McClintock, Sir Francis Leopold, 1819–1907, British arctic explorer As a lieutenant in the navy he was assigned to his first arctic service in 1848, when Sir James Clark Ross went in search of the lost expedition of Sir John Franklin On this voyage and on the Franklin search expedition (1850–51) under Capt Horatio Austin, McClintock learned and developed the Eskimo art of sledging On the Austin expedition he mapped much of the south coast of Melville Island, while on Sir Edward Belcher's expedition (1852–54), he discovered and mapped most of Prince Patrick Island In 1857 Lady Franklin placed him in command of the *Fox*, in which he set forth in search of more definite knowledge of Franklin's fate The *Fox* remained in the arctic until 1859, McClintock discovered the channel that bears his name, explored Prince of Wales Island and the east coast of King William Island, and sledged to Boothia Peninsula He found records which disclosed the fate of the Franklin expedition, publishing his account in *The Voyage of the Fox* (1859), a book which had great popularity He retired from the navy in 1884 with the rank of admiral See biography by Sir Clements Markham (1909).

McClintock, John, 1814–70, American Methodist clergyman and educator, b Philadelphia, grad Univ of Pennsylvania, 1835 From 1836 to 1848 he taught at Dickinson College, resigning to edit (1848–56) the *Methodist Quarterly Review* He preached at St Paul's Church, New York city (1857–60), and at the American Chapel in Paris (1860–64) He served (1867–70) as first president of Drew Theological Seminary With James Strong, McClintock began in 1853 the noted *Cyclopaedia of Biblical, Theological, and Ecclesiastical Literature* (10 vols , 1867–81), three volumes of which were published before his death

McCloskey, John (mŭklŏ'skē), 1810–85, American churchman, cardinal of the Roman Church, b Brooklyn He was educated at Emmitsburg, Md , and at Rome He became coadjutor to Bishop John Hughes of New York (1844), bishop of Albany (1847), and archbishop of New York (1864) and was created cardinal (1875) Cardinal McCloskey was the principal builder of the present St Patrick's Cathedral, and he founded churches, seminaries, and missions throughout his see

McClung, Clarence Erwin (mŭklŭng'), 1870–1946, American zoologist, b Clayton, Calif , grad Univ of Kansas (B A , 1896, Ph D , 1902) He was associated with the Univ of Kansas (1897–1912) and later was professor of zoology and director of the zoological laboratory at the Univ of Pennsylvania (1912–40) He made extensive studies of germ plasm and chromosomes, stating in 1902 that sex is determined by the chromosomal constitution of the germ cells He was long managing editor of the *Journal of Morphology* and was editor of the *Handbook of Microscopical Technique* (1929)

McClure, Alexander Kelly, 1828–1909, American journalist and political leader, b Perry co , Pa He edited and published the *Juniata Sentinel* of Mifflintown, Pa , before acquiring and editing (1850–56, 1862–64) the *Franklin Repository* at Chambersburg He was an early and active Republican, and at the party's national convention in 1860, Andrew G CURTIN and he swung the pivotal Pennsylvania delegation to Lincoln As chairman of the state committee, McClure built up the Republican organization which secured the governorship for Curtin and Pennsylvania's electoral votes for Lincoln He served in both houses of the state legislature and after the Civil War practiced law in Philadelphia McClure supported Gen U S Grant in 1868, but in 1872 was one of the leaders of the Liberal Republican party, which nominated Horace Greeley for President In 1873 he was defeated for mayor of Philadelphia He founded (1875) the Philadelphia *Times* and was its editor until 1901 He wrote *Abraham Lincoln and Men of War Time* (1892), *Old Time Notes of Pennsylvania* (1905), and accounts of his varied travels, and he edited *Famous American Statesmen and Orators* (6 vols , 1902) See his recollections (1902)

McClure, Sir Robert John Le Mesurier, 1807–73, British arctic explorer He entered the navy and in 1848 accompanied Sir James Clark Ross to the arctic As a naval captain he was given command (1850) of the *Investigator*, one of two ships which were to search the western part of the Arctic Archipelago for Sir John Franklin Passing through Bering Strait, he coasted along Alaska and Canada, then went by way of Prince of Wales Strait into the west part of Viscount Melville Sound He wintered (1850–51) in Prince of Wales Strait and by a sledging journey along its shores reached Barrow Strait He discovered McClure Strait and established the insularity of Banks Island. On its north coast the *Investigator* was frozen in the ice for several winters At length he abandoned ship in 1853 and by sledge retreated over Barrow Strait eastward across the ice to Dealy Island, where his party was ultimately rescued by Sir

Edward Belcher's expedition McClure first proved the existence of the Northwest Passage He was knighted in 1854

McClure, Samuel Sidney, 1857–1949, American editor and publisher, b Co Antrim, Ireland, grad Knox College, 1882 He came to America as a boy In 1884 he established the McClure Syndicate, the first newspaper syndicate in the United States He founded *McClure's Magazine* in 1893 and, as editor, made it a great success, particularly during the muckraking era, when it published the articles of Lincoln Steffens, Ida Tarbell, Ray Stannard Baker, and other journalistic leaders of the movement See his autobiography (1914)

McClure Strait, 170 mi long and 60 mi wide, arm of Beaufort Sea, W Franklin dist, Northwest Territories It extends W from Viscount Melville Sound between Melville and Eglinton islands on the north and Banks Island on the south

McColl (mukŏl'), cotton-milling town (pop 2,391), NE S C, at the N C line NNE of Florence

McCollum, Elmer Verner (mukŏ'lum), 1879–, American physiological chemist, b Redfield, Kansas, grad Univ of Kansas (B A, 1903), Ph D Yale, 1906 He taught at the Univ of Wisconsin (1907–17) and later was professor of biochemistry at Johns Hopkins (1917–44) An internationally known authority on nutrition, he made special studies of vitamins, diet, and growth and wrote standard works, including *Newer Knowledge of Nutrition* (1918, later editions with Nina Simmonds and with others), *American Home Diet* (1919), and *Food, Nutrition, and Health* (1925)

McComb, John (mukōm'), 1763–1853, American architect, b New York city He was chiefly known for the New York city hall (1803–12), the finest American building of the postcolonial period, designed with the assistance of Joseph Mangin, a French engineer, its elegant composition was inspired by the monumental work of the mid-18th cent in France Other New York works included St John's Church, Varick St, now demolished, the façade of the old government house, built in 1790, demolished in 1815, and the fort at the Battery (begun c 1807) McComb also designed churches and public and private buildings in other places, including Alexander Hall (1815) at Princeton Theological Seminary, Queen's Building (1808–9) at Rutgers College, New Brunswick, N J, and the Cape Henry lighthouse He was street commissioner of New York from 1813 to 1821

McComb, city (pop 9,898), SW Miss, SSW of Jackson and near the La line, founded c 1857 It is the industrial and trade center for a cotton and truck area and has large railroad shops

McConnell, Francis John, 1871–, American Methodist bishop, b Trinway, Ohio, grad Ohio Wesleyan Univ (B A, 1894, D D, 1905), Ph D Boston Univ, 1899 In 1909 he became president of DePauw Univ From 1912 to 1944 he was bishop of his denomination His interest in social problems has found practical expression, and his influence has been extended through his writings Among his books are *Christian Materialism* (1936) and *Evangelicals, Revolutionists, and Idealists* (1942)

McConnellsburg, borough (pop, 1,055), S Pa, W of Chambersburg, settled c 1730, laid out 1786, inc 1814

McConnelsville, village (pop 1,895), co seat of Morgan co, SE Ohio, on the Muskingum and SE of Zanesville, platted 1817 It was once a busy river port Council Rock, with Indian pictographs, is near

McCook, Alexander McDowell, 1831-1903, Union general in the Civil War, b Columbiana co, Ohio, grad West Point, 1852 One of a family known as the "fighting McCooks" he served on the frontier, 1853–57, and taught at West Point, 1858–61 In the Civil War, McCook became a brigadier general of volunteers (Sept, 1861) He commanded a division under D C Buell in the advance of the Army of the Ohio through Tennessee, fighting at Shiloh (April, 1862) McCook, promoted major general in July, served with distinction at Perryville (Oct), but at Murfreesboro (Dec, 1862–Jan, 1863) and at Chickamauga (in the CHATTANOOGA CAMPAIGN) his corps was routed He was relieved of command in Oct, 1863, and, although exonerated for his part in the Chattanooga campaign, he took small part in the rest of the war After the war, McCook saw years of varied service in the regular army, rising to the rank of major general in 1894

McCook, city (pop 6,212), co seat of Red Willow co, S Nebr, on the Republican river near the Kansas line, founded 1881 as Fairview, renamed McCook 1882, inc 1883 In a rich farming area, it has processing plants and is a railroad division point with repair shops It was the home of George W. Norris A junior college is here The city was named for Gen A M McCook

McCormack, John, 1884–1945, Irish-American tenor, b Athlone, Ireland He made his debut in London in 1907 In 1909 Oscar Hammerstein brought him to the United States After his debut in New York he sang with the Boston and Chicago opera companies, but after 1914 sang principally in concert and for phonograph records, through which he became widely beloved for the singing of simple sentimental songs He became an American citizen in 1919 and a papal count in 1928 In 1938 he retired See biographies by L A G Strong (1941) and his wife, Lily McCormack (1949)

McCormick, Cyrus Hall, 1809–84, inventor of the reaper, b Rockbridge co, Va His father, Robert McCormick (1780–1846), had worked intermittently for over 20 years at his blacksmith shop on a reaping machine, but had given it up before Cyrus, his eldest son, began working on different principles The first public demonstration of the reaper, as constructed by Cyrus, took place in July, 1831, and was a success, though he did not patent it until after Obed Hussey announced his invention in 1834 McCormick's reaper contained the straight reciprocating knife, guards, reel, divider, platform, main-drive wheel, and other innovations, which have been essential features of every satisfactory harvesting machine since that day His early machines were made for local use, and not until more than 10 years later did he begin in earnest to expand his market In 1847 he built his Chicago factory, in 1851 he introduced the reaper into England and, subsequently, into other European countries He continued to patent improvements and demonstrated his machine in the field, often in competition with Hussey's reaper After 1850 many strong competitors appeared and Hussey gave up, while only McCormick's unusual business ability kept him in the running He was quick to purchase promising inventions and added the self-rake, hand binder, and twine binder See biography by W T Hutchinson (2 vols, 1930–35)

McCormick, Joseph Medill, 1877–1925, American journalist, b Chicago, grad Yale, 1900, son of Robert S McCormick He worked as a reporter on the Chicago *Tribune*, and by 1908 the newspaper was under his management He was a leading figure in Theodore Roosevelt's Progressive party campaign (1912) and later served in the Illinois legislature (1913–17), in the U S House of Representatives (1917–19), and in the U S Senate (1919–25) He was a strong opponent of the League of Nations His wife was **Ruth Hanna McCormick,** 1880–1945, b Cleveland, daughter of Mark A HANNA She early became interested in Republican party politics She served (1929–31) in the U S Congress, but was defeated as a candidate for the U S Senate in 1930 In 1932 she married Albert Gallatin Simms, New Mexico Congressman

McCormick, Robert Rutherford, 1880–, American journalist, b Chicago, grad Yale, 1903, son of Robert S McCormick He held local public offices, was admitted (1907) to the bar, and practiced law in Chicago He worked with his brother, Joseph Medill McCormick, in the management of the Chicago *Tribune*, and, after an interruption when he fought in the First World War, he became sole owner of the newspaper He rapidly extended his journalistic holdings, took control of paper mills, and soon dominated in the Midwestern newspaper world The Chicago *Tribune* steadily and vehemently attacked the participation of the United States in world affairs

McCormick, Robert Sanderson, 1849–1919, American diplomat, b Rockbridge co, Va, brother of Cyrus Hall McCormick President William McKinley in 1902 made him minister to Austria-Hungary, and when the post was raised to an embassy that year, he became the first American ambassador to Austria-Hungary He then served as ambassador to Russia (1902–5) and to France (1905–7) He married Katherine Van Etta Medill, daughter of Joseph MEDILL

McCormick, Ruth Hanna. see McCORMICK, JOSEPH MEDILL

McCormick, town (pop 1,456), co seat of McCormick co, W S C, near the Savannah W of Columbia It was named for Cyrus McCormick

McCosh, James (mukŏsh'), 1811–94, Scottish-American philosopher and educator, b Ayrshire, grad Univ of Edinburgh, 1833 He was called to the United States in 1868 to become president of the College of New Jersey (now Princeton Univ), and he retained the position until 1888 His successful career as administrator and teacher laid an enduring foundation for the liberal development of the college His philosophical position was that of the Scottish school of Thomas Reid and Sir William Hamilton His writings, though unoriginal, were clear and concise, and he stood out as one of the first supporters of evolution Chief among his works are *Method of Divine Government, Physical and Moral* (1850), *The Intuitions of the Mind Inductively Investigated* (1860), *Christianity and Positivism* (1871), and *Psychology* (1880–87) See *The Life of James McCosh* (ed by W M Sloane, 1896)

McCoy, Frank Ross, 1874–, American army officer and international arbitrator, b Lewistown, Pa, grad West Point, 1897 He served in the Spanish-American War, in the Philippine Islands, on the Mexican border, and in the First World War He saw other varied service, including direction of Red Cross work in Japan after the 1933 earthquake President Calvin Coolidge appointed him to superintend the elections in Nicaragua in 1928, and later he served on the commission to conciliate the Chaco dispute and was a member (1932) of the Lytton Commission, which investigated Japanese penetration of Manchuria. He was promoted major general in 1929 and retired from the army in 1938 He served on the Far Eastern Commission until Nov. 1949

McCoy, Isaac, 1784–1846, American missionary among the Indians, b near Uniontown, Pa He grew up on the Kentucky frontier, experienced a religious conversion, and became a Baptist preacher in S Indiana He was appointed (1817) missionary to the Indians, chiefly Miami and Kickapoo, in the Wabash valley and subsequently established schools among them Feeling that the Indians were being harmed by their close contact with white settlement, McCoy became an ardent advocate of their removal to regions W of the Mississippi, and the Federal government appointed him an Indian agent in 1830 He selected and superintended the surveying of sites for their settlement in Kansas and Oklahoma and had charge of their removal He afterwards visited the tribes for lengthy periods In 1842 McCoy was made corresponding secretary and general agent of the American Indian Mission Association, established at Louisville, Ky, through his influence His *History of Baptist Indian Missions* (1840) contains much frontier history

McCoy, Joseph Geating, 1837–1915, American cattle-trade pioneer, b Sangamon co, Ill He selected Abilene, Kansas, as the site for a railroad shipping center for the marketing of Western cattle In 1867 he purchased the townsite, built stockyards and facilities, and advertised his cattle-shipping plan The Cherokee Indians employed him (1881) as their agent for the collection of revenue on tribal lands McCoy was superintendent of the range cattle department of the 11th U S census His *Historic Sketches of the Cattle Trade* (1874, reprint, 1932) is an important source book

MacCracken, Henry Mitchell, 1840–1918, American educator, b Oxford, Ohio, grad Miami Univ, 1857 After a brief teaching career he entered the Presbyterian ministry in 1863 He later studied in Germany, preached (1868–81) in Toledo, and from 1881 to 1884 was chancellor of Western Univ (now the Univ of Pittsburgh) In 1884 he was appointed professor of philosophy and vice chancellor of the Univ of the City of New York (now New York Univ), becoming chancellor in 1891 Before his retirement in 1910, the University Heights campus was acquired, a graduate school and schools of commerce and pedagogy were founded, and the university medical school was strengthened by union with Bellevue Hospital Medical College Henry Noble MacCracken and John Henry MacCracken, president (1915–26) of Lafayette College, were his sons See T F Jones, *New York University, 1832–1932* (1933)

MacCracken, Henry Noble, 1880–, American educator, b Toledo, Ohio, grad New York Univ (B A, 1900), Ph D Harvard, 1907, son of Henry Mitchell MacCracken He taught English at Sheffield Scientific School, Yale (1908–13), and at Smith College (1913–15) and was later president of Vassar College (1915–46) He wrote texts for English composition and edited *The College Chaucer* (1913) and, with C F T Brooke and J W Cunliffe, *Shakespeare's Principal Plays* (1917–33) His *Family on Gramercy Park* (1949) is autobiographical

McCrae, John (mukrā'), 1872–1918, Canadian physician and poet His famous poem, "In Flanders Fields," written under fire in the First World War, was published anonymously in *Punch* in 1915 and under his name in a posthumous volume, *In Flanders Fields and Other Poems* (1919) He died of pneumonia in the war

McCrory, town (pop 1,010), E Ark, in an area growing cotton, rice, and peaches, settled 1886

McCullers, Carson, 1917–, American novelist, b Columbus, Ga Her three novels deal with the South—*The Heart Is a Lonely Hunter* (1940), *Reflections in a Golden Eye* (1941), and *The Member of the Wedding* (1946), successfully dramatized in 1949 and voted the Critics Award (1950) as the best American play of the year

McCulloch, Ben (mukŭl'ŭ), 1811–62, American scout and Indian fighter, b Rutherford co, Tenn He followed David Crockett to Texas (1835), distinguished himself at San Jacinto (1836) in the Texas Revolution, and was of some prominence in the little republic At the outbreak of the Mexican War he joined Taylor with a company of Texas Rangers and for the most part was head of the spy and scout service in Mexico In 1849 he went to California, returning in 1852 to Texas, where he was a U S marshal In 1857 he was one of the commissioners to investigate the Mormon disputes Made a Confederate brigadier general (1861), he commanded in Arkansas, fought at the battle of WILSON CREEK and at PEA RIDGE, where he was killed See biography by V M. Rose (1888)

McCulloch, Hugh (hū' mukŭl'ŭ), 1808–95, American financier, b Kennebunk, Maine Educated at Bowdoin, he studied law in Boston and practiced two years at Fort Wayne, Ind, before turning to banking and eventually becoming president of the

State Bank of Indiana In 1863 he became U S comptroller of the currency, upon the recommendation of Secretary of the Treasury Salmon P Chase, and he launched the new national banking system Appointed (1865) Secretary of the Treasury by Abraham Lincoln, he held office through Andrew Johnson's term While in office he favored the rapid reduction of the huge debt left by the Civil War as well as the retirement of the legal tender notes (see GREENBACK) and a return to specie payments in order to prevent over-speculation and a panic There was opposition to such severe deflation, however, and Congress adopted a compromise program, only to revoke this schedule in 1868 After leaving the Treasury in 1869, McCulloch went to London as the resident partner of the English branch of Jay Cooke & Company, this branch withstood the Panic of 1873 when the home bank at Philadelphia crashed From Oct , 1884, to March, 1885, he again served as Secretary of the Treasury, under Chester A Arthur See his *Men and Measures of Half a Century* (1888)

McCulloch, John Ramsay (mŭk'ŭ'luk), 1789–1864, British economist, b Scotland He developed a wage theory, promoted free trade, and made several valuable statistical studies, but his chief importance was as a popularizer of classical economic doctrines His writings include *Principles of Political Economy* (1825) and *An Essay on the Circumstances which Determine the Rate of Wages* (1826)

McCulloch vs. Maryland, case, decided in 1819 by the U S Supreme Court Congress had established the Bank of the United States to help control the unregulated issuance of currency by state banks Maryland replied by imposing a tax on all banks not chartered by the state and brought suit for collection against the U S branch bank in Baltimore Chief Justice John Marshall, who wrote the opinion, gave trenchant expression to the doctrine that Congress in carrying out its express powers (including the control of currency) might use any means it thought necessary The supremacy of the Federal government in its limited sphere was held to prevent all state interference with Federal instrumentalities, hence the tax applied to the Baltimore bank was held unconstitutional

McCullough, John Edward (mŭk'ŭ'luk), 1832–85, American actor, b Ireland He came to the United States in 1853, played minor roles (1855) at the Arch St Theater, Philadelphia, and gained experience supporting Edwin Forrest and Edwin Booth His best roles, which he offered in the heroic style of Forrest, were Virginius, Spartacus, Lear, and Othello He was a great success in the plays of John Howard Payne

McCumber, Porter James, 1858–1933, American political leader, b Crete, Ill He began to practice law at Wahpeton, N Dak in 1881 and served in the territorial legislature (1885–89) From 1899 to 1923 he was a Republican U S Senator As chairman of the finance committee he had a leading part in the framing of the Fordney-McCumber Tariff Act of 1922 He tried to secure protection for many farm products and to get such legislation passed was obliged to agree to high tariffs on the products of industry

McCutcheon, George Barr (mŭk'ŭ'chŭn), 1866–1928, American novelist, b near Lafayette, Ind , studied (1882–83) at Purdue Univ While he was a newspaperman he wrote *Graustark* (1901), a romantic novel of a mythical Balkan country Its wide popularity led him to write successors, such as *Beverly of Graustark* (1904) Within 28 years he published about 40 novels, one of which, *Brewster's Millions* (1903), was successfully dramatized by Winchell Smith in 1906

McCutcheon, John Tinney, 1870–1949, American cartoonist, b Tippecanoe co , Ind , grad Purdue College, 1889, brother of George Barr McCutcheon He had been associated with the Chicago *Record* and *Record-Herald* when in 1903 he joined the staff of the Chicago *Tribune*, remaining with that paper until he retired (1945) He was war correspondent in the Spanish-American and Boer wars, in the Mexican expedition in 1914, and in the First World War He went on big-game hunts with Theodore Roosevelt and with Carl E Akeley in Africa Of his many famous cartoons, *Indian Summer* (1907) has been many times reprinted, *A Wise Economist Asks a Question* won the Pulitzer Prize in 1931 Other writings and collections of his cartoons include *Stories of Filipino Warfare* (1900), *Bud Centre Cartoons* (1904), *The Mysterious Stranger and Other Cartoons* (1905), *Congressman Pumphrey, the People's Friend* (1907), and *In Africa* (1910)

Macdhui, Ben, Scotland see BEN MACDHUI

Macdonald, Alexandre (älĕksä'dru makdônal'), 1765–1840, marshal of France, of Scottish descent He distinguished himself in the French Revolutionary Wars, was governor of Rome (1798) and of Naples (1799), and aided Napoleon's coup d'état of 18 Brumaire (1799). Temporarily in disgrace for defending Jean Victor MOREAU, he returned to favor, was created duke of Taranto, and played an important part in the battle of Wagram (1809), the Peninsular War, and the Russian campaign. In the Hundred Days he was loyal to Louis XVIII.

Macdonald, Angus Lewis, 1890–, Canadian political leader, b Nova Scotia, educated at St Francis Xavier Univ , Dalhousie Univ , and Harvard Elected as a Liberal to the legislature of Nova Scotia in 1933, he became premier of the province that year and held the post until 1940, when he resigned to become minister of national defense for naval services in the dominion cabinet In this post he served until 1945, when he withdrew and again became premier of Nova Scotia

Macdonald, Flora, 1722–90, Scottish Jacobite heroine, who aided Charles Edward STUART, the Young Pretender, to escape to the Continent after the defeat of the JACOBITES at Culloden Moor in 1746 A native of the Hebrides, Flora Macdonald received, in Edinburgh, more than ordinary education for a young lady of the times She showed great charm and sweetness of character For smuggling the prince, disguised as a woman (Betty Burke, an Irish spinning maid), to the Isle of Skye, she was imprisoned in the Tower of London (1746–47) Later she was visited by many celebrities, including Dr Johnson (1773) She lived for a time (1774–79) in North Carolina, where her husband, Allan Macdonald, served in the British forces in the American Revolution Her romantic aid to the prince is commemorated in Highland poetry and legend Boswell recounts the story as given to Dr Johnson by the lady herself

Macdonald, George, 1824–1905, Scottish novelist and poet His novels, chiefly of life in rural Scotland, include *David Elginbrod* (1863), *Alec Forbes* (1865), and *Robert Falconer* (1867) The narrative poem *Within and Without* (1855) appeared also in his *Poetical Works* (1893) The moral allegory *Phantastes* (1858) and his fairy tales and stories for children—including *At the Back of the North Wind* (1871), a classic of its kind, *The Princess and the Goblin* (1872), and *The Light Princess* (1890)—have been reprinted many times Macdonald is a moralizer, but the point of view of his eclectic ethic is flexible and delicately shaded See Greville Macdonald, *George Macdonald and His Wife* (with introduction by G K Chesterton, 1924), C S Lewis, ed , *George Macdonald an Anthology* (1947)

McDonald, James Grover, 1886–, American diplomat, b Coldwater, Ohio, grad Indiana Univ (B A , 1909 M A , 1910) An assistant professor of history and political science (1914–15, 1916–18) at the Indiana Univ , McDonald devoted himself to the study of international problems He served (1933–35) as high commander for refugees expelled from Germany After 1936 he became an editorial writer and a radio news commentator He was (1946) a member of the Anglo-American committee of inquiry on Palestine, and, appointed (June, 1948) by President Harry S Truman as special envoy to the provisional government of Israel, he later (Feb , 1949) became the first U S ambassador to Israel

MacDonald, James Ramsay see MACDONALD, RAMSAY

MacDonald, James Wilson Alexander, 1824–1908, American sculptor, b Steubenville, Ohio Examples of his monumental art are the statues of General Custer (West Point, N Y) and of Fitz-Greene Halleck (Central Park, New York)

Macdonald, Sir John Alexander, 1815–91, Canadian statesman, first premier of the Dominion of Canada, b Glasgow His parents settled in 1820 in Kingston, Ont Macdonald first practiced law With his election (1844) as a Conservative to the legislative assembly, he entered upon his long political career A forceful man and a vigorous fighter, he quickly rose to leadership in the government of Upper Canada. He and Georges Étienne CARTIER of Lower Canada headed the Liberal-Conservatives (a coalition largely of Macdonald's creating), and he became premier in 1857 When he was joined (1864) by George BROWN and others in "the great coalition" ministry, the way was paved for the union of the British North American provinces Macdonald was perhaps the most potent figure in bringing about their confederation (1867) as the dominion of Canada He was the maker of the dominion and first premier He was knighted in 1867 His policy was dominated by the vigorous attempt to build Canada Believing that the dominion's prosperity required strong bonds with England, he worked throughout his career to that end He was a member of the British commission which negotiated and signed the Treaty of Washington (1871), a pact which led to the settlement of the *Alabama* claims The Northwest Territories were taken over from the Hudson's Bay Company in 1869, to facilitate their development, Macdonald's government decided to construct the Canadian Pacific Railway His personal popularity—he knew everyone and everyone knew him—was not enough when the PACIFIC SCANDAL (1873) broke The government resigned When changing industrial conditions made Macdonald the advocate of a protectionist policy (known as the National Policy), he returned to the premiership in 1878 The transcontinental railroad was pushed to completion (1885), and other public works were accomplished See biography by G R. Parkin (rev ed , 1926), memoirs by Joseph Pope (rev ed , 1930)

Macdonald, John Sandfield, 1812–72, Canadian political leader, b Ontario Admitted to the bar (1840), he was elected (1841) as a Conservative to the Canadian legislative assembly, but he afterwards developed considerable political independence He was solicitor general for Upper Canada (1849–51), speaker of the legislative assembly (1852–54), and attorney general for Upper Canada in 1858 He was premier (1862–64), first of the Macdonald-Sicotte, then of the Macdonald-Dorion cabinet While, after confederation was accomplished (1867), his attitude towards it was loyal, he had previously opposed it Macdonald was chosen first premier of Ontario in 1867, but in 1871 he resigned, defeated by the Liberals under Edward Blake

MacDonald, Ramsay (James Ramsay MacDonald), 1866–1937, British statesman Born in poverty in Scotland, he came to London as a young man and engaged himself in Socialist and labor movements, particularly in the Fabian Society He was one of the founders of the Labour party, in which he served as secretary (1900–1912) and treasurer (1912–24) He was in addition, chairman (1906–9) of the Independent Labour party He was elected to Parliament in 1906 and was leader of the Labour party in the House of Commons (1911–14) until he was discredited and labeled traitor for his pacifist stand at the outbreak of the First World War By 1922 he had again risen to leadership of his party and he was prime minister and foreign secretary of the first Labour government of Britain (Jan –Nov , 1924) He did much to stabilize the international economy and relieve unemployment in Britain He was defeated, however, largely as a result of his supposed pro-Communist stand in connection with the ZINOVIEV LETTER He gave his unwilling support to the abortive general strike of 1926 In 1929 he again became premier under the second Labour government By 1931, however, economic conditions had become so serious as to demand concerted action, and MacDonald accepted the post of prime minister in a coalition cabinet largely dominated by Conservatives (the National government) This action and his policy of economic nationalism were regarded as apostasy by most of British labor, and in 1935 MacDonald was overwhelmingly defeated at the polls He regained a seat in Parliament as a representative of the Scottish universities and served (1935–37) as lord president of the council in Stanley Baldwins' cabinet He retired as a broken and embittered man, disavowed by his early friends and never completely trusted by his later allies MacDonald's writings include *Parliament and Revolution* (1920), and *Socialism Critical and Constructive* (1924) See biography by Lord Godfrey Elton (1939, covering his career to 1919), L M Weir, *The Tragedy of Ramsay MacDonald* (1938, an unsympathetic account of his political career)

McDonald, Ranald, 1824–94, American adventurer, b Fort George, on the Columbia river He was the son of Archibald McDonald, a Scotsman who served as a clerk with the Hudson's Bay Company at Fort George, and of a princess of the Chinook Indians Ranald McDonald was reared on the frontier, received his schooling in frontier forts, and became (1839) an apprentice clerk for the Hudsons's Bay Company at St Thomas, Ont He soon wearied of routine work and went to sea, reaching (c 1844) London on a whaler He then went to the African Gold Coast via slave ship and reached Oriental waters on another whaler On the voyage he followed his long-concealed urge to visit Japan, cast off with adequate supplies to the forbidden land in a cockleshell boat, and reached the island country in 1848 There he was imprisoned and subjected to several ordeals, but because of his stolid courage, McDonald was released in 1849 He reached Australia after a shipwreck and later toured Italy, France, and England He returned (c 1854) to the Pacific Northwest, engaged there in commercial pursuits, and spent his twilight years in a wilderness cabin at Fort Colville (now Colville), Wash See biography by M L Nichols (1940)

McDonald 1 Village (pop 1,529), NE Ohio, on the Mahoning and NW of Youngstown Pig iron is made here 2 Borough (pop 3,530), SW Pa , N of Washington

Macdonnell, Arthur Anthony (măk"dŭnĕl'), 1854–1930, British Sanskrit scholar He was one of the greatest figures in his field Besides many other authoritative works, he wrote the standard grammar of Vedic and a Sanskrit-English dictionary

Macdonough, Thomas (mŭkdô'nu), 1783–1825, American naval officer, b New Castle co , Del He served under Stephen Decatur in the TRIPOLITAN WAR and took part in the burning of the *Philadelphia* and the attack on the Tripolitan gunboats Macdonough resigned from the service in 1808 but returned early in the War of 1812 He was given command of a small fleet on Lake Champlain and was charged with building a force strong enough to hold the British fleet in check British military plans in 1814 required control of the lake, and their naval force struck the American fleet at Plattsburg By superior skill and planning, Mac-

donough on his flagship, the *Saratoga*, (26 guns), was able to defeat the *Confiance* (37 guns) in one of the most significant naval battles in U.S. history At the same time Alexander Macomb won a victory on land, and the British plan was thoroughly disrupted. See A. T Mahan, *Sea Power in Its Relation to the War of 1812* (1905)

McDonough, city (pop 1,232), co seat of Henry co, W central Ga, SE of Atlanta, in a farm area, inc. 1823

MacDougal, Daniel Trembly (mŭkdō'gul), 1865–, American botanist, b Liberty, Ind, grad DePauw Univ, 1890 He was connected with Carnegie Institution, Washington, from 1905 to 1933 He is noted for his researches in plant physiology, heredity, and evolution Among his publications are *Botanical Features of North American Deserts* (1908), *Water-Balance of Succulent Plants* (1910), *Conditions of Parasitism in Plants* (1910), *Alterations in Heredity Induced by Ovarial Treatment* (1911), *Growth in Trees* (1921), and *The Pneumatic System of Plants* (1933)

McDougall, Alexander, 1731–86, American Revolutionary patriot and general, b Islay, Inner Hebrides, Scotland He was brought (1738) as a child to New York In the French and Indian War he commanded (1756–63) a privateer Later he was a flaming opponent of British restrictions on trade and helped to form the SONS OF LIBERTY in New York In 1770 he was arrested on the charge of having written a seditious broadside, and while he was in prison he was much visited and was hailed as "the Wilkes of America" In 1774 he presided over the meeting that decided to send New York delegates to the Continental Congress He served in the army throughout the Revolution and was notable in the battles of White Plains and Germantown and in the fighting in New Jersey In 1780, after Benedict Arnold's treason, McDougall succeeded to the charge of West Point Later he was again delegate to the Congress After the war (1781–82, 1784–85) he was a U S Congressman from New York

McDougall, Alexander (mŭkdō'gul), 1845–1923, American shipbuilder, b Scotland He was brought (1854) by his parents to Canada At 16 he ran away to be a sailor on the Great Lakes, and his interest in ship design led him to develop (1888) the "whaleback" freighter, he built many vessels of this type at Duluth (his home), Minn, and Superior, Wis He acquired shipyards in Collingwood and Kingston, Ont, and in 1892 he established at Everett, Wash, the first yards for building steel ships in the Pacific Northwest

McDougall, William, 1822–1905, Canadian leader in the movement for confederation, b near York (now Toronto), Ont, educated at Victoria College, Cobourg A lawyer and a journalist, he was elected (1858) to the legislative assembly of Canada Later (1862–64) he was commissioner of crown lands, in 1864 he entered "the great coalition" ministry as provincial secretary He was a delegate to the two Canadian conferences (1864) on confederation and to that held in England in 1866 In 1868 he again went to England, with Georges Cartier, to arrange for taking over the territories of the Hudson's Bay Company, a project he had long urged The following year he was appointed lieutenant governor of the newly acquired region, but on his way to assume his post he was turned back near the border by Riel's Rebellion

McDougall, William, 1871–1938, American psychologist, b Lancashire, England, educated at Cambridge, Oxford, and Göttingen He was professor (1920–27) of psychology at Harvard and later at Duke Univ A pioneer in physiological and social psychology, he was known also for his biological approach to the problems of psychology, he studied eugenics and heredity and for 17 years conducted experiments in the inheritance of acquired characteristics He was also interested in psychical research His most outstanding works were *An Introduction to Social Psychology* (1908) and *Outline of Psychology* (1923)

MacDowell, Edward Alexander (mŭkdou'ul), 1861–1908, American composer, who was born in New York city and died there He studied at the conservatories in Paris and Frankfurt and taught at the Darmstadt Conservatory, 1881–82 The chair of music was created at Columbia Univ in 1896, and he held it from that date until 1904 His outstanding works are four programmatic piano sonatas—*Tragica* (1893), *Eroica* (1895), *Norse* (1900), *Keltic* (1901)—and his *Indian Suite* (1897) for orchestra, which employs adaptations of native Indian melodies In addition, he wrote two piano concertos and numerous smaller works, including the popular *Woodland Sketches* (1896) and *Sea Pieces* (1898) for piano The MacDowell Colony for composers, artists, and writers, founded by his widow, Marian Nevins MacDowell, at their summer home in Peterborough, N H, is a fulfillment of a plan of MacDowell's The colony has been financed by Mrs MacDowell, who in its interest has toured the country giving concerts at which she played her husband's music See biographies by Lawrence Gilman (rev ed., 1909) and J. F Porte (1922), J T Howard, *Our American Music* (1930)

McDowell, Ephraim, 1771–1830, American pioneer surgeon, b Virginia. He studied with John Bell in Edinburgh and practiced in Danville, Ky He was noted especially for his success in lithotomy, and in 1809 he made surgical history by performing the first ovariotomy. See biography by August Schachner (1921).

McDowell, Irvin, 1818–85, Union general in the Civil War, b Columbus, Ohio, grad West Point, 1838 He taught at West Point (1841–45) and was brevetted captain for his service in the Mexican War In the Civil War, McDowell, made a brigadier general in the regular army (May, 1861), commanded the Union troops at the first battle of BULL RUN. After that defeat he commanded a corps under his successor, G B McClellan When the PENINSULAR CAMPAIGN began, McDowell's 1st Corps (then called the Army of the Rappahannock) was withdrawn from McClellan's command to defend Washington In the summer of 1862 McDowell's force became the 3d Corps of Pope's Army of Virginia and fought at the second battle of Bull Run (Aug) McDowell shared in the blame for that defeat and was removed from command He later commanded various territorial departments until his retirement in 1882 He was promoted major general in 1872

Macduff, burgh (pop 3,276), Banffshire, Scotland, E of Banff It is a port, a coast resort, and a center for herring fishing

McDuffie, George, 1790–1851, American statesman, b Columbia co, Ga He was a member of the South Carolina legislature and served (1821–34) in the U S House of Representatives, where he quickly became noted as an ebullient debater He bitterly opposed the administration of John Q Adams and as ardently supported Andrew Jackson McDuffie later broke with Jackson, he supported the Bank of the United States and also was a leader of the South Carolina group which advocated the doctrine of NULLIFICATION He was (1834–36) governor of South Carolina and served (1842–46) in the U S Senate

mace see NUTMEG

Macedon (măs'ĭdŏn), ancient country, N Greece, the modern Macedonia Macedon proper was the coast plain NW,N, and NE of the Chalcidice peninsula, Upper Macedon was the highland to the west and the north of the plain The plain was fertile and productive, and there were important silver mines in the eastern part The population of the region was complex when first known and included peoples related to modern Albanians as well as several Hellenic groups The first influence of Greek culture in Macedon came from the colonies along the shore founded in the 8th cent B C and after, these had ties to their mother cities which tended to isolate them politically from Macedon By the 7th cent B C there was developing in W Macedon a political unit led by a Greek-speaking family, which assumed the title of king and aggrandized itself Macedon was a Persian tributary in 500 B C but took no real part in the Persian Wars Alexander I (d 450 B C) was the first Macedonian king to enter into Greek politics, he began a policy of imitating features of Greek civilization For the next century the Hellenic influences were growing and the state was becoming stronger With Philip II (reigned 359–336 B C) these processes came to critical significance, for by annexing Upper Macedon, Chalcidice, and Thrace he made himself the strongest power in Greece, then he became its ruler He created an excellent army, this was the tool with which Alexander the Great forged his empire That empire, though it was a Macedonian conquest, was a personal creation The Macedonian generals carved it up after Alexander's death (323 B C), these were the successors (the Diadochi), founders of states and dynasties—notably Antipater, Perdiccas, Ptolemy I, Seleucus I, Antigonus I, and Lysimachus They had armies largely Macedonian and Greek in personnel, and most of them founded cities with colonies of their soldiers Thus began the remarkable spread of the Hellenistic (Greek, rather than Macedonian) civilization All the armies constituted a fatal drain on the population of Macedon, which never really flourished again Macedon, with Greece as a dependency, was one of the states cut out of the Alexandrian empire Almost immediately, however, there was struggle for the hold over Greece and even over Macedon itself Cassander took (319–316 B C) Macedon and held it until his death (297); he refounded Salonica After a period of short-lived attempts by Demetrius I, Pyrrhus of Epirus, Lysimachus, Alexander II of Epirus (see EPIRUS), and others to hold Macedon, Antigonus II established himself as king He fought off the Galatian invaders and used his long reign (277–239 B C) to restore Macedon economically There was constant trouble with the Greek city-states, many of them regained independence, but Antigonus III (reigned 229–221 B C), another strong king, reestablished Macedonian hegemony. Philip V (reigned 221–179 B C) was an adventurer, a would-be Alexander, but too late In two wars (the First Macedonian War, 215–205 B C., and the Second Macedonian War, 200–194 B C) the Roman republic humbled him. Philip learned his lesson and even got his indemnity to Rome reduced for good behavior His successor, Perseus (reigned 179–168 B C), foolishly aroused Roman fears and lost his kingdom in the Third Macedonian War (171–168 B C). Now Rome divided Macedon into four republics. Later (150–148 B C) a pretender, Andriscus, tried to revive a Macedonian kingdom This time Macedonia was annexed to Roman territory and became (146 B C) the first Roman province. It never again had political importance in ancient times In the history of Greek culture Macedon had its single significance in producing the conquerors and armies who created the Hellenistic empires and civilizations. See P. Jouguet, *Macedonian Imperialism and the Hellenization of the East* (Eng tr., 1928), Max Cary, *The Legacy of Alexander* (1932).

Macedonia (măsĭdō'nēŭ), region of SE Europe, in the Balkan Peninsula, divided among Greece, Yugoslavia, and Bulgaria Corresponding roughly to ancient Macedon, it extends from the Aegean Sea N between Epirus in the west and Thrace in the east and comprises the Vardar, Struma, and Mesta river valleys The region is predominantly mountainous, pastoral, and agricultural Tobacco is one of the chief crops Greek or Aegean Macedonia is a division (13,360 sq mi, pop. 1,759,130) of N Greece It includes the CHALCIDICE peninsula and has SALONICA as its capital and chief port Its industries are largely concentrated at Salonica and EDESSA Bulgarian Macedonia was organized after the Second World War as the Gorna Dshumaya oblast (pop 252,258), which contains no important towns Yugoslav Macedonia forms an autonomous republic (10,229 sq mi, pop 1,152,054), with its capital at Skoplje, other cities include Bitolj and Prilep There are chrome ore deposits both in Yugoslav and Greek Macedonia The official territorial divisions are to some extent arbitrary, and the limits of Macedonia as a region are somewhat indefinite The imperial Roman province of Macedonia was far more extensive than the present region, comprising Thessaly as well Like neighboring Thrace and Epirus, Macedonia has been, since the early Middle Ages, a meeting place of nations, a fact which was a major factor in its complex and turbulent history The Goths and Huns passed through the region but left no permanent trace In the 9th cent, however, it was wrested from the Byzantine Empire by BULGARIA Emperor Basil II recovered it (1014) for Byzantium, but after the temporary breakup (1204) of the Byzantine Empire, Macedonia was bitterly contested among the Latin Empire of Constantinople, the Bulgars under Ivan II, the despots of Epirus, and the emperors of Nicaea It again became part of the Byzantine Empire, which was restored in 1261, but in the 14th cent STEPHEN DUSHAN of Serbia conquered all Macedonia save Salonica The fall of the Serbian empire in the late 14th cent brought Macedonia under Turkish rule, which lasted for five centuries The population of Macedonia now was split into Bulgars, Serbs, Greeks, and Turks and into Moslems and Christians (At Salonica, there also grew up a large Jewish settlement) National and religious antagonism flared in the 19th cent, and conflict was encouraged by the Turkish policy of playing one group against the other Meanwhile Turkey had lost control over the major sections of Greece, Serbia, and Bulgaria, each of which claimed Macedonia on historical or ethnical grounds At the Treaty of SAN STEFANO (1878), which terminated the Russo-Turkish War of 1877–78, Bulgaria was awarded the lion's share of Macedonia, with a large section of the Aegean coast This settlement was nullified by the European powers in the same year (see BERLIN, CONGRESS OF), and Macedonia was left under direct Turkish control A secret terrorist organization working for Macedonian independence sprang up in the late 19th cent and soon wielded great power The *komitadjis*, as the terrorist bands were called, were generally supported by Bulgaria, which gained a major share of Macedonia in the first of the BALKAN WARS (1912–13). Greece and Serbia now turned against Bulgaria in the Second Balkan War, and at the Treaty of Bucharest (1913) Bulgaria was left with only a small share of Macedonia, the rest of which they divided between themselves roughly along the present line Thousands of Macedonians fled to Bulgaria to escape Serbian and Greek rule, and after the First World War, Macedonia became a hotbed of agitation and terrorism, directed largely from Bulgaria The population exchange which took place among Greece, Turkey, and Bulgaria after 1923 resulted in the replacement of most of the Bulgarian and Turkish elements in Greek Macedonia by Greek refugees from Asia Minor, who were settled here under the supervision of a League of Nations commission Greek charges of mistreatment of the Greek minority in Bulgarian Macedonia resulted in a Greek invasion (1925) of Bulgarian territory The League of Nations, however, enforced an end to hostilities and awarded (1926) a decision favorable to Bulgaria. Bulgarian relations with Yugoslavia remained strained over

the Macedonian question. Frontier incidents were frequent, as were Yugoslav charges against Bulgaria for fostering the terrorist Macedonian nationalist movement. Macedonian agitation against Serbian rule culminated in 1934 in the assassination of King Alexander of Yugoslavia by a Macedonian nationalist at Marseilles. In the Second World War all Macedonia was briefly united (1941–44) under Bulgaria, which sided with the Axis against Yugoslavia and Greece, but the Bulgarian armistice treaty of 1944 restored the pre-war boundaries, which were confirmed in the peace treaty of 1947 The Yugoslav constitution of 1946 made Yugoslav Macedonia an autonomous unit in a federal state Tension over Macedonia continued in the post-war years, as Greece accused Yugoslavia of helping the rebel forces who held part of Macedonia in the Greek civil war, while Yugoslavia charged Greece with mistreatment of the Macedonians The breach between Yugoslavia and Bulgaria after 1948 helped to make the Macedonian question once more an explosive issue. For the campaigns in Macedonia during the First World War, see SALONICA CAMPAIGNS

Maceió (mäsäô'), city (pop 80,045), capital of Alagoas state, NE Brazil, a port on the Atlantic The area produces cotton and sugar, and the city has textile mills, sugar refineries, and light manufactures Its harbor, called Jaraguá, is just to the east

McEntee, Jervis (mă'kŭntē), 1828–91, American landscape painter of the Hudson River school, b Rondout, N Y He became a member of the National Academy in 1861 Good examples of his works are *Autumn Landscape* and *In the Clouds* (Metropolitan Mus), *Eastern Sky at Sunset* (Corcoran Gall), *The Melancholy Days Have Come, Old Mill in Winter, Indian Summer, Shadows of Autumn; A Cliff in the Catskills,* and *Clouds*

Macer see LICINIUS, Roman gens

Macerata (mächĕrä'tä), city (pop 14,460), capital of Macerata prov , central Italy, in the Marches It is an agricultural center Macerata is surrounded by medieval walls and has a university which was founded in 1290

McEvoy, Ambrose (măk'uvoi), 1878–1927, English portrait painter He studied at the Slade School, where he knew Augustus John He is best known for his brilliant portraits in line, wash, and oil, which enjoyed a deserved success for their sensitive characterization, fine color, and spontaneity His *Portrait of a Young Man* and *The Earring* (Tate Gall , London) are well known McEvoy is also represented in the Luxembourg Museum, Paris, the Imperial War Museum, London, and many private collections See study by R M Y Gleadowe (1924)

MacEwen, Walter (mŭkū'un), 1860-1943, American landscape and genre painter, b Chicago, studied in Paris His works, which received many awards, include *Greek Heroes* (Library of Congress), *Sunday in Holland* (Luxembourg Mus , Paris), *Judgment of Paris* and *Lady in White* (Art Inst , Chicago), *An Ancestor* (Corcoran Gall), and *Phyllis* (Pa Acad of the Fine Arts) He is represented in many other museums of the United States and Europe

MacEwen, Sir William, 1848–1924, Scottish surgeon A professor of surgery at the Univ of Glasgow, he was noted for his work on bone grafting, on the radical cure of hernia, and especially on the surgery of the brain and spinal cord

McFarland, John Horace, 1859–1948, American master printer, horticulturist, and rose specialist, b McAlisterville, Pa Besides contributing numerous photographs and articles to periodicals, he wrote *Photographing Flowers and Trees* (1911), *Getting Acquainted with the Trees* (1904), *My Growing Garden* (1915), *The Rose in America* (1923), and *Roses of the World in Color* (1936, 3d ed , 1947) He was editor of *The American Rose Annual* from 1916 to 1943

McFee, Henry Lee, 1886–, American painter, b St Louis He studied art in St Louis and Pittsburgh At 21 he went to Woodstock, N Y , where he studied under L B Harrison and lived for many years His early work showed the influence of cubism and expressionism, but his later style is naturalistic with emphasis on composition and structure in space His color is rich and harmonious He is perhaps best known for his still lifes and interiors but also painted landscapes, portraits, and figures McFee received many awards and is represented in many American galleries. His *Crow with Peaches* (Whitney Mus., New York) is characteristic

McFee, William, 1881–, Anglo-American author, a marine engineer, b London Before settling in the United States in 1911 he wrote *Letters of an Ocean Tramp* (1908), and with *Casuals of the Sea* (1916) his ability to depict nautical life was proved Other works include *Captain Macedonne's Daughter* (1920), *The Harbourmaster* (1932), *Spenlove in Arcady* (1941), *Ship to Shore* (1944), *In the First Watch* (1946), autobiographical), and *Family Trouble* (1949)

MacGahan, Januarius Aloysius (mŭgăn'), 1844–78, American newspaper correspondent, b. Perry co., Ohio He reported the Franco-Prussian War for the New York *Herald* and in 1876 penetrated central Asia to join the Russian army against Khiva. An account of the venture, *Campaigning on the Oxus* (1874), made him famous He was sent by the London *Daily News* to investigate the Turkish massacres in Bulgaria, and his dispatches were collected in *The Turkish Atrocities in Bulgaria* (1876) and were an incitement to the Russo-Turkish War of 1877–78 See F L Bullard, *Famous War Correspondents* (1914)

McGee, Thomas D'Arcy (mŭgē'), 1825–68, Canadian journalist and statesman, a leader in the movement for confederation, b Ireland Emigrating to Boston, Mass , in 1842, he became editor of the Boston *Pilot*, but in 1845, upon the invitation of Daniel O'Connell, he returned to Ireland to join the staff of the Dublin *Freeman's Journal* Later McGee transferred his services to the *Nation*, journal of the Young Ireland party Implicated in the uprising of 1848, he fled to America He edited Irish papers in New York and Boston before settling (1857) in Montreal, where he started the *New Era* Entering (1858) the Canadian legislature, McGee became president of the council (1862) and minister of agriculture (1864) His anti-British position had undergone a change, and to the cause of Canadian confederation within the empire he lent his brilliant oratory He lived to see the achievement (1867) of the dominion of Canada, but the following year he was assassinated by a member of the Fenians, whose tactics McGee had denounced He was a pamphleteer and a talented poet See biographies by Isabel Skelton (1925) and Alexander Brady (1925)

McGehee (mugē'), shipping city (pop 3,663), SE Ark , near the Mississippi river, in a cotton and livestock region, inc 1906

McGiffert, Arthur Cushman (mugil'fûrt), 1861–1933, American theologian, b Sauquoit, N.Y , grad Western Reserve Univ , 1882, and Union Theological Seminary, 1885 After study abroad, he was ordained a Presbyterian minister in 1888 but entered the Congregationalist ministry in 1899 At Union Theological Seminary, McGiffert was professor of church history (1893–1926) and president (1916–26) His *History of Christianity in the Apostolic Age* appeared in 1897 Other writings include *The Rise of Modern Religious Ideas* (1915) and *A History of Christian Thought* (1931–32)

Macgillicuddy's Reeks (mugil'lukŭ'dēz rēks'), mountains of Co Kerry, Ireland, in the region of the Lakes of Killarney They include Carrantuohill (3,414 ft , highest peak in Ireland) and other peaks over 3,000 ft high

McGillivray, Alexander (mugil'lĭvrā), 1759–93, Indian chief He was born in the Creek country now within the borders of Alabama, the son of Lachlan McGillivray, a Scots trader, and his French-Creek wife Given a classical education at Charleston, he returned to his mother's people at the beginning of the American Revolution when Georgia confiscated the property of his Loyalist father, who thereupon returned to Scotland In the war he was a British agent, influential in maintaining Creek loyalty to the crown At Pensacola in 1784 McGillivray, now dominant in his nation's councils, concluded with the Spanish a treaty confirming the Creek Indians in their lands, giving the Spanish a trade monopoly, and making him Spanish commissary With arms provided by the Spanish, his warriors periodically attacked American frontier settlements from Georgia to the Cumberland river In 1790 President Washington, seeking to end the depredations, invited him to a conference in New York McGillivray, a clever diplomat, accepted, meanwhile assuring Spanish authorities of his loyalty, and was well received By the treaty of New York (1790), the Creek acknowledged U S sovereignty over part of their territory, acquired lands claimed by Georgia, and agreed to keep the peace McGillivray himself accepted a brigadier generalcy and a yearly pension He continued in the pay of the Spanish, however, and in 1792 when they increased his subsidy, he entered upon another treaty with them which practically repudiated his treaty with the Americans, and the Indian attacks were resumed See J W Caughey, *McGillivray of the Creeks* (1938)

McGill University (mugil'), at Montreal, Que , nonsectarian, coeducational, chartered 1821, opened 1829 It was named for James McGill, who left a bequest to establish it Its real development dates from 1855 when John W DAWSON became principal Besides its faculties of arts and science, dentistry, engineering (with a school of architecture), law, medicine, and music, it has schools of commerce, library science, graduate nursing, physical education, and physiotherapy (for women) Anglican, Presbyterian, and United Church theological colleges are affiliated Royal Victoria College at Montreal is the woman's college of the university Macdonald College at Ste Anne de Bellevue, Que , includes the faculty of agriculture, a school for teachers, and a school of household science Dawson College is a branch at St. Johns, Que McGill is noted for its graduate work in chemistry, physics, medicine, and biology It has a fine medical library and medical museum See Cyrus Macmillan, *McGill and Its Story* (1921)

McGoldrick, Joseph Daniel, 1901–, American city official, b. New York city, grad Columbia (B A , 1922; Ph D , 1931) and Fordham (LL B , 1929) He was (1922–34) a member of the Columbia Univ staff and was recognized as an outstanding authority on municipal government He also served on many municipal and state investigating committees Mayor Fiorello H LaGuardia appointed him (1934) comptroller of New York city After he ran (1935) unsuccessfully for district attorney of Kings co , N Y , he was elected (1937) comptroller of New York city and, serving from 1938 to 1945, helped keep the city budget in balance

Macgowan, Kenneth (mugou'un), 1888–, American author and theatrical producer, b Winthrop, Mass , grad Harvard, 1911 He directed the Provincetown Players and the Greenwich Village Theatre and the Actors' Theatre of New York and produced *La Cucaracha* (1933), the first three-color process moving picture of a dramatic subject He was editor (1919–25) of the magazine *Theatre Arts*, and his books include *The Theater of Tomorrow* (1921), *Continental Stagecraft* (with Robert Edmond Jones, 1922), *Masks and Demons* (with Herman Rosse, 1923), and *Footlights across America* (1929)

McGrath, James Howard (mugrăth'), 1903–, U S Attorney General (appointed Aug , 1949), b Woonsocket, R I , grad Providence College, 1926, and Boston Univ law school, 1929 He was governor of Rhode Island (1941–45), U S Solicitor General (1945–46), and Senator from Rhode Island (1947–49) One of the more powerful Democratic politicians, J Howard McGrath succeeded Robert E HANNEGAN as chairman of the party's national committee and was rewarded for his service with a cabinet post

McGraw, John Joseph, 1873-1934, American baseball manager, b Cortland co , N Y He began playing professional baseball in 1890 and was (1891–1900) the star third baseman of the renowned Baltimore Orioles of the National League McGraw managed the Orioles in 1899, and after the team was dropped (1900) by the National League he helped organize (1900) the American League As manager (1902–32) of the New York Giants of the National League, the fiery, efficient John J McGraw became one of the outstanding figures of baseball He brought the Giants 10 pennants (1904–5, 1911–13, 1917, 1921–24) and three world series victories (1905, 1921–22) In 1914 and again in 1924 McGraw, together with Charles Comiskey, led groups of baseball players on world-wide tours to popularize the sport in Europe and the Orient He was named to the National Baseball Hall of Fame in 1937 He wrote *How to Play Baseball* (1914) See his autobiography, *My Thirty Years in Baseball* (1923), biography by Frank Graham (1944)

McGraw, village (pop 1,201), central N Y , E of Cortland, inc 1869

McGready, James (mugrā'dē), c 1758–1817, American Presbyterian minister and evangelist, b Pennsylvania Under his preaching in Logan co , Ky , in 1797, 1798, and 1799 was kindled the flame of the great religious revival which, in 1800, swept over the South and the West Gatherings encamped for McGready's revivals were the forerunners of later CAMP MEETINGS Some of his methods were questioned by the Presbyterian Church, in the division that resulted, the Cumberland Presbyterian Church was established Later McGready was received back into his presbytery and sent in 1811 to Indiana to found churches

McGregor, James Howard (mugrē'gûr), 1872–, American zoologist, b Bellaire, Ohio, grad Ohio State Univ (B S , 1894), Ph D Columbia, 1899 Associated with Columbia from 1897, he became professor of zoology in 1924 and professor emeritus in 1942 In 1916 he was made a research associate of the American Museum of Natural History His contributions include significant studies of reptilian and primate paleontology, his research has added much to the knowledge of primitive man.

MacGregor, Robert see ROB ROY

McGregor, 1 Town (pop 1,309), NE Iowa, on the Mississippi almost opposite the mouth of the Wisconsin It was settled in 1836 when Alexander McGregor established a ferry from Prairie du Chien, Wis , and was incorporated in 1857 The town is in a ravine with high bluffs on two sides The American School of Wild Life Protection holds annual assemblies in August Near by are Indian mounds and Point Ann and Pike's Peak state parks 2 Town (1940 pop 2,062, 1947 estimated pop 3,500), E central Texas, WSW of Waco It processes cotton and has a flour mill An ordnance plant was near by in the Second World War

McGuffey, William Holmes (mŭgŭ'fē), 1800–1873, American educator, b near Claysville, Pa He was graduated from Washington and Jefferson College in 1826, having meanwhile taught in rural schools, and became professor of languages at Miami Univ He remained at Miami until he became (1836) president of Cincinnati College He later served as president of Ohio Univ at Athens (1839–43), as professor of philosophy at Woodward College, Cincinnati (1843–45), and as professor of moral philosophy at the Univ of Virginia (1845–73) He helped to organize the common school system of Ohio but is now remembered chiefly as the compiler

of the famous McGuffey Eclectic Readers, the First and Second of which were published in 1836, the Third and Fourth in 1837, the Fifth in 1844, and the Sixth in 1857 These were constantly revised and passed through edition after edition, maintaining their place for nearly two generations, their estimated sales totaled 122,000,000 copies Their influence in shaping the American mind of the mid-19th cent can scarcely be exaggerated A memorial was erected to McGuffey in 1931 at his birthplace in West Finley township, Pa See *Old Favorites from the McGuffey Readers, 1836–1936* (1936), biography by H C Minnich (1936)

McGuigan, James Charles (mŭgwī'gun), 1894–, Canadian Roman Catholic churchman, cardinal of the Roman Church, b Prince Edward Island After study at Grand Seminary and Laval Univ in Quebec, he was ordained in 1918 He was archbishop of Regina from 1930 to 1934, when he became archbishop of Toronto He was given the red hat in 1946 See biography by C L Fisher (1948)

Mach, Ernst (ĕrnst' mäkh'), 1838–1916, Austrian physicist, psychologist, and philosopher He was professor of physics at the universities of Graz (1864–67) and Prague (1867–95) and of philosophy at the Univ of Vienna (1895–1901) His early work in physics and in the physiology and psychology of the senses led him to attempt to interrelate physics and psychology in a formulation of the methods and philosophy of science He advanced the theory (known as the principle of economy) that the scientist must select the simplest means of arriving at his results and must exclude elements not perceived by the senses Mach's writings include *The Analysis of Sensations and the Relation of the Physical to the Psychical* (1886, 3d Eng ed, 1914) and *The Science of Mechanics* (1883, 3d Eng ed, 1907, supplement, 1915)

Machabees (măk-) see MACCABEES

Machado, Antonio (äntō'nyō mächä'dhō), 1875–1939, Spanish poet Born in Seville, he spent most of his life in Castile and wrote his best poetry under the sober and dramatic influence of its landscape His best-known books are *Soledades* [solitudes] (1903), *Soledades, Galerías y otros poemas* (1907), *Campos de Castilla* (1912), and *Nuevas canciones* (1925) His *Poesías completas*, published in 1936, includes some new poems In collaboration with his brother, the poet Manuel Machado (1874–), he wrote many plays and translated Rostand's *L'Aiglon* and Hugo's *Hernani* into Spanish Antonio Machado belongs to the so-called Generation of 1898 He died on the French frontier, while leaving Spain at the end of the Spanish civil war (1936–39), in which he played an important part on the side of the Loyalists. See E A Peers, *Antonio Machado* (1940)

Machado, Gerardo (härär'dō mächä'dhō), 1871–1939, president of Cuba (1925–33) With the support of ZAYAS, Machado defeated MENOCAL in the campaign of 1924 A businessman, he gave considerable attention to material welfare and reform, but his primary concerns were not only to free Cuba from the political bonds of the Platt Amendment, but also from economic dependence upon the United States by taxing American capital investments, by constructing a central highway 700 mi long, by building up Havana and the tourist trade, and by fostering industrial and mining expansion Increasingly dictatorial, he succeeded in amending the constitution to permit a six-year term Secret societies, notably the ABC, banded together and led an abortive revolt in 1931 Retaliating through murderous gangs of secret police, he began a terrorism so bloody that the United States intervened Machado refused to resign until, through a general strike and loss of army support, the opposition forced him to flee and chose Carlos Manuel de CÉSPEDES provisional president Machado died in Miami Beach, Fla

Machado de Assis, Joaquim Maria (zhwukēm' murĕ'u mushī'dō dŭ äsē'zh'), 1839–1908, Brazilian novelist Born in the slums of Rio de Janeiro, the son of a Negro house painter and his Portuguese wife, he was given some education by a priest and became a typesetter, a proofreader, and finally a journalist His poetry and short stories were well received, but it is upon his realistic novels that his reputation rests, he is considered by many the greatest of Brazilian writers The best known of the novels are *Iaiá Garcia* (1878), *Memórias postumas de Braz Cubas* (1881), *Quincas Borba* (1891), and *Dom Casmurro* (1900). They are distinguished by psychological insight as well as a broad view of the social conditions in Brazil and the world The seriousness of the realistic view is high-lighted with ironic humor

Machar, Josef Svatopluk (yō'zĕf svä'tōplōōk ma'khar), 1864–1942, Czech poet and essayist He was a leader of the realist movement in Czech poetry and a master of colloquial Czech His early poems, *Confession* (1887–92), are in the spirit of Heine and Neruda He was active in Czech political circles in Vienna, and many of his poems were satires of political and social conditions. His largest undertaking was the poetic cycle *The Conscience of the Ages* (1901–21), of which *Golgotha* was the initial volume In this he contrasted antiquity with Christian civilization, glorifying the former. A satirical and amusing play, *Magdalena* (1894), is available in English (1916)

Machbanai (măk'bunā, măkbā'nā, măkbānā'ī), Gadite ally of David 1 Chron 12 13.

Machbenah (măkbē'nŭ), unidentified town, S Palestine 1 Chron 2 49

Machebeuf, Joseph Projectus (shōzĕf' prōzhĕktus' mashbūf'), 1812–89, French missionary in the American Southwest, a Roman Catholic priest He was a friend and associate of Jean Baptiste LAMY, coming with him to Ohio in 1836 and accompanying him to New Mexico in 1850 He did much missionary work, establishing churches, schools, and hospitals in New Mexico, Arizona, Utah, and Colorado He was made bishop of Denver in 1887 Father Machebeuf is the "Father Vaillant" of Willa Cather's novel, *Death Comes for the Archbishop* See biography by W J Howlett (1908)

Machek, Vladimir (vlădē'mĭr mä'chĕk), 1879–, Croatian political leader He headed the Croatian Peasant party after the assassination (1928) of its founder, Stefan Radich It was largely through his efforts that Croatia obtained autonomy within Yugoslavia in 1939 Machek entered (1939) the Yugoslav government as vice premier and headed the Croatian autonomous government After the occupation (1941) of Yugoslavia by the Axis forces, Machek was under close surveillance He opposed the Tito regime, which came into power in 1944, and left Yugoslavia

Machen, Arthur (măk'ĕn), 1863–1947, British novelist and essayist His bizarre and romantic works, written in exquisite style, include *The Great God Pan* (1894), *The Three Impostors* (1895), *Hieroglyphics* (1902), a series of essays, *The Hill of Dreams* (1907), *The Bowmen* (1915), *Far Off Things* (1922) and *Things Near and Far* (1923), autobiographical, and *The Green Round* (1933)

Machen, John Gresham (grĕ'sum mă'chun), 1881–1937, American Presbyterian clergyman, b Baltimore, educated at Johns Hopkins (B A, 1901), Princeton (M A, 1904), Princeton Theological Seminary (B D, 1905), and in Germany Ordained a Presbyterian minister in 1914, he became a leader of the fundamentalists in his denomination He objected to the liberalism of the Presbyterian Board of Foreign Missions and in 1933 set up an independent board Suspended (1935) from the ministry for this action, Dr Machen, with certain ministers and lay groups, established in 1936 an independent body which later took the name Orthodox Presbyterian Church

McHenry, James, 1753–1816, American statesman, b Ireland He emigrated to Philadelphia in 1771 and after studying medicine under Benjamin Rush served as a surgeon in the Continental army in the American Revolution Captured by the British at Fort Washington on Harlem Heights, N Y, he was exchanged in the spring of 1778 He was George Washington's secretary from 1778 to 1780, when he became attached to Lafayette's staff McHenry was (1781–86) a member of the Maryland senate and a delegate to the Confederation Congress (1783–86), and he attended (1787) the Federal Constitutional Convention, where he maintained a conservative course Later he advocated adoption of the Constitution From 1797 to 1800 he served as Secretary of War and followed the political leadership of Alexander Hamilton rather than that of President John Adams Adams finally demanded and received his resignation, and thereafter McHenry lived in retirement Fort McHenry at Baltimore was named for him See biography by B C Steiner (1907)

McHenry, city (pop 1,596), NE Ill, on the Fox river and NW of Chicago, settled 1836, inc as a village 1855, as a city 1923 It is a trade center in a lake resort and farm area

McHenry, Fort, former U S military post in Baltimore, Md In the War of 1812 it was bombarded (Sept 13–14, 1814) by a British fleet under Sir Alexander Cochrane, but the fort, commanded by George Armistead, resisted the attack, and its defense inspired Francis Scott Key to compose the STAR-SPANGLED BANNER The fort was restored (1933) and became Fort McHenry National Monument and Historic Shrine (47 6 acres, est 1939).

Machi (mă'kĭ), father of a spy Num 13 15

Machias (muchī'ŭs), coast town (pop 1,954), co seat of Washington co, SE Maine, on the Machias river It is the seat of a state normal school The English under Richard Vines established a trading post near the mouth of the Machias in 1633, but the French under Claude de la Tour, claiming this area, destroyed the post a little later Permanent settlement began in 1763 Burnham Tavern (1770), a historical museum, has mementos of "the first naval battle of the Revolution," the capture of a British ship off Machiasport, June, 1775

Machiasport, town (pop 818), SE Maine, at the head of Machias Bay E of Machias, inc 1862 A fort was built here in the Revolution and was taken by the British in 1814, its earthworks are now in a state park

Machiavelli, Niccolò (nēk-kōlō' mäkyävĕl'lē), 1469–1527, Italian author and statesman, one of the outstanding figures of the Renaissance Born in Florence of a well-to-do family, he entered political office as a clerk and rose to increasing importance throughout the period of the Florentine republic (1429–1512; see FLORENCE) As defense secretary he substituted (1506) a citizens' militia for the mercenary system then prevailing in Italy. This momentous reform sprang from his conviction, set forth in his chief writings, that the employment of mercenaries had largely contributed to the political weakness of Italy. Machiavelli became acquainted with power politics through his important diplomatic missions He met Cesare Borgia twice and was sent by Florence to Louis XII of France (1504, 1510), to Pope Julius II (1506), and to Emperor Maximilian I (1507) However, he never held an official rank higher than secretary The return (1512) of the Medici to Florence caused his dismissal, in 1513 he was briefly imprisoned and put to the torture for his unproved complicity in a plot against the Medici Machiavelli retired to his country estate, where he wrote his chief works He vainly humiliated himself before the Medici, in order to be restored to office When, in 1527, the republic was briefly reestablished, Machiavelli was distrusted by the republicans, and he died thoroughly disappointed and embittered Machiavelli's best-known work, *Il principe* [the prince] (1532), has made his name a symbol of political immorality Machiavelli, whose Italian patriotism and love of liberty cannot be questioned, lived at a time when political morality was nonexistent and when power and success justified the means by which they were attained He visualized the rise of a strong Italian state (not necessarily including all Italy) as the sole means to liberate his fatherland from foreign rule The plea for liberation forms the last chapter of the work The rest describes, with detached realism and objectivity, the means by which a prince may gain and hold power His model for the ideal prince was Cesare BORGIA In modern times the Machiavellian principles of justification by power and of political "realism" have found a large following Mussolini and Hitler are said to have been influenced by his writings, but it cannot be said that tyranny was the objective Machiavelli had in mind His exact intentions in writing *The Prince* remain a mystery and a matter of controversy Less read but of equal importance is Machiavelli's work *Discorsi sulla prima deca di Tito Livio* [discourses on the first 10 books of Livy] (1531) Commenting on the work of the Roman historian, Machiavelli expounded the first general theory of politics and government that departed from Platonic and scholastic concepts Written in Machiavelli's characteristic sober and concise style, the *Discourses* are vaster in conception and morally less offensive than *The Prince* Other works include *Dell' arte della guerra* [on the art of war] (1521), which is remarkable for viewing military problems in connection with politics, *Istorie Fiorentine* [history of Florence] (1532), a historical and literary masterpiece, entirely modern in conception, and numerous reports and brief works He also wrote many poems and plays, notably the lively, if rather ribald comedy, *Mandragola* (1524) His correspondence has been preserved and is of great interest The chief works of Machiavelli are available in several popular English editions See Pasquale Villari, *Life and Times of Niccolò Machiavelli* (Eng tr, 2 vols, 1878–83), Ralph Roeder, *The Man of the Renaissance* (1933), D E Muir, *Machiavelli and His Times* (1936), Leonardo Olschki, *Machiavelli the Scientist* (1945)

machine. Commonly the term is used to indicate a complicated arrangement of moving and stationary parts (such as a washing machine, a reaping machine, or an engine), a device made up of wheels, gears, levers, and other parts mounted on a base, which acting together can perform some useful work The technical definition, however, is not based upon the degree of complexity of structure or appearance but upon the fundamental principles involved in the contrivance by means of which some specific thing is accomplished A machine is, on this basis, any device, simple or complex, by which the intensity of an applied force is increased, its direction changed, or one form of motion or energy changed into another form Therefore, such simple contrivances as the LEVER, the PULLEY, the INCLINED PLANE, the SCREW, and the WHEEL AND AXLE are machines These are classed as simple machines, the five being grouped together by engineers as the mechanical powers or the fundamentally simple machines, of which all the more complicated machines are merely combinations Of the five, the lever, the pulley, and the inclined plane are primary, the wheel and axle and the screw, secondary The screw can be considered as an inclined plane wound around a straight central core An application of the inclined plane is seen in the WEDGE In machines, a small FORCE can be applied to overcome a much larger resistance or load The ratio between this resistance and the force applied to overcome it, i e, the number of times greater the resistance is than this force, is known as the mechanical advantage Since, however, in all machines a certain amount of the force applied is used

to overcome friction, such a ratio does not hold exactly in practice, and the mechanical advantage is calculated as the ratio between the distance the force applied moves and the distance the resistance moves In the inclined plane, for example, if a force of 2 lb can be applied to move a body of 10 lb up the incline, the mechanical advantage is 10/2 or 5, if *friction* is neglected On the other hand, if the plane is 10 ft long (the effort acts along the length of the plane) and its upper end is a perpendicular distance of 2 ft above the horizontal, its mechanical advantage is again 10/2 or 5 In a simple machine of this proportion, however, it would probably be found on testing that slightly more than a force of 2 lb would be required to keep the load moving up the plane after it had started This added force would be needed to overcome FRICTION Friction is present to some degree in all machines, and, as a result, the input of a machine or the work put into a machine is always in excess of the output or the work done by the machine The efficiency of a machine is the degree in percentage to which the machine accomplishes the work that it is capable theoretically of doing if there were no friction An efficiency of 20 percent indicates that the output is 20 percent of the theoretical output The jackscrew, for example, has a great deal of friction and therefore has a low efficiency Nevertheless it is extremely valuable to man because, even with much friction (which in this case is essential since it prevents the load from forcing the screw to turn back), a very small effort can be applied to lift an enormous load The principles of the simple machines are applied in man's common tools A pair of tongs and a crowbar are applications of the principle of the lever Complex machines are complicated combinations of the simple machines, and they may all be reduced to these mechanical powers Machines are commonly designated by the operations which they perform Complex machines used for sawing, planing, and turning are known, for example, as sawing machines, planing machines and turning machines and collectively as machine tools Certain other machines used to transform some other form of energy (as heat) into mechanical energy are known as engines, such as the STEAM ENGINE or the INTERNAL-COMBUSTION ENGINE The electric MOTOR transforms electrical energy into mechanical energy Its operation is the reverse of the electric GENERATOR, or electric machine, which is used to generate electricity and occurs usually as either the magneto or the dynamo The widespread use of machines has led to the designation of the present time as the Machine Age New machines are being invented constantly to meet the demands of modern industrial production that the relatively slow and nonuniform manual labor be reduced to a minimum and speed of production and uniformity of product be raised to a maximum The effect of the increasing use of machines has led to much controversy Labor has opposed their introduction on the basis that labor-saving machines create unemployment (the so-called technological unemployment) On the other hand, it is claimed that an increase in production brings about a reduction in price, thus creating a greater demand for the commodity and an increased employment See also HYDRAULIC MACHINE

See Michael Pupin, *Romance of the Machine* (1930), Stuart Chase, *Men and Machines* (1935), *Kent's Mechanical Engineers' Handbook* (11th ed , 1936), John Anson Clark and others, *Fundamentals of Machines* (1943)

machine gun, FIREARM that discharges rifle bullets with great rapidity The firing mechanism is operated either by the power of the recoil of the gun or by the explosion of gases as the gun is fired The machine gun was exclusively developed by inventors of American birth A forerunner was built by R J GATLING during the Civil War Later types were constructed by B B HOTCHKISS, Sir Hiram Stevens MAXIM, I N LEWIS, and J M BROWNING Machine guns were first used in the Franco-Prussian War, and the First World War revealed the enormous fire power of the automatic arms, which at times allowed a single machine to beat off the attack of six soldiers using rifles During the Second World War the machine gun was greatly improved in speed, in automatic quality, in fire power, and in portability The submachine gun ("tommy gun") is a lighter type, which can be carried by one man and has some of the advantages of the automatic rifle. It was developed in the First World War and later very much improved

Machir (mā'kûr) 1 Son of Manasseh Joshua 17 1, Num 26 29 **2** One who helped David and Mephibosheth 2 Sam 9 4–6, 17 27

Machnadebai (măknŭdē'bī, -nă'dŭ–), one who had a foreign wife Ezra 10 40

Machpelah (măkpē'lŭ), cave, near Hebron. It was bought by Abraham from Ephron, son of Zohar the Hittite, for a family burial place Gen 23; 25 9,10, 49.29–32, 50 13

Machu Picchu (mä'chōō pĕk'chōō), fortress city of the ancient Incas, Peru, c.50 mi NW of Cuzco It is perched high upon a rock in a narrow saddle between two sharp mountain peaks, and overlooks the Urubamba river 2,000 ft. below The ruins show poor as well as superb architectural construction. While the period of occupancy is doubtful, legendary history indicates that the city may have been the home of the Inca prior to their migration to Cuzco as well as their last stronghold after the Spanish Conquest See Hiram Bingham, *Lost City of the Incas* (1948)

Macia, Francisco (fransĕ'skō masē'ä), 1859–1933, Catalan leader He joined the separatist movement in CATALONIA and was elected to the Cortes in 1907 In 1917 he organized the extremist group Acción Catalana, both republican and separatist He was exiled in 1924 and directed, from Paris, the unsuccessful movement to establish a Catalan republic After the fall of the monarchy he returned (1931) to Barcelona and became the first president of the Catalonian republic He made a compromise with the central government at Madrid by which Cataloma was recognized as an autonomous region.

McIlwain, Charles Howard, 1871–, American historian, b Indiana co , Pa , grad Princeton (B A , 1894, M A , 1898) and Harvard (M A , 1903, Ph D , 1911) After teaching history at Miami Univ in Ohio (1903–5) and at Princeton (1905–10), he became (1911) a professor of history and government at Harvard, serving as Eaton professor of the science of government (1926–46) He was president (1935–36) of the American Historical Association Among his books are *The American Revolution a Constitutional Interpretation* (1923), for which he won the 1924 Pulitzer Prize in history, *The Growth of Political Thought in the West, from the Greeks to the End of the Middle Ages* (1932), *Constitutionalism and the Changing World* (1939), and *Constitutionalism, Ancient and Modern* (1940, rev ed , 1947)

McIntire, Samuel (mă'kĭntīur), 1757–1811, American architect and woodcarver, b Salem, Mass He developed high skill as a joiner and housewright and in wood sculpture McIntire's opportunities, both as builder and as carver, came in designing houses for the shipowning aristocracy of Salem In the interiors of these houses are to be seen the beautiful carved cornices and mantelpieces, influenced by the Adam style, for which McIntire is especially known At first he executed most of his work himself, but later employed his son, his two brothers, and his nephew, all skilled craftsmen The Salem residences include the Pierce-Nichols, the Peabody-Silsbee, the Gardner-White-Pingree and the Elias Haskett Derby His public buildings are Assembly Hall, Hamilton Hall, Washington Hall, and the courthouse, all in Salem, of which the two latter no longer stand In 1792 McIntire competed for the design of the Capitol at Washington, D C See M M Swan, *Samuel McIntire, Carver* (1934), S F Kimball, *Mr Samuel McIntire* (1940)

Macintosh, Charles (mă'kĭntŏsh), 1766–1843, Scottish chemist and inventor In 1823 he developed a waterproof fabric from which raincoats called mackintoshes are made He prepared sugar of lead and invented a bleaching powder

McIntosh, Lachlan (lăk'lun), 1725–1806, American Revolutionary general, b Scotland He was brought as a child to a Scottish settlement, which is now Darien, Ga In 1776 he joined the Continental army The next year he fatally wounded his personal and political foe, Button GWINNETT, in a duel In 1778 he was sent to subdue the Indians of the Pennsylvania and Virginia frontier, but, proving incompetent, he was replaced (1779) by Daniel Brodhead McIntosh took part in the unsuccessful patriot attack on Savannah, and in 1780 he was captured at the fall of Charleston He was elected to Congress in 1784 and in 1785 served as commissioner to deal with the Creek and Cherokee Indians

McIntosh, Millicent Carey, 1898–, American educator, b Baltimore, grad Bryn Mawr, 1920, Ph D Johns Hopkins, 1926 From 1926 to 1930 she taught at Bryn Mawr and was acting dean in 1929–30 She was headmistress of Brearley School, New York city, from 1930 until her appointment in 1947 as dean of Barnard College, Columbia Univ Married to Dr Rustin McIntosh, she has five children

McIntosh, William, c 1775–1825, Indian chief, b in the Creek country now within the limits of Carroll co , Ga , son of a British army officer and a Creek woman Friendly to the Americans (he was a first cousin of George M TROUP), McIntosh led the lower Creek Indians against the British in the War of 1812 and was made a brigadier general He later fought with Andrew Jackson against the Seminole In Feb , 1825, he signed a treaty ceding the Creek lands E of the Chattahoochee to Georgia and was shortly thereafter slain by the upper Creek braves, who opposed the cession

Macip or **Masip, Vicente Juan** (vēthān'tā hwän' măthēp', măsēp'), c 1500–1579, Spanish religious painter of the Valencian school, known as Juan de Juanes and Vicente Joanes One of the Spanish mannerists, Macip shows the influence of Italian painters and especially of Raphael in his design His somewhat harsh and individualized characterization, however, is Spanish. Among his chief works are five scenes from the life of St. Stephen and a portrait of Luis de Castelvi (Prado) and *Baptism of Christ, Conversion of St Paul,* and a portrait of Archbishop Tomás de Villanueva (all three: cathedral, Valencia)

MacIver, Robert Morrison (mukē'vur), 1882–, Scottish sociologist, grad Edinburgh and Oxford Since 1927 he has been at Columbia Univ His books, in which he defines and clarifies theoretical concepts, include *Community a Sociological Study* (1917), *Society Its Structure and Changes* (1931), and *The Web of Government* (1947)

Mack, Connie (Cornelius McGillicuddy), 1862–, American baseball manager, b. East Brookfield, Mass He was a catcher for the Meriden and Hartford teams in Connecticut before playing for the Washington Senators (1886–89) and the Pittsburgh Pirates (1891–94) After gaining managerial experience with the Pittsburgh (1891–96) and the Milwaukee (1897–1900) clubs, Mack became (1901) manager, and ultimately chief owner, of the Philadelphia Athletics of the newly organized American League Under his guidance, the Athletics won nine pennants (1902, 1905, 1910–11, 1913–14, 1929–31) and five world series (1910–11, 1913, 1929–30) He received the 1929 Bok Award for outstanding service to the city of Philadelphia In 1937 he was named to the National Baseball Hall of Fame After 1937 he met with repeated illnesses, and increasing managerial responsibilities were given his son, Earle Mack, but at the beginning of the 1950 season, at the age of 87, Connie Mack still led the Philadelphia Athletics See his autobiography, *My 66 Years in the Big Leagues* (1950)

Mackail, John William (mukāl'), 1859–1945, Scottish literary historian His *Latin Literature* (1895) is a standard work He was the biographer of his friend William Morris (1899) Angela Thirkell is his daughter

Mackall, Leonard Leopold (mă'kŭl), 1879–1937, American bibliographer, b Baltimore, grad Johns Hopkins, 1900, and studied at Harvard and in Germany In Germany he edited several of Goethe's works From 1924 until his death he edited "Notes for Bibliophiles" for the New York *Herald Tribune* and in 1936 was elected president of the Bibliographical Society of America At his death he left to Johns Hopkins Univ his collection of rare books

McKay, Claude (mukā'), 1890–1948, American Negro poet and novelist, b Jamaica, British West Indies After his poems *Songs of Jamaica* (1911) appeared, he came to the United States and studied at Tuskegee and at the Univ of Kansas His works include *Spring in New Hampshire* (1920) and *Harlem Shadows* (1922), poems, *Home to Harlem* (1927), *Banjo* (1929), and *Banana Bottom* (1933), novels, and *A Long Way from Home* (1937), his autobiography

McKay, Donald, 1810–80, American shipbuilder, b Nova Scotia He came to New York as a ship's carpenter and later worked in other shipyards before opening his own shipyard in Newburyport, Mass , in 1841 In 1845 he moved to Boston He grew celebrated as designer and builder of the largest ships of his time and of sleek, swift clippers, some of the most beautiful ships ever to sail the seas Some of the vessels he built were the *New World*, a three-decker, the largest ship of the world in 1845, the *Staghound*, a California clipper launched in 1850, the *Flying Cloud*, which made a record voyage from Boston to San Francisco in 1851, the *Sovereign of the Seas* (1852) and the *Great Republic* (1853), for years among the world's largest ships, the *Lightning* and the *James Baines*, clippers which established new speed records for the long England-to-Australia route, and the *Glory of the Seas*, which in 1869 made a record run of 94 days from New York to San Francisco He built several ships for the Union navy in the Civil War The building of steamships and iron vessels had advanced so far in 1873 that he closed his shipyard See R C McKay, *Some Famous Sailing Ships and Their Builder* (1928)

MacKay, Hugh (mŭkī), 1640?–1692, Scottish soldier After service with several continental armies, he joined the Dutch forces in 1673, brought his regiment to England (1685) to help suppress the rising under James Scott, duke of MONMOUTH, and in 1688 accompanied William of Orange (see WILLIAM III) to England In command of English troops in Scotland, he was defeated by John Graham of Claverhouse, Viscount DUNDEE, at Killiecrankie (1689), but later put down the Jacobite rising He was killed leading English forces for William III in the battle of STEENKERKE

Mackay, John William (mă'kē), 1831–1902, American financier, b Dublin, Ireland He came to the United States in 1840, worked in a shipyard, and in 1851 went to California to mine for gold In 1859 he joined the rush to **Nevada** when the Comstock Lode was opened He and a partner, William Shoney O'Brien, later joined by J. G. Fair and J. C. Flood, acquired control of valuable silver mines, which yielded them great fortunes Mackay formed the Commercial Cable Company with James Gordon Bennett (1841–1918) in 1883, and in 1886 he formed the Postal Telegraph Cable Company. See Oscar Lewis, *The Silver Kings* (1947)

Mackay (mŭkī), town (pop. 13,500), Queensland, Australia, NW of Rockhampton It is a port and ships sugar, copper, and gold

MacKaye, Benton (mukī'), 1879–, American forester and regional planner, b Stamford, Conn., grad Harvard (B A , 1900; M A School of Forestry, 1905); son of Steele MacKaye. He was a research forester of the U S Forest Service, he planned and helped in the construction of the Appalachian Trail (1921) and served on the regional planning staff of the Tennessee Valley Authority (1934–36) and on the staff of the Rural Electrification Administration (1942–45) MacKaye's philosophy of regional planning is given in *The New Exploration* (1928)

MacKaye, Percy (mukī'), 1875–, American author, b New York city, grad Harvard, 1897, son of Steele MacKaye His dramatic work is represented by *Jeanne d'Arc* (1906), *The Canterbury Pilgrims* (1909), and *St Louis* (1914), a masque presented by 7,500 players Interested in the mountain people of the S Appalachians, he gave them sympathetic and effective interpretation in *Tall Tales of the Kentucky Mountains* (1926) and *Kentucky Mountain Fantasies* (1928) His poems and plays were collected in two volumes in 1916

MacKaye, Steele (James Morrison Steele MacKaye), 1842–94, American actor, dramatist, and inventor, b Buffalo, N Y He first studied painting at Paris, and, after Civil War service, he studied acting there with Delsarte and François Régnier, he made his debut (1873) as Hamlet in London He returned to the United States and eventually wrote over 20 plays, of which his greatest success was *Hazel Kirke* (1880), a melodrama Although other producers made fortunes from this play, MacKaye himself was always financially straitened. He introduced the Delsarte system of acting to the United States and invented devices for overhead lighting, the first moving or double stage, and folding seats See *Epoch* (2 vols , 1927), by his son, Percy MacKaye

Macke, August (ou'gōst mä'ku), 1887–1914, German landscape painter He was a fine colorist and spontaneous and vital painter He died in the First World War. His last painting, *Mobilization*, is well known

McKean, Thomas (mŭkēn'), 1734–1817, American statesman, signer of the Declaration of Independence, b New London, Chester co., Pa He settled at New Castle, Del , and became a lawyer and a political figure, one of the strong opponents of the British colonial system He was a delegate to the Stamp Act Congress (1765) He promoted concerted colonial action and was (1774–76, 1778–83) a member of the Continental Congress He was absent when the Declaration of Independence was signed but affixed his signature later He helped to frame the Delaware constitution, was president of Delaware for a short time (1777), then was chief justice of Pennsylvania (1777–99) As president of the Congress he forwarded the Articles of Confederation, which he signed He worked to obtain the ratification of the Constitution by Pennsylvania and was a member of Pennsylvania's state constitutional convention As governor of Pennsylvania (1799–1808) he is said to have favored the Jeffersonians with political gifts With James Wilson he wrote *Commentaries on the Constitution of the United States* (1790)

McKeesport, city (pop 55,355), SW Pa , on the Monongahela at the mouth of the Youghiogheny and 12 mi SE of Pittsburgh, settled 1755, laid out 1795, inc. as a borough 1842, as a city 1890 It manufactures iron and steel products, tin plate, and cement. Braddock's camp and crossing are marked with tablets The city was an important armament center during the Second World War

McKees Rocks, industrial borough (pop 17,021), SW Pa , NW of Pittsburgh, settled c 1704, inc 1892. Its manufactures include bar iron and steel, tin containers, chewing gum, automobile parts, and car and locomotive springs It is on the site of an old Indian village

Mackensen, August von (ou'gōst fŭn mä'kŭnzŭn), 1849–1945, German field marshal In the First World War he defeated the Russians in the battle of the MASURIAN LAKES, later conducted successful operations in Galicia and in Serbia, and in 1917 occupied Rumania After the war he quelled civil disorders under the Weimar Republic and, retiring from service, became a leader of the Stahlhelm, a monarchist veterans' organization He later supported Hitler.

Mackenzie, Sir Alexander, 1764?–1820, Canadian fur trader and explorer, b Scotland. His family brought him to New York in 1774, and later he was sent to Canada In Montreal he entered (c 1779) the employ of a fur-trading firm, by whom he was sent (1784) to Detroit and later to Grand Portage He became a partner of one of the firms that merged (1787) to form the North West Company Mackenzie was given supervision of the important Athabaska fur district, succeeding Peter Pond in 1788 From his headquarters at Fort Chipewyan on Lake Athabaska, Mackenzie set forth (1789) on the first of his two noted trips of exploration, after reaching Great Slave Lake, he followed the then unknown Mackenzie river to the Arctic Ocean He was disappointed, for he had hoped that the great river which now bears his name would prove an avenue to the Pacific. Unable to relinquish his hope of discovering a route to the Pacific, Mackenzie made careful preparations for a second expedition. From a post which he had built on the upper waters of the Peace river, he set out again in 1793 He and his party fought their way up the Peace and its tributary the Parsnip, crossed the Continental Divide, and discovered the Fraser river, down whose turbulent course they traveled a short distance before they abandoned their canoe and struck overland for the coast Following the course of the Blackwater, a western tributary of the Fraser, they reached and crossed the Coast Ranges to the Bella Coola, which they descended in a borrowed dugout to its mouth in a tidal inlet of the Pacific Thus Mackenzie completed the first overland journey across North America N of Mexico Shortly after this historic exploit, he left the West, never to return He withdrew (c 1798) from the North West Company and became the principal figure of the XY Company Its union (1804) with the North West Company took him back to the old company. His *Voyages to the Frozen and Pacific Oceans* (1801) won for him wide recognition and a knighthood in 1802 Mackenzie was elected in 1805 to the legislative assembly of Lower Canada, but after serving for several years he returned (1808) to Scotland, where he lived the rest of his life See George Bryce, *Mackenzie, Selkirk, Sympson* (rev ed , 1926), biographies by M S Wade (1927), A P Woollacott (1927), and H H. Wrong (1927).

Mackenzie, Alexander, 1822–92, Canadian statesman, b Scotland Emigrating (1842) to Canada, he worked first as a stonemason in Kingston, Ont., then as a builder and contractor in Sarnia In Lambton he became editor (1852) of a Liberal newspaper Elected (1861) to the Canadian legislative assembly, Mackenzie supported the confederation movement and the Liberal leader, George Brown, he later (1882) wrote a biography of Brown. A member of the first dominion House of Commons (1867), Mackenzie headed the Liberal opposition in Sir John A. Macdonald's government, upon its resignation in 1873 he became the first Liberal prime minister of the dominion In 1878 Macdonald came back into power, and Mackenzie, who remained in Parliament until his death, again led the Liberal opposition (until 1880) His premiership, although honorable and industrious, was not notable See biography by William Buckingham and G W Ross (1892).

Mackenzie, Henry, 1745–1831, Scottish novelist, an Edinburgh attorney He is best known for his first novel, *The Man of Feeling*, published anonymously in 1771 This sentimental and humanitarian work was followed by *The Man of the World* (1773) and *Julia de Roubigné* (1777) *The Prince of Tunis* (1773) was his only successful play See H. W. Thompson, *A Scottish Man of Feeling* (1931).

McKenzie, Kenneth, 1801–61, American fur trader, b Scotland He was president of the Columbia Fur Company at the time of its union with the American Fur Company in 1827. He was then put in charge of American Fur Company interests on the upper Missouri By 1831 he had established posts at the mouth of the Yellowstone, the Bighorn, and the Marias rivers. Fort UNION, on the Yellowstone, was the most famous of these and was the best-built and best-equipped fort W of the Mississippi His usefulness in the fur trade was destroyed, however, when it was learned that, contrary to law, he had established a distillery at Fort Union See H. M Chittenden, *American Fur Trade of the Far West* (3 vols , 1902)

Mackenzie, Sir Morell, 1837–92, English physician and laryngologist A skillful surgeon, he was called to Germany to treat the crown prince, afterward Frederick III, emperor of Germany, who died of cancer of the larynx He was prompted by political and professional criticism to write *The Fatal Illness of Frederick the Noble* (1888). See biography by R. S Stevenson (1946)

McKenzie, Robert Tait, 1867–1938, Canadian-American sculptor and physical director, b Almonte, Ont , M D McGill Univ , 1892 He practiced medicine in Montreal and lectured at McGill until 1904, when he went to Philadelphia as professor and director of physical education at the Univ of Pennsylvania While working out the figure of an athlete scientifically, from averaged measurements, he discovered his ability as a sculptor Thereafter he produced some admirable figures in action, such as *The Sprinter* (Cambridge, England), *The Athlete* (Oxford), *The Competitor* and *The Supple Juggler* (Metropolitan Mus); *Benjamin Franklin as a Youth* and the Rev George Whitefield (Univ of Pennsylvania), and war memorials at Ottawa, Edinburgh (the Scottish-American Memorial), and Cambridge, England

Mackenzie, Sir William, 1849–1923, Canadian railroad builder and financier, b Ontario In the early 1870s he became a railroad contractor He constructed portions of the Canadian National and the Canadian Pacific railroads Entering (c 1888) into partnership with Sir Donald Mann, another Canadian Pacific contractor, he began the organization and construction of the far-flung network later to be known as the Canadian Northern Railway, of which Mackenzie became president. During the First World War the Canadian government decided (1917) to take over this railroad; it is now a part of the Canadian National Railways system. Mackenzie was knighted in 1911.

Mackenzie, William Lyon, 1795–1861, Canadian journalist and insurgent leader, b Scotland Emigrating to Upper Canada in 1820, he published (1824–34), first at Queenston, then at York (later Toronto), his noted *Colonial Advocate*. In it he vigorously attacked the governing clique called the Family Compact, and in 1826 his printing office was partly demolished Elected (1828) to the legislative assembly, Mackenzie was five times expelled for "libel" and five times reelected by his constituency. As a leader of the Reform party of Upper Canada he went to London in 1832 to obtain redress of grievances In 1834 he became the first mayor of Toronto In 1836 he founded the *Constitution* as a Reform party organ Enraged by the policies of Sir Francis Bond HEAD and by the defeat of the Reform party, Mackenzie and a group of insurgents attempted (1837) to seize Toronto, the capital, but the rebellion was quickly put down Mackenzie and others escaped to the United States. He set up a provisional government with fortified headquarters on Navy island in the Niagara river, but he was later imprisoned for 18 months by U S authorities for violating neutrality laws (see also CAROLINE AFFAIR) After his release he employed himself in newspaper work and writing until the proclamation of general amnesty allowed his return (1849) to Canada There he was again a member (1851–58) of the legislative assembly He was the grandfather of William Lyon Mackenzie King See biography by Charles Lindsey (rev. ed , 1908), Stephen Leacock, *Mackenzie, Baldwin, LaFontaine, Hincks* (1926 ed), E C Guillet, *The Lives and Times of the Patriots* (1938)

Mackenzie, provisional district, area 527,490 sq mi , one of the three provisional districts of the NORTHWEST TERRITORIES, est 1920 It lies between Yukon territory (on the west) and the district of Keewatin (on the east) and includes the lower two thirds of the Mackenzie valley, Great Bear Lake, Great Slave Lake, and many smaller lakes

McKenzie, city (pop 2,019), W Tenn , NNE of Jackson, inc as a city 1923 It is a processing and shipping center in a farm and timber area. Bethel College is here

Mackenzie, river of NW Canada, 2,514 mi long, second longest river in North America, flowing N and NNW to the Arctic Ocean Its basin lies between the Rocky Mts (on the west) and the LAURENTIAN PLATEAU (on the east) Much of the valley is heavily forested The soil is deep and well adapted to the growing of crops wherever the climate permits The Mackenzie proper is that part of the river (1,120 mi) from Great Slave Lake to the Arctic Above that, between Lake Athabaska and Great Slave Lake (312 mi), it goes under the name GREAT SLAVE or Slave river Flowing into Lake Athabaska are the chief headwater streams, the PEACE river and the ATHABASKA river There are a number of lakes which act as reservoirs, keeping the river from flooding more than it does, notably Lake Athabaska and Great Slave Lake, through which it passes, and Great Bear Lake, which discharges into the Mackenzie through Great Bear river At the mouth is a delta, nearly 80 mi by 100 mi in extent Though Peter Pond was possibly the first white man to enter (1777) the Mackenzie drainage area, Sir Alexander Mackenzie was the discoverer of that part of the river which bears his name He descended it to tidewater on the Arctic Ocean in 1789 Trading posts were established along the Mackenzie proper in the first decade of the 19th cent. The region was long the exclusive domain of the fur traders, in the 20th cent oil fields and mineral resources were found Below Great Slave Lake in the Mackenzie drainage area the chief trading posts are Fort Providence, Fort Simpson (opposite the mouth of the Liard river), Fort Wrigley, Fort Norman, Fort Good Hope, Fort McPherson, and Aklavik The Mackenzie is navigable from the Arctic to Great Slave Lake. Between Great Slave Lake and Lake Athabaska there are rapids (14 mi) which must be portaged Above these rapids there are over 700 mi of navigable waters. There is now regular air-mail service up and down the valley See F. L Waldo, *Down the Mackenzie through the Great Lone Land* (1923), R A Davis, *The Great Mackenzie* (1947), Leslie Roberts, *The Mackenzie* (1949).

Mackenzie King, William Lyon see KING, WILLIAM LYON MACKENZIE

Mackenzie Mountains, inaccessible and little explored range, lying partly in W Mackenzie dist. and partly in E Yukon territory, W of the Mackenzie river basin. In 1939 the Arnold Arboretum sponsored a scientific expedition to study the flora of the region.

mackerel, spiny-finned fish related to the tuna and bluefish Mackerel are characterised by their spindle-shaped bodies, their deeply forked tails, and a series of small, spiny finlets on the dorsal and ventral sides between the dorsal and ventral fins and the tail. The common mackerel (*Scomber*

scombrus), which travels in schools on both sides of the N Atlantic and in the Mediterranean, averages about a foot in length After spawning in deep water it swims to coastal waters in the spring and returns in late autumn to deeper waters. It is a popular food fish and there are large fisheries in Europe and America It is sold fresh, salted, and canned. The Spanish mackerel and the frigate mackerel are related forms

McKim, Charles Follen, 1847–1909, American architect, b Chester co , Pa , studied (1867–70) at the École des Beaux-Arts He was one of the founders of the firm of McKim, Mead, and Bigelow, which in 1879 became McKim, Mead, and White A vast number of important commissions came into their offices, in which McKim's spirit and taste were the controlling forces Following a policy of adhering to classic architecture and its Renaissance derivatives, they erected a long series of buildings with a restrained classical sobriety which turned the tide away from the vagaries of the prevailing romanticism Early examples of the style were the old Madison Square Garden (1891), New York, and the Boston Public Library (1888–95) McKim was an influential factor in the development of the Chicago World's Columbian Exposition, for which he built the Agricultural Palace He designed a fine series of clubhouses in New York, of which the University Club is one, a number of buildings for Columbia Univ , including the library (the present Low Memorial Library), the Pennsylvania RR station (1904–10), the J P Morgan private library, and many fine commercial and residential works His restorations include the work upon Thomas Jefferson's buildings at the Univ of Virginia and upon the White House at Washington McKim was associated with D H Burnham, Augustus Saint-Gaudens, and F L Olmsted, Jr , on the Senate Park Commission, which drew up plans for the development of Washington and the District of Columbia He was president of the American Institute of Architects and was largely responsible for the purchase of the historic Octagon Building in Washington to serve as the organization's headquarters He was first president of the American Academy in Rome, to the founding of which he had devoted years of zealous effort See biographies by A H Granger (1913) and Charles Moore (1929)

Mackinac (mă'kĭnô″), strait between the peninsula of Upper Michigan and Lower Michigan, separating Lake Huron and Lake Michigan In the Straits of Mackinac is Mackinac Island, and on the island is Mackinac Island city The name is a shortening of Michilimackinac, and in the course of history Mackinac has had varying and confusing applications The region was of great importance because it was a natural gathering place for nomadic Indians, the tribes fleeing before the conquering Iroquois stopped there and the place was a natural point of exchange and intertribal intercourse It became the center for the gathering of fur traders and a distributing point in New France, since it was a natural stopping place in the St Lawrence–Great Lakes communication The name has been applied to the island, to the whole fur-trading region supplied from there (greater than the drainage basin of the United States), to the northern mainland shore (St Ignace, sometimes called Ancient Michilimackinac), and to the southern mainland shore, where is Mackinaw City today and where the old fort stood (frequently called Old Mackinac or Old Mackinaw) In general, however, the name is in historical writing inclusive, meaning the island, St Ignace, and Old Mackinac, which were closely related and constituted one shifting settlement Jean Nicolet, sent out by Champlain in 1634–35, seems to have been the first white man to reach Mackinac Radisson and Groseilliers may have passed through the strait, and Father Alloues was the first of the heroic Jesuit missionaries known to have come to Mackinac Father Claude Dablon was on Mackinac island in 1670–71 Father Marquette came soon afterward, it was at his mission at St Ignace that Marquette first thought of seeking the great river, the Mississippi His companion, Jollet, was an important early trader With Duluth and Perrot, La Salle and Tonti, Mackinac became the great center of trade, and it remained the great military post of the Old Northwest for many years It lost some in importance when CADILLAC established Detroit (1701) The Jesuits had to abandon their old mission, and with the British conquest of Canada the post passed out of French control, the occupation by the British taking place in 1761 Two years later occurred one of the most stirring episodes of Northwest history when the Indians, aroused by the insurrection of Pontiac, massacred the garrison at Old Mackinac. The English regained the post, and in 1765 occurred the mysterious incidents of the command of Robert ROGERS at Mackinac (1765–68), he is suspected of conspiracy with the Spanish. The British post was threatened by the exploits of George Rogers CLARK in the American Revolution. In 1780–81 the fort and town were moved from Old Mackinac to the island. The Treaty of Paris in 1783 gave Mackinac to the United States, but it actually continued British until after Jay's Treaty It continued to be important because of the fur trade. In the War of 1812 one of the first actions of the war was the capture of Mackinac by the British (July 27, 1812) The Americans made an unsuccessful attempt to recapture it in Aug , 1814 The Treaty of Ghent gave it permanently into American ownership Mackinac was long the chief center of operations for John Jacob Astor's AMERICAN FUR COMPANY. Astor's withdrawal from the company in 1834 and the general decline of the fur trade marked the fortunes of the island After the '40s, the region, from being an important crossways, became more and more an out-of-the-way and forgotten shipping point Mackinac was associated with many great names It was rumored that the prince de Joinville when visiting there talked with and recognized Eleazer WILLIAMS, the putative Lost Dauphin Writers visited the place and wrote of it, among them Harriet Martineau, Margaret Fuller, William Cullen Bryant, and Constance Fenimore Woolson The island became a summer resort and was in 1875 made into a national park In 1894, however, the garrison was removed and the post abandoned, in 1895 the island became a state park. See Edwin O Wood, *Historic Mackinac* (1918)

Mackinaw City, resort village (pop 922), N Mich , on the south shore of the Straits of Mackinac, inc 1882 The region was well traveled during the 17th and 18th cent by traders, missionaries, and explorers French troops, sent to garrison Fort Michilimackinac here in 1715, remained for several years A rebuilt stockade of the fort and a zoo are in Fort Michilimackinac State Park Mackinaw City is the gateway to the Upper Peninsula

McKinley, William, 1843–1901, 24th President of the United States (1897–1901), b Niles, Ohio, educated at Poland (Ohio) Seminary and Allegheny College After service in the Union army in the Civil War, he returned to Ohio and became a lawyer at Canton He entered politics and was elected as a Republican to Congress in 1876 As a Congressman until 1891 (except for one term), he showed some sympathy for the "cheap money" policies of the Ohio radicals, though he opposed the continuance of the GREENBACK, he favored bimetallism, voted for the Bland-Allison Act, and advocated the original free-silver bill of 1890 At the same time he pleased the capitalist and industrial interests of Ohio by ardently championing protective tariffs The highly protective McKinley Tariff Act was unpopular and helped to bring about the Republican defeat and Grover Cleveland's victory in 1892 It had already cost McKinley his seat in Congress in the election of 1890, but he had attracted the attention of the powerful capitalist-politician Marcus A HANNA who from that time put the force of the efficiently organized Ohio Republican machine behind the ex-Congressman McKinley was elected governor in 1891 and again in 1893 Hanna in 1895 began a skillful and successful preconvention campaign to have McKinley nominated by the Republicans for President in 1896 The chief item on his conservative platform was endorsement of the gold standard Since the Democrats swung to the radical pole by nominating William Jennings Bryan with a platform favoring free silver, the issue was squarely joined Many conservative Democrats viewed their party's stand as reckless, and Hanna's handling of the campaign was a masterpiece of adroitness Conservatism and McKinley won The Republicans also had control of Congress, and in 1897 a thoroughgoing Republican tariff was adopted Interest then swung to external affairs There was much sympathy in the United States for the rebels in Cuba, who were seeking independence from Spain Relations between the United States and Spain grew worse, and the destruction of the battleship MAINE gave the advocates of war a rallying cry Though Spain had indicated willingness to make concessions, McKinley made the decision to ask Congress for a declaration of war—a decision that has been much debated since The SPANISH-AMERICAN WAR was brief, and from it the United States emerged a world power Expansionism, which was much decried as imperialism by its opponents, was paramount McKinley directed the peace commissioners to demand the Philippine Islands for the United States A more or less tight control was imposed on Cuba The President also signed the bill to annex Hawaii and supported the Open Door policy in China He and Secretary of State John Hay thus vigorously advanced the interests of the United States and American commerce The Currency Act of 1900 also consolidated the gold-standard policy on which McKinley had been elected in 1896 He was reelected in 1900, but his new administration was short On Sept 5, 1901, he addressed the Pan-American Exposition at Buffalo, N Y , advocating commercial reciprocity among nations The next day he was shot down by an anarchist, Leon Czolgosz, and on Sept. 14 he died Theodore ROOSEVELT succeeded him. See biography by C S Olcott (1916).

McKinley, Mount: see MOUNT MCKINLEY NATIONAL PARK.

McKinney, city (pop 8,555), co seat of Collin co , N Texas, NNE of Dallas, founded 1842 On the fertile blackland prairie, McKinney was one of the queen cotton cities before the Civil War Now it handles cotton, corn and other grains, pecans, onions, and truck and has small industries, including a textile mill

Mackintosh, Sir James (mă'kĭntŏsh), 1765–1832, English scholar Born in Scotland and educated as a physician there, he settled in London in 1788 His defense of the French Revolution, *Vindiciae Gallicae* (1791), was a spirited reply to Edmund BURKE, but after 1796 Mackintosh grew hostile to French radicalism He was admitted to the bar, practiced in England, and served as recorder of Bombay (1804–6) and judge in Bombay vice-admiralty court (1806–12) As a member of Parliament after 1812 he supported penal and parliamentary reform His writings include several histories See R J Mackintosh, *Memoirs of Sir James Mackintosh* (1835)

Macklin, Charles, 1697?–1797, stage name of Charles McLaughlin, English actor and playwright, b Ireland At first a strolling player, he later appeared in London (1734–53), mainly at the Drury Lane Theatre His greatest role was Shylock, and his interpretation of this and other characters restored respect for the original Shaksperian texts His acting was natural, but in private life his eccentric manners and morbid temper were well known. He wrote *Love à la Mode* (1759) and *The Man of the World* (1781), comedies which were actors' plays His rivals were James Quin and, later, Garrick. See E A Perry, *Charles Macklin* (1891).

Mack von Leiberich, Karl, Freiherr (kärl' frī'hĕr mäk' fŭn lī'burkh), 1752–1828, Austrian general In 1798 he led the Neapolitan army against the French Severely defeated in 1805, he surrendered his army to Napoleon I at Ulm

McLane, Louis, 1786–1857, American statesman, b. Smyrna, Del He studied law and was admitted (1807) to the bar He served in the U S House of Representatives (1817–27) and in the Senate (1827–29), resigning to become minister to England In England (1829–31) he succeeded in negotiating the opening of the British West Indies trade to the United States He was Secretary of Treasury (1831–33) in Andrew Jackson's cabinet, but when he refused Jackson's demand to transfer deposits from the Bank of the United States to state banks, he was transferred to be Secretary of State (1833–34) He was (1837–47) president of the Baltimore and Ohio RR and was again (1845–46) minister to England, while negotiations for the Oregon boundary were in progress

McLaughlin, Andrew Cunningham, 1861–1947, American educator and historian, b Beardstown, Ill , grad Univ of Michigan (B A , 1882, LL B , 1885) He taught history at the Univ of Michigan (1887–1906), becoming a full professor in 1891, and was professor of history at the Univ of Chicago (1906–29), serving as head of the department from 1906 to 1927 After 1929 he was professor emeritus From 1898 to 1914 he was an associate editor of the *American Historical Review*, acting as managing editor (1901–5) His reputation as an authority on constitutional history was acquired through such books as *The Confederation and the Constitution, 1783–1789* (1905), *The Courts, the Constitution, and Parties* (1912), *The Foundations of American Constitutionalism* (1932), and *A Constitutional History of the United States* (1935), which won the 1936 Pulitzer Prize in history He also wrote a biography of Lewis Cass (1891), *A History of the American Nation* (1899, rev ed , 1913), *America and Britain* (1918), and *Steps in the Development of American Democracy* (1920) He was joint editor with Albert Bushnell Hart of the *Cyclopedia of American Government* (3 vols , 1914)

Maclaurin, Colin, 1698–1746, Scottish mathematician and natural philosopher, considered in his time second only to Newton He was professor at Aberdeen and from 1725 at the Univ of Edinburgh He was an authority on fluxional calculus His writings include *Geometria organica* (1720), *A Treatise on Fluxions* (1742), *A Treatise of Algebra* (1748), and *An Account of Sir Isaac Newton's Philosophy* (1748)

Maclay, William (muklā'), 1734–1804, U S Senator (1789–91), b Chester co , Pa He was a lawyer and a provincial and state official before serving (1789–91) as U S Senator His journal, published in 1880 (new ed by Charles A Beard, 1927), is the prime account of the congressional debates of that period It reveals also Maclay's opposition to Alexander Hamilton's policies and his defense of the interests of the small farmer

McLean, John (muklān'), 1785–1861, American jurist, b Morris co , N J His family moved to Ohio, where he studied law, was admitted (1807) to the bar, and practiced in Lebanon He served in the House of Representatives (1813–16), was an associate justice of the Ohio supreme court (1816–22), and commissioner of the U S General Land Office (1822–23) President Monroe appointed him Postmaster General in 1823, and he was reappointed by John Quincy Adams McLean resigned in 1829 because of disagreement with Andrew Jackson

on the question of patronage Jackson, however, appointed him to the U S Supreme Court, where he served as an Associate Justice from 1829 until his death, he is perhaps best remembered for his dissenting opinion in the DRED SCOTT CASE

MacLeary, Bonnie (muklā'rē), 1892–, American sculptor, b San Antonio, Texas, studied at the Art Students League and at Julien's academy, Paris Her monumental works are World War Victory Memorial, San Juan, P R , monument to Don Luiz Muñoz Rivera, Univ of Puerto Rico, Río Piedras, and Ben Milam monument, San Antonio, Texas Of smaller sculpture, *Ouch!* is in the Children's Museum, Brooklyn, N Y , and *Aspiration* is in the Metropolitan Museum

MacLeish, Archibald (mŭklēsh'), 1892–, American poet and public official, b Glencoe, Ill , grad Yale, 1915 His poetry was at first subjective and personal, as in *Poems, 1924–1933* (1933) Since the publication of *Conquistador* (1932), a narrative poem of the conquest of Mexico which won a Pulitzer Prize, MacLeish has steadily come to regard the artist as a responsible citizen whose art should be used to propagate democratic ideals His radio verse drama, *The Fall of the City* (1937), and a selection of his prose writings, *A Time to Speak* (1941) illustrate his stand In 1939 his appointment as librarian of the Library of Congress met bitter disapproval since he was not trained in librarianship, but he held the post until Dec , 1944, he then resigned and was Assistant Secretary of State until Aug , 1945 He was also director (1941–42) of the Office of Facts and Figures and assistant director (1942–43) of the Office of War Information

Maclennan, Hugh (hū' mŭklĕ'nun), 1907–, Canadian novelist, b Cape Breton Island, N S , grad Dalhousie Univ , 1929 After completing his Rhodes scholarship at Oxford in 1935, he took a Ph D in Roman history at Princeton (1940) He has written three novels, *Barometer Rising* (1941), *Two Solitudes* (1945), a study of the conflicts between English and French Canadians, and *The Precipice* (1948) Their success enabled him to give up teaching and devote his full time to writing

McLennan, Sir John Cunningham, 1867–1935, Canadian physicist, b Ingersoll, Ont , grad Univ of Toronto (B A , 1892, Ph D , 1900) He taught at the Univ of Toronto from 1892 to 1932, was professor of physics from 1907, and was dean of the school of graduate studies and research from 1930 He is known for his studies in the fields of radioactivity, low-temperature research, spectroscopy, and the treatment of cancer by radium. In 1935 he was knighted

Macleod, Fiona see SHARP, WILLIAM

Macleod, Henry Dunning (mukloud'), 1821–1902, Scottish economist, organizer of the first poor-law union in Scotland From 1868 to 1870 Macleod compiled a résumé for the government of bills of exchange laws He was the first Briton to explain credit, but his theories on the connection between credit and capital have been greatly criticized Among his works are *The Theory and Practice of Banking* (1856), *History of Economics* (1896), and one volume of a projected *Dictionary of Political Economy* (1858)

McLeod, John (mukloud'), 1788–1849, Canadian fur trader and explorer, b Stornoway, Scotland He came to the New World in 1811 as an agent of the Hudson's Bay Company He headed the first detachment of the earl of Selkirk's settlers into the Red River Settlement, which was to be the object of much bloody strife between the Hudson's Bay and the North West companies McLeod was prominent in that tense struggle, which continued until the union of the two companies in 1821 He helped to extend Hudson's Bay trade into the trans-Rockies West In 1821 he was head of Fort William After the union he had charge of the department of New Caledonia, and from 1826 to 1840 he was at Norway House, the transshipping post in the Northwest In 1830 he visited Scotland, and after his return in 1831 he was in charge of districts in E Canada Part of his valuable diary was published in George Bryce, *The Remarkable History of the Hudson's Bay Company* (1900)

Macleod, John James Rickard (mukloud'), 1876–1935, Scottish physiologist, educated at Aberdeen and Leipzig He was a professor at Western Reserve Univ (1903–18) and at the Univ of Toronto (1918–28) and later taught at the Univ of Aberdeen For the discovery of insulin and the studies of its use in treating diabetes he shared with F G Banting the 1923 Nobel Prize in Physiology and Medicine His works include *Diabetes* (1913), *Physiology and Biochemistry in Modern Medicine* (with others, 1918, 9th ed , *Macleod's Physiology in Modern Medicine*, 1941), and *Carbohydrate Metabolism and Insulin* (1926)

Macleod, Norman, 1812–72, Scottish clergyman He was one of the foremost preachers of his time, noted also for his work among the poor of Glasgow. He was editor of, and contributor to, *Good Words* (1860–72) and wrote *Eastward* (1866) and *Reminiscences of a Highland Parish* (1867) See the memoir (1876) by his brother, Donald Macleod

Macleod, town (pop 1,649), SW Alta , S of Calgary and W of Lethbridge, in an area of ranching and coal mining

Maclise, Daniel (mŭklēs'), 1806–70, British painter and illustrator, b Ireland He first attracted attention with a portrait of Sir Walter Scott, sketched without the novelist's knowledge He won (1829) the gold medal at the Royal Academy of Arts schools with *The Choice of Hercules* His character sketches contributed (1830–38) to *Fraser's Magazine* under the pseudonym Alfred Croquis were later published as *The Maclise Portrait Gallery* (1871) He was an excellent portraitist, but after the success of his *Snap-Apple Night* and *Mokanna Unveiling His Features to Zelica*, he devoted himself chiefly to historical painting In this genre are the water-glass paintings *Meeting of Wellington and Blucher* and *The Death of Nelson*, in Westminster Palace, London, where are also his *Spirit of Justice* and *Spirit of Chivalry* Other works are *Merry Christmas in the Baron's Hall* (Dublin National Gall), *Waterfall at St Weighton's Keeve, Cornwall* (Victoria and Albert Mus), and a portrait of Dickens (National Gall , London) He became a member of the Royal Academy in 1840 He illustrated Dickens's Christmas books, Moore's *Irish Melodies*, and Bürger's *Lenore* and made drawings for *The Story of the Norman Conquest* See memoir by W J O'Driscoll (1871)

McLoughlin, John (mŭklŏk'lĭn), 1784–1857, fur trader in Oregon, b Rivière du Loup, near Quebec Trained in medicine, he was first a post physician, then a trader, of the North West Company He went to London for the negotiations leading to the merger (1821) of the North West Company and the Hudson's Bay Company From 1824 to 1846 he was Hudson's Bay Company man in the Columbia river country when it was hotly disputed by British and Americans Fiery and generous, Dr McLoughlin used his power to control the Indians and expand trade He foresaw the rich farms of the Willamette valley, helped French Canadians to settle there, and—particularly on a London trip in 1838–39—urged a land-colonization scheme on the Hudson's Bay Company He himself had Oregon City platted At Fort Vancouver (now Vancouver, Wash), his headquarters after 1826, aid and shelter were given to American adventurers (Jedediah S Smith, Nathaniel J Wyeth, Hall J Kelley), missionaries (Jason Lee, Marcus Whitman), and settlers Some Americans feared his influence and were ungrateful for his aid His years after he retired (1846) to live in Oregon City were unhappy In 1849 he became a U S citizen See his letters to the Hudson's Bay Company governor and committee (3 vols , 1941–45), biographies by F V Holman (1907) and R S Johnson (1935), Eva Emery Dye, *McLoughlin and Old Oregon* (1900), R C Montgomery, *The White-headed Eagle* (1935)

Maclure, William, 1763–1840, American geologist, b Scotland The early part of his career was spent in London, where he made a fortune in business He made visits to America in 1782 and 1796 and on his third visit undertook an extensive survey, traveling on foot over large areas of the United States His *Observations on the Geology of the United States* (1809, 2d ed , 1817) and the geological map which accompanied it marked an epoch in American geological history In 1819 Maclure went to Spain, where he later founded an agricultural school, which did not long survive He returned to America (1824), he again attempted an agricultural school in connection with the socialistic community at New Harmony, Ind After the end of the experiment, he went to live in Mexico Maclure was president of the Philadelphia Academy of Natural Sciences from 1817 His works include also *Essay on the Formation of Rocks* (1818) and *Observations on the Geology of the West Indra Islands* (1832)

MacMahon, Marie Edmé Patrice de (marē' ĕdmā' patrēs' du makmaō'), 1808–1893, president of the French republic (1873–79), marshal of France He was of Irish descent MacMahon fought in the Algerian campaign, in the Crimean War, and in the Italian war of 1859 For winning a victory at Magenta (1859), Napoleon III created him duke of Magenta He was governor general of Algeria (1864–70) and a commander in the FRANCO-PRUSSIAN WAR, taking part in the great defeat at Sedan (1870) He aided (1871) in the bloody suppression of the COMMUNE OF PARIS, this episode strengthened his monarchist tendencies In 1873 the monarchist majority in the National assembly defeated THIERS and chose MacMahon president of France for a seven-year term MacMahon inaugurated a series of measures designed to repress the republicans and prepare the way for monarchy That the Third Republic was preserved despite his efforts was largely due to dissension among the monarchists, and France received its new constitution in the organic laws of 1875 In May, 1877, after arbitrarily replacing a republican by a royalist cabinet, MacMahon ordered new parliamentary elections; despite a clear republican victory at the polls, he again appointed a royalist ministry in October. This involved him in increasing conflict with the chamber of deputies and with GAMBETTA MacMahon had to give in and eventually was forced to resign Jules Ferry succeeded him

Macmanus, Terence Bellew (mŭkmă'nŭs), 1823?–1860, Irish rebel He first entered politics when Daniel O'Connell was imprisoned in 1844 and joined the "physical force" movement of 1848 After the failure of the Young Ireland revolt of 1848, he went into hiding with William Smith O'Brien in Tipperary. The patriots were caught and sentenced to death, but their sentences were commuted and they were transported to Van Dieman's Land (Tasmania) in 1849 In 1852 Macmanus, in company with Thomas Francis Meagher, escaped and reached San Francisco, where he died in poverty See Denis Gwynn, *Young Ireland* (1949)

McMaster, John Bach, 1852–1932, American historian, b Brooklyn, N Y , grad College of the City of New York, 1872 Having practiced engineering in New York city and written *Bridge and Tunnel Centres* (1875) and *High Masonry Dams* (1876), McMaster was appointed (1877) an instructor in civil engineering at the College of New Jersey (now Princeton Univ) On a trip (1878) to Wyoming to collect fossils and study geology, he was struck with the drama of the frontier and renewed his determination to write a history of the United States After the successful appearance of his first volume in 1883, he was offered a newly created professorship of American history at the Univ of Pennsylvania, where he remained until he retired in 1920 as professor emeritus His *History of the People of the United States* (8 vols , 1883–1913), covering the period from the American Revolution to the Civil War, is marked by an emphasis on social and economic affairs, by the use of newspapers and other contemporary sources previously neglected by historians, and by a simple and straightforward narrative He wrote a ninth volume, *A History of the People of the United States during Lincoln's Administration* (1927), a number of widely used school textbooks, *Benjamin Franklin as a Man of Letters* (1887), *Daniel Webster* (1902), *The Life and Times of Stephen Girard* (2 vols , 1918), and *The United States in the World War* (2 vols , 1918–20) See biography by E E Goldman (1943)

MacNab, Sir Allan Napier, 1798–1862, Canadian Tory leader, b Newark (now Niagara-on-the Lake), Ont As a youth he fought in some of the campaigns of the War of 1812 A staunch supporter of English policies, he commanded the men of Gore against the rebels in the uprising of 1837 and later took charge of the forces opposing the insurgents under William Lyon Mackenzie on the Niagara frontier In the legislative assembly of Canada he served from 1841 to 1857, he became prime minister in 1854, but he was forced to resign in 1856 In the last two years of his life MacNab was a member of the legislative council He was knighted in 1838 and made a baronet in 1858

MacNally, Leonard, 1752–1820, Irish political spy and informer He became known as a patriot before his admission to the English bar in 1783 and was one of the first members of the United Irishmen He defended many republicans in court, but his patriotic clients were invariably hanged After his death MacNally was proved to have been in the pay of the British government It was he who betrayed the United Irishmen and Lord Edward Fitzgerald (1797) and Robert Emmet (1803) MacNally wrote many dramatic pieces and the song *The Lass of Richmond Hill*

McNarney, Joseph Taggart, 1893–, American general, b Emporium, Pa, grad West Point, 1915 In the First World War he served with the U S Army Air Corps, and after he returned to the United States he held various army administrative posts In the Second World War, promoted (1942) brigadier general, he became deputy chief of staff (1942–44) under Gen George C Marshall and later (1945) served as acting supreme Allied commander in the Mediterranean theater of operations McNarney succeeded (Nov, 1945) Gen Dwight D Eisenhower as commanding general of the U S forces in Europe and of the U S army of occupation in Germany—where he altered the policy toward the German people to include amnesty for minor National Socialists Succeeded (March, 1947) by Gen Lucius D CLAY, McNarney became a representative on the United Nations military staff committee and then (April, 1949) was chosen to aid Louis JOHNSON in the unification of the U S armed forces

McNary, Charles Linza (muknâ'rē), 1874–1944, U S Senator from Oregon (1917–44), b near Salem, Oregon He was admitted to the Oregon bar (1898) and became prominent in the Republican party In the Senate he sponsored farm-aid measures and, as minority leader after 1932, supported much New Deal legislation, though he opposed Cordell Hull's reciprocal trade agreements and President F D Roosevelt's proposals for Supreme Court reform He ran for Vice President on the unsuccessful Republican ticket along with Wendell Willkie in the campaign of 1940

McNaughton, Andrew George Latta (mûknô'tun), 1887–, Canadian engineer and army officer, b Saskatchewan, grad McGill Univ (B S, 1910, M S, 1912) In the First World War he served in France and Belgium as a Canadian artillery officer As a major general (1929), he was chief (1929–35) of the general staff of Canada In 1935 he became president of the Canadian National Research Council In the Second World War he commanded the Canadian forces in Great Britain and staunchly supported the policy of keeping the Canadian army a complete and separate force McNaughton became a general in 1944, returned to Canada that year, and was appointed minister of national defense on the resignation of J L RALSTON over the compulsory service issue In Feb, 1945, he was defeated in a by-election and resigned He served (1946–48) as president of the Canadian Atomic Energy Control Board and in 1948 was made the dominion's permanent representative on the Security Council of the United Nations

MacNeice, Louis (muknēs'), 1907–, British poet, b Belfast, Ireland He was educated in England and became a teacher of the classics Together with W H Auden, Stephen Spender, and Cecil Day Lewis, he participated in the "Oxford revolt" against formal language, his poetry shows also the influence of T S Eliot and James Joyce He is a classical scholar, and his translations include the *Agamemnon* of Aeschylus (1936) MacNeice wrote *Out of the Picture* (1937), an experimental play, *Letters from Iceland* (with W H Auden, 1937), poems, *Poems, 1925–1940* (1940), *Springboard Poems, 1941–1944* (1945), and *Holes in the Sky Poems, 1944–47* (1948) See his *Modern Poetry a Personal Essay* (1938)

MacNeil, Hermon Atkins, 1866 1947, American sculptor, b Chelsea, Mass, studied in Paris and in Rome under J Q A Ward His first work of importance was for the World's Columbian Exposition, Chicago, 1893, but he is perhaps best known for his Indians and Western pioneers Among his monuments are the *Coming of the White Man* (Portland, Oregon), McKinley Memorial (Columbus, Ohio), Soldiers and Sailors Monument (Albany, N Y), Marquette Memorial (Chicago), *Pony Express* (St Joseph, Mo), and a relief of Washington for the Washington Arch (New York city) Among smaller sculptures are *Primitive Chant* and *The Sun Vow* (both Metropolitan Mus) and *Moqui Prayer for Rain* (Art Inst, Chicago) MacNeil designed the 25-cent piece (Liberty quarter) which was accepted in 1916 His first wife, Carol Brooks MacNeil (1871–1944), was also a sculptor

MacNeill, John Gordon Swift, 1849–1926, Irish politician and jurist A professor of law at King's Inn, Dublin, after 1882, and at the National Univ of Ireland after 1909, he was also a Nationalist member of Parliament from 1887 to 1919 Of his books, the best known are *Constitutional and Parliamentary History of Ireland till the Union* (1917) and *Studies in the Constitution of the Irish Free State* (1925) See his memoirs, *What I Have Seen and Heard* (1925)

McNicholas, John Timothy, 1877–, American Roman Catholic prelate archbishop of Cincinnati (1925–), b Kiltimagh, Co Mayo, Ireland Brought to the United States in 1881, he entered the Dominican order in 1894 and was ordained a priest in 1901 He received the degrees of lector (1904) and master (1916) of sacred theology from Minerva Univ in Rome From 1905 to 1909 he taught at Catholic Univ, then he was pastor (1913–16) of a church in New York city and served (1918–25) as bishop of Duluth, Minn The organizer and first national director of the Holy Name Society (1908), he edited (1909–17) the *Holy Name Journal* Becoming archbishop of Cincinnati in 1925, he devoted his attention particularly to educational and social questions In 1946 and again in 1949 he was elected president general of the National Catholic Educational Association, and he became associated with the National Catholic Welfare Conference He founded both the Athenaeum of Ohio (1928), a corporation controlling various institutions of higher learning in his archdiocese, and the Institutum Divi Thomae (1935), a graduate school of science

McNutt, Paul Vories, 1891–, high commissioner to the Philippines (1937–39, 1945–46), b Franklin, Ind, grad Indiana Univ, 1913, LL B Harvard, 1916 He taught in the law school of Indiana Univ (1917–33), becoming dean in 1925 He was national commander of the American Legion (1928–29) and governor of Indiana (1933–37) Under President F D Roosevelt he served as Federal security administrator (1939–45) and headed (1942–45) the War Manpower Commission

Macomb, Alexander (mukŏm'), 1782–1841, American general, b Detroit, Mich He entered the army in 1799 In the War of 1812 he assisted in the capture of Fort Niagara and Fort George (1813) On Sept 11, 1814, as brigadier general in command at Plattsburg, N Y, in the absence of Gen Ralph Isard, he repulsed the assault of a greatly superior force under Sir George Provost, this action, with the complete defeat of a squadron on Lake Champlain by Thomas Macdonough, caused the British to retreat to Canada He succeeded Gen. Jacob J Brown as commander in chief of the army in 1828 He was active in the Seminole War in 1835 See memoir by G H Richards (1833)

Macomb (mŭkŏm'), city (pop 8,764), co seat of McDonough co, W Ill, E of Keokuk, Iowa, laid out 1831, inc as a village 1841, as a city 1856 A trade and manufacturing center in a farm, clay, and coal area, it produces clay and metal products Western Illinois State College is here

Macon, Nathaniel (mā'kŭn), 1758–1837, American statesman, b Warren (now Edgecombe) co, N C He attended the College of New Jersey (now Princeton Univ) but left in 1776 to serve in the American Revolution Later he became a political leader in North Carolina and an ardent champion of states' rights He opposed the U S Constitution because he thought it gave too much power to the Federal government In the early years of the republic he was a national figure, serving as U S Representative (1791–1815, speaker of the House, 1801–7) and Senator (1815–28, president pro tempore of the Senate, 1826–28) He was a stout Jeffersonian, though briefly in Jefferson's second administration he headed a small faction called the Quids, who favored James Monroe rather than James Madison as the presidential candidate to succeed Jefferson From the time he opposed the Alien and Sedition Acts to the end of his career he stood for Jeffersonian ideas of personal liberty and states' rights He opposed the reestablishment of the Bank of the United States, all schemes for internal improvement, and (ironically enough) Macon's Bill No 2, which bears his name (see EMBARGO ACT OF 1807) Macon, Ga, and Randolph-Macon College are named for him Some of his correspondence was edited by Kemp P Battle (1902) See biography by W E Dodd (1903)

Mâcon (mâkŏ'), town (pop 18,221), capital of Saône-et-Loire dept, E central France, in Burgundy, on the Saône It is famous for the red wine of the region Mâcon was acquired by the French crown in the 13th cent, was added to Burgundy by the Treaty of Arras (1435), and was recovered by France in 1477 In the 16th cent it was a Huguenot stronghold Lamartine was born here

Macon (mā'kun, -kŏn) **1** City (pop 57,865), co seat of Bibb co, central Ga, at the head of navigation on the Ocmulgee and c 80 mi SE of Atlanta It was settled on the east side of the river in 1806 as Fort Hawkins, which was renamed Newtown (1821) Macon (for Nathaniel Macon) was laid out on the west bank (1823), and Newtown was annexed in 1829 It is the distributing, industrial, and shipping center for an extensive farm area producing cotton, truck, and livestock, industries include textile mills, farm-product processing plants, clay-product plants, and lumber mills Wesleyan College (for women, 1836), Mercer Univ (Baptist, coeducational, 1833), the state school for the blind, and a Negro junior college are here Sidney Lanier's birthplace is preserved Ocmulgee National Monument is not far from Macon **2** City (pop 2,261), co seat of Noxubee co, E Miss, SSW of Columbus and on the Noxubee, in a cotton, timber, and dairy area, inc 1836 **3** City (pop 4,206), co seat of Macon co, N Mo, S of Kirksville, founded c 1856, inc 1859 It is a shipping point for farm products and stock Coal mines are near by An osteopathic sanatorium is here

Macon, Bayou (bī'ŏ mā'kun), rising in SE Arkansas and flowing S into NE Louisiana to the Tensas river It was a rendezvous of the bandits Frank and Jesse James

Macphail, Agnes Campbell (mukfāl'), 1890–, Canadian legislator, b Ontario, of Scottish farmer parentage After some years of teaching, she was elected (1921) to the Canadian House of Commons as a representative of the United Farmers of Ontario and Labor, first woman in Canada to enter Parliament, she served until her defeat in 1940 On the formation (1932) of the Co-operative Commonwealth Federation, she became a leading member of this party She was elected in 1948 to the Ontario legislature

Macpherson, James, 1736–96, Scottish poet, b Ruthven, educated at King's and Marischal colleges (both at Aberdeen) and at the Univ of Edinburgh In 1760 his *Fragments of Ancient Poetry Collected in the Highlands* was published, followed by *Fingal* (1761), an epic in six books on a Norse invasion of Ireland, and *Temora* (1763) These purported to be translations from the Gaelic, and the last two he said were by the Irish bard Ossian The poems, written in a loose, rhythmical prose, filled with supernaturalism and melancholy, influenced powerfully the rising romantic movement in literature They were translated into Italian, French, and German and were widely quoted, as, for example, by Goethe in *Werther* Dr Johnson, Thomas Gray, and others expressed doubt as to the authenticity of the poems As a result of the controversy which followed, Macpherson's "original" texts were produced and were said to have been collected in the Highlands of Scotland After his death an

investigating committee of scholars agreed that Macpherson used some ancient Gaelic poems and traditions, but composed most of the poetry himself, and the "texts" were his forgeries To Macpherson rather than to Ossian must go credit for the Ossianic verse which enjoyed such popularity Macpherson also compiled histories, translated Homer, and held a colonial secretaryship in West Florida for two years See E D Snyder, *The Celtic Revival in English Literature* (1923)

McPherson, James Birdseye, 1828–64, Union general in the Civil War, b Sandusky co, Ohio, grad West Point, 1853 After teaching a year at West Point, he worked on various engineering projects In the Civil War, he became aide-de-camp to H W Halleck in Missouri and then chief engineer to U S Grant in the Union advance through Tennessee McPherson, promoted brigadier general in May, 1862, and major general in October, commanded the 17th Corps in the Vicksburg campaign, distinguishing himself at Port Gibson and Raymond He commanded the Dist of Vicksburg (July, 1863–March, 1864) and upon Grant's recommendation was made a brigadier general in the regular army (Aug, 1863) In the Atlanta campaign he ably commanded the Army of the Tennessee (Sherman's old command) until he was killed in the battle of Atlanta (July 28) His death was generally considered an immense loss to the army

McPherson, city (pop 7,194), co seat of McPherson co, central Kansas, between Salina and Hutchinson and on the old Santa Fe Trail, laid out 1872, inc 1874 It has oil refineries and ships for a large oil-producing area McPherson College, a Dunker institution, is here

Macquarie (mŭkwä'rē), river of New South Wales, Australia, rising in the Blue Mts and flowing 590 mi NW to the Darling river

Macquarie Island, uninhabited volcanic island, S Pacific, 850 mi SE of Tasmania, Australia, to which it belongs Rocky, with small glacial lakes, it is 21 mi long and 3 mi wide Elephant seals are found here

McRae, city (pop 1,595), co seat of Telfair co, S central Ga, SE of Macon and on the Little Ocmulgee river, in a farm and dairy area, settled in the mid-19th cent by Scotch, inc 1874 Helena is contiguous

macramé, see LACE

Macready, William Charles (mŭkrē'dē), 1793–1873, English actor and manager Son of a provincial manager, he first appeared as Romeo in his father's company in 1810 His London debut (1816) was in the role of Orestes in *The Distressed Mother*, and in 1817 he appeared with Mrs Siddons at John Kemble's benefit After his portrayal of Richard III at Covent Garden in 1819, he established himself as a tragedian of the first rank In 1822 he traveled to France and Italy, where he observed Talma, and in 1823 he played Othello, King John, Shylock, Romeo, and Virginius He made his first visit to the United States in 1826, achieving moderate success, and in 1827 returned to England to play Macbeth Macready sponsored and acted in Bulwer-Lytton's *Lady of Lyons* (1838) and acted in his *Richelieu* (1839) He was manager of Covent Garden (1837–39) and later of Drury Lane (1841–43), where he played opposite Helen Faucit In 1843 he again visited the United States, increasing his audience, but on his last visit (1849) to the United States, the Astor Place riot, instigated against him by partisans of Edwin Forrest, occurred He retired in 1851 A scholar of the theater, he was excellent as Lear and Richard III but was always eclipsed by Kean See his *Reminiscences* (ed by Sir Frederick Pollock, 1872) and *Diaries, 1833–1851* (ed by William Toynbee, 1912), William Archer, *William Charles Macready* (1890), M J Moses, *The Fabulous Forrest* (1929)

McReynolds, James Clark (mŭkrē'nŭldz), 1862–1946, U S Attorney General (1913–14) and Associate Justice of the Supreme Court (1914–41), b Elkton, Ky, grad Vanderbilt (1882) and Univ of Virginia law school (1884) He was a professor of law at Vanderbilt when, although a Democrat, he was appointed Assistant Attorney General by Theodore Roosevelt He served from 1903 to 1907, and later in practice in New York he still was a special assistant to the Attorney General in several antitrust cases He continued his active antitrust work as Attorney General. As a member of the Supreme Court he had a name as a strict constructionist, he wrote more opinions finding acts of Congress unconstitutional than any other Supreme Court Justice He particularly found the acts of the New Deal contrary to the Constitution and was a key figure in F D Roosevelt's unsuccessful attack on the Supreme Court

Macrinus (Marcus Opellius Severus Macrinus) (mukrī'nŭs), 164–218, Roman emperor (217–18) A Moorish officer, prefect of the Praetorian Guard under Caracalla, he was threatened by the emperor's murderous plans Macrinus therefore had the emperor killed and became the first emperor who was not a senator He himself lost the favor of the soldiers, who revolted. He was killed, and Heliogabalus succeeded.

Macrobius (mŭkrō'bēŭs), fl. c 400, Latin writer and philosopher. His *Saturnalia*, a dialogue in seven books chiefly concerned with Vergil, incorporates valuable quotations from other writers His commentary on Cicero's *Dream of Scipio* was popular in the Middle Ages, it influenced Chaucer.

McSherrystown, borough (pop 2,128), S Pa, SE of Gettysburg, inc 1882

MacSwiney, Terence James (mŭkswē'nē), 1880–1920, Irish patriot, one of the martyrs of Sinn Fein He was arrested after the Easter Rebellion of 1916 and again in 1920 MacSwiney, who was lord mayor of Cork, began a hunger strike after he was sentenced to two years' imprisonment for sedition He died Oct 25, 1920, after a fast of more than two months His death and those of three fellow hunger strikers caused a tremendous sensation in the British Isles and elsewhere, and the British government was denounced for murder Sinn Fein soon abandoned the hunger strike as a political weapon.

Mactan (mŭktän'), small coral island (pop 40,103), Philippine Islands, off the east coast of Cebu Magellan was killed by natives here in 1521.

MacVeagh, Franklin (mukvā'), 1837–1934, U S Secretary of the Treasury (1909–13), b Chester co, Pa, grad Yale, 1862, and Columbia School of Law, 1864, brother of Isaac Wayne MacVeagh He entered (1866) the wholesale grocery business in Chicago, and his company became outstanding in its field As head of the Chicago Citizens' Association he was able to force salutary civic reforms He was given his cabinet post by President W H Taft

MacVeagh, Isaac Wayne, 1833–1917, American diplomat, U S. Attorney General (1881), b Chester co, Pa, grad Yale, 1853 Wayne MacVeagh was admitted (1856) to the bar and was (1859–64) district attorney of Chester co He became prominent in the Republican party After he was (1870–71) minister to Turkey, he became (1877) chairman of the MacVeagh Commission appointed by President Hayes to adjust political difficulties in Louisiana following the disputed election He was appointed to the cabinet by President Garfield, but resigned on the accession of Chester A Arthur He served (1893–97) as ambassador to Italy and became (1903) chief counsel of the United States in the Venezuela Claims question

Macy, Anne Sullivan, 1866–1936, American educator, friend and teacher of Helen Keller, b Feeding Hills, Mass Placed in 1876 in Tewksbury almshouse, she was later admitted to Perkins Institution for the blind, since her eyes had been seriously weakened by a childhood infection She was graduated in 1886 A series of operations had restored her sight, but she had learned the manual alphabet in order to talk with Laura Bridgman In 1887 she was chosen to teach Helen Keller and thereafter remained her constant companion In 1905 Anne Sullivan married John Macy, who died in 1932 See biography by Nella Braddy (1933)

Macy, John Albert, 1877–1932, American author and critic, b Detroit, grad Harvard, 1899 His books include a biography of Poe (1907), *The Spirit of American Literature* (1913), *The Critical Game* (1922), and *About Women* (1930) He married Anne Sullivan in 1905

Madach, Emeric (mŏ'dach), Hung *Madách Imre* (Im'rĕ), 1823–64, Hungarian poet, a member of parliament He is best known for his dramatic epic, *The Tragedy of Man* (1861, Eng tr, 1908), which deals with the rise and fall of mankind An adapted version is frequently performed in Hungarian theaters.

Madagascar (mădugă'skur), island (227,737 sq mi, pop c 4,155,000), in the Indian Ocean It is, with its dependencies, an overseas territory of the French Union The capital is Tananarive One of the world's largest islands, Madagascar is separated from Africa by the Mozambique Channel Well-forested mountains occupy the interior Coffee, the principal export, is raised in the uplands, and a variety of crops are grown on the fertile coastal plains The main overseas ports are Tamatave (connected by rail to Tananarive) and Majunga There are good highways More than two thirds of the inhabitants are Malagasy (a Malay stock), the largest tribe being the Hova (c 900,000) The Portuguese (16th cent) and English (17th cent.) vainly attempted to found permanent settlements, and the island became a haunt of pirates and a field for European adventurers The Hova kings Andrianampoina (1794–1810) and Radama (1810–28) conquered nearly the whole island and established friendly relations with the British, From 1864 to 1895 Ranilaiarivony, chief minister during three reigns, played off England against France, but in 1895 a French force took Tananarive Pacification was completed by Galliéni, the first governor (1896–1905), who was very popular for his fair dealing. In the Second World War the colony adhered to the Vichy French government, despite pressure from the British, who occupied it in 1942 Since 1946 Madagascar has been ruled by a governor general with the aid of a representative assembly; it is represented in the French parliament. See S E. Howe, *The Drama of Madagascar* (1938), Olive Murray Chapman, *Across Madagascar* (1943)

Madai (mă'dāī, mă'dī), biblical form of the name of the Medes Gen 10 2, 1 Chron 1.5.

Madame. In France the eldest daughter of a king or a dauphin and the wife of Monsieur (eldest of the king's brothers) were referred to by the simple title Madame without their Christian names. Henrietta of England, in particular, is remembered under that title.

Madang (mä'dăng), town, on E New Guinea, in the Territory of New Guinea, on Astrolabe Bay. It exports copra and gold In the Second World War it was the site of a Japanese air base established in 1942; it was regained the following year by Allied forces.

Madariaga, Salvador de (salvadhōr' dā mădhăr-yä'gä), 1886–, Spanish author and diplomat He is a cosmopolitan who writes with equal ease in Spanish, French, and English Although he has written poetry, novels, and drama, his essays are most noted In 1916 he moved to London, where he became a journalist He was professor (1928–31) of Spanish literature at Oxford In 1921 he entered the Secretariat of the League of Nations and in 1922 was placed at the head of the disarmament section Madariaga served republican Spain as ambassador to the United States in 1931, as ambassador to France (1932–34), and as delegate of Spain on the Council of the League of Nations (1934–36) He resigned the last post because of dissatisfaction with his treatment by the republic He took no part in the civil war (1936–39) Some of his best-known works are *The Genius of Spain*, written originally in English (1928) and appearing as *Semblanzas españolas* in Spanish, *Spain* (1930), the historical essays on Christopher Columbus (1940) and Hernán Cortés (1941), *The Rise of the Spanish American Empire* (1947), and *The Fall of the Spanish American Empire* (1947) One of his best known books is *Ingleses, franceses, españoles* [Englishmen, Frenchmen, and Spaniards] (1928), a penetrating comparison of national psychologies Some of his political essays are *Disarmament* (1929), *Theory and Practice in International Relations* (1937), and *Anarchy or Hierarchy* (1937)

Madawaska (mădŭwŏs'sku), town (pop 4,477), N Maine, a port of entry on the St John opposite Edmundston, N B, inc 1869 Paper mills were established here in 1925–26 The town was settled by Acadians in 1785

Madawaska (mădŭwŏ'sku), river rising in S Ontario in Algonquin Provincial Park and flowing east through several lakes to Chats Lake, a widening of the Ottawa river W of Ottawa

Madden, Sir Frederic, 1801–73, English antiquarian and paleographer As a member of the British Museum staff from 1828 and as head of the manuscript department from 1837, he did notable work in editing Anglo-Saxon and Norman-French texts and collating the manuscripts of Cædmon for Oxford His edition of Matthew of Paris's history (1866–69) is noteworthy Other works he edited include *The Ancient English Romance of Havelok the Dane* (1828), *The Ancient English Romance of William and the Werwolf* (1832), *The Old English Versions of the Gesta Romanorum* (1838), and, with Josiah Forshall, the Wyclif version of the Bible (4 vols, 1850)

madder, Old World dye plant (*Rubia tinctorum*), which has whorled leaves and small yellowish flowers followed by berries It has a long, fleshy root, from which are made various fast and beautiful pigments, such as madder purple and madder orange The plant was known to many ancient peoples—madder-dyed cloth has been found in old Egyptian mummy cases—and has been cultivated in Europe for many centuries Until the artificial production of alizarin, the color principle of madder, which is also the name of the dye, the plant was the most important dyestuff source. It was also used medicinally in ancient times and has been utilized in science (because of its power to dye growing bones) for the study of bone development. The intensity of the color in the root increases with the age of the plant, and it is therefore usually left in the ground for from 18 to over 20 months or is stored in cellars to ripen

Madeira, (mudēr'u, mudā'ru), village (pop 1,384), SW Ohio, near Cincinnati

Madeira (mudā'rŭ), river, formed by the junction of the Beni and Mamoré rivers on the Bolivian-Brazil border It flows north along the border, then northeast through swamps and rain forests of Brazil to the Amazon below Manaus With the Mamoré, it is c 2,000 mi long and is the greatest tributary of the Amazon It is navigable by ocean vessels to the falls and rapids near Pôrto Velho, where the Madeira-Mamoré railroad begins a 227-mile run to Guajará-Mirim on the Mamoré.

Madeira (mudēr'u, mudā'ru), island, c 35 mi long, far off the coast of Morocco and SW of Portugal, in the Atlantic. Mountain peaks descend precipitously into deep, green valleys and, advancing to the sea as precipitous basalt cliffs, give the island unusual scenic beauty The delightful climate, marred only by the seasonal *leste*, a hot south wind, makes Madeira an attractive year-round health resort, particularly for tuberculous patients. Its chief town is Funchal. Madeira is the largest of the

Madeira Islands (c.800 sq. mi.; pop. 250,124), a group including one other inhabited island, Porto Santo, and a number of small islands divided into two groups (Desert Islands and Savage Islands). The archipelago is coextensive with Funchal dist, administratively an integral part of Portugal; Funchal is the capital. The islands produce Madeira wine, for which they are famous, and the well-known Madeira embroidery. Reed furniture and baskets are made. The tourist and resort trade is of the utmost importance. Though the islands were known and put on maps in the 14th cent., it is traditional to say that João Gonçalves Zarco and Tristão Vaz Teixeira, under orders of Prince Henry the Navigator, discovered Porto Santo in 1418 and Madeira in 1419. There were settlements before 1425. The islands have taken an inconspicuous part in Portuguese history except for a violent and unsuccessful outbreak against the Carmona government in 1921.

Madeira wine, red or amber fortified wine which is matured about six years in the cask and improved by heat and motion. The chief types are sercial, a dry wine, bual, rich, with a fine bouquet, and malmsey, a sweet dessert wine.

Madeleine (mă'dŭlĭn, Fr mädlĕn') [Fr. =Magdalen, i.e., Mary Magdalen], large church of Paris, in the Place de la Madeleine. It was planned originally by J. A. Gabriel as part of his layout for the Place de la CONCORDE, the location being selected so as to close the vista of the Rue Royale. The building was begun in 1764, but construction was halted by the French Revolution. Napoleon I selected Barthélemy VIGNON to convert the structure into a Temple of Glory. Vignon worked on the Madeleine from 1807 until his death in 1828, and his successor, J. J. M. Huvé, completed it in 1842. After the Bourbon restoration the building became a church again. Externally it is a peripteral temple of the Roman Corinthian order, set upon a basement 23 ft. high, with its columns 63 ft. high surpassing the height of all those of the ancient Greek or Roman temples. The interior contains a vestibule, a nave of three bays covered by domes on pendentives, and a semicircular apse. The building is without windows, and light is furnished by an oculus in the crown of each dome.

Madelia (mădē'lĭyu), village (pop. 1,652), S Minn., S of New Ulm, in a farm area, settled 1855, platted 1857, inc. 1873.

Madera (mudă'ru), city (1940 pop. 6,457, 1947 special census pop. 9,223), co. seat of Madera co., central Calif., NW of Fresno in the San Joaquin Valley, laid out 1876, inc. 1907. Lumber, wine, olive oil, and cottonseed oil are among the city's products. The Madera Canal, coming into this region from Friant Dam, is part of the CENTRAL VALLEY PROJECT.

Madero, Francisco Indalecio (frănsĕ'skō ēndälā'syō mädhā'rō), 1873–1913, Mexican statesman, president of Mexico (1911–13). A champion of democracy and social reform, he established various humanitarian institutions for the peons on his family's vast estates in Coahuila. In 1908, after Porfirio DÍAZ announced that Mexico was ready for democracy, Madero published *La sucesión presidencial en 1910*, a mild protest against the Díaz regime, the book made Madero a national figure. In 1910 he was the Anti-Reelectionist party's presidential candidate, with a program emphasizing effective suffrage and non-reelection. Díaz, at first contemptuous of his opponent, finally imprisoned Madero and won the election, as usual, without difficulty. Madero, released, fled to Texas and there proclaimed a revolution. Returning to Mexico, he found several groups in Chihuahua already in arms. These rebels, some led by Francisco VILLA, rallied to Madero's standard. On May 9, 1911, they captured Juárez, the prestige of the government was destroyed. At almost the same time an independent band rose under ZAPATA in the south. Throughout the republic the movement quickly gathered strength. The revolution triumphed. Díaz resigned (May 25, 1911). Madero, elected president, took office in Nov., 1911. His administration was anything but successful, and he was unable to accomplish any notable reforms because of division among his followers and his own administrative inability. The revolutionary forces, unleashed, continued active. In Feb., 1913, a revolution broke out in the capital. Victoriano HUERTA, appointed commander of the government forces, plotted with the rebels for Madero's fall. Finally, after bloody fighting — the "tragic ten days" (Feb. 9–18)—Huerta completed these negotiations. He had Madero arrested and then assumed power. Madero was shot, allegedly in an attempt to escape.

Madhya Bharat or **Madhyabharat** (mădyŭbŭ'rut), state (46,273 sq. mi.; pop. c.7,150,000), W India. Indore is the capital. It comprises 20 former princely states, including Indore and Gwalior.

Madhya Pradesh (măd'yŭ pră'dĭsh), state (130,323 sq. mi., pop. 19,647,781), central India, until 1950 called Central Provs and Berar. Nagpur is the capital. The state consists, from north to south, of three upland zones separated by plains. Adequate rainfall and plentiful good soil permit a prosperous, predominantly agricultural economy. Grains, especially wheat, are the main crops of the north. In the southeast rice is the largest crop. The abundant cotton of the southwest (especially Berar) makes this state second only to Bombay in cotton production. Spinning and weaving are the chief industries. Transportation is adequate in the areas that yield coal and manganese in the western part of the central upland, but deficient generally throughout the east. The aboriginal population (c. 5,000,000) reflects the comparatively recent development of Madhya Pradesh. Nominally within the Mogul empire, it was ruled during the 16th and 17th cent. by the Gonds and in the 18th cent. by the Marathas. Great Britain conquered a part in 1820. Berar, originally belonging to the domain of the Nizam of Hyderabad, was incorporated in 1903. In 1947 and 1948 the area was enlarged by the accession of all the surrounded princely states and many of those on the border.

Madian (mā'dēŭn), variant of MIDIAN.

Madill (mudĭl'), city (pop. 2,594), co. seat of Marshall co., S Okla., between the Red and Washita rivers, in a farm area producing livestock and oil, settled c. 1900.

Madison, Dolly, 1768–1849, wife of President James Madison, b. near present Guilford College, N.C. Pretty, sensible Dolly (not Dorothy) Payne was brought up in Quaker simplicity and was first married (1790) to a Quaker, John Todd, who died in the yellow-fever epidemic of 1793. She left the Friends to marry Madison in 1794, and in later years as official hostess for Thomas Jefferson (1801–9) and for her husband both in the White House and at MONTPELIER she was noted for the magnificence of her entertaining as well as for charm, tact, and grace. See biographies by E. L. Dean (1928) and Katherine Anthony (1949).

Madison, James, 1751–1836, 4th President of the United States (1809–17), b. Port Conway, King George co., Va. (on the Rappahannock), grad. College of New Jersey (now Princeton Univ.), 1771. Like Washington and others of the Virginia planter class, he opposed the colonial measures of the British and took the patriot side. In 1776 he helped to draft a constitution for the new state of Virginia, already putting to use his great store of knowledge about constitutional law, which was to grow greater with the years. He served in the Continental Congress from 1780 to 1783, and in 1787–88 and he saw with clear eye the weakness of Congress and of the executive under the Articles of Confederation. He did not forget when he was serving in the Virginia legislature (1784–86), playing a prominent part in disestablishing the Anglican Church in Virginia. Madison was an important figure in bringing about the conference between Maryland and Virginia concerning navigation of the Potomac. The meetings at Alexandria and Mt. Vernon in 1785 led to the Annapolis Convention in 1786, and at that conference he worked successfully to have the FEDERAL CONSTITUTIONAL CONVENTION called in 1787. There were, of course, many other men who were hoping and laboring for a revision of the form of government, but Madison and Alexander Hamilton were more than the others spokesmen and leaders in the move to form the new union. At the convention he and James WILSON were adept at formulating and crystallizing the proposals for the new government, and after the storms of argument had been cleared by compromise, Madison's was the chief hand in the actual drafting of the Constitution of the United States. His journals are the principal source of later knowledge of the convention. He fought to get the Constitution adopted. He contributed with Alexander HAMILTON and John JAY to the brilliantly argumentative FEDERALIST PAPERS, and in Virginia he led the forces for the Constitution against the opposition of Patrick HENRY and George MASON. As a Congressman from Virginia (1789–97) he had a hand in getting the new government established in practice, and he was a strong advocate of the first 10 amendments to the Constitution, generally known as the Bill of Rights. Yet, though modern historians have demonstrated the conservative nature of the Constitution and its founders, Madison was opposed to the conservative wing in the Washington administration, a steadfast enemy of Alexander Hamilton, and a steadfast supporter of Thomas JEFFERSON. He attacked the Alien and Sedition Acts and prepared the protesting Virginia resolutions (see KENTUCKY AND VIRGINIA RESOLUTIONS). When Jefferson triumphed in the election of 1800, Madison triumphed too and in 1801 became Secretary of State. He served through both of Jefferson's terms, and he was Jefferson's choice as presidential candidate. As President he had to deal with the results of the foreign policy that he had as Secretary of State helped to shape. The EMBARGO ACT OF 1807 was in effect dissolved by Macon's Bill No. 2. The bill provided that if either Great Britain or France should remove restrictions on American trade, the President was empowered to reimpose commercial nonintercourse with the other. Madison, accepting an ambiguous French statement as a bona fide revocation of the Napoleonic decrees on trade, resumed nonintercourse with Great Britain. This move was, however, only a minor incident in turning Jefferson's peace policy toward war with Great Britain. Far more important in bringing on war were the activities of the "war hawks," led by Henry Clay and John C. Calhoun who, hungry for conquest of Canada and for free expansion, clamored for action. They helped to bring on the declaration of war against Great Britain on June 18, 1812. The WAR OF 1812 was the chief event of Madison's administration. It proved to be difficult. New England merchants and industrialists were already disaffected, and their malcontent grew until at the Hartford Convention they talked of sedition rather than continuing "Mr. Madison's War." Even the friends of the President and the promoters of the war grew discouraged, as the fighting went badly. Victories in late 1813 and in the autumn of 1814 lifted the gloom somewhat, but the climax of disaster came in Sept., 1814, when the British took Washington and burned the White House. Soon afterward the war reached a happy conclusion in the Treaty of Ghent. Madison remained in office to see the beginning of the national expansion after the war and encouraged the new nationalism which hastened the split in the Democratic party, evident in the rise of Jacksonian democracy. Through these upheavals Madison lived quietly with his wife, Dolly Madison, after his retirement in 1817 to MONTPELIER. His last years were, however, disturbed somewhat by financial worries, for their lavish hospitality and elegantly gracious living beggared the ex-President and the "father of the Constitution." His writings were edited by Gaillard Hunt (9 vols., 1900–1910). See biographies by Hunt (1902) and Abbot E. Smith (1938), Irving Brant, *James Madison, the Virginia Revolutionist* (1941), *James Madison, the Nationalist* (1948), and *James Madison, Father of the Constitution* (1950), Adrienne Koch, *Jefferson and Madison the Great Collaboration* (1950).

Madison. **1** Resort town (pop. 2,245), S Conn., on Long Island Sound, set off from Guilford 1826. The Graves House dates from 1675. **2** Town (pop. 2,720), co. seat of Madison co., N Fla., near the Ga. line and the Suwannee river, settled in the 1830s. It is a trade center for an agricultural area. The city park is on the site of a Seminole War stockade. Near by is Cherry Lake Farms, a U.S. resettlement development. **3** City (pop. 2,045), co. seat of Morgan co., N central Ga., ESE of Atlanta, inc. 1809. It is the trade center for a farm area. **4** Industrial village (pop. 7,782), SW Ill., on the Mississippi and adjoining Granite City, inc. 1891. The steel industry predominates. There are terminal railroad yards, a meat-packing plant, and a planing mill. **5** City (pop. 6,923), co. seat of Jefferson co., SE Ind., on the Ohio NE of Louisville, Ky., settled c. 1809. It is a shipping point for farm produce. It has many pre-Civil War homes in a beautiful countryside. Some of the near-by waterfalls are in Clifty Falls State Park. **6** City (pop. 1,198), SE Kansas, on the Verdigris and S of Emporia, in a farm area, laid out 1879, inc. 1885. **7** Town (pop. 3,836), central Maine, on the Kennebec above Skowhegan, inc. 1804. Its water power developed textile and paper mills. Lakewood, a resort, is in the town. **8** City (pop. 2,312), co. seat of Lac qui Parle co., W Minn., SE of Ortonville near the S Dak. line, settled c. 1875, platted 1884, inc. as a city 1902. It is a trade center for a livestock, dairy, and grain region. **9** City (pop. 1,812), co. seat of Madison co., NE Nebr., S of Norfolk and NW of Omaha, in a prairie agricultural area, settled 1868, inc. 1873. **10** Residential borough (pop. 7,944), NE N.J., SE of Morristown, settled 1685, called Bottle Hill to 1834, inc. 1889. Sayre House (1745) was Anthony Wayne's headquarters. Madison's greenhouses supply florists with roses. DREW UNIVERSITY is here. **11** Market town (pop. 1,683), N N.C., on the Dan and NNE of Winston-Salem, in a farm area, laid out 1818. **12** City (pop. 5,018), co. seat of Lake co., SE S Dak., NW of Sioux Falls, platted 1873. It is the trade and shipping center for a farm region near Lakes Madison and Herman. The General Beadle State Teachers College (1881) is here. **13** Town (pop. 1,205), co. seat of Boone co., S W Va., SW of Charleston and on the Little Coal river, inc. 1906. **14** City (pop. 67,447), state capital, and co. seat of Dane co., S Wis., on an isthmus between Lakes Monona and Mendota, in the Four Lakes group, founded 1836, inc. as a village 1846, as a city 1856. Through the efforts of James Duane DOTY, Madison was chosen territorial capital before it was settled. It is the seat of the state university (see WISCONSIN, UNIVERSITY OF) and also the trading and manufacturing center of a fertile dairy region. Many parks, dotting the wooded lake shores, make it an attractive residential city. Among points of interest are the elaborate capitol, housing the legislative library organized by Charles McCARTHY, the capitol annex; and Vilas Park, containing a zoo. A state hospital for the insane and a sanatorium are near by. Madison is a cultural center and a focus of Federal and local government agencies.

Madison, river 183 mi. long rising in NW Wyoming in Yellowstone National Park. It flows generally

N through Montana to join the Jefferson and the Gallatin at the Three Forks of the Missouri.

Madison, Mount. see PRESIDENTIAL RANGE.

Madison College see NASHVILLE, Tenn.

Madisonville. 1 City (pop 8,209), co seat of Hopkins co, W Ky, ENE of Paducah, settled 1807 It is a trade and shipping center for an area of farms, timber, coal, and oil and it has food-processing plants 2 City (pop 2,095), co seat of Madison co, E central Texas, NNW of Houston

Madmannah (-măn'ŭ) [Heb, =dunghill], place, SW Palestine, perhaps the same as BETH-MARCABOTH. Joshua 15 31, 1 Chron 2 49

Madmen [Heb, =dunghill], unidentified town, in the plains E of the Red Sea Jer 48 2

Madmenah (mădmē'nŭ) [Heb, =dunghill], unidentified village, N of Jerusalem Isa 10 31

Madoc or **Madog** (both mă'dŭk, mă'-) (Madoc ap Owain Gwynedd) fl 1170?, quasi-historical Welsh prince Welsh legend has it that Madoc, a son of Owain Gwynedd, discovered America 300 years before Columbus Witnesses' accounts of finding supposedly Welsh-speaking Indians have served to keep alive the Madoc myth He is the theme of Southey's *Madoc*

Madoc (mă'dŏk), village (pop 1,188), S Ont, on Deer Creek and NW of Belleville, in a lumber and farming region

Madoera, Indonesia see MADURA

Madon (mă'-), unidentified royal Canaanite city, N Palestine Joshua 11 1, 12 19

Madonna (mudŏn'ŭ) [Ital, =my Lady, see MARY], in Christian art, the representation of the Virgin, a favorite theme since Roman times Prominent in the arts of the Byzantine, Romanesque, Gothic, Renaissance, baroque, and all succeeding periods, Mary has been portrayed in every significant phase of her life on earth and in heaven, perhaps most gloriously in Gothic sculpture and in Renaissance sculpture and painting, of which she was a perennial source of inspiration Among countless other artists, Raphael, Giovanni Bellini, Botticelli, Correggio, Titian, Rubens, and Murillo are famous for their Madonnas

Madras (mudrăs', mâdras'), state (127,768 sq mi, pop 49,840,564), S India, including the Laccadive Islands The interior of the province is relatively dry The Malabar Coast and the Coromandel Coast, bounded by the Western and Eastern GHATS respectively, are the most fertile areas About 70 percent of the population lives on farms, with rice the principal crop, cotton, tobacco, peanuts, and millet are widely cultivated Timber is cut in the uplands Food processing and the manufacture of cotton and silk cloth are the main industries The small mineral production is restricted to magnesite and mica The extensive rail net, which links the seaports, including Madras, Vizagapatam, and Calicut, with the hinterland, facilitates the economically important overseas trade The population is mainly of Dravidian stock and Hindu religion despite many occupations by various powers from the north Moslems swept away the Hindu Vijayanagar kingdom in the 16th cent and controlled the area for about a century In the 16th cent the Portuguese established colonies, followed in the 17th cent by the Dutch, French, and British After a sharp struggle (1741–63) with the French and with Hyder Ali and Tippo Sahib, the British emerged supreme and by 1801 had established virtually the present-day state boundaries In 1947, after the partition of India, several princely states joined Madras **Madras,** city (pop 777,481), the capital of the province, is situated at about the midpoint of the Coromandel Coast It was founded in 1639 by the British East India Company The French, under Dupleix, captured Madras in 1746, but it was recovered two years later From the port, which is protected by artificial breakwaters, tea, oil seeds, yarn, hides, skins, manganese, and mica are exported, rice, oil, coal, and machinery are imported Madras is a manufacturing center with silk and cotton cloth among its chief products The central facilities of the Univ of Madras, the leading educational institution of the province, are located here There are many large public buildings and a famous shore drive, the Marina Mt St Thomas, the traditional site of the martyrdom (A D 68) of Thomas the apostle, is near the city

Madrazo (madra'thō), family of Spanish painters They were leaders of the academic school and are represented in the Prado **José de Madrazo y Agudo** (hōsā'dā, ē āgōō'dhō), 1781–1859, was a student of J L David in Paris and was court painter to Charles IX and director of the Prado and of the Academy of San Fernando In both directorships he was succeeded by his son **Federico de Madrazo y Kunt** (fādārē'kō, ē kōōnt'), 1815–94 Another son was **Luis de Madrazo** (lwēs'), 1825–97 **Raimundo de Madrazo y Garreta** (rīmōōn'dō, ē gārē'tā), 1841–1920, was the son of Federico

Madre de Dios (mā'drā dā dyōs), river, c 700 mi long, rising in the Andes of SE Peru and flowing NE through Bolivia to the Beni It is only partly navigable because of frequent rapids Formerly the valley was explored for rubber

Madrid (mudrĭd', Span mădhrēdh'), city (pop 1,088,647), capital of Spain and of Madrid prov,, in New Castile, on the Manzanares river Lying in a vast open plateau, it is subject to extremes of heat and cold, the daily variation is sometimes 40°F Madrid is almost in the exact geographic center of Spain and is Spain's chief railroad communications point Its commercial and industrial life developed very rapidly after the 1890s and is rivaled in Spain only by that of Barcelona An archiepiscopal see, Madrid also has a university, transferred from ALCALÁ DE HENARES in 1836 Madrid was first mentioned in the 10th cent as a Moorish fortress Alfonso VI of Castile took it in 1083 The cortes of Castile met here in 1329, and Ferdinand and Isabella as well as Emperor Charles V often resided here, but Madrid became the capital of Spain only in 1561, in the reign of Philip II The city developed slowly at first, but it expanded rapidly in the 18th cent under the Bourbon kings From that period date the royal palace and the PRADO, now housing one of the outstanding art collections in the world At the beginning of the PENINSULAR WAR a popular uprising against the French took place at Madrid on May 2, 1808, and a fierce battle was fought in the Puerta del Sol, the central square of the city In reprisal hundreds of citizens were shot at night along the Prado promenade The events of that day were immortalized by two of Goya's most celebrated paintings, both in the Prado gallery Madrid again played a heroic role in the Spanish civil war of 1936–39, when, under the command of Gen José Miaja, it resisted 29 months of siege by the Insurgents, suffering severe bombardments and all attacks and surrendering only late in March, 1939 The general aspect of Madrid is that of a modern city Among the landmarks are the huge royal palace, the Buen Retiro park, opened in 1631, and the imposing 19th-century building containing the national library (founded 1712), the national archives, a museum of Spanish modern art, and an archaeological museum The *modern* Ciudad Universitaria [university city] suffered heavily in the civil war, as did all the other western suburbs

Madrid (mădrĭd'), city (pop 2,074), central Iowa, NNW of the Moines, platted 1852, inc 1883 Coal is mined near by

madrigal (mă'drĭgul) The Italian madrigal of the 14th cent was a poetic form created by Petrarch and his followers It consisted of from one to four stanzas of three iambic pentameters each, followed by a *ritornello* of two rhymed lines in a contrasting meter The rhyme scheme of the stanzas was abb, cdd, etc Contemplation of nature was its usual theme and its mood was often ecstatic The composers of the 14th-century Florentine school made polyphonic musical settings of the madrigal They were usually in two, sometimes in three, melodically independent voices, the top voice being somewhat florid Outstanding composers were Jacopo da Bologna and Giovanni da Florentia (both fl c 1350) The greatest was the blind organist Francesco Landini (1325–97), although he composed relatively few madrigals The Renaissance madrigal, a new form, was the creation of the Venetian school of composers Its only connection with the earlier madrigal was in its poetry, which freely imitated the 14th-century madrigal The number of voices was at first four, then five Costanzo Festa (d 1545) was the first native Italian madrigal composer of the 16th cent The Flemish composers of the Venetian school, such as Arcadelt and Willaert, combined the Flemish technique of imitative polyphony with forms taken from Italian popular music Luca Marenzio represents the culmination of this development, for the madrigals of Carlo Gesualdo (c 1560–1614) and of Monteverdi are actually creations of the baroque era, with their dissonant harmonies and their expressive tone painting which depict the textual imagery The English madrigal developed as a result of the importing of Italian madrigals in the latter half of the 16th cent and came to mean any unaccompanied part song The earliest significant English madrigals were William Byrd's first book of madrigals (1588) Other outstanding madrigalists were Thomas Morley and Orlando Gibbons See E H Fellowes, *The English Madrigal Composers* (1921), Alfred Einstein, *The Italian Madrigal* (3 vols, 1949)

madroña (mudrōn'yu), broad-leaved evergreen tree or shrub (*Arbutus menziesii*) of the West Coast of the United States, cultivated in warm regions for ornament It has glossy leaves, white flowers, and red berries

Madura (mă'jŏōru), city (pop 239,144), S Madras state, India It was the capital of the Pandya kings from the 5th cent B C until 1311 and of the Nayak kings from c 1550 to 1743 The British acquired it in 1801 The most notable monument is the large, elaborately ornamented temple to Siva which was mainly constructed during the 16th and 17th cent Cotton and silk textiles are manufactured The official name is Mathurai

Madura or **Madoera** (both mădōō'rā), island (1,762 sq mi, pop 1,858,183), Indonesia, near the north coast of Java, from which it is separated by Madura Strait Its principal products are salt, obtained from salt pans along the coast, and fish The generally chalky soil makes the island unsuitable for agriculture. The capital is Pamekasan; Sumenep is the largest town. Since about the 11th cent, Madura has been dominated by Java. The island with its offshore islets constitutes the state of Madura, belonging to the United States of Indonesia

Madvig, Johan Nikolai (yōhän' nĭkōlī' mädh'vĭg), 1804–86, Danish classical scholar Educated at the Univ of Copenhagen, he served (1829–79) as professor of Latin there As minister of education (1848–51), he worked for the improvement of classical schools He was interested in the careful edition of classics as the basis of philology and in history as the primary background of philology His edition of Cicero's *De finibus* (1839, 3d ed, 1876) is particularly fine

madwort see ALYSSUM

Maeander (mēăn'dûr), ancient name of the Buyuk Menderes river, W Turkey It is c 250 mi long and rises in three branches W of Afyonkarahisar It flows generally W into the Aegean Sea, which it reaches south of the island of Samos Olives are grown in its valley Its winding and wandering course gave rise to the term *meander*

Maebashi (mā'bāshē), city (1947 pop 90,432), capital of Gumma prefecture, central Honshu, Japan It is a silk textile center Gumma prefecture produces large quantities of raw silk

Maecenas (Caius Cilnius Maecenas) (mīsē'nus, mē-), d 8 B C, Roman statesman and patron of letters He was born (between 74 B C and 64 B C) into a wealthy family and was a trusted adviser of Octavian (AUGUSTUS), who, in his own absence, employed Maecenas as ruler of Italy Later out of favor with the emperor, he retired, devoting all his time to his famous literary circle, which included Horace, Vergil, and Propertius, to the great poets of his day he proved a friend and munificent patron His name is the symbol of the wealthy, generous patron of the arts

Maelstrom (māl'strum), Nor *Malstrøm* (mal'strŭm), *narrow sound in the Lofoten islands, NW Norway, just S of Moskenes island* Its powerful tidal currents create a whirlpool dangerous to small ships It has been celebrated in Poe's *Descent into the Maelstrom*

Maenads see BACCHAE

Maeotis, Palus see AZOV, SEA OF

Maerlant, Jacob van (yä'kŏp vän mär'länt), c 1235–c 1300, Flemish poet, earliest important figure of Dutch literature He wrote lyric poems and chivalric verse romances after the French, his later works are long didactic poems, chief of which is *Spiegel historiael*, an adaptation of the *Speculum* of VINCENT OF BEAUVAIS Jacob van Maerlant is an early literary representative of the bourgeois spirit

Maes or **Maas, Nicolaas** (nē'kōlas mās'), 1632–93, Dutch genre and portrait painter His earlier genre pictures bear, in their manner and coloring, remarkable resemblance to those of his master, Rembrandt In his best period (1655–65), at Dordrecht, he painted chiefly domestic genre on a smaller scale His later works, portraits in the main, show the influence of Van Dyck in their smooth elegance Among his paintings are *Reverie* (Rijks Mus), *Card Players*, *The Dutch Housewife*, and *The Cradle* (National Gall, London), *Saying Grace* (Louvre), and four admirable examples in the Metropolitan Museum

Maeshowe (mās'hou), prehistoric artificial mound, on Pomona, Orkney Islands, Scotland, near Stenness Within is a room which was apparently broken into by the Norse invaders in the 12th cent There are runic inscriptions on the walls

Maesteg (mīstāg'), urban district (1931 pop 25,570, 1947 estimated pop 230,010), Glamorganshire, Wales, in a coal-mining district

Maestra see SIERRA MAESTRA

Maestricht, Netherlands see MAASTRICHT

Maeterlinck, Maurice (mōrēs' mătĕrlĕk'), 1862–1949, Belgian poet who wrote in French, b Ghent His literary ties are with the SYMBOLISTS, and his dramatic efforts (intended for reading) are considered to represent "symbolistic" drama They present, then, not the everyday world, but the author's idea of the metaphysical or "real" world All his writing, prose and poetry, is suffused with rich feeling, often with pathos His works include *Le Massacre des innocents* (1886), a long short story on war and the noncombatant, a beautiful zoological study, *La Vie des abeilles* (1901, Eng tr, *The Life of the Bee*), and the dramas, *Pelléas et Mélisande* (1892), *Monna Vanna* (1902), regarded as the greatest symbolistic drama, and *L'Oiseau bleu* (1909, Eng tr, *The Blue Bird*), written to convey metaphysicomystical ideas and since become a favorite with children He also wrote critical essays Maeterlinck won the 1911 Nobel Prize in Literature The actress Georgette Leblanc, who was his wife from 1901 to 1918, earned fame in Maeterlinck roles

Mafeking (mă'fĭkĭng), town (pop 5,813), capital of Bechuanaland protectorate, Cape Prov, Union of South Africa, founded 1885 In the South African War the British garrison under Lord Baden-Powell withstood a siege (Oct 12, 1899–May 17, 1900) for 217 days until relief arrived

Maffei, Francesco Scipione, marchese di (frănchä'sko shēpyō'nā märkä'zā dē mäf-fā'ē), 1675–1755, Italian author and scholar. He wrote plays,

poems, translations of the classics, and works on the theater, theological history, archaeology, criticism, and his native city, Verona. He stimulated the development of Italian drama and is best known for his tragedy *Merope* produced in 1713 and printed in 1714.

Maffitt, John Newland (mă'fĭt), 1819–86, American naval officer. He was born at sea. Appointed a midshipman in the U S navy in 1832, Maffitt served many years in the Coast Survey. He resigned in April, 1861, and was commissioned in the Confederate navy. In the Civil War he distinguished himself particularly in 1862–63 as commander of the *Florida*, one of the outstanding CONFEDERATE CRUISERS. See biography by his wife, Emma M. Maffitt (1906).

Mafia (mä'fēä), name given to a number of organized bands of Sicilian brigands in the 19th and 20th cent. Unlike the CAMORRA in Naples, the Mafia had no hierarchic organization, each group operating on its own. The Mafia originated in feudal times, when lords hired brigands to guard their estates in exchange for protection from the royal authority. The underlying principle of the Mafia was that legal authorities were useless and that justice must be obtained directly, as in the VENDETTA. Political corruption gave the Mafia tremendous influence. The organization spread, through emigration, to the United States and created particular trouble in LOUISIANA. Mussolini suppressed the Mafia in a vigorous campaign, but after the Second World War it showed signs of revival.

Mafra (mă'frŭ), town (pop. 3,223), W Portugal, in Estremadura, near Lisbon and the Atlantic coast. It is noted for the immense monastery and palace which John V began to build in 1717 to rival the Spanish Escorial. The church is remarkable for its colored marbles and precious woods as well as for its size.

Magadan (mä'gudän'), see MAGDALA.

Magadan (mägudän'), city (1940 estimated pop. 40,000), N Khabarovsk Territory, RSFSR, in NE Siberia, a port on the Sea of Okhotsk. Founded in 1932, it is a supply point for the Kolyma gold region.

Magadha (mä'gudu), Hindu kingdom, c. 650–c. 320 B.C., in present-day S Bihar state, India. One of its later capitals was Pataliputra (now Patna). Buddhism and Jainism first developed in Magadha. Its territory fell to the Maurya empire.

Magadi Lake (muga'dē), area 240 sq. mi., S Kenya colony, in the Great Rift Valley. It is at an elevation of 1,978 ft. Carbonate of soda is dredged from the lake floor.

Magallanes, Chile: see PUNTA ARENAS.

magazine: see PERIODICAL.

Magazine, Mount, peak, 2,800 ft. high, W Ark., in the Ouachita Mts. E of Booneville.

Magbish, family in the return, EZRA 2:30.

Magdala (măg'dulu), home of St. Mary Magdalen. It is probably to be identified with Mejdel, a hamlet on the west shore of the Sea of Galilee. In some Bible sources Magdala is read in Mat. 15:39, others give Magadan, a place not otherwise known. The comparable passage reads DALMANUTHA.

Magdala (măg'dăla, măg'dulu), village, NE Ethiopia. It is on a high butte difficult of access. Here King Theodore II held as prisoners Englishmen who had come on a diplomatic mission. They were rescued in 1868 by a military expedition under Sir Robert Napier, who was created Baron Napier of Magdala for his exploit.

Magdalen: see MARY MAGDALEN, SAINT.

Magdalena, village (pop. 1,324), W central N Mex., SW of Albuquerque, founded 1884. It is a trade and shipping center for a livestock and mineral area.

Magdalena (măgdhalh'nu), river, over 1,000 mi. long, rising in SW Colombia and flowing N to the Caribbean near BARRANQUILLA. Discovered (1501) by BASTIDAS, it is the republic's most natural, vital, but difficult avenue of communication, flowing along a fault c. 50 mi. wide through the Andes to a broad, swampy, alluvial plain. Here it is joined by the CAUCA. Its course is navigable for 900 mi. but is impeded by sand bars, by rapids at HONDA, and by a fluctuating water level. Economic development of the tropical Magdalena valley has been retarded except for the recent growth of the oil industry. Ever since its exploration by JIMÉNEZ DE QUESADA in 1536, the Magdalena has profoundly influenced the economic and political life of Colombia.

Magdalen College (môd'lĭn), see OXFORD UNIVERSITY.

Magdalene College (môd'lĭn), see CAMBRIDGE UNIVERSITY.

Magdalenian: see PALEOLITHIC PERIOD.

Magdalen Islands (măg'dulun), group of nine main islands and numerous islets (102 sq. mi., pop. 8,940), belonging to Quebec, in the Gulf of St. Lawrence N of Prince Edward Island. They were discovered (1534) by Jacques Cartier. In 1787 they became the property of Sir Isaac Coffin, in 1903 they were purchased by the Magdalen Islands Company. The main islands are Alright, Amherst, Brion, Coffin, East, Entry, Grindstone, Grosse, and Wolfe. Fishing and whaling are the chief occupations of the islanders, most of whom are of French origin.

Magdeburg (măk'dûbôôrk), city (pop. 236,326), capital of the former Saxony prov. of Prussia, E central Germany, on the Elbe. A large inland port, it is also an industrial center with steel, paper, and textile mills, sugar refineries, and metallurgical and machine-building plants. It is the center of the chief beet-sugar region of Germany. First mentioned in 805, Magdeburg became under Emperor Otto I an outpost for the colonization of the Wendish territories and was made (968) an archiepiscopal see. The archbishops of Magdeburg ruled a large territory as princes of the Holy Roman Empire. The city of Magdeburg obtained from them a charter which was the model of hundreds of medieval town charters in Germany, Austria, Bohemia, and Poland. Under this Magdeburg Law a town governed itself through an elected council, had its own courts of justice, and was exempt from all duties except the payment of rent to the prince of the land. Magdeburg prospered and became one of the chief members of the Hanseatic League. It accepted (1524) the Reformation, joined (1531) the SCHMALKALDIC LEAGUE, and continued its resistance against Emperor Charles V even after the Schmalkaldic War until its fall (1551) to Maurice of Saxony. The city was now a stronghold of Lutheranism. Here Flacius Illyricus edited (late 16th cent.) the *Magdeburg Centuries*, the first comprehensive history of Protestantism. Cardinal ALBERT of Brandenburg, archbishop of Mainz and Magdeburg and bishop of Halberstadt, by his authorization of the sale of indulgences had been instrumental in bringing about Luther's reform. His successor in Magdeburg, who was also a member of the house of Brandenburg, accepted Protestantism, and after his death members of his family continued to rule the archbishopric as administrators. In the Thirty Years War the imperial forces under Tilly and Pappenheim laid siege to Brandenburg in 1630. Gustavus II of Sweden, who might have come to its relief, protracted his negotiations with the Protestant German princes. On May 20, 1631, the imperial troops stormed the city and put the garrison to the sword, fires broke out in various quarters, and on the following day virtually the entire city had burned down. At least 20,000 people (more than half the population) perished in the sacking that accompanied the conflagration. The sack of Magdeburg produced an immense impression and caused the Protestant princes to conclude a closer alliance. The Protestant charge that Tilly had ordered the sack is unfounded, in fact he took stern measures to halt it. The theory that the defenders themselves put fire to the city is equally doubtful. The city was rebuilt and its trade revived after the Peace of Westphalia (1648), which transferred both the city and the archbishopric (which was secularized and made a duchy) to the electorate of Brandenburg. Magdeburg long was an important Prussian fortress. In the Second World War more than half the city (including the entire old section) was destroyed. The 13th-century cathedral, which had survived the fire of 1631, was damaged. Otto von GUERICKE, inventor of the Magdeburg hemispheres, the composer Telemann, and Baron von Steuben were born here.

Magdiel (măg'dēĕl), duke of Edom. Gen. 36:43, 1 Chron. 1:54.

Magee, town (pop. 1,221), S central Miss., between Jackson and Hattiesburg, in a cotton, truck, and poultry area. Near by is a state tuberculosis sanatorium.

Magellan, Ferdinand (mujĕ'lun), Port. *Fernão de Magalhães*, Span. *Fernando de Magallanes*, c. 1480–1521, Portuguese navigator. Born of a noble family, he was reared as a page in the royal household. He served (1505–12) in Portuguese India, under Francisco de ALMEIDA and later under Afonso de ALBUQUERQUE. In 1513–14 he served in Morocco, where he was accused of financial irregularities. Although the authorities there refused to proceed against him, he lost the favor of Manuel I, who rejected his proposal to reach the MOLUCCAS by a western route. Hence in 1517 he went to Spain, where (March 22, 1518) his plan was approved by King Charles I (later Emperor Charles V). Portuguese efforts failed to prevent the voyage. With five vessels and some 270 men, Magellan sailed from Sanlúcar de Barrameda on Sept. 20, 1519. Sighting the South American coast near Pernambuco, he searched for the suspected but unknown passage to the South Sea. In Jan., 1520, the Río de la Plata was carefully explored. While wintering in Patagonia (March–Aug., 1520), he summarily put down a mutiny of some of his officers. On Oct. 21 he discovered and entered the strait which bears his name, and Nov. 28, 1520 he reached the Pacific. His fleet, now consisting of three vessels, sailed NW across the Pacific. No land was sighted in nearly two months, no provisions were obtained in three, the men suffered intensely. Magellan reached the Marianas March 6, 1521, and 10 days later the Philippines, where he was killed (April 27) while supporting one group of natives against another. Soon after, the *Concepción* was burned as unseaworthy, the remaining two vessels visiting Borneo and then the Moluccas, where they loaded spices. The *Trinidad* sailed for Panama but, forced to turn back, was wrecked, only four of her crew eventually reached Spain. The *Victoria*, commanded by Juan Sebastián del CANO, sailed across the Indian Ocean, rounded the Cape of Good Hope, got into trouble with the Portuguese, who held 13 men of her crew at the Cape Verde Islands, and finally, with only 18 men, reached Sanlúcar Sept. 6, 1522, thus completing the first voyage around the world. Although he did not live to complete the first circumnavigation of the world, Magellan's was the skill and determination which took the vessels over the great unknown portion, one of the greatest achievements on the sea. The voyage proved definitely the roundness of the earth, it revolutionized ideas as to the relative proportions of land and water, it revealed the Americas as a new world, separate from Asia. See the firsthand account of Antonio Pigafetta, *Magellan's Voyage around the World* (ed. by J. A. Robertson, 1906), biographies by F. H. H. Guillemard (1890), E. F. Benson (1929), and Stefan Zweig (1938).

Magellan, Strait of, c. 330 mi. long and 2½–15 mi. wide, separating South America from Tierra del Fuego and other islands south of the continent. Except for a few miles at its western end in Argentina, it passes through Chile. The strait, discovered by MAGELLAN in 1520, was important in the days of sailing ships, especially before the building of the Panama Canal, and is still used by ships rounding South America. One of the most scenic waterways in the world, it affords an inland passage protected from almost continuous ocean storms. The only city on the strait is PUNTA ARENAS.

Magendie, François (fräswa' mäzhädē'), 1783–1855, French physician. He taught at the Collège de France and is considered a founder of experimental physiology. Much of his experimental work was performed on animals. He distinguished the motor and sensory portions of peripheral nerves and studied the function of veins, the effect of air in arteries, and the effects and uses of various drugs.

Magenta (mujĕn'tu, Ital. mäjän'ta), town (pop. 10,470), Lombardy, N Italy, 15 mi. W of Milan. Here in 1859 the French and Sardinians won a decisive victory over the Austrians which opened the way to Milan. General MacMahon played a leading role in the battle and was made duke of Magenta.

magenta: see FUCHSINE.

Maggiore, Lago (lä'gō mäd-jō'rā), or **Verbano** (vĕr-bä'nō), second largest lake of Italy, area 82 sq. mi., c. 40 mi. long, in the Alpine foothills of Lombardy. Formed by the Ticino river, it lies partly in Switzerland, but mostly in Italy. Along part of its western shore run the SIMPLON road and railroad. The lake is dotted with villas and resorts, notably at STRESA, Baveno, Pallanza, Intra, and (on the Swiss side) LOCARNO. The Borromean Islands, four small islets near Stresa, include the Isola Bella, with the Borromeo Palace (now a museum) and with beautiful gardens.

maggot: see BLOWFLY, FLY, LARVA.

Maghreb or **Maghrib** (both mä'grĭb) [Arabic, =the West], Arabic term for the northern part of Africa. Some writers, especially during the Moslem domination, included Spain.

Magi (mā'jī), priestly caste of ancient Persia. Probably Median in origin, they were, according to Herodotus, a tribe rather than a priestly family. ZOROASTER is thought to have been a Magus. Study of the Magi is thorny with problems. They are thought to have molded a pre-Zoroastrian religion, nothing is known of it except by inference. After Zoroaster, Magian priests headed Zoroastrianism; the greatest was Saena. The Magi were revered by classic authors as wise men, and their reputed power over demons gave rise to the word *magic*. For the Magi of Mat. 2, see WISE MEN OF THE EAST.

magic, the practice of manipulating the course of Nature by supernatural means. In aim (i.e., the use and changing of nature to a desired end) magic approximates the aim of science, and in later times the science of chemistry grew out of the magical art of ALCHEMY. Magic, although closely allied to religion, is to be distinguished from religion in that religion is intended to reverence and worship supernatural beings, while magic seeks to control supernatural forces to a desired end. Underlying magic is generally the belief that there is a supernatural spirit permeating all things (see ANIMISM) which can be controlled and manipulated by verbal or written pronouncements (see INCANTATION, SPELL, CHARM), by the wearing of an AMULET, and by imitative acts. Imitative, or *sympathetic*, magic is based on analogy. Thus an American Indian of the N Pacific coast area, knowing that sea shells grow very old, will rub some sea-shell dust upon his son's forehead to insure, by analogy, longevity. Agricultural FERTILITY RITES are founded on an analogy between plant and human generation. Not only could human life be extended and fields made to prosper by magic but enemies could be destroyed, sickness cured, woman made to bear, rain to fall, love to prosper, and the past and

future told (see DIVINATION). Almost all the ancients practiced magic (the name comes from Persian priests who were called Magi) The Chaldeans had an extensive system of divination, dream interpretations, demonology, and medicine The Egyptians had secret names, apparently believing that there was no difference between the name and the thing it denoted. The Greeks emphasized the spoken and written word, as in oracles The Romans elevated magic to a state system of political and utilitarian prophecy From the beginning of the Christian era, the Church combated pagan religion and magic, fearing the effects of the practice Occultism was made disreputable among Christians, and thereafter was called the black art It still survived, however, and those people who practiced it became known as sorcerers and witches People believed that these followers of WITCHCRAFT and sorcery could change themselves into cats, particularly black cats, wolves (see LYCANTHROPY), bats, and the like Witches were able to cast spells and thus enchant unwary people Many of our present-day superstitions are survivals of pagan magic Authorities hold that magic was employed in late Paleolithic times It is still found in many places today, and not only in "primitive" societies, but also in urbane and educated circles See FAKIR and YOGA See Lynn Thorndike, *The Place of Magic in the Intellectual History of Europe* (1905) and *History of Magic and Experimental Science* (6 vols , 1923–41), James Frazer, *The Golden Bough* (12 vols , 1907–15), Frederick Schleiter, *Religion and Culture* (1919)

magic lantern see STEREOPTICON

magic square, a square divided into parts with letters or numbers inscribed therein which, whether combined vertically, horizontally, or diagonally, form the same word or the same sum In ancient times such squares were thought to have magic properties, perhaps connected with the stars They were worn as amulets by the Arabians, as they still are in parts of India See W W R Ball, *Mathematical Recreations* (rev ed , 1947) Example

Maginn, William (mugĭn'), 1793–1842, Irish poet, journalist, and short-story writer Some of his best stories and essays appeared in *Blackwood's Magazine* In 1830 he established the highly successful *Fraser's Magazine*, writing for it clever satires and parodies Captain Shandon in Thackeray's *Pendennis* is a portrait of Maginn See M M H Thrall, *Rebellious Fraser's* (1937)

Maginot Line (mă'zhĭnō, Fr măzhēnō'), mighty system of fortifications along the eastern frontier of France, extending from the Swiss border to the Belgian It was named for André Maginot (1877–1932), French minister of war (1929–30), who began its construction Considered impregnable, the line was not even completed when the Second World War broke out in 1939 Its actual strength was never tested, for the line was turned by the Germans in their French campaign of 1940 Like all fortified lines since the building of the Great Wall of China, the chief effect it had was to lull its builders into a false sense of security Though certainly complementary to the French system of defense, it could not—as it was vaguely expected to do—eliminate the necessity of mobile warfare That particular lesson was thoroughly learned after the French collapse of 1940, and military thinking has since then steered away from similar concepts

Magliabechi, Antonio (antō'nyō malyäbā'kē), 1633–1714, Italian librarian, b Florence For 40 years, while he was a goldsmith, he devoted himself to learning, mastering among other things Greek, Latin, and Hebrew He became known throughout Europe for his prodigious memory In 1673 he was appointed court librarian by Cosimo III de' Medici, grand duke of Tuscany At Magliabechi's death he bequeathed his library of 30,000 volumes to the grand duke, who gave it to the city of Florence, where it now forms part of the National Library

Magna Carta or **Magna Charta,** the most important instrument of English constitutional history, issued by King John at Runnymede, under the compulsion of his barons, June, 1215 John, by his continual extortions of money and his violations of feudal customs, had aroused not only the barons, but also many of the lesser gentry, the knights, and the townspeople In addition, a large group of churchmen, headed by Stephen LANGTON, opposed the king even after John's reconciliation with the pope The lower classes—serfs and artisans—were not actively rebellious, but, though the uprising of 1213–15 was dominated by the barons, it was in a sense a national reaction The king, faced by superior force, was compelled to enter into parleys with the barons at Runnymede. On June 15, 1215, after some attempts at evasion, John set his seal to the preliminary draft of demands presented by the barons, and after several days of debate a compromise was reached (June 19) The resulting document was put forth in the form of a charter freely granted by the king, though in actuality its guarantees were extorted by the barons from John. The original charter, in Latin, is a relatively brief, and sometimes vague, document of some 70 clauses, many of which were of only transient significance. In some respects the charter was a reactionary document; its purpose was to insure feudal rights and dues and to guarantee that the king would not encroach upon baronial privileges. Articles specifically protecting villeins and tenants were few The barons, however, did seek to retain the constitutional advances made under John's predecessors There were provisions guaranteeing the freedom of the Church and the customs of the towns, special privileges being conferred upon London The charter definitely implies that there are laws protecting the rights of subjects and communities which the king is bound to observe or, if he fails to do so, be compelled to observe by force Most important were the vaguely worded general grants against oppression of all subjects, which later came to be interpreted as guarantees of trial by jury and of habeas corpus Such interpretations, however, were the work of later scholarship and are not explicit in the charter itself The true meaning of the charter, indeed, has only been determined by recent study, but its importance in the development of the British constitution is not vitiated by the fact that many of the early interpretations of its provisions were based upon bad historical work or false reasoning As an actual instrument of government the charter was, at first, a failure John repudiated it as a grant made under coercion, and he was released from its observance by the pope The clumsy machinery set up to prevent the king's violation of the charter never had an opportunity to function, and civil war broke out the same year On John's death in 1216, the charter was reissued in the name of young King Henry III, but with a number of significant omissions relative to safeguards of national liberties and restrictions on taxation. In another reissue the following year, clauses relating to the forests were combined into a Forest Charter, the remaining larger group, in what was substantially to be its permanent form, became known as the Great Charter or Charter of Liberties In later years it became a symbol of the supremacy of the constitution over the king, as opponents of arbitrary royal power extracted from it various "democratic" interpretations This movement reached its height during the Puritan Revolution of the 17th cent in the work of parliamentary apologists such as Sir Edward COKE It came to be thought that the charter forbade taxation without representation, that it guaranteed jury trial, even that it invested the House of Commons (nonexistent in 1215) with great powers These myths persisted until the 19th cent , when extremists among scholars came to maintain that the Magna Carta was a completely reactionary, not a progressive, document—that it was merely a guarantee of feudal rights It is generally recognized now that it was more than that, the charter did definitely set forth the theory that the power of the king was not supreme But most important was the fact that it could later be interpreted as it was Potentially it was the guarantee of liberties that it came to be There are four extant copies of the charter of 1215 See W S McKechnie, *Magna Carta a Commentary* (1914), G B Adams, *Constitutional History of England* (1936), Faith Thompson, *Magna Carta* (1948)

Magna Graecia (măg'nŭ grē'shu) [Latin, =great Greece], Greek colonies of S Italy The Greek overseas expansion of the 8th cent B C founded a number of towns which became the centers of a new, thriving Greek territory They were on both coasts from the Bay of Naples and the Gulf of Taranto southward, there were no inland settlements Unlike Greek Sicily, Magna Graecia began to decline by 500 B C , probably because of malaria and endless internecine warfare Only Tarentum (now Taranto) and Cumae remained individually very significant The chief part of Magna Graecia in Greek cultural history was as the center of two philosophical groups in the 6th cent B C , that of Parmenides at Elea and that of Pythagoras at Crotona Through Cumae especially, the Etruscans of Capua and the Romans came into early contact with Greek civilization The following are the chief cities of Magna Graecia (those colonized from Greece, except Thurii, go back to the 8th cent B C ; those colonized locally are perhaps a century younger)—on the east coast from north to south, Tarentum (colonized from Sparta), Metapontum (from Achaea), Heraclea (from Tarentum), Siris (from Colophon), Sybaris (from Achaea), Thurii (from Athens, replacing Sybaris), Crotona (from Achaea), Caulonia (from Crotona), Epizephyrian Locris (from Locris), on the west coast from north to south, Cumae (from Chalcis), Neapolis (now Naples, from Cumae), Paestum or Posidonia (from Sybaris), Elea, Laos (from Sybaris), Hipponium (from Epizephyrian Locris), and Rhegium (now Reggio di Calabria, from Chalcis) See David Randall-MacIver, *Greek Cities of Italy and Sicily* (1931).

magnalium (măgnā'lēum), alloy of aluminum and magnesium (about 5 percent), often containing small amounts of copper, manganese, and silicon Its density is 2.5 g per cubic centimeter or 156 lb per cubic foot; since it is silver white and lighter and more workable than aluminum, it is used in making metal mirrors and scientific instruments

Magnesia, two ancient cities of Lydia, W Asia Minor (now W Turkey). They were colonies of the Magnetes of E Thessaly. One (Magnesia ad Maeandrum), SE of Smyrna, was later colonized by Ionians and given by Artaxerxes to Themistocles, who died there. There are important ruins, including the celebrated temple of Artemis Leucophryene Magnesia ad Sipylum, on the Hermus river at the foot of Mt Sipylus, NE of Smyrna, was the scene of the defeat of Antiochus III (Antiochus the Great) by the Romans (190 B.C) The present MANISA is near by

magnesia (măgnē'shŭ, -shō), magnesium oxide, a compound of the metal and oxygen. Because of its high melting point (2800°C) and its low heat conductivity, it is used to line electric furnaces, to make firebricks, and for covering boilers and hot pipes It reacts with water slowly to form the hydroxide, a nearly insoluble substance Magnesium oxide is usually prepared by heating the carbonate It is formed also when the nitrate is heated and when magnesium burns in air Citrate of magnesia is the magnesium salt of CITRIC ACID A suspension of magnesium oxide in water forms milk of magnesia, which is used commonly in medicine as an antacid and mild laxative

magnesite (măg'nĭsīt), a mineral, magnesium carbonate, white, yellow, or gray in color It originates through the alteration of olivine or of serpentine by waters carrying carbon dioxide, through the replacement of calcium by magnesium in calcareous rocks, sometimes limestone, more often dolomite, and through precipitation from waters rich in magnesium that have undergone reaction with sodium carbonate Caustic magnesite is not thoroughly calcined, 3 to 4 percent of carbon dioxide being left, mixed with magnesium chloride it makes oxychloride cement, which is extensively used for floorings and as a stucco Dead-burned magnesite is calcined in kilns until it contains less than 1 percent of carbon dioxide, it is made into an excellent FIREBRICK Magnesite is also used in the manufacture of Epsom salts, face powder, boiler wrappings, and disinfectants

magnesium (măgnē'sēum, -zēum, -zhum, -shum), active metallic element (symbol = Mg, for physical constants, see ELEMENT, table), silver white, resembling aluminum in physical properties, ductile malleable, not affected by dry air, but tarnishing in moist air When ignited it burns brilliantly in air (hence its use in flashlight powder and PYROTECHNICS), yielding the oxide, magnesia It is a good reducing agent Magnesium is grouped with beryllium, calcium, strontium, and barium in the periodic table and is sometimes included with the last three as a metal of the ALKALINE EARTHS It forms many compounds with other elements, several of which are found widely distributed in nature With carbon and oxygen it forms magnesium carbonate, called MAGNESITE, with calcium, carbon, and oxygen, the double carbonate, DOLOMITE, with chlorine, the chloride present in natural waters, with chlorine and potassium, the double chloride, carnallite; with sulphur and oxygen, the sulphate, as either kieserite (the monohydrate) or EPSOM SALTS (the heptahydrate, 1 e , having seven molecules of water), with oxygen, the oxide, MAGNESIA, and with phosphorus, oxygen and the ammonium radical, magnesium ammonium phosphate With silicon, in the form of the silicate, it is present in such substances as asbestos, meerschaum, serpentine, talc, and tourmaline The metal is usually prepared by the electrolysis of a fused MIXTURE of chlorides (magnesium, potassium, and sodium) or by the electrolysis of magnesium oxide dissolved in fluorides It is extracted on a commercial scale from sea water The commercial product appears either as a powder or as a metal ribbon Besides its use in making signal lights and fireworks, in medicine (as Epsom salts, milk of magnesia, and citrate of magnesia), and in photography, magnesium is extensively employed in making alloys with aluminum These are very light and strong and include DURALUMIN (aluminum, copper, and magnesium) and MAGNALIUM (aluminum and magnesium alone) Another alloy contains aluminum, copper, nickel and manganese The element is present in some glass and in the soil in the form of salts, when it is used by plants for food and is one of the elemental constituents of chlorophyll, the green coloring matter in plants A strip of the metal is used as a fuse in the thermite process Davy obtained a very small quantity of magnesium in 1808, but it was not until 1831 that A A B Bussy prepared it in larger amounts

magnet: see MAGNETISM.

magnetic poles. The earth, like every other magnet (see MAGNETISM), has two magnetic poles—places on its surface where the magnetic force is vertically downward (causing the dipping needle to stand at 90°) and where the horizontal compass is useless The north magnetic pole, first located (1831) by Sir James C. Ross at lat. 70° 51′ N and long. 96°

46′ W, in the Boothia Peninsula of N Canada, was placed in 1948 on Prince of Wales Island at lat 73° N and long. 100° W. The south magnetic pole, reached (1909) by Sir T W E David and Sir Douglas Mawson, was tentatively located by them at lat 72° 25′ S and long. 155° 16′ E, on Antarctica It is at present near lat 70° S and long. 148° E, inland from George V Coast

magnetic pyrite: see PYRRHOTITE.

magnetism, property of attracting iron, exhibited by certain substances in varying degree, as by lodestone, iron, steel, nickel, and cobalt Lodestone, a form of MAGNETITE, is said to be a natural magnet because it possesses magnetism in its natural state, the phenomenon of magnetism was probably first observed by the ancients in lodestone Substances that do not possess magnetism naturally but acquire it after special treatment are known as artificial magnets Magnetism can be produced in iron or steel in various ways If, for example, a bar of either of these substances is rubbed or stroked with a strong magnet, it will become magnetic Magnetism can be produced also when the piece of metal is laid parallel to a magnet and tapped gently a number of times, magnetizing in this way is called magnetic induction An ELECTROMAGNET can be made by winding around a soft iron bar or core a coil of insulated wire carrying an electric current Substances differ as to the ease with which they can be magnetized (i e , in permeability) and also in their ability to retain their magnetism (i e , in retentivity) For example, soft iron is easily magnetized but loses its magnetism very rapidly Certain steels are magnetized with difficulty but retain their magnetism for a long time Magnets made of such steel are commonly called permanent magnets, they are usually made in the form of a rod or bar or of a "U" or horseshoe An ordinary artificial magnet made of a bar of steel demonstrates several general properties of magnets When such a magnet is suspended in the air so that it can move freely in any direction, it comes to rest eventually with its long axis in a general north-south direction, because of the magnetic effect of the earth The end of the bar pointing in the northerly direction is called the north-seeking pole, that pointing toward the south, the south-seeking pole Experiment shows that like poles, i e , north and north or south and south, repel each other, and that unlike poles attract each other The magnetism of a magnet has been found to be concentrated in the region of its poles, a condition termed polarity Polarity can be demonstrated by placing a magnet in a horizontal position and covering it with a piece of light cardboard over which iron filings are then scattered When the paper is tapped gently, the iron filings become magnetized by induction and arrange themselves in an outline of the bar, collecting in especially thick clusters around the two poles The filings which are situated too far from the magnet to be drawn to its surface are nevertheless affected by the magnetism, they become arranged in definite curved lines that extend outward from one pole and curve backward to the other pole through the area in which the magnetism of the bar is active This area is called the magnetic field of force, and the lines through which the magnetism appears to act are called lines of magnetic force Theoretically, the flow of magnetic force is supposed to be through a continuous path (closed circuit), the direction of flow being from the north-seeking pole outward through the lines of force to the south-seeking pole and from there through the body of the magnet back to the north-seeking pole The strength of the magnetic field is measured according to the number of lines of force crossing a unit area such as a square centimeter. When a magnetized body—a compass needle, for example—is placed in a magnetic field, it tends to swing into a position parallel to the lines of force Iron, the most magnetic substance, and nickel, cobalt, and other highly magnetic substances are called ferromagnetic The paramagnetic substances are those which are only feebly attracted by a magnet When a rod of a ferromagnetic or a paramagnetic substance is placed in a magnetic field it tends to turn parallel to the field. Diamagnetic substances (e g , antimony and bismuth) are repelled by a magnet, and a rod of these substances in a magnetic field tends to turn at right angles to the field The exact nature of magnetism is not yet fully understood One theory advanced by J A Ewing holds that magnetism is a property of the molecules of the substance of which the magnet is made and depends upon their arrangement in the body of the magnet Each molecule is considered to be a tiny magnet, and it is held that if the molecules of a given body, a flat bar of iron, for example, are arranged in orderly rows along its length, with north poles all pointing in one direction and south in the other, their magnetism becomes so concentrated that the bar as a whole becomes a magnet. When all the molecules are thus arranged, "saturation" is said to have been reached This theory of magnetism is based upon the observation that if a bar magnet is cut in half, each half itself becomes a magnet and that if, in turn, each of these halves is cut in half, each yields two more magnets, and so on; it is assumed, therefore, that this division could be carried out and new magnets produced until magnets consisting of a single molecule are obtained It has been observed that any treatment given a magnet which would affect the arrangement of the molecules of the magnetized substance (such as pounding or extreme heating) results in a loss of magnetism According to this theory, the magnetizing of a body consists in causing its scattered molecules to be rearranged in orderly rows Many other theories concerning the nature of magnetism have been advanced in the past; more recently the theory that it is caused by the movement of the electrons in the atom was introduced, and this has been rather widely supported The original discovery of magnetism is not known, but to William Gilbert is commonly attributed the first important scientific work on the subject (1600) No further important steps were made in its study until the late 18th cent , when Coulomb presented the results of his research, which were later substantiated by C F Gauss Later A M Ampère showed a relationship between magnetism and electricity, Oersted demonstrated the effect produced upon a magnetic needle by a current of electricity flowing through a conductor, Faraday described the magnetic lines of force in a magnetic field and discovered electromagnetic induction, Joseph Henry demonstrated the electromagnet, and Harold Pender discovered a magnetic field around a moving, electrically charged body Especially important are the discoveries of J C MAXWELL and J J THOMSON The study of **terrestrial magnetism** is based on the assumption that the earth is a gigantic magnet Compass needles on its surface arrange themselves in a general north-south position They do not, however, point directly to the north and south geographical poles of the earth, and it is therefore concluded that the magnetic and geographical poles do not coincide The deviation of a compass needle from the geographical north-south direction is called declination The magnetic poles, unlike the geographic poles, are not fixed, but are continuously changing their positions, so that the declination at a given point varies also Maps are made which have irregular lines, called isogonic lines, drawn upon them and extending north and south, to indicate the points on the earth's surface where the declination is the same It is known also that a magnetic needle does not remain in a horizontal position (if it is so mounted that it can move freely from horizontal to vertical) at all points on the earth's surface The deviation of the needle from the horizontal is called the dip or inclination When such a needle is carried toward either magnetic pole, it dips more and more until at the pole it is in a vertical position Near the equator, however, on a line known as the magnetic equator, no dip is observable Like other magnets the earth under certain conditions is apparently able to impart magnetism to substances such as iron The discovery of the deviation of the compass needle from the geographical north-south position is a subject of controversy. Commonly, it is attributed to Columbus on his voyage to America To Robert Norman, an English instrument maker of the 16th cent , is credited the discovery of the dip or inclination The first adequate explanation of terrestrial magnetism was offered by William Gilbert in 1600 Discovery that the declination (deviation) of the compass needle varied even during each day (diurnal variation) did not come until the 18th cent , and the definite and systematic observation of the magnetic action in various parts of the world was instigated by Alexander von Humboldt and Gauss Johann von Lamont made a number of surveys during the 19th cent , a work later taken up in the 20th cent , directed, and coordinated internationally by L A BAUER See D L Hazard, *The Earth's Magnetism* (U S Coast and Geodetic Survey, Special Publication 117), J A Fleming, ed , *Terrestrial Magnetism and Electricity* (1949)

magnetite (măgˈnətītˌ), lustrous black, magnetic mineral, a compound of iron and oxygen containing a large percentage of the metal It occurs in crystals of the cubic system, in masses, and as a loose sand It is one of the important ores of iron (magnetic iron ore), being a common constituent of igneous and metamorphic rocks It is found in Norway, Sweden, the Urals, and various parts of the United States A variety of magnetite, lodestone or loadstone, exhibits polarity and is especially interesting for its natural magnetism, its best-known locality is Magnet Cove, Ark

magneto: see GENERATOR.

Magnificat (măgnĭfˈĭkătˌ) [Latin, =magnifies], song of the Virgin beginning, "Magnificat anima mea Dominum" [my soul doth magnify the Lord] Luke 1 46–55. It is the daily vesper hymn of the Roman Church and is usually sung at evening prayer in the Church of England

magnifying glass: see MICROSCOPE

Magnitogorsk (mŭgnyēˈtŭgôrskˈ), city (1946 estimated pop 200,000), RSFSR, on the Ural river and the conventional border of Europe and Asia Planned in 1929, it grew rapidly into the chief metallurgical center of the USSR. American engineers assisted in the early stages of its growth. Its industries are based on the high-grade magnetite mined in the Magnitnaya Mt (on the southwestern slope of which the city is built), on iron ore and alloys from the Urals, and on coal from Karaganda and from the Kuznetsk Basin Magnitogorsk covers an area of 30 sq mi Its largest plant, the Stalin Steel Works, constructed in 1931, includes (as of 1948) 8 blast furnaces, 26 open-hearth furnaces, and 8 rolling mills. Large residential constructions were still under way in 1950

magnitude, in astronomy, the term used for a measure of the brightness or visibility of a star or other celestial object PTOLEMY published a scale of six magnitudes in which the brightest stars are of the first magnitude and the faintest stars visible to unaided human vision are of the sixth magnitude When the use of the telescope extended the visibility of heavenly bodies, the system was extended and smaller gradations of brilliancy could be discriminated An English astronomer N R Pogson standardized the Ptolemaic scale by establishing a light ratio Measurements with photometers revealed that first magnitude stars were about 100 times brighter than the average brightness of those of sixth magnitude The ratio of brightness between any two successive magnitudes was therefore calculated to be 2 51 (the fifth root of 100) Thus if the quantity of light given out by a star of sixth magnitude be represented as one, a star of the next degree of brightness will give a quantity represented by 2 512 When brightness greater than that of the first magnitude is to be expressed, the degrees of brightness are indicated by negative numbers A star giving 2 512 times as great a light as one of the standard first-magnitude stars is of zero magnitude Sirius is 1 6 times as bright as that, therefore its magnitude is given as (−1 6)

Magnolia. **1** City (pop 4,326), co seat of Columbia co , SW Ark , near Louisiana, settled 1852, inc 1855 Its oil industry has been important since 1938, and there is a large textile mill A state junior agricultural and mechanical college is here **2** City (pop 2 125), co seat of Pike co , SW Miss S of McComb City near the La line It makes cotton goods **3** Borough (pop 1,552), SW N J , SE of Camden, inc 1915 Its early name was Greenland from the color of the marlaceous soil here

magnolia, any species of the genus *Magnolia*, evergreen and deciduous trees or shrubs native to North and Central America and Asia Among the numerous species are some considered to be the most beautiful flowering trees in North America The hardier kinds are deciduous Native American magnolias bloom when the trees are in leaf, many introduced kinds bloom before the leaves appear The bull bay (*Magnolia grandiflora*) of Southern coastal regions has huge white flowers resembling the water lily, among the largest of any tree blossom, while the Southern umbrella tree (*M tripetala*) has perhaps the largest simple leaves (from 1 to 2 ft long), of any North American tree The cucumber tree (*M acuminata*), so called because of the appearance of its unripe fruits, grows wild as far north as New York and Ohio Its wood is light and soft and is used in interior finishes and cabinetwork, sometimes as a substitute for tulip poplar The sweet bay (*M. virginiana*) is native from Texas to New England. See J G Millais, *Magnolias* (1927)

Magnus I (Magnus the Good), 1024–47, king of Norway and Denmark, son of St Olaf He was recalled by the national party when they rebelled against Sweyn, son of Canute In 1038 he made a treaty with Harthacanute of Denmark, by which either king, if he died without an heir, was to be succeeded by the other Magnus at first dealt harshly with his father's enemies and kept the oppressive laws of Sweyn in force, but later granted an amnesty and revoked Sweyn's laws He succeeded Harthacanute in Denmark (1042) and at first claimed the throne of England, but was prevented from pressing his claim by the necessity of crushing a Danish revolt and of fighting against the Wends. Later he consented to dividing the realm with his uncle HAROLD III

Magnus VI (Magnus the Law Mender), 1238–80, king of Norway (1263–80), son of Haakon IV. A man of peace, he brought an end to the Scottish war by ceding the Hebrides and the Isle of Man to Alexander III (1266) He immediately undertook a general revision of the laws, introducing a new code for the kingdom (1274) and subsequently new municipal laws His code introduced the concept that crime is an offense against the state rather than against the individual and narrowed the possibilities of personal vengeance It greatly increased the power of the king, making the throne the source of justice The municipal law gave the cities increased freedom from rural control One of his enactments fixed the law of succession to the throne, another, by its creation of a new royal council and of new ranks of nobility, laid the foundation of a new governing class. In 1277 Magnus made a concordat with the Church See L M. Larson, *The Earliest Norwegian Laws* (1934)

Magnus VII (Magnus Smek) [the effeminate, from Swed. *smeka*=to fondle], 1316–73, king of Norway

(1319–43) and Sweden (1319–64) He succeeded his grandfather, Haakon V, in Norway, at the same time he was elected king by the Swedish nobles to succeed his exiled uncle, King Birger of Sweden He was declared of age in 1332 Educated in Sweden, he neglected Norway and soon became unpopular there However, despite accusations of vice and extravagance, he appears to have been a well-intentioned, though weak, ruler His reign was beset by troubles Norwegian opposition to union with Sweden forced him to recognize (1343) his son Haakon (later Haakon VI) as his successor in Norway, over which he exercised a nominal regency until Haakon came of age (1355) In 1356 his son Eric rebelled and proclaimed himself king of Sweden, Magnus had barely resumed his rule on Eric's death (1359) when he was forced (1361) to share his rule over Sweden with his son Haakon Early in his reign Magnus had acquired the Danish provinces of Skane and Blekinge in S Sweden, but in 1343 Waldemar IV of Denmark forced him to sell these acquisitions back to Denmark The threat of the Hanseatic League, which established its colony at BERGEN during Magnus's reign, induced both Magnus and Haakon VI to enter an alliance (1363) with Denmark Haakon married Waldemar's daughter MARGARET, thus preparing the union of Sweden, Norway, and Denmark The Danish alliance was unpopular with the Swedish nobles, who deposed (1364) both Magnus and Haakon and offered the Swedish crown to the duke of Mecklenburg The duke's son, Albert, thus became king of Sweden Magnus was imprisoned from 1365 to 1371 and spent his last years in Norway

Magnusson, Arni or **Arne** (our'nĭ mag'nōōsŏn), 1663–1730, Icelandic historian and antiquarian He taught at the Univ of Copenhagen and made an important collection of ancient Icelandic manuscripts, housed at the university

Magnusson, Finnur (fĭ'nur), 1781–1847, Icelandic archaeologist and scholar Educated at the Univ of Copenhagen, he was appointed (1815) professor of Northern literature and mythology there He compiled, edited, and translated the *Elder Edda* and published a lexicon of Norse mythology (1828) and works on the origin of the *Edda* sayings

Mago (mā'gō), fl 500 B C, Carthaginian statesman, one of the founders of the military power of Carthage He forced commercial treaties on the Etruscans, Rome (509 B C), and the Greeks of S Italy

Mago, d c 202 B C, Carthaginian general He served in Italy under his brother HANNIBAL and in Spain was one of the commanders defeated by Scipio at Ilipa (206 B C) In 204, after wintering in the Balearic Isles (where Port Mahon is named for him), he landed in Liguria, only to be defeated by the Romans in Cisalpine Gaul (203)

Magoffin, Beriah, 1815–85, governor of Kentucky (1859–62), b Harrodsburg, Ky, grad Centre College 1835, and Transylvania Univ, 1838 A lawyer in Harrodsburg, he became a prominent Democratic political leader As governor, Magoffin, who was a states' rights man rather than a secessionist, urged compromise to avoid war, refused Lincoln's call for troops, and warned both North and South against violating Kentucky's armed neutrality The measures advocated by the legislature after the Confederate invasion of the state (1861) did not meet his approval Virtually deprived of all military powers, he disliked his position and resigned in 1862

Magog (mā'gŏg), in the Bible **1** Son of Japheth. Gen 10 2 **2** See GOG

Magog (mā'gŏg), town (pop 9,034), S Que, SW of Sherbrooke and on Lake Memphremagog Founded by Loyalist emigrants from the United States after 1776, Magog is a resort and trade center, with textile mills and dairying

Magoon, Charles Edward (mugōōn'), 1861–1920, American administrator, b Steele co, Minn, educated at the Univ of Nebraska Work as attorney (1899–1904) in the Bureau of Insular Affairs showed his ability to deal with the legal problems of American expansion In 1904 he was made counsel for the Panama Canal Commission and prepared laws for the Canal Zone, and in 1905 he became governor of the Canal Zone and minister to Panama As provisional governor of Cuba after 1906 he so reorganized affairs that the government was returned to the Cuban people in 1908 He was the author of *The Law of Civil Government under Military Occupation* (1902)

Magor-missabib (mā'gôr-mĭs'ŭbĭb) [Heb, =terror on every side], name given by Jeremiah to the man who put him in the stocks Jer 20 3

Magpiash (măgpī'ăsh), signer of the covenant Neh 10 20

magpie, bird of the crow family Closely related to the magpies of Europe and Asia is the American or black-billed magpie of W North America Its plumage, except for the white wing patches and abdomen, is black with some iridescence, and it is about 20 in long Magpies build huge, domed nests in trees They destroy birds' eggs and young and kill sickly, wounded, or newborn sheep or cows by pecking They are scavengers but also eat harmful insects and fruits, berries, and leaves Noisy, chattering birds, in captivity they can be taught to imitate some words The yellow-billed magpie is found in the San Joaquin and Sacramento valleys See J M Linsdale, *The Natural History of Magpies* (1937).

Magrath (mŭgrăth'), town (pop 1,295), S Alta, S of Lethbridge, in a farm (grain and sugar beets) and stock-raising region, founded by Mormons

Magruder, John Bankhead (mugrōō'dŭr), 1810–71, Confederate general, b Winchester, Va, grad. West Point, 1830 His reckless daring in the Mexican War won him a captaincy and the brevets of major and lieutenant colonel At the outbreak of the Civil War he resigned and joined the Confederate army He was given command of forces on the Virginia peninsula and in June, 1861, defeated B F Butler at Big Bethel Promoted major general (Oct), Magruder distinguished himself in the PENINSULAR CAMPAIGN, particularly in holding off G B McClellan at Yorktown As commander of the Dept of Texas (1862–64), he recaptured Galveston, Jan 1, 1863 After the war he was a major general in the Mexican imperialist army until MAXIMILIAN came to grief See D S Freeman, *Lee's Lieutenants*, Vol I (1942)

maguey see AGAVE

Magyars (mŏd'yärz, măg'yarz), the people of HUNGARY Although in the past it was believed that some common origin existed among the Magyars, the Huns, the Mongols, and the Turks, modern research has proved the baselessness of such suppositions The only similarity between the Magyars and the peoples named above was their mode of life when they first appeared in Europe in the 9th cent The Magyar or Hungarian language belongs to the Finno-Ugric family (see LANGUAGE, table) A nomadic nation, the Magyars migrated (c 460) from the Urals to the Northern Caucasus region They remained there for about 400 years, for part of that time they were allied with the Khazars Contact with Turkic peoples seems to have been close, for many Magyar words of Turkish origin, relating to animal husbandry and political and military organization, were in use before the 9th cent During that period the Magyars began to engage in agriculture Late in the 9th cent the advance of the PECHENEGS forced the Magyars W across S Russia and into present Rumania Under their leader ARPAD they defeated the Bulgar tsar Simeon I, but Simeon, with the help of the Pechenegs, forced them northward into Hungary, which they permanently settled (c 895 They were described as ferocious warriors, mounted on swift horses and almost unconquerable on their raids They conquered Moravia and penetrated deep into Germany until they were checked (955) by Emperor Otto I at the Lechfeld Under St STEPHEN, Christianity was introduced early in the 11th cent, and the Magyars consolidated their state They absorbed the other ethnic groups of Hungary proper The SZEKELY are presumably closely related to them The terms *Magyar* and *Hungarian* are identical, but in non-Hungarian languages the word *Magyar* is frequently used to distinguish the Hungarian-speaking population of Hungary from the German, Slavic, and Rumanian minorities, which were considerable until the end of the First World War, when Hungary lost its border provinces For Magyar literature, see HUNGARIAN LITERATURE

Mahabaleshwar (mŭhä'bŭlĕsh'wur), town (pop 5,090), W central Bombay state, India It is a summer resort situated in the Western Ghats at an elevation of c 4,000 ft

Mahabharata (muhä'bhä'rutŭ), great Sanskrit epic of India, composed between 200 B C and A D 200. The work, traditionally ascribed to one of its minor characters, Vyasa [Skt, =arranger], was probably written by a number of bardic poets and later partly revised by philosophical writers to gloss over barbarous elements It comprises some 110,000 couplets of 16-syllable lines The story incorporates in part that of the RAMAYANA, the other great Sanskrit epic While there are many subplots and irrelevant tales, basically the *Mahabharata* is the fabulous account of a dynastic struggle in the kingdom of Hastinapur The Pandavas, five brothers of noble character married in common to Draupadi, are rivals of their three cousins, the treacherous Kauravas After many years the two parties fight a great battle—in which the episode of the BHAGAVAD-GITA occurs—and the Pandavas win Yudhisthira, the eldest, ascends the throne, but, saddened by the spectacle of earthly glory, he abdicates, takes the path to heaven, and is received into eternal bliss For selections, see Romesh C Dutt, *The Mahabharata and the Ramayana* (1911) See E W Hopkins, *The Great Epic of India* (1901), Edward P Rice, *The Mahabharata Analysis and Index* (1934)

Mahalah (mā'hä'lu) [Heb, =disease], child of the sister of Gilead 1 Chron 7 18

Mahalaleel (mā"hulā'lēĭl) [Heb, =praise of God] **1** Descendant of Adam Gen 5 12, 1 Chron. 1.2. Maleleel Luke 3 37 **2** Judahite Neh 11.4

Mahalath and **Mahalath Leannoth:** see AIJELETH SHAHAR

Mahali (mā'hā'lī), variant of MAHLI.

Mahan, Alfred Thayer (muhăn'), 1840–1914, American writer on naval affairs, b West Point, N Y., grad Annapolis, 1859 A Union navy officer in the Civil War, he later taught naval history and tactics at the Newport War College, of which he was president (1886–89, 1892–93) Out of his lectures grew his books on sea power in its historical significance, among them *The Influence of Sea Power upon History, 1660–1783* (1890) and *Sea Power in Its Relation to the War of 1812* (1905) Mahan saw naval questions not in the narrow view of technical study of naval campaigns but rather in broader sweep of the interlocking activity of international politics and naval policy, with some emphasis on ocean commerce and its economic implications He considered sea power the decisive factor in warfare His works were widely hailed and exerted considerable influence on the thought of his time On a visit to Europe (1893–95) he was highly honored In 1896 he retired, but later he was sent to the Hague Conference of 1899, where he stoutly opposed reduction of armaments His books have been much used by proponents of a big navy He also wrote biographies of Farragut and Nelson, *The Harvest Within* (1909), a religious book, and the autobiographical *From Sail to Steam* (1907) A selection of his works appeared in 1918 See biography by W D Puleston (1939); R S West, Jr, *Admirals of American Empire* (1948)

Mahanadi (muhä'nŭ'dē), river, c 550 mi long, rising in SE Madhya Pradesh, India It flows generally N through Madhya Pradesh and then generally E through Orissa state, where it has cut a gorge through the Eastern Ghats, to empty into the Bay of Bengal by several channels The Mahanadi supplies water for extensive irrigation works

Mahanaim (mā"hunā'ĭm) [Heb, =hosts], unidentified city, E of the Jordan near the Jabbok Here Jacob met angels, here, also, David took refuge from Absalom. Gen 32 2,22, Joshua 21 38, 2 Sam 2 8, 17 24–27, 19 32, 1 Kings 4 14

Mahaneh-dan (mähä'nĕ-dän") [Heb, =camp of Dan], unidentified place, near Jerusalem Judges 13 25, 18 12

Mahanoy City (mähunoi'), industrial borough (pop 13,442), E Pa, NE of Pottsville, settled 1859, inc 1863 Its products include anthracite, textiles, and beer Mahanoy Mt near by has an altitude of c 2,000 ft

Maharai (mā'hurī) [Heb, =hasty], one of David's men 2 Sam 23 28, 1 Chron 11 30, 27 13

Mahath (mā'hăth) **1** Ancestor of the singer Heman 1 Chron 6 35 **2** Levite serving under Hezekiah 2 Chron 31 13

mahatma (muhät'mu, -hät'-) [Sanskrit, =great-souled], title used in India among Hindus for a person of superior holiness It is without theological significance Gandhi is the best-known figure to whom the title was applied

Mahavite (mā'hăvīt, mähä'vīt), obscure family name of one of David's guard 1 Chron 11 46

Mahazioth (muhā'zēŏth) [Heb, =visions], leader of temple musicians 1 Chron 25 4,30

Mahdi (mä'dē) [Arabic, =he who is guided], in ISLAM, the man who will arise in the end of the world as the leader of the faithful or IMAM In spite of the canonical saying, "There is no Mahdi but Jesus," and in spite of the belief among Sunnites that Jesus will come in the last things, the Shites and the variations of Shiism have tended to a kind of active millennialism As a result of this, men have arisen from time to time in Persia and Egypt claiming to be the Mahdi The only one of these who gained historic importance was Mohammed Ahmed See DRUSES and FATIMITE

Mahdi (mä'dē), title claimed by **Mohammed Ahmed,** 1848–85, Moslem religious leader in the Anglo-Egyptian Sudan He declared himself in 1881 the divine guide (Mahdi) of Islam and led a war of liberation from the oppressive Egyptian soldiery He died soon after capturing Khartoum, Gen Charles Gordon, the British defender there, was killed in the siege His followers, the **Mahdists,** for a time substituted a pilgrimage to his tomb at Omdurman for the customary Moslem pilgrimage to Mecca The final defeat of the Mahdists in 1898 by an Anglo-Egyptian army under Lord Kitchener gave Great Britain control of the Sudan

Mahdia (mädē'ä), town (pop 9,251), E Tunisia It is a fishing port Founded (912) by the Fatimites on the site of Phoenician and Roman colonies, it prospered as their capital (921–48) In the Middle Ages it was known to Europeans as the "town of Africa" The strongly fortified town was several times besieged and fell to Normans, Almohades, the Spanish, and others It early became a base of the Barbary pirates

Mahe: see SEYCHELLES

Maher-shalal-hash-baz (mā'hur-shăl'ăl-) [Heb, =spoil speeds, prey hastes], symbolic name of a son of Isaiah Isa 8 1,3

Mahican Indians (muhē'kŭn), confederacy of North American Indian tribes of the Algonquian linguistic stock They are also called the Mohican The Mahican were of the Eastern Woodlands culture area In the early 17th cent they occupied both banks of the upper Hudson river extending N almost to Lake Champlain. They were neighbored in the northeast by the Pennacook Indians and in

the southwest by the Wappinger Indians; both of these some writers include with the Mahican The MOHEGAN INDIANS were a tribe of the Mahican Confederacy and are to be distinguished from the larger group When the Dutch arrived in New York the Mohawk had been at war with the Mahican for some time and had steadily driven the Mahican E of the Hudson river The Mahican council fire, or capital, had been moved (1664) from Schodac, near Albany, E to Stockbridge, Mass The complete subjection and dispersal of the Mahican were hastened by the firearms provided by the Dutch to their enemies Some of the Mahican moved west to join the Delaware Indians, with whom they afterwards moved to the Ohio region (where the Mahican refugees lost their identity) Others placed themselves under the protection of the Iroquois Confederacy in S central New York The Mahican who remained in Massachusetts became part of the so-called STOCKBRIDGE INDIANS See Alanson Skinner, *Notes on Mahikan Ethnology* (1925)

Mahlah (mā'lu) [Heb ,=disease], daughter and coheiress of Zelophehad Num 27 1-11

Mahler, Gustav (gōōs'taf mā'lur), 1860–1911, Austrian composer and conductor, studied at the Univ of Vienna He was conductor of the Royal Opera, Budapest, 1888–90, the Imperial Opera, Vienna, 1897–1907, the Metropolitan Opera, New York, 1908–11, and the New York Philharmonic 1908–11 He completed nine symphonies, augmenting the orchestra with voices in many of them His Eighth Symphony, called *Symphony of the Thousand* (1910), requires 1,000 performers *Das Lied von der Erde* (1908), for solo voices and orchestra, brings to consummation his work in the song-cycle form, of which *Das klagende Lied* (1880) and *Kindertotenlieder* (1902) are significant examples See biographies by Carl Engel (1933), Bruno Walter (1941), and his wife, Alma Mahler (Eng tr, 1946), Dika Newlin, *Bruckner, Mahler, Schoenberg* (1947)

Mahli (mā'lī, mĭ') [Heb ,=sickly] **1** Son of Merari 1 Chron 6 19,29, 23 21, 24 26 Mahali Ex 6 19 **2** Grandson of Merari 1 Chron 6 47, 23 23, 24 30

Mahlon (mā'lŏn) [Heb ,=pining], Ruth's husband Ruth 1 2,5, 4 9,10

Mahmud I (mə-mōōd', mä'mōōd), 1696–1754, Ottoman sultan (1730–54), son of Mustafa II, nephew and successor of AHMED III A revolt of the Janizaries put him on the throne Affairs of state were largely in the able hands of the Nubian agha, Beshir (1653–1746), who was the power behind a number of successive grand viziers During Mahmud's reign the Ottoman Empire was involved in wars with Persia The attempt of his vassal, the khan of the Crimea, to come to Mahmud's aid led to the Russo-Turkish War of 1736–39 Emperor CHARLES VI entered the war in 1737 on the Russian side, but by the separate peace of Belgrade (1739) he restored N Serbia to Turkey Russia made peace soon afterward and was forced to raze Azov Mahmud built many splendid buildings in Constantinople He was succeeded by his brother, Osman III

Mahmud II, 1784–1839, Ottoman sultan (1808–39), younger son of Abdul-Hamid I He was raised to the throne upon the deposition of his brother, MUSTAFA IV, and continued the reforms of his cousin, SELIM III During his reign the EASTERN QUESTION assumed increasing importance Mahmud inherited the Russo-Turkish War of 1806–12, which ended with the loss of Bessarabia However, Russia was obliged to cease supporting the Serbian rebels under KARAGEORGE, and Serbia returned (1813) to Turkish control In 1817 he recognized MILOSH as prince of Serbia, a Turkish vassal He suppressed (1822) the rebellion of ALI PASHA and defeated the Greeks in the first phase of the Greek War of Independence At the height of his power he ruthlessly carried out (1826) a long-cherished project—the destruction of the JANIZARIES, whose political power was intolerable The Turkish successes in Greece were largely due to the troops sent by the viceroy of Egypt, MOHAMMED ALI, under the command of IBRAHIM PASHA British, Russian, and French intervention led to the destruction (1827) of the Egyptian fleet at Navarino, to the Russo-Turkish War of 1828–29, to a humiliating peace (see ADRIANOPLE, TREATY OF), and to the independence of GREECE The sequel of the Greek war was the invasion of Turkey by Ibrahim Pasha after Mahmud had refused to give Syria to Mohammed Ali as reward for his aid against the Greeks At Konya the Turkish army was completely routed (1832), and Constantinople was saved only by the intervention of a Russian fleet Mahmud was obliged to accede (1833) to Mohammed Ali's demands and, by a secret agreement with Russia, promised to close the Dardanelles to all warships hostile to Russia In 1839 war with Egypt was resumed, and on the day of Mahmud's death news came of the ignominious surrender of the Turkish fleet in the harbor of Alexandria Mahmud's son and successor, Abdul-Mejid, granted Egypt virtual independence Thus, despite the efforts of one of its most forceful and able rulers, the Ottoman Empire had advanced still further on its road to ruin However, Mahmud laid the basis for a modern Turkey He not only initiated the reform of the Turkish army, begun in 1835 by H K B von MOLTKE, but he sought to "Westernize" the whole structure of the state and he destroyed the old feudal pattern of his empire

Mahmud of Ghazni (mumōōd', gŭz'nē), 971?–1030, Afghan emperor and conqueror He defeated (c 999) his elder brother to gain control of Khurasan (in Iran) and of Afghanistan Mahmud, a staunch Moslem, was the scourge of the heterodox and the infidel On his raids against the states of N India, he destroyed Hindu temples, forced conversions to Islam, and carried off booty and slaves Hindus especially abhorred his destruction of the temple to Siva at Somnath in Gujarat Mahmud's territorial gains lay mainly W and N of Afghanistan and in the Punjab He was a patron of literature and art At Ghazni he built a magnificent mosque, the Celestial Bride His successors in the Ghaznavid dynasty, which he founded, ruled over a reduced domain until 1191 See biography by Muhammed Nazim (1931)

Mahnomen (monō'mun), village (pop 1,429), co seat of Mahnomen co, NW Minn It is in the White Earth Indian Reservation and is a center of livestock, poultry, and dairy cooperatives

mahogany, valuable hardwood obtained chiefly from trees of the genera *Swietenia* and *Khaya* of the family Meliaceae Spanish or West Indian mahogany, *Swietenia mahogani*, found in the West Indies and S Florida was originally carried to England from Spanish possessions in the West Indies as ballast in sailing vessels in the 16th cent It was used in shipbuilding before it became popular for furniture According to tradition Sir Walter Raleigh had a mahogany table made for Queen Elizabeth After c 1715, importations of mahogany into England were adequate to provide cabinetmakers with a fairly constant supply The popularity of the wood increased steadily in the 18th cent West Indian mahogany is golden brown to dark rich, red brown and is hard, close-grained, and fine-textured Crotches or curls, pieces obtained from a forked portion of a tree and therefore having unusual markings, became popular toward the end of the 18th cent The mahogany of the continental tropical American regions, *S macrophylla*, grows in areas of heavy rainfall from S Mexico and the Yucatán peninsula through Central America and in parts of Venezuela, Colombia, Peru, and extreme W Brazil The wood is usually golden brown and has a straighter grain than the West Indian species African mahogany, *Khaya ivorensis*, is obtained chiefly from the Gold Coast and the Ivory Coast and the coastal regions of Nigeria and Cameroons It is golden brown and more figured than any other mahogany and is much used, especially as veneers, for furniture and interior trim Mahogany is resistant to termites The name mahogany has been incorrectly applied to the wood of a number of unrelated trees, e g , Colombian mahogany from *Carapana guyanensis* and species of *Cedrela*, including Spanish or West Indian cedar (*Cedrela odorata*)

Mahol (mā'hŏl) [Heb ,=dance], father of wise men 1 Kings 4 31

Mahomet see MOHAMMED

Mahon, Port (muhōn'), Span *Mahón* (mäōn'), city (pop 14,401), chief city and port of Minorca island, Balearics prov , Spain, in the W Mediterranean Its large, excellent natural harbor is defended by two fortresses Port Mahon was named after the Carthaginian general Mago It shared the history of MINORCA

Mahone, William (muhōn'), 1826–95, Confederate general and Virginia politician, b Southampton co , Va , grad Virginia Military Institute, 1847 He was president, chief engineer, and superintendent of the Norfolk-Petersburg RR when the Civil War broke out Mahone became a Confederate brigadier general in Nov , 1861, and fought in most of the campaigns of the Army of Northern Virginia He distinguished himself particularly at PETERSBURG, where on June 30, 1864, he repulsed the Union assault at the "Crater" For this he was immediately promoted major general After the war he resumed his railroad activities and entered politics Mahone became the leader of the Readjusters, Virginia Democrats who advocated the scaling down of the state debt He led the party to victory in 1879 and in 1881, when he was elected to the U S Senate By allying himself with the Republicans there, Mahone was able to build a powerful machine which controlled Virginia politics for several years See biography by Nelson M Blake (1935), D S Freeman, *Lee's Lieutenants* (3 vols , 1942–44)

Mahone Bay, town (pop 1,025), S N S , N of Lunenburg It has shipbuilding and lumbering

Mahoning (muhō'nĭng), river rising in NE Ohio near Alliance. It flows north a short distance beyond Warren, where it turns southeast to flow past Youngstown into Pennsylvania and join the Shenango to form the Beaver river It is c 90 mi long and drains an exceptionally fertile valley The U S Corps of Engineers in 1943 completed Berlin Dam (5,750 ft long and 95 ft high) for controlling floods and for supplying water to the industries of the Mahoning valley

Mahony, Francis Sylvester, pseud **Father Prout,** 1804–66, Irish Jesuit priest He was dismissed from the order in 1830 His essays and poems contributed to *Fraser's Magazine* were collected in 1834–36 as *The Reliques of Father Prout*

Mahopac, Lake (mā'ŏpăk, mā'hō–), small resort lake, SE N Y , NE of Peekskill

Mahrattas or **Marathas** (both murä'tus, mura'–), Marathi-speaking people of W central India In the 17th cent their great leader SIVAJI declared his independence of the Mogul empire From the Mahratta capital at Poona, military expeditions were dispatched and much territory was conquered, especially in central India By the mid-18th cent the Mahrattas had displaced the Mogul empire as the leading power in India, but their domain soon split into several territories which warred among themselves Great Britain, determined to end the threat to its control over India, waged several wars with the Mahrattas, finally subduing them in 1818 Of the major Mahratta states, Baroda, Gwalior, and Indore alone continued in existence See J G Duff, *History of the Mahrattas* (rev ed , 1921), G S Sardesai, *New History of the Marathas* (1947)

Mährisch Ostrau, Czechoslovakia see MORAVSKA OSTRAVA

Mai, Angelo (an'jälō mī'), 1782–1854, Italian philologist, cardinal of the Roman Church As an official at the Ambrosian Library in Milan and at the Vatican Library, he discovered and published many manuscripts, some of them highly valuable His most famous discovery was Cicero's *De republica* In 1838 he received the cardinal's hat

Maia (mā'u mī'u) **1** In Greek religion, one of the Pleiades She was the daughter of Atlas and the nymph Pleione and the mother of Hermes by Zeus **2** In Roman religion, goddess of spring and fertility She was also called Maiesta (the month of May bears her name) and was usually identified with Bona Dea

Maiden, textile-mill town (pop 1,803), W central N C , SW of Charlotte

Maiden Castle, ancient fortress, Dorsetshire, England, near Dorchester The finest earthwork in the British Isles, c 115 acres in area, is here Excavations in 1934–37 revealed evidences of a Neolithic village, with a two-ditch system, indicating occupation c 2000 B C On the same site are remains of an Iron Age fortified village (300 B C) It is believed that the fortress was taken by the Romans and that occupation ceased about A D 70

maidenhair fern, popular woodland FERN (*Adiantum pedatum*) of North America, delicate and graceful It has slender, dark, shining stalks and fragile fronds It was once a popular pectoral remedy In Europe the somewhat similar Venus's-hair (*Adiantum capillus-veneris*) is called maidenhair fern Other species of *Adiantum* are called maidenhair ferns and are cultivated by florists

maidenhair tree see GINKGO

Maidenhead, municipal borough (1931 pop 17,515, 1943 estimated pop 25,453) Berkshire, England, on the Thames and W of London Of the two bridges, one, of stone, was built in 1772 The borough is a resort and residential place, with chemical and metal industries

Maidens, the, or **Hulin Rocks,** group of islets, in the North Channel off Northern Ireland, in Co Antrim There are two lighthouses

Maidstone (mād'stun), municipal borough (1941 pop 42,280, 1947 estimated pop 50,430), co seat of Kent, England, on the Medway Chillington Manor contains the Maidstone Museum, the public library, and the headquarters of the Kent Archaeological Society The grammar school dates from 1549 Noteworthy are the Church of All Saints, founded in the 14th cent , the palace of the archbishops, the College of All Saints, the hospital founded for pilgrims to Canterbury in 1260, and Penenden Heath, a recreation ground William Hazlitt was born here, and Coltree Manor, near by, is the "Dingley Dell" of Dickens's *Pickwick Papers* The chief products are hops, paper, cement, and beer

Maiduguri (mīdōō'gurē), town (pop 24,359), NE Nigeria It exports hides and skins

Maidu Indians (mī'dōō), group of North American Indian tribes belonging to the Penutian linguistic stock In the early 19th cent they were located on the eastern tributaries of the Sacramento river Maidu culture was typical of the California area, they lived in simple brush shelters, they gathered acorns, and they practiced a spirit cult in the Kuksu Society, which featured the *hesi* (initiation) dance Of the three divisions of the Maidu—valley, foothill, and mountain tribes—the valley Indians, or Nisenan, were the most prosperous and culturally developed The Maidu numbered between 8,000 and 10,000 before white contact, but there are now only some 800 living on the Round Valley Reservation, Calif See A L Kroeber, *Valley Nisenan* (1929), R L Beals, *Ethnology of the Nisenan* (1933)

Maikop (mīkôp'), city (pop 67,302), capital of Adyge Autonomous Oblast, Krasnodar Territory,

RSFSR, at the northern foot of the Greater Caucasus and on the Belaya river It has lumber, tobacco, furniture, food-processing, and other industries. To the southwest are the important Maikop oil fields, discovered in 1900–1901 and connected by pipe line with the refineries at Krasnodar and the Black Sea port of Tuapse. Founded in 1858 as a Russian fortress, the city was held (1942–43) by the Germans in the Second World War

mail, see POSTAL SERVICE For coat of mail, see ARMOR

Maillol, Aristide (ărēstēd' mäyôl'), 1861–1944, French sculptor. He was a neoclassicist, finding much inspiration in early Greek sculpture. He is best known for his simple and massive figures of women, such as *Flora*, *Pomona*, *Venus*, and the *Fame* in his celebrated memorial to Cézanne at Aix *The River* is in the Museum of Modern Art in New York See study by Maurice Denis (1925, in French)

Maimonides (mīmŏn'ĭdēz) or **Moses ben Maimon** (mī'mun) 1135–1204, Jewish rabbi, savant, physician, and philosopher, one of the greatest Hebrew scholars, b Córdoba, Spain, d Cairo He is called Rambam from the initials of the words Rabbi Moses ben Maimon His greatest scholastic work was his attempt to organize and systematize the vast mass of Jewish oral law in what was to be a reference book for laymen as well as for rabbis and judges—the Mishna Torah [copy or repetition of the Torah or the Law], generally known among scholars as the *Strong Hand* He also produced a great commentary on the six orders of the Mishna, a collection of discourses, a work on logic, a treatise on the calendar, several medical books, the most important of which is his book on hygiene, and the great philosophical work *Moreh Nebukim* (Eng tr, *Guide for the Perplexed*, 1919), in which he explained the esoteric ideas in the Bible, formulated a proof of the existence of God, expounded the principle of creation, and elucidated baffling metaphysical and religious problems The *Moreh Nebukim* has dominated Jewish thought and exerted a profound influence upon Christian thinkers See Izak Münz, *Maimonides* (1912, Eng tr, 1935)

Main (mān, Ger mīn), river, 308 mi long, central and W Germany It is formed near Kulmbach, Bavaria, by the confluence of the Red Main (Ger *Roter Main*) and the White Main (Ger *Weisser Main*), both of which rise in the Fichtelgebirge It then winds generally W through Upper and Lower Franconia and N Hesse past Schweinfurt, Wurzburg, Aschaffenburg, Offenbach, and Frankfurt to join the Rhine opposite Mainz It is navigable from its junction with the Regnitz near Bamberg and is connected by canal with the Danube.

Maine, Sir Henry James Sumner, 1822–88, English jurist and historian, educated at Cambridge Univ A pioneer in the historical and comparative study of institutions, he looked on the history of laws as the most certain way of studying the history of civilization He drew analogies between 19th-century institutions in India and those of Anglo-Saxon society and believed that society progressed from custom to law, with Roman law demonstrating the intermediate stage between ancient usage and modern British law Parts of his theories (such as his belief that the development of contract is related to society's greater respect for the will) have been demolished, but his influence on the study of the history of jurisprudence is incalculable. His first work was his most famous, *Ancient Law* (1861, new ed, with introduction by C K Allen, 1931), written while he was reader to the Inns of Court and professor of civil law at Cambridge. He was (1862–69) legal member of the viceroy's council in India, where he planned the codification of Indian law From 1869 to 1878 he was professor of jurisprudence at Oxford, from 1877 master of Trinity Hall, Cambridge, and from 1887 professor of international law at Cambridge He embodied his lectures on legal history in several books, among them *Village Communities in the East and the West* (1871) and *The Early History of Institutions* (1875) In *Popular Government* (1885) he challenged the thought of his day by warning that democracy and progress were not necessarily equated

Maine (mān, Fr mĕn), region and former province, NW France, S of Normandy and E of Brittany. It now occupies the departments of Mayenne and Sarthe and parts of Loir-et-Cher, Eure-et-Loire, and Orne Maine is primarily agricultural, with important stock raising in the hilly PERCHE Le Mans, an industrial and commercial center, was the capital Other towns include Laval, Mayenne, and Vendôme. Maine is well irrigated by the Mayenne, Loir, and Sarthe rivers Made a county in the 10th cent, it passed (1110) to ANJOU and was held for long periods by England between 1156 and 1448, when it was definitely confirmed as a fief of the French crown It was made a duchy, but in 1481 Louis XI incorporated it in the royal domain, subject to the jurisdiction of the Parlement of Paris It subsequently was an appanage of several Valois and Bourbon princes

Maine, state (area 33,215 sq mi; 1940 pop. 847,226, 1949 estimated pop 909,000), in the extreme northeastern corner of the United States, largest of the New England states, admitted as the 23d state in 1820 (a free state). AUGUSTA is the capital, PORTLAND the largest city. The Canadian provinces of Quebec and New Brunswick bound Maine from the northwest around to the southeast, with the SAINT JOHN and SAINT CROIX rivers forming part of the international line with New Brunswick To the south spreads the Atlantic Ocean (the Bay of Fundy lies off to the east) New Hampshire (on the west) is the only state bordering Maine. Geological action laid down a bedrock of sandstone, shale, and limestone, these, where crystallized by molten granite, form valuable mineral deposits Much of the soft rock eroded into tableland valleys, while the more resistant rock remained, in the generally mountainous west, the mountains of MOUNT DESERT ISLAND in the east, and isolated peaks including KATAHDIN, high point of the state Receding glaciers deposited long drift ridges across the countryside and dammed the valleys to form over 2,200 lakes (MOOSEHEAD LAKE is the largest) and to establish new, rugged watercourses for more than 5,000 rivers and streams From the higher levels in the west the land slopes to the St John river basin in the north, eastward to the PENOBSCOT river, and southward to the KENNEBEC, ANDROSCOGGIN, and SACO rivers The sea has encroached over the low coastal valleys, leaving a jigsawed coastline of 2,500 mi. and numerous irregular and rocky islands offshore East of the Kennebec waves dash against bold and precipitous cliffs, but along the west coast the shoreline has frequent sandy beaches and marshy lowlands Great stands of white pine (for which Maine takes its name as the Pine Tree State), hemlock, spruce, fir, and hardwoods once covered the entire state Three quarters of the area remains forested, and the population is centered on the cleared land along the coast and the major rivers Forest fires are a constant menace, and a particularly severe one in Oct, 1947, took 15 lives and a huge toll in timberland and property, including much of BAR HARBOR In the shelter of lakes and woods, particularly in the northern counties, wild life has found refuge Elk, deer, black bear, and smaller game are abundant, and fish and fowl are plentiful These attractions for visitors and sportsmen supplement the appeal of picturesque coastal and island resorts to make the tourist and vacationist trade an important feature in Maine's economy Many factors have unfavorably affected the state's economic life—a generally poor soil and short growing season, geographical remoteness from production centers, an inadequate distribution system, lack of coal and steel, and a reluctance to adopt modern methods of production and merchandizing Maine's major assets are its rapid rivers, with approximately one half of their potential power developed, protected harbors for fishing ports, commerce, and shipbuilding, and extensive lumber, mineral, and fishing resources Fishing, the earliest industry, yields an abundance of herring (used for sardine packing), lobsters (nationally famous), and scallops Lumbering has dominated industry and the export trade since the days when the straight white pines provided masts for the British navy The timber trade has declined, but pulpwood products and paper are manufactured at many mill and factory towns along the rivers (this is the most valuable industry), and a careful system of selective cutting and reforestation ensures the preservation of the woodlands The proximity of harbors and forests encouraged extensive shipbuilding Although the days are past when mighty clippers and freighters slipped down the gentle slopes of tidal rivers to carry the skill of Maine artisans and seamen around the world, the construction of fishing and pleasure craft remains a skilled and valuable industry After the decline of shipbuilding and timber trading, commercial activity slackened, and today Portland, the largest port, operates far below its capacity However both Portland and BANGOR are important commercial cities and, during the summer months, serve a vast resort region Other industries that produce in sufficient quantity for export include textile manufacturing (cotton and woolen goods) at LEWISTON, Augusta, WATERVILLE, and BIDDEFORD and the making of shoes, centered at AUBURN. The mineral wealth of the state is considerable, much of it undeveloped Many varieties of granite, including some superior ornamental types, have been used for construction throughout the nation Slate, limestone, and clay are produced, and pegmatite yields several different minerals, including some precious stones Agriculture, which occupies approximately one third of the population, is an achievement of perseverance over adverse soil and climatic conditions Since the opening of the prairie and grasslands of the West, Maine has tended to concentrate on dairying, poultry raising, and market gardening to serve local and New England markets The growing of potatoes, particularly in AROOSTOOK CO, was stimulated by the completion of the Aroostook RR in 1894; the versatile Maine potato, Idahoans to the contrary, now dominates the national market. With many factors operating against the establishment of a stable and prosperous economy, Maine has had a very low population increase in the last century. As a result the state exhibits more cultural homogeneity and dependence on custom than is generally found in other parts of the nation. The earliest human occupation extends back to prehistoric time, as evidenced by the burial mounds of the Red Paint people found in the south central part of the state The Indians who came later left enormous shell heaps, variously estimated at from 1,000 to 5,000 years old At the time of settlement by white men the friendly ABNAKI INDIANS were scattered along the coast and in some inland areas The coast of Maine may have been visited by the Norsemen and was known to British, French, and Spanish mariners before the sieur de MONTS and Samuel de CHAMPLAIN established a short-lived (1604–5, it was moved to Port Royal) French colony at the mouth of the St Croix river The region was embraced in the grant James I awarded to the Plymouth Company, and Sir John Popham and Sir Ferdinando GORGES sent out colonists under Sir John's nephew, George POPHAM, in 1607 This settlement, Fort St George, on the present site of PHIPPSBURG, at the mouth of the Kennebec (then called the Sagadahoc) river, did not prosper, and the colonists returned to England in 1608 The French returned to the area in 1613 when a new colony and a Jesuit mission (see BIARD, PIERRE) were established on Mount Desert Island, but Sir Samuel ARGALL soon put an end to the venture In 1622 the Council for New England (successor to the Plymouth Company) granted Gorges and Captain John MASON the territory between the Kennebec and Merrimack rivers, the grant extending 60 mi inland At this time, the region became known as Maine, either in honor of Charles I's queen, Henrietta Maria, who was feudal proprietor of the French province of Maine, or to distinguish the mainland from the off-shore islands Gorges and Mason divided (1629) their grant, with Gorges taking the area east of the Piscataqua, in which he was confirmed by Charles I, who issued him a royal charter in 1639 for "the Province and Countie of Maine" Meanwhile permanent settlements had been established at MONHEGAN, SACO, and YORK Neglected after Gorges's death in 1647, Maine settlers in 1659 came under the jurisdiction of Massachusetts With the restoration of Charles II in 1660, however, the Massachusetts title to Maine was not clear until, in 1677, it purchased the proprietary rights of Gorges's heirs French influence, recently reasserted east of the Penobscot, declined rapidly after 1688 when Sir Edmund Andros, royal governor of all New England, seized French fortifications there After the overthrow of Andros, Massachusetts received a new charter (1691), which confirmed its hold on Maine, and with Sir William PHIPS, a Maine native, as governor and the territorial question settled, local government and institutions in the Massachusetts tradition really took root in Maine Because it was on the frontier, the province was repeatedly ravaged by Indians, but their strength was broken during Queen Anne's War, at the end of which KITTERY, Wells, and York were the only remaining settlements Maine nevertheless recovered quickly and soon had prosperous fishing, lumbering, and shipbuilding industries In one of the last French and Indian Wars its militia won distinction serving under Sir William PEPPERELL, a Maine man, in the capture (1745) of Louisburg, French stronghold on Cape Breton Island Dissatisfaction with British rule was expressed openly after passage of the Stamp Act in 1765, when a mob at Falmouth (Portland) seized a quantity of the hated stamps The town paid dearly for its defiance, being devastated by a British fleet in the American Revolution In that same year, 1775, Benedict Arnold led his grueling, unsuccessful expedition against Quebec N through Maine During the war supplies were cut off and Indian attacks were frequent, but with American independence won, economic development was rapid in the Dist of Maine, one of the three admiralty districts of Massachusetts set up by the Continental Congress in 1775 However, the Embargo Act of 1807 and the War of 1812 interrupted the thriving commerce and turned the district to industrial development Agitation for statehood, which had been growing since the Revolution now became widespread Dissatisfaction with Massachusetts was aroused by the inadequate military protection provided during the War of 1812; by the land policy, which encouraged absentee ownership, and by the political differences between conservative Massachusetts and democratic Maine The imminent admission of Missouri into the Union hastened the separation, and equality of power between North and South was preserved by admitting Maine in 1820, in accordance with the MISSOURI COMPROMISE. With Portland as its capital (moved to Augusta in 1832) the new state entered a prosperous period. During the first half of the 19th cent. Maine enjoyed its greatest population increase, a highly profitable timber trade was carried on with the West Indies,

Europe, and Asia, and towns such as BATH became America's leaders in shipbuilding. The long-standing NORTHEAST BOUNDARY DISPUTE almost precipitated border warfare between Maine and New Brunswick in the so-called AROOSTOOK WAR of 1839, the controversy was settled by the WEBSTER-ASHBURTON TREATY of 1842 Political life was vigorous, particularly in the 1850s when the reluctance of the Democrats to take a firm antislavery stand swept the new Republican party into power HANNIBAL HAMLIN became a leading Republican politician and served as Vice President during Lincoln's first administration Antislavery sentiment was strong, and Maine made sizable contributions of men and money to the Union in the Civil War Generals Oliver O HOWARD and Joshua L CHAMBERLAIN were from Maine For decades regulation of the liquor traffic was the chief political issue, and Maine was the first state to adopt (1851) a prohibition law, which, framed by Neal Dow, came to be known to the rest of the nation as the "Maine Law " This was incorporated into the constitution in 1884 and was not repealed until 1934 State politics entered a hectic stage in 1878 when the newly organized Greenback party combined with the Democrats to carry the election In the following year the coalition was accused of manipulating election returns, a charge sustained by the state supreme court, which seated a rival legislature elected by the Republicans In 1880 the fusionists were again successful, but since that time the state has been prevailingly Republican, providing that party with national leaders in James G BLAINE, Thomas B REED, and Eugene HALE Only once since the Civil War, in 1912, has the state chosen Democratic presidential electors Virtually the only political contests are in the Republican primaries Maine is the only state to hold state elections in September, and the usually successful Republican party once capitalized on this by claiming that "as Maine goes, so goes the nation " After the 1936 national election, however, Democratic wags gleefully amended that slogan to "as Maine goes, so goes Vermont " In the 20th cent the nationwide interest in progressive legislation led to the adoption of the direct primary, the initiative and referendum and a corrupt practices act A law passed in 1909 to prohibit the sale of hydroelectric power outside the state precipitated a contest with the power companies that was not settled until the law was approved by direct vote in 1929 Liberals still maintain that the power companies have too much political influence in the state A unique experiment in the development of water power was started under the New Deal in 1935 with a Public Works Project to dam the tidal waters of PASSAMAQUODDY BAY The plan was abandoned in 1936 when Congress failed to appropriate funds, workers were stranded, and a state already dubious about governmental enterprises was confirmed in its attitude This same distrust of government has been expressed in an unwillingness to spend state money for such internal improvements as the extension of freight facilities or increased school aid. Some of Maine's abundant natural and industrial resources remain undeveloped The economic revival experienced in port and factory towns during the Second World War has largely subsided, and in 1949–50 the textile industry, after enjoying a brief expansion, suffered severely from competitive markets The prevailing trend toward industrialization and urbanization challenges Maine to build a modern commercial and industrial community and still preserve the Down East individualism which contributes so greatly to the charm of the state The state has four institutions of higher education—Bowdoin College at Brunswick, Colby College at Waterville, Bates College at Lewiston, and the Univ of Maine at Orono It has been remarked that in addition to potatoes and fish, Maine exports books about Maine There is no shortage of this commodity as both native and adopted citizens of the state—Sarah Orne Jewett, Kate Douglas Wiggin, Laura E Richards, Edwin Arlington Robinson, Robert P Tristram Coffin, Mary Ellen Chase, and Kenneth Roberts—have turned out or continue to turn out the product regularly with the labor of love See Glenn W Starkey, *Maine Its History, Resources and Government* (1920, 4th ed., 1947); Harrie B Coe, ed., *Maine Resources, Attractions, and Its People* (5 vols., 1928–31), W B. Smith, *The Lost Red Paint People of Maine* (1930), Orren C Hormell, *Maine Towns* (1932), Leon H Tebbetts, *The Amazing Story of Maine* (1935), Federal Writers' Project, *Maine. a Guide "Down East"* (1937), Kenneth Roberts, *Trending into Maine* (1938, rev ed., 1944); Alfred F Loomis, *Ranging the Maine Coast* (1939), Robert P Tristram Coffin, *Yankee Coast* (1947) and *Maine Doings* (1950), William H Rowe, *The Maritime History of Maine; Three Centuries of Shipbuilding & Seafaring* (1948), Edward V. Mitchell, *It's an Old State of Maine Custom* (1949), Marion J. Smith, *History of Maine from Wilderness to Statehood* (1949), Henry Beston, ed., *White Pine and Blue Water; a State of Maine Reader* (1950).

Maine, river, W France, in Anjou, formed by the confluence of the SARTHE and the Mayenne, just N of Angers. It flows S past Angers to join the Loire

Maine, U S battleship, the center of a serious international incident in 1898 Cuba was in a state of unrest and revolutionary turmoil, and the American consul general, Fitzhugh Lee, asked for protection of American nationals and property The *Maine* was sent under command of Capt Charles D Sigsbee, arriving at Havana harbor Jan 25, 1898 On the evening of Feb 15 a mysterious explosion occurred, and the *Maine* sank, with a loss of 260 men An outcry resulted The cause of the explosion was never satisfactorily explained A U S naval inquiry, headed by W T Sampson, reported on March 21 that the *Maine* had been sunk by a submarine mine but that responsibility could not be fixed on any person A Spanish naval inquiry reported (March 22) that the disaster was an accident, resulting from an explosion in the forward magazine Whatever the truth of the matter, the enraged American public considered the Spanish to blame "Remember the Maine" became a catchword that fed American patriotism in the SPANISH-AMERICAN WAR In 1912 the vessel was raised from the harbor, towed to sea, and sunk Captain Sigsbee wrote *Personal Narrative of the Battleship Maine* (1899)

Maine, University of, at Orono, land-grant and state supported, coeducational, chartered 1865 as Maine State College of Agriculture and the Mechanic Arts, opened 1868, renamed 1897 It has colleges of agriculture, arts and sciences, and technology, a school of education, a marine biological station, and an art gallery

Maine de Biran (mĕn' dŭ bĕrā), 1766–1824, French philosopher, active in the Napoleonic government His real name was Marie François Pierre Gonthier de Biran Although interested in the theories of Condillac and the ideologues, he was unable to accept the definition of knowledge as solely the sum of sensations Believing it to occur also through voluntary attention to sensation, Maine de Biran felt morality to be within the field of choice He later inclined to mysticism His writings were collected as *Œuvres inédites de Maine de Biran* (1859)

Maine-et-Loire (mĕn"-ā-lwär'), department (2,787 sq mi, pop 496,068), NW France It occupies, roughly, the historical province of ANJOU Angers is the capital

Mainland. 1 Island, Orkney Islands, Scotland see POMONA 2 Island (pop 15,172), 55 mi long and 20 mi wide, off N Scotland, largest of the Shetland Islands Lerwick, county town of the Shetlands, is on the east coast

Maintenon, Françoise d'Aubigné, marquise de (frāswaz' dōbēnyā' markēz' dŭ mătunō'), 1635–1719, second wife of Louis XIV Her grandfather was Agrippa d'Aubigné, the Huguenot hero Her father betrayed the Protestant cause and was later imprisoned as a counterfeiter She was born in prison The family spent some years in Martinique, but upon her father's death she and her mother returned to France, where they lived in great poverty Though baptized a Catholic, the child was educated by a Protestant aunt Later cared for by Catholic relatives, she was converted and became very devout At 16 she married the poet SCARRON and through his position became a figure in the literary and intellectual world of Paris After his death in 1660 the queen mother continued the poet's pension to his widow, and later Mme de MONTESPAN obtained a pension for her She became the governess for the children of Mme de Montespan and the king and gradually supplanted Mme de Montespan in the esteem and affections of Louis XIV, who made her a marquise Mme de Maintenon exercised considerable influence over Louis and greatly improved the moral tone of the court, but it is now universally believed that the ascription to her of Louis's mistakes (particularly the revocation of the Edict of Nantes) is, at least, an exaggeration The queen, Marie Thérèse, was devoted to her and died in her arms In 1684 she was morganatically married to the king In her later years Mme de Maintenon gave much of her attention to the famous school of Saint-Cyr, which she had founded for the daughters of poor but noble families She also wrote remarkable essays and letters dealing with education See biographies by C C Dyson (1910), Gonsague Truc (1929, in French), and Marcel Langlois (1932, in French)

Mainz (mīnts), city (1939 pop 158,533, 1946 pop 75,020), Rhenish Hesse, W Germany, on the left bank of the Rhine opposite the mouth of the Main Its French name, also sometimes used in English, is Mayence (mīäs') One of the great historical cities of Germany, Mainz grew on the site of the Roman Maguntiacum or Mogontiacum, in Upper Germany St BONIFACE was made (8th cent) first archbishop of Mainz The later archbishops acquired considerable territory around Mainz and in Franconia, on both sides of the Main, which they ruled as princes of the Holy Roman Empire They very early received a vote in the imperial elections and had precedence over the other electors; they crowned the German kings and, from the 16th cent, the emperors-elect, and they were, *ex officio*, archchancellors of the Holy Roman Empire. Under the rule of the archbishops-electors Mainz flourished as a commercial and cultural center The Jews, who had one of their oldest settlements in Germany here, played an important part in the prosperity of Mainz GUTENBERG lived at Mainz, which he made the first printing center of Europe Occupied (1792) by the French, Mainz was ceded to France by the Treaty of Campo Formio (1797), and the archbishopric was secularized and reduced to a diocese in 1803 The last archbishop, K T von DALBERG, received, however, ample compensation The Congress of Vienna made (1815) Mainz a federal fortress of the German Confederation and awarded it, with Rhenish HESSE, to the grand duchy of Hesse-Darmstadt Mainz thus became (1816) the provincial capital of Rhenish Hesse It was (1918–30) the headquarters of the French occupation army in the S Rhineland The city, including its many architectural and artistic treasures, was more than half destroyed in the Second World War It was taken (1945) by American troops and was soon afterward incorporated with the newly created state of Rhineland-Palatinate, under French occupation Though Mainz was declared the capital of the new state, Coblenz became the temporary seat of the government The decline of the population of Mainz is due in part to the transfer (1945) of its suburbs on the right bank of the Rhine to American-occupied Hesse Among the heavily damaged buildings in the old inner city are the Romanesque cathedral (consecrated 1009, restored 19th cent), the Renaissance electoral (archiepiscopal) palace, which housed a picture gallery and a museum of antiquities, and the Church of St Peter (18th cent) The city was, until recently, primarily a commercial center Its active river trade declined in the 19th cent and was partly taken over by Mannheim, with it declined the trade in Rhine wines The present industries of Mainz (chemicals, machinery, precision instruments, and others) are of recent origin The Univ of Mainz was founded in 477, was discontinued in 1816 and was reconstituted in 1946 by the French occupation authorities as the Johannes Gutenberg Universität

maiolica see MAJOLICA

Maipo (mī'pō), river, c 155 mi long, rising in the Andes of Chile and flowing W to the Pacific Some miles north was fought the decisive battle of MAIPÚ in the struggle for Chilean independence The river is also sometimes called Maipú

Maipú (mīpōō'), battlefield, central Chile, a few mi S of Santiago Here on April 5, 1818, SAN MARTÍN routed the Spanish royalist army and assured Chilean independence The victory made possible his liberating expedition to Peru

Maisonneuve, Paul de Chomedey, sieur de (pōl' dŭ shômdā' syûr' dŭ māzônûv'), c 1612–1676, founder and first governor of Montreal, b France A soldier in the European wars, he was sent by the Société de Notre Dame de Montréal to take possession of their grant in the new world He landed (May, 1642) on Montreal island A man of faith and courage, he administered the affairs of the colony for 22 years, until he was removed by the lieutenant general of the French territories in the Americas, and returned (1665) to France to die in obscurity in Paris

Maistre, Joseph de (zhôzĕf' dŭ mĕ'strŭ), 1754?–1821, French writer and diplomat in the service of Sardinia Born in Savoy, he was Sardinian ambassador at St. Petersburg from 1803 to 1817 Joseph de Maistre was unalterably opposed to the 18th-century philosophy, and he was passionately royalistic and ultramontane He was master of a rigidly logical method and the possessor of a great store of knowledge These qualities, combined with a fine ability in writing French prose, made him perhaps the most powerful literary enemy of 18th-century rationalism, in which he delighted to detect logical weakness and shallowness His principal works were *Du pape* [on the pope] (1819) and *Les Soirées de Saint-Pétersbourg* [discussions in St Petersburg] (1821) They develop his idea that the world should be one, ruled by the pope absolutely as the spiritual ruler, no temporal ruler having an independent authority

Maistre, Xavier de (zăvyā'), 1763–1852, French writer, b Savoy, brother of Joseph de Maistre He served in the Russian army and lived most of his life in St Petersburg His works are distinguished for their polished wit His *Voyage autour de ma chambre* [trip around my room] (1794), written when he was in prison for dueling, is a simple peregrination from object to object allowing each to call up recollections. *Le Lépreux de la cité d'Aoste* [the leper of Aosta] (1811) is a dialogue between a soldier and a leper, remarkable for its portrayal of Christian resignation *La Jeune Sibérienne* [the Siberian girl] is the story of a plea of a Russian girl to the tsar for mercy for her father in Siberia

Maitland, Frederic William, 1850–1906, English legal historian Educated at Cambridge and admitted to the bar (1876), he engaged in chancery practice until 1884. In 1888 he was made Downing professor of English law at Cambridge Univ. A

thorough scholar, he founded the Selden Society for the publication of early English documents and himself edited many texts, such as Henry de Bracton's notebook and the *Year Books of Edward II* (completed by G. J Turner, 4 vols , 1903–7) *The History of English Law before the Time of Edward I* (2 vols., 1895), which he wrote with Sir Frederick Pollock, is a brilliant work, still standard Other studies by him, notable for their prose style as well as sound theories of constitutional history are *Domesday Book and Beyond* (1897), a model for the use of a source, *English Law and the Renaissance* (1901), *Equity* (ed. by A H Chaytor and W J Whittaker, 1909, rev ed by John Brunyate, 1937), and *The Forms of Action at Common Law* (ed by A H Chaytor and W J Whittaker, 1909 and 1937) His *Constitutional History of England* (ed by H A L Fisher, 1908) is a valuable series of lectures See his collected papers (ed by H A L Fisher, 3 vols , 1911) and *Selected Essays* (ed by H D Hazeltine, G T Lapsley, and P H Winfield, 1936), biography by H A L. Fisher (1910)

Maitland, James· see LAUDERDALE, JAMES MAITLAND, 8TH EARL OF

Maitland, John see LAUDERDALE, JOHN MAITLAND, DUKE OF

Maitland, William (Maitland of Lethington), 1528?–1573, Scottish statesman, called Secretary Lethington, son of Sir Richard Maitland, Lord Lethington He began his career in the service of the regent MARY OF GUISE, but deserted her in 1559 Upon the return to Scotland of MARY QUEEN OF SCOTS two years later, he became her secretary of state A skilled diplomat, Lethington was unique in an age of religious wars in not being swayed by religious passions and in resisting attempts of the Church to dominate government This led to suspicion from both Catholics and Protestants, although his abilities were recognized by all His chief desire was to effect a union of Scotland and England based on Mary's right of succession after Elizabeth's death He was probably involved in David Rizzio's murder and almost certainly in that of Lord Darnley He abandoned Mary after the Bothwell marriage, possibly in fear of his life He later took her part and became one of the leaders of the queen's party After the earl of Lennox became regent in 1570, Maitland led the opposition to him and held out in Edinburgh Castle from 1571 to 1573 His death shortly afterward saved him from execution

Maitland, town (pop 19,156), New South Wales, Australia, on the Hunter river and NW of Newcastle It is a coal-mining and manufacturing center There is a Roman Catholic cathedral

maize· see CORN

Majano, Benedetto da see BENEDETTO DA MAJANO

Majdanek (mīdä'nĕk), extermination camp (see CONCENTRATION CAMP), Poland, near Lublin, established and operated by the Germans in the Second World War About 1,500,000 persons of 22 nationalities (chiefly Jews, Russians, and Poles) were annihilated here in its gas chambers and burned in its furnaces

majolica (mujŏ'lĭku, muyŏ'-) or **maiolica** (muyŏ'lĭ-ku) [from Majorca], an enameled and decorated FAÏENCE of Spain and Italy, produced since the 13th cent in Valencia, probably also in Majorca, whence it was shipped to Italy Later this pottery was manufactured in Gubbio by Giorgio di Pietro Andreoli and in Florence as DELLA ROBBIA ware Faenza majolica was characterized by a background of rich blue The Italian ware at first showed Hispano-Moresque influence, but later the decoration developed an original boldness and simplicity suited to architectural work (usually sculptured), for which it was much in demand The clay object—plaque, bowl, jar, or panel—is fired, given a coating of tin enamel and refired, then decorated in brilliant colors and fired again

Major, Charles, 1856–1913, American novelist Born in Indianapolis, he practiced law there Immensely popular were his historical romances *When Knighthood Was in Flower* (1898), on Mary of England, and *Dorothy Vernon of Haddon Hall* (1902).

Major, John, 1469–1550, Scottish theologian and historian He studied and taught at the Univ of Paris His works, all in Latin, were published there He was one of the most famous teachers of scholastic philosophy of his day, at Paris and later at the Univ of Glasgow and at St Salvator's College, St Andrews The best known of his works is *Historia Majoris Britanniae, tam Angliae quam Scotiae* (Paris, 1521, Edinburgh, 1740) This *History of Greater Britain, both England and Scotland* was the first critical history of Scotland An English translation by Archibald Constable was published (1892) with a biography by Aeneas J. G. Mackay. Major's name was also spelled Mair.

Majorca (mujŏr'ku), Span *Mallorca* (malyŏr'kä), island (1,405 sq mi.; pop 327,119), Spain, largest of the BALEARIC ISLANDS, in the W Mediterranean PALMA is the chief city Majorca is mountainous in the northwest, rising to 4,739 ft in the Puig Major, the south and east form a gently rolling, fertile region Its mild climate and beautiful scenery have long made Majorca a popular resort Agriculture and fruitgrowing (cereals, flax, grapes, and olives are produced), raising of hogs and sheep, and mining (lead, marble, and copper) are the chief occupations The kingdom of Majorca was formed in 1276 from the inheritance of JAMES I of Majorca It comprised the Balearic Islands, ROUSSILLON and Cerdagne (between France and Spain), and several fiefs in S France Perpignan, in Roussillon, was the capital In 1343 Peter IV of Aragon took the kingdom from JAMES II and reunited it with the crown of Aragon The flourishing commerce of Majorca declined, partly because of the warfare waged between the native peasantry and the Aragonese nobles and Catalan traders, but mainly because of the change in trade routes after the discovery of America In the Spanish civil war of 1936–39 Majorca early passed to the Insurgent side For history before 1276, see BALEARIC ISLANDS

Majorian (mujō'rēun), d 461, Roman emperor of the West He became emperor after RICIMER had deposed Avitus The only able ruler of the period, he enacted laws to protect the people from the taxgatherers and to preserve the ancient monuments of Rome His expedition against Gaiseric, though energetic, was unsuccessful Ricimer, jealous of so vigorous an emperor, attacked and defeated him in battle Majorian was slain His death prepared the disintegration of the West Roman Empire

Majuba Hill (mujōō'bu), NW Natal prov , Union of South Africa, in the Drakensberg Range Here, on Feb 27, 1881, a British force of 500 was routed by Boer troops under the command of P J Joubert

Majunga (mŭjŭng'gu), town (pop 23,684), NW Madagascar, founded by Arab traders c 1700 It is one of the island's main ports

Majuro (mäjōō'rō), atoll (pop 1,537) comprising 57 islets, central Pacific, in the Marshall Islands It is district headquarters of the Ratak Chain

Makah Indians (mäkô'), tribe of North American Indians who in the early 19th cent inhabited Cape Flattery, NW Wash According to Lewis and Clark they then numbered some 2,000 The Makah are the southernmost of the Wakashan linguistic stock, being the only member of the stock within the United States Makah culture was fundamentally that of the Pacific Northwest Coast area In 1855 they ceded all their lands to the United States except a small area on Cape Flattery which was set aside as a reservation Today they live on Makah Reservation, where they number some 450 See Albert Irvine, *How the Makah Obtained Possession of Cape Flattery* (1921)

Makapuu Point (mä'käpōō'ōō), SE Oahu, T H It is the site of a lighthouse with one of the most powerful lights (installed 1909) in the world

Makart, Hans (hans' mä'kart), 1840–84, Austrian historical painter, studied with Karl von Piloty in Berlin His early success was phenomenal The emperor of Austria provided him with a studio, and his short life was crowded with official honors and triumphs In his large historical paintings he strove to emulate Rubens in the use of gorgeous color Unfortunately his paintings have blackened badly Characteristic works are *Entry of Charles V into Antwerp, Triumph of Ariadne* (Vienna), and *Dream after the Ball* (Metropolitan Mus)

Makassar, Indonesia see MACASSAR

Makatea (mäkutā'u), formerly **Aurora,** island, 5 mi long, S Pacific, one of the most northwesterly of the TUAMOTU ISLANDS It is a district (pop 1,826) of French Establishments in Oceania The center of the island is a mass of solid phosphate 300 ft high The British and the French agreed (1908) to exploit the island cooperatively

Makaz (mā'käz), unidentified town, W central Palestine 1 Kings 4 9

Makemie, Francis (mukĕ'mē), 1658–1708, American clergyman, sometimes looked upon as having founded Presbyterianism in America Born in Ireland, he studied in Scotland and c 1682 was ordained a missionary to America In 1683 he arrived in Maryland He traveled and preached from the Carolinas to New York Makemie organized Presbyterian churches at Snow Hill and Rehoboth, Md In 1704 he went to England for funds and men to strengthen Presbyterianism in America, in 1706, through his efforts, the first presbytery in the country was organized in Philadelphia Makemie was arrested and imprisoned (1707) by Governor Cornbury of New York on the charge of preaching there without a license. Though acquitted, he had to pay heavy costs He died in Virginia See biography by I M Page (1938), C A Briggs, *American Presbyterianism* (1885)

Makeyevka (mŭkyā'ufkŭ), city (1926 pop. 79,421, 1939 pop 240,145), SE Ukraine, in the Donets Basin A major metallurgical and coal-mining center, it has iron and steel mills and coking plants

Makhachkala (mukhäk'hkälä'), city (1926 pop 33,552, 1939 pop 86,847), capital of Dagestan ASSR, SE European RSFSR It is a busy port on the Caspian Sea and a commercial and industrial center Its oil refineries are linked by pipe line with the Grozny fields The city has agricultural, technical, medical, and viticultural schools Founded in 1844 as Petrovsk, it was renamed after the Russian Revolution.

Makheloth (mākhē'lŏth), **unidentified desert encampment.** Num. 33.25.

Makin (mä'kĭn, mäg'ĭn), **formerly Pitt Island,** triangular atoll (4.5 sq mi , pop. 1,824), central Pacific, one of the N Gilbert Islands In 1915 it was included in the British colony of the Gilbert and Ellice Islands. Butaritari on the southernmost islet is the port of entry and is headquarters of a copra company In the Second World War the island was occupied (Dec., 1941) by the Japanese and was regained (Nov., 1943) by U S forces, who established an air base

Makkedah (mäkē'dä), town, SW Palestine, taken by Joshua Joshua 10.

Mako, Hung *Makó* (mŏ'kō), city (pop 35,705), S Hungary, on the Maros river near the Rumanian border It is the center of the Hungarian export of onions It has a large Slovak population

Maktesh (mäk'tĕsh) [Heb ,=mortar], unidentified district of Jerusalem Zeph 1 11

Malabar Coast (mă'lŭbăr), west coast of India from Goa to the southern tip of the peninsula at Cape Comorin It is bounded by the Western Ghats There is extensive fishing, largely based on the harbors of Cochin and Calicut Heavy monsoon rains make the coast a very fertile rice-growing area

Malacca (mulă'ku), city (pop 38,042), capital of the settlement of Malacca (638 sq mi , pop 239,244), SW Malaya, near the southern tip of the MALAY PENINSULA It is on the Strait of Malacca, one of the world's great arteries of sea-borne commerce, linking the Indian Ocean with the South China Sea The city was founded c 1400 and became rich as the center of a trade with China, Indonesia, India, and the Near East Its kings, aided by the decline of the Madjapahit empire of Java and the friendship of China, extended their power over the near-by coast of Sumatra and over the Malay Peninsula as far N as Kedah and Patani More important, it was through Malacca that Islam was introduced into the Malay world In 1511 Malacca was seized by the Portuguese under Afonso de ALBUQUERQUE Here, under Portuguese rule, St Francis Xavier preached Malacca fell to the Dutch in 1641 It was occupied by the British (1795–1818) during the French Revolutionary and Napoleonic Wars and in 1824 was ceded by the Dutch to Great Britain From 1826 to 1946 it was under the same government as Penang and Singapore (see STRAITS SETTLEMENTS) Modern Malacca still shows traces of its past in its Portuguese and Dutch buildings and in its Portuguese Eurasian community The rise of SINGAPORE made its commercial preeminence a thing of the past

Malachi (mă'lukī, -kē), **Malachias** (mă"lukī'us), or **Malachy** (mă'lukē), book of the Old Testament, 12th of the books of the Minor Prophets Its author is not otherwise known, he may have been contemporary with Nehemiah After a protestation of God's love for Israel (1 1-2), the prophet rebukes priests (1 6–2 9) for their negligence and the people (2 10–16) for their foreign marriages Finally, there is an impressive prophecy of punishment and judgment in the coming of a messiah (2 17–4 6) Christians from earliest times have regarded 2 10–11 as a prediction of the Eucharist For bibliography, see OLD TESTAMENT

malachite (mă'lukīt), a mineral, the green basic carbonate of copper occurring in crystals of the monoclinic system or (more usually) in masses It is translucent or opaque, the luster is silky, vitreous, adamantine, or dull It takes a good polish, but fails to retain it An important ore of copper, it also serves as a gem and for various ornamental purposes and, when finely ground, as a pigment It is found associated with other ores of copper (especially AZURITE) in various parts of the United States and in Cuba, Chile, Russia, Rhodesia, and Australia.

Malachy, Saint (mă'lukē), 1095–1148, Irish churchman, reformer of the Church in Ireland His Irish name was Máel Máedoc ua Morgair He was assistant to Cellach (Celsus), bishop of Armagh, who was attempting to reduce the disorderly ecclesiastical system to a state of discipline Malachy was ordained, studied at Lismore, and became abbot of Bangor (11237), bishop of Connor (1124), and archbishop of Armagh (1134–37) He resigned to be bishop of Down in 1137 The Church in Ireland was still organized with the tribal hierarchy set up by St Patrick Bishops came and went as they pleased, Armagh had been for many years a hereditary see Paganism was rife St Malachy set about vigorously to establish the Church on the plan of the Church on the Continent He founded the territorial hierarchy, regulated matrimony, disciplined the clergy, and generally revived religion. He went twice to Rome to seek the pallium for Irish archbishops On the first trip (1140) he visited Clairvaux, where he became the friend of St Bernard They planned a Cistercian house for Ireland, this resulted (1142) in the abbey of Mellifont (near Drogheda) After a second journey (1142) to Rome he died at Clairvaux, where he was buried Feast Nov. 23 The primary source is the biography by St. Bernard of Clairvaux (Eng tr by H J Lawlor, 1920)

Malad (mŭlăd') or **Malad City,** village (pop. 2,731), co seat of Oneida co., SE Idaho, on Deep Creek, a tributary of the Malad river, and SE of Pocatello

Founded by Mormons in 1864 in a valley well known to early travelers, it was a pony-express station and became the center of a farm district, which today produces sugar beets, wheat, and potatoes

Malad. 1 River, c 4 mi long, rising in S Idaho, SW of Gooding, and flowing SW to the Snake river It is now utilized in the MINIDOKA PROJECT 2 River, c 50 mi long, formed in SE Idaho by the junction of the Little Malad with several creeks, notably Devil Creek and Deep Creek, on which is Malad or Malad City The river flows S into Utah and empties into the Bear river

Maladetta Mountains (mälädĕ'tä), Span *Montes Malditos* (mōn'tĕs mäldē'tōs) [Span ,=cursed mountain], massif of the central Pyrenees, NE Spain, near the French border Its highest point, the Pico de ANETO, is also the highest in the Pyrenees The Garonne rises in this group

Málaga (mă'lugu, Span mä'lugä), city (pop 208,-344), capital of Málaga prov , S Spain, in Andalusia Picturesquely situated on the Bay of Málaga, it is one of the best Spanish Mediterranean ports Its luxurious vegetation and fine climate make it a winter resort as well The sweet Malaga wine is celebrated throughout the world, the wine, raisins, fruit, fish, and olive oil are exported There also are sugar refineries, cotton mills, and metalworks Founded by the Phoenicians, Málaga passed to the Carthaginians, the Romans, the Visigoths, and the Moors (711) It flourished from the 13th cent as a port for the Moorish kingdom of Granada, until it fell to Ferdinand and Isabella in 1487 The city has a modern aspect The cathedral, begun in the 16th cent , ruins of the Moorish alcazar, and the imposing citadel, called the Gibralfaro, are the most notable landmarks Pablo Picasso was born here

Malakhov (mŭlä'khuf), hill overlooking Sevastopol, RSFSR, S Crimea, just east of the city A fortified height in the Crimean War, it was stormed (1855) by the French after a long siege The name is often spelled Malakoff

Malaparte (mälapär'tä), pseud of **Curzio Suckert,** 1898 -, Italian journalist and short-story writer He fought and was wounded in the First World War After two years in the diplomatic service, he became a free-lance writer In his political writings, internationally known, he both defended and criticized fascism Because of his criticism he was exiled for five years to Lipari, described in *Fughe in prigione* (1936) *Sodoma e Gomorra* (1931) is a collection of stories, *Kaputt* (1944, Eng tr , 1946) describes some of the countries of N Europe in the Second World War

Malaren or **Malar,** Swed *Mälaren* (mĕ'larun), lake, area 440 sq mi , Sweden The largest of the Swedish lakes, it extends c 70 mi W from Stockholm, which is situated on the strait connecting the lake with the Baltic Sea On the lake shores and on the more than 1,000 islands of the lake there are many villas and historic castles and ruins, notably SKOKLOSTER and GRIPSHOLM Vasteras is on Malaren lake

malaria, infectious febrile disease caused by parasitic protozoa of the genus *Plasmodium*, transmitted by the anopheles mosquito There are three main types of malaria benign tertian malaria, malignant tertian, and quartan malaria In benign and malignant tertian malaria, the characteristic paroxysm occurs every 48 hr or every third day, in quartan malaria, the chills occur every 72 hr or every fourth day The uncontrollable shaking chill or ague coincides with the liberation of the microorganisms (sporelike bodies) from red blood cells within which they have multiplied As the blood cells thus destroyed by the germs rupture, the germs enter the blood stream and the patient sustains a high fever A severe anemia and weakness follows Relapses may occur in all types of the disease without reinfection, even after the use of quinine, atabrine, or plasmochin, drugs which are specific for malaria During the Second World War, quinine, difficult to procure, was largely replaced by a synthetic drug, atabrine Because the larvae of the mosquito develop in stagnant water, their growth may be prevented by pouring oil on the surface or by draining the water See M A Barber, *A Malariologist in Many Lands* (1946), M L Duran-Reynals, *The Fever Bark Tree* (1946).

Malartic (malärtĕk'), town (pop 2,895), W Que , W of Val d'Or, in the Rouyn mining area, inc 1939

Malaspina (mälŭspē'nu), glacier, SE Alaska, on the Gulf of Alaska and S of Mt. St Elias It covers an area of 1,500 sq mi The glacier was named for an Italian navigator who explored this region for Spain in 1791

Malaspina, volcano see CANLAON, MOUNT

Malatesta (mälätĕ'stä), Italian family, ruling RIMINI and near-by cities for almost three centuries. Malatesta da Verucchio, a powerful Guelph leader, became (1239) podestà of Rimini His hunchback grandson Giovanni was the husband of FRANCESCA DA RIMINI After 1295 the Malatesta rule in Rimini was well established, but papal investiture came only in 1392. Branches of the family came to rule also Pesaro, Cesena, and Fano. In the 14th and 15th cent. several members of the family were noted condottieri in the service of various Italian states The most famous was Sigismondo Pandolfo Malatesta (1417–1468), a typical lord of the Italian Renaissance A patron of arts and letters, he had the Tempio Malatestiano (the temple of the Malatesta) in Rimini built He played a role in Italian politics, but finally lost all his possessions except Rimini (1463) His brother Novello, lord of Cesena, built there the fine Malatesta library Sigismondo's son still held the little state After the fall of Cesare Borgia, the Malatesta family returned briefly but it sold Rimini to Venice in 1503 The city eventually went to the Holy See

Malatya (mälätē'ä), anc *Melitene*, city (pop 41,-530), E central Turkey, in Armenia, at the eastern foot of the Taurus mts It has cotton mills and is the trading center of an agricultural and orchard region In ancient and early Christian times, Melitene was an important city of Cappadocia and a metropolitan see Here in 1895 a terrible massacre of the Christians took place The name is also spelled Malatia

Malay see MALAYAN

Malaya (mulā'u), federation (c 50,850 sq mi , pop 4,902,678), in the southern part of the MALAY PENINSULA It consists of two British settlements (Penang and Malacca) and nine states in treaty relations with the British crown There is a federal government under a British high commissioner with federal executive and legislative councils The British colony of Singapore is outside the federation After the founding of PENANG (1786) and SINGAPORE (1819) and the Dutch cession of MALACCA (1824), the British for half a century avoided overt interference with the governments of the neighboring Malay states By a series of treaties between 1874 and 1909, the rulers were induced to accept British advisers In 1895 PERAK, SELANGOR, NEGRI SEMBILAN, and PAHANG were formed into the Federated Malay States Suzerainty over KEDAH, KELANTAN, PERLIS, and TRENGGANU was transferred from Siam to Great Britain in 1909, these, with JOHORE, were termed the Unfederated Malay States British administration developed Malaya's wealth Tin had been mined for centuries, but modern machinery made tin production spectacularly large Rubber was introduced in 1877 after the failure of the spice and coffee plantations, and in the 20th cent Malaya took world leadership in production of natural rubber In the Second World War the Japanese overran the country in two months (Dec , 1941–Feb , 1942) and occupied it till Aug , 1945 In 1946 the British established a union of Malaya to replace the former arrangements with the Federated and Unfederated Malay States and dissolved the former colony of the STRAITS SETTLEMENTS Resentment against the union plan, which would have reduced the states from protectorates to parts of a colony, caused Great Britain to replace (1948) the union with the federation Malaya suffered severe war damage, and its economy was weakened by the increase in world production of synthetic rubber A cause of internal tension is the fact that Chinese (1,882,874) and Indians (534,148) are together more numerous than Malays (2,135,811) and other Malaysians (267,030) See Sir R O Winstedt, *Malaya and Its History* (1948), Rupert Emerson, *Malaysia* (1937)

Malayalam (mă"luyä'lŭm), language of the Dravidian family See LANGUAGE (table)

Malayan (mulā'ŭn) or **Malay** (mā'lā), one of a population of some 100,000,000 persons inhabiting SE Asia and the adjacent islands The Malays vary greatly in physical appearance, which is, however, generally Mongoloid The term *Indonesian*, used as an alternative for Malayan, is also sometimes applied to the people of interior districts, who are thought to be connected with the Pygmies or Negritos (probably the earlier inhabitants of the region) In the coastal districts there has been intermixture with Chinese elements and with Indian elements Scores of languages or dialects are spoken, they form a group of the Malayo-Polynesian languages (see LANGUAGE, table)

Malay Archipelago or **Malaysia,** great island group, SE of Asia, in the Indian and Pacific oceans, comprising Indonesia and the Philippines

Malay language, one of the chief languages of the Malayo-Polynesian family See LANGUAGE (table)

Malay Peninsula (mulā', mā'lā), anc *Chersonesus Aurea* (kûrsŏnē'sus ô'rēu), southern extremity of the continent of Asia, lying between the Indian Ocean and the Straits of Malacca on the west and the South China Sea on the east It stretches south for 400 mi from the Isthmus of KRA, where it is narrowest, to SINGAPORE The northern part of the peninsula forms a part of Thailand, the southern part constitutes the federation of MALAYA A mountain range, culminating in peaks more than 7,000 ft. high, forms the backbone of the peninsula, from it numerous short, swift rivers flow east and west More than three quarters of the land surface is covered with jungle, the only open areas, aside from man-made clearings, are the alluvial plains of N Malaya and stretches along the rivers The region is one of the richest of the world in the production of tin and rubber, other products include copra and coconut oil, palm oil, tapioca, peanuts, pineapples, and bananas Rice is the chief foodstuff The peninsula forms a physical and cultural link between the Asiatic mainland and the islands of INDONESIA (often included in the Malay Archipelago) The Malays, historically the dominant cultural group, probably came originally from S China, but their ethnic characteristics have been modified by fusion with other peoples The Chinese are now nearly as numerous as the Malays, Indians and Siamese form important minority groups Small tribes of aborigines, descendants of pre-Malay immigrants, are found in the hills and jungles The Malay Peninsula was visited near the beginning of the Christian era by traders from India and in the succeeding centuries received, like Indonesia and Indo-China, Buddhist and Brahman missionaries and Hindu colonists Small Hindu-ized states sprang up, like Langkasuka in the area of modern KEDAH In the second half of the 8th cent the peninsula fell under the domination of the Sailendra rulers of SRI VIJAYA (from SUMATRA), whose cities in Kedah and Patani rivaled the importance of their capital at Palembang The peninsula was overrun in the 11th cent by the Cholas from the Coromandel Coast of India, after about 50 years, the Sailendras, somewhat weakened, resumed their sway It ended in the late 13th cent , when Sumatra and some southern areas of the Malay Peninsula fell to a Javan invasion and when the Thai king of Sukhothai swept over the peninsula from the north The Sumatran kingdom of Melayu next ruled over the south of the peninsula, to be followed in turn (late 14th cent) by Madjapahit, the last Hindu empire of Java, and by the Thai king of Ayuthia The fall of Madjapahit opened the way for the primacy of a Malay state, MALACCA The 15th cent. saw the conversion of the Malays, beginning with the Malaccans, to Islam (which remains the religion of most Malays), while the 16th cent brought the first Europeans The Portuguese seized Malacca, and soon afterwards Dutch traders appeared in Malayan waters Malacca fell to the Dutch in 1641 The first British ship appeared at PENANG in 1592, and from 1612 to 1623 the British maintained a factory at Patani British dominance in Malaya was deferred, however, till after the founding of settlements at Penang (1786) and Singapore (1819) and the definitive Dutch cession of Malacca (1824). The coming of the Portuguese plunged the peninsula into anarchy The last sultan of Malacca, in flight from the Portuguese, founded a kingdom based on the Riouw archipelago and JOHORE, but the rulers of the petty states in the south gradually took and claimed independence, while the rising power of Siam was as yet too weak to exercise more than a dubious suzerainty over its vassal states in the north In the 19th cent an increasingly centralized Siam and an increasingly imperial Britain rivaled each other in bringing order The British intervened in state after state, and in 1909 the boundary between Siam and Malaya was fixed by Siam's transfer to Great Britain of suzerainty over Kedah, Perlis, Kelantan, and Trengganu The Siamese Malay states, brought under the central power, shared in part the material prosperity that followed on British rule in Malaya, but never attained the commercial importance of their neighbors to the south The peninsula fell under Japanese domination in the Second World War, but after the war Siam and Great Britain recovered their previous holdings

Malaysia see MALAY ARCHIPELAGO

Malay States see MALAYA

Malazgirt, Turkey see MANZIKERT

Malbone, Edward Greene (mälbōn'), 1777–1807, American portrait painter and miniaturist, b Newport, R I , self-taught After painting portraits in Providence and Boston, he accompanied (1800) Washington Allston to Charleston, S C , and thence to Europe He was urged by Benjamin West to settle in London but returned to America, where he met with great success His portrait of Allston is in the Museum of Fine Arts, Boston, *The Hours* is in the Providence Athenaeum, and his miniatures are in many collections He died of tuberculosis

Malbork, former East Prussia see MARIENBURG

Malcham (mäl'kum) [Heb ,=their king] **1** One of the Benjamite chiefs 1 Chron 8 9 **2** Heathen god, perhaps to be identified with MOLECH Zeph 1 5

Malchiah (–kī'u) [Heb =God is my king] **1** Priest 1 Chron 6 40 **2, 3, 4, 5** Israelites in the return to Palestine Ezra 10 25, Neh 3 14,31, 8 4 **6** Israelite in the return Ezra 10 31. Malchijah Neh 3 11 **7** Owner of Jeremiah's prison Jer. 38 6 **8** See MALCHIJAH **1**

Malchiel (mäl'kēĕl, mälkī'ul) [Heb ,=God is my king], founder of an Asherite family Gen 46 17, Num 26 45 1 Chron 7 31

Malchijah (–kī'jû) [Heb ,=God is my king] **1** Priest 1 Chron 9 12 Jer 38 1 **Malchiah** Neh 11 12 Melchiah Jer 21.1 **2** Priest, perhaps the same as **1** 1 Chron 24 9 **3** Sealer of the covenant, perhaps the same as **1** Neh 10 3 **4** Israelite in the return. Ezra 10.25. **5** Priest in the return. Neh 12 42 **6** See MALCHIAH **6.**

Malchiram (mălk'rrp), son of King Jeconiah. 1 Chron 3.18

Malchi-shua (măl'kĭ-shōō'u) [Heb ,=my king is help], son of Saul 1 Chron 8 33; 9 39 Melchishua 1 Sam 14 49; 31 2

Malchus (măl'kŭs) [Gr ,=Heb MALLUCH], servant of the high priest whose ear Peter cut off and Jesus healed John 18 10,11

Malcolm III (Malcolm Canmore), d 1093, king of Scotland (1054–93), son of Duncan I, successor to MACBETH It took him some years to regain the boundaries of his father's kingdom About 1068 EDGAR ATHELING, pretender to the English throne, took refuge with Malcolm, who soon married Edgar's sister Margaret On behalf of Edgar, Malcolm invaded N England, but in 1072 WILLIAM I of England invaded Scotland, and Malcolm made peace with him He also sent Edgar to make peace with William in 1073 In the reign of WILLIAM RUFUS, Edgar Atheling was expelled from his Normandy shelter and appeared with Malcolm in his raid into England in 1091, but William Rufus forced both men to submit and to do homage Malcolm was killed at Alnwick, Nov 13, 1093, in still another raid into Northumbria, and his queen died three days later Malcolm's frequent wars insured the independence of his kingdom and made possible the great ecclesiastical reorganization initiated by his wife (see MARGARET OF SCOTLAND, SAINT). Four of his sons were kings of Scotland Duncan II, son of Malcolm and his first wife, was his successor (1093–94), and three sons of Malcolm and Queen Margaret—Edgar (1097–1107), Alexander I (1107–24), and David I (1124–53)—held the throne Malcolm's daughter Matilda married Henry I of England and another daughter was mother to the wife of King Stephen of England

Malcolm IV or **Malcolm the Maiden**, 1141–65, king of Scotland (1153–65) He succeeded his grandfather, DAVID I, who had outlived Malcolm's father. The young king at once met rebellion of the western Gaels and attacks by the Norse, both of which he put down Henry I of England insisted he give up Northumbria and Cumberland in 1157 and retain his earldom of Huntingdon as an English fief—largely useless because of its distance from Scotland Malcolm fought on Henry's behalf in France (1159) and returned to find rebellions in Scotland, but put them down He was succeeded by his brother, WILLIAM THE LION

Malden (môl'dŭn) 1 Residential and industrial city (pop 58,010), E Mass , a suburb N of Boston, settled 1640, set off from Charlestown 1649, inc as a city 1881 Its chief products are electrical equipment and rubber footwear. 2 City (pop 2,673), SE Mo , SE of Poplar Bluff, platted 1877 It is a cotton center.

Malditos, Montes· see MALADETTA MOUNTAINS

Maldive Islands (măl'dĭv, môl'–), group of atolls (c 115 sq mi , pop c 93,000), in the Indian Ocean, SW of Ceylon They are a British-protected state with a Moslem population ruled by a sultan and an elected assembly Coconuts are exported

Maldon (môl'–), municipal borough (1931 pop 6,559, 1943 estimated pop 9,020), Essex, England, on the Blackwater estuary It is a market town and an old port The 13th-century Church of All Saints has a unique hexagonal spire, and the town hall is a 15th-century building Prehistoric and Saxon or Danish traces have been found in the vicinity A battle against Danish raiders was fought near here (probably 2 or 3 mi below Maldon) in 991, the leader of the East Saxons, BYRHTNOTH, was killed The battle was celebrated in one of the last Anglo-Saxon heroic poems, "The Battle of Maldon" (325 lines), of unknown authorship but probably written by a contemporary See E V K Dobbie, introduction to *The Anglo-Saxon Minor Poems* (1942).

Mâle, Émile (āmāl' mâl'), 1862–, French art historian He directed the Académie de France à Rome from 1925 His distinctive work was on the sculptures of the Middle Ages, notably in such places as the cathedral at Chartres. Convinced that the sculptures were made to represent connected ideas, he showed, for example, that in some cases they actually illustrated passages from the great encyclopedia of Vincent of Beauvais Among his works are *L'Art religieux du XIIIe siècle en France* (1913, Eng tr , 1913) and *L'Art religieux du XIIe au XVIIIe siècle* (1945, Eng tr , 1949)

Malebranche, Nicolas (nēkôlà' mâlbrăsh'), 1638–1715, French Cartesian philosopher Malebranche laid greater stress on the dualism of mind and matter than Descartes and developed the doctrine of OCCASIONALISM more completely than his predecessors He believed the interaction of mind and matter to be completely impossible and taught that the mind can have knowledge of material objects only with the assistance of divine revelation. The speculative philosophy of Malebranche is best expressed in *De la recherche de la vérité* (1674; Eng tr., *The Search for Truth*, 1694) See A. A. Luce, *Berkeley and Malebranche* (1934).

Malecite Indians (măl'ŭsīt), tribe of North American Indians of the Algonquian linguistic stock. In the early 17th cent., as recorded by Samuel de Champlain, they occupied the valley of the St. John river in New Brunswick, Canada. The French settlers in this area intermarried with the Malecite, thus forming a close alliance with the Indians. Hence, during the colonial wars the Malecite supported the French against the English The Malecite have kept a remnant of their original lands along the St John river in New Brunswick, where they number some 1,050

Maleleel (mŭlē'lēĭl), variant of MAHALALEEL.

Malesherbes, Chrétien Guillaume de Lamoignon de (krātyĕ' gāyōm' dŭ lămwānyô' dŭ mâlzĕrb'), 1721–94, French statesman After serving as counselor to the Parlement of Paris, he succeeded (1750) his father as president of the court of aids at Paris His father, then chancellor, entrusted him with the censorship of the press; Malesherbes's administration was popular, and the publication of the *Encyclopédie* was largely due to his liberal policy. He protested against the dissolution of the PARLEMENT in 1771 and was exiled to his country estate, but upon the accession of Louis XVI (1774), Malesherbes was reappointed He supported his friend Turgot's program of reform and resigned because of its cold reception (1776), but became master of the king's household Recalled in 1787, he was made minister without portfolio but resigned the next year and retired from political life In 1792, at his own request, he was appointed a defender of Louis XVI in the king's trial Malesherbes was soon afterwards arrested as a royalist and guillotined See biography by J M S Allison (1938)

Malet, David see MALLET, DAVID

Malherbe, François de (frăswà' dŭ mâlĕrb'), c 1558–1628, French poet and critic, official poet of Henry IV and Louis XIII His poems, mostly occasional pieces, approach mechanical perfection but lack verve and fire, the best known is probably *Consolation à Monsieur du Perves* (c 1590) The critic Malherbe's profound influence on French literature was based upon his constant advocacy of objectivity, of perfection, and of seriousness of purpose, ideals soon to be enshrined in classicism

Malheur (mălōōr'), river of E Oregon rising in several branches in the Blue Mts The united stream flows generally NE to the Snake

Malheur Lake, SE Oregon, in the Harney Valley near Burns A federal migratory bird refuge is here

Malibran, María Felicita (García) (mălēbrà'), 1808–36, operatic contralto, b Paris, pupil of her father, Manuel GARCÍA Her voice was of enormous range, although a contralto, she made her debut (London, 1825), as Rosina in *The Barber of Seville* She sang in Grace Church, New York, before returning (1827) to Europe, where she achieved eminent success Her second husband was the Belgian violinist Charles de Bériot

Malibu Beach (măl'ĭbōō), unincorporated town (pop c 900), S Calif , W of Los Angeles and near Santa Monica It is a year-round resort popular with Hollywood stars

malice (măl'ĭs) In law, an act is malicious if it is an intentional violation of the law of crimes or torts which injures another person Malice need not involve a malignant spirit or the definite intent to do harm To prove malice, it is sufficient to show the willful doing of an injurious act without lawful excuse A malicious state of mind may be inferred from reckless and wanton acts which a normal person should know might produce or threaten injury to others Malice aforethought is a technical element of MURDER

Maligne Lake (mulēn'), W Alta , in Jasper National Park, in beautiful mountain scenery It is drained NW into the Athabaska river by the short Maligne river Its altitude is 5,490 ft

Malindi (mălēn'dē), town (pop c 2,000), NE Kenya, a port on the Indian Ocean Vasco da Gama landed here in 1497 and erected a fort which is partly preserved There are sisal plantations near by

Malines, Gerard, see MALYNES, GERARD.

Malines (mŭlēn', mulēn', Fr mălēn'), Flemish *Mechelen* (mĕ'khulŭn), city (pop 60,903), Antwerp prov , N Belgium, on the Dyle river In English it is also known as Mechlin (mĕ'klĭn) The city has long been famous for the exquisite lace it manufactured. It now has a large cotton textile industry Dating from the early Middle Ages, Malines was made an archiepiscopal see in 1561 and is the seat of the primate of Belgium In the course of the many wars that swept over the Low Countries, it was often devastated It has, however, retained many notable buildings, especially the 13th-century cathedral of St Rombaut, with a tower 319 ft high and with a famous carillon; it contains Van Dyck's great *Crucifixion* The churches of Our Lady and of St John have paintings by Rubens Other fine buildings are the archiepiscopal palace and the city hall (originally 14th cent., rebuilt 18th cent). Frans Hals was born here.

Malinovski, Aleksandr Aleksandrovich: see BOGDANOV, A.

Malinowski, Bronislaw (brônē'slôf mălĭnôf'skē), 1884–1942, Polish-English anthropologist, b. Poland, Ph.D Univ of Cracow, 1908. Working in the field of cultural anthropology, he gained renown through his studies (1914–18) of the primitive peoples of the Trobriand Islands off New Guinea. He taught at the Univ. of London (1924), became professor (1927), and thereafter traveled and did research in Africa, Latin America, and the United States His approach to the subject and his research techniques caused him to be regarded as the founder of "functionalism" in social anthropology Malinowski joined the Yale faculty as a visiting professor (1939). His writings were published in many languages They include *The Family among the Australian Aborigines* (1913), *Crime and Customs in Savage Society* (1926), *Sexual Life of Savages in North West Melanesia* (1929), *Coral Gardens and Their Magic* (1935), and *The Dynamics of Culture Change* (ed by P M Kaberry, 1945)

Malipiero, Gian Francesco (jän' frănchĕsk'skō mălēpyā'rō), 1882–, Italian composer, studied in Venice with Enrico Bossi and in Bologna He taught (1921–24) at the Conservatory of Parma and in 1936 became professor of music history at the Univ of Padua He edited the complete works of Monteverdi (16 vols , 1926–42) and has done research in early Italian music, which influenced his compositions His *Rispetti e strambotti* (1920) won the Elizabeth Sprague Coolidge chamber-music prize Among his works are songs, concertos, choral works, orchestral works, including *Pause del silenzio* (1918), the choral mystery play *San Francesco d'Assisi* (1921), and operas, including *Giulio Cesare* (Genoa, 1936) and *Antonio e Cleopatra* (Florence, 1938), both based on Shakspere's plays

mallard· see DUCK

Mallarmé, Stéphane (stāfan' mălarmā'), 1842–98, French poet He held that the poet should express the ideas of a transcendental world, intelligibility was to be eschewed, poetry should learn most from music, especially Wagnerian music Mallarmé's language is free of syntactic arrangement and is given to such obscurity that it cannot be read without commentary His best-known poem, *L'Après-Midi d'un faune* (*The Afternoon of a Faun*), inspired a composition of DEBUSSY Mallarmé's great importance is as the chief forebear of a new school, for the young SYMBOLISTS of the mid-1880s drew inspiration at the Tuesday evening gatherings where Mallarmé mused aloud for his hearers Paul VALÉRY also owed much to Mallarmé Editions of Mallarmé's poetry were published in 1887 and 1890, and a selection of prose *Divagations* in 1897 Some of the poems have been translated (with commentary by Charles Mauron) by Roger Fry, *Poems of Mallarmé* (1936) Mallarmé earned his living by teaching English

malleability, property of a metal which describes the extent to which it can be hammered, beaten, pressed, or rolled into thin sheets Metals vary in this respect, pure gold is the most malleable Silver, copper, zinc, tin, aluminum, lead, and iron are also especially malleable Tin foil and aluminum foil are used for wrapping merchandise, both are common in sheets Lead foil is used for lining tea boxes and for covering other substances The malleability of a metal is not constant but is influenced by temperature Zinc, for example, at ordinary temperatures is very brittle, but at temperatures from about 120°C to 150°C it is malleable Impurities affect adversely the malleability of metals

Mallet, Malet, or **Malloch, David** (măl'ĭt, –ŭkh), c 1705–1765, Scottish poet He and James THOMSON (1700–1748) wrote the masque *Alfred* (1740), which contained the famous song *Rule, Britannia* (music by Thomas Arne)

Mallorca· see MAJORCA

Mallory, George Herbert Leigh (mă'lurē), 1886–1924, English mountain climber After performing spectacular feats in the Alps, he participated in the Everest expeditions of 1921, 1922, and 1924 The 1924 expedition culminated in a bold and possibly successful drive toward the summit made by Mallory and Andrew Irvine, from which they did not return Mallory's intelligence, resolution, and superb leadership, together with the mystery surrounding his final effort, have made his name legendary among mountaineers His name also appears as George Herbert Leigh-Mallory See biography by D R Pye (1927), J R Ullman, ed , *Kingdom of Adventure Everest* (1947)

Mallory, Stephen Russell (mă'lurē), c 1813–1873, U S Senator, secretary of the navy in the Confederacy, b Trinidad, West Indies He was reared in Key West, Fla , where he practiced law and was a customs official Elected to the U S Senate in 1851 and reelected in 1857, Mallory served till Florida seceded. He was long chairman of the committee on naval affairs He was secretary of the navy in the Confederacy throughout the Civil War. Mallory ardently advocated ironclad warships for the navy With them he hoped to break the Union blockade, but efforts to secure ironclads from England and France proved futile, and of the few constructed in the Confederacy the most outstanding, the *Virginia* (*Merrimac*) and the *Mississippi*, had to be destroyed to prevent their falling into Union hands Mallory was captured in flight with Jefferson Davis in 1865 and was imprisoned. On his release in 1866, he resumed the practice of law in Florida. See B. J. Hendrick, *Statesmen of the Lost Cause* (1939).

Mallothi (mă'lŭthī, mŭlō'thī), leader of temple singers. 1 Chron. 25.4,26.

Mallow [Irish, =plain of the Allo, old name for the Blackwater], urban district (pop 5,217), Co Cork, Ireland, on the Blackwater and NNW of Cork. It is a railroad center and agricultural market with a sugar refinery, tanneries, and salmon fisheries Mallow Castle is the seat of the Norreys, and there are ruins of an old castle of the Desmonds After the discovery of mineral springs, Mallow became a popular resort

mallow, name sometimes given various plants of the mallow family (see HIBISCUS, MARSH MALLOW; VELVETWEED), but particularly species of the genus *Malva*, mostly pink- or white-flowered decorative or weedy plants

Malluch (măl'ŭk) [Heb, =counselor] **1** Merarite. 1 Chron 6 44 **2, 3** Two who gave up foreign wives Ezra 10 29, 32 **4, 5** Two signers of the covenant Neh 10 4,27 **6** Priestly family returned with Zerubbabel Neh 12 2 Melicu Neh 12 14 Some of these may be the same

Malmaison (mälmāzō'), château at Rueil-Malmaison, a western suburb of Paris, France It was the residence of Napoleon Bonaparte (1800–1803) and of Empress Josephine after her divorce (1809–14) It contains a Napoleonic museum

Malmberg, Aino (I'nō mälm'bĕr"yŭ), 1866–1933, Finnish patriot and feminist, grad Univ of Helsinki, 1887, in the first class to include women students She was active in the nationalist movement and in the nation-wide strike of 1905, which resulted in universal suffrage In 1910 she was exiled by Russia and went to England Her home in London was for many years a center for exiles from Finland and other oppressed nations She was a pacifist during the First World War and in 1916 a member of Henry Ford's peace delegation Her later years in Helsinki were devoted to schemes for bettering the lot of peasant farmers

Malmédy (mälmādē'), town (pop 5,702), Liége prov, SE Belgium, near the German border The town and the surrounding district belonged to the abbey of near-by Stavelot until their transfer (1815) to Prussia Under the terms of the Treaty of Versailles Malmédy and Eupen were transferred to Belgium (see EUPEN)

Malmesbury (mamz'bŭrĭ), municipal borough (1931 pop 2,334, 1943 estimated pop 2,700), Wiltshire, England It is famous for its magnificent abbey, started by Maildulf in the 7th cent, here St Aldhelm and William of Malmesbury worked and studied and Athelstan was buried Thomas Hobbes was born near Malmesbury, and at Garsdon are tombs of George Washington's ancestors

Malmo (mäl'mō), Swed *Malmö* (mäl'mö"), city (pop 171,053), co seat of Malmohus co, SE Sweden, on the Oresund opposite Copenhagen It is a large naval and commercial port and an industrial center with shipyards, machine shops, textile mills, sugar refineries, and tobacco and rubber manufactures Founded in the 12th cent, the city was a major fishing port for herring during the Hanseatic period It was under Danish rule until Sweden annexed it (1658) as a part of Skane In Malmo castle (built 1537) Bothwell was held a prisoner Other important buildings include the city hall, built (1546) in Dutch Renaissance style, and several museums

Malmohus, Swed *Malmöhus län* (mäl"mûhŭs lĕn'), county (1,871 sq mi, pop 551,610), S Sweden, opposite Denmark Part of the historical province of SKANE, it is the most populous and wealthiest county in Sweden Its fertile soil and temperate climate make it a rich agricultural region MALMO is the county seat, HALSINGBORG the shipping center, LUND the university town Other ports and fishing centers are LANDSKRONA, TRELLEBORG, YSTAD, Skanor, and Falsterbo

malnutrition, condition resulting from deficiency in the quality or quantity of food or from faulty assimilation Disturbances of the digestive and nervous systems may be the cause of malnutrition Underweight and overweight usually indicate nutritional disorders Certain deficiency diseases, e g, rickets, scurvy, beriberi, and pellagra are caused by a lack of vitamins in the diet Anemia may result from imperfect intake or absorption of iron and other minerals

Maloja (mälō'yä), pass, Grisons canton, Switzerland, leading from the Engadine Valley to Italy The resort village of Maloja lies in the northeast

Malolos (mälō'lōs), municipality (pop 33,384), on SW Luzon, Philippine Islands, NW of Manila It is a rice-trading center Filipino patriots under the leadership of Emilio Aguinaldo established their short-lived revolutionary capital here in 1898

Malone, Dumas (mûlōn'), 1892–, American historian and editor, b Coldwater, Tate co, Miss, grad Emory College (now Univ), 1910, and Yale (B.D., 1916; M A., 1921, Ph D, 1923) He served in the U S Marine Corps in the First World War and was an instructor of history at Yale (1919–23) and associate professor (1923–26) and professor (1926–29) at the Univ of Virginia He was an editor of the *Dictionary of American Biography* from 1929 to 1931 and editor in chief from 1931 to 1936 After serving as director of the Harvard Univ. Press (1936–43), Malone became (1945) professor of history at Columbia. Among his books are *The Public Life of Thomas Cooper* (1926), *Saints in Action* (1939), *Edwin A. Alderman* (1940), and *Jefferson the Virginian* (1948, Vol I of a projected four-volume work entitled *Jefferson and His Time*)

Malone, Edmund, 1741–1812, Irish Shaksperian scholar His studies (1778) in the chronology of Shakspere's plays are still generally accepted Malone was (1782) among the first to see through the supposed antiquity of the poems by Thomas Chatterton, and he exposed (1796) the Shaksperian forgeries of William Ireland Malone published an edition of Shakspere in 1790 and an elaborate edition of Dryden in 1800 A friend of Samuel Johnson, Malone advised James Boswell on the writing of Johnson's biography

Malone (mûlōn'), village (pop 8,743), co seat of Franklin co, N N Y, on the Salmon river, settled c 1800, inc 1833 Near the Quebec line, it is a port of entry Woolen, paper, and dairy products are made Members of the FENIAN MOVEMENT gathered here (1866) to attack Canada There is a state school for the deaf

Malory, Sir Thomas (măl'ŭrĭ), d 1471, English author of the great *Morte d'Arthur*, the last medieval English work of the ARTHURIAN LEGEND He was, almost certainly, Sir Thomas Malory of Newbold Revell, Warwickshire, he reputedly began in England in 1450 a career of lawlessness, though no record of his crimes remains, he wrote much of his work in prison and may have died there Malory's original book was eight more or less separate romances and was called *The Book of King Arthur and His Knights of the Round Table* It was Caxton the printer who erroneously gave it the title *Morte d'Arthur* He also tried to unify the work by some deletions and by dividing it into 21 books, each being the adventures of one knight Among Malory's French sources the chief one was a lost collection of romances, probably of the 13th cent He also used two 13th-century English romances, one of which, the alliterative *Morte Arthur*, sets the heroic tone of the work In his own relatively simple stories, Malory's tales of Lancelot and Guinevere and of Arthur's death reveal an excellent dramatic sense and grasp of character His prose style is remarkably vigorous, fresh, and simple See *The Works of Sir Thomas Malory* (ed by Eugene Vinaver, 1947)

Maloyaroslavets (mə"luyärŭslä'vyĭts), city (1939 pop over 10,000), central European RSFSR, NNE of Kaluga Here in 1812 the Russians barred the road to Kaluga to Napoleon's retreating army and forced it to retreat by way of Mozhaysk through devastated territory In the Second World War the Germans held Maloyaroslavets in the winter of 1941–42 during their drive on Moscow

Malpighi, Marcello (märchĕl'lō malpē'gē), 1628–94, Italian anatomist A pioneer in the use of the microscope, he made numerous valuable observations on the structure of plants and animals, He completed the proof of Harvey's theory of circulation by his observation of the movement of blood through capillaries and recorded this as well as his work on the structure of the lung, in *De pulmonibus* (1661) He is noted also for his studies of the structure of glands, the brain, and the spleen, liver, and kidneys, of the anatomy of the silkworm, of the embryology of the chick, and of plant tissues Malpighi was professor at the Univ of Bologna (1666–91)

Malplaquet (malplăkā'), village, Nord dept, N France, NW of Maubeuge Here in 1709, in the War of the Spanish Succession, Marlborough and Eugene of Savoy won a costly victory over the French under Marshal Villars

Malraux, André (ädrā' malrō'), 1895–, French novelist A student of Oriental languages and an archaeologist, Malraux soon became interested in the problem of revolution experienced by his generation Participant as well as observer of the 1925–27 uprisings in China, of the civil war (1936–39) in Spain, and of the Second World War, he records in his novels the violence he witnessed From his experiences in China came his first three novels —*Les Conquérants* (1928, Eng tr, *The Conquerors*, 1929), *La Voie royale* (1930, Eng tr, *The Royal Way*, 1935), and *La Condition humaine* (1933, Eng tr, *Man's Fate*, 1934), which won him the Goncourt Prize *Le Temps du mépris* (1935, Eng tr, *Days of Wrath*, 1936) is concerned with the struggle of a member of the German underground during the Nazi reign, and *L'Espoir* (1938, Eng. tr, *Man's Hope*, 1938) was a result of Malraux's participation as an aviator in the Loyalist air force in Spain In 1943 appeared in Switzerland *Les Noyers de l'Altenburg*, first volume of a long novel, *La Lutte avec l'ange* His *Psychologie de l'art* (1947) appeared in English in two volumes—*Museum without Walls* and *The Creative Act* (both 1949) Malraux became in 1947 an unofficial press agent for Charles de Gaulle

malt, a grain (usually barley) steeped in water, partially germinated, then dried and cured Enzymes, chiefly diastase, are produced by germination Malt is used in brewing for the saccharification of cereal starches Its high carbohydrate and protein content make it a valuable nutrient.

Malta (môl'tŭ), British colony in the Mediterranean S of Sicily, comprising the islands of Malta (95 sq mi), Gozo (26 sq mi), and Comino The total population is 306,996 The group is sometimes called the Maltese Islands The capital is Valletta The island of Malta (ancient Melita) has been important from early times and belonged successively to the Phoenicians, the Greeks, the Carthaginians, the Romans, and the Saracens In 1090 it passed to Sicily and in 1530 was given by Charles V to the Knights Hospitalers (therefore sometimes called the Knights of Malta) Notwithstanding a determined siege by the Turks in 1565, the order held it until 1798, when it was surrendered to Napoleon The British ousted the French in 1800 and in 1814 annexed the island In 1947 a constitution similar to that of 1921, providing for government by an elective assembly, a ministry, and a governor was granted by letters patent The 1921 constitution was abolished in 1936, Malta reverting to the status of a crown colony In 1939 a limited constitution was put into effect Malta is of great strategic value Valletta is the principal British naval and military base in the Mediterranean In the Second World War, between 1940 and 1943, Malta was subjected to well over 2,000 heavy air raids by Italian and German planes, but the solid fortifications and air-raid shelters built into the rock and an intensive anti-aircraft concentration kept the Axis from bombing Malta into surrender In 1942 the entire Maltese population was awarded a decoration for bravery by King George VI In Sept, 1943, the Italian fleet surrendered to the British at Valletta Although there is some export of potatoes, onions, lace, beer, pipes, buttons, cigarettes, and cotton, the British naval dockyards are the principal source of employment The ancient capital was Citta Vecchia Important relics of Paleolithic, Neolithic, and Bronze Age civilizations have been found in Malta St Paul was shipwrecked here

Malta, city (pop 2,215), co seat of Phillips co, N Mont, on the Milk river, inc 1909 In the late 19th cent a cow town, it is today also the chief town of the Milk river reclamation project

Malta, Knights of see KNIGHTS HOSPITALERS

Malta fever see UNDULANT FEVER

Malte-Brun, Conrad (kôn'rädh mäl'tu-brōōn", Fr maltu-brŭ'), 1775–1826, Danish geographer, originally named Malthe Konrad Bruun Born in Jutland, he settled in Paris after being exiled because of his political views He wrote an encyclopedic geography of the world and a dictionary of geography He was secretary of the French Society of Geography, as was his son, **Victor Adolphe Malte-Brun** (vēktôr' adôlf'), 1816–89, who also wrote extensively on geographical subjects

Maltese Islands see MALTA

Malthus, Thomas Robert (măl'thŭs), 1766–1834, English economist, sociologist, and pioneer in modern population study In *An Essay on the Principle of Population* (1798, rev ed, 1803), he contended that poverty and distress are unavoidable, since population increases by geometrical ratio and the means of subsistence by arithmetical ratio As checks on population growth, Malthus first accepted only war, famine, and disease, but in his revised work he admitted also the preventive check of "moral restraint" Although this theory caused general controversy, it was later adapted by neo-Malthusians (see BIRTH CONTROL), and its implications influenced classical economists, especially Ricardo Subsequent POPULATION trends have outmoded most of his predictions, but not all of his analysis He wrote *Principles of Political Economy* (1820) and other books See biography by James Bonar (2d ed, 1924)

Malton (môl'-), urban district (pop 4,419), North Riding of Yorkshire, England, on the Derwent and NE of York It has steel rolling mills At Old Malton is the Norman church of a priory founded in 1150 New Malton is adjacent to Old Malton Near by are traces of a Romano-British settlement

maltose (môl'tōs) or **malt sugar**, a carbohydrate (a compound of carbon, hydrogen, and oxygen) having the same chemical formula as cane sugar (SUCROSE) and milk sugar (LACTOSE) It forms needle-like crystals, taking up one molecule of water of crystallization It is very soluble in water, but only slightly so in alcohol Maltose results through the action of the ENZYME diastase on starch. The enzyme maltase causes it to be changed to dextrose (glucose) and alcohol Maltose, being directly fermented by yeast, is important in the brewing of BEER It is an easily digested food

Malus, Étienne Louis (ātyĕn' lwē' mülüs'), 1775–1812, French physicist In 1809 he stated his discovery of the polarization of light, in 1810 he published a memoir of his theory of double refraction

Malvasia (mälvusē'u), Gr *Monembasia* or *Monemvasia* (both mô"nŏmvāsē'ä), village (pop 638), S Greece, in the SE Peloponnesus, on a rocky island joined to the mainland by a mole In the Middle Ages it was an export center of Malvasian or malmsey (mäm'zē) wine, a type now made in many places

Malvern (môl'vurn, mô'-), urban district (1931 pop 15,634, 1943 estimated pop 17,320), Worcester-

shire, England, SW of Worcester and on the east slope of the Malvern Hills The district includes Great Malvern (with medicinal springs and leather industry), Malvern Wells (with medicinal springs), Little Malvern or West Malvern (residential), and Malvern Link (an engineering suburb) Malvern College, a public school for boys, was founded in 1863 There are ruins of a Benedictine priory church of the 11th cent Another priory of the 11th cent has been rebuilt The mineral springs, climate, and pleasant surroundings made the district a favorite watering place The annual dramatic Malvern Festival was instituted in 1928 as a tribute to George Bernard Shaw

Malvern (măl'vurn, -vûrn) **1** City (pop 5,290), co seat of Hot Spring co, S central Ark, laid out 1873, inc 1876 Lumber, cotton, chemical, shoe, and brick manufacture are important, and a large aluminum plant was started near by during the Second World War A state park is also near by **2** Town (pop 1,325), SW Iowa, SE of Council Bluffs, in a farm area, founded 1869 with the coming of the railroad, inc 1870 **3** Village (pop 1,177), NE Ohio, SE of Canton **4** Borough (pop 1,680), SE Pa, W of Philadelphia, settled 1866, inc 1889 It is a trading center for an agricultural area

Malverne, residential village (pop 5,153), on SW Long Island, SE N Y, near New York city, settled c 1790, inc 1921

Malvern Hill see SEVEN DAYS BATTLES

Malvern Hills, range of hills, c 9 mi long, England, on the Worcestershire-Herefordshire border The highest points are the Worcester Beacon (1,395 ft) and the Hereford Beacon, on which there was an ancient British camp

Malynes, Malines, or **de Malines, Gerard** (mălēn'), fl 1586–1641, English economist His leading works, which take the mercantilist point of view, include *A Treatise of the Canker of England's Commonwealth* (1601), *The Maintenance of Free Trade* (1622), and *Consuetudo vel Lex Mercatoria, or, Ancient Law Merchant* (1622)

Mamaroneck (mumă'runĕk), residential village (pop 14,034), SE N Y, in Westchester co, on Long Island Sound near New Rochelle, settled 1661, inc 1895 It has a raincoat factory, and food products and wood products are made

Mamelukes (măl'mulōks) [Arabic, =slaves], originally slaves brought to Egypt by the Fatimite caliphs in the 10th cent and by the later Ayyubite sultans and trained as soldiers Many were freed and rose to positions of great power, some even became emirs with slaves of their own It was the Mameluke emir Fibek who, in 1250, killed the last of the Ayyubite dynasty and proclaimed himself sultan For more than 250 years Egypt was ruled by these slave sultans, who waged bitter war with the last of the Crusaders and later with the Mongols in Syria and Asia Minor, at times holding all of Syria, much of Asia Minor, and cities on the Armenian frontier The Mameluke rulers were of two dynasties, the earlier Bahrites (1250–1382), chiefly Turks and Mongols, who were settled on an island in the Nile, and the later Burjites (1382–1517), chiefly Circassians, who lived in Cairo itself. With the one exception of Mohammed en-Nasir (reigned 1293–1340), each of the Mamelukes ruled but briefly, meeting usually a violent death at the hands of rival conspirators But in spite of the turbulence and carnage of their rule, they left some fine architectural monuments, especially in Cairo When Egypt was conquered by the Turks in 1517, Mamelukes remained in the army, and Mameluke beys (princes) remained in control of the provinces. The Mamelukes (in rebellion against the Turks) were defeated by Napoleon on his invasion of Egypt in 1798 Mohammed Ali finally destroyed the power of the Mamelukes in 1811 by massacring their leaders, whom he had gathered together in a fortress ostensibly for parleys See Sir William Muir, *The Mameluke or Slave Dynasty of Egypt* (1896)

Mamison or Mamisson (both mămēsŏn'), pass, 9,550 ft high, USSR, in the central Greater Caucasus, on the border between the Georgian SSR and the RSFSR Crossed by the Ossetian Military Road, it links the Ardon and Rion river valleys

mammal, an animal of the highest class of vertebrates, the Mammalia The female has mammary glands which secrete milk for the nourishment of the young after birth, in the majority the body is partially or wholly covered with hair, the heart has four chambers and only the left aortic arch is present, a muscular diaphragm separates the chest from the abdominal cavity Mammals are warm-blooded, and the mature red corpuscles in the adult animal usually lack a nucleus. Except in the order of egg-laying monotremes (the PLATYPUS and the echidna) the young are born alive A MARSUPIAL is born in an undeveloped and helpless condition In some marsupials and in higher mammals the young receive nourishment in the prenatal state through a true PLACENTA. The order of flesh-eating animals or Carnivora includes terrestrial animals such as the cat, dog, and bear families as well as the aquatic seal, sea lion, and walrus families Other aquatic mammals are the whale, porpoise, and dolphin of the order Cetacea and the manatee and dugong of the order Sirenia Unusual adaptations are also found in the bat (order Chiroptera); in the elephant (order Proboscidea), in the sloth, armadillo, and anteater (order Edentata); and in the beaver, woodchuck, porcupine and squirrel of the order Rodentia The order Insectivora includes the shrew and the mole There are two groups of ungulates or hoofed mammals most members of the order Perissodactyla, including the horse and the rhinoceros are odd-toed, and the third digit is the largest in all, those of the order Artiodactyla, the deer, antelope, camel, pig and cow, are even-toed, with the third and the fourth digits symmetrical and functional Man, the monkey, the ape, and the lemur belong to the order of Primates Some remains of mammals from the Jurassic period are identified and the group became dominant in the Tertiary period See H F Osborn, *The Age of Mammals* (1910), W B Scott, *A History of Land Mammals of the Western Hemisphere* (1937), G H. Tate, *Mammals of Eastern Asia* (1947), V H Cahalane, *Mammals of North America* (1947)

mammon [Aramaic, =riches], Aramaic term retained in the New Testament Greek Mat 6 24, Luke 16 9,11,13

mammoth, extinct elephant which ranged over parts of Europe, Asia, and North America in the Pleistocene epoch of geologic time The shoulder height of the Siberian or woolly mammoth, which roamed the northern regions of both hemispheres, was about 9 ft, and that of the imperial mammoth of the Great Plains was about 13½ ft Mammoths were covered by a long, shaggy outer coat and a dense, woolly undercoat They had complex, many-ridged molar teeth and long, slender, curved tusks The ivory of these tusks was long an article of export from Siberia, where mammoths perished in great abundance when the species died out Whole mammoths have been discovered frozen in N Siberia, it is from these and from the drawings left by the Cro-Magnon men in the caves of S France that knowledge of the mammoth's appearance is derived See Bassett Digby, *Mammoth and Mammoth-hunting in Northeast Siberia* (1929)

Mammoth Cave National Park, 50,695 73 acres, S Ky, SSW of Louisville and NE of Bowling Green, est 1936 Mammoth Cave one of the largest known caves, was discovered by white men in 1799, but it was an Indian habitation long before it was visited by Kentucky pioneers During the War of 1812 saltpeter was mined here for gunpowder The full extent of the cave is still unexplored, but the known passages extend c 150 mi, disclosing beautiful and fantastic limestone formations, lakes, and rivers The corridors occur in five separate levels, through the lowest of which flows Echo river (360 ft below the surface) draining into the Green River The cave contains many large chambers connected by relatively small and narrow passages It has two main entrances, one is natural and is known as the Old, or Historic, Entrance, the other is man made, known as the Frozen Niagara Entrance In the cave is the mummified body of a man believed to be of the pre-Columbian period, eyeless fish, bats, and insects are found here. Mammoth Cave has been famous for more than a century The park area in which it lies is hilly and forested (with a variety of animal, bird, and plant life), contains 30 mi of the Green and Nolin rivers, and offers swimming, boating, fishing, and other recreational opportunities

Mammoth Hot Sprngs see YELLOWSTONE NATIONAL PARK

Mamoré (mamōrā'), river, c 600 mi long, Bolivia, formed by tributaries rising in the Andes and plains of central Bolivia It flows N to Brazil. Joined in its lower course by the Guaporé, it forms a small section of the Brazil-Bolivia border before it joins the Beni to form the MADEIRA

Mamou (mă'mōō), village (pop 1,379), SW La, S of Alexandria

Mamre (măm'rē), ally of Abraham and owner of part of HEBRON Gen 14 24

Mamun (Abu-l-Abbas Abd-Allah al-Mamun) (mămōōn'), 786–833, 7th ABBASID caliph (813–33), son of HARUN-AL-RASHID He succeeded his brother Al-Amin but was unable to enter Baghdad until 819 His reign was full of troubles, particularly because of Mamun's preference for Persians and rationalists He was himself one of the Mutazilites, the greatest rationalistic sect of Islam, holding that the Koran was created in time He persecuted the orthodox bitterly His reign was one of great culture, and he was especially interested in scientists, particularly when they knew Greek The poet Abu Tammam, the tradition collector Bukhari, and the jurist Ahmed ibn Hanbal all flourished under Mamun

Man, town (pop 1,342), S W Va, on the Guyandot and SE of Logan, in a mining area, inc 1918

man see ANTHROPOLOGY, MAN, PRIMITIVE, RACE.

Man, Isle of, island 221 sq mi., pop 49,308), 33 mi. long and 12 mi wide, Great Britain, in the Irish Sea The coast is indented by numerous bays and has precipitous cliffs; the Calf of Man is a detached rocky islet off the southwest coast. The rounded hills rise to over 2,000 ft in Snaefell. The scenery is varied and beautiful, the climate very mild (subtropical plants are grown without protection), and the island is a resort More than half the island is cultivated, crops include fruits, flowers, vegetables, and grains Dairying, fishing, and quarrying are carried on Traces of occupants of the isle from Neolithic times exist, there are ancient crosses and other stone monuments, a round tower at Peel, an old fort, and castles Occupied c 600 by Vikings, the island was a dependency of Norway until 1266, when it passed to Scotland, but from the 14th cent to 1735 it belonged to the earls of Derby Since 1827 it has been under the British crown The ancient open-air midsummer-day assembly of the Tynwald (legislature) was attended for the first time by the British king in 1945 The isle is rich in folklore and legend Its towns include Douglas, Peel, Ramsey, Castletown, Port Erin, and Port St Mary The Manx language (Celtic, see LANGUAGE, table) is now known by very few of the inhabitants—English is generally spoken. Thomas Edward Brown, a native Manxman, used the dialect in his poetry Hall Caine lived on the island and wrote about Manx life See R H Kinvig, *History of the Isle of Man* (1944)

man, primitive, or **early man.** A comparison of man with other animals reveals that he is closely related to the so-called anthropoid or manlike apes, and scientists infer on evolutionary grounds that the anthropoid apes and man have a common ancestor This common ancestor is now generally recognized to have been the large ape, *Dryopithecus*, fossil remains of which have been discovered in late Miocene deposits (7,000,000 to 10,000,000 years old) in an area stretching from Spain and North Africa to the southern and eastern parts of Africa and to India A giant in size compared with earlier apes, *Dryopithecus* is thought to have deserted the trees for residence on the ground in order to obtain the more abundant food there Its leg bones indicate that it walked virtually upright Anatomists maintain that it gave up the vegetarian diet of arboreal apes and became omnivorous Like the modern chimpanzee, it may have been capable of a limited use of objects in obtaining food Remains of *Dryopithecus* belong to the strata of late Pliocene times, when definitely prehuman types appear. Several fossil apes, more advanced than *Dryopithecus* and the modern apes, discovered (1924–38) in South Africa, seem to belong to Pleistocene times, when human populations covered the whole Eastern Hemisphere The Pleistocene period, beginning 500,000 to 1,000,000 years ago (depending on the geological time scale employed), was marked by four advances and recessions of a north polar ice cap, and these have provided a calendar for determining the age of human remains The "age of glaciers" thus coincides with the age of early man and with the greater portion of the Paleolithic period Of the millions of people who lived during this period the fragments of only a few hundred individuals have been found, including some 20 fairly complete skeletons The significance of the early finds was not understood, the Neanderthal skull found in 1856 being thought to represent an aberrant or apelike form or a pathological specimen of man In 1886 another Neanderthal fossil man was discovered at Spy, Belgium, in association with the bones of extinct animals and flint implements of the Paleolithic period, and scientists realized that they had to do with a new type of man With the acceptance of the evolution theory the search for early man began, each new discovery being hailed as the "missing link" between modern man and the apelike ancestor postulated by Charles Darwin With the finding of Cro-Magnon fossils (see CRO-MAGNON MAN) in 1868 the age of modern man was pushed back 25,000 years In *Pithecanthropus erectus*, found in Java in 1891–92, by Eugene Dubois, a definitely primitive, apelike type was recognized Eventually, on the basis of the fossil material, scientists distinguished and named several new genera and more than a score of new species of man In the 1930s, with the excavations at Mt Carmel, Palestine, important new light was shed on the question of man's evolution In 1940 Franz Weidenreich proposed to reduce to three main types or species the fossil men then known—*Homo erectus*, *Homo neanderthalensis*, and *Homo sapiens* This classification recognizes the fact that all known fossil men have so many human traits in common that they must be placed in one genus, *Homo*, that however much they differ from one another, they often combine the most archaic with the most modern features, and that advanced and primitive physical types seem to be nearly of the same antiquity The most primitive men, Java man (*Pithecanthropus*) and Peking man (*Sinanthropus*), seem clearly to be variants of one type, *Homo erectus* The jaws of both are massive, the teeth are nearly human, the brow ridges bounding the eye sockets above are heavy and projecting, and the forehead is flat and sloping—all distinctively apelike characteristics The markings on the inside of the skullcap reveal the configuration of a near-human brain, including a speech area Both Java and Peking man knew the use of fire and probably lived in small bands or encampments and

spoke some sort of language. They are assigned to the early Pleistocene The remains of *Homo neanderthalensis*, with those of his Mousterian culture, have been found in the greatest number in W central Europe in the deposits of the third interglacial and last glacial period, laid down from 30,000 to 150,000 years ago Neanderthal man was short in stature, averaging little more than 5 ft in height He had an exceptionally long and full face, deep-set eyes, a broad, flat nose, and round, full cheeks and a robust body with deep chest The males alone seem to have possessed heavy brow ridges The arms were short and muscular, the forearm being especially short, a manlike trait He had a brain measuring about 1400 c c , nearly as large as that of the modern European, but a smaller proportion of it occurred in the frontal lobes than is the case with modern man Neanderthaloid populations dominated the scene in late Pleistocene times from Europe to Africa, Palestine, and central Asia The type was not uniform but seems to have varied from place to place in response to local conditions or as a result of intermixture with other types, as perhaps occurred at Mt Carmel Typical variants are the men of Spy, Ehringsdorf, and Rhodesia Because so many remains of these people have been found in caves, they are popularly thought of as "cave men", but they probably did not live in caves, though they visited them No relics of Neanderthal man have been found in postglacial Europe, and until the last two decades it was assumed that he had been driven out, perhaps exterminated, at the end of the Ice Age by immigrant groups of *Homo sapiens* type, the earliest known of which was the Cro-Magnon population in France and Spain, but how the Cro-Magnon people could have appeared so suddenly without known antecedents anywhere was a mystery Recent study of the fossil evidence, however, indicates that *Homo sapiens* may have been among the oldest inhabitants of Europe as well as Asia and Africa The Piltdown, Galley Hill, and Swanscombe fossils discovered (1888-1935) in England in early Pleistocene strata seem remarkably modern in several respects, though Piltdown man was found in association with eoliths, the crudest human artifacts known, Galley Hill man in association with Prechellean, and Swanscombe man in association with Acheulean implements Piltdown man lacked the massive brow ridges of most early men, and Galley Hill man possessed a large, virtually modern brain A second "Peking man," found (1933) in the upper cave at Chou Kou Tien, near Peking, China, lived in later Pleistocene times, as did apparently the Kanam, Kanjera, and Oldoway of E Africa and Boskop man of the Transvaal These fossils are definitely *Homo sapiens* relics and show how widely modern man was distributed and that he was contemporaneous with anatomically more primitive types Evidence from the Skhul cave at Mt Carmel suggests that modern man may be a mixture of Neanderthal and other types, like Cro-Magnon An even more complicated mixture of traits has been found in fossils like those of the Solo man and Wadjak man of Java, which present a strange mosaic of traits of *Pithecanthropus*, Neanderthal, and *Homo sapiens* In many such remains scientists discern the Mongoloid, Negroid, and Caucasoid characteristics of living populations Like all early men, Cro-Magnon man possessed a long head, but it was combined with a broad face, in this he resembled the modern Eskimo Few broadheaded populations are known before the Pleistocene Whatever the origin of *Homo sapiens*, many hold it to be probable that he is in part the result of crossing with other types, which took place whenever early men in their wanderings came in contact with each other No remains of man of proved antiquity have been discovered in the Americas The age of such as have been found has been compromised by the inability to determine the age of the strata in which they were found It is not known exactly when animals like the mammoth and mastodon became extinct in North America, hence the association of human relics with their bones is not significant Anthropologists who follow Ales Hrdlicka consider that all fossils found in prehistoric America cannot be of great age, since they resemble too closely living Indian populations, while Earnest A Hooton and others hold that skulls need not be primitive in order to be ancient The best claim to antiquity seems to be held by the "Minnesota girl" turned up by a road-grading machine in 1931 near Pelican Rapids, Minn , which has many characteristics of the Sioux Indian type A number of narrow, high-vaulted craniums discovered (1940) in the caves of Lagoa Santa, Brazil, illustrate a variant in head form which is found sporadically throughout the populations of America as far as Labrador and Greenland The view generally held is that the prehistoric populations of America were predominantly of Mongoloid type, possibly with some admixture of Ainu and Caucasoid elements, descendants of Asiatic immigrants who entered the continent by way of Bering Strait and Alaska soon after the retreat of the Wisconsin ice. The theory once put forward that the Western Hemisphere might have been peopled by men who drifted across the Pacific Ocean in boats never received much acceptance See G G MacCurdy, ed , *Early Man* (1937), R W Murray, *Man's Unknown Ancestors* (1943), Franz Weidenreich, *Apes, Giants, and Man* (1946), W E Le Gros Clark, *History of the Primates an Introduction to the Study of Fossil Man* (1949)

Manado, Indonesia see MENADO

Manasquan (măn'ŭskwăn), borough (pop 2,340), E N J , a resort near the Atlantic SSW of Asbury Park, inc 1887

Manassa (mună'sŭ), town (pop 1,008, alt c 7,700 ft), S Colo , near the N Mex line, in a farm area, founded 1878-79 by Mormons, inc 1889 Jack Dempsey was born here

Manassas (mună'sŭs), town (pop 1,302), N Va , WSW of Alexandria in a farm area, inc 1873, rechartered 1938 The courthouse of Prince William co is here The town has a regional vocational school The Civil War battles of BULL RUN, fought near by, are sometimes called the battles of Manassas

Manasseh (mună'sē) [Heb ,=forgetfulness] or **Manasses** (mună'sŭs) **1** First son of Joseph and eponymous ancestor of one of the 12 tribes of Israel Manasseh was divided into two halves in Palestine it occupied the land just S of the Vale of Jezreel In the land beyond the Jordan, Manasseh received land E of Gad Gen 41 51, Num 26 28–34, Deut 3 13, Joshua 17, 2 Kings 10 33, 1 Chron 2 21–23, 5 25–26, 7 14–19, Rev 7 6 **2** Died c 643 B C , king of Judah (c 698–c 643 B C), son and successor of Hezekiah Under him Judah reached a low point of degradation 2 Kings 21, 2 Chron 33, Mat 1 10 The Prayer of Manasses, one of the PSEUDEPIGRAPHA, placed in the Apocrypha in AV, is in character a fine penitential psalm It is given as the king's prayer in captivity, alluding to 2 Chron 33 13 **3, 4** Men who had foreign wives EZRA 10 30,33 **5** Textual error for Moses Judges 18 30 **6** Husband of Judith Judith 8 2

Manasseh ben Israel, 1604?–57 Jewish scholar and historian, b Portugal, d Middelburg, Netherlands He is best known for his zealous efforts towards the readmission of Jews into England, he managed to obtain Cromwell's unofficial assent for Jews to settle in London He also started the first Hebrew press in Holland His *Conciliador* is an elaborate discussion of hundreds of conflicting passages in the Old Testament He wrote in five languages See biography by Cecil Roth (1934)

Manasses (mună'sŭs), variant of MANASSEH

Manatee (mănutē'), town (pop 3,595), SW Fla , S of Tampa, at the mouths of the Braden and Manatee rivers, near Bradenton and the Gulf; founded 1842 It packs and ships fruits and vegetables, and there is lumbering Near by are tree nurseries

manatee (mănutē'), herbivorous aquatic mammal allied to the DUGONG Three species are known, one in the waters off Florida, Central America, and the West Indies, the second, in the rivers of NE South America, and the third, in the coastal rivers and lagoons of W Africa Manatees range in length from about 9 to 15 ft The tail is rounded and flattened, there are no hind legs, and the forelegs are modified into weak flippers The upper lip is cleft into two pads, which are used to gather waterweeds into the mouth. The oil, flesh, and hide are useful to man, the animal is protected in Florida.

Manaus (munoush'), city (pop 66,854), capital of Amazonas state, NW Brazil, on the left bank of the Rio Negro near the point where that river enters the Amazon Though more than 900 mi (by river) inland, Manaus is a large port for ocean-going vessels It is the metropolis for all the upper Amazon and has been ever since its founding in the late 17th cent In the days of the boom in wild rubber before the First World War, Manaus also boomed A lavish opera house, now disused, is a reminder of former glory The city now exports chiefly Brazil nuts, rubber, tonka beans, hardwoods, and hides and skins from the cattle-grazing savannas of the Rio Branco There is a fine cathedral The name was formerly spelled Manãos

Mance, Jeanne (zhăn' mäs'), 1606–73, French missionary and nurse in Canada She accompanied Maisonneuve and his party to Montreal in 1642 and at once began caring for the ill, Indians and colonists alike, in her own home In 1644 she founded the Hôtel Dieu (forerunner of the present hospital), to which she devoted the rest of her life

Mancelona (mănsulō'nu), village (pop 1,173), N Mich , NE of Traverse City, inc 1889 Automobile parts and pig iron are made here

Mancha, La (lä man'cha), region of central Spain, in New Castile, comprising Ciudad Real prov, and part of the provinces of Toledo, Albacete, and Cuenca It is a high, barren plateau, made familiar to the whole world as the scene of most of the adventures of Don Quixote de la Mancha in the novel by Cervantes

Manche (mäsh), department (2,476 sq mi , pop 435,153), NW France, in Normandy Its name derives from the French name for the English Channel It includes the COTENTIN peninsula, which projects into the English Channel CHERBOURG, SAINT-LÔ (the capital), AVRANCHES, and MONT-SAINT-MICHEL are its chief places

Manchester (măn'chustur) [=chester from Latin,=camp], city (1931 pop 766,378, 1948 estimated pop 693,000), Lancashire, England, on the Irwell, Medlock Irk, and Tib rivers Manchester is the center of the most densely populated area of England and has long been the leading textile city of England and the world's foremost cotton city, serving as a distribution point for the mills of surrounding towns and a center of industries closely allied to the textile trade The first application of steam to machinery for spinning cotton was made here in 1789, and the first English passenger railroad (to Liverpool) was constructed here by George Stephenson in 1830 The MANCHESTER SHIP CANAL makes the city a seaport After the First World War the artificial-silk industry tended to balance the losses in cotton The John Rylands Library (1899) contains the Althorp collection, the Chetham Library (part of Chetham's Hospital) was founded in 1653 The Victoria Univ of Manchester, founded by John Owens in 1846, received a charter in 1880 in conjunction with other colleges, but it was not independent until 1903 Manchester dates from antiquity, relics having been found of the Roman city of Mancunium Manchester was mentioned in the Domesday Book Its earliest charter was granted in 1301, and its manorial rights were finally bought by the city in 1845 In early politics Manchester supported varying causes but since the early 19th cent has led in liberal reform movements In 1819 it was the scene of the PETERLOO MASSACRE The Free Trade Hall was built in 1856 on the site of the earlier buildings of the Anti-Corn-Law League The first cooperative college was founded in Manchester in 1919 The great liberal daily the Manchester *Guardian* dates from 1821 The city has two art galleries and a symphony orchestra which was founded by Sir Charles Hallé in 1857 In the Second World War, Manchester suffered heavy damage and many casualties from air raids in 1940–41 See James Tait, *Mediaeval Manchester and the Beginnings of Lancashire* (1904), W H Brindley, ed , *The Soul of Manchester* (1929), Rachel Ryan, *A Biography of Manchester* (1937)

Manchester **1** Town (pop 23,799), central Conn , E of and near, Hartford, settled c 1672, inc 1823 Textiles, especially silk, are made here **2** Industrial city (pop 3,462), W Ga , near Warm Springs NE of Columbus, inc 1909 Settled in 1905, the town grew with the establishment of railroad shops (1908) and a textile mill (1909) The state-wide textile strike flared violently here in 1934 A state fish hatchery is near by **3** City (pop 3,762), co seat (since 1881) of Delaware co , NE Iowa, on the Maquoketa river and W of Dubuque, settled 1850 as Burrington, renamed 1856, inc 1886 It is a trade and processing center for a livestock, farm, and dairy area A U S fish hatchery is here **4** City (pop 1,509), co seat of Clay co , S Ky , on Goose Creek and N of Middlesboro, in a coal, timber, and farm area of the Cumberland foothills For nearly a century after its settlement c 1790 the town was a salt-producing center **5** Resort town (pop 2,472), NE Mass , on the coast between Salem and Gloucester, settled 1626, set off from Salem 1645 **6** Village (pop 1,100), S Mich , SW of Detroit, in a farm area, inc 1867 **7** City (pop 77,685), a co seat of Hillsboro co , S N H , on both sides of the Merrimack between Concord and Nashua; settled 1722, granted 1735, inc. as a town

1751 In 1846 Manchester became the first city in the state The Amoskeag Falls (ăm'ŭskĕg) furnish abundant power. The Amoskeag textile mills, long Manchester's principal industry, were closed in Sept, 1935, and liquidated in July, 1936 Local citizens of all occupations organized as Amoskeag Industries, Inc, bought the property in Sept, 1936, and sold or leased parts to various manufacturing concerns (including textiles and shoes); the power plant was sold to a public-utilities company The collections in the granite Manchester Historic Association Building include Indian relics and sculpture of John Rogers, who worked in Manchester A statue of Lincoln, by Rogers, is in front of the Central High School An art gallery was built in 1927 Manchester also has an institute of arts and sciences and the Carpenter Memorial Library St Anselm's College is here John Stark is buried in a park named for him, the house in which he lived (1758–65) is preserved The city has a municipal airport **8** Village (pop 1,330), W central N Y, SE of Rochester, inc 1892 It is a freight transfer point, shipping fruit and truck crops Canning is done here **9** Village (pop 2,163), S Ohio, on the Ohio river and W of Portsmouth It was founded in 1791, one of the state's earliest towns It has varied manufactures **10** Borough (pop 1,004), SE Pa, N of York, laid out c 1815, inc c 1869 **11** Town (pop 1,715), co seat of Coffee co, central Tenn, SSE of Nashville and near the Duck river, in a farm and timber area, settled 1836, inc 1905 Near by is an ancient stone fort of uncertain origin **12** Resort town (pop 2,139), a co seat of Bennington co, SW Vt, N of Bennington and E of Mt Equinox (3,816 ft high); chartered 1761, settled c 1764, laid out 1784 It is in an area noted for its beauty and its fine homes In July, 1777, a council appointed at the Windsor Convention met in Marsh's tavern here Burr and Burton Seminary (1829) is in Manchester

Manchester College see NORTH MANCHESTER, Ind

Manchester school, group of English political economists of the 19th cent, so called because they met at Manchester Their chief leaders were William COBDEN and John BRIGHT, and their chief tenet was that the state should interfere as little as possible in economic matters, therefore they advocated FREE TRADE and LAISSEZ FAIRE Only a minimum of regulation was tolerated, as in the various factory acts

Manchester Ship Canal, 35½ mi long, connecting Manchester, Lancashire, England, with the Mersey estuary at Eastham, Cheshire, above Birkenhead Begun in 1887, it was opened in 1894 The canal revolutionized Lancashire's industrial life

Manchester terrier see TERRIER

Manchu (măn'chōō) This people, related to the Tungus, was known at the beginning of the 16th cent A D, when they inhabited the Sungari river valley Originally pastoral nomads, they later developed an agrarian civilization Under Nurhachu (1559–1626) they secured the allegiance of many tribes and increased their territory The Manchu claim of relation to the Ch'in dynasty of China was the justification for conquering China in the 17th cent and establishing the CH'ING dynasty The Manchu language, written in an alphabetic script dating from the 17th cent, is spoken today by less than a million persons, chiefly inhabitants of N Manchuria

Manchukuo (mănchōō'kwō), former state (512,766 sq mi, pop 43,233,954), comprising Manchuria and Jehol prov, China It was founded in 1932 The capital, then called Hsinking (Chinese, =new capital), was Changchun Henry Pu Yi, last of the Manchu (CH'ING) dynasty of China, was the ruler, first as regent and after 1934 as emperor The new country ostensibly aimed to develop the traditional home of the Manchu people independent of China, Manchukuo was, however, inspired and thoroughly controlled by Japan Of the major countries only Japan, Italy, and Germany extended diplomatic recognition With funds and direction from Japan, industry and railroads were expanded to make Manchukuo a powerful military base Following Japanese foreign policy, Manchukuo subscribed to the Anti-Comintern Pact, and on Dec 8, 1941, declared war against the United States With the end of the Second World War in 1945 Chinese sovereignty was reasserted over the area

Manchuria (mănchōō'rēu), Mandarin *Tung-pei-sheng* [northeastern provinces], region (443,275 sq mi, pop 41,487,522), NE China It is separated from the USSR largely by the Amur, Argun, and Ussuri rivers and from Korea by the Yalu and Tumen rivers Until 1949 Manchuria comprised Antung, Heilungkiang, Hingan, Hokiang, Kirin, Liaoning, Liaopei, Nunkiang, and Sungkiang provs. It was the home of the MANCHU conquerors of China Until 1860 it included territory now in Siberia Most of Manchuria is hilly to mountainous The Great and the Lesser Khingan in the north and the Changpai in the east are the greatest ranges Lumber and livestock come from the hill and mountain slopes. The mineral resources of Manchuria, mostly iron and coal, are concentrated in the southwest. The largest colliery is at Fushun, and the largest steel mill at Antung. The great Manchurian plain (average elevation c.1,000 ft.), crossed by the Liao and the Sungari rivers, is the only extensive level area It is a major manufacturing and agricultural center of China. Its rainfall is adequate and the soil is fertile, but long, severe winters limit harvests to one a year Nearly half the arable land is planted in soybeans, cereals, including corn, wheat, millet, and kaoliang, are also grown The main Manchurian industry, processing soybeans into oil, animal feed, and fertilizer, is centered in cities in or near the plain, notably Harbin, Changchun, Kirin, and Shenyang or Mukden The South Manchurian RR and the Chinese Eastern RR are the major lines in the extensive railroad system, which connects the hinterland with the coastal ports (including Talien or Dairen, Port Arthur, and Antung) and makes possible the region's prosperity In this century emigration to Manchuria from the adjacent provinces has been heavy, and the population now is predominantly Chinese Japan and Russia long struggled for control of this rich, strategically located region From 1898 to 1904 Russia was dominant The Russians built Harbin, the naval base at Port Arthur, and the Chinese Eastern RR Japan, after victory in the Russo-Japanese War (1904–5), took control of Port Arthur and the southern half of Manchuria (see LIAONING), limiting Russian influence to the north Chiefly through the South Manchurian RR, Japan developed the region's economy In 1932, under the aegis of Japan, Manchuria with Jehol prov was constituted MANCHUKUO, a nominally independent state, which expired at the end of the Second World War Russian forces occupied Manchuria from July, 1945, until May, 1946 At the end of the war the Chinese Communists were strongly established in Manchuria, and by 1949 they had completely driven out the forces of the Nationalist government The Communists divided the eastern portion of Manchuria into five provinces, Kirin (identical with the Nationalist province of that name), Heilungkiang, Liaosi, Liaotung, and Sungkiang The western part of Manchuria and the northern parts of the former Nationalist provinces of Jehol, Chahar, Suiyuan, and Ninghsia were constituted the Inner Mongolian Autonomous Region This region is largely inhabited by Mongol pastoral nomads See Owen Lattimore, *Manchuria, Cradle of Conflict* (1932), F C Jones, *Manchuria since 1931* (1949)

Mancini (manchē'nē), family name of five famous sisters, nieces of Cardinal MAZARIN, who were called from Italy to enjoy his patronage at the French court The eldest was **Laure Mancini** (lōr), 1636–57, who in 1651 married Louis de Vendôme, duke of Mercœur and grandson of Henry IV She spent much of her time at the court of Louis XIV Her son was Louis Joseph, duc de VENDÔME The second sister, **Olympe Mancini, comtesse de Soissons** (ōlĕp', kôtĕs' du swasō'), 1639?–1708, was lady of honor to the queen Because of her intrigues she was exiled Implicated in the trial of La Voisin (see POISON AFFAIR), she escaped (1680) to the Low Countries She was the mother of the famous general, Prince EUGENE OF SAVOY **Marie Mancini** (marē'), c 1640–c 1715, third of the sisters, was loved by Louis XIV, who wished to marry her Mazarin, who by his policy was committed to bringing about the king's marriage with Marie Thérèse of Austria, broke up the liaison and married Marie to the constable of Naples, Prince Colonna She left her husband (1672) and, after a troubled life in Spain and Flanders, died in obscurity **Hortense Mancini** (ôrtās'), 1646 99, fourth and most beautiful of the nieces, was Mazarin's favorite Her hand was sought by the future kings of England and Portugal, but her uncle married her to Armand Charles de la Porte, who took the title duke of Mazarin Hortense left her husband and went to England, where she was a court favorite **Marie Anne Mancini, duchesse de Bouillon** (marē' ăn', dushĕs' du bōōyō'), 1649?–1714, was celebrated for her vivacity and wit She was the center of a literary circle in Paris and a patroness of LA FONTAINE Also implicated in the trial of La Voisin, she was banished (1680) from the court

Mancini, Pasquale Stanislao (päskwa'lā stänēslä'ō mänchē'nē), 1817–88, Italian jurist and statesman After taking part in the Revolution of 1848 in Naples he fled to Turin and became (1860) a deputy in the parliament He was minister of justice (1876–78) and of foreign affairs (1881–85) and negotiated the Triple Alliance of Germany, Austria-Hungary, and Italy In internal politics Mancini represented the liberal left and was an anticlerical. He taught at the universities of Turin and Rome.

Manco Capac (măng'kō käpäk'), legendary founder of the Inca dynasty of Peru. According to the most frequently told story, four brothers, Manco Capac, Ayar Anca, Ayar Cachi, and Ayar Uchu, and their four sisters, Mama Ocllo, Mama Huaco, Mama Cura (or Ipacura), and Mama Raua, lived at Paccari-Tampu [tavern of the dawn], several leagues distant from Cuzco They gathered together the tribes of their locality, marched on the Cuzco Valley, and conquered the tribes living there. Manco Capac had by his sister-wife, Mama Ocllo, a son called Sinchi, or Cinchi, Roca. Authorities concede that the first Inca chief who was a historical figure was called Sinchi Roca (c 1105–c.1140). Thus was the foundation for an empire laid. Another legend relates that the Sun created a man and a woman on an island in Lake Titicaca They were given a golden staff by the Sun, their father, who bade them settle permanently at whatever place the staff should sink into the earth. At a hill overlooking the present city of Cuzco the staff of gold disappeared into the earth. They gathered around them a great many people and founded the city of Cuzco and the Inca state.

Manco Capac, d. 1544, last of the Inca rulers, son of HUAYNA CAPAC After the deaths of ATAHUALPA and HUÁSCAR, Manco Capac was crowned (1534) emperor by Francisco Pizarro, but was tolerated only as a puppet He escaped, levied a huge army, and in 1536 laid siege to Cuzco; the defense was commanded by Hernando Pizarro Although the Indians had by now learned some European tactics of war, they were outclassed by technical advantages Besides, Manco Capac could not prevent dismemberment of his army at harvest time. The heroic siege, which virtually destroyed the ancient Incan capital, was abandoned after 10 months, but during the ensuing eight years the Inca's name became a terror throughout Peru Manco Capac fought a bloody guerrilla warfare against soldier and settler Finally he was treacherously murdered by the defeated Almagro supporters who had taken refuge in his camp

Mandaeans (măndē'ŭns), a small religious sect in Iran and Iraq, who maintain an ancient belief resembling that of GNOSTICISM and that of the Parsees They are also known as Christians of St John, Nasoreans, Sabaeans, and Subbi Some 5,000 Mandaeans survive near the Tigris and Euphrates rivers, a few are living in the area of Shushtar, Iran, and scattered Mandaeans are in cities of Asia Minor In their customs and writings ancient practices survive Their system of astrology resembles that of ancient Babylonia and the cults of the Magi in the last centuries B C Their emanation system and their dualism suggest Gnostic origin, but unlike the Gnostics, they abhor asceticism and emphasize fertility Although some of their practices were influenced by Christianity, Judaism, and Islam, they despise all three The Mandaeans respect St John the Baptist because of his baptizing, since their principal concern is ritual cleanliness and their chief rite is frequent baptism Their custom, which antedated the baptisms of St John, stems from the belief that living water is the principle of life They have a communion sacrament, which is offered for the remembrance of the dead and resembles Parsee ritual meals The origin of the Mandaeans is not known, it is conjectured that they came from a mountainous region N of Babylonia and Persia, where they settled in ancient times Their chief holy book, the *Ginza Rba*, like their other books, contains a medley of cosmology, cosmogony, prayers, legends, and the like, written at various times and often contradictory The sect is diminishing because younger members tend to apostatize See S A F D Pallis, *Mandaean Studies*, (rev ed, 1926), Lady Drower, *The Mandaeans of Iraq and Iran* (1937)

Mandalay (măn"dulā', măn'dulā"), city (pop 163,527), central Burma, on the Irrawaddy river It is the terminus of the main rail line from Rangoon and the starting point of branch lines to Lashio and Myitkyina As a city it dates from the middle of the 19th cent, it was the capital of the Burmese kingdom, replacing Amapura, from 1860 to 1885 The Arakan pagoda was a shrine before the rise of the city, the group of sacred buildings known as the Seven Hundred and Thirty Pagodas was erected in the reign (1853–78) of King Mindon Fort Dufferin, the walled square containing the old royal palace, in the Second World War withstood a 12-day siege before the city was retaken by the Allies (1945) Mandalay was heavily damaged.

mandamus (măndā'mŭs) [Latin, =we order], legal writ directing the performance of ministerial acts A ministerial act is one which a person or body is obliged by law to perform under given circumstances, e g, on receipt of the fee, a license clerk must grant a marriage license to persons legally able to marry. If the law allows discretion in performance, the act is not ministerial, thus mandamus will not be issued if, pursuant to statute, a license to sell liquor is refused because of the applicant's immoral character Mandamus may be used to compel the directors of a corporation to produce the books for inspection in the manner provided by law or to compel a lower court to accept a suit which it has illegally refused Mandamus is an extraordinary remedy, i.e., it will not be issued if the usual remedies, e g., damages for the breach of duty, are adequate Mandamus, originally granted at the will of the British king, is now available from ordinary courts in Great Britain and the United States It is similar to INJUNCTION.

Mandan (măn'dăn), city (pop 6,685), co. seat of Morton co, S N Dak, on the Missouri opposite Bismarck; inc 1881. A railroad division point, it is the distributing center for a grain, dairy, and diversified farming area. Near by are a state re-

form school,'a U.S. agricultural experiment station, and Fort Abraham Lincoln State Park. Lewis and Clark wintered here (1804–5) in the Mandan Indian villages.

Mandan Indians, tribe of North American Indians of the Siouan linguistic stock. The Mandan Indians were a sedentary tribe of the Plains area and were culturally connected with their neighbors on the Missouri, the Arikara and the Hidatsa Indians Although the Mandan were typical "village Indians," they had certain distinctive cultural traits which included an elaborate ceremony, the Okipa dance. According to tradition, at one time the Mandan lived in an eastern locality, but their movements in historic times were westward up the Missouri river By the mid-18th cent , when they were visited (1738) by the sieur de la Vérendrye, they lived in nine villages near the mouth of the Heart river in S central North Dakota After having suffered severely from smallpox and the attacks of the Assiniboin and the Sioux, the Mandan moved farther up the Missouri river to a point opposite the Arikara villages Here the Mandan survivors merged into two villages, on opposite sides of the Knife river. They were visited (1804) by Lewis and Clark, who said that they numbered some 1,250 In 1837, after an epidemic of smallpox and cholera, the Mandan were reduced to some 150, all dwelling in a single village When the Hidatsa moved (1845) from the Knife river region N to the Fort Berthold trading post, the few Mandan joined them A large reservation was set aside (1870) for the Mandan, the Hidatsa, and the Arikara in North Dakota (Fort Berthold Reservation) The Mandan, living on this reservation, number some 380 See G F Will and H J Spinden, *The Mandans* (1906)

mandarin (măn'dŭrĭn) [from Port *mandar* = to govern], an official under the Ch'ing dynasty of China For each of the nine grades there was a different colored button worn on the dress cap Mandarin Chinese is the language spoken throughout China except in the southern coastal provinces and the west The Peiping dialect of Mandarin is the basis of the Chinese official national speech (*kuo yü*)

mandat (mädä'), paper currency issued in 1796 by the French government to replace the worthless ASSIGNATS The face value of the *mandats territoriaux* (or land notes) was based, like that of the assignats, on the value of the confiscated lands held by the state The exchange rate of assignats against mandats was fixed as 30 to 1, but actually the mandats soon fell to about 20 percent of their face value The government found itself obliged to honor the mandats by selling confiscated land for the practically worthless notes At last, early in 1797, the currency inflation was ended by the introduction of the gold franc, obtainable for 100 francs in land notes or 3,000 livres in assignats

mandates, system of trusteeship established by Article 22 of the Covenant of the LEAGUE OF NATIONS, for the administration of former Turkish territories and of former German colonies It differed from a PROTECTORATE in that obligations were assumed by the mandatory to the inhabitants and to the League, which supervised mandates, it differed from a sphere of influence in that the guardians had an acknowledged right to raise and expend revenues, to appoint officials, and to make and enforce laws As finally adopted, the mandates system was principally the work of General SMUTS International control was the result of compromise The mandated territories were divided into three classes, according to their economic and political development and their location They were then to be assigned to individual powers Class A consisted of Iraq (British), Syria and Lebanon (French), and Palestine (British) The provisional independence of these former Turkish provinces was recognized, subject to administrative control until they could stand alone In 1932 Iraq became a member of the League of Nations, thus terminating the British mandate Class B was composed of former German African colonies, Southwest Africa excepted—Tanganyika and parts of Togoland and the Cameroons (British), Ruanda-Urundi (Belgian), and the greater part of Togoland and the Cameroons (French) The establishment of military or naval bases in these regions by the mandatories was forbidden, commercial equality with other nations and native rights were guaranteed In Class C were placed Southwest Africa (Union of South Africa), former German Samoa (New Zealand), New Guinea (Australia), Nauru (Australia), and former German islands in the Pacific north of the equator (Japan). While fortification of these mandates was forbidden and native rights were guaranteed, these areas were to be administered by the mandatories as integral parts of their empires. The mandates system was administered by the League of Nations through a Permanent Mandates Commission of 11 members The focusing of public opinion was the only means of compelling the proper execution of the mandate A somewhat different system was established (1946) by the United Nations (see TRUSTEESHIP, TERRITORIAL). By 1949 all former Class A mandates had reached full independence.

Mandelstam, Osip Emilyevich (ôs'ĭp ĕmyēl'yôvĭch măn'dĭlstŭm), 1892–1942, Russian poet of the Acmeist school. He has been called the "architect of words" The volume *Stone* (1913) contains his chief poems. Some have been translated by Charles Coxwell in *Russian Poems* (1929) and by Leonid Strakhovsky in the *Russian Review* (1947)

Mander, Karel van (kä'rŭl vän măn'dur), 1548–1606, Flemish painter and humanist He wrote plays on biblical themes, made translations from the classics, and composed a biography of painters, *Het Schilder-Boeck* (1603–4, Eng. tr., *Dutch and Flemish Painters*, 1936) A painting attributed to him is believed to contain portraits of Shakspere and Ben Jonson See Tracy Kingman, *An Authentic Contemporary Portrait of Shakespeare* (1932)

Mandeville, Bernard (măn'dŭvĭl), 1670–1733, English satirical writer on ethical subjects, b Dordrecht, Holland, M D Univ of Leiden, 1691 He became a London physician in 1692 He is remembered chiefly for *The Fable of the Bees; or, Private Vices, Public Benefits* (1714, enl eds , 1723 and later), an expansion of his pamphlet poem *The Grumbling Hive* (1705) He declared that the mainspring of society is the self-seeking effort of individuals Religious or legal restraints on the satisfaction of selfish desires are therefore unnatural and harmful to society This cynical attitude was attacked by Bishop Berkeley, William Law, and others See *The Fable of the Bees* (ed. by F B Kaye, 2 vols , 1924)

Mandeville, Sir John, pseudonym of the 14-century author of *The Voyage and Travaile of Sir John Mandeville* The work was written originally in French (c 1371) and translated by others into English, Latin, and most European languages The work purports to record the actual experiences of the author's travels through Jerusalem, Egypt, Turkistan, India, China, etc Actually it is a compilation from authentic travels of others, notably William of Boldensele, Albert of Aix, and Friar Odoric of Pordenone, into which the author has interpolated extravagant details of medieval lore Although scholars are still puzzled as to the identity of the author, it is now generally believed that Mandeville is a pseudonym of Jean de Bourgogne (or Jean à la Barbe), a physician of Liége, or, more probably, that both Mandeville and Jean de Bourgogne are fictitious names invented by one Jean d'Outremeuse (1338–1400), a writer of histories and fables, a citizen of Liége See editions of the work by Arthur Layard (1895), A W Pollard (1915), and Ernest Rhys (Everyman Library, 1928) and the account of Mandeville in *The Cambridge History of English Literature*, Vol II (1933)

Mandeville (măn'dŭvĭl), resort town (pop 1,326), SE La , on Lake Pontchartrain opposite New Orleans, founded c 1830, inc 1840 A state park is near by

mandolin (măn"dŭlĭn', măn'dŭlĭn"), musical instrument of the lute family, having a pear-shaped body, a fretted neck, and a variable number of strings, plucked with the fingers or with a plectrum The earlier mandolin, with five double strings, was developed from the mandola, a 17th-century lute The Neapolitan mandolin, a smaller type having four strings, became popular in the 18th cent and is the usual present-day mandolin Notable uses of the mandolin in art music are in Mozart's *Don Giovanni* and in pieces by Beethoven

Mandor, India see JODHPUR

mandrake, European plant, the source of a dangerous narcotic much used during the Middle Ages as a painkiller and perhaps the subject of more superstition than any other plant The true mandrake is usually considered to be *Mandragora officinarum*, a herbaceous perennial with a cluster of wavy-margined leaves borne at the ground The long root, crudely resembling the human form, has been credited since ancient times with superhuman powers Among the powers attributed to it were arousing ardor, increasing wealth, and overcoming barrenness On being pulled from the ground, the root was said to give forth such screams that death or madness resulted for any who heard, so that a dog was usually forced to uproot the plant by being tied to it and then called from a distance The potency of the mandrake has made it one of the most frequently mentioned plants in literature Shakspere refers to it several times, and it appears in the Bible (Gen 30 14–16, Cant 7 13) The mandrake has also been known as devil's-apple and love apple The MAY APPLE is often called mandrake

mandrill, baboon of W Africa Unlike the typical baboons it is mainly arboreal and has a reduced tail Its coat is olive, its nose bright red, with blue swellings, it has a yellow chin beard and crimson and blue callosities The related drill is brown with a black face partially outlined in red

manes (mā'nēz), in Roman religion, the spirits of the dead, taken collectively. They are also called *di manes* [the good gods—a euphemism]. Ancestor worship was never strong at Rome, but respect and fear of the spirits of the dead, especially the larvae, were potent forces in Roman religion The Romans placated the manes with sacrifices of oil, honey, and milk at the graves of the dead. In later times the *di manes* were identified with the *di parentes*, the ancestors of the family, and as such watched over the welfare of the family along with the lares and penates The Parentalia in mid-February, therefore, became the public feast of the manes

Manet, Édouard (ādwär' manā'), 1832–83, French impressionist painter, b Paris, son of a magistrate. Rather than study law he went to sea On his return in 1850 he was permitted to study art under Couture In 1861 the Salon accepted his *Chanteur espagnol*, but two years later his *Déjeuner sur l'herbe* (Louvre) was shown in the Salon des Refusés and violently attacked The *Olympia* (Louvre), shown in 1865, received similar abuse This extraordinary hostility of the critics attended Manet throughout his life He died of paralysis at 52 before the belated recognition of his greatness became general Fortunately he had some independent means, a strong following among his fellow painters, and a companion in Zola, who lost his position on a newspaper for defending him Manet is usually considered the greatest protagonist of impressionism and of plein-air painting, of which he was one of the originators He did not indulge in broken color, however, nor was he particularly interested in light effects as such His dramatic and vigorous paintings, achieved with the utmost economy of means, are often reminiscent of Hals and Goya His influence on his contemporaries was very great At the close of the century impressionism came into its own, and the works of Manet, once hooted, were enshrined in the Louvre Today splendid examples are to be seen in the most important European and American galleries Among the large number of his famous paintings are *The Balcony*, a portrait of Zola, and *The Fife Player* (Louvre), *Dead Christ with Angels* and *Boy with a Sword* (Metropolitan Mus), part of the *Execution of Maximilian* (National Gall , London), and *Les Courses à Longchamps* (Art Inst , Chicago) He is also well known for his pastels a portrait of George Moore being in the Metropolitan Museum See study by Théodore Duret (Eng tr , 1937)

Manetho (măn'ĭthō), fl 300 B C , Egyptian historian, a priest in Sebennytos, under Ptolemy I His work, written in Greek, is known to us only through the later works of Josephus, Julius Africanus, and Eusebius Manetho's arrangement of 30 dynasties, though quite inaccurate—some dynastic changes are not recorded, some dynasties continued through two or three of Manetho's—has been found a convenient device and is still in use

Manfred, c 1232–1266, king of Sicily (1258–66), the last of the HOHENSTAUFEN on that throne A natural son of Emperor Frederick II, he acted as regent in the kingdom of Sicily for his brother CONRAD IV Conrad died in 1254 and Manfred seized the regency for Conrad's younger son, CONRADIN But Pope INNOCENT IV and his successors, Alexander IV and URBAN IV, were determined to stamp out the Hohenstaufen They refused to recognize Conradin, and in 1254 Manfred was forced to restore the kingdom to the papacy, himself retaining only the duchy of Taranto as a fief held from the pope Soon Manfred rebelled, reconquered S Italy and Sicily, assumed leadership of the Ghibellines throughout Italy, and in 1258 had himself crowned at Palermo, Conradin having been rumored dead Urban IV reacted by investing Charles of Anjou with Sicily as CHARLES I Charles invaded Italy and defeated Manfred at Benevento (1266) Manfred was killed in the battle, and his nephew Conradin soon suffered a similar fate However, after the Sicilian Vespers (1282), Manfred's son-in-law, Peter III of Aragon, was chosen king of the island and began a new dynasty

Mangaia (mang-ī'ŭ), island (pop 1,844), S Pacific, 110 mi SE of Rarotonga, one of the COOK ISLANDS It is a volcanic island, c 6 mi in diameter and has an area of 17,500 acres It is interesting geologically a *makatea*, or cliff of coral limestone, surrounds the low hills in the center of the island Fruits and copra are exported

Mangalore (măng-gŭlōr'), town (pop 81,060), W Madras state, India, a port on the Arabian Sea The town was a shipbuilding center in the 18th cent It was occupied by the British in 1799 Cloth is manufactured, and coffee is exported

Mangan, James Clarence, 1803–49, Irish poet, b. Dublin His Irish poetry in English, such as his famous "Dark Rosaleen" and *The Poets and Poetry of Munster* (1849), was based on translations from Gaelic by others His own translations in his *German Anthology* (2 vols , 1845) were free and apt See editions of his poetry (1903) and prose (1904) by D J O'Donoghue, biography by O'Donoghue (1897), studies by James Joyce (1930) and J. D Sheridan (1947)

manganese (măng'gunēs, măn'–), metallic element (symbol = Mn, for physical constants, see ELEMENT, table), gray tinged with pink, taking a high polish, brittle, not malleable, and harder than iron, which it resembles somewhat Manganese is active chemically It displaces hydrogen from water and from certain acids (sulphuric and hydrochloric). With oxygen it forms a number of oxides, its valence varying, these include manganic oxide and manganous oxide, a dioxide (pyrolusite) which is its chief source, a trioxide, a heptoxide, and another oxide

(native hausmannite) having three atoms of manganese and four of oxygen in the molecule With sulphur the element forms a sulphide, with chlorine, chlorides, with sodium and potassium, permanganates, with potassium, a manganate, and with the hydroxyl radical, two hydroxides The metal itself does not occur free in nature, but its compounds are widely distributed Ores containing the element are found in Russia, Africa, India, South America, and the United States (in Arkansas, Colorado, Georgia, New Mexico, Minnesota, Montana, and Virginia) The metal is prepared by the reduction of pyrolusite It is also obtained from ore by an electrolytic process It is widely used in making alloys, to increase hardness, and as a deoxidizer It is present in most steels, being added to the STEEL in the form of spiegeleisen or ferromanganese, any steel having between 10 and 15 percent is known as manganese steel It is also alloyed with copper and with aluminum and is used with varying proportions of copper, tin, and zinc (with small amounts of other metals) to form both manganese bronze and manganese brass Compounds of the element are used in paints, in dry cells, as oxidizing agents, and as antiseptics and disinfectants in medicine The element was first isolated by J G Gahn in 1774 and to him is credited its discovery, although its existence had been recognized previously by T O Bergman and by Scheele.

Mangareva see GAMBIER ISLANDS

mange (mānj) Especially in winter, domestic animals and sometimes man may be affected with this disease, known also as scabies (skā'bē-ēz, -bēz) or scab Several types of mite cause the disease by burrowing in the skin, hair follicles, or sweat glands The irritation causes itching and scratching, and often bacterial infection results Weight is lost, and hair falls out Treatment consists of scrubbing the animal with soapsuds and dipping him, at intervals of 10 to 14 days, in an insecticide solution which is compounded for the particular kind of animal involved

mangel-wurzel (mäng'gl-wûr"zl) [Ger ,=beet root], a kind of coarse field beet grown extensively for livestock food in Europe and Canada and less extensively in the United States Some is used in silage and some is dried It contains less sugar than the sugar beet, is succulent, and has a very long root, which keeps well in storage There are several varieties

Mangin, Charles Marie Emmanuel (shärl' marē' ĕmanŭĕl' mäzhē'), 1866–1925, French general A graduate of Saint-Cyr, he served in the Sudan under Jean Baptiste MARCHAND and in French North Africa He was one of the great figures in the colonial history of France His book, *La Force noire* (1910), shows his devotion to colonial development Mangin commanded in the First World War with great tactical skill and was prominent in the defense of Verdun From 1921 to his death he was a member of the supreme war council and inspector general of colonial troops

mango (mäng'gō), evergreen tree of the cashew family, native to tropical Asia and now grown in both hemispheres The chief species, *Mangifera indica*, is believed to have been cultivated for about 6,000 years Many horticultural varieties have been developed The mango tree grows rapidly and ranges from 30 to 90 ft in height is densely covered with lanceolate, glossy leaves, and bears panicles of small, fragrant yellowish or reddish flowers followed by fruits which are fleshy drupes The fruit is from about 2 to 6 in long and has thick greenish to yellowish-red skin, pale yellow to orange-red flesh, and a large seed, the kernel of which is edible when cooked When ripe the fruit is luscious, aromatic, and slightly acid Unripe and inferior fruits may be fibrous, acid, and pervaded by the flavor and odor of turpentine Mango fruits are a vital food source for millions of inhabitants of the tropics Most of the fruit is used fresh, often as a dessert fruit, but some is cooked, dried, and canned It is used in chutneys, jellies, and sauces The tree is propagated by grafting and to a less extent by seed

Mangravite, Peppino (pĕp-pē'nō mangravē'tā), 1896–, American painter, b Lipari, Italy From 1908 to 1914 he studied in the art school of Carrara, At 19 he came to New York and studied under Henri and at the Art Students League Mangravite served as art director of many American schools, including the Avon School, Avon, Conn, and Sarah Lawrence College His easel paintings are characterized by low, rich color and fine draughtsmanship Among his murals, that in the Dept of Labor, Washington, D C, is well known Mangravite is the author of many articles on art and education.

mangrove (mäng'grōv, măn'-), tropical, evergreen tree that grows along sea coasts Mangroves are found most abundantly in parts of Asia, Africa, and the islands of the Pacific The American mangrove (*Rhizophora mangle*) inhabits shores and brackish marshes, creeks, and lagoons of S Florida, the Florida Keys, Mexico, Lower California, the West Indies, Central America, and tropical South America It often grows to a height of about 40 ft and sometimes to 70 or 80 ft, the deeply furrowed bark is gray or grayish brown Mangroves produce from their trunks aerial roots which become embedded in the mud and form a tangled network, these serve as props for the tree and as a means of aerating the root system The aerial roots form a base for the deposition of silt and other material carried by the tides, and thus the land is built up and gradually it is invaded by other vegetation The fruit is a reddish-brown conical berry, about an inch long, the single seed germinates within the fruit, forming a large primary root, and when the fruit drops from the tree the seedling lodges in the muddy soil and, anchored by the root, develops rapidly Some species lack the aerial or stiltlike roots but have special pores on their branching root system for obtaining air The tannin content of the mangroves is high Also called mangrove are certain members of the vervain family, e g, *Avicennia nitida*, the black mangrove

Mangum (măng'gŭm), city (pop 4,193), co seat of Greer co, SW Okla, on the Salt Fork of the Red River, in an irrigated farm region, laid out 1883, inc 1900 A state park is near by

Manhasset (mănhăs'ĕt), unincorporated suburban village (pop 5,099), on the north shore of Long Island, SE N Y, near the head of Manhasset Bay Insecticides are made here

Manhattan **1** City (pop 11,659), co seat of Riley co, NE Kansas, near the confluence of the Big Blue and the Kansas WNW of Topeka, founded 1854, inc 1857 It is the trade and processing center of an agricultural and grazing area and the seat of KANSAS STATE COLLEGE OF AGRICULTURE AND APPLIED SCIENCE **2** Borough (land area 22 sq mi, pop 1,889,924) of NEW YORK city, SE N Y, roughly coextensive with New York co It is composed chiefly of Manhattan island (c 12½ mi long and 2½ mi wide at its greatest width), bounded by the Hudson river on the west, New York Bay on the south, the East River on the east, and the Harlem River on the east and north Many bridges, tunnels, and ferries link it to the other boroughs and to New Jersey The MANHATTAN INDIANS sold the island to the Dutch in 1626, in 1664 it became New York under the English New York city's boundaries did not extend beyond the island of Manhattan until 1874, when several communities in Westchester co were incorporated into the city In 1898 Manhattan became one of the five boroughs of New York Commercial and cultural heart of the city, Manhattan is the site of the Metropolitan Opera House, Carnegie Hall (home of the New York Philharmonic-Symphony), the City Center of Music and Drama, the Juilliard School of Music, and numerous other music institutions Theatrical center of the country, it developed an interest in playgoing long before the Revolution The many museums and art galleries of Manhattan include the METROPOLITAN MUSEUM OF ART, the AMERICAN MUSEUM OF NATURAL HISTORY, the MUSEUM OF MODERN ART, the Whitney Museum, and the Museum of the City of New York COLUMBIA UNIVERSITY, CITY COLLEGE, parts of HUNTER COLLEGE and of NEW YORK UNIVERSITY, the NEW SCHOOL FOR SOCIAL RESEARCH, and Manhattanville College of the Sacred Heart are in Manhattan Numbered among its professional schools are General Theological Seminary, Union Theological Seminary, and Jewish Theological Seminary of America, four medical colleges, and COOPER UNION Among the borough's noted churches are Trinity Church (chartered 1697), SAINT PATRICK'S CATHEDRAL, the Cathedral of St John the Divine (see SAINT JOHN THE DIVINE, CATHEDRAL OF), Riverside Church, and Temple Emanu-El Famous among Manhattan areas are HARLEM, GREENWICH VILLAGE, and the BOWERY, among its streets are BROADWAY, FIFTH AVENUE, and WALL STREET Its parks include the BATTERY, Bowling Green, Washington Square, CENTRAL PARK, and Fort Tryon Park (with the Cloisters) Among other points of interest are the City Hall (1803–12), the Empire State Building, Rockefeller Center, Grant's Tomb, the Polo Grounds, the JUMEL MANSION, and the Dyckman farmhouse (1783)

Manhattan Beach, resort and residential city (1940 pop 6,398, 1948 special census pop 14,641), in Inglewood township, S Calif, SW of Los Angeles, inc 1912

Manhattan College, in New York city, Catholic (Christian Brothers), for men, opened as an academy 1849, chartered as a college 1863 It has schools of arts and sciences, business, and engineering Its campus is in Bronx borough

Manhattan District: see ATOMIC ENERGY

Manhattan Indians, North American Indian tribe of the Algonquian linguistic stock. They were a small tribe of the Wappinger Confederacy The Manhattan Indians in the early 17th cent occupied N Manhattan island and the east bank of the Hudson river, their principal village was in Yonkers, N Y The Dutch bought the island from them in 1626 and then practically destroyed them in the wars of 1640–45

Manheim (măn'hĭm), borough (pop 3,831), SE Pa., NW of Lancaster, settled 1716, laid out c 1760, inc 1848 A munitions center during the Revolution, it produced the first flint glass in the United States at the factory of Henry William STIEGEL.

Mani: see MANICHAEISM

manic-depressive psychosis, severe functional mental disorder, involving mania or depression or, in some cases, a fluctuation of the two. In the manic phase the mood of the patient is exalted and is characterized by optimism, lack of concentration, extravagance, and a tendency toward moral laxness In hypermanic states antisocial behavior often occurs as well During the depressive phase there is pathological melancholia and ideas of unworthiness, sin, poverty, and suicide In general, patients exhibiting these symptoms will recover in time, however, the danger of recurrence is always present Shock therapy has had some success in shortening the depressive phase of this PSYCHOSIS. There are indications of a hereditary predisposition toward this disease

Manich, RSFSR see MANYCH

Manichaeism (mā'nĭkēĭzm) or **Manichaeanism** (mānĭkē'ənĭzm), religion founded by Mani (ma'nē) (b 216?, d 274? or 276?) He was a Persian who was born near the site of Baghdad, had a vision in his early youth, and came forward as a prophet inspired by divine revelation (242) He preached in Persia for some years, then Shapur I, encouraged by the Zoroastrian priests, banished him During his exile of more than 20 years he traveled widely, perhaps as far as N India and Chinese Turkistan, teaching his doctrines and absorbing ideas He ventured to return to Persia, where he was flayed to death by Bahram I In spite of terrible persecution Mani's religion spread rapidly and was soon disseminated throughout the Roman Empire and Asia Manichaeism was a conscious synthesis with a basis of ZOROASTRIANISM Mani felt himself to be successor to Zoroaster, Buddha, and Jesus and called himself the Paraclete The influence of Buddhism, and particularly of GNOSTICISM (Mani was early taught to be a Mandaean), is everywhere apparent Mani derived his fundamental dualism from Zoroastrianism, but he spiritualized the struggle between the two conflicting principles Light and dark are commingled in our present age as good and evil, but in the last days each will return to its proper, separate realm, as they were in the beginning The fantastic cosmology and cosmogony of Manichaeism elaborated a simple concept of the Redeemer who aided men to free their light particles from the material substance Only the higher of the two classes of Mani's followers, the elect or perfect, were assured of immediate felicity after death They repudiated darkness by leading a life of strict celibacy and austerity, teaching and preaching The elect were administered to by the auditors or hearers who were laymen Auditors might marry once, but all sensual pleasures were forbidden The begetting of children was discouraged Believing in metempsychosis, the auditors hoped to be reborn as elect All others were sinners, doomed to hell The church was organized into five orders, four of them degrees of the elect, who were initiated into higher mysteries Worship was simple and the ethical standard high, killing was forbidden Manichaeism spread in the West along the shores of the Mediterranean, in North Africa, and in S Europe St Augustine, in his youth a Manichaean, helped suppress the sect in the West It died as a dynamic faith c 500, but was revived among the PAULICIANS, BOGOMILS, CATHARI, and ALBIGENSES, who were termed Christian heretics In the Orient (e g, Khurasan and China) it was a major religion for more than 1,000 years Prime sources for the study of Manichaeism are the so-called Turfan texts, named after the region in Turkistan where they were found in the late 19th cent These include fragments of Mani's long-lost bible, and portions of Manichaean literature written in Pahlavi, Saghdian, Old Turkish, and Chinese Other sources are the refutations of Christian, Mohammedan, and Zoroastrian polemicists See A V W Jackson, *Researches in Manichaeism* (1932), F C Burkitt, *The Religion of the Manichees* (1925), Steven Runciman, *The Medieval Manichee* (1947)

Manicouagan (mănĭkwa'gun), river rising in E central Quebec in the central plateau of the Labrador peninsula and flowing S through the Laurentian Plateau c 310 mi to the St Lawrence just SW of Baie Comeau

Manihiki (mənĭhē'kē) or **Humphrey Island**, atoll (pop 435), S Pacific, E of Samoa and c 655 mi NNW of Rarotonga, in the COOK ISLANDS It comprises 12 islets It was discovered in 1822 by Americans and in 1901 was placed under the New Zealand Cook Islands administration The whole group of islands (pop 2,139) that includes Manihiki and PENRHYN is often also designated Manihiki The name was formerly spelled Manahiki

Manila (mənĭ'lu), city (1939 pop 623,492, 1948 pop 983,906), capital of the republic of the Philippines and principal port of the islands, on SW Luzon, on Manila Bay The navigable Pasig flows through the city, dividing it into two sections, with Intramuros (the old walled city) on the south bank and the newer section on the north bank Before the Second World War, Intramuros contained interest-

ing examples of 17th-century Spanish architecture, but all the buildings except San Agustín Church (1606) were reduced to rubble Opposite Intramuros are Binondo, the Chinese quarter, and Tondo, the slum district One of the most imposing structures in the city is Malacañan Palace, the presidential mansion. Institutions of higher learning include Santo Tomás (see SANTO TOMÁS, UNIVERSITY OF), the Univ of the Philippines (see PHILIPPINES, UNIVERSITY OF THE), NATIONAL UNIVERSITY, and the Philippine Women's Univ The Tagalogs are the largest native group, and the Chinese form the largest foreign element In 1571 López de Legaspi established here a fortified colony, which was developed mainly by Spanish missionaries The English took control of the city in 1762, but returned it to Spain two years later During the Spanish-American War, Manila was won by U S forces after the battle of Manila Bay Filipino uprisings occurred for several years, and not until 1901 was a civil government definitely established Early in the Second World War, Manila was heavily bombed by the Japanese, although it had been declared an open city It was occupied by the Japanese from early 1942 to early 1945 Nearby Quezon City was officially made the capital in 1948 and construction of government buildings progressed

Manila, town (pop 1,248), NE Ark , S of Big Lake, founded 1852, inc 1901 A U S bird refuge is near

Manila Bay, inlet of the South China Sea, in SW Luzon, Philippine Islands An excellent landlocked harbor, it is c 35 mi wide and extends inland c 30 mi At the entrance is the fortified island Corregidor In the Spanish-American War, Admiral George Dewey destroyed the Spanish fleet here

Manila hemp, most important of the cordage fibers It is obtained from the Manila hemp plant, *Musa textilis*, grown chiefly in the Philippine Islands, where it is known as *abacá* (abuka') The abacá is closely related to the BANANA, which it resembles except for the inedible fruit At maturity the palmlike plants are cut down and the long fibers taken from the leafstalks which converge at the base to form the false trunk The fibers are exceptionally strong and durable, the coarser ones being used for binder twine, matting, and ropes, particularly marine cordage because of resistance to the action of salt water, the finer grades are woven into beautiful native fabrics and hemp hats **Manila paper** is largely made from old Manila hemp ropes and is valuable as a strong wrapping paper

Manlius, Caius (kā'ŭs mun'lēus, kī'us), fl 66 B C , Roman statesman When he was tribune of the people (67–66 B C), he proposed the *Lex Manilia* or Manilian Law, granting to POMPEY the command of the war against MITHRIDATES VI of Pontus This Cicero supported in an oration

Manlius, Marcus, fl A D 20, Roman poet Of his didactic poem on astrology, the *Astronomica*, five books remain These may, or may not, have constituted the whole work

Manilla, town (pop 1,040), W Iowa, NW of Atlantic, inc 1887

Manin, Daniele (danyā'lā manēn'), 1804–57, Italian patriot and statesman His father, a Venetian Jew, was converted to Christianity and took, after his baptism, the name of his patrons, the illustrious Venetian family of Manin, of which the last doge was a member A successful lawyer, Manin was active in revolutionary agitation against Austrian rule in Venice and was imprisoned with Niccolò Tommaseo Released after the outbreak of the Revolution of 1848, he became head of the Venetian republic Despite his opposition, Venice voted (July, 1848) its union with the kingdom of Sardinia and Manin resigned Early in 1849 Manin again became head of a provisional government, and after the Sardinian rout at Novara he assumed dictatorial powers and organized the heroic resistance of Venice to its Austrian besiegers After famine and disease forced Venice to surrender (Aug , 1849), Manin went into exile at Paris He subsequently supported the leadership of Sardinia in the movement for Italian unification See G M Trevelyan, *Manin and the Venetian Revolution* (1923)

manioc: see CASSAVA

Manipur (mŭnĭpōor'), state (8,638 sq mi , pop 512,069), NE India Imphal is the capital Manipur consists largely of jungle The Japanese invaded the area in 1944 but they were soon repulsed Manipur was a princely state until late 1949

Manisa (ma'nĭsä), city (pop 32,079), W Turkey, NE of Smyrna It is an agricultural center There are magnesite, zinc, and mercury deposits in the vicinity Near Manisa (also spelled Manissa) are the ruins of ancient MAGNESIA ad Sipylum

Manistee (mănĭstē'), city (pop. 8,694), co seat of Manistee co , N Mich , on Lake Michigan at the mouth of the Manistee and W of Cadillac, in a fruit region, inc 1869 It is a resort and shipping center and is known for its salt plants Manufactures are varied A festival commemorates its former lumber industry and its present reforestation.

Manistique (mănĭstēk'), city (pop 5,399), co. seat of Schoolcraft co , E Upper Peninsula, N Mich., on Lake Michigan at the mouth of the Manistique, inc as a village 1885, as a city 1901. It is a resort and a shipping and industrial center Fishing, hardwood manufacturing, and papermaking are its chief industries

manito (mä'nĭtō), name used among Indians of the Algonquian linguistic stock to describe the supernatural power which permeates all things (see ANIMISM) The idea of a supreme and personified manito, Kitchi Manito, may have been learned from missionaries Manito is also spelled manitos, manitua, manitou, and manetto

Manitoba (mănĭtō'bŭ), province (219,273 sq mi , with water surface 246,512 sq mi , 1946 pop 726,923, 1948 estimated pop 757,000), W central Canada WINNIPEG, the metropolis of the province, is the capital, other important cities are BRANDON, PORTAGE LA PRAIRIE, and SAINT BONIFACE Easternmost of the Prairie Provs , Manitoba is bounded on the north by Keewatin dist , Northwest Territories (with a northeastern shore line on Hudson Bay), on the east by Ontario, on the south by Minnesota and North Dakota, and on the west by Saskatchewan Once the mighty Lake AGASSIZ covered S and central Manitoba As its waters receded into Hudson Bay it left behind numerous lakes (WINNIPEG, Manitoba, and WINNIPEGOSIS) and rivers (NELSON, CHURCHILL, and HAYES), which flow northeast into the bay In some places rock formations were swept bare, and in others they were covered with rich deposits of black loam Miles of virtually uninhabited, treeless tundra surround the port of CHURCHILL Extending S from Churchill and E from Lake Winnipeg, the topography is of the LAURENTIAN PLATEAU type, in which limited areas have been cleared for general farming and dairying, and the mineral and timber resources have been partially developed The south central part of Manitoba is dominated by lakes, with the Winnipeg paralleled in the west by Winnipegosis and Manitoba To the south, where most of the population is concentrated, disciplined fields of wheat, barley, oats, and flax cover the rich prairies The life of the province—commercial, social, and political—is centered at Winnipeg, which lies at the junction of the RED and ASSINIBOINE RIVERS Here is situated the Univ of Manitoba One of the great railroad centers of the world, Winnipeg links E Canada and W Canada by two transcontinental raillines, with connections northward to Churchill and southeast to the Great Lakes ports To the west and north of the Red River valley, toward the Saskatchewan border, the land rises in the Manitoba escarpment, extending in the plateaus of the Pembina, Turtle, Riding, Duck, and Porcupine mts Much of this heavily forested area has been set off as reserves, with Riding Mt proclaimed a national park in 1930 The municipal districts of Flin Flon and The Pas, on the Saskatchewan river, serve as gateways to the wealthy mineral and timber lands of the central west The well-settled Souris plains of SW Manitoba are famous for their wheat fields Agriculture remains the chief industry of the province, although increased exploitation of timber and minerals (principally copper, gold, and zinc) is being encouraged, and manufacturing is being stimulated by the development of hydroelectric power, a large plant having been erected near Pine Falls in the Winnipeg river While there is considerable sectional variation in climate, long and intensive sunshine makes rapid growth possible during the summer months and tempers the severity of the winter's cold The development of fur farming in the north country gives continuity to the fur trade, which played a major part in the early history of the province In 1670 Manitoba became a part of the vast area under charter to the HUDSON'S BAY COMPANY and known as Rupert's Land Previously the ASSINIBOIN INDIANS had held this country as the home of the Great Manito, a claim unchallenged either by the landing of Sir Thomas Button at the mouth of the Nelson river in 1612 or by the Hudson Bay explorations of Luke Foxe in 1631 The Hudson's Bay Company established a trading post at PORT NELSON and soon extended its operations south to the strategic valley of the Red River The opposition of the French fur interests was always great because of the many inland French trading posts, but the French-British conflict was partially resolved when England gained control of Canada by the Treaty of Paris in 1763 When the earl of SELKIRK of the Hudson's Bay Company established the RED RIVER SETTLEMENT (the first agricultural colony), the move was opposed by the NORTH WEST COMPANY, who resented the intrusion of the Hudson's Bay Company and the threat to trapping A series of disagreements led to the battle of Seven Oaks in 1816 Colonizing was deterred by this violence, but with the merger of the two companies as the Hudson's Bay Company in 1821, the settlement was increased and from 1835 to 1870 was controlled by the company. In 1869 the Canadian government purchased the Northwest Territories from the Hudson's Bay Company, although by the deed of surrender the company retained valuable land and trading privileges This caused an insurrection of Indians and half-breeds led by Louis RIEL. Despite this trouble the province of Manitoba was created in 1870 Agricultural settlement proceeded slowly, handicapped by lack of transportation facilities and plagued by the hazards of pioneer life When the Canadian Pacific reached Winnipeg, it provided an outlet to the grain markets through PORT ARTHUR on the Great Lakes, and during the 1880s the population doubled The area of the province was enlarged in 1881, and in 1912 it was given its present extension to Hudson Bay, thereby making Manitoba a maritime province With the completion of the Hudson Bay RR to Churchill in 1929, the province was in a position to use the short sea route eastward, and a huge grain elevator was built at Churchill Manitoba's post-war plans center around the extension of its agricultural areas through a network of rural highways and through farm electrification The severe flood of 1950 in the Winnipeg district resulted in considerable damage to crops and property See F H Schofield, *The Story of Manitoba* (1913), M S McWilliams, *Manitoba Milestones* (1928), Dorothy Duncan, *Here's to Canada* (1941)

Manitoba, University of, at Winnipeg, provincially supported, coeducational, chartered 1877 It has faculties of agriculture and home economics (formerly Manitoba Agricultural College), arts and science, education, engineering and architecture, and medicine

Manitoulin Islands (mănutōō'lĭn), archipelago consisting of three large and several smaller islands, separating the north part of Lake Huron from the North Channel and from the northwestern part of Georgian Bay The largest island is Manitoulin, over 80 mi long and 2 to 40 mi wide, the largest lake island in the world It encloses over 100 lakes and has a much indented, rugged coast Cockburn Island, c 7 mi in diameter, just W of Manitoulin, and Drummond Island, c 24 mi long and c 10 mi wide, just W of Cockburn, are also rocky and forested Drummond belongs to Michigan, and the others of the group to Ontario, Canada The islands, in a noted fishing region, are popular resorts

Manitou Springs (mănĭtōō'), town (pop, 1,462, alt c 6,400 ft), central Colo , near Colorado Springs at the foot of Pikes Peak, founded 1872, inc 1888 It is a resort with mineral springs Near by are the Cave of the Winds and other interesting geologic formations

Manitowoc (mă"nĭtuwŏk'), industrial city (pop 24,404), co seat of Manitowoc co , E Wis , a port of entry on Lake Michigan at the mouth of the Manitowoc and N of Sheboygan inc 1870 The North West Company established a trading post here in 1795, permanent settlement began in 1837 The early fishing industry gave way to shipbuilding in the 1860s Manufactured products include aluminum goods Portland cement, and malt

Maniu, Iuliu (yōōl'yōō mănyōō'), 1873–, Rumanian politician, head of the Rumanian Peasant party Born in Transylvania, he helped to organize the Rumanian national movement there before and during the First World War He was premier in 1928–30, with a program of liberal reform, and again premier in 1932–33 He opposed King Carol II and the dictatorship of Ion Antonescu After the Communists came into power he was denounced as a reactionary Tried for high treason in 1947, he was convicted and sentenced to solitary confinement for life

Maniwaki (mănĭwô'kē), village (pop 2,320), SW Que , at the junction of the Desert and Gatineau rivers NNW of Ottawa It originated as an Indian mission, founded by the Oblate Fathers It has lumbering, pulp milling, and dairying

Manizales (manēsä'lās), city (pop 51,025), capital of Caldas, W central Colombia Founded c 1840 on the central cordillera of the Colombian Andes, it is a commercial and agricultural center, especially of coffee growing There is mining and some manufacturing, chiefly cotton mills

Mankato (măn-kā'tō) **1** City (pop 1,426), co seat of Jewell co , N central Kansas, laid out 1872, inc 1880 It is the trade center of a grain and livestock area **2** City (pop 15,654), co seat of Blue Earth co , S Minn , at a bend in the Minnesota river SW of Minneapolis, platted 1852, inc as a village 1865, as a city 1868 It is an industrial and commercial center in a dairy, farm, and quarry region Sibley Park was the site of Camp Lincoln, where over 300 Sioux were held after their outbreak in 1862 Mankato has a state teachers college (1868) Minneopa State Park is near

Manley, Mary de la Rivière, 1663–1724, English author After writing successful plays, "Mrs" Manley produced several prose romances full of political and personal scandal The most famous, known as the *New Atalantis* (1709–10), abused prominent Whigs and involved her in a court suit In 1711 she succeeded Swift as editor of the *Examiner* and for several years wrote in support of the Tory government Her works were frequently scurrilous and her reputation unsavory.

Manlius (măn'lēus), ancient Roman gens, chiefly patrician but later containing plebeian families **Marcus Manlius Capitolinus** (kä"pĭtŭlī'nus), d 384? B C , consul (392 B C), took refuge in the Capitol when Rome was taken by the Gauls (c 389

B C) Aroused by cackling geese at night, he repulsed the Gauls from the hill According to legend, he defended plebeian debtors from harsh patrician creditors, and the following year he was impeached for high treason and thrown down from the Tarpeian Rock by the tribunes **Titus Manlius Imperiosus Torquatus** (ĭmpērō'sŭs tôrkwā'tŭs), 4th cent B C, served against the Gauls (361 B C), one of whom he slew in single combat He took the Gaul's torque, hence his name Torquatus He was dictator three times, and three times consul. In 340 B C, with his colleague, P Decius Mus, he defeated the Latins near Vesuvius and at Trifanum He killed his own son for disobeying express orders not to engage in single combat with the enemy Some of his story is legendary **Titus Manlius Torquatus**, 3d cent B C, conquered the Sardinians while consul (235 B C), subsequently becoming censor (231 B C), consul (224 B C), and dictator (210 B C) He opposed the ransom of those taken prisoner in the battle of Cannae (216 B C)

Manlius village (pop 1,520), central N Y, SE of Syracuse, settled 1789, inc 1842 It is the seat of Manlius School, a military academy

Manly, municipality (pop 33,473), New South Wales, Australia, on the shore of Port Jackson NNE of Sydney It is a seaside resort, with knitting mills and woodworking factories

Manly, town (pop 1,445), N Iowa, near the Minn line N of Mason City, inc 1898

Mann, Sir Donald, 1853–1934, Canadian railroad builder, b Acton, Ont He became a railroad contractor in 1880 While constructing a section of the Canadian Pacific Railway, he met Sir William MACKENZIE, with whom he formed (c 1888) a partnership that led to the organizing and building of the Canadian Northern Railway, of which Mann became vice president He was knighted in 1911

Mann, Erika see MANN, THOMAS

Mann, Heinrich (hīn'rĭkh man'), 1871–1950, German novelist, older brother of Thomas Mann His many novels include *Im Schlaraffenland* (1901, Eng tr, *In the Land of Cockaigne*, 1925), *Die Göttinnen* (1902–3, Eng trs, *The Goddess*, 1918, *Diana*, 1929), *Professor Unrat* (1904, Eng trs, *The Blue Angel*, 1932, *Small Town Tyrant*, 1944), *Die kleine Stadt* (1909, Eng tr, *The Little Town*, 1931), the trilogy *Das Kaiserreich*, comprising *Der Untertan* (1918, Eng tr, *The Patrioteer*, 1921), *Die Armen* (1917, Eng tr, *The Poor*, 1917), and *Der Kopf* (1925, Eng tr, *The Chief*, 1925), and *Die Jugend des Königs Henri Quatre* (1935, Eng tr, *Young Henry of Navarre*, 1937) and *Die Vollendung des Königs Henri Quatre* (1938, Eng tr, *Henry, King of France*, 1939) In contrast to the detachment of his brother, Heinrich Mann wrote with romantic passion and fierce satire See his autobiography, *Ein Zeitalter wird besichtigt* (1945–46)

Mann, Horace (măn), 1796–1859, American educator, b Franklin, Mass He received a sparse preliminary schooling, but succeeded in entering Brown Univ in the sophomore class and graduated with honors in 1819 He studied law, was admitted (1823) to the Massachusetts bar, and thereafter practiced in Dedham, Mass, and in Boston He entered the state legislature in 1827, became speaker of the senate (1835), and was made secretary of the newly created (1837) state board of education at a time when the public school system was in very bad condition Within his 12-year period of service, public interest was aroused, a movement for better teaching and better-paid teachers was instigated, school problems and statistics were brought to light and discussed, training schools for teachers were established, and schoolhouses and equipment were immeasurably improved In 1843 he studied educational conditions abroad, and in 1848 he was elected to Congress as an antislavery Whig He was defeated for the post of governor of Massachusetts in 1852 In 1853 he became the first president of Antioch College, where he also taught philosophy and theology He died there without being able to carry out his ideas, handicapped by lack of funds He had married as his second wife Mary Peabody, sister of Elizabeth Peabody See Mary T Mann and others, ed, *The Life and Works of Horace Mann* (5 vols, 1891); biographies by G A Hubbell (1900) and E I F Williams (1937), B A Hinsdale, *Horace Mann and the Common School Revival in the United States* (1937), *Selective and Critical Bibliography of Horace Mann* (comp. by the Federal Writers' Project of Massachusetts, 1937)

Mann, James Robert, 1856–1922, American legislator, b McLean co, Ill, grad Univ of Illinois, 1876, and Union College of Law (now Northwestern Univ law school), 1881 He was admitted (1881) to the bar, practiced law in Chicago, and held many local offices before he served (1897–1922) as a Republican member of the U S Congress He was (1910) one of the sponsors of the Mann-Elkins Act, which provided for railroad-rate regulation (see INTERSTATE COMMERCE COMMISSION), and he was author (1910) of the **Mann Act,** also known as the White Slave Act, which forbade, under heavy penalties, the transportation of women from one state to another for immoral purposes.

Mann, Thomas (tō'mäs măn'), 1875–, German novelist and essayist, outstanding German writer of the 20th cent, b Lübeck, brother of Heinrich Mann. He first attracted notice with the short story *Der kleine Herr Friedemann* [little Herr Friedemann] (1898), written during a year spent in Italy with his brother Heinrich With the publication of his first novel, *Buddenbrooks* (pub 1900, although volume bears date 1901, Eng tr, 1924), depicting the rise, decay, and disintegration of a merchant family, he became famous Outstanding shorter works of fiction which followed were *Tristan* (written 1902) and *Tonio Kröger* (written 1903), his verse drama, *Fiorenza* (written 1904), *Wälsungenblut* [the blood of the Walsungs] (written 1905), a short story, *Felix Krull* (written 1911), a fragment of a novel, and the short novel, *Der Tod in Venedig* (written 1911, Eng tr, *Death in Venice*, 1925) These works show Mann's preoccupation with various psychiatric problems The proximity of creative art to neurosis, the artist's longing for death, and the affinity of genius and disease are larger themes, and incest, homosexuality, and infantile sexuality appear secondarily, throughout there is the problem of the artist's position in a bourgeois society—Mann's own problem in these early years and the theme of his second novel, *Königliche Hoheit* (1909, Eng tr, *Royal Highness*, 1926) Of his remaining works of shorter fiction, the most important are his prose idyl, *Herr und Hund* (1918, Eng tr, *Bashan and I*, 1923, *A Man and His Dog*, 1930), and the short novels *Unordnung und frühes Leid* [disorder and early sorrow] (1925, Eng tr, *Early Sorrow*, 1929), in which the exaltation of death again appears, and *Mario und der Zauberer* (1929, Eng tr, *Mario and the Magician*, 1930), an allegory of fascism English translations of all his shorter fiction are collected in *Stories of Three Decades* (1936) Mann's third novel was *Der Zauberberg* (1924, Eng tr, *The Magic Mountain*, 1927), occupying him for 12 years during which time he became acquainted with Freudian psychology All the themes of the earlier works are here, treated with mastery and subtlety The protagonist is not an artist but a highly complex symbol, represented as a young man from a bourgeous background who, in the midst of disease and death in a tuberculosis sanatorium, finds the way to fulfillment of his own life Having received the suggestion quite by chance, Mann began his tetralogy on the biblical story of Joseph in 1926 and was occupied with it intermittently for 16 years It consists of *Die Geschichten Jaakobs* [the tales of Jacob] (1933, Eng tr, *Joseph and His Brothers*, 1934), *Der junge Joseph* (1934, Eng tr, *Young Joseph*, 1935), *Joseph in Ägypten* (1936, Eng tr, *Joseph in Egypt*, 1938), and *Joseph der Ernährer* (1943, Eng tr, *Joseph the Provider*, 1943), the complete work is entitled *Joseph und seine Brüder* [Joseph and his brothers] In this, the pleasantest, most idyllic of all his works, Mann is no longer preoccupied with death and disease, replacing them with a profound study of the mythological and the psychological Before its completion, two other novels appeared—*Die vertauschten Köpfe* (1940, Eng tr, *The Transposed Heads*, 1941), based on a legend of ancient India, and *Lotte in Weimar* (1939, Eng tr, *The Beloved Returns*, 1940), a study of genius in the person of Goethe In *Doctor Faustus* (1948) the guise of a modern version of the Faust legend is used to tell the story of the composer Adrian Leverkühn, who allegorically represents the German people All of these works have been published in English translations by H T Lowe-Porter and others Mann's essays fall into two general categories—political and literary His autobiographical essay *Betrachtungen eines Unpolitischen* [reflections of a nonpolitical man] (1918, not translated into English) marks the end of his belief that politics do not concern the artist Regarding politics as public morality and something in which an artist must participate to preserve a society in which he may create, Mann became an outspoken essayist against fascism, also delivering radio messages to the German people English translations of his major political speeches and essays are published in *Order of the Day* (1942) His own selection of his literary essays was published in English as *Essays of Three Decades* (1947) These elucidate the ideas which are present in his novels, taking the form of studies of the men whose thought has influenced his own—Schopenhauer, Nietzsche, and Freud—of the novelists Dostoyevsky and Leo Tolstoy, of Goethe, whose spirit is invoked throughout Mann's work, and of Wagner, whom Mann considers arch-musician and arch-romantic and with whom he feels an artistic affinity Despite these romantic influences and the decadence of his early works, Mann is an opponent of the anti-intellectual trends in German thought of the early 20th cent Mann left Germany for Switzerland in self-imposed exile in 1933, was deprived of his citizenship by the Nazis in 1936, and took residence in Princeton, N J, in 1938, giving lectures at Princeton Univ. In 1941 he built a home near Los Angeles, where all of his works since that time were written. He was awarded the 1929 Nobel Prize in Literature, and in 1949, speaking in Frankfurt, Germany, on the 200th anniversary of the birth of Goethe, he was awarded that city's annual Goethe prize. See **James Cleugh,** *Thomas Mann: a Study* (1933); H. J. Weigand, *Thomas Mann's Novel Der Zauberberg* (1933), Harry Slochower, *Three Ways of Modern Man* (1937) and *Thomas Mann's Joseph Story* (1938); J. G Brennan, *Thomas Mann's World* (1942). His daughter, **Erika Mann** (ā'rēkä), 1905–, is an actress and author and was married to the British-American poet W. H. Auden. His son, **Klaus Mann** (klous'), 1906–49, was a novelist, essayist, and playwright. He left Germany in 1933 and until 1935 edited the anti-Nazi journal *Sammlung* in Amsterdam A resident of the United States from 1935, he became a citizen in 1943, at which time he entered the U.S army In New York city he edited (1941–42) *Decision*, a review, and he was a contributor to numerous American periodicals His writings include *Alexander a Novel of Utopia* (1929, Eng tr, 1930), *Pathetic Symphony* (1936, Eng tr, 1948), a novel about Tchaikovsky, the autobiographical *Turning Point* (1942), and *André Gide and the Crisis in Modern Thought* (1943) With his sister Erika he wrote *Escape to Life* (1939) and *The Other Germany* (Eng tr, 1940), two polemics against the Nazis With Hermann Kesten he edited *Heart of Europe* (1943), an anthology of European writing since 1920

Mann, Tom (măn), 1856–1941, British labor leader and syndicalist With John Burns and Benjamin Tillett, he organized the 1889 dock strike He was first secretary of the London Reform Union and of the National Democratic League His radical activities brought him several prison terms Mann's famous speech of 1912 urged soldiers not to molest strikers See his memoirs (1923)

manna (mă'nu), in the Bible, edible substance provided by God for the people of Israel in the wilderness It is described as white, small, and flaky and was found on the ground in the morning six days a week It has been regarded by Christians as a type of Christ in the sacrament Ex 16, Num 11 7,8, Joshua 5 12 Attempts have been made to identify manna botanically Some have thought that it was an exudate of the European flowering ash (*Fraxinus ornus*) However, according to a more recent theory, some manna may have been species of lichens of the genus *Lecanora*, still found over large areas of the barren plains and mountains in many sections of W Asia and the northern part of Africa It is also postulated that part of the manna was an alga of the genus *Nostoc* which grows rapidly on moist ground

Mann Act see MANN, JAMES ROBERT

Mannerheim, Baron Carl Gustav Emil (kärl' gŭ'stăv ä'mĭl mä'nurhām), 1867–, Finnish field marshal Of a distinguished Swedish-Finnish family, Mannerheim rose to the rank of general in the tsarist army and in Jan to May, 1918, led victorious antirevolutionary Finnish forces In the following year he headed the new regime in Finland as regent Defeated in the presidential elections of July, 1919, he went into retirement He was appointed head of the Finnish defense council in 1931 and commanded the Finnish forces in the FINNISH-RUSSIAN WAR of 1939–40 and again in 1941–44 In Aug, 1944, he succeeded Risto Ryti as president of FINLAND, and in September he terminated hostilities with Russia He went into retirement late in 1945 and resigned as president in 1946 The **Mannerheim Line,** a fortified line of defense across the Karelian Isthmus, was planned by him It was taken by the Russians in 1940 and subsequently dismantled

Mannes, David (mă'nĭs), 1866–, American violinist and educator, b New York city In 1891 he began to play the violin in the New York Symphony Orchestra, of which he was concertmaster from 1898 to 1912 In 1912 he founded the Music School Settlement for Colored People and in 1916, with his wife, the Mannes Music School, both in New York He inaugurated free concerts in the Metropolitan Museum of Art in 1918 *Music Is My Faith* (1938) is his autobiography His wife, **Clara Damrosch Mannes,** 1870–1948, b Breslau, the daughter of Leopold Damrosch, was a pianist She appeared with her husband in recitals and was codirector with him of the Mannes Music School Their son, **Leopold Damrosch Mannes,** 1899–, b New York city, grad Harvard, 1920, studied piano and composition in New York and Paris He taught composition (1924–31) at the Mannes school and theory (1927–31) at the Institute of Musical Art (now Juilliard School of Music) During the 1920s he distinguished himself in composition, but in 1931 he became a research chemist with the Eastman Kodak Company and contributed to the development of color photography In 1939 he became associate director of the Mannes Music School

Mannheim, Karl (kärl' män'hĭm), 1893–1947, Austro-Hungarian sociologist and historian, born and educated in Hungary. He taught at Heidelberg and Frankfurt and, from 1933 to his death, at the Univ. of London. Using historical data, he analyzed social values as the bases of social beliefs and thought. He was influenced by but critical of Marx, whose approach he adapted for his noted *Ideology and Utopia* (1929, Eng tr., 1936)

Mannheim (män'hĭm, Ger. män'hīm), city (1939 pop. 284,957; 1946 pop. 211,564), N Baden, W

Germany, on the right bank of the Rhine and at the mouth of the Neckar. A bridge connects it with Ludwigshafen, on the opposite bank of the Rhine. It is a major inland port and transshipment point, and it produces machinery, precision instruments, and chemicals. The port trades mainly in grain and coal. A small fishing village, Mannheim was fortified and chartered in 1606–7. In 1720 it became the residence of the electors palatine (see PALATINATE), who built a large palace and held a brilliant court here. Elector Charles Theodore made Mannheim one of the great musical and theatrical centers of Europe. The famous Mannheim orchestra ranked first among 18th-century orchestras and became the model of all later symphonic groups. Mozart lived here (1777–78), and SCHILLER began (1782–83) his career at the Mannheim theater. Mannheim was awarded to Baden in 1803. It was largely destroyed in the Second World War, the château and the regularly laid-out baroque buildings of the inner city, including the Jesuit church, the theater, and the city hall, were heavily damaged or destroyed. The noted art gallery was, however, mostly preserved. Karl Benz is credited with building the first motor-driven vehicle at Mannheim.

Manning, Daniel, 1831–87, American journalist and political leader, b. Albany, N.Y. At the age of 11 he went to work for the Albany *Atlas*, which in 1856 was consolidated with the *Argus*, he became editor in 1865 and owner in 1873. As legislative reporter he had become well known in political circles, and in 1874 he became a member of the state Democratic committee, serving as chairman from 1881 to 1884, thus he had a part in electing Grover Cleveland governor in 1882 and in nominating him for President in 1884. He served (1885–87) as Secretary of the Treasury under Cleveland.

Manning, Henry Edward, 1808–92, English churchman, cardinal of the Roman Church. He was born of a Low Church family and was educated at Harrow and at Balliol College, Oxford (B.A., 1830), gaining some reputation as a debater. He lacked the financial backing to enter politics like his friend W. E. Gladstone, but worked for a year in a minor post of the colonial office and returned to Oxford as fellow of Merton College. He was ordained (1832) and was given a living in Sussex. By 1835 he had become an adherent of the OXFORD MOVEMENT. Manning was a zealous pastor, and throughout his career his devotion to pastoral care and his partisanship with the secular clergy were characteristic. By 1845 when W. G. WARD was degraded, Manning, since 1841 archdeacon of Chichester, was prominent in the Oxford movement, and his letters of succeeding years, as well as his visit to Rome (1847), foretold his following of Newman and Ward into the Roman Catholic Church. When the bishop of Exeter was compelled by the privy council (1850) to institute G. C. Gorham to a benefice despite Gorham's open disbelief in the doctrine of baptismal regeneration, Manning left the Church of England and entered (1851) the Roman communion. He was later ordained. He was a celebrated confessor, an ardent advocate of prison reform, and a constant promoter of schemes for alleviating the condition of the poor. His society of Oblates of St. Charles (1857) carried on much of this work. One of the most trusted advisers of Cardinal WISEMAN, Manning was made (1857) provost of the Westminster chapter, and on Wiseman's death he was appointed archbishop (1865). He greatly expanded Catholic education in England and furthered the education of the poor, but strongly opposed Catholic participation in Anglican universities, thereby bringing himself into conflict with J. H. Newman. His advocacy of the rights of workingmen brought much abuse upon him from conservatives, but he fearlessly forwarded the movement within his church which culminated in the encyclical of LEO XIII on the rights of labor. In his later years he was constantly called on to speak at labor-union conventions and to serve on strike arbitration boards. He was an advocate of slum clearance and tectotalism. In 1869 and 1870 Manning was a leader in the movement to enounce the dogma of papal infallibility, and he inclined to view Newman and those others who thought it an untimely move as decidedly lukewarm Catholics. This intensified the dislike between Newman and Manning. In 1875 Manning was created cardinal. Many regard as the greatest single achievement of Manning's career the strong support he gave the strikers in the great London dock strike (1889) and his single-handed settlement of it. His *Rule of Faith* (1839) and *Unity of the Church* (1842) were important in the history of the Oxford movement. Among his Catholic works, *The Eternal Priesthood* (1883) is best known. See biographies by E. S. Purcell (1896), J. E. C. Bodley (1912), and Shane Leslie (1921), G. P. McEntee *The Social Catholic Movement in Great Britain* (1927).

Manning, Robert: see MANNYNG, ROBERT.

Manning, William Thomas, 1866–1949, American Episcopal bishop of New York, b. England, received his collegiate and theological training at the Univ. of the South, Sewanee, Tenn. Ordained priest (1891), he served parishes in California, Pennsylvania, and Tennessee and for years taught dogmatic theology at the Univ. of the South before becoming rector of Trinity parish, New York city, in 1908. Manning was bishop of New York from 1921 until his retirement in 1946. Under his bishopric great progress was made toward completing the building of the Cathedral of St. John the Divine.

Manning, 1 Town (pop. 1,748), W central Iowa, on the West Nishnabotna river and N of Atlantic, inc. 1880. 2 Town (pop. 2,381), co. seat of Clarendon co., E central S.C., ESE of Columbia. It is the processing center of a farm, lumber, and dairy area.

Mannington, city (pop. 3,145), N.W.Va., NW of Fairmont at the confluence of Pyles Fork and Buffalo Creek, inc. 1871. It is a processing center in an oil, gas, and farm region and manufactures pottery, glass, and tools.

Mannyng or **Manning, Robert,** fl. 1288–1338, English poet, a member of the Gilbertine order, b. Brunne (modern Bourne), Lincolnshire. He was also called Robert of Brunne. He is chiefly remembered for his *Handlyng Synne*, a religious manual for the common man (an adaptation of William of Wadington's *Manuel des péchés*). The poem is important because it uses the Midland dialect as accepted English and because its illustrative stories reflect conditions in pre-Chaucerian England. He also wrote a chronicle of England based on Wace and de Langtoft. *Handlyng Synne* was edited by F. J. Furnivall (1901–3), as well as the first part (1887) of the chronicle, the second part was edited by Thomas Hearne in 1725.

Manoah (mənō'ə) [Heb., =rest], father of Samson. Judges 13.

Manoel. For Portuguese rulers thus named, see MANUEL.

Manor, borough (pop. 1,289), SW Pa., NW of Greensburg, laid out 1873, inc. 1890.

manor house, dwelling house of a feudal lord of a manor, occupied by him only on occasional visits if he held many manors. Though not in the class of castles with regard to fortification, many manor houses were partly fortified; they were enclosed within walls or moats, these sometimes including the farm buildings as well. The primary feature of the manor house was its great hall, to which subsidiary apartments were added as the lessening of feudal warfare permitted peaceful domestic existence. By the beginning of the 16th cent., manor houses as well as smaller castles began to acquire the character and amenities of the residences of country gentlemen. This transformation produced the smaller Renaissance châteaux and *manoirs* of France and the numerous country mansions of the Elisabethan and Jacobean styles in England. See J. A. Gotch, *Growth of the English House* (1909), W. H. Ward, *Architecture of the Renaissance in France* (1926), Ralph Dutton, *The English Country House* (1936).

manorial system (munō'rēəl, mă–) or **seignorial system** (sēnyō'rēəl), economic and social system by which the peasants of medieval Europe held the lands they tilled. Its fundamental characteristic was the holding of lands from the lord (Fr. *seigneur*) of an estate in return for fixed dues in kind, money, and services. The system was intimately connected with FEUDALISM, but it was not feudal, since it had no connection with the fief. A similar method of holding by the peasants has appeared in other lands, notably in Japan and India. The manorial system prevailed in France, England, Germany, Spain, and Italy and far into the eastern lands that had been reconquered from, or were still held by, the Slavs. It reached its final form at different times in these various lands but in general may be said to have flourished from the 11th to the 15th cent. Gradual decline took place with the wide development of towns and of capitalistic commerce which tended to break down the small economic unit, the manor, and built up larger units. This decline was early in Italy, where Roman city institutions persisted to some extent through the Middle Ages (see COMMUNE). In Spain it was soon modified, especially by Moorish conquest, but still existed in modified form in the 20th cent. In England dissipation of the system had been long in process before it was hastened by the INCLOSURE of estates. In France its disappearance was consummated by the French Revolution. In Austria and Prussia it was virtually ended by the reforms of Emperor JOSEPH II, Karl vom und sum STEIN, and HARDENBERG, but in Hungary it left traces until the 20th cent. In Russia it was profoundly altered by the abolition of serfdom (1861, see EMANCIPATION, EDICT OF). Everywhere it left its mark upon succeeding institutions. Essentially the system was a local institution, and general statements concerning it are subject to exceptions. In its simple form it consisted of the division of the land into self-sufficient estates—the great domains. The great domain was held by a lord who might be the king, an ecclesiastical lord, a baron, or any lesser noble. The land was in his holding and was not given to the man who cultivated it, but only loaned in return for services and dues. The lord, however, did not have the right to withdraw the property or to increase the dues, the rights of cultivation were in general heritable among the peasants. The peasants were divided into two classes, the free and the unfree. The unfree SERF was bound to the land and could not leave it; in the extreme case, he was otherwise entirely subject to the will of the lord in the matter of services. The freeholder was not personally bound to the land or to the lord, in the highest form of freedom, he simply held the land in return for a fixed payment. There was wide diversity in the status of VILLEIN and serf, and as far back as the manor can be traced, the tendency was for the free and unfree tenants to become confused and consolidated. The terms *free* and *servile* came to be attached to the land rather than to the man, and the holding was servile or free regardless of the status of the holder. There were also other types of holders whose status cannot be definitely determined from the records that survive, such were the cottars and the *bordars*. On the typical domain was the manor house of the lord. Some of the land he retained for his own use (the demesne land). The domain was divided into arable, meadow (the commons), woodland, and waste. The arable was held by the peasants, each holding under its own fixed conditions, usually the holdings were by strips, and a single man might hold a number of widely separated lands. The three-field system of agriculture generally prevailed, with one field devoted to winter crops, one to summer crops, and one lying fallow each year. The meadow was usually held in common, though the lord had vested rights and the peasants might have special privileges. The woodlands and fishponds usually belonged to the lord, and he had to be recompensed for the right to hunt animals, to catch fish, and to cut wood. Normally the peasants of the domain lived together in a village not far from the manor house or castle, though there are numerous instances of manors with scattered tenant houses. The payments made by serf and villein varied with the locality. There were usually fixed dues paid at certain times of the year regularly. In addition to dues paid for the use of the lands, these payments included exactions for the use of the lord's mill and oven and also personal work dues. There were also the obligations to supply the lord with entertainment—food, lodging, and the like—when he came to the manor. In addition there were dues for the rights of justice. The manor was an administrative and political unit. It was, in theory at least, the unit of medieval social organization, with its own artisans, supposedly enough to supply the needs of the manor. There were manorial courts, and the lord, or more usually his agent, presided over the administration of justice. The manor was also the unit for the raising of taxes and for public improvements. Thus the tenants were obliged to repair roads and bridges, keep up castles, and take care of the military contributions. The manor was almost always under the charge of an intendant who was the agent of the lord. He might be assisted by provosts or bailiffs. The manor was looked upon as a permanent, fixed organization, and even when part of it was alienated by the lord, it still remained a single manor. Thus one manor might have several direct lords. It did not necessarily coincide with a single estate, it might be larger or might even, in rare cases, be only part of an estate. The most vexed problem concerning the manor is the question of the origin of manorial organization. There was a long-drawn quarrel between the so-called Romanists and the so-called Germanists as to the sources of the organization. The question will probably never be settled, there is not sufficient evidence. Those who stressed Roman origin pointed to the process that was, in the days of the later Roman Empire, producing independent estates. Those who believed in German origin pointed out the likenesses of the manor to what was supposedly the ancient German system of landholding (see MARK). It is now rather generally agreed that both German and Roman influences had a bearing on the development of the great domains in Carolingian times. See P. G. Vinogradoff, *Villainage in England* (1892) and *The Growth of the Manor* (3d ed., 1920), F. W. Maitland, *Domesday Book and Beyond* (1897), C. M. Andrews, *The Old English Manor* (1892), N. J. Hone, *The Manor and Manorial Records* (1925), J. W. Thompson, *Economic and Social History of the Middle Ages* (1928) and *Economic and Social History of Europe in the Later Middle Ages* (1931), N. S. B. Gras and E. C. Gras, *The Economic and Social History of an English Village* (1930), H. B. Bennet, *Life on the English Manor* (1938).

Man o' War, 1917–47, American race horse, by Fair Play out of Mahubah, bred by August Belmont near Lexington, Ky., and owned by Samuel D. Riddle after 1918. A large reddish-colored colt capable of tremendously long strides, he raced only as a two-year-old and three-year-old, but in this short time (1919–20) he won 20 out of 21 races and set five world records. His one loss was to a horse named Upset at Saratoga in 1919, he ran second. The most renowned stallion in the history of thoroughbred racing, "Big Red," as Man o' War was often called, became the leading sire of all time.

Manresa (mänrā'sä), city (pop. 34,075), Barcelona prov., NE Spain, in Catalonia. It is an industrial

center with cotton and silk manufactures Of ancient origin, Manresa has a Roman bridge and a Gothic cathedral Below the Jesuit convent is the grotto where St Ignatius of Loyola used to retire in prayer during his sojourn (1522–23) at Manresa on his way back from Montserrat It is now a place of pilgrimage

Manrique, Jorge (hôr'hā mänrē'kā), c 1440–1479, Spanish poet and soldier Most of his verse is undistinguished, but his *Coplas* [couplets] on his father's death are among the treasures of poetry. They were translated into Latin and into English (by Longfellow) and have been set to music

Mans, Le (lu mä'), city (pop 90,693), capital of Sarthe dept, NW France, on the Sarthe river The historical capital of Maine, it is also an important manufacturing, commercial, educational, and communications center Le Mans, which dates from pre-Roman times, has witnessed frequent sieges and battles throughout the centuries Some parts were damaged in the Second World War The Cathedral of St Julien du Mans (11th-13th cent), which contains the tomb of Berengaria, queen of Richard Cœur de Lion (Richard I of England), is partly Romanesque, its Gothic part has perhaps the most daring system of flying buttresses of any Gothic cathedral Le Mans was the birthplace of Henry II of England

Mansard see MANSART

mansard roof (mān'särd), type of roof so named because it was frequently used by the French architect François Mansart However, it was not invented by him but was used early in the 16th cent, as in portions of the palace of the Louvre designed by Pierre Lescot It became particularly characteristic of French Renaissance architecture and later was much used in Victorian buildings in Europe and America In a mansard roof the slope from eaves to ridge is broken into two portions The lower portion is built with a steep pitch, sometimes almost vertical, while the upper one has a low pitch or is nearly flat This results in a higher and more useful interior space than can be obtained in other types of roof

Mansart or **Mansard, François** (both fräswa' mäsär'), 1598–1666, one of the greatest French architects of the Renaissance His work is noted as a fine and pure expression of French classical design In 1635 he was charged by the duc d' Orléans with making additions to the château of Blois His final and greatest work is the Church of Val-de-Grâce, Paris, which is believed to have later influenced Sir Christopher Wren in the design of St Paul's Cathedral, London Mansart designed the château of Maisons and, in Paris, the Hôtel de Toulouse (now the Banque de France), the Hotel d'Aumont, and the alterations to the Hôtel Carnavalet, now a museum

Mansart or **Mansard, Jules Hardouin** (zhul' ärdwē'), c 1646–1708, French architect of the classical period of the Renaissance He studied under his great-uncle François Mansart and under Liberal Bruant Favored by Louis XIV, he was ennobled and in 1699 was made chief architect for the royal buildings After enlarging the royal château of Saint-Germain-en-Laye, he undertook work at the palace of Versailles, where, among his accomplishments, are the impressive Galérie des Glaces decorated by Le Brun, the Grand Trianon, the palace chapel, and the vast orangery In Paris he designed two pieces of city planning the Place des Victoires (1684–86) and the superb Place Louis le Grand, now called the Place Vendome (1699) The building which contributed greatly to the impressiveness of the city of Paris and is considered his most splendid achievement is the Dôme des Invalides (1706), this was added as a second church to the earlier one constructed by Bruant and brought the scheme of the Hôtel des Invalides to completion In collaboration with German Bofrand (1667–1754) he designed the cathedral of Nancy

Mansel, Henry Longueville (mān'sul), 1820–71, English philosopher A follower of Sir William Hamilton, he developed theories of consciousness and knowledge in the pattern of realism of the "common-sense" school of philosophy He held several chairs at Magdalen College, Oxford, and in 1868 became dean of St Paul's, London His Bampton Lectures, *The Limits of Religious Thought Examined* (1858), were highly regarded. Other works include *Metaphysics, or, The Philosophy of Consciousness* (1860) and *Philosophy of the Conditioned* (1866)

Mansfeld, Peter Ernst von (pā'tûr ërnst fûn mans'fĕlt), 1580?–1626, military commander, one of the Protestant leaders in the Thirty Years War Natural son of a governor for the Hapsburgs in the Low Countries, Mansfeld rendered distinguished military service in the imperialist forces in the Netherlands and was legitimized, by 1607 he was styling himself count When the Bohemians revolted and the Thirty Years War began, Mansfeld became the chief general attached immediately to FREDERICK THE WINTER KING He led a band of mercenaries in trying to defend Frederick's possessions in the Palatinate He was at first successful and proved himself skillful in command. He even won an engagement with TILLY in 1622, but he was unable to oust the imperialist forces and his unruly men ravaged and terrorized the country, Frederick dismissed him He then (1623) became a mercenary leader for Holland and in 1625 with a subsidy from England recruited a force to fight on the Protestant side and seek to recover the Palatinate He was severely defeated (1626) by Wallenstein near Dessau Mansfeld attempted then to cooperate with Gabriel Bethlen but without success He died soon afterward

Mansfield, Edward, fl 1665, West Indian buccaneer Possibly born in Curaçao of Dutch parentage, he is also called Edward Mansveld He was engaged (1665) by the British governor of Jamaica, Sir Thomas Modyford, to take Curaçao for the British He set sail with a fleet of 15 vessels, with Henry Morgan as second in command, and made, instead, for Cuba where he sacked Sancti Spiritus He took the island of Old Providence, ascended the San Juan river to take Granada, Nicaragua, and plundered and burned Spanish possessions along the Central and South American coasts before he returned to Jamaica, where he was mildly reproved by Governor Modyford for his activities He died shortly afterwards and was succeeded by Morgan as chief of the buccaneers

Mansfield, Joseph King Fenno, 1803–62, Union general in the Civil War, b New Haven, Conn, grad West Point, 1822 In the ANTIETAM CAMPAIGN he was mortally wounded while leading the 12th Corps, Sept 17, 1862

Mansfield, Katherine, 1888–1923, British short-story writer, whose real name was Kathleen Beauchamp, b Wellington, New Zealand She struggled against illness all her life and died of tuberculosis In 1911 she met John Middleton Murry, author and editor, they soon formed an alliance which lasted until her death Because the divorce from her first husband was long delayed, Katherine Mansfield and Murry were not married until 1918 Her first volume of short stories, *In a German Pension*, was published in 1911 *Bliss* (1920) established her reputation, and *The Garden Party* (1922) was very well received *The Doves Nest* and *Something Childish* (1924) were issued posthumously, and a complete edition of her stories appeared in 1937 Katherine Mansfield owed a considerable literary debt to the short stories of Chekhov Her work has in turn strongly influenced recent writers of the short story, particularly in the use of the crucial moment as a device for narration See her journal (1927), letters (1928), and *Scrapbook* (1940), all ed by J M Murry, and his *Between Two Worlds* (1935)

Mansfield, Richard, 1854–1907, American actor, b Germany, of English parents He came to the United States in 1872, in 1882 he made his first appearance on the American stage Among his chief successes were *Beau Brummel* (1890) and *Cyrano de Bergerac* (1898) An interpreter of contemporary drama and a leading actor of his day, Mansfield was one of the first to bring George Bernard Shaw's plays to the United States, and in 1906 he appeared in Ibsen's *Peer Gynt* See biography by Paul Wilstach (1909), William Winter, *Life and Art of Richard Mansfield* (2 vols, 1910)

Mansfield, William Murray, 1st **earl of,** 1705–93, English jurist As solicitor general (1742–54) he prosecuted the Scottish rebel lords, Balmerino, Kilmarnock, and Lovat In 1754 he became attorney general and in 1756 lord chief justice An advocate of toleration and legal niceties, he yet was accused of showing prejudice in the case against John Wilkes and in cases involving the letters of Junius His house was burned in the Gordon riots (1780) See C H S Fifoot, *Lord Mansfield* (1936)

Mansfield, municipal borough (1931 pop 46,077, 1947 estimated pop 50,680), Nottinghamshire, England, on the western border of Sherwood Forest It is in a coal and iron district, with manufactures of hosiery, shoes, and metal products The grammar school was founded in 1561, there is a 14th-century Church of St Peter Hardwick Hall and NEWSTEAD ABBEY are near

Mansfield. **1** Town (pop 1,002), W Ark, SE of Fort Smith, in an area producing cotton, fruit, vegetables, and natural gas **2** Town (pop 4,559), NE Conn, N of Willimantic, settled c 1692, inc 1703 The town includes STORRS, Mansfield Center, and Gurleyville and has a state school and hospital for epileptics and feeble-minded **3** Town (pop 4,065), parish seat of De Soto parish, NW La, S of Shreveport, inc 1847. It is in an area yielding oil and natural gas, cotton, farm products, and lumber. Mansfield Battle Park is the site of the Civil War battle of SABINE CROSSROADS **4** Town (pop 6,530), SE Mass, SSW of Boston, settled 1659, set off from Norton 1770 It produces chiefly machine parts See J F Copeland, *Every Day but Sunday* (1936) **5** City (pop 37,154), co seat of Richland co, N central Ohio, midway between Cleveland and Columbus, in a hilly region, laid out 1808, inc 1828 Its varied manufactures include steel and brass products (the Ohio Brass Company dates from the '80s), stoves, electrical equipment, and tires A blockhouse of the War of 1812 has been moved to South Park The scene of many of Louis Bromfield's novels is laid here The city is the seat of the Ohio State Reformatory **6** Borough (pop 1,880), N Pa, W of Towanda, laid out 1824, inc 1857. A resort center, it has a state teachers college

Mansfield, Mount, peak, 4,393 ft high, NW Vt, NW of Montpelier and NE of Burlington, highest peak of the Green Mts and of Vermont A hotel was built on its summit before 1860 At the foot of the mountain is a deep gorge called Smugglers Notch.

Mansfield Woodhouse, urban district (pop 13,721), Nottinghamshire, England, near Mansfield It has stone quarries

Manship, Paul, 1885–, American sculptor, b St Paul, Minn, studied at the St Paul Institute of Arts, Pennsylvania Academy of the Fine Arts, and American Academy at Rome He has often gone to classical mythology for his subjects, which are treated with notable purity of line Among his works are *Centaur and Dryad*, *Little Brother* and *Paulus* (Metropolitan Mus), *Infant Hercules*, a fountain (American Acad, Rome), and *Indian and Pronghorn Antelope* and *Dancing Girl and Fauns* (Art Inst, Chicago) He is represented in the Cleveland Museum of Art, the Corcoran Gallery, and the Luxembourg Museum, Paris He has received many awards, and he is a member of the Legion of Honor

manslaughter, HOMICIDE committed without justification or excuse but distinguished from murder by absence of the element of malice aforethought Modern criminal statutes usually divide it into degrees, the most common distinction being between voluntary and involuntary manslaughter Voluntary manslaughter is an intentional killing done in the heat of passion provoked by acts of the victim such as to cause a reasonable man to act rashly and without reflection Such provocation may include violent assault and an unlawful attempt to arrest him, but not mere insulting words or gestures Involuntary manslaughter is a killing in which there is no intention to kill at all Instances are death resulting from negligence on the part of the slaver and killing resulting from the commission of minor crimes (e g, rioting) The advent of the automobile caused many manslaughter cases which arise from reckless and careless driving, in the statutes of some states such killing is a separate crime

Manson, town (pop 1,429), W central Iowa, W of Fort Dodge, founded 1872, inc 1877 Near by is Twin Lakes State Park

Mansur (mänsōōr') or **Al-Mansur** [Arabic,=the victorious], d 775, 2d ABBASID caliph (754–75) His name was in full Abu Jafar abd-Allah al-Mansur He was brother and successor of ABU-L-ABBAS He was active and dominating and successfully consolidated his empire He lived at first, as his brother had, near Kufa, but in 762 he began to build a new city, Baghdad He was favorable to the Persians, and the Barmecides were his ministers (see HARUN-AL-RASHID)

Mansur or **Al-Mansur** (Mohammed ibn Abi-Amir al-Mansur billah), 914–1002, Moslem regent of Córdoba, known in Spanish as Almanzor He was made minister of finance by the caliph Hakim II, after whose death he displaced the regent for the young caliph Hisham II Mansur undertook many campaigns against the Christian states of N Spain and extended the power of the Omayyad caliphs of Córdoba throughout Moslem Spain Mansur was very ambitious and is said to have aimed at the caliphate, he kept Hisham in seclusion during Hisham's manhood After putting down a powerful conspiracy (in which one of his own sons was involved), Mansur in 991 gave up his premiership in favor of another of his sons He continued however, to exercise the actual power until his death

Mansura (mänsōō'ru), town (pop 1,138), central La, SE of Alexandria, in a sugar and cotton district

Mansura, El (ĕl mänsōō'ru), city (pop 68,886), N Egypt, on the Nile Here, in 1250, Crusaders under Louis IX suffered a crushing defeat at the hands of the Mamelukes Today the city is a rail and road junction with extensive trade in cotton

Manteca (mäntā'ku), city (1940 pop 1,981, 1946 special census pop 3,215), central Calif, S of Stockton, founded 1870, inc 1918 Grapes, olives, sugar beets, and other vegetables and fruits are grown and processed The city produces brandy and ships dairy products

Mantegna, Andrea (andrā'a mäntā'nyä), 1431–1506, Italian painter of the Paduan school. He was adopted by Squarcione, whose apprentice he remained until 1456, when he procured his release Two years earlier he had married the daughter of Jacopo Bellini By 1460 he had entered the service of the Gonzagas in Mantua, in which he continued all his life Outside of Venice he was the greatest and most celebrated artist of N Italy His passion for the antique is evidenced in all his work, and he was one of the first artists to make an extensive collection of Greek and Roman works A rigorous draughtsman and anatomist and a perfectionist in perspective, he nevertheless gave to his statuesque forms an intense and dramatic life Among his early works the most celebrated are his frescoes of the lives of St James and St. Christopher (Church of

the Eremitani, Padua, destroyed in the Second World War); St Luke altarpiece (Milan), and San Zeno altarpiece (central panel, Louvre, side panels, Tours) In Mantua he decorated (completed 1474) the bridal chamber in the Gonzaga palace with frescoes portraying many members of the family and other notables, including himself Also of this period are nine cartoons painted on paper backed with canvas depicting the *Triumph of Caesar* (Hampton Court Palace) and a *Pietà* (Milan) About 1497 he executed for Isabella d'Este his *Parnassus* and *Triumph of Virtue* (Louvre) Other famous examples are scattered throughout the galleries of Europe The Metropolitan Museum has his *Holy Family* Mantegna also is noted for his admirable drawings and copperplate engravings Among the engravings are *Virgin and Child, Entombment, Flagellation of Christ*, and *Bacchanalia with Silenus* See Paul Kristeller, *Andrea Mantegna* (Eng tr, 1901), Fritz Knapp, *The Work of Andrea Mantegna* (1913), R H Wilenski, *Mantegna and the Paduan School* (1947)

Mantell, Gideon Algernon (măn'tl), 1790–1852, English paleontologist He practiced medicine at Lewes, Brighton, and Clapham, devoting his free time to paleontology He wrote *The Fossils of the South Downs*, published in 1822, and first discovered the remains of the Iguanodon in 1825, subsequently his reputation was enhanced by his museum, which contained a remarkable collection of fossils Besides monographs and technical works, he was the author of a number of widely read popular books on geology, among them *Thoughts on a Pebble* (1836), *The Wonders of Geology* (1838), and *The Medals of Creation* (1844)

Mantell, Robert Bruce (măn"tĕl'), 1854–1928, British-American actor He made his debut in England in 1876 as the sergeant in Boucicault's *Arrah-na-Pogue* In 1878 he came to the United States, where he played juvenile parts with Modjeska and in 1882 appeared in Sardou's *Fedora* with Fanny Davenport He formed his own company in 1905 and excelled in Shakspere and melodrama

mantelpiece, embellishment framing a FIREPLACE opening Its development commenced in the Middle Ages with the hood which overhung an open hearth to collect the smoke and convey it to the flue But in the Renaissance the smoke chamber began to be constructed within the chimney itself, and the exposed hood was abandoned The fireplace thus became a rectangular recess at the base of the chimney, with the chimney breast above free for decoration In France in the early Renaissance and in England in Elizabethan and Jacobean periods, a single mantelpiece composition of the entire breast from floor to ceiling was customary Columns, caryatids, or corbels supported the shelf, above which an armorial or other sculptural decoration was framed within pilasters, moldings, and the like Jacobean carved oak chimney breasts were especially rich The 18th cent, however, changed from these ponderous motives, the decoration became restricted to the space around the opening itself, often consisting of merely a molded enframement Mantelpieces were small in size, comparable to a piece of furniture In Italy boldly sculptured baroque mantels of stone or marble were characteristic In France the Louis XV and Louis XVI periods created two definite types, the first of swelling serpentine shape and rococo scroll decoration and the second of severely classic form with pilasters, colonnettes, or fasces English Georgian mantels employed the classic architectural elements in an infinite variety, the Adam brothers producing many of the finest, with marble inlays and exquisitely sculptured ornament Eighteenth-century American examples were imitative of English types but were usually of wood

Manteno, village (pop 1,547), NE Ill, N of Kankakee, in a farm area, inc 1878

Manteuffel, Edwin, Freiherr von (ĕt'vĭn frī'hĕr fŭn măn'toifŭl), 1809–85, Prussian field marshal, nephew of Otto von Manteuffel He served in the war against Denmark in 1864 and was appointed Prussian governor in conquered Schleswig In the AUSTRO-PRUSSIAN WAR of 1866 he commanded with brilliance He also distinguished himself in the Franco-Prussian War (1870–71) and commanded (1871–73) the German army of occupation in France

Manteuffel, Otto, Freiherr von (ō'tō), 1805–82, Prussian statesman As foreign minister he concluded (1850) the Convention of OLMÜTZ with Austria

Manti (măn'tī), city (pop. 2,268, alt 5,530 ft), co seat of Sanpete co, central Utah, in the Sanpete Valley, W of the Wasatch Mts and S of Provo, founded 1849 by Mormons It is a processing center of a livestock, dairy, and poultry area The white Manti Temple (built 1877–88) of the Latter-Day Saints is a landmark

Mantinea (măn"tĭnē'ŭ), city of ancient Greece, in E central Arcadia A coalition led by Mantinea and Argos and urged on by Athens was defeated by Sparta at Mantinea in 418 B C It was also the scene of the victory of Thebes over Sparta in which Epaminondas was killed (362 B.C.).

mantis (măn'tĭs), member of a group of insects usually considered a family (Mantidae) of the order Orthoptera, but treated in some classifications as a separate order Popular names for various species include praying insect, praying mantis, prophet, soothsayer, mule killer, and devil's riding horse They are found in most warm countries The body is elongated, usually green or grayish, with two pairs of wings Some tropical forms resemble leaves and flowers The eyes are large, and the head can turn in all directions The spiny forelegs are held in an attitude which is suggestive of prayer but which actually is a preparation for seizing the insects to feed upon The female often consumes her smaller mate and other females The eggs are laid in a frothy secretion which hardens to form a brownish protective case It is attached usually to a twig, stone, or other support The young hatch as small, wingless nymphs Commonly found in the NE and E United States are *Mantis religiosa* (about 2½ in long), introduced from S Europe, and species of *Tenodera*, of Asiatic origin *Stagmomantis carolina* is native to the SE United States

Manton, city (pop 1,006), N Mich, N of Cadillac, in a lake region, inc, as a village 1877, as a city 1924 Chairs are made here

Mantua (măn'chōōŭ, -tōōŭ), Ital *Mantova* (man'tôvä), city (pop 36,489), capital of Mantua prov, Lombardy, N Italy The center of a rich agricultural district, it is surrounded on three sides by the Mincio, which widens here to form three lakes The history of Mantua does not follow the general pattern of most Lombard cities Of Etruscan origin, later a Roman town, it was a free commune from the 12th to the 13th cent After much internal strife, the GONZAGA family gained power in 1328 and held it until 1708, when the city passed to Austria Liberation from foreign rule came only in 1866 The Gonzagas were munificent patrons of art and literature, and the city flourished under their rule Their palace, an aggregation of buildings dating from the 13th to the 18th cent, vies with the finest in Europe There are frescoes by MANTEGNA and GIULIO ROMANO The Palazzo del Te, created by Giulio Romano, the Church of Sant' Andrea (15th–18th cent), designed by Alberti, where Mantegna was buried, and the town hall (started in 1250) are other important landmarks Near Mantua Vergil was born

Manu (mä'nōō), in Hindu legend, a divinely inspired lawgiver The Laws of Manu, written in Sanskrit, purport to be of his authorship They were compiled, probably between 200 B C and A D 200, from diverse ancient sources The laws govern in great detail the ritual and daily life of the Brahmans and seek to preserve their high social position by enjoining deference from the lower castes The Laws of Manu, perhaps the most influential Hindu legal work extant, were used by Warren Hastings in framing regulations for India See Georg Buhler, *Laws of Manu* (1915), J M MacFie, *The Laws of Manu* (1921)

Manua (manōō'a), district (pop 2,597) in American SAMOA, comprising TAU, OFU, and OLOSEGA islands, annexed by the United States in 1899 According to Samoan tradition, the Manua group is the cradle of the race

manual training see VOCATIONAL EDUCATION

Manuel I (Manuel Comnenus) (kŏmnē'nŭs), c 1120–1180, Byzantine emperor (1143–80), son and successor of John II He began his reign with a war against the Seljuk Turks, the subjugation of Raymond of Antioch, and an alliance with Emperor Conrad III against Roger II of Sicily, but he changed his policy when the Second Crusade (1147–49, see CRUSADES) devastated his territory and caused him to make a truce with the Turks He conveyed the Crusaders to Asia Minor, but was not displeased at their failure, which has been somewhat unjustly blamed on him In 1154 Manuel invaded S Italy but was forced to withdraw (1158) by WILLIAM I of Sicily He subsequently directed his diplomacy against Emperor FREDERICK I, supporting the Italian cities and Pope Alexander III and aiming at nothing less than the reunion of the Western Empire with the Eastern as well as of the Western Church with the Eastern His neglect of Asia Minor led to his crushing defeat by the Turks at Myriocephalon (1176), which put an end to his ambitions As a theologian and a scholar, Manuel Comnenus was essentially a pretentious dilettante He showed a particular weakness for foreigners—Italians, French, Germans, English—on whom he conferred high offices During his reign Genoese, Pisan, and Venetian colonies settled at Constantinople and began to influence its destinies His son, Alexius II, succeeded him

Manuel II (Manuel Palaeologus), 1348?–1425, Byzantine emperor (1391–1425), son and successor of JOHN V. During his reign the Turks reduced the empire to Constantinople and its environs After the failure of the crusade of Sigismund of Hungary (later Emperor Sigismund) at NIKOPOL (1396), Manuel appealed to the West for aid and made an extended European journey (1399–1402) for that purpose His nephew, JOHN VII, was joint emperor after 1399 and defended, with BOUCICAUT, Constantinople against the siege by Sultan Bajazet I (1402) The victory of Tamerlane over Bajazet in the same year temporarily saved Constantinople In his last years Manuel devoted himself to writing, entrusting the government to his son and successor, John VIII

Manuel I, 1469–1521, king of Portugal (1495–1521) The cousin and brother-in-law of John II, he was duke of Beja and grand master of the Order of Christ when John II's son, Alfonso, died in a fall from a horse Manuel succeeded to the throne for one of the most glittering reigns that Portugal ever knew John had planned the expedition in search of the sea route to India and had appointed Vasco da Gama to head it, but it was in Manuel's reign that Vasco da Gama returned and that all the wealth of the Indies began to pour into Portugal Cabral announced the discovery of the coast of Brazil, and such commanders as Francisco de Almeida and Afonso de Albuquerque built up the Portuguese commercial empire around the world Portugal was the leading commercial nation of the West This sudden wealth soon, however, had some corrupting effects on officials and started the process of turning interest away from agricultural and industrial development of Portugal itself—a process that ended centuries later in national decline and bankruptcy The king, wishing to marry the widow of young Alfonso, Isabel of Castile, had to undertake measures for forcible conversion of the Jews, though he did so reluctantly in 1496–97, he promised that no investigation would be made into the faith of the "new Christians" (the converted Jews) Yet he could not prevent the departure of the Jews, who had contributed much to Portugal in learning and science and also had provided many able artisans Nor could he prevent a great massacre of the Jews in Lisbon in 1506, though he did punish the perpetrators Manuel used his new wealth to erect some beautiful buildings, the most notable, perhaps, the monastery he had built at Belém (now in Lisbon) near the spot where Vasco da Gama embarked for his epochal voyage He also revised the laws and strengthened the power of the king in a trend toward absolutism He was succeeded by John III Manuel I is often called in English Emmanuel I

Manuel II, 1889–1932, king of Portugal (1908–10), second son of CHARLES I He succeeded on the assassination of his father and elder brother The tide of republican sentiment continued to rise, economic troubles increased discontent In 1910 a successful revolution led by Admiral Antonio Machado dos Santos dethroned Manuel and established a republic, of which Teófilo Braga became president The royal family escaped, and Manuel spent most of his remaining years in England enjoying his large fortune He made no real effort to regain his throne, even when royalists proclaimed him king in attempting a coup d'état (1919)

manure, any material used for fertilizing land, whether organic (as barnyard manures, fish scrap, guano, seaweeds) or inorganic (chemicals which are often called artificial manures or fertilizers) Crops grown for plowing under for fertilizing the soil are called green manure Vegetable and animal waste is sometimes worked into COMPOST and used as manure The name manure is popularly applied specifically to barnyard manure, the most common fertilizing material, used since ancient times.

Manus see ADMIRALTY ISLANDS

manuscript, a handwritten work as distinguished from printing or typescript The oldest manuscripts were on PAPYRUS, the earliest extant dates probably to c 3500 B C PARCHMENT, which succeeded papyrus as a material on which to write, was much more durable, and most of the ancient manuscripts still extant are of parchment These could be written on both sides and could even be erased and used again (when they are known as palimpsests, if used a third time a manuscript is a double palimpsest) An important discovery of parchment scrolls of Old Testament books written in the 2d and 3d cent B C was made (1947) in Palestine, in a cave near the Dead Sea The manuscripts of the Middle Ages were often beautifully illuminated in colors (see ILLUMINATION) on vellum, a fine variety of parchment Although PAPER was invented in China in the 2d cent A D, it was not known in Europe until the 12th cent The study of ancient and medieval manuscripts and handwriting is a highly developed and complex science (see PALEOGRAPHY) With the printed book from the 15th cent on, manuscripts no longer needed to be copied for publication After the typewriter came into common use in the last quarter of the 19th cent, the printer was usually supplied with a typescript (ordinarily called a manuscript, however), and both author and publisher could be protected against its loss by the making of one or more carbon copies See BOOK See M Ilin, *Black on White* (Eng. tr, 1932)

Manutius, Aldus: see ALDUS MANUTIUS

Manville, borough (pop 6,065), N central N.J., SW of Bound Brook, laid out 1906, inc 1929. Asbestos products are made here

Man with the Iron Mask: see IRON MASK, MAN WITH THE.

Manx (măngks), language of the Celtic subfamily of Indo-European languages. See LANGUAGE (table)

Many (mā'nē), town (pop 1,474), parish seat of Sabine parish, W La., near the Texas line, in a lumber and oil district; settled in the early 19th cent. Near by are historic Fort Jesup, an American frontier post, and Los Adaes, old Spanish capital of this section

Manych (mä'nĭch), two rivers, SE European RSFSR. The Western Manych, c 200 mi long, rises near Stavropol in the N Caucasus and flows NW through Lake Manych-Gudilo into the lower Don The Eastern Manych rises in a marshy area and flows c 100 mi east to a system of salt lakes and marshes c 75 mi W of the Caspian Sea, but it reaches the sea only in rare spring floods In spring the Western and Eastern Manych join in the center of the **Manych Depression**, a broad, valleylike lowland extending c 350 mi SE from the lower Don to the Caspian Sea. A canal joining the Don and the Caspian and using the Western Manych has been projected A variant spelling is Manich

Manzanares (mänthänä'rĕs), river, c 50 mi long, central Spain, rising in the Sierra de Guadarrama and flowing S past Madrid into the Jarama river, a tributary of the Tagus

Manzanillo (mansänē'yō), city (pop 35,730), SE Cuba, a port Founded late in the 18th cent, it was a smuggling center until the pirates were driven from West Indian waters The climate is hot The chief exports are sugar, molasses, tobacco, and hardwoods

Manzanillo (mänsänē'yō), city (pop 6,831), Colima, W Mexico, a port on the Pacific The climate is hot and the rainfall heavy With a fine harbor and rail and highway connections with Mexico City, Manzanillo handles many imports and ships out minerals, hides, coffee, palm oil, and lumber Dock facilities have recently been modernized and health conditions improved

Manzikert (măn'zĭkûrt), Turkish *Malazgirt* (mälăzgĕrt'), village, E Turkey, c 85 mi SE of Erzerum It was an important town of ancient Armenia Here in 1071 the Seljuk Turks under ALP ARSLAN routed the Byzantine emperor ROMANUS IV in one of the decisive battles of history As a result, most of Asia Minor fell to the Seljuks

Manzoni, Alessandro (älĕsän'drō mändzō'nē), 1785–1873, Italian novelist and poet, one of the chief figures in Italian literature In his youth he was taken to Paris by his mother, a daughter of Cesare Beccaria, and there he formed deistical opinions, which he discarded later He returned to Italy in 1807, in his late years he became a senator He wrote tragedies—e g, *Il Conte di Carmagnola* (1816–20) and *Adelchi* (1822)—and, in addition to other poems, *Cinque maggio* (1821), an ode inspired by the death of Napoleon In 1825–26, under the influence of Sir Walter Scott, he produced his most famous work, *I promessi sposi* (Eng tr, *The Betrothed*, 1828), a novel of the 16th cent in Milan and one of the world's great romances Fifty years after its publication in Italy, 118 editions had appeared, and it has been translated into many languages An operatic setting was made by Amilcare Ponchielli

Maoch (mā'ŏk), father of Achish 1 Sam 27 2

Maachah 1 Kings 2 39

Maon (mā'ŏn) [Heb, =habitation], town, in the hills of Judah c 10 mi S of Hebron It was Nabal's home The name survives in the present Tell Main Joshua 15 55, 1 Sam 23 24–26, 25 2 The **Maonites** (mā'–) or **Mehunims** (mēhū'nĭmz) were a Canaanite tribe of extreme S Palestine Judges 10 12, 2 Chron 26 7, Ezra 2 50

Maori: see NEW ZEALAND

Mao Tse-tung (mou' dzŭ-dōōng'), 1893–, leader of the Chinese Communists Mao, of peasant stock, received a modern education One of the founders of the Chinese Communist party, he organized (1921–24) peasant and industrial unions and directed (1924–26) the peasant section of the party After the Kuomintang-Communist split (1927), Mao led a revolt in Hunan prov, where he organized soviets In 1931 he was elected chairman of the Soviet Republic of China He led (1934–35) the Red Army on the "long march" (6,000 mi) from Kiangsi prov to Yenan Mao advocated cooperation with the Kuomintang during the Second Chino-Japanese War, and at the end of hostilities he urged a coalition government for China, but, dissatisfied with the Kuomintang proposals, he resumed civil war in 1946 Late in 1949 Mao was made chairman of the central government council of the newly established People's Democratic Republic of China, which held all the mainland in April, 1950 The name is also spelled Mao Tze-tung See his *China's New Democracy* (1944) and *Fight for a New China* (1945), Edgar Snow, *Red Star over China* (rev ed, 1944).

Map or **Mapes, Walter,** c 1140–c 1210, British author, archdeacon of Oxford, b Wales A favorite of Henry II, he received various preferments The one work indubitably his, *De nugis curialium*, is a Latin prose collection of legends, tales, gossip, and anecdotes—shrewd, witty, and satirical, it shows Map as a wit and a man of the world, familiar with court life and public affairs Map is commonly associated with the Lancelot romances of the Arthurian cycle, but the consensus of modern scholars is that he had no connection with them. The ascription to him of a group of GOLIARDIC SONGS is also questioned by scholars See *De nugis curialium* (ed by M R James, 1914; tr by Frederick Tupper and M B Ogle, 1924); Thomas Wright, ed, *The Latin Poems Commonly Attributed to Walter Mapes* (1841)

map, conventionalized picture of the earth's surface pattern drawn on a flat surface Emphasis may be placed on physical features, on cultural or political features, or on both Each point on a map corresponds to a geographical position in accordance with a definite SCALE and PROJECTION. Cartography (q v, map making) antedates even the art of writing Diagrams of areas familiar to them were drawn by Marshall Islanders, Eskimo, American Indians—probably by all primitive people. Maps drawn by ancient Babylonians, Egyptians, and Chinese have been found The oldest known map, now on exhibition in the Semitic Museum of Harvard, is a Babylonia clay tablet dating from c.2500 B C Our present system of cartography was established by the Greeks, who remained unexcelled until the 16th cent The first scientific measurements of earth distances by means of meridians and parallels were made by Eratosthenes (3d cent B C) The most famous of ancient cartographers was Ptolemy, whose system was followed for many centuries His basic error in underestimating the earth's size was not eliminated until the age of Mercator Only the Mediterranean world was represented with any accuracy in early maps During the Middle Ages, Arabic map makers, notably Idrisi (12th cent), carried on the work of Ptolemy Three major events contributed to the spectacular renaissance of cartography around 1500—the rediscovery and translation into Latin of Ptolemy's *Geographia*, the invention of printing and engraving, and the great voyages of discovery This renaissance was manifested by the work of Mercator, by the first modern world atlas published in 1570 by Ortelius, and by the decorative, paintinglike maps of the French Sanson family (17th cent) With improvements in the methods of surveying and with increased emphasis on accuracy, the 18th cent is noted for the work of Guillaume Delisle and J B B D'Anville, the founders of modern cartography. After 1750 many European governments undertook the systematic mapping of their countries C F Cassini headed the first important national survey in France, which was followed by the Ordnance Survey of Great Britain (1801) and the topographic survey of Switzerland (1832) In the United States the Geological Survey (est 1879) has mapped nearly 50 percent of the country at a scale of 1 62,500, but one half of these maps (called topographic sheets) are now obsolete While the 19th cent satisfied the demand for national maps and saw the publication of famous world atlases (Adolf Stieler, Heinrich Berghaus, K T Andree, and Bartholomew's *Times Atlas of the World*), the advent of the 20th cent brought about the desire for an international map of the world at a uniform scale Accordingly, at several meetings of the International Geographical Congress (1891, 1909, 1913), Albrecht Penck presented and perfected plans for a world map on a scale of 1 1,000,000, to consist of about 1,500 sheets, each covering four degrees of latitude and six degrees of longitude in a modified conic projection Uniformity of lettering and the use of layer tints to indicate relief were agreed upon By the 1940s, however, the work was only partially completed, with many more provisional than definitive sheets published While the United States had only completed four sheets in this series, the greatest single contribution to the map of the world was made by the American Geographical Society of New York, which, by 1945, had issued its 107-sheet *Map of Hispanic America*. Meanwhile in the United States, the Army Map Service (established in the Second World War) has compiled from miscellaneous sources a good coverage of many areas of the world heretofore inadequately mapped Aerial photography as an aid in map making has recently made great technical advances While the earliest printed maps (2d half of 15th cent) were made from woodcuts, maps can today be reproduced by the processes of photoengraving, wax engraving, and lithography See Erwin Raisz, *General Cartography* (2d ed, 1949), L A Brown, *The Story of Maps* (1949); R. V. Tooley, *Maps and Map-Makers* (1949)

Mapes, Walter. see MAP, WALTER

maple, ornamental and useful tree of the genus *Acer* Of about 75 species in the Northern Hemisphere, about 13 are native to North America. Most maples have deeply cut, opposite leaves (often brilliantly colored in the fall). The fruit encloses two seeds and bears two membranous wings Maples are popular as shade trees, and several species have valuable timber. The sugar maple, *Acer saccharum*, also known as the hard or rock maple, is probably the most valuable hardwood of E North America It furnishes both bird's-eye and curly maple, much prized by cabinetmakers Hard maple is used also for telephone cable terminals and in aircraft construction, and its ashes, rich in potash, have value in fertilizers The similar black maple (*A. nigrum* or *A saccharum nigrum*) is similarly used The silver or soft maple (*A. saccharinum*) is a fast-growing tree with fine-grained but brittle wood. The red or swamp maple (*A. rubrum*) is one of the commonest North American trees and is striking in autumn with its scarlet and orange foliage. Its wood is hard and is second commercially to the sugar maple. The BOX ELDER or ash-leaved maple (*A negundo*) has ornamental compound foliage From Europe have been introduced the Norway maple (*A platanoides*) and the sycamore maple (*A pseudoplatanus*), and from Japan (where maple shows are held annually) small, delicate maples with deeply colored leaves **Maple syrup** is the concentrated sap obtained for commercial purposes from the sugar maple and the black maple The trees thrive in the NE United States and in SE Canada The syrup and sugar, first prepared by the Indians, became the staple sweetening used by the colonists and remained important until c 1875 Sap flows intermittently for periods up to six weeks in the spring, is caught in buckets, strained, concentrated by boiling to a density of 11 lb per gallon for syrup, or evaporated further for sugar The low saccharine content of the sap, the disappearance of forests, and the high cost of manufacture have made the sugar and the syrup scarce items, used mainly for confectionery and for flavoring mixed syrups See Helen Nearing and Scott Nearing, *The Maple Sugar Book* (1950).

Maple Creek, town (pop 1,280), SW Sask, ESE of Medicine Hat, Alta, in a ranching and horse-breeding district

Maple Heights, village (pop 6,728), NE Ohio, near Cleveland

maquis (mäkē'), French word meaning the brush country in Corsica and, hence, the Corsican robber bands who hid out in the brush Under the German occupation of France during the Second World War, the word was used to designate the organized underground resistance The *maquis* originated with the introduction of compulsory labor service by Pierre LAVAL in 1943 The evaders of the labor draft took to the countryside Subsequently they were supplied with Allied weapons by parachute and were organized into the FFI (French Forces of the Interior), who fought as part of the Allied forces after June 6, 1944 Members of the *maquis* were called *maquisards* (makēzär')

Maquoketa (mukō'kĭtu), city (pop 4,076), co seat of Jackson co, E Iowa, S of Dubuque and on the Maquoketa river, inc 1853 The Ellis Museum of Archaeology and Anthropology is here, near by is Maquoketa Caves State Scientific Preserve

Mar, John Erskine, 1st **earl of,** d 1572, regent of Scotland His strength derived from his possession of Edinburgh and Stirling castles His position was essentially one of neutrality, but in the struggle between MARY OF GUISE and the nobles, Erskine intervened to a limited degree on both sides, and on the approach of the English (1559), he received Mary into Edinburgh Castle When MARY QUEEN OF SCOTS returned from France in 1561, he was made a member of her privy council and in 1565 was created earl of Mar. In 1567 he was given custody of the young king, James VI (see JAMES I of England). The earl of Bothwell later tried to gain control of the prince, but Mar evaded him and joined the revolt of the nobles He was one of the council to whom Mary signed over the government Although Mar was chosen regent after the earl of Lennox's death in 1571, the earl of MORTON, James Douglas, held the real power Mar's death forestalled a proposal by Elizabeth that Mary be turned over to the Scots for execution His wife continued as a guardian of James

Mar, John Erskine, 2d **earl of,** 1558–1634, Scottish nobleman The son of John Erskine, 1st earl of Mar, he was persuaded by the earl of Morton to assert his claims to Stirling Castle and guardianship of the king He seized the castle keys in 1578 and ejected his uncle, Alexander Erskine. Mar emerged in control of the king After Morton's arrest and the rise of Esme Stuart, duke of Lennox, and James Stuart, earl of Arran, he fell out of favor with the king Mar participated in the capture of James in the raid of Ruthven After James's escape, Mar was received at court, but was banished in 1584 and fled to England. In 1585 the foes of Arran made up their differences, invaded Scotland, and were received by James. Mar was made a member of the privy council. In 1601 he was sent as am-

bassador to England to offer secret assistance to the earl of Essex in his rebellion. This was crushed before his arrival, and Mar spent his time negotiating the question of James's succession to the English throne. In 1603 he accompanied James to England and was made a member of the English privy council. From 1616 to 1630 he was lord high treasurer of Scotland.

Mar, John Erskine, 6th earl of, 1675–1732, Scottish leader of the JACOBITES. He was also called the 11th earl and the 27th earl because the origin of the Mar title is "lost in obscurity." He was nicknamed "Bobbing John," probably for his vacillating politics. He became earl at his father's death in 1689, alternately joined and left the duke of Queensberry and the court party, and was made (1711) a secretary of state for Scotland for his leading part in promoting the union with England. After an effusive offer of his services to George I he was dismissed (1715) and withdrew secretly to Scotland, where he raised the standard for the Old Pretender without orders from him to do so. The rebellion failed largely through Mar's incompetence, and Mar fled (1716) to France with the Pretender. He was attainted of treason in England, but his active dissatisfaction with the Jacobite court and his suspected treachery caused the Pretender also to break with him in 1724. Mar remained in exile until his death. See Alistair Tayler and Henrietta Tayler, *1715: the Story of the Rising* (1936).

Mara [Heb., =bitter], punning name taken by Naomi out of sorrow. Ruth 1:20.

marabou, large bird (genus *Leptoptilus*) of the stork family, found in Africa. It belongs to the same genus as the similar bird of India called the adjutant. Sometimes the names are used interchangeably. The marabou is usually 4 or 5 ft. tall and has long legs, a huge bill, and a wing spread of about 10 ft. It is powerful in flight. The head and neck are bare except for a few feathers, the plumage is a dark green on the back and wings and grayish white on the breast and underparts. A fold of skin hanging from the throat is sometimes inflated with air. The bird is a scavenger and also eats poultry and other small animals. Elongated feathers growing in the tail region were once used for millinery and neckwear.

Marabouts (mă'rŭbo͝ots) [Arabic, =devotee hermit], members of a Mohammedan sect of the Berbers, successors of the ALMORAVIDES. They spread from NW Africa into Spain in the 11th and 12th cent. The Marabouts are holy men, greatly venerated as saints and prophets. They live in monasteries or are attached to mosques. Their tombs, which are also called Marabouts, are often places of pilgrimage.

Maracaibo (mărăkī'bō), port (pop. 112,519), NW Venezuela, second largest city of Venezuela, at the outlet of Lake Maracaibo. Founded in 1571 by Alonso Pacheco, it was sacked five times in the 17th cent. by buccaneers, notably in 1669 by the notorious Sir Henry MORGAN. Until the development of the oil industry after 1918, Maracaibo was extremely unhealthful. With a mean annual temperature of 82.4°F. and excessive humidity, it is one of the hottest cities in South America. Foreign interests (British, Dutch, and North American), in exploring the vast petroleum resources of the Maracaibo basin, have made it a clean, thriving commercial and industrial city, with modern public services. Because of the shallow lake outlet, it serves as a transshipping point for inland products, which are transferred from lake vessels to lighters going to WILLEMSTAD, where again reloading is necessary. Besides oil, exports include coffee, cacao, sugar, and hardwoods.

Maracaibo, Lake, area c.5,000 sq. mi., NW Venezuela. Discovered in 1499 by VESPUCCI, the lake lies in the extremely hot, disease-ridden lowlands of the Maracaibo basin, a region which, almost enclosed by mountains, is semiarid in the north but has an annual rainfall of 50 in. in the south. Much of the native population lives in thatched huts built on stilts over the brackish water. Although the fertile soil produces sugar cane, cacao, and a wealth of tropical hardwoods, absentee exploitation, unhealthful living, and scarcity of labor have left the area undeveloped agriculturally. Some livestock is raised. By far the most vital activity is production of petroleum. Developed since 1918 by foreign concerns, the region is one of the greatest oil-producing areas in the world. Lake Maracaibo, with the CATATUMBO river, is a major artery of communication for products of the adjacent region and those of the Colombian-Venezuelan highlands. A channel, 34 mi. long, in places only 11 ft. deep, connecting it with the Gulf of Venezuela (or Gulf of Maracaibo), blocks ocean vessels, necessitating transshipment at MARACAIBO.

Maracay (mărăkī'), city (pop. 30,224), N Venezuela, at the eastern end of Lake Valencia. It is a commercial, agricultural, and industrial city in most respects like its neighbor VALENCIA. Only 70 mi. from Caracas, it supplies much of the meat and dairy products for the capital and raw materials for its industries. It was modernized by the recent dictator, Juan Vicente GÓMEZ.

Maragha (mărägä'), city (1947 estimated pop. 33,335), NW Iran, E of Lake Urmia and S of Tabriz. It has large exports of local fruit to Russia. The seminomadic Mongols in Persia held their court here under Hulagu Khan until the establishment of a fixed capital at Tabriz. Their celebrated observatory is now in ruins.

Marah [Heb., =bitter] bitter spring which Moses sweetened. Ex. 15:23.

Marais (mărĕ') [Fr., =swamp], old quarter of Paris, France, on the right bank of the Seine. It was, until the 18th cent., the most aristocratic section of Paris. The Hôtel des Tournelles, long the residence of the kings of France (Henry II was killed in its court during a joust), was replaced by Henry IV with the Place des Vosges. The Marais park, surrounded by uniform houses in pink brick and gray slate, remains a perfect ensemble of 17th-century architecture. Near by is the CARNAVALET, once the residence of Mme de Sévigné, which houses the municipal museum of Paris. Though the quarter is now very populous, it still has many fine mansions dating from its most prosperous period.

Marais des Cygnes (mă"rĕ du sēn'), river, c.140 mi. long, rising in E central Kansas, SW of Topeka, and flowing SE into Missouri to join the Little Osage and form the Osage.

Marajó (mărəzhō'), island, c.150 mi. long and c.100 mi. wide, N Brazil, in the mouth of the Amazon. It divides the river into the Amazon proper and the Pará. Low and swampy in the west, it has in the east extensive grasslands for cattle raising. There are aboriginal mounds of archaeological importance.

Maralah (mär'ulä), unidentified boundary mark in N Palestine. Joshua 19:11.

Maramures, Rumania: see CRISANA-MARAMURES.

Maranatha (mär"unā'thu): see ANATHEMA.

Maranhão (mărănyă'o͞), state (129,270 sq. mi., 1940 pop. 1,235,169, 1949 estimated pop. 1,491,079), NE Brazil. The capital is São Luís (also sometimes called Maranhão). It fronts on the Atlantic in the north and has a low, hot coastal plain, where most of the population lives. Here grow many babassu palms, and babassu nuts (processed for vegetable oil) are an important product. In the south the land rises to a plateau and to the edge of the Brazilian highlands. Here in the fertile valleys of the small, northward-flowing streams, cotton, sugar, rice, and tobacco are grown. The state has some alluvial gold deposits, and phosphorous bauxite deposits have recently been found. The first settlement was by the French, who founded São Luís in 1612, but were displaced by the Portuguese in 1615.

Marañón (mărănyōn'), river, a headstream of the Amazon, rising in central Peru, flowing NNE through the Andes almost to Ecuador, then northeast and east to join the UCAYALI. It is sometimes considered part of the Amazon proper. It is navigable to the Pongo de Manseriche, the gorge through which it goes before reaching the Amazon basin. URBÚA descended the Marañón in 1560.

maranta see ARROWROOT.

Maras (mărăsh'), city (pop. 33,104), S central Turkey, in the Taurus mts. It is an agricultural trade center. Ancient inscriptions found here seem to indicate that it was a Hittite city. A large part of the population is Armenian. The name is sometimes spelled Marash.

maraschino (mă"rŭskē'nō), LIQUEUR prepared by distilling the fermented juice of the marasca, a sour cherry of Dalmatia. The **maraschino cherry** is preserved in maraschino or in imitation syrup.

Marash, Turkey: see MARAS.

Marat, Jean Paul (zhäN' pōl' märä'), 1743–93, French revolutionist, b. Switzerland. He studied medicine in England, acquired some reputation as a doctor in London and in Paris, and wrote valuable scientific and medical works (some in English). His *Philosophical Essay on Man* (1773) was attacked by Voltaire for its extreme materialism. When the Revolution began (1789), he abandoned science for politics, founding the journal *L'Ami du peuple*, in which he vented his bitter hatred and suspicion of all who were in power. Outlawed, he published his paper from various hiding places, attacking Necker, Lafayette, the commune, Mirabeau, the émigrés, and, finally, the king. While hiding in the sewers of Paris, he contracted a skin disease which necessitated his remaining in a warm bath. In Aug., 1792, he entered again into public life. The September massacres were indirectly caused by his inflammatory articles, which were widely read. Elected to the Convention, he supported the Jacobins by waging a deadly war on the GIRONDISTS. Their downfall marked his triumph. He was stabbed to death in his bath by Charlotte CORDAY. The murder of "the friend of the people" was exploited by the Jacobins as a pretext for intensifying the Terror. Selections from his writings have been published as *Textes choisis* (1945). See L. R. Gottschalk, *Jean Paul Marat* (1927).

Marathas: see MAHRATTAS.

Marathi (mŭrä'tē), language of the Indic group of the Indo-Iranian subfamily of Indo-European languages. See LANGUAGE (table).

Marathon (mär'ŭthŏn), village and plain, ancient Greece, 20 mi. NE of Athens. Here the Athenians and Plataeans under MILTIADES defeated a Persian army in 490 B.C. (see PERSIAN WARS). In legend the plain was the scene of the victory of THESEUS over a great bull.

marathon race, long-distance race deriving its name from Marathon, Greece, whence, in 490 B.C., a runner carried news of victory to Athens. In the Olympic games a long-distance foot race called a Marathon was first included in the program at Athens in 1896. The distance was c.25 mi., but in 1908 was standardized at 26 mi. and 385 yds. This race has become one of the principal events of the Olympic games. The American Marathon Race, held annually (except for 1918) since 1897 under the auspices of the Boston Athletic Association, is the most famous of such races. Clarence H. Demar won it seven times between 1911 and 1930.

Maratti or **Maratta, Carlo** (kär'lō märät'tē, -tä), 1625–1713, Italian painter and engraver of the Roman school. He restored Raphael's frescoes in the Vatican and was appointed curator of the Vatican paintings. Examples of his art are *Madonna* (Rome), *The Virgin Appearing to St. Philip* (Florence), *Adoration of the Shepherds* (Basel), *Presentation in the Temple* (Vienna), *Apollo Pursuing Daphne* (Brussels), *Hagar and Ishmael* (Madrid), and portraits of Pope Clement IX (Hermitage, Leningrad, half-length replica, Metropolitan Mus.) and Cardinal Cerri (National Gall., London).

Marbach (mar'bakh) or **Marbach am Neckar** (ämnĕ'kär), town (pop. 5,463), N Wurttemberg, Germany, on the Neckar and E of Ludwigsburg. It is in a wine-producing district. Friedrich von Schiller was born here.

Marble, Alice, 1913–, American tennis player, b. Plumas co., Calif. She began playing tennis at the age of 15, and after 1931 she rose rapidly in national tennis rankings. After a serious physical collapse on a Paris tennis court in 1934, Alice Marble quickly rebounded. She four times took the U.S. singles championship (1936, 1938–40) and, with Sarah Palfrey Cooke, took the U.S. doubles crown (1937–40). She also won the British singles (1939) and doubles (1938–39) championships. In 1940 she entered the professional tennis ranks. See her autobiography, *The Road to Wimbledon* (1946).

marble, LIMESTONE composed wholly or in large part of CALCITE or DOLOMITE crystals, the crystalline texture being the result of extreme METAMORPHISM by heat and pressure. The term is loosely applied to any limestone or dolomite which takes a good polish and is otherwise suitable as a building stone or ornamental stone. Marbles range in color from snow white to gray and black, many varieties being some shade of red, yellow, pink, green, or buff, the colors, which are caused by the presence of impurities, are frequently arranged in bands or patches and add to the beauty of the stone when it is cut and polished. Marble is used as a material in statuary and monuments, as a facing stone in buildings and residences, and for pillars, colonnades, paneling, wainscoting, and floor tiles. Like all limestones, it is corroded by water and acid fumes and is thus ultimately an uneconomic material for use in exposed places and in large cities. The presence of certain impurities decreases its durability. Marbles are quarried in all parts of the world, the chief countries where they are produced in important quantities are the British Isles, Belgium, France, Germany, Italy, Greece, and the United States. Marble was extensively used by the ancient Greeks, the Parthenon and other famous buildings were constructed of white Pentelic marble from Mt. Pentelicus in Attica, and the finest statues, e.g., the Venus de' Medici, from the remarkably lustrous Parian marble from Paros in the Cyclades. These same quarries were used by the Romans after their conquest of Greece. Among the famous marbles of Italy are the Carrara and Siena marbles of Tuscany, which were used by the Romans and the Italian sculptors of the Renaissance. The finest marbles in the United States come from Vermont, which produces more marble than any other one locality in the United States. Other states important as marble producers are Massachusetts, Maryland, Tennessee, Georgia, Missouri, California, Colorado, and Arizona. See G. P. Merrill, *Stones for Building and Decoration* (3d ed., 1903), W. G. Renwick, *Marble and Marble Working* (1909).

Marble Falls, town (pop. 1,021), central Texas, on the Colorado and NW of Austin, settled 1887, inc. 1908. Granite Mt. near by yielded granite for the Texas capitol, and the town is known primarily for quarrying.

Marblehead. **1** Town (pop. 10,856), NE Mass., on the coast NE of Boston, settled 1629, set off from Salem 1633. Long a fishing village, Marblehead became a resort in the 19th cent., it is favored especially for yachting. There are 18th-century buildings in the picturesque village, including Elbridge Gerry's birthplace. In Burial Hill cemetery are the graves of hundreds of Revolutionary soldiers and a monument to the 65 Marbleheaders who died in a gale in 1846. The Revolutionary Fort Sewall is in a seaside park. **2** Village (pop. 915), N Ohio, in a fruitgrowing and limestone area; settled c.1809. It is a summer resort and fishing center at the tip of a peninsula extending into Lake Erie N. of Sandusky.

marbling, in bookbinding, a process of coloring the *sides, edges,* or end papers of a book in a design that suggests the veins and mottles of marble In tree marbling, as of tree calf bindings, the design suggests also the trunk and branches of a tree In tree marbling, liquid colors are run over a surface bent to form a trough, the trunk of the tree is produced in the bottom of the trough In other marbling, the colors are arranged on the surface of a liquid, and to this the surface to be colored is applied Marbling requires skill, it is commonly done by specialists called marblers

Marburg (mär'bûrg, Ger mär'bo͝ork) or **Marburg an der Lahn** (an dĕr län'), city (pop 37,382), Hesse, W Germany, in former Hesse-Nassau, on the Lahn river and N of Frankfurt It is famed chiefly for its Protestant university, founded in 1527 by Philip of Hesse Chemicals, machinery, and precision instruments are manufactured here Marburg grew in the 12th cent around a castle and was the residence (13th–17th cent) of the landgraves of Hesse It remained virtually unchanged in the Second World War In the castle (13th–15th cent), which dominates the picturesque city, the famous Marburg Colloquy took place in 1529 under the auspices of Philip of Hesse, it failed to bring about agreement between LUTHER and MELANCHTHON on the one side and ZWINGLI on the other St ELIZABETH of Hungary is buried in the fine Gothic church dedicated to her, here also the less-exalted remains of Frederick William I and Frederick II of Prussia and of Field Marshal Hindenburg were transferred in 1946

Marburg, Yugoslavia see MARIBOR

Marbury vs. Madison, case, decided in 1803 by the U S Supreme Court William Marbury had been commissioned justice of the peace in the District of Columbia by President John Adams in the "midnight appointments" at the very end of his administration When the new administration did not deliver the commission, Marbury sued James Madison, Jefferson's Secretary of State Chief Justice John Marshall, who wrote the opinion, held that the statute upon which Marbury relied was unconstitutional because it gave the Supreme Court authority which was impliedly denied it by Article 3 of the U S Constitution The decision was the first by the Supreme Court authorizing all courts to review the constitutionality of legislation Thus, though in this instance it limited the power of the Supreme Court, it ultimately made the American judiciary more powerful than any other in the world

Marbut, Curtis Fletcher (mär'bŭt), 1863–1935, American geologist, b near Verona, Mo, grad Univ of Missouri, 1889 He taught at the Univ of Missouri (1895–1913) and from 1910 was director of the Soil Survey of the Dept of Agriculture Internationally known for his soil research, he was on his way to China to make a soil survey for the Chinese government when he died at Harbin

Marc, Franz (frants' mark'), 1880–1916, German post impressionist painter of landscapes and animals His early work was impressionistic, but he evolved a style in which all forms are broken into colorful, crystallike patterns *The Bewitched Mill* (Art Inst, Chicago) is a fine example Together with Kandinski and Klee, Marc was a leader of the Blaue Reiter group (see GERMAN ART) He was killed in the First World War

Marcantonio, Vito (vē'tō markäntō'nēō), 1902–, U S Congressman (1934–37, 1939–), b New York city, grad New York Univ law school, 1925 He was active in community affairs in the Harlem section of New York city after the age of 18 and managed the political campaigns of Mayor F H LaGuardia until 1934 He served (1930–31) as assistant U S district attorney, and in 1934 he ran successfully for Congress on the Republican and City Fusion tickets He was defeated for reelection in 1936, but after again winning a congressional seat in 1938—the year he was read out of the Republican party—he was repeatedly returned to Congress. In 1948, after a New York state law was passed prohibiting a candidate from entering the primary of a party without its consent, Marcantonio ran only on the ballot of the American Labor party—of which he became (1947) state chairman and through which he gave staunch support to Henry A. Wallace as presidential candidate in 1948 Marcantonio backed much of the New Deal legislation in Congress, but only aligned himself with President F D Roosevelt's foreign policy after 1941, when Germany invaded the USSR In 1948 he opposed legislation for the European Recovery Plan and for selective service

Marc Antony: see ANTONY

marcasite (mär'kəsīt) or **white iron pyrites,** a mineral closely resembling and having the same chemical composition as PYRITE It differs from pyrite in that it is paler in color, becomes darker upon oxidation, and crystallizes in the orthorhombic system. Twinned crystals resembling cockscombs (cockscomb pyrites) or spearheads (spear pyrites) are of common occurrence The mineral occurs in marls, clays, and limestones in Bohemia, Saxony, England, and France, it is found also at Galena, Ill; Joplin, Mo, and Mineral Point, Wis

Marceau or **Marceau-Desgraviers, François Séverin** (frāswä' sāvürĕ' märsō'-dāgrāvyā'), 1769–96, French general He rose from the ranks, was promoted major general at 24, and fought gallantly at Verdun and in the VENDÉE In 1796 he helped raise the siege of Mainz but was killed in battle soon afterward His youthful heroism and early death were celebrated by Byron and Schiller

Marcel, Étienne (ātyĕn' märsĕl'), d 1358, French popular leader, provost of the merchants of Paris In the States-General of 1356, 1357, and 1358, he and Robert LE COQ led in bargaining for governmental reforms with the dauphin (later CHARLES V), who was in need of funds to carry on the English war After the revocation (1357) by the dauphin of the *Grande Ordonnance,* which had granted the States-General far-reaching rights, Marcel formed an alliance with CHARLES II of Navarre, broke definitely with the dauphin, and prepared Paris for resistance against the dauphin He was assassinated on July 31, 1358, on the suspicion that he was about to open the gates to the king of Navarre

Marceline (märsulēn'), city (pop 3,206), N Mo, NW of Moberly, platted 1887 It is a shipping center in a farm and coal area

Marcellinus Ammianus see AMMIANUS MARCELLINUS

Marcellus (märsĕl'ŭs), principal plebeian family of the ancient Roman gens Claudia **Marcus Claudius Marcellus,** c 268–208 B C, was five times consul (*222, 215, 214, 210,* and *208* B C) In his first consulship he fought against the Insubrian Gauls, and he killed their king with his own hand In his third consulship, being colleague of Fabius Maximus, he went into S Italy and Sicily to prosecute the Second Punic War He besieged Syracuse and took (212 B C) the city, in spite of the wonderful defenses made by Archimedes In his fifth consulship he fell in a skirmish with Hannibal's men near Venusia Plutarch wrote a biography of him **Marcus Claudius Marcellus,** d 46 B C, was a friend of Cicero and subject of the Ciceronian oration, *Pro Marcello,* curule aedile (56 B C), and consul (51 B C) As a senatorial partisan, Marcellus defended Milo against Clodius and joined the opponents of Julius Caesar in the civil war Caesar pardoned him after Pharsala **Marcus Claudius Marcellus,** 43?–*23* B C, grandnephew of Cicero's friend, was son of Octavia, sister of AUGUSTUS, who favored him extremely Marcellus was considered to be Augustus' intended heir, and he was adopted *son of the emperor, married to* Julia, *the emperor's* daughter, and was made pontifex He died at Baiae, and there was great mourning for him

Marcellus, village (pop 1,112), central N Y, SW of Syracuse, inc 1846 Woolen cloth and paper are made here

Marcellus of Ancyra (ănsī'rŭ), fl 350, Galatian churchman, the most violent opponent of ARIANISM in Asia Minor He developed the theory that the Trinity was the result of emanations from God which would revert to God in the last things. He embarrassed the Nicene party, because their defense of him against the Arians made them suspect of Sabellianism The First Council of Constantinople condemned Marcellus

March, earls of see the family name, MORTIMER

March, Auzias (ouzē'äs märch'), c 1395–c 1460, Catalan poet He wrote *songs* in the manner of the troubadours, other lyrics show the influence of Dante and Petrarch His poems were translated into Castilian and were an important influence on later lyricists

March, Peyton Conway, 1864–, American army officer, b Easton, Pa, grad Lafayette College (B A., 1884, M A, 1887) and West Point, 1888 He served (1899–1901) in the Philippines and was military governor of various provinces. He rose through the grades and was (1903–7) a member of the army general staff He commanded (1917) the artillery forces of the American Expeditionary Forces, and in May, 1918, he became chief of staff He retired (1921) with the rank of major general He wrote *The Nation at War* (1932)

March, urban district (pop 11,266), administrative center of the Isle of Ely, England, in the agricultural fen region It is a railroad and farm trade center and makes farm machinery and flour The 14th-century Church of St Wendreda has a fine carved roof

March, river, Czechoslovakia see MORAVA

March see MONTH

march or **mark,** frontier province The term is of medieval Germanic origin, but in antiquity newly acquired provinces often were given a special military status to defend them from invasion The officers entrusted with the rule of marches generally were given wider discretion and greater military power than other officials Their title (margrave, marquis) has survived the institution Charlemagne created the Spanish March in NE Spain, conquered from the Arabs, out of this grew the county of BARCELONA AUSTRIA was originally the Eastern March (Ger *Ostmark*), also created by Charlemagne The borderlands of Wales, long contested in the Middle Ages by English barons and Welsh lords, were the Welsh Marches. The name has survived in many regions, e g., the Marche, in France, the Marches, in Italy, and Brandenburg (Ger. *Mark Brandenburg*)

march, in music, composition intended to accompany marching Thus the only constant characteristics of a march are duple meter and a fairly simple rhythmic design. The mood of a march may range from the profoundly moving death march in Wagner's *Götterdämmerung* to the elemental military marches of John Philip Sousa. The funeral march in Beethoven's Eroica Symphony may be cited as the sublimation of the march in serious music Others are the varied *marches militaires* of Schubert, the *march funèbre* in Chopin's Sonata in B Flat Minor, and the Dead March in Handel's *Saul* The earliest use of the march as a form in serious music was in the English harpsichord pieces of the 16th cent Numerous examples can be found throughout opera

Marchand, Jean Baptiste (zhäʹ baptēstʹ märshäʹ), 1863–1934, French explorer and general in Africa In 1898 he established a French post at Fashoda (now Kodok) on the White Nile and resisted dervish attacks When Lord Kitchener claimed that the territory was within the dominions of the khedive of Egypt, France and England stood at the brink of war, the FASHODA INCIDENT ended with Marchand's withdrawal Marchand fought in China in the Boxer Rebellion (1900) and had a command in France in the First World War

Marche (marsh), region and former province, central France, in the MASSIF CENTRAL, W of the Auvergne Mts It occupies Creuse dept and a part of Haute-Vienne dept Primarily an agricultural region, it also specializes in sheep raising The wool is manufactured into carpets and tapestries at AUBUSSON Guéret is the chief town The name of the region derives from its situation as a northern border fief (march) of the duchy of AQUITAINE It passed (late 13th cent) to the house of Lusignan but was seized (14th cent) by Philip IV of France Raised to a duchy, it was given in appanage to various Valois princes, ultimately passing to the house of Bourbon Upon the death (1527) of Constable Charles de Bourbon, it was definitively confiscated for the crown by Francis I

Marches, the, Ital *Marche* (märʹkä), region (3,744 sq mi, pop 1,278,071), central Italy, extending from the eastern slopes of the Apennines to the Adriatic coast It is divided into the provinces of Ancona, Ascoli Piceno, Macerata, and Pesaro e Urbino, all named after their chief cities Ancona is the capital Cereals and wine are the main products, recent exploitation of hydroelectric power has encouraged the growth of some industries The Umbri and the Picentes (Greek colonists for whom part of the region was named Picenum) lived here at the time of the Roman conquest (3d cent B C). The area was invaded by the Goths, later (6th cent) the northern section, including four of the five cities of the PENTAPOLIS and adjoining territories, was ruled by the Byzantines while the southern section became a part of the duchy of SPOLETO In the 8th cent the region passed, with the donations of Pepin and Charlemagne, under the nominal rule of the popes, but later emperors granted fiefs in the area until the 13th cent The name Marches originated around the 10th cent from some of these fiefs which came to be at the border of the Holy Roman Empire (March of Ancona, of Fermo, of Camerino) In spite of the contests between emperors and popes, some cities established free communes or were governed by noble families. After the 13th cent, the popes strove to establish their rule everywhere, the last local autonomies surrendered definitively in the 16th cent. After the period of French occupation (1797–1815) the Marches were restored to the popes They were united with the kingdom of Sardinia in 1860,

Marchesi, Mathilde (matēlʹdu markāʹzē), 1826–1913, German mezzo-soprano, whose maiden name was Graumann, pupil of Manuel Patricio Garcia She was well known as a singer in opera and concert and as the teacher of such singers as Melba, Eames, and Calvé She taught at the conservatories of Cologne and Vienna and in Paris She wrote on vocal technique, and her memoirs, *Marchesi and Music,* appeared in 1897 In 1852 she married **Salvatore Marchesi, cavaliere de Castrone, marchese della Rajata** (sälvätōʹrā markāʹzē, kavälyāʹrā dā kästrōʹnā, markāʹzā dĕlʹä rəjäʹta), 1822–1908, Italian baritone, also a famous teacher, who appeared with her in opera and concert

Marchfeld (markhʹfĕltˌ), plain, lower Austria, NE of Vienna, between the Danube and the Morava (Ger. *March*) river, which here forms the Austro-Czechoslovak border Offering an easy approach to Vienna, it is of strategic significance, and several important battles were fought here In 1260 OTTOCAR II of Bohemia defeated Bela IV of Hungary on the Marchfeld, and here Ottocar was defeated and slain by the forces of Rudolf I, whose family, the house of Hapsburg, thus began its major conquests. In 1809 Napoleon I was defeated here at Aspern by Archduke Charles but briefly afterward won a major victory at Wagram

Marchmont, Patrick Home of Polwarth, 1st earl of: see HOME OF POLWARTH, SIR PATRICK

Marcian (mär'shŭn), c.390–457, Roman emperor of the East (450–57), successor of Theodosius II, whose sister PULCHERIA he married in 450. Orthodox in religious affairs, he convoked (451) the Council of Chalcedon (see CHALCEDON, COUNCIL OF). He curtailed court expenses and endeavored to lighten taxation His refusal to pay tribute to ATTILA precipitated the Hunnic invasion of the Roman Empire With him the Theodosian dynasty came to an end in the East Leo I succeeded him

Marcion (mär'shun, mar'sēŭn), fl 144, early heresiarch, founder of the Marcionites, the first great Christian heresy to rival Catholic Christianity He was born in Sinope (A D c 85) He was first excommunicated for his doctrine by his father, the bishop of Sinope He taught in Asia Minor, then came to Rome (c 139), where he perfected his theory In 144 he presented his ideas to the Romans, they, too, excommunicated him He formed a church of his own, which became widespread and powerful Marcion taught a dualism, in common with GNOSTICISM, and proclaimed that the stern, lawgiving God of the Old Testament rivaled the good, merciful God of the New The Creator was evil Marcion also rejected the real incarnation of Christ, claiming that He was a manifestation of the Father But unlike the Gnostics, he believed in salvation by faith rather than by gnosis, he rejected the Gnostic emanation theory, and he sought truth in his own truncated version of the Gospels Marcion completely rejected the Old Testament and issued a version of the Gospels which included only 10 of the Pauline Epistles and an edited version of St Luke He explained in his *Antitheses* that since law was often opposed to St Paul in both the Old Testament and the early apostles all passages in the Bible which suggested the Jewish foundation of Christianity should be suppressed, even including such statements by St Paul Marcionism emphasized asceticism and influenced the development of MANICHAEISM, by which it was absorbed Its effect on orthodox Christianity was to cause a canonical Gospel to be assembled and promulgated and the fulfilment of the Old Law in the New Law to be clearly enounced

Marcomanni see GERMANS

Marconi, Guglielmo, Marchese (gōōlyĕl'mō markä'zā markō'nē), 1874–1937, Italian physicist, celebrated for his development of wireless telegraphy (see RADIO) In the field of electromagnetic waves he correlated and improved inventions of H R Hertz, Édouard Branly, and other scientists and invented a practical antenna Experimenting with homemade apparatus, in 1895 he sent long-wave signals over a distance of more than a mile He patented his system in England (1896) and organized a wireless telegraph company (1897) to develop its commercial applications In 1899 he transmitted signals across the English Channel and in 1901 received in St John's, Newfoundland, the first transatlantic wireless signals, sent from his station at Poldhu, Cornwall Aftet the First World War he concentrated on short waves, and c 1930 turned his attention to microwaves He received, jointly with K R Braun, the 1909 Nobel Prize in Physics for work in wireless telegraphy See biographies by O E Dunlap (1937) and Douglas Coe (1943)

Marco Polo see POLO, MARCO.

Marcos de Niza (mär'kōs dā nē'sa), c 1495–1558, missionary explorer in Spanish North America A Franciscan friar, probably born in Nice of Italian parents and sometimes called Marco da Nizza, he had served in Peru and (almost certainly) Guatemala before coming to Mexico There Viceroy Antonio de Mendoza, excited by Cabeza de Vaca's stories of rich Indian cities to the north of the present Sonora, planned an exploring expedition At the head of this in 1539, Fray Marcos voyaged into SE ARIZONA and perhaps into New MEXICO (his companion, Estéban, a MOOR or Negro, almost certainly went ahead and was killed in the Zuni country) The friar wrote a report that described with enthusiasm and great inaccuracy the fabulous riches of the Seven Cities of Cibola Fabulous they proved to be when Francisco Vásquez de CORONADO led (1540) his soldiers there, and Fray Marcos was dismissed as guide and sent back in disgrace The friar may have been duped by the talk of Indians into making his false statements At any rate his inconspicuous last years were spent worthily in religious service See bibliography under CORONADO, FRANCISCO VÁSQUEZ DE See also Cleve Hallenbeck, *The Journey of Fray Marcos de Niza* (1949)

Marculf (mär'kŭlf'), fl 7th cent, Frankish monk. He compiled the *Marculfi monachi formulae* [formularies of Marculf], usually dated c 650 Formularies were model forms of official documents for the use of the Church, of the state, and of private individuals, and they were used as manuals in chanceries Marculf's is one of the best collections and is invaluable to scholars.

Marcus, in the Bible see MARK, SAINT

Marcus, town (pop 1,206), NW Iowa, NE of Sioux City, inc 1892

Marcus Aurelius (Marcus Aelius Aurelius Antoninus) (mär'kŭs ôrē'lēŭs), 121–80, Roman emperor, named originally Marcus Annius Verus He was a nephew of Faustina, the wife of ANTONINUS PIUS, who adopted him Marcus married Antoninus' daughter, another Faustina From youth Marcus was a diligent student and a zealous Stoic During the reign of his guardian he was the emperor's constant companion, and he succeeded him (161) with his adoptive brother, Lucius Verus, as colleague Verus allowed Aurelius to dominate From 169 Aurelius was sole emperor His reign was not easy, because of earthquakes and plagues, and because of the attacks of Parthians, Germans, and Britons. He won a victory over the Marcomanni (167–68), commemorated by the Antonine Column (Piazza Colonna, Rome), raised by his son COMMODUS Marcus Aurelius was devoted to his duty and humanitarian in his conception of it He was notably good to the poor, lowering their taxes and lightening their burdens He was always clement with political criminals, and he cut down much of the public brutality of such things as gladiatorial shows In all things he devoted himself to the empire Consistent with his general activity was persecution of Christians, continuing the policy of Trajan He wrote a little book, called *Meditations* (Eng tr by George Long, 1942, by A S L Farquharson, 1945), which expresses with great beauty and humanity a philosophy of Stoic type See biographies by H D Sedgwick (1921), P E Matheson (1922), and C C Dove (1930)

Marcus Hook, industrial borough (pop 4,123), SE Pa., on the Delaware and SW of Philadelphia, settled c 1640, laid out c 1701, inc 1893 It is an important oil-refining center and has textile factories Blackbeard and other pirates had their rendezvous here The congregation of St Martin's Episcopal Church (1845) was organized c 1699

Marcus Island, Jap *Minami-tori-shima* volcanic island, area 1 sq mi, W Pacific, 700 nautical mi E of the Bonin Islands Discovered in 1896 by the Japanese, it was annexed by Japan in 1899 In the Second World War the island had Japanese naval and air bases After Japan's defeat it was placed under U S military government

Marcy, William Learned, 1786–1857, American statesman, b Southbridge, Mass., grad Brown, 1808 He went to Troy, N Y, where he was admitted (1811) to the bar and where, after serving in the War of 1812, he returned to law practice and held local offices A Democrat and partisan of Martin Van Buren, Marcy entered the political group known as the ALBANY REGENCY, of which he soon became a dominant figure He served as state comptroller (1823–29) and as justice of the state supreme court (1829–31) before he entered the U S Senate As Senator (1831–32), Marcy staunchly defended Van Buren, his public defense of "the rule that to the victor belong the spoils of the enemy" in the speech supporting the nomination of Van Buren as minister to England supposedly gave rise to the term "spoils system" Marcy served (1833–39) as governor of New York for three terms and was (1839–42) a member of the Mexican Claims Commission As Secretary of War (1845–49) under President James K Polk, Marcy was faced with the conduct of a difficult office in the Mexican War He had drifted into opposition to Van Buren and headed the HUNKERS, a faction of the New York Democratic party The peak of Marcy's career was reached when he served as Secretary of State (1853–57) under President Franklin Pierce He handled many delicate problems, including the Gadsden Purchase, negotiations concerning the *Black Warrior* matter with Spain, and the trouble arising from the filibustering expedition of William Walker in Nicaragua He condemned the OSTEND MANIFESTO, but managed to maintain a neutral attitude toward the rising problem of slavery

Marcy, Mount, 5,344 ft high, NE N Y, in the Adirondacks near Lake Placid, highest peak in the state It was first ascended in 1837 Tiny Lake Tear of the Clouds near by is the source of a headstream of the Hudson

Mar del Plata (mär'dhĕl plä'ta), city (pop 104,513), Buenos Aires prov, Argentina, c 250 mi SSE of Buenos Aires On the Atlantic coast, it is a fashionable seaside resort

Mardi Gras (mär'dē grä'), French name for SHROVE TUESDAY As the last day before the fasting season of Lent, it became the occasion for great merrymaking in the Middle Ages In the cities of some of the Roman Catholic countries the custom of holding carnival for Mardi Gras has continued and has been elaborated The carnivals, with spectacular parades, masked balls, mock ceremonials, and street dancing, usually last for a week or even two weeks before Mardi Gras itself Some of the most celebrated are held in New Orleans, Rio de Janeiro, Nice, and Cologne

Mardonius (mardō'nēus), d 479 B C, Persian general, son of the conspirator Gobryas and son-in-law of Darius I Darius sent him (492 B C) to attack Eretria and Athens for aiding the Ionians, but his fleet was lost in a storm off Mt Athos, and a Thracian tribe destroyed the greater part of his army He helped plan Xerxes' invasion of Greece, and after that monarch's defeat at Salamis (480 B C.) and return to Persia he stayed behind, only to be overwhelmed and killed at Plataea. See PERSIAN WARS

Marduk: see BABYLONIAN RELIGION

Maree, Loch (lŏkh murē'), lake, Ross and Cromarty co, Scotland, among mountains near the west coast It is 13½ mi long and 2 mi wide and is drained by the Ewe There are more than 30 islands, on one, Isle Maree, are ruins of a 7th-century abbey

Marées, Hans von (hans' fŭn märā'), 1837–87, German historical painter of the mid-19th-century romantic school Best known are his frescoes in the library of the Zoological Museum, Naples

Mare Island, W Calif, in San Pablo Bay near Vallejo, NE of San Francisco The important navy yard here was established (1854) by David G Farragut

Maremma (marĕm'mä), coastal area, Tuscany, central Italy, along the Tyrrhenian Sea, extending in the east to the Apennine hills It flourished at the time of the Etruscans, but was largely abandoned in the Middle Ages because of malaria Reclamation was begun by the grand dukes of Tuscany and was continued on a large scale by the Italian government Wide areas are now fertile agricultural districts Cattle and a noted breed of horses are raised, there are good hunting grounds (foxes, wild boars) The Maremma is rich in borax

Marengo (murĕng'gō), village near Alessandria, Piedmont, NW Italy, scene of the famous battle (June 14, 1800) between the French under Bonaparte and the Austrians under Melas Melas had almost won, when Desaix arrived with fresh troops to bolster the French, Desaix lost his life, but the Austrians were completely defeated and retired to the Mincio

Marengo 1 City (pop 2,034), NE Ill, E of Rockford, in a dairy area, settled 1835, inc as a town 1857, as a city 1893 Magnets and magnetic steels are made here 2 City (pop 2,260), co seat of Iowa co, E central Iowa, on the Iowa river and NW of Cedar Rapids, in a farm area, inc 1859

Marenzio, Luca (lōō'ka murän'tsēō), c 1560–1599, Italian composer, in whose works the Renaissance madrigal reached its peak of development He served in the households of several cardinals, and toward the end of his life he was in the service of Sigismund III of Poland

Mareotis (märē'ōtĭs), salt lake (area c 95 sq mi, excluding marshes), Egypt It is separated from the Mediterranean Sea by the narrow isthmus on which Alexandria is situated There are fisheries and saltworks The name is sometimes rendered Mariut or Maryut

Mareshah (märē'shu) 1 Descendant of Caleb 1 Chron 2 42 2 Son of Laadan 1 Chron 4 21 These passages may refer to places, not persons 3 Town, Palestine, c 20 mi WSW of Bethlehem, not far above the coastal plain Excavations have revealed Hellenistic inscriptions Joshua 15 44, 2 Chron 11 8 14 9, 20 37, Micah 1 15 Marisa 2 Mac 12 35

mare's-tail, any of the three species of the genus *Hippuris*, perennial aquatic herbs of temperate and frigid regions The common mare's-tail (*Hippuris vulgaris*) has an erect stem bearing whorls of small leaves in which it resembles some of the horsetails (which are also sometimes called mare's-tail) It is cultivated in bog gardens

Marfa, city (pop 3,805), co seat of Presidio co, W Texas, N of the Rio Grande and S of the Davis Mts, founded 1884, inc 1887 It handles cattle, wool, and mohair from surrounding ranches, in the past much silver was mined at near-by Shafter Fort D A Russell here was long an army post

Margaree (margurē'), river, on W Cape Breton Island, N S, rising in two branches and flowing NNW to the Gulf of St Lawrence at Margaree Harbour

Margaret, Saint, 3d cent, virgin martyr of Antioch Almost nothing is known of her, but there are a number of legends One story tells that she was swallowed by a dragon but survived and was beheaded for her faith Her cult was widespread in medieval England She was one of the saints who counseled St Joan of Arc In the East she is known as Marina Feast July 20

Margaret, 1353–1412, queen of Denmark, Norway, and Sweden, daughter of Waldemar IV of Denmark She was married (1363) to King Haakon VI of Norway, son of MAGNUS VII of Norway and Sweden At the death (1375) of her father her son Olaf became king of Denmark under the regency of his parents As Haakon was occupied in Norway, Margaret actually wielded the power in Denmark The death (1380) of Haakon made Olaf king of Norway as Olaf V, and Margaret regent She continued to press her late husband's claim to Sweden, of which she styled her son king When Olaf died (1387), Margaret continued to rule Denmark and Norway In 1389, near Falköping, Sweden, she defeated and captured the Swedish king, Albert of Mecklenburg Sweden and Norway were prey to disorder However, Margaret succeeded in persuading the Danish, Norwegian, and Swedish diets to accept her grandnephew, Eric of Pomerania, as king He was crowned (1397) at Kalmar, and at the same time a tentative act of union of the

three realms was drawn up (see KALMAR UNION) Stockholm had held out against Margaret until then, but surrendered in 1398 In spite of Eric's nominal kingship, Margaret remained the real ruler of all three kingdoms till her death She ruled autocratically and energetically, leaving many offices unfilled and reducing others to complete dependence on her authority Norway and Sweden resented her appointment of Danes to office The empire built by her was one of the largest of Europe, but it was not lasting

Margaret Island, Hungary see BUDAPEST

Margaret Maid of Norway, 1283–90, queen of Scotland (1286–90), daughter of Eric II of Norway and of Margaret, daughter of Alexander III of Scotland. In 1284 the nobles of Scotland recognized the infant Norwegian princess as heiress presumptive to the Scottish throne On Alexander III's death Margaret became queen under a regency, and EDWARD I of England arranged a marriage for her with Edward, prince of Wales, the union of English and Scottish crowns to remain personal In 1290 the child queen started for Scotland, but apparently died on the way Her death opened the way for the great civil war of Scotland over the succession (see BALIOL, JOHN DE, and ROBERT I)

Margaret Mary, Saint, 1647–90, French nun of the Visitation of Paray-le-Monial convent, Saône-et-Loire dept, France Her family name was Alacoque Jesus appeared to her in a vision and bade her inaugurate devotion to His Sacred Heart This has become one of the principal cultuses of the Roman Catholic Church She was canonized in 1920 Feast Oct 17 See Henri Ghéon, *The Secret of St. Margaret Mary* (Eng tr, 1937)

Margaret Maultasch (moul'tash) [Ger, =pocket mouth], 1318–69, countess of Tyrol, called the Ugly Duchess On the death (1335) of her father, Henry, count of Tyrol and duke of Carinthia, Emperor Louis IV gave Carinthia to the Hapsburgs and tried to take the Tyrol from Margaret and her husband, John Henry of Luxemburg Her Tyrolean subjects remained loyal to her, and John Henry's father, John of Luxemburg, king of Bohemia, forced the emperor to restore the Tyrol to his son However, Margaret soon expelled her husband from her country, her marriage was voided, and in 1342 she married Louis, margrave of Brandenburg, son of Emperor Louis IV She sided with her husband against the Tyrolean nobles, who as supporters of the pope had rebelled against him. After his death (1361) and that of their son Meinhard, Margaret abdicated (1363), leaving Tyrol to the Hapsburgs, and retired to Vienna Legend has painted her as a woman of great power and greater evil A well-known portrait, painted long after her death, served Tenniel as model for the "duchess" in his illustrations of *Alice in Wonderland* Lion Feuchtwanger utilized the story of Margaret in his novel, *The Ugly Duchess*

Margaret of Angoulême see MARGARET OF NAVARRE

Margaret of Anjou (ăn'jo͞o, Fr äzhō͞o'), 1430?–1482, queen consort of King HENRY VI of England, daughter of René of Anjou William de la POLE, earl (later duke) of Suffolk, was chief negotiator of a truce (1444) in the Hundred Years War and of Margaret's marriage, which occurred in 1445 With him Margaret formed a political alliance The queen acquired great unpopularity by her autocratic rule through the feeble king and helped to build up the discontent which was soon centered in the question of succession to the throne Henry went insane, and Richard, duke of YORK, the heir apparent, became regent The birth of Margaret's son, Edward (1453), destroyed Richard's chances of succession, and Henry's recovery of his faculties (1454) reopened the quarrel With the clash between the followers of Richard, the Yorkists, and the supporters of the king, the Lancastrians, at St Albans (1455), the War of the ROSES was begun. Margaret of Anjou was very active in the warfare, for 16 years she fought in defense of her son's claim to the throne. Richard was killed in the defeat of the Yorkists at Wakefield (1460), but Richard Neville, earl of WARWICK, and Edward, the new duke of York (later EDWARD IV), took up the Yorkist cause The Lancastrians were defeated at Towton (1461), and Margaret went to France, where she secured aid for an invasion of England The warfare continued with fluctuations of fortune, the quarrel between Warwick and Edward IV finally resulting in a restoration of Henry VI (1470) The next year Edward IV triumphed at Tewkesbury, where Margaret was captured and her son was killed The payment of ransom by Louis XI enabled her to return to France (1476), where she spent her last years in poverty See biography by J J Bagley (1948)

Margaret of Austria, 1480–1530, regent of the Netherlands, daughter of Emperor MAXIMILIAN I She was betrothed (1483) to the dauphin of France, later King CHARLES VIII, and transferred to the guardianship of Louis XI of France (see ARRAS, TREATY OF) After Charles's marriage to ANNE OF BRITTANY, she was returned (1493) to her father She was married (1497) to John of Spain (d 1497), son of Ferdinand and Isabella, and (1501) to Philibert of Savoy (d. 1504). In 1507 she was made regent of the Netherlands and guardian of her nephew Charles (later Emperor CHARLES V) She acted as an intermediary between her father and his subjects in the Netherlands, negotiated a treaty of commerce with England favorable to the Flemish cloth interests, and played an important role in the formation of the League of Cambrai (1508, see CAMBRAI, LEAGUE OF) After his majority (1515), Charles at first rebelled against her influence, but later recognized her as one of his wisest advisers After 1518 she was again regent intermittently till her death She negotiated the Ladies' Peace with Louise of Savoy (1529, see CAMBRAI, TREATY OF)

Margaret of Navarre (nəvär') or **Margaret of Angoulême** (ăgo͞olām'), Fr *Marguerite de Navarre* (märgürēt' du nävar') or *Marguerite d'Angoulême,* 1492–1549, queen of Navarre, sister of FRANCIS I of France After the death of her first husband she married (1527) Henri d'Albret, titular king of Navarre, by whom she became the mother of JEANNE D'ALBRET She was an advocate of religious liberty and of mild church reform Her brilliant court was frequented by literary men, among them Dolet, Marot, and Rabelais She is best known for her *Heptameron,* an original collection of 72 stories in the manner of Boccaccio She also wrote short poems and a long religious poem, *Le Miroir de l'âme pécheresse* See Arthur Machen, *The Heptameron* (1905), biography by Samuel Putnam (1935).

Margaret of Parma, 1522–86, regent of the Netherlands, natural daughter of Emperor Charles V She was married (1536) to Alessandro de' Medici (d 1537) and (1538) to Ottavio Farnese, duke of Parma. Appointed Spanish governor of the Netherlands (1559), she was restricted in her authority by a council of state headed by Cardinal GRANVELLE Charged with the difficult task of carrying out the religious policy of her half brother PHILIP II of Spain, she urged and finally secured the recall of the unpopular prelate She subsequently showed favor to the national party, but after the outbreak of violence she turned against the popular leaders (Egmont, Horn, and William the Silent of Orange) In 1567 ALBA arrived at Brussels to suppress the opposition by force Margaret warned Philip II against harsh measures and resigned as regent, being unable to agree with Alba She was a woman of great ability and firmness, and her departure was generally regretted

Margaret of Scotland, Saint, d 1093, queen of Scotland, wife of MALCOLM III and sister of Edgar Atheling Through her husband she carried out a great church reform in Scotland She did this partly by bringing many English priests into Scotland and by founding new monasteries She minimized the influence of Gaelic monasteries, and her work was potent in making Scotland ultimately an English kingdom From this time the Gaelic Scots were disaffected from the royal house and remained so until the Stuart misfortunes in England Queen Margaret could not always bend her husband to her wishes, but during the first half of the 12th cent her sons reigned and carried out her policies She was very generous to the poor and led a life of extraordinary piety Feast June 10 or, in Scotland, Nov 16

Margaret of Valois (valwä'), 1553–1615, queen of France and Navarre, daughter of Henry II and Catherine de' Medici She was also known as Queen Margot Her wedding (1572) with Henry, king of Navarre (later HENRY IV of France), was the prelude to the massacre of SAINT BARTHOLOMEW'S DAY The marriage, without affection on either side, was one of mutual toleration Margaret took part in the intrigues of her husband and her brother FRANCIS, duke of Alençon and Anjou In 1583 she was exiled from Paris by Henry III because of her immoral conduct Estranged from both her husband and her brother, she took up arms against them and seized Agen Taken prisoner (1586) by royal troops, she was confined at Usson, but she charmed her jailer and became mistress of the castle Though sympathetic with the LEAGUE, she took little part in the succeeding troubles In 1599 her marriage was annulled In her retirement at Usson (1587–1605), she maintained a small court, in which men of letters were prominent Her own memoirs (latest Eng tr, 1892), correspondence, and other writings show considerable literary ability She spent her last years in Paris, where she lived on friendly terms with Henry and MARIE DE' MEDICI Margaret plays a conspicuous role in literature and legend. See H N Williams, *Queen Margot* (1907), J H. Mariéjol, *A Daughter of the Medicis* (1928, Eng tr, 1929)

Margaret Tudor, 1489–1541, queen of JAMES IV of Scotland, daughter of Henry VII and sister of Henry VIII of England. After long negotiations she was married to James four years after the peace between Henry VII and James in 1499 Margaret tried unsuccessfully to prevent James's French alliance and break with England. After James's death at Flodden (1513), Margaret became regent for her infant son, JAMES V, but her marriage (1514) to Archibald DOUGLAS, 6th earl of Angus, led to the loss of the regency to John STUART, 4th duke of Albany. Albany soon obtained custody of the king, and Margaret fled to England. She returned in 1517, during Albany's absence, and shortly thereafter she became estranged from Angus. From this time she played a considerable part in the shifting Scottish political scene. Her political affiliations varied with her personal interest of the moment and her desire for money and alternated between the French and English parties and the struggle for power between the Hamilton (Arran) and Douglas (Angus) factions James was proclaimed king in 1524, but was for several years virtually a prisoner of Angus In 1527 Margaret obtained her divorce from Angus and soon married Henry Stuart, later Lord Methven. James, upon his escape from Angus (1528), joined his mother and Methven, and they were for a time his chief advisers A plan of Margaret's for a meeting between her brother, Henry, and her son led James to accuse her of betrayal (1534) They were further estranged by James's refusal of her desire to divorce Methven Margaret's descendants by James IV and by Angus were united by the marriage of Lord Darnley and Mary Queen of Scots, whose son became James I of England (James VI of Scotland)

margarine (mär'jərēn), artificial butter, an emulsified blend of edible vegetable oils or meat fats or a combination of both It was patented in 1869 by a French chemist, Mège-Mouries, as an inexpensive substitute for butter Beef fat, known as oleo, was chiefly used at first, but later was supplemented by pork and other animal fats and vegetable oils, such as coconut oil, olive oil, and cottonseed oil Over 90 percent of the margarine produced in the United States is made from vegetable oils, chiefly cottonseed and soybean The oils, refined, deodorized, and hydrogenated to the desired consistency, are churned or homogenized, usually with cultured skim milk, then chilled and reworked to incorporate salt and remove excess water Margarine is similar in composition to butter, yields practically the same number of calories or heat units, and is easily digestible It is commonly fortified with vitamin A A number of Federal, state, and local taxes and restrictions have been imposed on the manufacture and sale of margarine, especially when colored yellow Although commonly known as margarine, oleomargarine is the legal designation in the United States and must appear on cartons

Margarita (margärē'tä), island, off the coast of N Venezuela Discovered (1498) by Columbus, it became an important colonial pearl-fishing center and was used (1561) as a base of operations by the infamous Lope de AGUIRRE There are large deposits of magnesium, livestock, pearls, and fish are the other chief products Because the population supported Simón BOLÍVAR, Margarita and neighboring small islands were made a state, Nueva Esparta, after independence was won from Spain La Asunción (pop 4,061) is the capital

Margate (mär'gĭt), municipal borough (1931 pop 31,341, 1947 estimated pop 40,720), on the Isle of Thanet, Kent, England It is a seaport, with a long sea front, and a popular resort, especially for Londoners Construction of piers began in the 15th cent Of interest are the Church of St John the Baptist (partly Norman), the Royal Sea-bathing Hospital (18th cent), the asylum for the deaf and mute, and Dane Park, with an artificial grotto Cliftonville is a residential district There are regular steamers from London in the summer

Margate City (mar'gāt, -gĭt), city (pop 3,266), SE N J, on Absecon Beach SW of Atlantic City, inc. 1909

Margelan (margĭlan', Rus mŭrgyĭlan') city (pop. 44,327), Uzbek SSR, in the FERGANA VALLEY near FERGANA It has a large silk industry and has been prominent since the 10th cent as a trade center

Marggraf, Andreas Sigismund (ändrā'äs zē'gĭsmo͞ont märk'graf"), 1709–82, German chemist, a pioneer in analytical chemistry He proved that alumina, magnesia, and lime are distinct earths, found (1743) an improved method for the commercial preparation of phosphorus, and isolated (1746) zinc In 1747 he announced his discovery of sugar in the beet Marggraf directed, from 1754, the chemical laboratory of the Berlin Academy of Sciences

Margherita. see RUWENZORI.

Margiana see MERV

margin, in the phrase "on margin," refers to the amount of cash a person places with his broker when he wishes to buy or sell a security (stock or bond) for the purpose of profiting by a rise or a fall in the price of it. It forms a percentage of the money involved, the broker supplying the balance When the market price changes, the broker may require his client to put up more cash and, if he fails to do so, may close out the account. The smaller the margin, the greater the inducement to speculation. By the Securities Exchange Act (1934) the Federal Reserve Board has the power to fix the amount of the margin. It was fixed at 50 percent in 1937 and in 1946 for a time was raised to 100 percent

marginal unit, in economics, the last unit of a given commodity that an owner will sell and a purchaser will buy. It is said to have marginal utility. Mar-

ginal land is land that barely repays the cost of labor and capital applied to its cultivation

Marguerite. For French women thus named, see MARGARET

marguerite [Fr ,=pearl, daisy], tender perennial (*Chrysanthemum frutescens*) of the Canary Islands, called also Paris daisy and cultivated mostly as a florists' pot plant for the daisylike flower heads Other plants are called marguerite See also DAISY.

Marguerite d'Angoulême or Marguerite de Navarre see MARGARET OF NAVARRE

Marguerite, Paul (pôl' margərēt'), 1860-1918, and **Victor Marguerite** (vēktôr'), 1866-1942, brothers, French novelists of the school of ZOLA. They had abandoned the beliefs of Zola before they wrote the tetralogy, *Une Époque* [an epoch] (1898–1904), on the period of the Franco-Prussian War Of the novels written separately, Paul's were the more esteemed Victor's novel, *La Garçonne* (1919, Eng tr , *The Bachelor Girl*, 1923), created a sensation because of its treatment of abnormal personal relationships

Maria I (murē'u), 1734–1816, queen of Portugal (1777–1816), daughter of Joseph I She was married to her uncle, who assumed joint rule with her as Peter III and maintained it until his death in 1786 Neither king nor queen was much interested in affairs of state but they did bring about the fall of Pombal immediately Many of the intellectuals and personal enemies of Pombal who had been imprisoned or exiled returned, and Portugal experienced a mild intellectual revival The death of her husband, the death (1778) of her son Joseph, and, reputedly at least, fears over the revolution in France helped to unhinge Maria's mind Her son (later John VI) assumed the regency in 1792, and it was he who guided Portugal in the French Revolutionary Wars and the disasters of the Napoleonic period

Maria II (Maria da Gloria), 1819–53, queen of Portugal She was the daughter of Peter IV (PEDRO I of Brazil), who on the death of his father, John VI, in 1826, abdicated the throne of Portugal in favor of that of Brazil and named Princess Maria queen of Portugal A constitutional charter was granted the Portuguese To quiet the claims of her uncle, Dom MIGUEL, the little princess was betrothed to him and placed under his regency He was, however, an absolutist, opposed to the charter, and he convened the Cortes and procured an offer of the throne He then set out to rule alone and in absolute fashion The deposed Maria was taken to England Her father, having abdicated the throne of Brazil, now gathered an army, recruited from the liberal opponents of the reactionary Miguel A loan was negotiated in England, and English troops recruited A fleet was made ready and the armed forces gathered and sailed to the Azores From those islands the army sailed (1832) to Oporto The subsequent fighting in the so-called Miguelist Wars was severe Ultimately, with the help of an English defeat of the Miguelist fleet, the forces of the liberals won Miguel capitulated in 1834 Maria's reign was torn by dissension, revolutions, and counterrevolutions Some material progress was, however, made in the building of roads, the first railroad, and schools As her second husband, Maria married Ferdinand of Saxe-Coburg (FERDINAND II) Her son was LOUIS I

Maria Christina, Span *María Cristina* (marē'a krēstē'na), 1806–78, queen of Spain, daughter of Francis I of the Two Sicilies The fourth wife of FERDINAND VII, she persuaded him to confirm the revocation of the Salic law to allow their daughter Isabella to succeed him At the king's death, Maria Christina became regent for ISABELLA II In the Carlist Wars (see CARLISTS) which this succession provoked, she was aided by the liberals, but the frequent changes in the constitution alienated their support The opposition to ESPARTERO forced her to resign The regency and she went to France (1840) She returned after Isabella was declared of age and regained influence She had to yield to Espartero again in 1854, but remained a powerful figure to the end of Isabella's ill-starred reign

Maria Christina, Span *María Cristina*, 1858–1929, queen of Spain An Austrian archduchess, she was married (1879) to Alfonso XII After her husband's death she was regent (1885 1902) for their posthumous son, Alfonso XIII During her regency the last Spanish possessions in America were lost in the SPANISH-AMERICAN WAR

María de Molina (dā mōlē'nā), d 1321, queen of Castile, consort of Sancho IV As regent (1295 1301) for her son, Ferdinand IV, she defended his throne against several pretenders, who were at various times supported by France, Aragon, Portugal, Navarre, and Granada. From 1312 to 1321 she was prominent as a guardian of her grandson, Alfonso XI

María Luisa (lwē'sä), 1751–1819, queen of Spain, daughter of Duke Philip of Parma, consort of King CHARLES IV Dissolute and domineering, she exerted, with her lover GODOY, the real power in the government, thus contributing to the downfall of Spain at the hands of Napoleon I She was present at the interview of Bayonne with her husband, her son, FERDINAND VII, and Napoleon, and she shared her husband's confinement and exile **Goya,** her favorite, painted several revealing portraits of her

Mariamne (mărēăm'nē), d. 29 B C , second of Herod the Great's 10 wives She was a descendant of the Maccabees. She was greatly loved by Herod, but after false accusations by his sister Salome, Herod had her murdered

Mariana, Juan de (hwän' dā märyä'nä), 1536?–1623?, Spanish historian and political philosopher, a Jesuit He taught in Rome and in Paris before going to Toledo, where he wrote his two great works One of these, the *Historiae de rebus Hispaniae* [history of Spain], was a notable achievement in history because it presented a unified and coordinated history, not simply a chronicle Though he is sometimes credulous, he was to some extent critical of his sources, and his ability at combining materials into a smooth-flowing narrative was remarkable His *De rege et regis institutione* [on the king and the institution of kingship] achieved particular note because it condoned tyrannicide Mariana did not approve political assassination, but he argued that when the state was operating in violation of the welfare of the people, a desperate remedy was justifiable He extolled the natural simplicity of the communal life that he supposed existed in a lost Golden Age His humanitarian ideals had a great effect, and he is supposed to have influenced Rousseau His violent attack on debasement of the coinage—expressing arguments later universally accepted-- caused him to be imprisoned for a time See John Laures, *The Political Economy of Juan de Mariana* (1928)

Marianao (märyanaō'), city (pop 114,743), NW Cuba It is practically a suburb of Havana

Marianas Islands (marēä'năs), island group (370 sq mi , pop c 29,700), W Pacific, 1,500 mi E of the Philippine Islands, extending in a 500-mile chain from north to south The most important islands are GUAM, SAIPAN, and TINIAN The north islands are composed of volcanic rock, the south, of madrepore limestone covering a volcanic base All the islands are mountainous, with the highest peak (3,166 ft) on Agrihan Sugar cane, coffee, and coconuts are the chief products There are deposits of phosphate, sulphur, and manganese ore The Japanese are the most numerous of the inhabitants, among whom are Micronesians and Chamorros Discovered (1521) by Magellan, who named them the Ladrones Islands (Thieves Islands), they were renamed the Marianas by Spanish Jesuits arriving in 1668 The group was a Spanish possession from 1668 to 1898 They were sold to Germany (1899), with the exception of Guam, which became a possession of the United States The islands belonging to Germany were occupied in 1914 by Japan, which received a mandate over them in 1922 and in 1935 claimed them as a possession In the Second World War the Japanese islands were taken in 1944 by U S forces, who established naval and air bases on Saipan and Tinian In 1947 the group (exclusive of Guam) was included in the U S Trust Territory of the Pacific Islands under UN trusteeship The group is also called the Marianne Islands

Marianna (mărēăn'ù) **1** Cotton city (pop 4,449), co seat of Lee co , E Ark , near the Mississippi, inc 1877 Near by are a state university cotton experiment station and a U S soil conservation project **2** City (pop 5,079), co seat of Jackson co , NW Fla , near the Ala line, on the Chipola river and NW of Tallahassee It is in a productive dairy and farm area yielding fruits nuts, cotton, and corn The region has limestone deposits Florida Caverns State Park, here, has a natural bridge, and the caves are lighted The Blue Springs are near by **3** Borough (pop 1,493), SW Pa , SE of Washington, inc 1901

Marianne Islands see MARIANAS ISLANDS.

Marianske Lazne see MARIENBAD

Marianus Scotus (mărēă'nŭs skō'tŭs), 1028–c 1082, Irish monk and chronicler, whose Gaelic name was Mael-brigte He left Ireland in 1056 and lived at Cologne until 1058, at the abbey of Fulda from 1059 to 1069, and at Mainz until his death His chronicle of the world from the creation until 1082 was much used by others in the Middle Ages, notably by Florence of Worcester and Sigebert of Gembloux

Marianus Scotus, d 1088, Irish churchman, whose Gaelic name was Muiredach He left Ireland in 1067 on a pilgrimage to Rome, but settled permanently at Regensburg (Ratisbon), Germany, where he became abbot He was famous for his calligraphic copies of parts of the Bible, which were usually accompanied by his commentaries

Marias (mărī'ŭs), river rising in several branches in NW Montana near the Continental Divide and flowing c 240 mi SE to the Missouri near Fort Benton It receives the Teton c 3 mi above its mouth The upper Marias is used for irrigation, and the lower waters are part of the MISSOURI RIVER BASIN PROJECT.

Maria Theresa, Ger *Maria Theresia* (marē'ä tārā'zyä), 1717–80, empress, queen of Bohemia (1740–80), "king" of Hungary (1740–80), empress consort of FRANCIS I and dowager empress after the accession (1765) of her son, Joseph II Her father, Emperor CHARLES VI, altered the Hapsburg family law by the PRAGMATIC SANCTION so that she might succeed to the Hapsburg lands She was recognized by her subjects in the Austrian duchies and the Austrian Netherlands, in Bohemia, and in Hungary, although the Hungarian diet maintained the constitutional fiction that she was king of Hungary The chief European powers had subscribed to the Pragmatic Sanction in Charles's lifetime, but when she acceded she was immediately confronted with a European coalition against her, and FREDERICK II of Prussia brazenly seized SILESIA In the War of the AUSTRIAN SUCCESSION (1740–48), Maria Theresa lost most of Silesia to Prussia but secured in exchange the imperial election (1745) for her husband Her warm personality and her strength of will won her the loyalty of her subjects and of her troops, to whom she appealed directly in moments of crisis Her husband was given a share in governing her hereditary lands, but the actual government was in the hands of Maria Theresa, assisted by her able chancellor, KAUNITZ After the Treaty of AIX-LA-CHAPELLE (1748), Kaunitz shifted to a policy of alliance with France, the former enemy The SEVEN YEARS WAR (1756–63) exhausted the strength of Austria Maria Theresa lost no territory, but leadership among German states had definitely passed to Prussia In 1772, Maria Theresa reluctantly shared with Prussia and Russia in the first partition of Poland (see POLAND, PARTITIONS OF) Partly under the influence of her son, Joseph II (with whom she jointly ruled her dominions after 1765), Maria Theresa carried out a series of beneficent agrarian and other reforms Unlike her son, however, she followed no particular plan and was, on the whole, conservative In matters of religion she was devoutly Catholic She led a life devoted to her work and to her large family, a model wife and mother as well as a popular and kindhearted ruler Her court was the most moral in Europe During her reign Vienna became a center of the arts and of music Gluck was her court composer, and Mozart played before her as a child Among her 16 children were emperors Joseph II and Leopold II Marie Caroline of Naples, and Marie Antoinette of France Her authoritative biographer is Alfred von ARNETH See also biographies by J F Bright (1897), M M Moffat (1911), J A Mahan (1932) and C L Morris (1937), E M Link *The Emancipation of the Austrian Peasant* (1949)

Maria Theresiopel, Yugoslavia see SUBOTICA

Mari Autonomous Soviet Socialist Republic (mä'rē), autonomous republic (8,900 sq mi , pop 579,456), E central European RSFSR, in the middle Volga valley Ioshkar-Ola is the capital The region is heavily forested, the nonforested area is primarily agricultural, producing wheat, rye, oats, and flax The Mari (formerly called Cheremiss) form about half of the population, the rest being Russians (44 percent) and Tatars (4 percent) They are a Finnic people of Russian culture and Eastern Orthodox religion Their land was dominated by the Eastern Bulgars (9th–12th cent) and by the Golden Horde after the 13th cent It was conquered (1552) by Ivan IV It became an autonomous republic in 1936

Maria Wörth (marē'a vûrt'), village (pop 1,460), Carinthia, S Austria, W of Klagenfurt and on the Worthersee, a small lake It is a place of pilgrimage with two Romanesque churches

Mariazell (marē"atsĕl'), town (pop 2,330), Styria, E central Austria, SW of Vienna A place of pilgrimage, it is famous for its 12th-century image of the Virgin and Child Mariazell is also a summer and winter mountain resort

Marib (mä'rĭb), ancient city Yemen, SW Arabia c 140 mi inland at an altitude of c 3 900 ft It was one of the chief cities, perhaps the capital of Sheba The site was visited by Joseph Halévy who found numerous inscriptions and ruins including the famous dam The dam, built in the 6th cent B C and enlarged to 2,000 ft in length, was one of the great engineering feats of antiquity

Maribo (marē'bō), city (pop 4,681) Laaland, Denmark It is the administrative seat of Laaland and Falster islands It has sugar refineries and meat-processing plants

Maribor (ma'rĭbôr), Ger *Marburg* (mar'bōōrk), city (pop 60,498), Slovenia, N Yugoslavia, on the Drava river and near the Austrian border A commercial and industrial center it produces automobiles, textiles leather, and chemicals It is a Roman Catholic episcopal see First mentioned in 1147, it was an important city of Styria until its transfer (1919) to Yugoslavia There are a Gothic cathedral, a castle, and a fine Renaissance city hall

Maricopa Indians (marĭkō'pù, mărĭ-), tribe of North American Indians of the Yuman linguistic stock At some time in the past the Maricopa, under pressure from the Yuma, moved up the Gila river in Arizona from the Colorado river In 1775 they lived near the mouth of the Hassayampa river in S Arizona They then numbered some 3,000 The Maricopa were sedentary farmers who lived in fairly permanent villages They joined with the Pima in SW Arizona in the early 19th cent. for protection from their kinsmen and enemies, the

Yuma In 1859 a reservation (the Gila River Reservation) was set apart for the Maricopa and the Pima in S central Arizona The Maricopa now number some 300

Marie (mürē'), 1875–1938, queen of Rumania, consort of FERDINAND I The daughter of Alfred, duke of Edinburgh and of Saxe-Coburg-Gotha, she was granddaughter of Alexander II of Russia and of Queen Victoria of England She was instrumental in bringing Rumania into the Allied camp in the First World War, and she followed the Rumanian armies as a Red Cross nurse She traveled widely, and her visit (1926) to the United States was a triumph of publicity rather than of good taste As dowager queen she was prominent during the first reign (1927–30) of her grandson Michael Marie wrote several novels and collections of fairy tales in English, among them *My Country* (1916), *The Voice on the Mountain* (1923), *The Country That I Love* (1925), *Ilderim* (1925), and *Masks* (1937) Her autobiography, *The Story of My Life* (1934), was continued by *Ordeal* (1935)

Marie, Pierre Thomas Alexandre (pyĕr' tômä' alĕksä'dru marē'), 1795–1870, French minister of public works in the revolutionary provisional government of 1848 The administration promised work to all unemployed In supposed fulfillment, but actually in direct opposition, to the plan of Louis BLANC for *ateliers sociaux*, Marie opened national workshops (*ateliers nationaux*) which proved an impracticable and costly experiment It is generally agreed that Marie intended from the beginning that they should be a failure The abandonment of the program helped to bring on the uprising in the JUNE DAYS of 1848

Marie Antoinette (äntunĕt', ätwanĕt'), 1755–93, queen of France, wife of LOUIS XVI, and daughter of Maria Theresa and Francis I of Austria She was married in 1770 to the dauphin, who became king in 1774 With an anti-Austrian cabinet in power, she sought the constant advice of the Austrian ambassador and laid herself open to suspicions of spying for her native country Unhappy in her marriage, which remained unconsummated for seven years, she surrounded herself with a dissolute clique, led by Yolande de POLIGNAC and Marie Thérèse de LAMBALLE, and threw herself into a life of pleasure and careless extravagance This completed the alienation of the French and led to scandals such as the Affair of the DIAMOND NECKLACE and to rumors concerning her relations with the officers of the guard and with Hans Axel FERSEN The famous solution to the bread famine, 'Let them eat cake,'' is probably more unjustly attributed to the queen, but it is certain that Marie Antoinette lacked understanding of economic problems With the birth of her first son, her life became more sedate Although she had contributed to the downfall of Turgot in 1776 and was hostile to Necker, her influence on the king's decisions during the first two years of the Revolution (1789–91) has been exaggerated She was brought with the king from Versailles to Paris (1789) and was seized in her attempt to escape with her family (1791) Despite her hatred of the Revolution, the apathy of the king forced her to conduct the negotiations first with Mirabeau, then with BARNAVE Simultaneously, however, she secretly urged for Austrian intervention, after war was declared, she fully identified the cause of the dynasty with that of France and betrayed the French campaign plans to the enemy Accused of treason, she and her husband were removed to the Temple (1792) After the execution of the king (Jan , 1793), she was subjected to unjustifiable brutality Her son was taken from her and no attempt was made to hide from her the harshness of his treatment (see LOUIS XVII) Transferred to the Conciergerie, the "Widow Capet," as she was called in derision, was tried before the Revolutionary Tribunal (Oct 14–15, 1793), found guilty, and guillotined (Oct 16) In her last misfortunes she displayed steadfastness, courage, and dignity Her portraits, notably by VIGÉE-LEBRUN, are well known Among Marie Antoinette's published correspondence, see *Lettres de Marie Antoinette* (2 vols , 1895–96) and *The Letters of Marie Antoinette, Fersen, and Barnave* (ed by O G von Heidenstam, Eng tr , 1926) For a comprehensive bibliography, see Maurice Tourneux, *Marie Antoinette devant l'histoire essai bibliographique* (1901) See biographies by Hilaire Belloc (1910), P M M H de Ségur (Eng tr , 1928), and Stefan Zweig (Eng tr , 1933)

Marie Byrd Land, area of Antarctica, E of the Ross Shelf Ice and the Ross Sea and S of the Amundsen Sea The Edsel Ford Ranges lie in the northwest part The region was discovered and claimed for the United States by Richard E Byrd in 1929

Marie Caroline, 1752–1814, queen of Naples, consort of Ferdinand IV (later FERDINAND I of the Two Sicilies), daughter of Emperor Francis I and Maria Theresa, and sister of Queen Marie Antoinette of France She was married to Ferdinand in 1768 With her favorites, Sir John ACTON and Emma, Lady HAMILTON, she was a center of scandal and intrigue and exercised a decisive and sinister influence on state affairs She was forced to flee Naples late in 1798, during the short-lived Parthenopean Republic, and again in 1806, when she and her husband were expelled by Napoleon and took up residence in Sicily The British requested her banishment because of her intrigues, and she died at Vienna

Marie de France (dù frās'), fl 1185, French poet She was author of a dozen lais of uneven length, some are probably of Celtic origin See translations by J L Weston (1900), Edith Rickert (1901), and Eugene Mason (1911), Alice Kemp Welch, *Of Six Medieval Women* (1914), J E Harris, *The Lays Gugemar, Lanval, and a Fragment of Yonec* (1930)

Marie de l'Incarnation (du lĕkarnasyō'), 1599–1672, French missionary, named in the world Marie Guyard She was married in her youth and bore a son, when he was 12 years old, her husband being dead, she entered the Ursuline order Her burning desire was to convert the heathen, and, at her entreaty, the authorities gave her and another nun permission to go to New France to work among the Indians In 1639 she arrived in Quebec, where she was soon head of an Ursuline convent She ruled her house with great success and worked among the Indians with notable results Her letters are valuable sources of French Canadian history She wrote devotional works and catechisms, not only in French but in Indian tongues See Agnes Reppher, *Mère Marie of the Ursulines* (1931)

Marie de' Medici (mēd'ĭchē), 1573–1642, queen of France, second wife of Henry IV, and daughter of Francesco de' Medici, grand duke of Tuscany. She was married to Henry in 1600 After his assassination (1610) she became regent for her son Louis XIII She reversed the policies set by her husband, SULLY was replaced by her favorite CONCINI, and the carefully hoarded surplus was dissipated in court extravagance and in pensions to the discontented nobles In foreign affairs she abandoned the traditional anti-Hapsburg policy A new Franco-Spanish alliance was formed by the marriage of Louis to Anne of Austria, daughter of Philip III, and further cemented by the marriage of Princess Elizabeth to the future Philip IV Having remained in power for three years beyond the king's nominal majority, Marie was forced into exile after the murder of Concini (1617) In 1619 her partisans rose in revolt, but she was reconciled to her son in 1622 After the rise to power of her former favorite, Cardinal RICHELIEU, she was forced (1630) into a new exile at Compiègne, whence she fled to the Netherlands (1631), never to return to France She was the mother of Henrietta Maria, queen of Charles I of England The marriage of Marie and Henry IV was the subject of a celebrated series of paintings by Rubens, now in the Louvre See biographies by Julia Pardoe (3 vols , 1852), A P Lord (1903), and Louis Batiffol (1906, Eng tr , 1908)

Marie Feodorovna (marē' fyô'durŭvnu), 1847–1928, empress of Russia, consort of Alexander III and mother of Nicholas II Originally named Dagmar, she was the daughter of Christian IX of Denmark and the sister of Queen Alexandra of Great Britain She made no attempt to influence the political life in Russia and devoted herself to philanthropic and educational activities, especially the Red Cross Detained (1917) in the Crimea by the revolutionists, she refused an offer of safe conduct by the Germans, who occupied the Crimea in 1918, but returned to Denmark after the armistice of 1919 She spent her last years in Denmark Her letters to Nicholas II are published in *The Secret Letters of the Last Tsar* (Eng tr , 1938)

Marie Galante see GUADELOUPE

Marie Leszczynska (lĕshchĭn'sku), 1703–68, queen of France, wife of Louis XV, and daughter of STANISLAUS I of Poland Married in 1725, she was the mother of 10 children and the grandmother of Louis XVI Her marriage to Louis XV involved France in the War of the Polish Succession.

Marie Louise, 1791–1847, empress of the French (1810–15) and duchess of Parma, Piacenza, and Guastalla (1816–47), daughter of Emperor Francis II She was married (1810) to NAPOLEON I and was the mother of NAPOLEON II When Napoleon I was defeated (1814), she fled to Vienna Her Italian duchies were awarded to her at the Congress of Vienna, she ruled them, ineptly, from Parma, with the assistance of her lover, Graf NEIPPERG, whom she married morganatically in 1821 After his death she married another Austrian count, Bombelles See J A Mahan, *Marie Louise* (1931)

Marienbad (marē'unbät), Czech *Mariánské Lázně* (mar'yanskā läz'nyĕ), spa (pop 6,027), NW Bohemia, Czechoslovakia Its many curative mineral springs and baths, known since the 16th cent , are famous throughout the world

Marienburg (marē'unbōrk) or **Malbork** (mal'bôrk), town (pop 10,017), former East Prussia, on the Nogat river and SE of Danzig It was transferred to Polish administration in 1945 Originally a castle founded (1274) by the TEUTONIC KNIGHTS, it became the seat of their grand master in 1309. Though valiantly defended against the Poles in 1410, Marienburg was sold to Poland in 1457 by mercenaries whose pay was in arrears The town passed to Prussia in the first partition of Poland (1772) The castle, mostly in 14th-century Gothic and restored in the 19th cent , is one of the noblest examples of German secular medieval architecture

Marienwerder (marē"unvĕr'dur) or **Kwidzyn** (kvē' dzĭnyu), town (pop 7,980), former East Prussia, near the Vistula and S of Danzig It was transferred to Polish administration in 1945 Founded (1233) by the Teutonic Knights, Marienwerder developed into one of their leading towns in Prussia A Gothic cathedral and a castle (both 14th cent) remain

Marie Thérèse of Austria (mārē' tĭrĕz'), 1638–83, queen of France, daughter of Philip IV of Spain She was married (1660) to Louis XIV under the terms of the Peace of the PYRENEES Louis neglected her for a succession of mistresses The claims arising from their marriage led to the War of DEVOLUTION and, indirectly, to the War of the SPANISH SUCCESSION

Marietta (mărĕt'u, măr–) **1** Residential city (pop 8,667), co seat of Cobb co , NW Ga , just NW of Atlanta, inc 1834 During the 1850s it flourished as a popular summer resort Marietta is at the foot of Kennesaw Mt , scene of a Union defeat in the Civil War (see ATLANTA CAMPAIGN) A national cemetery here has the graves of thousands of Civil War dead **2** City (pop 14,543), co seat of Washington co , SE Ohio, at the confluence of the Muskingum and Ohio rivers, inc 1800 The first planned, permanent settlement in Ohio and the Old Northwest, it was founded among mound builders' earthworks in 1788 by the OHIO COMPANY OF ASSOCIATES under Manasseh CUTLER and Rufus PUTNAM and named for Marie Antoinette The first houses of the settlement were in a stockaded enclosure called Campus Martius The town grew as a shipbuilding and shipping point for an agricultural area and now has various minor manufactures including chemicals, metal products, and furniture It is the seat of Marietta College (coeducational, 1835) Preserved are General Putnam's house (in the Campus Martius Memorial State Museum) and the old land office, both built about the time of settlement Mound Cemetery, named for a large Indian mound it encloses, has the graves of numerous noted officers of the Revolution In 1938 the city celebrated its sesquicentennial The intercollegiate regatta, formerly rowed on the Hudson river at Poughkeepsie, N Y , was held on the Ohio here for the first time in June, 1950 **3** City (pop 1,837), co seat of Love co , S Okla , near the Red River, in a farm and resort area, settled c 1887 Lake Murray State Park is near by **4** Borough (pop 2,128), SE Pa , on the Susquehanna below Harrisburg, settled 1718, inc 1812 Its manufactures include shoes, textiles, and metal products

Mariette, Auguste Édouard (ōgust' ādwar' marĭĕt'), 1821–81, French Egyptologist On a visit (1850–54) to Egypt to collect Coptic manuscripts for the Louvre, he excavated (1851) the ruins of the Serapeum at Memphis, where he found in subterranean tombs mummies of the sacred Apis bulls He was curator (1854–58) of the Egyptian department at the Louvre and in 1858 returned to Egypt as director of excavations, receiving the title of bey and later of pasha He founded (1863) at Bulak (now part of Cairo) the Egyptian national museum, made notable excavations in the pyramid fields, and uncovered the base of the Great Sphinx at Gizeh He suggested the story for the libretto of the opera *Aida*

Marieville (ma'rēvĭl"), town (pop 2,394), S Que , SE of Montreal near the Richelieu river

Marignano, battle of (marēnyä'nō), in the Italian Wars, 1515, fought by Francis I of France and his Venetian allies against the Swiss Confederates, who then controlled the duchy of Milan It was fought (Sept 13–14) near the town of Marignano (now Melegnano), 10 mi SE of Milan One of the bloodiest engagements in the ITALIAN WARS, it was decided by the timely arrival of Venetian cavalry The Swiss retreated in good order, but evacuated Milan, which was thus lost to their protégé, Massimiliano SFORZA Their military ambitions broken, the Swiss made peace with Francis and negotiated (1516) the "eternal alliance" (see SWITZERLAND) Described as a "battle of giants," Marignano established the superiority of artillery and cavalry over the reputedly invincible Swiss infantry tactics

marigold, any plant of the genus *Tagetes*, mostly Central and South American herbs cultivated elsewhere as garden flowers The two common species of marigold, annuals, are distinguished as African (or Aztec) and French, although both are native to Mexico The African commonly has large yellow or orange flower heads and strong-scented foliage, but a new odorless kind has been developed, the French has smaller flower heads, single or double, usually two tones of yellow or orange and red Other plants sharing the name of marigold include MARSH MARIGOLD and BUR MARIGOLD See also CALENDULA.

marihuana, see MARIJUANA

Mariinsk System (mŭrē'ĭnsk), canal and river system, RSFSR, linking the Baltic and Caspian seas It consists of the Neva river, the Ladoga Canals, the Svir river, the Onega Canal, the Vytegra river, the Mariinsk Canal (5 mi. long, crossing the watershed of the system), the Kovzha river, the Belozersk Canal, and the Shekana river, which empties

at Cherepovets into the RYBINSK RESERVOIR, which is traversed by the Volga. The system is also connected with the Northern DVINA and the White Sea The Mariinsk Canal was built in 1808 and reconstructed after 1940, and the entire waterway was repeatedly reconstructed and deepened It follows the historic Baltic-Volga trade route, in use since the 9th cent

marijuana or **marihuana** (both märēwä'nə, -hwä'-nə, mă-), a drug, the effects of which combine excitation and depression. Marijuana is obtained from the flowering tops of the hemp plant *Cannabis sativa*. Although it was formerly employed empirically in such conditions as migraine and insomnia, it is no longer prescribed In the United States the drug is smoked in cigarettes known as reefers The illicit sale of these is the source of the main supply of the drug to those who have developed the marijuana habit Federal authorities have taken steps to control the cultivation of the hemp See R P. Walton, *Marihuana* (1938).

Marin, John (mərēn'), 1870–, American landscape painter, b Rutherford, N J After a year at Stevens Institute of Technology, he worked for four years as an architectural draughtsman At 28 he entered the Pennsylvania Academy of the Fine Arts and in 1905 went abroad, where he painted and etched and lived precariously for several years In 1909 his work was exhibited at the Stieglitz gallery, New York After that he gained a high reputation as a leading American water-colorist, and his work was widely exhibited and received many awards His pictures, painted for the most part on the Maine coast or at his home in New Jersey, have something of the decorative quality of certain abstract expressionist work Nevertheless they are representational and convey much of the character of the landscape which inspired them Marin's water colors are in leading galleries throughout the United States His work in oils, although less well known, is also noteworthy See monograph by Duncan Phillips (1931), studies by E M Benson (1936) and MacKinley Helm (1948)

Marinduque (mārēndō'kä), island (346 sq mi, pop 79,781), Philippine Islands, between Mindoro and Bondoc Peninsula of S Luzon Coconuts and rice are raised, and gold is mined Marinduque and several offshore islets constitute Marinduque prov (355 sq mi, pop 81,768)

marine biology, study of plants and animals in the sea and their relationship to each other and to the environment Marine organisms may be grouped, according to their mode of life, as nekton, plankton, and benthos Nekton are swimming animals that can migrate freely, e g, adult fishes, whales, and squid Plankton are floating and drifting plants or animals, usually microscopic or very small, whose power of locomotion is feeble or absent Benthos are plants or animals living on the sea bottom and including sessile forms (e g, sponges, oysters, and corals), creeping organisms (e g, crabs and snails), and burrowing animals (e g, many clams and worms) The distribution of organisms depends on the chemical and physical properties of sea water (temperature, salinity, and dissolved nutrients), on the circulation of ocean waters (these carry oxygen to subsurface waters and disperse nutrients, wastes, spores, eggs, larvae, and plankton), and on penetration of light Plants, the ultimate source of food, exist only in the photic zone (to a depth of about 300 ft), where there is sufficient light for photosynthesis Since only about 2 percent of the ocean floor lies in the photic zone, benthic plants are far less abundant than plant plankton, which is distributed in a shallow ocean-wide area. Among the most numerous plant forms are algae, diatoms, radiolaria, and foraminifera Animals exist at all depths but are more numerous near the surface Bacteria are abundant in upper waters and in bottom deposits The scientific study of marine biology dates from the early 19th cent., many seaside laboratories have been established, especially in temperate regions (see OCEANOGRAPHY) The science has contributed to the efficient exploitation of fisheries and to the understanding of problems in the evolution and growth of organisms It is believed that life originated in the sea. See F.W. Flattely and C L Walton, *The Biology of the Sea-Shore* (1922), H U Sverdrup and others, *The Oceans* (1942), R E Coker, *This Great and Wide Sea* (1947)

Marine City, city (pop 3,633), S Mich, on the St Clair river and S of Port Huron, inc as a village, 1865, named Marine City 1867, inc as a city 1887 It is a shipping center for the Great Lakes area Automobile parts are made The Indian lake shore trail crossed this site

marine engine. The earliest engines used for ship propulsion were steam At the present time there are in use the reciprocating STEAM ENGINE, the steam TURBINE, the DIESEL ENGINE, and the gasoline engine (see INTERNAL-COMBUSTION ENGINE) In addition, there is the electric drive, utilizing electricity supplied from generators which are driven by steam turbines or Diesel engines So-called reduction gearing is an important development in marine propulsion, it became necessary when the steam turbine was introduced This arrangement makes it possible to run the turbine at high speed (the best for economy of operation) while the propeller is run at low speed (for highest efficiency). Although several successful installations were made in which turbine and propeller were directly connected, turbine-driven ships were later generally fitted with reduction gearing A heavier type of engine than that used in land operation is employed for marine work, reliability being of paramount importance since repairs at sea are made with danger and difficulty In the SUBMARINE, electric batteries are used when the ship is running submerged

marine engineering see ENGINEERING

marine insurance: see INSURANCE.

marines, troops, usually having ranks comparable to those of the army officers, who serve on board ships of war or in conjunction with naval operation. A British marine corps was established in 1664, and the need for skilled riflemen aboard military vessels brought about intermittent renewal of this organization In 1775 the Continental Congress established the Continental Marines in the American Revolution, and after this organization had disappeared with the end of the war, the U S Congress created (1798) its successor, the present U S Marine Corps The U S Marine Corps played a distinguished role on the Barbary coast and has been prominent in all major wars in which the U S participated After the beginning of the 20th cent, U S marines were often sent to quell disturbances in several Central American and Caribbean countries—Panama, Honduras, Nicaragua, Haiti, and the Dominican Republic In the Second World War the marines played a cardinal role in the invasion of several Pacific islands held by the Japanese Under the organization (1947) of the National Military Establishment, the U S Marine Corps operates as an integral part of the U S Navy, but is a complete operating unit within itself and has all military arms except cavalry See F O Hough, *Island War* (1947); C L Lewis, *Famous American Marines* (1950)

Marinette (mărĭnĕt'), city (pop 14,183), co seat of Marinette co, NE Wis, on Green Bay at the mouth of the Menominee, inc 1887 It is across the river from Menominee, Mich, a bridge connects them At Marinette the fur trade, begun c 1795, gave way to lumbering, which throve in the late 19th cent It is now a port of entry, has a fishing fleet, and makes paper and dairy products

Marinetti, Filippo Tommaso (fēlē'pō tōmmä'zō mārēnĕt'tē), 1876–1944, Italian poet, novelist, and critic He is best known as the founder (1909) of FUTURISM, on which he wrote and lectured, and as an advocate of Fascism, he was one of the first members of the Fascist party He wrote in both French and Italian, among his works are *Le Roi Bombance* (1905) and *Mafarka le futuriste* (1909) For translations of Marinetti's verse, see *Poet Lore*, Vol XXVI (1915) See also H B Samuel, *Modernities* (1914)

Marini, Giambattista (jäm"bät-tē'stä märē'nē), or **Giovanni Battista Marino** (jōvän'nē bät-tē'sta märē'nō), 1569–1625, Italian poet His florid, bombastic style, called *Marinismo*, was somewhat akin to euphuism and was an equally bad influence on the literature of his day His works include *Adone* (1623), a long descriptive poem, and *La strage degli innocenti* [the slaughter of the innocents] (1632)

Marinus see JONAH, RABBI

Mario (mär'yō), 1810–83, stage name of an Italian tenor, who came of the noble family of Candia He went to Paris in 1836 as an officer in the Piedmontese guard, but studied singing at the Paris Conservatoire, making his debut at the Paris Opéra in 1838 He sang with great success in Paris, London, and St Petersburg, appearing often with his wife, Giulia Grisi He was possessed of an extremely beautiful voice, which, united with personal grace and charm, made him the idol of his public He retired in 1867

Marion, Francis, c 1732–1795, American partisan leader in the Revolution, b near Georgetown, S C He was a planter and Indian fighter before joining (1775) William Moultrie's regiment at the start of the American Revolution In 1779 he fought under Benjamin Lincoln at Savannah and escaped (1780) capture at Charleston by being on sick leave Marion organized a cavalry troop (1780) which after the American defeat at Camden in the Carolina campaign constituted the chief colonial force in South Carolina Now began the guerrilla warfare that made Marion famous He broke the British lines of communication, captured scouting and foraging parties, and intimidated the Loyalists When confronted by a formidable force, Marion would retire to the swamps, only to reappear at some distant point to strike at the enemy For this reason he was known as the Swamp Fox When Nathanael Greene had succeeded in ousting the British from North Carolina (see CAROLINA CAMPAIGN), his lieutenant, Light-Horse Harry Lee brought reinforcements to Marion, and they took part together in several battles, notably that at Eutaw Springs (Sept 8, 1781) After the war, Marion was elected (1781, 1782, 1784) to the South Carolina senate, where he advocated a lenient policy toward the Loyalists There are two early biographies by Peter Horry and M L Weems (1805) and W G Simms (1844)

Marion. **1** City (pop 2,382), co seat of Perry co, W central Ala, WNW of Montgomery near the Cahaba, in a farm area, settled 1817. Judson College (Baptist, for women, 1839) and a military academy are here Near by is a U S fish hatchery **2** City (pop 9,251), co seat of Williamson co, S Ill, NNE of Cairo, in a fruit and coal area, inc 1841 It is a mining and shipping center The state's first county fair was held here in 1856. Robert Ingersoll and John A. Logan lived here It is the seat of a veterans' hospital and home **3** City (pop 26,767), co seat of Grant co, E central Ind, NNE of Indianapolis, settled 1826 It is a farm trade center and an industrial center near gas and oil fields Its manufactures include glass, electric-lighting devices, automobile parts, and beer. It has a large U S veterans' hospital Marion College is here The city boomed with the discovery of gas and oil c 1880 **4** City (pop 4,721), E central Iowa, just NE of Cedar Rapids, settled 1839, inc 1865 It is a railroad division point with repair shops and freight yards **5** City (pop. 2,086), co seat of Marion co, E central Kansas, on the Cottonwood and NNE of Wichita, in a farming and poultry-raising region, settled 1860, laid out 1866, inc 1875 **6** City (pop 2,163), co seat of Crittenden co, W Ky, near the Ohio NE of Paducah, inc 1844 It is a shipping point for fluor spar **7** Resort town (pop 2,030), SE Mass, on Buzzards Bay E of New Bedford, set off from Rochester 1852 **8** Textile-mill town (pop 2,889), co seat of McDowell co, W N C, in the Blue Ridge ENE of Asheville To the north are the Linville Caverns, with interesting limestone formations **9** City (pop 30,817), co seat of Marion co, central Ohio, N of Columbus, laid out 1821, inc 1830 Rail, industrial, and agricultural center, it is noted for its production of power shovels and dredges Conveying, farm, and refrigeration machinery are also important products There are limestone quarries The home of Warren G Harding is preserved as a museum **10** Town (pop 5,746), co seat of Marion co, E S C, E of Florence, in a lumbering and farming area, founded c 1800 There are cotton-processing plants Several old buildings remain **11** Town (pop 5,177), extreme SW Va, in the Holston river valley with Walker Mt on the west, inc 1832 Lumber and grain are processed, and there are limestone quarries and textile mills The courthouse of Smyth co is here, as are a junior college and a state hospital for the insane Near by are a state park, White Top Mt, scene of an annual music festival, and Mt Rogers **12** City (pop 1,034), central Wis, NW of Appleton and on the Pigeon river, settled 1878, inc. as a village, 1898, as a city 1939 Cheese is made

Marion, Fort see SAINT AUGUSTINE, Fla

marionette see PUPPET

Marion Heights, borough (pop 2,068), E central Pa, SE of Sunbury

Marionville, city (pop 1,127), SW Mo, SW of Springfield, in a farm area, laid out 1854

Mariotte, Edme (ĕd'mŭ märyōt'), 1620?–1684, French physicist His *De la nature de l'air* (1676) stated the theory now known as Boyle's law (sometimes called Mariotte's law in France) He also studied hydrodynamics, barometry, and color and discovered the *macula lutea*, the yellow spot of the retina of the eye

Mariposa (mă"rĭpō'zu), unincorporated town (pop 628), co seat of Mariposa co, central California A boom town of the Mother Lode in the gold rush, today it is a tourist center for near-by Yosemite National Park Its courthouse (1854) is said to be the oldest in the state

Mariposa lily (mărŭpō'su, -sū), bulbous plant of the genus *Calochortus*, of the lily family, with tulip-like flowers of white, yellow, red, or lilac It is native to California, Utah, and neighboring states One species, the sego lily, which has an edible bulb, is the state flower of Utah The Mariposa lily is also called star tulip, butterfly tulip, and globe tulip

Maris (mā'rĭs), three Dutch painters, who were brothers **Jacob** or **Jakob Maris** (yä'kōp), 1837–99, the most celebrated, painted domestic interiors, but is particularly famous for his vigorous Dutch landscapes in oil and water color Rich in color and large and simple in composition and handling, these paintings are among the finest of The Hague school They usually depict the rich countryside under luminous gray skies The Rijks Museum has a notable collection, including *The Shell Gatherers* and *View of a Dutch Town* Other works are *The Bridge* (Frick Coll, New York), *Canal in Holland* (Metropolitan Mus), and *View of a Village* (Dordrecht) **Matthew or Matthijs Maris** (mätis'), 1839–1917, genre and landscape painter and etcher, worked with his brother Jacob and later settled in London He developed a vein of mysticism in his later work exemplified in such paintings as *Reverie* (Metropolitan Mus) and *The Bride* (The Hague) His work is rare and highly prized **William or Willem Maris** (vĭl'lŭm), 1844–1910, achieved an early reputation for his bright landscapes, usually with

cattle. The Rijks Museum has six, including *Cows beside a Ditch*.

Marisco, Adam de: see MARSH, ADAM.

Marissa, village (pop 1,657), SW Ill., SE of St Louis, in a farm area, inc 1882.

Maritain, Jacques (shäk' märētē'), 1882–, French neo-Thomist theologian and philosopher. He came to the United States in 1940, teaching in several universities until 1945, when he was appointed French ambassador to the Vatican. He resigned in 1948 to teach philosophy at Princeton Dissatisfied with the values of his Protestant upbringing and influenced strongly by Léon Bloy and Henri Bergson, Maritain joined the Roman Catholic Church in 1906 and became interested in the works of St. Thomas Aquinas His writings have been an integration and development of Thomism for its application to all phases of living. This Neo-Thomistic doctrine is sometimes called existentialism The development of his Thomistic principles can be most clearly found in *Eléments de philosophie* (1923–30, Eng. tr , *An Introduction to Philosophy*, 1930–37) and *Humanisme intégral* (1936, Eng tr , *True Humanism*, 1938) and summarized in *Confession de foi* (1941, first published in English in *I Believe*, ed by Clifton Fadiman, 1939) *Art et scolastique* (1920; Eng tr , *Art and Scholasticism*, 1930) is the application of Thomism to the field of aesthetics and demonstrates his keen perception of modern French literature *Christianisme et démocratie* (1943, Eng. tr , *Christianity and Democracy*, 1944) contains his political philosophy

Maritime Commission, United States, established (1936) by act of the U S Congress The U S Maritime Commission—composed of five members appointed by the President for six-year terms—replaced the U S Shipping Board, was vested with all its functions, and was given added jurisdiction The commission was designed to develop a merchant fleet capable of serving as a naval and military auxiliary in time of war or national emergency and to provide shipping service on all routes essential for maintaining domestic and foreign waterborne commerce at all times Thus, the commission was charged with directing the construction of well-equipped, safe, and suitable merchant vessels to be manned by a trained and efficient citizen personnel, with setting the size and terms of subsidies granted to private shipping companies, with establishing regulations for wages and working conditions of seamen, with ascertaining foreign and American shipbuilding and operating costs, and with transfer, sale, and disposal of war-built merchant ships Under the direction of Emory S LAND, the U S Maritime Commission's program during the Second World War resulted in the completion of the largest merchant fleet in the history of the United States

maritime law, system of law concerning navigation and overseas commerce Because ships sail from nation to nation over seas no nation owns, there is obvious reason why nations should seek agreement over customs relating to shipping From such agreements between nations has grown a body of customs and usages which began in ancient days. This is the basis for maritime law. It was, in origin, law of customs only, but it felt the influence of the Roman civil law In the later Middle Ages, when traders were more and more venturous in crossing the waters, the rules of the sea were compiled into widely recognized collections such as the *Consolato del mare* [consulate of the sea], *The Rolls of Oléron* or *The Law of Oléron*, and the English *Black Book of the Admiralty* In England, special courts were set up to administer the law under the high court of admiralty The procedure differed from that of the common-law courts, and because of increasing opposition to the civil law, the jurisdiction of the admiralty court was restricted more and more. The Judicature Act of 1873 abolished it altogether, assigning its functions to the high court of justice. In the United States the Constitution gives the Federal courts authority in "all cases of admiralty and maritime jurisdiction " This jurisdiction covers all maritime contracts, torts, injuries or offenses, and questions of PRIZE. In cases of collision at sea, the parties may under the Judiciary Act of 1789 bring suits at common law, otherwise all maritime cases come to the Federal courts. The jurisdiction extends to all navigable waters of the United States. Though maritime law is general in character, only those parts which determine the relations among nations—particularly in war at sea, such questions as belligerency and neutrality—are part of the international law proper See ADMIRALTY, BLOCKADE, PIRACY, PRIVATEERING; SEAS, FREEDOM OF THE; LONDON, DECLARATION OF; PARIS, DECLARATION OF

Maritime Provinces, term applied to NOVA SCOTIA, NEW BRUNSWICK, and PRINCE EDWARD ISLAND, which before the confederation (1867) were politically distinct from Canada proper. Much of the economic life of the Maritime Provs. is dependent upon the sea, particularly fishing and commerce, a fact which has frequently made them oppose the rest of Canada in political questions involving these subjects

Maritime Territory, Rus. *Primorskı Krai* (prēmôr'-skĭ krī'), administrative division (64,900 sq. mi.; 1946 estimated pop. 1,475,000), RSFSR, between Manchuria in the west and the Sea of Japan in the east. VLADIVOSTOK is the capital. The coastal mountain range is densely wooded and rich in minerals (lead, zinc, tin, and molybdenum) Along the Manchurian border, formed largely by the Ussuri river, extends an agricultural plain, where most of the population (mostly Russian and Ukrainian, with Korean, Chinese, and Mongol minorities) is concentrated The region has dry winters and rainy summers. There are important fisheries along the coast and coal mines in the southern section, notably at Suchan and Artem The Trans-Siberian RR system passes through the western and southern section of the territory. For history, see FAR EASTERN TERRITORY

Maritsa (märē'tsä), river, c 300 mi. long, SE Europe It rises in Bulgaria SE of Sofia and flows SE past Pasardsik and Plovdiv and, shortly after leaving Bulgaria, turns S at Adrianople to join the Aegean Sea From Adrianople to its mouth it forms the Greco-Turkish border

Maritzburg, Union of South Africa. see PIETERMARITZBURG

Mariupol, Ukraine see ZHDANOV

Marius, Caius, c.155 B C –86 B.C , Roman general He was a plebeian He became tribune (119 B.C) and praetor (115 B C) and was seven times consul He served under Scipio Africanus Minor at Numantia and under Quintus Metellus against Jugurtha Later he was a victorious commander against Jugurtha In 102 B C he defeated the Teutones at Aix, and the next year he bested the Cimbri at Vercelli Rivalry with Sulla over the command against Mithridates VI of Pontus turned into civil war, Sulla won, and Marius fled Rome When Sulla went off to fight, Marius, now allied with the consul Cinna, returned and butchered his opponents (88 B.C) Marius had no political program, but the enmity of the senate and of Sulla gained him a reputation as a friend of the people Thus had important influence on the early career of Julius Caesar, who was the nephew of Julia, Marius' wife. See F W Robinson, *Marius, Sulla, and Glaucia* (1912)

Marivaux, Pierre Carlet de Chamblain de (pyĕr' karlā' dŭ shäblē' dŭ märēvō'), 1688–1763, French dramatist and novelist His most successful works were probably the love comedies *Le Jeu de l'amour et du hasard* (1730, Eng tr , *Love in Livery*) and *Le Legs* (1736, Eng tr , *The Legacy*, 1915) and the unfinished novels of middle-class life *La Vie de Marianne* (1731–41) and *Le Paysan parvenu* (1735–36). See Arthur Tilley, *Three French Dramatists* (1933)

marjoram: see SWEET MARJORAM

Mark, Saint [Latin *Marcus*], early Christian Since the 2d cent, he has been regarded as the author of the second Gospel (see MARK, GOSPEL ACCORDING TO SAINT) His full name was John Mark He was a friend of St Peter, who furnished many of the evangelist's facts, and for a time he accompanied St Paul His mother, named Mary, is thought to have owned the house where the Last Supper was eaten, and St Mark is generally said to have been the "young man who ran away naked " Mark 14 51–52, Acts 12 12, 25, 13 5, 15 37–39, Col 4.10, 11, Philemon 24, 2 Tim 4 11, 1 Peter 5 13. According to tradition he was first bishop of Alexandria—the liturgy of that church is called the Liturgy of St Mark St Mark is the patron of Venice and of its famous cathedral, where his relics are shown His symbol is a lion, hence the Lion of St. Mark at Venice Feast April 25

Mark, Gospel according to Saint, second book of the New Testament This is the shortest and simplest of the Gospels, and many critics hold it was the first composed, A D c 70. The authorship of St Mark has been accepted since the 2d cent , the matter probably came from St. Peter. The Gospel may be divided into four parts beginning of the ministry of Jesus (1 1-13), his first two years of preaching (1 14-6 56), his third year (7 1-13), the passion and resurrection (14-16) St. Mark is the only Gospel which has no passage unparalleled in another Gospel. See SYNOPTIC GOSPELS; GOSPEL, MIRACLE, NEW TESTAMENT, PARABLE.

mark, frontier province see MARCH

mark. According to a theory formulated in the 19th cent by G L von MAURER and others, the name mark applied to the free village community which was supposed to have been the unit of primitive German social life The mark was, according to that theory, composed of free men in voluntary association, holding lands communally, and governed by a chief elected for a short term. The theory was expanded by other scholars, among them E. A FREEMAN, but it later was bitterly attacked by FUSTEL DE COULANGES and SEEBOHM Though controversy continues, it has become generally accepted that Roman as well as Germanic institutions influenced the formation of the medieval MANORIAL SYSTEM and that there never existed as idyllic a democratic society as depicted by Maurer. The word *mark* has generally fallen into disuse. See also VILLAGE

Marked Tree, cotton city (pop. 2,685), NE Ark., at the junction of the St Francis and Little rivers; settled c.1870. An important pellagra experiment was made here after the 1927 flood.

Marken (mär'kŭn), small island in the Ijsselmeer, North Holland prov , Netherlands, NE of Amsterdam. It is visited by tourists because of the survival of its colorful local traditions and costumes. Marken was linked to the mainland until the 13th cent It was a fishing center until the construction of the Ijsselmeer dam.

Market Drayton, urban district (pop. 4,749), Shropshire, England, on the Tern and NE of Shrewsbury, in a farming region. It has a 12th-century church and a 16th-century grammar school. At Blore Heath to the east a battle of the Wars of the Roses was fought (1459). Lord Clive was born near here Market Drayton is part of Drayton in Hales ecclesiastical parish.

market gardening, branch of HORTICULTURE devoted to the production of large quantities of vegetables on comparatively small areas near the towns or cities which they supply, usually on lands having high values. Intensive cultivation is practiced, including the planting of successive crops and heavy fertilising. With improvement in transportation methods, it has been possible to cultivate market gardens at greater distances from the market cities. See also TRUCK FARMING

Market Harborough, urban district (pop 9,312), Leicestershire, England, SE of Leicester, on the Welland and on the Grand Union Canal The town is a fox-hunting center and manufactures textiles, electrical equipment, rubber goods, and farm implements The Church of St Dionysius was begun in the 14th cent

marketing, in economics, part of the process of the production and exchange of goods. In popular usage it is defined as the distribution and sale of goods, the word *distribution* being understood in a sense different from the technical economic one Marketing then includes the activities of all those who are engaged in the transfer of goods from producer to consumer—not only those who buy and sell directly, wholesale and retail, but those who warehouse, grade, transport, insure, finance, or otherwise have a hand in the process of transfer In a capitalistic economy, where all production is for a market, these activities are of first importance, it is estimated that more than 50 per cent of the price paid by the ultimate consumer is made up of the cost of marketing Where production is for use, as in subsistence farming, the feudal manor, or the communistic group, there is little need for exchange of goods In simple societies that have not passed beyond the agricultural stage there is little division of labor and likewise little need for the exchange of the products of one kind of labor for those of another Before caravan travel and navigation developed, there could be little exchange of the products of one region for those of another Trade by sea did flourish in the Mediterranean in ancient times and was revived in Europe in the later Middle Ages The village fair or market, the itinerant merchant or peddler, and the shop where customers could have such goods as shoes and furniture made to order were features of marketing in rural Europe The general store superseded the public market in England, and it was an institution of the American country town until recent times In the United States in the 19th cent the typical marketing setup was one in which wholesalers assembled the products of various manufacturers or producers and sold them to jobbers and retailers A picturesque figure in this setup was the "drummer" or traveling salesman, who, after the advent of a network of railroads, was able to penetrate to every town and hamlet in the country, calling on retailers and receiving their orders for goods The independent STORE, operated by its owner, was (and remains) the chief retail marketing agency, but in the 20th cent it met stiff competition from chain stores, which were organized for the mass distribution of goods and enjoyed the advantages of large-scale operation The advent of the motor truck and paved highways, making possible the prompt delivery of lots of goods of any quantity, still further modified the marketing setup Manufacturers, such as those of automobiles, formed their own wholesale departments and dealt directly with retailers Independent stores organized their own wholesale agencies to supply them with goods Wholesale houses organized voluntary chains as an outlet for their wares Farmers sold their products through wholesale cooperatives of their own. The automobile widened the area within which consumers could make retail purchases. Commodity exchanges, such as those of grain and cotton, enabled businessmen to buy and sell commodities for both immediate and future delivery. Methods of merchandising were changed to attract customers. The one-price system (said to have been introduced by A T. Stewart in New York in 1841) saved the time of salesmen, previously wasted in haggling, and promoted faith in the integrity of the merchant The coming of the electric light enabled even the largest department store to display its ware to advantage Advertising created a nation-wide market for many goods, especially trade-marked and

labeled goods. The number of customers, especially for durable goods, has been greatly increased by the practice of installment selling. It is possible to speak of the marketing of services as well as of goods or commodities Sometimes a service, like that of a barber, repairman, or physician is marketed through the same act that produces it. Personal services may, however, also be disposed of by intermediaries, such as employment agencies, booking agents for concert or theatrical performers, and the like. See G. B. Hotchkiss, *Milestones of Marketing* (1939).

Markham, Sir Clements Robert, 1830–1916, English geographer and writer He entered the navy and as a midshipman served under Capt. Horatio Austin in the expedition (1850–51) to the arctic to search for Sir John Franklin He was in charge (1867–77) of the geographical work of the India Office and is credited with the introduction of cinchona cultivation into India from Peru He joined the Royal Geographical Society in 1854 and later served (1893–1905) as its president Secretary (1858–86) and president (1889–1909) of the Hakluyt Society, he edited and translated for it some 20 volumes of early travels His own 50 works include accounts of his many travels and a number of biographies, chiefly of explorers and travelers. He was an outstanding authority on Inca civilization and wrote *The Incas of Peru* (1910) and edited early accounts of the Inca. See biography by Sir Albert H Markham (1917).

Markham, Edwin, 1852–1940, American poet, b Oregon City, Oregon He lived in obscurity in California until 1899, when he wrote "The Man with the Hoe," a poem which brought him instant fame and on which his entire reputation rests. After moving to New York he wrote *Lincoln and Other Poems* (1901), *The Gates of Paradise* (1920), and "The Ballad of the Gallows Bird" (1926) See biography by W L Stidger (1933)

Markham, Gervase or **Jervase**, 1568–1637, English dramatist, poet, and writer on horses and English country life His plays include the *Tragedie of Sir Richard Grinvile* (1595) and a comedy, *The Dumbe Knight* (1608) Other works are *Cavelarice, or, The English Horseman* (1607) and *A Way to Get Wealth* (1631) J H H Lyon, in an interesting study (1919), attributes the famous *Newe Metamorphoses* (c 1600–1615) to Markham's pen

Markham, village (pop 1,204), S Ont , on the Rouge river and NNE of Toronto It has flour milling, lumbering, and seed processing

Markham, village (pop 1,388), NE Ill , near Chicago, inc 1925

Markiewicz, Constance Georgine, Countess (markyā'vĭts), 1884–1927, Irish Sinn Fein politician and patriot, daughter of Sir Henry Gore-Booth For her militant part in the Dublin rebellion of 1916 she was sentenced to death, but was released in 1917 She was elected to Parliament, but refused to serve She was a member of the Sinn Fein parliament (1918–22) and of the Dáil Éireann (1923–27) W B Yeats mentions her in his poems about the Irish rebellion See her *Prison Letters* (1934), biography by Sean O'Faolán (1934)

Markland, village (1945 pop 393), SE N F, near St John's A government agricultural resettlement project for unemployed was begun here in 1934

Marks, town (pop 1,818), co seat of Quitman co , NW Miss , on the Coldwater river and S of Memphis, Tenn , in a cotton area, inc 1906

Marksville, town (pop 1,811), parish seat of Avoyelles parish, central La , near the Red River SE of Alexandria, settled in the late 18th cent by Acadians An Indian park containing ancient mounds and relics is near by

marl, a soil, essentially clay mixed with carbonate of lime, highly valued as a dressing or fertilizer It crumbles rapidly and easily Marl in which the lime is in the form of invertebrate shells is called shell marl The term is loosely used for a variety of soils low in lime content, e g , the greensand marl of New Jersey, which is characterized chiefly by its richness in potash Marling of soil tends to lighten it, to correct acidity, and to promote nitrification.

Marlboro (märl'bûrō) 1 City (pop 15,154), E Mass , W of Boston, settled on the site of an Indian village, inc as a town 1660, as a city 1890 It was almost destroyed (1676) in King Philip's War Shoes are its chief manufacture 2 Mill town (pop 1,431), SW N H , SE of Keene, granted 1752, inc 1776

Marlborough, John Churchill, 1st duke of (märl'bûrŭ, môl'–), 1650–1722, English general and statesman, one of the great military commanders of history Born in Devonshire and educated at St Paul's, he entered the army and rose in the service He gained the patronage of the duke of York (later James II) and married (1683) Sarah Jennings (1660–1744), attendant and friend of Princess (later Queen) Anne Under James II he was active in crushing the rebellion of the duke of Monmouth (1685) and was raised to the peerage and made a major general. Nevertheless, fearing the religious policies of the Catholic king, he corresponded with William of Orange, supported him against James in the Glorious Revolution of 1688, and was made (1689) earl of Marlborough at his coronation as William III. Marlborough was successful as a military commander in 1689 and 1690, but like many others in those uncertain times, he had secret communication with James and the Jacobites, and suspicion of his intrigues put him out of favor with William from 1692 to 1698 It was in the reign of Anne that he reached the fullness of his power. His military genius and remarkable gift for handling men were given wide scope in the War of the Spanish Succession, he and that other military genius, Prince Eugene of Savoy, together won such victories as Blenheim (1704), Oudenarde (1708), and Malplaquet (1709), and he alone is credited with Ramillies (1706) and countless other triumphs Marlborough, made a duke in 1702, was also in the political ascendancy. The duchess, powerful as mistress of the robes, had enormous influence with her friend, the queen. Marlborough and his friend Godolphin, though earlier bound by personal and religious ties to the Tories, turned to the Whigs, who favored the war while the Tories opposed it They secured the dismissal of Robert Harley in 1708 and were paramount in politics The duchess, however, quarreled with Anne, who had come under the influence of Mrs Masham, the war was costly, and Marlborough was accused of prolonging it for his personal glory; the prosecution of Doctor Sacheverell was unpopular, and in 1710 the Whigs fell, yielding power to Harley and Henry St John The duke and duchess were dismissed (1711) from office, and he was charged with misappropriating public funds, but was not convicted He went to the Continent, returned to England on the accession of George I in 1714, and was given chief command of the army again, but took little part in public affairs A great strategist, a shrewd diplomat, and a courtier of unimpeachable personal habits and financial honesty, he has been criticised for inordinate love of wealth and power and for unstable loyalties in politics See the duke's letters and dispatches (ed by Sir George Murray, 1845), exhaustive biographies of him by W Coxe (1820) and Winston L S Churchill (1933–38) and a short one by M P Ashley (1939), studies of his military career by C T Atkinson (1921) and Frank Taylor (1921), Elbridge Colby, *Masters of Mobile Warfare* (1944) See also memoirs and letters of his wife in various volumes and biographies of her by Frank Chancellor (1932) and Kathleen Campbell (1932)

Marlborough (môrl'burŭ), municipal borough (1931 pop 3,492, 1943 estimated pop 4,976), Wiltshire, England, near Savernake Forest Now a market town, it was long an important station on the road from London to Bath It is chiefly known for its public school, Marlborough College, which was built in 1843 on the site of a historic castle William Morris went to school here In the school grounds is a prehistoric mound which according to tradition contains the body of Merlin, of Arthurian legend

Marlborough House, in London, on Pall Mall near St James's Palace, built 1710 by Wren for the duchess of Marlborough It has been the residence of Queen Adelaide, of Edward VII (1862–1901), of George V (1901–10), who was born here, of Queen Alexandra, after the death of Edward VII, and of Queen Mary, after the death of George V

Marlette, village (pop 1,161), S Mich , NE of Flint, in a farm and dairy region, inc 1881

Marlin, city (pop 6,542), co seat of Falls co , E central Texas, SE of Waco and near the Brazos, founded 1850 With important mineral wells, it is a health resort Many hospitals (including a state institution for crippled children), bottling works, and plants processing mineral crystals are here Bricks are made from local clay

Marlinsky, Cossack: see Bestuzhev, Aleksandr Aleksandrovich

Marlinton, town (pop 1,644), co seat of Pocahontas co , S W Va , on the Greenbrier and S&W of Elkins, settled 1749 The town, in a rich wild-game belt, is a hunters' center A state fish hatchery and a tannery are here

Marlow, city (pop 2,899), SW Okla , SW of Oklahoma City, in a farming area; settled 1892

Marlowe, Christopher, 1564–93, English dramatist and poet, b Canterbury, educated at Cambridge (B A , 1584, M A , 1587) He probably lived in or near London and was co-leader of the Marlowe-Ralegh circle, whose iconoclastic views he unwisely voiced In 1593 the playwright Thomas Kyd, with whom Marlowe had at one time lived, supported charges that Marlowe held and disseminated heretical and lewd religious and moral principles, before Marlowe could appear for questioning, he was "stabd with a dagger" by Ingram Frizer, a drinking companion, in a tavern. Although a coroner's jury certified that the assailant acted in self-defense, some scholars feel that the murder may have resulted from a definite plot. As an Elizabethan dramatist, Marlowe was second only to Shakspere His most important plays were three tragedies, *Tamburlaine* (c 1587), *Dr Faustus* (c 1588), and *The Jew of Malta* (c 1589), and a history, *Edward II* (c 1592) He collaborated with Thomas Nashe in *Dido, Queen of Carthage* (c 1593), and some authorities detect traces of his work in the Shakspere canon, notably in *Titus Andronicus* and *King Henry VI*. Of his nondramatic pieces, the best known are *Hero and Leander* (1598), which was finished by George Chapman, and "The Passionate Shepherd to His Love," the beautiful lyric which begins, "Come live with me and be my love" He also translated the first book of Lucan (1600) Marlowe was a power in the Elizabethan literary Renaissance, in his dramas he discarded Senecan imitations and established blank verse as an appropriate vehicle of expression Ben Jonson, in his poem to Shakspere's memory, immortalized the grandeur of Marlowe's verse with the phrase "Marlowe's mighty line" The name was spelled variously (Marlen, Marly, Marlyn, Morley, etc). See his *Life and Works* (ed. by R H Case, 1930–33); biographies by F. S. Boas (1940), J. E Bakeless (2 vols , 1942), and P H. Kocher (1946)

Marlowe, Julia, 1865?–, American actress, b. England She came to the United States with her parents in 1871 In 1887, dropping her real name, Sarah Frances Frost, she made her New York debut in *Ingomar* Her great reputation was won by her Shakesperian roles, especially Juliet, which she later played opposite her second husband, E H Sothern See biography by C E Russell (1926)

Marly-le-Roi (märlē'-lŭ-rwä'), town (pop 2,840), Seine-et-Oise dept , N France, on the Seine near Versailles The château built here for Louis XIV by J H Mansart was destroyed after the French Revolution Near by there was built in 1684 a huge hydraulic engine, the *machine de Marly*, which supplied the fountains of Versailles Considered one of the wonders of the world, it was in use until 1804.

Marmaduke, John Sappington, 1833–87, Confederate general, b Arrow Rock, Mo , grad West Point, 1857 He served in the expedition against the Mormons and in Western army posts At the outbreak of the Civil War, he resigned from the army, served for a time with the Missouri militia, and then accepted a commission in the Confederate army After varied service, he distinguished himself at Shiloh (1862) and was sent to Arkansas and Missouri as brigadier general Commanding the cavalry on Sterling Price's raid into Missouri (1864) he was captured at Marais des Cygnes and was held prisoner until the end of the war Marmaduke was elected governor of Missouri in 1884

marmalade (mär'mulād) [Port ,=a quince preparation], thick preserve of fruit pulp, originally made from quinces (*marmelos*) and known in England from the 15th cent True marmalade should have a jellylike consistency and a slightly bitter flavor, caused by including the rind of some tart fruit such as the Seville or bitter orange or the grapefruit Orange marmalade is made commercially on a large scale The name is also applied to various jams made tart by the addition of lemon juice or other acid ingredients

Marmara or **Marmora** (both mär'mûrŭ), anc *Proconnesus*, small island (pop 3,896), Turkey, in the Sea of Marmara It gives its name, which derives from its extensive marble quarries, to the Sea of Marmara

Marmara, Sea of, or **Sea of Marmora,** area c 4,300 sq mi , between Europe in the north and Asia in the south Its shores belong entirely to Turkey The Sea of Marmara is connected, on the east, with the Black Sea through the Bosporus and, on the west, with the Aegean Sea (part of the Mediterranean) through the Dardanelles Istanbul (Constantinople) is situated on the entrance of the Bosporus into the Sea of Marmara In ancient times the sea was known as Propontis [Gr ,=fore-sea] from its relative position to the Black Sea Its modern name is derived from the island of Marmara

Marmet, town (pop 1,814), S W Va , on the Kanawha river and SSE of Charleston, inc 1921

Mármol, José (hōsā' mär'mōl), 1817–71, Argentine writer of the romantic school His invectives against Juan Manuel de Rosas earned him the nickname "the poetic hangman of Rosas" He was imprisoned by Rosas in 1839 and later fled to Montevideo, where he lived until the overthrow of the dictator His fame rests primarily upon his novel *Amalia* (1851–55, Eng tr , 1919), which, despite its stilted style, presents a powerful description of the tyranny of Rosas He had, however, a true lyric gift His two romantic dramas, *El poeta* (1842) and *El cruzado* (1851), are of secondary importance He also wrote *El peregrino* [the pilgrim] (1847), a long poem in imitation of Byron's *Childe Harold's Pilgrimage* See Stuart Cuthbertson, *The Poetry of José Mármol* (1935).

Marmolada see Dolomites

Marmont, Auguste Frédéric Louis Viesse de (ōgüst' frādārēk' lwē' vyĕs' du marmō'), 1774–1852, marshal of France He fought in the Napoleonic Wars, winning distinction especially at Wagram (1809), and was made duke of Ragusa and governor of Illyria He succeeded Masséna in the Peninsular War and held the English in check until his defeat at Salamanca (1812). In command of the defense of Paris in 1814, he signed a convention with the allies which prevented Napoleon from retaking Paris. During the Restoration he supported Charles X, and he left France when Charles was

overthrown in 1830. Marmont wrote his memoirs (9 vols, 1856)

Marmontel, Jean François (shă' frăswă' märmôtĕl'), 1723–99, French critic, dramatist, and story writer, contributor to the *Encyclopédie* Educated by the Jesuits, he taught in Jesuit schools until 1745, when, encouraged by Voltaire, he went to Paris His works, popular in his day, include *Denys le tyran* (1748), a tragedy; *Contes moraux*, which appeared in the *Mercure* between 1761 and 1786, *Bélisaire* (1767), a plea for tolerance, and his *Mémoires* (4 vols, 1804), written for his children. He became a member of the French Academy in 1763.

Marmora (mär'mûrù), village (pop 1,106), S Ont, NE of Peterborough, in a lumbering, mining, and marble-quarrying district.

Marmora: see MARMARA

marmoset (mär'mŭsĕt), small monkey of Central and South America. It is an arboreal animal about the size of a squirrel, with a long, hairy tail and clawed feet The tamarin is of the same family Both are prized as pets but are difficult to keep healthy and require a warm climate. They feed on insects, fruits, and eggs

marmot (mär'mŭt), rodent allied to the squirrel. Marmots have stout bodies, rounded ears, and strong claws for digging The coarse fur is usually brown on the upper parts, often with white-tipped hairs They are terrestrial, gregarious animals, abroad during daylight, living in burrows and hibernating during the winter Marmots whistle a shrill warning when danger threatens The best-known American marmot is the WOODCHUCK From S British Columbia to parts of the W United States the yellow-bellied marmot inhabits rocky ledges and hillsides. The hoary marmot is found from Alaska to the NW United States and in Siberia In high mountains of Europe lives the Alpine marmot. The bobac is found from the central part of Europe to central Asia Most of the marmot skins used in the fur trade are from Old World animals

Marmousets (märmōōzā') [Fr, =little fellows], ministers of CHARLES V of France, so called by the royal princes in contempt of their humble origin CLISSON was the most prominent among them. CHARLES VI recalled them on reaching his majority, but they fell from power after the outbreak of the king's madness (1392) Their administration was, on the whole, beneficent

Marne (märn), department (3,168 sq mi, pop. 386,926), NE France, traversed by the Marne river It is a part of CHAMPAGNE, with Rheims and Épernay the centers of the wine industry Châlons-sur-Marne is the departmental capital

Marne, river, 325 mi long, rising in NE France in the Langres Plateau and flowing W through CHAMPAGNE past Châlons, Épernay, and Château-Thierry to join the Seine near Paris

Marne, battle of the. Two important battles of the First World War take their name from the Marne river. In the first (Sept 6–9, 1914) the German advance on Paris seemed assured when, under circumstances which remain controversial, it was called off on the direct order of Emperor William II. The principal Allied commanders were JOFFRE, GALLIENI, and Sir John French The German retreat which followed signified the abandonment of the essential feature of the SCHLIEFFEN plan In the second battle (July, 1918) the last great German offensive was repulsed decisively by the Allies American troops participated prominently

Marne, Haute. see HAUTE-MARNE

Marnix, Philip van (fĕ'lĭp vän mär'nĭks), 1540–98, Flemish patriot, lord of Sainte-Aldegonde He became a Calvinist in his youth and was the chief author of the Compromise of Breda (1566, see GUEUX). A leading figure in the Dutch and Flemish struggle for independence from Spain, he actively supported William the Silent He wrote (c.1570) the hymn *Wilhelmus van Nassauwe*, used as the rallying song of the insurgents, which remains the national anthem of the Netherlands In 1572 he represented William at the estates of Holland, held at Dordrecht, and secured the nomination of William as stadholder of Holland Among his writings are the vehement anti-Catholic pamphlet, *De Bĭenkorf der H Roomsche Kercke* (1569, Eng. tr., *The Bee Hive of the Romish Church*, 1578?), and a flowing versification of the Psalms (1580).

Maroa (mŭrō'ŭ), city (pop. 1,033), central Ill, just N of Decatur, inc. 1867.

Marochetti, Carlo, Barone (kär'lō bärō'nā märōkät'tē), 1805–1867?, Italian sculptor, studied in Paris and Rome. He went to England after the Revolution of 1848 His principal works are a statue of Richard Cœur de Lion, Westminster, Lord Clyde, on the obelisk, Waterloo Place, London; and equestrian statues of Queen Victoria and the duke of Wellington, Glasgow. In the Metropolitan Museum is a model of an equestrian statue (destroyed) of Washington that was made for the New York Crystal Palace

Maronites (mă'rŭnīts), Christian community of Lebanon, in communion with the pope The Maronites are Arabic in language and ethnically like their neighbors; by emigration they have spread to Cyprus, Palestine, Egypt, and America Their liturgy (said mainly in Syriac) is of the Antiochene type, it has innovations imitated from the Latin rite Their ecclesiastical head, under the pope, is called patriarch of Antioch; he lives in Lebanon As in other Eastern rites, the parish priest are usually married. The Maronites have been a distinct community since the 7th cent. and have been in communion with the pope since the 12th cent In the 19th cent, massacres of Maronites by the Druses brought French intervention; this gave France its modern hold in Syria Beside the Maronites there are two other groups in Syria in communion with the pope, the Melchites and the Syrian Catholics See Donald Attwater, *The Christian Churches of the East*, Vol 1 (1947)

maroon, slave who has escaped to the wilderness, called *marron* by the French, *cimarrón* by the Spanish Formerly much used in the West Indies and South America, the term is used today with particular reference to the Negroes living in a mountainous region known as the Cockpits in W Jamaica The maroons fled when the British began their conquest of the island from the Spanish in 1655 and maintained a hostile independence until 1739, when a treaty granting them lands of their own and virtual independence was concluded See R C Dallas, *The History of the Maroons* (1803), Katherine Dunham, *Journey to Accompong* (1947)

Maros, Rumania. see MURES

Maros Vasarhely, Rumania see TARGUL-MURES.

Marot, Clément (klāmā' marō'), 1496?–1544, French court poet He was accused of heresy and spent years in exile, writing in prison at Chartres his allegory *Enfer* His light, graceful rondeaux, ballades, and epigrams were extremely popular and won him the patronage of Francis I and Margaret of Navarre He translated the Psalms into French verse for the Genevan Psalter (see HYMN)

Maroth (mā'rŏth) [Heb, =bitterness], unidentified town, SW Palestine Micah 1 12

Marprelate controversy (mär'prĕ'lĭt), 16th-century English religious argument Martin Marprelate was the pseudonym under which appeared seven Puritan pamphlets (1588–89) satirizing the authoritarianism of the Church of England under Archbishop John Whitgift. The church replied in kind, but silenced Martin only after a reaction against him by the more conservative Puritans and after the use of police powers by Whitgift A flood of both Martinist and anti-Martinist literature followed, to which Nashe, Lyly, and Richard Harvey are supposed to have contributed. The true identity of Martin Marprelate has never been determined, but John Penry, a Puritan hanged in 1593, may have been the chief author See *The Marprelate Tracts* (ed by William Pierce, 1911)

Marquand, John Phillips (markwand'), 1893–, American novelist, b Wilmington, Del, grad Harvard, 1915 His boyhood was spent in Newburyport, Mass Marquand first won popularity with the "Mr Moto" series of detective stories in the *Saturday Evening Post*, but his reputation as a satirist to be taken seriously was made with *The Late George Apley* (1937), a Pulitzer Prize winner which was later made into a play and a film This satire on Boston was followed by *Wickford Point* (1939) and *H M Pulham, Esq* (1941) *So Little Time* (1943) and *Point of No Return* (1949) satirize the upper-class white-collar workers and suburbanites of New York Other novels are *Repent in Haste* (1945), a story of the war, and *B. F.'s Daughter* (1946)

marque and reprisal see PRIVATEERING.

Marquesas Islands (murkā'sĭs), volcanic group, S Pacific, c 740 mi NE of Tahiti These 11 islands are part of FRENCH ESTABLISHMENTS IN OCEANIA The largest island is NUKU HIVA, and the second HIVA OA, the seat of the capital, Atuona The islands are fertile and mountainous with the highest peak (c 4,130 ft) on Hiva Oa There are breadfruit, pandanus, and coconut trees, the limited fauna includes wild cattle and hogs The chief exports are copra, tobacco, and vanilla Taiohae Bay, on Nuku Hiva, and the Bay of Traitors, on Hiva Oa, are good harbors. The islands are divided into two groups The southern cluster (sometimes called the Mendaña Islands), including Fatu Huku, Hiva Oa, Tahuata, Motane, and Fatu Hiva, was discovered in 1595 by the Spanish explorer Álvaro de Mendaña de Neira, the northern cluster, including Hatutu, Eiao, Motu Iti, Nuku Hiva, Ua Huka, and Ua Pou, was discovered in 1791 by the American navigator Captain Ingraham, who named the group the Washington Islands. In 1813 Commodore David PORTER won the agreement of the natives to a proposal to annex the islands to the United States, but Congress took no action The islands were ceded to France in 1842 At this time, the natives numbered 20,000, about seven times the present population Of all the Polynesian peoples, the Marquesans suffered the greatest decline from European diseases. The islands are the setting for *Typee* by Herman Melville. The grave of GAUGUIN is on Hiva Oa.

marquetry (mär'kutrē), branch of cabinetwork consisting in the application of a decorative surface of wood, or other substance, which is glued to an object on a single plane. The term is to be differentiated from inlay, in which the secondary material is sunk into portions of a solid ground cut out to receive it, whereas in marquetry both field and pattern material are applied as a veneer of equal thickness. Wood is most used, especially for the ground or field, and to a considerable extent also—when of differing color, grain, or kind—for the decorative sections Other substances are extensively employed, however, including tortoise shell, motal, ivory, and bone The process was derived from the true wood inlay known as INTARSIA and reached a high point of development in its use by the Dutch in the 17th cent, subsequently, the French were its chief exponents, the foremost manufactory of the country being conducted by the Boulle family (see BOULLE, ANDRÉ CHARLES), whose extensive employment of copper and tortoise shell created a special style Marquetry in England was never carried to the heights of elaboration or technical brilliance reached on the Continent, but in the latter part of the 18th cent work of considerable distinction and refinement was produced

Marquette, Jacques (shăk' märkĕt'), 1637–75, French missionary and explorer in North America, a Jesuit priest He was sent to New France in 1666 and studied Indian languages under a missionary at Trois Rivières In 1668 he was sent as a missionary to the Ottawa Indians, spent a winter at Sault Ste Marie, and in 1669 reached La Pointe mission on Chequamegon Bay When fear of the Sioux drove the Ottawa and the Huron Indians away from La Pointe, Marquette accompanied them to Mackinac, where he founded a new mission on Point St Ignace. Contact with the Indians of Illinois had led Marquette to plan a mission among them, and he was also interested in the reports of a great south-running river Therefore he welcomed his appointment by Frontenac, governor of New France, to accompany Louis JOLLIET on an expedition to find the river They were the first to establish the existence of a water highway from the St Lawrence to the Gulf of Mexico On his return from the Mississippi voyage, Marquette stayed at Mackinac for a time recovering his health and writing a journal of the voyage, which was first published (1681) in Thévenot's *Recueil de voyages* In 1674 he set out to establish a mission in the present Illinois but his health broke He was hastening back to Mackinac when he died near the present Ludington, Mich In 1777 his body was removed to St Ignace See edition (1898) of his journal in the *Jesuit Relations*, biographies by R G Thwaites (1902) and Agnes Repplier (1929)

Marquette (markĕt'), city (pop 15,928), co seat of Marquette co, W Upper Peninsula, N Mich, on the high rocky shore of Lake Superior, inc as a village 1859, as a city 1871 It is a center of iron-ore shipping and of industry and trade for a mining, lumbering, farming, and resort region Chemicals, foundry and wood products, and mining machinery are made, and there are railroad shops A state teachers college and a branch of the state prison are in the city Near by are Cherry Creek Fish Hatchery and Marquette State Park

Marquette University, at Milwaukee, Catholic (Jesuit), coeducational, chartered 1864, opened 1881, became a university 1907 It has colleges of business administration (Johnston), engineering, journalism, liberal arts, and nursing and schools of dentistry, law, medicine, and speech

Marquis, Don (Donald Robert Perry Marquis) (mär'kwĭs), 1878–1937, American author and playwright, b Walnut, Ill A journalist on the Atlanta *Constitution*, he went to New York in 1912, began the humorous column "The Sun Dial" in the *Sun*, and later conducted "The Lantern" in the *Herald Tribune* He used his characters "Hermione," "The Old Soak," "archy the cockroach," "mehitabel the cat," and others to express in satirical prose and poetry his opinions on society and politics Chief among his collected writings are *The Cruise of the Jasper B* and *Hermione* (both 1916), *Noah an' Jonah an' Cap'n John Smith* (1921), and *Lives and times of archy and mehitabel* (3 vols in 1, 1943) He successfully dramatized *The Old Soak* in 1922.

Marr, Carl von, 1858–1936, American painter, b Milwaukee, Wis He lived in Munich His works were awarded numerous medals in Germany In 1893 he became professor in the Munich Academy, and in 1895 a member of the Berlin Academy His best-known works include *Episode of 1813*, *Germany in 1806*, *Gossip* (Metropolitan Mus), *Dusk* (Toledo Mus.), and *The Flagellants* (Milwaukee Public Library)

Marrakesh (mărā'kĕsh, mŭ-), Fr. *Marrakech* (mărākĕsh'), city (pop. 238,237), French Morocco. It developed, in the 11th cent, from the campsite of an Almoravide leader, Yusuf ibn Tashufin, and was for two centuries the capital of Morocco It was a starting point for caravans which set out to the Sahara and to Timbuktu, often to collect slaves, and today the population has a Negro strain. Beautifully situated near the Atlas range, Marrakesh has extensive gardens and a palace of the sultan of Morocco. The 220-foot minaret (com-

pleted 1195) of the most important mosque (the Koutoubya) dominates the city; like the Giralda at Seville, it was built by Andalusians under the Almoravides. The city, renowned for its leather goods, is one of the principal commercial centers of S Morocco.

marram grass: see BEACH GRASS

marriage, state or status in which persons of opposite sex are united as husband and wife to form a new family. In many societies marriage is preceded by betrothal, an act which imposes a mutual obligation on the betrothed couple. The period between betrothal and marriage varies greatly. Infant betrothal has been practiced among certain groups. Marriage is generally initiated by a rite or ceremony, consisting of a combination of words and symbolic acts, designed to dramatize the new relationship of the man and woman and give notice to the community that they have assumed the rights and obligations of married, as contrasted with single, persons. Marriage effects important changes in the personal and social relations of the persons to each other and to the community, hence even the most primitive social groups surround it with taboos and lay down the conditions under which it may be entered into. In Western civilizations a taboo is generally directed against INCEST, which depends on the group's conventional ideas about CONSANGUINITY. Where the group is divided into clans, the individual is required to marry outside his own clan, a practice known as exogamy. At the same time he must marry within the tribe, which is called endogamy, since in groups on a low economic level a tribe may number only a few hundred persons, this rule results in a considerable amount of inbreeding. In all human groups, simple or advanced, anthropologists find monogamy to be the dominant form of marriage, even where polygamy or plural marriage is permitted as a privilege of the few. This predominance of the monogamous union has been variously explained by the fact that approximately equal numbers of males and females are born, that on lower economic levels the male is able to support only one wife, and that children born to monogamous unions have a better chance of survival. These explanations are based largely on inference, as is the theory that "marriage by capture" was once general, carrying the bride over the threshold being regarded as a survival of such a custom. Abduction of wives, as among the Australian aborigines, may have been common, but it is held that marriage must normally have been an orderly and peaceable affair. "Group marriage," the marriage of all the men in a group to all the women in it, has been assumed from the use of certain terms of relationship, e.g., from the custom, found in some present-day societies, of calling all one's uncles and aunts as well as one's own parents fathers and mothers, all the members of one's own generation brothers and sisters, and all one's nephews and nieces sons and daughters, this custom, however, can be explained otherwise. Group marriage, if it existed, was hardly an advance upon complete promiscuity, which some anthropologists have assumed to be the original marital condition of mankind. Quite general, in fact almost universal, is the custom whereby the families of the prospective bride and groom negotiate the marriage agreement, often binding it with a mutual exchange of property, a custom not connected with any particular form of marriage. Typical of it is the practice of what has been called "marriage by purchase," which requires the groom and his relatives to pay a price for the bride. Of the variant forms of marriage, polygyny, the marriage of a man to more than one woman, is the most common. Polyandry, the marriage of a woman to two or more men, is admittedly rare. In some localities it seems to be a temporary arrangement, made under special circumstances, the great majority of the population living in monogamous unions. Polyandry has been reported among the Eskimo, some Western Shoshone Indians, some Philippine Pygmies, the Marquesans, some East Africans, the Tibetans, and the Todas of S India. Among some pastoral peoples polygyny has been as widespread as monogamy, existing alongside it. It has been forbidden in some countries. In the polygynous family the wives do not always enjoy equal status, there is usually a "chief wife," who is married "with ceremony" and to whom the others are subordinate. If the chief wife dies without giving her husband children, the family or lineage may require her sister to take her place, a usage that has been called sororate marriage. Better known is the levirate marriage practiced by the ancient Hebrews (but not peculiar to them), according to which a man was expected to marry his deceased brother's wife in order to provide for him a male heir to perpetuate his name and family cult. Both customs testify to the importance assigned to the birth of children in marriage; they seem also to contain a religious element. Whatever the form of marriage, it is generally a family and community affair, which automatically obtains the sanction of custom and religion. In Christian countries marriage did not become a religious tie or ceremony before the 9th cent., when newly wed couples began coming to the church door to have their union blessed by the priest. The Christian Church eventually undertook to supervise marriage, regulating it in considerable detail through the canon law and requiring communicants to marry within the Church. Established churches have extensive jurisdiction over marriage, in England, for example, special licenses must be obtained from the archbishop of Canterbury, and in Italy the canon law holds good for all marriages. The Roman Catholic and Orthodox churches consider matrimony a sacrament and an indissoluble contract. The Roman Catholic Church has precise legislation as to the time and place of marriage and requires (as do some other churches), except by special dispensation, the publication of banns of matrimony on three successive Sundays or holy days of obligation. A unique type of marriage ceremony is that of the Friends (Quakers), who marry at a special meeting for the occasion, the only formality being a public declaration of the marriage by the couple and the signing of a certificate by all present as witnesses. Civil marriage is now permitted in most countries. Marriage among civilized, as among less advanced, people appears often to be a property transaction. In many European countries the bride brings her husband a dowry, and legal arrangements are made for the settlement of a portion of the groom's property on the bride. So-called romantic love, or marriage for love, is a phenomenon apparently connected with the decline of family authority by reason of the changed legal relations between parents and children. The large number of unsuccessful marriages and the frequency of divorce in the United States led in the 1920s to the proposal of *companionate marriage*, i.e., a sort of trial marriage, which could be dissolved at the end of a year at the will of the parties, but it did not receive the approval of public opinion or law. For the legal aspects of marriage, see HUSBAND AND WIFE. See G. E. Howard, *History of Matrimonial Institutions* (1904), E. A. Westermarck, *A Short History of Human Marriage* (1926), J. W. Madden, *Handbook of the Law of Persons and Domestic Relations* (1931), Willystine Goodsell, *History of Marriage and the Family* (rev. ed., 1939).

marriage chest: see CASSONE.

Marryat, Frederick (măr'ēăt), 1792–1848, English novelist. Years of service in the British navy, from midshipman to captain, provided background for his thrilling tales of sea adventure. His novels include *Frank Mildmay* (1829), *Peter Simple* (1834), *Mr. Midshipman Easy* (1836), and *Snarleyyow, or, The Dog Fiend* (1837). *Masterman Ready* (1841–42) is a story for children; he wrote several books about Canada and the United States. See biographies by David Hannay (1889) and Christopher Lloyd (1939). His daughter, **Florence Marryat,** 1838–99, wrote besides novels of her own, *The Life and Letters of Captain Marryat* (1872).

Mars (märz), in Roman religion, god of war. Mars was the father of Romulus, the founder of the Roman nation, and, next to Jupiter, he enjoyed the highest position in Roman religion. He was one of the ancient Roman gods, and in early times he was probably a god of fertility. The Salii, his priests, honored him by dancing in full armor on the Campus Martius. He had many temples in Rome, the most important of which was the one on the Appian Way. Horses, bulls, and rams were sacrificed to him at festivals held in March (the month bears his name). His attributes include the spear and shield, and the fig tree, the wolf, and the woodpecker were sacred to him. In later times he was identified with the Greek ARES and associated with Bellona.

Mars, Mademoiselle (märs), 1779–1847, French actress, whose real name was Anne Françoise Boutet. She was the natural daughter of Jacques Marie Boutet, an actor who used the stage name Monvel, and Mlle Mars Salvétat. Mlle Mars was a famous comedienne at the Comédie Française and appeared in many plays by Molière.

Mars, borough (pop. 1,318), Butler co., W Pa., SW of Butler, inc. 1882.

Mars, in astronomy, a major planet revolving round the sun in an orbit next outside that of the earth and fourth in order of distance from the sun. Its mean distance from the sun is c. 141,540,000 mi. Compared with the earth its mass is 0.108, and its density 0.72. The eccentricity of the orbit, 0.0933, is greater than that of most of the other planets. Moving with a velocity of c. 15½ mi. per second, Mars requires nearly 1.88 years to complete a revolution of its orbit. The mean diameter, the determination of which presents considerable difficulty, is approximately 4,216 mi., a little more than half that of the earth. At intervals of 15 or 17 years, Mars, being then at opposition near perihelion, is nearest to the earth. The distance separating the two planets at that time is c. 35,000,000 mi., while at an opposition near aphelion it is c.63,000,000 mi. When it is most favorably seen, Mars shines with a luster more than twice that of Sirius. It is red in color. Observed through the telescope, the greater part of the surface of the planet appears dull red or orange, while over about three eighths of the area are darker masses of grayish or bluish green, lying mostly near the equator and extending irregularly southward, with one noticeable projection into the northern hemisphere. As few celestial bodies offer so definite a surface to observation, this planet has been given extensive investigation. The markings show few changes that cannot be accounted for by changing seasons. The prominent white spots, known as polar snowcaps, alternately increase and diminish (almost to the point of disappearance), with the regularity that marks the return of winter's cold and summer's heat. As the axis of Mars is tilted to the plane of its orbit at an angle of about 24° 50′, the seasons resemble those on the terrestrial globe but are nearly twice as long. The greenish areas were believed by earlier observers to be oceans or seas and were called *maria;* but examination by means of powerful modern instruments has led to the opinion that they are regions of vegetation. Concerning these and the network of straight dark lines, called "canals" [Ital.=*canals*] by their discoverer, SCHIAPARELLI, who first reported them in 1877, there has been much discussion. Percival LOWELL, one of the leading investigators of conditions on Mars, made an elaborate triangulation of the surface, recording several hundred canals, about 50 of them being double. He regarded them as the work of intelligent beings. In the observatory he established at Flagstaff, Ariz., a particular study of the planet has been made. Remarkable photographs taken there and at Lick Observatory have added much to the knowledge of the subject. Spectroscopic studies reveal the presence of little or no oxygen and of only very small amounts of water vapor in the atmosphere of Mars. The presence of some carbon dioxide was reported (1947). Temperatures are reported to range from a maximum of about 80°F. (for limited periods at the equator at noon) to a minimum of -130°F. In 1877 Asaph Hall discovered two satellites with orbits close to the planet, these are called Deimos and Phobus.

Marsala (märsä'lä), seaport (pop. 24,650), Sicily, Italy, on Cape Boeo, westernmost point of the island. It is the ancient LILYBAEUM. Marsala is noted for its sweet wine. Here in 1860 Garibaldi began his conquest of the Two Sicilies. Marsala suffered damage in the Second World War.

Marschall von Bieberstein, Adolf, Freiherr (ä'dôlf frī'hĕr mär'shäl fŏn bē'bûrshtīn), 1842–1912, German diplomat. As secretary for foreign affairs (1890–97) he failed to renew the German reinsurance treaty with Russia, and as ambassador at Constantinople (1897–1912) he extended German influence on Turkish affairs.

Marseillaise (märsülāz') [Fr., =of Marseilles], French national anthem, written and composed in 1792 by Claude Joseph ROUGET DE LISLE. The original title was *Chant de guerre de l'armée du Rhin,* but it was sung by the band of soldiers from Marseilles who marched on the Tuileries on Aug. 10, 1792, and thus became known as the *Marseillaise.*

Marseilles (märsālz'), Fr. *Marseille* (marsä'yü), city (pop. 551,640), capital of Bouches-du-Rhône dept., SE France, on the Gulf of Lion. It is the second largest city of France and its chief Mediterranean port, connected with the Rhone by an underground canal (see ROVE TUNNEL). The oldest town of France, it was settled by Phocaean Greeks from Asia Minor c. 600 B.C. Ancient Massilia became an ally of Rome, which annexed it (49 B.C.) after it had supported Pompey against Caesar in the civil war. It retained, however, its internal autonomy. Sharing the history of PROVENCE, it passed definitively to the French crown in 1486. The French conquest of Algeria and the opening of the Suez Canal caused the port of Marseilles to expand tremendously in the 19th cent. and also encouraged its industries (soap, chemicals, machinery, and shipbuilding). It became a meeting place of all races. The sight of Marseilles from the sea, a gleaming white city rising on a semicircle of bare hills, is famous. Despite its long history, Marseilles is poor in relics of the past, few buildings date back further than the 18th cent. During the Second World War large sections of this handsome city were destroyed. The old slums of the port section were razed by the Germans on the pretext that they sheltered (as indeed they did) the worst criminal elements in France; the waterfront was gutted by Allied naval guns in the landing of Aug., 1944. However, the city recovered quickly. The Canebière, its principal thoroughfare, is again one of the great avenues of the world. Part of the university of Aix-en-Provence is now at Marseilles. A landmark of Marseilles harbor is the CHÂTEAU D'IF.

Marseilles, industrial city (pop. 4,455), N Ill., SW of Chicago and on the Illinois river, in a coal and farm area, inc. 1861. It manufactures building material, sodium alkalies, and biscuits. Illini State Park is near by.

Marsena (mär'sēnŭ), counselor of King Ahasuerus. Esther 1:14.

Marsh, Adam, or **Adam de Marisco** (mă'rĭskō), d. 1259?, English Franciscan scholar. He was a student of Robert GROSSETESTE. When Grosseteste became bishop, Marsh took his place in the

Franciscan school at Oxford. Marsh's advice and his services as a peacemaker were constantly sought, and Grosseteste leaned heavily on him Actively supporting the reform party of Simon de MONTFORT, Marsh was able nevertheless to retain the confidence of Henry III Of his writings only his letters survive

Marsh, Charles Wesley, 1834–1918, American inventor and editor, b. Ontario In 1849 he moved to De Kalb co , Ill. Assisted by his brother William, he designed a hand-binding harvester and obtained a patent in 1858. He established a manufacturing plant in 1863, and within several years two other plants were established In 1865 Elijah Gammon and William Deering bought an interest in the property and eventually acquired the entire business. Marsh started another company in 1869 but sold a controlling interest to J. D Easter and Company in 1876 The following year the business failed. He next attempted to build an automatic binding machine, but this project failed in 1884 He became editor of the successful *Farm Implement News* in 1885 and retired in 1904 He served in the Illinois state legislature from 1868 to 1872 He wrote *Recollections, 1837–1910* (1910)

Marsh, Ngaio (nī'ō), 1899–, New Zealand detective-story writer She studied art and worked as an actress before going to London, where her first novel, *A Man Lay Dead,* was published in 1934 Her mystery novels, excellent in writing and characterization, draw upon her New Zealand background and her knowledge of the stage and the art studio They include *Artists in Crime* (1938), *Death of a Peer* (1940), and *Died in the Wool* (1945)

Marsh, Othniel Charles, 1831–99, American paleontologist, b Lockport, N Y, grad Yale, 1860 He studied abroad and from 1866 served at Yale as the first professor of paleontology and as curator of the Peabody Museum From 1882 he was also connected with the U S Geological Survey He made many expeditions to the West, especially to the Rocky Mt regions (his chief rival in the field was E D Cope), and gathered a large collection of fossil vertebrates, now at Yale and in the National Museum Among his discoveries were Cretaceous toothed birds, swimming and flying reptiles, and the fossil ancestors of the horse—a remarkably complete collection These discoveries have had a considerable bearing upon the teachings of evolution Marsh's writings are included, chiefly, in the monographs and reports of the Geological Survey See biography by Charles Schuchert and C M LeVene (1940)

Marsh, Reginald, 1898–, American painter and graver, b Paris Both his parents were artists After their return to the United States he studied at Yale (B A , 1920), where he became art editor of the *Record* He worked as a cartoonist for *Vanity Fair, Harper's Bazaar,* and the New York *Daily News* and later as a stage-set designer He then studied under John Sloan and K H Miller at the Art Students League From 1925 to 1939 he made two trips to Europe and sketched for the *New Yorker* After his first one-man show in 1930, his lively recordings of Manhattan street life in many media were highly popular Noted also are his two murals in the Post Office Building, Washington, D.C.

marsh · see SWAMP

Marshal, William: see PEMBROKE, WILLIAM MARSHAL, 1ST EARL OF

Marshall, Alfred, 1842–1924, English economist At Cambridge, where he taught from 1885 to 1908, he exerted great influence on the development of economic thought of the time. He systematized the classical economic theories and made new analyses in the same manner, thus laying the foundation of the neoclassical school of economics Concerned chiefly with theories of costs, value, and distribution, he developed a concept of marginal utility. His *Principles of Economics* (1890) was for years the standard work and is still accepted by some Among other works is *Industry and Trade* (1919) See A C Pigou, ed , *Memorials of Alfred Marshall* (1925); *What I Remember* (1947), by M P. Marshall, his wife

Marshall, Archibald, 1866–1934, English novelist and journalist, grad Trinity College, Cambridge In 1907 he became editor of the literary supplement of the London *Daily Mail* He was Paris correspondent of the *Daily News* during the First World War and as correspondent for the *Daily Mail* traveled in Australia and America. He is best known for his stories of English country life, somewhat in the style of Trollope, including the chronicles of Squire Clinton's family which began with *The Squire's Daughter* (1909) A later series about the Dare family was not as well received. See his autobiography, *Out and About* (1933).

Marshall, Frank James, 1877–1944, American chess player, b New York city He was chess champion of the United States from 1909 to 1936. See his book, *My Fifty Years of Chess* (1942).

Marshall, George Catlett, 1880–, American army officer and statesman, chief of staff (1939–45) and Secretary of State (1947–49), b Uniontown, Pa., grad Virginia Military Institute, 1901. Marshall served in the U.S. army for 43 years In the First World War he distinguished himself as a staff officer and later (1919–24) was aide to General Pershing. After varied tasks, including service in China (1924–27) and command in maneuvers (1936–37), he headed the army as chief of staff and became (Dec , 1944) general of the army ("five-star general") Helping to direct Allied strategy, Marshall advocated the conquest of Germany through France His plan was adopted Many of his wartime tasks were diplomatic; he attended important conferences of the Allies. When he resigned as chief of staff, he was promptly appointed (Nov , 1945) ambassador to China by President Truman and was recalled (Jan., 1947) to be made Secretary of State. To counter Soviet moves in foreign policy, he integrated the EUROPEAN RECOVERY PROGRAM (called the Marshall Plan) after engineering immediate aid to Greece and Turkey (Feb., 1947) Ill-health brought his resignation in Jan , 1949 Selected speeches (ed by H A De Weerd) appeared in 1945.

Marshall, James Wilson, 1810–85, American pioneer, discoverer of gold in California, b Hunterdon co , N J Migrating to California for reasons of health, he arrived at Sutter's Fort in 1845 and soon acquired land and livestock. After participating as a soldier in the Mexican War, he returned in 1847 to find his livestock gone Penniless, he had to sell his land, and then he entered into partnership with John A Sutter to build a sawmill. In Jan., 1848, while supervising the digging of the mill race, Marshall discovered gold This discovery launched the famous gold rush of 1849 The claims of Marshall and Sutter were ignored. The sawmill failed, and Marshall ended his days, embittered and misanthropic, working as a gardener He was buried at COLOMA See biography by G F Parsons (1870, reprinted 1935).

Marshall, John, 1755–1835, fourth Chief Justice of the United States (1801–35) Born in a log cabin on the Virginia frontier (today in Fauquier co , Va), he spent his childhood and youth in primitive surroundings His father rose to prominence in local and state politics, through his mother he was related to the Lees and the Randolphs and to Thomas Jefferson, later his great antagonist Marshall first left home for any length of time to serve as an officer in the American Revolution He returned in 1779 after attending for a few months lectures on law given at the College of William and Mary by George Wythe (his only formal education) Admitted to the bar in 1780, he practiced in the West, then was elected (1782) a delegate to the Virginia assembly He married and settled in Richmond, ever afterwards his home There his brilliant skill in argument made him one of the most esteemed of the many great lawyers of Virginia A defender of the new U S Constitution in the Virginia ratifying convention, Marshall later staunchly supported the Federalist administration, and after refusing Washington's offer to make him U S attorney general or minister to France, he finally accepted appointment as one of the commissioners to France in the diplomatic dispute which ended in the XYZ AFFAIR Marshall's effectiveness here made him a popular figure, and he was elected to Congress as a Federalist in 1799 One of the tiny group that continued to support President John Adams, he was prevailed upon to become Secretary of State (1800–1801) Before he left the cabinet he was appointed Chief Justice and confirmed by the Senate despite some opposition In his long service on the bench, Marshall raised the Supreme Court from an anomalous position in the Federal scheme to power and majesty, and he molded the Constitution by the breadth and wisdom of his interpretation, he eminently deserves the appellation the "great Chief Justice " He dominated the court equally by his personality and his ability, and his achievements were made in spite of virulent quarrels with Jefferson and later Presidents A loyal Federalist, Marshall saw in the Constitution the instrument of national unity and Federal power, and the guarantee of the security of private property He made incontrovertible the previously uncertain right of the Supreme Court to review Federal and state laws and pronounce final judgment on their constitutionality He viewed the Constitution on the one hand as a precise document setting forth specific powers and on the other hand as a living instrument which should be broadly interpreted so as to give the Federal government the means to act effectively within its limited sphere (see MCCULLOCH VS MARYLAND). His opinion in the DARTMOUTH COLLEGE CASE was the most famous of those that dealt with the constitutional requirement of the inviolability of contract, another favorite theme with Marshall. His interpretation of the interstate commerce clause of the Constitution, most notably in GIBBONS VS. OGDEN, made it a powerful extension of Federal power at the expense of the states. In general Marshall opposed STATES' RIGHTS doctrines, and there were many criticisms advanced against him and against the increasing prestige of the Supreme Court. The sometimes undignified quarrel with Jefferson (which had one of its earliest expressions in MARBURY VS. MADISON) reached a high point in the trial of Aaron BURR for treason. Marshall presided as circuit judge and interpreted the clause in the Constitution requiring proof of an "overt act" for conviction of treason so that Burr escaped conviction because he had merely engaged in a conspiracy. Marshall's difficulties with President Jackson reached their peak when Marshall declared against Georgia in the matter of expelling the Cherokee Indians, a decision that the state flouted. Marshall in his arguments drew much from his colleagues, especially his devoted adherent, Justice Joseph Story, and he was stimulated and inspired by the lawyers pleading before the court, among them some of the most brilliant legal minds America has seen, including Daniel Webster, Luther Martin, William Pinkney, William Wirt, and Jeremiah Mason Marshall in his manners combined the unceremonious heartiness of the frontier with the leisurely grace of the Virginia aristocracy. So great was his winning charm and so absolute his integrity that he gained the admiration of his enemies and the unbounded affection of his friends. His style combined conciseness and precision He wrote each opinion as a series of logical deductions from self-evident propositions and it was almost never his practice to cite legal authority. It is in these opinions that his literary skill is shown rather than in his major nonlegal work, *The Life of George Washington* (5 vols 1804–7) Marshall's constitutional opinions are collected in editions by J M Dillon (1903) and J P. Cotton (1905) The standard biography is by A. J Beveridge (4 vols., 1916–19) There are also a shorter biography by David Loth (1949) and Marshall's autobiographic sketch (1937). See E S Corwin, *John Marshall and the Constitution* (1917) B M Ziegler, *International Law of John Marshall* (1939).

Marshall, Thomas Riley, 1854–1925, Vice President (1913–21), b North Manchester, Ind , grad Wabash College, 1873 A lawyer of Columbia City, Ind , he was governor of the state (1909–13) before being elected Vice President on the ticket with Woodrow Wilson See his recollections (1925)

Marshall, 1 City (pop 2,758), co seat of Clark co , E Ill , SW of Terre Haute, Ind , in a farm and oil area, inc 1853 **2** City (pop 5,253), co seat of Calhoun co , S Mich , on the Kalamazoo and near Battle Creek, in a farm area, settled 1831, inc as a village 1846, as a city 1859 Automobile parts and furnaces are among its products **3** City (pop 4,590), co seat of Lyon co , SW Minn , SW of Granite Falls, settled 1871, platted 1872, inc 1901 It is a farm trade center in a dairy and fruit area Camden State Park is near **4** City (pop 8,533), co. seat of Saline co , N central Mo , N of Sedalia, in a farm area, settled c 1840 It manufactures shoes and food products It is the site of Missouri Valley College (coeducational), a state school for defectives, and homes for crippled children and for aged women. **5** Town (pop 1,160), co seat of Madison co , W N C , NNW of Asheville and on the French Broad River, in an area producing burley tobacco, settled 1816, inc 1852 **6** City (pop 18,410), co seat of Harrison co , E Texas, WNW of Shreveport, La , settled 1838, inc 1850 Live-oak-shaded streets and mansions recall the plantation past of the city, which now has railroad shops and processes and ships the truck, cotton, clay, lumber, dairy products, carbon, and oil of the surrounding pine-covered hills There is a Baptist junior college and a Catholic academy The many Negroes of the region are served by two colleges, Wiley College (Methodist, coeducational, 1873) and Bishop College (Baptist, coeducational, 1881)

Marshall College. see HUNTINGTON, W Va.

Marshall Islands, archipelago (70 sq mi , pop 10,223), central Pacific, 2,595 nautical mi N of Auckland, New Zealand It comprises 34 atolls and coral islands of the Ratak and Ralik chains KWAJALEIN, the largest atoll, is the district headquarters of the Ralik Chain (the western group). MAJURO is the chief island of the Ratak Chain (the eastern group) Under the Japanese, Jaluit was the capital The natives are Micronesians Copra is the chief export. The group was discovered in 1526 by the Spanish and visited by Captains Gilbert and Marshall in 1788 It was a German protectorate from 1885 to 1914, when, in the First World War, it fell to Japan In 1922 Japan received a mandate over the islands and in 1935 claimed sovereignty over them In the Second World War the islands were taken (1944) by U S. forces In 1946 the atom bomb was tested at Bikini The group was included (1947) in the U.S Trust Territory of the Pacific Islands under UN trusteeship

Marshall Plan: see EUROPEAN RECOVERY PROGRAM

Marshallton, unincorporated town (pop. 1,119), N Del., near Wilmington. A vulcanized-fiber plant and a race track are here, and state tuberculosis sanatoriums and industrial schools are near by

Marshalltown, city (pop. 19,240), co. seat of Marshall co., central Iowa, on the Iowa river and NE of Des Moines; settled 1851, inc 1863 It is the rail, trade, and industrial center of a large wheat, corn, and livestock area. There are railroad shops, meat-packing plants, and factories making iron and steel products. The state soldiers' home and a junior college are here.

Marshalsea (mär'shŭlsē), former prison in London, closed in 1842. Once attached to the court presided over by the king's marshal, it became in its later days a debtors' prison. It is the setting of Dickens's *Little Dorrit*.

Marshfield. 1 Town (pop. 2,419), SE Mass., near the coast SE of Boston; inc. 1642. Daniel Webster lived and is buried here. 2 City (pop 1,764), co. seat of Webster co., S Mo., ENE of Springfield, in the Ozarks; settled c 1830. 3 City, Oregon: see COOS BAY.

Marsh gas: see METHANE.

Mars' Hill, name given in the Bible for the Areopagus at Athens. Acts 17 22. It is derived from a false etymology of Areopagus.

Mars Hill, town (pop. 1,886), NE Maine, near the N.B. line between Houlton and Fort Fairfield, settled 1842, inc. 1867.

marsh mallow, perennial marsh plant (*Althaea officinalis*), naturalized from Europe in the E United States but rarely cultivated. The rose mallow (see HIBISCUS) is sometimes called marsh mallow, but may be distinguished by its much larger flowers. The true marsh mallow has pink flowers an inch in diameter. Its mucilaginous root is used medicinally as a demulcent and was formerly used for the confection **marshmallow,** which is now usually made from syrup, gelatine, and other ingredients.

marsh marigold or **cowslip,** perennial spring-blooming Old World and North American plant (*Caltha palustris*) of wet places. It has rounded glossy leaves and large buttercuplike flowers of bright and shining yellow. The tops are reputed to be toxic but with boiling become edible and are often eaten as greens while young, the flower buds are pickled and used like capers, and the flowers have been used for beverages. Other species of *Caltha* are also called marsh marigold.

Marsh's test, chemical test for arsenic and antimony, discovered by James Marsh (1789–1846), an English chemist. In testing for the presence of arsenic, the procedure consists essentially of treating the unknown with zinc which combines with arsenic to form the compound arsine. When this compound is burned in air, there is deposited upon a smooth cold object (as a cold porcelain plate or dish) placed in its flame a thin, brown, metallike layer, called "arsenic mirror," which is soluble in sodium hypochlorite. The test for antimony follows the same procedure, but a hydrogen-antimony compound, called stibine, is formed, and the deposit it forms when burned in air is insoluble in sodium hypochlorite. By the test, minute quantities of arsenic or antimony in a substance can be detected.

Marshville, town (pop. 1,007), S N.C., SE of Charlotte, in a lumbering and cotton-growing area.

Marsic War: see SOCIAL WAR.

Marsilius of Padua (märsĭl'ēŭs, pă'dūu), d. c 1342, Italian publicist. He is often called Marsiglio. Little is known of him certainly except that he was rector of the Univ. of Paris c 1312. When Emperor LOUIS IV was seeking a theorist to assist him in his struggle with JOHN XXII, Marsilius composed a tract, *Defensor pacis* (the defender of peace), probably in collaboration with the Averroist John of Jandun. It was published in 1324 and proved to be one of the most revolutionary of medieval documents. The work held that all power derived from the people and their ruler is only their delegate, there is no law but the popular will, as expressed in him. The church too has no authority apart from the people, and the actual power of the Holy See is self-arrogated, the church should be under the ruler, its province should be purely that of worship, and it should be governed by periodic councils. The notion that princes derive their power from the people was current in scholasticism, but the anti-ecclesiastical argument of the work aroused great scandal. It was repeatedly condemned by the Holy See. Marsilius went in Louis's train to Rome for his coronation and attended him afterwards. His lesser works include an argument that the emperor had final jurisdiction in matrimonial cases (1342). The *Defensor pacis* had a long life, thus, Gerson recommended it, and Thomas Cromwell patronized its translation into English (1535). See modern editions by C. W. Previté Orton (1926) and Alan Gewirth (1950).

Marston, John, 1576–1634, English satirist, dramatist, and divine, b. Oxfordshire, educated at Oxford and studied law at the Middle Temple. His coarse, cynical vigor showed in his satirical poems, *The Metamorphoses of Pygmalions Image* and *The Scourge of Villanie* (both 1598). In 1602 appeared *Antonio and Mellida* and *Antonio's Revenge*, both gloomy and uneven tragedies. With John Webster he wrote *The Malcontent* (1604), a tragicomedy dedicated to Ben JONSON, with whom Marston conducted a sporadic literary quarrel. He collaborated with George CHAPMAN and Ben Jonson in writing *Eastward Ho!* (1605) and was briefly imprisoned with them for writing it. Marston's other works include *Sophonisba* (1606), a horror tragedy, and three comedies—*The Dutch Courtesan* (1605), *Parasitaster* (1606), and *What You Will* (1607). About 1608 he deserted the theater, took holy orders, and became a clergyman in Hampshire. See his plays (ed. by H. H. Wood, 3 vols., 1934–39).

Marston, John Westland, 1819–90, English dramatist and critic. His plays include *The Patrician's Daughter* (1842), *Strathmore* (1849), *Donna Diana* (1863), and *The Favourite of Fortune*. Philip Bourke Marston was his son.

Marston, Philip Bourke, 1850–87, English poet. He was blind from the age of three, and his poems are remarkable for a reliance on appeals to the sense of hearing unique in poetry. His works include *Song-Tide* (1871), *All in All* (1875), *Wind Voices* (1883), and *For a Song's Sake* (1887), short stories.

Marston Moor, West Riding of Yorkshire, England, W of York. The battle fought here July 2, 1644, between the royalists under Prince Rupert and the duke of Newcastle and the parliamentarians under Lord Fairfax and Cromwell resulted in a decisive victory for the parliamentarians.

marsupial (märsōō'pēul, -sū'-), member of the order of pouched mammals. A true placenta is lacking in the females, and the young are born in an undeveloped state. (Some forms have a simple placenta which functions for a short time.) At birth the great gray kangaroo (*Macropus major*) is about 1 in. long, and the OPOSSUM is about ½ in. In most members of the order the female has a marsupium or pouch, formed by a fold of abdominal skin, into which the young crawl just after birth. Each attaches itself to a mammary gland and feeds until it is strong enough to leave the pouch. Until they outgrow the pouch the young often return to it when in danger. Most marsupials inhabit Australia.

Marsyas (mär'sēus), in Greek mythology, Phrygian satyr. He found the flute which Athena had invented but had thrown away. He became so skillful with the instrument that he challenged the lyre-playing Apollo to a contest. Apollo accepted on the condition that the victor might do as he would with the vanquished. The Muses, acting as judges, awarded the contest to Apollo. Apollo promptly flayed Marsyas for his presumption. The river Marsyas sprang from his blood or from the tears of his mourners. Among the many statues depicting this event is the *Flaying of Marsyas*, in the Villa Albani, Rome.

Mart, town (pop. 2,856), E central Texas, E of Waco, in a blackland area, settled c 1875, inc. 1903.

Martaban, Gulf of (märtŭbăn', -bän'), arm of the Andaman Sea, indenting S Burma and receiving the waters of the Rangoon, Sittang, and Salween rivers. The small port of Martaban is on the left bank of the Salween at its mouth, across the river from Moulmein.

Martel de Janville, comtesse de. see GYP.

marten, carnivorous, largely arboreal mammal (genus *Martes*) of the weasel family, widely distributed in North America, Europe, and central Asia. The American marten, also called American pine marten and American sable, is 20 to 25 in. long including the 7 to 8-inch tail. It lives in coniferous forests and eats a variety of small animals, carrion, berries, nuts, and honey. Similar to the American marten are the European pine marten and the stone or beech marten of Europe and central Asia. Marten fur is durable and soft and is generally brown on the upper parts and lighter on the under parts. The stone marten is grayish. The Siberian SABLE produces the most valuable fur. See also FISHER.

Martens, Frederick (mär'tĭns), Rus. *Feodor Feodorovich Martens* (fyô'dur fyô'durōvĭch mär'tĕns), 1845–1909, Russian authority on international law. He became an official in the foreign ministry in 1868 and was professor of international law at the Univ. of St. Petersburg from 1871 to 1905. He influenced Russian diplomacy and was a representative at many international conferences. He helped lay the foundation for the Hague Conferences. His decisions as arbitrator and his many books contributed much to international law. His doctrine was based on the idea of an international community with a common standard of civilization.

Martens, Georg Friedrich von (gā'ôrk frē'drĭkh fŏn mär'tĕns), 1756–1821, German writer on international law, b. Hamburg. He was professor of international law at Gottingen (1784–89), a state councilor of Westphalia (1808–13), and the representative of Hanover in the diet of Frankfurt (1816–21). His two great works (written in French) were a comparative study of modern law, *Précis du droit des gens modernes de l'Europe* (1789, a revision of an earlier work in Latin), and an enormous collection of treaties signed after 1761, *Recueil des traités*, which was continued as a standard work by other hands.

Martha, friend of Jesus, sister of Lazarus of Bethany. Luke 10.38–42; John 11.1–46, 12.1–9. She is said to have become a missionary in Gaul. Martha is the type of the housewife encumbered with her duties, or of the active, as against the contemplative, life. Feast, July 29.

Martha's Vineyard (vĭn'yŭrd), island, off SE Massachusetts, in Dukes co. It is 20 mi. long and 10 mi. wide and is separated from the Elizabeth Islands and Cape Cod by Vineyard Sound. Gosnold visited it in 1602; settlers came from Massachusetts in 1642. It is divided into the towns of Chilmark, EDGARTOWN, GAY HEAD, OAK BLUFFS, Tisbury (including VINEYARD HAVEN village), and West Tisbury. It has harbors at Vineyard Haven, Oak Bluffs, and Edgartown. Whaling and fishing were important here, but the island is now primarily a resort. Much of the interior is set aside as state forest. The island is connected with the mainland by boats from New Bedford and Woods Hole and by airplane service. See history by C. E. Banks (3 vols., 1911–25), H. B. Hough, *Martha's Vineyard* (1936), J. C. Allen, *Tales and Trails of Martha's Vineyard* (1938).

Martí, José (hōsā' märtē'), 1853–95, Cuban writer and leader in the movement for independence. One of the greatest prose writers of Hispanic America, he was noted for his fluent style and vivid imagery. Simultaneously a poet and a man of action, he began his political activities at the age of 16, when he was arrested as a revolutionary and exiled. He resided in Spain, Mexico, and Guatemala, then was in Cuba again for a year which ended in new exile (1879). In Venezuela and in New York (1881–95) he worked for Cuba's liberation. He earned his living primarily by contributing articles to the New York *Sun* and the *Vacón* of Buenos Aires. Because of his innovations in language he is considered a precursor of the *modernista* movement in Spanish letters, and 1882, the date when his *Ismaelillo* was published, is regarded by some as the beginning of *modernismo*. He founded the Cuban revolutionary party in Tampa (1892), went to Cuba as a leader in the revolution, and was among the first to die at the battle of Dos Ríos.

Martial (Marcus Valerius Martialis) (mär'shĭl), A.D. c 40–A.D. c 104, Roman epigrammatist, b. Bilbilis, Spain. He was in Rome for many years after A.D. 64 and by his wit and poetic gifts won fame and favor. He enjoyed the patronage of Domitian, Titus, and Pliny the Younger and the friendship of Juvenal and Quintilian. The closing years of his life were spent at Bilbilis. His epigrams are characterized by a twist of wit at the end of each and original meter and form. His clever, easy, well-written verse became the model for the modern epigram, and Martial executed whole galleries of first-century Roman miniatures. His work is marred in places by grossness.

martial law, temporary government and control by military authorities of a territory or state when war or overwhelming public disturbance makes the civil authorities of the territory or state unable to enforce its law. The body of principles and doctrines under which the military authorities act is also called martial law. When territory is occupied by an invading army, martial law at once comes into operation, the supreme power is exercised by the military commander in accord with the laws and usages of war, and local law and ordinary authorities are superseded as far as he may deem necessary. This sort of jurisdiction is also called military government. Martial law, similar to a state of siege, is applied in serious cases of internal dissension, the army authorities take over the administrative and judicial functions, and civil safeguards (e.g., HABEAS CORPUS and freedom of speech) are suspended. Where the civil courts remain open, even if their orders are executed by the military, martial law is not applicable. In the United States the Federal government is limited in applying martial law by the provision of Article 1, Section 9, Subsection 2, of the Constitution which concerns the suspension of habeas corpus. In most states, martial law may be proclaimed when rendered necessary for public safety. Martial law, which applies to all persons, civil and military, in the area is to be distinguished from MILITARY LAW, the system of rules of government applying only to those in military service.

Martianus Capella: see CAPELLA, MARTIANUS.

Martignac, Jean Baptiste Sylvère Gay, vicomte de (zhäN' bätēstĕ' sēlvĕr' gā' vēkôt' du märtēnyäk'), 1778–1832, French statesman. He was made a member of the council of state in 1822. Charles X, although he disliked Martignac's moderate policies, called upon him in 1827 to form a ministry. Martignac's cabinet, composed of both liberals and reactionaries, was ineffective, his liberal reforms were killed by the ultraroyalists. He was succeeded by the reactionary Polignac in 1829.

Martin, Saint, c 316–397, bishop of Tours. Born a heathen in Pannonia, the son of a soldier, he gave his military cloak to a beggar, became a convert, and refused to fight. Christians. He went (c 360) to St. HILARY OF POITIERS and built himself a hermitage. In 371 he was acclaimed bishop, against his will. He continued to live as a monk in the monastery of Marmoutiers, near Tours, which became the training ground for Celtic missions. He was a staunch Catholic, but his zeal for orthodoxy did not prevent his withholding communion from those bishops who connived at the ruthless slaughter of the Priscillianist heretics. St. Martin was universally loved, and his cloak is a symbol of heroic charity (see CHAPEL). His principal shrine was at Tours. Feast: Nov. 11 (Martinmas). St.

Martin's summer is an English counterpart of *Indian summer*, in mid-November.

Martin I, Saint, d 655, pope (649–55), an Italian (b Todi), successor of Theodore I and predecessor of St. Eugene I On his accession he summoned a great council at the Lateran, as St MAXIMUS had urged, to deal with MONOTHELETISM, discussion of which had been forbidden by Emperor Constans II The council condemned all Monothelete utterances, including the private letter of HONORIUS I, and enunciated the Catholic dogma of two natures, two wills, and two energies in one Person in Jesus Christ Martin disseminated an encyclical confirming the council's acts For this "contumacy" Constans ordered Martin taken to Naxos and imprisoned with great privations Later, he was publicly humiliated in Constantinople and finally exiled in the Crimea He soon died there and was immediately acclaimed as a martyr by Catholics of East and West Feast Nov 12

Martin IV, d 1285, pope (1281–85), a Frenchman named Simon de Brion; successor of NICHOLAS III and predecessor of Honorius IV He was chancellor under Louis IX of France and was created cardinal by Urban IV He was thus naturally very friendly to the Angevins in S Italy and Sicily and is said to have owed his election as pope to their interest At any rate he was wholly at one with Charles of Anjou (Charles I of Naples and Sicily) in his pontificate Hence in supporting Charles's design to restore the Latin Empire of Constantinople, Martin sacrificed (1281) the recent union of East and West made at Lyons (1274) Then after the SICILIAN VESPERS he turned all his powers against Aragon He probably never knew how disastrous his policy was Martin adopted the title Martin IV because it was believed then that the two popes named Marinus were named Martin He is really only the second pope named Martin

Martin V, 1368–1431, pope (1417–31), a Roman named Oddone Colonna, successor of GREGORY XII and predecessor of EUGENE IV He was created cardinal by Innocent VII, and in the schism (see SCHISM, GREAT) he attended and supported the decisions of the Council of Pisa (see PISA, COUNCIL OF) His election (Nov 11, 1417) by the conclave at the Council of Constance (see CONSTANCE, COUNCIL OF) as pope ended the schism The election was greeted with almost universal joy and relief Declining invitations to settle elsewhere, Martin made his way slowly to Rome (1420) and set about rehabilitating the city and the Papal States His chief concern was the consolidation of the restored Church unity and the papal prestige, and to this end he made concordats with various rulers More significant was his denunciation of the conciliar theory which had gained wide following at Pisa and Constance Nevertheless he followed the wishes of the last council and summoned a new one, this met at Pavia (1423), moved to Siena, and accomplished nothing, Martin dissolved it (1424) and summoned a council for 1431 to meet at Basel In Martin's reign an attempt to prolong the schism was made in Spain by the followers of Antipope Benedict XIII (see LUNA, PEDRO DE), who chose (1425) a successor to him called Clement VIII (otherwise Gil Sánchez Múñoz) Alfonso V of Aragon patronized this antipope out of political motives, but, gaining nothing, he made Clement resign (1429) and recognized Martin

Martin I, 1356–1410, king of Aragon and count of Barcelona (c 1395–1410) and, as Martin II, king of Sicily (1409–10) He succeeded his brother, John I, in Aragon and became king of Sicily on the death of his son, Martin I of Sicily, who had married Maria, last of the Sicilian branch of the house of Aragon Martin of Aragon and Sicily died without male issue, and struggles for his territories broke out After a two-year interregnum Prince Ferdinand of Castile was chosen (1412) king of Aragon and Sicily as FERDINAND I

Martín, Esteban (ĕstäē'bän märtēn'), fl 1539, printer in Mexico He is reputed to have preceded Juan PABLOS It is held by some that Martín printed *Escala espiritual para llegar al cielo*, a translation of a work by St John Climax, in 1535, and *Catechismo mexicano* in 1537

Martin, François Xavier (frăswä' zăvyā' märtē'), 1762–1846, American jurist, b Marseilles, France He came to the United States in 1786 He was admitted to the North Carolina bar in 1789 His Federal positions were judge for Mississippi Territory (1809) and for Louisiana Territory (1810) In the government of the state of Louisiana he was attorney general (1813), justice of the state supreme court (1815), and chief justice (1836) His wide learning did much to harmonize the strands of English, Spanish, and French law in the legal system of Louisiana Besides digests of Louisiana cases, Martin wrote *A History of Louisiana* (1827) and *A History of South Carolina* (1829)

Martin, Homer Dodge (mär'tĭn), 1836–97, American landscape painter, b Albany, N Y, mostly self-taught His earlier works are in the style of the Hudson River school, but after his stay (1881–86) in France his work showed the influence of the Barbizon school, notably Corot, his style, however, retained its individuality. Martin's landscapes are poetical interpretations of nature, admirably composed, somewhat melancholy, subtle in coloring and in the treatment of light and atmosphere. Among his best-known works are *Harp of the Winds*, *Sand Dunes at Lake Ontario*, *Manor House at Criquebœuf*, and *White Mountains* (Metropolitan Mus), *Evening on the Seine* and *Lower Ausable Pond* (National Gall , Washington, D C), *Lake Sandford* (Century Club, New York); *Sea at Villerville* (Kansas City Art Inst), and *A Newport Landscape* (Lotus Club, New York) His last years were spent in St Paul, Minn , where, nearly blind, he painted from memory *Adirondack Scenery*. See study by F J Mather (1912)

Martin, Josiah, 1737–86, British colonial governor of North Carolina (1771–76), b West Indies An army officer, he had attained the rank of lieutenant colonel when he was appointed governor in 1771 He established cordial relations with the leaders of the REGULATOR MOVEMENT on the frontier, but antagonized the tidewater planters by his severe policies of taxation and court regulations He attempted unsuccessfully to organize the Loyalists of the colony to resist the American Revolution When his Loyalist Highlanders were defeated (1776) and the revolution became general, he left the colony Later he took part in the attack on Charleston and was an adviser to Generals Clinton and Cornwallis He returned to England in 1781 because of ill-health

Martin, Luther, c 1748–1826, American lawyer and political leader, b New Brunswick, N J , grad College of New Jersey (now Princeton Univ), 1766 He practiced law and became attorney general of Maryland He was a delegate to the Federal Constitutional Convention but refused to sign the Constitution because he felt it violated states' rights He was one of the defense counsel for Samuel Chase in 1804 and for Aaron Burr in 1807 and was again state attorney general He was a bitter opponent of the Jeffersonians

Martin, 1 City (pop 1,013), co seat of Bennett co , SW S Dak , SE of Rapid City and near the Nebr line, in a farm and livestock area, founded 1912, inc 1926 Pine Ridge Indian Reservation is near by 2 City (pop 3,587), W Tenn , E of Reelfoot Lake, in a farm and timber area, founded 1873 Univ of Tennessee Junior College is here

martin, name applied chiefly to certain swallows—a small bluish-black European swallow, called the European martin, the bank swallow or sand martin of Europe and North America, and the American purple martin Since the purple martin feeds on insects, chiefly harmful ones and drives away hawks and crows, it is valuable to farmers It is a sociable bird, and groups will nest in boxes provided for them It winters in Brazil Bee martin is a name of the kingbird

Martin de Porres. see PORRES, MARTIN DE

Martin du Gard, Roger (rôzhä' marte' dü gär'), 1881–, French novelist Recognition came with *Jean Barois* (1913), a novel of France during the Dreyfus Affair, and the subsequent eight-volume novel cycle *Les Thibault* (1922–40, Eng tr , *The World of the Thibaults*, 1939–41), which won for its author the 1937 Nobel Prize in Literature The story of two families, one Catholic and the other Protestant, dissects the conflicting strata of modern French society and beliefs He also wrote the *nouvelles—Confidence africaine* (1931) and *Vieille France* (1933) Extremely interested in social problems, he has long been associated with the *Nouvelle Revue française* See H C Rice, *Roger Martin du Gard and the World of the Thibaults* (1941)

Martineau, Harriet (mar'tĭnō), 1802–76, English writer, b Norwich, sister of James Martineau Deaf from early youth and poverty stricken after her father's death in 1826, she not only supported herself by writing, but became prominent in literary circles Her first success was *Illustrations of Political Economy* (9 vols , 1832–34), a series of tales interpreting political science for the layman She successively advocated Unitarianism, the abolition of slavery, mesmerism, and positivism Although greatly admired by many, Miss Martineau's views provided a constant source of controversy Important among her many published works were *Society in America* (1837) and *Retrospect of Western Travel* (1838), books resulting from a visit to the United States in 1834, *Deerbrook* (1839), a novel, *The Playfellow* (1841), popular tales for children, which included *Settlers at Home* and *Feats on the Fiord*, *Letters on Mesmerism* (1845), *The Positive Philosophy of August Comte* (1853), a free and abridged translation of his *Philosophie positive*, and her autobiography (1877) See biographies by Theodora Bosanquet (1927) and J C Nevill (1943)

Martineau, James, 1805–1900, English philosopher and divine, brother of Harriet Martineau He integrated his philosophy and religion into an interpretation of man's theistic beliefs An inspired teacher and minister, he achieved international distinction in academic and religious circles Besides numerous essays contributed to periodicals, he was the author of *A Study of Spinoza* (1882), *Types of Ethical Theory* (1885), *A Study of Religion* (1888), and *The Seat of Authority in Religion* (1890).

Martinelli, Giovanni (jōvän'nē märtēnĕl'lē), 1885–, Italian-American operatic tenor. He made his debut in Milan in 1910 and sang (1913–46) at the Metropolitan Opera, New York. His repertoire of about 50 roles included the leading tenor roles in nearly all the principal Italian operas

Martinez (märtē'nĕz), city (pop. 7,381), co seat of Contra Costa co , W Calif., on Suisun Bay and NNE of Oakland; laid out 1849, inc 1876 Important industries are oil refining, fishing, copper smelting, and wine making A reservoir, completed here in 1947, is the end of the Contra Costa Canal (see CENTRAL VALLEY PROJECT)

Martínez de Campos, Arsenio (ärsän'yō märtē'nĕth dā käm'pōs), 1831–1900, Spanish general He served in Morocco (1859–60), followed Prim to Mexico and Cuba (1864–70), played a leading role in the proclamation of Alfonso XII as king, and helped bring the Carlist Wars to an end In 1877 he was sent to Cuba, where he ended the TEN YEARS WAR In 1879 he was briefly premier of Spain and then war minister In 1895 he was sent to put down the insurgents in the Cuban revolution, but his lenient attitude caused his replacement by Weyler He later was president of the Spanish senate

Martínez de la Rosa, Francisco (fränthē'skō märtē'nāth dā lä rō'sä), 1787–1862, Spanish dramatic poet, statesman, and historian His best plays are *La conjuración de Venecia* [the conspiracy of Venice] (produced 1834), which was the first real success of the romantic theater in Spain, *Abén Humeya*, written originally in French in 1830 and translated into Spanish in 1836, and the neoclassic *Edipo* [Oedipus] (1833) Among his poems the best are the elegy entitled *Epístola al duque de Frías* and *El recuerdo de la patria* [memory of our country] He also wrote historical novels and political histories

Martínez de Rosas, Juan (hwän' märtē'nĕs dā rō'säs), 1759–1813, Chilean revolutionist, b Mendoza, Argentina Lawyer and scholar, he was a leading instigator of revolutionary ideas In 1810 he headed the junta which deposed the Spanish governor, but the next year was himself forced out because his ideas were too radical for the more conservative element of the revolution Subsequently opposing the military dictatorship of José Miguel CARRERA, he was exiled and died at his birthplace

Martínez Ruiz, José (hōsā' märtē'nāth rōōth'), 1873–, Spanish writer of the group known as the Generation of 1898 Most of his books of essays novels, and plays have been published under the pseudonym Azorín Among his novels are *La voluntad* [will] (1902), *Antonio Azorín* (1903), *Las confesiones de un pequeño filósofo* (1904), *Don Juan* (1922, Eng tr , 1923), and *Doña Inés* (1925), in all of which he disregards the anecdote to concentrate on poetic and psychological observations woven together with a superb technique. His plays include *Old Spain* (1926) and *Brandy, mucho brandy* (1927) His fame rests largely on his essays and literary criticism His essays, which excel in the description of the landscape and the small towns of Castile in an impressionistic style, include *Los pueblos* (1905), *Castilla* (1912), *Lecturas españolas* (1912), *Clásicos y modernos* (1913), and *Al margen de los clásicos* (1915)

Martínez Sierra, Gregorio (grāgō'rēō märtē'nāth syĕ'rä), 1881–1947, Spanish dramatist, novelist, and poet His masterpiece is *Canción de cuna* (1911, Eng tr , *The Cradle Song*, 1917), it has been many times produced in New York and London Others of his most popular plays are *El reino de Dios* (1915, Eng tr , *The Kingdom of God*, 1923), *Sueño de una noche de agosto* [August night's dream] (1918, Eng tr , *The Romantic Young Lady*, 1923), and *Mamá* (1912) He also cultivated the novel, of which *Tu eres la paz* [Thou art peace] (1907, Eng tr , *Ana María*, 1921) is the best known *Flores de escarcha* (1900) is a collection of verse He was active as theater manager and art director of a dramatic group. Much of his work was done in collaboration with his wife, Doña María de la O Lejárraga

Martini, Simone (sēmō'nā märtē'nē), or **Simone di Martino** (dē märtē'nō), c 1283–1344, Sienese painter, sometimes erroneously called Simone Memmi He was a follower of Duccio de Buoninsegna and a leader of the Sienese school He executed frescoes for the churches of Siena, Naples, Assisi, and Orvieto, *Madonna and Child with Saints and Angels* (Palazzo Pubblico, Siena); and an altarpiece, *Madonna and Child with Saints* (Church of Santa Caterina, Pisa) In Assisi he painted frescoes in the Chapel of San Martin in the Lower Church, and in Avignon he decorated the papal palace Other works are *King Robert Crowned by His Brother, St. Louis of Toulouse* (Naples), an altarpiece for San Domenico in Orvieto (Gardner Mus , Boston), fresco of Guidoriccio Fogliani de' Ricci (Palazzo Pubblico, Siena), *Annunciation* (Uffizi), painted with Lippo Memmi, *Christ among the Doctors* (Royal Inst., Liverpool); and others in the Louvre and in Antwerp. Martini's art is distinguished for its color and decorative qualities See Bernhard Berenson, *Central Italian Painters of the Renaissance* (1897)

Martinique (märtĭnēk'), overseas department of Metropolitan France (427 sq mi ; pop 261,595), in the Windward Islands, West Indies The capital is FORT-DE-FRANCE The department and the island of Martinique are coterminous Of volcanic origin, rugged and mountainous, the island reaches its greatest height in PELÉE volcano Most of the farming is done in the hot valleys and along the coastal strips, and about 80 percent of this area is relegated to sugar cane. Introduced from Brasil in 1654, this crop, supplying the two major exports—sugar and rum—made Martinique one of the wealthiest sugar islands in the 18th cent and has since held so commanding a position in the economy that crop diversification has largely failed However, some bananas, cacao, coffee, pineapples, and subsistence foods are raised The population is largely Negro or part Negro A dialect of French is the common language With striking scenery, abundant rainfall, and fertile soil, Martinique has nevertheless been subject to disasters, an average of one about every five years There have been hurricanes, tidal waves, earthquakes, and volcanic eruptions, besides fire, famine, and drought The most striking catastrophe was the destructive eruption of Pelée in 1902, when the old capital, St. Pierre, was ruined Discovered by Columbus, probably in 1502, it was ignored by the Spanish, and colonization was begun by the French under ENAMBUC in 1635 Several times during the colonial wars between France and England it was occupied by the English, until after the Napoleonic Wars it was finally confirmed as a French possession After the fall of France in the Second World War, Martinique remained loyal to Vichy until 1943, when it capitulated under U S pressure and joined the Free French movement In 1946 it became a department, and a prefect replaced the governor as executive officer

Martino, Simone di see MARTINI, SIMONE

Martinsburg. **1** Industrial borough (pop 1,396), S Pa , SE of Altoona, settled c 1793 by Quakers, laid out 1815, inc 1832 It has hosiery mills Quarrying and brickmaking are done here **2** Industrial city (pop 15,063), co seat of Berkeley co , W Va , in the Eastern Panhandle SW of Hagerstown, Md , chartered 1778 It produces apples, textiles, cement, and lumber, and limestone is quarried Belle BOYD, Confederate spy, lived here and was imprisoned in the old courthouse Near-by Bunker Hill, settled c 1729, is the oldest recorded settlement in the state

Martins Ferry, industrial city (pop 14,729), E Ohio, on the Ohio river opposite Wheeling, W Va , settled 1785 as Norristown, platted 1795, replatted 1835 as Martinsville and later called Martins Ferry, inc 1865 Steel and coal are its chief products William Dean Howells was born here In Walnut Grove Cemetery are the graves of Elizabeth (Betty) and Ebenezer ZANE

Martinsville **1** City (pop 1,296), E Ill , SW of Terre Haute, Ind , in a farm and oil area, platted 1833, inc 1905 **2** City (pop 5,009), co seat of Morgan co , S central Ind , on the White River and SW of Indianapolis, settled 1822 In a beautiful region, it is a health resort with artesian springs **3** Industrial city (pop 10,080), SW Va , on the Smith river, in the Blue Ridge foothills near the N C line, founded 1793, inc as a city 1929 It is a trade center for a farm area and produces furniture and textiles The courthouse of Henry co is here

Martinu, Bohuslav, Czech *Martinů* (bō'hōōslăf mär'tĭnōō), 1890–, Czech composer, studied at the Prague Conservatory He played the violin (1913–23) in the Czech Philharmonic Orchestra He lived in Paris from 1923 until 1941, when he came to the United States His debut as a composer was with the ballet *Istar* (Prague, 1922) Outstanding works are the operas *The Miracle of Our Lady* (Prague, 1934) and *Juliette* (Prague, 1938), a Concerto Grosso (Boston, 1941), two symphonies (1942, 1943), and *Memorial to Lidice* (1943) for orchestra See biography by Milos Safranek (1944)

Martiny, Philip (märtē'nē), 1858–1927, American sculptor, b Alsace He was trained in France, where he acquired a brilliant technique He executed the decorations for the Agricultural Building at the World's Columbian Exposition, Chicago, 1893, the *Fountain of Abundance* for the Pan-American Exposition, Buffalo, 1901, the grand staircase in the Library of Congress and decorations for the Carnegie Library, Washington, D C , groups for the Chamber of Commerce, statuary for the Appellate Courthouse, bronze doors for St Bartholomew's Church, and two World War memorials, New York; and the monument to President McKinley, Springfield, Mass.

Martius, Karl Friedrich Philipp von (kärl' frē'drĭkh fē'lĭp fŭn märʹtsēōōs), 1794–1868, German botanist and physician He was professor of botany (1826–64) at the Univ of Munich and from 1832 was director of the botanic gardens After a scientific expedition to Brasil, he wrote several books on South American plants, including *Historia naturalis palmarum* (1823–50), *Reise in Brasilien* (1823), *Nova genera et species plantarum* (1823–32), and *Icones selectae plantarum cryptogamicarum* (1827).

Martyn, John, 1699–1768, English botanist He wrote a number of books on systematic botany, of which the most important is *Historia plantarum rariorum* (1728–37)

Marvel, Ik, pseud. of **Donald Grant Mitchell,** 1822–1908, American author, b Norwich, Conn , grad Yale, 1841 His two most popular books, read for more than a generation, were the sentimental *Reveries of a Bachelor* (1850) and *Dream Life* (1851) See biography by W H Dunn (1922)

Marvell, Andrew, 1621–78, English poet He was also a satirist, pamphleteer, and member of Parliament He is best known for his lyrics of country life, including "The Garden," "On a Drop of Dew," and "To His Coy Mistress," and for his "Horatian Ode" to Cromwell See Marvell's poems and letters (ed by H M Margoliouth, 2 vols , 1927), biographies by Augustine Birrell (1905), Pierre Legouis (1918), V Sackville-West (1929), and M C Bradbrook and M G L Thomas (1940)

Marvin, Charles Frederick, 1858–1943, American meteorologist, b Putnam (now part of Zanesville), Ohio, grad Ohio State Univ , 1883 He entered (1884) the U S Signal Service, predecessor of the Weather Bureau, which he helped to develop and later directed (1913–34) He is especially noted for his work on humidity tables and on the measurement of wind velocity, for the invention and improvement of meteorological instruments, and for his advocacy of calendar reform

Marwar, India see JODHPUR

Marx, Karl, 1818–83, German social philosopher and radical leader, the chief theorist of modern socialism The son of a jurist, he studied law at Bonn and Berlin, but became increasingly interested in philosophy, and took a Ph D degree at Jena (1842) In 1842 he became editor of the *Rheinische Zeitung*, a liberal newspaper which was suppressed in 1843 He then went to Paris where he began his life-long association with Friedrich ENGELS At this time Marx became a socialist The work of his Paris period culminated in his *Misère de la philosophie* [poverty of philosophy] (1847, Eng tr 1910), an answer to P J Proudhon and his book *Philosophie de la misère* In 1848 Marx and Engels published the famous *Communist Manifesto* in which was set forth the basic formulation of Marxism After a brief stay in Germany in the revolutionary years 1848–49 he went into exile to London in 1850 and remained there until his death Here he founded (1864) the International Workingmen's Association (see INTERNATIONAL, FIRST), and here he wrote his monumental work, *Das Kapital* (Vol I, 1867, Eng tr 1887, vols II and III, posthumously ed by Engels, 1885–94, Eng tr 1901–9) Despite its great difficulty, *Das Kapital* has exerted an incalculable influence on the modern world, an influence which has been compared to that of the Gospels, of the Koran, or of Newton's *Principia* Marx combined a profound and powerful mind with a capacity for indefatigable research and study Spending most of his time at the British Museum, he was thoroughly familiar with all earlier and contemporary economic thought and with all reports, studies, and statistics of British economy The organization of his work (even of the first volume, for which he is entirely responsible) is difficult to follow, and he probably planned a complete integrated revision His style particularly in descriptive passages, at times attains lucidity, force, and even trenchant humor, but it is usually made arid by his technical terminology and the complexity common to German philosophers Repudiating all existing socialist theories as either utopian or unscientific, he developed a dynamic theory of social change which became the basis of scientific socialism (see MARXISM) From this most modern forms of SOCIALISM and COMMUNISM are derived From the philosophy of HEGEL he adapted the dialectical method which he applied in a sense directly opposite to Hegel's (see DIALECTICAL MATERIALISM) Much of Marx's life was spent in poverty, some of the time he supported himself as a correspondent for the New York *Tribune*, and for years he depended upon Engels for financial aid Marx was the father-in-law of Jules Guesde, chief founder of the French Socialist party In the estimate of posterity Marx has figured as a blood-thirsty destroyer of society, as Antichrist, as a scholarly intellectual, and as a Messiah The fact that he was of Jewish parentage has been exploited by anti-Semites in two ways—either to prove to other anti-Semites that Marxism, as a Jewish invention, was necessarily diabolical, or to demonstrate to anti-Marxists that the Jewish race, having invented Marxism, was necessarily diabolical Dispassionate scholars have tended to regard Marx as one of the greatest of economic theoreticians, whose views cannot be lightly discounted but whose system, like all systems, is vitiated by its rigidly doctrinaire nature Marx wrote on nearly all aspects of economics, on the impact of the Civil War on American society as well as on European problems Among his many essays are *Civil War in France* (1871, Eng. tr 1871), *The Gotha Program* (1891, Eng tr 1922), and *A Contribution to the Critique of Political Economy* (1859, 2d ed 1897, Eng tr 1904) His selected works have been edited by V V Adoratsky (2 vols , 1935), and his and Engels's selected correspondence has been translated (1942) Notable biographies include those by Otto Rühle (Eng tr , 1929), Franz Mehring (Eng tr , 1935), and Karl Korsch (1939). See also M M Bober, *Karl Marx's Interpretation of History* (1927); Sidney Hook, *From Hegel to Marx* (1936)

Marx, Wilhelm (vĭl'hĕlm), 1863–1946, German statesman A leading member of the Catholic Center party, which he entered in 1910, he was elected its president in 1921 As chancellor (1923–24) he secured the passage of the Dawes Plan He was succeeded by Hans Luther, whom he followed again as chancellor (1926–28) In the presidential elections of 1925 Marx was the unsuccessful candidate of the Center and the Social Democratic parties against Hindenburg

Marx Brothers, team of American moving-picture comedians The members are Julius (1895–) known as Groucho, Arthur (1893–), called Harpo, and Leonard (1891–), known as Chico, all of whom were born in New York city They appeared in vaudeville and on the stage and in 1929 entered moving pictures, where they were first known as "the Four Marx Brothers " The fourth brother, Herbert, called Zeppo, withdrew from the combination in 1935 Some of the films that have made them famous are *Animal Crackers*, *Monkey Business*, *Horsefeathers*, *Duck Soup*, *A Night at the Opera*, and *Room Service*

Marxism, economic-political system named for Karl MARX It is also known as economic or materialistic determinism, scientific (as opposed to utopian) socialism, and dialectical materialism No modern economic or political system can well leave Marxism entirely out of account, and virtually all modern socialist and communist thought is directly based on Marxism Though primarily an economic-political doctrine Marxism is the result of a method (DIALECTICAL MATERIALISM) which is applicable to any problem of human thought, and in its fullest application it probably has had a wider impact on the development of society than any other doctrine since the advent of Islam The chief creators of the system were Karl Marx and Friedrich ENGELS, who cooperated in 1848 in drafting the *Communist Manifesto* This contains in germ the doctrines formulated in Marx's *Das Kapital* and developed in Engels's *Landmarks of Scientific Socialism* The fundamental assumption of Marxism was "that the history of all hitherto existing society is the history of class struggles" (*Communist Manifesto*), the struggle taking place between the oppressing and the oppressed (This view was a remarkable parallel of Darwin's theory of natural selection) In the Marxist theory of dynamic change, every social order based on class division contains the germs of its own destruction Every ruling class is eventually displaced by a new ruling class until a classless society emerges from the struggle In modern society, the bourgeois (i e , capitalist) class had displaced the nobility of feudal society, the commercial and industrial revolutions had simplified the class structure, and the stage was set for the struggle between the bourgeoisie and the nonpropertied "wage slaves"—the proletariat In *Das Kapital*, Marx developed his theory, using Hegel's dialectic method for his own purposes Tracing the entire process by which capital is accumulated and transmitted, in the historical process, from one class to another, he formulated the theory of surplus value Briefly, the theory supposes that the value of a commodity is determined by the quantity of labor (measured in time) required for its manufacture This also holds for the value of labor itself, which in capitalistic society is a commodity like any other The value of the commodities consumed by the worker is less than the value (in terms of time) of the commodities he produces, the difference, called surplus value, represents the profit of the capitalist Thus the bourgeois class prospers through the labor of the proletariat, which moreover is unable to afford to buy the majority of goods it produces Thus trend, in Marx's view, was becoming even more pronounced the rich were getting richer, and the poor poorer According to the *Communist Manifesto* the revolution of the proletariat was to occur first in a country where this trend had progressed most, i e , in an "advanced" or highly industrialized nation The proletariat, after becoming itself the ruling class, was "to wrest, by degrees all capital from the bourgeoisie, to centralize all instruments of production in the hands of the State," and "to increase the total of productive forces as rapidly as possible " Class distinctions would gradually disappear and the public power lose its political character (i e , to use a later phrase, the state would 'wither away"), because the conditions for the existence of class antagonisms would have disappeared Along with social classes, the "bourgeois family," religion, and other hallowed institutions would vanish Though the process was inevitably determined, Marxists were to cooperate with it and to speed it by bringing about the union of the workers of all countries, by supporting (for reasons of expediency) whatever political party favored "the momentary interests of

the working class," and by resorting to revolution if necessary. Marx's theory of the economic and historical process must be kept distinct from his predictions, which were inevitably subject to miscalculations even if his basic assumptions were right. Thus the trade union movement resulted, contrary to Marx's predictions, in a notable improvement of the workers' conditions in highly industrialized countries, while the first proletarian state was established in industrially retarded Russia. Marxists, however, can easily explain such discrepancies in the very terms of Marxist method. It is a popular error to suppose that Marxists, because they reason on the materialistic assumption that economic factors determine human behavior, and because they reject divine providence are necessarily materialists in the popular meaning of the word and reject all but material values as useless. Some Marxists have done so, but many defenders of the capitalist system are equally strongly convinced of the primacy of matter and of the nonexistence or irrelevancy of God. However, while capitalist society is merely indifferent to metaphysics and religion, Marxism as a rule is actively hostile, and wherever Marxist doctrine has triumphed relations between Church and state have deteriorated. From Marxism the various branches of SOCIALISM and COMMUNISM have derived a common program calling for collective ownership of the chief means of production. They have split on the political issue of how their object should be attained, the moderate Socialist parties preferring gradual evolution by parliamentary methods, and the Communists advocating world revolution. Leninism, the direction Marxism took in Soviet Russia, was the contribution of V. I. LENIN. See bibliography under MARX, KARL, COMMUNISM, SOCIALISM.

Mary, the Virgin, mother of Jesus, the principal saint, called Our Lady. Her name is the Hebrew *Miriam*. The events of her life mentioned in the New Testament include Gabriel's annunciation to her of Jesus' birth, her visitation to Elizabeth, Jesus' nativity, her purification at the Temple, and her station at the Cross. According to the New Testament she was first betrothed, then married, to Joseph and was the cousin of Elizabeth, mother of John the Baptist. The New Testament references to her are Mat. 1, 2, Luke 1, 2, John 2, Mark 3:31–35; 6:3, Luke 11:27,28, Mat. 12:49, John 19:25–27, Acts 1:14. Mary has been from ancient times most highly honored by Christians, and Roman Catholics and members of the Eastern churches maintain the traditional attitude. In the Reformation, one of the principal points of contention was the veneration of the Virgin, and Protestants have generally rejected her cultus along with those of the saints. The facts of the Virgin's life unmentioned in Scripture, as handed down by tradition, are that she was the daughter of St. Joachim and St. Anne, announced miraculously to them, that she was presented and dedicated at the Temple as a virgin, that she was later given to Joseph to be protected by him, that after the Ascension she was cared for by St. John the Divine, and that in the end she was "assumed" directly into heaven, some say in the body. Important dogmas concerning the Virgin, as taught by the Roman Catholic Church, are (1) her immaculate conception, that she was conceived and born without original sin (according to a bull of Pius IX, 1854), (2) that she was freed from actual sin by a special grace of God, (3) that she remained a virgin throughout her life, "the brethren of the Lord" of the Gospels being interpreted "kinsmen", (4) that her principal title is Mother of God, because her son, Jesus, is truly God (enounced at the Council of Ephesus, 431), (5) that her intercession is especially efficacious on behalf of men and of the Church, and (6) that she is the highest of creatures and deserves the greatest honor and veneration, but as a creature she is not to be worshiped, for God is alone to be worshiped. The Virgin is venerated under many aspects, which are customarily considered more or less distinctly, thus, churches may be dedicated in her honor or her patronage may be invoked under one aspect alone, e.g., the Roman Catholic Church has named Our Lady in her Immaculate Conception as patron of the United States. Typical of her aspects and cultuses are Queen of Heaven, the Sorrowful Mother, a popular cultus (see STABAT MATER DOLOROSA) commemorated especially by two feasts of the Seven Sorrows or Dolors (Sept. 15 and the Friday before Palm Sunday), Our Lady of Perpetual Help, associated with a famous icon in Rome, and Our Lady of CZENSTOCHOWA, a rallying point of Polish nationalism. Apparitions of the Virgin have been reported since ancient times, and some have led to new cultuses and shrines, typically associated with cures. Some of these cultuses have eventually been approved by the Roman Catholic Church, without vouching for the authenticity of the apparition or the cures. These apparitions include those at GUADALUPE HIDALGO, Mexico, in 1531, at PARIS (Our Lady of the Miraculous Medal) in 1830, at LOURDES, France, in 1858, and at FÁTIMA, Portugal, in 1917. Two great pilgrim shrines of medieval England were Our Lady of Glastonbury and Our Lady of Walsingham (Norfolk). Her symbolic titles (assembled in a popular list called the Litany of Loreto) often contain Old Testament allusions without necessarily implying that the passage refers to her in prophecy, e.g., Second Eve (Gen. 3.15), Mystical Rose (Ecclus. 24.14), and Ark of the Covenant. Some of her titles are frankly poetical, e.g., Star of the Sea (*Stella maris*). The Virgin is constantly honored and invoked by Roman Catholics in the AVE MARIA, in the ROSARY, in the litany, in hymns (e.g., SALVE REGINA), in novenas, in societies formed to encourage devotion to her, and in other ways. The following are the principal feasts, universally observed in the Roman Catholic Church and many of them by Protestants: Dec. 8, the Immaculate Conception, Feb. 2, the Purification of Our Lady, or CANDLEMAS, March 25, the Annunciation, or Lady Day, July 2, the Visitation of Our Lady to St. Elizabeth, Aug. 15, the Assumption, her principal feast in Eastern and Western Churches, Sept. 8, the Birthday of Our Lady, Nov. 21, the Presentation of Our Lady at the Temple. To her are devoted many other days, besides every Saturday and all the days of May. The honor paid to the Virgin by Christians has interested scholars greatly, for many aspects of the cultus of the Virgin are paralleled in non-Christian religions. Artistic representations of Mary are innumerable, for differing aspects, see MADONNA and PIETÀ. She has been the subject of countless works from the time of the PSEUDEPIGRAPHA. For differing views of her cultus, see Henry Adams, *Mont-Saint-Michel and Chartres* (1913), F. M. Willam, *Mary the Mother of Jesus* (1938), C. C. Martindale, *Our Blessed Lady* (1940), M. J. Scheeben, *Mariology*, Vol. I (1946).

Mary I, 1516–58, queen of England (1553–58), daughter of HENRY VIII and KATHARINE OF ARAGON. While she was still a child, various marriage proposals were considered—to the eldest son of Francis I of France (1518), to the Emperor Charles V (1522), to Francis I himself (1527), and to several others. She was a pawn in her father's political intrigues. In 1525 she was given a separate household as the princess of Wales, but in 1527 Henry began negotiations for divorce, and Mary, remaining loyal to her mother and to the Catholic religion, spent the next nine years in misery. She was separated from Katharine, denied presence at court, treated as illegitimate, and forced to serve her half sister Elizabeth as lady in waiting. Plans to escape to the Continent failed, and in 1536 she was finally forced to acknowledge herself as illegitimate and to repudiate the Catholic Church, statements from which she was later absolved by the pope. During the spread of Protestantism in the reign of her half brother, EDWARD VI, Mary was stubbornly loyal to her faith, insisting on observing Mass in her private chapel in defiance of the Act of Uniformity and appealing to the emperor for protection. The activities of John Dudley, duke of NORTHUMBERLAND, led to the short-lived usurpation of the throne by Lady Jane GREY at Edward's death, Mary, however, supported by an overwhelming number of loyal subjects, soon ascended the throne. In the early part of her reign Mary showed considerable clemency toward her political opponents, but she and her advisers were set upon two policies—her marriage to Philip (later PHILIP II of Spain), son of Emperor Charles, with the consequent Spanish alliance, and the restoration of Catholicism to England. The former aroused violent opposition, which was focused in the unsuccessful rebellion of Sir Thomas WYATT, but both the marriage and alliance were carried out in 1554. Late in 1554 papal authority was reestablished in England, early in 1555 Parliament repealed the antipapal laws of Henry VIII, restored the ecclesiastical courts and the laws against heresy, and refused only to restore church property that had been seized. There then began the religious persecutions which lasted throughout the reign, the number killed amounted almost to 300 and included such men as Nicholas RIDLEY, John ROGERS, Hugh LATIMER, and Thomas CRANMER. The queen's title of "Bloody Mary" is something of a misnomer, for the persecutions were no more severe than many others. Mary acted out of sincere devotion to her religion, and many of the radical Protestants were actually guilty of sedition. In 1555 Philip, frustrated by Parliament in his attempt to win coronation, left his grieving wife and went to his dominions in the Netherlands. In 1557 England was reluctantly drawn into the existing war between Spain and France, the main results of which were the loss of Calais and the increasing hostility of the English people toward their dying queen. See A. F. Pollard, *History of England, 1547–1603* (1923), A. D. Innes, *England under the Tudors* (1924), H. F. M. Prescott, *A Spanish Tudor* (1940).

Mary II, 1662–94, queen of England, daughter of James II and Anne Hyde, b. London. Brought up a Protestant despite her father's Catholic profession, she married William of Orange in 1677. She came to England after the Glorious Revolution of 1688 and was proclaimed joint sovereign with her husband in 1689 (see WILLIAM III), but actually ruled only during his absences. Although she was relatively popular with the Dutch and English, she led an unhappy life because of the political conflicts of her husband, her father, and her sister ANNE. She sided faithfully with her husband. See biography by N. M. Waterson (1928).

Mary, 1867–, dowager queen of England, consort of George V. Daughter of the duke of Teck and granddaughter of Adolphus, duke of Cambridge (son of George III), she was second cousin to George, then duke of York, to whom she was married in 1893. Among her sons were Edward VIII and George VI.

Mary, 1897–, princess royal of England; daughter of George V and sister of George VI. In 1922 she married Viscount Lascelles, later earl of HAREWOOD.

Mary, in the Bible. **1** MARY, the Virgin. **2** MARY MAGDALEN. **3** Wife of CLEOPHAS. **4** Sister of Lazarus and Martha. She sat at Jesus' feet while Martha served and has come to symbolize the life of contemplative love of God. Luke 10:38–42, John 11:1–46, 12:1–9. Some identify her with St. Mary Magdalen. **5** Roman lady saluted by Paul. Rom. 16.6. **6** Mother of St. Mark. Col. 4:10.

Mary, Turkmen SSR: see MERV.

Maryborough, town (pop. 14,409), Queensland, Australia, on the Mary river, 23 mi. from its mouth, and NNW of Brisbane. It exports sugar, fruit, coal, and timber. There are shipyards and a steel mill. The Maryborough School of Arts was established in 1861.

Maryborough, Ireland: see PORT LAOIGHISE.

Mary Hardin-Baylor College: see BELTON, Texas.

Maryknoll (mā'rēnōl), place, SE N.Y., near Ossining, headquarters of the Catholic Foreign Mission Society of America. A Roman Catholic community of priests (the "Maryknoll Fathers") are here especially trained for foreign missionary work. The community was established in 1911 and sent out its first missionaries in 1918. At first the territory assigned was the Far East, especially China and Korea. During the Second World War, Maryknoll priests began to be sent to Ecuador, Peru, Bolivia, and Chile, to supplement the shortage of native clergy. There is an affiliated community of nuns (the "Maryknoll Sisters"). See Robert Considine, *The Maryknoll Story* (1950).

Maryland, state (10,577 sq. mi.; 1940 pop. 1,821,244, 1949 estimated pop. 2,175,000), E United States, in the Middle Atlantic region, one of the Thirteen Colonies. Annapolis is the capital, BALTIMORE is the metropolis, with a large percent of the state's population. The seaboard state is split by the great gash of Chesapeake Bay, which runs northward almost to the northern border. The section of Maryland (the Eastern Shore) which with Delaware and a small part of Virginia occupies the peninsula between Chesapeake and Delaware bays is thus separated from the main part of Maryland and has developed a separate pattern of culture. The western and southwestern border (except at the District of Columbia) is marked by the Potomac, which separates Maryland from Virginia and West Virginia. The land border in the north is with Pennsylvania (see MASON–DIXON LINE). The main part of the state is divided by the fall line, which runs between Baltimore and Washington, D.C., to the north and west is the rolling piedmont, rising to the Blue Ridge and to the Pennsylvania hills. The heavily indented shores of Chesapeake Bay fringe the land with bays and estuaries, helping in the development of a farm economy relying on water transport. The distinction between tidewater and upland has mirrored in some ways the older national distinction between North and South and has made of Maryland truly a border state. In the mild winters and hot summers of the coastal plains typically Southern trees, such as the loblolly pine and the magnolia, flourish, while the cooler uplands have woods of black and white oak and beech. Chesapeake Bay dominates the eastern section, and the countryside is sharp with the smell of salt water. Fish and shellfish are taken from the water to yield an annual income of several millions of dollars, and in coastal marshes wild fowl abound. The waters and the Eastern Shore attract many vacationers. In the western sections are the mineral resources of building stone and coal. The iron mines, active in the 19th cent., have declined, but the making of iron and steel products is still a major industry. Shipbuilding naturally flourished and reached a high point of art in the days when the Baltimore clipper was queen of the seas, it continued in later years on more massive lines. There are other important manufactures, including textiles, processed foods, building and construction materials, and transportation equipment. Baltimore, CUMBERLAND, and HAGERSTOWN are the chief industrial centers. Manufacturing now exceeds agriculture in value, but the farms yield grains, cereals, truck, and other diverse products. Dairy and poultry farms thrive, and Maryland is famous for breeding horses. Farming today is marked by a low percentage of tenant farmers, a high cash income, and the practice of modern agronomy—all healthful signs. Farming has been extensively practiced since before the whites came

to displace the Algonquian-speaking Indians. Verrasano probably visited (1524) the Chesapeake region, which was certainly later (1603) visited by the Englishman, Bartholomew Gilbert, and charted (1608) by the stalwart Capt John Smith William CLAIBORNE of Virginia, under license from King Charles I, set up a fur-trading post on Kent Island in 1631 The next year Charles I gave a charter to George CALVERT, 1st Baron Baltimore, yielding him feudal rights to the region between lat 40° N and the Potomac river. The territory was named Maryland in honor of Henrietta Maria. Before the great seal was affixed to the charter, George Calvert died, but his son Cecilius CALVERT, 2d Baron Baltimore, undertook development of the colony as a haven for his persecuted fellow Catholics and also as a source of income The ships *Ark* and *Dove* in 1634 brought settlers (both Catholic and Protestant) to the Western Shore, and the colony of St Mary's was set up under Leonard Calvert, brother of the proprietor The grant had, of course, caused a struggle with Claiborne, and the colony continued to meet difficulties The land was largely parceled out in quasi-feudal holdings and given to colonisers In 1637 the freemen asserted their legislative rights by opposing the governor in the first assembly The religious conflict was strong in ensuing years as the Puritans, growing more numerous in the colony and supported by the Puritans in England, set out to destroy the religious freedom guaranteed with the founding of the colony The Act of Toleration (1649) was passed in an attempt to save the Catholic settlers from persecution, but it was repealed (1654) after the Puritans had seized control By a compromise in 1658 the proprietorship was restored to Lord Baltimore briefly, but after the Glorious Revolution of 1688, Maryland became (1691) a royal province, and the Church of England was made the established church Though the proprietorship was restored in 1716, Maryland remained indistinguishable in government from other royal provinces Anti-Catholic action persisted until the 19th cent , when by a curious reversal many Catholic immigrants came to Baltimore, which is today somewhat of a center of American Catholicism In 1694, when the capital was moved from St Mary's to Annapolis, those were the two towns in the province, but the next century saw the emergence of hustling, commercial-minded Baltimore, which by 1800 had a population of more than 30,000 and a flourishing coastal trade, partly dependent on the export of flour Maryland plantation life was somewhat quickened and somewhat altered by this dash of commercialism At the time of the American Revolution most Marylanders were stalwart patriots and vigorous opponents of the British colonial policy In 1776 Maryland adopted a declaration of rights and a state constitution and sent troops and supplies to aid the war for independence, supposedly the steadfast courage of its patriots gave Maryland its nickname, the Old Line State Reluctance to sign the Articles of Confederation was linked with reluctance to yield up claims to Western lands, but the surrender of the lands and creation of the Northwest Territory helped prepare the way for a stronger Federal government A party advocating states' rights, in which Luther MARTIN was prominent, was unsuccessful in opposing the Constitution, and in 1791 Maryland and Virginia contributed land and money for the new national capital in the District of Columbia Industry was already growing to support renewed commerce, and it was furthered by the skill of the German immigrants, who brought a new element into Maryland, hitherto entirely British except for the many Negro slaves After the War of 1812—which was marked for Maryland by the British attack of 1814 and the defense of Fort McHENRY immortalized in Francis Scott Key's STAR-SPANGLED BANNER—the business and industrial elements grew stronger The Southern ways and sympathies persisted, however, among the plantation owners, and as the rift between North and South grew, Maryland was torn by conflicting interests and the intense struggles of the true border state Despite the urgings of the Southern sympathizers, made famous in J R Randall's song, *Maryland, My Maryland*, the opponents of secession were successful in keeping the state in the Union in the Civil War, but Marylanders fought on both sides in the war, and families were even split in bitter conflict. The ANTIETAM CAMPAIGN was, however, the only important action actually fought in Maryland. When the war was over, many of the citizens were disfranchised, but the Reconstruction period lasted only until a new constitution was adopted in 1867 and did not scar the state. Industry quickly revived and became a dominant force. New railroads (railroads had been important to Maryland since early days of building) crossed the state and made it more than ever a crossing point between North and South. The economy prospered Cultural life, which had been vigorous from the early days of the republic, was broadened with the years after the Civil War. The public education system, founded in 1826, was supplemented by act of the assembly in 1868 providing schools for Negroes. In 1876 Johns Hopkins Univ. was founded to join the earlier institutions of higher learning in the state, such as St Johns College, the Univ. of Maryland, and the U.S. Naval Academy. The influence that Johns Hopkins exerted over higher education in the United States was revolutionary The old conflict between traditions in the state has, however, persisted to some extent, and the heritage of the ante-bellum South is still evident Most Marylanders are proud of the customs of gracious living that continue the plantation view of life A more troublesome continuance of the Southern tradition has, however, also been evident in the problem of the Negro Negroes account for 16 percent of the state's population, but generally they find it difficult to obtain occupational or social opportunity The large reservoir of unskilled labor on the southern coastal plains tends to depress wages and to cause a serious problem in times of economic slack The Urban League, founded in 1924, and a permanent state interracial commission are working for the improvement of race relations and for better utilization of the Negro resources The Second World War saw a rise in the general economy of the state, and many hold that the war prosperity, built on the long development of Maryland, is a permanent fulfillment of Maryland's beginnings under the Calverts See J M Gambrill, *Leading Events in Maryland History* (rev ed , 1917), William Bullock Clark, *The Geography of Maryland* (1918); M P Andrews, *The Tercentenary History of Maryland* (1929); Federal Writers' Project, *Maryland· a Guide to the Old Line State* (1940); Harry Bard, *Maryland the State and Its Government* (1943), Hulbert Footner, *Rivers of the Eastern Shore* (1944).

Maryland, University of, at College Park and Baltimore (with a college for Negroes at PRINCESS ANNE); land-grant and state supported, coeducational, chartered and opened 1807 as the College of Medicine of Maryland, became a university 1812 It has absorbed Maryland Agricultural College (chartered 1856), Baltimore College of Dental Surgery (1840, first U S dental school), and several law and pharmacy schools It now comprises colleges of agriculture, arts and sciences, business and public administration, education, engineering, and home economics and (in Baltimore) schools of dentistry, law, nursing, pharmacy, and medicine There are state agricultural, horticultural, and geological research offices, a U S Bureau of Mines experiment station, and the Glen L Martin wind tunnel (completed 1948)

Marylebone, Saint (sənt mă'rĭlŭbŏn') [O Fr ,= (Church of) St Mary-at-the-bourne, i e , at the Tyburn], metropolitan borough (1931 pop 97,627, 1948 estimated pop 75,980) of NW London, England, with Regent's Park to the east It includes the zoological and botanical gardens, the British Broadcasting Corp studios, and Mme Tussaud's waxworks In Marylebone is London's chief shopping district and Harley St , a center of medical practice

Mary Magdalen or **Mary Magdalene** (both măg'dulŭn; formerly, and still in Magdalen College, Oxford, and Magdalene College, Cambridge, môd'lĭn, hence *maudlin*, i e , tearful) [traditionally Greek,= of MAGDALA], Christian saint, a woman very widely venerated in Christendom The name Madeleine is a French form of Magdalen She appears in the New Testament as a demoniac healed by Jesus, as a watcher at the cross, as an attendant at Jesus' burial, and as one of those who found the tomb empty Mat 27 56, 61, 28, Mark 15 47, 16, Luke 8 2; 24, John 19 25, 20 A universal tradition identifies her with the repentant prostitute who anointed Jesus' feet Luke 7 36–50 She has also been identified with the sister of Martha Luke 10 38 A legend of Mary Magdalen makes her go to S France as a missionary and die there, at Sainte-Baume (20 mi E of Marseilles, W Var dept), this has become a popular shrine The principal aspect of her cult is as the penitent, hence the word *Magdalen* Her position as prototype of the Christian mystic arises from the identification with the sister of Martha. Artistic representations deal particularly with her repentance, with her bathing of the feet of Jesus, and with her meeting with Jesus after the resurrection She appears in representations of Jesus' crucifixion and burial Frequently she is shown with red hair. Feast July 22

Marymount College: see TARRYTOWN, N Y.

Mary of Burgundy, 1457–82, wife of Maximilian of Austria (later Emperor MAXIMILIAN I), daughter and heiress of CHARLES THE BOLD of Burgundy At her father's death (Jan , 1477) Louis XI of France seized Burgundy and Picardy and prepared to annex the Low Countries, Artois, Luxembourg, and Franche-Comté—Mary's entire inheritance To gain the assistance of the estates of Flanders, Brabant, Hainaut, and Holland, which sat at Ghent, Mary granted (Feb , 1477) the Great Privilege, which restored the liberties that her father and grandfather had abrogated. She then rejected Louis XI's proposal that she marry the dauphin Charles, and in May she married Maximilian, who had hastened to her assistance with an army However, the Low Countries remained in turmoil, despite his victory at Guinegate (1479), Maximilian was forced (1483) to agree to the Treaty of Arras (see ARRAS, TREATY OF), by this Franche-Comté and Artois passed to France Mary's premature death, caused by a fall from horseback, left her young son Philip (later PHILIP I of Castile) her heir, but only in 1493 was Maximilian able to regain control over the Low Countries, where Philip was held a virtual prisoner The Treaty of Senlis (1493) with France restored Artois and Franche-Comté to Philip, but Burgundy and Picardy remained French The marriage of Mary was a major event in European history, for it established the Hapsburgs in the Low Countries and originated the long rivalry between France and Austria

Mary of England (**Mary Tudor**), 1496–1533, queen consort of Louis XII of France, daughter of Henry VII of England Her father and later her brother, Henry VIII, carried on long but unsuccessful negotiations for her marriage with the Emperor Maximilian's grandson (later Charles V) She was married in Oct , 1514, to Louis XII of France, then a man of 52 and in broken health Soon after the king's death (Jan 1, 1515), Mary secretly married the man of her choice, Charles Brandon, duke of Suffolk With great reluctance Henry VIII pardoned the marriage Mary was the grandmother of Lady Jane GREY Charles Major's novel, *When Knighthood was in Flower*, has made Mary a figure of romance

Mary of Guise (gēz), 1515–60, queen of Scotland, wife of James V, and mother of MARY QUEEN OF SCOTS The daughter of Claude, duke of GUISE, she was also known as Mary of Lorraine Before her marriage to James V (1538) she had been married (1534) to Louis d' Orléans, 2d duke of Longueville, who died in 1537 When James died (1542), shortly after his daughter's birth, James HAMILTON, 2d earl of Arran, became regent. He negotiated a betrothal of the little Queen Mary to Prince Edward (later Edward VI) of England, but the queen mother persuaded Parliament to repudiate it, and after the outbreak of war with England, the young queen was sent to France By 1554, with French aid, Mary of Guise had replaced the pro-English Arran as regent and made no secret of her desire to bring France and Scotland together The young queen had been betrothed to the French dauphin and was married to him in 1558 Meanwhile the leaders of the Protestant reformation in Scotland, spurred by John Knox, aligned themselves with the anti-French party and were aided by the English The regent was forced to call in French troops to resist their combined attack She died soon thereafter By the treaty which ended the war, all foreign troops withdrew from Scotland, and the way was open for the establishment of the Protestant church she had so opposed

Mary of Modena (mŏ'dĭnə), 1658–1718, queen of JAMES II of England, member of the illustrious Este family, daughter of Alfonso V, duke of Modena Her marriage (1673) to James, then duke of York, was brought about through Louis XIV of France The devoutly Catholic princess was unpopular in stoutly Protestant England and was unhappy in her life with James The birth of a son in 1688 resulted in more unpopularity and greater unhappiness Her enemies, opposed to a Catholic heir to the throne, refused to believe him her son and declared him an imposter This hostility helped to precipitate the bloodless revolution which in 1688 overthrew James II Mary and her son fled to France, where she won Louis XIV to back the claims of her son, James Edward STUART (the Old Pretender) See JACOBITES

Maryport, urban district (1931 pop 10,183, 1948 estimated pop 11,270), Cumberland, England, at the mouth of the Ellen on the Irish Sea It is a market town and seaport Improvement of the harbor was begun in 1750, coal and coke are exported, and there are flour mills and sawmills, tanneries, and breweries A hill in the vicinity was the site of a Roman fort

Mary Queen of Scots (Mary Stuart), 1542–87, only child of JAMES V of Scotland and MARY OF GUISE Through her grandmother, MARGARET TUDOR, Mary was next heir to the throne of England after the children of Henry VIII She was born at Linlithgow six days before her father's death and so became queen of Scotland almost immediately. A project for the marriage of Mary to Henry VIII's son (later Edward VI) failed Mary of Guise then betrothed her daughter to Francis, dauphin of France, and sent the girl to France in 1548 to be brought up as a princess of the powerful house of Guise The mother remained in Scotland, eventually became regent, and struggled until her death in 1560 against rebellious nobles, the rising new Protestantism, and intermittent attacks by England In 1558 Mary Stuart and the dauphin were married under an agreement which would unite the crowns of Scotland and France if the union produced male issue In 1559 they were crowned king and queen of France, but FRANCIS II died the next year, and Mary became at 18 the dowager queen of France. The accession of Charles IX, dominated by the hostile Catherine de' Medici, led to the fall from power of Mary's uncles, the duke

of GUISE and the Cardinal of Lorraine. This situation plus the recent death of her mother prompted Mary to return to Scotland as queen in 1561. She faced many severe problems. She was a Frenchwoman, and the Scots, nobles and commoners, were intensely nationalistic. She was a devout Catholic; reformers under John KNOX had already established the new Protestant faith. Together with many Protestant nobles, they frequently sought help from England. Other lords, still Catholic, looked to the new queen to preserve the remnants of the old Church. Bloody internal struggles between Protestants and Catholics and the wars with England had laid waste much of the country and impaired its economy. Finally, Mary was confronted with the double problem of insuring her right to succeed Queen ELIZABETH to the English throne and of making a suitable marriage. During her first four years of active rule, she met all her problems creditably. Her great personal charm won over many lords and commoners. Soon after her arrival, she conferred with the adamant John Knox. In response to his demands she consented to the Presbyterian establishment and to such severe ecclesiastical laws as those which imposed death for adultery or witchcraft. Although she was eventually forced to acquiesce to some laws against Catholic priests, she steadfastly refused to abandon her own faith or to give approval to a law for compulsory attendance in the Protestant church and almost succeeded in establishing freedom of worship. Many Protestant leaders demanded, however, that she abolish the Mass said for her in the palace, and ministers like Knox led in scurrilous denunciations of her interest in music and other courtly graces. Some noblemen were won over by her intelligent effort to rule constitutionally and to carry out the Stuart policy of uniting Scotland under the crown, but most of them had long before become too violently partisan to submit permanently to her plans. At the beginning she was able to control recalcitrant leaders of both parties, but in 1562 she was obliged to quell a revolt led in the North by the earl of HUNTLY, chief of the Catholics. From the beginning of her reign, Mary requested Elizabeth to acknowledge her right of succession to the English throne. The English monarch characteristically gave only hazy, unsatisfactory answers and counterproposals, so Mary proceeded to make a marriage which would reinforce her claim. Skillfully parrying the demands of both factions among her noblemen, she accepted in 1565 her English cousin, Henry Stuart, Lord DARNLEY. His descent from Margaret Tudor gave him almost as close a claim to the English throne as Mary's. Most of the Catholic lords and some of the Protestants accepted the marriage, but the earl of MURRAY, Mary's half brother, tried with other Protestant nobles to raise a revolt. Mary took personal leadership of the loyal nobles and people and chased the rebels into England. One of the chief advocates of Mary's marriage had been David RIZZIO, at first her musician but later one of her most trusted counselors. Darnley, whom Mary soon came to despise, became jealous of the Italian and was chagrined that he himself had no real power. He was easily persuaded by a promise of the crown matrimonial and the real control of Scotland to join a plot sponsored by the outlawed Protestant lords and some other malcontents in the queen's council. In March, 1566, a band led by Darnley and the earl of MORTON broke into Mary's apartments, where she was dining with several courtiers, and murdered RIZZIO, reportedly before her eyes. Mary, despite illness and pregnancy, talked Darnley over to her side, escaped to Dunbar to be joined by the earl of BOTHWELL and other loyal lords, and so defeated the coup. It soon became necessary, however, to reinstate most of the rebels. In June, 1566, Mary bore a son, who was to become James VI of Scotland and JAMES I of England. According to tradition, about this time she fell in love with Bothwell, who, despite his reputation as an unfaithful husband, had remained consistently loyal to the queen. He may have appeared to Mary the strong leader she had not found in Darnley. The latter meanwhile was dabbling in another plot against her and had succeeded in making an enemy of everyone in Scotland. All the royal advisers urged Mary to rid herself of Darnley. Late in January, Darnley, who was ill, moved into Kirk o' Field, a house outside the walls of Edinburgh. On February 9 Mary visited him briefly there. That night the house was blown up, and Darnley was found strangled in the yard. Bothwell was universally suspected of the murder, but was acquitted by a packed court. On April 24 when Mary was returning to Edinburgh from Stirling, she was intercepted by Bothwell and carried away with her attendants to Dunbar Castle. In the ensuing two weeks Bothwell secured a divorce. On May 6 he and Mary returned together to Edinburgh; on May 15 they were married by Protestant rites. Aroused by outraged Protestant preachers, the Scots now flew to arms. Mary had lost the support of the people and lords, first by her failure to punish the man universally believed to be her husband's murderer and then by the flagrant act of marrying him. Supported only by the young earl of Huntly and the Hamiltons, she was forced to surrender to the lords of the council at Carberry Hill on June 15. Bothwell escaped, only to end by dying as an insane man in a Danish prison. Taken to prison at the castle of Lochleven, Mary abdicated, conveyed the crown to her son, and named Murray as regent. Early in May, 1568, Mary escaped with the help of Willie Douglas, a servant at her island prison, and supported by the Hamiltons, she soon accumulated a considerable force of lords and men sworn to replace her on the throne. At Langside, near Glasgow, Mary was defeated by Murray, and she immediately fled to N England. Elizabeth welcomed her to England, bade her wait patiently at Carlisle until her assured restoration, and refused to turn her over to the Scottish government. But the English queen did not keep her promise. In England, Mary offered something of a rallying point for the persecuted Catholics. To restore Mary in Scotland would have meant a setback for the Protestant party in Scotland. Elizabeth astutely persuaded both parties to present their case before an English tribunal, first at York and then at Westminster (1568–1569). The judgment was that the abdication and Murray's regency were legal, but that Mary's complicity in Darnley's murder was unproved. The result was that Murray stayed in power, Mary's reputation was smirched, and she became a prisoner of the English. Consenting to a divorce from Bothwell, Mary joined a plot for her marriage to the English duke of Norfolk. The plans failed as did a subsequent rebellion of the Catholics in N England in 1569. The following year Elizabeth approved a proposal which would have restored Mary to the Scottish throne but which included severe conditions favorable to England. Mary accepted, but the project fell through at the objections of the Scottish Protestants. In 1572 much was made of a purported plot which would have replaced Elizabeth and which involved Mary, the duke of Norfolk, and other English nobles in alliance with the papacy and Spain. Despite the urging of Parliament, Elizabeth at this time did not have her enemy executed. Mary had remained steadfast in claiming that her abdication was void because it had been obtained under duress, but in 1581 she offered to share the rule of Scotland with her son. Meanwhile from her prison she was plotting with the Guises and with Spain for an ill-advised invasion of England, a scheme which was detected and foiled in 1583. Mary then confirmed her son's kingship and asked for liberty. The request was of course refused, and Mary was moved in quick succession from castle to castle. In 1586 a plot to murder Elizabeth was reported by Walsingham, who cannily permitted the affair to develop in order to implicate Mary. The ringleader was a certain Anthony BABINGTON, formerly a page of Mary. Eventually he was arrested, Mary was charged with being an accomplice, formally arrested, and taken to Fotheringay Castle. Her trial began there on Oct. 14, and on the 15th adjourned to the Star Chamber for continuance. On Oct. 25 she was found guilty. After assurance from Mary's son that he would not make trouble, Elizabeth signed the death warrant. Elizabeth hesitated, but certain councilors secretly had the warrant published. Mary was beheaded at Fotheringay on Feb. 8, 1587. Upon hearing the news, Elizabeth produced a demonstration of pretended grief and anger. Mary's body was eventually buried in Westminster Abbey in Henry VII's chapel. During the latter years of her life, Mary displayed deep devotion to her religion, at her trial and execution her conduct moved even her enemies to admiration. These factors, her great personal charm, the romantic incidents of her life, the contrast offered by her personality to that of Elizabeth—all have contributed to a popular belief that she could not have been guilty of one murder and of plotting another. Some scholars maintain that she was indeed guilty, but a clear-cut decision is made difficult by the tangled web of intrigue surrounding both incidents. The chief evidence of her part in the murder of Darnley is the Casket Letters, eight letters and a set of poems, all in French, supposedly written by Mary to Bothwell. These were allegedly found on the person of one of Bothwell's servants by servants of the earl of Morton just after the Carberry Hill incident. Alleged translations of these were shown to the English commissioners at York and Westminster. It is possible also that the originals appeared briefly at both places, but this cannot be proved, nor do the originals survive in any form. At her trial for the Babington plot, Mary handled her own defense brilliantly, demanding specific proof of her part in the conspiracy. The witnesses against her had been interrogated elsewhere under threat and did not appear at her trial. When she demanded direct evidence in the form of her own handwriting, it was not produced. Certain decodings of Mary's letters were admitted as evidence, illegally because they had been made by Walsingham's secretary during the counterplot. The final verdict was reached after the court had been adjourned to the court of Star Chamber, at which Mary did not appear. Despite these abrogations of strict judicial procedure and despite the fact that the members of the tribunal were probably more or less thoroughly decided on a verdict of guilty before the trial took place, most scholars tend to believe that Mary at least had knowledge of Babington's plot. The question of Elizabeth's supposed reluctance to have Mary executed has no bearing on the truth or falsity of the charges, nor does it affect the clemency of Elizabeth, who kept Mary from two queenships that were rightfully hers. Mary's tragic history has made her one of the most celebrated heroines of romantic story. She is the subject of dramas by Friedrich Schiller, Vittorio Alfieri, A. C. Swinburne, and Maxwell Anderson. The 20th cent. has produced many interpretative and fictionalized biographies, most of them highly colored, one of the best is Stefan Zweig, *Mary Queen of Scotland and the Isles* (1935). Among the scholarly critical biographies are D. Hay Fleming, *Mary Queen of Scots* (1898), and T. F. Henderson, *Mary Queen of Scots* (1905). Good histories of the period are P. Hume Brown, *History of Scotland*, Vol. II (1902), J. B. Black, *The Reign of Elizabeth* (1936); and Agnes Mure Mackenzie, *The Scotland of Queen Mary* (1936). Sources for Mary's life contained in state papers, in private correspondence and in contemporary diaries have been published to a great extent. For these and for other works see S. A. Tannenbaum and D. R. Tannenbaum, *Marie Stuart, Queen of Scots, a Concise Bibliography* (3 vols., 1944–46).

Marysville, town (pop. 1,651), S N. B., on the Nashwaak river and near Fredericton.

Marysville. **1** City (pop. 6,646), co. seat of Yuba co., N central Calif., at the confluence of the Yuba and Feather rivers, N of Sacramento, inc. 1851. Here was a post on the trail into California, and Marysville after 1849 grew as a supply point for gold mines. The region is fruitgrowing. Yuba College (junior; coeducational) is here. **2** City (pop. 4,055), co. seat of Marshall co., NE Kansas, on the Big Blue River and NW of Topeka, inc. 1861. Once a ferry crossing (1849) on the Oregon Trail, it is the shipping center of an area producing grain, livestock, and dairy products. **3** City (pop. 1,777), S Mich., on the St. Clair river and near Port Huron, inc. as a village 1921, as a city 1924. Its products include salt, boats, and automobile parts. The Indian lake shore trail crossed this site. **4** Village (pop. 4,037), co. seat of Union co., W central Ohio, NW of Columbus, settled 1816, laid out 1820. Dairy products and heating apparatus are made. The state reformatory for women is here. **5** Borough (pop. 1,882), SE Pa., on the Susquehanna above Harrisburg, laid out 1861, inc. 1866. **6** Farm trading town (pop. 1,748), NW Wash., at the mouth of the Snohomish river, on Puget Sound near Everett, settled 1887, inc. 1890. An Indian reservation is near by.

Maryville. **1** City (pop. 5,700), co. seat of Nodaway co., NW Mo., on the One Hundred and Two river and N of St. Joseph, settled c. 1845. It is in a farm area producing hogs especially. Northwest Missouri State Teachers College is here. **2** City (pop. 5,609), co. seat of Blount co., E Tenn., S of Knoxville, in a fruitgrowing area, settled around Fort Craig (built 1785), inc. as a town 1907, as a city 1927. Sam Houston came here in 1807, near by is the log schoolhouse where he taught. Maryville College (Presbyterian, coeducational, 1819) is here.

Mary Washington College. see VIRGINIA, UNIVERSITY OF.

Masaccio (mäsät'chō), 1401–1428?, Italian fresco painter, pioneer of the Italian Renaissance and one of the epoch-making figures in Florentine art. His real name was Tommaso Guidi. He was enrolled in the guild of St. Luke in 1424. Much of Masaccio's work has perished; one of the earliest extant examples is probably the *Virgin with St. Anne* (Uffizi), painted for the Church of Sant' Ambrogio, Florence. In 1426 he painted for the Church of the Carmine, Pisa, an altarpiece, of which the central panel, *Virgin Enthroned*, is in the National Gallery, London; one panel, *St. Paul*, is in Pisa, a *Crucifixion* is in Naples, *St. Andrew* is in Vienna, and four panels, representing the *Adoration of the Magi*, *Martyrdom of St. Peter*, *Death of the Baptist*, and *Four Saints*, were in the Berlin Museum. A damaged fresco of the *Trinity*, painted for the Church of St. Ignatius, Florence, is now in Santa Maria Novella. Masaccio's greatest work is in the Brancacci Chapel of The Church of Santa Maria del Carmine, Florence. Here he continued the series of frescoes left unfinished by Masolino, which were completed by Filippino LIPPI many years later. His independent works include *Expulsion from Eden*, *Peter and John Healing the Sick*, *Peter and John Distributing Alms*, *Peter Baptizing*, *The Raising of the King's Son*, and *The Tribute Money*, in which the artist's genius reaches its highest expression. These frescoes created a new era in Florentine painting and were for generations the training school and inspiration of painters, among them Michelangelo and Raphael. With Masaccio modern painting may be said to have begun. He advanced the art through his realism, his employment of the newly discovered laws of perspective, his knowledge of the human form and his ability

to represent it in the round, and his naturalistic treatment of figures and landscape. Leonardo da Vinci called Masaccio's frescoes "perfect works" Masaccio went to Rome, leaving the chapel unfinished: here he died See A H Layard, *The Brancacci Chapel and Masolino, Masaccio, and Filippino Lippi* (1868), Henrik Lindberg, *To the Problem of Masolino and Masaccio* (1931)

Masan (mä'sän') or **Masampo** (mä'säm'pō'), city (1946 pop 82,175), S Korea, a port on Korea Strait. There is cotton weaving

Masaniello (mäsänyĕl'lō), 1620?–1647, Neapolitan revolutionist, whose original name was Tommaso Aniello (tōm-mä'sō änyĕl'lō) He was a fisherman and took the lead among the discontented common people burdened by taxation A new tax on fruit produced the climax Tumults broke out in 1647 and soon became so serious that the viceroy came to terms with Masaniello, promised the reforms demanded, and recognized him as captain general This sudden success had an ill effect on Masaniello's mind, and he was killed by his own supporters The revolution was immediately repressed

Masaryk, Jan (yän'mä'särĭk), 1886–1948, Czechoslovak statesman, son of Thomas G Masaryk He was Czechoslovak minister to London (1925–38) In 1940 in London he became foreign minister in the Czechoslovak government in exile headed by Eduard Benes. He continued to hold this post after his government returned (1945) to Prague. A liberal, he advocated cooperation with Soviet Russia as well as with the Western powers He thus remained in office after the Communist coup d'état of Feb , 1948, but a few days later it was officially announced that he had committed suicide by leaping from a window His death caused consternation and indignation throughout the world. There was some argument whether or not his death was voluntary, but no real evidence has been adduced on either side

Masaryk, Thomas Garrigue (gurĭg'), 1850–1937, Czechoslovak statesman, first president and chief founder of CZECHOSLOVAKIA Born in Moravia, he studied at the Univ of Vienna (Ph D , 1876), where he became a lecturer on philosophy He married Charlotte Garrigue, an American From 1882 to 1911 he was a professor at the Czech Univ of Prague He was elected to the Austrian parliament but soon resigned to devote himself to the political education of his own people In 1907 he reentered the parliament as head of his own party, which stood for complete independence of the Czechs from Austria He fled to Paris at the outbreak of the First World War and with Eduard BENES formed the Czechoslovak national council, which in 1918 was recognized by the Allies as the *de facto* government of Czechoslovakia Traveling widely during the war years, he raised funds in the United States for the Czech cause and in Russia organized the Czech Legion, which was to play an important part in the Russian civil war following the Russian Revolution of 1917 The national council, over which Masaryk presided, secretly maintained close contacts with Czech and Slovak nationalist leaders (notably KRAMAR) at home Upon the collapse of the Austro-Hungarian Monarchy he was chosen by acclamation (Nov , 1918) president of the newly formed Czechoslovak republic He was reelected in 1920, 1927, and 1934, but resigned because of his advanced age in 1935, when his loyal collaborator, Benes, succeeded him. Masaryk was a philosopher-statesman and an ardent liberal One of the first acts of his administration was an extensive land reform The chief domestic problems facing him were the status of minorities (particularly the Slovaks and Germans) and the relations between Church and state Masaryk sought a moderate course and thus incurred the enmity of extreme nationalists and of a large part of the clergy A *modus vivendi* with the Vatican was reached in 1927 after bitter quarrels, in the course of which the short-lived Czechoslovak National Church was set up In foreign policy Masaryk fully backed Benes Despite the opposition of extremists, he was revered by the great majority of the people and respected throughout the world as one of its great democratic leaders. Masaryk's extensive writings on philosophical, social, and political subjects include *Spirit of Russia* (Eng. tr , 1919), *The Making of a State* (Eng tr., 1927), *Ideals of Humanity* (Eng tr., 1938), and *Modern Man and Religion* (Eng tr., 1938) See biographies and studies by D. A. Lowrie (1930), Karel Capek (1935), Emil Ludwig (1937), Paul Selver (1940), Victor Cohen (1941), W. P. Warren (1941), and R. W. Seton-Watson (1943).

Masaya (mäsä'yä), city (1946 estimated pop 26,199), W Nicaragua In a rich agricultural area, Masaya is connected by rail and highway with Granada and Managua

Masbate (mäsbä'tā), island (1,262 sq. mi ; pop. 145,065), Philippine Islands, south of the southeastern peninsula of Luzon Gold has been mined here for centuries Agricultural crops are coconuts, rice, corn, and hemp. It is the principal island of Masbate prov. (1,571 sq. mi.; pop 182,483).

Mascagni, Pietro (pyā'trō mäskä'nyē), 1863–1945, Italian operatic composer. His one big success was his *verismo* opera *Cavalleria rusticana* (1890), based on the tale by Giovanni Verga, it stands with Leoncavallo's *Pagliacci* as a classic of its type. His other operas, including *L'amico Fritz* (1891) and *Iris* (1898), were less successful.

Mascara (mä'skürä, mä'skärä), town (1936 pop. 30,780), NW Algeria, SE of Oran It occupies the site of a Roman settlement and was a capital of Turkish rulers in W Africa A headquarters for Abd el-Kader, it was captured by the French in 1835, was lost by them, and was finally reoccupied in 1841 It is a market center, especially for wines, cereals, and tobacco and is particularly noted for its white wine.

Mascarene, Paul (mäskürēn'), 1684–1760, British colonial administrator, acting governor of Nova Scotia, b France, of Huguenot parentage, educated in Geneva In 1706 he became a British citizen and entered the army As an officer in the grenadiers, he took part in the final capture (1710) of Port Royal, N S From 1740 until the arrival of Gov Edward Cornwallis in 1749, Mascarene was acting governor of Annapolis Royal (which he successfully defended against the French in 1744) and president of the council of Nova Scotia He left the province c 1752 and spent the remainder of his life in Boston, in 1758 he retired from the army as a major general

Mascarene Islands (mäskürēn'), in the Indian Ocean, E of Madagascar They include MAURITIUS, RÉUNION, and RODRIGUEZ They are named for the Portuguese, Pedro Mascarenhas, who discovered Réunion in 1507

Maschil (mäs'kĭl), in the titles of Pss 32, 42, 44, 45, 52, 53, 54, 55, 74, 78, 88, 89, and 142, a term of unknown significance, probably an indication of the character of the Psalm

Mascoutah (mäskōō'tù), city (pop 2,294), S Ill , ESE of St Louis, in a farm and coal area, inc 1839

Masefield, John (mās'–), 1878–, English poet laureate (appointed 1930), playwright, and novelist He went to sea at the age of 14 and later spent several years at odd jobs in and around New York In 1897 he returned to England and was on the staff of the Manchester *Guardian* when he began writing poetry *Salt-Water Ballads*, containing "Sea Fever" and "Cargoes," appeared in 1902 In the *English Review* (Oct , 1911) appeared the first of his vivid, long, narrative poems, *The Everlasting Mercy*, which immediately made him famous The best known of his succeeding volumes of poetry are *The Widow in the Bye Street* (1912), *Dauber* (1913), *Reynard the Fox* (1919), *The Dream* (1922), *The Wanderer of Liverpool* (1930), and *Gautama the Enlightened* (1941) Among his plays are *The Tragedy of Nan* (1909), *The Tragedy of Pompey the Great* (1910), and *The Coming of Christ* (1928) Besides many adventure stories for boys, his novels include *Multitude and Solitude* (1909), *Sard Harker* (1924), *The Bird of Dawning* (1933), and *The Taking of the Gry* (1934) He has written studies of Shakspere (1911), of his friend Synge (1915), of Chaucer (1931), and of W B Yeats (1940) Other works include two excellent war sketches, *Gallipoli* (1916) and *The Nine Days Wonder* (1941), which concerns the retreat from Dunkirk, and the history of a ship, *The Conway* (1933) He was awarded the Order of Merit in 1935 See the autobiographical *In the Mill* (1941), Gilbert Thomas, *John Masefield* (1932)

Masereel, Frans (fräns' mäsärāl'), 1889–, Belgian painter and illustrator, associated with the Paris school of art He was essentially a self-taught artist The experiences of the First World War and friendship with Romain Rolland encouraged the development of a deeply humanitarian and social preoccupation in his art He is famous for his many series of woodcuts centering on abstract themes and powerfully expressing in an intense, decorative style the miseries and inner torments of men These include *Les Morts parlent*, *Idée*, *Le Soleil*, *Histoire sans paroles*, and *Souvenirs de mon pays* The books he has illustrated include *Jean-Christophe* by Romain Rolland, *Quinze poèmes*, *Cinq récits*, and *Le Travailleur étranger* by Émile Verhaeren, *Laponie et Kopiieau* by Georges Duhamel; *Le Trésor des humbles* by Maeterlinck, and *Quelque coin du cœur* by Henri Barbusse

Maseru (mä'sürōō), town (pop 3,383), capital of Basutoland protectorate. It is on a railroad to Durban, in the Union of South Africa Wool is exported.

Mash, son of Aram Gen 10 23

Mashal (mä'shäl), variant of MISHAL

Masham, Abigail, Lady (mä'shum), d **1734**, favorite of Queen Anne of England Her maiden name was Abigail Hill A plain, intelligent person, she became bedchamber woman to the queen (1704) and gradually succeeded her cousin Sarah, duchess of Marlborough, as the power behind the throne. In 1707 she married Samuel Masham, a groom of Prince George and later a baron Through Mrs Masham, Robert HARLEY, her kinsman, exerted his influence on the queen, until in 1714 Mrs. Masham quarreled with him, secured his dismissal as lord treasurer, and assured Viscount Bolingbroke (Henry St John) of supreme political power After Queen Anne's death she lived in retirement.

Masham, Samuel Cunliffe-Lister, Baron, 1815–1906, English inventor, a worsted manufacturer at Nottingham After various experiments in the mechanical combing of wool, he patented a machine and bought out rival inventors Later, he produced a silk-combing device which made it possible to spin silk waste into yarn He patented a compressed-air brake for railroads and held over 150 patents for various cloth-making machines, many of which were financially profitable In 1891 he was raised to the peerage. His *Lord Masham's Inventions* was published in 1905.

Mashin, Draga: see DRAGA

Mashona (mäshō'nù), Bantu-speaking people, E Southern Rhodesia, inhabiting Mashonaland They were dominated by the warlike Matabele from 1837 to 1893, when the British conquered Southern Rhodesia The Mashona are herdsmen.

Masinissa or **Massinissa** (both: mäsĭnĭ'su), c.238–149 B C , king of Numidia. He succeeded (c.207) his father as king of E Numidia. He was brought up in Carthage, and he fought in a Carthaginian campaign in Spain, but he joined the Romans (206 B.C) during the Second Punic War. After defeating his old rival Syphax, king of W Numidia, he joined Scipio Africanus Major and led his cavalry in a decisive charge at the battle of Zama (202) which ended the war Rome awarded him the Punic territory E of Carthage During his long reign he extended his power and converted his band of turbulent tribesmen into a formidable and prosperous kingdom He harassed reviving Carthage, which he goaded into breaking its treaty with Rome by attacking his territory (150 B C), thus he furnished Rome with a pretext for the Third Punic War.

mask, artificial covering for the face or head used as a disguise or a protection. Masks of stone, wood, and many other materials have been used by primitive people for medicinal, protective, religious, and theatrical purposes The North American Indians and Eskimo used masks in their ceremonies, and the mask is common to the aborigines of Australia, the natives of the South Sea Islands, some Negro tribes in Africa, and to Oriental peoples Theatrical masks are an integral part of Japanese drama, especially as exemplified in the *no* plays, and of Chinese temple dramas The many masks used in Greek drama represented the character being portrayed by the actor and were constructed for a fixed emotion such as grief or rage Greek masks had metallic mouthpieces which enhanced the resonance of an actor's voice The use of masks was preserved in the Roman theater, passed into the early Italian theater, and was a characteristic device of the COMMEDIA DELL' ARTE The mask had a place in the miracle dramas of the Middle Ages and appeared in modern times in the works of the German expressionist playwrights and in Eugene O'Neill's plays *The Great God Brown* and *Lazarus Laughed* The making of death masks is an ancient practice Roman death masks were made of wax, and Egyptian death masks of thin gold plate The modern method first applies oil or grease to the face and next a coat of plaster of Paris, which is permitted to harden and is then removed This procedure results in a mold which is used to cast the mask A similar process has been used for life masks but is often dangerous to the sitter and unsatisfactory in results Gas and other protective masks, baseball catcher's masks, beauty masks, and the surgeon's operating mask are products of modern times See MASQUE See Kenneth Macgowan and Herman Rosse, *Masks and Demons* (1923), W T Benda, *Masks* (1944)

Maskat, Arabia see MUSCAT

Maskelyne, Nevil (nĕ'vùl mä'skùlĭn), 1732–1811, English astronomer As astronomer royal (from 1765) he devoted much attention to means of improving navigation and astronomical observations He wrote the *British Mariner's Guide* (1763) and in 1766 established the *Nautical Almanac* In 1774 Maskelyne made his notable experiments to determine the density of the earth, testing, by the deviation of a pendulum from the vertical, the gravitational pull of Mt Schiehallion, in Scotland

masochism (mă'zùkĭzm), sexual abnormality in which satisfaction is derived from subjection to physical maltreatment In psychoanalysis the term describes a destructive attitude which the individual turns inward upon himself rather than outward upon others The word *masochism* was suggested by the name of an Austrian novelist, Leopold von Sacher-Masoch (1835–95), whose books depicted this abnormality

Masolino da Panicale (mäsōlē'nō dä pänēkä'lā), 1383–c 1447, Florentine painter of the early Renaissance, whose real name was Tommaso di Cristoforo Fini He was admitted (1423) to the apothecaries' guild in Florence, in which painters were enrolled, and was soon commissioned to paint the frescoes in the Brancacci Chapel in Florence These were continued by his pupil Masaccio upon Masolino's departure (1427) for Hungary and were completed by Filippino Lippi, thus greatly complicating the question of authorship, the best criticism attributes to Masolino *St Peter Preaching*, *St. Peter Healing the Cripple*, *The Raising of Tab-*

tha, and *The Fall of Adam and Eve*. Upon his return to Florence, Masolino found painters occupied with problems of perspective, light and shade, and classic architecture and decoration, ideas which he utilized while retaining much of the old Giottesque tradition. The authenticated works of the master are a series of frescoes executed for Cardinal Branda Castiglione in the church and baptistery of Castiglione di Olona in the province of Como, Italy. The earliest of these, in the choir, represent scenes from the life of the Virgin, those in the baptistery (c.1435), episodes from the life of St. John the Baptist. These important and well-preserved paintings represent a transitional period in Florentine art. Attributed to Masolino are a *Madonna and Christ in Glory* and *The Founding of Santa Maria Maggiore* (Naples); *Madonna with Angels* (Church of San Fortunato, Todi), and the much-repainted frescoes in the Church of San Clemente in Rome. See A. H. Layard, *The Brancacci Chapel and Masolino, Masaccio, and Filippino Lippi* (1868), Henrik Lundberg, *To the Problem of Masolino and Masaccio* (1931).

Mason, George, 1725–92, American statesman, b. Fairfax co., Va. He was one of the wealthiest of the colonial Virginia planters, and his mansion "Gunston Hall," completed in 1758, was magnificent. In his triple capacity as trustee (1754–79) of the town of Alexandria, justice of the Fairfax co. court until 1789, and as vestryman (1748–85) of Truro parish, Mason exercised great influence in local politics. In 1752 he became a member of the Ohio Company, and seven years later he was elected to the Virginia house of burgesses. While Mason signified his opposition to the Stamp Act, the Townshend Act, and the Boston Port Act by introducing various resolutions—some of which were adopted by the Continental Congress—his active resistance to British colonial policy dated from July, 1775, when he succeeded George Washington in the Virginia convention. Mason served on the Committee of Safety, and as a member of the Virginia constitutional convention, he not only drafted a good portion of the state constitution but also drew up the renowned Virginia Declaration of Rights. The declaration was extensively copied by the other American colonies, was in some degree drawn upon for the American Declaration of Independence, and had influence on the French Declaration of the Rights of Man. He was a member of the Federal Constitutional Convention at Philadelphia (1787) and took an active part in drafting the U.S. Constitution. However, he objected to provisions for the centralization of power, the compromise between New England and the Southern states on the tariff and slave-trade issues, and the failure to include a Bill of Rights. Mason refused to sign the Constitution and with Patrick Henry led the fight in Virginia against its ratification. The long Bill of Rights which he forwarded formed the basis for the first 10 amendments to the Constitution. See biographies by K. M. Rowland (1892) and Helen Hill (1938).

Mason, Gregory, 1889–, American anthropologist, journalist, and lecturer, b. New York city, grad. Williams (B.A., 1911), Ph.D. Univ. of Southern California, 1938. He was on the staff of the *Outlook* during and after the First World War. Under the auspices of several museums he organized and led (1926–31) scientific expeditions to Central and South America. He taught journalism at New York Univ. from 1937 (as professor from 1942). His works include *Green Gold of Yucatan* (1926), *Silver Cities of Yucatan* (1927), *Columbus Came Late* (1931), *Remember the Maine* (1939), and *South of Yesterday* (1940).

Mason, James Murray, 1798–1871, U.S. Senator and Confederate diplomat, b. Georgetown, D.C., grad. Univ. of Pennsylvania, 1818, grandson of George Mason. He studied law at the College of William and Mary and began practice in Winchester, Va., in 1820. Mason served in the Virginia legislature (1826–27, 1828–31), in the House of Representatives (1837–39), and in the U.S. Senate (1847–61). A staunch supporter of Southern rights, he drafted the Fugitive Slave Act of 1850 and advocated secession. Jefferson Davis appointed him Confederate commissioner to England in Aug., 1861. Along with John Slidell, Mason was seized aboard the British ship *Trent* by Capt. Charles Wilkes, commanding the U.S. warship *San Jacinto*, and was held prisoner at Fort Warren, Boston, till Jan., 1862 (see TRENT AFFAIR). Never officially recognized by the British government, he failed to attain the aid he sought. See biography by his daughter, Virginia Mason (1903), B. J. Hendrick, *Statesmen of the Lost Cause* (1939).

Mason, John, 1586–1635, founder of New Hampshire, b. Lynn Regis, Norfolk, England, educated at Magdalen College, Oxford. A royalist, he received favors from the king and was governor (1615–21) of Newfoundland. He and Sir Fernando Gorges received (1622) a grant of the province of Maine, and in 1629 Mason received as his share a 60-mile-deep area between the Merrimac and Piscataqua rivers, confirmed (1634) to him by the Council for New England and named by him New Hampshire. Attempts by his heirs to make good their claims to this land led to long litigation and finally to the naming of the MASONIAN PROPRIETORS. See biography by C. W. Tuttle (1887).

Mason, John, c.1600–1672, New England colonial leader, commander in the war against the Pequot Indians in Connecticut, b. England. He was an army officer before he emigrated (c.1630) to Massachusetts. In New England he became a captain in the Dorchester militia and a representative in the General Court. In 1635 he moved to Windsor, Conn. When the Pequot Indians threatened to wipe out the new colonies on the Connecticut river, he and John UNDERHILL led an expedition (1637) against them with the aid of Indians under UNCAS and MIANTONOMO and virtually destroyed the tribe. After this campaign—generally called the Pequot War—Major Mason was a distinguished figure in Connecticut until his death.

Mason, John Young, 1799–1859, American statesman, b. Greensville co., Va., grad. Univ. of North Carolina, 1816. He studied law under Tapping Reeve at Litchfield, Conn., and was admitted to the Virginia bar in 1819. Mason served in the state legislature (1823–31), in Congress (1831–37), and as a Federal judge (1837–44). He was Secretary of the Navy under President John Tyler and was first Attorney General and then Secretary of the Navy again in President James K. Polk's cabinet. From 1853 till his death he was minister to France, where, with James BUCHANAN and Pierre SOULÉ, he drew up (1854) the OSTEND MANIFESTO.

Mason, Lowell, 1792–1872, American composer and music educator of far-reaching influence, b. Medfield, Mass. While working as a bank clerk in Savannah, Ga., he compiled an anthology which was published as *The Boston Handel and Haydn Society's Collection of Sacred Music* (1820). He went to Boston to direct the music in three churches, added music to the curriculum of the Boston public schools, and in 1832 founded the Boston Academy of Music. His application of the principles of Pestalozzi to music education was the subject of lectures he delivered in Europe (1850–53). With G. F. Root and W. B. Bradbury he established (1853) the New York Normal Institute for training teachers. He compiled numerous collections of hymns, adapted or arranged many hymns, and composed 1,210 of his own, including *Nearer, My God, to Thee*, *My Faith Looks Up to Thee*, and *From Greenland's Icy Mountains*. See T. F. Seward, *The Educational Work of Lowell Mason* (1879), H. L. Mason, *Hymn-Tunes of Lowell Mason a Bibliography* (1944), J. T. Howard, *Our American Music* (rev. ed., 1946), biography by A. L. Rich (1946). Lowell Mason had four sons, all active musically. The two eldest, Daniel Gregory and Lowell, formed a publishing company in New York. Lowell and the third son, Henry, founded Mason & Hamlin, a firm which first made organs and is still an outstanding maker of pianos. The youngest son, **William Mason**, 1829–1908, b. Boston, was a distinguished concert pianist and teacher. He studied in Europe with Liszt and others and was received by Schumann and Wagner. He wrote a number of light piano pieces, his *Touch and Technic* (1889) was influential in American piano teaching. With Theodore Thomas he organized a chamber-music ensemble which did much to interest American concertgoers in chamber music. See his *Memories of a Musical Life* (1901). The son of Henry Mason, **Daniel Gregory Mason**, 1873–, b. Brookline, Mass., is important as a composer, writer, and lecturer. He studied with Ethelbert Nevin, with J. K. Paine at Harvard, and with D'Indy in Paris. In 1909 he joined the faculty of Columbia Univ., where he was MacDowell professor of music from 1929 to 1942. His writings include *Contemporary Composers* (1918), *From Grieg to Brahms* (1927), *Beethoven and His Forerunners* (rev. ed., 1930), *Music in My Time* (1938), and *The Quartets of Beethoven* (1947). His compositions, in a somewhat conservative idiom, include a prelude and fugue for piano and orchestra (1920), the *Chanticleer Overture* (1928), three symphonies, of which the third, known as *Lincoln Symphony* (1936), is outstanding, and chamber music.

Mason. **1** City (pop. 2,867), co. seat of Ingham co., S Mich., SE of Lansing and on a tributary of the Grand River, settled 1836, inc. as a village 1865, as a city 1875. Pharmaceuticals are made. A state game farm is near by. **2** Unincorporated town (pop. c.2,000), W central Texas, on Comanche Creek in the Llano river valley and NW of San Antonio. Settled by Germans before the Civil War, the stone-built city and near-by farms have a mildly continental air. Mason handles the wool, mohair, and cattle from ranches in the rugged, sparsely settled hills of the Edwards Plateau. Fort Mason, a pre-Civil War army post, was near by.

Mason and Slidell Affair: see TRENT AFFAIR.

Mason City. **1** City (pop. 1,984), central Ill., N of Springfield, in a farm area; inc. 1869. **2** City (pop. 27,080), co. seat of Cerro Gordo co., N central Iowa; settled 1853 by Masons, platted 1854, inc. 1870. Rail, trade, and industrial center of an extensive farm area, it produces tile, brick, and cement and has a meat-packing plant and a beet-sugar refinery. Its public junior college (1918) is the oldest in the state. Near by is Clear Lake State Park, a resort.

Mason-Dixon line, boundary between Pennsylvania and Maryland (lat. 39° 43′ 26.3″ N), surveyed by the English astronomers Charles Mason and Jeremiah Dixon in 1763–67. Owing to the ambiguous description of boundaries in the Maryland and Pennsylvania charters, a protracted dispute, submitted (1735) to the English court of chancery, arose between the proprietors of the two colonies. A compromise between the Penn and Calvert families in 1760 resulted in the appointment of Mason and Dixon. By 1767 the surveyors had run their line 244 mi from the Delaware, every fifth milestone bearing the Penn and Calvert arms. The survey was completed to the western limit of Maryland in 1773, and in 1779 the line was extended to mark the southern boundary of Pennsylvania with Virginia (the section that is now West Virginia). Before the Civil War the term Mason-Dixon line popularly designated the boundary dividing the slave states from the free states and is still used in distinguishing the South from the North.

Masonian Proprietors. The New Hampshire grant settled on John MASON (1586–1635) in 1629 caused litigation after his death (1635). The inhabitants refused to recognize the claims of his successors. The title passed from his grandson to Samuel Allen (1691) and back to the Mason heirs (1718). The inhabitants were finally compelled to recognize the rights, which were sold (1746) by one of Mason's descendants to 12 gentlemen of Portsmouth—the Masonian Proprietors. They issued permits to settle and land titles in the grant, which was redefined by the state in 1788.

Masonic orders see FREEMASONRY.

masonry: see BRICK, CONCRETE, STONEWORK; TILE.

Masontown, borough (pop. 3,721), Fayette co., SW Pa., c.40 mi. S of Pittsburgh, inc. 1876.

Masora or **Massorah** (məsō'rə)) [Heb., =tradition], collection of critical annotations made by Hebrew scholars, called the Masoretes, to establish the text of the Old Testament. A principal problem was to fix the vowels, as the Hebrew alphabet has only consonants. Through assiduous study the Masoretes formulated rules for an accurate reading of each verse, evolving a system of vowels and punctuation for the purpose of pronunciation and intonation. Two systems of vowels were evolved, the Tiberian (now in use), consisting of curves, dots, and dashes, which can be traced to the 7th cent., and the Babylonian, of earlier origin, a more complicated superlinear system. The language of the Masora is mostly Aramaic, although some of the notes are written in Hebrew. The Masoretic compilation which consists of notes in the margins is called the Great, or Outer, Masora; the one which consists of notes written between the columns of the text is known as the Small, or Inner, Masora. Masoretic work was begun at an unknown time, the first traces of it appear in some halakistic works on the Pentateuch. Innumerable scholars have contributed to this work, which ceased c.1425. See James Kennedy, *Aid to the Textual Amendment of the Old Testament* (1929), Robert Gordis, *Biblical Text in the Making* (1937).

Masovia (məsō'vēə), Pol. *Mazowsze*, historic region, central Poland. Warsaw is the chief city. At the death (1138) of Boleslaus III, it became one of the four duchies under the four branches of the PIAST dynasty. The Masovian Piasts became extinct in 1526.

Maspero, Gaston Camille Charles (gästô' kämē'yŭ shärl' măspərō'), 1846–1916, French Egyptologist. He was professor of Egyptology at the Collège de France (1874–80, 1886–99), and in Egypt he was (1880–86, 1899–1914) director of excavations. He established the French School of Oriental Archaeology at Cairo and accomplished valuable work, especially in Luxor and Karnak. He returned to France in 1914 as permanent secretary of the Académie des Inscriptions et Belles Lettres. Among his chief works, the best known is perhaps *L'Histoire ancienne des peuples de l'Orient Classique*, of which three volumes were translated as *The Dawn of Civilization* (1884), *The Struggle of Nations* (1897), and *The Passing of the Empires* (1900). A briefer version is his *Histoire ancienne des peuples de l'Orient* (1875). Other works translated included *Egyptian Archaeology* (Eng. tr., 1887), *Art in Egypt* (1912), and *Popular Stories of Ancient Egypt* (Eng. tr., 1915).

Masqat, Arabia: see MUSCAT.

masque or **mask** (both: măsk), **form of dramatic** entertainment which reached its height in England in the reigns of James I and Charles I, taking its name from the early use in it of the MASK. Originally introduced into England in the early 16th cent., the masque imitated contemporary Italian pageants. Masques became a favorite form of private entertainment, and their popularity at court brought about their elaboration into magnificent spectacles, with great emphasis on costumes, scenery, dancing, and music. Generally

allegorical or mythological in form, the masque was presented in the open air, at court, or on the estate of a nobleman. Probably the foremost writer of masques was Ben JONSON. Inigo JONES is famous for his costume designs, settings, and machinery for masques. Milton's *Comus* has been called both a masque and a pastoral drama. See Enid Welsford, *The Court Masque* (1927), Allardyce Nicoll, *Stuart Masques and the Renaissance Stage* (1937).

masquerade. Now generally a fancy dress or costume ball in which guests wear small half-face masks, masquerades date from an early historical period, when they accompanied religious observances, festivals, and celebrations, such as the Greek Bacchanalia, the Saturnalia of Rome, and the Purim feast of the Jews. Despite ecclesiastical opposition, masquerades were popular in medieval times (see FOOLS, FEAST OF). The masquerade ball introduced into England from France in the 16th cent gained great popularity, but degenerated at times into a riotous affair.

Masrekah (măsrē'kŭ), [Heb.,=vineyard], unidentified birthplace of an Edomite king. Gen 36.36, 1 Chron 1 47

Mass [Latin,=dismissal], religious service of the Roman Catholic Church, a performance of the sacrament of the EUCHARIST. It is the ancient Latin LITURGY of the city of Rome, now used in most, but not all, Roman Catholic churches. It is the simplest liturgy; its language is typically terse. The term is also used among Anglo-Catholics. In the Roman Catholic Church, except for some variant "uses," e.g., that of the Dominican order, the service is the same everywhere, under minute regulation of the Holy See. The celebrant, who must be a priest or a bishop, follows a prescribed MISSAL and wears certain VESTMENTS. Mass is said at an altar containing RELICS; two candles must be burning. A congregation is not essential, but solitary Mass is discouraged. In full form there are priest, deacon and subdeacon (usually also priests), and choir, this is solemn, or High, Mass. Low Mass, much commoner, is the same service said by one priest without music or incense. Most of the text is invariable, or "ordinary," but certain "proper" parts change with the occasion or day. Of the sung portions, some are chanted solo at the altar with choral response; there are also nine hymns for the choir. Four of these are proper and related in theme, with texts usually from the Psalms: introit, anthem after the epistle (alleluia, gradual, tract, or sequence), offertory, and communion. The five ordinary choral pieces are KYRIE ELEISON, GLORIA IN EXCELSIS, CREED, SANCTUS, and AGNUS DEI. Plain song is prescribed for all texts, but latitude is permitted the choir. A musical setting for the five ordinary hymns, called a Mass, is a form attracting many composers, e.g., Josquin des Prés, Palestrina, Byrd, Monteverdi, Scarlatti, Bach, Haydn, Mozart, Beethoven, Gounod, and Verdi. The Mass begins with preparatory prayers and continues with the introit, the *Kyrie eleison*, the *Gloria in excelsis* (not always), a COLLECT or collects (proper chanted prayers), the proper EPISTLE, an anthem and the proper GOSPEL (chanted with all standing). Mass is often interrupted here for the Gospel in the vernacular and a sermon. Mass continues with the creed (sometimes), the OFFERTORY (anthem with offering of bread and wine), offering of incense, washing of the celebrant's hands, and proper prayers called secrets. Now there is a chanted dialogue and proper preface of thanksgiving ending in the *Sanctus*. This opens the long eucharistic prayer, or canon, which is read rapidly and inaudibly. It begins with prayers for the living. The consecration follows, then the celebrant raises Host and chalice above his head for all to see and adore. This elevation is the solemn climax of the Mass. The canon ends with prayers for the dead and a doxology. After the canon the Mass consists of the Lord's Prayer (chanted in High Mass), a prayer amplifying "Deliver us from evil," the symbolic breaking of the Host and putting a piece into the cup, the kiss of peace (a quasi-embrace of those about the altar), the *Agnus Dei*, the communion, the ablution of vessels, the communion anthem, postcommunion prayers (chanted in High Mass), the dismissal (also chanted at High Mass), the blessing, and the "last Gospel," usually John 1 1–14. There are ceremonial adjuncts such as processions, blessings, censings, and the ringing of a handbell for a warning at *Sanctus*, consecration, and communion. Normally at Low Mass a server (altarboy) or acolyte, often a boy, helps and makes responses. Mass may be offered with a special intention, as in thanksgiving or for peace. A REQUIEM is a proper Mass for the dead. Most priests say Mass daily. Sunday Mass is an important sociocultural factor in Roman Catholic life. All members are required to attend Mass on Sunday as a minimum participation in public worship. The Mass is largely unchanged since the 6th cent; the latest additions are the communion prayers (14th cent.). In the Catholic Reform the uses were restricted and local variants eliminated. There are several complete translations into English of the Roman Missal. See Adrian Fortescue, *The Mass* (1912; rev. ed., 1937); Pius Parsch, *The Liturgy of the Mass* (Eng. tr., 1936).

mass, in physics, the quantity of matter in a body without regard to its volume or to the pull of gravity upon it. The term should not be confused with "weight," which is the measurement of the force of gravity acting upon a body at any given point on the earth's surface. For all practical purposes the mass of a body can be considered constant, whereas its weight is not constant—this varies with the force of gravity (see GRAVITATION) in different localities and depends upon the place at which the measurement is made. In determining the mass of a body, it is customary to use a beam balance and a set of standard weights. In this way, the factor of gravity is eliminated, since the body whose mass is being determined and the standard weights which balance it are both being acted upon by the same pull of gravity. When the weight of a body is measured on a beam balance, as it often is, it is identical with the mass of the body. For this reason mass is commonly described as standard weight. When, however, weight is measured on a spring balance, the identity does not hold, the reading on such a balance depends upon the amount of distortion of the spring resulting from the pull of gravity acting upon the body attached to it. The mass of the body can be calculated from its local weight as recorded on a spring balance if the local "pull" of gravity—technically, the local acceleration of gravity—is known. Using an equation based upon Newton's second law of MOTION, the local weight (w) divided by the local acceleration of gravity (g'), multiplied by the standard acceleration of gravity (g), equals the mass (m) of the body. With letters, the formula reads $\frac{w}{g'} \times g = m$. As the numerical value for the mass of a body is the same anywhere in the world, it is used in the formulas for determining the density and the specific gravity of substances. According to the theory of relativity, mass is held to be not constant and to depend upon velocity. The mass of the electron is held to increase as its speed approaches the speed of light, 186,000 mi. per second. This theory has been extended to include the mass of all bodies. Their INERTIA, which is a measure of their mass, increases as their velocity approaches that of light, and their mass also increases in proportion.

Massa (mä'sŭ), seventh son of Ishmael. Gen 25 14, 1 Chron 1 30

Massa (mäs'sä), city (pop. 12,508), capital of Massa e Carrara prov., Tuscany, central Italy, 3 mi. from the Tyrrhenian Sea. Marble quarrying is the most important occupation. The old town is centered around the 15th-century Malaspina castle, in the new section are the Cybo-Malaspina Palace, a 15th-century cathedral, and a fine marble fountain. From the 15th to the 19th cent. the city was the capital of the independent principality, later duchy, of Massa and Carrara, which was ruled by the Malaspina and the Cybo-Malaspina families. In 1829 it passed through marriage to the house of Austria-Este, dukes of Modena. It united with the kingdom of Sardinia in 1859.

Massachuset Indians (măsŭchōō'sĕt), tribe or confederation of tribes of North American Indians of the Algonquian linguistic stock. In the early 17th cent. they occupied the territory about Massachusetts Bay and ranged northward. They then numbered some 3,000, but by 1631, after wars and pestilence, they were reduced to some 500. Soon thereafter they adopted Christianity and moved, with other converts, into the villages of the "praying Indians." Here they ceased to have a separate tribal existence. The Massachuset owned and occupied the site of Boston.

Massachusetts (măsŭchōō'sĭts), state (8,257 sq. mi.; 1940 pop. 4,316,721, 1949 estimated pop. 4,713,000), NE United States, principal state of the New England group, one of the Thirteen Colonies. BOSTON is the capital and metropolis. The next largest cities are WORCESTER, SPRINGFIELD, FALL RIVER, CAMBRIDGE, NEW BEDFORD, SOMERVILLE, LOWELL, and LYNN. Massachusetts is bounded on the north by Vermont and New Hampshire, on the east and south by the Atlantic Ocean, further on the south by Rhode Island (which also borders SE Massachusetts on the west) and Connecticut, and on the west by New York. The eastern part of the commonwealth (its official designation), including the CAPE COD peninsula and the islands lying off it to the south—the ELIZABETH ISLANDS, MARTHA'S VINEYARD, and NANTUCKET—is a low coastal plain. Here short, swift rivers such as the MERRIMACK have long powered the state's industry, and an indented coast line provides many good natural harbors, although Boston is the only port that has retained its commercial importance. In the interior rise uplands separated by the rich Connecticut river valley, and farther west lies the Berkshire valley, surrounded by the BERKSHIRE HILLS, part of the TACONIC MOUNTAINS. The western streams feed both the Hudson and the Housatonic rivers. The state has a mean altitude of c.500 ft. and Mount GREYLOCK in the Berkshires is the highest point (3,491 ft.). The climate, of the northeast temperate zone variety, is variable. Massachusetts is an overwhelmingly industrial state, which, with its predominantly urban population, is one of the most thickly settled in the Union. The most valuable of its many, diversified industries in 1949 were the electrical (machinery, appliances, and supplies), woolen and worsted textiles, boot and shoe (nonrubber), clothing, cotton textiles, leather, foundries and machine shops, printing and publishing, rubber (including tires and tubes), bakeries, and paper and wood pulp. Well over 500,000 Massachusetts workers are members of labor unions. Corn, apples, potatoes, tobacco and onions (in the Connecticut valley), hay, oats and cranberries (on Cape Cod) are leading agricultural crops, and dairy cattle and poultry are extensively raised. The coastal waters abound in shellfish, and the fishing fleets of Gloucester and Cape Cod still bring in a large and varied catch. Lime, clay, sand and gravel, and stone are the chief mineral resources. Norsemen almost surely skirted the coast in the 11th cent., and in the late 16th and early 17th centuries Europeans of various nationalities (but mostly English) sailed offshore. Settlement, however, did not begin until the PILGRIMS landed (1620) from the MAYFLOWER on Cape Cod at the point which they named PLYMOUTH for their port of embarkation in England. Their first governor, John CARVER, died the next year, but under his wise successor, William BRADFORD, PLYMOUTH COLONY took firm hold and, weathering early difficulties, eventually prospered. Other Englishmen soon established fishing and trading posts nearby. Thomas Weston (1622) at Wessagusset (now Weymouth) and Thomas Wollaston and Thomas MORTON (1625) at Mount Wollaston or Merry Mount (now QUINCY). The fishing post established (1623) on Cape Ann by Roger CONANT failed, but in 1626 he founded Naumkeag (SALEM), which became the nucleus of settlement for the Puritan company and colony named for the MASSACHUSETTS INDIANS (see MASSACHUSETTS BAY COMPANY). The Salem in 1628 came JOHN ENDECOTT, after the Bay Company had received a patent from the Council for New England. When this grant was confirmed by a royal charter (1629), John WINTHROP (1588–1649) led (1630) the first large Puritan migration from England (900 settlers on 11 ships). Boston was founded, and Massachusetts was well launched. Under the charter the colony was to be administered by two general courts. The first, composed of stockholders in the company or freemen, met in quarterly sessions, at one of which they selected a governor, deputy governor, and 18 assistants, who composed the other general court, the power in the colony. The legislature of Massachusetts is today still called the General Court. The colonial arrangement contained suspicions of democracy which never worked out in practice, since Winthrop, the first governor under the charter, and the other leaders planned and established a social order in which the individual was subject to God's will as interpreted by the Puritan clergymen, among whom John COTTON was most prominent. Massachusetts thus became a thoroughgoing theocracy (see PURITANISM). Only members of the church were eligible to sit in the general court. This turn of events was not popular with many freemen, but it had the salutary effect of increasing settlements as the discontented moved further into the wilderness. So long as they could direct the course of new settlements, the ruling powers had no objection to this exodus. The Puritans, who had left England chiefly because of Anglican displeasure at their religious beliefs, were themselves intolerant (the Pilgrims at Plymouth were slightly less so), and this too led to English expansion in New England. The liberal Roger WILLIAMS, banished in 1635, founded (1636) Rhode Island as a haven for religious liberty, and was shortly joined by Anne HUTCHINSON, principal figure in the controversy over ANTINOMIANISM. Her brother-in-law, John WHEELWRIGHT, also banished (1637), founded Exeter in New Hampshire. Connecticut colony, on the other hand, was established by prominent orthodox Puritans such as John HAYNES and Thomas HOOKER, although at least one of them, Hooker, was partially prompted to move from dissatisfaction with the local theocracy. The steady stream of newcomers from England more than offset these departures, and soon the South Shore (south, i.e., of Boston), the North Shore, and the west were dotted with firmly rooted communities. The early Puritans were almost exclusively an agricultural and pastoral people living in villages, beyond which lay their privately owned fields. The typical village was composed of houses (also individually owned) built of native lumber and grouped around the green, which was land held in common by the community, and hence was known as the common. Dominant structure on the common was the church, where the pastor, the most important figure in the community, held forth in long Sabbath services. In the church of the chief village of a town (in New England a town corresponds to what is usually called a township elsewhere in the United States) was also held the town meeting, that much-praised foundation of

American democracy. Actually the town meeting was a very restricted form of democracy, since only male propertyowners who had reached their majority and were also church members could take part in its deliberations. It did serve, however, to modify somewhat clerical influence, seen in its most obnoxious form in the BLUE LAWS legislated by all Puritan colonies. The towns, which elected duly qualified representatives to the General Court, dearly prized local self-government Life was rugged and nearly always grim, and, in truth, the hard work required to wrest a living from the inhospitable soil left no time for frivolity, even had the Puritans been of a mind to indulge in it Time could be spared, however, for education, which was zealously promoted by the Puritan clergymen The BOSTON PUBLIC LATIN SCHOOL was founded in 1635, one year before HARVARD UNIVERSITY was established, and in 1647 a law was passed requiring elementary schools in towns of 50 families and both elementary and secondary schools in towns of 100 families or more These were not free schools, but they were open to all and are justly considered the beginning of popular education in America Even the Indians were intended for education as part of vigorous missionary activity, largely carried on by John ELIOT While the natives probably did not mind learning the English alphabet, they did become increasingly resentful of English land grabbing After the Pequot War (see PEQUOT INDIANS) in 1637, four of the five neighboring colonies (in those days Rhode Island was always the outcast) formed (1643) the NEW ENGLAND CONFEDERATION, which in 1675–76 broke the power of the Indians of southern New England in the bloody King Philip's War (see PHILIP) In the course of the drawn-out FRENCH AND INDIAN WARS, however, frontier settlements such as DEERFIELD were subjected to devastating Indian attacks Massachusetts Bay naturally rejoiced at the triumph of the Puritan Revolution. But with the restoration of Charles II in 1660, the colony's happy prospects faded Its recently extended jurisdiction over Maine was for a time discounted by the royal authority and, worse still, its charter was revoked in 1684 That act finished the "Bible commonwealth," which had already been weakened by the adoption of the HALF-WAY COVENANT in 1657 Sir Edmund ANDROS served as royal governor of all New England from 1686 to 1689, when, James II having been deposed, aroused Bostonians ended his arbitrary rule Meanwhile, Increase MATHER had gone (1688) to England to complain of Andros's administration His mission bore fruit in 1691 when a new charter uniting Massachusetts Bay, Plymouth, and Maine as the one royal colony of Massachusetts was granted The charter abolished church membership as a test for voting, although CONGREGATIONALISM remained the established religion Sir William PHIPS, a Maine native, was the first royal governor under the new charter The witchcraft trials in the late 18th cent were a repercussion of the earlier excitement in England over witches In 1688 Mrs Glover was executed in Boston, and the witchcraft panic, largely instigated by that brilliant bigot, Cotton MATHER, reached its height in Salem in 1692, when 20 women were hanged as witches The colony had now come a long way from its humble agricultural beginnings Fish and lumber were exported along with farm products in a lively trade carried by ships built in Massachusetts and manned by local seamen That the menace of French Canada was removed by 1763 was due in no small measure to the unstinting efforts of the mother country, but the increasing British tendency to regulate colonial affairs, especially trade (see NAVIGATION ACTS), without colonial advice, was most unwelcome Because of its extensive shipping interests, e g , the traffic in molasses, rum, and Negro slaves (the "triangular trade"), the colony sorely felt these trade restrictions Massachusetts people refused to be subjects, an attitude reflected in the bitter struggle between the legislature and Governor Thomas HUTCHINSON. Samuel ADAMS and John ADAMS, John HANCOCK, and James OTIS, became the leaders of the radical anti-British party. The STAMP ACT (1765) and the TOWNSHEND ACTS (1767) preceded the BOSTON MASSACRE (1770) The Tea Act (1773) brought on the BOSTON TEA PARTY, for which the rebellious colonials were punished with the INTOLERABLE ACTS (1774), which troops under General Thomas GAGE were sent to enforce. Through Committees of Correspondence Massachusetts and the other colonies had been sharing their grievances, and in 1774 they called the First Continental Congress at Philadelphia for united action The mounting tension in Massachusetts exploded in April, 1775, when Gage decided to make a show of force. Warned by Paul REVERE and William DAWES, the minutemen readied themselves (see LEXINGTON AND CONCORD, BATTLES OF) Thus began the AMERICAN REVOLUTION Patriot militia from other colonies hurried to Massachusetts, and there George Washington took command of the Continental army, after the battle of BUNKER HILL (June 17, 1775). The British then holed up in Boston until March 17, 1776, when Gen. William HOWE evacuated the town, taking with him a considerable number of Tories British troops never returned, but Massachusetts soldiers were busy fighting elsewhere for the independence the colonies proclaimed on July 4, 1776 Delegates elected to a constitutional convention dominated by John Adams formulated a new constitution accepted by the people in June, 1780 Victorious in the Revolution, the colonies faced depressing economic conditions, nowhere worse than in W Massachusetts, where discontented Berkshire farmers erupted in SHAYS'S REBELLION in 1786 The uprising was promptly quelled, but it frightened conservatives into support of a new national constitution which would displace the weak government under the Articles of Confederation with a stronger authority When John Hancock, hero to the common man, was brought around to favor the new Federal Constitution and attained the governorship, its adoption by the commonwealth was assured (1788) Independence had closed the old trade routes within the British Empire, but newer ones were soon opened up, and trade with China in particular became especially lucrative Boston and lesser ports boomed, and the good times were reflected politically in the commonwealth's unwavering adherence to the Federalist party, the party of the dominant commercial class European wars at the beginning of the 19th cent at first further stimulated the carrying trade but then led to interference with American shipping To avoid war Congress passed Jefferson's EMBARGO ACT OF 1807, a severe blow to the economy of Massachusetts and the rest of New England When war with Britain came anyway, in 1812, it was violently unpopular with the Yankees There was talk of secession at the abortive HARTFORD CONVENTION of New England Federalists, over which George CABOT presided As it transpired, however, the embargo and the War of 1812 had an unexpectedly good effect on the local economy With English manufactured goods shut out, the United States had to begin manufacturing on its own, and the infant industries that sprang up after 1807 tended to concentrate in New England, and especially in Massachusetts Financed by some of the merchant princes and shielded from foreign competition by protective tariffs beginning in 1816, they grew rapidly to transform the character of the commonwealth and its people Clever Yankees, inventive and adaptable from necessity, became the efficient operators and managers of the new mills The power loom, perfected by Francis Cabot LOWELL, had a revolutionary effect on the textile industry Labor was plentiful—and ruthlessly exploited Agriculture, on the other hand, went into a sharp decline as Massachusetts could not compete with the new states of the West Farms were abandoned by the score, and some farmers turned to the new industries for a living So many others departed for the more fertile West that commonwealth leaders, after typical Puritan soul-searching, decided that a long-overdue reform in government and religion might moderate the exodus Thus in the noteworthy year of 1820 Maine was allowed to go its way as a separate state and a constitutional convention drafted 10 amendments whose adoption considerably liberalized the government The most important among them provided for the incorporation of cities, the removal of religious tests for officeholders, and the abolition of property qualifications for voting except for a small property tax (Massachusetts is the only old state still governed under its original constitution, the one of 1780, although it was again extensively amended by the constitutional convention of 1917–19) The spirit of reform now became contagious as Massachusetts entered upon its golden age UNITARIANISM, a more charitable creed than the stern old-time Congregationalism (which was finally disestablished in 1833), swept through the commonwealth under the guidance of William Ellery CHANNING and, later, Theodore PARKER Horace MANN set about the establishment of an enduring system of public education in the 1830s, and Dorothea Lynde DIX began her noble crusade for the mentally ill in the 1840s Of the transcendentalists, Ralph Waldo EMERSON and Henry THOREAU were quick to perceive and decry the evils of the machine, while Bronson ALCOTT, Margaret FULLER, Nathaniel HAWTHORNE and Emerson had some association with BROOK FARM. The intellectual and cultural center of the nation, Massachusetts claimed the architect Charles BULFINCH, such writers and poets as Richard Henry DANA, Emily DICKINSON, Oliver Wendell HOLMES (1809–94), Henry Wadsworth LONGFELLOW, James Russell LOWELL, and John Greenleaf WHITTIER, the historians George BANCROFT, John Lothrop MOTLEY, Francis PARKMAN, and William Hickling PRESCOTT, and the scientist Louis AGASSIZ. Beginning in the 1830s reformers devoted most of their energy to the antislavery crusade, to the vast displeasure of conservatives, especially the cotton mill tycoons, who feared to offend the South because their raw material came from there. William Lloyd GARRISON was the noisiest though not the most effective of the ABOLITIONISTS. Equally sincere were the orator Wendell PHILLIPS and the poet Whittier, who branded the great Whig leader Daniel WEBSTER a traitor for his part in effecting the despised Compromise of 1850. Charles SUMNER, however, who soon took Webster's old seat in the U. S. Senate and displaced him in the affection of the people, satisfied even the most fiery abolitionist While he eloquently denounced the Kansas-Nebraska Bill (1854), other Massachusetts men organized the EMIGRANT AID COMPANY to save "bleeding" Kansas from slavery With the Whig party broken on the slavery issue, Massachusetts turned to the new Republican party and voted for John C Frémont in 1856 and Abraham Lincoln in 1860. Largely because of its efficient governor John ANDREW, it was the first state to answer Lincoln's call for troops after the firing on Fort Sumter, and Massachusetts men were the first to die in the Union cause as the 6th Massachusetts Regiment was fired on by a mob in secessionist Baltimore Massachusetts was thorough in its support of the Civil War. The Adams family, which has a long and most distinguished record of service to the republic, was well represented in Charles Francis ADAMS (1807–86), who, accompanied by the most brilliant of his sons, Henry ADAMS, was the able wartime minister to Great Britain Massachusetts thus did nobly in the struggle which ended Negro slavery in the South, but economic slavery still enthralled most of its own people In this respect the commonwealth was neither worse nor better than the rest of the North, experiencing its tremendous post-war industrial expansion Massachusetts capital financed many of the nation's new railroads, especially in the West. People, too, continued to leave the state for the West, but labor remained cheap and plentiful as European immigrants streamed into the state. The Irish, oppressed by both nature and the British, began arriving in droves even before the Civil War, beginning in the 1840s, and they continued to land in Boston for years after the Civil War. After them came French Canadians and, later, in the 19th cent and early in the 20th cent , Portuguese, Italians, Poles and other Slavs, and Scandinavians Englishmen, Scots, and Welshmen came also from the British Isles, but of all the immigrant groups, English-speaking and non-English-speaking, the Irish came to be the most influential, especially in politics. Their religion (Roman Catholic) and their political faith (Democratic) definitely set them apart from the old native Yankee stock, though certain traits of Puritanism are not completely foreign to a type of Celtic character Practically all of the immigrants set to work in the factories The halcyon days of Massachusetts shipping were over The carrying trade had bounded back triumphantly after the War of 1812, but the supplanting of sail by steam, the growth of railroads and the Confederate cruisers in the Civil War helped reduce it to its present negligible state Whaling, once the glory of New Bedford and Nantucket, faded quickly with the introduction of petroleum The growth of cities accompanied the rise of industrialism, but almost as important in the system was the small mill town, where the factory hands lived in company houses and traded in the company store Labor unions struggled for recognition in a long, weary battle marked by strikes, sometimes violent, as was the LAWRENCE textile strike of 1912 The First World War, in which industrial production was vastly stepped up, improved the lot of workingmen, but not of Boston policemen, who staged and lost their famous strike in 1919 For his part in breaking the strike, Gov Calvin COOLIDGE won national fame and went on to become Vice President and then President, the third Massachusetts citizen to hold that office. The SACCO-VANZETTI CASE, following on the police strike, attracted international attention, as liberals raged over the seeming lack of regard for the spirit of the law, quite the contrary to the stand of the state's most eminent jurist, Oliver Wendell HOLMES (1841–1935) Unions finally came into their own in the 1930s with the blessings of Franklin D Roosevelt's New Deal, which also helped the state pull through the severe economic depression of the period Industry, including shipbuilding, which has never been lost, spurted forward again with the Second World War Although in that conflict Massachusetts men and women ranged the world as far as their early forebears had, vestiges of the parochialism that has alternately amused and infuriated the rest of the nation survive. Massachusetts, University of, at Amherst, land-grant and state supported, coeducational, chartered 1863, opened 1867 It was called Massachusetts Agricultural College until 1931, and Massachusetts State College from 1931 to 1947. It includes schools of agriculture, liberal arts, science, engineering, home economics, and horticulture and a division of physical education. Its first president was William S Clark

Massachusetts Bay, inlet of the Atlantic Ocean, where the Massachusetts coast line curves inward. It extends from Cape Ann to Cape Cod. Boston Bay and Cape Cod Bay are arms of it

Massachusetts Bay Company, English chartered company, officially known as the Governor and Company of the Massachusetts Bay in New England Organized (1628) as the New England Company, it took over the Dorchester Company, which had established a short-lived fishing colony on Cape Ann in 1623 The group obtained (1628) from the Council for New England a grant of land between the Charles and Merrimac rivers, extending westward to "the South Sea" One of the men who negotiated for this patent, John ENDECOTT, became leader of the colony at Naumkeag (later Salem), founded (1626) by Roger CONANT and others from the Cape Ann settlement A royal charter, granted in 1629, confirmed the previous grant and created the Massachusetts Bay Company, but it did not bind the company to maintain headquarters in England Almost immediately the emphasis changed from trade to religion as the Puritan stockholders conceived of the colony as a religious and political refuge Puritan leaders, by the Cambridge Agreement (1629), engaged to go to New England on condition that the government and charter be entrusted entirely to the settlers John WINTHROP was a moving force in this arrangement, and he became the leading figure among the colonists who went to New England in 1630 They reached Salem, soon moved to Charlestown, but decided to make their chief settlement at the mouth of the Charles river, a commanding position on Massachusetts Bay There Boston was established Attempts were made by the Council for New England, under the leadership of Sir Ferdinando GORGES, to annul the colony's land claims, but they were finally unsuccessful The company and the colony were synonymous until 1684, when the charter was withdrawn and the company ceased to exist In 1691 Massachusetts was granted a new charter which extended its jurisdiction over Plymouth and Maine See N B Shurtleff, ed, *Records of the Governor and Company of the Massachusetts Bay in New England* (5 vols, 1853–54), G L Beer, *The Origins of the British Colonial System, 1578–1660* (1908), J T Adams, *The Founding of New England* (1921), C M Andrews, *The Colonial Period of American History*, Vol I (1934), Thomas Hutchinson, *The History of the Colony and Province of Massachusetts Bay* (ed by L S Mayo, 3 vols, 1936)

Massachusetts Institute of Technology, at Cambridge, nonsectarian, with land-grant support, mainly for men, chartered 1861, opened 1865 by William B Rogers in Boston, moved to the Charles river basin, Cambridge, 1916 It is a leading technical school of university grade, with schools of architecture, engineering, and science; divisions of humanities and industrial cooperation; and a large graduate school It has a combination course with a group of liberal arts colleges There are nautical and paper museums, an important technical library, a cyclotron, a wind tunnel, and laboratories of acoustics, aeronautics (Guggenheim), steam and compressed air, automotive engines, biology, chemistry, electronics, gas engines, high voltage, physics, refrigeration, public health, spectroscopy, solar energy, and testing materials An engineering camp is in Maine The institute had the first U S. school of architecture and also pioneered in various forms of engineering Its alumni have been prominent in industry, technical education, and naval building.

Massachusetts State Teachers College, at Framingham, for women, chartered 1838, opened 1839 at Lexington, a normal school until 1930 It is the oldest existing U.S. school for teachers and was the first under state control It was established by Horace MANN. Its early success influenced the development of other normal schools

massage (məsäzh'), systematic manipulation of the body by friction, stroking, and kneading. The method has some of the beneficial effects of exercise and is especially useful when active exercise is not advisable. Massage results in an increase of the blood supply and a stimulation of the musculature, it prevents atrophy from disuse in bedridden persons and aids recovery in fatigued muscles Massage has also been of aid in the treatment of paralyzed muscles in cases of infantile paralysis.

Massah (măs'ə) [Heb.,=temptation] or **Meribah** (mĕr'ĭbə) [Heb.,=strife] or **Massah and Meribah,** place, near Horeb, where Moses brought forth water from the rock Ex 17 7, Num 20 13,24, 27 14; Deut 6 16, 9 22, 32.51, 33 8; Ps. 81 7 It is associated with Kadesh in the wilderness of Zin.

Massapequa (măsəpē'kwə), unincorporated village (pop. 2,676), on the south shore of Long Island, SE N Y, E of Freeport. Several old buildings are still standing

Massasoit (măsəsoit'), c 1580–1661, chief of the Wampanoag Indians He was also known as Ousamequin (spelled in various ways), which was either his original name or a name adopted on an important occasion One of the most powerful native rulers of New England, he came to Plymouth in 1621 and signed a treaty with the Pilgrims which he faithfully observed until his death He befriended Roger Williams and was a friend of Edward Winslow In 1632 he fought his enemy, Canonicus, ruler of the Narragansett Massasoit's son, Metacomet, became famous as King PHILIP See biography by A G Weeks (1919)

Massawa (məsä'wə), Ital *Massaua*, city (pop 15,216), Eritrea, a port on the Red Sea There is a fine harbor, and the city is a market for pearls and mother-of-pearl It was the capital of Eritrea from 1885 until 1897, when the seat of government was transferred to Asmara It was the chief supply base in Italy's conquest of Ethiopia (1935–36)

Masséna, André (ädrā' məsänä'), 1758–1817, marshal of France, b Nice Of humble origin, he entered (1791) the French army and rose rapidly because of his brilliant tactical abilities He served under Bonaparte in the Italian campaign, won the battle of Rivoli (1797), and distinguished himself in Napoleon's campaigns of 1800 and 1809 against Austria His failure in the PENINSULAR WAR is often attributed to the lack of cooperation of the other French commanders Masséna's relations with Napoleon were somewhat strained by Masséna's republican convictions, but he lacked political ambition, and Napoleon honored his military achievements by making him duke of Rivoli (1808) and prince of Essling (1810) After Napoleon's fall in 1814, Masséna supported Louis XVIII, who raised him to the peerage (1815) His neutral attitude during the Hundred Days was bitterly attacked by the royalists after the Restoration

Massena (məsē'nə), village (pop 11,328), N N Y, on the Grass and Raquette rivers and NE of Ogdensburg, in a dairy area, settled 1790, inc 1886 There is a large aluminum plant, mica products are also made The Roosevelt International Bridge (1934) over the St Lawrence is near by

Massenet, Jules Émile Frédéric (zhül' zāmēl' frādārēk' məsənĕ'), 1842–1912, French operatic composer, studied at the Paris Conservatoire where he taught, 1878–96 Besides many songs, several oratorios, and orchestral suites, he composed over 20 operas, the most popular being *Hérodiade* (1881), *Manon* (1884), *Le Cid* (1885), *Werther* (1892), and *Le Jongleur de Notre Dame* (1902) See Massenet's *My Recollections* (Eng tr, 1919), H T Finck, *Massenet and His Operas* (1910)

Massif Central (măsēf' sätral'') [Fr.,=central highlands], great mountainous plateau, central France, covering almost a sixth of the surface of the country The chief water divide of France, it borders on the Paris basin in the north, the Rhone valley and basin in the east and south, and the Aquitanian basin in the west It includes the former provinces and natural regions of AUVERGNE, FOREZ, and VELAY (center); MORVAN and BOURBONNAIS (north), MARCHE and LIMOUSIN (west), QUERCY and ROUERGUE (south), and the CÉVENNES, VIVARAIS, LYONNAIS, BEAUJOLAIS, and CHAROLAIS (east) There is little unity of climate or soil The core of the Massif is the volcanic mass of the Auvergne mts with the highest point in the Puy de Sancy in the Mont Dore group There are granitic, limestone, and other soil formations, only in the average altitude (c 2,650 ft) is there a feature common to the entire Massif Central All four chief rivers of France (the Seine, the Loire, the Rhone, and the Garonne) receive tributaries from the Massif Central, the Loire, the Dordogne, and the Charente originate here Sheep grazing, dairying, cattle raising, and, in the fertile valleys, agriculture are the chief occupations Coal is mined extensively; CLERMONT-FERRAND, LE CREUSOT, SAINT-ÉTIENNE, and ROANNE are important industrial centers

Massilia: see MARSEILLES

Massillon, Jean Baptiste (zhä' baptēst' măsēyô'), 1663–1742, French clergyman, bishop of Clermont from 1717 He was celebrated for his preaching, especially at the court of Louis XIV and Louis XV Collections of sermons include a series for Advent and a series for Lent.

Massillon (mă'sĭlŏn), city (pop 26,644), NE Ohio, on the Tuscarawas and W of Canton, in a coal, clay, sand, and gravel area, settled 1812, laid out 1826. It is an important coal-distributing point and an industrial center, manufacturing steel products, machine parts, and roller bearings Jacob S COXEY lived here. It is the seat of a state hospital for the insane

Massine, Léonide (lāônēd' măsēn'), 1896–, Russian ballet dancer and choreographer He attended the Imperial Ballet School, Moscow, and became principal dancer and choreographer for the Diaghilev Ballet Russe (1914–20) and for the Ballet Russe de Monte Carlo (1932–42) His choreographical works include *Parade*, *Choreartium*, *Gaîté parisienne*, *Symphonie fantastique*, *The Three-cornered Hat*, and *Union Pacific*, and he has performed in many of these with great success

Massinger, Philip, 1583–1640, English dramatist, b Salisbury He studied at Oxford (1602–6) but left without a degree to go to London and write plays His many independent productions include *The Duke of Milan* (1618), a tragedy; *The Renegado* (1624), a tragicomedy, and two brilliant satirical comedies, *A New Way to Pay Old Debts* (1625) and *The City Madam* (1632) He is remembered, too, for his dramas in collaboration with such contemporaries as John FLETCHER, Nathaniel FIELD, Dekker, Middleton, and possibly Shakspere Among the most notable are *Sir John van Olden Barnaveldt* (1619) with Fletcher and *The Fatal Dowry* (pub 1632) with Field, he is alleged also to have had a hand in *King Henry VIII* of the Shakspere canon Modern research has revealed that several of Massinger's plays were accidentally burned by a cook in the 18th cent His coarse but fluent lines are tempered with fine rhetoric, and while his characters are often conventional, his plot structure shows great dramatic genius He died in Southwark, and he is said to be buried in the grave of his colleague, Fletcher. See his plays (ed by William Gifford, 1813, by Arthur Symons, 1887–89), study by A H Cruickshank (1920); bibliography by S A Tannenbaum (1938)

Massinissa: see MASINISSA

Massive, Mount, peak, 14,418 ft high, W central Colo, in the Sawatch Mts Of the U.S Rocky Mts, it is topped only by Mt Elbert

Masson, Frédéric (frādārēk' məsō'), 1847–1923, French historian, one of the foremost authorities of Napoleon I and his family His devotion to Napoleon did not prevent him from presenting his facts with conscientious accuracy, and his severe judgment of Napoleon's relatives is backed up by factual detail Masson's major work is *Napoléon et sa famille* (13 vols, 1897–1919) Among his books translated into English are *Napoleon at Home* (1894), *Napoleon, Lover and Husband* (1894), and *Napoleon and His Coronation* (1911) Other writings include *Napoleon à Sainte-Hélene* (1912) and, in collaboration with Guido Biagi, *Napoleon inconnu* (2 vols, 1893), containing unpublished manuscripts of Napoleon and valuable notes on his little-known early years

Masson, village (pop 1,226), SW Que, ENE of Ottawa and on the Lievre just above its mouth on the Ottawa river Lumbering and dairy and cattle farming are the chief industries

Massorah. see MASORA

mass production see PRODUCTION

Massys, Matsys, Messys, or **Metsys, Quentin** (kvĕn'tĭn məsĭs', mātsĭs', mĕ-, mĕt-), c.1466–1530, Flemish painter, b Louvain, son of a locksmith He himself worked first as a blacksmith He is thought to have studied with Dierick Bouts and early moved to Antwerp, where most of his life was spent Massys is considered one of the greatest Flemish painters of his time, a period of transition in which the influence of the Italian Renaissance was making itself felt in Flanders This influence is apparent in the use by Massys of life-size figures and in his subordination of detail However, unlike some of his contemporaries, he retained much of the freshness, realism, and intimate characterization of the earlier Flemish school, together with its rich and glowing color and meticulous finish His masterpiece is a triptych (Antwerp), the principal panel of which depicts the *Burial of Christ* and the wings of which portray the *Martyrdom of St John the Baptist* and *St John the Evangelist*, respectively Other famous works include *Pietà* and *Banker and His Wife* (Louvre), *Life of St Anne* (Brussels), *Crucifixion* and *Choirmaster* (Vienna), *Adoration of the Magi* (Metropolitan Mus), and *The Rest on the Flight into Egypt* (Worcester, Mass, Art Mus) Among his numerous and excellent portraits may be mentioned those of Jean Carondelet and Egidius (Longford Castle, Salisbury, England) See study by Jean de Bosschère (1907), Sir William Martin Conway, *The Van Eycks and Their Followers* (1921) Quentin's son, Jan **Massys** (yän'), c 1509–1575, imitated his father not over successfully His *Judith* is in the Museum of Fine Arts, Boston. Another son, Cornelis **Massys** (kôrnā'lĭs), d c 1580, excelled in painting landscape with figures and was also an engraver His *Imaginary Landscape* is in the Metropolitan Museum.

mast, large metal or timber pole secured vertically or nearly vertically in a ship and used for supporting sails and rigging—as well as signaling devices and the like The mast is as old as sailing vessels, and the oldest sailboats depicted (those of ancient Egypt) had a small mast placed forward and carrying a single sail The Phoenician bireme had one

mast, the Greek trireme two. Viking ships had one central mast. In the Middle Ages, a topmast was added, fixed to the single mast, to carry more sail, after the 16th cent., topmasts were generally demountable. By that time the building of larger vessels and the desire for greater speed on longer journeys had already brought increase in sails and in the masts—a process that continued until the clipper ships of the middle of the 19th cent were rushed forward by clouds of sails. Above the topmast was added the topgallant mast and above that the topgallant mast royal. In vessels having more than one mast, a small forward mast is called the foremast, a small mast abaft the mainmast is the mizzenmast. A platform for lookout on a mast is called a crow's nest. A modern merchant ship may have a mast of hollow steel tubes used mainly for signaling, for radio antennae, and for supporting lifts of derricks for cargoes. In the modern warship the mast has a steel platform, with the instruments for controlling gunfire, this is a descendant of the wooden platform from which gunfire was directed in battles of sailing ships.

mastaba (măˊstŭbŭ) [Arabic,=large bench of stone], in Egyptian architecture, a sepulchral structure built above ground. It was characteristic of the ancient empire and no doubt a development from the stone mass piled over the earlier mummy pits. It was built of limestone or of sun-dried mud bricks, rectangular in plan, topped by a flat roof or deck, with walls sloping inward. The mastaba was originally merely a mummy repository, but later became an elaborate lodging for it, consisting of three parts—a chamber, with decorated walls, where the offerings were placed for the ka, or vital spirit of the deceased; an inner secret chamber, where was walled up a portrait sculpture of the mortal body, and a shaft or mummy well penetrating downward through the mastaba. At the end of the shaft was a small chamber, cut in the rock, where the sarcophagus was deposited; after that the well was packed with stones and sealed. The pyramids or royal tombs were a further development of mastabas. In the Metropolitan Museum of Art is the mastaba tomb of Per-neb (c 2650 B.C.), V dynasty, with the objects found in excavating the tomb.

Masters, Edgar Lee, 1869–1950, American poet and biographer, b. Garnett, Kansas. He lived (1880–93) in Lewistown, Ill., on the Spoon river and studied briefly at Knox College. *Spoon River Anthology* (1915), published anonymously, won him literary fame but ruined his Chicago law business. This collection of epitaphs in free verse, revealing the secret lives of dead citizens, is a literary landmark for its poetic treatment of small-town American life. Volumes which followed included *Starved Rock* (1919), *Domesday Book* (1920), *Poems of People* (1936), and *Illinois Poems* (1941). His *Lincoln the Man* (1931) is a bitter and prejudiced attack. Other biographies are *Vachel Lindsay* (1935), *Whitman* (1937), and *Mark Twain* (1938). See his autobiography, *Across Spoon River* (1936).

mastic, resinous substance which exudes in drops from the bark of the small mastic tree (*Pistacia lentiscus*), found chiefly in Mediterranean countries. A similar substance is obtained from plants of N India, the West Indies, and in Peru. Mastic is used in making varnish, as an astringent, and, in the East, as a chewing gum. It is also used in the Near East to flavor a distilled liquor, called mastic, which appears milky when water is added.

mastiff, name applied to various large powerful dogs. The old English mastiff, believed to have been bred in England as a watchdog for more than 2,000 years, has short hair, a heavy head, and a short muzzle. By some it is considered the progenitor of many of the varieties of mastiffs. Mastiffs of the present day are bred chiefly from descendants of an English line. They are tan, silver fawn, or dark fawn, with the muzzle, nose, and ears black and with black around the eyes. Their disposition is generally docile, good-tempered, and courageous. There is some evidence that the mastiff originated in Asia, and the Tibetan mastiff, a rough-coated dog, is considered by some authorities to be the nearest to the original type.

mastodon (măˊstŭdŏnˌ), extinct mammal from which modern elephants are believed to have developed. The earliest known forms are identified with the Oligocene epoch in Africa. These were long-jawed mastodons about 4½ ft high, with four tusks, and a much elongated face. Their descendants of the Miocene epoch were the size of rather large elephants. During Miocene times they spread over Europe, Asia, and North America. The mastodons were forest dwellers, they obtained their food by browsing, and their teeth were more numerous and of a simpler form than those of the elephant. They are said by some to have persisted in North America and in Europe until the close of the Pleistocene. The genus name *Mammut* has been accepted by some authorities to replace the earlier genus name *Mastodon*.

mastoid (măˊstoid) or **mastoid process**, cone-shaped portion of the temporal bone of the skull palpable behind the ear. The mastoid process, also known as the mastoid bone, is less dense in children than in adults, and it may become infected from the extension of infection of the middle ear. Infection of the mastoid cells (mastoiditis) is a serious condition, since the large blood vessels of the neck and also the brain may become involved. Surgery is necessary when mastoiditis develops.

Masudi (măsōōˊdē), d. 956, Arabian historian, geographer, and philosopher, b. Baghdad. He traveled in Spain, Russia, India, and China and spent his last years in Syria and Egypt. His history of the universe from the creation to A.D. 947, *Muruj adh-Dhahab*, is a compilation of his observations and studies in all these lands and embraces social and literary history and discussions of religions, as well as geographic descriptions. A French version of this work, *Les Prairies d'or* [meadows of gold], was published in 1861–78. The first volume has been translated into English. See R. A. Nicholson, *A Literary History of the Arabs* (2d ed., 1930).

Masulipatam (mŭsōōˈlĭpătˈŭm) or **Bandar** (bŭnˈdur), town (pop. 59,146), N Madras state, India, a port on the Bay of Bengal. In the 17th cent. it was a center of French, British, and Dutch trade. Cloth is manufactured.

Masuria (mŭsōōˊrēŭ), Ger. *Masurenland* (măsōōˊrŭnlänt"), Pol. *Mazury* (măzōōˊrĭ), southern region of former East Prussia, since 1945 under Polish administration. It is a low-lying country, covered by large lakes and forests. Lyck is the chief city. Its inhabitants, originally Polish but largely Germanized in the early 20th cent., were replaced after 1945 by an almost entirely Polish-speaking population. The **Masurian Lakes** were the scene of heavy fighting early in the First World War. Two Russian armies, commanded by Generals SAMSONOV and RENNENKAMPF, advanced into the region when the war broke out. Samsonov was decisively defeated by Hindenburg at TANNENBERG (Aug., 1914). Rennenkampf was driven by Mackensen into the lake country, where he lost 125,000 men (Sept., 1914). The remnants of the Russian forces withdrew, but in the winter the Russians attempted a second drive into East Prussia. They were once again repulsed (Feb., 1915) in Masuria in the so-called Winter Battle.

masurium. see TECHNETIUM.

Matabele (mătŭbēˊlē), Bantu-speaking tribe of W Southern Rhodesia. It was founded in 1823 when Mzilikazi, a general under the Zulu king, Chaka, fled with some men across the Drakensberg into the present-day Transvaal. Reinforced by other Zulu deserters, the Matabele maintained themselves by raids as far south as the Orange river, and they destroyed or absorbed the surrounding tribes except for the Bamangwato of Bechuanaland, who paid a tribute. Driven north (1837) by the Boers and the Zulus, Mzilikazi crossed the Limpopo river and established his people in Matabeleland, their present home. From his second successor, Lobengula (1870–94), Cecil Rhodes secured permission (1888) to mine the gold deposits, but in 1893 Lobengula attacked the settlers. He was soon defeated and died while in hiding. With the suppression of a revolt in 1896, the Matabele abandoned war and settled down as herdsmen and farmers.

Matadi (mutäˊdē), town (pop. 9,110), SW Belgian Congo, a port at the mouth of the Congo. Matadi is the limit of navigation for ocean-going vessels. It is connected by rail with Leopoldville.

Matador, town (pop. 1,376), co. seat of Motley co., NW Texas, NE of Lubbock. This thoroughly Western town on the rolling prairie is near the giant Matador Ranch and is headquarters for grain and cotton farmers as well as for cowboys.

Matagorda (mătŭgôrˈdŭ), unincorporated town (pop. c 1,250), S Texas, on Matagorda Bay at the mouth of the Colorado and SSW of Houston. Settled in 1825, it was a port for Stephen F. Austin's colony but faded later. It is today known principally for fishing and oyster gathering. Despite hurricanes that often strike the coast, old Christ Church (1839) still stands.

Matagorda Bay, inlet of the Gulf of Mexico, S Texas, protected by a long sandspit, Matagorda Peninsula. The bay, with its arm, Lavaca Bay, was probably visited (1685) by La Salle's last expedition. Today small ports are Palacios, Port Lavaca, and Matagorda. Matagorda Island is a sand bar farther south at the entrance of San Antonio Bay.

Mata Hari (mäˈtŭ häˈrē), 1876–1917, Dutch dancer and spy in German service, whose real name was Margaretha Geertruida Zelle. She won wide acclaim in Paris for her interpretations of authentic Indonesian dances. In 1907 she joined the German secret service, and in the First World War she betrayed important military secrets confided to her by the many high Allied officers who were on intimate terms with her. In 1917 she was arrested, convicted, and executed by the French. See biography by Thomas Coulson (1930).

Matamoras (mătŭmôˈrŭs), residential borough (pop. 1,735), NE Pa., on the Delaware opposite Port Jervis, N.Y., and near the point where New York, New Jersey, and Pennsylvania meet. In the countryside are large estates and hunting lodges.

Matamoros, Mariano (märēäˈnō mätämôˈrōs), d. 1814, Mexican revolutionist, in the war against Spain. He was, like HIDALGO Y COSTILLA and MORELOS Y PAVÓN, a priest with liberal political opinions. Much harassed by the Spanish authorities after the outbreak of the revolution of 1810, he joined Morelos (1811). He became a prominent military leader, winning an especially important victory at San Agustín de Palmar (1813). After the second defeat of Morelos's army by ITURBIDE, Matamoros was captured, degraded from priestly office, and shot.

Matamoros (mätämôˈrōs, mätˈtŭmôˈrus), city (pop. 15,699), Tamaulipas, NE Mexico, near the mouth of the Rio Grande, opposite Brownsville, Texas. Matamoros, with rail and highway links between the United States and Mexico, is an international trading center and a point of entry for tourists. Sugar cane and cattle are raised in the surrounding area. The town, founded in 1824, fell (1846) in the Mexican War to the troops of Zachary Taylor after the battles of Palo Alto and Resaca de la Palma.

Matane (mŭtänˈ), town (pop. 4,633), E. Que., on the south shore of the St. Lawrence at the beginning of the Gaspé Peninsula, ENE of Rimouski. It is a lumbering and pulpwood-shipping center.

Matanuska Valley (mătunōōˈskŭ), settlement, S Alaska, W of the Chugach Mts., traversed by the Matanuska river. The area has coal and lumber as well as agricultural land. Here the Federal government in 1935 resettled farmers from drought-stricken areas in the Middle West. The colony and its farmers' cooperative association had varying fortune thereafter. The Second World War brought many soldiers and gave the place temporary prosperity.

Matanzas (mətanˈsäs), port (pop. 49,541), capital of Matanzas, W Cuba, E of Havana. On a large harbor, once a pirate haven, Matanzas exports sugar, molasses, coffee, fruit, and sisal. It has a free port zone, and there are sugar refineries, tanneries, and fertilizer plants. Well planned and attractive, it is also a popular tourist resort.

Matanzas, Fort. see SAINT AUGUSTINE, Fla.

Matapan, Cape (mätŭpänˈ), southern extremity of the Greek mainland, of the Peloponnesus, and of the Taygetus mts., projecting into the Ionian Sea. It was known to the ancients as Taenarum (Gr. *Taenaron*). In the Second World War the British won an important naval victory (1941) over the Italians off Cape Matapan.

Matapedia, Lake (mătŭpēˈdēŭ), 14 mi. long and 2 mi. wide, E Que., S of the St. Lawrence, at the base of the Gaspé Peninsula and S of Matane. It is drained southward by the Matapedia river, famous for salmon fishing.

Matarani, Peru. see MOLLENDO.

Mataró (mätärōˈ), city (pop. 27,573), Barcelona prov., NE Spain, in Catalonia. It is a Mediterranean port and a manufacturing center (especially of knitted goods).

Matawan (mäˈtŭwan), borough (pop. 2,758), E N.J., N of Freehold, inc. 1895. Among its old buildings is the Burrowes Mansion (1723).

match. Before the introduction of the friction match, the result of a series of inventions in different countries, fire was made by friction methods using the stick and groove, the fire drill, or flint, tinder, and steel or by employing a sunglass—methods so inconvenient that fires were kept burning as long as possible. Attempts in the 18th cent. to cause ignition by the use of chemicals resulted in a friction match devised in 1827 by an Englishman, John Walker, and in a phosphorus match invented in France in 1831 by Charles Sauria. In the United States a practical phosphorus match was patented in 1836 by J. D. Phillips and manufactured by L. C. Allin. The safe, cheap modern match was made possible by mechanized large-scale manufacture and by the use of nontoxic chemicals, notably the sesquisulphide of phosphorus. In the safety match, invented in Sweden in 1855 by J. D. Lundstrom, an oxidizing agent on the match tip is ignited by striking on a combustible material affixed to the matchbox.

mate (mätä, mäˊtä), **yerba mate** (yĕrˈbä,—bŭ), or **Paraguay tea**, evergreen tree of the HOLLY genus. From ancient times South American Indians have made a tea (also called mate) from the young leaves and tender shoots of *Ilex paraguariensis* or *I. paraguayensis*, the source of the best brew, and from closely related species. Mate is the most popular beverage in much of South America and its culture is an important industry in Brazil and Paraguay. The tea is stimulant and restorative, less astringent than genuine tea, and contains considerable caffeine. The word *mate* refers also to the cups in which the tea is infused, which are made from curiously shaped gourds or calabashes, with small openings cut in the top and sometimes decorated with silver mountings. The dried leaves are put in a container and covered with boiling water, and the tea is drunk through a *bombilla*, a tube provided at the lower end with a strainer of fine basketwork, metal, or perforated wood.

Matera (mätäˈrä), city (pop. 21,762), capital of Matera prov., Basilicata, S Italy, in the Apennines. It is an archiepiscopal see and an agricultural center. Its cathedral and its massive castle date from the 13th cent. There are many cave dwellings, which still are inhabited.

materialism, in philosophy, a widely held system of thought which explains the nature of the world as entirely dependent on matter and motion. The fundamental and final reality is matter, beyond which nothing need be sought. Certain periods in history, usually those associated with scientific advance, are marked by strong materialistic tendencies The doctrine was formulated as early as the 4th cent. B C. by DEMOCRITUS, in whose system all phenomena are explained by atoms and their motions in space. Other early Greek teaching, such as that of EPICURUS and STOICISM, also conceived of reality as material in its nature. The theory was later renewed in the 17th cent. by Pierre GASSENDI and by his associate, Thomas Hobbes, who believed that the sphere of consciousness essentially belongs to the corporeal world, or the senses. The investigations of Locke were developed in a material sense by David Hartley and Joseph Priestley. They were a part of the vigorous development of the 18th cent., strongly manifested in France, where the most extreme thought was that of LA METTRIE and its culminating expression the *Système de la nature* (1770), for which HOLBACH is considered chiefly responsible. A reaction against materialism was felt in the later years of the 18th cent., but the middle of the 19th cent. brought a new movement, largely psychological, supplemented by experimentation and investigation. Closely related to materialism are naturalism and sensualism. See DIALECTICAL MATERIALISM. See F A. Lange, *History of Materialism* (Eng tr., 1877–80), C J H. Hayes, *A Generation of Materialism, 1871–1900* (1941).

materials, strength of: see STRENGTH OF MATERIALS.

materia medica: see DRUGS.

Mater Matuta: see MATUTA

mathematics, the study of numerical quantities and the relationships between them, of spatial quantities and their relationships, and of various abstractions of these relationships. The study of these quantities includes defining them carefully, assuming certain properties for them, and deducing from these properties, according to certain laws of logic, the relationships existing between the quantities themselves and previously obtained relationships The most elementary mathematics of numerical quantities is ARITHMETIC, that of spatial quantities is GEOMETRY. ALGEBRA is an abstraction of arithmetic and so is the theory of numbers, which deals with the properties of whole numbers only In analytic geometry algebra is used as a tool to develop geometrical theorems by means of the introduction of a coordinate system. The analytic method is indispensable in the study of CALCULUS It is fundamental in almost all of the applications of mathematics to modern physics. Higher mathematics, i.e., mathematics beyond the college level, is usually divided into three categories, algebra (including number theory), analysis, and geometry. Analysis here refers to that part of the study of mathematics in which the interest is primarily upon the theorems proved by the principles and techniques of calculus and the analytic method. In applied mathematics the main interest is in the applications of mathematical techniques in other branches of knowledge such as biology, chemistry, physics, and statistics. For the history of mathematics, see articles on the various branches of the subject. See E T. Bell, *Men of Mathematics* (1937); Edward Kasner and James Newman, *Mathematics and the Imagination* (1940), Moses Richardson, *Fundamentals of Mathematics* (1941).

Mather, Cotton (mä'dhûr), 1663–1728, American clergyman and writer, b Boston, grad. Harvard (B.A., 1678, M A , 1681), son of Increase Mather and grandson of Richard Mather and of John Cotton He was ordained and became a colleague of his father at North Church, serving as pastor in his father's absences and after his father's death (1723). It was principally by his indefatigable writing that he became one of the most celebrated of all New England Puritan ministers He was a scholar of parts, working industriously to gather a library and setting forth what he learned volubly. Thus his *Magnalia Christi Americana* (1702) is a hodgepodge of materials on the ecclesiastical history of New England, vaguely intended to show how the history of Massachusetts demonstrated the working of God's will. His theological writings are now largely forgotten but had great influence in his time. He also was a power in the state as well as the church, was a leader in the revolt against the rule of Sir William PHIPS, and was an adviser in Phips's government. He is generally pictured today unsympathetically as the archetype of the narrow, intolerant, severe Puritan, and his part in the Salem witch trials in 1692 is often recalled. Though he did not approve of all the trials, he had helped to bring on the wave of hysterical fear by his *Memorable Providences Relating to Witchcraft and Possessions* (1689). Later he further pursued his inquiries into satanic possession with *Wonders of the Invisible World* (1693), which was sharply answered by Robert CALEF. Even Mather's benevolence—expressed in his actions and reflected in his writings, as in *Essays to Do Good* (1710)—had a core of smugness. Yet he helped to forward learning and education and to make New England a cultural center. He was disappointed in his hopes of being president of Harvard but was one of the moving spirits in the founding of Yale. He was deeply interested in science and was the first American to be a fellow of the Royal Society. He persuaded Zabdiel Boyleston to inoculate against smallpox and supported the unpopular inoculation even when his life was threatened See bibliography by T J. Holmes (3 vols , 1940), biographies by Barrett Wendell (1891) and R. P. Boas and Louise Boas (1928).

Mather, Frank Jewett, Jr., 1868–, American art critic and teacher, b. Deep River, Conn., grad. Williams, 1889, Ph.D Johns Hopkins, 1892 He taught (1893–1900) at Williams and was professor of art and archaeology (1910–33) at Princeton. Art critic of the New York *Evening Post* and other papers, he has written many books of criticism, including *Homer Martin* (1912), *Estimates in Art* (Ser 1, 1916, Ser. 2, 1931), *The Portraits of Dante* (1921), *A History of Italian Painting* (1923), *Modern Painting* (1927), *The American Spirit in Art* (with others, 1927; "Pageant of America" series), *Concerning Beauty* (1935), *Venetian Painters* (1936), and *Western European Painting of the Renaissance* (1939).

Mather, Increase, 1639–1723, American Puritan clergyman, b Dorchester, Mass , son of Richard Mather. After graduation (1656) from Harvard, he studied at Trinity College, Dublin (M.A , 1658), and preached in England and Guernsey until the Restoration. After returning to Massachusetts (1661), he became (1664) pastor of North Church and retained that position through his life His son Cotton Mather was his colleague, and the two Mathers cooperated in many of the affairs that occupied their busy lives They were outstanding upholders of the old Puritan theocracy and the established order in both Church and state This conservatism led to trouble with the government in the Restoration period, and Increase Mather was a particularly bitter opponent of Edward RANDOLPH and Sir Edmund ANDROS over the withdrawal of the Massachusetts charter and the conduct of royal government In 1688 he went to England to carry the grievances of Massachusetts, and after the Glorious Revolution of 1688 and the subsequent revolt in Massachusetts against Andros he obtained a new charter which united Plymouth Colony with Massachusetts Bay Increase Mather looked with favor on the government of Sir William PHIPS After 1692 his influence declined somewhat, but he remained powerful to the end He was president of Harvard College but spent little time in Cambridge and was inactive, his administration was ended in 1701. His writing was intimately connected with his career *Causes of Conscience concerning Witchcraft* (1693), appearing after the height of the Salem witch furor, denounced "spectral evidence" in witch trials He also wrote a biography of his father (1670), *A History of the War with the Indians* (1676), which was written just after King Philip's War, and *Remarkable Providences* (1684), based on an earlier work of other hands See bibliography by T J Holmes (1932); biography by K. B Murdock (1925)

Mather, Richard, 1596–1669, British Puritan clergyman in North America, b. Lancashire, England. He studied at Oxford, began preaching, and was ordained in 1620 His Puritan beliefs led him to difficulties and he fled to Massachusetts, where he was pastor of Dorchester until his death. He helped to draw up the CAMBRIDGE PLATFORM and, with John Eliot and Thomas Weide, prepared the *Bay Psalm Book.*

Mathew, Theobald, 1790–1856, Irish social worker, called "the apostle of temperance," a Capuchin priest Father Mathew spent many years working for the welfare and education of the poor In 1838 he took a pledge of total abstinence and thereafter devoted himself to the cause of temperance, campaigning in Ireland, England, and America and gaining an enormous following See biography by Patrick Rogers (1943).

Mathews, Charles, 1776–1835, English comedian He first played at Dublin, Limerick, and Cork, but left Ireland and made his debut at the Haymarket in 1803 In 1818 he began his own entertainments, called "At Homes," and became extremely popular for his gift of impersonation. From 1822 to 1823 he toured the United States with great success and in 1828 became joint proprietor of the Adelphi Theatre, London He was praised by Leigh Hunt and Byron and was well acquainted with Coleridge and the Lambs. See Mrs. Mathews, *Memoirs of Charles Mathews* (1838–39) His son, **Charles James Mathews,** 1803–78, started as an architect, but took to the stage and in 1835 began his career in comedy and farce In 1838 he married Mme VESTRIS and with her visited the United States, a venture which failed. In 1872, however, he won acclaim at Wallack's Theater in New York. He appeared in plays by Shakspere, Sheridan, and Congreve, but was more often seen in minor contemporary comedies, many of which he wrote or adapted See his autobiography (ed. by Charles Dickens, 1879).

Mathews, Shailer, 1863–1941, American theologian, educator, and author, b Portland, Maine, studied at Colby College, at Newton Theological Institution, and at the Univ. of Berlin After seven years of teaching at Colby College (then called Colby Univ.), he entered (1894) upon his long and noted association with the Univ of Chicago There he was associate professor and professor of New Testament history and interpretation (until 1905), professor of systematic theology (1905–6), and professor of history and comparative theology (1906–33), he was dean of the divinity school from 1908 to 1933 and dean emeritus thereafter. Editor (1903–11) of the *World Today,* editor (1913–20) of the *Biblical World,* and president (1912–16) of the Federal Council of Churches of Christ in America, he was also the author of many books His writings include *The French Revolution a Sketch* (1901), *The Church and the Changing Order* (1907), *The Faith of Modernism* (1924), *New Faith for Old an Autobiography* (1936), *The Church and the Christian* (1938), and *Is God Emeritus?* (1940)

Mathewson, Christopher (Christy Mathewson), 1880–1925, American baseball player, b Factoryville, Wyoming co , Pa , grad Bucknell Univ., 1902 He began playing professional baseball with the Honesdale, Pa , and Taunton, Mass , teams, and the right-hander showed great promise while pitching with the Norfolk, Va , team in 1900 He was purchased by the New York Giants in midseason, but was returned to the Norfolk club in 1901, the same year he joined the Cincinnati Reds and was traded back to the Giants After John J. McGRAW became (1902) manager of the Giants, "Big Six" or "Matty"—as Mathewson was known to the sports world—rose to greatness as a pitcher and won 373 games before he retired from active play in 1918 In three consecutive seasons (1903–5) Mathewson won 30 games or over each season, and in 1905 he led the Giants in their world series victory over the Philadelphia Athletics by pitching three shutouts He pitched two no-hit games and in 1908 recorded 37 victories Mathewson was traded (1916) to the Cincinnati Reds and successfully managed the team until 1918, when he joined the U S army's chemical warfare service in the First World War He became a victim of poison gas in France and was thus prevented from continuing as a coach for the Giants after he had signed with the club in 1920 He returned to baseball in 1923 as president of the Boston Braves, but he died of tuberculosis shortly after In 1937 he was elected to the National Baseball Hall of Fame

Mathiez, Albert (älbĕr' matyä'), 1874–1932, French historian, an authority on the French Revolution He studied under Aulard, whose scientific method he adopted, though it led him to different conclusions Mathiez's chief work, *La Révolution française* (3 vols , 1922–27, Eng tr , 1928), followed substantially the socialist interpretation, which viewed the French Revolution as the product of the class struggle and of economic necessity His arguments and presentation, however, were unbiased enough to permit the royalist historian, Pierre Gaxotte, to use much of Mathiez's work to support entirely opposite conclusions Mathiez extolled Robespierre, belittled Danton, and considered the Thermidorian reaction after Robespierre's fall in 1794 as the triumph of the bourgeoisie over the working class Among Mathiez's other works are *Autour de Robespierre* (1925, Eng tr , *The Fall of Robespierre,* 1927), *La Réaction thermidorienne* (1929), and other more specialized studies of the revolutionary period Although Mathiez's interpretation was put to use by the French Socialists, notably Jaurès, Mathiez himself was not a party member

Mathis (mă'thĭs), city (pop 1,950), S Texas, NW of Corpus Christi, inc 1937 It is near the state park around Lake Corpus Christi, a reservoir in the Nueces river much used for recreation

Mathura, India: see MUTTRA

Mathura, India see MADURA

Mathusala (măthū'sălù) see METHUSELAH

Matilda, Saint see HENRY I (Henry the Fowler)

Matilda or **Maud,** 1102–67, queen of England, daughter of HENRY I Henry arranged for her a marriage with Emperor HENRY V, and she was sent to Germany, betrothed, and two years later (1114) married to him. Empress Matilda was popular in Germany and seemed more German than English, but after her husband's death (1125) she returned to England. Her brothers having died, her father devoted himself to securing for her the succession to the English throne Probably in 1128 she married GEOFFREY IV (Geoffrey Plantagenet), to whom she bore a son (the later HENRY II). Her life with Geoffrey was stormy, but they managed to compose their differences At Henry I's death (1135), her cousin, STEPHEN, successfully contested the throne of England. Matilda in 1139, with her half brother Robert, earl of GLOUCESTER, undertook to wrest the throne from him. She acquired a large following and was made "lady of England" in 1141, but her arrogance alienated supporters and the captive Stephen had to be freed in a prisoner exchange for Gloucester Before the end of the year the same powerful clergy who had enthroned her now deposed her and declared for

Stephen The struggle continued, but never greatly in her favor In 1148 she withdrew; her son Henry inherited her claim to the throne and was in 1153 recognized as heir Matilda spent her remaining years in Normandy and became noted for her charity.

Matilda, 1046–1115, countess of Tuscany, called the Great Countess. Ruling over TUSCANY and parts of EMILIA-ROMAGNA and UMBRIA, she was the most powerful feudatory of central Italy. She sided with the popes against the emperors At her castle at CANOSSA, Henry IV humiliated himself before Pope Gregory VII in 1077 Soon afterward Matilda made a will (renewed in 1102) bequeathing her allods to the Holy See Her first husband having died in 1076, she married (1089) Duke Welf V of Bavaria, son of Henry IV's chief German enemy, who was 26 years her junior There are indications that in 1111 Matilda changed her will in favor of Emperor HENRY V, who, at any rate, seised (1116) her lands after her death The dispute over the ownership of Matilda's lands played a large part in the conflicts between the popes and the emperors, particularly the Hohenstaufen The cities of Tuscany emerged independent from the struggle, the other lands left by Matilda eventually fell under papal rule

Matisse, Henri (ärē'mätēs'), 1869–, French painter, lithographer, and sculptor, notable as the outstanding representative of FAUVISM After studying at the École des Beaux-Arts under Gustave Moreau, he first exhibited in 1896 but renounced, c 1900, the academic style, developing instead along a postimpressionistic line of brighter, simpler design. His travels in Morocco supplied him with inspiration for his highly decorative canvases in which bold, sinuous patterns of lines and flowers serve as background for odalisques, other favorite subjects are still lifes and interiors Matisse uses large surfaces of pure color to achieve light effects and reduces aerial perspective to a minimum His drawings, in pen and ink, are distinguished by the same sensitivity to line Living after the Second World War at Vence, near Nice, France, he designed there the chapel Ste Marie du Rosaire in which the austereness of the black-and-white walls is relieved by brilliantly colored stained windows In the United States his works were shown at the Armory Show of 1913 in New York, in a large one-man retrospective show at Philadelphia in 1948, and elsewhere Many of his paintings, such as *Interior with Violin Case*, *Girl in Green*, and *Three Sisters*, are in American museums and collections. See studies by Roger Fry (1930), A C Barnes and Violette de Mazia (1933), and A G Romm (Eng tr , 1947)

Matlock, urban district (1931 pop 10,545, 1943 estimated pop 16,596), Derbyshire, England, N of Derby It includes several villages along the Derwent valley Its situation in the hills and the presence of hot springs have made the region a favorite resort; use of the baths dates from 1698 There are caverns and lead mines in the vicinity

Mato Grosso (mä'tō grō'su), state (487,479 sq mi ; 1940 pop 420,835, 1949 estimated pop 508,027), central and W Brazil. The capital is CUIABÁ, the other chief city is CORUMBÁ Bordering on Bolivia in the west and on Paraguay in the southwest and south, Mato Grosso is mostly on the great central Brazilian plateau. It is drained toward the north by tributaries of the Amazon and to the south by the Paraguay and the Paraná In the extreme southwest are the hot flood plains of the Paraguay river Cattle raising is the principal occupation. Near the larger cities sugar, rice, and subsistence crops are raised, and in the southeastern part of the state the farming frontier is now pushing W from São Paulo The region was first explored by gold seekers in the 18th cent , and the first settlement followed gold strikes Some gold is still found, and mining of manganese has begun near Corumbá, but the mineral resources are largely undeveloped A railroad crosses the state from east to west and continues into Bolivia The chief population centers are linked by air lines There are Indian tribes in various stages of civilization (not included in population figures). The name was formerly spelled Matto Grosso

Matred (mā'trĕd), mother of Mehetabel, the wife of Hadar, king of Edom, Gen. 36.39.

Matri (mā'trī), Saul's family. 1 Sam. 21.

matriarchy (mā'trēär"kē), term used to describe certain features of a CLAN or a family that centers around the mother The residence of the family is that of the mother The husband comes to live with her; but he has little authority and little responsibility for his children except to contribute to their support The children receive the mother's name and reckon descent from her. The mother's brother, however, has considerable authority over her children, who inherit property from him Anthropologists no longer believe that matriarchy meant "mother rule" or that matriarchy was a universal stage in social evolution.

Matsudaira, Tsuneo (tsunä'ō mätsudī'rä), 1877–1949, Japanese diplomat. He held many important posts. He was consul general at Tientsin and Japanese commissioner during the expedition into Siberia (1918–1919). Later he was much involved in negotiations with the United States and Great Britain and as a delegate to the naval conferences He served as ambassador in Washington from 1925 to 1928 and later as ambassador at St James's. From 1936 to 1945 he was imperial household minister After Japan had surrendered to end the Second World War, he was elected (1947) president of the house of councilors

Matsue (mätsōō'ā), city (1947 pop 62,136), capital of Shimane prefecture, SW Honshu, Japan, a port on a lagoon of the Sea of Japan. A museum dedicated to Lafcadio Hearn contains a collection of his manuscripts. Shimane prefecture has extensive stock raising and lumber and fishing industries.

Matsukata, Masayoshi, Prince (mät'sōkhē mätē'kä"tä), 1835–1924, Japanese statesman. A Satsuma clansman and a genro, he was a leading figure in the modernization of Japan His greatest service was in improving the financial status of the country as finance minister (1881–91), and in 1897 he succeeded in establishing the coinage on the gold standard As prime minister (1891–92) he dissolved the hostile diet and used police force to influence the subsequent election but still lost He was prime minister again (1896–97) and keeper of the privy seal (1917–22)

Matsumoto (mätsōōmō'tō), city (1947 pop. 84,258), Nagano prefecture, central Honshu, Japan It is a raw-silk center

Matsuoka, Yosuke (yō'skē mätsōō'ōkù), 1880–1946, Japanese statesman and diplomat He came to the United States in 1893 and was graduated from the Univ of Oregon law school in 1900 before returning to Japan. He became a spokesman for the expansionist Japanese policy and led the Japanese delegation out of the League of Nations in 1932. Matsuoka was the principal promoter of Japanese alliance with the fascist powers, and as foreign minister (1940–41) in the Konoye cabinet he helped to forge the Pact of Berlin (Sept 27, 1940), which bound Japan to the AXIS. Early in 1941 he signed a five-year pact with the USSR After the German attack on Russia he left the cabinet Matsuoka was indicted as a war criminal after the Second World War but died before he could be convicted

Matsushima (mätsōō'shēmä) , town, Miyagi prefecture, N Honshu, Japan, on Ishinomaki Bay near Sendai It is a tourist center for the hundreds of scenic pine-clad islets in the bay One island is the site of a noted 9th-century Buddhist temple

Matsuyama (matsōōyä'ma), city (1940 pop 117,534, 1947 pop 147,967), capital of Ehime prefecture, NW Shikoku, Japan, a port on the Inland Sea Its manufactures include cotton textiles and paper products A noted feudal castle contains a museum In mountainous Ehime prefecture, Mt Ishizuchi (highest peak of Shikoku) rises to 6,497 ft Copper is mined in the prefecture, and there is extensive agriculture and stock breeding.

Mattawa (mă'tuwa), town (pop 1,971), S Ont., on the Ottawa river and E of North Bay, in a lumbering and mica-mining region.

Matteawan, N Y., see BEACON

Mattenai (mătēnā'ī) [Heb ,=giving] **1, 2** Two who had taken foreign wives Ezra 10 33,37. **3** Priest. Neh 12.19

Matteotti, Giacomo (jä'kōmō mät-tāôt'tē), 1885–1924, Italian Socialist leader. He was the outstanding opponent of the Fascist regime during its early days, and his murder by Fascist hirelings precipitated a parliamentary crisis which Mussolini overcame by disavowing the murder and by tightening police control. With Matteotti's removal Mussolini's dictatorship may be said to have begun. The murderers and their accomplices received only nominal sentences; several among them were arrested after Mussolini's fall in 1943, but their trial was indefinitely postponed in 1946.

matter, anything that occupies space and has weight In addition to having volume, it has mass, and it exhibits certain characteristic properties such as INERTIA, ELASTICITY, and impenetrability (two bits of matter cannot occupy the same space at the same time). The law of the conservation of matter holds that matter can be neither created nor destroyed Although the fundamental nature of matter is not yet known, two important modern theories have made possible the description and explanation of many natural phenomena and have opened up avenues for future research The kinetic molecular theory of matter holds that matter is not continuous, i e , that a material body is not one uninterrupted extent of matter, but is made up of many minute, invisible particles called molecules which are in constant vibratory motion (see MOLECULE) A solid body of matter would therefore appear, if the molecules could be seen, as a space in which millions of these tiny particles are vibrating, colliding, and rebounding. Change of state (from any one of the three states of matter, i e , gas, liquid, and solid, to another) is a physical change, as distinguished from a chemical change, for the internal structure of the molecules is not affected The modern ATOMIC THEORY of matter is in accord with the kinetic molecular theory, but goes further and concerns itself with the nature and internal structure of the molecules themselves Chemical change (see CHEMICAL REACTION) is described as change in which molecules are broken down into their atoms, these then recombining to form new molecules. In view of the work done in breaking down the atoms of various substances to nuclear particles of hydrogen and helium, the two lightest substances known, and the resulting hypothesis that all matter is composed essentially of the nuclei of hydrogen and helium, the theory of some ancient philosophers that all substances are modifications of a single fundamental substance is especially interesting. All the ancient philosophers did not, of course, agree One theory advanced by Empedocles c 450 B.C. held that all matter is made up of four "elements"—fire, water, earth, and air. Opposed to this belief the atomic school, represented by Leucippus and his pupil Democritus, maintained that matter is built up of small invisible particles—atoms—which by their shape and size determine the nature of any specific form of matter Opposing both this theory and that of Empedocles, Anaxagoras held all matter to be continuous, made of the same material throughout Later the alchemists (see ALCHEMY) searched long and fruitlessly for a *materia prima* which they supposed to be the basis of all matter and which they thought would therefore enable them to transmute one substance to another, especially base lead to gold Their failure to achieve any success brought their beliefs into disrepute, but with the introduction of the modern atomic theory the changing of one kind of elemental matter to another was again advanced as a possibility. Recent work by many scientists has definitely shown the TRANSMUTATION OF ELEMENTS to be possible For convenience in studying its properties, matter is separated into two major classifications, living matter and nonliving matter BIOLOGY is the science of living matter (see LIFE) CHEMISTRY treats the composition and structure of material substances, biochemistry is the chemistry of living matter and its products PHYSICS deals with matter in a more general way, with material bodies and the forces acting upon and between them, with motion, and with energy But in the most advanced modern research into the nature of matter, distinctions between the physical sciences have been lost, chemist has become physicist and physicist has become chemist in making the important discoveries of recent years which have been building up the proof that matter is fundamentally electrical.

Matterhorn (mă'tûrhôrn, Ger. mă'tûrhôrn), Fr *Mont Cervin*, Ital. *Monte Cervino*, peak, 14,780 ft high, on the Swiss-Italian border, 6 mi SW of Zermatt. It was first scaled in 1865 by Edward WHYMPER, four of his party fell to death on the descent The near-by **Matterjoch** (mă'tûryôkh) or **Théodule** is a pass (alt. 10,900 ft) linking Italy with Switzerland

Matteson, Tompkins Harrison (mă'tûsŭn), 1813–84, American genre and portrait painter, b. Peterboro, N Y., chiefly self-taught. His subjects were taken from American history and rural life, he is famous mainly for his painting of *The Spirit of '76*.

Matthan (mă'thăn) [Heb.,=gift], name appearing in the Gospel genealogy. Mat 1.15.

Matthat (mă'thăt) [Heb ,=gift], name appearing twice in the Gospel genealogy. Luke 3 24,29.

Matthew, Saint (mă'thu) [Latin *Matthaeus*, from MATTITHIAH], one of the Twelve Apostles, a publican of Capernaum. He was apparently also called Levi. Mat. 9.9–7, 10.3, Mark 2.14; Luke 5 27,29 Since the 2d cent. the first Gospel (see MATTHEW, GOSPEL ACCORDING TO SAINT) has been attributed to him. He is said to have died a martyr As an evangelist his symbol is a young man or an angel. Feast: Sept. 21.

Matthew, Thomas: see ROGERS, JOHN.

Matthew, Gospel according to Saint, first book of the New Testament. It differs from the other Gospels in its unique material on the birth of Jesus (1–2), in the arrangement of the Sermon on the Mount (5–7), and in the length of the discourse on the last things (24–25), there are more allusions to the Old Testament in this Gospel than in the others. A fourfold division of the book would be the coming of the Messiah (1–4 11), his first 10 years of preaching (4 12–14.36), his third year (15–25); the passion and resurrection (26–28). It is one of the SYNOPTIC GOSPELS Its composition is assigned to the latter half of the 1st cent The traditional ascription to St Matthew dates from the 2d cent See GOSPEL, MIRACLE, NEW TESTAMENT, PARABLE

Matthew of Paris or Matthew Paris, d 1259, English historian, a monk of St. Albans He became the historiographer of the convent after the death of ROGER OF WENDOVER The first part of his *Chronica majora* [great chronicle], a history of the world, is largely a corrected version of Wendover's chronicle, but the second part, from 1235 to 1259, is original and extremely valuable because its material was carefully collected from eyewitnesses or written from personal knowledge The standard edition is by H R Luard (7 vols , 1872–83) A translation by J A Giles (London, 1852–54) begins with 1235 Paris wrote the *Chronica minora* [little chronicle], also called the *Historia Anglorum*, a history of England, largely taken from the great chronicle but with some added material

Matthew of Westminster, name long given to the imaginary author of an English chronicle in Latin, the *Flores historiarum* This was actually written by various monks The portion covering the period from the creation to 1265, written at St Albans, derived largely from the *Chronica majora* of MATTHEW OF PARIS The portion covering 1265–1326 was written at Westminster, the entries for 1307–25 being written by Robert of Reading (d 1325) A translation to 1307 was made by C D Yonge (London, 1853)

Matthew Paris see MATTHEW OF PARIS

Matthews, Brander (James Brander Matthews) 1852–1929, American author and teacher, b New Orleans, grad Columbia, 1871 He traveled widely, mingled in literary circles in Paris and London as well as in New York, and for 50 years was a well-known figure at first nights in the theaters of these cities Some of his own plays were produced He taught at Columbia from 1891 to 1924, in that time holding the chairs of English and of dramatic literature, and became a leader in professional dramatic and scholarly organizations For his stimulation of American interest in French drama through such works as *French Dramatists of the Nineteenth Century* (1881) and *Molière* (1910), he was made an officer of the Legion of Honor in 1922 Some of his other works are *Americanisms and Britticisms* (1892), *The Development of the Drama* (1903), and *These Many Years* (1917), an autobiography His gift of model stage sets, costumes, and books is now the Brander Matthews Dramatic Museum at Columbia

Matthews, Washington, 1843–1905, American ethnologist and physician, b Ireland, grad Univ of Iowa medical school, 1864 He entered (1864) the army as acting assistant surgeon and retired (1895), as surgeon, having had much experience in the West He studied the habits and customs of the Hidatsa and Navaho Indians and wrote books and articles on their language, legends, and songs, the most important being *The Mountain Chant* (1887), *Navaho Legends* (1897), and *The Night Chant* (1902) While he was in charge of the Army Medical Museum (1884–90), he studied craniology and anthropometry Among his other writings is *Ethnography and Philology of the Hidatsa Indians* (1877)

Matthias, Saint (muthī'ăs) [Gr , from Heb MATTITHIAH], apostle chosen by lot to fill the place of Judas Iscariot Acts 1 23–26 He is said in ancient tradition to have died a martyr Feast Feb 24 (in leap year Feb 25)

Matthias, 1557–1619, emperor (1612–19), king of Bohemia (1611–17) and of Hungary (1608–18), son of Maximilian II In 1577 he was invited by the Catholic party in the Netherlands to assume the government there, but, overshadowed by the real leaders of the revolt, he left in 1581 In 1605 he forced his brother, Emperor RUDOLF II, to allow him to treat with the Hungarian and Transylvanian rebels under Stephen BOCSKAY, with whom he negotiated the Peace of Vienna (1606) In view of his brother's incapacity, he was recognized as head of the house of Hapsburg and future emperor (1606) He made peace with the Turks and Hungarians Allying himself with the estates of Hungary, Austria, and Moravia, he forced his brother to yield him the rule of those countries in 1608 After the revolt of the Bohemians (1611), Matthias forced Rudolf to yield Bohemia also In 1612 he succeeded Rudolf as emperor. His policy after his accession, more or less dominated by KLESL, was wavering and indecisive. Irresolute in the face of the Bohemian rising of 1618, Matthias unwittingly let Germany drift into the THIRTY YEARS WAR. FERDINAND II (already king of Bohemia and Hungary) succeeded him as emperor.

Matthias Corvinus (kôrvī'nŭs), 1443?–1490, king of Hungary (1458–90) and Bohemia (1478–90), second son of John HUNYADI He was elected king of Hungary on the death of LADISLAUS V Emperor FREDERICK III sought to contest the election, but recognized him in 1462 Matthias won a reputation as a crusader against the Turks He was persuaded by Pope PIUS II to take up arms against his first father-in-law, GEORGE OF PODEBRAD, king of Bohemia, Having conquered Moravia, Silesia, and Lusatia, Matthias had himself crowned (1469) king of Bohemia, but was not recognized by the Bohemian diet. The war continued after the accession of Ladislaus II of Bohemia In 1478 peace was made both Ladislaus and Matthias were to keep the title king of Bohemia, Matthias was to keep his conquests, which, however, were to revert to Bohemia after his death After fighting two wars (1477, 1479) against Frederick III, Matthias began (1482) a third campaign He took Vienna (1485) and conquered Styria, Carinthia, and Carniola, but his conquests were lost again after his death His military success was largely due to the establishment of a standing army During his rule Hungary reached its last flowering before its fall to Turkey He respected the national institutions but was harsh in his fiscal policy and in his administration of justice A true Renaissance despot, he protected learning and science His library at Buda, the Corvina, was one of the finest in Europe He was succeeded in Hungary by Ladislaus II of Bohemia (ULADISLAUS II of Hungary)

Matthison, Edith Wynne (măth'ĭsun), Anglo-American actress She made her debut in musical comedy in 1896 and the following year joined the Ben Greet Company In 1902 she originated the title role in the morality play *Everyman* She played in the United States in Maeterlinck's *Blue Bird* and *Sister Beatrice*, Josephine Preston Peabody's *Piper*, and Mary Austin's *Arrow-Maker* In 1910–11 she had a notable success in *The Servant in the House*, by her husband, Charles Rann KENNEDY

Matithia (măt"ĭthī'ŭ) [Heb ,=gift from God] **1** Overseer in the temple 1 Chron 9 31 **2** Musician of David 1 Chron 15 18, 16 5 **3** Man who had a foreign wife Ezra 10 43 **4** Assistant of Ezra Neh 8 4

Matto Grosso, Brazil see MATO GROSSO

Mattoon (măt"tōōn'), city (pop 15,827), E central Ill , SE of Decatur, in a farm and dairy area noted for its broomcorn, inc 1859 It is a trade, industrial and rail center Diesel engines, furniture, and shoes are among its products Near by are a large fish hatchery and Paradise Lake (artificial)

Mattson, Henry Elis, 1887–, American landscape painter, b Goteborg, Sweden, studied in Sweden and under John Carlson in Woodstock, N Y He worked on the Federal Art Project in New York city His landscapes, painted from memory, stress the universal rather than the specific and incidental in his subject In addition to rich color and strong, simple design they have a fine poetic mood created with economy Mattson is represented in leading collections of American painting His *Deep Water* (City Art Mus , St Louis) is characteristic

Maturin, Charles Robert (mă'tyōrĭn), 1782–1824, Irish novelist His works, written in the genre of Gothic romance, include the novels *The Milesian Chief* (1812) and *Melmoth the Wanderer* (1820), which was his masterpiece, and the tragedy *Bertram* (1816), produced by Edmund Kean

Matuta (mŭtū'tŭ) or **Mater Matuta** (mā'tur), Roman goddess, identified with LEUCOTHEA Goddess of birth and of the sunrise, she was also worshiped with Portunus as a sea-goddess Her festival, the Matralia, was celebrated by matrons alone

Matzenauer, Margarete (margarā'tu măt'sunou"ûr), 1881–, Hungarian-American mezzo-soprano She made her debut in Strasbourg in 1901 She sang from 1904 until 1911 at the court opera in Munich and from 1911 until 1940 at the Metropolitan Opera, New York Although she began by singing dramatic contralto roles, her voice had wide compass, and at the Metropolitan she added many dramatic soprano roles to her repertoire

matzoth (mat'sŭ, mat'sōth) [Heb ,=unleavened], Passover bread made without leaven It is eaten by Jews during the observance of PASSOVER

Maubeuge (môbûzh'), town (pop 20,310), Nord dept , N France, near the Belgian border It has manufactures of tools and metal goods An old town of Hainaut, it passed to France in 1678 and was fortified by Vauban It was damaged in both world wars.

Mauch Chunk (môk' chŭngk', môchŭngk'), industrial borough (pop 3,009), co seat of Carbon co , E Pa , on the Lehigh river and SE of Hazleton, settled 1815, inc. 1842 It is a railroad center with anthracite mines and rich mineral deposits Some of the Molly Maguires were executed in the jail here

Mauclerc, Pierre: see PETER I, duke of Brittany.

Maud. see MATILDA, queen of England

Maud, city (pop 2,036), central Okla , SE of Oklahoma City, inc as a city 1929

Maude, Cyril, 1862–, English actor and manager. He made his debut (1883) in *East Lynne* in the United States and became popular in such plays as *The Second Mrs Tanqueray*, *The Little Minister*, and *Grumpy* He co-managed (1896–1905) the Haymarket theater, London, and built the Playhouse, London, which he managed until 1915

Maude, Sir Frederick Stanley, 1864–1917, English soldier The most brilliant action of his long army career was in the First World War, when he, as commander in chief in Mesopotamia, recaptured Kut and with overwhelming force took Baghdad from the Turks. He died of cholera in Baghdad See biography by C E Colwell (1920), A. H Burne, *Mesopotamia the Last Phase* (1936)

Maugham, William Somerset (môm), 1874–, English novelist, playwright, and short-story writer, b Paris His experiences as a medical student are recorded in his first novel, *Liza of Lambeth* (1897) Also supposedly autobiographical is part of Maugham's most famous novel, *Of Human Bondage* (1915) Maugham has lived in many parts of the world, and some of his stories are set in the Far East and the South Seas Among these are *The Moon and Sixpence* (1919), a novel based on the life of Paul Gaugain, and the famous short story "Miss Thompson" (later dramatized as *Rain*), in the volume *The Trembling of a Leaf* (1921) Other works are *On a Chinese Screen* (1922), short stories, *The Painted Veil* (1925), *Cakes and Ale* (1930), which the author insists is not a satire on literary celebrities, and *The Razor's Edge* (1944) His successful plays include *The Circle* (1921), *Our Betters* (1923), *The Letter* (1925), and *The Constant Wife* (1927) Maugham has written his autobiography in *The Summing Up* (1938) He compiled *Introduction to Modern English and American Literature* (1943) and has written critical essays in *Great Novelists and Their Novels* (1948) and *A Writer's Notebook* (1949) See study by Richard Cordell (1937)

Maui (mou'ē), island (728 sq mi , pop 46,919), second largest of the Hawaiian Islands It is c 70 mi from Honolulu, separated from Hawaii by the Alenuihaha Channel and from Molokai by the Pailolo Channel Maui is made up of two mountain masses, which constitute the east and west peninsulas, connected by an isthmus The highest mountain on the island is HALEAKALA, near the center of the eastern peninsula In the west Puu Kukui rises to 5,790 ft Wailuku is the largest town and the county seat of Maui co , which includes Kahoolawe, Lanai, Maui, and Molokai The principal ports are Kahului and LAHAINA The Haleakala section belongs to the Hawaii National Park. On the east peninsula there is a tuberculosis sanatorium The chief industries are stock raising and the cultivation of sugar cane and pineapples

Maule (moul'ā), river, c 175 mi long, descending from the Andes in S Chile and flowing across a broad fertile valley W to the Pacific Probably the farthest southern limit of the ancient Incan empire, it gives its name to the coastal province of Maule

Maumbury Rings, Dorsetshire, England see DORCHESTER

Maumee (mômē'), residential village (pop 4,683), NW Ohio, on the Maumee river and SW of Toledo, founded 1817 This strategic location was often occupied after 1680 by French and British trading and military posts—the last being Fort Miami, surrendered by the British in the War of 1812 Maumee has limestone quarries and small industries Near by is FALLEN TIMBERS

Maumee, river formed in NE Indiana, at Fort Wayne, by the junction of the St Joseph and St Marys rivers It flows 130 mi NE into Ohio, through Toledo into Maumee Bay of Lake Erie

Mauna Kea (mou'nu kā'u), mountain, 13,784 ft high, on S central Hawaii, T H A dormant volcano, it is the loftiest peak in the Hawaiian Islands and the highest island mountain in the world

Mauna Loa (mou'nu lō'u), mountain, 13,675 ft high, on S central Hawaii, T H Its numerous craters include KILAUEA and MOKUAWEOWEO

Maundy Thursday (môn'dē) [Latin *mandatum*, word in the ceremony], Thursday of HOLY WEEK, anniversary of the institution of the Eucharist by Jesus at the Last Supper In the maundy ceremony set for the day in the Roman liturgy high authorities wash the feet of the lowly This is widely but not totally obsolete, at Westminster Abbey there is a survival in the distribution by the king of special "maundy money" to certain poor. In the Roman Catholic Church, Maundy Thursday is a general communion day, a single Mass is sung, and a Host, consecrated for the morrow, is placed in a specially adorned chapel for all-day worship

Maupassant, Guy de (gē' dŭ mōpusā'), 1850–93, French novelist and short-story writer, of an ancient Norman family He worked in a government office at Paris and became known c 1880 as the most brilliant of the circle of ZOLA. He poured out a prodigious number of short stories, novels, plays, and travel sketches until 1891, when he went mad, he died in a sanitarium Maupassant in his style and treatment of subject resembles FLAUBERT in classic simplicity, clarity, and objective calm. Maupassant is a modern exemplar of

traditional French psychological realism, he avoids disquisitions on his characters, and his most sordid details are never made the text for sermons on social reform His best novels are considered to be *Une Vie* (1883; Eng tr., *A Life*), the disillusioning life of a woman, *Bel-Ami* (1885), the career of a selfish man, *Pierre et Jean* (1888), the hatred of two brothers; and *Notre Cœur* (1890, Eng tr , *Our Hearts*), the emotional life of an unhappily married man His short stories, 900 in all, are superior in their genre to the rest of his work, and many of them are said to be unsurpassed A list of masterpieces would include "Boule de suif" ("Tallow Ball"), "L'Héritage" ("The Heritage"), "La Parure" ("The Necklace"), "La Maison Tellier" ("The House of Mme Tellier"), "Clair de lune" ("Moonlight"), "La Ficelle" ("The Piece of String"), "Mlle Fifi," and "Miss Harriett" Maupassant is very frequently translated See Henry James, *Partial Portraits* (1888), Ernest Boyd, *Guy de Maupassant* (1926), Francis Steegmuller, *Maupassant* (1949)

Maupeou, René Nicolas de (rünā' nēkôlä' dŭ mōpō'), 1714–92, chancellor of France (1768–74) He was president of the Parlement of Paris before he succeeded his father as chancellor He was the chief mover in the attempt of Louis XV to assert supremacy over the PARLEMENT and to crush opposition He dissolved the parlement (1771), exiled its members from Paris, and substituted a new parlement (nominating all the members) and a system of superior courts The provincial parlements suffered similar treatment Though he strove for judicial reform (notably the abolition of the sale of offices), he became highly unpopular. Louis XVI on his accession dismissed Maupeou and restored the old parlements

Maupertuis, Pierre Louis Moreau de (pyĕr' lwē' mōrō' dŭ mōpĕrtüē'), 1698–1758, French mathematician and astronomer For his skillful support of Newton's theory he was admitted to the Royal Society of London in 1728 He headed (1736–37) an expedition of academicians to Lapland, where he confirmed Newton's theory of the flattening of the earth at the poles The expedition is described in his *Examen . . . pour déterminer la figure de la terre* (1738) In 1740 he went to Berlin upon the invitation of Frederick II of Prussia, who later placed him in charge of the New academy Besides his numerous astronomical writings, including *Discours sur la figure des astres* (1732) and *Discours sur la parallaxe de la lune* (1741), he wrote a work setting forth a mechanistic view of the universe, *Essai de cosmologie* (1750) and several biological studies Quarrels, particularly with König and Voltaire (who satirized him in several writings, especially *Diatribe du Docteur Akakia*), and illness complicated his later years

Maurepas, Jean Frédéric Phélippeaux, comte de (zhäN' frādārĕk' fālēpō' kōt' dŭ mōrüpä'), 1701–81, French statesman He succeeded his father as minister of state at 14, the post being administered for him in his minority Made minister of marine (1725), he attempted to apply scientific methods to naval affairs A satirical epigram against Mme de Pompadour caused his dismissal and exile (1749) After Louis XVI's accession (1774) Maurepas returned, became minister of state, and covered his mediocre abilities by a judicial selection of his council, which included Vergennes, Turgot, and Malesherbes He supported the alliance with the American colonies and the war against England In 1776 he brought about the downfall of TURGOT, and in 1781 of Turgot's successor NECKER

Maurer, Georg Ludwig von (gā'ôrk lōōt'vĭkh fŭn mou'rur), 1790–1872, German jurist and historian He taught at the Univ. of Munich, was a member of the regency council for Otto of Greece, and was for a short time Bavarian premier Deeply interested in early Germanic institutions, he believed that he could distinguish in them the roots of the principles of liberty and democracy His theory of the MARK found enthusiastic adherents but has been generally abandoned, at least in its extreme form

Maurer, Konrad von (kōn'rät), 1823–1902, German legal historian and Germanist; son of G L von Maurer He was an authority on Old Norse, Anglo-Saxon, and early German laws and literature and wrote an excellent history of Iceland up to the year 1262—*Island von seiner ersten Entdeckung bis zum Untergang des Freistaats* (1874)

Maurer, Louis (mou'rŭr), 1832–1932, American lithographer, wood carver, and painter, b Germany He joined Currier and Ives (1852) and lithographed and colored by hand many of their prints, including the race horse Lexington and the series *The Life of a Fireman*

Mauretania, ancient district of Africa in Roman times In a vague sense it meant only "the land of the Moors" and lay W of Numidia, but more specifically it usually included most of present N Morocco and W Algeria It was a complex of native tribal units, but by the 2d cent B C. when Jugurtha of Numidia was warring against Rome, Jugurtha's father-in-law, Bocchus, had most of Mauretania under his control The Roman influence became paramount, and Augustus, having met opposition in restoring JUBA II to the throne of Numidia, placed him instead (25 B C) as ruler of Mauretania Revolts later occurred and Mauretania was subdued (A D 41–42), Emperor Claudius made it into two provinces—Mauretania Caesariensis, with Caesarea (modern Cherchel) as capital, and Mauretania Tingitana, with Tingis (modern Tangier) as capital. Roman influence was never complete, native chieftains remaining powerful With the onset of the barbarian invasions, the Roman hold was loosened and disappeared by the end of the 5th cent The district was not the same as modern MAURITANIA.

Mauriac, François (frāswä' mōryäk'), 1885–, French novelist Though he had earlier tried his hand at poetry, Mauriac achieved success in 1922 and 1923 with the novels *Le Baiser au lépreux* and *Genitrix* (Eng tr of both in *The Family*, 1930) His masterpieces, which reflect his pious Catholic upbringing, are *Le Désert de l'amour* (1925, Eng tr , *The Desert of Love*, 1929), *Thérèse Desqueyroux* (1927, Eng tr , 1928), and *Le Nœud de vipères* (1932, Eng tr , *Vipers' Tangle*, 1933) Other works include *La Pharisienne* (1941, Eng tr , *Woman of the Pharisees*, 1946) He wrote several biographies—*Vie de Racine* (1928), *Blaise Pascal et sa sœur Jacqueline* (1931), and *Vie de Jésus* (1936, Eng tr , 1937) He writes for *Figaro*, and three volumes of collected articles entitled *Journal* have been published (1934, 1937, 1940) His *Du Côté de chez Proust* (1949) was translated as *Proust's Way* (1950) He was elected to the French Academy in 1933 See Elsie Pell, *François Mauriac in Search of the Infinite* (1947)

Maurice (mô'rĭs), c 539–602, Byzantine emperor (582–602) He was a successful general when Tiberius II, successor of Justin II, proclaimed him emperor on his deathbed He ended the war with Persia in 591 and restored Khosru II to the throne, and he defeated the Avars His strict discipline caused an army mutiny and he was obliged to flee He was killed by order of the usurper Phocas, who was deposed (610) in turn by Heraclius I

Maurice, 1521–53, duke (1541–47) and elector (1547–53) of Saxony He became duke of Albertine SAXONY in 1541 Although a Protestant, he was more swayed by political than by religious motives and readily joined his father-in-law, PHILIP OF HESSE, in deserting the Schmalkaldic League In 1546 he made an agreement with Emperor CHARLES V by which he was to receive, in return for his aid against the Protestants, the lands and title of his cousin, Elector JOHN FREDERICK I of Ernestine Saxony He fought for Charles in the Schmalkaldic War and after Mühlberg (1547) received the electorate and a portion of his cousin's lands His unpopularity with his Protestant subjects, his disgust with Charles's treatment of Philip, and his still unsatisfied ambition led him, after raising an army for the execution of the ban against Magdeburg, with which he had been entrusted, to form a league against Charles and to ally himself (1552) with HENRY II of France After Charles's escape from capture, Maurice signed (1552) the Treaty of PASSAU with the emperor's brother Ferdinand (later Emperor FERDINAND I) In 1553 he appeared as the restorer of order at the head of the league of princes opposing his former ally, Albert Alcibiades of Brandenburg-Kulmbach, and was killed in battle Maurice has been roundly denounced for his double-dealing and fulsomely praised as a far-seeing Protestant and German statesman

Maurice, Frederick Denison (mô'rĭs, murĕs'), 1805–72, English author and clergyman He was brought up a Unitarian but became an Anglican He studied law at Cambridge and was a founder of the Apostles' Club Entering Oxford in 1830, he took holy orders in 1831, but in 1853 he lost the post of professor of divinity at King's College, London, because of the views contained in his *Theological Essays* (1853). He held the chair of moral philosophy at Cambridge from 1866 until his death Besides one novel, *Eustace Conway* (1834), he wrote many religious works, including *Lectures on Ecclesiastical History* (1854) and *The Doctrine of Sacrifice* (1854) Maurice was a leader of the CHRISTIAN SOCIALISM movement and also a leader in education, being a founder of Queen's College for women (1848) and the Working Men's College (1854) See biographies by Sir J F Maurice (1884) and C F G Masterman (1907)

Maurice of Nassau (nä'sô), 1567-1625, prince of Orange (1618–25), son of WILLIAM THE SILENT by Anne of Saxony He became stadholder of Holland and Zeeland immediately after the assassination (1584) of his father, was appointed (1588) captain general and admiral of the United Netherlands, and became (1589) stadholder of Utrecht, Gelderland, and Overijssel. He succeeded (1618) his elder brother, Philip William, as prince of Orange. Throughout his career the NETHERLANDS continued in its struggle for independence from Spain In 1590 he took the offensive against the Spanish under Alessandro Farnese. His campaigns were primarily distinguished by his skill in siegecraft His successes on land and on sea enabled him to conclude (1609) a 12-year truce with the Spanish (then commanded by Spinola). The truce virtually established the independence of the seven United Provs During the first part of Maurice's career his principal adviser was OLDENBARNEVELDT, chief author of the truce of 1609. Relations between the two men were, however, strained after 1600 and flared into open conflict when the struggle between REMONSTRANTS and strict Calvinists broke out Maurice took the part of the Calvinists and in 1618 compelled the summoning of the Synod of Dort, which suppressed the Remonstrants Oldenbarneveldt, as a leader of the Remonstrants, was arrested, tried, and executed Thus the house of Orange became supreme in the Netherlands. Maurice's campaigns after the resumption (1621) of hostilities with Spain met with little success. He was succeeded by his brother Frederick Henry The great commercial expansion of the Netherlands during his reign was mainly the work of Oldenbarneveldt.

Maurice of Saxony · see MAURICE (1521–53) and SAXE, MAURICE, COMTE DE (1696–1750)

Mauritania (môrĭtā'nēŭ), French overseas territory (323,310 sq mi., pop c 497,000), NW French West Africa, on the Atlantic Ocean. It is bordered on the north by Algeria and Rio de Oro, on the east by French Sudan, and on the south by Senegal Mauritania is mainly an arid desert It became a French protectorate in 1903 and a colony in 1920. Most of the inhabitants are pastoral nomads. There are salt deposits Mauritania is distinct from the ancient district of MAURETANIA.

Mauritius (murĭ'shŭs, -shēŭs, mô-), island (720 sq. mi , pop 438,703), in the Indian Ocean, with Rodriguez and outlying dependencies a British colony The capital is Port Louis Mauritius is one of the Mascarenes It was named for Maurice of Nassau Coral reefs surround Mauritius, and it is crossed by volcanic ranges rising to 2,700 ft. Sugar is the main crop and export Most of the island's food must be imported Mauritius was discovered by the Portuguese in 1507 It was occupied by the Dutch at intervals from 1638 to 1712 and was settled (1721) by the French, who named it Ile de France La Bourdonnais, governor from 1735 to 1746, established the cultivation of sugar and made Port Louis the depot between Europe and the East Indies The island was the base for his capture of Madras (1746) In the late 18th cent it was a haunt of pirates preying upon the India trade The British took Mauritius in 1810 After slavery was abolished in the British Empire (1834), laborers emigrated from India to man the sugar plantations and Indians became a majority of the population The native Negroes speak French and are Roman Catholics

Maurocordatos, Alexander see MAVROCORDATOS

Maurois, André (ädrā' mōrwä'), 1885–, French biographer, novelist, and essayist, studied at the Univ of Caen His name was originally Emile Herzog His first work, *The Silence of Colonel Bramble* (1918; Eng tr , 1920), was highly successful, but it was the publication of *Ariel* (1923, Eng tr , 1924), a life of Shelley, which established his fame as a biographer This was followed by lives of Byron, Disraeli, Chateaubriand, Washington, and others Further works include *The Miracle of England* (1937, Eng tr , 1937), *Tragedy in France* (1940, Eng tr , 1940), *From My Journal* (1946, Eng tr , 1948), and *Proust Portrait of a Genius* (1949, Eng tr , 1950) Maurois has written discerningly on the art of biography He was elected to the French Academy in 1939 See his memoirs, *I Remember, I Remember* (Eng tr , 1942)

Maurras, Charles (shärl' mōräs'), 1868–, French political writer and critic As editor of the *Action française*, he propounded his nationalistic and monarchial views, which are contained in *Enquête sur la monarchie* (1909, definitive ed , 1924) and *Mes Idées politiques* (1937) A study of George Sand and Musset, *Les Amants de Venise* (1902), is a critical work. In 1938 he was elected to the French Academy An active collaborator with the Germans, Maurras was sentenced (1945) to life imprisonment

Maury, Dabney Herndon (mô'rĭ), 1822–1900, Confederate general, b Fredericksburg, Va ; nephew of M F Maury He studied law at the Univ of Virginia and later was graduated from West Point (1846) Maury was wounded at Cerro Gordo in the Mexican War, taught at West Point (1847–52), and served in the West In May, 1861, he resigned from the U S army and entered the Confederate service He was made a brigadier general for his conduct at Pea Ridge (1862) and was promoted major general in November. As commander of the Dept of the Gulf (1863–65), he held Mobile for the Confederacy until near the end of the war. Maury was minister to Colombia (1886–89). See his *Recollections of a Virginian* (1894)

Maury, Jean Siffrein (zhäN' sēfrē' mōrē'), 1746–1817, French churchman, cardinal of the Roman Church. A court preacher and writer before the French Revolution, he was known in the Constituent Assembly as a defender of the nobles and clergy. When the Revolution grew more radical he fled (1792) to Rome and was created cardinal Driven from Italy by the French troops, he went to Russia, but returned, and in 1806 he went back to France In 1810 he was made archbishop of Paris and refused to surrender the office when commanded to do so

by the pope. After the fall of Napoleon he again fled to Rome (1814), where he was arrested and imprisoned for a time.

Maury, Matthew Fontaine (fŏntān' mō'rē), 1806–73, American hydrographer and naval officer, b. near Fredericksburg, Va. Appointed a midshipman in 1825, he saw varied sea duty until a stagecoach accident (1839) made him permanently lame. In 1842 he was placed in charge of the Depot of Charts and Instruments (later the U.S. Naval Observatory and Hydrographical Office). Soon his wind and current charts of the Atlantic began to appear. With the cooperation of mariners he broadened the field of his valuable charts, which cut the sailing time on many routes. At an international conference on oceanographic data held in Brussels in 1853, Maury was the leading spirit. He was greatly honored both at home and abroad. He wrote widely on navigation and naval reform, and his greatest book, *The Physical Geography of the Sea* (1855), was the first classic work of modern oceanography. He was forced into leave of absence in 1855, but, with wide support, was restored to active service in 1858 with the rank of commander, made retroactive to 1855. With the outbreak of the Civil War, he resigned and served the Confederacy, first in harbor defense and then as an agent in England. After the war he served (1865–66) under Maximilian in Mexico, where he attempted to establish colonies of ex-Confederates. He returned to the United States in 1868 and was professor of meteorology at the Virginia Military Institute until his death. See biographies by C. L. Lewis (1927) and J. W. Wayland (1930).

Maurya (mou'ryu), Indian dynasty, 325–184 B.C., founded by SANDRACOTTUS (Chandragupta). He conquered Magadha and established his capital at Pataliputra (now Patna). ASOKA, his grandson, for the first time in history brought nearly all India, together with Afghanistan, under one sway. Asoka substituted Buddhism for Hinduism as the state religion. The Maurya empire was administered by feudatory kingdoms and by a central government having charge of roads, forests, and defense. Little remains of the empire's apparently rich art and literature.

mausoleum (môsŏlē'ŭm) [from Gr., =belonging to Mausolus], a sepulchral structure or TOMB, especially one of some size and architectural pretension, so called from the sepulcher of that name at Halicarnassus, Asia Minor, erected (c. 352 B.C.) in memory of MAUSOLUS of Caria. It was a magnificent white marble structure, one of the seven wonders of the ancient world. Presumably in the form of an Ionic peristyle set on a lofty and massive base which contained the sarcophagus, it was surmounted by a stepped pyramid on whose truncated apex was a marble quadriga. It was richly decorated with sculpture, including works of Scopas and probably, of Praxiteles, some of which were recovered (1846) for the British Museum. The most notable Roman mausoleum was that of Augustus, a circular marble structure topped by a cone of earth planted with cypress trees in the Campus Martius, Rome (26 B.C.), only the brick shell is still visible. Also famous is the mausoleum of Hadrian (135–39), Rome. Originally a great circular drum sheathed in marble and perhaps covered by a conical stepped roof of masonry, its form has been changed beyond recognition. It is now called CASTEL SANT' ANGELO. Under the Mogul emperors of India was built a remarkable series of domed mausoleums for use as pleasure pavilions in the owner's lifetime, the most celebrated, built by Shah Jehan at Agra, is known as the TAJ MAHAL. Of the mausoleums of modern times notable are those of Napoleon under the Dôme des Invalides, Paris, of Gen. U. S. Grant on Riverside Drive, New York, and of Lenin in Red Square, Moscow. In America the term *mausoleum* is used loosely to describe any sepulchral building above the surface of the ground.

Mausolus (môsō'lŭs), d. 353 B.C., Persian satrap, ruler over Caria (c. 376–353 B.C.). He was always more or less independent. One of the satraps who revolted against ARTAXERXES II, he later went over to Artaxerxes. He aggrandized his power greatly, even to hegemony over Rhodes. After his death his wife, Artemisia, erected at HALICARNASSUS a tomb that he had planned, this gave the name to the mausoleum.

Mauston (mô'stŭn), city (pop. 2,621), co. seat of Juneau co., central Wis., on the Lemonweir and E. of La Crosse; settled c.1840, inc. 1883.

Mauve, Anton (ăn'tŏn mou'vŭ), 1838–88, Dutch landscape and animal painter. He excelled in painting quiet rural scenes with simplicity and realism. His oils and water colors are characterized by delicacy of color and atmosphere. There are examples in the museums of Amsterdam, London, and The Hague and in many English and American private collections. The Metropolitan Museum has five paintings, including *Spring*, *Autumn*, and *Return to the Fold*.

Maverick, Fontaine Maury (fŏntān' môrē măv'rĭk), 1895–, U.S. government official, b. San Antonio, Texas. He studied at Virginia Military Institute (1912–13) and at the Univ. of Texas (1913–16), and after he was admitted (1916) to the bar, he practiced law in Texas, California, and Washington, D.C. Maury Maverick as a Democratic Representative from Texas (1935–39) fought ardently for maintenance of the Tennessee Valley Authority, for public works, for antitrust laws, and for other New Deal legislation. As mayor (1939–41) of San Antonio, he reorganized the municipal government and actively opposed poll taxes. He was appointed (1941) to the War Production Board and served (1943–46) as its vice chairman. See his autobiography, *A Maverick American* (1937).

maverick (măv'rĭk, –rĭk), in cowboy terminology, the name for an unbranded yearling calf or any older animal not bearing the owner's mark. There are many stories told to explain the origin of the term. It is probable, though not certain, that it is derived from the name of Samuel A. Maverick, of San Antonio, Texas. It is said that in 1845 a debt was paid to him by giving him cattle, not being a cattleman, he neglected the herd, which increased and flourished; the young cattle were gradually taken up and branded by ranchers who continued to call all unbranded animals "Mavericks." In the confusion and demoralization of the cattle industry incident on the Civil War, there appeared a great number of ownerless cattle on the plains, and "mavericking" became a recognized and legitimate method of advancing a cattle fortune. In a few years the mavericks were all claimed and branded, and some of the men who had been rounding up mavericks took to removing unbranded animals from an owner's herd and even branded calves still following their mothers (a calf becomes a maverick when he quits his mother and is universally recognized before then as being of her brand). These men brought "mavericking" into disrepute and caused considerable trouble and bloodshed in the cattle country.

Mavrocordatos or **Maurocordatos, Alexander** (both. măv"rôkôr-dha'tôs), 1791–1865, Greek statesman. He took an active part in the Greek revolt against Turkey (1821) as author of the declaration of independence, president of the first national assembly, and commander of the army. Because he wished the English influence ascendant, he incurred the enmity of the pro-Russian Demetrios Ypsilanti and Capo d'Istria, but after Capo d'Istria's murder (1831) he emerged again into prominence as premier under King Otto.

Mawson, Sir Douglas, 1882–, Australian antarctic explorer and geologist, b. England. As a member of the scientific staff of Sir Ernest Shackleton's south polar expedition (1907–9), Mawson took part in the famous ascent of Mt. Erebus and the journey to the south magnetic pole. In 1911–14 he commanded the Australasian antarctic expedition, he studied the antarctic coast W. of Cape Adare, spent two winters in Adélie Land (now Adélie Coast), and discovered King George V Land (now George V Coast), while a subordinate party discovered and explored Queen Mary Land (now Queen Mary Coast). His *Home of the Blizzard* (1915) describes these explorations. In 1920 he became professor of geology and mineralogy at the Univ. of Adelaide. As commander of the British, Australian, and New Zealand antarctic expedition (1929–31), he revisited Enderby Land, not seen since its reported discovery a century earlier, and discovered Mac-Robertson Coast. Using a seaplane in connection with his ship, he made many short flights, in the course of this expedition, Mawson charted over 1,000 mi. of previously unknown antarctic coast and recharted c. 1,500 mi. of vaguely known coasts. He has written many scientific papers.

Max, Gabriel (gä'brēĕl maks'), 1840–1915, German painter and illustrator, b. Prague, son and pupil of Josef Max (1803–54), a sculptor. Gabriel Max is best known as a painter of mystical and spiritualistic subjects. His style is delicate and ethereal. Characteristic works include *Nun in the Cloister Garden*, *The Clairvoyant of Prevorst* (Prague), and *The Last Token* (Metropolitan Mus.).

Maxen (mäk'sŭn), village (pop. 897), Saxony, E. Germany, S. of Dresden. Here, in the Seven Years War, the Austrians under Daun forced (1759) a Prussian army to surrender.

Maxentius (Marcus Aurelius Valerius Maxentius) (măksĕn'shŭs), d. 312, Roman emperor in Italy and Africa (306–12), son of MAXIMIAN. After Diocletian and Maximian had retired, the successor to Maximian, Constantius, died. The Romans, discontent with the shift of power away from Rome, supported Maxentius, who claimed the throne. His father came out of retirement to help him as SEVERUS and GALERIUS came to force him to submission. Severus was compelled to surrender, and Galerius had to withdraw from Italy, while a fourth seeker for power, Constantine (CONSTANTINE I) was persuaded to recognize Maxentius. Maxentius and his father fell out, however, and Constantine declared against Maxentius, whom he defeated utterly in the battle of Milvian Bridge (312).

Maxey, Samuel Bell (măk'sē), 1825–95, Confederate general, b. Tompkinsville, Ky., grad. West Point, 1846. He served in the Mexican War but resigned his commission (1849) to practice law in Kentucky and, after 1857, in Texas. Maxey was made a Confederate brigadier general (1862) and commander in the Indian Territory (1863–65), where he marshaled the natives in support of the Confederacy. After his victory at Poison Springs, Ark. (1864), he was promoted major general. He was U.S. Senator from Texas from 1875 to 1887.

Maxim, name of a family of inventors and munition makers. **Sir Hiram Stevens Maxim,** 1840–1916, was born in Sangerville, Maine, but after launching on a career of inventing, moved to England. There he invented (1884) the Maxim machine gun, which used the recoil from the explosion of one cartridge to expel the empty shell and at the same time to reload the weapon. Among his numerous other inventions were a smokeless powder, a delayed-action fuse, and a heavier-than-air airplane. His arms company was consolidated (1896) with the Vickers firm, which later through another consolidation became Vickers-Armstrong, Ltd. He was knighted in 1901. His autobiography was published in 1915. His brother, **Hudson Maxim,** 1853–1927, was born in Orneville, Maine, and remained in the United States. A chemist, he developed numerous inventions, including a high explosive (maximite), smokeless powders (one of them stabilite), and a self-combustive compound to propel torpedoes (motorite). Some of his inventions were sold to the Du Pont interests. See his reminiscences (1924), Clifton Johnston, *The Rise of an American Inventor* (1927). **Hiram Percy Maxim,** 1869–1936, son of Sir Hiram, was born in Brooklyn, N.Y., and remained in the United States. After graduation from the Massachusetts Institute of Technology, he held many positions as a mechanical engineer and created several inventions, among them an automobile. The most spectacular was the Maxim silencer for explosive weapons (1908), but perhaps more useful were silencers for gasoline engines and the like (see SILENCER). He wrote *Life's Place in the Cosmos* (1933), a biography of his father, *A Genius in the Family* (1936), and the autobiographical *Horseless Carriage Days* (1937).

Maximian (Marcus Aurelius Valerius Maximianus) (măksĭm'ēăn), d. 310, Roman emperor with Diocletian (286–305). An able commander, he was made Caesar (subemperor) by Diocletian in 285 and Augustus in 286. He was in general charge of the empire in the West, but failed to put down the revolt of CARAUSIUS. Two new Caesars, GALERIUS and CONSTANTIUS I, were created (1293), and Constantius was successful against Carausius. Maximian abdicated with Diocletian in 305, but the death of Constantius in 306 brought confusion to the political scene. There was a struggle for power among SEVERUS, Galerius, Constantine (CONSTANTINE I, son of Constantius), and MAXENTIUS (son of Maximian). Into this Maximian plunged, at first to aid his son in Italy; he captured Severus, repulsed Galerius, and won over Constantine, to whom he gave his daughter Fausta in marriage. He and Maxentius then fell out, and Maximian, having failed to depose his son, fled to Constantine and abdicated again (308). He could not, however, rest content but revolted against Constantine. In 310 he was forced to commit suicide.

Maximilian I, 1459–1519, emperor (never crowned) and German king (1493–1519), son and successor of Emperor FREDERICK III. Elected king of the Romans in 1486, he assumed an increasing share of the imperial duties in the last years of his father's reign. After his marriage (1477) with MARY OF BURGUNDY he disputed his wife's inheritance in the Low Countries and Franche-Comté with Louis XI of France. Despite his victory (1479) at Guinegate, Maximilian was forced by the rebellious Flemings to adhere (1483) to the Treaty of Arras (see ARRAS, TREATY OF). Louis's successor, CHARLES VIII, repudiated the treaty; instead of marrying Maximilian's daughter MARGARET OF AUSTRIA, he married (1491) ANNE OF BRITTANY, regardless of the fact that Maximilian, whose first wife died in 1482, had already married Anne by proxy in 1490. Maximilian made a new war on France and by the Treaty of Senlis (1493) recovered his daughter's dowry, Artois and Franche-Comté. At the same time he regained control over the Low Countries and custody of his son Philip (see PHILIP I of Castile). In 1493 also he married Bianca Maria Sforza, a niece of Lodovico SFORZA, in exchange for her huge dowry, he invested (1494) Lodovico with the duchy of Milan. During Maximilian's reign two important constitutional reforms were attempted at the diets of Worms (1495) and of Cologne (1512). The first provided for a perpetual land peace, for an imperial chamber of justice, independent of the emperor; and for a general land tax. (The Swiss refused to pay the tax, defeated the imperial army, and thus won virtual independence in the Peace of Basel, 1499). In 1512 Maximilian divided the empire into 10 circles for imperial jurisdiction. He also set up, at Vienna, the Aulic Council, which gradually absorbed many functions of the imperial chamber, both courts, however, continued till the dissolution of the Holy Roman Empire. A council of regency (see REICHSREGIMENT) was forced on him, but he failed to support it. Maximilian's chief strength lay in the support of the towns of the SWABIAN LEAGUE. His alliance with the Sforzas and his

difficulties with Venice, which barred him from a Roman coronation, embroiled Maximilian in the ITALIAN WARS He joined both the League of Cambrai (see CAMBRAI, LEAGUE OF) against Venice and the HOLY LEAGUE against France, both moves merely cost him money, of which he was chronically short From his reign dated the dependency of the emperors on loans from the FUGGER family. Maximilian took (1508) the title emperor elect, which was also assumed by his successors and obviated the necessity of a coronation by the pope He also failed in his favorite project of a crusade against the Turks Maximilian's reign marked the ascendancy of the towns and the merchant classes, though he favored the trend, he is, because of his chivalrous and slightly quixotic character, often called "the last of the knights" His dynastic policy was crowned by success From the marriage of his son Philip to Joanna I of Castile issued Maximilian's successor, Emperor CHARLES V, upon whose empire "the sun never set" The marriage treaty (1515) with ULADISLAUS II of Hungary and Bohemia was of still more lasting importance Under the spell of the Italian Renaissance, Maximilian patronized such artists as DÜRER, enlarged the universities of Vienna and Freiburg, and himself indulged in literary composition The end of his reign is memorable for the first stirrings of the REFORMATION See biography by R W Seton-Watson (1902), G E Waas, *The Legendary Character of Kaiser Maximilian* (1941)

Maximilian II, 1527–76, emperor (1564–76), king of Bohemia (1562–75) and of Hungary (1563–72), son and successor of Emperor Ferdinand I He was believed to have a leaning toward Lutheranism, evidenced by his interest in Protestant writings and thought and his support of the Protestant form of the sacrament About 1560, however, he yielded to family pressure and outwardly, at least, conformed. After the abandonment of an early project by which Philip II of Spain was to have succeeded Ferdinand I as emperor, Maximilian was crowned king of Bohemia (1562), king of the Romans (1562), and king of Hungary (1563) He obtained funds from the diet for the defense of Austria against the Turks, but by the truce of 1568 with Selim II he continued to pay tribute to the sultan for his part of Hungary Maximilian granted a large degree of religious toleration in his Bohemian and Austrian possessions, during his reign the Catholic Reform made considerable progress in Germany A candidate for the throne of Poland to succeed Henry of Anjou (HENRY III of France), he was elected (1575) by the Polish senate, Stephen Bathory being elected by the diet Maximilian died, refusing the sacraments, while preparing to invade Poland His son, Rudolf II, was made king of Hungary in 1572 and of Bohemia in 1575 and succeeded him as emperor

Maximilian, 1832–67, emperor of Mexico (1864–67). As the Austrian archduke Ferdinand Maximilian, he was denied a share in the imperial government by his brother, Emperor Francis Joseph. Maximilian served as commander in chief of the Austrian fleet and was governor general of Lombardo-Venetia (1857–59), but he found no outlet for his ambition. When the Mexican conservatives sought the aid of NAPOLEON III in founding a Mexican empire, Maximilian was persuaded to accept the crown offered him He and his wife, Carlotta, left Miramar, his palace near Trieste, and sailed (1864) to Mexico The empire was a failure from the start Maximilian, who had no real understanding of Mexico, found most of the country hostile to him and loyal to Benito JUÁREZ He alienated the conservatives by his liberal tendencies and others of his supporters by his decree (1865) ordering the summary execution of all followers of Juárez Indeed, Maximilian's tenure rested solely on French soldiers, who drove Juárez and his liberal army to the north The European monarchs, except Napoleon III, were lukewarm The United States, frankly hostile, was prevented from interfering only by the American Civil War When affairs in France and the cessation of the Civil War impelled Napoleon III to withdraw (1866–67) the French troops from Mexico, the flimsy fabric of the empire dissolved. For a time Maximilian considered abdication, but he was irresolute. In 1866 Empress CARLOTTA went to Europe and vainly sought aid from Napoleon III and the pope Maximilian, in last desperation, assumed personal command of his forces, then mostly concentrated at Querétaro There, after a siege (March–May, 1867), he was captured and shot He wrote *Aus meinem Leben* (1865, Eng tr., *Recollections of My Life*, 1868) and *Mein erster Ausflug: Wanderungen in Griechenland* [my first excursion wanderings in Greece] (1868) See John Musser, *The Establishment of Maximilian's Empire in Mexico* (1918), Egon Caesar, Count Corti, *Maximilian and Charlotte of Mexico* (1928), *Maximilian, Emperor of Mexico: Memoirs of His Private Secretary, José Luis Blasio* (tr and ed. by Robert H. Murray, 1934).

Maximilian I, 1756–1825, king (1806–25) and elector (1799–1806) of Bavaria His alliance with Napoleon I earned him the royal title and vast territorial increases at the Treaty of PRESSBURG (1805) and gave him leadership over the CONFEDERATION OF THE RHINE. His daughter was married to Napoleon's stepson, Eugène de Beauharnais. In 1813, after Napoleon's retreat from Russia, he joined the coalition against Napoleon a few days before the battle of Leipzig. At the Congress of Vienna (1814–15) Maximilian lost some of his territorial gains. Devoted to Bavarian independence, he opposed all moves to unite Germany With his minister, Montgelas, he carried out important social reforms and abolished most of the relics of feudalism in Bavaria In 1818 he granted a liberal constitution and, in contrast to the reaction that prevailed elsewhere in Europe, he continued to rule as "enlightened monarch" He was succeeded by his son, Louis I

Maximilian II, 1811–64, king of Bavaria (1848–64), son and successor of LOUIS I He had strong liberal tendencies and was a patron of art and learning He sided with Austria against the rising power of Prussia, but failed in his hope of creating a union of small German states under Bavarian leadership His son, Louis II, succeeded him

Maximilian I, 1573–1651, elector (1623–51) and duke (1597–1651) of Bavaria, one of the outstanding figures of the THIRTY YEARS WAR, and an ardent supporter of the Catholic Reform. After his occupation of Donauwörth, a Protestant stronghold then under the imperial ban, Protestant indignation was aroused and the Protestant Union formed (1608) To oppose this Maximilian founded the Catholic League He tried to maintain a moderate course in the great quarrel within the empire until 1619 Then, in return for concessions, he brought the army of the League to the support of Emperor FERDINAND II against FREDERICK THE WINTER KING In 1620 Maximilian entered Upper Austria and, after the victory of Tilly at the White Mt., entered Prague After the conquest of the Palatinate, the emperor in 1623 transferred Frederick's electorate to Maximilian A few years later, Maximilian was given the Upper Palatinate in return for Upper Austria, which he had been holding Maximilian protested against Wallenstein's ascendancy and secured his dismissal (1630) In the later years of the war, Bavaria was ravaged by Swedish forces, and Maximilian attempted to negotiate a separate peace A truce was reached at Ulm, in 1647, but was later broken By the Peace of Westphalia, Maximilian retained the electorate and the Upper Palatinate

Maximilian, prince of Baden (Max of Baden), 1867–1929, German statesman A liberal, he succeeded (Oct. 3, 1918) Count Hertling as imperial chancellor, with a coalition cabinet including the Socialists G A Bauer and Scheidemann At the recommendation of the supreme command he began to negotiate for an armistice with the Allies German morale had broken after four years of war and the strain of the Allied blockade Revolution spread after the sailors' mutiny at Kiel The monarchy seemed lost, and Prince Max forced Emperor WILLIAM II to abdicate Several hours later he surrendered the government to Friedrich EBERT

Maximin (Caius Julius Verus Maximinus) (mäk'sĭmĭn), d 238, Roman emperor (235–38) A rough Thracian soldier of great physical strength, he rose in the army and when the soldiers revolted against ALEXANDER SEVERUS they proclaimed Maximin emperor at Mainz He established order among the troops and conducted (235–38) highly successful campaigns against the Germans In 238 Gordian (GORDIAN I) conspired against him Maximin marched on Italy and advanced on Aquileia In the siege he was assassinated by the soldiers

Maximin (Galerius Valerius Maximinus), d 313, Roman emperor (308–13), kinsman of Galerius He is called Maximin Daia He was made Caesar in 305 and in 308 proclaimed himself Augustus in opposition to Licinius After the death of Galerius (310) Maximin exercised considerable power He persecuted the Christians and tried to revive paganism He later allied himself with MAXENTIUS against Licinius and Constantine (CONSTANTINE I). Maxentius was crushed by Constantine, Maximin was defeated by Licinius A last-minute effort to win the Christians by an edict of toleration did not help him He died a fugitive

Maximus, Saint, c 580–662, Greek theologian He was secretary to Emperor Heraclius and subsequently abbot at the monastery of Chrysopolis To curb MONOTHELETISM he went to Rome and persuaded Pope St MARTIN I to convene the synod of 649, which denounced as heretical the *Typus* of Emperor Constans Back at Constantinople, Maximus demanded that the decrees of the synod be accepted He was imprisoned (653–62) by imperial order, then exiled He is important in the history of Byzantine mysticism St Maximus leaned much upon the Pseudo-Dionysius St. Maximus' works influenced Erigena, who translated them into Latin Feast Aug 13.

Maximus, d 388, Roman emperor of the West (383–88) After murdering GRATIAN, he was recognized as ruler of Britain, Gaul, and Spain by Theodosius I. He invaded Italy in 387, expelling VALENTINIAN II, but the next year he was defeated and put to death by Theodosius. In the reign of Maximus the heresy of PRISCILLIAN was suppressed.

Maximus Planudes. see GREEK ANTHOLOGY.

Max-Müller, Friedrich: see MÜLLER, MAX.

Max of Baden: see MAXIMILIAN, PRINCE OF BADEN.

Maxton, town (pop 1,650), S N.C., SW of Fayetteville near the S C line, in a farm area.

Maxwell, Anna Caroline, 1851–1929, American nurse, b. Bristol, N Y., grad. Boston City Hospital, in nursing. She was director of nurses in hospitals in Montreal, Boston, and New York. She organized (1892) and directed until 1921 the school of nursing at Presbyterian Hospital, New York city. Her work in the Spanish-American War demonstrated the efficacy of nursing in reducing the typhoid death rate She served also in the First World War. With A E. Pope she wrote *Practical Nursing* (1914)

Maxwell, James Clerk (klark), 1831–79, great Scottish physicist After a brilliant career at Edinburgh and Cambridge, when he won early recognition with mathematical papers, he was professor at Marischal College, Aberdeen (1856–60), and at King's College, London (1860–65) In 1871 he was appointed first professor of experimental physics at Cambridge, where he directed the organization of the Cavendish Laboratory He is known especially for his work in electricity and magnetism and wrote *A Treatise on Electricity and Magnetism* (1873) Basing his own study and research on that of Faraday, he developed the theory of the electromagnetic field on a mathematical basis and made possible a much greater understanding of the phenomena in this field He was led to the conclusion that electricity and magnetic energy travel in transverse waves and that light waves are in reality waves of this nature, i e, electric and magnetic Maxwell's electromagnetic theory of light was of great importance One of his early papers was "On the Stability of Motion of Saturn's Rings" (1859) He is also known for his investigations of heat, the kinetic theory of gases, color (which led to his invention of the color disk named for him), and color blindness In addition to his papers in these fields, he wrote also a classic elementary text in dynamics, *Matter and Motion* (1876) The unit of magnetic flux is named maxwell in his honor

Maxwell Lefroy, Harold: see LEFROY, HAROLD MAXWELL

Maxwelltown (mäk'swŭltoun), former burgh, once in Kirkcudbrightshire, now in Dumfriesshire, Scotland It is on the Nith river opposite Dumfries, to which it was added in 1929 Maxwelltown has a museum with a collection of Burnsiana

Maxwelton House, 17th-century mansion, Scotland, NW of Dumfries It was the birthplace of Annie Laurie of the song

May, Philip William (Phil May), 1864–1903, English caricaturist, b. Leeds. He earned his living at 12, working in a foundry, on the stage, and in London for a theatrical costumer He gradually found a sale for posters and cartoons and began working for the *St Stephen's Review*. In 1884 he went to Australia for his health and worked for five years on the Sydney *Bulletin* After his return to London a collection of his sketches, *The Parson and the Painter* (1891), was published Later appeared *Phil May's Sketch Book* (1895) and *Phil May's Gutter-Snipes* (1896), *Phil May's Winter Annual* began in 1892 During his last years he worked exclusively for *Punch* and the *Graphic* May's work is distinguished for its economy of line, its brilliant characterization and gentle, kindly humor Most of his types are taken from the stage, sporting events, and London slums See biography by James Thorpe (1932).

May, Samuel Joseph, 1797–1871, American reformer, b. Boston, grad Harvard, 1817 He was Unitarian minister at Brooklyn, Conn (1822–36), South Scituate, Mass (1836–42), and Syracuse, N.Y. (1845–67) An abolitionist of the Garrisonian type, he championed the Negro in spite of bitter hostility, his house in Syracuse was a station on the Underground Railroad May was also a leader in the temperance and woman's rights movements and supported Horace Mann in his reform of the public school system. At Mann's request he served as principal of the normal school at Lexington, Mass., in 1842–44 *Some Recollections of the Anti-Slavery Conflict* (1869) is the most important of his published works See T J Mumford and others, ed., *The Memoir of Samuel Joseph May* (1873)

May, Thomas, 1595–1650, English translator and poet Educated at Cambridge, he was prevented from practicing law by a speech impediment and turned to literature He wrote a number of plays, the most successful of which are *The Heir* (1622), a tragicomedy, and *The Old Couple* (1658), a comedy of manners Better known as a translator, *Lucan's Pharsalia* (1626–27), *Virgil's Georgics* (1628), and *Selected Epigrams of Martial* (1629) comprise his best work He was secretary to the Long Parliament, and *The History of the Parliament of England* (1647) is the product of his political efforts His other work includes two long historical poems on the reigns of Henry II (1633) and Edward III (1635), composed for his patron, Charles I. See A G Chester, *Thomas May, Man of Letters* (1932).

May, Thomas Erskine, 1st Baron Farnborough, 1815–86, constitutional jurist, clerk of the British House of Commons and historian. He is well

known for his writings, which include *A Treatise upon the Law, Privileges, Proceedings, and Usage of Parliament* (1844) and *The Constitutional History of England* . *1760–1860* (1861–63).

May: see MONTH.

may, name for several plants, in England, particularly the HAWTHORN.

May, Cape: see CAPE MAY

May, Isle of, small island, Fifeshire, Scotland, at the mouth of the Firth of Forth and SE of Crail It has a lighthouse, ruins of a 13th-century priory of St Adrian (who was killed here by the Danes in the 9th cent), and a former place of pilgrimage known as the Holy Wells.

Maya (mī'ə, Span mä'yä), American Indians, ethnically and linguistically related, occupying an area (c 125,000 sq mi) comprising the YUCATAN peninsula, the highland crescent of E Chiapas, much of Guatemala, and extreme W Honduras The Mayan languages are spoken in this area, and there is one Mayan island in N Veracruz (see HUASTEC) In the Maya ruins are many inscriptions written in a hieroglyphic which is as yet far from completely understood, though scholars in the 20th cent have approached the subject from the standard Mayan language written in documents under Spanish influence or from careful study of modern Maya (see LANGUAGE, table) Archaeologists have assembled masses of evidence about the Maya, but the unknown area is still great Their early history is still completely obscure One theory holds that they were an offshoot of the OLMEC culture of S Veracruz, another that the civilization of the Maya originated among nomadic tribes about the 4th cent B.C in N central PETÉN Here, 11 mi from each other, are the ruins of two city-states, TIKAL and Uaxactún, early examples of the flourishing culture of a sedentary, agricultural people well advanced in art and science According to Sylvanus G Morley, the history of the Maya may be divided into three major epochs—Pre-Maya (2500 B C –A D 317), Old Empire (317–987), and New Empire (987–1697) Since Maya political organization never developed beyond a loose federation of independent city-states (and even that far only once), the term *empire* is used merely as a convenience to differentiate the last two epochs Pre-Maya is broken down into I, II, and III No monuments survive from Pre-Maya I and II, but during this time cultivation of maize was learned In Pre-Maya III (353 B C –A D 317) came the invention of their calendar, development of chronology and hieroglyphic writing, and the beginnings of stone architecture Both Old and New Empires likewise are broken into periods In Old Empire I (317–633) archaism vanished from sculpture and epigraphy, and Maya culture spread over the entire area The second period (633–731) was one of territorial and cultural consolidation leading up to the greatest expression of the genius of the Maya in Old Empire III (731–987) at COPÁN, QUIRIGUÁ, PALENQUE, and PIEDRAS NEGRAS Before decline set in during the last third of this era, the art of the Maya reached high development These centers of culture were all abandoned within a century One explanation offered is soil exhaustion, without agricultural tools, the Maya burned off the brush and replanted corn by pointed sticks in the same fields exactly as they do today, and the method is hard on the land Disease and social decadence are also offered as causes, probable evidences of violence are entirely lacking There seem to have been two migrations —the Lesser Descent (461–623) and the Great Descent (475, 652–987)—which took the Maya N through E Yucatan The Lesser Descent resulted in the founding of several cities, one of them CHICHÉN ITZÁ The Great Descent took the peoples farther west The New Empire, thus begun, falls into three periods—Puuc or Renaissance (987–1194), Mexican (1194–1441), and Disintegration (1441–1697) A Mexican migration or invasion from Campeche, begun under Kukulcán (see QUETZALCOATL), strongly influenced the indigenous culture of the Maya Between 968 and 987 Kukulcán established his capital at Chichén Itzá and then founded Mayapán, over which he placed the Cocom family Between 987 and 1007, completing the Great Descent, Tutul Xiu founded UXMAL Probably to secure the new rulers' control, a loose confederation of the three cities, called the League of Mayapán, was formed, and a long period of stability ensued Civil war finally broke out, and Chichén Itzá was destroyed (1194) by Mayapán The federation was ended, and the ITZÁ had to abandon their city The victorious Cocom maintained a tyrannical ascendancy until the Xiu revolted (1441), destroying Mayapán and the last vestige of centralized authority. The cities were abandoned, not even the victorious Xiu returned to Uxmal, but instead founded Mani New Empire III was dominated by civil wars, a series of calamities, and the Spanish Conquest under the elder and younger Francisco de MONTEJO. The governmental and probably the ecclesiastic organization of the Maya was headed by a hereditary chieftain (*halach uinic*) who appointed lesser chieftains to govern dependent villages. All ranking officials probably constituted, with the priesthood, a hereditary nobility. The leading priest was second only to the chieftain. He and his hierarchy were not only able administrators, but also outstanding scholars, astronomers, and mathematicians. Below them came the vast majority of common people (laborers and artisans) and then the slaves (war prisoners and criminals) Religious practices in the Old Empire were stately and well organized, and they probably involved little human sacrifice, but with the New Empire and Mexican influence human sacrifice and complex idol worship were introduced Heading the cosmogony were Hunab Ku and his son, ITZAMNA Since the religion of the Maya was dualistic, there was also a chief malevolent deity, Ah Puch, god of death, presiding over hell Other important deities were the god of corn and Chac, god of rain The pantheon later grew considerably The Spanish destroyed the worship of all except the little gods of nature and fertility, the rites for these lesser idols were to a large extent incorporated by the common people into Christian practices The Maya, recording not deeds of human glorification, but chronology, astronomy, and religion, were the only people in the New World to develop an original system of writing (ideographic), which was probably borrowed by other Mexican Indians The most important of the Spanish documents giving information on the language is Bishop Diego de Landa's *Relación de las cosas de Yucatán* (1566, Eng tr by A M Tozzer, 1941) He had destroyed all but three perishable records, the Dresden Codex, the TRO-CORTESIANUS Codex, and the PERESIANUS Codex The paperlike codices were made from the pounded bark of the wild fig tree (*copo*), folded in strips, and fastened with natural gum Shortly after the Spanish Conquest, some of the natives, educated to write their language in Spanish script, recorded much of their history and life in writings known as the *Books of Chilam Balam* There were two Mayan calendars– a 365-day year (*haab*), recurring in 52-year cycles and a sacred or ceremonial year (*tzolkin*) of 260 days grouped into 13 months of 20 days each The corrected calendar year of 18 months of 20 days and one month of 5 days approximated the astronomically determined year with even more accuracy than the Gregorian calendar The positional mathematics of the Maya, developed for accurate time computation, was a magnificent abstract intellectual achievement, based on the vigesimal rather than the decimal system, but having no fractions It was an advance in knowledge that was not equaled for many centuries in Western Europe To record numbers the Maya used bars and dots (a bar equal to five, a dot equal to one) and had variant pictures or glyphs for names Mayan architecture was confined to ceremonial buildings grouped around plazas The majority of the population, estimated to have been c 14,000,000 in the 8th cent or seven times the number of Maya-speaking people today, lived in suburban agricultural communities in wattle, or sometimes adobe, houses with thatched roofs Temples (usually marked by a medial molding on all four sides and often by a flying façade or roof comb of stone rising from the flat roof as high again as the temple itself) were built on pyramidal substructures The pyramid usually had a core of rubble faced with limestone and was ascended by steep stairways Interiors, universally without windows, were small chambers roofed by a corbeled vault (the Maya had no arch), by flat slabs of lime concrete, or by wood beams Walls were covered with limestone plaster, and some buildings were decorated by elaborate stucco or sculpturing on wall panels, stairway ramps, and doorjambs New Empire architecture was characterized by ornate moldings, employing the feathered serpent, and great open colonnades In general, New Empire buildings were less massive and more graceful Sculpture, as an independent art, reached its best expression in the Old Empire, when magnificent carved stone steles marking the calendric periods were erected Usually they were painted dark red, less often blue and other colors Sculpture, at its height between 731 and 889, declined as an independent art in the New Empire, but as an adjunct of architecture reached a dignity and beauty equaled nowhere else in aboriginal America Comparing accomplishments of the Maya with those of other American Indian civilizations, the Maya emerge as undisputed masters of abstract knowledge—writing, astronomy, arithmetic, calendric development, chronology, and the recording of history Their architecture, though not as massive as that of the Inca, the Toltec, or the Aztec nor as advanced as that of the Inca in technical achievement, was outstanding in harmony of line and decorative motifs, the Maya excelled in sculpture in relief and in round Their painting, as in codices and in wall frescoes, is superb Their ceramics were beautiful in polychromatic design but lacked strength In metalwork and in lesser arts the Maya were inferior to other great pre-Columbian civilizations. Neither in governmental nor in social organization did they quite equal the Aztec and certainly not the Inca The foregoing comparisons and evaluation of the culture of the Maya are based on S G Morley, *The Ancient Maya* (1946), the most recent and comprehensive book on the Maya (all dates used in this article are also taken from the book) For an outstanding illustrated account of the modern discovery and first thorough exploration of Maya ruins, see J L Stephens, *Incidents of Travel in Central America, Chiapas, and Yucatan* (1841, new issue, 1949) and *Incidents of Travel in Yucatan* (1843). For the Spanish Conquest, see P. A Means, *History of the Spanish Conquest of Yucatan and of the Itzas* (1917), Robert S Chamberlain, *The Conquest and Colonization of Yucatan* (1949) For art and architecture, see Pál Kelemen, *Medieval American Art* (1943) For a discussion of chronology differing from that used above, see H J Spinden, *The Reduction of Mayan Dates* (1924) For ethnology of the Maya, see Robert Redfield and Alfonso Villa Rodríguez, *Chan Kom, a Maya Village* (1933), and Redfield, *The Village That Chose Progress Chan Kom Revisited* (1950), Morris Steggerda, *The Maya Indians of Yucatan* (1938).

Mayaguana (mī"əgwä'nä), one of the BAHAMA ISLANDS In 1940 the United States acquired a 99-year lease to build a naval and air base here

Mayagüez (mägwās', mäwās'), city (1940 pop 50,376, 1949 estimated pop 62,000), W Puerto Rico, a port on Mona Passage It is a port of entry and an important shipping center in a fertile agricultural region producing sugar, coffee, fruit, vegetables, tobacco, and honey These products are processed, and the craft of handmade embroidery and other needlework is important The city has the colleges of agriculture and mechanic arts of the Univ of Puerto Rico

Mayakovsky, Vladimir (vlŭdyē'mĭr mĭ"ŭkôf'skē), 1893–1930, Russian poet and dramatist He was a leader of the futurist school and chief spokesman in verse of the revolution He wrote mainly for declamation, and his poems, often crude and always iconoclastic, were virile and full of vivid imagery Besides poetry, he wrote three plays, *Mystery Bouffe* (1918, Eng tr , 1934), *The Bedbug* (1928), and *The Bathhouse* (1930) His longest poem is *150,000,000* (1920) He committed suicide See Alexander Kaun, *Soviet Poets and Poetry* (1943)

May apple, North American perennial herb (*Podophyllum peltatum*), growing in patches in wooded regions and sometimes planted in wild gardens The plant grows 12 to 18 in tall, in the spring it bears a nodding white blossom in the fork beneath the two large, deeply lobed leaves, about midsummer it dies back to the ground The rootstock, stem, and leaves are poisonous, but the well-ripened fruit, though not palatable to everyone, may be eaten in moderation The rootstock, which may produce a skin irritation, yields a drug used in certain liver ailments Other names for the May apple are hog apple, wild lemon, and MANDRAKE, but it should not be confused with the true mandrake

May beetle see JUNE BEETLE

Maybole (mābōl'), burgh (pop 4,212), Ayrshire, Scotland, SSW of Ayr It manufactures shoes and agricultural machinery Maybole was once the capital of Carrick, the domain of the Bruces, and had a number of fine mansions Crossraguel Abbey (13th cent) is not far from the burgh

Maybrook, village (pop 1,189), SE N Y , SW of Newburgh, inc 1925 It is an important rail center

May Day, the first day of May. Its celebration probably originated in the spring festivals of the goddesses of fertility of India and Egypt The festival of the Roman goddess Flora was April 28, later April 28–May 3 In medieval England the chief feature of the celebration of May Day was the Maypole, this was decorated with flowers and streamers, the loose ends of which were held by dancers, who encircled the pole, weaving intricate patterns as they passed each other in the dance These dances were forbidden during the Puritan Revolution, but were again sanctioned at the Restoration They are still danced for exhibition purposes in England and the United States, and in some places it is a May Day custom for children to dance around a Maypole in public parks In some parts of the United States children celebrate May Day by hanging baskets of flowers on doorknobs The Second Socialist International in 1889 designated May Day as the holiday for radical labor, and since that time it has been the occasion for demonstrations, parades, and speeches among Socialists and Communists It is a very important holiday in the USSR

Mayence, Germany see MAINZ

Mayenne, Charles de Lorraine, duc de (shärl' də lôrĕn' dük' də mayĕn') 1554–1611, French Catholic general, younger brother of Henri, 3d duc de GUISE After the murder of his brothers (1589), he became the head of the LEAGUE. Defeated by Henry IV at Arques (1589) and Ivry (1590), he nevertheless raised the siege of Paris (1590). For a time he wielded almost royal power over the parts of France which supported the League. He became estranged from the pro-Spanish faction and in 1596 made his peace with the king

Mayenne (mayĕn'), department (2,012 sq mi , pop. 256,317), NW France, in MAINE named for a tributary of the Maine river Laval is the capital

Mayenne, old town (pop. 6,514), Mayenne dept , NW France, in Maine, on the Mayenne river

Mayer, Johann Tobias (yō'hän tōbä'ĭas mī'ûr), 1723–62, German mathematician and astronomer. In 1751 he became professor of economics and mathematics at the Univ. of Gottingen, and in 1754 director of the observatory He is especially noted for his lunar tables (1752) Maver is remembered also for his improvements in map making and for the invention of the repeating circle, later used in measuring the arc of the meridian A collection of his memoirs was published in 1775, a revision of his catalogue of 998 zodiacal stars, newly computed, appeared in 1894

Mayerling (mī'urling), village, Lower Austria, 15 mi. SW of Vienna Here is the hunting lodge (now a convent) where Archduke RUDOLF, heir to Austria-Hungary, and Maria Vetsera met their mysterious death in 1889

Mayfair, fashionable residential quarter of W London, England, N of Piccadilly, named for a fair held here in May from the 16th to the 19th cent. It includes Berkeley and Grosvenor squares

Mayfield. 1 City (pop 8,619), co. seat of Graves co., SW Ky., 8 of Puducah, in an area of farms, clay pits, and timber, founded 1823. It is a market for tobacco and mules and a trade and industrial center with varied manufactures. In the local cemetery are the curious Wooldridge monuments—stone figures of the family, friends, and animal pets of an eccentric horse trader. 2 Anthracite-mining borough (pop 3,172), Lackawanna co., NE Pa., NE of Scranton

Mayfield Heights, village (pop 2,696), NE Ohio, near Cleveland, inc 1925

Mayflower: see TRAILING ARBUTUS.

Mayflower, the ship which in 1620 brought the PILGRIMS from England to New England She set out from Southampton in company with the *Speedwell*, the vessel which had borne some of the English separatists from the Netherlands back to England for the momentous voyage, but, the *Speedwell* proving unseaworthy, the *Mayflower* set out again from Plymouth alone Among the more conspicuous of the 102 passengers were William Brewster and William Bradford After a two-month voyage the ship sighted land on Nov 9 or 10 (Old Style) Before landing, an agreement for the temporary government of the colony by the will of the majority was drawn up in the famous **Mayflower Compact.** Some time was spent in selecting a suitable place for the colony, the choice finally falling upon Plymouth In 1894 the Society of Mayflower Descendants was formed in New York, other states opened branches and in 1897 the national society was organized. The requirement for membership is proved descent from a passenger on the *Mayflower*, a condition which has come to be regarded as the hallmark of an American "aristocracy" The society has encouraged historical work on the ship and its voyage and was the sponsor for the genealogical works of G E. Bowman Much speculation has been spent on the identification of the *Mayflower* A ship of 180 tons burden, it presumably resembled other ships of the period and bore a name common to other vessels

mayhem (mā'hĕm, mā'ûm), in law, originally the crime of willfully and violently injuring a person so as to diminish his capacity for self-defense Cutting off an arm or leg would constitute the offence, while such a battery as cutting off the outer ear would not In the United States, however, statutes treat all mutilations (including those which are self-inflicted to escape some duty, such as military service) as the same offence The victim may sue for damages

Maynard, Edward (mā'nûrd), 1813–91, American dental surgeon and inventor, b Madison, N Y He was court dentist to Nicholas I of Russia and was honored by the kings of Prussia and of Sweden He is also famous for his inventions of improved firearms, including a priming system (1845) and the breech-loading rifle which bears his name.

Maynard, George Willoughby, 1843–1923, American figure, marine, and mural painter, b. Washington, D C., studied at the National Academy of Design and in Florence and Antwerp His decorations are in the Library of Congress, the Essex co. courthouse, Newark, N J., and the Metropolitan Opera House, New York He is represented in the Rhode Island School of Design Museum of Art, Providence, the Pennsylvania Academy of the Fine Arts, the Corcoran Gallery, and the Metropolitan Museum Among his canvases are *An Ancient Mariner, Venetian Court, Strange Seas, Grandfatherly Advice, Vespers at Antwerp, Strange Gods, Rocks at Ogunquit,* and *Flood-Tide* Maynard became a member of the National Academy in 1885

Maynard, Horace, 1814–82, U.S. Representative from Tennessee (1857–63, 1866–75), b Westboro, Mass., grad. Amherst, 1838. He taught at East Tennessee College (now the Univ. of Tennessee) at Knoxville before becoming a lawyer and entering politics. With Andrew Johnson and other Unionists in E Tennessee, he vigorously opposed secession and in the Civil War was attorney general (1863–65) in the Union military government of Tennessee Maynard, a radical Republican, denounced Johnson's policies as President and was later involved in Tennessee's acrimonious political battles of Reconstruction days. He was minister to Turkey (1875–80) and Postmaster General (1880–81) under President Rutherford B. Hayes.

Maynard (mā'nûrd), town (pop. 6,812), E Mass., near Concord; settled 1638, set off from Sudbury and Stow 1871 Woolen goods are produced.

Mayno or **Maino, Juan Bautista** (hwän' boutäs'tä mī'nō), c.1569–1649, Spanish painter He early entered the Dominican order in Toledo, where he is thought to have studied with El Greco. He was drawing teacher to the youthful Philip (later Philip IV) *The Reconquest of the Bay of San Salvador* and *Adoration of the Kings* (both, Prado) and *Adoration of the Shepherds* (Leningrad) are splendid examples of his work.

Maynooth (mā'nōōth, mānōōth'), town (pop. 572), Co Kildare, Ireland, on the Royal Canal and WNW of Dublin It is the seat of St Patrick's College, the principal institution in Ireland for training Roman Catholic clergy, founded in 1795, now a constituent college of the National Univ. of Ireland Some of the buildings were designed by Pugin Near the college are the ruins of **Maynooth Castle,** founded c 1176, besieged in the reign of Henry VIII, and demolished in the 17th cent.

Mayo, Charles Horace (mā'ō), 1865–1939, American surgeon, b Rochester, Minn, M D Northwestern Univ, 1888 He specialized in goiter and cataract operations His brother, **William James Mayo,** 1861–1939, b Le Sueur, Minn, M D Univ of Michigan, 1883, was also a surgeon He specialized in abdominal surgery From a small clinic opened by their father in Rochester, Minn, in 1889, the brothers developed the **great Mayo Clinic** of international reputation In 1915 they established the Mayo Foundation for Medical Education and Research as a branch of the graduate school of the Univ of Minnesota See Helen Clapesattle, *The Doctors Mayo* (1941), Lucy Wilder, *The Mayo Clinic* (1948 ed.)

Mayo, Henry Thomas, 1856–1937, American naval officer, b. Burlington, Vt., grad Annapolis, 1876 In 1913 he became commander of the Atlantic Fleet At Tampico in 1914 he precipitated an international incident by demanding an apology and salute to the American flag after Mexican officials had arrested an American paymaster and a boat crew He was commander of the Atlantic Fleet throughout the First World War and for a time in 1919 commanded the entire U S fleet, which was, however, again divided into Atlantic and Pacific fleets He was given the permanent rank of rear admiral and in 1920 was retired

Mayo, William James: see MAYO, CHARLES HORACE

Mayo (mā'ō), county (2,084 sq mi., pop 148,200), W Ireland, in Connaught The county town is Castlebar The western portion, including large Achill island, is mountainous, the eastern part is more level There are numerous lakes (Mask, Corrib, Conn, and Carragh) and the irregular coast line is deeply indented by bays (Killala, Broadhaven, Blacksod, and Clew). The county grows oats and potatoes and raises cattle, sheep, pigs, and poultry, but its output is hardly sufficient to support its dwindling population. The region was granted to the De Burghs after the Anglo-Norman invasion of Ireland, but the family revolted and the county was not brought under English control until the late 16th cent.

Mayo Clinic: see MAYO, CHARLES HORACE

Mayodan (mā'ōdăn'), cotton-mill town (pop 2,323), N N.C, NNE of Winston-Salem, settled 1894, inc. 1897.

Mayon, Mount (mayōn'), active volcano, 7,926 ft. high, on SE Luzon, Philippine Islands.

Mayo-Smith, Richmond, 1854–1901, American statistician, b Troy, Ohio At Amherst he was influenced by John W. Burgess and after graduation (1875) studied in Berlin and Heidelberg. In 1877 he began to teach at Columbia Univ. He is best known as a pioneer in the teaching of statistics and the application of statistics to social science He also worked directly in economics After 1886 he was an editor of the *Political Science Quarterly,* and he was one of the founders (1885) of the American Economic Association. His principal works are *Science of Statistics* (2 vols., 1895–99; issued also as *Statistics and Sociology* and *Statistics and Economics*) and *Emigration and Immigration* (1890).

Mayow, John (mā'ō), 1643?–1679, English chemist and physiologist In his studies on air he recognized the presence in it of a substance (now called oxygen) that supports burning and respiration; he called the substance the "nitro-aerial" spirit. See his *Medico-physical Works* (tr from the Latin, 1907); Francis Gotch, *Two Oxford Physiologists* (1908)

maypop: see PASSIONFLOWER.

Mays Landing, unincorporated village (pop. 1,452), co seat of Atlantic co., SE N.J., on the Great Egg Harbor river and NW of Atlantic City; settled c 1710. It is an inland water resort in a poultry and truck farm area.

Maysville. 1 City (pop. 6,572), co. seat of Mason co., N Ky., on the Ohio at the mouth of Limestone Creek and SE of Covington. With air, rail, and river connections, the city is a trade and industrial center and has distilleries and tobacco plants It was settled as Limestone c.1782 by Simon KENTON and others, established in 1787, and incorporated in 1833. As an early point of transfer from river to land travel and as a station on the old highways, Maysville enjoyed a flourishing commerce. Daniel Boone and his wife ran a tavern here (c 1786–89). U S Grant attended a local school. A marker notes the site of Kenton's trading post near by. 2 City (pop. 1,026), co seat of De Kalb co., NW Mo., ENE of St. Joseph, in a farm area; settled 1845

Mayville. 1 Resort village (pop. 1,354), co seat of Chautauqua co., W N.Y., on Chautauqua Lake, inc 1830 Furniture and milk products are made here. 2 City (pop. 1,351), E N Dak., on the Goose river and SSW of Grand Forks, settled 1881, inc. 1885. It is a trade center in a farm area. A state teachers college is here 3 Industrial city (pop 2,754), E Wis., S of Fond du Lac; settled 1844, inc 1885.

Maywood. 1 City (pop. 10,781), in San Antonio township, S Calif., near Los Angeles, founded 1920, inc 1924 It is a residential city in an industrial region 2 Village (pop. 26,648), NE Ill., on the Des Plaines river and just W of Chicago; inc. 1881. It is a residential suburb in an industrial area. Tin cans are made here 3 Borough (pop. 4,052), NE N J., near Hackensack, inc 1894.

Mazaca: see CAESAREA MAZACA.

Mazagan (măzăgăn'), city (pop 40,318), French Morocco, a port on the Atlantic Ocean It was occupied by the Portuguese (1502–89) and was from 1541 the only place they held in Morocco. Vestiges of Portuguese fortifications remain A port of the fertile Doukkala region, it exports eggs and cereals

Mazanderan (măzăn"durăn'), region and former province, area 7,519 sq mi, N Iran, along the Caspian It is traversed by the Elburs range. Its fertile plain yields rice, cotton, silk, and sugar cane Mazanderan is the Tabaristan of Arab writers

Mazarin, Jules (zhül' măzărĕ'), 1602–61, French statesman, cardinal of the Roman Church, b Italy. His original name was Giulio Mazarini After serving in the papal army and diplomatic service and as nuncio at the French court (1634–36), he entered the service of France and made himself valuable to Richelieu, whom he succeeded in 1642 Though he had received only minor orders and had never been ordained a priest, he was raised to cardinal upon the recommendation of Louis XIII (1641). He retained his post during the regency through his influence over ANNE OF AUSTRIA The theory that Mazarin was secretly married to the widowed queen has been widely credited. He won favorable terms for France in the Peace of Westphalia (1648), but his financial abuses and his centralizing policy provoked the troubles of the FRONDE (1648–53) By clever diplomacy he defeated the Frondé, strengthened the crown, and negotiated the favorable Peace of the PYRENEES at the end of the war with Spain (1659) See J B Perkins, *France under Mazarin* (1886); Arthur Hassall, *Mazarin* (1903)

Mazarin Bible (mă'zurĭn), considered to be the first book printed by GUTENBERG and the earliest book printed from movable types. It was printed at Mainz The work, which probably required several years, was completed not later than 1456 The text of the Bible is Latin The type is a Gothic related to Old English and similar to the best handwriting of the time Colored initials and other illuminations are made by hand. The pages of the book are folio, each page is in two columns, and, with few exceptions, each column has 42 lines There are both vellum and paper copies. In design and workmanship, the Mazarin Bible holds its place as one of the finest of all printed books. It is called the Mazarin Bible because the first copy to recapture attention was in the library of Cardinal Mazarin, in Paris. It is called also the Gutenberg Bible and the 42-line Bible.

Mazar-i-Sharif (mazär'-ē-shärēf'), town (pop. more than 50,000), N Afghanistan, between Balkh and Tashkurgan. It is a commercial and religious center and the site of a noted mosque of Ali. Silk and cotton goods are produced.

Mazaruni (măzurōō'nē), river of British Guiana rising near Venezuela and flowing generally E to the Essequibo near its mouth. It is the center of the diamond industry of British Guiana.

Mazatlán (măzätlän'), city (pop 32,117), Sinaloa, NW Mexico, a port on the Pacific. The harbor is wide but shallow, and ships must anchor about a mile out, but Mazatlán is a large Pacific port and is on the western trunk line between the United States and Mexico city Spanish colonial trade with the Philippines began the development of the port Present exports include metals, hides, woods, and fruits. Sawmilling and tanning are minor industries. Fish products and *orégano*, a type of vervain much used in Mexican cooking, are shipped inland The climate is hot, and population fluctuates with the seasons.

Mazdaism: see ZOROASTRIANISM.

maze, a detail of landscape gardening based on the Greek LABYRINTH and consisting of intricate paths or alleys lined with high hedges and having a center and exit difficult to find. It was a prominent feature in the formal English gardens of the 17th and

18th cent., the most notable being that at Hampton Court Palace, London.

Mazeppa (mŭzĕ'pŭ), 1644?–1709, hetman of the Cossacks. He was educated at the court of the Polish king. The husband of a Polish lady, with whom he had been carrying on an intrigue, tied him naked to the back of a wild horse which was driven out into the steppes. Mazeppa was rescued in the Ukraine, where his courage and ability soon gained him the leadership of the Cossacks (1687). He became the trusted ally of Peter I of Russia, but later was discovered plotting with Charles XII of Sweden and was forced to take refuge in the Swedish camp. After the battle of Poltava he accompanied Charles to Turkey and there died. In Byron's poem *Mazeppa* he relates the story of his ride.

Maso, Juan Bautista Martinez del (hwän' boutēs'tä märtē'nāth del mä'thō), c.1612–1667, Spanish portrait and landscape painter. He was the pupil and son-in-law of Velásques, with whom he lived and collaborated and whom he succeeded in 1661 as first court painter to Philip IV. Velázques was obliged to supply several copies of certain court portraits. Maso, who assimilated his master's manner in portraiture, unquestionably painted many of these and also some of the originals later attributed to Velásques. His best undisputed portrait is that of Doña Mariana of Austria (Prado). As a landscape painter, however, Maso shows himself a great original artist. His *View of Saragossa* (with little figures by Velásques), *Fountain of the Tritons*, *Calle de la Reina de Aranjues*, and *View of the Buen Retiro* (all Prado) are superb paintings whose breadth of treatment and freshness anticipate the achievements of the later French and British landscapists. See Aureliano de Beruete y Moret, *School of Madrid* (Eng tr., 1909).

mazurka (mŭsûr'kŭ, –zōr'kŭ), Polish national dance which spread to England and the United States at the beginning of the 19th cent. Performed by four or eight couples and characterized by stamping of the feet and striking together of the heels, it is in moderate triple meter and permits improvisation. Chopin composed over 50 masurkas for piano.

Mazzaroth (măz'urŏth), name probably signifying the signs of the Zodiac. Job 38:32.

Mazzini, Giuseppe (jōōzĕp'pā mät-sē'nē), 1805–72, Italian patriot and revolutionist, an outstanding figure of the RISORGIMENTO. His youth was spent in literary and philosophical studies. He early joined the CARBONARI, was imprisoned (1830–31), and went into exile. In Marseilles he founded the secret society Giovine Italia [young Italy], which led a vigorous campaign for Italian unity under a republican government. Mazzini went to Switzerland, then to London (1837), working untiringly at revolutionary propaganda. His influence on Italian liberals was tremendous. Republican revolts were stirred up in Piedmont, the Papal States, and Naples. When Milan was liberated (1848) Mazzini went there; in 1849 he was one of the *triumvirs* of the Roman republic. After its fall he resumed his propaganda from abroad. He organized unsuccessful uprisings in Milan (1853) and an ill-fated expedition in S Italy (1857). He often came secretly to Italy, although he had been condemned to death *in absentia*. Back in London in 1858 he founded the newspaper *Pensiero ed azione* [thought and action]. He supported Garibaldi's expedition to Sicily, but, unlike him, remained a confirmed republican. His relations with Cavour were strained, though both strove for Italian unification, their ideas were opposite, Cavour relying for help on a foreign power (France), Mazzini believing in revolution and war based on direct popular action. He was briefly imprisoned (1870) in Italy for revolutionary activities. Mazzini's work was inspired by his great moral strength. His program was not only political, but deeply social, aiming at human redemption on a religious and moral basis, at liberty, and at justice. His literary style is remarkably fine. He wrote on politics, social science, philosophy, and literature. A selection of his works has appeared in English (6 vols., 1890–91). See biographies by Bolton King (1902), G. O. Griffith (1932), and Stringfellow Barr (1935).

Mazzola, Francesco: see PARMIGIANO.

Mazzuchelli, Samuel Charles (mä'shōōkĕlē), 1806–64, Italian missionary in America. He was a Dominican. He was ordered (1830) to the island of Mackinac to be the only permanent priest in the upper Great Lakes region. He preached at points as separated as Sault Ste Marie and Prairie du Chien, built a church and founded the first Catholic school in Wisconsin at Green Bay, and visited various Indian tribes as a missionary. About 1835 he moved to Galena, Ill.; he established churches in Galena, Dubuque, Davenport, Potosi, Burlington, Iowa City, Bloomington, Bellevue, Shullsburg, Sinsinawa, and other places. He founded, and for three years was first president of, a college for men at Sinsinawa and founded at the same place the Dominican Congregation of the Most Holy Rosary. He excelled in music, painting, and architecture and designed all his churches and several lay buildings. He probably drew plans for the first statehouse of Iowa, now the administration building of the state university in Iowa City. See his memoirs (Milan, 1844; Eng. tr., with biographical introduction by Archbishop Ireland, 1915).

Mc-. Names beginning thus are entered as if spelled Mac-. See the article MAC.

Mdina, Malta: see CITTÀ VECCHIA.

Mead, George Herbert (mēd), 1863–1931, American philosopher and psychologist, b. South Hadley, Mass., grad. Oberlin, 1883, and Harvard, 1888, and studied in Leipsig and Berlin. He taught at the Univ. of Chicago from 1894 until his death. The work of John Dewey and of Mead may be regarded as complementary. Mead, studying the development of the mind and the self, regarded mind as the natural emergent from the interaction of the human organism with its social environment. Within this bio-social structure the gap between impulse and reason is bridged by the use of language. Mastering language, man sets up assumptions as to his role in life, and self and consciousness-of-self emerge, giving intelligence a historical development that is both natural and moral. Mead calls his position social behaviorism, using conduct—both social and biological—as an approach to all experience and recognizing unpredictable behavior patterns as emerging from a complex of causes. An example of this type of emergence is the development of mental activity out of nonmental elements. Mead's work, collected posthumously, includes *The Philosophy of the Present* (1932), *Mind, Self, and Society* (1934), *Movements of Thought in the Nineteenth Century* (1936), and *The Philosophy of the Act* (1938).

Mead, Larkin Goldsmith, 1835–1910, American sculptor, b. Chesterfield, N.H., studied with Henry Kirke Brown, brother of W. R. Mead. He lived chiefly in Italy after 1862. His works include the Lincoln monument in Springfield, Ill. and a colossal statue of Ethan Allen for the capitol at Montpelier, Vt., of which he made a duplicate for Statuary Hall, Washington, D.C.

Mead, Margaret, 1901–, American anthropologist, b. Philadelphia, grad. Barnard (B.A., 1923), Ph.D. Columbia, 1929. In 1926 she became assistant curator, and in 1942 associate curator, of ethnology, of the American Museum of Natural History, New York city. She is known for her studies of the cultures of many remote peoples. Her works include *Coming of Age in Samoa* (1928), *Growing Up in New Guinea* (1930), *The Changing Culture of an Indian Tribe* (1932), *Sex and Temperament in Three Primitive Societies* (1935), *And Keep Your Powder Dry* (1942), and *Male and Female* (1949).

Mead, William Rutherford, 1846–1928, American architect, b. Brattleboro, Vt., grad. Amherst, 1867, brother of Larkin G. Mead. He entered the office of Russell Sturgis in New York. In 1872 he commenced the practice of architecture with C. F. McKim, their partnership being joined by Stanford White in 1879 to make the famous firm of McKim, Mead, and White. Mead was a fellow of the American Institute of Architects, was president (1907–8) of its New York chapter, and on the death (1909) of McKim succeeded him as president of the American Academy in Rome. Mead became a member of the National Academy of Design in 1910. Among the New York works of his firm are the old Madison Square Garden, buildings at Columbia Univ. and the College of the City of New York, the General Post Office, the Municipal Building, the Brooklyn Institute of Arts and Sciences, and additions to the Metropolitan Museum.

mead (mēd), alcoholic beverage fermented of honey and water, sometimes flavored with spices. It is highly intoxicating. Mead was known in classical Greece and Rome and was the favorite drink of the tribes of N and W Europe.

Mead, Lake: see HOOVER DAM.

Meade, George Gordon (mēd), 1815–72, Union general in the Civil War, b. Cádiz, Spain, son of a U.S. naval agent. Graduated from West Point in 1835, he resigned from the army the next year and became a civil engineer. In 1842 Meade reentered the army in the corps of topographical engineers. He served in the Mexican War and later on various engineering projects. In the Civil War he was made a brigadier general of volunteers (Aug., 1861). In the SEVEN DAYS BATTLES (1862), he was severely wounded at Frayser's Farm, but he recovered in time to lead his brigade ably at the second battle of Bull Run. In the Antietam campaign, in the battle of Fredericksburg (1862), and in the battle of Chancellorsville (1863), where he commanded a corps, he distinguished himself further. Meade succeeded Joseph HOOKER in command of the Army of the Potomac on June 28, 1863. Several days later he won the greatest battle of the war at Gettysburg (see GETTYSBURG CAMPAIGN). This brought him a brigadier generalcy in the regular army. He was criticized, however, for not following up his victory. Meade commanded the Army of the Potomac till the end of the war, but U. S. Grant really directed his army in the WILDERNESS CAMPAIGN and subsequent operations. Although he was thus overshadowed by the commander in chief, Meade's sound generalship contributed to the final Union success. He was promoted major general in the regular army on Grant's recommendation in Aug., 1864. After the war Meade commanded various military departments. See George Meade, *The Life and Letters of General George Gordon Meade* (2 vols., 1913); biographies by R. M. Bache (1897) and I. R. Pennypacker (1901), G. R. Agassiz, ed., *Meade's Headquarters, 1863–65* (1922).

Meade, city (pop. 1,400), co. seat of Meade co., SW Kansas, 88W of Dodge City, in a cattle area, inc. 1885. A state park with a lake is near.

meadow beauty, any plant of the genus *Rhexia*, perennials of wet places E of the Rockies, sometimes known as deer grass. A common species (*Rhexia virginica*), called also handsome Harry, has showy rose-purple flowers and a square stem. Meadow beauties may be cultivated in bog or moist wild gardens.

Meadow Lake, town (pop. 1,456), W Sask., NW of Prince Albert, in a lumbering and grain-growing district, with fishing and fur trapping near by.

meadow lark, common North American meadow bird of the blackbird family. The eastern species is a little larger than the robin and has a protectively colored black-and-brown-streaked coat, a yellow throat, a black crescent on the yellow breast, and outer tail feathers of white, conspicuous in flight. The bird nests in the grass. Its food consists mostly of insects. It has a clear, whistling song. The western species has a more melodious song than the eastern but in appearance the two are very similar.

meadow saffron or **autumn crocus,** any plant of the genus *Colchicum*, Old World hardy, crocuslike plants most of which flower in the fall when their leaves are gone. The flowers, of various colors, differ from the crocus in having six stamens. The corms and seeds of the common meadow saffron (*Colchicum autumnale*) are poisonous, yield COLCHICINE, and are used medicinally in treating gout and rheumatism. See also ROSE OF SHARON.

meadowsweet, any plant of the genus *Filipendula* (once classed as a SPIRAEA, some species of which are also called meadowsweet), generally hardy perennial herbs cultivated in borders, sometimes as pot plants. They have showy panicles of small white, pink, or purple flowers. The species include the white-flowered Eurasian dropwort, the pink-flowered North American queen of the prairie, and the white-flowered Eurasian queen of the meadow with leaves white-hairy underneath, escaped from cultivation in the United States.

Meadville, city (pop. 18,919), co. seat of Crawford co., NW Pa., S of Erie and on French Creek, settled c.1788, laid out 1793, inc. as a borough 1823, as a city 1866. A trading center for an agricultural region and near oil fields, its manufactures include rayon, zippers, and metal products. It is the seat of Allegheny College (coeducational, 1816). Meadville was founded as a frontier post on the site of Cussewago, a Munsee village.

Meaford (mē'furd), town (pop. 2,662), S Ont., on Georgian Bay and E of Owen Sound. It is a port, with boatbuilding, in a fishing, dairy, and fruit-growing region.

Meagher, Thomas Francis (mar), 1823–67, Irish revolutionist and Union general in the Civil War, b. Waterford, Ireland. Educated at Jesuit colleges in Ireland and England, he distinguished himself as a young orator for the cause of Irish legislative independence. In 1848 he was condemned to death for his part in the rebellion, but the sentence was commuted to penal servitude in Van Diemen's Land (now Tasmania). Escaping, he came to New York city in 1852, practiced law, and edited the *Irish News*. In the Civil War, Meagher fought at the first battle of Bull Run with the famous 69th Regiment and organized (1861–62) the "Irish Brigade" of New York. His command was eventually decimated in fighting with the Army of the Potomac from the Peninsula campaign through Chancellorsville, and Meagher resigned (1863) as brigadier general of volunteers. His resignation was soon canceled, and at the end of the war he was serving under Gen. W. T. Sherman. He was appointed secretary of Montana Territory in 1865 and also served as temporary governor. His autocratic rule was unpopular and he disappeared at Fort Benton under mysterious circumstances, supposedly drowned in the Missouri river. His *Speeches on the Legislative Independence of Ireland* was published in 1853. See biographies by W. F. Lyons (1870) and Michael Cavanaugh (1892), C. G. Bowers, *The Irish Orators* (1916).

Meah (mē'ŭ) [Heb., =hundred], tower of the wall of Jerusalem. Neh. 3:1, 12:39.

mealy bug, common greenhouse and crop pest of the scale insect family (Coccidae). It has an oval, segmented body which is usually covered with a waxy secretion, giving it a cottony or mealy appearance. Various species cause great damage by feeding on the juices of many plants, including citrus fruits, sugar cane, grapes, pineapple, and coffee.

mean, in statistics, a type of average. The arithmetical mean of a group of numbers is found by dividing their sum by their number. There are seven numbers in the group 4, 5, 6, 9, 13, 14, and 19 and their sum is 70. The mean, obtained by dividing 70 by 7, is 10. Less often used is the geometric mean (the square root of the product of the quantities).

Means, Philip Ainsworth, 1892–1944, American historian and archaeologist, b Boston, grad Harvard (B.A., 1915, M.A. 1917). An assistant on a Yale expedition to Peru (1914–15), he was later (1920–21) director of the National Museum of Archaeology, Lima, Peru. He traveled widely in Latin American countries, and between 1921 and 1932 he was several times an associate in anthropology at the Peabody Museum, Harvard. He wrote many books and articles, in both English and Spanish; these are admired for their scholarship and literary style. Among his works are *History of the Spanish Conquest of Yucatan and of the Itzas* (1917), *Ancient Civilizations of the Andes* (1931), *Fall of the Inca Empire and the Spanish Rule in Peru, 1530–1780* (1932), *The Spanish Main: Focus of Envy, 1492–1700* (1935), and *Newport Tower* (1942).

Mearah (mē'ärù) (Heb., =cave), unknown district of NW Palestine. Joshua 13:4.

Meares, John (mērz), 1756?–1809, British naval officer, explorer, and trader. He served in the navy, in which he attained the rank of lieutenant, until after the Peace of Paris (1783), when he entered the merchant service. In Macao he formed a commercial company for trade with the Northwest Coast of America, to which he paid his first visit in 1786, he explored along the coast of Alaska, wintered in Prince William Sound, and then returned to the Orient. Two years later he went to Nootka Sound, erected a trading post on its shores, and built the *Northwest America*, first ship launched in British Columbia. In 1789 his establishment at Nootka Sound was seized by the Spanish, war between England and Spain was narrowly averted. Meares later returned to the British navy and became (1795) a commander. He wrote *Voyages Made in the Years 1788 and 1789 to the North West Coast of America* (1790).

Mearns, the, county, Scotland: see Kincardineshire.

measles or **rubeola** (rōōbē'ùlu), contagious epidemic disease, widely prevalent, caused by a virus. The incubation period is about 10 or 11 days. Symptoms are fever, chills, running eyes and nose, and an eruption which appears on the forehead, cheeks, and back of the neck and gradually spreads over the body. This rash begins to fade in a few days and is followed by a flaking off of the dried skin, the desquamated skin is not infectious. Measles is chiefly a disease of the young, and one attack generally confers a lifelong immunity. Injections of protein material from the blood plasma of persons who have had measles have been found useful both in causing the disease when contracted to be a milder form (which nevertheless develops immunity to other attacks) and in giving temporary protection against the disease to those exposed to it. Sulfa drugs and penicillin are used to combat pneumonia and other complications which sometimes develop. German measles (rubella) is an infectious disease somewhat similar to measles, but relatively mild. It does not result in an immunity to measles. The incubation period is from 10 to 21 days. It is reported to be harmful to the embryo when contracted by the mother in early pregnancy.

measure, in music, a metrical unit having a given number of beats, the first of which receives an accent. The latter condition may be altered by syncopation. Measures are separated on the staff by vertical lines called bars. The consistent division of music into measures with regularly recurring accent did not become prevalent until about the 17th cent. See also meter and rhythm.

measures, see weights and measures.

meat, in general, the flesh of animals, intended or prepared for food, especially that of cattle, sheep, lambs, and swine. The word is sometimes used in distinction from game, poultry, and fish, sometimes as inclusive of all animal flesh. The chief constituents of meat are water, protein, and fat, with small amounts of minerals. Its food value is high, the protein contributing to the growth and repair of tissue, the fat being a source of energy. Phosphorus, iron, and vitamins are contained in meat, especially in some of the edible organs (e.g., liver). Meat is very completely digested, nearly all the protein and 95 percent of the fat, under normal conditions, becoming available for use in the bodily tissues. It remains in the stomach longer than starch or sugar foods, and varying periods of time are required for digestion of different meats, the fatter meats, such as pork, requiring a longer time. The edible parts of a carcass include lean flesh, fat flesh, and edible glands or organs, such as the heart, liver, kidneys, tongue, tripe, brains, and sweetbreads. The toughness and texture of meat depend on the character of muscular walls and connective tissue and vary with the part of the animal and its age and condition. "Ripening" or "hanging" meat for a time permits the formation of lactic acid, which acts on the tissues to soften them. Weak vinegar, sometimes used in preparing a tough cut for cooking, has a similar effect. Good meat may be recognized in the market by a uniform color, a firm, elastic texture, barely moist to the touch, and a scarcely perceptible, clean odor. The choicer cuts should be of fine texture and well interspersed with fat. Cooking meat not only softens tissues, kills parasites and microorganisms, and coagulates blood and albumen, but makes the meat more palatable by developing its flavors or introducing new ones by means of seasonings and sauces. Meat, where available, has been a staple food since prehistoric times. The meat supply, obtained at first by using the raw flesh of animals found dead, was augmented by trapping, then, as man developed his tools and a community life, by hunting, and finally by the domestication of animals. Meat has been subject to prohibitions (see vegetarianism) and to butchering regulations on religious and hygienic grounds. Meat consumption has been commonly based on the supply, lamb and mutton being preferred in the Near East, veal in Italy and pork and beef in most of Europe and America. The per capita use of meat is higher in the United States than in Europe but is exceeded in Argentina, New Zealand, Australia, and Canada, all large exporters.

Meath (mēth, mādh), county (903 sq. mi.; pop. 66,232), E Ireland, in Leinster. The county town is Trim. The land is mostly level, being a part of the central plain of Ireland, with extensive fertile areas near the Boyne and the Blackwater, the principal rivers. There is a sandy coast line of some 10 mi. along the Irish Sea. Farming and cattle raising support the bulk of the population, and there are a few minor manufactures in the larger towns. The region is important in Irish history. Tara was long the seat of the high kings of Ireland. Meath was considered a fifth province of Ireland for many centuries and was not finally organized as a county until the 17th cent.

meat packing, one of the largest modern industries. It includes the operation of large plants and the buying, inspection, and slaughter of food-producing animals, the preparation of their carcasses for food and various other purposes, and the conduct of departments for advertising, distribution, and sales. The practice of assembling cattle at a central plant where they can be slaughtered and all parts utilized is a natural outgrowth of American conditions. The plains of the Middle West and the South support cheap stock raising, but the cattle must be marketed in the densely populated Eastern states. Losses entailed by driving animals, especially swine, to distant markets led, as early as 1820, to the shipment of brine-packed meat from central points. Cincinnati was a leading center from 1840, and in the 1850s Chicago attained prominence in the industry. With its Union Stock Yards (1864), it became the dominant livestock and packing center of the United States. Modern meat packing dates from the introduction of refrigeration. In 1870 fresh beef was shipped from Hammond, Ind., to Boston in an iced car. The Union Stock Yards began c 1877 the use of refrigerated cars. Distribution now extended even to export trade, and the handling of fresh meat assumed predominant importance. Storage and distributing warehouses, coordinating with extensive lines of refrigerated cars and steamships, make possible a rapid and efficient marketing of even the most perishable products. Research has rendered profitable the by-products of a packing plant, formerly considered waste, e.g., hide, hoofs, hair, horns, bones, fats, intestines, blood, and viscera. Federal laws require examination of all animals slaughtered for export or interstate trade. The laws are administered through the Bureau of Animal Industry of the Dept. of Agriculture, and all plants are open to inspection day and night. Chicago, Kansas City, South Omaha, St. Louis, South St. Joseph, Indianapolis, Fort Worth, Ottumwa, and Sioux City are distribution centers of packing-house products in the United States. Packers may avail themselves of a grading service, offered at cost by the Dept. of Agriculture, which classes beef as prime, choice, good, medium, common cutter and low cutter steer or heifer. See P. T. Ziegler, *The Meat We Eat* (2d ed., 1948); publications of the U.S. Dept. of Agriculture.

Meaux (mō), city (pop. 13,030), Seine-et-Marne dept., N France, on the Marne and E of Paris. It is the chief city of Brie. An episcopal see since the 4th cent., it has a cathedral (12th–16th cent.) which contains the tomb of Bossuet, the most famous of its bishops. In the massacre of Meaux (1358) thousands of peasants who had participated in the Jacquerie were slain. Meaux was the farthest point of the German advance in the first battle of the Marne (1914).

Mebane (mē'bln), town (pop. 2,060), central N.C., E of Greensboro, founded 1854. It has textile and furniture plants and a tobacco market.

Mebunnal (mēbŭn'l), the same as Sibbecai.

Mecca (mĕ'kù), city (pop. c.130,000), capital of Hejaz, Saudi Arabia. The birthplace of Mohammed the Prophet, it is the holiest city of Islam. It is c 50 mi. from its port, Jidda, and is in a narrow valley overlooked by hills crowned with castles. The streets are wider than in most Oriental cities. Many of the buildings, constructed of stone, are more than three stories high. The city, called Macoraba by Ptolemy, was an ancient center of commerce and a place of great sanctity for idolatrous Arab sects before the rise of Mohammed. Mohammed's flight (the hegira) from Mecca in 622 is the beginning of the Moslem era. He captured the city shortly after. Although Mecca never lost its sanctity, it declined speedily in commercial importance after its capture by the Omayyads in 692. It was sacked in 930 by the Karmathians and taken by the Ottoman Turks in 1517. The Wahabis held it from 1803 to 1813. Here, in 1916, Husein ibn Ali proclaimed his independence of Turkey and maintained himself as king of the Hejaz until Mecca fell to Ibn Saud in 1924. The center of Mecca is the great mosque, the Haram, which encloses the Kaaba, the chief goal of Moslem pilgrimage. Next to the Kaaba is the holy well, the Zemzen, used solely for religious and medicinal purposes. The great bazaar outside the mosque is noted for its silks, beadwork, and perfumes. The commerce of the city depends almost wholly on the pilgrims, as there are few manufactures save articles of devotion. Despite the ban against unbelievers, the holy city was visited and described in the 19th cent. by Richard Burton and others. In some years as many as 150,000 Moslems make the pilgrimage to Mecca, Medina, and Arafat. See Eldon Rutter, *The Holy Cities of Arabia* (1928).

Méchain, Pierre François André (pyĕr' frāswä' ädrā' māshĕ'), 1744–1804, French astronomer, particularly remembered as an observer of comets and the discoverer of several. In the *Connaissance des temps*, which he edited for 10 years, and in the *Transactions* of the Academy of Sciences most of his memoirs on comets and on eclipses were published. He worked with J. D. Cassini and A. M. Legendre in 1787 in verifying the difference in longitude between the observatories of Paris and Greenwich, in 1791 he worked with J. B. J. Delambre in measuring a part of the arc of the meridian between Dunkirk and Barcelona, as a basis for the establishment of the metric system.

mechanical advantage: see machine.

mechanical engineering, see engineering.

Mechanic Falls, town (pop. 1,999), SW Maine, W of Auburn and on the Little Androscoggin, set off from Minot and Poland 1893. It has paper mills.

mechanics, branch of physics concerned, in general, with the study of the effects produced when forces act upon bodies (solids, liquids, or gases). Although the ancients used such simple machines as the lever, the inclined plane, and the wheel and axle and by means of them were able to do much useful work which otherwise would not have been possible, at first they were not aware, apparently, of the fundamental principles governing the action of those forces which they applied to the solid bodies. Understanding of the principles came gradually, and the mechanics of today, with its carefully tested and organized knowledge, is the result of the efforts of many men to determine what general laws govern the action of forces on bodies. Archimedes, for example, studied the action of the lever and stated his simple law, and Leonardo da Vinci in the Renaissance devoted special attention to this device. Later other simple machines were investigated and methods were devised for representing, by geometrical figures, the action of the forces applied (see machine). Galileo studied the inclined plane, the simple pendulum, and the speed of falling bodies of different weight from his experiments drawing important conclusions. Christiaan Huygens was concerned with centrifugal motion. Isaac Newton organized those principles already discovered and brought forward his own very important laws of motion and universal gravitation. Since then, especially from the times of Descartes and Leibniz, these principles have been reduced to mathematical formulas. The science of mechanics is to a large degree abstract. It treats primarily of motion, of the effects of forces applied to bodies in motion (kinetics) and of motion alone (kinematics) without consideration of the causes, such as mass and force. Although the branches of the science are variously grouped, these two fields of investigation are frequently classed together under dynamics—as opposed to statics, that branch of mechanics treating of bodies in equilibrium and of the forces holding them in that state. The mechanics of liquids deals with bodies of liquids in equilibrium (hydrostatics), with the motion of liquids and the principles involved (hydrodynamics), and with the application of these principles to various machines (hydraulics, see hydraulic machine). For example, Pascal's law of fluid pressure, a principle of hydrostatics, finds application in the hydraulic press. Archimedes' principle is applied to problems concerning the buoyant effect not only of liquids on bodies immersed in them, but also of gases, which are commonly classed with liquids as fluids. The study of fluids in motion involves, as does the study of solids, a consideration of friction and of inertia. The mechanics of gases (pneumatics) is largely concerned with the pressure exerted by the atmosphere and with the physical properties of gases in general and forms the basis for the action of such devices as the siphon and the pump.

Mechanicsburg. **1** Village (pop. 1,653), W central Ohio, NE of Springfield, in a farm area. **2** Industrial borough (pop. 5,709), S Pa., between Harrisburg and Carlisle, settled c.1790, inc. 1828. It produces textiles and metal products and is in a farming area.

Mechanicsville: see SEVEN DAYS BATTLES.

Mechanicville, city (pop 7,449), E N.Y., N of Albany, on the west bank of the Hudson and on the Barge Canal, settled before 1700, inc as a village 1859, as a city 1915 There are railroad shops here. Bricks, paper, and knit goods comprise the chief products E E. ELLSWORTH lived in the city.

mechanized warfare, in the broadest sense, modern mobile attack and defense that depend upon machines, more particularly upon those powered by gasoline motors. Central to the prosecution of such warfare are the tank and the armored vehicle, with support and supply from motorized columns and airplanes The automobile was of great use in the First World War The tank was introduced at Cambrai in 1917, and its use was enthusiastically endorsed by the Briton, Gen J. F C Fuller. The need for air protection and support was emphasized by the American, Gen. William L. Mitchell The basic essentials were thus established early, but it was not until Germany attacked Poland at the start of the Second World War that the full potentialities of mechanized warfare (as well as air warfare) began to be revealed The German armored divisions (Panzer divisions) proved their worth and were later to win spectacular success in North Africa and in Russia Outstanding among the German proponents of this sort of warfare were Heinz Guderian and Erwin Rommel The German triumphs brought recognition to the men in other countries who had advocated mechanized warfare, e g , Charles de Gaulle The British and American armies emphasized the creation of armored divisions and the development of weapons against mechanized warfare, especially the antitank gun and the air bomber The Germans used their mechanized forces for deep infiltration of enemy territory, but were ultimately beaten by superior use of artillery as shown by the Russians in such engagements as the battle of Orel and by the British in the battle of Alamein The use of air defense also told The Allies themselves developed the use of tank warfare with brilliant success, as in the thrusts of American forces under George S Patton, Jr There are many who argue that the classic age of this particular type of mechanized warfare came and went in the Second World War, but the effects on mechanized warfare of such new weapons as the atomic bomb, rockets, and jet-propelled airplanes have not yet been actually demonstrated

Mechelen, Belgium see MALINES

Mecherathite (mĕ'kurəthīt), obscure designation of one of David's guards 1 Chron 11 36

Mechitar see ARMENIAN LITERATURE

Mechlin, Belgium see MALINES

Mechnikov, Ilya Ilyich. see METCHNIKOFF, ÉLIE

Mecklenburg (mĕ'klunbûrg, Ger mā'klunboŏrk, mĕ'-), state (8,863 sq mi , pop 2,108,735), N Germany, along the Baltic Sea Schwerin is the capital As constituted after 1945 under Russian military occupation, Mecklenburg consists of the former states of Mecklenburg-Schwerin (5,068 sq mi , 1925 pop 674,045) and Mecklenburg-Strelitz (1,131 sq mi , 1925 pop 110,269) and of the part of the former Prussian province of POMERANIA situated W of the Oder (but not including Stettin) Mecklenburg is a low-lying, fertile agricultural region, with many lakes and forests Cattle raising and fishing are important occupations On the Baltic coast are the cities of ROSTOCK, WISMAR, and STRALSUND, long important as Hanseatic ports, and the Island of RÜGEN (Rugen and Stralsund were formerly in Pomerania) There are many seaside resorts Mecklenburg has no important industries The region was occupied (6th cent A D) by the WENDS (Slavs) Later awarded as a march to the dukes of Saxony, it was subdued (11th cent) by Henry the Lion, and the Wendish prince Pribislaw became a vassal of the Holy Roman Empire In 1348 the princes were raised to ducal rank In the Thirty Years War, Duke Adolphus Frederick was deposed (1628) and the duchy was given to WALLENSTEIN, who had conquered it, it was, however, retaken by Gustavus II of Sweden and restored (1632) to its former ruler The Mecklenburg dynasty divided into several branches at various times in its history The most recent division of the land took place in 1701, when the line of Mecklenburg-Strelitz was founded At the Congress of Vienna (1815) both divisions of Mecklenburg were raised to grand duchies They both joined the German Confederation, sided with Prussia in the Austro-Prussian War of 1866, and joined the German Empire in 1871 The grand dukes were deposed in 1918, in 1934 the separate states of Mecklenburg-Schwerin and Mecklenburg-Strelitz were united Mecklenburg joined (1949) the East German republic

Mecklenburg Declaration of Independence, alleged to have been proclaimed at Charlotte, N C , by the citizens of Mecklenburg co. on May 20, 1775. Although North Carolina's seal and flag bear this date, the declaration is widely regarded as a spurious document. Actually, the Mecklenburg people adopted (May 31, 1775) strong anti-British resolutions, with no mention of independence An account of the Mecklenburg Resolves, as they are called, was published in 1819, with embellishments from the national Declaration of Independence. From this grew the tale of the declaration of May 20, which still persists in North Carolina, but is completely unsupported by documentary evidence. A small matter (only one county in one colony is involved), it has nevertheless produced considerable controversy See W. M Hoyt, *The Mecklenburg Declaration of Independence* (1907), J H. Moore, *Defense of the Mecklenburg Declaration of Independence* (1908)

Medad (mē'-), one who with Eldad received the prophetic power of Moses Num 11 16,26

medal, a piece of metal, cast or struck, commonly coin shaped, but not circulated as money The obverse and reverse bear bas-relief and inscription Commemorative medals are issued to preserve the memory of a notable person or event DECORATIONS, CIVIL AND MILITARY, are medals (disk, cross, or star) conferred by state, order, or organization for signal bravery or service or for distinction in science or the arts Religious medals, often worn on the person of Roman Catholics, are believed to be efficacious if blessed by the Church, indulgences may be attached to blessed medals Medals have ranked as works of art since Greek times, Roman medals are notable for their realistic portraiture Medals returned to fashion during the Renaissance especially through the fine work of PISANELLO Many sculptors and painters were famous also as medalists, notably Filippo Lippi, Benvenuto Cellini, and Albrecht Durer France in the 19th cent became the leader in producing medals of artistic merit Cast medals were predominant in the 15th cent but by the 16th had been largely superseded by die-struck medals Dies may be cut direct, or a wax or plaster model about four times the intended size of the medal may be reproduced as a metal electrotype from which a die is made in the desired size by a reducing machine operating on the principle of the pantograph See also NUMISMATICS

medallion, in sculpture, usually a portrait relief, such as an oval, circular, or rectangular plaque or large MEDAL several inches or more in diameter Medallion in decorative art is a similarly shaped motif, it may be single, as in antique jewelry or title-page ornaments used in printing, or it may be repeated in a pattern with garland, wreath, or geometric frame to form a dispersed design, as in textile and lace patterns In architecture, a medallion is an ornamental feature in relief or color displaying mask, bust, figure, or decorative design on members such as beams, brackets, and window trims

Medan (mē'dăn), son of Abraham and Keturah Gen 25 2, 1 Chron 1 32

Medan (mädan'), town (pop 76,584), capital of the state of East Sumatra, Indonesia, on NE Sumatra. It is the trade center of a rich agricultural area producing tobacco, rubber, and tea, and it manufactures machinery and bricks Its port is Belawan, 15 mi north of the town

Medary, Samuel (mĕ'durē), 1801–64, American journalist, b Montgomery co , Pa In Ohio after 1825, he edited the *Ohio Sun* at Bethel and later the *Ohio Statesman* at Columbus and was superintendent of public printing (1837–47) Medary, a leading Western Democrat, championed the annexation of Texas and Oregon He was most influential in having adopted the Ohio constitution of 1851 He was territorial governor of Minnesota (1857–58) and of Kansas (1858–60) In 1860 he founded the *Crisis* in Columbus, Ohio, and in the Civil War, as a "Peace Democrat" and supporter of C L VALLANDIGHAM, he was bitterly hated by Union patriots, who wrecked his press in 1863

Medea (mēdē'ə), in Greek mythology, princess of Colchis, famous for her knowledge of sorcery She loved JASON and helped him, against the will of her father, Aeetes, to obtain the GOLDEN FLEECE When Jason left Colchis she fled with him, taking along her brother Absyrtus To stay her pursuing father, she murdered Absyrtus and scattered bits of his body as she fled, knowing that Aeëtes must pause to pick them up Medea lived as Jason's wife for many years and bore him two children She induced the daughters of Jason's uncle PELIAS to murder their father, promising to restore his youth When Jason wished to marry CREUSA, Medea sent her an enchanted wedding gown which burned her to death Then she killed her children and went to Athens, where she married AEGEUS, father of THESEUS She is the heroine of plays by EURIPIDES, SENECA, CORNEILLE, and others

Medeba (mĕ'dĭbə, mē'-), town, Jordan, E of the Dead Sea It is S of Heshbon In early times it was in Moab and is so mentioned in the Bible Num 21 30, Joshua 13 9,16, 1 Chron 19 7, Isa 15 2 Later it was important as a holy place and became a bishop's see One of the oldest of extant maps was found in a mosaic in a Byzantine church at Medeba It antedates Islam.

Medellín (mādhāyēn'), city (pop 143,952), W central Colombia Founded in 1675 in a small valley (alt. c 5,000 ft), Medellín was geographically isolated until the development of transportation in the 19th cent Not until after 1918 was coffee, its main agricultural product, introduced Manufacturing includes textile, shoe, soap, candy, and bottle factories, ironworks, ice plants, and breweries, coal is mined locally, and there are sugar refineries near by A clean, modern, healthful city, Medellín is the leading industrial center of the republic

Medelpad (mā'dulpād), historic province of NE Sweden. It is now administratively part of VASTERNORRLAND CO.

Medes: see MEDIA

Medfield, residential town (pop. 4,384), E Mass , SW of Boston, set off from Dedham 1650 Most of it was burned in King Philip's War George Inness lived and painted some of his best-known canvases in Medfield

Medford, 1 City (pop 63,083), E Mass , northern suburb of Boston, on the Mystic river, settled 1630, inc as a town 1684, as a city 1892 Paper products and furniture are made here It is the seat of TUFTS COLLEGE and has several 18th-century buildings Lydia Maria Child was born in Medford **2** Town (pop 1,121), co seat of Grant co , N Okla , NE of Enid, in wheat country **3** City (pop 11,281), co seat of Jackson co , SW Oregon, W of Klamath Falls and on Bear Creek, a tributary of the Rogue, founded 1883, inc as a town 1884, as city 1885 With fruit-packing plants and lumber mills, it is the trade and shipping center for a rich farming, lumbering, and quarrying region Resort activities center about near-by Crater Lake and the Rogue river fishing and game area **4** City (pop 2,361), co seat of Taylor co , central Wis , NW of Wausau and on the Black River, inc 1889

Media (mē'dēə), ancient country of W Asia, of varying limits, occupying generally what is now NW and W Iran and S Azerbaijan SSR It extended from the Caspian Sea to the Zagros Mts It was divided by the Romans into Media Atropatene (modern Azerbaijan) and Media Magna, the southern and larger division whose capital was Ecbatana, the modern Hamadan. According to Ctesias, Arbaces was the founder of the dynasty which ruled Media until its overthrow by Cyrus The country was then united with the Persian Empire See PERSIA

Media, borough (pop 5,351), co seat of Delaware co , SE Pa , near Philadelphia, settled 1682, laid out c 1848, inc 1850 It has a large business section and a few industrial plants Near by is the Providence Meetinghouse (1684), where many of William Penn's followers are buried

median (mē'dēun), in statistics, a type of AVERAGE In a group of numbers as many numbers of the group are larger than the median as are smaller In the group 4, 5, 6, 9, 13, 14, 19, the median is 9, three numbers being larger and three smaller

mediation, in international law, type of intervention in which the disputing states accept the offer of a third state to recommend a solution for their controversy Mediation by an international commission is usually termed conciliation Mediation differs from ARBITRATION in being a diplomatic rather than a judicial procedure, thus, the parties to the dispute are not bound to accept the mediator's recommendation Certain formal procedures appear in mediation which are absent from diplomatic good offices (the informal consideration of a dispute), in effect, however, the two methods are identical Resort to mediation has become increasingly frequent The Declaration of Paris (1856) expressed the hope that the signatories would ask for mediation in their disputes At the Second Hague Conference (1907) the right of friendly powers to offer mediation was recognized The Covenant of the League of Nations provided that the whole League, acting through the League Council, should offer conciliation, and the Charter of the United Nations requires all members to submit disputes to mediation on recommendation of the Security Council Mediation has been successfully used in many cases The United States was mediator between Bolivia and Chile (1882) and between Russia and Japan (1905)

medic (mĕd'ĭk), any plant of the genus *Medicago*, annual or perennial Old World legumes mostly cultivated as forage or green-manure plants They have trifoliate leaves, small yellow or purple flowers in heads or racemes, and usually twisted pods, often burry Besides ALFALFA, the most important species in America include the black medic, the toothed bur clover, and the spotted medic A few are occasionally cultivated for ornament—the snail clover for its odd fruits—and several are naturalized in America

medical care insurance see HEALTH INSURANCE.

medical jurisprudence or **forensic medicine,** the application of medical science to legal problems It is typically involved in cases concerning paternity, insanity, injury, or death resulting from violence It also defines the relation of physician and patient See B S Oppenheimer, *Medical Jurisprudence* (1935)

Medici (mĕ'dĭchē, Ital mā'dēchē), Italian family which directed the destinies of FLORENCE from the 15th cent until 1737 Of obscure origin, they rose to immense wealth as merchants and bankers, became affiliated through marriage with the major houses of Europe, and, besides acquiring (1569) the title grand dukes of Tuscany, produced three popes (LEO X, CLEMENT VII, and Leo XI), two queens of France (CATHERINE DE' MEDICI and MARIE DE'

MEDICI), and several cardinals of the Roman Church. They also ruled for a brief period (1516–21) the duchy of Urbino. The rise of the Medici in Florence coincided with the triumph of the capitalist class over the guild merchants and artisans. Until 1532 the democratic constitution of Florence was outwardly upheld, but the Medici exerted actual control over the government without holding any permanent official position. They were driven from power and expelled from Florence in 1433–34, from 1494 to 1512, and from 1527 to 1530, but the attempts (such as the PAZZI CONSPIRACY, 1478) of the Florentine republicans to restore the former liberties failed ultimately because of the Medici's wealth and powerful connections. When their influence began, in the early 15th cent., much of the most glorious period of the RENAISSANCE in Florence lay already in the past, however, the magnificence and liberality of many of the members of the house, who were passionate patrons of the arts, literature, and learning, allowed Florence to become the most stupendous repository of European culture since the Athens of Pericles. Florence such as it is today is largely the accomplishment of the Medici. This cultural flowering was accompanied by tremendous economic prosperity and expansion and by territorial aggrandisement (see TUSCANY) which reached its climax in the 16th cent. The rule of the Medici, though denounced by their enemies as tyrannical, was at first generally tolerant and wise, but became stultifying and bigoted in the 17th and 18th cent. The genealogy of the family is complicated by numerous illegitimate offspring and by the tendency of some of the members to dispose of each other by assassination. The first important member was Giovanni di Bicci de' Medici (1360–1429). His elder son, Cosimo de' Medici (see separate article) founded the senior line, which included Piero de' Medici (Piero il Gottoso), Lorenzo de' Medici (Lorenzo il Magnifico), Piero de' Medici (1471–1503), Pope Leo X, Giuliano de' Medici, duke of Nemours, Lorenzo de' Medici, duke of Urbino, Ippolito de' Medici, Alessandro de' Medici, and Pope Clement VII (separate articles on all). Giovanni di Bicci's younger son, Lorenzo (d 1440), founded the younger line, which included Lorenzino de' Medici, Giovanni de' Medici (Giovanni delle Bande Nere), and the grand dukes of Tuscany—Cosimo I, Ferdinand I, Cosimo II, Ferdinand II, Cosimo III, and Gian Gastone, last of the line (separate articles on all). See G. F. Young, *The Medici* (2 vols., 1909); Lacy Collison-Morley, *The Early Medici* (1936), Ferdinand Schevill, *The Medici* (1949). See also bibliographies under FLORENCE and RENAISSANCE.

Medici, Alessandro de' (älĕs-sän'drō dā), 1511–37, duke of Florence (1532–37), probably an illegitimate son of Lorenzo de' Medici, duke of Urbino. After his father's death (1519), young Alessandro lived in Florence with his cousin Ippolito de' Medici (see separate article) and with Cardinal Passerini, who administered the city under the orders of Pope CLEMENT VII, the head of the Medici family. In 1527 the Medici were banished from Florence as a result of the invasion of Italy by the army of Emperor Charles V. When the pope succeeded in restoring them to power (1530), he favored Alessandro against Ippolito and sent him to Florence. Alessandro was made head of the republic (1531) and hereditary duke (1532) by Emperor Charles V, whose daughter Margaret (later known as Margaret of Parma) he married. His arbitrary rule brought him general hatred. The Florentines sent Ippolito to appeal to Charles V, protesting the duke's atrocities, but Ippolito died on the way, apparently poisoned at Alessandro's orders (1535). Alessandro was, however, murdered in turn two years later by Lorenzino de' Medici (see separate article). With Alessandro the elder Medici line became extinct, and the headship of the family passed to Cosimo I de' Medici.

Medici, Catherine de': see CATHERINE DE' MEDICI.

Medici, Cosimo de' (kō'zēmō), 1389–1464, Italian merchant prince, first of the Medici family (see separate article) to rule Florence. After the death of his father, Giovanni di Bicci de' Medici, Cosimo and his family were banished from Florence by a faction headed by the powerful Albizzi family. However, he returned (1434) a year later and, supported by the people, soon became the acknowledged leading citizen of the republic. An able financier, he vastly expanded the family's banking business. In spite of his lavish expenses for the state, for charities, and for the arts and learning, he doubled his fortune. He respected the republican institutions of the city, always sought popular support, and made his power as little felt as possible. Guiding Florentine foreign policy, he sought a balance of power among the Italian states. From the traditional alliance with Venice against Milan, he shifted to an alliance with the SFORZA family, helping the Sforza to gain control over Milan. Cosimo's claim to greatness, however, rests chiefly on his generosity towards artists and scholars. He founded the famous Medici Library and an academy for Greek studies (headed by Marsilio FICINO), built extensively in Florence, and protected such artists as Brunnelleschi, Donatello, Ghiberti, and Luca della Robbia. After his death Florence voted him the official title Pater Patriae. Piero de' Medici (Piero il Gottoso), his son, succeeded as head of the family. See C. S. Gutkind, *Lorenzo de' Medici, Pater Patriae* (1939).

Medici, Cosimo I de', 1519–74, duke of Florence (1537–69), grand duke of Tuscany (1569–74); son of Giovanni de' Medici (Giovanni delle Bande Nere). In 1537 Lorenzino de' Medici (see separate article) murdered Cosimo's predecessor, Alessandro de' Medici, and fled from Florence, thus leaving the succession to Cosimo. Cosimo, despite promises to the contrary, assumed absolute authority as soon as he was installed. A group of exiles who tried to oppose him were defeated and beheaded. In 1539 Cosimo married a Spanish noblewoman, Eleonora de Toledo, whose enormous dowry replenished his empty coffers. Under Cosimo's able, though ruthless, rule Florence reached its highest political importance and material prosperity and almost doubled its territories—notably by the acquisition (1555) of the republic of SIENA. In 1569 Pope Pius V raised Cosimo to the rank of grand duke of Tuscany. His son, Francesco de' Medici, succeeded him.

Medici, Cosimo II de', 1590–1620, grand duke of Tuscany (1609–20), son and successor of Ferdinand I de' Medici. He was a patron of Galileo. His son, Ferdinand II de' Medici, succeeded him.

Medici, Cosimo III de', 1642–1723, grand duke of Tuscany (1670–1723), son and successor of Ferdinand II de' Medici. During his reign the government of Tuscany degenerated into bigoted and corrupt despotism. His son and successor, Gian Gastone de' Medici, was the last of the family to rule Tuscany.

Medici, Ferdinand I de', 1549–1609, grand duke of Tuscany (1587–1609), brother and successor of Francesco de' Medici. He was made a cardinal in his youth, and he built the famous Villa Medici at Rome. To become grand duke at his brother's death he resigned his cardinalate (he had never been ordained). Ferdinand improved the administration, strengthened the fleet, and created the port of Leghorn. His son, Cosimo II de' Medici, succeeded him.

Medici, Ferdinand II de', 1610–70, grand duke of Tuscany (1620–70), son and successor of Cosimo II de' Medici. A pupil of Galileo, he founded (1657) the Accademia del Cimento, the first European academy of natural sciences. As a ruler, Ferdinand was weak. His lavish expenses drained the family fortune. His son, Cosimo III de' Medici, succeeded.

Medici, Francesco de' (franchā'sko), 1541–87, grand duke of Tuscany (1574–87), son and successor of Cosimo I de' Medici. In his reign the decline of the family began. He allowed the Austrian and Spanish branches of the house of Hapsburg to establish a virtual protectorate over his dominion, devoting himself to alchemy and other nonpolitical pursuits. He married Joanna, daughter of Emperor Ferdinand I, and, after Joanna's death, Bianca CAPELLO. His daughter by the first marriage was Marie de' Medici, queen of Henry IV of France. Francesco was succeeded by his brother, Ferdinand I de' Medici.

Medici, Gian Gastone de' (jän' gästō'nā), 1671–1737, grand duke of Tuscany (1723–37), son and successor of Cosimo III de' Medici. He was the last male member of his family, and the question of succession was agitated even before his father's death. In 1735 it was settled, in connection with the general territorial exchanges caused by the War of the POLISH SUCCESSION, that on Gian Gastone's death Tuscany should fall to Francis of Lorraine (later Emperor FRANCIS I), husband of Maria Theresa, in exchange for Lorraine, which went to Stanislaus I of Poland. When Francis became grand duke, Tuscany had fallen from its former glory to decadence and impoverishment.

Medici, Giovanni de' (1475–1521) see LEO X.

Medici, Giovanni de', or **Giovanni delle Bande Nere** (jōvän'nē dĕl'lā bän'dā nā'rā) (Ital.=of the black bands), 1498–1526, Italian condottiere, great-grandson of Lorenzo de' Medici (d 1440, brother of Cosimo de' Medici, 1389–1464). The son of Caterina SFORZA, he was trained from childhood for the military life, and in 1516 his relative, Pope Leo X, gave him command of a troop. He soon won great reputation and eventually commanded a troop of his own. His nickname was probably acquired because of the black stripes of mourning on his banners after the death (1521) of Leo X. In the Italian Wars, Giovanni fought (1521–22) in N Italy for the pope, on the side of Emperor Charles V, against Francis I of France. He later changed sides, however, and fought on the side of Francis in the battle of Pavia (1525), where he was severely wounded. In 1526 he again sided against Charles V, fighting for the League of Cognac. He died of a wound received in battle. Giovanni delle Bande Nere possessed great courage and tactical ability. His hold over his men was remarkable, and his corps remained together long after his death. His wife, Maria Salviati, was a granddaughter of Lorenzo de' Medici (Lorenzo il Magnifico), and his son became grand duke of Tuscany as Cosimo I.

Medici, Giuliano de' (jōōlyä'nō), 1479–1516, duke of Nemours (1515–16); younger son of Lorenzo de' Medici (Lorenzo il Magnifico) and brother of Pope Leo X. He entered Florence in 1512 when the Holy League restored his family to rule the city. Having married a princess of the Nemours branch of the house of Savoy, he was invested with the duchy by Francis I of France, who also intended to place him on the throne of Naples. Giuliano was a patron of the arts and letters. His statue, by MICHELANGELO, together with the statues of Day and Night, adorn his tomb in the Church of San Lorenzo, Florence. Ippolito de' Medici was an illegitimate son of Giuliano.

Medici, Giulio de': see CLEMENT VII.

Medici, Ippolito de' (ĭp-pō'lētō), 1509–35, cardinal of the Roman Church; an illegitimate son of Giuliano de' Medici, duke of Nemours. Pope CLEMENT VII, head of the Medici family, after his election (1523) to the papacy continued to rule Florence through Ippolito and Ippolito's cousin, Alessandro de' Medici (see separate article), entrusting to Cardinal Passerini the actual conduct of Florentine affairs. Clement favored Alessandro more and more, and in 1531 he made Ippolito a cardinal and sent him on a mission to Hungary to remove him from the scene. In 1535 Ippolito was deputed by the Florentines to bring their grievances against Alessandro before Emperor Charles V. He died on his way, apparently poisoned on Alessandro's orders. Ippolito, a patron of literature, is said to have maintained 300 poets at his expense.

Medici, Lorenzino de' (lōrăntsē'nō), 1515–47, member of the cadet branch of the Medici family. A boon companion of Alessandro de' Medici (see separate article), he secretly plotted the duke's murder—possibly out of republican convictions. With a hired assassin, he stabbed Alessandro to death (1537) and fled to Venice. The uprising he anticipated failed to materialize. Lorenzino, though he had become head of the family, did not claim the succession, which fell to Cosimo I de' Medici, his distant cousin. Lorenzino was eventually assassinated in Venice on Cosimo's orders. He is the hero of Alfred de Musset's drama, *Lorenzaccio* (1834).

Medici, Lorenzo de' (lōrän'tsō), 1449–92, Italian merchant prince, called Lorenzo il Magnifico [the magnificent]. He succeeded (1469) his father, Piero de' Medici (Piero il Gottoso), as head of the Medici family and as virtual ruler of Florence. One of the towering figures of the Italian Renaissance, he was an astute politician, firm in purpose, yet pliant and tolerant, a patron of the arts, literature, and learning such as Europe had not known since Maecenas, and a reputable scholar and poet. Without adopting any official title, he subtly managed to conduct the affairs of the Florentine state. His lavish public entertainments contributed to his popularity, but, in combination with his mediocre success as a businessman, they helped to drain his funds. His growing control of the government alarmed Pope SIXTUS IV, who helped to foment the PAZZI CONSPIRACY (1478) against Lorenzo and his brother, Giuliano de' Medici. Giuliano was stabbed to death during Mass at the cathedral, but Lorenzo escaped with a wound, and the plot collapsed. Sixtus now declared war on Florence, which he excommunicated for the sacrilege committed in the cathedral. An honorable peace was made in 1481. In 1480, in order to retrieve his huge financial losses, Lorenzo by a coup d'état gained control over the public funds of Florence. The city, however, flourished, and Lorenzo, who played an important role on the international scene, constantly worked to preserve general peace by establishing a balance of power among the Italian states. Through his credit with Pope Innocent VIII he obtained a cardinal's hat for his son Giovanni (later Pope Leo X). In spite of the attacks of SAVONAROLA, Lorenzo allowed him to continue his preaching. Lorenzo spent huge sums to purchase Greek and Latin manuscripts and to have them copied. His brilliant literary circle included Politian, Ficino, Pulci, and Pico della Mirandola. He was a patron of Botticelli, Ghirlandaio, Filippino Lippi, Verrocchio, Michelangelo, and other hardly less famed artists. His own poetry—love lyrics, rustic poems, carnival songs, sonnets, and odes—shows a delicate feeling for nature. His son Piero de' Medici succeeded him as head of the family but was expelled from Florence two years later.

Medici, Lorenzo de', 1492–1519, duke of Urbino (1516–19), son of Piero de' Medici. His uncle, Pope LEO X, who controlled Florence through Lorenzo, made him duke of Urbino. After Lorenzo's death, however, Urbino reverted (1521) to the Della Rovere family. A patron of the arts and humanities, Lorenzo has been immortalized by MICHELANGELO, who designed and made his tomb in the Church of San Lorenzo, Florence. Of the three statues adorning his tomb, one represents Lorenzo in a pensive attitude (hence it is known as the *Pensieroso*), the other two represent Dawn and Dusk. Lorenzo was the father of Catherine de' Medici and, probably, of Alessandro de' Medici.

Medici, Marie de': see MARIE DE' MEDICI.

Medici, Piero de' (pyā'rō), 1416–69, Italian merchant prince. He succeeded his father, Cosimo de'

Medici, as head of the Medici family and as leader of the Florentine state. His ill-health earned him the name Il Gottoso [the gouty]. In 1466 Piero put down a conspiracy of nobles headed by the Pitti family, and although it was directed at his life, he allowed the conspirators to go free. His son, Lorenzo de' Medici (Lorenzo il Magnifico), succeeded as head of the family.

Medici, Piero de', 1471–1503, Italian merchant prince. He succeeded his father, Lorenzo de' Medici (Lorenzo il Magnifico), as head of the Medici family and as leader of the Florentine state. In 1494 he surrendered the chief fortresses of Tuscany to the invading army of CHARLES VIII of France. The democratic party in Florence, led by SAVONAROLA, took advantage of Charles's approach and of Piero's weakness to expel the Medici, who had virtually ruled Florence for half a century. After Piero's death the Medici regained (1512) control over Florence with the help of the HOLY LEAGUE. Giuliano de' Medici and Pope Leo X were brothers of Piero. Piero's son, Lorenzo de' Medici, became (1516) duke of Urbino.

medicine, the science and art concerned with the treatment and prevention of disease. Medicine had its beginnings in the earliest attempts of man to cope with injuries and with disease. Through many centuries and in many different civilizations disease, being of unknown origin, was associated with the supernatural, and its treatment was coupled with magic and superstition; wounds and other injuries, however, were more often treated by relatively rational methods. In treating various diseases primitive man sometimes employed trephining (making a circular opening in the skull) and also made some medicinal use of plants. Among early peoples a witch doctor was employed, especially when various folk methods (e.g., the use of charms, amulets, and herbs) had failed. Some of the elements of early folk medicine survive among some peoples in modern times. The historical origin of the practice of medicine on a more scientific basis is difficult to determine. Archaeological evidence points to the existence of a medical profession among the Sumerians of Mesopotamia several thousand years B.C. and among the Babylonians about the same time. The Code of Hammurabi includes laws applying to medical practice. Ancient civilizations of China, India, Egypt, and Persia showed varying degrees of progress in medical treatments and in anatomical knowledge. Ancient Israel contributed especially to the formulation of hygienic laws, most of which showed the influence of neighboring civilizations. The Arabs contributed notably to materia medica. In Europe ancient Greece, influenced undoubtedly by Babylonian and other cultures, developed the medical art to a higher degree than was again achieved for many centuries. Progress can be traced through the school of ASCLEPIADES OF BITHYNIA and Hippocrates (for the Hippocratic oath, see HIPPOCRATES) and was influenced by the studies of philosophers and scientists including Aristotle. GALEN followed in general the Hippocratic method, but his great contribution lay in his original experimental work and anatomical dissections. During the centuries following, much of the early learning was lost and only remnants were retained during the Middle Ages, chiefly through the agencies of the Christian Church and the teachings of the Arabian physicians. In the 9th cent. the famous medical school at SALERNO was founded, it was the prototype of others. Stimulus to more accurate anatomical studies resulted from the work of Leonardo da Vinci and Andreas Vesalius. Valuable contributions were made by William HARVEY, Edward JENNER, John HUNTER, and many others in later years. Medical progress had long been hampered by the low status assigned to the surgeon; the prevalent feeling that work with the hands was menial resulted in a division of work between the physician, who stood by and directed, and the surgeon or barber-surgeon, who operated on the patient. Not until the 14th cent. did the barriers between the two begin to break down. With the growth of a middle class who could afford medical treatment, such treatment became less a privilege of kings and nobles. Gradually medical training and education reached a higher plane, and the practice of medicine was raised to professional status. One of the commonest practices of the physician which persisted from antiquity up to the 19th cent. was bloodletting; this was accomplished by venesection and cupping and by the use of leeches. Toward the end of the 18th cent. there was finally a revolt against the practice, which had so long been used, often to a merciless degree. In the early 19th cent. a system of medical treatment known as HOMEOPATHY was developed. In contrast to homeopathy, the general practice at the time was to prescribe extremely large doses of medicines having effects on the body different from those caused by the disease; to this general practice the adherents of homeopathy applied the name allopathy. Allopathy has sometimes been incorrectly used for the ordinary system of using medicine. With formulation of the germ theory of disease in the 19th cent. by PASTEUR and the introduction of antiseptic methods by LISTER came a better understanding of infection and disease and a sharp decline in mortality. The work of Robert KOCH and others in bacteriology increased knowledge of the specific agents causing disease and led to the production of immunizing substances useful in combating disease. Innumerable discoveries and advances marked the further progress of medicine in the 19th and in the 20th cent. Better obstetrical care reduced both infant and maternal mortality. The development of vaccines, antitoxins, and other means of checking disease reduced mortality among children and adults. Treatment of glandular disorders became possible through studies of the action of hormones and other glandular products. The discovery of INSULIN and of the cure for pernicious anemia restored untold numbers of people to useful lives. Also among discoveries whose values can scarcely be estimated were radium, the SULFA DRUGS, and PENICILLIN and the other ANTIBIOTIC SUBSTANCES. As the scope of medicine enlarged, there was an increasing trend toward specialization in such fields as obstetrics, pediatrics, gynecology, urology, cardiology, dermatology, neurology, ophthalmology, radiology, psychiatry and medical psychology, preventive medicine, and public health. Aviation medicine assumed increasing importance with the growth of air forces and travel by air. Although a few scattered observations were made earlier, the period of the First World War saw the real beginnings of aviation medicine, and it received particular stimulus from the greatly increased development of air power in the Second World War. Among the problems with which the field is concerned are anoxia (deficiency or lack of oxygen in the tissues) and the effects of changes in barometric pressure and in acceleration. With the growth of medicine, the educational requirements for physicians and surgeons have become increasingly stringent. In addition to obtaining a medical degree (which follows only after a four-year course beyond the regular undergraduate college course) and serving an internship in a hospital, some additional years of study in a special field are usually necessary. The practice of medicine, at first limited to men, has become an increasingly important professional field for women also. It is recognized that many thousands of people do not have the benefit of good medical care, while often all doctors do not have enough patients. Attempts to adjust this situation include several forms of group medicine. In some instances a large group of employees of a firm have engaged a doctor to whom an annual salary is guaranteed, this is paid by the members of the group (each contributing a nominal sum), in return for which medical care by the physician is insured for the year. Such groups have sometimes established their own clinic or hospital. Similar plans have been followed also by community groups, where the group is small, the physician often continues private practice on a part-time basis. Sometimes a group of physicians set up practice together in a clinic where a patient may have the advantage of consultation with specialists in various fields, payment is usually made to the organization rather than to an individual doctor. Various plans of HEALTH INSURANCE have received wide support in the United States. Medical-care programs directed by the government, often called socialized medicine, have been practiced in some countries, e.g., in England. See also ANESTHESIA, PSYCHOSOMATIC MEDICINE; SURGERY, TROPICAL MEDICINE. Medicine Bow Mountains, outlying eastern range of the Rockies, SE Wyo. and N Colo. It extends from Medicine Bow town (pop. 338), Wyo., NW of Laramie, southward c. 100 mi. to Cameron Pass, Colo. Peaks include Medicine Bow Peak (12,005 ft.) and Elk Mt. (11,162 ft.). Much of the area is in Medicine Bow National Forest.

Medicine Hat, city (pop. 12,859), SE Alta., on the South Saskatchewan river near the Sask. border and SE of Edmonton. It is the center of a large natural-gas field, with coal mining, sheep and cattle ranching, and dry farming in the region. The city is a distributing center for a large area and has flour and feed mills, foundries, and railroad shops. In 1882 the site was chosen as a post for the Northwest Mounted Police.

Medicine Lodge, city (pop. 1,870), co. seat of Barber co., S Kansas, WSW of Wichita, in a wheat and livestock area, founded 1873, inc. 1879. In 1867 was concluded near here a peace treaty with the five tribes of the Plains Indians—the Apache, Arapaho, Cheyenne, Comanche, and Kiowa, every five years since 1927 a pageant has commemorated the event. Carry Nation, who lived here, began her antisaloon crusade in the city in 1899. Gypsum products are made.

medicine man: see SHAMAN.

Medieval Latin literature had its undatable beginnings in a crumbling Roman Empire whose literature had already become decadent. Transitional figures from the 4th to the 6th cent., such as St. HILARY OF POITIERS, St. AMBROSE, St. JEROME, and St. AUGUSTINE in PATRISTIC LITERATURE and the pagan BOETHIUS are hardly classical authors even if they cannot be called medieval. But although its development was gradual, Medieval Latin did produce a characteristic literature, different from that of classical Latin in its inspiration, its language, and its genres. The development resulted from two factors, the fall of the empire and with it the disappearance of the milieu which had produced Cicero and Vergil, and the rise of Christianity, the influence of which cannot be overestimated. From the 5th cent. Christian writers drew upon Greek and Latin patristic literature and the Latin versions of the BIBLE, especially the Vulgate. The language which these authors employed was the colloquial Latin which had been spoken for a long time by the lower classes in Rome and the provinces and which was simpler and more flexible than the classical. Classical language and models were never completely neglected, but attempts to revive classical standards, like that in the Carolingian renaissance, were unsuccessful. This colloquial Latin remained the language of the people in S Europe until the differentiation of vernaculars by the 10th cent. It then became the international language of Europe, and, fostered by the Catholic Church, it retained this function long after the rise of excellent vernacular literatures. Particularly in the early literature, Christianity also determined most of the genres. Poetry turned generally to hymns, and prose to homilies, theological treatises, ecclesiastical rules, saints' lives, and devotional literature in general. Some of the greatest medieval literature remains in the hymns and prayers of the Roman Catholic liturgy. There gradually developed also, especially from the 10th cent., important secular genres like the lyric, the epic, the romance, the fabliau, the beast epic, and the historical or philosophical treatise. The Medieval Latin literature extant is many times greater than the classical, and a chronological sketch can point out only the main figures and developments. One of the earlier Christian poets was the Spanish PRUDENTIUS (4th cent.), remembered especially for his hymns. Another was Sedulius (5th cent.), whose *Carmen paschale* recounts the life and resurrection of Christ. FORTUNATUS of Gaul (6th cent.) wrote, besides several occasional poems, the stirring hymn, *Vexilla regis*. Two other early hymns, both anonymous, were GLORIA IN EXCELSIS and TE DEUM. Principal prose writers in the 6th and early 7th cent. were CASSIODORUS and St. GREGORY OF TOURS, important for their histories; St. GREGORY I (Gregory the Great) for his letters, the *Dialogues*, and *Pastoral Care*, and St. ISIDORE OF SEVILLE for his *Origines*, a universal encyclopedia long prominent in the Middle Ages. From the 6th through the 8th cent. the British Isles were producing a substantial Latin literature, among the writers were St. GILDAS, St. COLUMBA, St. ALDHELM, and, most important the Venerable BEDE. ALCUIN of York, who joined the court of Charlemagne, had little literary merit, but figured largely in the Carolingian renaissance, a revival of learning which lasted nearly two centuries. Prominent figures connected with it were biographers and historians, such as PAUL THE DEACON, EINHARD, and LIUTPRAND, and theological writers, such as RABANUS MAURUS MAGNENTIUS and ERIGENA. The poets WALAFRID STRABO and GOTTSCHALK were exceptional in their attempts to use strict classical forms of quantitative verse. From the 4th cent. or earlier, however, there had been developing from a number of sources a popular, accentual, rhymed poetry. This process was stimulated by the evolution from the 9th cent. on of sequence hymns in which a single syllable corresponded to each note. Interaction between musical rhythm and words eventually produced the accentual, rhymed hymn, a forerunner of modern prosody. In the 10th cent. appeared the *Waltharius*, or *Waltharius*, a warlike Germanic epic, probably by EKKEHARD I, and the poems and plays of the nun HROSWITHA. In the same century began the simple Latin dialogues which dramatized the birth and the resurrection of Christ. They were given in French and English churches and later developed into the MIRACLE PLAY. Prominent authors in the late 10th and the 11th cent. were SYLVESTER II, his pupil Fulbert, St. PETER DAMIAN, LANFRANC, St. ANSELM, and HILDEBERT OF LAVARDIN. In all genres medieval Latin literature reached its height in the 12th and 13th cent. The GOLIARDIC SONGS.

which had begun in the 11th cent, flourished; their directness and freshness were characteristic of many of the best poems later produced in the vernacular Magnificent hymns, many of them now in the missal and breviary, were composed, e.g., *Jesu dulcis memoria*, sometimes attributed to St. BERNARD OF CLAIRVAUX, *Stabat Mater dolorosa*, probably by JACOPONE DA TODI; DIES IRAE by Thomas of Celano, and PANGE LINGUA by St THOMAS AQUINAS Other poets were ABELARD, who composed lyrics and hymns as well as philosophical works, Adam of St. Victor, who first used two-syllable rhyme with real skill; and BERNARD OF CLUNY, who produced the impressive jeremiad *De contemptu mundi* Among the many historians, chroniclers, encyclopedists, and writers of miscellanies were WILLIAM OF MALMESBURY, GEOFFREY OF MONMOUTH, GIRALDUS CAMBRENSIS, Walter MAP, and VINCENT OF BEAUVAIS. The summa of saints' lives appeared in the *Golden Legend*, collected by Jacobus de Voragine Scholars and philosophical writers of the 12th cent., such as JOHN OF SALISBURY and Robert GROSSETESTE, were forerunners of 13th-century SCHOLASTICISM Main figures in this synthesis of medieval philosophy were St BONAVENTURE, ALBERTUS MAGNUS, and St THOMAS AQUINAS himself The learning of Roger BACON, famous for his scientific and linguistic studies, pointed toward the Renaissance By the 14th cent the vernaculars were generally ascendant in literature, but both DANTE and PETRARCH esteemed their Latin writings Standing out above the numerous Latin writers involved in hair-splitting scholastic disputation were DUNS SCOTUS, WILLIAM OF OCCAM, and John WYCLIF One of the last popular works in Latin was the *Imitation of Christ* by THOMAS À KEMPIS of the 15th cent Although during the Renaissance and later times, Erasmus, Francis Bacon, Milton, Newton, and others wrote in Latin, they sought to imitate classical Latin, and Medieval Latin was displaced as a literary medium by the vernaculars It still remains an essential key to the medieval heritage See H O Taylor, *The Medieval Mind* (1925), F A Wright and T A Sinclair, *A History of Later Latin Literature* (1931), Maurice Hélin, *A History of Medieval Latin Literature* (1949)

Medill, Joseph (mədĭl'), 1823–99, American journalist, b near St John, N B His family moved to a farm near Massillon, Ohio, in 1832 He was admitted to the bar in 1846, but in 1849 abandoned the law and with his three brothers bought the Coshocton *Whig*, which he renamed the *Republican* In 1851 he founded the *Daily Forest City* in Cleveland and later merged it with a Free-Soil paper to form the Cleveland *Leader* Medill bought an interest in the Chicago *Tribune* in 1855, became its managing editor and business manager, and from 1874 till his death had absolute control of the paper He was important in the formation of the Republican party (he is credited with having suggested its name) and was a warm supporter and friend of Lincoln In the Civil War he advocated the emancipation and arming of the slaves and in Reconstruction days backed the radical Republicans in Congress He was a member of the Illinois constitutional convention of 1869, was one of the first U S civil service commissioners (1871), and was elected (1871) mayor of Chicago. See Philip Kinsley, *The Chicago Tribune* (3 vols , 1943–46), John Tebbel, *An American Dynasty* (1947)

Medina, José Toribio (hōsā'tōrē'byō mādhē'nä), 1852–1930, Chilean scholar His numerous works cover a vast range of learning—history and biography, bibliography, archaeology, and journalism Among them are a history of colonial literature in Chile, *Los aborigenes de Chile* (1882), biographical works on Juan Díaz de Solís, Esteban Gómez, and others, numerous books on the history of printing in Spanish America, and the monumental *Biblioteca hispano-americana* (7 vols., 1898–1907) See Elisabeth Roberts, *José Toribio Medina: His Life and Works* (1941)

Medina (mədē'nə), Arabic *Medinat en-Nabi* [city of the Prophet, i e , Mohammed] or *Medinat Rasul Allah* [city of the apostle of Allah], city (pop. c.15,000), Hejaz, Saudi Arabia. It is situated inland, c 110 mi. from the Red Sea, in a well-watered oasis, where much fruit is raised Before the flight (the hegira) of MOHAMMED from Mecca to the city in 622, Medina was called Yathrib Mohammed quickly gained control of Medina, successfully defended it against attacks from Mecca, and used it as the base for converting and conquering Arabia. Medina grew rapidly until 662, when the capital of the caliphate was transferred to Damascus Local warfare reduced the city's importance, and it passed to the rule of petty chieftains. It was brought under the sway of the Ottoman Turks in 1517 It fell to the Wahabis in 1804 but was recaptured by the Turks in 1812 In the First World War forces of Husein ibn Ali, who revolted against Turkey, captured Medina. In 1924 it fell to Ibn Saud, Husein's rival, after a 15-month siege The city is surrounded by two walls, flanked by bastions and pierced by nine gates The chief building is the great mosque, which contains the tombs of Mohammed, his daughter Fatima, and the caliph Omar. The great pilgrimage to MECCA which pious Moslems wish to make at least once in their lives includes a visit to Medina. See Eldon Rutter, *The Holy Cities of Arabia* (1928).

Medina (mĭdī'nə) 1 Industrial village (pop. 5,871), W N Y , on the Barge Canal and E of Lockport; in a rich farm region, inc 1832 Iron products, furniture and canned foods are made. Sandstone quarries are near 2 Village (pop 4,359), co. seat of Medina co , N Ohio, NW of Akron, in a farm area, settled as Mecca, platted 1818. Apiarian supplies and wood novelties are manufactured here

Medina Sidonia (mädhē'nä sēdhō'nyä), Spanish noble family, which received the ducal title from John II of Castile in 1445 and gave Spain several prominent citizens Best known among them was **Alonso Pérez de Guzmán, duque de Medina Sidonia** (älōn'sō pā'rĕth dā gōōthmän' dō̄'kā dä), 1550–1615 He was placed in command of the Spanish ARMADA through the favor of King Philip II. The disastrous defeat was partly due to his ineptitude.

Medinet el Faiyum, Egypt see FAIYUM.

Mediolanum see MILAN.

Mediterranean race. see RACE.

Mediterranean Sea [Latin,=in the midst of lands], largest inland sea, surrounded by Europe, Asia, and Africa Its area is 1,145,000 sq mi (highest estimate), maximum length, c 2,300 mi , maximum width, c 1,200 mi , and greatest depth, c 14,435 ft , off Cape Matapan It connects with the Atlantic Ocean through the Strait of Gibraltar, with the Black Sea through the Dardanelles, Sea of Marmara, and Bosporus, and with the Red Sea through the Suez Canal Its chief divisions are the Tyrrhenian, Adriatic, Ionian, and Aegean seas, its chief islands, Sicily, Corsica, Crete, Cyprus, Malta, Rhodes, the Dodecanese, the Cyclades, the Sporades, and the Balearic and Ionian islands Shallows (Adventure Bank) between Sicily and Cape Bon, Tunisia, divide it into two main basins It is of higher salinity than the Atlantic and has little variation in tides The largest rivers that flow into it are the Po, Rhone, Ebro, and Nile The shores are chiefly mountainous Earthquakes and volcanic disturbances are frequent, the region has local winds, such as the SIROCCO from the south and the bora and mistral from the north Fish (about 400 species), sponge, and coral are plentiful The Mediterranean was opened as a highway for commerce by the PHOENICIAN CIVILIZATION CARTHAGE, Greece, Sicily, and Rome were rivals for dominance of its shores and trade, under the Roman Empire it became virtually a Roman lake (the Romans often called it *mare nostrum* [our sea]) Products of the Orient passed to Europe over Mediterranean trade routes until the establishment of a route around the Cape of Good Hope (late 15th cent) Since the opening of the Suez Canal (1869) the Mediterranean has resumed its importance as a link on the route to the East The development of the northern regions of Africa and of oil fields in the Near East have increased its trade Its importance as a trade link and as a route for attacks on Europe resulted in European rivalry for control of its coasts and islands and was demonstrated by campaigns in the region during both world wars See Margret Boveri, *Mediterranean Cross-Currents* (Eng tr , 1938), Charles Moran, *The Sea of Memories* (1942), Emil Ludwig, *The Mediterranean* (Eng tr , 1942), William Reitzel, *The Mediterranean Its Role in America's Foreign Policy* (1948), André Siegfried, *The Mediterranean* (Eng tr , 1948)

medium, in SPIRITISM, the person through whom communication with spirits of the dead is attempted. Mediums have been the subject of intensive psychical research, and while many of them have been exposed as frauds, certain phenomena have been recorded which are not explained by known causes

medlar (mĕd'lur), small, deciduous tree (*Mespilus germanica*) of the rose family, native to Europe and Asia It grows to a height of from 10 to 20 ft , has luxuriant foliage, and in the wild state is sometimes thorny The pointed, oblong leaves are from 3 to 5 in long, the white or pinkish flowers are large and are borne singly The medlar has long been cultivated in parts of Europe for its acid, apple-shaped fruit It is usually not picked until after it has been touched by frost, which causes the hard fruit to begin to mellow, then the fruit is stored until the ripening process is completed It is commonly eaten fresh but is sometimes used for preserves

Médoc (mādôk'), region, SW France, a peninsula extending N of Bordeaux between the Bay of Biscay and the Gironde river. It is covered with some of the most famous vineyards of France (e.g., Château Lafite, Château Mouton-Rothschild, Château Margaux). Pauillac and Lesparre are the chief towns.

medulla: see PITH.

Medusa (mĭdū'zə), in Greek mythology, most famous of the three GORGON monsters. She was once a beautiful woman, but she offended Athena, who changed her hair into snakes and made her face so hideous that all who looked at her were turned to stone. When Medusa was with child by Poseidon, Perseus killed her and presented her head to Athena, his patroness. Chrysaor and Pegasus sprang from her blood when she died. Medusa's head retained its petrifying power even after death, and because of this it was a favorite device on armor. Athena used the Medusa head on her aegis

medusa, name given to the free-swimming generation of certain types of JELLYFISH.

Medveditsa (mĭdvĕ'dyĭtsə), river, 430 mi. long, RSFSR. Rising NE of Volsk, it flows southwest, roughly parallel to the Volga, into the Don. It is not navigable

Medway, town (pop. 3,297), E Mass., on the Charles and SW of Boston, settled 1657, set off from Medfield 1713 Woolens are produced.

Medway, river of SE England. Rising from two headstreams in Sussex and Surrey, it passes Maidstone, Rochester, and Chatham and enters the Thames at Sheerness It is 70 mi. long.

Meehan, Thomas (mē'ən), 1826–1901, American botanist, nurseryman, writer, and editor, b England. While in his early teens he succeeded in hybridizing the fuchsia, producing a new race, and he made and published his first scientific discovery, relating to the stamens of the portulaca He wrote the *American Handbook of Ornamental Trees* (1853) and *The Native Flowers and Ferns of the United States* (1878–80).

Meek, Fielding Bradford, 1817–76, American paleontologist, b Madison, Ind. He was an assistant in the geological survey of Iowa, Wisconsin, and Minnesota (1848–49) and subsequently assisted James Hall in the survey of New York While with Hall he made an expedition to the Badlands with F V Hayden and spent some time on the Missouri survey After 1858 he lived in Washington, D C , and worked on the government surveys, chiefly with Hayden His works include *Check List of the Invertebrate Fossils of North America* (1864) and, with Hayden, *Palaeontology of the Upper Missouri* (1865).

Meek, Joseph L., 1810–75, American pioneer, b Washington co , Va In 1828 he went to St Louis and soon became one of the mountain men, the trappers in the West. He trapped in the dangerous Blackfoot country, and in 1833–34 he and several companions made a journey to California, returning across the Mojave Desert As the days of trapping declined, he guided a party to Oregon and settled there In 1847–48 he was sent as a messenger to Washington to ask Federal protection for the Oregon settlers He served as Federal marshal for a time after Oregon became a territory His accounts of his life (mostly true) are recorded in Mrs F F Victor's *Rivers of the West* (1871).

Meeker, Ezra, 1830–1928, American pioneer, b near Bellefontaine, Ohio He and his bride went out in 1851 over the Oregon Trail, and later he became a farmer and hop grower at Puyallup, Wash He devoted much enthusiasm and hard work to preserving the historical memory of the Oregon Trail and pioneer days He founded (1926) the Oregon Trail Memorial Association and also wrote several works on the early days, including *Washington Territory West of the Cascade Mountains* (1870), *Pioneer Reminiscences of Puget Sound* (1905), and an autobiography (1916)

Meeker, town (pop 1,399, alt. c 6,200 ft), co seat of Rio Blanco co , NW Colo , on the White River, in a farm and ranch area, inc. 1885

Meeker, Mount, peak, 13,911 ft high, N central Colo , in the Front Range It is included in Rocky Mountain National Park

Meer, Jan van der, Dutch painter of Delft. see VERMEER, JAN.

Meer, Jan van der (yän' vän dur mär'), two Dutch landscape painters **Jan van der Meer**, the elder, 1628–91, was born in Haarlem, where most of his work was done Many of his views of the downs and flatlands of Holland have excellently drawn figures His son and pupil, **Jan van der Meer**, the younger, 1656–1705, became in 1683 master of the guild in Haarlem. He is best known for his landscapes with sheep.

Meer, Johannes van der: see VERMEER, JAN.

meerschaum (mēr'shŏm) [Ger ,=sea foam], a mineral that looks like white clay and is used chiefly for making tobacco pipes and cigar and cigarette holders (all have mouthpieces of amber) It is about as heavy as water Lighter pieces sometimes float to shores, and the mineral has been erroneously thought a petrified sea foam Before drying, it is relatively soft, and meerschaum pipes are often carved into ornate forms Vienna is the chief center of meerschaum carving Meerschaum is absorbent, and pipes made of it and waxed become a rich brown with use. The mineral is found in many parts of the world, the chief source being Asia Minor. Chips made in carving meerschaum are pulverized and pressed into inferior pipes, and meerschaum is imitated in other materials Chemically, meerschaum is a hydrous magnesium silicate, in mineralogy it is named sepiolite.

Meerut (mē'rŭt), city (pop. 169,290), NW United Provs , India. Its finest buildings were erected in the Mogul period. The first outbreak of the Sepoy Rebellion took place here in May, 1857, but the

British never lost the city. Grain, sugar, and cotton are traded, and flour and vegetable oil are manufactured

Megaera · see ERINYES.

megalithic monuments (mĕgŭlĭ'thĭk) [Gr ,=large stone], huge, but essentially simple, stone structures found throughout the world from prehistoric times. The earliest date back to the 2d millennium B.C. and are chiefly found along the coastal sections of Western Europe. Little is known of their builders except that they used metals and were agriculturalists who preferred areas open to the sea. Such massive structures testify to the engineering feats possible to the concerted efforts of relatively ill-equipped peoples. See also CAIRN, CARNAC, DOLMEN, STONEHENGE. See O. G. S. Crawford, *The Long Barrows of the Cotswolds* (1925), T. F. G. Dexter, *Sacred Stone* (1929)

Megalopolis (mĕgŭlŏ'pŭlĭs) [Gr ,=great city], ancient city, S central Arcadia, Greece. It was founded (c. 370 B.C.), on Epaminondas' advice, as headquarters for the new, anti-Spartan Arcadian league. Inhabitants of many villages moved there. It was the home of Philopoemen and of Polybius. There has been much excavation.

Mégantic (mugăn'tĭk, Fr. măgătēk') or **Lac Mégantic**, town (pop. 4,560), SE Que., on Lake Megantic and ENE of Sherbrooke. It is a lumbering and farming center.

Megara (mĕ'gùrù, *mĕ'gärä*), town (pop. 13,360), central Greece. Here stood the ancient town of Megara, the capital of Megaris, a small district between the gulfs of Corinth and Aegina. The Dorians who succeeded the earliest-known inhabitants made Megara a wealthy city by maritime trade and founded many colonies, including Chalcedon and Byzantium. After the Persian Wars the citizens summoned Athenian aid against the Corinthians (459 B.C.), but later expelled the Athenians, thus helping to provoke the Peloponnesian War.

megatherium (mĕgŭthē'rĭŭm) [Gr ,=large beast], extinct ground sloth which was widely distributed in North and South America in the Pleistocene. A huge beast, it attained a length of 18 ft. and was probably proportionately heavy. The hind legs and tail were massive, the forelegs slender and supple, the animal probably supported itself much of the time in a semierect position on its hind legs and tail and used its forelegs to pull from trees the foliage on which it fed.

Meghna (mĕg'nu), river of E East Bengal prov., Pakistan, flowing c. 150 mi. S to the Bay of Bengal. Several channels of the Ganges and Brahmaputra rivers discharge into the Meghna.

Megiddo (-gĭd'-), ancient city, Palestine, by the Kishon on the southern edge of the plain of ESDRAELON due N of Samaria. Archaeological excavations undertaken under American leadership in the 1930s revealed that Megiddo was a city before 2000 B.C., the finds for the middle of the 2d millennium B.C. were especially valuable. Near Megiddo several important battles have been fought. Here Thutmose III defeated a Syrian coalition (1479? B.C.), and at Megiddo, Deborah led the Jews to win over Sisera (Judges 4, 5). Josiah was defeated and killed here by the Pharaoh Necho c. 609 B.C. (2 Kings 23:29,30). The plain is called the valley of **Megiddon** in Zech. 12:11. See also ARMAGEDDON.

megrim see MIGRAINE.

Meharry Medical College (mŭhă'rē), at Nashville, Tenn., coeducational, for Negroes. It was organized in 1876 as the medical department of Central Tennessee College and was chartered as an independent school in 1915. It has schools of medicine, dentistry, and nursing.

Mehemet For persons thus named, see MOHAMMED.

Mehetabeel (mēhē'tŭbēl), ancestor of Shemaiah the prophet. Neh. 6:10.

Mehetabel (mēhē'tŭbĕl), wife of Hadad, king of Edom. Gen. 36:39.

Mehida (mēhī'dù), family returned from Babylon. Ezra 2:52, Neh. 7:54.

Mehir (mē'hĭr) [Heb.,=price], descendant of Judah. 1 Chron. 4:11.

Meholathite (mēhō'lŭthīt), biblical epithet, perhaps referring to ABEL-MEHOLAH. 1 Sam. 18:19.

Mehujael (mēhu'jăĕl) [Heb.,=God has smitten], descendant of Cain. Gen. 4:18.

Méhul, Étienne Nicolas (ātyĕn' nēkôlä' māül'), 1763-1817, French operatic composer. Encouraged by Gluck, he became one of France's outstanding composers in the Revolutionary period. At the founding of the Paris Conservatoire he was made an inspector. His masterpiece was the biblical opera *Joseph* (1807). *Euphrosine et Coradin* (1790) and *Stratonice* (1792) were the first operas which, while without comical elements, were called *opéras comiques* because they employed spoken dialogue.

Mehuman (mēhū'mŭn), chamberlain of King Ahasuerus. Esther 1:10.

Mehunim, Canaanite tribe, S Palestine see MAON.

Meigs, Henry (mēgz), 1811-77, American promoter and railroad contractor, b. Catskill, N.Y. He went to California in the gold rush, built a fortune from nothing, then, finding himself faced with debts and accusations of forgery, he fled (1854) to Chile. He became one of the most spectacular of all railroad builders in South America. No mountain passes were too high, no desert too broad, no terrain too difficult. He began in Chile with railroads from Santiago to the Maule river and to Valparaiso. After 1868 he worked in Peru and completed the Mollendo-Arequipa line in 1871. His greatest undertaking, the road from Callao to Lima and up to Oroya on dizzying mountain slopes, was halted in 1875 by lack of funds, but his work on it was an almost incredible victory over nature. See biography by Watt Stewart (1946).

Meighen, Arthur (mē'ŭn), 1874–, Canadian political leader, b. Ontario, grad. Toronto Univ., 1896. Entering the Canadian House of Commons in 1908, he became solicitor general (1913), secretary of state and minister of mines (1917), and minister of the interior (1917). He was chosen prime minister in 1920 but resigned in 1921 after his defeat in the general election. As leader of the Conservative party, Meighen was again prime minister in 1926 but resigned within the year. In 1932 Prime Minister Richard B. Bennett appointed him to the senate, from which he resigned in 1942 to contest a seat for the House of Commons. Defeated, he retired to private life.

Meigs, Return Jonathan (mĕgz), 1740–1823, American army officer in the American Revolution, b. Middletown, Conn. He served from the beginning of the American Revolution. He accompanied Benedict Arnold on the Quebec expedition, where he was taken prisoner, and was exchanged (1776), he kept a journal of his experiences on the campaign. As colonel, he led an expedition against the British at Sag Harbor, Long Island, in 1777, this was his most remarkable exploit. He served under Wayne at Stony Point in 1779. After the Revolution he was interested in the OHIO COMPANY OF ASSOCIATES and in the settlement made at Marietta in 1788. In 1801 he was appointed Indian agent for the Cherokee, and he retained the post for the remainder of his life. His son, **Return Jonathan Meigs**, 1764?–1825, American statesman, b. Middletown, Conn., grad. Yale, 1785, also went to Ohio and became politically prominent there. He had served as territorial judge, member of the territorial legislature, and chief justice of the state in Ohio before becoming a judge in the Louisiana Territory and in Michigan Territory. As Senator from Ohio (1808–10) and governor of that state (1810–14) he rendered sterling service, which was rewarded by his appointment as Postmaster General (1814–23).

Meigs, Fort, founded (Feb., 1813) in the War of 1812 by Gen. William Henry HARRISON on the Maumee river, near the present Perrysburg, Ohio, across the river from the British Fort Miami (at the present Maumee, Ohio). Through the spring and summer the British and Americans faced each other. An American relief party was wiped out, but British attacks under Gen. H. A. Proctor, especially in May and July, 1813, failed to take this "Gibraltar of the West." The defense helped to lift American morale.

Meiji (mā'jē), reign name of Emperor MUTSUHITO of Japan. Just after his accession occurred the revolution in Japanese life and government that is known as the Meiji restoration. The centuries-old power of the SHOGUN had declined, and much opposition had been built up in the late 18th and early 19th cent. The intrusion of foreigners, initiated by Matthew C. PERRY, precipitated discontent. The shogun, under pressure, submitted (1854) to foreign demands. Therefore a large group found a pretext for demanding that the shogun surrender power to the emperor, even though the emperor, too, was forced to yield later to foreign demands. The heads of the powerful clans attempted resistance on their own to the foreigners and were defeated. The proponents of Westernization found themselves strengthened. The shogun was forced to relinquish power to the emperor who had succeeded in 1867. The shogun, after defeat in battle, then surrendered himself to the emperor, and the clan heads were forced under the code of loyalty to do likewise. The emperor was thus enabled in 1868 to place the power of government in the hands of the Westernizers (among them Ito, Inouye, Okubo, and Yamagata. The renovation of Japan on Western lines was accomplished. Feudalism was abolished. A new constitution was prepared and was adopted in 1889, long after suppression of the Satsuma rebellion in 1877 had guaranteed the power of the reformers. Japan was remade into an industrial, modern, Westernized state, though it kept the old military traditions.

Meiklejohn, Alexander (mĭ'kùljŏn), 1872–, American educator, b. Rochdale, England, grad. Brown Univ., 1893, Ph.D. Cornell Univ., 1897. He taught philosophy at Brown from 1897 to 1912, serving as dean after 1901 and, after 1906, as professor of logic. From 1912 to 1924 he was president of Amherst College. Meiklejohn was professor of philosophy at the Univ. of Wisconsin from 1926 to 1938 and was chairman for the five years (1927–32) of its existence of the Experimental College, which studied intensively a period of Greek civilization. This experiment inspired similar programs in other colleges, e.g., St. John's College. From 1933 to 1936 he taught at the Social Studies Center in San Francisco. Meiklejohn's educational theories are set forth in *The Liberal College* (1920), *Freedom and the College* (1923), and *The Experimental College* (1932). He also wrote *What Does America Mean?* (1935), *Education between Two Worlds* (1942), and *Free Speech and Its Relation to Self-Government* (1948).

Mei Lan-fang (mā'lán'-fäng'), 1893–, Chinese actor of female roles. Born into a family of renowned actors, he was trained by his musician uncle, Yü-ti'en, and made his professional debut at the age of 12. The idol of Chinese theatergoers, he gave a command performance before the emperor in 1923. He brought his troupe to the United States in 1930 and performed several playlets from his large repertoire. The heroine in *The Dream of the Red Chamber* was his most famous part. News of his death by poisoning in Shanghai was given in an unconfirmed Japanese broadcast in 1943, he was, however, reported alive in 1945, having become a national hero by refusing to perform for Japanese invaders during the Second World War.

Meilhac, Henri (ärē' māynk'), 1831–97, French librettist. With Philippe Gille he wrote the libretto for Massenet's *Manon* (1884). His most successful collaborations were the librettos with Ludovic Halévy for the operas of Offenbach and for Bizet's *Carmen*.

Meiningen (mī'nĭng-un), city (pop. 23,700), Thuringia, central Germany, on the Werra river. It has machinery, textile, and lumber industries. First mentioned in 982 and chartered in 1344, Meiningen was the capital of the duchy of Saxe-Meiningen from 1681 to 1918. In the second half of the 19th cent. the ducal theater of Meiningen acquired an international reputation and long set the style for German dramatic performances. The ducal orchestra, conducted (1880-85) by Hans von Bülow, was also famous. The ducal palace was built in the 16th and 17th cent.

Meinong, Alexius (ălĕk'syōōs mī'nŏng), 1853–1920, Austrian philosopher and psychologist, pupil of Franz Brentano. He was professor at the Univ. of Graz from 1889, founding (1894) the first psychological laboratory in Austria. Opposed to the school of content, which regarded perception as a composite of elementary sensations, Meinong's school of the act believed its necessary constituent to be a definite mental act. Establishing a general theory of values based on psychological grounds, Meinong distinguished between perception as the recognition of relationships inherent in the perceived object and conception as dependent on the mental act itself. His *Gesammelte Abhandlungen* [collected essays] were published in 1914.

Meissen (mī'sùn), city (pop. 48,348), Saxony, E Germany, on the Elbe and NW of Dresden. It has been famous since 1710 for its porcelain "Dresden" china, as Meissen ware is known in English, is particularly famous for its figurines. There also are various other manufactures, and there are large kaolin deposits near by. Meissen was founded (929) by Henry of Saxony (later German king as Henry I), and it became (965) the seat of the margraviate of Meissen, where the WETTIN dynasty of SAXONY originated. The diocese of Meissen was founded in 968, was suppressed in 1581, and was restored in 1921 with its see at Bautzen. The Albrechtsburg, a large castle dominating the city, was built in the 15th cent., it housed (1710–1864) the royal porcelain manufacture, begun by J. F. BÖTTGER under the patronage of Elector Frederick Augustus I (Augustus II of Poland). Among the other ancient buildings of Meissen are the cathedral and the Church of St. Afra (both 13th–14th cent.).

Meissonier, Jean Louis Ernest (zhä' lwē' ĕrnĕst' māsônyā'), 1815-91, French genre and military painter. He began his career as an illustrator and etcher. His study of the Dutch masters was evidenced in his first painting to be shown (1834) in the Salon, *A Visit to the Burgomaster*. His small genre paintings show furnishings and costumes in exquisite detail with accuracy as to period. His figures (usually of men) seem alive. Among Meissonier's battle scenes, chiefly of the Napoleonic Wars, are *Napoleon I with His Staff* (Louvre) and *Friedland, 1807* (Metropolitan Mus.). His genre pictures include *The Voyage* (Louvre), *The Lute Player* and *The Sign Painter* (Metropolitan Mus.), *Amateurs of Painting, The Chess Player, Young Man Playing a Cello*. See study by Henri Barbusse (Eng. tr., 1912).

Meissonier, Juste Aurèle (zhüst' ōrĕl'), 1693?–1750, French painter, sculptor, architect, and goldsmith. He is best known as a goldsmith and decorator to Louis XV. He is the author of several books of designs and is considered to have originated ROCOCO.

meistersinger (mī'stûr-) [Ger.,=mastersinger], member of one of the musical and poetic guilds which flourished in the large cities of Germany from the 14th to the 16th cent., succeeding the MINNESINGER. The guilds or schools were composed chiefly of artisans who were usually obliged to go through four preparatory stages before they

could attain the coveted rank of *Meister*. Each candidate was required to submit an original song which had to conform to rigid technical formulas and to receive the approval of a group of judges before admission to full rank was granted The libretto of *Die Meistersinger von Nürnberg*, an opera in three acts by Richard Wagner, is a faithful representation of guild practices There was very little opportunity for spontaneity or inspiration owing to the strictness of the rules Hans Sachs was the greatest of the meistersingers and the only real poet among them

Meister Stephan see Lochner, Stephan

Meitner, Lise (lē'zu mīt'nûr), 1878–, Austrian-Swedish physicist and mathematician She was professor at the Univ of Berlin (1926–33) A refugee from Germany after 1938, she became associated with the Univ of Stockholm and with the Nobel Institute at Stockholm and was visiting professor (1946) at the Catholic Univ of America She discovered in 1917 with Otto Hahn the element protoactinium and is noted for her work on the disintegration products of radium, thorium, and actinium and on the behavior of beta rays In 1938 she participated in experimental research in bombarding the uranium nucleus with slow-speed neutrons Dr Meitner interpreted the results as a fission of the nucleus and calculated that vast amounts of energy were liberated Her conclusion contributed to the development of the atomic bomb In 1949 she became a Swedish citizen

Me-jarkon (mē-jär'kŏn) [Heb ,=yellow waters], unlocated town, W Palestine Joshua 19 46

Mejillones (mähēyō'näs), small port, N Chile With a good harbor and a rail connection 38 mi S to Antofagasta, it exports chiefly Chilean nitrates and Bolivian tin Here in 1879 in the War of the Pacific the capture of the Peruvian ironclad, *Huascar*, gave Chile control of the sea.

Meknès (mĕknĕs'), city (pop 159,811), French Morocco. It lies in a fertile and well-watered agricultural region, and it is an important railroad center Meknès was founded (c 1672) by Sultan Ismail, who undertook palatial building operations that gave his city the name Versailles of Morocco, little of the construction has survived In the old walled town are a large summer palace and gardens of the sultan A European town is laid out beside the old one.

Mekonah (mĕkō'nu), unlocated town, apparently in S Palestine Neh 11 28

Mekong (mā'kŏng'), one of the great rivers of SE Asia, over 2,500 mi in length It rises in Tibet and flows S through Yunnan prov , China, its Chinese name is the Lantsan After leaving Yunnan, the Mekong forms the western boundary of Laos, then curves east and south through Laotian territory, and again becomes the Thailand-Laos border. From S Laos the Mekong descends to the Cambodian plain Through Yunnan and Laos, the Mekong flows in deep gorges and is interrupted by rapids and falls. The lower Mekong is navigable for ships, and Pnom Penh is a considerable port At the Quatre Bras [four arms] near Pnom Penh, the Mekong and the Tonle Sap join, and the Mekong divides into the Mekong proper (or Mekong Anterior) and the Bassac (or Mekong Posterior), which flow SE through Cochin China There they form a delta and enter the South China Sea through numerous mouths The Mekong and other rivers of Cochin China are linked by canals into a network of waterways The alluvial soil brought by the Mekong and the irrigation it provides make Cochin China an important rice-producing area.

Mela, Pomponius. see Pomponius Mela

Melampus (mĭlăm'pŭs) [traditionally from Gr.,=black-foot], in Greek myth, physician, sage and soothsayer, said to have introduced the worship of Dionysus into Greece.

melancholia (mĕlun-kō'lēù) [Gr ,=black bile], state of general depression associated with certain neuroses and psychoses. See involutional melancholia and manic-depressive psychosis.

Melanchthon, Philip (mulăngk'thun), 1497–1560, German scholar and humanist and after Martin Luther the chief figure of the Lutheran Reformation. His original name was Schwarzend. A man of great intellect and wide learning, he achieved excellence as a teacher and a writer. While professor of Greek at the Univ of Wittenberg, he met Luther and soon became his intimate friend and chief associate Melanchthon's influence on the Lutheran movement is considerable and complex. In *Loci communes* (1521) he made a classical presentation of the principles of the Reformation which explained the new evangel to many outside the movement Melanchthon served as liaison between Luther and the humanists, tempering the Protestant disapproval of worldly culture. He represented Luther at many conferences. At the Marburg Conference he opposed Zwingli, and at the Diet of Augsburg (1530) he wrote and presented the Augsburg Confession (see creed). Melanchthon was more conciliatory than Luther, as evidenced by his friendship with Calvin after Luther's death and by his compromising on doctrinal issues. Luther had great confidence in Melanchthon as his successor, but Melanchthon was ill-suited for the role of a leader and was unable to secure the enthusiastic support which Luther had commanded As the prime mover in the building of the German school system Melanchthon is known as preceptor of Germany His *Loci communes* appeared in a modern critical edition and translation by Charles Leander Hall (1944) See J W Richards, *Philip Melanchthon, the Protestant Preceptor of Germany, 1497–1560* (1898), Franz Hildebrandt, *Melanchthon, Alien or Ally?* (1946).

Melanesia (mĕlunē'shŭ,-shù), one of the three main divisions of the Pacific islands, in the S and SW Pacific, south of the equator. It includes the Solomons, New Hebrides, New Caledonia, the Bismarck Archipelago, and the Admiralty and Fiji islands The Melanesians are largely of Negroid stock, their languages are Malayo-Polynesian (see language, table)

Melatiah (mĕ"lutī'u) [Heb ,=freed by God], worker on the wall of Jerusalem. Neh 3 7

Melba, Dame Nellie, 1861?–1931, Australian soprano, whose name originally was Helen Porter Mitchell First trained to be a pianist, she appeared as a singer in Sydney in 1885 and in London in 1886 After study with Mathilde Marchesi in Paris, she made her operatic debut in Brussels in 1887 She sang regularly at Covent Garden from 1888 until 1926 and intermittently with the Metropolitan Opera Company from 1893 to 1910, in 1907 she appeared at the Manhattan Opera House While extremely successful in lyric and coloratura roles, she nearly ruined her voice when, in 1896, she sang Brünnehilde in *Siegfried* She was made Dame of the British Empire in 1918. See her autobiography, *Melodies and Memories* (1925)

Melbourne, William Lamb, 2d Viscount (mĕl'bûrn), 1779–1848, English Whig statesman He entered Parliament in 1805, held the chief secretaryship of Ireland under George Canning (1827–28), and entered the House of Lords on the death of his father (1828), but exercised little political influence until he became home secretary for Lord Grey in 1830 He accepted the Reform Bill of 1832 with apathy In 1834 he succeeded Grey as prime minister, but was replaced the same year by the Conservative, Sir Robert Peel. When Peel failed to carry a parliamentary election and resigned (1835), Melbourne entered on a long administration (1835–41) It witnessed the municipal corporations act with important reform in city government, the Durham Commission report recommending the liberalizing of Canadian government, penny postage, and other reforms, but the prime minister was not the moving spirit and even opposed parliamentary reform and the repeal of the corn laws Lord Palmerston dominated in foreign affairs Melbourne was a favorite of the young queen, Victoria, and taught her statecraft He was briefly implicated in scandal with the divorce suit of Caroline Norton in 1835–36, years after he was separated (1825) from his wife See biography by Bertram Newman (1930), David Cecil, *The Young Melbourne* (1939)

His wife, Caroline Lamb, Viscountess Melbourne, 1785–1828, was the daughter of Frederick Ponsonby, 3d earl of Bessborough Lady Caroline was clever, beautiful, impulsive, and indiscreet She is remembered less for the minor novels she wrote than for her love affair with Lord Byron See biography by Elizabeth Jenkins (1932).

Melbourne (mĕl'burn), city (pop 99,863, metropolitan pop. 1,226,923), capital of Victoria, Australia, on the Yarra river 5 mi from its mouth on Hobson's Bay (north arm of Port Phillip Bay) One of Australia's largest cities, it was the first commonwealth capital (1901–27), being succeeded by Canberra Known as Dootigalk when it was settled in 1835, it was renamed in 1837 for the British prime minister. The port of Melbourne includes wharves at the city itself as well as those at Port Melbourne and Williamstown on Hobson's Bay The focus of railroads from the interior, Melbourne is the commercial center of a large region It has textile and knitting mills, machinery manufacturing, and an aircraft plant. The principal exports are wheat, flour, meat, wool, and fruits The city is the seat of the Univ of Melbourne (1854), the Conservatorium of Music (1910), Melbourne Technical College (1887), and the National Art Gallery (1904) There are Anglican and Roman Catholic cathedrals The royal mint is also here The botanical gardens, covering an area of 103 acres, are a notable feature of the city. The Melbourne Cup is run annually at the Flemington Racecourse. Brighton is one of the many suburbs that are seaside resorts

Melbourne, city (pop. 2,622), E Fla., on Indian River, settled 1878, inc. 1888. It is a shipping point for fruit and a sportsmen's center. Melbourne Beach, a bathing resort, is across Indian River

Melcher, coal-mining town (pop. 1,290), S Iowa, SSE of Des Moines; inc. 1912.

Melchers, Gari (gä'rē mĕl'churs), 1860–1932, American figure, genre, and portrait painter, b. Detroit, studied in Düsseldorf and Paris. In Holland he painted the canvases of Dutch peasant life that established his reputation. *The Sermon* (Corcoran Gall.) was awarded the medal of honor at the Salon of 1886, His decorations painted for the World's Columbian Exposition, Chicago (1893), are now in the library of the Univ. of Michigan In 1914 Melchers settled permanently in the United States and devoted himself primarily to portraits and mural paintings. In 1906 he became a member of the National Academy of Design Among his works are *Mother and Child* and *Nurse and Children* (Luxembourg Mus , Paris), *The Supper at Emmaus* (Essen), *Dutch Skaters* (Pa. Acad of the Fine Arts); *Madonna* (Metropolitan Mus); *Penelope* and *Maternity* (Corcoran Gall), *Sailor and His Sweetheart* (Carnegie Inst , Pittsburgh), *The Wedding*, *The Fencing Master*, portrait of Mrs Melchers, and *The Vespers* (Detroit Inst. of Art), *The Smithy* (Phillips Memorial Gall , Washington, D C), *War and Peace* (Library of Congress), and portraits of President Theodore Roosevelt (Freer Coll , Smithsonian Institution, Washington) and Charles Hutchinson (Art Inst , Chicago).

Melchi (mĕl'kī) [Heb ,=king], two names in the Gospel genealogy Luke 3 24,28

Melchiah (-kī'u), variant of Malchijah 1

Melchior (mĕl'kēôr) see Wise Men of the East

Melchior, Lauritz (lou'rĭts mĕl'kēôr), 1890–, Danish heroic tenor. He made his debut in Copenhagen in 1913, singing a baritone role in *Pagliacci* In 1918 he made his first appearance as a tenor and in 1924 sang at Covent Garden He sang at the Bayreuth Festivals regularly from 1925 to 1931 and in 1926 joined the Metropolitan Opera Company as its leading Wagnerian tenor

Melchisedec (-kĭ'zŭ-), variant of Melchizedek.

Melchi-shua (mĕl'kī-shōō'ù) see Malchi-shua

Melchites or Melkites (both mĕl'kīts) [royalists, from Syriac,=king], Christian community of Syria, Jordan, Palestine, Egypt, and America, mainly Arabic-speaking They are in communion with the pope and have a Byzantine rite much like that of Constantinople but in the Arabic language Their head, under the pope, is called patriarch of Antioch, he lives in Damascus or Egypt The name was first applied to all who followed the emperor in accepting the Council of Chalcedon, it is sometimes applied to the Orthodox of Syria and Egypt The Melchites are separate from the Maronites and from the Syrian Catholics, each of these communities has its own hierarchy under the pope and its own rite See Donald Attwater, *The Christian Churches of the East*, Vol I (1947)

Melchizedek or **Melchisedec** (both mĕlkĭ'zŭdĕk), king of Salem and "priest of the Most High God" He blessed Abram after the defeat of Chedorlaomer, and Abram gave him tithes of the spoils Gen 14 18–20 Later Melchizedek is regarded as typifying the priesthood of the Messiah Ps. 110 4, Heb 5-7

Melcombe Regis, Dorsetshire, England see Weymouth and Melcombe Regis.

Melea (mē'lēu), ancestor of Joseph Luke 3 31

Meleager (mĕlēā'jûr), hero in Greek mythology He was the son of Oeneus, king of Calydon, and Althaea and was the brother of Tydeus and Deianira When Meleager was born, a prophesy said that he would die when a certain log in the fire was burned His mother snatched the log from the fire and hid it. After Meleager returned from his adventures as an Argonaut, he led the Calydonian hunt Later, when the Calydonian boar had been killed, Meleager gave its skin to Atalanta, whom he loved. His mother's brothers, angered at his partiality, tried to take the skin from Atalanta, but Meleager slew them When his mother heard of this she threw the log into the fire, and Meleager died when it was consumed The poem "Atalanta in Calydon" by Swinburne is about this myth

Melech (mē'lĕk) [Heb ,=king], great-grandson of Jonathan. 1 Chron. 8 35, 9 41.

Melegnano, Italy see Marignano, battle of

Meletius, Saint (mĭlē'shus), d 381, schismatic Catholic bishop of Antioch. The Catholic patriarch of Antioch, Eustathius, had been deposed by the Arians, who substituted the Arian Eudoxius Eudoxius died (361), and the Arians appointed St Meletius, who was considered semi-Arian, but proved to be Catholic The Eustathians would not forgive his consecration by Arians, the Arians considered him a traitor. St. Basil the Great was working to procure recognition for Meletius by the other churches, when Lucifer of Cagliari hastily consecrated another bishop from the Eustathians, whom Alexandria and Rome recognized (362). Meletius was banished, an Arian was put in his place (361) But the Eustathians and Meletians, both Catholics, would not combine, and the Arians controlled Antioch Meletius returned (378), recognized by all Catholic churches except Rome and Alexandria He presided over the First Council of Constantinople, at which he died He is venerated as a saint. See Flavian of Antioch.

Melfi (mĕl'fē), city (pop. 14,190), Basilicata, S Italy, 18 mi N of Potenza. It is noted for its wine. In the 11th cent. it was the capital of the Norman county of Apulia. Robert Guiscard embellished it Emperor Frederick II promulgated here his important code, the Constitutions of Melfi, or Liber Augustalis In 1528 the city was sacked by Lautrec and never again recovered its flourishing com-

merce. It suffered several earthquakes, which destroyed the cathedral; the campanile (1153) still stands.

Melfort, town (pop 2,305), central Sask, in the Carrot river valley SE of Prince Albert It is a shipping point for stock ranches in the region and an oil-distributing center

Melicu (mĕ'lĭkū), same as MALLEUCH 6

Melilla (mālē'lyä), city (pop. 89,073), on the Mediterranean coast of Morocco It is administered as part of the Spanish province of Málaga Spain has held it since c.1497 despite many attacks by Moroccans Melilla exports iron ore and is a fishing port.

melilot: see SWEET CLOVER

Melita: see MALTA

Melitene, Turkey: see MALATYA.

Melitopol (mālyĭtō'pul), city (pop. 75,735), S Ukraine A growing industrial center, it produces heavy machinery and has flour mills and meat-packing plants. In the Second World War, Melitopol was recovered (1943) from the Germans after a bloody battle and prolonged house-to-house fighting

Melk or **Mölk** (both mĕlk), town (pop 3,139), Lower Austria, on the Danube. It was the earliest residence of the Austrian rulers The wealthy and splendid Benedictine abbey, founded in 1089, has a large library containing ancient manuscripts and incunabula Melk is mentioned in the *Nibelungenlied* as Medelike

Melkites see MELCHITES.

Mellen, city (pop 1,598), N Wis, SE of Ashland, in a lake and woods region, settled 1886, inc. 1907 Granite is quarried A state park is near

Mellon, Andrew William, 1855–1937, American financier, industrialist, and public official, b Pittsburgh He studied at the Western Univ of Pennsylvania (now the Univ of Pittsburgh), but he left college to organize a lumber business with his brother, Richard B Mellon Soon they joined interests with their father, Thomas Mellon, a successful banker and lawyer of Pittsburgh, who had helped Henry C Frick to expand his holdings in the coke industry When Thomas Mellon retired (1886), his two sons took over the banking firm of Thomas Mellon and Sons In 1889 Andrew Mellon led in establishing the Union Trust Company of Pittsburgh—later to become one of the larger financial institutions in the United States—and then the Union Savings Bank was created as a subsidiary firm Meanwhile Andrew Mellon expanded his holdings in key American industries and held large interests in the Gulf Oil Company, the American Locomotive Company, the Pittsburgh Coal Company, and in hydroelectric, bridge-building, public-utility, steel, insurance, and traction companies Mellon also played an important role in originating the huge Aluminum Company of America He resigned (1921) as president of the Mellon National Bank to become U S Secretary of the Treasury and held that cabinet post until 1931 under Presidents Harding, Coolidge, and Hoover Secretary Mellon worked for a downward revision of income taxes and surtaxes, and in spite of drastic tax curtailments, he reduced the national debt from $24,298,000,000 in 1920 to $16,185,000,000 in 1930 He later served (1931–32) as U S ambassador to Great Britain His income-tax return for the year of 1931 was the subject of a Federal investigation in 1935, but he was exonerated in Dec, 1937, four months after he died He gave $10,000,000 for the founding (1911) of the Mellon Institute of Industrial Research in Pittsburgh, in 1937 he donated his art collection to the public, with funds for the erection of a building in Washington in which to house it (see NATIONAL GALLERY OF ART) He wrote *Taxation the People's Business* (1924). See biographies by P. H. Love (1929) and Harvey O'Connor (1933)

Melloni, Macedonio (mächädō'nyō mäl-lō'nē), 1798–1854, Italian physicist Known especially for his investigations of heat, he pointed out the similarity of heat to light, showing that it also is refracted, reflected, and polarized

Mellon Institute of Industrial Research, at the Univ of Pittsburgh, founded 1913 by Andrew W and Richard B Mellon (see DUNCAN, ROBERT K), subsidized by the industries concerned It has a fine, well-equipped building Important discoveries of methods and products have been made

melodeon or melodium: see REED ORGAN

melodrama (mĕ'lŭdrämu) [Gr, =song-drama], originally a spoken text with musical background, as in Greek drama The form was especially popular in the 18th cent, when its composers included Georg Benda, J J ROUSSEAU, and Pietro METASTASIO, among many others The variation of the form to mean drama interspersed with song is familiar in John Gay's *Beggar's Opera*. Modern examples of the true music melodrama are found in Richard Strauss's setting of Tennyson's *Enoch Arden*, and in Arnold Schönberg's *Pierrot Lunaire*. In 18th-century melodramas the action was generally romantic, full of violent action, and characterized often by the final triumph of virtue The latter-day use of the term for plays with overdrawn characterizations and smashing climaxes and with great appeal to sentiment has naturally followed, whether or not the climaxes are heightened by the use of music. *East Lynne* is one of the most famous popular melodramas of stage and screen, its "tear-jerking" propensities increased by its tragic ending

melody, succession of single tones of varying pitch Melody is the linear aspect of music, in contrast to harmony, the chordal aspect, which results from the simultaneous sounding of tones. It is impossible to consider melody without rhythm These two, plus tone quality, are the necessary elements of music Our ears have become so accustomed to harmony that a given melody may be felt to imply certain harmonies The same melody may often be harmonized in several ways, however, and music may exist without harmony. Certain composers have been especially noted for their melodic gifts, particularly Schubert and Tchaikovsky.

melon, fruit of *Cucumis melo*, a trailing annual, which varies greatly in size, shape, color (white, orange, or green), and character of skin (smooth, netted, or furrowed) It is native to Asia and was cultivated by the Egyptians and Romans, but not until some time after the Civil War did it become an important market crop in the United States Many varieties of melons have been developed, the casaba, honeydew, and Persian are winter melons of excellent flavor and good keeping quality but require long growing seasons. The true cantaloupe (*C melo cantalupensis* from Cantalupo, Italy, where it was introduced from Armenia) is a hard-shelled or rock melon, little grown outside of the Mediterranean countries Muskmelons, which are often less correctly called cantaloupes in the United States, are nutmeg-shaped varieties with soft rinds and netted surface markings and usually have a musky flavor They are often grown in home gardens Melons are grown commercially in Arizona, Arkansas, California, Colorado, Georgia, Maryland, New Jersey, and North Carolina The WATERMELON is *Citrullus vulgaris* See J. W Lloyd, *Muskmelon Production* (1928)

Melos (mĕ'lŏs) or **Milo** (mē'lō, mĭ'lō), island (60 sq mi, pop ab 5,000), off E Greece, in the Aegean Sea, in the Cyclades The capital is Plaka, near the site of the ancient city of Melos Melos flourished as a center of the Aegean civilization (Early Minoan period, after 3000 B C), because of obsidian deposits there When the use of bronze came in, the island lost importance (c 2200 B C) The Greek expansion of c 1000 B C brought Dorians to Melos The island was neutral in the Peloponnesian War, but fell a victim to Athenian imperialism When the Melians showed resistance, the men were massacred and the rest enslaved (416 B C) Much excavation has been done at Melos, the most famous find is the Venus of Milo (now in the Louvre), discovered in 1820

Melozzo da Forlì (mālôt'tsō da fôrlē'), 1438–94, Umbrian painter His extant works, though few, reveal him as a painter of power and individuality He is especially notable for his bold foreshortening, in the use of which, particularly in vaultings, he was a pioneer His known works include the great fresco of the *Ascension*, in the cupola of the Church of the Santi Apostoli, Rome (Quirinal Palace, Rome), a fresco, *Pope Sixtus IV Giving Custody of the Vatican Library to Platina*, painted for the Vatican Library, and *Angels Making Music*, a fragment (Vatican)

Melpomene see MUSES

Melrose, burgh (pop 2,052), Roxburghshire, Scotland, on the Tweed river It is the site of one of the finest ruins in Scotland—Melrose Abbey, founded for Cistercians by David I in 1136 and now owned by the nation Scott's *Lay of the Last Minstrel* has descriptions of the abbey Several times partly destroyed and rebuilt, the abbey contains the heart of Robert the Bruce There are lesser ruins of a 7th-century abbey a few miles from Melrose Abbotsford and Dryburgh Abbey are near

Melrose 1 City (pop. 25,333), E Mass, N of Boston, settled c 1629, set off from Malden 1850, inc as a city 1899 It produces specialties 2 City (pop 2,015), central Minn, on the Sauk and WNW of St Cloud, settled 1857, platted 1871, inc as a city 1898 It is a farm trade center

Melrose Park, village (pop 10,933), NE Ill, just W of Chicago, inc 1893 It is a residential suburb in an industrial area near large railroad yards Plastics and railroad car parts are made here

melting point, temperature at which a substance changes its state from solid to liquid. Under standard pressure (15 lb per square inch) different chemical elements and compounds have different temperatures at which this change of state takes place, each having a definite melting point which is included among its specific properties When heat is applied continuously and in sufficient quantity to such solids, the temperature rises steadily until it reaches that point at which LIQUEFACTION occurs Here the rise ceases and no further change in temperature is observed until all of the substance has been converted to the liquid The heat being applied to the substance at that temperature is consumed in bringing about the change of state, and none is available to raise the temperature of that part of the substance already liquefied until all of it has changed to the liquid. When the liquefaction is complete and if heat is still applied, the temperature will then begin to rise again The quantity of heat necessary to change one gram of any substance from solid to liquid at its melting point is known as its latent heat of fusion and differs for different substances Ice, for example, requires approximately 80 calories of heat to change each gram to water at its melting point Because its heat of fusion is relatively high, ice is used in refrigeration In freezing (the reverse process or change from liquid to solid), heat is given off by the substance undergoing the change and the amount given off is the same as that taken on in melting Usually the melting point and the freezing point of a substance are the same

Melton Mowbray (mōb'rē), urban district (1931 pop 10,437, 1943 estimated pop 11,330), Leicestershire, England, at the junction of the Eye and the Wreak NNW of London It is famous for its pork pies and Stilton cheese and is a fox-hunting center in winter It has a church which was begun in the 13th cent

Melun (mulœ̃'), town (pop 15,128), capital of Seine-et-Marne dept, N France, SE of Paris An ancient place of Île-de-France, it was an early Capetian residence It has a Romanesque church (Notre Dame, 11th cent) and vestiges of a Roman fortress and a Capetian castle Melun suffered heavy damage in the Second World War Near by is the famous Château of Vaux, built for Nicolas FOUQUET

Mélusine (mālüzēn') or **Melusina** (mĕlyōōsē'na), in French legend, water sprite who fell in love with and married a mortal On their wedding she created a fairy palace in which they lived This was called Lusina, and the name Lusignan was said to be derived from it She was able to conceal from her husband that she was a mermaid and at times had the tail of a fish She had made him promise that he would not intrude on her on Saturdays He broke the promise and discovered her secret She left him. When the lord of the castle or the king of France was dying, she appeared, shrieking, on the castle wall. Several noble families claimed descent from Mélusine.

Melville, Andrew (mĕl'vĭl), 1545–1622, Scottish religious reformer A man of learning and scholarship, he studied abroad, came under the influence of Theodore Beza, and was a professor at Geneva. He was principal (1574–80) of the Univ of Glasgow, in 1580 he became principal of St Mary's College, St Andrews, and in 1590 he was made rector of St Andrews He reorganized the Scottish universities and greatly broadened their educational scope However, Melville's greater task was the molding of the Scottish church, upon him fell the mantle of John Knox He was largely responsible for the introduction of a presbyterian system into the somewhat tentative church organization developed by Knox A foe of prelacy and royal supremacy, Melville asserted the independence of the church, which brought him into conflict with the court party of James VI (James I of England) He was called before the privy council on a charge of treason in 1584 and fled to England, but shortly returned to Scotland He was several times moderator of the general assembly Melville's struggle to protect the independence of the Scottish church continued In 1606 he and other clergymen were summoned to confer with James I, but no settlement was reached Melville offended the court by his harsh criticism of the king and particularly by a Latin epigram directed against Anglican practices In 1607 he was committed to the Tower, where he remained for four years On his release he was allowed to accept a chair at the Univ of Sedan. Melville wrote a number of Latin poems of some merit See standard biography by Thomas McCrie (1819)

Melville, George Wallace, 1841–1912, American naval engineer and arctic explorer, b New York city, grad Brooklyn Polytechnic Institute In 1861 he entered the U S navy as an engineer and served in the Civil War As chief engineer of the *Jeannette* on the expedition (1879) of George W DE LONG to the arctic, he distinguished himself on the voyage, and when disaster overtook the ship, Melville commanded the only boat to reach safety After a terrible journey, his party was rescued in the delta of the Lena river He later led the expedition which recovered the bodies of De Long and his men as well as the records He was chief engineer in the Winfield Scott Schley relief expedition (1884) which rescued A. W. Greely These experiences are recounted in his *In the Lena Delta* (1885) Melville was made chief of engineers in the U S navy in 1887 and played an important part in the modernization of the navy He is credited with the introduction of the triple screw, of vertical engines, and of many other innovations From 1899 until his retirement in 1903 he held the rank of rear admiral

Melville, Herman, 1819–91, American author, b. New York city In 1841–42 he spent 18 months on the whaler *Acushnet*, rounding Cape Horn and enduring such hardships that, with a companion, he escaped from the ship in the Marquesas The two were captured by the Typees, a tribe of cannibals, by whom they were well treated After a month, Melville was rescued by an Australian whaler and

was put ashore at Tahiti, he spent some time among the Pacific islands Shipping home from Honolulu on a U S naval vessel, he was discharged Oct. 14, 1844 About these four years Melville wrote his most popular books—*Typee a Peep at Polynesian Life* (1846), *Omoo a Narrative of Adventures in the South Seas* (1847); *Mardi and a Voyage Thither* (1849), *Redburn* (1849), *White-Jacket, or, The World in a Man-of-War* (1850), and his masterpiece, *Moby-Dick, or, The Whale* (1851). The first two books caused a storm of criticism of Melville's descriptions of native life and his attacks on missionaries, but were eagerly read Melville married in 1847 and from 1850 to 1863 lived on a farm near Pittsfield, Mass., where he had the stimulus of Hawthorne's friendship and where he wrote *Moby-Dick* and later works His readers, puzzled by the symbolism and bitterness in *Moby-Dick*, ignored the ambiguous *Pierre* (1852) *Piazza Tales* (1856) contained good stories—"Benito Cereno" has been called the greatest in English His long poem *Clarel* (1876) and his last novel, *Billy Budd, Foretopman* (1924), reflect the serenity of his later life Poverty made his life difficult until in 1866 he became a customs officer in New York, he died relatively obscure In the 1920s a revival of interest in Melville began See his works (16 vols, 1922–24) and a new complete edition of which *Collected Poems* (ed by H P Vincent, 1947) is the first volume, his *Journal up the Straits* (ed by R M Weaver, 1935) and *Journal of a Visit to London and the Continent* (ed by E M Metcalf, 1948), letters ed by Meade Minnigerode (with a bibliography, 1922) and by V H Paltsits (1929), biographies by R M Weaver (1921), John Freeman (1926), Lewis Mumford (1929), Geoffrey Stone (1949), and Newton Arvin (1950), Charles R Anderson, *Melville in the South Seas* (1939), two studies of his mind by W E Sedgwick (1945) and Charles Olson (1947)

Melville, Sir **James,** 1535–1617, Scottish diplomat After some years on the Continent, he returned (1564) to Scotland and thereafter represented Mary Queen of Scots and later James VI, on important diplomatic missions His memoirs, written after James's accession to the English throne and first published in 1683, are one of the principal sources for the history of the period See edition by A F Steuart (1929)

Melville, James, 1556–1614, Scottish Presbyterian minister, nephew of the reformer Andrew Melville He was for five years professor at Glasgow and later (1580–84) at St Andrews He was forced to flee to Berwick in 1584 He was ordained (1586) to a charge in Fifeshire and became moderator of the general assembly (1589) With his uncle he went to London (1606) at the command of James I, after he had opposed some of the royal ecclesiastical measures After that he was detained within an area of 10 mi about Newcastle-on-Tyne His diary, which was printed in 1829, is valuable for the history of his time

Melville, town (pop 3,824), SE Sask., NE of Regina, in a wheat-growing region The town has a grain elevator and flour mills

Melville, town (pop 1,828), S central La., on the Atchafalaya river and NW of Baton Rouge, settled c 1875, inc 1911 It was almost destroyed by floods in 1927

Melville, Lake, 120 mi long and 25 mi at its widest point, SE Labrador, in heavily forested country It receives the Hamilton river in Goose Bay, the southwest arm of the lake, and the Naskaupi river N of Goose Bay It reaches the Atlantic through Hamilton Inlet There is an air base in Goose Bay

Melville Bay, broad indentation of the western coast of Greenland, opening to the southwest into Baffin Bay The inland icecap comes down to the coast, and glaciers discharge much ice into its waters

Melville Island, 200 mi long and 30 to 130 mi wide, off W Franklin dist., Northwest Territories, in the Arctic Ocean Largest island (c 16,503 sq mi) of the Parry Islands and one of the largest islands of the Arctic Archipelago, it is separated from Victoria Island to the south by Viscount Melville Sound Generally hilly, rising to a height of c 1,500 ft., it has several ice-covered areas in the interior and supports large herds of musk oxen, though their numbers have diminished The island was discovered (1819) by Sir William Edward Parry, and its south coast was explored (1850–51) by Sir Francis McClintock

Melville Island, area 2,400 sq. mi., in the Timor Sea, 16 mi off the north coast of Australia It is 65 mi long and 45 mi wide and is separated from Bathurst Island by Apsley Strait An aboriginal reservation, it consists largely of mangrove jungle with sandy soil The island was the site of the first British settlement (1824–28) in the Northern Territory.

Melville Peninsula, 250 mi. long and 70 to 135 mi wide, S Franklin dist., Northwest Territories, just N of the Arctic Circle This northern projection of the Canadian mainland, at the entrance of Hudson Bay, between the Gulf of Boothia and Foxe Basin, is separated from Baffin Island to the north by the narrow Fury and Hecla Strait. There are numerous connected lakes in the southern portion; large Hall Lake lies near the west coast, and at the base of the peninsula is a trading post at Repulse Bay.

Melville Sound: see Viscount Melville Sound.

Melvindale, residential city (pop 4,764), SE Mich., a suburb of Detroit, settled 1870, inc. as a village 1925, as a city 1932

Melzar (mĕl'zär) [Heb., =overseer], title of the guardian of King Jehoiakim's wards Dan 1 11,16

Memel (mā'məl), Lithuanian *Klaipeda* (klī'pĕdă), city (pop 41,297), W Lithuania, an ice-free port on the Baltic Sea, at the entrance to the Kurisches Haff There are shipyards and paper, match, and plywood manufactures Memel was founded by the Teutonic Knights in 1252, and it is German in character It was ceded (1629) by Prussia to Gustavus II of Sweden, but reverted to Prussia in 1635 In the Napoleonic Wars, Memel was (1807) the refuge and residence of Frederick William III of Prussia, who signed here the edict emancipating the serfs in his kingdom From 1919 Memel shared the history of the Memel Territory. The name also appears as Klaypeda

Memel, river see Niemen

Memel Territory, Ger *Memelland* (mā'məl-lant"), name applied to the district (1,026 sq mi., 1941 pop 134,034) of former East Prussia situated on the right (northern) bank of the Niemen The Treaty of Versailles (1919) placed the district, containing the city and port of Memel, under French administration, France administering it under the League of Nations In 1923 Lithuanian troops occupied it and forced the French garrison to withdraw The council of ambassadors then drew up a new status for predominantly German Memel, accepted by Lithuania and ratified in 1924 The territory was made an autonomous region within Lithuania and had its own legislature The electoral victory (1938) of the National Socialists in the Memel Territory was followed (March, 1939) by a German ultimatum demanding the return of the district Lithuania complied In 1945 the district was captured by Russian troops and was returned to Lithuania, by then a part of the USSR

Memling or **Memlinc, Hans** (hans' mĕm'lĭng, -lĭngk), c 1430–1494, Flemish religious painter, follower of the Van Eycks and of Van der Weyden, with whom he is thought to have studied Memling's work is distinguished for its pensive and gentle lyricism Less forceful than that of his predecessors, it is more charming Working in Bruges at the time of its commercial decline, he brought to perfection the conventional treatment of religious subjects He also painted many admirable portraits The earliest (1468) of his known works is a triptych, *The Madonna Enthroned with Saints and Donors* (Duke of Devonshire Coll., Chatsworth) Famous among his works are *The Shrine of St Ursula* and the triptych with *The Marriage of St Catherine* as the central panel (both Hôpital de St Jean, Bruges) and the large altarpiece *The Last Judgment* (last known to be in the Church of St Mary, Danzig) His surviving work is copious and widely distributed, most of the principal galleries of Europe containing one or more samples In this country fine specimens of his work are in the National Gallery of Art, Washington, D C., the Metropolitan Museum, and the Pierpont Morgan Library, New York His name is sometimes spelled Hemling See study by Alfred Michiels (1883, in French), Sir Martin Conway, *The Van Eycks and Their Followers* (1921)

Memmingen (mĕ'mĭng-un), city (pop 24,586), Swabia, SW Bavaria It manufactures metal goods and food products First mentioned in the 11th cent., it became (1286) a free imperial city and passed (1803) to Bavaria The Twelve Articles of Memmingen were drawn up here during the Peasants' War Memmingen has kept part of its medieval walls and gates and two of its Gothic churches The Fugger House dates from the 16th cent

Memminger, Christopher Gustavus (mĕ'mĭnjur), 1803–88, Confederate secretary of the treasury (1861–64), b Würtemberg, Germany, grad South Carolina College (now the Univ of South Carolina), 1819 He came to Charleston as a child and, left an orphan, was adopted in 1814 by Thomas Bennett, later governor of the state Memminger became a successful lawyer and as a state legislator and Charleston school commissioner did much toward effecting financial and educational reform. Although a late convert to secession, he took a prominent part in the proceedings of the South Carolina secession convention of 1860 and was chairman of the committee which drafted the provisional constitution of the Confederacy A "hard money" man forced by circumstances to direct the Confederacy's inflationary financial program, Memminger labored hard at the treasury post, but criticism compelled his resignation. He later practiced law again in Charleston. See biography by H D Capers (1893), B. J Hendrick, *Statesmen of the Lost Cause* (1939).

Memnon (mĕm'nŏn), in Greek mythology, king of Ethiopia He was the son of Tithonus and Eos In the Trojan War he fought against the Greeks, and after he had killed Antilochus, he himself was killed by Achilles. Eos obtained a grant of immortality from Zeus for her son. Memnon was supposed to have lived in Egypt, and the Greeks gave his name to the great statue of Amenhotep III at Thebes This statue was said to make a musical sound at dawn, at which time Memnon greeted his mother, goddess of dawn

Memorial Day or **Decoration Day,** celebrated in the North in the United States on May 30, in the South on April 26, May 10, or June 3 It was inaugurated in 1868 by Gen. John A Logan for the purpose of decorating the graves of Civil War veterans The exercises were formerly conducted by members of the Grand Army of the Republic, they are now frequently under the auspices of the American Legion The graves of all American soldiers are decorated

memory, term commonly used to indicate the power or ability of an individual to remember things or situations experienced in the past If the term is employed to mean simply the ability of an individual to retain the image of an object or of a situation of past experience (retention), it becomes so limited as not to include another definite character of memory, i e, the ability to recall that which has been retained Psychoanalysts point out that some memories which affect personality are rarely recalled except through hypnosis or PSYCHOANALYSIS As a result, the ability to retain and the ability to recall that which is retained must be distinguished, and both must be included under the more general term of memory Still another factor, that of learning, also contributes to the duration and extent of the total, general ability Much experimental work has been done to test memory Among others, Ebbinghaus, using nonsense syllables (groups of disconnected syllables without associative connection), has shown that the rate of forgetting is greatest at first, gradually slowing down until a general level is reached It has been shown also that, in general, the rapid learner retains the material learned for a longer period than the slow learner Recent experiments show that a person tends to remember better those things which are consistent with his intellectual bias and emotional needs The ability to retain is, in general, explained physiologically on the assumption that paths in the brain and nervous system over which a stimulus has once traveled offer less resistance to subsequent passage However, this, like other attempts to establish a physical basis of memory, has been purely hypothetical and subject to question

Memphis (mĕm'fĭs), capital of the Old Kingdom of ancient Egypt (c 3400–c 2445 B C), at the apex of the Nile delta 12 mi above Cairo It was reputedly founded by Menes, the first king of united Egypt Its god was Ptah The temples of Ptah, Isis, and Re, the Serapeum, two statues of Ramses II, and numerous dwellings have been brought to light Across the Nile are the great pyramids, extending for 20 mi to Gizeh Memphis remained important during the long dominance of Thebes and became the seat of the Persian satraps (525 B C) Second only to Alexandria under the Ptolemies and under Rome, it finally decayed with the foundation of near-by Fustat by the Arabs, and its ruins were largely removed for building in the new city and, later, in Cairo

Memphis. **1** City (pop 1,935), co seat of Scotland co, NE Mo, on the North Fabius river and WNW of Keokuk, Iowa, settled 1838 It is a shipping point for livestock and grain **2** City (pop 292,942), co seat of Shelby co, SW Tenn, on the Fourth, or Lower, Chickasaw Bluff beside the Mississippi just below the mouth of the Wolf river A bridge crosses the Mississippi to Arkansas Some have claimed that De Soto crossed the Mississippi near here, and La Salle's Fort Prudhomme may have been built on this site, which was involved in the British, French, and Spanish imperial rivalries of the 18th cent The United States built a fort here in 1797 Memphis, planned in 1819, was incorporated as a town in 1826, as a city in 1849, in 1909 commission government was adopted In the Civil War, Memphis fell on June 6, 1862, to a Union naval force led by the elder Charles Henry Davis and was an important Federal base for the rest of the war Severe yellow-fever epidemics occurred in the 1870s Important since early days as a river port, Memphis today is the largest city in the state, a port of entry, a great rail center (with railroad shops), a leading cotton and hardwood-lumber market, a livestock market, and an industrial city whose manufactures include cottonseed products, mixed feeds, wire and rubber products, drugs, and chemicals The city purchases power from the TVA In Memphis are Southwestern at Memphis (Presbyterian, coeducational, 1875), Memphis State College, Southern College of Optometry, the medical divisions of the Univ. of Tennessee (see Tennessee, University of), Le Moyne College (Negro), Goodwyn Institute, a museum of natural history and industrial arts, an art gallery, and a number of fine churches The city has a splendid park system and the Mid-South Fairgrounds. An annual cotton carnival is held. Beale Street, in the Negro section, has been made famous by W. C. Handy. At Memphis, Edward Hull Crump for

many years wielded notable political influence on the city and the state. See Shields McIlwaine, *Memphis Down in Dixie* (1948) **3** City (pop 3,869), co seat of Hall co, NW Texas, ESE of Amarillo, founded 1889, inc 1906 A center of farms producing grains, cotton, forage, and other crops, Memphis has processing plants and small industries

Memphremagog, Lake (mĕm"frŭmā'gŏg), 30 mi. long and up to 4 mi wide, mainly in S Quebec, partly in N Vermont Newport, Vt, and Magog, Que, are trade centers and resorts on the lake, which was a travel route for Indians and colonists.

Memucan (mĕmū'kun), counselor of King Ahasuerus Esther 1 14.

Mena, Juan de (hwän' dā mā'nä), 1411–56, Spanish poet and scholar He was greatly influenced by the Italian school, and his masterpiece, a long allegorical poem entitled *Laberinto de Fortuna* or sometimes *Las trescientas* [the 300 stanzas] (1444), was modeled upon Dante Juan de Mena was a precursor of Góngora and Gongorism, the Spanish form of euphuism

Mena (mē'nu), city (pop 3,510), co seat of Polk co, W Ark, in a rich farm section of the Ouachita Mts, founded 1896 It has flour mills, cotton gins, and wood and brick works Commonwealth College, a unique labor school here, closed in 1939

Menado (mänä'dō) or **Manado** (manä'dō), town (pop 27,544), on the northeast coast of Celebes, East Indonesia, on an inlet of the Celebes Sea A trade center and port, it exports copra, coffee, sugar, nutmeg, and ebony There is an airport

Menahem (mē'nuhĕm) [Heb, =comforter], d c 737 B C, king of Israel (c 749–c 737 B C) He was a general in command at Tirzah and murdered Shallum for the throne Menahem was made a tributary by Tiglath-pileser III of Assyria His son, Pekahiah, succeeded him

Menai Strait (mē'nī), channel of the Irish Sea, between the island Anglesey and Caernarvonshire, Wales It is 14 mi long and 200 yards to ¾ mi wide Telford's suspension bridge (1826) carries the road from Bangor on the mainland to Anglesey, over the strait, and Stephenson's tubular bridge (1850) carries a railroad

Menam (mānum') or **Chao Phraya** (chou präya'), river rising in headwaters at the Burma-Laos border and crossing Thailand north-south, the chief river of that kingdom The lower Menam is a union of four streams and enters the Gulf of Siam through several outlets, interconnected by canals that serve for both irrigation and communication The valley is the main rice-producing area of Thailand Ayuthia and Bangkok are on the river

Menan (mē'nun), ancestor of Joseph Luke 3 31

Menander (mĭnăn'dur), 342?–291? B C, Greek poet of the New Comedy, an associate of Theophrastus and Epicurus From discovered fragments he appears to have written ingenious plays with an elegant, smooth style, elaborate plot, and smoothly developed characters His fame was very great and he was often quoted Through the imitations of PLAUTUS and TERENCE he influenced late 17th-century comedy Gilbert Murray translated two plays, filling out the missing parts (1946)

Menands (munăndz'), village (pop 1,764), E N Y, near Albany, inc 1924

Menard (mĭnard'), town (pop 2,375), co seat of Menard co, W central Texas, on the San Saba river and SE of San Angelo It handles the wool, mohair, and cattle from surrounding ranches Near here was established in 1757 a Spanish mission, usually called Mission San Sabá, which was taken by the Comanche Indians in 1758 A presidio, now restored, was also founded in 1757 The mission Indians irrigated land at Menard

Menasha (mună'shu), city (pop 10,481), E Wis, on Lake Winnebago (adjacent to Neenah) and on the Fox, settled before 1850, inc 1874 Water power here serves its numerous factories, which manufacture chiefly paper and wood and paper products The region at the lake outlet was visited by Jean Nicolet and other French explorers and was described by Jonathan Carver in his *Travels* (1778) On Doty Island, part belonging to Neenah, part to Menasha, is James Duane Doty's log house, now a museum

Mencius (mĕn'shus), Mandarin *Meng-tse*, 371?–288? B C, Chinese sage The principal source for Mencius' life is his own writings He was born in the ancient state of Ch'ao, in modern Shantung prov Appalled at the anarchic condition of society, he traveled through several petty states urging the rulers to practice the doctrines of CONFUCIUS Central to the philosophy of Mencius was the belief that man is innately compassionate rather than self-seeking This trait can receive expression only if men enjoy peace of mind, which, in turn, depends upon material sufficiency It follows that the duty of the ruler is to insure the prosperous livelihood of his subjects He should particularly eschew warfare except for defense. If the ruler's conduct reduces his subjects to penury and self-seeking, he must be deposed. Many of the specific reforms in landholding and other economic relations which Mencius proposed are difficult to understand from the sole text of his works, *The Book of Mencius*, which is one of the *Four Books* (see CHINESE LITERATURE) Not until the late 11th cent A D. was Mencius regarded with veneration Since then his image has been placed in temples dedicated to Confucius, and his work is considered one of the classic commentaries on the Confucian writings The complete text of Mencius was translated by James Legge (1861) and by L A Lyall (1935). Excerpts were translated by Arthur Waley in *Three Ways of Thought in Ancient China* (1939) See I A Richards, *Mencius on the Mind* (1932)

Mencken, Henry Louis, 1880–, American editor, author, and critic, b Baltimore, grad Baltimore Polytechnic He began his journalistic career on the *Morning Herald*, became editor of the *Evening Herald*, and has been since 1906 on the staff of the *Sun* or *Evening Sun*, all Baltimore papers From 1914 to 1923 he was coeditor of the *Smart Set* with George Jean Nathan, together they started the *American Mercury* in 1924, and Mencken was sole editor from 1925 to 1933 His pungent and iconoclastic criticism, aimed chiefly at all complacent attitudes, has enlivened many magazines besides his own These essays have been collected in a series of six volumes, *Prejudices* (1919–27) In the field of philology he has compiled a monumental and lively study, *The American Language* (1st ed, 1919, 4th ed, 1936, with supplements, 1946, 1948). Among his other works are *George Bernard Shaw: His Plays* (1905), *In Defense of Women* (1917), *Treatise on the Gods* (1930), and the autobiographical *Happy Days, 1880–1892* (1940), *Newspaper Days, 1899–1906* (1941), and *Heathen Days, 1890–1936* (1943), collected in one volume in 1947 See Edgar Kemler, *The Irreverent Mr Mencken* (1950)

Mende (mād), town (pop 5,026), capital of Lozère dept, S France, in Languedoc, on the Lot river. It has a liqueur trade

Mendel, David see NEANDER, JOHANN AUGUST WILHELM

Mendel, Gregor Johann (grā'gôr yō'hän mĕn'dul), 1822–84, Austrian scientist and Roman Catholic priest, noted for experimental work on heredity He entered the Augustinian monastery at Brno in 1843, taught science at a local secondary school, and in 1869 was elected prelate of the monastery Using garden peas for hybridization experiments, he was the first to keep systematic records of a great number of offspring over several generations He recorded each inherited character separately and insured accuracy by precise technique in cross-breeding His account of the experiments and his conclusions were presented before a local scientific society in 1865 and were published in 1866 The value of his work was not recognized until it was pointed out almost simultaneously in 1900 by K E Correns, De Vries, and Tschermak-Seysenegg Mendel's impaired sight and his duties as prelate curtailed his work, but he carried out further experiments on hawkweed and four-o'clocks and on bees He anticipated Oscar Hertwig's discovery that fertilization of an egg involved only one male sex cell, but Mendel did not publish his findings Mendel's classic article on his experiments with peas, translated as *Experiments in Plant Hybridization*, has been published as a pamphlet and in William Bateson, *Mendel's Principles of Heredity* (1902, 4th impression, 1930) See biography by Hugo Iltis (Eng tr, 1932) **Mendelism** is the system of heredity revealed in Mendel's conclusions Known as Mendel's laws, these state that separate characters (e g, height in peas) are inherited independently of one another, that each reproductive cell receives only one of a pair of alternative factors (such as that determining tallness or shortness) existing in the other body cells (the law of segregation), and that some factors are dominant over others (the law of dominance) When individuals purebred in respect to one set of characters showing dominance are crossed with purebred individuals showing the alternate characters, the hybrid offspring will all exhibit the dominant character, but its cells will carry also the recessive factor A crossing of these hybrids gives an average of one out of four individuals bearing two dominant factors, one bearing two recessive factors, and two bearing both factors, therefore the offspring of hybrids exhibit the dominant character in a ratio of three to one. Mendel's laws have been used by plant and animal breeders See also GENETICS and HEREDITY

Mendelejeff, Dmitri Ivanovich (mĕndulā'uf, Rus dŭmē'trē ēvä'nŭvĭch myĭndyllyä'ûf), 1834–1907, Russian chemist He stated (1869) his concept of the PERIODIC LAW of the classification of elements and, with Lothar Meyer, who had independently reached similar conclusions, was awarded the Davy medal in 1882 Mendelejeff predicted the properties of elements unknown at the time, three of these (gallium, germanium, and scandium) were later discovered. He studied also the nature of solutions and the expansion of liquids An outstanding teacher, he was professor at the Univ of St Petersburg (1868–90) He directed the bureau of weights and measures from 1893 and served as government adviser on the development of the petroleum industry His *Principles of Chemistry* (2 vols, 1868–71, Eng tr., 1905) was long a standard text See biography by D Q Posin (1948)

Mendele mocher sforim (mĕn'dûlû mŏkh'ûr sfō'rĭm), pseud. of **Sholem** (or **Solomon**) **Yakob Abramovich** (shō'lûm yä'kōp ûbra'mûvĭch), 1836–1917, Yiddish novelist Born in Minsk, Russia, and orphaned at 14, he found his way to Kamenets in the Ukraine His early writings were in Hebrew, but his later novels and short stories were written in Yiddish. He perfected a Yiddish prose style which greatly influenced later writers

Mendelism: see MENDEL, GREGOR JOHANN

Mendelsohn, Erich (ā'rĭkh mĕn'dulsōn), 1887–, German architect, an exponent of German expressionism His designs included that of the Steinberg hat factory (1923) at Luckenwalde near Berlin, a Berlin department store (1923), and dwelling houses at Charlottenburg The Potsdam observatory, also known as the Einstein tower (1927), was a highly original concrete structure with a tower, suggestive of sculpture in its plastic conformation of volumes and surfaces In his recent works Mendelsohn has abandoned this fanciful quality and generally follows the modern international style Mendelsohn moved (1933) to England and practiced architecture there until 1937, when he went to Palestine After 1941 he lived in the United States His projects in Palestine include a government hospital in Haifa a trade school at Yagur, several buildings in Jerusalem, and the design for a Hebrew university on Mt Scopus. See study by Arnold Whittick (1940)

Mendelssohn, Jakob Ludwig Felix (mĕn'dlsŏn, yä'kōp lōōd'vĭkh fā'lĭks mĕn'dlsōn), 1809–47, German composer, b Hamburg, grandson of Moses Mendelssohn His father, Abraham, upon conversion to Christianity, changed his surname to Mendelssohn-Bartholdy, a form which is seldom used Mendelssohn's first mature work, the Overture to *A Midsummer Night's Dream*, was composed at 17, and he showed like precocity at the piano In 1829 he conducted a performance of the St Matthew Passion which stimulated a revival of interest in the music of Bach He was musical director at Düsseldorf, 1833–35, and in 1835 became conductor of the Gewandhaus concerts, Leipzig There he founded the Leipzig Conservatory, 1842–43 He was director of the music section of the Academy of Arts, Berlin, in 1841 On many occasions he conducted the London Philharmonic Orchestra His music is characterized by emotional restraint, refinement, and sentimentality Of his five symphonies, the Scottish (1830–42), Italian (1833), and Reformation (1830–32) symphonies are best known. Frequently performed are his Violin Concerto in E Minor (1844), *The Hebrides*, concert overture (1830–32), and two biblical oratorios, *St Paul* (1836) and *Elijah* (1846) Of his piano works, the *Variations sérieuses* (1841) and the *Songs without Words* (in six books, 1832–45) stand out He also composed chamber music, songs, and six organ sonatas See his letters (ed by G Selden-Goth, 1945), biography by S S Stratton (rev ed, 1934)

Mendelssohn, Moses, 1729–86, German-Jewish philosopher, grandfather of Jakob Ludwig Felix Mendelssohn He was a leader in the movement for cultural assimilation In 1743 he went to Berlin, where he studied and worked, becoming (1750) a partner in a silk merchant's firm In 1754 he met Lessing, and a life-long friendship began, out of which grew Lessing's play *Nathan the Wise* (1779) Mendelssohn's philosophy, which anticipated the aesthetics of Kant and J C F von Schiller, is best expressed in his writings, which include *Philosophische Gespräche* (1755), *Philosophische Schriften* (1761), *Phädon* (1767), and *Jerusalem, oder, Über religiöse Macht und Judentum* (1783) He also translated the Psalms and the Pentateuch into German See biography by Hermann Walter (1930)

Mendenhall, Thomas Corwin, 1841–1924, American physicist and educator, b near Hanoverton, Ohio He was professor of physics at Ohio State Univ (1873–78, 1881–84), president of Rose Polytechnic Institute, Terre Haute, Ind (1886–89), and of Worcester Polytechnic Institute (1894–1901) As professor at the Imperial Univ, Tokyo (1878–81), he helped found the Tokyo Seismological Society He conducted researches in electricity, earthquakes, and gravity, organized the Ohio Weather Bureau, and served the U S Coast and Geodetic Survey as superintendent (1889–94)

Mendenhall, town (pop 1,282), co seat of Simpson co, S central Miss, SE of Jackson, in a farm area Near by is a state tuberculosis sanatorium

Menderes (mĕndurĕs'), name of several rivers in Turkey The Buyuk Menderes is the ancient MAEANDER, the Kucuk Menderes is the ancient SCAMANDER

Mendès, Catulle (katül' mĕdĕs'), 1841–1909, French poet, critic, and novelist of the Parnassian school. He founded (1861) the *Revue fantaisiste*, contributed to the *Parnasse contemporain*, and wrote several volumes of verse, including *Philomèla* (1863) and *La Grive des vignes* (1895) Some of his fiction has been translated into English

Mendham (mĕn'dum), residential borough (pop 1,343), N N J., W of Morristown, settled before 1750, inc 1906 An aeronautical-telephone laboratory was established here in 1930 Black Horse Tavern is pre-Revolutionary

Mendieta y Montefur, Carlos (kär'lōs mĕndyā'tä ē mōntäfōōr'), 1873–, Cuban political leader. He was one of the chief opponents of Gerardo Machado Mendieta, installed as provisional president (Jan , 1934) by a coup led by Fulgencio Batista, was unable to establish political stability and resigned (Dec , 1935)

Mendip Hills, range of hills, c 23 mi long and 6 mi. wide, Somerset, England, extending SE from Weston-super-Mare, highest 1,068 ft Their structure is mostly limestone, and they contain numerous caves (including Wookey Hole), some of which show signs of prehistoric occupation. The Romans mined lead here Some of the gorges are very picturesque, notably near Cheddar

Mendocino, Cape (mĕndūsē'nō), westernmost point of California, N of San Francisco

Mendon, rural town (pop. 1,315), S Mass , SW of Boston, settled 1660, inc. 1667 It was burned in King Philip's War

Mendota (mĕndō'tŭ) 1 City (pop 4,215), N Ill., N of La Salle, inc 1859 It is a processing and shipping center in a farm and livestock area Among its manufactures are farm implements and concrete products 2 Village (pop 228), SE Minn , just S of St Paul at the confluence of the Minnesota with the Mississippi, the first permanent white settlement in the state Alexis Bailly of the American Fur Company had traded from Mendota (then St Peter's) before 1819, but settlement dates from 1834, when Henry H Sibley replaced Bailly The name was changed in 1837 The homes of Sibley (1835) and of Jean Baptiste Faribault (1837) have been restored

Mendoza (mĕndō'thä), noble family of Spain, originating (14th cent) in New Castile Iñigo López de Mendoza was created (1445) marquis of Santillana (see Santillana, Iñigo López, marqués de) The family reached great prominence in the 15th cent and became allied by marriage with some of the principal houses of Spain Iñigo's son, **Pedro González de Mendoza** (pā'dhrō gônthä'lĕth dā), 1428–95, was a cardinal of the Roman Church He supported Henry IV of Castile in his struggles against the nobles and later sided with Isabella I against Juana la Beltraneja More a soldier than a prelate, he also fought in the conquest of Granada He cultivated literature and wrote religious and political works Ana de Mendoza, princess de Éboli, was the granddaughter of the cardinal's illegitimate son, Diego Among other prominent members of the family were Antonio de Mendoza, first viceroy of New Spain, and Diego Hurtado de Mendoza (see separate articles)

Mendoza, Antonio de (äntō'nyō dā), 1490?–1552, Spanish administrator, first viceroy of New Spain (1535–50) and viceroy of Peru (1551–52) Of noble family, Mendoza held high offices before going to Mexico, where his wise rule caused him to be called "the good viceroy " He alleviated the condition of the Indians, though he opposed enforcement of the New Laws of Las Casas, fostered religion, encouraged education, brought the first printing press to America at the instance of Bishop Zumárraga, quelled numerous revolts, notably the Indian insurrection in Nueva Galicia called the Mixtón War, in which Pedro de Alvarado was killed, and pushed exploration far into the north by sending out expeditions under Marcos de Niza, Coronado, Hernando de Alarcón, and Cabrillo Industry and agriculture were developed, resulting in general prosperity In brief, he extended and consolidated the conquest, begun by Hernán Cortés, and established the sure basis for Spain's long rule in Mexico Efforts to discredit and oust him, originating with Cortés, his rival in the work of discovery, ended in failure In 1551 he took office as viceroy of Peru There also he opposed enforcement of the New Laws, but the *audiencia,* allowed liberty of action, overruled him See biography by A S Aiton (1927).

Mendoza, Pedro de (pā'dhrō), b 1501 or 1502, d 1537, Spanish conquistador, first adelantado of Río de la Plata (present Argentina) After a military career in Europe, he received (1534) from Emperor Charles V a commission to conquer and colonize the Río de la Plata region With 11 vessels and 1,200 men, he sailed from Sanlúcar de Barrameda on Aug 24, 1535. He reached the estuary of the Río de la Plata in January and founded Buenos Aires early in Feb , 1536 Attacks by the Indians, scarcity of food, and disaster of every sort made the place untenable Leaving Juan de Ayolas in charge, Mendoza sailed for Spain in April, 1537, and died at sea Buenos Aires was abandoned in 1541, by order of Domingo Martínez de Irala, the colonists removing to Asunción See Paul Groussac, *Mendoza y Garay* (2d ed , 1916), and, for the account of an eyewitness, the "Voyage of Ulrich Schmidt to the Rivers La Plata and Paraguai" in Luis L Domínguez, *The Conquest of the River Plate* (Hakluyt Society, Ser 1, No. 81, 1891).

Mendoza, Pedro González de · see Mendoza, family.

Mendoza (mĕndō'sä), city (estimated pop 100,429), capital of Mendoza prov., metropolis of W Argentina, in an oasis irrigated by the Mendoza river It was founded (1561) by Pedro del Castillo and was the capital of the Chilean province of Cuyo until the creation of the viceroyalty of Río de la Plata (1776) Destroyed by an earthquake in 1861, the town was rebuilt. The wine industry is controlled mainly by a large Italian population Mendoza expanded after the completion of the railroad to Buenos Aires late in the 19th cent Alfalfa, corn, potatoes, and fruit are also grown in the vicinity, and some manufacturing has developed. Of increasing value is the exploitation of petroleum Mendoza is the eastern terminus of the Transandine Railway It was from here that San Martín and Chilean revolutionists began (1817) the final liberation of Chile from Spain

Menelaus (mĕnūlā'ŭs), in Greek mythology, king of Sparta, son of Atreus He was the husband of Helen, the father of Hermione, and the younger brother of Agamemnon Paris, prince of Troy, abducted Helen Menelaus asked the other Greek kings to join him in an expedition against Troy Thus the Trojan War began Menelaus, although subordinate to Agamemnon, took a prominent part in the war After the fall of Troy, he became reconciled with Helen, and he returned to Sparta with her Menelaus appears in the *Iliad* and in the *Odyssey*

Menelik II (mĕ'nĕlĭk), 1844–1913, emperor of Ethiopia after 1889 He was originally king of Shoa (central Ethiopia) After the death (1868) of Emperor Theodore II, Menelik, with Italian support, gained strength steadily, conquered most of the country, and seized the throne He concluded (1889) the Treaty of Uccialli with Italy, but when he learned that the Italian version made Ethiopia a protectorate of Italy he denounced the agreement In the Italian invasion which followed (1895–96) he astounded the world by his great victory, notably in the rout at Aduwa Italy was forced to concede Ethiopia's absolute independence Menelik then accepted the offered friendship of the British and the French He took many important steps to centralize and modernize his country, including the construction of a railroad, suppression of the slave trade, and curbing the feudal nobility His armies brought S Ethiopia (largely Moslem in population) under some degree of central control He was succeeded by Lij Yasu

Mene, Mene, Tekel, Upharsin (mē'nē, mē'nē tĕ'kĕl ûfär'sĭn), in the Bible, the mysterious riddle written by a hand on the wall at Belshazzar's feast Daniel made from it a prophecy of the destruction of the kingdom His solution connects these words with (Aramaic or Chaldaic) stems meaning "to number, to number, to weigh, to divide " Dan 5 5–29

Menéndez de Avilés, Pedro (pā'dhrō mänān'dĕth dä ävēlās'), 1519–74, Spanish naval officer and colonizer, founder of Saint Augustine, Fla , b Avilés, Asturias He went to sea as a youth and so distinguished himself that by the time he was 35 he held the captain generalcy of the Indies fleet, which convoyed treasure ships from the New World to Spain By a patent of March 20, 1565, Philip II made him *adelantado* of Florida and charged him with driving the French Huguenots from Fort Caroline and establishing a Spanish colony Menéndez's expedition of 11 ships and 500 colonists sailed from Spain on June 29 and on Aug 28 entered the harbor he named for St Augustine At the mouth of the St Johns river on Sept 4 he encountered a French fleet under Jean Ribaut, which he was unable to bring to combat Menéndez then returned to St Augustine, where he began to build a fort Ribaut, hoping to take the Spanish by surprise, sailed to attack them, but his fleet was wrecked in a tropical hurricane With Fort Caroline, under the command of René de Laudonnière, virtually defenseless, Menéndez marched overland and on Sept. 21 killed most of the French there Ribaut and his men, driven ashore S of St Augustine, were captured as they tried to reach Fort Caroline by land, and all but a few were slain The massacres, which aroused France, were later avenged by Dominique de Gourgues Part of his mission accomplished, Menéndez went to Cuba for supplies and then explored the Gulf Coast, where he made friendly contacts with the Indians Before he returned to Spain in 1567 there were posts on St Helena Island (S C) and on Chesapeake Bay in addition to St Augustine and San Mateo (Fort Caroline) Although he remained governor of Florida until his death, Menéndez returned only for a brief stay in 1571 The establishment of the Florida colony was due almost wholly to his energy and ability An early account is Gonzalo Solís de Merás, *Pedro Menéndez de Avilés* (tr. and ed by J T Connor, 1923) See Woodbury Lowery, *The Spanish Settlements within the Present Limits of the United States· Florida, 1562–1574* (1905)

Menéndez Pidal, Ramón (rämōn' mänān'dĕth pēdhäl') 1869–, Spanish scholar known for his philological studies and research in medieval Spanish literature He directed the *Revista de filología española* and wrote *Orígenes del español* (1926), the first work to explain the origin of a Romance language. Among his works in the field of medieval literature are *La leyenda de los infantes de Lara* (1896), *L'Épopée castillane* (French, 1909, Spanish, 1910), *El romancero español* (1910), *Poesía juglaresca y juglares* (1924), and his edition (1916) of the *Primera crónica general.* Of several works on the Cid, the first was *Cantar de Mío Cid* (1898) He has long worked on a history of the Spanish language.

Menéndez y Pelayo, Marcelino (märthälā'nō mänān'dĕth ē pälī'yō), 1856–1912, Spanish scholar and literary historian. His contribution to Spanish literary history and appreciation is outstanding His works include *Ciencia española* [Spanish science] (1876); a study of Horace's influence on Spanish poetry (1877), *Historia de los heterodoxos españoles* [history of Spanish heterodoxy] (1880–81); *Historia de las ideas estéticas en España* [history of aesthetic ideas in Spain] (9 vols., 1883–91), *Estudios de crítica literaria* [studies in literary criticism] (1884–1908), editions of the plays of Calderón (1881) and Lope de Vega (13 vols., 1890–1913), a study of the origins of the novel, *Orígenes de la novela* (1905–10), and two important anthologies, *Antología de poetas líricos castellanos* (13 vols , 1890–1908) and *Antología de poetas hispanoamericanos* (1892).

Menes (mē'nēz), fl 3400? B.C , first historic ruler of the first dynasty of ancient Egypt. He seems to have united the southern and northern kingdoms and to have settled on a new capital, the later Memphis Two tombs have been attributed to him, one (found in 1897) near Negadeh below Luxor, the other (found in 1938) at Sakkara Hieroglyphics from his reign have been found at Abydos

Menevia · see Saint David's, Wales

Mengelberg, Josef Willem (yō'sĕf vĭ'lum mĕng'ulbĕrkh), 1871–, Dutch conductor In 1895 he became conductor of the Amsterdam Concertgebouw Orchestra, a position which he held until 1945, when the Netherlands Honor Council for Music declared that because of his activities during the Second World War he would no longer be allowed to conduct in the Netherlands From 1921 to 1930 he was one of the conductors of the New York Philharmonic Orchestra

Menger, Karl (karl' mĕng'ur), 1840–1921, Austrian economist, a founder of the Austrian school of economics He was professor of economics at the Univ of Vienna from 1873 until 1903, when he retired to devote himself to research Following an empirical approach rather than the historical method, he formulated a theory of marginal utility The basic principle is that consumer goods have value of two orders, as they serve human needs directly or indirectly, thus he explained the economic phenomena of price and distribution in terms of social value His theories are well known to the English-speaking world through the works of some of his associates, especially Friedrich von Wieser and Eugen von Böhm-Bawerk His chief work is *Grundsätze der Volkswirtschaftslehre* [foundations of political economy] (1871)

Mengs, Anton Raphael (an'tōn rä'faĕl mĕngs'), 1728–79, German historical and portrait painter, b Bohemia He was the pupil of his father, Ismael Israel Mengs (c 1688–1764), a miniature painter, who lived in Dresden and with whom Anton went (1741) to Rome The younger Mengs was appointed (1749) court painter at Dresden to King Augustus III of Poland and Saxony In 1754 he became director of the Vatican Art Academy Summoned (1761) to Madrid to decorate the royal palace, he painted there some of his best work, including *The Apotheosis of Trajan* His portrait of Maria Amalia, queen of Spain, is in the Metropolitan Museum

Meng-tse see Mencius

Mengtsz or **Meng-tzu** (both mŭng'dzŭ'), city and county (pop 98,538), SE Yünnan prov , China The city is on the railroad from Kunming to Haiphong Tin is manufactured

menhaden (mĕnhā'dun) [Narragansett, =fertilizing], fish related to the shad and herring, found from Nova Scotia to Brazil Highly prolific, it is one of the most abundant fish on the Atlantic coast of the United States, although destroyed in vast numbers by bluefish and other aquatic predators An excellent oil is extracted from it, and a meal for poultry and a fertilizer ingredient are made from the residue Most of the large annual catch is used for these products The numerous common names include pogy and mossbunker

menhir (mĕn'hĭr'), [Breton, =long stone], unhewn stone or boulder found standing upright. Serving as a monument in prehistoric times, such a monolith was set on end near or at a grave Its shape is rough and squared, tapering toward the top The size varies, large and small stones are found in a pattern such as the cromlech (stone circle), where a large menhir is surrounded by smaller stones From this, lines of small menhirs form a series of alleys called alignments In France long rows of menhirs are found at Carnac. A huge circle of standing stones is the famous Stonehenge of England, portions of which consist of a variety of menhirs.

Ménière, Prosper (prôspĕr' mänyĕr'), 1799–1862, French physician. A noted otologist, he first described **Ménière's disease** of the inner ear, which

is accompanied by vertigo and often by progressive deafness.

Menin (mūnē′), Flemish *Meenen* (mā′nŭn), city (pop. 21,464), West Flanders, W Belgium, on the Lys river and on the French border It has a linen textile industry It several times changed hands during the bitter fighting between Germans and English in the Ypres sector in the First World War.

meningitis (mĕnĭnjī′tĭs) or **cerebrospinal meningitis** (sĕ″rŭbrōspī′nŭl), inflammation of the meninges (membranes) of the brain and spinal cord. The meninges are subject to infection by various organisms, e g , pneumococcus, streptococcus, meningococcus, and the bacillus of tuberculosis. An epidemic type of meningitis is caused by an organism (*Neisseria intracellularis*) which enters through the respiratory tract The disease usually occurs in children and young people Symptoms are violent headache, vomiting, fever, stiff neck, and sometimes convulsions Later a rash may appear Early use of a specific serum and of the sulfa drugs has reduced the mortality rate Meningitis is sometimes followed by hydrocephalus or by paralysis.

Ménippée, Satyre see SATYRE MÉNIPPÉE

Menken, Adah Isaacs, 1835–68, American actress, whose real name was Dolores Adios Fuertes She was born near New Orleans, probably of a Jewish family She made her first appearance as a dancer there In the title role of *Mazeppa* (first presented in San Francisco, 1863), adapted from Byron's poem, she created a sensation in New York and London for her daring unconventionality Several times married, the friend of such different literary celebrities as Dumas père and Longfellow, she never permitted her legend to pale She died under 40 in poverty She dedicated a volume of verse, *Infelicia* (1868), to Dickens See Allen Lesser, *Enchanting Rebel* (1947)

Menkure (mĕnkōō′rā) or **Mycerinus** (mīsurī′nŭs), fl 2800? B C , successor of Khafre in the IV dynasty of ancient EGYPT and builder of the third pyramid at Gizeh His reign began the decline of the IV dynasty

Menlo Park 1 Residential city (1940 pop 3,258, 1946 special census pop 7,180), W Calif , 8 of San Francisco and near Palo Alto, inc 1874 St Patrick's Seminary and a junior college are here 2 Village, NE N J , NE of New Brunswick Edison's workshops were here from 1876 to 1887 A 131-foot memorial tower was dedicated in 1938

Menninger, Karl Augustus (mĕ′nĭng-ŭr), 1893–, and **William Claire Menninger**, 1899–, American psychiatrists, brothers, b Topeka, Kansas Karl was graduated from Harvard (M D , 1917), and William from Cornell (M D , 1924) The Menninger Clinic, conceived with the idea of collecting many specialists in one place, was founded in Topeka in 1920 by Karl and his father, Charles, and in 1926 they were joined by William The Menninger Foundation, for the purpose of research, training, and public education in psychiatry, came into existence in 1941 and has since become a psychiatric center of the United States Karl Menninger, whose writings include *The Human Mind* (1930) and *Man against Himself* (1938), was instrumental in founding the Winter Veterans' Administration Hospital at the close of the Second World War This institution functioned not only as a mental hospital but as the center of the largest psychiatric training program in the world William Menninger's works include *Psychiatry in a Troubled World* (1948) and, with Munro Leaf, *You and Psychiatry* (1948)

Mennonites (mĕ′nŭnīts), sect of Protestant Christians, originating among the ANABAPTISTS in Switzerland and for a time called Swiss Brethren They derive their name from MENNO SIMONS, a Dutch reformer In Zurich a congregation formed by Conrad Grebel and others separated (1523–25) from the state church because they believed such a church unauthorized by Scripture and because they rejected the practice of baptizing infants They believed in nonresistance and refused to take oaths Taking the Bible as their sole rule of faith and purposing to restore the Christianity of apostolic times, they retained only two sacraments, baptism (for adult believers only) and the Lord's Supper Persecution drove many of the brethren to Germany, where new congregations were formed The movement spread also to the Netherlands, where it assumed importance, and to France and Russia The Dordrecht Confession of Faith, embodying the distinctive features of Mennonite belief, was issued (1632) in Holland Mennonites are numerous in the United States, where mainly they have settled in Pennsylvania, Ohio, and the Middle West. Many of them are occupied in farming, at which they excel The first permanent Mennonite settlement in America was made (1683) at Germantown, Pa , by a group from Krefeld, Germany Mennonites from Switzerland, Russia, and other parts of Europe increased the numbers in America While each congregation is at liberty to decide independently on its form of worship and other matters, all Mennonites agree on certain points—baptism of believers only, the necessity of regeneration, refusal to bear arms and to take oaths, and the importance of rejecting worldly concerns They preserve simplicity of dress and habits and disapprove of marriage with one outside their faith In celebrating the Lord's Supper, some branches include the rite of foot washing Differences of opinion on matters of discipline and performance have resulted in division into a number of branches The Mennonite Church, whose members are sometimes known as Old Mennonites, is the original body in the United States and has the largest membership It carries on missionary and other kinds of organized Christian work and publishes denominational literature in both English and German. The General Conference of the Mennonite Church of North America (1860), next largest body, may be listed among the liberal branches of the sect, together with the Central Conference Mennonites (1899) One of the most conservative divisions is the Amish Church, which, under the lead of Jacob Amman, broke away from the main body in Europe The principal Amish groups in the United States are the Old Order Amish, who do not use churches but worship in homes and conduct their services in German, and the Conservative Amish, who abide by the Dordrecht Confession of Faith but hold services in English as well as German and accept such innovations as the Sunday school The terms "House Amish" and "Church Amish" are sometimes used to distinguish the branches. Another conservative body is the Reformed or Herrite branch, established (1812) under the leadership of John Herr The Church of God in Christ (1859), the Old Order Mennonites, formed in 1870 under Jacob Wisler, and the Mennonite Brethren in Christ (1883) are among the other branches Many Mennonites are to be found in Canada Recently a number of American, Canadian, and European Mennonites have moved to colonies in Paraguay, South America See C Henry Smith, *The Story of the Mennonites* (1941), John Horsch, *Mennonites in Europe* (1942), C S Rice and J B Shenk, *Meet the Amish* (1947)

Menno Simons (mĕ′nō sē′mōnz), 1496?–1561, Dutch religious reformer The name of the MENNONITES was derived from his name In 1524 he became a priest of the Roman Catholic Church, but in 1536 he left that communion, when he could no longer believe in infant baptism and other teachings His test of the true Christian was regeneration He was active in Holland and Germany as an organizer and leader of the less aggressive division of Anabaptists His writings and sermons were published as *Opera omnia theologica* (1681)

Menocal, Mario García (märē′ō gärsē′ä mänōkäl′), 1866–1941, president of Cuba (1913–21) He was educated as an engineer at Cornell Univ An able leader in the fight for liberation from Spain, he later became a Conservative politician As president he initiated a "businessman" government that was widely criticized as corrupt and tyrannical The boom of Cuban sugar known as the "dance of the millions" rose in Menocal's time His victory in the election of 1916 was challenged by the Liberals, and José Miguel GÓMEZ led a revolt, Menocal was, however, able to avoid defeat and turned affairs into international channels by taking Cuba into the First World War on the side of the United States In 1920 he backed Alfredo ZAYAS, and in 1924 he lost to Gerardo MACHADO Taking part in the 1931 revolution led to exile in the United States After Machado's fall he returned to Cuba and to politics

Menominee (mənŏm′ənē), city (pop 10,230), co seat of Menominee co , W Upper Peninsula, N Mich , on Green Bay at the mouth of the Menominee, settled c 1840, inc 1883 A bridge connects with Marinette, Wis Fur trading and lumbering brought early development The city is an important port, a haven for a commercial fishing fleet, and the industrial center for an area producing lumber, sugar beets, and dairy products Summer sports draw scores of visitors

Menominee, river, c 118 mi long, formed by the union of the Brule and the Michigamme (or Michigamie) above Iron Mountain, W Upper Peninsula, N Mich , and flowing SSE into Green Bay at Menominee. It courses through an iron-ore region and forms part of the Wisconsin-Michigan line Once used for lumbering, it now furnishes water power

Menominee Indians, North American Indian tribe of the Algonquian linguistic stock They are also called the Menomini They were a sedentary people of the Eastern Woodlands area who chiefly subsisted on the gathering of wild rice, the Algonquian name for wild rice is *manomin* In c 1634, when they were visited by Jean Nicolet, the Menominee lived at the mouth of the Menominee river in Wisconsin and Michigan In 1671 and from then until 1854 they inhabited settlements which extended from the Menominee river S to the Fox river and bordered the western shore of Green Bay Although some of the Menominee supported the British in the American Revolution and the War of 1812, they were generally peaceful towards the whites The Menominee were, however, the bitter enemies of the neighboring Algonquian tribes, who waged constant warfare to drive the Menominee out of the rich wild-rice area. In 1854 the Menominee were settled on a reservation (Menominee Reservation) on the Wolf river, in N central Wisconsin In the 19th cent the Menominee numbered some 1,600 but today number 2,500 See Alanson Skinner, *The Material Culture of the Menomini* (1921); Felix Keesing, *The Menomini Indians of Wisconsin* (1939)

Menomonee Falls (mənŏm′ənē), village (pop. 1,469), SE Wis , NW of Milwaukee and on the Menomonee, settled 1843, inc 1892

Menomonie (munŏm′ənē), city (pop 6,582), co seat of Dunn co , W Wis , NW of Eau Claire and on the Red Cedar, platted 1859, inc 1882 Once a lumber town, it is now a farm trade center and makes dairy products It is the seat of Stout Institute (coeducational, 1903), which trains teachers in home economics and industrial education

menopause (mĕ′nŭpôz) or **climacteric** (klīmăk′tərĭk, klī″măktĕ′rĭk), the normal cessation of menstruation, also called change of life. Menopause is caused by a slowing down of the activities of the ovaries and occurs most frequently between 40 and 50 years of age The change is gradual, with shorter or less frequent menstrual periods for a varying number of years before menstruation ceases In many individuals a number of disturbances occur during the change, e g , hot flashes, profuse perspiration, vertigo, headache, and sometimes hypertension and arthritis Some disturbances accompanying the menopause are relieved by estrogenic hormones, administered either by mouth, by injection, or by means of suppositories Any bleeding or bloody discharge between menstrual periods is not caused by the menopause and requires early examination and diagnosis Recently it has been generally recognized that there is a psychological change in men which corresponds to the climacteric in women and which has some physical manifestations

Menorca, Spain see MINORCA

Menotti, Gian-Carlo (jän′-kär′lō mänôt′tē), 1911–, Italian-American composer, b Italy, studied at the Milan Conservatory and at the Curtis Institute of Music, Philadelphia His outstanding works are the operas *Amelia Goes to the Ball* (Philadelphia, 1937), *The Old Maid and the Thief* (1939), commissioned by the National Broadcasting Company, *The Medium* (1946), and *The Telephone* (1947). All of these except *The Medium*, a melodrama, follow the tradition of Italian *opera buffa* and are tuneful, witty, and mildly satirical His tragic musical drama *The Consul* (1950) is his first successful full-length work He is his own librettist

Menpes, Mortimer (mĕm′pĭs), 1859–1938, English painter, etcher, draughtsman, and writer, b Australia, chiefly self-taught in art He served as artist for the periodical *Black and White* in the South African War, painted in many lands, and held exhibitions in London He revived the art of printing in color from etched plates Menpes wrote and illustrated books on Japan (1901), Venice (1904), Brittany (1905), and India (1905) He was the founder of the Menpes Press

Menshevism. see BOLSHEVISM AND MENSHEVISM

Menshikov, Aleksandr Danilovich (ŭlyĭksän′dŭr dŭnyē′lŭvĭch mĕn′shĭkŏf), 1672–1729, Russian field marshal and statesman Of lowly origin, he became an intimate companion of the orgies of PETER I (Peter the Great), and after the death (1699) of François Lefort he was the emperor's chief adviser Despite his vices and rapacity he proved an able military commander, and he energetically carried out Peter's reforms He was successively governor of Schlüsselburg, St Petersburg, and Estonia and was created a prince Peter, while cherishing him, frequently punished him by heavy fines to relieve him of some of his ill-gotten gains Empress CATHERINE I was Menshikov's mistress before Peter took her from his house Menshikov helped to raise her to the throne on Peter's death and was the real ruler of Russia during her reign His administration was efficient but highhanded, and his enemies were legion Shortly after the accession (1727) of Peter II, he was brusquely dismissed and exiled to Siberia, where he died Several of his descendants held high posts in the empire

menstruation, the flow of blood from the uterus or womb, occurring in women from puberty to the menopause usually in cycles of 28 days. This periodic occurrence is associated with the release of an ovum from the ovary and is controlled by the hormonal activities of certain endocrine glands (the ovaries and pituitary, adrenal, and thyroid glands) The menstrual cycle begins with a flow of blood which usually ceases after four or five days Between the 5th and 14th day of the cycle, a replacement of the glandular tissue lining the uterus occurs by a rapid proliferation of the remaining cells. Between the 13th and 18th day, an ovum is released from the ovary During the following 10 days, a swelling of the cells lining the uterus occurs, and the egg, having reached the uterus during this period, is discharged with the flow of blood and of sloughed cells from the uterine lining If conception takes place, the cycle of menstruation usually ceases for the duration of the pregnancy.

mental age: see INTELLIGENCE.

mental diseases: see MANIC-DEPRESSIVE PSYCHOSIS; NEUROSIS, PARANOIA; PSYCHIATRY, PSYCHOSIS, SCHIZOPHRENIA.

mental hygiene, the science of promoting mental health and preventing mental disease through the application of psychiatry and psychology Throughout the 19th cent there were periodic waves of interest in the problems of the insane, generally stimulated by the crusading zeal of such reformers as Dorothea L DIX In reaction to public ignorance of the facts of insanity, as well as to callousness in official quarters, the National Association for the Protection of the Insane and the Prevention of Insanity was formed in 1880. While this organization performed great service in the area of public enlightenment, it could not survive the internal dissensions which caused its dissolution in 1886 It was not until 1908 that the mental hygiene movement as such took root This came about as a direct result of public reaction to Clifford W Beers's autobiography, *A Mind That Found Itself,* which described his experiences in institutions for the insane That year the Connecticut Society for Mental Hygiene was organized, to be followed in 1909 by the National Committee for Mental Hygiene The movement found early supporters in Adolf Meyer (who suggested the term "mental hygiene"), William James, Henry Phipps, T W Salmon, and F E Williams It was spread throughout the United States by organization of state societies and expanded to other countries An International Committee was formed in 1930 during the first international congress, the second congress met in 1937. In the United States the mental hygiene movement, either directly through the national committee or state societies or in cooperation with other agencies, has accomplished, among many other advances, wide reforms in institutional care, the establishment of child-guidance clinics, and public education concerning mental hygiene The First World War gave impetus to the mental hygiene movement by underlining the great need for a positive mental health program The national committee has since 1917 been issuing a quarterly journal, *Mental Hygiene,* as well as other publications designed to increase public information See W A White, *20th Century Psychiatry* (1936), *One Hundred Years of American Psychiatry* (1944)

mental tests, standardized tests for measuring psychological traits or for studying some specialized aspect of ability Psychologists and vocational advisers have become increasingly interested in evaluating mental factors other than those investigated in INTELLIGENCE TESTS Schools have made greater use of educational aptitude and achievement tests that enable them to compare ability with actual accomplishment, while administrators in business use tests for such things as special talents, interests, and motor skills to learn the potential capacities of a future employee With the development of psychoanalysis a number of so-called projective tests have come into extensive use They are based on the theory that individuals tend to project their own unconscious attitudes into ambiguous situations The most widely used of these tests is that of the Swiss psychiatrist, Hermann Rorschach, who used 10 standardized inkblots and had the patient tell what he saw The interpretation is based on whether the whole blot or details are described, the reaction to color, how much movement is seen, and a great many other factors The Thematic Apperception Test, developed by Henry A Murray, uses a standard series of pictures about which short stories must be told Each story is carefully analyzed to uncover underlying needs, attitudes, and patterns of reaction A Hungarian psychiatrist, Lipot Szondi, introduced a test designed to bring forth the hidden dynamic processes in the human personality, using photographs of 48 mentally disturbed or sexually perverted people from which a given number of those liked and those disliked must be chosen Among other commonly used projective tests are the word-association test, made famous by C G Jung, used to uncover complexes, and the finger painting and the draw-a-man tests See G K Bell, *Projective Techniques* (1948), F L Goodenough, *Mental Testing* (1949), Susan Deri, *The Szondi Test* (1949)

Mentana (mäntä'nä), village, Latium, central Italy, 13 mi NE of Rome. Here in 1867 GARIBALDI was defeated by French and papal troops

Menteith (mĕntēth'), small lake, 1¼ mi long and 1 mi wide, Perthshire, Scotland, NW of Stirling in Menteith valley. Mary Queen of Scots, as a child, was sent to Inchmahome, one of the three islands, in 1547 The same isle has remains of an Augustinian priory founded in 1238, and on another are ruins of a castle of the earls of Menteith

menthol (mĕn'thôl), soft, white crystalline solid, with a characteristic odor It is the chief constituent of oil of peppermint An alcohol, it is a compound of carbon, hydrogen, and the hydroxyl (OH) group It melts at 42° to 45°C and boils at 215°C. It is freely soluble in alcohol, ether, chloroform, and other organic solvents In medicine it is used chiefly to relieve the pains of neuralgia and to alleviate irritations of the mucous membrane and skin. It can be prepared synthetically.

Menton (mätôⁿ'), Ital. *Mentone,* town (pop 11,079), Alpes-Maritimes dept, SE France, on the Italian frontier opposite Ventimiglia It is a favorite resort on the RIVIERA Menton, till then a part of the principality of Monaco, was seized by Sardinia in 1848 and ceded to France, after a plebiscite, in 1860. It was damaged in the Second World War.

Mentor (mĕn'tûr, -tôr"), in Greek mythology, friend of Odysseus and tutor of Telemachus On several occasions in the *Odyssey,* Athena assumes Mentor's form to give advice to Telemachus or Odysseus. His name is proverbial for a faithful and wise adviser

Mentor, village (pop 1,827), NE Ohio, near Lake Erie NE of Cleveland, founded 1799 Garfield was living here when he was elected President.

Menuhin, Yehudi (yühōō'dē mĕn'ŭhĭn), 1916–, American violinist, b New York city, of Russian parents He made his debut with the San Francisco Symphony Orchestra at the age of seven and afterward studied in Europe with Adolph Busch and Georges Enesco In the season of 1934–35 he made his first world tour After nearly two years of retirement he appeared again in 1937, a mature artist, in the first rank of violinists He has often appeared in recital with his sister Hephzibah, an accomplished pianist See Donald Brook, *Violinists of Today* (1948)

Menzaleh or **Menzala** (both mĕnzä'lē), lagoon, area 620 sq mi, Egypt, partly separated from the Mediterranean Sea by the narrow peninsula on which Port Said is situated The lagoon is the northernmost section of the Suez Canal

Menzel, Adolph Friedrich Erdmann von (ä'dôlf frē'drĭkh ĕrt'man fŭn mĕn'tsul), 1815–1905, German painter and illustrator His lithographic illustrations for Goethe's *Künstlers Erdenwallen* attracted early attention His 400 designs for wood blocks illustrating Kugler's *History of Frederick the Great* established his reputation and gave a stimulus to German wood engraving These were followed by notable illustrations for the works of Frederick the Great Self-taught, Menzel ranks as an outstanding German painter While best known for his historical paintings such as *Round Table of Frederick II* and *Departure of the King from the Seat of War,* Menzel also painted excellent and realistic pictures of daily life

Menzies, Robert Gordon (mĕn'zēz), 1894–, Australian statesman A wealthy barrister, Menzies was elected as a Conservative to the Australian House of Representatives in 1934 and was attorney general (1935–39) in Joseph A Lyons's government Upon Lyons's death Menzies succeeded as leader of the United Australia party (later the Liberal party) and as prime minister (1939) In 1941 he was forced out of the premiership, which he had held by a narrow majority He led the opposition in the House from 1943 until late in 1949, when the Liberal–Country party coalition defeated the Labour government at the polls and Menzies, as leader of the Liberal party, again became prime minister

Meonenim (mēō'nēnĭm), unidentified location adjacent to Shechem Judges 9 37

Meonothai (mēō'nōthī, mēfā'ăth), unlocated city, E of the Dead Sea Joshua 13 18, 21 37, 1 Chron 6 79, Jer 48 21

Mephibosheth (mĕ"fĭbō'-, mēfĭ'bŏ-) **1** Jonathan's lame son to whom David restored Saul's lands 2 Sam 4 4, 9, 16 1,4, 19 24 Merib-baal 1 Chron 8 34, 9 40 For the relation between the names of this man, see BAAL **2** Son of Saul 2 Sam 21 8

Mephistopheles (mĕfĭstŏf'ŭlēz), in the German FAUST legend, the personification of the devil, to whom Faust sells his soul He appears in versions by Goethe, Marlowe, Gounod, Berlioz, and Boito

Merab (mē'-) [Heb ,=increase], daughter of Saul 1 Sam 18 17–19 She is referred to (by a textual error, no doubt) as Michal at 2 Sam 21 8

Meraiah (mĕ"rā'ŭ), one of the priestly family of Seraiah Neh 12 12

Meraioth (mĕrā'yŏth) [Heb.,=rebellious] **1** Descendant of Aaron 1 Chron 6 7,52, Ezra 7 3 **2** Priest 1 Chron 9 11, Neh 11 11. **3** See MERE-MOTH 3

Meramec (mĕr'umĕk), river rising in S central Missouri, E of Salem, and flowing 207 mi N, NE, and SE to the Mississippi c 20 mi below St Louis. It affords fishing, boating, and swimming

Merano (mära'nō), Ger *Meran* (märan'), city (pop 22,575), Trentino-Alto Adige, N Italy, beautifully situated in the Alps of S Tyrol Its site and mild climate have made it a popular resort Excellent grapes are grown here

Merari (mĕ'rărī, mĕrā'rī) [Heb ,=bitterness], ancestor of a division of the Levites. Gen 46 11, Num 26 57

mercantilism (mûr'kuntĭlĭzĭm), economic policy that superseded the medieval feudal organization in Western Europe, especially Holland, France, and England. The period 1500–1800 was one of religious and commercial wars, and large revenues were needed to maintain armies and pay the growing costs of civil government. Mercantilist nations were impressed by the fact that the precious metals (bullion) were in universal demand as the ready means of obtaining other commodities; hence they tended to identify money with wealth Since foreign trade was the means of acquiring bullion, foreign trade was favored above domestic trade, and manufacturing or processing, which provided the goods for foreign trade, was favored at the expense of agriculture and other extractive industries. Manufacturing in turn promoted the growth of population, an asset in war. State action, an essential feature of the mercantile system, was used to accomplish its purposes Under a mercantilist policy a nation sought to sell more than it bought and so to accumulate bullion The imports desired, besides bullion, were raw materials, and duties upon imports were levied to provide revenue for the government The state exercised its control over the economic life in part directly but chiefly through corporations and trading companies Production was carefully regulated with the object of securing goods of good quality and low cost, thus enabling the nation to hold its place in foreign markets Treaties were made to obtain exclusive trading privileges, and the commerce of colonies was exploited for the benefit of the mother country In England mercantilist policies were effective in creating a skilled industrial population and a large shipping industry Through a series of NAVIGATION ACTS it finally destroyed the commerce of Holland, its chief rival Mercantilist ideas were a force in history after 1500 and did not decline before the coming of the INDUSTRIAL REVOLUTION and of laissez-faire ideas Henry VIII, Elizabeth, and Oliver Cromwell conformed their policies to mercantilism In France its chief exponent was Jean Baptiste COLBERT See J W Horrocks *A Short History of Mercantilism* (1924), P W Buck, *The Politics of Mercantilism* (1942)

Mercator, Gerardus (jurär'dŭs mûrkā'tur, mur-), Latin form of his real name, **Gerhard Kremer** (gā'rart krā'mur), 1512–94, Flemish geographer, mathematician, and cartographer He studied in Louvain, where he had a geographical establishment (1534) From 1537 to 1540 he surveyed and mapped Flanders, in 1538 he produced his first map of the world (based on Ptolemy's map), in 1541 he made a terrestrial, and in 1551 a celestial, globe He was appointed (1552) to the chair of cosmography in Duisburg, where he subsequently lived and worked In 1554 he made a six-sheet map of Europe In 1569 appeared his first map using the PROJECTION which has since borne his name and has been more generally used than any other projection for navigators' maps of the world In 1585 Mercator began a great atlas, including many of his earlier maps, this atlas was completed by his son and published in 1594 Mercator did cartographical work for Charles V and was cosmographer to the duke of Julich and Cleves He wrote several books, mainly on the science and mathematics of geography and cartography and on ancient geography

Merced (mûrsĕd'), city (pop 10,135), co seat of Merced co, central Calif, NW of Fresno, founded 1870, inc 1889 It is a tourist and farming center in the Turlock irrigation district of the San Joaquin Valley, with plants for packing and processing fruit Yosemite National Park is northeast

Mercedes (mûrsā'dēs), city (1940 pop 7,624, 1947 estimated pop 10,000), extreme S Texas, WNW of Brownsville, founded 1907, inc 1909 It is a busy packing and processing center for the citrus fruits and vegetables of the irrigated lower Rio Grande valley, with some meat packing and small factories

Mercedes (mĕrsā'dhēs), city (1941 estimated pop 30,000), SW Uruguay Founded in 1781, Mercedes is today an agricultural and livestock center E of Fray Bentos, its port It is an attractive, modern, and popular health resort

Mercer, Henry Chapman, 1856–1930, archaeologist and anthropologist, b Doylestown, Pa, grad Harvard, 1879 He was curator (1894–97) of American and prehistoric archaeology at the Univ of Pennsylvania He is noted for his studies of the archaeology of Yucatan and of the Delaware valley He made a unique collection of the tools and utensils of American colonists and in 1916 built and endowed a museum at Doylestown, Pa, to house it. His writings include works on archaeology, *Ancient Carpenters' Tools* (1929), and *The Bible in Iron* (1914, revised by H M Mann, 1941).

Mercer, Hugh, c 1725–1777, American Revolutionary general, b Aberdeen, Scotland, studied medicine at the Univ of Aberdeen He was a surgeon in the forces of Charles Edward Stuart (the Young Pretender) and after the defeat at Culloden (1747) immigrated to America In the French and Indian War, Mercer served with Edward Braddock (1755) and John Forbes (1758) in their expeditions against Fort Duquesne At the start of the American Revolution, he helped organize the Virginia militia Mercer fought at Trenton (1776) and was mortally wounded at Princeton (Jan. 3, 1777) See biography by J. T Goolick (1906), J. M. Waterman, *With Sword and Lancet* (1941).

Mercer, John, 1791–1866, English chemist His work in his father's small cotton mill led to his interest in experiments for dyeing calicoes and, from

this, to a serious study of chemistry He invented the process known as **mercerizing**, by which cotton (cellulose) is treated with sodium hydroxide and a hydrate is formed After being washed the cotton is dried under tension, it acquires, from the process, a high luster and greatly increased tensile strength See J T Marsh, *Mercerizing* (1941)

Mercer, borough (pop 2,272), co seat of Mercer co, NW Pa, NNW of Pittsburgh, settled 1795, laid out 1803, inc 1814 It is a farm trading center

mercerizing: see MERCER, JOHN

Mercersburg, borough (pop 1,763), S Pa, near the Md border SW of Chambersburg, settled c 1729, inc 1831 A tannery and a shirt factory are here It is the seat of Mercersburg Academy, founded in 1836 See H M J Klein, *A Century of Education at Mercersburg* (1936).

Mercer University: see MACON, Ga

merchant marine: see SHIPPING

Merchants Adventurers, English trading company, flourishing in the Low Countries and the free cities of Germany in the 16th and 17th cent The company was granted the right of self-government by the English crown, and because it brought great prosperity to the cities, such as Hamburg, Bruges, and Antwerp, where it had depots, the local rulers there granted it special privileges, practically amounting to EXTERRITORIALITY Rivalry between the Merchants Adventurers and the HANSEATIC LEAGUE for the Netherlands cloth market was keen The company, by a judicious loan, managed to secure the backing of the English government, and in 1560 a treaty was signed which gave the Merchants Adventurers a monopoly for exporting cloth to the Netherlands and W Germany The organization was finally dissolved during the Napoleonic Wars The Merchants Adventurers derived from the GUILD system and was a forerunner of the great CHARTERED COMPANIES It developed the trading abilities of the English and instructed them in mercantile self-government

Merchantville, borough (pop 3,679), SW N J, E of, and near, Camden, settled 1852, inc 1874

Mercia, kingdom of (mûr'shiu), in Anglo-Saxon England, consisting generally of the region of the Midlands It was settled by Angles c 500 probably first along the Trent valley, but its early history is obscure Apparently Æthelbert of Kent was accepted as its overking in the late 6th cent PENDA of Mercia extended his power over Wessex (645) and East Anglia (650) to gain overlordship of England S of the Humber Although he had twice defeated the kings of NORTHUMBRIA (633, 642), he was killed in an effort to conquer this kingdom in 655 After a three-year loss of ascendancy during which Mercia was converted to Christianity by a Northumbrian mission, Wulfhere reestablished a Greater Mercia between the Thames and the Humber, which finally under Æthelbald in the 8th cent extended over all S England This hegemony was strengthened by OFFA (reigned 757–96), who controlled East Anglia, Kent, Essex, and Sussex and maintained superiority at least over Wessex and Northumbria He had the great Offa's Dyke built to protect W Mercia from the Welsh After his death, Mercian power gradually gave way before that of Wessex In 825 and 829 the victories of Egbert of Wessex in Mercia established him briefly as overlord In 874 Mercia weakly succumbed to the invading Danish army, and ultimately the eastern part became a portion of the DANELAW (886), while the western portion was controlled by Alfred of Wessex Thereafter Mercia has no independent history of its own, although it had one more distinguished ruler in ÆTHELFLÆD, Lady of the Mercians

Mercié, Marius Jean Antonin (maryüs' zhä' ätônĕ' mĕrsyä'), 1845–1916, French sculptor Among his works are a bronze *David* (Luxembourg Mus, Paris), *Gloria Victis* (courtyard of the Hôtel de Ville, Paris), *Quand Même* (Belfort, replica in the garden of the Tuileries, Paris), *William Tell* (Lausanne), *Jeanne d'Arc* (Domrémy and Rouen), the *Tomb of Louis Philippe and His Queen* (Dreux), and the equestrian statue of Robert E Lee (Richmond, Va)

Mercier, Désiré Joseph (dāsērā' zhōzĕf' mârsĕā'), 1851–1926, Belgian churchman, cardinal of the Roman Church He was ordained priest in 1874 and eight years later became professor of philosophy at the Univ of Louvain, where, under the auspices of Pope Leo XIII, he organized an institute for the study of the teachings of Thomas Aquinas. He became a foremost leader in the 20th-century revival of interest in Thomistic scholasticism and in its integration with modern developments He was made archbishop of Malines (1906) and cardinal (1907) Cardinal Mercier worked to secure greater cooperation between the Catholic clergy and the laity and to promote social well-being In the First World War, when the king was separated from his people and the burgomaster of Brussels had been deported, Cardinal Mercier became spokesman of the Belgians. His opposition to German encroachment was fearless, and his pastoral letters served to sustain the independent spirit of the country See the autobiographical *Cardinal Mercier's Own Story* (1920), biographies by Henry Louis Dubly (1928) and John A Gade (1934)

Mercier, Honoré (ônôrā' mĕrsyā'), 1840–94, Canadian political leader, b Quebec prov, educated at the Jesuits' College, Montreal For several years he edited a French liberal paper; in 1866 he became a lawyer Opposing confederation on the grounds that unification of the Canadian provinces would imperil the influence of the French element, Mercier was a founder of the *Parti national* He entered the Canadian House of Commons in 1872 and became (1883) leader of the Liberal party of Quebec. Nationalist excitement over the execution of Louis Riel enabled Mercier to form a coalition and to become premier of Quebec in 1887 His laws indemnifying the Jesuits for lands earlier confiscated by the government aroused much opposition After four years as prime minister, he was dismissed by the lieutenant governor for alleged malversation of public funds His son, **Honoré Mercier**, 1875–1937, was also a lawyer and a politician in Quebec He served for 31 years (1907–36) in the provincial legislative assembly He was minister of colonization, mines, and fisheries (1914–19) and minister of lands and forests (1919–36)

Merck, Johann Heinrich (yō'hän hīn'rĭkh mĕrk'), 1741–91, German critic He was the counselor of many young writers, including Herder and Goethe, whose genius he was first to recognize He may have been the inspiration for Goethe's Mephistopheles

Mercury: see HERMES

Mercury, *in astronomy*, the planet revolving in an orbit nearest the sun Mercury and Venus are called the inferior planets, because their orbits lie between that of the earth and the sun In the course of its revolution each of them passes through phases similar to those of the moon, except that their diameters seem to vary as the distance between them and the earth increases or diminishes Mercury's greatest distance from the earth is more than twice its least distance Its mean distance from the sun is c 35,960 000 mi, and the eccentricity of its orbit is 0 206 The period required for a revolution is 88 days The mass of the planet is estimated to be about one twenty-seventh, and its density about three fifths, that of the earth Mercury is never more than 28° from the sun, and therefore conditions for observation are unfavorable The planet is never visible long after sunset or long before sunrise, and the haze of the earth's atmosphere interferes with examination of an object so near the horizon Mercury has, therefore, been observed frequently in full daylight Astronomers long sought a means of determining the period of rotation on its axis Schiaparelli, in Italy, c 1880, arrived at the conclusion that this period is identical with that of the planet's revolution in its orbit and that the same side is permanently turned towards the sun Observations of Percival Lowell at Flagstaff, Ariz, and of E M Antoniadi in France (1927) support this view The planet is believed to have no atmosphere, and its surface has been described as rough and mountainous The side on which the sunlight falls is believed to have a temperature of more than 600°F, while the dark side probably approaches absolute zero in temperature The planet has no satellite Transits of Mercury across the sun's disk can be observed when conjunction occurs near one of the nodes of the planet's orbit This falls either in May or in November The November transits occur usually at intervals of from 7 to 13 years, and the May transits from 13 to 46 years They are of great value to scientists as a means of determining the positions and distances of heavenly bodies

mercury or **quicksilver**, silvery, liquid metallic element, the only metal existing as a liquid at ordinary temperatures (symbol=Hg [Latin *hydroargyrus*], for physical constants, see ELEMENT, table) Mercury forms two groups of compounds, mercurous and mercuric compounds Being below hydrogen in the replacement series, the element does not replace hydrogen in dilute acids except in the case of dilute nitric acid, when it forms mercurous nitrates With concentrated nitric acid it forms mercuric nitrates, and with hot concentrated sulphuric acid, mercuric sulphate With oxygen it forms both mercuric oxide (a red or yellow substance, used in medicine in skin ointments) and mercurous oxide, with chlorine, mercuric chloride or CORROSIVE SUBLIMATE and mercurous chloride or CALOMEL, with iodine, mercuric iodide, sometimes used as a pigment, with sulphur and oxygen, mercuric sulphate, employed in making calomel and corrosive sublimate, with sulphur alone, a sulphide, cinnabar, the chief source of the metal, with nitrogen and oxygen, mercurous nitrate and mercuric nitrate, both of which are soluble, and with carbon, nitrogen, and oxygen, a FULMINATE The metal forms a special type of alloy with other metals, called AMALGAM. Mercury's great weight (13 59 g per c c) makes it especially suitable for use in the barometer, and its equal expansion per degree rise in temperature makes it valuable for use in the thermometer. The metal occurs free in nature, but to a very limited extent, and it is obtained almost entirely from its sulphide ore, CINNABAR. It is commonly purified for use by distillation Discovery of the element is placed in antiquity. When an electric current is passed through mercury confined in a vacuum tube, the mercury vaporizes and a greenish-blue luminescence appears There are various uses for mercury-arc lamps, e g, for sterilizing, because of the properties of the light waves (ultraviolet) emitted Since ordinary glass does not transmit ultraviolet light, the tubes are made of some substance which does, such as fused quartz

Mer de Glace (mĕr" dü gläs') [Fr, =sea of ice], glacier (3½ mi long, 16 sq mi), E France, on the northern slope of MONT BLANC It stops a few miles above Chamonix There are deep crevasses and high *seracs* [ice needles] The glacier is renowned for its majestic beauty

Mered (mē'rĕd) [Heb, =rebellion], husband of Pharaoh's daughter Bithiah 1 Chron 4 17,18

Meredith, Edwin Thomas (mĕ'rĭdĭth), 1876–1928, U S Secretary of Agriculture (1920–21), b Avoca, Iowa After 1896 he owned and edited the *Farmers' Tribune*, he founded (1902) *Successful Farming*, and he started (1922) the magazine which became *Better Homes and Gardens* An unsuccessful Democratic candidate for public office, Meredith was appointed to several government posts before he entered President Wilson's cabinet

Meredith, George, 1828–1909, English novelist and poet, b Portsmouth He went to school (1842–44) in Germany Later he supported himself by contributing to newspapers and magazines in London and was for many years reader for the publishing house of Chapman & Hall In 1849 he married Mary Ellen Nicoll, widowed daughter of Thomas Love Peacock, who left him in 1858 He remarried in 1864 Meredith's first two books, *Poems* (1851) and *The Shaving of Shagpat* (1855), attracted little notice His first success, *The Ordeal of Richard Feverel* (1859), was followed by *Evan Harrington* (1860), *Rhoda Fleming* (1865), *Beauchamp's Career* (1876), *The Egoist* (1879), *The Tragic Comedians* (1880), *Diana of the Crossways* (1885), by many considered his masterpiece, and *Lord Ormont and His Aminta* (1894) His poetic works include *Modern Love* (1862), *Poems and Lyrics of the Joy of Earth* (1883), *Ballads and Poems of Tragic Life* (1887), and *A Reading of Earth* (1888) A single critical essay, *On the Idea of Comedy and the Uses of the Comic Spirit* (1877), has become famous as an illuminating statement of the theory behind his novels Because of the brilliant unconventionality and difficulty of his writing, Meredith did not receive wide recognition until the publication of *Diana of the Crossways* See various volumes of his letters, studies by G M Trevelyan (1906), M H Gretton (1926), J B Priestley (1926), R E Sencourt (1929), Robert Peel (1931), and Siegfried Sassoon (1948)

Meredith, Owen: see BULWER-LYTTON, EDWARD ROBERT

Meredith, town (pop 2,192), central N H, inc 1768 It includes Meredith, on Lake Winnipesaukee a resort village which also has linen mills

Meredith College: see RALEIGH, N C

Meremoth (mĕ'rĭmŏth) [Heb, =heights] **1** Priest under Nehemiah Ezra 8 33 Neh 3 4 **2** Israelite who married a foreigner Ezra 10 36 **3** Sealer of the covenant Neh 10 5, 12 3 He is probably the Meraioth of Neh 12 15

Meres (mē'rēz), counselor of King Ahasuerus Esther 1 14

Merezhkovsky, Dmitri Sergeyevich (dumē'trē sĭrgā'uvĭch mărlshkôf'skē), 1865–1941, Russian poet, critic, and novelist Until c 1890 he wrote verses of social import, then turned to literary criticism to produce *Tolstoi as an Essay on Dostoevsky* (1901–2, Eng tr, 1902) in which he represented the two figures as seers, respectively, of the flesh and of the spirit His greatest work is the trilogy, *Christ and Antichrist*, which includes *The Death of the Gods* (1896, Eng trs, *Julian the Apostate*, 1899, and *The Death of the Gods*, 1901, 1929), *The Gods Reborn Leonardo da Vinci* (1902, Eng trs, *The Romance of Leonardo da Vinci*, 1902, 1928), and *Peter and Alexis* (1905, Eng trs, 1905, 1931) In this he propounded his theory of history as a struggle toward harmonization of the pagan concept of the sanctity of the flesh and the Christian idea of the sanctity of the spirit Mereshkovsky was twice forced into exile, in 1905 temporarily, because of his support of the revolution, after 1918 permanently because he opposed the Bolsheviists His greatest influence was exerted in the period before and after 1900 when, with his wife Zinaida Hippius, he actively promoted the theories embodied in his novels through the forum of the Religious-Philosophic Society, which he founded In exile he attacked bolshevism, in *The Kingdom of Antichrist* (1922, Eng tr, 1922) and other works He also studied Egyptian culture and wrote the novel *The Birth of the Gods: Tutankhamen in Crete* (1925, Eng. tr, 1925)

Mergenthaler, Ottmar (ôt'mär mĕr'gŭnta"lur), 1854–99, American inventor of the LINOTYPE. He was born in Germany, learned the watchmaker's trade, came to America in 1872, and was employed to inspect and repair clocks in the government buildings in Washington After 1876 he made his

home in Baltimore, where he perfected his linotype, first patented in 1885 and put into operation in 1886

merger (mûr'jûr), in business, a combination of organizations to increase profits or diminish losses The old organizations are continued, but under unified control. In a consolidation, unification is complete, the old units, or all but one of them, being discontinued See R N Owens, *Business Organization and Combination* (3d ed , 1946).

Merian, Maria Sibylla (mâr'ĕ'ä zĭbĭl'lä mä'rēän), 1647–1717, Swiss naturalist and painter of insects and flowers; daughter of Matthäus Merian, the elder. Her first book on insects, with plates engraved and colored by herself, was published in 1699 The same year she went to Dutch Guiana to study tropical insects, and her work on that subject appeared in 1705 Her researches in natural history combined with her excellent studies, executed for the most part in water color on vellum, gave her a high reputation The British Museum has two volumes of her drawings

Merian, Matthäus (mätĕ'ōōs), the elder, 1593–1650, Swiss engraver and draughtsman He settled in Frankfurt-am-Main (c 1623), where he practiced engraving, publishing, and print selling and produced numerous etchings of battles, hunts, and landscapes These include *Dance of Death*, illustrations for the Bible, Gottfried's *Chronik*, and the series *Theatrum Europaeum*, and the copperplate illustrations for Martin Zeiller's *Topographia* His son, **Matthäus Merian**, the younger, 1621–87, Swiss portrait and historical painter, worked in Amsterdam, England, the Netherlands, Paris, and Frankfurt-am-Main and painted the portraits of many notable persons Upon his father's death he continued the print-selling business in Frankfurt-am-Main He is represented by *Martyrdom of St. Lawrence* (cathedral, Bamberg), *Resurrection* (City Library, Basel), and a portrait of his sister, Maria Sibylla Merian (Basel)

Merihah (mĕ'rĭhä) see MASSAH

Merib-baal (mĕrĭb'-bāăl) see MEPHIBOSHETH 1.

Mérida (mä'rēdhä), city (pop 98,852), capital of YUCATAN, SE Mexico, in the northwestern part of the Yucatan peninsula It is c 22 mi S of Progreso, its port Founded (1542) by Francisco de MONTEJO, the younger, on the site of a ruined Mayan city, Mérida (alt c 25 ft) is a well-planned city, with architecture Spanish colonial in type. Since the region has no surface water supply, water is pumped up by rooftop windmills from underground wells and rivers The limited nature of the soil, in which subsistence crops of maize and beans are raised, has made Mérida almost entirely dependent commercially on the large crops of henequen (see SISAL HEMP) from the surrounding region and on tourists visiting near-by Mayan ruins, notably CHICHÉN ITZÁ and UXMAL It is a station of Pan American Airways

Mérida (mä'rēdhä), city (pop. 22,440), Badajoz prov , SW Spain, in Estremadura, on the Guadiana river. The colony Emerita Augusta, founded by the Romans in the 1st cent B C., became the capital of LUSITANIA Its Roman remains, among the most important in Spain, include a magnificent bridge, a triumphal arch, a theater with marble columns, an aqueduct, a temple, an imposing circus, and an amphitheater Mérida was later the chief city of Visigothic Lusitania It fell (713) to the Moors, under whom it prospered Conquered (1228) by Alfonso IX of Leon, it was given to the Knights of Santiago and quickly declined The Church of Santa Eulalia, begun in the 13th cent , and the ancient alcazar are notable landmarks

Meriden (mĕ'rĭdŭn), city (pop 39,494), S central Conn., SW of Hartford, settled 1661, inc 1867, coextensive with Meriden town, set off from Wallingford 1806 Its products include silverware, telephone and electrical equipment, tools, ball bearings, and machinery Silver and pewter ware were made in the 18th cent. by Samuel Yale and later by the Rogers Brothers A state tuberculosis sanatorium and a state school for delinquent boys are in Meriden.

Meridian. 1 Village (pop. 1,465), SW Idaho, W of Boise; founded 1891, inc 1902. It is a center of the BOISE PROJECT 2 City (pop. 35,481), co seat of Lauderdale co , E Miss , E of Jackson and near the Ala line, founded c.1854, inc 1860. Rail and highway focus, it is the trade, shipping, and industrial center for a farm, livestock, and lumber area and has numerous factories. In the Civil War the city was destroyed (Feb , 1864) by General Sherman A city junior college (1937) and a state mental hospital are here, and a U S agricultural experiment station is near by. 3 City (pop 1,016), co seat of Bosque co , central Texas, on the Bosque river and NW of Waco; settled 1854, inc 1886 It handles wool, pecans, and the produce of variegated farming Meridian State Park attracts vacationers.

meridian [Latin,=of midday], imaginary line drawn on the earth's surface from pole to pole, cutting the equator and all parallels at a right angle Two opposite meridians form a great circle whose plane, passing through the earth's center, bisects the globe into two hemispheres Meridians, together with parallels, constitute the earth grid by means of which directions and relative locations are easily indicated By international agreement (1884) the Greenwich meridian, passing through the Royal Observatory at Greenwich, England, was selected as zero or prime meridian, from which other meridians are measured in terms of east and west LONGITUDE up to 180° At the equator the distance between two meridians encompassing 1° longitude is c 69 mi This distance diminishes north and south of the equator (it is, for example, c 34 6 mi at 60° latitude) until it reaches zero at the poles

Merighi da Caravaggio. see CARAVAGGIO, MICHELANGELO AMERIGHI DA

Mérimée, Prosper (prôspĕr' mārēmā'), 1803–70, French novelist and historian. He first wrote a collection of plays in imitation of Spanish drama, *The Plays of Clara Gazul* (1825, Eng tr , 1825), and a collection of so-called Illyrian ballads, *La Guzla* (1827) His important historical novel, *The Chronicle of the Reign of Charles IX* (1829, Eng. trs , 1830, 1890), is marked by an objectivity and psychological penetration rare among the romanticists He was master of a concise and sober style, a painstaking student of archaeology, a linguist who translated Russian authors into French, a senator under the empire, and a cultivated man of the world His reputation is based primarily on his *nouvelles*, or long short stories, of which finished and perfect examples include *Colomba* (1840, Eng tr., 1853), *Carmen* (in *Revue des Deux Mondes*, 1845, as a book, 1846, Eng tr , 1881), which was the basis of Bizet's opera, *La Vénus d'Ille* (1837), and *Letters to an Unknown* (in *Revue des Deux Mondes*, 1873, as a book, 1874, Eng tr., 1874), his one novel written with emotion His short story, "Mateo Falcone" (1876), is one of the world's best Mérimée also wrote literary and art criticism and historical studies See biographies by G. H Johnstone Derwent (1926) and Sylvia Lyons (1948)

Merino sheep (mŭrē'nō), a breed of sheep originated in Spain, from which various types have been developed elsewhere It is highly esteemed for its fine wool Typically, the rams have horns, the ewes have none, the skin is wrinkled, the fleece is heavy and fine The Rambouillet is a variety of Merino sheep developed in France It is bred on ranges of the W United States and parts of Canada for both wool and mutton

Merionethshire (mĕrō'nŭthshĭr) or **Merioneth,** county (660 sq mi , 1931 pop 43,201, 1948 estimated pop 39,166), N Wales, on Cardigan Bay The county seat is Dolgelley The region is mountainous, rising in some peaks (Aran Mawddwy, Cader Idris) to nearly 3,000 ft The chief rivers are the Dovey, the Dee, and the Mawddach The soil is generally poor, but provides good pasturage The main wealth of the county lies in its deposits of manganese, slate, and limestone The beautiful scenery makes it a popular tourist district Merionethshire was organized as a shire by the English in the 13th cent , but the remoteness of the region made it one of the last districts in Wales to submit to English influence In 1931 more than 80 percent of the inhabitants could speak Welsh

Meriwether, Lee, 1862–, American social reformer, b Columbus, Miss He made (1885–86) a "tramp trip" across S Europe and afterward prepared a report on European labor conditions for the U S Secretary of the Interior He later lived in St Louis and was active in various reform movements He was a special agent of the Dept of State in the First World War Among his books are *A Tramp Trip* (1887), *Seeing Europe by Automobile* (1911), *War Diary of a Diplomat* (1919), and *My Yesteryears* (1942)

Meriwether Lewis National Monument see NATIONAL PARKS AND MONUMENTS (table)

Merkel (mûr'kŭl), city (pop 2,005), W central Texas, W of Abilene, in a ranch and farm area, settled c 1875, inc 1906

Merle d'Aubigné, Jean Henri (zhä' ärē' mĕrl' dōbēnyā'), 1794–1872, Swiss ecclesiastical historian and Protestant preacher After studying theology at Geneva and in Berlin, he was pastor of the French Protestant church in Hamburg for five years, then court preacher to King William at Brussels until the Revolution of 1830 separated Holland from Belgium Returning to Geneva, he helped establish the new Evangelical Church there and became distinguished as professor of church history in its theological seminary His history of the Reformation (1835–53) was translated into most of the languages of Europe and has had remarkable popularity. Merle d'Aubigné traveled in England and Scotland and wrote *Germany, England, and Scotland* (1848)

Merlin, great magician at King Arthur's court see ARTHURIAN LEGEND.

mermaids and mermen (mûr'mādz, -mĕn) [English, i e , sea-maids, -men], in folklore, women and men who live in the sea or in lakes, often represented as having fishtails instead of legs. In some versions of the legend, they may assume perfectly human shapes at will, and there are many stories of mermaids living with mortal men on earth or dragging them into the sea. Such stories are told also of mermen There are similar creatures in the folklore of most peoples (see NEREIDS).

Mermaid Tavern, in Elizabethan London, where Shakspere, Ben Jonson, Beaumont, Fletcher, and their friends often met The brilliant talk at these meetings was noted at the time and is proverbial. See Keats, "Lines on the Mermaid Tavern."

mermen see MERMAIDS AND MERMEN

Merneptah (mĕrnĕp'tä), d c.1215 B.C., king of the XIX dynasty of ancient EGYPT. He succeeded his father, RAMSES II (1225 B C.) when he was already advanced in years. He quelled a revolt in Syria and repulsed an invasion of the western delta by the Libyans. The name of Israel appears first in inscriptions in a stela of Merneptah glorying in a victory His reign was apparently the beginning of the decline, for on his death a period of palace intrigues begins SETI II was one of the kings of the group that succeeded Merneptah

Merodach (mĕ'rōdăk, mĕrō'dăk), biblical form of the name of the god Marduk of Babylon Jer. 50 2

Merodach-baladan (-bā'lŭdăn) [Assyrian,=Marduk has given a son], fl 721 B C , Chaldaean prince, who tried to usurp the Babylonian throne (721 B C.) Sargon of Assyria, son of Shalmaneser and heir to the throne, put down the allies of Merodach-baladan in Syria and Palestine (including Philistia, Judah, Moab, and Edom) and eventually drove the usurper from Babylon (c 710 B C). In 705 B C , on Sargon's death, Merodach-baladan reoccupied the throne for a short time Isa. 39, 2 Kings 20 He is also called Baladan and Berodach baladan

Meroë (mĕ'rōē), district, Anglo-Egyptian Sudan, between the Blue Nile and the Atbara The ancient city of **Meroë,** c 200 mi N of Khartoum, was successor to Napata as seat of the Nubian kings The ruins, partly excavated, include 80 pyramids

Merom, Waters of (mē'-) see BAHR EL-HULEH.

Meronothite (mĕrō'nŏthīt), obscure designation used of two men 1 Chron 27 30, Neh 3 7

Merope (mĕ'rŭpē) **1** In Greek mythology, one of the Pleiades She was the daughter of Atlas and the nymph Pleione One legend says she became the lost Pleiad after she married a mortal, Sisyphus, king of Corinth Her son was Glaucus **2** In Greek mythology, daughter of Oenopion and Helice Orion, the hunter, loved her, but, failing to gain her father's consent, he violated her Oenopion blinded him

Merovingians (mĕr"ōvĭn'jĭnz), dynasty of Frankish kings, descended, according to tradition, from Merovеus (mĕr"ōvē'ŭs), chief of the Salian FRANKS, whose son was CHILDERIC I and whose grandson was CLOVIS I, the founder of the Frankish monarchy After Clovis I's death (511), the kingdom was divided and subdivided among his descendants into the kingdoms of AUSTRASIA, Orléans, Paris, NEUSTRIA, BURGUNDY, and AQUITAINE These kingdoms, whose borders were constantly shifting, were often combined, for brief periods, they were all united in a single realm under CLOTAIRE I (558–61), CLOTAIRE II (613–c 622), and DAGOBERT I (630–33) The rule of the Merovingians before Dagobert I was disturbed by chronic warfare, notably the feud (567–613) between Queen BRUNHILDA of Austrasia and Queen FREDEGUNDE of Neustria Dagobert I was the last active ruler, his descendants, called the idle kings, were entirely subject to their mayors of the palace, the CAROLINGIANS, who became the nominal as well as the actual rulers of France when PEPIN THE SHORT deposed (751) the last Merovingian king, Childeric III See also CHILDEBERT I, THEODORIC I, GUNTRAM, CHILPERIC I, SIGEBERT I, GALSWINTHA, CHILDEBERT II See F Funck-Brentano, *Earliest Times* (Vol I of *National History of France*)

Meroz (mē'rŏz), unidentified place, denounced in the Song of Deborah Judges 5 23.

Merriam, Clinton Hart, 1855–1942, American physician and naturalist, b New York city, M D Columbia, 1879. He was chief of the U S Bureau of Biological Survey (1885–1910) and served on expeditions throughout the United States and elsewhere for many years He is the author of many works on the animals and plants of different regions of North America and on the relation of climatic and other conditions to the flora and fauna

Merriam, Harold Guy, 1883–, American educator, b Westminster, Mass , grad Univ. of Wyoming, 1905, and, as a Rhodes scholar, studied at Oxford until 1908 Thereafter he taught English at Whitman, Beloit, and Reed colleges before becoming head of the English department at Montana State Univ in 1919. Merriam was later appointed chairman of the humanities division and editor of the *Frontier*, a campus publication which he has made a notable literary magazine of the West.

Merriam, John Campbell, 1869–1945, American paleontologist, b Hopkinton, Iowa, grad Lenox College (B S , 1887) He taught at the Univ. of California (1894–1920) and was president of the Carnegie Institution (1920–38) He specialized in the vertebrate paleontology of the W United States and wrote a great number of books and monographs, chiefly on the mammals of the Cenozoic and the reptiles of the Triassic. His later works deal with the general significance of geology for human history. A noted conservationist, he was consulted by King Albert in the establishment of a preserve for gorrillas in the Belgian Congo

Merrill, city (pop 8,711), co. seat of Lincoln co., central Wis., at the confluence of the Wisconsin and Prairie rivers N of Wausau; settled c.1847, inc. 1883. Once a lumber town, it now has varied industries Grandfather Falls of the Wisconsin and Council Grounds State Forest are near by

Merrimac (mĕr'ĭmăk), town (pop 2,320), NE Mass., between the Merrimack river and the N H. line; settled 1638, set off from Amesbury 1876.

Merrimac: see MONITOR AND MERRIMAC.

Merrimack (mĕr'ĭmăk), town (pop. 1,253), S N H ; inc. 1746. It includes Merrimack village, on the Merrimack and NNW of Nashua Wood products and leather are made

Merrimack, river formed in S central New Hampshire, at Franklin, by the junction of the Pemigewasset (rising in the White Mts) and the Winnipesaukee It flows S past Concord, Manchester, and Nashua, N H , into NE Massachusetts Turning east, then northeast, it passes Lowell, Lawrence, and Haverhill, Mass , entering the Atlantic below Newburyport Its power has long been used for textile and other mills

Merriman, Henry Seton, 1862–1903, English novelist, whose real name was Hugh Stowell Scott He wrote several popular works including *With Edged Tools* (1894), *The Sowers* (1896), a powerful story of Russia before the revolution, *In Kedar's Tents* (1897), and *Roden's Corner* (1898)

Merritt, Anna Lea, 1844–1930, American figure and portrait painter and etcher, b Philadelphia. In 1877 she married Henry Merritt, her art teacher in London, and lived thereafter in England She exhibited for many years at the Royal Academy and is represented in the Chantrey Collection in the Tate Gallery, London Her works include *Piping Shepherd* (Pa Acad of the Fine Arts) and a portrait of James Russell Lowell (Memorial Hall, Harvard) She was also an etcher of note and was author of a memoir of Henry Merritt (1879) and *A Hamlet in Old Hampshire* (1902)

Merritt, Wesley, 1836–1910, American army officer, b. New York city, grad West Point, 1860 He was a cavalry officer in the Civil War and was brevetted major general In 1866 he became a lieutenant colonel in the regular army He served in Indian campaigns, as superintendent (1882–87) of West Point, and in other capacities, rising in rank until in 1895 he was made a major general As commander of the land force he cooperated with George DEWEY in the taking of Manila, and in 1898 he was military governor of the Philippines

Merritt Island, c 40 mi long and c 6 mi wide at its northern end, E Fla , near Titusville Indian River separates it from the mainland on the west, and Banana river from the Canaveral Peninsula on the east The island produces citrus fruits and is noted for birds and other wildlife

Merritton, town (pop 2,993), S Ont , on the Welland Ship Canal It is a suburb of St Catharines and has steel, paper, and pulp mills

Merry del Val, Rafael (räfäĕl' mĕ'rē dĕl väl'), 1865–1930, Spanish prelate, cardinal of the Roman Church, b London He was educated for the priesthood and ordained at Rome (1888) He was secretary of the pontifical commission which studied the validity of Anglican orders (1897) He went as apostolic delegate to Canada (1897) on the occasion of the closing of Catholic and private schools in Manitoba In 1903 Pius X created him cardinal and made him papal secretary of state, in which office he was said to have increased the bitterness between France and the Holy See Benedict XV made him archpriest of St Peter's and secretary of the Congregation of the Holy Office He was a co-worker with Cardinal Gasparri in the negotiations leading to the Lateran Treaty See Vigilio Dalpiaz, *Cardinal Merry del Val* (1937)

Merryman, ex parte (ĕks" pär'tē), case decided in 1861 by Chief Justice Roger B Taney sitting as a Federal circuit judge in Baltimore, Md John Merryman, a citizen of Maryland, was imprisoned by the U S army on suspicion of favoring the Confederacy He obtained a writ of habeas corpus This the commanding general refused to respect, alleging, instead, that President Lincoln had authorized him to suspend the writ Taney held that Article 1, Section 9, of the U S Constitution gave to Congress alone the power to suspend the writ in case of rebellion or invasion and that consequently the President's action had been without warrant and represented a threat to the liberties of all Americans. Lincoln, however, continued to adhere to the same practice throughout the Civil War.

Merry Mount: see MORTON, THOMAS

Merryville, wool-marketing town (pop. 1,216), SW La., near the Sabine river. It was once a lumber center.

Merseburg (mĕr'zŭbōōrk), city (pop. 34,106), former Prussian Saxony prov., E central Germany, on the Saale It is a lignite-mining center and produces steel, paper, cellulose, machinery, and synthetic rubber. First mentioned as a fortress in the 9th cent., Merseburg was a favorite residence of Henry I (Henry the Fowler) and of Emperor Otto I. It was an episcopal see from 968 until its suppression (1561) by the Reformation, when the bishopric passed to Saxony. From 1656 to 1738 the city was the seat of the dukes of Saxe-Merseburg, and in 1815 it passed to Prussia. In the Second World War, Merseburg was half destroyed. Among its noted buildings were the cathedral (founded 1015, rebuilt in the 13th and 16th cent) and the episcopal palace (15th cent)

Mersen, Treaty of, 870, redivision of the Carolingian empire between CHARLES II (Charles the Bald) of the West Franks (France) and LOUIS THE GERMAN of the East Franks (Germany), signed at Mersen (Dutch *Meersen*), now in the Netherlands It followed the death (869) of King Lothair of LOTHARINGIA and superseded the tripartite division of 843 (see VERDUN, TREATY OF) Lotharingia was divided between France (which obtained the territories roughly corresponding to the modern Netherlands, Belgium, and Lorraine) and Germany (which received Alsace and the left bank of the Lower Rhine) Emperor LOUIS II, who ruled Italy, was excluded from the partition The borders established did not last long, but the treaty had the permanent effect of establishing a common frontier between Germany and France

Mersey (mûr'zē), river of England, formed at Stockport by the confluence of the Tame and the Goyt and flowing between Lancashire and Cheshire 70 mi to the Irish Sea NW of Liverpool Its estuary is 16 mi long and c 2 mi wide and is navigable for ocean-going liners Its drainage area comprises much of the Peak district of Derbyshire. Tributaries include the Irwell and the Weaver The Manchester Ship Canal enters the Mersey from the Cheshire side A large vehicular tunnel (1934), 2 mi long, under the Mersey connects Liverpool and Birkenhead The river is of great commercial importance to the cities served by it, especially to Liverpool and Manchester

Mersin (mĕrsĭn'), city (pop 33,148), S Turkey It is a rail terminus and a Mediterranean seaport, shipping chrome, copper, and agricultural products. Mersin, formerly called Icel, is sometimes also spelled Mersina Excavations here in the 1930s showed that this has been an inhabited place since 6000 B C Well-preserved remains of a city dating from 3600 B C were found in one of the numerous layers of the mound where the excavations were made

Merthyr Tydfil (mûr'thûr tĭd'vĭl), county borough (1931 pop 71,108, 1947 estimated pop 60,750), Glamorganshire, Wales, NW of Cardiff and on the Taff river among barren hills In the center of the great coal field of Glamorganshire, it has large ironworks and steelworks The name comes from the story of the martyrdom of St Tydfil, a Welsh princess killed by Saxons in the 5th cent

Merton, Thomas (mûr'tŭn), 1915–, American religious writer and poet, b France He grew up in France, England, and the United States and studied at Cambridge Univ and at Columbia Univ. (B A , 1938, M A , 1939) Converted to the Roman Catholic Church during his college career, he became in 1941 a Trappist monk at the monastery of Gethsemani, Ky. He was later ordained priest and is known in religion as Father M Louis Among his volumes of poems are *Figures for an Apocalypse* (1947) and *Tears of the Blind Lions* (1949) The best known of his books are his autobiography, *The Seven Storey Mountain* (1948, English title, *Elected Silence*, 1949), and its companion volume on the Trappist life, *The Waters of Siloe* (1949) *Seeds of Contemplation* (1949) is a book of meditations

Merton, Walter de, d 1277, English bishop, founder of Merton College, Oxford He was lord chancellor (1261–63), was reappointed after the death of Henry III (1272), and was made bishop of Rochester in 1274 In 1261 he obtained a charter from the earl of Gloucester for the assignation of lands for the support of scholars, and in 1264 a regular charter of incorporation established a "House of Scholars" at Malden, Surrey, this was later transferred to Oxford The establishment of a corporate body to rule and control the scholars marks the beginning of the collegiate system of education, and Merton College became the model for other colleges at Oxford and Cambridge.

Merton and Morden, urban district (1931 pop 41,227, 1947 estimated pop 76,290), Surrey, England, SW of London and on the Wandle There are remains of an Augustinian priory founded in 1115, which under Henry III was the meeting place of the Parliament that passed the Statutes of Merton. Thomas à Becket and Walter de Merton (the founder of Merton College, Oxford) received part of their education in Merton. Lord Nelson had a home here.

Merton College: see OXFORD UNIVERSITY

Meru (mā'rōō), mountain peak, 14,979 ft high, NE Tanganyika, near Mt Kilimanjaro. It is an extinct volcanic cone

Merv (myĕrf), ancient city, in a large oasis of the KARA KUM desert, Turkmen SSR, on the MURGAB river. As Margiana it was the capital of a northern border province of ancient Persia and was conquered by Alexander the Great A center of medieval Islamic culture, it was conquered by Russia from the Uzbeks in 1884 Near ancient Merv (now called Bairam-Ali) a new Merv developed. This new city was in 1937 renamed Mary (pop. 37,100). It is the capital of Mary oblast and has important textile manufactures, based on the cotton grown and the goat and karakul sheep raised in the region, especially along the Murgab

Merwede (mĕr'vā"dŭ), river, SW Netherlands It is formed near Gorinchem by the junction of the Meuse (Maas) and the Waal and is known as the Upper Merwede for the first 5½ mi of its westward course It then bifurcates into the Lower Merwede, which flows 9 mi west to form the Oude Maas (see MEUSE), and into the New Merwede, which flows 10 mi. southwest to form the Hollandsdiep, a wide estuary through which it reaches the North Sea

Meryon, Charles (sharl' mĕryôN'), 1821–68, French etcher, son of an English doctor in Paris His short life was saddened by poverty and neglect and complicated by recurring forms of mental aberration After four years of travel in the South Seas in the French navy, Meryon settled in Paris Prevented by color blindness from painting, he became an etcher and evolved an incomparable technique which has been much imitated His posthumous fame rests largely on his poetic series of about 20 etchings of old sections of Paris, *Eaux-Fortes sur Paris* (1850–54) Meryon died insane at 47 See study by Loys Delteil (Eng tr , 1928), H. J. L. Wright, *Three Master Etchers* (1930)

Mesa (mā'sŭ), city (pop 7,224), S central Ariz., in the SALT RIVER VALLEY, inc 1883 The Mormons who founded it in 1878 used old Indian irrigation canals A Mormon temple and the chief Univ. of Arizona experimental farm are here.

mesa (mā'sŭ) [Span ,=table], name given in the SW United States to a small, isolated tableland or a flat-topped hill Two or more of the sides are steep and usually perpendicular Some have all four sides practically perpendicular and are very difficult of access Their bold lines make them a picturesque part of the landscape, and they are frequently deep red or yellow in color The usual explanation of their origin is that a hard stratum acted as a cap to protect the layers beneath it from the erosion that wore down the surrounding softer rock, once level with the summit of the mesa in a plateau The strata in a mesa are horizontal, or nearly so The many "table mountains" are mesas, and buttes are usually less precipitous and smaller formations of the same sort. Two celebrated mesas are the Mesa Verde in Colorado and the Enchanted Mesa (Mesa Encantada) in New Mexico.

Mesabi (musa'bē), range of low hills, NE Minn , known for their deposits of iron ore The Mesabi is the richest of the three so-called iron ranges the Vermilion (NE Minn , between Vermilion Lake and Ely, first ore shipped 1884), the Mesabi (between Grand Rapids and Aurora, Hibbing and Virginia are centers, first ore shipped 1892), and the Cuyuna (central Minn , between Brainerd and Aitkin, first ore shipped 1911) Leonidas Merritt, with his brothers, discovered the Mesabi iron in 1887, established claims to the region, and in 1890 organized a company to exploit the deposits In the financial difficulties of 1893 the Merritts lost control of their great projects to John D Rockefeller The Mesabi ore lies in horizontal layers, and mining here is by the open-pit method The ores of the other ranges are in vertical strata, less accessible Most of the ore is shipped from Duluth. European laborers were imported to work the mines, and the population of the iron ranges is more heterogeneous than that of most of the state. Revenue from the mines provides excellent school and other public buildings Paul de Kruif, in *Seven Iron Men* (1929), tells the story of the Merritts.

Mesa Verde National Park: see NATIONAL PARKS AND MONUMENTS (table) and CLIFF DWELLERS

mescal (mĕskäl'), Mexican spirituous liquor, usually obtained by distilling a liquid made from the leaves, juicy stalk, and roots of certain species of AGAVE (maguey) The name is sometimes given to liquor distilled from agave sap which, fermented, is PULQUE *Tequila* and *sotol* are similar to mescal Presumably because of a slight similarity of effect when eaten, the name mescal is sometimes applied to the drug obtained from PEYOTE

Mescala, river, MEXICO see BALSAS, RÍO DE LAS.

Mesdag, Hendrik Willem (hĕn'drĭk vĭ'lŭm mĕs'dakh), 1831–1915, Dutch marine painter He gave up banking at 35 to study painting with Alma-Tadema in Brussels He later lived at The Hague and was known as a painter and wealthy patron of the arts He presented to the nation his fine collection, containing many paintings of the Barbizon school, together with a building to house it—Mesdag Museum, The Hague His simple and realistic marines are found in many Dutch galleries *The Return of the Fishing Boats* (The Hague) is characteristic.

Mesech (mē'sĕk), variant of MESHECH

Mesha (mē'shŭ) 1 King of Moab contemporary with Ahab. Ahab was his overlord, after Ahab's death Mesha attempted a revolt against Israel. 2 Kings 3. He composed the inscription on the MOABITE STONE. 2 Son of Caleb. 1 Chron. 2.42. 3 Benjamite 1 Chron 8.9. 4 Unidentified region of Arabia. Gen. 10.30.

Meshach (mē'shăk), one of the THREE HOLY CHILDREN.

Meshech (mē'shĕk) **1** Son of Japheth Gen 10 2, Ezek 32 26, 38 2, 39 1. Mesech Ps 120 5 **2** Son of Shem 1 Chron 1.17.

Meshed (mĕsh'hĕd, mĕshĕd'), city (pop 176,471), NE Iran The beautiful shrine [*meshed*] of the Imam Riza, which is also the burial place of Harun-al-Rashid, is the greatest place of pilgrimage in Iran The bombing of this sanctuary by the Russians in 1912 caused widespread resentment in the Shute Moslem world Meshed was the capital of Nadir Shah An air line reached Meshed in 1929, motor roads connect the city with Herat and the Caspian The name is also spelled Mashhad

Meshed Ali, see NEJEF

Meshelemiah (mĕshĕ'lĕmī'ă) [Heb, =whom God repays], gatekeeper 1 Chron 9 21, 62 1,2,9 Shallum 1 Chron 9 19,31, Ezra 2,42, Neh 7 45 Shelemiah 1 Chron 26 14 Meshullam Neh 12 25

Meshezebeel (mĕshĕ'zŭbĕl") [Heb, =delivered by God] 1 Worker on the wall Neh 3 4 **2** Signer of the covenant. Neh 10.21 **3** Descendant of Judah Neh 11 24

Meshillemith (mĕshĭ'lĕmĭth) or **Meshillemoth** (-mŏth) [Heb, =retribution] **1** Ephraimite chief. 2 Chron 28 12 **2** Priest 1 Chron 9 12, Neh 11 13

Meshobab (mĕshō'băb), descendant of Simeon 1 Chron 4 34

Meshullam (mĕshŭ'lum) [Heb, =friend] **1** Ancestor of Shaphan 2 Kings 22 3 **2** Son of Zerubbabel 1 Chron 3 19 **3** See MESHELEMIAH **4** See SHALLUM 7 **5** Father-in-law of JOHANAN 10 Neh 3 4,30, 6 18 **6** Repairer of the wall Neh 3 6 7 Assistant of Ezra Ezra 10 15 **8** Man who had a foreign wife Ezra 10 29 **9** Father of SALLU **2** 10 Ancestor of ADAIAH **4** 11 Gadite chief 1 Chron 5 13 12 Chief man of the Exile Ezra 8 16 **13, 14** Sealers of the covenant Neh 10 7,20 **15** Grandfather of AZARIAH **24** 16, 17 Priests in the time of Jehoiakim Neh 12 13,16 **18** Benjamite 1 Chron 8 17 **19** Kohathite Levite 2 Chron 34 8 **20** Prince of Judah Neh 12 33 **21** One present at the reading of the LAW Ezra 8 4 **22** See SHALLUM 6

Meshullemeth (-shĭ'lŭ-) [Heb, =fem of MESHULLAM], wife of King Manasseh 2 Kings 21 19

Mesilla (măsē'ă), historic village (pop 1,170), SW N. Mex., on the Rio Grande and near Las Cruces, settled c 1850 The whole Mesilla Valley became part of the United States under the Gadsden Purchase (1853) Mesilla was a central station on the overland mail route During the Civil War it changed hands several times From July, 1861, to August, 1862, it was headquarters for Col John R Baylor of the Confederate army, who proclaimed Mesilla the capital of the new Confederate territory A museum commemorates Billy the Kid, who once stood trial here.

Mesmer, Friedrich Anton (mĕz'mŭr, Ger frē'drĭkh ăn'tōn mĕs'mur), or **Franz Anton Mesmer** (frants'), 1733? 1815, German physician, studied in Vienna His interest in animal magnetism developed into a system of treatment through hypnotism that was known as mesmerism After his refusal to reveal the secret of his so-called magnetic cures, his large and fashionable practice in Paris was curtailed by a government investigation, and he retired See study by M L Goldsmith (1934), Stefan Zweig, *Mental Healers* (1932)

mesmerism see HYPNOTISM

Mesobaite (mĕsō'băĭt, mĕ"sōbā'ĭt), obscure term applied to one of David's guard 1 Chron 11 47.

Mesolithic period· see NEOLITHIC PERIOD

Mesolonghi, Greece see MISSOLONGHI

meson (mē'zŏn,- sŏn, mē'-) or **mesotron** (mē'zŭtrŏn, -su-, mē'-), nuclear particle intermediate in mass between the electron and the proton The existence of such a particle was predicted in 1935 by Hideki Yukawa In 1937 the meson was discovered in the course of cosmic-ray studies by Carl D. Anderson and Seth Neddermeyer and almost simultaneously by J C Street and E C Stevenson Mesons have been identified in the upper atmosphere by studies of their paths made observable in the Wilson cloud chamber; it is believed that these particles are produced in the upper atmosphere as a result of the collision between cosmic rays and atoms in the air Mesons have been produced artificially by means of the cyclotron Positive, negative, and neutral mesons have been identified. Most mesons have a life span of a few millionths of a second, but the neutral meson disappears almost as soon as it is produced, on disintegration mesons yield energy Their function is not definitely known

Mesopotamia (mĕ"sŭpŭtā'mēŭ) [Gr, =between rivers], ancient country of Asia, the region about the lower Tigris and the lower Euphrates, included in the modern Iraq The region extends from the Persian Gulf north to the mountains of Armenia, from the Iranian plateau on the east to the Syrian Desert From the mountainous country of the upper courses of the rivers, Mesopotamia slopes down through grassy steppes to the open central plain, which was once rendered exceedingly fertile by a network of canals Now the region is generally barren and arid except for occasional oases To the south the rivers unite in the Shatt el Arab, forming a delta which is a swampy wilderness of reeds Deposits of silt have encroached on the Persian Gulf, so that sites of ancient towns, originally built on or near its shores, are now several miles inland The southern part of this region was, so far as is known, the cradle of civilization, a little older even than Egypt. Here appeared the cities of Eridu, Ur Larsa, Lagash, Nippur, Akkad, and Babylon Civilization was well settled in the 4th millennium B C The rise of kingdoms, notably that of Sargon, out of the rivalry of Sumerian and Semitic cities presaged the growth of the Babylonian might (see BABYLONIA), which gave rise to the Assyrian Empire (see ASSYRIA) and the Persian Empire (see PERSIA) The region, always threatened by Egypt and held by Egyptians for centuries in earlier times, began a slow decline under Persia It still had prestige at the time of Alexander the Great, but became a more or less inconsiderable part of the Roman Empire The Arabs took it from the Byzantine Empire, and it flourished again after Baghdad was made (A D 762) the capital of the Abbasid caliphate under Mansur This glory was destroyed when the Mongols under Hulagu Khan laid the area waste in 1298 and destroyed the ancient irrigation system Mesopotamia did not recover from the ravaging and was not an important part of the Ottoman Empire. In the First World War, however, it gained new importance and was an important battlefield The new kingdom of IRAQ, created in the territory, is of international importance because of its rich oil fields, but its status in the Moslem world is enhanced by the rich finds of archaeologists searching for remains of the incredibly distant past

mesotron: see MESON

Mesozoic era (mĕsŭzō'ĭk) [Gr, =middle life], one of the grand divisions of geologic time When the Archeozoic and Proterozoic eras are considered separately (i e, not combined as Pre-Cambrian time), the Mesozoic is the fourth great division, the Paleozoic being the third As a result of the disturbances of the late PALEOZOIC ERA, the topography of North America differed in Mesozoic times in several important respects from its topography in Paleozoic times The Appalachian geosyncline was replaced by the Appalachian Mts, and the eastern part of the continent was elevated and exempt from submergence during most of the period The Appalachians were subjected to much erosion, and the products of this erosion were deposited along the Atlantic coast, now a lowland region, or in the ocean beyond Aside from the Appalachians, the other positive or consistently dry areas of the continent were the Canadian Shield, the Antilles area, and a mountain range elevated in part of the Cordilleran geosyncline The negative, always or often submerged, areas were the Pacific geosyncline of the west coast, the Colorado geosyncline, successor to the Cordilleran geosyncline and occupying much of the western interior of the continent, and the Mexican geosyncline The life of the Mesozoic was dominated by the reptiles, of which there were many more kinds than have existed at any subsequent time Already numerous in the TRIASSIC PERIOD, they were most abundant in the JURASSIC PERIOD and in the CRETACEOUS PERIOD, but all the more conspicuous varieties became extinct when violent disturbances late in the Cretaceous brought the Mesozoic to a close The Mesozoic was less than half the length of the Paleozoic, an average estimate for its duration being about 125,000,000 years See also GEOLOGY.

Mesquite (mĕskēt', mĕ'skēt), any plant of the genus *Prosopis*, leguminous spiny trees or shrubs with deciduous leaves, native to North and South America, Asia, and Africa The fruit pods of *Prosopis glandulosa*, a common mesquite, contain a sweet pulp eaten by both man and animal, they have been used for fodder and by the Indians in making a bread and a fermented beverage The stems yield a gum somewhat like gum arabic, the very durable wood is valued for fence posts and fuel Mesquites can grow in arid sites, and they form a part of the CHAPARRAL of the Southwest

Messala or **Messalla** (Marcus Valerius Messala Corvinus) (both mĕsă'lă), 64 B C -A D 8, Roman writer and soldier. He fought for the republicans at Philippi (42 B.C.), was pardoned by the triumvirs, and became a friend of Augustus He was consul in 31 B C. and proconsul in Aquitania in 28 and 27 His writings are lost He was a close friend of Tibullus.

Messalina (Valeria Messalina) (mĕsălī'nu), d. A.D. 48, notorious Roman empress, wife of CLAUDIUS I. She was the mother of his children, BRITANNICUS and Octavia. Her reputation for greed and lust was supposedly unknown to her husband until once, in Claudius' absence, she publicly married her lover, C. Silius. A political plot was apparently involved, and Narcissus informed the emperor, Messalina was killed.

Messalla: see MESSALA.

Messana, Sicily. see MESSINA.

Messene (mĕsē'nē), ancient city, central Messenia, Greece. It was founded (c.369 B.C.) under Theban auspices to be a capital and fort for the Messenians, whom the battle of Leuctra had just freed from the Spartans. The ruins, notably of the city walls, are important. Modern Messene (pop 7,323) is at some distance.

Messenia (mĕsē'nēu), ancient region, SW Greece, occupying mainly the westernmost of the great peninsulas of the Peloponnesus and corresponding to the modern nome of Messinia. Excavation has revealed an important center of Mycenean culture at Pylos in Messenia (13th cent B C). Expanding Sparta annexed Messenia (c 700 B C.) to be its granary A Messenian revolt (the Second Messenian War) is credited with driving Sparta to adopt its militaristic constitution (late 7th cent B C) Another stubborn revolt (the Third Messenian War, 464–459 B C) was a failure, but very costly to Sparta. The battle of Leuctra (371 B C) freed Messenia, and Messene was founded as a capital The country gave its name to Messina, Sicily, because of an influx of Messenian colonists (c 490 B C) See C A Roebuck, *A History of Messenia from 369 to 146 B C* (1941)

Messerschmitt, Willy (vĭ'lē mĕ'surshmĭt), 1898–, German aircraft designer and manufacturer He designed his first airplane when he was 18 and had his own factory by 1923 His planes were of value to the Germans in the Second World War, and he worked closely with the National Socialists in developing his famous pursuit planes After the war in the trials of the Nazis, he was declared a minor offender

Messiaen, Olivier (ōlēvyā' mĕsyā'), 1908–, French organist and composer, pupil of Paul Dukas at the Paris Conservatoire He became organist at La Trinité, Paris, in 1931 Having taught at the Schola Cantorum and the École normale de Musique, Messiaen became professor of harmony at the Paris Conservatoire in 1941 Well schooled in traditions of the past, he is at the same time an innovator, some of his works are based on scale formulas of his own invention A mystical Catholicism is evident in all his works, and he draws inspiration from both literature and art *L'Ascension* (1935), for orchestra, and *La Nativité du Seigneur* (1936) and *Le Banquet céleste* (1936), for organ, are best known among his compositions, which also include *Masses*, songs, and chamber music His symphony *Turangalila* (Boston, 1949) was commissioned by the Koussevitzky Music Foundation

Messiah (mŭsī'ŭ) or **Messias** (mŭsī'ŭs) [Heb, =anointed], in Judaism, a man who would be sent by God to restore Israel and reign righteously The idea developed among the Jews especially in their adversity, and such a conception is clearly indicated in Isaiah 9 This personal ruler for the restored Zion would be a member of the house of David, born in Bethlehem Micah 5 2 Jesus Christ considered himself and is considered by Christians to be the promised Messiah to whom the whole Old Testament pointed, the name Christ is Greek for Messiah Mat 16 16 The Christian ideal of the Messiah is fundamentally different from the early Jewish conception in the aspect of suffering, for the common idea of Jesus' time was that the Messiah should reign in glory as an earthly king The expectation of the second coming of Jesus is similar to the Jewish belief in the Messianic advent

Messidor. see FRENCH REVOLUTIONARY CALENDAR

Messina (mŭsē'nu, Ital măs-sē'na), city (pop 192,051), capital of Messina prov, NE Sicily, Italy, on the Strait of Messina It is the third largest city of the island, its busy seaport, connected by ferry with the Italian mainland, is a commercial and industrial center exporting citrus fruit, wine, and olive oil Founded (8th cent B C) by Greek colonists and named Zancle, it was taken (5th cent B C) by Anaxilas of Rhegium and renamed Messana Involved in several wars, particularly with Syracuse and Carthage, it was taken (228 B C) by mercenaries called Mamertines The Mamertines having appealed to Rome for help against Syracuse, the Romans intervened in Sicily, thus precipitating the first of the PUNIC WARS Messana then became an ally of Rome and subsequently shared the history of the rest of SICILY Its flourishing silk industry, its commerce, and its culture declined under Spanish rule after the 16th cent A heroic insurrection against Spain took place in 1774–78 Garibaldi took Messina in 1860, but the Bourbon garrison resisted in the citadel until 1861 Messina suffered several earthquakes That of Dec 28, 1908, destroyed 90 percent of the buildings, including its fine churches and palaces, and cost 60,000 lives The city has since then been completely rebuilt following strict quake-resistant rules. The Sicilian campaign in the Second World War ended with the fall of Messina to the Allies, Aug 17, 1943

Messina, Strait of, channel separating the Italian peninsula from Sicily and connecting the Ionian and Tyrrhenian seas. About 20 mi long and from 2 to 10 mi wide, it is crossed by a ferry from Villa San Giovanni to Messina. Reggio di Calabria, SW Italy, and Messina, NE Sicily, are the main ports The currents, whirlpools, and winds of the strait gave rise in ancient times to many legends on its dangers to navigators (see SCYLLA).

Messys, Quentin: see MASSYS, QUENTIN.

Mesta (mĕ'stä), Gr. *Nestos* (nĕ'stŏs), river, c.130 mi. long, SW Bulgaria and NE Greece. It flows from the Rhodope mts. generally SE into the Aegean Sea near Kavalla

mestizo (mĕstē'sō) [Span.,=mixture], person of mixed race, particularly in Latin American countries the descendants of Spanish or Portuguese and Indians. The mestizos, also called by various local names (e g , ladinos), constitute a large part of the population in these countries. The term is also used in the Philippines.

Mestrovic, Ivan, Serbo-Croatian *Meštrović* (ē'vän mĕsh'trôvĭch), 1883–, Yugoslav sculptor. He was a shepherd boy and then an apprentice to a marble cutter At 17 he went to the Vienna Academy, and at the International Exhibition at Rome in 1911 he was recognized as a new figure in the art world His style is a modern adaptation of archaic Greek sculpture and Byzantine tradition, his figures and reliefs are decorative in effect Many of Mestrovic's sculptures are of biblical scenes, often in wood Other works include the equestrian statue of the Serbian hero Marko Kraljevic and sculptures commemorating the battle of Kossovo He built (1920–22) at Cavtat, near Ragusa, a memorial chapel for the Racic family Canada has a war memorial, Chicago two Indian equestrian statues, by Mestrovic A one-man show of his work was held at the Metropolitan Museum in 1947

Metabetchouan (mĕ"tubĕch"wän'), village (pop. 1,469), S Que , on the south shore of Lake St John and W of Chicoutimi, in a farming and lumbering region

metabolism (mută'bŭlĭzm), the sum of the chemical processes in the body which result in growth, in the production of body heat and muscular and nervous energy, and in the maintenance of vital functions. Metabolism includes catabolism (the breaking down of substances into simpler forms) and anabolism (the building-up, or assimilative, processes). Muscular exercise, ingestion of food, and lowering of the environmental temperature stimulate metabolism Basal metabolism, which represents the minimum amount of energy required to maintain life at normal body temperature, is the heat produced by an individual at rest, a number of hours (usually 12 to 14) after the ingestion of food, in a room kept at a temperature of 20°C (68°F) The measurement of basal metabolism is known as the basal metabolic rate

metal, chemical ELEMENT possessing certain properties by which it is distinguished from a nonmetal, including a characteristic metallic luster, the ability to conduct heat and electricity, and the capacity to form a positive ION The metallic elements, which constitute about two thirds of the known elements, include aluminum, barium, beryllium, bismuth, cadmium, calcium, cerium, cesium, chromium, cobalt, copper, dysprosium, erbium, europium, gadolinium, gallium, germanium, gold, hafnium, holmium, indium, iridium, iron, lanthanum, lead, lithium, lutetium, magnesium, manganese, mercury, molybdenum, neodymium, nickel, niobium, osmium, palladium, platinum, potassium, praseodymium, radium, rhodium, rubidium, ruthenium, samarium, scandium, silver, sodium, strontium, tantalum, tellurium, terbium, thallium, thorium, thulium, tin, titanium, uranium, vanadium, wolfram, ytterbium, yttrium, zinc, and zirconium Arsenic exhibits both metallic and nonmetallic properties Antimony is similar in this respect The metals differ to such a degree in hardness, ductility (property enabling them to be pulled out into wire), malleability, tensile strength, density, and melting point that a definite line of distinction between them and the nonmetals in this respect cannot be drawn Furthermore, although all metals form crystals, this is also characteristic of certain nonmetals, e g , carbon and sulphur The hardest elemental metal is chromium, and the softest is cesium Copper, gold, platinum, and silver are especially ductile Most metals are malleable, gold, silver, copper, tin, and aluminum being extremely so Some metals exhibiting great tensile strength are copper, iron, and platinum Three metals (lithium, potassium, and sodium) have densities of less than one gram per cubic centimeter at ordinary temperatures, being, therefore, lighter than water Some heavy metals, beginning with the most dense, are osmium, iridium, platinum, gold, wolfram, uranium, tantalum, mercury, hafnium, lead, and silver. For many industrial uses, the melting points of the metals are important Wolfram fuses, or melts, only at extremely high temperatures (3370°C) while cesium has a melting point of 28 5°C Mercury, the only metal liquid at ordinary temperatures, solidifies at -38.87°C The best conductor of electricity among the metals is silver. Copper, gold, and aluminum follow in the order named All metals are relatively good conductors of heat, silver, copper, and aluminum are especially good On the basis of chemical activity, the metals can be arranged in a series, the electromotive series or replacement series, so called because it indicates what metals replace, or are replaced by, other metals and hydrogen in compounds. The order of activity, starting with the most active, is cesium, rubidium, potassium, sodium, lithium, barium, strontium, calcium, magnesium, aluminum, manganese, zinc, chromium, iron, cadmium, cobalt, nickel, tin, lead, hydrogen, antimony, bismuth, arsenic, copper, mercury, silver, palladium, platinum, gold, and iridium In general, any metal will replace any other metal, or hydrogen, which it precedes in the series and, under ordinary circumstances, will be replaced by any metal, or hydrogen, which it follows Also on the basis of chemical activity, according to the PERIODIC LAW, metals fall into groups Certain very similar elements fall into families, as the alkali metals, the alkaline earth metals (see ALKALI), or the metals of the RARE EARTHS Chemically, the metals differ from the nonmetals in that they form positive ions and basic oxides and hydroxides Upon exposure to moist air, a great many undergo corrosion, i e , enter into a chemical reaction which results in the formation of a new substance, a compound, unlike the original metal, e g , iron rusts when exposed to moist air, the oxygen of the atmosphere uniting with the metal to form the oxide Potassium, sodium, and calcium corrode rapidly Magnesium reacts to form a carbonate Aluminum and zinc do not appear to be affected, but the fact is that a thin coating of the oxide is formed almost at once, stopping further action and being unnoticeable because of its close resemblance to the metal Tin, lead, and copper react slowly under ordinary conditions Silver is affected by sulphur and becomes tarnished when exposed to air containing sulphur compounds The metals are combined with nonmetals in their salts, as in carbides, carbonates, chlorides, nitrates, phosphates, silicates, sulphides, and sulphates On the other hand, mixed with each other in definite amount, they form alloys A mixture of mercury and another metal is called an AMALGAM Although a few metals occur uncombined in nature, the great majority are found combined in their ores The extraction of metals from these ores is called METALLURGY Some metals, including copper, tin, iron, lead, gold, silver, and mercury, were known to the ancients Copper is probably the oldest known Mixed with tin, it forms BRONZE, the first alloy ever used The BRONZE AGE was followed by the IRON AGE The steel of today is essentially iron hardened by the addition of carbon For the uses of specific metals and their compounds, see the separate articles

metallurgy (mĕ'tulûr"jē), branch of chemistry concerned with the extraction of metals from their ores The processes employed depend upon the chemical nature of the ORE to be treated and upon the properties of the METAL to be extracted In certain cases (as when gold, silver, or occasionally copper occur "free," i e , uncombined chemically, in sand or rock), mechanical methods alone are sometimes sufficient to obtain relatively pure metal Finely divided waste material is washed away or separated by gravity, rock is crushed and then heated until the metal fuses and separates away Other processes involve the use of a flux—any material that will combine with the waste material when sufficient heat is applied—to form a fusible mass called slag, the slag formed, being lighter than the metal, floats and can be skimmed or drawn off The material employed as a flux varies according to the chemical nature of the ore and the impurities to be removed Silica and limestone are often used Gold and silver can sometimes be removed from the impurities associated with them by treatment with mercury, in which they are soluble (for this amalgamation process, see AMALGAM). Another method for the separation of gold and silver is the so-called CYANIDE process The Parkes process is used to free silver from lead ores In general, however, mechanical methods are inadequate, since almost all the metals occur in nature in chemical compounds and require, therefore, chemical reaction to set them free The chemical processes in metallurgy can, in general, be classified with respect to the nature of the ore treated The general term for the treatment of an ore by heat is SMELTING If the ore is an oxide, it is heated with a reducing agent, such as carbon in the form of coke or coal, the oxygen of the ore combines with the carbon and is removed in carbon dioxide, a gas (see OXIDATION AND REDUCTION) The waste material, called the gangue, mixed in with the ore is removed by means of a flux A sulphide ore is commonly roasted, i e , heated in air, the metal of the ore combines with oxygen of the air to form an oxide, and the sulphur of the ore also combines with oxygen to form sulphur dioxide, which, being a gas, passes off The oxide of the metal is then treated with a reducing agent A carbonate ore is heated, the oxide of the metal is formed, and carbon dioxide is given off The oxide is subsequently reduced. In some cases, the oxides of metals, such as chromium, cobalt, and manganese, are reduced by means of aluminum Certain active metals, e g , aluminum, calcium, barium, magnesium, potassium, and sodium, are prepared by ELECTROLYSIS a fused compound, commonly the chloride, is treated, the metal collecting at the cathode When an ore of a metal has a low percentage of the desired metal, concentration is necessary before the extraction process is begun. In one method, the ore is crushed and placed in a machine where, by shaking, the heavier particles containing the metal are separated from the gangue (lighter rock particles) by gravity Another method is the FLOTATION PROCESS, used commonly for copper sulphide ores In some cases, since the metal obtained from the ore still contains impurities, special REFINING processes are required Metallurgy is of great commercial importance because of the wide use of metals Since the methods for the treatment of ores are so diverse, see ALUMINUM, COPPER, GOLD, IRON, LEAD, NICKEL, SILVER, TIN, and ZINC for the special procedures followed See C G. Johnson, *Metallurgy* (3d ed , 1946), Joseph Newton, *Introduction to Metallurgy* (2d ed , 1947), John Elberfeld, *Metallurgical Materials and Processes* (1948), R H Harrington, *Modern Metallurgy of Alloys* (1948)

metalwork. Copper, gold, and silver were probably fashioned into ornaments and amulets in the Neolithic period GOLDWORK and SILVERWORK have since employed the talents of leading craftsmen and artists in making JEWELRY, plate, inlays, and sculpture The first great advance in metalworking came in the Bronze Age, and BRONZE has remained important for industrial and artistic uses Brass, an alloy of copper with zinc, came into use later (see BRASSES, MONUMENTAL, and BRASSES, ORNAMENTAL) The Iron Age provided a cheaper ductile medium used chiefly for tools and ornamental IRONWORK until modern times, when improved methods, alloys, and machinery made iron essential to the industrial and structural trades PEWTER, tin, and lead have had a place in industrial and art metalwork Methods of shaping metals include drawing, spinning, hammering, and casting, decorative processes include CHASING, DAMASCENING, embossing, enameling, ENGRAVING, ETCHING, FILIGREE, GILDING, inlaying, NIELLO, and REPOUSSÉ

metamorphic rocks see ROCK

metamorphism (mĕ'tumôr'fĭzm), in geology, processes by which changes are brought about in any kind of ROCK In its broadest sense, metamorphism includes such processes as WEATHERING and the cementation of loose particles into hard rock, the term is frequently restricted, however, to the subterranean processes by which rocks are profoundly altered in texture and mineral composition Metamorphism, in the narrower sense, is generally caused by heat, by the infiltration of liquids and gases into the rock, by the thrust or pull of earth movements, by the weight of overlying rocks, or (most commonly) by the simultaneous activity of two or more of these agents Alteration of the mineral composition of rock is the result of the action of circulating liquids and gases in the addition of new elements and the taking away of elements formerly present or of recrystallization under pressure, alteration of texture is commonly the result of the rearrangement of the mineral particles under pressure, the fusibility of the rock being increased in the presence of heat and water SCHIST and GNEISS are the results of metamorphism, and slaty cleavage is a common property induced by metamorphism Metamorphism usually occurs when an igneous mass, e g , a batholith, is intruded into older rock Some changes in the older rock occur simply because of the pressure the igneous rock exerts and the heat it radiates, but the more extensive alterations are produced by the liquids and gases which the intrusive gives off Metamorphism on a grander scale accompanies the occurrence of faults and folds Metamorphism is occasionally set in motion by the pressure of the overlying rocks Metamorphism is designated, according to the agent principally responsible, as hydrometamorphism (effected by water), thermal metamorphism (heat), contact metamorphism (igneous intrusion), dynamic metamorphism (earth movements), and static or load metamorphism (overlying rocks), it is evident, however, that these classifications cannot be arbitrarily applied According to the extent of the area affected, metamorphism is local or regional See Alfred Harker, *Metamorphism* (2d ed , 1939), F J Turner, *Mineralogical and Structural Evolution of the Metamorphic Rocks* (1948)

metaphor (mĕ'tufur,-fôr) [Gr ,=transfer] and **simile** (sĭ'mulē) [Latin,=likeness], in rhetoric, two figures of speech In metaphor, an object belonging to one class of things is referred to as if it belonged to another class The reference may be explicit, as in "All the world's a dream," or it may be assumed or implied, as when a beloved woman is referred to as "a rose without a thorn " In simile, an object is explicitly compared to another object, as in "My love is like a red, red rose " Thus, metaphor compares by saying A is B or by substituting B for A, while simile compares by saying A is like B Slang is rich in metaphor, as is criminal argot, in which, for instance, diamonds may be referred to as "ice "

metaphysical poets, group of English poets of the 17th cent The hallmark of their poetry was the metaphysical conceit—a figure of speech which blended passion and logic by means of unusual images Their poetry employed intellectual wit, learned imagery, skillful evolution, and subtle argument in an effort to express a highly individual

reaction to the changing times As a result, the poems of this group exhibited a fresh new depth of feeling The leading metaphysical poets were John Donne, George Herbert, Henry Vaughan, Thomas Traherne, and Richard Crashaw See studies by H J C Grierson (1921), J B Leishman (1934), H C White (1936), and Theodore Spencer and Mark Van Doren (1939)

metaphysics (mĕtŭfĭ'zĭks), the part of philosophy in which is studied the ultimate nature of existence It perpetuates the *Metaphysics* of Aristotle, a collection of treatises placed after the *Physics* [Gr. *metaphysics*=after *physics*] and treating what Aristotle called the First Philosophy The principal study of metaphysics is sometimes called ONTOLOGY, but there are other important fields of metaphysical study, e g , theology, psychology, and epistemology or the study of knowledge A conventional division of metaphysics also includes cosmology, which might be part of physics The most elaborate and one of the most carefully constructed metaphysics is that of the scholastic philosophy (see SCHOLASTICISM), which is more closely connected with the Aristotelian metaphysical system than is any other In general, the history of philosophy seems to show a tendency among thinkers to emphasize now one phase of metaphysics, now another, e g , Leibnis was more interested in ontology than Kant, who emphasized epistemology. Since the middle of the 19th cent it has been common among thinkers to make material phenomena their chief interest and, by limiting their logical processes to induction, to arrive at a philosophical materialism, which may be said in general to deny metaphysics See Jacques Maritain, *A Preface to Metaphysics* (1940), D W Gotshalk, *Metaphysics in Modern Times* (1940), R G Collingwood, *An Essay on Metaphysics* (1940)

Metapontum (mĕtŭpŏn'tŭm), ancient city of MAGNA GRAECIA, on the Gulf of Taranto, SE Italy Settled by Greeks in the 6th cent B C , it flourished and gave refuge to Pythagoreans expelled from Crotona Pythagoras taught and died here There are remains of a Doric temple, called Tavole Paladine, and other ruins

Metastasio, Pietro (pyā'trō mātästā'zēō), 1698–1782, Italian poet and dramatist, whose real name was Pietro Bonaventura Trapassi He was educated by a wealthy man who left him a fortune Court poet at Vienna from 1729, he wrote lyric verse, a masque, *The Gardens of the Hesperides* (1721–22), and librettos of a great many operas, including *Didone abbandonata* (1724), *Artaxerxes* (1730, Eng tr , 1761), *La clemenza di Tito* (1734, Eng tr , 1811), and *Il re pastore* (1751, Eng tr , *The Shepherd King*, 1765) These operas, which were properly melodramas, were set to music by such composers as Gluck, Handel, Mozart, and Hasse, some were set as many as 30 or 40 times See biography by Charles Burney (3 vols , 1796)

Metaurus (mĭtô'rŭs), river of the Marches, central Italy, flowing from the Apennines into the Adriatic near Fano On its banks in 207 B C the Romans defeated the Carthaginians under HASDRUBAL

Metaxas, John (mĭtăk'sus, Gr mā'taksas"), 1871–1941, Greek general and statesman He served as chief of staff from 1915 to 1917, but was exiled as pro-German when Greece joined the Allies in the First World War He returned in 1920, led a counterrevolution against the republic, and was exiled again (1923–24) He was prominent as a royalist politician and, after the monarchy was reestablished in Greece, became premier on April 13, 1936 His administration became a reactionary dictatorship after he dissolved parliament in Aug , 1936 In 1938 he was named premier for life After the Italian attack on Greece (Oct , 1940), he successfully directed Greek resistance. His death was considered even by his opponents a blow to the Greek cause.

Metcalf, Victor Howard (mĕt'kăf), 1853–1936, American cabinet official, b. Utica, N Y , grad Yale Law School, 1876 He practiced law in Utica, N Y , and then in Oakland, Calif He was elected (1898) as U S. Congressman from California on the Republican ticket He resigned (1904) to become Secretary of Commerce and Labor under President Theodore Roosevelt and then served (1906–8) as his Secretary of the Navy

Metcalf, Willard Leroy, 1858–1925, American landscape painter, b. Lowell, Mass., studied in Boston and at Julien's academy, Paris He was an instructor at Cooper Union and at the Art Students League, New York. His works, in most of the American museums, include *The Family of Birches* (National Gall , Washington, D.C.); *The North Country* (Metropolitan Mus of Art), *May Pastoral* (Mus of Fine Arts, Boston), *May Night* (Corcoran Gall), *Icebound* (Art Inst , Chicago), *The Prelude* (Worcester Art Mus), *Twin Birches* (Pa. Acad of the Fine Arts), and *Unfolding Buds* (Detroit Art Mus.).

Metcalfe, Charles Theophilus Metcalfe, 1st Baron, 1785–1846, British colonial administrator, b. India After a long career in the Indian civil service, which included the role of provisional governor general (1835–36) of India, and after serving as governor (1839–42) of Jamaica, he was appointed governor general of Canada in 1843. His experience in British dependencies had little prepared Metcalfe for service in a colony in which the movement for self-government was strongly under way In 1843 his ministers, headed by Robert Baldwin and L H. LaFontaine of the Reform parties, resigned He formed a Conservative administration and a general election resulted in his favor, but his health was impaired and he retired in 1845 Metcalfe was raised to the peerage that year. See biographies by J. W Kaye (rev ed , 1858) and E J Thompson (1937)

Metchnikoff, Élie (mĕch'nĭkôf), Rus *Ilya Ilyich Mechnikov*, 1845–1916, Russian biologist He studied in Germany, lectured at the Univ of Odessa, and, after working with Pasteur in Paris, became (1904) deputy director of the Pasteur Institute there He developed the theory of phagocytosis, the ingestion and destruction of bacteria by certain white blood cells (phagocytes) For his work in immunity he shared with Paul EHRLICH the 1908 Nobel Prize in Physiology and Medicine He also studied the effect of lactic-acid bacteria of the digestive tract in preventing putrefaction and worked with P P E Roux on syphilis His numerous writings include *Immunity in Infectious Diseases* (1901, Eng tr , 1905) and *The Nature of Man* (1903, Eng tr , 1938) See biography by Olga Metchnikova (1920, Eng. tr , 1921)

Metellus (mĕtĕ'lŭs), distinguished ancient Roman family of the plebeian gens Caecilia It was one of the small number of families that controlled the senate **Lucius Caecilius Metellus** (sēsĭl'ēŭs), d c 221 B C , consul (251 B C), fought in the First Punic War He was pontifex maximus (from 243 B C) and was said to have been blinded (241 B C) in rescuing the Palladium from the burning temple of Vesta **Quintus Caecilius Metellus Macedonicus** (măsĭdŏ'nĭkŭs), d 115 B C , grandson of the preceding, was a successful general in Macedonia (148 B C) and in the final pacification of Greece (146 B C) He was consul in 143 B C and defeated the Celtiberians in N Spain As censor (131 B C) he proposed to make marriage compulsory for Roman men, to increase the birth rate He had a reputation as a sound, substantial senator **Quintus Caecilius Metellus Numidicus** (nūmĭ'dĭkŭs), d 91? B C , nephew of Macedonicus, was a leader of the senatorial party As consul (109 B C) he conducted the Numidian War against Jugurtha He antagonized his legate, MARIUS, who received his command In his censorship (102 B C) Numidicus tried to remove L Appuleius Saturninus, of the popular party, from the senate In 100 B C , Saturninus and Marius took revenge by passing a law requiring senators to swear acceptance of an agrarian law, they tricked Numidicus into refusing to swear and got him exiled for it He is said to have been poisoned by the tribune Q Varius His son, **Quintus Caecilius Metellus Pius** (pī'ŭs), d c 63 B C , named Pius because of his filial devotion during his father's exile, continued his father's opposition to Marius As praetor (89 B C) he fought in the Social War, in the civil war that followed he was called to Rome by the senate to defend the city against Marius and CINNA Foreseeing its capitulation, he crossed to Africa, whence he returned (83 B C) to join SULLA He defeated the Marians in Umbria and Cisalpine Gaul and became consul with Sulla (80 B C) In his proconsulship in Spain (79 B C) he began an eight-year war with SERTORIUS, in which he was steadily unsuccessful, in spite of aid brought by Pompey After Sertorius' murder (72 B C) Metellus won at Italica and Segovia. His successor as pontifex maximus was Julius Caesar For his adoptive son, **Quintus Caecilius Metellus Pius Scipio**, see SCIPIO A great-grandson of Metellus Macedonicus by an elder branch of the family was **Quintus Caecilius Metellus Celer** (sē'lur), d 59 B C , he fought in Asia under Pompey and was praetor (63 B C) in Cicero's consulship He assisted in the suppression of CATILINE He was consul in 60 B C Celer was a leader in the stubborn defense of every senatorial prerogative This policy led to opposing Pompey in the shabbiest detail and so in driving Pompey into the fateful alliance with Julius Caesar Celer's wife, Clodia, the notorious sister of P CLODIUS, was said to have poisoned him **Quintus Caecilius Metellus Nepos** (nē'pŏs), d c 55 B C , brother of Celer, served with Pompey (67–64 B C). He supported Pompey against the senatorial party and ran as his candidate for the tribunate (63 B C). He was elected with Cato, but before his term was well under way he fled Rome to escape the senatorial hatred In his consulship (57 B.C) he allowed his sworn enemy, Cicero, to return from exile, chiefly to curry favor with Julius Caesar His proconsulship (56 B C) was in Hither Spain. **Quintus Caecilius Metellus Creticus** (krē'tĭkŭs), d c.55 B C., grandson of Macedonicus, was consul with Q Hortensius (69 B C) Crete was his proconsular assignment, and he set out to subjugate the pirate-infested island When he had conquered most of the island, the pirates in the rest sent a message to Pompey (Creticus' superior officer) offering to surrender to him, hoping for easy terms. Creticus disregarded the surrender and captured the rest of Crete. Creticus resembled Celer in his political attitude.

metempsychosis: see TRANSMIGRATION OF SOULS.

meteor (mē'tēŭr), one of the small bodies of solid cosmic matter which, coming from somewhere outside, enter the atmosphere of the earth and pass through it with such speed that the friction produced makes them incandescent. Thus they become visible and shine like stars Some of the very large ones are seen to explode and break out into showers of sparks. Some disappear at once. Occasionally one, traveling less rapidly and weighing more, falls to the surface of the earth In that case it is called a METEORITE On a clear night meteors appear to be points of light, varying much in size and brilliancy, moving across the sky in lines of brightness, sometimes leaving in their wake trains of light, visible for several seconds When they do not exceed the fixed stars in brightness, they are known as shooting stars, those that are very large and bright are fireballs or bolides At certain times of the year showers of meteors occur. They appear to coincide with the periods of certain comets. A shower of late November, called the Andromedes, has been seen to occur at the time when the comet of Biela, now lost, was due to appear The name of the shower indicates that it seemed to come from the constellation Andromeda, these showers were recorded from 1741, occurring at intervals of between six and seven years, but no real shower has been seen since 1899 Nov 14 is the time for the Leonid shower, which seems to proceed from Leo Major and which occurred with marked intensity in 1799, 1833, and 1866 This, too, is now linked with the path of a comet The same is true of the Lyrids of April 20 and the Geminids of Dec 10–13 Shooting stars of special brilliancy and showers of meteors were recorded thousands of years ago The Perseids, a great shower that brightens the sky about Aug 10, probably were observed and recorded by the Chaldeans in 2700 B C Meteors are visible only while in our atmosphere Many calculations have been made, resulting in the estimates that meteors are usually at heights of from 60 to 90 mi above the earth when they become visible and that the smaller ones disappear between 40 and 50 mi above the earth The average rate of speed as calculated is c 26 mi per second The sizes of meteors are difficult to determine with any precision, but the largest are supposed to be less than 3,000 ft in diameter, and the smallest are tiny, weighing almost nothing The most satisfactory way of studying meteors is by means of photographic records See C P Olivier, *Meteors* (1925), H H Nininger, *Our Stone-pelted Planet* (1933), F G Watson, *Between the Planets* (1941)

Meteor Crater see WINSLOW, ARIZ

meteorite (mē'tēurīt), a METEOR which reaches the earth's surface Sometimes the fall of a meteorite is observed, and it can thus be traced and recovered, others are discovered accidentally and are recognized as meteorites by their appearance and composition Those called siderites are composed entirely of metal (chiefly nickel and iron), and others, called aerolites, are of stone, a third group, called siderolites, more rare than the others, are of metal and stone in varying proportions As meteors speed through the earth's atmosphere, their outer surface becomes liquified by the intense heat and pressure, as the friction with the atmosphere finally reduces the velocity of the meteor, the surface cools and the glowing material solidifies into a dark smooth crust, which is glassy in the stony meteorites and composed chiefly of iron and nickel oxides in the metallic ones Some meteorites are somewhat cone shaped and show lines of flow in the hardened surface radiating from the rounded cone, indicating that during its flight that end of the meteorite was constantly directed forward Others that probably spun around while falling have a variety of shapes Since the flight time of meteors through the air is short, the interior does not become hot, metallic meteorites that have just fallen are hot on the surface, stony ones are warm, and both cool quickly Friction with the atmosphere has little effect in slowing down the very large meteorites, and when they reach the earth they strike with tremendous force and become buried beneath the surface The depth of burial varies with the size of the meteorite and the kind of soil The sudden impact with the earth causes great compression, heating, and partial vaporization of the outer part of the meteorite and of the materials in the ground, expansion of the gases thus formed and of steam produced from ground water causes an explosion which shatters the meteorite, scatters parts of it over the surrounding area, and carves a crater in the ground. A huge crater is the Meteor Crater, near Winslow, Ariz That it was caused by a meteorite has been disputed, but in recent years scientific studies have uncovered much evidence that it was so formed Other craters believed to have been produced by meteorites have been discovered near Odessa, Texas, in the Chaco, Argentina; in the great desert of Arabia; and in N Siberia. A meteorite, estimated to weight about 60 tons, rests where it was discovered near Grootfontein, SW Africa. Among the exhibits at the

Hayden Planetarium in New York city are those brought from Greenland (one weighing 36½ tons and two smaller ones) by R E Peary and the conical Willamette meteorite weighing about 14 tons found (1902) near Portland, Oregon. Meteorites have been discovered in most parts of the world In N Mexico have been found a number weighing a ton or more each Metallic meteorites weighing more than a ton have been discovered in Brazil, Argentina, and Australia Not until the early 19th cent did scientists fully accept the fact that meteorites came to the earth from outside space Since then many studies have been made of the composition and crystalline structure of meteorites, the development of methods of microchemical analysis and the use of X rays and of the mass spectrograph have facilitated such work. The age of meteorites can be determined by measuring the radium and helium contents The origin of meteorites is as yet unsolved Among the theories to account for them is the belief that they are fragments of some large body from which asteroids also originated See H H Nininger, *Our Stone-pelted Planet* (1933), F A Paneth, *Origin of Meteorites* (1940), F. G Watson, *Between the Planets* (1941), publications of the American Museum of Natural History

meteorology (mē"tēurŏl'ujē), the science of the ATMOSPHERE with its associated phenomena, the WEATHER The earliest indications of activity in this field date back at least to the 5th cent B C ; Aristotle in the 4th cent B C wrote the first treatise on meteorology Scientific progress began with the development of the mother science, physics, and the invention of basic instruments including Leonardo da Vinci's wind vane (1500), Galileo's thermometer (c 1593), and Torricelli's mercurial barometer (1643) Further developments include Halley's original account of the trade winds and monsoons (1686), H W Brandes's drawing of the first weather map (1820), W C Redfield's recognition of the cyclone as a revolving storm (1840), and William Ferrel's theory of the general circulation of the atmosphere (1856) The invention of the telegraph made possible the rapid collection of data from remote stations Between the First and Second World Wars, Bjerknes made his discovery of the POLAR FRONT and advanced his wave theory of cyclones, and Rossby introduced his concept of isentropic analysis Other contributors to the science include Lamarck, J P Espy, Alexander von Humboldt Alexander Buchan, Julius Hann, M F Maury, Cleveland Abbe, J W S Rayleigh, C H D Buys-Ballot, and W J Humphreys See also CLIMATE, CLOUD, DUST, HUMIDITY, RAIN, STRATOSPHERE See works of David Brunt, W J Humphreys, Sir William Napier Shaw, and Sverre Pettersen

meter, in music, the division of a composition into units of equal time value called measures In general, the first beat of a measure receives an accent Meter is usually indicated by a time signature, a fraction whose numerator indicates the number of beats in a measure and whose denominator indicates the note value which is the unit of beating. The time signature may be changed at any point in the composition, and changes of meter occur frequently in much 20th-century music In music of the 18th and 19th cent , however, the same meter is usually adhered to throughout a section or movement of a composition See also RHYTHM For meter in poetry, see VERSIFICATION, for meter as a unit of measure, see METRIC SYSTEM

methane (mĕ'thān), colorless, odorless gas, commonly called marsh gas It is lighter than air, boils at −161 4°C , and solidifies at −184°C It burns in air, but, mixed with air, forms an explosive mixture The gas is commonly formed beneath the surface of the water in swamps and marshes by the decomposition of plant and animal matter, and it is the principal component of NATURAL GAS and the fire DAMP of mines In the laboratory it can be prepared by heating together sodium acetate and sodium hydroxide, by the reaction between water and aluminum carbide, by the direct combination of carbon and hydrogen, by the reaction between carbon monoxide and hydrogen, and by the destructive distillation of coal and wood It is used as fuel and illuminant and in the treatment of steel Chemically, methane is a compound of carbon and hydrogen, its molecule consisting of one carbon atom and four hydrogen atoms Its structural formula represents the carbon atom in the center with the four hydrogen atoms around it It is the first member of a series of saturated hydrocarbons called the **methane series** or **paraffin series.** The other members of the series have the same numerical relationship between the carbon and hydrogen atoms, the number of hydrogen atoms in each molecule exceeding twice the number of carbon atoms by two Some members are gases, some liquids, and some solids They are common compounds and occur in various mixtures in such liquids as BENZINE, GASOLINE, and KEROSENE and such solids as PARAFFIN, all of which are obtained in the fractional distillation of petroleum. A number of substances are considered chemically as derivatives of this series of hydrocarbons; these include CHLOROFORM, METHYL ALCOHOL, ETHYL ALCOHOL, FORMALDEHYDE, and ACETIC ACID. The chemical formulas of these substances indicate that, theoretically, other atoms or radicals have been substituted for certain of the hydrogen atoms (see SATURATION) in the original molecules, these substances are not necessarily prepared directly from the members of the series

methanol see METHYL ALCOHOL.

Metheg-ammah (mē'thĕg-ă'mŭ), place, conquered by David from the Philistines It is identified by some with Gath 2 Sam 8 1

Methodism, the doctrines, polity, and worship of those Protestant Christian denominations which have developed from the movement started in England by the teaching of John WESLEY He, his brother Charles, George WHITEFIELD, and others belonged to a group at Oxford which in 1729 began meeting for religious exercises From their resolution to conduct their lives and religious study by "rule and method" they and their societies were given the name Methodists The leaders of the movement were ordained ministers of the Church of England, neither of the two Wesleys ever disclaimed the holy orders of that church, but they were barred from speaking in most of its pulpits, in disapproval of their evangelistic methods They preached in barns, houses, open fields, wherever an audience could be reached Societies were formed, class meetings of converts were held, and lay preachers were trained and given charge of "circuits" of several congregations When they were changed about from one appointment to another, the system of itinerancy had its beginning The Articles of Religion were drawn up at the first annual conference (1744), they were based to a considerable extent upon the Thirty-nine Articles of the Church of England, but great emphasis was laid upon repentance, faith, sanctification, and the privilege of full, free salvation for everyone Whitefield could not agree to this and became the leader of the CALVINISTIC METHODISTS The influence of Methodism was to make religion a vital personal experience and to reveal its social responsibilities Not until 1784 did John Wesley assume the authority of ordination, and he did not then apply that name to the ceremony In 1784 he ordained Dr Thomas COKE as superintendent of the societies in America The Methodists in England adopted a legal constitution in 1784, in 1791, after the death of Wesley, they were formally separated from the Church of England In the conference of that year, the WESLEYAN METHODIST CHURCH engaged "to follow strictly" the plan left by its founder In both England and America secessions have given rise to branch organizations, differing from their parent groups in some matter of church government but never in doctrine Reunions have been effected from time to time In Great Britain the Methodist New Connection was the first group to form a separate branch Then followed the Primitive Methodists, the Bible Christians, the Protestant Methodists, the Wesleyan Methodist Association, and the Wesleyan Reformers In 1857 the last three formed a union as the United Methodist Free Churches, in 1907 these were incorporated with the Methodist New Connection and the Bible Christians as the United Methodist Church Finally, in 1932, the Wesleyan Methodists, the Primitive Methodists, and the United Methodists were gathered together again in one great church under the United Conference of Methodist Churches John Wesley (with his brother) visited America in 1735 as spiritual adviser to James Oglethorpe's colony in Georgia, but the actual beginnings of Methodism in America were in New York, after 1766, when Philip Embury, a Wesleyan convert who had earlier come from Ireland, began to preach In Maryland, Robert Strawbridge started a congregation In 1769 Wesley sent several itinerant preachers into the new field, Francis ASBURY arrived in 1771. With the meeting in 1773 of 10 preachers the first annual conference in the New World was held In 1784 Coke and Asbury were made superintendents (and shortly thereafter styled bishops) of the Methodist Episcopal Church, at the "Christmas Conference" in Baltimore, where that church was formed and where the order of worship and articles of religion prepared by Wesley were adopted In 1792 the first General Conference was held In 1830, after controversy over lay representation in conferences and other questions, the Methodist Protestant Church was formed, without bishops or presiding elders The Wesleyan Methodist Connection was organized (1843) at Utica, N Y , in a strong anti-slavery protest The independent career of the Methodist Episcopal Church, South, began in 1845 over the issue of slavery In 1939 a great reunion was realized—the Methodist Episcopal Church (North), the Methodist Episcopal Church, South, and the Methodist Protestant Church united as the Methodist Church The many activities of this vast body are administered by boards, among which are the council of bishops, boards of education, missions and church extension, publication, hospitals and homes, and evangelism, and the commission on world peace. Among other branches of Methodism in the United States are the Primitive Methodist Church (introduced c 1830 by emigrants from England), the Congregational Methodist Church (1852), and the Free Methodist Church of North America (1860). Negro Methodists have formed denominations of their own, under the leadership of such men as Richard ALLEN These include the African Methodist Episcopal Church, the African Methodist Episcopal Zion Church, the African Union First Colored Methodist Protestant Church, and the Colored Methodist Episcopal Church (which became in 1870 a separate body approved in the General Conference of the Methodist Episcopal Church, South) Bishop Asbury established (1786) the first Methodist Sunday school. In 1789 the Methodist Book Concern (now known as the Methodist Publishing House) was started The great missionary enterprises of the Church began early in the 19th cent See J S Simon, *John Wesley and the Methodist Societies* (1923), H E Luccock and Paul Hutchinson, *The Story of Methodism* (1926), Umphrey Lee, *Historical Backgrounds of Early Methodist Enthusiasm* (1931), W W Sweet, *Methodism in American History* (1933), E K Nottingham, *Methodism and the Frontier. Indiana Proving Ground* (1941), N B Harmon, *Organization of the Methodist Church* (1948)

Methodius, Saint. see CYRIL AND METHODIUS, SAINTS

Methuen (mĭthōō'un), industrial town (pop 21,880), NE Mass , near the N H line NW of Lawrence, settled c 1642, set off from Haverhill 1725. It produces worsteds and shoes

Methusael (mĕthū'sāĕl), father of Lamech. Gen 4 18

Methuselah (mĕthū'zulu), descendant of Seth, son of Enoch The Bible says he lived 969 years. Gen 5 21 Mathusala Luke 3 37

methyl (mĕ'thĭl), organic RADICAL consisting of one carbon atom and three hydrogen atoms Its name is derived from methane, since the arrangement of its atoms corresponds to that of methane except that it has one less hydrogen atom It has never been isolated, but appears in many compounds, e g , methyl acetate, an ESTER formed by the action of acetic acid and methyl alcohol; methyl chloride, a gas, used in refrigeration, methyl green, a dye, methyl orange, used as a dye and also used in the chemical laboratory for testing, since it turns red with acids and yellow with bases, methyl salicylate, the oil of wintergreen, METHYL ALCOHOL, and methyl ETHER

methyl alcohol, methanol (mĕ'thĭnôl, -nŏl), or **wood alcohol,** colorless, liquid ALCOHOL, boiling at 64 5°C , melting at −97 8°C , inflammable, miscible with water in all proportions With acids it forms esters It is a fatal poison (see wood alcohol under POISONING, table) Small doses, as well as continued inhalation of the vapor, cause blindness. As a result its commercial use has been prohibited in some cases It is used as a solvent for many organic substances in making varnishes and lacquers and is extensively employed in the preparation of formaldehyde which is obtained by its oxidation Because of its poisonous properties, it is used as a denaturant (about 10 percent) in industrial alcohol, since it makes the product unfit to drink Commercially, methyl alcohol is prepared by the destructive distillation of wood It can also be produced by a synthetic process, involving the direct combination of carbon monoxide and hydrogen

methylbenzene see TOLUENE

Meton (mē'tŏn), fl 432 B C , Greek astronomer of Athens, who introduced the Metonic cycle into chronology This is a cycle of 19 years embracing 235 lunar months The moon's phases in every 19th year occur on the same date The number of any year in the Metonic cycle is known as a golden number and is used in fixing the date of Easter

metric system, system of measurements and weights planned in France and adopted there in accordance with laws passed in 1795 and 1799 It was subsequently adopted by many nations, and its use is permitted in Great Britain and the United States The system is based on the meter, a measure of length The unit of surface is the are, 100 square meters The unit of volume is the liter, the cube of 1/10 meter The unit of weight is the gram, theoretically the weight of distilled water that would fill a cubical vessel with edges of 1/100 meter The meter itself was intended to be 1/10,000,000 of the distance measured on the earth's surface from the equator to the pole In spite of careful surveying the accuracy of such a computation is sufficiently doubtful to make it expedient to define the meter legally as the length of a certain platinum bar kept in Paris Nations that have adopted or approved the metric system have recognized this bar as the standard meter, certified copies of it are available In the metric system, weights and measures larger and smaller than the meter, the are, the liter, and the gram are related to these units by a decimal system e.g., a kilometer is 1,000 meters, a kilogram is 1,000 grams, a centimeter is 0 01 meter, a centigram is 0.01 gram For equivalents of metric denominations, see WEIGHTS AND MEASURES (table)

metronome (mĕ'trunōm), in music, a clockwork mechanism to indicate the exact tempo in which a work is to be performed It has a double pendulum

whose pace can be altered by sliding the upper weight up and down Simultaneously the sliding bob indicates the rate of oscillation by means of calibrations on the pendulum A number to indicate the rate at which the metronome is to be set and a note whose value is to equal one beat of the metronome are often given on a piece of music, preceded by the initials MM, for Mälzel's Metronome, Johann Mälzel (1772–1838) having made in 1816 the type of metronome in general use today Beethoven and Schumann left such tempo indications for many of their compositions, but for earlier music and often for later music such indications are those of the editor

Metropolis (mətrŏ'pülĭs), city (pop 6,287), co seat of Massac co, S Ill., on the Ohio and E of Cairo, in a farm and timber area, laid out 1839, inc 1845 It manufactures various wood products and clothing. In Fort Massac State Park here is the site of Fort Ascension (later Fort Massiac), established by the French in 1757, it was later held by the English and by Americans George Rogers Clark landed here in 1778 at the outset of his Illinois campaign. In the area are the Kincaid Indian mounds

Metropolitan Museum of Art, New York city, founded in 1870 It opened in 1880 on its present site in Central Park facing Fifth Ave The building is owned by the city, which contributes a certain sum yearly for upkeep, but otherwise the museum is supported by private endowment and income from memberships Admission to it is free. Outstanding among the museum's collections are European paintings, pastels, water colors, miniatures, and drawings numbering more than 3,000 and the Egyptian wing with its mastaba tomb of Perneb, erected about 4,400 years ago and rebuilt here in its original form Other outstanding features include medieval art (part of which is in the CLOISTERS acquired by the museum in 1925 and moved to its present building in 1938), Chinese and Oriental art, Greek and Roman art, and arms and armor. An American wing shows the development of furniture and decorative arts from the colonial to the early Federal period The print collection includes woodcuts, engravings, etchings, and lithographs dating from the 15th cent The Costume Institute provides a practical source of inspiration and reference for designers, in fashion, the theater, moving pictures, and related fields and for students through its collection of thousands of authentic costumes and accessories, international in scope and covering three centuries

Metropolitan Opera Company, term used in referring collectively to the organizations which have produced opera at the Metropolitan Opera House, New York The house was built by members of New York society who could not be accommodated with boxes at the Academy of Music The first presentation, on Oct 22, 1883, was Gounod's *Faust* Henry E Abbey was the first manager, but the season ended with heavy financial loss to him The season 1884–85 was sponsored by the stockholders; the director, Leopold Damrosch, died during the season From 1885 to 1891 Edmond Stanton was director In the season 1891–92 H E Abbey, J B Schoeffel, and Maurice Grau were managers, and the brothers Jean and Édouard de Reszke made their first American appearances A devastating fire prevented production of any opera during the season 1892–93 Rebuilding was undertaken by a new company, the Metropolitan Opera and Real Estate Company One tier of boxes was eliminated, and the number of seats in the orchestra was increased. There was no resident company at the Metropolitan in the season 1897–98 The following season the Maurice Grau Opera Company was formed, its end in 1903 marked the end of a period (1891–1903) which was notable for a greater profusion of virtuoso singers than at any other time in the Metropolitan's history The Conried Metropolitan Opera Company was formed with Heinrich Conried as manager in 1903. In Nov, 1903, Enrico Caruso made his debut and by the following season had assumed his place as the dominant figure of the company Conried retired in 1908, and the following season saw the coming of Giulio Gatti-Casazza as director and Alfred Hertz, Gustav Mahler, and Arturo Toscanini as conductors, the name was now Metropolitan Opera Company for the first time Toscanini's departure in 1915 was an artistic loss from which the company never fully recovered In Feb, 1935, during Gatti-Casazza's final season, Kirsten Flagstad made her debut. Herbert Witherspoon was appointed in May, 1935, to succeed Gatti-Casazza but died only a few weeks later. Edward Johnson was appointed in his place In 1932 the Metropolitan Opera Association, Inc, had been formed to replace the Metropolitan Opera Company, and performances were now underwritten by public subscription In 1940 the association bought the house from the Metropolitan Opera and Real Estate Company, marking the final step in transference from private to public sponsorship. In June, 1949, Rudolf Bing was appointed to succeed Johnson at the end of the season 1949–50. See Irving Kolodin, *The Metropolitan Opera, 1883–1939* (1940), W. H. Seltsam, *Metropolitan Opera Annals* (1947).

Metsu or **Metzu, Gabriel** (both· gä'brēĕl mĕt'sü), 1630?–1667, Dutch genre painter, b Leiden. He was admitted to the painters' guild in Leiden in 1648 About 1654 he moved to Amsterdam, where he married and remained the rest of his life In his youth he painted some biblical subjects, such as *Woman Taken in Adultery* (Louvre), which shows Rembrandt's influence But he early discovered his true gift for genre, and he is best known for his quiet, charming little interiors As a rule he painted the home life of the well to do, but he was also successful in depicting humbler scenes His work is distinguished by fine draughtsmanship and exquisite handling of light and texture Among his well-known works are *Music Lesson* (Louvre), *Duet* (National Gall, London), *Mother with a Sick Child* (The Hague), *Music Lesson, Visit to the Nursery,* and *The Artist and His Wife* (Metropolitan Mus); and *The Intruder* (National Gall of Art, Washington, D C)

Metsys, Quentin: see MASSYS, QUENTIN

Metter, city (pop 1,823), co seat of Candler co., E Ga, near the Canoochee river and WNW of Savannah

Metternich, Clemens Wenzel Nepomuk Lothar, Fürst von (klā'mĕns vĕn'tsĕl nä'pōmōōk lō'tär fürst fŭn mĕ'turnĭkh), 1773–1859, Austrian statesman, b Coblenz, of a noble Rhenish family While a student in Strasbourg, he witnessed revolutionary excesses, to which he later credited his heightened conservatism and hatred of political unrest In 1795 he married Eleonora von Kaunitz, granddaughter of the Austrian statesman of the same name, who brought Metternich great estates and admission to the highest court circles He began his state career in 1797 as representative of the Westphalian college of counts at the Congress of Rastatt and became ambassador to Saxony (1801) and to Prussia (1803) The favorable impression he made upon the French envoy while in Berlin led Napoleon to request that he be sent as Austrian representative to France (1806) His influence greatly increased when he succeeded Stadion as minister of foreign affairs (1809) Until 1813 his was a policy of acquiescence in the supremacy of France, but he constantly sought to strengthen the diplomatic and military position of Austria, in order to make future resistance possible, and to disrupt the alliance between Napoleon and the tsar He was successful in securing the marriage of Archduchess MARIE LOUISE to Napoleon (1810) and a temporary alliance with France (1812) The middle course that he pursued between France and Russia developed into a policy of armed mediation The substitution of Austrian for French supremacy supplanted this policy in 1813 The Quadruple Alliance was formed, and war of the coalition against France ended with allied victory at LEIPZIG (1814) Although Metternich wished French domination checked, he had no desire to see the country crushed, for he did not want Prussia and Russia too greatly strengthened and the balance of power upset He hoped to make Austrian influence supreme in Italy and, while vigorously opposing German unity, sought Austrian ascendancy in the newly formed GERMAN CONFEDERATION The period 1815–48 has been called the Age of Metternich, for during this time he was not only master of Austria, but chief arbiter of Europe Metternich, with his skillful diplomacy and as leader of conservatism in Europe, was the guiding spirit of the international congresses at Vienna (1814–15, see VIENNA, CONGRESS OF), Aachen (1818), Carlsbad (1819, see CARLSBAD DECREES), Troppau (1820, see TROPPAU, CONGRESS OF), Laibach (1821, see LAIBACH, CONGRESS OF), and Verona (1822, see VERONA, CONGRESS OF) and was the chief statesman of the so-called HOLY ALLIANCE In 1818 he was created prince His brilliant assistant was Friedrich von GENTZ The Metternich system depended upon political and religious censorship, espionage, and the suppression of revolutionary and nationalist movements His name became anathema to liberals everywhere, and the Revolution of 1848 (which forced him to seek refuge in England) was almost wholly directed at his repressive system He returned to Austria in 1851 His memoirs were published posthumously (1880–84), as was his correspondence (1899) The authoritative work on Metternich is Heinrich, Ritter von Srbik, *Metternich, der Staatsmann und der Mensch* (2 vols, 1925) See biographies by Arthur Herman (1932), Algernon Cecil (1933), Helene du Coudray (1935), Frederick de Reichenberg (1938), and Raoul Auernheimer (1940), A J May, *The Age of Metternich* (1933)

Metuchen (mŭtū'chun), borough (pop 6,557), NE N J., NE of New Brunswick, settled before 1700, inc. 1900. Insulation products are made here. There are a few 18th-century buildings A veterans' home (1932) and a county tuberculosis hospital are near.

Metz, Christian: see AMANA SOCIETY.

Metz (Eng and Ger mĕts, Fr mĕs), city (pop. 65,472), capital of Moselle dept., NE France, on the Moselle river It is a cultural and commercial center of LORRAINE Of pre-Roman origin, Mets was an early episcopal see and became (6th cent.) the capital of AUSTRASIA. After the division of the Frankish empire, the bishops of Mets greatly increased their power, ruling a relatively vast area as a fief of the Holy Roman Empire. The town itself became (12th cent.) a free imperial city Henry II of France in 1552 annexed the three bishoprics of Lorraine (Mets, Toul, Verdun) to France after holding a sort of plebiscite Mets, under the command of François de Guise, resisted a long siege (1552–53) by Emperor Charles V The Peace of Westphalia (1648) confirmed the three bishoprics in French possession An important fortress and garrison town, it was besieged (1870) by the Germans in the FRANCO-PRUSSIAN WAR, after a two-month siege Marshal BAZAINE capitulated with 180,000 men During the German annexation (1871–1918) of E Lorraine, Metz, largely French-speaking, was a center of pro-French sentiment In the Second World War, Metz suffered greatly under the German occupation, 25,000 French-speaking citizens were expelled and 10,000 were deported. The German garrison resisted (Sept -Nov, 1944) the U S forces of Gen. George S Patton, Jr, but the city itself was scarcely damaged in the siege. Metz has preserved much of its medieval aspect. The celebrated Cathedral of St Étienne was built from the 13th to the 16th cent, the Place Sainte-Croix is a square surrounded by medieval houses (13th-15th cent.), there are several other churches and mansions from the Middle Ages Verlaine was born here

Metzu, Gabriel see METSU, GABRIEL.

Meudon (mûdō'), town (pop 20,106), Seine-et-Oise dept, N France, near Sèvres The astrophysics department of the Paris Observatory is located in a pavilion of a 17th-century château, which commands a magnificent view of Paris Rabelais was curate of Meudon.

Meulen, Adam Frans van der (ä'däm frāns' vän dĕr mû'lun), c 1632–1690, Flemish painter of battle scenes He was court painter to Louis XIV, whom he accompanied on his military campaigns in Flanders He was a member of the Académie royale de Peinture et de Sculpture and the recipient of many other honors His paintings are valued more for their historical interest than for their artistic merit They are best studied in the Louvre and at Versailles The Metropolitan Museum contains *A Combat of Cavalry* and *Encounter of Cavalry* He also painted landscape and genre and designed cartoons for the Gobelins

Meun, Jean de. see JEAN DE MEUN

Meunier, Constantin (kōstätĕ' mûnyā'), 1831–1905, Belgian sculptor and painter, son of a tax collector in a suburb of Brussels. After some youthful attempts at sculpture, he devoted himself, with notable success, to painting pictures of monastic life and of factory workers His *Tobacco Factory of Seville* (Brussels), product of a short visit to Spain, is a fine example At the age of 50 he returned to sculpture Such sincere and vigorous works as *The Puddler* and *The Hammerer* soon won him the highest recognition The remainder of his life was spent in producing the statues, bas-reliefs, and monuments, largely in bronze, for which he is famous Perhaps no modern sculptor has so successfully expressed the dignity of labor His masterpiece, the unfinished *Monument to Labor* (Brussels), is comprised of four stone reliefs, *Industry, The Mine, Harvest,* and *Harbor,* four bronze statues, *The Sower, The Smith, The Miner,* and *The Ancestor,* and a bronze group, *Maternity* From 1887 Meunier was professor in the academies first of Louvain and later of Brussels

Meurthe (mûrt), river, 106 mi long, E France, in Lorraine Rising in the Vosges, it flows NW past Saint-Dié, Lunéville, and Nancy to join the Moselle just N of Nancy Its very irregular level has necessitated an intricate system of controls

Meurthe-et-Moselle (mûrt"ā-mōzĕl'), department (2,039 sq mi, pop 528,805), NE France, in LORRAINE, bordering on Belgium Nancy is the departmental capital

Meuse (mûz), department (2,410 sq mi; pop 188,786), NE France, in LORRAINE, bordering on Belgium It is drained by the Meuse river and traversed by the hills of the ARGONNE Bar-le-Duc (the capital) and Verdun are the chief towns

Meuse (mûz, Fr mûz), Dutch and Flemish *Maas* (mäs), river, c 560 mi long, traversing NE France, S Belgium, and the Netherlands It runs N from the Langres Plateau past Verdun, Sedan, and Mézières, crosses into Belgium, and is joined by the Sambre at Namur From Namur it winds eastward skirting the Ardennes, passes Liége, and turns N into the Netherlands at Maastricht The Belgian section of the Meuse valley is an important industrial and mining region, especially in the districts surrounding NAMUR and LIÉGE After passing Venlo and Bergen in the Netherlands, the river swings westward Near 's Hertogenbosch (which it does not touch) it branches out one branch, arbitrarily called Maas, flows northwest to join the WAAL near Gorinchem; the joint Waal and Maas then form the MERWEDE. The other branch, called Bergsche Maas, flows into an inlet of the North Sea S of Dordrecht The Old Meuse (Dutch *Oude Maas*), which is a branch of the Waal, and the New Meuse (Dutch *Nieuwe Maas*), which is a continua-

tion of the LEK, both actually belong to the Rhine estuary. The Meuse is linked with the port of Antwerp by the ALBERT CANAL and with Rotterdam and other Dutch ports by the intricate system of Dutch waterways, it is thus one of the chief thoroughfares of Europe. A strategic line of defense, particularly in Belgium and France, the Meuse valley has been a battleground in many wars, and most of the cities along its course have been strongly fortified since the Middle Ages.

Mewar, India: see UDAIPUR

Mexia (mühā'ü, -hē'ü), city (pop 6,410), E central Texas, ENE of Waco, settled 1873 A long-prosperous cotton town, it experienced an oil boom after discovery of oil fields in 1920 It has plants processing cotton, textile mills, and other small industries Fort Parker State Park is near by

Mexicali (māhēkā'lē, mēksēkā'lē), city (pop. 18,775), capital of the northern district of Lower California, Mexico Across the border from Calexico, Calif , Mexicali is an important agricultural center in an extension of the Imperial Valley of California Cotton is the chief crop

Mexican art was already highly developed in the ancient civilizations flourishing before the conquest of Cortés Archaeological remains have been found in Mayan and Aztec settlements attesting to a very sophisticated technique Other cultures, such as those of the Toltec and Teotihuacán, also left their stamp on the country in the form of temples, sculpture, pottery, and wall paintings The nearly 100-inch statue of the goddess Coatlicue of Aztec workmanship is an example of the massive classic art that has influenced later artistic developments of Mexico The most unique expression of early Mexican artists are the feather paintings, in which innumerable small pieces of bird feathers in a wide range of colors are gummed against a background to produce a picture So highly developed was this craft that some of the feather paintings look, at a short distance, like meticulous oils The feather painters enjoyed immense social prestige among their people With the coming of the Spanish to Mexico, the natives were introduced to European art, especially painting A good many Spanish paintings were brought there, and the native artists, quick to learn and extremely dexterous, became during the 17th and 18th cent adept at religious oil painting and at modeling religious figures in wax The serenity and sensitivity of the early native art were added to the Spanish influence to give to Mexican painting a mellowness and richness of color not at that time yet achieved in Spain Fifty years or so before Murillo made his mark as a colorist, Mexican artists were already giving their works rich red and blue tones This type of work is sometimes referred to as Mexican baroque to distinguish it from the more rigid, less pliant European baroque Baltásar de Echave, the elder, is considered the first great Mexican artist, he founded the first native school in 1609 His *Agony in the Garden* (1582-1620) is an example of a Renaissance work with a Spanish character The 18th cent produced a large number of artists, outstanding among them were José Ibarra and Miguel Cabrera A period of academic art followed, producing no very distinctive works, this period of imitation was broken at the close of the 19th cent by the painter José María Velasco, whose perceptive landscapes, individual in their execution, again reaffirmed a national style José Guadalupe Posada was famous for his satirical prints Since the revolution of 1910 Mexico has been outstanding in its use of mural painting for the expression of social themes Diego Rivera, José Clemente Orozco, and David Alfaro Siqueiros are the chief representatives of this technique, they are noted also for their revival of fresco painting Widest known of the modern Mexican caricaturists is Miguel Covarrubias, of the abstract painters Rufino Tamayo has shown that in the new and experimental styles Mexican artists have much to contribute Influential as teacher and art critic as well as painter is Dr Atl, pseud of Gerardo Murillo Apart from painting, wood sculpture has also flourished in Mexico throughout its long centuries of civilization, folk arts, such as weaving of serapes, pottery making, and silverwork, have developed alongside the fine arts For Mexican architecture, see SPANISH COLONIAL ARCHITECTURE

Mexican hairless dog, small dog of Mexico, about the size of a fox terrier Its body is hairless, except for a fuzz on the top of the head, and sometimes there are a few hairs at the end of the tail It is of ancient and unknown origin Some say that the dog reached the Valley of Mexico with the Aztec In Mexico it was long valued partly because of the legendary healing powers ascribed to it In the United States it is recognized as a toy breed; it is an active well-proportioned little dog with an arched neck, long tail, and smooth skin (of a variety of solid colors and sometimes mottled). Similar breeds are known in China.

Mexican literature: see SPANISH AMERICAN LITERATURE.

Mexican War, 1846–48, fought by the United States and Mexico. While its immediate cause was the annexation of Texas (Dec., 1845), other factors disturbed peaceful relations between the two republics. In the United States there was agitation for the settlement of the long-standing claims of American citizens against Mexico, and many desired the acquisition of California, which was becoming restive under Mexican control with the influx of English-speaking people and upon which it was believed that France and Britain cast covetous eyes Despite the rupture of diplomatic relations between Mexico and the United States, after the admission of Texas into the Union, President James K Polk sent John SLIDELL to offer the assumption of American claims by his government in return for boundary adjustment and to purchase California and New Mexico, part of which was claimed by Texas When Mexico declined to negotiate, the United States prepared to enforce a settlement which could not be arrived at by diplomacy The war was most heartily supported by frank imperialists and by those who wished to see slaveholding territory extended The settlement of the Oregon boundary dispute (June, 1846), which took place shortly after the outbreak of hostilities, seemed to indicate British acquiescence, for it granted the United States a free hand Early in May, 1845, American troops under Gen Zachary TAYLOR were stationed at the Sabine river preliminary to an advance to the Rio Grande, the southern boundary claimed by Texas In July, Taylor advanced to Corpus Christi, and after the failure of Slidell's mission he occupied (March, 1846) Point Isabel at the mouth of the Rio Grande. To the Mexicans, who claimed the Nueces as the boundary, this was an act of aggression, and after some negotiations Gen Mariano Arista crossed the Rio Grande On May 3 the guns of Matamoros began to shell Fort Brown (then Fort Taylor), an advanced American position near the present Brownsville, Texas President Polk called these Mexican actions an invasion of American soil, and on May 12, 1846, Congress declared war Taylor, meanwhile, had rushed to defend Fort Brown, and before the formal declaration of war reached him he had defeated the Mexicans at PALO ALTO and RESACA DE LA PALMA The Mexicans retreated across the Rio Grande Taylor took Matamoros (May 18) and after a five-day battle (Sept , 1846) occupied Monterrey In June, Stephen W KEARNY left Fort Leavenworth for New Mexico with some 1,600 men including a force of Missouri volunteers under Alexander DONIPHAN Santa Fe was taken, a provisional government was set up, and Doniphan was placed in command of the area Kearny pushed on to California to find that this province with the aid of Commodore John D SLOAT (later relieved by Robert F STOCKTON) and John C. FRÉMONT had already exchanged Mexican for American rule After reinforcements reached Santa Fe, Doniphan was enabled to invade N Mexico, taking El Paso and Chihuahua before he joined forces with Gen John E WOOL (who had advanced SW from San Antonio) and with Taylor at Saltillo SANTA ANNA, who had been in exile in Cuba and had been allowed passage through the U S blockade at Veracruz, had now assumed the presidency and gathered a large force to stop Taylor's advance The American commander was weakened by the transfer of many of his best troops to the expedition Gen Winfield SCOTT was to take to Veracruz Taylor was in an extremely vulnerable position when Santa Anna struck at BUENA VISTA (Feb , 1847) The fighting was hard and was a drawn battle, but the Mexicans withdrew in confusion The final campaign of the war began with the landing of U S forces at Veracruz in March, 1847 Scott was supported by a naval task force under David CONNER (who was relieved by Matthew C PERRY), they landed some 12,000 men and after a three-day bombardment took the city Then began Scott's drive on Mexico city Santa Anna was defeated at the mountain stronghold of CERRO GORDO After hard fighting Mexican forces were routed at CONTRERAS and CHURUBUSCO The Mexicans accepted (Aug , 1847) an armistice, but after a month of futile peace negotiations fighting was resumed The Mexican capital was heavily defended by strong points at Casa Mata and Molino del Rey and the great fortress of CHAPULTEPEC William J Worth carried the strong points The supposedly impregnable Chapultepec was stormed by savage American assault led by Gen John A QUITMAN, the heroic defense offered by the Mexican boy heroes availed nothing On Sept. 14, 1847, American troops entered Mexico city, where they remained until peace was restored The United States had won an easy victory partly because Mexico was torn by civil strife and had no united opposition to face the invader The Mexican presidency had changed hands 12 times in the war, and some of the states had refused to cooperate with the central government Peace negotiations were conducted, on the part of the United States, by N P. TRIST, a secret envoy whose relations with General Scott were at first strained, the final negotiations took place after his authority had expired The treaty which he signed was, however, ratified by the U S. Senate (March 10, 1848). Mexico, by the Treaty of GUADALUPE HIDALGO, ceded to the United States two fifths of all Mexican territory and received an indemnity of $15,000,000 and the assumption of American claims by the U.S government The boundary between the two countries, as outlined, was to follow the Rio Grande from its mouth to the New Mexican line, then W to the Gila river, and with that stream to the Colorado, and then, following the boundary between Upper California and Lower California, to the Pacific See H I Priestly, *The Mexican Nation* (1923), G L Rives, *The United States and Mexico, 1821–1848* (1913), J H. Smith, *The War with Mexico* (1919), Bernard De Voto, *The Year of Decision* (1943), A H Bill, *Rehearsal for Conflict* (1947), R S Henry, *The Story of the Mexican War* (1950).

Mexico (mĕk'sĭkō), Span *México* or *Méjico* (both mĕ'hēkō), republic (760,373 sq mi , 1946 estimated pop 22,776,041), North America, between United States on the north and Central America on the south The capital is MEXICO city. It is the smallest of the three great nations of North America and the largest of the nations of Middle America It stretches south from the river border (the Rio Grande) with Texas and the land borders with New Mexico, Arizona, and California to the borders of Guatemala and British Honduras The Pacific Ocean is on the west and also, as the country tapers to the Isthmus of Tehuantepec, on the southwest and west The Mexican peninsula of Yucatan in the east juts out and helps to divide the Atlantic waters into the Gulf of Mexico and the Caribbean Administratively the country is divided into 28 states and three territories, apart from the capital, which is set aside in the Federal District The states are AGUASCALIENTES, CAMPECHE, CHIAPAS, CHIHUAHUA, COAHUILA, COLIMA, DURANGO, GUANAJUATO, GUERRERO, HIDALGO, JALISCO, MEXICO, MICHOACÁN, MORELOS, NAYARIT, NUEVO LEÓN, OAXACA, PUEBLA, QUERÉTARO, SAN LUIS POTOSÍ, SINALOA, SONORA, TABASCO, TAMAULIPAS, TLAXCALA, VERACRUZ, YUCATAN, and ZACATECAS The territories are the two sections of LOWER CALIFORNIA and QUINTANA ROO Much of Mexico is mountainous The cordilleras of the SIERRA MADRE run southward through the northern and central parts of the country, converging until they reach the transverse east-west volcanic belt, which has some of the noblest peaks of Mexico, including ORIZABA, POPOCATEPETL, and IXTACIHUATL Below the volcanic belt are jumbled masses of mountains and the Sierra Madre del Sur, which have helped to make S Mexico one of the most inaccessible, picturesque, and undeveloped sections The mountains rise above coastal plains in both east and west In the west the plain is narrow, always threatened by the mountains, which ultimately reach the sea in the south There are several good natural harbors, best known among them ACAPULCO and MAZATLÁN The thin peninsula of Lower California is a separate land between the Gulf of California and the Pacific proper In the east the coastal plain varies in width Like the coastal plain in the west, it is excessively hot, but it has rich oil-bearing lands Oil has made the fortune of the northern port, TAMPICO, and has contributed much to VERACRUZ, which has the added distinction of being the old, vital port of Mexico in Spanish times It is still the chief eastern port, supplying Mexico city and the other cities of the central plateau The central plateau, between branches of the Sierra Madre is the heart of Mexico The plateau is not actually a tableland It is broken by mountain ranges and gouged into barrancas hundreds of feet deep Within it are drainage basins that have no outlet to the sea One of them, the LAGUNA DISTRICT, is one of the most productive areas of Mexico. Storms blowing in from the sea are blocked by the mountains The central plateau in the north is desert and semidesert except for the irrigated areas It is used principally for stock raising In the south, the region called ANAHUAC, there are some semiarid sections Aridity is the curse of Mexican agriculture, greatly reducing the area of arable land, which is not naturally extensive because of the mountains and the jungle sections The shortage of food crops is a most serious problem, which even the extensive irrigation schemes will not solve for some time There are, however, many acres yet to be brought under cultivation, and the extension of modern agricultural methods will greatly increase production As yet many of the village farmers generally use the production methods of pre-Columbian days The central plateau has the greatest concentration of population and most of the large cities—MEXICO, GUADALAJARA, MONTERREY, PUEBLA, and the rest Except for the oil-based industries of the coastal cities and the many home crafts throughout Mexico (making of pottery and baskets and the weaving of wool and cotton), the industries of Mexico are concentrated in the plateau cities, notably in Mexico city and Monterrey Textiles and clothing, food and tobacco processing, making of construction materials, and manufacture of leather goods are all of importance. Paper making and publishing are of increasing importance The iron and steel mills at Monterrey are notable, and breweries at Monterrey and Mexico

city are large concerns Many of the mountain towns at the mines (which are overwhelmingly foreign owned) have industries connected with the extracting of minerals In the Yucatan peninsula rainfall is not heavy, but in Tabasco there are steaming tropic jungles with more than 100 in of rain a year The climate varies with the altitude, so that although the country lies mostly in the tropical zone, there are regions of hot, temperate, and cool lands—*tierra caliente, tierra templada,* and *tierra fría.* Mexico produces crops from all these zones, tropical fruits, rubber, chicle, hardwoods, sugar cane, cacao, corn, wheat and other grains, tobacco, and cotton Corn, squash, and beans are the basic subsistence crops today as they were in the times before the coming of the white man The wealth of the mountains in minerals has, however, since the Spanish Conquest been much exploited in silver, gold, lead, tin, antimony, zinc, iron, and mercury Ancient Indian civilizations grew and flourished in Mexico and left great stone remains that have been studied by the archaeologists—the MAYA, the TOLTEC, the AZTEC, the MIXTEC, and the ZAPOTEC The first to visit the coast were Francisco FERNÁNDEZ DE CÓRDOBA in 1517 and Juan de GRIJALVA in 1518 The conquest was undertaken in 1519 by Hernán CORTÉS, who with his able lieutenants such as Pedro de ALVARADO managed by intrigue and hard fighting to take the Aztec capital, TENOCHTITLÁN, bring down the empire of the Aztec, and ward off Spanish rivals such as Pánfilo de NARVÁEZ In 1528 the first AUDIENCIA was set up under Nuño de Guzmán, who then spread Spanish civilization N into NUEVA GALICIA The land was made into the viceroyalty of New Spain under Antonio de MENDOZA in 1535, and the process of Christianizing and Europeanizing the Indians went forward under such men as Juan de ZUMÁRRAGA Nevertheless, the Spanish remained a small number in the vast Indian population, and pacifying and establishing control over the Indians continued an arduous task through the centuries, with serious outbreaks of trouble from the MIXTÓN WAR to the Pueblo revolt The population developed slowly into three groups—the whites, the mestizos, and the Indians They did not coalesce easily, despite the efforts of many able viceroys such as LUIS de VELASCO (both father and son) and the younger conde de REVILLA GIGEDO The efforts of the Church did result fairly early in at least nominal Christianization of the Indians, and the population of Mexico today is overwhelmingly Roman Catholic Yet the Church did not succeed in mending the tissue of society, and the lands owned by the Church and its huge political power tended to add to the problems of a country burdened with the problems of large landholdings and a depressed laboring class on the lands, in the mines, and in the small factories (chiefly the textile mills, called *obrajes*). The increase in the mestizo class, without a place or privileges, and the antagonism between the Spanish-born (*gachupines*) and native-born (*criollos*) added to the stress The system of mercantilism drained the mineral wealth to Spain, and manufacturing establishments were forbidden in New Spain There was much corruption and some apathy in the administration of lesser officials. All these evils grew over the centuries while the conquest and consolidation of new territories went on Most of present Mexico and of the former Spanish holdings in the present United States were occupied early The regions known as Nueva Galicia and Nuevo León were explored in the 16th cent , as was California, but it was not until the middle and the late 18th cent that Nueva Santander (NE Mexico) and Texas were occupied in any large degree, and even then Spanish control was not strong Many of the administrative evils were wiped out by the reforms of José de GALVEZ, who introduced the system of intendancies, but discontent with Spanish rule continued to grow among the creoles Revolutionary ideas were spread from France, and the intellectual and business classes were ripe for revolt when Napoleon's subjugation of Spain offered an opportunity The priest HIDALGO Y COSTILLA opened the rebellion by issuing the *grito de Dolores* [cry of Dolores] on Sept 16, 1811 Armies sprang up under the command of such leaders as Ignacio ALLENDE, José María MORELOS Y PAVÓN, Vicente GUERRERO, and Mariano MATAMOROS. Hidalgo was at first successful but lost (1811) the decisive battle of Calderón Bridge and was captured and executed Morelos and Matamoros were defeated, and Guerrero was driven into the wilds The revolution thus almost died away, but the movement did continue somewhat. It took a new turn when the royalist general Agustín de ITURBIDE negotiated with Guerrero and arrived at the Plan of IGUALA in 1821. This set up an empire, of which Iturbide was emperor, but the scheme was short-lived In 1823 the republican leaders SANTA ANNA and GUADALUPE VICTORIA drove out Iturbide. The republic was set up with GUADALUPE VICTORIA as president. Personalism took hold, each political and military leader seeking his own ends Governments rose and fell. Nothing was done to solve the land problems and the other social evils. Guerrero and Nicolás BRAVO were rivals in Guadalupe Victoria's administration. In 1828 Guerrero, aided by Santa Anna, gained the presidency, but in 1830 he was overthrown Santa Anna's shadow hangs over the next decades of Mexican history. He and Anastasio BUSTAMANTE pursued their separate courses of personal advancement, but it was Santa Anna who dominated Mexico The Texas Revolution threw him from power, but he was able to overcome the disgrace and was again president (1841–44) Waste and corruption and inefficiency were rampant All the while the evils of the social order went unchallenged The war with Texas started a train of events that brought on the war with the United States—the MEXICAN WAR The results were disastrous, and Mexico lost a large block of territory to the United States (later augmented by the GADSDEN PURCHASE). Santa Anna returned to power as "perpetual dictator." The Revolution of Ayutla, which overthrew him in 1855, was the most significant event in Mexican history after the achievement of independence. Men who favored and demanded a reform program came to the fore —Juan ÁLVAREZ, Ignacio COMONFORT, Miguel and Sebastián LERDO DE TEJADA, and, most important of all, Benito JUÁREZ The constitution of 1857 instituted liberal reforms, including secularization of church property, attack on the privileges of the army, and land reform The opposition to the sweeping reforms grew more and more bitter, and when Comonfort resigned, Juárez became president and carried on against the conservatives the vigorous campaigns of the War of the Reform (1858–61) The liberals succeeded, and the conservatives sought foreign aid They found it in Napoleon III Intervention followed and led to the brief interlude of empire in Mexico (1864–67) As long as Emperor MAXIMILIAN was supported by French arms it was hard for Juárez even to maintain resistance, but with the loss of French aid, the frail empire collapsed completely Maximilian was shot, and Juárez again ruled Mexico He consolidated his power, but political differences prevented the accomplishment of the reform program Porfirio DÍAZ, who had led a revolt against Juárez in 1871 and continued it against Sebastián Lerdo de Tejada, once more sprang into revolt when he lost the presidential election of 1876 This time he was successful, and he established himself firmly in power until 1911 The period of his rule was one of great material development, with the spread of railroads, the increase of foreign investments, and the steady growth of national wealth But the social maladjustment was made worse with the favoring of great landowners, the Indians lost more of their lands and sank deeper into PEONAGE The introduction of foreign capital, while it made possible this material progress, also drained Mexican wealth away Education stagnated Self-government was merely formal After a pretense of reestablishing democratic forms, Díaz was reelected in 1910, and an idealistic revolutionary leader, Francisco I MADERO, raised the standard against him The revolution was successful, and Mexico was thrown into a ferment of revolt Madero proved incapable of accomplishing much in reform, because he was not strong enough to establish order He fell, and Victoriano HUERTA established a reactionary rule Revolutions promptly sprang up under the leadership of Venustiano CARRANZA, Francisco VILLA, and Emiliano ZAPATA Huerta was involved in troubles with President Wilson of the United States After a long struggle to maintain himself and after the landing of U S. troops at Veracruz, Huerta resigned (1914) Carranza had adopted a strong revolutionary program, including the nationalization of mineral-yielding lands and the restoration of the communal lands to the Indians He also favored a vast educational plan The liberals fell out Carranza's generals, especially Álvaro OBREGÓN, finally succeeded in defeating Villa and Zapata, but not until Villa's raids had brought on the U S expedition under John J Pershing and had greatly embittered the relations between United States and Mexico The constitution of 1917 outlined agrarian and labor reforms, the educational and religious provisions brought on trouble with the Church, the clauses concerning minerals brought on conflict with foreign capital There was little opportunity to put these reforms into immediate effect as the turbulent revolution went on Obregón led a successful revolt against Carranza, and after the short term of Adolfo de la Huerta as provisional president, Obregón was president (1920–24) There was a concerted effort to systematize the revolution. Uprisings were suppressed, the most important was that of De la Huerta in 1924. Plutarco E. CALLES succeeded to the presidency and continued the establishment of order. Calles became the "strong man" of Mexico His administration (1924–28) saw the advance of some reforms but generally marked a backswing toward conservatism. A working agreement was reached with the United States. Troubles with the Church reached a new extreme in bitterness. The National Revolutionary party was forged and became the one political engine of Mexico; it remained so after Calles's administration, and Calles continued the dominant figure in its organization Obregón, elected to succeed in the presidency, was assassinated. PORTES GIL became president. Calles retired to private life but returned to help put down a revolution in 1929 He was generally conceded to be the power behind the administration of Portes Gil, in which growing conservatism was apparent. ORTIZ RUBIO succeeded Portes Gil as president (1930–32) and was in turn succeeded by Abelardo L. RODRÍGUEZ (1932–34) The provisional presidency ended with the inauguration of Lazaro CÁRDENAS in 1934. Vigorous and idealistic, Cárdenas forced Calles into exile and set about long-needed reforms to improve the lot of the suppressed classes and to make the Indian an organic part of the state. He redistributed communal lands under the EJIDO system and gave power to the labor unions, which had grown large The railroads were nationalized, and foreign holdings (particularly oil and land) were expropriated. Great stress was laid on the educational program, and much progress was made in reducing illiteracy among the Indians. State medical facilities were extended. Communications were improved Reclamation, hydroelectric, and industrial projects were forwarded. A settlement with the Church was reached by the adoption of a more lenient government attitude These reforms were continued under Manuel ÁVILA CAMACHO, but with emphasis on education and industrial development and a turn toward a middle-of-the-road policy Relations with the United States were close Mexico declared war on the Axis Powers in May, 1942 In 1945 the Inter-American Conference on the Problems of War and Peace met in Mexico city and drew up the Act of Chapultepec (see PAN-AMERICANISM) The general tone of this administration was continued after Miguel ALEMÁN became president Irrigation projects were advanced and hydroelectric plants were constructed to supply power for the new industries that were springing up under encouragement Reclamation and industry were looked upon as the possible cure for the low living standard There were setbacks, notably the hoof-and-mouth disease, which in 1947 and 1948 halted the exportation of Mexican cattle The country still is primarily agricultural, but the increase in industry has been enough to make Mexico self-sufficient in textiles and leather goods and promises to bring self-sufficiency and an export surplus in many fields The building of the INTER-AMERICAN HIGHWAY greatly increased the number of U S tourists and thus improved the value of one of Mexico's greatest assets—the physical beauty of the land Roads, rails, and air lines now make most of the regions accessible The federal government has gradually assumed greater power as the reform program went forward This process is continuing and the government in 1950 played a large part in all aspects of national life, as political stability, social readjustment, and economic balance seemed permanent A number of the historical sources have been translated into English, particularly those of the Spanish Conquest Notable are the letters of Cortés and the account by Bernal DÍAZ DEL CASTILLO The most familiar work on Mexican history in English is W H Prescott's *Conquest of Mexico,* still much read See H I Priestley, *The Mexican Nation* (1923), D H Lawrence, *Mornings in Mexico* (1927), J Fred Rippy, José Vasconcelos, and Guy Stevens, *Mexico* (1928), J Fred Rippy, *The United States and Mexico* (1931), Frank Tannenbaum, *Peace by Revolution* (1933) and *Mexico the Struggle for Peace and Bread* (1950), Ramón Beteta, *The Mexican Revolution* (1937), H B Parkes, *A History of Mexico* (1938), L B Simpson, *Many Mexicos* (1941), George Hoyningen-Huene, *Mexican Heritage* (pictures, with a text by Alfonso Reyes, 1946)

Mexico, Span. *México* or *Méjico,* state (8,268 sq mi., 1946 estimated pop 1,317,303), central Mexico The capital is TOLUCA The northern section of the state forms most of the flat Valley of Mexico, part of the ANÁHUAC plateau, temperate in climate, with broad, shallow lakes, it is broken by low mountains The eastern section has mountains and deep valleys, and the southern and western parts are dominated by the rugged terrain of the volcanic belt extending across the center of the country On the southeastern border are the volcanoes, POPOCATEPETL and IXTACIHUATL. Except on the south, the state encircles the Federal District, with the nation's capital, Mexico city. A north-south range, with several peaks over 14,000 ft. high, separates Mexico city from Toluca. The principal river is the LERMA. Mining, agriculture, stock raising, and dairy farming are the chief activities From the mines come gold (El Oro is a leading producer), silver, lead, copper, antimony, and iron Cereals, maguey, coffee, fruits, sugar cane, and tobacco are important crops. Manufacturing includes the processing of the various agricultural products and making of textiles, baskets, glassware, pottery, bricks, liquor, and wines.

Mexico, Span. *México* or *Méjico,* city (pop. 1,448,422, alt. 7,800 ft.), central Mexico, capital and largest city of Mexico, in the southwestern part of the Valley of Mexico, near the southern end of the

plateau of ANÁHUAC. The horizons of the city are nearly blocked by the mountain barriers—high, barren slopes to the north and towering ranges elsewhere The peaks of POPOCATEPETL and IXTACIHUATL are not far off The climate is cool, dry, and healthful, and the annual rainfall in the rainy season (late May to early Sept) is 20 to 25 in Much of the valley is a lake basin with no outlet, and in the rainy seasons mountain floods once swelled the lakes From the time when the Aztec capital of Tenochtitlán stood on an island in Lake TEXCOCO—now the heart of MEXICO city—measures have been taken to protect the city and provide for expansion by draining TEXCOCO and the other lakes, Chalco and XOCHIMILCO. The Spanish viceroys, notably Louis de Velasco, the younger, in the 17th cent, initiated important works In 1900 a central canal with a tunnel was completed and reached to the headwaters of the PÁNUCO river. The Caracol [Span ,=snail], a 12-mile spiral canal fed by longitudinal canals begun in 1936, acts as an evaporating basin, from which valuable minerals (salt, caustic soda, sodium bicarbonate, potash, sodium sulphate, and borax) are taken Drainage and water use by artesian wells have lowered the water table so that the surface crust, formerly supported by subsoil water, can no longer sustain the heavier buildings of the city, which are sinking some 4 to 12 in. a year Some of the finest buildings in MEXICO have been damaged, among them the old cathedral (begun in 1553 on the site of a great Aztec temple) and the Palace of Fine Arts (which has sunk 10 ft) Modern office buildings on the Avenida Juárez opposite Alameda Park and west to the Monument of the Revolution have been shored up with pilings Many monuments of Spanish colonial architecture remain The cathedral and the National Palace are on the great central square, the Plaza de la Constitución (also called the Plaza Mayor and the Zócalo), around which the streets of the old town crisscross in rough gridiron pattern and from which great avenues span out to the far sections of the city Colonial churches and public buildings are also to be seen on the other streets, notably on the Paseo de la Reforma, which cuts across the city from the end of the Avenida Juárez to CHAPULTEPEC Public buildings of the 19th cent have a ponderous grandeur that shows French influence, and there are starkly modern business houses Some of the old buildings as well as the newer (e g , the Palace of Fine Arts, the National Palace, the National Univ , and the National Preparatory School) have murals by the contemporary artists Diego Rivera, José Clemente Orozco, and David Alfaro Siqueiros The noisy movement in the traffic-crowded streets is entirely modern, but the city has been the metropolis of MEXICO since New Spain was first created and the key point for colony and republic The Univ of MEXICO was founded in the 16th cent It was in 1847 taken by Winfield Scott's American army, which had marched inland from Veracruz in the MEXICAN WAR The French army captured it in 1863, and Emperor MAXIMILIAN, crowned in MEXICO city in 1864, did much to beautify the city before it was recaptured by Benito JUÁREZ and his MEXICANS In the years of revolution after 1910 it was a magnet drawing the divergent insurrectionary forces Perhaps the most spectacular incidents were the occupations (1914–15) by FRANCISCO VILLA and Emiliano ZAPATA The huge city today is the commercial, industrial, financial, political, and cultural center of the nation Railroads, highways (including the INTER-AMERICAN HIGHWAY), and airways converge here Since 1935 industry has been much expanded and modernized Among the important manufactures are textiles, tobacco products, glassware, cement and bricks, petroleum by-products, leather goods, clothing, metalwork, soap, alcohol, and matches Population recently has increased rapidly in a city which had already spread out in many middle-class and wealthy residential sections called *colonias*. Beyond them lie the cities of the Federal District, of which AZCAPOTZALCO (pop 31,486) and GUSTAVO A MADERO (pop 25,929) are the largest There are many suburbs of MEXICO city, COYOACÁN (pop. 23,724) is the oldest, with a palace built by Cortés There are noted centers (some included in later towns)—GUADALUPE HIDALGO, XOCHIMILCO, TLALPÁN (pop. 10,436), and Tacubaya.

Mexico. **1** Town (pop 4,431), W Maine, on the Androscoggin opposite Rumford, inc. 1818 **2** City (pop 9,053), co seat of Audrain co , central Mo , NE of Columbia, in a farm area, laid out 1836. Saddle horses are bred here, and the city has fire-brick, shoe, and food-processing industries and railroad shops **3** Village (pop 1,348), N N Y , near Lake Ontario E of Oswego, in a rich farming area; inc 1851. Diabetic foods are made here.

Mexico, Gulf of, arm of the Atlantic Ocean From east to west it is over 1,000 mi. and from north to south c.800 mi It is bordered by Florida, Alabama, Mississippi, Louisiana, Texas, and the east coast of Mexico from the Rio Grande to the Yucatan peninsula. At the entrance is the island of Cuba. On the north side of Cuba the Gulf is connected with the Atlantic by the Straits of Florida, and on the south side with the Caribbean Sea by Yucatan Channel The Bay of Campeche is its largest arm The area of the Gulf is c 700,000 sq mi Its deepest part (12,714 ft), known as the Sigsbee Deep, lies off the Mexican coast The GULF STREAM leaves the Gulf through the Straits of Florida. The shore line is generally low, sandy, and marshy, but there are ports at Tampa and Pensacola, Fla , Mobile, Ala , Galveston and Corpus Christi, Texas, Tampico and Veracruz, Mexico, and Havana, Cuba Chief of the many rivers entering the Gulf are the Mississippi, Sabine, Brazos, Colorado (of Texas), and Río Grande Oil deposits in the Gulf have long been known, and new fields were discovered in the Gulf 8 mi from the Texas and Louisiana coasts in 1948

Meyer, Adolf (ä'dôlf mī'ur), 1866–1950, American psychiatrist, b Switzerland, M D Zurich, 1892 Coming to the United States in 1892, he was professor of psychiatry at Cornell Univ (1904–9) and at Johns Hopkins (1910–41), where he was also director of the Henry Phipps Psychiatric Clinic He was active in the mental hygiene movement from its inception (1908) and suggested the term "mental hygiene" His system, called psychobiology, demanded that each patient's problem be considered in the light of his total personality See his selected papers, *Commonsense Psychiatry* (ed with biographical narrative by Alfred Lief, 1948)

Meyer, Conrad Ferdinand (kôn'rät fĕr'dēnänt mī'ur), 1825–98, Swiss poet and novelist He was 39 when his first volume of verse appeared and 48 when he produced his first *Novelle*, *The Amulet* His other prose fiction, in which field he is a master, includes the *Novellen*, *Der Heilige* (1880, Eng tr , *Thomas à Becket the Saint*, 1885) and *Die Hochzeit des Mönchs* (1884, Eng tr , *The Monk's Wedding*, 1887), and his only novel, *Jürg Jenatsch* (1876) His stories, historical in subject, are not mere costume pieces but studies of human problems, largely ethical His verse is polished, but warm and powerful See study by Arthur Burkhard (1942)

Meyer, Eduard (ä'dōōart mī'ur), 1855–1930, German historian He taught at the universities of Leipzig, Breslau, Halle, and Berlin An authority on ancient history, he made valuable use of numismatics, comparative philology, anthropology, and folklore His chief work is *Geschichte des Altertums* (5 vols , 1884–1902)

Meyer, George von Lengerke (fŭn lĕng'urkē mī'ur), 1858–1918, American diplomat and cabinet officer, b Boston, grad Harvard, 1879 He was a merchant and banker in Boston, held several local offices, and became a member of the Republican National Committee He was (1900–1905) ambassador to Italy, then (1905–7) ambassador to Russia On his return to the United States, he served as Postmaster General (1907–9) in President Theodore Roosevelt's cabinet and Secretary of the Navy (1909 13) under President Taft See biography by M A De Wolfe Howe (1919)

Meyer, Gustav see MEYRINK, GUSTAV

Meyer, Johann Georg (yō'hän gā'ôrk mī'ur), 1813–80, German genre painter, called Meyer von Bremen He worked principally in Düsseldorf and Berlin and excelled in sympathetic studies of peasant life and children Characteristic is his *Letter* (Metropolitan Mus) Examples of his work are in many American collections and in the New York Public Library

Meyer, Lothar (lōtär' mī'ur), 1830–95, German chemist He taught at Breslau, Karlsruhe, and Tübingen (from 1876) and is known especially for his work in the development of the PERIODIC LAW, for which, with Mendelejeff, he received the Davy medal in 1882 He evolved the atomic volume curve (1869), which represented graphically the relation between the atomic weights and the atomic volumes of the elements

Meyerbeer, Giacomo (jäkō'mō mī'yurbār), 1791–1864, German operatic composer, of Jewish ancestry, whose real name was Jakob Liebmann Beer, pupil in composition of Abbé Vogler and in piano of Clementi He traveled in Italy and experimented in various styles of composition, but his real success came only with his spectacular French grand operas—*Robert le Diable* (1831) and his masterpiece, *Les Huguenots* (1836) In these and two other grand operas, *Le Prophète* (Paris, 1849) and *L'Africaine* (produced posthumously, 1865), Scribe was his librettist Two *opéras comiques* are noteworthy, *L'Étoile du nord* (1854) and *Dinorah* (1859) He calculated the taste of his public with tremendous success and was much imitated, notably by Wagner in *Rienzi* Today much of his music seems to many vulgar and repetitious See W. J Crosten, *The French Grand Opera* (1948)

Meyerhof, Otto (ō'tō mī'urhōf), 1884–, German physiologist, M D. Heidelberg, 1909 He was professor at the Univ. of Kiel (1912–24) and at the Univ of Berlin and director of the Kaiser Wilhelm Institute of Medical Research at Heidelberg (1929–38), in 1940 he became professor of biochemistry at the Univ of Pennsylvania. He studied cellular oxidation and discovered the transformation of lactic acid in muscles For this he shared with A V. HILL the 1922 Nobel Prize in Physiology and Medicine His works include *The Chemical Dynamics of Life Phaenomena* (1924).

Meyer-Lübke, Wilhelm (vĭl'hĕlm mī'ur-lüp'kŭ), 1861–1936, Swiss philologist Educated at the universities of Zurich and Berlin, he taught at the universities of Zurich and Vienna, and Bonn He was the author of many works on Romance languages, chief among them being an etymological dictionary (in 13 parts, 1911–20, rev ed , in 20 parts, 1930–35)

Meyersdale, borough (pop 3,250), SW Pa , SE of Somerset near the Md border, laid out 1844, inc 1871 Maple-sap products and coal mining are its industries

Meyer von Bremen see MEYER, JOHANN GEORG

Meynell, Alice (Thompson) (mē'nul), 1847–1922, English poet and essayist, sister of Elizabeth, Lady Butler She was educated by her father and spent most of her youth in Italy Converted to Roman Catholicism in 1872, she wrote much on religious subjects In 1877 she married Wilfrid Meynell (1852–1948), the founder and editor of *Merry England*, a Catholic paper which published the early works of W H Hudson and Hilaire Belloc and to which Mrs Meynell was a frequent contributor The Meynells befriended and encouraged Francis Thompson, whose work also appeared in *Merry England* Mrs Meynell's poetry is in *Preludes* (1875), *Poems* (1893), *Later Poems* (1901), and a collected edition (1923) Among her essays are *The Rhythm of Life* (1893), *The Color of Life* (1896), and *The Second Person Singular* (1921) See biography by her daughter Viola Meynell (1929)

Meyrink, Gustav (gōōs'täf mī'ringk), 1868–1932, German author, whose real name was Gustav Meyer, b Vienna After a brief business career he joined the staff of *Simplicissimus* in 1902 and became famous for his sketches and parodies and for his comedies He translated many of Dickens's works The novels *The Golem* (1916, Eng tr , 1928) and *Walpurgisnacht* [Walpurgis night] (1917) brought him considerable fame His work is a mélange of irony, mysticism, the grotesque and the gruesome, the comic and the bitterly polemic.

Mezahab (mē'zähăb) [Heb ,=water of gold], grandfather of Mehetabel Gen 36 39, 1 Chron 1 50

Mezen (myĕ'zĭnyu), river, 565 mi long, N European RSFSR It rises in the Timan hills and flows generally NW into the Mezen Bay of the White Sea Its lower course is navigable from May to November Near its mouth is the city of Mezen (pop 2,952), a river port exporting lumber

Mézenc, Mont see VIVARAIS

Mézières (māzyĕr'), town (pop 7,898), capital of Ardennes dept , NE France, on the Meuse opposite CHARLEVILLE, which is its twin city An old fortified town, it was successfully defended by Bayard against Emperor Charles V (1521) Its capture (1918) by the Allies marked the last major battle of the First World War

Mezokovesd, Hung *Mezőkövesd* (mĕ'zûkû'vĕsht), town (pop 20,838), NE Hungary, 22 mi SSW of Miskolc It is noted for its traditional costumes and for the fine embroidery which is exported

mezzo-relievo see RELIEF

mezzotint (mĕt'sutĭnt, mĕd'zū–, mĕ'zu–) [Ital ,= half-tint], method of copper or steel engraving It is supposed to have been invented by Ludwig von Siegen c 1640, but it was used most in England in the late 18th and early 19th cent The process involves uniform burring with a curved, saw-toothed tool by cradling it back and forth until the surface of the plate presents an all-over, even grain This yields a soft effect in the print The picture is developed in chiaroscuro with a scraper and a burnisher, every degree of light and shade from black to white being attainable No line drawing is employed, the result being velvety and soft without the sharp lines of an etching Mezzotint is well suited for the reproduction of a certain type of painting and was especially used for reproductions of portraits by Sir Joshua Reynolds and later for landscapes by John Constable and J M W Turner One of the chief English mezzotint engravers was John Raphael Smith

Mfumbiro (mnfōōmbĭ'rō, mnfōōm'bĕrō), volcanic range, on the Belgian Congo–Uganda border There are active cones Mt Karisimbi (kärusĭm'bē) is the highest peak (c 14,780 ft)

Mg, chemical symbol of the element MAGNESIUM.

Miaja, José (hōsä' myä'ha), 1878–, Spanish general. He commanded the Loyalists' defense of MADRID from the beginning of the Spanish civil war (1936) until March, 1939, when the situation had become hopeless He went in exile to MEXICO

Miami (mī'ămē) **1** Town (pop 4,722), E ARIZ , in foothills of the Pinal Mts E of Phoenix, settled 1909. The town more or less superseded GLOBE as a copper-smelting center **2** City (pop 172,172), co seat of Dade co , SE Fla , on Biscayne Bay at the mouth of the Miami river It is one of the most popular resorts and tourist centers of the E United States and has numerous recreational activities—fishing, bathing, horse racing, and the like—and industries dependent on them It is a notable transportation center and a port of entry A number of large air bases (private and governmental) are situated here and air transport with Latin America is important The region of Greater Miami includes Miami, MIAMI BEACH, CORAL GABLES, and HIALEAH. William Brickell and Julia S. Tuttle set-

tled here in the 1870s near the site of Fort Dallas, built during the Seminole War In 1895 Henry M Flagler became interested in the area, made it a railroad terminus in 1896 (when it was incorporated), dredged the Miami harbor, and began the development of the city as a recreation center It received its greatest impetus during the Florida land boom of the mid-1920s Barry College for Women is here At Musa Isle are a Seminole Indian village and an alligator farm Occasional hurricanes have damaged the city **3** City (pop 8,345), co seat of Ottawa co , extreme NE Okla , in an area producing lead and zinc, livestock, and dairy and farm products Truck tires are manufactured A state junior college is here

Miami, Fort. see FORT WAYNE, Ind , SAINT JOSEPH, Mich , MAUMEE, Ohio

Miami, Great and Little, rivers see GREAT MIAMI.

Miami, University of, at Coral Gables, Fla , nonsectarian, coeducational, chartered 1925, opened 1926 It includes a college of liberal arts and schools of business administration, education, engineering, law, and music Its Hispanic-American Institute is well known

Miami Beach, city (pop 28,012), SE Fla , part of Greater Miami, on an island between Biscayne Bay and the Atlantic, inc 1915 In 1913 John S Collins built a wooden bridge from the mainland, but development from a jungle wilderness was slow until the 1920s, when the Florida land boom occurred A popular resort, it is an area of palatial estates and numerous recreational facilities Causeways extend to Miami

Miami Indians, tribe, or group of tribes, of North American Indians of the Algonquian linguistic stock The Miami were people of the Eastern Woodlands area, but they hunted the buffalo which ranged through most of their territory In the mid-17th cent the Miami held land in W Wisconsin, NE Illinois, and N Indiana In the mid-18th cent , however, the invading northern tribes drove the Miami to NW Ohio The Miami occupied this territory until the treaty of 1763, when they retired to Indiana They then numbered some 1,200 The Miami had aided the French in the French and Indian Wars, and they helped the British in the American Revolution With their chief LITTLE TURTLE, the Miami were prominent in the Indian wars of the Old Northwest By 1827 they had disposed of most of their lands in Indiana, and they had agreed to move to Kansas Most of the tribe went (1840) to Kansas and later to Oklahoma In 1872 the small group of Miami left in Indiana surrendered their land to be divided into severalty. The Miami who are on a reservation in Oklahoma number some 300 See Elmore Barce, *The Land of the Miamis* (1922).

Miamin (mĭ'umĭn) [Heb , =on the right hand] **1** One separated from a foreign wife Ezra 10 25 **2** Family of priests Neh 12 5 Miamin 1 Chron 24 9, Neh 10 7 Miniamin Neh 12 17

Miamisburg (mīăm'ĭzbûrg), village (pop 5,544), SW Ohio, on the Great Miami and SW of Dayton, in the leading tobacco region of the state, laid out 1818 and called Hole's Station (for Zachariah Hole) It manufactures tobacco-processing materials and wood products Near by is an Indian mound reputed to be the largest in Ohio

Miami Shores 1 Village (pop 1,956), SE Fla , inc 1932 It was once a part of Miami. **2** Former name of NORTH MIAMI, Fla

Miami University, at Oxford, Ohio, state supported, coeducational, chartered 1809, opened 1824 It includes a college of arts and science (with Scripps Foundation for population research) and schools of business administration, education (with lower schools), and fine arts William H MCGUFFEY taught here, there is a memorial museum

Miantonomo (mēăn"tŭnō'mō, mīăn"-), d 1643, chief of the Narragansett Indians, nephew of another chief, CANONICUS In 1637 he aided the English colonists in the Pequot War The following year he was induced to make a treaty of peace with the English and with his ancient enemy, UNCAS Miantonomo was friendly with the settlers of Rhode Island, particularly with Roger Williams, but was viewed with suspicion in Massachusetts and accused of instigating plots against the English He defended himself in Boston, where he was ill-treated In 1643 he was captured by Uncas and delivered to the English at Hartford, but was returned by them to Uncas to be murdered See H M Chapin, *Sachems of the Narragansetts* (1931).

Miaskovsky, Nikolai Yakovlevich (nyĭskul' yä'kŭvlyĭvĭch myĭskôf'skē), 1881–, Russian composer, b. near Warsaw, grad St Petersburg Conservatory, 1911 He completed his First Symphony in 1908, in 1943 he had composed 24 In addition he has written chamber music, piano music, choruses, and songs, in a conservative and often pessimistic style See A. A Ikonnikov, *Myaskowsky His Life and Work* (1946).

Miass (mēäs'), river, 390 mi long, RSFSR, in W Siberia It rises in the eastern slopes of the Urals and flows N and NE past Chelyabinsk into the Iset, a tributary of the Ob The city of **Miass** (pop. 19,378), on the upper course of the river, is the center of a major gold-mining district.

Mibhar, one of David's men. 1 Chron. 11.38.

Mibsam (mĭb'săm) **1** Son of Ishmael Gen 25 13; 1 Chron 1 29 **2** Son of Simeon 1 Chron 4 25.

Mibzar (mĭb'zär) [Heb , =fortress], duke of Edom. Gen 36 42

mica (mī'kŭ), general term for a large group of minerals, hydrous silicates of aluminum and potassium, often containing magnesium, ferrous iron, ferric iron, sodium, and lithium and more rarely containing barium, chromium, and fluorine All crystallize in the monoclinic system, but mica is most commonly found in the form of scales and sheets All the micas have an excellent basal cleavage, splitting into very thin, elastic laminae Some varieties are transparent, resistance to heat is high Commercially, the most important micas are muscovite (potassium mica) and phlogopite (magnesium mica) Muscovite, the commoner variety, is usually colorless, but it may be red, yellow, green, brown, or gray, with a vitreous to pearly luster It occurs in granites, syenites, mica schists, and gneisses, but is commonest in pegmatite dikes It is widely distributed Phlogopite varies in color from yellow to brown, some specimens having a coppery tint and others being greenish It occurs in crystalline limestones, dolomites, and serpentines in Canada, New York, New Jersey, and Finland Other micas, of little or no importance commercially and, in most cases, restricted in distribution to a few localities, are paragonite (sodium mica), lepidolite (lithium mica), zinnwaldite (lithium-iron mica), biotite (iron-magnesium mica, frequently associated with muscovite), and lepidomelane (iron mica) The clintonites are similar to the micas in crystal form and optical properties, but are chemically more basic and have extremely brittle laminae The chlorites, aluminum silicates with ferrous iron, magnesium, and chemically combined water, are characterized by their green color and the inelasticity of their laminae Neither the clintonites nor the chlorites are commercially important Mica mining, because of the necessity of keeping the crystals intact, is a delicate operation, drills and blasting powder must be used carefully, if at all The mined crystals are first "cobbed," i e , roughly trimmed of rock and cut, then split with a hammer into plates, and further split into sheets with a knife Sheet mica is used chiefly as an insulating material in electrical apparatus, as a resonant diaphragm in phonographs, submarine detectors, and loud-speakers, as a transparent and insulating material in stoves, optical lanterns, lamp shades, and lantern slides Scrap and ground mica is used in wallpaper, fancy paint, ornamental tile, roofing, lubricating oil, and Christmas-tree snow Ground mica is sometimes pressed into sheets (micanite) which can be used as sheet mica Most of the sheet mica used in the United States was long imported, chiefly from India and also from Brazil Synthetic mica was produced in the United States after intensive government-sponsored research began in 1946 See R. R Chowdhury, *Handbook of Mica* (1939)

Micaëlis de Vasconcelos, Carolina (kärōlē'nu mēkaā'lĭsh du vash'kônsĕ'lōōsh), 1851 1925, Portuguese scholar, b Berlin, daughter of a philologist, Gustav von Michaelis While still a girl she earned a name for herself as a Romance philologist, with a special interest in Portuguese After her marriage (1876) to Joaquim de Vasconcelos, a Portuguese art critic and writer, she moved to Portugal There she became an authority on the language, literature, and folklore of Portugal Her minutely careful work covered these fields and opened much new information to the scholarly public, e g , her edition of the *Cancioneiro de Ajuda* revolutionized the history of early Portuguese poetry She was the only woman to be a professor at the Univ of Coimbra and was only honorary professor at the Univ of Lisbon Her name is still sometimes written in the earlier form, Michaëlis de Vasconcellos

Micah (mī'kŭ) [Heb , =Who is like God?] **1** Prophet, author of the book of MICAH **2** Levite 1 Chron 23 20 Michah 1 Chron 24 24 **3** Ephraimite whose sacred belongings were taken from him Judges 17–18 **4** Son of Mephibosheth 1 Chron 8 34, 9 40 Micha 2 Sam 9 12 **5** Same as MICHAIAH **1 6** Same as MICHAIAH **2 7** Reubenite 1 Chron 5 5

Micah (mī'ku) or **Micheas** (mĭkē'us), book of the Old Testament, sixth of the books of the Minor Prophets The book contains the prophecy of Micah, of the second half of the 8th cent B C , a contemporary of Isaiah (fl 710 B C) and Hezekiah Main divisions of the book are the doom of Israel and Judah (1), its necessity founded in hypocritical worship, social injustice, and personal immorality (2–3), ultimate redemption (4–5), and a recapitulation in different form of the same themes (6–7) The Messianic passage in 5 2–6 is famous. Mat 2 6, John 7 42 Some critics attribute chapters 4–7 to later authorship. For bibliography, see OLD TESTAMENT.

Micaiah (mĭkā'yŭ, mī"kā'ĭ'u), Samaritan prophet who foretold the death of Ahab 1 Kings 22.

Micha (mī'kŭ). **1** Same as MICAH **4. 2** Sealer of the covenant Neh. 10 11 **3** Same as MICHAIAH **2**

Michael (mī'kul) [Heb., =Who is like God?], archangel prominent in Jewish, Christian, and Moslem tradition In the Bible he is mentioned several times, each time as a prince or warrior Dan 10 13,21, 12.1, Jude 9, Rev 12 7 In Christian tradition he is the angel with the sword, the conqueror of Satan. In the Roman Catholic Church and in Russia he has had widespread veneration His feast, Michaelmas, Sept 29, is the anniversary of the dedication of a Roman basilica to him, and on May 8 he is honored for his apparition on Monte Gargano, Italy He appeared to Joan of Arc, Mont-Saint-Michel owes its foundation to an apparition of the archangel

Michael I (Michael Rhangabe), d c 845, Byzantine emperor (811–13), son-in-law and successor of Nicephorus I He supported orthodoxy against iconoclasm and recalled Theodore of Studion from exile Disastrously defeated by the Bulgars, he was deposed and went into exile Leo V was proclaimed emperor

Michael II (Michael the Stammerer), d 829, Byzantine emperor (820–29) A native of Phrygia, he was a companion in arms of Emperor Leo V, whom he helped to the throne Leo had him arrested for heading a conspiracy, but the plotters murdered Leo and raised Michael to the throne Indifferent to religious controversy, Michael tolerated both orthodoxy and iconoclasm. Late in his reign, however, he actively supported iconoclasm He lost (823) Crete to the Arabs, who also began (827) the invasion of Sicily His son Theophilus (829–42) and Theophilus' son Michael III (842–67) succeeded him

Michael III (Michael the Drunkard), 839–67, Byzantine emperor (842–67), son and successor of Theophilus and grandson of Michael II His minority saw the final overthrow of ICONOCLASM and a severe persecution of the PAULICIANS Upon coming of age he entrusted the government to his capable uncle, Bardas, whose administration (856–66) was marked by the missions of SS CYRIL AND METHODIUS to the Slavs and by the conversion of Tsar Boris I of Bulgaria The Arabs continued their raids into the empire and extended their conquests in Sicily Michael was addicted to drink and vice and chose his favorites from the most questionable circles One of these favorites was the Macedonian Basil (later BASIL I), who in 866 had the Caesar Bardas assassinated Soon Michael made Basil joint emperor with himself, and in the following year Basil murdered Michael and became emperor In the last year of Michael's reign began the schism precipitated by the patriarch PHOTIUS

Michael VIII (Michael Palaeologus), 1224 82, Byzantine emperor (1261–82), first of the PALAEOLOGUS dynasty By causing the murder of the regent for Emperor JOHN IV of Nicaea, he became (1259) regent and, soon afterward, joint emperor Michael then led his army against the crumbling Latin Empire of Constantinople and recovered (1261) its capital from Emperor BALDWIN II by a simple stratagem a band of soldiers entered the city at night through an old aqueduct and opened the gates for the army, which entered unopposed With the Byzantine Empire thus restored, Michael was crowned again He had John IV blinded and imprisoned The remainder of Michael's reign was taken up by his fight against the Seljuk Turks and against CHARLES I of Naples and Sicily He negotiated with Pope Gregory X for a union of the Eastern and Western Churches, and in 1274 his emissaries at the Second Council of Lyons (see LYONS, SECOND COUNCIL OF) agreed to recognize the spiritual supremacy of the pope However, in 1281 Pope MARTIN IV, a supporter of Charles I of Naples, broke the union by excommunicating Michael, while Charles's troops invaded Epirus Michael's throne was saved only by the SICILIAN VESPERS, which broke Charles's power, an astute diplomat, Michael undoubtedly had a hand in the conspiracy that prepared the Sicilian uprising Michael was distinguished for his learning and left an interesting autobiography. His son Andronicus II succeeded him

Michael (Michael Romanov), 1596–1645, tsar of RUSSIA (1613–45), founder of the ROMANOV dynasty, grandnephew of Anastasia, wife of Ivan IV His election, following the successive appearances of false pretenders (see DMITRI), ended the so-called Time of Troubles that had begun with the death of Boris Godunov The real ruler of the country was the tsar's father, the patriarch Philaret During Michael's reign the peasantry was further reduced to serfdom His son Alexis succeeded him

Michael, 1921–, king of Rumania (1927–30, 1940–47) His father, Prince Carol (later CAROL II), having renounced his right of succession, young Michael ascended the throne under a regency on the death of Ferdinand II However, in 1930, his father returned to be recognized as king When Carol II abdicated in 1940, Michael once more became king In 1944 he overthrew the dictatorship of Ion ANTONESCU and concluded an armistice with the Allies (see RUMANIA) Increasing difficulties with the Communist-dominated coalition government after the Second World War led to his abdication (Dec., 1947) He went into exile He married (1948) Princess Anne of Bourbon-Parma at Athens, Greece.

Michael (Michael Obrenovich), 1823–68, prince of Serbia (1839–42; 1860–68); younger son of Prince

MILOSH He succeeded his brother, Milan His reforming measures aroused the conservative peasants A rebellion resulted (1842) in Michael's deposition and ALEXANDER (Alexander Karageorgevich) became prince. In 1858 Milosh was restored to the throne and Michael returned with his father, on whose death (1860) he once more became prince The ablest Serbian ruler of the 19th cent , Michael modernized his country and prepared its complete liberation from Turkish vassalage. At the end of his reign, the last Turkish garrisons withdrew from the Serbian fortresses, including Belgrade Assassinated by members of the Karageorgovich faction, he was succeeded by his cousin Milan.

Michaelis, Georg (gā'ôrk mĭkh"ăā'lĭs), 1857–1936, German statesman He succeeded (July, 1917) BETHMANN-HOLLWEG as imperial chancellor and was dominated by the military leaders When asked to endorse the resolution passed by the Reichstag favoring peace without annexation or indemnities, he tried to avoid his obligation by stating that he would support the resolution "as he understood it" In Oct , 1917, Michaelis was succeeded by HERTLING

Michaelis, Karin, Dan *Michaelis* (kä'rēn mĭkăā'lĭs), 1872–1950, Danish novelist, sociologist, and lecturer Her chief interest lay in psychological studies of women and their problems She wrote *The Dangerous Age* (1910, Eng tr , 1910), *Little Woman, Your Faith Is Great* (1925), *Mother* (1935), and in 1929-39 a series of children's books about "Bibi," illustrated by Hedvig Collin.

Michaëlis de Vasconcelos, Carolina: see MICAËLIS DE VASCONCELOS, CAROLINA

Michaelmas see MICHAEL, archangel.

Michaelmas daisy see ASTER

Michael the Brave, d 1601, prince of Walachia (1593–1601) Having been obliged to pay a large sum to the Sublime Porte for his appointment as prince, he got rid of his Turkish creditors, who had advanced him the money, by summoning them to his palace and then having them massacred This act was imitated throughout Walachia and became known as the Walachian Vespers He then repeatedly routed a Turkish punitive army with the help of Sigismund Bathory, prince of Transylvania In 1596 the sultan made peace with him, leaving Walachia virtually independent Michael now turned to the conquest of Transylvania, which he accomplished after defeating (1599) Cardinal Bathory, who had succeeded Sigismund as prince In this he claimed to have acted in the name of Emperor Rudolf II, as he did when he entered and conquered Moldavia in 1600 Actually, the emperor had opposed the scheme, but Michael now had accomplished his aim of uniting all Rumanians under his sole rule His hostility to the Hungarian nobles in Transylvania soon caused a rebellion, which was aided by the imperial army in Hungary Defeated, Michael fled and presented himself at the imperial court at Vienna, where he was pardoned and reinstated as governor of Transylvania On his return, he defeated Sigismund Bathory, who had renewed his claim to the principality, but he was shortly afterward assassinated on the order of the imperial general Basta After his death Walachia and Moldavia reverted to Turkish control, while Transylvania came under Austrian domination Though a national hero of Rumania, Michael during his lifetime exceeded the Turks in his oppressive taxation of his subjects

Michah (mī'kŭ), the same as MICAH **2.**

Michaiah (mĭkā'yŭ, mī"kāī'yŭ) [Heb ,=Who is like God] **1** Father of ABDON **2** 2 Kings 22 12 Micah 2 Chron 34 20 **2** Asaphite Neh 12 35 Micah 1 Chron 9 15 Micha Neh 11 17 **3** Priest Neh. 12 41 **4** Same as MAACHAH **3** **5** Prince sent by Jehoshaphat to teach in Judah 2 Chron 17.7 **6** Son of Gemariah who read Jeremiah's prophecies to the princes Jer 36 11–13.

Michal (mī'kŭl), wife of David and daughter of Saul. 1 Sam 18.20, 19 12, 2 Sam 6 16 See MERAB

Michaud, Joseph François (zhôzĕf' frăswä' mēshō'), 1767–1839, French journalist and historian A royalist, he was deported under the Directory for advocating the restoration of the Bourbons On his return (1799) to France he wrote a *History of the Crusades* (Eng tr , 3 vols , 1852), still one of the most widely read works on the subject He was chief editor of the *Biographie universelle* (52 vols , 1811–28; rev ed., 45 vols , 1853–66), a standard biographical reference work

Michaux, André (ädrä' mēshō'), 1746–1802, French botanist. He collected botanical specimens in Europe and Asia and in 1785 was sent by the French government to establish nurseries in America to cultivate plants for naturalisation in France Until 1796 he made botanical journeys over the United States and recorded his studies in a book on the oaks of North America (1801) and in a work on North American botany, *Flora Boreali-Americana* (1803) His son, **François André Michaux** (frăswä'), 1770–1855, is known chiefly for his work on the forest trees of North America (1810–13, Eng. tr., *The North American Sylva*, 1817)

Micheas (mīkē'ŭs), variant of MICAH.

Michel, Claude: see CLODION

Michelangelo Buonarroti (mĭkulän'jŭlō, Ital. mēkälän'jälō bwônär-rō'tē), 1475–1564, Italian sculptor, painter, architect, and poet, b Caprese, Tuscany Upon serving a year of his apprenticeship to the painters Domenico Ghirlandaio and his brother Davide at Florence, Michelangelo entered (1489) the art school held in the Medici gardens under the directorship of Bertoldo (a pupil of Donatello) His early essays in sculpture attracted the attention of Lorenzo de' Medici, who took him to live in his household between 1490 and 1492 Here he was influenced by such men as Politian, Pico della Mirandola, and Marsilio Ficino Drawings of this youthful period in the Louvre attest Michelangelo's study of works by Giotto and Masaccio, while the marble reliefs of the *Madonna of the Stairs* and *Battle of Centaurs* (Casa Buonarroti, Florence) show the influence of Donatello and of ancient Roman sarcophagi He had occasion to study (1494–95) the reliefs of Jacopo della Quercia on the portal of San Petronio, Bologna, when he executed statuettes for the shrine of San Domenico in the same church About this time he was deeply impressed by the teachings of Savonarola Between 1496 and 1501 Michelangelo worked in Rome, where he executed the marble *Bacchus* (Bargello, Florence) and the *Pietà* (St Peter's, Rome) Upon returning to Florence in 1501, he was commissioned by the city to execute the giant *David* (Academy, Florence) and to paint, with Leonardo da Vinci, one of two frescoes depicting scenes from the wars with Pisa for the council hall of the Palazzo Vecchio The cartoons (now lost) for these projected frescoes exerted enormous influence in their period From these years date the marble *Bruges Madonna* (Notre Dame, Bruges) and the painted *tondo* of the *Holy Family* (Uffizi) In 1505 he was called to Rome to execute a sepulchral monument for Pope Julius II Soon after the contract was awarded, Julius II changed his mind in favor of the decoration of the ceiling of the Sistine Chapel Michelangelo fled to Florence and could not be persuaded to undertake the decoration until after a meeting with Julius in Bologna, at which time he was commissioned to execute a seated bronze statue of Julius (destroyed in 1511) The Sistine ceiling was executed between 1508 and 1512 In its profundity of spiritual content and sublimity of style it stands as one of the world's greatest masterpieces A vast architectonic framework divides the ceiling into three superimposed zones In the highest zone are nine panels with scenes from Genesis Below are prophets and sibyls In the lunettes and spandrels of the lowest zone are enigmatic scenes with groups of figures which have been variously identified as the ancestors of Christ or of the Virgin and which seem to suggest a vision of primordial humanity After the death of Julius II the heirs again contracted for the execution of his monument Although litigations with these heirs dragged on some 30 years, the most significant work, including the colossal *Moses* (San Pietro in Vincoli, Rome) and the two statues known as *Bound Slave* (Louvre), was executed between 1513 and 1521 It was a major tragedy for Michelangelo that his plan for a vast temple-mausoleum within St Peter's had to be abandoned and that the monument finally erected in San Pietro in Vincoli was a mere travesty of his original heroic conception He worked (1520–34) on the sepulchral chapel of the Medici, in the Second Sacristy of San Lorenzo, Florence Here he was able to integrate sculpture and architecture into a powerful expressive unity Michelangelo assisted (1829) as engineer in the defense of Florence After the suppression of Florentine freedom Michelangelo established himself in Rome, where he became deeply attached to a young nobleman, Tommaso Cavalieri, to whom he dedicated many sonnets and several drawings of an allegorical nature From 1534 to 1541 he worked on the *Last Judgment* of the Sistine Chapel From this period dates his friendship with Vittoria Colonna, to whom he dedicated many religious sonnets Through her he was introduced to the ideas of such men as Cardinal Pole and Bernadino Ochino This influence was reflected in the intensified concern with religious values manifest in the writings and works of Michelangelo's later years After executing (1541–50) the Pauline Chapel (Vatican) frescoes of the *Conversion of Paul* and *Martyrdom of Peter*, he devoted himself principally to architecture In 1546 he succeeded Antonio da Sangallo the younger as chief architect of St Peter's Michelangelo put into shape Bramante's outlined ideas for the main body of the church, its centralized Greek-cross plan and the great dome which was completed, after his death, by Domenico Fontana and Giacomo della Porta, who but slightly modified Michelangelo's plan Other architectural work included remodeling the tepidarium of the baths of Diocletian into the Church of Santa Maria degli Angeli and designing the façades and court of the palace group on the Capitoline Hill Two unfinished sculptured *Pietà* groups testify to the tendency toward increasingly spiritualized and abstract form in Michelangelo's last years The one now in the cathedral, Florence, was intended by Michelangelo for his own tomb, it was for some reason smashed and survives as reassembled by another sculptor, who seems to have added or entirely reworked the figure of the Magdalen The Rondanini *Pietà* (Sanseverino Palace, Rome) was begun c 1555 and left unfinished at Michelangelo's death Michelangelo thought of himself primarily as a sculptor, and a feeling for the expressive potentialities of sculptural form manifests itself in all phases of his work As a 16th-century artist, he was forced to depend on the favor of great patrons who had means and power to award commissions worthy of his genius Throughout his career his artistic ambitions were thwarted by the caprices of these patrons, by the social instability of the times, by jealousy of other artists, and by the deep moral conflicts that arose within his own spirit This struggle is expressed in an art whose universality transcends definition in terms of one style and which scholars have variously categorized as best associated with the high Renaissance, baroque, or mannerist periods A verse translation of Michelangelo's sonnets was made by J A Symonds (1878) See biographies by J A Symonds (1893, a classic, reprinted in many editions), Ascanio Condivi (Eng tr , 1904), Romain Rolland (1915, 4th ed , 1927), and Marcel Brion (Eng tr , 1940), Charles de Tolnay, *The Youth of Michelangelo* (1943)

Michelet, Jules (zhül' mĕshulā'), 1798–1874, French writer, the greatest historian of the romantic school Born in Paris of poor parents, he visualized himself throughout his life as a champion of the people against its oppressors He was head of the historical section of the national archives and professor of history at the Collège de France, but lost his positions when he refused (1851) the oath of allegiance to Louis Napoleon (later Napoleon III) His major work is his *Histoire de France* (many volumes, 1833–67, there are several partial translations into English), its style, its emotional strength, and its powerful evocation of it among the masterpieces of French literature Michelet sought to trace the biography of the nation as a whole, rather than concentrate on persons or groups of persons His most convincing pages are those dealing with the Middle Ages Michelet possessed vast knowledge of original documents and factual detail, but his history—especially its latter part—is marred by his emotional bias against the clergy, the nobles, and the monarchic institution and tends increasingly toward the end to become a distorted indictment rather than a factual account Michelet was the author of many other political and historical works, most of them outgrowths of his history of France Remarkable among these are his biography of Joan of Arc (1853) and *Le Peuple* (1846) He also wrote romantic impressions of nature and life, among them *L'Oiseau* [the bird] (1856), *L'Insecte* (1850), *La Mer* [the sea] (1861), and *La Montagne* [the mountain] (1868)

Michelozzi, Michelozzo (mēkälôt'tsō mēkälôt'tse), 1396–1472, Italian sculptor, architect, goldsmith, and founder He was long associated with Donatello and Ghiberti Of the statues and reliefs of his first independent sculpture, the Aragazzi Tomb, some are in the cathedral at Montepulciano, for which it was made, two angels are in the Victoria and Albert Museum, London His fame rests chiefly on the architectural and decorative works to which he devoted himself after 1435 With Brunelleschi he shared the leadership in establishing the Renaissance style In Venice and in Milan he designed fine buildings, but his best work was in Florence As architect and art adviser to Cosimo de' Medici he built for him the Riccardi Palace, one of the finest city houses ever made He built the Medici Chapel in Santa Croce, enlarged and rebuilt the Monastery of San Marco, and worked on the restoration of the Palazzo Vecchio

Michelson, Albert Abraham (mī'kulsun), 1852–1931, American physicist, b Strelno, Prussia, grad Annapolis, 1873, and studied at Berlin, Heidelberg, and Paris He was professor of physics at Clark Univ (1889–92) and later was head of the department of physics at the Univ of Chicago (1892–1929) He is known especially for his determinations of the velocity of light, in some of his earliest work he tested the data of Foucault's experiments and, then and later, with apparatus designed and built by himself, obtained results on the speed of light of an unequaled degree of accuracy In general, his experiments on the interference of light waves (optical interference) are of the greatest scientific value He was invited to Paris to make measurements of the standard meter, by the use of his interferometer method, in terms of the wave length of the red portion of the spectrum of cadmium His experimental studies of ether drift contributed to the development of Einstein's theory of relativity Michelson was awarded the 1907 Nobel Prize in Physics, being the first American scientist

to receive this honor In addition to his scientific papers, he was the author of *Velocity of Light* (1902), *Light Waves and Their Uses* (1903), and *Studies in Optics* (1927)

Michigan (mĭ'shĭgŭn), state (57,022 sq mi., with water surface, including enclosed portions of the Great Lakes, c 98,000 sq mi , 1940 pop. 5,256,106, 1949 estimated pop 6,352,000), N United States, in the Great Lakes region, admitted 1837 as the 27th state (a free state) LANSING is the capital, and DETROIT is the largest city The state is in two distinct parts, separated by lake water The Lower Peninsula thrusts northward from Indiana and Ohio, with Lake Erie and Lake Huron (and their Detroit river–Lake St Clair–St Clair river link) separating it from Ontario on the east and Lake Michigan separating it from Wisconsin on the west Across Lake Michigan, NE of Wisconsin, the Upper Peninsula stretches its long eastern reach, separating Lake Michigan from Lake Superior It ends in the east with the near-closing of Lake Superior, where the Upper Peninsula is separated from Ontario only by the narrow river at Sault Ste Marie, and ends in the south with the near-closing of Lake Michigan, where the Upper Peninsula is separated from the Lower Peninsula only by the Straits of Mackinac In the east the Upper Peninsula has swampy flats and limestone hills on the Lake Michigan shore, while sandstone ridges rise abruptly from the rough waters on Lake Superior, in the west the land rises to the forested mountains that still are rich in copper and iron The whole of it is northern woods country with "ten months of winter and two months of poor sledding" The abundance of furred animals and the trees early attracted fur traders and lumbermen The animals were trapped out, many of the virgin forests were ruthlessly stripped, and even the pure copper and the high-grade iron ore were wrested rapidly from the earth Though great mines elsewhere have reduced their significance, mines are still active. In the forests are deer and bear and other big and small game, and in rushing streams and the lakes are fish, the area attracts sportsmen and vacationers The scarred timberlands are being covered with second growth, and the selective cutting and replanting of trees have replaced the rapacious methods of the old-time lumber barons Across the Straits of Mackinac, the Lower Peninsula is a different sort of country, less wild but in parts no less beautiful Its forests also were cut over in the lumbering boom days late in the 19th cent , when sawmills were busy on the many streams and for a time gave Michigan the lead in lumber production The soil of these cut-over lands proved generally too poor for farming, and reforestation is going on The Lower Peninsula has its mineral wealth in things less spectacular than copper and iron—gypsum, sandstone, limestone, and salt There is also some petroleum. The wealth of the Lower Peninsula, however, lies in its farms and its factories The climate, tempered by surrounding waters, allows a long growing season, and grain and vegetable fields cover much of the southern counties while fruit orchards line the shores of Lake Michigan Livestock raising and, more particularly, dairying have lately grown enormously The farms as well as the mines have contributed to the expansion of industry in Michigan Michigan automobile factories are known the world over, and their mass-production methods were the core of an industrial revolution. Detroit, DEARBORN, FLINT, Lansing, and PONTIAC are names to reckon with Yet food processing and lumber products are only less well known, in the United States the very names of some Michigan cities evoke the thought of their principal products—GRAND RAPIDS means furniture, BATTLE CREEK means breakfast foods The Lower Peninsula, too, has its beaches and sand dunes, its blue water, and its woods to attract tourists A state department of conservation plans and executes a program for keeping and improving the natural recreational gifts of the state Those same gifts once made life reasonably comfortable for the Ojibwa, the Ottawa, the Potawatami, and the other Algonquian-speaking Indian tribes who were living in Michigan when Étienne Brulé landed at the narrows of Sault Ste Marie in 1618, the first white man known to have reached the present Michigan Other explorers, traders, and missionaries came—Jean NICOLET seeking the Northwest Passage, Jacques MARQUETTE founding a mission in the Mackinac region, and the empire builder, LA SALLE, on the *Griffon*, the first ship to sail the Great Lakes French posts were scattered along the lakes and the rivers, and MACKINAC island became a business center of the fur trade Detroit, too, rose to prominence after it was founded by CADILLAC, and the Detroit-Mackinac water route, much used, partly explains the later combination of the two disparate peninsulas in one state All this vast, thinly held region was lost to the French by their ultimate failure in the French and Indian Wars. In 1763 Detroit was surrendered to Robert Rogers and his Rangers. The Indians of Michigan, who had lived in peace with the French, resented the coming of the British, the allies of the much-hated Iroquois. Under Pontiac they rose in bloody warfare and terrorised the British in the newly won territory, but the revolt was short-lived and the British won over the Indians so well that the Indians strongly favored them in the American Revolution Despite the Treaty of Paris in 1783, the British held stubbornly to Detroit and Mackinac until 1796 Even after the NORTHWEST TERRITORY was broken up and Detroit was made (1805) capital of Michigan Territory, British agents still held great influence over the Indians, who fought on the British side in the War of 1812 Mackinac and Detroit fell almost immediately from the inefficient grasp of William HULL and his American troops Michigan remained in British hands through most of the war until William Henry HARRISON in the battle of the THAMES and Oliver Hazard PERRY in the battle of Lake Erie restored American prestige in the Old Northwest Slowly after peace had come the flow of pioneers into Michigan rose, then more rapidly Much of the credit for the policy of pushing the Indians westward and opening the lands to settlement is given to Gen Lewis Cass, who was Michigan's governor (1813–31) and later a U S Senator He had in early days done exploring, and he reported fully the possibilities of Michigan He encouraged the Federal government to build five military highways in Michigan Steamboat navigation on the Great Lakes and sale of public lands in Detroit both began in 1818, and the Erie Canal was opened in 1825 Farmers came in numbers to the Michigan fields, and the first sawmills were built on the rivers The move toward statehood was retarded by the desire of Ohio and Indiana to absorb parts of present S Michigan After a census showed a population of 82,273, the Michigan electorate organised a government without U S. sanction and in 1836 operated as a state, though outside the Union Congress offered statehood on condition that the Toledo strip was ceded to Ohio and Indiana with compensation to Michigan of land in the Upper Peninsula Though the electorate rejected the offer, a group of Democratic leaders accepted it, and by their acceptance Michigan became a state in 1837 Detroit remained the capital until 1847, when it was succeeded by Lansing The state promptly adopted a program of internal improvement through the building of railroads, roads, and canals (including the Soo Ship Canal at Sault Ste Marie) A survey of the mineral resources made in 1837 by the state geologist, Douglas Houghton, and William A Burt prefaced the development of the copper and iron mines At the same time lumbering was developing further, and the population was being enriched by the coming of the Germans, the Irish, and the Dutch In 1841 the Univ of Michigan was opened, the first state university and a coeducational institution—a harbinger of Michigan's interest in educational and cultural development in years to come. The state was soon caught in the tension between North and South that led to the Civil War Michigan, thoroughly Northern, helped in the early steps of the formation of the Republican party, and the state was firmly Republican until 1882 Then the farmers, feeling the same radical urge that moved other Western farmers against the railroads and the interests, joined with the growing labor group from the mines and the lumber camps They succeeded in passing legislation for agrarian improvement and public welfare The labor movement early was expressed by the creation of a state bureau of labor (1883), by a law enforcing a 10-hour day (1885), and by a moderate child-labor law (1887) The lumbering business, with its logging camps, its shanty-built towns, its notable lumber-town fires, and its yield of wealth to the lumber barons, declined to nothing. Some, at least, of the loggers joined the ranks of industrial workers The ranks of labor were swelled by many Polish and Norwegian immigrants More important was the invention of the automobile, for industry in Michigan was completely changed by the building of automobile plants Henry FORD was the outstanding figure, but many others joined to build the industry. The development of mass-production methods changed the organization of labor (approximately half the industrial workers of the state are in the automotive industry) In the 1930s unionization advanced in struggles marked by sit-down strikes and by some violence The conflict continued in the 1940s, perhaps with less bitterness In the Second World War, Michigan was particularly notable for its industrial contribution to the war effort with the transformation of factories to the production of tanks, airplanes, and other war matériel On industrial frontiers the state has continued to show the vigorous pioneering spirit that marked its settlement a century ago See H. M Utley, B. M Cutcheon, and C M Burton, *Michigan as a Province, Territory, and State* (4 vols., 1906), Michigan State Planning Commission, *Study of Michigan* (1935), Stewart Holbrook, *Holy Old Mackinaw* (1938); George Fuller, ed , *Michigan. a Centennial History* (5 vols., 1939); Calvin Goodrich, *The First Michigan Frontier* (1940), Federal Writers' Project, *Michigan. a Guide to the Wolverine State* (1941, rev. ed., 1946); Angus Murdock, *Boom Copper* (1943), M. M. Quaife and Sidney Glazer, *Michigan, from Primitive Wilderness to Industrial Commonwealth* (1948).

Michigan, Lake, 307 mi. long and 118 mi at its greatest width, third largest of the Great Lakes Lying 579.79 ft. above sea level, it has a maximum depth of 923 ft and an area of 22,400 sq. mi Michigan borders it on the east and north, Illinois and Wisconsin on the west, and Indiana on the south. The Straits of Mackinac at the northeast end of the lake, its only natural outlet, connect it with Lake Huron The Illinois waterway (the Chicago Sanitary and Ship Canal, connecting with the canalized Des Plaines and Illinois rivers) links Lake Michigan with the Mississippi river and the Gulf of Mexico The harbors at the south end of the lake are usually open all year, but those in the north are closed by ice for at least four months Despite the prevalence of sudden, dangerous storms, the lake carries a vast amount of shipping Cities on its shores include Michigan City and Gary, Ind , Chicago, Evanston, and Waukegan, Ill , Kenosha, Racine, Milwaukee, Manitowoc, and Two Rivers, Wis.; and Escanaba, Manistee, Ludington, Muskegon, Grand Haven, and Benton Harbor, Mich. Among the islands in the northern reaches of the lake is Beaver Island. The largest arm of the lake is Green Bay. Lake Michigan was discovered (1634) by Jean Nicolet and was later explored by Marquette and Jolliet. See M. M. Quaife, *Lake Michigan* (1944)

Michigan, University of, at Ann Arbor, state supported, coeducational Chartered in 1817 as the Catholepistemiad (or University) of Michigania, it was rechartered in 1821 and 1837; it opened as a school in Detroit in 1817 and reopened as a college in Ann Arbor in 1841 It includes colleges of architecture and design, engineering, pharmacy, and literature, science, and arts (with library science and journalism) and schools of business administration, dentistry, education, forestry and conservation, law, music, nursing, public health, and medicine There are institutes of dentistry, human adjustment, medical research, public and social administration, state and U S fisheries research, noted museums of archaeology, anthropology, paleontology, and zoology, a herbarium, a university press; and lower schools There are observatories at Ann Arbor and in South Africa, McMath-Hulbert Observatory, with a solar tower, is near Pontiac The library has especially fine collections of Americana (in the William L Clements Library, founded 1923), Shakesperiana, papyri, and works on political science See Kent Sagendorph, *Michigan the Story of the University* (1948)

Michigan City, city (pop 26,476), NW Ind , on Lake Michigan c 40 mi. ESE of Chicago, settled 1830, inc 1836 It is a summer resort with excellent lake-front facilities. Furniture and Pullman cars are made here It is the seat of Indiana State Prison

Michigan State College of Agriculture and Applied Science, at East Lansing, with land-grant support, coeducational, chartered 1855, opened 1857 as the first state agricultural college, renamed 1925 It has divisions of agriculture (with forestry), applied science (with police administration), engineering, home economics, liberal arts (with music), and veterinary science.

Michilimackinac: see MACKINAC.

Michmas or **Michmash** (both mĭk'–), town, c.8 mi NE of Jerusalem It was a bivouac of Jonathan in his Philistine wars 1 Sam 13, 14, Ezra 2.27, Neh 7.31

Michmethah (mĭk'mĕthä), unidentified place, central Palestine Joshua 17 7.

Michoacán (mēchōäkän'), state (23,202 sq. mi , 1946 estimated pop 1,370,483), W Mexico Dominated by the mountains of the Sierra Madre Occidental and the east-west volcanic chain of central Mexico, Michoacán extends from the Pacific northeastward into the central plateau. The LERMA river and Lake CHAPALA form part of its northern boundary with Jalisco, and the Río de las BALSAS the southern boundary with Guerrero. The variety of climate and soil occasioned by topography and differences of elevation make Michoacán predominantly an agricultural state Sugar cane, coffee, vanilla, tobacco, cereals, and subsistence crops are grown, and cattle and sheep are raised From the forests come fine cabinet woods and dyewoods Mining is a leading industry, gold and silver are most important, but lead, cinnabar, iron, copper, sulphur, coal, and petroleum are also exploited. With no important Pacific port, Michoacán ships its products from the urban centers, URUAPAN and the capital, MORELIA. Of interest to tourists are Lake PÁTZCUARO and the volcano PARICUTÍN Most of the inhabitants are TARASCAN INDIANS Michoacán played an important part in the revolution against Spain and the subsequent turbulent struggles of Mexico.

Michri (mĭk'rī), ancestor of Elah. 1 Chron. 9.8.

Michtam (mĭk'tăm), in the titles of Pss. 16, 56, 57, 58, 59, 60, a word of uncertain meaning, perhaps indicating the type of psalm.

Michurin, Ivan Vladimirovich (ēvän' vlŭdyē'mĭrŭvĭch mēchōō'rĭn), 1855–1935, Russian horticulturist. He is noted for his experimental efforts to produce

better fruit trees by grafting. His theory that hereditary changes can be induced by grafting and that acquired characters are inherited was elaborated by T. D Lysenko and his followers and was officially supported (1948) by the Soviet Central Committee He founded at Kozlov (later renamed Michurinsk in his honor) a nursery that was taken over by the state after the 1917 revolution; it was placed under his direction and was enlarged to include a technical college and a research laboratory

Michurinsk (mĭchōō'rĭnsk, Rus mēchōō'rĭnsk), city (pop 70,202), central European RSFSR, NW of Tambov It is a railroad center Founded in 1636, it was known until 1926 as Kozlov. Its new name is in honor of the 19th-century Russian scientist Michurin, who founded here a horticultural experimental institute Besides the institute, there are several other educational institutions

Mickiewicz, Adam (ä'dăm mēt'skyĕ'vĭch), 1798–1855, Polish poet Born in what now is Belorussia, he studied in Vilna, where he was arrested (1823) for his activities in illegal student organizations and was deported to Russia, never to return to Poland Fearing another arrest, he left Russia (1829) and traveled through Europe, becoming a professor of literature in Lausanne (1839) and Paris (1840) Mickiewicz, influenced by the revolutionary spirit of 1848, went to organize Polish legions in Rome and later in Constantinople, where he died His body was deposited (1890) on the Wawel in Cracow Mickiewicz had been acquainted with Pushkin and Goethe Deeply attached to his homeland, he was during his exile influenced by Messianism His works include the historical poems *Pan Tadeusz* (1834) and *Konrad Wallenrod* (1825–28), the drama *Forefather's Eve* (1823), *The Books of the Polish Nation and of Polish Pilgrimage* (1832), prose, *Sonnets from the Crimea* (1825), the epic *Grazyna* (1823), and several ballads and odes These and other works have been translated into English See study by M M Gardner (1911)

Micmac Indians, tribe of North American Indians of ALGONQUIAN stock, in Nova Scotia, Cape Breton Island, Prince Edward Island, Newfoundland, and New Brunswick There are a number of confederated bands The Micmacs are expert canoeists, and their economy centers about fishing and shore hunting The French came into contact with them in the 16th cent , and the Micmacs were allies of the French and enemies of the English throughout the history of New England Contact with the whites has not had the usual effect of tribal disintegration and the Micmacs still thrive, though their culture has changed radically Thev are all Roman Catholics The men are professional hunting guides

Micon (mī'kŏn), fl c 460 B C , Greek painter and sculptor In collaboration with Polygnotus he painted *The Greeks and the Amazons* and the celebrated *Battle of Marathon* in the Stoa Poecile at Athens He is supposed to have helped decorate with paintings the temple of the Dioscuri at Athens and the Theseum

microbiology: see BIOLOGY

microcephalia. see FEEBLE-MINDEDNESS

Micronesia (mīkrōnē'shu, -shu), one of the three main divisions of the Pacific islands, in the W Pacific, north of the equator It includes the Carolines, Marshalls, Marianas, and Gilbert Islands The inhabitants are related to the Malays and stem from Negroid and Mongoloid stock. They speak Malayo-Polynesian languages (see LANGUAGE, table)

microphone (mī'krufōn), device for converting the acoustic energy of sound waves into waves of electrical energy, used in radio broadcasting, recording, and sound amplifying systems The first microphones were based on the fact that as the pressure holding electrical contacts together is increased, the resistance between them decreases The microphone, various forms of which were developed c 1877 by Emile Berliner, David E Hughes, and Thomas A. Edison, was first used as a telephone transmitter, the vibrations of an acoustic diaphragm applying fluctuating pressures on the contact point of two electrodes The present-day telephone transmitter is essentially a microphone of the carbon type, in which carbon grains are compressed by the mechanical force of sound waves, the resistance of the carbon varying inversely with the compression and thereby varying the flow of current in the associated circuit All other microphones in common use generate audio voltages of their own in response to the sound pressure applied to them The crystal microphone employs the piezoelectric effect derived from two thin plates of Rochelle-salt crystals cut in opposing grain Sound-wave pressure causes varying degrees of expansion in the plates, causing them to bend like the metal band of a thermostat and generate a voltage across their surfaces Two other types of microphone generate their voltages by the Faraday principle of electromagnetic induction; the ribbon or velocity type employs a thin metal ribbon suspended in a stable magnetic field, vibrations in the ribbon caused by sound waves generating a current from this field, the moving coil or dynamic microphone operates on similar principles, but uses a light movable coil attached to a dome-shaped diaphragm in place of the ribbon.

microscope, optical instrument used to increase the apparent size of an object. A magnifying glass, an ordinary double convex LENS having a short focal length, is a simple microscope The reading lens and hand lens are instruments of this type. The principle involved is when an object is placed nearer such a lens than its principal focus—i e , within its focal length—a virtual IMAGE is produced which is erect and larger than the original object. The magnification is commonly expressed in diameters For example, if a lens magnifies an object 5 times, the magnification is said to be 5 diameters, commonly written simply "5x " The compound microscope consists essentially of two or more such lenses fixed in the two extremities of a hollow metal cylinder This cylinder is mounted upright on a screw device, which permits it to be raised or lowered above the object until a clear image is formed The lower lens (nearest to the object) is called the objective, the upper lens (nearest to the eye of the observer), the eyepiece The total magnification of the compound microscope is computed by multiplying the magnifying power of the objective by the magnifying power of the eyepiece When an object is in focus, a real, inverted image is formed by the lower lens at a point inside the principal focus of the upper lens This image serves as an "object" for the upper lens which produces another image larger still (but virtual) and visible to the eye of the observer Briefly, the object is magnified by the lower lens, the enlarged image of the object by the upper lens The compound microscope is widely used in bacteriology, biology, and medicine in the examination of such extremely minute objects as bacteria, other unicellular organisms, and plant and animal cells and tissue. It has been extremely important in the development of the biological sciences and of medicine Its invention is variously accredited to Zacharias Janssen, a Dutch spectaclemaker, c 1590, and to Galileo, who announced his invention in 1610 Other men are known for their discoveries made by the use of the instrument and for their new designs and improvements, among them G B Amici, Nehemiah Grew, Robert Hooke, Leeuwenhoek, Malpighi, and Swammerdam The ultramicroscope is an apparatus consisting essentially of a compound microscope with an arrangement by which the material to be viewed is illuminated by a point of light placed at right angles to the plane of the objective and brought to a focus directly beneath it This instrument is used especially in the study of Brownian movement in colloidal solutions (when the particles of the COLLOID appear, by reflection, as tiny dancing points of light) The electron microscope, since it is not limited by the powers of optical lenses and light, permits greater magnification and greater depth of focus than the optical microscope and reveals more details of structure Instead of light rays it employs a stream of electrons controlled by electric or magnetic fields. The image may be thrown on a fluorescent screen or may be photographed It was first developed in Germany c 1932, James Hillier and Albert Prebus of Canada and V K Zworykin of the United States contributed notably to its development in this hemisphere See F J Muñoz and H A Charipper, *The Microscope and Its Use* (1943), E F Burton and W H Kohl, *The Electron Microscope* (2d ed , 1946)

Midas (mī'dus), in Greek legend, king of Phrygia, son of GORDIUS Because he befriended SILENUS (or one of the sileni), Dionysus granted him the power of turning everything into gold by touch Midas tired of his gift when even food became gold in his hand Dionysus allowed him to wash away his power in the Pactolus river, which afterward had gold-bearing sands It was also said that Midas was given ass's ears by Apollo for preferring, in a contest, the music of Marsyas (according to another account Pan) to the god's Midas preserved his shame from all but his barber, who, wishing to tell it, whispered it into a hole in the ground Reeds which grew out of that hole told the secret There was also a historical king of Phrygia named Midas in the 8th cent B C

Middelburg (mĭ'dŭlbûrkh), municipality (pop 20,353), capital of Zeeland prov , SW Netherlands, on Walcheren island, NNE of Flushing It is a trade center and has varied manufactures. Middelburg was a flourishing commercial city in the Middle Ages and belonged to the Hanseatic League The last Spanish fortress in Zeeland, it was captured (1574) by the Beggars of the Sea after a fierce battle In the Napoleonic Wars, Middelburg was briefly occupied (1809) by the British It was flooded in the Second World War and was taken late in 1944 by British troops There was much destruction, but the fine 15th-century city hall and the 12th-century abbey remain

Middelfart (mĭ'dhŭlfärt), city (pop. 8,080), Fyn island, Denmark It is a port on the Little Belt, which is bridged here

Middin, unidentified town, S Palestine. Joshua 15 61.

middle, in grammar: see VOICE

Middle Ages, period in Western European history following ancient times and preceding modern times. Exact dates for the beginning and end of the Middle Ages tend to mislead by suggesting that the gradual transitions were abrupt, and different dates are preferred by different scholars For the beginning, one of the convenient dates is the fall of the Western Roman Empire in 476. For the end, a convenient date is the discovery of America by Columbus in 1492. Other landmarks of the end of the Middle Ages include the REFORMATION, the change in scholarship and the fine arts known as the RENAISSANCE, and the invention of printing The Middle Ages have been called the Dark Ages As it was found that the darkness was not so much in the period as in the minds of those who considered it, the term was first limited to an earlier part of the Middle Ages and was then generally discarded So vast a division of history must show great differences in times and places, yet it is not difficult to see a unity in the Middle Ages At the beginning, the position of Christianity was apparently insecure. At the end, it was the religion of essentially all the peoples who are Christians today The Middle Ages, then, were the period of the organization and spread of Christianity Christian doctrine was systematized by able theologians, as St THOMAS AQUINAS (see SCHOLASTICISM) Monastic communities set an example of civilized Christian living Friars, as the followers of St FRANCIS of Assisi, brought the faith and spirit of Christianity to individuals throughout Europe. With Christianity came civilization, so that by the end of the Middle Ages, though much even yet remains to do, no part of Europe could be called uncivilized The unity of Europe in the Middle Ages was in the faith, doctrine, and institutions of Christianity Secular organization was typically local, with home rule or a large measure of it Noblemen had much authority over the people of their domains (see FEUDALISM), and the free town or city became the typical urban community Larger organizations, as the empire of CHARLEMAGNE and the HOLY ROMAN EMPIRE, were ambitious but insecure A secular institution allied with Christianity was chivalry, best exemplified by the orders of knighthood, codes of conduct are yet based upon it Conspicuous military adventures of the period included the CRUSADES GOTHIC ARCHITECTURE originated and was carried to its highest development, covering Europe with the "white robe of churches" that remains its chief ornament. In literature, forms wholly different from those of ancient times, as verse based on rhythm and rime, were used by such masters as DANTE and CHAUCER Printing was not invented until the 15th cent , but illuminated manuscript books were made of a beauty that printing does not achieve Artisans were organized in guilds, and their position seems to have been more satisfactory to them than artisans had found their position before or have found it since The craftsmanship of the medieval guildsmen attained a uniform excellence Possibly the fatal weakness of the system of GUILDS was that it was urban and did not include agriculture Medieval endeavor in general had other motives than riches or fame Few men of the Middle Ages are remembered for their wealth, and anonymity is characteristic of medieval art Of the older histories in English some of the most used were Ephraim Emerton, *Introduction to the Study of the Middle Ages, 375–814* (1888), *Medieval Europe, 814–1300* (1894), and *Beginnings of Modern Europe, 1250–1450* (1917) and G B Adams, *Civilization during the Middle Ages* (1894) See *Cambridge Medieval History* (8 vols , 1911–32), Henry Adams, *Mont-Saint-Michel and Chartres* (1913), Ralph Adams Cram, *The Great Thousand Years* (1918), Henry Osborn Taylor, *The Mediaeval Mind* (4th ed , 1925), E K Rand, *Founders of the Middle Ages* (1928), Lynn Thorndike, *The History of Medieval Europe* (new ed , 1931), L J Paetow, *Guide to the Study of Medieval History* (rev ed , 1931), W G Ault, *Europe in the Middle Ages* (rev ed , 1937), J W Thompson and E N Johnson, *Introduction to Medieval Europe, 300–1500* (1937), Carl Stephenson, *Medieval History* (rev ed , 1943), John L. La Monte, *The World of the Middle Ages* (1949)

Middleboro, town (pop 9,032), SE Mass , between Plymouth and Taunton, settled 1660, inc. 1669 Shoes are made here

Middleburg, 1 Village (pop 1,074), E N Y., on Schoharie Creek and SW of Albany, in a farm and resort area, settled 1712, inc 1881 2 Borough (pop. 1,124), co seat of Snyder co , central Pa , SW of Sunbury, settled c 1760, laid out 1800, inc. 1856. Its industries include dairying

Middleburgh Heights, village (pop 1,225), NE Ohio, near Cleveland, inc 1927

Middlebury. 1 Town (pop 2,173), SW Conn , between Waterbury and Woodbury; settled early in the 18th cent , inc 1807 It is the site of country and summer homes 2 Town (pop 3,175), co. seat of Addison co , W Vt., on both sides of Otter Creek, chartered 1761, first settled 1773, permanently settled 1783 It includes Middlebury village (pop 2,123) There are a few 18th-century buildings in the town Sheldon Art Museum (1829) contains collections, mainly colonial, begun by Henry Sheldon Edward John Phelps was born in Middlebury. The Middlebury Female Academy was the

scene of Emma Hart Willard's first educational work. Middlebury College (nonsectarian; for men and women) was chartered and opened in 1800. The college owns a large forest tract The foreign-language summer schools here and the writers' conferences at near-by Bread Loaf Mt are noted See W Storrs Lee, *Father Went to College* (1936) and *Stagecoach North* (1941).

middle class: see BOURGEOISIE

Middle Congo. see FRENCH EQUATORIAL AFRICA.

Middle Country: see MIDDLE KINGDOM

Middle East, in the more usual sense, term applied to the countries of SW Asia lying W of Afghanistan, Pakistan, and India Thus defined it includes Turkey, Syria, Israel, Jordan (and the annexed areas formerly part of Palestine), Iraq, Arabia, and Iran Some writers, however, use the term *Middle East* to mean the group of lands (now or until recently) predominantly Moslem in religion and Arab in background Such usage excludes Turkey from the above list but adds Egypt

Middle English literature is a conventional designation for the literature of England from 1100 to 1500 It is best considered separately from ANGLO-SAXON LITERATURE and from ENGLISH LITERATURE (modern) because the Middle English dialects differ from Anglo-Saxon and from modern English (see ENGLISH LANGUAGE) and because the Norman Conquest and the Renaissance were significant in changing both the sources and the forms of English literature For nearly 200 years after the Conquest, until c 1250, English was the language only of the lower classes, and although some popular literature was produced in it, the greater portion appeared in French, the language of the upper classes, and in Latin, still the universal language of Western Europe (see MEDIEVAL LATIN LITERATURE) The French culture of England, sometimes called Anglo-Norman, produced works commensurate in quality with those in continental France and also set the pattern for much of the later literature in English Before 1250, in its best period, it included many important compositions historical verse chronicles such as that of Geoffrey Gaimar, romances such as the *Tristan* of Thomas of Britain, such biographies as the anonymous work on William Marshal, earl of Pembroke, the lais of Marie de France; and numerous religious and encyclopedic works From c 1150, when Middle English became distinctive from Anglo-Saxon, until 1250, literature in English was predominantly religious. Outstanding in this vein were the *Ancren Riwle*, a warmly human treatise of instruction to anchoresses, and the *Orrmulum*, a lengthy redaction of the Gospels Also important were Layamon's *Brut*, a verse chronicle in which the ARTHURIAN LEGEND appears for the first time in English, and *The Owl and the Nightingale*, a lively and entertaining debate in verse Early and accomplished examples of the rhymed lyric are to be found in the songs *Alsoun* and *Sumer Is Icumen In* From 1250 to 1350 English was becoming the ascendant language in which were now produced many religious and secular works Examples of the former were *The Debate of the Body and the Soul*, *Cursor Mundi*, a legendary history of the world, Robert Manning's *Handlyng Syn*, and the writings of Richard Rolle, the mystic Important in lay literature were the many romances, most of which were translated or adapted from the French and dealt with standard subjects—Alexander, Troy, Charlemagne, and Arthur and his knights Some romances, however, owed their ultimate sources to purely English history or tradition, highly popular were *King Horn*, *Havelok the Dane*, *Bevis of Hampton*, and *Guy of Warwick* The greatest period of Middle English literature was the last half of the 13th cent when there appeared a number of individual authors with mastery of the language and of French or native forms In the alliterative meter, which had survived in English popular tradition, the anonymous author of the 14th-century poem *The Pearl* composed *Sir Gawain and the Green Knight* It is the only Arthurian romance in English which compares with the polished works of earlier French and German authors such as Chrestien de Troyes and Wolfram von Eschenbach William Langland, another alliterative poet, composed in this period *Piers Plowman*, a long allegory justly famous for its intense religious vision and social protest Geoffrey Chaucer is not only the greatest figure in Middle English, but also one of the greatest in all English literature by virtue of his broad humanity, his humor, his narrative skill, and his mastery of prosody In *Troilus and Criseyde* and the *Canterbury Tales* appears a cross section of the best medieval European literature, all transformed by the alembic of his genius A lesser contemporary was John Gower, whose *Confessio Amantis* shows considerable narrative ability The 15th cent saw many imitators of Chaucer John Lydgate and Thomas Hoccleve were the main ones in England, they were surpassed by King James I and Robert Henryson of Scotland (see SCOTTISH DIALECT) In the 15th cent also appeared a considerable body of excellent anonymous poetry in carols and in ballads (see BALLAD) like those of Robin Hood In this century, too, English medieval drama reached the peak of its long development in the mystery plays (see MIRACLE PLAY) of the Wakefield cycle. As English had become the predominant language, an adequate prose had begun to develop in the 14th cent The styles of the translator John of Trevisa and of the theologian John Wyclif are inclined to stiffness, but the translation of the Bible by the latter's follower, John Purvey, looks forward to the style of the King James Version. In the 15th cent. learned men like Reginald Pecock and Sir John Fortescue furthered the development of English for philosophical writing and argument In the evolution of an idiomatic prose, equally important were more popular works such as the translations of Mandeville's *Voyage and Travaile* and *The Book of Margery Kempe* The best-known prose work remains Sir Thomas Malory's *Morte d'Arthur*, both for its style and for its preservation of the Arthurian story Another later work genuinely medieval was the morality play *Everyman* (late 15th cent) See R M Wilson, *Early Middle English Literature* (1939), E K Chambers, *English Literature at the Close of the Middle Ages* (1945), H S Bennett, *Chaucer and the Fifteenth Century* (1947), A C Baugh, "The Middle English Period," in *A Literary History of England* (1948), translations of representative works in R S Loomis and Rudolph Willard, *Medieval English Verse and Prose* (1948)

Middlefield, industrial town (pop 1,230), S Conn , settled c 1700, set off from Middletown 1866 Dinosaur tracks found here were acquired by the Peabody Museum of Yale

Middle Kingdom or **Middle Country,** Mandarin *Chung Kuo*, Chinese name for China It dates from c 1000 B C , when it designated the Chou empire situated in the province of Honan. The modern name for China is Chung Hua Min Kuo [central glorious people's country, i e , republic]

Middleport 1 Village (pop 1,575), W N Y , NE of Buffalo and on the Barge Canal, settled 1812, inc 1859 **2** Village (pop 3,356), SE Ohio, on the Ohio river and SW of Marietta **3** Borough (pop 1,077), Schuylkill co , E Pa , near Pottsville, laid out 1830, inc 1859

Middlesboro, city (pop 11,777), S Ky , in the Cumberlands near the point where Kentucky, Tennessee, and Virginia meet, in a coal and farm area, founded 1889 It is a resort, a mining center, and a railroad division point, with a foundry, machine shops, and other plants Cumberland Gap and Pinnacle Mt are near by

Middlesbrough (-bru), county borough (1931 pop 138,274, 1947 estimated pop 142,660), North Riding of Yorkshire, England, on the southern bank of the Tees estuary It grew from a village after the opening of the Stockton-Darlington Railway and after the discovery of iron in the Cleveland Hills near here There are great iron and steel plants and technical and metallurgical schools, libraries, and museums The South Gare breakwater (1863), 2½ mi long, and the North Gare breakwater are partly built of slag from the factories The parish church of St Hilda takes its name from a very early religious establishment

Middlesex, inland county (232 sq mi , 1931 pop. 1,638,728, 1948 estimated pop 2,262,700), S central England, adjoining the city of London and wholly within the area of Greater London The administrative functions of the county are conducted in the Middlesex Guildhall in London The city of London has been separated from the rest of Middlesex as an independent administrative county since 1888 The terrain is level except for low hills on the northern border It is chiefly a residential suburban area of London, and through it main traffic routes run north and west Towns include Brentford, Ealing, Harrow, Hornsey, Tottenham, Uxbridge, Hampton, Hounslow, and Staines Middlesex has been important from Roman times, when the Roman road known as Watling Street traversed the district It was organized as a shire c 886 Hampton Court, one of England's most famous architectural monuments, was the home of Cardinal Wolsey, for whom it was built, and of Henry VIII Middlesex was heavily bombed during air attacks in the Second World War See Arthur Mee, *Middlesex* (1940)

Middlesex, borough (pop 3,763), N central N.J., near Bound Brook, inc 1913.

Middle Temple: see INNS OF COURT, TEMPLE, THE.

Middleton, Arthur, 1742–87, American Revolutionary patriot, signer of the Declaration of Independence, b near Charleston, S C , son of Henry Middleton After an education in England, he returned to America in 1763 Succeeding his father as a delegate, he served (1776–77, 1781–83) in the Continental Congress. He also fought at Charleston (1780), where he was captured by the British.

Middleton, Conyers, 1683–1750, English clergyman and controversialist. A fellow of Trinity College, Cambridge, he became known through his disputes with Richard Bentley, master of Trinity Bentley finally brought suit for libel, which he alleged was contained in *The Present State of Trinity College* (1719). Middleton was made the principal librarian of Cambridge Univ. in 1721. A storm of protest followed his *Letter from Rome, Showing an Exact Conformity between Popery and Paganism* (1729). Middleton opened the question of his own strict orthodoxy in his controversy with Daniel Waterland over the historical accuracy of the Bible. *The Life of Cicero* (1741) brought the author wide recognition, but later critics charged that it owed much to a work by William Bellenden. The latitudinarian attitude of Middleton was plainly shown and severely criticized in his *Free Inquiry into the Miraculous Powers* (1749), concerning the claims to miraculous powers in the Church His *Miscellaneous Works* (4 vols , 1752) include many of his writings. Middleton was one of the earliest English rationalistic theologians

Middleton, Henry, 1717–84, American Revolutionary leader, b near Charleston, S C. A planter of great wealth and influence, he held many official positions before resigning (1770) in protest against the British trade policies He was a member (1774–76) and president (1774–75) of the Continental Congress, but he opposed independence and resigned His son Arthur Middleton took his place The elder Middleton returned to South Carolina, and even though he resumed allegiance to the crown after the fall of Charleston (1780), his estates were not confiscated The gardens of his home near Charleston are preserved today as one of the beauty spots of that city

Middleton, Sir Hugh · see MYDDLETON, SIR HUGH

Middleton, Thomas, 1570?–1627, English dramatist and pamphleteer Remembered for his satirical plays, he also wrote civic pageants and masques and in 1620 became city chronologer The best of his realistic comedies are *A Trick to Catch the Old One* (1608), *A Chaste Maid in Cheapside* (c 1612, pub 1630), *No Wit, No Help Like a Woman's* (c 1613, pub 1657), and a tragicomedy, *The Witch* (c 1617, pub 1778) Others are *A Mad World My Masters* (1618) and, written with Dekker, *The Honest Whore* (1604, Part II, 1630) and *The Roaring Girl* (1611) His most powerful tragedies were *The Changeling* and *The Spanish Gypsie* (both c 1623, pub 1653) with Rowley and *Women Beware Women* (c 1623, pub 1657) *A Game at Chess* (1625) made political trouble for Middleton and its actors *Father Hubburd's Tales* (1604) and *The Black Book* (1604), pamphlets, show wide acquaintance with London's underworld See his works (ed by A H Bullen, 1885–86), study by W D Dunkel (1925)

Middleton, town (pop 1,172), W N S , on the Annapolis river and NE of Annapolis Royal, near the Bay of Fundy, in a fruitgrowing region It is a port of entry.

Middleton, municipal borough (1931 pop 29,188, 1947 estimated pop 31,060), Lancashire, England, on the Irk and N of Manchester It manufactures cotton and silk textiles and aircraft

Middleton. 1 Town (pop 2,348), NE Mass , NW of Salem, settled 1659, organized 1728 Chemical products are made here **2** Village (pop 1,358), S Wis , W of Madison, inc 1905

Middletown. 1 Industrial city (pop 26,495), co seat of Middlesex co , central Conn , on the west bank of the Connecticut river and below Hartford, settled 1650, inc 1784, coextensive with Middletown town, inc 1651 Synthetic fabrics are made here A typewriter factory was closed in 1936 for five weeks by a strike and moved away in 1940 Middletown was the birthplace of Reginald De Koven It is the seat of WESLEYAN UNIVERSITY and of a state training school for girls and a state hospital for the insane A suspension bridge (1938), 3,420 ft long, spans the Connecticut to Portland **2** Town (pop 1,529), N Del , between Newark and Dover, in a farming area, inc 1861 The town has several old structures, near it is the pre-Revolutionary St Anne's Episcopal Church **3** Town (pop 1,520), central Ind , ENE of Indianapolis **4** Village, E N J , NW of Red Bank, settled 1665 The first Baptist church in the state (1668) was built here Marlpit Hall (c 1684) is kept as a museum **5** Industrial city (pop 21,908), SE N Y , SW of Newburgh, inc 1888 It is a farm trade center, with railroad shops and foundries Among its varied products are clothing, leather goods, and silk textiles **6** City (pop 31,220), SW Ohio, on the Great Miami and near Hamilton, in a farm area, laid out 1802 Its industries include aircraft, paper and papermaking machinery, steel, steel products, and tobacco The Armco Steel Corp plant and its research laboratory are here **7** Industrial borough (pop 7,046), SE Pa , on the Susquehanna below Harrisburg, laid out 1755, inc 1829 A farmers' trading center, it manufactures metal products, steel, and clothing A U S military air depot is here **8** Rural and resort town (pop 3,379), between Newport and Portsmouth on Rhode Island, SE R I , set off from Newport 1743. "Whitehall," where Bishop Berkeley lived (1729–31), has been preserved

Middletown: see LYND, ROBERT STAUGHTON.

Middle West or **Midwest,** section of the United States about the Great Lakes and the upper Mississippi valley. It is a vague regional term and has been by some applied to all the northern section of the land between the Alleghenies and the Rockies More usually it is restricted to the Old Northwest and the neighboring states to the southern border of Missouri, E of the Great Plains. It thus includes

Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, Missouri, Kansas, and Nebraska. The Dakotas may also be included, and the term may be extended internationally to include the Prairie Provs of Canada (Manitoba, Saskatchewan, and Alberta) The area has some of the richest farming land in the world and is known for its corn and hogs The extended area also includes great wheat fields Parts of the Middle West also have an enormous amount of industry (e g , the automobile factories of Michigan and the rubber factories of Ohio) In popular tradition the Middle West is conservative, isolationist, Protestant, and "American " Actually it has all sorts and shades of political, economic, and religious opinion and a great mixture of peoples It does, however, constitute a dialect area of American speech

Midgard [Norse, = middle court], in Norse mythology, the earth

Midgley, Thomas, Jr, 1889–1944, American chemist, b Beaver Falls, Pa, M E Cornell, 1911 While serving as chemist with the General Motors Research Laboratories he discovered in 1922 tetraethyl lead as an antiknock agent in gasoline He is known also for his work in chemical refrigerants From 1923 he was vice president of the Ethyl Gasoline Corp and from 1930 of Kinetic Chemicals, Inc

Midhat Pasha (mĭd-hät' pä'shä), 1822–84, Turkish statesman As governor of Bulgaria he succeeded within the few years of his tenure (1864–69) in raising the country from misery to relative prosperity, building schools, roads, and granaries from funds obtained by local taxation His hostility to Pan-Slavism caused the Russian ambassador at Constantinople to secure his transfer to Baghdad He briefly was grand vizier in 1872 In 1876 at the head of the reforming party he led the revolution which deposed Abdu-l-Aziz The new sultan, Murad V, was shortly deposed because of his insanity, and ABDU-L-HAMID II succeeded Late in 1876 Midhat secured the promulgation of the first Turkish constitution, but as soon as Abdu-l-Hamid regained control over the situation he sent Midhat into disgrace Midhat was later imprisoned, charged with the murder of Abdu-l-Aziz, and strangled

Midhurst, rural district (pop 15,020) and village, Sussex West, England, in an agricultural region It is the birthplace of Richard Cobden and has a Perpendicular church and ruins of Cowdray House, a 16th-century mansion

Midi, Pic du see PIC DU MIDI DE BIGORRE and PIC DU MIDI D'OSSAU

Midian (mĭ'dēun), in the Bible, a people of N Arabia and of the lands E of Palestine They invaded and oppressed Israel and were defeated by Gideon in his famous victory Their eponym was a son of Abraham Gen 25 2, 37 28, 36, Ex 3 1, Num 31 1–9, Judges 6–8 Madian Acts 7 29

Midland, town (pop 6,800), S Ont, a port on E Georgian Bay and NNW of Toronto It has lumber mills, shipyards, grain elevators, a government coal dock, and a government radio station Near it is the Martyrs' Shrine commemorating the deaths of five Jesuit priests who were among the eight North American martyrs canonized in 1930

Midland 1 City (pop 10,329), co seat of Midland co, S Mich, at the confluence of the Pine and the Chippewa with the Tittabawassee W of Bay City, inc as a village 1869, as a city 1887 An early lumber town, Midland owes its development after 1800 to the Dow Chemical Company Oil and coal as well as salt are found in the vicinity **2** Industrial borough (pop 6,373), W Pa, on the Ohio and NW of Pittsburgh, settled c 1820 Its industries include steel mills and foundries and a coke by-products plant **3** City (1940 pop 9,352, 1947 estimated pop 18,000), W Texas, on the southern border of the Llano Estacado, WNW of San Angelo, settled 1885, inc 1906 Though Midland has drawn much wealth from cattle ranches, its reputation for being fabulously rich is linked to the many offices of oil companies here (the oil fields themselves are around Odessa) The opulent and bustling city attracts travelers, and the airport between Midland and Odessa is important in transcontinental traffic

Midland College see FREMONT, Nebr

Midland Park, borough (pop 4,525), NE N J, N of Paterson, inc 1894

Midlands, region of central England Generally coextensive with the Anglo-Saxon Mercia, it is usually considered to include the present counties of Bedford, Buckingham, Derby, Leicester, Northampton, Nottingham, Rutland, and Warwick

Midlothian (mĭdlō'dhēun), formerly **Edinburghshire**, county (366 sq mi , 1931 pop 526,296, 1948 estimated pop 583,624), E central Scotland, on the south shore of the Firth of Forth The county town is Edinburgh, the capital of Scotland In the south are the Pentland and Moorfoot hills, which rise to c 2,000 ft The main rivers are the Gala Water, Water of Leith, the Esk, the Almond, and the Tyne It is a predominantly agricultural region, with market gardening, fruitgrowing, stock raising, and dairying, fishing is also an important occupation. Paper, whisky, and ironware are manufactured, and there are shipbuilding centers at Leith and Granton The county—and particularly the city of Edinburgh—has been prominent in the history of Scotland There are numerous vestiges of Roman occupation and medieval secular and ecclesiastic remains Here were fought the battles of Pinkie and of Carberry Hill, where Mary Queen of Scots was defeated The Heart of Midlothian was a popular name for the Tolbooth prison at Edinburgh and gave its title to the novel (1818) by Sir Walter Scott

Midlothian (mĭdlō'thēun) **1** Village (pop 2,430), NE Ill , near Chicago, inc 1927 **2** City (pop 1,027), N Texas, SSW of Dallas, in the rich blackland farming country, settled 1880, inc 1898

midnight sun, name for the sun when visible at midnight At the North Pole the sun shines continuously from March 21 to Sept. 23, apparently traveling in a circular path above the horizon The number of months, weeks, or days of continuous sunshine decreases from the North Pole southward At the Arctic Circle the sun is visible at midnight once during the summer, about June 22 From the South Pole to the Antarctic Circle the same conditions prevail at opposite times of the year This phenomenon is the result of the inclination of the axis of the earth to the plane of its orbit

Midrash (mĭd'räsh) [Heb , = investigation], a homiletical, rather than a literal, interpretation and elucidation of the Scriptures by Jewish rabbis since A D c 200 It is incorporated in the Mishna of the TALMUD and, like the Gemara, contains both halakic (see HALAKAH) and haggadic elements Midrashic books were compiled for a number of books in the Bible—e g , Exodus, Leviticus, Numbers, Deuteronomy, Pentateuch, Sifra, Ruth The most important halakic Midrashim are on the Pentateuch and the Five Scrolls and on Exodus, the important haggadic Midrashim are the *Tanhuma Midrashim* (on the Pentateuch) and the *Pesikta Midrashim*

midsummer day and midsummer night, names given to the feast of the nativity of St John the Baptist (June 24) and the preceding night (St John's Eve, June 23) Because midsummer is about the time of the solstice, it has been associated since long before Christianity with solar ceremonies Relics of such ceremonies are the bright bonfires and the merrymaking of midsummer night Formerly it was considered the one night of the year when supernatural beings were about The gaiety and frolic of the night were often excuses for unbridled license The importance of this night to love and lovers is undoubtedly a survival of fertility rites

Midvale, city (pop 2,875), N central Utah, on the Jordan river and S of Salt Lake City Settled by Mormons in 1859, it was called Brigham Junction, East Jordan, and (with incorporation as a city in 1909) Midvale A large smelter (lead, zinc, silver, and gold) dominates the city

Midway, group (2 sq mi , pop 437) comprising Sand and Eastern islands with the surrounding atoll, central Pacific, c 1,150 mi NW of Honolulu About halfway across the Pacific and near the 180th meridian, the group was discovered (1859) by Americans and was annexed in 1867 A cable station was opened in 1903 In 1935 Midway became an air base of the Pan American Airways A U S naval air base was commissioned here in 1941 Midway gave its name to the **battle of Midway** (June 5–6, 1942), one of the decisive victories of the Second World War, which took place near by The battle, fought entirely with aircraft, resulted in the destruction of a large Japanese battle fleet, crippled the Japanese navy, and put an end to threat of invasion in the Pacific

Midwest see MIDDLE WEST

midwifery (mĭd'wĭ'furē), the art of assisting at childbirth The term, largely superseded by the more general term OBSTETRICS, arose from the practice of placing the delivery of a child in the hands of a woman known as a midwife The midwife is mentioned in the Bible, and trained midwives were employed in ancient Greece and Rome The methods used and the training of midwives deteriorated during the medieval period Until the 16th cent physicians were called upon only when Caesarean section was necessary to deliver the child Thereafter physicians assisted more often at childbirth, a number of treatises on midwifery appeared, and the licensing of midwives became common In the 18th cent midwifery became a part of medical training, and training courses for midwives were widely established, by the end of the century obstetrics had become an important branch of medical science The services of midwives are still used in many parts of the world In many European countries and in certain states of the United States midwives must obtain a license to practice

Mie (mē'ä), prefecture, S Honshu, Japan see TSU, the capital

Mieczyslaw see MIESZKO

Mieres (mēā'rās), town (pop 9,616), Oviedo prov , N Spain, in Asturias It is an important mining center for coal, sulphur, and cinnabar and has iron and steel plants

Miereveit, Miereveld, or Mievereldt, Michiel Janszen van (all. mēkhēl' yän'sən vän mē'ruvĕlt), 1567–1641, Dutch portrait painter, court painter to the house of Orange He worked chiefly in Delft and at The Hague, where he was admitted (1625) to the guild of St Luke Mierevelt had many pupils and assistants, whose numerous, and usually inferior, works bear his name His portraits include those of William of Orange, the princes Philip William, Maurice, and Frederick Henry of Orange, Elector Palatine Frederick V, and Jacob Cats (Rijks Mus), William of Orange and four princes of the house of Orange (The Hague), and Margaretha van Cloostwyck and Jacob van Deel (Metropolitan Mus) His son and pupil, **Pieter van Mierevelt**, 1595–1623, painted portraits in the manner of his father His *Anatomy Lesson* is in the hospital at Delft

Mieris (mē'rĭs), family of Dutch genre and portrait painters of Leiden **Frans van Meiris** (frāns' vän), 1635–81, the most important, was the son of a goldsmith and pupil of Gerard Dou He early became proficient, and his tiny, meticulous paintings won him distinguished patrons and a lucrative practice Mieris excelled in the faithful rendering of texture and was an admirable portraitist His works are to be seen in many important European collections Among his numerous well-known works are *Oyster Breakfast* (Hermitage, Leningrad), *Sleeping Girl* (Uffizi), and *Lady in a Crimson Jacket* (National Gall , London) His sons and pupils, **Jan van Mieris** (vän'), 1660–90, and **Willem van Mieris**, (vĭ'lum), 1662–1747, continued his tradition, but failed to equal him A grandson, **Frans van Mieris**, 1689–1763, also followed in his steps with only slight success The younger Frans is known, however, as an antiquarian and writer on numismatics and history

Mies van der Rohe, Ludwig (lōōt'vĭkh mē'ĕs vän dĕr rō'u), 1886–, German-American architect, one of the BAUHAUS architects He was an assistant to Peter Behrens, in whose office Walter Gropius and Le Corbusier had also been trained After the First World War, Mies produced (1921) a design for an all-glass skyscraper which attracted international attention In 1927 he was placed in charge of the Werkbund Housing Exposition at Stuttgart, for which he built a modern apartment house, and in 1929 had charge of the German section of the Barcelona International Exposition In 1938 he became director of architecture at the Armour Institute (now the Illinois Institute of Technology) and among other projects has designed the buildings for their new campus Mies's buildings are distinguished by their functional composition based on the lines of interior walls and the planes of floors and roof In façades he uses great planes of glass or unobstructed wide openings His work includes residences and workmen's dwellings Mies became a U S citizen in 1944

Mieszko I (myĕsh'kō) or **Mieczyslaw I** (myĕ'chĭswäf), 921?–992, Polish ruler, duke of Poland (962–92), the first important member of the PIAST dynasty He accepted Christianity (966) and began the conversion of Poland, which he ultimately placed under the protection of the pope Anxious to regulate his relations with the Germans, who in 963 invaded Poland for the first time, Mieszko concluded (c 963) a treaty with Emperor Otto I He began the conquest of Pomerania His son, BOLESLAUS I, succeeded him

Mieszko II or **Mieczyslaw II**, 990–1034, king of Poland (1025–34), son and successor of Boleslaus I His reign was marked by internal and external strife He lost Slovakia to Hungary, Moravia to Bohemia, Lusatia to Germany, Pomerania to Denmark, and sections of Ruthenia to Kiev His kingdom was in a state of chaos when it passed to his son, CASIMIR I

Mifflin, Thomas, 1744–1800, American Revolutionary general and politician, b Philadelphia, grad. College of Philadelphia (now the Univ of Pennsylvania), 1760 Turning from commerce to public affairs, he was a member of the provincial assembly and of the First Continental Congress He joined the army early in the American Revolution and rose to be quartermaster general He resigned (1776) to recruit new patriot troops in Pennsylvania, but later he resumed his duties as quartermaster general until charges of misuse of funds caused him to offer his resignation The charges were never substantiated Dissatisfied with Washington's conduct of the war, he became involved in the so-called Conway Cabal and tried to undermine Washington, but later he renewed his friendship with the commander in chief Mifflin again served in the Continental Congress (1782–84) and was its president (1783–84) He was later a delegate to the Federal Constitutional Convention He was a governor of Pennsylvania (1790–99) in a period that saw much economic development and political dissidence, including the WHISKY REBELLION and the revolt of the Pennsylvania Germans under John FRIES

Mifflinburg, borough (pop 2,090), central Pa , SW of Lewisburg, laid out 1792, inc 1827 Its manufactures include automobile parts and textiles.

Mifflintown, agricultural borough (pop 1,097), co. seat of Juniata co , S Pa., on the Juniata river and NW of Harrisburg, laid out 1791, inc 1833. The

borough was named for Thomas Mifflin. It is a resort center.

Migdal-el (mĭg'dəl-ĕl") [Heb ,=tower of God], fortified town, extreme N Palestine Joshua 19.38.

Migdal-gad (-găd") [Heb ,=tower of Gad], town, SW Palestine Joshua 15 37 It has been tentatively identified c 4 mi NE of Ascalon

Migdol (mĭg'dŏl) **1** Place, near which the Israelites crossed the Red Sea Ex. 14 2, Num 33 7 **2** Egyptian city, where Jews lived Jer. 44 1, 46 14

Mignard, Pierre (pyĕr' mēnyär'), 1610–95, French painter He lived for 22 years in Italy, where he painted Popes Urban VIII and Alexander VII In 1657 he was summoned to France by Louis XIV to portray the king and the celebrities of the court In 1664 he decorated, in fresco, the cupola of the Church of Val-de-Grâce in Paris He became leader of the opposition against Le Brun and the Académie royale de Peinture et de Sculpture, but upon the death of Le Brun succeeded to all his honors including the directorship of the Académie and of the Gobelin tapestry works Among his best-known works are *St Luke Painting the Virgin*, *St Cecilia*, and *Mme de Maintenon* (all Louvre)

Migne, Jacques Paul (zhäk' pôl' mē'nyu), 1800–1875, French publisher of theological works, a Roman Catholic priest (ordained 1824) He set up a printing press in Paris and printed many religious and theological works His principal publication was *Patrologia*, a collection of all the writings of all Christian writers into the Middle Ages Its principal value lies in the fact that the volumes are not expensive and that in the edition countless works have been published for the first time There are three series Latin Fathers to Innocent III (217 vols and an index in 4 vols), Greek Fathers (to 1438) in Latin translation (81 vols), and Greek Fathers in Greek and Latin (166 vols)

Mignet, François Auguste Marie (frăswä' ōgüst' märē' mēnyĕ'), 1796–1884, French historian and journalist With his lifelong friend, Adolphe THIERS, he played an important part in the liberal opposition to the government of Charles X, he and Thiers were editors of the powerful opposition daily, *Le National* As a historian, Mignet is best known for his popular *Histoire de la Révolution française* (1824, many later editions and translations) A middle-of-the-roader, Mignet considered the French Revolution as the historical evolution toward a constitutional monarchy, and he deplored its violent aspects as excesses He also wrote several works on Spanish history, among them *Antonio Perez and Philip II* (Eng tr , 1846), and a life of Mary Queen of Scots (Eng tr , 1851)

Mignon, Abraham (ä'brəhăm mĕn'yôn), 1640–1679?, German still-life painter in Holland, b Frankfurt-am-Main He studied in Holland with De Heem, whose flower and fruit painting he successfully imitated His works are in many European galleries *Flowers in a Vase* (Rijks Mus) is characteristic

mignonette (mĭnyunĕt'), any plant of the genus *Reseda*, small-flowered Old World herbs The common mignonette (*Reseda odorata*) is widely cultivated as an annual garden, greenhouse, or pot plant for the delightful fragrance of the whitish, yellowish, or reddish flowers Another species (*Reseda luteola*), usually called weld or dyer's-weed, has been used for a yellow dye and is naturalized in North America

migraine (mī'grān, mĭgrān'), intense headache usually recurring periodically The pain commonly arises in one temple and may spread to the back of the head or even to the whole head, the face, and the neck It is often accompanied by visual disturbances (e g , blurred or double vision and dark spots and flashes of light), by nausea and vomiting, and by vertigo It is believed that incidence is higher in women than in men and that the tendency to migraine is sometimes inherited, usually from the mother Although there is no agreement as to the ultimate cause of migraine headache, the immediate cause is generally conceded to be the expansion of arteries in the neck and brain resulting in overstimulation of nerves and consequent pain The onset of attacks is attributed to various causes, e g , emotional disturbances, fatigue, allergies, glandular disturbance, and certain foods The attacks, which may last hours or days, are usually treated with drugs to relieve pain or to contract the arteries Some patients have been helped by inhaling oxygen Attempts to prevent migraine or to extend the period between attacks include the administration of various substances, e g , histamine, a salt of nicotinic acid, and vitamin B_1; the severing of the temporal artery, and the elimination of factors causing tenseness or fatigue See N. D. Fabricant, *Headaches* (1949)

migration, movement of people into new areas, usually a distance away from the original home Migrations have occurred throughout human history and have played an important part in the peopling of all the areas of the world Primitive migrations, of which there are traces, were tribal and were usually made in search of food. Physical changes, such as the advance of the glacial mass, and invasion by other tribes also accounted for prehistoric mass migration. In modern times economic pressure became the basic motive for migration, areas of low population density attracting people from areas where density is high and economic opportunity consequently low. The desire for religious and political freedom has also been important, and national policies have played some part in the movement of peoples Modern migrations have been those of individuals and families rather than of mass groups Since the beginning of the 19th cent the largest international migration in history has taken place, with the IMMIGRATION of vast numbers of Europeans into other continents, especially North America Regulation of migration by modern governments became significant in the 20th cent The development of totalitarianism and the Second World War resulted in a new pattern of forced mass migration within Europe Over 30,000,000 people were forcibly moved or scattered by the Nazis during the war, and in the post-war period great numbers were moved in Eastern Europe (see REFUGEES), for migration of Jews into Palestine, see ISRAEL) Normal internal migration has been characterized in modern times by a noticeable population shift from the country to the city There has also been, especially in the United States, an increasing amount of MIGRATORY LABOR See Carter Goodrich, ed , *Migration and Economic Opportunity* (1936), Julius Isaac, *Economics of Migration* (1947), Milbank Memorial Fund, *Postwar Problems of Migration* (1947), E M Kulischer, *Europe on the Move* (1948)

migration of animals, movements of animals in large numbers from one place to another Some migrations are regular seasonal journeys to and from a definite area, some are trips, long or short, to a habitat suitable for reproduction, and others are sporadic movements from which there is no return Sporadic migrations are made by the LEMMING, by the locust or migratory GRASSHOPPER, and by the army worm Many butterflies undertake seasonal migrations The SALMON migrates from salt to fresh water to breed, and the freshwater EEL breeds in the Atlantic Ocean SE of Bermuda Sea turtles return to land to lay their eggs Some whales travel long distances to breed on certain shores In Africa there are definite movements of game animals to avoid the droughts The caribou in Newfoundland migrate southward as winter approaches Regular seasonal migrations are best exemplified by birds Bird banding, which has been carried on in North America on a large scale since 1920, and observational and experimental studies have added much to the knowledge of migration, but the forces which initiate the typical migratory flights are not fully understood Attempts have been made to correlate climatic changes and glacial movements in North America with the establishment of migratory habits in some birds and the nonmigratory behavior of others Failure of food supply and temperature changes do not offer satisfactory explanations It is generally agreed that migration is probably the result of an environmental stimulus and an allied physiological one The instinct for migration is known to bear a relation to the cycle of enlargement in the spring and reduction in the fall of the reproductive organs Experiments conducted by William Rowan with juncos and some other birds support the theory that variation in day length (with resulting variation in amount of activity) is the chief external stimulus and that the production of a hormone by the reproductive organs is the internal stimulus Bird migration is not limited strictly to spring and fall There is variation and overlapping in time between species and individuals of the same species More birds (especially small songbirds) migrate by night than by day Vertical migration is characteristic of mountain-dwelling birds, many of which descend to lower altitudes for the winter Among the long-distance migrants are the arctic TERN, the golden PLOVER, and the blackpoll warbler, which travels from Alaska to South America Most ruby-throated hummingbirds winter in South America and make a nonstop flight of c 500 mi over the Gulf of Mexico, often flying in the troughs between the waves See William Rowan, *The Riddle of Migration* (1931), G C Aymar, *Bird Flight* (1938), A L Thomson, *Bird Migration* (rev ed , 1942)

migratory labor (mī'grutō"rē), term applied in the United States to several different groups of workers The harvesters of seasonal crops—wheat, cotton, sugar beets, fruits, and vegetables—may go from one place to another transporting themselves, or they may be transported by a contractor or "padrone" who has agreed to supply the farmer with so much labor at the time it is needed. They may be urban dwellers who go on the land only for the season or they may be migrants whose only means of living is to follow the crops from one place to another Efforts to enforce sanitary conditions, prevent child labor, and protect the workers from exploitation have met with slight success, though a New York state law of 1946 requires the registration of employers who recruit, transport, or are responsible for bringing into the state 10 or more workers, and it empowered state health officers to order the elimination of unsanitary conditions. In the 1930s many small farmers and farm laborers of the plains states, driven out by droughts, the depression, and the increase of mechanized farming, piled what they could of their possessions into the family car and sought a living on the West Coast, moving from one place to another The Joad family of John Steinbeck's *Grapes of Wrath* is a dramatic representation of these migrants It was estimated that this type of permanent migratory worker, without home, voting privileges, or union representation, numbered more than 3,000,000. In the Second World War a third type of migratory worker sprang into being with the need for labor in munition plants, airplane factories, and other defense industries These uprooted workers presented housing problems, but they were protected by wage and hour laws which do not apply to agricultural labor See H H Collins, Jr , *America's Own Refugees* (1941), Cary McWilliams, *Ill Fares the Land* (1944)

Migron (mī'grŏn), unlocated place or places N of Jerusalem 1 Sam 14 2, Isa 10 28

Miguel (mēgĕl'), 1802–66, Portuguese prince, son of John VI and brother of PEDRO I of Brazil. On John's death the succession was somewhat in question The reactionary absolutists favored Miguel for the throne, the liberals supported Pedro, who was the elder Pedro abdicated conditionally in favor of his daughter, MARIA II, provided that the constitutional charter he had just issued be accepted and that Miguel should act as guardian for and marry the little queen Miguel accepted these terms, but the absolutists threatened revolt Miguel came to Portugal in 1828 and convened the "traditional" Cortes, which offered him the crown He accepted The liberal leaders, who had fled the country, gathered their forces and managed to establish themselves in the Azores. There came Pedro in 1832, and the liberal forces sailed to Oporto They barely managed to withstand a long siege by Miguel In 1833 an English sea force in the employ of the liberals destroyed Miguel's fleet, and Miguel's fortunes sank By 1834 his cause was lost and he agreed to abandon Portugal. Once in Genoa he denounced his own capitulation, and Maria's reign was troubled by Miguelist uprisings, but all were vain

Mijamin (mĭ'jəmĭn), variant of MIAMIN

mikado (mĭkä'dō), a former title of the emperor of JAPAN used chiefly in the English language

Mikhailovich, Draja or **Dragoliub** (drä'zhä mĕhī'lôvĭch, dra'gôlyōōb"), 1893?–1946, Yugoslav soldier He fought with the *chetniks*, a Serbian guerrilla force, in the Balkan Wars and in the First World War, and after the conquest (1941) of Yugoslavia in the Second World War he headed the revived *chetnik* forces His successful operations earned him promotion from colonel to general and appointment (1942) as minister of war by the Yugoslav government in exile An ardent Serbian nationalist, he soon clashed with the partisans of Marshal TITO, who accused him of collaborating with the AXIS in order to fight Tito's predominantly Communist forces Mikhailovich's forces gradually dwindled while Tito's increased, and by 1944 he had lost Allied support and was reluctantly—dismissed by his king Mikhailovich continued antipartisan warfare with the remnants of his forces, but was captured by the Tito authorities and was tried on charges of collaboration and treason His trial at Belgrade was widely denounced in the outside world as a travesty of justice While it seems certain that Mikhailovich did at times act against the Tito forces in an understanding with the enemy occupation authorities, the question of treason remains open His death sentence, which was executed despite world-wide protests, was based on internal political considerations rather than on his actual guilt

Mikkeli (mĭk'kĕlē), town (pop 11,091), S central Finland It is a center of the SAIMA lake region and was incorporated in 1838

Mikloth (mĭk'lŏth) **1** Son of Jehiel and Maachah 1 Chron 8 32, 9 37, 38 **2** Captain of a division of David's army, 1 Chron 27 4

Mikneiah (mĭknē'yu) [Heb ,=possession of God], temple doorkeeper 1 Chron 15 18, 21

Mikolajczyk, Stanislaus, Pol *Stanisław Mikołajczyk* (stänēs'wäf mĭkôwī'chĭk), 1901–, Polish politician The leader of the Polish Peasant party, he became vice premier (1941) and premier (1943) in the Polish government in exile at London He sought to reach a compromise with the USSR concerning the Polish-Russian border and with the Polish Committee of National Liberation (see LUBLIN) concerning the future Polish government After the YALTA CONFERENCE he joined the new Polish government as vice premier and minister of agriculture He soon was the only center of opposition to the Communist and left-wing Socialist leaders of the state, thus finding himself in the anomalous position of opposing a cabinet of which he was a member. The procedure adopted in the elections of 1947 resulted in his defeat Mikolajczyk fled Poland and settled in the United States.

Mikszath, Koloman (kō'lōmän mĭk'sät), Hung. *Mikszáth Kálmán* (käl'män), 1849–1910, Hungar-

ian novelist. He is the author of witty novels and tales of Hungarian life, which include *St. Peter's Umbrella* (1895; Eng tr., 1900)

Mikulov, Czechoslovakia: see NIKOLSBURG.

Milaca (mĭlă'kə), village (pop 1,627), co seat of Mille Lacs co, E Minn, on the Rum and NNW of Minneapolis, settled 1858, inc 1897 Originally a lumbering town, it is now a farm trade center.

Milalai (mĭ"lälä'ĭ, mĭlä'lăĭ), musician in the dedication of the wall Neh 12 36

Milan (Milan Obrenovich) (mĭ'lən ōbrĕ'nōvĭch), 1854–1901, prince (1868–82) and king (1882–89) of Serbia, grandnephew of Milosh Obrenovich He succeeded his cousin Michael Obrenovich as prince He was educated in Paris and a regency ruled for him until 1872 Under Russian influence he declared war (1876) on Turkey in support of the rebellion in Bosnia and Hercegovina (see RUSSO-TURKISH WARS) At the Congress of Berlin (1878) he secured Austrian support and obtained European recognition of the full independence of Serbia from the Ottoman Empire, and in 1882 he took the title king of Serbia Heavy taxation, his pro-Austrian policy, his scandalous private life, and his unsuccessful campaign (1885) against Bulgaria aroused bitter opposition After proclaiming (1889) a liberal constitution, he abdicated in favor of his son, ALEXANDER (Alexander Obrenovich), and went abroad He returned in 1894 and became commander in chief of the army, but resigned upon his son's scandalous marriage

Milan (mĭlăn', mĭ'lun), Ital *Milano* (mēlä'nō), Latin *Mediolanum*, city (pop 1,068,079; with suburbs 1,115,848), capital of Lombardy and of Milan prov, N Italy Because of its geographical position in the Lombard plain, at the intersection of several European lines of communication, it became a first-class strategic and commercial center It is the most important silk market in Europe The manufacture of textiles is Milan's leading industry, printing and publishing, especially of music, and the production of machinery, airplanes, and chemicals make it today the richest industrial city in Italy Of Celtic origin, it was conquered by the Romans and was in late Roman times the seat of the Western Empire From 374 to 379 AMBROSE was bishop, and Milan became the religious center of N Italy It was destroyed by the Huns (c 450) and again by the Goths (539) and was conquered by the LOMBARDS in 569 In the 12th cent a free commune was formed, and Milan gradually gained supremacy over the cities of LOMBARDY From the 11th to the 13th cent it suffered from class warfare, the Guelph and Ghibelline strife, and the enmity of rival cities, which assisted Emperor Frederick I in destroying it (1163) A member of the Lombard League, it contributed to Frederick I's defeat at Legnano (1176) At the Peace of Constance (1183) Milan's independence was recognized In the 13th cent it lost its republican liberties first the Torriani, then the VISCONTI (1277) became its lords Galeazzo Visconti received (1395) from the emperor the title duke of Milan, and under him the duchy became one of the most important states in Italy After the death of the last Visconti (1447), the SFORZA became dukes The city flourished, but it soon became involved in the ITALIAN WARS and fell (1535) under Spanish domination This was a period of decline At the end of the War of the Spanish Succession, Austrian rule was established (1713–96) Bonaparte made it the capital of the Cisalpine Republic (1797) and of the kingdom of Italy (1805–1814) In 1815 it went back to Austria Milan was a revolutionary center throughout the RISORGIMENTO in five days of heroic fighting in 1848 the people succeeded in expelling the Austrians, who returned, however, a few months later Only in 1859 could Milan be united with the kingdom of Sardinia Its industrial importance grew after its incorporation (1861) into Italy In the Second World War the city suffered widespread damage from air raids, most of its important buildings were hit, some beyond repair The most striking feature in the city is the Gothic cathedral (1386–1813), which shows traces of many styles It is elaborately ornamented with more than a hundred pinnacles and thousands of statues On the highest pinnacle (354 ft.) is a statue of the Madonna The Romanesque Church of St Ambrose, founded in 386, is the most important medieval building A number of churches are the work of Bramante, e g, Santa Maria delle Grazie, in its refectory LEONARDO DA VINCI painted the *Last Supper*. The Brera Palace contains a picture gallery, a library, and the Institute of Fine Arts An important art museum is housed in the Poldi-Pezzoli Palace The AMBROSIAN LIBRARY, one of the richest in Europe, has a good collection of paintings The Castello Sforzesco, once a residence of the Sforza, is an imposing construction, Bramante and Leonardo collaborated with others in designing it. The world-famous Teatro alla Scala, heavily damaged by bombs, has been restored Milan, long a musical center, has an excellent conservatory. There are two universities, one state and the other Catholic

Milan (mĭ'lən) **1** Village (pop. 1,210), NW Ill., just S of Rock Island and on the Rock River near its junction with the Mississippi, in a farm area, inc 1893 **2** Town (pop 1,000), Ripley co, SE Ind, NW of Aurora. **3** Village (pop. 2,340), SE Mich, on a tributary of the Raisin and SW of Detroit, in a rich farm area, inc 1885. Furnaces and boilers are made here. A federal detention farm is near **4** City (pop 2,016), co. seat of Sullivan co, N Mo, W of Kirksville, in a livestock and truck-farm area, laid out 1845 **5** Village (pop 719), Erie co, N Ohio, SE of Sandusky, settled 1804 by Moravian missionaries and Indian converts, laid out 1816 It was once a grain-shipping center Thomas A Edison's birthplace is here **6** Town (pop 3,035), W Tenn, N of Jackson It is a shipping point in an area growing vegetables, fruit, and cotton

Milan Decree, issued, Dec, 1807, by Napoleon in an attempt to enforce the CONTINENTAL SYSTEM The Milan Decree, designed to strengthen the BERLIN DECREE, authorized French warships and privateers to capture neutral vessels sailing from any British port or from countries occupied by British armies The English government issued replies by ORDERS IN COUNCIL

Milazzo (mēlät'tsō), town (pop 10,378), NE Sicily, Italy, on a peninsula extending into the Gulf of Milazzo in the Tyrrhenian Sea The ancient MYLAE, it is now a wine trade center Garibaldi completed his conquest of Sicily by defeating the Bourbon troops here There is an imposing 13th-century castle Several palaces and churches were damaged by bombings in 1943

Milbank, city (pop 2,745), co seat of Grant co, NE S Dak, NE of Watertown near the Minn line, settled 1880 A shipping center for a dairy region, the city has granite quarries and monument works

Milbank Memorial Fund see ANDERSON, ELIZABETH MILBANK

Milcah (mĭl'kə) **1** Wife of Abraham's brother Nahor Gen 22 20 **2** Daughter and coheiress of Zelophehad Num 27 1–12

Milcom [Heb, =their king, cf MOLECH], god of the Ammonites 1 Kings 11 5, 33, 2 Kings 23 13 In Judges 11 24 the name is replaced (probably by a slip) by Chemosh

mildew, name for certain fungi and the diseases they cause in various crops and for the discoloration and sometimes weakening and disintegration of materials, such as leather, fabrics, and paper, caused by other related fungi Powdery mildews usually grow on the surface of plant tissues, forming a gray or white coating and absorbing nourishment from the host Sometimes they cause dwarfing and distortion They attack many fruits and cereals Dusting with sulphur helps to control mildews The downy mildews are really molds One of the most destructive is the downy mildew of grape, native to the United States and introduced into Europe, where it has caused great losses in vineyards Spraying with Bordeaux mixture aids in its control Methods of making fabrics and leather resistant to mildew have been devised

Milé, Jean François see MILLET, JEAN FRANÇOIS (c 1642–1679)

Miles, Nelson Appleton, 1839–1925, American army officer, b near Westminster, Mass In 1861, at the outbreak of the Civil War, he left his job in a Boston store and organized a company of volunteers He served throughout the war, distinguishing himself at Antietam and Fredericksburg, for his actions at Chancellorsville (1863) he was brevetted brigadier general After the war he was for a time custodian of Jefferson Davis Remaining in the army as a colonel, he helped subdue the Sioux in Montana, in 1877 he destroyed the village of Crazy Horse In that same year he brought to an end the gallant adventure of Chief Joseph of the Nez Percé, capturing him near the Yellowstone In 1886, as commander of the Dept of Arizona, he accepted the surrender of the Apache under Geronimo, and in 1890–91, in Dakota, he suppressed another Sioux outbreak As commander of the Dept of the Missouri he commanded the troops which were called out in the Pullman strike of 1894 In 1895 he became commander in chief of the army, rising to the rank of lieutenant general in 1901 Owing to political chicanery he was not given command of the expedition against Santiago de Cuba (1898), which was commanded instead by W R SHAFTER, Miles, however, brought reinforcements and accepted the surrender He later commanded in Puerto Rico In 1901 President Theodore Roosevelt censured him for publicly approving Admiral Dewey's report on the Schley case He visited the Philippines in 1902, made an official inspection, and reported on mistreatment of insurgents by Americans In 1903 he was retired. He wrote *Personal Recollections and Observations* (1896), *Military Europe* (1898), and *Serving the Republic* (1911).

Miles City [for Nelson A Miles], city (pop 7,313), co seat of Custer co., SE Mont, on the Yellowstone river at the mouth of the Tongue, inc 1887. It grew up around Fort Keogh (built 1877), was reached by the Northern Pacific in 1881, and was the leading cattle town of the region. Saddles and other leather goods are made here. There is some irrigation, and a Federal livestock experimental farm is in Miles City.

Miles College: see BIRMINGHAM, Ala

Milesians (mīlē'zhənz), in the legendary history of Ireland, the last invading people, who came after the TUATHA DE DANANN They were led by two brothers, sons of a Spaniard, Milesius, who had fought in Greece According to the tradition the Milesians were the ancestors of the present inhabitants of Ireland.

Miletus (mīlē'təs), ancient seaport of W Asia Minor, in Caria, on the mainland not far from Samos It was occupied by Greeks in the settlement of the E Aegean (c 1000 B C) and became one of the principal cities of Ionia From the 8th cent B C it led in colonization, especially on the Black Sea The Milesians were strong enough to resist the Lydian kings and were not molested by the Persians In 499 B C, however, they stirred up the revolt of Ionian Greeks against Persia, the Persians sacked the city (494 B C) Although less flourishing, Miletus remained an important seaport until the harbor silted up early in the Christian era Thales, Anaximander, and Aspasia were Milesians St Paul visited Miletus twice, once on the return from his third missionary trip Acts 20 15–38, 2 Tim 4 20 The name appears as Miletum

milfoil see YARROW

Milford. 1 Town (pop 16,439), SW Conn, on Long Island Sound E of Bridgeport, settled 1639 The small harbor, early scene of shipping and shipbuilding, became a yacht harbor, scientific oyster fishing has been developed Many old buildings remain **2** City (pop, 4,214), S central Del, S of Frederica, inc 1867 The Mispillion river divides the city into North and South Milford It is a trade and industrial center and a shipping point for farm products Several 18th-century buildings remain **3** Village (pop 1,628), E Ill, N of Danville, settled c 1830 on the old Hubbard Trail, platted 1836, inc 1874 It is a farm trade center **4** Town (pop 1,202), NW Iowa, near the Minn line and S of Spirit Lake, founded 1869, inc 1892 It is a farm trade center **5** Town (pop 1,264), S central Maine, on the Penobscot opposite Old Town, inc 1833 **6** Industrial town (pop 15,388), S Mass, SE of Worcester, settled 1662, set off from Mendon 1780 It included HOPEDALE until 1886 Shoes and clothing are produced **7** Village (pop 1,637), SE Mich, on the Huron river and near Pontiac, in hilly country, inc 1869 Electric welding machinery is made Near by is the General Motors proving ground **8** Town (pop 3,927), S N H, on the Souhegan and NW of Nashua, formed 1794 of parts of Hollis and Amherst There are granite quarries and textile and lumber manufactures **9** Village (pop 2,139), SW Ohio, on the Little Miami and NE of Cincinnati **10** Town (pop. 1,393), SW Utah, on Beaver river, settled 1880, inc 1903 It grew in a mining boom and today is a supply point for mines and ranches as well as a railroad town and a center of irrigated farms

Milford Haven, urban district (1931 pop 10,104, 1943 estimated pop 10,884), Pembrokeshire, Wales, a seaport on the northern side of the bay called Milford Haven The bay, headquarters for steam trawlers, forms a splendid natural harbor 10 mi long and 1 to 2 mi wide, with a lighthouse on St Ann's Head at the entrance Henry VII landed here from France in 1485 The town was very early a port for trade with Ireland and is one of the chief British fishing ports

Milford Sound, arm of the Tasman Sea, indenting SW South Island, New Zealand High mountains on its shores give it a fjordlike beauty

Milhau, France see MILLAU

Milhaud, Darius (daryüs' mēyō'), 1892–, French composer, studied at the Paris Conservatoire He began composing c 1912 In Brazil (1917–19) as an aide to Paul Claudel, French minister to Brazil, he became acquainted with Brazilian folk music Upon his return to France he became one of *Les Six* (see SATIE, ERIK) He often employs simple diatonic melodies, but combines them in polytonal counterpoint, producing a highly dissonant effect His quest for simplicity has sometimes led him to banality He is outstanding as a composer for the stage, his works include short operas such as *Le Pauvre Matelot* (Paris, 1927, libretto by Jean Cocteau), as well as those of epic proportions such as *Christophe Colombe* (Berlin, 1930, libretto by Paul Claudel) and *Medée* (Paris, 1940, text by Madeleine Milhaud) Outstanding also are the ballets *La Creation du monde* (1923) and *Le Bœuf sur le tout; or, The Nothing Doing Bar* (Paris, 1920), showing Brazilian influences, and *Salade* (Paris, 1924), called a *ballet chanté* Other works are songs, including settings of poems of Paul Claudel and Francis Jammes, concertos, orchestral music, and a great deal of chamber music In 1940 he came to the United States, where he became professor of composition at Mills College, Oakland, Calif.

Milicz of Kremsier (mē'lĭch, krăm'zēr), d. 1374, Bohemian preacher and writer He was a Roman Catholic priest In 1363 he began a career of preaching in Moravia as well as in Prague Believing that the end of the world was near, he went to Rome in 1367 to urge the remedying of abuses in the Church He was placed in prison by the Inquisition and there wrote *Libellus de Antichristo* Released by Urban

V, when the latter returned from Avignon, Milics resumed (1369-72) preaching in Prague He was the author of devotional writings in both Latin and Czech As one of the most influential preachers in Bohemia, he has been called a precursor of John Huss, but there is no question of Milics's doctrinal orthodoxy

Military Academy, United States: see UNITED STATES MILITARY ACADEMY

military engineering: see ENGINEERING

military government, rule of enemy territory under military occupation It is distinguished from MARTIAL LAW, which is the temporary rule by domestic armed forces over disturbed areas Military government is of course needed whenever hostile territory is conquered Its practices were standardized before the First World War, notably at the Hague Conferences (1899, 1907) and form a part of the laws of war (see WAR, LAWS OF) During and after the Second World War military government held sway over vast territories Germany administered occupied countries through a hierarchy of *Kommandaturen* [military government headquarters], but this normal army administration was often duplicated by civilian economic agencies and Gestapo personnel In France, Norway, Greece, and Serbia, local puppet governments were authorized to operate under German control, Belgium and NE France were under purely military government, the Netherlands was a hybrid case, and Denmark was not considered an enemy state In Eastern Europe, authority was concentrated in 1941 in the ministry for eastern occupied territories, headed by Alfred Rosenberg German military government often violated the rules laid down by the Hague Conventions The Germans held and executed hostages for acts committed by unknown individuals and deprived the conquered nations of their basic resources, they rounded up slave labor for German industries and committed wholesale executions and massacres Japanese military government, while equally ruthless, did not seek to destroy the economies of conquered nations Allied Military Government (AMG) began to function in Sicily and Italy in 1943, it sought to utilize local civilian authorities to the widest possible extent When operating in Allied territory, such as France, AMG became Civil Affairs (CA) and was limited to combat areas After the termination of military operations, Germany and Austria were divided (1945) into four occupation zones and military government was reorganized At first it was subject in general policy to the authority of the U S -Russian-British-French Allied Control Councils in Berlin and Vienna In time, the growing dissension between the Western powers and the USSR led to the breakdown of the quadri-partite system in Germany and in BERLIN For most purposes the British, French, and American zones were amalgamated, in opposition to them stood the Russian zone In Austria and Vienna disharmony was less evident In Japan, military government became a solely American responsibility, though subject to suggestions of an 11-power Allied council By 1950 the occupied countries were restored to control over most matters except foreign policy and offenses against military personnel See E H Feilchenfeld, *International Economic Law of Belligerent Occupation* (1942), Ernst Fraenkel, *Military Occupation and the Rule of Law* (1944), Raphaël Lemkin, *Axis Rule in Occupied Europe* (1944), C J Friedrich, ed , *American Experiences in Military Government in World War II* (1948), D A Graber, *Development of the Law of Military Occupation, 1863–1914* (1948)

military law, system of rules established for the government of persons in the armed services It is distinguished both from MARTIAL LAW (rule by domestic military forces over an area) and from MILITARY GOVERNMENT (rule by the military over occupied foreign territory) Regular systems of military law existed in Rome, with severe penalties for such offenses as desertion In the Middle Ages procedures were less regularized The origin of much military law is found in the codes and statutes enacted in England in the 17th cent These were substantially adopted in the United States The scope of military law differs somewhat in peace and in war In time of peace it is generally limited to military offenses—e g , absence without leave, desertion, breach of orders, during war it usually extends to crimes of a civil nature as well, and the penalties may be severer In most countries the legislature establishes the code of military law. Thus, the U S Congress has enacted the Articles of War (for the army and the air forces) and the Articles for the Government of the Navy (for the navy and the marines) These codes define the offenses for which a person under the jurisdiction of the armed forces may be subjected to court-martial In addition to allowing punishment by the commanding officer for periods not to exceed a week, the codes establish three levels of courts-martial The summary court-martial (deck court under the naval rules) consists of a single officer and may inflict a maximum sentence of one month. The special court-martial (naval summary court-martial) consists of at least three officers and may impose a sentence to run six months The general court-martial is composed of five or more members and may impose any authorized sentence, including death and dishonorable discharge The principal differences between the procedure in courts-martial and in criminal trials in the civil courts is the absence of a jury and the decision of the case by a simple majority of the court. The accused is permitted to have counsel, to compel the attendance of witnesses, and to enjoy the usual protections of the law of evidence Nevertheless it was widely felt after the Second World War that many abuses had crept into the administration of military justice and that excessively severe sentences had been imposed, especially on enlisted men The armed forces responded by establishing civilian boards of review, which recommended reduction of the punishment inflicted on a large percentage of those convicted (some 100,000) by general courts-martial during the war In 1948 Congress extensively revised the codes of military law, largely to place operations more in the hands of professional lawyers and to insure fairer review procedures An important change in the Articles of War permitted an enlisted man tried by a general court to demand that one third of the court be composed of enlisted personnel See Garrard Glenn, *Army and the Law* (rev ed , 1943), H W Campbell, *Introduction to Military Law* (1946)

military pension: see PENSION

military science: see STRATEGY AND TACTICS

militia (mĭlĭ'shu), military organization formed on a voluntary basis as a permanent force for service only in times of emergency Modern militia is said to have had its origin in the Anglo-Saxon *fyrd*, the force created by the obligation of every freeholder to defend the realm against invaders The "training bands" in England and the town and provincial military companies in the British colonies of North America continued the tradition The MINUTEMEN of Lexington and Concord are used as the sample of the worth of the militia In the 19th cent the various states of the United States had their militia, and various private companies (Zouaves and the like) were organized, principally to give the members an opportunity to drill, parade, and wear bright uniforms They were, however, called into service in all the wars of the 19th cent , showing up unevenly as to fighting ability These many bodies have been superseded by the National Guard With the adoption of conscription through selective service in the First World War, the importance of the militia sank greatly In other countries the militia is generally known as the special reserve or the territorial reserve In a broader but still technical sense the militia of a country is the entire body of citizens capable of military service

Milukov, Pavel Nikolayevich. see MILYUKOV

Milk, river, 729 mi long, rising in NW Montana It flows N into Alberta, then in long curves eastward, S into Montana again, and generally SE to the Missouri, entering just below Fort Peck Dam The Milk river reclamation project (est 1911) of the Bureau of Reclamation irrigates more than 140,000 acres with water from the Milk and the St Mary The largest of several dams is the Fresno Dam, 111 ft high and 2,070 ft long Malta, Chinook, Glasgow, and Harlem, Mont , are on the project

milk, glandular secretion of the breast or the udders of animals that suckle their young Man has used the milk of the cow and of many other animals including the mare, goat, ewe, camel, ass, zebra, reindeer, and llama Milk is valuable in the diet of adults and is a nearly complete food for infants, its carbohydrates, fats, and proteins are in a digestible form and in well-balanced proportions, and it is the best common source of calcium It contains most of the vitamins and is a major source of vitamin A and riboflavin (vitamin G or B_2) The vitamin D content is often supplemented by ultraviolet irradiation, by adding irradiated yeast to the cow feed, or by fortifying milk with a vitamin D concentrate The composition of milk varies with the species, breed, feed, and condition of the milk-producing animal, the milk of Jersey and Guernsey cows is especially rich in fat Milk is often homogenized, in this process it is pumped under pressure through small openings to break up the fat globules and destroy their ability to coalesce and rise to the top as cream In the United States the milk industry is subject to Federal, state, and local regulations concerning the proportion of butterfat and other solids in milk, adulteration, and sanitary measures covering milk handlers, herds, plant, and equipment, dairy herds are commonly tuberculin tested Certified milk is produced with exceptional precautions and may be sold either raw or pasteurized PASTEURIZATION checks bacterial growth, thereby making milk safer to drink, and increasing its keeping qualities and possible range of transportation The consumption of concentrated milk, both whole and skim, has steadily increased since its commercial production was inaugurated c 1856 by Gail Borden The water is partially evaporated in vacuum-pan machines which permit boiling temperatures lower than at atmospheric pressure Evaporated milk when sweetened is known as condensed milk Dried (or powdered) milk is made by passing a film of partially evaporated milk over a heated drum or by spraying it into a heated chamber in which the particles dry as they fall to the floor. Malted milk is a dried mixture made of milk and the liquid from a mash of barley malt and wheat flour. Skim milk is valuable in fat-free diets, although much of the nutritive value of milk remains, most of the vitamin A is removed in the cream. See also DAIRYING and FERMENTED MILK See C. L Roadhouse and J L Henderson, *The Market-Milk Industry* (1941), L. L Lampert, *Milk and Dairy Products* (1947).

milk fever, fever which occurs at the time of lactation It has been thought that such a fever is caused by the establishment of the secretion of milk and also that the condition is caused by puerperal infection. There is a disease of cattle known as trembles or milk sickness, often caused by eating the white snakeroot plant (*Eupatorium urticaefolium*) The toxic substance, tremetol, can be transmitted to other animals and to humans through the milk of the affected animal See E. L Moseley, *Milk Sickness Caused by White Snakeroot* (1941)

milk snake: see KING SNAKE

milk sugar: see LACTOSE

milkweed or **silkweed,** any plant of the genus *Asclepias*, mostly New World perennials characterized usually by a milky juice, terminal roundish clusters of small flowers, and seeds with a tuft of silky hairs The flowers are of various colors, orange in the BUTTERFLY WEED, purplish in the common milkweed (*Asclepias syriaca*) The milkweeds have been utilized for food (particularly the young shoots of the common milkweed, boiled like asparagus), medicament, and fiber by the Indian and to some extent by the white man The sap has been used experimentally as a source of rubber and the silk has been successfully employed in life jackets A number of species, particularly the Western whorled milkweed, are poisonous to livestock, especially sheep Several other milky-juiced plants are also called milkweed

Milky Way system or **Galaxy** (gă'lŭksē), the great system of stars, planetary nebulae, and diffuse nebulae lying between the earth and the more distant extragalactic nebulae (the spiral and elliptical nebulae) All the stars visible from the earth are members of the system, which comprises some 30 thousand million stars, among them white dwarf stars, red giant stars, and variable stars Also included in the system are double stars, star clusters, novae, and the solar system A broad band of stars which seem to form a white pathway across the heavens is commonly called the Milky Way A great number of stars are visible in this plane because of the flattened shape of the stellar system and the position of the earth within the system—hence the milky appearance The solar system is about 30,000 light years from the center of the Galaxy The form of the Milky Way system is that of a flattened disk or a biconvex lens, its greatest diameter is believed to be about 100,000 light years, and its thickness is thought to be from one sixth to one tenth of that distance The galactic equator (or galactic circle) is a circle midway between the poles of the Galaxy, it intersects the celestial equator at an angle of 62° Apparent positions of heavenly bodies are determined with reference to the galactic equator There is evidence that the Galaxy rotates about an axis perpendicular to the plane of the Milky Way and that its rotation period is about 200 million years Certain dark portions observed in the sky, some of them known from early times as "coalsacks," are now believed to consist of diffuse, dark material known as dark nebulae Such dark nebulae form great lanes which divide the Milky Way system into two portions along nearly one third of its extent Notable early studies of the Milky Way system were made by Sir William Herschel, Sir John Herschel, and J C Kapteyn See B J Bok and P F Bok, *The Milky Way* (1941)

Mill, James, 1773–1836, British philosopher, economist, and historian, b. Scotland, father of John Stuart Mill Educated at Edinburgh through the patronage of Sir John Stuart, Mill gave up preaching, for which he was licensed, and went to London in 1802 to make his way writing for and editing periodicals He met Jeremy Bentham c 1808 and became an ardent advocate of utilitarianism On the strength of his *History of India* (1817), on which he had worked for over 10 years, he secured a permanent position with the India House Others of his works were *Elements of Political Economy* (1821), *Analysis of the Phenomena of the Human Mind* (1829), and the *Fragment on Mackintosh* (1835), which contains the best exposition of his psychological and ethical theories Mill furnished a psychological basis for utilitarian ethics by expanding the associationism of Hume Association by contiguity, where ideas which occur frequently together form combinations, may be such a subtle process that the merging of ideas may occur without leaving any trace of the elements which went into their formulation. Derived conceptions may

thus achieve autonomy of value quite apart from their obvious utilitarian effect. This is the origin of altruistic motives, which are otherwise difficult to explain on utilitarian grounds. It is also the origin of conscience. See Alexander Bain, *James Mill* (1882), H. C. Warren, *History of Association Psychology* (1921).

Mill, John, 1645–1707, English clergyman and biblical scholar. The masterpiece of scholarly critical work to which 30 years of his life were devoted is an edition (1707) of the Greek New Testament. Dr. John Fell, bishop of Oxford, encouraged Mill to undertake the task, giving over his own notes and assuming the expense of printing.

Mill, John Stuart, 1806–73, English philosopher and economist. A precocious child, he was educated privately by his father, James Mill. In 1823, abandoning the study of law, he became a clerk in India House, where he rose to become head of the examiner's office by the time of the company's dissolution (1858). During this period he contributed to various periodicals and met with discussion groups, one of which included Macaulay, to explore the problems of political theory. His *System of Logic* (1843) was followed in 1848 by the *Principles of Political Economy*. After the death of her husband he married (1851) Helen Taylor, whom he had loved for 20 years. She died in 1858, and Mill, profoundly affected, dedicated to her the famous *Essay on Liberty* (1859) on which they had worked together. He strongly supported the North in the American Civil War. In 1863 *Utilitarianism* was published, and his *Auguste Comte and Positivism* appeared in 1865. From 1865 to 1868 he served as a member of Parliament, after which he retired, spending much of his time at Avignon, where he died. In the year of his death appeared his celebrated autobiography. John Stuart Mill's philosophy followed the doctrines of his father and Bentham, but he sought to temper them with humanitarianism. For example, Mill came close to socialism, a theory repugnant to his predecessors. His urge for reform and meliorative democratic change was in part due to the influence of his wife. In logic he formulated rules for the inductive process and stressed the method of empiricism as the source of all knowledge. In his ethics he pointed out the possibility of a sentiment of unity and solidarity which may even develop a religious character, as in Comte's religion of humanity. In addition he introduced into the utilitarian calculus of pleasure a qualitative principle which goes far beyond the simpler conception of quantity (see UTILITARIANISM). He constantly advocated political and social reforms, such as proportional representation, emancipation of women, and the development of labor organizations and farm cooperatives. His influence has been strong in economics, politics, and philosophy. See his autobiography (with preface by J. J. Coss, 1924, reissued 1944, with appendix and preface by H. J. Laski, 1924), George Morlan *America's Heritage from John Stuart Mill* (1936).

mill see MILLING

Millais, Sir John Everett (mĭlā'), 1829–96, English painter. At 11 he began studying at the Royal Academy and at an early age won all the prizes. In 1848, together with William Holman Hunt and Dante Gabriel Rossetti, he initiated the Pre-Raphaelite movement (see PRE-RAPHAELITES). His early work shows a painstaking rendering of detail, careful draughtsmanship, and extreme clarity. His excellent *Christ in the Carpenter's Shop* (1850, Tate Gall., London) was attacked at the time because of its naturalism, but his reputation was soon established, and in later life he enjoyed high honors. he was created a baronet in 1885, and in 1896 he became president of the Royal Academy. Ruskin was a close friend and a champion of his work. In 1855 Millais married Mrs. Ruskin after the nullification of her marriage. Millais excelled in painting biblical and medieval subjects and was a popular portrait painter. He is well represented in many British galleries. His *Portia* is in the Metropolitan Museum. See biographies by J. G. Millais (1899), M. H. Spielmann (1899), and A. L. Baldry (1902).

Millau, formerly **Millhau** (both mēyō'), town (pop. 15,891), Aveyron dept., S France, on the Tarn, in the causses of ROUERGUE. At the nearby village of Roquefort a famous cheese is manufactured from sheep's milk; sheepskins are used for the important glove industry at Millau. The town was a Huguenot stronghold; its forts and walls were demolished by Louis XIII.

Millay, Edna St. Vincent (mĭlā'), 1892–, American poet, b. Rockland, Maine, grad. Vassar, 1917. Her first poem, "Renascence," appeared in the *Lyric Year* in 1912 and was the title poem of her first volume (1917). *A Few Figs from Thistles* (1920) was followed by *Second April* (1921) and by *The Ballad of the Harp-Weaver* (1922), which won the 1923 Pulitzer Prize for poetry and was republished as *The Harp-Weaver and Other Poems* (1923). She supported herself by writing short stories under the name Nancy Boyd. *The Buck in the Snow and Other Poems* (1928), *Fatal Interview* (1931), *Wine from These Grapes* (1934), and *Make Bright the Arrows* (1940) are later works. As experiments in dramatic verse, Miss Millay has also written *Aria da Capo* (1920), *The Lamp and the Bell* (1921), the libretto for Deems Taylor's opera *The King's Henchman* (1927), *The Princess Marries the Page* (1932), and *The Murder of Lidice* (1942), a radio play. In 1923 she married Eugen Boissevain. A collection of her sonnets appeared in 1941, and of her lyrics in 1943. The emotional and lyric power of her poetry has been compared with that of the Elizabethan romantics, and she is one of the few modern poets able to express herself with ease in the sonnet form. See study by Elizabeth Atkins (1936), bibliography by Karl Yost (1937).

Millbridge, town (pop. 1,318), SE Maine, at the mouth of the Narraguagus, inc. 1848. It has small industries.

Millbrook, residential and resort village (pop. 1,340), E N.Y., NE of Poughkeepsie, inc. 1896. Bennett Junior College for girls and the Millbrook School for boys are here.

Millburn, residential township (pop. 11,652), NE N.J., W of Newark, settled c. 1725, inc. 1857. It includes Short Hills, a section of wealthy estates.

Millbury, industrial town (pop. 6,983), S Mass., on the Blackstone and S of Worcester, settled 1716, set off from Sutton 1813. Textile and metal products are made here.

Milledge, John (mĭl'lĭ), 1757–1818, governor of Georgia (1802–6), b. Savannah, Ga. In the American Revolution he was prominent among the patriots who seized (1775) the colonial government at Savannah. Milledge, a lawyer, was a U.S. Representative (1792–93, 1795–99, 1801–2) and a Senator (1806–9). The Univ. of Georgia campus is situated on land donated by him, and the city of Milledgeville was named in his honor.

Milledgeville, city (pop. 6,778), co. seat of Baldwin co., central Ga., on the Oconee and NE of Macon, in a fertile farm area, inc. 1836. Laid out in 1803 as the site of the state capital, Milledgeville (for John Milledge) was the seat of government from 1804 to 1807. It has various industries. In or near the city are the Georgia State College for Women (1889), the old executive mansion (1838), the old state capitol (1807, later amended), now Georgia Military College, the Ina Dillard Russell Library, with the Georgia History Museum, many fine old houses in classic revival style, state institutions (the reform school, the prison, and the mental hospital), and excavated Indian mounds.

Mille Lacs, Lac des (lak" dā mēl lak') [Fr., =thousand lakes, possibly from the Ojibwa for big lake], lake, c. 18 mi. long and c. 12 mi. wide, W Ont., WNW of Port Arthur. It drains SW into Rainy Lake.

Mille Lacs Lake (mĭl" lăk', lăks), 18 mi. long and 14 mi. wide, E central Minn., N of Minneapolis. Sieur Duluth visited Ojibwa Indians living on its shore in 1679. In 1680 Hennepin and his companions were held captive here by Indians for several weeks. The region is a tourist and sportsmen's center.

Millen, city (pop. 2,820), co. seat of Jenkins co., E Ga., S of Augusta and on the Ogeechee, settled in the 1830s, inc. 1881. It is a railroad junction in a farm area. A state fish hatchery is near by.

millennium [Latin, =1,000 years], in Christian eschatology, strictly, period of a thousand years in which Christ will reign again gloriously on earth. No great church of Christendom has ever sanctioned a belief in the millennium, but from the earliest times the idea has recurred, supported by Rev. 20. With a belief in the millennium has also gone, very often, the idea that the Second Coming is at hand. Belief in the millennium is called chiliasm (kĭ'lēăzm) by historians of the ancient church. See JUDGMENT DAY.

millepede see MILLIPEDE.

Miller, Alfred Jacob, 1810–74, American artist, b. Baltimore, studied under Thomas Sulley and in Europe. In 1837 he accompanied Sir William Drummond Stewart to the Rocky Mts. to make sketches to be developed into paintings for Stewart's castle in Perth, Scotland. The sketches, showing scenery and fur trappers, were discovered in 1935 in a storeroom of the Peale Museum, Baltimore.

Miller, Arthur, 1915–, American dramatist, b. New York city, grad. Univ. of Michigan, 1938. He won several awards for plays written while he was a student, later he wrote for radio. *Focus* (1945) was a novel about anti-Semitism. His plays *All My Sons* (1947) and *Death of a Salesman* (1949) won awards from the New York Drama Critics' Circle, the second receiving also the Pulitzer Prize.

Miller, Charles Henry, 1842–1922, American landscape painter and etcher, b. New York city, studied in Munich. He abandoned the practice of medicine for art. His pictures are chiefly Long Island scenes, such as *Sunset, East Hampton* (Brooklyn, N.Y., Mus.) and *Bouquet of Oaks* (Metropolitan Mus.). He also executed many etchings and wrote (under the pen name Carl de Muldor) *The Philosophy of Art in America* (1885). He became a member of the National Academy of Design in 1875.

Miller, Cincinnatus Heine (or **Hiner**): see MILLER, JOAQUIN.

Miller, David Hunter: see MILLER, HUNTER.

Miller, Dayton Clarence, 1866–1941, American physicist, b. Strongsville, Ohio, grad. Baldwin Univ. (B.A., 1886), D.Sc. Princeton, 1890. From 1890 he taught at the Case School of Applied Science (now Case Institute of Technology), as professor (from 1895), he is known for his work on measurements of sound and of light and for his studies of the relative motion of earth and ether. He successfully photographed and projected sound waves. His works include *The Science of Musical Sounds* (1916), *Sound Waves Their Shape and Speed* (1937), and *Sparks, Lightning, Cosmic Rays* (1939).

Miller, Frieda Segelke, 1889–, U.S. government official, b. La Crosse, Wis., grad. Downer College, 1911. After graduate study (1911–15) at the Univ. of Chicago, she taught (1916–17) social economy at Bryn Mawr College. She then became active in labor field work and attended numerous labor conferences. In the New York state labor department, she was a labor commissioner (1929–38) and then (1938–43) state industrial commissioner. She was (1943–44) special assistant to John G. Winant, U.S. ambassador to England, and after her return to the United States she became (1944) director of the Women's Bureau of the U.S. Dept. of Labor. She represented the United States at the 1946 conference of the International Labour Organisation and was (1946) a U.S. delegate to United Nations General Assembly.

Miller, George Abram, 1863–, American mathematician, b. Lehigh co., Pa., grad. Muhlenberg College (B.A., 1887), Ph.D. Cumberland Univ., 1893. He was professor at the Univ. of Illinois (1907–31). His chief work was in the theory of groups of finite order and the history of mathematics.

Miller, Henry, 1860–1926, American actor-manager, b. London. He went to Toronto with his parents in 1873. In his early career he supported Modjeska and Adelaide Neilson and appeared with the Boucicault troupe. He played a lead in Bronson Howard's *Shenandoah*, the first successful Charles Frohman production, later becoming a star in *Heartsease* (1897), written by himself. He broke with the Theatrical Syndicate and under his own management appeared in William Vaughn Moody's play *The Great Divide*. He also played in *The Havoc* and Sacha Guitry's *Pasteur*. See F. P. Morse, *Back stage with Henry Miller* (1938).

Miller, Hugh, 1802–56, Scottish geologist and writer. He was a stonemason and later an accountant in a bank. In 1829 he published *Poems Written in the Leisure Hours of a Journeyman Mason*, and in 1835 *Scenes and Legends of the North of Scotland*. His *Letter to Lord Brougham* (1839) brought him forward as a leader of the nonintrusionist party in the Scottish Church, and he became editor of the anti-intrusionist paper the *Witness*. Miller's leisure time had long been devoted to the study of geology, and in 1840 he published the articles later issued as *The Old Red Sandstone* (1841). The book was an important contribution to Devonian geology and paleontology and won him a high scientific reputation. He was instrumental in bringing about the foundation of the Free Church of Scotland, which, however, he did not join. His *Footprints of the Creator* (1847) and *The Testimony of the Rocks* (1857) were attempts to reconcile geology with the Mosaic account of the creation. Overworked, he finally suffered an attack of insanity and committed suicide. He wrote also the autobiographical work, *My Schools and Schoolmasters* (1854).

Miller, Hunter (David Hunter Miller), 1875–, American lawyer, b. New York city, grad. New York Law School, 1910. In 1918 he was legal adviser to Col. E. M. House in the Paris peace mission. He helped write the final draft of the Covenant of the League of Nations. He served (1929–31) as editor of treaties for the Dept. of State. His books include *Secret Statutes of the United States* (1918), *The Geneva Protocol* (1925), *The Drafting of the Covenant* (1928), and *The Peace Pact of Paris* (1928).

Miller, Joaquin (wakēn'), pseud. of **Cincinnatus Heine** (or **Hiner**) **Miller,** 1839?–1913, American poet, b. Liberty, Ind. In 1852 he was taken to frontier Oregon. He lived in gold-mining camps in California, later with the Indians, and was in turn an express rider, an editor, and an Oregon judge. His first book of poems, *Specimens* (1868), brought him only local acclaim, but in England, where he went next, his colorful personality, his dramatic Western costume, and his *Songs of the Sierras* (1871) made him famous as a frontier poet. Of his several plays, *The Danites in the Sierras* (produced 1877) was the best and was one of the most popular 19th-century Western dramas in the United States and in England. See his autobiography (1898, ed. by S. G. Firman, 1930), studies by Harr Wagner (1929) and M. S. Peterson (1937).

Miller, Joe (Joseph or Josias Miller), 1684–1738, English comedian, erroneously known as the author of *Joe Miller's Jests*. Joe Miller was for many years a favorite comedian in minor parts at Drury Lane. A year after his death John Mottley published the work to which he gave Joe Miller's name. It was a compendium of puns and rather dull witticisms which went through many editions.

Miller, Kenneth Hayes, 1876–, American painter and etcher, b Oneida Community, Oneida, N Y He was educated at the Horace Mann School in New York and studied art at the Art Students League and New York School of Art He was a popular art teacher, first in the New York School of Art (1899–1911) and then at the League Aside from a trip to Europe in 1900 Miller lived largely in Manhattan, whose daily life he came to paint more and more His earliest pictures show the influence of his friend Albert P Ryder, but his mature work is matter of fact and descriptive His *Fitting Room* (Metropolitan Mus) is characteristic See *monographs* by Alan Burroughs (1931) and Lloyd Goodrich (1930)

Miller, Samuel Freeman, 1816–90, American jurist, b Richmond, Ky , M D Transylvania Univ , 1838 In 1845 he abandoned his medical practice around Barbourville, Ky , to study law and was admitted (1847) to the bar An abolitionist, Miller moved in 1850 to Keokuk, Iowa, where he became a leading Republican For his political labors Lincoln appointed (1862) him an Associate Justice of the Supreme Court, where he served till his death Like John Marshall, with whom he has been compared, Miller was a great logician but not a great scholar, he was principally interested in the practical application of the law He was a strong supporter of Federal authority in the Civil War, but his opinion in the SLAUGHTERHOUSE CASES (1873) sharply defined the spheres of Federal and state jurisdiction Throughout his career he was more concerned with the welfare of society as a whole than with the protection of vested property interests This view made him a perpetual dissenter in the Supreme Court, which, more than any other time in its history, always seemed to condone the activities of those interests See biographies by C N Gregory (1907) and Charles Fairman (1939)

Miller, Wilhelm, 1869–, American horticulturist, b Duane, Va He has had a notable influence on American landscape architecture, particularly in the prairie states, by his bulletins written for the Univ of Illinois His writings include *What England Can Teach Us about Gardening* (1911) and *Practical Help on Landscape Gardening* (1914)

Miller, William, 1782–1849, American sectarian leader, b Pittsfield, Mass He was the founder of the sect of Second ADVENTISTS, often called Millerites In 1831, convinced from study of the Bible that the prophecies pointed to the second coming of Christ in 1843, he went about spreading his belief among large audiences Many prepared for the Day of Judgment, and when the year passed without a fulfillment of Miller's prophecy, a date in 1844 was set In 1845 Miller and his followers founded the Adventist Church

Miller, William, 1795–1861, English soldier and South American revolutionist After service in the British army, he went to South America, where he distinguished himself fighting under José de SAN MARTÍN in Chile and took an important part in the liberation of Peru He later took part in the tumultuous politics of Peru and was exiled in 1839 for his support of Andrés SANTA CRUZ See John Miller, *Memoirs of General Miller* (1827).

Miller, city (pop 1,460), co seat of Hand co , E central S Dak , E of Pierre, settled 1882, inc as a city 1910 It is a farm trade center in a grain and livestock area.

Millerand, Alexandre (älĕksä'drù mēlrä'), 1859–1943, French statesman, president of France (1920–24) He began his political career as a Socialist As the first Socialist to accept a post in a bourgeois cabinet—he was (1899–1902) minister of commerce in the Waldeck-Rousseau ministry—Millerand was sharply criticized by his party, which eventually expelled him in 1914 He held cabinet posts during the First World War and became commissioner general in recovered Alsace and Lorraine (1919) and premier (1920) By then an ardent nationalist, he was elected president in the same year to succeed Clemenceau During his tenure Poincaré succeeded (1922) Briand as premier. Millerand resigned when Herriot refused to form a cabinet while Millerand was president Gaston Doumergue succeeded him. He was elected (1925) to the senate and continued to exert his influence as a rightist and nationalist.

Millersburg. 1 **Village** (pop 2,239), co. seat of Holmes co , central Ohio, SW of Canton; settled 1816, laid out 1824 It has varied industries There are coal mines and sandstone quarries here **2** Residential borough (pop 2,959), SE Pa , on the Susquehanna and NNW of Harrisburg, settled c 1790, laid out 1807, inc 1850 It is a distributing center for farm and dairy produce

Millersville, borough (pop. 1,867), Lancaster co , SE Pa , SW of Lancaster It has a state teachers college

Milles, Carl (mĭl'lùs), 1875–, Swedish sculptor, whose name originally was Carl Emil Wilhelm Anderson He studied in Paris from 1897 until 1904, when he returned to Stockholm He had his first exhibition at Malmo in 1914 and was for the first time (1926–27) exhibited outside Sweden at the Tate Gallery, London In 1929 he visited the United States for the first time and in 1931 began to teach sculpture at Cranbrook Academy, Cranbrook, Mich. His work, which is inspired by Rodin and consists predominantly of large linear human figures, is represented in America by the *Peace Monument* at St. Paul, Minn ; the *Fountain of the Meeting of the Waters* at St. Louis, statues in Rockefeller Center, New York See M R Rogers, *Carl Milles: an Interpretation of His Work* (1940).

Millet, Aimé (āmā' mēlā'), 1819–91, French sculptor and painter Among his statues for public buildings in Paris is the *Apollo* on the Opéra For Napoleon III he produced a colossal *Vercingetorix* in copper

Millet, Francis Davis (mĭl'lut), 1846–1912, American illustrator, painter, and journalist, b Mattapoisett, Mass , grad Harvard, 1869, and studied art at Antwerp He had been a drummer boy in the Civil War before going to college As a correspondent, Millet covered the Russo-Turkish War of 1877–78 for the New York *Herald* and the London *Daily News* and *Graphic* He was a member of the international art jury at the Paris exposition of 1878 and was director of decorations at the World's Columbian Exposition, Chicago, in 1893 He was war correspondent in the Philippines in 1898 for the London *Times* and for *Harper's Weekly* His mural paintings, for which he was later well known, include *Evolution of Navigation* (customhouse, Baltimore) Of his genre pictures, *A Cozy Corner* and *An Old-Time Melody* are in the Metropolitan Museum, and *Between Two Fires* is in the Tate Gallery, London He became a member of the National Academy in 1885 and was first secretary of the American Academy at Rome Millet lived in England much of his later life, he died in the sinking of the *Titanic*

Millet or **Milé, Jean François** (both zhä' fräswä' mēlā'), c 1642–1679, French landscape painter, known as Francisque, b Antwerp His Arcadian and imaginary Italian landscapes painted in the manner of Nicolas Poussin are to be seen in numerous European galleries

Millet, Jean François (zhä' fräswä' mēlā'), 1814–75, French painter He came of a poor farming family In 1837 an award from the municipality of Cherbourg enabled him to go to Paris, where he studied under Delaroche In 1848 he settled in Barbizon Here he executed such famous works as the *Gleaners* (1857) and the *Angelus* (1859), both now in the Louvre He was an outstanding member of the Barbizon school As a painter of scenes of peasant labor, he has been considered a social realist and linked with such artists as Courbet and Daumier He is well represented in American museums, notably in the Quincy Shaw Collection of the Museum of Fine Arts, Boston

millet, popular name for many species of grasses and cereals of distinct genera Millets are important sources of human food in India, China, Japan, and parts of Europe and Africa In North America they are forage crops Millets are among the most ancient agricultural plants The common millet of Europe, *Panicum miliaceum*, also called hog millet, Indian millet, and other names, has been cultivated since prehistoric times in Asia and Egypt and was known to the lake dwellers of Europe Widely cultivated in Russia, S Europe and the Orient, the grain is used as groats in bread and as poultry feed. It is the best suited of the millets for human food The common millet of America is the foxtail millet, *Setaria italica* (formerly *Chaetochloa*), much grown in India for food and used in Europe as poultry feed Long cultivated, it was one of the five holy plants sown at a public ceremony by the emperor of China by an order believed to date from 2700 B C See also PEARL MILLET

Mill Hall, borough (pop. 1,513), Clinton co , N central Pa , on Bald Eagle Creek and SW of Lock Haven, laid out 1806, inc. 1850 Electric fixtures are made here

Milligan, ex parte, case decided by the U S Supreme Court in 1866 By authorization of Congress, President Lincoln in 1863 suspended the writ of habeas corpus in cases where military officers held persons for offences against the armed services Army authorities had arrested Milligan, a civilian who was involved in Copperhead activities in Indiana, and in 1864 he was tried by a military commission, convicted of fomenting rebellion, and condemned to death The court did not deal directly with the question of habeas corpus but with the limitation of martial law It held that civilians might be tried by a military tribunal only where civil courts could not function because of invasion or disorder Even though the United States was at war, the Federal courts of Indiana were operating and they alone might try the case See Samuel Klaus, ed , *The Milligan Case* (1929)

Millikan, Robert Andrews (mĭl'lĭkŭn), 1868–, American physicist and educator, b Morrison, Ill , grad Oberlin (B A., 1891), Ph.D Columbia, 1895, and studied in Germany He taught physics at the Univ. of Chicago from 1896 to 1921 and from 1921 to 1945 was chairman of the executive council of the California Institute of Technology and director of the Norman Bridge Laboratory there. One of the foremost American scientists, he received the 1928 Nobel Prize in Physics for his measurement of the charge on the electron and for his work on the photoelectric effect. He has also made important studies of cosmic rays, X rays, and physical and electrical constants and has written and lectured on the reconciliation of science and religion His books include *Electricity, Sound, and Light* (1908), *Science and Life* (1924), *Evolution in Science and Religion* (1927), *Science and the New Civilization* (1930), *Time, Matter, and Values* (1932), and *Electrons (+and−), Protons, Photons, Neutrons, Mesotrons, and Cosmic Rays* (rev. ed., 1947, 1st ed. with title *The Electron*, 1917, enl ed , 1935). See his autobiography (1950)

Millin, Sarah Gertrude (Liebson), 1889–, South African writer Her husband, Philip Millin, is a judge of the supreme court of South Africa The first of her novels of colonial and racial problems in South Africa was *Dark River* (1920). Later ones include *God's Stepchildren* (1924), *Mary Glenn* (1925), *An Artist in the Family* (1928), *What Hath a Man?* (1938), and *The King of the Bastards* (1949), a historical novel She has also written a study, *The South Africans* (1926, rev. ed , 1934), and biographies of Cecil Rhodes (1933) and of her friend General Smuts (1936).

milling, the grinding of wheat or other grains to produce flour It originated in prehistoric times, probably the original method was to pound the grain between two stones The advantages of using a stone with a rounded end to grind grain in a cup-shaped stone led to the development of the mortar and pestle This was early superseded among the more advanced peoples by the quern, a primitive mill in which grain, placed on a flat, circular nether millstone, is ground by revolving a similar upper millstone to which a handle is attached The device, operated at first by hand, was adapted to the use of animal, water, or wind power The Greeks probably used water power c 450 B C., the Romans used gears to connect several sets of millstones with one waterwheel Windmills are said to have become widespread in Europe following the Crusades and were probably introduced from Asia Minor The Industrial Revolution brought the use of steam power and of transportation facilities that resulted in the rise of large-scale operations at milling centers Wooden machinery has been superseded by metal parts, millstones, by sets of steel rollers The invention of the middlings purifier by which, after preliminary grinding, the flour is separated from bran particles by strong air currents, improved the quality of flour prepared from hard spring wheat and led to the development of great milling centers in spring-wheat areas in Minnesota (notably Minneapolis), the Dakotas, and Montana In Europe modern methods were early developed in Hungary, and Budapest became one of the chief milling centers In modern processing, grain is usually blended, cleaned, scrubbed to remove wheat hairs, tempered by heat and moisture (to prevent brittleness in the bran and consequent pulverization resulting in speckled flour), passed through sets of steel rolls with successively finer corrugations, and sifted after each grinding It is then blown in a middlings purifier, ground between sets of smooth rolls, and bolted through a very fine mesh sieve. The entire process takes about an hour and comprises some 180 operations The term *milling* is applied also to the processing of other materials, e g , soap, textiles, and metals, processing establishments are often called mills, e g , lumber mill or sawmill, cotton mill, and sugar mill

Millinocket (mĭl'lĭnŏ'kĭt), town (pop 6,223), central Maine, on the West Branch of the Penobscot SE of Millinocket Lake, inc 1901 It grew about its paper mills, built here in 1899–1900

millipede or **millepede** (both mĭl'lupēd), wormlike, segmented arthropod It is somewhat similar to the centipede, but the body is cylindrical and the legs shorter and more numerous—two pairs on most segments. Its firm cuticle and the scent glands found in many species afford some protection It seeks damp, dark places Millipedes are herbivorous, feeding on decaying vegetation and the parts of plants in contact with the soil Some damage crops. They are sometimes called thousand-legged worms

Millis, town (pop 2,278), E Mass., on the Charles and SW of Boston, settled 1657, set off from Medway 1885 Shoes and asbestos products are made

Millo (mĭl'lō), unidentified part of Jerusalem in the time of David Judges 9 6, 20, 2 Sam 5 9, 1 Kings 9 15, 24, 11 27, 2 Kings 12 20, 1 Chron. 11 8, 2 Chron 32 5

Millport, burgh (pop 2,083), on Great Cumbrae island, Buteshire, Scotland. It is the site of the Cathedral of the Isles

Mills, Clark, 1810–83, American sculptor, b Onondaga co , N.Y. Self-taught in art, he designed and in 1852 cast in an experimental foundry the statue of General Jackson for Lafayette Square, Washington, D C. Mills had never seen his subject nor an equestrian statue. The daring pose of the horse was a mechanical triumph. Later Mills made a colossal statue of Washington on horseback, and he cast in his foundry Thomas Crawford's *Armed Freedom* for the Capitol dome.

Mills, Ogden Livingston, 1884–1937, American political leader, b. Newport, R.I., grad. Harvard (B.A., 1904; LL.B., 1907). He practiced law in New York city and became an active Republican party leader He served (1914–18) in the New York state legislature and then (1921–22) in the U.S Congress—where he was noted as a fiscal expert He was appointed (1927) Undersecretary of the Treasury, succeeded Andrew Mellon as Secretary of the Treasury (Feb.–March, 1933), and afterwards severely criticized the New Deal He wrote *Liberalism Fights On* (1936) and *Seventeen Million* (1937)

Mills, Robert, 1781–1855, American architect of the CLASSIC REVIVAL period, b Charleston, S.C From 1800 to 1820 he worked as an architect in Washington, Philadelphia, and Baltimore, being associated at different times with Thomas Jefferson, James Hoban, and B H Latrobe He then returned to Charleston as state engineer and architect In 1836 President Jackson appointed Mills architect of public buildings in Washington In this post he designed the Treasury Building (1836), the Patent Office (1830), the Washington Monument (1836), and the old Post Office (1839) His design for the monument was executed without the base originally intended for it—a Greek Doric Pantheon with columns 100 ft high—and was not completed until long after Mills's death He also designed the Washington Monument in Baltimore, the Bunker Hill Monument, and the Monumental Church in Richmond, Va He was able to achieve truly monumental effects, and his works exhibit fine proportions in their unadorned simple masses See biography by H M Pierce Gallagher (1935)

Mills, Roger Quarles, 1832–1911, American politician, b Todd co, Ky He moved to Texas when he was 17 Admitted to the bar by special act of legislature (1852), he practiced law until the outbreak of the Civil War After serving with the Confederate forces, he again practiced law He entered politics, becoming a member of Congress (1873–92) and Senator (1892–98) He is remembered chiefly for the Mills Bill, a bill for reducing tariffs on manufactured goods and for putting various raw products on the free list, in 1877 It awoke great opposition to Cleveland's administration and failed of passage

Mills College, at Oakland, Calif, nonsectarian, mainly for women, opened 1852 as the Young Ladies' Seminary at Benicia, Calif, moved 1871 It was called Mills Seminary and College from 1877 to 1885 for Cyrus Mills (president 1865–84) and his wife Susan (president 1890–1909) Chartered as a college in 1885, it was the first woman's college in the Far West

Millspaugh, Charles Frederick (mĭlz'pô), 1854–1923, American botanist, b Ithaca, N Y He traveled extensively through Mexico, parts of South America, and the West Indies as a botanical explorer, specializing in the flora of the Antillean region Among his works are *American Medicinal Plants* (1887), *Weeds of West Virginia* (1892), *Plantae Yucatanae* (1903), *Flora of the Sand Keys of Florida* (1907), and (with N L Britton) *The Bahama Flora* (1920)

Mill Springs, village, Wayne co, SE Ky, on the Cumberland river, c 85 mi S of Frankfort In a battle of the Civil War fought here, Jan 19, 1862, the Confederates under Gen G B Crittenden attacked the Union forces of Gen G H Thomas at Logan's Crossroads, c 10 mi north of the river, but were routed Thus East Tennessee was left open to a Union advance

Millstadt, village (pop 1,290), SW Ill, SSE of St. Louis, in a farm and coal area, inc 1878

Milltown, town (pop 1,876), SW N B, on the St. Croix and W of St John It has lumber mills.

Milltown, borough (pop 3,515), E N J, S of New Brunswick, settled before 1800, inc 1889.

Millvale, industrial borough (pop 7,811), SW Pa., on the Allegheny river opposite Pittsburgh, settled c.1844, inc 1868. It has metal factories and a meat-packing plant

Mill Valley, residential town (pop 4,847), W Calif, in the San Francisco Bay area N of San Francisco, inc 1900. It is at the foot of Mt Tamalpais. Muir Woods National Monument is near by

Millville. **1** Town (pop. 1,722), S Mass, near the R I line SE of Worcester, settled 1662, set off from Blackstone 1916 **2** City (pop 14,806), S N J, E of Bridgeton, settled 1756, laid out 1801, inc 1866 A center for a farming and poultry-raising district, it has glassworks and Maurice river fisheries Roosevelt Park, one mile south, a WPA-built colony for the aged, was opened in 1937.

Milman, Henry Hart, 1791–1868, English clergyman and author, dean of St Paul's from 1849. He was the author of several plays on historical subjects and of important historical works, including *History of the Jews* (1830), *History of Christianity* (1840), and, his chief work, *History of Latin Christianity* (6 vols, 1854–55)

Milmore, Martin, 1844–83, American sculptor, b. Shigo, Ireland. He came to Boston in 1851 and began studying with Thomas Ball in Charlestown in 1860. Among the examples of monumental sculpture on which his fame chiefly rests are the Soldiers' and Sailors' Monument, Boston Common, and the Soldiers' Monument, Forest Hills Cemetery, Roxbury, Mass. With his brother he made a granite *Sphinx* for Mt. Auburn Cemetery, Cambridge, Mass. In spite of his early death he was known also for his portrait busts, among his subjects being Pope Pius IX, Longfellow, Emerson, Wendell Phillips, and Charles Sumner (the last Metropolitan Mus) Over Milmore's grave in Forest Hills Cemetery is D C French's *Death and the Young Sculptor*

Milne, Alan Alexander (mĭln), 1882–, English dramatist and humorous writer for children, b London He was assistant editor of *Punch* from 1906 to 1914 Of his fiction for adults, *The Red House Mystery* (1921) is a classic of its genre His small son was the "Christopher Robin" of his children's verse *When We Were Very Young* (1924) and *Now We Are Six* (1927) and of the stories *Winnie-the-Pooh* (1926) and *The House at Pooh Corner* (1928) His successful comedies include *Mr. Pym Passes By* (1919), *The Truth about Blayds* (1921), *The Dover Road* (1922), and *Michael and Mary* (1930) See his autobiography (1939)

Milne, John, 1850–1913, British seismologist, b Liverpool, educated at King's College and the Royal School of Mines He worked as a mining engineer in Newfoundland and Labrador and served (1874) as a geologist on a mining expedition to NW Arabia From 1875 to 1894 he was professor of geology at the Imperial Univ in Tokyo, where he helped to organize the seismic survey of Japan After his return to England he was influential in promoting the establishment of seismological stations throughout the world, he designed several seismographs He wrote *Earthquakes* (1883) and *Seismology* (1898)

Milne Bay (mĭln, mēl), easternmost bay of New Guinea, c 225 mi SE of Port Moresby In the Second World War an Allied air base was here

Milne-Edwards, Henri (ärĕ' mēl'nādwärs'), 1800–1885, French naturalist He became professor at the Sorbonne (1843) and served at the Museum of Natural History, Paris, as professor (from 1843) and director (from 1864) He wrote important works on the crustacea, molluscs, and corals and a noted textbook in zoology (1834) His principal work was a series of lessons on comparative anatomy and physiology (14 vols, 1857–81)

Milner, Alfred Milner, 1st **Viscount,** 1854–1925, English statesman and colonial administrator Born in Germany, Milner was educated there and in England, distinguishing himself for his scholarship at Oxford He did journalistic work in London on the *Pall Mall Gazette*, and in 1889, through the influence of George Goschen, chancellor of the exchequer, he was made undersecretary of finance in Egypt He spent four years there during a difficult period in Egypt's economic history, and on his return to England he wrote *England in Egypt* (1892) In 1897 Milner was appointed high commissioner for South Africa and governor general of Cape Colony This was shortly after the JAMESON RAID had heightened the growing tension between the British and the Boers in South Africa Long negotiations failed to halt the outbreak in 1899 of the South African War Milner remained in South Africa until 1905, laying the groundwork for the assimilation of the Transvaal and Orange River Colony into the British colonial system Milner was one of the Conservatives who opposed Lloyd George's revolutionary budget of 1909 in the House of Lords, but in 1915 Lloyd George appointed him to his war cabinet, and Milner was a major figure in the civilian conduct of the war In 1918 he was made colonial secretary and in 1920 led a commission to Egypt which recommended recognition of Egyptian independence See Cecil Headlam, ed, *The Milner Papers, 1897–1905* (1931–33), W B Worsfold, *Lord Milner's Work in South Africa* (1906)

Milnes, Richard Monckton. see HOUGHTON, RICHARD MONCKTON MILNES, 1ST BARON

Milo (mī'lō) or **Milon** (mī'lŏn), fl 500 B C, athlete of ancient Greece, b Crotona He was many times a victor at wrestling in the Olympic and Pythian games He is said to have killed a heifer with a blow of his fist and to have eaten the animal in the course of a day Finding a tree partially split, he attempted, according to legend, to rend it asunder, but he was caught fast by the hand and was devoured by wolves.

Milo (Titus Annius Papianus Milo), 95 B C.–47 B C., Roman partisan leader As tribune of the people (57 B C) he obtained the recall from exile of Cicero At the instance of POMPEY, Milo hired a gang to fight the gang of P CLODIUS The rivals kept Rome in an uproar until it ended in the death of Clodius in an affray at Bovillae, on the Appian Way (52 B C) Pompey was appointed sole consul to restore order in the city, and Milo was brought to trial. Cicero, his advocate, was so intimidated that he did not deliver his oration, which he later published (*Pro Milone*) Milo was exiled to Masilia, joined the insurrection of M. Caelius in Italy, and was defeated, captured, and killed. Milo's wife was Sulla's daughter. Milo had the historian Sallust beaten for an intrigue with her.

Milo (mī'lō), town (pop 3,000), central Maine, on the Piscataquis and NNW of Bangor, settled 1803, inc 1823 It is a center for the Schoodic, Seboois, and Sebec lakes region and has manufactures of lumber products, yarn, and thread At Derby village are railroad shops

Milo, Aegean island see MELOS

milo or milo maize. see SORGHUM

Milon see MILO.

Milosh (Miloš Obrenovich) (mī'lŏsh ōbrĕ'nuvĭch), 1780–1860, prince of Serbia (1817–39, 1858–60), founder of the OBRENOVICH dynasty and of modern SERBIA An illiterate swineherd, he was a revolutionary chieftain fighting the Turks under KARAGEORGE After Karageorge's defeat he temporarily submitted to the Turks, but in 1815 he began a new and successful rebellion In 1817, having killed his rival Karageorge, he was named prince of Serbia, a title confirmed by the national assembly (1827) and by the sultan (1830), who remained his suzerain Popular discontent with his tyrannical rule and Russian intrigue forced him to abdicate (1839) in favor of his son, Milan, who died in the same year Milosh's younger son, Michael (Michael Obrenovich), who then became prince, was deposed in turn in 1842 and succeeded by Alexander Karageorgevich In 1858 the Serbian Skupchtina [parliament] recalled Milosh He was succeeded at his death by Michael

Miltiades (mĭltī'ădēz), d 489 B C, Athenian general, who commanded at Marathon From youth he lived in an Athenian dependency in the Gallipoli Peninsula and succeeded his uncle as its ruler (c 524 B C) He accompanied (c 513 B C) Darius in the Persian expedition into Scythia Later he took part in the revolt of Ionian Greece against the Persians (499–493 B C) and retired at the end to Athens His experience, ability, and sentiments made him a leader of the patriotic party, which elected him to the board of generals to oppose the impending Persian invasion (see PERSIAN WARS) When the enemy arrived at Marathon, Miltiades went there to protect Athens from the land side After a few days' delay the Persians began the march toward Athens, and Miltiades attacked He had an infantry outnumbered two to one, but the Greek spears and armor outweighed Persian arms The Athenian center gave way, the wings enveloped the Persians, and the Persians were vanquished They retreated to their ships and started at once by sea to attack Athens, the army being absent Perhaps the chief glory of Miltiades was that he could bring his army, which had fought all day, in a 20-mile race back to Athens In the morning the Persian fleet arrived off Athens, Miltiades and his army were there already After the battle the general was given a fleet Unauthorized, he made an unsuccessful attack on Paros His enemies took advantage of him and had him fined He died of a wound soon after

Milton, John, 1608–74, English poet, b London, educated at St Paul's School and at Christ's College, Cambridge (B A, 1625, M A, 1632) His father, a wealthy scrivener, was also an amateur musician and composer who encouraged his son's early interest in literature, language, and music While John Milton was at Cambridge he wrote poetry in both Latin and English, including his ode "On the Morning of Christ's Nativity" (1629) Although the exact date is unknown, "L'Allegro" and "Il Penseroso" were probably written not long after this His increasing dislike of the ritualism which was growing stronger in the English Church at this time was the reason he later gave for not entering the Church as he had earlier planned to do Resolved to be a poet, Milton retired to his father's estate at Horton after leaving Cambridge and devoted himself to his studies There he wrote *Comus*, a masque (acted 1634, pub 1637), and "Lycidas" (1638), one of his greatest poems, an elegy on the death of his friend Edward King In 1638, after the death of his mother, Milton went to Italy, where he traveled and studied nearly two years In Florence he learned of the death in England of his closest friend, Charles Diodati, and later wrote of him one of his most austere Latin poems, "Epitaphium Damonis" Returning to England in 1640, he supported the Presbyterians in their attempt to reform the English Church His pamphlets, which attacked the episcopal form of church government, include *Of Reformation in England* (1641) and *The Reason of Church Government Urged against Prelaty* (1642) In 1643 he married Mary Powell, who left him the same year He then wrote (1643–45) four controversial pamphlets upholding the morality of divorce for incompatibility *Areopagitica* (1644), his most famous prose work and one of the great arguments in favor of the freedom of the press grew out of his dissatisfaction with the strict censorship of the press exercised by Parliament. Milton gradually broke away from the Presbyterians, and in 1649 he wrote *The Tenure of Kings and Magistrates*, which supported the Independents who had imprisoned King Charles in the PURITAN REVOLUTION In it he declared subjects may put to death an unworthy king This pamphlet secured Milton a position in Oliver Cromwell's government as secretary for foreign tongues, and he continued

to defend Cromwell and the Commonwealth government in his *Eikonoklastes* [the image breaker] (1649)—an answer to EIKON BASILIKE—and in the Latin pamphlets *First Defense of the English People* (1651), *Second Defense of the English People* (1654), and *Defense of Himself* (1655) In the midst of his heavy official business and pamphleteering, Milton, whose sight had been weak from childhood, became totally blind, and he had to carry on his work through secretaries, one of whom was Andrew Marvell Mary Powell had returned to Milton in 1645, but died in 1652 He married Catharine Woodcock in 1656, and she died two years later She is the subject of one of his most famous sonnets beginning, "Methought I saw my late espousèd saint" Milton's 19 sonnets in English and 5 in Italian follow in general the Petrarchan style (see SONNET) and are accepted as among the greatest ever written In 1663 Milton married Elizabeth Minshull, who survived him Milton supported the Commonwealth to the very end, and after the Restoration (1660) he was forced into hiding for a time and some of his books were burned He was included in the general amnesty, however, and lived quietly thereafter For many years Milton had planned to write an epic poem, and he started his work on *Paradise Lost* probably before the Restoration The blank-verse poem in 12 books appeared in 1667, was greatly admired by Milton's contemporaries, and has ever since been considered the greatest epic poem in the English language In telling the story of Satan's rebellion against God and the story of Adam and Eve in the Garden of Eden, Milton has attempted to account for the evil in this world and, in his own words, to "justify the ways of God to men" *Paradise Regained*, a second blank-verse poem in four books, describes how Christ, a greater man than Adam, overcame the temptations of Satan *Samson Agonistes*, a poetic drama modeled on classic Greek tragedy but with biblical subject matter, appeared in 1671 Milton's theology, which, although in the Protestant tradition, is extremely unorthodox and individual on many points, is set forth in the Latin pamphlet *De doctrina Christiana*, [on Christian doctrine], unpublished during Milton's lifetime and discovered and published in 1823 As a poet he has won universal acclaim, but Milton's personal life, his politics, and his theology, which can, in general, be described as Puritan, have always been subjects of much controversy See his complete works (ed by F A Patterson, 20 vols , 1931–40). There are many one-volume editions which contain all the poetry and some of the prose, among them are *The Student's Milton* (ed by F A Patterson, 1933) and *The Portable Milton* (ed by Douglas Bush, 1949) See biographies by Samuel Johnson (in *Lives of the Poets*, 1799), David Masson (7 vols , 1858–94, rev ed by Peter Smith, 1946), Eustace Tillyard (1930), Denis Saurat (rev ed , 1944), and J H Hanford (1949), J H Hanford, *The Milton Handbook* (4th ed , 1946), D L Clark, *John Milton at St. Paul's School* (1948)

Milton West, town (pop 1,964), S Ont , W of Toronto It has lumber and flour mills and dairying The town was formerly called Milton

Milverton, village (pop 1,015), S Ont , NNE of Stratford It has a textile mill.

Milvian Bridge or **Mulvian Bridge,** Latin *Pons Milvius* or *Pons Mulvius* It was built by M Aemilius Scaurus in 109 B C over the Tiber near Rome as part of the Flaminian Way. By defeating Maxentius here in A D 312, Constantine I became the unchallenged ruler of the West It was here that Constantine saw the cross in the sky.

Milwaukee (mĭlwô'kē), city (pop 587,472), co seat of Milwaukee co , SE Wis., N of Chicago and at the point where the Milwaukee, Menomonee, and Kinnickinnic rivers join and enter Lake Michigan, inc 1846 During the late 17th cent , missionaries visited the site, where Indian tribes gathered and traded, and in 1795 the North West Company set up a fur-trading post In 1818 Solomon JUNEAU came Several settlements in the region merged after 1835 to be Milwaukee village With a good harbor, a developing hinterland, accessible raw materials, and industrious and capable citizens, Milwaukee grew as a shipping center and became the largest city in the state, famous for its numerous industries, notably brewing and meat packing It is also a port of entry For several years after 1848, German refugees, such as Carl SCHURZ, stimulated the city's political, economic, and social growth After the Civil War the KNIGHTS OF SAINT CRISPIN foreshadowed the city's growing labor movement Victor L BERGER, the Socialist leader, exerted a dominant influence here, and Daniel W HOAN made Milwaukee known for efficient administration Among the city's educational institutions are MARQUETTE UNIVERSITY, a state teachers college, Mt Mary College, and Milwaukee Vocational School Milwaukee-Downer College (nonsectarian, for women), opened in 1848 as a seminary, was chartered as a college in 1851, with a program planned by Catharine Beecher In 1895 it absorbed Downer College (chartered 1855 at Fox Lake) It is a liberal arts college with special departments of art, home economics, music, and occupational therapy Other points of interest include a large auditorium, a public library and museum, an art institute, and an art gallery Milwaukee has a large U S veterans' institution Among the numerous parks are Washington Park, with a zoo, Mitchell Park, containing botanical gardens, Juneau Park, and Estabrook Park, containing one of the city's oldest houses See W G Bruce, *A Short History of Milwaukee* (1936), D W Hoan, *City Government* (1936)

Milwaukie, city (pop 1,871), NW Oregon, just S of Portland and on the Willamette, founded 1848, inc 1903 Cherry trees brought here from Iowa in 1847 inaugurated the state's important cherry-growing industry

Milyukov or **Miliukov, Pavel Nikolayevich** (both pä'vĭl nyĭkull'uvĭch mēlyōō'kôf'), 1859–1943, Russian statesman and historian A member of the Duma and a leader of the liberal Constitutional Democratic party, he became foreign minister in the first government of Prince Lvov after the February Revolution of 1917 His insistence on carrying out Russia's military obligations toward the Allies in the First World War made him highly unpopular with the war-weary masses, and in May, 1917, he was forced to resign An uncompromising opponent of Bolshevism, he settled in Paris after the failure of the counterrevolution against Lenin Among his historical works is *Outlines of Russian Culture* (Eng tr , 3 vols , 1942)

Mimico (mĭ'mĭkō), town (pop 8,070), S Ont , on Lake Ontario It is an industrial and residential suburb W of Toronto

mimicry, in biology, the advantageous resemblance of one animal to another of a different, and often an unrelated, species or to a feature of its own environment (However, this resemblance to some environmental feature is usually classed as PROTECTIVE COLORATION) Mimicry may exist among plants as well as animals, but it is most easily and most commonly observed among insects The first scientific studies on the subject were published by H W BATES (1862) and A R WALLACE (1865) The Batesian theory of mimicry is that, through the operation of natural SELECTION and without conscious effort, an edible insect (for example) acquires a deceptive resemblance to an inedible insect and thus escapes its aggressor This superficial resemblance can occur only when some anatomical feature lends itself to such adaptation, radical changes in structure do not occur The mimic is usually of a rarer species than the model, mimic and model are generally found in the same localities and exhibit similar variations in their geographic range Mimics may themselves become models for other groups In some instances the insect mimics its prey, as in the case of spiders that resemble ants A common example of mimicry seen in temperate North America is the resemblance of the viceroy butterfly to the monarch butterfly which is distasteful to birds Other examples of protective mimicry are flies which look like bees, a Borneo beetle which resembles a wasp, and a rare African swallowtail butterfly the female of which mimics an inedible common variety An aposematic or warning resemblance is believed to have the effect of inspiring dread, e g , a South American insect of which part of the head looks strikingly like that of a small alligator and harmless snakes which resemble poisonous varieties. See E B Poulton, *Colours of Animals* (1872); H W Bates, *Naturalist on the River Amazons* (new ed , 1910); Harry Eltringham, *African Mimetic Butterflies* (1910), G. D. H. Carpenter and E. B Ford, *Mimicry* (1933)

Mimnermus (mĭmnûr'mŭs), fl. late 7th cent B.C., Greek elegiac poet of Colophon. Only fragments of his poetry survive. He wrote martial and historical poems as well as love poems marked by tenderness and melancholy sentiment. One collection was called *Nanno*, after a beloved flute girl

mimosa (mĭmō'sŭ), any of the trees, shrubs, or herbs of the leguminous genus *Mimosa*, chiefly tropical American plants, usually with feathery foliage and rounded clusters of flowers Mimosas are used for ornamental purposes in warm regions The acacias of florists are often called mimosa, and many are quite similar, but they may be distinguished by the number of stamens—10 or less in mimosa, more than 10 in acacia Most widely known of the mimosas is the sensitive plant (*Mimosa pudica*), a weed in the tropics, but cultivated as a greenhouse annual elsewhere because of its interesting movements Its leaves fold up and collapse under a light touch, until the whole plant may assume a thoroughly wilted appearance for a short time When stimulated at regular and frequent intervals, the plant soon fails to respond

Mims, Fort: see WEATHERFORD, WILLIAM

Min (mĭn), rivers in China, both navigable 1 Fukien prov , flowing c 260 mi on a southwest course to empty into the South China Sea near Foochow 2 Szechwan prov , flowing c 120 mi on a southerly course to join the Yangtze at Suifu

Mina, Francisco Javier (franthĕ'skō hävyĕr' mē'nä), 1789-1817, Spanish soldier and revolutionist In the Peninsular War he fought under Palafox at Saragossa (1808–9) and carried on guerrilla warfare against the French with his uncle ESPOZ Y MINA The failure of the revolt against Ferdinand VII after his restoration (1814) forced Mina to flee to England Here he organized a group to support the Mexican revolutionists Landing in the United States (1816), he recruited some American followers, spent some time at Galveston, and then went to Soto la Marina Though deserted by some of his followers, he won a few initial successes but was captured by the royalists and executed

Minami-tori-shima see MARCUS ISLAND.

minaret (mĭnurĕt'), tower used in Moslem architecture (see MOSLEM ART AND ARCHITECTURE) The small tower is a usual part of most mosques and from a gallery the muezzin chants his summons to prayer A winding stairway mounts to the summit Many mosques have only a single minaret, while in others minarets occur at the corners or at several points on the plan Early examples are in the mosque (late 7th cent) at Kairwan, North Africa, and in that (879) of Ibn Tulun at Cairo These and other early minarets are square towers, generally of brick and with little adornment From the 12th cent , however, numerous decorative types were developed, showing increased slenderness The characteristic form was of several receding stories, each marked by a projecting balcony, with a domed or conical summit Egyptian minarets have a square base from which rises a polygonal story supporting one or two cylindrical stories The balconies project upon intricate stalactite corbeling, and the tower surfaces are covered with rich relief ornament Persian minarets are entirely sheathed in decorated glazed tiles and support a cupola with domical roof They often flank a deep portal niche, as at the imperial mosque, Isfahan (1585–1612) The Indian minarets are similar Those of Turkey are tall and exceedingly slim shafts, often fluted, with elongated conical tops There are generally six in a mosque The early square minaret became a firmly rooted type in Spain and North Africa, the most noted is the Giralda tower, Seville (c 1190)

Minas Basin (mī'nŭs), northeast arm of the Bay of FUNDY, indenting N Nova Scotia

Minas de Riotinto, Spain see RÍO TINTO

Minas Gerais (mē'nus zhurīsh') [Port , =various mines], state (224,701 sq mi , 1940 pop 6,736,416, 1949 estimated pop 8,132,111), E Brazil The capital is Belo Horizonte One of the few entirely inland states of Brazil, Minas Gerais lies on the central plateau, cut off from the coast by mountain escarpments It is crossed by the Serra do Espinhaço, which has reputedly the largest known iron reserves in the world These are now being exploited So are the rich deposits of manganese in the state Diamonds are mined at Diamantina, and gold is panned in various streams as well as dug There are also semiprecious stones and other less important minerals Gold was first discovered in 1698 on the tributaries of the São Francisco, which drain the central and most of the west of the state, and later strikes followed Minas was made a captaincy in 1720, and the old capital, Ouro Preto, was an important colonial city Diamonds were first found in 1730 Great wealth was drawn from the area, but the rugged terrain and lack of communication restricted settlement to a few centers Late in the 18th cent Minas was the center of a literary group, and here in 1788 Tiradentes led an ill-planned and hopeless revolt against the Portuguese government In 1897 when the capital was moved from Ouro Preto to the planned city of Belo Horizonte, the state still had been little developed Today it has the second highest (after São Paulo) population of any state Not only minerals but also agriculture (coffee, cotton, tobacco, rice and other grains, and sugar) contribute to Minas wealth. It

is well known for its stock breeding, the so-called Triângulo Minerio, a section between headstreams of the Paraná that drain the extreme west of the state, being particularly notable for its cattle The extension of railroads has brought industry. There are iron and steel mills E of Belo Horizonte, and Juiz de Fora is a textile center. Other plants process local produce. The climate of Minas is generally cool, and there are popular mountain resorts. The name was formerly spelled Minas Geraes

Minatare (mĭn'ŭtâr), village (pop 1,125), W Nebr, on the North Platte river and near Scottsbluff, in an irrigated farming area It has a beet-sugar factory

mincemeat see PIE

Minch (mĭnch) or **North Minch**, strait, 25 to 35 mi wide, separating the island Lewis with Harris, Outer Hebrides, from the mainland of Scotland Little Minch, southwest, 14 to 20 mi wide, separates Skye from North Uist and neighboring Outer Hebrides islands

Mincio (mēn'chō), river of Lombardy, N Italy, c 40 mi long, flowing from Lake Garda through Mantua to the Po In its upper course, before entering Lake Garda, it is called the Sarca The Sarca-Garda-Mincio line marks the natural border between Lombardy and Venetia and has been of strategic importance, especially in the wars of the Risorgimento (1848–49) Vergil referred to the Mincio in his *Eclogues*

mind see PSYCHOLOGY

Mindanao (mĭndumu'ō,-nou'), island (36,536 sq mi, pop 1,828,071), second largest of the Philippine Islands It is NE of Borneo Off its northeast coast in the Philippine Sea is the Mindanao Deep (35,400 ft), the greatest known depth of any ocean Indented by several deep bays, the island has a large western peninsula The terrain is generally mountainous, rising to 9,690 ft at Mt Apo The largest of the many rivers is the Mindanao, c 200 mi long, navigable by small steamers for 40 mi, the largest lake is Lake Lanao Mindanao lies below the typhoon belt, and its climate is more favorable than that of Luzon to the north There are valuable hardwood forests and varied tropical vegetation, although the soil is generally fertile, only a relatively small portion of the land is under cultivation Hemp, coconuts, rice, corn, and coffee are grown, and there is some mining of iron, gold, and coal ZAMBOANGA and DAVAO are the principal cities During the 14th and 15th cent, Islam spread from Indonesia to Mindanao and the other southern islands of the Philippines In later centuries the Mohammedan Filipinos, the Moros, strenuously resisted the attempts of the Spanish to gain control over them

Minden (mĭn'dun), city (pop 34,293), Westphalia, NW Germany, at the junction of the Ems-Weser and Weser-Elbe canals Minden was the see of a bishopric founded c 800 by Charlemagne It struggled throughout the Middle Ages against the temporal rule of its bishops, joined (13th cent) the Hanseatic League, and accepted (1530) the Reformation The secularized bishopric of Minden passed to Brandenburg in the Peace of Westphalia (1648) In the Seven Years War the English and Hanoverians here defeated (1759) the French In the Second World War the city suffered heavily, the cathedral (11th–13th cent) and the city hall (13th–17th cent) were destroyed Among the varied manufactures of Minden are furniture, distilled liquor, and lumber

Minden. **1** Shipping and rail city (pop 6,677), parish seat of Webster parish, NW La, NE of Shreveport, in a cotton and farm area, inc as a town 1850, as a city 1928 Oil and natural gas are in the vicinity, and recreational facilities are near by **2** City (pop 1,848), co seat of Kearney co since 1878, S Nebr, SSE of Kearney, founded 1876

Mindoro (mĭndō'rō), island (3,758 sq mi, pop 116,988), Philippine Islands, SW of Luzon and separated from the Calamian Islands by Mindoro Strait Coal is mined, and rice and coconuts are grown Mindoro and its offshore islands constitute Mindoro prov (3,891 sq mi, pop 131,569)

mind reading see TELEPATHY

Mindszenty, Joseph (mĭnd'sĕntē), 1892–, Hungarian prelate, cardinal of the Roman Church He was bishop of Veszprem during the German occupation of Hungary in the Second World War His anti-German attitude led to his imprisonment for several months by the Hungarian puppet government After the war he was made archbishop of Esztergom and Catholic primate of Hungary, and in 1946 he was raised to the cardinalate A strong opponent of Communism, Mindszenty soon entered into conflict with the Hungarian government, which arrested him and several others late in 1948 on the charges of treason and illegal monetary transactions. The main charge was that the cardinal, with the help of the Western powers, sought to restore the Hungarian monarchy under Archduke Otto of Hapsburg His visit (1946) to the United States and Canada was represented as linked to his treasonable activities Mindszenty at a sensational public trial pleaded guilty to most charges It was widely held that his confession was obtained by drugging him, because he had disclaimed in advance any confession he might make in case of arrest; however, the moral pressure put on him during his confinement would appear a sufficient explanation That he was an outspoken opponent of the Communist government and thus a major obstacle to the success of its program there can be no doubt The court found him guilty, with mitigating circumstances (based on his stand during the war), and sentenced him to life imprisonment Pope Pius XII, protesting Mindszenty's arrest and trial, excommunicated all those Catholics responsible for them and refused to fill the see of Esztergom, Outside Hungary, the case in favor of Mindszenty has been presented in several books, among them Bela Fabia's *Cardinal Mindszenty* (1949) A selection of his writings was published as *Cardinal Mindszenty Speaks* (1949)

mine, in industry see MINING

mine, in warfare, explosive weapon used in land and sea operations The submarine mine is employed for attacks against ships, for defense of harbors, and to deny the use of certain areas of water to ships It consists of a charge of explosives contained in a watertight case The first attempts to use such explosive charges against ships occurred in the 16th cent, and drifting charges were used The Continental forces used mines against England in the American Revolution The first electrically fired mine was exploded in the Civil War Mines are classified into controlled and noncontrolled or contact mines Controlled mines are connected by electric cable to a shore station The current can be switched off to enable passage of friendly ships In noncontrolled mines the means of firing is contained in the mine itself It is either electrical (small battery) or mechanical (spring) As contact mines are dangerous for friendly and inimical vessels alike, their use was limited by the London Convention on warfare on the high seas (1912) A new kind of contact mine was the magnetic mine invented by the Germans and launched for the first time in the fall of 1939 They were attracted by the iron hulls of ships and exploded when they struck them The first German magnetic mine was captured on Nov 24, 1939, and exactly one month later a successful counterweapon was tried out It consisted of a pair of long electrified cables towed behind two minesweeping tugs The cables set up a magnetic field strong enough to explode all mines within a huge area, thus clearing wide shipping lanes Mines are laid by vessels specially fitted to carry them, usually called minelayers Certain types of destroyers and submarines also are fitted for minelaying Minesweeping is performed by pairs of small vessels drawing between them a cable which engages the moorings of the mines and permits their destruction The land mine first appeared in siege warfare A system of galleries was dug to run from a point of safety under an opposing work and terminate in a chamber in which explosives were stored to be detonated at a chosen moment The Turks were the first to use explosive mines In their first siege of Vienna (1529) they were badly defeated, however, through an excellent system of countermining by the defenders These countermines blew up whole parties of assailants In the First World War, during the period of trench warfare, mining and countermining were frequently employed, and telephonic and other means of mine detecting developed. The sowing of large mine fields developed This was carried to a much greater extent in the Second World War Various types of mines were used, and they were concealed in different fashions The antipersonnel mines were quite effective, and mines were much used as defense against tank attacks One of the major duties of military engineers came to be laying of mines and detecting mines laid by the enemy

Mineola (mĭnēō'lu) **1** Village (pop 10,064), co seat of Nassau co, on W Long Island, SE N Y, inc 1906 It is a commercial center and has repair and service shops for near-by Mitchel Field, U S military flying field **2** City (pop 3,223), E Texas, E of Dallas, in the northeast corner of the state, inc 1873 Settled at a railroad junction in 1872, it has railroad shops, cotton-processing plants, and small factories The area has many truck farms

Miner, John Thomas (Jack Miner), 1865–1944, Canadian naturalist and author, b Dover Centre, near Cleveland, Ohio. He went with his parents to Canada in 1878 About 1904 he began to make a bird sanctuary of his farm near Kingsville, Ont He was a pioneer in the bird-banding movement for tracing the journeys of migratory birds In 1931 his admirers instituted the Jack Miner Migratory Bird Foundation to insure the continuance of his work Known as a lecturer and newspaper writer, he also wrote *Jack Miner and the Birds* (1923) and *Jack Miner on Current Topics* (1929)

mineral, inorganic substance occurring in nature, having a characteristic and homogeneous chemical composition, definite physical properties, and, typically, a definite crystalline form (Some substances of organic origin are sometimes included among the minerals) A few of the minerals (e g, carbon, arsenic, bismuth, antimony, gold, silver, copper, lead, mercury, platinum, and iron) are elements, but the vast majority are chemical compounds. A definite formula can usually be assigned to each mineral which is a chemical compound, although sometimes one element in a mineral may be replaced by another without changing the species of the mineral (ISOMORPHISM) Minerals combine with each other to make up rocks, which, as distinguished from minerals, are of heterogeneous composition and are lacking in definite structure Minerals may, and typically do, occur in the form of crystals, when external conditions are unfavorable to crystallization, they may be found in the massive state Among the important physical properties of minerals are specific gravity, hardness, cleavage, fracture, tenacity, fusibility, heat conductivity, luster, color, transparency, taste, odor, feel, magnetism, and electrical properties Minerals originate by precipitation from solution, by cooling and hardening of magmas, by the condensation of gases or gaseous action on country rock, and by METAMORPHISM Minerals in rocks are frequently replaced by other minerals through the action of water or gases (metasomatism) Minerals, especially the metals, are of great economic importance to civilization, entering into the composition of many manufactured articles They are especially important to a highly industrialized civilization, which could not, indeed, exist without them. Many minerals which would otherwise be of no economic significance are highly valued as GEMS. Mineralogy is the branch of geology which deals with the study of minerals See A C Hawkins, *The Book of Minerals* (1935), L V Pirsson, *Rocks and Rock Minerals* (3d ed, 1947), Frank Rutley, *Elements of Mineralogy* (24th ed, revised by H H. Read, 1948), W H Jones and David Williams, *Minerals and Mineral Deposits* (1948), E S. Dana, *Minerals and How to Study Them* (3d ed, revised by C S Hurlbut, Jr, 1949), *Minerals Yearbook*, publication of the U S Bureau of Mines.

mineral oil see PETROLEUM.

Mineral Point, city (pop 2,275), SW Wis, SW of Madison, inc 1857 Old Cornish miners' houses here recall the city's early lead-mining activity

mineral water. The water issuing from many springs throughout the world has been found to contain various mineral salts, especially the carbonates, chlorides, phosphates, silicates, sulphides, and sulphates of calcium, iron, lithium, magnesium, potassium, sodium, and other metals Present in many also are various gases, e g, carbon dioxide (the gas causing the "sparkle" in common soda water). The water probably obtains its mineral matter as it passes through the soil on its way into the spring. Those springs that contain iron (commonly in the form of the carbonate) and are usually impregnated with carbon dioxide are known as chalybeate springs Some mineral springs are hot or boiling (thermal) and some are cold They are commonly considered to be of value in the treatment of various conditions, as rheumatism, gout, liver trouble, blood ailments, dyspepsia, and many of the common diseases of various organs and parts of the human body Famous European resorts include Bath, Spa, Aix-les-Bains, Aachen, Baden-Baden, and Carlsbad, in the United States, Poland, Maine, Saratoga Springs, N Y, Berkeley Springs and White Sulphur Springs, W Va, Hot Springs, Ark, French Lick, Ind, Waukesha, Wis, and Las Vegas Hot Springs, N Mex, are well known Many of the natural mineral waters are now prepared synthetically, the various mineral ingredients being added to ordinary water in the correct proportions, after careful chemical analysis of the original ingredients See T D Luke, *Spas and Health Resorts of the British Isles* (1919), C F Mullett, *Public Baths and Health in England, 16th–18th Century* (1946), M G Foster, *Baths and Medicinal Waters of Britain and Europe* (1933), Morris Schott, *Health and Pleasure Resorts of Central Europe* (1928), W E Fitch, *Mineral Waters of the United States and American Spas* (1927), Perceval Reniers, *Springs of Virginia* (1941)

Mineral Wells, city (1940 pop 6,303, 1947 estimated pop 10,000), N Texas, near the Brazos and W of Fort Worth, founded 1872 The popularity of the wells as a health resort gave the hill city a chance to develop small industries, including manufacture of mineral crystals and making of hosiery Recently attempts have been made to plant mulberries and build a silk industry Camp Wolters, near by, was very active in the Second World War To the east is Lake Mineral Wells, a reservoir in the Trinity river system

Minersville, industrial borough (pop 8,686), E Pa, near Pottsville, settled c 1793, laid out 1830, inc 1831 Anthracite and clothing are produced here

Minerva (mĭnûr'vu), in Roman religion, goddess of learning and handicrafts She is identified with the Olympian ATHENA.

Minerva, village (pop 2,937), NE Ohio, SE of Canton and on the Sandy River, in a farm area It was founded in 1835 with the building of the Sandy and Beaver Canal It produces ceramics

Ming (mĭng), dynasty of China which ruled from 1368 to 1644 The first Ming emperor, Chu Yüan-chang (ruled 1368–98), a former Buddhist monk,

completed the expulsion of the Mongols from China by 1371 (see YÜAN). Succeeding emperors from their capitals at Nanking and Peking consolidated an empire which at its height extended from Burma to Korea. In the early years of the dynasty naval expeditions were dispatched for conquest and trade, but the traditional Chinese policy prohibiting ships from leaving the coastal waters was soon revived (c.1440) Despite a strong effort to exclude foreign trade, European settlements were made at Macao and Canton In government and in cultural life the Ming attempted to eradicate all Mongol influences An encyclopedia, a dictionary, and many scholarly works were produced, and the novel and drama reached great heights The delicate monochromatic porcelain of the Ming period is often considered the finest achievement of Chinese ceramics Oppressive taxation in the later years of the dynasty incited revolts among peasants in the border regions and prepared the way for the Manchu conquest of China (see CH'ING)

Mingan Islands (mĭng'gun), group of 15 small islands and many islets, E Que., near the mainland N of Anticosti island, in Mingan Passage of the St Lawrence river Thev were discovered (1535) by Cartier In 1679 Frontenac granted seal and cod fishing rights to Louis Jolliet, and in 1836 the islands were sold to the Hudson's Bay Company

Minghetti, Marco (mar'kō mĕngĕt'tē), 1818–86, Italian statesman. He was premier in two conservative cabinets (1863–64, 1873–76) When the leftists under Depretis gained power, Minghetti led the opposition in the parliament He wrote on politics, history, and art

Mingo Junction, village (pop. 5,192), E Ohio, on the Ohio and near Steubenville, settled 1809, inc. 1882 It is a steel center near coal mines.

Mingrelia (mĭn-grē'lēu), region, W Georgian SSR, a lowland bordering the Black Sea. Tea and grapes are the chief products. Poti is the main port. The COLCHIS of the ancients, Mingrelia was a vassal principality under the Ottoman Empire and was annexed to Russia in 1803 The Mingrelians are closely related in culture and language to the Georgians.

Minho (mē'nyō), Span *Miño* (mē'nyō), river, c 210 mi long, rising in NW Spain, in Galicia, and flowing generally S and SW to the Atlantic. It forms the boundary between Portugal and Spain. It gives its name to the northernmost province (1,868 sq mi, pop. 741,510) of Portugal, with the capital at Braga.

Minsamin (mĭnsā'mĭn) [Heb.,=Miamin] **1** See MIAMIN **2.** **2** Officer under Hezekiah 2 Chron. 31 15. **3** Trumpeter at the dedication of the wall, Neh. 12.41.

miniature painting [Ital.,=work done with the red pigment *minium*; the word originally had no implication as to size]. In a general sense the word denotes any small, detailed kind of painting, including medieval ILLUMINATION and much of the finest painting of India and Persia More commonly it is used to refer to diminutive portraits Among the earliest European masters of this latter art were Holbein the Younger, Jean Clouet, and Jean Fouquet Later masters famous for their miniatures were Nicholas Hilliard, Samuel Cooper, and Richard Cosway in England and the Petitots, Isabey, Hubert Drouais, Nattier, Fragonard, and Boucher in France In colonial America, C W Peale, Benbridge, Copley, Peter Pelham, and E G Malbone were notable exponents of the art Water color on parchment, paper, porcelain, or ivory is the commonest medium for miniatures They have also been executed in oil on copperplate and in baked enamel The Metropolitan Museum, the Louvre, and the Wallace Collection in London have notable collections

Minidoka project, S Idaho, in the Snake river valley Developed by the Bureau of Reclamation, it irrigates 215,000 acres. The Snake river is impounded by Minidoka Dam (est 1909), which is 73 ft high and 4,133 ft long and forms Lake Walcott near Rupert, and by American Falls Dam (est 1927), which is 89 ft high and 5,227 ft. long. American Falls Reservoir stores surplus water, which supplies some 600,000 acres of privately irrigated land in the Snake river valley Project land in the Minidoka and Burley areas comprises 120,000 acres in the Snake river plain below Lake Walcott Another 95,000 acres lie near Gooding and Shoshone and in the Wood river valley, irrigated with water from the Snake carried in a canal c 70 mi long Jackson Lake, in Wyoming, stores water for the project Burley, Rupert, Shoshone, and Gooding are the chief project towns. See AMERICAN FALLS.

minimum wage, lowest wage permitted in an industry or in a government or other organization The object sought in establishing minimum wages has commonly been to assure wage earners of a standard of living not below the lowest permitted by health and decency. This minimum has been set by labor unions through collective bargaining, by arbitration, by boards, and by legislation Introduced by New Zealand in 1894 through compulsory arbitration with a prohibition on strikes and lockouts, it became rapidly part of the social legislation of almost all countries. Although minimum wage laws were at first held unconstitutional in the United States, a strong fight by labor for its enactment culminated in the passage (1938) of the Fair Labor Standards Act, which set minimum wages for all workers engaged in interstate commerce (with some exceptions), this act also set up "industry committees" to recommend rates for every industry. In July, 1942, the government decreed that no wage increase over 15 percent as of Jan., 1941, should be granted (this was known as the "Little Steel Formula") This came under heavy attack by labor as the cost of living rose In 1949 a law was passed setting the minimum wage at $.75 per hour See Seth Richardson, *The Minimum Wage* (1927)

mining, extraction of ores, precious stones, COAL, and other mineral resources from the earth The search for and discovery of mines is known as PROSPECTING, the extraction of the metals from the ores after mining is the province of METALLURGY Mineral deposits are exploited either from the surface of the ground or from underground shafts and tunnels, the method of exploitation depending on the depth of the deposit below the surface of the ground A given mineral may thus be mined by different methods in different localities, e g, GOLD and DIAMOND are mined by placer, open-pit, and underground methods, coal, by both open-pit and underground methods In placer mining no excavation such as is suggested by the term *mine* is involved The gravels are removed from the deposits by hand, by hydraulic nozzles, or by dredging, the ore is separated from the waste by panning or by sluicing In open-pit mining, an excavation of any depth, similar to a quarry, is made, in deep pits, the sides are usually cut into steps or benches. Access to the bottom of the mine is made possible by arranging the benches in spiral form, by cutting inclined approaches, or by sinking a shaft outside of the mine and connecting the shaft and mine with an adit or tunnel In glory-hole mining (or mill-hole mining) a funnel-shaped excavation is connected by a raise (vertical passage driven from below) with an underground haulage level, into which the ore slides through the raise An underground mine consists, broadly speaking, of a vertical shaft, horizontal levels opening out of the shaft, and raises or winzes (vertical passages driven from above) connecting the levels The openings branching off from the levels, where the ore is actually extracted, are called stopes Stoping (extracting of ore) is carried on by a great variety of methods, the choice of which depends on local conditions, e g, the size and shape of the ore body and the strength of the surrounding rock Some mining methods, applied to liquids (e g, petroleum), gases, and soluble minerals, involve the use of wells and pumps The principal materials used in the support of mine workings are timber (often treated with preservatives), reinforced concrete, steel, brick, and stone Pillars of ore are frequently left as supports, being mined only when the workings are vacated The tools of mining were formerly the pick and shovel, the hand drill, and the mule cart, later small charges of explosives were used The value of a mineral deposit is determined by the relationship of the richness (mineral content per weight unit of ore) of the ore to the cost of extracting it from the ground Increased mechanization has permitted the profitable exploitation of low-grade deposits Modern mining equipment includes hydraulic nozzles, power-driven dredges, plows, power-driven excavators, drills operated by water, steam, compressed air, electricity, and gasoline, endless-belt and endless-chain conveyors, and self-powered machinery which combines the operations of drilling, blasting, cutting, and loading Advances have been made in transportation, illumination, and drainage, but the problems of ventilation and wetting down dust (to prevent explosions and such occupational diseases as silicosis) and the detection of imminent cave-ins still challenge mining engineers See T A Rickard, *A History of American Mining* (1932), R. S Lewis, *Elements of Mining* (1933), T J Hoover, *The Economics of Mining* (1933), W H Witcombe, *All about Mining* (1937), G. J. Young, *Elements of Mining* (4th ed., 1946)

mining engineering see ENGINEERING

minister, in diplomacy see DIPLOMATIC SERVICE and EXTERRITORIALITY

minister, in government see CABINET

ministry, term generally used to mean the clergy of Protestant churches, particularly those who repudiate the traditional views of the Roman Catholic, Eastern, Anglican, and Lutheran churches as not apostolic (for those churches, see ORDERS, HOLY) The first new polity developed in the Reformation was PRESBYTERIANISM, holding one order of ministry The Methodists have preserved the old title of bishop, but differ fundamentally from Anglicans in having a clergy often scarcely distinguished from "lay preachers" Among the FRIENDS the ministers are set apart officially, but there are many in each meeting, with only spiritual authority. Many loosely knit Protestant denominations have ministries which depend mainly on a sense of personal calling.

Minitari Indians: see HIDATSA INDIANS.

minium: see RED LEAD.

mink, semiaquatic mammal of the weasel family. One species is found over most of North America, and another, with its subspecies, inhabits Europe (where it is rare except in Russia) and central Asia. In the American mink the slender, arched body is about 20 to 30 in. long, including the bushy tail, and the shoulder height is about 5 in. The valuable and durable fur, a soft undercoat overlaid with shiny guard hairs, is a rich brown throughout the year. The secretion of the musk glands is acrid. Minks prey on fish, small mammals, birds, and other animals Much of the mink used in the fur trade is now raised on farms

Minkowski, Hermann (hĕr'män mĭn-kôf'skē), 1864–1909, Russian mathematician He was educated in Germany and was professor at the Univ of Konigsberg (1894–96), the Federal Institute of Technology, Zurich (1896–1902), and the Univ. of Gottingen (1902–9) He is noted for his contribution to the development of the theory of numbers and for having evolved a four-dimensional geometry that is credited with having influenced the formulation of the geometrical expression of the general theory of relativity.

Minneapolis (mĭn'ēē-ăp'ŭlĭs). **1** City (pop 2,087), co seat of Ottawa co., N central Kansas, on the Solomon and N of Salina, laid out 1866, inc. 1871 It is a trade center for an agricultural and livestock region A state park is east of the town, to the west is Rock City, an area of curious eroded geological formations. **2** City (pop 492,370), co. seat of Hennepin co., E Minn., largest city in the state, on both sides of the Mississippi at the Falls of St Anthony, which were visited and named by Hennepin in 1680 Fort Snelling (see SNELLING, FORT) was established in 1819, and a saw mill was built at the falls in 1821 The village of St Anthony was settled c 1839 on the east side of the river near the falls, Minneapolis, which originated on the west side of the river c 1847 and included much of the reservation of Fort Snelling, was incorporated as a town in 1856 and as a city in 1867, St Anthony was annexed in 1872 The city became the country's foremost lumber center as Minnesota was logged off As the plains were planted for wheat and railroads were built, flour milling developed, the 50-foot falls supplying power, and in this industry, too, the city reached supremacy Minneapolis is contiguous to St Paul, just east Known as the Twin Cities, they have become the financial, industrial, and commercial center of a large area having rich natural resources and excellent power and transportation facilities Minneapolis has an airport and is an important railroad center and a port of entry The city was laid out with wide streets and has many lakes and parks (including Minnehaha Park, where is preserved the Stevens House, built in 1849, first frame house in Minneapolis) The city is the seat of the state university (see MINNESOTA, UNIVERSITY OF), the Minneapolis College of Music, the Minneapolis School of Art, Augsburg College and Theological Seminary (Lutheran), and Dunwoody Institute (a trade school) See C R Walker, *American City* (1937).

Minneapolis Symphony Orchestra, founded in 1903 Its first concert was given that year under Emil Oberhoffer, who was conductor until 1921 Later conductors were Henri Verbrugghen (1923–31), Eugene Ormandy (1931–36), and Dimitri Mitropoulos, who resigned in 1949 and was succeeded by Antal Dorati Beginning in 1930 the orchestra's concerts were given in Northrop Memorial Auditorium on the campus of the Univ of Minnesota

Minnedosa (mĭn'dō'sŭ), town (pop 1,837), SW Man., on the Minnedosa river, N of Brandon and W of Winnipeg, in a lumbering and farming region

Minnehaha Falls (mĭn'hā'hŭ") [traditionally Indian,=laughing water], over 50 ft high, in the southeastern part of Minneapolis, in Minnehaha Creek, which flows from Lake Minnetonka to the Mississippi The beautiful surrounding area, including the gorge cut by the receding falls, is a public park Most of the year only a thin trickle of water passes over the falls. The name is immortalized in Longfellow's *Hiawatha*

Minneota (mĭn'ēō'tŭ), village (pop. 1,065), SW Minn, SW of Granite Falls, in a farming region, settled 1868, inc 1881

minnesinger (mĭn'sĭng"ûr), in German literature, a singer of *Minne*, or romantic love The minnesingers correspond roughly to the troubadours of other nations and flourished in the 12th and 13th cent., preceding the meistersingers. The *Minnesang* was based on the Provençal troubadour verse Its greatest exponents were Heinrich von Morungen, Walther von der Vogelweide, and Wolfram von Eschenbach.

Minnesota (mĭn'ēsō'tŭ), state (84,068 sq. mi.; 1940 pop. 2,792,300, 1949 estimated pop. 2,977,000), N United States, in the Great Lakes region, admitted 1858 as the 31st state (a free state). SAINT PAUL, the capital, and its twin city, MINNEAPOLIS, together have almost a third of the state's population The most northerly of all the states (reaching lat 49°23'55" N), Minnesota is bounded on the north by the Canadian provinces of Manitoba and

Ontario, on the east by Lake Superior and by Wisconsin (the St Croix and Mississippi rivers forming much of the border with that state), on the south by Iowa, and on the west by South Dakota and North Dakota The climate is continental. Winter locks the earth in snow, then explodes into a brief spring. Summer follows, untempered by ocean winds but modified by the many lakes which glaciers scoured out in lost prehistoric time The glaciers also left marshes, boulder-strewn hills, and rich gray drift soil from the pine wilderness in the north to the broad prairies in the south In the eastern section are worn mountains that have yielded a wealth of iron ore to make part of Minnesota's fortune and supply much of the traffic to DULUTH at the western tip of Lake Superior, the largest inland harbor of the United States In the Vermilion and Cayuna ranges the iron must be mined underground, but the rich MESABI needed only to be scratched on the surface New methods have been developed to use lower-grade ores as the better ores were exhausted To the south of the iron country, famous for the still-remembered raw boom towns, are the quieter rolling hills and then the prairies in the south and west, the fine farming country of Minnesota Wheat, paramount in older days, has yielded its preeminence to corn growing, livestock raising, and the production of dairy produce and eggs. The forests have been exploited as wheat growing exploited the soil, and the "big woods" of the early 19th cent have been to a large extent recklessly felled The scarred land was left open to further devastation by fire, but reforestation has been undertaken The use of smaller trees for pulpwood has also helped to keep timber as one of Minnesota's valuable assets Yet the great resource of Minnesota has steadily been its water—its more than 11,000 lakes and its numerous streams The rivers feed three great river systems the Red River and its tributaries in the west run N to Hudson Bay, the streams that run E into Lake Superior eventually help to supply the St Lawrence, and the Mississippi flows south from its sluggish beginning in Minnesota, gathering the waters of the St Croix and Minnesota rivers, which give it volume before it leaves Minnesota Over the lakes and the rivers came the first white men. There are many who argue on the basis of the KENSINGTON RUNE STONE and other evidence that these first white men were the Norsemen, but others deny that the Norsemen reached Minnesota That French fur traders came in the 17th cent is undeniable Explorers, traders, and missionaries of New France penetrated the country, RADISSON and GROSEILLIERS, VERENDRYE, the sieur DULUTH, and Father HENNEPIN and Michel ACO, who discovered the Falls of St Anthony (the site of Minneapolis) Archaeological evidence shows that Minnesota was inhabited many thousands of years ago, long before the MOUND BUILDERS At the time the French came the dominant groups were the OBIJWA INDIANS in the east and the SIOUX INDIANS in the west Both received the French in friendship and contributed to the fur-trading empire of New France Traders opened the country to take back the forest wealth of fur pelts to civilization Minnesota was excellent country for fur trade through the British regime after the fall of New France and remained so after the War of 1812, the AMERICAN FUR COMPANY became dominant, and American Fur Company men helped to develop the country The eastern part had been included in the NORTHWEST TERRITORY and was governed under the Ordinance of 1787, the western part was joined to the United States by the Louisiana Purchase Exploration of the country was pursued by Jonathan CARVER (1766–67), Zebulon M PIKE (1805–6), Henry SCHOOLCRAFT (1820, 1829), and Stephen H LONG (1823) The fisheries of Lake Superior were tapped by the American Fur Company. Later they were to grow into a great industry, and the fish in mountain lakes and streams still attract sportsmen to the "land of sky-tinted waters" It was only after the War of 1812 that settlement began in earnest In 1820 Fort St Anthony (later Fort SNELLING) was founded as a guardian of the frontier There a gristmill, established in 1823, initiated the industrial beginnings of Minneapolis Treaties with the Ojibwa and the Sioux and the opening of a land office at St Croix Falls in 1848 initiated a period of real expansion By 1848 the settlers were already clamoring for territorial independence They held a convention at Stillwater in that year and elected Henry H SIBLEY, American Fur Company trader, to petition Congress for territorial status, which was granted in 1849 The Missouri and White Earth rivers were the western boundary. A land boom grew as towns were platted, railroads chartered, and roads built There were the beginnings of colleges, including the Univ of Minnesota, which has had great influence on the cultural life of the state. The building of the Big Soo Canal at Sault Ste Marie, Mich., opened a water route for lake shipping to the eastward, and though fantastic land speculation helped to make the Panic of 1857 more severe, hard times did not prevent the achievement of statehood in 1858, with St. Paul as the capital. Chiefly a land of small farmers of British, German, and Irish extraction, Minnesota was strongly for the Union in the Civil War and supplied some men and much food, since wheat growing had already commenced on the Minnesota plains In the war and afterward, the Sioux expressed their displeasure with the broken promises, the fraudulent dealings, and the steady land taking of the white men by massacres and raids. A band of them under Little Crow were defeated by Col H H Sibley, and Minnesota was freed of Indian wars, while the fiercer fighting went on farther west Settlement boomed, aided by the Homestead Act of 1862 In the later decades of the century came the Scandinavians—Swedes, Norwegians, and Finns Lumbering was paramount Scouts went ahead to find desirable sites, and logging camps were established The days of logging, immortalized in the stories of the legendary Paul Bunyan and Babe the Blue Ox, were brief, but they built a number of large fortunes, such as that of Frederick WEYERHAEUSER Fortunes were quickly made in the Minnesota of the '70s and the '80s, as the railroads were pushed west, partly through the genius of James J HILL The boom in wheat made the Minnesota flour mills famous across the world and brought wealth to flour manufacturers such as John S PILLSBURY Not all went well, however, in farming Natural disasters such as the blizzard of 1873 and plagues of insects from 1874 to 1876 added to the miseries that the farmers suffered from the turn of national economy, and Minnesota was particularly a center of the farmers' discontent, expressed in the GRANGER MOVEMENT The opening of the iron mines gave a new impetus to Minnesota economy and also supplied a new element of discontent in the laborers They joined forces with the farmers in the 1890s in the POPULIST PARTY, with Ignatius DONNELLY as one of its most powerful figures This combination of farmers and laborers blossomed again in 1920 in the FARMER-LABOR PARTY, which was long powerful in Minnesota, Knute NELSON, Floyd B OLSON, and Henrik SHIPSTEAD were among the dominant figures In 1940 Senator Shipstead turned Republican, and that party once more took over the state Harold E STASSEN was one of the most prominent of recent governors The state has been notable for experimentation in novel features of local government and also has been a leader in the use of cooperatives The large percentage of Scandinavians perhaps explains the prominence of cooperatives, which are highly developed in Scandinavia itself Credit unions, cooperative creameries and grain elevators, and cooperative purchasing associations were forwarded by legislation in 1919 that protected the institutions and instructed the state department of agriculture to encourage them Today there are more than 4,000 cooperative associations in Minnesota serving diversified needs The state has by the beauty of its lakes lately attracted many tourists, and many visitors come into Minnesota for attention at the world-known Mayo Clinic at Rochester See William Watts FOLWELL, *A History of Minnesota* (4 vols., 1921–30), William Anderson, *A History of the Constitution of Minnesota* (1921), Daniel E Willard, *The Story of the North Star State* (1922), Minnesota State Planning Board, *The Cities and Industry* (1934), Theodore Christianson, *Minnesota: the Land of the Sky-tinted Water* (5 vols., 1935), Walter Havighurst, *Upper Mississippi* (1937), Theodore C Blegen, *Building Minnesota* (1938), James Gray, *Pine, Stream, and Prairie* (1945), Meridel LeSueur, *North Star Country* (1945)

Minnesota, river, *332* mi long, rising in Big Stone Lake at the western boundary of Minnesota and flowing SE to Mankato, then NE to the Mississippi at Mendota Early called the St Peter or St Pierre, it was an important route of explorers and fur traders It follows the valley of the prehistoric River Warren, the outlet of Lake Agassiz

Minnesota, University of, mainly at Minneapolis, land-grant and state supported, coeducational, chartered 1851 and 1868, opened as a university 1869 It has a two-year General College There are colleges of agriculture, forestry, and home economics (at St Paul, with three branch schools elsewhere), education, pharmacy, and science, literature, and the arts (with diplomatic and consular service, journalism, public administration, and social work) The university also has an institute of technology (chemistry, engineering and architecture, mines and metallurgy), schools of business administration, dentistry, law, and medicine (with technologist and nursing courses and a hospital, for affiliated foundation, see MAYO, CHARLES H), a library instruction division, and a branch at Duluth There are art and natural history museums, experiment stations of engineering and mines (U S), a high school, a radio station, a university press, and a child welfare institute The library has a Scandinavian collection The main campus, on heights near the Mississippi, was laid out partly after Cass Gilbert's plans, the much larger "Farm Campus," adjoining the state fair grounds, occupies a rolling wooded area. In the General College and through extension work Minnesota has made special efforts to raise the general cultural level.

Minnetaree Indians or Minnetari Indians: see HIDATSA INDIANS.

Minnetonka, Lake (mĭ"nĭtŏng'ku), 10 mi long, E Minn., just W of Minneapolis Its outlet is Minnehaha Creek Resorts line its much-indented shore Songs by Thurlow Lieurance (*By the Waters of Minnetonka*) and Charles W Cadman (*From the Land of the Sky-Blue Water*) celebrate the lake

Minni, biblical name of part of Armenia Jer 51 27

Minnith, unidentified place, E of the Jordan, associated with Jephthah Judges 11 33, Ezek 27 17

minnow, name for certain fish of the carp family In Europe it refers chiefly to a small form, *Phoxinus phoxinus*, about 3 in. long, which lives in streams In America there are a number of small minnows of the same family The squawfish or Sacramento pike of Pacific coastal rivers, which reaches a length of almost 3 ft, is the largest North American minnow A giant minnow 8 ft long was found in Siam The mud minnows and top minnows belong to other families Minnows are used as bait Many (especially the top minnow *Gambusia*) destroy mosquito larvae

Miño, river see MINHO

Minoan civilization (mĭnō'un), period of ancient culture, forming a stage in the development of the AEGEAN CIVILIZATION It is named for King MINOS of Crete and includes, according to Sir Arthur Evans, the whole of the Bronze Age In the Early Minoan Age (3000-2200 B C) pictographic writing was in use, and copper, silver, and gold became known in Crete In the Middle Minoan Age (2200–1600 B C) civilization reached its apogee Pottery became a fine art, natural objects were depicted realistically, and pictographs were superseded by linear writing in pen and ink The Late Minoan Age (1600–1200 B C) was a period of slower development (during which, however, the working in bronze and inlaying metals showed great skill) but the cultural center gradually passed to Troy and to the Greek mainland, where Archomenus, Tiryns, and Mycenae were developing an era of artistic splendor Most of the archaeological knowledge of Minoan civilization is derived from study of the great palace at CNOSSUS Finds in the Cadmeia of Thebes (1932) show that the language and script of the 14th cent. B C. were identical with that of Minoan Crete. The changes in the forms of burial places indicate the probability that beliefs varied at different periods See R M Burrows, *Discoveries in Crete* (1907), C. H and H Hawes, *Crete, the Forerunner of Greece* (1911), J L Myres, *Dawn of History* (1911), Sir Arthur J Evans, *Palace of Minos* (4 vols., 1921–35), J D. Pendlebury, *Archaeology of Crete* (1939).

Minobe, Tatsukichi (ta'tsukē'chē mēnō'bā), 1873–, Japanese scholar, professor of law at Tokyo Imperial Univ Because in an early book he described the emperor as an "organ of the state," he was accused of lese majesty in 1935 and was forced to resign from the house of peers In Jan., 1946, he was appointed to the privy council

Mino da Fiesole (mē'nō da fyā'zōlā) or **Mino di Giovanni** (dē jōvan'nē), 1431–84, Florentine sculptor of the early Renaissance Skillful in the carving of architectural detail and noted for the finish he gave to the marble, he produced many tombs and sculptures for churches Among the best are the altar in the cathedral at Fiesole, the altar and the monument to Count Hugo in the Badia of Florence, the tomb of Bishop Salutati at Fiesole, that of Francesco Tornabuoni in Rome, and busts and reliefs in Florence From 1474 to 1477 he made the monument to Pope Paul II, fragments of which are now in the crypt of St Peter's, Rome His sculptures, characterized by extreme delicacy, lack vigor and are of uneven value

Minonk (mĭnŭngk'), city (pop 1,897), central Ill NE of Peoria in a farm and coal area, inc 1867

Minorca (mĭnôr'ku), Span *Menorca* (mĕnôr'kä), island (271 sq mi, pop 43,025), off Spain, in the W Mediterranean, the second largest of the BALEARIC ISLANDS Port MAHON is the chief city and port Except in the hilly center, the terrain is mostly low Cereals, wine, olive oil, and flax are the chief products A great number of megalithic monuments show that the island has been inhabited since very ancient times It shared the history of the other Balearic Islands until 1708, when it was occupied by the English in the War of the Spanish Succession England retained it until the Seven Years War, when the defeat (1756) of Admiral John BYNG enabled the French to seize it The Treaty of PARIS (1763) restored Minorca to Britain, but the French and Spanish again seized it (1782) in the American Revolution In 1798, in the French Revolutionary Wars, England regained control, the Peace of Amiens (1802) definitely awarded Minorca to Spain In the Spanish civil war of 1936–39 Minorca remained in Loyalist hands until Feb., 1939, while Majorca early passed to the Insurgents

minority, in international law, population group with a characteristic culture and sense of identity occupying a subordinate political status Religious minorities were known from ancient times, but it was not until the 19th cent that the situation of ethnic minorities became an issue in European

politics The rise of NATIONALISM intensified the problem in two respects On the one hand, the country of residence tended to oppress the minority to compel conformity to the usual national patterns On the other hand, the minority (especially if living in a border area) would agitate for incorporation of its territory into the country (if any) with which it felt itself identified or would demand independence Before the First World War the minority problem was especially acute in Austria-Hungary, Turkey, and Russia During the war each side promised autonomy or independence to minorities in enemy states, and revolts (e g , of Arabs and Czechs) were encouraged One of President Wilson's FOURTEEN POINTS was the freeing of minorities The treaties of peace attempted to accomplish this in various ways, they established new nations of one predominate stock (e g , Hungary, Poland, and Austria) or combined several former minorities (e g , Czechoslovakia and Yugoslavia), and they made transfers of territory (e g , Alsace-Lorraine was returned to France from Germany) Most states of Central and Eastern Europe bound themselves by treaty to protect the minorities within their borders by assuring them liberty to practice their religion, speak their own language, and educate their children in the minority culture The League of Nations was responsible for enforcing these guarantees, but in the opinion of many it did not take vigorous steps to end serious abuses To some extent the problem of the Jewish minority in Central Europe was relieved by immigration to Palestine through the efforts of world ZIONISM Hitler made adroit use of the minority issue to annex the Sudetenland in Czechoslovakia and to attack Poland, thus launching the Second World War After the war Czechoslovakia and Poland took the extreme step of deporting all Germans The treaties of peace with the Axis satellites in Europe required them to guarantee minority rights as part of the protection of civil liberties, but no enforcement machinery was set up Among the areas today most strongly affected by political turmoil because of minorities are Trieste and Macedonia It is a boast of the Communist countries, especially the USSR, that they do not have minority problems because all ethnic groups are allowed full expression, some claim, however, that the USSR is repressing its large Ukrainian population See L P Mair, *The Protection of Minorities* (1928), Julius Stone, *International Guarantees of Minority Rights* (1932), Oscar Janowski, *Nationalities and National Minorities* (1945)

Minos (mī'nŏs, -nûs), in Greek myth, king of Crete, son of ZEUS and EUROPA, husband of PASIPHAË, and father of ANDROGEUS, ARIADNE, and PHAEDRA He refused to sacrifice the bull sent him for sacrifice to Poseidon, and Pasiphaë, falling in love with the bull, bore the MINOTAUR Minos was presumably the name or title of a king of Crete in history, and his name is given to the archaic MINOAN CIVILIZATION of Crete

Minot, Charles Sedgwick (mī'nut), 1852–1914, American embryologist, b West Roxbury, Mass , grad Massachusetts Institute of Technology, 1872 He studied abroad and from 1880 was on the faculty of Harvard's medical school He is known for his studies of the placenta and for his *Human Embryology* (1892), *Laboratory Text-Book of Embryology* (1903), and other works

Minot, George Richards, 1885–1950, American physician and bacteriologist, b Boston M D Harvard, 1912 He was (1928–1948) professor of medicine at Harvard and director of the Thorndike Memorial Laboratory, Boston City Hospital He specialized in diseases of the blood, and for his research on the value of liver in treating pernicious anemia he shared with W P Murphy and G H Whipple the 1934 Nobel Prize in Physiology and Medicine.

Minot, Laurence, fl 1333–52, English poet, believed to have been a soldier from his spirited, patriotic war songs—on Halidon Hill, the siege of Calais, the capture of Guines, and other historic battles—written in northern English dialect. See his poems (ed by Joseph Hall, 1914)

Minot (mī'nut), city (pop 16,577), co seat of Ward co , NW N Dak , on the Souris river and NNW of Bismarck, settled 1886, inc 1887 with the coming of the railroad It is the railroad, trade, and distributing center for an extensive farm region and processes the area's products, a lignite mine is near. A state teachers college is here. Dikes and dams have been built to check floods

Minotaur (mī'nutôr), monstrous offspring of PASIPHAË and a bull He had the head of a bull and the body of a man. Minos had Daedalus build the Labyrinth (see LABYRINTH) to keep the monster, and the Athenian captives sent to pay for the murder of ANDROGEUS were fed to him THESEUS killed him

Minots Ledge (mī'nuts), reef off Cohasset, E Mass., ESE of Boston. The first lighthouse here (1850) was destroyed in a gale in 1851; the present 114-foot granite structure dates from 1860

Minquiers (mēkyā'), small, uninhabited island group off the coast of Brittany, part of the Channel Islands The Minquiers were made an international fishing zone by an Anglo-French convention of 1839.

Minseito (mēn"sā'tō), Japanese political party The name is frequently given in English as Liberal party It was first formed by Okuma in 1881 as the Kaishinto and also took in Katsuya's Doshikai It became the Kenseikai in 1916 and was reorganized as the Minseito in 1927 The cabinets of Takaaki Kato (1924–26), Wakatsuki (1926–27, 1931), and Hamaguchi (1929–31) were Kenseikai or Minseito governments The Minseito was loosely identified with the Mitsubishi interests. See SEIYUKAI

Min Shan see KUNLUN

Minsk (mĭnsk, Rus mĕnsk), city (1939 pop. 238,772), capital of Belorussia and of Minsk oblast, on the Svisloch, a tributary of the Berezina It has important industries (automobiles, tractors, textiles) and is a cultural center, with a university (founded 1921), several technical, medical, and scientific institutes, an opera, and theaters and museums First mentioned in the 11th cent , Minsk became the capital of a principality which was conquered (1326) by Lithuania It was sacked by the Tatars in 1505. Joined to Poland by the Union of Lublin (1569), it passed to Russia in the second partition of Poland (1793) In the Middle Ages, Minsk became one of the largest Jewish centers of Eastern Europe, until the Russian Revolution the Jews (some 40 percent of the population) were confined to the ancient poverty-stricken ghetto Minsk played a leading role in the Bolshevik Revolution but was occupied (1918–20) by German and later by Polish troops The city was thoroughly modernized under the Soviet regime, but the Germans, who held it (1941–44) in the Second World War, virtually destroyed it, partly by air raids, partly by deliberate demolition The Jews, except those who had fled in time, were exterminated

Minster, village (pop 1,504), W Ohio, NNW of Dayton, settled 1831, inc. 1833 There are small industries

minstrel, professional secular musician of the Middle Ages The modern application of the term is general and includes the JONGLEUR as a minstrel. Certain especially able jongleurs ceased their wanderings and were attached to a court to play or sing the songs of the TROUBADOUR or TROUVÈRE who employed them and sometimes also to compose To these and to some itinerant musicians of similar ability was applied in the 14th cent the term *ménétrier* and later *ménestrel*, from which the word *minstrel* is derived, to indicate a higher social class than jongleur The number of these minstrels increased, and their popularity and influence was great They were even organized and given protection of the law Sometimes the minstrel's function was similar to that of the Welsh BARD. See also NEGRO MINSTREL.

mint, name often applied to any plant belonging to the family Labiatae (called also Lamiaceae), usually an easily recognized group characterized by four-angled stems and opposite, aromatic leaves A few of the better-known plants of the mint family—besides those of the mint genus—include catnip, bergamot, ground ivy, thyme, horehound, rosemary, Oswego tea, lemon balm, sage, and lavender More specifically, however, the name mint refers to any plant of the genus *Mentha*, most of them herbs with typical characteristics of the mint family and having clusters of small pink, purple, or white flowers The two best-known and most important mints are the PEPPERMINT and SPEARMINT, usually distinguishable by the presence of a short leafstalk in peppermint and the absence of a leafstalk in spearmint The European PENNYROYAL also belongs to the mint genus

mint, place where lawful coins are manufactured The name is derived from the temple of Juno Moneta, Rome, where silver coins were made as early as 269 B C Mints existed earlier elsewhere, as in Lydia and in Greece, from which coinage was introduced into Italy The first U S mint was established in Philadelphia in 1792 Coins are now minted in Philadelphia, Denver, and San Francisco See also NUMISMATICS, COIN, MEDAL.

mint julep see JULEP

Minto, Gilbert John Elliot-Murray-Kynynmound, 4th **earl of** (klĭn'mund), 1845–1914, British statesman, educated at Eton and Cambridge He was commissioned (1867) in the Scots Guards Minto was a staff officer in the Crimean War and in the Second Afghan War (1879) He was military secretary (1884) to Henry Lansdowne, governor general of Canada in RIEL'S REBELLION From 1898 to 1904 Minto was himself governor general of Canada In 1905 he succeeded Lord Curzon as viceroy of India and served until 1910 Though Minto and John Morley, the secretary of state for India, were often in conflict, they joined in sponsoring the Minto-Morley reforms (1909) which increased Indian representation on the advisory legislative councils of the viceroy and the provincial governors. See biography by John Buchan (1924)

Minton, English family of potters. The first important member of the family was **Thomas Minton,** 1765–1836, who founded a small pottery at Stoke-on-Trent. He first engraved the famous WILLOW-PATTERN WARE. **Herbert Minton,** 1793–1858, succeeded his father as head of the firm and to him was due its development and reputation. He enlisted the services of artists and skilled artisans. A memorial museum and library building was erected to him at Stoke-on-Trent

Minton, Sherman, 1890–, Associate Justice of the U S Supreme Court (Sept , 1949–), b. Georgetown, Ind , grad Indiana Univ , 1915, and Yale Law School, 1916 He interrupted his law practice to serve as a captain in the First World War In 1932 he was appointed counselor for the Indiana public-service commission Elected (1934) Senator as a Democrat, he supported New Deal legislation, and after defeat in the 1940 election he was appointed (1941) an administrative assistant to President F D. Roosevelt Minton served (1941–49) on the U S Circuit Court of Appeals before President Harry S Truman appointed him to the Supreme Court bench.

Minton, Thomas see MINTON, family.

Minturnae (mĭntûr'nē), ancient town of Latium, Italy It was important because it controlled the bridge on the Appian Way over the Liris river Founded by a people called the Aurunci or Ausones, it became a Roman colony (295 B C) and a flourishing commercial center There are important rivers (including an aqueduct), two theaters, forums, and other buildings north of modern Minturno

Minucius Felix, Marcus (mär'kus mĭnū'shŭs fē'lĭks), fl. 2d cent , Christian apologist, author of a dialogue, *Octavius*, one of the earliest Latin apologies In it a pagan and a Christian discuss the merits of Christian life See J H Freese, *The Octavius of Minucius Felix* (1919)

minuet (mĭnŭet'), French dance, originally from Poitou, introduced at the court of Louis XIV in 1650 It became popular during the 17th and 18th cent In 3-4 meter and moderate tempo, the minuet was performed by open couples who made graceful and precise glides and steps The minuet left a refined but definite imprint on music, it is found in the operatic sinfonias of Alessandro Scarlatti and appears frequently as a movement in the symphonies and sonatas of Haydn and Mozart, less frequently in those of Beethoven

Minuit, Peter (mĭn'ŭlt), c 1580–1638, first director general of New Netherland (1626–31), b Wesel (then the duchy of Cleves), probably of Walloon descent He purchased Manhattan from the Indians for trinkets valued at $24 and made New Amsterdam its center Dismissed in 1631 by the Dutch West India Company, he later entered negotiations with the Swedes and headed (1638) the group sent out to found NEW SWEDEN He was lost in a hurricane in the West Indies

Minusinsk (mēnōōsĕnsk'), city (pop 21,427), S Krasnoyarsk Territory, RSFSR, in Siberia, a port on the Yenisei river opposite Abakan It is the center of the Minusinsk-Khakass coal-mining and industrial area and is an agricultural market

minutemen, in the American Revolution, colonial militiamen or armed citizens who agreed to turn out for service at a minute's notice The term is used especially for the men who were enrolled (1774) for such service by the Massachusetts provincial congress These were "the embattled farmers" who fought on the patriot side at Lexington and Concord

Minya (mĕ'nyu), city (pop 50,688), central Egypt, on the Nile There is cotton spinning and weaving

Minya Konka (mĭn'yu kŏng'ku), peak, c 24,900 ft high, Sikang prov , China, in the Himalayas It was climbed (1932) by an American expedition See R L Burdsall and A. B. Emmons, *Men against the Clouds* (1935)

Miocene epoch (mī'usēn) [Gr , =less recent], third epoch of the TERTIARY PERIOD of geologic time North America was more extensively submerged in the Miocene than in the preceding OLIGOCENE EPOCH and underwent considerable disturbances of the earth's surface The Atlantic and Gulf coasts were flooded to about the same extent as in the EOCENE EPOCH Miocene rocks are known along the Atlantic as far north as Martha's Vineyard, but the series, everywhere thin, is thickest and least interrupted from New Jersey to Maryland, on the Gulf coast it extends from Florida westward to Texas. The Atlantic series is chiefly marls, clays, and sands, with diatomaceous earth, the Florida series, chiefly limestone (Florida having risen as an island in the late Oligocene), the Gulf series, limestone and sediments On the Pacific coast, the Great Valley of California was submerged at the beginning of the Miocene. The deposition of the Vaqueros sandstone, clay, and conglomerate was followed by the formation of the Monterey series, partly sandstone and shale but largely diatomaceous tuff, the Monterey is an important source of oil. In mid-Miocene time there was extensive mountain making in this region, the Cascades and Coast Ranges being pushed up This disturbance was accompanied by volcanic activity (to which the Monterey tuff owes its origin) and by the first known movement along the San Andreas fault zone. Late in the Miocene a new, extensive submergence laid down the San Pablo shale and sandstone The sediments of the California Miocene came chiefly from the Sierra

Nevada and the Klamaths, which, through EROSION, were peneplained by the close of the epoch. In the western interior of North America the Columbia river basalt plateau of Idaho, Washington, Oregon, N California, and N Nevada was formed by a great outpouring of lava, which was continued in the succeeding PLIOCENE EPOCH During the Miocene most of N Europe was elevated, but marine waters covered E Spain, S France, Italy, and a depressed area extending through Hungary to a basin around Vienna There was considerable mountain making, while lagoons were formed at the base of the Carpathians and N of the Caucasus, in the regions now occupied by the Rumanian and Baku oil fields The mammalian life of the Miocene was marked by further stages in the development of the horse, by the multiplication and final extinction of the giant hogs, and by the appearance of the mastodons, raccoons, and weasels Cats, camels, doglike carnivores, and rhinoceroses were common, while species of a great ape (*Dryopithecus*) inhabited S Europe, Asia, and Africa In the Miocene there was a distinct cooling of the climate, which resulted in the reduction of the area occupied by forests and an increase in that occupied by grassy plains

Miphkad (mĭf'kăd), gate in the postexilic wall of Jerusalem It was east of the Temple Neh 3 31

Miquelon (mĭ'kulŏn, Fr mēkulō'), two islands (area 83 sq mi) lying just S of Newfoundland which, with the adjacent island group of St Pierre (10 sq mi), constitutes an overseas territory of the French Union The total population is 4,175, mainly fishermen, and the capital is St Pierre The islands are barren and rocky and often fogbound, but their proximity to the Grand Banks makes them a valuable base for fishermen They were settled by the French (c 1660), taken by the British (1702), returned to France (1763), twice retaken by the British, and finally returned (1814) to France, with the provision that they should be unfortified They were granted local autonomy in 1935 In 1941 a Free French naval force entered the harbor of St Pierre and took possession of strategic points A plebiscite indicated 98 percent in favor of Gen Charles de Gaulle and the Free French The United States condemned the move as contrary to agreements, but maintained supervision of the St Pierre radio station In 1944 regulations of the Vichy government were voided, and St Pierre and Miquelon returned to France

Mirabeau, Honoré Gabriel Riquetti, comte de (mĭ'rubō, Fr ônôrā' gäbrēĕl' rēkĕtē' kôt' du mērabō'), 1749-91, French revolutionist and statesman, son of Victor de Mirabeau His life before 1789 was characterized by wild excesses, which ruined his health and caused him to be repeatedly jailed—several times on the request of his father, with whom he carried on a public quarrel The year 1785 found him an exile in England, where he moved in Whig circles, but in 1786 he was sent on a secret mission to Prussia He failed and betrayed the trust of the French government by publishing an account of the affair The author of numerous pamphlets in which he violently denounced various abuses of the *ancien régime*, he was elected (1789) a delegate of the third estate for Aix-en-Provence in the States-General His clear and practical ideas, his fiery eloquence, and his terrifying yet imposing appearance exerted a fascination over the delegates and the populace Despite his unsavory personal reputation he almost immediately found himself the spokesman of the third estate He carried the day when the king ordered the States-General to leave the hall after the day's session had been declared closed, to the marquis de Brézé, who announced the king's order, Mirabeau replied (his words have been variously reported) "Go and tell your master who sent you that we are here by the will of the people and that we shall not leave our places save by the force of bayonets " The king did not use bayonets, and the assembly remained in session and adopted Mirabeau's motion that its members were inviolable However, despite his sonorous phrases, Mirabeau from the very beginning of the French Revolution sought to save rather than destroy the monarchy He realized the danger to the crown and exerted himself to create a constitutional kingdom on the English model The radical turn of events late in 1789 thus drove him into a secret alliance with the court In his secret correspondence with the king and queen he reveals himself as the actual prime minister, although members of the National Assembly had been barred from cabinet posts by a law specifically directed against him Mirabeau's advocacy of a strong executive power for the king and his moderate foreign policy were attacked by the Jacobins While he lost the support of the Assembly, he never entirely gained the confidence of the court, particularly of the queen He thus was unable to accomplish any part of his constructive program He died in Jan , 1791, amid impressive manifestations of public sorrow and respect, for he had never lost his popularity with the masses His predictions of the violent course of the revolution came true soon after his death. Mirabeau, who was deeply in debt, most probably was paid by the court during his last years, but his policy was certainly not influenced by his financial dependency His moral shortcomings did not diminish his status as a clear-sighted and responsible statesman, nor did his frequent borrowing of other men's ideas lessen the originality of his thought and his oratory Among the men who constituted Mirabeau's "brain trust" were CLAVIÈRE and P E L DUMONT See Louis de Loménie and Charles de Loménie, *Les Mirabeau* (5 vols , 1879-81), F M Fling, *Mirabeau and the French Revolution* (1908), biographies by Louis Barthou (Eng tr , 1913), Henry de Jouvenel (Eng tr , 1929), Pierre Nezelov (Eng tr , 1937), and Antonina Vallentin (1948)

Mirabeau, Victor Riquetti, marquis de (vĕktôr', mŭrkē'), 1715-89, French social philosopher and physiocrat, father of the statesman Mirabeau His best-known work is *L'Ami des hommes* [the friend of men] (6 parts, 1756-60)

miracle, departure from the usual course of nature attributed to supernatural interposition As Homer shows, many Greeks looked upon miracles as everyday manifestations of immortal personalities often quite limited in power Believers in one transcendent God, including the more orthodox adherents of Judaism, Christianity, and Islam, have generally agreed in explaining miracles by the omnipotence of the one God, the Creator, alone able to interrupt the operation of his decree or to delegate power to a creature to interrupt it The delegation of power is the explanation of the miracles wrought through men In the history of Christianity miracles have played a great role The Resurrection has always been considered the central Christian fact (Mat 28, Mark 16, Luke 24, John 20, 21), and the Virgin Birth is usually called a miracle The miracles of Jesus recorded in the Gospels are as follows *Raising the dead* Jairus' daughter (Mat 9 18,19,23-26, Mark 5 22-24, 35-43, Luke 8 41,42,49-56), the widow's son at Nain (Luke 7 11-18), Lazarus (John 11) *Casting out demons* Gadarene swine (Mat 8 28-34, Mark 5 1-20, Luke 8 26-40), dumb demoniac (Mat 9 32-35), deaf-mute (Mat 12 22, Luke 11 14), Syrophoenician woman's daughter (Mat 15 21-28, Mark 7 24 30), child (Mat 17 14-21, Mark 9 17-29, Luke 9 38-42), in the synagogue (Mark 1 23-28 Luke 4 33-37) *Healing* leper (Mat 8 2-4, Mark 1 40-45, Luke 5 12-15), centurion's palsied servant (Mat 8 5-13, Luke 7 1-10), Peter's mother-in-law, sick of a fever (Mat 8 14 15, Mark 1 30,31, Luke 4 38,39), palsied man (Mat 9 1-8, Mark 2 1-12, Luke 5 18-26), two blind men (Mat 9 27-31), withered hand (Mat 12 10 13, Mark 3 1-6, Luke 6 6-11), two blind men (Mat 20 30-34), deaf-mute (Mark 7 31-37), blind man (Mark 8 22-26), blind Bartimaeus (Mark 10 46-52, Luke 18 35-43), crippled woman (Luke 13 11-17), dropsical man (Luke 14 1-6), 10 lepers (Luke 17 11-19), Malchus' ear (Luke 22 50,51), nobleman's sick son (John 4 46-54), feeble man at the pool of Bethesda (John 5 1-16), man born blind (John 9) *General* stilling the storm (Mat 8 23-27, Mark 4 37-41, Luke 8 22-25), feeding 5,000 (Mat 14 15-21, Mark 6 35-44, Luke 9 12-17, John 6 5-14), walking on the water (Mat 14 22 33, Mark 6 45-55, John 6 15-21), feeding 4,000 (Mat 15 32-38, Mark 8 1-9), blasting the fig tree (Mat 21 18-22, Mark 11 12-14, 20-24), the draught of fish (Luke 5 1-9), turning water into wine at Cana (John 2 1-11), the draught of fish after the Resurrection (John 21 1-14) See also Mat 4 24,25, 8 16 17, 9 20-22, 15 30,31, Mark 1 32-34, 3 10-12, 5 25 34, Luke 4 40,41, 8 43-48, John 11 47,48, Acts 10 38, 39 There are miracles recorded in the New Testament as done by apostles Acts 9 36-43 Every age of Christianity has had miracles supposedly performed The traditional attitude that miracles happen, in Christian life, albeit infrequently, is that of the Eastern Christians and Roman Catholics Protestants generally reject miracles except those in the Bible Miracles in Christianity are especially associated with saints' bodies and relics and with shrines, thus, cures are especially associated with relics of St Anthony of Padua and with Lourdes Some saints had in their lifetime great repute for curing the sick by supposed miracles, such were St Bernard of Clairvaux and St Vincent Ferrer The Roman Catholic Church requires rigid attestation of miracles before CANONIZATION, but does not officially require belief in other than biblical miracles See George Douglas Campbell, 8th duke of Argyll, *The Reign of Law* (5th ed , 1867, conservative Protestant), J H Newman, *Two Essays on Biblical and on Ecclesiastical Miracles* (1901, Roman Catholic), C S Lewis, *Miracles a Preliminary Study* (1947, Anglican)

miracle play or **mystery play,** medieval form of the drama which derived from small scenes or tropes added at Easter and Christmas to the Mass or matins of the Roman Catholic Church It developed from the 10th to the 16th cent The miracle play enabled the clergy of Western Europe to present a scriptural, Apocryphal, or hagiographical story in a simple dramatic form The action of a miracle play was introduced by a prologue or by a herald who gave a synopsis, the play proper followed, and a herald's salute closed it First given in Latin, the plays were later performed in medieval English, French, or German vernacular The length and number of the plays increased, and the audience grew so much numbers that the churches were unable to contain them The plays were next presented on the steps of the church, and the audience stood in the churchyard This resulted in a separation of the plays from the regular church service Finding that the plays tended to become realistic, often humorous, and that they required lay actors, the Church prohibited the clergy from appearing in plays outside the church walls In England the direction of the plays was assumed by the town guilds, who gave them on church festival days, particularly the feast of Corpus Christi The subjects continued to be biblical, and the plays were arranged in cycles Often the plays were given on stages with wheels, so that each episode could be presented at one public square and drawn on to its next performance at another, while a different stage succeeded it The principal English miracle-play cycles are the York Plays (1430-40), the Towneley or Wakefield Plays (c 1450, in Yorkshire), the Coventry Plays (1468), and the Chester Plays (1475-1500) In France the plays were taken over by companies of actors, and in a charter given by Charles VI in 1402 to the most famous company, the Confrérie de la Passion, the word *miστerie* first appears The French *mystère du Viel Testament* is similar to the extant English miracle plays The PASSION PLAY is the chief modern example of the miracle play In the 15th cent a kind of offshoot of the mystery plays appeared in the dramas called moralities In these the characters were abstractions representing good or evil, and the purpose was to teach a lesson about living rather than to present biblical history The greatest English morality is EVERYMAN See E K Chambers, *The Medieval Stage* (1903), Karl Young, *The Drama of the Medieval Church* (1933)

mirage (mĭrazh'), optical illusion which causes a person to see what appears to be a real object, or water, or a complete scene in the distance Such illusions are seen when a body of water appears to be stretched out before an observer on a desert, although no such body of water is actually present, or when at sea the inverted image of a ship is seen in the heavens, or when some object actually miles away from an observer and out of his line of vision (since it is below the horizon) appears to loom up a relatively short distance away These phenomena can be explained by the fact (1) that light rays undergo REFRACTION, i e , are bent, in passing from a medium of one density into another of different density and (2) that the combined surfaces of two such media act, under certain conditions, like the surface of a mirror and cause the REFLECTION of the light rays Since the density of the atmosphere varies according to its temperature (the density being less at higher temperatures), a mirage is formed when light rays are bent in passing from a layer of air of one density into another of another density and when light rays are reflected as they strike the line of the adjacent surfaces at an extremely oblique angle The "lake" mirage in the desert is essentially a reflection of the sky Light rays from a distance are thrown upward by the surface of the area of extremely hot air just above the sand, and the effect to an observer at some distance is a shimmering expanse which resembles very closely the surface of a body of water The inverted image of a ship seen in the heavens at sea is caused by the rays of light from the ship (below the horizon) being bent downward as they leave the cooler layer of air directly over the water and reach the warmer area above that layer Because of continuous bending and of reflection, the rays tend to follow the curvature of the earth and thus finally reach the eye of the observer, although under ordinary circumstances the curvature of the earth would prevent them from doing so directly The image formed appears to be that produced by an object somewhere distant in a straight line from the observer and, therefore, at a position in the sky It is sometimes inverted because in the bending process the light rays coming from the object are changed in relative position The type of mirage described as looming, in which distant objects appear much nearer than they actually are, is explained in the same way as the ship except that the image is not inverted Mirages can be photographed The strange phenomenon known as the fata morgana (fä'tä môrjä'nä) [Ital ,=Morgan le Fay, of the Arthurian legend, the supposed author of the mirage] is a form of mirage especially in evidence at the Strait of Messina, in which images of objects such as ships, houses, or men, often two of the same object with one inverted, are seen suspended in the air over the object itself or on the water

Miramichi (mĭrumĭshē'), river rising in several forks and tributaries in central New Brunswick and flowing E past Newcastle into the Gulf of St Lawrence at Miramichi Bay. The Bay was visited by Cartier in 1534

Miranda, Francisco de (Sebastián Francisco de Miranda) (fransē'skō dā mērän'da), 1750 1816, Vene-

zuelan revolutionist, sometimes called the Precursor, b. Caracas. His birthdate is usually given as 1756, but W. S Robertson has demonstrated that this is an error, arising from confusion with a younger brother He became an officer in the Spanish army and served under Bernardo de Gálves in the Spanish attack on Pensacola (1781) when Spain was an ally of the rebels in the American Revolution He later saw varied service as a soldier of fortune and fought under Dumouriez in the French Revolutionary Wars Imbued with revolutionary ideas, he became the apostle of Venezuelan liberty. He sought foreign aid and led an expedition to the Venezuelan coast (1806), but this venture was a complete failure After the outbreak of the revolution in 1810, he returned and soon took a commanding position in the patriot forces He was dictator for a short time, but because of increasing misfortunes, including the loss of Puerto Cabello by Simón Bolívar and a destructive earthquake in Caracas, he surrendered (1812) to the Spanish Bolívar and other patriots, angered by his actions, threw him into prison The Spanish seized him and, contrary to the conditions of surrender, kept him imprisoned the rest of his life See biography by W S Robertson (1929)

Miranda, Francisco de Sá de. see SÁ DE MIRANDA, FRANCISCO DE

Mirandola, Giovanni Pico della: see PICO DELLA MIRANDOLA, GIOVANNI, CONTE

Mirbel, Charles François Brisseau de (shärl' fräswä' brēsō' du mērbĕl'), 1776–1854, French botanist, noted for his researches in the cellular structure and embryology of plants Director of gardens and greenhouses for the empire, he became professor of botany at the Museum of Natural History, Paris, in 1829 He also wrote several books on his subject

Miriam (mĭr'rēum) **1** Sister of Moses and Aaron She led the women in the song of Miriam Later she sided with Aaron against Moses and was stricken with leprosy Ex 15 20,21, Num 12. **2** Descendant of Judah 1 Chron 4 17 Miriam and Mary are diverse forms of the same original name

Mirma (mûr'mù) [Heb ,=fraud], chief Benjamite 1 Chron 8 10

Miró, Joan (hwän' mērō'), 1893-, Spanish surrealist painter, b Barcelona He early went to Paris, where his work soon attracted attention It is distinguished by the use of brilliant pure color and the juxtaposition of free forms with geometric lines It has been characterized as psychic automatism and is an attempt to express the subconscious by highly abstract forms In 1941 he settled in Majorca Miró is particularly well represented in the Museum of Modern Art, New York See study by J J Sweeney (1941)

mirror. The reflection of light from certain surfaces is such that extremely clear-cut and exact reproductions of objects are formed when the rays of light coming from the objects fall upon these surfaces (see REFLECTION) In optics, a surface which can form such a reproduction is called a mirror, and the reproduction is known as the IMAGE of the object Usually mirrors are made of plate glass one side of which is coated with metal or some special preparation to serve as a reflecting surface The junction of this reflecting surface and the plate glass is called the mirror line Highly polished metal and other materials serve also as mirrors Three common types of mirror are the plane mirror or mirror with a flat, or plane, surface, the convex mirror, the concave mirror In a fine plane mirror the rays of light falling upon it are reflected with little change in their original character and their relationship to one another in space Thus not only does each image almost exactly match its object, but the setting as a whole is also reproduced and an illusion of perspective is created Although the image appears to be behind the mirror, actually it is formed at the mirror line Its apparent position is the same distance behind the mirror as the actual object is in front of the mirror, the image is the same size as the object and is called a virtual image (i e , the rays of light from the object do not actually go to the image, but extensions of these light rays appear to intersect behind the mirror) The exactness of an image produced by a mirror depends upon the quality and condition of the mirror, as, for example, upon the clearness of the glass, the smoothness, and the cleanness The human eye often finds it practically impossible to distinguish between the image in a good mirror and the object itself, a condition upon which many optical illusions depend Convex and concave mirrors are known collectively as spherical mirrors, since their curved reflecting surfaces are considered to be part of the surface of a sphere The common concave type is one in which the mid-point, center, or vertex of the reflecting surface is farther away from the object than are the edges The center of the imaginary sphere of which it is a part is called the center of curvature and each point of the mirror surface is, therefore, equidistant from this point A line extending through the center of curvature and the mid-point of the mirror is the principal axis, and rays parallel to it are all reflected in such a way that they meet at a point on it lying halfway between the center of curvature and the vertex. This point is called the principal focus. The size, nature, and position of an image formed by a concave spherical mirror depend upon the position of the object in relation to the principal focus and the center of curvature. If the object is at a point farther from the mirror than the center of curvature, the image is real (i e , it is formed directly by the reflected rays) and inverted If the object is at the center of curvature, the image is the same size as the object and is real and inverted When the object is inside the principal focus, the image is virtual, is right side up, or erect, and is larger than the object In the case of both the real and the virtual image the size of the image is to the size of the object as the distance of the image from the mirror is to the distance of the object from the mirror In a convex spherical mirror the mid-point or vertex of the mirror is nearer to the object than the edges —the mirror bulges toward the object The image formed by it is always smaller than the object and always erect It is never real because the reflected rays diverge outward from the face of the mirror and are not brought to a focus, and the image, therefore, is determined by their prolongation behind the mirror as in the case of the plane mirror. The mirror of the ancient Greeks and Romans was a disk of metal with a highly polished face, sometimes with a design on the back, and usually with a handle In medieval Japan and also in China, some mirrors of this type were found to reflect, on a white surface, the design upon the back, these were called magic mirrors Glass mirrors date from the Middle Ages They were made in large quantities in Venice from the 16th cent., the back being covered with a thin coating of tin mixed with mercury, after 1840 a thin coating of silver was generally substituted The introduction of plate glass for mirrors (17th cent) stimulated the use of large stationary mirrors as part of household furniture Small bits of "silvered" glass were much used in the East to adorn articles of dress and of decoration The metal trench mirror of the First World War revived the manufacture of mirrors of this type In modern architecture large areas with highly polished surfaces are used to give the effect of mirrors Mirrors are a feature of modern interior decoration They also play an important part in the modern astronomical TELESCOPE

Mirs Bay. see HONG KONG

Mirzapur (mĭr'zäpōr"), town (pop 70,944), SE United Provs , India, on the Ganges river Many pilgrims visit its temple to the Hindu goddess Vindhyeshwari Shellac is manufactured

Misael (mĭ'sāul), one of the THREE HOLY CHILDREN

miscarriage see ABORTION

miscegenation (mĭ"sĭjĭnā'shŭn), the interbreeding, crossing, or hybridization of persons of different racial type Before the development of modern anthropology and genetics, opinions differed sharply as to the effects of racial crossing Some found that it produced anatomical "disharmony," others that it produced "hybrid vigor," which is sometimes the result of interbreeding domestic animals It is now known that racial crossing is a process that has been continuous in mankind from prehistoric times and that modern populations, in Europe as elsewhere, are products of this process on a grand scale In the Americas and in SE Asia and the Pacific islands, where it has been observed in recent times, the only ill effects seem to be on the personality and character of the offspring when there is social disapproval of mixed unions In some states of the United States, marriages of persons differing in race are prohibited by statute Such statutes are held to be constitutional, since the Thirteenth and Fourteenth amendments to the Constitution are construed as securing civil and political rights only, not privileges of social or domestic nature.

Mischabelhörner (mĭ'shäbulhûr"nur), group of peaks, Valais canton, Switzerland, in the Pennine Alps The highest is the DOM

misdemeanor (mĭs"dĭmē'nur) At common law a misdemeanor was a crime other than treason or a FELONY Although it might be a grave offense, it did not affect the feudal bond or take away the offender's property By the 19th cent serious crimes were labeled felonies, and minor crimes misdemeanors In the United States a misdemeanor usually is an offense which may be punished summarily by fine and by imprisonment for less than a year Commission of a misdemeanor does not cancel citizenship or subject an alien to deportation. In some states there are minor law violations which are not classified as misdemeanors, e.g , traffic offenses and breach of municipal regulations.

Miseno, Cape (mēzā'nō), S Italy, at the northwest end of the Bay of Naples. Here Augustus founded a naval station which was destroyed by the Arabs in the 9th cent There are ruins of a theater and of a reservoir.

Miserere (mĭzûrĕr'ē, -rār'ē) [Latin, =have mercy], the 51st (or 50th) Psalm, beginning, "Miserere mei, Deus (Have mercy upon me, O God)." It is one of the penitential psalms (see PSALMS). Noteworthy musical settings, are those of Palestrina, Josquin, and ALLEGRI.

Misgab (mĭs'găb) [Heb ,=height], unlocated place, SE of the Dead Sea, which was denounced by Jeremiah. Jer. 48.1.

Mishael (mĭ'shāul). **1** Kohathite Levite. Ex. 6 22; Lev 10 4 **2** Companion of Ezra. Neh. 8 4. **3** One of the THREE HOLY CHILDREN.

Mishal (mĭ'shŭl), unidentified town, N Palestine Joshua 21.30. Misheal Joshua 19.26 Mashal 1 Chron 6 74

Misham (mĭ'shăm), descendant of Shaharaim 1 Chron 8 12

Mishawaka (mĭshuwô'kù), city (pop 28,298), N Ind , on both banks of the St Joseph river and near South Bend, settled c 1830, inc 1899. Its manufactures include rubber and woolen apparel, metal products, automobile transmission units, and food products

Misheal (mĭ'shēul), variant of MISHAL

Mishma (mĭsh'mu) [Heb ,=report] **1** Son of Ishmael Gen 25 14; 1 Chron 1 30. **2** Son of Simeon 1 Chron. 4 25

Mishmannah (mĭshmă'nu) [Heb ,=fatness], Gadite ally of David 1 Chron 12 10.

Mishna see MIDRASH and TALMUD

Mishraites (mĭsh'rāĭts, mĭshrā'ĭts), one of the four families of Kirjath-jearim 1 Chron 2 53

Miskolc (mĭsh'kôlts), formerly **Miskolcz**, city (pop 77,362), NE Hungary, on the Sajo river It is an important industrial city, with large iron and steel mills and varied manufactures In the museum are Scythian excavations from the 6th cent B C and the Bronze Age The city has a 13th-century Gothic church, a law school, and a conservatory of music On near-by Mt Avar are large, state-owned vineyards, and lignite is mined in the vicinity.

Mispereth (mĭ'spērĕth) [Heb ,=number], exile who returned from Babylon Neh 7 7. Mizpar. Ezra 2 2

mispickel. see ARSENOPYRITE

Misr see EGYPT

Misrephoth-maim (mĭs'rēfŏth-mā'ĭm), unidentified place, N Palestine, to which Joshua drove the defeated Canaanites Joshua 11 8

missal [Latin, =of the mass], in the Roman Catholic Church, book containing all directions and texts necessary for the performance of Mass throughout the year At the end of the missal are votive Masses and various blessings Like the Roman BREVIARY the Roman missal is in much more widespread use than formerly The missal is in Latin, but English and bilingual editions are numerous

Missinaibi (mĭsĭnā'bē), river rising in central Ontario in Missinaibi Lake, SW of Kapuskasing, and flowing 265 mi N and NE to the Mattagami SW of Moosonee The united stream forms the MOOSE

Mission, village (pop 1,957), SW British Columbia, on the Fraser river and E of Vancouver, founded c 1861 by Father Fouquet as a mission to the Northwest Coast Indians It has fruit and vegetable canneries and fishing

Mission, city (1940 pop 5,982, 1947 estimated pop 8,700), extreme S Texas, WNW of Brownsville, founded 1908, inc 1910 It was founded on property that had belonged to the Oblate Fathers, whose chapel (completed 1824) still stands on the Rio Grande Mission packs and cans grapefruit and other citrus fruits and vegetables of the irrigated lower Rio Grande valley It has small industries

Missionary Ridge see CHATTANOOGA CAMPAIGN and NATIONAL PARKS AND MONUMENTS (table)

missions, term applied in general use to organizations formed for the purpose of extending religious teaching, whether at home or abroad It also indicates the stations or the fields where such teaching is given In a more particular sense it designates the efforts to disseminate the Christian religion From the first steps taken by the disciples of Jesus to carry out his direction to preach his gospel throughout "all the world," the history of the Christian Church has been in great part a history of missions Spreading through Asia Minor, into Europe by way of Greece and Rome, to Alexandria, the faith rapidly gained converts A missionary college was founded in Alexandria in the 2d cent , one at Constantinople in 404 The following centuries were marked by notable missionary labors in Scotland, Ireland, Central Europe, and among the Northmen, reaching even into Iceland and Greenland St PATRICK, St AUGUSTINE, and St BONIFACE are great names of that era After the Christianization of Europe there was little missionary effort until the 16th cent Roman Catholic missions were then, as now, almost entirely in the hands of the religious orders The great missionary orders are the Benedictines (which virtually civilized medieval Germany), Franciscans (especially the Capuchins), Dominicans (founded for missions among the Albigenses), Carmelites, and Jesuits (founded for the education of boys) The Jesuits were the great missionaries of the Catholic Reform (see JESUS, SOCIETY OF) Wherever they could go, they went—to the Far East (see FRANCIS XAVIER), to America, and to Protestant N Europe It was the Jesuits who kept up the English missions in the 16th and 17th cent. The first Catholic missionaries in Canada were Recollects, who worked in the first part of the 17th cent.; they were soon followed by Jesuits. Notable of

these Jesuits were Jerome Lalemant, Jean de Brébeuf, and Isaac Jogues Their labors among the Indians of the interior bore great fruit, and they may be regarded as a principal factor in the growth of the Canadian frontier and in the exploration of Canada and the upper Mississippi The *Jesuit Relations*, the individual journals of these Jesuits, are exceedingly important sources of early American history In the period of the conquest of Central and South America by Spain the Church sent her missionaries with the conquerors The Franciscans and Jesuits were the most important orders in Mexico At the end of the 18th cent and in the early 19th there was an extensive Catholic missionary interest in the Mississippi valley, and many Italians and French came to America to teach in the newly opened country Bardstown, Ky , was the chief center Since the 17th cent practically all Roman Catholic missions have been administered by one of the Roman congregations, Congregatio de Propaganda Fide (Congregation for the Propagation of the Faith), usually called the Propaganda This is made up of cardinals, whose office is a palace in Rome It is one of the most important of the papal congregations, for it directly administers all church affairs in non-Catholic countries (i e , countries not predominantly Catholic) The foreign missions are administered by the religious orders, the missionaries being responsible to the Propaganda In Propaganda countries where there is a strong hierarchy, the missionaries are responsible to the hierarchy In order to prevent overlapping, the Propaganda divides up among the various orders the territory in which there are few Catholics A new missionary policy has been in practice since the middle of the 19th cent , which emphasizes as most important the training of native clergy and the ordination of native bishops Roman Catholic missions are supported by the Propaganda, by the religious orders, and by lay missionary societies Two unsuccessful attempts were made to establish Protestant missions in the middle of the 16th cent , one by French Protestants for a colony in Brazil and the other a plan of Gustavus Vasa (Gustavus I) of Sweden for work among the Laplanders The Dutch East India Company sent missionaries to the Malaysians early in the 17th cent , and a seminary for the training of missionaries for work among the American Indians was carried on in New England in the 17th cent by John Eliot and Roger Williams (see also Stockbridge Indians) The Society of Friends also made converts among the Indians In Great Britain associations were formed to encourage the extension of the faith among the American colonists—the Society for the Propagation of the Gospel in New England (1649), the Society for Promoting Christian Knowledge (c 1698), and the Society for the Propagation of the Gospel in Foreign Parts (1701) The Scottish Society for the Promotion of Christian Knowledge appointed (1742) David Brainerd as a missionary to the American Indians Denmark sent into its colonial fields of the East and West Indies the first Lutheran missionaries—mainly German Pietists—in 1705 Members of the Moravian Church went as messengers of the Gospel to all continents except Australia before 1760 A new missionary spirit was aroused in Great Britain at the end of the 18th cent by the evangelistic fervor of John Wesley and George Whitefield The Baptist Missionary Society was formed (1792), and William Carey went to India Then followed the founding of the London Missionary Society (1795) and, among the Anglicans, the Church Missionary Society for Africa and the East (1799) In 1813 the Wesleyan Methodist Missionary Society was added In Holland, Germany, Switzerland, and France missionary societies were organized In the United States they sprang up all through the early part of the 19th cent —the American Board of Commissioners for Foreign Missions (1810), the American Baptist Missionary Union (1814), which supported the mission in Burma of Adoniram Judson, the Missionary Society of the Methodist Episcopal Church (1819), and the Domestic and Foreign Missionary Society of the Protestant Episcopal Church (1820) While its work had started much earlier, the Presbyterian Board of Foreign Missions was not actually constituted until 1837 American home mission societies began addressing their efforts to Indians, Eskimo, Negroes, and settlers on the expanding Western frontier and, later, to immigrants from Europe and Asia and to persons in isolated mountain regions of the South. The problems of missionaries in Africa and those in parts of Asia are strongly contrasted In Africa the people to be reached are in the more primitive stages of social and intellectual development In India and China, however, the inhabitants are the heirs of ancient civilization, long historical tradition, and extensive culture Medical and educational services have proved most effective in opening the way for spiritual ministry among these peoples. Organised medical work in India started in the middle of the 19th cent under doctors sent by the London Missionary Society and the American Board. With the work of Alexander Duff in India in 1830, a new enterprise in missionary effort on educational lines was launched In China a number of Christian colleges and universities have been established Work there was started (1807) by Robert Morrison, representing the London Missionary Society The China Inland Mission, with funds and personnel drawn from several denominations and countries, was founded (1865) by J H Taylor The opening of Japan by treaties in 1858 offered an opportunity to introduce foreign missionaries Educational work has been an important part of missionary activity there In 1797 the London Missionary Society laid the foundations of missionary work in the South Sea Islands Famous among mission workers in Africa are David Livingstone and Albert Schweitzer A marked trend in missionary work in recent years has been the training of indigenous leadership for church offices and administrative positions in mission enterprises The International Missionary Council, composed of some 26 national and regional missionary organizations and Christian councils in various parts of the world, was constituted in 1921 The Second World War and its aftermath severely curtailed or destroyed missionary accomplishments in many lands, but as fast as possible new mission schools, hospitals, orphanages, and churches are rising to replace those destroyed in war Missionaries have been able to return to their stations in many places Scattered congregations have reassembled, new mission leadership is in training for service See K S Latourette, *A History of the Expansion of Christianity* (7 vols , 1937-45), W O Carver, *Christian Missions in Today's World* (1942), L J Shafer, *The Christian Mission in Our Day* (1944), John Aberly, *An Outline of Missions* (2d ed , revised, 1946), H P Van Dusen, *World Christianity, Yesterday, Today, and Tomorrow* (1947), K S Latourette and W R Hogg, *Tomorrow Is Here* (1948), publications of the International Missionary Council For Roman Catholic missions, see works on the religious orders and the publications (in America) of the Society for the Propagation of the Faith and the Society of the Divine Word

Missisagi (mĭs'ĭsä'gē), river rising in S Ontario NE of Sault Ste Marie and flowing 140 mi S into the North Channel of Lake Huron

Mississippi (mĭ"sĭsĭp'ē), state (area 47,420 sq mi , 1940 pop 2,183,796, 1949 estimated pop 2,130,000), S United States, admitted 1817 as the 20th state (a slaveholding state) Jackson is the capital and largest city Meridian, Vicksburg, Hattiesburg, Greenville, Laurel, Biloxi, Natchez, and Gulfport (the only seaport) are the other important cities Across the Mississippi river, from which the state takes its name and which forms most of its western boundary, lie Arkansas and Louisiana Louisiana also cuts into S Mississippi along the parallel of lat 31°N like the toe of a boot until it reaches the Pearl river, which forms the lower part of the western boundary Mississippi Sound, an arm of the Gulf of Mexico, forms the rest of the southern line, Alabama is on the east, Tennessee on the north Where the Tennessee river loops across the extreme northeast corner of the state, the surface, generally hilly, reaches its greatest height (806 ft) Most distinctive region in the state's varied topography is the flat alluvial plain between the Mississippi and Yazoo rivers The Delta, as it is called, a highly productive cotton area, "begins in the lobby of the Peabody Hotel in Memphis and ends on Catfish Row in Vicksburg " A wide belt of longleaf yellow pine, the piny woods, covers most of S Mississippi to within a few miles of the coastal plain meadows Here are lumbering and allied industries, not so flourishing as in the early decades of the 20th cent , but still important Most of the state's many rivers belong to either the Mississippi river or the Alabama river system, with the Pontotoc Ridge the divide Mississippi has an almost subtropical climate, and the average annual rainfall is more than 50 in One of the most predominantly rural states in the Union, it is second in the production of cotton Soil erosion, resulting from overcultivation of the crop, and the boll weevil have led to the increased adoption of scientific farming techniques and to agricultural diversification, which has resulted in a great rise in livestock raising and, especially, dairying Corn, oats, hay, sorghum, sweet potatoes, pecans, soybeans, truck, and tung nuts are also grown The state's most valuable mineral resources, natural gas and petroleum, have been developed only since the 1930s Industry has also grown rapidly since oil development began and has been helped by the Tennessee Valley Authority and the state's Balance Agriculture with Industry program Under the BAWI plan many communities have subsidized and attracted new industries, and industrial products, including cotton textiles, have exceeded in value those of agriculture in recent years There is a small but profitable fishing industry on the Gulf coast Hernando De Soto's expedition doubtless wandered (1540–42) through this region of the Choctaw, Chickasaw, and Natchez Indians, but the first permanent white settlement was not made until 1699, when the sieur d'Iberville established a French colony on Biloxi Bay The region was part of Louisiana until 1763, when, by the Treaty of Paris, England received practically all the French territory E of the Mississippi and also the Floridas, which had belonged to Spain English colonists, many of them retired soldiers, had made the Natchez district a thriving agricultural community producing tobacco and indigo by the time Bernardo de Gálvez captured it, along with the Floridas, for Spain in 1781 By the Treaty of Paris of 1783 following the American Revolution, the United States, with English approval, claimed lat 31°N as its southern boundary in the West Spain denied this claim, and the long, involved West Florida Controversy ensued Spain accepted the 31st parallel as its northern boundary in the Pinckney treaty (1795) but did not evacuate Natchez until the arrival of American troops in 1798 Congress immediately created Mississippi Territory, with Natchez as Capital and William C C Claiborne as governor After Georgia's cession (1802) of its Western lands to the United States (see Yazoo land claims) and the Louisiana Purchase (1803), a land boom swept Mississippi The high price for cotton and cheap, fertile land brought settlers thronging in, most of them via the Natchez Trace, from the Southern piedmont regions and even from New England A few attained great wealth, many more simply managed a living The territory was extended in 1804 and again in 1810, and in 1817 Mississippi became a state with substantially its present boundaries, the eastern section of Mississippi Territory was then organized as Alabama Territory The aristocratic planter element of the Natchez region at first dominated the government, as the state's first constitution (1817) showed, but with the spread of Jacksonian democracy the small farmer came into his own, and the new constitution adopted in 1832 was quite liberal for its time In 1832 also was concluded a treaty by which the Chickasaw Indians yielded their remaining lands, thus ending the pressure of land hunger, which had driven virtually all Indians out of the state Mississippians were among the leading Southern expansionists, and Robert J Walker, Henry S Foote, John A Quitman, and Jefferson Davis agitated for or fought in the Mexican War Although the Union was generally revered by the old established families and by the small farmers, a strong middle class swept them along into secession on Jan 9, 1861 State pride was highly gratified in the choice of Davis as president of the Confederacy Civil War fighting did not reach Mississippi until after the battle of Shiloh in April, 1862, when Union forces were victorious at Corinth and Iuka Grant's brilliant and persistent Vicksburg campaign ended large-scale fighting in the state, but more destruction was caused by Gen W T Sherman in his march from Vicksburg to Meridian, and the cavalry of both armies, particularly the Confederate command of Gen N B Forrest, continued active, as did the resistance of anti-Confederate irregulars especially in Jones co After the war Mississippi abolished slavery but refused to ratify the Thirteenth and Fourteenth amendments and in March, 1867, under the congressional plan of Reconstruction was organized with Arkansas into a military district commanded by Gen E O C Ord With the defeat of a Republican constitution in 1868, civil government was suspended, and the next year all ex-Confederates were disqualified as officeholders The same constitution, made less objectionable to the people, was approved in Nov , 1869, and Mississippi, controlled by scalawags and carpetbaggers, was readmitted to the Union early in 1870 Extravagance and corruption were the hallmarks of government until, in the bitter election of 1875, the Republicans were defeated Lucius Q C Lamar figured largely in the Democratic triumph and was the state's most prominent national figure for many years On the ruins of the shattered plantation economy rose the sharecropping system, the merchant and the banker replaced the planter in having the largest financial interest in the farming Too often the system made the sharecroppers, white as well as black, little more than economic slaves The landowner, however, maintained his hold on politics until 1904, when the small farmers, still the dominant voting group, elected James K Vardaman governor This agrarian revolt did not, however, alter a deep-seated obscurantism which was reflected in the "Jim Crow" law (1904), prohibition (1908), and the ban on the teaching of evolution in the public schools (1926) Since the disastrous Mississippi flood of 1927 the Federal government has taken over flood-control work The race problem still plagues Mississippi where, until 1940, Negroes had for years constituted slightly more than half the total population, which is almost 100 percent native-born In Reconstruction days, the Republicans could win only with solid Negro support, and after the end of Reconstruction, Negroes were hardly encouraged to vote White supremacy was bolstered by the constitution of 1890, later used as a model by other Southern states and still in force, a prospective voter may be required to read and interpret any of its provisions. Because at that time most Negroes

could not read (neither could many white men, but the test was rarely applied to them), they were legally disfranchised The state, however, has made valiant efforts to wipe out illiteracy (it long had the highest rate in the country), spending more than half its income in recent years on its segregated schools for white and Negro children The fact that many Negroes, especially veterans of the Second World War, qualified successfully in recent elections (few actually voted) is evidence of the success of Mississippi's educational program The Negroes are feared and hated as economic competitors by the poor whites or "peckerwoods" (who also despise the more economically secure whites) It is to the poor whites that Negrophobes such as the late Sen Theodore G BILBO and Congressman John Rankin appeal In the Second World War thousands of Negroes left the state for the North, consequently decreasing the state's labor supply In 1948 Mississippi abandoned the Democratic party and supported J Strom Thurmond, the States' Rights party candidate for President The Univ of Mississippi at Oxford is the state's leading educational institution Several Mississippians have won literary renown by their widely different interpretations of Mississippi life, notably William Faulkner, Stark Young, Eudora Welty, William Alexander Percy, David L Cohn, Hodding Carter, Robert Rylee, and James Street See J F H Claiborne, *Mississippi as a Province, Territory, and State* (1880), Robert Lowry and W H McCardle, *A History of Mississippi* (1891), J W Garner, *Reconstruction in Mississippi* (1901), Dunbar Rowland, *History of Mississippi* (1925), D L Cohn, *God Shakes Creation* (1935) and *Where I Was Born and Raised* (1948), Federal Writers' Project, *Mississippi a Guide to the Magnolia State* (1938), C S Sydnor and Charles Bennett, *Mississippi History* (1939), Hodding Carter, *Lower Mississippi* (1942), J R Bettersworth, *Confederate Mississippi* (1943), Herbert Weaver, *Mississippi Farmers, 1850–1860* (1945)

Mississippi, river, 105 mi long, rising in S Ontario E of the Kawartha Lakes and flowing NE into Mississippi Lake, then northerly to the Ottawa below Arnprior It is navigable for small steamers

Mississippi, river, c 2,350 mi long, principal river of the United States, the "main stem" of a vast system that drains an area of c 1,244,000 sq mi Its drainage basin covers all or parts of 31 states and small parts of two Canadian provinces The Mississippi rises in N Minnesota, near Lake Itasca, and flows generally S to the Gulf of Mexico Minnesota, Wisconsin, Illinois, Kentucky, Tennessee, Mississippi, and Louisiana are on its east bank, Minnesota, Iowa, Missouri, Arkansas, and Louisiana border its west bank The upper Mississippi (north of the mouth of the Missouri river) is a comparatively narrow, clear stream flowing between limestone bluffs From its source to the Falls of St Anthony at Minneapolis, it is not navigable, below that city, a channel with a minimum depth of 9 ft runs to the Gulf This channel is maintained between Minneapolis and the mouth of the Missouri by 26 Federal locks and dams, construction of a 27th channel-improvement project, just N of St Louis, was started in 1947 Below the mouth of the Missouri, the Mississippi is known as the lower Mississippi, it takes the muddy color of the Missouri, follows a much more winding and variable course, and has a wide alluvial valley of great fertility which is lower in some places than the river's surface The river has carried down vast quantities of sediment, forming a delta that is crossed by the river's several mouths It extends out into the Gulf of Mexico Jetties (authorized by Congress in 1874) were built by James B EADS to provide a sediment-free navigation channel through South Pass to the Gulf The Mississippi's principal tributaries from the east are the St Croix, the Chippewa, the Wisconsin, the Rock, the Illinois, the Kaskaskia, the Ohio, the YAZOO, and the Big Black rivers, from the west come the Minnesota, the Iowa with the Cedar, the Skunk, the Des Moines, the Missouri, the St Francis, the White, the Arkansas, and the Red rivers Cities on the Mississippi include St Cloud, Minneapolis, St Paul, and Winona, Minn , La Crosse and Prairie du Chien, Wis , Dubuque, Clinton, Davenport, Muscatine, Burlington, Fort Madison, and Keokuk, Iowa, Moline, Rock Island, Quincy, Alton, East St Louis, and Cairo, Ill , Hannibal, St Louis, Ste Genevieve, and Cape Girardeau, Mo , Wickliffe and Hickman, Ky , Memphis, Tenn , Helena, Ark , Vicksburg and Natchez, Miss , and Vidalia, Baton Rouge, Plaquemine, and New Orleans, La The Mississippi river has a long record of disastrous floods, especially in its lower course, where it receives its larger affluents Levee building began in 1717 at New Orleans under the French By the middle of the 19th cent there was an almost continuous line of levees reaching N to Memphis But as the Mississippi became increasingly confined, its flood crests rose ever higher and the levees were frequently washed away or broken The valleys of the river itself and those of many of its tributaries were visited almost yearly by floods that inundated cities and farmlands, destroying homes and crops, crippling industries, interrupting transportation, and taking many lives In 1917 Congress passed a flood-control act, first of a series of Federal acts designed to improve and extend flood control Following the flood of 1927, which was a national disaster, the need for effective Federal aid was more clearly recognized The important flood-control act of 1928 was passed, and the program of Edgar Jadwin, then chief engineer of the U S army, was adopted. From these stem the widespread projects and the Federal expenditures of billions of dollars yearly which are rendering the Mississippi system's floods less destructive Hundreds of miles of high strong levees and floodwalls have risen along the banks of the river and on those of many of its affluents Cutoffs have eliminated the dangerous, winding channels An improved main channel increases the river's flood-carrying capacity Channel-improvement projects also have been instituted on many of its tributaries Floodways, for use when Mississippi river stages are dangerously high, divert some of the extra water The Birds Point-New Madrid Floodway, 34 mi long, is near the west bank of the Mississippi below Cairo, Ill The Morganza Floodway, 6 to 10 mi wide, and the West Atchafalaya Floodway, 7 to 8 mi wide, are on opposite sides of the Atchafalaya river in Louisiana, with the river, they help to carry flood waters S to the Gulf The Bonnet Carre Spillway, above New Orleans, channels flood waters to Lake Pontchartrain The Federal government's flood-control program also provides for a number of dams and reservoirs on many of the Mississippi's tributaries, particularly at their headwaters Flood-control constructions in connection with the lower Mississippi valley and navigation improvements are under the jurisdiction of the Mississippi River Commission and are executed by the U S Corps of Engineers The commission was established by Congress in 1879, it is a seven-man body of engineers, appointed by the President of the United States, three of whose members, including its president, are chosen from the Corps of Engineers The great waterway was much used by the Indians, and Coronado on his eastward exploration in 1541 heard rumors of it and of fleets of boats At about the same time De Soto coming from the east had reached and crossed it, and after his death his body was sunk in its waters The Spanish discovery was not, however, effective It remained for the French to make real use of the Mississippi After Marquette and Jolliet reached the river in 1673, it was really opened to white knowledge La Salle went down the river to its mouth in 1682, claiming the territory for France He lost his life in an attempt to find the mouth of the river on a return trip from France Despite his tragedy, France did appropriate the river, and the founding of New Orleans by Bienville in 1718 extended the French North American empire to its final reach The Mississippi was a French river in the 18th cent , and the settlements of Cahokia, Kaskaskia, Prairie du Chien, and St Louis created a chain of French control, with centers of French trade This section of empire was untouched by the fighting of the French and Indian Wars, and as they drew to a close it was transferred (1762) to Spain Spanish control created a problem for farmers of the then U S West (especially Kentucky and Tennessee), and the treaty rights for use of the Mississippi were a source of international wrangling The situation also had its bearing on schemes—more or less traitorous—to set up separate Western nations in conjunction with Spain James Wilkinson seems to have entertained such ideas, and Aaron Burr was accused of cloudy schemes of the sort These possibilities came to an end with the Louisiana Purchase in 1803 The Mississippi by that stroke became an entirely American river It was used immediately for the great westward thrust of American migration, and the river ports became busy centers of men going west by flatboat, raft, keelboat, and—later—steamboat The steamboat age on the Western waters saw the Mississippi in its full glory Especially after the 1830s the transport by river steamer was an essential part of American life, and the vessels became more and more fancy as the trade was more and more lucrative Meanwhile, the valley of the Mississippi was being peopled and, according to the theories of historians of the frontier (notably Frederick J Turner), was producing in the settlers the basis of American democracy as we know it today The river, however, flowed from north to south out of free territory into slave-holding territory, and it was to witness some of the severest fighting that arose from the war of the sections. Traffic from the North naturally ceased after the outbreak of the Civil War, and the Union was anxious to restore it to meet the demands of the politically important Northwest Even more important for the Union was the fact that the Mississippi made a splendid invasion route Victorious on the rivers of the Mississippi system, the Tennessee and the Cumberland (at Fort Henry, Fort Donelson, and Shiloh), the Union with its superior naval forces took ISLAND No 10 and Memphis in June, 1862 Two months earlier New Orleans had fallen to a combined Union naval and military expedition coming out of the Gulf The Confederates doggedly held on to Vicksburg, but the city finally succumbed to U S Grant's persistence (see VICKSBURG CAMPAIGN) on July 4, 1863, and with Port Hudson surrendering immediately thereafter, the Union had complete control of the river Vicksburg, rivaling Gettysburg as the most important single victory of the war, not only completed Union domination of the Mississippi but also effectively cut the trans-Mississippi West off from the rest of the Confederacy The loss of the supplies had a serious effect in bringing about the desperate condition of the South at the time of defeat The river was never again to have its old glory Steamboat traffic was resumed and was of great economic value, but the railroad had come, and the river ports were to molder slowly away The record that Mark Twain left in *Life on the Mississippi* (1883) of the river life and that great river pilot, Horace E Bixby, was but the preservation of the memory of a day past Today traffic is heavy on the river, but it is no longer vital There are many river boats and the descendants of the legendary John Henry still load and unload the river cargoes, but to the general public of the nation the Mississippi is more a matter of golden legend and of flood control than of commerce See Lyle Saxon, *Father Mississippi* (1927), Ben Lucien Burman, *Big River to Cross* (1940), Hodding Courter, *Lower Mississippi* (1942), Walter Havighurst, *Upper Mississippi* (rev ed , 1944), Edwin Rosskam and Louise Rosskam, *Towboat River* (1948), Richard A Bissell, *A Stretch on the River* (1950), Louis C Hunter, *Steamboats on the Western Rivers* (1950)

Mississippi, University of, at University, near Oxford, state supported, coeducational, chartered 1844, opened 1848 It includes a liberal arts college and schools of commerce and business administration, education, engineering, law, medicine, and pharmacy The Business Research Bureau, established in 1941, has aided small business

Mississippian period see CARBONIFEROUS PERIOD.

Mississippi Scheme, plan formulated by John LAW for the colonization and commercial exploitation of the Mississippi valley and other French colonial areas In 1717 the French merchant Antoine Crozat transferred his monopoly of commercial privileges in LOUISIANA and Canada to Law, who, with the sanction of the French regent, Philippe II d'Orléans, organized the Compagnie d'Occident Its shares first depreciated in value but rose rapidly when Law, director of the new royal bank, promised to take over the stock at par at an early date In 1719 the company absorbed several other organizations for the development of the Indies, China, and Africa, and Law thus controlled French colonial trade The consolidated company, renamed the Compagnie des Indes, issued quantities of stock, and the crown conceded to it control of finances When the Mississippi Company (as it was commonly called) was given, among other privileges, the right of farming the revenues, it assumed the state debt, and public confidence was so unbounded that a wild orgy of speculation in its shares set in The climax was reached with the amalgamation of the company and the royal bank in 1720 Overexpansion of its activities, the almost complete lack of any real assets in the colonial areas, and the haste with which Law proceeded soon brought an end to his scheme, despite several drastic edicts A few speculators sold their shares in time to make huge profits, but most were ruined by the "Mississippi Bubble " In the governmental crisis that followed, his system was abolished and Law fled the country (Dec , 1720) Although a failure in its financial aspects, the Mississippi Scheme was responsible for the largest influx of settlers into Louisiana up to that time

Mississippi Sound, arm of the Gulf of Mexico, c 80 mi long and 7 to 15 mi wide, separated from the Gulf by a series of narrow islands and sand bars and extending from Lake Borgne on the west to Mobile Bay on the east It washes the shores of Mississippi and part of Alabama Bay St Louis, Pass Christian, Gulfport, Biloxi, and Pascagoula, Miss , are on Mississippi Sound

Mississippi State College, at State College, near Starkville, with land-grant support, coeducational, chartered 1878, opened 1880, called an agricultural and mechanical college until 1932 It has schools of agriculture, business and industry, education, engineering, and science The state chemistry and plant offices are here

Mississippi State College for Women, at Columbus, the first state-supported woman's college, chartered 1884, opened 1885 as Mississippi Industrial Institute and College, renamed 1920 Liberal arts, music, and vocational courses are included

Missolonghi (mĭsulŏng'gē) or **Mesolonghi** (mĕsŭ–), Gr *Mesolongion* (mĕsōlŏng'gōōn), town (pop. 10,565), W central Greece, a port on an inlet of the Gulf of Patras. Missolonghi was a major stronghold of the Greek insurgents in the Greek War of Independence. It successfully resisted a Turkish siege in 1822 and held out heroically against a second siege from 1825 to 1826, when the Turks captured it. It was at Missolonghi that Lord Byron died in 1824.

Missoula (mĭsōō'lə), city (pop 18,449), co seat of Missoula co, W Mont, on the Clark Fork (called here the Missoula) very near the confluence of the Bitterroot, inc 1889. Settlement began at Hell Gate Canyon in 1860 but later centered at the present location a few miles away The coming of railroads (1883, 1908) stimulated growth, and the city has railroad shops Missoula, in the midst of watered agricultural valleys and large forests, has some lumbering industry and food-processing plants (including the refining of beet sugar) Montana State Univ (see MONTANA, UNIVERSITY OF) much affects the life of the city The U S Forest Service has a regional office here Fort Missoula was established near by in 1877

Missouri (mĭzōō'rē, mĭzōō'rə), state (69,270 sq mi, 1940 pop 3,784,664, 1949 estimated pop 3,935,000), central United States, admitted 1821 by the MISSOURI COMPROMISE as the 24th state (a slaveholding state) The capital is JEFFERSON CITY, and the largest cities are SAINT LOUIS and KANSAS CITY Missouri is bounded on the north by Iowa, on the west by Nebraska, Kansas, and Oklahoma, and on the south by Arkansas, the Mississippi river on the east separates it from Illinois and (in the extreme southeast) from Kentucky and Tennessee The state lies north of lat 36°30′N except for a small area in the extreme southeast which thrusts into Arkansas Two great rivers have done much to determine life and history in Missouri The Mississippi tied the region to the South, particularly to New Orleans, and the Missouri, which crosses the state from west to east to enter the Mississippi at St Louis, was the greatest avenue of the pioneer advance westward across the continent The tributaries to the two have also played a large part in the story of Missouri The region N of the Missouri is largely prairie land, growing corn and livestock, not unlike the Iowa plains to the north Most of the region S of the Missouri is covered by the foothills and the plateau of the OZARK MOUNTAINS, with soft hill scenery and some fruit orchards, the region is known for the simple customs, the superstitions, and "backwardness" of its hill people In the southwest there is a shaft of flat land, a part of the Great Plains, where livestock and forage crops are raised, and in the southeast below Cape Girardeau are the cotton fields of the Mississippi flood plain This southeastern region was much improved after the establishment of a drainage system in 1805 Most of the well-watered state would be affected by the development of the long-discussed Missouri Valley Authority (see MISSOURI RIVER BASIN PROJECT) The many rivers have frequently and disastrously flooded the fertile land and eroded it The waterways have been important since far back in geologic time Swampy prehistoric jungles have left their traces in the coal deposits and fire clays in various parts of the state Retreating glaciers of the Ice Age built the fertile plains in the north, and inland seas laid down the deposits of limestone and sandstone that have proved useful Even more useful have been other mineral deposits—coal in the west and the north central section, lead in the southeast, zinc in the southwest and about JOPLIN, one of the leading zinc producers of the country The lead mines, discovered early, were one of the great attractions for early settlement SAINTE GENEVIEVE and POTOSI were examples of lead-mining settlements Agriculture has, however, contributed more to the growth of Missouri and has been the chief base of the meat packing in Kansas City and the development of manufactures in St Louis Both cities are major industrial centers, with a variety of heavy and light manufactures St Louis has been traditionally famous for its clothing, shoes, beer, and railroad equipment The two cities, along with Chicago, are the major midcontinental centers of transportation by rail, road, and air The river routes were widely known and used by the Indians before the first white men arrived This was probably in 1541, when the Spanish expeditions from east and west, those of Hernando DE SOTO and Francisco Vásquez de CORONADO, pierced the continent The region was, however, opened by the French traders and missionaries who went down the Mississippi The expedition of Marquette and Jolliet and that of La Salle were the pioneering voyages, and by the end of the 17th cent trade with the Indians of Missouri was brisk In the early 18th cent Frenchmen coming from both the lower Mississippi and Canada were working the lead mines and were apparently making numerous but unrecorded river journeys through Missouri in search of furs The Mississippi led to New Orleans, and the region was part of the French colony of Louisiana Ste Genevieve was founded in 1732, and 32 years later Pierre LACLEDE and young René Auguste CHOUTEAU founded a post at St Louis The whole of Louisiana had already been ceded to Spain, but the slowly developing country about St Louis was not much affected by the change nor by the retrocession to France It passed (1803) to the United States with the Louisiana Purchase Already Americans had filtered in, particularly to the lead mines, but French influence remained dominant.

The fur trade flourished under the Spanish system of monopolies on the trade of a region and afterward, when restrictions were removed, through private companies. The members of the prominent Chouteau family and Manuel LISA of the Missouri Fur Company did much to develop the routes westward across the continent The LEWIS AND CLARK EXPEDITION set out from and returned to St Louis, which was by that early day already notable as the gate to the Far West The territory of Missouri was set up in 1812, but settlement was slow even after the War of 1812. Planters from the South had introduced the system of slavery, but the plantations were restricted to a small area The question of admitting the Territory as a state was a burning national issue, since it involved the right of extension of slavery into the territories It was resolved by the first of Henry Clay's great compromises, the Missouri Compromise of 1820 The state was admitted as a slave state, and the slaveholding interests became politically powerful in the early years Missouri was still, however, principally known as a fur trading center, and out from St Louis went W H ASHLEY, who made a large fortune in the trade, and the mountain men, who explored the West—among them Jedediah S Smith, Thomas Fitzpatrick and James Bridger The AMERICAN FUR COMPANY established the Western headquarters at St Louis in combination with the Chouteau interests and was economically powerful in the 1830s and early 1840s From Missouri traders went out over the Santa Fe Trail to the Spanish lands, and settlers went out over the Oregon Trail to people the Far West Independence, Westport, and Franklin gained fame as places for organizing these expeditions Settlement of Missouri itself quickened, spreading in the 1820s over the river valleys into central Missouri and by the 1830s into W Missouri The present bounds of Missouri were reached by the addition of the northwest corner through the Platte Purchase in 1836 Tobacco and hemp were being raised on plantations in the bottomlands of the Missouri river, but in the Ozarks and in the rich cornlands the slave system was uneconomic, and the voice of Missouri as it spoke through its celebrated statesman, Thomas Hart BENTON, was of the West rather than of the South Men from Missouri eagerly took part in the expansionist Mexican War, fighting particularly under Stephen W KEARNY and Alexander W DONIPHAN Though the MORMONS had been anything but welcomed and were expelled from the state in 1839, the Germans who came in the '40s and the '50s were received cordially They settled principally about St Louis and were to contribute outstanding leaders, notably Carl SCHURZ The slavery problem was made acute by the passage of the KANSAS-NEBRASKA BILL in 1854 The pro-slavery forces in Missouri became very active in trying to win Kansas for the slave cause and contributed vigorously to the violence and disorder that tore that territory apart and helped to prepare for the Civil War These were, however, only one element in Missouri and, as events turned out, not the most powerful one In the Civil War, most Missourians remained loyal to the Federal government, largely because of the activity of strong Unionists like Francis P BLAIR (1821–75) The state convention which first met in 1861 voted against secession and, in 1862, after deposing the pro-Southern administration of Gov C F JACKSON, set up a provisional government headed by H R Gamble Meanwhile Union forces under Gen Nathaniel LYON had forced the pro-Confederate state militia to retreat, but were defeated at WILSON CREEK (Aug 10, 1861) However, after being routed (March, 1862) at PEA RIDGE in Arkansas, the Confederates did not again reappear in force (although there was guerrilla activity in the state throughout the war) until 1864, when Sterling Price led a brief invasion of his native state Most noted of the guerrillas was William C QUANTRILL The disorder and lawlessness bred by the war continued after the war was over, and Missouri saw the activities of one of the most celebrated of all outlaws, Jesse JAMES A new Missouri was, however, rising from the war, a Missouri rapidly losing the semi-Southern air that was to linger only in tradition and in the works of one of Missouri's most celebrated sons, Mark TWAIN Steamboating and the river life dwindled slowly, but the railroads drove the old river towns to decay The railroads also tied Missouri more closely to the East and the North European immigrants—at first German and Irish and later from Eastern Europe—poured in, attracted particularly to St. Louis and Kansas City Urbanization and industrialization grew as twins The packing industry was firmly established in Kansas City, which by a few years after the Civil War had won its place as a crossroads of shipping and commerce Manufactures multiplied not only in the two great cities but in other cities as well, as at Joplin and St Joseph. When in 1904 the Louisiana Purchase Exposition was held at St Louis, the growth of Missouri in a century from backwoods and unsettled prairie to a complex modern commonwealth was dramatically shown The development of industry has not, however, blanked out agriculture The rich grain fields and orchards still offer their yield, and the progress of farming is shown in the annual state fair at Sedalia Poultry raising and dairying are important, and the raising of horses and the big Missouri mules is notable That some of the writers and artists in trying to capture the spirit of the region lay as much stress on the rural as on the urban scene shows the continuing importance of farm life One of the best-known of modern American artists is Thomas Hart BENTON, a descendant of the Senator of that name Since the brief period of radical Republican rule from 1864 to 1870, Missouri has been permanently wedded to neither party, tending toward the Republicans in the days of Theodore Roosevelt, turning solidly Democratic with Franklin D Roosevelt Political machines in the large cities have attracted unfavorable national notice (notably the Pendergast machine in Kansas City), but Missouri has contributed outstanding statesmen such as Champ Clark and James Reed The political importance of the state grew enormously when a Missourian, Harry S TRUMAN, became President Missouri has many institutions of higher learning, a few of the most widely known being the Univ of Missouri, Washington Univ, St Louis Univ (Jesuit), and Stephens College Old standard historical works are those of Louis Houck, *A History of Missouri until the Admission of the State* (3 vols, 1908) and *The Spanish Regime in Missouri* (2 vols, 1909) See Walter B Stephens, *Centennial History of Missouri* (1921), J F Ellis, *The Influence of Environment on the Settlement of Missouri* (1929), Walter Williams and F C Shoemaker, *Missouri, Mother of the West* (5 vols, 1930), Federal Writers' Project, *Missouri, a Guide to the "Show Me" State* (1941)

Missouri, river, c 2,464 mi long, longest river of the United States and principal western tributary of the Mississippi It is formed where the Gallatin, the Madison, and the Jefferson (main headstream of the Missouri) rivers join in SW Montana at Three Forks The river flows generally SE to the Mississippi c 17 mi above St Louis Flowing across the Great Plains, it crosses North Dakota and South Dakota, forms the east boundary of Nebraska and part of the east boundary of Kansas and of the west boundary of Iowa, then passes through Missouri to the Mississippi river Its tributaries include the Musselshell, the Milk, the Yellowstone, the Grand of South Dakota, the Cheyenne, the White, the Niobrara, the James (sometimes called the Dakota), the Big Sioux, the Little Sioux, the Platte, the Kansas (or Kaw), the Grand of Iowa and Missouri, the Chariton, the Osage, and the Gasconade rivers The Missouri's principal cities are Great Falls, Mont, Bismarck, N Dak, Pierre, S Dak, Sioux City and Council Bluffs, Iowa, Omaha and Nebraska City, Nebr, Atchison, Leavenworth, and Kansas City, Kansas, St Joseph, Kansas City Jefferson City, and St Charles, Mo The still-pending MISSOURI RIVER BASIN PROJECT is a Federal government plan (1941) for flood control, irrigation, and other measures The Missouri was an artery of commerce for the Indians before the coming of the white man, particularly for the village Indians of the Plains culture area, notably the Mandan, the Arikara, and the Hidatsa It is probable that the French also were involved in trade and transport not only on the lower river but also on the upper river, yet the records are too scant to yield details Certainly the wide and yellow river was well known to fur traders in the period after 1762—to such men as those of the Chouteau family and Manuel Lisa—but only the lower river was familiar, and of expeditions to the upper Missouri little is known until after the 19th cent had begun The Lewis and Clark expedition (1804–6) opened the mountain country to the world, and Lisa and his fellows of the Missouri Fur Company (including Andrew Henry) had plunged far to the sources of the river before the overland expedition to Astoria used (1811) the Missouri as the road across much of the continent. The mountain reaches of the Missouri and its headstreams were not to be well known until the days of the mountain men in the 1820s and 1830s The fur trade was well established, and the American Fur Company in 1832 brought the first steamboat to the mouth of the Yellowstone Steamboats (first introduced on the river in 1819) were to be of much importance, with Fort Benton, Mont, as the head of navigation Even more important in the 1840s and 1850s was the use of the Missouri and its tributary the Platte for the beginning of the route to Oregon and California, as well as the path for the Mormons bound for Utah River traffic began to boom before the Civil War and was hastened somewhat by the building of the Mullan Wagon Road Even after the Civil War it was prominent in the peopling of Kansas and Nebraska and in the Black Hills gold rush, but the railroads had already come, and their diminishing effect on river traffic was apparent The Missouri gradually became more important for its falls, which could be and were used for hydroelectric power than for transport Its waters and those of its tributaries have also been already much used for irrigation,

and the Missouri river valley plan envisions maximum use of the waters for agriculture See P E Chappell, *History of the Missouri River* (1911); C P Deatherage, *Steamboating on the Missouri River in the Sixties* (1924), Stanley Vestal, *The Missouri* (1945), Rufus Terral, *Missouri Valley; Land of Drouth, Flood, and Promise* (1947), Bernard De Voto, *Across the Wide Missouri* (1947)

Missouri, University of, mainly at Columbia, land-grant and state supported, coeducational; chartered 1839, opened 1841; the oldest state university W of the Mississippi It includes colleges of arts and science (with music), education, engineering, and agriculture and schools of business and public administration, journalism (1908, oldest in the world), law, medicine, and, at Rolla, mines and metallurgy The state historical society and a U S fisheries bureau are here

Missouri Compromise, 1820–21, measures passed by the U S Congress to end the first of a series of crises concerning the extension of slavery into the national territory By 1818 Missouri Territory had gained sufficient population to warrant its admission into the Union as a state Settlers came largely from the South, and it was normally expected that it would be a slave state To a Missouri statehood bill brought before the House of Representatives, James Tallmadge of New York proposed an amendment that would forbid importation of slaves and would bring about the ultimate emancipation of all slaves born in Missouri This amendment passed the House (Feb , 1819), but not the Senate Bitterness immediately appeared in the debates, and the sectional division of the United States was sharply emphasized as the matter hung fire In Jan , 1820, a bill to admit Maine as a state passed the House The admission of Alabama as a slave state in 1819 had brought the slave states and free states to equal representation in the Senate, and it was seen that by pairing Maine (certain to be a free state) and Missouri, this equality would be maintained The two bills were finally joined as one in the Senate, with the clause forbidding slavery in Missouri replaced by the measure proposed by Sen Jesse B Thomas of Illinois prohibiting slavery in the remainder of the Louisiana Purchase north of 36° 30′ (the southern boundary of Missouri) The House rejected this compromise bill, but after a conference committee of members of both houses was appointed, the bills were treated separately, and in March, 1820, Maine was made a state and Missouri was authorized to adopt a constitution having no restrictions on slavery However, the provision in the Missouri constitution barring the immigration of free Negroes was objectionable to Northern Congressmen, and not until the Missouri legislature pledged that nothing in the constitution would be interpreted to abridge the rights of citizens of the United States was the charter approved and Missouri admitted to the Union (Aug , 1821) Henry CLAY, as speaker of the House, did much to secure passage of the Missouri Compromise—so much, in fact, that he is generally regarded as its author The 36° 30′ proviso held until 1854, when the KANSAS-NEBRASKA BILL repealed the Missouri Compromise The whole problem of the extension of slavery was not solved until the battlefields of the CIVIL WAR were reached

Missouri river basin project, plan advanced in 1944 by Gen L A. Pick of the U S. Corps of Engineers and W G Sloan of the Bureau of Reclamation (see RECLAMATION, BUREAU OF) It provides for coordinated development and control of the Missouri and its basin lands Eight states—Montana, Colorado, Wyoming, North Dakota, South Dakota, Nebraska, Kansas, and Missouri—are principally involved For the plan the Flood Control Act of 1944 authorized more than 100 dams, reservoirs, and levees intended to irrigate some 5,500,000 acres, to control floods, to improve navigation, to restore surface and ground water, and to develop hydroelectric power The project will also conserve wildlife and abate stream pollution A committee, with representatives of the Corps of Engineers, the Dept of the Interior, the Dept of Agriculture, the Federal Power Commission, the Dept of Commerce, and the governors of five states, was established in 1945 to help advance the gigantic scheme, which is ultimately intended to include existing projects in the basin such as those of the NORTH PLATTE and the SOUTH PLATTE Chief among the many tributaries to be controlled are the MILK, the YELLOWSTONE, the CHEYENNE, and the Kansas (see REPUBLICAN and SMOKY HILL RIVER) On the Missouri itself the project includes, among other units, Canyon Ferry Dam (begun 1948), near Helena, Mont , the Missouri-Souris unit to use for irrigation the water impounded by FORT PECK DAM, Garrison Dam (begun 1947), c 75 mi above Bismarck, N Dak ; and a group of three—Oahe Dam, 6 mi above Pierre, S Dak , which will back the river up to Bismarck, Big Bend Dam, c 25 mi above Chamberlain, S Dak , which will eliminate the bend in the Missouri and back the river up to Pierre, and Fort Randall Dam (begun 1947), c 75 mi upriver from Yankton, S.Dak. The first unit of the entire project to be completed (in 1948) was Kanopolis Dam on Smoky Hill River.

Missouri Valley, city (pop 3,994), SW Iowa, near the Missouri N of Council Bluffs, settled 1854, inc. 1871. It is a trade and shipping center for a farm and livestock area.

mist · see FOG.

Mistassini (mĭstŭs'nē), village (pop 1,294), S Que., on the Mistassini river N of Lake St. John. In a farm region, it has blueberry canning.

Mistassini, river of S Quebec, rising E of Lake Mistassini and flowing c 200 mi S then SE to Lake St John

Mistassini, Lake, c.100 mi. long, S Que , NW of Lake St. John, in sparsely settled country. A Hudson's Bay Company post is on its east shore It drains W to James Bay by the Rupert river

Misti, El (ĕl mō'stē), volcano, 19,166 ft high, S Peru, near Arequipa Also called Arequipa. El Misti is flanked by two other volcanos—on the NW by Chachani, 19,960 ft high, and on the SE by Pichu Pichu, 18,400 ft high With a perfect snow-capped cone, El Misti, apparently of significance in the Inca religion, has figured much in Peruvian legends and poetry

mistletoe (mĭ'sūltō), parasitic evergreen with white, semitranslucent berries, used for Christmas decoration It was sacred to the druids and has from early times featured in the folklore and superstitions of many parts of the world It was thought to cure many ills Birdlime is made from the berries. The Old World mistletoes are of the genus *Viscum*, and those of the New World belong to the genus *Phoradendron*, of which there are over 200 species, mostly tropical Contrary to general belief, the mistletoe is seldom parasitic on the English oak, but, in France and England, on the apple tree and other trees and shrubs and, in America, on many shade and timber trees including the tupelo and red maple in the Southeast, poplars and willows in the Southwest, conifers in the Northwest, and oak on the Pacific coast. There are several other less common mistletoes in the United States which attack juniper, cypress, cottonwood, mesquite, and creosote bush

Mistral, Frédéric (frādārēk' mēstral'), 1830–1914, French Provençal poet With AUBANEL he was one of the seven founders (1854) of the Felibrige, an organization to promote Provençal as a literary language He was the leader of the movement and was recognized as its greatest poet Besides many short poems he wrote four verse romances, notably *Mirèio* (1859, Eng tr , 1867) He published a Provençal dictionary (1878–86) and wrote memoirs (Eng tr , 1907) His verse is characterized rather by ease and beauty of language than by power of thought He shared with Echegaray the 1904 Nobel Prize in Literature See C A Downer, *Frédéric Mistral* (1901), C M. Girdlestone, *Dreamer and Striver* (1937)

Mistral, Gabriela (gabrēā'lä mēstrāl'), 1889–, Chilean poet, whose real name is Lucila Godoy Alcayaga (lōōsē'la gōdhoi' älkī'gä) For almost a decade she was a teacher and director of rural schools in Chile Her note as an educator was increased later when she worked with José de Vasconcelos on reorganizing the Mexican school system She was also given diplomatic posts and represented her country at the League of Nations The tragedy of an early love affair as well as her burning desire for justice for the unfortunate is reflected in the simple and fluent lyricism of her verse Two volumes are *Desolación* (1922) and *Tala* (1938) Her prose has not been collected. She received the 1945 Nobel Prize in Literature.

Misurata (mēzōōrä'tä), town (pop 5,000), Tripolitania, Libya, in an oasis It exports dates and grain and is noted for its hand-woven carpets. Its port, Misurata Marina (7 mi. to the east), was built by the Italians

mita see PEONAGE.

Mitau, Latvia see JELGAVA.

Mitcham, urban district (1931 pop 56,859; 1947 estimated pop. 65,320), Surrey, England, S of London It was once noted for its lavender There is a 480-acre common on which cricket matches are played The annual fair in Mitcham is a survival from medieval times The city's manufactures include leather, chemicals, soap, margarine, biscuits, paint, and pharmaceuticals

Mitchel, John, 1815–75, Irish revolutionist and journalist A practicing barrister, Mitchel contributed articles to the *Nation* (Dublin) and the *United Irishman*, which he founded in 1848, calling for rebellion against England He was transported to Australia for sedition before the abortive Young Ireland revolt of 1848, which he had helped prepare, could be accomplished He escaped to the United States in 1853, where he led a turbulent and contentious career as a journalist, editing the pro-slavery journal, *Citizen*, in New York and later, during the Civil War, the *Examiner* in Richmond After a short imprisonment (1865) for his Confederate activities, he became acknowledged leader of the Irish-American nationalists, and as such edited the *Irish Citizen* He returned to Ireland and was elected to Parliament shortly before his death. He edited the poems of James Mangan and Thomas Davis. His *Jail Journal* (new ed., with an introduction by Arthur Griffith, 1945) is an Irish revolutionary classic.

Mitchel, John Purroy, 1879–1918, mayor of New York city ((1913–17), b New York city, grad Columbia, 1899, son of John Mitchel. As commissioner of accounts (1907–9) for New York city, he won public approval by prosecuting corruption, and in 1909 he was elected president of the board of aldermen He served as acting mayor when Mayor William Jay Gaynor was recovering from the attack of a would-be assassin, and again Mitchel crusaded against graft He was elected mayor in 1913 on an anti-Tammany ticket and introduced educational, financial, and social reforms Defeated for reelection by J. F Hylan, he enlisted as an army aviator and was killed in an airplane crash

Mitchel, Ormsby MacKnight, 1809–62, American astronomer and soldier, b Union co , Ky , grad West Point, 1829 He taught mathematics at West Point (1829–31), but resigned from the army and moved to Cincinnati to become professor of mathematics, natural philosophy, and astronomy at Cincinnati College (later part of the Univ of Cincinnati) He secured the establishment of an observatory in Cincinnati (1842), where he conducted important astronomical investigations, he published (1846–48) an astronomical periodical, the *Sidereal Messenger* In 1845 Mitchel verified the transit of Mercury, and while at the observatory he recorded the results of observations on about 50,000 faint stars, double stars, and comets In 1860 he became the director of the Dudley Observatory at Albany, N. Y. Among his works are *Planetary and Stellar Worlds* (1848), *Orbs of Heaven* (1858), and *Popular Astronomy* (1860) When the Civil War broke out Mitchel was made brigadier general of volunteers in command of Ohio (1861) He took part in an important campaign, and shortly before his death of yellow fever at Beaufort, S C , he was promoted major general See biography by his son Frederic Mitchel (1887)

Mitchell, Donald Grant see MARVEL, IK

Mitchell, John, 1870–1919, American labor leader, b. Braidwood, Ill He became a miner at the age of 12 and in 1885 joined the Knights of Labor When the United Mine Workers of America was formed (1890), he became a member, after his successful leadership of the S Illinois soft-coal miners in the strike of 1897, he was national vice president, then president from 1898 to 1908, when he resigned His leadership of the anthracite miners' strike in 1902 secured better wages and working conditions in the industry, substantially increased membership in the union, and brought him recognition from members and the public as an outstandingly able leader As a vice president (1899–1914) of the American Federation of Labor he was a strong advocate of the "sacredness of contract," in which he was opposed by the more radical factions in the federation In 1914 he was appointed commissioner of labor for New York state and was from 1915 to 1919 chairman of the state industrial commission He wrote *Organized Labor* (1903) and *The Wage Earner and His Problems* (1913) See biography by Elsie Glück (1929)

Mitchell, John Ames, 1845–1918, American editor and author, b New York city He was founder and publisher (1883–1918) of *Life*, a humorous magazine, and author of *Amos Judd* (1895), *The Pines of Lory* (1901), and *Pandora's Box* (1911)

Mitchell, Maggie, (Margaret Julia Mitchell), 1832–1918, American actress, b. New York city. She made her New York debut as Julia in *A Soldier's Daughter* and later became popular in *Mignon* and *Fanchon the Cricket*, first presented in 1860 She was a favorite in tours throughout the country, in mining camps and on remote frontiers

Mitchell, Margaret, 1900?–49, American novelist, b. Atlanta, Ga Her one novel, *Gone with the Wind* (1936), was a large-scale picture of the Civil War and Reconstruction periods in Atlanta and its vicinity. It showed great narrative power and won enormous popularity The moving picture (1939) made from the novel was highly successful The novel won the Pulitzer Prize in 1937 Miss Mitchell, who was Mrs John R Marsh, died as the result of being struck by an automobile

Mitchell, Maria, 1818–89, American astronomer, b Nantucket, Mass She taught school in Nantucket and later became a librarian there. She made a special study of sunspots, nebulae, and satellites and discovered a comet in 1847, for which she was awarded a gold medal by the king of Denmark After 1865 she was professor of astronomy at Vassar College She was a fellow of the American Association for the Advancement of Science and was the first woman to be elected to the American Academy of Arts and Sciences. In 1922 she was elected to the Hall of Fame. See biographies by P. M. Kendall (1896), M. K. Babbitt (1912), and Helen Wright (1949).

Mitchell, Samuel Alfred, 1874–, American astronomer, b. Kingston, Ont., M. A. Queen's Univ , Kingston, 1894; Ph D. Johns Hopkins, 1898. He was connected with Columbia Univ. from 1899 to 1913. From 1913 to 1945 he was professor of as-

tronomy and director of McCormick Observatory at the Univ of Virginia. Between 1900 and 1937 he went as astronomer on 10 eclipse expeditions to different parts of the globe He is a fellow of the Royal Astronomical Society of London and member of other learned bodies of Europe and America His writings include several editions of his work on parallaxes of stars and also *Eclipses of the Sun* (1923, 4th ed, 1935) and, with C G Abbot, *Fundamentals of Astronomy* (1927)

Mitchell, Silas Weir, 1829–1914, American physician and author, b Philadelphia, M D Jefferson Medical College, 1850, studied in Paris A pioneer in the application of psychology to medicine, he won special fame for his treatment of nervous disorders and for his study of the nervous system His medical works include treatises on snake venom and neurology, as well as *Injuries of Nerves and Their Consequences* (1872) and *Fat and Blood* (1877), which summarizes his well-known rest cure Among his novels are historical romances (*Hugh Wynne, Free Quaker*, 1896) and psychological studies (*Constance Trescot*, 1905) He wrote several volumes of respectable poetry and interspersed lyrics in his novels See biographies by A R Burr (1929) and E P Earnest (1950)

Mitchell, Wesley Clair, 1874–1948, American economist, b Rushville, Ill He received his Ph D (1899) from the Univ of Chicago, where he studied under Thorstein Veblen and John Dewey, and taught at several institutions, including the Univ of California, Columbia Univ, and the New School for Social Research He also served on many government committees, was chairman of the President's Committee on Social Trends (1929–33), and helped found the National Bureau of Economic Research One of the most eminent of American economists, Mitchell refuted many of the tenets of orthodox economics and turned toward an institutional analysis based on behaviorist psychology His chief researches were centered on investigation, often statistical, of the business cycle, his *Business Cycles* (1913, 2d ed, 1927) is his most important work His other books include *A History of the Greenbacks* (1903), *The Backward Art of Spending Money* (1937), and *Measuring Business Cycles* (with A F Burns, 1946)

Mitchell, William Lendrum, 1879–1936, American advocate of air power, b Nice, France, grad George Washington Univ, 1899 He was born while his father—Sen John Lendrum Mitchell—and his mother were staying in Europe At the age of 18 he joined (1898) the U S army as a private in the Spanish-American War and then served in the Philippines After return to the United States, he led in the precarious construction of a telegraph network in Alaska and then pioneered in U S army aviation He rapidly rose in rank, and when he commanded the U S air forces in France in the First World War he was promoted brigadier general After the armistice, Billy Mitchell, made director of military aviation in the U S army, argued violently for a large, independent air force His public criticism of military and naval leaders for neglect of air power led to his demotion and to court-martial (1926) After he resigned from the army, he remained a bitter critic of army and government policy He wrote *Our Air Force* (1921), *Winged Defense* (1925), and *Skyways* (1930) See biography by Isaac Don Levine (1941)

Mitchell, town (pop 1,777), S Ont, on the Thames river and NW of Stratford It has knitting, flour, and lumber mills, milk canneries, grain elevators, and cold-storage plants

Mitchell. 1 City (pop 3,393), SW Ind, near the East Fork of the White River S of Bedford Cement is made here Spring Mill State Park near by is finely timbered, has caves and a restored pioneer village **2** City (pop 2,181), W Nebr, on the North Platte above Scottsbluff, in an irrigated farming area Sugar beets are processed here It is the seat of Scotts Bluff County Fairgrounds **3** City (pop 10,633), co seat of Davison co, SE S Dak, near the James river and near Lake Mitchell, WNW of Sioux Falls, platted 1879, inc 1881, chartered 1883. A trade and shipping center for a farm, dairy, and stock-raising area, it has meatpacking and food-processing plants In its large Corn Palace elaborate festivals are held in September celebrating the state's crops Mitchell is the seat of Dakota Wesleyan Univ (Methodist, coeducational, 1885).

Mitchell, Mount, peak, 6,684 ft high, W N C, in the Black Mts NE of Asheville, highest peak of the Eastern states.

Mitchill, Samuel Latham, 1764–1831, American scientist, b North Hempstead, L I, N Y, M D Univ of Edinburgh, 1786 Noted for his wide interests and learning, Mitchill had a varied and influential career He served as professor at Columbia (1792–1801) and at the College of Physicians and Surgeons (1807–26) In 1826 he helped found Rutgers Medical College (no longer in existence) He was a member of the New York state assembly (1791, 1798, 1810), of the U S House of Representatives (1801–4, 1810–13) and of the U.S. Senate (1804–9). His contributions in science include the introduction of the chemical nomenclature of Lavoisier, pioneer research in mineralogy, geology, botany, and zoology; and the founding and editing (1797–1820) of the *Medical Repository* See biography by C. R. Hall (1934)

mite, small, often microscopic, arachnid of the same order as the tick and of world-wide distribution Usually the body is oval and not constricted between the thorax and the abdomen The itch mite burrows into the skin of humans and other mammals and lays eggs Succeeding generations develop rapidly Intense itching and injury to the health of the host result Species of this mite cause mange in dogs, horses, and other animals Other mites attack poultry, sheep, and cattle Among those destructive to vegetation are the citrus rust mite, the red spider mite, and the gall mites Cheese, ham, sugar, flour, and stored grains may become infested with mites Some nonparasitic mites are aquatic

Mitford, Mary Russell, 1787–1855, English writer, b Alresford, Hampshire Her father, a physician, squandered the family fortune Well educated, she supported her parents with her literary earnings Her first volume of poetry (1810) sold well, though severely treated by the critics Later she turned to playwriting as a more lucrative field, but only *Rienzi* (1828) was successful *Our Village* (1824–32), a series of rural sketches which had been appearing serially in the *Lady's Magazine* from 1819, established her reputation and gained for her a wide following She later wrote a novel, *Belford Regis* (1835), other series of tales including *Atherton* (1854), and *Recollections of a Literary Life* (1852) See her letters, ed by A G K L'Estrange (2 vols, 1870) and by Henry Chorley (2 vols, 1872), biography by Constance Hill (1919)

Mitford, William, 1744–1827, English historian He left Oxford in 1761 without a degree, took up and abandoned the study of law, and at the suggestion of Edward Gibbon, began his life work, *The History of Greece* (5 vols, 1784–1818) It was opinionated, but was the most scholarly treatment of the subject before George Grote and Connop Thirlwall Mitford was a member of Parliament at intervals from 1785 to 1818

Mithcah (mĭth'kŭ) [Heb, =sweetness], unlocated desert encampment Num 33 28,29

Mithnite (mĭth'nīt), obscure designation used of one of David's guards 1 Chron 11 43

Mithra (mĭ'thrŭ) [Old Persian, =friend], ancient cultic god of Iran and India (where he is called Mitra), until the 6th cent B C apparently a minor figure in the great Zoroastrian system Under the Achaemenidae, Mithra became more and more important until he appears in the 5th cent B C as the principal Persian god The extension of his cult into Mesopotamia and Armenia resulted in making it a world-wide religion, called **Mithraism** (mĭ'thrŭizm). This was one of the great religions of the Roman Empire, and in the 2d cent A D it was more general than Christianity Its spread was caused by the legions, for Mithra (or Mithras in Latin and Greek) was the ideal divine comrade and fighter Long before this time, probably in the supersession by Mithra of Ahura Mazdah in Persia, Mithra had become the god of light and of the sun, perhaps thus was a very old feature of his cult The Mithraic system was dualistic, its central myth was the story of how Mithra slew a sacred bull in a grotto This is represented frequently in ancient reliefs The ethics of Mithraism were rigorous, loyalty was very strongly inculcated, and fasting and continence were prescribed The religion was a mystery-faith and it had several of the standard sacramental forms common to mystery religions, e g, baptism and the sacred banquet There was a strict hierarchy Women were not initiated into Mithraism Little is known in detail about Mithraism In the 19th cent there was a revival of interest in this religion, partly because of supposed borrowings by Christianity, but with the wider knowledge of comparative religion it is seen that the features common to Mithraism and Christianity are common to many other religions as well

Mithredates VI see MITHRIDATES VI

Mithredath (mĭth'rēdăth) **1** Cyrus's treasurer Ezra 1 8 **2** Persian officer who hindered the rebuilding of the Temple Ezra 4 7

Mithridates VI (Mithridates Eupator) (mĭthrĭdā'tēz, ū'pūtôr), c 131 B C–63 B C, king of Pontus, called sometimes Mithridates the Great He extended his empire until he held, besides Pontus, Cappadocia, Paphlagonia, and the Black Sea coast past the Caucasus The increasing importance of Rome in Asia Minor brought Mithridates and the republic into open conflict The First Mithridatic War (88 B C–84 B C) was the result He conquered the whole of Asia Minor (except a city or two) in 88 B C and kept the Roman army under Sulla occupied in Greece until 85 B C, when the Roman Fimbria attacked him in Asia Minor and defeated him simultaneously with the destruction of his army in Greece In the resultant treaty Mithridates paid an indemnity and gave up all but Pontus and a few colonies The Second Mithridatic War (83 B C–81 B C.) was begun by L Murena, who desired glory. In a campaign about the upper course of the Halys, the Roman was worsted and was superseded by A Gabinius, who made peace with Mithridates The Third Mithridatic War (74 B C.–63 B.C.) began when Mithridates resolved to prevent Rome's annexing Bithynia, left to Rome by a royal will LUCULLUS was sent against Mithridates, who was finally forced to flee to Armenia In 68 B.C the Romans invaded Armenia, but retreated Mithridates returned to Pontus, and Lucullus was replaced by POMPEY (66 B C) Pompey soon drove Mithridates eastward, and the king fled to the Crimea, the last of his provinces He had a slave kill him His fall is the subject of Racine's *Mithridate*. Pharnaces II was his son, Tigranes his son-in-law The name is sometimes spelled Mithradates Appian and Plutarch (in the biographies of Lucullus and Pompey) are the chief sources

Mitilini, Greece see MYTILENE

Mitla (mēt'lä) [Nahuatl =abode of the dead], religious center of the ZAPOTEC, near Oaxaca, SW Mexico Probably built in the 13th cent, the buildings, unlike the pyramidal structures of most Middle American architecture, are low, horizontal masses enclosing the plazas Wall panels, decorated with hard stucco and intricate mosaics, show more than 20 different patterns of a single motif—the stepped spiral representing the sky-serpent, QUETZALCOATL Mitla, with its subterranean chambers and passages decorated by fine frescoes, probably represents the highest expression of Zapotec architectural talent Like MONTE ALBÁN, Mitla was conquered by the MIXTEC For bibliography, see ZAPOTEC See also Elsie Clews Parsons, *Mitla, Town of the Souls* (1936)

Mito (mē'tō), city (1947 pop 61,416), capital of Ibaraki prefecture, central Honshu, Japan, on the Naka river It was in the 17th cent the seat of an important branch of the Tokugawa family Coal, tobacco, and raw silk are among the products of Ibaraki prefecture

mitosis (mītō'sĭs, mī–), method of division of the nucleus of a cell in which the chromatin material undergoes a series of complex changes resulting in the separation of the chromosomes into two groups each of which forms a new daughter nucleus Mitosis is studied in microscopic sections of various cells, frequently in the young root tips of the onion The process varies somewhat in different kinds of cells but is fundamentally the same in most cells Four or five stages are generally distinguished, although one follows another without interruption In the resting stage preceding division the nucleus contains a network of long, thin, intertwined threads, the chromonemata During the first stage, the prophase, the chromonemata uncoil and the matrix (darkly staining nuclear material) condenses on the chromonemata The chromosomes thus formed thicken and become visible as double structures, longitudinally split into two portions known as chromatids, each composed of a chromonema and matrix The nucleolus or nucleoli of the cell usually disappear completely by the end of the prophase, and the dissolution of the nuclear membrane marks the end of this stage During the next stage, the prometaphase (sometimes included in the metaphase), a spindle-shaped structure called the spindle forms, it is firmer than the surrounding cytoplasm but is probably not composed of solid fibers as some earlier cytologists believed it to be The chromosomes at the metaphase stage have moved to the equator of this spindle During the anaphase the two chromatids comprising each chromosome move apart (the cause of this movement is not fully understood), one chromatid from each chromosome thus approaches the pole nearest it Each chromatid is now known as a daughter chromosome During the telophase a nuclear membrane forms around each group of chromosomes Each daughter nucleus thus formed contains the same number of chromosomes (bearing the genes which transmit hereditary characters) as the original cell The main difference between mitosis in the cells of higher animals and that in the cells of the onion and other higher plants is that in the animal cells the spindle arises from two centrosomes Division of the cell body (cytokinesis) usually accompanies mitosis in plant and animal cells, and the term *mitosis* is sometimes used to include this process also, in some tissues cytokinesis occurs after mitosis is completed and in others it begins before mitosis is completed The importance of mitosis lies in the fact that by this mechanism each cell formed receives a number of chromosomes equal to the number in the original parent cell, that number being characteristic of the species Mitotic division is the method of nuclear division of the somatic cells, as distinguished from the gametes or sex cells (eggs and sperms) In plants and animals which form new individuals by a union of two gametes a process of reduction division, or meiosis, takes place during the maturation of the gametes A series of complex changes occurs in meiosis It begins with a pairing off of homologous chromosomes (i e, corresponding chromosomes received from the two parent organisms) Each paired chromosome then splits, forming a tetrad A division takes place in which one chromosome of each pair

passes into each of two nuclei formed. Thus each of these nuclei contains only one half of the original number of chromosomes, and this is therefore called a reduction division In the second meiotic division each nucleus again divides but there is no further reduction in the number of chromosomes, each nucleus receives one of the chromatids formed by the original splitting of the chromosomes into tetrads The mature gametes therefore contain one half the number of chromosomes characteristic of the species, and the normal number is restored by the union of two gametes

Mitre, Bartolomé (bär"tōlōmā' mē'trā), 1821–1906, Argentine statesman, general, and author, president of the republic (1862–68) An opponent of Juan Manuel de Rosas, he was forced into exile and had a colorful career as a soldier and journalist in Uruguay, Bolivia, Peru, and Chile He returned to aid Urquiza in defeating Rosas (1852) A leader of the revolt of Buenos Aires against Urquiza's federal system, Mitre held important posts in the provincial government after Buenos Aires seceded from the confederation He was defeated by Urquiza in the civil war of 1859, and Buenos Aires reentered the confederation. As governor after 1860, he was again leader when fresh difficulties led to open war in 1861 At Pavón he won an inglorious victory for Buenos Aires, he then assumed national authority In Oct , 1862, Mitre was elected president In his administration national political unity was finally achieved, and a period of internal progress and reform began He served for a time as commander of the allied forces of Argentina, Brazil, and Uruguay in the war against Paraguay In 1868 he was succeeded as president by Sarmiento, and although still a force in politics, he devoted himself chiefly to literary work He founded the *Nación* (Buenos Aires), which became one of South America's leading newspapers Mitre was known in his youth as a poet and in later years as a historian His important historical works are *Historia de Belgrano* (1858–59, 4th ed , 1887) and *Historia de San Martín y de la emancipación sudamericana* (1877–88, Eng tr , *The Emancipation of South America*, 1893)

Mitropoulos, Dimitri (dēmē'trē mētrō'pōōlōs), 1896?–, Greek conductor He studied at the Athens Conservatory, and in 1926, after conducting in Germany, he became conductor of the orchestra there He made guest appearances in the United States in 1936 and became conductor of the Minneapolis Symphony Orchestra in 1937 In 1949 he resigned from that position to share with Leopold Stokowski the conductorship of the New York Philharmonic, Mitropoulos became permanent conductor in 1950 He is also known as a pianist and for orchestral transcriptions of organ works of Bach

Mitscher, Marc Andrew (mĭ'chur), 1887–1947, American admiral, b Hillsboro, Wis , grad Annapolis, 1910 A pioneer in naval aviation, he won his wings in 1917 and in 1919 flew from Newfoundland to the Azores In the Second World War he commanded the aircraft carrier *Hornet* (from which Gen James Doolittle's planes bombed Japan) and later Task Force 58, which inflicted heavy damage on the Japanese navy He was made commander of the 8th Fleet (Jan , 1946), then was named (Sept , 1946) commander in chief of the Atlantic Fleet

Mitscherlich, Eilhard (īl'hart mĭ'churlĭkh), 1794–1863, German chemist He was professor at Berlin from 1822 Noted for his discovery of the principle of isomorphism, he did important work also on the compounds of phosphorus and arsenic and on benzene derivatives and discovered permanganic and silenic acids and nitrobenzene.

Mitsubishi see Zaibatsu.

Mitsui see Zaibatsu

Mittag-Leffler, Magnus Gosta (mäng'nŭs yō'sta mĭ'täg-lĕf'lur), 1846–1927, Swedish mathematician He was (1877–81) professor at Helsingfors (Helsinki) and at the Univ of Stockholm from 1881 In 1882 he founded *Acta Mathematica*, which he edited until his death He made important contributions to analysis (Mittag-Leffler theorem) and to linear differential equations and greatly stimulated mathematical research

Mitylene, Greece see Mytilene

Mivart, St George Jackson (mĭ'vurt), 1827–1900, English anatomist and biologist. Converted to Roman Catholicism in 1844, he studied at St. Mary's College, Oscott, near Birmingham He contributed important anatomical studies of the mammalian groups of Insectivora and Carnivora Many of his works deal with the relation between science and religion, and these eventually led to his excommunication in 1900 by Cardinal Vaughan His views on evolution are contained in *On the Genesis of Species* (1871)

Mixtec (mĭs'tĕk), Indian people of Oaxaca and part of Guerrero, SW Mexico, one of the most important groups in Mexico Their origins are obscure, but before the arrival (c 700?) of the Toltec on the central plateau of Mexico the Mixtec and the Olmec seem to have been the carriers of the advanced Highland culture Probably c.900 they began spreading southward, overrunning the valley of Oaxaca and taking Monte Albán and Mitla, cities of the Zapotec The chronic rivalry and warfare between Zapotec and Mixtec halted momentarily at the end of the 15th cent in an alliance to defeat the Aztec, but with the successful conclusion of the war and a Zapotec alliance with the Aztec, the Mixtec again began fighting When the Zapotec king, after the arrival of Cortés, made an alliance with the Spanish, the Mixtec carried on a bloody resistance until they were subjugated by Pedro de Alvarado

Mixtón War (mēstōn'), 1541, revolt of the Indians against Spanish rule in Nueva Galicia, W Mexico, The conquest under Nuño de Guzmán had been particularly harsh, the encomienda system established obvious injustice, and the Indians were thoroughly discontented When Coronado's expedition to the north in 1540 drained away many of the Spanish, the Indians rose under Tenamaxtli They fortified Mixtón, Nochistlán, and other mountain towns and besieged Guadalajara Unable to cope with the uprising, Cristóbal de Oñate asked for aid from the viceroy, Antonio de Mendoza The Spanish, reinforced by a large body of Tlaxcaltec and Aztec, succeeded in recapturing the towns by hard fighting Pedro de Alvarado was killed in a rash assault on Nochistlán, and the reconquest was slow, but Spanish authority was reestablished in New Spain

Miyagi (mēyä'gē), prefecture, N Honshu, Japan: see Sendai, the capital

Miya-jima see Itsuku-shima

Miyazaki (mēyä'zä"kē), city (1940 pop 66,497, 1947 pop 92,144), capital of Miyazaki prefecture, SE Kyushu, Japan, on the Hyuga Sea It is the seat of the great Shinto shrine, Miyazaki-jingu (with an archaeological museum), dedicated to Jimmu, first emperor of Japan The products of the prefecture include rice, lumber, raw silk, and charcoal

Miyazu (mēyä'zōō), town, Kyoto prefecture, S Honshu, Japan, a port on Wakasa Bay Near by is Ama-no-hashidate or "heaven's bridge," one of the scenic sights of Japan—a pine-wooded promontory mirrored in the waters of the bay

Mizar (mī'zär), unidentified lo ality Ps 42 6

Mizpah or **Mizpeh** (mĭz'pu) [Heb ,=watch tower] **1** See Galeed **2** See Ramath-mizpeh **3** Meeting place of Israel, in Benjamin, often identified with the place called Neby Samwil Judges 20 1, 21 1,5,8, 1 Sam 7 5 **4** Town at the foot of Mt Hermon Joshua 11 3 **5** Town in the lowland of Judah Joshua 15 38 **6** Home of Jephthah Judges 10 17, 11 11,34 **7** David's refuge in Moab 1 Sam 22 3

Mizpar (mĭz'pär), variant of Mispereth .

Mizraim (mĭzrā'ĭm) [Heb ,=Egypt], son of Ham and eponym of Egypt Gen 10 6,13

Mizzah (mĭ'zu), duke of Edom Gen 36 13,17, 1 Chron 1 37

Mjosa, Nor *Mjøsa* (myû'sä), lake, area 141 sq mi , depth 1,472 ft , SE Norway , largest in the country It empties into the Vorma river, a tributary of the Glomma Three cities, Lillehammer, Gjovik, and Hamar, are on its shores The name also appears as Mjosen

Mlada Boleslav, Czech *Mladá Boleslav* (mulä'da bō'lĕslăf), Ger *Jungbunzlau* (yōōngbōōnts'lou), city (pop 19,573), N Bohemia, Czechoslovakia. Among its industrial products is machinery.

Mn, chemical symbol of the element manganese

Mnason (munā'sŭn), Cyprian, an early convert Acts 21 16

Mnemosyne (nĕmŏ'sĭnē,-zĭnē) [Gr ,=memory], Greek personification of memory She was a Titaness, daughter of Uranus and Gaea. The nine Muses were her daughters by Zeus

Mnesicles (nē'sĭklēz), Greek architect of the Age of Pericles The Propylaea (437–432 B C) on the Acropolis at Athens was designed by him, and the Erechtheum, also on the Acropolis, is sometimes ascribed to him.

Mo, chemical symbol of the element molybdenum

moa (mō'u) [Maori], extinct flightless bird of New Zealand closely related to the kiwi and also allied to the emu, the cassowary, and the ostrich. The various species ranged in size from that of a turkey to about 12 ft The bird had a short stout bill and it had no wings—even the shoulder girdle was lacking in most species It was probably herbivorous Remains preserved in caves and bogs include bones, pieces of skin, feathers, and egg shells Largely because of the hunting activities of the Maoris the bird became extinct, probably about 500 years ago

Moab (mō'ăb), nation inhabiting in ancient times the upland area E of the Dead Sea, now part of Jordan. The country cannot be protected from the east, hence its history is a chain of raids by the Bedouin The Moabites were close kin to the Hebrews, and the language of the Moabite stone is practically the same as biblical Hebrew The relations of Moab with Judah and Israel (especially under the house of Omri) are continually mentioned in the Bible The Moabite religion was much like that of Canaan Gen 19 37, Num 22–24; Judges 3, 2 Kings 3; Isa 15–16, Jer 48, Ezek. 25, Amos 2, Zeph. 2

Moab, town (pop. 1,084), co. seat of Grand co., E Utah, on the Colorado near the La Sal Mts. The Indians caused abandonment of the Mormon mission (1855) and delayed settlement until Moab grew as a cow town after 1876 Water from creeks is used for irrigation, and tourists going to Arches National Monument and other scenic spots pause here, but Moab is primarily a ranching town

Moabite stone, ancient slab of stone with a long inscription dating from 850 B C , erected by Mesha of Moab to commemorate a victory in his revolt against Israel A large part of it was discovered at Dibon (1868) by a German minister, F A Klein It was later broken, but most of the fragments were recovered They are in the Louvre The language of the Moabite differs little from biblical Hebrew

Moadiah (mō"udī'u), variant of Maadiah.

Moallakat see Muallaqat

moat, ditch, usually filled with water, surrounding a building or fortification for defensive purposes It was a development of the circumferential trench around the primitive earthwork fortress and, in the Middle Ages, constituted a valuable element in the defense of the castle and fortified town Besides serving to insulate the base of walls from attack by battering ram and ladders, it was also an effective hindrance to mining or sapping operations Even after firearms had come into general use, the moat was occasionally retained as an obstacle against infantry attack and, notably in the French châteaux, as a decorative feature of pleasure gardens

Moawiyah, see Muawiya.

mob, as a psychological term, a group of people in direct contact who strongly interact upon each other and whose conduct is dominated by suggestion and emotion rather than by reason The crowd may be said to be more stable than the mob and also to lack its intense common emotional element However, under conditions of stress or danger, a crowd may quickly turn into a mob Throughout history, fervent and often hysterical leaders have succeeded in driving crowds to acts of mobilike heroism as well as to extreme brutality In the mob situation the individual is in a state of heightened suggestibility not unlike that prevailing in hypnosis Differing from the isolated individual, the member of the mob, by reason of his loss of controlling inhibitions, is capable of behaving in a manner foreign to his everyday life The works of Gabriel Tarde and Gustave Le Bon, at the end of the 19th cent , stimulated interest in group behavior and marked the beginning of social psychology More recently, psychiatric and psychoanalytic techniques have been applied to the study of group dynamics

Moberg, Vilhelm (vĭl'hĕlm mō'bĕry'u), 1898–, Swedish novelist and dramatist His stories have dealt with the small farmers of his native province, Smaland, a region known for its poor soil and hard workers In this group are *Raskens* (1927), *Far from the Highway* (1929), and *The Clenched Hands* (1930) His first substantial recognition came with his partly autobiographical *Knut Toring* trilogy (1935–39, Eng tr , *The Earth Is Ours*, 1940) His battle against totalitarianism reached its climax with his historical novel *Ride This Night!* (1941, Eng tr , 1943). His dramas include *Our Unborn Son* (1945)

Moberly (mō'burlē), city (pop 12,920), N central Mo , NNW of Columbia, laid out 1866 It is a railroad shipping point, with shops, its manufactures include shoes, hosiery, tools, and dairy products Deposits of coal and fire clay are in the area

Mobile (mōbēl') [from Mauvila or Maubila Indians], city (pop 78,720), co seat of Mobile co , SW Ala , on Mobile Bay at the mouth of the Mobile river The only seaport in the state, it is an important shipping and shipbuilding center, exporting and processing farm produce, lumber, cotton, and naval stores, other products include paper, asbestos, and chemicals, The town was founded in 1710 by the sieur de Bienville The original French settlement at Biloxi had been moved (1702) to Fort Louis de la Mobile on the Mobile river, and a flood caused removal to the present site Mobile was capital of Louisiana from 1710 to 1719 It was held by the British from 1763 to 1780, when Bernardo de Gálves took it for Spain In 1813 it was seized for the Americans by Gen James Wilkinson and was incorporated as a town in 1814, as a city in 1819 In the Civil War, ships from Mobile evaded the Federal blockade until Farragut's victory at Mobile Bay (1864). Gen E R S Canby captured the city in April, 1865 In 1937 the second free port in the United States was established here Besides a number of fine ante-bellum houses, the city has a Roman Catholic cathedral and a U S marine hospital, Spring Hill College (Jesuit, for men, 1831) is near by In 1941 the Bankhead Tunnel under the river was completed The colorful annual Mardi Gras was begun in 1704, the Azalea Trail Festival dates from 1929. See Erwin Craighead, *Mobile* (1930)

Mobile, river in SW Alabama formed by the junction of the Alabama with the Tombigbee It flows south c.45 mi to enter Mobile Bay at Mobile

Mobile Bay, arm of the Gulf of Mexico, SW Ala , c.35 mi. long from the Gulf to the mouth of the

Mobile river and from 8 to 18 mi. wide The ship channel passes between Mobile Point (with old Fort Morgan) and Dauphin Island (with old Fort Gaines) Here Admiral David FARRAGUT won the celebrated battle of Mobile Bay on Aug. 5, 1864

Mobridge, city (pop 3,008), N S Dak., on the Missouri, founded 1906 when the railroad built a bridge across the river here, inc 1908 It is a trade and distributing center for a farm and dairy area.

Mocambique: see MOZAMBIQUE

moccasin, snake see WATER MOCCASIN

moccasin, skin shoe worn by North American Indians, excepting the sandal wearers of the Southwest area There were two general types of moccasins, the hard-soled, which was used in the Eastern Woodlands and the Southeast areas, and the soft-soled, used in the Plains culture area The hard-soled moccasin was made by sewing, with sinew thread, a rawhide sole to a leather upper piece, and the soft-soled was one piece of soft leather with a seam at the instep and the heel Boot or legging moccasins (sometimes reaching the hip) were worn from Alaska to Arizona and New Mexico, but they were generally part of the woman's costume The moccasins of certain tribes were distinctive, and sometimes even a moccasin track indicated the tribe of the wearer Moccasins were usually symbolically decorated with porcupine quills and, after the coming of the whites, with glass beads Special moccasins were used for ceremonies such as the Iroquois adoption service, which required that a recruit put on Iroquois moccasins to indicate that he would follow Iroquois ways See Arthur Parker, *The Indian How Book* (1927), Melvin Gilmore, *Prairie Smoke* (1929)

moccasin flower see LADY'S-SLIPPER

Mocha (mō'ku), town (pop c 2,000), Yemen, SW Arabia, a port on the Red Sea It was noted for the export of the coffee to which it gave its name

mocha stone see AGATE.

mockernut hickory see HICKORY

mockingbird, North American songbird of the same family as the catbird and the brown thrasher and allied to the thrushes and wrens The southern mockingbird of the SE United States (and the Bahamas) is sometimes found as far north as Quebec It has a long, drooping tail and is gray above, with white wing patches and whitish underparts Unsurpassed in singing ability by other North American birds, it has a melodious song of its own and is noted for its skill in mimicking bird songs and other sounds The similar western mockingbird is common in Texas and is found from the SW United States to S Mexico

mock orange or **syringa** (sĭrĭng'gu) [New Latin, from Gr ,=pipe], any species of the genus *Philadelphus*, mainly deciduous late-spring-blooming shrubs, popular for their ease of cultivation and for the white blossoms generally similar to orange blossoms The various species are native to Eurasia and North America The common or sweet mock orange (*Philadelphus coronarius*) is the most fragrant species and has varieties with double flowers Other species of *Philadelphus* and their hybrids vary in shrub form (as arching branches) and size and in flower form (as doubleness and narrow petals) and size, many lack the fragrance of the common mock orange A western American species (*Philadelphus lewisii*) is the state flower of Idaho and was formerly used by Indians for arrow wood Mock oranges should be pruned (see PRUNING) following the blooming period The shrub is one of the plants formerly known as pipe tree, the twigs being supposedly utilized for pipe stems Early botanists called the plant *Syringa*, and the name is still used popularly for the mock orange, *Syringa* is now the generic name of the LILAC Various other plants are sometimes called mock orange

Mocksville, town (pop 1,607), co seat of Davie co, W central N C, SW of Winston-Salem, settled before 1750 Textiles, hosiery, and furniture are made here

Moctezuma see MONTEZUMA

mode, in grammar see MOOD

mode, in logic see SYLLOGISM

mode, in music, any pattern of arrangement of the intervals of a scale Greek music employed a highly developed modal system, known today only through theoretical treatises because so little of the music itself is extant The modal system of plain song is based upon the final development of the Greek system and comprises eight modes, four called authentic and four plagal Each authentic mode has a corresponding plagal mode whose final note, or *finalis*, is the same, the difference lies in the range Mode one (authentic) and mode two (plagal) both have D as *finalis;* the range of the first is represented by the series of white keys of the piano from D to D, whereas the range of the second is from A to A The third and fourth modes have E as *finalis*, the fifth and sixth F, and the seventh and eighth G. The range of each mode is an octave, the lowest note in the authentic mode being the *finalis*, and the range of the plagal mode being always the interval of a fourth below that of the corresponding authentic mode The representation on the white keys of the piano is merely a convenient means of showing the arrangement of whole and half steps, for mode has nothing to do with pitch, any mode may be transposed to any convenient pitch. Greek names came to be used to identify these modes—Dorian and Hypodorian for the D modes, Phrygian and Hypophrygian for the E modes, Lydian and Hypolydian for the F modes, and Mixolydian and Hypomixolydian for the G modes The only modes used for plain song, these modes were the basis of musical composition throughout the Middle Ages As practice added certain others, however, they gained theorists' recognition Glareanus (1488–1563), a Swiss scholar, in his valuable treatise *Dodecachordon* (1547), described 12 modes, adding the two A modes, Aeolian and Hypoaeolian, and the two C modes, Ionian and Hypoionian The Ionian mode is the modern major mode and the Aeolian the minor The Locrian and Hypolocrian, the B modes, were rarely used The Greek names of the medieval modes do not correspond to the Greek modes of the same names because Greek musical theory was little understood in the Middle Ages The modal system was in use when music was primarily melodic, the limiting of the series to major and minor coincided, in general, with the decline of polyphony and the rise of harmony Use of the medieval modes by later composers is called modality in contrast to TONALITY The pentatonic scales of Chinese and Japanese music, which have not only whole and half steps but also some larger intervals, have modes which are various arrangements of these intervals An extension of the term *mode* allows its application to the *raga* of Hindu music and the *maqam* of Arabian music, although these are actually melodic formulas rather than scales The *echos* of Byzantine music corresponds to the mode of Western church music to the extent that there are four authentic and four plagal *echoi*, but these are actually melodic formulas also The *echoi* served the function of modes, however, and in Western church music certain melodic patterns were characteristically associated with each mode See Gustave Reese, *Music in the Middle Ages* (1940)

mode, in statistics, an infrequently used type of AVERAGE In a group of numbers the mode is the number occurring most frequently In the group 1, 4, 5, 5, 6, 6, 6, 9, 9, the mode is 6 since it occurs four times and the others only once or twice

model and modeling, in painting, the use of light and shade to simulate volume in the representation of solids In sculpture the terms denote a technique involving the use of a pliable material such as clay or wax As opposed to CARVING, modeling permits addition as well as subtraction of material and lends itself to freer handling and change of intention The technique is exemplified not only by works executed in soft materials but also by those works in cast metal and plaster which are made from original work in clay The noun *model* is used to describe such an original and also any small three-dimensional study for a larger or more elaborate project in sculpture or architecture It also denotes a person or object used as an aid to representation in painting See Albert Toft, *Modelling and Sculpture* (1911), F J Glass, *Modelling and Sculpture* (1929)

Model Parliament see PARLIAMENT

Modena (mō'dĭnu, Ital mō'dānā), city (pop 50,541), capital of Modena prov, Emilia-Romagna, N central Italy It is an agricultural center, wine, cheese, and sausage are produced A Roman town on the Aemilian Way, it became a free commune (12th cent) and permanently passed (1288) to the Este family of Ferrara The duchy of Modena, established in 1452, became the seat of the Este after the loss of Ferrara (1598) From the fall of Napoleon I until 1859 the house of Austria-Este ruled despotically The 12th-century Romanesque cathedral has a fine façade, and the Albergo delle Arti contains several art collections, among them the rich Este art gallery and library Six miles to the northeast is the Nonantola abbey, founded in 752, a center of learning in the Middle Ages

modern architecture. In the decade after the First World War the important buildings of most countries came to possess such similar characteristics as to signalize emergence of a new architectural style, one in which homogeneity existed despite many individual and national variations By 1950 this style, no longer new, had undergone three decades of experiment and growth It possesses no appellation more precise than modern, though the labels International style and functionalism have also been used Among the multiple examples, from small houses to vast public buildings, any selections for commendation would have to refer to aesthetic criteria which have been practically a hundred years in evolution For, since the mid-19th cent, a conscious attempt to assimilate modern technology, first to architectural practice and later to both practice and formulated theory, has been continuously in progress Even earlier, at the beginning of the 19th cent, an omen was Sir John Soane's work in England, which showed a turn from heavy masonry to a use of light, widely spaced supports Technical advance in materials made possible the construction in 1851 of Sir Joseph Paxton's celebrated Crystal Palace in London, in which a revolutionary lightness was implied in the nature of the iron and glass of which it was built In the ensuing years iron, steel, and glass determined the architectural form of many train sheds, department stores, and market halls, but the structural forms were cluttered by irrelevant ornament, and as late as 1889 the newly erected Eiffel Tower found the public not yet ready for a modern conception of structure as beautiful per se The portentous first use of a complete steel skeleton for tall buildings appeared in such examples as the first SKYSCRAPER built in Chicago in 1883 by W Le Baron Jenney Vastly more important, at the end of the 19th cent, was the work of the Americans Louis H. Sullivan and Frank Lloyd Wright Wright, in his works and in his writings, showed a liberating path from stagnant architectural thinking and continued to be an active innovator In the first two decades of the 20th cent most architecture employed modern methods and tried to satisfy modern needs, but confusedly retained a clothing of obsolete forms By 1920, however, there was an increasingly wide understanding that all building types—bridges, factories, auditoriums, airplane hangars, smokestacks—must come to terms with their purposes and materials if they were to achieve intrinsic significance or beauty Now, too, instead of viewing a building as heavy volumes supported and enclosed by ponderous materials, the leading exponents considered it as areas of space, resting upon slender piers and slabs and enclosed by light, thin curtain walls The very element of enclosure was given minimum emphasis in order that the basic structural skeleton might be all the more in evidence In giving form and coherence to this new rationale of an organic modern architecture, Le Corbusier's book, *Vers une architecture* (1923), performed an eminent role, while the writings of the Dutch J J P Oud and the German Walter Gropius (head of the BAUHAUS) were also important In these early consolidations of the modern style abstract painting and sculpture contributed new ideas for the architects, while they also conditioned the public to accept a form of beauty based solely upon spatial relationships and pure geometrical shapes, freed from past associations By the mid-20th cent modern architecture became an instrument for dealing with the multiple building needs of a complex society in which such problems as housing for population masses, structures for intricate industrial uses, and highly integrated community planning could scarcely be handled except in terms of completely contemporaneous architectural concepts adjusted to the vast resources of current technology and the mass production of modern materials Large areas of glass, sometimes encompassing the entire exterior of a building, would seem to be the one most pervasive external identification of modern works, and glass in many forms seems to be the material more exploited than any other However, reinforced concrete is also intimately involved with the style's development, as are the advances in elevator transportation, air conditioning, and electric illumination The use of an unvarying module or basic dimensional unit throughout a design makes palpable the structural regularity and machine-tool precision of those buildings where it is employed In New York the monumental structures for the United Nations, produced by a collaboration among prominent architects representing their various countries, display what are presumably the style's most representative characteristics Of this group Le Corbusier of France, one of the style's earliest proponents, and Oscar Niemeyer of Brazil are two who have international recognition Other noted pioneers of the 1920s who later practiced in the United States are Mies van der Rohlo and Walter Gropius Important contributions to the progress of modern design were made by Raymond Hood and Albert Kahn in their completely American skyscraper and industrial architecture and by Marcel Breuer, Richard J Neutra, William E Lescaze, and the firm of Harrison, Foulhoux, and Abramovitz See W C Behrendt, *Modern Building* (1937), Walter Gropius, *The New Architecture and the Bauhaus* (1937), M C Rathbun and B H Hays, Jr, *Layman's Guide to Modern Art* (1949)

modern art see ABSTRACT ART, CUBISM, DADA; FAUVISM, FUTURISM, IMPRESSIONISM, POSTIMPRESSIONISM

modernism, in religion, movement intended to reconcile the developments of 19th-century science and philosophy with historic Christianity It began with the evident disparity between Darwin's evolution theory and the old literal interpretation of Genesis, but it was heavily influenced also by philosophical attempts (as of Herbert Spencer) to read Darwinian principles into the history of civilization The general trait of modernism was to reject all belief in the supernatural, hence God, no longer the Creator, was limited to a role of a spirit living in the world (an idea called immanence), the Gospels were no longer accepted as history, especially in the account of the Resurrection; prayer was conceived as important only in the psychology of the individual, and the Church was sometimes re-

jected as anything but a human society These ideas were accepted in all or in part by many of the Protestant denominations, but there was also reaction against them, e g , in FUNDAMENTALISM, in the 1920s, and in the Oxford Group of Frank Buchman Among Anglicans the High Church members and Anglo-Catholics (see OXFORD MOVEMENT) opposed modernism In the Roman Catholic Church there was a brilliant ephemeral modernistic movement, led by A F Loisy and others, their theories rejected the objective reality of sacraments, viewed the historic dogmas as transient statements of more general concepts, and attacked the spiritual authority of the Church With the decree *Lamentabili* (1907) of the Holy Office and Pius X's encyclical, *Pascendi* (1907) the tendencies were declared heretical These and later rulings have ended Roman Catholic modernism In reformed JUDAISM, especially among Americans, there is a modernist movement resembling Protestant modernism See Shailer Mathews, *The Faith of Modernism* (1924), M D Petie, *Von Hugel and Tyrrell* (1938).

modernismo (mōdhĕrnĕ'smō), movement in Spanish literature that had its beginning in Latin America It was paramount in the last decade of the 19th cent and the first decade of the 20th cent *Modernismo* is now usually said to have first appeared in the poetry of the Cuban leader, José Martí Julian del Casal, Salvador Díaz Miron, José Asunción Silva, and Manuel Gutiérrez Nájera were also writing *fin de siècle* verse of the modernist stripe before *modernismo* became an acknowledged world event with the appearance of *Azul* [blue], a volume of poetry by Rubén Darío in 1888 Darío was the great genius of the movement His exotic, highly colored, and finely wrought verse made a sensation, and soon a host of little magazines and little literary groups were forwarding his ideas of elegant form, carefully chosen images, and subtle word music. *Modernismo* derived from French symbolism and the Parnassian school, but too much stress can be laid on the French influence, for *modernismo* was spontaneous, and it borrowed from many sources, including Walt Whitman The subject matter of modernist poetry was generally remote and escapist, with symbols of princesses and swans, peacocks and lilies, and the landscape of remote lands such as the Far North and Japan It represented, like contemporary movements in other literatures, total rejection of the materialist world of the day The modernists were supremely self-conscious in their art, and there was more than a hint of artificiality in the movement Nevertheless, it had a powerful effect in remolding Spanish literary ideas and language It was the first important movement starting in Spanish America to affect peninsular Spain deeply Among the leading figures of the movement were Amado Nervo, Guillermo Valencia, Leopoldo Lugones, and Julio Herrea y Reissig Probably its most valued prose writer was José Enrique Rodó. The force of the movement began to wane after 1914 as some writers turned away from the contrived forms and extreme figures to a consideration of the everyday and the social problems of a changing world, and others took up more extreme aesthetic movements The patriotic element of concern with Latin American problems had never been absent in the Spanish American writers, including Darío himself That strain now grew stronger By the end of the First World War the new generation of writers had, in the words of Enrique González Martínez, "wrung the neck of the swan," and *modernismo* was dead

Modestinus, Herennius (hurĕ'nēŭs mōdustī'nus), fl c.250 B.C., Roman jurist, student of Ulpian Under the Roman Empire he was one of the five jurists, including PAPINIAN, whose views might be decisive in resolving legal controversies. Extensive sections of his work are preserved in the Corpus Juris Civilis.

Modesto (mōdĕ'stō), city (pop 16,379), co , seat of Stanislaus co., central Calif , SE of Stockton and on the Tuolumne river, in the San Joaquin Valley, founded 1870, inc., 1884 It is the processing and trade center of a diversified farm and fruit area A junior college (coeducational) is here

Modica (mō'dēkä), city (pop 27,928), SE Sicily, Italy It is the center of a stock-raising and agricultural region The feudal county of Modica enjoyed from the 14th to the 18th cent a high degree of independence. Near by are the Cave d'Ispica (a series of limestone grottoes containing cave dwellings) and prehistoric and early Christian tombs

Modigliani, Amedeo (ämädā'ō mōdēlya'nē), 1884–1920, Italian painter, b.Livorno. He studied at the Academy of Fine Arts in Florence, but early went to Paris, where his first work as a sculptor was greatly influenced by cubism and Negro art. Soon, however, he developed a unique style in painting characterized by distortion for emotional effect together with a purity of form reminiscent of the Florentine Renaissance Although his talent was recognized by leading young artists, he remained unknown to the public during his short life, which was one of poverty, neglect, drink, and disease Hardly had he died of tuberculosis when his magnificent portraits and figure studies became highly prized collectors' items His work may be seen in collections of 20th-century painting everywhere. Modigliani is well represented in the Art Institute of Chicago and in the Museum of Modern Art, New York See Charles Douglas, *Artist Quarter* (1941).

Modjeska, Helena (mōyĕ'skä), 1844–1909, Polish actress She had (1865–68) great success in *Adrienne Lecouvreur* and in Shakspearian roles in Poland She married Gustav Modrzejewski in 1868 and after his death married Count Bosenta Chlapowski, with whom she came to the United States in 1876 She made her American debut, with immediate success (1877), in an English adaptation of *Adrienne Lecouvreur* at the California Theater, San Francisco, and increased her reputation in such Shakspearian roles as Lady Macbeth, Juliet, and Ophelia and as Nora in Ibsen's *Doll's House*, which was given its first performance in America at Louisville, Ky , in 1883 Modjeska had charm, intelligence, and dignity, she was considered one of the greatest tragic actresses of her time Her admirers were so many that the Metropolitan Opera House, New York, was used for her farewell testimonial (1905) See her *Memories and Impressions* (1910)

Modjeski, Ralph (mujĕ'skē), 1861–1940, American engineer, b Cracow, Poland, son of Mme Helena Modjeska He came to the United States in 1876 and, after studying engineering in Paris, established himself as a leading designer and builder of bridges in America He built many railroad bridges, including those over the Columbia and Willamette rivers, and was either chief engineer or consulting engineer for bridges at St Louis, Mo , Portland, Oregon, Poughkeepsie, N Y (Mid-Hudson), New Orleans (the Huey P Long), Davenport, Iowa (Iowa-Illinois Memorial), Philadelphia (over the Delaware), and many others

Mödling (mūd'lĭng), town (pop 17,015), Lower Austria, at the entrance of the picturesque Brühl valley and just S of Vienna

Modoc Indians (mō'dŏk), tribe of North American Indians who in the early 19th cent lived in SW Oregon and N California, particularly about Modoc Lake and Tule Lake They constitute the southern branch of the Lutuamian linguistic stock, their kinsmen, the Klamath, belong to the northern branch Modoc culture was practically identical with the culture of the KLAMATH INDIANS, but the Modoc did not rely too heavily on the wokas or water lily seeds There was considerable trouble between the Modoc and the early American settlers, with atrocities being committed on both sides The Modoc were finally constrained to go (1864) on the Klamath reservation, but most of the tribe was dissatisfied In 1870 Chief Kintpuash, or Captain Jack, led the more turbulent members of the tribe back to California and refused to return to the reservation The attempt to bring back the band brought on the Modoc War (1872–73) After some struggles Captain Jack and his men retreated to the lava beds on the California border They stayed there for four months, successfully resisting efforts to dislodge them An attempt by Gen Edward R S Canby to mediate for peace came to nothing when he and another peace commissioner were treacherously killed by the Modoc After this, steady pressure bore down on the Indians, and many of them deserted to the whites In June (1873) the war ended Captain Jack and five other leaders were hanged, and the Modoc tribe was divided, some were sent to Oklahoma (where a few remain), and some to the Klamath reservation in Oregon The Modoc in Oregon number some 300 See S A Barrett, *Material Culture of the Klamath Lake and Modoc Indians* (1910), Doris Payne, *Captain Jack, Modoc Renegade* (1938).

Modred, Sir, King Arthur's treacherous nephew see ARTHURIAN LEGEND

modulation, in music, shift in the key center of a composition For its accomplishment use is made of the fact that each chord figures in the harmonic relationships of several keys In modulating from one key to another, a chord which is common to both keys is used as a pivot chord For example, in modulating from C major to D major, the G major chord, built on the fifth tone of the C scale and therefore the dominant of C, is also the chord built on the fourth tone of the D scale, serving D as the subdominant The G chord, approached naturally in the key of C, may be allowed suddenly to assume its role in relation to D, is followed by a cadence which affirms the key of D, and modulation has taken place. If there is no common chord between the two keys, a smooth modulation is more difficult, a passage may move through several keys before the desired modulation has been effected Modulation is employed as a means of achieving variety in practically every composition of any length which has a tonality.

Moe, Jorgen Engebretsen, Nor. *Jørgen Engebretsen Moe* (yûr'gŭn ĕng'ubrĕtsun mō'ŭ), 1813–82, Norwegian folklorist and poet, bishop of Kristiansand He began in early youth to collect and revise sagas and folk songs, publishing (1840) a collection of songs and ballads in Norwegian dialects. In collaboration with his friend P C. Asbjornsen he wrote *Norwegian Folk Stories* (1841–44; Eng. tr , 1858). *Fairy Tales from the Far North* (Eng tr , 1881). and *East o' the Sun and West o' the Moon* (Eng. tr , 1917) are selections from *Norwegian Folk Stories*

Moen, Dan. *Møen* or *Møn* (all: mû'ŭn), island (84 sq mi , pop 14,156), Denmark, in the Baltic Sea, S of Zealand. It produces mainly sugar beets Stege is the chief town

Moerae see FATES.

Moeris (mĕr'ĭs), ancient name of Lake Karun, area 90 sq mi , Egypt, in the Fayum, c 50 mi SW of Cairo In extent and depth the lake is much reduced from that described by ancient travelers, such as Herodotus. Crocodilopolis (later Arsinoë) was the chief town on the lake and a residence of the Ptolemies Ancient irrigation works were excavated in the late 1920s

Moesia (mē'shĭū), ancient region, SE Europe, south of the lower Danube It was not penetrated by Grecian influences and was organized as a Roman province only in A D 44, when it included roughly what is now Serbia (Upper Moesia) and Bulgaria (Lower Moesia) Under the empire Roman colonies and agriculture flourished in the Danube valley.

Mofaddaliyat (mōfu"dalēät') or **Mufaddaliyat** (mōō–), great Arabic anthology made by the celebrated philologist Al Mufaddal of Kufa (d c 775) It contains 126 poems, some complete odes, others fragmentary They are all of the Golden Age of Arabic poetry (500–650) and are the best collection of poems of that period by different authors There are 67 authors, two of them Christian The oldest poems in the collection date from c 500

Moffat Tunnel (mŏf'ŭt), railroad tube (alt c 9,000 ft) piercing James Peak, N central Colo , in the Continental Divide WNW of Denver. It was built in 1923–27 and is 6 4 mi long

Mogadishu (mōgudī'shō), Ital *Mogadiscio* (mōgadē'shō), city (pop 50,000), capital of Italian Somaliland, a port on the Indian Ocean A 13th-century mosque is the oldest building Mogadishu was sold (1905) to Italy by the sultan of Zanzibar The city processes oilseeds and has sawmilling

Mogador (mōgudôr'), town (pop 28,620), French Morocco, a port on the Atlantic Ocean It serves the Marrakesh region Sultan Mohammed XVI founded (c 1760) the town on the site of a Portuguese fort and opened the port to foreign shipping, but it did not attract the trade he had expected Mogador has a large Jewish colony

Mogadore (mōg'udôr), village (pop 1,616), NE Ohio, SE of Akron

Mogilev (mŭgēlyôf'), city (pop 99,440), capital of Mogilev oblast, E Belorussia, on the Dnieper It is an industrial center and, at the junction of four rail lines and five highways, also an important communications point The city grew around a castle dating from 1267 It was part of the grand duchy of Lithuania (united with Poland in 1569) and passed to Russia in the first partition of Poland (1772) Before the Second World War, when it was held (1941–44) by the Germans, 30 percent of the population was Jewish

Mogilev-Podolski (–pŭdôl'skē), city (pop 22,993), W Ukraine, in Podolia, on the Dniester river A medieval trade center on the border of Podolia and Moldavia, it attracted many Greek and Armenian merchants It passed to Russia in the second partition of Poland (1793) The city was held (1941–43) by the Germans in the Second World War Of the pre-war population 40 percent was Jewish

Mogollon Plateau (mōgōyŏn'), tableland, generally from 7,000 to 8,000 ft high, E central Ariz , S of Winslow and Holbrook Its southern edge is a rugged escarpment usually called the Mogollon Rim, sometimes also called the Mogollon Mts or the Mogollones It is not directly connected with the Mogollon Mts in W New Mexico.

Mogul (mō'gŭl, mōgŭl') or **Mughal** (mōōgŭl'), Moslem empire of India, 1526–1857 The name Mogul, a variant of MONGOL, stems from the claim of descent from Jenghiz Khan made by BABER, who founded the Mogul empire with the capture of Delhi Not until near the end of the reign of AKBAR was the empire, then occupying the vast territory from Afghanistan S to the Godavari river, free from divisive wars. SHAH JEHAN and AURANGZEB brought the Mogul territory to its greatest extent, but even at its zenith the empire suffered the blows of the Sikhs and the Marathas who later had brought it to near ruin by the late 18th cent When Great Britain occupied Delhi in 1803 the empire actually came to an end, but the British maintained puppet emperors until 1857 Many features of the Mogul administrative system were adopted by Great Britain in ruling India, but the lasting achievements of the Moguls were in art, particularly in painting and architecture (see MOSLEM ART AND ARCHITECTURE). Their capitals at Delhi, Fatehpur Sikri, and Agra (with the surpassing beauty of the Taj Mahal) contain some of the greatest edifices of India. See S. M. Edwards and H. L O Garrett, *Mughal Rule in India* (1930)

Mohacs, Hung *Mohács* (mō'hăch), city (pop 18,355), S Hungary, an important inland port on the Danube. Mohacs is best known for the disastrous defeat (Aug. 29, 1526) there of LOUIS II of Hungary by SULEIMAN I of Turkey. Hungary was

fil prepared for the attack. its nobles had curtailed the royal military power, magnates and gentry were in constant strife, and the oppressed peasantry was not entrusted with arms Louis's army was poorly equipped, badly led, and outnumbered at least three to one John Zapolya (see JOHN I), with a large Transylvanian contingent, never joined him, perhaps through treachery The king, the flower of the Hungarian nobility, and almost every soldier of the army were killed in the battle or massacred after being taken prisoners Thus, the worst disaster of Hungarian history, opened the 150 years of Ottoman domination. There are monuments at Mohacs to the slain, regarded ever since as martyrs to Christianity and Hungarian independence Mohacs was also the scene (1687) of a Turkish defeat by CHARLES V of Lorraine

mohair, the hair of the Angora goat or a large group of fabrics made from it, either wholly or in combination with wool, silk, or cotton. The Angora goat, native of Asia Minor for 2,000 years, is bred in other lands, e g., the SW United States, and South Africa Mohair is cool, firm, and resistant to dust and moisture The fiber is especially valuable in the manufacture of upholstery plushes, steamer and automobile rugs, automobile tops, heavy cloakings, "fur" cloths such as astrakhan, and false hair. Mohair is often sold as alpaca

Mohammed (Mahomet, Muhammad) (mōhă'mĭd) [Arabic, =praised], 570?–632, the Prophet of ISLAM, one of the great figures of history, b Mecca, son of Abdallah ibn Abd-al-Muttalib and his wife Amina, both of the tribe of Koreish, which ruled Mecca Abdallah died soon after Mohammed's birth, and the boy was brought up by his uncle Abu Talib When he was 24 Mohammed married Khadija, a wealthy widow, much his senior, whom he seems to have loved dearly He had no other wife in Khadija's lifetime Mohammed's only surviving child who had issue was Khadija's daughter Fatima Mohammed's position in the community was that of a wealthy merchant When he was 40, he felt himself selected by God to be the Arabian prophet of true religion, for the Arabs had had no prophet, as other nations had In the country N of Mecca he had a vision, in which he was commanded to preach Thereafter throughout his life he continued to have revelations, many of which have been collected and recorded in the KORAN His fundamental teachings were there is one God, man must submit in all to him, in this world nations have been amply punished for rejecting God's prophets, and heaven and hell are waiting for the present generation, the world will come to an end with a great judgment He included as religious duties frequent prayer and almsgiving and forbade usury In his first years Mohammed made few converts but many enemies His first converts were Khadija, ALI (who became husband of Fatima), and ABU BAKR From c 620 Mohammed's affairs at Mecca were in a crisis, the city was actively hostile, since much of its revenues depended on its shrine, the KAABA, and an attack on the existing Arabian religion attacked the prosperity of Mecca While he was gaining only enemies at home, Mohammed's teaching was faring little better abroad, only at Yathrib did it make any headway, and on Yathrib depended the future of Islam In the summer of 622 a plan was made at Mecca to murder Mohammed, but it was found out, and he escaped in the night from the city and made his way to Yathrib From this event, the flight or HEGIRA of the Prophet (622), Islam counts its dates The rest of his life Mohammed spent at Yathrib, now called MEDINA, the City of the Prophet, the city par excellence At Medina he built his model theocratic state, and from Medina he ruled his rapidly growing empire Mohammed's lawgiving at Medina is at least theoretically the law of Islam, and in its evolution of the next 10 years, the history of the community at Medina is seen Medina lies on the caravan route N of Mecca, and the Koreshites of Mecca could not endure the thought of their outlawed relative taking vengeance on his native city by plundering their caravans There was a pitched battle between Mohammed's men and the Meccans at a place called Badr, the victory of an inferior force from the poorer city over the men of Mecca gave Islam great prestige in SW Arabia More than a year later the battle of Ohod was fought, without such fortunate results. In the 7th year of the hegira Mohammed sent a pilgrimage to Mecca, and it returned unharmed By this time pagan Arabia had been converted, and the Prophet's missionaries or legates were active in the Eastern Empire, in Persia, and in Ethiopia. Mohammed's relations with the Jews and Christians of Arabia became gradually worse Since he believed firmly in his position as last of the prophets and as successor of Jesus Christ, Mohammed seems to have expected at first that the Jews and Christians would welcome him and accept his revelations, but he was soon disappointed. Medina had a large Jewish population, which controlled most of the wealth of the city, and they steadfastly refused to give their new ruler any kind of religious allegiance Mohammed, after a long quarrel with them, appropriated much of their property, and his first actual conquest was the oasis of Khaibar, occupied by the Jews, in 628. At the same time his teaching became strictly condemnatory of the Jews He never fell so far afoul of the Christians as of the Jews; but the failure of several missions among them made him distrustful of Christians as well as Jews His renown increased, and in 629 he made a pilgrimage to Mecca without interference There he won valuable converts, including Amr and Khalid (who had fought him at Ohod) In 630 he marched against Mecca, which fell without a fight Arabia was won Mohammed's private life has received a vast, and perhaps disproportionate, amount of attention His frequent marriages and the troubles of the harem are the subject of this His last favorite wife, AYESHA, was able and devoted, he died in her arms June 8, 632 Islam has enshrouded Mohammed's life with a mass of legends and traditions (contained in the *Hadith*) He is considered to have been sinless by most Moslems Most unprejudiced scholars consider Mohammed a man of great conviction and religious feeling, of a deeply mystical nature There have been attempts to explain Mohammed from a psychoanalytic point of view, considering his trancelike fits not epileptic, as has often been suggested, but rather ecstatic His name appears in various forms, two of the most important being Muhammad and the Turkish Mahomet The biographies and accounts of Mohammed are many Among recent ones are those by Tor Andrae (Eng tr, 1936), Essad Bey (Eng tr, 1936), and R V. C Bodley (1946)

Mohammed I, 1389?–1421, Ottoman sultan (1413–21), son of **Bajazet I** By defeating his brothers he reunited most of his father's empire, which had fallen as a result of Tamerlane's victory over Bajazet at Ankara (1402). Mohammed put down several rebellions His son, Murad II, succeeded

Mohammed II (Mohammed the Conqueror), 1429–81, Ottoman sultan (1451–81), son and successor of Murad II He completed the conquest of the Byzantine Empire by storming (1453) Constantinople after a 50-day siege, for which he constructed the largest cannons the world had yet known Emperor CONSTANTINE XI fell in the heroic defense Mohammed moved his capital from Adrianople to Constantinople and restored the greatness of that city by settling there the populations of other conquered towns To Greek and Armenian citizens of Constantinople he granted the privileges which they were to enjoy throughout Ottoman rule The Church of Hagia Sophia became a mosque Mohammed did not rest but set out to conquer the Balkan Peninsula, reducing Greece, Bosnia, and several of the Venetian possessions in the Aegean islands The khan of Crimea became his ally and vassal However, his further advance was checked at Belgrade by John HUNYADI, in Albania by SCANDERBEG, and in Rhodes by the Knights Hospitalers under AUBUSSON In Asia, Mohammed reduced the empire of Trebizond and Karamania In 1480 he captured Otranto, in Italy, but the expedition had no results Mohammed was a patron of learning and an accomplished linguist as well as a great commander He may be regarded as the true founder of the Ottoman Empire His son, BAJAZET II, succeeded him.

Mohammed III, 1567–1603, Ottoman sultan (1595–1603), son and successor of Murad III He fought inconclusively in Hungary and in his last year lost Tabriz to Shah Abbas I of Persia His son Ahmed I succeeded him

Mohammed IV, 1641–92, Ottoman sultan (1648–87) He was proclaimed emperor by the Janizaries after the deposition and murder of his father, Sultan Ibrahim. Disorder and corruption continued until in 1656 the KUPRILI family obtained the vizierate and gave the empire a new lease on life However, Turkey suffered severe setbacks Algiers freed itself (1659) from Ottoman suzerainty In 1683 the Turks, in alliance with THOKOLY, besieged Vienna but were repulsed by King John III of Poland The war was carried into Hungary, and after the Turkish defeat (1687) at Mohacs by Charles V of Lorraine, Mohammed was deposed His brother, Suleiman II, succeeded him.

Mohammed V, 1844–1918, Ottoman sultan (1909–18) He succeeded to the throne when the Young Turk revolution of 1909 deposed his brother, Abdul-Hamid II. He exercised no actual power under the new constitution, and the administration was dominated by ENVER PASHA During his reign Turkey lost most of its remaining European possessions in the BALKAN WARS (1912–13) and lost Tripoli to Italy in 1911–12. Germany gained increasing influence over Turkish affairs, resuming the construction of the BAGHDAD RAILWAY in 1911 Mohammed sided with the Central Powers in the First World War. He died shortly before the Turkish surrender and was succeeded by his brother, Mohammed VI

Mohammed VI, 1861–1926, last Ottoman sultan (1918–22), brother and successor of Mohammed V Soon after his accession he capitulated to the Allies, who occupied Constantinople and sought to rule through him what remained of Turkey He consented to the extremely harsh peace terms of the Allies (see SÈVRES, TREATY OF). In the meantime Kemal ATATURK gained control over Anatolia; after his victory over the Greeks he turned on Mohammed, who was deposed in 1922 The sultanate was abolished and the republic of Turkey established Mohammed fled and died in exile After his flight he was deposed as caliph, in which capacity he was succeeded by his cousin, Abdu-l-Mejid In 1924 the CALIPHATE was abolished and all members of the Ottoman house were exiled Mohammed VI died at San Remo, Italy

Mohammed Ahmed: see MAHDI

Mohammed Ali (ă'lē), 1872–1925, shah of Iran (1906–9), son of MUZAFFAR-ED-DIN Shah Mohammed Ali, who was an opponent of constitutional government, began to rule at a critical period just after the constitution of 1906 had been granted His struggle with the nationalists led to the bombing of the newly established parliament He called in the aid of the Russians, who organized a Cossack brigade for him His attempt to overthrow the constitutional government brought on two short civil wars (1908–9) Mohammed Ali was finally forced to abdicate in favor of his son AHMED. Later he attempted with Russian help to regain his throne, but he failed and afterward lived in complete retirement

Mohammed Ali, 1769–1849, pasha (governor) of Egypt after 1805 He was a common soldier of Albanian birth who rose steadily by his military skill and political acumen He first came to notice in 1799, when he led a large force against Napoleon As pasha he was virtually independent of his nominal overlord, the Ottoman sultan He organized a modern army and navy, ended administrative abuses, and established an educational system and public works, especially irrigation projects In 1811 he exterminated the leaders of the MAMELUKES, who had almost uninterruptedly ruled Egypt since 1250 With his son and successor, IBRAHIM PASHA, he conducted successful campaigns in Arabia against the Wahabis and in Nubia He scored great successes in Greece until the British, French, and Russians combined to defeat his fleet at Navarino in 1827 When the Ottoman sultan, Mahmud II, refused him the governorship of Syria, Mohammed invaded Syria (1833) with great success In 1839 he launched a campaign against his overlord in Asia Minor but was forced to desist when he lost the support of France and was threatened by united European opposition In a compromise arrangement the Ottoman sultan made the governorship hereditary in Mohammed's line The present royal family of Egypt is descended from him See H H Dodwell, *The Founder of Modern Egypt* (1931)

Mohammedan and **Mohammedanism**: see MOSLEM and ISLAM

Mohammed ibn Tumart (ĭ'bĭn tōōmart'), c 1080–1128?, Berber Moslem religious leader, founder of the ALMOHADES He went to the East in his youth and returned convinced he was intended to reform Islam He was a rigorist and purist in doctrine and morality He fought violently the anthropomorphism then current, and he was bitterly opposed to the use of alcohol He became increasingly fanatical, until he finally preached a holy war against Moslems who disagreed with him He was a man of compelling personality and of great sagacity

Mohammed Reza Shah Pahlevi (rĕzä' shä' pä'luvē), 1919–, shah of Iran He ascended the throne in Aug, 1941, upon the deposition of his father, Reza Shah Pahlevi He was educated in Switzerland and attended the military academy in Teheran, where he learned several languages and became an accomplished athlete and sportsman In 1939 he married Princess Fawzieh, eldest sister of King Farouk of Egypt, who bore him one daughter They were divorced in 1949 In Feb, 1949, the king narrowly escaped assassination at the hands of a leftist Tudeh party member In Nov, 1949, he made a state visit to the United States His reign coincides with a critical period in Iranian history, when the country is beset with financial and political instability To alleviate the economic situation, he has launched a liberal Seven-Year Plan for the industrial, agricultural, and social development of the country

Mohammerah, Iran see KHORRAMSHAHR

Mohave, river and desert see MOJAVE

Mohave Indians (mōhä'vē), tribe of North American Indians of Yuman linguistic stock In the mid-18th cent. they lived on both banks of the Colorado river, in Arizona and California They then numbered some 3,000 The Mohave were semisedentary farmers who depended upon the inundation of the river for moisture They lived in low, brush dwellings. Most of the tribe is settled on the Colorado river reservation, which was established in 1865 The Mohave now number some 550

Mohawk (mō'hôk), village (pop. 2,882), E central N Y, on the Mohawk river and SE of Utica, settled 1826, inc 1844.

Mohawk, largest tributary of the Hudson, c.140 mi long, rising in central New York and flowing S and SE past Rome, Utica, Amsterdam, Schenectady, and other cities to the Hudson at Cohoes. From Rome to its mouth the river is canalized as a link in the Barge Canal. The beautiful and fertile Mo-

hawk valley, named for its original Indian inhabitants, was the scene of many battles and fierce raids in the French and Indian War and the Revolution The Mohawk was an important travel route to the West The ERIE CANAL, which opened in 1825, followed the river See T Wood Clarke, *The Bloody Mohawk* (1940), Codman Hislop, *The Mohawk* (1948)

Mohawk Indians: see IROQUOIS CONFEDERACY

Mohawk Trail. 1 Old road in New York state following the Mohawk river It was an easy route through the mountain chain by which thousands of settlers emigrated from the Eastern seaboard to the Great Lakes region and the upper Mississippi valley It traverses the territory occupied by the Iroquois Confederacy, and in the colonization period it was a series of turnpikes beginning at Schenectady and extending to Rome, with lesser trails stretching westward The Erie Canal rendered the road less important, and with the construction of railroads its value was further diminished 2 Motor highway extending across N Massachusetts from Greenfield, Mass, to North Adams, Mass Running through the historic towns of Lexington and Concord and traversing the scenic Berkshire Hills, this route is popular with tourists

Mohegan, Lake (mōhē'gun), SE N Y, in Westchester Co, near Peekskill Mohegan Lake village here is the trade center of a resort area

Mohegan Indians, tribe of North American Indians, also called Mohican, of the Algonquian linguistic stock They were the eastern branch of the Mahican Indians In the early 17th cent the Mohegan occupied most of SW Connecticut, their chief village being on the site of the present village of Mohegan on the Thames river When the white settlers arrived in this region, the Mohegan and the Pequot were one tribe, living under the rule of Sassacus, who afterward became known as the Pequot chief Later UNCAS, a subordinate chief, rebelled against Sassacus and assumed the leadership of a small band of Indians on the Thames river near Norwich This band became known to history as the Mohegan Indians After the fall of Sassacus the greater part of the Pequot joined the Mohegan, who in 1643 numbered some 2,300 Uncas thereby obtained control of the territory of the two tribes The Mohegan, supported by the English, became one of the most powerful tribes in S New England As white settlements were extended, the Mohegan sold most of their land and accepted a reservation on the Thames They declined quickly, numbering but 84 in 1804 See A L Peale, *Uncas and the Mohegan-Pequot* (1939).

Mohenjo-Daro (mōhĕn'jō-dä'rō), archaeological site of NW Sind, India, on the Indus, which has given its name to the **Mohenjo-Daro civilization** or **Indus civilization.** This civilization has been revealed chiefly by finds at Mohenjo-Daro and Harappa, 400 mi to the northeast, in central Punjab near the Ravi The civilization was an urban culture closely resembling that of Sumer and contemporary with it (3d millennium B C) The Indus culture is distinguished from the Mesopotamian in the use of cotton textiles, in the excellent development of intaglio and faience work, in the rarity of temples, and in the use above the ground of burnt modern-type brick rather than square sun-dried brick The great bathhouse and the development of private homes are remarkable at Mohenjo-Daro The quasi-pictographic writing, as yet undeciphered, is found chiefly in short seal inscriptions, it is apparently related to the writing of Sumer and of early Elam, to the Brahmi alphabet of India and to the South Arabian alphabet, and probably to the script of Easter Island The Indus Civilization covered a vast area, extending from Harappa to 100 mi SW of Mohenjo-Daro Little research has been undertaken to the east Of the race of the peoples it can be said only that they were not Aryans, of their religion that it had affinities with historical Indian religions Since the era of the civilization, the annual rainfall of the Indus valley has decreased from 15 to 20 in to c 6 in, probably because of the eastward recession of the monsoon, the desiccation is the main reason for the disappearance of the civilization, and the shift of the river course accounts for the decline of Mohenjo-Daro The first period of archaeological research at Mohenjo-Daro was 1922–27 under the patronage of the imperial Indian government, the work at Harappa began earlier See Sir John Marshall, *Mohenjo-Daro and the Indus Civilization* (1931), complete discussion and corpus, Ernest Mackay, *The Indus Civilization* (1935), G R. Hunter, *The Script of Harappa and Mohenjodaro and Its Connection with Other Scripts* (1934)

Mohican Indians: see MAHICAN INDIANS and MOHEGAN INDIANS

Mohl, Hugo von (hōō'gō fŭn mōl'), 1805–72, German botanist He is noted for his research on the nature of PROTOPLASM and chlorophyll and on the physiology of higher plant forms He was professor of botany at the Univ. of Tübingen from 1835 He was an expert on microscopy and laid the foundation for later work on the structure of palms and cycads His works include *Principles of the Anatomy and Physiology of the Vegetable Cell* (1851, Eng tr, 1852) and a collection of important papers *Vermischte Schriften botanischen Inhalts* [miscellaneous botanical writings] (1845)

Mohnton (mōn'tŭn), borough (pop 1,853), Berks Co, SE Pa, near Reading, inc 1907

Moholy-Nagy, Laszlo (lä'slō mō'hoi-nō'dyu), Hung *Moholy-Nagy László*, 1895–1946, Hungarian painter, designer, and experimental photographer He turned to art after studying law and founded (1916) the review *Jelenkor* in Budapest While living (1920–23) in Berlin he was one of the founders of constructivism and wrote for various modern art magazines As a professor (1923–28) in the newly opened Bauhaus at Weimar (later at Dessau) he was coeditor with Walter Gropius of the school's regular publications Living (1928–34) again in Berlin, he became known as a typographer and designer of stage sets In 1937 he became the director of the Bauhaus School of Design at Chicago Upon the failure (1938) of this school, he opened (1939) the Chicago Institute of Design, which he headed until his death His greatest contribution to modern art lay in his teaching His vivid interest in the new and experimental together with his grasp of the fundamental principles of practical art led him to make of the Institute of Design a school which duplicated the work of the Bauhaus and which deeply influenced American commercial and industrial design He was the author of *The New Vision* (Eng tr, 1928) and *Vision in Motion* (1947)

Mohonk, Lake (mōhŏngk', hŭngk'), SE N Y, near New Paltz, in a resort area of the Shawangunk Mt Mohonk Lake village is here The Lake Mohonk Conference on International Arbitration, sponsored by the Society of Friends, was held yearly from 1895 to 1916

Mohr, Charles Theodor (môr), 1824–1901, American botanist, b Germany He took part in various state and Federal government investigations in botany and forestry Besides contributing to the National Herbarium publications, he wrote *The Timber Trees of the Southern United States* (1896–97) and *Plant Life of Alabama* (1901)

Mohr, Josef (yō'zĕf mōr'), 1792–1848, Austrian priest, author of the poem *Silent Night*

Mohr, Karl Friedrich (karl' frē'drĭkh mōr'), 1806–79, German chemist He was professor of pharmacy at the Univ of Bonn from 1867 He is noted for his work on volumetric analysis and for his invention of a pinchcock and a balance used especially in specific-gravity determination Mohr's salt is a double salt (ferrous ammonium sulphate) used in analytical chemistry

Mohs, Friedrich (frē'drĭkh mōs'), 1773–1839, German mineralogist He was professor at Vienna from 1826 He devised Mohs's scale of HARDNESS

Moir, David Macbeth (moir), 1798–1851, Scottish physician and author He was a frequent contributor to *Blackwood's Magazine*, in which his amusing study of humble Scottish character, *The Life of Mansie Wauch, Tailor in Dalkeith* (1828), appeared under the pseudonym Delta

Moira (moi'ru), river rising in S Ontario W of Sharbot Lake and flowing 60 mi SW to the Bay of Quinte at Belleville Its course is rapid and provides water power

Moirai see FATES

Moisie (mwazē') river of E Quebec, rising near the Labrador border and flowing 210 mi S to the St Lawrence The Hudson's Bay Company has an important trading post at the village of Moisie near the mouth

Moissan, Henri (ärē' mwasä'), 1852–1907, French chemist He was professor at the École normale supérieure de Pharmacie, Paris (1886–99), and at the Sorbonne (from 1900) He isolated the element fluorine (1886) and invented an electric-arc furnace (1892) For these achievements he received the 1906 Nobel Prize in Chemistry He also made diamonds (by crystallizing carbonic acid), evolved a new process of manufacturing acetylene, and made important studies of carbides, silicides, and borides

Moivre, Abraham de (ābra-ăm' du mwä'vrŭ), 1667–1754, French-English mathematician, b France He fled to England after the revocation of the Edict of Nantes He was called upon by the Royal Society to help decide the issue between Newton and Leibniz on the priority of the invention of the differential calculus De Moivre made important contributions to trigonometry and to the law of probabilities. There are three mathematical theorems which bear his name Among his writings is *Doctrine of Chances* (1718)

Mojave (mōhä'vē), river of S California rising in the San Bernardino Mts and flowing north and northeast c 100 mi to disappear in the Mojave Desert When the river reaches the plains, the porous soil and rapid evaporation deprive it of most of its water, except for a short period in the wet season.

Mojave Desert, region of barren mountains and flat desert valleys, c 15,000 sq mi, S Calif, S of the Sierra Madre and N of the San Gabriel and San Bernardino Mts Large borax deposits and gold have been found here "Dry" lakes, undrained and crusted with alkali, contain water only during wet seasons. The Mojave river is in the southern part, and Death Valley lies to the north of the Mojave Desert Once an arm of the sea, the desert was formed by volcanic action and by material deposited by the Colorado river from the arid plain to the east

Moji (mō'jē), city (1940 pop 138,997; 1947 pop. 109,567), Fukuoka prefecture, N Kyushu, Japan, a port on Shimonoseki Strait. A tunnel (1942) connects this industrial and transportation center (known in feudal times as Mojigaseki) with the city of Shimonoseki on Honshu.

Moki Indians see HOPI INDIANS

Mokpo (mŏk'pō'), Jap. *Moppo*, city (1946 pop 103,081), S Korea, a port on the Yellow Sea It is a center of food processing and cotton ginning.

Moksha (mŏk'shŭ), river, 430 mi long, central European RSFSR, rising near Penza and flowing generally NW into the Oka. Its lower course is navigable

Mokuaweoweo (mōkōō'uwä'ōwä'ō), volcano, S central Hawaii, T H, on the summit of MAUNA LOA It is one of the largest active craters With a depth of 800 ft, the crater is 3 7 mi long and 1 7 mi wide During active periods, lava streams flow down the slopes of Mauna Loa The lava flow of 1880–81 was 50 mi long

Moladah (mō'lŭdŭ, mōlä'dŭ) [Heb.,=birth], unidentified city, S Palestine Joshua 15 26, 19 2, 1 Chron 4 28, Neh 11 26

molasses, brownish, viscid residue separated from crystallized cane sugar in the manufacturing process It is called treacle in England In the United States the name is sometimes applied to syrups obtained from sorghum and the sugar maple, as well as to the uncrystallizable residue from the manufacture of sorghum and beet sugars The clarified and evaporated juice of the sugar cane is boiled until the sugar crystallizes and a mass is formed consisting of sugar crystals and molasses The mass is placed in hogsheads with perforated bottoms so that the molasses can drain off, in modern plants, is centrifuged in cylinders which revolve at high speed and throw out the liquid Molasses is usually reprocessed, sometimes twice, to recover crystallizable sugar, then purified The lowest grade, blackstrap, is used in mixed stock feed and in the manufacture of industrial alcohol Better grades such as New Orleans drip molasses and Barbados molasses, lighter in color and containing more sugar, are used in cooking and in the production of rum Standard molasses contains 12 to 16 percent sucrose and not more than 25 percent water

Molay, Jacques de (zhak' du mōlā'), 1243?–1314, last grand master of the Knights Templars He distinguished himself in defending Palestine against the Saracens After the Templars were driven from the Holy Land, he removed to Cyprus, where he began to organize a new force to recapture the lost territory He was summoned (1306) to France by Pope Clement V, at the request of Philip IV, king of France, who, jealous of the Templars' riches and fearful of their power, wished the order suppressed In 1307 all Templars in France were arrested, and their property confiscated De Molay and his knights were brought before an inquisitorial court, charged with heresy, and tortured The grand master, thus subjected, admitted the truth of certain charges, but later recanted, and was burned at the stake

Mold (mōld), urban district (1931 pop, 5,137, 1943 estimated pop 5,800), co seat of Flintshire, Wales, W of Chester It is a livestock market and is in a coal-mining district West of the town is the spot where, traditionally, St GERMANUS OF AUXERRE and the Britons won a great victory There is a 15th-century church The border fortress here was captured by Llewelyn ap Iorwerth in 1199

mold, name for certain multicellular fungi with the plant body composed of a mycelium (a mass of branching filaments) on which the reproductive bodies, spores, are borne The black, green, pink, orange, and other colors of molds are caused by the spores Most molds are saprophytic and can obtain moisture and nutriment from fruits, vegetables, jelly, cheese, butter, bread, silage, and almost any dead organic matter. Among the commonest forms is the black bread mold (*Rhizopus nigricans*), which grows also on decaying vegetables, fruits, and meals Some molds, e g, species of *Penicillium*, are useful in the preparation of Camembert, Roquefort, and other cheeses PENICILLIN and other antibiotic substances are obtained from molds A few molds are pathogenic, e g, those which cause ringworm and other skin diseases and thrush In barnyard fowls moldy feed may cause a fatal pneumonia A mold is the cause of late blight or downy mildew of potato Water molds grow on submerged organic matter and some parasitize fish

Moldau (mōl'dou), Czech *Vltava* (vŭl'tävä), longest river in Czechoslovakia It rises in the Bohemian Forest, 55 mi S of Pilsen, and flows 267 mi northward, past Budweis and Prague, into the Elbe.

Moldavia (mōldā'vēu), historic province (c 14,700 sq mi, pop. 2,598,258), E Rumania, separated in the east from the Moldavian SSR by the Pruth and in the west from Transylvania by the Carpathians.

It borders on the Ukraine in the north and on Walachia in the south JASSY, its historic capital, and GALATI, its port on the Danube, are the chief cities Moldavia, a fertile plain drained by the Sereth, is the granary of Rumania It was part of the Roman province of DACIA and has retained its Latin speech despite the centuries of invasion and foreign rule which began in the 3d cent A D. Greek, Slavic, Turkish, Jewish, and other elements have influenced its culture (see RUMANIA) In the 13th cent the Cumans, who then held Moldavia, were expelled by the Mongol invasion When the Mongols withdrew, Moldavia became (early 14th cent) a principality under native rulers It then included BUKOVINA and BESSARABIA Like its sister principality, WALACHIA, it was torn by strife among the boyars—the great landowners and officeholders—and among rival claimants to the throne The rural population was reduced to misery and virtual slavery (which lasted well into the 19th cent) by the princes, who ruled with Oriental absolutism and cruelty Moldavia reached its height under Stephen the Great, who in 1475 routed the Turks, but in 1504 it became tributary to the sultans It frequently was occupied by foreign powers in the continuous wars among Turkey, Austria, Transylvania, Poland, and Russia, but it always reverted to Turkish suzerainty S Bessarabia early passed under the rule of the khans of Crimea Early in the 18th cent the Turks ended the rule by native princes—who had sided with the enemy as often as with Turkey—and appointed governors (hospodars), mostly Greek PHANARIOTS The Greeks surpassed their predecessors in grasp-ingness, while the nobility fell into total decay and corruption Their rule was ended (1822) after the Greek insurrection instigated by Alexander YPSILANTI, and native hospodars were appointed After the Russo-Turkish War of 1828–29 Moldavia and Walachia were made virtual protectorates of Russia (see ADRIANOPLE, TREATY OF), though they continued to pay tribute to the sultan A Rumanian national uprising (1848–49) was suppressed by Russian intervention In the Crimean War, Moldavia was again occupied by Russia, but in 1856 the two Danubian principalities—Walachia and Moldavia—were guaranteed independence under the nominal suzerainty of Turkey (see PARIS, CONGRESS OF) With the accession (1859) of Alexander John CUZA as prince of both Moldavia and Walachia, the history of modern Rumania began.

Moldavian Soviet Socialist Republic, constituent republic (c 13,000 sq mi , 1946 estimated pop 2,700,000), SW USSR The Pruth separates it from Rumania in the west In the north and east the Dniester forms its approximate boundary with the Ukraine, on which it also borders in the south KISHINEV (the capital), Bender, and Tiraspol are among its chief cities Mostly a hilly plain, it occupies all but the northernmost and southernmost sections of former BESSARABIA and is largely agricultural The majority of the population are Moldavians, but there are large Russian, Jewish, Ukrainian, and Bulgarian minorities The history of the region before the creation (1940) of the republic was essentially that of Bessarabia When Rumania seized (1918) Bessarabia, Soviet Russia refused to accept the fact and established (1924) the Moldavian Autonomous SSR, in the Ukraine, with Tiraspol its capital In 1940 Rumania was forced to cede Bessarabia to Russia The predominantly Ukrainian districts in the south and around Khotin in the north were incorporated into the Ukraine, as were parts of the Moldavian Autonomous SSR, the rest was merged with what remained of the Moldavian Autonomous SSR and made a constituent republic The republic was reconquered by Rumania in 1941, but the USSR recovered it in 1944

Molde (mōl'du, mō'lu), town (pop 3,774), More og Romsdal co , W Norway, S of Kristiansund and on the north bank of the Molde Fjord Commanding a panoramic view over the fjord and the Dovrefjell peaks, it is a favorite tourist center The Molde Fjord has several arms, one of them the famous Romsdal Fjord

molding, in architecture, furniture, and decorative objects, a surface or group of surfaces of projecting or receding contours A molding may serve as a defining element, terminating a unit or an entire composition (e g , in the cap of a column or the crowning cornice of a building) or establishing a boundary or transition between portions of a design It may also serve to break the monotony of a plain surface The shape of a molding is termed its profile or section The various architectural styles have developed such specialized character in their moldings that these generally accurately reveal the period of a work Although little used in modern architecture, moldings formed an important part of most past styles, in Babylonia, Assyria, and Persia, however, their place was taken by flat ceramic enrichments in color In Egypt, moldings were limited to the cove or cavetto and the half round or torus, which, used together, formed the cornices for the walls of temple or pylon. Moldings were an essential feature of Greek orders and buildings These Greek profiles form the basic molding vocabulary for classic types and still underlie the forms currently used, such as the fillet and the fascia, flat vertical surfaces, the ovolo, of an egglike convex outline, the bead and the torus, both convex, three fourths of a circle and one half, respectively, the cavetto, a quarter circle, and the scotia, of elliptical curvature, both concave, and the *cyma recta* and the *cyma reversa*, both of compound curvature, being half concave and half convex The ovolo was carved with the alternating egg and dart, the acanthus leaf and the anthemion were used for the *cyma recta*, and the water leaf for the *cyma reversa* or ogee Roman and Renaissance designers, substituting simple segments of circles for the elliptical and parabolic curvatures, never attained the beauty of Greek forms, while in ornament they added numberless innovations In Byzantine architecture the tendency was to flatten the classic outlines, transforming them into bands of pierced enrichment Romanesque moldings were chiefly simple segments of a circle, as in the especially characteristic boltel or three-quarter round Moldings changed with the development of Gothic Cornices, jambs, arch rings, and capitals show a richly varied interplay between projecting rounds and deep concavities, the latter being often undercut to produce a more complete hollow In England, as the style advanced, the boltel became pear shaped with its tip brought to a point or flattened by a fillet This, the keel molding, is distinctively Gothic, as is also the ware molding In the 15th-century late Gothic of France and of Germany there were elaboration and smallness of scale, with ingenious combining of differing elements to produce broken, merging, and interpenetrating moldings In developed Gothic an entire rich assortment of naturalistic forms appeared, with flowers and intertwining vines From the crisp and clustered foliage emerged human figures and fabled birds and animals The Renaissance return to purely Roman moldings was preceded, in the northern work, by an experimental period in which both Gothic and classic forms freely intermingled See C H Walker, *Theory of Mouldings* (1926).

Molé, Louis Mathieu, Comte (lwē' matyŭ' môlā'), 1781–1855, French politician He was made a count and minister of justice by Napoleon I during the Hundred DAYS (1815) and later served in several cabinets under Louis XVIII Louis Philippe appointed him (1830) foreign minister and premier (1836–39) In these posts Molé steered a middle course at home, pursued a cautious foreign policy, and acted in complete harmony with the king Opposition, both from the right and the left, in the chamber of deputies caused Molé to persuade Louis Philippe to dissolve the chamber and to order new elections A large majority voted in favor of the parliamentary opposition, and Molé resigned He played some part during the Second Republic but retired after Napoleon III's coup d'état of 1851

mole, in chemistry see MOLECULAR WEIGHT.

mole, in medicine see BIRTHMARK

mole, in zoology, small insectivorous burrowing mammal, native to Europe, Asia, and North America Moles are characterized by soft, thick gray or brown fur and pointed muzzles, small, weak eyes, in many species capable only of distinguishing light from dark, the absence of external ears, and powerful, muscular fore limbs, equipped with strong digging claws They dig tunnels just under the surface of the ground, in which they hunt worms and insects Quarters for living, nesting, and wintering are in deeper burrows Mole runways leave ridges and mounds in fields, gardens, and lawns, the animals are trapped as pests (though they probably do less damage than the animals they destroy) and for their fur, which is highly valued The mole is one of the strongest of animals for its size It does not live in captivity See *Mole Control* (U S Dept of Agriculture, Farmers' Bul 1716)

Moloch (mō'lŏk) or **Molech** (mō'lĕk) [Heb , =king], Canaanitish god of fire to whom children were offered in sacrifice He had sanctuary at Topheth, in the valley of Hinnom near Jerusalem Both Solomon and Ahaz were said to have introduced this worship Lev 18 21, 20 2, 1 Kings 11 7, 2 Kings 23,10, Jer 32 35 MALCHAM and MILCOM may be identifiable with Molech

molecular weight (mulĕ'kyōolur), relative weight of a MOLECULE of a substance as compared with the weight of a molecule of some other substance taken as a standard It can be calculated from the chemical FORMULA of a substance, by adding together the relative weights (ATOMIC WEIGHT) of the atoms making up a molecule of the substance For example, to compute the molecular weight of carbon dioxide the molecular formula of this gas indicates that each molecule contains one atom of carbon and two atoms of oxygen Then, since the atomic weights of carbon and oxygen are 12 and 16 respectively, the molecular weight of carbon dioxide is 44, i e , 12+(2×16)=44 Molecular weights of substances are determined in the laboratory in various ways, the method employed depending upon the state (solid, liquid, or gas) of the substance treated Methods for determining the molecular weight of gases are based upon Avogadro's law, from which it is concluded that a comparison of the weight of equal volumes of gases under the same conditions of temperature and pressure gives the same result as a direct comparison of the weights of the molecules themselves When substances are not gaseous normally and do not volatilize without decomposition, the methods for determining their molecular weights involve examination of the increase or decrease in the boiling or freezing point of some solvent Molecular weights are important in chemistry, being used in analysis Often in chemical processes a gram-molecular weight (or mole) of a substance is used, i e , a weight in grams equal numerically to the molecular weight of the substance For example, since the molecular weight of carbon dioxide is 44, the gram-molecular weight is 44 grams The volume occupied by this weight under standard conditions is called the gram-molecular volume

molecule (mŏl'ukūl) [New Latin, =little mass], smallest particle into which any substance (element or compound) can be divided without altering its properties According to the kinetic molecular theory of matter, molecules are in constant vibratory motion (see BROWNIAN MOVEMENT) The state or form in which matter appears (solid, liquid, or gas) depends upon the relative distance between the molecules and upon their velocity In general, in a solid the molecules are relatively close together, the cohesive force between them is strong, and their velocity is relatively slow, in a liquid they are farther apart and move at a faster rate, but their motion is restricted within a definite volume by cohesive forces between the molecules, while in a gas they are farthest apart and move at greatest velocity, the attractive force between them being small Since the kinetic energy, i e , the energy of motion of the molecules, is heat energy, in general when heat is added to a substance its molecules begin to vibrate more rapidly and to move at greater distances from one another If the pressure upon the substance is kept constant, the substance is said to expand When heat is withdrawn, the activity of the molecules decreases, they come closer together, and the substance contracts If heat is added continuously to a substance, a solid or a liquid, for example, the molecules of the substance are finally moving at such velocities and in such relative distances that a change of state occurs, from solid to liquid or from liquid to gas It is believed that in the absence of all heat the motion of the molecules ceases Pressure, as well as temperature, affects the molecular condition of a substance and therefore its state For example, when pressure of sufficient magnitude is applied to a gas, the molecules of the gas are forced more closely together and their velocity is decreased Heat is given off and the gas changes to a liquid The velocity and relative position of the molecules of a substance depend upon the conditions of temperature and pressure in which the substance occurs Molecules, according to the chemist, are made up of atoms which are either of the same kind or of two or more different kinds and which are joined in chemical combination In some cases the molecule consists of only one atom Substances differ according to the structure and composition of their molecules (see ELEMENT and COMPOUND) A compound substance is indicated in chemistry by its molecular FORMULA, which shows the kinds of atoms (the elements) making up a molecule of the substance, the relative number of each kind of atom, and the relative amount by weight of each kind of element A molecule is considered the smallest particle of any given kind of matter which, when taken alone, retains the properties of that given kind of matter Molecules of different substances differ in size and weight (see MOLECULAR WEIGHT) as well as in structure In chemical action, the structure of the molecules of the substance or substances taking part is affected, the atoms breaking from their original molecular arrangement and recombining to form other molecules and therefore different substances Until the 19th cent the terms atom and molecule were treated as synonymous, but in 1811 Avogadro drew the distinction in his study of the combining volumes of certain gases, his hypothesis lending support to Dalton's atomic theory Today, the terms are clearly distinguished

Molesworth, Mary Louisa Stewart (mōlz'wûrth), 1839–1921, Scottish author, b Rotterdam She used the pseudonym Ennis Graham She is best known for her popular stories for children, including *Carrots* (1876) and *The Cuckoo Clock* (1877)

Moley, Raymond Charles (mō'lē), 1886–, American political economist, b Berea, Ohio, grad Baldwin-Wallace College, 1906, Ph D Columbia, 1918 He taught at Western Reserve Univ (1916–19) and at Columbia after 1923, becoming professor of public law and an expert on the treatment of criminals. He was an economic adviser to Gov Alfred E. Smith and became a central figure in the BRAIN TRUST, a group of advisers to Franklin D Roosevelt After Roosevelt was elected President, Moley served (1933) as Assistant Secretary of State and delegate to the World Economic Conference at London, resigning because he felt that Roosevelt did not support him As editor of *Today* (1933–37) and later associate editor of *Newsweek*, he bitterly

criticized Roosevelt's administration. He wrote much on government, the treatment of criminals, and politics. His *After Seven Years* (1939) deals with the Roosevelt administration His political ideas are expounded in *37 Masters of Politics* (1949)

Molfetta (mōlfĕt'tä), city (pop 48,898), Apulia, S Italy, a port on the Adriatic. There is a fine Apulian Romanesque cathedral (11th cent).

Mohd (mō'lĭd) [Heb ,=begetter], descendant of Jerahmeel 1 Chron 2 29.

Molière, Jean Baptiste Poquelin (zhäⁿ' bäptēst' pōkəlē' mōlyĕr'), 1622–73, French dramatist, actor, and master of comedy, b Paris, son of a merchant who was upholsterer to the king His original name was Jean Baptiste Poquelin In his youth he joined the BÉJART troupe of professional actors, from whom he never parted, Madeleine Béjart was for years his mistress The little company opened a theater in Paris, but the venture failing (1645), they toured the provinces Already he had added Molière to his name In 1658 the company returned to Paris and was established under the patronage of the king's brother From then on Molière's company was always successful and in 1665 was given the title the King's Troupe In 1662 Molière married Armande Béjart Molière's comedies excel in three ways, in delineation of character, in creation of situation, and in comic interest These elements appear best in the great comedies of character, in which he ridicules a vice or type of excess by caricaturing a person incarnating it. These comedies are *Le Tartuffe* (1664), on the religious hypocrite, *Le Misanthrope* (1666), on the antisocial man, *L'Avare* (1668, Eng tr , *The Miser*), *Le Bourgeois Gentilhomme* (1670, Eng tr , *The Merchant Gentleman*), on the parvenu, *Les Femmes savantes* (1672, Eng tr , *The Learned Women*), on the fashionable affected intellectualism which he had already lampooned in the little piece *Les Précieuses ridicules* (1659), and *Le Malade imaginaire* (1673), on the hypochondriac Molière was actang the part of the hypochondriac when he was fatally stricken Also comedies of character, but depending more on comic interest, are *L'École des maris* (1661, Eng tr , *The School for Husbands*), *L'École des femmes* (1662, Eng tr , *The School for Wives*), which was followed by a skit against the critics, *La Critique de l'École des femmes* (1663), and *Dom Juan* (1665), an adaptation of the old story of the libertine Molière's farces are uproarious—*Sganarelle* (1660), *Le Médecin malgré lui* (1666, Eng tr , *The Doctor in Spite of Himself*), *George Dandin* (1668), *Monsieur de Pourceaugnac* (1669), *Les Fourberies de Scapin* (1671, Eng tr , *Scapin, the Trickster*), and *La Comtesse d'Escarbagnas* (1671) Among Molière's other works are the poetic *Amphitryon* (1668), after Plautus, *L'Étourdi* (1653?, Eng tr , *The Blunderer*), *Le Dépit amoureux* (1656, Eng tr , *The Amorous Quarrel*), and *Le Mariage forcé* (1664, Eng tr , *The Forced Marriage*) Fortunately there is a primary source on Molière's career, the careful *Registre* or daybook of programs, expenditures, and receipts of the Paris company from 1658 It was kept by the actor Charles Varlet de la Grange (1639?–1692) Molière's comedies have been often translated into English, and his life has been extensively treated, among the standard biographies are those by H M Trollope (1905), H C Chatfield-Taylor (1906), Brander Matthews (1910), and John Palmer (1930). See P A Chapman, *The Spirit of Molière* (1941)

Molina, Luis (lwēs' mōlē'nä), 1535–1600, Spanish Jesuit theologian He taught at Coimbra and Évora In 1589 he published a work called *Concordia* Its doctrine, called Molinism, was an attempt along new lines to reconcile the two Catholic dogmas, that God's grace is supreme and the cause of sanctification of the soul and that man is endowed with a will absolutely free Molinism emphasized the freedom of the will and started from that The author was immediately attacked by the Dominicans, because he rejected the reconciliation made by St Thomas Aquinas, but the Jesuits rallied to Molina's side The dispute was extremely bitter at first The theology of Francisco SUÁREZ attempted to bridge the gap

Molina, María de: see MARÍA DE MOLINA

Molina, Tirso de see TIRSO DE MOLINA

Moline (məlēn'), city (pop. 34,608), NW Ill , on the Mississippi (here crossed by several bridges) adjacent to ROCK ISLAND and opposite DAVENPORT, Iowa, platted 1843, inc as a town 1848, as a city 1872 The three cities, with EAST MOLINE, form an economic unit called the Quad Cities Moline is a rail, air, river, trade, and industrial center, with coal fields near by. It is supplied with water power from a dam in the river Among its manufactures are plows, tractors, and other agricultural machinery, heating equipment, paints, and clothing In 1847 John DEERE moved here from Grand Detour

Molinos, Miguel de (mēgĕl' dā mōlē'nōs), 1640–97, Spanish priest and mystic. He was the founder of QUIETISM, which he held in its most extreme form From 1669 he lived principally at Rome. His *Guida spirituale* (1675) set forth his quietistic principles—the complete contemplative passivity of the soul before God. His development of the idea of a separation between the lower man and the passive soul led to difficulty. In 1685 he was tried by the Holy Office, imprisoned, and condemned (1687) by the Inquisition He died in prison, but with the rites of the Church. See John Bigelow, *Molinos, the Quietist* (1882), J H Shorthouse, *Golden Thoughts from the Spiritual Guide of M Molinos* (1883).

Molise see ABRUZZI E MOLISE.

Mölk, Austria see MELK

Mollendo (mōlyĕn'dō), Pacific port (pop 12,628), SW Peru. Formerly the chief port for S Peru and N Bolivia, it lost some importance when Matarani, a new port c 7 mi to the north, was completed in 1941. Mollendo, a rail terminus, is entirely open to the ocean, while Matarani has some natural protection aided by breakwaters. Chief export is alpaca wool

Mollison, James Allan, 1905–, British aviator. He made the first westward solo flight across the Atlantic in 1932 With his wife, Amy Johnson, he recrossed from England in 1933, but crashed at Bridgeport, Conn.

mollusk (mŏl'ŭsk), invertebrate animal of the phylum Mollusca with a soft, unsegmented body, the under part of which usually forms a muscular foot Many mollusks have an external shell, in some the shell is internal and in a few it is lacking A mantle or sheath of skin usually envelops the body and secretes the shell Most of the species are aquatic, but some are terrestrial Classes of mollusks include the gastropods, or stomach-footed forms, e g , the SNAIL, whelk, limpet PERIWINKLE, and CONCH, which characteristically have one spirally coiled shell, and the SLUG and land snail, the cephalopods or head-footed forms, such as the squid, OCTOPUS, NAUTILUS, and CUTTLEFISH, the pelecypods or lamellibranchs, bivalve forms which usually have a hatchet-shaped foot, such as the CLAM, OYSTER, MUSSEL, SCALLOP, and SHIPWORM, the chitons, and the tooth shells or tusk shells

Mollwitz (mōl'vĭts), village, Lower Silesia, SE of Breslau Here, on April 10, 1741, Frederick II of Prussia defeated the Austrians in the War of the Austrian Succession The battle conclusively demonstrated the superiority of modern infantry over cavalry

Molly Maguires (mŭgwī'ŭrz), secret organization of Irishmen in the Scranton anthracite mining districts of Pennsylvania For several years, especially from c 1865 to 1875, it dominated the industry It was a physical-force movement, which seems to have arisen to combat the oppressive industrial and living conditions Since the police and the forces for law and order were entirely controlled by the owners of mines, the Molly Magures often resorted to murdering or intimidating the police Agents and superintendents were continually molested. The apogee of the Mollies' power was c 1875, when they managed to organize a strike in a region otherwise virtually unorganized Their power was finally broken by the spying activity of James McParlan, an Irishman employed by the Pinkertons on behalf of the industrialists Twenty of them were hanged McParlan's secret reports were released for study in 1947 See Anthony Bimba, *Molly Maguires* (1932), J. W. Coleman, *The Molly Maguire Riots* (1937)

Molnar, Ferenc (fĕ'rĕnts mōl'när), Hung *Molnár Ferenc*, 1878–, Hungarian dramatist and novelist He studied law at the universities of Budapest and Geneva and was for several years a journalist in Budapest His translated plays, produced with great success in the United States, include *The Devil* (1907, Eng tr , 1909), *Liliom* (1909, Eng. tr , 1921), *The Swan* (1920, Eng tr , 1922), and *The Guardsman* (1910, Eng tr , 1924) and were collected in 1937 (*All the Plays of Molnár*) Other translated works include the novel *The Paul Street Boys* (1907, Eng tr , 1927)

Molndal, Swed *Mölndal* (mûln'dăl"), city (pop 17,822), SW Sweden, just E of Goteborg An industrial center, it produces textiles, paper, and margarine

Moloch (mō'lŏk), in the Bible. see MOLECH

Molokai (mō'lōkī'), island (259 sq mi., pop 5,340), one of the Hawaiian Islands It is c 8 mi W of Maui across Pailolo Channel and c 23 mi E of Oahu across Kaiwi Channel Molokai is generally mountainous, with Mt Kamakou (4,958 ft) the highest peak In an isolated part of the northern coast is the leper colony (established in 1860 and now a government leprosarium), Kalaupapa Settlement, shut off from the rest of the island by a rock wall c 1,600 ft high The Belgian missionary Father DAMIEN worked and died here Molokai has many cattle ranches and pineapple plantations, the poor soil is unfit for the cultivation of sugar cane The chief port is Kaunakakai

Molotov, Vyacheslav Mikhailovich (vyĕ"chĭslăf' mĭkhī'lŭvĭch mō'lŭtŭf), 1890–, Russian statesman. A Communist from early youth, he changed his name from Skriabin to Molotov to escape the imperial police He was, however, several times imprisoned and exiled After the Bolshevik Revolution he rose rapidly in the party and was chairman of the council of people's commissars (i e., premier of the USSR) from 1930 to 1941, when that post was taken over by Stalin and Molotov became vice chairman In May, 1939, he succeeded LITVINOV as commissar of foreign affairs (a title later changed to foreign minister), and in this capacity he negotiated with Ribbentrop the Russo-German nonaggression pact, signed at Moscow in Aug , 1939. After the German invasion (1941) of the USSR, Molotov helped to strengthen the alliance of Russia with the Western powers, shared in the foundation of the United Nations, and took part in all major international conferences until 1949, when his deputy, Vishinsky, succeeded him as foreign minister. Molotov kept his post as vice premier and as member of the Politburo of the Communist party Molotov's unswerving and tireless adherence to the policies dictated by his government gave him the reputation of personal inflexibility and stubbornness during the difficult post-war years, when Russian and Western foreign policies clashed continually

Molotov, city (1939 pop 255,196; 1946 estimated pop 450,000), capital of Molotov oblast, RSFSR, on the Kama river, in the western foothills of the Urals Until 1940 its name was Perm Molotov is a major inland port, a railroad center, and an important station in air transport It also has important industries, producing pig iron, machinery, and chemicals. Among its numerous cultural institutions are a university (founded 1916), medical, pharmaceutical, and agricultural colleges, museums, theaters, and an opera Perm was chartered in 1781; it was named for the Finnic population of the region, which still lives in the Komi-Permyak National Okrug (see KOMI) It was merged (1938) with the city of Molotovo (1933 estimated pop 68,900) and renamed Molotov in 1940 Its industrial development began in the late 19th cent and was intensified after the First World War Molotov oblast is a major mining region (see URALS)

molting, the periodical shedding and renewal of the outer skin, exoskeleton, fur, or feathers of an animal In birds the number and completeness of the molts varies The down feathers of the very young bird are replaced by the juvenal plumage Among birds in which the plumage colors of males and females differ, as in the oriole, the goldfinch, and the redstart, the juvenal plumage more closely resembles that of the female Soon after they learn to fly, most species molt the juvenal plumage and assume the first winter plumage From that time until they become adults the birds are called the immatures The following spring the first nuptial plumage appears It is replaced at the end of the summer by the second winter plumage This late summer postnuptial molt is repeated each year and is in most birds the only complete molt The annual spring or prenuptial molt is complete in only a few birds In some, such as the scarlet tanager and the goldfinch, the dull body feathers of winter are replaced by bright ones In others the brightening is caused by a wearing off of the tips of the winter feathers Feathers are, in most cases, lost and replaced gradually and in sequence Except among ducks, rails, and diving birds the ability to fly is not lost A series of molts gives the PTARMIGAN protective coloring at all seasons Invertebrate animals, such as insects and crabs and their relatives, which have exoskeletons shed this covering periodically to permit growth A new covering which is formed by the skin beneath hardens after the animal emerges from the old one Snakes shed their skins, and mammals change from heavy winter pelage to light summer pelage In some mammals, such as the ermine and the varying hare, the color changes with the season

Moltke, Helmuth Johannes Ludwig, Graf von (hĕl'mōōt yōhn'nus lōōt'vĭkh grăf' fŭn mōlt'kŭ), 1848–1916, German general He fought in the Franco-Prussian War (1870) and in 1882 became adjutant to his uncle, Field Marshal Moltke He became a favorite of Emperor William II and succeeded Alfred von SCHLIEFFEN as chief of general staff in 1906 Shortly before the outbreak of the First World War, Moltke modified his predecessor's famous plan by timorously withdrawing several divisions from the right wing of the potential Western front, in order to reinforce the left Because of illness he retired as chief of staff soon after the war broke out

Moltke, Helmuth Karl Bernhard, Graf von (hĕl'mōōt kärl' bĕrn'härt grăf' fŭn mōlt'kŭ), 1800–1891, Prussian field marshal, b. Mecklenburg Following his graduation from the Royal Military Academy of Denmark, he entered the Danish service, but resigned his commission in 1822 to join the Prussian army He became a member of the general staff (1832), and three years later with official sanction he entered the service of the Turkish sultan as military adviser. His advice was not followed in the campaign against Mohammed Ali, and he returned (1839) to Prussia, where he advanced rapidly and was made chief of the general staff in 1858. He worked tirelessly to mold the Prussian army into a formidable war machine. The successful completion of the Danish War (1864) and of the Austro-Prussian War (1866) was due to his tactics, and in the FRANCO-PRUSSIAN WAR (1870–71) Moltke's genius, evinced especially in his plan of mobilization, led to complete Prussian victory. On receiving news of the fall of Metz,

William I made him a count. Moltke owed many of his military successes to the elasticity of his strategy. Unlike Napoleon, he gave his subleaders liberty in making decisions. When he resigned as chief of staff in 1888, he was made chairman of the committee for national defense. Moltke was a member of the diet of the North German Confederation (1867–71) and of the Reichstag (1871–91). He wrote noteworthy books on tactics, including *The Franco-German War of 1870-71* (Eng tr, 2 vols, 1893)

Moluccas (mŭlŭ'kŭs, mō–) or **Spice Islands**, Dutch *Molukken*, island group (c 32,300 sq mi.; pop 560,000), East Indonesia, between Celebes and New Guinea. The group includes HALMAHERA, CERAM, BURU, AMBOINA, TERNATE, ARU ISLANDS, and KAI ISLANDS. Discovered in the early 16th cent by the Portuguese, they were taken in the 17th cent by the Dutch, who secured a monopoly in the clove trade. Twice the British gained a foothold in the islands, which passed definitely to the Dutch in the first quarter of the 19th cent. Of volcanic origin, mountainous, and fertile, the Moluccas yield a variety of tropical products, with exports consisting chiefly of copra and fish.

molybdenite (mulĭb'dunīt, mō–), a mineral, molybdenum disulphide, blue gray in color, with a metallic luster and greasy feel. It occurs in crystals of the hexagonal system, but more commonly in scales, grains, or foliated or massive form. It has an excellent basal cleavage and the laminae are flexible. It is found in granites, syenites, gneisses, and crystalline limestones, important producing regions are in Saxony, Bohemia, England, Australia, and various parts of the United States, especially in Colorado and New Mexico. Molybdenite is an important ore of molybdenum, the ore is first roasted to eliminate the sulphur, and the oxide thus formed is reduced with carbon in the electric furnace.

molybdenum (mulĭb'dunum), rare, silvery metallic element (symbol=Mo, for physical constants, see ELEMENT, table). It exhibits a metallic luster and can be drawn into wire and made into thin sheets. It combines with various substances with oxygen to form a number of oxides, the trioxide being the best known, with chlorine to form a number of chlorides, with sulphur, sulphides and with some other metals or the ammonium radical and oxygen to form compounds known as molybdates. The metal does not occur uncombined in nature, its chief ores being MOLYBDENITE (a compound of the element with sulphur) and wulfenite (lead molybdate, a compound of lead, molybdenum, and oxygen). It is widely, but sparingly, distributed throughout the world, in these and other rarer minerals, being found in the United States (in the northeastern and far western parts), in Canada, in South America, in Europe (in Norway, Sweden, Finland, England, France, Saxony, and Italy), in Africa, and in Australia. The metal is prepared from molybdenite by roasting followed by reduction by carbon in the electric furnace. It is used in making alloy STEEL, being introduced commonly in the form of an alloy with iron (ferro-molybdenum alloys) and acting as a good hardening agent. Molybdenum steels are employed for making high-speed tools, aircraft parts, and forged auto parts, and molybdenum is used in radio-tube grids and filaments, for electrodes, and in other products. A compound, ammonium molybdate is used in testing for phosphoric acid. The existence of molybdenum was suggested by K. W. Scheele (1778), and it was isolated by P. J. Hjelm in 1782.

Mombasa (mŏmbā'sŭ, -bă'sŭ), city (pop 102,500), Kenya, a port on the Indian Ocean, on Mombasa island and the mainland. From the 8th to the 16th cent. it was a center of the Arab trade in ivory and slaves. It was visited (1498) by Vasco da Gama on his first voyage to India. Mombasa was three times burned by the Portuguese, notably by Francisco de Almeida in 1505, and the Portuguese controlled it until it fell to the Arabs in 1698. It later became part of Zanzibar sultanate and passed to Great Britain c 1880. It is the terminus of the Kenya-Uganda RR and a center for the export of coffee, cotton, sisal, and tea.

Mombert, Alfred (äl'frät mōm'bĕrt), 1872–1942, German poet. He was briefly a lawyer and public official. His numerous volumes of verse are characterized by mysticism and fantasy. Other poets have proclaimed him the outstanding German genius of his time. His works include *Die Glühende* [aglow] (1896), *Die Schöpfung* [the creation] (1897), *Die Blüte des Chaos* [the blossoming of chaos] (1905), the trilogy *Aeon* (1907–11), *Der Held der Erde* [the hero of the earth] (1919), and *Atair* (1925). Although Jewish, he preferred to remain in Germany under the Nazis. Arrested in 1940, he became ill in a concentration camp in France, was released in 1941, and died in Switzerland.

Momence (mōmĕns'), city (pop 2,425), NE Ill., on the Kankakee river and 8 of Chicago, in a farm and quarry area; platted 1844, inc. 1874. It was an important point on the Hubbard Trail.

momentum (mōmĕn'tŭm). The term is commonly employed in popular usage to indicate the force or power that a moving body exerts to maintain its motion. This definition is not satisfactory, however, when a measurement of momentum is necessary, since it does not make clear the two elements upon which the momentum of a body depends, namely, the mass of the body and the velocity of the body, and it confuses the momentum of a body with the impulse of a force upon the body and with the energy which the body possesses because of its motion, i.e., its kinetic energy. In mechanics, therefore, the momentum of a body is defined as the quantity of motion of the body, specifically the product of the mass of the body and its velocity. When an external force acts upon a body or a system of bodies in motion, it causes a change in the momentum of the body. The impulse of a force (i.e., the product of the force and the duration of time in which it acts) upon a body is measured by the change in momentum. On the other hand, when no external force acts upon a body in motion or a system of bodies there is no change in the momentum of the body or system of bodies, even though, as in the case of a system of bodies, there is an internal disturbance of the system. This conclusion is known commonly as the principle of the conservation of momentum. The distinction between the momentum of a body and its kinetic energy can be seen in the action of a pile driver. The distance to which the pile is driven depends upon the kinetic energy, while the length of time required for the action to cease depends upon the momentum.

Mommsen, Theodor (tā'ōdōr mōm'sun), 1817–1903, German historian. Appointed (1848) professor of civil law at the Univ. of Leipzig, he lost his position in 1850 because of his moderately liberal political opinions. He subsequently taught Roman law at Zurich and Breslau and from 1858 was professor of ancient history at the Univ. of Berlin. His greatest work is his *History of Rome* (3 vols, 1854–56, available in several English translations), which became one of the classics of historical writing. The fourth volume was never completed, but the fifth appeared in 1885. His political opinions, somewhat colored his remarks on ancient politics, but his work admirably covers Roman cultural and economic life. Mommsen also wrote authoritatively on Roman law, notably in *Römisches Staatsrecht* (3 vols, 1871–76) and *Römisches Strafrecht* (1899), and on archaeology. He edited several volumes of the *Monumenta Germaniae historica*. His collected works were published as *Gesammelte Schriften* (8 vols, 1905–13). Mommsen received the 1902 Nobel Prize in Literature.

Momus or **Momos** (both mō'mus), in Greek myth, personification of mockery and rebuke, son of Night. Only Aphrodite, he said, was blameless.

Mon, Denmark: see MORN.

Mona, Roman name of an island sometimes identified with the Isle of Man, Great Britain, and sometimes with Anglesey island, Wales.

Monaca (mŏn'ŭkŭ), industrial borough (pop 7,061), W Pa., on the Ohio and NW of Pittsburgh, settled 1813, inc. 1839. Its manufactures include glass and iron and steel products.

Monaco, Lorenzo: see LORENZO MONACO.

Monaco (munä'kō, mō'nŭkō, Fr. mônäkō'), independent principality (c 370 acres, 1946 pop 19,242), on the Mediterranean, an enclave within Alpes-Maritimes dept., SE France, E of Nice and near the Italian border. Surrounding a natural harbor, it consists of three adjoining sections—La Condamine, the business district, MONTE CARLO, and Monaco, its old capital, atop a rocky promontory. Its beautiful situation and the famous gambling casino of Monte Carlo make it one of the best-known resorts of the Riviera. The ruling prince, Rainier III, succeeded his grandfather, Louis II, in 1949. According to the constitution of 1911 the principality is governed by a cabinet and a national council. Monaco has a customs union with France, and its currency is interchangeable with the French. There is no income tax, the chief source of state revenue being the casino, which is managed as a concession by a private corporation. Only c 2,000 of the population are citizens of Monaco (Monegasques), these are not admitted to the gambling tables. Probably settled by the Phoenicians in early times, Monaco was ruled by the Genoese Grimaldi family from the 13th cent. In 1731 the male line died out, but the French Matignon family, which succeeded by marriage, assumed the name Grimaldi. Monaco was under Spanish protection from 1524 to 1641, under French protection from 1641 to 1793, annexed to France in 1793, and under Sardinian protection from 1815 to 1861. The districts of Menton and Roquebrune were incorporated (1848) into Sardinia, which in turn ceded them to France in 1860. By a treaty of 1918, the succession to the throne must be approved by the French government. In the 19th cent., Monaco rose to great prosperity as a fashionable resort. The town of Monaco contains the palace (16th cent.), the cathedral (19th cent.), and a noted oceanographic museum founded (1910) by Prince Albert I.

monad: see BRUNO, GIORDANO, and LEIBNIZ, GOTTFRIED WILHELM, BARON VON.

Monadhliath Mountains (mō'nälē'ŭ), Inverness-shire, Scotland, between the Spey valley and Loch Ness. Carn Mairg (3,087 ft.) is the highest point.

Monadnock (munăd'nŏk), isolated peak, 3,165 ft. high, SW N.H., NW of Jaffrey, much visited for its wide view.

Monagas, José Tadeo (hōsā' tädhā'ō mōnä'gäs), 1784–1868, Venezuelan political leader. He fought under Bolívar in the revolt against Spain. Chosen by José Antonio PÁEZ as president in 1847, he set up a compromise administration. Páez subsequently revolted, but Monagas crushed the insurrection. In 1851 José Gregorio Monagas, a brother, was inaugurated, and in 1855 José Tadeo again took office. Reforms, including the emancipation of slaves, were introduced, but adoption of a new constitution led to a successful revolution (1858) against him. Ten years later he headed a counter-revolution with forces called the Azules [blues], but he died just after returning to power. His son, José Ruperto Monagas, continuing the dynasty, was overthrown by a new revolution that brought GUZMAN BLANCO to power.

Monaghan (mō'nŭgun), inland county (498 sq mi., pop. 57,215), one of the northern counties of the republic of Ireland, in Ulster. The county town is Monaghan. The northwest portion of the county is a part of the fertile central plain of Ireland, the hilly sections to the south and east are devoted to cattle grazing. It is primarily an agricultural county. Potatoes, oats, and turnips are the chief crops, and pigs, sheep, and poultry, as well as cattle, are raised in large numbers. Monaghan was organized as a shire in the latter part of the 16th cent.

Monaghan, urban district (pop 4,673), county town of Co. Monaghan, Ireland, NNW of Dublin. It has the Roman Catholic cathedral of the diocese of Clogher and is a farm market with some manufacturing.

Monahans (mŏn'ŭhănz), city (1940 pop 3,944, 1947 estimated pop 5,600), co. seat of Ward co., W Texas, N of the Pecos, inc. 1928. It grew from a tiny ranching center to be an oil town in the 1930s, it now refines gasoline and produces carbon black.

Mona Passage (mō'nu), 80 mi. wide, between Haiti and Puerto Rico. It connects the N Atlantic with the Caribbean Sea.

monarchianism (mŏnar'kēŭnĭzm) [Gr., =belief in the rule of one], the concept of God which maintains his sole authority even over Christ and the Holy Spirit. Its characteristic tenet, that God the Father and Jesus Christ are one person, was developed in two forms in early Christianity. Dynamistic monarchians, such as the THEODOTIANS and PAUL OF SAMOSATA, held that Jesus was born a man and received the Christ as a power from God at a later time (see ADOPTIONISM). Modalistic monarchians taught that God is unknowable, except for his manifestations or modes. Christ is one of these. Because of the consequent implication that God the Father must have died on the cross, they were called Patripassians (from Latin, =the Father suffering). SABELLIUS fully developed modalism.

monarchy. One-man rule is found in many primitive groups. Monarchy is either absolute or limited by custom or a constitution. It may be elective or hereditary or, as in the case of early German kings, chosen from a family, both. In recent times, monarchies are regularly hereditary and limited by a constitution. Many monarchs of ancient times were deified, some hereditary monarchs were believed to be descended from deities. Many later monarchs claimed to hold their power by divine right. In some instances the monarch has become primarily a symbol of political unity and has little or no power except through personal influence.

Monasterboice (mŏn'usturbois'), village, Co. Louth, Ireland. It has ancient crosses and a round tower, relics of a community founded by St. Bute or St. Boethius (d. 521).

monasticism (mună'stĭsĭzm, mō–), organized life in common, especially for religious purposes. Voluntary seclusion is a commonplace of ASCETICISM. Where the person isolates himself, he is a HERMIT, the life being called eremitic, the secluded life in common, called cenobitic, is the conventional form of monasticism. The home of a monastic society is a monastery or convent, the inhabitants are monks or nuns, all these terms have special uses in Christian practice. Typically monastic communities are of one sex only and practice CELIBACY. Monasticism has played a major role in BUDDHISM, (including LAMAISM), JAINISM, ISLAM, and Christianity. There are other cases of monasticism, as, anciently, the VESTAL virgins of Rome, the Jewish ESSENES, the THERAPEUTAE of Egypt, and the Peruvian virgins of the sun. Nonreligious communistic groups such as BROOK FARM and the AMANA SOCIETY are not generally regarded as monastic. The SHAKERS had many analogies with monasticism. Among Christians, monasticism is found only among those who hold the traditional Christian view of asceticism, i.e., mainly in the Roman Catholic and Eastern Orthodox churches. A few Anglican religious orders have been founded. In the Eastern churches monasticism is generally uniform (see BASILIAN MONKS). Roman Catholic monasticism of the West is more diverse and more

intimately connected with everyday life than that of the East The norm in the Roman Catholic Church is the religious order, a society of men or of women bound together with vows, always of chastity and obedience and usually of poverty too Members of Roman Catholic religious orders are said to be enclosed if they rarely or never go out of the enclosure they live in They are said to be regular, as distinct from the secular clergy of the parishes The terms *contemplative or active*, applied to the life of regular religious, are misleading, since though enclosure implies emphasis on contemplation, many unenclosed religious lead contemplative lives (see MYSTICISM) Male members of religious orders may be in holy orders, i e , bishops, priests, or deacons, but they are not necessarily so, laymen in religious orders are brothers Roman Catholic religious orders of men fall into six classes, monks, canons regular, friars, clerks regular, ecclesiastical congregations, and religious institutes Monks are attached to their monastery, subordinate chiefly to their abbot, and are typically BENEDICTINE, the CISTERCIANS are a class of Benedictines, and the TRAPPISTS (enclosed) are a division of the Cistercians The CARTHUSIANS, of a quasi-hermit type, are the only non-Benedictine monks of the West Canons regular are priests living in a community usually attached to a church, such have been the Lateran canons, the religious of the Alpine pass of St Bernard, the Premonstratensians, and the old Austin canons (see AUGUSTINIANS and CANON) The rest of the religious orders are highly centralized systems (not federations) and have usually their work outside their precincts The friars are the oldest of this new type (see FRIAR) These are chiefly DOMINICANS, FRANCISCANS, Augustinians (Austin friars), and CARMELITES Clerks regular are several orders, including the Jesuits (see JESUS, SOCIETY OF), the most numerous of Roman Catholic orders in the 20th cent The largest number of communities of priests are called loosely ecclesiastical congregations They number more than 50, including the Oratory of St Philip Neri, the Redemptorists, and Maryknoll Religious institutes are separate organizations of laymen, mainly teaching bodies, notably the Christian Brothers, founded by St JOHN BAPTIST DE LA SALLE Roman Catholic communities of women are generally smaller and are much more numerous—there are more than 1,000 A few are enclosed and are more properly called nuns There are enclosed nuns following the rule of most orders of monks and friars, they are often called second orders Most Roman Catholic sisterhoods are devoted to teaching or charitable work (e g , hospitals and social work), many of them are tertiaries (see TERTIARY) They differ greatly in clothing, especially in their hoods The orders also vary in purpose Some exist as a way of life for the perfection of their members—this is the classic Benedictine goal Probably the greatest number of orders are specifically for teaching or missionary work, some (Jesuits, Franciscans, Dominicans) have generalized goals realized in every field In the modern Roman Catholic Church almost the only official activity which is not mainly in the hands of religious orders is the administration, from the parish to the Holy See Christian monasticism probably began with hermits in Egypt and Palestine about the time of the legalization of Christianity The most famous hermit was St ANTHONY (4th cent) His contemporary St PACHOMIUS introduced to Egypt the life in common, and St Basil the Great's rule (late 4th cent) established the norm for the Eastern Church The earliest Western monasticism resembled that of the East and spread with Christianity to Ireland, where the church was organized (6th cent) around the monasteries as centers Meanwhile in Italy, St BENEDICT (5th cent) began the work from which sprang the BENEDICTINES From the time of Pope GREGORY I, Western monasticism became gradually universally Benedictine, with even the Celtic foundations on the Continent like Luxeuil and St Gall assimilating to the general practices The part of the monks in the rise of the new civilization of the West is incalculable Their abbeys were the foci of stability, and they almost alone preserved the Christian and Roman-Greek cultural tradition In the 10th cent there began at CLUNY a reform which affected all Europe Out of another reform arose the Cistercians (12th cent). The Dominicans and Franciscans (early 13th cent) abandoned enclosure as a principle and with the other friars became a feature in the town life of Europe until the Reformation Their energy gave the universities and schools definitive form, and the whole Aristotelian renaissance (e g., in SCHOLASTICISM) was dominated by the friars They became the chief spiritual leaders In the 15th cent monastic life, like all religion, was in decline, still it was the time of the rise of a number of quasi-monastic layman's groups, such as the BEGHARDS and BÉGUINES and the tertiaries The Reformation destroyed monasticism wherever it triumphed politically, a process begun in England by Henry VIII The 16th cent saw a new monastic revival in the Jesuits concomitant with reform within the Church. Since then, notably in the 19th cent., there has been a great increase in the number of religious communities The Paulists and the Sisters of Charity of Mother Seton are examples of American communities Anti-Catholic and anti-religious attacks concentrate typically on monasticism, e g., in National Socialist Germany and in Communist-dominated countries The result is that from nearly every country in Western Europe the religious orders have been expelled at one time or another To many (e g , France, England, the Netherlands) they have been allowed to return Individual orders resemble each other in their history, they go through wavelike periods of fervor and relaxation The reformers always are plagued by the same chief evil, laxness of the individual, which brings decline in self-discipline At times the orders have been large property holders, sometimes with beneficent results (as in pre-Reformation England), sometimes to their own decay and ruin (as in 18th-century France) Many reformers (e g , St Francis and St Dominic) have perceived the dangers of institutional property becoming an end in itself, but no monastic organization which held no property at all has long survived See the classic of Montalembert, *The Monks of the West* (Eng , tr , 6 vols , 1896), F A Gasquet, *Henry VIII and the English Monasteries* (3d ed , 1888–89), Louis Gougaud, *Christianity in Celtic Lands* (1932), David Knowles, *The Monastic Order in England* (1940), J R H Moorman, *Church Life in England in the Thirteenth Century* (1945)

Monastir, Yugoslavia see BITOLJ

monazite (mŏ'nuzīt), one of the RARE EARTHS It is a phosphate of the rare elements cerium, lanthanum, praseodymium, and neodymium and usually contains thoria (the oxide of thorium) and some silica as impurities It is brown or reddish in color, with a resinous luster, perfect basal cleavage, and conchoidal fracture, it is translucent to opaque It occurs associated with granites and gneisses but most commonly is found in river and beach sands derived from monazite-bearing rocks It was formerly mined in North and South Carolina, but most of the world's supply comes from the placer deposits of India and Brazil Monazite is the chief source of thorium and of cerium

Monboddo, James Burnett, Lord, 1714–99, Scottish judge and philosophical writer His two six-volume works are *Of the Origin and Progress of Language* (1774–92), in which he antedates Darwin in considering orangutans and human beings as similar animals, and *Antient Metaphysics* (1779–99), in which he defends the dualism of Plato and Aristotle. See William Knight, *Lord Monboddo* (1900).

Moncenisio see CENIS, MONT

Mönch (mŭnkh), peak, 13,468 ft high, in the Bernese Alps, Switzerland

Monck, Charles Stanley, 4th **Viscount,** 1819–94, governor general of Canada An Irish peer, he was elected (1852) to the British House of Commons and was a lord of the treasury (1855-57) in the Palmerston government As governor general (1861-67) of British North America (Canada), he worked to prevent a rupture between the United States and Great Britain during the American Civil War and to bring about confederation of the Canadian provinces Created (1866) a baron in the peerage of the United Kingdom, he was appointed (1867) the first governor general of the dominion of Canada, but he resigned in 1868 and returned to Ireland

Monck or **Monk, George,** 1st **duke of Albemarle,** 1608–70, English soldier and politician He fought in the Thirty Years War and against the Scots in 1639 At the outbreak of the civil war he somewhat hesitantly aligned himself with the king and was given command of the naval forces from Ireland Captured at Nantwich in 1644, he was not released until 1647 Having gained the confidence of Parliament, he was commissioned to help subdue the Irish rebellion In 1650 he was made lieutenant general under Cromwell in Scotland and in 1651 was left to complete the subjugation of the Scots He became a general of the fleet in 1652 and took part in the victories over the Dutch at Portland and off the Texel He resumed his command in Scotland (1654–60) and was an adviser of Richard Cromwell after the death of Oliver (1658). He was reluctant to accede to the proposals of Charles Stuart (later Charles II) and remained loyal to Parliament until early in 1660, when he apparently decided that order could be secured only by restoring the Stuarts to the throne After obtaining the support of the Scottish estates, he crossed the border and marched with an army upon London Through his influence the Rump Parliament readmitted the members excluded by Pride's Purge (1648), then dissolved itself and called elections for another Parliament (the convention), which proved to be sympathetic to the Restoration On Monck's advice, Charles issued the Declaration of Breda, and Monck managed the invitation to Charles to return The restored monarchy was confirmed by the new Parliament on May 1, 1660 Monck's diplomacy was hardly less conspicuous than his ability as a soldier. After the Restoration honors were heaped upon him, he was appointed gentleman of the bedchamber, created duke of Albemarle, made military commander in chief, and granted a pension In the summer of 1666 Monck was given command of the fleet and shared with Prince Rupert the victory over the Dutch He was in control of the city of London at the time of the great plague (1665) and the great fire (1666) See C. W. Jarrolds, *Hero of the Restoration* (1936)

Moncks Corner, town (pop 1,165), co seat of Berkeley co , SE S C , N of Charleston It is on the Cooper near the Santee-Cooper hydroelectric and navigation project The county hospital is here

Monckton, Robert (mŭngk'tŭn), 1726–82, British general He served in the War of the Austrian Succession in Flanders and Germany In 1752 he was sent to Nova Scotia and the next year suppressed an insurrection of German settlers at Lunenburg In 1755 Monckton led a large force mostly New England auxiliaries, from Boston and took Fort Beauséjour and other forts, reducing Nova Scotia to British control He was made lieutenant governor of Nova Scotia and followed out the governor's orders in deporting the Acadians (see ACADIA) He had been chosen by Jeffrey Amherst to succeed John FORBES as commander, but instead was made second in command to James Wolfe in the campaign against Quebec (1759) In that decisive campaign he played a fairly notable part In 1760 Amherst gave him command in Pennsylvania and the South, and in 1761 he was made governor of New York He was commander of land forces in the expedition against Martinique (1761–62) which Admiral Rodney and he accomplished brilliantly He returned to New York, but went to England in 1763 and was succeeded as governor in 1765

Monckton Milnes, Richard see HOUGHTON, RICHARD MONCKTON MILNES, 1st BARON

Moncton (mŭngk'tŭn), city (pop 22,763), SE N B , on the Petitcodiac river above its mouth on the Bay of Fundy It is an industrial and transportation center, with an airport, in a lumbering and farming area First settled by the French, who were followed (1763) by Germans from Pennsylvania, it was called The Bend until 1855, when it was renamed in honor of Gen Robert Monckton The Free Meeting House (nonsectarian) was built in 1822

Mond, Alfred Moritz, 1st **Baron Melchett** (mŏnd, mĕl'chĭt), 1868–1930, English industrial chemist He was the first commissioner of works (1916) and later was minister of health He conducted researches in pure and applied chemistry and in color photography, writing on these and on political and economic subjects He was made a peer in 1928 His father, **Ludwig Mond,** 1839–1909, was also an eminent chemist He was born in Germany and became a naturalized British subject. He experimented with alkalies and also developed a producer gas known by his name Another outstanding discovery was that of nickel carbonyl, a gas formed from carbon monoxide and metallic nickel Mond developed a valuable method known as the **Mond process** for extracting nickel from its ores by the use of this carbonyl In the process carbon monoxide passed over the crushed and smelted ore containing nickel produces the volatile nickel carbonyl, this is decomposed to yield metallic nickel

Monday see WEEK

Mondovì (mŏndō'vē), city (pop 2,077), W Wis , SW of Eau Claire and on the Buffalo river, settled 1855, inc 1889 There are limestone quarries

Mond process see MOND, LUDWIG

Mondrian, Piet (pēt' mŏn'drē-ăn), 1872–1944, Dutch painter He studied at the academy in Amsterdam and passed through an early naturalistic phase In 1910 he went to Paris, where the influence of cubism gave rise to the development of his geometric, nonobjective style which he called neoplasticism He and the painter-architect Theo van Doesburg were leaders of the so-called Stijl group of artists In 1917 they founded a magazine *De Stijl*, in which Mondrian published articles until 1925 In 1920 he published a book on his theory which appeared as *Le Neo-Plasticisme* in French and *Neue Gestaltung* in German His art and theory influenced the Bauhaus movement and the development of the international style in architecture In 1940 he settled in New York Typical of his art are compositions employing only vertical and horizontal lines at 90° angles and using only the primary colors and sometimes grays or black against a white background These are executed with consummate perfection of design and craftsmanship Much of his work is in American and European private collections. He is represented in the Museum of Modern Art, New York, and in the Art Institute of Chicago.

Mondsee see SALZKAMMERGUT.

monel metal (mŏnĕl'), silver white alloy of copper and nickel, about two thirds nickel, one third copper, with a small percentage of other metals, including iron and manganese It is produced directly by smelting a Bessemerized (see BESSEMER PROCESS) ore containing nickel, copper, iron, and sulphur The alloy is strong, resists acid corrosion well, and holds a bright finish It is used for making scientific instruments, chemical processing equipment, machinery parts, corrosion-resistant

containers for foods and other products, and condenser tubes for steamships and for various other purposes.

Monembasia or **Monemvasia,** Greece see MALVASIA

Monessen (mŭnĕs'ŭn), city (pop 20,257), SW Pa., on the Monongahela and S of Pittsburgh, laid out out 1897, inc 1898 It has steelworks and tinworks Its name is a portmanteau of *Monongahela* and *Essen*, Germany.

Monet, Claude (klōd' mōnā'), 1840–1926, French impressionist landscape painter, son of a grocer in Le Havre, where he studied with Boudin In 1862 he went to Paris, studying there he met the painters Cézanne, Renoir, and Sisley In 1865 two of his paintings were shown in the Salon For a time he lived in Argenteuil, but, driven from home by the Franco-Prussian War, he traveled abroad, making the acquaintance of Pissarro On his return to Paris, together with Berthe Morisot and Sisley he organized the impressionist exhibition of 1875, an exhibition which was so named in derision by the critics because of the title of one of his pictures, *Impression soleil levant* For years his school was in disrepute and he lived in extreme poverty. In 1883 a fairly successful exhibit enabled him to buy a small property at Giverny near Vernon, where he retired and painted for the rest of his life From then on his popularity and prosperity rapidly increased He was, however, almost blind for the last 10 years of his life Monet was one of the leading exponents of plein-air painting Often-used subjects were haystacks, the cathedral at Rouen, the Thames river, and water lilies—all of which he painted at many different times of day He entirely eliminated black and brown from his palette and excelled in rendering light effects by means of broken and contrasting colors He is admirably represented in the Art Institute of Chicago, the Metropolitan Museum, the National Gallery, London, and the Louvre, as well as in many famous private collections See study by Camille Mauclair (Eng tr, 1924), G E B Clemenceau, *Claude Monet the Water Lilies* (1930), Stephen Gwynn, *Claude Monet and His Garden* (1934)

Moneta, Ernesto Teodoro (ĕrnā'stō tāōdō'rō mōnā'ta), 1833–1918, Italian editor and pacifist He joined the movement for Italian unification, serving (1859–66) with Garibaldi From 1867 he devoted himself to the cause of peace, editing the daily *Secolo* He was president (1906) of the International Peace Congress in Milan and shared the 1907 Nobel Peace Prize His best-known work is *Le guerre, le insurrezioni, e la pace nel secolo XIX* (3 vols, 1903)

monetary union, agreement between two or more nations for the purpose of unifying currency values A monetary union presupposes close economic relations, common fiscal policies, and the movement of capital among participating nations It may consist only in the legalization of several currencies in frontier areas, or it may provide for circulation of currency in the participating states at a fixed ratio of foreign to domestic or even for a common coinage An extreme example is the assignment of the coinage function by one country to another, as by Luxembourg to Belgium Of many monetary unions attempted since ancient times, the most famous were the LATIN MONETARY UNION and the Scandinavian union of 1873 Monetary unions have generally failed on grounds of economic nationalism The Bank of International Settlements of 1930 and the Bretton Woods agreements of 1944 were attempts to fulfill some of the functions of monetary union on a world basis See also INTERNATIONAL MONETARY FUND

Monett (mŭnĕt'), city (pop 4,395), SW Mo, ESE of Joplin, surveyed 1887 It is a shipping point in the Ozark dairy and fruit (especially berries) region The city also manufactures cigars A state hospital for venereal diseases is in Monett, a state horticultural experiment station is near by

Monette, town (pop 1,074), NE Ark, E of the St Francis river and Jonesboro, inc 1900

money, term which actually refers to two concepts, the abstract unit of account in terms of which the value of goods, services, and obligations can be measured and anything which is generally acceptable as a means of payment Frequently the standard of value also serves as a medium of exchange, but this is not always the case While the Code of Hammurabi contains evidence that a single commodity—silver—was used for both purposes, many ancient communities took cattle as their standard of value but used more manageable objects as means of payment Thus the Homeric talent of gold was equivalent to an ox in value, both in Latin and in Anglo-Saxon the word for cattle also denotes money Exchange involving the use of money is a great improvement over barter, since it permits elaborate specialization and provides generalized purchasing power for the participants which may be held into the future. The growth of monetary institutions has largely paralleled that of trade and industry, while some societies, such as the Inca, were able to benefit from extensive division of labor without making significant use of a monetary medium, this was possible only through rigid reliance on custom and status and a system of extreme regimentation Today almost all economic activity is concerned with the making and spending of money incomes A great variety of objects have served as money, e g, stones, shells, ivory, wampum beads, tobacco, furs, dried fish, and cigarettes From the earliest times precious metals have had particularly wide monetary use, owing to convenience of handling, durability, divisibility, and the high intrinsic value commonly attached to them Whether an article is to be regarded as money does not, however, depend on its value as a commodity, except where intrinsic worth is necessary to make it generally acceptable in exchange, the relation between the face value of an object used as money and its commodity value has, in fact, tended to become increasingly remote State coinage, which is said to have originated in Lydia during the 7th cent B C, often enabled governments to issue coins with nominal values in excess of their value as metals—i e, they were not "full-bodied" Paper currency first appeared about 300 years ago, it was usually backed by some "standard" commodity of intrinsic value into which it could be freely converted on demand, but even during the early development of currency, issuance of inconvertible paper money was not infrequent (see for example, LAW, JOHN) The monetary system of the United States was based on BIMETALLISM during most of the 19th cent A full gold standard was in effect from 1900 to 1933, providing for free coinage of gold and full convertibility of currency into gold coin, the volume of money in circulation was closely related to the gold supply Since the passage of the Gold Reserve Act of 1934, the country has been on a "modified gold bullion standard" Gold still serves as the standard of value, the dollar is defined by law as 155/21 grains of gold 9/10 fine, making the price of pure gold $35 an ounce, gold also serves as a reserve behind much of our currency However, it may no longer be used as a domestic medium of exchange, the country's gold stock is held by the Federal government in the form of bullion, it is illegal for private persons or firms to own gold coins or certificates, ownership of gold bullion is permissible only under license from the Treasury Dept for specified export or industrial purposes While gold still seems of some importance for the maintenance of confidence in the dollar, it has only a vague connection with money in actual use About seven eighths of the currency circulating in the United States consists of Federal reserve notes, which are issued in denominations from $5 to $10,000 by the Federal reserve banks, are guaranteed by the U S government, and must have a gold backing of at least 25 percent Next in importance are silver certificates, issued by the Federal government and varying in denominations from $1 to $1,000, they are redeemable into silver dollars Other types of money in circulation include U S notes (greenbacks), originally issued by the Federal government to finance the Civil War, Federal reserve bank notes and national bank notes, both in process of retirement, and silver dollars and other coins None of the coins have a commodity value equal to their face value Under the Legal Tender Act of 1933, all American coin and paper money in circulation is now legal tender, i e, it must under the law be accepted at face value by creditors in payment of any debt, public or private Today currency and coin are less widely used as a means of payment than checks, which probably account for over 80 percent of payments made in the United States, commercial bank demand deposits (checking accounts) are, therefore, generally considered part of the money supply (see BANKING, on the regulation of the supply, availability, and cost of money, see FEDERAL RESERVE SYSTEM and INTEREST) Certain assets, sometimes called near-monies, come close to possessing the characteristics of money in that they can usually be readily converted into cash without loss, they include, for example, time deposits and very short-term obligations of the Federal government The importance of money has been variously interpreted While the advocates of MERCANTILISM tended to identify money with wealth, the classical economists, e g, John Stuart MILL, usually considered money as a veil obscuring real economic phenomena In recent years, the role of money in the determination of the national income and in economic fluctuations has received increasing emphasis See E W Kemmerer, *Money* (1935), Horace White, *Money and Banking* (6th ed, 1935), J M Keynes, *General Theory of Employment, Interest, and Money* (1936), J A Todd, *The Mechanism of Exchange* (5th ed, 1939), K H Niebyl, *Studies in the Classical Theories of Money* (1946)

Monfalcone (mōmfälkō'nā), city (pop 17,388), Friuli-Venezia Giulia NE Italy, near the border of the Free Territory of Trieste An industrial center with large shipyards, it was badly damaged in the Second World War

Monferrato, Italy, see MONTFERRAT.

Monge, Gaspard, comte de Péluse (gäspär' mōzh' kōt' dŭ pālüz'), 1746–1818, French mathematician, physicist, and public official. He was distinguished for his geometrical researches, which laid the foundations of modern descriptive geometry He was professor of mathematics (1768) and of physics (1771) at Mézières One of the founders of the École polytechnique, he served there as professor of descriptive geometry. From 1792 to 1793 he was minister of marine He wrote *Feuilles d'analyse appliquée à la géometrie* (1795) and *Géometrie descriptive* (1799)

Mongolia (mŏng-gō'lēŭ, mŏn-gō–), Asiatic region (c.906,000 sq mi, pop c.5,390,000), lying roughly between Sinkiang prov, China, on the west and the Manchurian provinces on the east and between Siberia on the north and the Great Wall of China on the south It comprises the Mongolian People's Republic (Outer Mongolia) and Inner Mongolia (the Chinese provinces of CHAHAR, SUIYUAN, and NINGHSIA) Mongolia is mainly a plateau from 5,000 to 10,000 ft high The climate is severe and the population is small The Yellow River valley of S Mongolia is the only agricultural zone of importance Central Mongolia comprises the Gobi an entirely desert region The Altai mts cut off the Gobi from the habitable area to the north There are rivers in the north, including the Selenga, Orkhon, and Kerulen, but little irrigation is attempted, and the rainfall, averaging less than 15 in a year, is insufficient for crops Throughout Mongolia livestock raising and the processing of animal products are the main industries Wool, cloth, and hides are exported Gold and coal are the important mineral resources The few rail lines of Mongolia are in the extreme north (connecting with the Trans-Siberian RR) and in the extreme south Camels are the chief means of transport Trade is greater with the USSR than with China Great hordes of horsemen have repeatedly swept down from Mongolia to establish vast, though generally short-lived, empires Mongolia was the base of the Hsiung-nu (the Huns?) who ravaged (1st–5th cent) N China The Uigur Turks founded their first empire (745–856) with its capital at Urga in W Mongolia Many smaller territorial states followed until (c 1205) Jenghiz Khan conquered Mongolia and from his capital at Karakorum led the MONGOLS in creating one of the greatest empires of all time After the disruption of the Mongol empire, Mongolia intruded less in world affairs China, which had earlier gained control of Inner Mongolia, subjugated Outer Mongolia in the late 17th cent, but in the succeeding years struggled with Japan and Russia for its control Outer Mongolia broke away in 1921 to form the Mongolian People's Republic In 1949 the Chinese Communists joined most of N Inner Mongolia to N Jehol prov and W Heilungkiang prov to form the Inner Mongolian Autonomous Region See Ladislaus Forbath, *New Mongolia* (1936), Gerard M Friters, *Outer Mongolia and Its International Position* (1949)

Mongolian languages see LANGUAGE (table)

Mongolian People's Republic, country (c 590,000 sq mi, pop c 900,000), N central Asia The capital is Ulan Bator It is bordered by China on the west, south, and east and by the USSR on the north The republic, which comprises more than one half the area of MONGOLIA, is unofficially called Outer Mongolia The area was under Chinese control from the late 17th cent until 1921, when a revolt, aided by the USSR, deposed the Chinese authorities In 1924 the present republic was constituted, but China did not recognize its independence until 1945 As the country, under a soviet form of government, became increasingly socialistic, modern industry was established and the large class of Buddhist lamas or monks (see LAMAISM) was drastically reduced The relations with the USSR have from the beginning been very close In 1946 the United Nations rejected an application of the republic for membership

Mongolism see FEEBLE-MINDEDNESS

Mongols (mŏng'gŭlz, mŏng'gōlz"), Asiatic people, numbering c 3,000,000 and distributed mainly in Mongolia, in N and W Manchuria, and in the Buryat-Mongol ASSR in the USSR The KALMUCKS also belong to the group so-called Mongolian traits, such as slanted eyes, high cheekbones, and a "yellow" pigmentation are found among many other peoples of Europe, Asia, and America, but—contrary to widely held belief—do not prove any relationship with the Mongols Although many Turkic-speaking peoples of central Asia undoubtedly have Mongol strains, they do not belong to the Mongolian linguistic family (see LANGUAGE, table) Except in the USSR, where collective farms have been introduced, the Mongols are and always have been a predominantly pastoral people They are generally Lamaist Buddhists Until recently their social organization typically included princes, a lesser nobility, a clergy, and serfs They have a written language, the earliest extant work written in Mongolian dates from A D 1240 It was at that time that the Mongols, under the leadership of JENGHIZ KHAN and his successors (among them BATU KHAN and KUBLAI KHAN), entered world history by conquering most of E Europe and Asia. Actually, the Mongol hordes (particularly those who conquered Russia and

penetrated as far as Hungary and Germany) included large elements of Turkic and other peoples; they came to be known collectively as TATARS The Mongols established the YÜAN dynasty in China, the khanate of the GOLDEN HORDE in Russia, the Jagatai khanate in TURKISTAN, and another khanate in Persia. Karakorum was their central capital TAMERLANE, who conquered a new empire in the 14th cent., claimed descent from Jenghis Khan, as did BABER, who in the 16th cent. founded the MOGUL (i e., Mongol) empire in India The connection of these conquerors with the Mongols was, at best, dynastic The Mongols were expelled from China in 1370 and lapsed into relative obscurity. See Harold Lamb, *The March of the Barbarians* (1940), Michael Prawlin, *The Mongol Empire* (1940)

mongoose (mŏn'gōōs, mŏng'-, măng'-), small carnivorous mammal related to the civet, found chiefly in India, SE Asia, and Africa and having one species in S Spain The Indian mongoose is a slender, brownish-gray animal, about 30 in. long including the tail, which is nearly as long as the head and body It is a killer of venomous snakes—among them the cobra—which it attacks fearlessly and with success, relying upon its remarkable agility to keep out of the way of the snake's fangs It is easily tamed and makes an attractive, as well as a valuable, pet In addition to snakes it destroys rats and other vermin, when introduced, as it was in the West Indies, into a new habitat it often destroys useful animals The Egyptian species, the best known and one of the largest, was venerated in ancient Egypt It is also called ichneumon

Monhegan (mŏnhē'gĭn), island, 10 mi. off the coast of S Maine SE of Boothbay Harbor. It is a summer resort favored by artists for its rock and surf scenery The battle between the *Boxer* and the *Enterprise* took place off its shores in 1813 There is a lighthouse

monism (mō'nĭzm) [Gr., =belief in one], in metaphysics, a term applied to that type of theory which seeks to explain the universe with all its phenomena by a single principle, thus reducing the whole of reality to unity of some kind In seeking to explain the contradictions apparent in a world where mind seems to be distinct from matter and soul seems to be distinct from body, monistic theories differ considerably in the choice of the principle which is made the basis of unification It may be material, if substance and energy of a physical nature be regarded as the only reality, or it may be spiritual, if mind or spirit be taken as the reality by which all is to be explained The resulting systems then will represent materialistic (or naturalistic) or idealistic (spiritualistic) monism Or an ultimate principle may be adopted in which the opposites are shown to be held in equipoise While until the time of Christian von Wolff in the 18th cent. the term was not used for types of thought which thus sought to conquer the dualism of mind and body, monism had a beginning among the thinkers of the early Greeks in their conception of cosmic matter as an explanation of the unity of the world Later the Eleatics, led by Parmenides, found all unified in a single being, whose nature was not clearly given Spinoza (17th cent.) furnishes an example of the material and the spiritual in equipoise in his doctrine of the substance (or Deity), of which the phenomena of all that has space-filling quality (physical bodies) and of all that has consciousness (mind or spirit) are the attributes. Hegel's philosophy (19th cent.) is outstanding among those of the idealistic monistic type For him the phenomena of the natural world are links in the self-unfolding of spirit (Mind or God). The monism of HAECKEL is materialistic, he gives a popular exposition in his writings Monism stands in opposition to dualism and pluralism See E. H. Haeckel, *Monism as Connecting Religion and Science* (1895), Arthington Worsley, *Concepts of Monism* (1907)

monitor, type of warship (no longer used), carrying heavy guns, having little draft, and lying low in the water. Monitors were so called from the first of the class, the *Monitor*, built for the Union navy in the Civil War by John ERICSSON at a cost of $275,000 Launched in Jan., 1862, the *Monitor* was 179 ft long, of 41½ ft beam, and weighed 1,200 tons A revolving turret, protected by 8 in. of iron armor and containing two 11-inch smooth-bore guns, was her main feature Her sides were covered by iron plates 3 to 5 in. thick, with about 27 in. of wood backing, and the deck, only 18 in. above water, was shielded with one-inch armor She was moved by steam power, with a screw propeller. Monitors were used extensively in the Civil War, but the type had its limitations and was eventually abandoned However, in the First World War the British navy revived the use of monitors See J. B. Baxter, *Introduction of the Ironclad Warship* (1933)

Monitor and Merrimac. When, at the beginning of the Civil War, the Union forces abandoned the Norfolk Navy Yard at Portsmouth, Va., they scuttled the powerful steam frigate *Merrimac*. She was subsequently raised by the Confederates, converted into a formidable ironclad, and renamed the *Virginia* On March 8, 1862, the *Virginia*, commanded by Capt. Franklin BUCHANAN, sallied forth into Hampton Roads against the wooden ships of the Union blockading squadron. She rammed and sank the *Cumberland*, destroyed the *Congress* after running her aground, and scattered the remaining ships, all the while sustaining practically no damage to herself But on the next day the *Virginia*, now under command of Lt. Catesby ap R. Jones, was challenged by the strange-looking Union ironclad *Monitor*, built by John ERICSSON and commanded by Lt. John L. WORDEN The *Monitor* had just reached the Roads after a precarious voyage from New York The ships engaged in a four-hour close-range duel which resulted in a draw, for neither was able to damage the other appreciably The *Virginia*, under Capt. Josiah TATNALL, subsequently challenged the *Monitor* several times, but the Union ship declined combat When McClellan's advance in the PENINSULAR CAMPAIGN forced the Confederates to abandon Norfolk, Tatnall, unable to lighten the *Virginia* sufficiently for passage up the James river, destroyed her (May, 1862) The *Monitor* foundered and sank in heavy seas off Cape Hatteras in Dec., 1862 Their combat, the first between ironclads, marked a revolution in naval warfare See R. S. McCordock, *The Yankee Cheese Box* (1938), H. A. Trexler, *The Confederate Ironclad "Virginia"* (*Merrimac*) (1938)

monitorial system, method of elementary education devised by Joseph LANCASTER and Andrew BELL to furnish schooling to the underprivileged even when facilities were severely limited It was sometimes called the mutual or Lancasterian system All students met in one room, with about 10 students and one monitor to each bench The monitors, older and better students, were instructed directly by the teacher and in turn instructed the other pupils This system, which might involve several levels of monitors, used elaborate programs of reward for good deportment and scholarship, supplemented by punishment based on "shame rather than pain" The success of the monitorial system stimulated interest in education for the poor See Joseph Lancaster, *The Lancasterian System of Education* (1821)

Moniz, Egas (ā'gush mō'nĭsh), 1874–, Portuguese physician and diplomat His full name is Antonio Caetano Abreu Freire Egas Moniz He shared the 1949 Nobel Prize in Physiology and Medicine with W. R. Hess Moniz developed an operation known as prefrontal lobotomy or prefrontal leucotomy, a severing of certain nerve connections in the frontal portion of the brain, the operation has been used in the treatment of some mental diseases As author and co-author of more than 300 medical works he is widely known From 1903 he served in the Cortes several times and was Portuguese minister (1917) in Madrid and secretary for foreign affairs (1918–19).

Monkchester or **Monk Chester:** see NEWCASTLE-ON-TYNE, Northumberland, England

monkey, mammal of the primate order. The New World monkeys and marmosets differ in certain anatomical characteristics from the Old World monkeys and apes The New World monkeys, found from Mexico to South America, are arboreal, and the tail is often prehensile, the nose is flat, the nasal septum is broad, and the nostrils are directed sidewise, there are usually 36 teeth, cheek pouches and callosities on the buttocks are lacking. Among the New World monkeys are the capuchin or sapajou, often seen in captivity, the howler monkey, largest of the South American group, in which the hyoid bone is enlarged to form, at the upper end of the windpipe, a hollow sound box enabling treetop choruses of the animals to be heard for several miles, the spider and woolly monkeys, which like the howler have a highly prehensile tail, the squirrel monkey and titi, smaller forms in which the tail is nonprehensile, the nocturnal durukuli (douroucouli) or owl monkey, and the saki and ouakari. Old World monkeys inhabit Africa, Asia and adjacent islands, and Gibraltar These monkeys have a narrow nasal septum, and the nostrils are directed downward, the tail, if present, is never prehensile, many are terrestrial, there are 32 teeth, and many have cheek pouches and callosities on the buttocks The Old World forms are often divided into three families (suborders in some classifications) One family includes the true monkeys Among these are species of macaques, e.g., the Gibraltar monkey (or Barbary ape), the rhesus monkey (or Bengal or bandar macaque), and the bonnet, the crab-eating, the short-tailed, and the Japanese macaques, the BABOON; the guereza or colobus monkey, species of which are hunted for fur, and the langurs, including the hanuman monkey sacred in parts of India. Comprising the second family are the apes—the CHIMPANZEE, GIBBON, GORILLA, and ORANGUTAN. Man is placed in the third family

Mon-Khmer languages (mŏn'-kumâr'), group of Austro-Asiatic languages widely scattered over SE Asia, including the Nicobar Islands and some parts of the Malay Peninsula. The most important are Mon or Talaing (tälä'ĭng), spoken along the lower Irrawaddy in Burma, Khmer or Cambodian (kămbō'dēun), spoken over an area partly in Thailand and partly in S Indo-China, and Cham (chăm), also one of the languages of Cambodia in S Indo-China.

Monmouth, James Scott, duke of (mŏn'muth), 1649–85, claimant to the English throne, natural son of Lucy Walter, mistress of Charles II of England, b. Rotterdam. After his mother's death, he was cared for by Lord Crofts, whose name the boy adopted, until in 1662 he went to live at Charles's court. Charles recognized him as of the blood royal, created him (1663) duke of Monmouth, and married him to Anne Scott, countess of Buccleuch, whose name James now adopted He served in the army, rose to be (1670) captain general of the forces, and commanded in Scotland and on the Continent Politically he became very important after anti-Catholic feeling against the succession of James, duke of York (later JAMES II), was heightened by the Popish Plot agitation in 1678 The first earl of SHAFTESBURY and other supporters of a Protestant succession championed Monmouth as heir to Charles and tried in vain to get Charles to prove his son legitimate After a brief absence in 1679 Monmouth returned to England despite his promise to the duke of York that they would both stay out of England, for this he was forbidden the court by Charles Monmouth worked with those who desired the exclusion of James from the succession and achieved popularity until the arrest of Shaftesbury for treason in 1681 Shaftesbury escaped to Holland and died in 1683, and after the RYE HOUSE PLOT against Charles was discovered and Whig leaders were arrested, Monmouth fled to Holland James II succeeded Charles in Feb., 1685, and in June, Monmouth, supported by such plotters as Fletcher of Saltoun and Robert Ferguson, landed at Lyme Regis, Dorset, and raised a small force At Taunton he was proclaimed king, but his army was routed at Sedgemoor by John Churchill (later duke of Marlborough) Monmouth was captured and beheaded in London July 15 See biography by George Roberts (1844)

Monmouth, county, England see MONMOUTHSHIRE

Monmouth, municipal borough (pop. 4,731), co. seat of Monmouthshire, England, at the junction of the Monnow and the Wye NE of Newport It is a market town with the remains of a 12th-century castle (in which Henry V was born), a Norman church, and an old bridge over the Monnow

Monmouth. **1** City (pop. 9,090), co. seat of Warren co., W. Ill., W. of Galesburg, laid out 1831, inc. 1852 It is a trade, industrial, and shipping center in a livestock, farm, and clay area Its manufactures include pottery, farm implements, and furnaces Monmouth College (Presbyterian, coeducational, 1856) is here **2** Town (pop. 1,500), SW Maine, between Augusta and Lewiston, settled 1775, inc. 1792 It is the seat, since the early 19th cent., of Monmouth Academy and, since 1909, of a state university agricultural experiment station

Monmouth, battle of, in the American Revolution, fought June 28, 1778, near Monmouth Courthouse (see FREEHOLD, N.J.) Gen. George Washington chose this location to attack the British troops, who were retreating from Philadelphia to New York. Gen. Charles LEE launched the assault but without warning ordered a retreat The British, under Sir Henry Clinton, immediately counterattacked, and only the arrival of Washington and Steuben prevented an American rout The British forces escaped, and Lee was court-martialed for disobeying orders The legend of Molly PITCHER grew from this battle See W. S. Stryker, *The Battle of Monmouth* (1927).

Monmouthshire (mŏn'muth-shĭr) or **Monmouth,** border county (546 sq. mi., 1931 pop. 434,958, 1948 estimated pop. 420,800), W England The county town is Monmouth. The chief rivers are the Wye and the Usk, the Severn estuary forms the southern border The lands are low and fertile along the Wye and the seaboard, rising to hills in the west and northwest (Sugar Loaf, 1,955 ft.) Much of the area is devoted to pasturage, farming and fruitgrowing are important on the lower lands The region is chiefly important, however, for the extensive coal and iron deposits, particularly those in the districts around Pontypool and Rhymney Although Monmouth became an English county in 1536, it has always been more closely associated with Wales than with England. Welsh is still spoken by many of its inhabitants. Monmouth is for certain administrative purposes treated as part of Wales Among the notable architectural remains of the county is Tintern Abbey, made famous by Wordsworth. See J. A. Bradley, *History of Monmouthshire* (4 vols., 1904–33).

Monnier, Henry (ärē' mônyā'), 1799–1877, French lithographer, writer, and actor. About 1825, when he illustrated La Fontaine's *Fables* with pen draw-

ings, Monnier's work became popular. He wrote and illustrated three series of *Scènes populaires* (1830, 1835, 1862), books of satiric sketches about the people of his day, in which he introduced the imaginary characters Mme Gibou and M Joseph Prudhomme. Their history was continued in his best-known work, *Mémoires de Monsieur Joseph Prudhomme* (1857), a collection of cartoons, with some text Some of his numerous plays also concerned themselves with these characters Monnier was an actor, though not a highly successful one See Edith Melcher, *The Life and Times of Henry Monnier* (1950)

Monocacy (mŭnŏ'kŭsĭ) river rising in S Pennsylvania and crossing Maryland to join the Potomac S of Frederick, Md On its banks, just E of Frederick, was fought the Civil War battle of Monocacy, July 8, 1864 Although defeated, Gen. Lew Wallace here delayed the Confederate force under J A EARLY so that troops from Grant's army reached Washington shortly after Early appeared before the capital on July 11

monogram (mŏ'nŭgrăm) [Gr ,=single letter], symbol of a name or names, consisting typically of one or more letters worked together A famous monogram is that of Christ, consisting of X (chi) and P (rho), the first two letters in Greek The monogram has been commonly used by artists (e g , Dürer), monarchs (e g , G R for George VI), companies, and societies Bridal monograms and monograms on seals and letterheads are common.

monologue (mŏ'nŭlôg) [Gr ,=speaking alone] Originally a monologue was a passage in which a character speaks his thoughts aloud This was an accepted theatrical convention and was used by Racine, Corneille, Shakspere and other Elizabethans, Beaumarchais, and Hugo and by Eugene O'Neill in his *Strange Interlude* Such an aside is now generally known as a *soliloquy* [Latin,=speaking alone] In the modern sense the monologue is an entertainment in which one actor presents one character or many characters Browning's *Ring and the Book* is a series of 12 dramatic monologues bearing on a single story Yvette Guilbert interpolated monologues with songs in her vaudeville sketches In the United States, Beatrice Herford was a noted monologist, and Ruth Draper and Cornelia Otis Skinner carried the monologue to a high plane of dramatic art

Monon (mō'nŏn'), town (pop 1,262), White co , NW Ind , NW of Logansport, inc 1879

Monona (munō'nu) **1** Town (pop 1,191), NE Iowa, 10 mi from the Mississippi, inc 1897 **2** Village (pop 1,323), S Wis , near Madison, inc 1938

Monongah (munŏng'gu), mining town (pop 1,790), N W Va , on the West Fork of the Monongahela and WSW of Fairmont, founded c 1768 In 1907 it was the scene of a mine disaster which killed 361 men

Monongahela (munŏng"guhē'lu), city (pop 8,825), SW Pa , on the Monongahela and S of Pittsburgh, settled 1770, inc as a borough 1833, as a city 1873 It manufactures machinery, chemicals, and firebrick Hamilton House was visited by Washington in 1784 and was famous during the Whisky Rebellion

Monongahela, river, 128 mi long, formed at Fairmont, N W Va , by the junction of the West Fork and the Tygart It flows northward into SW Pennsylvania to join the Allegheny and form the Ohio at Pittsburgh The river carries freight

Monophysitism (mŏnŏf"ĭsĭt"ĭzm) [Gr ,=belief in one nature], a heresy of the 5th and the 6th cent , which grew out of a reaction against NESTORIANISM It was anticipated by Apollinarianism and was continuous with the principles of EUTYCHES, whose doctrine had been rejected in 451 at Chalcedon (see CHALCEDON, COUNCIL OF) Monophysitism challenged the orthodox creed of Chalcedon and taught that in Jesus Christ there were not two natures, but one Discussion of this heresy was badly confused by misunderstandings of terms and by the lack of knowledge in the West of Greek In the East, the Council of Chalcedon was declared (c 476) invalid by the emperor Later, Emperor Zeno, bowing to the storm of protest, issued the *Henotikon* (482) in an attempt, based on the doctrines of St CYRIL of Alexandria, to compose the dispute with a formula which, ostensibly orthodox, left a loophole for the Monophysites Neither side was satisfied; the extreme Monophysites refused to accept the intended compromise, and the pope excommunicated the East for abrogating the Council of Chalcedon The schism ended in 519 when Emperor Justin I enforced the creed of Chalcedon Later, Justinian, although strongly Catholic, was tolerant toward the Monophysites, who were becoming more intransigent In the 6th cent , Monophysitism became the dominant faith in Syria, Egypt, and Armenia, and the Chalcedonian creed became more firmly established in the West. The quarrel, growing deeper, was further embittered when Justinian in 544 pronounced anathema upon the Three Chapters. These were the person and writings of THEODORE OF MOPSUESTIA, the writings of THEODORET against St. Cyril of Alexandria, and the letters of Ibas of Edessa to Maris the Persian. The anathema was based on the grounds that they were all tinctured with Nestorianism. Since many of these writings were considered orthodox by the majority of Catholics, the edict was confusing The vacillating attitude of Pope VIGILIUS and Justinian's control of the empire procured the convocation of the Second Council of Constantinople (553), which condemned the Three Chapters without prejudice to the canons of Chalcedon. The Monophysites remained aloof, and the West was virtually alienated Justinian's successors alternately favored and oppressed Monophysitism, but by 600 permanent schism had set in, the COPTIC CHURCH, the JACOBITE CHURCH of Syria, and the ARMENIAN CHURCH were established MONOTHELETISM was a 7th-century attempt to reconcile orthodoxy with Monophysitism

monoplane see AIRPLANE

monopoly (munŏ'pulē). When the supply of a product is controlled so that purchasers cannot buy it elsewhere and are forced to meet the terms of sale laid down by the owner, a monopoly exists Governments have often created this situation by laws excluding competition from an industry, thus operating a public monopoly These usually exist in areas of "natural monopoly," where the conditions of the market make unified control necessary in the public interest Government monopolies are not primarily operated for a profit but as a public service, such as the postal system SOCIALISM has advocated the extension of this principle to all vital industries, e g , coal and steel, which have an immediate effect on the general welfare of the economy Private monopolies are often constructed in a different manner In Europe, a CARTEL often controls the entire marketing and production of a commodity, but in the United States, monopoly is achieved by the merger of several corporations, by interlocking directorates, or by agreements among members of an industry which restrain price competition In history, monopoly has often been the source of oppression Pharaoh controlled food, and in England exclusive grants were made to court favorites until Parliament curtailed the practice in 1624 during the reign of James I In modern times, the tremendously increased production and fierce competition brought about by the Industrial Revolution gave rise to many monopoly agreements The U S government has attempted to remedy this situation by making monopoly illegal under antitrust laws, thus guaranteeing that price will be determined by market value rather than by arbitrary contracts among corporations The government still grants monopolies in the form of patents and copyrights to encourage the arts and sciences, but these are of a temporary nature See Vernon Mund, *Monopoly* (1934), Thurman Arnold, *The Folklore of Capitalism* (1937), W. H Hamilton, *Patterns of Competition* (1940); Edward Chamberlin, *Theory of Monopolistic Competition* (4th ed , 1942)

monotheism (mŏ'nuthēĭzm) [Gr ,=belief in one God], a belief in one god The term is applied par excellence to three religions, JUDAISM, CHRISTIANITY, and ISLAM In general the term is nonphilosophical, the word THEISM being used in metaphysics for the idea of one god ZOROASTRIANISM in its early stages was monotheistic, and Greek religion in its later stages became monotheistic The rationalism of the deists is not considered monotheism on the basis that it is not religious See also GOD

Monotheletism or **Monothelitism** (both munŏ'thĭlĭt"ĭzm) [Gr ,=one will], 7th-century opinion condemned as heretical by the Third Council of Constantinople in 680 (see CONSTANTINOPLE, THIRD COUNCIL OF) This doctrine, by declaring that Christ operated with but one will, although he had two natures, opposed the intent of the Council of Chalcedon Monotheletism was first proposed in 622 and was immediately adopted by the Emperor HERACLIUS I, for political reasons, as a compromise between MONOPHYSITISM and orthodoxy The Eastern hierarchy, while doubtful of the dogma, tended to support Heraclius In 631 Cyrus of Phasis, patriarch of Alexandria, promulgated a Monothelite thesis, which was opposed by Sophronius, a Palestinian monk (later patriarch of Jerusalem) At Sophronius' behest, Sergius, patriarch of Constantinople, wrote to Pope HONORIUS I for advice The pope replied with a letter which apparently supported one will, but forbade further discussion of the question Soon afterwards (638) Heraclius published the *Ecthesis*, which defined Monotheletism as the official imperial form of Christianity When the *Ecthesis* arrived in Rome, Pope Severinus, Honorius' successor, immediately condemned it, *ex cathedra* Heraclius, before he died, disclaimed the *Ecthesis* and attributed it to Sergius Heraclius' successors, Constantine III and Constans II, however, continued to enforce the heresy Popes John IV and Theodore I anathematized Monotheletism, but they could do little in face of imperial support Constans II withdrew the *Ecthesis* and promulgated instead the *Typus*, a decree flatly forbidding the mention of one will or two wills or one energy or two energies in the Second Person. The *Typus* was favorable to the Monophysitism established in the empire, but would have silenced the orthodox The *Typus* was intended to make peace, but it brought on the crisis of the controversy In 649 Pope St. MARTIN I convened a Lateran Council to condemn Monotheletism and was subsequently seized by the emperor, imprisoned, and exiled. ST MAXIMUS was the most vigorous opponent of Monotheletism The accession of Constantine IV to the imperial throne brought toleration for the Catholics After the Council at Constantinople, in 680, Monotheletism died out except among the Maronites in Syria There was a brief revival of imperial Monotheletism in 711–13 This, the last of the Christological controversies, enhanced the prestige of the papacy, which took the lead in opposing official imperial heresy

monotype (mŏ'nutīp) [Greek *mono*=one], trade name of a machine, invented by Tolbert LANSTON, for casting and setting type for printing It was first patented in 1887 and was first produced commercially in 1897 Unlike the LINOTYPE and the INTERTYPE, which cast each line of type as one slug, the monotype makes each character separately, assembling the characters as in hand composition, for which the monotype characters can be used The machine consists of two distinct units The keyboard unit, resembling a typewriter, punches holes in a roll of paper This roll, similar to that of a player piano, is taken to the casting unit of the machine, where the holes in the roll of paper govern the casting and assembling of the type

Monreale (mōnrĕā'lā), town (pop 14,340), NW Sicily, Italy, 4 mi SW of Palermo It commands a magnificent view over the Conca d'Oro with its orange, lemon, and olive groves Here is the famous cathedral founded by William II of Sicily in 1174, one of the masterpieces of Norman-Sicilian architecture. It is entirely decorated with Byzantine mosaics on a golden background and has fine bronze doors Near by is a lovely cloister with 216 twin columns and an Arabian fountain

Monro, Harold, 1879–1932, English poet, b. Belgium, grad Cambridge, 1901 He devoted his life to poetry, founding the *Poetry Review* (1911), which soon failed, and the Poetry Bookshop (1912), devoted exclusively to poetry, drama, and related subjects Thus became a refuge and intellectual center for poets The journal *Poetry and Drama* (1913) was discontinued during the First World War, but Monro republished it as *Chapbook* (1919–25) These periodicals had great influence on the poetical work of the time His own work includes *Poems* (1906) and *Elm Angel* (1930) His *Collected Poems* (1933), edited by his wife, contains biographical and critical material

Monroe, Harriet, 1860–1936, American editor, critic, and poet, b Chicago In 1892 she wrote "The Columbian Ode" for the Chicago exposition of 1893 A landmark in American literary history was her founding in 1912 of *Poetry a Magazine of Verse*, which paid and encouraged both established and new poets In its pages Miss Monroe, as editor, introduced to American readers such writers as Carl Sandburg, Rabindranath Tagore, Vachel Lindsay, Rupert Brooke, and Robert Frost Publication in the magazine came to be an accolade for young poets More important than her own volumes of poetry were her essays *Poets and Their Art* (1926, rev ed , 1933), the anthologies she compiled with Alice Corbin Henderson, *The New Poetry* (1917, enl eds , 1926, 1932), and her autobiography, *A Poet's Life* (1938) She died at Arequipa, Peru, returning from a meeting of writers in Buenos Aires

Monroe, James, 1758–1831, 5th President of the United States (1817–25), b Westmoreland co., Va Leaving William and Mary College in 1776 to fight in the American Revolution, he served the patriot cause well but did not achieve particular distinction as a soldier Afterward he studied law (1780–83) under Thomas Jefferson, and the friendship that sprang up was the foundation stone of Monroe's political career He was elected to the Virginia legislature in 1782 and the next year to the Continental Congress under the Confederation. In 1786 he returned to Virginia politics Not only was he not sent to the Federal Constitutional Convention but in his own state he supported Patrick Henry in opposing the Constitution, which seemed to him to create a government so centralized that it encroached on states' rights Under the new government he served (1790–94) in the U S Senate, where he proved himself an outstanding lieutenant of Jefferson and a violent assailant of George Washington, Alexander Hamilton, and the Federalists Appointed (1794) minister to France in the hope that his Francophile sympathies would smooth the ruffled relations between the two nations, he found his efforts thwarted by French anger over Jay's Treaty He was recalled in 1796 in the midst of wrangles between the Federalists and the Jeffersonians. Monroe was governor of Virginia from 1799 to 1802, and in that time the election of 1800 gave the Jeffersonians national power Sent in 1802 by President Jefferson to France as a special envoy, he assisted Robert R Livingston in negotiating the LOUISIANA PURCHASE In Spain he aided Charles Pinckney in the

unsuccessful negotiations with the Spanish government. A mission to England was even more disastrous He and William Pinkney struggled to arrive at a commercial treaty to end the troubles between Great Britain and the United States over shipping, but they could get no concessions, and Jefferson did not even submit the treaty they drafted (1806) to the Senate for approval In 1808 Monroe made a bid for the presidential nomination and thus alienated James Madison, but the estrangement ended shortly, and Monroe, after serving again as governor of Virginia, was Madison's Secretary of State (1811–17) and was prominent in the days of the War of 1812 For a time he was also Secretary of War (1814–15) after the dismissal of John Armstrong In 1816 he obtained the presidential nomination and was easily elected So firm was the hold of the Democratic Republicans (see DEMOCRATIC PARTY) in this 'era of good feeling" that in the 1820 election Monroe lost only one vote in the electoral college when he was reelected. The good feeling was, however, only apparent, political forces were dividing as Andrew Jackson gained followers and prepared for the peaceful revolution of Jacksonian democracy that was to come later Monroe's two administrations saw the young nation stretch its muscles and become adult Pioneers were going westward in great numbers, and the Middle West was becoming a solid part of the republic The first serious struggle over the question of slavery in the territories was composed by the MISSOURI COMPROMISE The United States asserted its right to a place among the nations of the world by the MONROE DOCTRINE, which was as much the work of Monroe's Secretary of State, John Quincy Adams, as that of the President himself The Florida question was resolved, and U S ownership was confirmed by the campaigns of Andrew Jackson The boundary question with Canada was settled The remarkable experiment of the American Colonization Society in settling Liberia was undertaken with Monroe's blessing, and Monrovia was named for him In the exciting election of 1824 Adams was chosen as Monroe's successor when Henry Clay supported him against Andrew Jackson Monroe at the end of his term retired to his estate, "Oak Hill," near Leesburg, Va (to which he had moved in 1820 from "Ash Lawn" near Charlottesville) He died on a visit to New York His writings were edited by S M Hamilton (7 vols , 1898–1903) See biographies by Daniel C Gilman (1883), George Morgan (1921), and W P Cresson (1946), B W Bond, *The Monroe Mission to France* (1907), Arthur Tryon, *The Last of the Cocked Hats* (1946)

Monroe, Paul, 1869–1947, American educator, b. North Madison, Ind , grad Franklin College, 1890, Ph D , Univ of Chicago, 1897 At Teachers College, Columbia, he was professor of education from 1902 until his retirement in 1938 and director of the School of Education from 1915 to 1923 and of the International Institute after 1923 In 1932 he became president of Robert College and of the American College for Girls, Istanbul Monroe made school surveys in the Philippine Islands, Puerto Rico, and Iraq He edited the *Cyclopedia of Education* and *Principles of Secondary Education* (1914) and wrote *China, a Nation in Evolution* (1928) and several works on education, including *Founding of the American Public School System* (1940)

Monroe. 1 Rural town (pop 1,728), SW Conn , N of Bridgeport, settled c 1755, inc 1823 **2** City (pop 4,168), co seat of Walton co , N central Ga , E of Atlanta, inc 1821 Monroe is a trade and processing center (with cotton mills) in a cotton and truck area It has some fine old houses in classic revival style **3** Town (pop 1,015), central Iowa, E of Des Moines, a Dutch community laid out 1851 **4** Industrial city (pop 28,309), parish seat of Ouachita parish, N La , on the Ouachita river between the lowland cotton country and the hilly western cattle land The first settlers founded Fort Miro c 1785 It was renamed in 1819, incorporated in 1820, and incorporated as a city in 1900 The greatest period of growth came after 1916, when natural gas was discovered in the area Carbon-black manufacture, paper mills, and railroad shops are also important A state junior college and a training school for boys are here **5** City (pop 18,478), co seat of Monroe co., SE Mich , on Lake Erie at the mouth of the Raisin and SW of Detroit, settled c 1780, inc 1837 Its chief manufactures are paper and automobile parts, there are limestone quarries near The city has large nurseries and is the shipping point for a farm region St Mary's Convent and Academy is here Monroe was the scene of the RAISIN river massacre during the War of 1812 and the center of the "Toledo War" (see TOLEDO, Ohio). A statue by E C Potter commemorates George A Custer, who lived here Indian trails crossed this site, and numerous Indian relics have been found in the vicinity Near the piers are beds of Egyptian lotus **6** Resort village (pop 1,616), SE N Y , in hilly country SW of Newburgh, inc 1894 Iron products are made **7** City (pop 6,475), co seat of Union co., S N C , SE of Charlotte, settled 1751, inc. 1844 It is a trade and manufacturing center for an area producing lumber and cotton **8** City (pop 1,292, alt. 5,380 ft), S central Utah, in the Sevier river valley S of Richfield, in a livestock and orchard area, settled 1863, inc 1926 **9** Town (pop 1,590), NW Wash , on the Skykomish river and NE of Seattle It has lumber and food industries A state reformatory is here **10** City (pop 6,182), co seat of Green co , S Wis , SW of Madison, in a dairy region, inc as a village 1859, as a city 1882 Its inhabitants are largely of Swiss descent The city is a cheese center, especially of Swiss and Limburger An annual cheese fair is held

Monroe, Fort, at Old Point Comfort, Va , commanding the entrance to Chesapeake Bay and Hampton Roads It is on the site of earlier fortifications built in the 17th and 18th cent The present fort was erected by the Federal government (1819–34) and named for President Monroe It was held by the Union throughout the Civil War, and Jefferson Davis was imprisoned (1865–67) here Long a U.S army coast artillery post and school, Fort Monroe became headquarters of the U S army field forces in 1946

Monroe, Mount: see PRESIDENTIAL RANGE

Monroe City, city (pop 1,978), NE Mo , WSW of Hannibal, in a farm area, founded 1857, inc 1869 Mark Twain's birthplace and Mark Twain State Park are at near-by Florida

Monroe Doctrine, dual principle of American foreign policy enunciated in President Monroe's message to Congress, Dec 2, 1823 The doctrine grew out of two diplomatic problems The first was the minor clash with Russia concerning the northwest coast of North America In this quarrel, Secretary of State John Quincy Adams in a note to Monroe expressed the principle that the American continents were not to be considered any longer as a field for colonization by European powers This was incorporated verbatim in the presidential message The other and more important part of the doctrine grew out of the fear that the group of reactionary European governments commonly called the HOLY ALLIANCE would seek to conquer and reduce again to colonial status the Latin American states that had recently revolted from Spain The United States had just recognized the independence of those states, and Great Britain did not care to lose the markets of Latin America The British foreign minister, Canning, proposed to the United States that a joint note of protest be sent by the two governments In a conference on the subject Adams strongly opposed a joint note with Britain The presidential message, therefore, announced that the United States would not interfere in European affairs but would view with displeasure an attempt by the European powers to subject the nations of the New World to their political systems Thus in a sense the Monroe Doctrine as the dual principle (no colonization and no intervention by European states in the Americas) was complementary to the old Washington policy of no interference in European affairs The doctrine was not ratified by any congressional legislation The European nations regarded its pronouncement as unwarranted and deliberately provoking It did not obtain a place in international law Yet it became important in American policy, particularly when President Polk reasserted it in 1845 and 1848 with respect to the disturbances over Texas and Oregon and the aspirations of European nations in Yucatan Later the strained relations with Great Britain concerning Central America in the 1850s brought a new American expression of the doctrine, Great Britain specifically denied its validity The most important question involving the doctrine in the years that followed was the French intervention in Mexico and the establishment of the empire of MAXIMILIAN Under U S Grant and his successors the doctrine was expanded It was asserted that the transference of American territory from one European power to another would also be viewed with hostility by the United States As imperialistic tendencies appeared in the United States, the Monroe Doctrine came to be associated not only with the exclusion of European (now extended to all non-American) powers from the Americas, but also with the hegemony of the United States This condition explains why the Monroe Doctrine, though it was not formally used to justify American intervention, came to be viewed with suspicion and dislike by Latin American nations The expanding designs of the United States to exercise police power in the New World appeared in the VENEZUELA BOUNDARY DISPUTE, in the VENEZUELA CLAIMS question, and in the Spanish-American War In 1904 Theodore ROOSEVELT expounded the so-called Roosevelt Corollary to the doctrine, saying that continued misconduct or continued disturbance in a Latin American country might force the United States to intervene in order to prevent European intervention This frankly imperialistic interpretation met much resistance in Latin America, and later Presidents tended to move away from it The doctrine was so deeply imbedded in U S foreign policy that Woodrow Wilson asked for a special exception for it in the Covenant of the League of Nations In later years the doctrine received much less stress. The imperialistic aspect began to disappear notably after the appointment of Dwight W. Morrow as ambassador to Mexico in 1927 and was dissolved altogether in the administration of F D Roosevelt with its "good neighbor" policy. See D. Y. Thomas, *One Hundred Years of the Monroe Doctrine* (1923), Alejandro Alvarez, *The Monroe Doctrine* (1924), Phillips Bradley, *A Bibliography of the Monroe Doctrine* (1929), Dexter Perkins, *The Monroe Doctrine* (covering 1823–1907 by periods in 3 vols , 1927, 1933, 1937), S. F. Bemis, *John Quincy Adams and the Foundations of American Foreign Policy* (1949)

Monroeville. 1 Town (pop 1,724), co seat of Monroe co , SW Ala , near the Alabama river and NNE of Mobile, settled c 1815 It is a trade center for a farm area noted for its hogs **2** Village (pop 1,173), N Ohio, S of Sandusky Stock and poultry feeds and pottery are made here

Monrovia (mŭnrō'vēă) [for President James Monroe], city (pop c 12,000), capital of Liberia, a port on the Atlantic at the mouth of the St Paul river It was founded in 1822 by the American Colonization Society as a haven for ex-slaves from the United States Descendants of those early settlers are still dominant in the town The survival of Monrovia in early years was due mainly to the efforts of Jehudi Ashmeen and Ralph Gurley The port in a hot rainy climate with poor harbor facilities did not thrive in the 19th cent In the Second World War, U S forces undertook improvements, and a deep-water harbor was opened in 1948 New plans to exploit the wealth of Liberia may enhance the city

Monrovia, city (1940 pop 12,807, 1947 special census pop 18,011), S Calif , NE of Los Angeles; laid out 1886, inc 1887 Citrus-fruit growing and packing are important industries

Mons (mônz, Fr môs), Flemish *Bergen* (bĕr'khu), city (pop 24,900), capital of Hainaut prov , SW Belgium At the junction of the Condé-Mons Canal and the Canal du Centre—two important inland waterways—it is the processing and shipping center for the Borinage coal-mining district, Mentioned from the 7th cent , Mons became (9th cent) the seat of the counts of Hainaut In the wars of the 16th, 17th, and 18th cent it was repeatedly attacked and occupied by Dutch, Spanish and French forces In the First World War, Mons was the scene (1914) of the first battle between the British and the Germans, the British were forced to retreat At the end of the war (1918) Mons was again on the line of battle The city has preserved a 12th-century castle chapel and a 15th-century town hall It is the scene of an annual pageant and festival of St George

Monserrat, Spain see MONTSERRAT

Monson 1 Town (pop 977), central Maine, NW of Dover-Foxcroft, settled 1818, inc 1822 Monson is noted for its slate quarries **2** Town (pop 5 597), S Mass , E of Springfield, settled 1715, set off from Brimfield 1760. It has granite quarries and textile mills

monsoon (mŏnsōōn') [Arabic, =season], a WIND which changes direction with change of season Use of the term is generally restricted to the monsoons of INDIA, although monsoonal winds also develop, but to a lesser degree, in the Spanish peninsula in portions of Africa, in Australia, in China, and in the United States in Texas The winter monsoon of India is largely the result of the area of high pressure which at that time develops in S Siberia From this area, dry winds blow spirally outward, crossing India in a general northeast to southwest direction The wet or summer monsoon is caused by the area of low pressure that develops in S Asia as the sun moves" northward The moisture-laden air from over the Indian Ocean rushes toward this center of low pressure As it ascends the slopes of the Himalayas, it is cooled by expansion, clouds form, and heavy rains result When shipping was confined to sailboats, mariners regulated their schedule of voyages by the monsoons

Mont, Pol de (Karel Maria Polydoor de Mont) (pôl' du mô', kä'rul marē'ä pôlĭdôr'), 1857–1931, Flemish poet and critic He was curator (1904–19) of the museum of fine arts at Antwerp In his art criticism he defended modern tendencies, and in letters he worked for the Flemish revival He wrote lyrics and short stories Some of his poems are translated in Jethro Bithell, *Contemporary Flemish Poetry* (1917)

Montagu, Elizabeth Robinson, 1720–1800, English lady noted for her wit and beauty, "queen of the BLUESTOCKINGS" Her home was frequented by Johnson, Walpole, Burke, Reynolds, and other eminent men She wrote *An Essay on the Writings and Genius of Shakespear* (1769), defending the bard against Voltaire's condemnation She also conducted a voluminous correspondence, which was edited in part by E J Climenson (1906) and in part by Reginald Blunt (1923)

Montagu, John: see SANDWICH, JOHN MONTAGU, 4TH EARL OF

Montagu, Lady Mary Wortley, 1689–1762, English wit and letter writer, b London, daughter of the duke of Kingston She married Edward Wortley Montagu, from 1716 to 1718 ambassador to Turkey, and her letters from Constantinople are among her best On her return to England she worked to educate the public in the use of inoculation against smallpox Pope, who had been her friend, later attacked her viciously in his satires In 1739 Lady Mary separated amicably from her husband and lived in France and Italy, a long series of letters to her daughter, Lady Bute, resulted Her *Town Eclogues* (1747) was first published by Edmund Curll in a pirated edition entitled *Court Poems by a Lady of Quality* (1716) Her letters, witty and informative, appeared first in 1763 and in many editions since See studies by Lewis Melville (1925), Iris Barry (1928), and Lewis Gibbs (1949)

Montague, Charles Edward, 1867–1928, English journalist and author, b London, grad Oxford, 1887 He joined the staff of the Manchester *Guardian* in 1890, remaining until his retirement in 1925 except for service (1914–19) in the First World War, as a private and later as an intelligence officer His war experience is reflected in his antiwar essays and novels Among his best-known works are *A Hind Let Loose* (1910), *Dramenchantment* (1922), *Fiery Particles* (1923), *The Right Place* (1924), essays, *Rough Justice* (1926), and *Right off the Map* (1927)

Montague, William Pepperell, 1873–, American philosopher, b Chelsea, Mass, grad Harvard (B A, 1896, Ph D, 1898) In 1903 he entered the department of philosophy at Barnard, where he remained, with brief absences, until his retirement as professor emeritus in 1947 His philosophic system has been developed in relation to scientific discoveries, particularly in terms of mechanics His works include *The Ways of Knowing, or, The Methods of Philosophy* (1925), *Belief Unbound* (1930), and *The Ways of Things* (1940)

Montague (mŏn'tŭgū) **1** Town (pop 7,582), N Mass, SE of Greenfield, settled 1715, set off from Sunderland 1754 Turners Falls village, in the town, was the site of the first dam across the Connecticut The town has a large hydroelectric plant and varied industries **2** Resort city (pop 1,099), S Mich, at the head of White Lake, near Lake Michigan and N of Muskegon, inc as a village 1883, as a city 1935 A shipping center, it has a foundry and fisheries Indian mounds are near

Montaigne, Michel Eyquem, seigneur de (môntān', Fr mēshĕl' ākĕm' sānyûr' du môtĕn'yu), 1533–92, French essayist Born at the Château of Montaigne in Périgord, he was the son of a rich Catholic father and a Protestant mother of a Portuguese Jewish family and was destined for a life of comfort and honor He studied for the law, held a magistracy until 1570, and was (1581–85) mayor of Bordeaux From 1571 he lived mostly in a rural retreat, aloof from the political and religious quarrels of France This attitude of judicious neutrality toward life is reflected in his immortal *Essais* (1st ed, 1580, 1st complete ed, 1595), which with irony, humor, and a spontaneously flowing style incorporate wise judgments on all human affairs They are generally considered the finest examples of the ESSAY ever written These rambling collections of personal observations mirror charmingly the author's egocentric and gently skeptical views, succinctly expressed in his phrase, "Que sais-je?" [what do I know?] Few other French works have been so widely read abroad, and perhaps none has had such influence on English literature Especially famous essays are "On Friendship," commemorating the author's relationship with Étienne de la Boétie (d 1563), the skeptical "Apologie de Raimond Sebond," taking its name from the work of a Catalan theologian which Montaigne had translated (1569), and "On Books," giving some account of Montaigne's reading The old standard translation of the *Essais* was that of John Florio, there have been several recent translations, among them those of E J Trechmann (1927), Jacob Zeitlin (1934–36), and George B Ives (1947). Autobiographical excerpts edited by Marvin Lowenthal appeared in 1935 E J Trechmann translated *The Diary of Montaigne's Journey to Italy in 1580 and 1581* (1929) See studies by M E Lowndes (1898), R W Bond (1907), and André Gide (Eng tr, 1933), Donald W Frame, *Montaigne in France* (1940)

Montale, Eugenio (ā'ōjā'nyō mōntä'lā), 1896–, Italian poet and critic After serving in the First World War he was an editor and later was chief librarian of the Gabinetto Vieusseux library in Florence, retaining the post until the outbreak of the Second World War His poetry attempts to reconcile external and internal experience and has been superficially compared to that of T S Eliot His two volumes are *Ossi di seppia* (1925) and *Le occasioni* (1940) Translations of them have appeared in American and English literary journals, as have his critical writings

Montalembert, Charles Forbes René de Tryon, comte de (shärl' fôrbz' runä' du trē'ō' kôt' du môtälĕbĕr'), 1810–70, French statesman and writer, b London His mother came of an old Scottish family After much travel he went to PARIS (1830), where he became associated with LACORDAIRE and LAMENNAIS in the Catholic liberal movement, notably in editing the *Avenir* He submitted to the papal condemnation of the journal (1832) and turned to a study of ecclesiastical history, writing a life (1836) of St Elizabeth of Hungary The year before he had begun his legislative career and was always a leader in the movement for civil liberty and the freedom of the Church He was a celebrated orator As a member of the chamber of peers he sat in the constituent assembly of 1848 and was an enthusiastic republican He ceased to support Louis Napoleon after his coup d'état (1851) and was the chief (often the only) figure in the early public liberal opposition to the emperor (1852–57) His great ambition was to make liberalism a characteristic of Catholicism He opposed beforehand the enunciation of the dogma of papal infallibility, but later accepted it Montalembert's principal (though incomplete) work still invaluable, is *Les Moines de l'occident* (7 vols, 1860–77, Eng tr, *Monks of the West*, 7 vols, 1861–79)

Montalembert, Marc René, marquis de (märk' runä' märk' dŭ mōtälĕbĕr'), 1714–1800, French military engineer He continued the theories of Vauban and favored erecting chains of detached forts around a citadel, creating the effect of an entrenched camp with massed fire power In the French Revolution he emigrated but responded when Lazare Carnot summoned him back for service to the nation

Montalván, Juan Pérez de: see PÉREZ DE MONTALVÁN, JUAN

Montana (mŏntă'nu), state (146,316 sq mi, 1940 pop 559,456, 1949 estimated pop 521,000), NW United States, in the Rocky Mt region, admitted 1889 as the 41st state HELENA is the capital, BUTTE is the largest city, and other places of importance are GREAT FALLS, BILLINGS, and MISSOULA The state lies on the northern border of the United States, south of the Canadian provinces of British Columbia, Alberta, and Saskatchewan Elsewhere Montana is bordered by North Dakota and South Dakota on the east, by Wyoming and Idaho on the south, and by Idaho on the west Much of the western boundary is marked by the crest of the lofty Bitterroot Range, and the complex chains of the Rockies dominate the western section with high granite peaks, green forests, blue lakes, and such natural wonders as those of GLACIER NATIONAL PARK The mountains have, however, offered more than massive beauty, for within and on the edge of the mountainous region are found the fabulous mineral deposits that have made Montana best known to the world—copper, silver, gold, zinc, lead, manganese, and sapphires The eastern part of the state is known, too, for its natural gas and petroleum, and there are vast coal deposits not yet really exploited Yet the Great Plains of the east have been perhaps more important for the high grass that once nourished roving herds of buffalo and later fed the cattle and sheep of huge ranches The plains were broken, too, for many acres of wheat, despite the dangers of drought Small farming has not flourished too well on the plains because of the lack of rain, and severe years have driven the farmers forth and made farming communities into ghost towns In the northwest corner of the state about the Flathead river system and around the Kootenai, small farming, aided by irrigation, has been more successful, and some of the mountain valleys are fertile The eastern region is drained by the Missouri, which begins effectively in Montana where the three forks join, and by its tributaries, the Milk, the Marias, the Sun, and especially the YELLOWSTONE Important today for hydroelectric development and for irrigation, the rivers were avenues of travel for the Indians (the Blackfoot, the Sioux, the Shoshone, the Arapaho, the Kootenai, the Cheyenne, the Flathead, and others) and for the early explorers of the country The first white men to cross the northern plains were probably two Frenchmen from Canada, Pierre and François Gaultier, but the region was not really known until after most of Montana had passed to the United States with the LOUISIANA PURCHASE (1803) The LEWIS AND CLARK EXPEDITION passed westward across Montana in 1805, and in that same year the fur traders arrived François Antoine Laroque and his North West Fur Company men from Canada explored the Yellowstone In 1807 the first trading post in Montana (at the mouth of the Bighorn) was established by the men of Manuel Lisa, coming up the Missouri from St Louis For some years both the Canadian and the American traders opened the territory David THOMPSON of the North West Company built several posts in NW Montana between 1807 and 1812, and beaver in the mountain streams and lakes attracted Andrew Henry and the later MOUNTAIN MEN The American Fur Company with its posts on the Missouri dominated the later years of fur trade, which diminished in the 1840s Montana was still a wilderness of forest and grass, with a few trading posts and some missions established by such stalwart men as Father P J DE SMET Settlers were then swarming to the Oregon country and later to the gold fields of California, but Montana saw only a few of these transients FORT BENTON at the head of navigation on the Missouri did rise to prominence as an inland port Between 1859 and 1863 Capt John Mullan built a wagon road from Fort Benton across the Rockies to Walla Walla, Wash, but the Indians menaced the travel of white men across the land, and it was only in the time of the Civil War that Montana began to grow The first growth was the rapid, boisterous, and unstable expansion of a gold rush The discovery of gold brought gold seekers to mushrooming camps at Bannack (1862) and Virginia City (1864) Crude shanty towns were built with the dominant saloons and dance halls, evanescent settlements as colorful and perhaps even more lawless than earlier camps in California The Federal government, partly to provide some sort of order, set Montana off as a territory in 1864, but the experiences of the first governors, Sidney Edgerton who had to flee, and Thomas Francis MEAGHER who died mysteriously, showed that law and order did not come easily to Montana, where Northern and Southern sympathizers among the miners were fighting the Civil War in their own way After the war the grasslands attracted ranchers, the first cattle were brought in from Texas over the Bozeman Trail in 1866 Yet it was not until after the Sioux Wars were ended that ranching was safe, for the Sioux did not tamely submit to having their land taken from them and in 1876 at the battle of the Little Bighorn won one of the greatest of all Indian victories in annihilating George A CUSTER and his force They were, however, subdued, and the gallant venture of Chief JOSEPH of the Nez Percé had its pitiful end in Montana The great ranches spread out across the plains and cow towns that were to grow to cities such as Billings and Missoula sprang up as the railroads were driven westward Mining continued to dominate Montana The discovery of silver at Butte (1875) was followed (c 1880) by discovery of copper at that "richest hill on earth" Montana's fate was thereafter linked to copper, and ANACONDA became a household word The Titans of the mines, Marcus DALY and William A CLARK, contested bitterly not only for ownership of the deposits but for political control, and their rivalry was fought out by the miners with actual bloodshed F Augustus HEINZE also entered the scramble for the copper, but his brilliant promotional schemes came to nothing, and ultimately one big company (the Amalgamated, later the Anaconda) ruled triumphant, exercising some control over state affairs as well as over its private interests There were struggles between the company and the workingmen that led to bloodshed and disorder but led also to some early measures for social security The dwellers in the rough mining towns have been peculiarly dependent on the general economy, for their very living is conditioned on the market price of copper The mines have, however, contributed a very large percentage of the state's wealth The ranches after the coming of the railroad suffered from the "wheat boom" fostered by James J Hill and other railroad men for the development of the lands of E Montana Farmers were brought out by the trainload and hopefully sowed grain in the second decade of the 20th cent The yield of wheat was great and the golden promises seemed fulfilled, but not for long The great drought of 1919 and the consequent dust storms seared the fields, and in the 1920s the farms began to disappear as rapidly as they had come By the time of the great national depression in 1929 Montana was already accustomed to depression In the 1930s and 1940s the population of the state continued to shrink Vigorous measures were taken for planning and resettlement Federal projects for dams and for irrigation —on the Missouri itself and on the Yellowstone, the Marias, the Sun, and elsewhere—had opened many acres to cultivation by the late 1940s Grazing lands have also been subjected to planned use. Hydroelectric water power is being developed, and the demand for copper in the Second World War helped to restore balance to an economy that still has some of the vigorous characteristics of a frontier society. The chief state institutions of higher

learning are included in the system called the Univ of Montana. See C. B Glasscock, *The War of the Copper Kings* (1935); C. P Connolly, *The Devil Learns to Vote* (1938), Federal Writers' Project, *Montana* (1939), N C Abbott, *Montana in the Making* (1939), M G. Burlingame, *The Montana Frontier* (1942), J. K Howard, *Montana, High, Wide, and Handsome* (1943)

Montana, University of, the state system of higher education constituted 1913, with headquarters at Helena, under the executive control of a chancellor It comprises six units Montana State Univ (coeducational, chartered 1893), at Missoula, with a college of arts and sciences, schools of business administration, education, forestry, journalism, law, music, and pharmacy, a biological station (at Flathead Lake), and a state forestry experiment station; Montana State College (1893), at Bozeman, with divisions of agriculture, engineering, household and industrial arts, and science, Montana School of Mines (1893), at Butte, with the state bureau of mines and geology, Montana State Normal College (1893), at Dillon, Eastern Montana State Normal School (1925), at Billings, and Northern Montana College (junior, 1913), at Havre

Montañes, Juan Martínez (hwän' märtē'nĕth môntän'yĕs), c.1568–1649, Spanish sculptor, justly famous for his polychrome figures in wood Most of his work was done for the churches and convents of Seville, where it still remains He is best known for his beautiful and naturalistic interpretations of the Crucifixion and of the Immaculate Conception A portrait of Montañes by Velázquez is in the Prado

Montanism (môn'tunĭzm), enthusiastic Christian movement of the 2d cent It arose in Phrygia (c.172) under the leadership of a certain Montanus and two prophetesses, whose entranced utterances were deemed oracles of the Holy Ghost Because they had an instant expectation of Judgment Day they encouraged ecstatic prophesying and severe asceticism. They believed that a Christian fallen from grace could never be redeemed, in opposition to the Catholic view that, since the sinner's contrition restored him to grace, the Church must receive him again Montanism antagonized the Church because the sect claimed a superior sanctity arising from divine inspiration. Whereas Catholics were permitted to flee persecution, Montanists were told to seek it When the Montanists began to set up a hierarchy of their own, the Catholic leaders, fearing the loss of the cohesion characteristic of persecuted CHRISTIANITY, denounced the movement Even the great TERTULLIAN could not save Montanism, and it died as a sect (c 220), except in isolated areas of Phrygia, where it continued to the 7th cent But the puristic anti-intellectual movement had many descendants—NOVATIAN, DONATISM, the CATHARI, and even SWEDENBORG and Edward IRVING

Montargis (môtärshē'), town (pop 13,529) Loiret dept, N central France, in Orléanais It is an agricultural market with paper mills and tanneries Once a royal residence, it has kept a medieval aspect The younger Mirabeau was born at the near-by Castle of Bignon For the story of the Dog of Montargis, see AUBRY DE MONTDIDIER.

Montauban (môtôbä'), city (pop 23,016), capital of Tarn-et-Garonne dept, S France The Tarn river is crossed here by a 14th-century bridge built of brick. Montauban was a stronghold of the Albigenses in the 13th cent and in the 16th cent became a Huguenot center The cathedral (17th–18th cent) contains a celebrated painting by INGRES, who was born here The city has textile mills.

Montauk Point (mŏn'tôk"), eastern extremity of the south peninsula of Long Island, SE N Y It has been the site of a lighthouse since 1795 The area is included in Montauk Point State Park

Montbéliard (môbälyar'), town (pop 13,596), Doubs dept, E France, on the Rhone-Rhine Canal It has manufactures of watches, hardware, and textiles With the surrounding countryside Montbéliard constituted after the 12th cent a county of the Holy Roman Empire The county passed (1397) to the counts (later dukes) of Württemberg, who held it, with interruptions, until the French Revolution As a result, Montbéliard accepted the Reformation Captured (1793) by the French, it was formally ceded to France by the Treaty of Lunéville (1801) The castle of the counts of Montbéliard was rebuilt in the 18th cent Cuvier was born here

Mont Blanc (mô blä'), Alpine massif, on the Franco-Italian border SE of Geneva Its highest point (15,772 ft) lies in France The southeastern (Italian) face is a massive wall, on the northwestern slopes are numerous glaciers, the largest of which (the MER DE GLACE) flows into the valley of CHAMONIX Mont Blanc was first ascended in 1786 by Dr. Michel Paccard of Chamonix and in 1787 by H B de SAUSSURE of Geneva. See Edward Whymper, *Chamonix and Mont Blanc* (1896)

Montcalm, Louis Joseph de, (môntkäm', Fr lwē' zhôzĕf' dŭ môkälm'), 1712–59, French general His name in fuller form was Louis Joseph de Montcalm-Gozon, marquis de Saint-Véran. A veteran of the War of the Polish Succession and the War of the Austrian Succession, he was sent (1756) to defend Canada in the French and Indian War. His position was subordinate to that of Vaudreuil, governor of New France, and protests to the home authorities against the dishonesty of the provincial administration and the evil consequences of divided command were without avail Montcalm's capture of Fort Ontario at Oswego (1756) restored control of Lake Ontario to France, and he besieged and captured (1757) Fort William Henry, on Lake George, but the victory was marred by the massacre of English prisoners by his Indian allies, although Montcalm finally restored order at the risk of his life In 1758 Montcalm concentrated a force of 3,800 at Ticonderoga and successfully withstood an attack by a large British force under Gen James Abercromby In 1759 Montcalm, still handicapped by Vaudreuil's interference, successfully defended Quebec against the siege of Gen James WOLFE until the strategy of the English effected an open engagement (see ABRAHAM, PLAINS OF) The British were victorious (Sept 13, 1759), but both Wolfe and Montcalm were killed A classic account is that of Francis Parkman, *Montcalm and Wolfe* (1884). For bibliography, see FRENCH AND INDIAN WARS See also biography by Thomas Chapais (1911), William Wood, *The Passing of New France* (1914), H R Casgrain, *Wolfe and Montcalm* (rev ed, 1926)

Montclair, residential town (pop 39,807), NE N J, NNW of Newark, called Cranetown (for Jasper Crane, who settled here in 1669) until incorporation in 1868 as Montclair It has a state teachers college (1908) and an art museum (1918) containing works of George Inness, who lived here

Mont-de-Marsan (mô"-dŭ-marsä'), town (pop 11,929), capital of Landes dept, SW France, in the LANDES of Gascony

Mont-Dore (mô-dôr'), town (pop. 2,165), Puy-de-Dôme dept, SE central France, in the Auvergne mts It is dominated by the Puy de Sancy (6,187 ft), highest peak of the Mont-Dore mountain group A thermal station frequented since Roman times for respiratory diseases, it is now also a winter sports center.

Monte Albán (môn'tā alban'), ancient city, c 7 mi from Oaxaca, SW Mexico, capital of the ZAPOTEC Monte Albán was built on an artificially leveled, rocky promontory above the Valley of Oaxaca Located around an enormous plaza c 1,000 ft long and 650 ft wide are long, low buildings (c 30 ft. high) set off by sunken courts and stairways The tombs, particularly Tomb 7, have yielded great archaeological treasure—jewelry of gold, copper, jade, rock crystal, obsidian, and turquoise mosaic and bone and wood carving showing elaborate religious symbolism Excavation was begun (1931) by the Mexican archaeologist, Alfonso Caso The Zapotec apparently had an advanced culture here c 200 B C and already were using the bar and dot system of numerals used by the Maya The final epoch (1300–1521), terminated by the Spanish Conquest, covers the ascendancy of the Mixtec, when the Zapotec were driven from Monte Albán and MITLA To this period belongs Tomb 7 A cultural link with the TOLTEC is evident.

Montebello (môntbĕ'lō), village (pop 1,266), S Que, on the Ottawa river ENE of Ottawa It is a summer resort in a lumbering and farming area Louis Joseph Papineau lived here after 1854

Montebello (môntbĕ'lō), city (1940 pop 8,016, 1950 special census pop 21,670), S Calif, SE of Los Angeles, inc 1920 Oil wells are within the city limits as well as in the surrounding region, and the area produces truck and flowers

Monte Carlo (mŏn"tē kär'lō, Fr môtä' karlō'), famous gambling resort (pop. c 7,967), principality of MONACO, on the Mediterranean on the French RIVIERA It is noted for its scenery and its fine villas and luxurious hotels. Thousands of visitors come here each year, attracted by its world-famous casino, and the gambling concession, granted in 1861, gives the principality most of its revenue
