pumps With the increased speed of movement made possible as the hydraulic elevators were improved came the development of safety devices such as speed governors to check excessive downward speed Toward the end of the 19th cent , electric elevators came into use, and gradually operation by electric motor became the chief method Later developments are mainly the improvement of safety devices and the introduction of means of operating elevator cars either partially or entirely by automatic devices. Increase in speed of operation and improvement in general design also mark the more modern elevators Moving staircases, commonly called escalators, are used (often to supplement the work of elevators) in stores, subway stations, and elsewhere for transporting from one level to another

elf, in Germanic mythology, one of the fairy folk said to dwell in fields, in woods, and in the air They are usually represented as tiny people, more or less human in form except for their size They—and particularly the elf maidens—are remarkable for their (usually dark) good looks and they lure mortals into peril They are vengeful and mischievous, trying always to do harm to human beings The term can be used to include all the fairy folk

Elfsborg, Sweden see ALVSBORG

Elgar, Sir Edward William, 1857–1934, English composer He became acquainted with music largely through the reading of books and scores in his father's music shop and taught himself several instruments He succeeded his father as organist of St George's Church, Worcester, in 1885 Music composed in 1897 for Queen Victoria's diamond jubilee brought him public recognition Among his outstanding works are *Variations on an Original Theme* (1898, known as *Enigma Variations*), orchestral portraits of his friends, *Sea Pictures* (1899) for contralto and orchestra, and *The Dream of Gerontius* (Birmingham, 1900), a cantata using Cardinal Newman's poem as a text Popular also are his five marches, *Pomp and Circumstance* (1902–30) His style, influenced by German romanticism, is marked by a sensuous texture and sure musical craftsmanship He was knighted in 1904 and became Master of the King's Musick in 1924 See biographies by Ernest Newman (1922), Basil Maine (1933), Mrs Richard Powell (1937), and W H Reed (1939)

Elgin, Thomas Bruce, 7th **earl of** (ĕl'gĭn), 1766–1841, British soldier and diplomat He served on diplomatic missions to Vienna, Brussels, Berlin, and Constantinople and brought to England the so-called ELGIN MARBLES from Athens His son, **James Bruce,** 8th **earl of Elgin,** 1811–63, was governor of Jamaica (1842–46) and governor general of Canada (1847–54) In Canada he put into operation the responsible government outlined in the famous report of his father-in-law, the earl of DURHAM He improved education and helped Canadian economy by urging on London a gradual application of the new policy of free trade and by personally negotiating with the United States the reciprocity treaty of 1854 He negotiated (1857–60) trade agreements with China and Japan Shortly before his death he was appointed governor general of India See biographies by W P Kennedy (1926) and J L Morison (1928) His son, **Victor Alexander Bruce,** 9th **earl of Elgin,** 1849–1917, was viceroy of India (1894–99) during an especially troubled period in that country's history and served as colonial secretary (1905–8) under Sir Henry Campbell-Bannerman

Elgin (ĕl'gĭn), burgh (pop 8,810), county town of Morayshire, Scotland, on the Lossie river and SSW of Lossiemouth, its seaport Elgin is the site of the Cathedral of Moray, founded in 1224, partially burned in 1270, again burned in 1390 (by the Wolf of Badenoch, Alexander Stuart), and ruined by the falling of the lofty central tower in 1711 There are also ruins of a castle which lodged Edward I in 1296 and of a bishop's palace The town has a museum, a hospital, an asylum, and county and market buildings, mostly of 19th-century construction Elgin's products include woolen textiles and whisky

Elgin **1** (ĭl'jĭn) city (pop 38,334), NE Ill , on the Fox river and WNW of Chicago, founded 1835, inc as a village 1847, as a city 1854 Elgin is a railroad, trade, and industrial city, a processing center for dairy products, and the home of the Elgin watch factories Among other manufactures are wood products, hardware, garments, and shoes A number of religious periodicals are published here The city is the seat of one of the state's oldest preparatory schools for boys (opened 1856) A state hospital for the insane is in Elgin **2** (ĕl'gĭn) City (pop 2,008), S central Texas, E of, and near, Austin, settled 1867, inc 1890 The area has truck and dairy farming and coal mining

Elgin Marbles (ĕl'gĭn), ancient sculptures taken from Athens to England in 1806 by Thomas Bruce, 7th earl of Elgin The PARTHENON frieze by Phidias, or more probably by his pupils, a CARYATID, and a column from the ERECHTHEUM were sold to the government in 1816 and are now in the British Museum, in a gallery given by Lord Duveen Casts of these sculptures are in the Metropolitan Museum

Elginshire, county, Scotland see MORAYSHIRE

Elgon, Mount (ĕl'gŏn), peak, 14,140 ft high, central Africa, on the Kenya-Uganda border It is an extinct volcano

El Greco, see GRECO, EL

Elhanan (ĕlhā'nŭn) [Heb ,=God has been gracious], **1** One of David's mighty men 2 Sam 23 24, 1 Chron 11 26 **2** Israelite 2 Sam 21 19, 1 Chron 20 5

Eli (ē'lī) [Heb ,=height], high priest and judge of Israel, teacher of the boy Samuel 1 Sam 1–4

Elia see LAMB, CHARLES

Eliab (ēlī'ăb) [Heb ,=my father is God] **1** Chief of the tribe of Zebulun Num 1 9, 2 7, 7 24,29, 10 16 **2** Father of DATHAN **3** Brother of David 1 Sam 16 6, 17,13,28, 1 Chron 2 13 Elihu 1 Chron 27 18 **4** Musician of David. 1 Chron 15 18,20, 16 5 **5** A follower of David. 1 Chron 12,9 **6** The same as Elihu **1**

Eliada (ēlī'ŭdu) [Heb ,=known by God] **1** Son of David 2 Sam 5 16, 1 Chron 3 8 Beeliada 1 Chron. 14 7. **2** Officer under Jehoshaphat 2 Chron 17,17

Eliadah (ēlī'ŭdu) [Heb ,=known by God], father of Rezon 1 Kings 11 23

Eliah (ēlī'u) [Heb ,=God is God] **1** Benjamite 1 Chron 8 27 **2** Jew who had a foreign wife Ezra 10 26

Eliahba (ēlī'ŭbu) [Heb ,=whom God hides], one of David's guard 2 Sam 23 32, 1 Chron 11 33

Eliakim (ēlī'ŭkĭm) [Heb ,=whom God will establish] **1** King of Judah see JEHOIAKIM **2** Important officer of state under King Hezekiah 2 Kings 18 17-37, 19 1-5, Isa 22 20-25, 36, 37 1-5 **3** Priest at the dedication of the new wall at Jerusalem Neh 12 41 **4, 5** Names appearing in the Gospel genealogies Mat 1 13, Luke 3 30,31

Eliam (ēlī'ăm) [Heb ,=the God of the people] **1** Father of Bath-sheba 1 Sam 11 3 Ammiel 1 Chron 3 5 **2** One of David's warriors 2 Sam 23 34

Elias (ēlī'ŭs), Greek form of ELIJAH

Eliasaph (ēlī'ŭsăf) [Heb ,=to whom God has added] **1** Tribal chief of Gad Num 10 20 **2** Head Gershonite Num 3 24

Eliashib (-lī'u-) [Heb ,=God brings back] **1** High priest Neh 3 1,20,21, 12 10,22,23, 13 4,7, Ezra 10 6 **2** Priest under David 1 Chron 24 12 **3** Descendant of David 1 Chron 3 24 **4, 5, 6** Men who had made foreign marriages Ezra 10 24, 27, 36

Eliathah (ēlī'ŭthu) [Heb ,=to whom God has come], temple musician 1 Chron 25 4,27

Elidad (ēlī'-) [Heb ,=loved by God], Benjamite Num 34 21

Élie de Beaumont, Jean Baptiste Armand Louis Léonce (zhäN' bätēst' ärmäN' lwē' lāôN' älN' du bōmôN'), 1798–1874, French geologist With the collaboration of Ours Dufrénoy he made a noted geological map of France, begun 1823 and published in 1841 In *Notice sur les systèmes de montagnes* (3 vols , 1852) he enunciated a theory relating the age and orientation of mountain chains He was professor at the School of Mines, Paris, from 1829 and also at the Collège de France from 1832 and served with the Bureau of Mines from 1824 (as inspector general from 1847) He became a senator (1852) and perpetual secretary of the Academy of Sciences (1853)

Eliel (ē'lĭĕl) **1** Manassite chief 1 Chron 5 24 **2** The same as ELIHU **1, 3, 4** Benjamites 1 Chron 8 20,22 **5, 6, 7** Mighty men of David 1 Chron 11 46,47, 12 11 **8, 9** Levites 1 Chron 15 9,11, 2 Chron 31 13

Eli, Eli, lama sabachthani? (ē'lī, lā'mu săbăk'thunu, ā'lē, la'masabakh'thanē) or **Eloi, Eloi, lama sabachthani?** (ē'loi, ā' loi) [*Eli, Eloi* Heb or Aramaic,= Lord, *lama sabachthani?* Aramaic,= why hast thou forsaken me?], in the Gospel (Mat 27 46, Mark 15 34), words of Jesus on the cross The Greek text retains and translates the original, which is seemingly a quotation of Ps 22 1

Elienai (ē"lĭē'nāī) [Heb ,=my eyes are unto God], Benjamite chief 1 Chron 8 20

Eliezer (ēlĭē'-, ēlĭē') **1** Servant of Abraham Gen 15 2 **2** Son of Moses Ex 18 4, 1 Chron 23 15,27, 26 25 **3** Prophet who rebuked King Jehoshaphat 2 Chron 20 37 **4** Benjamite 1 Chron 7 8 **5** Priest under David 1 Chron 15 24 **6** Chief Reubenite 1 Chron 27 16 **7** Messenger of Ezra Ezra 8 16 **8, 9, 10** Men who had taken foreign wives Ezra 10 18,23,31 **11** Man in the Gospel genealogy Luke 3 29

Eligius, Saint see ELOY, SAINT

Elihoenai (ēlĭ"hōē'nāī) [Heb ,=towards God are my eyes] **1** Korahite doorkeeper 1 Chron 26 3 **2** Leader in the return with Ezra Ezra 8 4

Elihoreph (ēlĭ"hō'rĕf), scribe of Solomon 1 Kings 4 3

Elihu (ēlī'hū) [Heb ,=he is my God] **1** Ancestor of Samuel 1 Sam 1 1 Ehlab 1 Chron 6 27 Eliel 1 Chron 6 34 **2** One of Job's comforters Job 32 2-37 21 **3** The same as ELIAB **3 4** Manassite captain of David 1 Chron 12 20 **5** Korahite doorkeeper 1 Chron 26 7

Elijah (ēlī'ju) or **Elias** (ēlī'us) [both Heb ,=God is God], fl c 875 B C , Hebrew prophet He is one of the outstanding figures of the Old Testament Nothing is heard of him before he confronts Ahab with the prophecy of a drought to last until Israel shall forsake her evil ways Elijah's mission was to destroy the worship of foreign gods and to restore justice His fanatical zeal lashed the land and brought about at least a temporary banishment of idolatry His story has many incidents—his raising the widow's son from the dead, his contest of faith with the priests of Baal, resulting in his triumph and their death, his being fed by ravens, his experience of the still, small voice on Mt Horeb, and his departure from earth in a chariot of fire enveloped in a whirlwind His disciple was Elisha Allusions to Elijah are frequent in the New Testament, e g , John the Baptist and Jesus are asked if they are the incarnation of the prophet He appeared in the Transfiguration He is prominent in the Koran. Mendelssohn composed an

oratorio, *Elijah* 1 Kings 17-19; 21 17-29; 2 Kings 1-2; Mal. 4 5; Mat 11 14; 16 14, 17 3; Luke 4 25; John 1 21, James 5 17. Another Elijah is mentioned among the Jews who came back after the Exile Ezra 10 21

Elijah ben Solomon, 1720–97, Hebrew scholar, called the Gaon [genius] of Wilna He combated the spread of Hasidic mysticism among the Jews of Lithuania and Poland He was immensely influential His name also appears as Elijah Wilna

Elika (ĭ-lī'-), oasis where the Israelites halted Ex. 15 27, Num 33 9

Eliot, Charles William, 1834–1926, American educator and president of Harvard Univ , grad Harvard, 1853 In 1854 he was appointed tutor in mathematics at Harvard and in 1858 became assistant professor of mathematics and chemistry In 1863 Eliot went abroad for two years' study, returning to become professor of chemistry at the new Massachusetts Institute of Technology Two articles on "The New Education Its Organization," published in the *Atlantic Monthly*, were in part responsible for Eliot's election in 1869 to the presidency of Harvard Univ The corporation's choice of a layman and a scientist, coupled with the fact of Eliot's youth, aroused some opposition, but the overseers finally concurred in the appointment Under Eliot's 40-year administration Harvard developed from a small college with attached professional schools into a great modern university Several notable reforms were introduced in the college the elective system was extended, the curriculum was enriched through the addition of new courses, written examinations were required the faculty was enlarged, and the strict student discipline was relaxed in favor of flexible regulations Increased entrance requirements prevailed both in the college and in the professional schools, which Eliot reformed and revitalized The courses of study were radically revised, and the standards for professional degrees were raised with the able cooperation of such men as Christopher C Langdell, dean of the law school New schools were established, including the Bussey Institution (agriculture), schools of applied science, the graduate school of arts and sciences, and the school of business administration Eliot also supported Elizabeth Cary Agassiz in her project of a woman's college, and fostered the development of Radcliffe College, affiliated with Harvard He was greatly interested in secondary education and as chairman of the Committee of Ten appointed in 1892 by the National Education Association was influential in securing a greater degree of uniformity in high school curriculums and college entrance requirements After his resignation in 1909, he turned to public affairs He had been a strong advocate of civil service reform for many years and was a member of the General Education Board and a trustee of the Carnegie Foundation for the Advancement of Teaching In 1911–12 he traveled abroad as an emissary of the Carnegie Endowment for International Peace and later actively supported the League of Nations and the World Court A national leader, Eliot made numerous public addresses and edited *The Harvard Classics* ("President Eliot's Five-Foot Shelf") to further adult education by means of a planned course of reading His most important papers written before 1914 are reprinted in two volumes edited by W A Neilson, under the title *Charles W Eliot, the Man and His Beliefs* (1926), and those since 1914 in *A Late Harvest* (1924), edited by M A De Wolfe Howe *The Religion of the Future* (1909) and *The Durable Satisfactions of Life* (1910) present Eliot's religious and ethical views See biography by Henry James (2 vols , 1930), S E Morison, *The Development of Harvard University, 1869 1929* (1930) In 1901, he wrote a biography of his son

Charles Eliot, 1859–97, landscape architect, who in a short period made his mark in a new profession through his work in planning the park system of Greater Boston

Eliot, George, 1819–80, English novelist, whose real name was Mary Ann or Marian Evans She was brought up in a strict evangelical atmosphere, against which she later rebelled Her early schooling was supplemented by assiduous reading, and the study of languages led to her first literary work, *Life of Jesus* (1846), a translation from the German of D F Strauss After her father's death she joined (1851) the editorial staff of the *Westminster Review*, contributed articles, and came to know many of the literary people of the day Her long and happy union with G H Lewes, which began in 1854, she regarded as marriage, though it involved social ostracism and could have no legal sanction because Lewes's estranged wife was living Encouraged by Lewes, she began the *Scenes of Clerical Life*, a series of realistic sketches first appearing (1857) in *Blackwood's Magazine* under the pseudonym Lewes chose for her, George Eliot Three novels followed, *Adam Bede* (1859), *The Mill on the Floss* (1860), and *Silas Marner* (1861), in each of them middle-class characters lived out the lives which their circumstances and emotions necessitated, against the beautiful background of the Warwickshire countryside George Eliot had known in her youth She twice visited Italy (1860 and 1861) before she brought out in the *Cornhill Magazine* (1862–63) her historical romance *Romola*, a story of Savonarola *Felix Holt* (1866) a political novel, was followed by *The Spanish Gypsy* (1868), a dramatic poem *Middlemarch* (1871–72), which marked a return to her earlier manner, she considered her best novel—an opinion upheld by many critics She wrote one more novel, *Daniel Deronda* (1876), and the satirical *Impressions of Theophrastus Such* (1879) Her verse, never popular, is now seldom read Lewes died in 1878, and in 1880 she married an intimate friend of both Lewes and herself, John W Cross, who later edited *George Eliot's Life as Revealed in Her Letters and Journals* (1885) See A T Kitchel, *George Lewes and George Eliot* (1933) G S Haight, *George Eliot and John Chapman* (1940), biographies by Oscar Browning (1890), E S Haldane (1927), B C Williams (1936), and Gerald Bullett (1948)

Eliot, Jared, 1685–1763, American scientist, b Guilford, Conn , grad Collegiate School of Connecticut (now Yale), 1706 The minister at Killingworth (now Clinton), Conn , from 1709 to his death, he was deeply interested in medicine—which he had learned from his father—and became a notable physician and teacher of physicians His broad interests also led him to urge development of iron deposits in Connecticut as well as to write *Essays upon Field-Husbandry in New-England* (1760, reprinted 1934)

Eliot, Sir John, 1592? 1632, English statesman He was a staunch upholder of constitutional government by Parliament and joined Sir Edward Coke and others in promoting the PETITION OF RIGHT, which was presented to Charles I in 1628 In 1629 he read a protest in Commons against arbitrary taxation and "popery," while the speaker was held in the chair by force in defiance of the king's order of adjournment Eliot was committed to the Tower and, refusing to submit to the authority of the king, was left to die in prison

Eliot, John, 1604–90, English missionary in colonial Massachusetts, called the Apostle to the Indians, educated at Jesus College, Cambridge He was influenced by Thomas Hooker, became a staunch Puritan, and emigrated from England Arriving in Boston in 1631, he became teacher at the church in Roxbury in 1632 and kept that position the rest of his life He helped to write the *Bay Psalm Book*, but more important was his interest in converting the Indians He studied the native language spoken around Roxbury and was soon preaching in it His determination to Christianize the Indians led him to establish villages for the Christian natives—the "praying Indians"—with simple civic and religious organization He won the aid of the colonial authorities and achieved the founding in England of the Society for the Propagation of the Gospel in New England under the auspices of Parliament Funds and workers came to him and on lands granted for the purpose he and his helpers founded some 14 communities The most prominent and successful was at Natick King Philip's War caught the "praying Indians" between the hostile tribes and the Indian-hating whites and all but wiped them out White settlements took over most of the villages The pamphlets by Eliot and, even more, his translation of the Bible into an Algonquian Indian language usually called Natick (1661–63, the first Bible printed in the United States) and his *Indian Primer* (1669) are prime sources of later knowledge of the peoples of Massachusetts

Eliot, Thomas Stearns, 1888–, English poet, b St Louis, Mo , studied at Harvard, the Sorbonne, and Oxford After 1914 he lived mostly in England and in 1927 became a British subject For a time he worked as a teacher, then as a bank clerk, and later entered the publishing firm of Faber & Faber, of which he is a director He is one of the most influential conservative modern poets and literary critics His early poetical works, *Prufrock and Other Observations* (1917) and *Poems* (American ed , 1920), expressed his disillusion with his times, his long poem *The Waste Land* (1922) provided an iconoclastic and hopeless picture of his world and was followed in 1925 by the less ambitious but no less despairing poem, "The Hollow Men" Meanwhile he attained stature as a critic by being assistant editor (1917–19) of the *Egoist*, magazine of the imagists, by founding and editing (1922–39) his quarterly, the *Criterion*, and also by his essays collected in *The Sacred Wood* (1920) Some of his literary debts are indicated in his edition of poems by Ezra Pound (1928), his *Dante* (1929), and his *John Dryden* (1932) In 1928 in *For Lancelot Andrewes* he announced that he was an Anglo-Catholic in religion and a classicist in literature In the same kind of difficult, musical language layered with meanings which he had found necessary for his earlier poetry, his religious conversion is reflected in his later poetry—*Ash Wednesday* (1930), many of the *Collected Poems, 1909–35* (1936), and *Four Quartets* (1943) His early poetic dramas were interesting—*Sweeney Agonistes* (1932) and *The Rock* (1934), *Murder in the Cathedral* (1935) and *Family Reunion* (1939) were widely produced, and *The Cocktail Party* (1950), called a modern morality, was acclaimed Eliot's criticism includes *Elizabethan Essays* (1934), *Essays Ancient and Modern* (1936), *The Use of Poetry and the Use of Criticism* (1933), *After Strange Gods* (1933), *The Idea of a Christian Society* (1939), and *Notes toward the Definition of Culture* (1949) His works are widely translated, he was awarded the 1948 Nobel Prize in Literature, and a considerable body of criticism has been written about him See bibliographical checklist of his writings by Donald Gallup (1947) and selections of critical articles by Leonard Unger (1948), Balachandra Rajan (1948), and Richard Marchand Tambimuttu (1950), critical studies by F O Matthiessen (new ed , 1947) and Elizabeth Drew (1949)

Eliot, town (pop 1,932), extreme SW Maine, on the Piscataqua above Kittery, inc 1810

Eliott, George Augustus, 1st **Baron Heathfield of Gibraltar,** 1717–90, British soldier, of Scottish birth He served in Germany under George II In 1775, as lieutenant general, he was made governor of Gibraltar In 1779 he was besieged in Gibraltar by the Spanish fleet, which, reinforced by the French, continued the siege until peace was restored, three and a half years later (1783) This was a long and memorable defense He was raised to the peerage in 1787 The name also appears as Elliott

Eliphal (ĭ-lī'făl, ē-lī'-f]), the same as ELIPHELET **4.**

Elphalet (ĕ-lĭf'ŭlĕt) [Heb ,=God is deliverance], name of two sons of David 2 Sam 5 16, 1 Chron 14 7 Elphelet 1 Chron 3 6,8 Elpalet 1 Chron 14 5

Elphaz (ĕ'lfăz, ēl'-făz) **1** Son of Esau and father of Teman Gen 36 4 10–16, 1 Chron 1 35,36 **2** Temanite, a comforter of Job Job 2 11, 4, 15, 22, 42 9

Elpheleh (ĕl-fē'lĕ) [Heb =God distinguishes], harper before the ark 1 Chron 15 18,21

Eliud (ĕl'ĭud) [Gr from Heb ,=God of the Jews], in the Gospel genealogy Mat 1 14

Elizabeth, Saint [Gr ,=Heb ELISHEBA], mother of St John the Baptist and cousin of the Virgin,

Luke 1. Her principal liturgical and artistic importance is in the Visitation of Our Lady, July 2; see MARY, the Virgin Feast Nov 5

Elizabeth, Saint, 1207–31, daughter of Andrew II of Hungary and wife of Louis II of Thuringia She is called St Elizabeth of Hungary or St Elizabeth of Thuringia After the death of her husband (1227) she left the Wartburg, perhaps at the compulsion of her brother-in-law, Henry Raspe She found refuge with her uncle, the bishop of Bamberg, and later joined the third order of St Francis and lived in seclusion at Marburg Her confessor, Conrad of Marburg, was a harsh ascetic and led her to practice extreme austerities and to separate herself from her children St Elizabeth's sweet disposition and loving care for the needy and sick won her the devotion of Thuringia Her shrine is in the beautiful church at Marburg In art she is portrayed carrying red roses because of a legend that her husband, disapproving of her giving bread to the poor, one day halted her, and the bread she was carrying miraculously turned to roses The same legend is told of other saints Feast Nov 19

Elizabeth, 1837–98, empress of Austria and queen of Hungary A Bavarian princess, she was married (1854) to her cousin Emperor Francis Joseph Despite her exceptional beauty, intelligence, and kindness she led an unhappy domestic life which was obscured, moreover, by family tragedies (notably the death of her only son, Archduke RUDOLF, and the death of one of her sisters in the charity bazaar fire in Paris, 1897) Independent and unconventional, she avoided the stiff etiquette of the Viennese court and spent much of her time abroad, notably on Corfu She was assassinated by the Italian anarchist Luccheni in Geneva, Switzerland See biography by E C CORTI (1936)

Elizabeth, 1709–62, empress and tsarina of RUSSIA (1741–62), daughter of Peter I and Catherine I She gained the throne by overthrowing the young emperor, IVAN VI, and the regency of his mother, ANNA LEOPOLDOVNA Her coup d'état was made possible by her popularity with the imperial guards, who hated the German favorites of Anna Leopoldovna and who revered in Elizabeth the memory of her father Elizabeth herself, arms in hand, led the bloodless revolution Violently anti-German and guided in her foreign policy by her chancellor, A P. BESTUZHEV-RYUMIN, Elizabeth rid Russia of German influence She victoriously sided against Frederick II of Prussia in the SEVEN YEARS WAR, but her death and the accession of her nephew, Peter III, took Russia out of the war and made Frederick's ultimate victory possible Elizabeth established government banks and founded the Univ of Moscow and the Academy of Fine Arts in St Petersburg

Elizabeth, 1876–, queen of the Belgians, consort of King ALBERT I, whom she married in 1900 and whom she lost in a tragic accident in 1934 A Bavarian princess, she inherited the independent character and many-sided talents which distinguish her family She studied nursing in her youth and during the First World War won the love and admiration of her adopted people by her unstinting work in hospital care She showed deep and personal interest in the improvement of social conditions in Belgium Her simplicity of manners, studious taste, and musical talent won her the personal friendship of many outstanding scientists and artists

Elizabeth, 1596–1662, queen of Bohemia, daughter of James I of England Her beauty attracted most of the royal suitors of Europe (she was nicknamed the "Queen of Hearts"), but she was married (1613) to Frederick V, elector palatine (see FREDERICK THE WINTER KING) in order to cement an alliance between English and German Protestantism She became queen of Bohemia in 1619, when her husband accepted the crown offered by the Bohemian diet After Frederick was defeated (1620) in the battle of the White Mountain, Elizabeth took up her residence in Holland, where she courageously endured privation and misfortune She received no support from abroad, not even from her son, Charles Louis, who was restored to the Palatinate in 1648 In 1661 she returned to England, against the wishes of Charles II, who, however, pensioned her She had 13 children, among them Prince RUPERT, Princess Elizabeth, who was the patroness of Descartes, and SOPHIA, who was electress of Hanover, mother of George I of England

Elizabeth, 1533–1603, queen of England (1558–1603) The daughter of HENRY VIII and Anne BOLEYN, she was declared illegitimate by a royally controlled court after the execution of her mother in 1536, but Parliament in 1544 reestablished her in succession after Edward, her half brother, and Mary, her half sister Elizabeth was well educated by a series of tutors including William Grindal and Roger Ascham. In 1553 she supported the claims to the throne of MARY I over those of Lady Jane GREY, and after Mary was crowned, Elizabeth was careful to avoid implication in the plot of Sir Thomas WYATT Since Elizabeth's potential succession to the throne inevitably furnished a rallying point for discontented Protestants, she was imprisoned, but gradually regained her freedom through outward conformity to Catholicism. When she became queen in 1558, religious strife, a huge government debt, and failures in the war with France had brought England's fortunes to a low ebb At Elizabeth's death 45 years later, England had passed through one of the greatest periods of national history—a period that produced SHAKSPERE, Edmund SPENSER, Francis BACON, Walter RALEGH, Martin FROBISHER, Francis DRAKE, and other notable figures, a period that saw England, united as a nation, become a first-rate European power with a great navy, a period in which English commerce and industry prospered and English colonization was begun Elizabeth came to the throne with the Tudor concept of strong rule and the realization that effective rule depended upon popular support She was able to select and work well with the most competent of counselors, Sir William Cecil (Lord BURGHLEY) was appointed immediately, and Sir Francis WALSINGHAM in 1573 One of her first acts was to reestablish Anglicanism through Acts of Supremacy and Uniformity (1559) The measures against Roman Catholics grew harsher over the course of her reign—and particularly after the pro-Catholic Ridolfi plot in 1571 In 1585 a law declared it treason for a Catholic priest to set foot in England English Puritans, like the Catholics, objected to the Established Church, and a severe law against conventicles in 1593 kept the separatist movement underground for the time At the beginning of her reign, Elizabeth's government enacted needed currency reforms and took steps to mend English credit abroad Other measures eventually followed—the Statute of Apprentices (1563) to stabilize labor conditions, the poor laws (1563–1601) to attempt some remedy of widespread poverty, and various acts to encourage agriculture, commerce, and manufacturing Elizabeth initiated a general policy of peace and commenced a long series of diplomatic maneuvers which eventually defeated Spain and stalemated France In 1559 she concluded a peace in the unfortunate war with France and refused the marriage offer of PHILIP II of Spain The next year the Treaty of Edinburgh initiated a policy toward Scotland, successful in the long run, of supporting the Protestant lords against the Catholic party By lending aid to French Huguenots she managed for some time to harass France and Spain without involving England in actual war effort By keeping alive the prospect of marriage with Francis, duke of Alençon and Anjou, she secured (1572) a temporary defense alliance against Spain and by reviving the marriage negotiations later she procured some French aid for the Dutch against Spain Meanwhile Elizabeth had met the threat of MARY QUEEN OF SCOTS, a Catholic with a claim to the English throne In 1568, after Mary's abdication from the Scottish throne, Elizabeth gave her refuge and kept her prisoner for 18 years Elizabeth's government defeated numerous plots, both real and alleged, to seat Mary on the English throne Elizabeth did not, however, have her executed until 1587 after the plot of Anthony BABINGTON By now Spain had emerged as England's main enemy English seamen had been unofficially encouraged to encroach on Spanish monopolies and raid Spanish shipping Philip therefore planned the punitive expedition of the Spanish Armada The Armada was defeated in 1588 by the skill of such leaders as John Hawkins and Francis Drake and by storms, rather than by planning on Elizabeth's part, but the victory strengthened English national pride and broke the power of Spain Elizabeth continued to harry the Spanish by permitting raids on the Spanish coast From 1599 Ireland was the scene of increasingly severe rebellions, but these were finally ended by the campaigns of Lord Mountjoy in 1600–1603 After the Armada, Elizabeth's popularity began to wane Parliament became less tractable and began to object to the abuse of royally granted monopolies The rash and foolish uprising of her old favorite, Robert Devereux, 2d earl of ESSEX, darkened part of her last years Elizabeth was vain, fickle in bestowing favor (as upon Essex and upon Robert Dudley, earl of LEICESTER), prejudiced, vacillating, and parsimonious Her main virtues were a constant awareness of the responsibility of rule and her immense personal courage See A D Innes, *England under the Tudors* (1932), A F Pollard, *The History of England, 1547–1603* (1915), Lytton Strachey, *Elizabeth and Essex* (1928), J. B Black, *The Reign of Elizabeth* (1936)

Elizabeth, 1900–, queen consort of GEORGE VI of England, daughter of the 14th earl of Strathmore She was Lady Elizabeth Bowes-Lyon until her marriage (1923) to the then duke of York

Elizabeth, 1843–1916, queen of Rumania, consort of King Carol I, whom she married in 1869 Of German birth, she was the daughter of Hermann, prince of Wied She completely identified herself with her adopted country and gave herself to its cultural development Under the pseudonym Carmen Sylva the queen wrote extensively and with almost equal facility in German, French, English, and Rumanian. She collaborated on several books with her lady in waiting, Mite Kremnitz Among her chief works are *Pensées d'une reine* [a queen's thoughts] (1882) and an English collection of Rumanian folk tales, *The Bard of Dimbovitza* (1891)

Elizabeth, 1926–, British princess, heir presumptive to the throne of Great Britain. She is the daughter of King George VI and Queen Elisabeth. In 1947 she married Philip Mountbatten, duke of Edinburgh. In 1948 their son, Prince Charles Philip Arthur George, was born.

Elizabeth, 1764–94, sister of Louis XVI of France, known as Madame Elisabeth. Loyal to her brother, she remained in France during the Revolution, suffered imprisonment, and was guillotined

Elizabeth see RUSSELL, MARY ANNETTE

Elizabeth, 1 City (pop 109,912), co seat of Union co , NE N J , S of Newark, known as Elizabethtown until 1740, inc. as a borough 1789, as a city 1855 Goethals Bridge (opened 1928) connects it with Staten Island Englishmen bought the site from Indians in 1664; it was selected as the provincial capital, and Philip Carteret arrived as first governor in 1665, the assembly met here, 1668–82 The school that became Princeton Univ was opened here in 1747 The village suffered British raids in the Revolution, the courthouse, the Presbyterian church, and other buildings being burned in 1780 Surviving old buildings include Elias Boudinot's home (c 1750), the Belcher Mansion (before 1750), and the Nathaniel Bonnell House (before 1682) Tanning and brewing were followed by manufacture of machinery, oil refining, and shipbuilding, a Singer sewing-machine factory was opened in 1873 A vocational school was started in 1937 Nicholas Murray Butler and M. W Baldwin were born here See Sesquicentennial Committee, *Revolutionary History of Elizabeth* (1926) 2 Residential borough (pop 2,976), SW Pa , on the Monongahela and SSE of Pittsburgh, settled 1769, inc 1834

Elizabethan style (ĭlĭz"ubē'thun, -bē'thun), in architecture and the decorative arts, a transitional style of the early English Renaissance which took its name from Queen Elizabeth's reign (1558–1603) Particularly characteristic of the period was the construction of large country houses, the plans, interior finish, and comfort of which were immensely in advance of earlier dwellings The great hall of medieval manors was retained, while added features were a broad staircase, a long gallery connecting the wings of the house on the upper floor, a withdrawing room, and bedrooms of increased importance and number As in the subsequent Jacobean style, the designers attempted to include Renaissance motives drawn from Italy, their insufficient documentation leading to free and naïve interpretations of columns, pilasters, and classic ornament These, together with lozenges, festoons, baroque scrolls, interlacing straps, and grotesque figures, constituted the details peculiar to the two styles and appeared not only on exteriors but also in the design of interiors, furniture, and accessories The important rooms contained architectural paneling in oak, elaborately ornamented chimney breasts, and ceilings in decorative plaster relief As a background for the new ideas, many elements of English Gothic construction remained tall projecting bays with mullioned windows, numerous ornamental gables, towers, great chimneys, and façades in half-timber Landscape design reached the point of formal gardens with clipped box and yews, long balustraded terraces, and other features to form a finished setting for the great manors During the period few churches but a number of colleges at Oxford and Cambridge were built Among the mansions are Knole House, Kent (1570), Kirby Hall, Northamptonshire, and Moreton Hall, Cheshire

Elizabeth Charlotte of Bavaria, 1652–1722, German princess, called the Princess Palatine, wife of Philippe I d'ORLÉANS She abjured the Protestant faith before her marriage (1671) Her ugliness, active temperament, German patriotism, and strict moral views combined to make her miserable with her husband and at the court, from which she tried to hold aloof Her frank and vigorous letters are a valuable source for the social history of the time She was the mother of the regent, Philippe I d'Orléans, and a friend and patron of Leibnitz She was also known as Charlotte Elizabeth See *Letters of Madame* (Eng tr , 2 vols , 1924–25), Cécile Vincens, *Madame, Mother of the Regent* (1909, Eng tr., 1909)

Elizabeth City, town (pop 11,564), co seat of Pasquotank co , NE N C , a port of entry with a fine harbor on the Pasquotank river N of Albemarle Sound, founded 1793. It is a fishing, trade, and industrial center (cotton, lumber, and hosiery mills) in an agricultural area yielding cotton, corn, and potatoes The region is also a popular sportsmen's resort A U.S coast guard base and a state teachers college for Negroes are here.

Elizabeth Farnese (färnā'sā), 1692–1766, queen of Spain, second consort of Philip V; niece of Antonio Farnese, duke of Parma. Soon after her marriage (1714), arranged by Cardinal ALBERONI and the Princess des URSINS, she gained a strong influence over her weak husband and for some time, at first with Alberoni, virtually ruled Spain, though after

1743 Ensenada was the chief power in government Her ambition to recoup the losses incurred by Spain at the Peace of Utrecht plunged Spain into several wars. As a result of the attack on Naples in the War of the POLISH SUCCESSION her son Carlos (later Charles III of Spain) became king of Naples and Sicily in 1734 and her son Philip obtained (1748) the duchy of Parma Exiled by her stepson, Ferdinand VI, she returned to court after the accession (1759) of Charles III.

Elizabeth Islands, chain forming the southern boundary of Buzzards Bay, off SE Massachusetts, in Dukes co Cuttyhunk is farthest west, Naushon is largest Cuttyhunk was discovered in 1602 and settled in 1641, it has a U S coast guard station Pemkose Island was the seat of a summer school of marine biology established by Louis AGASSIZ

Elizabeth of Valois (vāl'wh, Fr valwā'), 1545–68, queen of Spain, daughter of Henry II of France Originally destined for Don CARLOS, son of Philip II of Spain, she was married (1559) to Philip himself The unfounded legend of a tragic love between Elizabeth and Carlos has often been used in literature, notably in Schiller's *Don Carlos*

Elizabethton, town (pop 8,516), co seat of Carter co, NE Tenn, at the junction of the Watauga and Doe rivers. The region was one of the earliest settled in Tennessee In 1772 the WATAUGA ASSOCIATION was organized here, Sycamore Shoals Monument commemorates this event, the treaty Richard Henderson made with the Cherokee in 1775, and the formation of a Revolutionary force that later took part in the battle of Kings Mountain Elizabethton, which was incorporated in 1905, is an industrial center with notable rayon mills, a strike here in 1929 was one of the first in Southern textile plants Unaka National Forest is near by

Elizabethtown. **1** City (pop 3,667), co seat of Hardin co, central Ky, S of Louisville, settled 1780, platted 1793 It is a trade center for a farm (especially tobacco and grain) and limestone region Thomas Lincoln lived here for a time The Union garrison at Elizabethtown was captured by Gen John H Morgan in Dec, 1862 Indian mounds in the region have yielded numerous artifacts Near by is Fort Knox (see KNOX, FORT) **2** Early name of ELIZABETH, N J **3** Town (pop 1,123), co seat of Bladen co, S N C, on the Cape Fear River and SSE of Fayetteville, settled c 1738 It is in a region growing cotton, tobacco, and peanuts and has processing plants. **4** Borough (pop 4,315), SE Pa, between Harrisburg and Lancaster, laid out 1751, settled c 1753, inc 1827. It is a trading center for the surrounding agricultural region Elizabethtown College is here

Ellenville, residential village (pop 4,000), SE N.Y., SW of Kingston, in a resort area of the Shawangunk Mt; inc. 1856 It has varied products

Ellery, William, 1727–1820, American Revolutionary patriot, signer of the Declaration of Independence, b Newport, R I While a member of the Continental Congress (1776–81, 1783–85), Ellery distinguished himself in committee work pertaining to naval and commercial affairs

Ellesmere, Francis Egerton, 1st **earl of** (ĕlz'mēr), 1800–1857, English statesman, author, and philanthropist He lent his influence and wealth to the support of many intellectual societies In Parliament (1822–46) he supported the liberal Tory policies, favoring free trade He served as secretary for Ireland (1828–30) and secretary for war (1830) Ellesmere's many writings include essays, translations, poems, and plays He enlarged and opened to the public the Bridgewater Collection of paintings which he inherited in 1833. In the latter year he changed his family name from Leveson-Gower to Egerton

Ellesmere, Thomas Egerton, Baron, c 1540–1617, lord chancellor of England A distinguished early career at law brought him appointment (1581) as solicitor general He took part in the trial of Mary Queen of Scots (1586) and was a favorite and adviser of Queen Elizabeth In 1592 he was appointed attorney general and in 1596 lord keeper of the great seal and privy councilor A friend of Robert Devereux, 2d earl of Essex, he tried to curb the earl's impetuosity, was lenient to him at the time of his first trial (1600), but abandoned him after his rebellion (1601) and was a witness against him in the trial that resulted in his execution James I retained Egerton as lord keeper, made him Baron Ellesmere and lord chancellor (1603), lord lieutenant of Buckinghamshire (1607), and Viscount Brackley (1616) Ellesmere was also chancellor of Oxford (1610–17) He upheld James's harsh policy toward the Puritans and was equally severe to Catholics He pressed the king's favorite project of a union with Scotland and asserted the king's prerogative against the common law His championing of the chancery and high commission courts against the courts of common law brought him into conflict with Sir Edward Coke, whose dismissal he helped to secure (1616) As a man of learning and an incorruptible judge he was highly regarded by such contemporaries as Francis Bacon and Ben Jonson John Donne was his secretary (1597–1601) and married Egerton's niece

Ellesmere Island, island, area 77,392 sq mi, off N Canada, in the Arctic Ocean, the most northerly and, except for Baffin Island, the largest of the Arctic Archipelago It is separated from Greenland by Smith Sound, Kane Basin, and Kennedy and Robeson channels There are great fjords in the surface of the plateau (mostly above 2,000 ft) which rises to c 5,000 ft in the United States Range in the north An ice cap covers much of the southeast Glaciation occurs in the south and east slopes of the mountains, while in northerly Grant Land there is almost none The central district is called Grinnell Land To the ice-free parts summer brings abundant grass for large herds of musk oxen The eastern coast was explored by E. A Inglefield, E K Kane, G S Nares, C. F Hall, A W Greely, and R. E Peary. The western shore was explored largely by Otto Sverdrup

Ellet, Charles, 1810–62, American civil engineer, b. Bucks co, Pa, studied at the École polytechnique, Paris He built noted bridges at Philadelphia over the Schuylkill (1842), below Niagara Falls (1847), and at Wheeling, W Va, over the Ohio (1847–49) He was chief engineer of the James River and Kanawha Canal and of the Virginia Central RR A fleet of nine ram boats (advocated by Ellet in his *Coast and Harbour Defense*, 1855, and built by him) sank four Confederate gunboats and helped to capture Memphis (1862), Ellet was fatally wounded in the battle He was long an advocate of flood control, his plans, outlined in *The Mississippi and Ohio Rivers* (1853) were reprinted (1927–28) for the use of Congress

Ellice Islands (ĕl'ĭs) or **Lagoon Islands,** group of atolls (9 5 sq mi, pop 4,487), S Pacific, belonging to Great Britain The group includes nine islands, FUNAFUTI, NANUMEA, Nanumanga, Nui, Niutao, Vaitupu, Nukufetau, Nukulaelae, and Nurakita The islands are generally low, but some rise to 90 ft There are pandanus and coconut groves, the chief export is copra The Polynesian natives are unusually literate Discovered in 1764 by Captain Byron and made a British protectorate in 1892, the group was included (1915) in the Gilbert and Ellice Islands colony In the Second World War the islands escaped Japanese invasion Nanumea and Funafuti were occupied in 1943 by U.S. forces, who established naval and air bases

Ellicott, Andrew, 1754–1820, American surveyor, b Bucks co, Pa, brother of Joseph Ellicott His early career was varied, he served in the American Revolution and edited *The United States Almanack* before he helped to run (1784) the western part of

the Mason-Dixon line and served (1785–86) on the commission to locate the northern and western boundaries of Pennsylvania Appointed (1789) by the Federal government, he ran the southwestern boundary of New York As surveyor of the national capital at Washington, he succeeded (1792) Pierre Charles L'Enfant and issued an altered city plan called the Ellicott plan He later laid out (1795) Erie, Pa , and surveyed the United States-Florida boundary (1796–1800) and the Georgia-South Carolina boundary (1811–12) In 1813 he was appointed mathematics professor at West Point See biography by C V Mathews (1908)

Ellicott, Joseph, 1760–1826, American surveyor and land agent, b Bucks co , Pa He worked on surveys made by his brother Andrew Ellicott, then became the surveyor and ultimately the agent of the HOLLAND LAND COMPANY He helped to open W New York to settlement and laid out many towns, including Batavia, N Y , the headquarters of the company, and Buffalo, which he modeled somewhat after Washington, D C

Ellicott City, unincorporated town (pop 2,682) in Baltimore and Howard counties co seat of Howard co , N Md , on the Patapsco river and W of Baltimore It is a commercial center in wheat-growing country, mills flour, and manufactures doughnut machines John, Joseph, and Andrew Ellicott settled here and built a flour mill (1774) The town was called Ellicott's Mills until 1867 In 1830 the Baltimore & Ohio RR was opened to this point Near by are Doughoregan Manor (c 1720), home of Charles Carroll, and a Franciscan monastery (1930)

Ellicottville, village (pop 1,024), W N Y , SE of Buffalo, inc 1881 It has varied industries

Ellijay, city (pop 1,497), co seat of Gilmer co , N Ga , N of Atlanta and on the Coosawattee river, inc 1834 It is a processing center for a fruit area Chattahoochee National Forest is near

Ellington, rural town (pop 2,479) N Conn , NE of Hartford, settled c 1720, inc 1786

Ellinwood, city (pop 2,059), central Kansas, on the Arkansas and NW of Hutchinson, founded 1871, inc 1878 In the 1930s it boomed with the exploitation of the area's oil fields

Elliot, Daniel Giraud, 1835–1915, American zoologist, b New York city From 1856 to 1878 he traveled widely in Europe and the Near East and later pursued his research in North and South America He helped found the American Ornithologists' Union, gave his collection to the American Museum of Natural History, and served the Field Museum, Chicago, as curator of zoology (1895–1906) His many works include several volumes on birds, some of which he illustrated, and *Review of the Primates* (3 vols , 1912) The National Academy of Science established the Elliot medal in his memory

Elliott, Charles Loring, 1812–68, American painter, b Scipio, Cayuga co , N Y , pupil of John Trumbull and Quidor His portraits number over 700 His principal works include the portraits of Matthew Vassar (Vassar College), A B Durand (Corcoran Gall), several governors of New York (city hall, New York), Fletcher Harper, Erastus Corning (state library, Albany, N Y), James E Freeman (National Acad of Design, New York), Caleb Gasper, Mrs James C Griswold, M B Brady, and a self-portrait (Metropolitan Mus), and James Fenimore Cooper

Elliott, George Augustus: see ELIOTT, GEORGE AUGUSTUS, 1ST BARON HEATHFIELD OF GIBRALTAR

Elliott, Jesse Duncan, 1782–1845, American naval officer, b Hagerstown, Md In the War of 1812, he helped capture two British vessels on Lake Erie and was made commander of the lake He began building the fleet that O H Perry was to use after he succeeded (1813) Elliott In the battle of Lake Erie (1813), Elliott was second in command His delay in the battle brought about a bitter argument with Perry—an argument that was continued long after the death of both and is still not completely settled.

Elliott, John, 1858–1925, American portrait and mural painter, b England, studied in Paris and in Rome His portraits include those of King Humbert of Italy, the marquess of Winchester, and Julia Ward Howe, a pastel study of Dante, and 16 *War Portraits* of young Americans killed in the First World War (National Mus , Washington, D C) Notable examples of his decorative works are *The Triumph of Time* (Boston Public Library) and *Diana of the Tides* (National Mus , Washington, D C)

ellipse (ĭlĭps'), closed plane curve of which the sum of the distances between a point on the curve and two fixed points (*foci*) is the same for all points on the curve It is also defined as the conic section—other than a circle—formed by a plane cutting all the elements of the cone in the same nappe. The center of an ellipse is the point halfway between its foci The major axis is the chord which passes through the foci The minor axis is the chord which passes through the center perpendicular to the major axis The vertices are the two points of intersection of the major axis with the curve Elliptical gears in hay presses, the elliptical orbits of the planets, and the elliptical shape of whispering galleries are examples of the occurrence of this curve in everyday life

Ellis, Alexander John, 1814–90, English philologist, an early student of phonetics, educated at Cambridge Univ He was originally named Sharpe but took the name Ellis from a relative who left him money to pursue his scholarly life He made attempts to reform English spelling on phonetic lines and wrote *On Early English Pronunciation* (5 vols , 1869–89, title varies slightly with the volumes). He also wrote on mathematics

Ellis, George Washington, 1875–1919, American Negro sociologist, b Weston, Mo A student, a teacher, and a lawyer, he was from 1902 to 1910 secretary of the U S legation in Liberia and made a study which resulted in his *Negro Culture in West Africa* (1914) He became a prominent lawyer and speaker in Chicago Ellis is remembered for his studies of Negro culture in its sociological setting, notably as the author of *Negro Achievements in Social Progress* (1914) and as an editor of the *Journal of Race Development*

Ellis, Havelock (Henry Havelock Ellis), 1859–1939, English psychologist and author He became a qualified physician but devoted himself to scientific study and writing Although the first volume of the *Studies in the Psychology of Sex* (7 vols , 1897–1928, complete ed , 4 vols , 1936) was banned on charges of obscenity, the series—Ellis's major work—constituted a valuable contribution to the study of sex problems and had an important influence in changing the public attitude toward them In 1891 Ellis married Edith Lees The story of their marriage is the chief theme of his *My Life* (1939) His other works include, besides poems and essays, *A Study of British Genius* (1904), *The Soul of Spain* (1908), and *The Dance of Life* (1923) See biographies by Isaac Goldberg (1926) and Houston Peterson (1928)

Ellis, Job Bicknell, 1829–1905, American mycologist, b Potsdam, N Y He made a large collection of North American fungi (now in the New York Botanical Garden herbarium) With B M Everhart he wrote *North American Pyrenomycetes* (1892)

Ellis, William, 1794–1872, English missionary, pioneer of printing in the Pacific Sent in 1816 to Polynesia as a *nonconformist* missionary, he developed a form of writing for the Hawaiian language, set up at Tahiti the first printing press in the South Seas, and included in his works valuable antiquarian materials on Polynesia He also worked in Madagascar and wrote a history of that land

Ellis, rail city (pop 2,042), W central Kansas, between the Saline and Smoky Hill rivers NW of Hays, founded 1867, inc 1888

Ellis Island, c 27 acres, in Upper New York Bay, SW of Manhattan Island Government property since 1808, it was long the site of an arsenal and a fort, but its most famous years were from 1892 until 1943, when it served as the chief immigration station of the country With the removal of immigration and naturalization services to Manhattan, Ellis Island was used as a detention center for immigrants having some inaccuracy in their entry papers and for those awaiting deportation

Ellisville, city (pop 2,607), a co seat of Jones co , SE Miss , SSW of Laurel, in a farm and dairy area near timber resources In the Civil War the county was a center of anti-Confederate activity A district junior college and the state school for the feeble-minded are here

Ellora (ĕlō'rŭ), village, NW Hyderabad state, India Extending more than a mile on a hill are 34 rock and cave temples (3d–13th cent) in three groups, Buddhist, Brahman, and Jain The most remarkable structure is the Brahman Kailasa (8th cent), a free-standing Dravidian temple hewn from the surrounding rock The rear wall of its excavated courtyard (276 ft x 154 ft) is 100 ft high The temple proper (164 ft x 109 ft) was carved from a single mass of rock The roof of its central hall is supported by 16 square columns The Siva shrine at the rear is surrounded by five small temples The mythological and animal figures profusely carved on nearly all the surfaces are among India's greatest sculptural treasures

Ellore (ĕlōr'), town (pop 64,911), NE Madras state, India It is at the head of an important irrigation system Carpetmaking and tanning are important.

Elloree (ĕl'ŭrē), town (pop 1,123), E central S C , SE of Columbia near the Santee river

Ellsworth, Elmer Ephraim, 1837–61, American Civil War hero, b Malta (then Dunning Street), near Mechanicville, N Y Just before the Civil War he became famous for his Zouave company of Chicago, which toured the North, giving exhibition drills A friend of Lincoln, he accompanied him to Washington in 1861 When war began, Ellsworth recruited a regiment from the volunteer firemen in New York city and dressed and trained them in the Zouave manner At Alexandria, Va , in May, 1861, he removed a Confederate flag from atop the Marshall House and was shot and killed by the proprietor His death, the first officer casualty on the Virginia front, produced a profound sensation See C. A Ingraham, *Elmer E. Ellsworth and the Zouaves of '61* (1925)

Ellsworth, Henry Leavitt, 1791–1858, American agriculturist, b Windsor, Conn , grad. Yale, 1810 His interests were varied He was a lawyer, a businessman (of Hartford), and a farming enthusiast In 1832 he was one of the commissioners appointed to inspect the area to which Indians were being transferred (in the present Oklahoma) He was accompanied on his Western journey by Washington Irving, who recorded his impressions in *A Tour on the Prairies*, by C J Latrobe, and by the young comte de Pourtales Ellsworth's own account appears in *Washington Irving on the Prairie, or, A Narrative of a Tour of the Southwest in the Year 1832* (ed by Stanley T Williams and Barbara D Simison, 1937) Appointed (1835) commissioner of patents, Ellsworth worked to promote agricultural research and aid to farmers He helped bring about the establishment of the Dept of Agriculture

Ellsworth, Lincoln, 1880–, American explorer, b Chicago, Ill , educated at Columbia and Yale He was surveyor and engineer in railroad building and afterwards was a prospector and mining engineer in NW Canada He became the financial supporter and associate of Roald AMUNDSEN in his arctic aviation ventures In 1925 they flew N from Spitsbergen to 87° 43′, and in 1926 he was co-leader of the flight from Spitsbergen over the North Pole to Alaska in the dirigible *Norge* He was an observer on the *Graf Zeppelin's* flight in 1931 to Franz Josef Land and Northern Land In 1935 he accomplished the first flight over Antarctica from the Weddell Sea to the Ross Sea In 1939 he flew into interior Antarctica from the Indian Ocean side, viewing 81,000 sq mi previously unseen With Amundsen he wrote *Our Polar Flight* (1925) and *First Crossing of the Polar Sea* (1927) His later books are *Search* (1932), *Exploring Today* (1935), and *Beyond Horizons* (1938)

Ellsworth, Oliver, 1745–1807, American statesman, b Windsor, Conn , grad College of New Jersey (now Princeton), 1766 A lawyer of Hartford, he was a member of the Continental Congress and a commissioner (1784) with Oliver Wolcott to determine the Connecticut boundary line His great service was at the FEDERAL CONSTITUTIONAL CONVENTION, where as a delegate he advanced the "Connecticut compromise," which ended the struggle between large and small states over representation He also was responsible for the term United States in the Constitution He later was one of Connecticut's first Senators, was Chief Justice of the U S Supreme Court, and served as a commissioner to negotiate in 1799 with the French government concerning the restrictions put on American vessels See biography By W G Brown (1905)

Ellsworth 1 City (pop 2,227), co seat of Ellsworth co , central Kansas, on the Smoky Hill River and W of Salina, laid out 1867, inc 1868 It grew as a cow town in the 1870s and is a farm trading center for a vicinity which produces winter wheat, rock salt, oil, and limestone **2** City (pop 3,911), co seat of Hancock co , S Maine, N of Mt Desert Island, settled 1763, inc as a town 1800, as a city 1869 A trade center for a resort area, it had as earlier industries lumbering, shipbuilding and shipping, and manufacturing (there are falls in the Union river here) Much of the business district burned in May 1933 Among old houses is Black Mansion (1802), now a museum **3** Borough (pop 1,975), SW Pa , SE of Washington, inc 1900 **4** Village (pop 1,340), co seat of Pierce co , W Wis , W of Eau Claire, inc 1887

Ellwood City, industrial borough (pop 12,329), W Pa , NW of Pittsburgh near the Ohio border, settled 1890, inc 1892 It has many metal-products plants and a wire-fence company Limestone deposits are found here

elm, any of several species of the genus *Ulmus*, deciduous trees or, rarely, shrubs of wide distribution in the Northern Hemisphere Among the North American species are the American or white elm (*Ulmus americana*), native throughout the eastern half of the United States and into Canada and commonly planted as a shade tree, the slippery elm (*U fulva*), of similar distribution, with a mucilaginous inner bark often chewed like gum and sometimes used for medicinal purposes, the rock or cork elm (*U thomasi*), a Northeastern and Midwestern species with very hard wood, and the wahoo or winged elm (*U alata*), southern in range The English elm (*U campestris*), native to Europe, is much planted elsewhere, the best-known specimens in America are on Boston Common Elm wood is valued for being tough, hard, and durable and is extensively used for barrel hoops and staves, general lumber, and farm implements The inner bark of some species has been used for food, and that of others for a fiber yielding rope and fabric The Dutch elm disease, so named because Dutch scientists discovered its cause, results from invasion of the elm's tissues by a fungus, *Ceratostomella ulmi*, which is carried from tree to tree by at least two species of bark beetles It attacks both American and European elms and has nearly exterminated them in some areas.

Elma, farm trading town (pop 1,370), W Wash , in the Chehalis river valley; settled c.1886.

Elman, Mischa (mĭ'shŭ ĕl'mŭn), 1891–, Russian-American violinist, b Kiev, studied in St. Petersburg with Leopold Auer. Since his debut in New York (1908) he has toured widely in Europe and America, being noted for an extensive repertoire

Elmer, John: see AYLMER, JOHN

Elmer, borough (pop 1,344), SW N J , E of Salem, inc 1893. It is a farm trade center

Elmhurst, residential city (pop 15,458), NE Ill , W of Chicago, in a truck-farm area, settled 1843, inc 1910 It is the seat of Elmhurst College (Evangelical and Reformed, coeducational, 1865)

Elmina (ĕlmē'nu), town (pop c 5,000), Gold Coast, on the Gulf of Guinea The earliest European settlement on the Gold Coast, it was founded in 1471 by the Portuguese, who built (1482) St George's Castle, still extant Elmina fell to the Dutch in 1637 and to the British in 1872

Elmira (ĕlmĭ'rŭ), town (pop 2,012), S Ont , N of Kitchener and W of Toronto It is a manufacturing town with a large felt-shoe factory

Elmira, city (pop 45,106), co seat of Chemung co , extreme S N Y , on the Chemung and W of Binghamton, settled 1788, inc 1864 It is a distributing and manufacturing center, producing office equipment, business machines, tools, and fire engines An annual glider contest is held near by The Elmira State Reformatory, first supervised by Z R BROCKWAY, is well known The Arnot Art Gallery has paintings of the Flemish, Dutch, German, and French schools Mark Twain is buried in Elmira **Elmira College** (nonsectarian, for women), chartered in 1852 and 1853, was rechartered and opened in 1855 with a gift from Simeon Benjamin It was called Elmira Female College until 1890 Elmira was the first women's college to grant degrees (1859) for the completion of courses equivalent to those offered in men's colleges Besides arts and science courses, it cooperates with a hospital in a nursing school

Elmira Heights, village (pop 4,829), S N Y., N of Elmira, settled 1779, inc 1896

Elmo, Saint: see PETER GONZALEZ, SAINT

Elmodam (-mō'-), in the Gospel genealogy Luke 3 28

El Monte (ĕl mŏn'tē), city (1940 pop 4,746, 1947 special census pop 7,153), S Calif , E of Los Angeles, in an area of truck and dairy farms, founded 1842, inc 1912 Walnuts are packed here A large lion farm is near by

Elmore, village (pop 1,103), NW Ohio, SE of Toledo and on the Portage river

El Morro National Monument see NATIONAL PARKS AND MONUMENTS (table)

Elmsford, residential village (pop 3,078), SE N Y , in Westchester co , W of White Plains, inc 1910 Hearing aids are made here

Elmwood, city (pop 1,348), N central Ill , WNW of Peoria, in a coal and farm area, inc 1867 It is the birthplace of Lorado Taft, whose bronze statue *Pioneers of the Prairies*, a memorial to his parents, stands in the park

Elmwood Park, village (pop 13,689), NE Ill , residential suburb of Chicago, inc 1914

Elmwood Place, village (pop 4,248), SW Ohio, a suburb of Cincinnati Gears, pinions, and crane wheels are made here

Elnaam (ĕl'nāăm, ĕlnā'-) [Heb , =God is delight], father of two of David's guard 1 Chron 11 46

Elnathan (ĕlnā'thăn) [Heb , =God's gift] **1** Grandfather of Jehoiachin 2 Kings 24 8 **2** Leader in Jerusalem in the time of Jehoiakim Jer 26 22, 36 12,25 This may be the same person as **1**

3, 4, 5 Three emissaries of Ezra Ezra 8 16

Elohim (ĕlōhēm', ĕlō'hĭm, ĕl'ōhĕm) [Heb , =gods], common Hebrew name of GOD

Eloi, Eloi, lama sabachthani? see ELI, ELI, LAMA SABACHTHANI?

Elon (ē'lŏn) [Heb , =oak] **1** Hittite father-in-law of Esau Gen 26 34 **2** Ancestor of the Elonites Num 26 26 **3** Judge of Israel Judges 12 11, **4** Danite town Joshua 19 43 This may be connected with **Elon-beth-hanan** (-hā'-) [oak of the house of grace], one of Solomon's commissariat districts 1 Kings 4 9

Elora, village (pop 1,247), S Ont , at the junction of the Grand and Irvine rivers NW of Guelph It is in a cattle-breeding area

Eloth (ē'lŏth), the same as ELATH

Eloy, Saint (ē'loi), d c 658, Frankish goldsmith and state treasurer, bishop of Noyon He is patron of goldsmiths Eligius is the Latin of Eloy

Eloy (ē'loi), town (1950 special census pop 4,828), S Ariz , on the Santa Cruz and NNW of Tucson, inc as a town 1949 It is in an agricultural area and has vegetable-packing and cotton-processing plants

Elpaal (ĕl'pāăl, ĕlpā'ăl), founder of a Benjamite family. 1 Chron. 8 11,12,18.

Elpalet (-pā'-), son of David see ELIPHALET.

El-paran (ĕl'pā'-), the same as PARAN

El Paso (ĕl pă'sō). **1** City (pop. 1,021), central Ill , E of Peoria, in a farm area, inc 1861 **2** City (1940 pop 96,810; 1948 estimated pop. 107,000), co. seat of El Paso co., in the western tip of Texas, on the Rio Grande opposite JUÁREZ, Mexico, inc. 1873. It is a port of entry and has immense international traffic by rail, highway, and air. This largest of the border cities is something of a blend of the United States and Mexico, and its long past is bound with that of Juárez The two present cities are in the region then known as El Paso del Norte, so called because of the route through the mountains to the north In the 17th cent , missionaries, soldiers, and traders came to the region Although missions were founded at YSLETA and elsewhere north of the river, the major settlement was on the south (Juárez) bank Not until 1827 was the first house built in the present El Paso After the new U S –Mexican border was set, settlement thickened, and the coming of the first railroad in 1881 prefaced the growth of the rendezvous of cowboys, exiles, border traders, and adventurers into a great commercial city Paso wine from the sunny vineyards was once much sought, and today farms irrigated from Elephant Butte Reservoir (see RIO GRANDE) have large yields The city has diverse industries, including copper refineries, smelters, oil refineries, food-processing plants, a big cement plant, and textile mills The tourist traffic is notable, and the dry warmth attracts winter residents International trade is, however, still all-important In El Paso there are Texas Western College (formerly called the Texas College of Mines and Metallurgy, coeducational, 1913, a branch of the Univ of Texas), an old and still active army post (Fort Bliss), an army hospital (William Beaumont General Hospital), and a military airfield (Biggs Field)

Elphinstone, Arthur, 6th **Baron Balmerino** (ĕl'fĭnstun, băl"mĕ'rĭnō), 1688–1746, British leader of the JACOBITES He resigned a command in the British army (1715) to join the cause of the Old Pretender, lived in exile in France (1715–33), and was executed after his capture at Culloden (1746)

Elphinstone, George Keith, 1746–1823, British admiral He held high commands during the wars of the American and French revolutions In the naval service from 1761 to 1815, the high points of his career were the reduction of Charleston (1780), the capture of Capetown (1795), the suppression of the Sheerness mutiny (1797), and the covering of Sir Ralph Abercromby's landing in Aboukir Bay (1801) He was made Viscount Keith in 1797

Elphinstone, William, 1431–1514, Scottish prelate He was trained in the law and was employed on many political missions before becoming bishop of Aberdeen in 1483 For his loyalty in the struggle with the nobles, James III made him lord high chancellor in 1488 In 1494 he procured a papal bull founding King's College (part of the present Univ of Aberdeen) Bishop Elphinstone was instrumental in introducing printing into Scotland

El Reno (ĕl rē'nō), city (pop 10,078), co seat of Canadian co , central Okla , near the North Canadian river W of Oklahoma City, settled 1889, inc 1890 A marketing center, it has flour and other mills and railroad shops Near by are a U S reformatory, Fort Reno, a U S army remount station, and a state quail hatchery

Elroy, city (pop 1,850), central Wis , on the Baraboo and E of La Crosse, settled 1854, inc 1885

Elsa, town (pop 1,006), extreme S Texas, WNW of Brownsville, in the irrigated district of the lower Rio Grande valley, settled 1927, inc 1933

Elsberg, Louis (ĕlz'bûrg), 1836–85, American physician, b Germany, M D Jefferson Medical College, 1857, studied in Europe with Johann Czermak A pioneer laryngologist and a founder of the American Laryngological Association, he introduced the use of the laryngoscope in the United States, invented several instruments, and wrote a history of laryngology

Elsberry, city (pop 1,548), E Mo , near the Mississippi NW of St Louis, laid out 1871 A glove factory and a U S erosion control nursery are here

El Segundo (ĕl sĕgŭn'dō), city (1940 pop 4,738, 1944 special census pop 5,625), in Inglewood township, S Calif , WSW of Los Angeles, founded 1911, inc 1917 Founded as an oil town, it refines oil and produces machinery and chemicals

Elsheimer, Adam (ă'dăm ĕls'hīmur), 1578–1610?, German painter After studying in Frankfurt, Munich, and Venice, he settled in Rome and worked for Pope Paul V He painted chiefly biblical and mythological subjects with landscape backgrounds which he treated naturalistically He had numerous students, including Pieter Lastman, who was the teacher of Rembrandt, and is thought to have had a considerable influence on Dutch landscape painting Elsheimer was particularly successful in rendering light effects His *Good Samaritan* (Louvre) is one of his well-known works

Elsinore (ĕl'sĭnôr"), Dan. *Helsingør* (hĕl"sĭng-ûr'), city (pop. 18,930), NE Zealand, Denmark, on the Oresund opposite Halsingborg, Sweden, with which it is connected by ferry. It is a port and a commercial center, with shipyards and rubber manufactures Known since the 13th cent , it saw its greatest prosperity from the 15th cent until 1857 as the port where the Danish kings collected tolls from ships passing through the Oresund The famous Kronborg castle was built in 1577–85 and restored in 1635–40 and is now sometimes used as the scene for performances of Shakspere's *Hamlet*, which is laid in Elsinore.

Elsinore (ĕl'sĭnôr), resort city (1940 pop 1,552, 1948 special census pop 2,074), S Calif , on Lake Elsinore and S of Riverside, inc 1888 Hot mineral springs are near by

Elsmere. **1** Town (pop 1,630), NE Del , near Wilmington, inc 1909 An industrial school for boys and a county workhouse are near here. **2** Town (pop 2,885), N Ky , near Covington

Elssler, Fanny (fă'nē ĕl'slûr), 1810–84, Austrian ballet dancer. The youngest daughter of Johann Elssler, copyist and servant of Haydn, she made her debut (1833) at the King's Theatre, London, in Adolphe Adam's *Faust* She danced at the Paris Opéra (1834–39) and also in London (1838–40) and became a favorite in both cities Her forte was folk dancing, especially the cachucha and the cracovienne She made a triumphant tour of the United States (1841) and after appearances throughout Europe retired in 1851 Her dancing was sensuous, human, and fired by great energy Her sister, **Thérèse Elssler** (tārĕz'), 1808–78, supported Fanny as male dancer She married Prince Adalbert of Prussia (1848) and was made countess of Barnim by Frederick William IV

Elster, Kristian Mandrup (krĭs'tyăn măn'drŏp ĕl'stur), 1841–81, Norwegian novelist His promising career was cut short by an early death, and recognition was posthumous, with the publication of *Dangerous People* (1881) His son, **Kristian Elster,** 1881–, a novelist and literary critic, wrote a history of Norwegian literature (1923–24)

Elstow, village (pop 513), Bedfordshire, England It is the birthplace of John Bunyan

Elswick (ĕl'sĭk), western part of Newcastle-on-Tyne, England Great engineering works are here

Eltekeh (ĕl'tĕkĕ) [Heb , =God-fearing], city of Dan Near here Sennacherib of Assyria put down the western nations in 701 B C Joshua 19 44, 21 23

Eltekon (ĕl'tĕkŏn, ĕltē'-), town, S Palestine, of unknown site Joshua 15 59

Eltolad (ĕl'tō-, ĕltō'-), unidentified town, S Palestine Joshua 19 4 Tolad 1 Chron 4 29

Eluard, Paul (pôl' ălwar'), 1895–, French poet His poetry, at first impersonal, became more emotional during his alliance with the surrealists, with whom he broke for Communism *Mourir de ne pas mourir* [to die of not dying] (1924) was followed by *L'Immaculée Conception* (with André Breton, 1930) and the war poems, *Poésie et vérité* (1942) and *Au rendez-vous allemand* (1945)

Eluzai (ĕlū'zāī, ĕl"ūzā'ĭ), Benjamite with David at Ziklag 1 Chron 12 5

Elvas (ĕl'vush), city (pop 11,272), S Portugal, in Upper Alentejo prov , near the Guadiana river and the Spanish border A heavily fortified town, it was important in all the Portuguese wars but most particularly in the wars with Spain after Portugal revolted (1640) against Spanish control and in the Peninsular War The city has minor manufactures and farm trade There is an imposing old aqueduct

Elvehjem, Conrad Arnold (ĕlvā'ŭm), 1901–, American biochemist, b McFarland, Wis , grad Univ of Wisconsin (B A , 1923, Ph D , 1927) From 1923 he was affiliated with the department of biochemistry at the Univ of Wisconsin, as professor from 1936 In 1946 he became dean of the graduate school The discovery of Elvehjem and his associates that niacin (or nicotinic acid), part of the vitamin B complex can cure blacktongue in dogs, a disease corresponding to pellagra in humans, led to the use of niacin in treating pellagra patients His many other contributions include research on various other components of the vitamin B complex, the discovery that copper is essential to the formation of hemoglobin, and research on respiration in tissues With H A Waisman he wrote *The Vitamin Content of Meat* (1941)

Elvend or **Elwend** (both ĕlvĕnd', ĕl'vĕnd), mountain, c 11,600 ft high, W Iran, SW of Hamadan. It bears rock inscriptions of Darius and Xerxes The name may be spelled in other fashions, e g , Alvand

Elvins, city (pop 2,367), E Mo , SW of St Louis, in a farm and timber area, inc 1903

Elwell, Frank Edwin, 1858–1922, American sculptor, b Concord, Mass He was a curator in the Metropolitan Museum from 1903 to 1905 Examples of his work are *Dickens and Little Nell* (Fairmont Park, Philadelphia), a statue of Gen Winfield Scott Hancock (Gettysburg, Pa), *Kronos*, fountain exhibited at the Pan-American Exposition, *Greece* and *Rome* (New York Customhouse), *Water Boy of Pompeii* (Metropolitan Mus), and *Diana and the Lion* (Art Inst , Chicago)

Elwend, mountain, Iran see ELVEND

Elwood. **1** City (pop 10,913), E central Ind , NNE of Indianapolis It is a canning center for a tomato-growing area and ships grain and livestock. Trailers and tractors are made here Wendell L Willkie was born in Elwood **2** Residential city (pop 1,014), NE Kansas, on the Missouri above Atchison, founded 1856 as Roseport, inc 1873

Ely, Richard Theodore (ē'lē), 1854–1943, American economist, b Ripley, N.Y., grad. Columbia, 1876, Ph D Heidelberg, 1879. He taught at Johns Hopkins (1881–92), the Univ of Wisconsin (1892–1925), and Northwestern Univ. (1925–33). One of the most influential teachers of his time, he

was instrumental in popularising the study of economics, and his *Outlines of Economics* (with R H. Hess, 1889, 6th ed , 1937) was a standard text At Wisconsin he founded the Institute for Research in Land Economics and Public Utilities (now the Institute for Economic Research), he also helped found the American Economic Association An early leader of Christian socialism in America, he advocated public control of resources, prohibition of child labor, and the development of labor unions His many books include *Monopolies and Trusts* (1900), *Studies in the Evolution of Industrial Society* (1905), and *Land Economics* (with G S Wehrwein, 1940) See his autobiography, *Ground under Our Feet* (1938); J R Everett, *Religion in Economics* (1946)

Ely, **1** City (pop 5,970), NE Minn , NE of Virginia and on the Vermilion iron range, settled 1885, inc as a village 1888, as a city 1891 In a region of lakes and forests, Ely is a center for vacationists and hunters and headquarters for the Superior National Forest It has a junior college (coeducational) **2** City (pop 4,140, alt 6,433 ft), co seat of White Pine co , E Nev , settled 1868, inc 1907 It is a trade center for the state's rich copper-mining area Lehman Caves National Monument and Wheeler Peak are near by

Ely, City of, urban district (pop 8,381), Isle of Ely, England, NNE of Cambridge Ely Cathedral, one of the largest in England, is on the site of an abbey founded by St Æthelðreda in the 7th cent and destroyed by Danes in 870 The present building was begun in 1083 and became the cathedral of a new bishopric in 1109 The architecture is of varied periods Within the cathedral grounds are the Tudor palace of the bishop, a theological college, and the King's Grammar School, founded (1541) by Henry VIII

Ely, Isle of, administrative county (372 sq mi , 1931 pop 77,698, 1948 estimated pop 87,613), E England March is the administrative center It is a region of extensive fens, now drained and devoted to agriculture Historically it is a part of CAMBRIDGESHIRE The name originally applied to the small area of higher ground in the center of the region about the City of Ely

Elymas (ĕl'ĭmăs), the same as BAR-JESUS

Elyot, Sir Thomas, c 1490–1546, English author He wrote the earliest Latin-English dictionary (1538) and is remembered especially for his sensible and well-written treatise on education, *The Book Named the Governour* (1531)

Elyria (ĭlēr'ĭə), city (pop 25,120), co seat of Lorain co , N Ohio, on the Black River and SW of Cleveland, settled 1817, inc 1892 It is a retail and industrial city in a farm area Its products include plastics, industrial pumps, and bicycle equipment Gates Memorial Hospital for crippled children and Cascade Park are here

Élysée (ālēzā'), palace in Paris, on the Rue du Faubourg Saint-Honoré Built in the 18th cent and once the property of Mme de Pompadour, it is now the residence of the presidents of France

Elysian fields (ĭlĭ'zhun) or **Elysium** (ĭlĭ'zhēŭm), in Greek religion, happy otherworld for heroes favored by the gods Identified with the Isles of the Blest or Fortunate Islands, Elysium was situated in the distant west, at the edge of the world In later tradition and in Vergil, Elysium is a part of the underworld and a pleasant abode for the righteous dead

Elzabad (ĕl'zŭ-, ĕlzā'-) [Heb ,=God's gift] **1** Gadite who came to David in Judah 1 Chron 12 12 **2** Levitical doorkeeper 1 Chron 26 7

Elzaphan (ĕl'zufăn, ĕlzā'-), same as ELIZAPHAN **1**

Elzevir, Louis (ĕl'zuvur, -vēr), 1540–1617, Dutch publisher, whose name also appeared as Elsevier or Elzevier He produced his first book at Leiden in 1583 Under him and his descendants, the business was continued until the death of the second Abraham Elzevir at Leiden in 1712 In its best years it was easily the greatest publishing business in the world The Elzevirs were typically neither printers nor scholars but businessmen They owned presses and type and employed good editors and printers Their books were good textually, legible, and inexpensive Many of the Elzevir books were printed in the establishments of members of the family at Leiden, Amsterdam, Utrecht, and The Hague, but many books were printed for the Elzevirs by other printers Agencies of the family, conducted by members of it, were established in many cities, from Denmark to Italy The Elzevir types are typically legible and sturdy, rather than elegant, and typically the books are of small size with narrow margins The impecunious scholar was the purchaser whom the Elzevirs kept in mind The texts were usually in Latin, though the family printed and published books in Greek, French, and other languages. The most noted of the successors of Louis were his son **Bonaventure Elzevir,** 1583–1652, and his grandson **Abraham Elzevir,** 1592–1652 A famous designer of types used by the Elzevirs was Christopher van DYCK. Roman type such as he designed, known in England and America as "old-style" type, is known on the continent of Europe as "Elzevir" type

emanation (ĕmŭnā'shŭn) [Latin,=flowing from], cosmological concept characteristic of Neoplatonism and of GNOSTICISM and frequently encountered in Indian metaphysics It is one of three fundamental ways of explaining the world, the other two being creation, by which the eternal God makes all else from nothing, and EVOLUTION Emanation is a subtle idea, explainable only in crude metaphors God (or the One or the Absolute) is the one prime principle, and from him flows the divine substance, his substance never lessens, as the out-flowed substance becomes more distant from God, the divinity of the substance becomes less and less Thus, when a stone is dropped in a pool, the circles ever widening from the point (God) where the stone fell are emanations, becoming fainter and fainter. Another metaphor makes God a spring that can never dry up, always overflowing Similarly a candle's light becomes dimmer with distance Emanation never ceases, the whole process moving continually outward from God Emanation differs especially from creation in the transcendent nature of the creative God, who shares none of His substance with His creatures, and from metaphysical evolution in the evident perfectionism of the ideal evolutionary scheme, in which all is improving The Neoplatonists ascribed to Plato an emanative concept in his Idea of the Good supreme, the lesser ideas being in some way related to the Idea of the Good The use of the name God is, of course, dangerous in thinking of emanation, which is entirely impersonal See PLOTINUS and NEOPLATONISM For use of the term in chemistry, see RADIUM

Emancipation, Edict of, March 3, 1861 (N S), the edict by which Tsar Alexander II freed all Russian serfs (c 22,000,000 or one third of the total population) All serfs were freed unconditionally, peasant serfs were given the use of land allotments in addition to freedom The land still belonged to the landlords however, and the freedmen paid for its use with money or services A peasant could buy his land if the landlord consented, in such case, the government advanced the purchase price as a 49-year loan Land thus sold did not become the personal property of the peasant until the entire *mir* (see VILLAGE) had redeemed itself, in the meantime it was held in communal ownership and subject to periodic redistribution These provisions proved irksome, for only a minority of freedmen were ever able to acquire full ownership The situation helped the Russian Revolution to succeed

Emancipation Proclamation Despite the insistent urgings of abolitionists, President Abraham Lincoln reframed, in the early part of the Civil War, from issuing an edict freeing the slaves He was anxious not to alienate the slaveholding border states that had remained in the Union, and for him the war was being fought solely to preserve the Union "If I could save the Union without freeing *any* slave, I would do it, and if I could save it by freeing *all* the slaves, I would do it, and if I could do it by freeing some and leaving others alone, I would also do that" He wrote these words to Horace Greeley on Aug 22, 1862, in answer to a carping criticism from that administration gadfly, but actually he had long since decided, after much reflection, to adopt the third course For his own good and sufficient reasons Lincoln kept the plan to himself until July 13, 1862, when, according to the cabinet diarist Gideon Welles, he first mentioned it to Welles and Secretary of State William H Seward On July 22 he read a preliminary draft to the cabinet and acquiesced in Seward's suggestion to wait until after a Union victory before issuing the proclamation The Antietam campaign presented that opportunity, and on Sept 22,1862, after reading a second draft to the cabinet, he issued a preliminary proclamation which announced that emancipation would become effective on Jan 1, 1863, in those states "in rebellion" which had not meanwhile laid down their arms On Jan 1, 1863, the formal and definite Emancipation Proclamation was issued The President, by virtue of his powers as commander in chief, declared free all those slaves residing in territory in rebellion against the Federal government "as a fit and necessary war measure for suppressing said rebellion" Congress, in effect, had done as much in its confiscation acts of Aug , 1861, and July, 1862, but its legislation did not have the popular appeal of the Emancipation Proclamation—despite the great limitations of the proclamation, for it did not affect bondsmen in those slave states which had continued loyal to the Union or in territory of the Confederacy which had been reconquered These were freed in other ways (see SLAVERY) Nor did the proclamation have any immediate effect in the vast area over which the Confederacy retained control, although Confederate leaders fearfully denounced it as an incitement to servile insurrection, which, however, did not occur. It did not even reflect Lincoln's own earnest solution for the slavery problem. He continued to favor gradual emancipation, to be undertaken voluntarily by the states, with Federal compensation to slaveholders, a plan he considered eminently just (which it was) in view of the common responsibility of North and South for the existence of slavery. The Emancipation Proclamation was chiefly a declaration of policy, which, it was hoped, would prove an opening wedge in depleting the South's great man-power reserve in slaves (hence the military necessity) and, equally important, would enhance the Union cause in the eyes of Europeans, especially the British. At home it was duly hailed by the radical abolitionists, but it cost Lincoln the support of many conservatives and undoubtedly figured in the Republican setback in the congressional elections of 1862. This was more than offset by the boost it gave the Union abroad, where, on the whole, it was warmly received, in combination with subsequent Union victories, it ended all hopes of the Confederacy for recognition from Britain and France. Doubts as to its constitutionality were later removed by the adoption of the Thirteenth Amendment

Emba (ĕm'bŭ), river, 410 mi. long, Kazakh SSR It flows southwest through a rich oil area into the Caspian Sea.

embalming (ĕmbä'mĭng, ĭm-), practice of preserving a body after death The custom was current among many ancient peoples and has survived among several remote groups. It was highly developed by the Egyptians, who believed it advantageous to the dead in an afterlife, it is said to have been suggested by the natural preservation of bodies in hot sands Although Egyptian embalming methods varied, bodies were almost always immersed for several weeks in a solution of carbonate of soda and were usually treated with spices and with resinous or bituminous materials Viscera were sometimes embalmed separately and either replaced in the body or preserved in canopic jars The custom of embalming was gradually discontinued in Egypt and ceased A D c 700. It is mentioned in the Bible and was practiced occasionally in Europe during the Middle Ages Modern methods originated in the 17th cent in attempts to preserve anatomical specimens Although practiced to a limited extent in Europe, the custom is most widespread in the United States Methods have been evolved by which a body can be preserved indefinitely, but most embalming is designed only to preserve the body until burial or cremation Embalming fluids, commonly containing formaldehyde, are pumped into the vascular system or body cavities or both Many states require embalming after death from contagious disease or if a body is to be transported before burial The use of toxic ingredients, e g , arsenic, zinc salts, and mercuric chloride, is commonly prohibited to prevent medico-legal complications that might arise in cases of death by poisoning See J H Eckels, *Modern Mortuary Science* (3d ed , 1948)

embargo (ĕmbär'gō), prohibition by a country of the departure of ships or certain types of goods from its ports Instances of confining all domestic ships to port are rare, and the EMBARGO ACT OF 1807 is the sole example in American history Neither is it any longer the practice to detain foreign ships as an act of REPRISAL designed to coerce diplomatic redress Embargoes on goods, however, are fairly common The United States has used them for economic ends, e g , in prohibiting the export of gold bullion in 1933. Strategic considerations motivated (1940) the American prohibition of export of goods (e g , high octane gasoline) needed for war. The United States has often used the embargo as a diplomatic weapon Thus, in 1912, the President was empowered to forbid the export of munitions to Latin America, and the NEUTRALITY ACT of 1936 gave him a similar power in regard to warring nations anywhere An embargo was imposed in the Spanish civil war (1936–39) pursuant to the act, but it was not applied in the Second Chino-Japanese War Embargoes were authorized by the Covenant of the League of Nations and were applied to some degree against Italy in the Italo-Ethiopian War (1935–36) Article 41 of the United Nations Charter permits embargoes in case of military aggression

Embargo Act of 1807, passed Dec 22, 1807, by the U S Congress in answer to the British ORDERS IN COUNCIL restricting neutral shipping and to Napoleon's opposing CONTINENTAL SYSTEM The U S merchant marine was hit by both, and Thomas Jefferson's administration undertook to answer by measures that would restrict neutral trade and thus show its importance and vindicate its rights The first attempt was the Nonimportation Act, passed April 18, 1806, forbidding the importation of specified British goods in order to force Great Britain to relax the rigorous rulings on cargoes and sailors (see IMPRESSMENT) The act was suspended, but the Embargo Act of 1807 was a bolder statement of the same idea It forbade all international trade to and from American ports, and Jefferson hoped that England and France would be persuaded of the value and the rights of a neutral commerce. In Jan , 1809, the prohibition was extended to inland waters and land commerce to halt the sky-rocketing trade with Canada. Merchants, sea captains, and sailors were naturally dismayed to find themselves without income and to see the ships rotting at the wharves. All sorts of dodges were used to circumvent the law.

The daring attempt to use economic pressure in a world at war was not successful. England and France stood firm, and not enough pressure could be brought to bear Enforcement was difficult, especially in New England, where merchants looked on the scheme as an attempt to defraud them of a livelihood When, in Jan , 1809, Congress, against much opposition, passed an act to make enforcement more rigid, there was a protesting outcry—again especially in New England—and the scheme had to be abandoned. On March 1, 1809, the embargo was superseded by the Non-intercourse Act Thus allowed resumption of all commercial intercourse except with England and France. Jefferson reluctantly accepted it Not unexpectedly, it failed to bring pressure on England and France In 1810 it was replaced by Macon's Bill No 2 (named after Nathaniel Macon), which merely authorized the President to restrict commerce to one of the warring countries if and when the other revoked the offensive measures against neutral commerce Thus the whole purpose of the embargo was effectually dissolved, and Jefferson's prestige was much hurt by the failure of his scheme See L M Sears, *Jefferson and the Embargo* (1927)

Embarras (ĕm'brō), river, 185 mi long, rising in E Illinois and flowing S, then SE, to the Wabash a few miles below Vincennes, Ind

embassy: see DIPLOMATIC SERVICE and EXTERRITORIALITY

ember days, in the Western Church, the Wednesday, Friday, and Saturday following the first Sunday in Lent, Whitsunday, Sept 14 (Exaltation of the Cross), and Dec 13 (St Lucy's Day) They are days of fasting to sanctify the season, and the ember Saturdays are especially appropriate for ordinations The ember days are of very ancient, and of uncertain, origin

embezzlement, wrongful use of another's property for one's own selfish ends The act could not be considered as LARCENY at common law because larceny is committed only when the property stolen is secured by a "felonious taking " Consequently, unfaithful servants, employees, agents, trustees, or guardians who misappropriated another's property could be sued only in the civil courts To remedy this situation statutes were passed in England and the United States which either make embezzlement a distinct crime or enlarge the definition of larceny in such a way as to include all cases of misappropriation of property in the lawful possession of the wrongdoer In most states of the United States, embezzlement is a FELONY The modern state laws are broad Under acts of Congress, stealing of letters by postmasters, clerks, and letter carriers is punishable as embezzlement

emblem, symbol representing membership in a group Emblems are usually used as heraldic devices in HERALDRY The cross, crescent, and star of David denote membership in religious groups Flags and heraldic animals (e g , the American eagle) are national emblems The fasces and hammer and sickle are political emblems The Tudor rose, originally a family emblem, eventually denoted a political group Colors may be emblematic (e g the Blues and the Greens in Byzantium, the Reds and the Whites in Russia) Among emblems of rank are crown, baton, mace, scepter, and cardinal's hat Some emblems are jocular, as the donkey and elephant in American politics

embolus (ĕm'bŭlus), clot or plug carried by the blood current from a larger to a smaller vessel, thereby occluding the smaller vessel Air bubbles, globules of fat, or aggregations of bacteria are examples of emboli The circulation may also become blocked by a fragment of a cancerous growth or by a portion which becomes separated from a thrombus (see THROMBOSIS) and is carried to the lung, forming a pulmonary embolus

embossing, process of producing by mechanical means designs or patterns in relief upon various materials, such as metal, wood, leather, fabrics, cardboard, and paper. The material is pressed between a pair of dies especially adapted therefor as to hardness, depth, and design, a felt counter or female die being employed for embossing fabrics, while metal, millboard, or cardboard is used for embossing metal, cardboard, or paper Leather for commercial bookbinding and decorative purposes, such as wall coverings and screens, and wood for furniture ornamentation are die stamped while wet, heat being applied for embossing the wood Embossing differs from other processes resulting in reliefs, such as repoussé, chasing, carving, and leather tooling, in being machine wrought.

embroidery, ornamental NEEDLEWORK applied to all varieties of fabrics and to leather and worked with all varieties of thread—linen, cotton, wool, silk, and gold thread and leather thongs. The art, probably antedating that of weaving, is exemplified in the decorated skin garments of the American Indians and the shell and feather work of central Africa All peoples used some type of needle very early. Needlework is mentioned in the Veda and in Exodus in the Bible and has been found on mummy wrappings of the 15th cent. B.C. Embroidery on filmy muslin and goldwork and silverwork on velvet, for trappings of state such as canopies and elephant housings, have been done in India from remotest times. Persia made famous gauzes threaded with gold; the art in China is stylized, unchanged for centuries Asia Minor produced sumptuous designs in gold and silver Richly embroidered fabrics were introduced into Europe through Byzantine channels From the 12th through the 14th cent was the great period of church embroidery The famous Opus Anglicanum dates from these centuries France, Germany, and Italy produced beautiful embroidery Monasteries and convents were kept busy adorning vestments and altarpieces Ateliers employing both men and women were founded In the 16th cent , secular embroidery came to the fore, and the Elizabethan period was famous for its household and costume embroidery—not only gowns, capes, and caps, but accessories of all kinds were embellished with fine needlework. Richly embroidered curtains and bed valances of this period are still preserved Under the Bourbon kings of France embroidery became a court art Louis XIV established embroiderers in his household to keep up the supply for his court The tools are simple, including frames large and adjustable for TAPESTRY or crewel work and small tambour frames for lighter pieces, with the different needles necessary for holding yarn, silk, or metal threads Stitches are numerous and are adapted to the type of work Turkey work, done with worsted yarn in imitation of Oriental carpets and rugs, was favored in the 16th cent Petit point or tent stitch, closely imitating tapestry, was the fashion from the 16th to the 18th century Needlepoint (any embroidery stitch applied on a canvas ground) has had a 20th-century revival Embroidery as an art declined with the advent of machinery Some of the lighter forms are still practiced, such as English or Madeira eyelet, Italian cutwork, French and Irish embroidery on lingerie, and the so-called peasant work The BAYEUX TAPESTRY is a famous example of embroidery See Grace Christie, *Embroidery and Tapestry Weaving* (1933 ed), *Mary Thomas's Embroidery Book* (1936).

embryo (ĕm'brō), name for the developing young of an animal or a plant Embryology is the science dealing with the development of the animal up to the time of hatching or of birth, but the exact period during which the young is called an embryo is not well defined In humans and other mammals the young in the later stages of prenatal development is called the fetus In all animals that reproduce through a union of a sperm cell with an egg cell, a series of mitotic divisions known as cleavage or segmentation begins soon after fertilization The succeeding stages vary much among the different groups of invertebrates Although there is more uniformity in vertebrate development, the changes in form and the processes involved in both groups are complex and difficult to outline in general terms Successive divisions during the early stages result, in many forms, in the arrangement of the cells to form a spherical mass called a blastula It is one layer of cells in thickness and has a hollow central cavity called the cleavage cavity or segmentation cavity An impushing of the blastula occurs, partially obliterating the cavity and forming a two-layered cuplike stage called the gastrula Its cavity is known as the archenteron or primitive gut The outer layer of cells is the ectoderm, and the inner the endoderm In simple invertebrate animals, e g , the sponges and jellyfish, these two layers become the chief functional tissues of the adult In higher forms a third layer, the mesoderm develops from one or both of the other two layers or from other cells, the organs and tissues of these forms therefore develop from three primary germ layers From the ectoderm develop the outer layers of the integument, outer skeletal structures (e g , scales, hoofs, hair, claws), the nervous system, parts of the sensory organs, and a number of other tissues in various animals Endoderm forms most of the tissues and organs of the alimentary tract, part of the respiratory tissue, and the reproductive organs From the mesoderm are developed muscular tissue, the lining of the body cavity, blood, teeth (except for the ectodermal enamel), cartilage, reproductive organs of some animals, and other tissues in certain animals Among vertebrates the process of gastrula formation is more complex than in the invertebrates. A number of embryonic membranes develop for performing special functions Among animals in which the egg contains much yolk, e g , birds, some fish, and reptiles, the embryo undergoes its early divisions on the surface of the yolk, and later the yolk becomes surrounded by membranes and is gradually used up by the developing animal. In the higher mammals there is little yolk and the whole egg divides Nourishment is secured through the placenta In the higher plants the divisions of the fertilized egg and the differentiation of the tissues to form the structures of the embryo occur within the ovule inside of the pistil. The embryo is enclosed within the seed which develops from the ovule.

Emden (ĕm'dŭn), city (pop. 31,748), Hanover, NW Germany, in East Friesland, a North Sea port at the mouth of the Ems river and on the Dortmund-Ems and Ems-Jade canals The third largest seaport of Germany after Hamburg and Bremen, it has large shipyards and herring fisheries and has considerable transit trade Dating from the 10th cent., Emden reached its flower in the 16th cent It passed from East Friesland to Prussia (1744) and to Hanover (1815) All its historic buildings—but not the port installations—were heavily damaged in the Second World War

emerald, the green variety of BERYL, of which aquamarine is the blue variety The emerald was highly esteemed in antiquity, both genuine and imitation emeralds were used in early Egypt The finest emeralds are found in South America in Colombia The gem was a favorite in pre-Columbian Mexico and Peru, where it was cut in intricate designs with great skill The treasure taken to Spain by the conquerors included emeralds. Good emeralds are highly valued The **Oriental emerald** is a different gem, the transparent green variety of corundum. The blue variety is sapphire, the red, ruby

Emerson, Ralph Waldo, 1803–82, American poet and essayist, b Boston His father, William Emerson, the descendant of New England clergymen, was minister of the First Unitarian Church in Boston Ralph was in school at the age of two, and his early years were filled with books and a daily routine of studious and frugal home life After his father's death in 1811, Ralph's aunt, Mary Moody Emerson, brilliant and eccentric, became his confidante and stimulated him to courageous and independent thinking At Harvard (1817–21) he was an undistinguished scholar In his junior year he began copying passages which interested him and recording his thoughts in the since-famous *Journal* Precarious health hindered his studies at the Harvard Divinity School in 1825, and in 1826, after being "approbated to preach," he had to go South because of incipient tuberculosis In 1829 he became minister of the Old North Church in Boston (Second Unitarian) In the same year he married Ellen Tucker, who died of tuberculosis in 1831 Disagreeing with his congregation as to the sacrament of the Lord's Supper, Emerson retired in 1832 from his only pastorate On a trip to Europe at this time, he began his long friendship with Carlyle and met Coleridge and Wordsworth. He was already reading Elizabethan and contemporary English literature, Plato and the Neoplatonists, the sacred books of the East, and Swedenborg and Montaigne, and his English friends turned him toward the German idealists At home he began to give lectures He bought a house in Concord, Mass (1834), to which in 1835 he brought Lydia Jackson as his second wife, and here his four children were born The earliest published product of his stubborn search to express his belief in the worth of the individual was *Nature* (1836) Two addresses at Harvard first attracted really wide attention to his views in the Phi Beta Kappa oration in 1837 titled *The American Scholar*, he called for independence from European cultural leadership, in a lecture at the Harvard Divinity School in 1838, his admonition that one could find redemption only in one's own soul was taken to mean that he repudiated Christianity and caused such indignation that he was not invited to Harvard again until, in 1866, the college granted him the LL D degree In 1836 Emerson had helped form a conversation group interested in TRANSCENDENTALISM He was not regarded by the group as its official spokesman, though the members read his work with appreciation Emerson contributed to their magazine, the *Dial*, and was editor himself in 1842–44 in a futile attempt to keep the magazine going In 1847 the first collection of his poems appeared Emerson always regarded himself as essentially a poet, in spite of his difficulty in writing structurally correct verse Among his poems, "Threnody" (on the death of his son Waldo), "Brahma," "The Problem," "The Rhodora," and "The Concord Hymn" are perhaps best known His prose is charged with passages of poetic insight, but it was his winter lecture tours which first made him famous among his contemporaries To write a lecture he culled from his *Journal* appropriate quotations and sentences, which he wove into a related whole His published works were largely his lectures, somewhat polished and revised His *Essays* (first series, 1841, second, 1844) expressed some of his transcendental beliefs in "The Over-Soul," "Compensation," and "Self-Reliance " After his second trip to England in 1847, he gave lectures later published as *English Traits* (1856) A new edition of *Nature* appeared in 1849, a collection *Addresses and Lectures* in 1849, and *Representative Men* in 1850 In the '50s his concern with the antislavery issue and national events increased The material of his later annual lecture tours was largely contained in *The Conduct of Life* (1860) and *Society and Solitude* (1870) After 1866 he felt his own inability to produce new work, though he gave a series of talks, *Natural History of Intellect* (1870), at Harvard and published *Letters and Social Aims* (1876) He spent his last decade in a slow decline of mental capacity, brightened by journeys to California (1871) and Europe (1872) and by the expression of affection

shown by his friends and townspeople when they rebuilt the home that burned in 1872 A check list of all Emerson's published letters is included in the *Letters* (ed. by R. L Rusk, 6 vols., 1939) See *The Heart of Emerson's Journals* (ed by Bliss Perry, 1926), biographies by G W Cooke (1881), J E Cabot (1887), G E Woodberry (1907), O W. Firkins (1915), Van Wyck Brooks (1932), and R L Rusk (1949) Emerson's son, **Edward Waldo Emerson,** 1844–1930, b Concord, Mass., grad Harvard and Harvard Medical School, practiced medicine in Concord until his father's death After 1882 he devoted himself to editing and to writing about the literary men of his father's generation His *Emerson in Concord* (1889) and *Early Years of the Saturday Club* (1918) contain good biographical material He was editor of the Centenary edition (12 vols, 1903–4, the most complete) of Emerson's works, and, with W E Forbes, of the *Journals of Ralph Waldo Emerson* (10 vols, 1909–14)

Emerson, borough (pop 1,487), NE N J., N of Hackensack, settled 1875, inc 1909.

emery see CORUNDUM

Emeryville, industrial town (pop 2,521), W Calif, on San Francisco Bay and adjoining Oakland on the north, inc 1896 It has factories, including plants making paper and electrical products The San Francisco–Oakland Bay Bridge has an approach from Emeryville

Emesa see HOMS, Syria

emetic (ĭmĕ'tĭk), a substance which produces vomiting Emetics may act upon the controlling nerve center in the medulla and so produce the required effect (indirect or systemic emetics), or they may act immediately upon the stomach walls by irritation (direct or gastric emetics) The chief indirect emetics are apomorphine, tartar emetic, ipecacuanha, senega, and squill Direct emetics include alum, ammonium carbonate, zinc sulphate, common salt, mustard, and warm water

emeu · see EMU

Emigrant Aid Company, formed in 1854 to promote organized antislavery immigration to Kansas from the Northeast Eli Thayer conceived the plan as early as March, 1854, even before the Kansas-Nebraska Bill became law, and in April, Massachusetts chartered the Massachusetts Emigrant Aid Company This organization, however, proved defective and was soon superseded by the New England Emigrant Aid Company Many other Kansas aid societies were subsequently formed throughout the North, e g , the Kansas Emigrant Aid Society of Northern Ohio and the New York Kansas League, but the New England group was preeminent in the field, and the name Emigrant Aid Company is associated exclusively with it Amos A Lawrence served as treasurer of the company, which, despite its earnest soliciting of the support of clergymen throughout New England, remained in bad financial condition until Nov, 1855, when a notably successful campaign to raise money was launched For Thayer, who was vice president of the company, the venture was not only philanthropic but profitable As stock-subscription agent he received 10 percent of all the money he collected, provided he gathered in $20,000 or more Thayer easily exceeded that figure, for by May, 1856, the company had received over $100,000 The company sent out an aggregate of 1,240 settlers under agents such as Charles Robinson, who founded Lawrence and other towns in Kansas Southerners, at first confident that Kansas was safe for slavery, were moved to organize similar, though proslavery, societies of their own, but without success The ill-advised show of force in sacking Lawrence (May 21, 1856) only stimulated the Kansas aid movement further Delegates from 12 states and Kansas convened at Buffalo, N Y., in July, 1856, and formed a National Kansas Committee Its project of establishing Kansas aid committees in every state, county, and town throughout the North was never realized For one thing the national committee was divided, one group, in which Lawrence was most conspicuous, advocated peaceful protest against proslavery excesses in Kansas and financial help to the Free Staters, while the other, led by extreme abolitionists such as Gerrit Smith and the Rev Thomas W Higginson, urged the creation of state military forces to be used against Federal troops in Kansas if necessary This group also proposed disunion at a convention in Worcester in Jan , 1857 Although the New England Emigrant Aid Company continued in existence for many years, its real work was over and the whole Kansas aid movement was virtually ended by 1857. Actually, the company and its counterparts in other states had little to do with making Kansas a free state. That was mainly accomplished by settlers from the Western states But the movement made a deep impression on public opinion, North and South, and it is claimed that the bitterness and hate it engendered helped bring on the Civil War

emigration. see IMMIGRATION and MIGRATION.

émigré (ā'mēgrā'), in French history, royalist who fled from the French Revolution and took up residence in foreign lands. The émigrés were principally members of the higher nobility and of the clergy. Immediately after the fall of the Bastille (1789) the exodus of the princes of the blood began, and a steady stream flowed out of France after that date Louis XVI himself tried to flee France but was arrested at Varennes (1791) Many of the émigrés gathered about Prince Louis Joseph de Condé and formed a counterrevolutionary army The Convention decreed against them perpetual banishment and confiscation of their goods The rise of Napoleon marked a turn of fortune for the émigrés, who were readmitted to France after 1802 with restrictions Many rose to power in the empire With the Restoration, they all returned and became a powerful reactionary group working against the moderate policies of Louis XVIII The king's brother favored them, and when he ascended the throne as Charles X, an attempt was made to restore to the nobility their confiscated estates The pro-émigré (or more properly ultraroyalist) legislation helped bring on the July Revolution of 1830 The term *émigré* is used of the noble refugees from any revolution

Emilia-Romagna (āmē'lyā-rōmā'nyā), region (8,542 sq mi , pop 3,338,721), N central Italy A generally fertile plain bounded in the north by the Po, in the east by the Adriatic, and in the south and west by the Apennines, it is divided into eight provinces, named after their chief cities Bologna, Ferrara, Modena, Parma, Piacenza, and Reggio nell' Emilia are in Emilia, Forlì and Ravenna lie in historic Romagna Bologna is the regional capital Cereals, sugar beets, hemp, rice, and grapes are the chief products, cattle raising is of some importance The only important industries are cheese production and sugar refining Emilia takes its name from the Aemilian Way, a Roman road crossing the region from Rimini to Piacenza After the fall of Rome the region was conquered (5th cent) by the Lombards, most of present Romagna and Bologna fell under Byzantine rule in the 6th cent and from then on had its own history Emilia, divided into several duchies and counties, was conquered by the Franks in the 8th cent , but its subsequent history is that of its cities By the 17th cent the duchy of Parma and Piacenza, under the Farnese family, and the duchy of Modena, under the house of Este, covered virtually all the region not included in the Papal States In 1860 the whole region was annexed to Sardinia, which in 1861 became the kingdom of Italy

Emims (ĕ'mĭmz), primitive Moabitish tribe of giants. Gen 14 5, Deut 2 10

Eminence, city (pop 1,411), N Ky , NW of Frankfort, in a noted stock-raising area

Eminescu, Mihail (mēhīl' yĕmēnĕ'skōō), 1850–89, foremost Rumanian poet, b Moldavia, whose name was originally Mihail Iminovici His poems, first published in periodicals and widely translated into European languages, were collected in 1880 Selections from his work appeared in English in 1930

Emin Pasha (ā'mĭn pa'shä), 1840–92, German explorer, whose original name was Eduard Schnitzer A physician, he served the Turkish government in Albania and Egypt He joined (1876) Gen Charles Gordon's forces in the Sudan as medical officer In 1878 he became the governor of Equatoria province (southernmost part of Anglo-Egyptian Sudan) When news reached Europe in the late 1880s that his life was apparently endangered by the Mahdist uprising, a rescue expedition under Henry Stanley was dispatched, and Emin was brought (1889) to Mombasa He was murdered while engaged in exploration for Germany in the region of Lake Tanganyika See Henry Stanley, *In Darkest Africa* (1890)

Emmanuel. For Byzantine and Portuguese rulers thus named, see MANUEL

Emmanuel, in the Bible see IMMANUEL

Emmanuel College: see CAMBRIDGE UNIVERSITY

Emmanuel Philibert, 1528–80, duke of Savoy (1553–80), called Ironhead He succeeded his father, Charles III, who had been dispossessed of his duchy by Francis I of France and by the Swiss in 1536 Emmanuel Philibert entered the service of Emperor Charles V and later served Philip II of Spain. As Philip's lieutenant general in Flanders he won a brilliant victory over the French at Saint-Quentin (1557) and captured the French commander, Anne de Montmorency The Treaty of Cateau-Cambrésis (1559) restored most of Savoy (except Vaud and Geneva, which remained Swiss) to Emmanuel Philibert, who in the same year married Margaret of Valois, sister of Henry II of France Savoy was in deplorable condition, but the duke, with great energy and wisdom, completely reorganized the courts, finances, educational system, industry, commerce, and army of his state His skillful diplomacy and Savoy of the remaining French and Spanish garrisons and secured peaceful relations with the Swiss. Toward the Waldenses he displayed tolerance. By making Turin his capital, he shifted the center of gravity of his duchy from Savoy proper to Piedmont, thus making it an Italian rather than a French state. He was succeeded by his son, Charles Emmanuel I

Emmaus (ĕm'ā-ŭs, ĕmā'ŭs) **1 Place,** outside of Jerusalem, where Cleopas and another disciple met the risen Christ. Luke 24.13. **2 Place,** where Judas Maccabeus defeated Gorgias. 1 Mac 3 40,57; 4.3–27; 9 50 It is now called Amwas and lies halfway from Jerusalem to Jaffa, Palestine The two places cannot be identical without correction of the text

Emmaus (ĕm'ā-ŭs), industrial borough (pop 6,731), E Pa , S of Allentown, settled c 1740 by Moravians, inc 1859 It manufactures commercial gases and rubber products and has textile mills. German folkways are preserved here

Emma Willard School, at Troy, N Y.; nonsectarian, for girls, opened 1814 as Middlebury (Vt.) Seminary, chartered 1819, moved to Waterford, N Y , 1819, to Troy 1821 From 1821 to 1892 it was called Troy Female Seminary. Founded by Emma Willard, it preceded the first women's colleges as an experiment in higher education In 1910 Margaret O S Sage gave the school new buildings, the old buildings were turned over to Russell Sage College in 1916 The Emma Willard School occupies a hilly site in the eastern part of the city

Emmen (ĕ'mun), municipality (pop. 53,590), Drenthe prov , NE Netherlands. It is an agricultural center

Emmental (ĕ'mŭntal), valley of the Emme river, Bern canton, Switzerland Devoted to agriculture and cattle raising, it produces some of the finest cheese in Switzerland

Emmet, Lydia Field, 1866–, American miniature and portrait painter, b New Rochelle, N Y., student of Bouguereau and Tony Robert-Fleury, Paris, and William Chase, New York Her work has received many awards

Emmet, Robert, 1778–1803, Irish patriot He studied at Trinity College, Dublin, but was forced to leave (1798) because of his nationalist sympathies He spent some time (1800–1802) in France planning, with other exiled United Irishmen, a French-aided uprising in Ireland Emmet interviewed Napoleon, who encouraged him in his plans He returned to Ireland and scheduled an uprising for Aug , 1803 A premature explosion advanced the date to July 23. Emmet, with a hundred or so disorderly men, started a march on Dublin Castle The rebellion turned into a brawl, and Emmet fled, but returned to Dublin a few days later, partly to be near Sarah Curran, daughter of John Philpot Curran He was captured, tried, and hanged Leonard McNally, his attorney, was in the pay of the crown, and many of Emmet's associates were informers for the British government Emmet became a great hero of Irish patriots, largely on the basis of his stirring speech from the scaffold He inspired Thomas Moore's songs beginning, "Oh, breathe not his name" and "She is far from the land where her young hero sleeps " See biography by Helen Landreth (1948)

Emmet, Thomas Addis, 1764–1827, Irish-American lawyer, b Cork, Ireland, grad Trinity College, Dublin, 1782, brother of Robert Emmet He was trained in medicine at the Univ of Edinburgh but abandoned that field for law and gained a brilliant reputation as a barrister in Ireland, particularly in defending members of the Society of United Irishmen Imprisoned in 1798 for his activities in the Irish cause, he was later released on condition of perpetual exile and came to the United States in 1804 As a lawyer in New York, he came to be known as one of the most notable of American lawyers His interest in the Irish cause continued, and he also was of invaluable assistance to many of the Irish immigrants who came to America

Emmetsburg, city (pop 3,374), co seat of Palo Alto co , N Iowa on the West Fork of the Des Moines river near Medium Lake, founded 1856

Emmett, Daniel Decatur, 1815–1904, American song writer, b Mt Vernon, Ohio He sang as a blackface minstrel and founded the Virginia Minstrels in 1842 He is most famous for his songs *Old Dan Tucker* (c 1830) and DIXIE (1859) See C. A Browne, *Our National Ballads* (1931)

Emmett, city (pop 3,203), co seat of Gem co , SW Idaho, on the Payette river and SE of Payette, founded 1864 as a trading post, inc as a village 1900, as a city 1909 The region about the city is within the Boise PROJECT and grows cherries and other fruit There is some lumbering

Emmitsburg, town (pop 1,412), N Md , near the Pa boundary NE of Hagerstown, founded around a convent established by Elizabeth Ann Seton in 1809 Mt St Mary's College and St Joseph's College are here Mother Seton is buried in the Chapel at St Joseph's

Emmons, Ebenezer, 1799–1863, American geologist, b Middlefield, Mass , grad Williams, 1818 He taught at Williams, at Rensselaer Institute, and at Albany Medical College, served the New York state geological survey (1838–42), and was state geologist of North Carolina (from 1851). Emmons did notable pioneer work in paleozoic stratigraphy His theory that the Taconic rock system was older than the Silurian was for a time discredited, but later found support

Emmons, Samuel Franklin, 1841–1911, American geologist, b. Boston, grad Harvard, 1861. He studied abroad, joined (1867) the survey of the 40th parallel under Clarence King, and from 1879 was geologist in charge of the Colorado division of

the U. S Geological Survey. His chief works were *Descriptive Geology* (with Arnold Hague, 1877) and *The Geology and Mining Industry of Leadville, Colorado* (1886)

Emmor (ĕm'-), the same as HAMOR

Emory, William Hemsley, 1811–87, American general, b. Queen Annes co , Md , grad West Point, 1831. Chief topographical engineer in the Western expedition of Gen S W KEARNY in the Mexican War, he won two brevets After that war he worked on the survey of the new U S –Mexican boundaries and later served in the cavalry on the Western frontier In the Civil War, Emory was made a brigadier general of volunteers (1862), he fought in the Peninsular campaign and commanded under N P Banks in the Dept of the Gulf (1862–64) He led the 19th Corps in Sheridan's operations in the Shenandoah Valley (1864–65) In 1876 he was retired from the army with the rank of brigadier general His engineering reports were published by the government

Emory University, near Atlanta, Ga , mainly for men, chartered 1836, opened 1838 by Methodists at Oxford as a college, became a university 1915, moved near Atlanta 1919 It includes a college of arts and sciences and schools of business administration, dentistry, law, library science, theology, and medicine It cooperates with Agnes Scott College (for women, 1889), at near-by Decatur

emotion, term commonly and loosely used as synonymous with feeling In psychology, however, it is considered as a response to stimuli which involves characteristic physiological changes (as an increase in pulse rate, a rise in temperature, a greater or less activity of certain glands, a change in rate of breathing, and various other activities) and which tends in itself to stimulate the individual as a whole, or in part, to further activity Fear, love, and anger are usually considered the three primary responses of this kind They are apparently aroused either directly by some external environmental stimulus or indirectly by some internal one through memory As individuals mature, specific stimuli no longer provoke the same emotion in every person, nor is there any universal manner of expressing a given emotion In varying cultures emotional expression must at least be partially learned The development of PSYCHOSOMATIC medicine has emphasized the physiological role of emotions, demonstrating that tension from unrelieved emotions may be the underlying cause of physical disorders See C A Ruckmick, *Psychology of Feeling and Emotion* (1936)

empathy (ĕm'puthē), theory to explain the imitative responses, both emotional and kinesthetic, of the human observer to perceived objects It originated with the German psychologist Theodor Lipps in the term *Einfuhlung* The theory hypothesized that understanding of others depends upon the capacity to imitate behavior In general, however, empathy holds that the imitative response is unconscious, and while it may coexist with sympathy, it can be distinguished from sympathy as a sharing of activity or emotion rather than a sharing of attitude Empathy also has an objective reference and physical manifestations Examples of empathy may be found in the imitation by an audience of the facial and bodily gesture of the actors, in the reproduction of muscular movements by the spectators at athletic events, and in the perception by the observer of the mood of a work of art

Empedocles (ĕmpĕ'dŭklēz), c 495–c 435 B C , Greek philosopher, b Acragas (present Agrigento), Sicily Leader of the democratic faction in his native city, he was offered the crown, which he refused A turn in political fortunes drove him into exile with his followers He taught that there are four elements—fire, water, earth, and air—composed of material particles, which are undivided and indestructible He postulated two opposing forces —harmony and discord—which act upon the lifeless elements, forcing the particles into varying combinations and then destroying those combinations, thus creating multiplicity and change in the world He believed in the indestructibility of matter, teaching that things as a whole arise and pass away, but that the material particles of which they are composed are undivided and indestructible

emperor [Latin *imperator*=one holding supreme power, especially applied to generals], the head of an empire In the Roman republic, the imperator held the chief military command The title became honorific and was accorded by acclamation Taken by Caesar and Augustus in reference to their military positions, it was adopted by all their successors During the Middle Ages the Holy Roman emperors perpetuated the title as claimants to the Roman political succession and added definite religious connotations to the name. In its most lasting sense, the title lost meaning with the abolition of the Holy Roman Empire in 1806, though the Roman heritage, evoked by Peter the Great in Russia, was also revered in the empire of Napoleon Its subsequent use by European monarchs in Austria, France, Germany, and England (Indian Empire, 1877–1947) was in the strict sense incorrect, as was its use by various rulers in the Americas—Brazil (1822–89), Mexico by Iturbide and Maximilian, and Haiti by Christophe and Dessalines. In a more general sense the title has been used to describe a non-European ruler of a considerable territory, e g , the emperor of Japan, the emperor of Ethiopia

Empire State Building, in central Manhattan, New York city, on Fifth Ave between 33d St. and 34th St , built 1930–31 The tallest building in the world, it is 1,250 ft high and has 102 stories From the observatories atop it there is a 50-mile view on a clear day The name is derived from a nickname of New York state

Empire style, manner of interior decoration evolved in France from the DIRECTOIRE STYLE and designated *Empire* by reason of its identification with the reign of Napoleon I The Empire expression of the classic revival already evident during the Louis XVI period emphasized Roman forms marked by the imperial grandeur with which Napoleon had determined to invest his reign It received its direction from J L DAVID and from the emperor's architects, PERCIER and FONTAINE Traditional classic motifs were supplemented by symbols of imperial pomp, representations of military trophies, the monogram of the emperor, and his emblem, the bee Walls and ceilings were simple, colors strong, even crude Although rosewood, ebony, and cheaper woods treated to imitate ebony were used, the staple wood was mahogany, solid or veneer Brass and ormolu mounts were the chief embellishment In vogue were pedestal tables and beds designed to fit sideways against a wall, e g , the gondola, or sleigh, bed The style, although characterful and robust, has been criticized for unimaginative copying of classic forms The newly rich clientele demanded grandiose effects in place of the artistic detail appreciated by the cultivated taste of the old regime In its later phase the style deteriorated and c 1840 fell into disuse A simplified form was adopted in England and the United States, a German bourgeois adaptation is known as Biedermeier The style of the first Empire is to be distinguished from that of the second (1852–70), which was heavy, often incongruous

empiricism (ĕmpĭr'ĭsĭzm) [Gr , =experience], philosophical doctrine that all knowledge is derived from experience, i e , from sense perception Empiricism denies the existence of innate ideas or a priori truths and explains all abstract ideas as merely names (NOMINALISM) or shorthand devices, for dealing economically with groups of particular objects The doctrine opposed to this is rationalism Empiricism denies the possibility of certain knowledge, holding that generalizations (based on experience) can never yield more than a greater or less degree of probability Empiricism in one form or another was the teaching of Bacon, Hobbes, Locke, Berkeley, Hume, J S. Mill, and a great many others The term *empiricism* can be used in a broader sense Some thoroughgoing mystics claim that they are empiricists, because, they say, their conviction of union with their mystical object (usually God) is based on a sense perception of it, not on any intellectual process

employee, one who works for a salary in the service of an employer An employee's status may vary greatly In the beginning of the factory system he was little more than a cog in the machine Labor and humanitarian organizations have forced employers to grant better working conditions, wages, and hours, and some gains have been legally protected Employee representation in managerial councils, employee stock ownership plans, employee insurance and saving plans, and personnel departments, as well as labor unions, are among the developments tending to give the worker more control over his job and more security Employee representation in the United States started with shop committees which presented workers' grievances The National War Labor Board, the U S Railroad Administration, and the Shipbuilding Labor Adjustment Board in the First World War used the shop committee in adjusting labor disputes Some businesses now give employees only advisory power, some provide for employee representation on bodies settling labor disputes, some have employee representation on the company board of directors, and many allow representation from labor unions not subject to the management The plan of allowing employees to purchase stock has been practiced by many corporations, in the United States it is more widely used than the similar English scheme of copartnership or the giving of shares as bonuses Under handicraft production, the apprentice system of the guilds trained the worker. The training of employees for factory work has been less systematic A few companies c 1890 set up corporation schools or educational departments The directors of the schools rarely had enough experience for thorough instruction, and the emphasis is now upon training supervisors who give informal but thorough instruction to the worker on the job Public trade and industrial schools have been widely developed for generalized industrial training, but more specific aspects must be left to the company Personnel departments employ men to fit the various jobs, relocate them in other departments if they are not successful in one; keep records of work, promptness, and relations with other employees, and frequently supervise the training of new workers In the Second World War the U S government established (1942) a Committee on Fair Employment Practices to eliminate race and religious discrimination in employment It was terminated in 1946, but a few states have passed laws against discrimination See also LABOR TURNOVER See G S Watkins, *Labor Problems* (3d ed , 1940)

employers' liability see WORKMEN'S COMPENSATION

employment bureau, establishment for bringing together the employer offering work and the employee seeking it In Europe the public exchange is most common, in the United States, although many large cities and states and even the Federal government have established free agencies, the private bureau, charging a fee, is perhaps more characteristic In England the first employment bureau was opened in 1855 at Egham A national system was established in 1909 When the Ministry of Labour was founded in 1917, both unemployment insurance and the employment exchanges were transferred to it The exchanges charge no fees In Germany local public exchanges were founded as early as 1883 France has had public employment agencies since 1916 The International Labor Conference of the League of Nations in 1919 included in the convention on unemployment an article providing that ratifying states would establish free public labor exchanges In the United States the first state regulation of private employment bureaus was in Massachusetts in 1848, and Wisconsin and Minnesota were requiring municipal licensing by 1855 Private fee-charging agencies are prohibited only in Idaho Regulations and required licensing have been enacted in 41 states Misleading advertising, misrepresentation, fraud, and fee-splitting with employers are prohibited, some states try to regulate fees, many require agencies to post notices of strikes and lockouts or otherwise inform applicants of labor disputes The first state agency was established in 1890 in Ohio The Federal government in 1907 opened offices in 18 zones under the Bureau of Immigration and Naturalization In 1918 the Employment Service was established as a unit in the Dept of Labor It cooperated with or replaced many state and local bureaus, and 832 offices were opened by Oct , 1918 By the time the war ended, the service was becoming efficient, but decreasing appropriations and considerable opposition rendered it practically ineffective In June, 1933, it was reestablished as part of the Dept of Labor Its functions as defined in the bill were to develop a national system of public employment offices throughout the country, furnish information as to the opportunities of employment, and maintain a system for clearing labor among the several states In Jan , 1942, the state employment services were brought directly under Federal operation, and a few months later the entire U S Employment Service was incorporated into the War Manpower Commission .While the war lasted, the agency was mainly preoccupied with the channelization of labor into war industries In Sept , 1945, after the liquidation of the War Manpower Commission, the U S Employment Service was transferred back to the Dept of Labor In July, 1946, Congress turned the public offices back to the states Two years later (July, 1948), the U S Employment Service was transferred from the Dept of Labor to the Federal Security Agency and placed within that administration's Bureau of Employment Security See J B Seymour, *The British Employment Exchange* (1928), S M Harrison, *Public Employment Offices* (1924)

Empoli (ĕm'pōlē), town (pop 12,534), Tuscany, central Italy, on the Arno It has varied manufactures Its cathedral dates in part from the 11th cent

Emporia (ĕmpō'rēu) **1** City (pop 13,188), co seat of Lyon co , E central Kansas, between the Neosho and the Cottonwood and SW of Topeka, founded 1857, inc 1870 A railroad center, chief commercial city of a large dairying and farming area, it has grain elevators, stockyards, and various manufactures A dam and reservoir (completed 1938) in Kahola Valley supply the city with water William Allen WHITE made the Emporia *Gazette* nationally known The College of Emporia (Presbyterian, coeducational, 1882) and Kansas State Teachers College (1863) are here **2** Town (pop 2,735), S Va , on the Meherrin river and S of Petersburg, near the N C line, in a cotton, lumber, and peanut area, inc 1887 The courthouse of Greensville co here dates from 1787

Emporium, industrial borough (pop 3,775), co seat of Cameron co , N Pa , surrounded by mountains NE of Ridgway, settled 1810, laid out 1861, inc 1864 It produces electric and leather goods.

Ems or **Bad Ems** (bät' ĕms'), town (pop. 8,454), Hesse, W Germany, on the Lahn river and near Nassau After 1945 it was incorporated into the French-occupied and newly founded state of Rhineland-Palatinate It is one of the most famous and oldest watering places of Europe, its springs are probably those described by Pliny.

Ems, river, 208 mi long, NW Germany, rising near Paderborn and flowing NW into the North Sea near Emden Its wide mouth is called the Dollart The Ems is paralleled for much of its course by the DORTMUND-EMS CANAL In the Emsland, as the region about its lower course is called, oil and natural gas were discovered after 1940

Ems dispatch. In June, 1870, the throne of Spain was offered to Prince Leopold of Hohenzollern-Sigmaringen, a relative of King William I of Prussia (later Emperor William I) Leopold at first accepted the candidacy, but withdrew it in July after the French government had protested During these transactions William I and Otto von Bismarck were taking the waters at Ems, Germany Here the French ambassador, Comte Benedetti, in an interview with the king, demanded William's guarantee that never in the future should a Hohenzollern seek the candidacy to the Spanish throne William flatly rejected this unusual request Bismarck, intent on provoking war with France, made the conversation public (July 12) in his celebrated Ems dispatch, which —by skillful editing—he worded in a manner thoroughly insulting to the French France declared war on July 19, and the Franco-Prussian War began

Emser, Hieronymus (hĕ"rō'nōōmōōs ĕm'zur), 1477–1527, German Roman Catholic theologian He was secretary to the elector of Saxony and urged reform of clerical abuse In 1519 his enmity with Luther began, he and the reformer indulged in the most violent invective, mainly on the subject of Luther's translation of the New Testament Emser made a translation in 1527

Emsworth, residential borough (pop 2,765), SW Pa., on the Ohio and NW of Pittsburgh, settled 1803, inc 1897.

emu or **emeu** (both ē'mū), large flightless bird of Australia, related to the CASSOWARY and the ostrich It is 5 to 6 ft tall and a very swift runner The feathered head and neck bear no wattles Six or seven dark green eggs are laid in a sandy pit They are incubated by the male and require 56 days to hatch The emu is easily tamed Only two species are known, and the bird is in danger of extinction.

emulsion: see SUSPENSION

Enam (ē'–), city, SW Palestine Joshua 15 34

Enambuc, Pierre Belain d'. see ESNAMBUC

enamel, a siliceous substance fused upon metal It may be so compounded as to be transparent or opaque and with or without color, but usually it is employed to add color for decoration, as in CLOISONNÉ It is the same vitreous GLAZE, of prehistoric origin, which is used for pottery, the constituents being easily fusible and comprising sodium or potassium borates and silicates and lead, with the inclusion of a metallic oxide to produce the desired color Applied dry or moist, it is subsequently placed in a muffle and subjected to moderate temperature in an enamel furnace See PAINT

enamelware, commodities or utensils having a metal foundation and a glaze coating applied by fusion Many appliances, especially for the kitchen, nursery, and bathroom, are made by this process, which produces a surface resistant to acids and rust and easy to clean, although it becomes chipped or cracked by extremes of temperature Foods tend to stick in enamelware utensils because of the comparatively porous surface The metal base (of sheet iron or steel or of cast iron) is cut, stamped, or drawn into the desired shapes and then is annealed and pickled to remove impurities The glaze is practically the same as glass and is colored and made opaque by the use of metallic oxides The mineral ingredients are fused and the molten glass drawn off into cold water, in which it contracts so rapidly as to fall into small particles (called frit) The pulverized frit is mixed with clay and water and aged The quality of enamelware depends on the ingredients of the glaze and the number of coats applied The metal base is usually first dipped in glaze made dark blue by cobalt oxide, which has an affinity for iron and bonds the metal with the outer coats It is fused into the pores of the metal at temperatures of from 1400°F to 1800°F Subsequent coats are similarly applied on sheet metal On cast iron, the glaze in powder form is sifted on the red-hot metal and then fused

Enan (ē'–), prince of Naphtali Num. 1 15.

Enare, lake, Finland see INARI

encaustic, painting medium in which the binder for the pigment is wax or wax and resin In the best encaustic painting the palette and spatula are warmed to keep the color soft Examples of encaustic tomb portraits from Roman Egypt bear witness to the durability of the medium, which is thought to have been widely used in ancient times Encaustic painting lacks the facility of oil painting, which it somewhat resembles, and has been practiced rarely in Western art. A few 20th-century painters, however, have revived its use.

encephalitis lethargica: see SLEEPING SICKNESS

Enchanted Mesa, steep-sided mesa, central N.Mex., near the pueblo of Acoma. Acoma legend says it was the home of their people until earthquake destroyed the only approach. Investigation does not support the legend It is called Mesa Encantada in Spanish and Katsimo by the Indians.

enchantment: see INCANTATION and MAGIC

Encina or **Enzina, Juan del** (both hwän' dĕl ĕnthē'nä), 1469?–c 1530, Spanish dramatist, musician, and poet. He spent many years in the service of the duke of Alba and lived in Italy There one of his plays, *Placida y Victoriano,* was given in Rome in the year 1513 He became a priest and went on a pilgrimage to Jerusalem The *Cancionero,* published in Salamanca in 1496, contains his musical and lyrical compositions He is one of the precursors of the theater of Lope de Vega The best known of his dramatic pieces are called *Églogas* [eclogues]

Enciso, Martín Fernández de (märtēn' fĕrnan'dāth dā ĕnthē'sō), fl 1509–19, Spanish conquistador and geographer Commanding the supply ship for the colony planted (1509) near Cartagena by OJEDA, he met the discouraged men who had abandoned the settlement and persuaded them to found a new one in Darien There NICUESA had earlier failed in planting a colony Enciso, unable to govern satisfactorily, was deposed by Vasco Núñez de BALBOA and sent to Spain Enciso's complaints led to the appointment of Pedro ARIAS DE ÁVILA as governor, and with him Enciso returned (1514) In 1519 appeared his *Suma de geografía,* an excellent commentary on the flora and fauna he had observed in the New World

Encke, Johann Franz (yō'hän' fränts' ĕng'kù), 1791–1865, German astronomer. He was assistant (1816–22) and director (1822–25) of the observatory at Seeberg (near Gotha) and director (from 1825) of the Berlin Observatory He is known for his study of records of the orbit of the comet of 1680 and for calculations, based on transits of Venus, of the earth's distance from the sun Encke's comet (discovered by J L Pons in 1818) was named for him because he calculated its orbit, finding the period of recurrence to be 3 3 years, and accurately predicted the date of its return

enclosure of land see INCLOSURE

encomienda (änkōmyän'dä), system of tributory labor established in Spanish America Developed as a means of securing an adequate and cheap labor supply, the encomienda was first used over the conquered Moors of Spain Transplanted to the New World, it gave the conquistador complete control over the Indians by requiring them to pay tribute from the lands, which were granted to the *encomendero* by the Spanish crown Often the Indian rendered personal services as well In return he received the protection of the owner and the right to use the land for his own subsistence When first applied in the West Indies, the system wrought extreme hardship and resulted in early efforts by the Spanish king and the Dominican order to suppress it, but the need of the conquerors to reward their supporters led to *de facto* recognition of the practice The crown prevented the encomienda from becoming hereditary, and with the New Laws (1542) promulgated by LAS CASAS, the system gradually died out, to be replaced by the *repartimiento* and finally debt PEONAGE

encyclical see BULL.

encyclopedia, either a general compendium of knowledge in all fields or a work which aims to be comprehensive in some one field It differs from a dictionary in that it gives not only a definition but a history and discussion—however brief—of the subject, explaining its causes and relating it to similar topics It differs from an almanac or yearbook in that the almanac covers only a recent period and is issued periodically while the encyclopedia attempts to cover large periods in a single unit The *Natural History* of Pliny the Elder in 37 books (which included not only science but some material on the fine arts) is often considered the most ancient encyclopedia because it aimed at encompassing all knowledge Various medieval attempts to make all the knowledge of scholars available to the less informed include the works of Vincent of Beauvais, Roger Bacon, and Brunetto Latini, all in the 13th cent William Caxton printed (1481) an English translation of the encyclopedia of Vincent of Beauvais as *Mirror of the World* Caxton's successor, Wynkyn de Worde, printed an English translation by John of Trevisa of the encyclopedia of natural science written in Latin (c 1250) by Bartholomew de Glanville The modern encyclopedia—including alphabetical arrangement of material and bibliographies—was of late and slow development The example was not clearly set until John Harris (c.1667–1719) published (1704) his *Lexicon technicum, or, An Universal English Dictionary of Arts and Sciences.* The next notable encyclopedia was the *Cyclopedia; or, An Universal Dictionary of Arts and Sciences* (1728), published by Ephraim Chambers (d. 1740). Arranged alphabetically like Harris's work, it is notable also for being the product of collaboration and for employing cross references Johann Zedler published (1732–54) in German a *Universal-Lexikon,* a notably comprehensive encyclopedia for the time After originating in a translation of Ephraim Chambers's work, the famous French ENCYCLOPÉDIE in 28 volumes was finally completed in 1772 by Diderot and others This encyclopedia, partly because it was involved in the bitter struggle of ideas in its day and partly because of the fame of its contributors, is probably the most famous of all encyclopedias. The first edition of *The Encyclopaedia Britannica* in three volumes was published in Edinburgh in 1771. Since the 14th edition (1929) this encyclopedia has been published in the United States The oldest German encyclopedia still being published is *Brockhaus' Konversations-Lexikon,* first issued in 1796–1808 On this was based the first edition of the British *Chambers's Encyclopaedia* (1859–68) and the first American encyclopedia, *The Encyclopaedia Americana,* which was edited by Francis Lieber (13 vols , 1829–33); the *Americana* through many later editions has kept only the name *The New International Encyclopaedia* traces its descent from *Chambers's Encyclopaedia* There have been many encyclopedias planned especially for young people These in general are not alphabetically arranged but are grouped by subject—animals and plants, literature, history, art—and are intended for reading rather than for quick reference. Nearly all the major countries of the world have encyclopedias in the vernacular Several have been published in China, they are arranged by categories, not alphabetically, and generally partake of the nature of anthologies Among the encyclopedias which limit themselves to a single branch of knowledge or try to serve a special interest, the most ambitious is the great German art encyclopedia edited by Ulrich Thieme and Felix Becker (35 vols , 1907–47) Among others are the *Encyclopaedia of the Social Sciences, Grove's Dictionary of Music and Musicians, The Schaff-Herzog Encyclopedia of Religious Knowledge, The Catholic Encyclopedia, The Jewish Encyclopedia,* and *The Encyclopaedia of Islam* In a work published over a period of many years the earlier volumes must of necessity be out of date before the last ones are off the press A smaller encyclopedia, which brings events down to the year of publication obviates this difficulty Encyclopedia publishers have tried various methods for bringing their works up to date, the most popular being yearbooks, supplements issued every few years, loose-leaf insertions, and "continuous revision," i e , the system of revising a certain number of articles for each new printing For evaluation of encyclopedias, see the latest edition of *Guide to Reference Books,* edited by I G Mudge and Constance Winchell

Encyclopédie (äsēklōpādē'), the work of the French Encyclopedists or *philosophes* The full title was *Encyclopédie, ou, Dictionnaire raisonné des sciences, des arts, et des métiers* This work was originally planned as a translation of the Chambers *Cyclopedia,* and the first editor was the Abbé Jean Paul de Gua de Malves, but the project was abandoned on account of various disagreements, and Le Breton, the publisher, agreed to let Denis DIDEROT as editor produce an entirely new work With the aid of Jean le Rond d'ALEMBERT, QUESNAY, MONTESQUIEU, VOLTAIRE, J J ROUSSEAU, TURGOT and other distinguished authorities, Diderot produced the first volume in 1751, with a famous "preliminary discourse" signed by D'Alembert Jesuit influence caused withdrawal of the official permit, and Voltaire and D'Alembert prudently retreated However, with the support of Mme de Pompadour, of Marc Pierre d'Argenson, and of the duc de Choiseul and the statesman Malesherbes, Diderot was able to persist Helped by the Chevalier de Jaucourt, he brought the clandestine printing of the work (28 vols) to completion in 1772 It was followed (1776–77) by a supplement in five volumes and by a two-volume index in 1780 When the work was in page proof Diderot discovered that deletions had been made by the printer The *Encyclopédie* differed from similar works in being the mouthpiece of a philosophy, that of scientific determinism, derived from Bacon, Descartes, Locke, and Newton and championing the skepticism and rationalism of the century Its success was immediate and its influence incalculable, the term *encyclopedist* became the description of an entire school Through its stress on a materialistic philosophy and its attacks on legal, juridical, and clerical abuses, the *Encyclopédie* was a major factor in the development of the French Revolution See John Morley, *Diderot and the Encyclopedists* (1878), D H Gordon and N. L Torrey, *The Censoring of Diderot's Encyclopédie and the Re-established Text* (1947).

Endecott or **Endicott, John,** c 1588–1665, governor of Massachusetts Bay colony (1628–30) He was the first governor of the colony at Salem and continued important in public affairs after John Winthrop established the colony's center at Boston. As a military leader, he so managed an expedition against the Indians that he helped bring on the Pequot War. One of the sternest of the Puritan fathers, he brought about the expedition of Miles Standish against the colony of Thomas MORTON at Merry Mount and was zealous in persecution of the Quakers. See biography by L. S. Mayo (1936).

endemic disease (ĕndĕ'mĭk) [Gr.,=in the people], one which is always present in a given locality in a certain number of the population Most infectious diseases are endemic in some region or other. In these regions the disease does not ordinarily become EPIDEMIC because most persons in the locality have IMMUNITY to that disease and the infectious agent is of ordinary virulence TYPHOID FEVER is endemic in many places. It becomes epidemic when, spread by even one carrier, it affects a large group of persons, as in armies in war A disease is said to be sporadic when a very few cases occur here and there in a given region

Enderbury Island, area 4 sq mi , central Pacific, one of the Phoenix Islands It is near CANTON ISLAND c 2,000 mi SW of Honolulu The island has been under Anglo-American control since 1939

Enderby Land, area in Antarctica, in the Indian Ocean sector It is claimed by Great Britain on the basis of discovery by John BISCOE in 1831. The region was not visited again until 1929–30. Douglas MAWSON went there

Enderlin, city (pop. 1,593), SE N Dak , SW of Fargo; inc 1896 It is a railroad division point

Endicott, Charles Moses, 1793–1863, American sea captain, b Danvers, Mass He traded in the Far East and knew well the coast of Sumatra His *Sailing Directions for the Pepper Ports* (1833) and its accompanying chart of Sumatran ports were long used by mariners On his last voyage but one his ship, the *Friendship,* was seized by natives at Kuala Batu in Sumatra, and members of the crew were killed Endicott escaped and with the help of three American ships recaptured the *Friendship* The next year the U S frigate *Potomac* bombarded the town in reprisal See R D. Paine, *Ships and Sailors of Old Salem* (1909).

Endicott, John · see ENDECOTT, JOHN

Endicott, village (pop 17,702), S N Y , on the Susquehanna and W of Binghamton, settled c 1795, inc 1906 With Johnson City and BINGHAMTON it is the home of the Endicott-Johnson shoe company. Business machines are also made

endive (ĕn'dĭv, an'dēv), annual or biennial herb (*Cichorium endivia*) native to India, widely cultivated as a salad plant The broad leaved and the curly leaved are the common kinds, the crisp inner leaves are blanched Endive is closely related to chicory

endocrine gland: see GLAND and HORMONE.

endogamy · see MARRIAGE

En-dor [Heb ,=spring of Dor], village, Palestine, S of Mt Tabor, where lived a celebrated witch consulted by King Saul 1 Sam 28 7, Ps 83 10

Endymion (ĕndĭ'mēun), in Greek legend, young shepherd of Mt Latmos, loved by Selene (the moon) He was given immortality and eternal sleep John Keats in his poem *Endymion* elaborated on this legend

En-eglaim (ĕn-ĕg'lāĭm, ĕn-ĕglā'ĭm) [Heb ,=spring of two heifers], place, probably on the Dead Sea. Ezek 47 10 It may be the same as EGLAIM

enemy alien · see ALIEN

energy, in physics, usually defined as the ability or capacity to do work Forms of energy include HEAT, LIGHT, SOUND, ELECTRICITY, and chemical energy When a force acts upon a body, the work performed is the product of the force and the distance **Potential energy** is the capacity for doing work that a body possesses because of its position For example, a stone weighing 5 lb and resting on the edge of a cliff 40 ft high is said to have 200 foot-pounds of potential energy, since in falling it could do 200 foot-pounds of work (the product of its weight and the distance it falls) The energy is here measured in a work unit, the foot-pound **Kinetic energy** is the capacity for doing work that a body possesses because of its motion Each is illustrated, and the change from one to the other is shown, in the movements of a simple pendulum As the suspended body moves upward its kinetic energy or energy of motion is continuously being changed into potential energy The higher it goes the greater becomes the energy that it owes to its position, for the greater becomes its potential capacity for doing work on the downward swing At the top of the swing the change from kinetic to potential energy is complete, and in the course of the downward motion the potential energy reverts again to kinetic energy It is common for energy to be converted thus from one form to another, but it is a fundamental law, the **law of the conservation of energy** that although energy can be changed in form it can be neither created nor destroyed **Chemical energy** is the form of energy involved in a CHEMICAL REACTION. For example, chemical energy is changed into heat and light energy when a candle burns (see COMBUSTION) and into electrical energy in the electric CELL In addition, its transformation is important in the processes concerned with the obtaining of energy from foods. Solar energy, considered as the ultimate source of all energy on the earth, is utilized by plants in the chemical process of making starch (see PHOTOSYNTHESIS), later as a food this starch is broken down by chemical action (see DIGESTION) and the energy stored in it is thus released for use in the animal body. In life processes (e g., RESPIRATION), in many other natural phenomena, and also in many industrial operations, the transformation of energy is of fundamental importance

Enesco, Georges (ĕnĕs'kō), 1881–, Rumanian violinist, composer, and conductor, studied at the Vienna Conservatory and in Paris with Massenet, Fauré, and others. He has frequently appeared both as violinist and conductor in Europe and America, including appearances with the New York Philharmonic, 1936–39 Among his numerous compositions, two Rumanian Rhapsodies for orchestra are very popular

Enfantin, Barthélemy Prosper (bärtālmē' prôspĕr' äfätē'), 1796–1864, French socialist, sometimes called Père Enfantin He became a leader of the movement started by the comte de SAINT-SIMON. Under his guidance the Saint-Simonians became a religious group, notorious for eccentricities of dress and rite Because of his disagreements with BAZARD and his free-love doctrine, there was a schism Enfantin settled his followers at Ménilmontant (1832), but was imprisoned He later became a successful industrialist His books include *La Science de l'homme* (1858) and *Life Eternal* (1861, Eng tr , 1920) See biography by Sebastien Charléty (1930)

Enfield, urban district (1931 pop 67,874, 1947 estimated pop 109,680), Middlesex, England, N of London It is largely residential but is the site of the Royal Small Arms factory (Enfield rifles) and manufactures electric wire, boilers, ebonite, aluminum, chemicals, and cables Charles and Mary Lamb lived near here for several years

Enfield, 1 Textile town (pop 13,561), N Conn , on the Connecticut at the Mass line, settled c 1680 The site of a Shaker settlement (c 1780–1915) was bought for a state prison farm The town hall was built in 1775 2 Town (pop 1,693), W N H , on Mascoma river and lake and E of Lebanon A charter was granted to settlers in 1761 A Shaker community was established here in 1793 Woolen fabrics are made 3 Town (pop 2,208), N N C , near the Roanoke NNE of Rocky Mount, in a farm area, settled before 1750 It is a peanut-processing and shipping center

Engadine (ĕng'gudēn), upper part of the Inn valley, Grisons canton, Switzerland Extending 60 mi NE from Maloja to Martinsbruck, it is divided into the Upper and the Lower Engadine The valley, which is forested and partially cultivated, is dominated in the south by the BERNINA group The majestic scenery and excellent air have made the Engadine a tourist and health center St Moritz, Pontresina, Sils-Maria, Tarasp, and Schuls are among its numerous resorts The population is largely Romansh-speaking and Protestant

En-gannim (ĕn-gă'nĭm) [Heb ,=spring of gardens] 1 Town of Judah Joshua 15 34 2 Levitical city, the modern Jenin, at the southeastern end of the plain of Esdraelon Joshua 19 21, 21 29 Anem 1 Chron 6 73

En-gedi (ĕn-gē'dī, ĕn'-gĕ-) [Heb ,=well of the kid], ancient well, on the west shore of the Dead Sea above a fertile plain, now called Ain Jidy Joshua 15 62, 1 Sam 24 1–4, Cant 1 14, Ezek 47 10 Hazezon-tamar Gen 14 7, 2 Chron 20 2

Engelberg (ĕng'ulbĕrk), village (pop 2,409), Obwalden half-canton, Switzerland It is a winter and summer resort and has a 12th-century Benedictine abbey

Engelmann, George (ĕng'ulmun), 1809–84, American physician and botanist, b Frankfurt-am-Main, Germany, studied at the universities of Heidelberg and Würzburg (M D , 1831) Coming to America in 1832, he settled at St Louis, Mo , and built up a large medical practice His intense interest in general science led him also to carry on researches in biology and botany and to continue systematic meteorological observations from 1836 until his death He first called attention to the immunity of the American grape to the attack of the phylloxera His large plant collection and botanical library, as well as some 60 volumes of botanical notes and drawings, are in the Missouri Botanical Garden, St Louis Some of his more important papers were collected in *Botanical Works of the Late George Engelmann* (1887) Three genera and a number of species bear his name

Engels, Friedrich (frē'drĭkh ĕng'uls), 1820–95, German socialist He and Karl MARX were the two founders of modern communism The son of a wealthy textile manufacturer, Engels went in 1842 to take a position in a factory near Manchester, England, in which his father had an interest In 1844, while passing through Paris, he met Marx, and their lifelong association began. Engels's first major book was *The Condition of the Working Class in England in 1844* (1845, Eng tr , 1887), which attracted wide attention From 1845 to 1850 he was active in Germany, France, and Belgium organizing revolutionary movements and collaborating with Marx on several works, notably the epoch-making *Communist Manifesto* (1848). The failure of the Revolution of 1848 caused his return (1850) to England, where he lived the rest of his life He was a successful businessman, and from his income he enabled Marx to devote his life to research and writing. Engels played a leading role in the First INTERNATIONAL and the Second International After Marx's death, Engels edited the second and third volumes of *Das Kapital* from Marx's drafts and notes The intimate intellectual relationship between Marx and Engels leaves little doubt that there was complete harmony of thought between them, although recent critics have sometimes questioned their full agreement Marx's personality has overshadowed that of Engels, but the influence of Engels on the theories of MARXISM, and particularly on the elaboration of DIALECTICAL MATERIALISM, can scarcely be overestimated Engels's *Landmarks of Scientific Socialism* (1878, Eng tr , 1907) and *The Origin of the Family, Private Property, and the State* (1884, Eng tr , 1902) rank among the fundamental books in communist literature and profoundly influenced Lenin Another of Engels's works is *The Peasant War in Germany* (Eng tr , 1926) His correspondence with Marx has been partly translated (1942). See biography by Gustav Meyer (Eng tr , 1935)

Engels (ĕn'gĭls), city (pop. 73,279), RSFSR, on the left bank of the Volga opposite Saratov It is an agricultural center Founded in 1747 by Ukrainian settlers, it was called Pokrovsk until c 1932 and was the capital (1923–41) of the former German Volga Republic

Enghien, Louis Antoine Henri de Bourbon-Condé, duc d' (lwē' ätwan' ārē' dŭ bōōrbō-kōdā dük' dĭgē'), 1772–1804, French émigré, son of Louis Henri Joseph de CONDÉ He was suspected by Napoleon of participation in the conspiracy of Georges CADOUDAL because witnesses testified that an unnamed émigré prince had directed the plot This was probably the count of Artois (later Charles X), but Napoleon had the duke kidnaped from Ettenheim, Baden, and, within the space of a few hours, had him court-martialed and shot at Vincennes (March 21, 1804) Napoleon's brutal procedure provoked a revulsion of feeling against him, it is still subject to debate whether his act ultimately strengthened or weakened his power

Enghien (ägē'), town (pop 4,511), Hainaut prov , W Belgium, SW of Brussels There are linen and lace manufactures Dating from the 11th cent , it was a medieval trade center Enghien became a possession of the Bourbon family in the 15th cent , but was sold (1606) by Henry IV to the house of Ligne The title duke of Enghien remained with the Condé branch of the house of Bourbon

engine · see DIESEL ENGINE, INTERNAL-COMBUSTION ENGINE, STEAM ENGINE

engineering, the science dealing with the design, construction, and operation of the various structures, machines, engines, and other devices used in industry and in everyday life From the beginnings of civilization man in his use of simple tools applied engineering principles By means of man power and simple machines were accomplished such feats of engineering skill as the pyramids of Egypt, the irrigation systems of Egypt, Babylon, and Mesopotamia, the Roman roads, bridges, and aqueducts, and the Mayan temples Until the time of the Industrial Revolution, engineering embodied only the functions of the civil engineer (the construction of tools, roads, bridges, and other useful devices and structures) and those of the military engineer (the construction of fortifications, engines of war, and other structures) After the Industrial Revolution mechanical engineering developed as a separate field to provide for the designing and construction of the essential machinery Engineering in modern times is a vast field embracing many smaller fields of specialization related to nearly every phase of human activity **Aeronautical engineering** is concerned with the designing of aircraft (both civil and military) and parts of aircraft and the directing of the technical phases of manufacture and operation of such structures Special branches of aeronautical engineering include aerodynamics, stress analysis, and flight testing **Agricultural engineering** includes the design and construction of farm buildings, machinery, and other equipment farm electrification, the development of power for agricultural use and of methods of conserving and utilizing soil and water (e g , irrigation, drainage, and flood and erosion control). **Chemical engineering** is concerned with the design, construction, and operation of the plants and machinery required to produce innumerable products such as acids, dyes, drugs, plastics, and synthetic rubber The chemical engineer must have a thorough knowledge of both chemistry and mechanical engineering **Civil engineering** has many smaller divisions since it is concerned with the planning, designing, construction, and maintenance of a great variety of structures and facilities for use by the public as well as by commerce and industry Among its problems are city planning and the planning and building of highways, bridges, tunnels, harbors, airports, railroads, dams, canals, irrigation systems, pipe lines, and water-supply systems and sewage and waste disposal plants (usually included in sanitary engineering) **Electrical engineering** is a broad field which includes the planning and construction of power plants, transmission lines, and distributing systems and the designing and construction of lighting devices and lighting systems (the work of the illuminating engineer) and of the innumerable

other devices utilizing electricity (e.g., refrigerator and air-conditioning equipment, telephone, telegraph, radio, television, and radar) Two main divisions of **geological engineering** are petroleum engineering and mining engineering **Industrial engineering** or **management engineering** is less clearly defined than most other engineering fields, the industrial engineer deals with such problems as the improvement of production methods, efficient arrangement and working of machinery in a plant, and the planning of production **Marine engineering** deals with the designing and construction of ships, docks, and other marine structures and devices **Mechanical engineering** is a field on which many other branches of engineering are dependent, since it is concerned with the design, construction, and operation of power plants and of the engines and machines used in commerce and industry A number of the other fields of engineering are actually branches of mechanical engineering **Metallurgical engineering** deals with the extraction of metals from ores and with the fabrication of metals Education for engineering is based on a strong foundation in mathematics, chemistry, physics, and allied sciences in addition to study in the special fields of engineering and in the social sciences and humanities In the United States, West Point and Rensselaer Polytechnic Institute pioneered in offering engineering courses Many of the institutions providing engineering training were originally land-grant colleges. Education in engineering has benefited by the activities of the many engineering societies See W D. Binger, *What Engineers Do* (rev ed , 1938), W J Claxton, *Half-Hours with Great Engineers* (1938), T J Hoover, *The Engineering Profession* (1941), N V Carlisle, *Your Career in Engineering* (1942), J K Finch, *Trends in Engineering Education* (1948), J G. McGuire and H W Barlow, *An Introduction to the Engineering Profession* (1950)

England, John (Ing'glund, Ing'lund), 1786-1842, Irish Roman Catholic churchman in America, b. Cork He studied, was ordained, and ministered to several parishes in Co Cork His patriotic zeal made him well known, although his parishes were among the peasantry, and he fought vehemently for Catholic Emancipation and for the equality of his church with the Anglicans in Ireland. He was consecrated bishop of the new see of Charleston, S C , in 1820 and immediately went to America His diocese included the Carolinas and Georgia He was notable from the beginning for his intense interest in all things American He traveled throughout his diocese continually, going many miles if necessary to visit even one of his coreligionists Especially devoted to the needs of the Negroes, he said a special early Mass on Sunday for them He was highly honored throughout the country See biographies by J L O'Brien (1934) and D F Grant (1949)

England (Ing'glund, Ing'lund) [i e , Angle-land], largest political division (all figures without Monmouthshire 50,874 sq mi , 1931 pop 37,359,045, 1948 estimated pop 40,197,490) of the island of Great Britain in the British Isles, the core of the British Empire WALES occupies the western mountainous portion of the island, SCOTLAND the northern part above Solway Firth, the Cheviot Hills, and the River Tweed, the remainder of the island is England The English Channel, the Strait of Dover, and the North Sea cut the island off from the continent of Europe The coast in the south and southeast lies close to France, the strait of Dover is narrow Yet wind and tide have given Britain security in her insularity, without cutting the island off from the course of continental affairs The south and east coasts are low-lying, only in the north and the west is the land edge rocky and forbidding The ports of the south are easy of access—Southampton, Portsmouth, Folkestone, Dover (see also CINQUE PORTS), and, in the southwest, Plymouth In the east the estuaries of the rivers make entrance easy the Thames, with London up the river, the Humber, with the port of Hull, the Tees, and the Tyne, on which is Newcastle The west coast also offers entry by Bristol Channel and the Severn, with Bristol just inland, the Mersey, with Liverpool and Birkenhead, and Solway Firth, with Carlisle The accessibility of the island, together with its defensibility by a strongly organized government, is one of the cardinal geographic facts that determined England's growth Another is the mildness of the climate, attributable to the surrounding ocean, though the island lies far to the north (London being in the same latitude as Labrador), most of the island is subject to much wet weather, some of it suffers severe cold, but in general the climate is favorable to man The political divisions of England, the counties or shires, are Bedfordshire, Berkshire, Buckinghamshire, Cambridgeshire, Cheshire, Cornwall, Cumberland, Derbyshire, Devonshire, Dorsetshire, Durham, Essex, Gloucestershire, Hampshire, Herefordshire, Hertfordshire, Huntingdonshire, Kent, Lancashire, Lincolnshire, Middlesex, Monmouthshire (often included in Wales rather than in England), Norfolk, Northamptonshire, Northumberland, Nottinghamshire, Oxfordshire, Rutland, Shropshire, Somerset, Staffordshire, Suffolk, Surrey, Sussex, Warwickshire, Westmorland, Wiltshire, Worcestershire, and Yorkshire The surface in the south and southeast is generally low. The low white chalk cliffs that face France across the Channel begin in Norfolk and continue S to Dover and to the southern coast Behind them, especially in the south—Sussex, Surrey, Hampshire—lie gently rolling downs and wide plains stretching to the Chiltern Hills and on to the Cotswolds This is the south of England, fertile agricultural lands from the orchards of Kent to the gardens of E Devon To the north along the east coast are the lowlands of Norfolk reaching up to the Fens, the marshy country about the inlet called the Wash, into which flow waters of several small rivers (the Ouse, the Nene, the Welland, and the Witham) The Fens once stretched inland much farther than now, to Cambridge and as far N as Lincoln, most of the land has been reclaimed since the coming of the Saxons to England. The center of England, the Midlands, is a large plain interrupted and bordered by hills, which has much dairying country, it lies southwest by northeast and in it, especially along its northern edge, the coal fields have led to the great industrial development Birmingham is a huge industrial center, and to the west of it is the Black Country with its extensive coal and iron industries The Severn valley is more closely kin to the south of England in its general aspect, the Severn's tributary, the Avon, is notable to tourists chiefly because of Stratford-on-Avon, Shakspere's birthplace The west of England is rough country tapering out through Somerset and Devon to the long peninsula of Cornwall, which terminates in two points, one (Lands End) the westernmost, the other (Lizard Point or Head) the southernmost in England proper Lincolnshire, just S of the Humber, is a distinctive region, with high, bleak hill country near the coast and much sheep-grazing country to the west The Humber is created by the confluence of the Trent, the Ouse, and lesser rivers The north of England, above the Humber, is mountainous The Pennine Chain, the longest chain, leads into Scotland The scenic charms of the LAKE DISTRICT in Cumberland, Westmorland, and Lancashire have been especially noted since the days of the Lake poets (William Wordsworth, S T Coleridge, and Robert Southey) Lancashire is the center of intensive industrial development, depending chiefly upon the textile industry which developed rapidly after the Industrial Revolution Yorkshire is also highly developed industrially in the west, in the east are the high bleak moors and wolds The largest city of England is London, the capital, the other leading cities are for the most part the great manufacturing and shipping centers—Manchester, Liverpool, Leeds, Sheffield, Birmingham, Bristol, Bradford, and Hull The chief wealth of England for the last 200 years has come from her shipping and her manufactures Various parts of the country are noted for various types of specialized manufactures, such as the steel of Sheffield and the pottery of Staffordshire In the 19th cent , England was the undisputed leader in world export of manufactured articles England is joined with Scotland and Northern Ireland in the United Kingdom of Great Britain and Northern Ireland Constitutionally, it is a limited monarchy The legislative authority and actual sovereignty reside in PARLIAMENT, the executive authority is nominally vested in the crown, but actually is in the hands of a cabinet responsible to Parliament The Church of England, of which the king is the head, is the established religion, though there is complete religious liberty Education had no uniform system until the Education Act of 1944 attempted coordination of all secondary schools, extending its registration and inspection even to the heretofore independent public schools—Eton, Harrow, Rugby, Winchester, and lesser institutions Oxford and Cambridge are still the most notable as well as the oldest of the 11 universities, the others being Birmingham, Bristol, Durham, Leeds, Liverpool, London, Manchester, Reading, and Sheffield

Celt and Roman, Saxon and Dane The history of England has been from its beginning closely associated with that of the other nations of the British Isles, Wales, Scotland, and Ireland All were settled at the dawn of historic times by peoples usually called CELTS, who were, however, a mixed people, probably created by various waves of prehistoric migration (see BRITAIN) The island was visited by Mediterranean traders who sought jet and pearls as well as tin from the mines of Cornwall Apart from archaeological remains, little is definitely known of these early Britons before the invasion by Julius Caesar in 55 B C This was a harbinger of Roman conquest and occupation which began in the 1st cent and continued until the early 5th cent Great internal improvements were made by the Romans, who built the famous ROMAN ROADS that were to be the main highways during the Middle Ages The Roman period also brought about the conversion of the Celts to Christianity About the time that declining Rome began to withdraw the legions from Britain, Germanic peoples—the ANGLO-SAXONS and Jutes—commenced the raids which developed in the latter half of the 5th cent into great invasions. Most of the Celts fell back into Wales and Cornwall and some of them to Brittany. The newcomers gradually developed from loosely knit tribes into several kingdoms (see KENT, SUSSEX, ESSEX, WESSEX, EAST ANGLIA, MERCIA, NORTHUMBRIA), among which Wessex assumed lasting importance in the 9th cent Meanwhile, in the 8th cent the general movement of the NORSEMEN southward resulted in raids on coastal England by Norwegians, who went on to settle in E Ireland and who in the 10th cent repeatedly tried to extend their Irish kingdom to N England. By 835 the Danes, no longer controlled by a strong king, raided present France and England. *Danes* came to be in English history the term for all Norse invaders. In 865 a great Danish army invaded England and conquered and plundered for some 10 years until at last the leaders divided land among the soldiers for settlement The continuing process of conquest and settlement was first effectually resisted by King ALFRED when more than half of England was lost He obtained support from all Englishmen not subject to the Danes and with great trouble confined the enemy to the DANELAW. His successors, EDWARD THE ELDER, ATHELSTAN, and EDMUND, conquered the Danelaw to form a united England The early 10th cent saw attempts at conquest by the Irish vikings and by Norwegians repulsed But new Danish invasions, beginning late in the 10th cent , overcame the ineffective resistance offered under ÆTHELRED (called the Unready, and the Dane, CANUTE, ruled all England by 1017 At the expiration of the Scandinavian line in 1042, EDWARD THE CONFESSOR of the Wessex dynasty gained the throne Upon his death in 1066 the crown was disputed by the Saxon HAROLD and William, duke of Normandy (WILLIAM I) The resulting NORMAN CONQUEST ended the Anglo-Saxon period, important in its own right and for its effects on essential English culture The basic social structure of the early Germanic invaders had been not the earl or noble but the ceorl or freeman, responsible only to his king and notably superior to the freedman and slave Intervening centuries of war and subsistence-level farming usually forced him to serfdom or at least to dependence on the aristocracy of lords and thanes who came to enjoy a large measure of autonomous control over manors held from the king The old traditions of freedom and popular government persisted to some extent among the large number of Danish freemen and in the courts of shires and hundreds The central government developed from tribal chieftainships to a monarchy in which the king usually controlled both executive and judicial powers, limited only by his practical need for support from the secular and ecclesiastical aristocracy which composed his witan or council Agriculture remained the principal industry, but the enterprising Danes also stimulated trade, and the growth of towns was accelerated from the 9th cent on The Anglo-Saxons had been Christianized by missionaries from Rome—St AUGUSTINE OF CANTERBURY arrived in Kent in 597—and from Ireland—St AIDAN, a disciple of St COLUMBA, began (c 635) to convert Northumbria Missionaries changed the old heathen fatalism into devout faith, and the influence of Christianity became strongly manifest in all phases of culture Differences between the Celtic and continental religious customs were decided in favor of the Roman forms in the Synod of Whitby (664) Monastic communities, outstanding in the later 7th and in the 8th cent and strongly revived in the 10th, boasted continental styles of architecture and sculpture and developed great proficiency in manuscript illumination Most important, church scholars like Bede, Alcuin, and Ælfric—as well as King Alfred himself—preserved and furthered learning and education Fittingly, much ANGLO-SAXON LITERATURE simultaneously reflects the old Germanic heroic ideal and loyalty and the softer qualities of the Christian faith

Feudal England William's conquest marked a new departure in English history To Saxon England's economic FEUDALISM and MANORIAL SYSTEM he added political and military feudalism England was for the first time under strong rule, efforts at centralization were made, typified in the DOMESDAY survey After William came two of his sons, at the death of the second (Henry I), the country was subjected to a period of civil war and anarchy (see STEPHEN), which ended in the accession of HENRY II in 1154 His reign was notable for the conflict between king and Church and for the great constitutional and legal reforms he instituted The holdings of English kings in France were greatly increased, and the first struggles between the two countries began. The towns of England commenced their phenomenal growth, which was abetted by the financial needs of RICHARD I in going on the Third Crusade Under JOHN, who succeeded Richard, the baronial wars between nobles and kings reached a high pitch, and the vic-

tory of the barons bore fruit in the most noted of all English constitutional documents, the MAGNA CARTA (1215). This marked a great step forward in the development of PARLIAMENT, which was to grow steadily in power The baronial wars continued under HENRY III, with a great popular leader rising in Simon de MONTFORT The conquest of Ireland was first seriously attempted by Richard de Clare (Richard Strongbow), earl of PEMBROKE. Attempts to enforce English hegemony in Scotland and Wales dated from Saxon times, but conquest was not systematically undertaken until EDWARD I, also known as the English Justinian because of his expansion and reform of the centralized royal courts and the legal system. Under EDWARD III, the HUNDRED YEARS WAR with France began in 1337 England won some glorious victories under EDWARD THE BLACK PRINCE and Henry IV but with no ultimate gain The Black Death, which first arrived in England in 1348, had a tremendous effect on English economic life, hastening the breakdown (long since begun) of the manorial and feudal systems and building up the towns and trades The confusion and change of the time fostered radical thought in the teachings of John WYCLIF, the resulting spread of LOLLARDRY, and the revolt led by Wat TYLER RICHARD II was deposed and was succeeded in 1399 by HENRY IV (the son of JOHN OF GAUNT), the first of the Lancastrian kings War with France continued, while the English wool trade, firmly established in the reign of Edward III, became more and more important Commerce opened new avenues, and the islanders were assuming the nature of tradesmen The dynastic Wars of the ROSES, in which the house of Lancaster (see LANCASTER, HOUSE OF) and the house of York (see YORK, HOUSE OF) contended for the throne, was brought to an end by the accession of the family of TUDOR in the person of HENRY VII in 1485

Tudor and Stuart The accession of Henry VII is usually considered the beginning of the modern history of England The reign of the Tudors was one of the most glorious periods of English history Commercial expansion was fostered, and English seamen went far and wide, bringing the country into conflict with Spain, a conflict intensified by religious differences The culminating point of this struggle was the failure of the Spanish ARMADA (1588) HENRY VIII introduced the REFORMATION, and his work was brought to completion by EDWARD VI and ELIZABETH The Renaissance in England came to flower in Elizabethan literature The matter of succession to the throne was one of the principal political questions in the reigns of Edward VI (see SOMERSET, EDWARD SEYMOUR, DUKE OF, NORTHUMBERLAND, JOHN DUDLEY, DUKE OF, GREY, LADY JANE), MARY I, and Elizabeth, whose chief rival was MARY QUEEN OF SCOTS Elizabeth was succeeded by James VI of Scotland, who, as JAMES I of England, introduced the Stuart line The reigns of James and his son, CHARLES I, were dominated by the struggle of the new bourgeois class—in general identified with the Puritans in religion—to establish its power in the government, to end the influence of ministers responsible only to the king (such as the unpopular George Villiers, duke of BUCKINGHAM, the bitterly hated Thomas Wentworth, earl of STRAFFORD, Archbishop William LAUD), and to make Parliament superior to the king This was the PURITAN REVOLUTION, which reached the crisis of civil war in 1642 The victory of the parliamentarians was signalized by the execution (1649) of Charles I For more than a decade England was kingless and was under the Puritan rule of the Commonwealth and the PROTECTORATE Oliver CROMWELL was practically ruler of the country until his death in 1658 In 1660 the Stuart monarchs in the person of CHARLES II regained the throne, and the RESTORATION was a period of reaction against Puritanism and an era of reawakening prosperity and of vigorous political activity under such men as Edward Hyde, earl of CLARENDON, and Anthony Ashley Cooper, earl of SHAFTESBURY The victory of Parliament was not, however eclipsed, with the overthrow of JAMES II by the Glorious Revolution of 1688 and the accession of WILLIAM III and Mary (MARY II), the supremacy of Parliament was definitely fixed For some years the JACOBITES, supporters of James II and his descendants, were to disturb the security of the monarch From this time, too, dates the beginning of party government (see WHIG and TORY), which reached its rounded development under the statesman Sir Robert WALPOLE in the early 18th cent Colonial expansion of England had begun under Elizabeth with the exploits of Sir Francis Drake, Sir John Hawkins, and the other "sea dogs," and mercantilist laws were passed by the Commonwealth government and by that of Charles II, but this expansion did not assume huge proportions until the time of William III In the 17th and early 18th cent England established supremacy over the Dutch in the carrying trade and engaged in colonial rivalry with France England entered into the wars of the European alliances—the War of the GRAND ALLIANCE and the War of the SPANISH SUCCESSION—mainly because of this rivalry with France. The Tudors, the Stuarts, and Cromwell continued the conquest of Ireland and the settlement of English and Scottish colonists there, but Ireland was never pacified for long Scotland, already under English rule, was reluctantly joined to England by the Act of Union (1707) under Queen ANNE, and the kingdom was thereafter Great Britain The later history of GREAT BRITAIN is treated under that heading and the development of the empire under BRITISH EMPIRE

Heart of Empire The face of England was changed in the 17th and 18th cent by the agricultural revolution brought about by inclosures, and in the 19th cent the industrial Midlands were the heart of England's leadership in the INDUSTRIAL REVOLUTION and the expanding empire and trade There was a notable shift of the population northward to this area, and the disfigurement caused by smoking factories gave it the name of the Black Country. The darker side of industrialization—depression and unemployment—produced the Owenist agitation and CHARTISM in the first half of the century The worst depression of the century, with its attendant miseries, hit Lancashire when the American Civil War in the 1860s temporarily cut off the supply of American cotton The greatly increased trade and the financial supremacy of England contributed to the phenomenal growth of cities in the 19th cent, especially of the sprawling metropolis, London, which became the focal point of the new web of railway lines The First World War made few major changes physically in England, but in the succeeding depression, housing deteriorated in spite of all efforts With the rising income tax, inherited fortunes began to be broken up and great estates sold and divided, a process brought almost to completion by the taxes attendant on the Second World War and the following nationalization of industry Between the wars England lost financial leadership of the world to the United States England was the heart of the mushrooming war industries for this second war, and the countryside was dotted with air fields for allied forces Air attacks by the German air force leveled huge areas of the principal cities and architectural treasures in London and a few historic towns After this war rebuilding was slow, but new planned residential towns or areas were undertaken to prevent the regrowth of slums bombed out or slated to be removed As the ties of the British Empire became more tenuous in the British Commonwealth of Nations, England rather than Great Britain as a whole once more became its center and preeminently the home of the king

The kings of England since William the Conqueror have been *Norman*—William I, 1066–87, William II, 1087–1100, Henry I, 1100–1135 *Stephen*—Stephen, 1135–54 *Plantagenet*—Henry II, 1154–89, Richard I, 1189–99, John, 1199–1216, Henry III, 1216–72, Edward I, 1272–1307, Edward II, 1307–27, Edward III, 1327–77, Richard II, 1377–99 *Lancaster*—Henry IV, 1399–1413, Henry V, 1413–22, Henry VI, 1422–61 and 1470–71 *York*—Edward IV, 1461–70 and 1471–83, Edward V, 1483, Richard III, 1483–85 *Tudor*—Henry VII, 1485–1509, Henry VIII, 1509–47, Edward VI, 1547–53, Mary I, 1553–58, Elizabeth, 1558–1603 *Stuart*—James I, 1603–25, Charles I, 1625–49 (executed in 1649, Commonwealth and Protectorate, 1649–60, Charles II in exile), Charles II, 1660–85, James II, 1685–88 *Orange*—William III, 1688–1702, and Mary II, 1688–94 *Stuart*—Anne, 1702–14 *Hanover*—George I, 1714–27, George II, 1727–60, George III, 1760–1820, George IV, 1820–30, William IV, 1830–37, Victoria, 1837–1901 *Saxe-Coburg-Gotha*—Edward VII, 1901–10 *Windsor*—George V, 1910–36, Edward VIII, 1936, George VI, 1936–

There is, of course, a vast body of literature on England, geographical, historical, and general See also ENGLISH LITERATURE and ENGLISH LANGUAGE Among the better-known writers on English history are H T Buckle, H M Chadwick, R G Collingwood, E A Freeman, J A Froude, S R Gardiner, F A Gasquet, Élie Halévy, Henry Hallam, F J Haverfield, Sir William Holdsworth, W E H Lecky, T B Macaulay, Justin M'Carthy, F W Maitland, Sir Francis Palgrave, Harold Peake, A F Pollard, Sir Frederick Pollock, J H Round, Thorold Rogers, Frederic Seebohm, William Stubbs, T F Tout, G M Trevelyan, Sir Paul Vinogradoff, Sir Spencer Walpole, and Beatrice and Sidney Webb See Charles Gross, *The Sources and Literature of English History from the Earliest Times to about 1485* (2d ed, 1915) A much-read but now outdated general history is J R Green, *History of the English People* (4 vols, 1883–86) There are several good shorter histories, such as those by G M Trevelyan (1926, later rev eds), W E Lunt (3d ed, 1945), and K G Feiling (1950) See *Victoria History* of the counties of England, *The Dictionary of National Biography* and its supplements and continuations, William Hunt and R L Poole, ed, *The Political History of England* (12 vols, 1905–10), William Cobbett, *Rural Rides* (ed. by G. D H Cole and Margaret Cole. 3 vols, 1930), C B Fawcett, *A Political Geography of England* (1933), *The Oxford History of England* (ed. by G. N. Clark, 1934–), A E Trueman, *Geology and Scenery in England and Wales* (rev. ed, 1949)

England, city (pop 2,027), central Ark, near the Arkansas river, in a fertile farm region

England, Church of, the established church of England. It had its beginning as a separate national institution in the 16th cent, when Henry VIII, withdrawing allegiance from the pope, announced that in England the king should be head of the church The occasion of the break with Rome was Henry's request for divorce from KATHARINE OF ARAGON The Act of Supremacy (1534) acknowledged the king as "the only supreme head on earth of the Church of England" Thus the Reformation in England under Henry and WOLSEY was at first a matter of policy, not doctrine The theology of the Church as shown in the SIX ARTICLES (1539) and the King's Book (1543) was unchanged in essentials Henry authorized the Great Bible (1539), a revision of the English translations of Tyndale and Coverdale, and some slight alterations in services The monasteries were suppressed, chiefly at the hands of Thomas Cromwell Under Edward VI changes came rapidly and Protestantism gained ground In 1549 the first BOOK OF COMMON PRAYER was adopted Under Mary all the measures that had separated the Church of England from Rome were reversed, the old ritual was brought back, and the nation was received again into the Catholic communion under the pope. ELIZABETH restored Protestantism The national church retained its continuity with the early Christian church of Britain and much of the ritualism sanctioned by older rubrics In the struggle between Catholicism and Calvinism, the queen and her advisers hit upon a middle course The Act of Supremacy (1559) made clear the constitutional position of the Church in relation to the crown, provided that the powers thus restored to the sovereign should be exercised by a court of high commission Under JAMES I the steadily rising tide of Puritanism made necessary the Hampton Court Conference (1604), where the king gave his decision for the existing doctrine Under CHARLES I the extreme measures of the party headed by Archbishop LAUD, in maintaining the discipline and worship of the Church against the Calvinists, had much to do with bringing on civil war (1642) The Long Parliament, after excluding the bishops, substituted Presbyterianism for the episcopacy in 1646, in accordance with the Solemn League and Covenant (see COVENANTERS) Under Oliver Cromwell, Independent rather than Presbyterian doctrines triumphed, it was a penal offense to use the prayer book Many bishops were imprisoned and many churches were pillaged With the Restoration (1660) the episcopacy was restored The prayer book was in 1662 made the only legal service book by an Act of Uniformity which required the episcopal ordination of all ministers About 2,000 clergymen, the "nonjurors," instead of complying, resigned and, with their adherents, established their own worship in Protestant nonconformist chapels Parliament passed severe acts against nonconformists In 1688 a petition to King James II stating their reasons for refusing his order to read in all churches his declaration of indulgence was signed by SANCROFT, archbishop of Canterbury, and six other bishops Imprisoned, they were acquitted by trial Some of these were among the nonjurors who refused to swear allegiance to William and Mary For some time latitudinarians held control in the Church In George I's reign the Bangorian Controversy, occasioned by the heterodox expressions of Bishop HOADLY, led to the proroguing of convocation in 1717, this great council of the Church was not reassembled until 1852 There was a revival of religious fervor in the late 18th cent, one of the results of which was the rise of Methodism In the first half of the 19th cent certain Catholic elements in the Church of England were revived by the OXFORD MOVEMENT, of which KEBLE and PUSEY were leaders and also NEWMAN until he went over to the Church of Rome in 1845 To the later leaders of the movement, ritualism became of chief importance, as it is at present to the High Church party, which holds the doctrines of APOSTOLIC SUCCESSION, the Real Presence, and others that are contravened by the Low Church or Evangelical party The Broad Church adherents follow a middle course In 1833 the judicial committee of the privy council became the supreme court of appeal in ecclesiastical matters, it is composed of secular statesmen Closely related to the Church of England are the other members of the Anglican Communion in the British dominions and in other English-speaking countries They include the Protestant EPISCOPAL CHURCH and the Church of Ireland (see IRELAND, CHURCH OF) These are all represented by their bishops in the Lambeth Conferences, the first of which was held in 1867 The clergy of the Church of England are of three orders, deacons, priests, and bishops Only the bishop can ordain and confirm or can consecrate churches A bishop is given consecration at the hands of other bishops. The archbishop of Canterbury is the primate of all England, while the archbishop of York is the pri-

mate of England Worship is liturgical and is regulated by the Book of Common Prayer The creeds in use are the Apostles', the Nicene, and the Athanasian The standards of doctrine are found in the Thirty-nine Articles, the Book of Common Prayer, the Catechism, and two books of homilies In the Articles the truths of Christianity are explained on the authority of Scripture alone. Englehart, town (pop 1,262), E Ont., N of North Bay

Engleheart, George, 1752–1829, English miniature painter He studied with Sir Joshua Reynolds and made copies in miniature of his paintings Court miniaturist under George III, he competed successfully with the famous Cosway His nephew **John Cox Dillman Engleheart,** 1784–1862, was also a noted miniaturist Fine examples of both men's work may be seen in the Metropolitan Museum

Engler, Adolf (a'dôlf ĕng'lur), 1844–1930, German botanist He emphasized the importance of geological history in the study of plant geography and worked out an influential system of plant classification. He was professor at the Univ of Berlin and director of the botanical gardens (1889–1921) and was founder and editor (from 1881) of the periodical *Botanische Jahrbücher* He wrote several works on plant geography and taxonomy, including *Versuch einer Entwicklungsgeschichte der Pflanzenwelt* (2 vols , 1879–82) and *Syllabus der Pflanzenfamilien* (1898) He collaborated with Karl Prantl on the early volumes of *Die natürlichen Pflanzenfamilien* (1887–1915)

Englewood (ĕng'gulwŏod) **1** Residential city (pop 9,680), N central Colo , near Denver, in a farming and dairying area, inc 1903 **2** Residential city (pop 18,966), NE N J , near the Hudson N of Jersey City, settled before the Revolution, inc 1899 **3** Town (pop 1,342), E Tenn , NE of Chattanooga, inc 1919 It is in a farm area which was settled in 1819

English, Thomas Dunn, 1819–1902, American ballad writer and playwright, b Philadelphia His poem "Ben Bolt" was made into a popular song during the Civil War and was used by George Du Maurier in his novel *Trilby* Among his several plays, only *The Mormons* (produced 1858) had any success Poe, in his "Literati," satirized English as "Thomas Dunn Brown "

English, William Hayden, 1822–96, U S Congressman (1853–61), b Scott co , Ind A lawyer, he became a local politician and entered the House of Representatives He voted for the Kansas-Nebraska Bill and generally supported Stephen A Douglas on the slavery question In 1858 when the question of bleeding Kansas was crucial he proposed a compromise, Kansas was offered a land grant for accepting the proslavery Lecompton Constitution Southern votes passed the bill, but the people of Kansas—as English is said to have foreseen—refused the compromise He was candidate as vice presidential running mate to Gen W S Hancock on the unsuccessful Democratic ticket in 1880

English architecture as a distinctive national art may be said to have evolved in the 12th cent with the Norman style Building before that time was in what is commonly called the Saxon or Anglo-Saxon style, which combined Roman and Celtic features, it is represented by remains of monasteries, churches, and cathedral crypts distinguished by long-and-short ashlar stonework composed into single-towered, three-naved structures, with roofing probably of slate or shingles The Norman Conquest brought French ideas to England (see NORMAN ARCHITECTURE), but there the round-arc style soon took on characteristics distinguishing it from the slightly lighter French type The Norman style developed in the late 12th cent into English Gothic, a style predominating for three centuries, during which most of the English cathedrals were built This period can be subdivided into EARLY ENGLISH STYLE (late 12th and 13th cent), DECORATED STYLE (14th cent), and PERPENDICULAR STYLE (late 14th-middle 16th cent) The transition from Gothic to a classic Renaissance style was slow and again was composed of three phases, TUDOR STYLE (1485–1558), ELIZABETHAN STYLE (1558–1603), and JACOBEAN STYLE (1603–25) A fairly strict adherence to the Palladian architecture (see PALLADIO, ANDREA) prevalent in Italy was initiated in England by Inigo JONES and elaborated by Sir Christopher WREN A refined observation of the Renaissance orders slightly adapted to the English use of wood, especially in interior paneling, remained throughout the period of the GEORGIAN STYLE (1714–1820) of construction Neoclassicism set in with the REGENCY STYLE evolved by John Nash and continued, with alterations, through the Victorian period (see VICTORIAN STYLE) The classic and Gothic revivals, already begun in England late in the 18th cent , reached their elaborate climax in the middle of the 19th cent. The 20th cent brought with it mass construction and the adoption of a few modern tendencies, such as simplified square blocks, sometimes incongruously superimposed on an older style. It was not until c 1930 that MODERN ARCHITECTURE gained ground in England; since that time the influence of the modern German schools of construction has produced in England some notable examples of functional contemporary architecture In 1941 John Reith was appointed to plan the rebuilding of bombed areas See T D Atkinson, *English Architecture* (new ed , 1904), W H Godfrey, *Story of Architecture in England* (2 vols , 1928–31), T E Tallmadge, *Story of England's Architecture* (1934), Frederick Gibberd, *Architecture of England* (1938), A H. Gardner, *Outline of English Architecture* (1945)

English art. A copious religious art of painting, sculpture, stained glass, and embroidery enriched the medieval church in England Enough architectural and memorial sculpture has survived to attest to centuries of achievement from the Anglican crosses of Cumberland (dating back to the 7th cent) to the 15th-century figures of Henry V's chantry in Westminster Abbey A similar long tradition can be traced in stained glass windows still adorning many churches Very little church painting has survived, but illuminated manuscripts, such as the benedictional of St Æthelwold, (c 975), show a high development of the art at an early period In comparison with this wealth of indigenous medieval art, the 16th and 17th cent, were barren A long series of foreign artists were imported by the nobility, largely for portraiture From Holbein to Van Dyck these men found few worthy followers and no rivals in England Such painters as William Dobson and Robert Walker could hardly compete with the Dutch Lely or the German Kneller But the Elizabethan miniaturists Nicholas Hilliard and Isaac and Peter Oliver were followed by Samuel Cooper and Richard Cosway, all admirable practitioners, and late in the 17th cent a notable sculptor, Grinling Gibbons, decorated Oxford Chapel and other churches Early in the 18th cent William Hogarth, a highly original artist, initiated the English school of portraiture but is better known as a satirist, and the graphic art of social commentary which he began has flourished in England ever since Perhaps it found its finest expression in Rowlandson's drawings at the close of the century, when an opposite trend toward poetic and mystical expression in the graphic arts reached its perfection in the work of William Blake and his followers In portraiture the 18th cent produced outstanding men Sir Joshua Reynolds, who helped found the Royal Academy of Arts and was the first Englishman who successfully asserted the dignity of his profession, is usually conceded to share with Gainsborough the place of honor in this field, though Romney, Raeburn, Hoppner, Wilkie, and Sir Thomas Lawrence were all admirable Gainsborough is distinguished too for his landscape painting, a genre in which England made contributions of the first order Other excellent 18th-century landscape painters, such as Richard Wilson, J R Cozens, George Morland, Paul Sandby, and Thomas Girtin, were followed in the 19th cent by John Crome, J S Cotman, and others But all these were overshadowed by two great landscape painters, John Constable and J M W Turner, whose influence on subsequent French painting is incalculable In England, however, they were followed by a decline in landscape painting and by the rise of the short-lived Pre-Raphaelite school of D G Rossetti, William Holman Hunt, and Burne-Jones Sculpture did not parallel the development of English painting, but Flaxman in the 18th cent and Baron Leighton, Sir W H Thornycroft, Sir Alfred Gilbert, and, above all, Alfred Stevens in the 19th cent were notable In the 20th cent such men as Frank Dobson, Eric Rowland Gill, and Henry Moore have brought English sculpture into considerable prominence, the American Jacob Epstein has worked chiefly in England. England played a very minor part in initiating experimental and intellectual movements in the arts, such as cubism, early in the 20th cent , but was profoundly affected by them Among noted 20th-century painters are Augustus John, Paul Nash, Stanley Spencer, Sir William Orpen, Sir Muirhead Bone, Sir William Rothenstein, and P Wilson Steer In the minor arts English pottery is justly famous, and such wares as Chelsea, Derby, Doulton, Staffordshire, and Wedgwood are highly prized The same can be said of furniture prior to the Victorian era and of the work of such famous designers and craftsmen as Chippendale, Sheraton, Heppelwhite, and the Adam brothers. See E. G Underwood, *A Short History of English Sculpture* (1933); Roger Fry, *Reflections on British Painting* (1934), R H. Wilenski, *Masters of English Painting* (1934), R. S. Lambert, *Art in England* (1938).

English Channel, Fr *La Manche* (lä mänsh') [Fr., = the sleeve], arm of the Atlantic, 350 mi long, between France and England It is 112 mi wide at its west entrance, between Lands End, England, and Ushant, France. Its greatest width, c.150 mi., is between the inner coast of Lyme Bay and the inner coast of Saint-Malo; between Dover and Cape Gris-Nez it is 21 mi wide. At the east end the Strait of Dover connects the Channel with the North Sea. The principal islands in the Channel are the Isle of WIGHT and the CHANNEL ISLANDS Shipping across the Channel is supplemented by air lines, a train-ferry service to carry passengers and freight without change between Paris and London was opened between Dover and Dunkirk in 1936 Tunneling the Channel has long been under discussion In 1785 J P Blanchard and Dr John Jeffries crossed the Channel by balloon; the first airplane crossing was made by Blériot in 1909 The first to swim across was Matthew Webb (1875) The fisheries of the Channel are important The principal Channel ports are (in England) Plymouth, Southampton, Portsmouth, Folkestone, and Dover and (in France) Cherbourg, Le Havre, and Calais

English daisy. see DAISY

English horn, musical instrument, the alto of the OBOE family, pitched a fifth lower than the oboe and scored for as a transposing instrument It has a pear-shaped bell, giving it a soft, melancholy tone, which probably accounts for the fact that its regular use in the orchestra dates from the romantic era Wagner used it, but even its solo passage in Franck's Symphony in D Minor was considered revolutionary The 18th-century form of the instrument was curved, whence, possibly, its misleading designation as a horn

English ivy or **ivy,** Old World woody vine (*Hedera helix*), cultivated in many varieties as a house plant, CLIMBING PLANT, and ground cover It clings by many small roots and has evergreen leaves, only very old plants fruit This ivy contains a poisonous principle (hederin), and the berries especially are reported to be poisonous Ivy was sacred to Bacchus and the English hung it as a tavern sign

English language, language prevalent in the United States and much of Canada, in the British Isles, in Australia, in New Zealand, in much of South Africa, and in a few other places, such as Bermuda It is probably the native language of more people than any other except North Chinese It is also used extensively as an auxiliary language There are many dialect areas, in England and S Scotland these are of long standing, and the variations are striking, the SCOTTISH DIALECT especially has been cultivated literarily There are newer dialect differences also, such as in the United States Standard forms of English differ also, thus, the standard British ("the king's English") is dissimilar to the several standard varieties of American and to Australian Today's English is the continuation of the language of the 5th-century invaders of Britain No records exist of pre-invasion forms of the language The language most closely related to English is Frisian, an earlier stage of Anglo-Frisian was West Germanic, for the Germanic subfamily and its place among Indo-European languages, see LANGUAGE (table) The history of English is an aspect of the history of the English and their ramifications Thus in the 9th cent. the standard English was the dialect of dominant Wessex (see ANGLO-SAXON LITERATURE). The Norman Conquest (11th cent) brought in foreign rulers, and English was eclipsed by French as the official language When English became again (14th cent) the language of the upper class, the capital was London, and the new standard (continued in Modern Standard English) was a London dialect It is convenient to divide English into periods—Old (to c 1050), Middle (to c 1450, see MIDDLE ENGLISH LITERATURE), and Modern, this implies no discontinuity, for even the hegemony of French affected only a small percent of the population The English-speaking areas have expanded at all periods Before the Normans the language was spoken in England and S Scotland, but not in Cornwall, Wales, or, at first, in Strathclyde English has not yet quite ousted the Celtic languages from the British Isles, but it has spread vastly overseas. Since its establishment in North America (17th cent) the extension has continued, until today English is the most widely scattered of the great speech communities Like other languages, English has changed greatly, albeit imperceptibly, so that an Englishman of 1300 would not have understood either the English of 500 or that of today Changes of every sort have taken place, concomitantly in the sounds (phonetics), in their distribution (phonemics), and in the grammar (morphology and syntax) The following familiar words show changes of 1,000 years.

	home	*stones*	*name*	*tongue*
Old	hāām	stāā'nās	nā'mā	tōŏng'gū
Middle	hōm	stō'nus	nā'mū	tōŏng'gu
Modern	hōm	stōnz	nām	tŭng

The changes are more radical than appear, for Modern English ō and ā are diphthongs. The words *home, stones,* and *name* exemplify the fate of unaccented vowels, which became ŭ, then u disappeared In Old English important inflectional contrasts depended upon the difference between unaccented vowels, so, as these vowels coalesced into

ú and this disappeared, much of the case system disappeared too. In Modern English a different technique, word order (subject + predicate + object), is used to show what a case contrast once did, namely, which is the actor and which the goal of the action There are other critical changes also. The vocabulary has naturally expanded, but many common modern words are derived from the lexicon of the earliest English, e g., *good, father,* and *shower* From words acquired with Latin Christianity come *street, bishop,* and others; and from words adopted from Scandinavian settlers *root, egg, knife, take,* and many more French words, such as *castle,* began to come into English shortly before the Norman Conquest After the Conquest, Norman French became the language of the court and of official life, and it remained so until the end of the 14th cent During these 300 or more years English remained the language of the common people, but an increasingly large number of French words found their way into the language, so that when the 14th-century vernacular revival, dominated by Chaucer and Wyclif, restored English to its old place as the speech of all classes, the French element in the English vocabulary was very considerable. To this phase of French influence belong most legal terms (such as *judge, jury, tort,* and *assault*) and words denoting social ranks and institutions (such as *duke, baron, peer, county,* and *parliament*), together with a great number of other words which cannot be classified—e g , *honor, courage, season, manner, study, feeble,* and *poor* Since nearly all of these French words are ultimately derived from Late Latin, they may be regarded as an indirect influence of the classical languages upon the English vocabulary The direct influence of the classical languages began with the Renaissance and has continued ever since, even today Latin and Greek roots are the chief source for the English names of new inventions, such as *bicycle* and *telephone* During the last 300 years the borrowing of words from foreign languages has continued unchecked, so that now most of the languages of the world are represented to some extent in the vocabulary See Henry Sweet, *A Short Historical English Grammar* (1892), Ernest Weekley, *The Romance of Words* (1920), G P Krapp, *The English Language in America* (1925), Otto Jespersen, *Growth and Structure of the English Language* (6th ed , 1930), H L Mencken, *The American Language* (4th ed , 1936), C C Fries, *American English Grammar* (1940)

English literature. Modern English literature was preceded by two earlier periods, Old English or ANGLO-SAXON LITERATURE (roughly, to 1066) and MIDDLE ENGLISH LITERATURE (roughly, to 1475) The RENAISSANCE, with which Modern English may be said to begin, was slower to appear in England than on the Continent and may be dated from the setting up of the first English printing press by William Caxton in 1476 The end of the Middle Ages came in England at the cessation of the Wars of the Roses and the accession of the Tudor family in the person of Henry VII in 1485 The humanism of the Renaissance had been fostered at Oxford Univ and was carried on by the Oxford humanists, William Grocyn, Thomas Linacre, John Colet, and William Lyly Significant prose works were written in English instead of scholarly Latin by Sir Thomas Elyot and Roger Ascham, although the greatest English humanist, Sir Thomas More, wrote his *Utopia* in Latin In this age of seeking after old and new knowledge a complete translation of the BIBLE was needed, and William Tyndale issued a noteworthy version, in 1539 the Great Bible (Tyndale's, revised by Miles Coverdale) was ordered used in churches The Book of Common Prayer (1549), given form by Archbishop Thomas Cranmer (1552), is one of the prose masterpieces of the 16th cent Early Tudor poetry included the satires of John Skelton, Alexander Barclay, and David Lindsay and the experiments with Italian forms (including the sonnet) by Sir Thomas Wyatt and Henry Howard, earl of Surrey. Their poems and others were published in Richard Tottel's miscellany (1557), the first of a brilliant series of collections of poetry Meanwhile the drama had developed from medieval religious pageantry to the MIRACLE PLAY OR MYSTERY PLAY and such morality plays as *Everyman,* from these it had passed to the INTERLUDE. The first plays written in accordance with classic dramatic rules were produced probably by schools, they were the comedies *Ralph Roister Doister* by Nicholas Udall and *Gammer Gurton's Needle* by William Stevenson and the tragedy *Gorboduc* by Thomas Sackville and Thomas Norton There followed comedies by George Gascoigne, John Lyly, George Peele, and Robert Greene, produced mostly in private theaters such as the Blackfriars, where the children of the Chapel Royal acted. In tragedy the influence of Seneca underwrote violence in the great predecessors of Shakspere—Thomas Kyd, Samuel Daniel, Robert Greene, and Christopher Marlowe. Shakspere is the apotheosis of playwright and poet of Elizabethan England. The long reign of Elizabeth (1558–1603) saw the flowering of the English Renaissance in literature Every branch was enlarged and enriched, and new literary forms were created. Characteristic of the age are its enthusiasm and robust vitality, its imagination and its freedom of expression The religious writers of reestablished Protestantism included the Scottish preacher John Knox, the anonymous author of the Puritan Martin Marprelate tracts, and Richard Hooker. In prose narrative, John Lyly's *Euphues* has been called the first English novel and had many imitations, as did Sir Philip Sidney's *Arcadia* Other romancers included Robert Greene and Thomas Lodge, both of whom wrote controversial pamphlets and satires. A realistic story by Thomas Nashe, another satirist, has been called the forerunner of the picaresque novel Sidney, Lodge, and George Gascoigne were critics as well as authors Influential translations were Sir Thomas North's Plutarch, Sir John Harington's Ariosto, John Florio's Montaigne, and George Chapman's Homer English historians fired with nationalism, such as John Stow, Raphael Holinshed and Sir John Hayward, influenced dramatists, who used their material as Shakspere used Holinshed Richard Hakluyt and Samuel Purchas collected the voyage literature of their time. Sir Walter Ralegh wrote of his own famous voyages and was historian and poet as well Edmund Spenser's *Shepheardes Calender* (1579) and his *Faerie Queene* (1590–96) are the first major poetic achievements of the period Songs and lyrics, so beloved by this age, were written by most of the major literary men, of the sonnets, particularly beloved were those by Sir Philip Sidney, the much later *Amoretti* (1595) of Spenser, and those by Shakspere In the large group of poetical collections, *England's Helicon* (1600) is outstanding Of long narrative verse, the chief writers were Michael Drayton, Thomas Sackville, and Samuel Daniel The last part of the Renaissance in England is considered to extend from the accession of James I in 1603 through the PURITAN REVOLUTION to the Restoration Obviously some of the great men of Elizabeth's day continued writing beyond her reign King James himself was a poet and prose writer, and the version of the Bible authorized by him is a high point of English translation Foremost among the prose writers of his time was Sir Francis Bacon Other prose writings were those of Robert Burton, Sir Thomas Browne, and Jeremy Taylor and the sermons of the poet John Donne Thomas Fuller was a good historian and a royalist, as was the biographer Izaak Walton (best known, however, for his *Compleat Angler*) Of the sermons and pamphlets which influenced English life in the period before and during the civil war, little achieved the stature of literature except the *Eikon Basilike,* published immediately after the execution of Charles I, and the powerful writings of the Puritan apologist John Milton In drama, Shakspere wrote his greatest tragedies after Elizabeth's death and remained the foremost dramatist Others were Thomas Heywood, Thomas Dekker, and John Webster, while Ben Jonson's classic and satiric plays started a school of writers, who continued until the closing of the theaters by the Puritans in 1642 Jonson's great masques are equaled only by the later *Comus* of Milton Other playwrights of note were George Chapman, John Marston, Cyril Tourneur, Francis Beaumont and John Fletcher, Philip Massinger, and Thomas Middleton In poetry during the Jacobean period, Ben Jonson was the leader, as critic and teacher, but equally great was John Donne Their contemporaries and followers included the group called the METAPHYSICAL POETS and the CAVALIER POETS, as well as William Drummond and Andrew Marvell, the friend of Milton Many of these men continued to write through the confusion of the Puritan Revolution, although the work of John Milton overshadows all else in those times and is one of the great achievements in English literature His two epics and other major poetry appeared after the restoration of Charles II in 1660 The interest in the classics which had been an element in humanism developed into a well-defined critical neoclassicism, concerned with rules and proportions, in the latter half of the 17th cent Probably the greatest critic as he was one of the greatest poets of the period was John Dryden, although William D'Avenant, Thomas Hobbes, and Abraham Cowley had preceded him in both fields Perhaps in reaction from the Puritan regime, perhaps reflecting the low moral tone of the courts of Charles II and James II, Restoration plays, especially comedies, were cynical and corrupt, often indecent. Dryden's rival playwrights were Thomas Otway, Sir George Etherege, William Wycherley, Thomas Shadwell, and Aphra Behn Around the turn of the century the playwrights who continued the bawdiness, though with more concern for the structure of the plays, were William Congreve, Sir John Vanbrugh, and George Farquhar In the uncertain political atmosphere poetic satire flourished, written by Dryden, Samuel Butler, and John Wilmot, earl of Rochester Notable prose is found in the histories of Edward Hyde, earl of Clarendon, the diaries of John Evelyn and Samuel Pepys, and the essays of the antiquarian Thomas Rymer and of Abraham Cowley. In 1698 Jeremy Collier wrote his attack on the morality of the English stage. Imitations of foreign romances were numerous The greatest fiction writer of the time was, however, John Bunyan, who used his talents for religious teaching The 18th cent is often called the Age of Reason or Age of Classicism because of the stress placed on common sense (i e., the sense of knowledge common to all men), conventionality, and the pseudoclassical "rules" of literature Enthusiasm and individuality were deprecated, reason, manners, and form were stressed over imagination and emotion The philosophy propounded by John Locke shortly after the Glorious Revolution of 1688 was empirical rationalism, and he was followed by the deist Anthony Ashley Cooper, 3d earl of Shaftesbury, and the Anglican bishop George Berkeley, also a philosopher The concern with manners had in it the seeds of sentimentalism and of romanticism which were to prevail in the latter half of the 18th century The early half of the century was the age of town life and the coffeehouses, the rise of the PERIODICAL and the NEWSPAPER, and the vigorous and cutting prose of Daniel Defoe and Jonathan Swift Joseph Addison and Sir Richard Steele, collaborators in the *Spectator,* were also political writers, and Addison was a poet and critic. In poetry Alexander Pope was the predominant figure, while his friends John Gay and Dr John Arbuthnot as well as Swift, Matthew Prior, and others were noted for light and satiric verse Pope himself was a master of form and of criticism in verse. James Thomson and Edward Young both used blank verse as opposed to Pope's polished heroic couplets Most notable of the hymn writers of the time was Isaac Watts There was a new interest in the ballad. Pope as a letter writer found a rival in Lady Mary Wortley Montagu, and the vogue for letters led to the novel in letters of Samuel Richardson After his *Pamela* (1740) the modern novel was developed by Henry Fielding and Tobias Smollett Laurence Sterne, Oliver Goldsmith, Henry Mackenzie, and Fanny Burney are foremost among those later in the 18th cent who wrote sentimental novels They may be compared with the sentimental comedies which held the stage in the first half of the century In reaction against the Restoration appeared these more respectable if less inspired plays of Colley Cibber, Sir Richard Steele, Edward Moore, and Henry Fielding The farces of Fielding and the ballad operas by John Gay and Henry Carey, however, continued the earlier free vein Tragedy was negligible, represented in the plays of Nicholas Rowe, of Addison, Ambrose Philips, and George Lillo Dr Samuel Johnson embodies a great deal of the best thought and writing of the middle and latter half of the century and may be grouped with his biographer, James Boswell, with the philosopher David Hume, the naturalist Gilbert White, and the historian Edward Gibbon, as well as with Edmund Burke, as a master of English prose In an age which prized autobiography and the stories of voyages—*Robinson Crusoe* was a fictional reflection of both—the diaries of Fanny Burney and Mrs Thrale were popular, as were the letters of the earl of Chesterfield, Horace Walpole, William Cowper, and Thomas Gray On the stage appeared plays by George Colman, the elder, and Richard Cumberland and the revisions of older plays by the actor David Garrick Of higher kind were the works of Oliver Goldsmith and Richard Sheridan The growing interest in nature and in the individual which was to flower in romanticism begins to show not only in the early work of James Thomson and William Collins, but more especially in the transitional poetry of Thomas Gray, William Cowper, and Robert Burns In addition, William Blake gave rein to the soaring imagination and personal religion which in different forms were to appear in the later romantic poets Burns too adapted the folk song which the romantics were to collect as ballads On the other hand, romantic interest in the medieval and exotic flowered in the GOTHIC ROMANCE of Horace Walpole, Ann Radcliffe, and others and in the Ossianic poems of James Macpherson The religious revival under the Wesleys, Charles and John, gave a great stimulus to hymn writing and religious writing The romantic period in English literature is usually defined as beginning with the French Revolution in 1789 or with the publication of *Lyrical Ballads* (1798) by William Wordsworth and Samuel Taylor Coleridge and ending with the death of Sir Walter Scott in 1832. The characteristics of ROMANTICISM are conveniently opposed to those of classicism in poetry, but English literature of the period also reflects the turmoil of the French Revolutionary Wars and of those against Napoleon I as well The polemics of Thomas Paine and the writings of William Godwin and Joseph Priestley were largely political, while the later agitations for reform by William Cobbett and Jeremy Bentham, culminating in the Reform Bill of 1832 and the rise of the Victorian middle class, were sociological This great creative period in English literature stressed, among the poets, nature, the individual, the medieval and to some

extent the classical past, and Elizabethan literature, especially Shakspere The leading poets were William Wordsworth, Samuel Taylor Coleridge, John Keats, Percy Bysshe Shelley, Lord Byron, and Sir Walter Scott, while lesser ones included Robert Southey, Thomas Moore, Thomas Hood, Thomas Lovell Beddoes, Leigh Hunt, and Walter Savage Landor Hunt and Landor, as well as Coleridge, were essayists and critics of note and played their part in the development of the periodicals which sprang up in this time Other leading essayists were Charles Lamb, William Hazlitt, and Thomas De Quincey In fiction the novels of Jane Austen are in tone purely 18th cent , although chronologically she is the first great novelist of the romantic period Lesser novelists were Henry Brooke, Thomas Day, William Godwin, and the Irish novelist Maria Edgeworth The greatest name in romantic fiction of the early 19th cent is that of Sir Walter Scott, who also wrote popular narrative verse and whose influence was as great in Germany, France, and Italy as in England and America His contemporaries and followers included his son-in-law and biographer J G Lockhart, Frederick Marryat, Thomas Love Peacock, and John Galt Harrison Ainsworth and Edward George Bulwer-Lytton were his most immediate successors among historical novelists in England, and Bulwer-Lytton was one of the few successful playwrights in a period when imitations of the Elizabethans and translations and adaptations of German plays held the stage Other playwrights once popular, but now forgotten, were Thomas Holcroft, Richard Cumberland, Joanna Baillie, and Mary Russell Mitford, Miss Mitford is remembered only for *Our Village* The Victorian period in literature is usually considered to begin with the passage of the Reform Bill of 1832 and to close about the end of the 19th cent The rise of a prosperous middle class, attendant on the INDUSTRIAL REVOLUTION, increased the reading public, and the rapid progress of science brought many new questions to the attention of writers Periodicals flourished, and in literature the age was one predominantly of the novel, the essay, and poetry In scientific writing, Sir Charles Lyell in the 1830s in geology was to prepare the way for Charles Darwin's writings on evolution in the 1850s and for the writings of the philosopher Herbert Spencer and the later Thomas H Huxley Thomas Carlyle was an essayist and historian in whom romanticism was expressed as transcendentalism John Stuart Mill, utilitarian philosopher, was a notable essayist. T B Macaulay was the first of the great Victorian historians and was followed by H T Buckle, W E H Lecky, J R Green, William Stubbs, and E A Freeman In the 1830s the Oxford movement within the Anglican Church included John Keble, R H Froude, Edward Pusey, and John Henry Newman Newman after his conversion to Roman Catholicism wrote some of the best religious prose and poetry of the century The great novelists of the early part of the Victorian period were Charles Dickens and William Makepeace Thackeray, only slightly less prominent were Charlotte and Emily Brontë, George Eliot, Anthony Trollope, Charles Reade, Charles Kingsley, Wilkie Collins, and Benjamin Disraeli, Elizabeth Gaskell wrote one immortal novel, *Cranford* The fiction of Lewis Carroll (C L Dodgson) is some of the most charming nonsense in English Largely autobiographical are Samuel Butler's *Way of All Flesh* (not published until 1903) and the travel books of George Borrow Later in the century George Meredith and Thomas Hardy wrote both poetry and novels of note, free of the taboos which are associated with Victorianism Robert Louis Stevenson became one of England's best storytellers, and Rudyard Kipling was both poet and novelist of the empire George Gissing's novels reflected the naturalism of France George Moore's best work was done in the 1890s The great names in Victorian criticism included John Ruskin, Matthew Arnold, Walter Pater, and Walter Bagehot and later Edward Dowden, G E B Saintsbury, and Sir Edmund Gosse In poetry the writings of Matthew Arnold and his friend Arthur Clough were less successful than Arnold's prose Alfred Tennyson was the unchallenged poet laureate till the 1870s, when Robert Browning began to get the recognition already accorded his wife, Elizabeth Barrett Browning, and when the Pre-Raphaelites Dante Gabriel Rossetti and William Morris and also Algernon Swinburne revolted variously against Victorianism Among the minor poets were W H Henley, William Watson, A E Housman (whose lyrics were better known to 20th-century readers), and the decadents Oscar Wilde, Ernest Dowson, and Arthur Symons Coventry Patmore, Francis Thompson, Lionel Johnson, and Gerard Manley Hopkins were all religious poets of the time, although the intense work of Hopkins was not published by his brother poet Robert Bridges until 1918 Christina Rossetti wrote religious poetry and charming verses for children. Playwrights in the rather undistinguished Victorian theater were Dion Boucicault, Tom Taylor, and T. W Robertson. W S. Gilbert is best known for his collaborations with Sir Arthur Sullivan in gay, satirical operettas Social comedy in the 1880s and '90s—best represented by Henry Arthur Jones, Sir A W Pinero, and the sparkling wit of Oscar Wilde —was almost untouched by the influence of Ibsen, although some of his plays had been translated by William Archer, playwright and dramatic critic, and George Bernard Shaw had written *The Quintessence of Ibsenism* (1891) Shaw dealt with social problems and ideas, as did Harley Granville-Barker and John Galsworthy Other playwrights whose work carried into the 20th cent were Sir James Barrie and John Drinkwater The Irish literary revival in the latter part of the century gave rise to the Abbey Theatre and its playwrights, notably J M Synge, W B Yeats (a major poet as well as playwright), Lady Gregory, St John Ervine, and later Lennox Robinson and Sean O'Casey Early 20th-century poets include traditionalists such as Alfred Noyes, John Masefield, Walter de la Mare, Lascelles Abercrombie, Edward Thomas, and James McElroy Flecker and the essayists G K Chesterton and Hilaire Belloc Among the "war poets" of the First World War were Rupert Brooke, Wilfred Owen, Edmund Blunden, and Siegfried Sassoon English poets concerned with the poetic experiment imagism included primarily Richard Aldington, although many more were profoundly influenced T S Eliot is probably the most influential poet, critic, and playwright of the middle years of the century Other poets are W H Auden, Stephen Spender, Louis MacNeice, C Day Lewis, and Dylan Thomas The Sitwells— Osbert, Edith, and Sacheverell —are perhaps more famous for their prose than for their eccentric poetry In the first half of the 20th cent the strong tendencies toward realism and naturalism noticeable in Hardy's novels and in other works continued in those of John Galsworthy and Arnold Bennett and even in some of those of H G Wells, when he was not writing of a fantastic future William De Morgan wrote long novels, crowded with characters, in the 19th-century tradition Joseph Conrad was probably the best writer of sea stories of this period The nature novels of W H Hudson seem a romantic survival Psychological realism was attempted by Henry James and was carried to its ultimate by James Joyce and his followers, May Sinclair, Dorothy Richardson, and especially Virginia Woolf, who pursued the stream-of-consciousness technique Disgust with society and revolt against it resulted in the powerful and diverse fiction of Aldous Huxley, D H Lawrence, and Evelyn Waugh Various novelists writing less experimental works were Somerset Maugham (also a successful playwright), E M Forster, Rose Macaulay, H M Tomlinson, and Winifred Holtby Most short-story writers were also novelists, but the especial talents of Katherine Mansfield must be remembered This century also saw a phenomenal rise in the popularity of the detective story, which had had its genesis earlier in the "Sherlock Holmes" stories of Sir Arthur Conan Doyle The theater has prospered in spite of difficulties of wars and depressions, besides the long and brilliantly paradoxical plays of G B Shaw, the most popular have been those of Noel Coward and the Abbey Theatre dramatists Much of the best English prose was written in other fields than pure literature, by such men as the psychologist Havelock Ellis, the philosophers Bertrand Russell and Alfred Whitehead, the scientist Julian Huxley, the anthropologist Sir James Frazer, and the sociologists Beatrice and Sidney Webb Influential books on Arabia were written by Gertrude Bell, Charles Montagu Doughty, and T E Lawrence Of the excellent historians only a few can be named— Cardinal Gasquet, Lord Acton, G M Macaulay, W S Churchill, Arnold Toynbee See also the articles AMERICAN LITERATURE, CANADIAN LITERATURE, ENGLISH, SOUTH AFRICAN LITERATURE, AUSTRALIAN LITERATURE See *The Cambridge History of English Literature* (14 vols , 1907–16, index volume, 1927), *The Cambridge Bibliography of English Literature* (4 vols , 1940) There are various one-volume histories of English literature, such as those by Emile Legouis and Louis Cazamian (rev ed , 1935), W M Neilson and Ashley Thorndike (rev ed , 1930), and A C Baugh and others (1948) For histories of 20th-century literature, see J M Manly and Edith Rickert, *Contemporary British Literature* (3d ed , 1935), S J Kunitz and Howard Haycraft, *Twentieth Century Authors* (1942), W Y Tindall, *Forces in Modern British Literature, 1885-1946* (1947)

engraving, in its broadest sense, the art of cutting lines in metal, wood, or other material either for decoration or for reproduction through PRINTING. In its narrowest sense, it is an intaglio printing process in which the lines are cut in a metal plate with a graver (burin) The earliest known engravings date from about the middle of the 15th cent The technique lends itself to careful, studied work in which precision and clarity are desiderata Tones are most readily obtained with fine parallel lines, which may easily give a slightly mechanical quality Among the early master engravers were Dürer, Schongauer, and Lucas van Leyden WOOD ENGRAVING differs from true engraving in that it is a relief process During the 19th cent , steel engraving enjoyed a short popularity as a reproduction process because it made possible a large number of proofs, but it was superseded by the photomechanical processes (see PHOTOENGRAVING) See also DRY POINT and ETCHING See A M Hind, *History of Engraving and Etching* (1923), Frank Weitenkampf, *How to Appreciate Prints* (rev ed , 1932), J T Arms, *Handbook of Print Making and Print Makers* (1934)

engrossing, in English law, crime of acquiring a monopoly of goods so as to sell them dear The offense was ordinarily limited to monopolies of foods Related crimes were forestalling, i e , the buying up of food on the way to its normal markets, and regrating, i e , an attempt to raise the price of foods, as by spreading rumors about imminent shortages All these crimes were abolished in 1844

En-haddah (ĕn-hă'dŭ), unidentified city, N of Samaria Joshua 19 21

En-hakkore (ĕn-hă'kōrē) [Heb ,=spring of the crier], fountain, S Palestine Judges 15 19

En-hazor (ĕn-hā'zôr) [Heb ,=village spring], place, W of the Sea of Galilee Joshua 19 37

Enid (ē'nĭd), city (pop 28,081), co. seat of Garfield co , N Okla , settled 1893 on the site of a U S land office It is an important trade and processing center for an area rich in wheat, livestock, and poultry, there are also oil refining and dairying Phillips Univ (Disciples of Christ, coeducational, 1906) and a state hospital are here See Marquis James, *The Cherokee Strip* (1945)

Enisei, river see YENISEI

Eniwetok (ĕnĭwē'tŏk, ĕnā'wĕtôk), circular atoll, central Pacific, one of the Ralik Chain in the Marshall Islands It is c 50 mi in circumference and comprises 40 islets In the Second World War, Eniwetok was captured in 1944 by U S forces and became a naval base in 1945 In 1948 installations for atomic tests were established

Enkhuizen (ĕngk'hoi"zun), municipality (pop 10,342), North Holland prov , NW Netherlands, a port on the Ijsselmeer NNE of Amsterdam It played an important part in the Dutch struggle for independence, was a prosperous fishing and trading center in the 17th cent , and has retained some of its Renaissance architecture Enkhuizen was the scene of fighting (1940) in the Second World War

Enlightenment, term applied to the main trend of thought of 18th-century Europe Sparked by the English Revolution of 1688, by the discovery by Sir Isaac NEWTON of a fundamental universal order, by the rationalism of DESCARTES, and by the empiricism of Francis BACON and John LOCKE, the champions of the Enlightenment sought to popularize a rationalistic and scientific approach to religious, social, political, and economic issues They varied so widely in opinion that one cannot speak of a common program, but they were in agreement on several basic attitudes All remnants of the Middle Ages—feudalism, dogmatism, reliance on authority in spiritual and scientific matters, censorship of thought, religious intolerance, restrictions of trade and economic enterprise—fell under their attack Freedom, reason, and humanitarianism were their common mottoes Popularization was their preferred weapon The dictionary of Pierre BAYLE, the ENCYCLOPÉDIE of DIDEROT, and the popular writings of Benjamin FRANKLIN and Thomas PAINE exerted immeasurable influence on all classes of 18th-century society Foremost among other proponents of Enlightenment and humanitarianism were VOLTAIRE, MONTESQUIEU, J J ROUSSEAU, TURGOT, and BUFFON in France, David HUME and Alexander POPE in England, G E LESSING, Moses MENDELSSOHN, HERDER, and, especially, KANT in Germany, and BECCARIA in Italy Among the extreme materialistic school, generally opposed with vehemence by the other thinkers of the Enlightenment, were LA METTRIE, HOLBACH, and HELVÉTIUS The cosmopolitan character of the whole movement was furthered by the international salons of such women as Mme d'Épinay, Mme du Deffand, and Mme Geoffrin The movement found its strongest echo among the newly arisen class of bourgeoisie— rich merchants, industrialists, and financiers—its strongest opposition in the high clergy and the impoverished nobility, which saw its few remaining privileges menaced A phenomenon peculiar to the Age of Enlightenment—or Age of Reason, as it is also called—were the "enlightened despots" who by high-handed methods tried to impose the reforms advocated by the philosophers Peter I of Russia anticipated the trend Emperor JOSEPH II was perhaps the outstanding prototype of the enlightened despot; others were FREDERICK II of Prussia, CATHERINE II of Russia, and CHARLES III of Spain The proponents of the Enlightenment have often been held responsible for the French Revolution They certainly contributed immensely to the formation of the modern mind and of modern society The government of the United States, particularly, is the child of 18th-century rationalism. See R B. Mowat, *The Age of Reason* (1934);

O E Fellows and N L Torrey, *The Age of Enlightenment* (1942), G E Bryson, *Man and Society* (1945), Ernst Cassirer, *Rousseau, Kant, Goethe* (1945), Paul Hazard, *La crise de la conscience européenne* (3 vols , 1935)

En-mishpat (-mĭsh'-) [Heb , =fountain of judgment], the same as KADESH (Kadesh-barnea)

Enna (ĕn'nä), city (pop 21,261), capital of Enna prov , central Sicily, Italy, formerly called Castrogiovanni In ancient times it was devoted to the cult of Ceres It fell to Syracuse (396 B C) and to Rome (258 B C), and it played a major part in the Sicilian slave rebellion of 135–132 B C A strong medieval citadel dominates the city, which commands a strategic position Sulphur mining and agriculture are important in the region

Ennemoser, Joseph (yō'zĕf ĕ'numōzûr), 1787–1854, Austrian physician, b Tyrol, M D Univ of Berlin, 1816 He was professor of medicine at the Univ of Bonn and later established a practice in Munich, where he attracted attention by his use of hypnotism in the treatment of disease

Ennis, urban district (pop 5,876), co seat of Co Clare, Ireland, on the Fergus river and NW of Limerick It has flour mills and a trade in farm produce It is the site of the Roman Catholic cathedral of Killaloe diocese A Franciscan abbey was founded here in the 13th cent The ruins of Clare Abbey and Killone Abbey (both 12th cent) are near

Ennis, city (pop 7,087), N Texas, SSE of Dallas, settled c 1870, inc 1893 A market center in an area of rich blackland farms, it processes cotton and grain and has railroad shops and varied small industries

Enniscorthy (ĕnĭskôr'thē), urban district (pop 5,960), Co Wexford, Ireland, on the Slaney river and NNW of Wexford It is a market for livestock, dairy products, and field crops and has breweries, flour mills, iron founding, and other industries The Roman Catholic cathedral of Ferns diocese was designed by E W Pugin There are remains of a 12th-century Norman castle In 1649 Cromwell took the town, and in 1798 it was sacked by United Irishmen from near-by Vinegar Hill

Enniskillen (ĕnĭskĭl'lĭn), urban district (pop 4,880), co seat of Co Fermanagh, Northern Ireland, on an island in Erne river between Upper and Lower Loughs Erne There is trade in farm produce, and cutlery is manufactured The forces of William III defeated those of James II here in 1689

Ennius, Quintus (kwĭn'tŭs ĕ'nēus), 239–169? B C , Latin poet, regarded by Romans as the father of Latin poetry, b Calabria He learned to speak Oscan, Greek, and Latin He served (204 B.C) as a centurion in Sardinia under Cato the Elder, who took him to Rome Ennius lived there most of his life, teaching and writing He was made a Roman citizen in 184 B C His ambition was to be a Latin Homer, and his innovations proved important in the development of Latin poetry he introduced the Latin quantitative hexameter and the elegiac couplet, smoothed the current roughness of Latin diction, and gave to Latin poetry a definitive artistic base His verse is vigorous and imaginative with a sonorous quality of diction A successful tragedian, he also wrote comedies, satires, and epigrams Fragments amounting to some 400 lines survive from his tragedies, and about 600 lines remain from his masterpiece, the epic *Annales*, a literary history of Rome Vergil, Lucretius, and Ovid borrowed freely from Ennius

Ennodius, Saint (Magnus Felix Ennodius) (ĕnō'-dēus), 474?–521, Gallo-Roman ecclesiastic and writer He was bishop of Pavia (514?–521) and was employed as an imperial envoy (515, 517) in an attempt to unite the Eastern and Western Churches His writings (letters, orations, poems, and biographies), in the classical tradition, are devoted much to form An autobiography, *Eucharisticum*, and a life of Epiphanius, his episcopal predecessor, are his best works

Enns (ĕns), town (pop 7,661), Upper Austria, on the Enns river, a tributary of the Danube, and SE of Linz One of Austria's oldest towns, it was established as a fortress in the 9th cent and received city rights in 1212 It has a Gothic church and a museum with Roman relics Lorch, incorporated into Enns in 1938, is on the site of a Roman camp established A D c 170 by Marcus Aurelius

Enoch (ē'nuk) [Heb , =dedicated] **1** Son for whom Cain named the city he built Gen 4 17 **2** Father of Methuselah It was said of him that he walked with God—a phrase used also of Noah—and also that like Elijah he was translated to heaven Gen 5 18–24, Luke 3 37, Heb 11 5, Jude 14 Henoch 1 Chron 1 3 For the Ethiopic Book of Enoch and the Secrets of Enoch, see PSEUDEPIGRAPHA

Enos (ē'nŏs) [Heb , =man], son of Seth Gen 4 26, Luke 3 38 Enosh 1 Chron 1 1

Enosburg (ē'nusbûrg), town (pop 2,082), N Vt , NE of St Albans, granted 1780 It includes Enosburg Falls village (pop 1,168), where textile equipment is made

Enosh (ē'nŏsh), the same as ENOS

En-rimmon [Heb , =pomegranate spring], place, inhabited by Judahite exiles. The same is meant by "Ain and Rimmon" in Joshua 15 32, by "Ain, Remmon" in Joshua 19 7, by "Ain, Rimmon" in 1 Chron 4 32, and by "Rimmon" in Zech 14 10 It was near the border of Simeon

En-rogel (ĕn-rō'gĕl) [Heb , =fuller's spring], spring, near Jerusalem Joshua 15 7, 18 16, 2 Sam 17 17, 1 Kings 1 9 Two places claim to be identified with En-rogel—the Fountain of the Virgin and the Well of Job, further south

Enschede (ĕn'skhudă), municipality (pop 100,-123), Overijssel prov , E Netherlands, near the German border It is a textile center and a market for dairy products The city, destroyed by fire in 1862, has been completely rebuilt

Ensenada, Zenón de Somodevilla, marqués de la (thānōn' dā sōmōdāvē'lya markās' dā lā ĕnsānā'-dhä), 1702–81, Spanish statesman He was ennobled (1736) for his part in the expedition to Naples that placed King Philip V's son Carlos (later Charles III of Spain) on the Neapolitan throne After 1743, when Philip appointed him chief minister, Ensenada virtually ruled Spain He sought to maintain peace so that Spain might recover, but he was led by his fear of England to a policy of close alliance with France and of naval rearmament His economic and fiscal reforms benefited the country Ensenada's anti-British attitude led to his downfall In 1754 FERDINAND VI dismissed, arrested, and banished him Ensenada returned to the court after the accession (1759) of Charles III, but was accused of intrigues and banished again in 1766

En-shemesh (ĕn-shē'mĕsh) [Heb , =spring of the sun], spring, Palestine, on the border of Judah Joshua 15 7, 18 17

ensilage (ĕn'sulĭj), succulent, finely chopped fodder, made by storing a green crop in an airtight structure (called a silo), in which it is preserved in palatable form for a considerable time if properly cured and handled The crop most used for silage is corn, other crops are sorghum, sunflowers, and legumes The principle has been known since Roman times at least, fodder then being stored in pits in the ground, but the modern tower storage process is only about a century old Its development has been a great aid to dairying and to agriculture in general, since ensilage makes a good feed for horses and sheep as well as for cattle The crop must be cut at the proper time to insure right fermentation in the silo See publications of the U S Dept of Agriculture

Ensor, James Ensor, Baron, 1860–1949, Belgian impressionist painter, son of an Englishman As a protégé of Félicien Rops, he was one of the founders of the experimental group *Les XX*, with whom he exhibited in Paris (1882), Berlin (1903, 1908), and Rome (1911) His work is characterized by brilliant and subtle coloring and concerns itself with landscape as well as portraits and action pictures, masks and masked persons are one of his specialties Among his works are *Hultres* (Antwerp), *Le Lampiste* (Brussels), and *Tribulations of St Anthony* (Mus of Modern Art, New York) His influence on 20th-century Belgian art has been incalculable He was created baron in 1929 The German radio had announced his death in 1942

entablature (ĕntă'blucheûr), the entire unit of horizontal members supported by the columns or pilasters in classic architecture—Greek, Roman, or Renaissance In Renaissance and modern designs, the entablature is used also upon a wall as the crowning member or as a horizontal band, irrespective of columns Essentially the entablature is a development from the primitive lintel which spans between two posts and supports the ends of the roof rafters The height of the entablature with relation to the column supporting it varies with the three orders, Doric, Ionic, and Corinthian, but, in general, it is about one fourth the column height in all the Roman and Renaissance interpretations The entablature's component members are the ARCHITRAVE, which rests directly upon the abacus, or top member, of the column cap and which in the Greek orders was generally a plain, unmolded surface, the FRIEZE, which may be plain or ornamented and which, in the Doric order, is composed of alternating triglyphs and metopes, and the CORNICE, or topmost member, a group of strongly projecting moldings

entail, in law, restriction of inheritance to a limited class of descendants for at least several generations The object of entail is to preserve large estates in land from the disintegration which is caused by equal inheritance by all the heirs and by the ordinary right of free alienation (disposal) of property interests Legal devices similar to entail were known in Roman law and in all the countries of Europe In England the entail became common in the early 13th cent , and in its most usual form was a conveyance by the grantor (owner) of real property to a grantee and the "heirs of his body," i e , his lawful offspring, in successive generations In the inheritance the rule of PRIMOGENITURE was observed The subsequent development of the entail reflects a continuing struggle between the effort to preserve large estates and the allowance of free alienation By the mid-13th cent the courts interpreted the birth of his first child as the satisfaction of a condition which vested the grantee with the power of alienation This result was overcome by the statute *De donis conditionalibus* [conditional gifts] (1285) which gave effect to the grantor's intent In time the grantee was able to get control of the property despite the statutory prohibition by use of the FINE Other devices were later developed to effect the opposite result of preserving the entail Current English law permits the holder of entailed property (either real or personal) to dispose of it by DEED, otherwise the entail persists In the United States for the most part entails are either altogether prohibited or limited to a single generation

En-tappuah (ĕn'-tăpū'u) [Heb , =spring of Tappuah], the same as TAPPUAH **2**

entasis (ĕn'tusĭs) [Gr , =stretching], the slight convex curvature of a classical COLUMN which diminishes in diameter as it rises This device, as used by Greek builders, was of extreme subtlety, the free-hand curvature being merely sufficient to guard the contours of the column from any appearance of inward sagging In the Doric columns of the Parthenon, 34 ft high and 6 ft 3 in in diameter at the bottom, the total convexity amounts to only ¾ in This, as well as other Greek refinements, had remained entirely unobserved prior to Cockerell's close measurements of the ruins in the early 19th cent In Greek Doric columns the entasis began at the foot, but in the Roman orders it was confined to the upper two thirds of the column

Entebbe (ĕntĕ'bu), city (pop c 7,000), capital of Uganda, on Victoria Nyanza There is sugar refining

Entente. see TRIPLE ALLIANCE AND TRIPLE ENTENTE, BALKAN ENTENTE, LITTLE ENTENTE

Entente Cordiale. see TRIPLE ALLIANCE AND TRIPLE ENTENTE

Enterprise. 1 City (pop 4,353), a co seat of Coffee co , SE Ala , WNW of Dothan, inc 1899 Diversified farming was begun after the boll weevil destroyed the area's cotton (1910–15), a Boll Weevil Monument was erected in 1919 **2** City (pop 1,709), co seat of Wallowa co , NE Oregon, SE of Pendleton, platted 1885, replatted 1887, inc 1889 Trade center for near-by ranches, it is the headquarters for Wallowa National Forest and has a state fish hatchery

Entragues, Henriette de Balzac d' (ärrĕt' du bälzak' dätrag'), 1579–1633, marquise of Verneuil, mistress of Henry IV of France after the death of Gabrielle d'Estrées She violently resented his marriage to Marie de' Medici and plotted against his life

Entrecasteaux, Joseph Antoine Bruni d' (zhōzĕf' ätwan' brōnē' dätrukastō'), 1739–93, French navigator He fought at Minorca (1756), commanded the East India station (1786), and was appointed governor of Mauritius and the Isle of Bourbon (1787) While in command of an expedition to search for La Pérouse (1791–92), he determined the position of Amsterdam island, explored the coast of New Caledonia, Tasmania, and New Holland, and located several groups of islands Many of the charts made by the expedition (particularly those of South Australia produced by Beautemps-Beaupré) were of unusually high standards An archipelago, a point on the coast of Australia, and a channel between Tasmania and Brumi island are named for him

Entrecasteaux Islands, D', Territory of Papua see D'ENTRECASTEAUX ISLANDS

entrepreneur (ätruprunûr') [Fr , =one who undertakes], term attributed to the French 18th-century economist Richard Cantillon With French economists the term carried a connotation of personal activity and speculative risk, in contrast to the ordinary capitalist's more passive participation in business ventures British economists did not differentiate the entrepreneur from the regular capitalist until the 19th cent , when Alfred Marshall and others built up a doctrine stressing the entrepreneur's social value as coordinator of the various processes necessary to large-scale industry and trade Entrepreneurs have been most important in times of economic change and new industrial growth, pre-eminently during the Industrial Revolution in the 18th and early 19th cent , when Arkwright in England and William Cockerill on the Continent were outstanding among the rising class of manufacturers Henry Ford is a more recent example, but the entrepreneur's functions and importance have declined with the growth of the CORPORATION See M H Dobb, *Capitalist Enterprise and Social Progress* (1925)

Enumclaw (ĕn'umklô), town (pop 2,627), W Wash , in the foothills of the Cascade Range E of Tacoma, in lumber, dairy, and resort country, founded 1885

Enver Pasha (ənvär' pashä'), 1881–1922, Turkish general and political leader He took a prominent part in the Young Turk revolution of 1908 and in the Tripolitan campaign of 1912 In the second Balkan War he recovered Adrianople (1913) Ardently pro-German, he helped bring Turkey into the First World War as a German ally, and throughout the war he exercised virtually dictatorial power He was killed while leading an anti-Soviet expedition in Bukhara

Enzina, Juan del: see ENCINA, JUAN DEL.

Enzio (ān'tsēō) or **Enzo** (ān'tsō) [Ital. from Ger. *Hans* or *Heinrich*], c.1220–1272, king of Sardinia, illegitimate son of Emperor FREDERICK II. He married a Sardinian heiress and was made king of Sardinia by his father. In the wars between Frederick and the pope he fought gallantly in central and N Italy. While helping Modena against BOLOGNA he was defeated and captured at the battle at Fossalta (1249). He was kept a prisoner in Bologna until his death. The palace in which he was confined was named after him.

enzyme (ĕn'zīm, -zim), complex organic substance secreted by certain cells of plants and animals which causes a chemical change in the substance upon which it acts. Much remains to be learned about the chemical nature and mode of action of enzymes. A number of enzymes have been isolated in crystalline form and have been found to be proteins. The action of an enzyme is believed to be that of a catalyst (see CATALYSIS). However, enzyme reactions are distinguished from ordinary catalytic reactions in being more specific (i.e., they usually can act upon only one kind of substance), in having an optimum temperature at which they react (usually from about 30°C. to 40°C.), in having an optimum acidity for reaction, and in that the effect of changing the concentration of the enzyme or changing the material upon which it is acting (the substrate) cannot always be predicted by simple chemical theory. Among the digestive enzymes found in both plant and animal tissues are the proteinases (those that act upon protein), e.g., pepsin, trypsin, and erepsin; lipase (which acts upon fats); and the carbohydrases (those that act upon starch and sugar), e.g., diastase (or amylase), maltase, and invertase. Certain enzymes catalyze oxidation reactions and other metabolic processes. Fermentation is brought about by enzymes. See C. A. Elvehjem and others, *Respiratory Enzymes* (1939); J. H. Northrop and others, *Crystalline Enzymes* (2d ed., 1948), Henry Tauber, *Chemistry and Technology of Enzymes* (1949), Benjamin Harrow, *One Family's Vitamins, Enzymes, Hormones* (1950).

Eoanthropus: see MAN, PRIMITIVE.

Eocene epoch (ē'usēn) [Gr., =early recent, literally: dawn-recent], first epoch of the TERTIARY PERIOD and the CENOZOIC ERA of geologic time. It is frequently divided by geologists into Paleocene and Eocene. In North America, the Laramide revolution of the CRETACEOUS PERIOD was prolonged into the Paleocene during which the continent remained generally emergent, the Fort Union sandstone and shale of Wyoming and Montana and the Puerco and Torrejan sandstones of New Mexico being the only rock formations laid down. The Eocene proper in North America was marked by the submergence of the Atlantic and Gulf coastal plain, from New Jersey to Texas and as far north as S Illinois, and of the Great Valley of California and by extensive continental deposition in the Rocky Mt. region. Eocene formations along the Atlantic-Gulf coast are chiefly sands, clays, and marls, with some limestone and lignite, in California, Oregon, and Washington they are shale and sandstone, with oil and coal. The Badlands of the West are partly cut into Eocene formations (Wasatch, Green River, Bridger, and Uinta) containing great quantities of volcanic ash and in some districts oil-producing shale. Europe at the beginning of the Paleocene was emergent, but N France, S England, Belgium, and parts of Russia, Germany, and S Europe were later flooded. In the Eocene, a great flood from the Mediterranean covered most of S Europe, N Africa, and SW Asia, depositing nummulitic limestone, which is prominent in the Alps and Carpathians and from which the stones of the Pyramids are quarried. In the Eocene, the mammals became the dominant animals. The chief Paleocene mammals were marsupials, insectivores, lemuroids, archaic flesh-eating mammals (creodonts), and archaic hoofed mammals (amblypods, condylarths), but in the Eocene proper the ancestors of the common animals of Europe and North America suddenly made their appearance, possibly as immigrants from another region where they had developed. Eocene mammals included ancestral rhinoceroses, tapirs, camels, pigs, rodents, monkeys, and whales and the ancestral HORSE, *Eohippus*, as well as animals, like the titanothere, which have since become extinct. The vegetation of the Eocene was fairly modern. After a period of cool climate in the Paleocene, the Eocene climate was warm.

Eohippus: see HORSE.

Éon de Beaumont, Charles Geneviève Louis Auguste André Timothée, chevalier d' (shärl' shunuvyĕv' lwē' ōgüst' ädrā' tēmōtā' shuvälyā' dō' du bōmō'), 1728–1810, French secret agent. According to a legend, neither established nor disproved, his first exploit (1755) was a secret mission to the Russian court, where he appeared in woman's dress and thus obtained the confidence of the empress. He was certainly attached to the French embassy in Russia from 1756 to 1760, served in the army (1761), and then went to England as secretary to the special ambassador (1762). Left there as chargé d'affaires (1762–63), he became involved (1763) in a scandalous public quarrel with the new ambassador, refusing to accept his recall or to surrender his papers. After Louis XV's death (1774), the new government, through Beaumarchais, reached an agreement with him by which he was to surrender his papers and return to France. The story of his Russian disguise had meanwhile been revived, bets were laid on his sex, and just before his departure (1777), an English jury officially adjudged him a woman. For unknown reasons, the French government insisted on his wearing female dress after his return to France, and he was thenceforth known as the Chevalière d'Éon. He returned to England in 1785, and there retained his disguise in his later years he was forced to earn his living by exhibitions of fencing. After his death, an examination of the body conclusively proved him a man. Memoirs attributed to him were published in 1836 and contain the spurious will of Peter the Great, a "plan" for world conquest by Russia. See J. B. Telfer, *The Strange Career of the Chevalier d'Éon de Beaumont* (1885).

Eos (ē'ŏs) [Gr., =dawn], Greek personification of dawn, daughter of the Titans HYPERION and THEIA. Her husband was ASTRAEUS, her children were the winds and the stars. She loved TITHONUS and bore him a son, MEMNON. The Romans called her AURORA. Homer's standard epithet for Eos is "rosy-fingered."

Eötvös, Joseph, Baron (öt'vûsh, Hung. *Eötvös József* (yō'zhĕf), 1813–1871, Hungarian writer and statesman. A Christian Liberal, he was minister of public instruction and religious affairs in 1848 and again in 1867. His political writings and also his novels and dramas reflect his liberal views. His novel, *The Village Notary*, translated into English, exposed the corrupt practices of county governments.

eozoon (ēuzō'ŏn) [Gr., =dawn animal], mineral formation composed of alternate layers of lime and green serpentine, discovered in the Grenville limestone of Canada. Sir John William Dawson, by whom the formation was named and described, believed it to represent a colony of fossil invertebrates, the earliest animals known to science, whose bodies had occupied the space filled by the serpentine and whose shells survived as the lime. The organic nature of eozoon has been vigorously disputed, and many scientists now agree that it is of inorganic origin.

Epaenetus (-pē'nĭ-, -pē'-) [Gr., =praiseworthy], convert living at Rome. Rom. 16:5.

Epaminondas (ĭpă'mĭnŏn'dus), d. 362 B.C., Greek general of Thebes. The son of a poor noble, he was obscure in early life, but at the battle of Mantinea (385 B.C.) he is said to have saved the life of Pelopidas. At the peace conference of 371 B.C. he was a Theban delegate and refused to surrender Theban claims to supremacy in Boeotia. Agesilaus II of Sparta therefore excluded Thebes from the peace. In the resulting war Epaminondas commanded the Boeotian troops. His thorough victory over the Spartans at Leuctra (371 B.C.) proved the virtue of his military innovations and earned him a name as one of the greatest tacticians of ancient times. Later he bolstered Boeotian power by rebuilding Messenian independence of Sparta. Because of unauthorized activities, he was for a time demoted, but his services were indispensable and he was returned to rank. In 367 B.C. he forced Alexander of Pherae to release Pelopidas. In 362 he was again commanding the Boeotians against the Spartans. He won at Mantinea but was killed in battle. He had a high reputation for probity, and his military genius was a valuable lesson to Alexander the Great.

Epaphras (ĕ'pufrăs) [for EPAPHRODITUS], fellow worker of Paul. Col. 1:7, 4:12, Philemon 23.

Epaphroditus (ĕpăfrōdī'tus) [Gr., =lovely], messenger from the Philippians to Paul in Rome. Philip. 2:25–30, 4:18.

Epée, Charles Michel, Abbé de l', (sharl' mĕshĕl' ābā' du lāpā'), 1712–89, French Jansenist and teacher of deaf-mutes. He developed a manual system of communication for deaf-mutes and founded a school for their instruction. In 1776 he published a treatise on his educational method, which he later (1784) expanded as *La Véritable Manière d'instruire les sourds et muets* [the right way to teach deaf-mutes]. His dictionary of manual signs was completed after his death by Abbé Sicard, and in 1791 his school was taken over by the Institution nationale des Sourds-Muets à Paris.

Épernay (āpĕrnā'), town (pop. 18,716), Marne dept., NE France, in Champagne, on the Marne river. It is, next to Rheims, the largest manufacturing center for CHAMPAGNE wine, and the headquarters of some of the oldest firms, notably Moët. The wine is processed and stored in caves which form a labyrinth some 30 mi. long in the surrounding hills.

Épernon, Jean Louis de Nogaret, duc d' (zhā' lwē' du nōgärā' dük' dāpĕrnō'), 1554–1642, French nobleman, favorite of Henry III. After the assassination of Henry, he tried to set up an independent government in Provence but was forced to submit to Henry IV in 1596. Largely responsible for the acceptance of MARIE DE' MEDICI as regent (1610), he was conspicuous in the government till 1618, in 1619 and 1620 he supported Marie against LUYNES. He was governor of Guienne from 1622 until dismissed (1641) by Richelieu.

Ephah (ē'fù) [Heb., =darkness]. **1** Midianite. Gen. 25:4, 1 Chron. 1:33. **2** Concubine of Caleb. 1 Chron. 2:46. **3** Judahite. 1 Chron. 2:47.

Ephai (ē'fī), man whose sons were massacred in Babylon by Ishmael. Jer. 40:8, 41:3.

Epher (ē'fur) [Heb., =calf]. **1** Son of Midian. Gen. 25:4, 1 Chron. 1:33. **2** Judahite. 1 Chron. 4:17. **3** Head of a Manassite family. 1 Chron. 5:24.

Ephes-dammim (ē'fĭs-) [Heb., =border of blood], bivouac of the Philistines when David killed Goliath. 1 Sam. 17:1. Pas-dammim. 1 Chron. 11:13.

Ephesians (-fē'-), epistle of the New Testament, the 10th book in the usual order. According to tradition it was written by St. PAUL to the Christians of Ephesus from his captivity at Rome (A.D. c.60). Critics have doubted, without great agreement, each of these points, there is ground for believing the letter was intended as an encyclical. No one subject is treated, but the whole epistle is pervaded with the doctrine of the mystical body of Christ, St. Paul's analogy of the perfect union of Christians. 1:20-23, 2:19-22, 4:1-13. Thus provides, too, the best example for the ideal harmony of husbands and wives. 5:22-33. Ephesians contains a famous metaphor of the Christian as a soldier. 6:10-17. The epistles to Colossians and Philemon were probably written at the same time as Ephesians.

Ephesus (ĕ'fusus), ancient Greek city of Asia Minor, near the mouth of the Cayster river (modern Kucuk Menderes), in what is today W Asiatic Turkey, S of Smyrna. One of the greatest of the Ionian cities, it enjoyed huge trade and became the leading seaport of the region. Its wealth was proverbial. The Greek city was near an old center of worship of a native nature-goddess, who was equated with the Greek Artemis, and a large temple was built. To this Croesus, who captured the city, contributed. From Lydian control Ephesus passed to the Persian Empire, enhancing its trade and importance. The temple was burned down in the 4th cent. B.C., but rebuilding was begun before Alexander the Great took Ephesus in 334. The city continued to thrive during the wars of his successors, and after it passed (133) to the Romans it kept its hegemony and was the leading city of the province of Asia. Its greatest glory was still the huge temple of Artemis, called by the Romans the temple of Diana and considered one of the Seven Wonders of the World. Ephesus became a center of Christianity and was visited by St. Paul, who addressed one of his epistles to the congregation there. The city was sacked by the Goths in A.D. 262, and the temple was destroyed. It was later somewhat restored. Ephesus was the seat of a church council in 431, but its importance was sinking. After the harbor silted up, Ephesus was abandoned. Excavation (1869–74) of the ruins of the temple brought to light many artifacts, including sculptures by Phidias and Polycletus and a portrait of Alexander the Great by Apelles. Other ruins are also of interest, including the Cathedral of St. John (which incorporated some materials from the old temple).

Ephesus, Council of, 431, the third ecumenical council, convened by Theodosius II and Valentinian III to deal with the controversy over NESTORIANISM. Adherents of both parties came, St. CYRIL of Alexandria had behind him the clergy and laity of most of Christendom, while Nestorius was backed by Theodosius and the Antiochene hierarchy. The council, late in starting, was opened by St. Cyril before the Antiochene bishops arrived. It anathematized Nestorius and his views. The Antiochenes arrived and, accusing Cyril of deliberately rushing the vote, deposed him. Soon afterward the papal legates arrived and the council reconvened, reaffirmed its position, and excommunicated the Antiochenes. The controversy continued until Theodosius held a hearing at Chalcedon between the disputants. He exiled Nestorius and ordered the consecration of a new patriarch of Constantinople, and the council broke up. Its chief dogmatic pronouncement was that from the very words of the Nicene Creed it follows that Mary may be called Mother of God, for the perfect coherence of godhead and manhood in Christ prevents any separation of natures such as Nestorius implied. This doctrine was further defined later (see CHALCEDON, COUNCIL OF). For the Robber Synod (Latrocinium) of Ephesus, see EUTYCHES.

Ephialtes: see ALOADAE.

Ephlal (ĕf'-), descendant of Judah. 1 Chron. 2:37.

Ephod (ē'fŏd, ĕ'fŏd), Manassite. Num. 34:23.

ephod, sacred linen garment worn by the high priests of Israel. It was in two parts, one covering the back, one the front of the body to the hips, and was fastened at the shoulders by two clasps of onyx on which were engraved the 12 tribal names, six on each. This vestment was held in at the waist by a twisted linen girdle of many colors and upon it, hung by golden chains and rings, was the breastplate with the URIM AND THUMMIM. It was somehow used for divination. Ex. 28, Judges

8.27; 17.5; 18.14; 1 Sam. 2.28; 14.3; 22.18; 23.6,9; 30.7, Hosea 3 4.

ephors (ĕ'fûrz) [Gr., =overseers], an executive, legislative, and judicial board of five Spartan citizens. This annually elected board functioned at least from the 8th cent B C down to the 3d cent. B.C. In the period of its greatest authority the board of ephors was the organ of citizen control over the dual kingship of Sparta. Its members were elected in various ways at different times, but for the most part, apparently, by the drawing of lots Their relation to the two kings was curious The kings were recognized as the only authorized military commanders, but the ephors had full discretion in levying troops, and some of them accompanied the armies During campaigns they had no voice in command, but they might bring the royal leaders to trial for alleged errors in conducting war. The ephors cast the deciding vote when the kings disagreed. While one member of the board of ephors was its chairman and, like a Roman consul, gave his name to the year of his office tenure, the authority of the five members was equal, and their decisions were the result of a simple majority vote A particularly famous prerogative was that of control over the education of Spartan youth

Ephorus (ĕ'fûrus), c 405–330 B C , Greek historian; pupil of Isocrates His chief work is a universal history, in 30 books, arranged by subjects He was widely quoted by the ancients, notably by Diodorus Siculus

Ephphatha (ĕ'fûthû) [Aramaic, =be opened], words addressed by Jesus to a deaf-mute as He made him hear and speak Mark 7 34 As elsewhere in Mark, the Greek text retains and translates the Aramaic words, cf 5 41, 14 36, 15 34

Ephraem, Saint, 308?–373, Syrian theologian, Doctor of the Church He taught at Nisibis and Edessa and composed biblical exegesis (now almost all lost) and numerous sacred verses He converted Syria with his psalms, vehicles of orthodox doctrine, which soon supplanted those of BARDESANES He is venerated by all the Eastern churches and by Rome Feast June 18 See C W Mitchell, ed., *St Ephraim's Prose Refutations of Mani, Marcion, and Bardaisan* (1912–21)

Ephraim (ē'frĭm) [Heb , =doubly fruitful] **1** Youngest son of Joseph and Asenath and ancestor of one of the 12 tribes of Israel The tribe occupied the rough country around Shiloh, this came to be called Mt Ephraim Gen 41 52, 46 20, 48 14-20, Joshua 16, 1 Chron 7 20 **2** Unidentified place, central Palestine, probably near Bethel 2 Sam 13 23 **3** Place, to which Jesus retired after raising Lazarus It is in the same region as **1** and **2** and may be the same as **2** It also may be identical with EPHRAIN John 11 54

Ephraim, city (pop 2,094, alt 5,543 ft), central Utah, in the Sanpete Valley S of Provo, settled 1854, inc 1868 Turkeys and sheep are raised Alfalfa is grown for winter range, since 1937 the Sanpete project has brought water by a tunnel through the Wasatch Range from a Green River tributary to support irrigation here Ephraim has Snow College (junior) and the Central Utah Museum

Ephrain (ē'frān), unidentified city, N of Jerusalem, where Abijah defeated Jeroboam 2 Chron 13 19 See EPHRAIM **3.**

Ephrata (ē'frutu), industrial borough (pop 6,199), SE Pa , between Lancaster and Reading, inc 1891 It is the financial and commercial center of a prosperous farming area and produces textiles, brick, and furniture Here a noted communal religious community, the Ephrata Cloisters, was settled (1728–33) under the leadership of Johann Conrad BEISSEL, by Seventh-Day Baptists This austere colony was famous for its music and established one of the earliest printing presses in the country The well-preserved buildings are now maintained as a monument by the state

Ephratah (ē'frutu) or **Ephrath** (ē'frăth) **1** See BETHLEHEM **2** Wife of CALEB 1 Chron 2 19,50, 4 4 At Ps 132 6 Ephraim may be intended instead of this name

Ephron (ē'frŏn) **1** Owner of the cave of MACHPELAH. **2** Unidentified region, W of Jerusalem Joshua 15 9

epic, a long narrative poem, elaborate and dignified, in which a theme is treated in heroic proportions and in the grand style The story of a hero usually provides a unifying subject, although there may be more than one main plot, e g , the divine and human plots in the work of Homer Early Greek epics were written to be recited and thus differed from lyrics, written to be sung, and from the drama, written to be acted Epics are generally classed as those conceived and composed by one mind (Vergil's *Aeneid*, Milton's *Paradise Lost*) and those, often termed "epics of growth," by various unknown poets working at different times on popular legends which contained significant heroes (BEOWULF and ROLAND), the greatest of all epics, the *Iliad* and the *Odyssey*, embrace both groups Some epics embody the ideals of a nation, as do the Finnish KALEVALA, the Persian *Shah Namah* of FIRDAUSI, and *The Lusiads* of CAMÕES. Other famous epics include the *Jerusalem Delivered* of TASSO, the *Orlando Innamorato* of BOIARDO, the *Orlando Furioso* of ARIOSTO, *The Faerie Queene* of SPENSER, the High German NIBELUNGENLIED, the Sanskrit MAHABHARATA, the RAMAYANA of India, the Spanish CID, and the Babylonian GILGAMESH. Examples of the burlesque epic include the Greek *Batrachomyomachia* (*Battle of the Frogs and Mice*), Samuel Butler's *Hudibras*, Pope's *Rape of the Lock*, and Boileau's *Lutrin*. See W P. Ker, *Epic and Romance* (1896), C. M. Bowra, *From Virgil to Milton* (1946)

Epicharmus (ĕpĭkär'mŭs), fl c 450 B C , Sicilian Greek comic poet He was the first to write a coherent artistic comedy, and he dealt with topics other than personal satire His role as a Pythagorean philosopher and his connection with that school are debatable See A W. Pickard-Cambridge, *Dithyramb Tragedy and Comedy* (1927).

Epictetus (ĕpĭktē'tŭs), b c 60 B C , Phrygian Stoic philosopher He wrote nothing, his teachings were set down by his disciple Arrian in the *Discourses* and the *Encheiridion* Epictetus emphasized indifference to external goods and taught that the true good is within oneself His Stoicism was outstanding in its insistence on the doctrine of the brotherhood of man Arrian has been translated in the Loeb Classical Library

Epicurus (ĕpĭkū'rŭs), 341–270 B C , Greek philosopher, b Samos, son of an Athenian colonist He claimed to be self-taught, although tradition states that he was schooled in the systems of Plato and Democritus by his father and various philosophers He taught in several towns in Asia Minor before going to Athens c 306 B C There he purchased the famous garden which has become linked in the annals of philosophy with the Academy of Plato and the Lyceum of Aristotle He was a generous and genial man who lived on the warmest terms with his followers Though his writings were voluminous, only fragments remain Epicurus defined philosophy as the art of making life happy, strictly subordinating metaphysics to ethics, with pleasure as the highest and only good For Epicurus pleasure was not heedless indulgence, but the opposite, *ataraxia* [serenity], manifesting itself in the avoidance of pain His hedonism differed from the cruder variety of Aristippus and the Cyrenaics in the emphasis which he placed on *ataraxia* and on the superiority of intellectual pleasures over bodily pleasures He prescribed a code of social conduct that included honesty, prudence, and justice in dealing with others, not because these attitudes were good in themselves, but to save the individual from society's retribution While Epicurus appropriated much of the mechanics of Democritus' metaphysics, he deviated from its deterministic implications by the introduction of an element of spontaneity, which allowed atoms to form the objects of the world by chance The element of freedom in his metaphysics supported and paralleled his notion of man's freedom of will He held blind destiny to be more dangerous to man's *ataraxia* than belief in fables about the gods, men could hope to propitiate the gods but mechanical determinism was inexorable Denying the gods supernatural powers which would interfere with man or nature, he reduced the power of religious and physical forces on man's life and emphasized freedom of action The work of the Roman poet Lucretius, *De rerum natura* (*On the Nature of Things*), contains the finest exposition of Epicurus' ideas

Epidaurus (ĕpĭdô'rŭs), ancient city on an inlet of the Saronic Gulf, NE Peloponnesus, Greece It was celebrated as the site of the temple of ASCLEPIUS, visited for centuries by Greek seekers of health Relics of the city include a temple, a theater, and a *tholos* [rotunda] with fine Corinthian columns Though in the region of Argolis, Epidaurus was semi-independent until Roman times

epidemic disease (ĕpĭdĕ'mĭk) [Gr , =on the people] AN ENDEMIC DISEASE may become epidemic if persons lacking immunity are present in large numbers or if the infectious agent is more virulent than usual or is for some reason being distributed more than usual CHOLERA is endemic in parts of India and becomes epidemic in the crowding of people under unsanitary conditions during pilgrimages PLAGUE is endemic in a part of China and under certain conditions becomes epidemic When it reached Europe in the Middle Ages, an epidemic of great proportions resulted MALARIA is endemic in various parts of the world Epidemic diseases are controlled by various measures according to whether they are spread by respiratory infection, by intestinal infection, by direct contact, or by means of insects A world-wide epidemic is known as a pandemic Influenza was pandemic in 1918

Epigoni (ĕpĭg'unī) [Gr , =the offspring], in Greek legend, the sons of the SEVEN AGAINST THEBES Ten years after their fathers died at Thebes—and not long before the Trojan War—they conquered Thebes and gave the kingdom to THERSANDER. Their leader was ADRASTUS

epigram, in Greek literature, an epitaph in verse. Simonides was probably the greatest Greek writer of epigrams The terseness and aptness of epigrammatic verse made it popular in Rome for literary purposes, and as written by Catullus, Martial, Juvenal, and others, it developed into its familiar form—the short, pointed or antithetical saying, often with a satiric "sting" at the end or a paradox in expression In Germany LOGAU was among the greatest epigrammatists, the form was popular there among 18th-century writers, especially Lessing. In 18th-century France, Boileau-Despréaux, Lebrun, and Voltaire excelled at the little barbed poem. Epigrams have been culled from the work of Shakspere and Ben Jonson, but they really became high fashion in English literature in the 18th cent when Alexander Pope made the heroic couplet a perfect instrument for the epigram In recent times epigrams have been written brilliantly in prose, notably by Oscar Wilde, and many poets, among them W B Yeats, have used the form Chinese speech and literature, especially poetry, are epigrammatic.

epigraphy · see INSCRIPTION.

epilepsy, condition characterized by loss of consciousness and usually accompanied by a convulsion The attacks vary in frequency, they may be sudden and either brief or prolonged. Peculiar sensations of feeling, taste, and smell precede the attack The individual usually falls to the ground and a convulsion follows; the muscles stiffen and breathing may be temporarily arrested Exhaustion follows the attack The individual falls asleep and often retains no memory of the occurrence on awakening The cause of epilepsy is not known The condition is considered to be a symptom rather than a disease Most cases of epilepsy begin in early life Electroencephalography has been used as an aid in diagnosis Treatment consists of sedation and rest in an attempt to prevent attacks by avoiding exhaustion See W G Lennox, *Science and Seizures* (1941), Owsei Temkin, *The Falling Sickness* (1945).

Epimenides (ĕpĭmĕ'nĭdēz), 6th cent. B C , Cretan prophet According to one story, he was called to Athens to purify the city after the murder of Cylon on the Acropolis. Many poems, oracles, and sayings were attributed to him Titus 1 12 is supposed to contain one of these

Epimetheus (ĕpĭmĕ'thēŭs,-thūs) [Gr , = afterthought], in Greek religion, Titan, brother of PROMETHEUS and son of Iapetus and Clymene Despite his brother's warning, he took PANDORA for his wife

Épinal (āpēnäl'), town (pop 21,939), capital of Vosges dept , E France, in Lorraine, on the Moselle It is famous for the *images d'Épinal*, popular colored portravals of melodramatic events printed here for many generations There also is a textile industry Épinal suffered considerable damage in the Second World War

Épinay, Louise Florence Pétronille (de Tardieu d'Esclavelles) La Live d' (lwēz' flôrās' pātrônē'yu du tärdyû' däklävĕl' lä lēv' dāpēnā'), 1726–83, French woman of letters Influential in the ENLIGHTENMENT, she was the friend of many of its leaders, especially Grimm, her literary heir, and Diderot She was Rousseau's benefactress until 1757, when there was a quarrel It is now known that Rousseau was at fault and that his passages on Mme d'Épinay in his *Confessions* are pure calumny She wrote a treatise on the education of girls, *Les Conversations d'Émilie* (pub 1775 though volume bears date 1774) Her memoirs and correspondence (1818, Eng tr , 1899, 1930) were not intended for publication

epinephrine · see ADRENALINE.

Epiphania see HAMA, Syria

Epiphanius, Saint (ĕpĭfā'nēŭs), c 315–403, theologian, bishop of Salamis, and metropolitan of Cyprus after 367, b Palestine His chief work (in Greek) against heresy was *Penarion* Feast May 12

Epiphany (ĭpĭ'funē) [Gr , =showing], a prime Christian feast, celebrated Jan 6, called also Twelfth Day, Little Christmas, and the Manifestation of Christ to the Gentiles Its eve is TWELFTH NIGHT It commemorates three events—the baptism of Jesus (Mark 1), the visit of the WISE MEN to Bethlehem (Mat 2), and the miracle at Cana (John 2) In his baptism Jesus' sonship to God was manifested to the world, in the visit of the Wise Men he was manifested as king to the Gentiles, and at the marriage feast in Cana his power to perform miracles (a divine prerogative) was shown. The feast is far more ancient than Christmas. Technically it is more important than Christmas, ranking after Easter and Whitsunday It is a day of gifts in many countries, and in England it marks the end of the Christmas holidays In the Eastern Church the waters are blessed on this day The word *epiphany* in lower-case usage means a manifestation, usually of divine power Thus the actual appearance of God (as in the burning bush) or a moment of divine revelation may be called an epiphany

epiphyte, see AIR PLANT

Epirus (ĕpī'rus), ancient country of Greece, on the Ionian Sea, N of the Ambracian Gulf, S of Illyria, and W of Macedon and Thessaly, a region now comprised in NW Greece and S Albania. Between the mountains and the sea, it is largely a land of ridges and valleys with a few alluvial plains It was inhabited from very early times by Eprote

tribes, barely known to the Greeks, who were, however, acquainted with the oracle at Dodona. The tribes were molded into a state under the hegemony of one of them (the Molossi), whose chiefs became the paramount rulers in the 4th cent B C. A Molossian ruler, Neoptolemus, married his daughter to Philip II of Macedon, who placed Neoptolemus' son Alexander on the throne of Molossia (most of Epirus). Alexander met death on an invasion of Italy, but the kingdom persisted and grew. It reached its height in the 3d cent B C under PYRRHUS, who sought to make conquests in Italy, Macedon, and Greece. He achieved great renown, but his exploits and the unsuccessful attempts of his successor, Alexander II (d. 240), to take Macedon ruined the state. A republic was set up with its capital at Phoenice. The Epirotes aided with Macedon in the wars against Rome, and Epirus was sacked (167 B C.) by Aemilius Paullus, who took away many thousands of captives. The country passed under Roman dominion. Octavius (later Augustus) built (31 B C.) a new capital at Nicopolis. Epirus was a more-or-less-neglected portion of the Byzantine Empire. After the Crusaders had conquered Constantinople, the despotat of Epirus, larger than ancient Epirus, was set up. At the end of the 18th cent. Ali Pasha, the Lion of Yanniná, set up an independent state in Epirus and Albania.

Epirus, despotat of (dĕ'spŭtăt") When, in 1204, the host of the Fourth Crusade set up the Latin Empire of Constantinople on the ruins of the Byzantine Empire, an independent state emerged in Epirus under Michael I, a member of the Angelus family. It reached from Durazzo in the north to the Gulf of Patras in the south. In 1222 the despot of Epirus took Salonica from the Latins. For a time the despotat was a rival of the Greek empire of Nicaea (see NICAEA, EMPIRE OF) in the struggle for the restoration of the Byzantine Empire. It accepted, however, a status of semivassalage to Nicaea c 1246 and was united (1336–49) with the restored Byzantine Empire. The Serbs and Albanians then assumed direction of the state. In the 15th cent. the Ottoman Turks took over, and the state disappeared. The despotat of Epirus played an important role in the preservation of Hellenism in W Greece.

Episcopal Church, Protestant, in the United States of America, a part of the Anglican Communion. Its separate existence as an American ecclesiastical body with its own episcopate began in 1789. Anglican church services in America were first held in 1607 in Jamestown, Va. In New England the Puritans proscribed all that was Anglican, except in Maryland and Virginia, there were few clergymen of the Established Church in the colonies. In 1686, when the colonial charter of Massachusetts was revoked, Church of England clergymen were appointed. In 1689 King's Chapel, Boston, was opened, and that year saw the consecration of Trinity Church in New York city. In 1693 James BLAIR, an Anglican missionary to colonial Virginia, secured the charter for the College of William and Mary. As the commissary of the bishop of London, Thomas BRAY visited Maryland in 1700. King's College (now Columbia Univ.) was founded in 1754. During the American Revolution, while many members of the Church of England in America were supporters of the patriot cause, a number of the clergy were Loyalists who fled to England or Canada. To organize a national church and establish a native episcopacy was the first objective of American Anglicans after the Revolution. Conferences were held, and the new ecclesiastical body was called the Protestant Episcopal Church, a name approved in 1789 by the first General Convention of the denomination, which also adopted a constitution and a revised version of the BOOK OF COMMON PRAYER. Meanwhile, Dr. Samuel SEABURY of Connecticut was consecrated bishop in 1784 by bishops of Scotland, and William White of Pennsylvania and Samuel PROVOOST of New York were consecrated bishops in England in 1787. In 1817 General Theological Seminary was organized, and in 1820 the Domestic and Foreign Missionary Society was established. Episcopal churches were founded by settlers in the newly opened regions of the West. Although during the Civil War the Church was necessarily disunited, at the General Conference of 1865 the full number of states answered to the roll call. However, a group of clergy and laity withdrew in 1873 from the main body, in disagreement over certain ritualistic practices and other matters, and formed the Reformed Episcopal Church. Revised issues of the Book of Common Prayer were approved in 1892 and 1928. The Church maintains that the Holy Scriptures are the ultimate rule of faith. Her symbols of doctrine are the Apostles' and the Nicene Creed and the Thirty-nine Articles of the Church of England, with certain modifications to fit American conditions. The ministry is of three orders, deacons, priests, and bishops. The system of organization includes the parish, the diocese, the province, and the General Convention. The General Convention, the highest ecclesiastical authority in the Church, consists of the House of Bishops and the House of Deputies and meets in session every three years. The National Council, set up in 1919, is delegated by the General Convention to administer all the organized missionary, educational, and social work. Among the organizations within the Church are the Brotherhood of St. Andrew, the Girls' Friendly Society, the Church League for Industrial Democracy, the Guild of St. Barnabas, and the Woman's Auxiliary. Publications of the Protestant Episcopal Church in the United States of America include the *Living Church* and the *Witness*. In 1940 the Church came into full membership with the Federal Council of the Churches of Christ in America, and it is a member of the World Council of Churches. See histories of the Episcopal Church by S. D. McConnell (1916) and W. W. Manross (1935), E. C. Chorley, *Men and Movements in the American Episcopal Church* (1946).

Episcopal Church, Reformed see REFORMED EPISCOPAL CHURCH.

Episcopius, Simon (ĕpĭsko'pēus), 1583–1643, Dutch theologian, whose original name was Bisschop or Bischop. Episcopius accepted the teachings of Jacob ARMINIUS and became a leader of the Arminians or REMONSTRANTS. This group opposed orthodox Calvinist doctrine by assuming a more lenient and less dogmatic view on such questions as original sin, election, and predestination. Episcopius represented the Remonstrants at conclaves at The Hague (1611), at Delft (1613), and at the Synod of Dort (1618), where he presented a detailed defense of his position. However, the Calvinist views prevailed, Remonstrant church services were banned, and some of its leaders were banished. In exile Episcopius wrote an Arminian creed (1622). In 1625, upon the death of Prince MAURICE OF NASSAU, the ban was removed, and Episcopius returned to the Netherlands. Episcopius, in the *Institutiones theologicae* (1650), established the doctrine of the Remonstrants upon a consistent theological basis. His avowed aim was to present Christianity in a practical aspect and to liberate theology from too rigid limitations of theory and ecclesiasticism.

epistemology (ĭpĭ"stumŏ'lujē) [Gr., =discussion of knowledge], that branch of philosophy which investigates the origin and the nature of knowledge. It is a discipline distinct from logic, which has traditionally occupied itself with the mind's operations in the knowing process. With regard to the origin of knowledge, empiricism traces all knowledge to sense perception, rationalism insists that the mind contributes to knowledge certain general ideas not derived from experience. With regard to the nature of knowledge, realism teaches that the object of knowledge is independently real, and idealism makes the object entirely, or in part, dependent on the mind's activity.

epistle (ĕpĭ'sĕl), letter, considered from a formal point of view. Of the books of the New Testament, 21 are epistles. The Pauline Epistles (ascribed to St. Paul) are ROMANS, 1 and 2 CORINTHIANS, GALATIANS, EPHESIANS, PHILIPPIANS, COLOSSIANS, 1 and 2 THESSALONIANS, 1 and 2 TIMOTHY, TITUS, PHILEMON, and HEBREWS. The Catholic, or General, Epistles are JAMES, 1 and 2 PETER, 1, 2, and 3 JOHN, and JUDE. This classification is traditional. There is an Epistle of Jeremiah in BARUCH. The liturgical recitation of the lesson from the epistle at the right side of the altar, a usage of the Western Church, has caused the right side to be called the epistle side. The use of letters as a literary form was especially popular in the 18th cent., when the novel was epistolary. Celebrated epistles are those of PETRARCH, PASCAL, SWIFT, and (in verse) POPE, DRYDEN, and others.

epitaph, strictly, an inscription on a tomb, but by extension of usage, lines, usually in verse, commemorating the dead. Many of the best ancient and modern epitaphs are literary memorials. The earliest such inscriptions are those found on Egyptian sarcophagi. Greek epitaphs are numerous, the earliest being those from the island of Thera. In England, epitaphs did not begin to assume a literary character until the time of Elizabeth and even after that were often written in Latin or Greek. Ben Jonson, John Milton, Alexander Pope, and Samuel Johnson were considered masters at the art, and there are valuable discussions of epitaphs by Pope, Johnson, and Wordsworth. Epitaphs are sometimes humorous, by accident or design. E. L. Masters used epitaphs as a literary form in *The Spoon River Anthology* (1915).

E Pluribus Unum (ē" plōōr'ĭbus ū'nŭm) [Latin, =one made out of many], motto on the great seal of the United States and on many U.S. coins. It was selected (1776) by Benjamin Franklin, John Adams, and Thomas Jefferson for the Continental Congress.

epoch (ē'pŏk, ĕ'puk) [Gr., =age], a word signifying either a period of time (an "age" or an ERA) or, more exactly, the beginning of a period, especially as marked by destructive or formative events.

Epping, urban district (pop. 4,956), Essex, England, on the northern edge of Epping Forest, NNE of London. **Epping Forest** (the ancient royal Waltham forest) originally included all Essex, but had dwindled before it became a 5,600-acre public park in 1882. For its history and literary associations, see William Addison, *Epping Forest* (1945).

Epping, town (pop. 1,618), SE N.H., between Manchester and Portsmouth; inc. 1741.

Epping Forest see EPPING, Essex, England.

Epsom and Ewell (yōō'ul), urban district (1931 pop. 27,689, 1947 estimated pop. 68,760), Surrey, England, SSW of London. Horse races are run on Epsom Downs, notably the DERBY (founded 1780), named for the earl of Derby, and the Oaks, named for his estate. Epsom College, for the sons of medical men, was founded in the middle of the 19th cent.

Epsom salts, name for magnesium sulphate. In the common heptahydrate (i.e., containing seven molecules of water) form it appears as white, needle-shaped crystals. It was first prepared from the waters of mineral springs at Epsom, England. Epsom salts are used medicinally as a purgative and are employed also in cotton goods as a filler and in a number of processes, e.g., dyeing and tanning.

Epstein, Jacob (ĕp'stĭn), 1880–, sculptor, b. New York city, of Russian-Polish parentage, studied under Rodin in Paris. He has worked chiefly in England. In revolt against the ornate and merely pretty in art, Epstein produces forms striking in effect—massive creations in stone or bronze, foreign to accepted traditions, which have stirred up many controversies. His 18 large figures on the British Medical Association Building, London, removed in 1937 as dangerous, were followed by the Oscar Wilde Memorial, Père-Lachaise cemetery, Paris, a marble *Venus*, a bronze *Christ*, the W. H. Hudson Memorial, a statue of "Rima" of *Green Mansions*, Hyde Park, London, *Adam*, and *Jacob and the Angel*. Some of his best work is bronze portraiture, the subjects including Admiral Lord Fisher, the duchess of Marlborough, Joseph Conrad, and Mrs. Epstein. In the Metropolitan Museum is his *American Soldier* in bronze. See his *Let There Be Sculpture* (1940), Robert Black, *The Art of Jacob Epstein* (1942).

Epworth, market village, in the Parts of Lindsey, Lincolnshire, England. It is the birthplace of John and Charles Wesley, whose father, Samuel Wesley, was rector here.

equal temperament, in music, a system of tuning based on the arbitrary division of the octave into 12 equal semitones, thus leaving the octave as the only acoustically correct interval in the scale. The scale thus derived is known as the tempered scale, its advantage is that a keyboard instrument may be played in all keys because, for example, a single key can represent both F sharp and G flat, and modulation is then freely possible. Bach demonstrated his belief in this or a similar system with his *Well-tempered Clavier*, containing preludes and fugues in all the major and minor keys. Opposed systems are the Pythagorean scale, wherein the pure fifth, whose frequency ratio is 3:2, is the basis of tuning, and just intonation, a purely theoretical system wherein all the intervals are tuned in relation to the pure fifth and the pure third. Various compromise systems, referred to as mean-tone systems, were advanced from the early 16th cent. That of Vincenzo Galilei (1581) closely approximates equal temperament. Such systems were first used for fretted instruments and were applied to some extent to keyboard instruments in the 17th cent., but did not find universal adoption until the beginning of the 19th cent. Rameau was a notable advocate of equal temperament. See also TEMPERAMENT. See Alexander Wood, *The Physics of Music* (1944).

equation, in mathematics, a statement, usually written in symbols, which states the equality of two quantities or algebraic expressions, e.g., $x+3=5$. The quantity $x+3$, to the left of the equals sign (=), is called the left-hand or first member of the equation, that to the right, 5, the right-hand or second member. A numerical equation is one containing only numbers, e.g., $2+3=5$. A literal equation is one which, like the first example, contains some letters (representing unknowns or variables). An identical equation is a literal equation which is true for every value of the variable, e.g., the equation $(x+1)^2=x^2+2x+1$. A conditional equation (usually referred to simply as an equation) is a literal equation which is not true for all values of the variable, e.g., only the value 2 for x makes true the equation $x+3=5$. To solve an equation means to find the value or values of the variable which satisfy it. Equations are classified according to the highest degree of the variable which they contain. Thus the first example is a first degree (also called linear) equation. The equation $ax^2+bx+c=0$ is a second degree (or quadratic) equation in the unknown x if the letters a, b, and c are assumed to represent constants. In algebra, methods are evolved for solving various types of equations. To be valid the solution must satisfy the equation. Whether it does can be ascertained by substituting the supposed solution for the variable in the equation. The simultaneous solution of two or more equations is a set of values of the variables which satisfies each of the equations. In general the number of equations (i.e., conditions) must be no more than the number of variables in order that a

solution may exist. In physics, equations are a means of expressing fundamental relationships In chemistry an equation is used to represent a reaction The first member of a chemical equation consists of the formulas of the reacting substances and the second member the formulas for the resulting products. An arrow (→) is used instead of an equals sign The direction of the arrow indicates in which direction the reaction is proceeding

equator [Latin, =equalizer], imaginary line about the earth, everywhere equidistant from the two poles and forming the base line from which latitude is reckoned It intersects N South America, central Africa, and Indonesia. The celestial equator is the projection of the plane of the earth's equator upon the celestial sphere (see ECLIPTIC)

equatorial belt of calms: see DOLDRUMS.

Equatorial Islands: see LINE ISLANDS

equinox (ē'kwĭnŏks) [Latin, =with equal night; i e, equal to the day], in astronomy, either of the two points of intersection of the ECLIPTIC and the celestial equator The vernal equinox, known also as "the first point of Aries," is the point at which the center of the sun moves across the celestial equator from south to north This occurs about March 21 and marks the beginning of spring in the Northern Hemisphere The autumnal equinox is the point at which the sun again crosses the celestial equator, but from north to south, about September 23, the beginning of autumn for the Northern Hemisphere On those two dates, in all parts of the world, night and day are equal in length The word *equinox* is often used to indicate either of the dates when day and night are equal The belief has long been widespread that violent storms, called "equinoctial gales," occur at the time of the equinoxes Meteorological science and observation have not supported this popular impression See also PRECESSION OF THE EQUINOXES.

equites (ĕk'wĭtēz) [Latin, =horsemen], the original cavalry of the Roman army, chosen, it is said, by Romulus from the three old Roman tribes and later selected (to the number of 3,600), on a basis of wealth, from the patricians and plebeians The Sempronian Law of C Sempronius Gracchus in 123 B C transferred judicial functions from the senate to the body of equites, who, though deprived of these powers by Sulla, attained much influence in the state In the 1st cent B C they were really the capitalist class, and they allied themselves alternately with the popular and the senatorial parties Under the emperors the body gradually fell into disrepute, it disappeared in the reign of Constantine It is conventional in English to call them knights, but their resemblance to anything in knighthood is neither apparent nor real

equity (ĕk'wĭtē), principles of justice originally developed by the English chancellor In Anglo-American jurisprudence equitable principles and remedies are distinguished from the older system which the COMMON LAW courts evolved One of the earliest functions of the king's chaplain (the chancellor) and of the chancery (the office which he headed) was to govern access to the royal courts by issuing on application the appropriate original WRIT At first the chancellor had great discretion in framing writs, but in time he was limited to a few rigidly circumscribed forms, and in certain cases worthy claims could not be satisfied From this inadequacy arose the practice of appealing directly for aid to the chancellor as the "keeper of the king's conscience" By the early 16th cent a fairly well-defined jurisdiction was exercised by the court of chancery in rivalry with the common law In the 17th cent it was definitely established that the court of chancery would decide any claim to jurisdiction which the courts of common law disputed The early chancellors purported to dispense equity in its original sense of fair dealing, and they cut through the technicalities of common law to give just treatment Some of their principles were derived from ROMAN LAW and from CANON LAW Soon, however, equity amassed its own body of precedents and tended to rigidity Among the most notable achievements of equity were the MORTGAGE and the TRUST, in the field of remedies, in addition to the money DAMAGES of common law, it afforded the INJUNCTION Because the DECREE (final order) of an equity court operated as an order of the king to the defendant, disobedience might be punished as CONTEMPT OF COURT, in legal remedies, on the contrary, the plaintiff was limited to enforcing his JUDGMENT The fact that equity trials were decided without a jury was thought advantageous in complex cases The coexistence of different systems of justice and the delays of the courts of chancery presented such great procedural difficulties that in England, in 1875, the Judicature Acts were adopted to amalgamate law and equity In the United States only a few of the states have separate equity courts Of the remaining states some divide actions (and to a less extent) remedies into legal and equitable, while the others have almost entirely abolished the distinction See Frederick Maitland, *Equity* (1909)

Er [Heb, =watchful] **1** In the Gospel genealogy, Luke 3 28 **2** Judah's first son. Gen 38.1–7. **3** Judahite. 1 Chron 4 21

Er, chemical symbol of the element ERBIUM.

era (ēr'ə), period of historic time. In geology, it is the name applied to large divisions of geologic process, e g, Paleozoic era (see GEOLOGY) In chronology an era is a period reckoned from a fixed point in time, as before or after the birth of Christ —before Christ, B C, *Anno Domini* [year of the Lord], A D These points are determined by the legends, history, and culture of the people adopting them Some of those best known in the West are the creation of the world (Jewish, equivalent to 3761 B C, Byzantine, 5508 B C), the founding of the city of Rome (753 B C, year marked A U C for *ab urbe condita* [from the founding of the city]), the hegira, the flight of Mohammed from Mecca (A D 622, abbreviation A H), and the founding of the Olympic games in ancient Greece (776 B C, time in Olympiads) Since in different calendars, years are of different lengths and do not begin on the same day (see CALENDAR), several factors have to be used in changing the year of one era to that of another, and even with conversion charts not all difficulties are removed Because of poor time calculation in earlier times, there may be anomalies in dating Thus the beginning of the Christian era, originally fixed probably by Dionysius Exiguus, was fixed a little too late Therefore the actual birth of Christ must be dated a little earlier, probably in 4 B C

Eran (ē'-) [Heb, =watching], grandson of Ephraim. Num 26 36

era of good feeling, phrase applied to the period 1817–23 in U S history, when, the Federalist party having declined, there was little open party feeling After the War of 1812 all sections were anxious to return to a normal life and to forget political issues. The phrase was coined at the time of President Monroe's good-will tour through the North, including New England, where a President had not been seen since the Virginia "dynasty" came into power Under the surface, however, vast sectional issues were shaping themselves, while personal rivalries also were gathering strength to break loose in the campaign of 1824

Erasistratus (ĕrəsĭs'trətŭs), 3d cent B C, Greek physician, b Chios He was the leader of a school of medicine at Alexandria, and his works remained influential until the 4th cent A D Congestion was considered by him to be a primary cause of disease His theory of the pneuma as a substance vital to life embraced the belief that air is carried from the lungs to the heart, where it becomes a vital spirit circulated by the arteries He revived dissection, distinguished between motor and sensory nerves, studied the convolutions of the brain, named the trachea, and devised a calorimeter and a catheter

Erasmus (ĭrăz'mŭs) or **Desiderius Erasmus** (dĕsĭdēr'ēŭs) [Gr *Erasmus*, his given name, and Latin *Desiderius* =beloved, both are regarded as the equivalent of Dutch *Gerard*, Erasmus' father's name], 1469?–1536, Dutch humanist, probably b Rotterdam He was ordained priest of the Roman Catholic Church and studied and lectured at the Univ of Paris Erasmus' influence began to be felt in Europe after 1500 It was exercised through his personal contacts, his editions of classical authors, and his original writings He was acquainted with most scholars of Europe and his circle of friends was especially large in England, it included Thomas More, Colet, and Henry VIII His editions of Greek and Latin classics and of the Fathers of the Church (especially of Jerome and Athanasius) were his chief occupation for years His new Latin edition of the New Testament was based on critical principles He was many years editor for the publisher FROBEN in Basel Erasmus' original works are mainly satirical and critical, they are written in Latin, the author's customary language Important among them are *Adagia* (1500, Eng tr, *Adages* or *Proverbs*), a collection of quotations, *Enchiridion militis christiani* (1503, Eng tr, *Manual of the Christian Knight*), *Moriae encomium* (1509, Eng tr, *The Praise of Folly*), *Institutio principis christiani* (1515, Eng tr, *The Education of a Christian Prince*), and *Colloquia* (1516, Eng tr, *Colloquies*) His collected letters (Eng tr, ed by F M Nichols, 1904–18) are perhaps more important still Erasmus combined vast learning with a keen, often malicious, humor He is esteemed the model man of culture Whatever his individual talents, he was certainly the broadest of the humanists His position with regard to the Reformation gained him wide denunciation, especially from Luther, who had first looked on Erasmus as an ally because of Erasmus' attacks on clerical abuse and lay ignorance As a humanist he detested the cultural decline inevitable in the religious warfare, and he remained all his life a believing Roman Catholic See Preserved Smith, *Erasmus* (1923), Maurice Wilkinson, *Erasmus of Rotterdam* (1921), J J Mangan, *Life, Character & Influence of Desiderius Erasmus of Rotterdam* (1927), Albert Hyma, *The Youth of Erasmus* (1930)

Erastus (ĭrăs'tŭs) [Gr, =beloved] **1** Companion of Paul Acts 19 22 **2** Early Christian, probably the same as 1 2 Tim. 4 20. **3** Chamberlain of Corinth Rom. 16 23

Erastus, Thomas (ĭrăs'tus), 1524–83, Swiss physician and theologian, whose original name was Lieber or Liebler As a follower of ZWINGLI, he supported the Swiss leader's view of the LORD'S SUPPER at the conferences of Heidelberg (1560) and Maulbronn (1564) and in a book (1565). In spite of his vigorous opposition to the Calvinist doctrine, Presbyterian church discipline and government were introduced in Heidelberg in 1570. In the same year Erastus, charged with Unitarian sympathies, was excommunicated, but five years later the edict was removed Much controversy has arisen over the treatise, *Explicatio*, written in 1568 and posthumously published in 1589, which declares that excommunication is not a divine ordinance and that punishment of sins should be left to civil authorities Erastus was motivated by his fear of the omnicompetent Church At the Westminster Assembly (1643–49), a party of Erastians unsuccessfully presented this view, and since that time the term **Erastianism** represents approval of the dominance of civil authority in all punitive measures and, by extension, complete dominance of the state over the Church, though Erastus had no such extreme view. See Erastus Evans, *Erastianism* (1931)

Erath (ē'răth), town (pop 1,408), S La, N of Vermilion Bay, in the Acadian country

Erato see MUSES

Eratosthenes (ĕrətŏs'thənēz), c 275–c 195 B C, Greek scholar, b Cyrene A pupil of Callimachus in Athens, he became (c 240 B C), head of the library at Alexandria Known for his versatility, he wrote poetry and works (most of them lost) on literature, the theater (notably on ancient comedy), mathematics, astronomy, geography, and philosophy, he also drew a map of the known world and evolved a system of chronology Especially noted as an astronomer, he is credited with measuring the circumference and tilt of the earth and the size and distance of the sun and the moon

Erbil (ĕr'bĭl), town (pop c 25,000), NE Iraq The ancient Sumerian and Assyrian city of ARBELA was on this site Erbil is on an artificial mound surmounted by an old Turkish fort The name is sometimes spelled Arbil

erbium (ûr'bēum), rare metallic element (symbol = Er, for physical constants, see ELEMENT, table) With other metals of the RARE EARTHS, to which group it belongs, it is present in the mineral gadolinite occurring in Sweden It is combined with oxygen in a rose-colored oxide (erbia) and with other elements in a number of similarly colored salts Discovery of the element (1843) is credited to Carl G Mosander It has no commercial use

Erceldoune or **Ercildoune**, Scotland see EARLSTON

Ercilla y Zúñiga, Alonso de (ālōn'sō dā ĕrthĭl'lya ē thōō'nyĕga), 1533–94, Spanish epic poet He went to Chile in 1556 as a soldier and fought against the Araucanian Indians of Chile While in camp he began the heroic poem *La Araucana* This famous poem in 37 cantos is divided into three parts, published in 1569, 1578, and 1589 Ercilla praises the brave Araucanian Indians with passion and strength In the second and third parts he deals with Spanish contemporary history, relating it to the heroic subject of the poem Verse translations into English were published in 1945 and 1946

Erckmann-Chatrian (ĕrkmän'-shätrēän'), name indicating the joint authorship of **Émile Erckmann** (ämēl'), 1822–99, and **Alexandre Chatrian** (alĕksän'drŭ), 1826–90 They wrote a series of historical romances and plays laid in their native Lorraine The novels include *Madame Thérèse* (1863, Eng tr, 1869), *Friend Fritz* (1864, Eng tr, 1877), *The Conscript* (1864, Eng tr, 1869), *Waterloo* (1865, Eng tr, 1899), and *Brigadier Frederick* (1874, Eng tr, 1875) Their principal plays are *Friend Fritz* (1876), which was the basis of the opera *L'Amico Fritz* by Mascagni, *The Rantzaus* (1884), also set by Mascagni, and *The Polish Jew* (1869), which in the English version by Leopold Lewis (1870) was called *The Bells* and was made famous by Sir Henry Irving in the role of Mathias

Erdélyi, John (ĕr'dĕlyĭ), Hung *Erdélyi János*, 1814–68, Hungarian writer and critic He was a professor of philosophy and literature at Sarospatak A follower of Hegel in his aesthetics and anticipating Taine in his criticism, he figured prominently in the movement of Hungarian language reform. His research in the field of Hungarian folk literature was comparable to that of Thomas PERCY in English He edited (1846–48) the first collection of Hungarian folk poetry

Erdmann, Benno (bĕ'nō ĕrt'män), 1851–1921, German philosopher He taught in the universities of Kiel, Breslau, Halle, Bonn, and Berlin He is widely known for his books on the philosophy of Kant.

Erdmann, Johann Eduard (yō'hän ä'dōōart), 1805–92, German philosopher, b Livonia, Russia, educated in Dorpat (now Tartu) and Berlin He was professor of philosophy at Halle from 1836 until his death He is best known for his *History of Philosophy* (1866, Eng trs, 1891, 1913)

Erebus (ĕ'rĭbŭs) [Gr, =darkness], in Greek mythology, gloomy part of the underworld through which the shades of men go on their way into Hades

Erebus, Mount, volcanic peak, more than 13,300 ft. high, on Ross Island, in the Ross Sea off Antarctica It was discovered (1841) by Sir James C Ross and named after one of his ships It was climbed in 1908 by a party under T W E David

Erech (ē'rĕk) or **Uruk** (ōō'rōōk), ancient Sumerian city of Mesopotamia, on the Euphrates, not far from the ancient Ur, in present Iraq A modern name is Warka. Erech was one of the most important early cities of S Mesopotamia and was flourishing probably in the 5th millennium B C. It was one of several rivals for power and for long periods was the capital of what came to be Lower Babylonia. Excavations have revealed a ziggurat temple of Nana (equivalent of Ishtar) and other finds including libraries with documents Gilgamesh, the hero of the Babylonian flood legend, was king of Erech It was in the Bible one of the cities of Nimrod in Shinar

Erechtheum (ĕrĕk'thēum) [for Erechtheus], Gr *Erechtheion*, temple in Pentelic marble, on the Acropolis at Athens One of the masterpieces of Greek architecture, it was constructed between c 420 and 409 B C, though damage by fire extended the work until c 393 B C Its design is sometimes ascribed to the architect Mnesicles The Erechtheum contained sanctuaries to Athena Polias, Poseidon, and Erechtheus The temple contains the finest examples of the Greek Ionic order The requirements of the several shrines and the location upon a sloping site produced an unusual and irregular plan From the body of the building porticoes project on east, north, and south sides The eastern portico, hexastyle Ionic, gave access to the shrine of Athena which was separated by a partition from the western cella The northern portico, tetrastyle Ionic, stands at a lower level and gave access to the western cella through a fine doorway The southern portico, known as the Porch of the Caryatids from the six sculptured draped female figures which support its entablature, is the temple's most striking feature, it forms a gallery or tribune The west end of the building, with windows and engaged Ionic columns, is Roman work In Justinian's reign the Erechtheum was made a church, while upon the Turkish capture of Athens (1458) it became a harem One of the east columns and one of the caryatids were removed by Lord Elgin to London, replicas being installed in their places The building was much damaged in the Greek revolution in 1827 Partial reconstructions took place beginning in 1838, while in recent years the fragments on the site have been employed in further restoration

Erechtheus (ĕrĕk'thūs), in Greek mythology, ancient king of Athens, son of Hephaestus and Gaea, usually identified with Erichthonius His body ended in the form of a serpent, a symbol of his connection with the powers of the earth He became a wise and beloved king, invented the four-wheeled chariot, built the Erechtheum, and founded the Panathenaea He had three daughters, and when he sacrificed one to win a battle, the others also died

Erenburg, Ilya Grigoryevich · see Ehrenburg

Eretria (ĕrē'trēu), ancient city of Greece, on Euboea, southeast of its rival, Chalcis Eretria sent out many colonists to islands and coasts of the N Aegean, and they supported the Ionian cities in the revolt against Persian control In punishment Darius I destroyed (490 B C) the city Here Athens later planted a colony, which revolted in 411 B C with the rest of Euboea and much later after the new Delian Confederacy had been created again revolted (349 B C) It had a school of philosophy and dialectics Eretria has been studied and excavated by archaeologists

Erfurt (ĕr'fōōrt), city (pop. 174,633), in the former Saxony prov of Prussia, central Germany, incorporated after 1945 into Russian-occupied Thuringia It manufactures chemicals and raises large quantities of flowers and vegetables One of the oldest cities of Germany—it was mentioned by St Boniface in the 8th cent.—Erfurt is rich in historical associations At its former university (founded 1392, closed 1816) Martin Luther studied, and at its former monastery he took his vows as an Austin friar. A free city of the Hanseatic League, Erfurt passed (1664) to the electors of Mainz and (1802) to Prussia and was occupied by the French from 1806 to 1813 Here, in 1808, Napoleon I and Alexander I met at the Congress of Erfurt, more notable for Napoleon's interview with Goethe and for Talma's acting before the two emperors and a "parterre of kings" than for its political results The Franco-Russian alliance concluded at Tilsit in 1807 was renewed, but proved short-lived At a congress held at Erfurt in 1891 the German Social Democratic party adopted the Erfurt Program, which marked the triumph of Marxian teachings over the doctrines of Lassalle in German Socialism. Among the notable buildings of Erfurt is the cathedral, flanked by the Church of St. Severus (both 13th cent.).

erg, unit measurement of work and energy in the cgs (centimeter-gram-second) system. It is the work done by one dyne acting through a distance of one centimeter A joule is 10,000,000 ergs.

Ergasteria, Greece: see Laurion.

ergot (ûr' gŭt), drug derived from a fungus, ergot, which attacks rye and other cereals. It is used medicinally to stop hemorrhage and in obstetrics to cause contraction of the uterus and induce labor. Poisoning from eating bread made from rye infected with the fungus or from continued use of the drug may either cause gangrene or affect the nervous system.

Eri (ē'rī) [Heb., =watching], son of Gad Gen. 46 16; Num 26 16

Eric IX (Eric the Saint), d. 1160, king of Northern Sweden Leading a crusade to Finland, he converted the Finns to Christianity by the sword He was assassinated by a Danish prince, a pagan Soon afterward the people began to revere him as a saint, and he became the patron saint of Sweden. Feast day May 18

Eric XIV, 1533–77, king of Sweden (1560–68), son and successor of Gustavus I. In order to strengthen the power of the crown, he limited (1561) the privileges of the royal dukes He forbade the marriage of his brother John, duke of Finland, to the sister of the king of Poland John disobeyed and was accused of treason and imprisoned (1563) Eric tried to regulate the status of the nobles, but finally, fearful of treason, assassinated Nils Sture, of the powerful Sture family, and had other nobles murdered or imprisoned (1567) Having unsuccessfully sought the hand of Elizabeth of England, Eric married his peasant mistress in 1568 and had her crowned queen Swedish reverses in the war with Denmark (1563–70), the unpopularity of his adviser, Goran Persson, and Eric's evident insanity enabled John to lead a successful insurrection against him Eric was deposed (1568) and died in prison He was succeeded by his brothers John III and Charles IX A patron of the arts and literature, Eric was himself an author of some ability

Ericht, Loch (lŏkh' ē'rĭkht), lake, 14 mi long, Perthshire and Inverness-shire, Scotland, at the foot of Ben Alder

Erick, city (pop 1,591), SW Okla., inc 1903 The region has farms, ranches, and natural gas

Ericsson, John (ē'rĭksun), 1803–89, Swedish-American inventor and marine engineer, b Varmland co., Sweden He moved to London in 1826 In a railroad locomotive contest (1829), his entry, the *Novelty*, was defeated by George Stephenson's *Rocket* Ericsson's outstanding role in the development of the screw propeller (he patented one in 1836) for ships was responsible for his coming to the United States in 1839 to build for the navy The U S S. *Princeton*, completed by him in 1844, was the first warship with a screw propeller Unfortunately, one of the *Princeton's* guns, which he did not build, exploded and killed several notables, and he was blamed unjustly for the disaster He is chiefly remembered as the designer and builder of the *Monitor* (see monitor) The battle of the Monitor and Merrimac caught the imagination of the people and made Ericsson a hero With his associates he was busy the remainder of the Civil War designing and building more ironclads After the war he built monitors for other governments, constructed gunboats for Spain, and worked on a "destroyer" with successful devices for releasing torpedoes under water, in which, however, he could not interest the navy He made many other contributions to engineering, notably in ordnance, marine engines, and caloric or heat engines In his late years he did experimental work in solar physics See biography by W. C. Church (1890)

Ericsson, Leif see Leif Ericsson

Eric the Red, fl 10th cent., Norse chieftain, discoverer and colonizer of Greenland He left (c 950) Norway with his exiled father and settled in Iceland A feud resulting in manslaughter led to his banishment (c 981) for three years from Iceland He sailed (c 982) to seek land reputed to be W of Iceland The discovery of Greenland followed, and Eric and his viking followers spent three years exploring the south and west coasts On his return to Iceland he promoted a colonizing venture and is said to have given Greenland its attractive name to encourage settlers He led (c 986) to the new land a group of 25 ships, of which 14 arrived Eric established a farmstead, Brattahlid, near present Julianehaab and was a leader of a southern settlement at Osterbygd He resisted in vain the introduction (c 1000) of Christianity by his son Leif Ericsson.

Eridu (ā'rĭdōō), ancient Sumerian city of Mesopotamia, near the Euphrates, built close to the Persian Gulf, but now (because of silting) well inland The ruins are in Iraq, near the ruins of Ur, and have been excavated The city is very old, dating perhaps from the 8th millennium B.C It was a center of worship of the water-god Ea.

Erie. 1 Town (pop 1,019), N Colo., N of Denver, in a coal area, inc 1885. **2** Village (pop 1,052), NW Ill., on the Rock River and NE of Moline, inc. 1872 **3** City (pop 1,286), co. seat of Neosho co., SE Kansas, on the Neosho and WNW of Pittsburg, founded 1867, inc. 1870. It is a trade center and shipping point for an oil-producing and farming area **4** City (pop 116,955), co. seat of Erie co., NW Pa., on Lake Erie SW of Buffalo; laid out 1795, inc. as a borough 1805, as a city 1851. The state's only port on the Great Lakes, it is a busy shipping point for coal, iron, chemicals, and petroleum It has machinery and metal-products plants A reconstructed blockhouse commemorates Fort Presque Isle. The original fort, built in 1753 by the French, was occupied and rebuilt in 1760 by the English and was destroyed in 1763 by Pontiac. In 1764 a peace conference was held on this site by the British and Indians Garrison Hill (now the site of the state soldiers' and sailors' home) was fortified in 1795 The Venango Trail, which was the main land route to Lake Erie, connected the line of French forts from Quebec to the Ohio river At Crystal Point, Perry's fleet was launched before his victory over the British in 1813 The first all-iron battleship, the *Wolverine*, was assembled at Erie (1843). Stanton House was a stop on the Underground Railroad H T Burleigh, composer, was born at Erie Mercyhurst College is here

Erie, Lake, 241 mi long and from 30 to 57 mi wide, fourth in size and shallowest of the Great Lakes Lying 571.94 ft above sea level, it has a maximum depth of 210 ft. and an area of 9,950 sq. mi On its north shore it touches Canada (Ontario), on its south, New York, Pennsylvania, and Ohio; on its west, a small portion of Michigan The Detroit river is its inlet from Lake Huron, and the Niagara its outlet into Lake Ontario Navigation between Lakes Huron and Erie follows a natural channel, but between Lakes Erie and Ontario it passes through the Welland Canal Lake Erie is connected with the Atlantic by the New York State Barge Canal and the Hudson river. The lake, which is subject to violent storms, is partially ice-bound and largely closed to navigation from mid-December until about the end of March Its principal U S ports are Buffalo and Dunkirk, N Y., Erie, Pa., Conneaut, Ashtabula, Cleveland, Lorain, Sandusky, and Toledo, Ohio, and Detroit, on the lake's inlet Its main Canadian ports are Port Colborne, Port Dover, Port Stanley, and Leamington Probably the first white man to see Lake Erie was Louis Jolliet in 1669 Forts and trading posts sprang up along its shore The French and Indian Wars gave Great Britain control of the lake, which she retained even after the American Revolution At the close of the War of 1812 the international boundary between the United States and Canada was established to run approximately through the center of the lake See Harlan Hatcher, *Lake Erie* (1945) The **battle of Lake Erie,** Sept 10, 1813, a naval engagement in the War of 1812, was fought at Put in Bay An American fleet (9 ships) led by Oliver H Perry defeated a British squadron (6 ships) commanded by Capt Robert Barclay and thereby won control of the lake

Erie Canal, artificial waterway, extending from Albany to Buffalo and connecting the Hudson with Lake Erie After the American Revolution, the need for a canal between the Great Lakes and the Atlantic coast was imperative George Washington saw political unity in canalization, others visualized easy transportation and increased trade free from Canadian competition Several land surveys for a canal followed, and by 1810 the issue loomed large in the New York state legislature, where De Witt Clinton lent it his political strength A canal commission, including De Witt Clinton, Gouverneur Morris, Stephen Van Rensselaer, Thomas Eddy, and others, formed (1810) by the legislature, recommended (1811) an Erie rather than an Ontario canal The War of 1812 stilled the issue but revealed a canal need After a public meeting in New York city (1815), Clinton drew up an Erie canal proposal and petitioned the legislature for the canal's authorization The canal bill was debated in the legislature (1816–17), New York city and the Lake Ontario interests opposing vigorously Meanwhile, veto of a national-waterways project forced the proposed canal's financial burden on New York state, but the canal bill passed the state legislature in April, 1817 The Erie Canal's middle section (extending from Utica to Salina) was completed in 1820, its eastern section was finished at Albany in 1823 Elaborate celebrations followed the canal's completion in 1825, Clinton and other notables sailed from Buffalo to New York city, where Clinton emptied a barrel of Lake Erie water into the Atlantic The canal, over 350 mi long and costing over $7,000,000, was later enlarged Its most important branches, the Champlain (1819), the Oswego (1828), and the Cayuga and Seneca were also enlarged. The Erie's total cost, at the end of 1882 when its tolls were abolished, was over $78,000,000 It had showed large profits Railroad competition, beginning in the 1850s, eventually destroyed the canal's long-haul advantages. Some improvements were made (1884–94), but its inadequate navigability and the disclosure of a fraudulent canal administration (the "Canal Ring") brought plans for its basic improvement and conversion into the New York State Barge Canal. The Erie helped to push New York city's financial development, opened Eastern markets to the farm products of the Great

Lakes region, fostered immigration to the Old Northwest, and helped to create numerous large cities Its initial success started a wave of frenzied canal building, which was ended completely only by the victory of the railroads

Erie Indians, tribe of Iroquoian linguistic stock, who in the 17th cent. inhabited the region E and SE of Lake Erie in the present states of New York, Pennsylvania, and Ohio They then numbered some 14,000 Although they were sedentary farmers of the Eastern Woodlands culture, they exhibited some Southeastern cultural traits, such as the use of poisoned arrows and building of palisaded villages They were traditional enemies of the Iroquois Confederacy, and in 1656, after one of the most relentless and destructive Indian wars, the Iroquois almost exterminated them The surviving captives were either adopted or enslaved by the confederacy, and some of their descendants live on reservations in Oklahoma as "Seneca" Indians. See R C Vietzen, *Immortal Eries* (1945)

Erie Railroad. The New York and Erie Railroad Company was enfranchised and incorporated in 1832, and construction was begun in 1835 from Piermont, N Y , on the Hudson river The year 1851 saw 483 mi of trunk line across New York state completed to Dunkirk, N Y , on Lake Erie at a huge cost The railroad was extended to Jersey City, N J , and to Buffalo, N Y , but in 1861 the company failed and was reorganized as the Erie Railway Company The company gained sound footing during the Civil War before it became the subject of a tremendous financial battle Daniel DREW, Jay GOULD, and James FISK allied themselves and from 1866 to 1868 outmaneuvered —with aid of unauthorized stock issues, political chicanery, and incessant litigation—Cornelius Vanderbilt to keep control of the Erie Railway Company Drew lost his control to Gould, who during his presidency (1868–72) further wrecked the Erie Railway Company After further financial trickery, the Erie Railway Company went bankrupt and was reorganized (1878) as the New York, Lake Erie and Western Railway Company By 1880 branch lines were built to Chicago The New York, Lake Erie and Western went into receivership after the Panic of 1893 and was reorganized (1895) as the Erie Railroad Company Under the presidency (1901–27) of Frederick D Underwood, the Erie fought an uphill fight, and after a major reorganization (1941) it yielded (1942) a dividend for the first time in 69 years See Edward Hungerford, *Men of Erie* (1946)

Erigena, John Scotus (skō'tus ĕrĭj'ĭnŭ) [Latin *Scotus*=Irish, *Erigena*=born in Ireland], c 810–880, scholastic philosopher, apparently born in Ireland About 847 he was invited by Charles II (Charles the Bald) to take charge of the court school at Paris At Charles's request also he translated the writings of Pseudo-Dionysius and his commentator Maximus Confessor Erigena is said to have been invited to England by King Alfred One account has it that he was put to death by his students, but the story of his death is obscure as is that of much of his life It is not even certain whether he was a priest Erigena was perhaps the most learned man of his time and a remarkable thinker His thought, based on that of Pseudo-Dionysius, with elements of Aristotle, the Greek Fathers, and St Augustine, is Neoplatonic Philosophy and theology are identified, all thinking and being begin and end with God, who is above all being and thought Erigena makes a fourfold division of the things that are, or nature—that which creates and is not created, that which is created and creates, that which is created and does not create, that which neither creates nor is created. The first is God, the source of all things The second is the Logos, existent in, and coeternal with, God, in whom are the primordial causes and types of things The third is the world of space, time, and generation, which came into being from the primordial causes by emanation through the successive genera and species The fourth is again God, but regarded now as the end of all things, for just as creatures have emanated from God, so they will return to him This division is reminiscent of the analysis of a universal into its generic and specific parts, plus the converse process by which the parts are unified in the universal, thought is identified with reality. Erigena's principal writings are *De divisione naturae* and the fragmentary *De egressu et regressu animae ad Deum* See Henry Bett, *Johannes Scotus Erigena* (1925).

Erha, Palestine see JERICHO

Erin (ĕr'ĭn, ē'rĭn), poetic name of IRELAND.

Erinna, fl 4th cent. ?B C , Greek woman poet, influenced by Sappho Her *Distaff*, in 300 hexameters (of which fragments survive), a lament for a friend, was compared anciently to Homer

Erinyes (ĕrĭn'ĭ-ēz), in Greek religion, the Furies or goddesses of vengeance, usually represented as three maidens, winged, with snakes in their hair They were born from the blood of URANUS, and their names were Megaera (mĕjē'rŭ) [envious], Tisiphone (tĭsĭf'ŏnē) [blood avenger], and Alecto (ŭlĕk'tō) [unceasing, i.e., in pursuit]. They pursued criminals, drove them mad, and tormented them in Hades The Erinyes were called Semnae (sĕm'nē) [Gr ,=august ones] and, euphemistically, Eumenides (ūmĕn'ĭdēz) [Gr ,=favorable ones] The latter is their title as the chorus in the *Eumenides* of Aeschylus, who was fined when the realistic appearance of the chorus caused panic in the Athenian theater The Romans called them Dirae (dī'rē) [dire ones] and Furiae (fū'rĭē) [furies]

Eriphyle (ĕr'ĭfī'lē), in Greek legend, wife of AMPHIARAÜS Knowing that if he joined the SEVEN AGAINST THEBES he would go to his death, Amphiaraüs refused to go until Eriphyle, bribed by Polynices with the necklace of HARMONIA, persuaded him When her sons ALCMAEON and Amphilochus grew to manhood, they punished her treachery by killing her

Eris (ē'rĭs) [Gr ,=discord], in Greek legend, female personification of strife, who provoked a dispute among HERA, APHRODITE, and ATHENA See APPLE OF DISCORD

Erith (ē'rĭth, ĕr'ĭth), urban district (1931 pop 32,789, 1947 estimated pop 45,170), Kent, England, on the Thames and ESE of London It is a summer resort with fine estates, and it manufactures chemicals, explosives, paper, cables, radios, lubricating oil, and flour

Eritrea (ĕrĭtrē'ŭ), former Italian colony (46,128 sq mi , pop c 700,000), NE Africa, on the Red Sea Asmara is the capital, Assab and Massawa are the ports The land boundaries of Eritrea are the Anglo-Egyptian Sudan on the west, Ethiopia on the south, and French Somaliland on the east The southern part is a largely desert coastal strip c 30 mi wide, in N Eritrea there is a narrower level coastal zone adjoining a rugged inland plateau (3,000–7,000 ft high) Most of the country supports only a scanty population of pastoral nomads Central Eritrea, however, has many fertile agricultural valleys Products of the country include citrus fruits, cereals, cotton, and hides Eritrea was more or less governed by Ethiopia until the 16th cent , when the region fell to the Ottoman Turks Various parts were under petty chieftains from the 17th cent to the mid-19th cent , when Egypt, Ethiopia, and Italy struggled for control Italy was dominant by the 1880s and formed the colony in 1890 Eritrea was an important base for Italy's conquest (1935–36) of Ethiopia In the Second World War the colony was used for attacks on the Anglo-Egyptian Sudan Early in 1941 the British counterattacked and by April completed the conquest of Eritrea and occupied the territory Ethiopia had long demanded Eritrea on the grounds that the population, largely Moslem, was of Ethiopian stock and that the coast was needed to give access to the Red Sea In 1949 the General Assembly of the United Nations voted to award most of Eritrea to Ethiopia but took no action because the final disposition of all the former Italian colonies was not settled

Erivan (ĕrĭvan', Rus ĕrĭvăn'yu), Armenian *Yerevan* (yĕrĕvan'), city (1926 pop 64,613, 1939 pop 200,031, 1948 estimated pop 300,000), capital of the Armenian SSR, on the Zanga river, in a picturesque orchard district surrounded by mountains Mt Ararat, in Turkish territory, is visible from here Founded in the 7th cent A D , Erivan was the capital of Armenia under Persian rule After the downfall (15th cent) of Tamerlane's empire, to which Erivan belonged, the city passed back and forth between Persia and Turkey It was taken by Russia from Persia in 1827 and formally ceded to Russia by the Treaty of Turkamanchai (1828) Under the Soviet regime Erivan underwent spectacular growth, mainly because of the establishment of important industries (machinery, textiles, and chemicals) and the influx of Armenian refugees. Erivan is the seat of a university (founded 1921) and possesses several museums and public libraries (totaling 3,000,000 volumes) Some 10,000 ancient Armenian manuscripts have been transferred here from Echmiadzin Erivan consists of a modern section and of the old historical city Hydroelectric stations on the Zanga furnish power for its industries

Erkel, Ferenc (fĕ'rĕnts ĕr'kĕl), 1810–93, Hungarian composer, the founder of opera in Hungary He wrote the Hungarian national anthem (1845), and his operas, of which *Hunyady Laszlo* (1844) and *Bank Ban* (1861) are most famous, are marked with strong national feeling

Erlach, Johann Bernhard Fischer von: see FISCHER VON ERLACH, JOHANN BERNHARD

Erlangen (ĕr'läng-ŭn), city (pop 45,536), Middle Franconia, Bavaria, on the Regnitz river and N of Nuremberg It has breweries and textile manufactures and produces the major part of German medical equipment, such as X-ray machines and hearing aids. Erlangen is best known, however, for its university (the only Protestant university in Bavaria, founded 1742 at Bayreuth and transferred here in 1743) Schelling and Schleiermacher taught here in the 19th cent. The university has numerous scientific institutes and a large library Dating from the 8th cent., Erlangen belonged to the bishopric of Bamberg from the 11th to the 14th cent and passed (1402) to the Franconian branch of the house of Hohenzollern, under which it shared the history of Bayreuth. It was rebuilt after a devastating fire in 1706, and the present city has a predominantly baroque character G. S Ohm was born here, and Friedrich Rückert lived here

Erlanger, Joseph (ûr'läng-ur), 1874–, American scientist, b San Francisco, grad Univ of California (B S , 1895), M.D Johns Hopkins, 1899 For his contributions to physiology, especially nerve action, he shared with H S Gasser the 1944 Nobel Prize in Physiology and Medicine From 1910 to 1946 he was professor of physiology at the medical school of Washington Univ , St Louis With H S Gasser he wrote *Electrical Signs of Nervous Activity* (1937)

Erlanger (ûr'läng-ûr), residential town (pop 2,416), N Ky , a suburb of Covington and Cincinnati

Ermak see YERMAK.

Ermanaric (ûrmă'nurĭk), d c 375, king of the Ostrogoths He extended his power over other barbarian tribes and thus built up an empire in eastern Europe N of the Danube. He was overthrown by the HUNS and soon afterward came to a violent end, either committing suicide or being assassinated In Germanic legend he bears the character of a treacherous tyrant He appears in Anglo-Saxon poems (e g , *Deor*) as Eormanric and in Old Norse literature as Jormunrekker

Ermeland (ĕr'mŭlänt), **Ermland** (ĕrm'länt), or **Warmia** (wôr'mēŭ), historic diocese of former East Prussia The region, extending far inland from the Baltic Sea, was ceded to Poland by the Teutonic Knights in 1466 and passed to Prussia only in 1772, in the first Polish partition Since 1945 it has been again under Polish administration.

ermine (ûr'mĭn), name for various species of WEASEL and for their fur In fur trapping the name weasel is generally used for skins obtained in North America and stoat is applied to the chief species (*Mustela erminea*) of the northern parts of Europe and Asia The pelts are made into wraps, coats, and trimmings When used in the white winter coat, the fur is bleached to remove discolorations The black tails are sometimes used in America as ornament, and in Europe they were always used with the ermine of royal robes Both the white winter coat dyed light brown and the brown winter coat of an arctic weasel which does not become white in winter are called summer ermine

Ermine Street, early Roman road in Britain said to have extended from Londinium (London) N to Lindum (Lincoln) Its length and exact route are disputed See Thomas Codrington, *Roman Roads in Britain* (new ed 1918)

Ermland see ERMELAND

Erne (ûrn), river of Ireland and Northern Ireland, rising in Lough Gowna on the border of Counties Longford and Cavan, and flowing 72 mi NW through Counties Cavan, Fermanagh and Donegal, through Loughs Oughter and Erne, past Belturbet and Ballyshannon, to Donegal Bay of the Atlantic

Erne, Lough (lŏkh' ûrn'), lake, 200 ft deep, Co Fermanagh, Northern Ireland Upper Lough Erne (10 mi long and 5 mi wide) is joined to Lower Lough Erne (18 mi long and 5 mi wide) by a 10-mile stretch of the Erne river Both lakes have numerous islands, on one of which is Enniskillen

Ernest I, 1784–1844, duke of SAXE-COBURG-GOTHA, brother of Leopold I of Belgium, uncle of Queen Victoria of England, and father of Victoria's consort, Prince Albert He succeeded to the duchy of Coburg in 1806 and acquired Gotha in 1826

Ernest Augustus, 1771–1851, king of Hanover (1837–51) and duke of Cumberland, fifth son of George III of England At the accession of Victoria, the crowns of England and Hanover were separated, since succession in Hanover was only through the male line The reign of Ernest Augustus was notoriously reactionary He rescinded the liberal constitution of 1833 and evoked the famous protest of the seven GÖTTINGEN professors The revolutionary outbreaks of 1848 forced him to restore the constitution, but he later attempted to evade his concessions He was succeeded by his son, George V

Ernle, Rowland Edmund Prothero, bp, 1st **Baron** (ûr'nul, prŏ'dhurō), 1851–1937, British agriculturist, editor, and writer He served as president of the Board of Agriculture from 1916 to 1919, and from 1894 to 1899 he edited the *Quarterly Review* Among his books are *Pioneers and Progress of English Farming* (1887), *Life and Correspondence of Dean Stanley* (1893), *English Farming Past and Present* (1912), and *The Land and Its People* (1925)

Ernst, Harold Clarence (ûrnst), 1856–1922, American bacteriologist, b Cincinnati, M D Harvard, 1880 He studied with Robert Koch and in 1885 opened at Harvard a course in bacteriology He established laboratories in Boston hospitals and furnished diphtheria antitoxin and tuberculin for use by the state Besides editing the *Journal of Medical Research* from 1896, he wrote several books on infection and immunity

Ernst, Max (mäks' ĕrnst'), 1891–, German painter After the First World War he joined the Dada movement in Paris and contributed to the periodical *Révolution surréaliste* Ernst has explored many means, including collage, psychic automatism,

and photographic representation, in his attempt to express the subconscious He is well represented in the Museum of Modern Art, New York

Eros (ĭ'rŏs, ē'rŏs) [Gr , =love], in Greek mythology, god of love He is the force of love in all its manifestations—physical passion at its strongest, tender romantic love, rose-crowned, playful, sportive friend of love-making and flirtation By some he was pictured as one of the oldest of the gods, born from Chaos like Gaea the earth-goddess and personifying creative power and harmony Associated with Dionysus in the ORPHIC MYSTERIES, he was worshiped as Protogonos, the first-born More usually, he was called the son of Aphrodite and Ares and was represented as a winged youth armed with bow and arrows He is sometimes also represented with a brother, Anteros In later times, and especially as the Roman CUPID or Amor, he was represented as a child, and Venus was accompanied not with one Cupid but with many cherubic boys For the story of Eros and Psyche, see PSYCHE

erosion (ĭrō'zhŭn), general term for the processes by which the surface of the earth is constantly being worn away, in which the principal agents are running water, waves, glaciers, and the wind All running water gathers and transports particles of soil or fragments of rock, formed by WEATHERING, and every stream carries in suspension or rolls along its bottom material received from its tributaries or detached from its own banks In addition to this power of transportation, which is an essential feature of erosion, streams have the power of wearing away their beds by corrasion If the bed is rough, with many jagged points, and the water is moving with sufficient velocity, the jagged points are detached by the mere mechanical action of the water, if on the other hand the bed is smooth and hard, it is worn by the rubbing of the particles being transported Streams also gather and transport material decomposed by the chemical action of weathering agents on rock Erosion by running water frequently enlarges slight depressions, forming gullies, ravines, and ultimately valleys, widens and alters the courses of rivers, and reduces hilly areas to peneplains or very nearly level surfaces Eroded materials either find their way to the deep sea or are deposited as ALLUVIUM It has been estimated that the basin of the Mississippi river is being reduced by erosion at the rate of one foot in about 9,000 years Sea coasts are eroded by ocean waves, which detach loose or nonresistant material and wear the rock by both the force of their own impact and the abrasive action of the detritus they carry A GLACIER erodes by plucking off loose rocks and by its abrasive action on the surface over which it passes, the wind is an important agent in arid regions, where it may transport sand in the form of a DUNE Washing away of the fine rich topsoil of farm lands annually destroys great amounts of wealth This menace is particularly acute in Mississippi and other regions of the South and in California, Oregon, Washington, and Montana Among the methods of preventing soil erosion are reforestation, the leaving of fallow strips, terracing, underdraining, ditching, deep plowing, and plowing across slopes rather than up and down See P B Sears, *Deserts on the March* (1935), Russell Lord, *To Hold This Soil* (U S. Dept of Agriculture, Miscellaneous Publication 321), G V Jacks and R O Whyte, *Vanishing Lands* (1939), H H Bennett, *Soil Conservation* (1939), William Vogt, *Road to Survival* (1948)

Erpenius, Thomas (ûrpē'nēus), 1584–1624, Dutch Orientalist, whose name in Dutch was Van Erpe He was one of the most celebrated scholars of his day and wrote several grammars of Near Eastern languages, notably one of Arabic

Errett, Isaac (ĕ'rĭt), 1820–88, American minister of the Disciples of Christ, b New York city After years of pastoral and evangelistic work in pioneer towns of Ohio and Michigan, he became (1866) the first editor of the *Christian Standard* and made it the denomination's foremost periodical See J S Lamar, *Memoirs of Isaac Errett* (2 vols , 1893)

Errigal, Mount (ĕrĭgŏl'), 2,466 ft high, Co Donegal, Ireland, highest point in the county

Ersch, Johann Samuel (yō'hän zä'mōōĕl ĕrsh'), 1766–1828, German encyclopedist, first editor of the great encyclopedia known as Ersch and Gruber's At his death, 17 volumes had been completed As editor he was succeeded by Johann Gottfried Gruber, who had been his associate Previous works of Ersch entitle him to be considered the father of German bibliography He held professorships in the universities of Jena and Halle and was librarian of each university

Erse (ûrs), Irish or Gaelic language See LANGUAGE (table)

Erskine, Ebenezer (ûr'skĭn), 1680–1754, founder of the Secession Church in Scotland, minister of Portmoak, Kinross-shire (1703) and of Stirling (1731) He upheld the right of the people to make their own choice of pastors, for which he was censured, suspended, and deposed (1733) With three other ministers he set up an Associate Synod, which was the origin of the Secession Church In 1736 they reaffirmed their separation, but they were not ejected from their churches until 1740 When the Associate Synod was divided over the question of certain oaths taken by burgesses of Scottish cities, Erskine was a leader of the "Burghers"

Erskine, John, 1509 91, Scottish reformer, called Erskine of Dun After several years on the Continent he returned to Scotland, where he introduced the study of Greek He was the friend and firm supporter of John Knox and George Wishart Erskine was a witness at the marriage (1557) of Mary Queen of Scots to Francis II of France and a participant in the coronation (1567) of James VI at Stirling As a member of a noble family and a person of gracious manner he was a valuable intermediary between the reforming party and Mary and, later, James Although a layman, he was several times moderator of the general assembly of the Scottish Reformed Church In 1578 he took part in compiling the Second Book of Discipline and in 1579 became a member of the king's council

Erskine, John, 1695–1768, Scottish jurist He was (1737–65) professor of law at the Univ of Edinburgh His chief works are *Institutes of the Law of Scotland* (1754) and *Principles of the Law of Scotland* (1773)

Erskine, John, 1721?–1803, Scottish theologian He was long a leader of the evangelical party in the Church of Scotland He was minister successively at Kirkintilloch, Culross, and New Greyfriars Church, Edinburgh, until, in 1767, he became the colleague of Dr William Robertson at Old Greyfriars He corresponded with Jonathan Edwards and edited and published his works in Great Britain Erskine's own writings include sermons, theological pamphlets, essays, and other works, principally of a religious nature

Erskine, John, 1879–, American educator, author, and musician, b New York city, grad Columbia (B A , 1900, Ph D , 1903) He taught first at Amherst (1903–9) and then at Columbia, becoming professor of English in 1916 and professor emeritus in 1937 He has written much about literature, including *The Literary Discipline* (1923) and *The Delight of Great Books* (1928), has edited scholarly works and served as coeditor of *The Cambridge History of American Literature*, and has written serious poetry He is best known for his gay, satiric novels based on legend, which include *The Private Life of Helen of Troy* (1925) and *Galahad* (1926) In his late 40's he began appearing as a concert pianist and was president of the Juilliard School of Music from 1928 to 1937 See his autobiographical *The Memory of Certain Persons* (1947) and *My Life as a Teacher* (1948)

Erskine, Robert, 1735–80, geographer and surveyor general to the American Revolutionary army, b Dunfermline, Scotland His several hundred detailed maps of the region W of the Hudson, showing roads, buildings, and other details, were of much use to Washington and are of great value to local historians See Albert Henry Heusser, *The Forgotten General* (1928)

Erskine, Thomas, 1st **Baron Erskine,** 1750–1823, British jurist He was admitted to the bar in 1778 and immediately built up an enormous practice by his eloquence and forensic skill A Whig member of the House of Commons from 1790 to 1806, he devoted much of his energy in the 1790s to the defense of civil liberties He defended Thomas Paine's publication of *The Rights of Man* against the charge of sedition, and his defense of the dean of St Asaph led to a liberal revision of the laws of libel (1792) Erskine's parliamentary career was undistinguished, as was his service as lord chancellor (1806 7) He is conceded, however, to have been one of the greatest trial lawyers of all time See L P Stryker, *For the Defense* (1947)

Erul see GERMANS

Ervine, St John Greer (ĕrvĭn', ûr'vĭn), 1883–, British dramatist and novelist, b Belfast Two early plays, *The Magnanimous Lover* and *Mixed Marriage*, were produced at the Abbey Theatre, of which Ervine became the manager in 1915 His dramatic work was interrupted by service at the front in the First World War Two of his plays, *John Ferguson* and *Jane Clegg*, were among the early successful productions of the Theatre Guild, New York Two later plays, *The First Mrs Fraser* and *Boyd's Shop* (in the United States, *Boyd's Daughter*) were also produced in New York, in 1930 and 1940 Ervine's novels include *Mrs Martin's Man* (1914), *Alice and a Family* (1915), *Changing Winds* (1917), *Foolish Lovers* (1920), and *The Wayward Man* (1927) In 1928–29 he was dramatic critic on the New York *World* *The Theatre in My Time* (1934) comprises his reviews

Erving, George William, 1769–1850, American diplomat, b Boston His father, a Loyalist in the American Revolution, took him to England, where he was educated at Oriel College, Oxford He returned to the United States in 1790 and attached himself to the Jeffersonian party He was secretary of legation in Spain (1804–9), was successful on a special mission to Denmark (1811), and served (1814–19) as minister to Spain

Erving, town (pop 1,328), W Mass , E of Greenfield, settled 1801, inc 1838. Paper and tools are made here

Erwin, town (pop 3,350), co seat of Unicoi co , NE Tenn , S of Johnson City, near the Bald Mts and the N C line, inc 1903 The area was settled c 1775 Erwin has potteries and railroad shops, and a U S. fish hatchery is near

Erymanthos (ĕrĭmăn'thŏs), mountain group, Greece, in the NW Peloponnesus, on the border of Achaea, Arcadia, and Elis The highest peak (7,294 ft) is Mt Erymanthos, also known as Mt Olonos In mythology the mountains were the haunt of the boar killed by Hercules

Eryri, Wales see SNOWDON

erysipelas (ĕrĭsĭl'pulus, -lĭs, ĭru-) [Gr , =red skin], acute inflammation of the skin accompanied by fever and other constitutional symptoms It is a world-wide disease, occurring especially in temperate climates, more frequently in women than men, and most commonly between 35 and 55 years of age *Streptococcus hemolyticus* (*S pyogenes*) is the cause of the disorder The organisms invade the site of a wound or abrasion, causing an eruption, swelling, pain, itching, and burning sensations accompany the infiltration of underlying tissues Complications are subcutaneous abscesses Some forms of erysipelas, e g , the traumatic variety, may be fatal, especially when gangrenous The sulfa drugs have reduced the fatality rate Antitoxins and vaccines have not been found to be of value The individual with erysipelas should be isolated

Erythrae (ē'rĭthrē), ancient Greek city in Asia Minor, on the peninsula opposite the island of Chios, now in W Asiatic Turkey It was one of the 12 Ionian cities and had a famous sybil

Erythraean Sea (ĕrĭthrē'un), name of doubtful origin anciently applied to the Indian Ocean, later to the Arabian Gulf, and finally to the Red Sea

Eryx (ē'rĭks), ancient city, W Sicily, Italy It was long a bone of contention between Carthage and Syracuse The Carthaginians destroyed it (c 260 B C) in the First Punic War, and its people were resettled in nearby Drepana (modern Trapani) The temple of Venus Erycina was an important religious shrine The most notable remains are cyclopic walls, some with Phoenician inscriptions The site is now occupied by the village of Erice

Erzberg (ĕrts'bĕrk), peak, c 5,000 ft high, Styria, central Austria It has large iron ore deposits In the summer the ore is mined on the surface Some of the mines have been worked for more than a thousand years

Erzberger, Matthias (mätē'äs ĕrts'bĕrgur), 1875–1921, German statesman, b Württemberg A leader of the Catholic Center party in the Reichstag from 1903, he was chief of propaganda in the First World War and drew criticism for his proposal (July, 1917) in favor of peace without annexation He joined (Oct , 1918) the cabinet of MAXIMILIAN, PRINCE OF BADEN, and headed (Nov 11, 1918) the German delegation which signed the armistice at Compiègne His powerlessness to secure the armistice on the basis of President Wilson's Fourteen Points caused many irresponsible attacks on him A member of the Scheidemann cabinet, he insisted upon acceptance of the Treaty of Versailles When the Scheidemann cabinet resigned (June, 1919) rather than sign the treaty, Erzberger joined the cabinet of Scheidemann's successor, Gustav Bauer, as finance minister He brought all railroads under national control and drastically reformed the fiscal system Opposition to Erzberger was fostered by a pamphlet of Karl Helfferich, a former finance minister whose policy the Center leader had attacked After suing his critic, most of whose statements were groundless, Erzberger resigned He was assassinated shortly afterward by two members of a secret nationalist organization

Erzerum or **Erzurum** (both ĕr'zurōōm), city (pop 50,875), NE Turkey, in Armenia, near the source of the Euphrates It is an agricultural trading center The ancient Theodosiopolis, it was long of strategic and commercial importance

Erzgebirge (ĕrts'gubĭr"gu), Czech *Krušné Hory* (krōōshnā hô'rĕ), mountain range, along the border of Bohemia (Czechoslovakia) and Saxony (Germany) It is sometimes called, in English, the Ore Mountains Extending c 100 mi from the Fichtelgebirge in the southwest to the Elbe in the northeast, it reaches its highest point (4,080 ft) in Mt Klinovec (Ger *Keilberg*) in Czechoslovakia From the 14th cent to the 19th cent silver and iron were mined extensively in the Erzgebirge, notably at JACHYMOV At present, the chief ores mined are wolframite, lead, tin, copper, bismuth, sulphur, arsenic, antimony, and uranium Coal and lignite mines are also exploited The Erzgebirge has many famous mineral springs (notably at Carlsbad, Marienbad, and Teplice-Sanov, all in Czechoslovakia) and is an important industrial area particularly in the production of textiles and machinery. Embroidering and toy manufacturing have long been traditional home industries In 1938 the Czech part of the Erzgebirge, which then had a predominantly German-speaking population, was transferred to Germany by the Munich Pact It was restored to Czechoslovakia in 1945, and most of the German population was expelled.

Erzsebetfalva, Hungary: see PESTSZENTERZSEBET.
Erzurum, Turkey: see ERZERUM.
Esaias (ēsā'yŭs), variant of ISAIAH
Esar-Haddon (ē"sär-hă'dŭn), king of ancient ASSYRIA (681–668 B C), son of SENNACHERIB Immediately on getting the throne he had to put down serious revolts and defeat the Chaldaeans In this he was triumphant He also extended conquests wide Most important was his conquest (673–670 B C) of Egypt, where, after initial difficulties, he took Memphis and defeated Tirhakah, deposed him, and put Necho in power Esar-Haddon also captured Susa and broke the power of Elam. One of the most powerful of the Assyrian kings, he was still warring when he died on the way to subdue an Egyptian revolt He was succeeded by Assur-bani-pal
Esau (ē'sô) [Heb ,=hairy], son of Isaac, tricked out of his birthright and his father's blessing by his twin, Jacob The loss of these compelled Esau to seek his living away from home, and he settled on Mt Seir As ancestor of Israel's enemies Esau is called EDOM Some scholars regard the story of Jacob and Esau as a double eponymous myth Gen 25–28, 32, 33, 36, Deut 2 4,5, Joshua 24 4, Jer 49 7–22, Heb 12 14–17
Esbjerg, Dan *Esbjaerg* (both ĕs'byĕr), city (pop 43,241), SW Jutland, Denmark, a North Sea port It is an export center and a fishing base and has a dairy industry The city developed after the construction of the harbor in the 19th cent Fano island, opposite the city, is a resort suburb
Escalante, Silvestre Vélez de (sēlvā'strā vā'lāth dā ĕskŭlän'tā), fl 1769–79, Spanish explorer in the Southwest and Far West, a Franciscan missionary He was in charge of Pueblo missions in the present New Mexico and conceived the idea of establishing overland communications with Monterey in Alta California A preliminary journey in 1775 took him to the Hopi towns in N Arizona and in 1776 he led an expedition from Santa Fe that crossed the present Colorado and went into present Utah, reaching Utah Lake—the first white men known to have seen the Utah country Mountain snows in the Sierra Nevada prevented him from going on to California, and with great hardship the party returned to Santa Fe Escalante kept a singularly accurate journal, which was signed also by his associate and superior, Francisco Atanasio Domínguez It appears in English translation in W R Harris, *The Catholic Church in Utah* (1909)
Escalante (ĕskŭlăn'tē), town (pop 1,106, alt 5,303), S Utah, on the Escalante river, a tributary of the Colorado, in a grazing area, settled 1875 by Mormons The name honors the Spanish missionary Silvestre Vélez de Escalante, who did not, however, visit the site
Escambia (ĕskăm'bēu), river, c 231 mi long, rising in SE Alabama, where it is called the Conecuh (kunē'ku) It flows SW through Alabama, then southerly through the northwest corner of Florida into Escambia Bay, an arm of Pensacola Bay
Escanaba (ĕskunō'bu), resort city (pop 14,830), co seat of Delta co, W Upper Peninsula, N Mich, on an inlet of Green Bay and NE of Menominee, settled 1852, inc 1883 It is a railroad, lumber, and fishing center, and from its fine harbor large amounts of ore are shipped Among its varied manufactures are paper, veneer, and dairy and foundry products The Upper Peninsula State Fair is held here Several prehistoric Indian villages were located in the vicinity
Escanaba, river, c 100 mi long, rising in W Upper Peninsula, N Mich, and flowing SSE into Little Bay de Noc, an inlet of Green Bay
Escandón, José de (hōsā' dā ĕskundōn'), 1700–1770, Spanish conquistador, count of Sierra Gorda, colonizer of the lower Rio Grande valley Made governor (1746) of the province of Nuevo Santander, an area on the Gulf of Mexico including TAMAULIPAS E of the Sierra Madre and Texas S of the San Antonio river, Escandón from 1747 to 1755 was one of the most efficient colonizers of New Spain The Indians were peacefully subdued, and prosperous settlements were established, notably those in the vicinity of present Laredo, Texas, and Nuevo Laredo, Tamaulipas Escandón continued as governor until his death See F J Scott, *Historical Heritage of the Lower Rio Grande* (1937)
escarpment or **scarp,** a long cliff, bluff, or steep slope, caused usually by geologic faulting or by EROSION and characteristic of mountainous regions The Palisades along the Hudson river are an example of an escarpment, another is the long break separating the coastal region from the inland area in Texas, roughly paralleling the coast
Escaut, river: see SCHELDT
Esch, John Jacob (ĕsh), 1861–1941, U S. Congressman and Federal administrator, b Norwalk, Wis, grad Univ of Wisconsin (B A, 1882, LL B, 1887) A lawyer of La Crosse, he became a member of the House in 1899 and served until 1921, distinguishing himself as co-author of the Transportation Act (Esch-Cummins Act) of 1920 He was a member of the Interstate Commerce Commission from 1921 to 1928, when his renomination was rejected by the Senate because he allegedly was responsible for rates favoring Pennsylvania coal mines and discriminating against Southern mines. He served as president of the American Peace Society from 1930 to 1938
Esch (ĕsh), town (pop 26,851), grand duchy of Luxembourg, on the Alzette river A steel center, it also produces cement, tar products, and synthetic fertilizer It is also called Esch-sur-Alzette
Eschenbach, Wolfram von see WOLFRAM VON ESCHENBACH
Eschenmayer, Adam Karl August von (ä'däm kärl' ou'gŏost fŭn ĕ'shunmīur), 1768–1852, German philosopher He was a physician and professor of philosophy at Tübingen from 1811 to 1836 He later became deeply interested in animal magnetism, spiritualism, and demonology His point of view in philosophy was like that of Schelling, except that Eschenmayer conceived of philosophy as leading to nonphilosophy, an area where religious mystical faith must supersede speculation
Escholtz Islands, Marshall Islands see BIKINI
Eschscholtz, Johann Friedrich (yō'hän frē'drĭkh ĕsh'shôltz), 1793–1831, German naturalist and traveler, b Dorpat He accompanied Otto von Kotzebue in his travels, collecting many animal specimens Eschscholtz Bay on Kotzebue Sound and the genus *Eschscholtzia* (see CALIFORNIA POPPY) were named for him He published *Zoologischer Atlas* (1829–33)
eschscholtzia see CALIFORNIA POPPY
Eschweiler (ĕsh'vīlur), city (pop 30,191), in the former Rhine Prov of Prussia, NW Germany, near Aachen The center of a soft-coal basin, it has iron and steel mills Dating from the 9th cent, Eschweiler has preserved the ancient Church of SS Peter and Paul (dating partly from the 12th cent, damaged in the Second World War) and a 13th-century castle, now a hospital
Escobedo, Juan de (hwän' dā ĕskō hā'dhō), d 1578, Spanish politician, secretary of John of Austria in the Netherlands He was murdered while on a mission in Madrid Antonio PÉREZ was accused of having procured the murder, possibly on orders from Philip II
Escondido (ĕskŭndē'dō), city (1940 pop 4,560, 1946 special census pop 5,930), S Calif, N of San Diego, laid out 1885, inc 1888 It lies in a valley rich in citrus fruits, grapes, and dairy products To the east is San Pasqual Battlefield State Monument, there, in Dec, 1846, Gen Stephen W Kearny and his U S force engaged in a battle with a group of Californians under Andrés Pico
Escondido (ĕskōndē'dhō), river, SE Nicaragua, flowing into the Caribbean at BLUEFIELDS It is navigable for shallow-draft vessels some distance inland and is the principal east-west communication It is sometimes called the Bluefields
Escorial (ĕskō'rēul, Span ĕskōrē-ä'l') or **Escurial** (ĕskyōō'rēul), palace near Madrid, Spain It was built (1563–84), together with the monastery of San Lorenzo del Escorial, by Philip II to commemorate the victory over the French at Saint-Quentin (1557) The somber and massive pile of granite buildings including monastery, church, royal palace, mausoleum, college, and library, form a parallelogram with towers rising from the corners and the dome and towers of the church rising from the center The Escorial was begun by the architect Juan Bautista de Toledo and finished by his pupil Juan de Herrera, it was decorated by Claudio Coello, Luca Giordano, and other noted artists The Escorial has an art collection including paintings by Velázquez, Ribera, El Greco, and Tintoretto
escutcheon (ĕskŭ'chun) or **shield,** in heraldry, the field upon which armorial bearings are displayed (see BLAZONRY) It originated in the actual SHIELD borne in war and identifying its owner The usual escutcheon in heraldry is straight across the top with sides curving to a point at the bottom Variants include the shield *chaurée* or *à la bouche,* this is four-sided and has a notch, where the lance rested, at the upper dexter corner (1 e, at the right of the bearer)
Esdraelon (ĕs'drūē'lŭn) [Gr for JEZREEL], fertile plain, central Palestine, through which the Kishon flows It extends from the Mediterranean near Mt Carmel to the Jordan and is roughly triangular with the apex to the west The coastal route through Palestine crosses the plain, and since ancient times it has been a battleground, especially around MEGIDDO, see also GILBOA The plain of Esdraelon is called also the plain of Jezreel or of Megiddo The plain is divided between territory which belongs to Israel and territory which is claimed by Jordan There was fighting in the area after the partition (MAY, 1948) of Palestine
Esdras (ĕz'-) [Gr from Heb EZRA], books of the OLD TESTAMENT and PSEUDEPIGRAPHA Four books have borne this name, the canonical books called Ezra and Nehemiah in AV (see EZRA) and two pseudepigrapha called 1 and 2 Esdras in the Apocrypha of AV The Western canon calls Ezra and Nehemiah 1 and 2 Esdras respectively, and the terms 3 and 4 Esdras are then used for the pseudepigraphic books Greek Bibles use the name 1 Esdras for Ezra and Nehemiah (taken as one book as in the Hebrew canon) and 2 and 3 Esdras for the pseudepigraphic books Below the pseudepigrapha are called 3 and 4 Esdras 3 Esdras is mainly a Greek translation of several parts of the Bible (3 Esdras 1=2 Chron 35 1-36 21, 3 Esdras 2 1–15=Ezra 1, 3 Esdras 2 16–30=Ezra 4.7–24, 3 Esdras 3–5 6 not found elsewhere, 3 Esdras 5 7–73=Ezra 2–4 5, 3 Esdras 6–9 36=Ezra 5–10, 3 Esdras 9 37–55=Neh 7 73–8 12) The book antedates 100 B C 4 Esdras is a Jewish apocalyptic work of which the bulk is a series of visions and revelations to Ezra in the style of the book of Revelation This is considered by many the best Jewish apocalypse The original language must have been Greek, but no Greek version is extant Most critics date it as a whole after A D 100 3 Esdras has enjoyed a relatively greater prestige in Christendom than 4 Esdras For 4 Esdras, see W O E Oesterley, *II Esdras* (1933)
Esek (ē'sĕk) [Heb ,=struggle], one of Isaac's wells Gen 26 20
Esenin, Sergei Aleksandrovich see YESENIN
Esh-baal (ĕsh-bā'ul, ĕsh'-bāul) see ISH-BOSHETH
Eshban, HOURI Gen 36 26, 1 Chron 1 41
Eshcol (-kŏl) [Heb ,=cluster], Amorite ally of Abraham Gen 14 13, 24
Eshean (ē'shēun, ĕsh'-, ĕshē'), unidentified city, near Hebron Joshua 15 52
Eshek (ē'shĕk), Benjamite 1 Chron 8 39
Esher, Reginald Baliol Brett, 2d **Viscount** (bāl'yul, ē'shur), 1852–1930, British historian After sitting in Parliament (1880–85), he thereafter preferred to exercise his influence from behind the scenes As deputy governor (later governor) of Windsor Castle (1901–30), he managed the king's household for 30 years He was given access to Queen Victoria's papers, from which he edited, with A C Benson, *The Correspondence of Queen Victoria* (1907) He was offered many public offices, among them the viceroyalty of India and the secretaryship for war, but refused them all in his desire to stay out of politics His works include *The Influence of King Edward* (1914) and *The Tragedy of Lord Kitchener* (1921) See his journals and letters (ed by his sons, M V Brett and Oliver Brett, Viscount Esher, 4 vols, 1934–38)
Esher (ē'shur), urban district (1931 pop 17,076, 1947 estimated pop 50,440), Surrey, England, SW of London Wolsey's Tower, a gatehouse, remains of the ancient mansion "Esher Place" founded by William Waynflete and occupied by Cardinal Wolsey "Claremont," built by Lord Clive, is here.
Eshkalon (ĕsh'ku-), variant of ASHKELON
Esh-Sham, SYRIA see DAMASCUS
Eshtaol (ĕsh'tāōl), unidentified city, SW Palestine, Joshua 15 33, 19 41, Judges 13 25, 16 31, 18 2, 8, 11, 12
Eshtemoa (ĕsh'tĕmō'u) **1** Judahite 1 Chron 4 19 **2** City, S Palestine, probably near Hebron in the mountains Joshua 21 14, 1 Sam 30 28, 1 Chron 4 17, 6 57 This place is called **Eshtemoh** (-mō') in Joshua 15 50
Eshton, Judahite 1 Chron 4 11,12
Esk, short river of S Cumberland, England, rising near Scafell in the Lake District and flowing SW through Eskdale to the Irish Sea The Esk river of Dumfriesshire, Scotland, cuts across a corner of N Cumberland just before entering Solway Firth
Esk, name of several rivers in Scotland There are in Midlothian the North Esk and the South Esk, which unite at Dalkeith and enter the Firth of Forth, the Black Esk and the White Esk, of Dumfriesshire, which unite and flow into the Solway Firth just after crossing a corner of Cumberland, England, and the North Esk and the South Esk, of Kincardine and Angus, which flow into the North Sea
esker (ĕs'kur) [Irish], long, narrow, winding ridge of stratified sand-and-gravel DRIFT Eskers, many miles long and resembling abandoned railway embankments in general appearance, occur in Scandinavia, Ireland, Scotland, and New England, they probably arose from deposition in the beds of subglacial streams
Eski Krim or **Eski Krym,** RSFSR see STARY KRYM
Eskilstuna (ĕ'skĭlstŭ"nu), city (pop 49,421), Sodermanland co, SE Sweden, between Hjalmaren and Malaren lakes Named after an 11th-century martyr missionary, Eskil, it was incorporated in 1659 by Charles X, who founded a gun factory there This factory was the nucleus of an expanding steel and tool industry, which has made Eskilstuna the rival of Sheffield, England, in the production of cutlery
Eskimo (ĕ'skumō) [Algonquian, =eaters of raw meat], native inhabitant of the arctic and subarctic regions of North America Also included among the Eskimo are c 1,000 individuals on the Chukchi Peninsula of NE Siberia The present population is estimated at little more than 30,000, although there is evidence that in earlier times they numbered at least 100,000 All but a few bands of the 15,000 Greenland Eskimo have mixed with the white population, but the Central Eskimo have remained a pure stock in historic times Despite their wide dispersal, the Eskimo are surprisingly uniform in language, physical type, and culture and as a group are distinct in these traits from all neighbors They speak dialects of the same language, which with the language of the ALEUT makes up the Eskimo-Aleut family Their Mongoloid features, unusual for their facial breadth and head height,

point to an Asiatic origin. Their eastern distribution is relatively recent—the first Eskimo known to the Norse settlers in Greenland appeared in the 13th cent Their adjustment to a severe environment has been equaled by no other group Sea mammals provide them with food, clothing, illuminating and cooking oil, tools, and weapons, the skill required to secure these necessities places the Eskimo among the foremost hunters of the world Fish and caribou are of next importance in their economy The practice of eating raw meat, disapproved of by their Indian neighbors, provides their limited diet with essential nutritional elements which cooking would destroy Except for some 500 Caribou Eskimo living in the "barren grounds" of central Canada, they are a littoral people who rove inland in the summer for freshwater fishing and game hunting Tents of caribou skins or sealskins provide adequate summer dwellings, in colder seasons, shelter is constructed of sod, driftwood, or sometimes stone placed over excavated floors The snow hut or IGLOO of the Eastern and Greenland Eskimo is seldom used The problem of long-distance and heavy transport made necessary by their nomadic and hunting existence is solved with dog-pulled sleds Their skin CANOE, the "kayak," in experienced hands is the most highly maneuverable small craft ever invented Their innumerable devices used in hunting and their clothing show an ingenuity essential to survival in their environment They possess a well-developed art and are skilled artisans in bone, ivory, antler, and stone There is evidence of cultural decline antedating white contact Archaeological finds show a richer material culture and a presumably wider social organization among early Eskimo than in recent times They now live in small bands, in voluntary association under a leader recognized only for his superior ability to provide for the group Only the most personal property is considered private, any equipment reverts through disuse to those who have need for it Blood feuds occur, but friction is usually forestalled by mutual avoidance Fear of ridicule is sufficient inducement to remain within group approval Their religion is loosely formulated, with a rich mythology that little affects daily life, although they are handicapped by food taboos Shamanism is found, but is a relatively recent borrowing from Siberia The now widespread use of firearms has seriously reduced native food supply, and substitution of the white man's economy has not yet proven beneficial. Measures are being undertaken by the U S and Canadian governments to check the population decrease and to restore the economy of the North. See G deM de Poncins, *Kabloona* (1941), writings of Vilhjalmur Stefansson and K J Rasmussen

Eskimo dog, dog believed to have originated in E Siberia, related to the chow, the Samoyede, the Alaskan malamute, and the Siberian husky Inhabitants of the arctic have long used the dogs for drawing sleds, for pulling boats, and as pack animals Explorers in both the arctic and the antarctic have relied on the dogs for transporting men and supplies to otherwise inaccessible places The coat consists of long guard hairs overlying a dense, woolly undercoat impenetrable by rain and cold Some are gray, some all white, and others are white with black heads Instead of barking, the Eskimo dog usually yelps or howls like a wolf, actually it is not very closely related to the wolf

Eskisehir (ĕskē'shĕhĕr), city (pop 80,030), W central Turkey, W of Ankara It is an export center for meerschaum, chromium, and magnesite, an important agricultural market, and a railroad junction, and it has cotton and tile manufactures and mineral springs It probably is the same as the ancient DORYLAEUM.

Esli (ĕs'lī), in the Gospel genealogy Luke 3 25

Esmarch, Johannes Friedrich August von (yōhä'nus frē'drĭkh ou'gōost fŭn ĕs'märkh), 1823–1908, German surgeon, educated at Kiel and Göttingen He served in the Schleswig-Holstein and Franco-Prussian wars and was the author of works on hospital management and military surgery He is especially known for his book on first aid written in 1877 and for his introduction of the Esmarch TOURNIQUET and a triangular cloth bandage which can be applied in 32 ways

Esna (ĕs'nu) or **Isna** (ĭs'nŭ), town (pop 20,085), Upper Egypt, on the Nile The Ptolemaic temple (with Roman additions) to the ram-headed deity Khnum is the outstanding monument Near by there is a Christian monastery, supposedly founded in the 4th cent to commemorate those martyred by Diocletian, but now believed to date from the 10th or 11th cent.

Esnambuc or **Ênambuc, Pierre Belain d'** (both· pyĕr' bŭlĕ' dänäbük'), 1585–1636, French pioneer in the West Indies Seeking to recoup his family fortune by privateering in the West Indies, Esnambuc instead became the founder of French colonial possessions in that area In 1625 he established a settlement on St Kitts in the Leeward Islands. Although St Kitts had already been settled by the British, the island was divided between France and England Firmly and justly he managed the colony's affairs through difficult times and explored and settled other islands. In 1635 he founded a colony at SAINT-PIERRE on Martinique

Esopus (ĕsō'pŭs), town (pop 4,220), SE N.Y., on the west bank of the Hudson and S of Kingston; formed 1811 In 1818 part of it was annexed to Kingston, while a portion of Hurley was annexed to Esopus In 1842 Esopus annexed part of New Paltz John Burroughs lived on a farm near Esopus.

Esopus Creek, rising in SE New York in the Catskills and flowing generally SE through Ashokan Reservoir and later NE past Kingston to the Hudson at Saugerties

espalier (ĕspăl'yûr), trellis or lattice used in horticulture for training a tree or vine either for ornament or to fit it into a small space, allowing it to get a maximum of air and sun, and bringing the fruit within easy reach for gathering The plant, usually an apple or pear tree, may be trained into various shapes, such as a fan or a fork The term is also used for the tree or vine so trained.

Española see HISPANIOLA

Espartero, Baldomero, duque de la Victoria, conde de Luchana (bäldōmā'rō ĕspartä'rō dō'kā dā lä vĕktō'rēä kōn'dā dā lōōchä'na), 1793–1879, Spanish general and statesman He fought against the French in the Peninsular War (1808–14) and later against the revolutionists in South America After Ferdinand VII's death, he supported Isabella II against the CARLISTS and won brilliant victories in the Carlist War of 1836–39 His agreement at Vergara (1839) with the Carlist general Maroto virtually ended the war Espartero was created duke of la Victoria (an honorary title) A member of the progressive party in the Cortes from 1837, the general played an important political role His opposition to the queen regent, MARIA CHRISTINA, helped force her to leave (1840) In 1841 Espartero was made regent by the Cortes and became virtual dictator His ruthless suppression of revolutionary movements—notably at Barcelona—soon made him highly unpopular A general uprising drove him from office, and he fled to England (1843) He returned to Spain in 1848 but lived in retirement until Isabella II called upon him (1854) to support her tottering throne He became premier with the support of the progressives and commander in chief of the army Leopoldo O'Donnell, who was his war minister, displaced him in 1856 Espartero later supported King Amadeus, then adhered to the republic, but he recognized Alfonso XII upon his accession (1875).

Espejo, Antonio de (äntō'nyō dā ĕspä'hō), fl 1582–83, Spanish explorer in the Southwest In 1582 he went out to rescue missionaries among the Pueblo Indians, said to be menaced by the Indians He went down the Conchos river and then up the Rio Grande, exploring much of the present New Mexico and going far into the present Arizona and returning in 1583 He found traces of gold that led the Spanish to support the expedition under Juan de OÑATE a few years later His narrative is translated in H E Bolton, *Spanish Explorations in the Southwest* (1916)

Esperanto see UNIVERSAL LANGUAGE

Espina de Serna, Concha (kōn'cha ĕspē'ná dā sĕr'na), 1877–, Spanish novelist Her regional novels, many of them laid in her native Santander, have brought her fame and have been widely translated Among the best known of her novels are *La esfinge maragata* (1914, Eng tr, *Mar(flor*, 1924), a story of Leon, *El metal de los muertos* (1920), of the Rio Tinto mines, *El cáliz rojo* (1923), and *Tierras del aquilón* [lands of the north wind] (1924), a collection of short stories and impressions of voyages

Espinel, Vicente Martinez (vĕthān'tā martēnēth' ĕspēnĕl'), 1550–1624, Spanish poet, novelist, and musician He composed guitar music and added the fifth string to the guitar As a poet he is credited with the creation of the 10-line stanza called *décima* or, in his honor, *espinela* His translation of Horace's *Epistola ad Pisones* was published with his *Rimas* in 1591 Espinel wrote the picaresque novel *Vida del escudero Marcos de Obregón* [the life of Squire Marcos de Obregón] (1618), from which Le Sage adapted many episodes and characters for *Gil Blás de Santillana*

espionage (ĕ'spēŭnäzh", -nĭj, ĕspō'ŭnĭj), clandestine securing of information. The term applies particularly to the act of seeking military, industrial, and political data concerning one nation for the benefit—actual or potential—of another Espionage is also practiced in other connections In industrial espionage employers use detectives to prevent sabotage, to apprehend agitators, or to break strikes Commercial espionage is common among competing businesses. The most widespread type of espionage is practiced by the police and security agencies of a state to discover foreign spies and saboteurs (counterespionage), to apprehend or control disloyal elements within the state, and to prevent organized opposition to a despotic regime Foreign espionage agents are usually indiscriminately called spies—a derogatory term One should distinguish between agents belonging to the armed or civil services of a government and spies, who are either paid or voluntary informants serving these agents. Spies, if caught, are almost always disavowed by their employers, agents are, if possible, protected. All types of espionage have been practiced ever since organized society began. Espionage as an organized institution was developed in the 18th and the early 19th cent., particularly by Joseph FOUCHÉ International law and the rules of warfare have standardized the treatment accorded to convicted foreign agents In wartime an enemy agent, if apprehended while not wearing the uniform of his country, may be punished by death. A neutral agent serving the enemy in wartime, or any foreign agent in peacetime, may be imprisoned but is frequently merely deported Anyone spying against his own country may be convicted of TREASON and made subject to the penalty provided by the law of his country. In the First World War the U S Espionage Acts of 1917 and 1918 extended the definition of espionage to include almost all interference with the government war effort, thus curtailing freedom of the press and making obstruction of the government a criminal offense Among nations at peace with each other espionage is never officially admitted but almost always practiced Diplomatic personnel (military attachés and others), if suspected of employing unfair means for securing information, must be recalled upon the demand of the government which they have offended Captured spies are often not convicted but used by their captors to spy on their original employer, these are "double agents" Spies may be zealous amateurs, paid professionals, or individuals who for some reason are at the mercy of their employer (e g, criminal or political offenders desiring to escape punishment) Of these the first are the most, the last are the least, reliable Espionage is rarely of decisive military value, except when carried out on such a huge scale as in France before the Allied landing in 1944 Espionage forms a minor aspect of intelligence activities as compared with the study of diplomatic and consular reports, foreign newspapers and technical publications, statistics, and—in wartime—aerial photography and interrogation of prisoners The four main steps in intelligence work are the gathering of data, the evaluation of their source, the analysis of their content, and the evaluation of their significance In secret police work, however, espionage plays a very important part No state can entirely dispense with it, but some governments consider every citizen a potential informant Typical is the use of *agents-provocateurs*, i e, agents who induce suspects unwittingly to give self-incriminating evidence

Espiritu Santo (ĕspō'rētōō sän'tō) or **Santo,** volcanic island (c 1,900 sq mi, pop c 4,000), S Pacific, largest and westernmost island of the New Hebrides British administrative headquarters is at Hog Harbour, French headquarters at Segond Canal The island produces copra, coffee, and cocoa It was discovered in 1606 by Queiros and was formerly called Tierra del Espiritu Santo In the Second World War the island was occupied (1942) by U S forces who established an air base for the Solomons campaign

Espoz y Mina, Francisco (franthē'skō ĕspōth' ē mē'nä), 1781 1836, Spanish soldier and revolutionist During the Peninsular War (1808–14) he and his nephew MINA waged successful guerrilla warfare against the French After the restoration of Ferdinand VII he was forced to flee because of his liberal views He returned to serve the constitutional government (1820–22), but went abroad again until 1833 He supported Maria Christina against the Carlists

Espronceda, José de (hōsä' dā ĕsprōnthä'dhä), 1808–42, Spanish poet He was involved in political intrigue from a very early age and wrote his first verse while confined in a monastery He was exiled and later went to Lisbon, where he fell in love with Teresa Mancha His two principal poetic works are *El estudiante de Salamanca* [the student of Salamanca] and *El diablo mundo* [the world devil] (1841), in which he included his passionate "Canto a Teresa" Espronceda was the great popular poet of the romantic period in Spain He has been compared to Byron, whom he much admired

Espy, James Pollard (ĕ'spē), 1785–1860, American meteorologist He developed a convection theory of storms, explaining it in 1836 before the American Philosophical Society and in 1840 before French and British scientific societies, his *Philosophy of Storms* was published in 1841 He became meteorologist to the War (1842) and Navy (1848) departments and developed the use of the telegraph in assembling weather observation data, by which he studied the progress of storms and laid the basis for scientific weather forecasting.

Esquiline Hill: see *Rome before Augustus* and *Roman Empire* under ROME.

Esquimalt (ĕskwĭ'mŏlt,-mält, ĕskwī'-), village, on Vancouver Island, British Columbia, c.3 mi. from Victoria It has the chief naval station and naval dockyard in W Canada. The station was established by the British government in 1855 and was taken over by Canada in 1906

Esquipulas (ĕskēpōō'läs), town (pop. 1,876), S Guatemala, near the Honduran and Salvadorean borders.

Believed to be a center of Mayan religious ceremonies, Esquipulas was chosen by the Spanish conquerors as a church site Here they commissioned the carving of a figure of Christ from balsam, which became known as the Black Christ of Esquipulas A series of miracles resulted in commissioning a grandiose church in 1737 About Jan 15 each year, before Guatemala inaugurated passport restrictions, the population exceeded 100,000 The pilgrimage may be made throughout the year.

Esquirol, Jean Étienne Dominique (shā'ătvĕn' dôměnăk' ĕskērôl'), 1772–1840, French psychiatrist, pupil of Pinel. He worked prodigously for the reform of mental institutions and for sympathetic treatment of the criminally insane In his chief work, *Des maladies mentales* (2 vols , 1838), he was one of the first to emphasize the role of emotions as a source of mental disturbances, supporting his thesis with statistical tabulations

Esquiros, Alphonse (Henri Alphonse Esquiros) (ălfōs' ĕskērōs', ārē'), 1814–76, French politician and author He was disciplined by the government for his democratic *Évangile du peuple* (1840) and exiled in 1851 He returned to political life as a deputy and became a senator in 1876 His works include *Les Chants d'un prisonnier* (1841), poems, and *Charlotte Corday* (1840), a novel *L'Angleterre et la vie anglaise* (1859) first appeared in *Revue des Deux Mondes* (1857–59), parts of it have been translated into English

Esrom (ĕs'rŏm), the same as HEZRON 1.

Essad Pasha (ĕ'săt pä'shä), 1863–1920, Albanian dictator Of a prominent Albanian family, he supported (1908) the Young Turk revolution, became a member of the Turkish parliament, and in the First Balkan War was entrusted (1912) with the defense of Scutari against the Montenegrins, to whom he surrendered the city in 1913 In 1914, when William, prince of Wied, became king of newly independent Albania, Essad was made chief minister He promptly expelled William and governed Albania dictatorially In the chaotic years that followed, Essad maintained himself, with Italian aid, until defeated (1916) by the Austrians He fled abroad and headed an Albanian commission in Paris, where he was assassinated by a fellow countryman

essay, literary composition in prose which gives the author's thoughts and feelings on almost any subject The essay is unlike a dissertation or an article in being less objective and more personal The word was first used by Montaigne, whose *Essais* (1580–95) discussed friendship, love, death, and moral questions, they are considered by many today the finest essays ever written The essays of Francis Bacon, his contemporary, were more formal The first important personal essays in English were those of Abraham Cowley, and the great essayist of the next period was Jonathan Swift In the 18th cent Addison and Steele in the *Spectator* and Samuel Johnson in the *Rambler* widened the use of the essay In the next century the most famous essayists were Charles Lamb and Thomas De Quincey and later Richard Jefferies, more formal essays dealing with morality, literature, painting, and history were written by Leigh Hunt, Carlyle, Walter Savage Landor, Ruskin, Matthew Arnold, J H Newman, John Stuart Mill, and Walter Pater In America the principal essayists of the 19th cent were Washington Irving, Oliver Wendell Holmes, James Russell Lowell, and, most famous, Ralph Waldo Emerson and Henry Thoreau Continental essayists included Brunetière, F É J Lemaître, Lessing, Friedrich von Schlegel, Émile Faguet, and Schopenhauer The 20th-century English essayists include G K Chesterton, E V Lucas, and Hilaire Belloc In the United States, Samuel McChord Crothers, H L Mencken, Christopher Morley, Agnes Reppher, James Thurber, and E B White have written informal and generally amusing essays See Burges Johnson, *Essayng the Essay* (1927)

Esseg, Yugoslavia see OSIJEK

Essen (ĕ'sŭn), city (pop 524,728), in the former Rhine Prov of Prussia, NW Germany The center of the RUHR district and the seat of the KRUPP steel works, it is one of the great industrial cities of the world Although its origin is traceable to the 9th cent , its importance dates only from its industrial rise in the 19th cent Its ancient minster was damaged in the intensive Allied raids which destroyed three quarters of Essen during the Second World War

Essenes (ĕ'sēnz), members of a Jewish religious order, originating in the 2d cent B C Very little historical information about the Essenes is available our chief sources of information are Pliny the Elder, Philo's *Quod omnius probus liber*, and Josephus' *Jewish War* and *Antiquities of the Jews* A feature of their organization was the doctrine of communal possession Ceremonial purity was another outstanding characteristic, this called for abstinence from conjugal relations, scrupulous cleanliness, the wearing of only white garments, and the most strict observance of the Sabbath. The Essenes believed in purification through baptism and in immortality, but not in resurrection They condemned slavery and prohibited trading because it led to covetousness and cheating; they abhorred untruthfulness, forbidding oaths They subsisted by pastoral and agricultural activities and handicrafts All these features, besides indicating that the sect was an outgrowth of extreme Pharisaism, also show Oriental influences. The claim sometimes advanced that Jesus and John the Baptist came from this sect has never been substantiated The sect ceased to exist sometime in the 2d cent A D

essential oils. see OILS

Essequibo (ĕsăkē'bō), river, central British Guiana It is the longest river of the colony, flowing from the Brazilian border to the Atlantic The first colony in the Guianas, founded by the Dutch in 1616, was also called Essequibo

Essex, Robert Devereux, 2d **earl of** (dĕ'vurōō), 1567–1601, favorite of Queen ELIZABETH of England He succeeded to the earldom on the death of his father in 1576 and came under the guardianship of Lord BURGHLEY He received his master's degree from Cambridge in 1581 and soon won favor at court. While serving as a cavalry officer in the Netherlands under his stepfather, the earl of Leicester, he distinguished himself in action and was knighted (1587) When he returned to England he soon became a marked favorite of the queen, a position which involved him in a quarrelsome rivalry with Sir Walter RALEGH Pressed for money and hungering for adventure, Essex joined the expedition of Sir John Norris and Sir Francis Drake to Portugal but was ordered home by Elizabeth (1589) In 1590 he angered the queen by secretly marrying the widow of Sir Philip Sidney The following year he commanded a flamboyant but unsuccessful expedition to Normandy to help Henry of Navarre (Henry IV) He returned home and, advised by Francis BACON, entered politics in an effort to seize power from the aging Burghley But Essex was too obvious and impetuous in his demands on the queen, Elizabeth was wary, and gradually she conferred the power he sought on Robert Cecil, son of Burghley Essex became a national hero when he shared command of the expedition which captured Cádiz in 1596, but he failed miserably the next year in another Spanish expedition, much to the displeasure of the queen. When she soon afterward created him earl marshal, however, Essex plunged again into a quest for power In 1598 he affronted the queen and was struck by her In 1599, at his own demand, Essex was made lord lieutenant of Ireland and sent there with a large force to quell the rebellion of the earl of TYRONE Failing completely to accomplish his mission, he returned to England against the express orders of the queen, was confined by the council, and then became ill In 1600 he was tried for disobedience by a special council and deprived of his offices In several months he was again free but was banned from the court Still popular, he planned a coup which would oust the enemy party and establish his own about the queen To this end he unsuccessfully asked support from the army in Ireland and opened negotiation with James VI of Scotland Desperately, Essex made his attempt with a small body of personal followers on Feb 8, 1601 The Londoners failed to respond, the queen's government was thoroughly prepared, and he was arrested At the trial Bacon contributed heavily to his former patron's conviction Elizabeth signed the death warrant, and Essex was executed See W B Devereux, *Lives of the Earls of Essex* (1853), L A Cadwallader, *Career of the Earl of Essex* (1923), Lytton Strachey, *Elizabeth and Essex* (1928), G B Harrison, *The Life and Death of Robert Devereux* (1937)

Essex, Robert Devereux, 3d **earl of,** 1591–1646, English parliamentary general, son of Robert Devereux, 2d earl of Essex James I restored him (1604) to the estates of his father and arranged his marriage (1606) with Frances Howard, daughter of Thomas Howard, earl of Suffolk The marriage ended in a famous trial when the countess, who had fallen in love with Robert Carr, earl of SOMERSET, sued for and obtained an annulment (1613) with great scandal After 1620 Essex followed a military and naval career and after 1626 was in the parliamentary opposition to Charles I leading to the Puritan Revolution He was second in command of the royal army in the first BISHOPS' WAR in Scotland (1639) and was made privy councilor (1641), but Charles could not keep his allegiance thereafter Essex commanded the parliamentary forces at Edgehill (1642) and took Reading (1643) He relieved Gloucester in 1643, but the next year saw his failure and disgrace He went into Cornwall and, pursued, had to escape with as many of his men as he could by sea. The Self-Denying Ordinance forced Essex to relinquish his command (1645)

Essex, Walter Devereux, 1st **earl of,** 1541–76, English soldier He was created earl of Essex in 1572 The following year he volunteered to colonize a part of Ulster, then controlled by the O'Neill clan, and bring it under English rule Famine, desertion of his troops, and the vacillation of Queen Elizabeth negated his ruthless efforts to subdue the Irish He was recalled (1575) and died soon afterwards. His son, Robert, became the 2d earl of Essex

Essex, kingdom of Anglo-Saxon England It was settled probably in the early 6th cent by Saxons who traced their royal line back to a continental Saxon god, instead of to Woden, as did rulers of other early kingdoms, Essex eventually included the modern counties of Essex, London, Middlesex, and most of Hertfordshire Under the hegemony of his uncle, Æthelbert of Kent, King Sæbert by 604 had accepted Christianity, but the kingdom lapsed into heathenism when his successors ejected (617) Mellitus, bishop of London In 653, however, at the request of King Sigbert, Oswy of Northumbria sent Cedd to convert the East Saxons and to build churches In the 7th cent the submission of Essex to the overlordship of Wulfhere marked the beginning of a long domination by MERCIA, and by 740 the larger state controlled London In 825 Essex joined other eastern kingdoms in submitting to EGBERT of Wessex and became an earldom Heavily settled by the Danes, it became part of the DANELAW by the treaty of 886, but was retaken by Edward the Elder of Wessex in 917 Its most famous later earl was BYRHTNOTH, who suffered a noble defeat with his followers at MALDON in 991

Essex, maritime county (1,528 sq. mi , 1931 pop. 1,755,459, 1948 estimated pop 1,974,000), E England, on the north bank of the Thames estuary Chelmsford is the county town The land rises from the low irregular coast line to undulating pastoral country There are numerous streams and salt marshes Among the chief products of the county are fish, oysters, fruits, and vegetables The southwest portion of the county is included in the Greater London area Here there are important manufactures of chemicals, machinery, textiles, cement, and a variety of other products Essex was once part of the kingdom of the East Saxons, whence its name, and there are Roman and Saxon remains at Colchester and Maldon There are popular resorts along the coast The areas near London and along the coast were frequently bombed in the Second World War See *Victoria History of Essex* (2 vols , 1903–7), Clifford Bax, *Highways and Byways in Essex* (1939)

Essex, town (pop 1,935), S Ont , SE of Windsor It is in a fruitgrowing district

Essex. 1 Industrial town (pop 2,859), S Conn , on the Connecticut, set off from Saybrook 1852 2 Town (pop 1,384), NE Mass , NE of Salem, settled 1634, set off from Ipswich 1819 Its shipyards were established in 1668 3 Town (pop 3,059), NW Vt , E of Burlington and on the Winooski, chartered 1763, settled 1783 It includes the village Essex Junction (pop 1,901), a railroad and highway focus and seat of the Champlain Valley Exposition

Essex Fells, borough (pop 1,466), NE N J , NW of Newark, inc 1902

Essex Junction, Vt see ESSEX

Essex Junto, group of New England merchants, so called because many of them came from Essex co , Mass They opposed the radicals in Massachusetts in the American Revolution and supported the Federalist faction of Alexander Hamilton They later encouraged the disaffection of the Hartford Convention Prominent among them were Timothy PICKERING, George CABOT, and Theophilus PARSONS

Essexville, city (pop 2,390), S Mich , at the mouth of the Saginaw river opposite Bay City and near Saginaw Bay, inc as a village 1883, as a city 1934 This area, the site of numerous Indian villages, was part of an Indian reservation (1819–37)

Esslingen (ĕs'lĭng-un) or **Esslingen am Neckar** (am nĕ'kär), city (pop 64,923), N Württemberg, SW Germany, on the Neckar and ESE of Stuttgart Noted for its wines, it also has machinery, textile, and other industries Founded in 777 and a free imperial city from 1219 to 1803, Esslingen was (1488) the scene of the formation of the Swabian League It has retained its 13th-century castle and several fine Gothic churches The old city hall dates from the 15th cent , the new city hall dates from the 18th cent

Established Church. see ENGLAND, CHURCH OF, SCOTLAND, CHURCH OF; and IRELAND CHURCH OF.

Estaing, Charles Hector, comte d' (shärl' ĕktôr' kōt' dĕstĕ'), 1729–94, French admiral After serving in India he was given command (1778) of a French fleet sent to aid the patriots in the American Revolution Planning to attack Newport, R I , he was undone by a storm and had to put into Boston for repairs In 1779 he cooperated with Gen Benjamin LINCOLN in the unsuccessful attack on Savannah In 1780 he returned to France Estaing commanded the National Guard at Versailles when a Parisian mob invaded the palace (Oct 5–6, 1789), but failed to take action Though he shared some of the French revolutionists' ideas, he was personally friendly to the royal family, testified (1793) in favor of Marie Antoinette during her trial, and was guillotined as a noble

estate. 1 In property law, see PROPERTY and TENURE 2 In constitutional law, an estate de-

notes an organized class of society with a separate voice in government The term is of feudal origin and in older usage designates the three principal classes, the nobility, the clergy, and the commons The commons were the townspeople of substance—the burgesses or bourgeoisie The sovereign would occasionally consult the three estates and consider their grievances Often voting was by an estate as a whole rather than by individual vote In many cases the estates might merely advise the sovereign, and their decisions were not binding From these practices modern parliamentary institutions gradually evolved In several countries Much of the constitutional development of the later Middle Ages is a record of the emergence of the commons —sometimes called the third estate—into a position of equality with the other two estates The process is clearly shown in the history of the STATES-GENERAL in France The English PARLIAMENT may be viewed historically as a representative body of the estates, the nobility and the Church of England are represented by the House of Lords, and the commons—the remaining adult citizens—by the House of Commons In fact, however, the term *estate* is not applicable to a country with democratic institutions and is probably not appropriate in any modern state

Estates-General see STATES-GENERAL

Estaunié, Édouard (ādwär' ĕstônyā'), 1862–1942, French novelist Although he was successful as an engineer, Estaunié's main interest was literary His best-known novel, *L'Empreinte* [the imprint] (1896), was followed by *Le Ferment* (1899), both concerned with the problems of education Other novels, generally dealing with unhappy people, include *La Vie secrète* (1909), *Les Choses voient* [things do see] (1913), and *Tels qu'ils furent* [such as they were] (1927) He was elected to the French Academy in 1923

Este (ĕ'stā), ancient Italian noble family, rulers of FERRARA (1240–1597) and of MODENA (1288–1796) and celebrated patrons of the arts during the Renaissance Probably of Lombard origin, they belonged to the house of the GUELPHS and derived their name from the castle of Este, near Padua **Azzo d'Este II** (ät'tsō), d 1097, lord of Este, was invested with Milan by the emperor His son, **Guelph d'Este IV** or **Welf IV,** d 1101, was adopted by his maternal uncle, Guelph III, whom he succeeded as duke of Carinthia In 1070 he was made duke of Bavaria The grandfather of Henry the Proud of Bavaria and Saxony, Guelph IV was the founder of the German line of the Guelphs, from whom the ruling house of England is descended He died on Cyprus while crusading Azzo d'Este II had another son, who continued the Italian line of the house, among that son's successors was **Obizzo d'Este** (ōbĕt'tsō), d 1194 Obizzo played an important part in the struggle of the Guelphs against Emperor Frederick I (see GUELPHS AND GHIBELLINES) He married the heiress of one of the two families contending for supremacy in Ferrara His grandson, **Azzo d'Este VI,** 1170–1212, was podestà of Mantua and Verona and fought to obtain Ferrara, but it was left for his son, **Azzo d'Este VII,** 1205–64, to succeed in becoming (1240) podestà of that city at the head of the triumphant Guelph party **Obizzo d'Este II,** d 1293, was made perpetual lord of Ferrara, lord of Modena (1288), and lord of Reggio (now REGGIO NELL'EMILIA) in 1289. Since Ferrara was held as a fief from the pope, the Este became papal vicars in 1332 **Niccolò d'Este III** (nĕk-kōlō'), 1393–1441, made Ferrara a center of arts and letters and increased the power of his house by playing his more powerful neighbors against each other Under his successors the court of the Este became one of the most brilliant in Europe Among them were **Lionello d'Este** (lēōnĕl'lō), 1407–50, an accomplished prince, and his brother **Borso d'Este** (bōr'sō), 1413–71, who received the title duke of Modena and Reggio from Emperor Frederick III in 1452 and that of duke of Ferrara from Pope Paul II in 1471 The third brother, **Ercole d'Este I** (ĕr'kōlā), 1431–1505, lost some territory in wars against Venice Ercole's beautiful and brilliant daughter, **Beatrice d'Este** (bāatrē'chā), 1475–97, married LODOVICO SFORZA, duke of Milan, one of the most lavish of all Renaissance princes Her sister, **Isabella d'Este** (ē"zabĕl'lā), 1474–1539, married Francesco GONZAGA, marquess of Mantua Ariosto, Boiardo, and Berni were her friends, and Leonardo da Vinci and Titian painted portraits of her Ercole I was succeeded by his son, **Alfonso d'Este I** (alfōn'sō), 1476–1534, second husband of Lucrezia BORGIA In the ITALIAN WARS he entered the League of Cambrai against Venice and remained an ally of Louis XII of France even after Pope Julius II had made peace with Venice The pope declared Alfonso's fiefs forfeited and excommunicated him (1510), Modena and Reggio were lost However, in 1526–27 Alfonso participated in the expedition of Emperor Charles V against Pope Clement VII, and in 1530 the pope again recognized him in possession of his duchies Ariosto lived at his court in Ferrara after being long employed by Alfonso's brother, **Ippolito I, Cardinal d'Este** (ēp-pō'lētō), 1479–1520, to whom *Orlando Furioso* is dedicated. Alfonso's son and successor, **Ercole d'Este II,** 1508–59, married Renée, daughter of Louis XII of France He joined the pope and France against Spain in 1556, but made a separate peace in 1558 He also was a patron of the arts, as was his brother, **Ippolito II, Cardinal d'Este,** 1509–72, an able diplomat who led the pro-French party at the papal court Ippolito built the celebrated VILLA D'ESTE at Tivoli. With Ercole II's son, **Alfonso d'Este II,** 1533–97, the direct male line of the house ended He willed his titles to his cousin, **Cesare d'Este** (chāza'rā), 1533–1628, but Pope Clement VIII refused to recognize Cesare's rights, and Ferrara was incorporated into the Papal States in 1598 Emperor Rudolf II recognized Cesare's rights to Modena and Reggio, but without Ferrara the duchy lost its political importance The last duke, Ercole d'Este III, was deposed in 1796 by the French and died in 1803 His daughter, Maria Beatrice, married Archduke Ferdinand of Austria, a son of Emperor Francis I, who founded the house of Austria-Este After the restoration of the duchy of Modena (1815) their son and grandson, Francis IV and Francis V, ruled as dukes of Modena, Massa, and Carrara Francis V was expelled in 1859, and his territories were annexed (1860) to the kingdom of Sardinia

Este (ĕ'stā), town (pop 14,438), Venetia, NE Italy, SW of Padua The ancient Ateste, it was a center of civilization (10th–2d cent B C) of which many important remains have been found The Este family originated here In 1405 the town passed under Venetian rule Este has a 13th-century castle and several fine villas

ester, any one of a group of compounds formed by the reaction between an alcohol and an acid For example, when ethyl alcohol and acetic acid react, ethyl acetate (an ester) and water are formed, the reaction is called esterification Ethyl acetate is used as a solvent Methyl acetate, formed by the reaction between methyl alcohol and acetic acid, is a sweet-smelling liquid used in making perfumes, extracts, and lacquers Esters react with water (HYDROLYSIS) under certain conditions to form an alcohol and an acid When heated with a hydroxide certain esters decompose to yield soap and glycerin, the process being called saponification Common FATS AND OILS are mixtures of various esters, such as STEARIN, PALMITIN, and linolein, formed from the alcohol glycerol (GLYCERIN) and fatty acids The presence of certain esters in flowers gives them their distinctive odors Esters are commonly used for flavoring, in perfumes, in paints, and in explosives (see NITROGLYCERIN)

Esterhazy (ĕ'sturha"zē), Hung *Eszterházy,* ancient princely Hungarian family **Paul, Fürst Esterhazy von Galantha** (poul' fürst' ĕ'shtĕrhä'zē fŭn gä'läntä), 1635–1713, distinguished himself in the defense of Vienna (1683) and the reconquest of Hungary from the Turks and was made palatine of Hungary in 1681 A staunch supporter of Hapsburg rule, he was created prince of the Holy Roman Empire in 1712 **Paul Anton, Fürst Esterhazy von Galantha,** (än'tōn), d 1762, appointed Joseph HAYDN as composer for his private chapel (i e, orchestra) at his seat at Eisenstadt, now in Austria For his brother **Nikolaus Joseph, Fürst Esterhazy von Galantha** (nĕkōlä'ōōs yō'zĕf), 1714–90, Haydn composed most of his chamber music and numerous symphonies and operas for a vastly increased orchestra and a newly established private opera Nikolaus Joseph, one of the most lavish Maecenases of all time and immensely rich, built the celebrated château of Esterhaz, on the southern end of the Neusiedler Lake, at an estimated cost of 11,000,000 florins At his death he left Haydn the handsome pension of 1,000 florins a year His nephew, **Nikolaus, Fürst Esterhazy von Galantha,** 1765–1833, was offered (1809) the crown of Hungary by Napoleon I, but refused

Esterhazy, Ferdinand Walsin (ĕ'sturha"zē, Fr fĕrdēnä' välsĕ̄ ĕstĕrazē'), 1847–1923, French army officer, claiming membership in the old Hungarian family of Esterhazy An adventurer, he had served in the papal army and the French Foreign Legion before entering the regular French army, where he rose to be a major Deep in debt, he sold French military secrets to the Germans When evidence of treason leaked out in 1894, the guilt was pinned on Captain Dreyfus (see DREYFUS AFFAIR) Esterhazy was tried in 1898 upon the insistence of the pro-Dreyfus party, but his fellow officers, still refusing to admit a judicial error, acquitted him He was later dismissed from the army

Estes Park (ĕs'tĕz), resort town (pop 994, alt c 7,500 ft), N central Colo, in the Rockies NNW of Denver, settled 1859, inc 1917 It is the headquarters for Rocky Mountain National Park A state fish hatchery is near by Two dams and power plants of the COLORADO–BIG THOMPSON PROJECT are near Estes Park

Estevan, town (pop 3,120), S Sask, SE of Regina, just N of the SOURIS river and near the N Dak. border; founded 1892 It has a lignite-mining industry and an electric power plant

Estey, Jacob (ĕ'stē), 1814–90, American organ manufacturer, b Hinsdale, N H Going to Brattleboro, Vt, he started to make small organs c.1850, selling them himself in New England His shop burned, in 1860 the Estey Organ Company was established in Brattleboro The firm began to make pianos in 1885 and large church organs in 1901.

Esther (ĕ'stûr) [Heb from Babylonian Ishtar], book of the Old Testament, 17th in the order of AV. It is the story of a Jewish girl, named originally Hadassah (hŭdă'sû) [Heb, =myrtle], whose great beauty made her queen of the Persian king Ahasuerus (Xerxes) It tells how the wicked courtier Haman attempted to compass the massacre of the Jews and how Esther and her uncle Mordecai turned the tables, the feast of PURIM commemorates the triumph Extant Hebrew versions are different from those surviving in Greek These latter are longer by several chapters, translations of which are treated as apocryphal in AV, in Roman Catholic translations, where they are canonical, they are appended, out of order, as 10 4–13 and 11–16 They contain a conclusion and supplementary material, including prayers of Esther and Mordecai The Hebrew version contains no mention of God Some critics date the book as late as 150 B C The French dramatic poet Racine wrote an *Esther* (1689) For bibliography, see OLD TESTAMENT

Estherville, city (pop 5,651), co seat of Emmet co, NW Iowa, on the West Fork of the Des Moines river near the Minn line, E of Spirit and Okoboji lakes, settled 1857, inc as a town 1881, as a city 1894 A processing, trade, and shipping center for a large livestock, farm, and lumber area, it has railroad shops, creameries, and a meat-packing plant Parts of a large meteorite which fell here in 1879 are at the British Museum, at Vienna, and at the Univ of Minnesota The site of Fort Defiance (1862), near by, is preserved in a state park The city has a junior college

esthetics see AESTHETICS

Estienne, Étienne (ātyĕn'), or, Latinized, **Stephanus** (stĕ'funus), family of Parisian and Genevan printers of the 16th and 17th cent, distinguished through five generations in scholarship as well as in their craft The first of the line was **Henri Estienne** (ärē'), d 1520, who was by 1502 established as a printer in Paris Before his death more than 100 books, some of them of great typographic beauty, had issued from his press His foreman, Simon de COLINES, succeeded him and married his widow Some years later, probably in 1526, Henri's son, **Robert Estienne** (rōbĕr'), b 1498 or 1503, d 1559, took over his father's shop, Colines then founding a new establishment Robert, a capable scholar, devoted himself to printing only scholarly works, many of them edited by himself He put out editions of classical authors, dictionaries and lexicons, and, more especially, critical editions of the Bible He enjoyed the favor of Francis I and became king's printer for Latin, Hebrew, and Greek The printer's mark used by him, the Olive Tree, was designed by Geoffroy TORY, who is said to have been a proofreader for the elder Estienne, some of the Estienne types were designed by Claude GARAMOND Robert Estienne, a thorough humanist, upheld the cause of the Reformation, and long-continued attacks upon him by the faculty of the Univ of Paris and also by political opponents of the king finally resulted in his removal to Geneva in 1550 He set up a press there and continued to print books until his death His own Latin dictionary, *Thesaurus linguae Latinae* (1531), probably compiled with the aid of other scholars, is a monumental work His grammatical treatises on French are also of great importance His brother, **François Estienne** (frāswa'), d 1553, was of minor importance as a bookseller, but another brother, **Charles Estienne** (sharl), c 1504–1564, succeeded Robert in the management of the Paris establishment in 1551 Educated in medicine, skilled in classical learning, Charles wrote many works on medicine, agriculture, and other subjects Many of his books were printed by his brother, Robert, and by his stepfather, Colines Best known of his works are perhaps an encyclopedia, one of the earliest appearing in France, a treatise on dissection, and *Praedium rusticum,* which as *Maison Rustique, or, The Countrie Farme* appeared in English editions The second **Henri Estienne,** 1531?–1598, the greatest scholar of the family, was one of Robert's sons He inherited his father's press on the express condition that it should not be moved from Geneva He was a well-trained scholar and devoted years to searching for manuscripts Although humanism was far advanced, he yet discovered numerous works of classical authors of which he issued first editions His editions of Greek and Latin works are remarkable for their accuracy and textual criticism The greatest monument to his scholarship is, perhaps, his *Thesaurus Graecae linguae* (1572) He also championed the use of the French language and wrote valuable treatises on the French tongue and on French grammar, the most important is *La Precellence du langage françois* (1579), in spite of its gross errors in philology His satirical *Apologie pour Herodote* (1566) got him into trouble with the Consistory of Geneva, and after the publication of *Deux Dialogues du nouveau langage françois italianizé* (1578) he went to France to escape cen-

sure in Geneva He was imprisoned for a short time on his return, and his life became more and more that of the wandering scholar. The books he printed did not equal those of his father in typographic beauty He marks, however, the highest point of the family's career, though the Estiennes continued prominent as printers until late in the 17th cent

Estill (ĕs'tĭl), town (pop 1,280), S S C , near the Savannah W of Charleston, in an area yielding tobacco, peanuts, and strawberries

Eston, urban district (1931 pop 31,341, 1947 estimated pop 32,290), North Riding of Yorkshire, England, at the foot of the Cleveland Hills It has ironworks and steelworks

Estonia (ĕstō'nēu), Estonian *Eesti* (ā'stĕ), republic (17,400 sq mi , 1934 pop 1,126,413), NE Europe Its inclusion (1940) in the USSR as a constituent republic was still unrecognized in 1949 by the United States It borders on the Baltic Sea and two arms of the Baltic, the Gulf of Finland and the Gulf of Riga, in the north, west, and southwest, on the RSFSR in the east, and on Latvia in the south TALLINN (the capital), TARTU, Narva, and Parnu are the chief cities Estonia has about 1,500 lakes, Lake PEIPUS, on its eastern border, is the largest On its Baltic coast there are 818 islands, the most notable Saaremaa It is a flat, generally agricultural country Dairy farming is—or used to be—the chief source of its agricultural wealth, other important resources are shale oil, timber, peat, and fish Before the Second World War 88 percent of the population were Estonians, who are ethnically and linguistically close relatives of the Finns, and 8 percent Russians Lutheranism is the prevailing religion Early in the 13th cent the northern part of present Estonia was conquered by Denmark, and the southern part by the LIVONIAN KNIGHTS, a German order In 1346 all LIVONIA (i e , present Estonia and Latvia) was united under the rule of the knights, who however lost their domains in 1561 Estonia passed to Sweden, the rest was briefly Polish, then (1629) also Swedish In 1710 Peter I of Russia conquered all Livonia, and Russian possession was confirmed by the Treaty of Nystad (1721) Despite these political changes, the German nobility—the Baltic barons—retained its sway over the Estonian peasantry until the eve of the Russian Revolution of 1917 Estonian national consciousness began to stir in the mid-19th cent There were grave outbreaks and bloody reprisals in the Revolution of 1905 Independence from Russia was proclaimed in Feb , 1918, and was shortly followed by occupation by German troops who received some aid from the Estonians In Nov , 1918, Estonia proclaimed itself a democratic republic and repulsed the invading Red Army Peace with Russia came in Feb , 1920 Democratic rule ceased in 1934, when political parties were abolished and President Konstantin Pats instituted an authoritarian regime A more democratic constitution came in force in 1938, but in Sept , 1939, Russia secured military bases, and in June, 1940, occupied Estonia Elections were held in July, 1940, and Estonia was absorbed into the USSR as a constituent republic Occupied (1941–44) by German troops, it was reconquered by Russia Many Estonians fought Russia alongside the Germans and many fled their country on the approach of the Russians The Estonian SSR ceded c 1000 sq mi of border tracts to the RSFSR

Estournelles de Constant, Paul Henri Benjamin, baron d' (pôl' ārē' băzhamē' barō' dătōōrnĕl' du kōstā'), 1852–1924, French diplomat and pacifist He wrote and spoke tirelessly in favor of disarmament and international conciliation, was a delegate to the Hague Peace Conferences (1899 and 1907), and was awarded the 1909 Nobel Peace PRIZE jointly with Auguste Beernaert

Estrada Cabrera, Manuel (mänwĕl esträ'dä käbrā'ra), 1857–1924, president of Guatemala (1898-1920) He ruled as an absolute dictator, and there were several revolutionary movements and attempts on his life Although his regime was one of terror, Guatemala achieved material progress through advance of education, maintenance of order, and, in spite of a ruinous currency system, increase of wealth A revolution in 1920 forced Estrada Cabrera to leave office and flee the country

Estrada Palma, Tomás (tōmäs', pal'ma), 1835–1908, Cuban revolutionist and first president (1902–06) of the permanently established republic Actively participating in the Ten Years War (1868–78), he became a general and revolutionary president (1876) He was captured by the Spanish (1877), but released and exiled Estrada Palma spent some time in the United States where, upon the new outbreak (1895) of revolution in Cuba, he helped to win sympathy and support for the Cuban cause. As president he strove to balance the republic's economy and set Cuba on the road to material progress, but he was unable to stop the excessive graft and spoils sought by the revolution's military and political participants who claimed reward His reelection by the Conservatives in 1906 brought charges of fraud from the Liberals, and a revolt broke out under José Miguel GÓMEZ Estrada Palma asked the United States to intervene, but after the intervention refused the proferred American compromise and resigned

Estrades, Godefroy, comte d' (gôdfrwä' kōt' dĕstrād'), 1607–86, French diplomat, marshal of France He negotiated the restitution of Dunkirk by the English (1662), fought in the Dutch War of Louis XIV, and negotiated the Peace of Nijmegen.

Estrées, Gabrielle d' (gabrēĕl' dĕstrā'), 1573–99, famous beauty, mistress of Henry IV of France, who made her marquise of Monceaux and duchess of Beaufort She divorced her husband, and Henry was preparing to divorce Marguerite of Valois, with the object of marrying Gabrielle, when Gabrielle died in childbirth

Estrela, Serra da (sĕ'ru dä shträ'lu), short mountain range, N central Portugal, in Upper Beira prov , rising to more than 6,500 ft The mountains, notable for their beauty, are a summer resort, and in the winter the slopes, heavy with snow, attract winter sports enthusiasts

Estremadura (shtrŭmudōō'ru), region, SW Portugal, formerly a province, now divided among the provinces of Estremadura (2,064 sq mi , pop 1,379,533) and Ribatejo, with a small part in Beira Litoral The capital is Lisbon, which dominates the province The Tagus river flows through a fertile, heavily wooded valley, stretching out to wide plains There are grainfields, orchards, and vineyards, and the province produces some copper, iron, marble, coal, and salt Before the Christian reconquest it was a Moslem province Its history is largely that of Lisbon, Santarém, and its other cities See PORTUGAL

Estremadura (shtrumudōō'ru), Span *Extremadura* (ăstrāmădhōō'rä,ăks–), region (16,059 sq mi , pop 1,253,924), W central Spain It is on the border of Portugal and comprises Badajoz and Cáceres prov , a tableland crossed by mountains and by the Tagus and Guadiana rivers Poverty-ridden, Estremadura suffers from the effects of poor communications, absentee landlordism, and continuous emigration Except in its fertile valleys, where wine, oil, and cereals are produced, Estremadura serves as winter grazing land for sheep from Castile and Leon Hogs are also raised in large quantities Reconquered from the Moors in the 12th and the 13th cent , Estremadura was frequently a battlefield in the Spanish wars with Portugal and again in the Peninsular War

Estremoz, Port *Estremós* (shtrumōsh'), city (pop 6,765), SE Portugal, in Upper Alentejo prov , NE of Évora It is famous for its white, almost translucid marble and also for its pottery The castle built by King Diniz, with a stately tower, is much admired Some of the expeditions of Nun'Alvares Pereyra were based on Estremoz, and in the 17th cent it was important in the wars with Spain

estuary (ĕs'chōō"rē), the meeting place of river water and ocean water, the part of a river course affected by tides The shape of an estuary affects the height of the tide, some estuaries (as that of the Severn) are characterized by a BORE An estuary often provides a good harbor, sometimes well connected with the interior, if the river is navigable Estuarine inlets take different names in different countries, e g , firth (Scotland), fjord (Norway)

Eszek, Yugoslavia see OSIJEK

Esztergom (ĕ'stĕrgôm), Ger *Gran,* city (pop 22,-171), N Hungary, on the Danube and 25 mi NW of Budapest The birthplace of St Stephen, it became (1198) and still is the seat of the archprimate of Hungary, it was the royal residence and the capital of Hungary until the 13th cent The dome-topped cathedral, the most beautiful church in Hungary, dates from the 19th cent and overlooks the Danube The palace of the primates contains a museum of antiquities and a library rich in old manuscripts and incunabula Esztergom's warm springs and beautiful location have made it a favorite tourist resort

Etah (ē'tu), village, on NW Greenland, N of Cape York The Eskimo tribe discovered here by John Ross in 1818 is known as the Polar Eskimo and has been studied by R E Peary, D B MacMillan, and Knud Rasmussen Etah is frequently used as a base for arctic expeditions See D B MacMillan, *Etah and Beyond* (1927)

Etam (ē'–) **1** Village, S Palestine 1 Chron 4 32. **2** Town of Judah, fortified by Rehoboam *2* Chron 11 6 **3** Cleft rock, where Samson hid Judges 15 8,15 These may be the same

Étampes, Anne de Pisseleu, duchesse d' (ăn' dŭ pēslû' dushĕs dătăp'), 1508–1580?, official mistress of Francis I of France after 1526 She patronized men of letters and used her increasing influence over the king to procure the downfall of Anne de Montmorency and the reinstatement of Chabot In 1533 Francis married her to Jean de Brosses, whom he created duke and made governor of Brittany In 1547 Henry II exiled her from court

Etawah (ĭtä'wŭ), town (pop 53,114), SW United Provs , India, on the Jumna river In the 17th cent it was an important banking and commercial center. Cotton cloth is manufactured

etching, the art of engraving with acid on metal and also the print taken from the metal plate so engraved In hard-ground etching the plate, usually of copper or zinc, is given a thin coating or ground of acid-resistant resin This is sometimes smoked so that lines scratched through the resin will be clearly visible The needle exposes without penetrating the metal When the design is completed, the plate is submerged in an acid solution which attacks the exposed lines During the bath the plate is frequently removed, and such lines as are bitten to sufficient depth are coated with stopping-out varnish The lines receiving the longest exposure to the acid will be the heaviest and darkest in the subsequent print It is also possible to apply the acid locally to the plate In printing, all varnish is removed, the plate is warmed, coated with etcher's ink, and then carefully wiped so that the ink remains in the depressions but is largely or wholly removed from the surface It is then covered with a soft, moist paper and run through an etching press The best etchers have usually done their own wiping and printing There are many variations of the technique of etching Often the acid is permitted to penetrate the ground somewhat, and the resultant specks of foul biting are deliberately employed Etchers often remove undesired lines by burnishing and otherwise change the first state of the plate from which they make their trial print Certain etchings appear in many and widely differing states Only a limited number of first-rate proofs can be made from a plate, and some etchers destroy their plates after making a given number of prints Soft-ground etching gives effects similar to those obtained in pencil or crayon drawing, while aquatint approximates the effects of a wash drawing Aquatint is often combined with hard-ground etching, as is also dry point This latter technique, in which lines are scratched directly on the metal, is not true etching as no acid is employed but resembles it closely in the effect produced Dry point has been practiced on celluloid as well as on metal Pictorial etching evolved gradually from the earlier burin engraving Both seem to have originated in Germany, where Dürer's etchings on iron, made between 1515 and 1518, were probably the earliest important examples of an art which in the following centuries was practiced by many of the greatest painters Landmarks in the history of etching are the names of Dürer, Jacques Callot, Rembrandt, the Tiepolos, the Piranesi, Goya, and, in the 19th cent , Meryon and Whistler See Levon West *Making an Etching* (1932), Joseph Pennell, *Etchers and Etching* (1919)

Eteocles (ētē'ōklēz), in Greek legend, son of OEDIPUS Having excluded his brother, POLYNICES, from a share in the kingdom, he defended Thebes in the war of the SEVEN AGAINST THEBES The brothers killed each other in single combat

Étex, Antoine (ätwăn' ātĕks'), 1808–88, French sculptor, painter, and architect Among his paintings is *Glory of the United States* (city hall, New York) He is best known as a sculptor, foremost among his works are the colossal group, *Cain and His Race Cursed by God,* Lyons, and *Resistance* (1814) and *Peace* (1815), two large groups on the Arc de Triomphe de l'Étoile, Paris

Etham (ē'–) encampment of the Jews Num 33 6,8

Ethan (ē'–) [Heb ,=strong] **1** Ezrahite 1 Kings 4 31, title of Ps 89 He is probably the same as Ethan, son of Zerah 1 Chron 2 6 **2, 3** Two temple singers 1 Chron 6 42,44

ethanol. see ETHYL ALCOHOL

Ethbaal (ĕthbā'ŭl, ēth'bāul) [Heb ,=with Baal], king of Sidon, Jezebel's father 1 Kings 16 31

Ethel-. For some Anglo-Saxon names beginning thus, see ÆTHEL–, e g , for Ethelbald, see ÆTHELBALD

Ether [Heb =abundance], unidentified city, SW Palestine Joshua 15 42, 19 7

ether, in chemistry, a term used commonly to designate ethyl ether, a compound of carbon and hydrogen, united in the ethyl (C_2H_5) radical, and oxygen It is a colorless liquid with a characteristic odor, is volatile and inflammable, boils at 34 54°C , and is used extensively as an organic solvent (for fats and oils) and as an anesthetic (see LONG, W , MORTON, W T G , SIMPSON, J Y) It is prepared commercially by the distillation of ethyl alcohol and sulphuric acid (140°C) The group of compounds known chemically as ethers are formed in a similar manner METHYL ether, for example, is prepared from methyl alcohol and sulphuric acid These compounds are classed also as oxides, e g , ethyl oxide and methyl oxide, because of the combination of the hydrocarbon radicals (ethyl and methyl) with oxygen

ether In physics and astronomy, ether (called also luminiferous ether) is a hypothetical medium for transmitting light and heat (see RADIATION), filling all unoccupied space, e g , that between the bodies of the solar system, that between the molecules of the gases that make up the air, and that between the molecules of solids Ether is held to be invisible, without odor, and of such a nature that it does not interfere with the motions of bodies through space Many deny its material existence

Etherege, Sir George (ĕth'ŭrĭj), 1635?–1691, English Restoration dramatist His witty, licentious comedies—*The Comical Revenge, or, Love in a Tub* (1664), *She Wou'd If She Cou'd* (1668), and *The*

Man of Mode; or, Sir Fopling Flutter (1676)—set the tone of the comedy of manners which Congreve was to perfect As English minister to Ratisbon after 1685, he sent amusing letters home to Dryden and other friends See his *Letterbook* (ed by Sybil Rosenfeld, 1928) and works (ed by H F B Brett-Smith, 3 vols, 1927–)

Ethical Culture movement, originating in the Society for Ethical Culture, founded in New York city in 1876, by Dr Felix Adler Its aim is "to assert the supreme importance of the ethical factor in all relations of life, personal, social, national, and international, apart from any theological or metaphysical considerations" No definite ethical system is insisted upon, though Adler's own ethical thought has naturally had much influence The society holds its own religious services, but members may have other religious affiliations if they wish Much emphasis has been placed upon education, and especially in New York the movement pioneered in the establishment of free kindergartens and adult education Societies were organized in Chicago (1882), Philadelphia (1885), St Louis (1886), Brooklyn (1906), and later in other cities In England, Stanley Cot founded the South Place Ethical Society, London, in 1887 There are now seven societies in that country In 1896 the International Union of Ethical Societies was organized. Though the membership is not large, the movement has enlisted a number of intellectual leaders See Adler's books and *The Fiftieth Anniversary of the Ethical Movement* (1926)

ethics, in philosophy, the study and evaluation of human conduct in the light of moral principles Moral principles may be viewed either as the standard of conduct which the individual has constructed for himself or as the body of obligations and duties which a particular society requires of its members Ethics has developed as man has reflected on the intentions and consequences of his acts From this reflection on the nature of human behavior, theories of CONSCIENCE have developed, giving direction to much ethical thinking The intuitionists (Cudworth, J J Rousseau, the 3d earl of SHAFTESBURY, Francis HUTCHESON) hold that conscience is innate, a given moral sense that drives men to act on values beyond their immediate gain The empiricists (Comte, John LOCKE, HOBBES, HELVETIUS, J S MILL) deny the innateness of conscience and explain it as a power of discrimination acquired by experience In the one case conscience is the originator of moral behavior, and in the other it is the result of moralizing Between these extremes there have been many compromises Another major difference in the approach to ethical problems revolves about the question of absolute good as opposed to relative good Throughout the history of philosophy men have sought an absolute criterion of ethics Frequently moral codes have been based on religious absolutes Other theories, such as Socrates' concept of ideas as eternal and Kant's categorical imperatives, were an attempt to establish a criterion independent of any one theology Idealists (PLATO, KANT, ROYCE) founded their ethics on a metaphysics All varying methods of building an ethical system pose the question of the degree to which morality is authoritarian (i e, imposed by a power outside the individual) If the criterion of morality is the welfare of the state (HEGEL), the state is supreme arbiter If the authority is a religion, then that religion is the ethical teacher The utilitarians (Jeremy BENTHAM, James MILL) found their criterion in the greatest good of the greatest number To the instrumentalists (John DEWEY) morality lies within the individual and is relative to his experience Man acts morally as he grows in his ability to consider the consequences of his behavior and to choose intelligently between alternative courses of action The egoist (ARISTIPPUS, LA METTRIE, Hobbes) views the good of the individual to be the sole consideration HEDONISM, as the desire for the greatest amount of pleasure, may be either egoistic or universalistic (utilitarian) Since the study of the ends of conduct embraces all areas of human activity, the field of ethics extends beyond the material of pure philosophy into the total relationships of man with his environment See CASUISTRY, DETERMINISM, VIRTUE See John Dewey and J H Tufts, *Ethics* (rev ed, 1938), M. A. R Tucker, *Past and Future of Ethics* (1938), Albert Schweitzer, *Civilization and Ethics* (3d ed, 1946)

Ethiopia (ēthēō'pēŭ), empire (c 400,000 sq mi, pop c 15,500,000), E central Africa The name Abyssinia, although never official, was formerly widely applied to the country The capital is Addis Ababa Ethiopia is not far inland from the Indian Ocean and the Red Sea, but it is completely cut off from the coast It is bordered on the north by Eritrea, on the east by French Somaliland and British Somaliland, on the south by Italian Somaliland and Kenya, and on the west by the Anglo-Egyptian Sudan The country comprises low-lying deserts and a hilly and mountainous plateau rising to 15,158 ft at Ras Dashan in the northwest In the deserts (Danakil in the north and Ogaden in the south), which occupy the eastern third of Ethiopia, the small population (Somali-speaking) lives by grazing livestock and mining potash and salt The Great Rift Valley (with a chain of large lakes in the south) divides the plateau into two sections, of which the western is the larger and loftier The plateau is extremely broken, and travel is difficult Some sections, especially Gojam in the northwest, are, with Tibet and the Andean highlands, among the highest inhabited places in the world There is considerable summer rainfall in the plateau, much draining off to the northeast, where Tana lake, the largest body of water in the country and the source of the Blue Nile, is located In the stretches of level land agriculture is possible, but except in a few areas there are no commercial plantations but only subsistence farming and gathering of wild products, including cotton and coffee The exports of W Ethiopia include grains, coffee, honey, beeswax, hides, and gold The country's chief connection with the outside world is its single railroad, which runs from Addis Ababa to JIBUTI, French Somaliland, a port on the Gulf of Aden There are c 7,000 mi of finished roads centering on Addis Ababa, some extend to Eritrea and Somaliland With facilities for foreign trade inadequate and little surplus produced, there persists a nearly self-contained agricultural and pastoral economy It is not known when the Ethiopian state originated The traditional account is that the ruling line was founded in c 1000 B C by Solomon's first son, whom the queen of Sheba (identified with Ethiopia) is supposed to have borne In the 1st cent A D, however, the earliest time for which there are authentic records, Ethiopia, with its capital at AKSUM, was pagan The country then probably comprised Tigré (present-day N Ethiopia) and Nubia (S Anglo-Egyptian Sudan) In the 4th cent the Aksumite king was converted to Coptic Christianity by Frumentius, a bishop consecrated by the patriarch of Alexandria A later Alexandrian patriarch refused to recognize the Council of Chalcedon (451), and the established Ethiopian Church still adheres to MONOPHYSITISM Ethiopia's control over the Red Sea coast provided the base for invasion (6th cent) of Yemen in Arabia Judaism, found among the Falashas, who live N of Tana lake, was perhaps introduced from Yemen The rise of Islam in the mid-7th cent was soon to deprive Ethiopia of its coast and to surround it with hostile Moslem neighbors There was some expansion southward in the face of Moslem Somalis and pagan Gallas, both large elements of the population today The country was often in turmoil until a new dynasty, allegedly a restoration of the Solomonian line, was founded (c 1270) A literary revival followed, with many works written in the fields dear to Ethiopian savants—hagiology, biblical exegesis (based upon the translation in Geez of the Septuagint), history, and annals Other arts, including illumination and church architecture, flourished Reports of a great Christian monarch in a remote country excited the belief in Europe that Ethiopia (confused with India) might be the land of the fabulous Prester John In the early 16th cent several Portuguese embassies reached the Ethiopian court and furnished arms to the emperor to repel attacks from the Turks based in Yemen The emperor was converted to Roman Catholicism, but extreme repression of native customs and the priesthood caused much unrest, and in the mid-17th cent the Coptic Church was fully restored and all foreigners expelled Occasional explorers, notably James Bruce, were still permitted to visit the country In the intense civil war of the two succeeding centuries nearly all of Ethiopia's greatest monuments were ruined In the 19th cent the continuous war for power saw the temporary victory of Kasa (c 1818–1868), originally a petty chieftain, who, after 1855, ruled most of the country as Theodore II and consolidated his conquest over Tigré and Shoa (central Ethiopia, where Amharic, the official language, is spoken) Theodore's refusal to release a British diplomatic party led to his defeat (1868) by a relief expedition under Napier of Magdala The succession went to the ras [governor] of Tigré, but in the renewed fighting the Shoa ruler, later MENELIK II, became dominant, especially as he received the help of Italy, for Italy wished to expand from the Eritrean deserts into the fertile land of NW Ethiopia In 1889 Menelik II had control of most of the country and concluded the Treaty of Uccialli with Italy Amity was soon disrupted when Italy claimed that the treaty established a protectorate over Ethiopia Ethiopia then repudiated the treaty. Italy invaded the country late in 1895, but repeated losses in the next few months, especially in the battle of Aduwa, forced the Italians to withdraw and to recognize Ethiopia's independence Menelik turned his favor to France and Great Britain In his reign the railroad (financed by French capital) was built and law codes were enacted His successor, Lij Yasu, was deposed (1916) after a short reign when he attempted to propagate Islam. Judith, a daughter of Menelik, was made empress and Ras Tafari Makonnen became the regent, on her death (1930) he ascended the throne as Emperor HAILE SELASSIE Almost immediately he faced threats from Italy, determined to avenge the "shame" of Aduwa A border clash at Walwal in Ogaden on Dec 5, 1934, provided an occasion for increasing the tension and calling up reserves Italy refused all offers of conciliation and on Oct 3, 1935, commenced invasion, thus launching war The attempt of the French and British governments to compromise the matter with a deal crashed (Dec, 1935) as the Hoare-Laval Plan failed On several fronts with air power and modern weapons, the Italians, under Gen Emilio de Bono and Marshal Pietro Badoglio, quickly crushed what feeble resistance the ill-armed Ethiopians could offer In May, Haile Selassie, whose resistance had been hindered by the defection of some of his forces, fled the country Although the League of Nations, which rejected the Italian contention that the war was a civilizing mission, had called for economic sanctions against Italy, they were soon abandoned, and in 1938 the member nations were released from their commitment not to recognize the conquest All major countries except the United States, China, and the USSR granted recognition Ethiopia was amalgamated with Eritrea and Italian Somaliland into Italian East Africa In the Second World War, Ethiopia was a base, in 1940, for Italy's short-lived occupation of British Somaliland Early in 1941 Great Britain flew Haile Selassie into Ethiopia to organize resistance A British offensive was launched (Feb) against Italian East Africa, the stubborn resistance of the duke of Aosta in Ethiopia was broken, Haile Selassie resumed the throne in May, and the entire territory fell by November In 1942 Ethiopia declared war on Italy, Germany, and Japan After the war Ethiopia repeatedly insisted that territory on the Red Sea coast seized from Italy should be given Ethiopia and protested when Italy was granted temporary control over Italian Somaliland Ethiopia today is governed by the emperor with the aid of a council of ministers and of a parliament consisting of two houses, one appointed by the emperor and one, eventually to be elected by the populace, now selected by the nobility Efforts are being made to reduce illiteracy and, building upon Italian improvements, to modernize transportation and agriculture and to develop industry See Sir E A W Budge, *A History of Ethiopia* (1928), A H M Jones and Elizabeth Monroe, *A History of Abyssinia* (1935), Margery Perham, *The Government of Ethiopia* (1948)

Ethiopic (ēthĭŏp'ĭk), subgroup of Semitic languages See LANGUAGE (table)

Ethnan [Heb., =gift], son of Ashur 1 Chron 4 7

Ethni (-nī) [Heb., =munificent], ancestor of Asaph the singer, perhaps the same as JEATERAI 1 Chron 6 41

ethnology (ēthnŏ'lŭjē), branch of ANTHROPOLOGY which studies primarily the distinctive groups of mankind which are still extant or have only recently become extinct The first concern of ethnology has been the analysis and comparative study of primitive peoples The variety of such groups, the uniqueness of their cultures, and their relative simplicity of organization have led to the development of techniques of detached and objective observation Since society cannot be studied under conditions of experiment or control, comparative data from the total range of human behavior can help the social scientist to avoid those assumptions implicit in his understanding of his own society See G P Murdoch, *Our Primitive Contemporaries* (1934), R H Lowie, *The History of Ethnological Theory* (1938).

ethyl (ē'thĭl), in chemistry, an organic RADICAL consisting of two carbon atoms and five hydrogen atoms It corresponds to the molecule of ethane (the second member of the METHANE SERIES) with one hydrogen atom removed It appears in numerous compounds known, therefore, as derivatives of ethane, e g, ETHYL ALCOHOL, when a hydroxyl radical (O H) is added, and ETHER, upon the addition of oxygen Ethyl acetate, an aromatic liquid used as a solvent for lacquer and varnish, is an ESTER formed by acetic acid and ethyl alcohol Ethyl chloride, a colorless, inflammable gas liquefying at 12°C, is used in REFRIGERATION and, because of its rapidity of evaporation, as a local anesthetic

ethyl alcohol, ethanol, or **grain alcohol,** a colorless, liquid ALCOHOL with a characteristic odor and taste, boiling at 78 5°C and melting at −117 3°C It has a strong affinity for water, is miscible with it in all proportions, and is separated from it completely only with difficulty When free of water, it is called absolute (ethyl) alcohol and is extremely poisonous The absolute alcohol of commerce usually contains a small percentage of water, less than one percent Ethyl alcohol burns in air with a blue flame forming carbon dioxide and water, reacts with certain acids to form esters, and reacts with certain active metals (e g, sodium or potassium), to form a compound (e g, sodium or potassium ethylate) and to liberate hydrogen Ethyl alcohol is formed by the action of yeast on sugar or from starch It is the alcohol of wine and distilled liquor Commercially it is prepared by FERMENTATION from sugar (molasses) or from starch (e g, potatoes and corn). It

can be synthesized. Ethyl alcohol is used extensively as a solvent in the manufacture of varnishes, perfumes, and many other substances; as a preservative for biological specimens, in the preparation of essences and tinctures (e g , tincture of iodine) and of many medicines and drugs; and as a fuel. Ethyl alcohol is denatured by the addition of nauseous or poisonous substances (e g , methyl alcohol) to prevent its use as a beverage, alcohol thus treated is called industrial alcohol and is not taxed The term "one hundred proof" indicates that a solution contains 50 percent alcohol

ethyl chloride: see ETHYL

ethylene (ĕ'thĭlēn), colorless gas with a faint odor and a slightly sweet taste, boiling at −103 8°C and solidifying at −169 4°C Ethylene burns in air with a luminous flame and for this reason is an important part of illuminating gas Its presence gives luminosity to the coal-gas flame With oxygen it forms an explosive mixture It combines directly with bromine to form a dibromide, with chlorine to form a dichloride, and with hydrogen to form ethane, a hydrocarbon of the methane or paraffin series Ethylene is prepared by the action between sulphuric acid and ethyl alcohol at about 180°C , the alcohol being dehydrated to yield ethylene and water It is also formed when certain other hydrocarbons of higher molecular weight are broken down by heat It is used as an anesthetic and to bring out the coloring of citrus fruit Ethylene is an unsaturated HYDROCARBON, its molecule consisting of two atoms of carbon and four of hydrogen, the carbon atoms being held together by a double bond and each in addition holding two of the hydrogen atoms It is the first member of a series of hydrocarbons, called the **ethylene series** or olefine or olefin series Each member has twice as many hydrogen atoms as carbon atoms in its molecule The lower members of the series, like ethylene, are gaseous, the middle members, liquids, and the higher, solids Members of the series can be obtained by the destructive distillation of such substances as petroleum, wood, and coal, they also occur in such animal secretions as beeswax and in certain animal and plant oils Derivatives of the ethylene series are similar to those of the methane or paraffin series

ethyl gasoline: see GASOLINE.

Étienne, family of printers see ESTIENNE.

etiquette, name for the codes of rules governing social or diplomatic intercourse These codes vary from the more or less flexible laws of social usage (differing according to local customs or taboos) to the rigid conventions of court, naval, and military circles and extend to the legal, medical, and other professions Some system of etiquette has prevailed in all stages of culture, the variations which occur are a partial index to differing racial attitudes toward morals and conduct. See Lillian Eichler, *Customs of Mankind* (1924), M B Van Arsdale and M R Lingenfelter, *Manners Now and Then* (1940), A H Verrill, *Strange Customs, Manners, and Beliefs* (1946), Emily Post, *Etiquette* (1948 ed)

Etna, industrial borough (pop 7,223), SW Pa , on the Allegheny river and near Pittsburgh, settled c 1832, inc 1868 Its manufactures include iron and steel

Etna or **Aetna** (both ĕt'nû), volcano, 10,700 ft high, on the east coast of Sicily, Italy It is the highest active volcano in Europe The shape and height of its central cone have often been changed by eruptions There are more than 260 lesser craters on the slopes, formed by lateral eruptions The southeastern slope is cut by a deep, precipitous cleft, the Valle del Bove. The first known eruption occurred in 475 B C and was described by Pindar and Aeschylus Of the numerous later eruptions, often accompanied by earthquakes, those of 1169 and 1669 were the most destructive, the most recent occurred in 1949 The wide base of Mt Etna is encircled by a railroad c 93 mi in circumference Up to 1,600 ft the vegetation is subtropical, yielding citrus fruit, bananas, and figs, between 1,600 and 4,300 ft there is a temperate zone, with vineyards and various fruit trees, from here to c 7,000 ft there are chestnut, birch, and pine woods, above, there is a desolate waste of lava and ashes Near the top there is snow most of the year The fertile lower slopes are densely populated agricultural areas There is an observatory at 9,650 ft A motor road reaching 6,170 ft was completed in 1935 Nicolosi, 9 mi. NW of Catania, is the starting point for the ascent.

Étoile, Place de l', Paris: see ARC DE TRIOMPHE DU L'ÉTOILE.

Eton (ē'tŭn), urban district (1931 pop. 2,005, 1943 estimated pop 4,505), Buckinghamshire, England, on the left bank of the Thames, opposite Windsor It is known chiefly for **Eton College,** largest and most famous of the English public schools, founded by King Henry VI in 1440. Some of the buildings (chapel, lower school, cloisters) date back to the 15th cent. Unlike other English public schools, whose masters appoint prefects and monitors, Eton is controlled by elected student representatives who enforce regulations and administer discipline. Many of England's outstanding men were schooled here. Eton has had a close alliance with King's College, Cambridge, for over 500 years. Since the Second World War more scholarships to poorer students have been granted The annual cricket match between Eton and Harrow attracts much attention

Etowah (ĕ'tûwä), town (pop 3,362), E Tenn , ENE of Chattanooga It is a farm trade center and a railroad division point Cherokee National Forest is near by

Etowah, river rising in N Georgia in the Blue Ridge and flowing c 150 mi SW to Rome, where it joins the Oostanaula to form the Coosa Allatoona Dam, near Cartersville (begun 1946), for flood control and hydroelectric power), is the first in a series of projects planned to develop the Alabama-Coosa river system

Etruria (ĭtrōō'rēu), ancient country of W central Italy, now forming TUSCANY and part of UMBRIA. This was the territory of the Etruscans, who in the 6th cent spread their civilization over much of Italy but were later forced back into Etruria and ultimately dispersed See ETRUSCAN CIVILIZATION.

Etruscan civilization (ĭtrŭ'skun), highest civilization in Italy before the rise of Rome The core of the territory of the Etruscans, known as Etruria to the Latins, was NW of the Tiber, now in modern TUSCANY and part of UMBRIA, but they at first expanded their territory greatly, then were forced to contract The Latins called them Etrusci, while the Greeks called them Tyrrheni [whence Tyrrhenian Sea] The striking fact about the Etruscans, that their language and culture differed completely from that of other old peoples of the peninsula at the time—Villanovans, Umbrians, and Picenes—indicated that they were of foreign origin. Some scholars consider them as autochthonous, but evidence is generally against this belief Barthold Niebuhr's theory that they came down from the north has been abandoned since archaeological exploration has shown that their earlier settlements were made by the sea and that the northern settlements in the valley of the Po were the latest of all, modern research upholds the tradition of Herodotus that they arrived (c 800 B C) by sea from Asia Minor, possibly Lydia Their superiority and wealth was in part based upon their knowledge of ironworking and exploitation of iron deposits which were abundant in Etruria and the island of Elba just off the coast They brought the older art of bronzeworking to a new level of achievement Even the Greeks purchased from them, and their work is found over Germany and France Etruscan goldwork is the finest found anywhere in the ancient world They were noted for their black *bucchero* pottery and were experts with the wheel This pottery was highly prized by the Greeks and others The Etruscans may have introduced the vine and the olive tree from the East and improved agriculture, controlling the rivers for irrigation Much of the actual work was done by the native population, who were subject to—though probably not slaves of—their conquerors, the nobility of Etruscan birth formed an exclusive caste The Etruscans were fond of music (particularly wind instruments), of games (especially dice and ball games), and racing (they introduced the chariot into Italy) They kept up a large commerce with the East and many of their art motifs are from the East The Etruscan cities were a loose-banded confederation, each ruled by oligarchical government Important Etruscan centers were Tarquinii (modern Tarquinia), with its frescoed tombs, Caere (modern Cervetri), with its necropolis, the most striking Etruscan monument in Etruria, and tumuli, now excavated, Veii (modern Veio), a center known particularly for its sculptures, Vetulonia, one of the very earliest Etruscan settlements, Volterra, where most of the evidences have been destroyed by landslides, and Clusium (Umbrian Camars, modern Chiusi) Museums important for Etruscan remains are at Florence (the best), Rome, and Tarquinia, the best specimen of an Etruscan chariot extant is in New York city The earlier art was influenced by Asiatic and Egyptian art, the later by Greek Inscriptions in Etruscan are few and short, and, if they could be read, would probably not add greatly to the knowledge of the civilization The establishment of the affiliations of the language, however, would be important It is certain it is not Indo-European and therefore not related to any ancient Italian dialect The alphabet has a relation to the Greek and Phoenician, however In the last years of the 6th cent B C. the Etruscans crossed the Apennines and established themselves in the Po valley, their center being at Felsina (the modern Bologna). Their civilization was at its height about 500 B C , when they had consolidated the Umbrian cities with Etruria and occupied part of Latium. The Greeks in S Italy had always sought, with some success, to halt Etruscan expansion The Romans, who had varying relations with the Etruscans (the Tarquin kings of Rome were Etruscans), undertook in the early 5th cent B C. to beat the Etruscans back. In the north invading Gauls aided in making the confederacy of the 12 cities crumble Rome finally captured (396 B C) Veii after long struggles. Thus, the disunited Etruscan cities fell one by one and the civilization was no more. See F Poulsen, *Etruscan Tomb Paintings* (Eng. tr , 1922), David Randall-MacIver, *Villanovans and Early Etruscans* (1924) and *The Etruscans* (1927), R A L. Fell, *Etruria and Rome* (1924), M A Johnstone, *Etruria Past and Present* (1930); J. D. Beazley, *Etruscan Vase Paintings* (1947)

Ettrick (ĕ'trĭk), parish, Selkirkshire, Scotland Here is buried James Hogg, the "Ettrick Shepherd "

Ettrick Forest, former woodland including all the present Selkirkshire, Scotland. It was forfeited to the crown by the 9th earl of Douglas in 1455 and became a royal hunting ground, famous in legend Today the area is pasturage for sheep

Ettrick Water, river of Selkirkshire, Scotland, rising on Capel Fell and flowing with a high gradient c 32 mi NE to the Tweed after passing Selkirk. It receives the Yarrow above Selkirk.

Ettwein, John (ĕt'vĭn), 1721–1802, leader and bishop of the American Moravian Church. He arrived in Bethlehem, Pa , from Germany in 1754 as a missionary He traveled on foot or horseback from the settlements in Pennsylvania to Moravian frontier colonies in North Carolina, toured South Carolina and Georgia, and made trips through New England He preached to many Indian tribes and established missions among those in Pennsylvania He led a band of Christian Indians in 1772 to a new settlement established in Ohio by the Moravian missionary David ZEISBERGER and, after the Revolution, prevailed upon Congress to set aside reservations for the converted Indians He represented the Moravians in negotiations with the Continental Congress, explaining their refusal to bear arms or subscribe to the Test Act From 1784 to 1801 he was bishop and head of the church in America See J T. Hamilton, *A History of the Church Known as the Moravian Church or the Unitas Fratrum* (1900)

Etty, William, 1787–1849, English painter. He studied with Sir Thomas Lawrence and later in Italy, where Venetian painting made a lasting impression on him Etty is best known for his spirited figure compositions He achieved fame in 1825 with his *Combat* (Edinburgh) and enjoyed a high reputation, although criticized by some for his voluptuous nudes Characteristic are his three Judith pictures (Edinburgh), *The Three Graces* (Metropolitan Mus), and *Youth at the Prow and Pleasure at the Helm* (National Gall , London) See biography by Alexander Gilchrist (1855)

etymology (ĕtĭmŏl'-), historical derivation of linguistic forms, especially words. The study had prestige for centuries because of an accepted theory that knowledge of the history of a word made its meaning clearer It was this study which chiefly revealed the regular relations of sounds in the Indo-European languages (as in GRIMM'S LAW) and led to the historical investigation of language in the 19th cent In the 20th cent linguists continued to use etymology to learn how meanings change, but they came to consider that the meaning of a form at a given time must be understood without reference to its history if it is to be understood at all. The term *etymology* has been replaced by *derivation* for creation of combinations in a language, such as new nouns with *-ness* See GRAMMAR.

Etzel (ĕt'sul), in German legend, hero who corresponds to the Atli of Icelandic legend and to the historic ATTILA

Eu, Louis Philippe Marie Ferdinand Gaston d' Orléans, comte d' (lwē' fēlēp' märē' fērdēnā' gästō' dôrlāā' kōt' dû'), 1842–1922, consort of Princess ISABEL of Brazil, b Neuilly, France, son of the duc de Nemours. He married the Brazilian princess in 1864, commanded the Brazilian forces against Paraguay (1869–70), and exercised great influence in the government, particularly when Isabel, in the absence of her father, was regent He favored the ultraconservative, clerical party and was generally unpopular in Brazil At the fall of the empire (1889) he retired to France

Eu, chemical symbol of the element EUROPIUM.

Euboea (ūbē'u), Gr *Evvoia* (ĕ'vēā), island (1,467 sq mi , pop 162,854), Greece, in the Aegean Sea, separated from Boeotia and Attica on the Greek mainland by a narrow channel Chalcis is the main city Generally mountainous, Euboea is c 100 mi long and 4 to 33 mi wide and rises to 5,718 ft Wheat, wine, and olives are grown in its fertile valleys, and sheep, goats, and cattle are raised In the 8th cent B C , CHALCIS and ERETRIA were powerful and prosperous cities and established colonies in Macedonia, S Italy, and Sicily Euboea came (506 B C) under Athenian hegemony, against which it rebelled unsuccessfully in 446 It was annexed (338 B C) by Philip II of Macedon and passed in 191 B C under Roman rule As a result of the Fourth Crusade, Euboea became a Venetian colony (1209–1470). It then passed under Turkish domination, which ended only in 1830. Its name under the Venetians was Negropont [black bridge], for the bridge connecting Chalcis with the mainland across the EURIPOS A drawbridge now connects Chalcis with the mainland

Eubulides (ūbū'lĭdēz), 4th cent B C , Greek philosopher, native of Miletus He was a contemporary and adversary of Aristotle and was the successor of Euclid as head of the Megarian school.

Eubulus (ūbū'–) [Gr., =prudent], Christian at Rome 2 Tim. 4 21

eucalyptus (ūkŭlĭp'tŭs) [Gr , =well covered] or **gum tree,** any plant of the large genus *Eucalyptus,* evergreen trees or shrubs native to Australasia Some species are widely planted in other warm regions, especially along the west coast of the United States The blue gum (*Eucalyptus globulus*) is the most common in California The red gum (*E rostrata*) is a relatively hardy species *E amygdalina regnans* is one of the tallest trees known, one specimen being reported from Australia as 326 ft high Various species yield timber used particularly for shipbuilding, railroad ties, furniture, and fuel, eucalyptus oil used in medicine and perfumery, Botany Bay kino and red gum used in medicine, and tanning materials For other gum trees, see BLACK GUM and SWEET GUM.

Eucharist (ū'kurĭst) [Gr , =thanksgiving], Christian SACRAMENT which repeats the action of Jesus at his last supper with his disciples, when he gave them bread saying, "This is my body," and wine saying, "This is my blood " Mat 26, Mark 14, Luke 22, 1 Cor 11 Partaking is called communion The traditional understanding of the words of Jesus holds that in the sacrament bread and wine actually turn into the body and blood of Jesus The sacrament is a reenactment of the crucifixion and therefore an act of sacrifice The performance is called the LITURGY, the Roman liturgy is the MASS The official Roman Catholic explanation of the change taking place in the sacrament, called transubstantiation, is that the substances of bread and wine are turned (miraculously) into the substance of God himself, the elements changed retaining only the appearance, taste, etc (the accidents) of bread and wine Since the Godhead is indivisible, every particle or drop thus changed is wholly identical in substance with divinity, body, and blood of the Crucified Savior The views of the Orthodox are basically similar In receiving communion the Christian attains union with Jesus, and all who partake are mystically united In the Mass (but not in Eastern liturgies of the Roman Catholic Church) others than the celebrant receive the Host only a practice which arose from the difficulty of transport and storage of wine In this communion in one kind the believer is held to receive the same divine whole as the celebrant, who receives both kinds at the altar The Roman Catholic and Orthodox churches set conditions for the reception of communion, which is a sign of membership, to be "in communion with" means mutual recognition of membership in the true church Devotion to the Eucharist (the Blessed Sacrament) is important in the Roman Catholic Church The object of the cult of the Blessed Sacrament is the Host reserved in churches (see BENEDICTION and CORPUS CHRISTI) Every leader of the Protestant Reformation attacked the traditional teaching of the Eucharist For the communion services in some Protestant churches, see LORD'S SUPPER

euchre (ū'kur), card game, played usually by four persons (two sets of partners) The pack has 32 cards, from 7 up to ace in each suit The jack of trumps, called the right bower, ranks highest, and the jack of the other suit of the same color, called the left bower, ranks next The dealer gives five cards to each player, in two rounds, first three cards and then two or vice versa, as he chooses, and turns up the next card for trumps The player to the left of the dealer (eldest hand) may accept the turn-up for trumps ("I order it up") or may pass, in which case the option goes to the next player and so on If all four pass, then the eldest hand may name trumps or pass A second round of passing calls for a new deal A trick is won by the highest trump or by the highest card of the suit led Five points make a game By making all five tricks (march), the combination that has made trumps scores two points (four if one plays alone) They score only one point by making either three or four tricks, while if they fail to make three tricks they are euchred and the opponents score two points Variations of the game are cutthroat or three-hand euchre, two-hand euchre, auction euchre, call-ace euchre, and hasenpfeffer See R. L Frey, ed , *The New Complete Hoyle* (1947)

Eucken, Rudolf Christoph (rōō'dôlf krĭs'tôf oi'kun), 1846–1926, German philosopher, studied at Göttingen and Berlin He taught philosophy at Basel and became professor of philosophy at Jena (1874) His work attained wide popularity, and he won the 1908 Nobel Prize in Literature In 1912 he lectured at Harvard His organized philosophy, which he called "activism," emphasized that experience is the source of value English translations of his work include *The Truth of Religion* (1901), *The Life of the Spirit* (1909), and *Knowledge and Life* (1913) See W T Jones, *The Philosophy of Rudolf Eucken* (1914)

Euclid (ū'klĭd), fl c 300 B C , Greek mathematician famous for his *Elements,* a collection of geometrical theorems and problems which forms the basis for GEOMETRY Practically nothing is known about his life, his history and character having been overshadowed by the importance of his work Works attributed to him, besides the *Elements,* include the *Phenomena,* the *Data,* the *Optics,* and *On Divisions.* The *Elements* was first translated into English by Sir Henry Billingsley in 1570

Euclid (ū'klĭd), city (pop 17,866), NE Ohio, a suburb of Cleveland, settled 1798 Its chief products are incandescent lamps and office machinery The National American Shrine of Our Lady of Lourdes is here

Euclid of Megara (mĕ'gŭru), c 450–c 375 B C, Greek philosopher, a disciple of Socrates and founder of the Megarian school He combined the Eleatic doctrine of the unity of being with the Socratic teaching that virtue is knowledge He held that the idea of the good is the sole reality

Eudemus of Rhodes (ūdē'mus), 4th cent B C, Greek Peripatetic philosopher, whose works are lost He may have edited the *Eudemian Ethics,* which is certainly the work of Aristotle

Eudes (ūdz, ūd), c 860–898, count of Paris, French king (888–98) The son of ROBERT THE STRONG, he was the first Capetian to hold the royal title He defended Paris against the Normans (885–87), and after deposition of Emperor CHARLES III (Charles the Fat) he was elected by the nobles to succeed Charles in France He continued to battle the Normans, but his energies were increasingly diverted by the rising tide of sentiment favorable to the legitimate Carolingian heir, CHARLES III (Charles the Simple), who in 893 was elected king by a party of nobles The resulting warfare between the two rival kings, neither of whom controlled much territory, was suspended in 897, when Eudes conceded the city of Laon to Charles He is also called Odo

Eudocia (ūdō'shŭ), d c 460, Roman empress of the East, daughter of an Athenian Sophist She was selected by PULCHERIA as the wife of THEODOSIUS II, whom she married (421) after undergoing baptism and exchanging her name of Athenais for Eudocia She became powerful at court, then was banished and withdrew to Jerusalem, where she devoted herself to literary and charitable work She embraced EUTYCHIANISM, but finally returned to orthodoxy See Charles Diehl, *Byzantine Portraits* (Eng tr , 1927)

Eudocia Macrembolitissa (mă"krumbō"lĭtĭ'su), fl 11th cent , Byzantine empress At the death (1067) of her husband, Constantine X, she married ROMANUS IV and made him emperor She was famous for her learning

Eudora (ūdō'ru), town (pop 1,808), extreme SE Ark , near the Mississippi, inc 1904 It has cotton gins and sawmills

Eudoxia (ūdŏk'sēu), d 404, Roman empress of the East (395–404), daughter of a Frankish general and wife of ARCADIUS Her evil influence upon her weak husband was largely responsible for the corruption of his government She helped bring about the downfall of EUTROPIUS, to whose intrigues she owed her marriage, and the exile of St JOHN CHRYSOSTOM, who had criticized her

Eudoxus of Cnidus (ūdŏk'sus, nī'dŭs), 408?–355? B C , Greek astronomer, mathematician, and physician From the accounts of various ancient writers he appears to have studied with Plato in Athens, spent some time in Heliopolis, Egypt, founded a school in Cyzicus, and spent his later years in Cnidus, where he had an observatory It is claimed that he calculated the length of the solar year, indicating a calendar reform like that made later by Julius Caesar, and that he was the discoverer of some parts of geometry included in the work of Euclid He was the first Greek astronomer to explain the movements of the planets in a scientific manner His system involved a number of concentric spheres supporting the planets in their paths Some scientists still held this belief at the time of Copernicus

Eudoxus of Cyzicus (sĭ'zĭkus), fl 130 B C , Greek navigator in the service of the Ptolemies He explored the Arabian Sea for Ptolemy II and after being blown from his course to the east coast of Africa decided that Africa could be circumnavigated Setting out from Gades (Cádiz), he was driven ashore at Morocco on a first voyage He undertook a second voyage down the west coast of Africa and was never heard from

Eufaula (ūfô'lu) **1** City (pop 6,269), a co seat of Barbour co , SE Ala , on the Chattahoochee and ESE of Montgomery, settled in the 1830s It ships cotton and produces textiles Many fine plantation houses remain **2** City (pop 2,355), co seat of McIntosh co , E Okla , near the confluence of the Canadian and North Canadian rivers, founded c 1872 near the site of a Creek settlement An Indian girls' school is here

Eugene III, d 1153, pope (1145–53), a Pisan named Bernard (probably in full Bernardo dei Paganelli di Montemagno), successor of Lucius II and predecessor of Anastasius IV Before his election he was called Bernard of Pisa He was prominent among the CISTERCIANS, then in their first flower, and was the friend of St BERNARD OF CLAIRVAUX, who wrote *De consideratione* for the new pope Eugene's pontificate was disturbed from the beginning by ARNOLD OF BRESCIA, whom he ordered to return to Rome in penitence In 1146 the agitation of the triumphant republicans drove the pope from Rome Eugene and St Bernard led in promoting the disastrous Second Crusade While in exile (1146–48) the pope busied himself with reforming the clerical discipline of Western Europe. Early in 1149 he left Rome again He was beatified in 1872.

Eugene IV, 1383–1447, pope (1431–47), a Venetian named Gabriele Condulmer, successor of MARTIN V and predecessor of NICHOLAS V He was of exemplary character and ascetic habits Gregory XII, his uncle, made him cardinal (1408). The first part of Eugene's reign was beset with the difficulties created by the Council of Basel, (see BASEL, COUNCIL OF), which began just after his election. Eugene at first opposed the council in its antipapal acts, but after he had been driven by rebellion from Rome into exile at Florence (1434) he was disposed to conciliate Finally in 1437 he removed the council to Ferrara, the refusal of the leaders at Basel to obey removed much of their prestige and their subsequent "deposition" of Eugene and "election" of Amadeus VIII of Savoy (as Felix V) were academic Meanwhile the Council of FERRARA-FLORENCE met and proclaimed the reunion of Eastern and Western Churches Abortive as this union proved to be, it greatly enhanced the papal prestige, and in 1443 Eugene returned to Rome from Florence The stay of the papal court in Florence and the influx of Greeks connected with the reunion were important in turning the disposition of the papacy towards the new tendencies in arts and letters

Eugene, city (pop 20,838), co seat of Lane co , W central Oregon, on the Willamette and S of Salem, settled 1846, laid out 1852, inc 1862 Commercial and shipping center of an agricultural area, it has creameries, fruit canneries, and flour and lumber mills The Univ of Oregon (see OREGON, UNIVERSITY OF) is here

Eugene of Savoy, 1663–1736, prince of the house of Savoy, celebrated general in the imperial service Born in Paris, he was the son of Eugène, comte de Soissons, of the line of Savoy-Carignano, and Olympe MANCINI, niece of Cardinal Mazarin He was ill received by Louis XIV, who refused him a commission in the French army—a refusal the king had cause to regret Eugene entered (1683) the service of Emperor Leopold I against the Turks After taking part in the relief of Vienna he fought in Hungary, helped in the capture of Belgrade (1688), and annihilated the Turkish army at Zenta (1697) Though this victory was perhaps his greatest feat, posterity remembers him more for his part in the War of the SPANISH SUCCESSION (1701–14) At first in command of the imperial army in N Italy, Eugene was victorious over the French under CATINAT and VILLEROI In 1704 he joined MARLBOROUGH in Bavaria, and together they won the signal victory of BLENHEIM Returning to Italy, Eugene was severely defeated by his cousin, Louis Joseph de VENDÔME, at Cassano (1705), his invasion of Provence (1707) was a failure owing to the inadequacy of his forces In 1708 Eugene again cooperated with Marlborough in Flanders, the victories of Oudenarde (1708) and Malplaquet (1709) resulted After the conclusion (1713) of the Peace of Utrecht by England and France, Eugene continued to campaign on the Rhine against the French under Villars Emperor Charles VI empowered him late in the year to negotiate with the war-weary French at Rastatt The Peace of Rastatt (1714) complemented that of Utrecht (see UTRECHT, PEACE OF) Eugene was made governor of the Austrian Netherlands (1714–18) and, after his recall, imperial vicar in Italy He again fought the Turks successfully (1716–18), defeating them at Belgrade (1717) and making possible the Austrian triumph marked by the Treaty of Passarowitz (1719) In the War of the Polish Succession Eugene held a command despite his advanced age One of the greatest commanders of modern times, Prince Eugene was noted for his cold and severe character, his almost monastic way of life, and his unremitting hatred of Louis XIV

eugenics (ūjĕ'nĭks), study of methods of improving the human race physically and mentally. Francis Galton, who introduced the term *eugenics,* is usually regarded as the founder of the modern science of eugenics, his emphasis was on the role of agencies under social control which could either improve or impair the qualities of future generations Modern eugenics is directed chiefly toward the discouragement of propagation among the unfit and encouragement of propagation among those who are healthy, intelligent, and of high moral character. Sterilization of mental defectives is advocated by some as a eugenic measure, and laws pertaining to the practice exist in many states The carrying out of such a measure presents many problems, including the difficulties of deciding to whom it shall be applied Comparative statistics on the prevalence of mental defectiveness existing, for example, in different years or among groups living under different socio-economic conditions are frequently misleading, among the reasons for this are the failure in some cases to consider the numbers of defectives in relation to an increased population figure and the difficulty of getting accurate counts of defectives. In education probably lies the great-

est hope for eugenics; much remains unknown about the inheritability among humans of many traits, but such knowledge is constantly increasing Studies in heredity have revealed the frequency with which defective offspring result from marriages in which both families have a history of such weaknesses, inbreeding increases the chances of producing defectives The inheritability of hemophilia, of albinism, and of a number of structural abnormalities is known. Efforts to improve the human race through bettering the housing facilities and other environmental conditions are known as euthenic measures Race betterment requires greater progress in euthenics as well as in eugenics See International Eugenics Congress, *A Decade of Progress in Eugenics, 1932* (1934), Ellsworth Huntington and others, *Tomorrow's Children* (1935), Nathan Fasten, *Principles of Genetics and Eugenics* (1935), J B S Haldane, *Heredity and Politics* (1938), H C Bibby, *Heredity, Eugenics, and Social Progress* (1939), L L Burlingame, *Heredity and Social Problems* (1940), Frederick Osborn, *Preface to Eugenics* (1940)

Eugenie (ûjē'nē, Fr ûzhānē'), 1826–1920, empress of the French (1853–70), consort of NAPOLEON III She was christened Eugenia María de Montijo de Guzmán at Granada, Spain, and was the daughter of the conde de Teba and of a Scottish noblewoman One of the most beautiful women of her time, she was presented (1851) to Prince Louis Napoleon, who fell in love with her and married her in 1853 She played some part in the politics of the Second Empire, acting as regent when Napoleon was away at war Deposed (Sept, 1870) after her husband's capture at Sedan, she fled to England After the death (1879) of her sole child, the prince imperial, she retired to FARNBOROUGH, Hampshire, where she is buried In her later life she undertook numerous trips abroad She died at Madrid See Maurice Paléologue, *Tragic Empress* (Eng tr, 1928), Robert Sencourt, *The Life of the Empress Eugenie* (1931), Rita Wellman, *Eugenie* (1941)

Euhemerus (ûhē'mûrus), fl c 300 B C, Cyrenaic philosopher He is famous for a theory of mythology embodied in his philosophical romance, *Sacred History*, a work of which only fragments remain Euhemerus' theory, called after him euhemerism, was that the gods were deified heroes His views are consistent with contemporary application of philosophical skepticism to religion

Eulenberg, Herbert (hĕr'bĕrt oi'lunbĕrk), 1876–, German dramatist After his first play, *Anna Walewska* (1899), he produced many popular dramas, characterized by passionate, sensational, and grotesque elements Among them are *Kassandra* (1903) and *Belinde* (1912), awarded the Schiller Prize Other works include fantastic tales and a history, *The Hohenzollerns* (1928, Eng tr, 1929)

Eulenburg, Philipp, Fürst zu (fē'lĭp fürst tsōō oi'lunbōōrk), 1847–1921, German diplomat, friend and confidential adviser of Emperor William II He was ambassador to Austria-Hungary (1894–1902), but it was his role as intermediary between the emperor and his government that made him important After Bülow became chancellor (1900), Eulenburg's influence declined In 1908 a scandal, which was dragged into the courts of law, put an end to Eulenburg's public life and private reputation A famous *raconteur* and a dilettante composer, Eulenburg also left memoirs, *Aus 50 Jahren* (1923) and *Mit dem Kaiser als Staatsmann und Freund* (1931)

Eulenspiegel, Till (oi'lun-shpē'gûl) [Ger, =owl-mirror, hence English Howlglas], a north German peasant clown of the 14th or 15th cent who was immortalized by chapbooks describing his tricks, preferably on persons of higher class The first chapbook (c 1500) was probably in Low Saxon, but his story was spread all over Europe, e g, in North Britain he was called Howleglas He is the subject of a popular tone poem by Richard Strauss See K R H MacKenzie's adaptation in English, *Master Tyll Owlglass* (1890)

Euler, Leonhard (lā'ônhart oi'lûr), 1707–83, Swiss mathematician A founder of higher mathematics, he is known especially for his work on the calculus of variations, trigonometry, and analytic mathematics and mechanics He also accomplished notable work in astronomy, hydrodynamics, and optics In 1727 he was called by Catherine I to St Petersburg, where he was professor (1730–41) At the invitation of Frederick the Great, he taught in Berlin from 1741 until his return to St Petersburg in 1766 He wrote many influential treatises, and his name is perpetuated in the terminology of mathematics and hydrodynamics, e g, Eulerian equation and Euler's formula

Euler-Chelpin, Hans Karl August Simon von (hänz' kärl' ou'gōōst zē'mōn fŭn oi'lur-kĕl'pĭn), 1873–, Swedish chemist, b Germany For his work on the fermentation of sugar and the chemistry of enzymes he shared with Arthur Harden the 1929 Nobel Prize in Chemistry He studied under Arrhenius at the Univ of Stockholm and was professor there (1906–41) and director of its institute for research in organic chemistry.

Eumenes (ûmē'nēz), c 361–316 B C, secretary to Philip II of Macedon and to Alexander the Great A Thracian Greek, he was able, diplomatic, and eloquent and proved himself able as a general as well as a secretary After Alexander's death, he was given control of Cappadocia and Paphlagonia He threw in his lot with PERDICCAS and thus was opposed by ANTIPATER, Antigonus (ANTIGONUS I), Ptolemy (PTOLEMY I), and Craterus He was defeated by Antigonus, but it was the downfall and death of Perdiccas that undid Eumenes in the wars of the Diadochi He was deserted by his troops and killed

Eumenides, see ERINYES

Eumolpus (ūmŏl'pus) [Gr, =good singer], in Greek religion, founder of the Eleusinian Mysteries

Eunapius (ūnā'pēus), b c 347, Greek Neoplatonic philosopher, whose *Lives of the Philosophers and Sophists* is a most valuable primary source His continuation of Dexippus' history is lost Like many Neoplatonists, he opposed Christianity

Eunice (ūnī'sē, ū'nĭs) [Gr, =good victory], Timothy's mother, a Christian 2 Tim 1 5, Acts 16 1

Eunice (ū'nĭs) **1** Town (pop 5,242), SW La, W of Baton Rouge, inc 1895 The oil fields, cotton, rice, and vegetables in the area provide materials for its industries It has an annual fair **2** Town (pop 1,227), SE N Mex, near the Texas line, settled 1909, platted 1927, inc 1935. It is in an oil region, and carbon black is made

Eunomia see HORAE

Eunomius, c 333–393?, Cappadocian theologian He was a pupil and secretary of AETIUS, whose system he adapted This was an extreme ARIANISM, founded on a rationalistic concept of the deity It rejected even the Semi-Arian compromise that the Son is like the Father Eunomius held that the essential attribute of God is that he has no origin, whereas the Son, begotten and created out of nothing, is unlike the Father in having an origin Eunomius' followers were called Anomoeans [Gr *anomoios*=unlike] The doctrine was never popular Eunomius was made (c 361) bishop of Cyzicus, but after 383, when Theodosius restored orthodoxy, he was frequently in trouble and repeatedly exiled The clause in the Nicene Creed which contains the words "Son of God, begotten of the Father before all worlds" was probably inserted as a conscious denial of the Anomoean stand

eunuch (ū'nuk) [Gr, =keeper of the couch], castrated man, particularly a chamberlain of the harem in the Orient The custom of employing eunuchs as servants in wealthy or royal households is very ancient, it reached its epitome at the court of Constantinople under the Byzantine emperors, from whom the Ottoman sultans adopted it Eunuchs often rose to high position, the Byzantine general NARSES being the most celebrated example In the Moslem world the use of eunuchs was far less common than is generally believed, however, the sale of boys to be eunuchs was formerly an important element in African trade The operation was performed with varying thoroughness and with varying success From Constantinople also spread the custom of using eunuchs in choirs In the *opera seria* (see OPERA) of the 18th cent the male heroes' roles were sung by *castrati*, and the papal choir used *castrati* until the beginning of the 19th cent A famous *castrato* was FARINELLI

Euodias (ūō'dēus) [Gr, =good fortune], Philippian Christian urged by Paul to be reconciled with one Syntyche Phlip 4 2

euonymus (ūōn'ĭmŭs) or **spindle tree**, any plant of the genus *Euonymus* (or *Euonymus*), widely distributed and cultivated vines, shrubs, or small trees, many with square or winged stems and brilliant fall foliage Spindles were formerly made of the wood of *Euonymus europaeus* The pods, often pink, split open to reveal a usually scarlet center, they resemble somewhat the related bittersweet but the leaves are opposite rather than alternate One of the most popular is a trailing or climbing evergreen used on walls, as a hedge, or as a ground cover See also BURNING BUSH

Eupatoria (ūputō'rēu), Rus *Yevpatoriya* (yĕfpŭtô'rēĭ), city (pop 23,512), S European RSFSR, in the W Crimea It is a Black Sea port, an agricultural center, and a resort Founded in 6th–1st cent A D, it was named after Eupator, king of Pontus Under the Tatar khans of Crimea it served as a fortress and developed its sea trade During the Crimean War, Eupatoria was occupied (1854–56) by the allied British, French, and Turkish troops, in the Second World War it was occupied by the Germans The old section of the city contains ruins of the Tatar fortress and a 16th-century mosque The new section was developed after 1910 Eupatoria was also called Kozlov in the 19th cent A variant spelling is Evpatoriya

Eupen (oi'pun), town (pop 14,379), Liége prov, SE Belgium, near the German border and Aachen, in an agricultural district There are wool manufactures The districts of Eupen and MALMÉDY, an area of c 380 sq mi with a population of c 60,000, were awarded to Prussia by the Congress of Vienna (1815) Strategically important for the defense of Belgium, they were transferred (1919) from Germany to Belgium by the Treaty of Versailles, although the population is predominantly German The inhabitants were allowed to register their protest against the transfer, but only a few did so German nationalists agitated for the return of Eupen and Malmédy, and during the Second World War the districts were annexed (1940–44) to Germany. German continues to be used as an official language under the Belgian administration

Euphorion (ūfô'rēun), 276? B C–187? B C, Greek poet, b Chalcis He was (c 223 B C) made librarian at Chalcis Of his works—much admired in Augustan Rome—only fragments remain

Euphranor (ūfrā'nûr), fl 364 B C, Greek painter and sculptor of Corinth His most famous paintings were in the Stoa of Zeus at Athens—*Theseus* on one wall and the 12 great gods on the opposite and *A Cavalry Charge between the Athenians and Boeotians at Mantinea* His statues, executed in metal or marble, were praised by Pliny for symmetry and dignity Among them were *Paris* and *Leto with Apollo and Artemis* Adolf Furtwängler has attempted to identify several celebrated existing statues as copies of Euphranor's works

Euphrates (ūfrā'tēz), Turkish *Frat*, Arabic *Al Furat*, river of SW Asia, rising in E Turkey It flows c 1,675 mi to Iraq, where it joins the TIGRIS river to form the SHATT EL ARAB The two headstreams of the Euphrates, the Kara Su and the Murad (or Murat), run west to their junction in Turkey The united stream flows S through Turkey and into Syria, where it turns southeast, crossing the eastern section of the country and continuing on into Iraq, which it divides into two nearly equal parts The river flows between steep banks in its precipitous upper course In N Iraq it is studded with islands, some with the remains of old castles The lower course of the river is of greatest economic importance Through a system of canals and dams water is supplied to Iraq's great date plantations The river works, to a large extent the product of modern engineering, do not equal in scope those of ancient times, when Sippar, Erech, Ur, and Babylon flourished on the banks of the lower course The lower Euphrates and the Tigris water Mesopotamia, which was the birthplace of great ancient civilizations

Euphrosyne see GRACES

euphuism (ū'fūĭzm) [Gr, =of good form], in English literature, a highly artificial style derived from the *Euphues* (1579) of John LYLY It was characterized by alliteration, allusion (to mythology), and antithesis The term has come to mean any artificial, precious, high-flown style of writing

Eupolis (ū'pulĭs), c 466–c 411 B C, Athenian comic poet, contemporary of Aristophanes He seems to have collaborated with Aristophanes, whom he also attacked; another of his victims was Alcibiades I His plays, satirical and virulent, were greatly admired by the ancients Fragments of his work survive.

Eupompus (ūpŏm'pus), fl 4th cent B C, Greek painter, founder of the Sicyonic school The only one of his works of which there is record is *A Victor in the Olympic Games*

Eupora (ūpô'rù), town (pop 1,377), N central Miss, near the Big Black River E of Greenwood, in a poultry and farm area, settled 1887, inc 1889

Eurasia (yōōrā'zhu, -shu), land mass comprising the continents of EUROPE and ASIA

Eure (ûr), department (2,331 sq mi, pop 315,902), N France, in Normandy EVREUX is the capital The Eure river is a minor tributary of the Seine

Eure-et-Loir (ûr-ā-lwär'), department (2,293 sq mi, pop 285,110), N France, SW of Paris, in the agricultural BEAUCE region Chartres is the capital

Eureka (ūrē'ku) **1** City (pop 17,055), co seat of Humboldt co, N Calif, on Humboldt Bay, founded 1850, inc 1856 It is a port of entry and a lumbering and fishing center in a country noted for its redwoods Fort Humboldt here protected settlers against Indian attack from 1853 to 1865 **2** City (pop 1,714), co seat of Woodford co, central Ill, E of Peoria, founded in the 1830s, inc 1859 It is a farm trade center with a cannery Eureka College (coeducational, 1848) is here **3** City (pop 3,803), co seat of Greenwood co, SE Kansas, E of Wichita and on the Fall River, laid out 1867, inc 1870 It is a trade center for an oil-producing and cattle-raising region **4** City (pop 1,457), N S Dak, NW of Aberdeen near the N Dak line, founded 1886 by immigrants from the German Volga Grain and livestock are shipped Eureka has a state agricultural experiment station **5** City (pop 2,292, alt c 6,400 ft), N central Utah, SW of Utah Lake, in a mining region, settled 1870

Eureka Springs, resort city (pop 1,770), a co seat of Carroll co, NW Ark, in the Ozarks near Missouri, settled 1879 It has mineral springs A U S soil conservation project is near by

eurhythmics, see EURYTHMICS

Euric (yōō'rĭk), d c 484, Visigothic king of Spain (466–c 484), brother and successor of Theodoric II He conquered nearly all of the Iberian peninsula and part of Gaul, made Toulouse his capital, and issued the first codification of Visigothic law His son and successor was ALARIC II

Euripides (yōōrĭ'pĭdēz), b 480 or 485 B C, d 406 B C., Greek tragic poet, ranking with AESCHYLUS

and SOPHOCLES. Born in Attica of a middle-class family (though rumor said his mother was a greengrocer), he lived at Athens most of his life, though spending much time on Salamis He wrote perhaps 92 plays (the first produced in 455 B C), he won only four first prizes in his lifetime (the first in 441 B C) There are 19 of his plays extant (including one that is doubtful) *Cyclops* (date unknown), the only complete extant Greek satyr play, *Alcestis* (438 B.C), perhaps his most appealing play, *Medea* (431 B C), one of the greatest of Greek tragedies, *Hippolytus* (428 B C), *Andromache* (date unknown), the *Heraclidae* (perhaps c 428 B C), a patriotic play inspired by the Peloponnesian War, *Hecuba* (425? B C), the *Suppliants* (c 420 B C), *Hercules Furens* (c 420 B C), one of his more rationalistic works, *Ion* (date uncertain), even more iconoclastic, the *Trojan Women* (415 B C), an indictment of war, *Electra* (413 B C), *Helena* (412 B C), *Iphigenia in Tauris* (date uncertain), one of the most finished of his tragedies, the *Phoenician Women* (c 409 B C), on the story of the SEVEN AGAINST THEBES, *Orestes* (408 B C), *Iphigenia in Aulis*, a character study, and the *Bacchae*, on the PENTHEUS story, both posthumously produced (405 B C), and *Rhesus*, doubtfully attributed to Euripides Provocative, concerned with problems and conflicts sometimes disturbing to his audience, Euripides displayed a rationalistic and iconoclastic attitude toward the gods and an interest in less heroic, even homely, characters He brings the mythical stories down to the immediate contemporary and human level He was more of a realist than Aeschylus or Sophocles, and his tragedies may lack in grandeur what they make up in penetration Characteristic of Euripides' tragic form are the prologue, used as means for direct exposition of previous action, and the *deus ex machina* [god from a machine], used, in many cases, to resolve the play's problem Though the *deus ex machina* often seems a forced addition to the play and though its presence often strains the play's meaning, Euripides used it probably because the Athenian audience considered it desirable One theory has been that for Euripides the play ends before the *deus ex machina* and that the device is a concession to convention His choral passages (interludes in, rather than parts of, the action) have remarkable lyric power Euripides has been often translated See A W Verrall, *Euripides the Rationalist* (1895), W N Bates, *Euripides, Student of Human Nature* (1930), G M A Grube, *The Drama of Euripides* (1941)

Euripos (yōōrī'pus), strait, forming the central and narrowest part of the channel separating the island of Euboea from the Greek mainland It is 5 mi long and from 130 ft to 1 mi wide Chalcis, at the narrowest point, is connected with the mainland by a drawbridge (built 1894)

Euroclydon (ūrŏk'lĭd-), east or northeast storm wind which caused Paul's shipwreck on Malta Acts 27.14

Europa (yōōrō'pu), in Greek religion, Phoenician princess, daughter of Agenor and sister of Cadmus Zeus, enamored of her, appeared as a white bull, enticed her to climb on his back, and swam off with her to Crete There she bore him three sons—Minos, Rhadamanthus, and Sarpedon She married the king of Crete, who adopted her sons She was worshiped as a goddess in the festival of the Hellotia

Europe, continent (with adjacent islands c 4,000,000 sq mi, pop c 540,000,000) It forms a vast peninsula of the great Eurasian land mass It is separated from Asia by the Ural mts and Ural river in the east, by the Caspian Sea and the Greater Caucasus in the southeast, and by the Black Sea, the Bosporus, and the Dardanelles in the south The Mediterranean Sea and the Strait of Gibraltar separate it from Africa Europe is washed in the north by the Arctic Ocean (including the Barents Sea and the White Sea) and in the west by the Atlantic Ocean, with which the Irish Sea, the North Sea, the Baltic Sea, the Mediterranean Sea, and the Black Sea are connected A huge mountain chain, of which the Pyrenees, the Alps, the Carpathians, the Balkans, and the Caucasus are the principal links, traverses the continent from west to east The highest points are Mt Elbrus (18,481 ft.) in the Caucasus and Mont Blanc (15,772 ft) in the Alps Between the mountainous Scandinavian peninsula in the north and this mountain chain in the south extends the great European plain, stretching from the Atlantic coast of France to the Urals A large part of this plain (which is often relieved by minor mountain groups and hills) is fertile agricultural soil, in the east and north there are vast steppe, forest, lake, and tundra districts South of the mountain chain extend the Iberian, Italian, and Balkan peninsulas, which are largely mountainous The Po plain, between the Alps and the Apennines, and the Danubian plain, between the Carpathians and the Alps, are fertile and much-developed regions Among the chief river systems of Europe are, from east to west, those of the Volga, the Don, the Dnieper, and the Danube (all flowing south), of the Oder, the Elbe, and the Rhine (flowing north), and of the Loire, the Garonne, and the Tagus (flowing west). The climate varies radically in different parts of Europe. The Mediterranean climate of the south is dry and warm The western and northwestern parts have a mild, generally humid climate, influenced by the North Atlantic Drift In Central and Eastern Europe the climate is continental In the northeast it is hyperborean All Europe, however, is subject to the moderating influence of prevailing westerly winds from the Atlantic Politically, Europe is subdivided into many sovereign states, some very large, some covering only a few square miles The following list is arranged by geographic regions Eastern Europe the European part of the UNION OF SOVIET SOCIALIST REPUBLICS, the Baltic republics (Lithuania, Latvia, and Estonia), which are in fact members of the USSR, and Poland Southeastern Europe Rumania, Hungary, Yugoslavia, Albania, Bulgaria, Greece, and the European part of Turkey Scandinavia Sweden, Norway, Denmark, and Finland Central Europe Austria, Czechoslovakia, Germany, Switzerland, and Liechtenstein Western Europe Belgium, the Netherlands, the grand duchy of Luxembourg (these three forming the Low Countries), France, and Monaco Southern Europe Italy, the Free Territory of Trieste, San Marino, Vatican City, Spain, Portugal, and Andorra The British Isles United Kingdom (i e, England and Wales, Scotland, and Northern Ireland) and Ireland Isolated in the Atlantic is Iceland With the exception of Basque and Maltese and the Finno-Ugric, Samoyed, Turkic, and North Caucasian language groups, only Indo-European languages are spoken in Europe (see LANGUAGE) European colonists and immigrants have spread their languages and civilization throughout North America, and South America, South Africa, Australia, New Zealand, and large parts of Asiatic Russia, they have introduced their technology and political concepts and the Christian religion to all parts of the earth The beginnings of civilization in Europe can be traced to very ancient times, but the civilizations of Mesopotamia and Egypt are still older than those of Europe

Europe, Council of, international body created in 1949 at London, England, by representatives of Great Britain, France, Belgium, the Netherlands, Luxembourg, Norway, Sweden, Denmark, Ireland, and Italy The purpose of the council is to make a first step toward a federation of European states Its statute provides for a committee of ministers and for a consultative assembly composed of representatives of the member countries Strasbourg, France, was chosen as the seat of the council because of its central location Greece and Turkey joined the council in 1950 Although the Council of Europe may eventually facilitate the creation of a genuinely federated Europe, its importance in 1950 was largely as a platform for public opinion

European corn borer see CORN BORER.

European Recovery Program, name popularly given to the project which was instituted at the Paris Economic Conference (July, 1947) to foster postwar economic recovery in certain European countries The ERP took form when U S Secretary of State George C Marshall—for whom the program is also called the Marshall Plan—urged (June 5, 1947) that European countries decide on their economic needs so that material and financial aid from the United States could be integrated on a broad scale In April, 1948, President Harry S Truman signed the act which set up the Economic Cooperation Administration to administer the program The ECA, authorized to function until 1952, was created to promote European production, to bolster European currency, and to facilitate international trade. Paul G Hoffman was named (April, 1948) economic cooperation administrator, and the participating countries (Austria, Belgium, Denmark, France, Germany, Great Britain, Greece, Iceland, Italy, Luxembourg, Netherlands, Norway, Sweden, Switzerland, Turkey, and United States) signed in 1948 an accord establishing the Organization for European Economic Cooperation as the master coordinating agency From the start the USSR strongly opposed the program while the various countries in the Soviet orbit denounced or ignored it To the end of 1949, England, France, Germany, and Italy received the largest allocations See S E. Harris, *The European Recovery Program* (1948)

europium (yōōrō'pēum), extremely rare metallic element (symbol = Eu, for physical constants, see ELEMENT, table) occurring with other metals of the RARE EARTHS group of which it is a member The oxide is obtained as a pinkish powder Discovery of the element (1901) is credited to Eugène Demarçay. Europium has no commercial use

Europus or **Europos,** Syria see DURA.

Eurydice. see ORPHEUS

Eurymedon (yōōrĭ'mudŏn), small river of ancient Pamphylia, S Asia Minor. Here in the Persian Wars Cimon defeated (c 467 B.C.) the Persians.

Eurynome (ūrĭ'numē), in Greek religion, daughter of Oceanus and Tethys and mother, by Zeus, of the Graces According to one tradition, she and the Titan Ophion ruled the world until they were overcome by Cronus

eurythmics or **eurhythmics** (both yōōrĭdh'mĭks) [as if Gr., = good rhythm], harmonious bodily movement, especially as expressed according to the system of Emile JAQUES-DALCROZE, who began his studies in 1903 in an effort to overcome the rhythmic difficulties of his students His aim is to bring the body under control of the mind through a system of gymnastics correlated with music. First, an unconscious technique of bodily response to the rhythm of music is developed, and finally the student is able to improvise an interpretation, through gesture language, of an entire composition. The system has influenced, not only musical instruction, but also the ballet and even fields outside of musical study The first demonstrations of it were given in 1905, and the first Jaques-Dalcroze Institute in the United States was established in 1915 For a history of the Dalcroze method of eurythmics, see Nicolas Slonimsky, *Music since 1900* (1937) See Jaques-Dalcroze, *Eurythmics, Art, and Education* (Eng tr, 1930) and *Rhythm, Music, and Education* (Eng tr, 1921)

Eusebius of Caesarea (ūsē'bēŭs, sĕzūrē'u) or **Eusebius Pamphili** (păm'fĭlī), c 263–339?, Greek historian Born in Palestine, he was bishop of Caesarea, Palestine (314?–339) In the controversy over ARIANISM he was accused by the Athanasians of being an Arian—a probably unjustified charge Eusebius was related to Eusebius of Nicomedia and gave Arius refuge at one time He disapproved of some of the canons of the First Council of Nicaea, which he was deputed to open, but he signed the Nicene Creed His historical works were his chronicle, a history of ancient peoples, remarkable for its chronology, and the monumental *Ecclesiastical History*, in 10 books Written from a moderate point of view, it is the only source for many events in the history of the early church He also wrote a life of Constantine and theological treatises

Eusebius of Nicomedia (nĭkōmē'dēu), d 342?, Arian leader, powerful because of his influence over Constantia, sister of Constantine I He sheltered Arius in 321 and fought his condemnation at Nicaea (325). Eusebius opposed the Nicene canon, although he had signed it, he was exiled for his Arianism But he was in power again in 330 and, aided by the court, became bishop of Nicomedia (330–39) and patriarch of Constantinople (339–42)

Eustace II (ū'stĭs), d 1093, count of Boulogne Kinsman by marriage of EDWARD THE CONFESSOR of England, he visited England in 1051. There he and his followers came into conflict with the citizens of Dover GODWIN, earl of Wessex, refused to punish the people of the town and broke with Edward as a result Eustace supported William I (William the Conqueror) in 1066, but the following year led an unsuccessful revolt against him They were subsequently reconciled Eustace was the father of Godfrey of Bouillon and Eustace III, who was in turn father of Matilda, wife of STEPHEN of England Stephen and Matilda's son, **Eustace IV,** d 1153, count of Boulogne, opposed Empress MATILDA and GEOFFREY (Geoffrey Plantagenet) in Normandy Eustace's death cleared the way for the accession of HENRY II to the English throne

Eustachi, Bartolomeo (bär"tōlōmā'ō ā"ōōstä'kē), d 1574, Italian anatomist He lived in Rome from 1549 and taught at the Collegia della Sapienza (later the Univ of Rome) He described many structures in the human body, including the Eustachian tube of the ear, the adrenal glands, the thoracic duct, the uterus, and the kidneys, and investigated the structure and development of the teeth His *Tabulae anatomicae* (1552), a remarkable set of anatomical drawings, was published in 1714

Eustachian tube (ūstā'kēun, ūstā'shŭn), small structure, also referred to as the auditory tube or auditory canal, which extends between the middle ear and the nasopharynx It serves to equalise the air pressure between the throat and the middle ear Growths such as adenoids or tumors may block off the cartilaginous opening of the tube in the nasopharynx Infection in the throat may extend to the middle ear by way of this channel, causing ear infections and deafness

Eustathius, Saint (ūstā'thēus), c 280–c 335, patriarch of Antioch (324?–330?), prominent Catholic leader at the First Council of Nicaea He was deposed and exiled by a faction led by Eusebius of Nicomedia during the Arian reaction His followers refused to acknowledge MELETIUS as bishop

Eustathius, d c 1194, Byzantine scholar, archbishop of Salonica (from 1175). He became renowned as master of the orators at Hagia Sophia, Constantinople, then a center of learning He lectured on Homer and Pindar As bishop he was active in the affairs of Salonica and secured religious freedom for its inhabitants when the Normans captured it. He attempted to reform the monasteries but failed and was temporarily obliged to leave the city. Works of interest include commentaries (especially on Homer), which are valuable for extracts from lost Greek works, also a history (1185) of the Norman conquest of Sicily and S Italy, funeral orations, and *The Reform of Monastic Life*. Michael ACOMINATUS was his student and friend

Eustatius Island: see SAINT EUSTATIUS.

Eustis, William (ū'stĭs), 1753–1825, U S. government official, b Cambridge, Mass , grad Harvard, 1772. He studied medicine under Joseph Warren and was a surgeon in the patriot forces in the American Revolution Later he took up politics as an Anti-Federalist and Jeffersonian and served in Congress (1800–1804). Jefferson made him (1807) Secretary of War, and he served until 1812 when the misfortunes of the War of 1812 brought criticism of him as inefficient and caused him to resign He was later minister to the Netherlands (1814–18), again a member of the House of Representatives (1820–23), and governor of Massachusetts (1823–25)

Eustis, city (pop. 2,930), N central Fla , on Lake Eustis, N of Lake Apopka, inc as a city 1925 It is a resort and trade center in a region noted for its citrus fruit and watermelons Sand dredged from the lake is used for building purposes

Eutaw (ū'tô), town (pop 1,895), co seat of Greene co , W central Ala , near the Black Warrior river and SSW of Tuscaloosa, in a farm area, settled 1818. It has a number of ante-bellum houses

Eutaw Springs, short branch of the Santee river, which it joins c 30 mi E of Orangeburg, S C It was (Sept 8, 1781) the scene of a battle in the CAROLINA CAMPAIGN of the American Revolution.

Euterpe: see MUSES

Eutropius (ūtrō'pēŭs), fl 4th cent A D , Roman historian, a protégé of the emperors Julian and Valens He wrote a compendium of Roman history (*Breviarium ab urbe condita*) in 10 books Though unimportant as a source, it is a good summary, written in pure Latin

Eutropius, d 399, favorite of the East Roman Emperor ARCADIUS A eunuch of the palace, he brought about the marriage (395) of Arcadius and EUDOXIA and succeeded RUFINUS as chief minister He was hated for his cruelty and avarice, his fall, however, was caused by the enmity of Eudoxia and of the leader of the Gothic mercenaries, Gainas Though his life was spared at first through St John Chrysostom, he was later tried and executed

Eutyches (ū'tĭkēz), c 378–c 452, archimandrite in Constantinople, sponsor of Eutychianism, the first phase of MONOPHYSITISM He was the leader in Constantinople of the most violent opponents of NESTORIANISM, among whom was Dioscurus, successor to St CYRIL as patriarch of Alexandria Whereas Cyril had agreed with the Antiochenes in 433 that Christ had two natures, Eutyches and Dioscurus insisted that Christ's humanity was absorbed in his divinity and that to accept two natures at all was Nestorian When THEODORET attacked Eutychianism (447), Dioscurus retaliated by anathematizing him, and Emperor Theodosius II, who was friendly to Eutychianism, confined Theodoret to his diocese (448) But Eutyches was accused of heresy and deposed by a council called by St. Flavian, patriarch of Constantinople (Nov , 448) Eutyches appealed to his friends, and Theodosius called a council to meet at Ephesus, Aug 1, 449 This, the famous Robber Synod (Latrocinium), was disgraceful from the beginning Dioscurus presided and disenfranchised most of the clergy inimical to Eutyches The "council" reinstated Eutyches, declared him orthodox, and deposed Flavian and Eutyches' accuser, Eusebius Flavian denied the council's authority, the papal legates denounced the council's proceedings The soldiery, called in by Dioscurus, compelled an affirmative vote, Flavian was imprisoned and died of rough handling by members of the "synod " The legates barely escaped Theodoret and the patriarch of Antioch were deposed. After the death of Theodosius (450) his orthodox successors convened the Council of Chalcedon (see CHALCEDON, COUNCIL OF) to right the wrongs of the Robber Synod, and Eutychianism was ended

Euychides (ūtĭ'kĭdēz), fl 4th cent B C , Greek sculptor of Sicyon, pupil of Lysippus Records exist of several of his works, among which the best known is *Fortune*, personifying the city of Antioch. The allegory is carried out in detail, as may be seen in a marble copy in the Vatican The identity of the statue was established through copies on coins

Eutychus (ū'tĭkŭs) [Gr ,=fortunate], young man whom Paul raised from the dead Acts 20 9–12

Evagoras (ĭvă'gŭrŭs), d c 374 B C , despot of Cyprus He was the inheritor of the rule of Salamis in Cyprus and was able not only to make good his claim but also to spread (c 410 B C) his control over the whole island. He was friendly to Athens and sought to bring Athenian culture to Cyprus, partly by giving refuge to exiled Athenians, notably CONON He built a powerful fleet and with it harried the mainland (under Persian control) After the Peace of Antalcidas, Evagoras lost all Greek support and found himself alone in war with Persia ARTAXERXES II defeated him in 381 and destroyed his fleet. He was, however, given easy peace terms and kept at least nominal rule of the island. Isocrates wrote an encomium of him.

Evagrius Scholasticus (ĭvă'grēŭs), c 536–c 600, Syrian ecclesiastical historian, a prominent, honored lawyer in Antioch and Constantinople. His *Ecclesiastical History* (431–593), written in excellent Greek, is an authentic source for the history of Nestorianism and Monophysitism.

Evald, Johannes: see EWALD, JOHANNES.

Evander (ĭvăn'dûr) [Gr ,=good man], a figure taken by the Romans from Greek mythology to connect Roman with Grecian legend He was said to have founded Pallanteum on the Palatine Hill (hence, supposedly, the name), naming it for his home Pallanteion, Arcadia He figures in the *Aeneid*, when Aeneas appeals to him for aid

Evangelical Alliance (ēvănjĕ'lĭkŭl), an association of Evangelical Christians in a union, not of churches, but of individuals belonging to different denominations and different countries, formed to give evidence of the unity existing among Evangelical believers and to advance such unity It was founded in 1846 in London, at a conference in which some 50 denominations were represented by several hundred clergymen and laymen, gathered from many parts of the world Branches have been organized in various countries. The largest association is the one first formed in Great Britain, which in 1923 became known as the World's Evangelical Alliance See A J Arnold, *History of the Evangelical Alliance* (1897), J W Ewing, *Goodly Fellowship a Centenary Tribute to the Life and Work of the World's Evangelical Alliance* (1946)

Evangelical and Reformed Church, a Protestant denomination formed by merging (1934) the Reformed Church in the United States and the Evangelical Synod of North America, both of which bodies had their origin in the Reformation in Europe Settlers in the American colonies from Germany and Switzerland established churches The Reformed Church in the United States, long known as the German Reformed Church, organized its first synod in 1747 and adopted a constitution in 1793 The Evangelical Synod of North America (not to be confused with the Evangelical Church, which merged in 1946 with the United Brethren in Christ to form the Evangelical United Brethren Church) was founded in 1840 at Gravois Settlement, Mo , by a union of Reformed and Lutheran Christians In its early years it was known as the German Evangelical Church Association of the West The Evangelical and Reformed Church is presbyterian in organization, and its creed is the Heidelberg Catechism (1563) The church maintains educational institutions and foreign missions A move to unite the Evangelical and Reformed Church and the Congregational Christian Churches (see CONGREGATIONALISM) was opposed by part of the Congregational membership and was barred (1950) by the courts

Evangelical Church: see EVANGELICAL UNITED BRETHREN CHURCH

Evangelical United Brethren Church, a Protestant denomination created (1946) by the union of the Evangelical Church and the United Brethren in Christ Both denominations originated early in the 19th cent in about the same place, with similarities in organization and polity The Evangelical Church owed its beginning to the evangelical, pietistic efforts of Jacob ALBRIGHT, a Lutheran convert to Methodism, who preached among his fellow Pennsylvania Germans The United Brethren in Christ came into being as a result of the evangelistic preaching of Philip William OTTERBEIN of the German Reformed Church and Martin BOEHM, a Mennonite bishop These two ministers conducted revivals among the German-speaking people of Pennsylvania, Maryland, and Virginia The methods of Albright, Otterbein, and Boehm were similar after evangelistic meetings, converts were encouraged to form classes or societies for strengthening their spiritual life The groups formed under Albright held a general conference in 1807 at which he was elected bishop, in 1816 the name Evangelical Association was assumed In 1891 a group which became the United Evangelical Church seceded from the Evangelical Association, but in 1922 the two bodies reunited as the Evangelical Church The societies formed under Otterbein and Boehm took shape as a distinct ecclesiastical body, to be known as the United Brethren in Christ, at a conference in 1800, at which the two ministers were elected bishops The United Brethren in Christ (Old Constitution) parted from the main body in 1889, from that time they have maintained a separate church Members of the MORAVIAN CHURCH are also sometimes called the United Brethren. In earlier years the membership of the Evangelical Church and of the United Brethren in Christ included few who were not German in speech, but later the German-speaking element formed only a small proportion Extension W of the Alleghenies was rapid The newly combined church supports publishing houses in the United States and abroad, four theological seminaries, a number of colleges, and foreign missions It has an episcopal form of government. In doctrine it is Arminian Particular emphasis is laid on prayer, a life of devotion to Christ, and the responsibility of the individual See R W Albright, *History of the Evangelical Church* (1942); J. W Owen, *A Short History of the Church of the United Brethren in Christ* (1944).

evangelist (ĭvăn'jŭlĭst) [from Gr.,=Gospel], the title given to SS. Matthew, Mark, Luke, and John The four evangelists are often shown together in art accompanied by, or represented by, their symbols The symbols usually given are: St Matthew, a youth with a book, St Mark, a lion (hence the celebrated Lions of St Mark, at Venice), St. Luke, a bull, St. John, an eagle In modern times the term is applied to Protestant preachers who go about preaching personal conversion to religion. The greatest effort of evangelism was undoubtedly the GREAT AWAKENING, and METHODISM is essentially evangelistic John WESLEY and George WHITEFIELD were the great Methodist evangelists George FOX, founder of the Society of FRIENDS (Quakers), was also an evangelist In the 19th cent Dwight MOODY was the type of the evangelist Frank Buchman used the methods of evangelism in the Oxford Group. See also CAMP MEETING and REVIVAL

Evans, Sir Arthur John, 1851–1941, English archaeologist He was keeper (1884–1908) of the Ashmolean Museum at Oxford He conducted archaeological researches at Cnosus and discovered in Crete the pre-Phoenician script. His writings include *Cretan Pictographs and Prae-Phoenician Script* (1896), *The Mycenaean Tree and Pillar Cult* (1901), and *Palace of Minos* (3 vols , 1921–30)

Evans, Augusta Jane, 1835–1909, American novelist, b Columbus, Ga Of her sentimental, moralistic novels, *St. Elmo* (1866) achieved greatest popularity It was widely translated and read Others include *Vashti* (1869) and *Infelice* (1875)

Evans, Caradoc, 1883–1945, Anglo-Welsh novelist and short-story writer His chief works are his short-story collections, *My People* (1915), *Capel Sion* (1916), and *My Neighbors* (1919), and his novel *Nothing to Pay* (1930) A writer of power, he is a harsh critic of his people. See biography by his wife, Oliver Sandys (1946)

Evans, Edward Payson, 1831–1917, American scholar, b Remsen, N Y , grad Univ of Michigan, 1854 He spent most of his life in Munich, Germany, where he studied ancient and contemporary Oriental literature, medieval art and law, religions, and languages He contributed frequently to magazines in Germany and America *Animal Symbolism in Ecclesiastical Architecture* (1896) and *The Criminal Prosecution and Capital Punishment of Animals* (1906) are strange and fascinating excursions into medieval art and law by an original mind His wife, **Elizabeth Gibson Evans**, 1832–1911, wrote biographical studies and novels

Evans, George Henry, 1805–56, American editor and agrarian reformer He came to the United States from England in 1820 He edited (1829–37, 1844–47) the *Workingman's Advocate*, the first important labor paper in the United States, and in 1840 published in the *Radical* a "History of the Workingman's Party in New York," an account of a movement in which he was a leading figure, but which had been largely destroyed by the panic of 1837 After the panic he preached a doctrine of free land and entered into the homestead movement on the theory that its success would not only relieve the conditions of labor in the cities but reduce the price of land in the older states to the value of improvements on the land, which would mean that the land itself was free Henry George and the single taxers used many of his arguments a generation later

Evans, Herbert McLean, 1882–, American anatomist and embryologist, b Modesto, Calif , M D Johns Hopkins, 1908 At the Univ of California he became professor of anatomy in 1915 and professor of biology and director of the Institute of Experimental Biology in 1930 He discovered vitamin E (1922) His work also includes research in the endocrine organs, the relation of nutrition to fertility, the physiology of reproduction, and studies of chromosomes in man

Evans, John, 1814–97, American founder of educational institutions, b Waynesville, Ohio, grad Lynn Medical College, Cincinnati, 1838 He practiced medicine in Indiana and was first superintendent of the state hospital for the insane in 1845 He went to Chicago in 1848 as professor of obstetrics at Rush Medical School He invested in real estate, and Evanston, Ill , is named for him He helped found Northwestern Univ there He served (1862–65) as governor of Colorado Territory Later he worked for the promotion of what is now the Univ of Denver He was also prominent as a railroad builder in Colorado See biography by E. C MacMechen (1934)

Evans, Sir John, 1823–1908, English archaeologist, geologist, numismatist, and paper manufacturer A president of the Royal Numismatic Society and of the Society of Antiquaries, he was active also in public welfare and was an authority on water supply His works include *Coins of the Ancient Britons* (1864), *The Ancient Stone Implements, Weapons, and Ornaments of Great Britain* (1872), and *Ancient Bronze Implements ... Great Britain and Ireland* (1881) Part of his coin collection is in the Ashmolean Museum, Oxford.

Evans, Lewis, c 1700–1756, colonial surveyor and geographer, b Wales He is known to have been in Philadelphia c 1736 He did several jobs for Benjamin Franklin. His travels and studies of the colonies nearest him bore fruit in two maps, *A Map of*

Pennsylvania, New Jersey, New York, and the Three Delaware Counties (1749, revised 1752) and *A General Map of the Middle British Colonies in America*, published together with an *Analysis* (1755) The first of these was used by migrating colonists for the excellent detail of the roads The second was used by Braddock and was published many times over by London firms In the *Analysis* he drew particular attention to Ohio and suggested ways and means of acquiring it by force from the French His *Brief Account of Pennsylvania* (1753) is given in the biography by L H Gipson (1939)

Evans, Luther Harris, 1902–, American librarian and political scientist, b Bastrop co, Texas, grad Univ of Texas, 1923, Ph D Stanford, 1927 After teaching political science at New York Univ, Dartmouth, and Princeton, he became director of the Historical Records Survey, under the WPA (1935) In 1939 he was appointed director of the legislative reference service of the Library of Congress He was chief assistant librarian of Congress from 1940 to June, 1945, when he was appointed librarian He wrote *The Virgin Islands* (1945)

Evans, Maurice, 1901–, English-American actor manager He was naturalized in 1941 His debut in the United States with Katharine Cornell in *Romeo and Juliet* (1936) was followed by other Shakspearian roles which won him great distinction These included *King Richard II* (1937), *Hamlet* (1938), and *Macbeth* (1941) During the Second World War he entertained troops and in 1947 appeared in Shaw's *Man and Superman*

Evans, Oliver, 1755–1819, American inventor, b near Newport, Del He joined his brothers in Wilmington in the flour-milling business and installed machinery which he developed and patented after studying similar earlier devices These included an elevator, a conveyor, a descender, and a hopper-boy, which handled the grain by machinery and which a generation later became a part of every mill establishment His *Young Mill-Wright & Miller's Guide* (1795) went through many editions Evans experimented on a steam carriage to run on ordinary roads, but turned from it to build stationary steam engines He was a pioneer in the building of high-pressure engines, and after establishing the Mars Iron Works in 1807 he built about 50 engines, most of them used in pumping He built the first steam river dredge to be used in America and brought it to the river under its own power See biography by Greville Bathe and Dorothy Bathe (1935)

Evans, Rudulph, 1878–, American sculptor, b Washington, D C *The Golden Hour* (Luxembourg Mus, Paris, replica, Metropolitan Mus) is rated one of his best works Others are *Boy and Panther*, *Dawn*, *Venus Aphrodite*, and the Kiernan Memorial, Green Bay, Wis

Evans, Mount, peak, 14,260 ft high, N central Colo, in the Front Range of the Rocky Mts The Inter-University High Altitude Laboratory is at the summit of Mt Evans

Evansburg, borough (pop 1,604), W Pa, E of Zelienople, inc 1882 Its post office is **Evans City.**

Evanston, **1** Residential city (pop 65,389), NE Ill, on Lake Michigan just N of Chicago, settled 1826, platted 1854, inc as a city 1892 It is the seat of NORTHWESTERN UNIVERSITY, Seabury-Western Theological Seminary, a Bible institute, a teachers college, and a junior college Evanston, once the home of Frances E Willard, is the national headquarters of the Woman's Christian Temperance Union Radios and steel products are made **2** City (pop 3,605, alt c 6 750 ft), co seat of Uinta co, extreme SW Wyo, on the Bear river, settled 1869, inc 1888 It is the trade center of a farm and dairy area in a region which has yielded coal and other minerals The city developed with the arrival of the railroad The state hospital for the insane is in Evanston

Evansville, **1** City (pop 97,062), co seat of Vanderburgh co, SW Ind, on the Ohio and SW of Indianapolis, settled 1817, inc as a town 1819, as a city 1847 It is a port of entry and is a shipping point for an agricultural region which also mines coal During the Second World War, Evansville had the largest inland shipyards in the world It manufactures glassware, tools, automobile parts, refrigerators, shovels, and cranes, and beer and pharmaceuticals are made here It is the seat of Evansville College A state hospital for the insane is in the city **2** City (pop 2,321), S Wis, S of Madison, settled 1839, inc as a village 1866, as a city 1896 It is a farm trade center The Wyler School for boys and the Hallelujah Campgrounds are here

evaporation, the changing of a liquid into a gas at any temperature below the BOILING POINT of the liquid For example, water placed in a shallow, open container and exposed to dry air disappears rapidly, the rate at which it evaporates depending in part upon the extent of surface exposed and also upon the amount of water already in the air (see HUMIDITY) The explanation of the process, according to the kinetic molecular theory of MATTER, is that the molecules of water at the surface bound off into the air and are prevented from returning to their original position by collision with the molecules of the air and consequent deflections from their original direction This process continues until no more water molecules remain in the container Since increased activity of the water molecules is dependent upon the acquisition of heat (heat is the kinetic energy of the molecules), this energy must be drawn from surrounding substances As a result, the temperature of substances in the immediate vicinity, as well as that of the liquid itself, is decreased The cooling sensation felt when a liquid evaporates on the skin is an example When carbon dioxide which has been liquefied is allowed to evaporate in a confined space, so much heat is absorbed from the surrounding substances, including the liquid already evaporated, that DRY ICE is formed

Evart (ĕv'urt), city (pop 1,335), N Mich, on the Muskegon and NW of Midland, inc as a village 1872, as a city 1938 Several Indian mounds are near by

Evarts, William Maxwell, 1818–1901, American lawyer and statesman, b Boston, grad Yale, 1837, grandson of Roger Sherman After attending Harvard Law School he began (1841) to practice law in New York city, where, with Charles E Butler, he formed (1843) a firm which became one of the best known in the country A number of cases, notably one involving the daring forger Monroe Edwards, spread his fame, which during the Civil War was further enhanced by his handling of the Savannah privateers case and several prize cases Evarts was government counsel in the abortive trial of Jefferson Davis for treason and later eloquently defended President Andrew Johnson in the impeachment proceedings He was one of the counsel for the United States in the Geneva arbitration proceedings (1871–72) on the *Alabama* claims and in 1877 argued the claims of Rutherford B Hayes to the presidency as Republican counsel before the electoral commission He was U S Attorney General under Johnson (1868–69) and Secretary of State under Hayes (1877–81) Confronted in the latter capacity with activity of French interests in constructing an isthmian canal, he stated forcefully that any canal must remain under American control, thus formulating a policy subsequently maintained in American foreign relations He was U S Senator from 1885 to 1891, a period marked by failing eyesight, which resulted in total blindness for the last 11 years of his life See Brainerd Dyer, *The Public Career of William M Evarts* (1933), biography by Chester L Barrows (1941)

Evarts, town (pop 1,642), E Ky, in the Cumberlands, near the Va line E of Harlan, in a coal area, settled c 1800, inc 1915

Evatt, Herbert Vere (vēr' ĕ'vut), 1894–, Australian statesman After achieving prominence as a labor lawyer Evatt became justice of the High Court of Australia in 1930 and in 1940 became a Labour member of the House of Representatives In 1941 he was appointed attorney general and minister for foreign affairs During the Second World War, Evatt was the Australian member of the Pacific War Council and a delegate to the United Nations Conference in 1945 He gained note for championing the rights of the smaller nations and opposing the veto power of the big nations Evatt has also urged international control of atomic energy In 1948–49 he was president of the United Nations General Assembly He has written a number of books, including *The Task of Nations* (1949)

Eve [Heb, =life], in the Bible, the first woman, wife of ADAM and the mother of Cain, Abel, and Seth Fashioned from Adam's rib, she was beguiled by the serpent into eating the forbidden fruit of the tree of knowledge Eve then tempted Adam to eat, whereupon they were banished from the Garden of Eden Gen 2–4, 2 Cor 11 3, 1 Tim 2 13

Eveleth (ĕv'ulĕth), city (pop 6,887), NE Minn, on the Mesabi iron range and S of Virginia, in a region of lakes and woods, settled 1892, inc 1893 It has a junior college (coeducational) An annual winter carnival is held

Evelyn, John (ēv'ulĭn, ĕv'lĭn, ēv'lĭn), 1620–1706, English diarist, b Wotton House, Surrey Though of royalist sympathies, he took little active part in the civil war After 1652 Evelyn lived at Sayes Court, Deptford, as a wealthy country gentleman, cultivated his garden, and wrote on all manner of subjects, including reforestation, natural science, the history of art, and numismatics After the Restoration he was a faithful public servant His best-known work is his lifelong diary, less intimate than Pepys's, but full of historical information about 17th-century England It was first published in 1818 and was edited by Austin Dobson in 1906 Evelyn also wrote *The Life of Mrs Godolphin* (ed by Harriet Sampson, 1939)

evening primrose, any species of the genus *Oenothera* and of several similar and related genera, herbs, most of which are yellow, evening-flowering, North American annuals or biennials The common evening primrose (*Oenothera biennis*) has become a weed in the Old World, where the roots are sometimes used for food Hugo de Vries noticed that the progeny of evening primroses were often unlike the parents Further study led him to formulate the theory of mutation and to confirm and expand Mendel's law of heredity

evening schools see VOCATIONAL EDUCATION.

Evenki National Okrug (ĕvyĕn'kē), administrative division (285,900 sq. mi., pop 25,000), N Krasnoyarsk Territory, RSFSR, in central Siberia, traversed by the Lower Tunguska and the Stony Tunguska rivers. Tura is the capital Fur trading, reindeer raising, and fishing are the chief occupations of the Evenki population, which belongs to the TUNGUS linguistic family

Everdingen, Allart van (ä'lärt vän ä'vürdĭngŭn), 1621–75, Dutch painter and etcher. He studied in Utrecht and in Haarlem, which, with Amsterdam, was his chief working center The scenery of Sweden and Norway forms the subject of some of his finest pictures In color, atmosphere, and skillful composition his paintings have often been likened to those of Ruisdael Everdingen executed over 150 etchings, treated in a broad and vigorous manner

Everest, Sir George (ē'vurĭst), 1790–1866, British surveyor, b Brecknockshire, Wales. He worked on the trigonometrical survey of India from 1806 to 1843 He became superintendent of the survey in 1823 and surveyor general of India in 1830 Mt Everest, on the Nepal-Tibet border, is named for him He was knighted in 1861

Everest, Mount, peak, 29,141 ft high, on the border of Tibet and Nepal, in the Himalayas It is the greatest elevation in the world The mountain is named for Sir George Everest, whose trigonometrical survey in 1849 definitely located the peak and later fixed its height at 29,002 ft, a figure still used in official works All attempts to climb the peak to its summit have been vain C G Bruce (1923, 1924), Hugh Ruttledge (1933, 1936), and W H Tilman (1938) returned in safety after the failure of the parties that they led On Bruce's expedition E F Norton established the world's climbing record of 28,126 ft It is possible, however, that in that party G L Mallory and A C Irvine, who were observed disappearing in a fog before they were lost, attained a greater elevation The summit of Mt Everest is well known today from aerial photographs See E F Norton and others, *The Fight for Everest, 1924* (1925), Sir Francis Younghusband, *The Epic of Mount Everest* (1926), P F M Fellowes and others, *First over Everest* (1934), James R Ullman, *Kingdom of Adventure Everest* (1947)

Everett, Edward (ĕv'rĭt, ē'vurĭt), 1794–1865, American orator and statesman, b Dorchester, Mass, grad Harvard (B A, 1811, M A, 1814) In 1814 he became a Unitarian minister in Boston, but, appointed (1815) professor of Greek literature at Harvard, he went abroad to study at the Univ of Gottingen (Ph D, 1817) and to travel During his professorship (1819–25) he also edited (1820–23) the *North American Review* A U S Representative (1825–35), Everett adopted a conservative attitude toward the slavery question, thereby awaking opposition He was governor of Massachusetts (1836–39), minister to England (1841–45), and president of Harvard (1846–49) In the last four months of President Millard Fillmore's administration, he was Secretary of State, succeeding his late friend, Daniel Webster By this time Massachusetts had elected him U S Senator, but he resigned in the second year of the term (1854), embarrassed still by his old-line Whig attitude of compromise on slavery In 1860 Everett halfheartedly accepted the vice presidential nomination of the CONSTITUTIONAL UNION PARTY In the Civil War he traveled throughout the North speaking for the Union cause and drawing immense audiences His most famous address, now completely forgotten, was the principal oration delivered at Gettysburg on the same occasion that called forth Abraham Lincoln's enduring Gettysburg Address See his *Orations and Speeches on Various Occasions* (4 vols, 1850–68), biography by P R Frothingham (1925)

Everett (ĕv'rĭt, ē'vurĭt) **1** Industrial city (pop 46,784), E Mass, a suburb N of Boston, set off from Malden 1870, inc as a city 1892 Steel and iron goods and chemicals are its chief products **2** Industrial borough (pop 2,425), S Pa, on the Juniata and E of Bedford, laid out 1795, inc 1873 Coal and limestone are produced here It was the site of an attack upon Indian traders which resulted in the Battle of Bloody Run (1765) **3** City (pop 30,224), co seat of Snohomish co, NW Wash, on Puget Sound at the mouth of the Snohomish Settled c 1890, it was planned as a seaport and industrial city It is a port of entry and a commercial center and has important manufactures of lumber, pulp, and plywood and other diversified industries A state home for girls is here, and an Indian reservation is near by The attempt to expel members of a lumber workers' union resulted in violent conflict, Nov 5, 1916

Everglades, subtropical area, covering the greater part of S Florida, S of Lake OKEECHOBEE The sedge (*Cladium jamaicense*), popularly called saw grass, and water which are its chief characteristics stretch 100 mi from the lake to the Gulf of Mexico, ranging from 50 to 70 mi in width The water flows south from the lake system of central Florida to Lake Okeechobee and then, overflowing into the

Everglades, moves south down an almost imperceptible incline. The Everglades proper—with two marked seasons, wet and dry—has an annual average rainfall of over 60 in. Underlying the grass and water and embedded in some places with coral is oolitic limestone, which also rims the area, thus serving as a retaining wall against the sea. The saw grass is most heavily concentrated at the northern end, south from there, thousands of islandlike masses of vegetation called hammocks rise above the surface, which is nowhere more than a few feet above sea level. The solidly packed black muck of the Everglades, the result of millions of years of vegetable decay, was long looked on as potentially rich farming land, and intensive reclamation work began in the administration (1905–9) of Gov Napoleon B Broward. The state and Federal governments constructed thousands of miles of canals and ditches leading out of Lake Okeechobee to the Atlantic and the Gulf of Mexico. Over 4,000,000 acres of the Everglades and contiguous lands were drained, but only the area immediately bordering the lake was actually turned over to agriculture (winter vegetables and sugar cane are the chief crops) and, partially, to cattle grazing. Great fires which burned in the lower Everglades in March, 1939, confirmed the opinion of a few conservationists that the region was being overdrained and led to the first thorough studies of the region as a whole. These established that most of the lower Everglades was unfit for cultivation. Everglades National Park, established in 1947, embraces 341,-969 acres. In addition to the saw-grass and water prairies, it includes long stretches of sandy beaches, vast mangrove forests, and a wide variety of subtropical flora and fauna. The rookeries of the white egret, the roseate spoonbill, the great heron, and other water birds are particularly impressive. The park reaches to the north of the Tamiami Trail, completed in 1928. The town of Everglades (pop 518), county seat of Collier co, is the western terminus of the trail. W of the Everglades and N of Big Cypress Swamp is a reservation for SEMINOLE INDIANS, whose forebears found a great natural ally in the Everglades in their long struggle to resist removal to the West. See Marjory Stoneman Douglas, *The Everglades: River of Grass* (1947)

Evergreen, city (pop 2,216), co seat of Conecuh co, S Ala, SW of Montgomery, in a farm area noted for its evergreens, settled c 1820

evergreen, plant which carries green foliage the year round. Most conifers are evergreen, the LARCH being an exception. Many broad-leaved plants, too, are evergreen, e g, box, rhododendron, holly, and most tropical plants. The leaves, whether needlelike or broad, last a varying length of time with different plants

Evergreen Park, village (pop 3,313), NE Ill, south suburb of Chicago, inc 1893

everlasting or **immortelle**, names for several plants characterized by papery or chaffy flowers which, on drying, retain their form and, usually, color and are used for winter bouquets and decorations. Some of the more popular of the everlastings are the STRAWFLOWER, pearly everlasting (*Anaphalis*), winged everlasting (*Ammobium*), Swan River everlasting (*Helipterum* or *Rhodanthe*), the common immortelle (*Xeranthemum*), pussytoes (*Antennaria*), SEA PINK (*Statice*), GLOBE AMARANTH, and COCKSCOMB. Everlastings should be cut before fully mature, some while still in bud, then stripped of their leaves and hung in bunches, head downward, to dry, colored blossoms should be dried in the shade. Some plants may be treated as everlastings because of their ornamental dried fruits, e g, several grasses, honesty (*Lunaria*), Chinese lantern (*Physalis*), TEASEL, and bittersweet

Evermann, Barton Warren, 1853–1932, American naturalist, b Monroe co, Iowa, grad Indiana Univ (B A 1886, Ph D, 1891). From 1891 to 1914 he was ichthyologist of the Bureau of Fisheries, serving also as head of the Alaska Fisheries Service (1910–14) and as chairman of the fur-seal board (1908–14). From 1914 he was director of the Museum of the California Academy of Sciences and from 1922 of the Steinhart Aquarium, in San Francisco. With David Starr Jordan he wrote *The Fishes of North and Middle America* (4 vols, 1896–1900) and *American Food and Game Fishes* (1902).

Everson (ĕv'ûrsŭn), borough (pop 1,809), SW Pa., SE of Pittsburgh, laid out 1874. It has a metal-products plant

Everyman, a late 15th-century morality play in English which is the counterpart of the Dutch play *Elckerlyc*. Which one is the original has been disputed. When he is summoned by Death, the hero, Everyman, can persuade none of his friends—Beauty, Kindred, Worldly Goods—to go with him, except Good Deeds. Modern presentations of *Everyman* have been well received

Evesham (ēv'shŭm, ē'shŭm, ē'sŭm), municipal borough (1931 pop 8,799, 1943 estimated pop 11,000), Worcestershire, England, SE of Worcester and on the Avon, in a productive fruit and vegetable region. There are remains of a Benedictine abbey founded early in the 8th cent. An obelisk marks the scene of the victory of the royalists under Prince Edward over Simon de Montfort in 1265, and the place where Simon fell.

Evi (ē'vī) [Heb, =desire], Midianite king. Num. 31 8, Joshua 13 21

Évian-les-Bains (āvyā'-lā-bĕ') or **Évian**, town (pop. 2,999), Haute-Savoie dept, E France, on the Lake of Geneva. It is a fashionable spa at the foot of the Alps. Évian mineral water (for digestive and rheumatic diseases) is bottled and exported to all parts of the world

evidence. The rules discussed in this article were developed in England for use in JURY trials. Today they are generally observed in all countries having the COMMON LAW, although they have been extensively modified by statute in some jurisdictions. The object of the law of evidence is to assure a high probability that the questions of fact in suits are resolved correctly. To that end the proof at the trial is ordinarily restricted to items of great probative value, and material which may arouse unreasoning passion is ordinarily excluded. The nature of the legal controversy determines what assertions of fact each party must prove or disprove to win his case, and an item of evidence which at best has a remote bearing on the factual issues must be excluded as irrelevant (an alternative legal term is *immaterial*). Naturally a judge prefers direct evidence (such as an official document or a witness's assertion of his immediate knowledge) to indirect or circumstantial evidence from which the truth respecting the issues can merely be inferred. The type of controversy also governs the burden of proof, i e, the obligation that a party bring forward some admissible proof of a factual contention on pain of having it decided against him. In criminal trials the prosecution has the burden of proof whenever the defendant raises an issue. In civil trials, on the other hand, each party has the burden only of proving his affirmative contentions. Thus the plaintiff must offer some proof of each of the elements which combine to constitute the defendant's alleged wrong (see PROCEDURE), while the defendant must prove his affirmative defenses, e g, in a suit for NEGLIGENCE, that the plaintiff's own negligence contributed to the injury. Carrying the burden of proof requires the prosecutor and, in most cases, the plaintiff to present his evidence first. At the close of this presentation the criminal or civil defendant may move for a nonsuit if admissible evidence supporting each necessary contention has not been offered. Evidence at the trial, in addition to being relevant, must be competent, i e, it must not fall under an exclusionary rule. Obviously if the evidence is documentary (e g, a birth certificate introduced to prove a person's age) or if it is "real" (e g, a bloody garment exhibited to prove that the victim suffered injury), there can be a question only whether the proferred evidence is itself incompetent. Most evidence, however, is testimonial, i e, offered by the witnesses who testify before the court. Here the question of the witness's personal competency is ever present. To qualify a witness as competent, it must be shown that he was able to know, understand, and remember the matters on which he is to be examined. Thus a witness must possess the sensory faculties needed to apprehend the facts on which he reports, and he must not be feeble-minded or insane. Children offered as witnesses are examined by the judge to determine their intelligence and their understanding of the OATH usually required of witnesses. Children may be permitted to testify without an oath if the jury is cautioned that their statements then possess slight probative value. The witness is first directly examined by the party who offers him. The adversary party is then allowed to cross-examine the witness and attempt to disprove his testimony by eliciting additional facts or showing inconsistencies or lies. Testimonial evidence is limited both by exclusionary rules—chiefly concerning opinion evidence and hearsay evidence—and by rules respecting personal privilege. No witness may express his opinion on any matter when the jury can draw its own conclusions from the facts, but on technical questions an expert witness (e g, a physician) may state his opinion. Hearsay declarations, i e, statements made by persons who are not before the court, usually are excluded on the grounds that the statement may not be cross-examined, and only when the circumstances of the statement afford a high probability of its truth may it be admitted. Thus, if the victim of an attack, believing himself near death and so likely to speak truth, identifies his assailant, the identification may be introduced in a trial for murder. Certain types of evidence are excluded by the assertion of the personal privilege of the witness or another person. In general, information confided in the course of the relations of attorney and client, priest and penitent, physician and patient, and husband and wife is subject to this privilege. Witnesses are further protected by the privilege of withholding self-incriminating evidence. Criminal defendants have the privilege of refusing to take the witness stand, and in most situations evidence of previous criminal convictions is inadmissible. When an attorney believes that offered evidence should be excluded, he first makes the "general objection" that the item is "irrelevant, immaterial, and incompetent." If this is overruled, he may offer a specific objection on any grounds. Allegedly damaging errors in the admission of evidence are reviewable on appeal. In their final summing up, the attorneys may make any assertion which is supported to some degree by evidence. Among the many modern treatises on the law of evidence those of J H WIGMORE are often accorded the highest authority

evil. The philosophical problem of evil is most simply stated in the question, Why does evil exist in the world? Death, disease, and SIN are often included in the problem. Traditional Christian belief ascribes evil to the misdeeds of men, to whom God has granted FREEDOM OF THE WILL. The Christian systems that hold PREDESTINATION and justification by faith claim like their Christian opponents that God is still not the author of the evil men do. One explanation of evil is DUALISM, as in ZOROASTRIANISM and MANICHAEISM. In OPTIMISM evil is treated often as more apparent than real. The book of Job is a literary treatment of the problem.

evil eye. An ancient superstition (still prevalent, particularly in the Orient) holds that the glance of certain persons has the power to harm or to destroy other persons or things. Amulets and charms of many kinds are worn or used as protection against the evil eye, animals and children being considered especially susceptible to it

Evil-Merodach (ē'vĭl-mē'rōdăk, -mĭrō'dăk) [Babylonian *Amil-Marduk*], d 560 B C, king of Babylonia (562–560 B C), son and successor of NEBUCHADNEZZAR. He favored JEHOIACHIN. 2 Kings 25 27–30

evolution, concept which embodies the belief that existing animals and plants developed by a process of gradual, continuous change from previously existing forms. This theory, also known as descent with modification, constitutes organic evolution. Inorganic evolution, on the other hand, is concerned with the development of the physical universe from unorganized matter. Organic evolution, as opposed to belief in the special creation of each individual species as an immutable form, conceives of life as having had its beginnings in a simple primordial protoplasmic mass (originating probably in the sea) from which, through the long eras of time, arose all subsequent living forms. Evolutionary concepts appeared in some early Greek writings, e g, in the works of Thales, Empedocles, Democritus, Anaxagoras, and Aristotle. Under the restraining influence of the Church no evolutionary theories developed during some 15 centuries of the Christian era to threaten the belief in special creation and the literal interpretation of the first part of Genesis. With the growth of scientific observation and experimentation, there began to appear from about the middle of the 16th cent. glimpses of the theory of evolution that emerged in the mid-19th cent. Among philosophers, belief in the mutability of the species appeared in the works of Francis Bacon, Descartes, Leibniz, and Kant. In the field of experimental science the invention of the microscope, making possible the study of reproductive cells and the growth of the science of embryology, was a factor in overthrowing theories such as preformation or *embottement* (belief that the embryo contains in miniature the complete form of the adult) which long hampered evolution. Studies in classification (taxonomy or systematics) contributed to the trend toward belief in evolution. Linnaeus, in his later years, showed an inclination toward belief in the mutability of species as a result of his observations of the many variations among species. Buffon, on the basis of his work in comparative anatomy, suggested the influence of use and disuse as molding the organs of vertebrate animals. Cuvier directed his weighty influence against Buffon and also against Lamarck, who was one of the first to present a clearly stated evolutionary theory. Lamarck's explanation depended upon the inheritance of acquired characters, and for this belief he was ridiculed and discredited by his contemporaries. Erasmus Darwin, grandfather of Charles Robert Darwin, had earlier advanced a theory similar to that of Lamarck. Goethe's theory of metamorphosis of plants, in which he interpreted all floral parts as having evolved from leaves, placed him among the ranks of the evolutionists. His discovery in man of the intermaxillary bone (previously demonstrated in a number of vertebrate animals) furnished important evidence of evolution among higher forms. Although special creation of each species was the prevalent belief even among scientists in the first half of the 19th cent, actually the evidence for the chief arguments in favor of evolution had by that time been uncovered. It remained for someone to assemble and interpret the evidence and to formulate a scientifically credible theory. This was accomplished by Charles Robert Darwin, who set forth the concepts that came to be known as DARWINISM. After returning from the *Beagle* voyage, Darwin had worked for some 20 years on analyzing his material, collecting further evidence, and working out a theory to explain his observations. In 1858 Darwin received from Alfred Russel Wallace a paper setting

forth a concept of evolution based on his studies (begun in 1848) in the tropics which almost paralleled the theory that Darwin had worked out Darwin felt that he should set aside his own interests and present Wallace's less exhaustive treatise However, Charles Lyell and Joseph Hooker, who had for years been familiar with Darwin's work, finally persuaded him to present his own and Wallace's conclusions simultaneously, this was done (1859) at a meeting of the Linnean Society. Darwin's generosity lent strength to the arguments of both authors Also in 1859 appeared the first edition of Darwin's *Origin of Species* The influence of the evolutionary theory upon scientific thought and experimentation and upon philosophy can scarcely be overestimated The mid-19th cent. saw not only the emergence of Darwinism but also the death of the theory of spontaneous generation or abiogenesis, belief in which had persisted in some degree from the time of Aristotle Pasteur's masterly and dramatic demonstrations supported by the work of John Tyndall in England presented incontrovertible evidence that microscopic organisms, like the more complex forms of life, can arise only from preexisting life This gave support to the theory of evolution In the years following the promulgation of evolution many accepted and many denied its validity The theory found an opposing force in some religious creeds that declared it incompatible with their basic tenets For a time evolution, sometimes falsely interpreted as meaning man's descent from monkeys, became a target for attack by both church and educational authorities Feeling ran high even as late as the time of the SCOPES TRIAL Nevertheless, the theory of evolution became firmly entrenched as a scientific principle, and in many creeds it has been reconciled with religious teachings It has, however, undergone modification in the light of later scientific developments Evidence that evolution has occurred still rests on essentially the same grounds that Darwin emphasized Since the time of Darwin much more fossil evidence has been uncovered, and paleontology, considered by Darwin as lending only rather weak support to the theory, has proved to be a strong bulwark The chief weakness of Darwinian evolution lay in its inability to explain satisfactorily the mode of origin of species and the mechanism of evolution The neo-Darwinians believed that natural selection adequately explained evolution and denied the inheritance of acquired characters, this stand provoked much controversy Darwinism failed to distinguish between inheritable and noninheritable characters (developed through influence of the environment) De Vries, in 1901, presented his theory that mutations or suddenly appearing, well-defined, inheritable variations, as opposed to the slight, cumulative changes stressed by Darwin, are forces in the origin and evolution of species Scarcely less important than the work of Darwin were the Mendelian laws of inheritance (rediscovered in 1900), although their significance in their relation to evolution did not begin to be realized until some 20 years later With the growth of the science of genetics, of which Mendelian inheritance formed the basis, new light was shed on evolution Largely through studies of the fruit fly or vinegar fly *Drosophila* developed the knowledge of the genes as the bearers of inheritable traits Through the artificial production of gene mutations and studies of their inheritance came a better understanding of the evolutionary process T H Morgan and H J Muller pioneered in experimental studies of evolutionary genetics Many others have contributed to this growing field of knowledge Evolution is not a completed process but a continuing one, both the recombination of the many factors carried by the genes inherited by offspring from its male and female parents and the occurrence of mutations are forces contributing to evolution It is believed by many that the role of the environment is to offer a stimulus to change and that ability to adapt to the environment may have survival value to the individual and may influence its ability to reproduce and thus to perpetuate certain characters See H F Osborn, *From the Greeks to Darwin* (1929), A F Shull, *Evolution* (1936), Theodosius Dobzhansky, *Genetics and the Origin of Species* (2d ed., 1941), Julian Huxley, *Evolution* (1942), R S Lull, *Organic Evolution* (rev. ed., 1947); G. G Simpson, *The Meaning of Evolution* (1949)

Évora (ĕ'vôru), city (pop 21,851), S Portugal, capital of Évora dist., largest city of Alentejo prov., ESE of Lisbon It was the Ebora (renamed Liberalitas Julia after Julius Caesar) of Roman times and has impressive ruins called the temple of Diana An episcopal see before 300, it was later a center of commerce under the Moors. In the wars of the reconquest by the Portuguese its capture by Geraldo Sem-Pavor [Gerald the fearless] in 1166 was a noteworthy incident The old cathedral (12th cent.) is well known, and the Jesuit university (1559–1758, now used as a high school) has remarkable glazed tiles

Evpatoriya, RSFSR: see EUPATORIA.

Évreux (ĕvrû'), town (pop. 16,645), capital of Eure dept., N France, in Normandy. A Roman town called Mediolanum, it became (10th cent.) the seat of a county which, through the Middle Ages, frequently changed hands From 1349 to 1425 the counts of Évreux were also kings of NAVARRE as CHARLES II (Charles the Bad) and CHARLES III (Charles the Good) The French crown, which had already held it at various times, acquired it in 1584, but Louis XIV exchanged it for Sedan with Frédéric Maurice, duc de Bouillon. The county was abolished by the French Revolution. The cathedral (14th–17th cent.) of Évreux was damaged in the Second World War, it contains some remarkable carved altar screens.

Ewa (ā'wä, ā'wə), town (pop. 3,570), Oahu, T H., 12 mi WNW of Honolulu. It is a sugar center

Ewald, Georg Heinrich August von (gā'ôrk hĭn'rĭkh ou'gōost fŏn ā'vält), 1803–75, German Orientalist and theologian He was professor of philology at Göttingen after 1827. In 1837 he was one of the seven professors who protested the revocation of the Hanoverian Constitution (see GÖTTINGEN) For the next 10 years he was a professor at Tübingen In 1848 he returned to Göttingen, but in 1867, having refused to take an oath of allegiance to the king of Prussia, he was retired with a pension In spite of the bitterness of his polemical writings, his scholarship was broad and deep, and he produced many highly valued exegetical and critical works Among his notable publications are *A Grammar of the Hebrew Language* (Eng. tr., 1836) and *The History of the People of Israel* (Eng. tr., 1867–86).

Ewald, Johannes (yōhä'nŭs ā'väl), 1743–81, Danish poet. He studied for the ministry, but soon turned his talents to writing In 1769 his dramatic tragedy *Adam and Eve* was published His numerous works include *The Joys of Rungsted* (1773), a poem dedicated to his mother, *Rolf Krage* (1770), the first original Danish tragedy, the satirical tragicomedy *The Brutal Clappers* (1771), and *Old Bachelors* (1773) His last great drama, which is still popular, *The Fishers* (1779), contains the Danish national anthem, *King Christian Stood by the Lofty Mast* Ewald was one of the earliest of the romantic writers of Denmark, and he exerted a marked influence on later writers. His name also sometimes appears as Evald

Ewbank, Thomas (ū'băngk), 1792–1870, American inventor and writer, b. Durham, England He learned sheet-metal working in England In 1819 he emigrated to the United States and for 16 years manufactured tubing in New York, utilizing his patents for tinning lead He wrote an authoritative account (1842) of hydraulic and other machines for raising water Appointed commissioner of patents by President Taylor, he greatly improved the method of handling claims After extensive travels in South America he wrote *Life in Brazil* (1856) His writings include also *The World a Workshop* (1855), *Thoughts on Matter and Force* (1858), and *Reminiscences of the Patent Office* (1859)

Ewell, Benjamin Stoddert (ū'ŭl), 1810–94, American educator, b Georgetown, D C, grad West Point, 1832, brother of Gen R S Ewell He taught mathematics at West Point, Hampden-Sidney College, and Washington College (now Washington and Lee Univ.) before being elected professor of mathematics and acting president of the College of William and Mary (1848) In 1854 he became president The college was closed in the Civil War, and Ewell, who had at first opposed secession, joined the Confederate army and was chief of staff to Gen J E Johnston through most of the war After the war he prevailed on Congress to reimburse the college for buildings burned by Federal troops and was thus able to reopen William and Mary in 1869, only to be forced to close it again in 1881 because of diminished income Ewell spent his own money in keeping up the institution, until in 1888 it was reopened with state aid He was then president emeritus till his death

Ewell, Richard Stoddert, 1817–72, Confederate general, b Georgetown, D C, grad West Point, 1840 He served with distinction in the Mexican War and on the frontier. Ewell, of Virginia family, resigned from the army in May, 1861, to follow that state in the Civil War. He was rapidly promoted in the Confederate army, attaining his major generalcy in Oct., 1861 In 1862, his division fought under T J (Stonewall) JACKSON in the Shenandoah Valley campaign, and Ewell had a large part in Jackson's victories at Winchester, Cross Keys, and PORT REPUBLIC He continued in Stonewall's command through the Seven Days battles and Lee's subsequent advance on Pope but lost his leg at the beginning of the second battle of Bull Run (Aug., 1862) When Ewell returned to duty in May, 1863, he was promoted lieutenant general and made commander of the 2d Corps, succeeding the late Stonewall Jackson He ably led Lee's advance in the GETTYSBURG CAMPAIGN and commanded the Confederate left in that great battle. At Spotsylvania Courthouse in the WILDERNESS CAMPAIGN (1864), Ewell sustained further injury and was forced to retire from the field. He later commanded the defenses of Richmond until the city fell. Sheridan captured him and his small force at Sailor's Creek in April, 1865. Ewell was held prisoner for four months after the war. Upon his release, he made his home in Tennessee See D. S. Freeman, *Lee's Lieutenants* (3 vols., 1942–44).

Ewing, Eleanor Boyle, 1824–88, American philanthropist, b. Lancaster, Ohio; daughter of Thomas EWING (1789–1871) She married (1850) William Tecumseh SHERMAN Her zealous work for Catholic charities was the best-known manifestation of an admirable character. See *Home Letters of General Sherman* (ed by M. A. De Wolfe Howe, 1909), Anna McAllister, *Ellen Ewing, Wife of General Sherman* (1936)

Ewing, Hugh Boyle, 1826–1905, Union general in the Civil War, b Lancaster, Ohio; son of Thomas Ewing (1789–1871). Having served with distinction in the Antietam, Vicksburg, and Chattanooga campaigns, he was brevetted major general in 1865 Ewing was minister to the Netherlands (1866–70)

Ewing, James (ū'ĭng), 1866–1943, American pathologist, b Pittsburgh, M.D. Columbia, 1891 Professor of pathology (1899–1932) and of oncology (from 1932) at Cornell and director of Memorial Hospital, New York city, he was known for his research in cancer and in classifying tumors He wrote *Neoplastic Diseases* (1919, 4th ed., 1940) and *Cancer* (1931)

Ewing, Sir James Alfred, 1855–1935, Scottish engineer and physicist. He was principal and vice chancellor of the Univ. of Edinburgh from 1916 to 1929 He had earlier served as professor at Tokyo (1878–83), Dundee (1883–90), and Cambridge (1890–1903) He was director of naval education in the United Kingdom (1903–16), held important government committee posts, and was knighted in 1911 His researches in magnetism led him to observe the phenomenon of hysteresis, and he investigated the crystalline structure of several important metals. He studied earthquakes in Japan, one of the first Europeans to do so His works include *Treatise on Earthquake Measurement* (1883), *The Strength of Materials* (1899), and *Thermodynamics for Engineers* (1920)

Ewing, John, 1732–1802, American clergyman and educator, b Cecil co., Md., grad Princeton He served as pastor of the First Presbyterian Church of Philadelphia from 1759 until his death and, after 1779, as professor of natural philosophy and provost of the newly chartered Univ. of the State of Pennsylvania Ewing remained as provost when this university and the College of Philadelphia were combined in 1791 as the Univ. of Pennsylvania He wrote numerous articles on scientific subjects, and his lectures were published in *A Plain, Elementary, and Practical System of Natural Experimental Philosophy* (1809)

Ewing, Juliana Horatia (Gatty), 1841–85, English story writer, b Ecclesfield, Yorkshire She wrote the children's classic, *Jackanapes* (1879), first published in *Aunt Judy's Magazine*, which was founded by her mother, Margaret Gatty Other stories for children are *A Flatiron for a Farthing* (1870–71) and *The Story of a Short Life* (1885)

Ewing, Thomas, 1789–1871, American statesman, b Ohio co., Va. (now W Va.), grad Ohio Univ., 1815 He began (1816) to practice law in Lancaster, Ohio and rose rapidly in the profession He represented Ohio in the U S Senate (1831–37) and supported Henry Clay in the Whig fight against the Jackson administration Ewing was Secretary of the Treasury under Presidents Harrison and John TYLER from March to Sept., 1841, when all the cabinet except Webster resigned President Taylor made him the first Secretary of the Interior (March, 1849) but in July, 1850, he resigned to fill a senatorial vacancy from Ohio until March, 1851. Defeated for reelection, Ewing resumed his law practice and subsequently won renown for his work before the U S. Supreme Court He favored conservative Unionist policies in the Civil War and later supported President Johnson Ewing was the benefactor of Gen. W. T SHERMAN

Ewing, Thomas, 1829–96, Union general in the Civil War, b Lancaster, Ohio, son of Thomas Ewing (1789–1871) He served as the first chief justice of the Kansas supreme court from 1861 to 1862, when he resigned to recruit Kansas volunteers. Ewing was brevetted major general of volunteers for his service at Pilot Knob, Mo (Sept., 1864), in checking Price's march on St Louis After the war he was a leader of the Greenback movement in Ohio, a Democrat in the House of Representatives (1877–81), and later a lawyer in New York.

Excalibur, King Arthur's wonderful sword given him by the LADY OF THE LAKE and returned to her by Sir Bedivere at the king's death. Another sword was drawn from a stone by Arthur in his youth to prove his royal lineage See ARTHURIAN LEGEND.

Excelsior (ĕksĕl'sēôr), village (pop 1,422), E Minn., western suburb of Minneapolis. It is a resort on Lake Minnetonka

Excelsior Springs, city (pop. 4,864), W Mo., NE of Kansas City; founded 1880, inc. 1903. It is a health resort with mineral springs. Frank and Jesse James lived near by.

excess profits tax, a tax on a profit above a standard profit Georgia used an excess profits tax during the Civil War. In 1917 the Federal government

adopted such a tax, which continued in various forms and at increasing rates, until 1921 The excess profits tax has been chiefly a wartime phenomenon, it has been imposed on the excess over a firm's peacetime earnings or over an arbitrary earning rate. In 1915-21 Great Britain imposed an excess profits tax, with a rate varying from 40 to 80 per cent Excess profits taxes were revived in both Great Britain and the United States in the era of the Second World War, rates were increased to 100 per cent in Britain, and the choice of terms allowed to the taxed firm was not so advantageous as in the United States See J R Hicks and others, *Taxation of War Wealth* (1941)

exchange, the mutual transfer of goods, money, or services or their equivalents In primitive society, exchange of unessential articles, such as jewelry, was common, but no primitive group could afford to rely on another for the necessities of life Gradually, as DIVISION OF LABOR developed, articles were produced for exchange, each group producing what best it could. Modern capitalistic society is not strictly an economy based on exchange, but is an outgrowth of it, because society has become too complex for barter, which is essential in true exchange, barter is replaced by the money and price system Broadly, the term is used to signify exchange of goods and services for money The value of the various factors in exchange is determined by the market demand for them In commerce, an exchange is a place where trading goes on, especially a STOCK EXCHANGE or a commodity exchange The current price of a BILL OF EXCHANGE is called the course of exchange Conversion of one country's currency into that of another by means of still others is called arbitration of exchange Exchange also refers to the amount of money necessary to buy a given amount in a foreign country, usually for the FOREIGN EXCHANGE of goods See W S Jevons, *Money and the Mechanism of Exchange* (1875, many times reprinted), J A Todd, *The Mechanism of Exchange* (1933)

Exchequer, Court of (ĕkschĕ'kur, ĕks'chĕk"kur), British governmental agency It originated after the Norman Conquest as a financial committee of the Curia Regis. By the reign of Henry II it had a separate organization and was responsible for the collection of the king's revenue as well as for exercising jurisdiction in cases affecting the revenue By the latter part of the 13th cent a separation became discernible between the court proper and the exchequer or treasury, especially with the appointment of lawyers as barons (judges) of the exchequer Its jurisdiction over common pleas now steadily increased, e g , to include money disputes between private litigants on the assumption that the plaintiff was indebted to the crown and needed payment from the defendant to enable him to pay the king A second Court of Exchequer Chamber was set up in 1585 to amend errors of the Court of the King's Bench From an amalgamation in 1830, a single Court of Exchequer emerged as a court of appeal intermediate between the common-law courts and the House of Lords In 1875 the Court of Exchequer became, by the Judicature Act of 1873, the exchequer division of the high court of justice

excise see INTERNAL REVENUE

exclamation point, see PUNCTUATION

excommunication, formal expulsion from a religious body It is attended by social ostracism when religious and social communities are nearly identical So it was in the case of Spinoza, excommunicated by the Jews In Christianity the Roman Catholic Church especially retains excommunication, it teaches that the spiritual separation of the offender from the body of the faithful takes place *ipso facto* when the offense is committed, and the decree of excommunication (or ANATHEMA) is a warning and proclamation of exclusion from Christian society Those who die excommunicate are not publicly prayed for, but this does not imply that the living know who is saved or damned Excommunications vary in gravity, thus, in grave cases readmission may be possible only by action of the Holy See Excommunicates are always free to return to the Church on repentance Protestant churches have generally abandoned excommunication, the Friends have made frequent use of it

excretion, process of eliminating from the body those materials which are of no further use It is an essential process in all forms of life Plants eliminate gases through the stomates In the unicellular animals, the protozoa, wastes are simply eliminated through the surface of the cell Among the multicellular animals special excretory organs develop In man the organs which function in excretion are the skin, which eliminates water and salts (see SWEAT), the lungs, through which carbon dioxide and water vapor leave the body, the kidneys, through which URINE is eliminated, and the large intestine (see INTESTINE) from which solid wastes are discharged

Exe (ĕks), stream of Somerset and Devonshire, England It rises in Exmoor and flows c 55 mi. S and SE to the English Channel at Exmouth.

execution of judgments: see JUDGMENT.

executive, one who carries out the will or plan of another person or of a group In GOVERNMENT, the term refers not only to the chief administrative office but to all others who execute the laws and to them as a group In modern government, the executive also formulates and carries out governmental policies, directs relations with foreign governments, commands the armed forces, approves or disapproves legislative acts, recommends legislation, and in some countries summons and opens the legislature, appoints and dismisses some executive officials, and pardons any but those impeached Usually the executive may also issue ordinances, often supplementing legislative acts, and may interpret statutes for the guidance of officials. These broad powers depend upon the theory that the state has a juristic personality whose will the government, in its various departments, must perform The separation of the legislative, executive, and judicial powers of government was not only modified in the U S CONSTITUTION but has been further modified in practice, for the President performs many judicial and legislative functions State and municipal executives have likewise assumed larger powers Distinction is sometimes made between executives who decide policies and the administration which carries out the laws and executive orders In business, the executives are those who manage, decide policies, and control the business See C A Beard, *American Government and Politics* (1931), H L Laski, *The American Presidency* (1940)

executors and administrators (ĭgzĕk'yōōturz, ădmĭn'ĭstrātŭrz) An executor is the person designated in the WILL of a decedent to carry out the provisions of the will An administrator is appointed by a probate court to perform the identical functions if the testator failed to name executors are not capable or are dead An administrator is also appointed in case of the death without a will of any person who owns property, the duty of such an administrator is to distribute the property among the heirs Administration is not necessary if the heirs, the creditors of the estate, and all others interested in the estate agree to the settlement of debts and the distribution of the property Under modern statutes, priority of right to be administrator depends largely on nearness of relation to the decedent The executor or administrator must execute a bond for honest and faithful discharge of his duties After he has paid the legacies and otherwise has followed the directions of the will so far as legally possible, the court will discharge him if his accounting is correct and he has shown himself to have acted honestly and in good faith, otherwise his bond may be forfeited, and he is made liable to suit

exegesis (ĕk"sĭjē'sĭs) [Gr ,=explanation], exposition of a literary passage, especially of Scripture Exegesis today has the general aim of discerning what the writer intended, this is accomplished especially by textual criticism Formerly exegesis ascertained what moral truths might be drawn from a passage, emphasizing especially allegorical interpretation of historical passages, which were also accepted as factually true Thus it was a conventional idea that the sacrifice by Abraham of his son Isaac was a foreshadowing of Jesus' death on the cross

exercise. The use of muscles leads to an increase in their size and improvement in their state of tone and, through favorable effect on circulation, has a beneficial action on the body as a whole Exercise is also a means of RECREATION and is important in the treatment of certain disorders, including paralysis Systematic exercise was introduced into Germany by Friedrich L Jahn in the early 19th cent Thus system makes use of apparatus, while the Swedish systems of P H Ling and of J G W Zander do not employ apparatus Exercise includes setting-up exercises, gymnasium, games, sports (including swimming), and dancing Each individual should follow the form of exercise which is suited to his needs and should avoid overexertion, since this degree of effort gives the heart more work than it is capable of doing Shortness of breath is a signal for rest See J H McCurdy and L A Larson, *The Physiology of Exercise* (3d ed , 1939), G Z Dupam, *Exercise and Physical Fitness* (1948), L E Morehouse and A T Miller, *The Physiology of Exercise* (1948)

Exeter (ĕk'sutur), village (pop 1,589), S Ont , on the Sable near Lake Huron and NW of London

Exeter, county borough (1931 pop 66,029, 1947 estimated pop 75,290) and city, county town of Devonshire, England, on an elevation above the Exe river There is a canal to Topsham, at the head of the Exe estuary The fortified town Isca Damnoniorum occupied the site in Roman times Ruins of a Norman castle and parts of the great town walls remain Because of its strategic location, the town was the object of several sieges, by the Danes in the 9th and 11th cent , by William the Conqueror in 1068, by Yorkists in the 15th cent , and by religious factions in the middle of the 16th cent In the civil wars, it surrendered to Fairfax (1646) The great cathedral, with its massive Norman towers, contains a remarkable oak throne of the bishops, the chapter house contains the famous EXETER BOOK Of interest also are Northernhay Boulevard, near the castle, and the bishops' 14th-century palace The cathedral was severely damaged by bombing in the Second World War The city has varied industries

Exeter. **1** City (pop 3,883), S central Calif., SE of Fresno, in a diversified farm section of the San Joaquin Valley, inc 1911 **2** Town (pop 5,398), co seat of Rockingham co , SE N H , SW of Portsmouth Rev John Wheelwright settled here in 1638 after his banishment from Massachusetts, the town was organized in the same year Noted for its patriotic activities, Exeter was the capital of New Hampshire in the Revolution The Gilman garrison house (17th cent) and several 18th-century buildings, including the Congregational church, are here, and Exeter is the seat of PHILLIPS EXETER ACADEMY Daniel Chester French, who designed the war memorial, William Ladd, and Lewis Cass were born in Exeter Textiles are made here **3** Industrial borough (pop 5,802), NE Pa , on the Susquehanna and NE of Wilkes-Barre, settled 1790, inc 1884 Anthracite is mined here **4** Rural town (pop 1,790), W R I , near Queens river, set off from North Kingstown and inc 1743

Exeter Book, manuscript volume of Old English religious and secular poetry, compiled c 975 and given to Exeter Cathedral by Bishop Leofric (d 1072) See edition by George Philip Krapp and Elliott V K Dobbie (1936)

Exeter College: see OXFORD UNIVERSITY.

exhaustion see FATIGUE

exhibition, term usually applied to a special showing of industrial and fine arts or of commercial and agricultural products On a large scale, it is called an EXPOSITION

Exile see CAPTIVITY

exile, expulsion of a national from his country by the government or voluntary removal of a citizen usually in order to escape punishment The banishment may be permanent or temporary and may be imposed as punishment for ordinary crimes or for political offenses An exile may be excluded from his native land upon pain of death, or he may be transported to, and sequestered in, a secluded location In the Homeric age of Greece, the punishment of homicide belonged to the family of the victim, rather than to the state (compare VENDETTA) If the offender could not atone for his crime by money payment, he could escape punishment only by flight When a reconciliation was effected, the exile returned and was not liable to reprisals After the state assumed jurisdiction over such cases, exile was sometimes an alternative penalty offered the accused when his guilt was established If the crime was intentional, his banishment was permanent and his property was confiscated If the offense was unintentional, his exile was temporary and his property was not subject to confiscation In the Greek city-states exile was a common punishment for political offenses Its typical form was ostracism The device, probably originated by Clisthenes, was designed to safeguard democracy by an expulsion of subversive leaders later it evolved into a system of expelling political dissenters As such, it was both a cause and a result of civil war Exile in early Rome was a means of escaping penalties An offender's removal was voluntary, but he was placed under an interdict by the state, and anyone could lawfully kill him if he returned With the extension of the empire, Roman offenders were exiled by deportation or sequestration The ancient Hebrews allowed those who committed crimes against the person to take refuge in specially designated cities of SANCTUARY These exiles were immune to personal or state reprisal Expulsion of political offenders was a common practice of the Italian city-states In medieval England, exile was usually imposed by a quasi-voluntary abjuration of the realm Certain classes of English offenders were formerly transported to Australian penal settlements, while Siberia received thousands of exiles banished by the tsarist government (see DEPORTATION) With the growth of national states and the acceptance of the doctrine that ties between state and citizen are indissoluble, exile tends to be less frequent, but in modern civil war, voluntary exile is common, and dictatorships, which depend upon conformity, also banish dissenters Political opponents of a state may seek refuge abroad, may be sequestered, or may be transported to outlying districts and there interned Political exiles are not subject to extradition and may demand protection from the country receiving them See REFUGEE, OUTLAW, ÉMIGRÉ

Exira, town (pop 1,046), SW Iowa, on the East Nishnabotna and N of Atlantic, settled 1852, laid out 1857, inc 1880

existentialism (ĕgzĭstĕn'shulĭzm, ĕksĭ–) There are three developments of this philosophic school—the Christian existentialism of Soren Kierkegaard, the atheistic existentialism of Martin Heidegger and Jean Paul Sartre, and the Christian existentialism of St Thomas Aquinas as presented by Jacques Maritain While differing widely in direction and emphasis, the common ground for these three doctrines seems to be the major problem is the problem of human existence, reason, by itself, is an inadequate method for explaining the enigmas

of the universe, anguish is an emotion common to all men as they confront the problems of life, and morality demands positive participation The Christian existentialism of Kierkegaard develops these grounds within a religious framework The intellectual methods available to man cannot reconcile paradoxes, and the anguish which man bears is caused by his inability to resolve these tensions For Kierkegaard the escape lies in the transcendental plane of faith In God the finite and the infinite are one, no tensions exist This philosophy has been developed theologically by Karl BARTH, Paul Tillich, and Reinhold Niebuhr and psychologically by Karl Jaspers and Gabriel Marcel Heidegger and, particularly, his pupil Sartre are the leading atheistic existentialists Sartre maintains that the fundamental absolute truth of atheistic existentialism is the Cartesian "I think, therefore, I exist" The existence of God is denied, as is also the existence of any set pattern of human behavior Man becomes what he wills himself to be, and as he perceives the futility of his efforts to resolve the paradoxes of the universe he sees himself alone and the world as absurd His aloneness gives him freedom to choose without dependency, obligation, or justification, and the emotional price which man pays for his freedom is anguish, forlornness, and despair He has no being, is nothingness, when he follows the dictates of society A literary movement has developed among the French existentialists, influenced by Franz Kafka, led by Sartre and Simone de Beauvoir A political creed based on the philosophy has started as well The third type of existentialism, that of Thomism as developed by Maritain, is best expressed in his *Existence and the Existent* (1949), in which he claims that Thomism is the only authentic existentialism The desire for being and the anguish over the possibility of nothingness is resolved by faith in God, the Free Existent Through this faith love of humanity is reborn and manifests itself in charity and self-giving See J P Sartre, *Existentialism* (1947), Marjorie Grene, *Dreadful Freedom* (1948), Guido de Ruggiero, *Existentialism* (1948)

ex libris · see BOOKPLATE

Exmoor, high moorland, Somerset and Devonshire, England It is largely a wasteland, with hills (Dunkery Beacon, 1,707 ft , highest point, others above 1,500 ft), valleys, and wooded glens, underlain by slates and sandstone. It is the grazing ground of sheep and the small Exmoor ponies The Exe, Lyn, and Barle rivers rise here There are many prehistoric earthworks It was the home of a nomadic group of brigands called the Doones before they were dispersed in the 17th cent See J L W Page, *An Exploration of Exmoor* (1890)

Exmouth (ĕks'mouth), urban district (1931 pop 14,591, 1943 estimated pop 15,260), Devonshire, England, below Exeter and on the east side of the mouth of the Exe river It has a long history—in 1347 it provided 10 ships for the siege of Calais Its modern development began in the 18th cent It is now a port and a popular summer resort There are promenades, baths, and facilities for golf, tennis (annual tournament), fishing, and yachting Docks were built in 1869 Sir Walter Ralegh was born at near-by Hayes Barton

Exodus (ĕk'sudus), book of the Old Testament, second of the five books of the Law (the Pentateuch or Torah) ascribed by tradition to Moses It is a religious history of the Jews during their departure from Egypt, the period when they began to receive the Law The events may be outlined as follows first, bondage in Egypt, from which God prepares liberation by means of Moses (1–11), including Moses' early career and divine vocation (1 15–7 13), and the first nine plagues of Egypt (7 14–25, 8–11), second, the exodus proper (12–18), with the plague of the first-born and the institution of the Passover (12–13) and the crossing dry shod through the Red Sea (14), third, the first divine legislation at Sinai (19–40) The last portion includes the Ten Commandments (20), a law code (20 22–23 33), directions for a tabernacle and worship (25–27,29–31), the designation of Aaron as high priest (28), the first national apostasy at the golden calf (32), a brief restatement of the code (34), and the institution of the tabernacle (35–40) A most solemn moment of biblical history occurs early in Exodus the appearance of God to Moses in the burning bush revealing His name as I Am (3 11–15) For critical views of the composition of Exodus and for works on the book, see OLD TESTAMENT.

exogamy see MARRIAGE.

expanding universe. see UNIVERSE

expansion, in physics, an increase in volume resulting from an increase in temperature Contraction is the reverse process It is characteristic of matter, according to the kinetic molecular theory, that when heat is applied to a body the rate of vibration and the distances between the molecules composing it are increased and that an increase in the space occupied by the body, i e , its volume, should result This increase in volume is not constant for all substances for any given rise in temperature, but is a specific property of each kind of matter. For example, zinc and lead undergo greater expansion in a one-degree rise in temperature than do silver or brass The amount of expansion which a unit volume (e g , a cubic centimeter or a cubic foot) of any substance undergoes per one-degree rise in temperature is called its coefficient of cubical expansion and is listed as a property of that substance The coefficient of linear expansion is the increase per unit of length per degree rise in temperature, and it can be calculated by dividing the coefficient of cubical expansion of the substance by three When the amount of expansion of a given length of a substance has been determined experimentally, the linear coefficient is calculated by dividing the total amount of expansion by the product of the original number of length units and the number of degrees of rise in temperature. Liquids and gases, as well as solids, expand when heated The coefficient of expansion is about the same for all the common gases at ordinary temperatures; it is $\frac{1}{273}$ of the volume at 0°C per degree rise in temperature The Kelvin or absolute scale (see TEMPERATURE) is based upon this number Charles's law concerning the expansion of gases states that the volume of a GAS is directly proportional to its absolute temperature. Liquids differ from each other as do solids in their expansion coefficients Water, unlike any other substance, expands when its temperature is decreased between 4°C and 0°C

expatriation, loss of NATIONALITY This may be general, as in connection with the cession or conquest of territory, or may be individual, and it may or may not be voluntary Desertion in time of war, flight in time of peace from a country requiring a period of military service of its citizens, or banishment may result in expatriation if the government chooses to renounce its obligations to protect such individuals Such persons are stateless until NATURALIZATION under some other government takes place Some governments, including the United States, consider an individual to have voluntarily expatriated himself if he lives abroad more than five years without giving notice on proper forms to diplomatic or consular agents that he wishes to continue as a citizen Many countries also consider that a woman loses her citizenship upon marrying an alien, the United States in 1922 provided that a married woman's citizenship was independent of her husband's and that she might choose whether to retain her own or adopt that of her husband The United States, in common with other countries, forbids expatriation in time of war The view of common law, that one's allegiance cannot be renounced without the state's permission, prevailed until after the middle of the 19th cent and is still common in Europe The United States first protested against it in order to protect her naturalized immigrants from claims of their native states, which had not recognized the rights of subjects to expatriate themselves In 1868 Congress announced the right of voluntary expatriation to be "a natural and inherent right of all people" and served notice that she would protect her naturalized citizens abroad, even in their native countries The United States has concluded treaties with most European countries covering this and other conflicting interpretations of citizenship Great Britain abandoned the common-law view in 1870 and gave British citizens the right to expatriate themselves voluntarily Some other European nations followed the British lead, but others did not Several nations today, notably the USSR, do not recognize expatriation

Exploits, largest river of Newfoundland Rising in the Long Range, it flows northeast and empties into Exploits Bay, a branch of Notre Dame Bay On it are Grand Falls and Bishop's Falls, the sites of large electric power plants

exploration was undertaken from the earliest times by primitive peoples in search of supplies, and most regions of the world were first discovered by them Recorded exploration which contributed to Western civilization began c 3000 B C , it was usually motivated by a desire for trade, conquest, or colonization Early Egyptian expeditions penetrated into Nubia, the Phoenicians and the Greeks explored the Mediterranean and the Black Sea regions before 600 B C , and a Phoenician expedition sent out c 600 B C by the Egyptian ruler Necho is said to have sailed around Africa After c 500 B C the Carthaginians pioneered beyond the Strait of Gibraltar to trade along the coasts of Spain and Africa A Greek navigator, Pytheas, probably sailed beyond Britain c 330 B C The conquests of Alexander the Great brought Western contacts with the Orient, and the Roman legions extended the limits of geographical knowledge, especially in N Europe Trade with the East was stimulated by the discovery (A D c 15) of a sea captain, Hippalus, that by using monsoon winds one could sail across the Indian Ocean instead of hugging the coast. Alexander, a Roman trader, established (A D. c 100) direct trade with China. After the dissolution of the Roman Empire, the Arabians extended contacts with the East Exploration by Europeans was carried on during the Middle Ages by the Norsemen, Eric the Red reached Greenland, and Leif Ericsson, North America However, these Norse journeys were too meagerly publicized to influence the rest of Europe. During the Crusades, Europe emerged from isolation and regained some knowledge of the Orient. This was extended by remarkable journeys across Asia, notably the missionaries Piano Carpini and William Rubruquis and by Marco Polo By c 1400 the breaking up of the Mongolian empire and the growth of the Ottoman Empire had blocked the routes to the East The search for new routes initiated a great age of discovery Henry the Navigator promoted voyages along the coast of Africa which helped to dispel the miasma of superstition and misinformation that had impeded previous attempts to sail through a torrid zone reputed to be impassable Epochal achievements that revealed the extent of the globe include the rounding of the Cape of Good Hope by Bartholomew Diaz, the reaching of India by Vasco da Gama, the discovery of America by Christopher Columbus, and the first circumnavigation of the globe by the expedition of Ferdinand Magellan In the 16th cent Spanish explorers, notably Balboa, Cortés, Francisco Pizarro, Cabeza de Vaca, De Soto, and Coronado, explored large areas in the Americas Much of the interior of North America was revealed in the 17th cent by Samuel de Champlain, La Salle, Louis Jolliet, Jacques Marquette, and other French explorers A Spanish and Portuguese monopoly of the new trade routes stimulated attempts to find other passages to the Orient (see NORTHEAST PASSAGE and NORTHWEST PASSAGE) and was soon challenged by English and Dutch voyages in the Pacific Ocean Most of the major islands of the Pacific and the coast line became known through the voyages of Drake, Tasman, Dampier, Cook, Bering, Vancouver, and other explorers The interior of Australia was explored in the mid-19th cent , and most of Africa, the "dark continent," by the end of the century This century saw also important achievements in arctic and antarctic exploration and pioneer attempts at deep-sea exploration (see OCEANOGRAPHY) Scientific interests and a search for natural resources were influential in motivating exploration in the 19th cent and have predominated in the 20th cent Inventions equipped the explorer with better facilities for conducting his inquiries, these include the steamship, the automobile, and the airplane Hitherto inaccessible areas, such as the interior of Antarctica, are being revealed See also GEOGRAPHY and articles on localities, e g , AFRICA, ARCTIC REGIONS, AUSTRALIA General works on exploration include J N L Baker, *A History of Geographical Discovery and Exploration* (1931), Sir Percy Sykes, *A History of Exploration* (1934), Leonard Outhwaite, *Unrolling the Map* (1935), Vilhjalmur Stefansson, ed , *Great Adventures and Explorations* (1947) Works on ancient exploration include C R Beazley, *The Dawn of Modern Geography* (3 vols , 1897–1906), Max Cary and E H Warmington, *The Ancient Explorers* (1929)

explosive, a substance (a liquid, solid, or gas) which undergoes decomposition or combustion with great rapidity, with the evolution of heat, and with the production of a large volume of gas Because the volume of gas thus suddenly formed is so many times greater than that occupied by the explosive substance originally and is expanding even more because of the heat evolved in the reaction, an enormous pressure is exerted The suddenness and the magnitude of this pressure is responsible for the characteristic activities of explosives—the blasting of rocks, the shattering of iron and steel shells and containers, and the propelling of shells from guns Chemically, explosives are of two general kinds Some, such as black powder (GUNPOWDER has been largely replaced today by smokeless powders), are mixtures of combustible, but not necessarily explosive, substances which, when "set off" (by ignition or friction), undergo very rapid combustion Others are compounds, which in being formed take on much energy, i e , are endothermic It is this energy that they liberate in their rapid decomposition and that is a factor in the expansion of the gas formed The chief elemental constituents of most explosives are nitrogen, oxygen, hydrogen, and carbon, and these elements are arranged in molecules which are apparently relatively less stable than those formed when they decompose Most of the modern high explosives (explosives which decompose with the greatest rapidity) are prepared from nitric acid In setting off many high explosives certain other explosives called DETONATORS (such as mercury FULMINATE) are employed Important high explosives are DYNAMITE, GUNCOTTON, NITROGLYCERIN, PICRIC ACID, and TRINITROTOLUENE (T N T)

exponent (ĕk'spōnunt), in mathematics, a number, letter, or algebraic expression written above and to the right of another number, letter, or expression called the base In the expression x^3 and x^n, the number 2 and the letter n are the exponents respectively of the base x The exponent indicates the power to which the base is to be raised When exponents were first introduced, only positive whole numbers were used and then the exponent indicated how many times the base was to be taken as a factor (see ROOT) In advanced algebra, fractions, zero, and negative numbers are also used as

exponents. Particular meanings have been assigned to these types of exponents so that they obey the same algebraic rules as does the simpler type of exponent

Export, borough (pop. 1,990), SW Pa., E of Pittsburgh, inc 1911 Coal mining is done here.

export, commodities sold out of a country. They are usually sold to wholesalers in the importing country They may be paid for primarily in goods and services, the balances being paid partly in gold and partly in currency whose par value is established by the International Monetary Fund Between the producer and the importer are many services facilitating such exchanges, which may be grouped under selling, buying, and distribution, transportation, and finance and insurance The national trade balance sheet includes not only visible exports, but such invisible exports as use of ships, foreign loans, commissions, payments for foreign loans, money spent by tourists and shippers in a foreign country, emigrants' remittances to relatives in the home country, and such miscellaneous items as moving-picture royalties Countries tend to export their surpluses for which there is a foreign demand but which cannot be consumed at as good a price at home See R E Osborne, *Export and Import Business* (1932), Philip MacDonald, *Practical Exporting* (1949)

exposition The word has wider meanings but is applied typically to an international exhibition or world's fair, designed to register the state of civilization The fine and industrial arts lend themselves especially to such an exposition, and the first international expositions were limited rather strictly to these arts Later expositions have emphasized scientific and technological progress Expositions have done much to raise standards of popular taste, to diminish provincialism, and to promote understanding among the countries participating The chief expositions outside the United States include the following London, 1851, 1862, and 1871, Paris, 1855, 1867, 1878, 1889, 1900, and 1937, Vienna, 1873, British Empire Exhibition at Wembley, 1924–25, South Africa Empire Exhibition at Johannesburg, 1936–37, International Exhibition at Nagoya, Japan, 1937, Empire Exhibition at Glasgow, 1938, Swiss National Exhibition at Zurich, 1939 Among the most important American expositions are Centennial Exposition, 1876, and Sesquicentennial Exposition, 1926, at Philadelphia, Cotton Centennial Exposition at New Orleans, 1884, World's Columbian Exposition, 1893, and Century of Progress Exposition, 1933–34, at Chicago, Pan-American Exposition at Buffalo, 1901, Louisiana Purchase Exposition at St Louis, 1904, Panama-Pacific Exposition, 1915, and Golden Gate International Exposition, 1939–40, at San Francisco, California Pacific International Exposition at San Diego, 1935–36, Great Lakes Exposition at Cleveland, 1936–37, New York World's Fair, 1939–40 See also FAIR

express company, system for the transportation of parcels, goods, luggage, or money when safer and quicker delivery is necessary than is provided by ordinary freight service Parcels to be expressed are collected from the shippers and delivered to the consignees by the compay Transportation is furnished chiefly by the railroads, but steamship, bus, and air lines also are utilized The transportation charge may be paid by the shipper or collected from the consignee The fee includes some insurance, additional insurance may be purchased for a higher fee The company also may act as an agent for the shipper and collect on delivery the amount of the invoice from the consignee Expressed goods sent by rail are transported in special cars attached to passenger trains or in special express trains The express company also performs such transactions as the issuance of letters of credit, traveler's checks, and money orders, the exchange of foreign money, the transference and filing of legal documents, the forwarding and clearance of imports and exports, and the operation of an extensive travel agency It is difficult to determine just when or by whom the express business in the United States was started Probably the postrider in colonial times performed the expressman's duties on land, he gradually disappeared from the main post roads, and late in the 18th cent stagecoaches began carrying mail in New England As people pushed westward into the mountain country, the pack horse, which had been in use from early days, became more prominent and was followed by the wagon carriers, who in turn were succeeded by railroads and canals In the early 19th cent, the jehu, a traveling agent who executed any sort of business, became prominent In 1834 an express service between Boston and Providence was organized by B D and L B Earle, they were joined by Henry Prew and as Earle & Prew the firm was in operation until the end of the century Silas Tyler, in 1835, ran a car attached to passenger trains on the Boston and Lowell RR, in 1836 he sold to W C Gray. In 1836 David T. Brigham conducted an express business on the Boston and Worcester Dean and Davenport had a carrying business between Boston and Taunton from 1836 to 1837, and in 1838 Dow's Express, Boston to Haverhill, was established In 1839 William F. Harnden started a parcels and general delivery service between Boston and New York, and in the same year he was listed in the Boston directory as "Express Package Carrier", in 1840 he established a transatlantic business and a foreign exchange through his partner, Dexter Brigham S S Leonard established a Boston and Worcester Express in 1840 Also in 1840 Burke and Company's Express was started between Boston and Worcester—with P B Burke and Alvan Adams as partners Within a few weeks Burke sold out to Adams, who carried on under the name of Adams and Company In 1841 he extended the service to New York and in 1842 to Philadelphia, in 1854 Adams and Company absorbed a number of companies, among them the service started by Harnden, under the name of Adams Express Company In 1841 an express service between Albany and Buffalo was started by George E Pomeroy, who made Henry Wells and Crawford Livingston partners Wells, William G Fargo, and Dan Dunning started the Western Express between Buffalo and St Louis in 1845 In 1849 Wells and Company, Livingston and Fargo, and Butterfield, Wasson and Company reorganized, forming two companies which came to own the stock of the American Express Company, organized in 1850 Wells, Fargo and Company was formed in 1852 In 1854 the United States Express Company was organized as a subsidiary of the American Express Company Two other important express companies were formed in later years—the Southern in 1861, as a result of the Civil War, and the Pacific in 1879 In the '40s and early '50s a great deal of mail was carried by the express companies, but this practice was finally stopped by the government The California gold rush in 1849 brought into existence many new express companies and an extension of duties, as most of the companies found it necessary to become bankers In 1860 the most spectacular and celebrated messenger service in the country, the Central Overland Pony Express Company (see PONY EXPRESS), was started between St Joseph and Sacramento During the Civil War the express company was the only satisfactory agency by which soldiers in the field kept in communication with their friends and relatives In 1918 the principal companies (Adams, American, Southern, and Wells, Fargo) were merged into a single company, the American Railway Express Company Wells, Fargo still operates in Mexico and has a bank in San Francisco, American has a financial business, Adams has become an investment trust, and Southern no longer exists With the inauguration of air express service, delivery service entered a new phase See A L Stimson, *History of the Express Companies* (1858) and *History of the Express Business* (1881), Henry Wells, *Sketch of the Rise, Progress, and Present Conditions of the Express System* (1864), A F Harlow, *Old Waybills* (1934), N C Wilson, *Treasure Express Epic Days of the Wells Fargo* (1936)

expressionism, term used generally to describe any modern art work in which representation of nature is subordinated to expression of emotion More specifically it is used to classify modern works of art characterized by intuitive, spontaneous distortion for emotional effect The term originated in Munich in 1911 but refers rather to a widespread tendency than to a localized school of art Van Gogh is often cited as the precursor of expressionism In literature the effort to project spiritual actualities rather than to recite naturalistic records of events was of most importance in the drama and the novel, though in poetry it was allied to and contrasted with the romantic schools of imagism and vorticism—e g , in the work of T S Eliot In the drama August Strindberg and Frank Wedekind were precursors of the expressionist playwrights who flourished in post-war Germany and Russia and of whom the German Ernst Toller was perhaps most vigorous In the English-speaking drama the plays of Eugene O'Neill and J B Priestley are outstandingly expressionistic The movement gained immeasurably from the work of the experimental stage designers of the period (see THEATER) The novel showed the influence of expressionism most strongly in France until the works of James Joyce appeared in English

exterritoriality or **extraterritoriality,** privilege of an alien of exemption from local law and law enforcement agencies while in a foreign country In legal theory the alien's activities take place outside the territorial jurisdiction of the country where they actually occur Exterritoriality, including immunity from arrest, extends to the visiting head of a foreign state and to persons in diplomatic service and their families Officials of the United Nations, like the officials of the former League of Nations, enjoy exterritoriality when performing their duties Vessels in foreign ports (so far as harbor management allows) and armed forces crossing foreign territory with permission of the sovereign enjoy exterritorial status Obviously armies in occupation of an enemy country are altogether exempt from the jurisdiction of the occupied country. Exterritoriality has also been granted to resident foreigners not occupying a diplomatic or official position. This practice developed when law was personal rather than territorial; i e , a person regardless of where he was came under the law of the place of his allegiance, typically where he was born Such exterritoriality at that time was not considered a limitation of sovereignty and was granted freely After the conquest of Constantinople by the Turks, exterritoriality was by the so-called capitulations accorded to several European states, notably Venice and Genoa, and nearly autonomous foreign residence zones were established in the city In the 19th cent Western powers, often by the use of coercion, secured unilateral exterritorial rights for their citizens resident in Morocco, Turkey, Persia, Egypt, Siam, Japan, and China Usually the Western consul was granted jurisdiction to try all civil and criminal cases involving his countrymen Thus, in 1906, the U S Congress established in China a consular court for American nationals with the right of appeal to higher courts in the United States In some countries, notably in Egypt, mixed courts, i e , courts with both foreign and native judges, tried the cases Exterritoriality of this type was strongly resented not only as an infringement of sovereignty but also as an opportunity for abuses, such as placing natives under the protection of foreign law and condoning the illegal conduct of aliens Speedy legal reforms led to the final abolition in 1899 of such exterritoriality in Japan Turkey's abrogation of capitulations in 1914 was confirmed by the Treaty of Lausanne (1923) and was not protested by the United States, which did not ratify the treaty Exterritoriality longest remained a problem in Egypt and China In Egypt, pursuant to the Montreux Convention of 1937, it was entirely abolished in 1949 In China opposition to exterritoriality was but one phase of resistance to foreign control, which included the TREATY PORT system and territorial concessions in the major cities In the First World War, China abolished all treaty rights of the Central Powers, and in 1924 the USSR voluntarily abandoned its privileges In 1943 the United States and Great Britain made a voluntary renunciation Italy and Japan, as enemies of China, lost their special status during the Second World War, and in 1946, when France abandoned its privileges, nondiplomatic exterritoriality in China came to an end See Shih Shun Liu, *Extraterritoriality Its Rise and Decline* (1925), G W Keeton, *The Development of Extraterritoriality in China* (1928)

extortion, in law, unlawful taking by an officer, under color of his office, of any property or money not legally due to him, e g , requesting and accepting fees in excess of those allowed to him by statute or arresting a man and, with corrupt motives, demanding money or property unlawfully under pretense of duty The taking of money or property is generally an essential element of the crime In most states of the United States, extortion is more widely defined to include the obtaining of money or property of another by inducing his consent through wrongful use of fear, force, or authority of office, thus under this definition are included BLACKMAIL and THREAT of force Such statutes define as extortion, in the case of officers, the mere request for illegal fees See CONSPIRACY

extradition (ĕkstrudĭ'shun), delivery of a person, suspected or convicted of crime, by the state where he has taken refuge to the state which asserts jurisdiction over him International law does not recognize extradition as a duty in the absence of treaty, however, a state, even though not obligated, may as a matter of comity refuse ASYLUM to a fugitive and honor a request for voluntary extradition In the United States fugitives are surrendered pursuant to extradition treaties only JAY'S TREATY (1794) included the first international extradition agreement to which the United States was a party In the 19th cent the increasing ease with which criminals could flee led to the conclusion of many bilateral treaties of extradition Treaties may specify particular extraditable crimes or may provide that all crimes for which there is a certain minimum penalty shall be extraditable Many offenses, possibly including minor ones, are typically included in the treaties between adjoining countries, while countries far apart usually demand extradition for major crimes only In most countries of the European continent a mere demand for the fugitive is sufficient The United States and Great Britain require, on the contrary, that evidence of sufficient facts to justify an indictment first be supplied Unlike the continental countries, they will surrender their own nationals for trial in a foreign country and will not try them domestically for crimes committed abroad Most countries do not surrender fugitives wanted for political offenses, where a political offense, e g , insurrection, is also an ordinary crime, diplomatic disputes may result if extradition is refused Congress, pursuant to Article 4, Section 2, of the U S Constitution, has established a uniform law of extradition between the states or interstate rendition The law provides that any person properly charged is subject

to extradition regardless of the nature of the crime. Although the states normally comply with extradition demands, the Supreme Court has held that they have the right to refuse compliance See J. A Scott, *The Law of Interstate Rendition* (1917), J Mervyn Jones, *Modern Development in the Law of Extradition* (1942)

extrahazardous occupations. Certain occupations are characterized by a much greater risk to health and life than others File cutters, for example, show a death rate 85 percent in excess of the average At one time glass blowers suffered a very high death rate Mining carries the risk of explosion and cave-in accidents Industries involving the use of explosives entail great risk to life Persons who work with arsenic, lead, phosphorus, and benzene are frequently victims of poisoning (see OCCUPATIONAL DISEASES) Many governments have set up agencies to mitigate the dangers in extrahasardous occupations (e g , the U S Bureau of Mines) Others have provided special care and other benefits (financial or otherwise) to those engaged in dangerous work, such as coal mining See E R Hayhurst and G M Kober, *Industrial Health* (1924), Ludwig Teleky, *History of Factory and Mine Hygiene* (1948)

extra-sensory perception see PARAPSYCHOLOGY.

extraterritoriality, see EXTERRITORIALITY

Extremadura: see ESTREMADURA, Spain

extreme unction (usually ĕks'-) [Latin, probably meaning anointing at the hour of death], SACRAMENT of the Roman Catholic Church In it a dying person is anointed on eyes, ears, nostrils, lips, hands, feet, and, sometimes in the case of men, the loins, by a priest while he recites absolutions for sins committed The Church teaches that through the sacrament the dying receive remission of sins, health of soul, and, if God wills, health of body The sacrament may be shortened, and it may be given conditionally, as when there is doubt as to whether the recipient is living or whether he is baptized The oil used is blessed on Maundy Thursday by the bishop The chief biblical text for extreme unction is James 5 14, 15, but theologians hold that it is implied in Mark 6 13 In the Eastern churches it is normally given by three priests and is not so widely used as in the West Extreme unction is given only to persons in danger of death from sickness or injury, hence it is not given before operations or in battle before attack Extreme unction, the last confession, and the VIATICUM are the last rites of the Church

extroversion and introversion, terms introduced into psychology by C G JUNG to identify two opposed psychological types He saw the activity of the extrovert directed toward the external world and that of the introvert inward upon himself This general activity or drive of the individual was called the libido by Jung, who robbed it of the sexual character ascribed to it by Freud The extrovert is characteristically the active man who is most content when surrounded by people, carried to the neurotic extreme his behavior appears to constitute an irrational flight from himself into society, where his feelings are acted out Jung called hysteria the extrovert's neurosis The introvert, on the other hand, is normally a contemplative individual who enjoys solitude and the satisfactions of a quiet life The extreme introvert flees external life by retreating into his own inner world, where his fantasies tend to become more meaningful to him than objective reality Jung saw schizophrenia as the psychotic ultimate of introversion and psychasthenia its neurosis. He did not suggest, however, strict classification of individuals as extrovert or introvert since everyone has tendencies in both directions, though one direction generally predominates Investigation indicates that the position of a personality on the extroversion-introversion scale is a result of a combination of temperament and environmental influences See C G Jung, *Psychological Types* (Eng tr , 1923)

Exuma and Cays. see BAHAMA ISLANDS

Eyck, Huybrecht van (vän īk', Flemish hoi'brĕkht vän īk'), **or Hubert van Eyck,** c 1370–1426, and **Jan van Eyck** (yan') **or John van Eyck,** c 1390–1441, founders of the Flemish school of painting, brothers They have been called, inaccurately, the discoverers of oil painting What is fairly certain is that they revolutionized the painter's craft and were the first to employ a resin or oil medium in naturalistic painting to obtain the greater depth and richness of color which such a medium permits Little is known of the life of Huybrecht He is said to have worked (1414–17) for William, duke of Bavaria, and is known to have settled in Ghent early in the 15th cent Jan is said to have become (1425) painter to the duke of Burgundy and in 1428 went to Portugal to portray his patron's fiancée, the Infanta Isabella On his return he settled in Bruges There is some controversy as to what part each of the brothers took in their famous masterpiece, an altarpiece of 12 panels in the cathedral at Ghent, called *The Adoration of the Lamb* from the subject of the principal panel. Huybrecht is credited with the general plan of the whole and the execution of certain panels, which are the only works which can be attributed to him with certainty Jan collaborated with his brother and is usually credited with much of the execution of the principal panel and certain of the others This work is one of the greatest in European art Its lower central panel shows the Lamb of the Revelation worshiped by angels in the center of a landscape of great beauty, with groups of martyrs, priests, and laymen symmetrically disposed In front is the fountain of life, and in the distance are the towers of Jerusalem The lower side panels show the just judges, knights, saints, and hermits advancing to adore The upper central panels represent Christ as King, the Virgin, and St John the Baptist, with choirs of singing and playing angels on both sides and Adam and Eve on the wings The jewellike color, thinly painted over smooth, white gesso, has retained much of its freshness There is little attempt at any general light and shade, the entire picture being in full light but with the individual forms modeled realistically and in great detail The Van Eycks had little, if any, knowledge of linear perspective but showed a clear intention to depict everything in perspective, and they were the first to exploit the depth of oil color to express depth in space Their influence upon the future of painting was of crucial importance In addition to the Ghent altarpiece, Jan van Eyck is credited with the portrait of Arnolfini and his wife (National Gall , London), *St Barbara* (Antwerp), *Annunciation* (National Gall of Art, Washington, D C), *Crucifixion* (Hermitage, Leningrad), and *St Francis Receiving the Stigmata* (Philadelphia Mus of Art) The Metropolitan Museum contains a fragment showing the head of a donor Various other splendid works are attributed to one or the other of the famous brothers See W H J Weale, *Hubert and John van Eyck* (1908), Sir W M Conway, *The Van Eycks and Their Followers* (1921)

Eyde, Samuel (sa'mōōĕl ā'dù), 1866–1940, Norwegian engineer and manufacturer He developed with O C Birkeland the Birkeland-Eyde process for nitrogen fixation, which he used for the manufacture of fertilizers He extended his operations to produce explosives and other products

eye, organ of vision, almost spherical in shape, situated in the front part of the bony orbit of the skull The eyeball or bulb of the eye is covered by a coat of three layers within which are contained the refracting media The layers which compose the wall of the eyeball consist of an outer fibrous, a middle vascular, and an inner nervous layer The outermost layer comprises the sclera and the cornea The sclera is white and opaque and covers the posterior larger portion of the eyeball The cornea is transparent and covers the front, lesser portion of the eyeball The middle layer is vascular and pigmented and consists of three structures, the chorioid (choroid), ciliary body, and iris The inner nervous layer, the retina, is a delicate membrane in which are distributed the fibers of the optic nerve The chorioid, situated between the sclera and retina, nourishes the retina and the lens The iris, behind the cornea, is a circular pigmented membrane perforated by an aperture, the pupil The ciliary body consists of the ciliary ring, ciliary processes, and ciliary muscle and connects the chorioid with the circumference of the iris The retina, innermost layer of the wall of the eyeball, is the perceptive structure of the eye The refracting media consist of the vitreous humor (vitreous body), the lens, and the aqueous humor The lens is a biconvex transparent structure, situated behind the iris and attached to the ciliary body by a suspensory ligament The vitreous humor is a transparent jellylike substance which fills the hollow of the eyeball between the lens and the retina The aqueous humor occupies the space between the lens and the cornea, this space is divided into two chambers, an anterior chamber between the cornea and the iris and a posterior chamber between the iris and the lens The aqueous humor in both chambers is continuous through the pupil of the eye A number of muscles attached to the wall of the eyeball regulate the movements of the eye The convexity of the lens is controlled by the action of the ciliary muscle Eyestrain results from overaction of the ciliary muscle and of the muscles which move the eyeball Among the disorders of the eye are ASTIGMATISM, BLINDNESS, CATARACT, CONJUNCTIVITIS, CROSS-EYE, GLAUCOMA, and STY

Eyjafjalla Jokull, Icelandic *Eyjafjallajökull* (ā'yā-fyät"lāyû"kŭtul), ice-capped volcano, 5,404 ft high, S Iceland It erupted in 1612 and 1821

Eyja Fjord (ā'ù fyôrd"), Icelandic *Eyjafjörður* (ā'yā-fyûr"dhûr), longest fjord in Iceland (37 mi), on the north coast At its head is AKUREYRI

Eylau (i'lou) **or Bagrationovsk** (bugrŭ"tyôf'nŭfsk), city (1939 pop 7,485), until 1945 in East Prussia, near Konigsberg Its former official name was Preussisch Eylau Here, in Feb., 1807, Napoleon I fought a bloody, indecisive battle against the allied Russian and Prussian forces Eylau was in 1945 transferred to Russian administration, it was incorporated into the RSFSR and renamed in honor of Prince Bagration, who distinguished himself in the battle

Eyre, Edward John (âr), 1815–1901, English administrator. In Australia (1832–45) he was a magistrate, friend of the aborigines, explorer, and writer on Australian geography. After terms as lieutenant governor of New Zealand (1846–53) and governor of St. Vincent (1854–60), he became (1864) governor of Jamaica A serious Negro outbreak (1865) was suppressed with vigor by the military, and Eyre was accused of brutality and illegal acts, especially in the execution of George Gordon, a mulatto member of the Jamaican legislature He was recalled in 1866, but several attempts to try him for murder were forestalled by a committee of admirers, which included John Ruskin, Alfred Tennyson, Thomas Carlyle, and Charles Kingsley. The episode contributed to the fall of the government of Lord Russell See W. L Mathieson, *Sugar Colonies and Governor Eyre* (1936).

Eyre, Sir James, 1734–99, English judge. As a young lawyer he successfully attacked the government's practice of issuing general search warrants He later became president of the Court of Exchequer (1787) and chief justice of common pleas (1793) He conducted (1794) the famous state trials of John Horne Tooke and others for alleged subversion of the government.

Eyre, Lake, shallow salt lake, area 3,430 sq mi , NE South Australia It is 39 ft below sea level and frequently dry

Eyre Peninsula, South Australia, between Spencer Gulf and the Great Australian Bight.

Ezar (ē'-), the same as EZER 1.

Ezbai (ĕz'bāī, ĕzbā'ī), father of NAARAI

Ezbon. 1 Son of Gad Gen 46 16 Ozni· Num. 26 16 2 Benjamin's grandson 1 Chron. 7 7.

Ezekias (ĕzŭkī'ûs) see HEZEKIAH

Ezekiel, Mordecai Joseph Brill, 1899–, American agricultural economist, b Richmond, Va He entered the service of the Dept of Agriculture in 1922 and became an expert in statistical analysis and in the study of the relation of farm production to demand He left the department in 1930 to serve as assistant chief economist to the Federal Farm Board, but returned as economic adviser to the Secretary of Agriculture (1933–44) In 1944 he became economic adviser to the Bureau of Agricultural Economics in the Dept of Agriculture and in 1947 was made economist of the Food and Agriculture Organization of the United Nations He wrote *Methods of Correlation Analysis* (1930).

Ezekiel, Moses Jacob, 1844–1917, American sculptor, b Richmond, Va , studied in Germany and worked in Rome He is known for his portrait busts, memorials, and religious statues, notably the Jefferson monument, Louisville, Ky , and *Religious Liberty*, Philadelphia

Ezekiel or **Ezechiel** (both ēzē'kēl) [Heb , =God strengthens], book of the Old Testament, third of the books of the Major Prophets It is the account of the prophetic career of the priest Ezekiel (fl 592 B C), who preached to Jews of the exile in Mesopotamia The central point of the work is the fall of Jerusalem (586 B C), what goes before (1–32) being prophetic of doom, the rest (33–48) inspired by the hope of restoration, ending with a vision of the ideal temple (40–48) Ezekiel's work consisted not only in sermons but also in prophetic behavior, e g , eating a book (3), sleeping on one side (4), and not mourning his wife (24) Splendid and famous passages are on the sword of God's wrath (21), on the greatness of Tyre (26–28), lament over Egypt (31–32), and on the field of dried bones (37) Ezekiel contains an explicit revocation of the principle of sins of the fathers visited on the children (18) See Ecclus 49 10–11 For bibliography, see OLD TESTAMENT

Ezel (ē'-), in the Bible, rock where David said farewell to Jonathan 1 Sam 20 19

Ezem (ē'zĕm), the same as AZEM

Ezer (ē'-) 1 Edomite chief Gen 36 21,27,30 Ezar 1 Chron 1 38,42 2 One of Ephraim's sons 1 Chron 7 21 3 Priest at the dedication of the wall Neh 12 42 4 Son of Hur the Judahite 1 Chron 4 4 5 Gadite ally of David 1 Chron 12 9. 6 Repairer of the wall Neh 3 19

Ezion-geber (ē'zēŏn-gē'-) or **Ezion-gaber** (-gā'-) [both Heb.,=giant's backbone], ancient port, on the Gulf of Aqaba The site, near AQABA, is now called Tell el-Kheleifeh It is now some distance from the shore, which is advancing The Bible reveals the existence of a port here from the reign of Solomon to at least that of Jehoshaphat (10th cent B C) 1 Kings 9 26, 22 48; 2 Chron 8 17 Esion-gaber Num 33 35,36, Deut 2 8 Excavations carried out in 1938–40 under American auspices fixed the site of Ezion-gaber The city, founded apparently by King Solomon, was established at one time as a port and a center of copper refining The scale of the buildings shows a high degree of planning and material resource

Eznite (ĕz'nīt), ostensibly an epithet of ADINO in 2 Sam. 23 8 The name with its qualifier is translated in the parallel passage "he lifted up his spear." 1 Chron. 11 11 This translation has been added to the passage in 2 Sam in AV

Ezra [Heb ,=help]. 1 Central figure of the book of EZRA 2 Priest who returned with Zerubbabel. Neh. 12.1 3 Judahite. 1 Chron. 4.17.

Ezra, or Esdras (ĕz'drŭs), and **Nehemiah** (nē'hŭmī'ŭ) [Heb.,=consoled by God], books of the Old Testament, a single work in the Hebrew canon, occupying the 15th and the 16th place in AV, they are usually called 1 and 2 Esdras in the Vulgate and the Western canon. Ezra (fl after 400 B C) was a priest; Nehemiah (fl. 444 B C.) was a cupbearer to Artaxerxes I and became governor of Jerusalem. The books narrate events of the return of the Jews to Palestine from captivity, as follows: Zerubbabel's return with a certain number, beginning with a favorable decree by Cyrus in 538 B C, but encountering opposition in rebuilding the city walls (Ezra 1–6). Ezra's account of his own return in 458 B C (possibly 398 B C), with the eviction from Jewish families of Gentile wives (Ezra 7–10), Nehemiah's return in 444 B C., with the rebuilding of the walls in spite of rich, powerful enemies (Neh 1–7), the solemn reading of the Law and signing of a covenant (Neh. 8–10); the conclusion of the walls (Neh 11–12), and an addendum telling of some reforms of Nehemiah (13). The order of events is not chronological, and much of the books consists of documents and lists, some of these are not in Hebrew but in Western Aramaic The work was probably originally one with Chronicles The Ezra of Neh 12.1,13,33, and the persons named Nehemiah in Ezra 2 2, Neh 3 16, 7.7, are not the famous leaders See OLD TESTAMENT See also ESDRAS.

Ezrahite (ĕz'rŭ-) a patronymic. see ZERAH 1.

Ezri (-rī) [Heb.,=help], officer under David 1 Chron 27.26

Ezzelino da Romano (ĕt"sālē'nō'dä'rōmä'nō), 1194–1259, Italian Ghibelline leader and soldier, a faithful supporter of Emperor FREDERICK II. He held Verona, Vicenza, Padua, and other cities and after Frederick defeated (1237) the Lombard League at Cortenuova he became the greatest power in N Italy. He had, however, to fight continuously against the Guelphs. In 1238 he married a natural daughter of Frederick In 1254 Pope Innocent IV excommunicated him and a strong alliance was formed against him Ezzelino lost Padua (1256), but in 1258 took Brescia After an attempt to conquer Milan he was defeated and wounded at Cassano and died soon afterward His name is remembered as that of a cruel tyrant; Dante placed him in the *Inferno*

F

F, sixth letter of the ALPHABET The Greek letter corresponding to it, digamma, which probably represented a sound like w, quite disappeared before the classical period In Western alphabets *f* has usually represented the voiceless labiodental fricative In MUSICAL NOTATION F stands for a note in the scale In Chemistry F is the symbol of the element FLUORINE

Fabens (fā'bĭnz), unincorporated town (pop c 2,000), extreme W Texas, SE of El Paso and on the Rio Grande, in an irrigated region

Faber, Frederick William (fā'bur), 1814-63, English theologian and hymn writer, friend of J H Newman. An adherent of the Oxford movement, he became in 1843 rector of Eton In 1845 he entered the Roman Catholic Church and with some of his friends and parishioners founded a religious community in Birmingham, which merged in 1848 into the ORATORY of St Philip Neri Ordained a Roman Catholic priest in 1847, with Father Hutchinson he established in 1849 the oratory in London of which he was superior for the rest of his life His poetical works include *The Cherwell Water-Lily* (1840) and many well-known hymns collected in *Hymns* (1848) Other writings are nine contributions to *Lives of the Canonized Saints* (1844–45), *The Blessed Sacrament* (1855), and *The Foot of the Cross* (1853–60) See biography by J E Bowden (2d ed., 1888)

Faber, Johannes (yōhä'nus fa'bur), 1478–1541, German churchman His German surname was Heigerlin He was a Dominican After 1531 he was bishop of Vienna. He was friendly at first (until 1521) with Luther and Zwingli, but later he became their untiring opponent in polemics He was an ardent proponent of reform of clerical discipline and of preaching, especially with respect to indulgences

Faber Stapulensis, Jacobus (jakō'bus fā'bûr stăpŭlĕn'sĭs), c 1455–1536, French writer of the Reformation movement His name in French was Jacques Lefèvre d'Étaples He became a priest and was much interested in classical studies, he was in 1507 made librarian at the abbey of Saint-Germain-des-Prés In 1521 the Sorbonne condemned as heretical a book on St. Mary Magdalene, but FRANCIS I and MARGARET OF NAVARRE prevented further process against him Later he was tutor to the royal children and librarian in the château at Blois His last years were spent at Nérac, under the protection of Margaret His works (particularly *Psalterium quintuplex*, 1509) are charged with the current ideas that were taken up into the Reformation He translated the Bible into French (1523–30)

Fabian, Saint (fā'bēun), pope (236–50), a Roman, successor of St. Anterus and predecessor of St Cornelius He recast the ecclesiastical organization in Rome Fabian was martyred under Decius Feast (with St SEBASTIAN) Jan 20

Fabian Society, influential English socialist society An outgrowth of the Fellowship of the True Life (founded 1883 under the influence of Thomas Davidson), the society was developed the following year by Frank Podmore and Edward Pease G B Shaw and Sidney Webb joined soon after this and became its outstanding exponents The group achieved recognition with the publication of *Fabian Essays* (1889), whose contributors included Shaw, Webb, Annie Besant, and Graham Wallas The Fabians were opposed to the revolutionary theory of Marx, holding that social reforms and socialistic "permeation" of existing political institutions would bring about the natural development of socialism Repudiating thus the necessity of violent class struggle, they took little notice of trade unionism and other labor movements until Beatrice Potter (later Mrs Sidney Webb) joined the group They subsequently helped create a unified Labour party (1900) and became increasingly identified with it The Labour party adopted their main tenets, and the Fabian Society remains as an independent research and publicity agency See E R. Pease, *The History of the Fabian Society* (1916); G D. H. Cole, *The Fabian Society* (1942)

Fabius (fā'bēŭs), **gens** of ancient Rome The family was most distinguished from the 5th cent B C onward Stories of the early members are, however, mostly tradition and legend That is even true of **Quintus Fabius Vibulanus** (kwĭn'tus vĭbulā'nus), fl 450 B C, consul three times (467, 465, 459 B C), one of the second decemvirate, although he had served Rome well in battle he was exiled with the other decemvirs His descendant, **Quintus Fabius Maximus Rullianus** (măk'sĭmus rŭlēā'nus) or **Rullus** (rŭ'lus), d c 291 B C., consul five times (322, 310, 308, c.300, and 297 B C) and dictator (315 B C), was renowned as a general, especially for his victory over the Etruscans, the Samnites, and their allies at Sentinum (295 B C) A famous act of insubordination was Rullianus' attack on the Samnites when he was master of horse (325 B C), he was victorious, but his disobedience to orders brought his condemnation by the dictator L Papirius Cursor, and Rullianus fled Rome for his life His descendant, **Quintus Fabius Maximus Verrucosus** (vĕrōsō'sus), d 203 B C, the opponent of HANNIBAL, was called Cunctator (kŭngk'tutōr) [Latin,=delayer], because of his tactics, which have given the term Fabian to a waiting policy He was consul five times (233, 228, 215, 214, 209 B C), and dictator (217 B C) after the battle of Trasimeno Fabius kept his army always near Hannibal's but never attacked, harassing Hannibal continually, but never joining battle The Romans tired of Fabius' policy, and he was supplanted by M Minucius Rufus and Terentius Varro, the rout at Cannae was the result In his last consulship Fabius took Tarentum from Hannibal, a signal victory Fabius was perhaps not one of the great generals of the PUNIC WARS, but his tactics were apparently sound Another branch of the family was represented by **Caius Fabius Pictor** (kā'us, kĭ'us, pĭk'tôr) [Latin,=the painter], fl 302 B C, who painted the temple of Salus at Rome, the first recorded Roman painting His grandson was **Quintus Fabius Pictor**, fl 225 B C, the first Roman annalist, his history covered Rome from Aeneas to the Second Punic War His work is lost Another Fabius was **Quintus Fabius Labeo** (lā'bēō), fl 180 B C, praetor (189 B C) He was commander of the fleet in an eastern campaign, but he seems to have used his power largely for his own aggrandizement An adoptive member of the gens was **Quintus Fabius Maximus**, fl 121 B C, consul (121 B C), called Allobrogicus (ă"lōbrō'jĭkus), because of his victory over the Allobroges in Gaul In his triumph the Allobrogian king was led in chains

fable, short moral story, often one in which the characters are beasts or inanimate objects Perhaps the oldest fables are in the *Hitopadesa* and PANCHATANTRA, both professedly moral Indian collections The Buddhist jataka tells of the Buddha's births in animal form, and the stories show many signs of being fabular in type The Indian fables were possibly the basis for the fables of AESOP, which were the earliest to be written down Other names important in classical fable are BABRIUS, PHAEDRUS and PLANUDES MAXIMUS In medieval times began the satirical series of animal stories about REYNARD THE FOX, and the fable was finally given classic form by Goethe in the 19th cent The greatest medieval fabulist was Marie de France, from whom Chaucer took the story in his Nun's Priest's Tale, her countryman of a later period, LA FONTAINE, was probably the greatest and most subtle literary artist to write fables Lessing, Gellert, and others in Germany and Bernard Mandeville, John Gay, and John Dryden in England continued the tradition of beast fables On the other hand, the use of fable to mean a general narrative with a lesson is demonstrated in J. R Lowell's *Fable for Critics* (1848) and in George Ade's lighthearted *Fables in Slang* (1899)

Fabre, Jean Henri (zhäⁿ ärⁿ' fā'brŭ), 1823–1915, French entomologist and author. He is known for his observations on insects and his study of insect behavior He taught until 1870 at Carpentras, Ajaccio, and Avignon, wrote works on popular science at Orange (1870–79), then retired to nearby Sérignan, where he devoted himself to the study of insects His principal work is *Souvenirs entomologiques* (10 vols., 1879–1907), English translations of selections from this work include *The Life of the Spider* (1912), *The Life of the Fly* (1913), *The Wonders of Instinct* (1918), *The Marvels of the Insect World* (1938), and *The Insect World of J Henri Fabre* (ed with commentary and biographical notes by E W Teale, 1949) See studies on Fabre by Augustin Fabre (Eng tr, 2d ed, 1921) and P F Bicknell (1923)

Fabre d'Églantine, Philippe François Nazaire (fēlēp' frāswä' näzĕr' fa'bru dāglätēn'), 1750–94, French dramatist and revolutionist His chief work, *Le Philinte de Molière* (1790), was a sequel to Molière's *Misanthrope* A member of the Convention, he was selected to devise the names for the months and days of the French Revolutionary calendar He was guillotined

Fabriano, Gentile da: see GENTILE DA FABRIANO.

Fabriano (fäbrēä'nō), town (pop 10,350), the Marches, central Italy, in the Apennines The local school of painting, founded by Allegretto Nuzi in the 14th cent, had Gentile da Fabriano as its best-known figure Paper has been made here since the 12th cent

Fabricius (Caius Fabricius Luscinus) (fûbrĭ'shus), d 250 B C, Roman general and statesman, distinguished for simplicity of habit and probity in public life He persuaded the Tarentines to abstain from war with Rome and, as consul (282 B C), defeated the Bou and Etruscans While treating with PYRRHUS for the ransom of prisoners captured at Heraclea (281 B C) he rejected a bribe When consul again (278 B C) he negotiated terms of peace with Pyrrhus and subsequently defeated the Samnites, Lucanians, and Bruttii

Fabricius, Hieronymus (hĭfurō'nĭmus), Ital *Geronimo Fabrizio* (jārō'nēmō fabrē'tsyō), 1537–1619, Italian anatomist, pupil and successor of Fallopius and teacher of William Harvey at Padua He was a surgeon, an embryologist, and an anatomist, he discovered the venous valves, but did not fully understand their function. See his *De venarum ostiolis* (1603, facsimile ed., with introduction by K J Franklin, 1933)

Fabricius, Johan Christian (yōhän' krĭs'tyan fabrē'syōōs), 1745–1808, Danish entomologist and economist Influenced by the methods of Linnaeus, under whom he studied, he worked out a classification of insects based on mouth structure He taught at the Univ. of Kiel from 1775

Fabritius, Carel (kär| fäbrĕt'sēōōs) c 1624–1654 Dutch painter, pupil and worthy follower of Rembrandt His early death in the explosion of a powder magazine of Delft cut short a career of the greatest promise Among his few but admirable works are *Portrait of a Man* (Rotterdam), *The Goldfinch* (The Hague), and *Portrait of a Soldier* (National Gall., London) Jan Vermeer was his pupil

Fabyan, Robert (fā'bēun), d 1513, English chronicler He was a prosperous member of the Drapers Company in London and an alderman His *New Chronicle of England and France*, ending with the reign of Richard III, was not published until 1516 Subsequent editions continued the narrative to later dates

façade (fusad', fă-), exterior face, or wall, of a building, the designation implying ordered disposal of its openings and other features—it seems inapplicable to a wall without design Any freestanding structure may have four or more façades designated by their ORIENTATION (i e, north façade, etc.), while a building flanked by others on either side generally has only a front and a rear façade In medieval churches the chief façade is that of the building's west end, where are the principal entrance portals The architectural theory of the façade is that, while enclosing a space, it should give by its articulation a true expression of the internal arrangements and the structure The flanks of a Gothic cathedral of the best type admirably fulfill this requirement. The dictum of the most advanced modern architecture requires of the façade an uncompromising revelation of structure and plan and avoidance of all architectural "effects."

Fackenthal, Frank Diehl (fă'kŭnthôl), 1883–, American educator, b Hellertown, Pa , grad. Columbia, 1906 He served his university as chief clerk (1906–10), secretary (1910–37), and provost (1937–48) Between the retirement of Nicholas Murray Butler (1945) and the installation of General Eisenhower as president (1948), Dr Fackenthal was acting president of the university, retaining his post as provost He retired in 1948 His principal speeches as acting president were published as *The Greater Power and Other Addresses* (1949)

facsimile (făksĭ'mulē), in communications, a system for transmitting pictures or other graphic matter by wire or radio The surface of the material to be sent is traversed by a light-beam and photoelectric-cell arrangement which translates the light and dark areas of the material thus scanned into tones of corresponding intensity capable of transmission by radio and wire A receiving station reverses the process, reproducing the transmitted material by means of a stylus which touches a chemically treated paper in response to the received tones

factor, in arithmetic, any number which divides a given number evenly, without any remainder The factors of 12 are 1, 2, 3, 4, 6, and 12 Similarly in algebra, any algebraic expression which divides a given expression evenly is called a factor of the given expression See also MULTIPLICATION

factory, commonly, an establishment where two or more persons are working for hire Primarily the word *factory* was not associated with manufacturing but with a business house under management of an agent With the Industrial Revolution the work took on a new meaning, with special implications of wage labor, division of labor, and the use of machines The factory is contrasted with the shop of the master workman Standardized goods are produced and sometimes are sold more cheaply by the factory system, and some of the goods are better than a craftsman can make The obvious advantages of the factory system in some functions, as in making pins, have led to its extension to fields where the advantages have been less decisive, as farming The system at once gave rise to social problems that remain unsolved See Peter Kropotkin, *Fields, Factories, and Workshops* (1899), R C Davis, *The Principles of Factory Organization and Management* (1928), Lewis Mumford, *Technics and Civilization* (1934), G G Hyde, *Fundamentals of Successful Management* (1946)

factory acts see LABOR LAW

Facundo Quiroga, Juan see QUIROGA, JUAN FACUNDO

Fadeyev, Aleksandr Aleksandrovich (ŭlyĭksan'dur ŭlyĭksan'drôvĭch fŭdyā'ŭf), 1901–, Russian author An active Communist, he fought in the Russian civil war Both his first novel, *The Rout* (1926, Eng tr , *The Nineteen*, 1930), and the long *Last of the Udege* (1929–35) are laid in Siberia

fading, in radio, the irregular variation in the strength and quality of a received signal The effect is thought to be caused largely by the constantly changing altitude and density of the Kenelly-Heaviside layer Different parts of the transmitted wave are reflected unevenly and arrive at the receiver out of phase Automatic volume control alters the amplification in the receiver in response to variations in signal strength so that weak signals are given greater amplification than strong ones In this way a fairly constant level of sound is maintained at the loudspeaker

Faenza (făän'tsä), city (pop 23,823), Emilia-Romagna, N central Italy, in Romagna The Manfredi family, which ruled it in the 14th and 15th cent , enriched it with works of art There are a Renaissance cathedral, a town hall (12th cent), and the Manfredi palace A special kind of richly colored ceramics, called faïence, has been made here since the 12th cent , this art reached its flower between 1450 and 1550 and was revived in the 18th cent The school and museum, containing fine specimens of faïence, were greatly damaged in the Second World War

Faerie Queene, The, see SPENSER, EDMUND

Faeroe Islands or **Faroe Islands** (both fă'rō), Dan *Færøerne* (fär'ŭ"rŭnu), Faeroese *Føroyar* (fûr'yar), group of 21 volcanic islands (c 540 sq mi , pop 29,178), in the N Atlantic Ocean, between Iceland and the Shetlands They belong to the Danish crown Stromo—on which the capital, Thorshavn, is located—and Ostero are the largest islands of the group High, rugged, with sparse vegetation, the Faeroes depend mainly on fishing and sheep raising and to a lesser extent on whaling, fowling, and farming Despite frequent storms and fog, the winters are mild, owing to the warm North Atlantic Drift Fish and wool are exported The earliest-known inhabitants of the islands were Celtic, but before A D 800 the Faeroes were settled by Norsemen. The islands became part of the kingdom of Norway and were Christianized in the 11th cent The Black Death nearly wiped out the population, which was replaced by Norwegian settlers in the 14th and 15th cent In the Treaty of Kiel (1814), which transferred Norway from the Danish to the Swedish crown, the Faeroes were not mentioned and thus remained under Danish rule. A nationalist movement resulted in the development of a written Faeroese language, which is akin to Icelandic and medieval Norwegian. In the Second World War, England established (1940) a protectorate over the islands after the German occupation of Denmark. The population profited greatly from the reorientation of its fish exports from Spain to England In 1948 the Faeroese obtained home rule. Their local parliament, the Lagting, was granted full legislative powers in matters of exclusive concern to the islands, and laws enacted by the Danish Rigsdag become valid in the Faeroes only after their approval by the Lagting See Gordon Hudson, *The Faeroes in Pictures* (1946)

Faes, Pieter van der: see LELY, SIR PETER.

Fages, Pedro (pā'dhrō fā'hās), fl 1767–90, Spanish governor of Alta California (1782–91) In Mexico in 1767, he was ordered to accompany the Portolá expedition that established (1770) the mission at Monterey, where he became *comandante* Later that year he led a small party to explore the east coast of San Francisco Bay, and his reports influenced the choice of the site of San Francisco In 1772, with Juan Crespi, he led an expedition from Monterey to the San Joaquin river, through the Santa Clara Valley Friction developed at Monterey between Fages and Father Junípero Serra, and Fages was recalled (1774), but he returned in 1782 as governor His administration was notable for its encouragement of colonization, agriculture, and missionary work He led punitive expeditions (1781–82) against the Indians of the Colorado river area, describing them in a diary, *The Colorado River Campaign* (Eng tr , 1913) Two other diaries, *The Expedition to San Francisco Bay in 1770* (Eng tr , 1911) and *A Historical, Political, and Natural Description of California* (Eng tr , 1937), are valuable source materials for the history of the period

Faggi, Alfeo (älfā'ō fad'jē), 1885–, American sculptor, b Florence, Italy He came to the United States in 1913 Faggi is best known for his sensitive interpretation of religious subjects in bronze His work recalls the Italian primitives, but is also a highly personal expression His *Pietà* (Art Inst , Chicago), *Stations of the Cross* (Church of St Thomas the Apostle, Chicago), *St Francis* (Santa Fe Mus), and low reliefs (Whitney Mus , New York) are characteristic works

Faguet, Émile (āmēl' fagē'), 1847–1916, French literary critic and historian His literary studies of the 16th, 17th, 18th, and 19th cent re-created an interest in the development of French literature Later works include *Le Culte de l'incompétence* (1910, Eng tr , 1911), *L'Horreur des responsabilités* (1911, Eng tr , 1914), and *Jean-Jacques Rousseau* (5 vols , 1911–13)

Fahrenheit, Gabriel Daniel (fä'runhīt, Ger gä'brēĕl dä'nēĕl fa'rūnhīt), 1686–1736, German physicist, b Danzig He improved the thermometer by substituting mercury for alcohol, invented a new type of hygrometer, and devised the Fahrenheit scale (see TEMPERATURE)

Faial see FAYAL

Faidherbe, Louis Léon César (lwĕ' lāō' sāzar' fādĕrb'), 1818–89, French colonial administrator As governor of Senegal (1854–61, 1863–65), he fought HAJJ OMAR and established an orderly and greatly expanded colony In the FRANCO-PRUSSIAN WAR, he assumed command of the Army of the North in the dark days after the fall of Sedan and gained some success

faïence (fīĕns', -ans', fī–) [for FAENZA, Italy], term applied to many kinds of pottery, especially to earthenware with an opaque lead glaze, e g , MAJOLICA

Failly, Pierre Louis Charles de (pyĕr' lwē' shärl' du fāyē'), 1810–92, French general He fought in Algeria, in the Crimean War, and at Magenta and Solferino (1859) Heading the expeditionary forces sent to protect the Papal States, he defeated Garibaldi at Mentana (1867) In this campaign the Chassepot rifle was first used Failly commanded the right wing of MacMahon's army at Sedan (1870) The disastrous outcome of that battle (see FRANCO-PRUSSIAN WAR) is largely ascribed to Failly's tactics

fainting or **syncope** (sĭng'kupē, sĭn'-), temporary loss of consciousness resulting from an insufficient flow of blood to the brain Among the causes of the condition are emotional shock, lack of food, being in a poorly ventilated place, hemorrhage, pain, and anemia To prevent an injured person from fainting it is wise to have him sit or lie down while being given first-aid or other medical treatment The sensation of faintness is best treated by lying down with the body level or, if this is not possible, by lowering the head to a position below the heart Sometimes it is helpful to hold an ammonia inhalant near the nose and to sprinkle the face with cold water Stimulants by mouth should never be given unless the patient is conscious

Fair, James Graham, 1831–94, American financier, b near Belfast, Ireland He came to America as a child, grew up on an Illinois farm, and went to the West in 1851 in search of gold In partnership with J W Mackay, J C Flood, and William S O'Brien, he made a large fortune from the silver of the Comstock Lode He was U S Senator from Nevada from 1881 to 1887

fair. Before the development of transportation and marketing had made it possible, in effect, to buy anything anywhere at any time, special opportunities for marketing were afforded by religious observances that brought many people together from distant places Periodic markets, or fairs, of this kind developed in Greece and Rome In the Middle Ages, the advantages of such fairs became much greater Merchants traveling together were safer than those who traveled alone, and special privileges were granted to those who transacted business at fairs The greatest period of the European fairs was the 13th and 14th cent The European fair has always been a business institution, for buying, selling, and bartering It declined under competition with continuous marketing, but a few fairs survived, as those of Leipzig and Nizhni Novgorod At some fairs, marketing was of products in general, but others were limited, e g , to cattle or to cheese Rosa Bonheur's painting of a horsefair is well known Some fairs that are no longer held are remembered in legend, as Donnybrook Fair in Ireland, abolished in 1855, is remembered for its turbulence The typical American fair has little in common with the European fair but the name It is not a market but an exhibition of products that are ranked by judges according to their relative excellence The products exhibited are typically those of the farm and the home The credit for the plan and for its prompt success belongs to Elkanah Watson, who organized and conducted the first Berkshire County Fair at Pittsfield, Mass , in 1811 The enthusiastic response of the rural population to this opportunity to meet their neighbors and to compare the best products of their work led swiftly to the establishing of annual county and state fairs throughout the United States As the wilderness was occupied by settlers, the fair was promptly introduced, tales of the meagerness of the first fairs are a part of neighborhood lore A famous rural fair is that at Danbury, Conn The nature of county and state fairs has changed with changes in farming Machines made by distant factories are exhibited Race horses from a distance, handled by professional jockeys, have displaced horses of the neighborhood ridden or driven by their owners In some places, allegiance to the fair has weakened until it has been discontinued For world's fairs, see EXPOSITION See W C Neely, *The Agricultural Fair* (1935)

Fairbairn, Sir William (fâr'bârn), 1789 1874, Scottish engineer A pioneer builder of iron ships, he was also known for his bridges, particularly for his work with George Stephenson on the railway bridges across the Conway river and the Menai Strait

Fairbanks, Avard Tennyson, 1897–, American sculptor, b Provo, Utah, studied in New York and Paris He was associate professor of sculpture at the Univ of Michigan in 1929 and has been dean of the school of fine arts, Univ of Utah, since 1947 Among his important works are *Doughboy of Idaho*, a state memorial, *Old Oregon Trail*, a marker, bust of Ezra Meeker (Univ of Oregon), *Three Witnesses*, memorial (Salt Lake City, Utah), *Pioneer Mothers*, memorial (Vancouver, Wash), *Hawaiian Motherhood*

Fairbanks, Charles Warren, 1852–1918, American statesman, Vice President (1905–9), b Union co , Ohio, grad Ohio Wesleyan Univ (B A , 1872, M A , 1875) He became wealthy as a railroad lawyer in Indianapolis, rose in Republican politics, and served in the U S Senate from 1897 to 1905 He was recognized as the spokesman of President McKinley and of the conservatives, and Fairbanks was chosen as vice presidential candidate with Theodore Roosevelt primarily to attract the conservative vote He continued to dominate his party in Indiana and was in 1916 again vice presidential candidate, this time on the unsuccessful ticket with Charles Evans Hughes

Fairbanks, Douglas, 1883–1939, American moving-picture actor, whose real name was Douglas Elton Ulman, b Denver From 1902 to 1914 he appeared on Broadway and on tour in light comedies and vaudeville In 1915 he entered moving pictures and made his name in such films as *Manhattan Madness*, *The Americano*, *Wild and Wooly*, *He Comes up Smiling*, *The Mollycoddle*, *The Mark of Zorro*, *The Nut*, *The Three Musketeers*, *Robin Hood*, and *The Thief of Bagdad* His marriage (1920) to Mary Pickford ended in divorce in 1935 Fairbanks had personal charm and great muscular agility See Alistair Cooke, *Douglas Fairbanks the Making of a Screen Character* (1940)

Fairbanks, Erastus, 1792–1864, American manufacturer and politician, b Brimfield, Mass His family moved to St Johnsbury, Vt , in 1815, and soon after, with two brothers, he established an iron foundry which manufactured stoves, plows, and various other implements The invention of the platform scale by Thaddeus Fairbanks, a younger brother, led the firm which Erastus headed to concentrate largely on making scales of various kinds The business prospered, and Fairbanks scales became known throughout the world Governor of Vermont (1852–53), he was elected again in 1860, this time as a Republican,

and remained in office the first year of the Civil War. His energetic support of the Federal government and cooperation in providing troops and supplies place him among the more notable "war governors." See W B Hesseltine, *Lincoln and the War Governors* (1948)

Fairbanks, Thaddeus, 1796–1886, American inventor, b Brimfield, Mass He helped his elder brother, Erastus Fairbanks, to establish an iron foundry in St Johnsbury, Vt, where he devised improvements for many household and agricultural implements He is remembered because he invented the platform scale, patented in 1831

Fairbanks, town (1939 pop 3,455, 1949 estimated pop 8,500), central Alaska, on Chena Slough, where the Chena river enters the Tanana Fairbanks is the transportation, distributing, and financial center for the Tanana river area and for the whole vast region of inland Alaska Gold was discovered here in 1902, and Fairbanks grew rapidly as a mining camp It declined somewhat after placer mining reached its limits, but flumes were built and two large companies continued mining by hydraulic methods The building of the Alaska RR increased the importance of Fairbanks The Richardson Highway from Valdez on the coast reaches Fairbanks, which became in the Second World War the terminus of the ALASKA HIGHWAY There are also other highways In the war it was an army air base, and a new air base was established in the vicinity after the war Fairbanks has one of the prominent airports of the territory Just outside Fairbanks is the Univ. of Alaska (see ALASKA, UNIVERSITY OF)

Fairburn, city (pop 1,502), NW Ga, SW of Atlanta, inc as a town 1854, as a city 1925

Fairbury. **1** City (pop 2,400), NE Ill, NE of Bloomington, in a farm and coal area, inc 1895 **2** City (pop 6,304), co seat of Jefferson co, SE Nebr, near the Kansas line SSW of Lincoln, in a farming area, founded 1869 In the '70s and '80s it was a typical prairie town Dairy products, metal castings, and grain are produced here It has a municipal power plant

Fairchance, borough (pop 1,855), SW Pa, SSE of Pittsburgh near Uniontown Explosives are manufactured here

Fairchild, David Grandison, 1869–, American botanist and agricultural explorer, b East Lansing, Mich After graduate study at Naples Zoological Station, German universities, and the Buitenzorg (Java) Botanical Garden, he entered the service of the U S Dept of Agriculture, where he organized (1897) and later (1906–28) was in charge of a division of plant exploration and introduction now part of the Bureau of Plant Industry He had charge also of the foreign research expeditions, in many of which he participated He wrote *Exploring for Plants, 1925–1927* (1930), *The World Was My Garden* (1938), *Garden Islands of the Great East* (1943), and *The World Grows round My Door* (1947) He married the daughter of Alexander Graham Bell

Fair Employment Practices Committee (FEPC), established (1941) as the Committee on Fair Employment Practices in the U S government within the Office of Production Management by executive order of President F D Roosevelt This wartime committee, created to promote the fullest utilization of all available man power and to eliminate discriminatory employment practices, was transferred (1942) to the War Manpower Commission and later (1943) was reorganized within the Office of Emergency Management Field offices were established in the major industrial cities of the United States, and complaints of discrimination were reviewed by the committee Appropriations for the FEPC were drastically reduced for the 1945 fiscal year and this committee was suspended (1946) for lack of funds Efforts to establish a permanent peacetime FEPC, as advocated by President Harry S Truman, were blocked in the U S Senate after 1946

Fairfax, Edward, d 1635, English translator *Godfrey of Bullogne, or, The Recoverie of Jerusalem* (1600) was his verse translation of Tasso's *Gerusalemme liberata* In *Discourse on Witchcraft* (1621) he recounts alleged witchcraft in his own family

Fairfax, Thomas Fairfax, 3d **Baron,** 1612–71, English soldier-statesman Son of Ferdinando Fairfax, 2d Baron Fairfax of Cameron (1584–1648), whose title he inherited and under whom he fought until 1644, he was given command of the New Model Army (1645) That same year the army crushed Charles I at Naseby Fairfax was conservative by nature, and when the quarrel developed between the army and Parliament he lost influence over army policies, although he remained nominal commander after Cromwell had become the dominant figure Nominated as a judge of Charles I, he resigned when he realized the king's execution was predetermined He resigned his command rather than invade Scotland (1650), became hostile to Cromwell during the Protectorate because of his dread of a military dictatorship, and was instrumental in securing the return of CHARLES II to the throne (1660) He was an able and valiant officer In politics he found himself moving less rapidly than the times. See the correspondence of the Fairfax family called *Memorials of the Reign of Charles I* (to 1642, ed by J G W Johnson, 2 vols, 1848) and *Memorials of the Civil War* (to 1660, ed by R Bell, 2 vols, 1849), biography by C R Markham (1870)

Fairfax, Thomas Fairfax, 6th **Baron,** 1693–1781, proprietor of the Northern Neck of Virginia, b Kent, England, educated at Oriel College, Oxford The Northern Neck, comprising the land between the Rappahannock and the Potomac, was inherited by him through his mother from his grandfather, the 2d Baron CULPEPER, colonial governor of Virginia Virginia disputed the extent of his grant, and both parties had surveys made, Fairfax coming to the colony for that purpose (1735–37) In 1745 the privy council, in return for certain concessions made by Fairfax, confirmed his claim in full (a minimum of 5,282,000 acres), and two years later he returned to Virginia to live permanently He spent several years with his cousin and former agent, Col William Fairfax, the patron of the youthful George WASHINGTON, at "Belvoir" on the Potomac before moving (1752) to the Shenandoah Valley, where he built "Greenway Court," near Winchester Though a Loyalist in sentiment (he was the only resident peer in the colonies), he went unharmed during the American Revolution The state of Virginia canceled the proprietorship in 1785 See D S Freeman, *George Washington*, Vol I (1948)

Fairfax **1** Residential town (pop 2,198), W Calif, N of San Francisco, inc 1931 **2** Village (pop 1,116), S Minn, E of Redwood Falls, in a farming region **3** Oil town (pop 2,327), N Okla, near the Arkansas river NW of Tulsa, founded c 1905, inc 1909 **4** Town (pop 1,379), S S C, near Allendale SSW of Columbia, in a truck and livestock area, settled 1876, inc 1898 **5** Rural town (pop 1,229), NW Vt, SE of St Albans, granted 1763, settled 1783 **6** Town (pop 979), N Va, WSW of Washington, D C, inc 1892 In the old courthouse (1800) of Fairfax co are the wills of George and Martha Washington Mt Vernon, Gunston Hall (1755–58), and Pohick Church (1774) are in the county

Fairfield. **1** Steel-manufacturing city (pop 11,703), N central Ala, near Birmingham, planned as an industrial city, founded c 1910 as Corey, inc 1919 **2** City (pop 1,312), co seat of Solano co, W Calif, NE of San Francisco, founded 1859, inc 1903 There are sheep ranches and fruit and dairy farms **3** Industrial town (pop 21,135), SW Conn, between Bridgeport and Westport, settled 1639 It was the scene of a battle with the Pequots (1637). In the Revolution the British burned much of the village The residential part of the town has many colonial houses **4** City (pop 4,008), co seat of Wayne co, SE Ill, W of the Little Wabash, in a farm region, settled c 1819, inc 1840 Automobile parts, dresses, and paper boxes are made here **5** City (pop 6,773), co seat of Jefferson co, SE Iowa, E of Ottumwa, inc 1847 It is a residential, trade, and manufacturing center Washing machines are made here The first annual Iowa State Fair was held here in 1854 The city is the seat of Parsons College (Presbyterian, coeducational, 1875) and of Old Settlers' Park (with a log cabin built in 1836) **6** Town (pop 5,294), S Maine, on the Kennebec above Waterville, settled 1774, inc 1788 It is the seat of a tuberculosis sanatorium and of the Good Will Homes and Schools There are woolen mills **7** Village (pop 1,409), SW Ohio, NE of Dayton The Fairfield Air Depot is here **8** Town (pop 1,047), co seat of Freestone co, E central Texas, WSW of Palestine, inc 1933 Small plants use the native lumber **9** Town (pop 1,444), NW Vt, E of St Albans, in a region known for its maple sugar, granted 1763, settled 1787 Chester A Arthur's birthplace is near

Fair Haven. **1** Borough (pop 2,491), E N J, on the Navesink and NE of Red Bank, inc 1912 **2** Town (pop 2,245), W Vt, W of Rutland The town is known for its slate, the first slate quarry in Vermont was opened here in 1839 Many inhabitants are descendants of Welsh slate workers who immigrated in the second half of the 19th cent Matthew Lyon was a citizen of Fair Haven

Fairhaven, town (pop 10,938), SE Mass, at the mouth of the Acushnet opposite New Bedford, settled 1670, set off from New Bedford 1812 Boatbuilding is carried on William Bradford, the marine painter, was born here

Fair Havens, Crete see LASEA

Fair Head, Northern Ireland see BENMORE HEAD

Fairhope, resort town (pop 1,845), SW Ala, on the east coast of Mobile Bay, founded 1894 95 by followers of Henry George, inc 1908 It remained a single-tax town until 1937 The experimental School of Organic Education is here

Fair Isle, rocky island (pop 108), 3 mi long and 2 mi wide, off N Scotland, halfway between the Orkneys and the Shetland Islands It is known for its knitted hosiery of bright, many-colored design Fishing and sheep raising are also pursued Fair Isle is a famous bird migration station

Fair Lawn, borough (pop 9,017), NE N J, near Paterson; inc. 1924 Airplanes are made The borough includes the planned community Radburn

Fairmont. **1** City (pop. 6,988), co seat of Martin co, S Minn, S of New Ulm near the Iowa line, platted 1857, inc as a village 1878, as a city 1902 Railway maintenance equipment is made here, and the city is a shipping point for farm products The courthouse, on the site of a stockade built in the Sioux outbreak of 1862, has pioneer relics **2** Town (pop 1,993), S N C, near the S C line S of Fayetteville, in a farm area **3** City (pop 23,105), co seat of Marion co, N W Va, where the West Fork and the Tygart form the Monongahela, in a rich bituminous-coal area, founded 1843 Glass and glass products are made here Fairmont is the seat of a state teachers college and a state hospital

Fairmont City, village (pop 1,905), SW Ill, industrial suburb of East St Louis, founded 1910 as Willow Town, inc 1914 as Fairmont City

Fairmount, town (pop 2,382), E central Ind, NNE of Indianapolis It has a cannery The town is the site of national and state conferences of the Methodist Church

Fairmount Heights, town (pop 1,391), W central Md, a suburb of Washington, D C, inc 1927

Fairport or **Fairport Harbor,** village (pop 4,528), NE Ohio, on Lake Erie near Painesville, laid out 1810 as Grandon, inc 1836 as Fairport A fishing village, it also ships iron ore and coal

Fairview. **1** Borough (pop 8,770), NE N J, near the Hudson NE of Jersey City, settled 1860, inc 1894 **2** Village (pop 4,700), NE Ohio, near Cleveland **3** City (pop 1,913), co seat of Major co, NW central Okla, near the Cimarron river, in a farm and dairy section, settled 1893, inc as a town 1901, as a city 1909 **4** City (pop 1,314), central Utah, on the San Pitch river in the Sanpete Valley, S of Provo, settled 1859 by Mormons, inc 1872 The dairy and farm region long had some irrigation from the river and now receives some water from a Green River tributary by the Sanpete project

Fairview Park, town (pop 1,074), Vermillion co, W Ind, N of Terre Haute

fairy, in legend of the British Isles, a supernatural being quite similar to human beings, but endowed with various magic powers and generally ill-disposed towards men The JINNI of Arabian folklore is similar Fairies are nearly always of great beauty, an attribute that distinguishes them from the non-English types of ELF, GNOME, GOBLIN, NIX, and TROLL The night is the favorite time of fairies It is dangerous for human beings to have anything to do with them thus, there are many stories of human lovers of fairies dying or being carried away In the 16th cent the fairies became very popular in English literature, and Shakspere led the way in conventionalizing them The fairy became a tiny, dainty little creature associated with flowers The diminutive size of fairies had no great place in popular belief until Elizabethan literature touched the people (for a similar development, see BROWNIE) At the same time, all kinds of classical names and ideas were connected with the fairies, and they were given a king and queen, Oberon and Titania or Queen Mab, and were identified with sylphs, dryads, and wood sprites Supernatural beings on the Continent were associated with the pagan gods In very recent times belief in fairies has been strong in Ireland, where a fundamental distinction is made between the fearful Little People or Good People (a euphemism) and larger man-sized fairies In the 16th and 17th cent belief in, and supposed dealings with, fairies were so general that the Church of Scotland conducted a vigorous campaign against them (For special types of creatures like fairies, see ROBIN GOODFELLOW, PUCK, and WAYLAND SMITH, also TUATHA DE DANANN, KELPIE, BANSHEE, and LEPRECHAUN) The appearance of supernatural beings and of magic of all sorts is characteristic of **fairy tales** The great adapters of popular fairy tales were Charles PERRAULT and the brothers GRIMM Hans Christian ANDERSEN's fairy tales are perhaps the most artistic examples of this literary genre Andrew LANG and James STEPHENS were other notable contributors.

Faisal. see FEISAL.

faith. see CREED.

faith healing, relief or cure of bodily ills without material aid, through some religious attitude on the part of the sufferer Cures are commonplace in religions of the most diverse cultures In the Jewish and Christian traditions prayers for cures and miracles are normal, thus the apostles developed a ritual of healing (James 5 14–16, see also MIRACLE) In the traditional churches healing has centered about the sacraments of the Eucharist and EXTREME UNCTION and around shrines (e g, LOURDES and SAINTE ANNE DE BEAUPRÉ) and RELICS Since 1800 there have appeared a number of groups who cultivated faith healing, e g, that of John Alexander DOWIE, the Emmanuel movement, and the PECULIAR PEOPLE The followers of CHRISTIAN SCIENCE, approaching the problem differently, do not consider their system one of faith healing They count man as like God,

spiritual, therefore not truly subject to material ills Faith healing is of obvious interest to psychiatry, especially in the fields of psychosomatic medicine and PSYCHOTHERAPY

Faithorne, William (fā'thôrn), 1616–91, the elder, English engraver and portrait painter, pupil of Robert Peake His activities during the English civil war caused him to be banished to France, where he studied with Robert Nanteuil He returned to London c 1650 and devoted himself to engraving, portraiture in crayon, and print selling His best engravings are portraits, executed in a brilliant and finished manner—the duchess of Cleveland (after Lely), Lady Paston (after Van Dyck), Oliver Cromwell, Cardinal Richelieu, and John Milton Faithorne engraved also two curious maps of London (Bibliothèque nationale, Paris) and of Virginia and Maryland (British Mus) His son, **William Faithorne,** the younger, 1656–1701?, engraved portraits in mezzotint

Faiyum, Egypt see FAYUM

Faizabad (fī'zŭbăd, fīzăbad'), city (pop c 20,000), capital of Badakhshan prov , NE Afghanistan It is a trading center with a fort built in 1904

Faizabad, India see FYZABAD

fakir (fukēr', fā'kur) [Arabic,=poor], a Moslem monk The term has been extended to include monks in India of all sorts and wandering beggars as well Because of their skill at magical tricks and awe-inspiring feats, fakirs are commonly considered wonder-working magicians In general, the word has come to mean a quasi-ascetic man who lives off charity, by begging, working miracles, or other means The term DERVISH is synonymous with fakir as applied to Moslem monks

Falaise (fălēz'), town (pop. 3,954), Calvados dept , N France, in Normandy It has tanneries and a textile industry At the castle of the first dukes of Normandy WILLIAM I of England (William the Conqueror) was born It was heavily damaged in the NORMANDY CAMPAIGN of 1944, in which Falaise was a key point

Falange (fā'lănj), Spanish political party, founded in 1933 as the Falange Española Tradicionalista by José Antonio Primo de Rivera, son of the former Spanish dictator Professing generally the principles of FASCISM, the Falange distinguishes itself from other fascist groups by its great insistence on national tradition, particularly emphasizing the imperial and Renaissance Christian traditions of Spain The Falange militia aided with the Insurgents in the Spanish civil war of 1936–39 and emerged as the most powerful single party Branches of the Falange were created in Latin American countries In 1942 Francisco Franco dismissed the head of the Falange, Ramón Serrano Suñer, and virtually absorbed it into his one-party government

Falashas (-lă'-) [Ethiopic,=emigrant], group of Abyssinians of Jewish affinity Pagan influences have affected their Judaism See J M Flad, *The Falashas of Abyssinia* (Eng tr , 1869)

falcon (fôl'kŭn, fô'kŭn), name for a number of species of long-winged birds of prey found in all parts of the world Only the female is used in FALCONRY Falcons fly at great speed with rapidly moving wings and do not soar as do hawks They have strong hooked and notched bills They eat birds, small mammals, and insects The Old World peregrine and the gyrfalcon (jûr'-) of arctic regions have been much used in falconry The duck hawk, the American variety of the peregrine, can overtake almost any bird in flight and kill it by striking it to earth or by grasping it with deadly talons Other American falcons are the pigeon hawk, the sparrow hawk, and the prairie falcon The kestrel and the merlin are English falcons

Falcone, Aniello (ănyĕl'lō fälkō'nā), 1600–1665, Italian painter, sometimes called the Oracolo delle Battaglie Two of his battle scenes are in the National Museum, Naples, two others in the Prado, *Fight between Turks and Cavalry* is in the Louvre and *Flight into Egypt* in the Naples cathedral

Falconer, Hugh (hū' fôk'nur), 1808–65, British paleontologist, botanist, and physician to the East India Company in Bengal For many years (1830–42, 1847–55) he remained in India, serving as superintendent of the botanic gardens at Saharanpur and at Calcutta, steadily carrying on his researches which resulted in remarkable discoveries of fossil fauna and flora After his retirement he continued his researches in Europe He edited nine parts of an illustrated work, *Fauna Antiqua Sivalensis* (1846–49) Dr. Charles Murchison edited his *Palaeontological Memoirs and Notes* (1868)

Falconer, William (fôk'nur), 1732–69, English poet, b Scotland The victim of a shipwreck off Greece, he described his ordeal in a long heroic poem, *The Shipwreck* (1762), which enjoyed immediate but transitory popularity The success of his poem brought him an appointment as purser on a royal frigate, but on his first voyage he was lost with the ship off Mozambique

Falconer (fôl'kunŭr, fôk'nŭr), village (pop 3,222), W N Y , near Jamestown, settled 1807, inc 1891

Falconet, Étienne Maurice (ātyĕn' mōrĕs' fälkōnā'), 1716–91, French sculptor, pupil of Lemoyne He was famous under Louis XV, but much of his work was destroyed in the Revolution. His colossal bronze equestrian statue of Peter the Great (Leningrad) and his *Bathing Girl* (Louvre) are well-known surviving works

falconry (fô'kunrē, fôl'-), the sport of hunting birds or small animals with falcons It was known to the ancient Chinese, Persians, and Egyptians. Falconry probably spread from Asia to Eastern Europe and then to Western Europe and became one of the chief sports of royalty and the nobility It attained its greatest popularity in late medieval and early modern Europe, but after the 17th cent falconry declined Subsequent revivals never brought it into the favor it once enjoyed A renewal of interest occurred in the United States and several European countries in the 1930s The hawks used in falconry are taken when young from their nests They are subjected to a rigorous course of training, in which they learn to fly, when released, at the quarry, to leave the prey untouched after killing it, and to sit quietly, when hooded, on the falconer's wrist See W. F Russell, Jr , *Falconry* (1940)

Falerii (fălēr'ēī), ancient city of Etruria, Italy, W of the Tiber It was the capital of the Faliscans, a tribe who fought with the Etruscans against Rome Falerii fell to Rome in 241 B C Modern Civita Castellana is on the site

Falfurrias (fălfûr'ēus), unincorporated town (pop c 2,500), co seat of Brooks co , S Texas, SW of Corpus Christi The dairying, truck-farming, and ranching area also yields oil The city has a recycling plant and a gypsum plant

Falguière, Jean Alexandre Joseph (zhā' alĕksā'dru zhôzĕf' fälgyĕr'), 1831–1900, French sculptor and painter He rose to prominence with his bronze *Winner of the Cock Fight* (Luxembourg Mus , Paris) Among his best works are the spirited *Diana* and the portrait statues of Corneille (Théâtre Français, Paris), Gambetta (Amiens), and Lafayette (Washington, D C) Less successful are his *Triumph of the Republic*, a quadriga designed for the top of the Arc de Triomphe, and his *Progress Overthrowing Error* (Panthéon, Paris) His paintings *The Wrestlers* and *Fan and Dagger* are in the Luxembourg Museum

Faliero or Falier, Marino (märē'nō fälyā'rō, fälĕr'), 1274–1355, doge of Venice (1354–55). As commander of Venetian forces he defeated Louis I of Hungary at Zara (1346) and later held high diplomatic posts Soon after his election as doge, the Venetians were defeated by the Genoese The doge found himself at odds with a group of patricians who had insulted his family Joining some dissatisfied plebeians, Faliero decided to participate in a conspiracy with the aim of assassinating the nobles, overthrowing the oligarchic government, and making Faliero dictator The plot was discovered, Faliero and his accomplices were tried by the Council of Ten and executed (1355) Faliero's life has inspired works by Byron, Swinburne, Delavigne, Delacroix, and Donizetti

Faliscan, Italic language See LANGUAGE (table)

Falkberget, Johan (yōhän' fälk'bĕrgu), 1879–, Norwegian novelist As a youth he worked in the mines, and this early experience of hard toil and poverty left an impress upon all his books *Lisbeth of Jarnfjeld* (1915, Eng tr , 1930), the trilogy *Christianus Sextus* (1927–35), and *Night Bread* (1940) are stories of the mines and the people who live by them

Falkenhayn, Erich von (ā'rĭkh fŭn fäl'kunhīn), 1861–1922, German general He succeeded (1914) the younger Moltke as chief of the German general staff He was successful on the Eastern front during the First World War, but after the disaster at Verdun (1916), he was replaced by Hindenburg Falkenhayn commanded (1916) the invasion of Rumania, and in 1918 he led an army into Lithuania.

Falkirk (fôl'kûrk, fôl'-), burgh (pop 36,566), Stirlingshire, Scotland, ENE of Glasgow and SW of Grangemouth, the port for Falkirk It is near a broad carse (stretch of fertile farm land) in a mining and manufacturing region Its chief products are chemicals and leather goods Famous annual stock fairs (the "trysts of Falkirk") have been held for centuries Carron, a northeastern suburb, is well known for ironworks established c 1760 In the first battle of Falkirk (July 22, 1298), Edward I and the English defeated the Scots led by Sir William Wallace On Jan 17, 1746, Gen Henry Hawley was defeated by Prince Charles Edward and his Highlanders The Wall of Antoninus passed the burgh

Falkland, Lucius Cary, 2d Viscount (fôk'lŭnd), 1610?–1643, English statesman and literary figure A poet in his own right, Falkland was a liberal patron of many of his literary contemporaries. He entered Parliament in 1640, where he opposed the exaction of ship money, spoke in favor of the earl of Strafford's attainder, and objected to the abolition of the episcopacy. He represented the king in attempts to make peace with Parliament and was with Charles at Edgehill and the siege of Gloucester. In despair at having to fight either king or Parliament, he is supposed to have deliberately allowed himself to be killed at the battle of Newbury. His family name also appears as Carey. See biography by J. A R. Marriott (1907), study by Kurt Weber (1940).

Falkland (fô'klŭnd, fôl'-), burgh (pop. 791), Fifeshire, Scotland, at the foot of East Lomond Hill and N of Edinburgh It was formerly the site of a castle of the earls of Fife, in which David, duke of Rothesay, was starved to death in 1402, and is the site of a 15th-century palace of the Stuarts

Falkland Islands (fô'klŭnd), group of islands, S Atlantic, c.300 mi E of the Strait of Magellan Ownership is disputed by Argentina and Great Britain, but the islands are administered as a British crown colony (4,618 sq mi , pop 2,239) with the capital at Stanley (pop 1,252) There are two large islands (East Falkland and West Falkland) and some 200 small islands Dependencies of the colony, scattered down into Antarctica, include SOUTH GEORGIA, the South Orkney Islands, the South Sandwich Islands, the South Shetland Islands, and Graham Land The Falklands themselves are bleak, rocky moorlands, swept by wind and drenched by chill rain The islands yield wool and skins, while from the dependencies come whale and seal oil and guano The British claim to them is based on probable discovery by John DAVIS in 1592 But a colony was first established in 1764 by the French under BOUGAINVILLE at Port Louis (on East Falkland), which was transferred to Spain (1766) and renamed Soledad John BYRON took possession in 1765 for the British at Port Egmont (on West Falkland) A British colony was established (1766), taken by the Spanish (1770), restored (1771), and abandoned (1774) by the British Soledad was also abandoned by the Spanish in 1811, but in 1820 was revived by the United Provs of La Plata (Argentina) Seizure of a U S sealing vessel at Soledad in 1832 led to a U S punitive expedition In 1832-33 the British occupied the islands The Argentine claim has, however, never been dropped, and in 1948 Argentina offered to have the question settled by adjudication In one of the most stirring naval engagements of the First World War, the British under Sir Frederick Sturdee destroyed a German squadron under Graf von SPEE near the Falklands on Dec 8, 1914 The Spanish name for the islands is Islas Malvinas See V F Boyson, *The Falkland Islands* (1924), Julius Goebel, Jr , *The Struggle for the Falkland Islands* (1927)

Falkner, William see FAULKNER WILLIAM

Fall, Albert Bacon, 1861–1944, American cabinet official, b Frankfort, Ky He became a rancher in New Mexico and a political leader in that state After election to the U S Senate in 1912 he served there until President Harding made him Secretary of the Interior in 1921 Fall was one of the chief figures in the scandal concerning oil lands that rocked the Republican administration (see TEAPOT DOME) He resigned in 1923 and was later tried and found guilty (1931) of conspiracy to defraud the government

fall, the, i e , the fall of man, in Christian thought see ORIGINAL SIN and GRACE

Falla, Manuel de (mänwĕl' dā fal'yä), 1876–1946, Spanish composer, pupil of the nationalist composer Felipe Pedrell In 1907 he went to Paris, where he met Debussy, Dukas, and Ravel Notable among his compositions are *La vida breve* (1905), an opera, *Nights in the Gardens of Spain* (1916), for piano and orchestra, the ballets *El Amor Brujo* (1915) and *El sombrero de tres picos* (Madrid, 1917, as *El corregidor y la molinera*, London, 1919, *The Three-cornered Hat*) See J B Trend, *Manuel de Falla and Spanish Music* (1929), Gilbert Chase, *The Music of Spain* (1941)

fallacy, in logic, reasoning which fails to satisfy the principles of valid argument Aristotle pointed out that fallacies may be divided into two classes—those attributable to language, arising primarily from ambiguities of meaning, and those arising from the inconsistencies of thought itself Among the commonly found deductive fallacies are the argument *ad hominem*, the *non sequitur*, the *petitio principii* (begging the question), the *post hoc, ergo propter hoc* (confusion of cause and concidence), and the double question Fallacies of induction arise from errors of perception, judgment, and interpretation

Fallada, Hans (hăns' fa'lädä), pseud of **Rudolf Ditzen** (rōō'dôlf dĭt'sun), 1893–1947, German novelist In 1932, after having written several novels, he produced *Little Man, What Now?* (Eng tr , 1933), a moving story of a young couple in Germany after the First World War, it was an immediate international success This was followed by *The World Outside* (1934; Eng tr , 1934), *Once We Had a Child* (1934, Eng tr , 1936), *An Old Heart Goes a-Journeying* (1936, Eng tr., 1936), and *Wolf among Wolves* (1937, Eng tr , 1938)

fallen arches: see FLAT FOOT

Fallen Timbers, state park, NW Ohio, near Maumee, on the Maumee river just SW of Toledo It is the site of the decisive battle in which Anthony WAYNE defeated (1794) the hostile Indians

Fallières, Armand (ärmä' fälyĕr'), 1841–1931, president of the French republic (1906–13) He was, with few interruptions, a member of various cabinets from 1882 to 1892 and served as president of

the senate. As president of the republic he maintained republican and socialist rule at home and sought the friendship of Russia and England abroad. During his term the separation of Church and state, passed as law in 1905, began to be applied, and the DREYFUS AFFAIR was brought to its conclusion in 1906

falling star: see METEOR

fall line, physiographic feature of almost every drainage basin, the boundary between an upland region and a coastal or tidewater plain It marks the place where rivers drop to the plain in falls or rapids To this point canoes could go without being portaged, and here today all seagoing boats must stop and unload their freight The falls also supply water power for the development of industry, and therefore the fall line is marked in modern lands, e g , the eastern seaboard of the United States, by a band of commercial and industrial cities of an importance rivaling that of the ports Typical fall-line cities of the Atlantic coast are Lowell, Mass , Pawtucket, R I , Troy, N Y , Trenton, N J , Georgetown, now part of Washington, D C , Richmond, Va , Raleigh, N C , Columbia, S C , and Augusta, Ga Louisville, Ky , and Minneapolis are illustrative of those in the Mississippi valley

Fallon (făl'ŭn), city (pop 1,911), co seat of Churchill co , W Nev , ENE of Carson City, inc 1908 The trade center of a ranching area, it is also served by the NEWLANDS PROJECT A Federal wildlife refuge was established here in 1931

Fallopius (fŭlō'pēŭs), Ital *Gabriello* or *Gabriele Fallopio* (gäbrēĕ'lō, gäbrēĕ'lā fäl-lō'pyō), 1523–62, Italian anatomist, pupil and successor of VESALIUS and teacher of FABRICIUS at Padua His important discoveries include the **Fallopian tubes** (fulō'pēun), leading from uterus to ovaries His collected works were published at Venice in 1584

fallow land, in farming, is plowed but not seeded for a season, either to conserve moisture, as in DRY FARMING, or to check weeds and plant diseases ROTATION OF CROPS is often substituted for fallowing in modern agricultural practice While fallowing helps conserve moisture, it is considered wasteful of humus and nitrogen

Fallows, Samuel, 1835–1922, American clergyman, bishop of the Reformed Episcopal Church, b England, grad Univ of Wisconsin, 1859 He served with the Union army in the Civil War and afterwards held Methodist pastorates in Milwaukee Choosing the Reformed Episcopal Church as best fitted to the needs of the West, he became (1875) rector of St Paul's Church, Chicago, and was made bishop in 1876 In 1908, with President Taft's endorsement, he went to the Far East to study sociological conditions See biography by A K Fallows (1927)

Fall River, industrial city (pop 115,428), a co seat of Bristol co , SE Mass , on Mt Hope Bay at the mouth of the Taunton, settled 1656, set off from Freetown 1803, inc as a city 1854 The first cotton mill was built here in 1811, Fall River's excellent harbor, water power, and damp climate contributed to the growth of the textile industry The city suffered with the transfer of much of New England's textile industry to the South and in the general depression after 1929, but recuperated with defense work after 1940 It is a port of entry The Bradford Durfee Textile School was opened in 1904

Falls Church, residential town (1940 pop 2,576, 1945 special census pop 4,341), N Va , near Washington, D C , inc 1875 The Falls Church was built in 1767–69 on the site of an earlier church built in 1734

Falls City, city (pop 6,146), co seat of Richardson co , extreme SE Nebr , near the Kansas line and near the falls of the Nemaha, founded 1857, inc 1858 It is a railway division point and the trade center of an agricultural region

Falls Creek, borough (pop 1,258), Jefferson and Clearfield counties, W Pa , NW of Du Bois It was incorporated in 1900

Falmouth (făl'mŭth), municipal borough (1931 pop 13,492, 1943 estimated pop 15,130), Cornwall, England, on the Fal estuary This port, fishing town, and resort has an excellent harbor, with the entrance guarded by Pendennis Castle on the west and St Mawes Castle on the east (both 16th cent) Fairfax took the town after a five-month siege (1640) in the civil wars The climate here is unusually warm, subtropical plants thrive

Falmouth. 1 City (pop 2,099), co seat of Pendleton co , N Ky , on the Licking and SSE of Covington, in a farm area, settled 1776, town founded 1799 Pleistocene fossils have been found in the area **2** Town (pop 2,883), SW Maine, on Casco Bay N of Portland, inc 1718 The old town of Falmouth included the site of one of Maine's earliest and largest settlements, which suffered greatly in the Indian wars and in 1775, when it was bombarded and nearly destroyed by the British The nucleus of the settlement was in 1786 set off as the town of PORTLAND **3** Town (pop 6,878), SE Mass , on SW Cape Cod, settled 1660, inc 1686 Falmouth includes WOODS HOLE and other villages. A Friends' meetinghouse was built in 1720. Falmouth village green was laid out in 1749. See study by M. C. Faught (1945).

False Decretals (dĭkrē'tŭls), collection of partly spurious documents treating of CANON LAW It was published between 847 and 852 probably in France, either at Rheims or in the province of Tours (specifically at Le Mans), and composed by a man who called himself Isidore Mercator (hence the term Pseudo-Isidorian Decretals), the date is based on external, the place chiefly on internal, evidence 'It was made to support bishops in their perennial struggle against secular interference by giving ancient legal sanction to episcopal demands for freedom from secular courts and spoliation on bare accusation It gave sanction instead to the direct dependence of bishops on the Holy See without mediation of metropolitans and archbishops The effect of the False Decretals was great in the Middle Ages, especially in application to individual cases in France They were accepted by the Holy See in support of its age-long claims, but to no such extent as was formerly said By incorporation and quotation in GRATIAN the False Decretals received a definite authority in textbooks of canon law in the Middle Ages The collection must be considered as a whole in the treatment of their effect in history and law The False Decretals have gained their chief fame because they were one of the great forgeries of history They were cunningly put together with the ostensible purpose of giving the basis for a canon-law reform The pseudonymous author gives in his collection 60 letters or decrees of popes from Clement I to Melchiades (d 314), of which 58 are forged an original essay on the early Church and the Council of Nicæa, with canons of 54 councils, of which all canons but one are authentic or were accepted as authentic long before the author's time, a collection of papal letters from the 4th to 8th cent , of which the majority are authentic The forgeries are supported by liberal interlarding with quotations from authentic letters and by attribution to popes whose letters were known to be lost Much of the author's work might be called false attribution or plagiarism rather than forgery, but his intent was palpably fraudulent The exposure of the False Decretals was begun by Cardinal Nicholas of Cusa and Juan de Torquemada in the 15th cent and continued by Protestant and Catholic critics The interpretation of the collection according to proper historical methods was not really begun until the 19th cent

false imprisonment, complete restraint upon a person's liberty of movement against his will and without legal justification Actual physical contact is not necessary, a show of authority or a threat of force is sufficient The person falsely imprisoned may sue the offender for money damages The action lies against officials improperly issuing warrants for arrest and against private persons for any total illegal restraint of liberty Release from such illegal restraint may be had through a HABEAS CORPUS proceeding See KIDNAPING

false pretenses, crime of obtaining property by willful misrepresentation. The offense, of statutory origin, was created to cure the inadequacies of the common law of cheats Cheats were misrepresentations intended to deceive a number of persons, e g , the use of false weights, any misrepresentation which affected only one individual was not actionable The crime of false pretenses is committed when a deliberately false statement induces the victim to deliver money or other property to the person committing the fraud It is no defense that the victim was unduly gullible

false Solomon's-seal see SOLOMON'S-SEAL

falsetto (fôlsĕt'tō) [Ital , =diminutive of *falso*], high-pitched, unnatural tones above the normal register of the male voice, produced, according to some theories, by the vibration of only the edges of the larynx The male altos of certain church choirs are tenors skilled in the use of falsetto Falsetto tone is usually thin and expressionless, but certain singers have occasionally used it with good effect

Falstaff (fôl'stăf), name of a famous jovial character, presented as the friend and companion of Prince Hal (later Henry V) in Shakspere's play *Henry IV* Shakspere's original name for his rakish character was Sir John Oldcastle, taken from his anonymous source, *The Famous Victories of Henry the Fifth*, but the historical John OLDCASTLE, who had been an intimate of Henry V, had died a Lollard martyr, and in deference to his contemporary descendants, Shakspere changed the name to Falstaff between the production of the play and its publication in quarto (1598) Falstaff is a transliteration of Fastolf, though it is doubtful that Shakspere had the historical Sir John Fastolf, an English soldier, in mind as a model, some similarities between the two may, however, have suggested the name Falstaff is also the leading character in Shakspere's *Merry Wives of Windsor* He has been made the central figure of several operas, notably that of Verdi, with libretto by Boito (1893). See J D. Wilson, *The Fortunes of Falstaff* (1943)

Falster (fäl'stŭr), island (198 sq mi , pop 45,665), Denmark, in the Baltic Sea, separated from S Zealand by a strait from 3 to 15 mi. wide Its southern tip, Gedser Odde, is the southernmost point of Denmark The soil is very fertile Nykobing is the chief city

Falun (fa'lün"), town (pop 15,439), central Sweden, co. seat and industrial center of KOPPARBERG co Its chief importance is as the headquarters of the oldest Swedish industrial company, organized in the 12th cent to operate the copper mine of Falun (now exhausted) The company gained great power, played an important role in Swedish history, and now holds wide interests in the Swedish iron, steel, lumber, and paper industries At Falun it has established an industrial museum and a mining school Swedenborg was born near Falun

Famagusta (fămŭgōō'stă), Gr *Ammochostos* (ămō'-khŏstŏs), city (pop 16,194), on E Cyprus, the chief port of the island It occupies the site of ancient Arsinoë, built (3d cent B C) by Ptolemy II Famagusta was (15th–16th cent) the seat of the Venetian governors of Cyprus, and it is thought to be the scene of the main action in Shakspere's *Othello* A British naval base, the city was bombed in the Second World War There are ruins of the medieval fortifications, including the so-called Tower of Othello, the 13th-century Gothic Cathedral of St Nicholas, and the Venetian governors' palace From 1945 to 1948 Jewish "illegal" immigrants to Palestine were interned by British authorities in a camp near the city Almost a third of the population of Famagusta is Turkish

familiar, a spirit or demon attending on a magician or wizard to give him information or assistance in his sorceries The belief in familiars was prevalent among Persians and Hindus and in the East generally, it colored medieval European thought

Familists (fă'mĭlĭsts), religious community founded in Friesland in the 16th cent by Hendrik Niclaes (c 1502–1580?) It was extended to England, where it existed until after the middle of the 17th cent Niclaes, a merchant of Munster and originally a Roman Catholic, claimed to have been chosen prophet and prepared by special outpouring of the "spirit of the true love of Jesus Christ " His purpose and aim was to promote unquestioning sympathy and love without regard to doctrine Making Emden his headquarters, he spread his beliefs, traveling much, particularly in Flanders and England At Emden was first established the Family of Love, many of whose members remained in the Roman communion, since no specific form of worship was prescribed In 1560 he had to leave Emden, and he escaped to England There the movement gained adherents but its emotionalism was frowned upon by the orthodox There was some government procedure against them under Elizabeth and James In the 17th cent the sect became extinct

family, social group consisting of parents and their children To this group of genetically related persons others may be added, as slaves, servants, and the wives or husbands of sons or daughters and their children Thus arises the extended family or lineage, also called the 'large" or "joint" family, an important economic as well as biological unit This family, with either a matriarchal or a patriarchal head, is characteristic of societies organized on a clan and tribal basis The smaller family of one male and one female, who care for their immature offspring, is in Western civilization the commonest form of family and the fundamental economic and social unit The birth of a child, coupled with the long weaning period (often three or four years in simple food-gathering economies, where suitable food for infants is hard to find), tends to cement the union of the parents and make it permanent The care that the child receives under such circumstances reduces the mortality rate and makes for race survival The type of family and MARRIAGE in time obtains the sanction of custom and religion In advanced agricultural-pastoral economies the patriarchal family, often polygynous, seems to be the dominant form, it is found in Arabia, China, and Africa and among the ancient Hebrews The Bible contains illuminating records of patriarchal families Typical of this family was the Roman familia, which was made up of all those subject to the same paterfamilias The familia might include, besides the wife and sons and daughters (adopted as well as direct), the daughters-in-law and the grandchildren by the sons, the paterfamilias had practically absolute control over both the persons and the property of the family This family was largely a self-sufficient household of producers and consumers The Roman law, which gave such extraordinary power to the paternal head of the family, was copied in many of its details in both the canon and secular law of Western Europe and was little modified until the 19th cent , when the Western nations began to grant to women equal rights with men with respect to the ownership of property, the control of children, divorce, and the like The state also intervened to modify the authority of parents over their children The effect has been to loosen the traditional ties that were strong in the old patriarchal family Another factor affecting the modern European-American family was the Industrial Revolution, which removed from the home many economic tasks, such as baking, spinning, and weaving, that once made for family cooperation In industrial communities the wife and mother is often employed outside the

home, leaving the children to be cared for by others Sociologists and psychologists find in these changed relations of the members of the family to each other and of the family to the community at large the germ of maladjustments that need to be resolved and are thought to have a bearing on many problems connected with family income, education, divorce, mental hygiene, and juvenile delinquency. See Margaret Mead, *Coming of Age in Samoa* (1928), J K Folsom, *The Family Its Sociology and Social Psychiatry* (1934) and *The Family and Democratic Society* (1943), Willystine Goodsell, *History of Marriage and the Family* (rev ed, 1934), Ralph Linton, *The Study of Man* (1936), B J Stern, ed, *The Family, Past and Present* (1938), M C Elmer, *Sociology of the Family* (1945)

Family Compact, name given to several alliances between France and Spain in the form of agreements between the French and Spanish branches of the Bourbon family The first of the three "compacts," the Treaty of the Escorial (1733), was continued and extended by the second agreement (1743) The third, and most important, of the treaties was that of 1761 Both England and France sought Spanish support in the SEVEN YEARS WAR, but England's attack on Spanish colonies and shipping alienated Charles III of Spain, and the king rejected the English offer in favor of the proposal made by the French minister Choiseul The pact, which dealt with political and commercial relations and with the entry of Spain into the war, also included the Bourbon ruler of the Two Sicilies and the Infante Philip, duke of Parma Spain entered the war (1762) but was of small use to France, the economic and political provisions of the pact proved more enduring

Family Compact, term popularly applied to a small, powerful group of men who dominated the government of Upper Canada from the closing years of the 18th cent to the beginnings of responsible government under the Baldwin-LaFontaine Reform ministry (1848–51) The group, some of whose members were of the same family and most of whom were men of wealth, controlled the legislative and executive councils, had a virtual monopoly of political office, and strongly influenced banking, education, the issuing of land grants, the affairs of the Anglican church in Canada, and the courts New settlers from Great Britain and the United States, finding themselves denied political opportunity, were drawn into an opposition movement, which in time became the Reform party Religious differences embittered the struggle, since the Family Compact (the term first appeared c 1828) was composed almost entirely of members of the Church of England The Chateau Clique was the name given to a similar powerful group in French Lower Canada See W S Wallace, *The Family Compact* (1915)

fan, device for agitating air or gases or moving them from one location to another Mechanical fans with revolving blades are used for ventilation, in manufacturing, in winnowing grain, to remove dust, cuttings, or other waste, or to provide draft for a fire Fans are driven by belts or by direct motor and include the screw or propeller type and the centrifugal or impeller type with blades set in a wheel within which centrifugal force sets up a partial vacuum and causes air to come in at a side opening in the casing As a light, flat instrument manipulated by hand to cool the body, the fan is of primitive origin and wide distribution and probably stems from the use of palm or other leaves China claims the invention of an early form, a row of feathers mounted in the enlarged end of a handle The fan reached a high point of artistic development, becoming an attribute of civil and religious ceremonial The long-handled fan carried by attendants was a badge of rank of Eastern potentates In India the punkah was suspended from the ceiling and agitated by slaves The screen of light material stretched on a rigid frame is the most universal type, few of its variants—such as the cockade of China, the tablet of Rome, or the flag of the East—have been perpetuated The folding fan made up of thin slats held together at one end by a pivot and covered with creased paper or fabric, was developed in Japan A D c 670 and was introduced into Europe by way of China c 1600 Carving, inlay, and piercing on slats of ivory, mother-of-pearl, wood, and tortoise shell became increasingly elaborate both in Europe and the Orient The form reached a high degree of delicacy, especially in France, in the 17th and 18th cent Mounts of silk, lace, paper, and parchment were decorated with designs by such artists as Charles Le Brun, Watteau, and François Boucher The management of the fan became a highly regarded feminine art The function and employment of the fan reached its high point of social significance in Japan

Fanar and **Fanariot** see PHANAR and PHANARIOT

fandango (fănděng'gō), ancient Spanish dance, probably of Moorish origin, which came into Europe in the 17th cent It is in triple time and is danced by a single couple to the accompaniment of castanets, guitar, and songs sung by the dancers At the end of certain measures, the music halts abruptly, and the dancers remain rigid until it is resumed

Faneuil Hall (făn'l, făn'yul), public market and hall given to Boston by the merchant Peter Faneuil in 1742 The building burned in 1761 but was rebuilt The scene of Revolutionary meetings, it became known as "the cradle of liberty" Bulfinch enlarged the hall in 1806 The building is still in use as market, meeting hall, and museum

Fannin, James Walker (fă'nĭn), 1804?–1836, hero in the Texas Revolution, b Georgia, Having been adopted by his maternal grandfather, he attended West Point (1819–21) under the name of James F Walker but did not graduate In 1834 he settled in Texas and became a slaveowner, possibly also a slave trader An influential agitator in the preliminaries of the revolution, he distinguished himself in the first victories of 1835 He eagerly advocated an expedition into Mexican territory, but the idea met with much opposition, particularly that of Gen Sam Houston With Houston occupied elsewhere and the governor removed, Fannin was left without orders or support His force never got beyond Goliad, and in the delays there he realized the precariousness of his position in the face of the rapid Mexican advance He retreated, but too late to prevent the capture of his small force after a hopeless battle The day after the surrender most of Fannin's men, including Fannin himself, were shot at the order of Santa Anna

Fanning, David, c 1755–1825, American Loyalist in the American Revolution, b Amelia co, Va He led raids on the patriots in the Carolinas and wrote an account of his adventures in *The Narrative of Colonel David Fanning*, first published in 1861 He later was a member of the provincial assembly of New Brunswick, Canada

Fanning, Edmund, 1739–1818, American Loyalist in the American Revolution, b Suffolk co, Long Island, N Y, grad Yale, 1757 He moved to North Carolina, practiced law, held minor political posts, and supported his father-in-law, the royal governor, William TRYON Fanning was the special object of detestation for the rebels of the REGULATOR MOVEMENT He went as Tryon's secretary to New York, where he held offices In 1775 he raised a Loyalist regiment which fought in partisan actions about New York and was notorious for ruthless cruelty After the Revolution he was lieutenant governor of Nova Scotia (1783–86) and governor of Prince Edward Island (1786–1804) Made a general, he spent his last years in England

Fanning, Edmund, 1769–1841, American trader, explorer, and promoter of trade and exploration in the South Seas, b Stonington, Conn At 14 he went to sea In command of a trading vessel, he realized a large profit from an expedition (1797–98) in the course of which he traded a cargo of trinkets for seal skins in the islands off the coast of Chile and exchanged them for valuable Chinese goods at Canton, returning around the Cape of Good Hope On this voyage he discovered (1783) Fanning Island, Washington Island, and other islands Convinced of the profits to be made from trade in the South Seas, he became the agent for a group of New York city merchants, for whom he supervised over 70 expeditions, in some of which he participated His *Voyages around the World* (1833), which shed light on some of the then-little-known parts of the globe, passed through several editions

Fanning Island, atoll, 15 sq mi, central Pacific, one of the Line Islands It is NW of Christmas Island and was discovered by Edmund Fanning in 1798 In 1916 it was added to the British colony of Gilbert and Ellice Islands It has a cable relay station connecting Canada and Suva, Fiji

Fano (fä'nō), city (pop 13,348), the Marches, central Italy, a resort on the Adriatic It was important in Roman times and flourished (1304–1463) in the Middle Ages under the Malatesta of Rimini An arch of Augustus, a town hall, and the Malatesta palace are the main landmarks A printing press, the first to use Arabic type in Italy, was set up here in 1514

Fanshawe, Sir Richard, 1608–66, English diplomat and man of letters He was secretary to the ambassador to Spain (1635–38) and chargé d'affaires there (1638) In the civil war he served Charles II in England, Ireland, and on the Continent until his own capture at Worcester (1651) In the retirement allowed by his captors, Fanshawe made the best known of his many translations—*The Lusiad* (1655), an English version in ottava rima of Camoens's masterpiece After the Restoration he was ambassador to Portugal (1661, 1662–63), privy councilor, and ambassador to Spain (1664–66) See memoirs of Lady Fanshawe with some of his letters (ed by H C Fanshawe, 1907) and his translation of *The Lusiad* (ed by J D M Ford, 1940)

fantasia (fäntä'zyu, –shŭ, făntăzē'u) [Ital, =fancy], musical composition not restricted to a formal design, but constructed freely in the manner of an improvisation In the 16th and 17th cent, however, the term designated a contrapuntal piece employing imitation and thus was one of the forerunners of the fugue The term is also used for medleys of popular airs.

Fantin-Latour, Ignace Henri Jean Théodore (ăgnäs' ărē' zhă' tōdōr' fătăn-latōōr'), 1836–1904, French painter and lithographer, best known for his portrait groups of famous contemporaries Notable examples are *An Atelier at Batignolles* (Luxembourg Mus, Paris), *Hommage à Delacroix* (Louvre), and *Around the Piano* A portrait of Manet is in the Art Institute of Chicago and *Portrait of a Lady* and *Palace of Aurora* are in the Metropolitan Museum Fine collections of his lithographs are in the British Museum and the Louvre Fantin-Latour illustrated Adolphe Jullien's *Wagner* and *Berlioz* with allegorical drawings See study by Adolphe Jullien (1909, in French)

fan vault, type of masonry vaulting developed in England in the late Gothic or Perpendicular style From the late 14th to the middle of the 16th cent this fan form, with many radiating members, was evolved by adding subordinate ribs to the main diagonal ones in constructing groined vaults, a custom begun early in the 13th cent After the introduction of a continuous rib along the ridge of the VAULT, the next addition was that of intermediate ribs, rising from the vault spring and meeting at the ridge Thus the vault surfaces of each bay, called tiercerons, were transformed into a number of smaller areas which could be more easily laid up and supported The next addition was that of the liernes, small ribs inserted between the major ribs, creating starlike patterns in plan The plain surfaces of vault masonry were now so numerous and small that the natural sequence was to make a decorative composition of the entire vault, with the rib and its adjoining areas worked from the same stone Thus, instead of having separate elements, web and rib, the vault became a concave conoid, from the center point of which a rich network of tracery spread, suggesting an open fan The earliest example (14th cent) is in the cloisters of the cathedral at Gloucester Others are in the retrochoir of Peterborough (late 15th cent), St George's Chapel, Windsor (c 1500), and the chapel of King's College, Cambridge (early 16th cent) That in the chapel of Henry VII, at Westminster Abbey, is unexcelled both for the great skill of its construction and for its intricate beauty See Clarence Ward, *Medieval Church Vaulting* (1915)

Fanwood, borough (pop 2,310), NE N J, SW of Newark, settled before 1780, inc 1895

Farabee, William Curtis (fă'rubē), 1865–1925, American anthropologist, b Washington, Pa, grad Waynesburg College, 1894, Ph D Harvard, 1903 He led the scientific expedition of the Peabody Museum in a study of E Peru (1906–9) and an expedition of the Univ of Pennsylvania in a study of the tribes of the Amazon basin (1913–16) On the second expedition he mapped hitherto uncharted country in N Brazil and the Guianas, discovered three previously unheard-of Indian tribes, and made the finest collection of Amazonian material in existence From 1903 to 1913 he taught anthropology at Harvard and from 1913 was curator of the museum of the Univ of Pennsylvania He was ethnographer for the American delegation to the Paris Peace Conference His writings include *The Central Arawaks* (1918), *The Indian Tribes of Eastern Peru* (1922), and *The Central Caribs* (1924)

Faraday, Michael (fă'rudē, –dā'), 1791–1867, English scientist Apprenticed to a bookbinder at the age of 13, he had little formal education, but acquired a store of scientific knowledge through reading and by attending some lectures by Sir Humphry Davy In 1812 he became assistant to Davy at the Royal Institution in London He was made a member of the institution in 1823 and a fellow of the Royal Society in 1824 In 1825 he became director of the laboratory, and from 1833 he was Fullerian professor of chemistry at the Royal Institution He declined knighthood and the presidency of the Royal Society His experiments yielded some of the most significant principles and inventions in scientific history. He developed the first dynamo (in the form of a copper disk rotated between the poles of a permanent magnet), the precursor of modern dynamos and generators From his discovery of electromagnetic induction stemmed a vast development of electrical machinery for industry In addition to other contributions he formulated laws of electrolysis Some of his works were collected as *Experimental Researches in Electricity* (3 vols, 1839–55) and *Experimental Researches in Chemistry and Physics* (1859) See his diary (ed by Thomas Martin, 7 vols, 1932–36), biographies by Thomas Martin (1934) and P E Andrews (1937)

Farah (fără'), town (pop c.6,000), W Afghanistan, S of Herat Farah is on the Herat-Kandahar trade route and on the Farah river It was rebuilt after destruction by Nadir Shah in 1837

Farallon Islands (fă'rulŏn), group of small, rocky islands in the Pacific c 26 mi W of San Francisco, Calif, of which they are a part A bird sanctuary, the islands are also the site of a lighthouse and a U S navy radio beam compass station

Farasan Islands (fărusän') or **Farsan Islands** (fărsän'), small archipelago, in the Red Sea, part of Saudi Arabia. There is oil drilling.

farce [Latin,=stuffing], light, comic theatrical piece It is a form of comedy in which the characters and the events are greatly exaggerated to produce a broad, simple humor Examples of farce are the Latin comedies of Plautus and Terence, but the term is derived from the *farces* of medieval France In England two of the earliest and best-known farces are *Ralph Roister Doister* (pub 1566) and Shakspere's *Comedy of Errors* (c 1593) Broad humor and absurd situations can be found in many other comedies, among them the farces of Molière in the 17th cent, those of Henry Fielding in the 18th cent, and the operettas of William Schwenck Gilbert and Arthur Sullivan in the late 19th cent In more recent times farce is used in the slapstick comedies of the American moving pictures See also BURLESQUE

farcy see GLANDERS

Far East, in the most restricted sense, term applied to China, Korea, Indo-China, Siam, Malaya, Japan, and the Far Eastern Area of the RSFSR In a more extended sense it also includes the Philippine Islands, Indonesia, Burma, Pakistan, India, Ceylon, and Afghanistan

Far Eastern Territory, former administrative division, RSFSR, in E and NE Siberia, a vast area comprising the KHABAROVSK TERRITORY and the MARITIME TERRITORY, into which it was divided in 1938 Khabarovsk was the capital, Vladivostok was the chief port Russian colonization of the northern part of the region began in the 17th cent The Amur district, between N Manchuria and the Sea of Okhotsk was ceded by China to Russia in 1858, the district between the Amur and Ussuri rivers and the Sea of Japan was ceded by China in 1860 During the civil war which followed the Russian Revolution of 1917, much of the area was occupied by the Japanese in connection with the Allied intervention In 1920 the local Bolsheviks organized the Far Eastern Republic, with Chita as capital, but the Japanese continued to hold the coast, including Vladivostok, where they set up a "White" Russian government The Japanese withdrew in 1922, and the republic became an oblast (from 1926 to 1938 a territory) of the RSFSR

Farel, Guillaume (gēyōm' färĕl'), 1489–1565, French religious reformer In 1520 Farel joined Jacques Lefèvre (FABER STAPULENSIS) at Meaux to aid in church reform and to establish an evangelical school for students and preachers Soon his iconoclastic ideas made him suspect, and he left for Switzerland, where most of his work was done His fearless and eloquent evangelism aroused both support and opposition He received permission to spread the reform doctrine throughout the canton of Bern The opposition of the bishop forced him to leave Geneva in 1532, but he returned in 1533 to lead a public disputation in favor of the Reformation The people declared in favor of Farel and his colleagues, and in 1535 the town council formally proclaimed the adoption of the Reformation Farel entreated John Calvin to assist in the organization of the new Protestant republic The two men drew up a statement of doctrine and immediately instituted widespread reform of church practices These measures were too sudden and too strict to be generally accepted, and Calvin and Farel were forced to leave Geneva in 1538 Farel went to Basel and then to Neuchâtel, where he worked unceasingly for the return of Calvin to Geneva, which he achieved in 1541 Farel went to Metz in 1542 and returned to Neuchâtel in 1544 Throughout his life he remained a confidant and consultant of Calvin

Farewell, Cape, most southerly point of Greenland, on Egger Island, at lat 59° 46' N Egger Island and the surrounding islands are called the Cape Farewell Archipelago

Farewell, Cape, most northerly point of South Island, New Zealand

Fargo, William George, 1818–81, American pioneer expressman, b Pompey, N Y He had been successively a postrider, freight agent, messenger, and resident agent (1843) for an express company in Buffalo, N Y, when in 1844, with Henry Wells and another partner, he organized Wells & Company, the first express company operating W from Buffalo The following year the firm became Livingston and Fargo, and in 1850 it merged with others to form the American Express Company, with Fargo as secretary By 1852 he and Wells had organized Wells, Fargo & Company to handle the express service between New York and San Francisco for which the gold rush had created a need, and they established stage and banking businesses on the Pacific coast, American Express Company serving as eastern representative In 1873 the two companies merged as the American Express Company In 1868 Fargo had become president of the American Express Company, making his home in Buffalo, where he served (1862–66) as mayor See N C Wilson, *Treasure Express Epic Days of the Wells Fargo* (1936)

Fargo [for W G Fargo], city (pop 32,580), co seat of Cass co, E N Dak, largest city in the state, on the Red River, settled 1871 with the coming of the railroad, inc. 1875 A railroad center and river port, it grew as the chief distributing point in the region, handling farm machinery and foodstuffs and processing the area's agricultural products NORTH DAKOTA AGRICULTURAL COLLEGE, Concordia Conservatory of Music, a veterans' hospital, and a school for crippled children are here

Faribault (fā'rĭbō), city (pop 14,527), co seat of Rice co, SE Minn, S of Minneapolis on bluffs of the Cannon and Straight rivers, in a rich farm region Alexander Faribault, French fur trader, built a post here in 1826, the village was platted in 1854 The city's importance as a center of Episcopalianism began with the missionary work here of James Lloyd BRECK and Bishop Henry B WHIPPLE Faribault has two military academies and a school for girls, it is the seat of state schools for the deaf and the blind and of one for the feeble-minded, known for its early study of FEEBLE-MINDEDNESS. Buckham Memorial Library contains historical collections

Faridun see FERID ED-DIN ATTAR

Farina, Salvatore (sälvätō'rā färē'nä), 1846–1918, Italian novelist His novels of middle-class life, sentimental but humorous, include *Il signor Io* [Mr I] (1880), *Mio figlio!* [my son] (in *Nuova antologia*, 1877 81), *Amore ha cent' occhi* [love has a hundred eyes] (1883), and *Amore bugiardo* [lying love] (1893) His memoirs appeared in three volumes (1910–15)

farina [Latin,=meal], in general, fine flour or powder made from vegetable growths rich in starch Its source may be cereal grains, such as rice and wheat, seeds, such as beans, or tubers, e g, the potato In England potato starch is called farina, in the United States, cereal breakfast foods are so named, such as the fine meal from winter wheat and that specially prepared from white corn The food value, in the case of cereals, depends largely on the part of the grain used in the manufacture

Farinato or **Farinati, Paolo** (pou'lō fərēnä'tō, -nä'tē), c 1525–1606, Italian painter, draughtsman, and etcher, of the Veronese school His worked chiefly in the churches and palaces of Verona Among his best works are *St Michael* (Santa Maria in Organo, Verona), the frescoes in San Nazaro e Celso, Verona, *Miracle of the Loaves and Fishes* (Verona), *St Martin* (cathedral, Mantua), and *Abraham and Hagar* (N Y Historical Society) Farinato's etchings, though few, are of high merit, and his drawings are in leading European collections

Farinelli, Carlo Broschi (kärlō brō'skē fərēnĕl'lē), 1705–82, Italian male soprano, whose real name was Carlo Broschi, pupil of Niccolò Porpora, in whose operas he sang in London (1734) Having been lauded in France and Italy, he became, in 1737, official singer to Philip V of Spain and renounced his public career He enjoyed a highly favored position at the Spanish court until 1759, when he retired to an estate in Bologna He was the greatest of the *castrati* and is regarded as one of the most remarkable singers of all time

Farington, Joseph, 1747–1821, British landscape painter and diarist His diaries, first published in 1922, are rich in gossip of the personalities and conditions of his period

Farley, James Aloysius, 1888–, American political leader, U S Postmaster General (1933–36, 1937–40), b Rockland co, N Y He rose steadily in Democratic party politics in New York state and became (1930) chairman of the New York state Democratic committee In 1932 he successfully pushed the presidential nomination of Franklin D ROOSEVELT Made chairman of the Democratic National Committee, Farley managed (1932) the presidential campaign with equal success He became U S Postmaster General and resigned this post to direct Roosevelt's 1936 presidential campaign—which resulted in another overwhelming Democratic victory He was reappointed (1937) Postmaster General but, opposed to Roosevelt's third-term candidacy and himself an unsuccessful Democratic presidential aspirant in 1940, Farley resigned (1940) his cabinet post and his national party chairmanship He remained powerful in New York state politics until 1944—when he resigned as chairman of the state Democratic committee Farley's two autobiographical works are *Behind the Ballots* (1938) and *Jim Farley's Story* (1948)

Farley, John Murphy, 1842–1918, American Roman Catholic churchman, archbishop of New York (1902–18), cardinal of the Roman Church, b Co Armagh, Ireland He came to America in 1864 He was educated at St John's College (now Fordham Univ) and in Rome, he was ordained (1870) and became parish priest on Staten Island He was (1872–84) secretary to Archbishop MCCLOSKEY and from 1891 was vicar general of the archdiocese of New York He was made archbishop in 1902 and cardinal in 1911 Cardinal Farley's greatest work was in unifying and stabilizing his diocese, which on his accession he found badly split by disagreements

Farlow, William Gilson, 1844–1919, American botanist, b Boston, grad Harvard, 1866 His chief contributions were made in the study of cryptogamic and parasitic plants. In his Harvard laboratory many eminent botanists received their training

Farman, Henri (ärē' färmä'), 1874–, French aviator and inventor A bicycle racer and then a racing motorist, he later pioneered in aviation and finally manufactured airplanes With his brother, Maurice, he perfected the Farman biplane In 1909 he established a world record for flight duration and altitude He became a chevalier of the Legion of Honor in 1909

Farm Credit Administration (FCA), an agency of the U S Dept of Agriculture that supervises a nationwide system of agricultural-credit units Farmers need long-term mortgage loans to help them acquire property and to refinance existing debts, short-term loans to finance the production and marketing of crops and livestock Agricultural cooperatives also need credit to supplement their operating capital Farmers have traditionally favored liberal credit facilities and low interest rates They have complained that private institutions have not made funds available as cheaply and conveniently as possible, and agrarians long strove (especially in periods of economic stress, such as the 1870s and 1890s) for "easy money" policies They asked for a banking system adapted to the peculiar needs of agriculture, and in answer to this demand the Federal Farm Loan Act of 1916 set up a system for mortgage credit 12 regional farm land banks were set up, with most of the original capital supplied by the government Their function was to act as credit wholesalers, raising funds in the investment markets through the sale of their bonds and loaning the money to farmers at interest rates only slightly higher than those paid by the land banks for their borrowings It was intended that the farmer-borrowers should ultimately own the banks In 1923 further federal aid was extended to farmers by establishment of 12 intermediate credit banks (one in the district of each land bank), with capital subscribed by the government These banks make loans for periods of six months to three years to agricultural cooperatives The loans are secured by warehouse receipts for crops or by liens of livestock Six years later, the whole structure of the land banks was severely hit by the great depression of 1929, with falling prices of farm products, increased debt delinquencies, and decline in the value of farms To bolster the land banks, the Hoover administration in 1932 took action The government invested $125,000,000 in the land banks and thus again became the majority stockholder The Reconstruction Finance Corporation made some of its funds available to farm enterprise Further measures were taken by the Roosevelt administration All then existing Federal agricultural-credit organizations were unified into one agency, the Farm Credit Administration Congress authorized that agency to extend the system of farm-mortgage credit Funds were made available for first- or second-mortgage loans—the so-called land bank commissioners loans—to debtors whose collateral was so low in value or so encumbered by debt as to make refinancing by the land banks unfeasible These "rescue" loans were made on easier terms than the regular advances In 1933 the FCA was also authorized to establish 12 production credit corporations, which finance short-term credit associations, and banks for cooperatives, which finance farmers' cooperative marketing These steps have resulted in a centralized source of major types of farm credit In addition to this more permanent work, the FCA makes emergency crop and feed loans to farmers who cannot obtain funds from other sources The FCA's work is supplemented by important types of farm credit advanced by the Commodity Credit Corporation and the FARM SECURITY ADMINISTRATION, which are agencies of the Dept of Agriculture Since 1939 the FCA, previously an independent agency, has also been responsible to the Dept of Agriculture Though it was originally expected that the farm-credit system would be cooperatively owned, unsubsidized, and operated in accordance with private banking criteria, there has been marked departure from these goals Operations of the FCA have been widespread and at least moderately effective In 1940 it held 40 percent of all outstanding farm mortgages, as against 12 percent held by the land banks in 1928 See annual reports of the Administration

Farmer, Fannie Merritt, 1857–1915, authority on American cookery, b Boston Ill-health interfered with her plans for a college education, and she turned to cooking, at home and at the Boston Cooking School, where she graduated in 1889 She was assistant director and director of the school until 1902, when she opened Miss Farmer's School of Cookery, pledged to train housewives and nurses, rather than teachers, in cookery One of her contributions was accurate measurement in recipe building For 10 years she contributed a page on cookery for the *Woman's Home Companion* She edited *The Boston Cooking School Cook Book* (1896), a standard text on the subject, many times reissued and translated

Farmer, Moses Gerrish, 1820–93, American inventor, b Boscawen, N H He studied at Dartmouth and later taught school He helped build and maintain some of the pioneer telegraph lines of Massachusetts and also experimented in multiple telegra-

phy He exhibited (1847) an electric train which carried children, invented a process for electroplating aluminum, and in 1851 installed in Boston the first electric fire-alarm service in any city His later years were spent chiefly in developing the incandescent electric light Twenty years before Edison's success he produced (1858–59) electric lamps, and in 1868, with a dynamo of his own invention, he lighted a house in Cambridge, Mass, but he was never able to perfect a marketable light His wife, **Hannah Shapleigh Farmer**, 1823–91, aided him with his inventions Interested in many charities, she also wrote on them

Farmer City, city (pop 1,833), central Ill , SE of Bloomington in a farm area, inc 1869

Farmer-Labor party, in U S history, political organization formed in 1920 by some former members of the older PROGRESSIVE PARTY together with representatives of farmers and labor leaders, chiefly of the Middle West Their socialistic program favored government ownership of public utilities, establishment of government banks, farm-relief measures, and progressive labor legislation The party's presidential candidate in 1920, P P Christensen of Utah, gained less than 300,000 votes, but the party continued strong in the Old Northwest, particularly in Minnesota, and elected Henrik Shipstead, Magnus Johnson, and Ernest Lundeen to the U S Senate and Floyd B Olson to the governorship It also won many local elections in the Dakotas In 1924 the national party dissolved to join other liberals in the unsuccessful attempt to elect Robert M La Follette as President It was reconstituted later and remained strong for some years but gradually lost strength after Franklin D Roosevelt became President and his New Deal incorporated in modified form some of the reforms advocated by the Farmer-Laborites

Farmersburg, town (pop 1,005), SW Ind , S of Terre Haute, settled 1854, inc 1871 It is a farm trading center

Farmersville, city (pop 2,206), N Texas, NE of Dallas, on the rich blackland prairie

Farmerville, town (pop 1,428), parish seat of Union parish, N La , on a branch of the Ouachita and NW of Monroe It is the parish trade center.

farming: see AGRICULTURE

farming, in taxation, the collection of TAXES through private contractors Usually, the tax farmer pays a lump sum to the public treasury; the difference between that sum and the sum actually collected represents his profit or loss In republican Rome, the collection of direct taxes was farmed out to publicans; in the Roman Empire only indirect taxes were farmed Tax farming has been practiced in most countries of Europe and Asia at various times and has survived in some forms, e g , in the method of collecting revenues from state-licensed gambling establishments In England the system was tried briefly but played no important part It was most fully applied in 18th-century France, where the collection of certain indirect taxes was leased by the king to the farm general, a chartered body of 40 financiers (at one time they numbered 60) which guaranteed a fixed sum of revenue Though the farmers general made phenomenal profits and their name became a by-word for cruel extortion, there undoubtedly were some excellent and able men among them, e g , Helvétius and Lavoisier Popular hatred naturally found a target in the farmers general, whose organization was abolished (1789) in the French Revolution, some 30 former members of the farm—Lavoisier among them—were guillotined in the Reign of Terror The system of farming has been generally abandoned and has been replaced by systems which allow the state to collect larger sums in a less offensive manner

Farmingdale **1** Town (pop 1,197), SW Maine, on the Kennebec below Augusta, inc 1852 **2** Village (pop 3,524), on W Long Island, SE N Y , near Mineola, settled 1695, inc 1904 There are large aircraft factories here It is the seat of the Long Island Agricultural and Technical Institute Bethpage State Park is near by

farming the taxes: see FARMING, in taxation
