Farnese, Ottavio: see FARNESE, family.

Farnese, Pierluigi: see FARNESE, family

Farnese Bull, sculptured group representing Zethus and Amphion, sons of Antiope, tying Dirce (who had ill-treated their mother) to an infuriated bull. The sculpture is generally considered to have been executed by Apollonius of Tralles and his brother Tauriscus in the 1st or 2d cent B C. A copy, formerly in the Farnese Palace, is in the National Museum at Naples

Farnese Hercules, marble statue, of the 1st cent B C It represents the hero with muscles exaggerated, leaning heavily upon his club, with the apples of Hesperides held in his right hand behind him It bears the inscription "Glycon, the Athenian, made it" Once in the Farnese Palace, it is now in the National Museum, Naples.

Farnese Palace, in Rome, designed by Antonio da Sangallo for Cardinal Alessandro Farnese (Pope Paul III). It was begun before 1514, and after the architect's death was continued by Michelangelo and was completed by Giacomo della Porta. Built of huge blocks plundered from the Colosseum and from the theater of Marcellus, it is one of the most magnificent palaces of Rome The great halls were decorated by Annibale Carracci and his pupils After the extinction of the Farnese family it passed by inheritance to the king of Naples Since 1874 it has housed the French embassy and the French school of archaeology of Rome; in 1937 it was leased to France for 99 years The once famous gallery of sculptures has been dispersed.

Farnesina (färnāzē'nä), villa in Rome, Italy, built (1508–11) by PERUZZI for the banker Agostino Chigi at the foot of the Janiculum on the right bank of the Tiber. One of the finest examples of Italian Renaissance architecture, it is famous for its frescoes by Raphael and his pupils It was long the residence of the Farnese family

Farnham, Eliza Woodson (Burhans) (fär'nŭm), 1815–64, American social worker, b Rensselaerville, N Y , wife of Thomas Jefferson Farnham As matron (1844–48) of the women's department at Sing Sing Prison, she used humane methods of treatment She also organized a society for the rehabilitation of destitute women The best known of her writings is *Woman and Her Era* (1864)

Farnham, Russel, 1784–1832, American fur trader, b Massachusetts He was a member of the sea expedition sent to found Astoria and made the journey on the *Tonquin*, sailing around Cape Horn When Astoria was sold to the British, Farnham set out to carry records and money (about $40,000) to the United States by crossing Asia and Europe His trip on foot across Siberia and Russia in 1814–16 was one of incredible difficulty, but after many adventures he reached Hamburg and ultimately America and delivered the records and funds to Astor He later served the American Fur Company as a trader in the upper Mississippi valley, where he and an older trader, Maurice Blondeau, got into trouble with the military in 1818 He proved capable and successful and later traded chiefly at Rock Island, where he was a partner of GEORGE DAVENPORT

Farnham, Thomas Jefferson, 1804–48, American pioneer, b Maine A lawyer of Peoria, Ill , he in 1839 led a small company westward over the Oregon Trail After visiting the Hawaiian Islands and California, he returned to Peoria, arriving in 1840 His *Travels in the Great Western Prairies* (1841) helped to stimulate emigration to the Oregon country He also wrote *Life and Adventures in California* (1846) His wife was the social worker Eliza Woodson (Burhans) Farnham

Farnham, town (pop 4,055), S Que , on the Yamaska river and E of St Johns It is a railroad and industrial center, with textile manufacturing, sugar refining, and dairying

Farnham, urban district (1931 pop 18,297, 1943 estimated pop 22,000), Surrey, England, on the Wey and SW of London, in a hop-producing region William Cobbett was born here There is a 17th-century castle of the bishops of Winchester Aldershot Camp is northeast of the town

Farnsworth, Philo Taylor, 1906–, American inventor, b Beaver, Utah, grad Brigham Young Univ , 1925. While still a boy he conceived of accomplishing television through the scanning of an image by fast-flying electrons In 1927 his working model was demonstrated at the Crocker Research Laboratory, San Francisco His "dissector tube" (called an Orthicon), like V K Zworykin's iconoscope, is a means of dividing an image into particles whose light values, when transmitted, are capable of being restored to form a replica of the original image Present-day equipment, both transmitting and receiving, employs principles which involve some of Farnsworth's inventions In 1938 he became research director of the Farnsworth Television and Radio Corp. See biography by George Everson (1949)

Farnworth, urban district (1931 pop 28,717, 1947 estimated pop 27,810), Lancashire, England, SE of Bolton It has cotton mills and makes chemicals, paint, soap, and textile machinery

Faro (fä'rō), town (pop 19,695), capital of Faro district and of Algarve prov , S Portugal A seaport, it exports fish, fruit (especially dried figs), and cork Important under Moorish domination, it was retaken in 1249

Faro, Swed. *Fårö* (fô'rû), island (40 sq mi , pop 1,321), N Gotland co , E Sweden, separated from Gotland by Faro Sound It has a lighthouse and there are ancient ruins.

faro (fâ'rō) [for *Pharaoh*, from an old French card design], gambling game played with a pack of 52 cards The dealer plays against each player individually The layout, or the cards of one suit, is painted on a specially made table, and a player may bet to win or lose on the layout in any of 21 different ways. The dealing is from a box and the cards are dealt by twos First played in France and England, faro was especially popular in American gambling houses in the 19th cent. See R. L. Frey, ed , *The New Complete Hoyle* (1947).

Faroe Islands: see FAEROE ISLANDS

Farouk I (fărōōk'), 1920–, king of Egypt, son and successor of Fuad I He returned to Egypt after Fuad's death in 1936 and, after a regency, acceded to the throne on July 29, 1937 His marriage to Queen Farida in 1938 was terminated by divorce in 1948. Farouk, a constitutional monarch, was frequently at odds with the WAFD, the largest Egyptian party.

Farquhar, George (fär'kŭr, -kwŭr), 1678–1707, British Restoration dramatist, b Londonderry, Ireland, educated at Trinity College, Dublin He acted on the Dublin stage, went to London (c 1697), procured an army commission, and had his first comedy, *Love and a Bottle*, produced in 1698 Other plays are *The Constant Couple* (1699), *Sir Harry Wildair* (1701), *The Stage Coach* (with Peter Motteux, 1704), and his masterpiece, *The Beaux' Stratagem* (1707), which had immediate and lasting success Farquhar excelled in easy, natural dialogue in his licentious, somewhat sentimental comedies See his complete works (ed by Charles Stonehill, 1930), Willard Connely, *Young George Farquhar* (1949)

Farr, William, 1807–83, English physician and statistician, founder of the English system of vital statistics He introduced tabulation methods which are still used and, through his statistical monographs, performed important services in indicating the incidence of disease and needed public-health measures *Vital Statistics*, a posthumous collection of his papers, was published in 1885

Farragut, David Glasgow (fă'rŭgut), 1801–70, American admiral, hero of the battles of New Orleans and Mobile Bay in the Civil War, b Stony Point, near Knoxville, Tenn Son of George Farragut, he was originally called James Glasgow Appointed a midshipman in 1810, he first served on the frigate *Essex*, commanded by David PORTER, his guardian, and bore himself well on that ship's famous cruise in the Pacific in the War of 1812 Farragut commanded his first vessel in Porter's Mosquito Fleet, which operated (1823–24) against the pirates in Gulf and Caribbean waters In the Mexican War he had minor commands on blockade duty The navy yard at Mare Island, Calif, was established by Farragut in 1854, and he was commandant there till 1858 On Virginia's secession Farragut, a Union sympathizer, moved from Norfolk, where he had made his home ashore, to Hastings-on-Hudson, N Y Yet his Southern connections placed him under suspicion, and not until Jan, 1862, did he receive an important assignment Then the Dept of the Navy, convinced of his loyalty, gave him command of the West Gulf Blockading Squadron, with orders to ascend the Mississippi and reduce New Orleans By April 18, 1862, his fleet, consisting of 17 vessels and a mortar flotilla under D D PORTER, was before Forts Jackson and St Philip, the defenses of the city, situated on opposite sides of the Mississippi about 40 mi from its mouth When the mortars failed to reduce the forts, Farragut decided to run by them This bold action was accomplished on April 24, with the loss of only three vessels The Confederate flotilla was then defeated in a hot engagement, and on April 25 Farragut anchored at New Orleans, now defenseless The forts surrendered on April 28, and on May 1 Union troops under Gen B F BUTLER entered the city For this victory at New Orleans, Farragut was made senior rear admiral of the navy His attempt to reduce Vicksburg in May–June, 1862, failed But in March, 1863, he successfully ran two ships past the batteries at Port Hudson and by thus controlling the Mississippi between that point and Vicksburg contributed to Grant's ultimate success in the VICKSBURG CAMPAIGN Farragut had succeeded in stifling Confederate blockade-running in the Gulf, except at its chief source, Mobile, and he moved on that port in 1864 Mobile Bay was strongly defended by Forts Gaines and Morgan, a double row of torpedoes (mines), and a Confederate flotilla commanded by Franklin BUCHANAN Farragut, disregarding the torpedoes, forced these defenses and defeated Buchanan for his crowning victory on Aug 5, 1864 The forts surrendered shortly afterwards, and though the city itself did not fall until April, 1865, blockade-running was effectively ended there Farragut was easily the outstanding naval commander of the war, and the ranks of vice admiral and admiral were created for him in 1864 and 1866 respectively See biographies by Loyall Farragut (1879), A T. Mahan (1892), and C L Lewis (1941–43)

Farragut, George, 1755–1817, American naval and army officer, b Ciudadela, Minorca, of Spanish stock, father of David Glasgow Farragut. By 1773 he was employed in trade in the Gulf of Mexico. His sympathy with the American colonies led him to offer his services and a cargo of arms and ammunition to Charleston, S C, in 1776 Farragut, made a lieutenant in the South Carolina navy in 1778, fought in actions near Savannah and at Charleston, where he was taken prisoner Exchanged, he later served on land, fighting under Francis Marion at Cowpens and raising and leading a volunteer cavalry company against Cornwallis in North Carolina. After the Revolution he returned to the sea until 1790, when he was made a major in the militia of the Southwest Territory (Tennessee) He later campaigned against the Cherokee From 1807 to 1814 Farragut was a sailing master in the U S navy at New Orleans. He was a U S. spy at the battle of New Orleans

Farrand, Livingston (fă'rŭnd), 1867–1939, American anthropologist, public-health worker, and educator, b Newark, N J., grad Princeton and College of Physicians and Surgeons, Columbia, and studied in England and Germany From 1893 to 1914 he taught at Columbia, first as instructor in psychology and after 1903 as professor of anthropology He accompanied two expeditions to the Pacific Northwest, wrote monographs on the Indian tribes of the British Columbia region and *The Basis of American History* (1904), a study of geographical and aboriginal backgrounds From 1905 to 1914 he also served as executive secretary of the National Association for the Study and Prevention of Tuberculosis In 1917 and 1918 he was in France as director of the antituberculosis campaign of the International Health Board From 1919 to 1921, as chairman of the central committee, he directed the work of the American Red Cross Farrand was president of the Univ of Colorado (1914–19), later of Cornell Univ (1921–37)

Farrar, Edgar Howard (fă'rur), 1849–1922, American lawyer, b Concordia, La, grad Univ of Virginia, 1871 He made his home in New Orleans, where he had a large corporation practice He was active in municipal-reform movements and in the founding of Tulane Univ Farrar wrote *Legal Remedy for Plutocracy* (1902) and *State and Federal Quarantine Powers* (1905)

Farrar, Frederic William, 1831–1903, English clergyman and author, dean of Canterbury (1895–1903), b Bombay, India, educated in England He was assistant master at Harrow from 1855 to 1870 and headmaster of Marlborough College from 1871 to 1876 In 1876 he was installed canon of Westminster and rector of St Margaret's He became archdeacon of Westminster in 1883 and dean of Canterbury in 1895 His writings cover a wide range, from school stories such as *Eric, or, Little by Little* (1858) to Scripture commentaries and theological studies His *Life of Christ* (1874) and *Eternal Hope* (1878) have passed through several editions See biography by his son (1904)

Farrar, Geraldine (furär'), 1882–, American operatic soprano, b Melrose, Mass, pupil of Lilli Lehmann She made her debut in Europe (1901) and sang at the Metropolitan Opera, New York, from 1906 to 1922 Her most famous roles were in *La Bohème, Madame Butterfly,* and *Carmen* See her autobiography, *Such Sweet Compulsion* (1938)

Farrell, James Thomas (fă'rul), 1904–, American novelist, b Chicago, studied at the Univ of Chicago His novels of life among Chicago's South Side Irish population include the *Studs Lonigan* trilogy (1932–35), *A World I Never Made* (1936) and its sequels, *No Star Is Lost* (1938), *Father and Son* (1940), and *My Days of Anger* (1943), and *Bernard Clare* (1946) and its sequel, *The Road Between* (1949) *Can All This Grandeur Perish?* (1937) is a collection of short stories The stories follow the Dreiser tradition of detailed realism in incident and language, Farrell plans to complete 25 or more novels integrated and connected through characters and scenes *A World I Never Made* was the subject in 1936 of a censorship trial chiefly because of the frankness of its language, but the obscenity charges were dismissed

Farrell (fă'rul), city (pop 13,899), W Pa, on the Shenango river at the Ohio border and adjoining Sharon, inc. as a borough 1901, as a city 1932 It is a railroad and industrial center, with large steelworks and ironworks

Farren, Elizabeth, 1759?–1829, Irish actress She was the daughter of an apothecary or surgeon in Cork who adopted the life of a strolling player Her first London appearance (1777), as Kate Hardcastle in *She Stoops to Conquer*, was a great success When Mrs. Abington withdrew (1782) from Drury Lane, Farren succeeded her as a comedy star As Lady Betty Modish and Lady Teasle, she became as renowned as her predecessor, playing these roles with grace, elegance, and vivacity In 1797 she was married to the 12th earl of Derby and retired from the stage

Farrer, Henry (fă'rur), 1843–1903, American etcher and painter, b England, self-taught He settled in New York in 1863 He painted landscapes and marines, both in oil and in water color (*On the East River, A Quiet Pool, A Windy Day*), but is best known for his etchings, executed with individuality and artistry and particularly admirable in the treatment of light and of sky effects Among the finest are *A Cloudy Day, November Day, Winter in the Woods, December,* and *The Washerwoman*

Far Rockaway, N Y see ROCKAWAY

Farrukhabad (fŭrōōkh'ăbad"), town, central United Provs, India, a joint municipality with Fategarh (total pop. 69,418) It was founded c 1714 by the Afghan ruler Nawab Mohammed Khan. The town manufactures brass and copper vessels and trades in grain.

Fars (färs) or **Farsistan** (färsĭstän'), region (75,476 sq. mi ; pop 1,403,583), SW Iran, corresponding to the Seventh Prov It is more or less identical with ancient Persis, the nucleus of the Persian Empire Fars produces grain, cotton, tobacco, opium, and wine The chief city is Shiraz, and the chief port Bushire

Farsan Islands, Saudi Arabia: see FARASAN ISLANDS

farsightedness, defect of sight resulting when rays of light focus behind the retina of the eye, known also as hyperopia It makes constant adjustment of the eye lens necessary in order to get a clear image and therefore usually results in eyestrain It is caused by shortness of the eyeball from front to back The malformation develops before birth. Glasses are necessary in cases which show eyestrain.

Farsistan, Iran see FARS

Farwell, Arthur, 1872–, American composer and teacher, b St Paul, Minn , pupil of Humperdinck He was interested in native American music, and his own compositions were often in Indian or Negro idioms In 1901 he founded the Wa-Wan Press for the publishing of American music He was director (1915–18) of the Music School Settlement in New York and taught (1927–39) at Michigan State College His compositions include *Navajo War Dance* (1923) for chamber orchestra and *Four Choruses on Indian Themes* (1937)

Farwell, unincorporated town (pop c 1,000), co seat of Parmer co , Texas, at the N Mex line NW of Lubbock, in a grain-growing region on the Llano Estacado

Fas, French Morocco: see FEZ

fasces (fă'sēz) [Latin,=bundles], ancient Roman symbol of the regal and later the magisterial authority The fasces were cylindrical bundles of wooden rods, tied tightly together, from which an axe projected, they were borne by guards, called lictors, before praetors, consuls, dictators, and emperors The fasces, which symbolize unity as well as power, have often been used as emblems, e g , on the arms of the French republic and on American coins Italian Fascism derived its name and its emblem from the fasces

fascism (fă'shĭzm) In its narrow sense, Fascism (in this case written with a capital F) was the political and economic system prevailing in Italy under the dictatorship of Benito MUSSOLINI, there it came into existence gradually after 1922 and lasted until the Italian defeat in the Second World War In its wider meaning, the term *fascism* has been applied more or less loosely to similar ideologies in other countries, e g , to NATIONAL SOCIALISM in Germany and to the regime of Francisco FRANCO in Spain While socialism (particularly Marxism) sprang into existence as a clearly formulated theory or program, based on a logical interpretation of history, fascism was a negative reaction against socialist and democratic equalitarianism Its roots may be traced to the reaction of the ruling classes against the French Revolution While in the early 19th cent an effort was made by the ruling class to restore conditions more or less as they had been before 1789, it became increasingly plain that the advance of leftist radicalism could be halted only if the ruling classes won over at least a fair segment of the "proletariat" and the petty bourgeoisie instead of treating them as enemies Forerunners of fascism, such as Boulanger, Drumont, Barrès, and Maurras in France and Adolf Stöcker and Karl Lueger in Germany and Austria, appealed to the fears inspired by the French Revolution, the Revolution of 1848, the Commune of Paris of 1871, and the increasingly menacing "specter of communism," they played on the sensitive chords of nationalist pride and prejudice, exploited ANTI-SEMITISM, and set themselves up as the champions of law, order, Christian morality, the sanctity of property, and the rights of the educated and responsible classes against the threat of mob rule and the destruction of the existing civilization Parliamentary democracy was generally represented by them as corrupt or, at best, as impotent, disorderly, and conducive to rule by mediocrities, salvation was expected only by the appearance of an authoritarian leader The events of the Russian Revolution of 1917 and the disorders caused in Germany, Italy, Hungary, and other countries by Communist attempts to seize power greatly strengthened this emotional approach to the problem In Italy particularly, social unrest was combined with nationalist dissatisfaction over the government's failure to reap the full fruits of victory after the First World War The action of Gabriele D'ANNUNZIO at Fiume was an indication of things to come With the appearance of the type of adventurer described in Machiavelli's *Prince*—such as D'Annunzio, Mussolini, and Hitler—the antidemocratic and anti-socialist reaction took on the revolutionary character that typifies fascism Capable of appealing to labor and the peasantry through demagogic promises of order and social justice, they were in a position to sell their services to the representatives of vested interests, who could not hope to muster such popularity themselves Governmental paralysis enabled Mussolini in 1922 to obtain the premiership by a show of force. He presented himself as

the strong-armed savior of Italy from anarchy and Communism He had taken over from Russian Communism a system of party organization based on a hierarchy and cells, this became typical of fascism everywhere He made use of a party militia—the Black Shirts—which became equally typical His party adopted the Roman fasces, symbol of strength through unity, as its emblem, and thus came to be known as Fascist In its dictatorial methods and in its use of brutal intimidation of the opposition by the militia and the secret police, Fascism did not distinguish itself from any other despotic regime of the past Inasmuch as it tended increasingly toward totalitarianism (i e , the subordination of all functions of life to the needs of the state), it bore strong similarities with Stalinist Communism It innovated, however, in two important respects As a philosophy of life, Fascism adopted as a social creed the basically Darwinist doctrine of the survival of the fittest, hence, it represented war as a necessary function in the life of a nation, and it considered peaceful and satisfied nations as decadent and doomed, fit victims for the appetite of young and dynamic nations The emphasis on youth and struggle became paramount However, the individual was subordinated to the nation, and the struggle for life was to be fought on a national rather than an individual plane Fascist militarism was to explode in the Italian aggression on Ethiopia and, ultimately, in the Second World War The second important innovation was the organization of the state As in other totalitarian systems, the supreme power was vested in the dictator and his party (the sole legal party) However, unlike Communism, Fascism abhored the idea of a classless society and saw a desirable order only in the organization of a state in which each class had its distinct place and function Representation by classes (i e , capital, labor, farmers, and professionals) was substituted for representation by parties, and the CORPORATIVE STATE came into existence Although the government tended to interfere considerably in the economic life and to regulate its process, there can be no doubt that despite all restrictions imposed on them, the capitalist and land-owning classes were protected by the fascist system and favored it as an obstacle to socialization On the other hand, the state adopted a paternalistic attitude toward labor, improving its conditions in some respects, reducing unemployment through large public works and through an armaments program, and controlling its leisure time through organized activities Many of these features were taken over by the Franco regime in Spain and by quasi-fascist dictators in Latin America A variation of fascism was the so-called clerico-fascist system set up in Austria under Chancellor Dollfuss This purported to be based on the social and economic doctrines enunciated by the popes Leo XIII and Pius XI, which, however, were never put into operation The Vichy government under Marshal Pétain in France during the Second World War also claimed a Christian basis, with little or no justification, it rather was the combination of fascist strong-arm methods and of an anachronistic attempt to restore the traditions of France before 1789 Wherever it has been successful, fascism has come into power by flattering the masses Admission into the party was, however, restricted as much as possible to an élite, the masses being considered as intrinsically stupid, amorphous, and sheep-like raw material, to be shaped and governed for their own good by a sort of natural aristocracy of superior beings Fascism has found adherents in all countries Its essentially vague and emotional nature facilitates the development of peculiar national brands, whose leaders often reject with indignation the idea that they are fascist at all See Herman Finer, *Mussolini's Italy* (1935), Gaetano Salvemini, *Under the Axe of Fascism* (1936), G A Borgese, *Goliath the March of Fascism* (1937), E B Ashton, *The Fascist His State and His Mind* (1937), W G Welk, *Fascist Economic Policy* (1938), H A Steiner, *Government in Fascist Italy* (1938), C T Schmidt, *The Corporative State in Action* (1939), Stephen Raushenbush, *The March of Fascism* (1939)

fashion, in dress, the prevailing mode affecting modifications in costume Styles in the Orient have been characterized by freedom from fashionable change, and Greek and Roman dress preserved the same flowing lines for centuries Fashion in dress and interior decoration may be said to have originated in Europe about the 14th cent New styles were set by monarchs and prominent personages and were spread by travelers, by descriptions in letters, and, in costume, by the exchange of fashion dolls (see DOLL) Probably the first fashion periodical originated c 1586 in Frankfurt, Germany, and was widely imitated, gradually superseding fashion dolls *Godey's Lady's Book*, established in the United States in 1830, remained popular for decades In interior decoration the influence of designers, such as Chippendale, Sheraton, and Robert and James Adam, was apparent in the 18th cent , but in costume the only influential designer at that period was Rose Bertin, milliner and dressmaker to Marie Antoinette In Paris, the leading arbiter of fashion since the Renaissance, the fading influence of celebrities was coincident with the rise of designer-dressmakers in the mid-19th cent Assisted by the proximity of Lyons, outstanding in the manufacture of fine textiles, Paris *haute couture* has remained preeminent in setting fashions for women's dress Increasing competition, however, is offered especially by American fashion designers Fashions are adapted for mass production by the garment industries of New York, Los Angeles, and other cities London early in the 19th cent became the center for men's fashions under the leadership of Regency dandies such as Beau Brummell, English tailors were skilled in handling the heavier cloth then coming into style See also CLOTHING See James Laver, *Taste and Fashion* (rev ed , 1945); R Turner Wilcox, *The Mode in Fashion* (1947)

Fashoda Incident (fəshō'du), 1898, diplomatic dispute between France and Great Britain In the closing years of the 19th cent those two countries were contending for control of the upper course of the Nile While Kitchener was leading British and Egyptian forces against the Mahdists in the N Sudan, a French and Ethiopian party under J B Marchand entered the S Sudan on July 10 and occupied the small town of Fashoda (now KODOK) on the Nile In September, Kitchener proceeded up the river and demanded that Marchand evacuate this territory, which the British claimed for Egypt The French government resisted for a time but, fearing war, ordered its mission to withdraw on Nov 3 In March, 1899, France yielded its claims to the upper Nile region and accepted a part of the Sahara in satisfaction The peaceful settlement of the dispute was largely due to the efforts of the French foreign minister, Delcassé, to bring about a Franco-British alliance French resentment about the incident rankled for several years, however, and was smoothed over only after the visit (1903) of Edward VII to Paris

Fassett, Jacob Sloat (fă'sĭt), 1853–1924, American political leader, b Elmira, N Y , educated at the Univ of Rochester (B A , 1875) and Heidelberg A lawyer and newspaper editor at Elmira, he became a Republican politician noted for his independence, his aggressive tactics, and his interest in reform He headed a commission to investigate New York city government in 1889 and conducted a notable though unsuccessful campaign for the governorship against Roswell P Flower in 1891 Fassett, despite an earlier quarrel with the Republican boss, Thomas C Platt, was U S Congressman from 1905 to 1911

fasti (fă'stī) [Latin, from *fas*, divine law], in ancient Rome, days on which public business could be transacted without impiety The calendars and almanacs were often called *fasti*, because they listed days that were holy and the *fasti* as well The annual official Roman summaries of important events of the year were *fasti* also Ovid's *Fasti* illustrate part of Julius Caesar's new calendar

fasting Abstinence from food or drink leads to death from STARVATION in eight or more days depending upon the original state of nutrition In hibernating animals the low rate of metabolism prevents starvation Fasting is used as a protest measure as in the case of hunger strikers (see HUNGER STRIKE) Partial or temporary abstinence from food is a widely used form of ASCETICISM Among the stricter Jews the principal fast is the Day of ATONEMENT (Yom Kippur), in ISLAM the faithful fast all the daytime hours of the month of RAMADAN In Christianity fasting is general The most widely observed fasts are LENT and ADVENT Both of these are preliminary to seasons of great rejoicing, and the vigils of several feasts are also kept as fasts, e g (in the West), those of Christmas, Easter, Whitsunday, the Assumption, and All Saints EMBER DAYS are also fasts in the West Protestants have generally abandoned fasting, but in New England an annual Fast Day was proclaimed (in Massachusetts until the 20th cent) The Roman Catholic Church differentiates fasting (eating only one full meal and little else in a day) and abstinence (eating no flesh meat) On most fast days the Church allows meat, but not on Fridays, which are days of abstinence or of fasting and abstinence (e g , Fridays in Lent) Roman Catholics fast from food and drink before receiving communion

Fastnet Rock (făst'nĭt), islet, off SW Ireland, in Co Cork, SW of Clear Island Its 160-foot lighthouse is on the most southerly point of Ireland.

Fastolf, Sir John (fă'stŏlf), 1378?–1459, English soldier He probably began his long service in the wars with France before 1413 For distinguished service at Agincourt (1415) and in other engagements, he was knighted some time prior to early 1418 He acted as governor of Anjou and Maine (1423–26) and was made (1426) a Knight of the Garter. While convoying supplies in 1429, Fastolf was attacked by a superior French force, but achieved victory by using herring barrels as protection (see HERRINGS, BATTLE OF) His conduct at the defeat of the English by Joan of Arc at Patay (1429), where he retreated after a panic of his men, has been variously described as common sense or cowardice. Fastolf continued, however, to exercise responsible commands until his final return to England in 1440 There he managed to amass a considerable fortune by somewhat sharp methods He spent his last years on his huge Norfolk estate as neighbor to John Paston, the principal beneficiary of his will For the connection between Fastolf and Shakspere's Falstaff, see FALSTAFF See James Gairdner, ed , *The Paston Letters* (1904); D. W Duthie, *The Case of Sir John Fastolf* (1907).

fat · see OBESITY and FATS AND OILS

fatalism, belief that a certain outcome is appointed for each life which neither foreknowledge nor effort can set aside or alter Unlike determinism, fatalism sees destiny determined by events and processes totally outside the individual In history, fatalism has been frequently associated with those who have many difficulties, who live under some extreme danger or discomfort, or who live under an especially arbitrary tyranny It is not normally a consistently worked out philosophical position

fata morgana · see MIRAGE

Fatehpur Sikri (fŭtŭpōōr' sĭk'rē), deserted ancient city, W central United Provs , India, c 30 mi W of Agra Founded (1569) by Akbar, it was the capital of the Mogul empire until he abandoned (1584) it in favor of Agra Fatehpur Sikri is unique in India as a nearly intact Mogul city A gate, flanked by colossal statues of elephants, was the principal entrance Carvings and murals cover many of the buildings Among the most notable are the Turkish Queen's House with Chinese-like carving, the Palace of Birbal, and the marble tomb of the Mohammedan saint Shaikh Salim

Fates, in Greek mythology, three goddesses, daughters of ZEUS and THEMIS They are called Moerae (mē'rē) or Moirai (moi'rē) They controlled the lives of men They were Clotho (klō'thō), who spun the web of life, Lachesis (lă'kusĭs), who measured its length, and Atropos (ă'trupŏs), who cut it The Roman Fates were the PARCA, Nona, Decuma, and Morta In Germanic mythology, the three NORNS wove and spun the web of life

Fath Ali Shah (fath' ă'lē shä', ălē', fat'), 1762–1834, shah of Persia (1797–1834), son and successor of Aga Mohammed Shah, of the Kajar or Qajar dynasty Most of his reign was spent in both internal and external warfare He managed to maintain himself against other claimants to the throne, but he was not so fortunate in his wars with Russia He sought to enlist aid from Napoleon, who, however, turned instead to the Russians with the Treaty of Tilsit and later was too occupied to be concerned with Persia The settlement of wars with Russia by the Treaty of Gulistan (1813) and the Treaty of Turkamanchai (1828) deprived Persia of the Caucasus and marked a downward trend in Persian power The name also appears as Feth Ali Shah

Father Millet Cross National Monument: see NATIONAL PARKS AND MONUMENTS (table)

Fathers of the Church, collective name for the Christian writers of early times whose work is considered generally orthodox A convenient definition includes all such writers up to and including St GREGORY I (St Gregory the Great) in the West and St JOHN OF DAMASCUS in the East See PATRISTIC LITERATURE There are several conventional groupings of the Fathers of the Church One of these is the Apostolic Fathers, usually considered to include the authors of the *Didache*, of the Epistles of Clement, of the Epistles of Ignatius of Antioch, and of the Shepherd of Hermas In an ancient category of honor eight Doctors of the Church are set apart, the Four Fathers of the Greek Church are St Basil the Great, St Gregory Nazianzen, St John Chrysostom, and St Athanasius, the Four Fathers of the Latin Church are St Ambrose, St Jerome, St. Augustine, and St. Gregory the Great

fatigue, in physiology, condition in which a tissue or an organ shows decreased ability or inability to respond to a stimulus as a result of continual stimulation without adequate rest The chemical and physiological processes involved in fatigue are complex and not fully understood In human beings and other higher animals, prolonged muscular activity produces fatigue which is accompanied by the accumulation of lactic acid and other metabolic products and a decrease in the nutritive material in the muscle. When such activity is followed by rest, the blood is able to carry away the waste products for elimination by the excretory organs and to restore nutritive substances to the muscles If the fatigue has become extreme, the accumulation of wastes is much greater and recovery is slower. Fatigue of nerve cells is also believed to be largely the result of an accumulation of waste products in the cell and the using up of the nutritive material of the cell Nerve fatigue can be produced by both muscular and mental activity The junction between nerve and muscle, i e , the point where nerve impulses activate a muscle, is more susceptible to fatigue than either the nerve fibers or the muscles. Mental work causes fatigue substances to form in the cells of the brain Ordinarily a night's sleep enables the body to recover from the fatigue produced by the day's activities.

However, if excessive fatigue occurs over a prolonged period, exhaustion, brainfag, and certain pathological conditions may result Poor physical health and worry, fear, and other mental anxieties lower the resistance to fatigue

Fatima (fä'tĭmû, fä'-, fŭtē'mû), 606?–632, daughter of MOHAMMED by his first wife She was the wife of ALI, the mother of Hasan and Husein, and reputedly the ancestress of the Fatimites

Fátima (fä'tēmû), hamlet, W Portugal, near Leiria At the Cova da Iria, near by, is the national shrine of Our Lady of the Rosary of Fátima This became a great Roman Catholic center of pilgrimage after the six reported apparitions of the Virgin Mary to three shepherd children, May 13–Oct 13, 1917 The oldest of these children was named Lucia de Jesus Santos An impressive basilica was built in 1944 See M F Wineatt, *Children of Fatima* (1945), W T Walsh, *Our Lady of Fatima* (1947), T M McGlynn, *Vision of Fatima* (1948); F. P. Ryan, *Our Lady of Fátima* (4th ed , 1949).

Fatimite (fă'tĭmīt) **or Fatimide** (fă'tĭmĭd), family claiming to hold the CALIPHATE on the basis of alleged descent from FATIMA, a daughter of Mohammed the Prophet In Moslem sectarian matters the Fatimites were related to other Shiite sects, including the Karmathians, the Assassins, and, most closely, the Druses About 904 Obaidallah, the leader of a Syrian Shiite group, responded to the call of his general Ash-Shu (or Al-Shu) that he come to NW Africa There Ash-Shu had aroused much enthusiasm among the Berber tribesmen by representing Obaidallah as the MAHDI whose coming they awaited Obaidallah was arrested by the Sunnite ruler of Morocco and cast into prison His release was effected in 909 by Ash-Shu, who in the intervening years had conquered the coast of NW Africa On his release Obaidallah claimed for himself the caliphate in opposition to the claims of the Abbasid caliph at Baghdad Obaidallah fell out with Ash-Shu and removed him after investing the Barbary States In the next few years the vigorous ruler pushed east, capturing the Abbasid holdings in Cyrenaica and Libya Several times he attacked Egypt, capturing Alexandria in 914, but not making extensive conquests His son Qaim, who succeeded in 934, consolidated the empire and attacked the Mediterranean ports in Europe Qaim's son Mansur (succeeded 946) brought Sicily under his control The Fatimites attained new importance with the conquest by Moizz (succeeded 952) of all Egypt in 969 and his founding of Cairo as his new capital Janhar (or Jawhar), Moizz's great general, invested W Arabia, Palestine, and Syria However, the western Fatimite provinces (Morocco, Tripolis, Sicily) gradually broke away from the empire as the governors became autonomous and founded their own dynasties Sicily was lost to the Normans in the mid-11th cent , and Tripoli and Morocco were detached in the 12th cent Fatimite rule in Egypt was at first brilliant and successful Great mosques were built in Cairo, and an academy was founded for teaching the Shiite doctrine Hakim (succeeded 996), the sixth Fatimite caliph (third in Egypt), forsook the religious toleration of his predecessors, he persecuted the Christians in his domain and destroyed (1010) the Church of the Holy Sepulchre in Jerusalem His positive accomplishments were founding the library at Cairo and giving support to the academy In 1020 Hakim proclaimed that he was a reincarnation of God This claim took hold only in Syria, where it is still espoused by the DRUSES Throughout the 11th cent the eastern domains of the Fatimites, mainly W Arabia and Syria, were continually menaced by the Turks There were also powerful European enemies, chiefly the Normans in Italy and Sicily and the Venetians The force of such powerful adversaries was eventually to crush the Fatimites A contributing cause to their downfall were attacks (1219–21, 1249–50), never highly successful, of the Crusaders in the Nile delta After 1129 the Fatimite caliphs were merely puppets in the hands of their viziers or their generals Nureddin seized (c 1160) control, and in 1171, when SALADIN entered Cairo and the name of the Abbasid Sunnite caliph was used in the Friday prayer in the mosques, the Fatimite reign officially came to an end See De Lacey O'Leary, *Short History of the Fatimid Khalifate* (1923).

fats and oils, group of substances which form an important part of the diet and also are useful in many industries Those known as fats are usually solid, while oils are usually liquid at ordinary room temperatures Some tropical products are liquids in the country of their origin and solids in cooler climates, in commerce they often retain the name originally given, e g , palm oil and cocoanut oil Chemically fats and oils are either simple or mixed glyceryl esters of organic acids belonging to the fatty-acid series They are compounds of the elements carbon, hydrogen, and oxygen, differing from the carbohydrates in having less oxygen in their molecules Fats and oils are derived from both plant and animal sources Among the vegetable oils of greatest commercial importance are cottonseed, linseed, olive, coconut, corn, peanut, rape, soybean, and castor oil. The method of obtaining the oils is similar for all· the fruits or seeds after being cleaned are crushed and pressed cold to obtain the highest grade of oil and then pressed warm, thus securing a grade suitable for industrial use Sometimes solvents are used to remove the remaining oil from the crushed mass Edible oils are those used in foods, and for these the highest grade is used, these must be pale in color, free from disagreeable odor and taste, and wholesome The lower grades are suitable for making soap and for other industrial purposes Vegetable fats are usually produced from the oil by a hardening process called hydrogenation, in general the process involves bringing the hydrogen into contact with the heated oil in the presence of a catalyst Some animal oils (e g , fish oil and whale oil) are also hydrogenated, chiefly for use in soapmaking, although some can be used in foods Animal fats used in foods include butter, lard, chicken fat, and suet. NEAT'S-FOOT OIL is used in dressing leather LANOLIN is used in many products Cod-liver oil and some other fish oils are used therapeutically as sources of vitamins A and D Nutritionally fats and oils are valued as a source of energy Because they contain less oxygen than other nutrients they oxidize more readily and release more energy Fats are digested in the human body chiefly by the enzyme lipase (in the pancreatic juice) aided by the bile There are several theories to explain the method of absorption of fats, favored by many is the view that they are absorbed by the epithelial cells of the lining of the small intestine in the form of the fatty acids and glycerol into which they are split by digestion and that a recombination to again form the fat occurs within the cells Most of the fat then enters the lymphatic system through the villi in the lining of the small intestine, although some is probably absorbed directly by the blood vessels of the villi See also OILS and PETROLEUM

Fatshan, China see NAMHOI

fatty degeneration. see DEGENERATION.

Fauchard, Pierre (pyĕr' fōshär'), 1678–1761, French dentist, a founder of modern dentistry He practiced in Paris from c 1715 and was influential in raising dentistry from a trade to a profession He advocated the sharing of dental knowledge and wrote *The Surgeon Dentist* (1728, Eng tr of 2d ed , 1946), long a standard work on dentistry See study by B W Weinberger (1941)

Fauchet, Claude (klōd' fōshā'), 1744–93, French clergyman and revolutionist, constitutional bishop of Calvados Fauchet led in the attack on the Bastille (1789) and was a member of the Paris commune, of the Legislative Assembly, and of the Convention Self-styled the Attorney General of the Truth, he sided with the Girondists, after whose fall he was executed

Faucit, Helen (fô'sĭt), 1817–98, English actress Engaged by Macready for Covent Garden in 1837, she became his leading lady in 1842–43 She had a measured and incisive style of acting and excelled in Shaksperian roles and in plays by Bulwer-Lytton and Robert Browning She married Sir Theodore Martin in 1851 and appeared on the stage rarely thereafter She wrote *On Some of Shakespeare's Female Characters* (1885)

Faujas de Saint-Fond, Barthélemy (bärtälmē' fōzhäs' du sē-fō'), 1741–1819, French geologist, an authority on volcanoes He became commissioner of mines and quarries in 1785 and was professor of geology (1793–1818) at the Jardin des Plantes, Paris His scientific journeys resulted in valuable geological observations He wrote *Minéralogie des volcans* (1784), *Voyage en Angleterre* (1797, Eng tr , *A Journey through England*, 1907), and *Essai de géologie* (2 vols , 1803–9)

Faulhaber, Michael von (mĭkh'ā-ĕl fŭn foul'hä-bur), 1869– , German churchman, cardinal of the Roman Church He was made archbishop of Munich and Freising in 1917 and was given the red hat in 1921 He was of great importance in church affairs and was a leading pacifist between the two world wars He earned most note for his unflinching courage in denouncing the National Socialist government for its violation of the Concordat of 1933 and for its anti-Christian activities Though an attempt was made on his life in 1934 and Nazi vandals damaged his palace in 1938, he remained firm

Faulkner or **Falkner, William,** (both fôk'nûr), 1897–, American novelist, b New Albany, Miss He saw war service in the Canadian air force before attending the Univ of Mississippi His first novel was *Soldiers' Pay* (1926), about his war experiences, but thereafter his major novels, written in a highly subjective style, were macabre, often morbid tales of the Deep South Among them are *The Sound and the Fury* (1929), *As I Lay Dying* (1930), *Sanctuary* (1931), *Light in August* (1932), *Absalom, Absalom!* (1936), *The Unvanquished* (1938), and *Intruder in the Dust* (1948) His notable short stories are collected in *These Thirteen* (1931), *Doctor Martino* (1934), and *Go Down, Moses, and Other Stories* (1942) Those in *Knight's Gambit* (1949) are of the detective-story type He has also written poems, less distinguished than his prose

fault, in geology, a fracture in the earth's surface, with displacement of the rock lying parallel to the fracture on one side relative to that on the other side Fractures in igneous rocks result chiefly from the contraction of the cooling molten matter, in sedimentary rocks, from contraction in the processes of hardening and drying or from the tension and compression caused by FOLD formation, and in metamorphic rocks, chiefly from folding Faults are most evident in sedimentary formations, where they result in the separation of the halves of previously continuous strata by considerable vertical and horizontal distances The fracture (fault plane or fault surface) along which a fault takes place may be vertical, inclined, or nearly horizontal Movement along a fault plane may be vertical, horizontal, or oblique in direction, or it may consist in the rotation of one or both of the fault blocks The side of a fault which has been raised relatively to the other is commonly called the upthrow side, and the other the downthrow side These terms, however, are purely relative and not necessarily descriptive of the actual movement, for the same effect is produced whether the two sides are moving in opposite directions, or one is stationary while the other moves, or both move in the same direction but not to the same extent In inclined faults (which make up the great majority of all faults) the term "hanging wall" is used for the side which, because of the slope of the fault plane, lies vertically above the other, called the "foot wall", thus if a fault plane slopes to the west, the foot wall is, horizontally, to the east of the hanging wall An inclined fault in which the foot wall is the upthrow side and the hanging wall is the downthrow side is called a normal or gravity fault, because the hanging wall appears to have slipped downward, a fault in which the foot wall is the downthrow side and the hanging wall is the upthrow side is called a reverse or thrust fault, or simply a *thrust*, because the hanging wall appears to have been pushed up over the foot wall Faults are also classified as high angle and low angle, and these classes are generally considered to correspond to gravity fault and thrust faults, though it is possible for high-angle faults to be of the thrust type, and vice versa The immediate cause of normal faulting is generally conceded to be stretching of the earth's crust, and the immediate cause of thrust faulting, the compression of the crust, even here, the evidence can be misleading, e g , if the rocks on one side of a fracture were squeezed higher than those on the other, so as to give the impression of a normal fault The more remote causes of fault formation, if known, would probably be the same as those of fold formation, since both are earth movements involved in the formation of mountains The principal topographical evidences of faults are fault scarps or cliffs on the faces of mountains Faults create grave problems for the geologist by altering the relations of strata (see STRATIFICATION), in some cases making the same bed appear twice in a vertical cross section of a formation, and in others making beds disappear altogether Faults commonly recur again and again along the same fault plane, so that the sum of the movements, though each movement is comparatively small, often makes a very great effect Faults are the leading causes of EARTHQUAKES

faun (fôn), in Roman religion, creature like the Greek SATYR, half man and half goat The fauns, not so lascivious as the satyrs, were mischievous, friendly spirits, followers of FAUNUS.

Fauna· see BONA DEA

Faunce, William Herbert Perry (fôns), 1859–1930, American educator and clergyman, b. Worcester, Mass , grad Brown Univ , 1880, and Newton Theological Seminary, 1884 He held pastorates in Springfield, Mass (1884–89), and New York city (Fifth Ave Baptist Church, 1889–99) and became prominent as a liberal theologian In 1899 he was chosen president of Brown Univ A champion of the liberal arts curriculum, Faunce in his 30-year administration placed Brown among the leading American universities After 1921 he was also president of the World Peace Foundation His books include *The Educational Ideal in the Ministry* (1908) and *Facing Life* (1928)

Faunus (fô'nus), in Roman religion, popular god of nature, protector of farmers and herdsmen, identified with the Greek PAN and related to Bona Dea. Many little fauns attended him Legend made him an ancient king of Latium The LUPERCALIA probably was his festival

Fauquier, Francis (fôkēr'), c 1704–1768, acting royal governor of Virginia (1758–68) He came to the colony as lieutenant governor in 1758, and in the absence of the governors—the earl of Loudon (1756–63) and Jeffrey Amherst (1763–68)—he was the chief administrative officer Instructions sent with him demanded that the office of treasurer of the colony be taken from the speaker of the house of burgesses, but he disobeyed these instructions and gained and maintained the friendship of the house In 1760 he informed Pitt of the colonial trend toward independence and offered suggestions as to changing British policies on taxation In 1765, however, he dissolved the house of burgesses when it passed a resolution against the Stamp Act See P S Flippin, *The Royal Government in Virginia, 1624–1775* (1919)

Faure, Élie (ālē' fôr'), 1873–1937, French art historian Trained in medicine, he brought his scientific knowledge to bear in his study of the history of art, relating it to the progress of human culture Of his long list of critical and historical works, the best known is his *History of Art* (5 vols , 1909–21, Eng tr by Walter Pach, 1937).

Faure, Félix (fālēks' fôr'), 1841–99, president of the French republic (1895–99) He had been a leather merchant and he served in the Franco-Prussian War before becoming an undersecretary for commerce and colonies in the GAMBETTA cabinet He later (1882–85, 1888) occupied the same post again and was vice president of the chamber of deputies and minister of the marine before becoming president The DREYFUS AFFAIR was a notable development in his administration, and Faure earned a bad mark against his reputation by opposing a new trial The Franco-Russian alliance was concluded, and the FASHODA INCIDENT occurred

Fauré, Gabriel Urbain (gäbrēĕl' ürbĕ' fôrā'), 1845–1924, French composer, pupil of Saint-Saëns In 1896 he succeeded Massenet at the Paris Conservatoire, where Ravel was among his pupils Fauré was its director, 1905–20 His works, largely of a refined, intimate quality, include nocturnes and barcarolles for piano, chamber music, and three operas He is best known for his Requiem (1888) and many exquisite songs See Charles Koechlin, *Gabriel Fauré* (Eng tr , 1945)

Faure, Jean Baptiste (zhäN' baptēst' fôr'), 1830–1914, French operatic baritone and composer, studied at the Paris Conservatoire He is remembered chiefly for his sacred song *Les Rameaux* (*The Palms*, 1861), which is very popular in American churches for Palm Sunday services

Faust (foust) or **Faustus** (fô'stus), in German legend, the tale of a learned doctor who surrendered his soul to the devil (personified by Mephistopheles in many literary versions) in exchange for youth, knowledge, and magical power Of obscure origin, the legend is supposedly based on the life of one Dr Johann Faust (d 1541), a scholar and savant about whom fanciful tales were told even in his lifetime. From 1570 on, the subject was treated in literature One of the best-known versions occurs in the *Volksbuch* of Johann Spies (1587), on an English version of which Marlowe based his play *Dr Faustus* (1593) The subject has since been treated by GOETHE and some 20 other German authors A recent variant of the Faust legend is Thomas Mann's novel *Doctor Faustus* (Eng tr , 1948) The Faust legend has been the subject of several operas opera in two acts, unrelated to Goethe's drama, music by Spohr, libretto by Bernhard (première, Frankfurt, 1818, London, 1852), *La Damnation de Faust*, a "dramatic legend in four parts," music by Berlioz, words partly translated by Gérard de Nerval from Goethe's drama and partly written by Berlioz (Paris, 1846, London, 1848, New York, 1880), opera in five acts, based upon Goethe's drama, music by Gounod, libretto by Barbier and Carré (Paris, 1859, London and New York, 1863), *Mefistofele*, perhaps the most dramatic setting of Goethe's *Faust*, both music and libretto by Boito (Milan, 1868, Bologna, 1875), *Le Petit Faust*, comic opera in three acts, music by D'Hervé, libretto by Crémieux and Jaime (première, 1869), *Doktor Faust*, an opera not related to Goethe's *Faust*, words and music by Busoni (Dresden, 1925) The legend also inspired Liszt's *Mephisto Waltz* and Faust Symphony See H E Krehbiel, *A Book of Operas* (1909), H G Meek, *Johann Faust the Man and the Myth* (1930), P M Palmer and R P More, *Sources of the Faust Tradition from Simon Magus to Lessing* (1936).

Fausta (Flavia Maximiana Fausta) (fô'stu), d c.326, Roman princess She was the wife of CONSTANTINE I, the daughter of MAXIMIAN, and the mother of CONSTANTINE II, CONSTANTIUS II, and CONSTANS I Her part in the murder of her stepson Crispus is said to have turned Constantine I against her, and she was murdered

Faustina (fôstī'nū), name of two women, wives of Roman emperors The elder (c 104–141) was the wife of ANTONINUS PIUS, who founded a school for orphan girls in her honor The younger (c 125–176), daughter of Antoninus Pius and the elder Faustina, was the wife of MARCUS AURELIUS, whom she accompanied on most of his campaigns, and she was termed Mater Castrorum [Latin,=mother of the camps] on the coinage

Faustulus (–tūlŭs), in Roman legend, shepherd, husband of ACCA LARENTIA, foster father of ROMULUS and Remus

Faustus, see FAUST

fauvism (fō'vĭzm [Fr *fauve*=wild beast], name adopted by a group of French painters including Matisse, Rouault, Derain, and Braque for a short-lived French art movement (1905–6) which preceded cubism Fauvism was essentially an expressionist movement, characterized by bold distortion and vivid color used for emotive effect.

Favart, Charles Simon (shärl' sēmŏ' fävar'), 1710–92, French dramatist and theatrical manager, for a time director of the Opéra-Comique He was the originator of the modern light opera and wrote, largely in collaboration with his wife, about 150 comedies and operettas, including *La Chercheuse d'esprit* (1741), *Les Amours de Bastien et de Bastienne* (1753), and *Les Trois Sultanes, ou, Soliman second* (1761). His wife, **Marie Justine Benoîte Duronceray Favart** (märē' shüstēn' bünwät' dürōsürā'), 1727–72, was a brilliant light-opera star.

Faversham, William (fā'vûrshŭm), 1868–1940, American actor, b London. He came to the United States on tour in 1888 and remained, joining the Empire Theatre Company in 1893. He played many Shakspearian parts but is remembered for his portrayal of the leading role in E M Royle's *Squaw Man* (1905–7)

Faversham (fā'vûrshum), municipal borough (1931 pop 10,091, 1943 estimated pop 12,080), Kent, England, WNW of Canterbury and on a small but navigable stream There are oyster fisheries under the management of an ancient guild Farm produce is exported to London, and brewing and cement-making are carried on King Stephen and Queen Matilda were buried in the Cluniac abbey here. The parish church is Early English The town was a seat of the Saxon kings Athelstan held a witenagemot here

Favorinus (fāvôrī'nŭs), b A D c 75, philosopher and writer, b Arles, in Gaul He wrote in Greek and knew many of the Roman great of his time including Emperor Hadrian, Plutarch, and Aulus Gellius

Favras, Thomas de Mahy, marquis de (tômä' du mäē' markē' dŭ fávras'), 1744–90, French royalist After the outbreak of the French Revolution, he plotted (1789) with the count of Provence (later Louis XVIII) to steal King Louis XVI away to Metz and, allegedly, to assassinate Bailly and Lafayette Favras was arrested but refused to divulge the details He was hanged

Favre, Jules (zhül' fa'vrŭ), 1809–80, French statesman At first a partisan of the July Monarchy, he joined the republican opposition to Louis Philippe After the February Revolution of 1848 he was one of the leaders of the provisional government of the Second Republic Under Napoleon III he was a leader of the constitutional opposition In 1858 he courageously defended Felice Orsini After Napoleon's downfall Favre was briefly foreign minister of the provisional government (1871), he resigned because of the hard conditions imposed by victorious Germany on France

Fawcett, Edgar (fô'sĭt), 1847–1904, American novelist and playwright, b New York city, grad Columbia, 1867 His opera libretto, *The New King Arthur* (1885), was moderately successful in the '80s, and of his plays the most popular was *A False Friend* (1880) His 35 novels, beginning with *Purple and Fine Linen* (1873), are satirical commentaries on New York life

Fawcett, Henry, 1833–84, English economist and statesman Blinded as a young man, Fawcett nevertheless played an important part in the radical politics of his day As a member of Parliament he achieved better finance methods for India, helped preserve public lands and forests, and opposed religious tests in the universities A follower of Mill, he was professor of political economy at Cambridge, and his *Manual of Political Economy* was widely popular As postmaster general under Gladstone he achieved several important improvements, such as parcel post, money orders, and postal savings His other works include *Pauperism* (1871) and *Free Trade and Protection* (1878) See biography by Leslie Stephen (5th ed , 1886) His wife, whom he married in 1867, was **Dame Millicent Garrett Fawcett**, 1847–1929, English suffrage leader, sister of Dr Elizabeth Garrett Anderson Active in the woman-suffrage movement in England after 1867, she became the leader of the nonmilitant suffragists. She was made Dame of the British Empire in 1924. Among her writings are *Political Economy for Beginners* (1870, 9th ed , 1915), *Some Eminent Women of Our Time* (1889), *The Women's Victory and After* (1920), and *What I Remember* (1925) See biography by Ray Strachey (1931)

Fawkes, Guy see GUNPOWDER PLOT.

Fay, Charles Ernest (fā), 1846–1931, American mountain climber, b Roxbury, Mass , grad Tufts College, 1868 He was instructor (1869–71) and professor (1871–1928) of modern languages at Tufts and helped found (1883) the Modern Language Association Better known as the "dean of American mountaineering," Fay was a founder of the Appalachian Mountain Club in 1876 and the first president (1902–8) of the American Alpine Club He was the first to climb many peaks of the Canadian Rockies, and his writings did much to make mountaineering popular in America Mt. Fay in the Canadian Rockies is named for him

Fay, Sidney Bradshaw, 1876–, American historian, b Washington, D C , grad Harvard (B A , 1896, Ph D , 1900) He also studied at the universities of Paris and Berlin Fay, professor of history at Dartmouth (1902–14), Smith College (1914–29), and Harvard (1929–46), earned his name as an authority on European diplomatic history. Best known of his books is *The Origins of the World War* (1928, 2d ed , revised, 1930) He also wrote *The Rise of Brandenburg-Prussia to 1786* (1937), made the translation *World History, 1815–1920* (1922) from Eduard Fueter's work and *The German Catastrophe* (1950) from that of Friedrich Meinecke, and was an editor of *A Guide to Historical Literature* (1931).

Fay, Theodore Sedwick, 1807–98, American author and diplomat, b New York city. He was one of the editors of the *New-York Mirror*, for which he wrote the essays collected in *Dreams and Reveries of a Quiet Man* (1832) His novels, full of melodrama and sentiment, were popular in their day, and Poe stirred up a literary sensation when he savagely attacked *Norman Leslie* (1835) Fay lived his later life in Europe and was (1853–61) resident U S minister in Switzerland. He wrote poetry and textbooks One of his later works was *The Three Germanys* (1889).

Fayal, Port *Faial* (fäyäl'), island, in the N Atlantic, one of the Azores It is in Horta dist , named for its chief town and port Horta. Fruit is exported

Fayette. **1** City (pop 2,668), co seat of Fayette co , NW Ala , WNW of Birmingham, inc 1821 It has a textile mill. **2** Town (pop 1,162), NE Iowa, on the Volga and NE of Waterloo, inc 1874 Upper Iowa Univ (coeducational, 1857) and an old church (1876) are here Near by is Brush Creek Canyon State Park **3** Commercial city (pop. 2,608), co seat of Howard co , N central Mo , near the Missouri R NW of Columbia, founded 1823 Central College (Methodist, coeducational, 1855) is here

Fayette City, borough (pop 1,598), SW Pa , on the Monongahela and S of Pittsburgh, settled 1794

Fayetteville (fā'ĕtvĭl) **1** City (1940 pop 8,212, 1947 special census pop 13,052), co seat of Washington co , NW Ark , in the Ozarks, founded 1828, inc 1836 It is a farm trade center with canneries and woodworking plants The Univ of Arkansas (see ARKANSAS, UNIVERSITY OF), which is here, maintains an agricultural experiment station near by Also near by are a U S soil conservation project, with recreational facilities, and a Methodist camp for summer conferences Because of its strategic location during the Civil War, the city was captured by troops of both sides, several battles occurred in the area, including the battle of PEA RIDGE **2** Village (pop 2,172), central N Y., E of Syracuse, inc 1844 Chemicals, paper, and furniture are made here It was the boyhood home of Grover Cleveland **3** City (pop 17,428), co seat of Cumberland co , S central N C , at the head of navigation on the Cape Fear River and SSW of Raleigh It was founded in 1739 by Scottish immigrants as Campbelltown and was renamed for Lafayette in 1783 It has textile and lumber industries As the state capital (1789–93) the city was the scene (1789) of the state convention which ratified the U S Constitution In the Civil War, Sherman occupied the city and destroyed its arsenal (1865) A state teachers college for Negroes is here Near by is Fort Bragg (c 122,000 acres, est 1918), a U S military reservation, used principally as a field-artillery training center **4** Town (pop 4,684), co seat of Lincoln co , S Tenn , SSE of Nashville and on the Elk river near the Ala line, in a farm area An inn here dates from 1813 Near by is the site of Camp Blount, where troops were mustered (1813) for Andrew Jackson's expedition against the Creek Indians **5** Trading town (pop 1,347), co. seat of Fayette co., S W Va , SE of Charleston, in a farm and stock area, settled 1818 New River Gorge is near

Fayum or **Faiyum** (both flyo͞om', fä–), region, N Egypt, W of the Nile It is a depression made fertile by Nile water and silt, which are carried by the canalized Bahr-Yusuf river It produces cereals, fruits, sugar cane, and cotton In the W Fayum is Lake Karun, identified with the ancient Lake Moeris The entire Fayum is rich in archaeological remains Although little survives of the structures built by the kings of the XII dynasty, many papyri both in ancient Egyptian and in Arabic (8th cent) have been discovered The chief city, Fayum (pop 74,314), is a trading and rail center with cotton spinning The name also appears as Fayyum.

Fe, chemical symbol of the element IRON.

fealty: see FEUDALISM.

Fear, Cape, promontory on Smith Island, off SE North Carolina, at the mouth of the Cape Fear River A lighthouse (built 1903) is on the cape, and a lightship is stationed off the dangerous Frying-Pan Shoals, which extend c 20 mi to sea.

Fearne Islands, see FARNE ISLANDS

feast. For secular feasts, see HOLIDAY The principal Jewish feasts are ROSH HA-SHANAH, the Feast of TABERNACLES, HANUKKAH, PURIM, PASSOVER, and PENTECOST The Christian ecclesiastical year is based on two systems By far the greater number of feasts, excluding Sunday, the weekly feast, fall on the same day of the month each year (e.g., CHRISTMAS), but some of the most important liturgical observances are movable, notably, EASTER and the feasts calculated from it. The two systems meet in the system of ecclesiastical seasons. These are (in the Western Church) ADVENT, Christmas and its season, EPIPHANY and the time after Epiphany, LENT (with the three Sundays before Lent itself), Easter and its season (Paschal

time), and Pentecost (Whitsunday) and its season In the Church of England the last season is that of Trinity. There are also some feasts reckoned according to the Sunday, hence movable within a short period (e g , the Feast of Christ the King on the last Sunday of October) For liturgical and other purposes Christian feasts are classified according to importance, thus, Easter, Pentecost, Epiphany, and Christmas are the four principal feasts, in that order, of the Western Church The Roman Catholic Church requires the attendance of its members at Mass on certain feasts besides Sundays, in the United States these are Christmas (Dec 25), the Circumcision (Jan 1), ASCENSION DAY (movable), the Assumption of the Virgin (Aug 15), ALL SAINTS (Nov 1), and the Immaculate Conception of the Virgin (Dec 8) these are called holydays of obligation For feasts commemorating Jesus, see JESUS, for those of the Virgin, see MARY See also VIGIL and FASTING

Feather, river rising in N California in the Sierra Nevada Its forks meet above Oroville, from which point the river flows S into the Sacramento above Sacramento Its basin was a rich source of gold The river has recently been used for hydroelectric power

feathers, outgrowths of the skin characteristic only of birds Scientists consider them to be modified scales Feathers grow in definite lines or areas called feather tracts or pterylae Down feathers or plumulae form the first plumage of young birds The true feathers are attached to the base of the down feathers, which later rub off, and they are at first sheathed in a horny covering Each feather develops from a papilla composed of cells of both layers of the skin and embedded in a pit Blood vessels in the lower layer of skin (dermis) nourish the growing feather When it is full grown, the blood supply is discontinued, and the cells of the papilla remain dormant until they are stimulated to produce a new feather when one has been pulled out or molted A typical feather, such as a contour or body feather, consists of a shaft bearing barbs which bear smaller barbules with two kinds of microscopic projections, barbicels and hamuli or hooklets, these interlock to form a web, giving the feather stiffness Down feathers lack these projections Bristles are modified feathers Red, brown, and yellow are caused by pigment in the feathers, but refraction of light causes the appearance of metallic colors and of blue and green (except in the African touraco, in which green pigment is present)

Featherstone (fĕth'ûrstŭn, -stōn), urban district (1931 pop 14 955, 1943 estimated pop 13,690), West Riding of Yorkshire, England, SE of Leeds It is a coal-mining center

February, see MONTH

February Revolution, 1848, French revolution which overthrew the monarchy of LOUIS PHILIPPE and established the Second Republic It was caused partly by the king's increasingly reactionary policy, carried out after 1840 by François GUIZOT, partly by the dissatisfaction of the working class, whose condition had worsened as a result of the Industrial Revolution The discrepancy of aims between bourgeois revolutionists such as LAMARTINE and P T A MARIE and the radicals, led by Louis BLANC, contributed to the eventual failure of the revolution On Feb 22, 1848, street fighting began in Paris, on Feb 24 Louis Philippe abdicated The chamber of deputies appointed a provisional government, including Lamartine, LEDRU-ROLLIN, and GARNIER-PAGÈS, and, upon popular pressure, proclaimed a republic Thus the moderates prevented, from the start, the seizure of power by the radical Commune of Paris, which had set up its headquarters at the city hall To appease the workers, the government guaranteed the right to work and established the national workshops (Louis Blanc's scheme for public works), however, deliberately incompetent handling of the workshops soon discredited the plan Radical demonstrations (March) were turned into peaceful channels by Blanc himself, and the "specter of Communism" was temporarily laid Elections, held in April, gave a majority to the moderates, whose strength was greater in the provinces than in Paris. The provisional government was replaced by an executive commission (again including Lamartine and Ledru-Rollin), which late in May began the gradual dissolution of the national workshops The resulting workers' rebellion of the JUNE DAYS was drowned in blood After the completion of a republican constitution Prince Louis Napoleon (later NAPOLEON III) was elected president The February Revolution set off revolutions in most European nations, but, as in France, the movement failed virtually everywhere See Pierre de la Gorce, *Histoire de la seconde république française* (2 vols , 1886); Émile Levasseur, *Histoire des classes ouvrières et de l'industrie en France depuis 1789 à 1870* (2 vols , 1903–4), Alexis de Tocqueville, *Recollections* (Eng tr , 1949).

Fécamp (fākäN'), town (pop 16,072), Seine-Inférieure dept., N France It is a fishing port and bathing resort on the English Channel. Fécamp dates back to Roman times Its Benedictine abbey church, a magnificent example of 12th-century Norman architecture, was damaged in the Second World War The Benedictine monks here were the inventors of BENEDICTINE liqueur, for which Fécamp is famous

Fechner, Gustav Theodor (gōōs'täf tā'ōdôr fĕkh'nûr), 1801–87, German philosopher and physicist, founder of psychophysics, educated at Dresden and Leipzig He became professor of physics at Leipzig in 1834 but was forced by ill-health to leave in 1839 Thereafter he devoted himself largely to the study of the relationship between body and mind, though under the name "Dr Mises" he also wrote humorous satire In philosophy he was an animist, holding that life is manifest in all objects of the universe His greatest achievement was in the investigation of exact relationships in psychology and aesthetics He formulated the rule known as Fechner's or Weber's law, that, within limits, the intensity of a sensation increases as the logarithm of the stimulus Fechner's most important work was *Elements der Psychophysik* (1860) See selections tr into English by Walter Lowrie as *Religion of a Scientist* (1946); G S Hall, *Founders of Modern Psychology* (1912)

Fechter, Charles Albert (fĕk'tur), 1824–79, Anglo-French actor, b England He made his debut (1844) at the Comédie Française and later appeared with Rachel but left France to perform in Berlin (1846) and in London (1847) He returned to Paris (1852) and, creating the role of Armand Duval in *La Dame aux camélias* by Dumas fils, speedily became the leading romantic actor of his time He played in English in *Hamlet*, in London (1861), and in Hugo's *Ruy Blas* in New York (1870) After 1870 he remained in the United States

Feckenham, John de (fĕk'ŭnŭm), 1518?–1585, English abbot He became a Benedictine monk at Evesham, studied at Oxford, and later served as chaplain to the bishop of Worcester and to Edmund Bonner, bishop of London Feckenham's sympathies were Roman Catholic, and his fortunes varied under the successive Tudor monarchs He was confined to the Tower by Edward VI and kept there, except for a brief release to engage in religious disputations, until Queen Mary's accession He became chaplain to Mary and abbot of the reconstituted abbey of Westminster, he was the last mitered abbot to sit in Parliament After Elizabeth's accession (1558), although his previous relations with her had been friendly, Feckenham spent most of the rest of his life in confinement for his refusal to recant his Catholic beliefs

Federal Art Project see WORK PROJECTS ADMINISTRATION

Federal Bureau of Investigation, division of the U S Dept of Justice Created (1908) by the Dept of Justice Appropriation Act as the Bureau of Investigation, it conducted investigations only for the Justice Dept After J Edgar HOOVER became (1924) director of the Bureau of Investigation, Congress gradually added one duty after another to the jurisdiction of the bureau and reorganized (1933) it with wider powers as the DIVISION of Investigation in the Dept of Justice Designated (1935) the Federal Bureau of Investigation, the bureau has charge of the investigation of violations of federal laws The FBI investigates alleged violations of about 120 Federal statutes, including crimes that pertain to the internal security of the United States, e g , sabotage, conspiracy, and treason See Henry Lysing, *Men against Crime* (1938)

Federal Capital Territory see AUSTRALIAN CAPITAL TERRITORY

Federal Communications Commission, independent executive agency of the U S government established by the Federal Communications Act of 1934 The Federal Communications Commission replaced the Federal Radio Commission—set up by the Federal Radio Act of 1927 to regulate radio communications The Federal Communications Commission is composed of seven members—appointed by the President with the consent of the Senate for seven-year terms—who are authorized to classify radio stations, to prescribe the nature of their service, to assign broadcasting frequencies, and to carry out the regulations prescribed in the Federal Communications Act The FCC has jurisdiction over standard, high-frequency, relay, international, television, and facsimile broadcasting stations and also has authority over experimental, amateur, coastal, aviation, strip, and emergency radio services The commission is empowered to grant, revoke, renew, and modify broadcasting licenses

Federal Constitutional Convention. The government adopted by the Thirteen Colonies in America (see CONFEDERATION, ARTICLES OF, and CONTINENTAL CONGRESS) soon showed serious faults Congress, powerless to enforce its legislation, was unable even to obtain adequate financial support Though its achievements were not so inconsiderable as has been commonly thought, it was, on the whole, impotent, and federal authority was too weak to be of consequence The central government was unable to enforce any obligations it entered into with foreign nations Severe economic troubles produced radical economic and political movements, such as Shays's Rebellion The monetary schemes of the states brought floods of paper money, which some of the states, notably Rhode Island, attempted to force upon its citizens The threat to economic stability alarmed the wealthy and conservative class, the merchants, who found the state tariffs not to their liking, were also harassed by the impossibility of reaching stable agreements with the English merchants They were anxious to have a stronger federal government to guarantee order and property rights The men who had money invested in Western territories also favored a stronger federal government controlling the territories Therefore, agitation for the adoption of a stronger union grew steadily in force Its advocates were zealous James MADISON and George WASHINGTON in Virginia, Alexander HAMILTON in New York, and James WILSON and Benjamin FRANKLIN in Pennsylvania all favored some new scheme The pamphlet of Pelatiah WEBSTER has been, perhaps, overemphasized by enthusiasts, feeling for union was general It was chiefly through the efforts of Madison that Virginia and Maryland agreed to a conference concerning navigation on the Potomac The conference met in 1785 at Alexandria and at Mt Vernon, but it was discovered that no agreements could be reached without the concurrence of Pennsylvania and Delaware The upshot was the calling of a general convention of the states This met at Annapolis in Sept , 1786, but delegates from only five states—Virginia, Pennsylvania, New York, New Jersey, and Delaware—arrived The delegates therefore contented themselves with calling a convention for constitutional purposes to meet at Philadelphia in May, 1787 Notice was sent to Congress, but the new convention was definitely extralegal in character This was the convention which drew up the CONSTITUTION OF THE UNITED STATES To it all the states except Rhode Island sent representatives The delegates on the whole came from the wealthier and more conservative ranks of society and included, besides Washington and the other proponents already mentioned, such leaders as Edmund RANDOLPH, Gouverneur MORRIS, Robert MORRIS, William PATERSON Charles PINCKNEY, C C PINCKNEY, Abrahain BALDWIN, Luther MARTIN, and Roger SHERMAN Washington was elected to preside The convention immediately set about drawing up a new scheme of government, but found itself faced with a rift It is customary to speak of the compromises of the Constitution, but actually the only real division lay between the smaller states, wishing to retain their power, and the larger states, wishing to have power fall where population and wealth lay It was agreed that the new Congress should be made an effective body, but as to its composition there was great difference of opinion This was the fundamental question—the apportionment of power in the new government Edmund Randolph offered a plan known as the Randolph, the Virginia, or the Large-State Plan, this provided for a bicameral legislature, the lower house to be elected according to population, the upper house to be elected by the lower William Paterson offered the New Jersey or the Small-State Plan, this provided for equal representation of states in Congress Charles Pinckney also prepared a plan, though its exact nature is today unknown Neither the large states nor the small states would yield, and for a time it seemed that the convention would break up Ellsworth of Connecticut finally offered a compromise measure which gradually won approval, this provided for a lower house to be elected according to population (the House of Representatives) and an upper house to be chosen by states (the Senate) After this initial compromise the way was easy It was agreed that Congress should have the power to lay direct but no indirect taxes, and the matter of counting slaves in the population for figuring representation was settled by a compromise agreement that three fifths of the slaves should be counted in apportioning representation and should also be counted as property in assessing taxes. Controversy over abolition of the importation of slaves ended with agreement that the importation should not be forbidden before 1808 There were, naturally, numerous other points of argument and some of the delegates were so disgusted that they went home and later led the fight in their states against the ratification of the Constitution James Madison was the chief drafter of the Constitution, Gouverneur Morris also having a hand in it The convention was in session until Sept 17, and the document was then sent to the states for ratification Delaware ratified it Dec 7, 1787, and although there were great struggles in most of the states (see FEDERALIST PAPERS and FEDERALIST PARTY), a sufficient majority to make it binding had ratified by the end of June, 1788 North Carolina and Rhode Island rejected the Constitution, but the majority clause brought the Constitution into force without them and they were forced to accept the Constitution later See Max Farrand, ed , *The Records of the Federal Convention of 1787* (3 vols., 1911), C A Beard, *An Economic Interpretation of the Constitution* (1925), Max Farrand, *The Framing of the Constitution* (1913) and *Fathers of the Constitution* (1921), Fred Rodell, *Fifty-five*

Men (1936), Carl Van Doren, *The Great Rehearsal* (1948)

Federal Council of the Churches of Christ in North America, interdenominational organization composed of some 25 Protestant churches It was founded in 1908 by the denominations "to express the fellowship and catholic unity of the Christian Church" The Council has no authority over its constituent bodies and no creed-making powers Its numerous functions to promote general spiritual welfare include an evangelistic program, aid in recruiting for the ministry, attempts to foster international and interracial cooperation and understanding, and assistance to communities in organizing local and state church councils

federal government, a union of states, forming a new body politic, which delegates some powers to the central government while the rest are held separately by the original governments Federal government has developed from the joining of states into confederations for some purpose, such as protection against a powerful enemy, with local autonomy preserved in other matters The Greek CITY-STATES formed such leagues, as did the Etruscans, the early Romans, and later the Italian and German cities of the 12th cent Commercial leagues such as the Hanseatic League had federal governments of a sort, and Switzerland and the United Netherlands grew from local federations in the Holy Roman Empire The confederation of the 13 English colonies in America was short-lived, and in 1789 the present Federal government of the United States was formed In 1867 Canada was federated Switzerland, in 1867, strengthened her federal central government The German Empire of 1871 was a strong federal government dominated by Prussia Australia achieved federal government in 1900, South Africa in 1909 Mexico, Argentina, and Brazil also have this form, and the USSR is a federal government Federal governments differ in the power delegated to the central government, but it is always more than in a confederation of states In the federal government, the central government has certain power over individuals as well as over local governments Federal powers usually include war, coinage, foreign relations, and commerce See FEDERATION See W F Dodd, *Modern Constitutions* (1909)

Federalist Papers, series of 85 essays written by Alexander Hamilton, James Madison, and John Jay in 1788 explaining and urging the adoption of the Federal Constitution, then before the states for decision Hamilton initiated the series and wrote about 50 of the essays Madison wrote perhaps 30, and Jay wrote 5 They were published in New York newspapers, widely copied in other papers, and subsequently gathered into book form The essays are notable for their literary quality as well as for their exposition of political philosophy They played an important role in securing the adoption of the Constitution The best editions are by H C Lodge (1891) and P L Ford (1898) See C A Beard, ed , *The Enduring Federalist* (1948)

Federalist party In the later years of the Articles of Confederation there was much agitation for a strong federal union, which was crowned with success when the Federal Constitutional Convention drew up the Constitution of the United States The men who favored the strong union and who fought for the adoption of the Constitution by the various states were called Federalists, a term made famous in that meaning by the *Federalist Papers* of Alexander Hamilton, James Madison, and John Jay After the new government was established under the presidency of George Washington, political division appeared within the cabinet, the opposing groups being headed by Alexander HAMILTON, and by Thomas JEFFERSON The party that emerged to champion Hamilton's views was the Federalist party The opponents, at first called Anti-Federalists, also coagulated into a Jeffersonian party that eventually became known as the Democratic party The issue had not yet been joined when John Adams was elected President, but the choice of Adams was, nevertheless, a clear Federalist victory The Federalists were the conservatives, favoring a strong centralized government, encouragement of industries, attention to the needs of the great merchants and landowners, and establishment of a well-ordered society In foreign affairs they were pro-British, while the Jeffersonians were pro-French The members of the Federalist party were drawn largely from the ranks of the wealthy merchants, the big property owners of the North, and the conservative small farmers and small-town businessmen Geographically, they were concentrated in New England, with a strong element in the Middle Atlantic states In the administration of John Adams there was trouble with France that led to virtual warfare in 1798 It led also to the ALIEN AND SEDITION ACTS, under which the Federalists, who mirrored the British reaction against all supporters of the French Revolution, prosecuted their opponents John Adams, who was a moderate and thoroughly honest man, followed the course he considered wise and by rejecting Hamilton's extreme desires caused something of a division in the Federalist ranks The Jeffersonians were meanwhile winning popular support not only among Southern landowners but also among the mechanics, workers, and generally the underprivileged everywhere Jefferson showed skill in building his party, and the Jeffersonians were much better publicists, than the Federalists The election of 1800 was, therefore, a Federalist debacle The Jeffersonians came to power and stayed there, establishing the so-called Virginia dynasty, with James Madison succeeding Jefferson and James Monroe succeeding Madison The Federalist party remained powerful locally, but more and more the leadership passed to the reactionaries, rather than the moderates It tended to become a New England party This trend was accentuated in the troublous period before the War of 1812 Merchants and shipowners were opposed to the EMBARGO ACT OF 1807, which worked great havoc in the seaboard cities, and their feelings were expressed through the Federalist party The Federalists, however, failed to enlist De Witt CLINTON and his followers in New York in their cause and their challenge in the elections of 1808 was easily overridden by the Jeffersonians Opposition to war brought the Federalists the support of Clinton and many others, and the party made a good showing in the election of 1812, winning New England (except for radical Vermont), New York, New Jersey, Delaware, and part of Maryland They failed, however, in Pennsylvania and lost the election While the country was at war, the disgruntled merchants of New England, represented by the ESSEX JUNTO, contemplated secession and called the HARTFORD CONVENTION Thus, paradoxically the Federalists became the champions of STATES' RIGHTS The successful issue of the war ruined the party, which became firmly and solely the party of New England conservatives The so-called "era of good feeling" followed, and politics was a matter of internal strife within the Democratic party The Federalist party did not even offer a presidential candidate in 1820, and by the election of 1824 it was virtually dead See J S Bassett, *The Federalist System* (1906), Claude Bowers, *Jefferson and Hamilton* (1925), W O Lynch, *Fifty Years of Party Warfare* (1931), L D White, *The Federalists* (1948)

Federal Power Commission, independent executive agency of the U S government established by the Federal Water Power Act of 1920 At first an interdepartmental agency of the War, Interior, and Agriculture departments, the commission was reorganized in 1930 The five commissioners are appointed by the President with the consent of the Senate The commission has control of the licensing of power sites on navigable rivers and public lands and of the location, design, and operation of hydroelectric projects on such sites An investigation of each proposed project is made by the commission to determine if it is in public interest, taking into consideration such matters as navigation, irrigation, flood control, and water supply The commission has the duty of determining the rental for the site and of regulating rates and services (see also RECLAMATION, BUREAU OF) General investigations of power resources may also be conducted by this agency The FPC was given (1938) similar jurisdiction over natural-gas projects, facilities, and rates The commission was also given added authority to supervise various parts of such federal hydroelectric projects as the Tennessee Valley Authority

Federal Reserve System, central banking system of the United States Established in 1913, it began to operate in Nov , 1914 Its setup, though somewhat altered since 1914, particularly by the Banking Act of 1935, has remained substantially the same The Federal Reserve Act created 12 regional Federal reserve banks, supervised by a Federal Reserve Board Each reserve bank is the central bank for its district The boundary lines of the districts were drawn in accordance with broad geographic patterns of business, and the banks were placed at Boston, New York, Philadelphia, Cleveland, Richmond, Atlanta, Chicago, St Louis, Minneapolis, Kansas City, Dallas, and San Francisco All national banks must belong to the system, and state banks may if they meet certain requirements Member banks hold the bulk of the deposits of all commercial banks in the country Each member bank is required to own stock in the Federal reserve bank of its district and must maintain legal reserves on deposit with the district reserve bank These required reserves are proportionate to the member bank's own deposits, the proportion varying according to the location of the member bank and the character of its deposits Each reserve bank is managed by a board of nine directors (three appointed by the Federal Reserve Board, six by the local member banks) The Board of Governors designates one of the directors it appoints as chairman and Federal reserve agent to report to the Board. The board of directors appoints the bank's president and other officers and employees The operations of the Federal reserve banks, although not conducted primarily for profit, yield an income that is ordinarily sufficient to cover expenses, to pay a six percent cumulative dividend annually on the stock held by member banks, and to make additions to surplus The Board of Governors of the Federal Reserve System—the national supervisory agency—is composed of seven members appointed for 14-year terms by the President Its offices are in Washington, D C The Federal Open Market Committee comprises the seven members of the Board of Governors and five representatives of the Federal reserve banks, it directs the purchases and sales by the reserve banks of Federal government securities and other obligations in the open market The Federal Advisory Council consists of 12 members, one appointed annually by the board of directors of each reserve bank, it confers from time to time with the Board of Governors on general business conditions and makes recommendations with respect to Federal reserve affairs The most important duties of the Federal reserve authorities relate primarily to the maintenance of monetary and credit conditions favorable to sound business activity in all fields—agricultural, industrial, and commercial Among those duties are lending to member banks, open-market operations, fixing reserve requirements, establishing discount rates, and issuance of regulations concerning these and other functions Member banks use their reserve accounts with the reserve banks in much the same way that a bank depositor uses his checking account They may deposit in the reserve accounts the checks on other banks and surplus currency received from their customers, and they may draw on the reserve for various purposes, especially to obtain currency and to pay checks drawn upon them But the required reserves also enable the Federal reserve authorities to influence the lending activities of banks So long as a bank has reserves in excess of requirements, it can enlarge its extensions of credit, otherwise it cannot increase its extensions of credit and may be impelled to borrow additional funds Inasmuch as the Federal reserve authorities have power to increase or decrease the supply of excess funds, they are able to exercise considerable influence over the amount of credit that banks may extend The principal means through which the Federal reserve authorities influence bank reserves are open-market operations, discounts, and control over reserve requirements Open-market purchases of securities by these authorities supply banks with additional reserve funds, and sales of securities diminish such funds Through the power to discount and make advances, the Federal reserve authorities are able to supply individual banks with additional reserve funds They may make these funds more or less expensive for member banks by raising or lowering the discount rate Discounts usually expand only when member banks need to borrow Raising or lowering requirements – within the limits imposed by law on the Board of Governors—as to the reserves that member banks maintain on deposit with the reserve banks has the effect of diminishing or enlarging the volume of funds that member banks have available for lending These several powers directly affect the volume of member-bank funds but have no immediate effectiveness in the use of those funds However, in the field of stock-market speculation the Federal reserve authorities have a direct means of control over the use of funds, namely, through margin requirements Another of the important functions of the Federal Reserve System is furnishing Federal reserve notes (now the most important element in the nation's currency for circulation The Federal Reserve System has achieved marked improvements in American monetary and banking institutions Its control over credit is a powerful influence on the nation's economic life See W R Burgess, *The Reserve Banks and the Money Market* (rev ed , 1946), E W Kemmerer, *The ABC of the Federal Reserve System* (12th ed , 1950), G L Bach, *Federal Reserve Policy-Making* (1950)

Federalsburg, farm trading town (pop 1,748), Eastern Shore, Md , SE of Denton, settled 1852

Federal Theatre Project. see WORK PROJECTS ADMINISTRATION

Federal Trade Commission (FTC), independent commission of the U S government established under the Federal Trade Commission Act of 1914 It has five members appointed by the President, with the consent of the Senate, for seven-year terms The act was part of the program of Woodrow Wilson to check the growth of monopoly and preserve competition as an effective regulator of business The duties of the FTC are, in general, to promote fair competition through the enforcement of certain antitrust laws, to prevent the dissemination of false and deceptive advertising of goods, drugs, curative devices, and cosmetics; and to investigate the workings of business and keep Congress and the public informed of the efficiency of such antitrust legislation as exists, as well as of practices and situations that may call for further legislation The commission's law-enforcement activities have to do with the prevention of unfair methods of competition and false advertising (in accordance with the Federal Trade Commission Act and the Wheeler-Lea Act of 1938), with administration of provisions restricting tying and exclusive dealing contracts, acquisition of capital stock, interlocking directorates, and price discrim-

inations (in accordance with the Clayton Anti-Trust Act of 1914 and the Robinson-Patman Act of 1936), and with administration of the Webb-Pomerene Act of 1918, which permits associations to engage in export trade without incurring the penalties of the Sherman Anti-Trust Act In 1946 the FTC was given the right to cancel faulty trademarks The commission may undertake special investigations at the order of Congress, the President, or upon its own initiative Its powers do not extend to banks or common carriers, which are under the supervision of other governmental agencies To enforce antitrust legislation, the commission is empowered, upon ascertaining to its satisfaction that the laws are being violated, to issue cease-and-desist orders These orders, to be effective, usually must have court sanction, and the commission must, therefore, in various instances prove its case in court The courts in deciding have interpreted and applied the phrase "unfair methods of competition" Many of the judicial decisions have frustrated the work of the commission in restricting the growth of monopoly and also, to some degree, the intent of the antitrust laws Yet the commission has done much toward ridding the business world of vicious competitive practices In its investigatory work, the commission was delegated the power to require information from any corporation in interstate commerce Many companies, however, gave only partial access to their records, and others gave none A decision by the Supreme Court declared that access to records of private business, except where substantial proof is submitted as to a specific breach of the law, is a violation of the Fourth Amendment Despite the fact that the commission's investigatory power was thus greatly limited, it has made and published a notable series of investigations After the checks received in the courts, the commission tended more and more to carry out its recommendations through trade-practice conferences, at which representatives of an industry might voluntarily adopt regulations to control competition in that industry See the annual reports of the commission, T C Blaisdell, Jr, *The Federal Trade Commission* (1932), Carl McFarland, *Judicial Control of the Federal Trade Commission and the Interstate Commerce Commission* (1933)

Federated Malay States see MALAYA

federation, a group of states in which sovereignty is divided between the central government and component political units A federation differs from a unitary state in that its component parts share with the central authority in the sovereign power and from a confederation in that the central power acts directly upon individuals, thus implying the possibility of dual allegiance In order to reconcile the need for unity with the desire of the component states for autonomy, the uniting states delegate certain powers to a central authority Thus the chief political problem of a federation is likely to be the allocation of sovereignty The Greek city-states failed to solve this problem, although religious and political federations were often attempted and the Aetolian and Achaean leagues had many of the institutions of federal government The primacy of the central over the state governments was not resolved in the United States until after the Civil War If the federation is to endure, substantial powers over matters affecting the people as a whole, such as external affairs, must be granted the central government, but retention of jurisdiction over local affairs by the states promotes efficiency and makes allowance for local feelings The distribution of powers between the federal and state governments is usually accomplished by means of a written constitution, for a federation does not exist if authority can be allocated by ordinary legislation The supremacy of the constitution implies the presence of a judicial body to interpret it, in American practice this function is performed by a powerful Supreme Court A fairly uniform legal system, as well as cultural and geographic affinities, is necessary for the success of a federation Interesting varieties of federation are the Swiss, where the federative principle is carried into the executive branch of government, the Australian, which closely reflects American states' rights and judicial doctrines, and the Canadian, which reverses common federative practice and allots residuary rights to the dominion government The League of Nations established after the First World War and the United Nations established after the Second World War represent embryonic attempts to achieve federation on a world scale See CITY-STATE and DEMOCRACY See James Bryce, *The American Commonwealth* (1888)

Federmann, Nikolaus (nē'kōlous fā'dûrmän), 1501–42, German adventurer in Venezuela and Colombia In the service of the Welser brothers, Augsburg bankers to whom Charles V had granted rights in Venezuela, Federmann first landed at CORO in 1530 Contrary to the orders of his commander, George op Speyer, Federmann began his search for EL DORADO in 1535, going south to explore the Colombian llanos. Hearing of JIMÉNEZ DE QUESADA, Federmann and his men climbed the Andes, met Quesada, and in return for a large payment agreed not to dispute the latter's claims An attempt by BENALCÁZAR to join with Federmann against Quesada failed Entering Bogotá, the commanders settled their differences and returned (1539) to Europe to confirm their claims Federmann, involved in a suit in which he accused the Welsers of defrauding the emperor, died in Madrid after confessing his accusation to have been false

Fedor. For Russian rulers thus named, see FEODOR

Fee, John Gregg, 1816–1901, American abolitionist clergyman, b Bracken co, Ky After two years (1842–44) at Lane Theological Seminary, Cincinnati, he devoted himself to the abolitionist cause in Kentucky, for which he was disinherited by his slaveholding parents He founded antislavery churches, notably one at Berea, where he also established an abolitionist school which became BEREA COLLEGE Driven from Kentucky in 1859, Fee was not allowed to return until 1863 He spent the rest of his life in Berea as pastor of the church and a trustee of the college See his autobiography (1891)

fee, in property law see PROPERTY and TENURE

feeble-mindedness, state of arrested mental development In the United States the three recognized degrees of feeble-mindedness are idiocy, imbecility, and moronity Idiots (I Q, 0–25) never exceed the mental age of 3 years and require constant supervision throughout life Imbeciles (I Q, 26–50) range from 3 to 7 years of mental age and with careful direction can be taught to carry out simple tasks, although they rarely learn to read Morons (I Q, 51 70), ranging from 8 to 12 years in mental age, can generally be taught, if adequately supervised, to perform manual labor of moderate complexity, such as the operation of lathes and sewing machines Observable physical defects, found in less than 10 percent of the feeble-minded, are cretinism, caused by an underactive thyroid gland which stunts growth, Mongolism, so called because of the superficial resemblance to Mongolians and believed to be the result of an unknown influence on the embryo, microcephalia, characterized by small skulls and receding foreheads resulting from injury to the fetus, and hydrocephalia (having a high infant mortality rate), evidenced by large heads and protruding foreheads, the cause of which is unknown While heredity is chiefly responsible for mental deficiency, other known causes are disease, glandular disturbance, and birth injury The development of institutions to treat and study the feeble-minded was given impetus by Dr Édouard Seguin, of Paris, who came (c 1850) to the United States Though there are a great many institutions throughout the United States—notably those at Faribault, Minn, and Vineland, N J —only about 10 percent of the feeble-minded are institutionalized See L S Penrose, *Mental Defect* (1933), L S Hollingsworth, *The Psychology of Subnormal Children* (1936)

Feehan, Patrick Augustine (fē'un), 1829–1902, American Roman Catholic churchman, first archbishop of Chicago (1880–1902), b Co Tipperary Ireland He studied at Maynooth and came to America in 1852 He lived from then on in St Louis as a parish priest except for a period as rector of the Carondelet seminary In 1864 he was made bishop of Nashville, the diocese being in a completely ruined condition He rebuilt churches and schools and ministered untiringly When Chicago was made an archepiscopal see, he went there (1880) and devoted himself to the poor immigrants, who were arriving daily He built many schools and institutions His devotion to the people was evident in his ministrations in the cholera epidemics of 1853 and 1878

Fehling, Hermann von (hĕr'man fŭn fā'lĭng), 1812–85, German analytical and industrial chemist He was professor from 1839 at the technical institute at Stuttgart He is best known for originating

Fehling's solution or **Fehling solution,** commonly used to test for glucose, fructose, and certain other reducing agents (substances causing removal of oxygen from a compound by union of the oxygen with another material) The solution consists of two parts (combined just before using)—a solution of cupric sulphate and an alkaline solution of Rochelle salt When heated in the presence of the reducing agent, the blue color of Fehling's solution is destroyed and a red precipitate, cuprous oxide, is formed

Fehmarn (fā'marn), island (69 sq mi, pop c 22,000), off Schleswig-Holstein, N Germany, in the Baltic Sea It has fertile soil and pastures Burg (pop c 6,700) is the chief town

Fehmgericht see VEHMGERICHT

Feijóo y Montenegro, Benito Gerónimo: see FEYJÓO Y MONTENEGRO, BENITO GERÓNIMO

Feininger, Lyonel (fī'nĭng-ur), 1871–, American painter and illustrator, b New York city The son of a violinist, he went to Germany in 1887 to study music but soon abandoned it for painting, which he studied in Berlin, Hamburg, and Paris He was an illustrator and caricaturist for several periodicals in Paris and in Germany and had a weekly comic page (1906-7) in the Chicago *Tribune* before he turned to easel painting in 1907 Feininger taught at the Bauhaus in Germany (1919–32) and at colleges in the United States He has exhibited in most European countries and is represented in New York in the Metropolitan Museum, the Museum of Modern Art, and the Whitney Museum and in other museums throughout the United States

Feisal I or **Faisal I** (both fī'sul), 1885–1933, king of Iraq after 1921 The third son of Husein ibn Ali, hereditary sherif of Mecca, he is also called Feisal ibn Husein or Feisal al Husein Feisal was educated in Constantinople and later sat in the Ottoman parliament as deputy for Jidda In the First World War he served with the Turkish army in Syria until 1916, when, escaping to Arabia, he joined in the revolt under T E LAWRENCE Feisal was disappointed in his expectation that the British would offer him the kingship of all Arab territory formerly in the Ottoman Empire His aspirations were partly satisfied in 1920, when a Syrian national congress proclaimed him king, but France, the mandatory power, forced him to abdicate later that year Largely at the urging of Gertrude M. L. BELL, the British, who held the mandate of Iraq, nominated Feisal as king, and he was confirmed by a plebiscite In Feisal's reign a constitution was adopted (1924) and the mandate was ended (1932) Generally he cooperated with the British He actively participated in government and encouraged improvements and the settlement of the Bedouin population

Feisal II or **Faisal II,** 1935–, king of Iraq He came to the throne in 1939 on the death of his father, King Ghazi I State affairs in 1950 were being conducted by the regent, Emir Abdul Ilah

Feith, Rhijnvis (rīn'vĭs fīt'), 1753–1824, Dutch romantic poet, novelist, and dramatist His principal works are the long poem on eternity *Het Graf* (1792) and the sentimental novel *Julia* (1783), which resembles Goethe's *Werther*

Feke, Robert (fēk), c 1705–c 1750, early American portrait painter, b Oyster Bay, N Y He practiced in Newport, New York, Philadelphia, and Boston Some of his finest works were produced in Boston His portraits accurately reproduce the elaborate costumes of the day The best known are Mary Wanton and Philip Wilkinson (Redwood Library, Newport, R I), Charles Apthorp (Cleveland Mus), Rev John Callender (R I Historical Society), James Bowdoin, Mrs James Bowdoin, William Bowdoin, and Mrs William Bowdoin (Bowdoin College, Brunswick, Maine) See biography by H W Foote (1930)

Feldberg (fĕlt'bĕrk), mountain, 4,898 ft high, S Baden SW Germany It is the highest peak of the Black Forest

Feldkirch (fĕlt'kĭrkh"), city (pop 17,061), Vorarlberg, W Austria It is a textile manufacturing center There is a large Jesuit academy

feldspar (fĕl'spär, fĕld'–) or **felspar** (fĕl'spär), mineral of which there are many widely distributed varieties As constituents of granite, gneiss, basalt, and other crystalline rocks the feldspars form a large part of the earth's crust Clay is the chief substance formed when weathering decomposes feldspars Feldspar crystals are either monoclinic or triclinic (see CRYSTAL), and all show clean cleavage planes in two directions Orthoclase feldspars, which have cleavage planes intersecting at right angles, are monoclinic The triclinic feldspars include the plagioclase feldspars (e g, albite, anorthite, and labradorite) and microcline, and their cleavage planes form slightly oblique angles Chemically the feldspars are silicates of aluminum, containing sodium, potassium, calcium, or barium or combinations of these elements Pure feldspar is colorless and transparent but the mineral is commonly opaque and found in a variety of colors Orthoclase and microcline are called potassium feldspars or potash feldspars, and usually they range from flesh color to brick red, although white, gray, and other colors are found They are used in the making of porcelain and as a source of aluminum in making glass A green variety of microcline known as amazonite or Amazon stone is used for ornament when cut and polished The plagioclase feldspars are commonly gray and occasionally red

Felegyhaza, Hungary see KISKUN FELEGYHAZA

Félibien, André, sieur des Avaux et Javercy (ādrā' fālēbyē' syûr' dāzävō ā zhavĕrsē'), 1619–95 French architect and writer Upon the establishment (1671) of the Académie de l'Architecture, he became its secretary As historian to Louis XIV, he assembled material for a history of the royal châteaux He did not complete the undertaking, however, from a manuscript copy of his notes, the Société de l'Histoire de l'Art français published in 1874 a volume entitled *Mémoires pour servir à l'histoire des maisons royales et bastiments de France* Among Félibien's other writings is *Entretiens sur les vies et sur les ouvrages des plus excellents peintres anciens et modernes,* valuable as material upon the history of French art

Felicity and Perpetua, Saints (purpĕ'chōōu), d 203, Carthaginian martyrs The contemporary account of their martyrdom is a treasure of patristic literature It is supposed by some to show traces of Montanism The martyrs are commemorated

March 6 or March 7 and are mentioned in the canon of the Mass after the consecration

Felix, Roman deacon, antipope (355–56) Emperor Constantius, an Arian, set him up to replace LIBERIUS He is wrongly known as Felix II

Felix V, antipope, see AMADEUS VIII

Felix, Antonius, fl A D 60, Roman procurator of Judaea, Samaria, Galilee, and Peraea (A D c 52–A.D 60), a freedman of Claudius I The apostle Paul addressed him at Caesarea on righteousness and the judgment to come and was held in custody for two years (Acts 24, 24) He married Drusilla, a Herodian princess He was succeeded by Porcius FESTUS, and when recalled to Rome, he only escaped being sentenced to death by Nero through the intercession of his brother, Pallas

Felixstowe (fē'lĭkstō), urban district (1931 pop 12,067, 1943 estimated pop 12,860), Suffolk East, England It is a fishing port, a seaplane base, and a summer resort with a good beach, golfing, tennis (annual matches), and yachting There are flour mills and electrical works Roman remains have been discovered in the vicinity

Fell, John, 1625-86, English clergyman He was dean of Christ Church and bishop of Oxford, but he is remembered today as the subject of Tom Brown's verse "I do not love thee, Dr Fell " While at Oxford, Fell initiated an extensive building program and restored high academic standards His chief literary work was a critical edition (1682) of St Cyprian

Fellenberg, Philipp Emanuel von (fĕ'lĭp ā'mä'nōōĕl fŭn fĕ'lunbĕrk), 1771–1844, Swiss educator and agriculturist He purchased (1799) an estate, "Hofwyl" (near Bern), where he put into practice his theory of combining farm training with a well-rounded education, encouraging productive labor, and bringing into contact pupils from different social levels His school attracted students from all parts of Europe and was influential in the development of educational theories and especially of manual training Fellenberg also founded an orphan asylum (1804), a colony for poor boys (1816), and other schools including a vocational school

Feller, Robert William Andrew (Bob Feller), 1918–, American baseball player, b Van Meter, near Des Moines, Iowa Famous for his extraordinary fast ball, Feller began pitching with the Cleveland Indians (American League) in 1936 In eight seasons of major-league play the right-hander pitched 2 no-hit and 10 one-hit games, he set two major-league records—the most strikeouts in one game (18 against the Detroit Tigers in 1938) and the most strikeouts in one season (348 in 1946) In the Second World War, Feller served (1941–45) in the U S navy See his autobiography, *Strikeout Story* (1947)

Fellin, Estonia see VILJANDI

Felling, urban district (1931 pop 27,040, 1947 estimated pop 25,040), Durham, England It is an industrial suburb of Gateshead with coal mining and metalworks

Fellows, Sir Charles, 1799–1860, English explorer and archaeologist In four expeditions to Asia Minor (1838–44), he discovered 15 ancient cities and brought back to England a large group of marbles now exhibited in the Lycian Room at the British Museum He was knighted in 1845 He wrote several books on his expeditions

felon, paronychia (pârunĭ'kēu), or **whitlow,** infection around the nail of finger or toe caused by staphylococcus bacteria There is inflammation with throbbing pain and swelling Pus may form and if there is no outlet, the abscess may extend to the tendons of muscles and to the bone This may lead to loss of use of the hand or foot, and some cases are fatal Hot soaks in epsom salts solution should be used early and the infected part kept at rest Most cases require careful watching in order to open the abscess surgically at the proper time

felony (fĕ'lunē) In early English law a felony was a heinous act which canceled the perpetrator's feudal rights and forfeited his lands and goods to the king, thus depriving his prospective heirs of their inheritance The accused might be tried by an appeal of felony, i e , personal combat with his accuser, the losing party to be adjudged a felon (see ORDEAL) The appeal of felony was gradually replaced by rational modes of trial and was altogether abolished in England in 1819 In addition to the forfeiture of his property, the convicted felon usually suffered death, long imprisonment, or banishment. Death was an especially common English penalty in the 18th and the early 19th cent To the list of common-law felonies —including murder, rape, theft, arson, and suicide—many were added by statute With the abolition of forfeitures in England in 1870 the felony acquired essentially its modern character of a grave crime contrasting with a MISDEMEANOR or petty crime Felony is used in various senses in the United States In some states the common-law definition is retained, in others, any crime calling for capital punishment or imprisonment for at least a year is felonious (e g , in New York), or else statutes specifically label certain crimes as felonies Other possible consequences of committing a felony are loss of the rights of citizenship, DEPORTATION if the felon is an alien, and liability to a severer SENTENCE for successive offenses. Felonies are usually tried by jury, and in some states the accused must first have been indicted by a grand jury.

felspar: see FELDSPAR

felt, fabric made by matting or felting together WOOL, hair, or fur, most of which have a natural tendency to snarl or cling together owing to their notched or scaly surfaces Processes of manufacture vary according to fibers used and purpose intended Woven felt is first made into coarse cloth, given a heavy nap by teasseling, then ironed down True felt is made by placing the cleaned fibers in the shape or mass desired, then beating, steaming, pressing, fulling, or otherwise compacting them to the required thickness For the finest hats, such as beaver hats, the fur and MOHAIR are placed and held in position (often by air suction), pressed and matted, then stiffened into permanent form Impregnated felts, designed for industrial uses such as roofing and sheathing, are made from waste and sometimes from paper treated with a stiffening or waterproofing substance Ancient writers mention feltmaking As an art it probably preceded spinning, having been used in N Asia for clothing, head coverings, tents, and decoration It is used for piano parts, covering and linings for furniture, slippers, polishers, surgical dressings, sound deadeners and interlinings

Felton, William Harrell, 1823–1909, American political leader, b Oglethorpe co , Ga , grad Univ of Georgia, 1842 After studying at the Medical Academy of Georgia (now part of the Univ of Georgia) at Augusta, he began to practice medicine, but gave it up for farming in 1847 Ordained a Methodist minister in 1848, he served occasionally in that capacity for the rest of his life He was a surgeon in the Civil War After the war he became the leading independent Democrat of Georgia, opposing reactionary machine politics He fought corruption and advocated legislation for elementary schools, higher education, penal reform, and better charitable institutions In 1874 he was elected to Congress as an independent in a bitter campaign against the party organization and served three terms before he was defeated Later, in the state legislature, he worked effectively for improved returns from the state-owned railroad In his long political struggle, his chief aid was his second wife,

Rebecca Latimer Felton, 1835–1930 Born near Atlanta, she wrote for the *Atlanta Journal* for nearly 30 years and was a champion of clean government, penal reform, temperance, and woman suffrage She was the first woman to enter the U S Senate, where she served briefly in 1922 by appointment Her writings include *My Memoirs of Georgia Politics* (1911)

Femgericht see VEHMGERICHT

feminism, in general, the movement for the political, social, and educational equality of women with men It had its roots in the humanism of the 18th cent and in the Industrial Revolution, both of which contributed to the emergence of society from a feudal aristocracy to an industrial democracy Women had been regarded as inferior to men physically and intellectually, their minds were assumed to be unfit for much learning Both law and theology had ordered their subjection Women could not in their own names possess property, engage in business, or control the disposal of their children or even of their own persons Although Mary ASTELL and others had pleaded earlier for larger opportunities for women, the first great feminist document was Mary Wollstonecraft's *Vindication of the Rights of Woman* (1792) In the French Revolution, women's republican clubs demanded that liberty, equality, and fraternity be applied regardless of sex, but the French woman's movement was extinguished for the time being by the Code Napoléon, partially repealed in 1938 In America, although Abigail Adams and Mercy Otis Warren had petitioned Washington and Jefferson to include woman's emancipation in the Constitution, the feminist movement really dates from 1848, when Elizabeth Cady Stanton, Lucretia Mott, and a few others, in a women's convention at Seneca Falls, N Y , issued a declaration of independence for women, demanding full legal equality, full educational and industrial opportunity, equal compensation and the right to collect wages, and the right to vote Led by Mrs Stanton and Susan B Anthony, the movement spread rapidly and soon extended to Europe Little by little, women's demands for higher education, entrance into all trades and professions, married women's property and other rights, and the right to vote were conceded In the United States after woman's suffrage was won in 1920, women were divided on the question of equal standing with men (advocated by the National Woman's party) versus some protective legislation For the political aspects of feminism, see WOMAN SUFFRAGE See John Stuart Mill, *The Subjection of Women* (1867), Havelock Ellis, *Man and Woman* (1894), Charlotte Perkins Gilman, *Women and Economics* (1908), Katharine Anthony, *Feminism in Germany and Scandinavia* (1915), Virginia Woolf, *A Room of One's Own* (1929), Ray Strachey, *Struggle* (1930), Mary Beard, *On Understanding Women* (1931); Winifred Holtby, *Women and a Changing World* (1935), Agnes Rogers, *Women Are Here to Stay* (1949).

Fen (fŭn), river, c 375 mi long, Shansi prov , China, flowing generally SW to the Yellow River It is not navigable

fence, in crime see STOLEN GOODS

fence [short for defense], barrier between two divisions of land, used to mark a boundary, to keep animals out or in, and sometimes for ornament In newly settled lands it is usually made of native materials, such as stone, saplings, or mud. When native materials become scarce or unobtainable, concrete, iron rails, woven wire, and BARBED WIRE are commonly used For fence posts, hard woods such as oak and chestnut are preferred, though soft woods may be treated with creosote to lengthen the life of the fence HEDGE fences are made of living trees or shrubs, grown close together and sometimes kept closely trimmed Electrified wire fences which deliver slight, intermittent shocks of electricity are sometimes used to keep animals either inside of or outside of the barrier

fencing, the art of attack and defense with foil, épée, saber, and similar weapons Fencing was refined as a means of combat when heavy armor declined after the introduction of firearms With the realization of the greater effectiveness of piercing the joinings of armor with a point, rather than by cutting or crushing, a light, maneuverable weapon was needed Thus the rapier—with a sharp point and with cutting edges as well—displaced (first in Italy) the heavy, cumbersome, double-edged sword The épée, a further refinement, is a straight, narrow, and stiff thrusting weapon without cutting edges The foil—a light flexible thrusting weapon with a blunted point—was introduced into the fencing *salle* as a practice weapon, and from the foil and its use fencing developed from a means of combat to an organized sport Today fencing societies exist in many European and American cities, and in 1920 for the first time the sport was included in the Olympics Fencing matches may be conducted among individuals or between teams of four (one member serving as alternate) A button blunts the weapon's tip, and points are scored by touching the opponent With foil and épée touches are made with the point, the rules governing the use of the two weapons varying mainly because of the difference in the sizes of the target (the torso only in foil, the whole body in épée) and because of the number of touches which wins (5 in foil, 3 in épée) The saber—a light weapon with a theoretical cutting edge along the front and along one third of the back edge—is also used in the sport of fencing Saber touches are made mostly by cutting, though a touch with the point may also be made The saber target is the torso, including head and arms Five touches win Because of the speed of the action, fencing is one of the most difficult sports to referee A bout is ruled by a director and four judges, a score-keeper keeps the record Fencers attack and parry on a strip (40 ft long and about 6 ft wide) which is marked off by a center line and two other parallel warning lines 10 ft from each end, beyond which the fencer may not step without penalty Women, too, engage in fencing—but using only the foil Besides his standardized weapons, a fencer requires protective equipment—a mask, a padded jacket, and a glove In international competition the French school has achieved note in foil and épée, the Italian in saber and foil, and the Hungarian in saber See Luigi Barbasetti, *The Art of the Foil* (1932), Aldo Nadi, *On Fencing* (1943), Clovis Deladrier, *Modern Fencing* (1948)

Fénelon, François de Salignac de la Mothe (frāswȧ' dŭ sälēnyäk' du lä môt' fänulō'), 1651–1715, French theologian and author, archbishop of Cambrai He was appointed tutor to the young duke of Burgundy, for whom he wrote *Télémaque* (1699), his most famous work His other writings are a treatise on the education of young girls (1687), used by Mme de Maintenon for her fashionable school at Saint-Cyr, and his *Lettre à l'Académie* (1716) Fénelon's defense of QUIETISM brought him into a prolonged quarrel with Bossuet, his former patron, which was settled by the pope in Bossuet's favor Fénelon was banished to Cambrai, where he devoted himself to his pastoral duties.

Fenelon Falls (fē'nulŏn), village (pop 1,158), S Ont , on the Fenelon river and N of Lindsay, in a lumbering and farming area

Fengkieh (fŭng'jĭĕ'), Mandarin *Feng-chieh*, city and county (pop 408,846), E Szechwan prov , China The city is on the Yangtse river at the beginning of the series of gorges which extends to Ichang, Hupei prov. The city was formerly called Kweichow

Feng Yu-hsiang (fŭng' yü'-shyäng'), 1880–1948, Chinese general. He held various military positions under the Ch'ing dynasty. Feng's conversion to Methodism in 1912 gained him the sobriquet the Christian General From 1920 to 1926 he struggled with Wu Pei-fu and Chang Tso-lin for the control of N China and Manchuria. He later held high offices in the Chinese central government, including the ministry of war and membership on

the Kuomintang central executive committee In 1947, while in the United States on an official mission, he denounced the government of Chiang Kai-shek Feng died in a fire aboard a Russian ship, apparently while en route to a conference with the Chinese Communists

Fenian movement (fē'nēun). The Fenian Brotherhood, known variously as the Fenian Society, the Irish Republican Brotherhood, and Irish-American Brotherhood, was a secret revolutionary society, organized c 1858 in Ireland and the United States to achieve Irish independence of England by force of arms Irish discontent with English rule was brought to a crisis by the famine of the 1840s and culminated in the abortive Young Ireland rising of 1848, led by William Smith O'Brien Vast numbers of embittered Irishmen emigrated to the United States, where they redoubled their agitation against England John O'Mahoney, one of those revolutionists driven abroad after 1848, was the organizer of the movement in the United States, and it was he who gave the society its name, reminiscent of the ancient Irish military corps led by Finn mac Cumhail In Ireland the movement was led by James Stephens (1825–1901), who founded the party organ, the *Irish People*, in Dublin, in 1863 The movement made its chief appeal to artisans and shop assistants rather than to the agrarian population The Roman Catholic Church was opposed to the society and doubtless kept many potential members from joining its ranks As the movement became stronger and rumors of actual plots arose, the British government took steps to crush it In 1865 the *Irish People* was suppressed and Stephens was arrested, although he escaped to America In 1866 the writ of habeas corpus was suspended in Ireland, and many Feinans were confined Initiative shifted to America, where a huge store of arms and money had been accumulated by the Fenians, and many Irish-American Civil War veterans were anxious to strike a blow against England In 1867 a ship, renamed *Erin's Hope*, was outfitted and sailed to Ireland The Fenians aboard were captured in an attempt to land In the same year there were several small-scale risings in Ireland The extensive plans included an uprising among the Lancashire Irish Two Irish-Americans were arrested for agitation in England As they were being taken through Manchester the police van was attacked by Fenians and in the scuffle a policeman was killed Three of the attackers were captured and were executed on Nov 23, 1867 Intense feeling among the Irish was aroused by the execution of these Manchester martyrs In the same year the Fenians attempted to rescue a Fenian prisoner in Clerkenwell prison in London by blowing in the wall Another Fenian was executed for the resulting deaths Agitation was continued and terrorism was condoned by many as a result of the feeling aroused by the executions The long-range effect of the Fenian movement was to draw the attention of the English Parliament to Irish problems The Fenian movement in America had a career of its own In 1865 a convention at Cincinnati determined upon an invasion of Canada In June, 1866, Gen John O'Neill (1834–78) with about 800 men crossed the Niagara river and captured Fort Erie His force was soon cut off by U S troops, and he was obliged to retreat toward Buffalo Some 700 men were arrested An attack on Campobello island was also frustrated O'Neill became president of the society and prepared for raids on the border towns of St Albans and Malone in 1870, these, too, were unsuccessful O'Neill and many other participants were arrested The raids added to the strained relations between England and the United States at the end of the Civil War, but their more important effect was encouraging confederation in Canada by the threat of invasion The movement continued until the First World War, but its influence was largely drawn off into new organizations, notably Sinn Fein, founded by Arthur Griffith, a former Fenian See Davitt, Michael, and Rossa, O'Donovan For bibliography, see Ireland

Fenians (fē'nēunz) [Irish *Fianna*, cf Fianna Fail] A professional military corps that wandered about ancient Ireland in the service of the high kings They figure in the legends clustered around Finn mac Cumhail and Ossian

Fenn College see Cleveland, Ohio

fennel, name for Old World herbs of the genus *Foeniculum*, particularly *Foeniculum vulgare* and two closely allied plants sometimes considered varieties These have licorice-scented foliage and seeds, used (particularly by Italians) as a potherb and a flavoring for sauces, bread, and liqueurs, the oil is used as a carminative and stimulant. The sweet fennel or finochio has a bulbous-based stalk eaten like celery Traditionally the fennel is a symbol of flattery, a cure for failing eyesight, and an exciting agent Fennels are cultivated in California, they have fine thready foliage and flat-topped clusters of yellow flowers The name fennel is sometimes incorporated in other plant names, as the fennelflower (see Love-in-a-mist)

Fennimore, city (pop 1,592), SW Wis., SE of Prairie du Chien, inc. 1919 Dairy products are made It is headquarters for a U S soil conservation project

Fenollosa, Ernest Francisco (fēnulō'su), 1853–1908, American Orientalist, educator, and poet, b Salem, Mass., grad Harvard, 1874 He lived in Japan from 1878 to 1890, spent the next seven years as curator of the Oriental department of the Boston Museum, and in 1897 returned to Japan for three years Besides teaching at Tokyo Univ, the Tokyo Academy of Fine Arts, and the Imperial Normal School, he was manager of the fine arts department of the Imperial Museum in Tokyo His works include *East and West the Discovery of America and Other Poems* (1893), *Epochs of Chinese and Japanese Art* (2d ed, 1912), compiled by his widow, Mary McNeil Fenollosa, and two works on Japanese drama (ed by Ezra Pound, 1916)

Fenris, in Norse mythology, a great wolf, son of Loki, chained by a magic bond until Ragnarok (Judgment Day), when he would swallow Odin

Fens, the, district, England, W and S of the Wash, including parts of the counties of Bedford, Norfolk, Cambridge, Huntingdon, and Lincoln It extends c 70 mi from north to south and c 35 mi from east to west and is traversed by the Witham, Welland, Nene, Ouse, and other streams The area was originally a swampland, formed by the silting up of a bay of the North Sea The higher places were sites of Roman stations, the Romans attempted drainage and built roads across the Fens The first effective drainage systems were developed after 1621 by the Dutch engineer Cornelius Vermuyden Drainage and the construction of dikes in various sections or "levels" (e g, Bedford Level) continued through the 18th and 19th cent, and the district is now largely under cultivation, the alluvial soils are very fertile Small game abounds in the wilder parts

Fenton, Edward, d 1603, English navigator He fought against Shane O'Neill's rebels in Ireland (1566) and commanded the *Gabriel* in Frobisher's second expedition (1577) to discover the Northwest Passage and the *Judith* in the third expedition (1578) While serving again in Ireland he was commissioned (1582) by the duke of Leicester to take a commercial expedition to the Moluccas and China by way of the Cape of Good Hope After an engagement off Brazil with three Spanish vessels he returned to England, having accomplished nothing In 1588 he was in command of the *Mary Rose* in the fleet against the Armada He translated *Certain Secret Wonders of Nature* (1569) from the French of Pierre Boaistuau See Hakluyt's *Voyages*

Fenton, Elijah, 1683–1730, English poet, chiefly remembered for his share in Pope's translation of the *Odyssey* (1725) Besides writing a volume of *Poems* (1708) and a tragedy, *Marianne* (1723), he edited Milton (1725) and Waller (1729) See Earl Harlan, *Elijah Fenton* (1937)

Fenton, Reuben Eaton, 1819–85, U S Senator (1869–75), b Carroll, Chautauqua co, N Y His early life was spent in logging and lumbering in W New York and Pennsylvania He was elected to the New York assembly in 1849 and to Congress in 1852 Although he was elected as a Democrat, his position on slavery led him to become a founder of the Republican party in New York He presided over the first Republican state convention, was a Republican member of Congress (1857–64), and in 1864 was elected governor, defeating Horatio Seymour. He was reelected in 1866 His administration was marked by progress in education, particularly in the establishment of normal schools, Cornell Univ was established during his governorship When Fenton entered the Senate, he immediately entered into dispute with Senator Conkling over control of the distribution of patronage Conkling, having the support of President Grant, won, and in 1874 he prevented Fenton's renomination Fenton spent his later years as a banker, and in 1878 he went to Paris as chairman of the U S commission to the International Monetary Conference

Fenton, part (since 1910) of Stoke-on-Trent, Staffordshire, England, in the Potteries district

Fenton, resort village (pop 3,377), S Mich, S of Flint, in a lake region, settled 1834, inc 1863 Marl taken from near-by lakes is used in the cement works here There are several Indian mounds W of Fenton

Fenwick, Benedict Joseph, 1782–1846, American Roman Catholic prelate, second bishop of Boston (1825–46), b. near Leonardtown, Md He was educated at Georgetown and Baltimore and entered the Jesuit novitiate in Georgetown He was ordained (1808) and in 1809 went to New York as parish priest. He was the principal priest in the region for many years and did much work in long tours about the country, visiting scattered Catholics In 1825 he became bishop of Boston, a see including all New England. He established Catholic education in his diocese and was instrumental in founding Holy Cross College at Worcester, Mass

Fenwick, Edward Dominic, 1768-1832, American Roman Catholic prelate, first bishop of Cincinnati (1822–32), b St Marys co., Md. He was educated in Belgium, joined the Dominicans (1790), and was ordained (1793). After a short imprisonment by the French republicans he went to England and taught at a new Dominican college in Surrey In 1804 he returned to America and set out for a Western mission. He set up the convent of St Rose of Lima, the first Dominican house in America, near Springfield, Ky, on land he bought He was an itinerant missionary in Kentucky and Ohio His chief center became Cincinnati, of which he was made bishop (1822) In 1831 he founded there the Athenaeum, now Xavier Univ

Fenwick, John, 1618–83, English Quaker colonist in America, b Berkshire, England Planning to found a Quaker refuge in America, Fenwick obtained (1673–74) Lord Berkeley's share of New Jersey in trust for the Quaker merchant Edward Byllynge, and in 1675 he and other Quakers founded at Salem the first permanent English settlement in New Jersey Conflict with Sir Edmund Andros over the administration of West Jersey led to Fenwick's imprisonment After his release most of his holdings were taken over by other proprietors

Fenwick, Sir John, 1645?–1697, English conspirator A persistent Jacobite plotter, he was arrested (1696) for conspiring to murder William III In his confession he tried to implicate leading Whigs in treasonable relations with James II Parliament secured his execution by voting a bill of attainder

Feodor I (Feodor Ivanovich) (fyô'dur, évä'nuvich), 1557–98, tsar of Russia (1584–98), son of Ivan IV (Ivan the Terrible) He left the government in the hands of his brother-in-law, Boris Godunov, who became tsar after Feodor's death

Feodor II, 1589–1605, tsar of Russia (1605) He succeeded his father, Boris Godunov, but was assassinated when the first false Dmitri was proclaimed tsar

Feodor III, 1656–82, tsar of Russia (1676–82), son and successor of Alexis Though an invalid, Feodor strove to carry out reforms In 1681 he abolished the system of precedence among the boyar families, which had caused interminable feuds He was succeeded by his brother Ivan V and his half brother Peter I under the regency of his sister Sophia Alekseyevna

Feodosiya (fyudô'shēu, -sē', Rus fā"ŭdô'sēū), city (pop 28,656), S European RSFSR, in E Crimea It is a major Black Sea port at the western end of the Feodosiya Gulf, exporting mainly grain The ancient Theodosia, it was founded (6th cent B C) by Greek colonists and shared the subsequent history of the Crimea The Genoese established (13th cent) a flourishing colony here and virtually monopolized Black Sea trade Under their rule the city was known as Caffa or Kaffa The khan of Crimea conquered it in 1475, and it remained under Turco-Tatar rule until the annexation (1783) of the Crimea by Russia During the Second World War, Tatar Feodosiya was twice occupied by the Germans (1941, 1942–44) There are ruins of the Genoese fortifications and an archaeological museum Feodosiya is also a health resort with a bathing beach, grape cure establishments, and mud baths

Ferber, Edna, 1887–, American novelist and playwright, b Kalamazoo, Mich Her first novel, *Dawn O'Hara* (1911), was followed by the serialized stories of "Emma McChesney," traveling saleswoman Her novels *So Big* (1924), *Show Boat* (1926), and *Cimarron* (1929) were all best sellers, and *Show Boat* with music by Jerome Kern was a successful musical comedy She collaborated with George S Kaufman on the plays *Dinner at Eight* (1932), *Stage Door* (1936), and *The Land Is Bright* (1941) Other works are the novels *Saratoga Trunk* (1941) and *Great Sons* (1945) and a collection of stories, *One Basket* (1947) See her autobiography, *A Peculiar Treasure* (1939)

fer-de-lance (fâr"-du-lās', -lans'), highly poisonous snake, about 5 to 6 ft long, found in tropical America and some of the West Indies It is related to the bushmaster and to the rattlesnake Since it hunts its prey, chiefly small mammals, at night, it is at that time most dangerous to humans

Ferdinand I, 1503–64, emperor (1558–64), king of Bohemia (1526–62) and of Hungary (1526–63), younger brother of Emperor Charles V Brought up in Spain, he was expected to succeed his grandfather, Ferdinand V of Aragon, who, instead, made Charles his heir In 1521 Charles gave him the Austrian duchies of the Hapsburgs In the same year Ferdinand married Anna, sister of Louis II of Hungary and Bohemia, in fulfillment of a treaty (1515) between his grandfather, Emperor Maximilian I, and Anna's father, King Uladislaus II On Louis II's death at Mohacs (1526) Ferdinand claimed the succession In Hungary he met the rival claim of John I (John Zapolya), supported by Sultan Suleiman I John's claims were inherited by his son John Sigismund (king as John II) The sporadic warfare in Hungary was indecisive, except that Ferdinand had to pay tribute to the sultan for the strip of NW Hungary which he was allowed to keep with the royal title In Bohemia, Ferdinand laid the groundwork for Hapsburg absolutism by virtually abrogating (1547) the prerogatives of the diet and the towns, he also began the reconversion of the kingdom to Catholicism by calling in the Jesuits. In Germany,

Ferdinand increasingly acted as agent of Charles V, who in 1531 had him elected king of the Romans He had to deal with the PEASANTS' WAR and with the rebellions stirred up by Ulrich I, dispossessed duke of WÜRTTEMBERG, where Ferdinand was unpopular as governor Ulrich and PHILIP OF HESSE defeated Ferdinand at Lauffen (1534) In the War of the SCHMALKALDIC LEAGUE, Ferdinand was an important figure Though a devout Catholic, Ferdinand was less committed against the Reformation than Charles V When Charles's triumph turned to defeat in the revolt of Maurice of Saxony, Ferdinand acted as mediator in making the Treaty of Passau (1552), and in 1555 he negotiated a religious truce at Augsburg (see AUGSBURG, PEACE OF) Charles had practically surrendered the government of the empire to Ferdinand by 1556, though formal abdication was not complete until 1558 At the end of his reign, Ferdinand still hoped that the reconvened Council of Trent would bring about a union of the churches He was succeeded by his son, Maximilian II, who had been crowned king of Bohemia (1562) and king of Hungary (1563) and had been elected king of the Romans (1562) before Ferdinand's death

Ferdinand II, 1578–1637, emperor (1619–37), king of Bohemia (1617–27) and of Hungary (1618–26), successor of Matthias Grandson of Ferdinand I, son of Archduke Charles of Styria, Ferdinand was educated by the Jesuits and was a devout Catholic He was chosen successor to MATTHIAS and became, before the emperor's death, king of Bohemia and Hungary His Catholicism, however, alienated the Bohemian nobles, who rebelled In 1619 they chose FREDERICK THE WINTER KING as their ruler, and the THIRTY YEARS WAR began The Bohemians at first were successful and pressed upon Vienna, but Ferdinand's forces drove them back Ferdinand was inducted as emperor He allied himself with MAXIMILIAN I of Bavaria and the Catholic League, and in 1620 the battle of the White Mt won back Bohemia War continued in the Palatinate In Hungary, Gabriel BETHLEN was successful in opposing Ferdinand in 1619 and 1620, but a peace was signed in 1621 TILLY and WALLENSTEIN gained victories for the emperor in the general European war The imperial cause prospered, though Wallenstein was unable to take Stralsund, a favorable peace was made with Denmark In 1629, however, Ferdinand II issued the Edict of Restitution, ordering the restoration of the property secularized after 1552 This further antagonized the Protestant princes GUSTAVUS II (Gustavus Adolphus) of Sweden came into the war Ferdinand in 1630 dismissed Wallenstein but later (1632) restored him after a series of disasters In 1634 the general was assassinated, almost certainly at the instigation of Ferdinand The battle of Nordlingen marked the resurgence of the imperialists, but the war was wrecking Germany and the house of Hapsburg Yet the Peace of Prague (1635), the last important act of the irresolute Ferdinand, did not end the fighting The war reached its unhappy conclusion in the reign of his son, FERDINAND III

Ferdinand III, 1608–57, emperor (1637–57), king of Hungary (1626–57) and of Bohemia (1627–57), son and successor of FERDINAND II After the dismissal and assassination (1634) of Wallenstein, Ferdinand became nominal generalissimo of the imperial forces in the THIRTY YEARS WAR, but it was Gallas who was responsible for the imperial successes that culminated in the victory of Nordlingen (1634) After Ferdinand's accession, however, the war took a disastrous turn Though anxious for peace, Ferdinand rejected the early peace proposals, but in 1648 he had to assent to the treaties of Münster and Osnabrück (see WESTPHALIA, PEACE OF), which virtually ended the central power of the HOLY ROMAN EMPIRE The emperor and his successors were left only the shadow of the imperial dignity, and their power was restricted to the hereditary Hapsburg dominions In these dominions—a vast enough empire in themselves—Ferdinand devoted the rest of his reign to healing the wounds of war He was succeeded by his son, Leopold I

Ferdinand, 1793–1875, emperor of Austria (1835–48), son and successor of Emperor Francis II A well-meaning monarch in his lucid moments, he was subject to fits of insanity A council of state dominated by METTERNICH, governed in his name After revolution broke out in Vienna in 1848 the emperor promulgated (April) a constitution which failed to satisfy the revolutionists He fled from Vienna in May and—after the recapture of Vienna by Windischgratz—was forced by Felix zu SCHWARZENBERG to abdicate (Dec 2, 1848) in favor of his nephew, Francis Joseph

Ferdinand, 1861–1948, tsar (1908–18) of Bulgaria after being ruling prince (1887–1908) A grandnephew of Ernest I of Saxe-Coburg-Gotha, he was chosen prince of Bulgaria after the enforced abdication of Prince ALEXANDER (Alexander of Battenberg) He was, however, opposed by Russia, and it was not until 1896 that he was recognized by the European powers. In 1908, taking advantage of the Young Turk revolution in Constantinople and of the annexation of nominally Turkish Bosnia and Hercegovina by Austria, Ferdinand proclaimed the full independence of Bulgaria from the Ottoman Empire and proclaimed himself tsar Now favored by Russia, Ferdinand concluded (1912) an alliance with Serbia, later joined by Greece and Montenegro, the four allies, falling on Turkey, were victorious in the first of the BALKAN WARS (1912–13) Bulgaria emerged as the foremost military power of the Balkans To check it, Serbia and Greece, joined by Rumania and Turkey, attacked Bulgaria in the Second Balkan War (1913) and thoroughly humiliated it In the hope of recovering the loss of most of Macedonia to Serbia and Greece by the Treaty of Bucharest (1913), Ferdinand in 1915 joined the Central Powers in the First World War In 1917 the tide of war turned against Bulgaria, and in 1918 Ferdinand was forced to abdicate in favor of his son, Boris III Ferdinand left Bulgaria to spend most of the rest of his life at Coburg, Germany His death was erroneously announced in April, 1945

Ferdinand I, 1379?–1416, king of Aragon and Sicily and count of Barcelona (1412–16), second son of John I of Castile, nephew and successor of Martin I of Aragon In 1406 Ferdinand became regent of Castile during the minority of his nephew, John II He captured (1410) Antequera from the Moors and claimed the vacant throne of Aragon in the same year Finally chosen king in 1412, he restored order in Sicily and Sardinia and suppressed a revolt in Catalonia (1413) In 1415 he met Emperor Sigismund and was obliged to agree to the deposition of Antipope Benedict XIII (see LUNA, PEDRO DE) Ferdinand was succeeded by his son, Alfonso V

Ferdinand II, king of Aragon see FERDINAND V, Spanish king of Castile

Ferdinand I or **Ferrante** (fĕr-rän'tā), 1423–94, king of Naples (1458–94), natural son and successor (in Naples) of ALFONSO V of Aragon His succession was challenged by Pope Calixtus III, but Pope Pius II made peace with him Ferdinand promoted commerce, industry, and learning and tried to reform the fiscal system His authoritarian policy provoked several revolts of the great feudal barons In 1462 they called in John of Anjou (son of the rival king of Naples, RENÉ) They were defeated at Troja, and John left in 1464 Another conspiracy (1485) was ruthlessly repressed Ferdinand's son reconquered (1481) Otranto from the Turks, who had held it a year He was succeeded by Alfonso II (1494–95), Ferdinand II (1495–96), and Frederick (1496–1501), who were unable to defend the kingdom of NAPLES against France and Spain in the ITALIAN WARS

Ferdinand IV, king of Naples see FERDINAND I, king of the Two Sicilies

Ferdinand I, 1345–83, king of Portugal (1367–83), son and successor of Peter I His ambitions and his private life plunged the realm in disaster Called Ferdinand the Handsome and Ferdinand the Inconstant, he justified both nicknames His desire for the throne of Castile plunged him into war with HENRY II (Henry of Trastamara) of Castile In 1370 Ferdinand promised to marry Leonor, daughter of his ally, the king of Aragon In 1371 in a peace patched up with Castile, he promised to marry Leonor, daughter of Henry II Instead he fell in love with a Portuguese noblewoman, Leonor Teles, and, after securing a rather dubious annulment of her earlier marriage, made her his queen She exercised a baleful influence on the reign With the help of JOHN OF GAUNT, Ferdinand waged new war against Henry II, which led to a Castilian siege of Lisbon (1373) and a humiliating peace Hostilities broke out once more after John I succeeded to the throne of Castile The English alliance was resumed, but in 1382, Ferdinand abandoned his ally and made peace with John, who married the heiress to the Portuguese throne, Beatrice Portugal would thus have gone to Castile on Ferdinand's death, but feeling was strong against Leonor Teles, her lover (the conde de Ourém), her daughter, and her Spanish son-in-law A revolution gave the throne to John of AVIZ (John I)

Ferdinand II, 1816–85, titular king of Portugal (1837–55) Ferdinand, oldest son of Ferdinand, duke of Saxe-Coburg-Gotha, married MARIA II (Maria da Glória) of Portugal in 1836, and although given the title of king consort (1837) did not use the appellation until the birth of an heir From the death of the queen (1853) until the majority of his son (1855), he ruled as regent The government was left to ministers, while Ferdinand, a collector of note, occupied himself with art He was offered the Greek crown in 1862 and in 1869 refused the Spanish crown, probably on account of his recent marriage to the American singer, Eliza Hensler

Ferdinand, 1865–1927, king of Rumania (1914–27), nephew and successor of Carol I In 1893 he married MARIE, daughter of the duke of Edinburgh Although related to the German imperial family, he entered (1916) the First World War on the Allied side, and in 1922 he was crowned king of the greater RUMANIA established by the peace treaties Ferdinand annexed (1918) Bessarabia from Russia and in 1919 ordered the Rumanian military intervention in Hungary which broke up the Communist government of Bela Kun. During his reign important agrarian reforms and universal suffrage were introduced Ferdinand's son, Carol (see CAROL II), renounced his succession in 1925, and Carol's son, Michael, succeeded in 1927

Ferdinand I or **Ferdinand the Great,** d 1065, Spanish king of Castile (1035–65) and Leon (1037–65) He inherited Castile from his father, Sancho III of Navarre, conquered Leon, and took parts of Navarre from his brother García Ferdinand fought successfully against the Moors and reduced to vassalage the Moorish kings of Saragossa, Badajoz, Seville, and Toledo At the Council of Coyanza (1050) he confirmed the laws of Alfonso V and introduced church reforms He divided his kingdom among his sons, Castile went to Sancho II, Leon to Alfonso VI, and Galicia to García

Ferdinand II, d 1188, Spanish king of Leon (1157–88), son and successor of Alfonso VII He invaded Castile in the minority of his nephew ALFONSO VIII and fought the Moors in Estremadura His son, Alfonso IX, succeeded him

Ferdinand III, 1199–1252, Spanish king of Castile (1217–52) and Leon (1230–52), son of Alfonso IX of Leon and Berenguela of Castile At the death (1217) of her brother, HENRY I of Castile, Berenguela renounced her right of succession in Ferdinand's favor Having inherited (1230) Leon from his father, Ferdinand permanently united the kingdoms of Castile and Leon. Ferdinand spent most of his reign crusading against the Moors He took Córdoba (1236), Jaén (1246), and Seville (1248) and received homage from Granada, the only remaining Moorish state in Spain In 1671 he was canonized a saint of the Roman Church His son, Alfonso X, succeeded him

Ferdinand IV, 1285–1312, Spanish king of Castile and Leon (1295–1312), son and successor of Sancho IV His mother, María de Molina, was regent during his turbulent minority He tried unsuccessfully to take Algeciras from the Moors but conquered Gibraltar with the help of Aragon He was succeeded by his son, Alfonso XI

Ferdinand V or **Ferdinand the Catholic,** 1452–1516, Spanish king of Castile and Leon (1474–1504), king of Aragon (as Ferdinand II, 1479–1516), king of Sicily (1468–1516), and king of Naples (1504–16) His father, John II of Aragon, gave him Sicily before his death and left him Aragon when he died In 1469 Ferdinand married ISABELLA I of Castile, and in 1474 Ferdinand and Isabella assumed joint kingship of Castile Thus all Spain except Navarre and the Moorish kingdom of GRANADA became united The royal couple, known as the Catholic monarchs, set out with energetic determination to make all Spain Christian Granada fell to them at last in 1492 In the same year Ferdinand and Isabella took a fateful step, which was to deal a hard blow to Spanish prosperity—all the JEWS who refused to accept Catholicism were expelled from Spain, and the decree, despite the pleas of Don Isaac ABRAVANEL and others, was ruthlessly executed The expulsion of the Moors (1502) was less effective, for many Moors pretended to accept Catholicism and remained To bolster religious unity, the Catholic kings instituted the INQUISITION in Spain Their reign was crucial in the history of the world as well as in that of Spain In 1492 Christopher COLUMBUS, sailing under their auspices, discovered the New World, and in 1494, by the Treaty of TORDESILLAS, Spain and Portugal divided the world Ferdinand V continued the imperialist policy of his predecessors, taking a leading part in the ITALIAN WARS His general, Gonzalo FERNÁNDEZ DE CÓRDOBA, conquered Naples in 1504 Ferdinand joined the League of Cambrai (1508) against Venice and the Holy League (1511) against France, and in 1512 he annexed most of NAVARRE After Isabella's death (1504) Ferdinand retained control over Castile as regent for his daughter JOANNA Joanna's husband, PHILIP I, became king of Castile in 1506 but died the same year, and Ferdinand continued his regency for Joanna, who had become insane, until his death He left a united Spain, besides Naples, Sicily, Sardinia, and an overseas empire, to his grandson by Joanna and Philip—the later Emperor Charles V The seeds of subsequent Spanish power and decay were sown in the reign of the Catholic kings The nobles and the CORTES had been curbed The expulsion of the Jews, the search for American gold, the conversion of large agricultural areas into grazing lands for the benefit of the wool industry, and the privileged position granted to the Church—all these left effects still now to be felt Spain became an Atlantic power, chief rival of France and England, and revolutionized the commerce of Europe See W H Prescott, *History of the Reign of Ferdinand and Isabella,* and Washington Irving, *Chronicle of the Conquest of Granada,* both classic works See also R B Merriman, *The Rise of the Spanish Empire* (4 vols, 1918–34)

Ferdinand VI, b 1712 or 1713, d 1759, king of Spain (1746–59), son of Philip V by his first queen, Marie Louise of Savoy When Ferdinand succeeded his father, his stepmother, ELIZABETH FARNESE, lost

her power at court and went into retirement Ferdinand's chief ministers were José de Carvajal y Lancaster, who was pro-British, and Ensenada, who had long directed the destinies of Spain and strongly favored France In the years preceding the Seven Years War (1756–63), both France and England sought the Spanish alliance Carvajal died in 1754, and Ferdinand, desiring Spain to remain at peace, dismissed Ensenada, fearing that he might embroil Spain in a French alliance Richard Wall, an Irishman, succeeded Carvajal, and with his help Ferdinand kept Spain out of the war during his lifetime In 1758 Ferdinand's queen, Maria Barbara de Braganza, died Ferdinand did not recover from his grief and died soon afterward He was succeeded by his half brother, Charles III

Ferdinand VII, 1784–1833, king of Spain (1808–33), son of Charles IV and María Luisa Excluded from a part in the government, he became the center of intrigues against the favorite Godoy and attempted to win the support of Napoleon I In 1807 he was arrested by his father, who accused him of plotting his overthrow and the murder of his mother and Godoy He was soon acquitted but the prestige of the family was shaken, and Napoleon's invasion of Spain (see Peninsular War) was facilitated A palace revolution at Aranjuez (March, 1808) caused the dismissal of Godoy and the abdication of Charles in favor of Ferdinand, who was enthusiastically acclaimed by the people Ferdinand was soon persuaded to cross the French border and meet Napoleon at Bayonne There he was forced to renounce his throne in favor of Charles IV, who in turn resigned his rights to Napoleon The emperor gave the Spanish throne to Joseph Bonaparte During the Peninsular War (1808–14) Ferdinand was imprisoned in France In his name the nationalist and liberal elements of Spain resisted the French invaders, and a liberal constitution was proclaimed (1812) by the Cortes at Cádiz Throughout the Spanish Empire his name was the rallying cry of revolutionary elements When Ferdinand was restored (1814) to his throne, he promptly abolished the liberal constitution and revealed himself a thorough reactionary After several unsuccessful uprisings, the Spanish liberals (who had organized in secret societies, e g , the Carbonari) staged a successful revolution in 1820 and forced the king to reinstate the constitution of 1812 The Holy Alliance became alarmed, and the Congress of Troppau was summoned to cope with the Spanish situation The powers reached no decision, but in 1822 at Verona (see Verona, Congress of) France was deputed by the Holy Alliance to undertake military intervention in Spain and to restore Ferdinand to absolute power Ferdinand, backed by French arms, revoked the constitution in 1823, ruthless repression followed Ferdinand's death caused no less trouble than his reign His fourth wife, Maria Christina, persuaded him to set aside the Salic law so that their only child Isabella might succeed to the throne, thus excluding Ferdinand's brother, Don Carlos, from the succession When Ferdinand died, the liberals supported Isabella II, while the reactionaries rallied around Don Carlos The Carlist Wars were the result During Ferdinand's reign the Spanish colonies on the mainland of North and South America were lost through the very rebellions which had begun as risings in his favor and against Napoleon

Ferdinand I, 1751–1825, king of the Two Sicilies (1816–25) He had previously been king of Naples as Ferdinand IV and king of Sicily as Ferdinand III Ferdinand succeeded (1759) to the two kingdoms when his father and predecessor became king of Spain as Charles III His father's reforms were continued during Ferdinand's minority by the regent, Bernardo Tanucci, but after the king's marriage (1768) to Marie Caroline a regime of absolutism and reaction was instituted under her influence Sir John Acton was appointed prime minister After the execution (1794) of the queen's sister, Marie Antoinette of France, Ferdinand drew closer to Austria and England and in 1798 joined the Second Coalition against France In Jan , 1799, the French took Naples shortly after the royal couple had fled to Sicily The French-sponsored Parthenopean Republic was short-lived, and terror accompanied Ferdinand's return (June, 1799) Peace was made with France in 1801, but in 1805 Ferdinand joined the Third Coalition In Dec , 1805, Napoleon I at Schonbrunn declared the Bourbons dispossessed of the kingdom of Naples, and early in 1806 the royal couple again fled to Sicily, where Ferdinand ruled under English protection In 1812 he made his son regent and had him grant a constitution After Naples was restored to him (1815) he abolished Sicilian autonomy and proclaimed himself (1816) king of the Two Sicilies His reactionary government provoked an insurrection in 1820, and he was forced to grant a constitution, which he soon repudiated He persecuted the Carbonari and reestablished his despotism with Austrian aid He was succeeded by his son Francis I.

Ferdinand II, 1810–59, king of the Two Sicilies (1830–59), son and successor of Francis I He is called King Bomba. Though at first he sought to improve the wretched condition of his kingdom, he soon relapsed into the policies of his predecessors and became an absolute despot Fear of revolution made him grant a constitution in 1848, but when disorders broke out in Sicily he ordered the bombardments of Messina (1848) and Palermo (1849) —an act that earned him the nickname Bomba He soon revoked the constitution, becoming even more reactionary Great Britain and France, in protest against his inhuman treatment of at least 15,000 political prisoners, withdrew their envoys (1856) The political isolation brought about by Ferdinand facilitated the fall of the dynasty under his son and successor, Francis II

Ferdinand, 1721–92, Prussian field marshal, a prince of the house of Brunswick, known as Ferdinand, duke of Brunswick He served Frederick II of Prussia brilliantly in the Seven Years War, notably by victories at Crefeld (1758) and Minden (1759)

Ferdinand the Catholic, see Ferdinand V

Ferdinand the Great, Spanish king of Castile and Leon see Ferdinand I

Fère-en-Tardenois, France see Château-Thierry

Fergana or **Ferghana** (both fyĕrgänä'), city (1932 estimated pop 34,700), capital of Fergana oblast, Uzbek SSR, in the Fergana Valley It is an industrial center (cotton ginning and milling, silk spinning) Founded in 1876 by the Russians, it was first named Novy Margelan, renamed (1907) Skobelev, and again renamed Fergana after the Bolshevist Revolution

Fergana Valley or **Ferghana Valley** (both fĕrgä'nu, fur-), region, USSR, in central Asia Bordering in the southeast on Chinese Turkistan (Sinkiang prov), it is divided among the Uzbek SSR, the Tadzhik SSR, and the Kirghiz SSR In the northeast rises the Fergana Range (part of the Tien Shan system), in the south is the Pamir The valley consists partly of a very fertile steppe, partly of desert land, and is drained by the Syr Darya and by many mountain streams A dense irrigation network is linked by the Great Fergana Canal, constructed in 1939–40 The Fergana Valley has one of the densest populations in the USSR and is covered by cotton fields, orchards, and vineyards Cotton is the chief crop, but for centuries the Fergana Valley was also one of the world's chief silk-producing regions, and silk continues, next to cotton, as one of the main industries There are oil fields and mercury and antimony mines along the fringes of the valley A circular rail line connects the chief cities of the valley—Kokand, Andizhan, Namangan, and Fergana The population is predominantly Moslem and consists of Uzbeks, Tadzhiks, and Kirghiz The Fergana Valley is one of the world's oldest cultivated regions, cities such as Margelan and Osh have been world trade centers for a thousand years Many conquerors occupied the region The Arabs introduced Islam early in the 8th cent Their rule was replaced (12th cent) by the Seljuk shahs of Khorezm, who in turn were displaced (14th cent) by the Mongols under Jenghiz Khan The valley was part of the empire of Tamerlane and his successors, the Timurids Early in the 16th cent it was overrun by the Uzbeks, who established the khanate of Kokand The Russian conquest of the valley was completed in 1876 by the fall of Kokand

Fergus, village (pop 2,832), S Ont , on the Grand River and NW of Guelph

Fergus Falls, city (pop 10,848), co seat of Otter Tail co , W Minn , SE of Fargo, N Dak , at falls of the Otter Tail river, settled 1857, laid out 1870, inc 1872 There are factories, mills, and a large cooperative creamery A state mental hospital (1890) is in Fergus Falls

Ferguson, Adam, 1723–1816, Scottish philosopher and historian He was professor of philosophy at the Univ of Edinburgh from 1759 until his retirement in 1785 His interest in ethics led to the writing of *Principles of Moral and Political Science* (1792) In this treatise he advanced the work of the Scottish school by developing the principle of perfection and by attempting to reconcile self-interest and universal benevolence His chief historical works are *An Essay on the History of Civil Society* (1767) and *The History of the Progress and Termination of the Roman Republic* (1783) See W C Lehmann, *Adam Ferguson and the Beginnings of Modern Sociology* (1930)

Ferguson, James Edward, 1871–, governor of Texas (1915–17), b Bell co , Texas After an adventurous youth, he rose from poverty to be a large landowner, a lawyer in Belton and in Temple, and finally a banker in Temple Though entirely unknown in state politics, he in 1914 announced his candidacy for the governorship and won it by speaking as the champion of the tenant farmers and poor independent farmers He promised many radical agrarian reforms, some of which were enacted into law He was not, however, favored by the reformers in Texas, because of his demagogic methods and the accusations of wholesale corruption in his administration In 1917 he was impeached, found guilty on several charges, and removed from office He devoted himself to clearing his name He was himself debarred from running for office, but in 1924 his wife, Miriam A. Wallace Ferguson (1875–), ran in his place and was triumphantly elected by the small farmers A general amnesty was issued to vindicate her husband, but it was declared unconstitutional Nevertheless in the midst of the depression Ma Ferguson (so called from her initials) once more was elected and served from 1933 to 1935, with a policy of extreme retrenchment. Ferguson was the actual, though not the nominal, governor

Ferguson, Margaret Clay, 1863–, American botanist and educator, b Phelps, N Y , grad Cornell Univ From 1906 to 1932 she was professor of botany at Wellesley She made a special study of plant physiology, genetics, cytology, and comparative morphology and is a Fellow of the American Association for the Advancement of Science Besides many scientific papers she wrote *Contributions to the Life History of Pinus* (1904)

Ferguson, Miriam A. Wallace (Ma Ferguson) see Ferguson, James Edward

Ferguson, Patrick, 1744–80, British army officer in the American Revolution He in 1776 invented an early breech-loading rifle Ferguson fought at Brandywine and Charleston before he was assigned to organize and train Loyalist militia in South Carolina Ironically he was defeated and killed in the battle that demonstrated the superiority of the rifle, Kings Mt in the Carolina campaign

Ferguson, Sir Samuel, 1810–86, Irish poet and author of some valuable works on Irish antiquities, including *Ogham Inscriptions in Ireland, Wales, and Scotland* (1887) "The Forging of the Anchor," his first poem, appeared in *Blackwood's Magazine* (1831) One of the first to put Irish history into English verse, he wrote *Lays of the Western Gael* (1865), *Congal* (1872), and *Deirdre* (1880)

Ferguson, city (pop 5,724), E Mo , settled c 1874, inc 1894 It is a residential suburb NW of St Louis

Fergusson, Robert, 1750–74, Scottish poet, b Edinburgh He was a precursor of Robert Burns, who generously proclaimed his debt to Fergusson's *Poems* (1773) His "Auld Reekie" is conceded to be the best of his poems, and it reflects both his genuineness of inspiration and his familiarity with the life of the Edinburgh poor He died in an asylum for the insane after a fall See his works (ed by A B Grosart, 1879)

Ferid ed-Din Attar (fĕrēd' ĕdēn' utär') [Arabic, = pearl of the faith, the druggist], d c 1229, Persian poet, one of the greatest mystic poets of Islam He was a druggist, hence his appellation Attar. Because he was converted to Sufism and became an expounder of the faith, he was called Ferid ed-Din His masterpiece is the *Mantiq ut-Tair* [language of birds], a long allegory surveying the philosophy and practices of the Sufis He lived in and near Nishapur His name also appears as Ferid Eddin Attar, Farid ud-Din Attar, and Faridun

Ferishtah see Firishta

Ferland, Jean Baptiste Antoine (zhä' bätēst' ätwän' fĕrlä'), 1805–65, French Canadian priest and historian, b Montreal, educated at Nicolet College Ordained priest in 1828 and appointed vicar at Quebec, he later (1841) joined the faculty of Nicolet College, of which he became superior in 1848 His lectures delivered while he was professor of history (1855–65) at Laval Univ were published as *Cours d'histoire du Canada* (2 vols , 1861–65), best known of his works Articles which Ferland contributed to the *Soirées canadiennes* and the *Foyer canadien* were republished after his death in several books

Fermanagh (fürmă'nù), inland county (653 sq mi , 1937 pop 54,569, 1948 estimated pop 53,722), Northern Ireland, in Ulster The county town is Enniskillen The Erne river, which widens into the extensive and beautiful Upper Lough Erne and Lower Lough Erne, divides the county into two roughly equal parts The land is hilly, rising to more than 2,000 ft in the south, and is devoted largely to grazing Butter, eggs, and oats are the chief agricultural exports Pottery (at Belleek) and linen are made, and some limestone and sandstone are quarried Fermanagh was organized as a county in 1585 The population has steadily declined, through emigration, for more than a century

Fermat, Pierre de (pyĕr' dŭ fĕrmä'), 1601–65, French mathematician A magistrate whose avocation was mathematics, Fermat is known as a founder of the modern theory of numbers and the calculus of probabilities His posthumously published *Varia opera mathematica* (1679) contains several new theorems, including one known as Fermat's last theorem, which states that if n represents any number greater than 2 there are no whole numbers that satisfy the equation $a^n+b^n=c^n$ Prizes have been offered for a proof of this theorem, and attempted proofs have resulted in many developments in the theory of numbers Fermat also recognized a principle in optics known as Fermat's law See L J Mordell, *Three Lectures on Fermat's Last Theorem* (1921)

fermentation (fûr"muntā'shŭn, fûr"mĕn-), chemical change brought about by the action of enzymes (or ferments) Various changes are known as fermentation, e g , the formation of lactic acid in milk as a result of the enzymatic action of lactic-acid

bacteria and the production of vinegar by the action of acetic-acid bacteria However, the process known as alcoholic fermentation is the one most commonly known as fermentation It is of great commercial importance Louis Pasteur's work on the fermentation of sugar solutions to produce wine proved that the process depends upon the presence in the solution of yeast cells (which are found on the surface of the fruit and in the air) and not upon spontaneously generated substances Later it was found that an extract of the enzymes from the living cells can also cause fermentation Zymase is a chief component of the enzyme system in the yeast cells which brings about the fermentation The reaction involves the production from simple sugars (glucose and fructose) of alcohol and carbon dioxide Fermentation processes are a source both of industrial alcohol (ethyl alcohol or ethanol) and of alcoholic beverages (e g , BEER, BRANDY, GIN, LIQUEUR, WHISKY, and WINE) In the United States the chief raw materials for the production of industrial alcohol are cane-sugar molasses and beet-sugar molasses. After the molasses has been diluted with water and made slightly acid (to retard the growth of bacteria and promote the growth of yeast), it is heated (to 70°F) and a prepared yeast culture is added The sucrose in the molasses is converted to glucose and fructose by the enzyme invertase (secreted by the yeast) and then the alcohol and carbon dioxide are produced By distillation the concentration of the alcohol can be increased Also used as sources of alcohol are corn and other grains, potatoes, and other starch-containing substances, in these the starch is converted to sugar in the preliminary stages

fermented milk, whole or skim milk curdled to beverage or custardlike consistency by lactic-acid producing organisms Many forms of fermented milk were originated by early nomadic herdsmen, especially in Asia and S and E Europe, and some are known in Scandinavia, Africa, and South America Such milks are believed to have medicinal value in the control of intestinal fermentation by contributing bacteria which, establishing themselves in the lower intestine, predominate over putrefactive types Fermented milks include acidophilus milk, especially noted for its therapeutic value, cultured BUTTERMILK, koumiss (koumiss), probably originated from mare's milk by western Mongols, effervescent and of acrid flavor and containing alcohol produced by yeasts, the similar kefir of SE Russia, yoghurt, similar to the Armenian matzoon, a highly acid, usually semisolid, form publicized by Metchnikoff in a book on the prolongation of life among Bulgarian tribes, and the somewhat ropy Scandinavian beverages, *kaelder-maelk* and *filbunke*

Fermi, Enrico (ĕnrē'kō fĕr'mē), 1901–, American physicist, b Italy He taught physics at the universities of Florence and Rome In 1939 he came to the United States, he was professor of physics from 1939 to 1945 at Columbia Univ and after 1945 at the Univ of Chicago For his work on radioactive substances he received the 1938 Nobel Prize in Physics The ATOMIC BOMB project was materially aided by his early research (1934–38) and after 1939 by his active participation He postulated the existence of an atomic particle which he called the neutrino and discovered element 93, now called neptunium He is the author of *Thermodynamics* (1937)

Fermo (fĕr'mō), town (pop 9,295), the Marches, central Italy, on a hill in the Apennines 5 mi from the Adriatic It has pre-Roman walls, interesting Roman remains (an arch, a theater, and a reservoir), and a Gothic cathedral Silkworm culture is the main occupation.

Fermoy (fûrmoi'), urban district (pop 4,212), Co Cork, Ireland, NE of Cork and on the Blackwater, here crossed by a 16-arch stone bridge built in 1866 There are woolen and flour milling, trade in farm produce, and fishing A large military station was established in Fermoy late in the 19th cent A Roman Catholic cathedral is here

Fern, Fanny see PARTON, SARA PAYSON WILLIS

fern, any plant of the Filicales order of the phylum Pteridophyta, numbering several thousand species, widely distributed but most abundant in the tropics Early geologic predecessors of ferns were in general similar to the TREE FERN and contributed to coal deposits Modern ferns range from small epiphytes to climbing ferns, aquatics, and tree ferns Typically, however, the ferns of North America have green fronds produced from a rootstalk Reproduction is achieved not by seeds (ferns have neither flowers nor seeds) but by asexual spores These are borne in various ways, as in rounded or elongated "fruit dots" (sori) on the backs of fertile fronds otherwise similar to the sterile (e g , the Boston fern), on a definite part of the frond delegated to spore bearing (e g , the interrupted fern), under the reflexed edges of the frond (e g , the brake and the maidenhair fern), or on specialized fertile fronds that bear no resemblance to the sterile frond (e g , the sensitive fern) The spores germinate to produce a small flat structure (prothallus) containing the sperm and egg cells, the union of which gives rise to the leafy fern plant. This production of both sexual and asexual forms is known as alternation of generations There are also vegetative means of multiplication, as by runners in the Boston fern and by the rooting of the frond tip in the walking fern Particularly valued as ornamental plants, some ferns have also been used for food, and the male fern has long been considered a remedy for tapeworm The asparagus fern and the shrub SWEET FERN are not true ferns The CLUB MOSS and HORSETAIL are related to the ferns and are usually distinguished as fern allies There is an American Fern Society See Herbert Durand, *Field Book of Common Ferns* (1928), W N Clute, *Our Ferns Their Haunts, Habits, and Folklore* (1938)

Fernald, Merritt Lyndon (fûr'nŭld), 1873–, American botanist, b Orono, Maine, grad Harvard, 1897 He taught at Harvard from 1902 to 1949 (as Fisher professor of natural history from 1915) and was director of the Gray Herbarium there from 1937 He was the editor (with Benjamin L Robinson) of the seventh edition (1908) of Asa Gray's manual of botany and of *Rhodora*, journal of the New England Botanical Club Besides numerous botanical papers and monographs, he wrote (with A C Kinsey) *Edible Wild Plants of Eastern North America* (1943)

Fernández or **Hernández, Gregorio** (grāgō'rĕō fĕrnän'dāth, ĕrnän'dāth), c 1576–1636, Spanish baroque sculptor He probably studied in Valladolid, where by 1605 he was established and was working for Philip IV He never went to Italy, and his natural and realistic figures are free from Michelangelesque exaggeration His *Pietà*, *Baptism*, and *Mater Dolorosa* are famous examples of his work to be seen in the churches and museum of Valladolid Others of his fine works are found throughout Spain A beautiful group, *St Theresa and Jesus*, is in the Church of St Theresa, Ávila

Fernández, Juan (hwän' fĕrnan'dāth), d 1602?, Spanish or Portuguese navigator in the Pacific There were several pilots of the name in Spanish America and much confusion about them One of them discovered how to increase sailing speed off the Peruvian and Chilean coast by taking advantage of the trade winds far out to sea He is also said to have discovered the Juan Fernández Islands before 1572, possibly in 1563

Fernández de Avellaneda, Alonso see AVELLANEDA, ALONSO FERNÁNDEZ DE

Fernández de Córdoba, Francisco, d 1526?, Spanish conquistador Sent in 1524 by Pedro ARIAS DE ÁVILA to deprive Gil GONZÁLEZ DE ÁVILA of his claims to Nicaragua, Fernández de Córdoba founded LEÓN and GRANADA Trying to seize Nicaragua for himself, he was surprised by his commander and put to death

Fernández de Córdoba, Gonzalo (gônthä'lō), 1453–1515 Spanish general, called the Great Captain He fought in the civil wars preceding and following the accession of ISABELLA I and in the conquest of Granada From 1495 to 1498 he commanded the army aiding Naples against Charles VIII of France After expeditions against the rebels of Granada and the Turks he returned to Italy as an ally of Louis XII of France, who had joined with Ferdinand V of Castile to partition Naples (see ITALIAN WARS) When Naples had been conquered, he expelled the French and served as governor till 1507, when he lost the king's favor

Fernández de Lizardi, José Joaquín (hōsā' hwäkēn' fĕrnän'dās dā lēsar'dē), 1776–1827, Mexican journalist, novelist, and dramatist, known by his pseudonym El Pensador Mexicano His most important work is the picaresque novel, *El Periquillo Sarniento* (1816–30, Eng tr , *The Itching Parrot*, 1942), which depicts scenes of Mexican life See biography by J R Spell (1931)

Fernández de Moratín, Leandro (lāän'drō fĕrnän'dāth dā mōrätēn'), 1760–1828, Spanish dramatist and poet He was a Francophile who sided with the Bonapartes and after Napoleon's fall lived a life of exile in France His poetry is mediocre, but he wrote successful prose comedies after the manner of Molière The best of these is *El sí de las niñas* [the maidens' consent] (1806)

Fernández Navarrete, Juan see NAVARRETE, JUAN FERNÁNDEZ

Fernandina (fûrnăndē'nŭ), city (pop 3,492), co seat of Nassau co , extreme NE Fla , on Amelia Island at the mouth of the St Marys It is a port of entry and a shrimping, fishing, and pulp-manufacturing center The region was known in the 16th cent , and in the 1680s it was the site of a Spanish fort During the 18th cent the region changed hands many times Fernandina was declared a free port in 1808 and developed rapidly as a resort of smugglers, slave traders, and pirates The old Spanish fort was taken by Americans in 1812, but it was not until the close of 1817 that the port was permanently captured Fort Clinch, now a state park, was built in 1847–61; in the Civil War, Union troops seized and occupied it (1862).

Fernando da Noronha (fĕrnän'dō dä nōrō'nyä), group of islands in the Atlantic, off NE Brazil, c 225 mi. NE of Natal Discovered in 1503 by a Portuguese expedition under Fernando da Noronha, it was used as a penal colony by Brazil and in 1942 was made a military base

Fernando Po or **Fernando Póo:** see SPANISH GUINEA

Fernán González (fĕrnän' gônthä'lāth), d 970, count of Castile Under him Castile gained virtual independence from Leon His feats are celebrated in an epic poem of the 13th cent , one of the chief works of popular Castilian poetry

Ferndale, 1 City (pop 22,523), SE Mich , residential suburb of Detroit; inc as a village 1919, as a city 1927 Metal products and synthetic resins are among the city's products 2 Residential borough (pop 2,740), SW Pa , near Johnstown, inc 1896

Ferne Islands. see FARNE ISLANDS

Fernel, Jean François (zhäN' frāswä' fĕrnĕl'), 1497–1558, French physician, professor of medicine at the Univ of Paris Besides contributing numerous medical writings (including *Universa medicina*, 1554), which advanced medical progress, he corrected many errors of Galen He also wrote on astronomy and mathematics See study by C. S Sherrington (1946)

Ferney-Voltaire (fĕrnā'-vôltĕr'), town and commune (pop 822), Ain dept , E central France, near Geneva It grew after VOLTAIRE, in 1758, bought the seigniory of Ferney to escape molestation from both the Genevese and the French authorities Here the "patriarch of Ferney" lived until 1778, he built the local church and founded a pottery industry which, revived by the French government, has formed some of the finest craftsmen of modern France Voltaire's handsome residence still stands

Fernie, city (pop 2,545), SE British Columbia, near the Mont border and on the Elk river It is a coal and lumber center

Fernkorn, Anton Dominik (ăn'tōn dō'mēnĭk fĕrn'kōrn), 1813–78, German sculptor Emigrating from Prussia to Vienna, he became director of the imperial bronze foundry His principal monuments are the equestrian figures, with prancing horses, of St George, Archduke Charles, and Prince Eugene (done in collaboration with others)

Fernow, Bernhard Eduard (fûr'nō), 1851–1923, American forester, b Germany In 1876 he came to the United States and became a leader in the movement to protect forests against fire and exploitation In 1886 he was appointed chief of the Division of Forestry, U S Dept of Agriculture He organized several of the schools of forestry in the United States and Canada Among his publications are *Economics of Forestry* (1902), *A Brief History of Forestry* (1907), and *Care of Trees* (1910)

Ferozepore (fŭrōz'pōr), town (pop 82,502), S Punjab state, N India It was founded by Firoz Shah Tughluk (reigned 1351–88), sultan of Delhi Important engagements in the Sikh Wars were fought near by

Ferrante see FERDINAND I, king of Naples

Ferrar, Nicholas (fĕ'rŭr), 1592–1637, English theologian He was associated (1618–23) with the Virginia Company and, with his brother John, played a notable role in its affairs He retired from Parliament and founded (1625) a religious utopian community at Little Gidding in Huntingdonshire, visited (1633) by Charles I, but attacked as an "Arminian nunnery" and disbanded by Parliament in 1647 Ferrar left in manuscript a harmony of the Gospels See biographies by T T Carter (1892) and H P K Skipton (1907), J E Acland, *Little Gidding and Its Inmates in the Time of Charles I* (1903), *The Ferrar Papers* (ed. by B Blackstone, 1938)

Ferrara (fûrä'ru, Ital fär-rä'rä), city (pop 58,187), capital of Ferrara prov , Emilia-Romagna, N central Italy On a low, marshy plain with much reclaimed land, it is now an agricultural center, but works of art recall its past splendor In the 13th cent the ESTE family founded here a powerful principality, and in the Renaissance commerce, learning, painting, and the arts flourished about the brilliant court Ariosto and Tasso lived here, and Savonarola was born in Ferrara After the city was incorporated (1598) in the Papal States, it declined Severe damage in the Second World War spared the 14th-century moated castle and the Romanesque-Gothic cathedral Foremost among the palaces of Ferrara are the Palazzo dei Diamanti and the Schifanoia

Ferrara-Florence, Council of, 1438–45, second part of the 17th ecumenical council of the Roman Catholic Church, the first part was the Council of Basel, canonically convened but after 1437 schismatic (see COUNCIL, ECUMENICAL, and BASEL, COUNCIL OF) The chief goal at Ferrara was to end the Schism of East and West, it was greatly promoted by John VII, Byzantine emperor, who, hard pressed by the Turks, hoped Christian union might save his empire! The council, consummation of years of negotiations, was opened by the papal legate at Ferrara as the legitimate successor of the Council of Basel. The representatives of the East arrived soon after the council's beginning (Jan , 1438), they included the emperor, the patriarch of Constantinople, canonical representatives of the

other Orthodox patriarchs, and the metropolitan of Kiev, head of the Russian Church The questions between East and West were the *filioque* clause of the CREED, the use of unleavened bread in the EUCHARIST, the definition of purgatory, and the nature of the papal jurisdiction The discussions were generally conducted without acerbity, the leading figure being BESSARION, archbishop of Nicaea, leader of the moderates among the Orthodox About a year after its commencement the council moved to Florence (Jan , 1439) because of the plague at Ferrara and of the financial inducements of the Florentines In July, 1439, the pope issued the bull *Laetentur coeli*, announcing the religious union of East and West, which had been ratified by both sides, except for a few Orthodox On the questions at issue the Orthodox conceded that the Latins might use the *filioque* in the creed and unleavened bread at Mass without danger to faith or right custom, they also accepted the Latin definition of purgatory and the papal supremacy over the patriarchs, without prejudice to patriarchal jurisdiction in the patriarchates The Orthodox departed from Italy, but after their return the party opposed to union on the council's terms gained power, and before any lasting strength could be given the union Constantinople fell to the Turks, who controlled the patriarchate of Constantinople thereafter The council continued to sit after the union was announced until 1445, moving to the Lateran in 1443 Its principal business was then to bring back into union with the Holy See the smaller non-Orthodox churches, i e , Armenian, Jacobite, Nestorian, and Maronite Of these, as of the Orthodox, small groups entered the Roman communion, but there was no great reunion The chief result of the council was probably the increase of prestige it lent to the Holy See It also was important in bringing Bessarion and other Greeks into Italy, strengthening the cultural connection between East and West

Ferrari, Gaudenzio (goudān'tsō fĕr-ra'rē), c 1480–1546, Italian painter, one of the leading representatives of the Lombard school He worked chiefly in the churches of Varallo (N Piedmont), Vercelli, and Milan and produced many works, including tempera, oil, and fresco, most of them now in the galleries of Lombardy and Piedmont At its best his art is characterized by inventiveness, fine feeling for the dramatic and decorative, and bright and pleasing color Notable examples include the frescoes in Santa Maria delle Grazie, Varallo, portraying 20 scenes from the life of Christ, the fine altarpiece, *Marriage of St Catherine*, for San Gaudenzio, Varallo, and frescoes for three of the chapels on the Sacred Mountain of Varallo Other excellent Ferrari frescoes, depicting incidents in the lives of Mary Magdalene and the Virgin, are in the Church of San Cristoforo, Vercelli, also *Choir of Singing Angels* in Santa Maria dei Miracoli, at Saronno, and the *Scourging of Christ*, in Santa Maria delle Grazie, Milan See study by Ethel Halsey (1904).

Ferrari, Giuseppe (jōōzĕp'pā), 1812–76, Italian philosopher and politician A thorough skeptic in metaphysics, he devoted himself to the more active aspects of social, political, and historical philosophy. From his self-imposed exile in France (1837–59), he exerted influence on the RISORGIMENTO His development of a philosophy of revolution in *La filosofia della rivoluzione* (1851) and *Histoire des révolutions* (1858) encouraged the radical and liberal elements in Italy to act Returning to Italy in 1859 he strove for a federalized state, described in his *La federazione repubblicana* (1851), thus opposing the unitarian and monarchical schemes of Cavour.

Ferraris, Galileo (gälā'lā'ō fär-rē'rēs), 1847–97, Italian physicist and electrical engineer. He is noted for his work on alternating currents and for his discovery (1885) of the rotary magnetic field, through which he promoted the development of alternating-current motors

Ferreira, Antonio (antō'nyō fûrā'ru), c 1528–1569, Portuguese dramatist and poet He studied canon law in the Univ of Coimbra and was imbued with the spirit of the Renaissance He was privy councilor and magistrate but found time to write dramas and lyrics His immortal work is the drama *Inês de Castro*, written sometime between 1553 and 1567, probably around 1557 He also wrote two comedies, *Bristo* and *O cioso* [the jealous husband]. *Poemas lusitanos* is a collection of sonnets, odes, epistles, eclogues, and epigrams His style is generally grave and elevated, and his writings show his classical learning The greatness of Ferreira's contribution to the development of the Portuguese language and literature is the more remarkable because he died of plague when still relatively young.

Ferrel, William (fĕ'rul), 1817-91, American meteorologist, b. Fulton co., Pa , grad Bethany College, now in West Virginia. For several years he worked on the *Nautical Almanac*, and from 1867 until 1882 he was employed on the government coast and geodetic survey. He did valuable research on tides, currents, winds, and storms and wrote extensively, his works include *Tidal Researches* (1874) and *Meteorological Researches* (1875–81). He formulated **Ferrel's law:** moving bodies on the earth's surface are deflected to the right in the Northern Hemisphere and to the left in the Southern Hemisphere, the amount of deflection varies with the velocity of the motion and with the latitude. This deflection is due to the rotation of the earth; it is zero at the equator and greatest near the poles. The law is of wide application in explaining the ways of air currents BUYS-BALLOT formulated a related law

Ferrer, Vincent. see VINCENT FERRER, SAINT

Ferrer Guardia, Francisco (frānthĕ'skō fĕrĕr' gwär'dyä), 1859–1909, Spanish educator and politician An ardent liberal, anticlerical, and republican, he took refuge in France (1886), where he became a socialist He returned to Spain to found (1901) an anticlerical, antimilitarist school at Barcelona Accused of complicity in the attempt (1906) to murder Alfonso XIII, he was, however, released and continued his educational work until 1909, when he was convicted of taking part in the violent uprising that had just shaken Barcelona He was executed His death was viewed by liberals everywhere as a judicial murder

Ferrero, Guglielmo (gōōlyĕl'mō fär-rā'rō), 1871–1942, Italian man of letters and historian With his father-in-law, the criminologist Cesare Lombroso, he collaborated in the writing of *La donna delinquente*, and his interest in psychology and sociology permeates all his writings An outspoken critic of Fascism, Ferrero was exiled by Mussolini and became (1930) professor of history at the Univ of Geneva, Switzerland, where he died Among his numerous works the best known deal with Roman history, notably *The Greatness and Decline of Rome* (Eng tr , 5 vols , 1907–9), a highly readable and challenging work, which, however, has been criticized by many professional historians He also wrote *The Ruin of Ancient Civilization* (Eng tr , 1921), *The Life of Caesar* (Eng tr , 1933), and *The Women of the Caesars* (Eng tr , 1935) In his last years he wrote extensively on the French Revolutionary and Napoleonic periods *The Gamble Bonaparte in Italy* (Eng tr , 1939), *The Reconstruction of Europe Talleyrand and the Congress of Vienna* (Eng tr , 1941), and *The Principles of Power* (Eng tr , 1942) are attempts at pointing, by historical parallels, toward a solution of the modern political world crisis Ferrero also wrote several novels Most of his later works appeared originally in French

ferret. The American ferret—the black-footed ferret—is the largest North American weasel It inhabits the Great Plains, and its chief prey is the prairie dog It is extremely rare About 2 ft long, it is yellow buff, marked with brown, and has a black masklike band across the eyes, a black-tipped tail, and black feet The Old World ferret is a domesticated breed of polecat with the head and body about 14 in long, native probably to Africa and used at least since Roman times for hunting rats, mice, and rabbits

Ferri, Ciro (chē'rō fĕr'rē), 1634–89, Italian painter, etcher, and architect, the most celebrated pupil of Pietro da Cortona He imitated Cortona's style with such success that he was employed to complete his unfinished works in the Pitti Palace and in Rome Among his chief independent works are the biblical frescoes in Santa Maria Maggiore, Bergamo, and the frescoes in the cupola of Sant' Agnese in Agone, Rome, and his masterpiece, *St Ambrose*, an altarpiece in San Ambrogio, Rome Others are *Triumph of Bacchus* (Hampton Court, London) and *Christ on the Cross* (Uffizi)

Ferri, Enrico (ānrē'kō), 1856–1929, Italian criminologist He continued the scientific study of crime begun by Lombroso, emphasizing social and economic factors He recommended classification of criminals as a basis for preventive treatment and advocated "penal substitutes" Argentina's penal code of 1921 was based on his ideas, but the Italian code which Ferri drew up in the same year was rejected by the Fascist regime He edited *Avanti*, a Socialist daily, for many years Of his several books the best known is *Criminal Sociology* (1884, Eng tr , 1917)

Ferri, Luigi (lwē'jē), 1826–95, Italian philosopher, educated in France He taught in both French and Italian universities and his works show the influence of both French and Italian thought As a historian of philosophy, he sought a reconciliation of the prevailing psychology with idealism His works include *Il genio d'Aristotele* (1866), *Il senso commune nella filosofia* (1872), and two highly esteemed historical studies in French, *Essai sur l'histoire de la philosophie en Italie au XIX siècle* (1869) and *La Psychologie de l'association depuis Hobbes jusqu'à nos jours* (1883)

Ferriday, town (pop 2,857), E La., near the Mississippi, founded 1903, inc as a village 1905, as a town 1927. It has railroad shops and cotton gins A large pecan plantation is near by

Ferrier, Sir David (fĕ'rēur), 1843–1928, Scottish neurologist He served as professor of neuropathology at King's College, London. His work on the cerebral localization of control of bodily functions confirmed and extended that of earlier investigators. He wrote *The Functions of the Brain* (1876) and *Cerebral Localisation* (1878).

Ferrier, James Frederick, 1808–64, Scottish philosopher He was a professor at Edinburgh (1842–45) and at St. Andrews from 1845 until his death His major work, the *Institutes of Metaphysic* (1854), argued against the absolute existence of matter and for the coexistence of mind and matter in all experience See biography by E S Haldane (1899)

Ferrier, Susan Edmonstone, 1782–1854, Scottish novelist In *Marriage* (1818), *The Inheritance* (1824), and *Destiny* (1831), she drew lively satirical pictures of Scottish society The *Memoir and Correspondence of Susan Ferrier* (ed by J A Doyle, 1898) was republished with the novels in 1928, when there was a considerable revival of interest in Miss Ferrier's work

Ferris, Warren Angus 1810–73, American fur trader and frontier surveyor, b. Glen Falls, N Y Most of his childhood was spent in Buffalo, but in 1828 he left home, adventuring westward In 1830 at St Louis he was engaged by the American Fur Company, and the next five years he spent as a company trader and trapper in the Rocky Mts After returning briefly to Buffalo in 1835, he went (1836) to Texas, where he surveyed much of NE and N Texas, including the site of Dallas He spent his years after 1847 on his farm near Dallas, doing some surveying and hunting on the side, as well as building up a library (rare in frontier Texas) His *Life in the Rocky Mountains*, first published (though not in entirety) in the *Western Literary Messenger* at Buffalo in 1843–44, is one of the most valuable of early Western documents An edition by Paul C Phillips appeared in 1940

Ferris, Woodbridge Nathan, 1853–1928, American educator and public official, b Tioga co , N Y After study (1873–74) at the Univ of Michigan, he taught in country schools, and became a successful school superintendent in Illinois In 1884 he founded a college at Big Rapids, Mich , the Ferris Institute, of which he remained head until his death He became active in Democratic party politics, and as governor (1913–16) of Michigan he gained the title of 'Good Gray Governor " In 1922 he won a notable victory when he was elected to the U S Senate, the first Democrat to gain this office in Michigan since 1863

Ferris, town (pop 1,436), N Texas S of Dallas, settled 1870, inc 1874 It is in a blackland farming area notable for producing onions It also makes bricks

Fernsburg, town (pop 1,347), W Vt , S of Burlington, on Lake Champlain, granted 1762, settled 1785 Many of the inhabitants were Friends "Rokeby," home of the writer Rowland E Robinson, was an Underground Railroad station

Ferris wheel, gigantic revolving wheel built for the World's Columbian Exposition held in Chicago in 1893 It was designed and constructed by George W. Ferris, an American engineer of Galesburg, Ill The wheel was built on the tension spoke principle, having two rims, between which were carried 36 cars, each capable of holding 40 passengers The wheel was 250 ft in diameter, the supporting towers 140 ft high, and the total weight of the apparatus about 1,200 tons Imitations have since been built for various exhibitions

ferroconcrete see CONCRETE

Ferrol, El (ĕl fĕrōl'), officially **El Ferrol del Caudillo** (dĕl koudhē'lyō), city (pop 40,664), La Coruña prov , NW Spain, in Galicia, an Atlantic port The naval base, first built in the 18th cent , is one of the most important in Spain Shipbuilding and ironworks are the main industries. Francisco Franco was born here

Ferry, Jules (zhul' fĕrē'), 1832–93, French statesman A journalist and a politician, he rose to prominence as minister of public instruction (1879–80, 1882) and was twice premier (1880–81, 1883–85) Ferry established the modern French educational system with universal, free, and compulsory education in the primary schools An anticlerical, he secularized the schools and dissolved those religious orders that were not authorized to teach The curriculum and the upper grades were expanded under his guidance Ferry is best known, however, as the builder of the French colonial empire Developing a philosophy of imperialism, he accepted the loss of Alsace-Lorraine and was willing to cooperate with Bismarck in order to get compensation elsewhere During his premiership the French occupied Tunis, entered Tonkin and Madagascar, and penetrated the regions of the Niger and the Congo Ferry was overthrown by Clemenceau after a temporary defeat of the French army in Indo-China. He was assassinated by a religious fanatic See T F Power, *Jules Ferry and the Renaissance of French Imperialism* (1944)

ferry, a passage across water by boat, provided for the public upon payment of a toll Over a narrow waterway foot passengers may be ferried in rowboats Vehicles and animals are often carried across on barges with flat bottoms If the passage is short, such a ferryboat may be propelled by means of a chain which lies on the bed of the stream and is made fast on shore at each end. In the boat it passes over a drum which is turned by hand power or by an engine Another kind of ferry for rivers has a boat attached to one end of a long

chain or rope, the other end of which is fastened to a stationary buoy somewhat upstream and in the middle This is used where the current is strong enough to propel the boat by pressure upon its side Where regular passenger traffic is heavy or where the distance traversed is greater, large ferryboats propelled by power are used, ordinarily with a screw at each end In places where a bridge cannot be used, large vessels, sometimes paddle-driven, transport railroad trains across water between track and track. Specially built ocean ferries have made possible, since 1936, a through train service between London and Paris The passengers entrain in either London or Paris, the cars are ferried across the English Channel between Dover and Dunkirk, and the occupants alight without having left the train throughout the entire trip

Fersen, Count Fredrik Axel (frā'drĭk äk'sŭl fĕr'sŭn), 1719–94, Swedish politician and soldier, a descendant of the McPhersons of Scotland. He served in the French army (1743–48) and retired as brigadier general As lieutenant general in the Swedish army (1750–57), he distinguished himself in the Seven Years War Fersen was a leader of the noble faction called the Hats After the coup d'état of Gustavus III, he became the king's adviser At the diet of 1789 he opposed the king's war policy and was arrested He was soon released and retired from politics His *Historiska Skrifter*, a history of 18th-century Sweden (largely autobiographical), is more interesting than accurate

Fersen, Count Hans Axel, 1755–1810, Swedish soldier and diplomat, son of Count Fredrik Axel Fersen He entered (1779) the French service, was aide-de-camp of Rochambeau in America, and later at the court of Versailles became a favorite of Marie Antoinette He was recalled (1784) to Sweden, but returned to Paris at the eve of the French Revolution In 1791 he helped Bouillé plan the flight of Louis XVI and Marie Antoinette and himself drove their coach outside the city limits, but the royal couple were arrested at Varennes Fersen later held diplomatic posts at Vienna and Brussels and in 1801 was made marshal of Sweden by Gustavus IV, whom he accompanied to Germany in the Napoleonic Wars After the Swedish revolution of 1809 Fersen was accused by popular rumor of reactionary intrigues, and he was killed by a mob See his own diaries (Eng tr, 1902), Marjorie Coryn, *Marie Antoinette and Axel de Fersen* (1938), Evan John (pseud of E V Simpson), *Kings' Masque* (1941)

fertility rites, magico-religious ceremonies to insure abundance of food and birth of children In primitive agricultural societies natural phenomena, such as rainfall, the fecundity of the earth, and the appearance, disappearance, and reappearance of vegetation were personified and thought to act in terms of human generation These phenomena are symbolized in the sacred mythical marriages of Mother Earth, the mother goddess (e g, Cybele, Ishtar, and Demeter), and the sun-god or ruler of heaven (e g, Attis, Tammuz, and Zeus) and the birth and death of their progeny (see Osiris, Persephone) The sacred drama is the fertility rite par excellence It depicts the marriage and includes a story of birth, death, and resurrection, symbolizing the periodicity of nature Fertility rites include acts of sympathetic magic, e g, kindling of fires (symbolizing the sun) and scattering the reproductive organs of animals on the fields, displays of phallic symbols, and even ritual prostitution A ritual dance including a mock battle, e g, the Green Corn dance of the Natchez Indians, was a typical device to ward off spirits hostile to crops Sacrifices released the powers embodied in humans, animals, and plants and so made the fields productive Generally the same magic was believed effective in enhancing agricultural and human fertility Some fertility rites have come down to modern times in a somewhat disguised form, e g, the Maypole dance and carnivals

fertilization, in biology, a process in the reproduction of both plants and animals, involving the union of two unlike sexual cells, or gametes, the sperm and the ovum or egg In the flowers of higher plants, the process occurs when, after pollination and the growth of the pollen tube down the style to establish contact with the egg cell, one sperm nucleus of the pollen enters the egg and fuses with the nucleus of the egg The process occurs also in the mosses and ferns differing in that the sperm is actively motile and swims down the neck of the egg chamber (archegonium) to fuse with (fertilize) the egg cell In the higher animals, the fundamental principle is the same The sperm or male cell fuses with the ovum, a new individual developing subsequently Fertilization is especially important in that, by the fusion of the nuclear material, the inheritable characters of the parent cells are carried in the genes, which are brought together to be rearranged and recombined in the fertilized ovum

Cross-fertilization, in botany, indicates the fusion of an ovum of one flower with the sperm of another flower, as distinguished from self-fertilization in which ovum and sperm from the same flower are fused.

fertilizer, material applied to the soil for the purpose of increasing its nourishment for plants Plants require nitrogen, potassium, phosphorus, and other chemical elements for proper growth, when these are lacking in the soil, they may be introduced by the application of organic fertilizers, such as barnyard manure, fish or bone meal, and packing-house wastes, or by inorganic or artificial fertilizers—chemicals which contain these elements Nitrate of soda, sulphate of ammonia, and muriate of potash are commercial fertilizer materials, used either separately or mixed in definite proportions, according to the needs of the soil and crop Machinery of various types is used for distributing fertilizers in the soil, either with the seed or before or after seeding The fertility of the soil is increased by plowing crops under and by growing leguminous crops, such as sweet clover and red and crimson clover See A F Gustafson, *Handbook of Fertilizers* (4th ed, 1944), G H Collings, *Commercial Fertilizers* (4th ed, 1947), publications of the U S Dept of Agriculture

Fervidor see French Revolutionary calendar

Fescennine verses (fĕ'sŭnĭn, -nīn), ancient Italian doggerel lines, bantering and scurrilous, originally chanted at rustic festivals—perhaps to avert the evil eye As used in Rome, they were shouted extemporaneously (in dialogue form) by onlookers at weddings and triumphs and may have been forerunners of Latin drama

fescue (fĕs'kū), any species of the genus *Festuca*, annual or perennial grasses The meadow fescue and especially the tall fescue, Eurasian perennials introduced into North America, are pasture and forage grasses The sheep fescue, is better adapted for turf than for use as a forage crop, the red fescue is used mainly for lawns A few species are cultivated for ornament

Fess, Simeon Davidson, 1861–1936, American educator and legislator, b Allen co, Ohio He was graduated from Ohio Northern Univ in 1889, immediately becoming professor of American history and later serving as dean of the law school (1896–1900) and vice president of the university (1900–1902) He was lecturer (1902–7) at the Univ of Chicago, then president (1907–17) of Antioch College Beginning his political career when past the age of 50, he served in Congress (1914–23) and in the Senate (1925–35) An ardent and conservative Republican, he served as chairman of the Republican national congressional campaign committee (1918–22), as temporary chairman and keynote speaker of the Republican national convention in 1928, and as chairman (1930–31) of the Republican National Committee He was an unswerving prohibitionist and an opponent of the New Deal One of his books, mostly textbooks in history and civics, is *The History of Political Theory and Party Organization in the United States* (1910)

Fessenden, Reginald Aubrey (fĕ'sundun), 1866–1932, American physicist and engineer, b Quebec prov, studied at Bishop's College, Lennoxville, Que From 1887 to 1890 he was head chemist at the Edison laboratories and was later associated with leading electrical companies He was professor of electrical engineering at Purdue (1892–93) and at Western Univ of Pennsylvania (later Univ of Pittsburgh) from 1893 to 1900 He also served with the Weather Bureau and conducted researches in electricity, particularly in the field of radio and its application See biography by his wife, Helen M Fessenden (1940)

Fessenden, Thomas Green, 1771–1837, American journalist and satirical poet, b Walpole, N H, grad Dartmouth, 1790, and studied law in Rutland, Vt Under the name Christopher Caustic he wrote satirical poems, popular but scurrilous, among them *Democracy Unveiled* (1805), an attack on Jefferson and other Democratic leaders He practiced law in Brattleboro, Vt, and edited successively two papers In 1822 he established in Boston the *New England Farmer*, which he edited until his death, and he wrote various agricultural handbooks including the widely used *Complete Farmer and Rural Economist* (1834) See P G Perrin, *Life and Works of Thomas Green Fessenden* (1925)

Fessenden, William Pitt (fĕ'sundun), 1806–69, American statesman, b Boscawen, N H, grad Bowdoin College, 1823 Admitted (1827) to the bar, he began practice in Portland in 1829 and by 1835 was regarded as one of the leading lawyers of Maine A Whig, he served several terms in the state legislature and one (1841–43) in the U S House of Representatives Fessenden was active in organizing the Republican party in Maine and in 1854 was elected to the U S Senate, where, except for nine months as Lincoln's Secretary of the Treasury (June, 1864–March, 1865), he remained till his death Beginning with a notable speech against the Kansas-Nebraska Bill, he gained a reputation as one of the Senate's greatest debaters Made a member of the finance committee in 1857, Fessenden was its chairman during most of the Civil War and in that capacity and as Secretary of the Treasury made an excellent record in public finance, trying to confine expenditures to necessary measures and to resist inflation In Dec, 1865, he became chairman of the joint committee on Reconstruction and wrote most of its famous report Though he believed Congress, and not the President, should direct Reconstruction and though he disliked Andrew Johnson personally, he refused to vote for Johnson's impeachment He also refused to vote on the Tenure of Office Act and in general acted more moderately than his fellow radical Republicans His course, particularly in regard to the impeachment proceedings, was contrary to the expressed wishes of his constituency, and for a time he was unpopular See biography by his son, Francis Fessenden (1907)

Festiniog, Merionethshire, Wales see Ffestiniog

Festival of Lights, Jewish festival see Hanukkah

festoon, sculptured or painted architectural or interior ornament consisting of a garland of leaves, flowers, or fruit, or some combination of these, held by ribbons or folds and draped by the ends It is also designated a swag It reproduces the actual garland used on Greek and Roman festal altars and was much used as a decorative feature in Roman and Renaissance art, and was often represented as carried by *putti*, or infant figures

Festus (Sextus Pompeius Festus), fl at some time between 100 and 400 A D, Roman lexicographer, his surviving work, *On the Meaning of Words*, is an abridgment of the lost glossary of M Verrius Flaccus It is most important as a primary source for Roman scholarship and Roman antiquities Paul the Deacon abridged Pompeius Festus' work

Festus, Porcius (pôr'shus), fl A D 60, Roman procurator of Judaea (A D 60–A D 62) He succeeded Antonius Felix He was just in his administration of the province Finding Paul in prison he gave him a fair hearing before King Agrippa and then sent him to Rome Acts 24 27–26 32

Festus, residential city (pop 4,620), E Mo, on the Mississippi below St Louis and adjacent to Crystal City, in a farm area, platted 1878 Shoes and textiles are made here

feterita see sorghum

Feth Ali Shah see Fath Ali Shah

Fétis, François Joseph (frāswa' zhōzĕf' fātēs'), 1784–1871, Belgian music theorist, historian, and critic His great contributions to music history were his *Biographie universelle des musiciens* (8 vols, 1835–44) and *Histoire générale de la musique* (1837), works of great value to music historians, despite inaccuracies In France in 1827 he founded the *Revue musicale*, an outstanding periodical He also wrote biographies and theoretical works

fetish (fē'tĭsh) [Port *feitço*=charm, sorcery], inanimate object supposed to possess some magical power through its association with some divine power The belief and use of fetishes in worship is fetishism, a religious idea related ultimately to animism Any object of irrational or superstitious devotion may by extension be called a fetish, and in psychopathology, fetishism usually means neurotic sexual attraction to some object such as a piece of clothing

Fetter, Frank Albert, 1863–1949, American economist, b Peru, Ind, Ph D Halle, 1894 He taught at Princeton from 1911 to 1931 Fetter attempted to revise the marginal utility theory by analyzing the importance of psychological factors in the determination of the value of goods His writings include *The Principles of Economics* (1904, rev ed, 2 vols, 1915–22)

Fetterman, William Judd, 1833?–1866, American army officer In 1861 he enlisted in the Union army from Delaware, he served throughout the Civil War and was twice brevetted for gallant conduct After the war he remained in the army and was sent, in Nov, 1866, to Fort Phil Kearney, Wyo The **Fetterman massacre** occurred when, despite his unfamiliarity with frontier conditions and methods of Indian fighting, he volunteered to lead a party of 80 men on supply escort duty, ignored orders not to leave the trail, and was ambushed by Indians under Red Cloud He and his entire party were killed in the attack

fetus (fē'tus), unborn offspring of a viviparous animal in the later stages of its development In earlier prenatal life, the developing young is known as the embryo The fertilized egg becomes implanted on the wall of the uterus (womb), and the embryo develops a separate circulatory system with its own blood supply, receiving nourishment and oxygen through the placenta In humans the heart beat of the fetus can be heard through the abdominal wall of the mother after the 18th week The form and position of the fetus can be identified by palpation in the second half of pregnancy, this may be confirmed by X-ray examination Active movements of the fetus are usually evident after the fifth month Just previous to birth, the top of the head of the fetus is usually situated in the lower portion of the pelvis In premature births, modern medicine, through the use of incubators and oxygen, offers the infant an excellent chance of survival

Feuchtwanger, Lion (lē'ŏn fokht'vang-ûr), 1884–, German novelist and dramatist He studied philosophy but turned to literature, translating various ancient classical dramas and writing several original plays which were successful His rise to a wide fame began with the historical novels *The Ugly Duchess* (1923, Eng. tr., 1928) and *Jud Süss* (1925,

Eng tr, *Power*, 1926), and he confirmed his popularity as a historical novelist with the Josephus trilogy, *Josephus* (1923, Eng tr, 1932), *The Jew of Rome* (1935, Eng tr, 1935), and *Josephus and the Emperor* (1942, English only) *Success* (1930, Eng. tr, 1930) and *The Oppermanns* (1933, Eng tr, 1933) are stories of modern German life Other works include the journal *Moscow, 1937* (1937, Eng tr, 1937) and the novels *Simone* (1944, English only) and *Proud Destiny* (1947, English only) Feuchtwanger left Germany in 1933 for France, but was later arrested and escaped to the United States in a dramatic fashion in 1940

feud, private warfare, especially between family groups Originally the general form of justice, the blood vengeance feud (see VENDETTA) is characteristic of most societies where a central government either has not arisen or has decayed In modern times the feud, outlawed in most civilized countries, has persisted where justice cannot be easily enforced and some recourse must be had to private means of effecting it Such has until recently been the case in the mountain regions of North Carolina and Kentucky, where the feud of the Hatfields and McCoys has become legendary The frontier in U S history was usually characterized by private justice and the feud

feudalism (fū'dŭlĭzm) [from Late Latin *feodalis*, adjective of *feodum* or *feudum*, a fief, which is ultimately from Germanic =cow, the source also of English *fee*], the form of social organization typical of all Western Europe from the dissolution of Charlemagne's empire to the rise of the absolute monarchies The basic characteristic of the organization is local and agricultural political economy Because it arose in Europe from the breakdown of central government and the growth of independent local units connected by personal relationships, there is such a bewildering diversity of forms, of customs, and of institutions that it is almost impossible to describe accurately feudalism as a whole This difficulty has been increased rather than lessened by the attempts of later legal writers to formulate exact feudal laws Nevertheless, certain institutions may be singled out as characteristic of feudalism strict division into social classes—nobility, clergy, peasants and burgesses (who emerged to power in the later part of the Middle Ages), private and almost continuous warfare, private jurisdiction, resting upon local custom, and the system of landholding dependent upon the fief, which gives feudalism its name Although some tillers of the soil held their land without obligation to any man, in alod (alodial tenure) or absolute ownership, they were the exceptions to the rule in the Middle Ages The usual economic unit was the manor, where the peasants, VILLEIN and SERF, held the land they worked from the lord of the manor, the seigneur, who granted them protection and the use of land in return for personal services (especially on the land he retained for his own use) and dues (especially payment in kind), which tended to become rigidly set by custom This was the MANORIAL SYSTEM and must be considered as distinct from the feudal system although the two were interdependent and inseparable The seigneur himself did not usually own the land, although in exceptional cases he might hold the manor in alod Normally he held it from a more powerful lord In an ideal feudal society (a legal fiction which most nearly approached realization in the artificially created Latin Kingdom of Jerusalem of the Crusaders), the ownership of all the land of a country was vested in the king Beneath him was a hierarchy of nobles, the most important nobles holding from him directly, the lesser nobles from them and so on down to the seigneur who held a single manor The method of holding was by fief The grantor of the fief was the suzeram or overlord, the recipient the vassal To acquire the fief the vassal knelt before the overlord, put his hands in those of the overlord, and declared himself his man, the overlord bound himself by kissing the vassal and lifting him to his feet This was the act of homage The vassal then swore an oath to be faithful to the overlord and to perform the services and acts due him this was the act of fealty or fidelity The overlord then invested the vassal with the possession of the fief, usually by giving him a stick, a straw, a clod of earth, or some other symbol of the land transferred (see INVESTITURE) It was not always land which was given in fief, an honor or a right might also be granted thus Nor is fief-holding usually considered as essential in feudalism this was merely a typical institution of medieval Western Europe. The vassal might in his turn become overlord by granting part of the fief to one who became a vassal to him A very complex and confusing net of relationships between the nobles grew up on the basis of fiefs The fief was originally a purely personal relationship and on the death of either party it had to be renewed With the growth of the idea of hereditary succession and of primogeniture, custom compelled its renewal with the heir of the deceased Basically, the system rested upon the unsettled condition of the time and the need that a lord felt for armed warriors; the nobility were essentially a military class, with the KNIGHT as the typical warrior (see also KNIGHTHOOD AND CHIVALRY) Since arming and equipping the mounted fighters were expensive, the lord was unable to create his armed force without the obligation of the vassal to supply a stipulated number of armed men, which varied according to circumstance from the simple service of the vassal himself (necessarily a knight) to the service of hundreds (who made up the private armies) The gradations of nobility were based on military service as well as on landholding The lowest rung of the scale was the squire, originally the servant of the knight Above the knight were the classes that varied in different countries—counts, dukes, earls, barons, and other nobles The vassal in addition to military service owed other dues and services varying with local custom and tending to become fixed, as in the AIDS The obligation of the overlord in the suzeram-vassal engagement, the feudal contract, was always protection of the vassal It was out of this need for protection that feudalism grew, in both the military and economic aspects It appears first in definite form in the Frankish lands in the 9th and 10th cent, and some scholars deny the name to any but the Frankish type A long dispute between historians as to whether German or Roman institutions formed its base could not reach a definite conclusion because of lack of documents It seems safe to say that feudalism arose from the condition of society consequent on the disruption of the decaying Roman institutions by the inroads and settlements of the Germans It used and altered institutions already existent One of the more important in an economic sense was the social organization of the Roman villa with the peculiar form of rental, the precarium, a temporary grant of land which did not alienate the right of the grantor More and more the poor landholder transferred his land to a wealthy protector and received it back as a precarium, thus creating the holdings in the manorial system However, the manorial system could develop as it did in England from the Germanic villages More important in the development of fiefs were the personal relationships, the Roman patrocinium and the German comitatus, both showing the tendency of the powerful to gather about them men dependent upon them for protection and rendering them service, particularly military service There was a tendency for the powerful to reward the services and render protection by the grant of a *beneficium*, the use of land, which tended to become hereditary. The use of mounted warriors, as by Charles Martel against the Saracens in 732, undoubtedly hastened amalgamation The local royal officers and the great landholders increased their power and forced the king to grant them rights of private justice and immunity from royal interference By this process feudalism grew fixed in Frankish lands by the end of the 10th cent The Church also had great influence in shaping feudalism, and though the organization of the Church did not become feudal in character, its hierarchy somewhat paralleled the feudal hierarchy The Church also owned much land, held in the hands of the monasteries, the church dignitaries, and the churches themselves Some of this was brought under cultivation by the monasteries out of the wilderness, but most of it was given by nobles as bequest or gift Much of it came with feudal obligations attached, and clerical land tended, like lay land, to assume a feudal aspect Therefore, though the clergy were forbidden to bear arms, they became participants as temporal lords in the feudal system, and many of the bishops and abbots were much like lay seigneurs Women and children could also become seigneurs in inheriting property under wardship Feudalism spread from France to Spain, to Italy, and later to Germany and Eastern Europe. The Frankish form was imposed by William I (William the Conqueror) upon England (1066), though most of the elements of feudalism were already present there It was extended eastward into Slavic lands to the marches that were continually battered by new invasions, and it was adopted partially in Scandinavian countries Feudalism continued in all the various countries until the end of the 14th cent The disruptive forces were always present in the system itself, which provided for the concentration of power into single hands The rise of monarchs in France, Spain, and England broke down the local system Another disruptive force was the increase of communication which broke down the isolated manor, built towns, and introduced the burgess (bourgeois) class This had also been present from the beginning, especially in Italy and Germany, but its great acceleration in the 14th cent with the expansion of the economic world after the Crusades, did much to destroy the feudal classification of society The system broke down gradually In France it was not completely destroyed until the French Revolution (1789). Old usages persisted in Germany until the 19th cent, in Russia until 1917 Many relics of feudalism still persist, and it has left its impress on almost all institutions of Western Europe Other ages and other lands have seen the development of feudal institutions In Japan the feudal system was well ordered before the 10th cent and persisted with modifications to the 19th cent (see JAPAN, BUSHIDO, DAIMYO) In other areas, as in China, the development was only partial, creating at times a feudalistic, rather a feudal, society Feudalism in India and in Saracenic civilization has also attracted notice There are thousands of scholarly works on particular aspects of feudalism as well as many collections of documents, laws, and treatises See Sir Paul Vinogradoff, *Villainage in England* (1892) and *The Growth of the Manor* (2d ed, 1911), Sir Frederick Pollock and F W Maitland, *History of English Law* (2d ed, 1899), Charles Seignobos, *The Feudal Régime* (Eng tr, 1902, of a chapter from Ernest Lavisse and Alfred Rambaud, *Histoire générale*, 12 vols, 1893-1901), R W Carlyle and A J Carlyle, *A History of Medieval Political Theory in the West* (6 vols, 1903-36), W S Davis, *Life on a Medieval Barony* (1923), Henri Pirenne, *Medieval Cities* (1925), J W Thompson, *Feudal Germany* (1927) and *Economic and Social History of the Middle Ages* (1928), F M Stenton, *The First Century of Feudalism, 1066-1166* (1932), Carl Stephenson *Medieval Feudalism* (1942), Marion Gibbs, *The Feudal Order* (1949)

Feuerbach, Anselm von (an'zĕlm fŭn foi'urbakh), 1829–80, German painter, leading exponent of the German classicist school, studied in Düsseldorf, Munich, Paris, and Rome He lived in Rome from 1856 to 1873, and after two years as professor in the Vienna Academy, he retired to Venice for the last five years of his life To his Roman period belong most of his famous works, including *Dante in Ravenna, Plato's Symposium, Judgment of Paris, Battle of Amazons,* and *Medea* One of his last works is the *Fall of the Titans* (Vienna) Feuerbach was also an accomplished portraitist His work shows strong Venetian influence His autobiography (1882) went through several editions

Feuerbach, Ludwig Andreas (lōōt'vĭkh andrā'äs), 1804–72, German philosopher, educated at Heidelberg and Berlin, son of Paul Johann Anselm von Feuerbach At first a Hegelian, he abandoned absolute idealism for naturalistic materialism, asserting that religious feeling is simply a product of man's yearnings and that the proper study of philosophy is man as defined by experience His attacks upon orthodoxy won him attention Feuerbach's most important works were *Das Wesen des Christentums* (1841, Eng tr by George Eliot, *The Essence of Religion*, 1853), *Geschichte der neueren Philosophie* (2 vols, 1833–37), and *Gotthelt, Freiheit und Unsterblichkeit* (1866) His writings exerted influence through their exposition of materialism, and both Karl Marx and Friedrich Engels wrote commentaries on him See W B Chamberlain, *Heaven Wasn't His Destination* (1941)

Feuerbach, Paul Johann Anselm von (poul' yō'hän an'zĕlm), 1775–1833, German jurist, father of Ludwig Feuerbach His work was in the field of criminal law † In *Kritik des naturlichen Rechts* [critique of natural law] (1796) he argued that law was the positive mandate of the state and was not to be confused with natural morality His *Grundsätze und Grundbegriffe des positiven peinlichen Rechts* [principles and rules of positive criminal law] (1799) ascribed a dual role to the penal law It should protect society by deterring crime through the threat of finely adjusted penalties and should protect individual liberties by punishing only those crimes which had been exactly defined by statute Feuerbach's books earned him teaching positions at the universities of Jena (1799), Kiel (1802), and Landshut (1804), and in 1805 he joined the ministry of justice of Bavaria with the task of preparing a criminal code The code (1813) embodied his principles, it was adopted by several German states and by several Swiss cantons Feuerbach served as an appellate judge from 1814 to his death Besides his systematic treatises he wrote vivid psychological studies, including *Kaspar Hauser* (1832; Eng tr, 1834) and *Narratives of Remarkable Criminal Trials* (1828–29, Eng tr, 1846)

Feuermann, Emanuel (ā'mä'nōōĕl foi'urmän), 1902–42, virtuoso cellist, b Kolomea, Galicia He appeared with the Vienna Philharmonic Orchestra at the age of 11 and later (1917–23) taught at the Cologne Conservatory From 1929 until 1933, when he fled to Switzerland, he taught at the Berlin Hochschule In 1938 he moved to the United States, where from 1935 he had concertized, he joined the faculty of the Curtis Institute of Music, Philadelphia, in 1941 Many considered him the greatest cellist in the world

Feuillants (fûyä'), political club of the French Revolution It emerged in July, 1791, when the right wing of the JACOBINS began to meet separately at the former Feuillant convent Its chief member was BARNAVE The Feuillants advocated a constitutional monarchy In March, 1792, the Girondists overthrew the Feuillant ministry, which was opposed to war on Austria From then on, the Feuillants were identified with the royalists and aristocrats and, after the fall of the monarchy (Sept, 1792), were suppressed by the Jacobins

Feuillet, Octave (ôktäv' fûyā'), 1821–90, French novelist and dramatist, popular with the court and society of the Second Empire He began, perhaps, as a collaborator of Dumas père, his own first

novel was *The Little Countess* (1856, Eng. tr , 1875). This was followed by *The Romance of a Poor Young Man* (1858, Eng tr., 1859), his most popular novel, also successful as a play, *Monsieur de Camors* (1867, Eng tr., 1868), *Julie de Trécœur* (1872, Eng tr , 1875); and *La Morte* (1886, Eng tr , *Alvette*, 1876) His work gave a sympathetic account of the loves and activities of genteel society. The word *feuilleton* was first used of his newspaper serials

fever. The normal temperature of the average human body registers 98 6°F by mouth and 99 6°F by rectum Any temperature above this is characterised as fever Fever may result from disease, e g , typhoid fever or pneumonia, from injuries to nerve centers of the brain, from a reduction of the water content of the blood (dehydration), and from the use of certain drugs

fever blisters see COLD SORES.

feverbush. see SPICEBUSH

feverfew [once identical with *febrifuge*], hardy Eurasian perennial (*Chrysanthemum parthenium*), called also PYRETHRUM and cultivated formerly as an herb, now as a border plant, often escaping in America It is strong smelling and has small daisy-like flower heads, sometimes double, with short white petallike rays One yellow-leaved variety is called golden feather Feverfew was long used medicinally, especially as a febrifuge and tonic

fever therapy (thē'rupē), treatment of disease by means of artificially produced fever In 1917 Julius Wagner-Jauregg introduced a method of treating general paralysis in the insane by injecting malaria organisms into the body to produce fever Other microbes, including those causing typhoid fever, have also been used in fever therapy but other methods have generally supplanted the use of germs. Physical methods of raising the body temperature are known under the general term of hyperthermy or artificial hyperpyrexia Probably the most used of these are the electrical methods (electropyrexia), including devices such as luminous heat cabinets containing carbon-filament lamps, nonluminous heat cabinets equipped with resistance coils, air-conditioned cabinets with a thermostat-controlled resistance unit for heat production and means of controlling humidity and circulation of air, cabinets provided with short-wave diathermy units, and electric blankets Other methods include the use of hot baths and radiation from infrared and other sources One value of fever therapy is that it can destroy pathogenic organisms without injury to the person under treatment Although such treatments have been to some extent displaced by chemical agents, fever therapy is sometimes used in conjunction with chemical substances, e g., in treating gonorrhea and syphilis Fever therapy is reported to have value in treating some cases of chorea, bronchial asthma, chronic arthritis, rheumatic fever, undulant fever, meningococcal meningitis, and some skin conditions. Skill and care are required in the use of fever therapy

Few, William, 1748–1828, American Revolutionary patriot and statesman, b near Baltimore Few moved (1758) with his family to North Carolina He was involved in the activities of the REGULATOR MOVEMENT and after its failure (1771) went to Georgia He took part in partisan activities in the American Revolution, served in the Continental Congress (1780–82, 1785–88), signed the Constitution, and was one of Georgia's first U S Senators (1789–93)

Fewkes, Jesse Walter (fūks), 1850–1930, American ethnologist b Newton, Mass , Ph D Harvard, 1877 He turned from his early work in marine zoology to the study of Southwestern ethnology He was chief of the U S Bureau of Ethnology (1918–28) His careful studies of Hopi ceremonies, especially the snake dances, are classic ethnological works He was the first to employ phonographs in recording Indian music From the study of the present-day Pueblo tribes he was led to their prehistory and in subsequent years did much foundation work in excavating prehistoric pueblos and cliff dwellings, including Casa Grande in S Arizona and many of the structures in Mesa Verde National Park He was also an expert in their judicious repair His work in the West Indies and on subsequent trips to Florida and E Mexico resulted in luminous contributions on West Indian and Gulf of Mexico relationships His writings are chiefly in the publications of the Bureau of Ethnology and in archaeological journals.

Feyjóo y Montenegro, Benito Gerónimo (bānē'tō hārō'nēmō fāhō'ō ē mōntānā'grō), 1676–1764, Spanish Benedictine scholar and critic, abbot at Oviedo, Asturias In his social and political ideas, in philosophy, science, and literature, he represents the most advanced European thought of his time His *Teatro crítico universal* (8 vols , 1726–39) and *Cartas eruditas y curiosas* (5 vols., 1742–60) are collections of essays in the manner of the English *Spectator*. Feyjóo is a variant spelling of his name

Fez, Arabic *Fas*, Fr. *Fès*, city (pop. 200,946), French Morocco. Its location in a rich agricultural region and at a central point on routes to Tangier, Rabat, and Marrakesh has assured its prosperity It was the capital of several dynasties (808–1062, 1269–1550, and after 1800), and it is one of the residences of the sultan of Morocco Fes consists of the old city (founded 808) and the new city (founded 1276), connected by walls, as well as a European suburb. There are more than a hundred mosques; that containing a shrine of Idris II, founder of the old city, is one of the holiest places in Morocco. The Kairouine mosque houses a Moslem university, especially influential in the Middle Ages Fez is noted for native industries and gave its name to the brimless felt caps, formerly a characteristic item of Mohammedan dress in the Near East

Fezzan (fĕzän'), region (c.50,000 sq. mi., pop c 30,000), W central Libya, a part of the Sahara It is a plateau bordered by hills and studded with oases Dates and grains are grown, and there is some grazing On the route from the Sudan to the Mediterranean, Fezzan was early an important trade zone It was conquered repeatedly, falling to Rome (19 B C.), to Arab invaders (7th cent.), to Bornu (13th cent.), and, after a bitter struggle to Turkey (1842) Italy acquired it in 1912 It was occupied by the French in the Second World War Murzuk is the chief settlement

Ffestiniog or **Festiniog** (both fĕstĭ'nĭŏg), urban district (pop 9,078), Merionethshire, Wales It is in the mountains overlooking the Vale of Ffestiniog, in which are the Cynfael Falls Slate is quarried at near-by Blaenau Ffestiniog

Fiammingo, Il (ēl fyam-mēn'gō) [Ital , =Fleming], appellation of several Flemish-Dutch artists see BOLOGNA, GIOVANNI DA, CALVAERT, DENIS, DUQUESNOY, FRANÇOIS

Fianna Fail (fē'unŭ fäl') [Irish, =Feinans of Ireland], Irish political party Organized in 1926 by opponents of the Anglo-Irish treaty of 1921 establishing the Irish Free State and led by Eamon DE VALERA, the party gained control of the government in 1932 and pursued a policy of complete political separation from Great Britain It remained dominant until it was in 1948 defeated at the polls by a coalition De Valera was replaced as prime minister by John A Costello

fiat money (fī'ăt, fē'ut), inconvertible money that is made legal tender by the decree or fiat of the government but which is not covered by a specie reserve It is commonly understood to be of paper, but it may also consist of overvalued metal coins Fiat money involves a danger of inflation, whereas money redeemable in gold is held to involve this danger in much smaller degree Inasmuch as inflation and deflation tend to transfer property from one class to another, discussions of fiat money have seldom been disinterested It is at least possible that, under certain conditions, fiat paper money might be a stable currency Large amounts of irredeemable paper money were issued by the American colonies and by both the Federal and Confederate governments during the Civil War Violent price rises accompanied these issues See Norman Angell, *The Story of Money* (1929)

fiber (fī'bur), threadlike strand, usually pliable and capable of being spun into a yarn More than a thousand different fibers are known to be usable, some 40 of these are of commercial importance, and others are of local or specialized use Most commercial fibers are put to varied and interchangeable uses Fibers may be classified according to origin as animal, vegetable, and inorganic fibers Animal fibers are composed chiefly of proteins, they include SILK, WOOL, and hair of the goat (known as MOHAIR), llama (called ALPACA), vicuña, camel, horse, rabbit, beaver, hog, badger, sable, and other animals Vegetable fibers are composed chiefly of cellulose and may be classed as short fibers, e g , COTTON and KAPOK, long fibers, including FLAX, HEMP, MANILA HEMP, istle, RAMIE, SISAL, and SPANISH MOSS, and synthetic fibers, e g , RAYON The chief natural inorganic fiber is ASBESTOS Fibers are derived also from other inorganic substances which can be drawn into threads, e g , glass, metals (especially gold and silver), and synthetic materials (notably, NYLON). Fibers are classified according to use as textile, cordage, brush, felt, filling, and plaiting fibers The largest volume is used for textiles and cordage. The chief textile fibers used for clothing and domestic goods are cotton, wool, rayon, nylon, flax, and silk Coarse-textured fibers (principally jute) are used for burlap, floor covering, sacks, and bagging materials. Cordage fibers include most of the long vegetable fibers and cotton Brush fibers include istle, sisal, broomcorn, palmyra, and animal hairs The chief felt fibers are rabbit and beaver hair Filling fibers include horsehair, wool-flock, kapok, cotton, and Spanish moss Plaiting fibers are used for braided articles (e g , hats, mats, and baskets) and include Manila hemp, sisal, rushes, and grasses. Flax, hemp, and wool have been used extensively from remote times, cotton, however, became the leading commercial fiber c 1800, and synthetic fibers are rapidly gaining in diversity and extent of use. The demand for fibers was greatly increased by the invention of spinning and weaving machinery during the Industrial Revolution. The expansion of commerce with remote areas has brought into Western markets many fibers formerly employed only locally. See J. V Sherman and S. L. Sherman, *New Fibers* (1946), J. M. Matthews, *Textile Fibers* (5th ed., 1947); Ludwig Wemdling, *Long Vegetable Fibers* (1947).

Fibiger, Johannes (yōhä'nŭs fē'bĕgur), 1867–1928, Danish pathologist and physician. He served as professor of pathological anatomy at the Univ. of Copenhagen. For his experimental studies in cancer, in which he was the first to produce cancer in the stomach of rats, he received the 1926 Nobel Prize in Physiology and Medicine

Fibonacci, Leonardo (lāônär'dō fēbōnät'chē), late 12th and early 13th cent , Italian mathematician, known also as Leonardo da Pisa In *Liber abaci* (1202), for centuries a standard work on algebra and arithmetic, he advocated the adoption of Arabic notation In *Practica geometrae* (1220) he organized and extended the material then known in geometry and trigonometry Baldassare Boncompagni edited his works (2 vols., 1857–62).

Fichte, Johann Gottlieb (yō'hän gōt'lēp fĭkh'tŭ), 1762–1814, German philosopher After studying theology at Jena and working as a tutor in Zurich and Leipzig, he became interested in Kantian philosophy. Public recognition was accorded him for his *Versuch einer Kritik aller Offenbarung* [critique of all revelation] (1792), which was at first attributed to Kant himself, who highly commended the work As professor of philosophy at Jena (1793–99), Fichte produced a number of works, including the *Wissenschaftslehre* [science of knowledge] (1794). Charges of atheism forced him to leave Jena for Berlin, where he became interested in politics. His *Reden an die deutsche Nation* (1808, Eng tr , *Addresses to the German People*, 1923) established him as a leader of liberal nationalism After several brief professorships, he served (1810–12) as rector of the new Univ of Berlin Fichte's dialectic idealism attempted unification of the theoretical and practical aspects of cognition which had been set apart by Kant He did this by rejecting the noumenal realm of Kant and by making the active indivisible ego the source of the structure of experience From there his dialectical logic led to the postulation of a moral will of the universe, a God or absolute ego from which all eventually derives and which therefore unites all knowing Fichte's philosophy had considerable influence in his day, but later he was remembered more as a patriot and liberal Though he was in political disrepute in his own day and after the reaction of 1815, he became a hero not only to the revolutionaries of 1848 but also to the conservatives of 1871 His political theory had socialistic aspects which influenced Lassalle See biography by H E Engelbrecht (1933) His son, **Immanuel Hermann von Fichte** (ēmänōō'ĕl hĕr'man fĭn), 1797–1879, edited Fichte's works, wrote a biography of him, and also did original philosophical work

Fichtelgebirge (fĭkh'tulgubēr"gu), mountain range, Upper Franconia, NE Bavaria, extending between Bayreuth and the Czech border and rising to 3,447 ft. in the Schneeberg peak It has dense pine woods and is dotted with numerous resorts The Saale and the Red and the White Main rivers originate here The chief industries are cattle breeding and glass manufacturing

Ficino, Marsilio (märsē'lyō fēchē'nō), 1433–99, Italian Platonic philosopher, son of a Florentine physician who enjoyed the patronage of Cosimo de' Medici A gifted youth, Marsilio Ficino was chosen by Cosimo to head a new Platonic Academy at Florence He translated Plato into Italian (1482), and his version is still regarded as the best in Italian His importance lies in this work, as his other writings are unreliable and unoriginal He must also be credited with aiding the revival of the humanist movement as head of Cosimo's Academy See study by P. O Kristeller (Eng tr , 1943)

Fick, August (ou'gōōst fĭk'), 1833–1916, German philologist He compiled the first comparative etymological dictionary of the Indo-European languages (1868).

Ficke, Arthur Davison (fĭk'ē), 1883–1945, American poet, b Davenport, Iowa, grad Harvard, 1904 His poetry, the best of which is sincere in theme and traditional in form, has been published in several volumes, including *Selected Poems* (1926) Prose works are *Chats on Japanese Prints* (1915) and a novel, *Mrs. Morton of Mexico* (1939) With Witter Bynner he wrote, under the pseudonym Anne Knish, brilliant parodies of modern poetry in *Spectra* (1916), which was seriously reviewed

fiction: see NOVEL, NOVELLE, SHORT STORY

fiduciary (fĭdū'shēĕrē), in law, a person who is legally obliged faithfully to discharge a responsibility of trust toward another. Among the common relations in which fiduciary duties figure are guardian and ward, parent and child, lawyer and client, and partnership In dealings with one who is entitled to repose trust in him, the fiduciary must be absolutely open and fair. Thus certain business methods which would be acceptable between parties dealing with one another "at arm's length" might expose a fiduciary to legal liability for having abused his position of trust; e g , whereas in an ordinary business transaction the prospective purchaser of land need not inform the seller of an imminent rise in realty values, a man buying land

from his partner must disclose such information. In many cases the courts will treat an unexplained profit derived from a fiduciary relationship as an instance of constructive FRAUD.

fief: see FEUDALISM.

Field, Charles William, 1828–92, Confederate general, b. Woodford co , Ky , grad West Point, 1849 He was instructor in cavalry tactics at West Point when he resigned (May, 1861) to enter the Confederate service Field led a regiment of Jeb Stuart's cavalry until March, 1862, when he was given an infantry brigade. He fought in the Seven Days battles and was severely wounded at the second battle of Bull Run (Aug., 1862) Promoted major general in Feb., 1864, Field commanded a division of Longstreet's corps from the Wilderness campaign to the end of the war. He served in the Egyptian army from 1875 to 1877 See D. S. Freeman, *Lee's Lieutenants* (3 vols , 1942–44)

Field, Cyrus West, 1819–92, American merchant, promoter of the first Atlantic cable, b Stockbridge, Mass , brother of David Dudley Field and Stephen J Field As head of a paper business, he accumulated a modest fortune, and in 1853 he retired In 1854 he conceived the idea of the cable He secured a charter, organized the English and American companies, and obtained the British and American naval ships *Agamemnon* and *Niagara* to lay the cable Five attempts were made in 1857–58 and the first message came over Aug 16, 1858, but the cable ceased working three weeks later It was necessary for Field to raise new funds and make new arrangements. The *Great Eastern* succeeded in laying a cable in 1866 Field was the object of much admiration and praise on both sides of the Atlantic for his persistence in accomplishing what many thought to be an absurd undertaking He promoted other oceanic cables, notably that via Hawaii to Asia and Australia In 1877 he resuscitated the New York city elevated system. See P B McDonald, *A Saga of the Seas* (1937)

Field, David Dudley, 1805–94, American lawyer and law reformer, b Haddam, Conn , brother of Cyrus W Field and S J Field He attended Williams College, studied law in Albany and New York city, was admitted to the bar in 1828, and soon had a large practice in New York city After the Civil War he argued before the U S Supreme Court several cases involving post-war constitutional issues, including the Milligan case (see MILLIGAN, EX PARTE) He was counsel for Jay Gould and James Fisk in the Erie RR litigation in 1869 and later defended "Boss" Tweed, receiving severe criticism from Samuel Bowles and others Filling an unexpired term of two months in Congress in 1877, he strongly supported the election cause of Samuel J Tilden against Rutherford B Hayes His greatest reputation, however, was for his work in behalf of law reform He was responsible for the New York legislature's appointment in 1847 of one commission to reduce the laws of the state to a systematic code and another to prepare codes of court practice and procedure Serving on the second commission, Field prepared a code of civil procedure which was promptly adopted (1848) His code of criminal procedure eventually became law The first commission met failure, and in 1857 Field became head of a new commission for the same task He prepared complete civil, political, and penal codes, but only the penal code, in 1881, became law The civil code several times passed the legislature but was killed by the governor's veto. The codes of procedure were adopted by several other states and strongly influenced the English Judicature Acts of 1873 and 1875, subsequently adopted by many British colonies Field abolished distinctive law and equity procedure Turning next to international law, he prepared, with some assistance, his *Draft Outline of an International Code* (1872), dealing with peacetime relations among nations The second edition (1876) contained Part II, which concerns war. He took a prominent part in the founding of the Association for the Reform and Codification of the Law of Nations (later the International Law Association) See biography by his brother H M. Field (1898)

Field, Eugene, 1850–95, American poet and journalist, b St Louis. For brief periods he attended Williams and Knox colleges and the Univ of Missouri He spent one year abroad, 1872–73, and the next 10 years on the editorial staffs of the St. Louis *Journal*, the Denver *Tribune*, and other newspapers In 1883 he made his permanent connection with the Chicago *Daily News*, later the *Record*. In this paper he conducted a column, "Sharps and Flats," which was effective in establishing the columnist as essential to the staff of an American newspaper. While Field's column was for the most part ephemeral, he did not withhold from it even such poems as his Horatian lyrics later published, with those of his brother, Roswell Martin Field (1851–1919), as *Echoes from the Sabine Farm* (1892). Eugene Field's poems of childhood include the favorites "Little Boy Blue" and "Wynken, Blynken, and Nod " Among his books are *A Little Book of Western Verse* (1889) and *With Trumpet and Drum* (1892). See biography by Slason Thompson (1927).

Field, John, 1782–1837, composer and pianist, b. Dublin, d Moscow In London he studied with Clementi, with whom he later toured Europe In 1804 he settled in Russia He was a successful pianist and his compositions were popular Chopin's nocturnes were modeled after those of Field

Field, Marshall, 1834–1906, American merchant, b Conway, Mass. In 1856, after five years' apprenticeship in a general store in Pittsfield, Mass , he went to Chicago and became a clerk for Cooley, Wardsworth & Company, a leading dry-goods house there, of which he became a junior partner in 1860. In 1865 he became a partner in the firm of Field, Palmer, and Leiter, the company which became Field, Leiter, and Company in 1867 and Marshall Field and Company in 1881 He amassed one of the largest private fortunes in the United States and pioneered in establishing many modern retailing practices The first of his major philanthropies was made when he was a charter member of the corporation formed in 1878 to found the institution which became the Art Institute of Chicago In 1890 he gave the original tract of land for the Univ of Chicago, ultimately becoming one of the largest donors to the school, and in 1893 he gave $1,000,000 to the fund for the museum at the World's Columbian Exposition in 1893. Its collections were the nucleus of the Field Museum of Natural History, now the Chicago Museum of Natural History, housed in a magnificent building on the Chicago lake front which was provided by a bequest of $8,000,000 from Field See S H Ditchett, *Marshall Field & Company* (1922) His son, **Marshall Field II,** 1868?–1905, attended Harvard and married the daughter of a Chicago brewer, but never made any move to follow his father into business His early death was from a gun wound officially held to have been accidental **Marshall Field III,** 1893–, son of Marshall Field II, was educated at Eton and at Cambridge Univ , then served in the First World War He engaged in numerous business activities until 1936, when he gave up all of them to devote himself to his various social projects From its beginning in June, 1940, Field was the largest stockholder in the New York city liberal newspaper *PM*, of which he became owner in Oct , 1940 He took no part in its editorial direction, but offered it financial support until April, 1948, when the paper was sold In 1941 he had started the Chicago *Sun*, and in Jan , 1948, he bought the Chicago *Times* and merged the two papers In this journalistic enterprise Field took a more active part, ultimately becoming the paper's dominant personality His charities included many child welfare organizations His political and social beliefs are expressed in his book *Freedom Is More than a Word* (1945) See John Tebbel, *The Marshall Fields. a Study in Wealth* (1947)

Field, Michael, pseud used by two British authors, Katherine Harris Bradley (1846–1914) and Edith Emma Cooper (1862–1913) They collaborated on numerous literary works, including poetic tragedies and lyrics Although their work was praised by such contemporaries as Robert Browning and George Moore, it is almost forgotten today *Works and Days*, a selection from their journal, was published in 1933 See Mary Sturgeon, *Michael Field* (1922)

Field, Nathaniel or **Nathan,** 1587–1633, English actor and dramatist He was one of the Children of the Queen's Revels who performed Ben Jonson's *Cynthia's Revels* in 1600 The young and brilliant Field acted in plays by Shakspere (he is listed in the 1623 folio as a principal actor), Ben Jonson, and Beaumont and Fletcher He had great success in Jonson's *Bartholomew Fair* in 1614 Field wrote two comedies, *A Woman Is a Weathercock* (1612) and *Amends for Ladies* (1618), and collaborated in Massinger's *Fatal Dowry* (1632)

Field, Rachel, 1894–1942, American author, b New York city, studied (1914–18) at Radcliffe She first achieved success as a writer of children's stories, both verse and prose, and as an illustrator of some of them *Hitty Her First Hundred Years* (1929), the story of an antique doll, won the Newbery medal for the most distinguished children's book in 1929 A collection of poems, *Fear Is the Thorn*, appeared in 1936 Her novels include *Time Out of Mind* (1935), her most successful one, *All This, and Heaven Too* (1938, moving picture, 1940), and *And Now Tomorrow* (1942). She married Arthur Pederson in 1935

Field, Robert, c 1769–1819, English portrait painter, miniaturist, and engraver In 1794 he came to America, where he painted portraits and miniatures in Philadelphia, Washington, and Boston, producing also some notable engraved portraits. After 1808 he lived in Halifax, N S. His best-known likenesses include those of Mrs Washington, painted at Mt Vernon, Henry Sargent and Sir John Wentworth (government house, Halifax), Sir A. Cochrane and the Rt Rev Charles Inglis (National Portrait Gall., London), and Sir John Cooper Sherbrooke, which was engraved See biography by Harry Piers (1927).

Field, Stephen Johnson, 1816–99, U S Supreme Court Justice (1863–97), b. Haddam, Conn , grad Williams, 1837. After practicing law for several years in New York city with his brother David Dudley Field, he went to California in 1849, settled at Marysville, and in 1850 was elected to the legislature He secured the passage of an act reorganizing the state judiciary and drafted codes of civil and criminal procedure which were based upon the famous codes of his brother but were adapted to certain established Spanish customs and miners' practices This legal recognition of usages and regulations of the mining camp as developed by the miners themselves became the basis of mining law in California and in other Western states which followed California's lead It was finally applied by Congress in all U S territories In 1857 Field was elected as a Democrat to the California supreme court, becoming chief justice two years later He wrote *Personal Reminiscences of Early Days in California* (1880) See C B Swisher *Stephen J Field, Craftsman of the Law* (1930)

Fielding, Antony Vandyke Copley, 1787–1855, English landscape painter in water color For the last 24 years of his life he was president of the Water Colour Society, where he exhibited yearly Fielding is best represented in the Victoria and Albert Museum

Fielding, Henry, 1707–54, English novelist and dramatist, educated at Eton and Leiden In 1729 he settled in London and began writing comedies, farces, and burlesques His vigorous dramatic attacks on Walpole's government—particularly in the play *Pasquin* (1736) and in the *Historical Register*—provoked the Licensing Act (1737), which set up political censorship of the stage Barred from the theaters, Fielding turned first to partisan journalism and then to fiction His first novel, *Joseph Andrews* (1742), was begun as a burlesque of Richardson's *Pamela*, it developed, however, into a long, Cervantean narrative *Tom Jones* (1749) is generally considered Fielding's masterpiece Its main action concerns the rise and triumph of the foundling Tom Fielding's other major works are *Jonathan Wild* (1743), *Amelia* (1752), and the posthumous *Journal of a Voyage to Lisbon* (1755) Fielding attacked human faults and foibles with ridicule, and major evils with savage satire Conversely, he portrayed virtuous living as the most desirable of human achievements Fielding had begun his serious study of law in 1737 and in 1740 was called to the bar He was appointed justice of the peace for Westminster in 1748 and for Middlesex in 1749 As a magistrate he worked ceaselessly and with some success to suppress crime and to establish an effective police See W L Cross, *The History of Henry Fielding* (3 vols , 1918), Aurélien Digeon, *The Novels of Fielding* (1925), B M Jones, *Henry Fielding, Novelist and Magistrate* (1933), M J Willcox, *A True-born Englishman* (1948)

Fielding, William Stevens, 1848–1929, Canadian statesman, b Halifax, N S For 20 years (after 1864) he was on the staff of the Halifax *Morning Chronicle*, rising to the position of managing editor In 1882 he entered the assembly of Nova Scotia as a Liberal, from 1884 to 1896 he was prime minister of the province, resigning to enter Laurier's cabinet as minister of finance For 15 years (1896–1911) he held this portfolio As a tariff expert, Fielding helped to negotiate the reciprocal-trade treaty with the United States in 1911 that resulted in the downfall of Laurier's government Favoring military conscription for Canada in the First World War, he parted with Laurier on the issue and supported Sir Robert Borden's Union government, but after the war he returned to the Liberal party, and in Mackenzie King's cabinet he again served (1921–25) as minister of finance Fielding had been Mackenzie King's unsuccessful rival for leadership of the Liberal party after Laurier's death

Field Museum of Natural History: see CHICAGO NATURAL HISTORY MUSEUM

Field of the Cloth of Gold, locality between Guines and Ardres, not far from Calais, in France, where in 1520 HENRY VIII of England and FRANCIS I of France met for the purpose of arranging an alliance Both kings brought large retinues and the name given the meeting place reflects the unexampled splendor of the pageantry The political result was negligible, because Henry, who had been undecided whether to support Francis or Emperor CHARLES V, had already turned toward the emperor and shortly afterward made an alliance with him

Fields, Annie Adams see FIELDS, JAMES THOMAS

Fields, James Thomas, 1817–81, American author and publisher, b Portsmouth, N H He was the junior partner of Ticknor and Fields, noted Boston publishing house in the middle of the 19th cent Fields edited the *Atlantic Monthly*, 1861–70, with notable success In 1870 he retired from business, but became a popular lecturer His books, largely reminiscences of literary friendships, include *Yesterdays with Authors* (1872), *Hawthorne* (1876), *In and Out of Doors with Charles Dickens* (1876), and *Ballads and Other Verses* (1881), a selection of his poems He was helped in his work by his gifted wife, **Annie Adams Fields,** 1834–1915, a native of Boston, who also became a well-known author Her books include a memoir of her husband (1881), biographies of Whittier (1893) and Harriet Beecher Stowe (1897); *Letters of Sarah Orne Jewett* (1911),

and *Under the Olive* (1881), one of her volumes of poetry She was a gracious hostess, and the home of the Fields in Boston was a literary salon See M A De Wolfe Howe, *Memories of a Hostess* (1922)

Fields, Lewis Maurice, 1867 1941, American comedian and theatrical manager, known as Lew Fields, b New York city He appeared with Joseph WEBER from 1875 to 1904 and again after 1912

Fiene, Ernest (fē'nĭ), 1894–, American painter, b Elberfeld, Germany, studied at the National Academy of Design and the Art Students League, New York, and later in Europe A brilliant practitioner in oil, water color, etching, and lithography, he is perhaps best known for his landscapes of New England and New York, although he is also an excellent still-life and figure painter His work is forceful and warm in color with an emphasis on space A Guggenheim fellow in 1932, Fiene is known as a popular teacher as well as an artist He is represented in leading galleries throughout the country

Fieschi, Giuseppe Marco (jōōzĕ'pā mar'kō fyā'skē), 1790–1836, French conspirator, b Corsica He became a revolutionist, and his activities culminated in his attempt to assassinate LOUIS PHILIPPE in July, 1835 He rigged up an arrangement of 24 guns which fired together, killing 40 people He was executed and his attempt at assassination resulted in a revival of loyalty to the king

Fiesole, Giovanni da see ANGELICO, FRA.

Fiesole, Mino da see MINO DA FIESOLE

Fiesole (fyā'zōlā), town (pop 2,647), Tuscany, central Italy, 3 mi NE of Florence, beautifully situated on a hill overlooking the Arno valley and Florence An Etruscan town of which walls still stand, ancient Faesulae (fē'sŭlē), was enriched with fine buildings by the Romans There are a well-preserved Roman theater and baths, a 11th-century Romanesque cathedral, and a Franciscan church and convent (on the site of the Roman acropolis) On the lower slopes of the hill is the Church of San Domenico, with paintings by Fra Angelico, who spent much of his life here

Fife or **Fifeshire,** maritime county (505 sq mi , 1931 pop 276,368, 1948 estimated pop 303,265), E Scotland, between the Firth of Forth and the Firth of Tay The county town is Cupar Part of the central Scottish Lowlands, the terrain rises, however, to more than 1,500 ft in the Lomond Hills The region, notably in the valleys of the Eden and the Leven, is well cultivated Fife is one of the most prosperous of the Scottish counties There is extensive coal mining, linen manufacturing, brewing, and shipbuilding Anciently the home of the Picts, the county has been known for many centuries as the kingdom of Fife Its modern history has been a peaceful one SAINT ANDREWS, which is also famous as a golfing resort, is the seat of the oldest of the Scottish universities Dunfermline is noted for its historic associations

fife, small transverse flute adopted for military purposes in Switzerland in the late Middle Ages Properly it has six finger holes, but the term is sometimes applied to the modern piccolo, which has largely replaced the fife in the present day

Fifth Avenue, famous street of Manhattan, New York city It begins at Washington Square and ends at the Harlem River Between 34th and 59th streets Fifth Ave is mainly a business section of large department stores and smaller shops, it passes the Empire State Building, the New York Public Library, Rockefeller Center, and St Patrick's Cathedral From 59th to 110th streets it borders Central Park, here its east side is lined with tall apartment houses (interspersed with some private homes), on the site of the mansions of 50 years ago North of the park it runs through congested Harlem

Fifth Monarchy Men, religious group of the time of the Puritan Revolution in England They were millenarians expecting the imminent coming of Jesus to rule the earth His monarchy was to be the fifth according to their interpretation of Dan 2 36-45, the first four were the Assyrian, Persian, Greek, and Roman empires The Fifth Monarchy Men objected to an established church and believed it their duty to establish Christ's reign by force, if necessary Among their numbers was John ROGERS, a Presbyterian minister For a time they supported the Commonwealth but, growing dissatisfied with its progress, they agitated against the government *When* evidence of a plot to murder Cromwell was uncovered (1657), many of their leaders were imprisoned until after the protector's death After the Restoration, Thomas Venner, one of their preachers, led a group through London in 1661 proclaiming the advent of the Fifth Monarchy He and many of his band were hanged for treason, and the movement thereafter disappeared The Fifth Monarchy Men were never sufficiently united to be called a sect. They have often been compared to the LEVELERS See L F Brown, *Political Activities of the Baptists and Fifth Monarchy Men* (1912).

Fifty-four forty or fight, phrase commonly used by extremists in the controversy with Great Britain over the Oregon country The rights of the United States, they maintained, extended to the whole region, i e , to lat 54° 40' N, the recognized southern boundary of Russian America It was used as a Democratic campaign slogan in the election of 1844

fig. The common fig is a tree (*Ficus carica*) native to the Mediterranean region and cultivated since early times for its commercially valuable fruit Several varieties of figs, e g , the Smyrna (one of the best), require caprification in order to produce good fruit, since the flowers are borne inside a fleshy fruitlike receptacle and are dependent on the fig wasp, *Blastophaga,* for the transfer of pollen from the caprifig This process involves hanging bunches of caprifigs (an inedible variety in which the wasp is enclosed) in the fig tree, the wasp emerges, enters and pollinates the fig flower, lays its eggs, and dies The resulting fig fruit absorbs the body of the wasp and the eggs, the insect being reproduced only from those eggs laid in caprifigs Figs can be propagated from cuttings They are now grown commercially in California and the Gulf states and usually bear three crops a year A few species are native to America The BO TREE, India-rubber tree, and BANYAN belong to the genus of figs

Figueras, Estanislao (āstä"nēslä'ō fēgä'räs), 1819–82, Spanish politician First elected to the Cortes in 1851, he joined the republicans, taking part in all their uprisings After the expulsion (1868) of Isabella II he became leader of the republican party, opposed King Amadeus, and was briefly president of the republic after the king's departure (1873) He retired to private life when the monarchy was restored

Figueras, town (pop 13,513), Gerona prov , NE Spain, in Catalonia, near the French border In the Spanish civil war it was briefly the seat of the Loyalist government before falling (Feb , 1939) to the Insurgents The 18th-century fortress of San Fernando is now a prison

Figueroa, Francisco de (fränthĕ'skō dä fēgärō'ä), 1536–1617', Spanish pastoral poet He spent his youth in Italy, traveled in Flanders, and finally retired to his native city, Alcalá de Henares, where he enjoyed fame until his death He followed the school of Garcilaso de la Vega and wrote elegies, sonnets, and *canciones* in the Italian manner

figure, in music, short melodic or rhythmic pattern, the smallest coherent unit in a composition A phrase may consist of several figures or of one figure used in IMITATION There is no clear distinction between figure and MOTIVE

figured bass, in music, a system of notation in which the bass part is given with figures below the notes to indicate the chords which are to be played Called also thorough bass and *basso continuo,* it arose in the early 17th cent in Italy as a means of notating an accompaniment It soon became so widespread that the baroque era is sometimes called the age of *basso continuo* The harpsichord's part in sonatas was indicated by a figured bass The harpsichord and the organ are usually played from a figured bass in the vocal works of Bach and Handel The realization of the *basso continuo* involves considerable improvisation, the style of which varies according to composer and period After the time of Bach, with the development of the symphony, the figured bass disappeared except for limited use in opera and as a device for teaching harmony See F T Arnold, *The Art of Accompaniment from a Thorough-Bass* (1931)

figurehead, carved decoration usually representing a head or figure placed under the bowsprit of a ship The art is of extreme antiquity Ancient ships such as the galley and trireme carried rostrums or beaks on the bow to ram enemy vessels These beaks were often surmounted by figureheads representing national emblems Roman vessels were sometimes embellished with large heads of the gods in bronze Viking ships had lofty and extended prows which were elaborately carved Dragons and lions vied with the human form in the figureheads of the Renaissance During the 18th and 19th cent a highly developed and original art of figurehead wood carving flourished in the United States It is of particular interest because at the time of its highest development (approximately 1785–1825), little other sculpture was practiced in this country Unfortunately few examples from this period survive, and attributions to such known masters of the art as William Rush of Philadelphia or the Skillin brothers of Boston are very rare Among them is the fine bust of Benjamin Franklin (Yale Univ), attributed to Rush The early "heads" were brightly painted and gilded, whereas after the middle of the 19th cent they were usually a uniform white or yellow With the disappearance of the sailing vessel the art became practically extinct One of the finest collections of American figureheads is in the Mariners' Museum, Newport News, Va See Pauline Pinckney, *American Figureheads and Their Carvers* (1940)

Fiji (fē'jē) or **Viti** (vē'tē), Melanesian island group (7,056 sq mi , pop. 259,638), S Pacific The most important British colony in the Pacific, it comprises 250 islands of which 80 are inhabited VITI LEVU, the largest, is the seat of Suva, capital of the colony The other important islands are VANUA LEVU, Taveuni, Kandavu, Koro, Ngau, and Ovalau In the center of the group is the Koro Sea, east of which is the Lau group The Yasawa and Mamanutha groups are W of Viti Levu. The larger islands are volcanic and mountainous, the highest peak (Mt Victoria, 4,341 ft) being on Viti Levu, which also has the largest river, the Rewa There are dense forests on the windward sides of the islands, and grassy plains and clumps of casuarina and pandanus on the leeward side The two largest islands have central cores of plutonic rocks thought to be remnants of an older continental mass There are hot springs in the mountain region The fertile soil, rich in humic acid, yields sugar cane, tropical fruits, taro, rice, cotton, pineapples, and cassava There are mangrove forests on the beaches and in the swampy delta lands The limited fauna includes bats, rats, parrots, and pigeons The temperature ranges from 60° to 96°, the annual rainfall varies from 60 in on the leeward side to 140 in on the windward side There are trade winds (May-Nov), and equatorial winds (Dec.-April) The chief ports, Suva and Lautoka on Viti Levu, export sugar, gold, copra, bananas, and timber The group was discovered in 1643 by Tasman and annexed by Great Britain in 1874 Missionaries arriving in 1835 helped abolish cannibalism The Fijians, a dark, fuzzy-haired race of Melanesian origin, constitute only about 40 percent of the population Indian laborers, imported (1879-1916) under the indenture system, are chiefly engaged in the sugar industry There are small groups of Europeans, Chinese, Polynesians, and Micronesians Fiji is governed by the colonial office in London through the governor at Suva, who is also the high commissioner of the Western Pacific See J W Coulter, *Fiji: Little India of the Pacific* (1942)

filament, in the incandescent lamp, the threadlike wire, usually made of tungsten and coiled or wound in the center of the light bulb, which becomes white-hot when an electric current flows through it In the vacuum tube, the filament is similarly placed, but is uncoiled It is made of various substances of high melting point (e g , tungsten, an alloy of tungsten and thorium, or an alloy of platinum and iridium coated with barium, calcium, cesium, and strontium oxides) When an electric current flows through it, it becomes red-hot and electrons break away and are attracted to the positively charged plate of the tube The flow of electrons is increased by an increase of temperature and by an increase in the positive charge of the plate See TUBE, VACUUM, and A battery under BATTERY, ELECTRIC

filament battery. see BATTERY, ELECTRIC

Filangieri, Gaetano (gätä'nō fēlänjā'rē), 1752 88, Italian jurist He served at the royal court of Naples His greatest work is the unfinished *Science of Legislation* (6 vols , 1780–85, Eng tr , 1806) It advocates a system of law which would not be concerned with transitory conditions but would serve man's permanent needs, chiefly the cooperation of social classes based upon the preeminent position of agriculture This social harmony, Filangieri urged, would best be promoted by a system of education designed to inculcate virtue

Filaret, Vasily Drosdov. see PHILARET, VASILY DROSDOV

filbert see HAZEL

Filchner, Wilhelm (vĭl'hĕlm fĭlkh'nur), 1877–, German explorer, geophysicist, and travel writer He led several expeditions to China and Tibet, where he established magnetic stations, and also led the second German antarctic expedition (1910–12), which discovered Luitpold Land on the southeast coast of Weddell Sea

Fildes, Sir Luke (fīldz), 1844–1927, English genre and portrait painter, b Liverpool He made drawings for the *Graphic* and other periodicals and illustrated Dickens's *Edwin Drood* As a painter he excelled in depicting the life of the London poor Later he specialized on portraiture and painted the coronation portraits of Edward VII and Queen Alexandra and a state portrait of George V His *Doctor* (Tate Gall , London) is a well-known work See biography by D C Thomson (1895)

file, tool dating from the Bronze Age, used for shaping, smoothing, and sharpening The blade or body is scored with chisel cuts and has a tapering end (tang) which fits into a wooden handle Over 4,000 kinds are classified according to their size, their cutting ridges, e g , single cut (having one series of parallel cuts), double cut or crosscut, circular cut, their cross section, e g , rectangular, round, triangular, or their use, e g , wood file, nail file, saw file The file is most widely used in hand metalwork

Filene, Edward Albert (fīlēn', fī–), 1860–1937, American merchant, b Salem, Mass As president of the Boston firm of William Filene's Sons he pioneered in scientific methods of retail distribution and successfully expanded his trade He planned and helped organize the Boston Chamber of Commerce and the Chamber of Commerce of the United States and served in the First World War as chairman of the War Shipping Committee. He was the founder (1919) of the Cooperative League, which became the Twentieth Century Fund, and he was active in the cause of peace He wrote several books on business methods and on economics See G W Johnson, *Liberal's Progress* (1948) His brother, **Lincoln Filene,** 1865–, b Boston, also directed William Filene's Sons and served as

business counsel to the Federal government after 1933. He played a prominent role in business associations and wrote a number of books and articles on economic problems

Filer, village (pop 1,239), S Idaho, W of Twin Falls, in an irrigated farm area, inc 1909 The Idaho white bean is grown here

filibuster (fĭl'ĭbŭs"tŭr), term applied in the 17th cent to buccaneers who plundered the Spanish colonies in the New World. In the 19th cent the word was used more in reference to adventurers who organized and led, under private initiative, armed expeditions into countries with which the country from which they started was at peace Complications between the governments involved were likely to result There was a series of filibustering expeditions from the United States against Cuba, Mexico, and Central and South American countries in the 19th cent, some of them led by citizens of the United States, as those of John A QUITMAN and William WALKER, and some by rebellious citizens of the government which they sought to overthrow, as those of Narciso LÓPEZ against Cuba Texas, when it was still a part of MEXICO, was a scene of filibustering activities In recent years the term has come to be used to designate organized obstructionist tactics in legislative assemblies

Filicaja, Vincenzo da (vēnchān'tsō dä fēlēkä'yä), 1642–1707, Italian poet A protégé of Queen Christina of Sweden, he wrote verses celebrating her conversion as well as a cycle of odes on the liberation of Vienna (1684) and some beautiful sonnets See Lorna de' Lucchi, *An Anthology of Italian Poems* (1922)

filigree (fĭl'ĭgrē), goldsmith's work of fine gold or silver wire often wrought into an open-work design and joined with matching solder and borax under the flame of the blowpipe The term was formerly applied to a fine sprinkling of metal grains Filigree is used as a decorative treatment for jewelry or other fine metalwork It was made in early times by the Egyptians and the Chinese The Greeks were especially adept in the art, and the Etruscans were noted for fine granular work Saxons, Britons, and especially the Celts in Ireland were skilled in producing intricate and ingenious designs in the Middle Ages, and the Moors in Spain did much exquisite work in silver Filigree is much employed today in Mediterranean areas, especially Tuscany, Malta, and the Ionian Islands, in India, and in Scandinavian countries Antique examples are to be seen in the Vatican, the Louvre, the British Museum, and the Metropolitan Museum

Filipino see PHILIPPINE ISLANDS

Fillmore, Millard, 1800–1874, 13th President of the United States (July, 1850–March, 1853), b Locke (now Summerhill), Cayuga co, N Y His education was irregular and incomplete, for he was early compelled to work at odd jobs to earn a living He read law in his spare time and was admitted (1823) to the bar After practicing law at East Aurora, N Y, until 1823, he settled in Buffalo Thurlow WEED made Fillmore a lieutenant in the ANTI-MASONIC PARTY, and with Weed's support Fillmore served in the New York state assembly (1829–31) and in the U S House of Representatives (1833–35) In 1834 he joined the WHIG PARTY and was thrice reelected (1836, 1838, 1840) to the House When the Whigs came into national power in 1840, Fillmore became prominent in his party As chairman of the Ways and Means Committee, he promoted the high tariff of 1842 He was considered (1844) for the vice presidential candidacy, but instead became whig candidate for the governorship of New York His defeat by Silas WRIGHT in a close contest was caused by the split between proslavery and antislavery Whigs, which lost the state, and thus the presidency, for Henry Clay in 1844 With Henry Clay's backing Fillmore was nominated (1848) for Vice President on the Whig ticket with Zachary TAYLOR As Vice President, Fillmore presided with notable fairness over the Senate during the turbulent debates of 1850 Succeeding to the presidency upon Taylor's death, he signed the Compromise of 1850, which included the Fugitive Slave Act He tried to enforce the measures despite the criticism his course evoked from the North Cheaper postal rates were introduced during his administration He appointed Daniel Webster Secretary of State, emphasized nonintervention in foreign disputes, and approved the treaty opening Japan to Western commerce He unsuccessfully tried to make of the Whigs a national party which by occupying middle ground on the issue of slavery could conciliate North and South and prevent extremists from gaining power Neither he nor Webster could win the support of the Whig convention in 1852, and the nomination went to Gen Winfield SCOTT, representative of the more radical antislavery element. With the division of the Whigs by the slavery issue and the consequent rapid decline of the party, Fillmore's political career was over He joined the KNOW-NOTHING MOVEMENT in the vain hope that it might unite North and South, and he accepted (1858) the nomination of that group for the presidency. He opposed Lincoln's election and his Civil War administration and supported Andrew Johnson's stand against radical Reconstruction measures, but he took no active part in the controversies over these issues Some of his papers and other materials were edited by Frank H Severance in Vols X and XI of the *Publications of the Buffalo Historical Society* (1907)

Fillmore, 1 City (pop 3,252), S Calif, NW of Los Angeles, in a citrus-fruit and oil-well region, inc 1914 **2** City (pop 1,785), co seat of Millard co, W central Utah, settled 1851 by Mormons Nominally the capital of Utah Territory from 1851 to 1856, it was briefly the seat of the legislature The region has dry farming and ranching

film, photographic see PHOTOGRAPHY

Filmer, Sir Robert, d 1653, English royalist political writer, author of *Patriarcha, or, The Natural Power of Kings* (1680), a defense of the divine right of monarchs by an exposition of the patriarchal theory of the origin of government He attacked Hobbes's contractual theory Later Whig and liberal political economists attacked Filmer violently, but his theory approached historical accuracy much more than the purely artificial social contract theory See W A Dunning, *A History of Political Theories* (1905), J N Figgis, *The Divine Right of Kings* (1914)

Filson, John, c 1747–1788, Kentucky pioneer, b Chester co, Pa In 1783 he took up land in Kentucky, taught school, and wrote *Discovery, Settlement, and Present State of Kentucke* (1784) This first history, or rather traveler's description, of the state contained a very good map, which was also published separately in several editions, but perhaps its most popular feature was an appendix, "The Adventures of Col Daniel Boon" Filson obviously wrote out, in the first person, material he garnered from Daniel BOONE, for the pseudo-Johnsonian style of the alleged autobiography was hardly that of the simple, vigorous, and unlettered frontiersman Filson's book is not completely reliable historically, but it went through a number of editions, including several in London and Paris Boone, however, delighted with his ghost-written "autobiography," pronounced every word true, and *Kentucke* was mainly responsible for his subsequent high reputation in American history See W R Jillson, ed, *Filson's Kentucke* (1929), a facsimile reproduction with full bibliography, biography by R T Durrett (1884)

filtration see WATER

fin, organ of locomotion characteristic of fish and consisting of thin tissue supported by cartilaginous or bony rays In some, e g, the eel, a single fin extends from the back, around the tail, and along the ventral surface In the majority there is a division into one, two, or three dorsal fins, a distinct tail fin, and an anal fin These are called median or unpaired fins The paired fins are the pectoral fins, placed just back of the gills, and the pelvic fins, variable in position and sometimes lacking The tail is an important organ of locomotion and the paired fins are used for steering, checking speed, and balancing and for slow movements An adipose fin (fatty tissue without support) is found behind the dorsal fin in some, e g, the salmon and the catfish See also CLIMBING PERCH and FLYING FISH

finance, the theory and practice of conducting the larger public and private dealings in money Private finance includes BANKING, insurance, and all ways of providing capital for business enterprises, as by stocks, bonds, and other securities Public finance is the management of public revenues and expenditures and of public debts Finance as a social science dates from the rise of the national state, for in medieval times most needs were met by direct personal service The governmental financial policy of the United States since 1921 has been embodied in an annual BUDGET, which shows how much revenue is to be raised and how it is to be spent Private expenditure tends to be measured by income, public income tends to be measured by expenditure Public income is derived mainly from taxes, but also from the sale of public property or of rights such as franchises and from charges for such services as the post office Public expenditures may be classified as protective, commercial, and developmental The first includes provision for the preservation of peace within the country and for defense from foreign aggression In the second class are expenditures such as those for post office or railways which take the place of private ownership The third group includes such expenditures as those for education or for public works See Francis Oakey, *Principles of Government Accounting and Reporting* (1921), Edward D Allen and O H Brownlee, *Economics of Public Finance* (1947)

Finch, Francis Miles, 1827–1907, American jurist and song writer, b Ithaca, N Y, grad Yale, 1849 He practiced law in Ithaca and from 1880 to 1895 was an associate judge of the New York court of appeals He became dean of the Cornell law school in 1892 The author of a number of college and patriotic songs, he is best remembered for "The Blue and the Gray," first published in the *Atlantic Monthly* (1867) and included in *The Blue and the Gray and Other Poems* (1909).

Finch, Heneage: see NOTTINGHAM, HENEAGE FINCH, 1ST EARL OF.

finch, member of the largest family of birds, the Fringillidae The birds have stout cone-shaped bills, useful in breaking the seeds which form a large part of the diet Among the finches are the SPARROW, the GROSBEAK, the CANARY, the GOLDFINCH, the BULLFINCH, the CHAFFINCH, the INDIGO BUNTING, the JUNCO, the purple finch, and the hawfinch.

Finchley, urban district (1931 pop 58,964, 1947 estimated pop. 71,410), Middlesex, England It is a residential suburb of London Finchley Common was once a resort of highwaymen

Finck, Henry Theophilus, 1854–1926, American music critic, b Bethel, Mo, educated at Harvard and in Europe He was noted for his work on the New York *Evening Post* from 1881 to 1924 His numerous books on music included *Chopin* (1889), *Wagner and His Works* (1893), *Songs and Song Writers* (1900), *Massenet and His Operas* (1910), *Richard Strauss* (1917), and *My Adventures in the Golden Age of Music* (1926)

Finden, William (fĭn'dun), 1787–1852, English line engraver and publisher With his brother Edward and numerous pupils he engraved many illustrations for books, characterized by precision and elaboration of finish They produced landscape illustrations for *The Life and Works of Lord Byron* and *The Gallery of the Graces*, after Landseer and others, *Landscape Illustrations for the Bible*, after Turner and others, *Portraits of the Female Aristocracy of the Court of Queen Victoria*, and *The Royal Gallery of British Art* The most important of Finden's single plates are the full-length portrait of George IV, after Thomas Lawrence, *The Village Festival*, after Sir David Wilkie, *The Highlander's Return*, after Landseer, and the *Crucifixion*, after William Hilton All are on a large scale and admirably executed

finder Under ordinary circumstances the finder of lost property is entitled to retain it against anyone except the owner It is LARCENY, however, for the finder to keep the property if he knows or could easily determine who owns it In some places (e g, New York city) the finder must deliver the lost object to the police, if it is unclaimed within a prescribed period it becomes his property Lost objects which are embedded in the soil, e g, a deeply buried ring, belong to the landowner even if another finds them On the other hand, objects found in a privately owned place to which the public has the right of access, e g, a hotel, belong to the finder and not to the owner of the realty The purchaser of an article which unwittingly has something of value concealed in it, e g, money in a desk, is legally the finder, not the owner, of the valuable See TREASURE-TROVE

Findlay (fĭn'lē, fĭnd'lē), city (pop 20,228), co seat of Hancock co, NW Ohio, on the Blanchard and S of Toledo, laid out 1821, inc as a village 1838, as a city 1887 Its industries include oil refining and the manufacture of automobile tires and tubes, cigars, and shooting traps Findlay College (Church of God, coeducational, 1882) is here In the 1880s Findlay prospered because of its abundant oil and gas, but by 1900 its supply had greatly diminished In the Findlay *Jeffersonian* appeared (1861) the satiric antislavery letters of "Petroleum V NASBY"

Findley, William, 1741–1821, American politician, b Ireland He arrived in Pennsylvania in 1763 and served the patriot cause in the American Revolution After the war, he gained political prominence in Pennsylvania, and in 1791 he was elected to Congress, where he served until 1817, except for the years 1799–1803 He was an Anti-Federalist and opposed Hamilton's measures, but Washington consulted him frequently on frontier matters At his suggestion the Committee on Ways and Means, the first congressional standing committee, was created At first Findley actively sided with the WHISKY REBELLION, but later urged compromise He justified his attitude toward the rebellion in his *History of the Insurrection in the Four Western Counties of Pennsylvania* (1796)

Findon or **Finnan** (both fĭ'nun), fishing village, Kincardine, Scotland, on the coast near Portlethen S of Aberdeen It was formerly known for the production of smoked haddock—"finnan haddie"

Fine, Henry Burchard, 1858–1928, American mathematician and educator, b Chambersburg, Pa, grad Princeton, 1880 From 1881 he was on the Princeton faculty. Although he made researches in the singularities of curves, his chief interest was in the logic of mathematics He wrote *Number System of Algebra* (1891), *College Algebra* (1905), and *Calculus* (1927)

fine. 1 In criminal law, sum of money exacted as punishment for a crime. In the case of misdemeanors and minor infractions of the law the convicted person has ordinarily the alternative of paying a fine or undergoing a short term of imprisonment This practice has been condemned at times as potentially exposing the poor to more onerous punishment than the well-to-do Fines are also

sometimes imposed in convictions for felony, usually in addition to a prison sentence. The Eighth Amendment of the Constitution of the United States prohibits the imposition of excessive fines, but the Supreme Court has never found that any statutory fine violated this provision **2** In the law of land, conveyancing, a legal fiction for permitting the sale of lands in ENTAIL The fine, first worked out in the 15th cent , is in form a suit to determine the ownership of land The buyer sues the seller, who accedes to the buyer's claim that his right of ownership is superior The judgment of the court to this effect constitutes the buyer's title The fine was formerly of wide use in England and the United States, but easier methods of defeating the entail have made it obsolete **3** In feudal law, payment to the lord for the privilege of releasing to another or acquiring for oneself the tenancy of land

Fingal see FINN MAC CUMHAIL

Fingal's Cave, cavern celebrated for its unusual beauty, on the little island Staffa of the Inner Hebrides, Scotland The entrance is an archway 227 ft long, supported by basaltic columns 20 to 40 ft high The ocean water is 25 ft deep beneath the arch at ebb tide There are many legends connected with the cave Mendelssohn composed an overture called *The Hebrides* or *Fingal's Cave*

Finger Lakes, group of long, narrow glacial lakes in north-south valleys, W central N Y , between Geneseo and Syracuse From west to east they include Conesus, Hemlock, Canadice, Honeoye, CANANDAIGUA, KEUKA, SENECA, CAYUGA OWASCO, SKANEATELES, and Otisco lakes The Finger Lakes region, famed for its beauty, has many resorts and state parks It produces grapes and other fruits, wines, vegetables, and wheat

fingerprint, an impression of the inside of the end of a finger or thumb, used for identification because the arrangement of lines is thought to be unique and unchanging with each person The first practical classifications of fingerprints were those of Sir Francis Galton and Juan Vucetich in 1891 The Galton method, elaborated by E R Henry, is still used in England and the United States, the Vucetich system is popular in South America Fingerprinting for identification of criminals was first used in connection with the BERTILLON SISTEM Most European and American countries now require that all criminals be fingerprinted In the United States, prints are also taken of members of the armed forces and many civilian government employees and by some private banks and other agencies Palm prints and footprints are also used, especially for identification of infants See C E Chapel, *Fingerprinting* (1941), B C Bridges, *Practical Fingerprinting* (1942)

Fini, Tommaso di Cristoforo: see MASOLINO DA PANICALE

Finiguerra, Maso or **Tommaso** (mä'zō, tôm-mä'zō fēnēgwĕr'rä), 1426–64, Florentine goldsmith and engraver of the Renaissance Benvenuto Cellini considered him the first master of his time in niello engraving His pax of the Crucifixion for the baptistery, Florence, was his masterpiece in this craft He probably introduced the copperplate engraving process into Italy In 1457 he was in partnership with Antonio Pollaiuolo, and in 1463 he made cartoons for five or more figures for the sacristy of the cathedral in Florence, the only existing works that can be attributed certainly to him In these his designs were carried out under Giuliano da Majano See Sir Sidney Colvin, *A Florentine Picture Chronicle* (1898)

Finistère (fēnēstĕr') [from Latin *finis terrae*=land's end], department (2,719 sq mi , pop 724,735), NW France, at the tip of BRITTANY Quimper is the capital and Brest the main port

Finisterre, Cape (finĭstâr') [from Latin *finisterrae*=land's end], rocky promontory, extreme NW Spain, on the Atlantic coast of Galicia Here the English won two naval battles against the French (1747, in the War of the Austrian Succession, 1805, in the Napoleonic Wars).

Fink, Albert, 1827–97, American engineer, b Hesse-Darmstadt, Germany. In 1849 he came to the United States and went to work in the drafting room of the Baltimore & Ohio RR, where he was responsible for the design and erection of bridges, stations, and shops, leaving in 1857 to become construction engineer, then chief engineer, for the Louisville and Nashville RR After the Civil War he was successful in rehabilitating the road and was made its general superintendent and vice president. He analyzed rates and costs, demonstrating the wastefulness of competitive rates in railroad operation, and wrote the Fink report on cost of transportation In 1875 he resigned to study and write but was called on to serve as commissioner of the Southern Railway and Steamship Association and to regulate freight rates among its 25 competing members Two years later he undertook the same service for the four trunk lines entering New York city and organized the Trunk Line Association When the Interstate Commerce Commission was established in 1887, such voluntary associations were no longer necessary, and in 1889 he retired He designed a type of truss bridge which is known by his name

Fink, Colin Garfield, 1881–, American electrochemist, b. Hoboken, N J., grad Columbia, 1903 He was research engineer with the General Electric Company (1910–17) and from 1922 taught at Columbia He invented the drawn tungsten filament, introduced the insoluble anode for copper electrolysis, and perfected a process for smelting and refining tin ores He produced several valuable corrosion-resisting alloys and helped make chromium and tin plating a commercial success As consulting chemist for many years for the Metropolitan Museum of Art, he invented methods for restoring old bronze and other metal art objects

Fink, Mike, 1770?–1822, American frontier hero, b Pittsburgh Having acquired a reputation as a marksman while serving as a keelboatman on the Ohio and Mississippi rivers, he enlisted, along with two friends, as a boatman, trapper, and hunter in W H Ashley's expedition of 1822 to open trade with the mountain tribes on the upper Missouri Fink was killed on this expedition, and the ascertainable facts are only that when the party was in winter quarters near the mouth of the Yellowstone, Fink shot one of his companions and was himself ultimately shot by another Many colorful tales were fabricated around the incident and were passed on, along with other tales of his adventurous life and his own ability at telling "tall stories" See Walter Blair and F J Meine, *Mike Fink, King of the Mississippi Keelboatmen* (1933).

Finland, Finnish *Suomi* (sōō'mē), republic (117,970 sq mi , with water surface 130,160 sq mi , pop 3,736,510), N Europe HELSINKI is the capital Finland is bounded by Sweden and the Gulf of Bothnia (part of the Baltic Sea) in the west, by Norway in the north, by Russia in the east and south, and by the Gulf of Finland in the south The central and southern sections consist of innumerable lakes grouped into many-forked waterways and linked by short rivers and by sounds that tend to form rapids The largest lakes are Saima, Inari, and Pajanne The Kemi and the Oulu are the longest rivers and together with the Tornio are important logging waterways From a central forested plateau c 500 ft high, the land rises in the north to 2,000 ft , with a few peaks 3,000 ft high The northern arctic region forms part of LAPLAND, its inhabitants, the nomadic Lapps, raise large reindeer herds as a primary source of food and clothing Although only about 7 percent of the land is used for agriculture, more than half the population is engaged in that occupation More than two thirds of the land area is forested, making timber the main Finnish export article Paper, pulp, and plywood are the chief industrial products Textile manufacture, ironworking, and dairying are also important A major part of the economic life of Finland is carried on by cooperatives Finland has three universities—one at Helsinki and two at TURKU. The Finns are largely Lutherans Finnish (see LANGUAGE, table) and some Swedish are spoken By the 8th cent A D , the Finns, coming from regions S of the Baltic, had taken the country from the Lapps, who receded northward In the 12th cent , Finland was conquered and Christianized by the Swedes, who in the 16th cent made it a grand duchy as a royal appanage Swedish became the official and literary language Finland suffered severely in the recurring wars between Sweden and Russia In 1696 a great famine wiped out almost a third of the population By the Treaty of Nystad (1721) Peter I of Russia acquired the province of Viborg (Viipuri) The rest of Finland passed to Russia in 1809 A constitution was granted, and for nearly a century Finland enjoyed semi-independence as a Russian grand duchy, with its own parliament and with a democratic regime entirely different from that of the rest of Russia Finnish nationalism became a powerful movement early in the 19th cent It was characterized by intensification of the language conflict between Swedes and Finns, by the folklore studies of Porthan at the Univ of Turku, and by Lönnrot's monumental work on the *Kalevala* The tightening of Russian rule after 1890 led to a general strike in 1905 and to the declaration (1917) of Finnish independence In the ensuing civil war between Russian sympathizers (Reds) and Finnish nationalists (Whites), the Whites, led by Marshal MANNERHEIM and aided by German troops, were victorious After a brief period of military control, the republic was established and the first president elected (1919) In 1920 the USSR recognized Finnish independence The agrarian reform laws of 1918–1922 enabled tenants on large estates to acquire their own land These measures, together with the distribution of state-owned land, made nearly 90 percent of the farmers independent Prohibition, effective after 1919, was repealed in 1931 Finland was the only European country to honor its debts to the United States in the years between the two world wars and thus won great popularity in America In 1931 an anti-Communist movement gained among the farmers in N Finland. Known as the Lapua movement, it resulted in the dissolution of the Communist party and the barring of Communist activities The movement soon lost popular support because of its violent tactics and reactionary nature. From Nov., 1939, to March, 1940, Finland was involved in war with Russia (see FINNISH-RUSSIAN WAR). Peace lasted only until June, 1941, when Finland, in the hope of recovering its territorial losses, invaded NW Russia shortly after the German attack on the USSR England—but not the United States—declared war on Finland A full-scale Russian offensive resulted in the capitulation of Finland in Sept , 1944 The German troops stationed in N Finland refused to evacuate the country, to fulfill the armistice terms, the Finns proceeded to expel the Germans by force In the resulting Finnish-German warfare N Finland was devastated A peace treaty between Finland and the principal Allies (except for the United States) was signed at Paris in 1946 Finland promised Russia $300,000,000 in reparations, ceded the PORKKALA area to Russia on a 50-year lease, and lost to Russia PETSAMO (PECHENGA) and border districts in the east and southeast, notably VYBORG Despite great financial and economic difficulties Finland paid its reparations on schedule, and in 1948 Russia cancelled $75,000,000 of reparations The post-war years were characterized by political tension The Communist party, strengthened by the Finnish defeat, was conceded several important government posts, but Communist attempts to seize power (notably by instigating widespread strikes in the summer of 1949) were foiled by determined government action President Juho PAASIKIVI, elected in 1946, appointed a predominantly Social Democratic cabinet in 1948 See J H Wuorinen, *Nationalism in Modern Finland* (1931), *The Prohibition Experiment in Finland* (1931), and *Finland and World War II* (1948), J H Jackson, *Finland* (1938)

Finlay, Carlos Juan, or **Charles John Finlay,** 1833–1915, Cuban physician of Scotch and French blood, studied in France, M D Jefferson Medical College, Philadelphia, 1855 Settling in Havana, he began his life work on yellow fever, suggesting in 1881 the mosquito as carrier and in 1882 specifying the genus *Stegomyia* The Reed Commission of 1900 inaugurated experiments which conclusively proved his theories Finlay served as chief health officer of Cuba from 1902 to 1909

Finlay, George (fĭn'lā, -lē), 1799–1875, British historian He studied law at Glasgow and Gottingen and in 1823 went to Greece, where he assisted in the fight for Greek independence He made his home in Greece from 1826 and devoted himself to the study of Greek history after the Roman conquest His many studies of that subject, which appeared after 1844, were collected by H F Tozer into a single series, *History of Greece from Its Conquest by the Romans to the Present Time, B C 146 to A D 1864* (7 vols , 1877)

Finlay (fĭn'lē), river of N British Columbia, 210 mi long, rising in the Stikine Mts and flowing southeast to join the Parsnip at Finlay Forks and form the Peace River

Finley, James Bradley, 1781-1856, Methodist preacher and frontier missionary, b North Carolina He was long a circuit rider and for 21 years was district superintendent of a backwoods circuit of the Western Conference of the Methodist Church His autobiography (1853) and other books are valuable sources on frontier life in Ohio

Finley, John Huston, 1863–1940, American editor and educator, b Grand Ridge, Ill , grad Knox College (B A , 1887, M A , 1890) He educated himself behind a plow, worked his way through Knox, and returned as its president at the age of 29 He was later president (1903–13) of the College of the City of New York, commissioner of education, New York state, and from 1921 associate editor of the New York *Times*, becoming editor in 1937 and editor emeritus in 1938 He wrote *A Pilgrim in Palestine* (1918) *Poems* (1941) has an introduction by his son, John Finley, Jr

Finley, Robert, 1772–1817, American clergyman, a founder of the AMERICAN COLONIZATION SOCIETY, b Princeton, N J In 1787 he was graduated from the College of New Jersey (now Princeton), where he later studied theology Ordained in 1795, he served for over 20 years at Basking Ridge, N J , both as pastor and as headmaster of an excellent school for boys At his death he was president of the Univ of Georgia Finley wrote *Thoughts on the Colonization of Free Blacks* (1816).

Finley, Samuel, 1715–66, Presbyterian minister, president of the College of New Jersey (now Princeton Univ), b Ireland He came to America in 1734 and is believed to have studied under William Tennent He preached in the Great Awakening, mainly in New Jersey and Pennsylvania In the early 1740s Finley founded a school in Nottingham on the Pennsylvania-Maryland border (now the West Nottingham Academy), where many noted men received their training He became president of the College of New Jersey in 1761.

Finnan, Kincardine, Scotland: see FINDON.

Finnan haddie, see HADDOCK

Finney, Charles Grandison, 1792–1875, American evangelist, theologian, and educator, b Warren, Ohio Licensed to the Presbyterian ministry in 1824, he had phenomenal success as a revivalist in the Eastern states, converting many who became

noted ABOLITIONISTS In 1834 the Broadway Tabernacle, New York city, was organized for him. Under his leadership this church withdrew from its presbytery and adopted the Congregational form of government Finney went in 1837 to Oberlin College, where he was professor of theology until 1875 and president of the college from 1851 to 1865 At the same time he was pastor of the Oberlin Congregational Church and continued his evangelistic tours until his death, twice taking trips to England to conduct revivals His theological writings, published chiefly in the *Oberlin Evangelist*, of which he was founder and editor, were of great influence and set the tone of "Oberlin theology," one of the forms of New School Calvinism See his memoirs (1876).

Finney, John Miller Turpin, 1863–1942, American surgeon, b Natchez, Miss, M D Harvard, 1889 He was associated with Johns Hopkins from 1889, becoming professor emeritus of surgery in 1933 Besides works on surgery of the abdomen and chest, he wrote the autobiographical *A Surgeon's Life* (1940).

Finnish language, one of the Finno-Ugric languages. See LANGUAGE (table)

Finnish literature. The first printed work in Finnish was an ABC book published c 1542 by Bishop Michael Agricola (1506–57) In 1642 the first complete translation of the Bible in Finnish appeared in Stockholm Until the 19th cent most of the writing done by Finns was in Swedish, since from the 13th cent to 1809 Finland was in political vassalage to Sweden The linguistic researches of Alexander Castrén (1813–53), coupled with the historical writings of Henry Gabriel Porthan (1739–1804), and finally in 1835 the publication by Elias Lönnrot of the *Kalevala* brought about an interest in the Finnish language as a literary vehicle and called attention to the literary worth of Finnish themes Still many of the leading authors continued to write in Swedish, including the national poet Runeberg Others who used Swedish were the poet and novelist Topelius, Arvid Morne (1876–1946), poet, novelist, and playwright, Jarl Hemmer (1893–1944), poet, Runar Schildt (1888–1925), prose writer To the first generation of those writing in Finnish belong the novelist Pietari Päivärinta (1827–1913) and the all-round literary figure Alexis Stenvall (pseud Kivi, 1834–72), known abroad for *The Seven Brothers* (1870, Eng tr, 1929), a historical romance Literature in Finnish was strongly influenced by French and German naturalism, e g, in the dramas of Minna Canth (1844–97) and the novels of Juhani Aho (1861–1921), which portray realistically the life of the common folk of Finland Tolstoy's influence is seen in the novels of Arvid Järnefelt (1861–1932) Finland's leading poet is Eino Leino (1878–1926) Other poets are Otto Manninen (1872–), Veikko Antero Koskenniemi (1885–), and Larin Kyösti (1873–) The leading Finnish novelists are Johannes Linnankoski (1869–1913), who won fame with his *Song of the Bloodred Flower* (1907, Eng tr, 1921), the 1939 Nobel Prize-winner Frans Eemil Sillanpää (1888–), Unto Seppanen (1904–), and Mika Waltari (1908–), whose *Egyptian* was translated into English in 1949 Among the dramatists are Maria Jotuni (1880–1943), Lauri Haarla (1890–1944), and Hella Wuolijoki (1886–) Paavo Cajander (1846–1913) is known for his translations of Shakspere

Finnish-Russian War, 1939–40 When the Second World War broke out in Sept, 1939, Russia, never on cordial terms with Finland, took advantage of its nonaggression pact with Germany to make several far-reaching demands on Finland (Oct, 1939). These demands included the demilitarization of the Mannerheim Line (a strong Finnish fortification across the Karelian Isthmus just N of Leningrad), a 30-year lease on Hankö as a naval base, and the cession of several islands in the Gulf of Finland In return, Russia offered extensive but valueless districts along the eastern border of Finland Finland balked, negotiations broke down in November After alleging (Nov 26) that Finnish artillery had fired on Russian troops, the USSR, denouncing (Nov 28) the Russo-Finnish nonaggression pact of 1932 and breaking off (Nov 28) diplomatic relations, attacked on Nov 30 The Russians first concentrated their efforts on the eastern border of Finland, but the Finns, superior in winter warfare and ably commanded by Field Marshal MANNERHEIM, repulsed their attacks at Lake Ladoga, Suomussalmi, Salla, and Ivalo World sympathy was with Finland Sweden and Norway sent volunteers and supplies, and some supplies came from France and England At length, however, small Finland was no match for the USSR Air bombardments and a well-prepared frontal attack (Feb, 1940) on the Mannerheim Line were followed by the collapse of Finnish resistance. In the peace treaty signed on March 12 Finland ceded part of the Karelian Isthmus, Viborg (Vupuri), and several border territories to the USSR In June, 1941, warfare between Finland and Russia was resumed and became part of the general world conflagration (see FINLAND).

Finn mac Cumhail, Fionn mac Cumhail or Finn MacCool (all fĭn' mukōōl'), in Irish literature, a central hero of Ossianic legend (see OSSIAN). He headed a corps of professional fighters, the FENIANS, in the 3d cent. and is the chief figure of many of the Fenian ballads. He was surrounded in the stories by a favored group, one of whom was Diarmuid, who eloped with Finn's wife, Grania The pursuit of these lovers is the most famous story about Finn There may be historical basis for Finn's personality He is the original of Macpherson's Fingal See Lady Gregory, *Gods and Fighting Men* (1904)

Finnmark (fĭn'mark), county (18,797 sq mi; pop 50,041), N Norway, forming the northernmost part of the Scandinavian peninsula It borders on Finland in the south and on the RSFSR in the southeast Its coast on the Barents Sea, a part of the Arctic Ocean, is deeply indented by large fjords, notably the Tana Fjord and the Varanger Fjord There are numerous islands off the coast, on one of them is NORTH CAPE Vadso is the county seat, and HAMMERFEST is the chief city A plateau rising to barren glaciated mountains, Finnmark is both the largest and the least-populated county of Norway The population consists of LAPPS (called Finns by the Norwegians—hence the name of the county), of Norwegians, and of Finns Fishing and reindeer raising (mainly by the Lapps) are the main sources of livelihood, but there also are large iron mines at Kirkenes as well as copper deposits In the Second World War, Finnmark was the scene of severe fighting (1944–45) between Russians and Germans.

Finno-Ugric languages: see LANGUAGE (table)

finochio see FENNEL

Finsbury, metropolitan borough (1931 pop 69,888; 1948 estimated pop 35,640) of N London, England It includes Clerkenwell Here are the graveyard Bunhill Fields (where Bunyan, Blake, Defoe, and Isaac Watts are buried), John Wesley's chapel and house, Sadler's Wells Theatre (home of English ballet), and the mint of the Bank of England

Finschhafen (fĭnsh'hafun), harbor on Huon Peninsula, E New Guinea, in the Territory of New Guinea There are boat yards In the Second World War the Japanese air base established in 1942 was taken by Australian forces in 1943 and became a U S base It is sometimes called Finsch Harbour

Finsen, Niels Ryberg (nĕls' rē'bĕr fĭn'sŋ), 1860–1904, Danish physician He established in Copenhagen an institute of light therapy and wrote several books on his work He received the 1903 Nobel Prize in Physiology and Medicine for his method of treating disease, especially lupus vulgaris, with concentrated light rays

Finsteraarhorn (fĭn"sturar'hôrn"), peak, 14,026 ft high, Switzerland, highest of the Bernese Alps.

fiord see FJORD

Fiorenzo di Lorenzo (fyōrān'tsō dē lōrān'tsō), b c 1440, d after 1521, Italian painter He was born in Perugia, where he worked and where his best authenticated works remain These include an altarpiece of 16 panels depicting a Madonna enthroned, God the Father, angels, saints, and Fathers of the Church, frescoes depicting SS Peter and Paul on either side of a niche with a Madonna with angels above, and *Adoration of the Shepherds* Attributed to him on stylistic grounds are works in the galleries of London and in the Metropolitan Museum Fiorenzo di Lorenzo is thought to have been the master of Perugino

fir, any tree of the genus *Abies*, tall pyramidal coniferous evergreens widely distributed, both naturally and in cultivation A favorite species is the BALSAM FIR Other North American kinds include the white firs, silver fir, and the red firs Old World species are also cultivated in America The wood of most species is light, soft, and not strong but is sometimes used, as well as that of the firs producing a better quality, for interior finishing and for boxes. The DOUGLAS FIR is not a true fir

Firbank, Ronald (Arthur Annesley Ronald Firbank) (fûr'bĭngk), 1886–1926, English writer, b London, studied at Cambridge An aesthete and a poseur, Firbank excelled in his very short novels in the presentation of characters and appealed to a small but appreciative number of readers He was a convert to Roman Catholicism Best known of his novels is *Prancing Nigger* (1924, title in England, *Sorrow in Sunlight*) Others are *The Artificial Princess* and *Concerning the Eccentricities of Cardinal Pirelli*, both republished in *Extravaganzas* (1935) A play, *The Princess Zoubaroff* (1920), was not produced See his works (with a biographical memoir by Osbert Sitwell, 5 vols, 1928) and *Five Novels by Ronald Firbank* (with introduction by Sitwell, 1949); biography by I K Fletcher (1932)

Firbolgs (fĭr'bōlgs) [Irish, =bagman], in Irish tradition, especially as recorded in *The Book of Invasions*, one of the foreign invading peoples These short, dark men were predecessors of the FOMORS The tinkers of Ireland, a nomadic group having their own dialect, were thought to be descendants of the Firbolgs.

Firdausi (fûrdou'sē), c 940–1020, principal Persian poet, author of the *Shah Namah* [the book of kings] the great Persian epic. His real name was Abul Kasim Mansur; he was born of a yeoman family of Khurasan and received a thorough education, not only in Moslem learning, but in the Persian language and antiquities The real course of his life is not surely known because of the immense accretion of legend about it He lived at the court of Mahmud of Ghazni, where there was a group of antiquarians Firdausi, not only a good antiquary but also a good poet, undertook his epic history of Persia from the arrival of the Persians to that of the Arabs to glorify Persia's past He dedicated the work to the king, who paid him less than Firdausi expected The poet wrote a savage satire on the king (usually prefaced to editions of the *Shah Namah*) and fled He wandered from court to court and arrived in his old age at his home His poem, in 60,000 verses, is the first great work of modern Persian literature In it Firdausi set the mark for Persian poetry with his even rhyme, stately cadences, and continuous flow The poem has taken a singular place in Persia, and long sections of it are known and recited by illiterate and savage tribesmen Another long work (18,000 lines) is *Yusuf and Zulaikha*, a version of the story of Potiphar's wife Firdausi was often suspected of infidelity for his glorification of pagan Persia.

fire For the nature of fire, see COMBUSTION and FLAME There is no record in tradition, archaeology, or observation, of any human community without the use of fire Since human beings alone of animals possess the use of fire, it is like speech in being a human property This fact has been appreciated by most men, as has the value of fire It is probably a combination of the ideas of indispensability and of mysterious force that made fire a sacred or divine object for many men. The fire as a god is a characteristic feature of ZOROASTRIANISM, in which, as in many sun-worshiping religions, fire is considered the earthly representative or type of the sun The fire as sacred is universal in mythology, and in practice it has often survived in highly cultured communities The tie between the Greek colony and the metropolis was the fire kindled in the colony from a brand brought from the mother-city's fire The most carefully preserved cult in Rome was that of VESTA, goddess of the hearth, and her virgins guarded the holy fire One of the greatest Greek myths is the story of PROMETHEUS, the fire bringer The ramifications of the human ideas about fire are tremendously complex, extending as they do into the concepts about light and the heavens (sun and stars) The Greek philosophers regarded fire as one of the four elements

fire apparatus, devices and appliances, both portable and mobile, used to combat or to escape from fire Essential to the burning process are a supply of fuel and oxygen and sufficient heat to cause the fuel to be kindled Methods of fighting fire are designed to remove one or more of these necessary conditions and thereby stop the burning process The apparatus and methods used depend upon the nature of the burning materials These fall into three main groups—ordinary combustible materials, e g, wood, paper, and cloth, inflammable liquids, e g, gasoline, alcohol, oils, lacquers, and paints, and electrical apparatus Water, although it has been to some extent supplanted by other materials, is the most commonly used means of quenching fires, it both cools the burning substance and helps to exclude oxygen from its surface With burning liquids and electrical apparatus, however, water spreads the fire, and therefore usually chemical apparatus must be employed A small fire can often be extinguished by smothering it (i e, removing the oxygen supply) with a rug, heavy fabric, sand, or water Fire buckets or pails filled with sand or water are the simplest form of fire apparatus Extinguishers that can be used to form a stream of water include the knapsack pump, which can be strapped to the back, and the stirrup pump The soda-and-acid extinguisher commonly seen in buildings is usually a cylindrical metal container filled to a certain level with a solution of water and sodium bicarbonate, above the solution is suspended a small container of acid When the cylinder is inverted, thus mixing the acid with the soda and water, the reaction produces carbon dioxide and the pressure of this gas forces a stream of water through the nozzle of an attached hose This extinguisher is useful for ordinary materials but not for most chemical substances or for electrical apparatus (unless the current is turned off) The addition to water of chemicals of a group called detergents gives it greater penetrating power, this chemically treated water is more effective in fighting forest fires as well as indoor fires For extinguishing both chemical fires and ordinary burning materials the foam-type extinguishers are effective This device consists of a metal cylinder containing water, sodium bicarbonate, and an agent (often licorice powder) for strengthening the foam and an inner container which holds an aluminum powder (aluminum sulphate), when all the materials are mixed, a foam of carbon dioxide bubbles, surrounded by a coating, forms This is used especially to put out oil fires Among the many other devices are the vapor-type extinguishers. One form is a metal cylinder containing liquid carbon tetrachloride which is forced out either by pumping or by

gas pressure and on striking the fire forms a heavy vapor that shuts off the oxygen, another kind is a tank with liquid carbon dioxide under pressure, which when released forms flakes which vaporize and form a layer of carbon dioxide gas over the flame A number of chemicals are used in the dry form for extinguishing fires A protective apparatus installed in many buildings is an automatic sprinkler system. Such a system usually consists of overhead pipes equipped with outlets normally closed but designed to open in response to excess heat and release streams of water to put out the fire Most large buildings have a standpipe system with outlets on each floor so that a hose can be quickly and easily attached wherever the fire may be The history of fire fighting begins with man's earliest efforts to halt fire's progress and culminates in the well-equipped, highly organized, and scientifically trained modern fire departments Machines for extinguishing fires are mentioned in early Roman writings Heron of Alexander described a fire-fighting machine of his own invention Pumping machines of various designs are said to have been used in Egypt possibly in the 2d cent. B C and in European countries in later times Hand squirts or squirt guns were used in England well into the 17th cent , these could be operated by one man who held the device by its two handles and pressed the plunger against his chest to force out a jet of water Larger squirts were mounted on wheels About 1672 Jan and Nicolas van der Heyden produced a leather hose that could be used for suction and delivery and also couplings for joining together lengths of the hose This made possible the drawing of water from a pond or other source and produced a stream that could be more accurately directed In 1725 Richard Newsham developed a fire engine with pumping levers and treadles operated by the firemen Two of Newsham's engines were the first of such machines to reach the United States (1731) A steam-operated fire engine was built in England by John Braithwaite in 1829, but it was not put into use By about the mid-19th cent steam fire engines were fairly common in some European countries and in parts of the United States In New York city their use dates from 1858 and in London from 1860 The horse-drawn engines were gradually replaced by motorized vehicles Modern motorized fire apparatus includes pumping engines (a combination of a pumper and a hose wagon), hook-and-ladder trucks (for fighting fire and effecting rescues at considerable heights), searchlight apparatus, rescue wagons, smoke ejectors, water towers, chemical apparatus, and salvage wagons Fireboats are invaluable for combating fires on water fronts and on vessels at sea They are usually equipped with hoses of a number of sizes, a two-way radio, air-compressor units, searchlight generators, cutting torches, drills, and other apparatus necessary to make the boat a self-sufficient fire-fighting unit Smoke and noxious gases produced by burning are hazards to fire fighters Mobile apparatus for analyzing such gases in order to permit immediate use of the correct antidote is a desirable but not commonly available adjunct to fire-fighting equipment See L M Limpus, *History of the New York Fire Department* (1940), John J McCarthy, *The Science of Fire Fighting* (1943), Frank Eyre and E C. R Hadfield, *The Fire Service Today* (1944)

firearm, device consisting essentially of a straight tube, to propel shot, shell, or bullets by the explosion of gunpowder Primitive types of firearms were used by the Chinese at least as far back as 618 B C and came into general use in Europe early in the 14th cent The principal classification of firearms is the division between large firearms, called ARTILLERY, and small firearms (the RIFLE, the MACHINE GUN, and the REVOLVER) Some arms, notably the mortar, belong to neither group. See GUN, MUSKET, PISTOL

firebrick, a brick characterized by its high degree of resistance to heat, used in the construction of kilns, furnaces, ovens, and fireplaces, especially in the metalworking industries There is no universally accepted standard of refractoriness for firebricks, but any brick which fuses at a temperature below 1600°C could not accurately be called firebrick. Firebricks are made in a variety of shapes and sizes and differ in composition according to the specific uses for which they are designed Aside from heat resistance, the chief requirement in a firebrick is resistance to chemical decomposition by the substances with which it comes in contact in the furnace The commonest firebrick material is some kind of clay, either kaolin or fire clay Silica bricks are used where very high temperatures obtain, they are less subject than fire-clay bricks to expansion and shrinkage and hence are useful in arch and roof construction Silica brick is quickly attacked by alkalies, magnesia brick is popular because of its resistance to alkalies Alumina brick, which is neutral in reaction, is adapted to electric furnaces Chromite brick is much used as a neutral course between acid and basic bricks In the construction of furnaces the bricks are bound together by refractory mortar or cement, which is also used as a protective lining and for patching defects. See A. B. Searle, *Refractory Materials* (3d ed., 1940) and *Refractories for Furnaces, Kilns, Retorts* (2d ed., 1948), F. H Norton, *Refractories* (2d ed , 1942)

fire clay, a CLAY which has a high degree of resistance to heat. By the best standards it should have a fusion point higher than 1600°C The term "fire clay" is commonly held to exclude kaolin and other refractory potter's clays Fire clay should contain high percentages of silica and alumina, with as little as possible of such impurities as lime, magnesia, soda, and potash, which lower the fusion point of the clay Two types of fire clay are recognized—flint clay, exceedingly hard, nonplastic, and resembling flint in appearance, occurring in the United States, and plastic fire clay The principal uses of fire clay are in the manufacture of firebrick and of various accessory utensils used in the metalworking industries, such as crucibles, saggers, retorts, and glass pots.

firedamp see DAMP

fire-eaters, in U S history, term applied by Northerners to proslavery extremists in the South in the two decades before the Civil War Edmund RUFFIN, Robert B RHETT, and William L. YANCEY were the most notable of the group As early as 1850, at a convention held in Nashville, Tenn , the "fire-eaters" urged secession upon the South, but the Compromise of 1850 and more moderate counsel combined to postpone that event for another 10 years Although the "fire-eaters" were in large measure responsible for the movement to organize a separate Southern government, they actually filled minor offices under the Confederacy

fire engine see FIRE APPARATUS

fire escape, in architecture, a device, either fixed or movable, to facilitate escape from a burning building In the United States the term usually is applied to the common exterior iron balconies and stairways or ladders which give egress from each floor to the ground, this type, although of doubtful value in time of panic and usually a disfigurement architecturally, is still in general use on multi-family dwellings and other buildings The fire stair, enclosed in an independent fireproof curtain wall and accessible at each floor level through a self-closing fireproof door, is a more dependable device now widely used (often required by ordinance) in apartment and commercial buildings and in places of public assemblage Even more desirable is the smokeproof fire tower, which contains a fireproof stair entered from each floor across an open-air balcony Other varieties of fire escape in more or less general use range from the simple knotted rope to elaborate systems of spiral chutes In England the term refers to a portable extension ladder which may be wheeled up to a burning building to enable occupants to escape when ordinary exits are cut off

fire extinguisher see FIRE APPARATUS.

firefly, luminescent carnivorous beetle, often called lightning bug, of the family Lampyridae, which is well represented in temperate regions although the majority are tropical or subtropical species The light organs are on the abdomen They consist of several layers of small cells which act as reflectors and a lower layer of light-producing (luminescent or photogenic) cells These are permeated by nerves and by air tubes, which supply oxygen for oxidizing the substance luciferin in the presence of an enzyme called luciferase The light may be yellow, greenish, bluish, or reddish There is variation in different species, also, in the intensity of the flashes and in the length of the intervals between them Attraction between the sexes is believed to be a function of the light Synchronized flashing is characteristic of some species, especially in the tropics The males, females, larvae, and eggs of some emit light Some tropical American species of the family Elateridae known as fire beetles or cucuyos glow with red and green lights.

fire insurance see INSURANCE

Fire Island, c 30 mi long, off the south shore of Long Island, SE N Y , between Great South Bay and the Atlantic, part of the OUTER BARRIER On the narrow, sandy island lie the resort colonies of Saltaire, Fair Harbor, Point o' Woods, Ocean Beach, and Cherry Grove, at its west end are a state park and a lighthouse (1858), reached by ferry from Bay Shore and Babylon The hurricane of 1938 and a storm in 1939 did great damage, but reconstruction has been extensive.

fire lands see WESTERN RESERVE

Firenze, Italy see FLORENCE

fireplace, the oldest device for providing heat in a room and one which lingers chiefly for its charm and hospitable associations The earliest fireplaces were mere stone hearths in the center of a hut or tent, the smoke issuing through an opening in the roof In early Roman dwellings the ATRIUM or court, in which the domestic existence focused, contained a hearth for heat and for cooking. In European castles of the Middle Ages the fire was built upon a large hearth in the center of the great hall, with a lowered aperture in the timbered roof above to draw away the smoke In the 13th cent , probably because rooms were built above the hall, the fireplace was moved from the center to an outer wall of the room, which permitted a projecting hood and a flue for discharging the smoke. By the 15th cent , fireplace and CHIMNEY had practically the form which they still retain, and in the rooms the chimney breast began to receive pronounced decorative treatment From this time each room had a fireplace in the country manors of N Europe Their chimneys were built in great decorative stacks in the Elisabethan and Jacobean periods in England and in the châteaux of the early French Renaissance (16th cent). The art of iron casting developed iron firebacks, often of elaborate design, to protect the masonry of the fire chamber from intense heat. Coal began to be used in England in the 13th cent ; this led eventually to the invention of wrought-iron hob grates. Fireplace openings became relatively small, as compared with the enormous ones of the Middle Ages, and were framed with mantelpieces of great variety and charm in wood, stone, or marble For a fireplace and its chimney to draw satisfactorily, certain methods must be followed in their construction The depth of the fire chamber should never be less than one half the height of the opening or more than 24 in For proper radiation of the heat, the side walls of the fire chamber should be splayed inward, and the upper part of the rear wall should slant forward The throat through which smoke passes to the flue should be of an area at least equal to that of the flue, yet not so large as to draw off too much heated air Above the fireplace, the smoke chamber, which collects the smoke, should have smooth sides sloping inward to the flue The flue itself should have a tightly jointed terra-cotta lining to prevent heat leakage, and its area should be one tenth that of the fireplace opening It should terminate in a sloping ledge, or smoke shelf, at the bottom to prevent smoke from blowing back into the room See A. H Senner, *Fireplaces and Chimneys* (1941)

fireproofing, method of making normally combustible materials as nearly noncombustible as possible In most cases it is possible only to treat them with a solution or coating of some substance that will tend to retard their ignition when subjected to fire Wood is protected in this way by being impregnated with a solution of ammonium phosphate Paints can be made fire-retardant by the use of certain pigments (e g , antimony oxide and calcium carbonate) or by the inclusion of chlorinated resins, chlorinated oils, chlorinated paraffins, and certain other materials Fireproof board made from a mixture of asbestos and cement is used quite extensively and for all practical purposes is noncombustible, as well as being a good insulator Fireproof doors are often constructed entirely of steel, but sometimes they have a wooden core with a layer of sheet metal pressed over it Some are equipped with automatic devices for closing them to check the spread of fire Fire-resisting materials used extensively in fireproof buildings are hollow clay tile, brickwork, gypsum, plaster, and concrete In the construction of steel buildings it is of utmost importance that the steel be adequately protected against damage by fire While steel will retain its strength up to a very high temperature, it fails rapidly at temperatures over 1000°F A very hot fire in a portion of a building where the steel is poorly protected may cause failure either in the columns or the floor beams Hollow clay tile and brickwork afford good protection for steel Steel beams incased in concrete should have at least 2½ in of concrete outside of all surfaces Columns and girders when liable to severe exposure to fire should be covered with a minimum thickness of 4 in of hollow clay tile Fireproof floors are frequently constructed of arched hollow tile between steel beams, the exposed portion of the beams being adequately protected as well A method used in modern buildings is known as slow-burning construction Very heavy lumber, much heavier than necessary to carry the normal loads imposed on the members, is used In the event of fire, the members, burning only on the surface, are thus protected against final collapse for a considerable period Certain methods and safeguards of building construction are required by law in most cities In the typical municipal code, buildings classed as fireproof are those in which all parts carrying weights or resisting strains as well as exterior and interior walls, interior partitions, stairways, and elevator enclosures are made entirely of incombustible materials and those in which all metal structural members are protected against effects of fire by complete casings of fireproofing material Building materials which are generally considered fireproofing materials include bonded brickwork laid in cement mortar, concrete, cinder concrete, porous or semiporous terra-cotta blocks, and solid gypsum blocks, all with certain required ingredients and methods of setting Textiles, especially cotton, rayon, and other fibers of vegetable origin, are often treated to make them flameproof by immersing them in solutions of certain chemicals or by brushing or spraying them with such solutions. Tents and tarpaulins can be made flame-retardant by treatment with certain substances, e.g , a coating containing chlorinated paraffin and antimony oxide Asbestos, because it is noncombustible and a nonconductor of heat, is widely used for insulation of pipes, boilers,

and other heated structures, for roofing and flooring materials, for theater curtains, and for many other purposes The fibers can be spun into fabrics flexible enough to be made into suits and gloves for firemen and for workers in metallurgical industries where intensely high temperatures are used Fire-resistant cloth made of cotton and asbestos (the proportions varying according to the use of the fabric) is made into various products for household use, e g., dish towels and covers for ironing boards.

Firestone, Harvey Samuel, 1868–1938, American industrialist, manufacturer of rubber products, b Columbiana co , Ohio Son of a prosperous farmer, Harvey Firestone turned from the soil, worked in Columbus, Ohio, and manufactured rubber tires after 1896 He organized (1900) the Firestone Tire & Rubber Company and rapidly became a leader of the rubber industry, with various properties over the world By 1926 he leased a 1,000,000-acre rubber plantation in Liberia to control the output of raw rubber needed in his factories Henry Ford and Thomas A Edison were his intimate friends

fireweed, any of several plants that spring up in fire-swept regions, especially the widely distributed great willow herb (*Chamaenerion,* or *Epilobium, angustifolium*) This fireweed is a tall perennial, weedy but sometimes cultivated, with willowlike foliage and with flowers that vary in shade from rose to purple and are sometimes white It is a good bee plant

fireworks · see PYROTECHNICS

firing, process of baking clay to produce pottery Primitive potters baked their clay in an open fire, as the American Indians still do, but for firing at higher temperatures and for the use of glaze, a KILN is needed In general, pottery is fired once to harden it into biscuit ware, then a glaze is applied and fused with the clay by a second firing China painting, enamel work, and STAINED GLASS also require firing Temperatures of firing vary from about 1100°F for fixing paint on glass to about 2800°F for hard porcelain

Firishta or **Ferishtah,** c 1552–c 1623, Persian historian He wrote an account of Moslem rule in India, including some Indian history before the arrival of Islam Although Firishta is considered uncritical and occasionally erroneous, he has preserved writings otherwise lost, and his history remains an important source

Firkins, Oscar W., 1864–1932, American literary critic, b Minneapolis, grad Univ of Minnesota (B A , 1884, M A , 1898) He was professor of comparative literature at his alma mater except in 1919–21, when he was drama critic for the New York *Weekly Review* His own one-act plays dramatize incidents in the lives of authors Among his full-length critical studies is his last work, *Power and Elusiveness in Shelley* (1937) See his *Memoirs and Letters* (1934)

Firminy (fĕrmēnē'), town (pop 17,941), Loire dept , E central France, in the SAINT-ÉTIENNE industrial district

first aid. The immediate treatment of a patient in case of emergency while awaiting the arrival of a physician is often a means of saving life and also may result in a better and more rapid recovery Prevention of further injury is important Essential knowledge includes that of the proper BANDAGE for a WOUND, that of the treatment of BLEEDING, FRACTURE, SPRAIN, DISLOCATION, FAINTING, BITES AND STINGS, BURNS AND SCALDS, POISONING (see POISON and POISONING, table), SUNSTROKE, and heat exhaustion, and that of the method of ARTIFICIAL RESPIRATION for DROWNING and ASPHYXIA See also Red Cross literature

Asphyxia Symptoms blue color, gasping, unconsciousness Treatment remove cause, e g , a foreign body or gas, use artificial respiration

Bites Symptoms wound Treatment bandage part on side towards heart Use antivenin for snake bite Cauterize with nitric acid for bite of rabid dog and follow with vaccination

Bleeding Symptoms external wound, pallor, weakness if internal Treatment local pressure, temporary tourniquet for severe arterial bleeding

Burns Symptoms redness, blistering, charring Treatment coat with oily material If from acid, first use baking soda If from alkali, first use vinegar Caution treat for shock

Dislocation Symptoms pain, swelling, deformity of the joint Treatment rest, cold or hot wet applications Caution do not move

Drowning Treatment artificial respiration Caution patient should be on stomach, with head low and mouth and nose unobstructed as in artificial respiration

Fainting Symptoms pallor, cold, rapid pulse Treatment elevate legs When conscious, give stimulants

Foreign body in eye Symptoms pain; redness, tears Treatment wash out with clean water, remove with clean cloth Caution do not touch cornea, the eyeball covering over pupil and iris

Fracture. Symptoms pain, deformity of bone Treatment splint the whole limb Caution do not move until splint is in place Treat for shock

Heat exhaustion. Symptoms pale, clammy skin, weakness, subnormal temperature Treatment. rest, stimulants Caution no cold application to skin

Poisoning Symptoms corrosive stain around mouth from irritants, depression from narcotics Treatment emetic, soothing liquids such as eggs, milk, oils For specific antidote, see POISONING (table)

Shock Symptoms pallor, cold, weak breathing, weak pulse Treatment head low, warmth, stimulants, treat cause of shock Caution do not move, avoid contact if electric shock

Sprain Symptoms pain, swelling. Treatment rest, cold wet applications

Sunstroke Symptoms headache, unconsciousness, fever, red, dry, hot skin Treatment rest, cold applications to skin, cool drinks Caution no stimulants

Wound Treatment remove foreign body, apply clean dressing and bandage Caution treat for bleeding and shock

Firth, Sir Charles Harding (fûrth), 1857–1936, British historian He was educated at Oxford, and in 1883 he began his long career of teaching there From 1904 to 1925 he was regius professor of history Under the influence of S R Gardiner, he edited texts and wrote works on 17th-century England and became one of the greatest authorities on the Puritan Revolution His *Oliver Cromwell* (1900) attracted wide notice and is still much read *Cromwell's Army* (1902), *The Last Years of the Protectorate* (2 vols , 1909, a continuation of Gardiner's great work), and *The House of Lords during the Civil War* (1910) complete the list of his major works He was remarkable for his high standards of research in original materials and was an editor without a peer His writing, though somewhat dry, is firm-textured, and his powers of narration considerable

firth or **frith,** name applied to an estuary in Scotland For Firth of Clyde, see CLYDE, for Firth of Forth, see FORTH

Firuzabad (fĭrōō'zŭbăd'), ruined city, S Iran, S of Shiraz It has an interesting palace built by Artaxerxes It was the birthplace of Firuzabadi (1329–1414), compiler of a great Arabic dictionary

Fischart, Johann (yōhän' fĭ'shärt), c 1545–c 1590, German satirist, called Der Mentzer He was a jurist by profession and was also engaged in printing Among his numerous works are an imitation of Rabelais, *Geschichtklitterung* (1575), three times the length of the original, a narrative poem, *Das Glückhaft Schiff von Zürich* [the lucky boat of Zurich] (1576); the religious satires, *Der Binenkorb* [the beehive] (1579), and *Das Jesuiten Hütlen* [the Jesuit's hat] (1580) Fischart was a writer of great wit and originality, he was the foremost German satirist of his age

Fischer, Emil (ā'mĕl fĭ'shur), 1852–1919, German organic chemist He is especially noted for his researches on the structure and synthesis of sugars and of purines and purine base derivatives, e g , caffeine, for this work he received the 1902 Nobel Prize in Chemistry His many other valuable discoveries include a method of synthesizing polypeptides He was an assistant of Adolf von Baeyer and was professor at the universities of Erlangen (1882–85), Würzburg (1885–92), and Berlin (from 1892)

Fischer, Hans (hans), 1881–1945, German organic chemist and physician For his studies of chlorophyll and hemin and for the synthesis of hemin he received the 1930 Nobel Prize in Chemistry He was professor from 1921 at the technical institute at Munich

Fischer, Kuno (Ernst Kuno Berthold Fischer) (kōō'nō), 1824–1907, German philosopher He taught at Heidelberg, was honorary professor of philosophy at Jena, and in 1856 was appointed lecturer at Berlin In 1872 he accepted the chair of philosophy at Heidelberg A Hegelian, he made his chief contribution to philosophy as a historian, his important work being *Geschichte der neuern Philosophie* (new ed , 1914)

Fischer, Theobald (tā'ōbalt), 1846–1910, German geographer, studied at Heidelberg and Halle He traveled much in Europe (especially in the Mediterranean regions) and in the northern part of Africa and was professor of geography in Kiel (1879–83) and Marburg (1883–1910) The author of several works on geography, he was an authority on Mediterranean lands

Fischer von Erlach, Johann Bernhard (yō'hän bĕrn'hart fĭ'shur fŭn ĕr'lakh), c 1656–1723, Austrian architect After studying in Rome, he returned to his native city, Vienna, where he designed a large number of buildings Most of these were baroque, some of them exemplifying its extreme phase His work gave a definite stamp to Vienna and remained typical of both the Austrian empire and the city for more than half a century His earliest buildings were done in Salzburg, chiefly churches, including the University Church (1696) Among his noted Viennese works are the imposing Karlskirche, begun in 1715, the Church of San Carlo Borromeo, extensive additions to the Hofburg, the imperial palace, designs for the imperial palace at Schönbrunn, subsequently executed by others, the monumental fountain in the Hohe Markt, and a number of private palaces He wrote *A Plan of Civil and Historical Architecture* (1730) See study by H V. Lanchester (1924)

Fish, family long prominent in New York politics and society **Nicholas Fish,** 1758–1833, b. New York city, attended the College of New Jersey (now Princeton Univ) and studied law before serving ably as a major in a New York regiment throughout the American Revolution A New York city alderman (1806–17), he was a leading Federalist and the close friend of Alexander Hamilton. He also served as chairman of the board of trustees of Columbia College, a post later held by his son, Hamilton Fish (1808–93), the most illustrious member of the clan (see separate articles for Hamilton Fish, 1809–93, and for his youngest son, Stuyvesant Fish). **Nicholas Fish,** 1848–1902, b New York city, grad Columbia, 1867, and Harvard Law School, 1869, was Hamilton's eldest son He entered the U S diplomatic service and was minister to Belgium (1882–86). A third son, **Hamilton Fish,** 1849–1936, b Albany, N Y , grad Columbia, 1869, studied law and was admitted to the bar in 1873 He was a member of the New York state assembly (1884–96), serving as speaker in 1895–96, and was long Republican boss of Putnam co On appointment by President Theodore Roosevelt, he was Assistant Treasurer of the United States in New York city (1903–8) He also served one term (1909–11) as a U S Representative The family's third **Hamilton Fish,** 1888–, son of the foregoing, b Garrison, Putnam co , N Y , grad Harvard, 1910, was a famous Harvard football player He remained an additional year at Cambridge to study law Fish served in the New York state assembly (1914–16), distinguished himself in the First World War as a captain of Negro infantry, and from 1920 to 1945 was a U.S. Representative A leading isolationist and vigorous anti-Communist, once accused of having connections with German Bundists and other Axis supporters, he was opposed for renomination in 1944 by Gov Thomas E Dewey and other Republican leaders because he injected a religious issue into the campaign Fish, however, won in the primary, but was defeated for reelection in November

Fish, Carl Russell, 1876–1932, American historian, b Central Falls, R I , grad Brown, 1897, and Harvard (M A , 1898, Ph D , 1900) From 1900 to his death he taught history at the Univ of Wisconsin Fish considered the Univ of Wisconsin the "most democratic institution in America," and he was extremely popular there among both students and colleagues He wrote *The Civil Service and the Patronage* (1904), *Guide to the Materials for American History in Roman and Other Italian Archives* (1911), *The Development of American Nationality* (1913, rev ed , 1940), a useful and popular textbook, *American Diplomacy* (1915, 5th ed , 1929), *The Path of Empire* ("Chronicles of America" series, 1919), *The Rise of the Common Man, 1830–1850* ("History of American Life" Vol VI, 1927), and *The American Civil War an Interpretation* (ed by William E Smith, 1937)

Fish, Hamilton, 1808–93, American statesman, b New York city, grad Columbia, 1827, son of Nicholas Fish (1758–1833) He studied law, was admitted (1830) to the bar, and generally confined his practice to real estate and chancery law Fish had been named for his father's friend Alexander Hamilton, and as an heir to the Federalist tradition he quite naturally gravitated to politics as a Whig A U S Representative (1843–45), he was elected lieutenant governor of New York in 1847 and governor, for a two-year term, in 1848 From 1851 to 1857 Fish was a U S Senator, serving on the foreign relations committee in 1855–57 He was a moderate antislavery man who opposed both abolitionist and proslavery excesses and deplored the breakup of the Whigs as a national party Slow to join the new Republican party, he lost his political standing After spending two years (1857–59) abroad with his family, he devoted himself during the next decade to private and civil affairs in New York city Fish was one of many to honize the victorious Civil War general Ulysses S Grant, but his appointment (March 11, 1869) as Grant's Secretary of State, to succeed the grossly miscast Elihu B Washburne, came as a surprise He accepted reluctantly and expected to hold the office for only a few months, but actually was in the cabinet longer than any other member, serving through both of Grant's administrations He was one of the most able of U S. Secretaries of State, although his reputation has doubtless been enhanced by the general low tenor of most of Grant's other appointments His greatest achievement as Secretary was bringing about the treaty (see WASHINGTON, TREATY OF) which paved the way for settlement of the ALABAMA CLAIMS and other long-standing disputes with Great Britain This was accomplished amid great difficulties, especially those offered by the vigorously anti-British chairman of the Senate foreign relations committee, Charles SUMNER, and Sumner's friend John L MOTLEY, the virtually insubordinate U S minister to Britain The period was one of constant trouble with Spain, arising out of the Ten Years War. To end the brutal conflict

Fish eagerly advanced a plan by which Cuba would buy its independence, the purchase price to be guaranteed by the United States Unfortunately the arrangement fell through, and Fish was hard pressed to persuade Grant not to recognise the belligerency of Cuba but to exert pressure on Spain to grant reforms in Cuba and redress the grievances of Americans having property there Under Fish's vigilant eye filibustering expeditions from the United States to Cuba were kept to a minimum, but the VIRGINIUS affair in 1873 nearly brought the nation, already completely sympathetic to the Cuban cause, to war with Spain Fish was not an expansionist, but to secure Grant's support of other policies he supported without enthusiasm the President's pet project to annex Santo Domingo He arranged the annexation treaty which the Senate, led by Sumner, rejected on June 30, 1870, an action bitterly resented by Grant Fish also handled unsuccessful negotiations for a Central American canal route and undertook a vigorous but cooperative policy in the Far East Grant was much impressed with Fish's character and ability, and neither he nor the Senate would hear of permitting Fish to retire late in 1871, after the Treaty of Washington had been concluded For his part Fish, while regretting the obvious deficiencies in Grant's make-up, which were largely responsible for the never-ending political scandals that characterised his administrations, was personally devoted to the President It is, however, difficult to understand how Fish, with his intimate knowledge of the widespread corruption that existed under Grant, could have, as he did in 1880, supported Grant's attempt to obtain a third term Fish himself was far above moral reproach, although, diplomatlike, "he sometimes chipped the cube of truth to make it roll," as his biographer aptly puts it After he left office in 1877, Fish, who maintained a town house in New York city and "Glenclyffe," a country estate at Garrison, on the Hudson, resumed his labors for Columbia College and the Episcopal Church, two institutions to which he was affectionately devoted Long chairman of the board of trustees of Columbia (before and after his cabinet service), he was one of those most responsible for its emergence as a true university See Allan Nevins, *Hamilton Fish, the Inner History of the Grant Administration* (1936)

Fish, Hamilton, 1849–1930, and 1888–· see FISH, family

Fish, Nicholas, 1758–1833, and 1848–1902 see FISH, family

Fish, Stuyvesant (stī'vŭsănt), 1851–1923, American railroad executive, b New York city, grad Columbia (B A., 1871; M A , 1874), son of Hamilton Fish (1808–93) He became (1877) a director of the Illinois Central RR, and as its president (1887–1907) he built the railroad into a large system Fish's membership in the state committee which investigated the Mutual Life Insurance Company of New York—of which he was (1883–1906) a trustee—gave E H Harriman an opportunity to oust him from the presidency of the Illinois Central RR

fish, aquatic gill-breathing vertebrate animal with fins and having skin provided with mucous glands and usually reinforced with scales or plates There is no distinct neck The cyclostomes, e g , the lamprey and the hagfish, are primitive, elongated creatures without paired fins and with suctorial mouths by which they attach themselves to larger fish, on whose tissues they feed More highly developed are the cartilaginous fish, the group to which the shark and the ray belong Highest in the scale are the bony fish (those with true bone in the skeleton), which include the majority of the fresh-water and marine species The name Pisces once included all fish but now usually refers only to the class of bony fish Largest of living fish is the whale shark, said to reach 50 ft in length, the smallest is a goby of Luzon in the Philippines, *Pandaka pygmea*, which averages about ½ in in length Locomotion in fish is accomplished by contractions of the body muscles and movements of the fins, supplemented by the thrust from the expulsion of water through the gill slits Most bony fish have an air bladder, the functions of which are not fully determined It aids in maintaining equilibrium between the density of the fish and that of the water, in some it is a supplementary respiratory organ, and others use it to produce sound Most fish have a lateral line on each side of the body, an indication of underlying sense organs Fish eat plankton, aquatic animals, plants, and refuse Eggs of some fish, e g , those of the cod, which are laid and fertilized in open waters, number in the millions Of eggs which have a better chance of survival smaller numbers are produced Among the live bearers the eggs are fertilized and develop within the female's body Young stages of the fish are known as fry and fingerling The SEA HORSE and the STICKLEBACK are among the few fish which care for the eggs Most fish are to some extent migratory in feeding and breeding habits. The EEL and the SALMON undertake long migrations Phosphorescent organs are found especially in deep-sea fish Fish are marketed fresh, frozen, canned, and dried Among the chief food fish are the salmon, cod, herring, tuna, haddock, halibut, and mackerel The protein content of fish is high and some, e g , salmon, herring, and mackerel, are rich in fat Important fish products are oil, ranging from crude oil to medicinally used liver oils, fish meal for feeding livestock and poultry, and fertilizer Glue and isinglass are also fish products See also CLIMBING PERCH, ELECTRIC FISH; FIN, FISHERIES, FLYING FISH, GILL, SHELLFISH See D S Jordan, *Fishes* (rev ed , 1925), J R Norman, *A History of Fishes* (1931), Brian Curtis, *The Life Story of the Fish* (1938), L P Schultz and E M Stern, *The Ways of Fishes* (1948)

fish curing, Methods of curing fish by drying, salting, smoking, and pickling or by combinations of these processes have been handed down from ancient times almost unchanged, although modern taste favors less salt than was formerly used On sailing vessels fish were usually salted down immediately to prevent spoilage; the swifter boats of today commonly bring in unsalted fish, much of which is sold fresh Modern freezing and canning methods have largely supplanted older methods of preservation, although sizable curing industries still exist in the Orient, Scandinavia, Russia, the British Isles, and New England Fish to be cured are usually first cleaned, scaled, and eviscerated, large fish are generally split Fish are salted by packing them between layers of salt or by immersion in brine The fish most extensively salted are cod, herring, mackerel, and haddock Smoking preserves fish by drying, by deposition of creosote ingredients, and, when the fish are near the source of heat, by heat penetration Herring and finnan haddie (Findon haddock) are commonly smoked Kippers are split herring, and bloaters are whole herring, salted and smoked Sardines, pilchards, and anchovies are small fish of the herring family, often salted and smoked, then preserved in oil Fish are dried under controlled conditions of temperature, humidity, and air velocity Since the dried product is relatively unappetizing and rehydration slow, other preservation methods are more common

Fisher, Andrew, 1862–1928, Australian statesman he emigrated from Scotland to Australia in 1885, helped organise the Australian Labour party, and served three times as labor prime minister of Australia (1908–9, 1910–13, and 1914–15) He guided the passage of much social legislation in the fields of taxation, banking, and land policy

Fisher, Dorothy Canfield, 1879–, American novelist, b Lawrence, Kansas, Ph D Columbia, 1904 After her marriage in 1907 to John Redwood Fisher she lived chiefly in Vermont, the background of the stories in *Hillsboro People* (1915) and of some of her novels *A Montessori Mother* (1912), one of the first books in English on the Montessori system of education, demonstrates Mrs Fisher's interest in education, which recurs in her fiction, e g , in *The Bent Twig* (1915) and *Fables for Parents* (1937) Her other novels include *The Brimming Cup* (1916), *The Deepening Stream* (1930), and *Seasoned Timber* (1939) Collections of her short stories are *Foursquare* (1949) and *Something Old, Something New* (1949, for children) Her translation (1921) of Papini's life of Christ was widely read

Fisher, Frederick Bohn, 1882–1938, American Methodist bishop, b Greencastle, Pa , grad Asbury College (B S , 1902, B A , 1903· D D , 1916) and Boston Univ (Ph D , 1909) From 1910 to 1920 he was secretary of the foreign missions department of the Methodist Episcopal Church In 1920 he became bishop, in residence at Calcutta, India, until 1930 He wrote *That Strange Little Brown Man, Gandhi* (1932) and other books on Indian affairs See biography by his wife (1944)

Fisher, Geoffrey Francis, 1887–, archbishop of Canterbury He was educated at Oxford and ordained in 1914 For 21 years he was an educator, serving as assistant master of Marlborough College (1911–14) and as headmaster of Repton School (1914–32) In 1932 he became bishop of Chester, from 1939 to 1945 he was bishop of London In 1945 Dr Fisher was named archbishop of Canterbury He is a president of the World Council of Churches

Fisher, Herbert Albert Laurens, 1865–1940, English historian He was a fellow, tutor, and warden (from 1925) at New College, Oxford, and served as vice chancellor (1912–16) of the Univ of Sheffield He led a distinguished public career, serving as a member of Parliament (1916–26) and president of the Board of Education (1916–22) His most ambitious historical work is his *History of Europe* (3 vols , 1935–36) He wrote various studies of Napoleon, including a biography (1913), and lives of the historians F W Maitland (1910), Lord Bryce (1927), and Sir Paul Vinogradoff (1927) Other works include *The Mediæval Empire* (1898), *A Political History of England, 1485–1547* (William Hunt and R L Poole, *A Political History of England*, Vol V, 1906), and *An Unfinished Autobiography* (1941).

Fisher, Irving, 1867–1947, American economist, b Saugerties, N Y , Ph D Yale, 1891 He began teaching at Yale in 1890 and was active there until 1935 His earliest work was in mathematics, and he made a distinguished contribution to mathematical economic theory He was noted chiefly for his studies in managed currency, in which he set forth the theory of the "compensated dollar" whereby purchasing power might be stabilised He was also one of the first to work out a system of index numbers Fisher's interests were wide and included activity in many academic, business, welfare, and public organisations, especially public-health societies Important among his many books are *Mathematical Investigations in the Theory of Value and Prices* (1892), *Appreciation and Interest* (1896), *The Nature of Capital and Income* (1906), *The Rate of Interest* (1907), *The Making of Index Numbers* (1922), and *Theory of Interest* (1930)

Fisher, John (Saint John Fisher), 1459–1535, English prelate, cardinal of the Roman Church, bishop of Rochester (1504–34). Known for his scholarship at Cambridge, he was chosen confessor to Margaret, countess of Richmond and Derby As vice chancellor of the university (1501–4) and chancellor thereafter, he helped to carry out her plans for establishing St John's College and Christ's College As bishop he was firm in his denunciation of abuses by the clergy, but he resisted reforms like Luther's, affecting doctrines of the Church Giving his support to the new learning, he was a friend to Erasmus Fisher, who was confessor to Katharine of Aragon, was the only bishop to oppose the invalidation of the marriage of Henry VIII and Katharine He refused to acknowledge the supremacy of the king and to accede to the Act of Succession, which made Katharine's child illegitimate In 1534 he was imprisoned in the Tower and deprived of his bishopric Pope Paul III, openly to show his attitude, created Fisher a cardinal in May, 1535 Henry, infuriated, pushed forward the trial A fortnight before Sir Thomas More was executed, John Fisher was beheaded on Tower Hill He was canonized as a martyr in 1935 Most of the Latin writings that he left were published in 1597 Some of his English works still remain in manuscript Feast June 22 See *The Life and Death of That Renowned John Fisher, Bishop of Rochester* (1635, new ed , 1893)

Fisher, John Arbuthnot Fisher, 1st **Baron** (fĭr'bŭth'nŏt), 1841–1920, British admiral In 1872 he was responsible for instituting the developmental work which perfected the torpedo, and in 1902 he reorganized and improved the method of training naval officers Fisher foresaw the need to revamp the types and sizes of naval vessels, and in 1905 started construction of the *Dreadnought* (see DREADNOUGHT) It was also largely through his efforts that the British navy changed to the use of oil as a fuel With the outbreak of the First World War he became first sea lord of the admiralty, but resigned because his scheme for control of the Baltic was abandoned in favor of the plan to force the Dardanelles In 1909 he was created Baron Fisher of Kilverstone See biography by R H. Bacon (2 vols , 1929)

Fisher, Sydney Arthur, 1850–1921, Canadian statesman He entered the House of Commons in 1882 and served from 1896 to 1911 as Sir Wilfred Laurier's minister of agriculture In 1909 he was a Canadian representative at the Washington Conference to consider conservation of the natural resources of the American continent

Fisher, Vardis, 1895 , American novelist, b Idaho, of Mormon parents, grad Univ of Utah, 1920, Ph D Univ of Chicago, 1925 His first important work was an autobiographical tetralogy (1932–36) He directed the state Federal Writers' Project, which compiled the Idaho state guide (1937) In 1939 his historical novel of the Mormons, *Children of God* (1939), won the Harper Novel Prize *The Mothers* (1943) is a novel of the Donner Lake tragedy He has also written poetry

Fisher, William Mark, 1841–1923, American landscape painter, b Boston, studied in Boston and Paris He settled in England, where he became a member of the Royal Academy His *Road to Mual* is in the Museum of Fine Arts, Boston, and *Feeding the Fowls* is in the Tate Gallery, London

Fisher, Fort, Confederate fortification on the peninsula between the Atlantic and the Cape Fear river, which defended the port of Wilmington, N C , in the Civil War. It was built by Gen W H C Whiting in 1862 Because Wilmington was one of the few ports open to blockade-runners, a joint land and naval expedition under Gen B F Butler and Admiral D D Porter was sent against Fort Fisher in Dec , 1864, but failed to take it A second attempt, with Gen A H Terry replacing Butler, captured the fort on Jan 15, 1865, after a desperate battle The port was then effectively closed and shortly afterward Wilmington itself fell to the Union

fisher, large species of marten (genus *Martes*) native to the N United States and Canada It is over 3 ft long, with brown fur shading to black It is a forest hunter, able to overtake squirrels and martens in trees and strong enough to kill a lynx, raccoon, or fox It attacks the porcupine fearlessly, turning it over and striking at the unprotected under parts. The fisher is nocturnal and hard to catch in traps, which it robs of other victims. It is not abundant, and the beautiful fur

brings high prices. Other names are pekan, black cat, and Pennant's marten.

fisheries. From earliest times and in practically all countries, fisheries have been of industrial and commercial importance The largest fishing grounds are in the N Atlantic off Newfoundland and Labrador, where cod and herring and also haddock, mackerel, and bluefish are taken by American and European fishing fleets The most valuable yields of American waters are the oyster, on the Eastern seaboard, and the salmon, the sardine, and the tuna on the Pacific The Pacific fisheries of Japan, the sardine fisheries of France and Spain, the cod and herring fisheries of the Baltic and the North Sea, and the inland fisheries of Russia are among the largest of the world Most of the large fishing fleets are now equipped with steam trawlers The methods chiefly in use—each with a great variety of modifications—are with line, net (trawling), and trap (for lobsters and crabs) In some cases the fish are put in salt-water tanks or in cold storage on the boat The drying, canning, salting, and preserving of fish give rise to a vast industry, with, in addition, the manufacture of numerous by-products, including glue, fertilizer, and, in the Orient, fish sauces In the United States, since all waters within a state are subject to state jurisdiction, domestic fisheries are governed by state regulations, except when national control results from the treaty-making power and except for the regulation of navigation, customs, and interstate commerce, which are granted to the Federal government by the Constitution Agreements between states concerning fishing in boundary waters (such as that between Washington and Oregon concerning the Columbia river salmon fisheries) require the ratification of Congress State fishery legislation is generally both restrictive and protective Fish may be protected by imposing closed seasons during the spawning season or for the period necessary for the increase of depleted species, certain waters may be entirely closed to commercial fishing, and the taking of fish below a certain size may be forbidden Undesirable types of fishing gear are prohibited and the use of other apparatus restricted State statutes forbidding the pollution or the obstruction of nonnavigable streams are general National governments generally restrict fishing rights within territorial waters to citizens and may establish jurisdiction over portions of the open sea, often for the purpose of protecting shore fisheries (Chesapeake Bay and Delaware Bay thus constitute closed seas) While the national government may regulate the high-seas fisheries of its own citizens, the right to take products from the high seas is a subject for international agreements Fisheries occupy an important part in the economic structure of many countries (the Black Sea fisheries formed an important source of Phoenician and Greek income, Spanish and Sicilian waters yielded fish for Rome, the economy of the Hanseatic League was partly based on North Sea herring fisheries, cod fishing was a chief industry of New England, and its fisheries in the Pacific are vital to Japan) For this reason fishing rights have long been the basis of controversy In the modern age such disputes have generally been settled by arbitration or by treaties Fishing rights, which had been enjoyed by the American colonists on the entire Atlantic coast, were confirmed in the Treaty of Paris (1783), but the right to dry fish on the Newfoundland coast and on the settled parts of the Labrador and Nova Scotian coasts (except by agreement with the inhabitants) was expressly denied This treaty was abrogated by the British upon the outbreak of the War of 1812, and the Treaty of Ghent (1814) contained no provisions relating to this controversial issue Friction developed, and, after prolonged parleying, another treaty further restricting American rights was negotiated (1818) This convention was replaced by the reciprocity treaty of 1854, which abolished all restrictions except for shellfish The United States abrogated the treaty in 1866, but a new treaty (1871, with a protocol in 1873) revived the provisions of the agreement of 1854 (to lat 39° N) Since the Canadians declared their waters more valuable than those of the United States, the question was arbitrated, and Canada received an award of $5,500,000 (1877) When the United States denounced the treaty (1885), American vessels were again seized and strained relations resulted In 1910, however, the North Atlantic Coast Fisheries Arbitration at The Hague ended the prolonged controversy Canada and the United States in 1923 and 1930 signed agreements regulating the halibut fisheries of the Pacific In 1882 Great Britain, Germany, France, Denmark, and Belgium signed the North Sea Fisheries Convention, which ended lawlessness in that area by granting a mutual right of visit, search, and arrest to the public vessels of the treaty powers A similar treaty, regulating the fishing banks off Iceland and the Faeroe Islands, was signed by Great Britain and Denmark in 1901, and three years later Anglo-French rights in the N Atlantic were set forth in a convention. The fisheries of the Pacific have also been the subject of many international agreements, such as the Japanese right to fish in specified sections of Siberian waters, first granted by the Treaty of Portsmouth in 1905 and continued by later agreements with annual auction of fishing "lots." One of the most celebrated contentions about territorial rights in waters concerned not fishing proper but the hunting of fur seals (see BERING SEA FUR-SEAL CONTROVERSY) See S A Moore and H. S Moore, *History and Law of Fisheries* (1903); G C L Howell, *Ocean Research and the Great Fisheries* (1921), R G Lounsbury, *The British Fishery at Newfoundland, 1634–1763* (1934), H E Gregory and Kathleen Barnes, *North Pacific Fisheries* (1939), E A Ackerman, *New England's Fishing Industry* (1942)

Fishers Hill, bluff, c 2 mi S of Strasburg, Va , in the Shenandoah Valley, where P H SHERIDAN defeated (Sept 22, 1864) Confederate Gen J A EARLY in the Civil War

Fishers Island, c 8 mi long and averaging 1 mi wide, off the northeastern tip of Long Island, SE N Y , in Suffolk co Fishers Island Sound separates it from SE Connecticut It was developed (1925) as a summer resort, but it has many all-year-round residents Fort H G Wright, headquarters for the Long Island coast guard, is here Discussions regarding the island's annexation to Connecticut were held in the 1940s

fishing. The practice of catching fish—by hand, club, spear, and possibly by hook—was known to prehistoric man. Fishing was practiced by the ancient Persians, Egyptians, and Chinese, and it is mentioned in the *Odyssey* It is a major means of livelihood today not only in simple societies such as those in the S Pacific but also in great nations such as China, Japan, and Norway As a self-conscious sport it is a comparatively recent development, though *The Compleat Angler*, the fishing classic by Izaak WALTON, appeared in 1653 There are three methods used in modern angling, fly-fishing on the surface of the water, mid-water fishing with moving bait such as a small fish, and bottom-fishing with worms and other bait Fly-fishing has become very popular, and several fly-casting tournaments are held annually The artificial fly—made of feather, quill, and metal hook—resembles a favored food of the fish to be caught The sport of deep-sea fishing has received increasing attention in recent years See Ray Bergman, *Just Fishing* (1932), Van Campen Heilner, *Salt Water Fishing* (1937), J A Knight, *The Theory and Technique of Fresh Water Angling* (1941), T W. Trueblood, *The Angler's Handbook* (1949)

Fishkill Landing, old village, SE N Y , on the east bank of the Hudson In 1913 it was joined with Matteawan to form BEACON

Fisk, Clinton Bowen, 1828-90, American philanthropist and temperance leader A general in the Civil War, he was appointed to the Freedmen's Bureau in 1865 In Nashville, Tenn , he helped found (1866) a school for training Negro leaders which became FISK UNIVERSITY, developed under the auspices of the American Missionary Association He was the Prohibition party candidate for the presidency in 1888 See biography by A A Hopkins (1890)

Fisk, Eugene Lyman, 1867–1931, American physician, M D New York Univ , 1888 He organized the periodic health examination system and educational service of the Provident Savings Life Association and of the Life Extension Institute and wrote and lectured on hygiene and the prolongation of life

Fisk, James, 1834–72, American financial buccaneer, b Pownal, Vt In his youth he worked for a circus and as a wagon peddler of merchandise During the Civil War he became wealthy purchasing cotton in occupied areas of the South for Northern firms and selling Confederate bonds in England In 1866 he established a brokerage house in New York city with the aid of Daniel Drew, whom he had formerly served as agent He audaciously helped Drew and Jay Gould conduct the famous struggle with Cornelius Vanderbilt for control of the Erie RR Afterward he and Gould unscrupulously manipulated Erie stock so as to gain millions for themselves but wreck the road They also engineered the attempt to corner the gold market in 1869, causing the famous BLACK FRIDAY scandal Other raids by Fisk and his associates upset markets and aroused public indignation Fisk controlled the Fall River and Bristol steamboat lines on Long Island Sound operated ferries on the Hudson, and bought an opera house in New York city, producing drama and light opera there He was killed by E S Stokes, a former business associate who was a rival for the attentions of the well-known actress Josie Mansfield. See R H. Fuller, *Jubilee Jim* (1928)

Fisk, Wilbur, 1792–1839, American clergyman and educator, b Brattleboro, Vt Ordained a Methodist minister in 1818, he rapidly became a leader of his denomination in New England In 1825 Fisk helped to reestablish Wesleyan Academy at Wilbraham, Mass., and became its principal He was a founder (1831) and first president of Wesleyan Univ , Middletown, Conn

Fiske, Bradley Allen (fisk), 1854–1942, American naval officer and inventor, b. Lyons, N.Y , grad. Annapolis, 1874. In the U S navy he devoted himself to inventing instruments for shipboard use His numerous inventions included an electric-powered turret, the turbine-driven torpedo, the naval telescope sight, and an electric range-finder—a device which brought him (1898) many citations when he applied it as navigating officer in the battle of Manila Bay He later became commanding officer of many battleships, was promoted (1911) rear admiral, and was (1912–13) division commander in the Atlantic Appointed (1913) aide for naval operations, Fiske agitated for a stronger navy, but he retired (1917) after his ideas clashed with the policies of Secretary of the Navy Josephus DANIELS He wrote *Electricity in Theory and Practice* (1884) *The Navy as a Fighting Machine* (1917), and *Inventions* (1921) See his autobiography, *From Midshipman to Admiral* (1919)

Fiske, John, 1842–1901, American philosopher and historian, b Hartford, Conn , grad Harvard, 1863 Born Edmund Fisk Green, he changed his name in 1855 to John Fisk, adding the final e in 1860. He opened a law practice in Boston but soon turned to writing A wide reader, he had been an enthusiastic follower of Herbert Spencer while in college, and the first part of his life was given mainly to popularizing Spencerian evolution He tried to reconcile orthodox religious beliefs with science, both on the lecture platform and in such books as *Outlines of Cosmic Philosophy* (1874), *Darwinism and Other Essays* (1879), *Excursions of an Evolutionist* (1884), *The Idea of God as Affected by Modern Knowledge* (1886), and *Through Nature to God* (1899). Fiske early achieved popularity also as a lecturer on history and in his later life was occupied mostly with that field His *Critical Period of American History, 1783–1789* (1888), *The Beginnings of New England* (1889), *The American Revolution* (1891), *The Discovery of America* (1892), *Old Virginia and Her Neighbors* (1897), *Dutch and Quaker Colonies in America* (1899), *The Mississippi Valley in the Civil War* (1900), and *New France and New England* (1902) form part of a comprehensive history of the United States from 1000 to 1865 These books were popular accounts based largely on secondary authorities and noted for an easy, lucid, and dramatic style See *The Letters of John Fiske* (ed by his daughter, Ethel F Fisk, 1940), biography by J S Clark (1917)

Fiske, Minnie Maddern, 1865–1932, American actress, b New Orleans For more than a generation she was a leading figure in the theatrical world. Born of a family of actors, she first appeared in *Richard III* when she was three, played an old woman in *Lady of Lyons* at 13, and starred when she was 15 In 1890 she married Harrison Grey Fiske and, after a retirement of four years, appeared thereafter under his management. *A Doll's House* (1894) and later *Ghosts* and *Hedda Gabler* established Mrs Fiske as one of the greatest interpreters of the intellectual drama of her time and introduced Ibsen in the United States Roles for which she was famous were Becky Sharp and Tess of the D'Urbervilles, and her successful revival of Sheridan's *Rivals* toured the country almost to the time of her death In 1901 she opened her own theater in New York, the Manhattan, and was influential in combating the theatrical syndicate of the '90s Mrs Fiske's polished technique and intelligence contributed to her artistry See *Mrs. Fiske, Her Views on Actors, Acting, and the Problems of Production* (compiled by Alexander Woollcott, 1917)

Fisk University, at Nashville, Tenn , nonsectarian, coeducational, a leading Negro institution It was opened in 1866 and chartered in 1867 by Congregationalists (American Missionary Association) and the Western Freedmen's Aid Commission of Cincinnati, assisted by Clinton B FISK It has a college of liberal arts, a music department, and a graduate department Especially noted are the social science courses and research under Charles S Johnson, who became president in 1946 The Fisk Jubilee Singers, a noted choir of Negroes, toured the United States and Europe, giving concerts to raise money for Jubilee Hall, and were a factor in spreading interest in Negro spirituals.

fistula (fis'chōolu), deep sinuous ulcer Although it may have two openings, it often has only one and is then more correctly called a sinus Removal of the source of trouble is the first step in treatment If a hollow organ, such as the bladder, opens to the skin, this tract is called a fistula Fistula from the cecum sometimes follows an abscess of the APPENDIX A fistula requires surgical treatment In horses an abcess on the withers from chafing and infection is termed a fistula

fit · see EPILEPSY and CONVULSION

Fitch, Clyde (William Clyde Fitch), 1865–1909, American playwright, b Elmira, N Y , grad Amherst, 1886 His first success, *Beau Brummel* (1890), written for Richard Mansfield, established a pattern, many of his plays thereafter being star vehicles He was a rapid worker and wrote 36 original plays as well as 21 adaptations His better plays, psychological studies, include *The Girl with the Green Eyes* (1902), *The Truth* (1907), and *The City* (1909), all ranking with the best produced in Amer-

ica before that time Historical plays, such as *Nathan Hale* (1899), *Barbara Frietchie* (1899), and *Captain Jinks of the Horse Marines* (1901), were immensely popular He frequently had several plays on Broadway at once, most were produced with success in London and many were translated for continental theaters The plays are remarkable for their reflection of American social life of the period See M J Moses, ed , *Plays by Clyde Fitch* (4 vols , 1916), M J Moses and Virginia Gerson, *Clyde Fitch and His Letters* (1924)

Fitch, John, 1743 98, American inventor, b. Windsor, Conn After serving as an apprentice clockmaker, Fitch set up a brass shop, served briefly in the Revolution, and with money he earned selling tobacco and beer to the Continental army bought Virginia land grants along the Ohio His land claims, coming into conflict with the Federal land policy, proved fruitless, but resulted in his own engraved maps of the Northwest Territory (1785) Returning to Pennsylvania, Fitch began (1785) work on the invention of the steam engine and steamboat and secured soon afterward the exclusive right to build and operate steamboats on the waters of New Jersey, Pennsylvania, New York, Delaware, and Virginia His first boat, launched and operated on the Delaware in 1787, was followed by two others A fourth was wrecked by a storm While Fitch was not alone in developing the steam engine and steamboat, there is good evidence that he was the first to invent the American steamboat Nevertheless, the penuriousness and lack of confidence displayed by his financial backers and other men of influence robbed him of the opportunity to commercialize his invention and of his undisputed recognition Frustrated by endless disappointments, Fitch committed suicide in Bardstown, Ky See Thomas Boyd, *Poor John Fitch* (1935)

Fitch, Thomas, c 1700–1774, colonial governor of Connecticut, b Norwalk, Conn , grad Yale, 1721 A lawyer, Fitch was an assistant in the colony (1734–35, 1740–50) The assembly elected him deputy governor in 1750, and for the next three years he was returned to that office by the qualified voters He supported the British well in the French and Indian Wars Fitch was elected governor in 1754 and remained chief executive until 1766, when he was turned out by the Whigs Although he had been the chief author of the colony's protest against the Stamp Act, he felt duty-bound to take the oath of office required of governors by the act and was, as a result, consistently defeated for reelection thereafter See A C Bates, ed , *The Fitch Papers* (2 vols , 1918–20)

fitch. For the fur, see POLECAT, for the plant mentioned in the Bible, see LOVE-IN-A-MIST

Fitchburg, industrial city (pop 41,824), a co seat of Worcester co , N Mass , on the north branch of the Nashua and N of Worcester, settled c 1730, inc as a town 1764, as a city 1872 Its products include paper, tools, electrical equipment, and textiles It has a state teachers college

Fittig, Rudolf (rōō'dôlf fI'tikh), 1835–1910, German organic chemist He was professor of chemistry at the universities of Tubingen (1870–76) and Strasbourg (from 1876) He discovered lactones, was coestablisher of the constitution of phenanthrene and of piperine, and introduced the Wurtz-Fittig reaction (see WURTZ, CHARLES ADOLPHE)

Fitz, Reginald Heber, 1843–1913, American pathologist, b Chelsea, Mass , M D Harvard, 1868 He studied under Rudolf Virchow, and in 1870 he returned to Harvard, where he introduced Virchow's methods and ideas In 1908 he became professor emeritus In a classic medical paper (1886) he first identified, named, and accurately analyzed appendicitis and recommended radical surgery for its cure In 1889 he first analyzed acute pancreatitis

Fitzgerald, Lord Edward, 1763–98, Irish patriot Son of James Fitzgerald, 20th earl of Kildare and 1st duke of Leinster, he spent much of his early life in France In 1779 he joined the British army and was sent to America in the American Revolution He was severely wounded in the battle of Eutaw Springs (1781) After his return to Ireland he sat in the Irish House of Commons, but gave up his seat when he saw that no reform was possible After a visit to the United States he again sat in Parliament, but, drawn by the French Revolution, he went (1792) to Paris He was expelled from the British army for his avowed republicanism In 1796 he joined the UNITED IRISHMEN and went again to Paris to secure French aid for an Irish uprising The rebellion had the wide support of the Irish people, but in 1798 in Ireland Fitzgerald was betrayed to the English and captured. He died of wounds sustained at his arrest See biography by Thomas Moore (ed. by Martin MacDermott, 1897)

FitzGerald, Edward, 1809–83, English poet, translator of Omar Khayyam He was the third son of John Purcell, who in 1818 took the name of his wife's father—FitzGerald Edward FitzGerald was educated at Trinity College, Cambridge, and passed most of his life in Suffolk in the leisurely pursuit of literature He wrote *Euphranor* (1851), a Platonic dialogue, and *Polonius* (1852), a collection of aphorisms, and prepared translations of Jami, Calderón, Aeschylus, and Sophocles. His masterpiece, *The Rubaiyat* of OMAR KHAYYAM, appeared in 1859 and passed unnoticed for a short time, until Rossetti made it famous. Greatly revised editions appeared in 1868 and 1872 FitzGerald's *Rubaiyat* has long been one of the most popular of English poems Although actually a paraphrase rather than a translation of the Persian poem, it poignantly expresses the *carpe diem* spirit of the original See biography of FitzGerald by A M Terhune (1947)

Fitzgerald, Francis Scott Key, 1896–1940, American novelist, b St Paul, Minn , educated at Princeton He attracted notice with stories of the post-war prohibition era, epitomizing the flapper and the jazz age *This Side of Paradise* (1920), an instant success, was followed by *The Beautiful and Damned* (1922) and *The Great Gatsby* (1925), considered his best novel *Tender Is the Night* (1934) failed to fulfill Fitzgerald's promise, but his posthumous unfinished *Last Tycoon* (1941) evidenced a maturing novelist A miscellaneous collection was published as *The Crack-up* (ed by Edmund Wilson, 1945). Fitzgerald was also a talented short-story writer

Fitzgerald, Gerald, 15th **earl of Desmond** (dĕz'-mund), d 1583, Irish nobleman He spent his life fighting the Butlers of Ormonde, who controlled the governorship and represented English interests He allied himself with his relatives in Kildare to avenge the death of Thomas Fitzgerald, 10th earl of Kildare He was twice imprisoned in London, but returned both times to continue his struggle After 1573 he was repeatedly defeated and was eventually murdered

Fitzgerald, James, 20th **earl of Kildare** and 1st **duke of Leinster** (kĭldär', lĭn'stur, lĕn'-), 1722–73, Irish nobleman He sat in the Irish House of Commons from 1741 and in the House of Lords at Westminster, as an English peer, from 1747 Politically active and powerfully connected, he became a national hero when he successfully opposed the ambitious Anglican archbishop of Dublin, George Stone, and in particular when he defeated Stone's attempts to divert surplus Irish revenues to the crown

Fitzgerald, Maurice, d 1176, Anglo-Norman invader of Ireland Son of Gerald, steward of Pembroke castle, and Nesta, daughter of the king of South Wales, he crossed to Ireland in 1169 to aid Dermot McMurrough, king of Leinster He served in expeditions against Dublin and Waterford In the seige of Dublin (1171), Maurice led the sally which routed King Roderic's army He acquired vast landholdings in Ireland and increased them by advantageous marriages of his children From his sons, Gerald and Thomas the Great, descend the two branches of the Fitzgeralds who became earls of Kildare (through Gerald) and earls of Desmond (through Thomas)

Fitzgerald, Thomas, 10th **earl of Kildare** (kĭldär'), 1513–37, Irish nobleman, called Silken Thomas When his father, the 9th earl and the deputy governor of Ireland, was summoned to London on charges of maladministration, Lord Thomas became vice deputy in 1534 The same year, hearing the rumor that his father had been executed (he actually died later in the Tower of London), he rose in rebellion against the pro-English Ormondes Lord Thomas was excommunicated for the murder of his enemy, the archbishop of Dublin The rebellion was crushed the following year Thomas eventually surrendered and was hanged in London with five of his uncles

Fitzgerald, city (pop 7,388), co seat of Ben Hill co , S central Ga , near the Ocmulgee river SSE of Macon, inc 1896 Founded in 1895 by Union veterans, it is an industrial and shipping center in a farm area Near by is Jefferson Davis State Park, where Davis was taken prisoner by Federal troops

Fitzgibbon, James, 1780?–1863, Canadian soldier, b Ireland He saw service in the British army in the wars against France before he went to Canada in 1802 As an officer in the War of 1812, he distinguished himself in the battle of Beaver Dams (1813) on the Niagara frontier Warned by Laura Secord of a surprise American attack, he forced the surrender of the American force, which was considerably larger than his Appointed assistant adjutant general (1822) of the militia of Upper Canada, he was adjutant general of the defending loyalist force at Toronto in the rebellion of 1837.

Fitzgibbon, John see CLARE, JOHN FITZGIBBON, 1ST EARL OF

Fitzherbert, Maria Anne, 1756–1837, wife of George, prince of Wales (later GEORGE IV) He was her third husband The marriage (1785) was illegal under English law of the time, since the prince was under age and the lady a Roman Catholic It was therefore ignored in 1795 when the prince, for purposes of state, married Princess Caroline, but the relationship did not end until 1803 See biographies by W. H Wilkins (1905) and Shane Leslie (2 vols , 1939–40)

Fitzpatrick, Benjamin, 1802–69, governor of Alabama (1841–45), b Greene co , Ga In 1816 he moved to Alabama (then still part of Mississippi Territory), became a successful lawyer, and developed a large plantation near Montgomery. After his two terms as governor he served in the U S Senate (1848–49, 1853–61) He declined the vice presidential nomination of the Douglas Democrats in 1860 A conservative, Fitzpatrick opposed secession but later supported the Confederacy He was prominent in the early days of the Reconstruction period in Alabama and presided over the constitutional convention of 1865, but was soon afterwards disfranchised

Fitzpatrick, Sir Charles, 1853–1942, Canadian jurist and statesman, b Quebec. He won distinction as a criminal lawyer In Laurier's government he became solicitor general (1896) and minister of justice (1902), resigning to accept appointment as chief justice of the Supreme Court of Canada in 1906 After his retirement from the bench in 1918, he was lieutenant governor of the province of Quebec until 1923

Fitzpatrick, Thomas c 1799–1854, American trapper, fur trader, and guide, one of the greatest of the MOUNTAIN MEN, b Co Cavan, Ireland In 1823 in St Louis he was engaged for a trading expedition of William Henry ASHLEY up the Missouri Like others of the mountain men, he spent many of the succeeding years opening up the West He went, with Jedediah S Smith into the Green River country in 1824 through the SOUTH PASS Fitzpatrick worked for the Ashley interests until Ashley withdrew (1826) from the trade, then he was a trader for Smith, Jackson, and Sublette until 1830, when the Rocky Mountain Fur Company was formed with Fitzpatrick as senior partner He knew well the whole region of the mountains, the Great Basin, and even the Southwest After competition, decline in beaver, and falling fur demands injured the trade irreparably, the Rocky Mountain Fur Company was dissolved (1834) Fitzpatrick was later notable as a guide He piloted the John Bidwell party, the first emigrant train bound for California as far as Fort Hall in 1841 The next year he guided Elijah White and Lansford W Hastings, bound for Oregon He gained some celebrity as guide to John C Frémont on his second expedition and in 1846 was guide to Stephen W KEARNY on the march to Santa Fe In Nov , 1846, he was appointed Indian agent for a large part of the present Colorado and was successful in negotiating treaties He, James BRIDGER, and Kit CARSON are perhaps the best known of the mountain men See H C Dale, *The Ashley-Smith Explorations* (1918), L R Hafen and W J Ghent, *Broken Hand the Life Story of Thomas Fitzpatrick* (1931), Bernard De Voto, *Across the Wide Missouri* (1948)

Fitzroy, Robert (fĭtsroi'), 1805–65, British meteorologist and naval officer He commanded the BEAGLE on the expedition (1831–36) for which Charles Darwin was naturalist He was governor of New Zealand for a term (1843–45) While chief of the meteorological department of the Board of Trade, he instituted the storm warnings which developed into daily weather forecasts His *Weather Book* was published in 1863 The Fitzroy barometer was his invention

Fitzroy (fĭtsroi'), manufacturing town (pop 32,423), Victoria, Australia, northeast suburb of Melbourne

Fitzroy, rivers in Australia **1** E Queensland, formed by the junction of the Dawson and the Mackenzie and flowing 174 mi past Rockhampton to Keppel Bay of the Coral Sea **2** N Western Australia, rising in the King Leopold Range and flowing 325 mi to King Sound of the Indian Ocean

Fitzsimmons, Robert, 1862 1917, British pugilist, b Cornwall, England Fitzsimmons excelled as a pugilist in Australia and New Zealand before coming to the United States in 1890 He won (1897) the world's heavyweight crown by defeating James J Corbett at Carson City, Nev In 1899 he lost the heavyweight title to James J Jeffries at Coney Island, N Y He retired from the ring in 1914

Fitzwilliam, William Wentworth Fitzwilliam, 2d **Earl,** 1748–1833, British statesman In his brief period as lord lieutenant of Ireland (1795) he was popular, but he was recalled by the younger Pitt because he advocated Catholic Emancipation His recall was a contributing cause of the rebellion of 1798

Fitzwilliam Museum, building erected to house the art collection of Richard, Viscount Fitzwilliam, bequeathed to Cambridge Univ in 1816 Both the collection and the building have been enlarged by later bequests, notably by that of Charles Brinsley Marlay in 1912 The museum has a splendid collection of paintings

Fiume (fēōō'mĕ, Ital fyōō'mā), Serbo-Croatian *Rijeka-Sušak* (rē̂ē'kä-sōō'shäk), city (pop. 72,130), Croatia, Yugoslavia, an Adriatic seaport on the Gulf of Quarnero Before the First World War it was the chief seaport of Hungary Italy, to which the city had been promised in the secret Treaty of London of 1915, claimed it at the Paris Peace Conference, but while negotiations still were going on Gabriele D'ANNUNZIO at the head of an Italian free corps seized Fiume in Sept., 1919 By the Treaty of Rapallo of 1920 Italy and Yugo-

slavia agreed to establish a free state of Fiume However, in 1922, a Fascist coup d'état overthrew the local government, and Italian troops occupied the city Tension between Yugoslavia and Italy over the Fiume question was eased by the Treaty of Rome (1924), which left Fiume in Italy but awarded its eastern suburb, Susak (Ital. *Porto Barros*), to Yugoslavia Susak was built up as a leading Yugoslav port In 1945 Fiume passed under Yugoslav occupation, and in 1947 the Allied peace treaty with Italy formally transferred the city to Yugoslavia It was reunited with Susak into a single city From 1700 until the Second World War, Fiume was a free port It has large shipyards, oil refineries, and other industries

Five Boroughs, Danish fortified towns in the English Midlands, settled in the 9th cent They were Derby, Leicester, Stamford, Nottingham, and Lincoln

Five Civilized Tribes, inclusive term for the CHEROKEE, CHICKASAW, CHOCTAW, CREEK, and SEMINOLE tribes of E Oklahoma By 1850 some 60,000 members of these tribes had settled in Indian Territory under the Removal Act of 1830, which provided that this territory was to be held communally on the condition that the tribes surrendered certain land rights E of the Mississippi These tribes never lived on a reservation and were officially recognized as domestic dependent nations Before crossing the Mississippi the Cherokee and the Creek had developed a high agricultural civilization in the SE United States Each tribe achieved a constitutional government modeled on that of the American states and a national school system supported by their own funds After the Civil War, the majority of the tribesmen having aided the Confederacy, all treaties were put aside, their lands were restricted to E Oklahoma, and their Negro slaves, who had numbered several thousands, were freed Later a Federal policy of detribalization resulted in loss of the governmental functions of the Five Tribes and the division of all land into individual holdings Despite their diminished acreage they have maintained their own leadership and status high among North American Indians Today, intermixed with white and Negro blood, they number some 64,000 See Grant Foreman, *The Five Civilized Tribes* (1934)

Five Forks, crossroads near Dinwiddie Courthouse, SW of Petersburg, Va The last important battle of the Civil War was fought here on April 1, 1865 P H SHERIDAN, leading his own and G K Warren's corps, decisively defeated the Confederates under Pickett The victory led to the fall of PETERSBURG, the capture of Richmond, and the surrender of Lee's army at Appomattox Courthouse

five hundred, card game, similar in principle to EUCHRE, usually played by three persons with a pack of 32 cards and a joker Each player receives 10 cards, and highest bidder for the widow (the three cards left over) names trump The two other players play in temporary combination against the bidder, and 500 points wins the game For the detailed rule, see R L Frey, ed , *The New Complete Hoyle* (1947)

Five Nations see IROQUOIS CONFEDERACY

Five-Power Treaty see NAVAL CONFERENCES

Five Towns, Staffordshire, England see STOKE-ON-TRENT and POTTERIES, THE

Five-Year Plan, Rus *Pyatiletka* In 1928 the UNION OF SOVIET SOCIALIST REPUBLICS adopted a plan designed to expand industrial production, expedite the collectivization of farms, and fulfill an ambitious cultural and educational program The plan was put into action by ruthless means, and its schedule was used to measure the efficiency and loyalty of those entrusted with its execution The second Five-Year Plan (1934–37) was a continuation and expansion of the first The third, inaugurated in 1938, was interrupted by the Second World War A fourth was put into effect in 1946, and by the end of 1949 the Soviet government claimed that some of the quotas set had already been exceeded The practice of government economic planning for a limited period ahead (four, five, six years) was adopted also by other nations, not necessarily Communist The great publicity given the first Five-Year Plan made it a household word throughout the world

Fizeau, Armand Hippolyte Louis (ärmäⁿ' ēpôlēt'lwē fēzō'), 1819–96, French physicist The first to measure (1849) the velocity of light in air, he also determined its speed in water He made valuable discoveries on the polarization of light and the expansion of crystals, explained the Doppler effect, and devised a method of increasing the permanency of daguerreotypes

fjord or **fiord** (fyôrd), a steep-sided inlet of the sea, characteristic of plateau lands Uplift, with consequent river activity and glaciation, and final subsidence and valley drowning produced the fjord coastlines of Norway, Scotland, Greenland, Alaska, British Columbia, Patagonia, S New Zealand, and Antarctica A fjord differs from most estuaries in its sheer parallel walls, often extending far below the water surface, and in the many sharp branches of similar form Often shallow at the mouth, fjords are frequently very deep farther inland, e g , Messier Channel (Patagonia) is 4,250 ft deep and Sogne Fjord (Norway) is 4,000 ft deep and over 100 mi long Loch Moran, Scotland (1,017 ft), is a typical fjord but is separated from the sea Norwegian fjords are noted for their grandeur

Flaccus, Quintus Fulvius (kwin'tŭs flăl'vēŭs flăk'kŭs), Roman consul four times (237, 224, 212, 209 B C), censor (231 B C), pontifex maximus (216 B C), and urban praetor (215 B C) In the Second Punic War he defeated (211 B C) Hanno near Beneventum, captured Capua (211 B C) and overcame (209 B C) Hannibal's garrisons in Lucania and Bruttium

Flacius Illyricus, Matthias (muthī'ŭs flā'shŭs ĭlĭr'ĭkŭs), 1520-75, German Lutheran reformer, whose original name was Matthias Vlachich or Frankowich, b Istria At Wittenberg, where he spent some time in study and in 1544 became professor of Hebrew, he was greatly influenced by LUTHER and MELANCHTHON Active in theological controversies wherever he went, Flacius made many enemies for himself In 1551 he went to Magdeburg, where he planned two great historical works In 1557 Flacius was called to Jena to the professorship of New Testament theology After leaving Jena in 1562, Flacius moved about, never able to remain long in any place until he found protection at Frankfurt His writings are able Among them three are preeminent, *Catalogus testium veritatis* (1556), *Clavis scripturae sacrae* (1567), and *Glossa-compendiaria in Novum Testamentum* (1570)

flag, name for several plants, particularly IRIS and SWEET FLAG

flag, a piece of cloth, usually bunting or similar light material, plain, colored, or bearing a device, varying in size and shape, but often oblong or square, used as an ensign, standard, signal, or for display and decorative purposes, and generally attached by one edge to a staff or to a halyard by which it may be hoisted The part of the flag attached to the staff or halyard is the hoist, the portion from the attached part to the free end is the fly The quarter next the staff and to the top is the canton, this is also in the U S flag, and in many others, the union, so called because it represents national unity In the U S flag in 1950 it is a field of blue with 48 stars representing the 48 states Symbolical standards were used by the ancient Egyptians, Assyrians, and Jews Biblical references to standards, ensigns, and banners are numerous As early as 800 B C the Persians were using a standard—the apron of a blacksmith—around which they rallied in a revolt against a despotic ruler A golden eagle emblazoned on a white flag was used by the Persians at the time of Cyrus The early Greeks carried a piece of armor on a spear for a standard, later the various Greek cities had their own devices Standards, usually figures of animals mounted on spears or staves, were common among the Romans, these were supplanted by the eagle Later, Roman emperors used the labarum as the imperial standard It resembled the vexillum, a square flag hanging from a crosspiece attached to the end of a spear, which was used by the Roman cavalry After Constantine was converted to Christianity, he adopted the labarum as his banner—a purple silk flag crowned with the Greek monogram of Christ Early flags usually had a religious significance The Dannebrog of Denmark, a red ensign, swallow-tailed, bearing a white cross, is no doubt the oldest flag in existence According to legend, King Waldemar I, while leading his troops in battle in 1219, saw a cross in the sky and, taking this as a celestial answer to his prayers, adopted it as the Danish flag In France the Cape de St Martin, originally kept in Marmoutier abbey, was borne upon the standards of the early kings, but this was succeeded by the oriflamme, the ancient banner of the abbey of St Denis William the Conqueror received his banner from the pope, and the ensign of Great Britain (the Union Jack) is formed by the crosses of St George, St Andrew, and St Patrick, national saints, respectively, of England, Scotland, and Ireland In medieval times there were numerous flags in use—banners, banderoles, gonfalons, gonfanons, pennons, pennoncells, standards, streamers, and gudons The banner, usually quadrangular in shape, was a battle flag bearing the arms of the person entitled to carry it—from knights banneret up in rank The banderole was smaller in size than the banner The gonfalon and the gonfanon, resembling the labarum and vexillum in that they hung from a crosspiece attached to a staff or spear, also were battle flags The gonfalon indicated the commander's position in battle, the gonfanon usually was carried beneath a knight's lance head The pennon was used as a knight bachelor's ensign, it was a long triangular flag, generally swallow-tailed The pennoncell was a small pennon used for ceremonial purposes The standard was a long, narrow flag, tapering toward the free end, richly decorated and used by nobles on ceremonial occasions The royal standard of today is derived from the medieval banner, it bears the royal arms and is smaller than the national flag or ensign The streamer was a long, narrow flag, tapering toward the fly, and generally carried at the masthead of a vessel. Today the pennant has replaced it, except in the British navy where the pendant, earlier spelling of pennant, is used The gudon was carried by horsemen, today it is used by the U S army for practically all units in dress parade and as a distinguishing flag In France the oriflamme was replaced by the Bourbon white flag sprinkled with fleurs-de-lis, which in turn was succeeded by the tricolor at the time of the Revolution In the British colonies of North America before the Revolution, each of the 13 colonies had its flag On Jan 2, 1776, the first flag of the United States was raised at Cambridge, Mass , by George Washington This was the Grand Union flag It consisted of 13 stripes, alternate red and white, with a blue canton bearing the crosses of St George and St Andrew Congress, on June 14, 1777, enacted a resolution "that the Flag of the United States be 13 stripes alternate red and white, that the Union be 13 stars white in a blue field representing a new constellation " The story of Betsy Ross and the first flag is now somewhat discredited, and it is recognized that the national flag evolved (see M M Quaife, *The Flag of the United States*, 1942) On Jan 13, 1794, Vermont and Kentucky having been admitted to the Union, Congress added two each of stripes and stars. Congress in 1818 enacted that the 13 stripes, denoting the 13 original colonies, be restored and a star added to the blue canton for each state after its admission to the Union Each of the states and territories of the United States has its flag The international code flags and pennants enable mariners to communicate regardless of differences of language In the armies and navies of the various nations of the world, flags are used for signaling The white flag is used universally for truce, the black in early times was a symbol for piracy, the red symbolizes mutiny or revolution, the yellow is a sign of infectious diseases Shipping lines have their own flags Striking a flag signifies surrender The flag of a victor is hoisted above that of the vanquished A flag flown at half-mast is the symbol of mourning The inverted national ensign is a signal of distress In U S usage the church pennant of the services is the only flag flown from the same hoist above the U S ensign There are specific rules for how to display the flag on any occasion, e g , when displayed with a state flag, the U S flag should be on the right (i e , the flag's right), and when draped out of a window the flag should hang flat, with the union uppermost and to the flag's right (i e , to the left of the observer in the street).

Flag Day, anniversary of the adoption of the American flag in 1777 In 1895, June 14 was designated in the United States as Flag Day, through the efforts of Dr B J Cigrand of Batavia, Ill It is not a legal holiday

flagellants (flă'julunts, flujĕ'lŭnts), term applied to the groups of Christians who practiced public flagellation as a penance The practice supposedly grew out of the floggings administered as punishment to erring monks, though flagellation as a form of religious expression is an ancient usage It was with the flagellants an extreme and hysterical expression of the ascetic ideal Self-flagellation as a penance was fostered by the great preachers of penance, such as St Peter Damian, and by the more severely ascetic religious orders of the Roman Church, such as the Camaldolese and the Carthusians Moderate and private self-flagellation is still practiced in some orders with the countenance of the Church The flagellant movement did not appear until the 12th cent , and it was not until c 1260 that the flagellants became large and organized bodies Arising in the towns of N Italy, the movement spread like wildfire across the Alps to Germany, Bohemia, and even to Poland Bands of flagellants marched from town to town and in the market places bared their backs and beat each other and themselves, all the while exhorting the people to repent The disorderly and morbid nature of these exhibitions caused the civil and ecclesiastical authorities to suppress them The movement died down, though occasional flarings of the spirit appeared, especially in Germany in 1296 and in Italy under the leadership of Venturino of Bergamo At the time of the Black Death (1348-49) it flared up again and was fed by the general dread and confusion of society From the East, the bands of flagellants spread across Hungary and Germany, to S Europe and even to England, where no converts could be gained In 1349 Pope Clement VI prohibited the practice After this pronouncement, flagellant movements were stamped out by the Church, though the milder forms were tolerated and were even encouraged by such leaders as St Vincent Ferrer The most important of the heretical flagellant sects were the Bianchi of Italy and France (1399) and the group led by Karl Schmid or Schmidt in Thuringia (1414). The Bianchi adopted the form of a religious order with a habit and rules The followers of Schmid went further and adopted doctrines of salvation through self-castigation and rigorous asceticism, the movement became an organized heresy The leader of the Bianchi and Schmid and many of his

followers were burned. By the end of the 15th cent the flagellants had largely disappeared, though sporadic outbursts in France, Spain, and Italy continued to occur in spite of the efforts of the Church to suppress them There was a recrudescence of public flagellation within the Church after the Reformation Catherine de' Medici and King Henry III of France encouraged flagellant orders, but Henry IV forbade them The Jesuits after a time abandoned this public penance and the practice died out again though tertiaries from time to time degenerated into flagellant groups In Spanish America flagellant orders persisted, usually in defiance of the ecclesiastical disapproval, in New Mexico the Penitentes (Hermanos Penitentes), a flagellant order, still practice secret rites

flageolet (flăjulĕt'), small, straight flute of conical bore, having a whistle mouthpiece The number of finger holes varies, as does the length, which may be from 4 to 12 in This instrument, related to the recorder, was known as early as the 16th cent. It has never figured in serious music Juvigny, a Parisian, is said to have invented the French flageolet in 1581

Flagg, Azariah Cutting, 1790–1873, American political leader, b Orwell, Vt He fought in the War of 1812, was editor of the Plattsburg (N Y) *Republican* until 1825, and was elected (1823) to the New York state assembly Flagg, a relentless Jeffersonian Democrat, was a leader of the ALBANY REGENCY and helped sustain its drive for political reforms after Martin VAN BUREN left to devote himself to national affairs He served New York as secretary of state (1826–32) and as state comptroller (1834–39, 1842–46), opposed any form of Federal banks, and advocated reform of the New York state banking system In New York city after 1846 he helped organize the BARNBURNERS, and was (1852–59) comptroller of New York city

Flagg, Edmund, 1815–90, American journalist and diplomat, b Wiscasset, Maine, grad Bowdoin, 1835 He was connected with various newspapers as editor or contributor, including the Louisville *Daily Journal* and the St Louis *Evening Gazette* *The Far West* (1838) contains sketches of pioneer life on the prairies, and material for *Venice the City of the Sea* (1853) was collected during a two-year consulship He was with the Dept of State in Washington from 1854 until 1870

Flagg, Ernest, 1857–1947, American architect, b Brooklyn, N Y, studied at the École des Beaux-Arts, Paris The 45-story Singer Building in New York which he built in 1908 marked a revolutionary height (612 ft) at its completion Flagg's other works include the Scribner Building, New York, the Corcoran Gallery of Art Washington, D C (later added to by Charles A Platt), buildings for the U S Naval Academy, Annapolis, Md, apartment houses, and numerous residences In magazine articles and in his book *Small Houses. Their Economic Design and Construction* (1922), Flagg advocated various structural economies and innovations These include a method of house planning on a module basis and a thin metal and plaster partition eliminating supporting studs He wrote also *Le Naos du Parthenon* (1928, in French and English), a study in Greek units of proportion

Flagg, George Whiting, 1816–97, American painter, b New Haven, Conn, nephew and pupil of Washington Allston His *Murder of the Princes, Execution of Lady Jane Grey, Woodchopper's Boy, The Nun, Lady and Parrot, Little Match Girl*, and several others are at the New York Historical Society His brother, **Jared Bradley Flagg**, 1820–99, portrait painter, clergyman, and author, wrote *Life and Letters of Washington Allston* (1892) and painted portraits of Chief Justice Church and of William M Evarts (state capitol, Albany, N Y)

Flagg, James Montgomery, 1877–, American painter, illustrator, and author, b Pelham Manor N Y, studied in New York, in England, and in Paris Returning to New York, he rapidly won a reputation as an illustrator of versatility, vivacity, and technical skill, contributing to *St Nicholas*, *Judge*, *Life*, and other magazines He works with equal facility in pen-and-ink, crayon, charcoal, oils, and water colors As official artist for New York state during the First World War, he designed 45 military posters He wrote *If—a Guide to Bad Manners* (1905), *Why They Married* (1906), *All in the Same Boat* (1908), *Cuty People* (1909), *I Should Say So* (1914), *The Mystery of the Hated Man* (1916), *Boulevard All the Way—Maybe* (1925), and his autobiography, *Roses and Buckshot* (1946)

Flagg, Jared Bradley: see FLAGG, GEORGE WHITING

Flagler, Henry Morrison, 1830–1913, American capitalist, b Hopewell, near Canandaigua, N Y As a youth he struck out for himself in Ohio. After trying the grain and salt business, he joined John D Rockefeller in oil refining The firm of Rockefeller, Andrews & Flagler became the Standard Oil Company in 1870, and Flagler was connected with it until 1911, resigning as vice president, however, in 1908 He had been Rockefeller's closest associate in the early development of the company Flagler visited Florida in 1883, and, annoyed at the inadequate transportation and hotel facilities, he began to do something about them. He bought up and consolidated several local railroads and organized the Florida East Coast Railway, which he extended 8 from Daytona through Palm Beach to Miami (1896) and thence 150 mi. to Key West (1912). He established steamship lines, dredged the Miami harbor, and built palatial hotels, all to encourage the development of Florida as a winter playground. He also made anonymous gifts to build schools, churches, and hospitals. Altogether Flagler invested over $40,000,000 in the peninsula and more than any other man was responsible for Florida's comparatively recent growth See S. W. Martin, *Florida's Flagler* (1949).

flagship, that vessel in a fleet which carries the commander of the squadron and which flies his flag The practice of having a leading ship with a supreme commander on board during a naval engagement was used by the early warring nations of the Mediterranean and by the vikings and has prevailed since that time The flag denotes the rank of the flag officer If the flagship is sunk or put out of action, the admiral immediately transfers his flag to the next ship in line Among smaller warships, such as destroyers, the ship carrying the senior officer is known as a flotilla leader

Flagstad, Kirsten (kyĭsh'tĭn flăg'stă, -stät), 1895–, Norwegian soprano. She made her debut in 1913, but sang only in Norway until 1934, when she appeared at the Bayreuth Festivals In 1935 she made her debut at the Metropolitan Opera House as Sieglinde in Wagner's *Die Walküre* and was soon acclaimed as the greatest living Wagnerian soprano In 1941 she returned to Norway to spend the duration of the war with her husband, who died (1946) while awaiting trial for economic collaboration with the Nazis She returned to the United States in 1947

Flagstaff, city (pop 5,080), co seat of Coconino co, N Ariz, near the San Francisco Peaks NE of Prescott, founded 1881 Lumbering, ranching, and the tourist trade thrive in the region, where many ruined Indian pueblos (as in Walnut Canyon), Mormon Lake and other lakes, Sunset Crater, and large forests are found Lowell Observatory (est 1894 by Percival Lowell) and Arizona State College (coeducational, 1899) are in the city A powwow of southwestern Indians is held each July

Flahaut de la Billarderie, Auguste Charles Joseph, comte de (ōgust' sharl' zhōzĕf' kōt' du flăō' du la bēvärdurē'), 1785–1870, French general and statesman, illegitimate son of TALLEYRAND and Adèle de Flahaut He fought under Napoleon I and served as ambassador to Berlin and Vienna under Louis Philippe After the Revolution of 1848, he plotted to put Napoleon III in power and was rewarded with the ambassadorship to London The lover of Hortense de BEAUHARNAIS, Flahaut was the father of Napoleon III's half brother, the duc de MORNY

Flaherty, Robert Joseph (flă'urtē), 1884–, American explorer and moving-picture producer He was born in Michigan, spent his childhood in Canada, and graduated from Upper Canada College During the years 1910–16 he explored subarctic E Canada and in 1922 completed his first film, which was the first full-length documentary film, *Nanook of the North* Among his best-known films are *Moana of the South Seas* (1925), *Tabu* (directed with Fred Murnau, 1931), *Man of Aran* (1934), *Elephant Boy* (1936), *The Land* (1941), *Louisiana Story* (1949), and *The Titan* (1950)

flail, The flail, consisting of two sticks, one a handle and the other swinging freely at the end of it, was not known in prehistoric or ancient agriculture It was invented in the Middle Ages—where or exactly when is uncertain It was much used from the time of its introduction until threshing machines largely displaced it in the 19th cent

Flamand, François see DUQUESNOY, FRANÇOIS

Flambeau (flăm'bō), river rising in N Wisconsin near the Mich. line and flowing swiftly SW to the Chippewa below Ladysmith

Flamborough Head, chalk promontory, Yorkshire, England, on the east coast, with Bridlington Bay to the south There is a lighthouse, visible for 21 mi Danes' Dyke (an ancient earthwork) crosses the head of the peninsula The chalk cliffs are fantastically wave-carved into caves and stacks and inhabited by flocks of seafowl

flamboyant style, the final development in French GOTHIC ARCHITECTURE, which reached its height in the 15th cent It is chiefly characterized by ornate tracery forms which, by their suggestion of flames, gave the style its name Though these free-flowing patterns in lines of double curvature originated in the English Decorated Gothic (early 14th cent), the French adopted them as the basis of a lavish style quite different from the English original Flamboyant works exhibit pronounced freedom and exuberance, created by high, attenuated proportions, accumulated and elaborate traceries, and many crockets, pinnacles, and canopied niches. Supposedly the style first appeared in a chapel (1373) of the cathedral at Amiens, while its culmination is in the Church of St. Maclou, Rouen (1437–50). Other conspicuous examples are the Palais de Justice, at Rouen (c.1500), the west front of Rouen cathedral; the northern spire of Chartres; and the south transept of Beauvais.

flame, in general, a phenomenon concerned with the CHEMICAL REACTION of a gas which has been heated above its kindling temperature with some other gas, usually atmospheric oxygen (see COMBUSTION). The heat and light given off are characteristic of the specific chemical reaction (or reactions) going on; the luminosity of the flame is usually caused by solid particles of foreign matter present (naturally or artificially) in the burning gas and heated to incandescence; and the shape of the flame is commonly that of a hollow cone The simple flame occurring when a single gas, such as hydrogen, burns in another gas, such as air, shows two areas or zones an inner, cone-shaped area consisting of unburned gas and an outer area in which the chemical reaction (the combination of hydrogen and oxygen to form water) is taking place Furthermore, the flame is nonluminous and therefore very hot, since the chemical energy is nearly all transformed into heat energy. This reaction is illustrated in the flame of the oxyhydrogen BLOWPIPE The flame of the OXYACETYLENE TORCH is also extremely hot A decrease in light with an increase in heat is brought about in the BUNSEN BURNER flame (a more complex flame) by mixing the combustible gas with air before it is ignited Flames become more complex as the combustible gas increases in complexity, since an increasing number of chemical reactions is involved Three zones, for example, are apparent in the Bunsen burner flame, which is commonly caused by the combustion of ordinary illuminating gas an inner zone of unburned gas, a middle zone called the reduction zone or reducing flame, since here a sufficient supply of oxygen is lacking and the oxygen is therefore removed from an oxide placed in it, and an outer or oxidizing zone The candle flame is extremely complex Several zones can be observed a nonluminous inner portion where the melted wax produces gases, a middle area where the gases are decomposed to hydrogen, which burns, and carbon, which is heated to incandescence, and an outer, hardly visible region in which combustion is complete (carbon dioxide and water being formed) Flames are colored by the introduction of various substances In the flame test used for the identification of certain metals, when a salt of a metal is introduced into the flame of a Bunsen burner it gives a color characteristic of the metal A yellow-green flame indicates the presence of barium, a reddish-orange, calcium, a bluish-green, copper, a violet, potassium, a crimson-red, lithium, a yellow, sodium, and a red, strontium

Flameng, Léopold (lāōpōl' flămĕ'), 1831–1911, Belgian engraver, pupil of Gigoux and Calamatta He early made a reputation on the staff of the Paris *Gazette des Beaux-Arts* He is best known for his plates after pictures by Rembrandt, Gainsborough, and Ingres He made 40 etchings illustrating Blanc's *Œuvre complet de Rembrandt* and 30 etchings for *Théâtre complet de Molière*

flame test, see FLAME

flamingo (flŭmĭng'gō), large, gregarious wading bird, with some similarities both to the heron family and to ducks and geese Native to both hemispheres, it is found in marshes and lagoons in warm regions It has very long legs, webbed feet, a goose-shaped body with a long neck, and a large heavy bill bent in the middle and ridged for straining the mud and water from its food The nest is a mud hollow 1 to 2 ft high on which both sexes sit alternately, with legs folded under them The American flamingo, now rare, nests in the Bahamas and other islands Both sexes have vermilion plumage with black-edged wings

Flaminian Way, one of the principal ROMAN ROADS, the greatest artery from Rome to Cisalpine Gaul, built by C Flaminius (220 B C) The road ran north from Rome to Narnia (Narni), to Mevania (Bevagna), northeast to Nuceria (Nocera Umbria), thence north to the Burano river at Cales (Cagli), thence to the Metauro river, thence northeastward to Fanum Fortunae (Fano) on the Adriatic, thence along the coast northwest to Arminum (Rimini) The Aemilian Way was an extension of it The original length was 209 mi, but it was increased to 215 when the course was changed for some 50 mi north of Narnia to run via Interamna (Terni), Spoletium (Spoleto), and Fulginium (Foligno). The former course replaced by this new road was called the Old Flaminian Way

Flamininus, Titus Quinctius (tī'tŭs kwĭngk'shŭs flămĭnī'nŭs), c 230–175 B C, Roman general and statesman, known as the Liberator of Greece. He became quaestor (199 B C) and, without the usual intermediate stages (aedile and praetor), consul (198 B.C). He defeated PHILIP V of Macedon at Cynocephalae (197 B.C) and, at the Isthmian games of 196 B C, declared the independence of the Greek cities. When Nabis, tyrant of Sparta, failed to abide by the Roman terms, he was crushed (195) by Flamininus, who returned to Rome after freeing the Italian captives sold into slavery during the Second Punic War. In 183 B.C. he sought to induce Prusias, king of Bithynia, to deliver up HANNIBAL.

Flaminius, Caius (kā'ŭs flŭm'ĭnēŭs, kī'ŭs), d. 217 B.C., Roman statesman and general. In his tribuneship (232 B.C.) he carried an agrarian law for the benefit of the plebeians and, as praetor (227 B.C.), governed Sicily with success. While consul (223 B.C.) he campaigned against the Insubres and although chosen master of the horse (221 B.C.) was barred from office by a bad omen. As censor (220 B C) he constructed the Circus Flaminius and the Flaminian Way. In 218 B.C. he supported the tribune Claudius in prohibiting senators and senators' sons from possession of seagoing vessels except for the transportation of the produce of their own estates. As consul again (217 B C) he was a leader against HANNIBAL in the invasion of Italy, and he fell at Trasimene See PUNIC WARS

Flammarion, Camille (kămē'yŭ flămärēôN'), 1842–1925, French astronomer and author He served for some years at the Paris Observatory and the Bureau of Longitudes and in 1882 was given an estate at Juvisy (near Paris), where he set up an observatory and continued his studies, especially of double and multiple stars and of the moon and Mars. He is chiefly noted as the author of popular books on astronomy, including *Popular Astronomy* (1880; Eng. tr , 1907) and *The Atmosphere* (1871, Eng. tr., 1873) His later studies were on psychical research, on which he wrote many works, among them *Death and Its Mystery* (3 vols., 1920–22, Eng. tr , 1921–23)

Flamsteed, John (flām'stēd), 1646–1719, English astronomer In 1675 he was appointed first astronomer royal by King Charles II and carried on his researches at the Greenwich Observatory Over his protests—as he did not consider it ready for publication—the *Historia Coelestis*, in which was included the first of the Greenwich star catalogues, was published in 1712. His complete work, *Historia Coelestis Britannica*, finished after his death by an associate, did not appear until 1725

Flanagan, Hallie (Ferguson), 1890–, American dramatic director, b Redfield, S.Dak , grad Grinnell College, 1911, M.A Radcliffe, 1924 She was production assistant to George Pierce Baker at Harvard In 1925 she became professor of drama at Vassar, securing leave to act as director (1935–39) of the Federal Theatre Project and dean (1942–46) of Smith She was appointed professor of drama at Smith in 1946 In 1912 she married John Murray Flanagan (d 1918) and in 1934 Philip H Davis (d 1940) Her works include *Shifting Scenes of the Modern European Theatre* (1928) and *Arena* (1940)

Flanagan, John, 1865?– American sculptor and medalist, b Newark, N J In addition to numerous medals and plaquettes, he has produced larger works, including a clock for the Library of Congress, the Bulkeley Memorial, Aetna Life Insurance Building, Hartford, Conn , and the Joseph Henry bust, Hall of Fame, New York Univ

Flanders (flăn'dŭrz), former county in the Low Countries, now divided between Belgium and France Extending along the North Sea and W of the Scheldt (Escaut) river, it varied considerably in size in the course of its history, including at one time also Artois and parts of Picardy In Belgian Flanders the Flemish language, a Low German dialect akin to Dutch, is spoken by the majority of the inhabitants, all the Flemish-speaking population of Belgium and France are, by extension, known as Flemings A considerable part of N Flanders has been gained from the sea in past centuries In 862 Baldwin Bras-de-Fer, a son-in-law of Emperor Charles II, became the first count of Flanders In the divisions (9th cent) of the Carolingian empire, Flanders became a fief dependent on the French crown, but its powerful counts enjoyed virtual independence They extended (11th cent) their domains to the east, these additions, being held in fief to the Holy Roman Empire, became known as Imperial Flanders, in contrast to Crown Flanders, held from the French kings In the 12th cent the direct line of counts died out, and in 1191 the counts of HAINAUT (with which Flanders had been briefly united previously) became also counts of Flanders The struggle for the succession to Flanders in the 12th cent resulted in the loss of Artois and other districts and towns in W and S Flanders to the French crown. At the same time the Flemish cities —among which GHENT, BRUGES, YPRES, and COURTRAI were foremost—gained vast privileges and liberties (see COMMUNE) Their prosperity and the prosperity of Flanders as a whole depended on the growing cloth industry, which had been introduced in the 10th cent , and on the transit trade at such major ports as Bruges (later superseded by Antwerp) and Ghent By the 13th cent the Flemish cloth industry was the foremost in Europe, and it has retained much of its importance to the present day. The turbulent history of Flanders in the 13th and 14th cent was the result of social and economic as well as political tensions. The intensive industrialization of the cities led to a class struggle between the guild workers and the patricians. This struggle was reflected in the political rivalry of the *Leliaerts* (supporters of the French kings, so named for the lion's claws in the counts' shield), who represented the lower classes In addition, there was chronic rivalry among the main cities, who often resorted to arms against each other. Flanders was weakened by the departure of its count, Baldwin IX, on the Fourth Crusade, which resulted in his proclamation (1204) as emperor of Constantinople as BALDWIN I. His absence was exploited by Philip II of France to strengthen his influence in Flanders, the Flemings were joined in defense by John of England and Emperor Otto IV but were defeated by Philip at Bouvines (1214) Again, in 1297, Guy of Dampierre, count of Flanders, allied himself with Edward I of England against Philip IV of France, but Philip, with the help of the *Leliaerts*, overran Flanders and imprisoned Guy (1300) Yet only two years later the *Clauwaerts* seized power, the French were massacred in the Matins of Bruges and were thoroughly routed in the BATTLE OF THE SPURS (1302) The accession (1322) of the pro-French Louis of Nevers as count of Flanders threw the country into a civil war in which Bruges and Ypres sided against, and Ghent with, the count The pro-French party emerged victorious, and Flanders became little more than a French province. When Edward III of England, about to embark on the Hundred Years War with France, stopped English wool exports to Flanders, the Flemish cloth industry faced ruin. Realizing the danger, the Flemings united under the leadership of Ghent, where Jacob van ARTEVELDE was given dictatorial powers in 1337, and allied themselves with England, taking part in Edward's great naval victory at Sluis (1340). After Artevelde's death (1345), Louis de Maële, son of Louis of Nevers, recovered control over Flanders and sought to preserve a balance between England and France, in 1380, however, the weavers of Ghent rebelled once more, this time under Philip van ARTEVELDE. They took Bruges but were defeated (1382) by a French army at Roosebeke Louis de Maële's son-in-law, Duke PHILIP THE BOLD of Burgundy, succeeded to Flanders on Louis's death (1384) and in 1385 subdued Ghent. Under the Burgundian dynasty (see BURGUNDY) Flemish commerce and FLEMISH ART reached their flower The cloth industry, however, was in decline, and the political rights of the cities, though asserted in many revolts, were curtailed On the death (1477) of Charles the Bold, his heir, MARY OF BURGUNDY, restored the Flemish liberties in the Great Privilege Her son by Archduke Maximilian (later Emperor MAXIMILIAN I), Philip of Burgundy (later PHILIP I of Castile), succeeded on Mary's death in 1482, but was kept a virtual prisoner in Ghent till 1485 With him began the rule of the house of Hapsburg over Flanders and the rest of the Low Countries. Flanders joined (1576) in the revolt of the NETHERLANDS against Philip II of Spain, but by 1584 the Spanish under Alessandro Farnese had recovered the county It continued under Spanish rule until 1714, when the Peace of Utrecht awarded it to Austria (see NETHERLANDS, AUSTRIAN AND SPANISH) Parts of W Flanders, including Lille, were annexed to France by Louis XIV between 1668 and 1678 and became known as French Flanders (see separate article) Austria ceded the remainder of Flanders to France in the Treaty of Campo Formio (1797), but the Congress of Vienna awarded (1815) the former Austrian Flanders to the Netherlands When Belgium gained (1830) independence, Flanders was divided into the provinces of EAST FLANDERS and WEST FLANDERS. Its strategic situation has made Flanders a major battleground since the Middle Ages In the First World War there was continuous fighting in French Flanders and West Flanders. In the Second World War the battle of Flanders began with the German invasion (May 10, 1940) of the Low Countries and ended with the surrender of the Belgian army and with the evacuation of the British at Dunkirk (May 26–June 4, 1940) For bibliography, see BELGIUM

Flanders, French, region and former province, N France, on the North Sea and along the Belgian frontier. It occupies part of NORD dept The area, studded with important industrial and fortified towns and with rich coal fields, shared the history of the county of Flanders until its final incorporation (1662–78) into France by Louis XIV Flemish is still widely spoken Lille was the provincial capital, Douai the seat of the PARLEMENT. The area has been a battleground in many of the major European conflicts

Flandrau, Charles Eugene (flăn'drō), 1828–1903, American judge and frontier hero, b New York city He read law in Whitesboro, N Y., was admitted (1851) to the bar, and after practicing law in St. Paul, Minn , he removed to Traverse des Sioux on the frontier There he became territorial representative and Indian agent in 1856. He was prominent in the state constitutional convention of 1857 and was associate justice (1857–64) in the territorial and state supreme court of Minnesota When the Sioux made war in 1862, Flandrau led the volunteer defenders in a dramatic victory at New Ulm, Minn. He practiced law in Minneapolis and St. Paul after 1867 He wrote *History of Minnesota and Tales of the Frontier* (1900).

Flandrau, Charles Macomb (flăn'drō), 1871–1938, American author, b St Paul, Minn., grad Harvard, 1895, son of Charles Eugene Flandrau. He wrote *Harvard Episodes* (1897), which were adapted for a magazine serial as *The Diary of a Freshman* (1901), soon followed by *Sophomores Abroad* (book form, 1935) His best-known work is a travel book, *Viva Mexico!* (1908) From 1915 to 1920 Flandrau wrote music and literary criticism for a St Paul newspaper.

Flandreau (flăn'drō), city (pop 2,212), co. seat of Moody co , E S.Dak., on the Big Sioux and N of Sioux Falls, in a farm area Its first settlers (1857) were driven away by Indians, it was resettled in 1869 It has a large cooperative creamery and is the seat of an Indian vocational high school

Flandrin, Jean Hippolyte (zhăN' ēpôlēt' flădrē'), 1809–64, French painter, student and follower of Ingres He is best known for his religious paintings, such as *St Clair Curing the Blind* (cathedral, Nantes), his decorations for the Church of Ainay, Lyons, and the Church of St. Séverin, Paris, and his frescoes for Saint-Germain-des-Prés, Paris. See studies (in French) by J B Poncet (1864), Henri Delaborde (1865), and Louis Flandrin (1902)

Flannagan, John Bernard, 1895–1942, American sculptor, b Fargo, N Dak , studied at the Minneapolis Institute of Arts His early life was a bitter struggle against poverty Too poor to buy quarried stone, he picked up field stones and carved them His sculptures, often of animals, are profound in conception, simple and direct in execution A mountain goat, *Figure of Dignity*, is in the Metropolitan Museum Because of ill-health he committed suicide in 1942 A retrospective exhibition, held first at the Museum of Modern Art, New York, was sent to various cities

Flannan Islands or **Seven Hunters**, uninhabited isles, off NW Scotland, in the Outer Hebrides

Flatbush, residential section of central Brooklyn borough of New York city, SE N Y In the 17th cent Flatbush was a Dutch village BROOKLYN COLLEGE, several 18th-century buildings, including the Reformed Protestant Dutch Church, and Erasmus Field are here

flatfish, member of an order of fish (Heterosomata) containing over 500 species, which in the adult form have both eyes on the same side of the head The body is compressed and the dorsal and anal fins elongated At first the larvae are bilaterally symmetrical The asymmetry of the adult involves changes in the skeletal and digestive systems and migration of one eye The side which is uppermost when swimming or lying on the bottom is pigmented and the under side is light in color Included in the group are the flounder, halibut, sole, plaice, and turbot

flat foot, condition of the human foot in which the entire sole rests on the ground The foot has two bony arches, the longitudinal arch extends from the heel to the toes on the inner (or medial) side of the foot, and the transverse arch extends across the foot in the metatarsal region When the alignment of the bones forming these arches is distorted, the foot becomes flattened This usually results from a weakness of the muscles and a straining and consequent stretching of the ligaments, as a result the instep sinks and the arch disappears The causes that initiate flattening of the foot are not fully understood Hypermobility of certain parts of the foot is one cause, this defect is inheritable, and it can also be acquired in childhood often as a result of rickets, obesity, and certain metabolic diseases of childhood Shortness of the muscles of the calf of the leg is usually also considered a primary cause of disorders of the longitudinal arch The shortness is sometimes acquired by confinement in bed because of a long illness and in women by the continual wearing of high-heeled shoes (intermittent wearing of high heels seems not to produce the condition) Conditions which aggravate such structural factors and thereby produce flat foot and related disorders include long standing and walking on hard level floors and pavements, faulty footwear, debilitating illness, and obesity In growing children malnutrition and the carrying of too heavy burdens are contributing causes Treatment and exercise directed by an orthopedic physician are usually advisable in cases of flat foot

Flathead, river rising in three forks in NW Montana North Fork, which rises in SE British Columbia and flows southeast, Middle Fork, which rises near the Continental Divide and flows northwest, forming the southern border of Glacier National Park, and South Fork, which flows north through rugged wilderness in the southern part of Flathead National Forest The united river flows into the north end of Flathead Lake and, coming out the south end, flows southward to Clark Fork. A large dam on this southern portion is used for power, it is on land belonging to the Indians. The whole Flathead valley is rich farming land. The Hungry Horse Dam on the South Fork is for power, irrigation, and flood control.

Flathead Indians, tribe of North American Indians of the Salishan linguistic stock, also known as the Salish Indians, who in the early 19th cent. inhabited the Bitterroot river valley of W Montana

According to Lewis and Clark they numbered some 600 These people never practiced head flattening, but the Columbia river tribes who flattened the front of the head to create a pointed appearance spoke of their neighbors, the Salish, as 'flatheads" in contrast Although a Plateau area tribe, after the introduction of the horse they adopted a Plains culture, including the hunting of buffalo and the use of the tepee After a series of wars with the Blackfoot Indians over hunting land the Flathead dwindled to some 350 The Jesuit missionary DE SMET, who in 1841 founded the mission of St Mary in Bitterroot valley among the Flathead, persuaded the Blackfoot to make peace By the Garfield Treaty (1872) the Flathead agreed to move north to the valley of the lake and river now bearing their name, where, with a band of the Kootenai Indians, they dwell and together number some 3,300 See H H Turney-High, *Flathead Indians of Montana* (1937)

Flathead Lake, 30 mi long, NW Mont In the midst of mountains, it is indented with irregular bays and has many small islands The Flathead river flows through it The region hereabout is quite fertile Polson is on the lake, and Kalispell is in the region

Flatman, Thomas, 1637–88, English poet and miniature painter Of his *Poems and Songs* (1674), there were several editions Of his two self-portraits, one is in the duke of Buccleugh's collection, the other in the Victoria and Albert Museum His portrait of Charles II is in the Wallace Collection, London See F A Child, *Life and Uncollected Poems of Thomas Flatman* (1921)

Flatonia, town (pop 1,024), S central Texas, ENE of San Antonio, in a diversified farm area, founded 1874 by Czechs, inc 1875

Flat River, city (pop 5,401), E Mo , ESE of Potosi, settled 1890, inc 1934 It is a lead-mining center A coeducational junior college is here

Flat Rock, industrial village (pop 1,467), SE Mich , on the Huron river and SW of Detroit, settled 1824, inc 1923 There are railroad shops and a plant making automobile parts

Flattery, Cape, NW Wash , at the entrance to Juan de Fuca Strait, discovered in 1778 by Capt James Cook A lighthouse and an Indian reservation are close by

Flaubert, Gustave (gustăv' flōbĕr'), 1821–80, French novelist, b Rouen The son of a surgeon, he studied law unsuccessfully and early settled down to the life of a writer Because of a severe nervous malady, he spent most of his life at Croisset, near Rouen, with his mother and his niece His first works were *Novembre* (written 1842, pub 1910) and the first version of *Education sentimentale* (written 1843–45, pub 1910) In 1857 was published, after five years of work, *Madame Bovary* (Eng tr , 1886), which, in spite of his romantic inclinations, is a masterpiece of naturalism, written in a supremely fastidious style The book resulted in his being prosecuted on moral grounds, but he won the case This novel was followed by *Salammbô* (1862, Eng tr , 1886), a story of ancient Carthage, the second *Education sentimentale* (1869, Eng tr , 1898), the final version of *The Temptation of St Anthony* (1874, Eng tr , 1895), which had been written three times, and the volume *Three Tales* (1877, Eng tr , 1903), which contained the great short story "A Simple Heart " After his death his unfinished satire *Bouvard and Pécuchet* was published (1881, Eng tr , 1896) His correspondence, including that with George Sand and the letters to his niece Caroline, appeared in nine volumes in 1926–33 Flaubert is the model of the scrupulous writer intent on the exact word (*le mot juste*) and complete objectivity See Francis Steegmuller, *Flaubert and Madame Bovary* (1939), L P Shanks, *Flaubert's Youth* (1941), Anatole France, *On Life and Letters* (1898, Eng tr , 1922), Henry James, *French Poets and Novelists* (1884), Émile Faguet, *Flaubert* (1898, Eng tr , 1918)

Flavian (flā'vēun), epithet applied to three Roman emperors, VESPASIAN and his sons TITUS and DOMITIAN

Flavian of Antioch (ăn'tēŏk), d 404, Catholic patriarch of Antioch He succeeded St MELETIUS A rival claimant to the patriarchate, Evagrius, was illegally consecrated but when Evagrius died, Flavian was recognized (c 398) by all but a very small party

flax (flăks), annual plant of the genus *Linum*, cultivated for its fiber and seed One of the oldest plants known to man, its cultivation in Europe was furthered by the Romans and revived by Charlemagne, by the late medieval period it had become the chief source of textile fiber Flax was largely superseded by cotton c 1800 and was further displaced by jute and other competitive fibers Flax is grown in temperate regions and does best in cool, damp climates The species *Linum usitatissimum*, the flax of commerce, has two varieties, one with blue and one with white flowers, the blue-flowered variety produces fiber of finer quality than does the white The plant rises to a height of 20 to 40 in on a smooth stem (in which the longitudinal fiber is embedded) and is surmounted by a small flower which is replaced by globular seed bolls Thick sowing produces plants with unbranched stems used for fiber; sparse sowing results in stems that throw out branches, each of which bears seed Flaxseed is crushed to obtain LINSEED OIL, the residue is employed as livestock feed The seed also yields a demulcent used in medicine Flax grown for fiber is harvested by pulling the stalk from the soil Gummy and semiligneous matter is dissolved from the stem by retting, a fermentation process The stems are retted by leaving them spread on grass for two to five weeks, by immersing them in cold water for one to two weeks, or by placing them in tanks of warm water for a few days Tank retting may be accelerated by the introduction of bacterial cultures The retted stems are allowed to dry, then the fiber is removed by scutching (beating) the stems to crush and break the pith The fiber is composed of elongated, tapering cells ranging in length from 1/5 in to 2 in and consisting chiefly of cellulose Short, broken fibers (called scutching tow) are used in the manufacture of coarse fabrics and cordage, long fibers, for fine *linen* The USSR grows the largest quantity of flax for fiber, Belgium reputedly grows the finest quality The chief producers of flaxseed are Argentina, the United States, and the USSR In the United States, production of fiber flax increased when flax harvesting and decorticating machines replaced hand labor Oregon is the chief flax-growing state

Flaxman, John, 1755–1826, English sculptor and draughtsman At 20 he went to work for Wedgwood, designing the cameo-like decorations for their pottery Later he spent seven years in Rome, where he devoted himself to sculpture and also produced outline figure drawings from Greek vases as illustrations for works of Homer, Dante, Aeschylus, and Hesiod These last were engraved by his friend Blake As a sculptor he is well known for his memorial sculptures of Chatterton (Bristol), of Agnes Cromwell, Jane Smith, and the poet Collins (all in Chichester Cathedral), and of Sir Joshua Reynolds, Admiral Earl Howe, and Lord Nelson (Westminster Abbey) In 1810 he became professor of sculpture at the Royal Academy It was at the instigation of Flaxman that the British government purchased the famous Elgin Marbles in 1816

flea, wingless, leaping insect which, in the adult stage, has mouth parts fitted for piercing the skin and sucking the blood of mammals and birds The larva feeds on decaying organic matter In America the cat flea and the dog flea are common They also attack man Rubbing the infested animals with napthalene or with insecticidal powders and freeing their sleeping quarters of eggs and larvae by cleanliness and the use of insecticides are methods of control The human flea, abundant in the warmer parts of Europe and Asia, is found less frequently in cooler regions Bubonic PLAGUE is transmitted to man by species which are parasitic on rodents, chiefly rats The CHIGOE is a flea See *How to Control Fleas* (U S Dept of Agriculture, Leaflet 152)

Flèche, La (lä flĕsh'), town (pop 8,103), Sarthe dept , NW France, on the Loir river It is famous for its college, the Prytanée, founded in the 16th cent for the sons of officers Descartes was a pupil here

flèche (flĕsh) [Fr ,=arrow], a spire which rises directly from a roof rather than from the summit of a tower and generally of light construction, such as timber covered by lead In French Gothic churches of the 13th cent , they are an especially characteristic decorative feature The most frequent location is at the point where the roofs of nave and transepts intersect (as at Amiens and at Notre Dame, Paris) In the Sainte-Chapelle, Paris, where there are no transepts, the elaborate flèche rises simply from the ridge of the nave roof The top of the Amiens flèche is 154 ft above the ridge An open and lacy effect was characteristic of the Gothic flèche Its polygonal form usually was composed of miniature pointed arches with gables, in a couple of receding tiers and with adornments of pinnacles and gargoyles, while a tall, richly crocketed spire topped the whole

Fléchier, Esprit (ĕsprē' flāshyā'), 1632–1710, French writer He was a famous pulpit orator and became bishop of Nîmes His principal work is an account of a grand inquest at Clermont (1665), in which most of the local nobility was involved Fléchier's manner is witty and detached, he attended the proceedings only as an onlooker See W W Comfort, *The Clermont Assizes of 1665: Translated from Abbé Fléchier's Mémoires sur les Grands Jours d'Auvergne* (1938)

Flecker, James Elroy, 1884–1915, English poet and playwright Educated at Oxford, he spent three years in the consular service in the Near East His poetry includes *The Golden Journey to Samarkand* (1913) and *Collected Poems* (1916) His two plays were posthumously published, *Hassan* in 1922, *Don Juan* in 1925 *Hassan* was produced in 1923–24 with music by Delius and ballet by Fokine See *Some Letters from Abroad* (with reminiscences by his wife and an introduction by J C Squire, 1930), studies by Douglas Goldring (1923) and G E Hodgson (1925).

fleece, wool shorn from a sheep at one time and forming a continuous mat which weighs on an average about 5 to 10 lb In highly bred wool sheep such as the American Merinos the fleece of the ram may weigh up to 30 lb Each fleece contains different qualities of wool, which are sorted at the factory Shearing is now done mostly by machinery on the large Western ranges When done twice a year the winter fleece is the better fleece

Fleet, Thomas, 1685–1758, American colonial printer, b Shropshire, England He arrived in Boston c 1712, a refugee because of his opposition to the High Church, and became a prominent printer and publisher of the colony From 1732 till his death he published a weekly paper after the manner of the English press, first called *Weekly Rehearsal* but changed in 1735 to Boston *Evening Post*

Fleet Prison [see FLEET STREET], former jail in London, an old establishment Rebuilt after it was destroyed in Wat Tyler's revolt in 1381, again after the great fire of 1666, and once more after the Gordon riots of 1780, it was finally demolished in 1845–46 It was notable principally after the 17th cent for incarceration of debtors "Fleet marriages" were clandestine and irregular ceremonies performed at Fleet Prison by debtor clergymen Though not illegal, the system was so abused that it was abolished in the reign of George II

Fleet Street, center of journalism in London, named for the Fleet river, now a sewer under Farringdon St Many buildings in Fleet St were damaged or destroyed in air raids in 1940–41

Fleetwood, Charles, d 1692, English parliamentary general He supported the policies of Oliver Cromwell, fought in many battles of the civil war, married Bridget, daughter of Cromwell and widow of Henry Ireton (1652), served on the council of state (1651), and was one of the administrative major generals He succeeded Ireton as commander in chief in Ireland (1652–55) and was ranking military officer under Richard Cromwell when he tried in vain to reconcile the protector, the army, and Parliament At the Restoration he was not prosecuted but was declared incapable of holding public office

Fleetwood, urban district (1931 pop 23,001, 1943 estimated pop 25,000), Lancashire, England, at the mouth of the Wyre estuary, which forms a good harbor off Morecambe Bay The town was named for Sir Peter Hesketh Fleetwood, who founded it in 1836 and developed it into a trading port and seaside resort

Fleetwood, borough (pop 2,254), SE Pa , NE of Reading, inc 1873

Flémal, Bertholet (bĕrtōlĕ' flämäl'), 1614–75, Flemish painter of mythological and religious subjects He studied in Italy and was influenced by Nicolas Poussin He worked in Paris for Marie de' Medici and in Liége for various churches Among his few surviving works are *Raising of Lazarus* and *Crucifixion* (cathedral, Liége), *Death of Lucretia* (Kassel), and *Mysteries of the Old and New Testaments* (Louvre) His name is spelled also Flemael, Flémall, and Flemalle

Flémalle, Master of see CAMPIN, ROBERT

Fleming, the see BOLOGNA, GIOVANNI DA

Fleming, Sir Alexander, 1881–, Scottish bacteriologist, discoverer of PENICILLIN and lysozyme He was educated at St Mary's Hospital Medical School, Univ of London, where he later became professor of bacteriology Lysozyme, a bacteria-destroying substance found in certain plant and animal secretions, was discovered by Fleming in 1922 In 1928 he observed that a mold contaminating one of his bacterial cultures caused the disappearance of germs To the germ-destroying substance produced by the mold he gave the name penicillin Fleming shared the 1945 Nobel Prize in Physiology and Medicine with Ernst B Chain and Sir Howard W Florey for work on penicillin

Fleming, Sir John Ambrose (flĕ'mĭng), 1849–1945, English electrical engineer He was a leader in the development of the use of electric lighting, the telephone, and wireless telegraphy in England and the inventor of a thermionic valve, as well as professor at the Univ of London and at University College In 1929 he was knighted Among his many publications are *The Thermionic Valve in Radiotelegraphy* (1919), *Fifty Years of Electricity* (1921), *Propagation of Electric Currents in Telephone and Telegraph Conductors* (4th ed 1927), and *Waves and Ripples in Water, Air, and Æther* (4th ed , 1929), as well as his *Memories of a Scientific Life* (1934)

Fleming, Margaret or **Marjorie,** 1803–11, Scottish child prodigy She was the daughter of James Fleming of Kirkaldy, the "Pet Marjorie" of Scott, and author of verses and a diary See *The Complete Marjory Fleming* (ed by Frank Sidgwick, 1935), biography by Oriel Malet (1946).

Fleming, Sir Sandford, 1827–1915, Canadian civil engineer, b Scotland He came to Canada in 1845, and after serving as chief engineer of the Northern Railway and of the Intercolonial Railway during its construction, he was appointed (1871) engineer in chief of the Canadian Pacific Railway In 1872 he began surveying the route for the railroad W from Fort William across the plains to the moun-

tains He first surveyed and advocated the use of Yellowhead Pass through the Canadian Rockies (now used by the Canadian National RR), and when it was rejected, he surveyed Kicking Horse Pass, which the Canadian Pacific now uses He also introduced the idea of establishing 24-hour-a-day standard time, publishing a pamphlet, *Terrestrial Time* (1876), and urging his proposal until in 1883 a standard time system was adopted by the railroads of North America and subsequently by the International Prime Meridian Conference Fleming was also the chief influence in the laying of the Pacific cable from Canada to Australia, over which he received (1902) the first message sent from New Zealand to Canada Knighted in 1897, he was chancellor (1880–1915) of Queen's Univ See biography by L J Burpee (1915), G M Grant, *Ocean to Ocean* (rev ed , 1925)

Fleming, Walter Lynwood, 1874–1932, American historian, b near Brundidge, Ala , grad Alabama Polytechnic Institute (B S , 1896, M A , 1897) and Columbia (M A , 1901, Ph D , 1904) He taught at West Virginia Univ (1904–7) and at Louisiana State Univ (1907–17) before becoming professor of history at Vanderbilt Univ From 1923 to his retirement in 1928 because of ill-health, Fleming was dean of the college of arts and sciences and director of the graduate school at Vanderbilt His scholarly reputation is based chiefly upon his studies of the Reconstruction period He edited *Documents Relating to Reconstruction* (1904) and wrote *Civil War and Reconstruction in Alabama* (1905), *Documentary History of Reconstruction* (2 vols , 1906–7), *The Sequel of Appomattox* ("Chronicles of America" series, 1909), and *The Freedmen's Savings Bank* (1927) He also edited *General W T Sherman as College President* (1912), wrote *Louisiana State University, 1860–1896* (1936), and contributed widely to periodicals From 1914 to 1922 he was a member of the board of editors of the *Mississippi Valley Historical Review* and was also an editor of the series "The South in the Building of the Nation "

Fleming, town (pop 1,193), E Ky , in the Cumberlands, near Jenkins and near the Va line, in a coal area, inc 1913

Flemingsburg, town (pop 1,542), co seat of Fleming co , N Ky , NE of Lexington, in a farm and livestock area, settled c 1790 The courthouse and the old graveyard are of interest

Flemington 1 Borough (pop 2,617), co seat of Hunterdon co , W N J , settled c 1730, inc 1910 Its courthouse (1828) was the scene in 1935 of Hauptmann's trial for the kidnaping and murder of Charles A Lindbergh, Jr Agricultural fairs and (since 1930) cooperative farm-product auctions are held here Manufactures include pottery and chemicals 2 Borough (pop 1,301), N central Pa , near the Susquehanna at Lock Haven, inc 1864

Flemish art. From the early 15th to the early 17th cent Flanders produced some of the world's greatest painters Although architects, sculptors, and decorative artists have always been active in Flanders and Belgium, it is in painting that the great masterpieces have been produced There are no records of native art in Flanders before the end of the 11th cent At that time the increased urban population and greater national prosperity gave impetus to the building of churches and cathedrals modeled on adjacent French buildings, such an early construction is the Church of St Gertrude at Nivelles Architecture flourished in the Meuse river valley and acquired a distinctive Romanesque character exemplified by semicircular vaulting, elongated verticals, and massive outlines Sculpture was confined to reliefs on such articles as baptismal fonts and to carvings in ivory Public secular buildings, such as the Château des Comtes (12th cent) at Ghent, in the same style, also became numerous Continuing in the French tradition, Flemish architecture developed the typical Gothic style, as exemplified at Bruges by the Church of Notre Dame (12th–13th cent) and the town hall (14th cent) The interiors were ornamented with statues, bronzes, and tapestries, but the Gothic elaborateness of building did not allow for mural painting, as had become the tradition in Italy Early painting in Flanders, as in France, developed the miniature and the illuminated manuscript. The best-known example of illumination is the Book of Hours (15th cent) of the duc de Berry, which is partly illustrated by the Flemish Pol de Limbourg Painting in the north thus had a tradition of delicate and accurate detail in contrast with the broader sweep of the Italian schools With the brothers Van Eyck, Flanders entered upon its great age of painting Of Huybrecht van Eyck little is known, and the only work that can definitely be attributed to him is the altarpiece *The Adoration of the Lamb*, which was completed by his brother Jan after Huybrecht's death This triptych is the first-known successful work in oils and, along with other paintings by Jan van Eyck, was far in advance of the general caliber of painting in Europe at that day, the tradition of careful observation of natural phenomena as practiced by the Van Eycks determined the style of subsequent Flemish painting Roger van der Weyden, in the 15th cent., amalgamating the French and Flemish styles, greatly influenced succeeding painters, such as Hans Memling, whose elongated fragile Madonnas have much in common with Van der Weyden's Gothic figures Petrus Christus, on the other hand, worked in the style of the Van Eycks Traits of Leonardo da Vinci are echoed in the paintings of Gerard David, and the portraits of Quentin Massys recall Piero della Francesca Italian elements are especially applied to landscape painting, which had grown up in Flanders under the teaching of the Dutch Dierick Bouts At the same time a native element found expression in the grotesque type of painting as elaborated by the work of Hieronymus Bosch, whose illustrations of hellish tortures and martyrdom are filled with horror In the work of Joachim de Patinir the landscapes of his teacher Gerard David and some of the exaggeration of Bosch mingle to give a foretaste of the work of Pieter Bruegel, the elder, outstanding genre and landscape artist In the late 16th cent both traditions existed in the so-called Antwerp school, where the native element predominated in the genre scenes, often humorously or grotesquely illustrating a proverb, and the Italian influence found expression in such artists as Frans Floris The last of the imitators of Italian painting was Otto Venius, the teacher of Peter Paul Rubens, in whom the two traditions were finally reconciled in the early 17th cent to give Flanders its most important artist since the Van Eycks A whole school of artists worked under his direction His pupil Sir Anthony Van Dyck excelled in aristocratic 17th-century portraiture, while Jacob Jordaens, another pupil, followed a more bourgeois trend of portraiture With the genre paintings of Adriaen Brouwer and the two Teniers, Flemish painting came to the end of its great period During this time, architecture had followed the usual French Renaissance and baroque trends Sculpture had not flourished to the same extent as painting, François Duquesnoy in the 17th cent being the only notable name in the field In the 18th and 19th cent Flemish arts became more and more connected with the French schools The influence of France produced in the 19th cent the painters Alfred Stevens and Félicien Rops James Ensor was the most important of the Belgians in the early 20th cent , influenced first by the impressionists, he later inaugurated a modern Belgian school of painting In contemporary Belgium painters, architects, and sculptors work in idioms indistinguishable from those of the French and Dutch artists See W R Valentiner, *The Art of the Low Countries* (1920), Roger Fry, *Flemish Art a Critical Survey* (1927), Édouard Michel, *Flemish Painting in the XVIIth Century* (Eng tr , 1939), Joseph van der Elst, *The Last Flowering of the Middle Ages* (1944)

Flemish language, Germanic language See LANGUAGE (table)

Flemish literature see DUTCH AND FLEMISH LITERATURE

Flensburg (flĕns'bo͝ork), city (1939 pop 70,871, 1946 pop 101,577), Schleswig-Holstein, a port on the Baltic Sea It produces machinery and is known for its rum and its smoked eels Chartered in 1284, it acquired commercial importance in the 16th cent It passed from the Danish crown to Prussia in 1864 Undamaged in the Second World War, it received a great influx of refugees after 1945

Flers, Robert de la Motte-Ango, marquis de (rōbĕr' du là môt"-ägō' markē' du flĕr'), 1872–1927, French dramatist His most important work was done in collaboration with Gaston de Caillavet and includes *L'Amour veille* (1907), *Le Roi* (also with Emmanuel Arene, 1908), based on the life of Edward VII, and *Primerose* (1911) An early prose work of his own, *Vers l'Orient* (1896), was crowned by the French Academy, to which Flers was elected in 1920

Fleta (flē'tä), treatise of unknown authorship on the English common law, written in the late 13th cent Its name is derived from the belief that it was written in the old Fleet Prison The book is almost entirely based upon Bracton's work The name is sometimes spelled Fleda

Fletcher, Alice Cunningham, 1838–1923, American ethnologist, b Cuba Her work was chiefly among the Indian tribes of the N Great Plains For several years she lived with the Omaha, and in 1883 as special agent of the Office of Indian Affairs she superintended the allotment of the reservation lands to the members of the tribe She was in charge of the same procedure for the Winnebago (1887–89) and the Nez Percé (1890–93), formulating rules that the Office used also with other tribes Her works include *A Study of Omaha Indian Music* (1888), *The Omaha Tribe* (1911, 27th annual report of the Bureau of American Ethnology), written with her adopted son, Francis LA FLESCHE, and *The Hako a Pawnee Ceremony* (1904, 22d annual report of the Bureau of American Ethnology) She wrote also *Indian Education and Civilization* (1888), a comprehensive 600-page report prepared in response to a Senate resolution After 1891 she held the Thaw fellowship of the Peabody Museum, Harvard, and many of her papers appear in the museum's publications.

Fletcher, Andrew, 1655–1716, Scottish patriot For his opposition to the English government of Scotland and for his part in the duke of Monmouth's rebellion he was much in exile until 1688 Fletcher helped organize the Darien Scheme, and with others he formed a Scottish home rule party. Though he opposed the union of Scotland and England, he worked to protect the civil and religious liberties of Scotland in the Act of Union (1707) After 1707 he devoted himself to agricultural experiments and to writing on Scottish affairs See biography by W C Mackenzie (1935)

Fletcher, Giles, the elder, c 1548–1611, English writer and diplomat He was the father of two poet sons, Giles Fletcher, the younger, and Phineas Fletcher He became a member of Parliament and later treasurer of St Paul's An envoy to Russia in 1588, he published an account of his experiences, *Of the Russe Common Wealth* (1591), which was suppressed Part of the book later appeared in Hakluyt in 1598 He also wrote a number of Latin poems, among them *Lucua, or, Poems of Love* (1593), a sonnet series strongly influenced by continental writers, and *Richard III*, a historical poem published with *Lucua*

Fletcher, Giles, the younger, b 1585 or 1586, d 1623, English poet, son of Giles Fletcher, the elder He was educated at Trinity College, Cambridge He began to write poetry while a boy, and his best poem, *Christ's Victory and Triumph* (1610), is a fine example of baroque style This devotional work owed much to Spenser and was later to have a great influence on Milton's *Paradise Regained* His only published prose work was *The Reward of the Faithful* (1623) See A B Langdale, *Phineas Fletcher* (1937)

Fletcher, Horace, 1849–1919, American writer on nutrition, b Lawrence, Mass He evolved a system called Fletcherism, concerned chiefly with the slow mastication of food Among his numerous publications are *Glutton or Epicure* (1899) and *Fletcherism What It Is* (1913)

Fletcher, John, 1579–1625, English playwright, b Rye, Sussex, educated at Benet College, Cambridge His father was the Protestant dean of Peterborough, and young Fletcher was in favor at Elizabeth's court until 1596, when his father was suspended because of a second marriage unpleasing to the queen After that it is known only that Fletcher was a prolific author of plays, often in collaboration with others He seems in many cases to have written the larger part of plays attributed to him and Francis BEAUMONT, with Shakspere (and perhaps Beaumont) he wrote the tragicomedy *The Two Noble Kinsmen* (between 1613 and 1616) and the historical play *Henry VIII* (1613) Having begun by writing for the boys' companies, after 1616 he supplied plays for the company called the King's Men, until he died of the plague in 1625 He was a competent craftsman of great popularity and delighted in extravagant plots He wrote two early tragedies, *Valentinian* (between 1610 and 1614) and *Bonduca* (between 1609 and 1614), and his comedies include *Monsieur Thomas* (between 1610 and c 1616), *Wit without Money* (between 1614 and 1620), *The Woman's Prize* (between 1604 and 1617), his sequel to Shakspere's *Taming of the Shrew*, *Rule a Wife and Have a Wife* (1624), and *The Chances* (between 1613 and 1625) His tragicomedies, perhaps his own favorites, were *The Loyal Subject* (1618), *The Mad Lover* (between 1615 and 1619), *The Humorous Lieutenant* (1619), and *A Wife for a Month* (1624) *The Pilgrim* (1621) is founded on Lope de Vega's play of that title and reflects the vogue of Spanish literature in that day, as does Fletcher's *The Island Princess* (between 1619 and 1622) In later years he collaborated with William Rowley, Nathan Field, and Ben Jonson, but most often with Philip Massinger, with whom he wrote many plays, including the tragedies *Thierry and Theodoret* (between 1607 and 1621), *Sir John van Olden Barnavelt* (1619), and *The False One* (between 1619 and 1622) and the tragicomedies *Women Pleased* (between 1619 and 1622), *The Prophetess* (1622), and *The Wandering Lovers* (1623) Among their comedies are *The Beggar's Bush* (between 1615 and 1622), *The Custom of the Country* (between 1619 and 1622), *The Spanish Curate* (1622), *The Sea Voyage* (1622), and *The Fair Maid of the Inn* (1626) Plays of unsettled authorship in which Fletcher seems to have had a hand are *The Knight of Malta* (1618 or 1619) and *The Bloody Brother* (between 1616 and 1624) See edition of the works of Beaumont and Fletcher by Arnold Glover and A R Waller (10 vols , 1905–12) and the incomplete Variorum edition (4 vols , 20 plays, 1904–13), studies by E H C Oliphant (1925), R C Bald (1938), Baldwin Maxwell (1939), and L B Wallis (1947), Alfred Harbage, *Annals of the English Drama, 975 to 1700* (1940)

Fletcher, John Gould, 1886–, American poet, b Little Rock, Ark , studied at Harvard Living for 15 years in England, Fletcher became associated with the imagist school of poetry, its influence appearing in *Irradiations Sand and Spray* (1915) and *Goblins and Pagodas* (1916), combined as *Preludes and Symphonies* (1922) *Japanese Prints* (1918) is revealing criticism His later work turned slowly from free verse to more exacting forms, and his

imagination was harnessed to create greater intellectual depths *Parables* (1925), *The Black Rock* (1928), and *XXIV Elegies* (1935) show his growth as a poet In 1939 he won the Pulitzer Prize for his *Selected Poems* (1938) Later works are *South Star* (1941), *The Burning Mountain* (1946), and *Arkansas* (1947) See his autobiography, *Life Is My Song* (1937).

Fletcher, John William, Fr *Jean Guillaume de la Flechère,* 1729–85, English clergyman, noted for his piety and saintliness, b Switzerland He went to England c 1752 and there became a close friend of John Wesley, for whom he sometimes preached From 1760 he labored for 25 years in the living of Madeley He was superintendent (1768–71) of the countess of Huntingdon's college at Trevecca, Wales Of his works the best known is *A Check to Antinomianism* (1771–75)

Fletcher, Phineas, 1582–1650, English poet, son of Giles Fletcher, the elder, and brother of Giles Fletcher, the younger He was primarily a follower of Spenser in form In his best-known work, the involved and overdone *Purple Island* (1633), Fletcher introduced a scientific note into the familiar conception of the body as an island *A Father's Testament* (1670) and *The Locusts* or *Apollyonists* (1627) show Fletcher at his best His other works include *Britain's Ida* (1628) and a play, *Sicelides* (1631). See study by A B Langdale (1937)

Fletcher, Thomas Clement, 1827–99, governor of Missouri (1865–69), b Herculaneum, Mo A Democrat opposed to slavery, he became a Republican in 1856 and supported Lincoln for the presidential nomination in 1860 In the Civil War, Fletcher commanded a Missouri regiment and was wounded and captured (Dec., 1862) at Chickasaw Bayou in the Vicksburg campaign Exchanged in May, 1863, he served in the Chattanooga and Atlanta campaigns and was brevetted brigadier general of volunteers for his service in repulsing Sterling Price at Pilot Knob, Mo (Oct, 1864) As governor in the difficult post-war period, he proved an exceptionally able administrator, especially in dealing with railroad and educational matters

Flettner, Anton (ăn'tŏn flet'nur), 1885–, German marine engineer and inventor As color blindness prevented service in the merchant marine for which he had trained, Flettner became teacher of physics and mathematics in technical schools and served as an aviator in the First World War He was interested in control of airplanes by radio, but is better known because he devised a type of ROTOR SHIP and invented the Flettner rudder See his *Story of the Rotor* (Eng tr, 1926)

Flettner, Peter. see FLÖTTNER, PETER

fleur-de-lis (flûr"-dŭ-lē', -lēs') [Fr, =lily flower], heraldic device of conventional design and of great antiquity, believed to have been suggested by the lily or the iris. It was used on many medieval coats of arms, but particularly on that of the kings of France. Early arms of France showed a blue field covered by an indefinite number of golden fleurs-de-lis, but in the 14th cent their number was reduced to three Edward III of England, when he claimed the French throne, quartered the fleur-de-lis shield of France with the arms of England, and his successors kept the fleurs-de-lis in their arms until 1801

Fleurus (flûrûs'), town (pop 6,619), Hainaut prov, Belgium, NE of Charleroi Here Mansfeld and Christian of Brunswick defeated (1622) the Spanish in the Thirty Years War, the French under Marshal Luxembourg defeated (1690) the Dutch and their allies in the War of the Grand Alliance, and the French under Jourdan defeated the Austrians in a decisive battle (1794) of the French Revolutionary Wars

Fleury, Abraham Joseph (abrȧ-hăm' zhôzĕf' flûrē'), 1750–1822, French actor, whose real name was Abraham Joseph Bénard. After experience in the French provinces, he went to Paris (1778). He was soon accepted and made a *sociétaire* or full sharing member of the Comédie Française There he became the greatest comedian of the period In 1793 a performance of Laya's play *L'Ami des lois,* thought counterrevolutionary, led to the arrest of Fleury and the entire company In 1799 he rejoined the rehabilitated Comédie Française His memoirs were edited (1835–37) by J P B Lafitte

Fleury, André Hercule de (ȧdrā' ĕrkül' du), 1653–1743, French statesman, cardinal of the Roman Church Louis XV, whose tutor he had been, made him his chief adviser and the virtual ruler of France (1726–43) Fleury restored order to the national finances, disorganized by the policies of Louis XIV and the speculative schemes of John LAW The currency was stabilized, roads were built, the merchant marine expanded, and a growth in commerce resulted By his rigorous proceedings against the Jansenists, Fleury became widely unpopular He strove for peace abroad but became involved in the War of the POLISH SUCCESSION; through it, however, he secured the reversion of Lorraine to France and established (1738) a Bourbon on the throne of Naples He was also drawn into the unfortunate War of the Austrian Succession. See A. McC Wilson, *French Foreign Policy during the Administration of Cardinal Fleury* (1936).

Fleury, Claude (klōd), 1640–1723, French ecclesiastical historian, a Roman Catholic priest, confessor to Louis XV, and author of the learned and unbiased *Histoire ecclésiastique* This great work, in 20 volumes, occupied him for 30 years It was the first systematic history of the Church, its organization, doctrines, and rites

Flexner, Abraham, 1866–, American educator, b Louisville, Ky, grad Johns Hopkins, 1886. After 19 years as a secondary school teacher and principal, he took graduate work at Harvard and at the Univ of Berlin In 1908 he joined the research staff of the Carnegie Foundation for the Advancement of Teaching and in 1910 wrote a report, *Medical Education in the United States and Canada,* which hastened much-needed reforms in the standards, organization, and curriculums of American medical schools From 1912 to 1925 Flexner was a member of the General Education Board, serving as secretary after 1917 He was director of the newly organized Institute for Advanced Study at Princeton from 1930 to 1939 His influential works on education range from *A Modern School* (1916) and *The Gary Schools* (with F B Bachman, 1918) to *The Burden of Humanism* (the Taylorian Lecture at Oxford Univ, 1928) and his widely known study, *Universities American, English, and German* (1930) His biography of H S Pritchett was published in 1943 See his autobiography, *I Remember* (1940).

Flexner, Simon, 1863–1946, American pathologist, b Louisville, Ky, M D Univ of Louisville, 1889, brother of Abraham Flexner He served with Rockefeller Institute from 1903 to 1935 (as director, 1920–35) and was Eastman professor at Oxford from 1937 to 1938. He worked on experimental epidemiology and venoms and is especially known for his serum treatment of cerebrospinal meningitis and for his studies of poliomyelitis

flicker, large North American WOODPECKER Flickers are the only brown woodpeckers The northern or yellow-shafted flicker is well known over most of North America and is called by many local names, such as yellowhammer and high hole There is a similar southern form A white rump patch shows plainly in flight Unlike most woodpeckers this bird often remains on the ground for some time Its sticky tongue, which can be thrust outward about 2½ in beyond the end of the bill, is useful in capturing insects Ants form the bulk of its food The yellow-shafted flicker interbreeds with the red-shafted flicker of the West

Fliedner, Theodor (tā'ōdōr flēt'nur), 1800–1864, German Protestant minister and philanthropist He organized in 1826 the first Prison Society of Germany In 1836 at Kaiserswerth he founded the pioneer deaconess house and hospital for the indigent sick Here Florence Nightingale worked and gained many ideas Fliedner established schools and orphanages in Europe and from 1849 to 1851 stimulated the organization of mother houses for deaconesses in Europe, America, and Asia See biography by Catherine Winkworth (1867)

Fliegende Holländer see FLYING DUTCHMAN

flight, sustained progress through the air achieved either by an animal or by aircraft Among animals adaptation for flight is highly developed in birds and insects The bat is the only mammal that accomplishes true flight, flying squirrels glide rather than fly, as do flying fish and flying lizards Man's first attempts at flight were made with flapping wings in imitation of birds, but no really successful machine of this kind has been developed Airships and balloons owe their ability to ascend and remain aloft to their inflation with a gas lighter than air, this is an application of Archimedes' principle of flotation, i e, that a body immersed in a fluid (liquid or gas) is buoyed up by a force equal to the weight of the fluid that it displaces Airplanes, autogiros, helicopters, and gliders, which are heavier than air, are able to remain in the air because of forces developed by the movement of the plane through the air Forward motion of an airplane is obtained through conversion by means of the propeller of the power of the engine to a forward force Wings and other airfoils are so designed as to employ the airflow and the resulting differences in pressure on various parts to support the plane The wings are streamlined and slightly curved on one or more surfaces, and the chord of the wing (line from the leading edge to the trailing edge) must form an acute angle (called the angle of attack) in relation to the relative wind Lift is obtained largely from the upward pressure of the air against the airfoils (e g, wings, tail fins, and ailerons) on the upper surface of which the pressure becomes lower than that of the atmosphere Studies in aerodynamics are concerned with the forces by which lift is obtained as well as with certain other principles of physics involved in flight Observers of the flight of birds have concluded that the body of the bird, highly adapted for flight, employs many of the aerodynamic principles that man has employed in designing airplanes The wing feathers of greatest importance in flight are the primary feathers (attached to the portion of the wing corresponding to the hand of humans), the secondaries (attached to the ulna bone of the forearm), and the tertiaries or scapulars (attached to the muscles over the humerus or upper-arm bone) The leading edge of the slightly concave wings is rather sharp and the feathers are small and close-fitting, so that a streamlined surface meets the air. On the trailing edge of each wing the interlocking of the larger feathers forms a surface that acts somewhat as do the ailerons of an airplane Flight of birds is of three general types, flapping, soaring, and gliding All birds employ flapping and some use all three; whether the bird is flapping, soaring, or gliding, the principal flight feathers overlap in such a way that the air pressure on the underside of the wing causes the feathers to form an airtight surface, on the upstroke, however, the feathers part sufficiently to allow some air to pass between them, thus reducing the pressure against which the wings must work Studies of the pattern of movement traced by wings have been made, but much remains to be learned It is believed that in flapping flight the wings rarely move straight up and down, but when the bird is flying at normal speed the motion is more or less in a semicircle, the wings generally moving upward and backward and then downward and forward The form and size of the wings vary in different birds In most woodland birds the wings are somewhat rounded and the secondary feathers are often as long as the primaries, thus giving a relatively broad surface Birds with well-developed gliding ability, e g, gannets and gulls, usually have narrow, pointed wings Especially noted for their soaring powers are eagles, vultures, crows, and some hawks, in these birds the ends of the outer primaries taper, and in both flapping and soaring flight the feathers separate at the tips so that they look something like spread fingers against the sky It is believed that this diverts the airstream over the wing and aids the bird in turning, banking, and wheeling There is disagreement as to the maximum speeds achieved by birds in flight The swift is considered the fastest of birds, and it is said often to reach 70 mi. an hour while procuring food and some say it can fly up to well over 100 mi an hour Most birds range between 10 and 60 mi. an hour See G C. Aymar, *Bird Flight* (1935), H L Williams, *Fundamentals of Aviation* (1946), Roland Green, *Wing-Tips in the Identification of Birds in Flight* (1947), G W Gray, *Frontiers of Flight* (1948), J H Storer, *The Flight of Birds* (1948)

Flinck, Govaert (gō'vart flĭngk), 1615–60, Dutch portrait and genre painter, pupil and follower of Rembrandt In such notable works as *The Blessing of Jacob, Celebration of the Peace of Münster,* and *Fete of the Civic Guards* (all Amsterdam) the influence of his master is predominant Among his best portraits are *The Man with a Gray Beard; Girl* (Louvre), and *Portrait of a Man and Woman* (Rotterdam) During his last 10 years Flinck endeavored to imitate Rubens, and his work deteriorated

Flinders, Matthew, 1774–1814, English naval captain and hydrographer, noted for his charting and coast surveys of Australia and Tasmania From 1795 to 1799 and again in 1801–3 he made valuable maps and charts of the waters and coast, circumnavigating both countries He is said to have been the first to perceive and correct compass errors caused by the iron ships He wrote *A Voyage to Terra Australis* (1814) W M Flinders Petrie was his grandson See biography by Sir Ernest Scott (1914) and fictionalized biography by Ernestine Hill (1944)

Flinders Island (802 sq mi, pop 853), in Bass Strait, between Tasmania and Australia, largest of the Furneaux Islands It produces sheep, butter and tin

Flinders Petrie, Sir William Matthew see PETRIE

Flinders Ranges, E South Australia, extending 260 mi between Lakes Torrens and Frome and rising to 3,900 ft. at St Mary's Peak There is a uranium-ore mine at Mt Painter The ranges were named for Matthew Flinders

Flin Flon (flĭn' flŏn), municipal district (1946 pop 7,595), W Man, at the Sask border and NNW of The Pas It is a mining and smelting center in a region producing copper, zinc, silver, gold, and cadmium

Flint, Austin, 1812–86, American physician, b Petersham, Mass, M D. Harvard, 1832. He practiced in New York city, where he was noted as a diagnostician and as an authority on diseases of the chest and of the heart, he wrote on these subjects and was also author of *Principles and Practice of Medicine* (1866) His son, **Austin Flint,** 1836–1915, M D Jefferson Medical College, Philadelphia, 1857, was a founder of Bellevue Hospital Medical College, New York city, and was professor of physiology there (1861–98) and later at Cornell Univ His *Physiology of Man* (5 vols., 1866–75) and *Textbook of Human Physiology* (1876) were standard works.

Flint, Timothy, 1780–1840, American author, b North Reading, Mass., grad Harvard, 1800, and entered the ministry As a missionary he traveled up and down the Mississippi valley from 1815 until 1825 and recorded in *Recollections of the Last Ten Years* (1826) the frontier life he experienced. Later,

while principal of a seminary in Louisiana, he produced a work very useful in its day, *A Condensed Geography and History of the Western States* (1828), and romantic novels, among them *Francis Berrian* (1826) and *Arthur Clenning* (1828), immediately popular but now forgotten. From 1827 to 1830 he edited the *Western Monthly Review* in Cincinnati His vivid *Biographical Memoir of Daniel Boone* (1833) helped the growth of the Boone legend See biography by J E Kirkpatrick (1911), introduction by C H Grattan to 1932 reprint of Flint's *Recollections*

Flint, county, Wales see FLINTSHIRE.

Flint, city (pop 151,543), co seat of Genesee co , S Mich , on the Flint river and NW of Detroit; settled 1819 as a fur-trading post on the site of an Indian village, platted 1835, inc 1855 Fur trading was succeeded by lumbering and then by cart and carriage making as Flint's leading industry Since 1904 it has been one of the chief automobile centers of the state. Other manufactures include structural steel and foundry and dairy products Of interest are the Flint Junior College, with its museum of Indian relics; the Frederick Wright Collection, antiques and curios; the Flint Institute of Arts, the General Motors Institute of Technology, and a state school for the deaf

Flint, municipal borough (1931 pop 7,655, 1943 estimated pop 13,140), Flintshire, Wales, NW of Chester, on the Dee estuary. The castle, of the time of Edward I, was the scene of Richard II's submission to Bolingbroke in 1399, it was taken by the parliamentarians in 1643 and dismantled in 1647 There are coal and lead mines and manufactures of paper, rayon, and chemicals

Flint, river rising in W central Georgia, S of Atlanta, and winding southeast and southwest c 285 mi to the southwestern corner of the state, where it joins the Chattahoochee to form the Apalachicola at the Fla line Navigable to Albany, it is a valuable source of water power Just N of Chattahoochee, Fla , a new dam is under construction in 1950

flint, a variety of cryptocrystalline QUARTZ, commonly occurring in rounded nodules Flints are gray, smoky brown, or black in color, when found in chalk or in other rocks containing lime the nodules frequently have a white coating Flint is translucent to opaque It was early used by primitive peoples for making knives and spearheads because although flint is very hard it is more readily shaped than stone, edges can be flaked off with comparative ease, especially those of freshly dug pieces, by pressure exerted with a piece of stone or bone Since it is not chipped by pounding, as stone is, sharper edges are obtained It was long used with steel for lighting fires and later for setting off the powder in flintlock firearms

Flintshire or **Flint,** county (256 sq mi , 1931 pop 112,889, 1948 estimated pop 138,300), NE Wales The county town is Mold, the chief industrial center is Flint It is bounded on the north by the Irish Sea and the Dee estuary and to the east by Cheshire The upland country of the Clwydian Hills is devoted to pasturage, while the fertile valleys (the Dee and the Clwyd) are given over to farming (oats and turnips). The county is rich in deposits of coal, iron, lead, zinc, copper, clay, and limestone, and there are manufactures of pottery, chemicals, and artificial silk Watt's Dyke and Offa's Dyke cross the county After the Norman Conquest the region was heavily fortified by the border lords against the partially conquered Welsh Flintshire today is important as part of the great British industrial area centered in near-by Lancashire.

Flodden, hill, Northumberland, England, SE of Coldstream, Scotland It was the scene of the battle of Flodden Field (Sept 9, 1513), in which the English under Thomas Howard, later 3d duke of Norfolk, defeated the Scots under James IV, who was killed The battle is described in Scott's *Marmion*

flogging see CORPORAL PUNISHMENT

Flood, Henry, 1732–91, Irish statesman. Educated in Dublin and at Oxford, he entered the Irish House of Commons in 1759 and allied himself with Henry GRATTAN in attempting to gain independence for the Irish Parliament He lost favor with the nationalists, however, when he accepted (1775) a position in the government, and the leadership of the nationalists went to Grattan. Although Flood's demands for independence were more radical than Grattan's, he opposed the cause of Catholic Emancipation, which Grattan favored. After the establishment of an independent Irish Parliament in 1782, Flood served (1783–90) in both the English and the Irish House of Commons, but he never regained his leadership

Flood, James Clair, 1826–89, American silver magnate, b. New York city. Having been apprenticed to a carriage maker, he left to join the California gold rush in 1849. The following year he returned to New York, then bought a farm in Illinois, but in 1851 he was back in California. In partnership with William Shoney O'Brien he operated a saloon and lunchroom in San Francisco until 1865, when the two men formed a successful mining partnership with J. W. Mackay and J. G. Fair to exploit the Comstock Lode. See Oscar Lewis, *The Silver Kings* (1947).

Flood, in the Bible see DELUGE.

flood plain, level land along the lower course of a large river formed by deposition of sediment during floods Flood plains are sometimes of great extent Below the confluence of the Ohio and the Mississippi, for example, the flood plains have a width of 80 mi. in some places Other rivers with considerable flood plains are the Nile, Ganges, Danube, Po, and most of the rivers of China. Flood plains are generally the most fertile parts of the country

floods. The most common natural causes of floods are excessive rainfall, sudden thaw, or a combination of the two When heavy spring rains follow a winter of heavy snowfall, floods invariably occur Less predictable are floods caused by the bursting of a levee or a dam, sea waves following earthquake or cyclone, or the blocking of a stream by a glacier or avalanche (common in mountainous regions) or by a mass of vegetation (as in the upper course of the Nile and other tropical rivers) and the subsequent sudden release of the dammed-up waters The changing of the course of an old river often results in disastrous flooding China's most terrible floods have been due to this cause. Next to the quantity of rainfall the type of stone or soil forming the river bed is a decisive factor in the frequency of floods Where the ground is pervious, much of the precipitation is absorbed and the danger of an inundation is lessened When the river bed is formed by impervious bare rock, 90 percent of the precipitation runs off, the average runoff being only 25 percent Another important factor in reducing the danger of floods is the presence of vegetation The most important means of protection against floods are levees (see LEVEE) or dikes, auxiliary outlets to be opened in time of floods, reservoirs near the headwaters to contain surplus drainage, and reforestation The basin of the Mississippi and its principal tributaries—the Ohio, the Missouri, the Arkansas, the White, the Red, and the Ouachita—has been frequently covered by floods from Cairo, Ill , to the Gulf of Mexico Its early levees (the first built in 1717) were local, but in 1879 the Mississippi River Commission was appointed to direct flood control From 1935 the U S Corps of Engineers has been in charge Other means of control used in the basin have been channel improvement by dredging, cutoffs, and reservoirs (of which there are more than 150) One of the objects of the TENNESSEE VALLEY AUTHORITY is flood control In 1947 Congress appropriated money for a 10-year program to combat floods by reforestation and the construction of reservoirs, spillways, and levees, the start was made on the upper course of the Missouri in Montana and North Dakota. The worst floods in the United States from river overflow were in 1913 on the Miami river (a tributary of the Ohio), affecting Dayton, Ohio, especially, in 1927 on the Mississippi; in 1935–36 on the Connecticut and other New England rivers In the spring of 1950, floods on the Red River of the North caused great damage in Winnipeg, Man , and other cities. The Johnstown, Pa , flood of 1889, with the loss of thousands of lives, was caused by the breaking of a mud dam above the city Even greater loss of life occurred (1900) in Galveston, Texas, when a tidal wave engulfed the city after a hurricane. The hurricane of 1938 on the New England and Long Island coasts was also followed by a tidal wave Accounts of floods which destroyed nearly all life are found in the mythology of many peoples For the flood described in the Old Testament, see DELUGE. The earliest continuous records of flood heights have been kept of the Nile, at Cairo. A flood of the Tiber was recorded in 413 B C Records of floods on the Danube date from 1000 The Netherlands, dependent on its dikes for protection from inundation, has suffered many disastrous floods, both from the sea and from the Rhine and Meuse rivers. See A. D Frank, *The Development of the Federal Program of Flood Control on the Mississippi River* (1930); H K Barrows, *Floods: Their Hydrology and Control* (1948)

floor, lower enclosing surface of a room In primitive dwellings the ground itself, often tamped down, was used for the purpose Later flat stones were laid down, and this developed into tile and mosaic floors The Romans made great use of tile for floors, some of the most beautiful and elaborate mosaic floor coverings are found in Byzantine buildings. Such floors were made by setting the pieces directly into the earth With multiple-story buildings a double floor was developed, in which a space is left between the girders and beams forming the supports and the actual solid flooring Wooden floors are most common in dwellings, they were introduced in the Renaissance and are often elaborate, as in parquet floors, where short wooden slabs—sometimes in contrasting woods—are arranged in a geometric mosaic. Concrete floors, whose chief advantage is fireproofness, are common in commercial buildings such as factories and warehouses. Aside from these main types of flooring, many other materials are used The Italian Renaissance introduced terrazzo, a mixture of cement and bits of marble; floors of marble are used in regions where this stone is abundant; and brick or other artificial stones have been employed. The main requisites of flooring are smoothness of surface, sound absorption, and temperature insulation

Flor, Roger de, d c.1306, German commander of Spanish mercenaries, b Italy He entered the service of the Knights Templars at an early age became a member of the order, and fought at ACRE (1291), but was obliged to leave the order when accused of theft He subsequently served as vice admiral under Frederick II of Sicily and after 1302 became the leader of a band of Spanish adventurers who entered the service of ANDRONICUS II against the Turks This Catalan company won several victories, but its oppression of the native population led to Roger's assassination by imperial order His followers ravaged the neighboring countryside in revenge, migrated into Greece, and established the duchy of Athens (1311)

Flora [from Latin, = flower], Roman goddess of flowers, identified with the Greek Chloris Her feast, Floralia, April 28 - May 1, was celebrated with great license Her temple was near the Circus Maximus

Flora. **1** City (pop 5,474), SE Ill , near the Little Wabash, E of Salem, in a farm area, inc 1867 Among its manufactures are dairy products, shoes, and furniture **2** Town (pop 1,468), NW Ind., SW of Logansport near Delphi, settled 1884, inc. 1898

Florala (flōrā'lə), city (pop 2,999), S Ala , at the Fla line, in a farm and pine-lumber area, with large sawmills

Floral Park, residential village (pop 12,950), on W Long Island, SE N Y , near Mineola, inc 1908.

Flora Macdonald College. see RED SPRINGS, N.C

Floréal: see FRENCH REVOLUTIONARY CALENDAR.

Florence, William Jermyn, 1831–91, American actor, whose real name was Bernard Conlin, b Albany, N Y He won praise in such roles as Bob Brierly in *Ticket-of-Leave-Man* and Captain Cuttle in an adaptation of Dickens's *Dombey and Son*, but his best portrayal was in 1861 as Bardwell Slote in *The Mighty Dollar*, which he often repeated A character actor, he had a great gift for dialect and impersonation

Florence, Ital *Firenze* (fērĕn'tsā), city (pop 271,975, with suburbs 321,176), capital of Tuscany, central Italy, on both banks of the Arno, at the foot of the Apennines Florence, the jewel of the Italian Renaissance, was a town of the Roman Empire In the Middle Ages it gained autonomy (c 1200), and Guelphs and Ghibellines fought over it until the Guelphs expelled the Ghibellines, then split into their own warring factions, the Blacks and the Whites, best remembered because Dante, a Florentine, was banished as a White Guelph. Warfare raged too with other cities, notably PISA, as the merchants and bankers of Florence made their own fortunes and the fortune of the city; the sale of Florentine silks and wools and jewelry brought almost overpowering wealth Florence grew in war, absorbing Arezzo, Pistoia, Volterra, and Pisa itself The turbulent city, become a city-state, fell in the 15th cent under the control of Cosimo de' Medici, a wealthy and cultured merchant Though republican forms were kept until the 16th cent , the MEDICI family ruled, and Lorenzo de' Medici, who ruled from 1469 to 1492, was able to put down the PAZZI CONSPIRACY. Under him and his successors for two centuries Florence was the golden city, with a well-nigh incredible flowering of intellectual and artistic life—the soul of the Renaissance The list of artists working in the city is headed by Michelangelo, Leonardo da Vinci, Raphael, and Donatello Poets and scholars abounded, and the Accademia della Crusca (see SOCIETIES, LEARNED AND LITERARY) was established Political life was turbulent The Medici were expelled by revolution, the fiery SAVONAROLA briefly held power, and MACHIAVELLI was a diplomatic representative of the republic The revolt was over by 1512, but a new revolution (1527–30) established a new republic, which was destroyed by the surrender to Emperor Charles V after heroic defense Under the restored Medici, Florence went on expanding and controlled most of Tuscany In 1569 Cosimo I de' Medici was made grand duke, and Florence became the capital of the grand duchy of TUSCANY The grand duchy, ruled by the house of Hapsburg-Lorraine after the extinction (1737) of the Medici, was annexed to the kingdom of Sardinia in 1860 Florence was the capital of the newly founded kingdom of Italy from 1865 to 1870 Most art treasures of Florence were spared in the Second World War, although many historic buildings were hit and parts of the medieval quarters have disappeared Of the bridges across the Arno, all were blown up except the famous Ponte Vecchio It is impossible to mention here all of the city's monuments, most of them dating from the 13th, 14th, and 15th cent The Gothic Cathedral of Santa Maria del Fiore has a dome by BRUNELLESCHI (1420–34), near by are the campanile designed by GIOTTO and the baptistery with the famous doors by GHIBERTI The Church of Santa Croce is the Florentine pantheon with frescoes by Giotto and other artists and fine works by the DELLA ROBBIA family, ROSSELLINO, and others Santa Maria

Novella (1278–1360) has frescoes, sculptured tombs, and fine cloisters Some of the best works by Fra ANGELICO are in the convent of St Mark's, while important frescoes by MASACCIO and Filippino LIPPI adorn the Church of the Carmine San Lorenzo contains Michelangelo's tombs of the Medici and many works by Donatello The imposing **Palazzo** della Signoria (city hall) has frescoes by Vasari, near by is the Loggia with the *Perseus* of CELLINI The UFFIZI and the Pitti Palace house some of the richest collections of paintings in the world Behind the Pitti Palace are the Boboli gardens, a typical example of Italian landscaping architecture The Academy art museum, the BARGELLO, and the Etruscan museum are also of primary importance Among the countless medieval and Renaissance palaces Or San Michele, Riccardi, Strozzi, and Rucellai deserve special mention On a hill overlooking the city is the basilica of San Miniato (11th–13th cent) The standard work of recent scholarship is Robert Davidsohn, *Geschichte von Florenz* (4 vols in 9, 1896–1927) See G F Young, *The Medici* (2 vols , 1909), Pasquale Villari, *Two First Centuries of Florentine History* (1894, Eng tr , 1894–95) See also works of the Florentine historians MACHIAVELLI and GUICCIARDINI and bibliography under RENAISSANCE

Florence. **1** City (pop 15,043), co seat of Lauderdale co , NW Ala , on the Tennessee near MUSCLE SHOALS and adjacent to Wilson Dam, laid out 1818, inc 1826 It is in a cotton and mining area, and power from Muscle Shoals has stimulated the growth of various industries In 1941 a large aluminum plant was built A state teachers college is here **2** Town (pop 1,383), co seat of Pinal co , S ARIZ , on the Gila river and SE of Phoenix; founded 1866, inc 1906 The surrounding area is irrigated from the San Carlos reservoir, made by the Coolidge Dam The state prison is near by **3** City (pop 2,632), S central Colo , on the Arkansas river above Pueblo, in a fruit, coal, and oil area, inc 1887 **4** City (pop 1,329), E central Kansas, NE of Wichita and on the Cottonwood, in a livestock and grain area, platted 1870, inc 1872 It has stone quarries **5** Hosiery-producing village, W central Mass , near Northampton It was a station on the Underground Railroad until 1861 **6** City (pop 16,054), co seat of Florence co , NE S C , ENE of Columbia and near the Pee Dee river, founded in the 1850s It is an important focal point for railroads (with repair shops) and an industrial and trade center for a farm, tobacco, and livestock area During the Civil War it was a transportation and supply point and served as the site of a prison camp Near by are a national cemetery, an agricultural experiment station, and the state industrial school for boys

Florence, Council of ' see FERRARA-FLORENCE, COUNCIL OF

Florence of Worcester (wo͝o'stur), d 1118, English chronicler A monk of Worcester, he compiled a Latin chronicle of British history, the *Chronicon ex chronicis* The earlier part of the account is based upon the work of other chroniclers, principally Marianus Scotus The work was continued by other monks after Florence's death

Flores, Juan José (hwän' hōsā' flō'rās), 1800–1864, president of Ecuador (1830–34, 1839–45), b Puerto Cabello, Venezuela An able commander under Bolívar in the War of Independence, Flores led (1830) the secession of Ecuador from the Colombian union and became its first president A Conservative who supported entrenched privileges, especially those of the Church, he was soon opposed by a Liberal opposition under ROCAFUERTE, who succeeded him as president Flores was twice reelected but, accused of dictatorial ambitions, was exiled Returning in 1860 with GARCÍA MORENO, he served as army chief until his death

Flores (flō'rĭz, Port flō'rĭsh), island, in the N Atlantic, the most westerly of the Azores

Flores (flō'rās), island (6,627 sq mi , pop including offshore islands 626,684), East Indonesia, one of the Lesser Sundas It is W of Timor Largely mountainous, it is 220 mi long and 40 mi wide The inhabitants in the west are mainly Malayans, those in the east are Papuans The principal products are sandalwood, copra, coffee, rice, beeswax, and cinnamon Ende is the chief town and port Flores was opened to trade in 1618 by the Dutch East India Company The Flores Sea is north of the island and S of Celebes

Floresville (flō'rĭsvĭl), city (pop 1,708), co seat of Wilson co , S Texas, on the San Antonio river and SE of San Antonio It is in a farm region that produces especially peanuts and watermelons

Florey, Sir Howard Walter, 1898–, Australian pathologist. He was educated at Adelaide Univ. and at Cambridge and Oxford and returned to Oxford as professor of pathology in 1935 Florey shared the 1945 Nobel Prize in Physiology and Medicine with Sir Alexander Fleming and Ernst B Chain for work on penicillin. In 1939, under a Rockefeller grant, Florey and his associates began work on penicillin and proved its effectiveness against many harmful bacteria With Dr. Norman Heatley, Florey visited the United States in 1941 to seek aid in finding a method of producing large quantities of penicillin.

Florham Park, borough (pop 1,609), NE N J , E of Morristown, settled 1655, inc 1899.

Florianópolis (flō"rēänä'pōlĭs), city (pop 25,253), capital and chief port of Santa Catarina state, SE Brazil, on Santa Catarina Island It is connected with the mainland by a suspension bridge Founded (1700) as Desterro by colonists from São Paulo and renamed (1893) for Floriano PEIXOTO, it is today a busy commercial city in a rich agricultural region There are light industries

Florida (flō'rĭdu), state (58,560 sq mi ; 1940 pop 1,897,414, 1949 estimated pop. 2,494,000), extreme SE United States, admitted 1845 as the 27th state (slaveholding) TALLAHASSEE is the capital, JACKSONVILLE, MIAMI, and TAMPA the largest cities Florida is bounded on the east by the Atlantic Ocean, on the west by the Gulf of Mexico, on the north by Georgia and Alabama (with the Perdido river the line in the northwest) A long, low peninsula, it is in the south separated from Cuba by the Straits of Florida Entirely within the temperate zone, Florida is influenced by the surrounding subtropical waters, the pleasant mild climate, beautiful scenery, and subtropical plants and animals attract many tourists and winter residents Though the state is best known for its resorts and the citrus fruit it produces, the economy, like the topography, is diversified Truck, fruit, and vegetable farming, fishing, lumbering and production of naval stores, phosphate mining (most of the U S phosphates come from Florida), and cattle raising are the principal activities Cities on the Atlantic coast, besides Jacksonville and Miami, are SAINT AUGUSTINE (the oldest in the nation), WEST PALM BEACH, and KEY WEST, on the Gulf are Tampa, SAINT PETERSBURG, and PENSACOLA The rolling, pine-clad hills of N Florida rise to the highest part of the peninsula (a little more than 300 ft) The central Florida region abounds in lakes and has ORLANDO as chief city Most of S Florida is covered by the unique EVERGLADES, S of Lake OKEECHOBEE—the region and the lake rivaling the SAINT JOHNS river (the principal waterway) and the FLORIDA KEYS as notable topographic features Though the peninsula was doubtless sighted by earlier navigators, its history begins with Juan PONCE DE LEÓN, who, seeking the island of Bimini, supposed to be N of Cuba, landed near the site of St Augustine in April, 1513 He claimed for Spain what he thought was an island, naming it Florida probably because it was then the Easter season (*Pascua florida*) The expeditions of other Spanish adventurers, notably Pánfilo de NARVÁEZ and Hernando DE SOTO, established the fact that Florida was not an island and gave Spain her claim to the vast region now comprising most of the SE United States, the whole being known as Florida But it was the activity of the French which led to actual Spanish settlement In May, 1562, Jean RIBAUT discovered the St Johns river, and two years later René de LAUDONNIÈRE built Fort Caroline at its mouth Alarmed at this encroachment, Philip II commissioned Pedro MENÉNDEZ DE AVILES to drive out the French, which he did, ruthlessly With Menéndez, founder of St Augustine (1565), Spanish colonization in Florida began The region presented difficulties, with no precious metals to spur conquest, as in Mexico and Peru, with more or less infertile soil (Spanish Florida was never self-sufficient agriculturally), and with Indians not in the least docile However, the Spanish were compelled to hold it because of its strategic situation athwart the Straits of Florida, through which rich treasure ships from the south sailed for Spain Soldiers and missionaries (first Jesuits and then Franciscans) established especially thriving posts in the area known as Guale (the SEA ISLANDS and coast of present Georgia and South Carolina) But the English, energetically expanding their American colonial holdings after 1607, threatened Florida St Augustine was several times attacked by English corsairs and in 1702–3 was besieged by Gov James Moore of South Carolina The establishment of Georgia and its steady growth under James E OGLETHORPE, who defeated (1742) the Spanish in the battle of Bloody Marsh on St Simons Island, made Florida's northern boundary the St Marys river The French, operating from their posts in the Mississippi valley, also troubled the hard-pressed Spanish The Indian fur trade was the great prize in this struggle, which was tied to the French and Indian Wars and the European conflicts Spain's last-minute entry on the side of France against England in the Seven Years War cost her (1763) Florida St Augustine and Pensacola were made the respective capitals of East Florida and West Florida. Under the British (1763–83), the Floridas made great economic progress The influx of English settlers reached a peak in the American Revolution when Tories flocked to the region from the north Patriot forces twice attempted invasion, but on the whole the Floridas were little touched by the war By the terms of the Treaty of Paris in 1783, they were returned to Spain, but her hold was extremely tenuous, especially in West Florida (see WEST FLORIDA CONTROVERSY). British traders and agents still had powerful influence, and in the War of 1812 Pensacola was a British base until captured by Andrew Jackson in 1814 In 1819, after years of diplomatic wrangling, the Adams-Onís treaty provided for the sale of Florida to the United States Official U S occupation took place in 1821, with Jackson as governor, and Florida, with its present boundaries, was organized as a territory in 1822. Settlers poured in from the neighboring states, especially into the area around the newly founded capital of Tallahassee Here flourished a plantation economy like that of the rest of the South, with cotton and tobacco the chief crops The whites, gradually expanding southward, displaced the SEMINOLE INDIANS, and a group of Seminoles, under OSCEOLA, resisted attempts to remove them to the West Indian wars seriously impeded Florida's development Florida seceded on Jan 10, 1861 State troops took the navy yard at Pensacola, but the Federals held Fort Pickens (see PICKENS, FORT) and in 1862–63 captured the coastal cities of Fernandina, Jacksonville, St Augustine, and Tampa Florida gave important supplies to the Confederacy, particularly salt and cattle The most important Civil War engagement fought in Florida was the battle of OLUSTEE (Feb 20, 1864), a Confederate victory. Florida suffered less than other Southern states in RECONSTRUCTION days, but scalawags and carpetbaggers controlled the government until the election of 1876 A new constitution (1885), under which the state is still governed, replaced the Reconstruction charter of 1868 Northern capitalists such as Henry B Plant and Henry M FLAGLER contributed greatly to Florida's modern development Their railroads and hotels stimulated the growth of the resort trade Close to Cuba, Florida has always been interested in the affairs of that island Cuban revolutionaries received sanctuary and aid in Florida, and the state enthusiastically supported and profited economically by the Spanish-American War, in which Tampa was the chief U S base The drainage of the Everglades was also important to the state's progress The first intensive reclamation work began in the administration of Gov Napoleon B BROWARD (1905–9) and precipitated one of the state's periodic land booms The most famous of these, starting after the First World War, reached its peak in 1925 when land values reached fantastic heights, only to collapse completely the following year Like other states Florida weathered the depression with the help of the Federal government, one of the New Deal projects was the FLORIDA SHIP CANAL In the Second World War, Florida prospered from army, navy, and air force installations The Univ of Florida, at Gainesville, is the state's leading institution of higher education Others are the Univ of Miami, at Coral Gables, Florida State Univ and Florida Agricultural and Mechanical College, at Tallahassee, Rollins College, at Winter Park, Florida Southern College, at Lakeland, John B Stetson Univ , at De Land, Barry College, at Miami, and Bethune-Cookman College, at Daytona Beach See Woodbury Lowery, *The Spanish Settlements within the Present Limits of the United States, 1513–1561* (1901) and *The Spanish Settlements within the Present Limits of the United States Florida, 1562–1574* (1905), W W Davis, *The Civil War and Reconstruction in Florida* (1913), C M Brevard, *A History of Florida* (1924–25), Federal Writers Project, *Florida a Guide to the Southernmost State* (1939), K T Abbey, *Florida—Land of Change* (1941), Thomas Barbour, *That Vanishing Eden a Naturalist's Florida* (1944), S W Martin, *Florida during the Territorial Days, 1821–1845* (1945), R W Patrick, *Florida under Five Flags* (1946)

Florida: see CONFEDERATE CRUISERS

Florida, Straits of, SE and S of Florida, between the Florida Keys and Cuba The Gulf Stream here passes from the Gulf of Mexico to the Atlantic Ocean

Florida, University of, at Gainesville, land-grant and state supported, chiefly for men, chartered and opened 1853 as a seminary at Ocala, Fla , moved 1906 after state schools were united The General College (junior, founded 1935) pioneered in modern curriculum and guidance plans There are also colleges of agriculture, arts and sciences, business administration, education, engineering, and law, and physical education, health, and athletics, schools of architecture and allied arts, forestry, and pharmacy, and the P K Yonge Demonstration School The Inter-American Institute and the state museum are here

Florida Agricultural and Mechanical College, at Tallahassee, Negro, land-grant and state supported, coeducational; chartered and opened 1887 as a normal school, renamed 1909 It has divisions of agriculture, education, home economics, liberal arts and sciences, nurses' training and health, and mechanic arts

Floridablanca or **Florida Blanca, José Moñino, conde de** (hōsā' mōnyē'nō kōn'dā dā flōrē'dhä blängˈkä), 1792–1808, Spanish statesman After the expulsion of the Jesuits from Spain (1767) he was sent to

Rome as ambassador to obtain the papal suppression of the Society of Jesus He was ennobled (1773) for the success of his mission In 1777 Charles III appointed him premier. Under Floridablanca absolutism reached its peak, but his internal reforms, especially financial, were beneficial and the economic life of the country was greatly improved He made peace and economic treaties with the Turks and with Morocco and reached agreement with Portugal, but was reluctantly drawn into war with England in the American Revolution He adopted a reactionary policy toward the French Revolution and advocated a coalition against France A few years after the accession of Charles IV the rise of Godoy led to Floridablanca's dismissal (1792) He was imprisoned for three years During the French invasion (see PENINSULAR WAR), Floridablanca became (1808) president of the Central Junta, but he died shortly after moving to Seville

Florida Keys, long chain of small coral and limestone islands or reefs, forming the southern tip of Florida. Between them and the mainland of Florida lies Florida Bay, while the Straits of Florida separate them from Cuba Many of the islands are habitable, the best known are Key Largo, Saddle Bunch Keys, and Key West, on which is the city of Key West They are noted for their commercial fisheries and for their resorts In Sept, 1935, the keys were swept by a hurricane which took many lives and destroyed thousands of homes and many miles of highway and railroad Most of them are joined to the mainland by a highway (passable since 1938, formally opened 1944), replacing the railroad destroyed in the 1935 hurricane

Florida Ship Canal, planned to follow a sea-level route across N Florida from the Atlantic at the mouth of the St Johns river to the Gulf of Mexico near Port Inglis, via the St Johns, Oklawaha, and Withlacoochee rivers The canal was to be c 200 mi long, at least 30 ft deep, and from 250 to 400 ft wide Work was started in Sept, 1935, with $5,000,000 of Federal relief funds, and was abandoned after Congress refused in March, 1936, to make grants for the project

Florida Southern College, at Lakeland, Methodist, coeducational, chartered and opened 1886, long known as Southern College It has a citrus laboratory and a nonsectarian religious center, with buildings designed by Frank Lloyd Wright

Florida State University, at Tallahassee, coeducational, chartered and opened 1905 as Florida State College for Women, renamed 1947 It has a college of arts and sciences and schools of education, home economics, library science, and music

Florio, John (flō'rēō), 1553?–1625, English author, b London, of Italian parentage He is chiefly remembered for his famous translation (1603) of the essays of Montaigne He wrote works on Italian grammar and compiled an Italo-English dictionary, *A World of Words* (1598) See F A Yates, *John Florio* (1934)

Floris, Frans (frans' flō'ris), c 1517–1570, Flemish painter, son of an Antwerp stonecutter His real name was Frans de Vriendt He studied in Liége and Rome Returning to Antwerp in 1540, he opened a large school and enjoyed the patronage of William of Orange and of many Flemish and Spanish notables Floris exemplifies the overpowering influence of Italy on many Flemish painters of his period, the so-called mannerists Although he was a good painter, with an excellent gift for composition, his work suffers from artificiality Characteristic are his *Last Judgment* (Brussels), *Lot and His Daughters* (Dresden), and *Fall of the Rebellious Angels* (Antwerp) In addition to such ambitious figure compositions, Floris produced several excellent portraits and etchings

Florissant, city (pop 1,369), E Mo , on the Missouri river and near St Louis It was settled by the French in 1785 and called St Ferdinand later by the Spanish, its present name was made official in 1939 The Church of St Ferdinand (1821) and other old buildings remain The Jesuit St Stanislaus Seminary (1823) was rebuilt in 1840–49, here Father De Smet was ordained in 1827

Flossmoor, village (pop 1,270), NE Ill , a suburb of Chicago, inc 1924

flotation process, in metallurgy, a process for the concentration of an ore before treatment to extract its metal The crude ore is ground to a fine powder and mixed with water, oil, and a small quantity of acid When air is blown through the mixture, a froth of oil is formed on top which holds the mineral, the waste material (gangue) settles to the bottom The froth is skimmed off, upon distillation the oil vaporizes and the mineral is left behind Copper sulphide ore is effectively concentrated by this method

Flötner or **Flettner, Peter** (pā'tur flōt'nûr, flĕt'nûr), c 1485–1546, German medalist and craftsman, possibly Swiss by birth He was active in decorative sculpture, wood carving, and lesser crafts, making medals and plaques and furnishing designs for silversmiths He was in Nuremberg by 1522 and did most of his work there Flotner is now regarded as a pioneer of the German Renaissance His *Kunstbuch* was published in 1549 In the Metropolitan Museum are five of his bronze plaques illustrating biblical episodes

Flotow, Friedrich von (frē'drĭkh fŭn flō'tō), 1812–83, German operatic composer Of his 29 operas only *Alessandro Stradella* (1844) and *Martha* (1847) remain popular

flotsam, jetsam, and ligan (flŏt'sum, jĕt'sum, lī'gun) [O.Fr], in maritime law, goods lost at sea as distinguished from WRECK, those goods which come to shore The goods which remain floating on the surface are called flotsam (or floatsam or flotsan), while jetsam refers to goods thrown overboard which sink and remain under water Ligan (or lagan) (lă'gŭn) designates those goods which go down with a vessel or which are sunk in the sea and have a buoy or floating object attached to them as a mark of ownership or in order that they may be found again Such goods found by other persons must be returned to the owner, while flotsam and jetsam must be returned only if the owner makes a proper claim The rules of SALVAGE apply to all three types of goods See JETTISON

flounder, name applied sometimes to any FLATFISH (except the true soles of Europe) and sometimes restricted to certain members of one family (Pleuronectidae) The under side of the flattened body is whitish, and the upper side is usually some shade of brown or olive, often mottled Many species can change their color and pattern, apparently at will, to blend with their background Flounders are found mostly in salt water but also swim up rivers They are abundant in North American waters and in parts of Europe Many are also called flukes The delicate white flesh is much used for food, when boned it is often marketed as sole

flour, finely ground, usually sifted, meal of GRAIN, such as wheat, rye, corn, rice, or buckwheat, of farinaceous plants, such as the potato, and of cassava, peas, beans, and peanuts In particular it signifies finely ground and bolted flour of WHEAT, which forms the largest proportion of all flour milled in the United States, Canada, and Western Europe MILLET and DURRA are ground in India and China Rye is much used for BREAD in N Europe, buckwheat in the Netherlands and Russia, and corn in the United States Rice may be used for bread in combination with other grains richer in GLUTEN Wheat and rye flour can be used in baking leavened bread, as they contain gluten in sufficient amount to retain the gas formed by the action of yeast Corn flour, rich in fats and starches, is a favorite for making quick breads True graham or whole-wheat flour contains the whole grain, unbolted It will not keep long, as the germ contains fats and ferments which cause deterioration when exposed to the air Some graham flour is made by adding bran to low-grade flour Wheat flour is separated into grades by milling In the United States, patent flour, freed of the bran and most of the germ, is the highest grade, clear flour is the second grade, and red dog, a low-grade residue, is used for animal feed and in paste and sizing "Straight" flour is a mixture of patent and clear grades The composition of flour depends on the type of wheat and the milling processes, gluten is the chief protein, starch the principal carbohydrate, although some sucrose, invert sugar, and dextrin may be present Gluten, or diabetic, flour has much of the starch removed On the market are prepared flours, such as the self-rising, which contains a leavening agent, and numerous cake, pancake, and pastry mixes requiring only the addition of water Flour improves up to six months if stored under conditions permitting the enzyme action which gives better baking qualities Good flour, rich in gluten, has a creamy color and adhesive quality Since 1908 the United States requires that bleached flours be so labeled Although bleaching by the proper methods is not harmful, it may conceal the use of inferior flours See S C Prescott and B E Proctor, *Food Technology* (1937), P A Amos, *Processes of Flour Manufacture* (rev ed, 1938)

Flourens, Pierre (Marie Jean Pierre Flourens) (pyĕr' flōōrăs'), 1794–1867, French physiologist He demonstrated the respiratory center in the medulla and the function of the cerebellum in muscular coordination and studied bone formation He was long a professor at the Collège de France

Flower, Benjamin Orange, 1858–1918, American editor, b Albion, Ill , grandson of George Flower He established the *American Spectator* (1886) in Boston and founded the *Arena* (1889), merging the two and editing them, except for a few years, until 1909 The *Arena*, a leading liberal publication, played a large role in the muckraking era of magazine journalism, supporting such new writers as Stephen Crane, Upton Sinclair, Frank Norris, and Jack London, not so much by literary agreement as by moralistic enthusiasm From 1909 to 1911 Flower edited the *Twentieth Century Magazine* and, convinced that Roman Catholicism endangered democracy, spent his later years conducting a bitter anti-Catholic crusade through a paper called the *Menace*

Flower, George, 1788–1862, pioneer settler of Illinois, b Hertfordshire, England. He toured the United States in 1816, and Flower and his friend Morris Birkbeck undertook a huge settlement scheme in Edwards co , Ill The two fell out, but much land was settled and Albion, Ill , was founded Flower wrote *History of the English Settlement in Edwards County* (published by the Chicago Historical Society, 1882). He was later prominent in the fight against legalizing slavery in Illinois.

Flower, Richard, 1761–1829, British settler in the United States, father of George Flower He emigrated (1818) to Illinois, to the settlement founded by his son and Morris Birkbeck When William Cobbett criticized the settlement, Flower answered in his *Letters from Illinois* (1822)

Flower, Roswell Pettibone, 1835–99, American politician, U S Congressman (1881–83, 1889–91) and governor of New York (1892–94), b Theresa (near Alexandria Bay), N Y He removed in 1869 to New York city, where he became a prosperous securities broker and a Democratic political leader His election to Congress in the "golden canvass" against William Waldorf Astor in 1881 and his election to the governorship of New York over J S. Fassett in 1891 were both accomplished with the help of Tammany and were generally regarded as triumphs of corruption at the polls

flower, name for the specialized part of a plant containing the sexual organs, commonly applied to SEED plants only A flower, then, contains the organs of reproduction of one or both sexes, surrounded usually by showy parts (inconspicuous in some) and normally producing seed Flowers vary considerably, but a typical one consists of the following parts, beginning with the outermost the CALYX, made up of green sepals, the COROLLA, composed of colored petals, the stamens, which bear the powdery POLLEN—the male element of flowers, and the pistil or pistils at the base of which is the ovary containing the egg or female element After the transfer of the pollen to a pistil (known as POLLINATION) a tube from the pollen grain grows down the inside of the pistil and causes fertilization of the egg From this fertilization FRUIT and seed develop Both sexes may be borne in a single flower or separated in different flowers Among the variations in the types of flowers is that found in the composites, a very large group of plants of which the daisy is a member In this group what appears to be a single flower is in reality a head of many small flowers The outer ring of petallike flowers are called ray flowers and are often sterile The central portion of the head is composed of disk flowers, very small tubular florets containing nearly always both kinds of sex organs Another type of flower is that represented by the Jack-in-the-pulpit, dogwood, and poinsettia, which have many small and inconspicuous true flowers surrounded by a showy bract or bracts—the whole commonly called a "flower " The color, fragrance, and form of flowers have made them from earliest times of aesthetic value to man Their arrangement for decoration is a studied art in Japan Their fragrance has been utilized in PERFUME A "language of flowers" was formerly popular for sending messages, usually of amorous intent, the flowers selected conveying a definite meaning, in the 19th cent several books were written on this subject Flowers have, of course, long been glorified in the arts, and they have occurred as emblematic devices in heraldry (ROSE), in religion (LOTUS), and in politics (VIOLET) Most countries have some one flower considered or proclaimed emblematic of that country Among these national floral emblems are edelweiss (Switzerland), cornflower (Germany), lotus (Egypt), forget-me-not (Alaska), fleur-de-lis (France), rose (England), and thistle (Scotland) There has been no one flower selected to represent the United States For the flowers of the various states of the United States, see STATE FLOWERS See R J Pool, *Flowers and Flowering Plants* (1929)

flowering almond, ornamental spring-blooming shrub of the genus *Amygdalus* (or *Prunus*), not the true almond but closely related to the plum, cherry, and apricot and hardy except in the northernmost states The pink or white blossoms usually appear before the leaves and cover the bush, double-flowered kinds are most often seen There are several other shrubs, somewhat similar in appearance, that are known as flowering almond

flowering maple see ABUTILON

flowering quince, plants of the genus *Chaenomeles* (sometimes *Cydonia*), Asiatic shrubs cultivated elsewhere for the early-spring flowers The best known, a fairly hardy spiny bush called also **Japanese** quince and japonica, has glossy leaves and waxy blossoms usually in shades of red The yellowish fruits are sometimes used in preserves

Floyd, John Buchanan, 1807–63, U S Secretary of War (1857–60) and Confederate general, b Smithfield, Va , grad South Carolina College, 1829. After failing as a lawyer and cotton planter in Arkansas, he returned to Virginia and practiced law at Abingdon He served in the state assembly (1847–48, 1855) and was governor (1849–52) His cabinet post was a reward for aiding in Buchanan's election Though a states' rights man, Floyd opposed secession. However, he maintained that Major Robert Anderson's removal from Fort Moultrie to Fort SUMTER in Charleston harbor was

contrary to his orders. When Buchanan refused to allow him to order Anderson back he resigned (Dec.) and became an ardent secessionist The President, meanwhile, had requested his resignation because of irregular and unauthorised practices in the War Dept , which involved an apparent loss of $870,000 Feeling was bitter against him in the North, although the belief that before he resigned he conveniently transferred large quantities of arms to Southern arsenals has since been discounted However, his inefficient administration of the War Dept certainly was no help to the Union later As a Confederate brigadier general in the Civil War, serving first under Lee in the western section of Virginia, Floyd was equally incompetent After his defeat at Fort DONELSON, Jefferson Davis, who nursed an old quarrel with Floyd, promptly removed him from command

Floyd, William, 1734–1821, American Revolutionary patriot, signer of the Declaration of Independence, b Brookhaven, N Y He served (1774–77, 1778–83) in the Continental Congress and later was a U S Congressman from New York (1789–91)

Floydada (floidă'dŭ), town (pop 2,726), co seat of Floyd co , NW Texas, NE of Lubbock on the Llano Estacado, settled c 1889, inc 1909 The region produces grain sorghums, alfalfa, wheat, cotton, poultry, and dairy products

Fludd or Flud, Robert (both flŭd), 1574–1637, English mystic philosopher Educated at Oxford and on the Continent, he became a London physician He made many scientific experiments and is said to have invented the barometer From his study of Paracelsus he arrived at the theory that spiritual and physical truth are identical His mystical pantheism centered about God as the all-pervading form of which the world and man are manifestations Gassendi, Kepler, and others attacked his doctrines Fludd, in several works, defended the Rosicrucians His major works included *Utriusque cosmi minoris et majoris technica historia* (1617–21) and *Philosophia Moysaica* (1638, Eng tr , *Mosaicall Philosophy*, 1659) See A E Waite, *The Real History of the Rosicrucians* (1887), R F Craven, *Robert Fludd, the English Rosicrucian* (1902)

fluke, parasitic flatworm which belongs to the class Trematoda of the phylum Platyhelminthes In parts of the Orient, humans may become infested with a liver fluke by eating raw fish and with a lung fluke from raw crabs Blood flukes are widely prevalent in Egypt and are found in parts of tropical America They may enter the human body in drinking water or may penetrate the skin of bathers Intestinal flukes attack man and pigs The cause of liver rot, a fatal condition of sheep and other herbivorous animals, is the liver fluke *Fasciola hepatica* Like many other flukes it spends part of its life in another animal, a species of snail For the flatfish sometimes known as a fluke, see FLOUNDER

flume : see SLUICE

fluorescence (floo"ŭre'suns), luminescence in which light of a visible color is emitted from a substance under stimulation or excitation by light waves of certain lengths and by some other means The light is given off only while the stimulation continues, in this it differs from the phenomenon of phosphorescence, in which light continues to be emitted after the excitation by other radiation has ceased Fluorescence of certain rocks and other substances had been observed for hundreds of years before its nature was understood Probably the first to explain it was Sir George G Stokes, who named the phenomenon after fluorite, a strongly fluorescent mineral Stokes is credited with discovering (1852) that fluorescence can be induced in certain substances by stimulation with ultraviolet light He formulated Stokes's law, which states that the wave length of the fluorescent light is always greater than that of the exciting radiation (there are, however, some exceptions) Later it was discovered that certain organic and inorganic substances can be made to fluoresce by activation not only with ultraviolet light but also with visible light, infrared radiation, X rays, radio waves, cathode rays, friction, heat, pressure, and some other excitants. Fluorescent substances, sometimes also known as phosphors, are used in paints and coatings, but their chief use is in fluorescent lighting. A. E Becquerel constructed a fluorescent lamp and described (1867) the preparation of fluorescent tubes basically similar to those made today Thomas A. Edison also developed a fluorescent lamp. Considerable progress in developing fluorescent lighting was made in several European countries, and during the 1920s high-voltage fluorescent tubes were used in advertising signs. In the United States the first practical hot-cathode, low-voltage, incandescent lamp was marketed in 1938 This is the form of lamp commonly used. It consists of a long, sealed glass tube with an electrode at each end, argon gas and a small amount of mercury are contained within the tube The inside surface of the tube is coated with a mixture of fluorescent powders, and when an electric discharge is maintained through the mercury vapor the ultraviolet light thus produced is absorbed by the fluorescent coating, and as a result of this excitation visible light is emitted The fluorescent powders are prepared either from fluorescent minerals or, less commonly, by synthesis Different colors of light are obtained by mixing powders in varying proportions Among the powders used are silicates (often zinc silicate and zinc beryllium silicate) and wolframates (or tungstates) The design of the lamps varies somewhat according to use. Soon after the hot-cathode fluorescent lamp came into use the more general use of cold-cathode fluorescent tubing (previously used chiefly in outdoor advertising signs) was promoted, but it is employed less commonly than the hot-cathode lamps. Fluorescent lighting is widely used in factories, offices, stores, public buildings, and homes

fluorine (floo'urēn, -rĭn), the most active nonmetallic element (symbol=F; for physical constants, see ELEMENT, table), a yellowish, poisonous, and highly corrosive gas It is a member of the HALOGEN family of elements It combines actively without the application of heat with most other elements except chlorine, helium, nitrogen, oxygen, and the inert gases (argon, neon, krypton, xenon) It attacks gold, copper, and platinum very slightly With hydrogen it forms hydrogen fluoride, and the water solution is known as hydrofluoric acid Because of its activity fluorine does not occur free (uncombined) in nature CRYOLITE and FLUORITE (or fluor spar, its chief commercial source) are important compounds. The gas was first prepared by Henri Moissan in 1886 by electrolysis of a solution of hydrogen fluoride containing potassium hydrogen (acid) fluoride Fluorine is of importance only in its compounds, which include hydrofluoric acid, used in metallurgy and etching, and some that are used as insecticides

fluorite (floo'urīt) or **fluor spar** (floo'ur spar), a mineral appearing in various colors, e g , green, yellow-brown, rose, and red Chemically, it is calcium fluoride, a compound of calcium and fluorine Its crystals, commonly cubic, are transparent or translucent and under certain conditions exhibit fluorescence The mineral also occurs in granular and massive forms Fluorite is found in various parts of the world, especially in England, in Germany, and in Kentucky and Illinois in the United States Its chief use is as a flux in METALLURGY, but it is also employed in the preparation of hydrofluoric acid and in the manufacture of opal glass and enamel, some of its more perfect crystals are used for making lenses and prisms

fluoroscope (floo'ruskōp), device used in medicine for diagnosis It involves the use of the X ray, the apparatus itself consists essentially of a pyramidal box with the large end fitted with a fluorescent screen and the small end with an aperture for the observer's eyes Since certain harmless bismuth salts do not permit the passage of the X rays, when a patient has been given a copious dose of these salts and is then placed in such a position that the abdomen is between the fluorescent screen and the X-ray source, the course of the bismuth through the alimentary canal can be seen in outline

fluor spar: see FLUORITE

Flushing (flŭ'shĭng), Dutch *Vlissingen* (vlĭ'sĭng-un), municipality (pop 19,430), Zeeland prov., SW Netherlands, a port on the southern coast of Walcheren island It is a terminus for boats crossing the English Channel from Harwich, England, and has oil refineries, shipyards, and machinery and metallurgical plants One of the first Dutch towns to rebel (1572) against Spain, Flushing has always held a strategic position dominating the mouth of the Scheldt. In the Napoleonic Wars a British expedition briefly wrested (1809) Flushing from the French In the Second World War, British commando troops took Flushing in Nov , 1944, thus clearing the entrance to Antwerp Admiral de Ruyter was born here

Flushing, 1 Village (pop 1,806), S Mich , on the Flint river and NW of Flint, settled 1833, inc 1877 Numerous Indian mounds are near by 2 Residential section of N Queens borough of New York city, SE N Y It was chartered in 1645 to English settlers by the Dutch West India Company and named Vlissingen, which became Flushing QUEENS COLLEGE is here, the Bowne House (1661) and the Quaker meetinghouse (c 1696) are also of interest In 1939 and 1940 the New York World's Fair was held at Flushing Meadows (now a park); this was later the site of meetings of the General Assembly of the United Nations See Haynes Trebor, *Colonial Flushing* (1945) 3 Village (pop 1,217), E Ohio, W of Wheeling, W.Va , in a coal area, settled 1809, inc 1840

flute, in music, generic term for such wind instruments as the FIFE, the FLAGEOLET, PANPIPES, the PICCOLO, and the RECORDER. The principal modern flute is the transverse flute, in which air is blown across a hole in its side, the vibrating edges of the hole set a column of air vibrating, thus producing the tone The origin of this type of flute was very early It underwent improvements in the baroque period and was introduced into the opera orchestra by Lully in 1677 In the classical period, the transverse flute replaced the less expressive recorder, which was generally employed in the time of Bach and Handel In the 19th cent. the transverse flute assumed substantially its present form with the improvements of Theobald Boehm (1794?–1881). He ascertained the acoustically correct size and placing of the holes and devised an ingenious system of keys to cover them. The flute may be of wood or metal and is one of the most expressive instruments of the modern orchestra It also has a considerable solo literature See Theobald Boehm, *Flute and Flute-Playing in Acoustical, Technical, and Artistic Aspects* (1871; Eng tr , 1908), David Ehrlich, *The History of the Flute from Ancient Times to Böhm's Invention* (1921)

flux. see METALLURGY. For magnetic flux, see MAGNETISM.

Fly, largest river of New Guinea, rising in the Victor Emmanuel Range in the Territory of New Guinea and flowing southeast 650 mi through the Territory of Papua to the Gulf of Papua For c 50 mi. of its course it forms the boundary between Netherlands New Guinea and the Territory of Papua It is navigable for 500 mi by steam launch.

fly, name for many winged insects, but properly restricted to certain members of the order Diptera, which includes the housefly, gnat, midge, and mosquito Only one pair of wings is functional A pair of knobbed threadlike structures, the halteres, which aid in balancing, are vestiges of the second pair of wings Many flies are harmful either as carriers of disease or as destroyers of crops Some parasitize harmful insects Vinegar flies of the genus *Drosophila* are used in the study of heredity The larvae or maggots of some species of blowfly are sometimes used to cleanse wounds and diseased bone

flycatcher, name of various members of an Old World family of songbirds, the Muscicapidae For some members of the New World tyrant flycatcher family (Tyrannidae), see KINGBIRD, PEWEE; PHOEBE, SCISSOR-TAILED FLYCATCHER

Flygare-Carlen, Emilie Smith, Swed *Flygare-Carlén* (flü'garĕ"-kaalān'), 1807–92, Swedish novelist Upon the death of her first husband she turned to writing, and her first novel, *Valdemar Klein* (1838), met with success In 1841 she married J G Carlen, and their home in Stockholm became a literary gathering place With *The Rose of Thistle Island* (1842, Eng tr , 1844) she found her proper milieu for her stories—sea life on the Bohuslan skerries where her childhood was spent Her later books include *A Night by Bullar Lake* (1847), *A Merchant's House on the Skerry* (1859), and her *Reminiscences of Swedish Literary Life* (1878)

flying animals. Birds and insects are the only large group of animals in which the chief method of locomotion is by FLIGHT Among mammals only the BAT is capable of true flight See also FLYING FISH, FLYING SQUIRREL, LIZARD

Flying Dutchman, according to sailors, an ominous apparition of a full-rigged ship seen near the Cape of Good Hope Its captain is said to be doomed to sail forever, because of a blasphemous oath he made A form of the story is used in Wagner's opera *Der fliegende Holländer*

flying fish, name for various gliding fish found in warm seas and usually traveling in schools Some have only the pectoral or anterior paired fins enlarged and winglike, e g , those of the genus *Exocoetus*, often seen in the N Atlantic, which are usually less than a foot long In others, e g , the Catalina flying fish (*Cypselurus*) which is about 18 in. long, the pelvic or hind paired fins are also enlarged. Flying fish rise into the air, sometimes to a height of 25 ft , after swimming rapidly underwater and then "taxiing" along the surface, propelled by movements of the tail It is generally agreed that they do not flap the wings but merely glide With favorable winds some are said by observers to remain aloft for a distance of 400 yd Their flesh is palatable The flying gurnard (*Cephalacanthus*) can glide for a short distance.

flying fox. see BAT

flying squirrel, name applied chiefly to certain nocturnal tree squirrels most abundant in Asia but found also in North America and Europe They do not really fly but glide from heights with the fold of furry skin, which extends along each side of the body, spread like a parachute The broad flat tail acts as a rudder. The animal's soft fur is some shade of brown or gray above. It nests in tree cavities, often a woodpecker's hole The North American tree squirrel (*Glaucomys*) is 9 to 14 in. in total length

Flynn, Edward Joseph, 1892–, American political leader, b New York city, grad Fordham law school, 1909 He practiced law in New York city and served (1917–21) in the New York state legislature He became leader of the Democratic party in Bronx co. and a power in New York and national politics. He succeeded (1940) James A FARLEY as national chairman of the Democratic party and successfully directed Franklin Roosevelt's third-term presidential campaign Named (1943) envoy to Australia by President Roosevelt, Flynn quit as Democratic national chairman, but when his appointment was not confirmed by the U S Senate, he returned to the Democratic National Committee. He described his political experiences in *You're the Boss* (1947).

Flynt, Josiah, 1869–1907, American author, b. Appleton, Wis., studied at the Univ. of Berlin. His real name was Josiah Flynt Willard. After living as a hobo for years, he wrote *Tramping with Tramps* (1899), *Notes of an Itinerant Policeman* (1900), some fiction, and his autobiography, *My Life* (1908).

flywheel, heavy metal wheel attached to a drive shaft, with most of its weight concentrated at the circumference. It is used on engines and other machines to equalise energy exerted and work done and thereby prevent great changes in velocity. Developed by James Watt in his work on the steam engine, it serves to carry the rotation past the dead center which occurs at the end of each piston stroke. Its kinetic energy fulfills a similar need in other machines

Foakes-Jackson, Frederick John: see JACKSON, FREDERICK JOHN FOAKES-

Foca, Turkey see PHOCAEA

Foch, Ferdinand (fĕrdēnäⁿ' fôsh'), 1851–1929, marshal of France. Imbued with the desire for revenge after the Franco-Prussian War, he embarked upon a military career, becoming a professor at the École de Guerre and, later, director of that institute. At the beginning of the First World War, Foch was responsible, with Joffre and Galliéni, for stopping the German advance at the Marne (Sept., 1914). He participated in the first battle of Ypres (1915) and that of the Somme (1916), and, after a brief eclipse, he was appointed (1917) chief of the French general staff. In March, 1918, Foch assumed the unified command of the British, French, and American armies. In this capacity, he was perhaps more responsible than any other one man for the winning of the war. See B. H. Liddell Hart, *Reputations, Ten Years After* (1928) and *Foch, the Man of Orléans* (1932), Charles Bugnet, *Foch Speaks* (Eng. tr., 1929).

Focşani (fôk-shan', -shä'nĕ), town (pop. 27,960), E Rumania, in Moldavia, NW of Galaţi, at the foot of the Transylvanian Alps. It is a trade center for wine, lumber, and grain and has textile and other manufactures. Here in 1789 the Austrians and Russians defeated the Turks. In the First World War the German-Rumanian armistice was signed here in Dec., 1917.

focus. In optics, the point at which rays converge after reflection by a MIRROR or refraction by a LENS is known as a real focus, the imaginary point from which rays appear to have diverged after reflection by a convex mirror or refraction by a diverging lens is known as a virtual focus

foetus see FETUS

fog, aggregation of water droplets immediately above the surface of the earth or water, similar to a cloud. A light or thin fog is usually called a mist. Fog may occur either when the moisture content of the air is increased beyond the saturation point or when the air is cooled below the dew point, in either case condensation of the excess moisture takes place on the microscopic dust particles (condensation nuclei) in the atmosphere. When caused by increase of moisture content, fog results from the evaporation of warm water into cold air, occurring either when cold air streams over a warm water surface (steam fog) or when a warm rain falls through a layer of cold air near the ground (frontal fog). More important is the occurrence when the air is cooled below dew point, the fog being caused by radiation of heat from the earth during a calm cloudless night, with subsequent cooling, by conduction, of the air adjacent to the ground (radiation fog), by the flow of warm air over a cold land or water surface (advection fog), or by air ascending a slope and cooling by expansion (upslope fog). Fog commonly found in valleys and depressions in the morning, especially during autumn, is of the radiation type, which, because of its shallow nature, is dissipated by the sun's heat as the day progresses. On the other hand, the extensive fog banks occurring frequently along the coasts of Newfoundland and Labrador are of the advective type and, being generally quite deep, often persist for days at a time, greatly hindering shipping and aviation activity. The "pea-soup" fogs of London result mainly from the large amount of industrial smoke in the air over the city, which, in addition to providing numerous nuclei for condensation, contributes a darkening effect in itself

Fogarty, Thomas, 1873–1938, American illustrator and art teacher, b. New York city, studied at the Art Students League. He taught at the League from 1908 to 1922. Among the books which Fogarty illustrated are Jacob Riis's *Making of an American* and several of David Grayson's

Fogazzaro, Antonio (äntô'nyō fōgät-tsa'rō), 1842–1911, Italian novelist and poet. Born of a well-to-do family and not obliged to earn his living, he studied but did not practice law. In 1874, at 32, he published his first work, a poem, *Miranda*. His famous novel *Malombra* (1881, Eng. tr., *The Woman*, 1907) was followed by a number of fictional works, involved, full of "characters," humorous, and recalling the 19th-century English novelists. They include *Daniele Cortis* (1885; Eng. tr., 1887); *Piccolo mondo antico* (1896, Eng. tr., *The Patriot*, 1906), one of the great Italian novels of the later 19th cent.; and its three sequels, *Piccolo mondo moderno* (1901; Eng. tr., *The Sinner*, 1907), *Leila* (1905; Eng. tr., *The Saint*, 1906), and *Leila* (1911). See Tommaso Gallarati-Scotti, *Life of Antonio Fogazzaro* (1920, Eng. tr., 1922).

Fogelberg, Bengt Erland (bĕngt' ĕr'länd fō'gulbĕr"-yü), 1786–1854, Swedish sculptor. He studied in Stockholm, in Paris, and in Rome, where he lived for many years. His statues of Greek and Norse mythological figures, such as *Venus Victrix*, *Odin*, and *Thor*, are in the Stockholm Museum. He also made portrait statues of bygone Swedish heroes including Gustavus Adolphus and Birger Jarl. Charles XIV made him court sculptor just before his death.

Fogg, George Gilman, 1813–81, American journalist, b. Meredith Center, N.H., grad. Dartmouth, 1839. Interested in politics, he was active in the Free-Soil movement and in the formation of the Republican party. He was influential largely through the *Independent Democrat*, which he founded (1846) in Concord, N.H. From 1861 to 1865 he was U.S. minister to Switzerland.

Foggia (fôd'jä), city (pop. 57,234), capital of Foggia prov., Apulia, S Italy. It is an important communications center and the main wheat market of S Italy. Since ancient times it has been the custom to store grain in huge holes dug in the squares of the city. Foggia was a favorite residence of Emperor Frederick II. There is a greatly restored 12th-century cathedral, only a fine portal is left of Frederick's castle. Foggia was the chief German air base in S Italy during the Second World War and suffered heavy damage from Allied bombing.

Fogo (fō'gō), town (1945 pop. 1,036), on Fogo Island, N.F., on the north coast.

Fogo Island, area 96 sq. mi., off NE Newfoundland, N of Hamilton Bay. East of it 25 mi. are two islets, the Funks, the last breeding place of the great auk, which became extinct after it was driven from here. Cape Fogo is on the northeast coast.

Föhr (fûr), island (32 sq. mi.; pop. c.11,200), off Schleswig-Holstein, N Germany, in the North Sea, one of the North Frisian Islands. Agriculture, fishing, and digging oysters are the main occupations. The principal town, Wyk (pop. 5,948), is a bathing resort.

foie gras (fwä grä') [Fr.,=fat liver], livers of fat geese. Duck livers may also be used, but are considered inferior because the fat melts too readily. The birds, penned in close coops to prevent exercise, are systematically fed to the limit of their capacity. Under this treatment the livers are brought to weigh 2 or 3 lb. or more. *Foie gras* was prized by epicures in Egypt, Greece, and Rome, but the fattening of geese for their livers became a lost art during the Middle Ages except in Strasbourg. The industry was revived in the 18th cent. following the invention of *pâté de foie gras* by Close (or Clausse), a chef brought to Alsace by a French governor of the province. The *pâté* is made by cooking fresh livers, reducing them to a paste delicately seasoned with wine and aromatics and combining it with truffles. The making of *foie gras* has become a famous industry of Strasbourg and of Toulouse, France. The product is exported to all parts of the world in several forms—the esteemed *pâté; foie gras au naturel*, the plain cooked livers, a sausage, and a purée.

Foix, Gaston de (gastō' du fwä'), 1489–1512, duke of Nemours, French general in the ITALIAN WARS, nephew of King Louis XII. As commander of the French army in Italy in 1512, he proved his outstanding ability, making his small army highly effective by the use of surprise and forced marches. He relieved Bologna, defeated the Venetians at Isola della Scala and Brescia, and successfully laid siege to Ravenna, where he was killed.

Foix (fwa), town (pop. 6,026), capital of ARIÈGE dept., S France, on the Ariège. Today a market center with a bauxite industry, it was the capital of the countship of Foix, which in the 11th cent. was detached from the countship of Carcassone for Roger, first count of Foix. His successors rose to great power. Though they supported their suzerains, Raymond VI and Raymond VII of Toulouse in the ALBIGENSIAN CRUSADE, they ultimately retained their lands, to which they added, by marriage, the viscounty of BÉARN. The most famous of these counts was GASTON III (Gaston Phoebus). In 1401 the line of Foix-Grailly succeeded the extinct direct line. Francis Phoebus in 1479 inherited the kingdom of NAVARRE from his mother, Leonora, his sister, Catherine, succeeded him. Through her marriage (1494) with Jean d'Albret, she brought her possessions to the house of ALBRET, whose heir became king of France in 1589 as Henry IV. Foix, united with the crownland in 1607, continued as a province under the jurisdiction of the parlement of Toulouse.

Fokine, Michel (mēshĕl' fôkēn', Rus. fô'kyĭn), 1880–1942, Russian ballet dancer and choreographer. He studied at the Imperial Theatrical School (1889–98) and danced at the Imperial Theater, Petrograd. Here his choreographical reforms won Nijinsky, Pavlova, and Mordkin as followers. He created *The Dying Swan* for Pavlova in 1905. In 1909 he took to Paris a company of dancers which became Diaghilev's Russian Ballet. In his choreographical work (1909–14) for this company, based on the old system of training but with elimination of rigid traditions, Fokine founded modern ballet. He became a citizen of the United States (1932), where he formed several companies and conducted a ballet school. His numerous choreographical works include *Acis et Galatée*, *Les Sylphides*, *Petrouchka*, *Prince Igor*, *Le Coq d'Or*, *Scheherazade*, *L'Oiseau de feu*, and *Bluebeard*. See C. W. Beaumont, *Michel Fokine and His Ballets* (1935), Grace Robert, *The Borzoi Book of Ballets* (1946).

Fokker, Anton Hermann Gerard (än'tōn hĕr'mən gā'rärt fô'kûr), 1890–1939, American airplane constructor, b. Java. In 1912 he erected an airplane factory at Johannesthal, Germany, and a year later he established a factory also at Schwerin. In the First World War he became famous as the constructor of the Fokker triplanes and biplanes, the combat planes employed by the German army. After the war he turned to the development of commercial aircraft, establishing the Fokker Aircraft Works in the Netherlands. In 1922 he came to the United States and was later naturalized. He was for a time president of the Fokker Aircraft Corporation of America.

Folcroft (fōl'krôft), borough (pop. 1,592), SE Pa., near Philadelphia, inc. 1927.

fold, in geology, a bent or deformed arrangement of stratified rock. Although stratified rocks are normally deposited on the earth's surface in horizontal layers (see STRATIFICATION), they are frequently found inclined or curved upward or downward from the horizontal. Arches or upfolds in stratified rock are called anticlines, troughs or downfolds, synclines. A third type of fold, the monocline, slopes in but one direction, it is more correctly called a flexure and generally passes into a fault. An imaginary line drawn along the crest of an anticline or the trough of a syncline is its axis, the two sides curving away from the axis are the limbs. If both limbs, dipping in opposite directions, make the same angle with the horizontal, and if an imaginary axial plane passed through the axis, and the center of the fold is perpendicular and divides the fold into two equal halves, the fold is symmetrical, if the limbs make unequal angles, and if the axial plane is inclined and does not bisect the fold, the fold is asymmetric. If one limb lies partly under the other, and the axial plane is inclined, the fold is overturned, if one limb lies almost completely under the other, and the axial plane is almost horizontal, the fold is recumbent. The axis of a fold cannot be indefinitely extended parallel to the horizontal, but plunges or emerges as the fold tapers off to a plane. Certain domes are very short anticlines with axes plunging at both ends, while some basins, similarly, are synclinal structures. Folds are commonly formed at some distance below the surface, but complete folds or portions of folds are exposed by erosion. Anticlines frequently have their crests eroded, till only the worn-down stumps of the two limbs remain, in a similar manner, younger rock may occupy the trough of a syncline so that only the edges of the limbs project above the surface. The nature of the fold can generally be determined, however, from the arrangement of the outcrops, or exposed portions, thus, two outcrops dipping toward each other mark a syncline, and two outcrops dipping away from each other, an anticline. Folds on a grand scale, extending, for example, most of the length of a continent, are known as geosynclines and geanticlines. The immediate cause of folding is generally conceded to be the horizontal compression of the earth's surface, anticlines being squeezed up by this compression and synclines formed between anticlines. The problem of the ultimate cause of fold formation is similar to that of fault formation, both being earth movements involved in MOUNTAIN building.

Földes, Jolan (yō'län fûl'dĕsh), Hung. *Földes Jolán*, 1902–, Hungarian novelist. Her novel *The Street of the Fishing Cat* (1936, Eng. tr., 1937) won the All-Nations Prize.

Folengo, Teofilo (tāō'fēlō fōlĕng'gō), 1491–1544, Italian burlesque poet, who used the pseudonym Merlinus Coccaius or Merlino Coccajo. He became a benedictine monk, but left his monastery c.1515 to become a wandering poet, returning to it c. 1527. Folengo was the first of the macaronic poets (mixing Latin and the vernacular and adding Latin endings to Italian words). His *Baldus* is a burlesque of the chivalric romance preceding *Don Quixote*. There is evidence in *Pantagruel* that *Baldus* was known to Rabelais.

Foley, John Henry, 1818–74, Irish sculptor, studied at the Royal Academy of Arts. He executed many important commissions, including the figure of Prince Albert and the group *Asia* for the Albert Memorial and statues of Sir James Outram (Calcutta) and Stonewall Jackson (Richmond, Va.). He was the designer of the seal of the Confederate States of America.

Folger, Charles James (fōl'jûr), 1818–84, U.S. Secretary of the Treasury (1881–84), b. Nantucket, Mass., grad. Hobart College, 1836. A lawyer of Geneva, N.Y., he held judicial posts and was (1861–69) a state senator. Opposition to slavery caused

him to turn from the Democratic to the Republican party, but in 1870 he was the candidate of both parties for the post of associate justice of the state court of appeals—a post he held except when chief justice briefly As Secretary of the Treasury under President Arthur he reduced the public debt and initiated civil service administration in his department He was defeated in the race for governorship of New York in 1882 by Grover Cleveland

Folger, Henry Clay, 1857–1930, American capitalist and collector of Shakspeariana, grad Amherst College, 1879, and Columbia School of Law, 1881 His connection with Standard Oil companies, beginning in 1879, continued until his retirement 49 years later as chairman of the board of the Standard Oil Company of New York He became a Shakspere admirer in his college days, and study made him a discerning and enthusiastic collector His wife, **Emily Jordan Folger** (d 1936), was his ardent associate in this work Their collection, quietly acquired, became one of the largest in the country and extremely valuable The **Folger Shakespeare Library,** east of the Library of Congress, Washington, D C , was dedicated in 1932

Folger, Peter, 1617–90, British settler on Nantucket He was associated with Thomas Mayhew on Marthas Vineyard, becoming missionary, schoolmaster, and surveyor, but in 1659 he went to Nantucket as surveyor He moved there in 1663, added other duties to those he possessed in Marthas Vineyard, and became a leader in the community He was a Baptist and was opposed to the intolerance of the Massachusetts leaders He wrote *A Looking Glass for the Times* (1676), which his grandson, Benjamin Franklin, described as a defense of liberty of conscience in "homespun verse—written with a good deal of decent plainness and manly freedom "

Folger Shakespeare Library. see FOLGER, HENRY CLAY

Folgore da San Geminiano (fōl'gōrā dä sän jāmēnyä'nō), late 13th-century Italian poet He wrote a cycle of sonnets on the seasons, interspersed with satire upon the manners of the youth of his day For translations of his poems, see D G Rossetti, *The Early Italian Poets* (ed by E G Gardner, 1904), and Lorna De Lucchi, *An Anthology of Italian Poems* (1922)

Foligno (fōlē'nyō), city (pop 10,694), Umbria, central Italy It is a commercial center, manufacturing cotton and wool textiles and paper It has a Romanesque cathedral (12th cent) and several notable churches and palaces A local school of painting flourished in the 15th cent

folk dance, primitive, tribal, or racial form of the DANCE, sometimes the survival of some ancient ceremony or festival The term is used also to include characteristic national dances, country dances, and figure dances in costume to folk tunes Many children's games, such as "London Bridge" and "The Farmer in the Dell," are traditional folk dances Good examples are the Spanish alemana and FANDANGO, the Bohemian POLKA, the Hungarian czardas, the Irish JIG, the HIGHLAND FLING, and the English MORRIS DANCE, sword dance, and Maypole dance American folk dances, such as the VIRGINIA REEL and "Pop Goes the Weasel," are largely derived from European sources Early in the 20th cent Cecil James SHARP, founder of the English Folk Dance Society, made a notable collection of English folk songs and dances, including many from the S Appalachian Mts The American Folk Dance Society has done much to preserve the knowledge of old American country dances, and a similar interest has developed in many other countries Folk dancing is often taught in schools, and it is becoming increasingly popular as a form of recreation See Beth Tolman and Ralph Page, *The Country Dance Book* (popular ed , 1944), Anne S Duggan and others, *Folk Dance Library* (5 vols , 1948), Margot Mayo, *American Square Dance* (2d ed , 1948)

Folkestone (fōk'stun), municipal borough (1931 pop 35,889, 1947 estimated pop 41,810), Kent, England, on the Channel at the foot of chalk hills WSW of Dover. It is a summer resort and seaport The **parade of the Leas,** along the cliffs, terminates at a war memorial There are vestiges of Roman occupation in the vicinity, and an 11th-century parish church is restored Folkestone has a good harbor, used by fishing vessels and passenger ships to Boulogne and other continental ports Folkestone is the birthplace of William Harvey The town suffered frequent air raids and bombardment in the Second World War

Folketing see RIGSDAG.

folklore, in its widest extent, the body of oral traditions, art, and superstitions of an ancient or a modern society It includes folk dances, folk songs, folk medicine (the use of magical charms and herbs), and folk tales (myths, rhymes, and proverbs) The study of folklore (a name first used in the middle of the 19th cent) originally was the domain of the antiquarian, but the simultaneous rise of European romanticism, with its interest in the past, and of nationalism, with its stress on the indigenous, made study of folklore a serious pursuit Folk and fairy tales were collected and are being collected today in even greater quantity. Folk heroes (e g , Frederick Barbarossa in Germany, Robin Hood in England, the Cid in Spain, and Paul Bunyan and John Henry in the United States), both semihistoric and imaginary, received much attention Theories to explain folk tales—particularly to explain away the abhorrent and fantastic elements—were legion Max Müller, a philologist, interpreted the legends as linguistic corruptions, Jakob Grimm saw them as corrupted cosmic allegories, the German school considered them as personified elements of nature; Edward Tylor and Andrew Lang held them to be survivals from a savage society, and more recently the psychoanalytical school finds them fraught with sexual symbolism Today anthropologists regard folk tales as an imaginative expression by a social group of its desires, attitudes, and cultural values They use tests to determine whether the tale is the result of diffusion or independent invention Almost every country has a folklore society which collects, analyzes, and publishes folk material (e g , the English Folklore Society, which published *Folklore,* and the American Folklore Society, which publishes the *Journal of American Folklore*) See B A Botkin, *A Treasury of American Folklore* (1944), *Funk and Wagnalls Standard Dictionary of Folklore, Mythology, and Legend* (ed by Maria Leach, 1949)

Folks, Homer (fōks), 1867–, American social worker, b Hanover, Mich , grad Harvard, 1890 As secretary of the State Charities Aid Association of New York for many years (after 1893), he helped draft and secure much important and progressive legislation in the fields of child welfare, probation, mental hygiene, and public health He acted as special adviser (1900) in relief activities to the military government of Cuba and conducted surveys (1917–19) in Europe for the American Red Cross His writings include *The Care of Destitute, Neglected, and Delinquent Children* (1900) and *The Human Costs of War* (1920)

folk school, form of adult education which in its most widely known form originated in Denmark in the middle of the 19th cent The idea as originally conceived by Bishop Nikolai GRUNDTVIG was to stimulate the intellectual life of young adults (generally 18 to 25) of rural Denmark, to foster patriotism and strengthen religious conviction, and to provide some agricultural and vocational training The first school, established in Schleswig in 1844, was moved across the Danish border after Schleswig passed to Prussia The movement then gained impetus and numerous schools were established, with national history and literature emphasized in the curriculum The courses were shortened to five months in the winter and three months in the summer The schools were of great influence on the civic life of rural Denmark and helped measurably to improve the condition of the small farmer whose products were marketed through cooperative societies The folk-school idea spread throughout Europe, with local adaptations in plan In the United States notable experiments in this form of adult education were instituted at Rome, Ga , and at Brasstown, N C , where the John C Campbell Folk School was founded in 1925 See H W Foght, *The Danish Folk High Schools* (1914), Martin Hegland, *The Danish People's High Schools* (1915), J K Hart, *Light from the North* (1927), O D Campbell, *Danish Folk School* (1928), Holger Begtrup, *The Folk High Schools of Denmark* (1936)

folk song, music of anonymous composition, transmitted orally, and consisting of pure melody The theory long held that folk songs were composed by the people has been reinterpreted by recent scholars, who assume that each folk song began as the creation of one person and that the group's contribution lies in the alterations, which are sometimes improvements, made as the song is transmitted National traits are observable in folk song, even in the case of songs transplanted from one country to another There is scarcely any people whose folk song is wholly indigenous, a notable instance of transplanting is in the examples of the English BALLAD found in various parts of the United States Bela Bartok did outstanding work in the collecting and notating of authentic folk songs of Central Europe, and the influence of this work is shown in his compositions The Russian nationalists—Glinka and "The Five"—made use of the rich store of Russian folk song On the other hand, folk song is often found to have been influenced by art music, this is particularly true of 17th- and 18th-century European folk song Some American scholars include as folk song certain songs of traceable authorship, e g , *Dixie* The study of the folk song was greatly facilitated by the invention of the phonograph, for the folk songs of many peoples can be only approximately and with difficulty written down in conventional Western notation See CHANTEY, SPIRITUAL, bibliography under BALLAD See Cecil Sharp, *English Folk Song* (1907), Ralph Vaughan Williams, *National Music* (1934), Leonhard Deutsch, *A Treasury of the World's Finest Folk Song* (1942), Olin Downes and Elie Siegmeister, *A Treasury of American Song* (rev ed , 1943), J A. Lomax and Alan Lomax, *Folk Song, U S.A* (1948)

Folkston, city (pop 1,024), co seat of Charlton co., SE Ga , SE of Waycross and near the St. Marys river, here the Fla. line, in a lumber area.

folkways, term coined by William Graham SUMNER to define more clearly those group habits and guides to conduct usually denoted as CUSTOM. Those behavior patterns which become reinforced by group approval and sometimes coerced by moral sanctions are called mores by Sumner The mores of a culture form the basis of social law The total folkways of a group, which include its traditions, manners, usages, mores, and laws, represent its culture By emphasizing the cultural distinctiveness of such patterns and their selective cumulation, Sumner provided in *folkways* a useful addition to cultural concepts. The term has failed, however, to maintain the currency it once received in the literature of social science See W G. Sumner, *Folkways* (1907)

Follansbee (fōl'ŭnzbē), steel-manufacturing town (pop. 4,834), W Va , in the Northern Panhandle, on the Ohio and S of Weirton, inc 1906 Tar and chemicals are also produced

Follen, Charles (Karl Theodor Christian Follen) (fō'lun), 1796–1840, American educator, b Giessen, Germany, educated at the Univ of Giessen After serving (1813–15) against Napoleon, he taught in 1818 at the Univ of Jena and from 1820 to 1823 at the Univ of Basel, but was dismissed in both instances because of his liberal political views In 1824 he came to the United States and in 1825 joined the faculty of Harvard to teach ethics, history, and German, his was the first course in German offered in America In 1828 he married Eliza Lee Cabot of Boston, a marriage which brought him into an intellectual and liberal circle that included W E Channing and Henry Ware He became an American citizen in 1830 His identification with the New England antislavery movement led to his dismissal (1835) from Harvard, and he devoted the remainder of his life, as lecturer, writer, and Unitarian minister, to reform movements See biography by G W Spindler (1917) His associate in reform work was his wife, **Eliza Lee (Cabot) Follen,** 1787–1860, who edited his works (5 vols , 1841–42), to which she appended a memoir She became influential as a writer in the Unitarian movement as well as in antislavery agitation and in promotion of women's education

Folquet de Marseille (fōlkā' du marsā'yu), 1150–1231, Provençal troubadour, noted for his songs of gallantry and love He took orders and rose to be archbishop of Toulouse He became notorious as the chief prosecutor of the Albigensian Crusade against the heretics of Provence and lived to persecute his former fellow singers Dante awarded him a place in Paradise

Folsom (fōl'sum), city (pop c 2,400), central Calif , on the American river and ENE of Sacramento, founded 1855, inc 1946 The town was on the road to the gold fields, and the first steam railroad in California was built from Sacramento to Folsom in 1856 Folsom is the seat of a state prison

Folsom culture (fōl'sum, fōl'–), early North American culture known through artifacts first excavated (1926) near Folsom, E of Raton, N Mex The artifacts include chipped flint points known as Folsom points and a variety of other stone implements The Folsom points are shaped somewhat like a laurel leaf and show a distinct lengthwise groove on each face It is believed that they were probably javelin heads Remains of extinct mammals including the bison, camel, and mastodon have been found in association with Folsom points There is evidence that many of the animals were cooked and eaten where they were killed Since the first finds were made, numerous other sites in W and SW United States and some sites in Canada have yielded evidences of Folsom culture No remains of Folsom man have yet been discovered The Folsom findings are significant in furnishing evidence that indicates, according to some scientists, the existence of man in North America from 15,000 to 25,000 years ago Others hold that man reached North America between 7,000 and 10,000 years ago See F C Hibben, *Lost Americans* (1946)

Folwell, William Watts (fōl'wul), 1833–1929, American educator and historian, b Romulus, Seneca co , N Y , grad Hobart College, 1857 He taught mathematics at Hobart, studied in Germany, served in the Union army in the Civil War, and later taught at Kenyon College As first president of the Univ of Minnesota (1869–84), he developed a broad, forward-looking educational program Later (1884–1907) he was librarian and professor of political science there In 1872 he helped initiate the Minnesota geological and natural history survey He also was active in Minneapolis and state affairs Much of his scholarly *History of Minnesota* (4 vols , 1921–30) was completed after his 90th year His autobiography and letters were published in 1933

Fomors (fō'mōrz) [Irish, =overseas], in Irish tradition, as recorded in *The Book of Invasions,* a foreign invading people who attacked the FIRBOLGS and defeated them They were supposed to come from Scandinavia They were defeated by the TUATHA DE DANANN.

Fonda (fŏn'dù) **1** Town (pop 1,188), NW Iowa, W of Fort Dodge **2** Industrial village (pop 1,123), co seat of Montgomery co, E central N Y, on the Mohawk and W of Amsterdam, inc 1850 It is a freight transfer point Gloves and silk fabrics are made here

Fond du Lac (fŏn' dù lăk", jŏō lăk"), industrial city (pop 27,209), co seat of Fond du Lac co, E Wis, at the south end of Lake Winnebago and on the Fond du Lac, NW of Milwaukee, settled c 1835, inc 1852 From its beginning as a French fur-trading post in the late 18th cent, Fond du Lac grew to be a lumbering town and, after the coming of the railroad, into an industrial city with railroad shops, limestone quarries, and various manufactures It also attracts visitors with its resort facilities In the 18th cent the term Fond du Lac was applied to many regions around the Great Lakes, including the bay near Keweenaw peninsula

Fonseca, Juan Rodríguez de (hwän' rōdrē'gĕth dā fōnsä'kä), 1451–1524, Spanish prelate He was bishop successively of Badajoz, Palencia, Córdoba, and Burgos and later archbishop of Rossano As head of the department of affairs of the Indies, he greatly hampered, after 1493, the explorations of Columbus and was later an enemy of Hernán Cortés

Fonseca, Manuel Deodoro da (manwĕl' dŭdō'rō dä fōnsä'ku), 1827–92, first president of Brazil (1891) A leader of the discontented militarists who helped overturn the empire (Nov, 1889), he headed the provisional government which established the republic In 1891, Fonseca was elected president by the constituent assembly Attempting to seize absolute power, he was forced to resign (Nov, 1891) and was succeeded by Vice President Floriano PEIXOTO

Fonseca, Gulf of (fōnsä'ka), inlet of the Pacific, c 50 mi long and 30 mi wide, Central America In a volcanic area, it is a natural but shallow harbor shared by Nicaragua, Honduras and Salvador Honduras has ports on Tigre Island, La Unión, Salvador, is on the gulf Nicaragua leased (1916) rights on the gulf to the United States as an adjunct of the NICARAGUA CANAL, causing serious protests from Salvador, which were upheld by the Central American Court of Justice but ignored by the United States and Nicaragua

Fontaine, Pierre François Léonard (pyĕr' frŭswä' läônär' fôtĕn'), 1762–1853, French architect He was known chiefly for the work which, beginning in 1794, he did jointly with Charles PERCIER, the development of the Empire style in France was almost exclusively an expression of their talents After Napoleon's fall the partnership dissolved (1814), and Fontaine thereafter practiced as court architect in the reigns of Louis XVIII, Charles X, and Louis Philippe He laid out the Rue de Rivoli in Paris, enlarged the Palais Royal, of which he also wrote a history, and published a number of books on architecture

Fontainebleau (fōtĕnblō'), town (pop 13,361), Seine-et-Marne dept, N France, SE of Paris It is a favorite spring and autumn resort It was long a royal residence, chiefly because of the excellent hunting in the vast Forest of Fontainebleau Louis IV resided, Philip IV and Louis XIII were born, here Francis I built the magnificent palace, chief glory of French Renaissance architecture, which was expanded by Henry IV Benvenuto Cellini was one of the artists who decorated the interior The palace witnessed important events ~here Louis XIV signed (1685) the revocation of the Edict of Nantes, Pope Pius VII was imprisoned here (1812–14), and here Napoleon signed his first abdication (1814)

Fontainebleau school see BARBIZON SCHOOL

Fontaine-de-Vaucluse, France see VAUCLUSE

Fontana, Carlo (kär'lō fōntä'nä), 1634–1714, Italian architect Like his master, Bernini, he worked in the debased baroque style at Rome His designs included a new façade for the much-rebuilt Church of Santa Maria in Trastevere (1702) He wrote a work on the Vatican and several engineering treatises

Fontana, Domenico (dōmä'nēkō), 1543–1607, Italian architect He went to Rome, where he built the Sistine Chapel in the Church of Santa Maria Maggiore (c 1580) for Cardinal Peretti When his patron was made pope (Sixtus V), Fontana played a leading part in the great rebuilding of Rome He designed the Lateran palace (1588) and portions of the Vatican, notably the library (1588) An engineer as well as an architect, he built, with his brother Giovanni, the great aqueduct and fountain known as the Acqua Felice (1587) and in 1586 erected the obelisk in front of St Peter's, a feat which won him wide renown With Giacomo della Porta, he completed the dome of St Peter's, following the model left by Michelangelo On the death of Sixtus V, Fontana's Roman career collapsed, he withdrew to Naples, where he built the imposing royal palace (1600) and where he died before the execution of his magnificent designs for the improvement of the harbor

Fontana, Prospero (prō'spārō), 1512–97, Italian painter He aided Primaticcio in the decoration of Fontainebleau but was chiefly active in Bologna, where most of his work remains His *Entombment* (Bologna) is characteristic. His daughter **Lavinia Fontana** (lävē'nyä), 1552–1614?, was a fashionable portrait painter in Bologna and Rome Her two self-portraits (one, Pitti Gall, Florence, the other, St Luke's Acad, Rome) and a portrait of Pope Gregory XIII are well-known works

Fontane, Theodor (tā'ōdôr fōntä'nu), 1819–98, German novelist, poet, and critic Trained as an apothecary, he found his way into journalism and wrote a book of poems published in 1851 After 10 years on the staff of the *Kreuzzeitung*, he was commissioned to write a history of the Franco-Prussian War, went to the front, and was captured After a month's imprisonment, he returned to journalism and served for 19 years, chiefly as a dramatic critic, on the *Vossische Zeitung* When almost 60 he began writing the prose fiction which is his chief claim to distinction, although he excelled as a ballad poet His novels, which blend realism with poetic style and artistic form, include *L'Adultera* (1882), *Irrungen, Wirrungen* (1888, Eng tr, *Trials and Tribulations*, 1917), and *Effi Briest* (1895, Eng tr, 1913–15) He also wrote three novelettes, an account of his imprisonment, travel books, and the autobiographical *Meine Kinderjahre* (1894, Eng tr of extracts, *My Childhood Days*, 1913–15) See Kenneth Hayens, *Theodor Fontane a Critical Study* (1920)

Fontanes, Louis, marquis de (lwē' markē' du fôtan'), 1757–1821, French statesman and poet He was the chief intermediary between Napoleon and the men of letters of the time and was the author of the poems *Le Jour des morts* and *Les Tombeaux de Saint-Denis* His collected works (1839) contain a biography by Sainte-Beuve

Fontanet, battle of, see FONTENOY, France

Fontanne, Lynn (fŏntăn'), 1887?–, American actress, b England, popular on the English as well as the American stage She made her first appearance in the New York theater in 1910 In 1924 she joined the Theatre Guild, New York city She has appeared notably in *The Guardsman*, *Strange Interlude*, *Elizabeth the Queen*, *Reunion in Vienna*, *Design for Living*, *The Taming of the Shrew*, *Idiot's Delight*, *There Shall Be No Night*, *O Mistress Mine*, and *I Know My Love* In most of her roles her husband, Alfred Lunt, whom she married in 1922, has played opposite her as co-star

Fonte, Jacopo della see QUERCIA

Fontenailles, battle of see FONTENOY, France

Fontenelle, Bernard le Bovier de (bĕrn är' lu bôvyā' du fōtunĕl'), 1657–1757, French author, nephew of Corneille He wrote poems, operas and tragedies but found his true forte in the popularization of science, writing in this vein *Entretiens sur la pluralite des mondes* (1686), his chief work

Fontenoy (fôn'tunoi, Fr fōtunwä'), village (pop 742), Hainaut prov, Belgium, SE of Tournai Here in 1745 Maurice de Saxe, in his most celebrated victory, led the French against the British and their allies under the duke of Cumberland in the War of the Austrian Succession

Fontenoy (fôn'tunoi, Fr fōtūnwä'), small village, Yonne dept, N central France, near Auxerre It is the reputed site of a battle in A D 841 when Charles II of France and Louis the German checked their elder brother, Emperor LOTHAIR I The battle led to the Oath of Strasbourg (see STRASBOURG, OATH OF) and the Treaty of Verdun (see VERDUN, TREATY OF) Fontenoy is also known as Fontenay, Fontanet, or Fontenailles

Fonthill, village (pop 1,000), S Ont, NW of Welland

Foochow (fōō'chou'), Mandarin *Fu-chou*, city (pop 300,377), capital of Fukien prov, China, a port on the Min-kiang delta After the OPIUM WAR (1839–42) it was established as a TREATY PORT About 1850 it was the principal Chinese port and the world's largest tea-exporting center Its importance declined because of the decreased demand for Fukien tea and because of harbor silting, which bars large vessels Bamboo paper and umbrellas are manufactured, and fruits are canned here In the Second World War, Foochow was captured by the Japanese in Oct, 1944, and recovered in May, 1945 It fell to the Communists in 1949

food, see COOKERY, DIET, FROZEN FOODS, NUTRITION; VITAMINS

food adulteration, the act of intentionally debasing the quality of goods offered for sale either by the admixture or substitution of inferior substances or by the removal of some valuable constituent to be used in another form for separate sale The classics contain allusions to wine makers and dealers who colored and flavored their wine In England as early as the 13th cent, bakers cheapened their wares or scanted the weight, and law makers for the first time made an effort to prevent fraudulent dealings on the part of butchers and beermakers In the 18th and early 19th cent in England, coffee, tea, and cocoa were protected against "sophistication" by parliamentary laws, passed not so much in the interest of the consumer as to keep up internal revenues About the middle of the 19th cent chemical and microscopical knowledge had advanced so far that food substances could be analyzed, and the subject of food adulteration began to be studied from the standpoint of the rights and welfare of the consumer The London *Lancet* in 1851 conducted a special investigation In 1855 a parliamentary commission was appointed, and in 1860 the first food law framed in the interest of the purchaser was passed This law, lacking means of enforcement, remained in large measure ineffective until 1872, when penalties for violation and officials of administration were provided In the United States the Pure Food and Drugs Act of 1906 was the result of a long and stormy campaign led by Dr Harvey W WILEY This law, amended in 1912, 1913, and 1919, declared in effect that food is adulterated if it is mixed or packed with another substance so as to reduce or lower or injuriously affect its quality and strength, if any substance has been substituted, wholly or in part, if any valuable constituent has been wholly or in part abstracted, if it has been mixed, colored, powdered, coated, or stained to conceal damage or inferiority, if poisonous or deleterious substances have been added, if it consists wholly or in part of filthy, putrid, or decomposed animal or vegetable substance, or if the product be from a diseased animal or one that died otherwise than by slaughter The act was superseded in 1938 by the stricter Food, Drug, and Cosmetic Act administered since 1940 by the Food and Drug Administration of the Federal Security Agency, which is charged with enforcing truthful and informative labeling of essential commodities, maintaining staff laboratories and formulating definitions and standards promoting fair dealing in the interests of the consumer The Wheeler-Lea Act (1938) makes unlawful false advertising as well as misbranding, the placing on packages of false or misleading statements of weight, qualities, and place of manufacture Imported goods which violate the provisions of the act may be denied admittance to the country and if not exported within a given time may be destroyed The Federal law controls traffic from one state to another and is supplemented by local regulations, which require food handlers to be licensed to prevent the spread of tuberculosis, typhoid, and syphilis and which provide for the inspection by health officers of meat and other foods, of restaurants, and of dairies and cold storage methods Foods often misbranded or adulterated are coffee, tea, milk and cream, butter, cheese, olive oil, bread and flour, breakfast foods and prepared cereals, canned vegetables, vinegar, spices, candy, syrups, and soft drinks Distilled liquors may be entirely synthetic and contain dilute alcohol, raisin or prune syrup, creosote, caramel, and glucose Many special meat products are put up in small amounts and sold as delicacies at high prices, such as "potted" meats and various kinds of sausage, most of these are special preparations using inferior qualities of meat See F A Filby, *A History of Food Adulteration and Analysis* (1934), R D Lamb, *American Chamber of Horrors* (1936), C R Martin, *Practical Food Inspection* (3d ed, 1948)

Food and Agriculture Organization (FAO), agency of the United Nations It developed out of the conference on food and agriculture held at Hot Springs, Va, in May, 1943 The constitution was formally adopted in Oct, 1945, and the FAO became an agency of the United Nations in Dec, 1946 In 1950 there were 68 countries that belonged to the FAO including some which were not members of the United Nations The organization is governed by a conference composed of the entire membership and meeting at least once biennially and by a council consisting of 18 members Operations of the staff are managed by the director general The objective of the FAO is to contribute toward an expanding world economy by bettering the conditions of rural life, improving agricultural production and distribution, and raising the level of nutrition The FAO has no mandatory powers but seeks by making investigations, publishing reports, and organizing conferences to accomplish its purposes The program operations are conducted by standing committees on agriculture, fisheries, rural welfare, and the like Regional conferences exist in Europe, the Near East, the Far East, and Latin America Among the activities of the FAO are devising plans of food allocation and offering technical aid to members in increasing forestry yield, improving seeds, and developing serums and vaccines

Food, Drug, and Cosmetic Act: see FOOD ADULTERATION

food poisoning, name applied to a number of illnesses marked by gastrointestinal disturbances and other symptoms and caused by eating food contaminated with poisonous substances Formerly the expression "ptomaine poisoning" was used for many kinds of food poisoning, but this term has been generally replaced Ptomaines are produced by the action of bacteria of decay on proteins and are not known to cause illness There are several chief causes of food poisoning, including the presence of bacterial toxins in the food, especially toxins produced by species of *Staphylococcus* and *Salmonella* and by *Clostridium botulinum* (see BOTULISM), the presence of poisonous inorganic chemicals in the food, and the presence of poisonous organic substances in the plant or animal material used for food Staphylococcus poisoning is believed to be the commonest form, the organisms can reach the food from the air or through

contact with a handler, and if the food and temperature are suitable the bacteria grow and form toxin The symptoms (nausea, vomiting, diarrhea, and acute prostration) usually appear from 2½ to 3 hr after eating the contaminated food, in general recovery is quite rapid Among the foods that have produced staphylococcus poisoning are bakery products filled with custard and cream, milk, sausage, ham, tongue, and other cured meats Preventive measures include the reheating to a certain temperature of cream-filled baked goods after the filling has been added and the refrigeration of the products after baking Refrigeration of ham and other meats is essential Many other foods also can cause poisoning if unrefrigerated for a few hours Frozen foods may produce staphylococcus poisoning if not kept under constant refrigeration before using Food poisoning caused by bacteria of the genus *Salmonella* is believed to be produced by ingesting with the food large numbers of the living bacteria. Symptoms usually develop within from 7 to 72 hr , the onset is, as a rule, sudden, and the symptoms are similar to those of staphylococcus poisoning with the addition of abdominal pain (often the first symptom), headache, and chill Contamination of the food is frequently caused by the excreta of rodents and houseflies that harbor the bacteria, the infection can also be transmitted by humans Cooking usually destroys the germs The disease is not common in the United States Chemical poisoning from foods sometimes results from the accidental mixing with foods of poisonous materials to be used for exterminating rodents and insect pests It also occasionally occurs as a result of reactions between some foods and certain kinds of cooking utensils (a chart is given in G. M Dack, *Food Poisoning*, rev ed , 1949) Food in opened cans if kept properly refrigerated does not cause food poisoning Toxic materials can be present in food without giving it a bad odor Among the plants that contain materials causing poisoning are poisonous species of mushrooms, leaves of rhubarb, Italian fava beans and the pollen of the fava bean flower, snakeroot, and water hemlock Poisoning sometimes is caused by eating mussels, clams, and other shellfish, as well as fish, the cause is not always known Some cases of poisoning by mussels have been traced to certain plankton on which the mussels feed

food preservation. From the most primitive ages man has given some attention to the preservation of the food which he secured uncertainly and with great effort Simple processes, growing out of accident, observation, and experience, were employed long before the reasons for their effectiveness were understood. Among the products of early food conservation were cheese and butter, wine and raisins, pemmican, sausage, bacon, and parched grain When modern science began to investigate the causes of decomposition or spoiling of food, it pointed the way to a wider application of preservative agencies already in use and to the discovery of new ones Before 1860 all changes in food were explained on the theory of "spontaneous generation " Pasteur demonstrated that ferments, molds, and some forms of putrefaction were caused by the presence of minute organisms widely distributed in air, water, and soil These require for life and activity certain definite conditions of heat, air, moisture, etc , and if food is made unfavorable to their growth, it is said to "keep" or be preserved Processes of preservation may be generally classified as drying, heating, refrigeration, and the use of chemicals or other particular agencies Drying was early used for fruits, grains, vegetables, fish, and meat It was sometimes combined with parching, as in the toasted oatmeal of the Scotch or the parched corn of the American Indian Modern applications of this primitive device are seen in dried or dehydrated fruits and vegetables, dried milk, and egg powder Meat is dried on a commercial scale by meat-packing establishments The early method of drying was by the direct action of the sun's rays, in modern industry the process is hastened by complex apparatus and chemical agencies Sugar was early combined with drying The process of heating was known and used centuries before its action was understood (See CANNING) One of the most important modern applications of the heat principle is in the PASTEURIZATION of milk Food may be preserved in its original state for a great length of time by REFRIGERATION (see also FROZEN FOODS) Chemical and other agencies include salting, smoking, the use of vinegar, alcohol, saltpeter, and spices, the use of sugar in combination with drying or density, the exclusion of air; and the use, in recent years, of such chemicals as formalin, benzoic acid, alum, lime, salicylic acid, and boric acid to arrest microorganic growth and preserve color. The excessive or unacknowledged use of these chemical agencies has been legislated against by most governments The use of salt for preserving food is very primitive, references to it being found in the earliest literatures Smoking preserves food partly because of the drying action of the heat and partly because the smoke coagulates the albumen on the outside of the meat and so forms a sort of protective coating. Vinegar and other acids inhibit bacteriological action; strong alcohol acts in a similar way Good wine will keep almost indefinitely, and fruit "brandied" or placed in a 15 to 20 percent alcoholic medium is well preserved The exclusion of air, nowadays accomplished by hermetic sealing, is an old device, formerly practiced by pouring hot oil over potted meat or fish, by coating food with fat as in pemmican, or by burying vegetables in the earth or in sand. The modern use of melted paraffin achieves the same result The secret of preserving eggs for household use in a natural condition lies in excluding air from their shells, which are porous, and this may be accomplished by coating them with vaseline or other fat or by immersing them in "water glass" or sodium silicate See W. W. Chenwyth, *How to Preserve Food* (1945).

fool, absurdly irresponsible person, often subject to spells of mirth or melancholy. Some fools are benevolent, others are cunning and malevolent In all countries from ancient times and extending into the 18th cent , mental and physical deformity provided amusement Attached to noble and royal courts were dwarfs, cripples, idiots, albinos, and monsters In the East, in ancient Greece and Rome, and in the Aztec court of Montezuma there were fools whose practice was much the same as those of medieval France, Spain, and England The court fool, however, frequently was not mentally deficient For the freedom to indulge in satire, tricks, and repartee, many men of keen insight and caustic wit obtained powerful patronage by assuming the role of fool. The clown or jester was common in Elizabethan drama, and with the fool's garb the actor gained the freedom of the fool The costume, which was hung with bells, usually consisted of a varicolored coat, tight breeches with legs of different colors—occasionally a long petticoat was worn—and a cap which fitted close to the head or fell over the shoulders in the form of asses' ears One of the buffoon's capers was to inflict blows with an inflated bladder at the end of a staff or scepter This, the fool's bauble, bore at the other end a grotesque head or a fox's tail Till Eulenspiegel and Robin Goodfellow are mythical fools See Barbara Swain, *Fools and Folly* (1932), Enid Welsford, *The Fool* (1936)

Fools, Feast of, burlesque religious festival of the Middle Ages It was somewhat similar to the Roman Saturnalia and was observed on or about the Feast of the Circumcision A boy or young man in the role of bishop (the boy-bishop) conducted the ceremonies, which degenerated into a travesty of the sacred rites of the Church

Foot, Samuel Augustus, 1780–1846, American politician, b Cheshire, Conn , grad Yale, 1797 He served as a Democratic Republican in the Connecticut legislature (1817–18, 1821–23, 1825–26) and in the U S House of Representatives (1819–21, 1823–25) before he was U S Senator (1827–33) In the Senate he became prominent by offering (1829) the FOOT RESOLUTION He was again (1833) elected—this time as a Whig—to the House of Representatives, but resigned to become governor of Connecticut His name appears sometimes as Foote, and Andrew Hull FOOTE was his son

Foot, Solomon, 1802–66, U S Senator from Vermont (1851–66), b Cornwall, Vt , grad Middlebury College, 1826 He taught school, studied law, and was admitted to the bar in 1831 Foot served several terms in the state legislature and was in the U S House of Representatives (1843–47) His antislavery convictions carried him into the new Republican party As Senator he was recognized as a master of parliamentary law (he was often president pro tempore) and established many customs in the Senate's procedure

foot, organ at the extremity of one or both pairs of limbs, found in most higher vertebrates and used chiefly as a base for supporting the body and for locomotion on land or in the water Its form depends upon the arrangement of the bones In man seven bones form the heel, five parallel metatarsals form the long arch, and their lower ends form the transverse arch, which is affected in FLAT FOOT Each toe has three phalanges except the great toe, which has two There are many joints between various bones and a complex arrangement of small muscles Branches of the nerves and arteries of the leg supply the foot The foot is subject to injuries and disorders, e g , CORN, BUNION, and SPRAIN. See D J Morton, *The Human Foot* (1935)

foot and mouth disease, highly communicable disease of cattle, sheep, swine, goats, and other cloven-footed animals It is caused by a virus and is characterized by an eruption of vesicles or blisters on the mucous membranes, especially of the mouth, feet, and udder The discharge from the vesicles is heavily infected with the virus, and the saliva becomes a chief agent by which the disease is spread Thus animals may develop the disease as a result of direct contact with infected animals or indirectly through food, water, soil, barns, and other contaminated materials. Human handlers can infect healthy animals after tending diseased ones. Occasionally humans become victims, but the illness in adults is usually a light one. An epidemic of the disease causes enormous losses to the cattle industry. Occasional outbreaks occur in the United States; in Europe and South America the disease is more prevalent. In 1946 the disease broke out in Mexico and continued for several years. The only certain method of control is believed to be the slaughter and deep burial of all infected animals, complete disinfection of the area where sick animals have lived, and the maintenance of strict quarantine

football, in the United States, a game played by two opposing teams of 11 men each—a fullback, two halfbacks, a quarterback, a center, two guards, two tackles and two ends. Substitution of players is practically unlimited, and in recent years it has been common for large squads to use one full team for offense and another for defense. The football field is level, measures 100 by 53⅓ yd , is marked off by latitudinal stripes every 10 yd , and is flanked on each end by an end zone 10 yd. long At the end of each end zone stand H-shaped goal posts not quite 20 ft high, with the crossbar 10 ft. from the ground and with the vertical posts 18½ ft apart Play is directed toward moving the football —an inflated, leather, prolate spheroid ball, often called the "pigskin"—across the opponent's goal line This done, a team scores a touchdown, counting six points. The game is divided into two halves, each having two periods, or quarters, of 15 min At the end of each of the first three quarters, the teams exchange goals Each half is begun by a kickoff, which also initiates play after every score (except a safety) In addition to the touchdown, points are scored by kicking the ball over the crossbar between the goal posts (a field goal), counting three points, and by downing a man in possession of the ball behind his own goal line (a safety), counting two points An additional point may be made after a touchdown, either by kicking the ball through the goal or by running with or passing the ball over the goal line In advancing the ball a team may run or pass (forward or laterally or a combination of both), but it must gain 10 yd in four tries (or downs), else yield possession of the ball to its opponent It may also lose possession if one of its ball carriers fumbles and an opposing player recovers the ball When a team is not likely to gain 10 yds in four downs, it often kicks, or punts, the ball downfield, usually on fourth down Standard scrimmage formations on the offense are the T-formation, the double wing-back, and the single wing-back Forward passing and open-field running are features of the game that most thrill the average spectator, and blocking and tackling make football one of the most rugged sports played Football players wear helmets, kidney guards, hip and shoulder braces, and other protective equipment Four men—the referee, umpire, field judge, and head linesman—officiate in a game, and penalties are meted out for roughing, tripping, and the like and for a host of technical violations The game and its rules, as a matter of fact, have become extremely complex, and it is no reflection on the intelligence of the spectators to say that many of them have only a hazy idea of what is taking place on the gridiron, as the playing field is also called However, with added color provided by bands, cheering sections, and other touches, college football is not only the most popular spectator sport of the fall season but also a big business The revenue from football often finances all other sports in many colleges Despite the strict amateur code of the National Collegiate Athletic Association and its member conferences in the various sections of the country, the subsidization of football players is widespread among the colleges, some pay money and gifts outright, others use more devious means Alumni, anxious that their alma mater have a winning team, figure prominently in this practice In this fashion football is played in American colleges today, but the game underwent long development Games called *harpaston* and *harpastrum* were played in Greece and Rome and bore resemblance to modern football These games were carried over through the Middle Ages down to present times in Tuscany and Florence under the name *calcio* Meanwhile a rugged, unprincipled type of football took root in England in the Middle Ages, and despite several royal edicts banning the game from time to time, football was popular among the masses until the early 19th cent Different forms of the game were soon developed at the various English public schools—Rugby, Eton, Harrow, and others—each type governed largely by local requirements. Two main games finally emerged One was primarily a kicking game, which later became association football, or SOCCER; the other, dating from 1823, was Rugby football, in which carrying the ball and tackling were permitted. In 1871 the Rugby Football Union was formed, and a set of rules was adopted A type of association football was played in New England from the colonial period In 1869 at New Brunswick, N.J., Rutgers and Princeton played the first intercollegiate football match in America. In 1873 a convention was held at which Columbia, Princeton, Rutgers, and Yale were represented, a set of rules was adopted, and the foundation was laid for intercollegiate matches. The rules of American football were drastically altered after Harvard

played (1875) McGill Univ of Canada under Rugby rules College football coaching became professionalized in the 1890s, and from the beginning of the 20th cent, despite constant protests against the death toll of the game, football has enjoyed tremendous popularity as a collegiate sport Rules concerning the field, scoring, playing time, downs, scrimmage, substitution, officials, and equipment have undergone several changes, and the general trend has been toward making the game safer. In 1902 the first Rose Bowl football game was played, and this postseason tournament has been conducted annually since 1916 Other popular annual, postseason, collegiate football games are the Sugar Bowl, the East-West Shrine, the Orange Bowl, the Sun Bowl, and the Cotton Bowl games Organized professional football in America dates from 1920, when the American Professional Football Association was formed with a membership of 10 clubs The A.P.F.A. was reorganized several times, and in 1922 it was renamed the National Football League. Professional football differs from college football in several specific ways, e g , the goal posts are on the goal lines, not at the rear of the end zones Football is also played by high schools and clubs Six-man football, played by teams of six on a diminutive field, was invented in 1934 In touch football, touching the ball carrier with both hands takes the place of tackling Famous personalities in football, past and present, are Sam Baugh, Jay Berwanger, Dana X Bible, Bernard W Bierman, Felix O ("Doc") Blanchard, Charles E Brickley, Chris K Cagle, Walter C Camp, James Crowley, Glenn W Davis, Harry Gilmer, George Gipp, Harold ("Red") Grange, Walter Heffelfinger, William F Henry, Donald Hutson, Elmer Layden, Frank Leahy, Lou Little, Sidney Luckman, Alvin N ("Bo") McMillan, Bronko Nagurski, Ernest A Nevers, Marshall ("Ma") Newell, David O'Brien, Benny Oosterbaan, Knute K Rockne, Frank Sinkwich, A Alonzo Stagg, Kenneth Strong, Harry A Stuhldreher, James C Thorpe, Glenn S ("Pop") Warner, and Robert C Zuppke See L H Baker, *Football Facts and Figures* (1945), Lamont Buchanan, *The Story of Football* (1947), H O Crisler, *Modern Football* (1949)

Foote, Andrew Hull, 1806–63, American naval officer, b New Haven, Conn , son of Samuel A Foote He was appointed a midshipman in 1822 An enthusiastic temperance reformer, Foote, while executive officer of the *Cumberland* (1843–45), made her the first temperance ship of the navy He was largely responsible for ending the alcohol ration in the navy in 1862 From 1849 to 1851 he was active against the slave trade on the African coast and later wrote *Africa and the American Problem* (1854) In 1856, while commanding the *Portsmouth* at Canton, China, he led a small naval force which captured the four barrier forts in reprisal for acts against the American flag In the Civil War, Foote was given command of naval operations on the upper Mississippi river (1861) His flotilla of gunboats and mortars cooperated brilliantly with the army in the victories at Fort Henry, Fort Donelson, and Island No 10 He was promoted rear admiral for his work, but wounds received at Fort Donelson forced him to retire from active service See biography by J M Hoppin (1874)

Foote, Arthur William, 1853–1937, American organist, teacher, and composer, b Salem, Mass , pupil of J K Paine at Harvard He was organist (1878–1910) at the First Unitarian Church in Boston, where he taught for many years His compositions, conservative and showing his admiration for Brahms, include sacred choruses, chamber music, choral settings of Longfellow's poems—*The Farewell of Hiawatha* (1886), *The Wreck of the Hesperus* (1888), and *The Skeleton in Armor* (1893)—songs, and the orchestral works *Francesca da Rimini* (1893) and *Four Character Pieces after Omar Khayyam* (1912)

Foote, Henry Stuart, 1804–80, U S Senator (1847–52) and governor of Mississippi (1852–54), b Fauquier co , Va , grad Washington College (now Washington and Lee Univ), 1819 He studied law and, admitted to the bar in 1823, moved to Alabama and then to Mississippi Foote, an able criminal lawyer, practiced in several different towns there and also edited newspapers After a visit to Texas he wrote *Texas and the Texans* (1841, facsimile reproduction, 1935) In the U S. Senate, Foote's aversion to states' rights doctrines emphasized his antagonism to his Mississippi colleague, Jefferson Davis, with whom he actually traded blows (Foote also fought several duels in his day) He defeated Davis for the governorship in 1851, but that was the last Union Whig victory in antebellum Mississippi Rejected for the Senate, he resigned the governorship just before the end of his term and moved to California, where he was again defeated (1856) for the Senate by a narrow margin. Foote moved eastward again in 1858, settling in Tennessee. In the Confederate congress for four years his consistent opposition both to Davis and to the continuation of the Civil War caused him to participate in peace schemes His *War of the Rebellion* (1866) tells his story Stoutly maintaining his Unionist principles, he was to the South something like what Clement L. Vallandigham was to the North. After the war Foote supported the national Republican administrations, and in 1878 he was appointed superintendent of the U S mint at New Orleans His *Casket of Reminiscences* (1874) and *The Bench and Bar of the South and Southwest* (1876) contain contemporary and personal history of the time

Foote, Lucius Harwood, 1826–1913, American diplomat, b. Herkimer co , N Y. He attended Knox College and Western Reserve Univ In 1853 he went overland to California, where he was admitted to the bar He was successively municipal judge, collector of the port at Sacramento, state adjutant general, and consul (1879–82) at Valparaiso, Chile For some months he acted as chargé d'affaires In 1883 he went as minister to Korea, the first regular diplomat from a Western power to that country When in 1884 his post was reduced to that of minister resident, he resigned, returning to San Francisco to live He became prominent in that city's intellectual life and wrote verse, including *The Wooing of the Rose and Other Poems* (1911)

Foote, Mary Hallock, 1847–1938, American author and illustrator, b Milton, N Y. In 1876 she married Arthur De Wint Foote; thereafter she lived in the Far West and wrote about it in stories and novels, including *Led-Horse Claim* (1883), *Coeur d'Alene* (1894), *A Touch of Sun and Other Stories* (1903), and *The Ground Swell* (1919) An occasional illustrator of books and magazines, she did sketches for some of Longfellow's poems.

Foote, Samuel, 1720–77, actor, wit, and dramatist He dissipated a fortune at Oxford and failed to earn a degree, and in 1744 went on the stage, where his small talent was always eclipsed by Garrick It is as a wit (Johnson pronounced him "irresistible") that he is remembered From 1747, at the Haymarket Theatre, London, he produced such programs as *Diversions of the Morning*, in which his ability to mimic and his jarring satire had free rein Foote's farcical comedies include *The Knights* (1749), *The Minor* (1760), *The Orators* (1762), and *The Maid of Bath* (1771). He was buried in Westminster Abbey.

Foote, Samuel Augustus see Foot, Samuel A

foot-pound: see work

Foot Resolution, offered in 1829 by Samuel A Foot in the U S Senate This resolution instructed the committee on public lands to inquire into the limiting of public-land sale The Jacksonian Democrats, who wished to encourage migration to the West, opposed the resolution, the New England manufacturing interests, who demanded a ready labor supply, backed it When the Foot Resolution was introduced, the advocates of states' rights saw an opportunity to coalesce with the interests of the West This touched off (1830) the dramatic debates between Robert Hayne and Daniel Webster

Footscray (fo͝ots'krā'), industrial center (pop 53,484), Victoria, Australia, western suburb of Melbourne. There is an ammunition plant

Foppa, Vincenzo (vēnchān'tsō fôp'pä), c 1427–c 1515, Italian painter He settled in Pavia about 1456 and founded the Lombard school, which exercised a notable influence upon northern Italian art until the advent of Leonardo da Vinci Foppa executed many important works in Pavia and Milan, most of which have been destroyed Among his best-known works are the fresco *Martyrdom of St Sebastian* (Milan), a fine altarpiece in Santa Maria di Castello, Savona, and *Crucifixion* (Bergamo) A *Madonna* is in the J G Johnson Collection, Philadelphia, and another in the Davis Collection, Newport, R I , the National Gallery of Art, Washington, D C , has a *St Christopher* and a *Madonna* See Constance Ffoulkes, *Vincenzo Foppa of Brescia* (1909)

Forain, Jean Louis (zhäⁿ' lwē' fôrē'), 1852–1931, French painter, etcher, and lithographer One of the foremost etchers of his day, Forain is best known for his political cartoons and social satires In this field he is the most notable follower of Daumier. His work enlivened a large number of publications, including *Vie moderne*, *Gravache*, *Parisien*, *Figaro*, and the New York *Herald* In 1898 he founded with Caran d'Ache the short-lived *Psst* His early training was academic, but his work shows the influence of Manet and Degas After the First World War, Forain retired from illustrating for journals and devoted himself to painting

Foraker, Joseph Benson (fôr'ukĭr), 1846–1917, American political leader, b Highland co , Ohio After service in the Civil War, he was graduated from Cornell Univ in 1869 A lawyer of Cincinnati, he became a judge of the superior court and was governor of Ohio (1886–90) and U S Senator (1897–1909) He supported McKinley's policies and imperialism At Mark Hanna's death he became the undisputed Republican boss of Ohio His second term in the Senate was marked by notable clashes with Theodore Roosevelt. Foraker, in many ways a progressive governor, became an able Old-Guard Senator He led the opposition to the Hepburn bill on railroad rebates in 1906 and opposed the direct election of U S Senators His political career was ended when in the election campaign of 1908 W R. Hearst revealed that Foraker had accepted from the Standard Oil Company large retainers as well as a loan to purchase the *Ohio State Journal*. He was defeated for the Republican nomination to the Senate in 1914 by Warren G Harding His *Notes of a Busy Life* (2 vols , 1916), is a primary source for the political history of the period His wife was **Julia Bundy Foraker,** 1847–1933, b Jackson co., Ohio She vividly pictured the social life of the time in *I Would Live It Again* (1932).

foraminifera (fôrăˌmĭnĭ'fĭrə), members of an order of protozoa, nearly all of which have a shell The majority secrete a shell of calcium carbonate, a few have skeletons of chitin and silica, and some primitive forms make agglutinized shells of silt and other particles Foraminifers inhabit all oceans and a few species live in fresh and brackish water Most species are less than one millimeter in diameter Many are bottom-living, others pelagic Large areas of the ooze on the ocean bottom are called globigerina ooze and are composed largely of the discarded skeletons of foraminifera of the genus *Globigerina*, which form a soft, limy deposit Layers of limestone or chalk such as are found in Dover, England, and in Alabama and Mississippi solidified from similar deposits of ooze in ancient seas Limestone used in some Egyptian pyramids contains skeletons of foraminifera, especially of nummulites, forms which have coin-shaped skeletons Fossil foraminifera are an aid in identifying subsurface formations, especially in petroleum investigations See J A. Cushman, *Foraminifera Their Classification and Economic Use* (3d ed , 1940)

Forbes, Duncan, 1685–1747, Scottish statesman, known as Forbes of Culloden, after the name of his estate As lord advocate (1725–37) and lord president of the court of session (1737–47) his influence and diplomacy did much to consolidate the union of England and Scotland He actively opposed the rebels in 1715 and 1745 and urged lenient treatment in pacifying the country. Meantime he wrote occasional theological tracts. See biography by George Menary (1936)

Forbes, Edward, 1815–54, British zoologist His researches in ocean life advanced the science of paleontology He served as professor of botany at King's College, London, naturalist on the surveying ship *Beacon* on a voyage to Asia Minor, curator of the museum of the Geological Society, and paleontologist with the British Geological Survey His valuable collections were left to the college museum at the Univ of Edinburgh, where he was professor of natural history for a short time before his death His writings include *History of British Starfishes* (1841) and, with Sylvanus Hanley, *History of British Mollusca* (4 vols , 1848–53)

Forbes, Edwin, 1839–95, American illustrator, etcher, and painter, b New York city He was employed as special artist for *Frank Leslie's Illustrated Newspaper*, in which appeared, throughout the Civil War his trenchant drawings of camp and battlefield *Life Studies of the Great Army*, a series of copperplate etchings from his war sketches, are in Washington, D C Forbes's paintings consist chiefly of landscapes, such as *Orange County Pasture* and *Sheep Pasture—Evening*

Forbes, James David, 1809–68, Scottish physicist and glacialist A professor of natural philosophy at the Univ of Edinburgh (1833–59) and principal of the United College at St Andrews (later Univ of St Andrews) from 1859, he is noted for his discovery of the polarization of heat He was a pioneer in the scientific study of glaciers

Forbes, John, 1710 59, British general in the French and Indian Wars, b Fifeshire, Scotland. He entered the army in 1735, won distinction and promotion in the War of the Austrian Succession, and in 1757 was made a colonel and was sent to reinforce the expedition against Louisburg Courageous, thorough, and particularly able as quartermaster, he was promoted (Dec , 1757) brigadier general (in America only) and assigned to command an expedition to take the French stronghold at the forks of the Ohio (see Duquesne, Fort) Forbes decided not to use the road Gen. Edward Braddock had taken to his disastrous defeat on the same mission in 1755. Instead he moved (1758) his force of nearly 7,000 men in short hops through W Pennsylvania, establishing successive depots as he went West of Raytown (now Bedford) he cut a wagon road over the Alleghenies, which, later known as Forbes Road, became a chief highway of Western emigration An advance column under Major James Grant was severely repulsed on the night of Sept 13–14 while making a reconnaissance in force Prisoners captured in a subsequent skirmish (Nov 12) in which George Washington, senior colonel of the two Virginia regiments, fared unhappily, revealed that the French were weak. Washington, however, was given command of one of the three brigades into which Forbes then divided his army to assure fullest mobility in a quick thrust at Duquesne But the French garrison decamped (Nov 24), and Forbes raised his flag over the burned fort, promptly renamed Fort Pitt, on Nov 25 without further fighting See A. P. James, ed , *Writings of General John Forbes Relating to His Service in North America* (1938), D. S. Freeman, *George Washington*, Vol II (1948).

Forbes, John Murray, 1813–98, American capitalist, b Bordeaux, France, of American parents A nephew of James and Thomas Perkins, he entered his uncles' counting house in Boston and was sent as agent to Canton At 24 he returned with an independent fortune, which he invested in varied enterprises, mostly maritime Interested in Western railroads, he organized in 1846 a company which purchased the uncompleted Michigan Central and extended it E to Buffalo and W to Chicago He undertook to complete and develop the Chicago, Burlington & Quincy from Chicago to the Mississippi and afterwards across Iowa At different times he served as president of both these railroads He also built the Hannibal & St Joseph in Missouri His railroad financing was conservative, and his roads were marked by a stability which was rare in that period of rapid expansion See S F Hughes, ed, *Letters and Recollections of John Murray Forbes* (2 vols, 1899), H G Pearson, *An American Railroad Builder* (1911)

Forbes, Robert Bennet, 1804–89, American sea captain and merchant, b near Boston, brother of John Murray Forbes When 13 years of age he went to China on a ship belonging to his uncles, James and Thomas Perkins of Boston, and at 20, as captain, he took a ship around the world for them He later managed stores in China for Russell & Company, with which Perkins & Company had merged to form the largest firm trading in China He recouped heavy losses after the panic of 1837 Returning to Boston in 1840, he became part owner of many vessels He was also a shipbuilder, one of the pioneers in New England in adopting the screw propeller and iron hulls for steamships In the Civil War he privately built a number of warships for the Union and supervised the construction by the government of nine gunboats He took great interest in humanitarian movements for sailors and in lifesaving devices and wrote numerous pamphlets and articles See his reminiscences (1876, 3d ed, 1892), J B Connolly, *Canton Captains* (1942)

Forbes, Stephen Alfred, 1844–1930, American zoologist, b Calhoun co, Ill, Ph D Univ of Indiana, 1884 He studied medicine but turned to natural history In 1872 he became curator of the museum of the Illinois state natural history society In 1877 the museum became the state laboratory of natural history, and Forbes was made its director, he continued in charge of his division when it became (1917) a part of the Illinois Natural History Survey He was professor (1884–1921) at the Univ of Illinois and dean (1888–1905) of its college of science A pioneer in developing the science of ecology in America, he made important studies of habitats and also wrote many works on economic entomology, ornithology, and ichthyology

Forbes, William Cameron, 1870–, American business executive and diplomat, b Milton, Mass, grad Harvard, 1892 He entered the mercantile house of his grandfather, John Murray FORBES, in Boston and was a partner in the firm after 1899 He later became an executive in many large companies Appointed (1904) to the Philippine Commission by President Theodore Roosevelt, W Cameron Forbes held several administrative posts there before he served (1909–13) as governor general of the islands He was a member of the Wood-Forbes Commission, which was sent (1921) by President W G Harding to the Philippines The commission's report did much to guide U S policy concerning the Philippines in the 1920s He was later (1930) chairman of a commission to study conditions in Haiti, served (1931–32) as ambassador to Japan at the time of the Manchurian crisis, and led (1935) an economic mission to the Far East He wrote *Philippine Islands* (1929) A pioneer player of polo in America, he also wrote *As to Polo* (6th ed, 1929).

Forbes-Robertson, Sir Johnston, 1853–1937, English actor From 1874 he appeared with the Bancrofts, John Hare, Henry Irving, and Mary Anderson—with her he went for the first time to the United States In 1889 he made his first signal success in *The Profligate*, by Pinero, played at the Garrick Theatre, London He played many Shakspearian roles, including Hamlet (1898) In 1900 he married Gertrude Elliott, with whom he played in *The Light That Failed*, after Kipling's novel, in Shaw's comedy, *Caesar and Cleopatra*, and in other plays For two seasons he played, both in England and in the United States, *The Passing of the Third Floor Back* by C R Kennedy He was knighted in 1913 See his autobiographical *Player under Three Reigns* (1925)

Forbidden City, China. see PEIPING and CHINESE ARCHITECTURE

Forbin, Claude, comte de (klōd' kōt' dŭ fôrbĕ'), 1656–1733, French naval commander He fought in the Antilles (1680) and in Duquesne's Algerian campaign (1682–83) and from 1685 to 1687 was grand admiral and generalissimo of the king of Siam He distinguished himself in the War of the Grand Alliance and the War of the Spanish Succession Forbin failed (1708) in an attempt to land the Old Pretender in Scotland His memoirs were published in 1829

Forbush, Edward Howe (fôr'bŏŏsh), 1858–1929, American ornithologist, b Quincy, Mass. Having begun his scientific work as a taxidermist and collector of natural history specimens, he later (1880–91) served the Worcester (Mass) Natural History Society as curator and president. He was director of the division of ornithology of the state board of agriculture from 1893 to 1908 and returned to the post in 1921 From 1908 he was state ornithologist. He headed (1891–1900) a state commission for control of the gypsy moth His works include *The Gypsy Moth* (1896) and *Birds of Massachusetts and Other New England States* (3 vols, 1925–29, abridged and revised as *Natural History of the Birds of Eastern and Central North America*, 1939).

Force, Peter, 1790–1868, American historian, b near Paterson, N J He served in the War of 1812 and afterwards established himself in Washington, D C., as a printer Entering local politics, he was at different times president of both the city council and the board of aldermen and was mayor of Washington (1836–40) His *National Journal*, established in 1823 to support John Quincy Adams for the presidency, continued as a daily from 1824 to 1831 He issued for many years the *National Calendar*, a yearbook of historical and statistical information, and edited four volumes of rare documents, *Tracts and Other Papers Relating Principally to the Origin, Settlement, and Progress of the Colonies in North America* (1836–46). His project for publishing early American documents, national, state, and private, dealing with colonial and American history down to 1789, was authorized by Congress but discontinued before completion The resulting *American Archives* (9 vols, 1837–53), the work by which Force is chiefly known, covers only the years 1774–76 Force's large collections were purchased by the Library of Congress

force, in physics, commonly defined as any "push" or "pull" acting on a body It is described more definitely as that effort acting to change the state of motion of a body, i e, its acceleration or the direction in which it is moving, or to change its state of rest Forces are measured in pounds, grams, or kilograms, depending upon the system of weights being used For example, to suspend a body weighing 10 lb a force of 10 lb is necessary, the force applied to the body is called the effort, and the weight of the body resisting it is called the resistance In a state of equilibrium, effort and resistance are equal and are acting in opposite directions For every force there is an equal and opposite force The direction in which a force is acting, as well as its magnitude, must be known to determine what effect it will produce when applied to a given body For example, if two forces acting upon a body at right angles to each other with a combined effort sufficient to move the body are represented graphically by arrows drawn to scale (i e, with a unit of length representing a unit of force), the direction of the body will be along the diagonal of a parallelogram constructed on the arrows This figure is called a parallelogram of forces The single force necessary to accomplish this same movement would act along this diagonal, and its magnitude is represented by the length of the diagonal This single force is called the resultant of the two forces, and a force equal in magnitude but acting in the opposite direction is the equilibrant of the two forces If two forces are acting in the same direction, their resultant is equal in magnitude to their sum, if they are acting in opposite directions, it is equal to their difference Forces can be applied to certain bodies to produce rotation, e g, to a LEVER bar fastened at its center and free to turn around that point The amount of force necessary to produce rotation decreases proportionally as the point of application is moved farther and farther from the point at which the bar is fastened, i e, from the axis The product of the distance from the axis and the numerical value of the force is called the moment of force In engineering, in the designing of structures and machines, the forces acting upon the various parts must be determined so that stress and strain can be anticipated and the STRENGTH OF MATERIALS be sufficient to meet the necessary demands A rotating part, for example, is acted upon by centrifugal force, i e, a force acting to make it fly off at a tangent from its definite path around the center This force must be balanced, if equilibrium is to be maintained, by a centripetal force, i e, a force acting in the opposite direction and toward the center, holding the body in its regular path. Certain measurements of force are based upon the velocity that a force can impart to a given mass in a unit of time In the cgs (centimeter-gram-second) system the unit of force is the DYNE, in the English system it is the POUNDAL, that force which will impart to a mass of one pound an acceleration of one foot per second in one second Newton's laws of MOTION govern the action of forces upon a body at rest and in motion The force of gravity is the pull of the earth upon other bodies (see GRAVITATION) The force acting upon a unit area is called PRESSURE For field of force, see MAGNETISM, for electromotive force, see VOLT.

force bill, popular name for several laws in U S history, notably the act of March 2, 1833, and the Reconstruction acts of May 31, 1870, Feb 28, 1871, and April 20, 1871. The first force bill, passed in response to South Carolina's ordinance of NULLIFICATION, empowered President Andrew Jackson to use the army and navy, if necessary, to enforce the laws of Congress, specifically the tariff measures to which South Carolina had objected so violently. In the second set of force bills or "enforcement acts," as they were also called, the radical Republicans controlling Congress strengthened their Reconstruction program for the South by imposing severe penalties on those Southerners who tried to obstruct it The act of May 31, 1870, designed to enforce the Fifteenth Amendment, provided heavy penalties of fine and imprisonment for anyone preventing qualified citizens (in this case Negroes) from voting Such cases were to come under the jurisdiction of the Federal courts Congressional elections were placed exclusively under Federal control, and the President was authorized to use the armed forces Even more drastic, but in a similar vein, was the act of Feb 28, 1871 The act of April 20, 1871, inspired by the activities of the Ku Klux Klan, declared the acts of armed combinations tantamount to rebellion and empowered the President to suspend the privilege of habeas corpus in lawless areas This U. S Grant did in certain counties of South Carolina Hundreds were indicted, fined, and imprisoned, and the act was partially responsible for the subsequent decline of the Klan.

Ford, Edsel Bryant see FORD, HENRY.

Ford, Edward Onslow, 1852–1901, English sculptor Of his portrait statues, memorials, and bronze statuettes, perhaps most famous is his Shelley Memorial (University College, Oxford)

Ford, Ford Madox, 1873–1939, English novelist and poet, grandson of Ford Madox Brown, English painter He changed his name legally from Ford Madox Hueffer in 1919 While helping Joseph Conrad master English, he collaborated with him on *The Inheritors* (1901), *Romance* (1901), and other novels and in 1924 wrote a memoir, *Joseph Conrad* In 1908 he established the *English Review*, which he edited until 1911 and which drew among its distinguished contributors Conrad, Hardy, Galsworthy, Masefield, and William James In his *Transatlantic Review* (1924, Paris) he "discovered" James Joyce and Ernest Hemingway Among his more than 60 books are volumes of criticism and reminiscences about the literary figures he had known, such as *Return to Yesterday* (1932), and four novels of the First World War See biography by Douglas Goldring (1949)

Ford, Guy Stanton, 1873–, American historian, educator, and editor, b Salem, Kenosha co, Wis, grad Univ of Wisconsin (Litt B, 1895), Ph D Columbia, 1903 He also studied (1899–1900) at the Univ of Berlin Ford was an instructor and then an assistant professor of history at Yale (1901–6) and professor at the Univ of Illinois (1906–13) before becoming professor and dean of the graduate school at the Univ of Minnesota (1913–38) He was president of Minnesota from 1938 to 1941 (he had been acting president in 1931–32 and 1937–38) and chairman of the university press there from 1925 to 1941 In Sept, 1941, he became executive secretary of the American Historical Association and managing editor of the *American Historical Review* (from 1921 to 1927 he was chairman of its board of editors) His books include *Hanover and Prussia, 1795–1803 a Study in Neutrality* (1903), *Stein and the Era of Reform in Prussia* (1922), *Science and Civilization* (1933), and *On and Off the Campus* (1938)

Ford, Henry, 1863–1947, American industrialist, pioneer automobile manufacturer, b Dearborn, Mich He showed mechanical aptitude at an early age and left (1879) his father's farm to work as an apprentice in a Detroit machine shop He soon returned to his home, but after considerable experimentation with power-driven vehicles, he removed (1887) to Detroit again and worked as a machinist and engineer with the Edison Company While he was advancing in his work for the electric company, Ford was also working on his own and completed (1892) his first AUTOMOBILE Resigning (1899) from the Edison Company, he launched the Detroit Automobile Company, but a disagreement with his associates led him to organize (1903), in partnership with James COUZENS, the Dodge brothers, and others, the Ford Motor Company In 1907 he purchased the stock of most of his associates, and thereafter the Ford family remained in control of the company. By cutting the costs of production, by gaining control of raw materials and the means of distribution, by adapting the conveyor belt and assembly line to automobile production, and by featuring an inexpensive, standardized car, Henry Ford was soon able to outdistance all his competitors and become the largest automobile producer in the world. He came to be regarded as the apostle of mass production. In 1909 he designed the Model T, over 15,000,000 cars were sold before this model was discontinued (1928) and a new design—the Model A—was created to meet growing competition. Highly publicized for paying wages considerably above the average, Ford originated in 1914—the year he created a sensation by

announcing that henceforth his workers would receive $5 for an eight-hour day—a profit-sharing plan which would distribute up to $30,000,000 annually among his employees In 1915, in an effort to end the First World War, he headed a privately sponsored peace expedition to Europe that failed dismally, but after the American entry into the war he was a leading producer of ambulances, airplanes, munitions, tanks, and submarine chasers In 1918 he ran unsuccessfully for U S Senator on the Democratic ticket After weathering a severe financial crisis in 1921, he began producing high-priced motor cars along with other vehicles and founded branch firms in England and in other European countries Strongly opposed to trade unionism, Ford—who incurred considerable antagonism because of his paternalistic attitude toward his employees and his statements on political and social questions—stubbornly resisted union organization in his factories by the United Automobile Workers until 1941 Although a staunch isolationist before the Second World War, Ford again converted his factories to the production of war material after 1941 In 1945 he retired His numerous philanthropies included $7,500,000 for the Henry Ford Hospital in Detroit and $5,000,000 for a museum in Dearborn, where in 1933 he established GREENFIELD VILLAGE—a reproduction of an early American village He wrote, in collaboration with Samuel Crowther, *My Life and Work* (1923), *Today and Tomorrow* (1926), *Moving Forward* (1931), and *Edison as I Knew Him* (1930) See biographies by W A Simmonds (1943), C C Caldwell (1947), and K T Sward (1948), W C Richards, *The Last Billionaire* (1948) His son, **Edsel Bryant Ford**, 1893–1943, b Detroit, shared in the control of the vast Ford industrial interests He was president of the Ford Motor Company from 1919 until his death Henry Ford, in the midst of the Second World War, once more became (1943) president of the company, but he retired when his grandson, **Henry Ford II**, 1917–, b Detroit, succeeded him in 1945

Ford, John, b 1586, English dramatist, admitted to the Middle Temple in 1602 but not known to have practiced law Besides collaborating with Dekker and Rowley in *The Witch of Edmonton* (1621) and other plays, he wrote independently several more, including *'Tis Pity She's a Whore* in 1633 and *Perkin Warbeck* in 1634 Unsuccessful in his humor and no master of plot, he was skillful in portraying pathos and tragedy Swinburne praised the "metrical regulation" of his verse The date of Ford's death is not known See studies by M J Sargeaunt (1935), S B Ewing (1940), and G F Sensabaugh (1945)

Ford, John, 1895–, American moving-picture director, whose real name is Sean O'Feeney, b Cape Elizabeth, Maine He was a property man in a Hollywood studio in 1914, but soon rose to the rank of director A craftsman of great distinction, Ford has directed such films as *The Lost Patrol*, *The Informer*, which received much critical acclaim, *Stagecoach*, *Grapes of Wrath*, *The Long Voyage Home*, and *How Green Was My Valley* He directed two notable government documentary films, *December 7th* and *Midway*

Ford, Patrick, 1835-1913, American journalist, b Galway, Ireland He was brought, an orphan, to the United States in 1842 and attended public schools and the Latin School in Boston Having served his apprenticeship in the printing office of William Lloyd Garrison, he began his newspaper career in 1855 and was later editor and publisher (1859–60) of the Boston *Sunday Times* After serving in the Civil War he edited the Charleston, S C, *Gazette* until 1870, when he moved to New York City and founded the *Irish World*, a paper devoted to the cause of Irish independence He raised money for the cause, organized more than 2,500 American branches of the Irish Land League, and in his editorials attacked England's policies in Ireland, these writings were collected as *A Criminal History of the British Empire* (1881) He also wrote *The Irish Question and American Statesmen* (1885) He was one of the founders of the Greenback party

Ford, Paul Leicester, 1865–1902, American historian and novelist, b Brooklyn, N Y, privately educated His father, Gordon L Ford, possessed probably the best library of Americana in the country, Paul edited rare material from this library in *Winnowings in American History* (with W C Ford, 15 vols, 1890-91) and made valuable bibliographies, those on Hamilton (1886) and Franklin (1889) being notable He edited many important early American writings, such as *Pamphlets on the Constitution of the United States . 1787–88* (1888) and the *Writings of Thomas Jefferson* (10 vols, 1892–99). His *True George Washington* (1896) was the first to present Washington as human and fallible Ford wrote several novels, two extremely popular—*Janice Meredith: a Story of the American Revolution* (1899) and *The Honorable Peter Stirling* (1894), both of which were dramatized later At 37 Ford was shot by his disinherited brother Malcolm, who then shot himself.

Ford, Worthington Chauncey, 1858–1941, American historian and editor, b Brooklyn, N Y. He was educated at the Polytechnic Institute of Brooklyn and at Columbia He was joint editor, with his brother Paul Leicester Ford, of *Winnowings in American History* (15 vols, 1890–91) While chief of the manuscripts division of the Library of Congress (1902–9), Ford edited the first 15 volumes of the new edition of the *Journals of the Continental Congress* From 1909 to his retirement in 1929 he was editor of the Massachusetts Historical Society and lectured on historical manuscripts at Harvard Ford edited *The Writings of George Washington* (14 vols, 1889–93) and wrote a standard biography of Washington (1900), edited *The Writings of John Quincy Adams* (7 vols, 1913-17), *A Cycle of Adams Letters, 1861–1865* (1920), and *Letters of Henry Adams* (2 vols, 1930–38), and other volumes of correspondence and documents, and wrote many articles and monographs on historical and literary subjects

ford, shallow place in a river, lake, or other water which may be crossed on horseback or in a vehicle Around the crossings habitually forded cities sprang up, hence fords came to be the sites of numerous river towns They have been of particular importance in migrations and in the deployment of armies in campaigns and have therefore been frequently fortified Place names, such as Oxford, Hertford, Hereford, Ashford, Milford, Stafford, Guilford, and Redford, testify to the strategic positions fords have had in historical development

Ford City, Ont see EAST WINDSOR

Ford City, industrial borough (pop 5,795), W Pa, on the Allegheny river and NE of Pittsburgh, laid out 1871, inc 1889 Various types of glass products are manufactured here

Fordham University (fôr'dŭm), in New York city, Catholic (Jesuit), partly coeducational, opened 1841 by Bishop Hughes (later archbishop) as St John's College, chartered 1846 as a university, renamed 1905 The university includes Fordham College, a college of pharmacy, and schools of adult education, business, education, law, and social service Fordham is noted for seismography work The university proper is in the Bronx, but part is in the Woolworth Building in lower Manhattan

Fordney, Joseph Warren, 1853–1932, American Congressman, b Blackford co, Ind He went to Michigan as a youth and became prominent in the lumber business, acquiring a fortune Elected to the House of Representatives in 1899, he served until 1923 as a conservative Republican As chairman of the ways and means committee in 1921, he was able to embody his high protectionist convictions in the Fordney-McCumber Tariff Act

Fords Island, Oahu, T H, in Pearl Harbor The island, site of Luke Field (est 1919), suffered damages during the Japanese attack (Dec 7, 1941) on Pearl Harbor

Fordun, John of, d c 1385, Scottish chronicler, probably a priest of the cathedral at Aberdeen He may have traveled in the British Isles collecting information for a history of Scotland He completed his chronicle to 1153 and left extensive notes, known as "Gesta annalia," continuing the history to 1385 In the 15th cent his work was interpolated and continued to the death of James I (1437) as the *Scotichronicon*, reputedly by Walter BOWER Fordun's chronicle, reliable for its contemporary parts, is the source for much of the early history of Scotland His work was edited by W F Skene as the *Chronica gentis Scotorum* (1871, tr by F J H Skene, 1872)

Fordyce (fôr'dīs), city (pop 3,429), co seat of Dallas co, S central Ark, SW of Pine Bluff It is a rail center and has lumber mills and cotton gins

Forefathers' Day, celebrated by New Englanders Dec 21, in commemoration of the landing of the Pilgrims in 1620 on Plymouth Rock It was first observed in 1769

foreign agent see ESPIONAGE

foreign exchange, written or telegraphic orders for the payment of money by a person or bank under a currency system different from that used by the issuer The rate of exchange is the price in home money for a unit of foreign money Exchange is almost the sole business means of international payment A merchant in the United States may owe a merchant in England £100 The former secures from an American bank its check for £100 drawn on a London bank with whom the American bank has a deposit The American bank charges its customer slightly more than the prevailing rate of exchange, taking the difference as profit Foreign exchange is handled in many other ways The chief demand is from importers of goods, borrowers of foreign capital, immigrants, and travelers The banks act as middlemen See E S Furniss, *Foreign Exchange* (1922), J W Gantenbein, *Financial Questions in United States Foreign Policy* (1939), F A Southard and others, *Foreign Exchange Practice and Policy* (1940).

Foreign Legion. The French Foreign Legion is a volunteer infantry regiment composed chiefly, in its enlisted ranks, of foreigners who find in it a chance for a new life Although foreigners had served in many French armies previously, King Louis Philippe is credited with having created (1831) this specific foreign legion Originally intended to pacify ALGERIA, where it is normally stationed, it also helped to complete (1926) the pacification of MOROCCO, guarded other troubled spots of the French colonial empire, and fought in the First World War It was virtually broken up during the Second World War and was reorganized in 1946 A large number of the new legionnaires were recruited from among German prisoners of war From antiquity, there have been many other foreign legions, e g, a British legion participated in the Carlist Wars in Spain under Sir George de Lacey Evans, and in the Spanish civil war of 1936–39 the International Brigade fought on the Loyalist side The French Foreign Legion has been romanticized in numerous books, films, plays, and songs

Foreign Ministers, Council of, informal international organization Future meetings of the American, British, and Russian ministers were planned at the Yalta Conference (Feb, 1945) In accordance with the agreements reached at the POTSDAM CONFERENCE, the ministers met at London, then at Moscow late in 1945 in order to discuss the problems connected with the settlement of the Second World War At the Moscow Conference it was decided to draft peace treaties with Italy, Rumania, Hungary, Bulgaria, and Finland, to establish an 11-power Far Eastern Commission and an 11-power Allied Council for Japan, and to set up an atomic energy commission within the United Nations The ministers also set up the Council of Deputy Foreign Ministers, meeting at London, for the purpose of preparing the work of the foreign ministers between their meetings Despite harrowing difficulties and protracted quarrels on matters of procedure, the Council of Foreign Ministers (to which France was admitted in 1946) steered the peace conference which met at Paris in 1946 to a successful conclusion The peace treaties with Italy, Rumania, Hungary, Bulgaria, and Finland were drafted, and remaining difficulties concerning the Free Territory of Trieste were ironed out after much talking at a meeting in New York (Nov–Dec, 1946) The deputies of the "Big Four" began talks on peace treaties with Germany and Austria early in 1947, and in March and April the foreign ministers themselves met again at Moscow Nothing was accomplished except the formal dissolution of Prussia, and a new attempt was made (Nov–Dec, 1947) to reach agreement on Germany and Austria when the foreign ministers met at London. The conference marked a disastrous turn in the relations between the USSR and the other three powers, and it disbanded, without having accomplished anything, in a hail of mutual recriminations The deputies, however, continued negotiations A new meeting (Sept, 1948) at Paris, regarding the disposition of the former Italian colonies, was also a failure The council was revived in June, 1949, when the foreign ministers, meeting at Paris, reached an agreement ending the Soviet blockade of Berlin

foreign missions see MISSIONS

foreign service see DIPLOMATIC SERVICE and CONSULAR SERVICE

Forel, Auguste or **August** (ōgüst' fôrĕl'), 1848–1931, Swiss psychiatrist and entomologist He began as a boy the study of ants which later influenced his approach to psychiatry As director (1879–98) of the cantonal asylum at Burgholzli, he instituted humane methods of treatment and the use of occupational therapy He made contributions to the study of hypnotism (*Der Hypnotismus*, 1889) and of sexual problems His works include *Les Fourmis de la Suisse* (1874) and other books on ants See his autobiography, *Out of My Life and Work* (Eng tr, 1937)

Forel, François Alphonse (frāswa' alfôs'), 1841–1912, Swiss physician and naturalist He was professor of anatomy and physiology at the Univ of Lausanne He studied the Swiss glaciers and lakes and was a founder of the Swiss seismological institute

Foreland, North, and **South Foreland,** headlands of Kent, England, forming part of the boundary of the roadstead called the Downs South Foreland, with two lighthouses, is 4 mi NE of Dover, and North Foreland, with one lighthouse, is near Margate Both are chalk cliff formations The defeat of the Dutch under De Ruyter in 1666 is associated with the Forelands

Forest, town (pop 1,570), S Ont, near Lake Huron and NE of Sarnia It is in a farming and fruit-growing district

Forest. 1 Town (pop 2,735), co seat of Scott co, central Miss, E of Jackson It is in Bienville National Forest and is the headquarters **2** Village (pop 1,083), NW Ohio, E of Lima

forest, plant community in which trees are dominant Forests of the world can be broadly divided into three types, equatorial or tropical rain-belt forests, deciduous forests, and coniferous forests Equatorial forests are marked by luxuriant growth, with a variety of species of trees, rarely grouped in a pure stand Mahogany, ebony, and wild rubber trees are scattered among other species. Sometimes equatorial forests are called evergreen because the leaves are not shed simultaneously

throughout the forest; most of the trees are believed, however, to drop and renew their leaves annually but sporadically Many of the taller trees have outgrowths around the lower part of the trunk which act as buttresses to help prevent uprooting by the wind. Woody climbing vines (called lianas) rooted in the soil strive to reach the sunlight through the forest canopy by crawling up the tree trunks, often they span the distance from tree to tree Epiphytes such as orchids are abundant In some regions of less dense growth and in temporary clearings are found members of the banana, arrowroot, ginger, and canna families Equatorial forests are found especially in the basins of the Amazon and Congo rivers and in much of the East Indian region Conifers appear in the equatorial area only at high elevations, e g , in parts of E Africa In temperate latitudes occur both deciduous and coniferous forests In the Northern Hemisphere there is a broad belt of boreal forest stretching across the continents in the higher latitudes In the northernmost limits bordering the tundra regions the conifers are reduced to a few stunted species In the less rigorous climates the species are more numerous, and aspens, birches, and some other deciduous trees are mixed with the conifers Because of their resistance to cold and drought, the conifers represent the climax growth of regions above about 40° N lat , below that latitude the deciduous trees are dominant except in some dry interiors of continents where the conifers are better able to survive In the Southern Hemisphere, because of the tapering of the land masses, forests are not as extensive in high latitudes as in the Northern Hemisphere, scattered forest areas are found in S Chile, Tasmania, and New Zealand In Australia there are forests in a rather narrow strip on the east coast and in a portion of the southwestern region In the United States the forest growth varies somewhat in different regions In the northeastern section the most numerous species include birch (yellow, gray, and paper birches), aspen, maple (sugar and red), ash (black and white), oak (several species), balsam, hemlock, pine (white, Norway, Jack, and pitch), tamarack, and arborvitae Timber trees of the Appalachian region include species of ash, basswood, hickory, and oak and also black cherry, black walnut, black locust, northern white pine, red spruce, and hemlock In the states of the Great Lakes regions the common trees include oaks (white, red, burr, scarlet, and black), hickory, and green ash, less commonly occur the black cherry, butternut, elm, basswood, black walnut, sugar maple, and yellow poplar On the coastal plains bordering the Atlantic Ocean and the Gulf of Mexico there are bottom lands (sedimentary deposits along the shore) on which some 50 species of hardwood trees are found and greater areas where pines (chiefly longleaf, shortleaf, loblolly, and slash pine) are dominant In the swamps of the South are found bald cypress and tupelo Characteristic of the Rocky Mt region are ponderosa (or western yellow) pine, Douglas fir, lodgepole pine, Engelmann spruce, western white pine, and, in some areas, larch. On the N Pacific coast are vast stands of timber, chiefly spruce (of which the Sitka spruce is of great commercial importance), Douglas fir, western hemlock, and western red cedar, farther south the firs gradually diminish and the pines are more numerous In the California fog belt the redwood is dominant The existing forests are the remnant of the vast expanses found by the white man on his arrival in America His coming initiated the destruction of forests (not only by clearing for settlements but by widespread fires) which continued for several centuries before any effective steps were taken to conserve remaining forests and to reforest denuded areas With the growth of the conservation movement came a greater awareness of the vital importance of forests in helping to conserve water, prevent erosion and floods, provide homes for wildlife, supply timber, beautify the land, and afford recreation Forestry or silviculture is the scientific development and management of forest lands Great areas of forest land in the United States are now preserved as NATIONAL FORESTS, national parks, and state, county, and municipal parks Attempts to prevent destruction by forest fires include the maintenance of watchtowers, radio communication systems, airplanes for transporting men and equipment to inaccessible spots, and many types of fire apparatus Education of the public to reduce the number of fires caused by carelessness is of great importance See E G Cheyney, *American Silvics and Silviculture* (1942), S H Holbrook, *Burning an Empire* (1943), R H D. Boerker, *Behold Our Green Mansions* (1945), S A Wilde, *Forest Soils and Forest Growth* (1946), R. G Lillard, *The Great Forest* (1947), Richard St B Baker, *Green Glory* (1948), J. T Hazard, *Our Living Forests* (1948)

Forfarshire · see ANGUS, county

forgery (fôr'jurē), in criminal law, willful fabrication or alteration of a written document with the intent fraudulently to injure the interests of another The crime may be committed even though the fraudulent scheme fails The forgery of government obligations—e g , money, bonds, postage stamps—constitutes the separate offense of COUNTERFEITING Typical examples of forgery are making insertions or alterations in otherwise valid documents and appending another's signature to a document without permission It is, of course, lawful to sign another's signature as his attorney or representative so long as there is no plan to commit fraud Most instances of forgery occur in connection with instruments for the payment of money The crime may also concern documents of title, e g , deeds, or public documents, including birth and marriage certificates In the United States forgery ordinarily is a state crime, but to send forged documents through the post office may constitute the Federal crime of mail fraud

forget-me-not, any plant of the genus *Myosotis,* annual, biennial, or perennial herbs of the Old and New Worlds, popular for borders and rock gardens The small blue flowers (sometimes white or pink) are a symbol of faithfulness The common forget-me-not (*Myosotis palustris* or *scorpioides*) has become naturalized in North America and is the floral emblem of Alaska Forget-me-nots are sometimes called scorpion grass, and other plants have shared the name forget-me-not

forging, working metals by heating followed by hammering or rolling Like FOUNDING or casting, it was practiced in prehistoric time, probably first in ASIA The first metals worked were copper, gold, silver, and the alloy of copper and tin called bronze Forging was practiced in pre-Columbian America, copper, gold, and silver were forged Some African tribes have great skill in forging iron The importance of metals in human progress is indicated by the names BRONZE AGE and IRON AGE The handicraft methods of forging may be seen in any blacksmith shop, the main feature of which is regularly the forge In the forge the metal is heated, commonly to a red or a white heat. Charcoal and coke are preferred fuels, because they produce an intense and easily regulated heat and because they are free from impurities that would injure the metal The heat is increased by driving air into the fire, typically by a bellows When the metal is hot enough, it is taken from the fire by tongs, is placed on the anvil, is hammered to the desired shape, and is tempered by being thrust into water. The details of the process, such as the smith's signals to his helper, register an ancient tradition Forging has often reached the level of art, as shown, for example, in medieval hinges. Machine methods include the use of power hammers and of rollers Forging increases the toughness of iron and steel, while casting makes them brittle See L C Jones, *Forging and Smithing* (1924); R H. Harcourt, *Elementary Forge Practice* (3d ed , 1938), Thomas Moore, *Practical Handbook of Smithing and Forging* (3d ed , 1942).

fork. As an agricultural implement, the fork is very ancient. Wooden forks used in Egypt and elsewhere have been preserved, and the earliest forks were probably forked sticks. Table forks were used first in 15th-century Italy, in Elizabethan England they were ridiculed as a foreign novelty

Forlì, Melozzo da. see MELOZZO DA FORLÌ

Forlì (fôrlē'), city (pop 33,505), capital of Forlì prov , Emilia-Romagna, N central Italy, in Romagna. It is an agricultural center, with silk, dye, felt, and soap manufactures A Roman town on the Aemilian Way, Forlì became a free commune in the 11th cent After much strife between rival families, the Ordelaffi secured power for almost two centuries In 1504 Forlì became part of the Papal States There are a 14th-century citadel, a fine clock tower, an art gallery, and several churches

form, in philosophy, a term to which various technical meanings have been attached With Plato, the Ideas are the forms of things, entities corresponding to the concepts of genera, possessing substantial reality and independent of the changes of particular phenomena With Aristotle, form is always correlative with matter; both are necessary aspects of reality With St Thomas Aquinas, forms are either pure ("subsistent") or inherent in matter Pure forms are conceived as active intelligences, the lowest of them being the human soul With Bacon, the forms of natural phenomena are the laws or uniformities of nature which it is the object of science to discover With Kant space and time are the forms of our sensibility, the categories, the forms of the understanding

formaldehyde (fôrmal'dihīd), simple ALDEHYDE, a gaseous compound of carbon, hydrogen, and oxygen, having a strong suffocating odor, boiling at −21°C and solidifying at −92°C , soluble in water, alcohol, and ether Formaldehyde is used in the preparation of certain dyes and in the production of such synthetic substances as BAKELITE and other plastics and synthetic resins Like other aldehydes it is subject to POLYMERIZATION Commercially, formaldehyde is prepared by passing methyl alcohol vapor mixed with air over hot copper or other substance which acts as a catalyst, causing partial oxidation of the alcohol The oxidation of formaldehyde yields formic acid **Formalin,** the 40 percent water solution of formaldehyde, is used commonly as an antiseptic and disinfectant and as a preservative for biological materials It is poisonous and should not be used as a preservative in foods By the evaporation of formalin, a white crystalline substance, paraformaldehyde, is obtained, which yields formaldehyde when heated and has been used consequently, in the form of candles, for the disinfection of rooms

formic acid [Latin, =belonging to ants], an organic ACID, a colorless, corrosive liquid with a sharp odor, boiling at 100 8°C and solidifying at 8 4°C It is the first, or lowest, member of the fatty-acid series and a compound of hydrogen, carbon, and oxygen; its molecule consists of one hydrogen atom linked to the carboxyl radical (a carbon atom, two oxygen atoms, and one hydrogen atom) It occurs in the bodies of red ants, in the sting of the bee, and in other insects The acid is prepared in various ways e g., by the vigorous oxidation of methyl alcohol or by further oxidation of formaldehyde, by distilling oxalic acid or heating it with glycerin, or from sodium formate It forms salts called formates When heated it decomposes to yield carbon monoxide and water

Formosa (fôrmō'su), Chinese *Taiwan* or *T'ai-wan* (both tī'wan'), province (13,885 sq mi , pop 6,173,035), China The capital is Taipeh Formosa, an island in the Pacific Ocean, is separated from the mainland of S China by the Formosa Strait The heavily forested hills and mountains of central and E Formosa rise to Mt Morrison, c 13,600 ft high, the loftiest peak This area produces some minerals, chiefly gold, silver, copper, and coal, but its main resources are forest products, including valuable hardwoods and the bulk of the world's supply of natural camphor The broad coastal plain in the west supports most of the island's population and is the chief agricultural zone Formosa, with a semitropical climate and rainfall ranging from moderate to heavy, produces large food surpluses Rice is the chief crop, sweet potatoes, sugar cane, and tea (the oolong variety) are also important Flour is milled, sugar is refined, and there are varied light manufactures About 2,500 mi. of rail lines link the hinterland with the island's overseas ports, including Tainan and Kilung The name Formosa {Port ,=beautiful} reflects Portugal's effort in the early 17th cent to use

the island, then inhabited only by primitive tribes, as a trade base The Dutch had displaced the Portuguese as the dominant power when (1661) Koxinga, a general of the Ming dynasty of China, seized Formosa, which was not captured by the Ch'ing dynasty until 1683 Chinese farmers, crowded out of neighboring Kwangtung and Fukien provs , emigrated in such numbers as to overwhelm the aboriginal population Japan, attracted by the island's strategic and economic importance, gained it by the Treaty of Shimonoseki (1895) after the First Chino-Japanese War Under Japan's control the island was exploited for the benefit of the home economy, but, except for technicians and merchants, it was scarcely used for Japanese colonization During the Second World War, Formosa was heavily bombed by American planes At the end of hostilities (1945) it was returned to China In 1949 when the Communists were sweeping through most of China, the Nationalist government fortified Formosa for a last-ditch stand See James W Davidson, *The Island of Formosa* (1903), A J Grajdanzov, *Formosa Today* (1942)

Formosus (fôrmō'sus), c 816–896, pope (891–96), probably a Roman, successor of Stephen VI and predecessor of Boniface VI As bishop of Porto, he became a power in the Church He was excommunicated by JOHN VIII for leading the party which opposed John's coronation of Charles the Bald Later, he was restored and was subsequently elected pope Involved in the dispute over the imperial power, he sided against the dukes of Spoleto, whose growing power was menacing the papacy However, he was forced to crown the duke of Spoleto, Guido, and his son Lambert Formosus encouraged ARNULF to invade Italy and crowned (896) him emperor When the Spoletos came into power, after Formosus' death, his grave was desecrated, and his pontificate declared invalid In 897 he was reburied John XI validated his acts

formula, in chemistry, commonly an expression written to represent a chemical COMPOUND, which indicates the elements making up one molecule of the compound and the proportion of each element by weight For example, the chemical formula for water is H_2O The SYMBOL H represents hydrogen, and the symbol O, oxygen The number 2 (called a subscript) written below the line indicates that two atoms of hydrogen are present, the absence of any subscript following O indicates that only one atom of O is present From the formula for water it is therefore seen that one molecule of it is composed of two atoms of hydrogen and one atom of oxygen The formula also shows that 2 parts by weight of hydrogen (2 x the ATOMIC WEIGHT, which is 1) and 16 parts by weight of oxygen (1x16, the atomic weight of oxygen) are combined to form 18 parts by weight of water From the formula for common salt, NaCl, it can be learned that salt is a compound of the elements sodium (symbol = Na) and chlorine (symbol = Cl), that a molecule of it consists of one atom of sodium and one of chlorine, and that 23 parts by weight of sodium combines with 35 5 parts by weight of chlorine (the atomic weight of sodium = 23, of chlorine = 35 5) to form 58 5 parts by weight of salt (see MOLECULAR WEIGHT) Although a formula indicates the elements, the number of atoms, and the weights of the elements present in a compound, it does not represent the arrangement of the atoms in a molecule This arrangement is indicated by the graphic or structural formula which is especially important in organic chemistry since some compounds have the same number of identical elements but differ in the arrangement of the atoms (see ISOMERISM) Certain elements often react as a single atom and remain grouped together in a compound, the combination being known as a RADICAL A chemical reaction is represented in an EQUATION which consists of several formulas

formula, in mathematics and physics a statement in symbols of the relationship between certain quantities The quantities are usually expressed by letters, and the way in which they are related is indicated by algebraic symbols For example, $A = \pi r^2$ is the formula for the area, A, of a circle of radius r The symbol π means a certain constant (see PI)

Forney, John Wien, 1817–81, American journalist, b Lancaster, Pa He edited the Lancaster *Intelligencer* (1837–45) and the Democratic *Pennsylvanian* in Philadelphia (1845–53) From 1851 to 1856 he was clerk of the U S House of Representatives He helped elect James Buchanan to the presidency in 1856, but, failing to receive a political reward, he later opposed Buchanan's administration and supported Stephen A Douglas in the Philadelphia *Press*, which he established in 1857 Later Forney became a Republican and was (1861–68) secretary of the U S Senate He edited the Washington *Daily Morning Chronicle*, supporting Abraham Lincoln and, for a time, Andrew Johnson, but later joined the attack on Johnson He sold (1870) his Washington paper, again became a Democrat, and wrote Gen Winfield S. Hancock's campaign biography in 1880. He also wrote *Anecdotes of Public Men* (2 vols , 1873–81) and *The New Nobility* (1881)

Forney, town (pop. 1,295), N Texas, E of Dallas, in a blackland area; settled 1872, inc. 1910.

Fornfelt, city (pop 1,504), SE Mo , near the Mississippi below Cape Girardeau, in a farm area

Forres (fŏ'rĭs, -rĭz), burgh (pop 4,169), Morayshire, Scotland, on the Findhorn river It is an ancient town with rich associations in legend and history It is one of the places where, according to tradition, Macbeth murdered Duncan Noteworthy are Sweno's Stone, a carved monument 23 ft high, probably erected to commemorate a victory over the Danes, Nelson's Tower, on wooded Cluny Hill, and the Witches' Stone Whisky is distilled here

Forrest, Edwin, 1806–72, American actor, of Scottish and German descent He first appeared as Young Norval in Home's *Douglas* at the Walnut Street Theater, Philadelphia (1820), gained experience supporting Edmund Kean in Shakesperian roles; and in 1826 first established himself as one of the great tragedians of the century in the role of Othello at New York He had rugged vigor and as Lear, Macbeth, Hamlet, Virginius, and Spartacus played with great force and insight He married (1837) Catherine Sinclair, an English actress, who in 1852 brought against him a sensational divorce suit In England in 1845 his Macbeth was hissed by partisans of Macready, and Forrest himself hissed his rival at Edinburgh These incidents precipitated the Astor Place riot of 1849, a demonstration against Macready at New York by partisans of Forrest in which many were killed Through the storms occasioned by the violence of his temperament his reputation as an actor remained unshaken, and his last appearance as Richelieu in Boston (1871) was an occasion of widespread regret He bequeathed a large share of his fortune to found the Edwin Forrest Home for Retired Actors in Philadelphia See biographies by W R Alger (1877), Lawrence Barrett (1882), Gabriel Harrison (1889), and M J Moses (1929)

Forrest, French, 1796–1866, American naval officer, b St Marys co , Md , entered the navy as a midshipman in 1811 He distinguished himself in the Mexican War, was head of the Washington navy yard (1856–57), and commanded the Brazil Squadron (1858–59) In 1861 Forrest resigned from the U S Navy and in June was commissioned in the Confederate navy While head of the Norfolk navy yard he supervised the armoring of the *Merrimac* He commanded the James River Squadron in 1863–64

Forrest, John Forrest, 1st **Baron,** 1847–1918, Australian explorer and statesman In 1869 he led an expedition to the west of Lake Barlee in search of the missing LEICHHARDT and the following year followed Evre's route in the reverse direction, from Perth along the Bight to Adelaide After other explorations he became surveyor general of Western Australia (1883) and its first premier (1890–1901) In 1901 he became postmaster general of the commonwealth Successively he was commonwealth minister of defense (1901–3), minister of home affairs (1903–4), and treasurer (1905–7, 1909–10, 1913–14, and 1917–18) His writings include *Explorations in Australia* (1875) and *Western Australia* (1884–87)

Forrest, Nathan Bedford, 1821–77, Confederate general, b Bedford co , Tenn (his birthplace is now in Marshall co) At the beginning of the Civil War, Forrest, a wealthy citizen of Memphis, organized a cavalry force which he led at Fort Donelson (Feb , 1862) and Shiloh (April) He assumed command of a cavalry brigade in the Army of Tennessee (June) and in July captured a large Union garrison at Murfreesboro He was made a brigadier general With a newly recruited command he effectively cut Grant's communications in a raid through W Tennessee (Dec , 1862) After foiling a Union attempt to cut the railroad between Chattanooga and Atlanta (May, 1863), Forrest participated in the CHATTANOOGA CAMPAIGN until trouble with Braxton Bragg led him to accept a command in N Mississippi He was promoted major general (Dec , 1863), captured Fort PILLOW (April, 1864), defeated a superior force at Brices Cross Roads, Miss (June), and held Gen A J Smith to a drawn battle at Tupelo, Miss (July) These Union failures against Forrest caused Sherman, then advancing on Atlanta, much concern for his communications Forrest commanded all the cavalry under J B HOOD in that general's Tennessee campaign (Nov - Dec , 1864) and was promoted lieutenant general (Feb , 1865) He surrendered shortly after his defeat at Selma, Ala , in April After the war he engaged for a time in railroading and also was important in the activities of the KU KLUX KLAN Forrest, probably the greatest Confederate cavalryman, is one of the most interesting figures of the war Legends of his exploits still persist in the South See biographies by J A Wyeth (1899), E W Sheppard (1930), A N Lytle (1931), and R S. Henry (1944)

Forrestal, James Vincent (fŏ'rĭstăl), 1892–1949, U S Secretary of the Navy (1944–47) and Secretary of Defense (1947–49), b Beacon, N Y After study at Princeton, he became a naval aviator in the First World War and later (1923) began a career as an investment banker He was appointed administrative assistant to President F. D Roosevelt (June, 1940), Undersecretary of the Navy (Aug , 1940), and Secretary of the Navy (1944) as successor to Frank Knox With the reorganization of the departments of war and the navy, he became Secretary of Defense. He headed the National Military Establishment Illness forced his resignation and caused his suicide

Forrest City, rail and trade city (pop 5,099), co seat of St Francis co , E Ark , at the foot of Crowley's Ridge, in an area producing peaches, cotton, and rice, settled c.1808, inc 1871 A U S soil conservation project is near by

Forster, Edward Morgan, 1879-, English novelist Educated at King's College, Cambridge, he there came to know G Dickinson Lowes, whose biography he wrote in 1934 He lived in Italy, visited India in 1912 and 1922, and during the First World War was stationed in Egypt He and others started the *Independent Review* in 1903, and in 1920 he was editor of the *Daily Herald*, a labor paper His novels are noted for their subtlety, wit, and irony *Where Angels Fear to Tread* (1905), *The Longest Journey* (1907), *A Room with a View* (1908), *Howard's End* (1910), *A Passage to India* (1924), his best-known work (Everyman's Library edition has notes added by Forster) His short stories are collected in *The Celestial Omnibus* (1911) and *The Eternal Moment* (1928) He is best seen as a critic in *Aspects of the Novel* (1927) and the miscellany, *Abinger Harvest* (1936) See studies by Rose Macaulay (1938) and Lionel Trilling (1943)

Förster, Ernst (ĕrnst' fûrs'tûr), 1800–1885, German painter, lithographer, and art critic He painted frescoes for the Univ of Bonn and the royal palace, Munich Förster discovered the Jacopo de Avanso frescoes in the San Giorgio Chapel, Padua He wrote a history of German art, a work on Italian art, and a life of Peter von Cornelius and edited the works of his father-in-law, Jean Paul RICHTER.

Forster, François (frăswa' fôrstĕr'), 1790–1872, French steel engraver, one of the foremost of his time He is noted for his engravings of the paintings of Raphael, Leonardo da Vinci, F P Gérard, and Gros

Forster, Georg (gā'ôrg fôr'stûr), 1754–94, German naturalist, traveler, and author, who accompanied Capt James Cook on a voyage around the world He was for a time professor at Kassel and at Vilna After the outbreak of the French Revolution, he was involved in an attempt to incorporate Mainz with France His account of a voyage around the world, an early scientific travel book, was published in 1777 His father, **Johann Reinhold Forster** (yō'hän rīn'hōlt), 1729–98, naturalist and teacher, was for a time in the employ of Catherine the Great He also accompanied Cook

Forster, John, 1812–76, English biographer and critic He early became literary and dramatic critic of the London *Examiner*, which he later edited (1847–56) His *Lives of the Statesmen of the Commonwealth* (5 vols , 1836–39) first brought him literary fame, but he is best known for his *Life of Charles Dickens* (3 vols , 1872–74), one of the great biographies of the period He also wrote lives of Goldsmith (1848), Landor (1869), and Swift (Vol I only, 1875) See Richard Renton, *John Forster and His Friendships* (1912)

Forster, William Edward, 1818–86, British statesman He entered Parliament in 1861 and, together with Bright and Cobden, opposed recognition of the Confederated States of America His compromise elementary education act (1870) provided aid for existing schools, established supplementary nondenominational "board schools," and was the foundation for the English system of national compulsory education In 1880 he went (unwillingly) to Ireland as chief secretary, but his opposition to Parnell and his stern enforcement of the law made him so unpopular that attempts were made on his life He resigned in 1882 See Frank Smith, *A History of English Elementary Education 1760–1902* (1931)

Forsyth, Andrew Russell (fôrsĭth'), 1858–1942, Scottish mathematician He was professor of mathematics at Cambridge (1895–1910) and then at the Imperial College of Science, London (1913–23) He was the author of works on differential equations (1885, 1890–1906), the theory of functions (1893), and differential geometry He also wrote *Calculus of Variations* (1927), *Geometry of Four Dimensions* (1930), and *Intrinsic Geometry of Ideal Space* (1935)

Forsyth, John, 1780–1841, American statesman, b Fredericksburg, Va , grad Princeton, 1799 He began law practice in Augusta, Ga , and was attorney general of the state He was in the House of Representatives from 1813 until his election to the Senate in 1818 In Feb , 1819, he resigned to become minister to Spain, where he was able to secure the ratification of the treaty of 1819 whereby Florida was ceded to the United States He again served in the House of Representatives from 1823 until elected governor of Georgia in 1827 He was again U S Senator (1829–34), resigning to become Secretary of State under Andrew Jackson, an office which he continued to hold during Van Buren's administration In his second term in the Senate, Forsyth supported Jackson's policies, particularly in the nullification controversy in Georgia. He was a leader in the agitation for removing the southern Indian tribes beyond the Mississippi. As Secretary

of State he was chiefly concerned with French spoliation claims, the question of the annexation of Texas, the troubles concerning the rebellion in Canada, including the *Caroline* incident, and the dispute over the Maine boundary

Forsyth, Thomas, 1771-1833, American frontiersman, b Detroit, Mich He early entered the Indian trade, spent several winters at Saginaw, and later made his headquarters at Peoria, Ill He served as subagent of Indian affairs for the region, (1812–19) and in the War of 1812 did much to protect the settlements and furnish information regarding Indian movements His influence kept the Potawatami neutral From 1819 to 1830 he was a full agent in charge of the Sac and Fox and was stationed at Fort Armstrong

Forsyth (fôrsith', fôr'sĭth) **1** City (pop 2,372), co seat of Monroe co, central Ga, NW of Macon, in a farm area, inc 1822 It processes cotton and lumber and manufactures textiles "Hill Arden," in classic revival style, dates from 1822 The city is the seat of Bessie Tift College **2** City (pop 1,696), co seat of Rosebud co, SE Mont, on the Yellowstone river, inc 1904

forsythia (–sĭth'ĭă, –sĭ'thēu), any plant of the genus *Forsythia*, Old World shrubs with abundant yellow flowers that appear in the spring before the leaves It is easily cultivated and popular for its early color The common cultivated kinds, called also golden bell, are Oriental or hybrid in origin The branches are often forced into bloom indoors

Fort, Paul (pōl' fôr'), 1872–, French poet, one of the SYMBOLISTS His chief distinction rests in his use of "rhythmical prose," especially in the *Ballades françaises* (Vol I, 1897) See Amy Lowell, *Six French Poets* (rev ed, 1916)

Fortaleza (fôrtulā'zu), city (pop 140,901), capital of Ceará state, NE Brazil, a port on the Atlantic Founded in 1609, it became a center of the great sugar plantations of NE Brazil in colonial times Cultivation of cotton came later, and the city processes sugar and cotton today It ships these, coffee, hides from the cattle-grazing interior, and, more important, exotic products such as carnauba wax, oiticica oil, rutile, and castor beans The modern, spacious city has several technical schools Fortaleza is known also for its lace and its wood carving The climate is tropical The city was formerly known to foreigners as Ceará

Fort Anne National Park, N S see ANNAPOLIS ROYAL

Fort Atkinson, city (pop 6,153), S Wis, SE of Madison, on the Rock River and NE of Lake Koshkonong, settled 1836, inc 1878 It is a trade and shipping center for a dairy region William D Hoard began the *Hoard's Dairyman* here (1885)

Fort Augustus, village, Inverness-shire, Scotland, on the Caledonian Canal at the head of Loch Ness Barracks established here in 1716 for protection against Highlanders were reinforced in 1730 by General Wade, who named the station after William Augustus, duke of Cumberland In 1876 the buildings were occupied by a Benedictine abbey

Fort Beauséjour National Park, N S see BEAUSÉJOUR, FORT

Fort Benton, city (pop 1,227), co seat of Chouteau co, N central Mont, on the Missouri and NE of Great Falls Growing around a post founded by the American Fur Company in 1846, it was laid out in 1865 and incorporated in 1883 The post was first reached by steamboat in 1859 and as head of navigation on the Missouri it was long the port of entry for gold seekers and for cattlemen The fort was used as a garrison in the Indian troubles for some years after 1870 The city is a farm trade center

Fort Bragg, city (pop 3,235), N Calif, on the coast NNW of San Francisco, in a timber, fishing, and farm region, founded 1850, inc 1889 An army post was built here in 1857 and named for Braxton Bragg, who was its first commandant

Fort Branch, town (pop 1,552), Gibson co, SW Ind, S of Princeton

Fort Bridger State Park, SW Wyo, E of Evanston and on Blacks Fork of the Green River The supply post, founded by James Bridger in 1843, became a station on the Oregon and other trails From 1853 to 1857 the Mormons took possession of Fort Bridger but retreated into Utah with the coming of government troops sent out against them Bridger then leased the post to the government It was maintained as a fort until 1890. Some of the original buildings still survive

Fort Collins, city (pop 12,251), co seat of Larimer co, N Colo, N of Denver and on the Cache la Poudre river, settled around a fortification (1864–71), inc 1883 It is the trade, shipping, and processing center for a rich farm area raising grain, sugar beets, and livestock It is the seat of the COLORADO AGRICULTURAL AND MECHANICAL COLLEGE and is the headquarters for Roosevelt National Forest Near by are several diversion dams of the COLORADO–BIG THOMPSON PROJECT

Fort Coulonge (kōōlōzh'), village (pop 1,072), SW Que, at the junction of the Ottawa and Coulonge rivers E of Pembroke It was founded in 1680 as a fur-trading post

Fort Davis, unincorporated town (pop c 1,000), co seat of Jeff Davis co, W Texas, SE of El Paso and in the Davis Mts Settled near a frontier army post, established in 1854 and abandoned in 1891, the town is a ranching center now much visited by tourists viewing the mountains The Univ of Texas maintains, with assistance from the Univ of Chicago, McDonald Observatory founded in 1932 on Mt Locke near by

Fort-de-France (fôr-du-frās'), city (pop 66,006), capital of MARTINIQUE dept, French West Indies Formerly called Fort-Royal, it is a port with a deep, landlocked harbor on W Martinique and handles nearly all the island's commerce, exporting sugar and rum In spite of its fine harbor, Fort-de-France did not become the chief commercial city until the destruction of SAINT-PIERRE in 1902

Fort Deposit, town (pop 1,351), S central Ala, SW of Montgomery, in the Black Belt, settled on the site of a fort established c 1813

Fort Dodge, city (pop 22,904), co seat of Webster co, central Iowa, on the Des Moines river and NNW of Des Moines, settled c 1846 Fort Clarke, established here in 1850, was named Fort Dodge (for Henry Dodge) in 1851 and was in 1853 abandoned The town was laid out in 1854 and incorporated in 1869 In an agricultural (corn, poultry, hogs) and mining area, it is a rail, distributing, and industrial center with gypsum mills and farm-product processing plants An important gypsum bed is here, coal and clay are also found The city has a junior college and an art gallery

Fort Donelson National Military Park see DONELSON, FORT

Fort Edward, village (pop 3,620), E N Y, on the Hudson where the Champlain division of the Barge Canal enters and near Hudson Falls, inc 1849 The fort was built (1755) by Phineas Lyman to guard the portage between the Hudson and Lake Champlain, Burgoyne occupied it briefly in 1777 Paper milling is the chief industry

Fort Erie, town (pop 6,595), S Ont, on the Canadian side of the Niagara river opposite Buffalo, N Y, with which it is connected by the Peace Bridge Bridgeburg was united with Fort Erie in 1931 A number of branch factories of U S firms are here Fort Erie was built in 1764 by Captain Montressor and was taken from the British in the War of 1812 by American forces, who in turn in Aug, 1814, withstood successfully a siege by a superior British force, but afterwards blew up and abandoned the stronghold The site was long desolate, the modern town being a growth of the 20th cent The fort has been considerably restored

Fortescue, Sir John (fôr'tĭsku), c 1394–c 1476, English jurist He was chief justice of the Court of King's Bench from 1442 until 1460, when he was deposed by Edward IV as a follower of the house of Lancaster In 1471 he became reconciled with Edward Fortescue's *De laudibus legum Angliae* [in praise of English laws] (1470) is a rudimentary description of current legal practices His *De natura legis naturae* [concerning the nature of natural law] (1463), defending the Lancastrian claim, was retracted in *The Governance of England* (c 1471), which advocated rule by a permanent staff of trained councilors of the king

Fort Fairfield, town (pop 5,607), NE Maine, settled 1816, inc 1858 In a potato-growing area, it is a port of entry and commercial center on the Aroostook at the New Brunswick line

Fort Frances, town (pop 5,897), W Ont, on Rainy River, opposite International Falls, Minn It was once a Hudson's Bay Company post and is now chiefly a lumbering center with sawmills and a pulp and paper factory Steamers ply regularly down Rainy River to Lake of the Woods and Kenora Fort Frances is the starting point for canoe and hunting and fishing trips in this forested, rock-bound area

Fort Frederica National Monument. see SEA ISLANDS

Fort Gaines, city (pop 1,357), co seat of Clay co, SW Ga, on a bluff overlooking the Chattahoochee river (here spanned by a cantilever bridge) and S of Columbus, inc 1830 It is the trade center for a diversified farm area

Fort George, formerly **Big River,** W Que, the longest river (c 550 mi) flowing into Hudson Bay from the east It rises on the Labrador plateau and flows almost straight west

Fort Gibson, town (pop 1,233), E Okla, on the Grand River near its junction with the Arkansas and near Muskogee One of the oldest settlements in the state, it was founded in 1824 and was a vital U S military post for many years Fort Gibson Dam (2,850 ft long and 110 ft high) in the Grand River was authorized by Congress in 1941 for completion in 1949 Built for flood control and power, it forms a reservoir covering about 51,000 acres

Forth, river of Scotland It is formed by the streams Avondhu and Duchray Water, which rise near Ben Lomond in Stirlingshire and join near Aberfoyle The Forth then flows c 50 mi past Stirling to Alloa, receiving the Teith, Devon, and other streams and crossing or bordering Stirlingshire, Perthshire, and Clackmannanshire The **Firth of Forth** extends c 50 mi from Alloa to the North Sea and is from 1 to 18 mi wide It is crossed at Kincardine, below Alloa, by a road bridge (1936) with a swing span of 300 ft At Queensferry it is spanned by a famous cantilever railroad bridge (5,330 ft long), built by Sir John Fowler and Sir Benjamin Baker, completed in 1890. Above Queensferry is the roadstead St. Margaret's Hope Rosyth, on the bay, is a naval base Bass Rock and the Isle of May guard the entrance to the firth, other islands are Inchkeith and Incheolm Rivers flowing into the firth include the Leven, Esk, Avon, and Cairon.

Fortier, Alcée (ălsā' fôrtyā'), 1856–1914, American educator and historian, b St James Parish, La, educated at the Univ of Virginia His career was associated with the Univ of Louisiana (later Tulane Univ) He taught French at Tulane after 1880, becoming professor of Romance languages in 1894 His most important works are his *History of Louisiana* (4 vols, 1904) and his studies of the Creoles and of Louisiana folklore He also wrote historical works and literary criticism in French He was director of the Louisiana Historical Society for many years

fortification. Some types of building for defense appeared with the beginning of organized warfare, as a settlement or camp had to be defended against a war party The attacked naturally took advantage of all natural means of defense—trees, rocks, and the like—and improved upon them One striking example of this process was the retreat of the Indians of the present SW United States to mesas and to the shelves of canyon walls which could be readily defended against nomadic warriors (see CLIFF DWELLINGS and PUEBLO INDIANS) Palisades made of wood and rather elaborate stockades are developed for protecting villages even among peoples of very simple material culture In the Near East city walls appeared very early, and the old cities of Mesopotamia had walls of mud or sun-dried brick to withstand invaders The citadel, a fort or fortified section within the city, appeared early as well, as did the isolated fort, a structure built for defending strategic spots (such as a river ford), for garrisoning fighters on the frontier, and for offering a haven of refuge to the people of a region Permanent or semipermanent fortifications developed Some of them had quite considerable strength against the weapons of ancient times Thus the walls of Troy in Homer's *Iliad* were reckoned as being invulnerable, and therefore the ruse of the wooden horse to take the city The Phoenician coastal cities were also walled strongly and offered sturdy resistance to Assyrian and Persian conquerors, and Jerusalem long was defended against Roman machines To overcome such means of defense siegecraft developed early with means of undermining or tunneling under the walls, casting stones or blazing arrows over the walls, and battering in the gates In the West the building of fortifications along whole stretches of frontier reached a high point with the Romans, who strung out walls along the Danube and Rhine and in England (e g, HADRIAN'S WALL) Some of these had elaborate systems of watchtowers, with provisions for garrisoning men along the wall and methods of transporting troops and supplies by road and canal In the East the famous Great Wall of China (see CHINA, GREAT WALL OF) was an even more ambitious undertaking of the same type The Romans, with their highly developed skill in engineering, also developed field fortifications in their camps (*castra*) With the breakdown of Roman authority and the increase of raids and incursions of invading hordes from the north and east, fortification on the grand scale had to be surrendered in favor of local protection, and in the Middle Ages, when petty warfare was the regular order of the day, the typical fortifications were town walls of masonry, great citadels in the cities, and that most typical of medieval military institutions, the CASTLE It is interesting that similar local fortifications became the rule in the anarchic warfare in China and India and in feudal Japan In the West the castles and citadels (developed to a high point by the Moors in Spain) were not proof against the attacks of the catapult, the crossbow, the BATTERING RAM, and mining and sapping, but many of them were defensible against all but long siege The masonry walls were even proof against early use of gunpowder, but the development of ARTILLERY in the 15th cent diminished the value of the castle to the vanishing point, and one of the great military problems of the Renaissance and the succeeding centuries was to develop fortifications to withstand artillery. Walls were cut down, and the moat that surrounded the medieval castle was deepened to afford greater protection New fortifications were set in the ditches and were buttressed to withstand heavy shot Defense guns were mounted behind earthen ramparts Bulwarks of various types were developed to protect the fortress In fortifications with towers (roundels) connected by walls (curtains), there were areas that could not be covered by defensive fire from the towers This condition led to the construction of artillery positions at angles to the main wall, the bastions, and the proper distribution of bastions became the main preoccupation of military engineering That science reached a new high point in the wars of Louis XIV. Sebastien le Prestre de VAUBAN, who worked out fortifications and siege

methods in the late 17th cent , has perhaps the most illustrious name in the history of fortifications. His methods, supported by the work of others such as the Dutch Menno van Coehorn and the French Marc René, marquis de Montalembert, were to be basic in fortification for centuries The detached fort as support for the outer defenses of the fortress chain was introduced to create a sort of entrenched camp between the citadel of the fortress and the outer edges Old methods of palisades, moats, and abatis (felled trees set with sharpened points) and the like were used The trend toward spreading the chain of defense (the enceinte) wider was hastened in the 19th cent by the development of explosive shells and heavier artillery and the increased use of curved fire Circles and lines of smaller forts and intrenched camps, connected by belt-line railroads, girdled cities and guarded strategic points on frontiers Batteries were dispersed and artillery was placed in revolving or disappearing cupolas of subterranean bases, and the pillbox (a subterranean concrete room with observation towers and machine guns) was developed The system of a chain of detached forts around a citadel was predominant in Europe at the time of the First World War The Belgian fortresses, which were thought impregnable, fell with ease to the Germans in 1914, and the ring system of fortification was discredited The resistance of French concrete forts to even the heaviest fire, however, seemed to offer a promise of permanent defense fortification The result was the undertaking of the MAGINOT LINE This elaborate system of pillboxes, forts, and underground communications demanded great expense, but in the Second World War it was quickly outflanked in May, 1940, and proved useless, the question as to whether it would have been effective if carried clear to the coast of the English Channel is still somewhat argued, but the elaborate fixed fortification was discredited by the fate of the Maginot Line and of the expensive Belgian forts Despite the value of the defense in depth of the German Siegfried Line, which withstood heavy assault in the attack of 1944 until overpowered, and despite the usefulness of the Russian Stalin Line in channeling the German attack on Russia, the predominant note in the war was field, rather than fixed, fortification The use of underground shelters against air attack was effective and led to plans for extensive underground fortifications The Japanese on the Pacific islands made effective use of the ancient devices of earth and log fortifications on the same principle as the most ancient type Indeed, with the emphasis on mobile warfare and the use of armored columns and airplanes, the theory of fortification seemed to return to the idea of the temporary and even improvised shelter from a war party, intended mainly to delay the invaders until a stronger force could be brought into action against them The land mine, the tank trap, the pillbox, and the foxhole replaced the fortress Whether these conditions will hold in the future no one can say Even less can the effect of the atomic bomb on the theories of fortification be foretold

Fort Jameson (jām'sun), town (pop 3,217), SE Northern Rhodesia, on Nyasaland border It was a station on a notorious slave-trade route to the coast in the 19th cent There is trade in cotton and tobacco

Fort Jefferson National Monument, 86 82 acres, off S Florida, on Garden Key, an island of the Dry Tortugas, 60 mi W of Key West, est 1935 There is a fine brick sanctuary on the island The fort, unfinished, was begun in 1846 to guard the Straits of Florida It became a Federal prison in 1863, and Dr Samuel A MUDD was imprisoned here for four years The largest masonry fortification in the Western Hemisphere, it is surrounded by high thick walls and by a moat 70 ft wide said to have been filled with sharks to prevent the escape of prisoners and hence was known as Shark Island

Fort Kent, town (pop 5,363), N Maine, settled 1829 by Acadians, inc 1869 It is a port of entry on the St John at the influx of the Fish and a potato-processing center

Fort Laramie National Monument, 214 41 acres, E Wyo , SE of Casper Fort Laramie, on the west bank of the Laramie 2 mi above its junction with the North Platte, was founded (1834) as a trading post by Sublette and Campbell It came into the possession of the American Fur Company in 1836 In 1849 it became a U S military post, which in subsequent years was a major stopping place on the OVERLAND TRAIL The fort was garrisoned until 1890 In 1938 it was made a national monument See L R Hafen and F M Young, *Fort Laramie and the Pageant of the West* (1938).

Fort Lauderdale (lô'durdāl), city (pop 17,996), co seat of Broward co , SE Fla , N of Miami, on the Atlantic coast, settled around a fort built (1837) in the Seminole War. On New River and a navigable canal to Lake Okeechobee, the city is a shipping center for fruits and vegetables and a resort center for deep-sea fishermen and yachtsmen Near by are Port Everglades (a fine artificial port and a port of entry) and a Seminole Indian reservation

Fort Lee, borough (pop 9,468), NE N J , on the Hudson, connected with New York by ferry, settled 1700, inc 1904 The fort built here to command the Hudson was abandoned Nov 20, 1776, by General Greene after Fort Washington, on the opposite shore, fell to the British Fort Lee was an early center of the moving-picture industry

Fort Lupton, town (pop 1,692), N Colo , NNE of Denver, founded c 1872, inc 1890 It is the processing center for a farm and dairy area Coal mines are in the region The site of Fort Lupton (1836-44), a fur-trading post, is near by

Fort McHenry National Monument and Historic Shrine: see MCHENRY, FORT

Fort McMurray, settlement, N Alta , on the west bank of the Athabaska river and near Waterways It is the chief base for air travel to the central part of the Northwest Territories It was originally a fur-trading post of the North West Company named Fort of the Forks, it was taken over by the Hudson's Bay Company in 1821

Fort Madison, city (pop 14,063), a co seat (since 1838) of Lee co , SE Iowa, on the Mississippi (here spanned by a bridge) below Burlington Fort Madison, a U S trading post, was established here in 1808 but when besieged by Indians was abandoned and burned in 1813 The settlement, made in 1833, was incorporated in 1838 Formerly a river port and now a rail, commercial, and industrial center in an agricultural area, it processes farm products and makes fountain pens, farm tools, and paints The state penitentiary is here

Fort Marion National Monument, renamed (1942) Castillo de San Marcos National Monument see SAINT AUGUSTINE, Fla

Fort Matanzas National Monument. see SAINT AUGUSTINE, Fla

Fort Meade, city (pop 1,992), central Fla , ESE of Tampa, in a farm, timber, and quarry area It was settled around a fort established here in the mid-19th cent Kissengen Springs, a resort, is near by

Fort Mill, textile-mill town (pop 2,919), N S C , near the N C line S of Charlotte, N C

Fort Morgan, city (pop 4,884), co seat of Morgan co , NE Colo , NE of Denver and on the South Platte river, settled on the site of an early army post, inc 1887 It is the trade and processing center for a rich farm area yielding sugar beets, grain, dairy products, and livestock

Fort Myers, city (pop 10,604), co seat of Lee co , SW Fla , on the Caloosahatchee river near the Gulf Fort Harvie, built (1841) in the Seminole War and renamed in 1850, was held by Federals in the Civil War and attacked by Confederates in Feb , 1865 The city grew up around the fort in a region of rich tropical vegetation, including numerous varieties of royal palms It ships citrus fruits, winter vegetables, fish, and cattle In the 1920s its growth as a resort was rapid Thomas A Edison wintered at Fort Myers and experimented here for many years

Fort Necessity National Battlefield Site: see NECESSITY, FORT

Fort Nelson, settlement and government post, N British Columbia, on the Alaska Highway and the Fort Nelson river and N of Dawson Creek A Hudson's Bay Company post (1800) is still occupied

Fort Nelson, river of N British Columbia, 180 mi long, a tributary of the Liard

Fort Payne, city (pop 4,424), co seat of De Kalb co , NE Ala , NE of Gadsden, in a farm area, founded 1889 Coal, iron, clay, and fuller's earth are found in the region Near by is the site of a Cherokee settlement

Fort Peck Dam, NE Mont , in the Missouri river, not far above the mouth of the Milk river Construction of the huge, earth-filled structure, 21,026 ft long and 250 ft high, began in 1933 and was substantially complete by 1940 Begun as a Federal project for improvement of navigation and for flood control, it was finally used also for hydroelectric power and for irrigation (see also MISSOURI RIVER BASIN PROJECT) The unincorporated town of Fort Peck (pop 1,816) was built to house project employees Glasgow, Mont , is near by

Fort Pierce, city (pop 8,040), co seat of St Lucie co , SE Fla , on Indian River, which is here connected with the Atlantic by Fort Pierce Inlet The city (inc 1901) grew around a fort built in 1838 to guard against the Indians A distributing center with a good harbor and rail facilities, it ships fruit, vegetables, fish, and lumber To the west is Halpatiokee Swamp

Fort Plain, village (pop 2,770), E central N Y , on the Mohawk between Amsterdam and Little Falls, settled 1723, inc 1832 Rayon fabrics are made here It is named for a fort built (1776) to protect the valley against Indian and Loyalist raids

Fort Pulaski National Monument see PULASKI, FORT

Fort Recovery, village (pop 1,123), W Ohio, on the Wabash and at the Ind line A rural trading center, it takes its name from the fort established by Anthony Wayne in 1791

Fortress Monroe: see MONROE, FORT

Fortrose, burgh (pop 875), Ross and Cromarty co , Scotland, on Moray Firth It is a seaside resort It was the site of a monastery in the 6th cent and became the seat of a bishopric in 1124 The stones of the ruined cathedral were used by Cromwell to strengthen fortifications at Inverness

Fort-Royal, Martinique see FORT-DE-FRANCE

Fort Saint John, settlement, N British Columbia, on the Alaska Highway and N of Dawson Creek, at the beginning of the Sikanny Trail A North West Company post established in 1805 is still operated by the Hudson's Bay Company

Fort Scott, city (pop 10,557), co seat of Bourbon co , SE Kansas, near the Mo line N of Pittsburg, inc 1860 A military post, established in 1842, was abandoned in 1855, the city grew up around it During the Civil War the fort was rebuilt, some of its buildings are still standing The city is a railroad, trading, and manufacturing center in a dairying and farming region, it makes dairy products, cement, and flour A junior college is at Fort Scott

Fort Smith, city (1940 pop 36,584, 1949 special census pop 50,724), a co seat of Sebastian co , NW Ark , at the Okla boundary where the Arkansas and Poteau rivers join Founded as a military post in 1817, it was an important supply point during the 1848 gold rush It was first incorporated in 1842 The city is the major industrial center of the state, with furniture, glass, textile, and scissors factories among its industries and with near-by supplies of coal, gas, and zinc It is also a rail and trade center for a diversified farm area A national Civil War cemetery, the Old Fort, and other old buildings are here, near by is a branch of the state tuberculosis sanatorium

Fort Stockton, city (1940 pop 3,294, 1947 estimated pop 4,200), co seat of Pecos co , W Texas, on a plateau W of the Pecos Comanche Springs, outside the town, once offered camping grounds for Indians and for overlanders bound (1849–50) for California, here was founded (1859) the army post (now in ruins) around which the city grew The large springs now furnish water for irrigated farms Fort Stockton also ships wool, mohair, and cattle from surrounding ranches, benefits from oil fields to the east, and entertains tourists

Fort Sumner, village (pop 1,669), co seat of De Baca co , E N Mex , NNE of Roswell It is the trade and shipping center of a farm and livestock area Near by are Alamogordo Dam and the ruins of Fort Sumner (built 1862), which was once a major military post

Fort Sumter National Monument: see SUMTER, FORT

Fort Thomas, residential city (pop 11,034), N Ky , on the Ohio and near Newport, inc 1867 Fort Thomas military reservation, a U S army post, was established here in 1887

Fortuna (fôrtōō'nu) [Latin,=fortune], in Roman religion, popular oracular goddess of chance, corresponding to the Greek Tyche She was represented with a rudder, a globe, and a cornucopia She was probably originally a goddess of fertility

Fortuna (fôrtōō'nu, -tū'nu), town (pop 1,413), N Calif , on the Eel river, S of Eureka and near the coast, in a lumbering region, inc 1906

Fortunate Isles or **Isles of the Blest,** in classical and Celtic legend, islands in the Western Ocean There the souls of favored mortals were received by the gods and lived happily in a paradise Belief in the islands long persisted, and the Canaries and the Madeira Islands were sometimes identified with them See BRENDAN, SAINT

Fortunatus (–nā'–) [Latin,=fortunate], Christian, probably Corinthian 1 Cor 16 17,18

Fortunatus (Venantius Honorius Clementianus Fortunatus) (vēn'in'shus hônô'rēus klēmēn"shē'nus), d c 600, Latin poet, b near Treviso, Italy A priest in Gaul, he wrote a long poem on St Martin of Tours and the hymn *Vexilla Regis prodeunt*, sung on Good Friday in the Roman Catholic Church A hymn written by him supplied the first line and the meter for the later *Pange lingua* He was the last of the Gallic Latin poets

Fortune, Robert, 1813-80, British botanist He traveled in the Orient for the Royal Horticultural Society and later for the East India Company and brought back to England a number of chrysanthemums, the Japanese anemone, tree peonies, the kumquat, and other plants His experiments with the tea plant founded its cultivation in India He wrote *Three Years' Wanderings in the Northern Provinces of China* (1847)

Fortune, Timothy Thomas, 1856-1928, American Negro journalist, b Marianna, Fla , son of a Reconstruction legislator Educated at Howard Univ , he went to New York c 1882 and became editor of the *Globe*, a Negro daily, editing it for the remainder of his life A militant advocate of industrial education for the Negro, he was the author of *Land, Labor, and Politics in the South* (1884) and *The Negro in Politics* (1885)

Fortune Bay, c 80 mi long, S N F A large number of fishing villages are on its shores, the French islands of Grand and Little Miquelon and St Pierre are at its mouth

fortunetelling, practice of foretelling the future or destiny of an individual Some means used include divination, astrology, crystal gazing, palmistry, numerology, and the inspection of playing cards or

tea leaves Fortunetelling for money is punishable by law in England and in parts of the United States

Fortuny, Mariano (märēä'nō fôrtōō'nē), 1838?–1874, Spanish genre painter Sent to Morocco (1859) to paint war scenes, he made many brilliant sketches of Oriental life His little canvases are characterized by an extreme facility and vivacity. He is represented in the Museo de Arte Moderno, Madrid, and in the Metropolitan Museum The Walters Art Gallery, Baltimore, has his well-known *Snake Charmers* Fortuny was also an accomplished etcher and water-colorist. His early death cut short a brilliant career

Fort Valley, city (pop 4,953), co. seat of Peach co., S central Ga., E of Columbus and SW of Macon, in a farm area, settled c 1836, inc 1856 Fort Valley State College (Negro, coeducational, 1895) is here

Fortville, town (pop 1,463), central Ind., NE of Indianapolis, laid out 1849. Chemicals are manufactured here Fort Benjamin Harrison is near by

Fort Wayne, city (pop 118,410), co. seat of Allen co., NE Ind., where the St Joseph and the St Marys join to form the Maumee At this strategic point of water transport between the Great Lakes and the Ohio, the Miami Indians had their chief town before the French founded a trading post sometime shortly after 1680 The elder sieur de Vincennes seems to have established (1704) a fort, which was burned (1747) by the Indians, rebuilt (1750), occupied (1760) by the British, and taken by the Indians in Pontiac's Rebellion The Miami successfully opposed the Americans under Josiah Harmar, who burned (1790) their town, but they were subdued by Anthony Wayne, who built (1794) the fort that bore his name There was further Indian fighting in the War of 1812, but afterward the peaceful fur-trading center began to grow It was incorporated as a town in 1829 and as a city in 1840 A century later it was the second largest city in the state, a key railroad and shipping point, and an industrial metropolis Meat is packed, other foodstuffs are processed, and the varied manufactures include electrical products, tools and machinery, paper, and hosiery Fort Wayne is the seat of Concordia College (junior, Lutheran, for men, 1839) and Fort Wayne Art School There is a state school for the feeble-minded See documents in B J Griswold, *Fort Wayne, Gateway of the West, 1802–1813* (1927)

Fort William, city (pop 30,585), W Ont., at the outlet of the Kaministikwia river on the northwest shore of Lake Superior With PORT ARTHUR, its twin city, 3 mi distant, it forms the westernmost Canadian port of the Great Lakes waterway and owes its importance to being the transfer and bulk-breaking point for the export and import trade of W Canada Both the Canadian National and Canadian Pacific railways have terminal facilities at the port, and the Canadian Pacific has there one of the largest coal docks in the world The harbor, one of the best on the Great Lakes, is formed by the three channel mouths of the Kaministikwia and is lined with large elevators There are also flour mills, lumber mills, pulp and paper mills, foundries and machine shops, and shipbuilding yards Kakabeka Falls in the vicinity furnish abundant water power An earlier fort at this point was known as Fort Kaministiquia Fort William, named for William McGillivray of the North West Company, was erected in 1801 when the company moved its headquarters from the GRAND PORTAGE, which was found to be in U S territory Until the union of the North West Company and the Hudson's Bay Company in 1821 the fort was the headquarters of the traders and the transfer point for their supplies, which went inland to all the Canadian Northwest by the Kaministikwia route

Fort William, burgh (1931 pop 2,524, 1948 estimated pop, 3,170), Inverness-shire, Scotland, on Loch Linnhe, near Ben Nevis It is a tourist center for the Highlands The fort was built by General Monck in 1655, strengthened and renamed under William III in 1690, besieged by the Jacobites in 1715 and 1746, and demolished in 1890 There is a museum with Jacobite relics Fort William, with an important aluminum industry, was damaged by a German plane in 1940

Fort Worth, *city* (1940 pop 177,662, 1948 estimated pop 268,000), co. seat of Tarrant co., N Texas, W of Dallas, settled 1843, inc 1873 It is at the point where the West Fork joins the Clear Fork of the Trinity An army post (Camp Worth, later Fort Worth) was established in 1847, and after the Civil War the town was an Old West cow town The first railroad, completed in 1876 by heroic efforts of the citizens, helped make Fort Worth a meatpacking city Later wheat growing made it a center for milling and shipping grain, and in the 20th cent it was enriched by refineries and other oil and gas industries It is the focus of nine railroads, several air lines (there is also a U.S. military air base), and good highways It expanded greatly in the First World War and more particularly in the Second World War, and the metropolitan area was estimated in 1948 to have some 334,000 inhabitants Aircraft making was added to the city's diverse and growing industries. Fort Worth is the seat of TEXAS CHRISTIAN UNIVERSITY, Texas Wesleyan College (Methodist; coeducational), and Southwestern Baptist Theological Seminary It has many parks and a well-known botanic garden Three reservoirs on the West Fork—Lake Worth, Eagle Mountain Lake, and Lake Bridgeport—serve the city Near by the U S Public Health Service Hospital was founded in 1936

Forty Fort, residential borough (pop 6,293), NE Pa., on the Susquehanna near Wilkes-Barre; settled 1772 on the site of the fort of that name From the fort the militia of the WYOMING VALLEY marched to engage British and Indians (1778) Near by is the Colonel Denison House, built in 1790

Fort Yukon (yōō'kŏn), village (pop 274), NE Alaska, on the Yukon Flats, where the Porcupine river enters the Yukon, just N of the Arctic Circle On the Yukon Flats in 1847 the Hudson's Bay Company built a trading post, which had to be abandoned in 1869 when it was proved that the site was within the borders of Alaska The village is one of the foremost trading points of the N Alaska region It was an outfitting point for some of the gold seekers in the Klondike in the time of the great rush, but is now again principally a trapping center

forum (fō'rum) [Latin, =market place], market and meeting place in ancient Roman towns in Italy and later in the provinces, corresponding to the Greek agora Here private and public affairs were discussed, ceremonies and assemblies held, orations delivered, edicts announced, and justice administered By extension the word *forum* may indicate in modern usage the meeting itself The forum was usually square or rectangular in shape and had, among other buildings, a basilica with shops, the public treasury, the curia, and a prison, under Greek influence colonnades were introduced The old Roman Forum extended in a marshy valley from Capitoline Hill southeast along the Palatine Hill When, much later, the Basilica of Constantine and the Triumphal Arch of Titus were added, it reached almost to the Colosseum The valley was crossed by a small stream emptying into the Tiber, which drained the area and was canalized underground probably in the 6th cent B C to become the greatest sewer, the Cloaca Maxima (a portion of which still exists) It was 14 ft high and 10½ ft wide At the SW end of the Forum was the temple of Vesta and near by the house of the vestals Next, as an entrance to the Forum proper, was the Arch of Augustus, having on one side the temple of deified Julius Caesar and on the other that of Castor and Pollux Behind it was a building, now the Church of Santa Maria Antiqua with fine 8th-century frescoes Along the southwest side of the Forum was the Basilica Julia, along its northeast side the Basilica Aemilia and the curia, where the senate met The Forum was closed to the northwest by the Arch of Septimius Severus and by the rostra, platforms adorned with beaks of captured vessels, from which tribunes, consuls, and orators made their speeches Beyond them, toward Capitoline Hill, were temples, among them the Temple of Concord, one of the richest, and the temple of Saturn, one of the oldest, housing the treasury In the central area were several smaller monuments In imperial times the old Forum became inadequate, the emperors built new fora to the northeast, from the Basilica of Constantine to the valley between the Capitoline and Quirinal On the southeast were the Forum of Vespasian with the Temple of Peace surrounded by a colonnade, next the Forum of Nerva, followed by that of Augustus with the temple of Mars Southwest of it was the smaller Forum of Julius Caesar, a colonnade enclosing the temple of Venus Beyond the Forum of Augustus was the Forum of Trajan, a vast colonnaded square, then the Basilica Ulpia, then the two libraries with, between them, the wonderful Column of Trajan, which is still standing, the temple of Trajan closed the Emperors' fora to the northwest. With their polychrome marble pavements and grandiose colonnades, these fora were much more splendid than the old Forum In the 4th cent the decay of the old Forum began, earthquakes, fires, and the barbarian invasions did the rest In the Middle Ages materials from the fora were used to build new monuments throughout the city Only in the 19th and 20th cent were systematic excavations made to bring to light what was left. The fora are now, with the Palatine and Colosseum, an imposing complex of ruins, testifying to the grandiosity of ancient Rome See Isabel Lovell, *Stories in Stone from the Roman Forum* (1926)

Forum Appii (ă'pēī) see APPII FORUM.

Foscolo, Ugo (ōō'gō fō'skōlō), 1778–1827, Italian poet and patriot His name was originally Niccolò Foscolo He joined the French army after the Revolution and fought against Austria and Russia, went to Switzerland in 1813 when the Austrians entered Italy, and then to London, where he died He was the author of two tragedies; a novel, *The Last Letters of Jacopo Ortis* (1796–1802; Eng. tr., 1818), which exercised great influence on later writers, translations, critical essays, and lyric verse, of which the *Sepulchres* (1807) is perhaps the finest example. Selections from his verse have appeared in Lorna De Lucchi, *An Anthology of Italian Poems* (1922).

Fosdick, Charles Austin, 1842–1915, American author, b Randolph, N Y In the Civil War he enlisted in the Mississippi squadron of the U.S navy His experiences there and elsewhere furnished him material for the popular boys' books he wrote under the name Harry Castlemon. His nearly 60 novels appeared between 1864 and 1904 in series, such as the "Gunboat" series (*Frank on the Mississippi, Frank before Vicksburg*), "Rod and Gun" series, "Afloat and Ashore" series, and the "Pony Express" series

Fosdick, Harry Emerson (fŏz'dĭk), 1878–, American clergyman, b Buffalo, N.Y, grad Colgate Univ, 1900, and Union Theological Seminary, 1904 Ordained a Baptist minister in 1903, he was pastor in Montclair, N J., until 1915 From that year until 1946 Dr. Fosdick was professor of practical theology at Union Theological Seminary He became pastor of the Park Ave Baptist Church, New York, in 1926, this was transformed into the Riverside Church in 1930, when the congregation and Dr Fosdick moved to an impressive new structure on Riverside Drive He served there until 1946, when he became pastor emeritus His position as a Modernist leader in the Fundamentalist controversies of the 1920s and his forceful, practical sermons won wide recognition His radio addresses were nationally broadcast Among his writings are *The Meaning of Prayer* (1915), *Twelve Tests of Character* (1923), *A Guide to Understanding the Bible* (1938), *On Being a Real Person* (1943), *A Great Time to Be Alive* (1944), and *The Man from Nazareth, as His Contemporaries Saw Him* (1949)

Fosdick, Raymond Blaine, 1883–, American administrator, b Buffalo, N Y, grad Princeton, 1905, and New York Law School, 1908, brother of Harry Emerson Fosdick A lawyer, he was (1910–14) commissioner of accounts for New York city He went to Europe (1913) as a representative of the Rockefeller Bureau of Social Hygiene to study police organization, and he later wrote on European and American police systems He was sent (1916) as special representative of the War Dept on the Mexican border and served (1918–19) in the same capacity in France Fosdick was undersecretary general of the League of Nations in 1919 and 1920 He was active in numerous philanthropic organizations and served (1936–48) as president of the Rockefeller Foundation

Foss, Sam Walter, 1858–1911, American journalist and librarian, b. Candia, N H, grad Brown, 1882 In 1883 he became part owner and editor of the Lynn, Mass., *Saturday Union*, writing a humorous column, which led to writing for humorous weeklies and the New York *Sun* In 1887 he became editor of the *Yankee Blade* and editorial writer for the Boston *Globe* From 1898 until his death he was head of the Somerville public library He is best known for his poem "The House by the Side of the Road" See biography by M S Woodward (1922)

Fossano, Ambrogio Stefani da see BORGOGNONE

Fosse Way (fŏs'wā'), early Roman road in England, supposed to have gone from Isca Dumnoniorum (Exeter) NE past Aquae Solis (Bath), Corinium (Cirencester), and Ratae (Leicester) to Lindum (Lincoln) It intersected Watling Street See ROMAN ROADS! See Thomas Codrington, *Roman Roads in Britain* (new ed, 1918)

fossil (fŏs'ĭl), remains or imprints of plants or animals preserved from prehistoric times by natural methods Fossils are found in sedimentary rock, asphalt deposits, and coal and sometimes in amber and certain other materials Fossilization of skeletal structures or other hard parts is most common, only rarely are flesh and other soft parts preserved Conditions which were conducive to the formation of fossils include quick burial in moist sediment or other material that tends to prevent weathering and exclude oxygen and bacteria, thereby preventing decay. Shells and bones embedded in sediment in past geologic time, under conditions suitable for preservation, left exact reproductions of both external and internal structures Sometimes after such specimens were enclosed in the rock formed from the hardened sediments, water percolating through the ground dissolved out the shell and other structures, leaving a space within which only the form was preserved This is known as a natural mold. When such molds are discovered by fossil hunters, casts can be made from them by pouring in plastic materials If such holes are filled with mineral matter by subsurface water, natural casts are formed Molds of insects that lived many millions of years ago are sometimes found preserved in amber These were formed by the enveloping of an insect in the sticky resin which became amber, through the years the delicate tissues thus surrounded dried until little remained except the mold So perfectly formed are these molds that detailed microscopic studies can be made of the minute structure Molds of thin objects such as leaves are usually known as imprints. Impressions of dinosaur skin have aided scientists in making restorations of these animals. Imprints of footprints and

trails left by both vertebrate and invertebrate animals are also valuable aids to studies of prehistoric life Coprolites are fossilized excrement material; if it is possible to determine their source they are useful in revealing the feeding habits of the animals. Entire animals of the late Pleistocene have sometimes been preserved In Siberia some 50 specimens of woolly mammoths and a long-horned rhinoceros were found preserved in ice with even the skin and flesh intact. Several specimens of the woolly rhinoceros bearing some skin and flesh have been found in oil-saturated soils in Poland Skeletal remains have been preserved as a result of the engulfment of an animal's body in ancient asphalt pits, bogs, and quicksand At Rancho La Brea, near Los Angeles, Calif., asphalt deposits have yielded a rich variety of skeletons of birds and mammals. Some fossils have been found buried in volcanic ash, such fossil deposits exist in the Cenozoic rocks of the W United States Petrifaction is another method of preservation of both plant and animal remains. This can occur in several ways Mineral matter from underground water may be deposited in the interstices of porous materials, e g , bones and some shells, making the material more compact and more stonelike and thus protecting it against disintegration The original material may be entirely replaced with mineral matter, molecule by molecule, so that the original appearance and the microscopic structure are retained, as in petrified wood Sometimes, on the other hand, all details of structure are lost in the replacement of organic matter by minerals, and only the form of the original is retained In shales are sometimes found the silhouettes of plant tissues (more rarely of animals) formed by the carbon residue of the organism after the volatile elements have been driven off The scientific study of fossils is paleontology Not until c 1800 were fossils generally recognized as the remains of living things of the past and accepted as an invaluable record of the past See R S Lull, *Fossils* (1931), C L Fenton, *World of Fossils* (1933)

Fossil Cycad National Monument: see NATIONAL PARKS AND MONUMENTS (table)

Fossombroni, Vittorio (vēt-tō'rēō fôs-sōmbrō'nē), 1754–1844, Italian diplomat He was foreign minister of Tuscany (1796–99). Napoleon made him senator, entrusted him with important missions, and made him a count After the restoration (1814) Grand Duke Ferdinand III of Tuscany named him prime minister, and he held the post for 30 years

Fosston, village (pop 1,271), NW Minn , WNW of Bemidji, in a farm area, settled 1884

Foster, Abby Kelley, or **Abigail Kelley Foster,** 1810–87, American abolitionist and advocate of woman's rights, b near Amherst, Mass She taught in several towns in Massachusetts before she began her crusade against slavery Her early speeches were attended with disorder, and as a woman speaking before mixed audiences she was subjected to persecution She married (1845) Stephen S Foster, abolitionist and reformer After 1850 she was more prominent as an advocate of woman's rights than as an abolitionist

Foster, Benjamin, 1852–1926, American landscape painter and art critic, b North Anson, Maine, pupil of Abbott Thayer He was art critic for the New York *Evening Post* and the *Nation* Among his pictures are *In Connecticut Hills* (Metropolitan Mus), *Misty Moonlight Night* (Brooklyn Mus), and *Lulled by the Murmuring Stream* (Luxembourg Mus , Paris)

Foster, Charles, 1828–1904, American political leader, b Seneca co , Ohio He was long identified with the business interests of Fostoria, Ohio—named for C W Foster, his father He entered Republican party politics, serving (1871–79) in the U S House of Representatives, Foster became a member of the Committee on Ways and Means and aided in exposing (1874) fraudulent contracts in connection with the U S Treasury Dept He was twice (1879, 1881) elected governor of Ohio and urged several progressive reforms He favored the taxation of saloons and sponsored a popular vote on the prohibition question A declared bimetallist, he was appointed in 1891 Secretary of the Treasury by President Benjamin Harrison, serving till 1893

Foster, Sir George Eulas, 1847–1931, Canadian statesman, b New Brunswick, educated at the Univ of New Brunswick He was professor of classics (1873–79) in the Univ of New Brunswick In 1882 he was elected to the Canadian House of Commons and, except for four years, remained a member until 1921, when he was appointed to the Senate In his long political life he held portfolios in a number of Conservative administrations, he was minister of marine and fisheries (1885–88) in the Macdonald government, minister of finance (1888–96), and minister of trade and commerce (1911–21) He was a Canadian delegate (1918–19) to the Paris Peace Conference and chairman (1920–21) of the Canadian delegation to the first assembly of the League of Nations, of which he was made vice president. In 1920 Foster was acting prime minister of Canada during the absence of Sir Robert Borden because of illness See his memoirs (ed. by W. S. Wallace, 1933).

Foster, Hannah Webster, 1759–1840, American novelist, b Boston. She married the Rev John Foster of Brighton, Mass , in 1785 Her novel, *The Coquette, or, The History of Eliza Wharton* (1797, facsimile edition by H R Brown, 1939), was one of the earliest and most popular American novels, but was almost as didactic as her other book, *The Boarding School, or, Lessons of a Preceptress to Her Pupils* (1798)

Foster, John Watson, 1836–1917, American diplomat, b Pike co , Ind , grad Indiana Univ (B.A , 1855, M A , 1858). After study at Harvard Law School, Foster practiced (1857–61) at Evansville, Ind , and then served (1861–65) with the Union army in the Civil War He later edited (1865–69) the Evansville *Daily Journal* and was (1869–73) postmaster of that city He was a leader of the state Republican party, and, becoming interested in international law and international relations, he served as minister to Mexico (1873–80), minister to Russia (1880–81), and minister to Spain (1883–85) He was (1892–93) Secretary of State under President Benjamin Harrison, represented (1893) the United States in arbitration of the Bering Sea Fur-Seal Controversy, acted (1894) for China in negotiations for the treaty with Japan, and attended several international arbitration conferences His numerous books include *A Century of American Diplomacy, 1776–1876* (1900), *The Practice of Diplomacy* (1906), and *Diplomatic Memoirs* (1909)

Foster, John Wells, 1815–73, American geologist and paleontologist, b Brimfield, Mass , grad Wesleyan Univ , 1834 He studied law and practiced at Zanesville, Ohio In 1837 he became an assistant on the geological survey of Ohio He made a thorough study of the great central coal bed of Ohio and of the Carboniferous limestone deposits near Columbus In 1847 he assisted Charles T Jackson in a geological survey of Michigan The reports of this survey established the richness and variety of the mineral resources of the Lake Superior region and were of far-reaching importance In 1869 Foster was made president of the American Association for the Advancement of Science He wrote *The Mississippi Valley* (1869), *Mineral Wealth and Railroad Development* (1872), and *Prehistoric Races of the United States of America* (1873)

Foster, Myles Birket, 1825–99, English water-color painter, wood engraver, and illustrator Some of his work appeared in early numbers of *Punch* and of the *Illustrated London News*, later he illustrated with wood engravings and steel etchings the works of English and American poets See H M Cundall, *Birket Foster, R W S* (1906)

Foster, Stephen Collins, 1826–64, American song writer and composer, b Lawrenceville (now part of Pittsburgh), Pa His was a pioneer family, observant of his talent for music but without understanding of it, consequently he had no formal musical education Only after a few of his songs had been successful did he decide on music as a profession His knowledge of the Negro was gained from minstrel shows, for which many of his songs were written In their utter simplicity his Negro dialect songs are often thought of as folk music The first edition of *Old Folks at Home* (1851) carried the name of E P Christy as author and composor By special arrangement with Foster, Christy, the manager of Christy's Minstrels, sang many of Foster's songs before they were published Foster felt that prejudice against his 'Ethiopian songs" existed, and he was at first unwilling to risk his reputation by having his name appear on them He had little aptitude for business, and his returns were never commensurate with the popularity of his songs Excessive drinking and extreme poverty marked his last years He died in Bellevue Hospital, New York, as a result of a fall in his room in a Bowery lodginghouse Banality entered into his work, but the songs that have remained popular, such as *Oh! Susannah* (1848), *Camptown Races* (1850), *Old Folks at Home* (1851), *My Old Kentucky Home* (1853), *Jeanie with the Light Brown Hair* (1854), and *Old Black Joe* (1860), are unpretentious and genuine See biographies by H V Milligan (1920) and J T Howard (1934), Morrison Foster, *My Brother Stephen* (1932), Evelyn Foster Morneweck, *Chronicles of Stephen Foster's Family* (1944).

Foster, William Zebulon, 1881–, American Communist leader, b Taunton, Mass An itinerant worker in many different occupations, he was first affiliated with the Socialist party, next with the I W W , and then with the A F of L In his early years as a laborer he became profoundly influenced by Marxism His activities among steelworkers were climaxed by his leadership of the famous steel strike of 1919 With the organization of the American Communist party (1919–21), he was a prominent leader and was presidential candidate in 1924, 1928, and 1932. In 1930 he was displaced as party head by Earl BROWDER. On Browder's fall Foster became (1945) national chairman He was charged in 1948 with advocating the overthrow of the U S government, but because of ill-health he did not go on trial (1949) with 11 other top Communists. Many of his personal experiences are recounted in *From Bryan to Stalin* (1937) and *Pages from a Worker's Life* (1939).

Foster, rural town (pop. 1,237), W R L; set off from Scituate and inc. 1781.

Fostoria (fôstô'rēŭ), city (pop 13,453), NW Ohio, S of Toledo Industrial, trade, and shipping center for a livestock and farm area, it was established in 1854 by the union of Risdon and Rome villages Carbon and machine parts are among the manufactures

Fothergill, John (fŏ'dhurgĭl), 1712–80, English physician, a Quaker of Yorkshire He practiced with great success in London, wrote an account of an epidemic of diphtheritic and scarlatinal sore throat (1748), and worked for improvement in jails and in sanitation At Upton, Essex, he maintained a noted botanic garden to which John and William Bartram contributed He took active part in an attempt to reconcile the American colonies See study by R H Fox (1919)

Fotheringhay (fŏdh'urĭng-gā), village, Northamptonshire, England, on the Nene and SW of Peterborough Fotheringhay Castle (12th cent) was the birthplace of Richard III and the scene of the imprisonment and execution (1587) of Mary Queen of Scots The 15th-century church has a monument to Edward (killed at Agincourt, 1415) and Richard, dukes of York

Foucault, Jean Bernard Léon (zhäⁿ' bĕrnär' lā' fōōkō'), 1819–68, French physicist. Known especially for his research on the speed of light, he determined its velocity in air and found that its speed in water and other media diminished in proportion to the index of refraction He originated the Foucault PENDULUM, with which he demonstrated the earth's rotation He also improved astronomical instruments, invented (1852) the gyroscope, and investigated the carbon arc and the eddy current (known also as the Foucault current), an electric current induced in metal by a moving magnetic field From 1855, he was physicist at the Paris Observatory

Fouché, Joseph (shōzĕf' fōōshā'), 1759–1820, French minister of police A teacher in the schools of the Oratorian order, he joined the French Revolution and was elected to the Convention (1792) Early a Girondist, he became a Jacobin, supported the Terror, and assisted Collot d'Herbois in the ruthless massacre (1793) of the counterrevolutionists in Lyons He was instrumental in the overthrow of Robespierre (1794), acted as spy for Barras, and became envoy to Holland (1798) and minister of police (1799) Always an opportunist, he closed the Jacobin clubs and helped Napoleon's coup d'état of 18 Brumaire As police minister under the Consulate, he organized a ruthlessly efficient spy system, but his duplicity caused his dismissal (1802) He was, however, made a senator and continued to maintain an unofficial espionage system He discovered the CADOUDAL plot (1804) and was reappointed police minister in the same year One of the indispensable men of the Napoleonic empire, Fouché is sometimes considered the father of the modern police state, however this may be, his reforms of the criminal police were a lasting achievement In 1809 he was created duke of Otranto as reward for his defense of Antwerp during Napoleon's absence in Austria Shortly afterward, he began secret negotiations with the English Dismissed again and replaced by Savary (1810), he fled to Italy but soon afterward returned In 1813 Napoleon made him governor of Illyria, and in 1814–15 he served both Napoleon and Louis XVIII After the second Bourbon restoration he was forced out of office and sent as ambassador to Saxony He soon fell into total disgrace, was exiled, and died in obscurity in Trieste. See Stefan Zweig, *Fouché* (Eng tr , 1930)

Foucquet: see FOUQUET

Fougères (fōōzhĕr'), town (pop 18,599), Ille-et-Vilaine dept , N France It is an old Breton town with picturesque fortifications

Fouillée, Alfred Jules Émile (älfrĕd' shül' āmēl' fōōyā'), 1838–1912, self-educated French philosopher and sociologist Until 1875, when he retired, he was a teacher at various French universities Fouillée regarded it as his particular work to "reconcile idealism and naturalism " To achieve this synthesis of Platonism and modern science, he developed the conception of *idées-forces*, in which ideas are inseparable from action This motor theory of consciousness makes ideas the agent of change and progress Fouillée expanded this idea of self-consciousness into a metaphysics (*L'Avenir de la métaphysique*, 1889) In the sphere of sociology and ethics he stressed the interdependence of the individual and society Chief among his philosophical writings are *Critique des systèmes de morale contemporaine* (1883), *L'Évolutionnisme des idées-forces* (1890), and *La Psychologie des idées-forces* (1893)

Foula (fōō'lä), island, 5 sq. mi , off N Scotland, one of the Shetland Islands Its cliffs rise to a height of 1,220 ft and are a haunt of seafowl

Fould, Achille (äshĕl' fōōld), 1800–1867, French financier and politician He began his political life as a deputy (1842) and had some financial influence in the formation of the provisional government in 1848 He served four times under Louis Napoleon as minister of finance and for a time was minister

of state His one great accomplishment was the reduction (1863) of the floating debt by a loan

Foulis, Andrew (foulz), 1712–75, and **Robert Foulis,** 1707–76, Scottish printers, brothers They worked in partnership as printers to the Univ of Glasgow Their publications were famous both for beauty and for accuracy; their *Horace* was overpraised as faultless Change in taste has impaired the prestige of their typography, which is criticized as pretty and elegant but lacking in character, it represents high achievement in a style of the time

Foulness (foul'nĕs'), island, Essex, England, at the mouth of the Crouch Foulness Point is at the northeast tip

Foulques see FULK

foundation, institution provided with funds for work in charity, education, or research Hospitals, schools, and orphanages supported by kings or by the Church in the Middle Ages were, in a sense, foundations, but according to the modern use of the term a foundation is usually established by private philanthropy One of the earliest American foundations was Benjamin Franklin's bequest to the cities of Boston and Philadelphia of £1,000 each, to be loaned to "young married artificers of good character" Large philanthropic foundations developed in the United States after the middle of the 19th cent , with the growth of private fortunes One of the oldest is the SMITHSONIAN INSTITUTION, founded in 1846 by James Smithson Andrew Carnegie and John D Rockefeller established foundations which have done valuable work in education and medical research Among other famous foundations are the Rhodes Scholarships, established by Cecil RHODES, the literary and artistic fellowships given by the Guggenheim family, and the Russell Sage Foundation Foundations supported by individual contributions are conducting important research in medicine, particularly in poliomyelitis, cancer, and heart disease

founding or casting, the shaping of metals by melting and pouring into molds The place where the work is done is called a foundry Like FORGING, founding was practiced in prehistoric time, probably first in Asia The mold used in casting iron or steel is regularly of sand or loam given the desired form by the pressure of a wooden pattern As the metal shrinks in solidifying, the pattern is made slightly larger than the casting desired If the casting is to be hollow, the mold includes a core The hardness of a casting is increased by rapid cooling, chilled steel is a product of this process Cast iron and cast steel are more brittle than iron and steel worked by forging Metal molds are used in some kinds of casting, as in type founding and die-casting The casting of bronze statues is an intricate process, requiring great skill See R H Palmer, *Foundry Practice* (4th ed , 1929), R G G Moldenke, *The Principles of Iron Founding* (2d ed , 1930), C E Schubert, *Foundry Practice* (3d ed , 1946)

founding hospital, institution for receiving and caring for children abandoned by their parents In Athens and in Rome until the 4th cent , undesired children were left or exposed in appointed places The Second Nicene Council in 787 ordered the establishment of foundling hospitals in all large cities The famous hospital founded by the Society of St Vincent de Paul in Paris in 1670 receives destitute children and juvenile delinquents as well as foundlings In England deserted children are supported in workhouses or other institutions by the parish in which they are found Under the Soviet regime, Russia has homes for children and homes for married and unmarried mothers with children, as well as state premiums to nursing mothers to prevent desertion In France, if a deserted child's parents cannot be found, it is supported by the state and placed in a private family In the United States, foundling hospitals were started before 1860 by Catholic nuns, Protestant churches, and private individuals The first was St Vincent's Infant Asylum of Baltimore (1856) Foundlings are assigned to the county poor farm in some states, elsewhere public or private maternity hospitals care for them, or they are boarded in supervised private families See CHILDREN, DEPENDENT See Homer Folks, *The Care of Destitute, Neglected, and Delinquent Children* (1900)

fountain, natural or artificially conveyed flow of water which either simply issues from an orifice and is received into a basin or is so disposed with architecture or sculpture as to form an effective decoration In ancient Greece columnar shrines were built over springs and dedicated to deities or nymphs In ancient Rome fountains fed by the great aqueduct system furnished water to the people in the streets, in the villa gardens, and in town houses Though there were few public fountains in the Middle Ages, beautiful examples remain, especially in Italy, where also splendid Renaissance fountains, showing the full artistic exuberance of the period, are found even in the smallest village square or the least pretentious villa The development of the great 16th- and 17th-century villas, with their hillside gardens and natural water sources, called forth amazing ingenuity in water decoration In the Villa d'Este at Tivoli and the villas at Frascati, near Rome, the various disposals of water constituted an integral element of the garden composition In France the gardens of the palace of Versailles, designed by LE NÔTRE, embodied a vast scheme of water adornment, with elaborate sculptural treatment The supply, held in a reservoir at Marly, was raised 500 ft above the Seine by machinery In fountains the theatrical trend of the baroque period found expression In keeping with the violently animated postures of the sculptured nymphs, sea horses, and dolphins, the water issued splashing over the rims of the uppermost bowls and down upon artificial rocks and shells A colossal figure of Neptune was a favorite motive, as in famous examples at Florence, Bologna, and Rome Bernini designed in Rome the superbly simple fountains in St Peter's Square, the grotesque fountains in Piazza Navona, and the fountain of Trevi, the last being perhaps the most dramatic of the baroque examples In sharp contrast with these are the fountains of Mohammedan countries, which dispense with gushing water, an inconspicuous trickle often forming the source In their gardens the water lies in quiet pools and long, narrow channels Of the type employing basins and sculpture, the Fountain of the Lions, in the ALHAMBRA, Granada, is a noted specimen Invariably a fountain for ablutions stands in the courtyard of a MOSQUE In Oriental cities the public fountains are entirely enclosed within structures richly finished in marbles and ceramics and with wide projecting roofs Drinks are given to the passer-by through a metal grille Fine examples are numerous in Istanbul, Cairo, and Damascus The modern public drinking fountain is usually of strictly utilitarian design, American landscape artists are, however, encouraging the use of the ornamental fountain with definite success Many private gardens show the happy results of artistic designing

Fountain Hill, borough (pop 4,804), E Pa , on the Lehigh river between Allentown and Bethlehem

Fountain Inn, town (pop 1,346), NW S C , SSE of Greenville, in a farm area

Fountains Abbey, ruined Cistercian abbey, West Riding of Yorkshire, England, SW of Ripon It was built in the 12th cent

Fouqué, Friedrich Heinrich Karl, Baron de la Motte- (frē'drĭkh hĭn'rĭkh karl' barōn' dŭ la môt'-fōōkā'), 1777–1843, German poet and novelist He wrote many chivalric romances, tales, and plays based on Norse mythology, but is chiefly remembered for his fairy tale of the nymph who had no soul, *Undine* (1811), of which there have been innumerable editions in English, and for the patriotic song *Frisch auf, zum fröhlichen Jagen* (1813)

Fouquet or **Foucquet, Jean** or **Jehan** (all zhäⁿ' fōō-kā'), c 1415–c 1480, French painter and illuminator He is usually considered the founder of the 15th-century school of French painting which combined the art of the Van Eycks and that of the early Florentines He was summoned to Rome to paint the portrait of Pope Eugenius IV (now lost) He was court painter to Charles VII and Louis XI and a protégé of Agnes Sorel and of Étienne Chevalier, treasurer of Charles VII Although a very famous artist in his own time, little is known of his life, and his importance as a painter was not generally recognized until the exhibition of French primitives in 1904 brought to light the scope of his talents His best-known paintings include a diptych, one wing of which represents Agnes Sorel as the Virgin (Antwerp) and the other a kneeling figure of Étienne Chevalier, and his portrait of Charles VII (Louvre) He is also famous for his illuminations in the duc de Berry's Book of Hours (Chantilly) and those for the French translations of Boccaccio and Josephus' *Antiquities of the Jews* (Bibliothèque nationale) See studies by Georges Lafenestre (1905, in French), Trenchard Cox (1931), and Paul Wechsler (1949)

Fouquet or **Foucquet, Nicolas** (nē-kôlä'), 1615–80, superintendent of finance (1653–61) under Louis XIV of France His loyalty to Mazarin during the Fronde helped to secure his position By his transactions with the financiers, to whom he allowed huge profits, he impoverished the treasury and accumulated a huge personal fortune He spent large sums on his house at Vaux, on art and book collections, and on lavish entertainments He was also a leading patron of literary men, among them Molière and La Fontaine Aroused by Colbert's reports of Fouquet's mismanagement and jealous of the magnificence of a fete he attended at Vaux, Louis XIV ordered Fouquet's arrest in 1661 His trial revealed little evidence of unusual guilt Fouquet was sentenced (1664) to banishment, but the king, still resentful, "commuted" the sentence to life imprisonment Prior to his disgrace, Fouquet had acquired the titles of viscount of Mélun and of Vaux and marquis of Belle-Isle

Fouquier-Tinville, Antoine Quentin (äⁿtwan' kätĕ' fōōkyā'-tăvēl'), 1746–95, French revolutionist, public accuser before the Revolutionary Tribunal (March, 1793–July, 1794) He personified the ruthlessness of the REIGN OF TERROR Among the many victims of his prosecution the most famous was Marie Antoinette After the fall of Robespierre, Fouquier-Tinville was guillotined. See biography by Alphonse Dunoyer (Eng. tr , 1913)

Fourcroy, Antoine François, comte de (äⁿtwän' frăswä' kōt' dŭ fōōrkrōōä'), 1755–1809, French chemist He was a pioneer in animal and plant chemistry and collaborated with Lavoisier and others in reforming the system of chemical nomenclature He was professor from 1784 at the Jardin du Roi (later the Jardin des Plantes), Paris, held public offices during the Revolution, and as director general of public instruction from 1801 instituted reforms in the French system of higher education He was made a count in 1809 His writings include *The Philosophy of Chemistry* (1792; Eng tr , 1795) and *A General System of Chemical Knowledge* (11 vols , 1801–2, Eng tr , 1804)

Four Forest Cantons, the, Ger *Die Vier Waldstätten* (dē fēr' vält'shtĕtŭn), the cantons of UNTERWALDEN, SCHWYZ, URI, and LUCERNE, the first Swiss communities to win their freedom The Lake of the Four Forest Cantons is called in English the Lake of LUCERNE

Four Freedoms In his message to Congress proposing lend-lease legislation (Jan 6, 1941), President Franklin D Roosevelt stated that Four Freedoms should prevail everywhere in the world—freedom of speech and expression, freedom of worship, freedom from want, and freedom from fear These were substantially incorporated (Aug , 1941) in the ATLANTIC CHARTER

Four-H clubs or **4-H clubs,** organizations for boys and girls living in rural communities In the United States they are operated by the Extension Service of the Dept of Agriculture They are part of an educational program, initiated in 1914, designed to improve methods of agriculture and home economics, to promote high ideals of civic responsibility, and to provide training for community leadership The name is derived from the fourfold purpose of improving head, heart, hands, and health, the club motto is "Learn by doing" The 4-H clubs are active not only in the continental United States but also in Hawaii, Puerto Rico, and Alaska, the movement has spread to other countries, especially in W Europe

Four Horsemen of the Apocalypse (ăpŏk'ŭlĭps), allegorical figures in the Bible Rev 6 1–8 The rider on the white horse has many interpretations—one is that he represents Christ, the rider on the red horse is war, on the black horse is famine, and on the pale horse, death

Fourier, Charles (François Marie Charles Fourier) (sharl' fōōryā', frăswä' marē'), 1772–1837, French social philosopher Coming from a bourgeois family and working as a salesman and clerk, he gradually evolved a sort of utopian socialism in negation of his mercantile background In his *Théorie des quatre mouvements* (1808) and later works he developed his idea that the passions of man would in a natural state attain harmony The social organization allowing for such development was to be based on the "phalanx," an economic unit composed of 1,620 people Members would live in the *phalanstère* (or phalanstery), a community building, with work to be divided among people according to their natural inclinations This arrangement was to destroy artificial restraints put upon natural man by civilization Fourier, however, was not ready to discard capitalism altogether, basically his ideal was an agricultural society, systematically arranged His collected works have been published (1888–90) See biography by Charles Pellarin (Eng tr. of 2d ed , 1848) **Fourierism** obtained a number of converts in France, and several newspapers spread the doctrines, although followers did not succeed in establishing a lasting colony there After Fourier's death, his principal disciple, Victor Prosper CONSIDÉRANT, tried to found a colony in Texas Albert BRISBANE and Horace GREELEY were the principal figures in the sudden and wide development of colonies in the United States BROOK FARM was for a time Fourierist The most successful of the communities was the North American Phalanx at Red Bank, N J The movement declined after 1850

Fourier, Jean Baptiste Joseph, Baron (fōō'rēā", fōō'rēur, Fr zhäⁿ' bätēst' zhōzĕf' barō' fōōryā'), 1768–1830, French mathematician and physicist He was noted for his researches on heat and on numerical equations He originated Fourier's theorem on vibratory motion and the Fourier series, which provided a method for representing discontinuous functions by a trigonometric series Fourier was professor (1795–98) at the École polytechnique, Paris, accompanied Napoleon I to Egypt, and was prefect of Isère (1802–15) In 1808 he was made a baron He wrote *Théorie analytique de la chaleur* (1822) His scientific writings were collected in two volumes (1888–90)

Four Lakes, chain of canalized lakes, S Wis These are Waubesa, Kegonsa, Mendota, and Monona, between the last two lies Madison, the state capital Largest of the four is Mendota (c 6 mi long), on which is the campus of the Univ of Wisconsin. Indian mounds are in the vicinity of the lakes

Fournier, Pierre Simon (pyĕr' sēmô' fōōrnyā'), 1712–68, Parisian type founder. He devised the

first point system for measuring and naming sizes of type He designed a number of type faces and many typographic ornaments and was the author of *Manuel typographique* (2 vols , 1764–66)

Four-Power Treaty · see NAVAL CONFERENCES

Fourteen Points, formulation of a peace program, presented by U S President Woodrow WILSON in an address before both houses of Congress on Jan 8, 1918. The message, though intensely idealistic in tone, had certain very practical aims It was intended to reach the people and liberal leaders of the Central Powers as a seductive appeal for peace, in which purpose it was successful It was intended also to serve notice upon the Allies that the United States would not be a party to a selfish peace, and it was planned to appeal for the support of the liberal elements in Allied countries in achieving an unselfish settlement It was intended to stimulate moral fervor at home Finally it was hoped that the points would provide a framework for peace discussions The message immediately gave Wilson the position of moral leadership of the Allies and furnished him with a tremendous diplomatic weapon as long as the war persisted In this period few stopped to analyze the practical implications of its far-reaching principles or realized that it cut across the secret treaties of the Allies After the Armistice opposition to the points quickly crystallized, and the actual treaty (see VERSAILLES, TREATY OF) represented a compromise or defeat of many of them The first five points were general in nature and may be summarized as follows (1) "open covenants openly arrived at", (2) freedom of the seas in peace and war, (3) removal of economic barriers between nations as far as possible, (4) reduction of armaments to needs for domestic safety, (5) adjustment of colonial claims with concern for the wishes and interests of the inhabitants as well as for the titles of rival claimants The next eight points referred to specific questions (6) evacuation and general restoration of conquered territories in Russia, (7) preservation of Belgian sovereignty, (8) settlement of the Alsace-Lorraine question, (9) redrawing of Italian frontiers according to nationalities, (10) the division of Austria-Hungary in conformance to its nationalities, (11) the redrawing of Balkan boundaries with reference to historically established allegiance and nationalities, (12) Turkish control only of their own peoples and freedom of navigation through the Dardanelles, (13) the establishment of an independent Poland with access to the sea The last point (14) was a provision for "a general association of nations under specific covenants" See Ray Stannard Baker, *Woodrow Wilson and World Settlement* (1923)

Fourteenth Amendment, to the U S Constitution, adopted 1868 The amendment comprises five sections Section 1 will be discussed later in detail Section 2 provides for apportionment of membership in the House of Representatives on the basis of the whole state population, excluding Indians not taxed A supplemental provision, intended to protect Negro suffrage but never implemented, allows reduction of the congressional representation of a state if male citizens over 21 years old are forbidden to vote The main effective constitutional guarantee of Negro suffrage has been the Fifteenth Amendment (adopted 1870), which forbids the United States or any state to abridge the right to vote on account of race, color, or previous condition of servitude Section 3 of the Fourteenth Amendment excluded from political office persons who, having sworn to uphold the U S Constitution (e g , army officers and members of Congress), violated this oath by aiding the Confederacy in the Civil War, but Congress by a two-thirds vote of each house could remove this disability Section 4 confirms the public debt but makes void all claims arising from credit extended to the Confederacy or from the loss of slaves By Section 5 Congress is empowered to enact legislation enforcing the foregoing sections Section 1 of the amendment declares substantially that all persons born or naturalized in the United States are American citizens and citizens of the state of residence, the citizenship of Negroes was thereby established and the effect of the DRED SCOTT CASE was overcome The section forbids the states to abridge the privileges and immunities of U S citizens, to deprive any person of life, liberty, or property without due process of law (a similar provision restraining the Federal government is in the Fifth Amendment), and to deny any person the equal protection of the laws Section 1 has been used extensively by the U S Supreme Court to test the validity of state legislation The privileges and immunities of citizenship have never been defined by a majority of the court, but some justices have argued that among the activities envisaged are freedom to cross state boundaries and freedom to gather for peaceable discussion of legislation The court has preferred to base its decisions on the due-process and the equal-protection clauses, which apply to all persons (the term *person* was soon applied to corporations as well as human beings) irrespective of citizenship In the early view of the court any deprivation of life, liberty, or property simply meant the punishment for crime. The requirements of due process would be met by fair procedure, including notice to the defendant, and an open trial with the right to counsel In time, however, the court concluded that due process was not limited to procedural considerations but had a substantive aspect as well Thus, even if proper legal procedure were observed, the grounds on which a person was deprived of life, liberty, or property might in themselves violate due process The constitutionality of much state legislation was opened to question, and so many laws were attacked that at certain times about one third of the cases before the Supreme Court dealt with due process The court did not stipulate limitations on traditional exercises of the POLICE POWER, such as the ordinary criminal law and the regulation of NUISANCE (see SLAUGHTERHOUSE CASES) However, it did severely restrain the power of the states to legislate on economic matters The court held that only businesses "dedicated to the public interest," e g , utility companies, might be regulated by the states and that state laws which limited the hours of work of women were an unwarranted interference with liberty of contract The equal-protection clause, which was also brought to bear on the economic legislation of the states, was held to invalidate restraints on corporations from which other businesses were exempted In several early cases this clause was used to foster individual economic rights, with the court striking down state laws which prevented aliens from pursuing certain occupations However, Negroes who claimed that the discrimination which they suffered at the hands of private persons (e g , exclusion from hotels) denied them the equal protection of law were refused redress by the court, which has always held that the Fourteenth Amendment was concerned with official state action only The court later enunciated the view that the states might provide segregated facilities for Negroes (e g , in education) so long as they were equal to those afforded white persons, this is the so-called "separate but equal" doctrine Except that state regulations of working conditions and hours of employment were permitted after a time, the court substantially maintained the views outlined above until the 1930s, when drastic reinterpretations were made (For factors producing the change, see SUPREME COURT, UNITED STATES) The court thereafter permitted state legislatures to make economic regulations without regard to the question whether the businesses concerned were dedicated to the public interest The states, it was also held, might meet the requirements of equal protection even if distinctions based upon "reasonable classifications" were made Thus, corporations, with their great potential power and size, might reasonably be subjected to severer restrictions than other types of business organizations While the states were given greater freedom in enacting economic legislation, their power to limit personal liberties was brought under greater restraint In a number of decisions it was held that the provisions of the First Amendment to the Constitution of the United States were made applicable to the states by the substantive aspect of the due-process clause Thus, the states, just as the Federal government, were forbidden to favor or suppress any religious establishment or to deny freedom of speech, of the press, and of peaceable assembly Only when the exercise of these rights created a "clear and present danger" of some grave evil might the states take repressive steps The court has not found such danger in most cases of peaceable picketing (defined as a form of speech) or in the distribution of religious and political propaganda, despite objectionable littering of the streets The court condemned all voluntary religious instruction in public schools as aid to establishments of religion With the new attitude of the court, the equal-protection clause became one of the main weapons of Negroes determined to enjoy the same rights as white persons Although the "separate but equal" doctrine was never repudiated, there were decisions that certain Negro schools in the South were inferior Where separate schools of equal quality were lacking, Negroes were to be admitted to the regular state institutions See C W Collins, *The Fourteenth Amendment and the States* (1912)

fourth dimension · see SPACE TIME.

Fourth of July, Independence Day, or **July Fourth,** U S holiday, commemorating the adoption of DECLARATION OF INDEPENDENCE It is the anniversary of the adoption of the final draft of the declaration, and the reason why this was chosen rather than any of several other days is obscure, but celebration of it began in the American Revolution It has ever since been the patriotic holiday par excellence Traditionally it has been celebrated with firing of guns and fireworks, parades, open-air meetings, and patriotic speeches Today local ordinances prevent much of the former display of fireworks and use of firearms.

Fowey (foi), municipal borough (1931 pop 2,382, 1943 estimated pop 2,255), Cornwall, England, SW of Plymouth at the mouth of the Fowey river It was of maritime importance in the 14th cent and is still a seaport and fishing town Place House was built during Henry VII's reign There are ruins of St Catherine's Fort overlooking the harbor At Pridmouth near by are fossils and minerals of geological and archaeological interest Castle Dore, a few miles north, is believed to be the castle of King Mark of Cornwall and thus is associated with the story of Tristram and Isolde "The Haven" was the residence of Sir Arthur Quiller-Couch The export of kaolin and fish curing are local industries

Fowke, Gerard (fouk), 1855–1933, American archaeologist, whose name was originally Gerard Smith, b Maysville, Ky Known especially for his study of the Ohio valley, he recorded his findings in *Archaeological History of Ohio* (1902) and *The Evolution of the Ohio River* (1933) He also investigated aboriginal remains in the E United States (1885–88, 1891–93) and alleged Norse remains near Boston (1894, 1896), explored (1898) Vancouver Island and the Amur river region, Siberia, made ethnological studies in the Hawaiian Islands (1920), and examined (1921–26) caves in the Ozark Mts and Indian sites in several states

Fowler, Charles Henry, 1837–1908, American Methodist bishop, b Canada, grad Genesee College (later Syracuse Univ), 1859, and Garrett Biblical Institute, 1861 For 11 years he held pastorates in Chicago churches He was president of Northwestern Univ from 1873 to 1876 After his election as bishop in 1884, he traveled in several mission fields and helped found the universities of Peking and Nanking in China, Nebraska Wesleyan Univ , and the Twentieth Century Forward Movement

Fowler, Henry Watson, 1858–1933, English lexicographer, educated at Oxford Both he and his brother, F G Fowler, had been teachers before they retired and entered the literary world with a translation of Lucian They collaborated also on *The King's English* (1906), a trenchant and witty book of modern English usage and misusage, and on an abridgment of the *Oxford English Dictionary* (in one volume, 1911) F G Fowler died in 1918 as a result of war service, and H W Fowler, who had also served in the First World War, completed alone *A Dictionary of Modern English Usage* (1926) Though many of the decisions and opinions expressed are debatable, these works became standard desk equipment for writers, editors, and all those interested in the usages of modern English

Fowler, Sir John, 1817–98, English engineer With his partner, Benjamin Baker, he designed and built the Forth Bridge (1882–90) He was also a designer and supervisor of the London underground railway In 1885 he was knighted

Fowler, Thomas, 1736–1801, English physician With an apothecary named Hughes he introduced a solution of potassium arsenite called Fowler's solution He wrote *Medical Reports of the Effects of Arsenic* (1786)

Fowler 1 Town (pop 1,531), S central Calif , in the San Joaquin Valley near Fresno, inc 1908 Raisins and nuts are packed here 2 Residential town (pop 1,903), co seat of Benton co , NW Ind , NW of Lafayette, laid out 1871

Fowlerville, village (pop 1,118), S Mich , between Detroit and Lansing, in a rich farm area, settled c 1836, inc 1871

Fowliang (fōō'lēäng'), Mandarin *Fou-liang,* city (pop 86,744), NE Kiangsi prov , China, on the Chang river It has been celebrated since the 6th cent A D for porcelain made from the white clay found near Poyang Lake to the west The city was formerly named Kingtehchen

Fox, Charles James, 1749–1806, English statesman and orator He entered Parliament in 1768 and by 1770 had been made an admiralty lord under Lord North Disagreeing with North over the king's marriage bill and other policies, he was dismissed (1774), went into bitter opposition, and lent his remarkable oratorical genius to attacking the government's policy in the American war, which he feared would lead to separation Despite the king's objection, he became foreign secretary in Rockingham's Whig ministry (1782) and aided the cause of Irish self-government by supporting the repeal of POYNINGS's LAW and by other acts In 1782 he advocated separate treaties of peace with America and France and lost office when Lord Shelburne, who opposed this view, succeeded Rockingham Fox, still a leader of the Whigs, associated himself now with the Tory opposition headed by his old enemy, Lord North, to insure Shelburne's defeat. Fox became foreign minister again His coalition fell (1783) on the issue of vesting the government of India in a commission, which George III defeated by his personal influence in the House of Lords Though disliked by the king, Fox was on intimate terms with the prince of Wales (George IV) Fox became committed after 1789 to a policy opposed to that of William Pitt, by favoring the French Revolution and demanding British nonintervention He objected to the suppression of civil liberties in wartime and urged such measures as parliamentary reform and political freedom for Catholics and dissenters At Pitt's death he became (1806) for a few months foreign secretary in the "ministry

of all the talents" Abolition of the slave trade, which he proposed and urged, was passed in 1807, after his death Fox combined with dissolute habits rare sweetness of character and tremendous courage and skill in debate See biographies by G. O Trevelyan (1880), J L Hammond (1903), John Drinkwater (1928), C F Hobhouse (1935), and E C P Lascelles (1936).

Fox, Dixon Ryan, 1887–1945, American historian and educator, b Potsdam, N Y Educated at the state teachers college at Potsdam (1903–7) and Columbia (B A., 1911, M A., 1912, Ph D., 1917), he taught at Columbia from 1912 to 1934, becoming full professor in 1927 From 1934 to his death he was president of Union College and chancellor of Union Univ His writings include *The Decline of Aristocracy in the Politics of New York* (1919), biographies of the historian Herbert L Osgood, his father-in-law (1924), and of Caleb Heathcote (1926), *Ideas in Motion* (1935), and *Yankees and Yorkers* (1940) Fox was a leader of research in social history and with Arthur M. Schlesinger, Sr., was editor of the excellent "A History of American Life" series *The Completion of Independence, 1790–1830*, Vol V (1944) in the series, was written by John A Krout and Fox As president (1929–45) of the New York State Historical Association he inspired and guided the publication of its notable *History of the State of New York* (ed by Alexander C Flick, 10 vols , 1933–37)

Fox, Fontaine Talbot, Jr, 1884–, American cartoonist, b Louisville, Ky He was cartoonist (1906–15) for Louisville papers and for the Chicago *Evening Post*, after 1915 his cartoons were syndicated He is best known for his *Toonerville Trolley* cartoons

Fox, George, 1624–91, English religious leader, founder of the Society of FRIENDS As a boy, he was apprenticed to a shoemaker and wool dealer By nature serious and contemplative, at the age of 19 Fox entered upon a wandering quest for spiritual enlightenment Turning from clergymen and churches, he arrived at the belief that "every man is enlightened by the divine light of Christ," the "inward light" which reveals God within man In 1647 he began to preach the convictions that filled his life with light Although often the victim of mob brutality and eight times imprisoned between 1649 and 1675, Fox won many followers, especially among groups of SEPARATISTS He did not design to start a new sect, but the expanding movement needed organization and form In 1668 he prepared the first pattern of organization, which was for some years to serve as the discipline of the Society of Friends. The London Yearly Meeting was started in 1671 To confirm his followers in their beliefs and to spread the truths, Fox went in 1671 to the West Indies and to America, where he made arduous journeys to various colonies scattered between New England and North Carolina Twice later he visited Holland His sincerity, serenity, fearlessness, and powerful preaching are attested to by a number of his contemporaries His journal (1694, with a preface by William Penn) has appeared in various editions See *George Fox an Autobiography* (ed by R M Jones, 2 vols , 1903–4), studies by R M Jones (1930), A N. Brayshaw (1933), and R H King (1940)

Fox, Gustavus Vasa, 1821–83, American naval officer, b Saugus, Mass., appointed a midshipman in 1838 He resigned from the navy in 1856, but in April, 1861, commanded the expedition which attempted to relieve the garrison at Fort SUMTER Fox was chief clerk of the Dept of the Navy from May to Aug , 1861, when the post of Assistant Secretary of the Navy was created for him He held that office till May, 1866 His honesty, efficiency, and wide knowledge of naval affairs were of incalculable benefit to the Union cause See his *Confidential Correspondence* (1918–19)

Fox, Henry Richard Vassall see HOLLAND, HENRY RICHARD VASSALL FOX, 3D BARON

Fox, John, Jr., 1862–1919, American novelist, b Paris, Ky., grad. Harvard, 1883 In the intervals of sporadic journalism he was in business in Big Stone Gap, Va , and there knew the mountain folk who are characters in his several picturesque, romantic, and sentimentalized novels *The Little Shepherd of Kingdom Come* (1903) and *The Trail of the Lonesome Pine* (1908) were immensely popular novels

Fox or **Foxe, Luke,** 1586–1635, English explorer As a master mariner, he set forth in 1631 to hunt for the Northwest Passage to the East He explored the west shore of Hudson Bay, satisfied himself that there was no passage through it, and returned that same year to England, where his *Northwest Fox; or, Fox from the North-West Passage* was published (1635, ed. by R M Christy, 1894) At about the time that Fox was in Hudson Bay, Thomas James was there, also conducting a search for the Northwest Passage.

Fox, Margaret, 1836 93, American spiritualist, b. Bath, near Kingston, Ont The family moved to Wayne co , N Y , when she was a child She claimed to have established communication with the spirit world by means of spirit rappings and, with her sisters, Katharine and Leah, toured the United States and Europe. The Fox sisters gained much notice and notoriety. In 1888 Margaret admitted that the effects were fraudulent She also created a sensation by claiming to be the common-law wife of the arctic explorer, Elisha Kent Kane.

Fox. 1 River, c 176 mi long, rising in central Wisconsin and flowing southwest to within c 1½ mi of Portage, on the Wisconsin river, with which it is connected by a ship canal Thence it flows irregularly NE to Green Bay, at the city of Green Bay The river, principal tributary of which is the Wolf, enters Lake Winnebago from the west at Oshkosh and drains from the northern end at Menasha Above the lake it is known as the Upper Fox, below the lake, as the Lower Fox Rapids at points along its course furnish water power Appleton, Kaukauna, and De Pere are on the Fox The river was a well-known route of early explorers, missionaries, and traders into Wisconsin and the Northwest Forts, missions, and trading posts were established along its course Louis Jolliet and Father Marquette were the first white men to reach (1673) the Mississippi by way of the Fox-Wisconsin portage 2 River rising in SE Wisconsin between Milwaukee and Lake Geneva and flowing SSW to the Illinois at Ottawa, Ill

fox, predatory animal of the dog family Its fur is generally long and thick, and the bushy tail is usually longer than that of the wolf It is an intelligent animal and shows great skill in outwitting its enemies Small animals, berries, and fruits form most of its food The red fox (*Vulpes*) inhabits parts of Europe and Asia, N Africa, and most of Canada and the United States Various races differ in color and markings, but the coat is usually reddish, the end of the tail is white, and the back of the ears are marked with black. Silver, black, and cross fox are color phases, one or more of which may appear in any red fox litter Silver fox pelts are valuable and much used in the trade, many are from animals raised in captivity in North America The thick, fine underfur is overlaid with black hairs about 3 in long some of which are partially white The natural all-black pelts are rare and expensive Cross fox is yellowish to pale orange, often with some white-tipped hairs and with black cross-shaped markings on the shoulders and back Breeders have developed a platinum fox The arctic fox has a circumpolar range Usually the short-haired summer coat, brownish above and white below, changes to a long white winter coat, the white fox of trade Another phase remains grayish or brownish throughout the year and is known as blue fox The gray fox is found over most of the United States and from Mexico to N South America

Foxboro, town (pop 6,303), SE Mass , SW of Boston, settled 1704, inc 1778 Indicating, recording, and precision instruments are produced A state mental hospital is here

Fox Chapel, borough (pop 1,080), Allegheny co., SW Pa , near Pittsburgh, inc 1934

Foxcroft, Maine see DOVER-FOXCROFT

Foxe, John, 1516–87, English clergyman, author of the noted *Book of Martyrs* He early became a Protestant and on Mary Tudor's accession fled from England to Strasbourg In Strasbourg was printed (1554) a volume in Latin, giving the history of the persecution of Protestant reformers to c 1500 —the first part of the work which became known popularly as the *Book of Martyrs* Foxe moved to Basel, and there was published (1559) the first complete edition, in Latin, of his history of the Christian martyrs to about the end of Mary Tudor's reign Returning to England, he was ordained (1560) and in 1563 became a prebendary in the cathedral at Salisbury He was connected also with the printing business of John Day, who issued (1563) the first complete English edition of Foxe's master work as *The Acts and Monuments of These Latter and Perilous Dayes* The *Book of Martyrs* was widely read, and its influence was extensive, although as history it is not altogether trustworthy. It has passed through many editions See J F Mosley, *John Foxe and His Book* (1940)

Foxe, Luke. see FOX, LUKE

Foxe Channel, arm of Hudson Bay, 200 mi long and 90 to 200 mi wide, SE Franklin dist and E Keewatin dist , Northwest Territories, between Southampton Island and Melville Peninsula on the west and Baffin Island on the east It connects Hudson Bay and Hudson Strait with Foxe Basin, a widen- of the channel between Baffin Island and Melville Peninsula

foxglove, any species of the genus *Digitalis*, Old World biennial or perennial herbs The common or purple foxglove (cultivated also in other colors) is usually biennial, and the tall spikelike spikes of flowers—early-summer blooming—are popular for borders Each blossom, likened to the finger of a glove or an elongated bell, points downward from the stalk. In England where it grows wild the plant has long been associated with the fairies, as evidenced by a few of its many names fairy thimbles, fairy bells, fairy cap, and fairies'-petticoat From the leaves of this plant, which is poisonous, is obtained the drug digitalis (dĭj"ĭtăl'ĭs, -tā'lĭs), valuable in the treatment of heart ailments

Fra Angelico see ANGELICO, FRA

Fracastoro, Girolamo (jĕrō'lämō frăkästō'rō), 1483–1553, Italian physician and poet He was born in Verona, where he practiced after studying at Padua He made careful studies of epidemic diseases and attributed their spread to the transmission of tiny particles or seeds of contagion by contact, either direct or indirect, or even without contact over long distances He wrote a long poem on syphilis from the title of which the disease takes its name

Frackville, borough (pop 8,035), E Pa , NNW of Pottsville, settled 1852, laid out 1861, inc 1876 Anthracite is mined here on a large scale

fraction [Latin, =breaking], in arithmetic, an expression representing a part, or several equal parts, of a unit In writing a fraction, e g , $\frac{2}{5}$ or $\frac{1}{3}$, the number after or below the bar represents the total number of parts into which the unit has been divided This number is called the denominator The number before or above the bar, the numerator, denotes how many of the equal parts of the unit have been taken The expression $\frac{2}{5}$, then, represents that two of the five parts of the unit or quantity have been taken When the numerator is less than the denominator, the fraction is proper, i e , less than unity When the reverse is true, e g , $\frac{5}{2}$, the fraction is improper, i e , greater than unity A fraction has been reduced to its lowest terms when the numerator and denominator are not divisible by any common divisor except 1, e g , when $\frac{4}{6}$ is reduced to $\frac{2}{3}$ When a fraction is written with a whole number, e g , $3\frac{1}{2}$, the expression is called a mixed number This may also be written as an improper fraction, as $\frac{7}{2}$, since three is equal to six halves, and by adding the one half, the total becomes seven halves, or $\frac{7}{2}$ When fractions having the same denominator, as $\frac{3}{10}$ and $\frac{4}{10}$, are added, the numerators only are added and their sum is then written over the common denominator $\frac{3}{10}+\frac{4}{10}=\frac{7}{10}$ Fractions having unlike denominators, e g , $\frac{1}{4}$ and $\frac{1}{6}$, must first be converted into fractions having a common denominator, a denominator into which each denominator may be divided, before addition may be performed In the case of $\frac{1}{4}$ and $\frac{1}{6}$, for example, the lowest number into which both 4 and 6 are divisible is 12 When both fractions are converted into fractions having this number as a denominator, then $\frac{1}{4}$ becomes $\frac{3}{12}$, and $\frac{1}{6}$ becomes $\frac{2}{12}$ The change is accomplished in the same way in both cases, the denominator being divided into the 12 and the numerator being multiplied by the result of this division The addition then is performed as in the case of fractions having the same denominator $\frac{1}{4}+\frac{1}{6}=\frac{3}{12}+\frac{2}{12}=\frac{5}{12}$ In subtraction, the numerator and the denominator are subjected to the same preliminary procedure, but then the numerators of the converted fractions are subtracted $\frac{1}{4}-\frac{1}{6}=\frac{3}{12}-\frac{2}{12}=\frac{1}{12}$ In multiplication, the numerators of the fractions are multiplied together as are the denominators without any changing being necessary $\frac{3}{5}\times\frac{3}{5}=\frac{9}{15}$. It should be noted that the result, here $\frac{9}{15}$, may be reduced to $\frac{3}{5}$ by dividing both numerator and denominator by 3 The division of one fraction by another, e g., $\frac{3}{5}\div\frac{1}{2}$, is performed by inverting the divisor and multiplying $\frac{3}{5}\div\frac{1}{2}=\frac{3}{5}\times\frac{2}{1}=\frac{6}{5}$ The same rules apply to the addition, subtraction, multiplication, and division of fractions in which the numerators and denominators are algebraic expressions. The present notation for fractions is of Hindu origin, but some types of fractions were used by the Egyptians before 1600 B C., as shown by the Ahmes papyrus (see ALGEBRA). A later way of representing fractions is by decimal notation (see DECIMAL SYSTEM).

fracture, a breaking, especially of a bone Fractures may be simple, greenstick, or compound A simple

fracture is one in which the overlying skin is unbroken. The break may not be noticed if the bone is not displaced. A greenstick fracture is one in which one side of the bone is broken, and the other bent. This type of partial fracture is common in children. A compound fracture is one in which the broken bone is in communication with the external air through a wound of the overlying structures. Splinting or immobilising the separated parts is essential before moving the individual in order to avoid further injury. The proper setting of broken bones and the application of casts requires the services of a physician. X ray is used to determine the position of fractured bones and also to indicate the presence and amount of callus formation during the healing process. In certain types of fracture, metal pins are employed to immobilise the parts. Skull and jaw fractures require special treatment. In some cases surgery is indicated in the reduction of fractures. Hemorrhage and shock accompanying fracture should be treated, and sedation given when necessary.

Fra Diavolo (frä' dēāl'vōlō) [Ital.=brother devil], 1771–1806, Italian bandit and soldier, whose real name was Michele Pezza. In 1799 he resisted the French invasion of the kingdom of Naples, and in 1806 he entered the service of the king against the French, but he was captured and hanged. The plot of Auber's opera, *Fra Diavolo* (libretto by Scribe), is in no respect historical.

Fragonard, Jean Honoré (shā' ōnōrā' frägōnär'), 1732–1806, French painter. He studied with Chardin, Carle Vanloo, and above all with Boucher, whose style he assimilated. He won the Prix de Rome and studied in Italy from 1755 to 1761. In 1765 he was admitted to the Académie royale de Peinture et de Sculpture for his *Coresus and Callirrhoé* (Louvre), but thereafter he devoted himself to painting scenes of love and gallantry for the court. Characteristic examples are *Love's Vow*, *The Swing* (Wallace Coll., London), and *The Shift Removed* (Louvre). Ruined by the Revolution, he retired to Grasse, where he decorated the house of his friend Maubert with the beautiful panels *Roman de l'amour et de la jeunesse*, originally intended for Mme du Barry (Frick Coll., New York). Fragonard is well represented in the Wallace Collection, London, in the Louvre, and in many French provincial museums. See studies (in French) by Roger Portalis (1889) and Pierre de Nolhac (1906).

Framingham (frā'mĭng-hăm"), town (pop. 23,214), E. Mass., on the Sudbury between Worcester and Boston, settled 1650, inc. 1700. Paper and paper novelties are produced. MASSACHUSETTS STATE TEACHERS COLLEGE is here.

Framlingham (frām'lĭng-um), market town, Suffolk, East, England. The old castle, now in ruins, was the refuge of Queen Mary after the death of Edward VI and was formerly the family seat of the Howards, dukes of Norfolk. The fine flint church, with a high tower, has monuments to the Howards, including the poet Henry Howard, earl of Surrey.

Frampton, Sir George James, 1860–1928, English sculptor, studied with Frith and with Mercié in Paris. Much of his work was done in more than one material, combining colored marble, bronze, ivory, and enamel. Well known are his *Peter Pan* (Kensington Gardens) and the Edith Cavell Memorial (London).

France, Anatole (anatōl' frās'), pseud. of **Jacques Anatole Thibault** (zhak', tĭbō'), 1844–1924, French writer. His early fiction was characterised by a somewhat sentimental charm, e.g., *Le Crime de Sylvestre Bonnard* (1881, Eng. tr., 1906), his first successful novel, and *Le Livre de mon ami* (1885; Eng. tr., *My Friend's Book*, 1913), the first of a series of autobiographical novels. Half his work appeared in periodicals and newspapers. After the Dreyfus Affair (in which he supported Zola) his work was slanted more to political satire, and the skill in irony which was seen in *Thaïs* (pub. 1890 though volume bears date 1891, Eng. tr., 1909), *La Rôtisserie de la reine Pédauque* (1893; Eng. tr., *At the Sign of the Reine Pédauque*, 1912), and *Le Lys rouge* (1894, Eng. tr., *The Red Lily*, 1908) was developed with full force in *L'Île des pingouins* (1908, Eng. tr., *Penguin Island*, 1909) and *La Révolte des anges* (1914, Eng. tr., *The Revolt of the Angels*, 1914). He also wrote a life of Joan of Arc (1908, Eng. tr., 1909). France's liaison with Mme de Caillavet, lasting 27 years, had a profound influence on his work; she spurred his ambition and saved him from material concern. In 1896 he was elected to the French Academy, and he was awarded the 1921 Nobel PRIZE IN LITERATURE. See biographies by J. L. May (1924), J. J. Brousson (Eng. tr., 1925), and E. P. Dargan (1937); Barry Cerf, *Anatole France: the Degeneration of a Great Artist* (1926); Nicolas Ségur, *Conversations with Anatole France* (Eng. tr., 1926), J. M. Pouquet, *The Last Salon. Anatole France and His Muse* (Eng. tr., 1927); H. M. Chevalier, *The Ironic Temper* (1932).

France, republic (212,700 sq. mi.; pop. 40,502,513), W. Europe. The chief member of the FRENCH UNION, it is called Metropolitan France as distinguished from Overseas France. It is washed by the English Channel in the north, the Atlantic Ocean with the Gulf of Biscay in the west, and the Mediterranean in the south. The natural land frontiers are the PYRENEES, which separate it from Spain, in the southwest, the ALPS, which separate it from Italy, in the southeast, the JURA mts., forming the Swiss border, in the east, and the Rhine, which is part of the French border with Germany. In the northeast, where France touches on Germany, Luxembourg, and Belgium, the frontier follows no natural line and is most exposed to attack. Since the French Revolution of 1789, France has had an extremely uniform and centralized administration. The central government at PARIS appoints the prefects who administer the 90 departments of Metropolitan France. The departments are subdivided into *arrondissements*, cantons, and communes. The communes, which are the towns, are administered by mayors who, though elected by municipal councils, are responsible to the prefects. There are elected departmental councils and *conseils d'arrondissement*, but local self-government is minimal. Despite its administrative uniformity, which also extends to the educational system, and despite its centralization, which is an important factor in its cultural life, France has retained the striking diversity of its natural regions. These regions for the most part coincide with the old historic provinces, abolished by the French Revolution, which still are the basic cultural, economic, and geographic divisions of France. France N. of the LOIRE river has as its center the province of ÎLE-DE-FRANCE, this takes up the greater part of the Paris basin, a fertile depression drained by the SEINE and the MARNE. The Paris basin is the heart of France. It is surrounded by the provinces of CHAMPAGNE and LORRAINE in the east, ARTOIS, PICARDY, FRENCH FLANDERS (see NORD dept.), and NORMANDY in the northeast and north, BRITTANY, MAINE, and ANJOU in the west; and TOURAINE, ORLÉANAIS, NIVERNAIS, and BURGUNDY in the south. Farther east, between the VOSGES mts. and the Rhine, is ALSACE, S. of Alsace, along the Jura, is FRANCHE-COMTÉ. Central France is occupied by the rugged mountains of the MASSIF CENTRAL, with a largely ungrateful soil. It comprises the provinces of BOURBONNAIS, MARCHE, LIMOUSIN, AUVERGNE, and LYONNAIS. To the east of the RHONE, which divides the Massif Central and the Alps, are SAVOY, DAUPHINÉ, and PROVENCE. Here are some of the highest peaks of Europe, notably MONT BLANC. The Rhone valley widens into a plain near its delta on the Mediterranean; part of the coast of Provence forms the celebrated French RIVIERA. LANGUEDOC extends from the CÉVENNES mts. to the Mediterranean coast W. of the Rhone. CORSICA lies off the Mediterranean coast. The southwestern part of France comprises the small Pyrenean provinces of ROUSSILLON, FOIX, BÉARN, and French NAVARRE and the vast provinces of GASCONY and GUIENNE. The last two constitute the great Aquitanian plain, drained by the GARONNE and the DORDOGNE, which extends to the Atlantic Ocean. The central section of the Atlantic coast, between the GIRONDE and the Loire, is occupied by the provinces of SAINTONGE, ANGOUMOIS, AUNIS, and POITOU. The backbone of French economy is agriculture, in which France is almost self-sufficient. The larger part of French soil is owned by small independent farmers, whose industry and thrift are proverbial. The richest agricultural districts lie in the north, while fruitgrowing and cattle raising are very important in the south. French wines are celebrated and are exported to all countries. The best-known vineyards are in Burgundy and Champagne, in the Loire and Rhone valleys, and in the BORDEAUX region. French industries are concentrated in Paris, center of its luxury and fashion industry, and in the Parisian suburbs; in the coal region of Nord dept., in the iron-ore basin of Lorraine, in the heavy industrial cities of SAINT-ÉTIENNE, LE CREUSOT, and CLERMONT-FERRAND; in the textile centers of LYONS, LILLE, and ROUBAIX; in the great wine centers, RHEIMS, ÉPERNAY, DIJON, COGNAC, and Bordeaux, and in the chief ports, ROUEN, LE HAVRE, CHERBOURG, BREST, SAINT-NAZAIRE, NANTES, Bordeaux, TOULON, and MARSEILLES. Other important or famous cities are NANCY, STRASBOURG, ORLÉANS, TOURS, TROYES, TOULOUSE, ARLES, NÎMES, and NICE. Only some 20 French cities have more than 100,000 inhabitants, and only Paris exceeds the million mark. The larger part of the French live in small towns and villages, and even in the larger cities many Frenchmen remain conscious of their link with the soil. The population of France is no longer expanding, the number of deaths sometimes exceeding that of births. Many foreigners have settled in France as industrial and agricultural workers, notably Italians in the southeast and Poles in the northern mining districts. Many former German prisoners of war chose to remain in France after the Second World War. Even apart from these immigrants, France shows great ethnic diversity. German is spoken in Alsace and parts of Lorraine and some Flemish in French Flanders. In Celtic Brittany, Breton is still cultivated, as is Basque in the BAYONNE region. Although the Latin cultural tradition has triumphed in all France, the north of France shows some Germanic admixture, in contrast with the distinctly Latin south. Roman Catholicism is by far the largest religious body in France. Separation of Church and state was made final in 1905–6. The educational level is high. Among the 16 universities of France the largest are those of Paris, Lyons, Bordeaux, Toulouse, Lille, AIX-EN-PROVENCE, MONTPELLIER, Strasbourg, RENNES, and GRENOBLE.

Ancient Gaul and the Birth of France. Some of the earliest anthropological and archaeological remains in Europe have been found in France, yet little is known of France before the Roman conquest (1st cent. B.C.). The country was then known as GAUL. It was inhabited largely by Celts (see CELT), called Gauls by the Romans, who had mingled with still older populations, and by BASQUES in present Gascony. Some of the Gallic tribes, however, undoubtedly were Germanic. The Mediterranean coast, notably Marseilles, had long been settled by Greek and Phoenician traders, and Provence was colonized by Rome in the 2d cent. B.C. The conquest of Gaul by Julius Caesar (see GALLIC WARS) was carried out between 58 and 51 B.C. and became final with the defeat of VERCINGETORIX. Before Caesar's arrival Gaul was ruled by tribal chieftains and, compared to Italy, was in a low state of material culture. Early in the course of the five centuries of Roman rule that followed, Gaul accepted Latin speech and Roman law, developed a distinct Gallo-Roman civilization, and sprouted many large and prosperous cities. Christianity, introduced in the 1st cent., spread rapidly. Gaul was a Christian, Latin, highly civilized, populous, and prosperous country when, early in the 5th cent., the barbarian invasions began to engulf the Roman world. Among the Germanic tribes that descended upon fertile Gaul, the VISIGOTHS, FRANKS, and BURGUNDII were most important in French history. Moribund Rome and its governors in Gaul sought, by alliances, to play the barbarians off against each other. Thus Aetius defeated (451) the Huns under Attila near modern Châlons-sur-Marne with the help of the Franks. But in 486 (10 years after the traditional date for the fall of Rome) the Franks, under their chieftain CLOVIS, routed Syagrius, last Roman governor of Gaul, at Soissons. Clovis made himself ruler of all the Franks, conquered S. Gaul from the Visigoths, and made W. Germany subject after his victory (496) over the Alemanni. He accepted Christianity, extinguished the Arian heresy, and founded a dynasty, the MEROVINGIANS—but he failed to provide for the unity of Gaul when he divided his lands among his sons at his death. Throughout the 6th and 7th cent., Gaul was torn by the fratricidal strife between the Merovingian kings of NEUSTRIA and of AUSTRASIA, the two realms that ultimately emerged from the division and were united only for brief periods under a sole ruler. The Merovingians remained barbarian, illiterate, and cruel and soon also became dissipated and indolent. Gaul was depopulated, the cities in ruins, commerce destroyed, the arts and sciences ignored. The only remnant of Roman civilization was the Church, but in the 8th cent. even the Church stood threatened by extinction when Gaul was invaded by the Saracens. Yet a more rigorous dynasty, the CAROLINGIANS, had in the meantime come to rule Austrasia and Neustria as mayors of the palace in the name of the decadent Merovingian kings. In 732 CHARLES MARTEL rallied the Franks and decisively defeated the Saracens between Poitiers and Tours. His son, PEPIN THE SHORT, dethroned the last Merovingian in 751 and proclaimed himself king with the sanction of the pope. His son was CHARLEMAGNE. Crowned emperor of the West in 800, Charlemagne expanded his lands by far-flung conquests. He gave his subjects an efficient administration, created an admirable legal system, and labored for the rebirth of learning, piety, and the arts. He left a reborn France and Germany to his son, Emperor LOUIS I, but on Louis's death, the empire was again divided. In 843 the three brothers, CHARLES II, king of the West Franks, LOUIS THE GERMAN, and Emperor LOTHAIR I, redivided their territories (see VERDUN, TREATY OF). From that date the existence of France as a separate kingdom is generally reckoned. Carolingian rule declined rapidly while society was undergoing momentous changes that had their roots centuries earlier, changes that produced FEUDALISM and established the MANORIAL SYSTEM in France. The central authority of the kings was increasingly usurped by the feudal lords. Among the most powerful of these were the dukes of AQUITAINE and of Burgundy and the counts of FLANDERS, of Toulouse, of BLOIS and of Anjou. In 911 the NORSEMEN, who long had raided France, obtained Normandy, of which ROLLO was the first duke. When the Carolingian dynasty died out in France (987), the nobles chose HUGH CAPET their king. The early CAPETIANS, as Hugh's dynasty is called, were dukes of Francia, a small territory around Paris. Their power was nonexistent in the rest of France. Yet by patient, unremitting effort they gradually extended their domain, raised the

castles of robber barons, and held their own against the great feudatories Louis VI began the process The towns, never dead, were regaining their population and wealth. Drawing together for their common defense (see COMMUNE), the townspeople won increasingly advantageous charters from the king and from their feudal lords Commerce revived and the great fairs of Champagne, situated on the busy commercial route between Flanders and S Europe, made France a meeting place for European merchants The CLUNIAC ORDER and the revival of theological learning at Paris (which was to make the SORBONNE the fountainhead of SCHOLASTICISM) gave France tremendous prestige in Christendom This process of rebirth reached its height in the 13th cent It was aided by the foremost role that France played in the CRUSADES, first preached at Clermont in 1095 The crusaders established the French ideal of chivalry, personified in Louis IX (Saint Louis), in most of Europe French courtly poetry and manners became European models, and the French language began to radiate beyond its boundaries In England, French manners and culture predominated among the nobles after the Norman Conquest (1066) The fact that the English kings were also French nobles, holding or claiming vast fiefs in France, brought the two nations into centuries of conflict The first stage of this conflict began with the marriage (1152) of HENRY II, king of England and duke of Normandy, with ELEANOR OF AQUITAINE, divorced wife of Louis VII of France Eleanor claimed a vast part of France as her heritage This stage ended with the victory (1204) of Louis's successor, PHILIP II (Philip Augustus) over King JOHN of England In the battle of BOUVINES (1214) Philip II solidly established the military prestige of France Under Philip II a new France emerged The crusade against the ALBIGENSES netted the crown the huge fiefs of the counts of Toulouse in S France, and the royal domain (i e , the territory directly subject to the king, rather than to feudal lords) now formed the larger part of the kingdom The towns and their prosperous guilds flourished, the roads were safer than since Charlemagne Louis IX (1226–70) organized an efficient and equitable civil and judicial system PHILIP IV, though inclined toward absolutism, was the first to call (1302) the STATES-GENERAL, to which he gave account of his acts and into which he incorporated the burgher class The kings, particularly Philip IV, asserted the royal authority against the Church Serfdom had by then virtually ceased, and although customary law remained in force (except in S France, where Roman law had always persisted), the institution of feudalism itself was largely supplanted by the central authority of the crown Yet, within a few years after the death (1328) of Charles IV, last of the direct Capetians, France was stopped on its road to unification and threatened in its national existence by more than a century of warfare

The Making of a Nation In 1328 the house of VALOIS, a younger branch of the Capetians, succeeded to the crown with PHILIP VI The succession was contested by Philip's remote cousin, EDWARD III of England, who in 1337 proclaimed himself king of France The dynastic struggle known as the HUNDRED YEARS WAR (1337–1453), actually a series of wars and truces, was complicated by many secondary issues, notably the civil troubles in Flanders and the War of the BRETON SUCCESSION The French defeats at CRÉCY (1346) and POITIERS (1356), the Black Death epidemic, the Parisian insurrection under Étienne MARCEL (1357–58), the JACQUERIE (peasant revolt) of 1358, and the pillaging bands of ÉCORCHEURS plunged France into anarchy and forced JOHN II to accept the humiliating Treaty of BRÉTIGNY (1360) Under CHARLES V, however, Bertrand DU GUESCLIN recovered (1369–73) all lost territories except Calais and the Bordeaux region France was scarcely recovering when, in 1407, the terrible civil strife between ARMAGNACS AND BURGUNDIANS began and when (1415) HENRY V of England renewed the war and crushed France at AGINCOURT In 1420 CHARLES VI made Henry V his heir, to the detriment of the dauphin, later CHARLES VII (see TROYES, TREATY OF) The dauphin assumed the royal title in 1422, but his authority extended over only a small area England held most of France, including Paris. Powerful Burgundy, under PHILIP THE GOOD, was allied with England At this dark hour appeared JOAN OF ARC, the Maid of Orléans, who rallied the dauphin's followers and in 1429 stood by the dauphin's side as he was crowned at Rheims The tide turned In 1435 Burgundy, though exacting exorbitant concessions, allied itself with France (see ARRAS, TREATY OF) In 1453 the English lost their last hold on French soil outside CALAIS It was left for LOUIS XI (1461–83) to destroy the power of the last great feudal lords and to incorporate into the royal domain almost all of present France He was aided by the downfall (1477) of CHARLES THE BOLD of Burgundy and by the extinction of the ANGEVIN dynasty Brittany was united with France shortly afterward (see ANNE OF BRITTANY), and the larger part of the fiefs held by the BOURBON family was confiscated in 1527 Under the reigns (1483–1560) of CHARLES VIII, LOUIS XII, FRANCIS I, HENRY II, and FRANCIS II, France proved its amazing recuperative powers despite the heavy drain imposed on its resources by the ITALIAN WARS (1494–1559) This first phase of the imperialistic struggle between France and the house of Hapsburg ended with the triumph of Hapsburg Spain in the Treaty of CATEAU-CAMBRÉSIS It also served to introduce the Italian Renaissance into France (see FRENCH ART, FRENCH LITERATURE) At the same time the Reformation gained a great following among all classes (see HUGUENOTS) In 1560 the religious conflict flared up in the first of the ferocious civil wars (see RELIGION, WARS OF) that tore France asunder during the reigns (1560–89) of the last Valois kings, CHARLES IX and HENRY III The Catholics, led by the ambitious GUISE family, eventually united into the Catholic LEAGUE and obtained Spanish support against the Protestant Henry of Navarre, designated heir of Henry III Navarre was supported by the moderate Catholics as well as by the Protestants He defeated the League but had to accept Catholicism before being allowed to enter long-beleaguered Paris (1594) As HENRY IV he became the first Bourbon king of France. With his great minister, SULLY, he made France prosperous again and encouraged French explorers in Canada His assassination (1610) by a Catholic fanatic marked the end of religious tolerance in France for nearly two centuries Under his successor, LOUIS XIII, and during the minority of LOUIS XIV, two great statesmen shaped the destinies of the kingdom Cardinal RICHELIEU and Cardinal MAZARIN They led France to victory in the THIRTY YEARS WAR (1618–48), which France entered openly in 1635 on the side of the Protestant powers against Hapsburg Austria and Spain Austria was humbled in 1648 (see WESTPHALIA, PEACE OF), Spain in 1559 (see PYRENEES, PEACE OF THE). At home, Richelieu destroyed the power of the Huguenots, and Mazarin overcame the nobles in the wars of the FRONDE Louis XIV, aided by the genius of Jean Baptiste COLBERT and François LOUVOIS, completed Mazarin's work of centralization He raised the position of the kingship to a dignity and prestige until then unknown in France, and by his conquests and his magnificence made France the first power in Europe and his court at VERSAILLES the cynosure of the world Yet his passion for warfare undermined French finances and his persecution of the Huguenots depopulated whole provinces His successes in the War of DEVOLUTION (1667–68) against Spain and the Dutch War (see DUTCH WARS) of 1672–78 inspired all Europe with fear of French hegemony and resulted in the isolation of France The War of the GRAND ALLIANCE against Louis XIV began to turn the tide, the War of the SPANISH SUCCESSION (1701–14), though it did not end with a clear victory over France, marked the end of French expansion in Europe In CANADA and LOUISIANA the reign of Louis XIV saw the height of French power in America France, at the end of Louis's reign, was exhausted from its attempt at primacy, yet so great was its latent strength and wealth that it could—and did—recover prosperity within a few years The existence of France as a unified, centralized nation and as a world power must be dated from the reign of Louis XIV

The Ancien Régime and the New France LOUIS XV inherited a unified France, but a France still dressed in patches of its feudal past The "absolute" power of the king was hedged in by a stupendous multitude of dusty charters and special privileges, held by families, guilds, monopolies, communes, and provinces, and by the clergy and nobles In N France, where customary law prevailed, justice varied from one village to the next Taxes, though onerous, were raised inefficiently, partly by the farmers general (see FARMING, IN TAXATION), partly by the state Some taxes (e g , the *vingtième*) were imposed on all Frenchmen according to their wealth, others were arbitrary Commerce, based on MERCANTILISM, was hampered by restrictive regulations, monopolies, and internal tariff barriers Government bookkeeping was chaotic Colbert had reorganized the administration by curtailing the power of the provincial governors and by creating new administrative units, called intendancies The intendants were trusted civil servants who carried out the policies of the central government, but their discretionary powers were wide In several provinces, notably Brittany, the local assemblies of the three estates persisted and occasionally proved unruly The edicts of the king himself had to be registered by the often intractable Parlement of Paris (see PARLEMENT) In the complexities of civil, administrative, and fiscal law only lawyers found their profit To the wealthy commercial and industrial bourgeoisie, who had become the dominant class in the 17th and 18th cent , they seemed intolerable. Free trade became the rallying cry of the PHYSIOCRATS and of such liberals as TURGOT. Its intellectual counterpart, free thought, was propagated by the philosophers of the ENLIGHTENMENT The peasants, though by no means as uniformly poor and oppressed as is often thought, resented their tax burden, particularly the feudal dues and services, which were slight but irritating A large proportion of farmers were landowners and serfdom had virtually disappeared, but this fact made the remaining feudal privileges the more intolerable The greatest paradox of 18th-century France was the near-bankruptcy of the state amid the prosperity of the nation The honest administration of Cardinal FLEURY had barely extricated France from the disastrous failure of the MISSISSIPPI SCHEME, when Louis XV plunged into the WAR OF THE AUSTRIAN SUCCESSION and the SEVEN YEARS WAR Not only was the treasury drained, but France lost its empire in India and North America and its prestige in Europe Turgot's reforms early in the reign of LOUIS XVI were cut short in 1776 Still hoping to take vengeance on England, France supported the American Revolution All French liberals hailed the gesture, but not its result, a huge political debt In 1788 the government was bankrupt NECKER was called to repair the irreparable, and the States-General were convoked for the first time since Henry IV Thus began the upheaval that shook Europe from 1789 to 1815 (see FRENCH REVOLUTION, FRENCH REVOLUTIONARY WARS, DIRECTORY, CONSULATE, NAPOLEON I) France executed its king, resisted the invasions of a European coalition, and ridded itself of the REIGN OF TERROR and of ROBESPIERRE only to fall under the dictatorship of a victorious general, Bonaparte From the Napoleonic epic nothing remained after Waterloo except a powerful legend But Napoleonic administration and law (see CODE NAPOLÉON) remained almost unchanged to the present day Of the *ancien régime*, nothing survived

Modern France The French Revolution and Napoleon made France into a uniform, bureaucratic state and brought about the triumph of the bourgeoisie The Congress of Vienna (see VIENNA, CONGRESS OF) assigned to France approximately its present-day boundaries and also restored King LOUIS XVIII The king joined the HOLY ALLIANCE, but sought a moderate and conciliatory policy at home Not so his successor, CHARLES X, champion of the ultraroyalists His efforts to restore absolutism were the more dangerous because France had become more centralized The new bourgeoisie, intending to reap the fruit of the INDUSTRIAL REVOLUTION, joined the radical Left and ousted Charles X in the JULY REVOLUTION of 1830 The July Monarchy (1830–48) under LOUIS PHILIPPE, the "citizen king," was a frank plutocracy, it was intolerable to the new urban proletariat (particularly in Paris), whose rights were ignored, and it became suspect to the liberals when Louis Philippe took on authoritarian airs The combined forces of opposition overthrew the July Monarchy in the FEBRUARY REVOLUTION of 1848 This was at first distinctly radical, but the Conservative bourgeoisie triumphed in the JUNE DAYS, and in Dec , 1848, Louis Napoleon Bonaparte, nephew of Napoleon I, became president of the Second Republic In 1852, by a coup d'état, Bonaparte became emperor as NAPOLEON III He emulated his uncle's autocratic regime at home and embarked on a questionable foreign policy and on adventurous but unrewarding wars The Second Empire was, however, a period of colonial expansion and of material prosperity In 1863 Napoleon instituted a more liberal and democratic government His rule ended disastrously in the FRANCO-PRUSSIAN WAR (1870–71) Alsace and Lorraine were lost to France until 1918 The third Republic (1871–1940) was born and ended in defeat After the suppression by the provisional government under Adolphe THIERS of the COMMUNE OF PARIS (1871), Marshal MACMAHON, a royalist sympathizer, was elected president (1873) But for the intransigence of Henri, comte de CHAMBORD (the legitimist pretender), France might again have become a monarchy A republican constitution was finally adopted in 1875 The two houses of parliament (the chamber of deputies and the senate) were characterized by their multiparty composition As the various parties combined, separated, and recombined into political blocs, cabinets succeeded each other in quick succession After the rapid rise and fall of General BOULANGER, the stability of France was once more shaken by the DREYFUS AFFAIR, which discredited the monarchists and reactionaries and brought the anticlerical but otherwise moderate Radical Socialists to power Socialism, led by GUESDE and JAURÈS, rose as a major force, but its pacifism antagonized the considerable body of Frenchmen to whom revenge upon Germany seemed the foremost duty In foreign policy the years before 1914 were marked by continuing French colonial expansion in Africa and Asia. This brought France into conflict with Great Britain (see FASHODA INCIDENT) and later with Germany (see MOROCCO) Eventually, France, England, and Russia allied themselves to balance the German-Austrian-Italian combination (see TRIPLE ALLIANCE AND TRIPLE ENTENTE) In the FIRST WORLD WAR (1914–18) France claimed the major share of the Allied victory and CLEMENCEAU was the

outstanding leader At the Paris Peace Conference (see VERSAILLES, TREATY OF), France obtained satisfaction, but its failure to honor its WAR DEBTS to the United States and its occupation (1923-25) of the RUHR when Germany failed to pay REPARATIONS cost France some of its popularity in America Outstanding among French political figures of the 1920s were POINCARÉ, HERRIOT, and BRIAND At the DISARMAMENT CONFERENCE France insisted on French security against possible German aggression The economic crisis of 1929 hit France severely, and politics were envenomed by scandals such as the STAVISKY AFFAIR A coalition of Socialists, Radical Socialists, and Communists won the elections of 1936 and the first Popular Front government under Léon BLUM effected many social and economic reforms Conservative opposition undid much of its work during a succession of increasingly less radical Popular Front governments Édouard DALADIER capped the appeasement policy toward Nazi Germany and Fascist Italy and Spain by making France a party to the MUNICH PACT (1938) After the outbreak (1939) of the Second WORLD WAR he was replaced by Paul REYNAUD In May-June, 1940, France was ignominiously defeated by Germany Marshal PÉTAIN, who signed the armistice, became head of the reactionary VICHY GOVERNMENT which had authority over the unoccupied part of France and which became a German tool In the meantime Gen Charles de GAULLE proclaimed, from London, the continued resistance of the "Free French" to Germany At first a small group, the Free French grew in prestige after the success of their forces in SYRIA, Madagascar, and North Africa The Allied invasion (Nov , 1942) of North Africa resulted (1943) in the establishment of a provisional French government at Algiers and in the total occupation of Metropolitan France by German troops De Gaulle's government moved to Paris after its liberation (Aug , 1944) and was subsequently recognized by the Allies By the end of 1945 the Allies had expelled the Germans from France France had suffered considerable damage in the brief campaign of 1940 German occupation was extremely costly and oppressive Thousands were executed and hundreds of thousands worked as slave laborers in Germany In the liberation of France, Free French military forces as well as the Forces of the Interior —the armed resistance within France— took a heroic and invaluable part Severe Allied bombings preceded the invasion of Normandy (June 6, 1944), the liberation campaign itself caused much additional ruin In 1945 French economy was virtually at a standstill Inflation and the black market seemed insuperable problems Politically, France was reduced to a second-rate power, although it became one of the five great powers in the United Nations and shared in the occupation of Germany However, France rallied once more With American aid (see EUROPEAN RECOVERY PROGRAM), French economy seemed, at least on the surface, to have substantially recovered by 1949 Immediately after the liberation, the Socialist and Communist parties dominated the scene, and a considerable part of French economy was nationalized After 1947 a progressive Catholic party—the Popular Republican Movement—emerged and with the moderate wing of the Socialists held the majority The rightist elements joined in opposition under De Gaulle The Fourth Republic began officially in Dec , 1946, when the new constitution came into effect The constitution reorganized the French Empire and, for France itself, established a parliament composed of a national assembly and of a much weakened upper house, called the council of the republic France joined (1948) in an alliance with Great Britain, Belgium, the Netherlands, and Luxembourg, and in 1948 adhered to the NORTH ATLANTIC TREATY A fine geographic study is Jean Brunhes, *Géographie humaine de la France* (2 vols , 1920-26) For early French historians, see Auguste Molinier, *Les sources de l'histoire de France* (6 vols , 1901-6) Jules MICHELET, though in many ways outdated, is still regarded by many as the greatest of French historians Among recent general histories of France, those edited by Ernest LAVISSE and Gabriel HANOTAUX are outstanding A monumental multivolume work is the *National History of France*, edited by F Funck-Brentano (Eng tr still in progress, 1913–) Short general histories include those by Victor Duruy (1889, in Fr , several Eng trs), A M Robinson Ducloux (1918, in Eng), Jacques Bainville (Eng tr , 1926), Charles Seignobos (Eng tr , 1933), and Albert Guérard (1946, in Eng) See also J S C Bridge, *History of France from the Death of Louis XI* (4 vols , 1921-29) Authors of important historical works on France are, for the medieval period, Achille LUCHAIRE and FUSTEL DE COULANGES, for the 17th cent , VOLTAIRE, for the French Revolution and Napoleon I, Hippolyte TAINE, Alphonse AULARD, Albert MATHIEZ, and Frédéric MASSON, for the history of the working class, Émile LEVASSEUR, for cultural history, Alfred RAMBAUD See Émile Bourgeois, *History of Modern France* (2 vols , 1919), S. B. Clough, *France. a History of National Economics, 1789-1939* (1939); D. W. Brogan, *France under the Republic* (1940)

Francesca, Piero della see PIERO DELLA FRANCESCA

Francesca da Rimini (frānsĕ'skŭ dŭ rĭ'mĭnē, Ital frānchā'skä dä rē'mēnē), 13th cent , daughter of Guido da Polenta of Ravenna She was married by proxy to Giovanni Malatesta, the Lame, lord of Rimini, the proxy was Giovanni's young and handsome brother, Paolo, who became Francesca's lover Giovanni, discovering their guilt, killed them This story was immortalized by Dante in the *Divine Comedy* and is also the subject of works by Stephen Phillips, Leigh Hunt, Silvio Pellico, and D'Annunzio, of a symphonic poem by Tchaikovsky, and of paintings by Ingres, Cabanel, Watts, Ary Scheffer, and others

Franceschi, Piero de' see PIERO DELLA FRANCESCA

Franceschini, Baldassare (bäldäs-sā'rā franchĕskē'-nē), 1611–89, Florentine painter, pupil of his father, an alabaster sculptor His works include the *Coronation of the Virgin*, a fresco (Church of the Annunziata, Florence), paintings in the Nicolini Chapel, Church of Santa Croce, Florence, *St John the Evangelist* (Church of Santa Chiara, Volterra), and *Madonna and Child* (Walters Art Gall , Baltimore)

Franceschini, Marcantonio (märkäntō'nyō), 1648–1729, Italian painter of the Bolognese school One of his finest works, a fresco representing episodes in the history of the republic, painted for the Council Palace at Genoa, was destroyed Among the best of his extant works are the cupola and ceiling frescoes and an altarpiece, *The Death of Joseph*, in the Church of Corpus Domini, Bologna, damaged in the Second World War, frescoes in the Pallavicini and Durazzo palaces, Genoa, and the *Annunciation* (Bologna)

Franche-Comté (frāsh-kōtā') or **Free County of Burgundy,** region and former province, E France It is now administratively divided into Haute-Saône, Doubs, and Jura depts The JURA mts , which form its border with Switzerland, are in the east, the Vosges mts rise in the north The Doubs and the upper Saône are the chief rivers Franche-Comté is largely an agricultural region, with stock raising and dairying in the Jura, which has dense pine forests and extensive grazing lands The chief industrial products are clocks, watches, machines, and plastics Dôle was the capital until 1676, BESANÇON, which until 1648 was not politically a part of Franche-Comté, was the later capital and remains the chief city Other towns are MONTBÉLIARD, which also has a separate history, Lons-le-Saunier, and Saint-Claude Originally comprised in the First Kingdom of BURGUNDY, the territory was united in the 9th cent as the Free County of Burgundy, or Franche-Comté, a fief held from the kings of Transjurane Burgundy, later (933–1032) kings of ARLES With Arles it passed (1034) to the Holy Roman Empire, but the allegiance was generally tenuous, and for six and a half centuries Franche-Comté was perpetually invaded and contested by France, Germany, Burgundy, Switzerland, and Spain Philip the Bold, duke of Burgundy, acquired Franche-Comté by marriage, but after the defeat and death (1477) of CHARLES THE BOLD it passed to Archduke Maximilian (later Emperor Maximilian I), who gave it to his son, Philip I of Spain Governed by native officials and by its PARLEMENT at Dôle, it enjoyed relative autonomy under the Spanish crown The Wars of Religion (16th cent) resulted in the occupation by France of the fortified towns In the Thirty Years War the county was laid waste first by the Catholics under Gallas, then by the Protestants under Bernhard of Saxe-Weimar LOUIS XIV conquered Franche-Comté in 1668 and again in 1674 and obtained its cession from Spain in 1678 Though the parlement continued to function after its transfer (1676) to Besançon, the provincial legislature was abolished, and Franche-Comté became an integral part of France

Franchère, Gabriel (gäbrēĕl' frāshĕr'), 1786–1863, American fur trader, b Montreal He entered the service of Pacific Fur Company for the venture in founding the post of ASTORIA on the Columbia river and was one of the members of the expedition who went to the Pacific coast by sea in the *Tonquin* He was a busy member of the enterprise and wrote one of the most valuable records of it in his *Rélation d'un voyage à la coté du Nord Ouest* (1820, Eng tr , *Narrative of a Voyage to the Northwest Coast*, 1854) When the post was sold to the North West Company, he entered the employ of that concern and made an overland trip to Montreal in 1814 In 1834 he became agent of the American Fur Company at Sault Ste Marie, and after 1839 he was in business for himself He was called to Washington to confer on the matter of ownership of Oregon when British-U S tension over the question was great in the mid-1840s

Franchet d'Esperey, Louis Félix Marie (lwē' fālĕks' märē' frāshā' dāspŭrā'), 1856–1942, marshal of France He commanded the French 5th Army in the battle of the Marne in 1914, the Army of the East in 1916, and the Army of the North in 1917 In June, 1918, he took command at Salonica, where the Allies were stalled He brilliantly accomplished the downfall of the Bulgarian armies and led the Allies to victory in the Balkans

franchise, a right specifically conferred by the government, especially the privilege conferred by the municipality of using its streets to supply public utilities, such as electricity, telephone, and street cars or buses. Franchises may not be revoked without the consent of the grantee unless so stipulated in the contract They may be forfeited by the grantees' violation of terms, and the government may take back granted rights by eminent domain proceedings with tender of just compensation Franchises are subject to reasonable policing Everything not specifically granted in a franchise is interpreted as not granted Franchise provisions usually include tenure, compensation to the grantor, the services, rates, and extensions, labor and strike regulations, capitalization, and reversion to the grantor In politics, the franchise is the right to vote In the United States, the states, with some restrictions from the Federal Constitution, govern the qualifications of voters By the Fourteenth and Fifteenth amendments, states cannot deny suffrage to male residents over 21 years of age "on account of race, color, or previous condition of servitude " The Nineteenth Amendment confers suffrage upon women

Francia (frän'chä), c 1450–1517, Italian painter, goldsmith, and medalist of the early Bolognese school, whose real name was Francesco Raibolini Until the age of 40 he was famous chiefly as a goldsmith and engraver of nielli and of dies for medals His first paintings, such as the *Madonna Enthroned* (Bologna) and *St Stephen* (Borghese Palace, Rome), show the influence of Lorenzo Costa, with whom he worked for a time His later works reflect that of Perugino and Raphael Among the most noted are *Crucifixion* (Louvre), *Madonna and Saints* and *Pietà* (National Gall , London), and *Assumption* (Church of San Frediano, Lucca) Others include *Head of the Virgin* (Pa Acad of the Fine Arts), *Madonna* (Gardner Mus , Boston), a portrait of Federigo Gonzaga (Metropolitan Mus), *Madonna and Child* (National Gall of Art, Washington, D C) See studies by J M Ady (1881) and G C Williamson (1907)

Francia, José Gaspar Rodríguez (hōsā' gäspar' rōdrē'gäs frän'sya), 1766 1840, dictator of Paraguay and creator of its national independence, known as El Supremo Incorruptible, of superior cultural attainments for his epoch, he took part in the bloodless revolution against Spain (1811), was first consul, finally declared himself dictator in 1814, and ruled until his death He limited the power of the Church and kept the aristocracy in subjection He was harsh with his enemies and intransigent with foreigners Cutting off Paraguay from the rest of the world and limiting trade to his personal supervision he gained international ill will but effectively stimulated the growth of local industry and agriculture See E L White, *El Supremo* (1916)

Francia Bigio (frän"chä bäbē'jō), 1482–1525, Florentine painter, whose real name was Francesco di Cristofano Bigi In the Convent of the Servi, Florence, Francia Bigio painted *The Marriage of the Virgin*, his masterpiece, which he mutilated because the friars uncovered the painting before its completion. He collaborated with his master, Andrea del Sarto, on *The Departure of John the Baptist for the Desert* and *The Meeting of the Baptist with Jesus* (Convent dello Scalzo) Other works are the fresco, *The Triumph of Cicero* (Poggio a Caiano, near Florence), and several remarkable portraits of young men, including one in the National Gallery, London, and one in the National Gallery of Art, Washington, D C He was at his best in portraiture

Francis, Saint, or **Saint Francis of Assisi** (usē'zē), 1182?–1226, founder of the Franciscans, one of the greatest of Christian saints, b Assisi, Umbria, Italy His baptismal name was Giovanni (John), his father's name was Pietro di Bernardone, from his birth Giovanni di Bernardone was called Francesco (Francis) [Ital , *Frenchman*], because his father was a frequent and recent traveler in France The name Francis (and its equivalents in other languages) owes its great popularity to St Francis and those named after him, for before him it was a name rarely given Pietro di Bernardone was a wealthy merchant, and his son's early life was ordinary The 20-year old Francis was taken prisoner in a battle between Assisi and Perugia and spent a year in prison in Perugia Two years after his return he set out for the wars in Apulia, but illness forced him home again He now underwent a conversion which turned him from the worldly (but certainly not riotous) life he had been leading He became markedly devout and ascetic, exchanged his gay clothes for rags, and went on a pilgrimage to Rome (1206) A series of events now revealed strikingly the characteristics that Francis was always to exemplify humility, love of absolute poverty, singular devotion to other men, and joyous religious fervor In 1209 as he was hearing Mass, the words of Jesus in the Gospel (Mat 10 7–10) bidding his apostles to go forth on their

mission struck Francis as a call. So he set out, still a layman, to preach, when a little group had gathered about him, they went to Rome to see the pope (INNOCENT III), who gave them oral permission to live in the manner Francis had chosen Thus began the Franciscan order of friars, an entirely new type of order in the Church. They wandered about Umbria and through Italy preaching the Gospel, working to pay for their very simple needs The expansion of the friars was amazing In 1212 St CLARE began to follow St Francis, and the Poor Clares (Second Order of St Francis) were established Francis not only sent the brothers abroad but went himself—to Dalmatia, to France, to Spain, and in 1219–20 to the Holy Land On his way to Palestine he stopped at Damietta and preached to the sultan A growing dissension in his order recalled him from Palestine, and after his return (1221) a great assembly was held at the little chapel of the Portiuncola near Assisi, with which Francis's career was closely identified There the saint laid down his active leadership of the order, for it was now, he felt, too unwieldy to command He continued his preaching and the composition of his rule and sponsored the Franciscan tertiaries (third order of St Francis) Two years before his death (1224) occurred the most famous of the wonderful events of his life He received the STIGMATA as he prayed on the Monte della Verna, he had a vision and was afflicted with the wounds of the Crucifixion, from which he suffered for the rest of his life The objective reality of these wounds is so well testified that the most critical of modern scholars accept it Francis died Oct. 3, 1226, and was mourned throughout the country Two years later Pope GREGORY IX, who had been his patron and friend, canonized him, his feast is Oct 4 The sources for the life of St Francis are two lives by THOMAS OF CELANO and the biography by St BONAVENTURE Later medieval works are the *Legenda trium sociorum* and the *Speculum perfectionis* Fortunately there is another work, which, by no means biographical or historical, gives unequaled insight into the personality of the saint and his companions, this is the Italian *Fioretti di San Francesco* [little flowers of St Francis], a series of short anecdotes From the *Fioretti* come many of the most beautiful stories of St Francis, and they exemplify in the most simple form his love of nature and of man, a love so great that he preached one time to the birds at Alviano His spirit breathes too in the *Canticо del sole* [hymn of the sun], which he may have written, and in the rules for his orders Artistic and literary representations of St Francis are innumerable, the churches of Assisi contain many famous paintings, e g, by Giotto In the early 20th cent the documents of St Francis's life became the object of an analysis modeled on the scriptural higher criticism, it was even proved to the satisfaction of some that St Francis never lived Those studies are now valueless, because of the great advances in medieval history made since 1920 There are many biographies, e g, that of G K Chesterton See also Father Cuthbert, *St Francis of Assisi* (1933)

Francis I, 1708–65, emperor (1745–65), duke of Lorraine (1729–37), grand duke of Tuscany (1737–65) He succeeded his father in Lorraine, but agreed (1735) to cede his duchy to Stanislaus I of Poland in exchange for the right of succession to Tuscany (see POLISH SUCCESSION, WAR OF THE) He married (1736) MARIA THERESA, heiress of all Hapsburg lands In 1737 the last Medici ruler of Tuscany died Francis succeeded him and carried out several long-needed reforms In 1740 Maria Theresa entered into her inheritance, which was immediately contested in the War of the AUSTRIAN SUCCESSION (1740–48) by an alliance headed by Frederick II of Prussia In the separate Treaty of Dresden (1745) between Frederick and Maria Theresa, Frederick promised his vote in the imperial election for Francis, who was promptly elected emperor to succeed CHARLES VII Francis I took little part in the government, which was in the hands of Maria Theresa and of Kaunitz The founder of the house of Hapsburg-Lorraine, he was succeeded as emperor by his eldest son, Joseph II, and as grand duke of Tuscany by his younger son, Leopold (later Emperor Leopold II)

Francis II, 1768–1835, last emperor of the Holy Roman Empire (1792–1806), first emperor of Austria (as Francis I, 1804–35), king of Bohemia and of Hungary (1792–1835) He succeeded his father, Leopold II, and was immediately faced with the problem of the French Revolution, which was to take the life of his aunt, Marie Antoinette Francis became involved in the FRENCH REVOLUTIONARY WARS. His armies were defeated by Napoleon Bonaparte, by the Treaty of CAMPO FORMIO (1797) he ceded the left bank of the Rhine to France but obtained Venetia and Dalmatia In 1798 he joined the Second Coalition against France, was again defeated, and in the Treaty of Lunéville (1801) consented to the virtual dissolution of the HOLY ROMAN EMPIRE, which was formally ended (1806) after the Austrian rout at AUSTERLITZ (see also PRESSBURG, TREATY OF) Francis had assumed the title emperor of Austria in 1804 In 1809 he again declared war on NAPOLEON I, who was then involved in difficulties in Spain. Francis's brother, Archduke CHARLES, defeated Napoleon at Aspern, but was crushed at Wagram. Napoleon entered Vienna and imposed on Francis the Treaty of SCHÖNBRUNN. In 1810 Francis consented to the marriage of his daughter, MARIE LOUISE, to Napoleon This marriage was arranged largely by METTERNICH, who throughout Francis's reign remained the dominant figure in Austrian politics In Aug, 1813, Francis joined Russia, Prussia, and England in their war against Napoleon He presided (1814–15) over the Congress of Vienna (see VIENNA, CONGRESS OF), in which Austria, after all its humiliations, emerged as the leading power in Europe Francis was one of the chief architects of the HOLY ALLIANCE The events of the first part of his reign shaped the reactionary views of his later years Though eclipsed by Metternich, he was a capable ruler He was succeeded by his son Ferdinand See W C Langsam, *Francis the Good the Education of an Emperor, 1768–1792* (1949)

Francis I, 1494–1547, king of France (1515–47), known as Francis of Angoulême before he succeeded his cousin and father-in-law, Louis XII He resumed the ITALIAN WARS, beginning his reign with the recovery of Milan through the brilliant victory at Marignano (1515) A candidate for the imperial crown (1519), he was defeated by Emperor CHARLES V, whose supremacy in Europe Francis was to contest in four wars In 1520 Francis tried to secure the support of Henry VIII of England by the interview of the FIELD OF THE CLOTH OF GOLD Though put off by Henry with vague promises, he began his first war against the emperor (1521–25) He was defeated at La Bicocca (1522) and at Pavia (1525), where he was captured Having, in his own words, 'lost all save life and honor," Francis regained his freedom by consenting to the Treaty of Madrid (1526), he renounced his claims in Italy, agreed to surrender Burgundy to the emperor, and abandoned the suzerainty of Flanders and Artois Resolved to violate a treaty signed under duress, Francis created the League of Cognac (1526) with Pope Clement VII, Henry VIII, Venice, and Florence and commenced his second war against Charles (1527–29) It ended, unfavorably for Francis, with the Treaty of Cambrai (see CAMBRAI, TREATY OF), which left Burgundy to France but otherwise duplicated the Treaty of Madrid Francis fulfilled its terms and, largely through the influence of Anne de MONTMORENCY, kept peace until 1536, when he invaded Savoy and Piedmont in a third attempt to regain Milan Charles retorted by invading Provence, and in 1538 a 10-year truce was arranged at Nice In 1542, with the support of SULEIMAN I of Turkey, Francis for the fourth time attacked the emperor, who allied himself (1543) with Henry VIII. Francis's victory at Ceresole (1544) was offset by the allied invasion of France in the same year By the Treaty of Crépy (1544) Francis restored peace with the emperor and relinquished his claims to Naples, Flanders, and Artois Peace with England (1546) confirmed the loss of Boulogne Despite Francis's failures, his reign was a brilliant period His CONCORDAT with the pope and his alliance with SWITZERLAND (both in 1516) were positive achievements His alliance with Turkey, his anti-Hapsburg policy, and his interest in Canada, which Jacques CARTIER was exploring, became the traditional French foreign policy for two centuries. Francis's absolutist leanings, his persecution of Protestants and WALDENSES (1545), his ruinous expenditures for foreign wars, and the prodigality of his court foreshadowed some aspects of the reign of Louis XIV However, Francis lacked Louis's firmness of purpose and was easily influenced by his successive ministers and mistresses and by his mother, LOUISE OF SAVOY Bold, unscrupulous, talented, and dissolute, Francis was the typical Renaissance monarch In his reign, the French Renaissance saw its fullest development Leonardo da Vinci, Cellini, and Andrea del Sarto worked at his court Francis and his sister, MARGARET OF NAVARRE, were the patrons of RABELAIS, MAROT, and BUDÉ, he also laid the foundation of the COLLÈGE DE FRANCE The composer, JOSQUIN DES PRÉS died and the poets of the PLÉIADE were born during his reign The sculptor Jean GOUJON rivaled the Italians without imitating them. The most permanent monuments to Francis's reign, however, are the châteaux of the Loire, notably CHAMBORD, and the royal residence at FONTAINEBLEAU He was succeeded by his son, Henry II See biography by Francis Hackett (1935), J S C Bridge, *A History of France from the Death of Louis XI*, Vol. V (1936).

Francis II, 1544–60, king of France (1559–60), son of Henry II and Catherine de' Medici He married (1558) Mary Queen of Scots (Mary Stuart), and during his brief reign the government was in the hands of her uncles, François and Charles de GUISE Their ruthless persecution of Protestantism led to the conspiracy of AMBOISE During Francis's reign French Protestantism, became a political force Francis was succeeded by his brother, Charles IX.

Francis I, 1777–1830, king of the Two Sicilies (1825–30), son and successor of Ferdinand I. He continued his father's ruthless and reactionary policy, and his court was notorious for waste and corruption His son, Ferdinand II, succeeded him

Francis II, 1836–94, last king of the Two Sicilies (1859–61), son and successor of Ferdinand II A weak ruler, he let his ministers follow his father's reactionary policy. Faced with the growing movement for Italian unity (see RISORGIMENTO), he sided first with Austria When he sought the alliance of Victor Emmanuel II it was too late, GARIBALDI had conquered Sicily and was marching (1860) upon Naples Francis fled to Gaeta There he and his queen, Maria of Bavaria (sister of Empress Elizabeth of Austria), resisted gallantly until 1861, when they surrendered to Victor Emmanuel They went into exile, at first in Rome, then in Paris

Francis, c 1554–1584, French prince, duke of Alençon and Anjou; youngest son of Henry II of France Though ill-shapen, pockmarked, and endowed with a curiously formed nose, he was twice (1572, 1579–81) considered a possible husband for Queen Elizabeth of England, who affectionately called him "her frog " In the Wars of Religion, Francis at first sided with the Huguenots and the moderate Catholics and intrigued against his brother, Charles IX, and his mother, Catherine de' Medici When William the Silent offered him (1580) the rule of the Netherlands, then in rebellion against Spain, he accepted In 1582 he sailed from England to take possession of his lands and was accepted as duke of Brabant, duke of Gelderland, count of Flanders, and lord of Friesland His attempt, by brutal and treacherous means, to obtain absolute power over his new domains met the armed resistance of his subjects and cost him the support of Elizabeth He was forced to withdraw in 1583 His death opened the French succession to Henry of Navarre (later Henry IV)

Francis II, 1435–88, duke of Brittany He succeeded (1458) his uncle Arthur III Francis's policy was almost from the beginning one of struggling with the French crown for the independence of his duchy He entered the League of the Public Weal (1465) against Louis XI, and he invaded Normandy in 1467 Though forced to sign the Peace of Ancenis (1468), he continued to intrigue against Louis and finally entered a feudal rebellion against Louis's successor, Charles VIII, who decisively defeated him in 1488 After this loss and Francis's death, his daughter, ANNE OF BRITTANY, was married to Charles VIII

Francis, David Rowland, 1850–1927, U S Secretary of the Interior (1896–97), b Richmond, Ky, grad Washington Univ, 1870 He established a large grain business in St Louis, entered politics, and served (1885–89) as mayor in a reform administration and later (1889–93) as governor of Missouri As a member of Cleveland's cabinet, he obtained a presidential proclamation setting aside millions of acres as forest reserves Francis was a leading promoter and official of the Louisiana Purchase Exposition of 1903–4 He became ambassador to Russia in 1916 and remained at his post after the Russian Revolution in efforts to keep Russia united with the Allies He wrote *Russia from the American Embassy* (1921), and his memoirs and letters were published in 1928

Francis, Sir Philip, 1740–1818, English pamphleteer He is one of the men reputed to be the author of the JUNIUS letters Appointed (1773) to the council of Bengal, he came into conflict with Warren HASTINGS The upshot of the trouble was a duel in which he was wounded (1780) He was a member of Parliament from 1784 to 1807 except for a short interval and took an active part in the impeachment proceedings against Hastings He contributed political articles to periodicals and wrote numerous pamphlets

Francis Borgia, Saint (bôr'jə), 1510–72, Spanish Roman Catholic reformer, third general of the Jesuits (see JESUS, SOCIETY OF). He was a member of the famous BORGIA family, a great-grandson of Pope Alexander VI and duke of Gandia in his own right In 1528 he went to the court of Charles V, who favored him In 1539 the empress died and Francis was appointed to accompany her to her burial, that errand turned him to religion After his wife's death (1546) he resolved to enter the Jesuits He settled his affairs and went (1550) to St Ignatius in Rome, one of his first deeds was to give the society the money to build the Roman College In 1551 he resigned his duchy and was ordained, he began at once to preach in Spain In 1556 he was given charge of all Jesuit missions abroad. His work was varied and successful, he attracted some of the finest young men in Spain into the society, he built permanent homes, he maintained the discipline, and he established the missions to the New World In 1565, on the death of Lainez, Francis was made general of his order. His work was now the same as in Spain, on a larger scale He was largely responsible for the Jesuit missions in the northern and eastern lands, and because of his noble connections, he had no trouble in allaying any political troubles that arose. He edited the Jesuit

rule and the *Spiritual Exercises*, and he is sometimes called "the second founder of the Jesuits"; he was one of the great figures of the Catholic Reform. He was on the closest terms of cooperation and intimacy with Pius V and Charles Borromeo Feast Oct. 10. See Margaret Yeo, *The Greatest of the Borgias* (1936)

Franciscans (frănsĭs'kănz), members of several Roman Catholic religious orders following the rule of St Francis (approved by Honorius III, 1223) There are three organizations of Franciscan friars the Friars Minor (formerly called Observants), one of the largest orders in the Church, the Friars Minor Capuchin (see Capuchins), less in numbers but one of the greater orders, and the Friars Minor Conventual The division arose from movements within the order essaying a return to the strict poverty of the founder Within 50 years of St Francis's foundation the order had a very strong wing of zealots, the Spirituals, who deplored the convents and any settled life They allied themselves with the anarchical monks who were preaching the vagaries of Joachim of Floris St Bonaventure tried to reconcile the factions of the order, but the Spirituals grew stronger and saw one of their heroes made pope as St Celestine V His abdication made their agitation one of the major social and religious problems of Italy So far as the order was concerned, John XXII settled the matter by putting the Franciscans on a level with every other order with respect to owning property corporately (1322), he also put a stop (1323) to a Franciscan boast that their way was more nearly perfect than any other In the following years a movement developed toward restoring primitive practice, the friars of this tendency (Observants) gained recognition within the order and eventually were made independent (1517) by Leo X Soon afterwards a movement among the Observants established the Capuchins (1525) as a still stricter adherence to the rule All of the Franciscan orders have shared in home and foreign missions, the Franciscans were in many parts of America the missionaries par excellence They have had a constant role in education and were leaders in medieval university life They have had a major place in preaching among Catholics from them come the Stations of the Cross and the Christmas Crib Since the 15th cent the Observants have been charged with the care of Roman Catholic interests in the Holy Places in Palestine Besides the friars the Franciscans include the Poor Clares, the order of nuns founded by St Clare, and countless members of the third order, men and women, some living in communities, many living in the world There are scores of religious communities of sisters of every sort of charitable mission who are regular Franciscan tertiaries Of canonized and beatified saints far more have been Franciscans than members of any other order The best known of them is perhaps St Anthony of Padua The Franciscans were called Gray Friars Their habit is now typically brown For the place of Franciscans among orders, see Monasticism See Father James, *The Franciscans* (1930), R M Huber, *A Documented History of the Franciscan Order* (1944)

Francis Ferdinand, 1863–1914, Austrian archduke, heir apparent of his great-uncle, Emperor Francis Joseph of Austria-Hungary He married, morganatically, a Czech lady, Sophie Chotek, who was created duchess of Hohenberg He withdrew from the court of Vienna, where his wife was subjected to constant humiliation, and labored for the reorganization of the Austro-Hungarian Monarchy He probably intended to transform the dual monarchy into a triple monarchy by creating a Slavic kingdom under the leadership of Croatia Francis Joseph was cool to the plan, and Serbia, anxious for its prestige among the Slavic Balkan nations, dreaded it On June 28, 1914, Francis Ferdinand and his wife were assassinated at Sarajevo (now in Yugoslavia), by Gavrilo Princip, a Serbian nationalist His death was the occasion for the ultimatum addressed to Serbia by Count Berchtold and thus led directly to the outbreak of the First World War

Francis Joseph, 1830–1916, emperor of Austria (1848–1916), king of Hungary (1867–1916), nephew of Ferdinand, who abdicated in his favor His long reign began in the stormy days of revolution and ended in the midst of the First World War In that troubled period of growing nationalism he held the many peoples of his empire together He subdued Hungary (1849) and in the same year defeated Victor Emmanuel II of Sardinia In the Italian War of 1859, in which he faced Napoleon III and Victor Emmanuel, he lost Lombardy to Sardinia by the Treaty of Villafranca di Verona In the Austro-Prussian War (1866) his only territorial loss was that of Venetia to Italy, but his crushing defeat resulted in the loss of Austrian influence over German affairs and in the ascendancy of Prussia Constant pressure from Hungary led to the reorganization (1867) of the empire as a dual monarchy—the Austro-Hungarian Monarchy. In 1879 Francis Joseph joined Germany in an alliance which later also included Italy (see Triple Alliance and Triple Entente). His reign, though it brought material prosperity, was disturbed by the discontent of the national minorities, notably the Slavs. When Russian Pan-Slavism backed up Serbia, particularly after the annexation of Bosnia and Hercegovina (1908), a situation was created that helped bring on the First World War Francis Joseph's private life was beset by the tragedies of his wife, Empress Elizabeth, his brother, Maximilian of Mexico, and his son, Archduke Rudolf In 1914 the heir apparent, Francis Ferdinand, was assassinated, and his death was the spark that set off the First World War Francis Joseph died before the empire actually fell apart under the impact of military defeat, as it did under his successor, Charles I See biographies by Joseph Redlich (Eng tr, 1929), Karl Tschuppik (Eng tr, 1930), and Eugene Bagger (1927), C W Clark, *Franz Joseph and Bismarck* (1934)

Francis of Paula, Saint (pō'lu), 1416?–1507, Italian ascetic, b Paola, Calabria He entered the Franciscans early and left them to live as a hermit A little community grew up about him, and eventually (1474) it was recognized by the pope Out of it grew a small, austere order of hermits, the Minims St Francis was called to the deathbed of Louis XI of France, and Charles VIII and Louis XII helped his work Feast April 2

Francis of Sales, Saint, 1567–1622, Savoyard Roman Catholic preacher, Doctor of the Church He was a member of an aristocratic family and was trained for the law, but entered the priesthood against his father's wishes (1593) His first years in the priesthood he spent in the district of Chablais preaching to its Protestant inhabitants He was credited with many conversions In 1599 he was made coadjutor bishop, and in 1602 bishop, of Geneva, he resided at Annecy in near-by Savoy His fame as a preacher spread abroad, and from 1600 until his death he delivered Lent and Advent sermons in many of the great cities of France In his diocese he set up schools and paid especial attention to the poorer parishes With St Jane Frances de Chantal he founded the Order of the Visitation for women who could not undergo the austerities of the great orders St Francis had a warmhearted affection for all people, and he preached constantly the theme that everyone, however busy, could have a spiritual life His spirit and aims show clearly in his two masterpieces of religious writing, *L'Introduction à la vie dévote* [introduction to the devout life] and *Traité sur l'amour de Dieu* [treatise on the love of God] Both have had great popularity and rank high among Christian classics St Francis's ideas, through his works, have had an important part in developing the modern Roman Catholic emphasis on loving God as a friend rather than on fearing him as a judge Feast Jan 29 See Henry Bordeaux, *Saint Francis de Sales* (Eng tr, 1929), Michael Muller, *Saint Francis de Sales* (1937)

Francis Xavier, Saint (zā'vyur), 1506–52, Basque Jesuit missionary, called the Apostle to the Indies, b Spanish Navarre, of noble parents He studied in Paris (1525–34), where he became intimate with St Ignatius of Loyola, with whom he and five others took the vow in Montmartre, which made them the nucleus of the Society of Jesus (see Jesus, Society of) In 1536–37 he went to Venice, where he worked in the hospitals, he was ordained there with Ignatius (1537) He worked at Rome with Ignatius for the new order until 1540, when he left for Portugal to join a mission the king was sending to Goa St Francis left Lisbon in 1541 with a brief as papal nuncio At Goa he immediately began to preach and was very successful After five months he went to the pearl fisheries of W India and spent 15 months on the coast from Ceylon northwards After a second stay in Goa he sailed to Malacca (1545), which he left in 1546 for the Moluccas, in 1547 he went back to Malacca Meanwhile more Jesuits were coming to India, and St Francis assigned them to missions he had started In 1549 he set sail for Japan and landed at Kagoshima He and his companions remained in Japan for more than two years and set up many Christian communities He went back to Goa (1552) and set out for China with a Portuguese embassy On his way he died on the island of Chang-chuen-shan (St John) He is buried at Goa St Francis was one of the greatest of Christian missionaries, his travels covered many thousands of miles in 11 years, and his successes in preaching and in personal conversion were tremendous He was characterized by boundless energy, invariable kindness, personal magnetism, and a singular combination of profound mysticism and common sense Feast Dec 3 See Theodore Maynard, *The Odyssey of Francis Xavier* (1936).

Franck, family of painters see Francken

Franck, César Auguste (sāsăr' ōgüst' frăk'), 1822–90, Belgian-French composer and organist He studied at the conservatories of Liége and Paris, taking prizes in piano, composition, and organ In 1858 he became organist of Ste Clotilde, Paris, where he demonstrated great skill in the art of improvisation. From 1872 until his death he was professor of organ at the Paris Conservatoire Much of his finest composition was for the organ, and organ style is present in his works for other instruments Among his most significant works are the Symphony in D Minor (1886–88), *Variations symphoniques* (1885) for piano and orchestra; *Prélude, choral et fugue* (1884) and *Prélude, aria et final* (1888) for piano, *La Rédemption* (1874) and *Les Béatitudes* (1869–79), oratorios, a violin sonata (1886), and *Trois Chorals* for organ (1890). Sincerity and profound simplicity mark his music, which was little acclaimed during his lifetime See biographies by Vincent d'Indy (Eng tr, 1910), Norman Demuth (1950), and John Horton (1950).

Franck, Hans: see Lützelburger, Hans

Franck, James, 1882–, German physicist He was professor of physics at Göttingen and at Johns Hopkins (1935–38) and professor of physical chemistry at the Univ of Chicago from 1938 He specialized in atomic structure With Gustav Hertz he shared the 1925 Nobel Prize in Physics for their discovery of the laws governing the effect of the impact of the electron on the atom

Franck, Sebastian (sābās'tyän frangk'), 1499–1543, German religious writer He was a Roman Catholic priest who came under the influence of the Reformation, but he shortly broke with the Lutherans also and for the liberal views expressed in his *Chronica* (1531) was banished from Strasbourg He founded printing presses at Ulm and Basel and wrote vigorously, mostly in defense of extremely liberal religious views

Francke, August Herman (ou'gŏost hĕr'măn frăng'ku), 1663–1727, German Protestant minister and philanthropist In 1686, encouraged by Philipp Jakob Spener, he helped found the *Collegium philobiblicum* for systematic study of the Scriptures. He became a leading exponent of Pietism c 1689 and from 1692 served as professor at the Univ of Halle and as pastor in a near-by town He founded at Halle the Francke Institutes, which still exist They started in 1695 with a paupers' school at his parsonage It grew rapidly and other institutions were added until, by Francke's death, over 2,200 children were being served The institutes exerted strong influence on the growth of Prussian education See H E F Guericke, *A H Francke* (1827, Eng tr, 1837)

Francke, Kuno (kōō'nō), 1855–1930, German-American philologist, b Kiel, Germany, educated at Kiel, Berlin, Jena, and Munich. He taught at Harvard from 1884 and was professor of German literature (1896–1905) and of the history of German culture (1905–17) His literary works were intended to portray German literature and civilization to Americans He was known as a broad-minded and tolerant scholar and was the prime mover in the building of the Germanic museum of Harvard Univ

Francken or **Franck** (frang'kŭ, frăngk), family of Flemish painters in the 16th and 17th cent Prominent members were **Hieronymus Francken** (hē"rō'nĭmōōs), c 1540–1610, student of Floris, who decorated the palace at Fontainebleau, his brother **Frans Francken** (frăns), c 1542–1616, also a student of Floris, whose altarpiece in the Antwerp cathedral is a characteristic work, **Frans Francken II**, 1581–1642, son of the first Frans, who studied in Italy and was influenced by Rubens and whose *Works of Mercy* (Antwerp) and *Prodigal Son* (Louvre) are well known, and his son, **Frans Francken III**, 1607–67, a follower of Rubens and the painter of *Moses Striking the Rock* (Vienna)

Franco, Francisco (franthē'skō fran'kō), 1892–, Spanish general and dictator He became a general at the age of 32 after organizing the Spanish Foreign Legion in Morocco and successfully cooperating with Marshal Pétain in the war against Abd-el-Krim He continued a purely military career and in 1934 was appointed chief of the general staff by the rightist government then in power He suppressed (1934) the uprising of the miners in Asturias When the Popular Front came to power (1936), Franco was made military governor of the Canaries, a post which amounted to exile In July, 1936, civil war broke out in Spain Franco flew to Morocco, from there took troops to Spain, and joined the Insurgents He became chief of the Insurgent government in Oct, 1936, dissolved all political parties save the Falange in 1937, and in the same year took formal oath as *Caudillo* [leader] His provisional capital was Burgos With German and Italian help he brought the civil war to a triumphant conclusion in March, 1939 In Aug, 1939, he enlarged his dictatorial powers and also became premier He succeeded in keeping Spain out of the Second World War despite the pressure brought on him by Mussolini and Hitler and despite the fact that Spain was a major member of the Axis In 1942 he dismissed the head of the Falange, his brother-in-law Ramón Serrano Suñer, and began to reduce the power of the Falange Though his major support in the civil war came from monarchists, Franco put off the issue of restoration The law of succession promulgated by him in 1947 and approved by a docile Cortes declared Spain a kingdom, with Franco acting as regent, pending the actual installment of a king. See Herbert Feis, *The Spanish Story* (1948) See also Spain

Franco-German War, 1870–71 see FRANCO-PRUSSIAN WAR

Franconia (frăngkō'nēă), Ger *Franken* (frăng'kun), one of the basic duchies of medieval Germany, created in the 9th cent and named after the Franks It stretched from the western bank of the Rhine eastward along both banks of the Main and included the cities of Speyer, Worms, Mainz, Frankfurt, Würzburg, Fulda, Heidelberg, Heilbronn, and Bamberg Duke Conrad of Franconia was elected (911) German king as Conrad I, but was unable to keep the royal crown in his family As a result of the rebellion of Duke Eberhard, Otto I seized the duchy in 939 and partitioned it, vast territories passed to the loyal clergy, notably to the bishops of Würzburg and Bamberg and the abbot of Fulda Two nominal duchies—that of Western or Rhenish Franconia and that of Eastern Franconia, dominated by the bishops of WÜRZBURG—emerged Rhenish Franconia, which gave the empire the Franconian or Salian dynasty (1024–1125, Conrad II, Henry III, Henry IV, and Henry V), broke up into the free cities of Frankfurt and Worms, the ecclesiastic states of Mainz and Speyer, the Rhenish Palatinate, the landgraviate of Hesse, and other territories Eastern Franconia was awarded (11th cent) to the Swabian house of Hohenstaufen, but the title fell into disuse until it was again assumed (15th cent) by the bishops of Würzburg The margraviates of Ansbach and Bayreuth, under the Franconian branch of the house of Hohenzollern, were the main secular territories in Eastern Franconia The division (16th cent) of the Holy Roman Empire into circles resulted in the creation of the Franconian circle, including the bishoprics of Würzburg and Bayreuth, the free imperial city of Nuremberg, and the cities of Ansbach and Bayreuth Most of Eastern Franconia passed to Bavaria between 1806 and 1815, and in 1837 Louis I revived the name Franconia by creating the provinces of Lower, Middle, and Upper Franconia

Lower Franconia, Ger *Unterfranken* (3,277 sq mi , pop 984,395), has its capital at Würzburg Occupying the northwestern part of Bavaria, it is traversed by the Main valley It is primarily agricultural and contains the forested SPESSART hills Among its cities are Aschaffenburg, Schweinfurt, and Bad Kissingen

Middle Franconia, Ger *Mittelfranken* (2,941 sq mi , pop 1,209,844), in N central Bavaria, is a hilly, fertile region, drained by the Altmühl and Pegnitz rivers Ansbach is the capital, Nuremberg, Fürth, and Erlangen are important industrial and cultural centers

Upper Franconia, Ger *Oberfranken* (2,897 sq mi , pop 1,076,438), occupies the northeastern corner of Bavaria and includes the FRANKENWALD and the FICHTELGEBIRGE near the Czech border Bayreuth, the capital, and Bamberg, Coburg, and Hof are the chief cities and industrial centers Both Middle and Upper Franconia, being former Hohenzollern domains, are predominantly Protestant

Franconia Mountains (frăngkō'nēă), range in the White Mts , N N H , rising to 5,249 ft in Mt Lafayette **Franconia Notch,** west of the range, is a beautiful defile c 6 mi long, passing the Old Man of the Mountain or the Profile (jutting cliffs forming the "Great Stone Face" of Hawthorne's story), Profile and Echo lakes, and the Flume The area is included in White Mountain National Forest A tramway up Profile or Cannon Mt near Echo Lake was opened in 1938 The village **Franconia,** northwest of the notch, is a resort

Franco-Prussian War or **Franco-German War,** 1870–71 The emergence of Prussia as the leading German power and the increasing unification of the German states were viewed with apprehension by NAPOLEON III after the Prussian victory in the AUSTRO-PRUSSIAN WAR of 1866 BISMARCK, at the same time, deliberately encouraged the growing rift between Prussia and France in order to bring the states of S Germany into a national union He made sure of Russian and Italian neutrality and counted —correctly—on British neutrality War preparations were pushed on both sides, with remarkable inefficiency in France and with astounding thoroughness in Prussia The immediate pretext for war presented itself when the throne of Spain was offered to a prince of the house of Hohenzollern-Sigmaringen, a branch of the ruling house of Prussia The offer, at first accepted on Bismarck's advice, was rejected (July 12) after a strong French protest But the aggressive French foreign minister, the duc de Gramont, insisted on further Prussian assurances, which King William I of Prussia (later Emperor WILLIAM I) refused Bismarck, by publishing the famous EMS DISPATCH, enflamed French feeling, and on July 19 France declared war Partly because they believed France the aggressor, the states of S Germany enthusiastically joined the North German Confederation—just as Bismarck had hoped The military conduct of the war was, for the Germans, in the hands of Helmuth Karl Bernhard von MOLTKE, a military genius On the French side, Napoleon III took active command, but it soon devolved on Marshal BAZAINE On Aug 4, 1870, the Germans crossed the border into Alsace They defeated the French at Wissembourg, pushed the French under Marshal MACMAHON to Châlons-sur-Marne, and forced a wedge between MacMahon's forces and those of Bazaine, centered on Metz Bazaine, attempting to join MacMahon, was defeated at VIONVILLE (Aug 16) and Gravelotte (Aug 18) and returned to Metz The Germans began their march on Paris On Sept 1 the attempt of Napoleon III and MacMahon to rescue Bazaine led to disaster at Sedan The emperor and 100,000 of his men were captured On the news of Sedan a bloodless revolution in Paris occurred Napoleon was deposed, and a provisional government of national defense was formed under General TROCHU, Léon GAMBETTA, and Jules FAVRE Paris was invested by the Germans on Sept 19, and a grueling siege began Gambetta escaped from Paris in a balloon to organize resistance in the provinces FAIDHERBE made a gallant stand on the Loire, CHANZY in the north, and BOURBAKI in the east, but the surrender (Oct 27) of Bazaine, with a garrison of 180,000 men, made such resistance useless Paris, however, held out until Jan 28, 1871, suffering several months of famine Though Bismarck and Adolphe THIERS signed an armistice on the same day, the fortress of BELFORT resisted until Feb 16 Thiers was named chief of the executive power, and provision was made for the election of a French national assembly, which met at Bordeaux The assembly accepted (March 1) the preliminary peace agreement, which was formalized in the Treaty of Frankfurt (ratified May 21, 1871) France agreed to pay an indemnity of $1,000,000,000 within three years—an indemnity fully paid before the term expired ALSACE, except the Territory of Belfort, and a large part of LORRAINE were ceded to Germany, which on Jan 18, 1871, had been proclaimed an empire under William I, in the Hall of Mirrors at Versailles Paris refused to disarm and to submit to the Thiers regime, and the COMMUNE OF PARIS was formed The French troops loyal to Thiers began the second siege of Paris (April–May, 1871) After the cruel suppression of the commune, peace returned to France Besides establishing the Third French Republic and the German Empire, the Franco-Prussian War had other far-reaching results Desire for revenge guided French policy for the following half century Prussian militarism had triumphed and laid the groundwork for German imperialistic ventures The Papal States, no longer protected by Napoleon III, were annexed by Italy, which thus completed its unification These and other effects were among the chain of causes that helped to set off the First World War

Francowich, Matthias. see FLACIUS ILLYRICUS, MATTHIAS

francs-tireurs (frā-tēr'ur'), in warfare, guerrilla fighters, without uniform and without a formal connection with a regular army Their usual fighting method is to attack the enemy singly or in small bands, frequently posting themselves behind trees or walls and picking off enemy soldiers with rifles The term was best known in the Franco-Prussian War, when the Germans punished captured francs-tireurs drastically Today the word is more or less of a technical term in military law

Frank, Bruno, (brōō'nō frăngk'), 1887–1945, German novelist and dramatist His later novels, well known in English, are notable for dramatic conception and, in the historical field, for the application of modern psychological reactions to figures of the past His novels include *The Days of the King* (1924, Eng tr , 1927), *Trenck* (1926, Eng tr , 1928), *A Man Called Cervantes* (1934, Eng tr , 1934), *Lost Heritage* (1937, Eng tr , 1937), a story of refugees, and *One Fair Daughter* (1943, Eng tr , 1943) His plays include *Twelve Thousand* (1927, Eng tr , 1928) and *Storm in a Teacup* (1930, produced in the United States as *Storm over Patsy*, 1937) He contributed to *The Ten Commandments* (1944) Exiled from Germany in 1933, he came to the United States in 1937 He died at Beverly Hills, Calif

Frank, Glenn, 1887–1940, American editor and educator, b Queen City, Mo , grad Northwestern Univ , 1912 He was assistant to the president of Northwestern Univ from 1912 to 1916 In 1919 Frank joined the staff of the *Century Magazine*, becoming editor in 1921 In 1925 he was appointed president of the Univ of Wisconsin and was ousted from the position by Governor La Follette in 1937 Editor of *Rural Progress* from 1937, he was also active in the Republican party and was campaigning for the position of Senator from Wisconsin when he was in a fatal automobile accident His works include *The Politics of Industry* (1919), *An American Looks at His World* (1923), and *America's Hour of Decision* (1934)

Frank, Jacob, *c* 1726–1791, Polish-Jewish sectarian and adventurer, b Podolia His real name was Jankiev Lebowicz He was founder of the Frankists, a semi-Christian Jewish sect, which was an anti-Talmudic outgrowth of the mysticism of the false Messiah, Sabbatai Zevi After traveling in Turkey, where he was called Frank and where he joined the Sabbatean sect, he returned (*c*1755) to Podolia Posing as a Messiah, Frank gathered a following, by whom he was addressed as "holy master." Professing to find in the cabala the doctrine of Trinitarianism and feigning conversion to Catholicism, he and the Frankists were baptized in 1759 in Lvov. The Church, however, soon became suspicious of the sincerity of its new converts, and in 1760 Frank was arrested in Warsaw on a charge of heresy and imprisoned in the fortress of Chenstochov, he was released in 1773 after that section of Poland came into Russian possession Moving to Moravia, he enjoyed for a time the favor of Maria Theresa of Austria, who believed him a disseminator of Christianity When she discovered his sectarianism, Frank fled to Offenbach, Germany, where he lived in luxury supplied by Polish and Moravian Frankists Upon his death his daughter Eve became "holy mistress" of the Frankists She died in 1816 The sect eventually died out, most of its members having become true Catholics

Frank, Leonhard (lā'ônhärt frăngk'), 1882–, German expressionist novelist and dramatist His first novel was *The Robber Band* (1914, Eng tr , 1928), to which he wrote a sequel, *The Singers* (1925, Eng tr , 1932) *The Cause of the Crime* (1920, Eng tr , 1928) was followed by such works as *A Middle-Class Man* (1924, Eng tr , 1930) and *Carl and Anna* (1927, Eng tr , 1929), his best-known novel, which was dramatized in 1929 *In the Last Coach* (1925, Eng tr , 1935) was a volume of short stories His writing, somewhat sensational, is psychological in method, antimilitaristic, and anticommunistic

Frank, Tenney (tĕ'nē frăngk'), 1876–1939, American historian, b Clay Center, Kansas, grad Univ of Kansas (B A , 1896, M A , 1898), Ph D Univ of Chicago, 1899 He taught Latin at the Univ of Chicago and at Bryn Mawr and was a professor at Johns Hopkins after 1919 He gained note for his meticulous research and his original conclusions about the forces of the history of Rome Perhaps his most widely known work is the textbook, *A History of Rome* (1923), but he was the author of several distinguished books, including *Roman Imperialism* (1914), *Vergil a Biography* (1922), *Economic History of Rome* (1920, rev ed , 1927), *Roman Buildings of the Republic* (1924), *Catullus and Horace* (1928), *Life and Literature of the Roman Republic* (1930), and *Aspects of Social Behavior in Ancient Rome* (1931)

Frankel, Zacharias (zăk'kurī'us frang'kul), 1801–75, Jewish theologian, called the founder of historical Judaism, b Prague, d Breslau Frankel believed that research based on scholarship was the only basis of reform In 1851 he was elected head of the new conservative rabbinical seminary of Breslau He wrote *Introduction to the Mishna* (1859)

Frankenmuth, village (pop 1,100), S Mich , on the Cass river and SE of Saginaw, settled 1845 by Germans, inc 1904 The vicinity abounds in Indian relics, and this site was part of an Indian reservation (1819–47)

Frankenstein (frăng'kənstīn), a German student who in *Frankenstein, or, The Modern Prometheus* (1818), a horror tale by Mary Wollstonecraft SHELLEY, creates a monster which ultimately destroys him The name is often inaccurately used to mean an invention or creation which gets out of control or destroys its originator

Frankenwald (frang'kunvält), wooded plateau, Upper Franconia, NE Bavaria, between the Fichtelgebirge and the Thuringian Forest It rises to c 2,600 ft

Frankford, village (pop 1,144), S Ont , on the Trent river and W of Belleville It has paper milling, canneries, and a hydroelectric station

Frankfort (frăngk'furt) **1** City (pop 13,706), co seat of Clinton co , W central Ind , NW of Indianapolis, laid out 1830 A trading center for an apple-growing region, it produces packed meat, enameled sheet metal, and brass fittings **2** City (pop 1,243), NE Kansas, E of the Big Blue River and NW of Topeka, in a wheat and corn area, founded 1867, inc 1875 **3** City (pop 11,492), state capital, and co seat of Franklin co , N Ky , on both banks of the Kentucky river It lies between Louisville and Lexington Settlement began in 1779, the city was organized in 1786 by Gen James WILKINSON and was selected as the capital in 1792 It is the trade and shipping center for a bluegrass area yielding farm products and limestone, among its manufactures are whisky, shoes, and twine The city, with many fine old houses and gardens, contains numerous places of interest—the present capitol (1909), the old capitol (1827–30), which houses the state historical society, Liberty Hall (built 1796 and said to have been designed by Thomas Jefferson), and the old cemetery with the graves of Daniel and Rebecca Boone and Richard M Johnson The Kentucky State College for Negroes (land grant, coeducational, 1886) is here The city is the site of the state institute for the feeble-minded The state penitentiary was moved to La Grange in 1940 **4** City (pop 1,642), N Mich , on Lake Michigan near the mouth of the Betsie river and W of Traverse City, settled 1870, inc as a village 1885, as a city 1935 It is a resort, fruit-shipping, and fishing center Indian relics are found near by. **5** Industrial village (pop 3,859), E central N Y , on the Mohawk and SE of Utica; settled in the 18th cent , inc. 1863.

Frankfurt (frängk'fŭrt, Ger frängk'fōōrt) or **Frankfurt-am-Main** (ăm mīn'), city (1939 pop 553,464, including suburbs; 1946 pop 424,065, 1949 estimated pop 490,000), Hesse, W Germany, on the Main river It is also known, in English, as Frankfort A historic, cultural, industrial, commercial, and financial center, Frankfurt also is a river port and a transportation hub Its main industries produce chemicals and pharmaceutical articles, machinery, electric equipment, and clothing The western suburb of Hoechst is the seat of the former I G Farben industry (the great chemical cartel) Frankfurt also is a publishing center and the seat of a university (opened 1914) The city occupies the site of a Roman settlement and became (8th cent) a royal residence under Charlemagne After the Treaty of Verdun (843) it was briefly the capital of the kingdom of the Eastern Franks (i e , Germany) A free city from 1219 and a free imperial city from 1372, Frankfurt was designated in the Golden Bull (1356) of Emperor Charles IV as the seat of the imperial elections, which took place in a chapel of the Church of St Bartholomew After the emperors ceased to be crowned by the popes, the coronation ceremonies also took place (1562–1792) at Frankfurt The emperors-elect, after being crowned at St Bartholomew's by the archbishop-elector of Mainz, proceeded with medieval pageantry to banquet in the city hall, called *Römer* because the emperors-elect were actually crowned kings of the Romans The coronation (1764) of Joseph II has been described in the autobiography of Goethe, the most illustrious native of Frankfurt The prosperity of Frankfurt has been due mainly to its famous fairs, first mentioned in 1240, which continue to be held twice a year The Jews played an important part in the history of the city from the Middle Ages until the advent of Hitler The banking family of Rothschild had its origin here Frankfurt accepted the Reformation in 1530, was a member (1536–47) of the Schmalkaldic League, and was occupied many times in the wars of the 17th and 18th cent After the dissolution (1806) of the Holy Roman Empire, Frankfurt was included in the ecclesiastic principality of Regensburg and Aschaffenburg, created by Napoleon I for Karl Theodor von Dalberg, this was converted in 1810 into the grand duchy of Frankfurt, also under Dalberg The Congress of Vienna (1814–15) restored Frankfurt to the status of a free city and made it the seat of the diet of the GERMAN CONFEDERATION The FRANKFURT PARLIAMENT met here in 1848–49 Having sided with Austria in the Austro-Prussian War of 1866, Frankfurt was annexed by Prussia and became part of the province of Hesse-Nassau After the First World War, Frankfurt was briefly occupied by French troops In the Second World War it suffered very severe damage The old part of the city was almost completely destroyed Among its historic landmarks were the *Römer*, the Gothic Catholic Church of St Bartholomew, also called the coronation cathedral (under reconstruction), the house in which Goethe was born (under reconstruction), the Lutheran Church of St Paul, where the Frankfurt Parliament met (rebuilt), and the ancestral home of the Rothschild banking family On the other hand, the modern administration building of the I G Farben concern was undamaged and became (1945) the headquarters of the U S occupation forces in Germany In the post-war years Frankfurt recovered its economic importance

Frankfurt, Treaty of, 1871 see VERSAILLES, TREATY OF, 1871

Frankfurt-am-Main see FRANKFURT

Frankfurt-an-der-Oder (-ăn-dĕr-ō'dûr), city (1939 pop 83,669, 1946 pop 51,577), Brandenburg, E Germany, on the Oder river The section on the east bank of the Oder (1946 pop 1,689) was placed under Polish administration in 1945 and is called Slubice by the Poles Frankfurt manufactures machinery, textiles, and foodstuffs (notably frankfurter sausages) Chartered in 1253, it joined (14th cent) the Hanseatic League and became an important commercial center Frankfurt was frequently besieged, notably in 1631, when it was stormed and sacked by the Swedes under Gustavus II The university founded here in 1506 was transferred to Breslau in 1811 Heinrich von Kleist was born here

Frankfurter, Felix, 1882–, American jurist, Associate Justice of the U S Supreme Court (1939–), b Vienna, Austria, grad College of the City of New York, 1902, and Harvard Law School, 1906 He was assistant U S attorney (1906–10) in New York and legal officer (1911–14) in the Bureau of Insular Affairs A professor (1914–39) at Harvard Law School, Frankfurter was intermittently appointed to government administrative posts Appointed to the Supreme Court by President Roosevelt, he continued his devotion to the liberal tradition—first manifested by his remarks (1927) on the Sacco-Vanzetti Case He wrote *The Public and Its Government* (1930) and edited *Cases under the Interstate Commerce Act* (1922), *Mr Justice Holmes* (1931), *Cases on Federal Jurisdiction* (1931), and *Mr Justice Brandeis* (1932) Frankfurter's lectures appear in *Law and Politics* (ed by Archibald MacLeish and E F Prichard, 1939), and selected opinions are in *The Constitutional World of Mr Justice Frankfurter* (ed by S J Konefsky, 1949)

Frankfurt Parliament, 1848–49 As a result of the liberal revolution that swept the German states early in 1848, a preliminary assembly (Ger *Vorparlament*) met at Frankfurt in March, 1848, and called an assembly, the Frankfurt Parliament, which met on May 18 at the Church of St Paul Its president was Heinrich von GAGERN, and its members (representing all political complexions) included the foremost German figures of the time The purpose of the parliament was to plan the unification of Germany Having suspended (June, 1848) the diet of the German Confederation, the assembly appointed Archduke John of Austria regent of Germany and head of the provisional (and virtually nonexisting) executive power While the parliament was lengthily debating various schemes of union and while it was diverted from its purpose by the war with Denmark over the SCHLESWIG-HOLSTEIN question, the German state governments, notably those of Austria and Prussia, suppressed the revolutionary movement and thus undermined the very basis of the Frankfurt assembly At last, in March, 1849, the parliament adopted a federal constitution of the German states (excluding Austria), with a parliamentary government and an hereditary emperor FREDERICK WILLIAM IV of Prussia was chosen emperor but refused to accept the crown from a popularly elected assembly and thus caused the failure of the entire scheme His attempt to substitute a union scheme of his own was smothered by Austria through the Treaty of OLMÜTZ (1850) The parliament broke up in 1849, and in 1850 the diet of the German Confederation was restored The constitution drafted by the Frankfurt Parliament influenced that of the NORTH GERMAN CONFEDERATION in 1866

frankincense, resin of an East African and Arabian tree of the genus *Boswellia*, which is gathered in irregular lumps for use in INCENSE in religious ceremonies—a use it has had since Old Testament (Ex 30 34) times It was formerly regarded as a remedy for various diseases and was used in embalming and fumigation Another name for frankincense is olibanum The Norway spruce yields a resin called common frankincense, which, when melted in water, becomes Burgundy pitch See also MYRRH

Frankland, Sir Edward, 1825–99, English chemist He studied under Bunsen and Liebig and taught at several English institutions In working on the synthesis and isolation of compounds he evolved the theory of valence He made studies of water purification, of flame and luminosity with Tyndall, and of gases with Lockyer, with whom he discovered helium His work on water purification was continued by his son, **Percy Faraday Frankland,** 1858–1946, also a chemist, who with his wife, Grace Toynbee Frankland, conducted bacteriological studies He wrote *Micro-organisms in Water* (1894) and *Life of Pasteur* (1897)

Franklin, Ann Smith, 1696–1763, American printer, sister-in-law of Benjamin Franklin After the death (1735) of her husband, James Franklin, Ann carried on his commercial printing business, in Newport, R I , aided by two daughters and her son James She printed a series of almanacs written by Joseph Stafford and published (1728–35) by James Franklin, but afterwards written (1736–41) by Ann herself She published the Newport *Mercury* and, as colony printer, printed many legal documents as well as the paper money of the colony In 1748 her son James became her partner, and after his death she was aided by Samuel Hall, but until her death she was the manager of her flourishing business

Franklin, Benjamin, 1706–90, American statesman, printer, scientist, and writer, b Boston Franklin, who was to become a worldly-wise, highly civilized man who won the respect of Europe for his attainments, began humbly enough The son of a tallow chandler and soapmaker, he left school at 10 years of age to help his father Disliking the work of the shop, he was apprenticed to his half brother James, a printer and the publisher of the *New England Courant*, to which young Ben secretly contributed After much disagreement he left his brother's employment and went (1723) to Philadelphia to work as a printer Industry and thrift—which he was to praise much later—helped him to better himself After a short stay in London (1724–26), he returned and in 1729 acquired an interest in the *Pennsylvania Gazette* As owner and editor after 1730, he made the periodical popular His commonsense philosophy and his neatly turned phrases won public attention in the *Gazette*, in the later *General Magazine*, and especially in his *Poor Richard's Almanack*, which he published from 1732 to 1757 Many sayings of Poor Richard, praising prudence, common sense, and honesty, are today standard American proverbs Franklin also interested himself in selling books, established a circulating library, organized the American Philosophical Society, helped to establish (1751) an academy which grew to be the Univ of Pennsylvania, and brought about civic reforms Meanwhile he had steadily extended his own knowledge by study of foreign languages, philosophy, and science He repeated the experiments of other scientists and showed his usual practical bent by inventing such diverse things as bifocal spectacles and a harmonica The phenomenon of electricity interested him deeply, and in 1748 he turned his printing business over to his foreman, intending to devote his life to science His spectacular experiment of flying a kite in a thunderstorm, which proved the identity of lightning and electricity, was but one of a series of investigations that won him recognition from the leading scientists in England and on the Continent He took local public offices and served long (1753 - 74) as deputy postmaster general of the colonies As such he reorganized the postal system, making it both efficient and profitable His status as a public figure grew steadily A Pennsylvania delegate to the ALBANY CONGRESS (1754), he proposed there a plan of union for the colonies, which was accepted by the delegates but later rejected by both the provincial assemblies and the British government He worked for the British cause in the French and Indian War, especially by providing transportation for the ill-fated expedition led by Edward Braddock against Fort Duquesne He was a leader of the popular party in Pennsylvania against the proprietors and in 1757 was sent to England to present the case against the Penns He won (1760) for the colony the right to tax the Penn estates but advised moderation in applying the right He returned to America for two years (1762– - 64) but was in England when the Stamp Act caused a furor Again he showed prudent moderation, he protested the act but asked the colonists to obey the law, thus losing some popularity in the colonies until he stoutly defended American rights at the time of the debates on repeal of the act He was made agent for Georgia (1768), New Jersey (1769), and Massachusetts (1770) and seriously considered making his home in England, where his scientific attainments, his brilliant mind, and his social gifts of wit and urbanity had gained him a high place As trouble between the British government and the colonies grew with the approach of the American Revolution, however, Franklin's deep love for his native land and his devotion to individual freedom brought him back (1775) to America There, while his son William Franklin was becoming a leader of the Loyalists, Benjamin Franklin became one of the greatest statesmen of the American Revolution and of the new-born nation He was a delegate to the Continental Congress, was appointed postmaster general, and was sent to Canada with Samuel Chase and Charles Carroll of Carrollton to persuade the people of Canada to join the patriot cause He was appointed (1776) to the committee that drafted the Declaration of Independence, which he signed. Late in 1776 he sailed to France to join Arthur LEE and Silas DEANE in their diplomatic efforts for the new republic Franklin, with a high reputation in France well supported by his winning presence, did much to gain French recognition of the new republic in 1778 He helped to direct U S naval operations and was a general and successful agent in Europe—the sole one after suspicions and quarrels caused Congress to annul the powers of the other American commissioners He was chosen (1781) as one of the American diplomats to negotiate peace with Great Britain and laid the groundwork for the treaty before John JAY and John ADAMS arrived British naval victory in the West Indies made the final treaty less advantageous to the United States than Franklin's original draft The Treaty of Paris was, in contradiction of the orders of Congress, concluded in 1783 without the concurrence of France, because Jay and Adams distrusted the French Franklin returned in 1785 to America and was made president of the Pennsylvania executive council The last great service rendered to his country by this "wisest American," as he is sometimes called, was his part in the Federal Constitutional Convention of 1787 Though his proposal of a single-chamber congress was rejected, he helped to direct the compromise that brought the Constitution of the United States into being Though not completely satisfied with the finished product, he worked earnestly for its ratification His writings are still widely known today, especially his autobiography (covering only his early years), which is generally considered one of the finest autobiographies in any language and has appeared in innumerable editions (see especially that of Max Farrand, 1949) His writings have been edited in a collected edition by A H Smyth (10 vols , 1905–7) and in many selected editions, such as that by F L Mott and C E Jorgenson (1936) and that by Nathan G Goodman in *A Franklin Reader* (1945) See biographies by S G Fisher (1899), Paul Leicester Ford (1899), Bernard Fay (1929), and Carl Van Doren (1938)

Franklin, Christine Ladd-: see LADD-FRANKLIN, CHRISTINE

Franklin, Edward Curtis, 1862–1937, American chemist, b Kansas, grad Univ of Kansas, 1888, Ph D Johns Hopkins, 1894 He taught at the Univ of Kansas (1888–1903) and at Stanford

(1903–29; as professor of organic chemistry from 1906) An authority on liquid ammonia, he served in the First World War as an expert on chemical warfare His works include *The Nitrogen System of Compounds* (1935).

Franklin, Sir John, 1786–1847, British explorer in N Canada Entering the navy in 1801, he saw service in the battle of Trafalgar. On his first overland expedition (1819–22) in N Canada, his party crossed the barren grounds from Great Slave Lake to the Arctic coast at the mouth of the Coppermine river and explored along the coast eastward for c.175 mi In his *Narrative of a Journey to the Shores of the Polar Sea* (1823), Franklin describes this journey On his next expedition (1825–27), the party descended the Mackenzie river and surveyed another long stretch of the Arctic shore line—westward to Return Reef (c 160 mi from Point Barrow, Alaska) and eastward to the mouth of the Coppermine By way of the Coppermine he went to Great Bear Lake, where he built Fort Franklin Franklin's *Narrative of a Second Expedition to the Shores of the Polar Sea* (1828) is an account of these feats On both of these expeditions he was accompanied by Sir George Back After serving (1836–43) as governor of Van Diemen's Land (now Tasmania), Franklin set out in the *Erebus* and the *Terror* in 1845 to search for the Northwest Passage When, three years later, no word from him had been received, there was dispatched the first of the more than 40 parties that in the following years were to search the arctic regions for traces of the expedition Although the geographical knowledge gained by the searchers was immense, no clues as to Franklin's fate were revealed with much clarity until John Rae, in 1853–54, and later (1857–59) Sir Francis McClintock found evidence of the great arctic tragedy Franklin's ships had been frozen in the ice between Victoria Island and King William Island After his death in 1847, the survivors abandoned ship in the spring of 1848 and undertook to make their way southward over the frozen wastes off Boothia Peninsula toward civilization Of the entire expedition of some 129 men, not one survived See biographies of Franklin by A H Markham (1891) and H D Traill (1896), the life, diaries, and correspondence of his wife, Lady Jane Franklin (ed by W F Rawnsley, 1923), R J Cyriax, *Sir John Franklin's Last Arctic Expedition* (1939)

Franklin, William, c 1730–1813, last royal governor of New Jersey, natural son of Benjamin Franklin He grew up in Philadelphia, saw service in the French and Indian War and was comptroller of the general post office (1754–56) in Philadelphia In 1757 he went with his father to England, where he studied law and so engaged influential friends that he was appointed (1763) governor of New Jersey His charm won him attention, but his love for aristocracy and strong attachment to England and British authority soon made him unpopular with the patriots After the American Revolution started, he sided with the Loyalists and quarreled bitterly with his father The New Jersey congress ordered (1776) his arrest, and he was imprisoned in Connecticut until he was exchanged in 1778 William Franklin in 1782 went to England, never to return In 1784 he was reconciled with his father, who wrote his famous autobiography to benefit William

Franklin, William Buel, 1823–1903, Union general in the Civil War, b York, Pa, grad West Point, 1843 He served in the Mexican War and was superintending engineer on the construction of the Capitol dome in Washington In the Civil War he was made a brigadier general of volunteers (May, 1861) and commanded a brigade at the first battle of Bull Run (July 21, 1861) He fought under McClellan in the Peninsular campaign and in the Antietam campaign and under Burnside in the battle of Fredericksburg Burnside held him partially responsible for that defeat and ordered his dismissal from the Army of the Potomac Franklin later commanded under N P Banks in the Red River expedition

Franklin, William Suddards, 1863–1930, American physicist, b Kansas, grad Univ of Kansas, 1887 He taught at Lehigh Univ (1897–1915) and at Massachusetts Institute of Technology (1917–29) He worked on the theory of alternating currents and contributed to technical education through a number of books

Franklin, William Temple, 1760–1823, American writer, b London, natural son of William Franklin He was brought (1774) to America by his grandfather, Benjamin Franklin, whose secretary he became and whose writings he edited

Franklin [for Sir John Franklin], provisional district, area 549,253 sq. mi, one of the three provisional districts of the Northwest Territories, est 1895 It comprises the islands of the Arctic Archipelago and Boothia and Melville peninsulas In 1897 the boundaries were defined by an order in council, and in 1926 the area was made a game preserve Fur trading is the chief occupation of the Eskimo population, and trading posts include those at Cambridge Bay, Frobisher Bay, and Pangnirtung In the Second World War the region became strategically important, with U S.–Canadian air bases and weather stations; since the war it has been an arctic military training ground.

Franklin. **1** Village (pop 523), SE Idaho, at the Utah line It was the first permanent settlement in Idaho, founded in 1860 by a party of Mormons, who, believing themselves to be still in Utah, set up a school and introduced irrigation. Fruit and vegetables are processed here **2** City (pop 6,264), co seat of Johnson co, S central Ind, S of Indianapolis, laid out 1822 A trading center for an agricultural area, it manufactures automobile parts, rayon, and household appliances Franklin College of Indiana (Baptist, coeducational, 1837) is here **3** City (pop 3,940), co seat of Simpson co, S Ky, SSW of Bowling Green and near the Tenn line, founded 1820 It is a trade center and shipping point for an area producing timber and farm products (especially strawberries) **4** Town (pop 4,274), parish seat of St. Mary parish, S La, on Bayou Teche, founded 1800 In a rich sugar-producing area, it has a refinery **5** Wool-textile town (pop 7,303), SE Mass, near the R I line and SW of Boston, settled 1660, set off from Wrentham 1778 A memorial marks the birthplace of Horace Mann **6** City (pop 1,272), co seat of Franklin co, S Nebr, on the Republican and S of Kearney, inc 1879 **7** City (pop 6,749), S central N H, at the junction of the Winnipesaukee and the Pemigewasset, which here form the Merrimack, settled 1764, inc as a town 1828, as a city 1895 Textiles and hosiery are among its products Near the Congregational church is a bust of Daniel Webster, who was born in a section at that time in Salisbury **8** Borough (pop 4,009), NW N J, in a region of hills and lakes, inc 1913 It has important zinc mines Theodore Frelinghuysen was born here **9** Town (pop 1,249), co seat of Macon co, W N C, near the Ga line SW of Asheville Lumbering, mining (mica, talc, kaolin), and farming are carried on Franklin is headquarters for Nantahala National Forest, and near by is a state game refuge **10** Village (pop 4,511), SW Ohio, on the Great Miami river and S of Dayton, laid out 1795 It produces paper and roofing material **11** Borough (pop 2,297), Cambria co, W Pa, near Johnstown **12** City (pop 9,948), co seat of Venango co, NW Pa, on the Allegheny and near Oil City, laid out 1795, inc as a borough 1828, as a city 1868 Its manufactures include oil-well equipment, railroad supplies, boilers, and machinery Dairying is done here Franklin is on the site of an Indian town **13** Town (pop 4,120), co seat of Williamson co, central Tenn, on the Harpeth river and S of Nashville The surrounding fertile farm area, settled before 1800, has phosphate mines and timber Franklin was the scene of fighting in the Civil War, the most severe being that on Nov 30, 1864, in the Tennessee campaign of J B Hood Thomas Hart Benton began his law practice here **14** Town (pop 1,087), co seat of Robertson co, E central Texas, SE of Waco, in a farm area, settled 1880, inc 1912 **15** Town (pop 1,021), NW Vt, NE of St Albans, at the Canadian line, granted 1789 It includes the resort Lake Carmi **16** Town (pop 3,466), SE Va, on the Blackwater river and SW of Portsmouth, in a farm area, inc 1876 Paper bags are made here

Franklin, State of, government (1784–88) formed by the inhabitants of Washington, Sullivan, and Greene counties in present E Tennessee after North Carolina ceded (June, 1784) its western lands to the United States Following preliminary conventions at Jonesboro (Aug. and Dec, 1784), the first assembly, meeting at Greeneville early in 1785, elected John Sevier governor for a three-year term, established courts, appointed magistrates, levied taxes, and enacted laws A permanent constitution was adopted in Nov, 1785 Unable to secure congressional recognition and pressed by North Carolina in its attempt to reestablish jurisdiction (in Dec, 1784, North Carolina repealed the act ceding the lands), Sevier's government passed out of existence when the terms of its officers expired The region reverted temporarily to North Carolina See S C Williams, *History of the Lost State of Franklin* (1924)

Franklin and Marshall College, at Lancaster, Pa, Evangelical-Reformed, for men, formed 1853 by a merger of two colleges Franklin College was chartered and opened in 1787 by Benjamin Franklin and others Marshall College, named for John Marshall, was chartered and opened in 1836 at Mercersburg as an outgrowth of a seminary, its preparatory department became Mercersburg Academy

Franklin Institute, in Philadelphia, for the promotion of mechanic arts, chartered and opened 1824, the first of its kind in the United States It was named for Benjamin Franklin An important research center, it has sponsored lectures, both popular and technical, and special exhibitions. In 1933 the institute opened the Fels Planetarium and in 1934 a large applied-science museum. The library contains a remarkable technical collection The institute has published a journal since 1825 and awards medals and certificates for meritorious inventions in the physical sciences. In 1925 it established the Bartol Research Foundation (physics), now housed at Swarthmore College, and in 1935 the Biochemical Research Foundation.

Franklin Lakes, borough (pop. 1,203), NE N.J; inc 1922.

Franklin Park, village (pop. 3,007), NE Ill., western suburb of Chicago, inc 1892.

Franklinton. **1** Town (pop. 1,579), parish seat of Washington parish, SE La, near Bogalusa; laid out 1821, chartered 1861. It ships cotton and vegetables and has a tung-oil plant **2** Town (pop 1,273), N N C, NE of Durham It is a shipping center for tobacco and cotton and has textile and lumber mills.

Franklinville, village (pop. 1,884), W N Y., SE of Buffalo, settled 1806, inc 1874. Cutlery and tin cans are made here.

Franks, group of Germanic tribes They were (3d cent A D) settled along the lower and middle Rhine The Salian Franks, in the north, and the Ripuarian Franks, in the south, had separate law codes (see Germanic laws) The Salian Franks became allies of the Roman Empire in the 4th cent and moved southward into Gaul In the late 5th cent their leader, Clovis, permanently united the Salian and Ripuarian Franks, accepted Catholicism, and founded the Frankish empire By the conquest of Burgundy, Thuringia, and Bavaria, of the territories of the Alemanni and Saxons, and of the kingdom of the Lombards, the Frankish empire grew (6th–8th cent) to include most of France, the Low Countries, Germany W of the Elbe, Austria, Switzerland, and N and central Italy Under its first dynasty, the Merovingians, the empire was, for most of the time, divided into several kingdoms, notably Neustria in the west and Austrasia in the east Internal warfare among the kingdoms was nearly chronic, and the state of civilization was very low, only the Church, represented by such men as St Gregory of Tours, kept alive the remnants of Gallo-Roman culture In the 8th cent began the rule of the Carolingians, first as mayors of the palace, then—from 751—as kings of the reunited Frankish domains Charlemagne, crowned emperor in 800, was the greatest Frankish ruler His empire was partitioned in 843 (see Verdun, Treaty of) and again in 870 by the Treaty of Mersen The kingdom of the Western Franks, who merged with the far more numerous Gallo-Roman population of Gaul, became the kingdom of France, the kingdom of the Eastern Franks, who retained their Germanic speech, became Germany Both France and the region of Franconia in Germany derive their names from the Franks

Franks, Sir Augustus Wollaston, 1826–97, English archaeologist and authority on the medieval period M A Cambridge Univ, 1852 Entering the British Museum in 1851, he became in 1866 keeper of the department of British and medieval antiquities and ethnology Most of his collections are in the British Museum, among them an 8th-century Northumbrian carved-bone casket He was a fellow of the Royal Society and was knighted in 1894 He compiled catalogues of various collections and wrote on ceramics

Franks, Sir Oliver Shewell (shōō'ul), 1905–, British statesman Educated at Oxford, he taught philosophy there, at the Univ of Chicago (1935), and at Glasgow Univ During the Second World War he served in the ministry of supply and was knighted in 1946 He led the European conference for economic cooperation (1947) and the following year was appointed ambassador to the United States

Frankston, town (pop 1,216), E Texas, near Palestine and in the valley of the Neches It has sawmills and ships truck

Frantiskovy Lazne, Bohemia see Franzensbad

Franz, Robert (rō'bĕrt frants'), 1815–92, German composer of about 350 lieder, intimate songs, usually in strophic form, which have some of the feeling of folk song The first of them were published in 1843 and were praised by Schumann in his *Neue Zeitschrift für Musik*

Franzen, Frans Michael, Swed *Franzén* (frāns' mē'kāĕl frānsān'), 1772–1847, Swedish bishop and poet, b Finland His *Ode to Gustaf Philip Creutz* (1797) marks the beginning of romantic lyric poetry in Sweden Several of his poems are included in *The Oxford Book of Scandinavian Verse* (1925)

Franzensbad (frän'tsunsbat"), Czech *Františkovy Lázně* (fran'tĭshkôvĭ läz'nyĕ), watering place (pop. 2,283), NW Bohemia, Czechoslovakia, near the German border It has extensive peat deposits and 27 mineral springs

Franz Josef Land (frāns' jō'zĕf, frants' yō'zĕf), Rus *Zemlya Frantsa Iosifa*, archipelago, area c.8,000 sq mi, off Archangel oblast, RSFSR, in the Arctic Ocean, N of Novaya Zemlya It consists of 85 islands, including Aleksandra Land, George Land, Wilczek Land, Graham Bell Island, and Hooker and Rudolf islands, which are the sites of government observation stations and of settlements on Tikhaya and Teplits bays. Some 90 percent of Franz Josef Land is covered by ice, interspersed with poor lichen vegetation; the average mean temperature is 6.5°F. It was discovered in 1873 by

Karl Weyprecht and Julius von Payer, leaders of an Austrian expedition, and was subsequently more fully explored by expeditions such as those led by Frederick George Jackson (1894–97), Fridtjof Nansen (who spent the winter of 1895–96 in Frans Josef Land), Walter Wellman (1898–99), the duke of the Abruzzi (1899–1900), and Anthony Fiala (1903–5). In 1926 the USSR claimed the archipelago, which is sometimes called Fridtjof Nansen Land, a name proposed (1930) by the Soviet Academy of Sciences but never officially adopted.

Franz Joseph, emperor of Austria and king of Hungary see Francis Joseph

Franz Joseph Spitze, Czechoslovakia see Tatra

Frascati (fräskä'tē), town (pop 10,660), Latium, central Italy, beautifully situated in the Alban Hills near the site of ancient Tusculum It is a summer resort famous for its wine and its fine villas (16th and 17th cent) and gardens Frascati was German headquarters in the Second World War The town and its villas, including the famous Villa Aldobrandini and Villa Torlonia, suffered severely from Allied bombings

Frasch, Herman (fräsh), 1851–1914, American chemist, b Württemberg He came to the United States in 1868 and studied in Philadelphia Although he worked out a process for the refining of paraffin and several for petroleum and for the preparation of various commercially important substances, e g , sodium carbonate, he is best known for the Frasch process

Frasch process [for Herman Frasch], a process for the extraction of sulphur from deposits Three pipes, one inside the other, are sunk to the bottom of the sulphur bed Water heated under pressure to a temperature well above the melting point of the sulphur is conducted down the outer pipe, and air under pressure down through the innermost pipe Their combined action melts the sulphur and forces it to the surface through the middle pipe, from which it is drawn off

Fraser, Alexander Campbell, 1819–1914, Scottish philosopher He was professor at the Univ of Edinburgh From 1850 to 1857 he edited the *North British Review* He is best known for his edition of the works of George Berkeley (4 vols , 1871) His own philosophy, a "theistic faith," is set forth autobiographically in *Biographia Philosophica* (1904) Other principal works are biographies of Berkeley (1881) and Thomas Reid (1898) and his *Philosophy of Theism* (1895–96)

Fraser, Claud Lovat, 1890–1921, English scenic artist and illustrator He served (1915–16) in the Durham Light Infantry and was gassed He illustrated several books, but is best known for his production of *The Beggar's Opera* (1920) and *As You Like It* (1920) His death at 31 cut short a promising career See study by John Drinkwater and A D Rutherston (1923)

Fraser, James Baillie, 1783–1856, Scottish traveler and author He traveled in Nepal (1815) and participated in two missions to Persia (1821, 1833–34) He wrote accounts of his journeys, valuable because he traveled in regions that had seldom been visited by Europeans

Fraser, James Earle, 1876–, American sculptor, b Winona, Minn , studied at the Art Institute of Chicago and in Paris The best known of his many works are *The End of the Trail* (San Francisco), the designs of Indian head and buffalo on the American five-cent piece, Harriman Fountain (Arden, N Y), sarcophagus of Bishop Potter (Cathedral of St John the Divine, New York), *Journey through Life* (Rock Creek Cemetery, Washington, D C), statue of Alexander Hamilton (Treasury Building, Washington, D C), John Ericsson monument (Washington, D C), John Hay Memorial (Cleveland), *Pioneers* and *Discoverers* (Memorial Bridge, Chicago), *Lewis and Clark* and Thomas Jefferson monument (Jefferson City, Mo), and *Victory* (Bank of Montreal, Canada) His excellent portrait busts include those of Theodore Roosevelt (Senate Chamber, Washington, D C) and Augustus Saint-Gaudens (Hall of Fame, New York Univ) His wife, **Laura Gardin Fraser,** 1889–, is Chicago, is a sculptor of force and originality, particularly in animal modeling and in designing coins and medals Examples of her work are *Reclining Elks* for the Elks Memorial Building, Chicago, and the Charles A Lindbergh Congressional Medal

Fraser, Simon: see Lovat, Simon Fraser, 12th Baron

Fraser, Simon, 1776?–1862, Canadian explorer and fur trader Born in Bennington, Vt , he was taken to Canada as a child He entered the service of the North West Company in 1792, and in 1802 he was made a partner In 1805 he was chosen to inaugurate the company's operations beyond the Rocky Mts , and after exploring and establishing trading posts on the upper reaches of the Fraser river, he and John Stuart and 20 companions in 1808 explored the same river to tidewater In point of view of dangers it was one of the most difficult exploration trips on record in North America He was disappointed to discover that it was not the Columbia as he had hoped, and he declined knighthood for the achievement. In 1811 Fraser was placed in charge of the important Red River department of his company, where he came into conflict with the earl of Selkirk over the Red River Settlement See F W Howay, *British Columbia* (1928)

Fraser, chief river of British Columbia It rises on the west slope of Yellowhead Pass, in the Rocky Mts , and flows c 350 mi NW through the Rocky Mt trench to Prince George, thence south and west c 500 mi to the Strait of Georgia, S of Vancouver Yale, Chilliwack, Mission, and New Westminster are on its lower course Its chief tributaries are the Nechako, Quesnel, Thompson, Chilcotin, Blackwater, and Lillooet rivers It is navigable to Yale, c 80 mi from the mouth Above this is the Fraser river canyon, noted for its scenery, its mountain walls rise more than 3,000 ft high The river was discovered by Sir Alexander Mackenzie, who followed its upper course on his expedition (1793) to the Pacific, and takes its name from Simon Fraser, who in 1808 followed it to its mouth, establishing a number of fur-trading posts It was a domain of the fur traders until the gold rush of 1858 and the discovery of gold (1859) in the Cariboo dist on its upper reaches, when the government built a road to serve the valley and settlement began

Fraserburgh (frā'zûrburu), burgh (1931 pop 9,720, 1948 estimated pop 10,877), Aberdeenshire, Scotland, N of Aberdeen, on a bay S of Kinnairds Head Near the burgh, on the headland, is the old castle of the Frasers (Sir Alexander Fraser founded the town in the 16th cent), now a lighthouse The burgh, having a fine harbor, is one of the chief centers of herring fishing in Scotland

Fraser Island or **Great Sandy Island,** area 66 sq mi , off SE Queensland, Australia, forming the eastern shore of Hervey Bay Sandy and wooded, it is 80 mi long and 15 mi wide

Frat see Euphrates

fraternal orders. The pioneer of the fraternal orders in the United States was Blue Lodge Freemasonry, which preserved much of the code and spirit of a medieval guild Men who were not stone masons by occupation welcomed the opportunity to share such a fellowship as guildsmen had enjoyed In the United States the passing of the neighborhood as a social unit left a void comparable to that left by the passing of the guild The fraternal order, like the neighborhood, gives men companionship and common interests The "lodge" system of local organization and meetings and the use of symbol and ritual have been adopted by the Odd Fellows and many other fraternal orders that have taken places beside the Masonic orders In addition to the orders for men, there are orders for women and orders that admit both men and women Charity is generally inculcated and practiced Some orders give fixed allowances to members while they are ill, and some orders provide life insurance for their members Some are committed to special interests and others abstain, as organizations, from partisanship and permit no discussion of politics or religion in their meetings

fraternity, in American colleges, a student secret society formed for social purposes, into which members are initiated by invitation Fraternities are usually named by two or three Greek letters and are also known as Greek-letter societies, women's Greek-letter societies are commonly called sororities The oldest Greek-letter society is Phi Beta Kappa, founded (1776) at the College of William and Mary, Williamsburg, Va It soon became a scholarship honor society After 1830 the literary societies which existed in many colleges were slowly supplanted by fraternities modeled on the three established (1825–27) at Union College After 1870 many professional and honorary fraternities were established to give recognition to scholarship in various fields Some Greek-letter societies have only one local organization or chapter, others are nationally organized with chapters in several institutions Fraternities are forbidden in some colleges because of opposition to secret societies and to the defects of the fraternity system The Interfraternity Conference (1909) and the National Panhellenic Congress (1929) were established to consult on the common interests of American fraternities and sororities See *Baird's Manual of American College Fraternities* (1927)

fraud, in law, willful misrepresentation intended to deprive another of some right The offense, generally only a tort, may also constitute the crime of false pretenses Frauds are either "actual" or "constructive" An actual fraud requires that the act be motivated by the desire to deceive another to his hurt, while a constructive fraud is a presumption of overreaching conduct which arises when a profit is made from a relation of trust (see fiduciary) The courts have found it undesirable to make a rigid definition of the type of misrepresentation which amounts to actual fraud and have preferred to consider individually the factors in each case. The misrepresentation may be a positive lie, a failure to disclose information, or even a statement made in reckless disregard of possible inaccuracy. Actual fraud can never be the result of accident or negligence, because of the requirement that the act be intended to deceive. The question of commission may depend upon the competence and commercial knowledge of the alleged victim Thus dealings with a minor, a lunatic, a feeble-minded person, a drunkard, or (in former times) a married woman are scrutinized more closely than dealings with an experienced businessman. A lawsuit based upon actual or constructive fraud must specify the fraudulent act, the plaintiff's reliance on it, and the loss suffered. The remedy granted to the plaintiff in most cases is either compensatory (and possibly punitive) damages for the injury or cancellation of the contract or other agreement and the restoration of the parties to their former status In a few states both damages and cancellation are available In certain suits based upon a contract fraud may be interposed as a defense

Frauds, Statute of. see contract

Frauenfeld (frou'ünfĕlt), town (pop 9,581), capital of Thurgau canton, Switzerland It has an 11th-century castle and a museum with local antiquities There are aluminum and food industries

Fraunces, Samuel (frôn'sĭs), c 1722–1795, American innkeeper, proprietor of the historic **Fraunces Tavern** in New York city This building at the corner of Broad and Pearl streets was the De Lancey mansion before Fraunces, a West Indian of French and Negro blood, purchased it in 1762 and opened it as the Queen's Head Tavern It became famous for its wines and food and was a gathering place of the Sons of Liberty and other organizations before the American Revolution and for British officers during their occupation of the city Fraunces himself was a patriot, and his tavern was the center of the celebration on the occasion of the British evacuation of New York In its Long Room, George Washington bade farewell (1783) to his officers Fraunces sold the tavern in 1785 When Washington returned (1789) to New York as President, Fraunces became steward of his household, maintaining that position until 1794, even after Philadelphia was made the capital The tavern, now owned by the Sons of the Revolution (not the Sons of the American Revolution), is still open to the public as a restaurant and possesses many historical objects and documents See W H Bayles, *Old Taverns of New York* (1915), H R Drowne, *A Sketch of Fraunces Tavern* (1919)

Fraunhofer, Joseph von (yō'zĕf fŭn froun'hōfur), 1787–1826, German optician and physicist He worked as a glass cutter and optician and became famous for making and polishing achromatic lenses He invented a micrometer and a heliometer and improved optical instruments He was the first to study carefully and to map the dark lines in the solar spectrum called Fraunhofer lines

Fray Bentos (frī'bān'tōs), city (1941 estimated pop. 9,500), SW Uruguay, a port on the Uruguay river Founded in 1859 as Independencia and renamed for an 18th-century religious hermit of the region, Fray Bentos has some of the largest meat-packing and beef-products industries in the republic It exports frozen and canned meats, hides, and wool

Frayser's Farm see Seven Days battles

Frazee, John, 1790–1852, American pioneer sculptor, b Rahway, N J Without formal instruction, he advanced from stone carving to portrait busts, including those of Daniel Webster, John Marshall, and other notables The portrait of John Wells (St Paul's Church, New York) is said to be the first marble bust executed in this country by a native American The Pennsylvania Academy of the Fine Arts owns the original cast of a self-portrait

Frazee (frāzē'), village (pop 1,167), W Minn., SE of Detroit Lakes, in a resort region

Frazer, Sir James George, 1854–1941, Scottish classicist and anthropologist, b Glasgow, educated at the universities of Glasgow and Cambridge He is known especially for his masterpiece, *The Golden Bough*, published originally in two volumes, in successive editions it was enlarged to 12 volumes It is a study in magic and religion, based on remarkably broad and reliable knowledge and written with fine literary skill It traces many myths and rites to the prehistoric beginnings of agriculture An abridged edition in one volume was prepared by the author His many other writings include *Totemism and Exogamy* (1910), a translation, in six volumes, of the *Description of Greece* by Pausanias, with a commentary, *Adonis* (1932), and *Anthologia Anthropologica* (4 vols , 1938–39) See study by R A Downie (1940)

Freas, Thomas Bruce (frēs), 1868–1928, American chemist, b near Newark, Ohio, grad Stanford Univ , 1896 He taught at the Univ of Chicago (1904–11) and at Columbia Univ (from 1911) A specialist in laboratory apparatus and management, he invented the standard Freas ovens and thermostats and a sun motor

Fréchette, Louis Honoré (lwē' ônôrā' frāshĕt'), 1839–1908, French Canadian poet, b Lévis, Que., studied at Laval, McGill, and Queen's universities. In 1861 he became associate editor of the *Journal de Québec* and two years later published *Mes Loisirs*, his first volume of verse He worked (1865–71) as a journalist in Chicago and while there wrote *La Voix d'un exilé* (1866–68). Returning to Canada, he served in Parliament (1874–78),

tried journalism again, and in 1889 received a government clerkship, which he held until his death His volumes of poetry include *Les Oiseaux de neige* (1879), on old Quebec, and *La Légende d'un peuple* (1887), an epic of the French Canadians, several of his works were crowned by the French Academy, a distinction he was the first Canadian poet to achieve His collected poems appeared in 1908 Uneven in quality, his poetry shows, nevertheless, genuine feeling for nature and for the heroic history of French Canada

freckles, circumscribed patches of pigment varying in size (usually small), forming mainly on the face, arms, and hands as a result of exposure to the sun They occur especially on the skin of blond and red-haired individuals Bleaching and peeling applications used in an attempt to remove them may result in skin irritations

Fredegunde (frĕ"dugŭn'dŭ), c 545–597, Frankish queen The mistress of CHILPERIC I of Neustria, she became his wife after inducing him to murder his wife Galswintha She and BRUNHILDA were the leading figures in the long war (567 613) between Neustria and Austrasia She procured the deaths of Sigebert I of Austrasia and of her own stepchildren, after Chilperic's death (584) she acted as regent for her son CLOTAIRE II

Frederic, Harold, 1856–98, American novelist, b Utica, N Y He was in succession office boy, reporter, and editor of the Utica *Observer* and from 1882 to 1884 was editor of the Albany *Evening Journal* After 1884 he remained in Europe as foreign correspondent for the New York *Times*, winning a high reputation for his work His earlier novels deal chiefly with the Mohawk valley, the best of them was *In the Valley* (1890), a story of the Revolution *Marsena and Other Stories of the Wartime* (1894), dealing with the Civil War, and *The Market Place* (1899) are worthy of mention, but his masterpiece is *The Damnation of Theron Ware* (1896), a study of moral degeneration in character

Frederica, town (pop 645), S central Del , on the Murderkill and S of Dover At Barratt's Chapel (c 1780) near here annual services commemorate the organization of the Methodist Episcopal Church

Fredericia (frēdurī'shu, Dan frĭdhurē'tsvĭă), city (pop 22,963), E Jutland, Denmark, a port on the Little Belt It grew around a 17th-century fortress, of which ruins remain

Frederick I or Frederick Barbarossa (burburô'su) [Ital ,=red beard], c 1122–1190, emperor (1155–90) and German king (1152–90), son of Frederick of HOHENSTAUFEN, duke of Swabia, nephew and successor of CONRAD III His mother, Judith, was a Guelph (see GUELPHS) and Frederick frequently acted as mediator between his uncle Conrad and his Guelph cousin, HENRY THE LION He accompanied Conrad on the Second Crusade Frederick's coronation as emperor in Rome was delayed by unrest in Germany and by the revolutionary commune of Rome, established in 1144 and headed by ARNOLD OF BRESCIA In 1152 Frederick pacified Germany by proclaiming a general land peace (extended to the whole empire in 1158), and in 1156 he satisfied Henry the Lion by restoring the duchy of Bavaria to him, at the same time erecting Austria into a new duchy In a treaty (1153) with the exiled pope, EUGENE III, Frederick promised to reinstate Eugene in Rome and to assist him against Roger II of Sicily He entered Italy in 1154, was crowned in Rome (June 18, 1155), and on the same day put down the rebellious Romans However, he failed to assist the new pope, ADRIAN IV, against Roger's successor, William I of Sicily, and returned to Germany on the following day Adrian, obliged to ally himself (1156) with William, turned against Frederick At the Diet of Besançon (1157) the papal legate presented a letter in which the pope strongly implied that the empire was held in fief from the pope Frederick replied in a manifesto that he held the throne "through the election of the princes from God alone" and proceeded to invade Italy Adrian explained that he had not intended that interpretation of his words, but *no sooner* had Frederick's army turned its back on Italy than Milan began the conquest of Lombardy Frederick returned to Italy, seized Milan, and at the Diet of Roncaglia (1158) laid claim, as emperor and king of the Lombards, to all regalian rights, including the appointment of an imperial *podestà* in every town This belated attempt to reimpose feudalism on the burghers of the Italian communes led to the revolt of Milan, Brescia, Crema, and their allies, secretly encouraged by Adrian IV After a long siege, Frederick stormed and burned Milan (1162). Moreover he set up an antipope to Adrian's successor, ALEXANDER III, who excommunicated him Frederick withdrew temporarily, but returned in 1166, captured Rome, and was preparing to attack the pope's Sicilian allies when his army was decimated by an epidemic In 1167 the Italian communes joined in the LOMBARD LEAGUE, and Frederick retreated, with difficulty, to Germany In 1174, he began his fifth Italian campaign, which ended with his defeat (1176) at Legnano by the Lombard League At Anagni he agreed (1176) to recognize Alexander III, who restored him (1177) to communion. The Peace of Constance (1183) satisfied the League's demands After his return to Germany, Frederick brought about the downfall of Henry the Lion, whose large duchies were partitioned, Frederick's changes of the German map were of lasting consequence At the Diet of Mainz (1184) the emperor celebrated his own glory in fabulous pomp, and at the Diet of Nuremberg (1188) he promulgated new laws supplementing the land peace of 1158 He married (1186) his son and successor, Henry (later HENRY VI), to Constance, heiress of Sicily In March, 1188, Frederick took the Cross, and he set out on the Third Crusade (see CRUSADES) in 1189 He was drowned in Cilicia Legend, however, has him still alive, awaiting German unification in the KYFFHAUSER Among the positive and lasting achievements of Frederick's reign are the foundations of new towns, the increase of trade, and the colonization and Christianization of Slavic lands in E Germany In his administrative reforms the emperor was ably assisted by his chancellor, Rainald of Dassel Frederick has left a profound impression on the German mind, but despite his undoubted qualities he did not comprehend the salient trend of his time the rise of the burgher class

Frederick II, 1194–1250, emperor (1220–50) and German king (1212–50), king of Sicily (1197–1250), and king of Jerusalem (1229–50), son of Emperor Henry VI and of Empress CONSTANCE Born in Sicily, he was elected king of the Germans at Frankfurt in 1196 At his father's death, his uncle, PHILIP OF SWABIA, failed to hold the German magnates to this election, but his mother secured his investiture as king of Sicily from Pope INNOCENT III Frederick's minority (1197–1208) was disturbed by war between his Norman mother and his father's German followers and later by war between the Germans and the pope, who became his guardian on his mother's death (1198) The invasion of Apulia by Emperor OTTO IV (1210) led Innocent to promote the coronation of Frederick as German king even though this meant putting a HOHENSTAUFEN against a Guelph In Dec , 1212, Frederick was elected at Frankfurt and crowned at Mainz, in 1215, on Otto's formal deposition, he was recrowned at Aachen and took the Cross He later had cause to repent his crusading vow, reminded of it by HONORIUS III, he repeatedly secured postponements Equally troublesome was his promise (1216) to separate Sicily from the empire by surrendering Sicily to a regency for his infant son, Henry, he broke this pledge by securing (1220) the election of Henry as king of the Romans on the occasion of his own imperial coronation at Rome The success of Frederick's early rule in Germany (1212–20) was due largely to his lavishness with imperial lands and rights In his Sicilian kingdom he pursued the reverse of his German policy, he suppressed the barons and fought against the Saracens, recovered alienated demesne, and began his legislative reforms In 1224 he founded the university at Naples Having married (1225) Yolande, daughter of JOHN OF BRIENNE, he claimed the crown of Jerusalem, but again postponed his departure on crusade and gave further offense to the pope by claiming Spoleto and by reasserting, at the Diet of Cremona (1226), the imperial claim to Lombardy The LOMBARD LEAGUE was immediately revived On the insistent demand of Pope GREGORY IX, Frederick embarked on crusade (Sept , 1227), but fell ill, turned back, and was excommunicated In 1228 he finally embarked His "crusade," actually a state visit, was a diplomatic victory At Jaffa he made a treaty by which Jerusalem, Nazareth, and Bethlehem were surrendered to the Christians with the Mosque of Omar being left to the Moslems, and in 1229 he was crowned king at Jerusalem The pope denounced the treaty (which the Moslems were soon to violate) and caused the invasion of Frederick's kingdom Frederick returned in 1229 and in 1230 signed with the pope the Treaty of San Germano, by which he made important concessions In 1231 Frederick issued a new body of laws for Sicily—the *Liber Augustalis*—which marked advances in humanizing penal law and in rationalizing procedure He reorganized the Sicilian fisc At the same time young Henry was forced by the German lay princes to grant them practically absolute authority within their territories and to curb the growing independence of the towns Henry rebelled against his father (1234), but Frederick easily deposed and imprisoned his son (1235) At the Diet of Mainz (1235) Frederick issued a land peace establishing an imperial court of justice to try all cases except those involving the great vassals This land peace is one of the great monuments of imperial legislation In 1236 he undertook a successful campaign against the Lombard cities, but in March, 1239, Gregory IX joined the Lombards and excommunicated the emperor Frederick issued a circular against the pope and seized most of the Papal States, in May, 1241, he captured a general council en route from Genoa to Rome, and he was threatening Rome when Gregory died While emperor and pope were thus at swords' points, Europe was threatened by a Mongol invasion (1241) Only Wenceslaus I of Bohemia opposed serious resistance, but the Mongols withdrew on the death of their leader, Otogai After the election (1243) of INNOCENT IV, Frederick offered sweeping concessions to the pope and his allies, but agreement was delayed, and the pope fled (1244) to Lyons. After deposing Frederick at the Council of Lyons (1245), Innocent gave the emperor's foes the privileges of Crusaders Frederick again appealed to the world. The election (1246) of an antiking to young CONRAD IV plunged Germany into civil war The war in Italy turned in Frederick's favor in 1250, but in December he died of dysentery Frederick II was one of the most arresting figures of the Middle Ages Norman and German in ancestry, but essentially a Sicilian, Frederick felt always a stranger in Germany He spent most of his time in Italy and Sicily Yet his able government benefited Germany as well His legal reforms set up an efficient and economical administration Himself an expert trader with far-flung business affairs, Frederick encouraged commerce and soon expanded it to Spain, Morocco, and Egypt Agriculture and industry were likewise fostered Towns, while at first somewhat curbed, enjoyed a more generous treatment in later years of his reign, and many developed into important trade centers Frederick was also a gifted artist and scientist A poet himself, he was surrounded by Provençal troubadours and German minnesingers He patronized science and philosophy and interested himself in medicine, mathematics, astronomy, and astrology His *De arte venandi cum avibus*, treating of hawking as well as of the anatomy and the life of birds, was the first modern ornithology Frederick's personality was a curious mixture of German-Christian and Byzantine-Moslem influences Though Christian, he maintained a harem, though he was constantly at outs with the papacy, he ruthlessly persecuted heretics, though he was sensitive to art and poetry, he could be extremely cruel His boundless hate of the papal opposition brought the conflict between emperors and popes to a high pitch With Frederick's death the house of Hohenstaufen fell, and the great days of the empire ended The interregnum (see HOLY ROMAN EMPIRE) ended only with the election (1273) of Rudolf I of Hapsburg See the splendid biography by Ernst Kantorowicz (1929, in German, Eng *tr* , 1931)

Frederick III, 1415–93, emperor (crowned 1452) and German king (1440–93), duke of Styria (1435–93) He became head of the house of HAPSBURG at the death (1439) of his distant cousin, Albert II, whom he succeeded as German king, being elected in 1440 His chief interest throughout his long reign lay in the aggrandizement of his family, an ambition succinctly expressed in the anagram AEIOU, with which he marked all his books and plate, after his death a note in his handwriting was found, explaining these letters as signifying *Austriae est imperare orbi universo* [Latin,=it is Austria's destiny to rule the whole world] or *Alles Erdreich ist Österreich untertan* [Ger ,=all the earth is subject to Austria] He made considerable progress toward that end by reuniting all the Hapsburg family lands under his own branch, by marrying (1477) his son, the later Emperor MAXIMILIAN I, to MARY OF BURGUNDY, and by thus setting the pattern for the subsequent marriages and successions through which the Hapsburgs were to dominate a large part of the globe However, he failed to establish himself as regent in Bohemia and Hungary for his young nephew, Ladislaus Posthumus (see LADISLAUS V), and after Ladislaus's death (1457) he had to relinquish Bohemia to GEORGE OF PODEBRAD and Hungary to MATTHIAS CORVINUS His succession to Ladislaus as duke of Austria was long challenged by the dukes of Carinthia and Tyrol But Frederick had the advantage of longevity over his rivals, who died, moreover, without direct heirs In 1485 Matthias Corvinus, who had invaded Bohemia and Austria, occupied Vienna, and Frederick was expelled from Austria, but Matthias died in 1490, and Frederick recovered his possessions As emperor, Frederick was indolent, except in matters regarding his personal aggrandizement Guided by his secretary, the brilliant Aeneas Silvius Piccolomini (later Pope PIUS II), he supported Pope EUGENE IV against Antipope Felix V (see AMADEUS VIII) In a secret agreement (1446) Frederick was promised in exchange an imperial coronation at Rome and various subsidies and revenues Again without consulting the diet, he signed the Concordat of Vienna (1448), by which Pope NICHOLAS V recovered the revenues and privileges of which the Council of Basel (see BASEL, COUNCIL OF) had deprived the pope In 1449, Frederick having already withdrawn his safe-conducts from its members, the council was dissolved and the schism came to an end Frederick III was the last emperor crowned at Rome (March, 1452) The fall of Constantinople (1453) brought forth a general demand for a new crusade, but Frederick turned a deaf ear In 1473 Frederick had an interview at Trier with CHARLES THE BOLD of Burgundy, the emperor's sudden departure—or flight—ended negotiations, but the subsequent marriage of Maximilian and the heiress of the slain and defeated

duke netted Austria a huge and cheap prize. In 1486 Frederick had Maximilian elected king of the Romans, and after 1490 he resigned most of his duties to his son At no time did Frederick make any particular effort to impose the imperial authority on the German princes Though he has been much criticized for this weakness he may possibly have foreseen the futility of such an effort, instead, he laid the foundations of the Hapsburg monarchy, one of the most authoritarian in history Frederick was an amateur astrologist, alchemist, humanist, and gardener

Frederick III, 1831–88, emperor of Germany, king of Prussia (March–June, 1888), son and successor of William I In 1858 he married VICTORIA, the princess royal of England, who exerted considerable influence over him Frederick was a liberal and a patron of art and learning He was popular, and much good was expected of his reign, but he died of cancer of the throat soon after his accession and was succeeded by his son, William II His diary of the Franco-Prussian War of 1870–71 has been translated into English

Frederick III, 1609–70, king of Denmark and Norway (1648–70), son and successor of Christian IV He at first made great concessions to the powerful nobles but later asserted his own power In 1657 war with Sweden recommenced CHARLES X of Sweden forced Denmark to accept the humiliating Treaty of Roskilde (1658) Charles X soon renewed the war, and it was only through the heroic defense of Copenhagen by Frederick that the Danish kingdom was preserved from utter destruction The Netherlands and Brandenburg, allies of Denmark, then assisted in repulsing the Swedes, and the peace of Copenhagen was made (1660) Denmark lost Skane, Halland, and Blekinge to Sweden The devastation of the war had a tremendous effect not only in impoverishing the king and the nation but in bringing to a head the opposition to the nobles By a coup d'état (1660) the monarchy was declared hereditary The King's Law (*Kongelov*), which was drawn up in 1665 by Frederick's chief minister, GRIFFENFELD, made Denmark an absolute monarchy It was not published until after Frederick's death Frederick was succeeded by his son, Christian V

Frederick IV, 1671–1730, king of Denmark and Norway (1699–1730), son and successor of CHRISTIAN V He allied himself (1699) with Augustus II of Poland and Saxony and with Peter I of Russia against CHARLES XII of Sweden in the NORTHERN WAR, but was forced to sign the humiliating Treaty of Travendal in 1700 Still hoping to recover S Sweden (lost in 1660) and to assure Danish rule in Schleswig, he again entered the war in 1709 In the peace treaties of 1720–21 Denmark renounced S Sweden but obtained Schleswig Frederick IV was industrious and able He systematized absolute monarchy, built schools, abolished serfdom, attempted to repair the damage caused by the war, and reduced the national debt He was succeeded by his son, Christian VI

Frederick V, 1723–66, king of Denmark and Norway (1746–66), son and successor of Christian VI Frederick's reign was one of commercial expansion and prosperity Loans, subsidies, and treaties aided industry, and a strong protective system was introduced The condition of the peasantry, however, remained poor In 1757 a commission was appointed to study agricultural affairs During Frederick's rule foreign affairs were conducted by J H E BERNSTORFF Frederick was succeeded by his son, Christian VII

Frederick VI, 1768–1839, king of Denmark (1808–39) and of Norway (1808–14), son and successor of CHRISTIAN VII After the court party had executed Struensee, expelled Frederick's mother, Caroline Matilda, and imposed their will on the demented king (1772), Frederick grew up under the guardianship of the dowager queen In 1784 by a peaceful coup d'état he established himself as regent He made the younger BERNSTORFF minister, and liberal reforms were instituted Except for a short war with Sweden (1788), peace reigned in a prosperous Denmark until the close of the century Denmark clung to its neutrality in the French Revolutionary Wars, but its opposition to the British ruling on neutral shipping resulted in the English attack on the Danish fleet (see COPENHAGEN, BATTLE OF, 1801) Again in 1807 England attacked neutral DENMARK and bombarded COPENHAGEN Frederick thereupon allied himself with Napoleon I and was punished at the Congress of Vienna (1814) by the transfer of Norway from Denmark to Sweden As compensation he received Rugen and Swedish Pomerania, which he exchanged with Prussia for the duchy of Lauenburg Frederick VI, who had no male issue, was succeeded by his cousin, Christian VIII

Frederick VII, 1808–63, king of Denmark, duke of Schleswig, Holstein, and Lauenburg (1848–63), son and successor of CHRISTIAN VIII The vexed SCHLESWIG-HOLSTEIN question continued during his reign The crisis precipitated by the adoption of the liberal constitution of 1849 was tentatively settled by the Berlin Treaty (1850) and the London Protocol (1852). However, the constitution was modified in 1854, in 1857, and in 1863, the last change once more offended the Germans and led to war between Denmark and Prussia under his successor, CHRISTIAN IX Numerous liberal reforms, such as emancipation of slaves in the colonies, freedom of the press, and civil marriage, were incorporated into Danish law in Frederick VII's reign

Frederick VIII, 1843–1912, king of Denmark (1906–12), son and successor of Christian IX He fought in the war with Prussia in 1864 and always retained an interest in military affairs He was succeeded by his son, Christian X Another son became king of Norway as Haakon VII

Frederick IX, 1899–, king of Denmark (1947–), son and successor of Christian X He visited the United States in 1939

Frederick I, 1657–1713, first king of Prussia (1701–13) He succeeded his father, Frederick William the Great Elector, in Brandenburg (1688) He made PRUSSIA a kingdom and in 1701 was crowned at Königsberg His rule was mediocre, and his extravagant expenses drained the finances of Prussia Frederick was a patron of Leibniz He was succeeded by his son, King Frederick William I, founder of Prussian greatness

Frederick II or **Frederick the Great,** 1712–86, king of Prussia (1740–86), son and successor of FREDERICK WILLIAM I His coarse and tyrannical father despised Prince Frederick, who showed a taste for French art and literature and no interest in government and war Ill feeling between father and son reached a climax when 18-year-old Frederick, who had been repeatedly humiliated and ill-treated, planned to escape from Germany Frederick was arrested, was forced to witness the beheading of his friend and accomplice, Lieutenant Katte, and himself only narrowly escaped a death sentence Having submitted to his father, Frederick was released He married Elizabeth of Brunswick-Bevern (1733), but separated from her shortly afterward and for the rest of his life showed no interest in women He spent the next few years at Rheinsberg, where he wrote his *Anti-Machiavel*, an idealistic refutation of Machiavelli, and began his long correspondence with VOLTAIRE Frederick William continued to regard him as an effeminate aesthete incapable of ruling a country, but immediately upon his accession Frederick showed the qualities of leadership, decision, and cynical disregard for treaties which characterized his reign In the War of the AUSTRIAN SUCCESSION (1740–48) against MARIA THERESA, Frederick invaded Silesia without warning, simultaneously offering his aid to Maria Theresa if she ceded a portion of Silesia to him A brilliant campaigner, Frederick acted with utter disregard of his allies, notably France, and twice concluded separate peace treaties with Maria Theresa (1742, 1745), both times securing Upper and Lower Silesia for Prussia In the SEVEN YEARS WAR (1756–63) Frederick faced a strong coalition including Austria, Russia, and France, with Great Britain his only strong ally Victorious at Rossbach and Leuthen (1758) he was routed (1759) at Kunersdorf by the Austro-Russians, who in 1760 occupied Berlin In that dark period, it is said, Frederick was on the verge of suicide However, the accession (1762) of his admirer, Peter III of Russia, took Russia out of the war and opened Frederick's way to victory The Peace of Hubertusburg (1763) left Frederick his previous conquests and made Prussia the foremost military power in Europe Frederick was brilliantly assisted by his principal generals, SEYDLITZ, James KEITH, FERDINAND of Brunswick, LEOPOLD I of Anhalt-Dessau, ZIETEN, and others His tactics were studied and admired by Napoleon Bonaparte and exerted great influence on the art of warfare By the first partition of Poland (see POLAND, PARTITIONS OF), in 1772, he vastly expanded the limits of Prussia His rivalry with Austria persisted Frederick was the instigator of the War of the BAVARIAN SUCCESSION (1778–79) and created (1785) the Fürstenbund [league of princes] which thwarted the schemes of Emperor JOSEPH II He continued his father's internal policies His first care was the strength and discipline of his army A "benevolent despot," he instituted important legal and penal reforms, set up trade monopolies to create new industries, forwarded education, and accomplished internal improvements such as drainage projects, roads, and canals He was economical to the point of avarice, and his grasping taxation system made him unpopular in his old age Though he improved the lot of his own serfs, the nobility was more firmly entrenched in its privileges after his reign than ever before He was tolerant in religious matters, but personally was intolerant of all religion, professing atheism to his intimates Cold and curt, he relaxed only during his famous midnight suppers at SANS SOUCI, his residence at Potsdam There, surrounded by his intimates—mostly Frenchmen—he permitted complete freedom His circle included Voltaire (who broke with him in 1753 but who later resumed his friendship from a safe distance), d'Alembert, La Mettrie, and Maupertuis Frederick's wit was corrosive and icy He wrote inconsequential poetry and remarkable prose on politics, history, military science, and philosophy Nearly all his writings were in French for he considered German fit only for stableboys He failed to appreciate such men as Lessing and Goethe, who were among his most ardent admirers In music his taste was highly developed A pupil of Quantz, he played the flute creditably He composed marches, concertos for the flute, and other pieces (a few of which are still performed) and was among the first to appreciate the greatness of J S Bach Frederick's personal appearance in his later years—small, sharp-featured, untidy, and snuff-stained—has become part of the legend of "Old Fritz." Himself an enemy of nationalism, he has been worshiped by German nationalists of later times He was succeeded by his nephew, Frederick William II See J D E Preuss, ed., *Œuvres de Frédéric le Grand* (30 vols, 1846–57) See also biographies by Carlyle and Macaulay, both classics, and the more scholarly studies by Ernest Lavisse (Eng tr, 1891), Pierre Gaxotte (Eng tr, 1942), and G P Gooch (1947)

Frederick III, king of Prussia see FREDERICK III, emperor of Germany

Frederick II, 1272–1337, king of Sicily (1296–1337), third son of Peter III of Aragon He is sometimes called Frederick III When his brother became (1291) king of Aragon as JAMES II, Frederick was regent for him in Sicily In 1295, however, James renounced Sicily in favor of his rival, CHARLES II of Naples The Sicilians rebelled and crowned Frederick A war ensued in which Frederick fought his own brother, now Charles's ally At the Peace of Caltabelotta (1302) Charles II and Pope Boniface recognized Frederick as king of Trinacria (an ancient name for Sicily) for his lifetime, but were promised its reversion to the Angevin dynasty of Naples at Frederick's death Though Frederick married a daughter of Charles II, war with Naples broke out again in 1313 Frederick, allied successively with Emperors HENRY VII and LOUIS IV, resumed the title king of Sicily and had his son Peter crowned with him in 1322 The war continued after Frederick's death

Frederick III (Frederick the Pious), 1515–76, elector palatine (1559–76) He inclined toward Calvinism and in 1563 caused the HEIDELBERG CATECHISM to be drawn up He was involved in quarrels with the Lutheran princes, notably with Augustus, elector of Saxony

Frederick IV, 1574–1610, elector palatine (1592–1610) An opponent of the Catholics and the Hapsburgs, he actively promoted (1608) a league of Protestant princes—the Protestant or Evangelical League, which he headed, its life was neither long nor prosperous His son, Frederick V, was known as Frederick the Winter King

Frederick V, elector palatine see FREDERICK THE WINTER KING

Frederick I, c 1372–1440, elector of Brandenburg (1415–40), founder of the greatness of the Hohenzollerns He was Frederick VI, burgrave of Nuremberg, and did good service for Emperor SIGISMUND, who made him vicar and captain general of the margraviate of Brandenburg He first appeared in Brandenburg in 1412 and spent years in quelling the rebellious nobles The aid of the archbishop of Magdeburg, wise concessions to nobles, and the use of superior artillery enabled him to pacify the territory, with which he was formally invested In 1420 he inherited Bayreuth and Ansbach, thus uniting the Hohenzollern lands He fought the Hussites, but broke with Sigismund Frederick was unable to realize his own ambitions in the empire At his death, the Hohenzollern territories were divided, but the family had a firm hold on Brandenburg

Frederick I or **Frederick the Warlike,** 1369–1428, elector of Saxony (1425–28) He was involved in disputes with his brothers and his uncles over division of his father's territory He and his brother William founded (1409) the university at Leipzig In 1425 he was left sole ruler of his father's territories and was invested with the electoral duchy which had been given him by Emperor Sigismund for his services against the Hussites In 1426 he was defeated by the Hussites at Aussig

Frederick III or **Frederick the Wise,** 1463–1525, elector of Saxony (1486–1525) At Wittenberg he founded (1502) the university where LUTHER and MELANCHTHON taught It was on the orders of the elector that Luther, on his way back from Worms to Wittenberg, was kidnaped by kindly hands and subjected to gentle imprisonment for his own protection in the Wartburg Frederick, however, never talked with Luther face to face and remained a Catholic, though he is thought to have inclined toward adopting the doctrines of the Reformation He was of a gentle and winning disposition and splendid character

Frederick, John Towner, 1893–, American novelist and editor, b near Corning, Iowa, grad State Univ of Iowa, 1915 He taught at Northwestern Univ from 1930 until 1944, going then to Notre Dame His novels include *Druda* (1923) and *Green Bush* (1925) In 1915 he founded the *Midland*, a little magazine which perished in 1933 with the depression, but which during its existence was remarkable for discovery of talented writers.

Frederick. 1 City (pop. 15,802), co seat of Frederick co , NW Md., near the Monocacy, in a farm area; settled 1746 The city produces brushes, hosiery, clothing, cooking utensils, pumps, and canned goods Frederick was a stop on the road to the Ohio valley and an important grain trading center Francis Scott Key Monument, Barbara Fritchie's home, Hood College (Evangelical and Reformed; for women, 1893), and the state school for the deaf are here Near by the battle of MONOCACY (1864) was fought 2 City (pop 5,109), seat of Tillman co , SW Okla , near the Red River, in a farm area Cotton processing is the chief industry There is here a collection of fossils and prehistoric implements

Frederick Augustus I, 1750–1827, king (1806–27) and elector (1763–1806) of Saxony, grand duke of Warsaw (1807–14) He sided with the allies in the French Revolutionary Wars and joined Prussia in the campaign of 1806 against Napoleon I However, after the French victory at Jena, he made a separate peace with Napoleon, with whose approval he took the title king of Saxony Napoleon also made him nominal ruler of the grand duchy of Warsaw Frederick Augustus did not abandon his alliance with Napoleon in time and as a result lost a large part of Saxony to Prussia at the Congress of Vienna (1815)

Frederick Augustus III, 1865–1932, king of Saxony (1904–18) The German revolution forced him to abdicate The bluff heartiness of his character made him very popular and gave rise to innumerable anecdotes of somewhat elementary humor

Frederick Augustus I, elector of Saxony see AUGUSTUS II, king of Poland

Frederick Augustus II, elector of Saxony see AUGUSTUS III, king of Poland

Frederick Augustus, 1763–1827, duke of York and Albany, second son of George III of England. Though he proved (1793–95) an incompetent general against the French, he was made field marshal in 1795 and commander in chief in 1798 and set about removing the corruption which riddled the army His good work was interrupted in 1809, when he was accused of bribery in promotions promised by his former mistress to young officers He was cleared and reappointed in 1811 The duke was heir to the throne after his father's death (1820) but died before his elder brother, George IV

Frederick Barbarossa: see FREDERICK I, emperor

Frederick Henry, 1584–1647, prince of Orange, son of William the Silent and Louise de Coligny He became stadholder of the United Netherlands upon the death (1625) of his brother, MAURICE OF NASSAU The Netherlands were still struggling to maintain their independence from Spain An able diplomat, he maintained friendship with France and in 1635 concluded an alliance with France and Sweden against the Hapsburgs in the THIRTY YEARS WAR By the capture of the frontier forts of 's Hertogenbosch (1629), Maastricht (1632), and Breda (1637), he became famous as a master of siegecraft In 1631 the United Provs showed their trust in his leadership by declaring the stadholderate hereditary in his family The period of his rule is known as "the Golden Age of Frederick Henry" because of the remarkable state of the arts (represented by such men as Rembrandt and Frans Hals), of the sciences, and of the commerce, prosperity, and prestige of the Netherlands. One year after his death the independence of the Netherlands was recognized in the Peace of Westphalia His son, William II, succeeded him as stadholder

Frederick Louis, 1707–51, prince of Wales, b Hanover, eldest son of George II of England By his wife, the Princess Augusta of Saxe-Gotha, he had several children, the eldest of whom became George III A coarse, unhappy, dissolute man, Frederick's marital and financial difficulties intensified his estrangement from his father His political opposition to the king and to Robert Walpole was used and furthered by Viscount Bolingbroke and later by William Pitt (earl of Chatham) See Sir George Young, *Poor Fred the People's Prince* (1937), Averyl Edwards, *Frederick Louis* (1947)

Fredericksburg. 1 Town (pop 3,544), co seat of Gillespie co., S central Texas, W of Austin, inc 1928 Founded by Germans in 1846, the long, neat town has persisted in German stone architecture, German speech, and German customs The citizens are busy with varied small industries and with handling and shipping farm produce and the wool, cattle, and mohair of surrounding ranches as well as granite quarried near by Hunting and fishing bring visitors 2 City (pop 10,066), N Va , on the Rappahannock and N of Richmond, settled 1671, laid out 1727, inc. as a town 1781, as a city 1879 A city of fine old houses and historic interest, Fredericksburg attracts many tourists It is also a farm trade center with flour, textile, cellophane, and other industries Its old houses include that in which Mary Washington lived (1774–89), "Kenmore," the home of Washington's sister, the Rising Sun Tavern (c 1760, a rendezvous for American patriots in the Revolution), James Monroe's law office, and the home of John Paul Jones. Mary Washington College (now affiliated with the Univ. of Virginia) is here. Near by are WAKEFIELD (Washington's birthplace) and Fredericksburg and Spotsylvania County Battlefields Memorial (2,420 71 acres, est 1927), commemorating the Civil War battles of Fredericksburg, CHANCELLORSVILLE, Wilderness, and Spotsylvania Courthouse (see WILDERNESS CAMPAIGN). See J. T Goolrick, *Historic Fredericksburg* (2d ed , 1922), A T Embrey, *History of Fredericksburg* (1937)

Fredericksburg, battle of, in the Civil War, fought Dec 13, 1862, at Fredericksburg, Va In Nov , 1862, the Union general, Ambrose BURNSIDE, moved his three "grand divisions" under W B Franklin, E V Sumner, and Joseph Hooker to the north side of the Rappahannock river opposite Fredericksburg, his objective was Richmond Delay in bringing up pontoons prevented Burnside from seizing the heights on the south bank immediately. R E LEE, having anticipated the move, soon confronted him from those heights with James Longstreet's 1st Corps, which was shortly joined by Stonewall Jackson's 2d The Federals crossed on Dec 11–12 and attacked Lee on Dec 13 After Jackson had repulsed Franklin's attack on the Confederate right, Burnside ordered Sumner to storm Longstreet's impregnable position on Marye's Heights Successive charges brought death to droves of gallant Union troops Burnside's subordinates protested against renewing the foolhardy assaults, and on Dec 15 the Federals made an undisturbed withdrawal to the north bank Union losses, more than twice the Confederate, were over 12,000 The defeat caused profound depression throughout the North See G F R Henderson, *The Campaign of Fredericksburg* (1886, 3d ed , 1891)

Frederick the Fair, c 1286–1330, German antiking (1314–26), duke of Austria, son of King Albert I On the death of Henry VII he was elected by the Hapsburg party as rival king to Emperor Louis IV He was captured in 1322 by Louis and renounced all his rights in 1326

Frederick the Great see FREDERICK II, king of Prussia

Frederick the Warlike: see FREDERICK I, elector of Saxony

Frederick the Winter King, 1596–1632, king of Bohemia (1619–20), elector palatine (as Frederick V), son of Frederick IV The Protestant diet of Bohemia, denouncing the Catholic Ferdinand (Emperor FERDINAND II), chose Frederick as king Frederick accepted but failed to equip an army against the emperor and did not receive the aid expected from his father-in-law, James I of England His supporters were routed at the White Mt (1620) Frederick thus lost Bohemia, from his short tenure came the jeering name, the Winter King He was put under the ban of the empire and, after the defeat of his few allies, was stripped of all his remaining territories The electorate was transferred to Maximilian I of Bavaria (see ELECTORS). These struggles were the first campaigns of the THIRTY YEARS WAR The Hanoverian kings of England were descended from Frederick and his wife, ELIZABETH

Frederick the Wise. see FREDERICK III, elector of Saxony

Fredericktown. 1 City (pop 3,414), co seat of Madison co , SE Mo , on a branch of the St Francis river, in the Ozarks, founded 1819 Lead, cobalt, copper, zinc, and iron deposits are in the region Clark National Forest is near by 2 Village (pop 1,297), N central Ohio, S of Mansfield, laid out 1807

Frederick William I, 1688–1740, king of Prussia (1713–40), son and successor of Frederick I His reign is remarkable for his administrative reforms He practiced the most rigid economy at his death there was a large surplus in the treasury The Prussian army was organized into an efficient instrument of war In the War of the Polish Succession, his troops fought against the French Known as the soldier-king, Frederick William had a mania for military drill and a weakness for collecting six-footers for his guard His tastes were coarse, and he had a profound contempt for his gifted heir, who was to succeed him as FREDERICK II and whom he had nearly executed for desertion See R R. Ergang, *The Potsdam Führer* (1941)

Frederick William II, 1744–97, king of Prussia (1786–97), nephew and successor of Frederick II. He joined the European coalition in support of Louis XVI and fought in the early campaigns of the French Revolutionary Wars, financial difficulties and the problem of the eastern frontier led him to make a separate peace at Basel (1795) He joined in the second and third Polish partitions (1793 and 1795, see POLAND, PARTITIONS OF) His extravagance left a ruined exchequer. He was a patron of the arts and an amateur cellist, Mozart dedicated three string quartets to him His son, Frederick William III, succeeded him

Frederick William III, 1770–1840, king of Prussia (1797–1840), son and successor of Frederick William II. Well intentioned but weak and vacillating, he endeavored to maintain neutrality in the Napoleonic Wars In 1806 events forced him to take up arms against France The crushing defeat at Jena and the humiliating Treaty of TILSIT (1807) served to waken the king to the need of reconstruction in Prussia. Unable to carry through the reforms himself, he was far-sighted enough to appoint capable ministers and to give them a free hand The reforms of Karl vom und zum STEIN, Karl August von HARDENBERG, and SCHARNHORST prepared the way for the Prussian war against Napoleon and laid the basis of the modern Prussian state. Forced to send an auxiliary force to aid Napoleon's Russian campaign, the king was finally persuaded to support the Convention of Tauroggen (see TAUROGGEN), concluded with the Russians by his general, Yorck von Wartenburg A few weeks later a military alliance with Russia was signed, and in March, 1813, the king declared war on France After Napoleon's defeat and the Congress of Vienna, which he attended, Frederick William became increasingly reactionary He joined the HOLY ALLIANCE and refused to grant the constitution he had promised His consort, Queen LOUISE, who had been far more popular than the king, died in 1810 His elder son, Frederick William IV, succeeded him. His second son was to become Emperor William I.

Frederick William IV, 1795–1861, king of Prussia (1840–61), son and successor of Frederick William III A romanticist, a mystic, and, at first, a very confused liberal, he amused himself with vague schemes of reform—which actually granted nothing—until the outbreak of revolution in Prussia in March, 1848 After crushing the revolutionists, he imposed (Dec , 1848) an extremely conservative constitution on Prussia Frederick William refused the crown of a united Germany offered him (1849) by the FRANKFURT PARLIAMENT on the ground that a monarch by divine right could not receive authority from an elected assembly In 1848 the first Prusso-Danish War over SCHLESWIG-HOLSTEIN took place Frederick William's scheme for a German union was prevented by Austria in the Treaty of OLMÜTZ (1850) In 1857 his mental condition necessitated a temporary (which later became a permanent) regency of his brother and successor, William I

Frederick William, former crown prince of Germany see WILLIAM

Frederick William, known as **the Great Elector,** 1620–88, elector of Brandenburg (1640–88), son and successor of George William At his accession the scattered lands of the Hohenzollerns were devastated and depopulated by the THIRTY YEARS WAR Beginning with few resources and no dependable troops, Frederick William raised an efficient army He improved relations with Sweden, France, and the Netherlands At the Peace of Westphalia, E Pomerania and other territories were secured to him, and in the years 1648–60, Frederick William aimed at the leadership of the north German states His sovereignty over Prussia (previously subordinate to Poland and threatened by Sweden) was recognized at the Peace of OLIVA (1660) Desire to consolidate his widely scattered lands and fear of French domination directed his policy When CHARLES XI and the Swedes, as allies of France, invaded his lands, Frederick William repulsed them in the brilliant victory of Fehrbellin (1675) and thus increased his prestige He laid the foundation of the Prussian state by strengthening central administration, husbanding the resources of his lands, and improving communication (he constructed the Friedrich Wilhelm Canal). His son became king of Prussia as Frederick I

Frederick William, 1771–1815, duke of Brunswick, German military hero On the death (1806) of his father, CHARLES WILLIAM FERDINAND, his duchy was seized by Napoleon and added to the kingdom of Westphalia When war broke out between France and Austria in 1809, Frederick William formed a free corps, the "Black Brunswickers," and in a dashing foray advanced through Germany and captured Brunswick He soon was hopelessly cut off but succeeded in fleeing to England. Returning in 1813, he took possession of his duchy, but he was soon afterward killed at Quatre Bras in the Waterloo campaign

Fredericton, city (pop 10,062), provincial capital (since 1788), S central N B , on the St. John river and NW of St John, founded 1785 by United Empire Loyalists It is the seat of Parliament House and Government House and of the Univ. of New Brunswick (see NEW BRUNSWICK, UNIVERSITY OF). It has an Anglican cathedral (built 1849), the Maritime Forest Ranger School, and a dominion experiment station, with farms It is the center of the provincial lumber trade, with woodworking and leather-goods manufacturing, and is also a hunting and fishing center. The city is named for Prince Frederick, son of George III

Freedmen's Bureau, U S government agency, formed to aid and protect the newly freed Negroes in the South after the Civil War. It was established by an act of March 3, 1865, under the name "bureau of refugees, freedmen, and abandoned lands" and was to function for one year after the close of the war A bill extending its life indefinitely and greatly increasing its powers was vetoed (Feb 19, 1866) by President Andrew Johnson, who viewed the legislation as an unwarranted (and unconstitutional) continuation of war powers in peacetime The veto marked the beginning of the President's long and unsuccessful fight with the radical Republican Congress over Reconstruction In slightly different form, the bill was passed over Johnson's veto on July 16, 1866 Organized under the War Dept , with Gen Oliver O Howard as its commissioner, and thus backed by military force, the bureau was one of the most powerful instruments of Reconstruction Howard divided the ex-slave states, including the border slave states which had remained in the Union, into 10 districts, each headed by an assistant commissioner The bureau's work consisted chiefly of five kinds of activity—relief work for both blacks and whites in war-stricken areas, regulation of Negro labor under the new conditions, administration of justice in cases concerning the Negro, management of abandoned and confiscated property, and support of education for Negroes Its career has been characterized as "a mixture of welfare and abuse, of genuine service and shameful corruption " In its relief and educational activities the bureau compiled an excellent record, which, however, was too often marred by the excesses of its agents (from both military and civil life) in the local offices, who "varied all the way from unselfish philanthropists to narrow-minded busybodies and thieves " The more responsible officials of the bureau had a difficult time in convincing the Negro that his dream of "forty acres and a mule," often deliberately inspired by unscrupulous agents, was not to be Ultimately the bureau became little more than a political machine, organizing the black vote for the Republican party, and as such was thoroughly hated in the South When, under the congressional plan of Reconstruction, new state governments based on Negro suffrage were organized in the south (with many agents holding various offices), the work of the Freedmen's Bureau was discontinued (July 1, 1869) Its educational activities, however, were carried on for another three years See P S Peirce, *The Freedmen's Bureau* (1904), L J Webster, *The Operation of the Freedmen's Bureau in South Carolina* (1916); J W. De Forest, *A Union Officer in the Reconstruction* (1948)

Freedom, industrial borough (pop 3,227), W Pa , on the Ohio river and NW of Pittsburgh, settled 1832, inc 1838 An oil works and an undertaking-supply factory are here.

freedom: see liberty.

freedom of speech, of the press, of the seas: see speech, freedom of, etc

freedom of the will, in philosophy, the doctrine that the will of the individual can, and does, determine at least some of the acts of the individual. It has been opposed to the various types of determinism The doctrine of freedom is virtually unprovable from a scientific point of view, the chief evidence for it in philosophy being faith which arises from the conscious feeling that man is free. Kant maintained that the dependence of the phenomenal world on the mind for interpretation makes freedom possible, and the categorical imperative implies its actuality. In theology the problem of freedom is important for its relation to the sins of men who are created by God See grace and Pelagianism

Freehold, borough (pop 6,952), co. seat (since 1715) of Monmouth co , E central N J , E of Trenton, settled before 1700, called Monmouth Courthouse 1715–1801, inc as a town 1867, as a borough 1919 It is a farm trade center with large rug works and liquor distilleries Of interest are the 94-foot war memorial shaft (1884) near the courthouse, the collections in the county historical association building (1931), a race track (opened 1873, reopened 1937), Hankinson House (1755), and, 3 mi. northwest, the Tennent Church (1751) The battle of Monmouth (see Monmouth, battle of) took place near by Philip Freneau lived in Freehold

freehold. see tenure

Freeland, industrial borough (pop 6,593), NE Pa , S of Wilkes-Barre, laid out 1868, inc 1876 It has textile mills and anthracite collieries

Freeman, Douglas Southall, 1886–, American editor and historian, b Lynchburg, Va , grad Richmond College, 1904, Ph D Johns Hopkins, 1908 He was editor of the Richmond *News Leader* from 1915 to 1949, when he retired to devote most of his time to historical writing An authority on military strategy and on the military history of the Civil War, Freeman wrote *R E Lee* (4 vols , 1934–35), which won the 1935 Pulitzer Prize for biography, and *Lee's Lieutenants* (3 vols , 1942–44) The first two volumes of his projected six-volume biography of George Washington appeared in 1948 He edited *A Calendar of Confederate Papers* (1908) and also wrote *Virginia, a Gentle Dominion* (1924), *The South to Posterity* (1939), and *John Stewart Bryan* (1947)

Freeman, Edward Augustus, 1823–92, English historian, educated at Oxford He devoted his life to intense and careful literary and historical work and gained a great reputation In 1884 he was made regius professor of modern history at Oxford His major work was the monumental *History of the Norman Conquest* (6 vols , 1867–79), which minimized the results of the Norman Conquest and glorified Teutonic influences His extreme views have since been generally conceded to be in error, but his care in his work, his dependence upon sources, and his deep understanding of politics give him a secure place as a historian His lectures, *Methods of Historical Study* (1886), set forth ideas that were influential Unfortunately his narrow understanding of the scope of sources and his great interest in politics also affected British history writing His own voluminous writings included not only other works in British history, such as *The Reign of William Rufus* (2 vols , 1882), but also studies in ancient history such as his *History of Sicily from Earliest Times* (4 vols , 1891–94, incomplete, covering the period to 289 B C) and other works in various fields such as *Byzantine History in the Early Middle Ages* (1900)

Freeman, Mary Eleanor Wilkins, 1852–1930, American novelist and story writer, b Randolph, Mass She lived there or in Brattleboro, Vt , until her marriage to Dr Charles Freeman, after which she lived in Metuchen, N J Her stories of rural New England are honest, realistic pictures of a severe and frustrating social life The best of them are collected in *A Humble Romance and Other Stories* (1887) and *A New England Nun and Other Stories* (1891) There are many other volumes of stories, a play, and several undistinguished novels See her *Selected Stories* (ed with an introduction by H W Lanier, 1927)

Freeman-Thomas, Freeman: see Willingdon, Freeman-Freeman-Thomas, 1st marquess of

Freemasonry, the teachings and practices of the secret fraternal order of Free and Accepted Masons The order has many adherents in many parts of the world. Its claims to ancient origins are not universally accepted, but organizations of "operative" masons, builders in stone, existed in the Middle Ages, with symbols and rites closely related to those of modern "speculative" masonry, which does not work in stone but preserves much of the form and spirit of a medieval guild The medieval masonic documents are evidently based on old established custom By some it is thought probable that organizations of builders in stone originated almost as early as their distinct craft and that ancient ways are embodied in modern Freemasonry. Custom is the supreme authority in the order A masonic body that seeks to overthrow custom in an essential ceases to be recognized as masonic. The admission of an atheist or a woman to membership would be a departure from custom of this kind The teachings of the order include obedience to the law of the land; and for this reason there is no international organization of Masons, but the organization in each nation is independent of all others Charity is enjoined on Masons and practiced by them, but they have no fixed system of doles. Each member is the judge of what he can and should do to relieve distress If a "lodge," or local organization, makes a gift, it is upon consideration of the special case, and the gift is quite without publicity Masonic charity is not limited to Masons or their families, though special obligations to these are recognized. The methods by which the doctrines of Masonry are imparted are typically the ancient methods of symbol and ritual Freemasonry has encountered opposition, partly from those who object to all secret societies, of which the Masonic is the strongest In the United States the chief instance of opposition was the Anti-Masonic party All higher Masonic degrees are based on the three degrees of the Blue Lodge—Entered Apprentice, Fellowcraft, and Master Mason Higher degrees include those of the Royal Arch Masons, the Knights Templar, and the Scottish Rite Masons Affiliated organizations include the Order of the Mystic Shrine, to which only those with high Masonic degrees are eligible, the Order of the Eastern Star, to which women are admitted, and Acacia, for Masons who are college students A list of distinguished Masons would include Goethe, in Germany, Burns, in Scotland, and Washington, in the United States See R. F Gould, *The History of Freemasonry throughout the World* (6 vols , rev ed , 1936), J F Newton, *The Builders* (9th ed , 1927)

Freeport. 1 City (pop 22,366), co seat of Stephenson co , N Ill , W of Rockford, settled 1835, inc 1855 It is a trade and manufacturing center in a farm and dairy region, among its products are cheese, toys, and batteries The city was the scene of an important Lincoln-Douglas debate (1858), in which Douglas expounded his famous "Freeport doctrine " Near by occurred a battle with Black Hawk's Indian forces 2 Town (pop 2,764), SW Maine, on Casco Bay between Portland and Brunswick, settled c 1700, inc 1789 In a tavern here were signed (1820) papers preliminary to the admission of Maine into the Union as a state Freeport grew as a fishing, shipping, and shipbuilding center, crab-meat packing is a later industry Near by is a sandy region, the Desert of Maine 3 Village (pop 20,410), on the south shore of Long Island, SE N Y , settled c 1650, inc 1892 It is a resort and deep-sea-fishing center and has varied industries 4 Industrial borough (pop 2,710), SW Pa , on the Allegheny river and NE of Pittsburgh, settled c 1792, laid out c 1800 Coal mining, brick-making, and dairying are done here 5 City (1940 pop 2,579, 1947 estimated pop 8,900), S Texas, at the mouth of the Brazos SSW of Houston A port from the 1820s, it was inconsiderable until sulphur production made it important in the second decade of the 20th cent Improvement of the port and development in the '30s and in the Second World War gave it a plant for taking magnesium from brine and other chemical industries It is the center of the booming industrial area called Brazosport, which includes Velasco and other towns. The Intracoastal Waterway crosses the Brazos here

free port, port, or section of a port, exempt from customs duties and regulations. Goods may be landed at a free port for storage and handling, and they may even in some places be made into manufactures Duty is charged only if the goods are moved from the free port into the adjacent territory Free ports originated in the late Middle Ages, when the burdensome tariffs charged by many petty states were threatening ruin to recently revived maritime commerce The high tariffs later levied in the period of mercantilism necessitated additional free ports Cities of the Hanseatic League were among the earliest free ports The system was extended to Leghorn and Genoa in the 16th cent and to other Italian cities, as well as Marseilles, Bayonne, and Dunkirk, in the 18th cent In the 19th cent the danger of smuggling caused the closing of many free ports In the United States bonded warehouses served some of the functions of the free port That arrangement permits goods to be stored and processed in specially licensed warehouses if a bond exceeding the amount of the customs duties is first posted In 1934 the Foreign Trade Zones Act authorized the establishment of free ports in the United States, but with a prohibition of manufacturing In 1937 the first American free port was opened at Stapleton, Staten Island, N Y

Freer, Charles Lang (frēr), 1856–1919, American art collector, b. Kingston, N Y He gave to the Smithsonian Institution of Washington, D C., his entire collection and the building (designed according to his direction) which houses it, called the Freer Gallery of Art A railway and industrial capitalist, he retired from active business in 1900, devoting the rest of his life to art collecting. His taste for the works of Whistler and of Oriental masters, and discovery of a close kinship between the two, re-

sulted in a warm friendship with Whistler and the development of an unrivaled collection of his works, this included the Peacock Room from the Leyland house, London, which had Whistler decorations The gallery also contains a fine collection of Chinese and Japanese paintings and art objects and a remarkable collection of antique glazed pottery, with examples from Egypt, Babylonia, Persia, India, China, Korea, and Japan

Freer (frēr), city (pop 2,346), SW Texas, WNW of Corpus Christi, inc 1938 Once a ranching town, it grew rapidly with the production of oil and gas

freesia, decorative, fragrant flower of the genus *Freesia,* South African herbs grown from corms, largely in greenhouses for winter and spring blossoming The flowers, yellow or white or tinted various colors, are borne at the end of the stem in a spike that turns at nearly a right angle Freesia culture requires a cool place

free silver. The free coinage of silver became a popular proposal in the United States soon after the panic of 1873, and it was a major political issue in the next quarter century The hard times of 1873-78 stimulated advocacy of cheap money, and the GREENBACK PARTY offered presidential candidates several times and flourished in local elections, especially in 1876 and 1878 The market price of silver fell fast after 1873, because of American and European demonitization of silver and because of increases in mine production Inflationists, not getting paper-money expansion, turned to silver, for free coinage of silver would serve their purpose as would greenbacks, so long as a silver dollar was worth intrinsically less than a gold dollar Silver-mining interests also wanted silver coinage to aid their business The ensuing demands for unlimited silver coinage led to the compromise BLAND-ALLISON ACT of 1878, providing for definitely limited coinage Sectional lines over money were becoming sharply drawn The financial East favored sound money and the gold standard The indebted agrarian classes of the South and West demanded inflation, to ease debt burdens in the face of falling prices of farm products Their silver demands were reinforced by Western silver-mining interests As the prosperity of the early '80s vanished, demands arose again for free silver By 1890 the political strength of the silver advocates, especially in the West, was so great that the Sherman SILVER PURCHASE ACT, another compromise, was passed, to replace the Bland-Allison Act and to provide for greater government purchase of silver The West's discontent was still more emphasized by the rise of the POPULIST PARTY, with demands including free silver The silver advocates were no longer content with compromise measures and were displeased by the candidacy of Grover Cleveland in 1892 They were enraged when the panic of 1893 brought repeal of the Sherman Silver Purchase Act By the middle of his second term, Cleveland's Western and Southern opponents had captured the Democratic party In 1896 free silver became the major issue of a presidential campaign when W J BRYAN made it the chief plank of his platform McKinley's victory over Bryan then and again in 1900, coupled with increasing gold supplies and returning prosperity, minimized free silver as a political issue Subsequent ideas for monetary expansion have largely taken other forms Yet the silver bloc, partly inspired by Nevada interests, continued active and secured mandatory legislation for heavy Treasury purchases of silver under F D Roosevelt See A B Hepburn, *History of Coinage and Currency in the United States* (1924), H T Peck, *20 Years of the Republic* (1905), W J Bryan, *The First Battle* (1896)

Free-Soil party, in U S history, a political party which came into existence in 1847 48 chiefly because of rising opposition to the extension of slavery into any of the territories newly acquired from Mexico The struggle over the WILMOT PROVISO in Congress helped to consolidate the Free-Soil forces, which were composed of those New York Democrats known as BARNBURNERS, the anti-slavery Whigs, and members of the former LIBERTY PARTY These forces met in mass convention at Buffalo in Aug , 1848, where the party was formally organized and Martin Van Buren and Charles F Adams (1807-86) chosen as its candidates for President and Vice President respectively The platform also declared for a homestead law, internal improvements, and a tariff for revenue only It polled 291,263 votes and, by giving New York state to the Whigs, was a decisive factor in making Zachary Taylor President The Compromise of 1850 supposedly settled the slavery issue, and the Barnburner element went back to its old allegiance A few radical antislavery men kept the organization in existence and gave John P Hale 156,667 votes for President in 1852 In 1854 the party was absorbed into the new Republican party See T C Smith, *The Liberty and Free Soil Parties in the Northwest* (1897)

freethinkers, those who arrive at conclusions, particularly in questions of religion, by employing the rules of reason while rejecting supernatural authority or ecclesiastical tradition The name came into general use in the early part of the 18th cent., soon after the publication of a book by Anthony Collins, *Discourse of Freethinking Occasioned by the Rise and Growth of a Sect Called Freethinkers* (1713) Societies and groups were usually indicated by the word In particular it denoted the deists in England The development in England has resulted in the formation of such groups as the National Secular Society and the Rationalist Press Association In France the movement for free thought is associated with the time, prior to and during the French Revolution, when reading and debating clubs were organized throughout the country The movement was aided by the growth of scientific investigation and discovery (e g , Darwinian evolution) which seemed to disclose the inadequacy of a literal interpretation of the Scriptures In the United States the organizations which have been established to further this movement are the American Rationalist Association, the American Secular Union, and the Freethinkers of America The International Order for Ethics and Culture, organized at Berlin in 1908, is designed to investigate the ethical factors in society without theological or metaphysical bias

Freetown, city (pop 55,358), capital of Sierra Leone, a port on the Atlantic Ocean It was founded in 1787 by the British as a settlement for liberated slaves Diamonds, gold, chromite, and palm oil are exported There is a college

Freetown, rural town (pop 1,584), SE Mass , N of New Bedford, settled 1675, inc 1683 It includes East Freetown village

free trade, in modern usage, trade or commerce carried on without duties to curtail imports or without bounties to encourage home production The basic argument for free trade is territorial division of labor that each region should produce what it can most cheaply and best and should exchange its products for those it is less able to produce rather than restrict the importation of goods produced more cheaply elsewhere as a means of raising prices at home (see PROTECTION) Free trade within the national borders, almost axiomatic in modern thinking, only came about as states abolished domestic trade barriers France began this abolition in the 17th cent under Colbert's ministry, the German states, in the Zollverein movement after 1818 In England domestic free trade is of long standing In the United States the desire to assure freedom from internal barriers was a factor in calling the Constitutional Convention England, the classic free-trade nation, evolved the term "free trade" during agitation for removal of the privileges of the chartered companies Later, free trade implied a desire for a moderate tariff policy, especially in regard to trade with France In the 18th cent Adam Smith's endorsement of free trade in his *Wealth of Nations* came at a time when England's industry was growing more rapidly than that of other nations and when her manufacturers wished to import cheap food for their laborers and cheap raw materials for their factories The distress of the working classes under the CORN LAWS lent cogency to the arguments of the industrialists In 1846 the agitation of the Anti-Corn Law League, led by Cobden, secured repeal of the tariff on grain, following the outbreak of a disastrous famine in Ireland Full free trade was established under Gladstone in 1869 After the First World War, Britain reintroduced protection and a system of empire preference in an attempt to establish a greater measure of economic autonomy France, despite the arguments of the 18th-century physiocrats (who decried a tax on commerce as pointless since land, not trade, was the true source of wealth), has generally followed an anti-free-trade policy, as have other European nations Throughout most of its history, the United States has followed high-tariff policies despite the strong protests of a large opposed minority In the period of international economic dislocation in the 1930s, the United States reversed earlier policy to sign reciprocal trade treaties with many foreign governments, embracing a policy of selective tariff reduction for mixed economic and political reasons Trade barriers have been increasingly viewed as promoting international discord See CUSTOMS, INTERNATIONAL REVENUE, TARIFF

free verse or **vers libre** (vĕr' lē'bru), term loosely used for rhymed or unrhymed verse made free of conventional and traditional limitations and restrictions in regard to metrical structure Cadence, especially the cadence of common speech, is often substituted for rhythmical meter Some modern verslibrists have said that the biblical Song of Solomon, part of the writings of Sir Thomas Browne, and certain poems of Matthew Arnold are essentially free verse The appellation free verse has been applied to the irregular poetry of Whitman, the verse of the French poets Gustave Kahn and Paul Fort, and to some of the poetry of such writers in English as Ezra Pound, Amy Lowell, H D , John Gould Fletcher, Alfred Kreymborg, Richard Aldington, T S Eliot, Archibald MacLeish, Conrad Aiken, and Gertrude Stein

freezing, see MELTING POINT and REFRIGERATION.

Freiberg (frī'bûrg, Ger frī'bĕrk), city (pop 42,303), Saxony, E Germany, between Dresden and Chemnitz, in a region of silver and lead mines Settled by miners in the 12th cent., it has a famous mining academy (founded 1765), the mines themselves are no longer worked. Precision instruments are made here In the Thirty Years War, Freiberg resisted a siege by the Swedes (1642-43), and in the Seven Years War it was the scene (1762) of a Prussian victory over the Austrians

Freiburg, Switzerland see FRIBOURG

Freiburg im Breisgau (frī'bûrg ĭm brīs'gou), city (pop 93,075), S Baden, W Germany, near the Rhine and at the edge of the Black Forest Primarily a cultural center, it is an archiepiscopal see and the seat of a famous university, founded in 1457 After 1945 it became the capital of the French-occupied part of Baden Founded in 1120, it passed, with the rest of the BREISGAU, to the Hapsburgs in 1368 In the Thirty Years War the Bavarians and Austrians were defeated here (1644) by the French under Turenne and Louis II de Condé The French held Freiburg from 1677 to 1697 and again (1744-49) in the War of the Austrian Succession In 1805 Freiburg passed to Baden The splendid cathedral (13th cent), which is partly Romanesque, partly Gothic, was lightly damaged in the Second World War Many other historic buildings remain

freight, originally goods carried by water, now, especially in the United States, extended to goods sent by land It does not include some goods for which arrangements are made for quick passage, as baggage, mail, and express Railroads use various kinds of cars for carrying different kinds of freight, such as gondola cars for sand and coal, stockcars for livestock, tank cars for oil, and refrigerator cars for perishable foods Much of the loading and unloading is done by machinery The INTERSTATE COMMERCE COMMISSION has some authority over rates, to prevent excessive or discriminatory charges Ocean freight, formerly carried by sailing vessels, is now carried by steamships of regular steamship lines or by tramp steamers, free to go where they may find most profit If freight charges are not prepaid, the carrier has a lien on the goods to secure payment on delivery The contract between shipper and carrier is called a bill of lading The railroads have met competition from trucks by speeding up deliveries through better locomotives, lighter weight cars, new methods of routing, and improved handling at terminals See P H Middleton, *Freight Transport in the United States* (1945)

Freiligrath, Ferdinand (frī'dēnänt frī'lĭkhrat), 1810-76, German poet Fled by the revolutionary spirit in 1841, he expressed such sentiments in his *Ein Glaubensbekenntniss* [a confession of faith] (1844) that he was forced to flee He returned in 1848 but was again forced to leave Germany after the publication of his *Neuere politische und soziale Gedichte* (1850) He spent the years 1851-68 in England and translated Burns, Tennyson, and Longfellow's *Song of Hiawatha* Among his best-known poems are "Ruhe in der Geliebten" and "O Lieb'," which was set as a song by Liszt and used as the motto of the composer's piano arrangement, the third *Liebestraum* See selection of Freiligrath's works tr by his daughter, Mrs Freiligrath-Kroeker (1867)

Freimund Raimar see RÜCKERT, FRIEDRICH.

Freising (frī'zĭng), city (pop. 24,482), Upper Bavaria, on the Isar river It has manufactures of motors, textiles, and brewery implements The cathedral was started in the 8th cent Freising was founded in 724 by St Corbinian, and its bishops held temporal power until the see was secularized in 1803 The diocese was restored in 1817, the archbishop of Munich being also bishop of Freising

Fréjus (frāzhüs'), town (pop 5,587), Var dept , SE France, in Provence, near the Mediterranean Its port, founded by the Romans, is silted and has been replaced by that of nearby SAINT-RAPHAËL There are important Roman ruins and a cathedral with a 5th-century baptistery Fréjus suffered in the Allied invasion of 1944

Frelinghuysen, Frederick Theodore (frē'lĭnghī"zun), 1817-85, U S Secretary of State (1881-85), b Millstone, Somerset co , N J , grad Rutgers, 1836 He studied law in the office of his uncle, Theodore Frelinghuysen, who had adopted him when he was three, and on admission to the bar in 1839 inherited his uncle's practice Frelinghuysen, a Republican, was attorney general of New Jersey (1861-66) and U S Senator (1866-69, 1871-77) In the Senate he supported the radical Republican Reconstruction program and later was associated with the "Stalwarts" led by Roscoe Conkling On the death of James A Garfield and the accession of Chester A Arthur to the presidency, James G Blaine resigned as Secretary of State to be succeeded (Dec , 1881) by Frelinghuysen Frelinghuysen canceled Blaine's plans for a Pan American Congress and urged reciprocity agreements with Latin American countries. Unable, like his predecessors, to persuade Great Britain to modify the terms of the Clayton-Bulwer Treaty, he negotiated (Dec., 1884) a treaty with Nicaragua allowing the United States the right to build a canal there under joint ownership of the two countries. However, Grover Cleve-

land, when he became President, withdrew the treaty from consideration by the Senate Frelinghuysen generally carried on a patient, pacifistic policy throughout Arthur's term. See S F Bemis, ed, *The American Secretaries of State and Their Diplomacy*, Vol VIII (1928)

Frelinghuysen, Theodore, 1787–1862, American statesman, b Franklin, N J, grad Princeton, 1804 Admitted to the bar in 1808, he practiced law in Newark and soon gained political prominence As U S Senator (1829–35), he won renown for his speech opposing the removal of the Cherokee and other southern Indians to lands W of the Mississippi Elected mayor of Newark in 1836, he served until 1839, when he became chancellor of New York Univ In 1844, he was vice presidential candidate on the Whig ticket with Henry Clay From 1850 until his death, Frelinghuysen was president of Rutgers College A deeply religious man, he was associated prominently with numerous religious and charitable organizations and contributed amply to them Frederick Theodore Frelinghuysen was a nephew and adopted son

Fremantle (frē'măn"tul, frī'muntul), principal port (pop 18,783) of Western Australia, SW of Perth, at the mouth of the Swan river and at the terminus of the Trans-Australian RR, founded 1829 The chief exports are wheat, wool, fruit, and flour Fremantle North (pop 2,945) and Fremantle East (pop 6,198) are not included in the municipality of Fremantle

Frémiet, Emmanuel (ĕmänüĕl' frāmyā'), 1824–1910, French sculptor, pupil and nephew of Rude He was noted for his animal and historical figures His *Wounded Dog* (Luxembourg Mus, Paris) and his equestrian statue of Joan of Arc (Place des Pyramides, Paris), a replica of which is in Fairmount Park, Philadelphia, are well-known, vigorous works Portrait statues include De Lesseps (Port Said) and Colonel Howard (Baltimore)

Frémont, Jessie Benton (frē'mŏnt), 1824–1902, American author, b Lexington, Va, daughter of Thomas L Benton and wife of John Charles Frémont Her elopement with the dashing Frémont caused a momentary break with her father, but the breach was healed She was very helpful to her husband, aiding him in writing his reports and encouraging his exploits She wrote a defensive account of his humiliation in the Civil War in *The Story of the Guard* (1863) When their fortune was lost, she helped to support the household with her pen, turning out chiefly books recounting her own experiences—*A Year of American Travel* (1878), *Souvenirs of My Time* (1887), *Far West Sketches* (1890), and *The Will and the Way Stories* (1891), She also helped her husband write his memoirs See biography by C C Phillips (1935) Irving Stone, *Immortal Wife* (1944), is a fictionalized version of her life

Frémont, John Charles, 1813–90, American explorer, soldier, and political leader, b Savannah, Ga, son of a French refugee and a woman of a Virginia tidewater family Showing a restless disposition early, he was forced to leave Charleston College (which later granted him a degree) He taught mathematics to U S naval cadets and through the influence of Joel R Poinsett he became an assistant to Joseph Nicolas Nicollet on a surveying expedition (1838–41) between the upper Mississippi river and the Missouri He was thus introduced to the West, where he was to win his triumphs He eloped with Jessie, daughter of Senator Thomas H Benton, who became reconciled to the match and helped his son-in-law secure command of an expedition to explore the Des Moines river in 1841 The next year he headed an expedition to the Rocky Mts with Kit Carson as guide, and in 1843, with first Thomas Fitzpatrick and then Carson as guide, he went to Oregon, starting in haste after secret warning from his wife that he was about to be recalled He explored the Nevada country, crossed the Sierra Nevada to California, and returned home by a more southerly route His enthusiastic reports created wide interest in Western scenery and Western concerns In 1845 he was off again, going to California as trouble brewed with Mexico and the Mexican War was in the making In California under his influence American settlers there raised the standard of revolt against the Mexican authorities and set up (1846) the Bear Flag republic at Sonoma He also turned to support Commodore Robert F Stockton, who appointed (1847) him governor of California After the arrival of Stephen W. Kearny as conqueror, there was trouble Frémont, refusing to obey the orders of Kearny, was arrested, court-martialed, and found guilty The penalty was remitted by President Polk, but Frémont, proud and injured, resigned from government service He in 1848 led a party in an ill-judged and disastrous effort to locate passes for a transcontinental railroad His fortunes literally as well as figuratively climbed after gold was discovered on his large California estate, though he was deprived of some of his wealth by the sharp practice of others He became one of the first U S Senators from California, serving briefly in 1850–51 Frémont, deeply interested in the Free-Soil party, was one of the prominent leaders when that group was merged into the Republican party, and the Republicans chose him as presidential candidate in 1856 He did not win, but he was generally recognized as a national hero and was at the peak of his career The descent was rapid In the Civil War he was given command of the Western Dept, issued an order confiscating the property of Missouri rebels, and was promptly removed His quarrel with the Blair family (see Blair, Francis Preston, 1821–75) cost him dearly He was given a new command, but when placed under the orders of John Pope, he resigned, without glory In 1870 ill-judged efforts to build a railroad to the Pacific—accompanied by actions of his agents that roused sharp criticism—cost him his fortune Beggared, he struggled on, loyally supported by his wife In 1878 he was made governor of Arizona Territory and served until 1882 In 1890 he was belatedly given a pension, but did not live long to enjoy it The Pathfinder, as he was sometimes called, is one of the most controversial figures of Western history His critics call him braggart and charlatan, his friends point to his courage, his handling of men, and his determination to open the West Certainly he did much to publicize the West His early reports were combined as *Report of the Exploring Expedition to the Rocky Mountains in the Year 1842, and to Oregon and North California in the Years 1843–44* (1845) His memoirs (1887) were disappointing and incomplete The standard biography is Allan Nevins, *Frémont the Pathmarker of the West* (1939) An adverse report is the biography by Cardinal Goodwin (1930) See also R J Bartlett, *John C. Frémont and the Republican Party* (1930)

Fremont (frē'mŏnt) **1** City (pop 2,520), S Mich, NE of Muskegon, settled 1855, inc as a village 1875, as a city 1911 Canned baby food is made Numerous Indian sites and mounds are near by **2** City (pop 11,862), co seat of Dodge co, E Nebr, on the Platte and WNW of Omaha, founded 1856, inc 1858 Trade center for a grain-growing, dairying, and grazing prairie area, it processes and ships farm products Midland College (Lutheran, coeducational, 1887) is here The town was named for J C Frémont **3** Town (pop 1,264), E central N C, SSW of Rocky Mount, in a tobacco region **4** City (pop 14,710), co seat of Sandusky co, N Ohio, on the Sandusky river and SE of Toledo It is an industrial and trade center After the War of 1812 two towns, Croghansville and Lower Sandusky, were settled, they were united in 1829 as Lower Sandusky and named Fremont in 1849, for J C Frémont Automobile parts, surgical instruments, and cutlery are made here Spiegel Grove State Park has the home and tomb of Rutherford B Hayes

Fremont Peak, 13,730 ft high, W Wyo, in the Wind River Range

Fremstad, Olive Nayan (frĕm'stăd), 1870?–, Swedish-American operatic soprano, pupil of Lilli Lehmann She came to the United States as a child After her European debut (Cologne, 1898), she returned to the United States and sang at the Metropolitan Opera, New York (1903–14) She was best known for Wagnerian roles

Fremy, Edmond (ĕdmō' frāmē'), 1814–94, French chemist He was professor of chemistry (from 1850) and director (1879–91) at the Museum of Natural History, Paris His work on iron, steel, sulphuric acid, fats, and vegetable coloring was of industrial importance He also prepared anhydrous hydrogen fluoride, studied fermentation, and originated a process for making artificial rubies He directed the publication of the *Encyclopédie chimique* (10 vols, 1882–94)

French, Alice, pseud **Octave Thanet,** 1850–1934, American novelist, b Andover, Mass She lived for many years in Davenport, Iowa, and most of her stories picture what she observed in Iowa and in Arkansas in the '80s and '90s Two collections of short stories, *Stories of a Western Town* (1893) and *Stories That End Well* (1911), have special interest Of her novels, *Expiation* (1890), *The Missionary Sheriff* (1897), and *The Man of the Hour* (1905) were best known

French, Daniel Chester, 1850–1931, American sculptor, b Exeter, N H, studied in Boston, under Rimmer, and in Florence His first commission, *The Minuteman* (Concord, Mass), was executed when he was 23 Some of the best of his statues and memorials are John Harvard and the bust of Ralph Waldo Emerson (Harvard Univ), *Death and the Young Sculptor*, Milmore Memorial (Boston), bronze doors (Boston Public Library), *Mourning Victory*, Melvin Memorial (Concord, Mass), Lewis Cass (rotunda of the Capitol, Washington, D C), *Dr Gallaudet and His First Pupil* and the heroic Lincoln in the Lincoln Memorial, Washington, D C, groups representing the four continents (customhouse, New York), *Alma Mater* (Columbia Univ), Richard Morris Hunt Memorial and *Memory* (Metropolitan Mus), the standing Lincoln (Lincoln, Nebr), General Oglethorpe (Savannah, Ga), and six heroic figures in the capitol, St Paul, Minn. He executed the impressive figure *The Republic* for the World's Columbian Exposition, Chicago. In collaboration with Edward C. Potter he made the equestrian statues General Grant (Philadelphia), General Washington (Paris), and General Joseph Hooker (Boston) See biography by his daughter, M F Cresson (1947)

French, John Denton Pinkstone, 1st **earl of Ypres** (ē'pur), 1852–1925, British general After long active service in the army, during which he served in the Sudan (1884–85) and in the South African War (1899–1902), he became field marshal in 1913 He commanded the British Expeditionary Force in France and Belgium from the outbreak of the First World War to Dec, 1915, when he was replaced by Sir Douglas Haig His title, bestowed in 1922, commemorates the four-year defense of the Belgian town of Ypres by the British forces He wrote *1914* (1919)

French, river issuing from Lake Nipissing, S Ont, and flowing 50 mi WSW to Georgian Bay of Lake Huron, NW of Parry Sound

French Academy, first and chief constituent of the Institut de France, hence an organism of the French state It was founded (as the Académie française, later Académie française) by Cardinal Richelieu, its nucleus being a coterie of literary men who met informally in the early 1630s to discuss rhetoric and criticism In 1635 the academy received the royal letters patent (registered by the Parlement of Paris in 1637) Its aims included chiefly the governance of French literary effort, grammar, orthography, and rhetoric The number of members was soon fixed at 40 (called often, because of their former motto, "the forty immortals") and was established as self-perpetuating, with a veto of elections reserved to the official *protecteur*, or patron, later to the state The earliest members included Chapelain, Guez de Balzac, Voiture, and Racan The first prominent activity of the society was the criticism of the *Cid* of Corneille After Richelieu's death (1642) the patronate went (1643) to Pierre Séguier, the chancellor, on his death (1672), King Louis XIV assumed the position of *protecteur*, which remained ever after a prerogative of the head of the French state The suppression of the academies in 1793 ended the French Academy, it was seen again in the second class of Napoleon's Institut (1803), and the old name and organization was "restored" in the first division of the Institut of 1816 The work of the French Academy has chiefly consisted of the preparation and revision of a dictionary (1st ed, 1694, 8th ed, 1932–35) and of a grammar (1932) The very conservative attitude of these books toward orthography, new words, and grammatical development has earned much criticism The academy, however, has never claimed to legislate, but simply to record forms, legislation on orthography and grammar under the Third Republic was made a function of the minister of public instruction The awarding of literary prizes has been an important function of the French Academy, and in the 19th cent its nonpartisanship encouraged the general recognition of the academy as a suitable trustee for the distribution of eleemosynary funds and prizes for courage and civic virtue The literary conservatism of the academy has been often judged by the failure of certain writers to attain membership, the most prominent of these are perhaps Molière, La Rochefoucauld, Saint-Simon, Rousseau, Honoré de Balzac, Lamennais, Flaubert, Stendhal, Zola, and Proust But not all omissions from the academy roster are attributable to literary criteria, for personal respectability and loyalty to the existing state have always been conditions of membership The members of the academy have traditionally included eminent Frenchmen of other than literary fame, such were the ecclesiastical historian Duchesne and the generals Foch and Pétain

French and Indian Wars, 1689–1763, the name given by American historians to the North American colonial wars between Great Britain and France in the late 17th and the 18th cent They were really campaigns in the world-wide struggle for empire and were roughly linked to wars of the European coalitions At the time they were viewed in Europe as only an unimportant aspect of the struggle, and, although the stakes were Canada, the American West, and the West Indies, the fortunes of war in Europe had more effect in determining the winner than the fighting in the disputed territory itself To the settlers in America, however, the rivalry of the two powers was of immediate concern, for the fighting meant not only raids by the French or the British but also the horrors of Indian border warfare The conflict may be looked on, from the American viewpoint, as a single war with interruptions The ultimate aim—domination of the eastern part of the continent—was the same, and the methods—capture of the seaboard strongholds and the little Western forts and attacks on frontier settlements—were the same The first of the wars, King William's War, corresponds to the European War of the Grand Alliance (1688–97) It was marked in America principally by frontier attacks on the British colonies and by the taking of Port Royal (now Annapolis Royal, Nova Scotia) by British colonial forces under Sir William Phips in 1690 The British were unable to take Quebec and the French commander,

Frontenac, attacked the British coast. The peace that followed the Treaty of RYSWICK in 1697 was short-lived, and shortly the colonies were plunged into war again Queen Anne's War (1701–13) corresponds to the War of the SPANISH SUCCESSION, The frontier was again washed in blood, the French and Indian raid (1704) on Deerfield, Mass , was especially notable Another British attempt to take Quebec, this time by naval attack, failed Port Royal, and with it ACADIA, fell (1710) to an expedition under Francis Nicholson and was confirmed to the British in the peace treaty (see UTRECHT, PEACE OF), as were the fur-trading posts about Hudson Bay, which had suffered in the long warfare Hostilities lapsed for years until trouble between England and Spain (which had been marked by trouble in the South in Queen Anne's War) led to the so-called War of Jenkins's Ear, which merged into the War of the AUSTRIAN SUCCESSION The American phase, King George's War, did not begin until 1745 In that year a Massachusetts-planned expedition under William PEPPERRELL with a British fleet under Sir Peter Warren took LOUISBURG Border warfare was severe but not conclusive The Treaty of AIX-LA-CHAPELLE (1748) returned Louisburg to France, but the hostile feelings that had been aroused did not die Rivalry for the West, particularly for the valley of the upper Ohio, prepared the way for another war In 1749 a group of Virginians interested in Western lands formed the OHIO COMPANY, and in that same year the French were investigating possibilities of occupying the upper Ohio region The French were first to act, moving S from Canada and founding two forts Robert DINWIDDIE, governor of Virginia, sent two emissaries, young George WASHINGTON and Christopher GIST, to protest The contest between the Ohio Company and the French was now joined and hinged on possession of the spot where the Monongahela and the Allegheny join to form the Ohio (the site of Pittsburgh) Men of the Ohio Company started a fort there but were expelled by the French, who built Fort Duquesne in 1754. Dinwiddie, after attempting to get aid from the other colonies, sent out an expedition under Washington He defeated a small force of French and Indians but had to withdraw and, building Fort NECESSITY, held his ground until forced to surrender (July, 1754) The British colonies, alarmed by French activities at their back door, attempted to correlate their activities in the ALBANY CONGRESS War had thus broken out before fighting began in Europe in the SEVEN YEARS WAR The American conflict, the last and by far the most important of the series, is usually called simply the French and Indian War The British undertook to capture the French forts in the West —not only Duquesne, but also Fort FRONTENAC, Fort NIAGARA, and the posts at TICONDEROGA and CROWN POINT They also set out to take Louisburg and the French cities on the St Lawrence, Quebec and Montreal In their attempts they at first failed The expedition led by Edward BRADDOCK against Duquesne in 1755 was a costly fiasco, and the attempt by Admiral Boscawen against Canada and the first expedition against Niagara were fruitless When the British ministry of the elder William Pitt was reconstituted, Pitt was able to supervise the war in America after 1757 Affairs took a better turn for the British Lord Jeffrey AMHERST in 1758 took Louisburg, where James WOLFE distinguished himself In that year, Gen John FORBES took Fort Duquesne (which became Fort Pitt) The French MONTCALM, one of the great commanders of his time, distinguished himself (1758) by repulsing the attack of James ABERCROMBY on Ticonderoga The next year that fort fell to Amherst In the West too, the hold of Sir William JOHNSON over the Iroquois and the activities of border troops under his general command—most spectacular, perhaps, the rangers under Robert ROGERS—reduced French holdings and influence The war became a climactic fight for the St Lawrence, with Montcalm pitted against the brilliant Wolfe The climax came in the open battle (1759) on the Plains of Abraham (see ABRAHAM, PLAINS OF) Both Wolfe and Montcalm were killed, but Quebec fell to the British In 1760 Montreal also fell, and the war was over The Treaty of Paris in 1763 (see PARIS, TREATY OF) ended French control of Canada, which went with the West to Great Britain The wars had helped to bring about changes in the British colonies. The divergence from the mother country, fundamentally based on the ocean-wide distance, had been accented by differences between the European and the American view of policies in the conflict The preoccupation of the home government with the French threat had allowed the colonies freer range to develop their institutions, while at the same time the colonies had been dependent on British arms and felt immediately less dependent when the war was done In various ways the French and Indian Wars prepared the way for the American Revolution The classic works in English on the conflict are those of Francis PARKMAN See William Wood, *The Passing of New France* (1915), G. M. Wrong, *The Conquest of New France* (1918); L. H Gipson, *The British Empire before the American Revolution*, Vols IV–VII (with individual titles, 1939–49).

French architecture began in the 11th cent. to develop a characteristic national style Based on the patterns of ROMANESQUE ARCHITECTURE, the Norman style, which grew into Gothic, originated in N France (see NORMAN ARCHITECTURE and GOTHIC ARCHITECTURE) After the 15th cent , Italian influence molded in France a Renaissance style (see RENAISSANCE ARCHITECTURE) which was further altered into BAROQUE The late baroque refinement known as ROCOCO was preeminent in France but was supplanted by the EMPIRE STYLE, a form of classic revival The 19th cent in France, as elsewhere, was mostly eclectic, consisting of a number of romantic revivals In the 20th cent , France became a leader in MODERN ARCHITECTURE, producing some of the foremost new designs

French art. Artistic remains in France date back to the Paleolithic age, and abundant examples attest the art of the periods of Roman and barbarian occupation as well as the Christian art of the subsequent Carolingian and Merovingian periods During the Middle Ages artistic production centered about the church and the feudal court In the Romanesque period (11th–12th cent) monasticism encouraged the development of manuscript illumination and the minor arts Important schools of sculpture centered in the regions of Languedoc and Burgundy The hierarchic austerity characteristic of Romanesque conventions was softened in the period of GOTHIC ART (13th–15th cent) by tendencies toward idealization and naturalism These tendencies are manifest in the sculpture of Rheims and Amiens cathedrals, where the figures show greater variety of pose and articulation and are less severely architectonic than those of the preceding Romanesque period Cathedral architecture gave impulse to the development of the art of stained glass which reached its height in such windows as those of the cathedral at Chartres Paris was a center of a school of manuscript illuminators Painting was strongly influenced by Netherlandish and Italian art Toward the end of the Gothic period these influences began to be harmonized in terms of a distinctly national style marked by a taste for formal simplicity and elegance such as is manifest in the works of Jean Fouquet In the 16th cent there was a strong wave of Italian influence Francis I employed Francesco Primaticcio of Bologna as artistic director, and a school of French painters worked in an Italianate manner at the palace of Fontainebleau In the art of the principal sculptor, Jean Goujon, a sense of native grace mitigates the dryness of the imported style During the baroque period (17th and early 18th cent) enthusiasm for classical antiquity, combined with a cult of rationalism, encouraged the development of a monumental and formalized art The most important painters were Nicolas Poussin and Claude Lorrain The movement toward political centralization, culminating in the absolute monarchy of Louis XIV, was attended by aesthetic authoritarianism with a consolidation and control of artistic production in the service of the state The French Academy was chartered in 1635 The Gobelins factory was established in 1661 Typical of the age was the painting of Charles Le Brun and Pierre Mignard and the sculpture of François Girardon, Pierre Puget, and Antoine Covsevox After the ascension of Louis XV, baroque monumentality was replaced by the lighter, more animated spirit of the rococo style, which had early manifestation in the art of J A Watteau Although François Boucher and J H Fragonard succeeded Le Brun as official painters, there was little attempt to impose the decorative sensuous style favored by the court Such artists as the painter J B Chardin and the sculptor J A Houdon exhibited quite independent tendencies Characteristic gracefulness and delicacy prevailed in the minor arts, exemplified in the bronze work of Jacques Caffieri and in Sèvres porcelains produced at the royal potteries established in 1745 at Vincennes and moved to Sèvres in 1753 Toward the end of the century reaction against the frivolity of court art and interest in new archaeological excavations encouraged the rise of the neoclassical style which flourished with state sanction under Directory, Consulate, and Empire As its principal exponent, the painter J L David wielded authoritarian influence over the national taste After neoclassicism, no single style predominated Rather, individual artists gave definition to a variety of movements J A D Ingres succeeded David as leading academician and favored an essentially linear and meticulously finished style in part inspired by a new enthusiasm for the art of the Italian primitives Opposed to the academic discipline were the romantic painters led by Eugène Delacroix. These expressed the liberal and revolutionary tendencies of the age in terms of an emotionally expressive rather than descriptive use of bold brushwork and color effects At the same time that romanticism championed subjective emotion and the taste for exotic subject matter, various currents of realism had notable exponents in Honoré Daumier, J B C. Corot, and Gustave Courbet Revived interest in landscape was manifest in the paintings of the Barbizon school. After the middle of the century, interest in rendering purely visual effects and in expressing transient and accidental aspects of nature resulted in the emergence of the impressionist movement, which was formally launched with the exposition of 1874 Impressionism drew allegiance from a variety of highly individual artists including Manet, Monet, Renoir, Degas, and Pissaro Cézanne drew inspiration from the impressionist group, but rejected their emphasis on transient effects and evolved an independent approach based on the expression of the fundamental characteristics of shapes and spatial effects Toward the end of the 19th cent a post-impressionist reaction against impressionistic naturalism manifested itself in the work of Seurat, Van Gogh, and Gauguin This reaction combined with the influence of Cézanne and a new current of interest in the art of primitive peoples to give rise to the early 20th-century movements of fauvism and cubism The discoveries of Freudian psychology and a reaction after the First World War against the decorative and formal emphasis of the pre-war art resulted in the emergence of the surrealist movement, which became well defined during the 1920s Paris had become the artistic center of Europe in the 19th cent and continued as a cosmopolitan center and source of aesthetic inspiration in the 20th cent Among the leading contemporary artists are Matisse, Rouault, Braque, and Picasso, who although not a French native is to be associated with the school of Paris In comparison with painting, 19th-century sculpture on the whole maintained more conservative trends In the first half of the cent François Rude infused his works with an animation that marked a break with the neoclassic conventions A L Barye, notable for his animal sculptures, and J B Carpeaux, leading sculptor of the time of the Second Empire, exemplify tendencies towards naturalism and an interest in rendering effects of movement that reached their culmination in the second half of the century in the sculpture of Auguste Rodin More conservative and eclectic trends were revealed in the works of Emmanuel Frémiet, Henri Chapu, and P A Bartholomé The end of the 19th and the beginning of the 20th cent saw a reaction against the effects of surface realism and saw new emphasis on movement of the earlier sculpture A new emphasis on relatively static, simplified forms was shown in the works of the leading sculptor, Aristide Maillol The break with the 18th-century tradition effected by the Revolution, combined with increasing substitution of machine for hand labor and the predominance of bourgeois taste, resulted in a marked decline in quality of design and craftsmanship in 19th-century decorative arts On the whole a heavy-handed eclecticism prevailed Various elements from the styles of the Louis XIV and Louis XV periods were combined with surviving neoclassic forms In the 20th cent there was an attempt to revive the craftsman tradition and to introduce nonderivative designs Leading artists such as Maillol and Matisse furnished tapestry and textile designs New tendencies toward simplification and functionalism were manifest in the furniture of the modern style See Edmond Goncourt and Jules Goncourt, *French XVIII Century Painters* (1874, Eng tr , 1949), Louis Dimier, *French Painting in the XVI Century* (1904), Gabriel Mourey, *French Art of the Nineteenth Century* (1928), Charles Terrasse, *French Painting in the Twentieth Century* (1939); R H Wilenski, *Modern French Painters* (1940)

French brier see BRIER

French Broad River, rising in W North Carolina in the Blue Ridge and flowing N to Asheville, then WNW into E Tennessee to a point near Knoxville, where it joins the Holston to form the Tennessee

French Cameroons: see CAMEROONS

French Congo: see FRENCH EQUATORIAL AFRICA

French East India Company. see EAST INDIA COMPANY, FRENCH

French Equatorial Africa, group of four French overseas territories (c 970,000 sq mi , pop c 4,131,000), W Africa. Until 1910 the territories were called French Congo Brazzaville is the capital Of the constituent territories Gabon (or Gabun or Gaboon) and Middle Congo are on the Atlantic coast, Ubangi-Shari and Chad lie inland. The land boundaries of French Equatorial Africa are Niger, Nigeria, French Cameroons, and Rio Muni on the west, Cabinda and Belgian Congo on the south, the Belgian Congo and the Anglo-Egyptian Sudan on the east, and Libya on the north The border with the Belgian Congo is largely marked by the Bornu, Ubangi, and Congo rivers. There is a coastal lowland with important ports at Libreville and Pointe Noire The south has a coastal range and c.300,000 sq mi of tropical forest, which yield rubber and hardwoods The central region, watered by the Ubangi and Shari rivers, produces cotton, coffee, and peanuts. The north is desert with some oases and areas where cattle are grazed There are several short railroads, but transport mainly depends upon a sparse network of roads which connects the coastal towns with the interior and the towns on the Congo. Little European interest was manifested in the area until, following some preliminary

exploration, France founded Libreville in 1849 French authority was gradually extended southward, and by 1894 the present boundaries were established by agreement with other European powers French Equatorial Africa is ruled by a governor general; there is a governor over each constituent territory. In the French parliament one representative sits for Gabon and the Middle Congo and one for Ubangi-Shari and Chad See André Gide, *Travels in the Congo* (Eng tr, 1934)

French Establishments in Oceania (ōshĕn'ēə), colony (1,554 sq. mi., pop 55,734) formed in 1903 to embrace 105 islands constituting the French possessions in the S Pacific, with the capital at Papeete on Tahiti, Society Islands The five main groups in the colony are the SOCIETY ISLANDS, MARQUESAS ISLANDS, TUBUAI ISLANDS, TUAMOTU ISLANDS, and GAMBIER ISLANDS The colony is also called the French Settlements of Oceania and, popularly, French Oceania

French Guiana. see GUIANA.

French Guinea (gĭ'nē), Fr. *Guinée* (gēnā'), overseas territory (c 95,000 sq. mi., pop c 2,125,000), French West Africa, on the Atlantic Ocean Conakry is the capital The territory is bounded on the north by Portuguese Guinea, Senegal, and French Sudan, on the east by the Ivory Coast, and on the south by Sierra Leone and Liberia Products of the swampy coastal zone include bananas and palm oil The interior, comprising plateaus and mountainous regions, produces rubber, lumber, coffee, meat, and hides There are a few modern roads and a railroad Some Portuguese settlements were made along the coast in the 16th cent., but they were soon abandoned because of difficult navigation France gained control in the mid-19th cent., annexing the area under the name Rivières du Sud [rivers of the south] and making it part of Senegal A separate territory was created in 1890 French Guinea is represented in the parliament of France

French horn or **horn**, brass wind musical instrument, consisting of a metal tube of relatively narrow conical bore It was developed out of the 18th-century hunting horn To increase its compass, in the late 18th cent it was made with finger holes and later with crooks, which could be inserted to lengthen it It was given valves in the 1820s, the valve horn was first scored for in Halévy's *La Juive* (1835), but did not supersede the older hand horn (so-called because before the use of valves, stopping by placing the right hand into the bell was an important part of the technique) until later in the century Stopping is now employed for special effects The instrument has a considerable solo literature, is very important in the orchestra, and is difficult to play It is a transposing instrument, the horn in F has been most common since the late 19th cent

French India, overseas territory (193 sq mi., pop 317,259) of France, in India The capital is PONDICHÉRY The territory comprises four settlements, Karikal, Mahé, Pondichéry, and Yanaon (or Yanam), and it formerly included Chandernagor. In 1948 France agreed to allow plebiscites on the question of merger with India, however, the plebiscites were postponed except in CHANDERNAGOR.

French Indo-China see INDO-CHINA.

French language, Romance language. See LANGUAGE (table)

French Lick, resort town (pop 2,042), S Ind., NW of Louisville, Ky Mineral water is obtained from sulphur springs here It was a French trading post in the colonial period

French literature, written in standard modern French and in the earlier forms of the language, dialects of N France This excludes both Provençal with its brilliant poetry and the voluminous Latin literature of medieval France The first French literary monuments are grand court entertainment, the CHANSONS DE GESTE, evoking the history of the Christian West, and the politer Celtic romances of Christian de Troyes Modification of these heroic genres led to the long verse romances and their modifications, e g, the philosophical ROMAN DE LA ROSE and the witty REYNARD THE FOX. Shorter animal satires than this are found in Marie de France and among the fabliaux, anecdotal rhymed pieces which are probably the nearest there is to popular literature of the day. The French lyric had in the 12th to 13th cent. a development like that of the TROUBADOURS, but far less elaborate. Medieval lyric poets include Christine de Pisan, Charles, duc d'Orleans, and the unique François Villon French prose began in the writings of chroniclers and historians, as Villehardouin, Joinville, Froissart, and Comines. In the late Middle Ages the MIRACLE PLAY developed, this was enormously popular and survived into the 16th cent. It has no continuity with later French drama. The Renaissance reoriented French letters toward Italy and the classics; the chief 16th-century writers to combine old French influence with the new ideas are Marot and Rabelais Less in the French tradition are Montaigne, Calvin, and Margaret of Navarre. Reaction against Italian tendencies appeared in the work of Ronsard (and the Pléiade) and the critic Malherbe, in whom is encountered the zeal for the correct word that has marked French writing ever since. The Bourbon monarchy brought stability and prosperity, and Paris became a brilliant cultural center. The 17th cent was the period of French classicism in the theater Corneille, Racine, and Molière; in lyric and satire, Jean de la Fontaine and Boileau, and in fields of prose, Pascal, Mme de Sévigné, Bossuet, Mme de la Fayette, La Rochefoucauld, and La Bruyère Fénelon and the duc de Saint-Simon belong to this age and the next as well. This 17th-century period, the time of the founding of the French Academy and the Comédie Française, has had unique influence on French letters The writers of the time vary among themselves, but all share in having a style that is clear, witty, polished, and restrained and in occupying themselves chiefly with the subtleties of human behavior. The brilliance of classicism induced imitation, and the 18th cent is in imaginative literature a decline, a few of its writers are still read for literary merit, e g, Regnard, Le Sage, Prévost d'Exiles, Beaumarchais, and André Chénier For the most part, however, it is the politico-philosophical content of their writing which maintains their repute, among these are Montesquieu, Diderot, and Alembert of the *Encyclopédie*, Voltaire, Rousseau, Mme de Staël, and Benjamin Constant The Revolution was contemporary with the rise of romanticism, not very different from the analogous literary developments in England and Germany Celebrated figures were Châteaubriand, Bernardin de Saint-Pierre, and Lamartine, Hugo at the apogee, and the poets Musset, Gautier, and Vigny The typically romantic Dumas père and Dumas fils are relegated by critics to a second grade of merit. The first great 19th-century novelists, Mérimée, Stendhal, George Sand, and Balzac, lead out of romanticism into the realism of Flaubert Subsequently the naturalism of Zola proved less successful and contrasted with the narrative virtuosity of Maupassant and Daudet In the 19th cent the "schools" or cliques of writers developed as a feature of Parisian letters—the PARNASSIANS, led by Leconte de Lisle, the circle of the Goncourt brothers, the SYMBOLISTS, who gathered around Mallarmé, and the decadents, who revived Baudelaire The greatest poets often belonged to no one school, such are Verlaine and Rimbaud, Jammes, Péguy, and, especially, Valéry Historical, critical, and polemical prose is always a major field of French letters, important 19th-century figures were the historians Thierry, Michelet, and Guizot, the critics Taine, Sainte-Beuve, Brunetière, and Faguet, and the mordant publicist Anatole France Important playwrights after 1870 were Maeterlinck (a Belgian), Rostand, Cocteau, and Sartre The chief genre of 20th-century French is the novel, intensively cultivated, representative modern novelists are Bourget, Loti, Barrès, Rolland, Colette, Barbusse, Bordeaux, Gide, Giraudoux, the influential Proust, Mauriac, Malraux, Romains, Aragon, and Bernanos See general works by George Saintsbury (1882), Lytton Strachey (1912), Kathleen Butler (1923), Maurice Baring (1928), F. E Guyer (1932), and W A Nitze and E P Dargan (3d ed., 1938), works on the 17th cent by E. F Jourdain (1912), Arthur Tilley (1929), and C. R Bagley (1937); works on the 19th and 20th cent by Pierre de Bacourt and J W. Cunliffe (1923), G N Henning (rev ed, 1935), and M H Stansbury (1935)

Frenchman Bay, inlet of the Atlantic, S Maine, between NE Mt Desert Island and the mainland

French Morocco. see MOROCCO

French North Africa, general name for ALGERIA, French MOROCCO, and TUNISIA From 1923 to 1935 there were annual French North African conferences that sought to establish economic and political cooperation among these territories In 1935 a permanent Mediterranean and North African high commission was created for that task

French Oceania see FRENCH ESTABLISHMENTS IN OCEANIA

French Revolution, the revolution of world importance which began in France in 1789 Students disagree in evaluating the various factors that brought about the cataclysm Among the indirect causes, one of the most important certainly was the rise of capitalism and the commercial expansion of the 17th and 18th cent To some extent at least, the Revolution came not because France was backward, but because her development had advanced too rapidly for constitutional change. In the fixed order of the *ancien régime*, the newly risen bourgeois class was unable to exercise the political and social influence to which its economic position entitled it. Louis XIV, by consolidating absolute monarchy, had destroyed the roots of feudalism, yet its outward forms persisted and became increasingly irritating France was still ruled by the privileged classes—the nobility and the clergy—who supplemented their diminishing funds by augmenting their corruption, while the productive classes bore the costs Discontent was also seething among the entirely new class of industrial workers, for whom there was no place under the old system As for the peasants, their condition had always been wretched, and feudal abuses struck them especially hard. A few serfs still existed in certain provinces in 1789, a larger minority were landowners; for the most part, however, they were tenant farmers, subject to feudal dues, to the avarice of the royal agents who were FARMING the taxes, to the CORVÉE, to military service, tithes, and other impositions Backward agricultural methods and internal tariff barriers caused recurrent famines which netted fortunes to grain speculators The *ancien régime*, economically outdated, was undermined intellectually by the apostles of the "Age of Reason" VOLTAIRE attacked the Church and absolutism, DIDEROT and the ENCYCLOPÉDIE propagated scientific materialism, LOCKE and MONTESQUIEU made English constitutionalism fashionable, and CONDORCET preached the bible of progress Most direct in his influence on revolutionary thought was J J. ROUSSEAU, especially through his dogma of popular sovereignty Economic reform, advocated by the PHYSIOCRATS and attempted (1774–76) by TURGOT, was thwarted by the unwillingness of the nobles and the clergy to sacrifice any privileges The direct cause of the Revolution was the chaotic state of public finance Jacques NECKER vainly sought by economy to reduce the gigantic public debt French participation in the American Revolution increased the debt, and Necker's successor, CALONNE, called an Assembly of Notables (1787), hoping to avert bankruptcy by inducing the privileged classes to share in the financial burden, they refused LOMÉNIE DE BRIENNE succeeded Calonne His attempts to procure money ran afoul of the Parlement of Paris (see PARLEMENT) which forced the calling of the STATES-GENERAL Elections were ordered in 1788, and on May 5, 1789, for the first time since 1614, the States-General met at Versailles The chief purpose of LOUIS XVI and of Necker, who had been recalled, was to obtain the assembly's consent to a general fiscal reform Each of the three estates—clergy, nobility, and the third estate or commons—was encouraged to present its particular grievances to the crown Innumerable *cahiers* (lists of grievances) came pouring in from the provinces, and it became clear that sweeping political and social reforms, far exceeding the object of its meeting, were expected from the States-General The aspirations of the bourgeoisie were fully expressed by SIEYÈS in a widely circulated pamphlet, which implied that the third estate and the nation were virtually identical The question soon arose whether the estates should meet separately and vote by order or meet jointly and vote by head (thus assuring a majority for the third estate) As Louis XVI wavered, the deputies of the third estate defiantly proclaimed themselves the National Assembly (June 17), on their invitation many members of the lower clergy and a few nobles joined them When the king had their meeting place closed, they adjourned to an indoor tennis court and there took an oath (June 20) not to separate until a constitution had been made On June 27 the king yielded and legalized the National Assembly At the same time, however, he surrounded Versailles with troops and let himself be persuaded by a court faction, led by Queen MARIE ANTOINETTE, to dismiss Necker (July 11) A Paris mob, incited by the journalist DESMOULINS, revolted and, on July 14, stormed the BASTILLE prison Louis XVI meekly recalled Necker and sanctioned the establishment of the commune as the new city government of Paris The National Guard was organized under the marquis de LAFAYETTE This first outbreak of violence presently spread throughout France Peasants were burning châteaux and terrorizing their landlords, while the government, afraid of bloodshed, stood by powerless On Aug 4 the nobles and clergy in the Assembly, driven partly by terror, partly by a hysterical outburst of generosity, relinquished all their privileges, abolishing in one night the entire feudal structure of France Radical political clubs, notably the JACOBINS, were gaining strength in Paris Rumors of counterrevolutionary court intrigues were circulated, and on Oct 5, 1789, a Parisian mob, probably incited by agents of the radical Louis Philippe, duc d'ORLÉANS, marched to Versailles Lafayette was barely able to save the lives of the king and the queen, who were taken to the Tuileries palace in Paris The Assembly was also removed to Paris Louis XVI was now virtual prisoner of the commune Honoré de MIRABEAU, the unofficial leader of the Assembly, foreseeing the uncontrolled revolution that the king's weakness was about to unleash, vainly strove to restore strength to the executive branch. But the Constituent Assembly (as the National Assembly was called in its new capacity) was working in the opposite direction, drafting a constitution which reduced the executive to impotence. The DECLARATION OF THE RIGHTS OF MAN was reluctantly approved by the king, the constitution itself, completed in 1791, created a limited monarchy with a unicameral legislature elected by voters with property qualifications Of gravest consequence were the Assembly's antireligious measures. Church lands were nationalized (1789), religious orders suppressed (1790), and the clergy required (July, 1790) to take oath on the state-controlled Civil Constitution of the Clergy. Few priests obeyed; troubles broke out, especially in the pious rural districts,

and Louis XVI, though forced to assent, was shaken out of his apathy by his bitterness at the loss of his personal freedom of worship Numerous princes and nobles had already fled abroad (see ÉMIGRÉS), Louis decided to join them and to get foreign aid to restore his authority The flight (June 20–21, 1791) was arrested at Varennes, and the king and queen were brought back in humiliation Louis accepted the constitution On Oct 1, 1791, the Legislative Assembly convened Its right wing consisted of FEUILLANTS, who also held the cabinet posts, most deputies were middle-of-the-roaders, whose indecision was exploited by the Jacobins and their offshoots, the GIRONDISTS and the CORDELIERS Jacobinism was gaining, Liberty, Equality, Fraternity, became the watchword, the SANS-CULOTTES adopted workingmen's dress, red bonnets were worn to symbolize the new era, liberty poles were set up. Meanwhile the early sympathy abroad for the Revolution was turning to hatred Émigrés were inciting the courts of Europe to intervene, in France, war was advocated by the royalists as a means to restore the old regime and also by most republicans, who either wished to spread the revolution abroad or hoped that the threat of invasion would rally the nation to their cause The Feuillant ministers fell and were succeeded by Girondists On April 20, 1792, war was declared on Austria, and the FRENCH REVOLUTIONARY WARS began Early reverses and rumors of treason by the king brought on the abortive insurrection of June 20 and the fatal one of Aug 10, 1792, when a mob stormed the Tuileries and massacred the royal Swiss guards The Assembly, with which the royal family sought asylum, suspended Louis XVI and ordered elections for a new body, the National Convention Meanwhile the Paris commune, dominated by DANTON and MARAT, assumed all police power Mass arrests of royalist sympathizers were followed (Sept 2–3) by the September massacres, in which "spontaneous" mobs entered jails throughout France and killed hundreds of prisoners On Sept 21, 1792, the Convention held its first meeting It immediately abolished the monarchy, set up the First Republic, and proceeded to try the king for treason His conviction and execution (Jan , 1793) provoked royalist insurrections, notably in La VENDÉE, and resulted in England's joining the war The Convention undertook the foreign wars with vigor but was itself torn by the struggle between the Girondists and the MOUNTAIN (Jacobins and extreme left) The Girondists were crushed (June, 1793) largely through the efforts of Marat and of ROBESPIERRE, who now controlled the Jacobins A republican constitution was adopted, but it never became active, instead the Convention established a dictatorship operating through the Committee of Public Safety, the Committee of General Security, and numerous agencies such as the Revolutionary Tribunal The REIGN OF TERROR began Thousands of royalists, Girondists, and mere suspects fell before the guillotine After the execution of Marie Antoinette (Oct , 1793), Robespierre began to strike at his own ranks The duke of Orléans was one of the first to go, Jacques René HÉBERT, who at the head of the commune had embarked on wild reforms, changing the calendar and introducing the worship of a goddess of Reason, fell in his turn in March, 1794, and Danton, who had tried to limit the butchery, was guillotined in April The Terror also took on economic aspects Maximum prices and wages were fixed, and acceptance of the inflated paper currency, the ASSIGNATS, was severely enforced Robespierre even tried to impose his religious convictions, proclaiming (June, 1794) the cult of the Supreme Being The final excesses of the Great Terror frightened the Convention into the coup of 9 THERMIDOR (July 27, 1794), Robespierre was executed (July 28) and a period of relative reaction set in The new constitution of 1795, setting up the DIRECTORY and a bicameral legislature, went into effect after the insurrection of VENDÉMIAIRE (Oct , 1795) had been put down The rule of the Directory was marked by corruption, incompetence, bankruptcy, and constant intrigues The fantastic communist conspiracy of BABEUF was nipped in the bud, but the coup d'état of 18 FRUCTIDOR (Sept 4, 1797) resulted in a reorientation of the Directory toward the left Military reverses (1799) brought France to the brink of disaster, when Napoleon Bonaparte, the hero of the Italian campaign, returned from his Egyptian expedition and, with the support of the army and several government members, overthrew the Directory on 18 BRUMAIRE (Nov 19, 1799) and established the CONSULATE Until the RESTORATION of the Bourbons (1814), NAPOLEON I was the real ruler of France The French Revolution, though it seemed a failure in 1795 and appeared nullified in 1815, actually had incalculable effects In France, the bourgeois and capitalist class was established as the dominating power, feudalism was dead, social justice was introduced by the CODE NAPOLÉON, and Paris became the center of European liberal thought The Revolutionary and Napoleonic Wars tore down the ancient structure of Europe, hastened the advent of nationalism, and inaugurated the era of modern, total warfare. In the arts and literature, romanticism received a powerful impetus. The attempts during the Restoration and the HOLY ALLIANCE to undo the Revolution resulted in the upheavals of 1830 and 1848, and the attempts of the proletariat to gain advantages from the Revolution of 1789, though they failed, foreshadowed the emergence of MARXISM in the 19th cent Partisanship among historians of the French Revolution still is the rule, and interpretations differ widely See the older works by MIGNET, THIERS, MICHELET, LAMARTINE, TOCQUEVILLE, LOUIS BLANC, QUINET, and TAINE, the great modern studies by AULARD and MATHIEZ, the diplomatic history by Albert SOREL, the Socialist interpretation of JAURÈS, Pierre Gaxotte, *La Revolution française* (1928, in French), a royalist account The classical but inaccurate English work is by Thomas CARLYLE See also Louis Madelin, *The French Revolution* (Eng tr , 1916), C D Hazen, *The French Revolution* (1932), L R Gottschalk, *The Era of the French Revolution* (1929), Crane Brinton, *A Decade of Revolution* (1934), J H Thompson, *The French Revolution* (1945) On the historiography of the French Revolution, see Paul Farmer, *France Reviews Its Revolutionary Origins* (1944)

French Revolutionary calendar, the official CALENDAR of France, Nov 24, 1793–Dec 31, 1805 Its introduction was decreed by the Convention on Oct 5, 1793, but it was computed from Sept 22, 1792, the autumnal equinox and the day after the proclamation of the republic Supposedly philosophical in its basis, it was divided into 12 months of 30 days (their names were invented by FABRE D'ÉGLANTINE) Vendémiaire (vintage month), Brumaire (fog), Frimaire (sleet), Nivôse (snow), Pluviôse (rain), Ventôse (wind), Germinal (seed), Floréal (blossom), Prairial (pasture), Messidor (harvest), Thermidor or Fervidor (heat), and Fructidor (fruit) The remaining five days, called sans-culottides, were feast days, they were named for the Virtues, Genius, Labor, Reason, and Rewards, respectively In leap years (the years III, VII, and XI) the extra day, the last of the year, was Revolution Day The first day of the year (1 Vendémiaire) of year I, II, III, V, VI, and VII fell on Sept 22 of the corresponding year A D , in the years IV, VIII, IX, X, XI, XIII, and XIV, it fell on Sept 23, in the year XII, it fell on Sept 24 There was no week, the months being divided into three decades, with every 10th day (*décadi*) a day of rest For the outstanding events known by the names of the revolutionary months in which they occurred, see VENDÉMIAIRE, BRUMAIRE, THERMIDOR, FRUCTIDOR

French Revolutionary Wars, 1792–1802 The FRENCH REVOLUTION aroused in foreign lands the hostility of monarchs, nobles, and clergy, who feared the spread of republican ideas to the lower classes abroad Ceaseless ÉMIGRÉ intrigues in 1791 led the Austrian and Prussian rulers to make the declaration of Pillnitz, stating that the cause of the French monarch was common to all the crowned heads of Europe French public opinion was aroused When the Girondists obtained control of the Assembly, an ultimatum was sent to Emperor Francis II, demanding that he withdraw his troops from the frontier and expel the émigrés from his dominions War was almost inevitable It was desired by the republicans, who—with the notable exceptions of Robespierre and Marat—believed that war would sweep aside the Bourbons and propagate the revolution abroad, and by the royalists, who hoped that victory would restore Louis XVI to popularity On April 20, 1792, the king declared war on Austria Opposed only by undisciplined bands of French soldiers, the allied Austrian and Prussian forces under CHARLES WILLIAM FERDINAND, duke of Brunswick, quickly crossed the frontier and began to march on Paris An allied manifesto, threatening to raze Paris if the royal family were harmed, enraged the revolutionists and led to suspension of the monarchy The comte de ROCHAMBEAU, commanding the northern sector, and the marquis de LAFAYETTE, commanding the center, resigned Their able successors, the generals DUMOURIEZ and KELLERMANN, turned the tide when they repulsed the invaders at Valmy (Sept 20, 1792) Dumouriez now advanced on the Austrian Netherlands (Belgium), which he seized after winning the battle of Jemappes (Nov 6), while CUSTINE captured Mainz and advanced on Frankfurt Late in 1792 the Convention proclaimed the French determination to carry the Revolution to the oppressed of all Europe This and the execution of Louis XVI provoked Great Britain, Holland, and Spain to join Austria and Prussia in the First Coalition against France Sardinia had already declared war after France had seized Savoy and Nice (Sept , 1792) On Feb 1, 1793, France declared war on England and Holland, and on March 7, on Spain Things rapidly turned against France Dumouriez, defeated at Neerwinden (March 18) by the Austrians under Frederick of Saxe-Coburg, deserted to the enemy, revolt broke out in the VENDÉE, and Custine lost Mainz to the Prussians (July 23). In the emergency the first Committee of Public Safety was created (April 6), and a *levée en masse* (universal conscription) was decreed in August. The committee, guided by the genius of Lazare CARNOT, raised 14 new armies, revolutionary commissioners were attached to the commands, defeated generals, like Custine, were executed "to encourage the others" These energetic measures soon bore fruit By the end of 1793 the allies had been driven from France In 1794 the new French commanders, JOURDAN and PICHEGRU, took the offensive. Jourdan, having defeated the Austrians at Fleurus (June 26, 1794), drove S along the Rhine as far as Mannheim, Pichegru seized the Low Countries On May 16, 1795, Holland, now transformed into the BATAVIAN REPUBLIC, made peace Prussia on April 5, 1795, signed a separate peace (the first Treaty of Basel), ceding the left bank of the Rhine to France, Spain made peace on July 22 (second Treaty of Basel) Warfare against Austria and Sardinia continued under the newly established Directory Carnot gradually evolved a plan calling for a three-pronged attack Jourdan was to advance southeastward from the Low Countries, Jean Victor MOREAU was to strike at S Germany, and Napoleon Bonaparte was to conquer Piedmont and Lombardy, cross the Austrian Alps, and join with Moreau and Jourdan During 1795, the French overran Baden, Württemberg, and Bavaria, but in 1796 the new Austrian commander, Archduke CHARLES, took the offensive, defeating first Jourdan, then Moreau, both of whom had retreated to the Rhine by Sept , 1796 On the Italian front, where a starving French army had been engaged in desultory and defensive operations until Bonaparte's arrival in 1796, one victory followed another (for details of the Italian campaign, see NAPOLEON I) Sardinia submitted in May, 1796, and in April, 1797, the preliminary peace of Leoben with Austria was signed by Bonaparte, just as Moreau had resumed his offensive in Germany The armistice was confirmed by the Treaty of CAMPO FORMIO (Oct , 1797) England, however, remained in the war, retaining naval superiority thanks to such able commanders as Samuel HOOD, Earl HOWE, John JERVIS, and Horatio NELSON Bonaparte's plan to attack the British Empire by way of Egypt was doomed by Nelson's naval triumph at Aboukir in Aug , 1798 Meanwhile, France again aroused the ire of the European powers by creating the CISALPINE REPUBLIC and the Roman Republic (see PAPAL STATES) and by invading Switzerland, which was transformed into the HELVETIC REPUBLIC Under the leadership of Tsar Paul I a Second Coalition was formed by Russia, Austria, England, Turkey, Portugal, and Naples Naples was defeated and transformed into the PARTHENOPEAN REPUBLIC (Jan , 1799), but in N Italy the Austrians and the Russians drove out the French, and in Aug , 1799, General SUVAROV crossed the Alps into Switzerland, where Archduke Charles had already won a victory at Zurich over MASSÉNA (June 4–7) However, disunity between the Austrians and the Russians resulted in disastrous defeats in Switzerland, and Suvarov, after a masterly retreat through the Alps, returned to Russia (Sept Oct , 1799) At this juncture, Bonaparte returned from Egypt and by the coup d'état of 18 Brumaire established himself as First Consul (Nov , 1799) The coalition was weakened by Russia's withdrawal, and Napoleon feverishly prepared a campaign to recoup French losses The campaign of 1800 was decisive In Italy, Napoleon, after crossing the St Bernard Pass, crushed the Austrians at Marengo (June 14), in Germany, Moreau crossed the Rhine and demolished allied opposition at Hohenlinden (Dec 3, 1800) With the Peace of Lunéville—a more severe version of the Treaty of Campo Formio— Austria was forced out of the war (Feb 9, 1801) Great Britain, however, continued victorious, taking Malta (Sept , 1800) and compelling the French to surrender in Egypt (Aug , 1801) When Denmark, encouraged by France, defied British supremacy of the seas, Lord Nelson destroyed the Danish fleet in the battle of Copenhagen (April 2, 1801) Nevertheless, England was war-weary and, after Pitt's retirement, consented to the Treaty of Amiens (March 27, 1802), by which all conquests were restored to France Malta was to be restored to the Knights Hospitalers (England's refusal to execute this stipulation was to lead to the resumption of warfare in 1803, see NAPOLEON I) Peace had already been made with Naples (March, 1801) and with Portugal (Sept , 1801), and in Oct , 1802, France signed a treaty restoring Egypt to Turkey The chief results of the French Revolutionary Wars were the triumph of the French Revolution, the emergence of national armies, and the rise of Napoleon

French Settlements of Oceania: see FRENCH ESTABLISHMENTS IN OCEANIA

French Somaliland. see SOMALILAND, FRENCH.

French Sudan (sōōdăn'), officially **Soudan,** French overseas territory (c 470,000 sq mi , pop c 3,797,000), French West Africa The capital is Bamako. French West Africa is surrounded by French territory Senegal and Mauritania are on the west, Algeria is on the north, Niger is on the east, and Upper Volta, the Ivory Coast, and French Guinea are on the south In the south, traversed by the Niger and Senegal rivers, there are fertile areas where peanuts, corn, sesame, and cotton are raised.

Elsewhere the country is arid and at most supports grazing. Exports travel by rail to Dakar French conquest of the region was completed in 1896 Today the territory is represented in the French parliament.

Frenchtown, borough (pop 1,238), W N J , on the Delaware and W of Flemington, inc. 1867

French Union, Fr *Union Française* (ünyō' frāsĕz'), name given by the French constitution of 1946 to the political organism composed of the French republic and associated states The French republic consists of Metropolitan France (i e , the 90 departments of continental France and Corsica), of the government general of Algeria (divided into the three overseas departments of North Algeria and the territories of South Algeria), of the overseas departments of Martinique, Guadeloupe, Réunion, and French Guiana, of the overseas territories of French West Africa, French Equatorial Africa, Madagascar, Comoro Islands, French Somaliland, the French Settlements in India (i e , Pondichéry, Karikal, Mahé, and Yanaon), New Caledonia, the French Settlements in Oceania, and Saint-Pierre and Miquelon, of Togoland and the Cameroons, held under United Nations trusteeship, and of the Anglo-French condominium of the New Hebrides The associated states in the French Union are the protectorate of Morocco, the protectorate of Tunisia, and Indo-China (including, as of 1950, Viet Nam, Cambodia, and Laos) The president of the French republic is also president of the French Union He presides over the high council of the French Union, composed of representatives of the French government and of the associated states The assembly of the French Union is a representative body, half of its members represent Metropolitan France, the other half represent the overseas departments and territories and the associated states The high council and the assembly of the French Union should not be confused with the council of the republic and the national assembly, which constitute the upper and lower chambers of the French republic. The overseas departments and the French citizens residing in the overseas territories are, however, represented (as of 1950) by 75 deputies in the national assembly and by 65 members in the council of the republic

Frenchville, town (pop 1,566), NE Maine, on the St John below Fort Kent, in a potato area, settled by Acadians, inc 1869

French West Africa, group of eight French overseas territories (c 1,800,000 sq mi , pop c 15,996,000) The capital is Dakar The constituent territories (all individually represented in the French parliament) are DAHOMEY, FRENCH GUINEA, FRENCH SUDAN, IVORY COAST, MAURITANIA, NIGER, SENEGAL, and UPPER VOLTA French West Africa is ruled by a governor general.

French West Indies see WEST INDIES

Freneau, Philip (frēnō'), 1752–1832, American poet and journalist, b New York City, grad Princeton, 1771, classmate of James Madison During the Revolution, Freneau served as soldier and privateer, and out of his capture and imprisonment aboard the brig *Aurora* in 1780 came his poem "The British Prison Ship " Later he returned to the sea twice as a captain (1785–89, 1802–4) Our first professional journalist, he was a powerful propagandist and satirist for the American Revolution and Jeffersonian democracy He edited various papers, including the partisan *National Gazette* (Philadelphia, 1791–93), for Jefferson He was usually involved in editorial quarrels, and, influential though he was, none of his papers was profitable His political and satirical poems now have value only for the historian, but his place as the earliest important American lyric poet is secured by such poems as "The Wild Honeysuckle," "The Indian Burying Ground," and "Eutaw Springs " He lived his last years in retirement near Monmouth, N J , and died when he lost his way in a snowstorm See his *Poems* (ed by F L Pattee, 3 vols , 1902–7) and *Last Poems* (ed by Lewis Leary, 1946), definitive biography by Lewis Leary (1941)

Frenssen, Gustav (gōō'stäf frĕn'sun), 1863–1945?, German novelist His writings are drawn from the life of a Holstein village where he served as pastor until 1902 His sober though poetic novels, with political and theological infusions, include the highly successful *Jörn Uhl* (1901, Eng tr , 1905), *Holyland* (1905, Eng tr , 1906), *Peter Moor's Journey to Southwest Africa* (1907, Eng tr , 1908), *Klaus Heinrich Baas* (1909, Eng tr , 1911), and *The Pastor of Poggsee* (1921, Eng tr , 1931) Other translated works are *Village Sermons* (1899, Eng tr , 1924) and the autobiographical *The Anvil* (1926, Eng tr , 1930)

frequency see RADIO FREQUENCY, SOUND, VIBRATION, WAVE

frequency modulation, method of radio transmission and reception perfected by Edwin H ARMSTRONG and usually referred to as FM, in contrast to AM or amplitude modulation, the older system. Frequency modulation eliminates noise and provides great improvement in fidelity The basic difference between the two types of operation is that in an AM transmission the carrier wave is constant in frequency and varies in amplitude (strength) according to the sounds present at the microphone, while in FM the carrier is constant in amplitude and varies in frequency Constant amplitude is the element responsible for FM's noise-reducing feature, since most noise is manifested in amplitude variations and FM receivers are insensitive to these This condition is achieved by the inclusion of limiter and discriminator stages, the circuits of which are responsive only to changes in carrier frequency The radio detector can perform in a single stage the same function as the limiter-discriminator combination and is often favored for this saving in space and materials The other stages of an FM receiver are similar in operation to corresponding parts of an AM receiver, although more care is required in their design and assembly if FM's advantages of noise reduction and higher fidelity are to be realized

Frere, Sir Henry Bartle Edward (frēr), 1815–84, British diplomat and administrator, nephew of John Hookham Frere He distinguished himself in India (particularly in the Sepoy Rebellion) and was (1862–67) governor of Bombay In 1872 he negotiated a treaty with the sultan of Zanzibar for the abolition of the slave trade As governor of Cape Colony and high commissioner of British South Africa (1877–80) Frere had to deal with the Zulu War and trouble with the Kafirs and Boers See biography by John Martineau (1895)

Frere, John Hookham, 1769–1846, English satirist, diplomat, and translator He was a member of Parliament (1796–1802), and he and his friend George Canning wrote brilliant parodies and satires for the political newspaper, the *Anti-Jacobin* (1797) He was undersecretary of state (1799–1800) and minister to Lisbon (1800–1802) and Madrid (1802–4, 1808–9) He was recalled after the British military failures in the Peninsular War in 1809 Thereafter he devoted himself to writing and lived mostly in Malta Frere's best work is in his metrical translations from Aristophanes (*The Acharnians, The Birds, The Frogs, The Knights*—all 1839) See his works with a memoir by Sir Bartle Frere (1874)

Fréret, Nicolas (nēkôlä' frārā'), 1688–1749, French scholar He was imprisoned in the Bastille (1714–15) for maintaining, in a paper for the Academy of Inscriptions, that the Franks were in origin a Germanic people (as they were) instead of a people of Greco-Latin descent (as the French believed they were) In retirement after his release, he devoted himself to his studies and was one of the first Europeans to study Chinese In 1742 he became permanent secretary of the academy

Fréron, Élie (ālē' frārō'), 1719–76, French critic and journalist His critical journal, *Année littéraire,* virulently attacked the *philosophes* of the Enlightenment, and Voltaire made him a butt of his jokes Particularly well-known is Voltaire's quatrain.

L'autre jour, au fond d'un vallon,
Un serpent mordit Jean Fréron
Que pensez-vous qu'il arriva?
Ce fut le serpent qui creva!

Fréron, Louis Marie Stanislas (lwē' marē' stänēsläs'), 1754–1802, French revolutionist, son of Élie Fréron He founded (1790) the radical journal, *Orateur du peuple,* became a member of the Convention, and took a part in the Reign of Terror, but after the fall of Robespierre (1794) he sided with the Thermidorian reaction He died as a member of the expedition to Haiti

fresco (frĕ'skō) [Ital ,=fresh], in its pure form the art of painting upon damp, fresh, lime plaster In Renaissance Italy it was called *buon fresco* to distinguish it from *fresco secco,* which was executed upon dry plaster with pigments having a glue or casein base In true fresco the binder is provided by the lime of the plaster, this in drying forms a calcium carbonate which incorporates the pigment with the material of the wall During the Renaissance it was customary to prepare cartoons of the same dimensions as the contemplated fresco These were transferred by pouncing to the rough plastered wall On this, the finish coat of plaster (*intonaco*) made of fine sand, lime, and marble dust was applied in small sections daily On each section while it was damp a part of the drawing was transferred and painted Any portion not completed at the end of the day was scraped off A large fresco therefore consists of many small sections each painted in a day and often planned to coincide with the contours of objects represented to make the joinings inconspicuous As not all colors are lime proof, fresco does not permit as large a palette as oil, nor can it rival the freedom of manipulation and delicate transitions of oil as a medium But these very limitations are often advantageous in mural decoration, for which its clear luminous color, fine surface, and permanence make it an ideal medium The technique has not altered substantially since the 15th cent , when it was widely practiced by most of the great masters of the Italian Renaissance Neglected in the 19th cent , fresco was revived in the 20th by such artists as Diego Rivera, José Clemente Orozco, Portinari, and many other mural painters

Frescobaldi, Girolamo (jĕrō'lämō frāskōbäl'dē), 1583–1644, Italian organist and composer, from childhood a prodigious performer He was organist at St Peter's in Rome from 1608 until near the end of his life, and huge audiences came to hear him play and improvise Through his pupil Froberger, who carried his style to Germany, he was a strong influence on German organists and composers through the time of Bach He composed five-part madrigals and works for organ, the latter being of greater significance

Freshfield, Douglas William, 1845–1934, British explorer and mountaineer A prominent member of the Royal Geographical Society, he did pioneer climbing in the Caucasus, the Himalayas, and the mountainous regions of many other countries He edited (1872–80) the *Alpine Journal* and wrote *The Exploration of the Caucasus* (1896), *Italian Alps* (1875, new ed , 1937), *Round Kangchenjunga* (1903), a biography of H B de Saussure (1921), and *Below the Snow Line* (1923)

Freshwater, bathing resort, on the Isle of Wight, England, E of the Needles "Farringford," Tennyson's residence, is near here

Fresnel, Augustin Jean (ōgustē' zhä' frānĕl') 1788–1827, French physicist and engineer He is known for his research on light, especially on conditions governing interference phenomena in polarized light and on double refraction His work supported the wave theory of light and the concept of transverse vibrations in light waves, which he analyzed mathematically He devised a method of producing circularly polarized light and promoted the replacement of mirrors by compound lenses in lighthouses He served as a government engineer during most of his career

Fresnillo (frāsnē'yō), city (pop 24,614), Zacatecas, N central Mexico Founded in 1554 by Francisco de IBARRA, Fresnillo became, with Zacatecas, the center of a fabulously rich mining area, especially for silver It is the seat of a well-known mining school

Fresno (frĕz'nō), city (pop 60,685), co seat of Fresno co , S central Calif , near the San Joaquin and the Fresno rivers, founded 1872, inc 1885 It is a railroad, processing, marketing, and shipping center in the fertile San Joaquin Valley, particularly a center of the dried fruit and sweet-wine industry The county produces large quantities of grapes, raisins, and figs The city's manufactures include clothing, cottonseed and olive oil, and machinery Fresno State College (coeducational, 1911) is here

Fretum Herculeum see GIBRALTAR

fretwork, architectural or interior feature in decorative openwork It may be flat, when the design is executed with a fret saw and the work related to scroll sawing, or in relief carving, much employed in Eastern countries The patterns may embody the allover frets of the Orient, characters in Arabic or Persian, or the more familiar Greek fret designs in various adaptations, all lending themselves readily to such work

Freud, Sigmund (froid, Ger zēk'mōont froit'), 1856–1939, Austrian psychiatrist, founder of PSYCHOANALYSIS Born in Moravia, he lived most of his life in Vienna, receiving his medical degree from the university in 1881 With the National Socialist occupation of Austria, Freud fled (1938) to England, where he died His medical career began with studies (1885–86) under J M Charcot in Paris, soon after his return to Vienna he began his famous collaboration with Josef Breuer on the use of hypnosis in the treatment of hysteria Their paper, *On the Psychical Mechanism of Hysterical Phenomena* (1893, Eng tr , 1909), more fully developed in *Studien über Hysterie* (1895), marked the beginnings of psychoanalysis by the discovery that the symptoms of hysterical patients—directly traceable to psychic trauma in earlier life—represent undischarged emotional energy (conversion) The therapy, called the cathartic method, consisted of having the patient recall and reproduce the forgotten scenes while under hypnosis This work was poorly received by the medical profession, and the two men soon separated over Freud's growing conviction that the undefined energy causing conversion was sexual in nature Freud then rejected hypnosis and devised a technique called free association (see ASSOCIATION), which would allow emotionally charged material which the individual had repressed in his unconscious to emerge to conscious recognition Further works, *The Interpretation of Dreams* (1900, Eng tr , 1913), *The Psychopathology of Everyday Life* (1904, Eng tr , 1914), and *Three Contributions to the Sexual Theory* (1905, Eng tr , 1910), increased the bitter antagonism against Freud, and he worked alone until 1906, when he was joined by the Swiss psychiatrists Eugen Bleuler and C G Jung, the Austrian Alfred Adler, and others In 1908 Bleuler, Freud, and Jung founded the journal *Jahrbuch für psychoanalytische und psychopathologische Forschungen,* and in 1909 the movement first received public recognition when Freud and Jung were invited to give a series of lectures at Clark Univ , Worcester, Mass In 1910 the International Psychoanalytical Association was formed with Jung as president, but the harmony of the movement was short-lived; between 1911 and 1913 both Jung and Adler resigned,

forming their own schools in protest to Freud's emphasis on infantile sexuality and the Oedipus complex Although these men, and others who later broke away, disclaim the Freudian theories, the basic structure of analysis is still Freudian, and disagreement lies in the degree of emphasis placed on concepts largely originated by Freud. He considered his last contribution to psychoanalytic theory to be *The Ego and the Id* (1923, Eng tr., 1927), after which he reverted to earlier cultural preoccupations *Totem and Tabu* (1913, Eng tr., 1918), an investigation of the origins of religion and morality, and *Moses and Monotheism* (1939, Eng tr , 1939) are the result of his application of psychoanalytic theory to cultural problems Freudian theory has had wide impact, influencing anthropology, education, and art and literature (see SURREALISM and EXPRESSIONISM) Other works include *A General Introduction to Psychoanalysis* (1910, Eng tr , 1920) and *New Introductory Lectures on Psycho-analysis* (1933) See his *Basic Writings* (tr and ed by A A Brill, 1938) and his autobiography (1925, Eng tr , rev ed , 1935), Fritz Wittels, *Freud and His Time* (1931), Theodor Reik, *From Thirty Years with Freud* (Eng tr., 1940)

Frey and Freyja (frī, frī'yŭ), Scandinavian god and goddess, brother and sister, deities of fertility, love, and matrimony and of light and peace Frey's chief shrine was at Uppsala, Sweden Freyja appears in legend riding a pig or drawn by cats Freyja and FRIGG were easily confused, and Freyja gradually supplanted the other

Freycinet, Charles de (shärl' dŭ frāsēnā'), 1828–1923, French statesman Elected to the senate (1876), he shared in a number of cabinets at various posts—public works, foreign affairs, war, and premier He worked for rapprochements with England and Russia (see TRIPLE ALLIANCE AND TRIPLE ENTENTE), and in 1894 a Franco-Russian military convention was signed Freycinet was minister of war when (1899) a second court-martial convicted Alfred Dreyfus of treason (see DREYFUS AFFAIR)

Freycinet, Louis Claude Desaulses de (lwē' klōd' dūsōls'), 1779–1842, French marine officer He was assigned (1800) to a French exploring expedition in Australian waters and after his return (1805) to Paris edited the maps and reports of the trip In 1817, accompanied by Arago and other scientists, he sailed in command of the *Uranie* to make observations in geography, ethnology, astronomy, and meteorology and to collect specimens of flora and fauna After visiting Australia and the Marianas, Hawaiian, and other Pacific islands, Freycinet lost his ship off the Falkland Islands The expedition's records and collections were saved, and Freycinet returned to Paris in 1820 He edited the scientific findings and the narrative of the journey, which appeared as *Voyage autour du monde* (13 vols , 1824–44)

Freyre, Gilberto (jēlbĕr'tō frā'ru), 1900–, Brazilian sociologist and anthropologist, b Recife, Pernambuco, grad. Baylor Univ , 1920, M A. Columbia, 1922 He taught and traveled much and gave lectures in many countries, especially in the United States For opposition to the government he was briefly imprisoned in 1934, but he was even then highly honored in Brazil He established himself with world-wide note as a social historian His linked masterpieces, *Casa grande e senzala* (1933, Eng tr , *The Masters and the Slaves*, 1946) and *Sobrados y mucambros* (1936), are an anthropological and social history of the plantation system of NE Brazil One of his many other works is *Brazil: an Interpretation* (1945, written in English).

Freytag, Georg Wilhelm Friedrich (grā'ŏrk vĭl'hĕlm frē'drĭkh frī'tak), 1788-1861, German Orientalist He compiled an Arabic-Latin lexicon (4 vols , 1830–37) and translated and edited several Arabic works

Freytag, Gustav (gōō'stäf frī'täk), 1816–95, German novelist and playwright He taught at the Univ of Breslau, edited the *Grenzboten* (1848–61), and, after writing several successful plays, produced *The Journalists* (1852, Eng tr , 1888), an adroit comedy of small-town life and politics which is his most lasting work for the stage Among his other works, best known today are his novels *Soll und Haben* (1855, Eng tr , *Debit and Credit*, 1856) and *Die verlorene Handschrift* (1861, Eng tr , *The Lost Manuscript*, 1865) and his *Technique of the Drama* (1863, Eng tr , 1895) Freytag also published an ambitious series of novels based on German history, *Die Ahnen* (1872–80; Eng. tr of selections, *Ingo*, 1873, and *Ingraban*, 1873), and works of history, criticism, and biography.

Friant Dam, central Calif , in the San Joaquin river, E of Fresno; completed 1944. It is 320 ft high and 3,430 ft long. The reservoir, Millerton Lake, attracts fishermen Friant Dam, the Madera Canal, and the Friant-Kern Canal are part of the CENTRAL VALLEY PROJECT.

friar, member of one of certain Roman Catholic religious orders, notably the DOMINICANS (Black Friars), FRANCISCANS (Gray Friars), CARMELITES (White Friars), and Austin Friars (see AUGUSTINIANS). They differ from monks in their goal, to extend the Christian life throughout society, and in the highly centralized organization. Originally they owned no property corporately—hence the term "mendicant orders" for them. This restriction was removed by the Council of Trent. See MONASTICISM.

friar's balsam, a tincture (alcoholic solution) of BENZOIN, storax, aloes, and tolu balsam. It is known in pharmacy as *Tinctura benzoini composita* and is used medicinally for wounds, abrasions, and ulcers, and in certain throat infections BENZOIC ACID is the chief active agent

Fribourg (frī'bŭrg, Fr frēbōōr'), Ger *Freiburg* (frī'bōōrk), canton (645 sq mi , pop 152,053), Switzerland, on the northern slopes of the Alps. It is known for its cheese and cattle Its original settlement and present capital is **Fribourg** (pop 26,045), a picturesque town on the Sarine river There are diversified food industries Fribourg was founded in 1157 by a duke of Zähringen, then passed successively to the houses of Kyburg, Hapsburg, and Savoy and in 1481 became a member of the Swiss Confederation An episcopal residence, it has a university and the Cathedral of St Nicolas (14th–15th cent) A large majority of the population is Catholic.

Frick, Henry Clay, 1849–1919, American capitalist, b. Westmoreland co , Pa He worked on his father's farm, was a store clerk, and did bookkeeping before he and several associates organized (1871) Frick & Company to operate coke ovens in the Connellsville coal district He strengthened his position in the Panic of 1873 by buying out embarrassed competitors and soon held a key place in the industry Andrew CARNEGIE, in order to control a business so vital to steelmaking, acquired heavy interests in Frick's organization Frick, in turn, was given large holdings in the Carnegie company, and because of his managerial ability, he was made (1889) chairman of the steel company. He played a key role in the organization (1892) of the Carnegie Steel Company, and as its acting head Frick engineered a large expansion of the company by buying out competing companies and acquiring many holdings in railroad securities and in Lake Superior iron-ore lands Frick, frequently over Carnegie's protest, dealt in strong-handed fashion with the workingmen of the company, and his adamant stand resulted in a pitched battle in the strike (1892) at Homestead, Pa —one of the most famous strikes in U S history He was largely responsible for the antiunion policy which characterized the steel industry for many decades Disputes between Frick and Carnegie led to a fight between them for control, and in 1899 Frick resigned He became a director of the U S Steel Corp and turned to other interests, chiefly railroads His mansion in New York city, together with his art collection and endowment of $15,000,000, was willed to the public as a museum Princeton Univ and the city of Pittsburgh also benefited from his philanthropies See biography by G B M Harvey (1928)

friction, the resistance offered to the sliding or rolling of one surface over another. Friction depends upon several factors It depends in part upon the degree of smoothness of the surfaces in contact For example, between pieces of ice it is very small, whereas between pieces of sandpaper or other extremely rough surfaces it is very large. Since, in view of the kinetic molecular theory of MATTER (see also MOLECULE), a perfectly smooth surface is physically impossible, there is always some resistance to any movement between surfaces in contact In addition, the adhesive or attractive force that acts between different materials, in greater or less degree, is instrumental in producing friction Two of the most important factors that cause friction are the chemical nature of the bodies in contact, i e , whether they are made of wood, metal, or some other material, and the magnitude of the force holding them together. When a body is moving over a horizontal surface, the force with which it presses down against the surface is equal to the weight of the body, i e , to the pull of gravity upon it An increase in the weight causes an increase in the amount of resistance offered to the relative motion of the surfaces in contact. However, although friction depends upon the weight and the nature of the bodies in contact, it does not depend upon the extent or area of the surfaces in contact or upon the speed at which they are moving. The so-called **coefficient of friction** is the quotient obtained by dividing the value of the force necessary to move one body over another at a constant speed by the weight of the body For example, if a force of 4 lb is needed to move a body weighing 10 lb over another horizontal body at a constant speed, the coefficient of friction is 4/10 or 0 4. Since different materials in contact yield different results, the coefficient of friction is not the same when a body is moved over different kinds of surfaces, even though the weight is constant If a wooden body of given weight is moved first over a wooden surface, then over a metal surface, and finally over a stone surface, the coefficient differs with each change It is, however, constant for any two given kinds of material and for this reason is of great help to engineers in anticipating the amount of friction between any two surfaces of known materials. This force of friction can be calculated by multiplying the known coefficient of friction between the two materials used (this coefficient of friction is determined by experiment) by the total pressure that will act between them. Friction is important in machines. Without friction the wheels of a locomotive could not "grip" the rails, nor could power be transmitted by belts. On the other hand, in the moving parts of machines a minimum of friction is required, in excess it produces heat, which causes expansion, the locking of the moving parts, and consequent destruction. LUBRICATION is important in minimizing friction as are also such devices as ball BEARINGS. Rolling friction is less than sliding friction; starting friction is greater than that observed when a body is moving along at an even speed **Fluid friction** is observed in the flow of liquids and gases Its causes are similar to those responsible for friction between solid surfaces, for it also depends upon the chemical nature of the fluid and the nature of the surface over which the fluid is flowing The tendency of the liquid to flow, i e , its degree of viscosity, is another important factor Fluid friction is affected by increased velocities, and the modern streamline is the result of engineers' efforts to minimize it.

Fried, Alfred Hermann (äl'frät hĕr'män frēt'), 1864–1921, German pacifist, b. Vienna He moved to Berlin, where he was a bookseller and a writer. After 1891 he devoted himself to the peace movement, founding the Deutsche Friedensgesellschaft [German league for peace], editing and contributing to pacifist journals, and writing books He shared the 1911 Nobel Peace Prize with Tobias Asser. After the outbreak of the First World War, Fried went to Switzerland, and when peace was restored he returned to Vienna He edited the periodical the *Friedenswarte* from 1899 Among his works are *Das Abrustungsproblem* [the disarmament problem] (1905), *Handbuch der Friedensbewegung* [handbook of the peace movement] (2 vols , 1911–13), and *Mein Kriegs-Tagebuch* [my journal of the war] (1918–20)

friedcakes see DOUGHNUTS

Friedel, Charles (shärl' frādĕl'), 1832–99, French chemist and mineralogist, b Strasbourg He was professor of mineralogy (1877–84) and of organic chemistry (from 1884) at the Sorbonne He worked on crystals and silicon compounds and on the artificial production of minerals With J. M Crafts he developed a widely used technique, the Friedel-Crafts reaction (in which anhydrous aluminum chloride is used as a catalyst), for preparing certain hydrocarbons and ketones

Friedland, Czech *Frýdlant* (both frēt'länt), town (pop 4,308), N Bohemia, Czechoslovakia, at the foot of the Sudetes It manufactures linen Its castle, now a museum, was the seat of the duchy of Friedland, awarded to WALLENSTEIN in 1625

Friedland (frēt'länt), city (pop 4,417), former East Prussia, since 1945 in the Kaliningrad (Königsberg) oblast of the RSFSR Its official Russian name is Pravdinsk (prav'dynsk) It is an agricultural center and a horse market Here in 1807 Napoleon I defeated the Prussians in a battle that led to the fall of Königsberg and the Treaty of Tilsit

Friedlander, Leo (frēd'lăndur), 1890–, American sculptor, b New York city, studied in New York, Paris, Brussels, and at the American Academy in Rome His many decorative works include sculptures on Washington Memorial Arch, Valley Forge, Pa , figures on the altar of St Thomas's Church, Frankfort, Pa , three figures for the main entrance of the Masonic Temple, Detroit, reliefs for the National Chamber of Commerce, Washington, D C , main central pediment of the Museum of the City of New York, façades for the Jefferson County (Ala) Courthouse, *Three Wise Men* for a private chapel, Berkeley, Calif , groups for the R C A. Building, Rockefeller Center, New York City; statues for the Oregon state capitol; and *Bacchante* (Metropolitan Mus).

Friedlingen (frēt'lĭng-ŭn), hamlet, SW Baden, SW Germany, near the Rhine and opposite Basel. Here in 1702 the French under Villars defeated the imperialist troops under Louis of Baden in the War of the Spanish Succession

Friedmann, Meir (mī'ŭr frēt'män), 1831–1908, Hungarian Semitic scholar He rendered valuable service in the field of scientific criticism of Rabbinic texts. Friedmann's editions of the Midrash are standard.

Friedrichshafen (frē'drĭkhshä"fun), town (pop. 15,356), S Württemberg, SW Germany, on the Lake of Constance. It manufactures machine parts and is the home of the Zeppelin works, which were destroyed during the Second World War by air raids Much of the rest of the town was also damaged. Buchhorn—as Friedrichshafen was named from its first mention (9th cent.) until 1811—became an imperial city in 1275. It passed to Bavaria in 1802 and to Württemberg in 1810. The

baroque ducal castle (originally a Benedictine abbey) and its church were both built in the late 17th cent. and have escaped war damage

Friedrichsruh (frē'drĭkhsrōō'), village, Schleswig-Holstein, N Germany Here Otto von Bismarck retired to his estate, which contains his mausoleum.

Friend, city (pop. 1,109), SE Nebr., WSW of Lincoln, in a farming area, founded c 1873.

Friendly Islands: see TONGA.

Friends, Society of, religious body originating in England in the middle of the 17th cent. under George FOX The members are commonly called Quakers Claiming that no theologically trained priest and no outward rite are needed to establish communion between the soul and its God, Fox taught that everyone could receive whatever understanding and guidance in divine truth he might need from the "inward light" supplied in his own heart by the Holy Spirit Many of his early converts were from among groups of SEPARATISTS Almost imperceptibly his followers were banded together into a new group of Christian believers Calling themselves Children of Light, Friends in the Truth, and Friends, they eventually agreed upon the name Religious Society of Friends Their popular name from early days was Quakers, either because they were so called by a judge whom Fox bade to "tremble at the word of the Lord" or because the early Friends were wont to tremble with emotion during their religious meetings The Friends regard the sacraments of the church as nonessential to Christian life They refused to attend worship in the Established Church and to pay tithes They resisted the requirement to take oaths and opposed war, refusing to bear arms Believing in the equality of all men and women, they would not remove their hats before alleged superiors Consequently, persecution was often their lot until the Toleration Act of 1689, but their numbers and their missionary zeal increased They sent representatives to the Continent and to America, Asia, and Africa They found a wide field of activity in philanthropic movements, taking the lead in the effort to abolish slavery The Friends worked for prison reform (e.g., Elizabeth FRY), for improvement in insane asylums, for mitigation of the penal code (especially abolition of capital punishment), and for the betterment of common education In colonial America they often met with severe condemnation and some persecution, except in Rhode Island and in Pennsylvania, where in 1682 William PENN settled his famous colony Though because of conscience Friends could not take an active part in the Revolutionary War, they were loyal in upholding the new national government Among noted American abolitionists were John WOOLMAN, Lucretia MOTT, and J. G. WHITTIER In 1827 questions arising in connection with the preaching of Elias HICKS divided the American Friends into two groups, "Hicksites," who placed emphasis upon the individual's belief as guided by revelation to his own spirit, and "Orthodox," who gave to the elders the duty of decision as to soundness of doctrine At the same time there was an "evangelical" revival among Friends in the Western states, with a tendency to discard many of the old forms and distinctions Another break occurred in 1845 in New England, when the adherents of John Wilbur set up a new yearly meeting in protest against what they considered dangerous departure from the teachings and ways of the early Friends Two superficial marks of Friends have been generally disappearing —the plain language, in which the Friends used "thee" to all men as a mark of equality, and the plain gray dress, the broad-brimmed men's hats, and the women's bonnets The Friends have long been workers in the cause of peace and international understanding The accomplishments in relief and reconstruction abroad achieved by the American Friends Service Committee, organized in 1917, are widely recognized This body and the Service Council of the British Society of Friends were jointly awarded the 1947 Nobel Peace Prize Educational activity among the Friends has resulted in the establishment and support of a number of excellent schools and colleges Missionary effort is extensive Avoiding liturgies and all elaboration that they fear might interfere with the direct guidance of the Holy Spirit, the "Inner Light," the Friends meet for worship without set form and frequently without stated leaders Any member is at liberty to follow the impulse of the spirit in prayer, praise, or exhortation A meeting may be spent entirely in silent receptivity and communion Ministers are not required to have special training, any man or woman who experiences the call to the work and gives evidence of his sincerity may be recorded as a minister In recent years, however, many of the Friends who seek the ministry have studied at theological schools The organization of the Society of Friends includes meetings for worship and monthly, quarterly, and yearly meetings. In the United States, the old lines of division between Orthodox, Hicksite, and Conservative (or Wilburite) Friends indicate no important differences, their common aims and interests draw them closely together. A general meeting held in Philadelphia in 1946 was attended by representatives from all the Quaker bodies, indicating the beginning of a new era of unity See T. E. Harvey, *The Rise of the Quakers* (1905); Rufus M. Jones, I. Sharpless, and A. M. Gummere, *The Quakers in the American Colonies* (1911), Rufus M. Jones, *The Later Periods of Quakerism* (2 vols., 1921), Auguste Jorns, *Quakers as Pioneers in Social Work* (Eng. tr., 1931), L. M. Wright, *The Literary Life of the Early Friends* (1932), Elbert Russell, *The History of Quakerism* (1942), Sidney Lucas, comp., *The Quaker Message* (1948), W. W. Comfort, *Quakers in the Modern World* (1949)

Friendship, 1 Fishing town (pop. 747), S Maine, near Rockland, settled 1743, inc. 1807 2 Village (pop. 1,148), W. N. Y., NE of Olean, inc. 1898. It has several manufactures

Friern Barnet (frī'ûrn bär'nŭt), urban district (1931 pop. 23,101, 1943 estimated pop. 26,100), Middlesex, England, in the London metropolitan area

Fries, Elias Magnus (ēlā'ăs măng'nŭs frēs'), 1794–1878, Swedish botanist He was the founder of the modern classification of fungi and lichens and taught at the Univ. of Uppsala (1834–59) His works include *Systema mycologicum* (3 vols., 1821–32) and *Icones selectae Hymenomycetum* (2 vols., 1867–84)

Fries, Jakob Friedrich (yä'kôp frē'drĭkh frēs'), 1773–1843, German philosopher He was a professor at Heidelberg and Jena His liberal political teachings caused the suspension of his lectures at Jena for many years He maintained that an adequate theory of knowledge must await the development of a true science of psychology His important work was *Neue Kritik der Vernunft* [new critique of reason) (3 vols., 1807)

Fries, John, c 1750–1818, American rebel, b Montgomery co., Pa After serving in the American Revolution, Fries became a traveling auctioneer Strongly opposed to the Federal property taxes levied (1798) for a possible war with France, he stirred the Pennsylvania Germans into an uprising (called Fries's Rebellion) against assessors and collectors He had from Federal troops, but his hiding place was betrayed by his dog, and he was arrested and sentenced to death He was pardoned by President John Adams

Fries (frēz), town (pop. 1,677), SW Va., on the New River and SW of Roanoke, inc. 1901–2

Frieseke, Frederick Carl (frē'zĭku), 1874–1939, American painter, b Owosso, Mich., studied at the Art Institute of Chicago and in Paris Under the influence of French impressionism he rapidly developed a highly popular style His paintings often show a woman out of doors painted in very light, bright colors Frieseke spent most of his working life in Paris and was recipient of many awards and honors at home and abroad He is represented in museums throughout the United States, in Odessa and Venice, and in the Luxembourg Mus., Paris *The Toilet* (Metropolitan Mus.) is a characteristic work

Friesland (frēz'lund, Dutch frēs'lant) or **Frisia** (frĭ'zhu), province (1,325 sq. mi., pop. 456,623), N Netherlands It comprises several of the West FRISIAN ISLANDS along the North Sea coast and borders on the Ijsselmeer in the west Leeuwarden is the capital A great dairying and cattle-raising country, Friesland has fertile land near the coast line and sandy heath and fenland in the interior It is drained by numerous canals and small rivers and has many lakes The Frisians, a Germanic people probably closely akin to the Anglo-Saxons, were conquered by the Franks in the 8th cent Their language still is spoken by a large part of the population In the Middle Ages, Frisia extended from the Scheldt river in the west to the Weser in the east and was a dependency of the counts of HOLLAND When Holland passed (1433) to the house of Burgundy, the authority of the Burgundian dukes was not recognized by the independent-minded Frisians In 1498 Emperor Maximilian I bestowed all Frisia on Duke Albert of Saxony Albert also was unable to establish his authority, and in 1515 his son for a payment restored the country to Maximilian, whose grandson, Emperor Charles V, reduced it by force in 1523 (EAST FRIESLAND, created a county in 1454, was not included in the transfer and its history became separate.) Friesland joined (1579) in the Union of Utrecht against Spanish domination, but it continued to appoint its own stadholders until 1748, when its stadholder, Prince William IV of Orange, became sole and hereditary stadholder of all the United Provs. of the Netherlands

Friesz, Othon (Achille Émile Othon Friesz) (ôtô' frēĕs', äshēl' āmēl'), 1879–, French painter, studied under Bonnat at the École des Beaux-Arts He was early attracted to impressionism, and his work shows this influence But his calligraphic style and color are highly personal and contemporary He is best known for his landscapes and marines, often with figures, and is represented in galleries of contemporary painting everywhere His *Marka* (Art Inst., Chicago) is characteristic

frieze, in architecture, the member of an entablature between the architrave and the cornice The Doric frieze alternates the metope and the triglyph, that of the other orders is plain or sculptured. Greek work shows figures in high relief, a 5th-century B.C. example is that of the treasury of the Cnidians, Delphi Roman and Renaissance examples, a notable one being on the temple of Vesta, Tivoli (1st cent. B.C.), display acanthus foliage, festoons, or conventional ornament, and the frieze frequently is pulvinated or convexly curved The term is likewise used to designate that part of the wall immediately below the ceiling, usually receiving a continuous ornamental band

frigate (frĭ'gĭt), originally a long narrow type of vessel used on the Mediterranean and propelled by either oars or sail or by both Later the term was used to designate a type of warship which was the cruiser of a hundred years ago and was largely employed as a commerce raider During the latter part of the 18th cent. and part of the 19th cent., frigates as a class were fast, square-rigged sailing vessels, with two gun decks carrying from 24 to 50 guns Frigates were the warships of the last days of sail The famous CONSTITUTION (launched in 1797) is a frigate of this period

Frigg or **Frigga,** in Germanic mythology, wife of WODEN She became confused with the Scandinavian goddess Freyja (see FREY AND FREYJA) and from being an earth-goddess seems to have turned into a goddess of fertility and love, hence, from her likeness to Venus, the Latin day of Venus became in Germanic-speaking countries Frigg's day (Friday) She appears in Richard Wagner's operas as Freia

frijole (frēhō'lē), used mostly in the plural **frijoles** (frēhō'lēz) [from Span. *frijol*, plural *frijoles*] In Mexico and the Spanish American countries, any cultivated bean of the genus *Phaseolus* is called by that general name In particular, it refers to the small, flat, black bean which ranks next to maize in importance as an article of diet and is an ingredient of many dishes It is probably of South American origin and belongs to the same family as the bean introduced into Europe in the 16th cent. from which sprang many of the modern garden varieties

Frimaire: see FRENCH REVOLUTIONARY CALENDAR

Friml, Rudolf (Charles Rudolf Friml) (frĭ'mul), 1881?–, American composer, b Prague, pupil of Dvorak He came to the United States in 1901 with Jan Kubelik Friml is best known for his light operas *The Firefly* (1912), *High Jinks* (1913), *Rose Marie* (1924), and *The Vagabond King* (1925)

Frimley and Camberley, urban district (pop 16,532), Surrey, England, near Farnborough N of Aldershot Bret Harte is buried here

fringeflower see BUTTERFLY FLOWER

Friou (frēōō'), Romance language See LANGUAGE (table)

Frisches Haff (frĭ'shus haf'), Pol. *Zalew Wiślany*, lagoon, c 60 mi. long and covering 322 sq. mi., on the coast of East Prussia It lies between the Nogat and Pregel rivers and is cut off from the Bay of Danzig by a narrow spit of land (the Frische Nehrung) except at the strait of the Pillauer Tief

Frischlin, Philipp Nikodemus (fē'lĭp nēkōdā'mōos frĭsh'lēn), 1547–90, German philologist, dramatist, and poet He was known not only for his work in editing Vergil and for his graceful Latin writings, but also for his spirited defense of Protestantism and for an adventurous career which ended in an attempted escape from prison

Frishmuth, Harriet Whitney (frĭsh'mŭth), 1880–, American sculptor, b Philadelphia, studied with Gutzon Borglum, H. A. McNeil, and Rodin Her work, mostly of nudes, is spirited, excellent in technique and design Well-known examples include *The Vine* and *Slavonic Dance* (Metropolitan Mus.), *Joy of the Waters* (Dayton, Ohio), bust of President Woodrow Wilson (capitol, Richmond, Va.), and *Play Days* (Dallas, Texas)

Frisi, Paolo (pä'ōlō frē'zē), 1728–84, Italian mathematician and astronomer He was professor at Pisa (1756?–1764) and at Milan (1764–77) and was noted as an authority on hydraulics He is credited with introducing lightning rods into Italy His works include *Cosmographia physica et mathematica* (2 vols., 1774–75)

Frisia: see FRIESLAND

Frisian Islands (frĭ'zhŭn), chain of islands, off the coasts of the Netherlands, Germany, and Denmark, in the North Sea The West Frisian Islands, belonging to the Netherlands, are off the shores of North Holland, Friesland, and Groningen provs. and include the islands of Texel, Vlieland, Terschelling, and Ameland The East Frisian Islands, belonging to Germany, are east of the mouth of the Ems and include NORDERNEY and Borkum The North Frisian Islands, off the coast of Schleswig-Holstein, Germany, and S Jutland, Denmark, include SYLT, FÖHR, and ROMO Fishing and stock raising are the main sources of livelihood on all the Frisian Islands There are many bathing resorts

Frisian language, Germanic language of the Frisian Islands and near-by coasts, the language most like English See LANGUAGE (table)

Frith or **Fryth, John** (both frĭth), 1503–33, English Protestant martyr He aided William Tyndale in translating the New Testament After a short time

in prison, suspected of heresy. Frith went to Germany in 1528 and was in Marburg, where he again assisted Tyndale. Upon his return to England in 1532, Frith was arrested and imprisoned. Firm in his denial of transubstantiation and purgatory, he was burned at Smithfield as a heretic. He was a man of great learning and ability. His works were edited (1573) by John Foxe.

Frith, William Powell, 1819–1909, English genre painter. His early paintings were illustrations, such as his *Scene from a Sentimental Journey* (Victoria and Albert Mus.). Later he painted many popular pictures of English life, among them *Derby Day* (National Gall., London) and *The Railway Station* (Leicester Mus.). See his autobiography (1887).

Frithjof (frē'tyôf), hero of an Icelandic saga of the late 13th or early 14th cent. Frithjof was supposed to have lived in the 8th cent. or earlier. The legends concerning him are the basis of the well-known poem *Frithjof's Saga* (1825) by the Swedish poet Esaias Tegnér.

Fritigern (frĭ'tĭgûrn), d. c 380, Visigothic chieftain. A rival of ATHANARIC for leadership of the VISIGOTHS, he adopted Arian Christianity and, with his followers, crossed (376) the Danube into Roman territory with the permission of Emperor VALENS. Rebelling against the Roman officials in 377, he defeated and slew Emperor Valens in the battle of Adrianople (378), a defeat from which Rome never recovered. His subsequent ravages of the Balkan Peninsula were ended only by his death. He is also known as Fridigern.

Friuli (frōō'lē), historic region, now divided between Friuli–Venezia Giulia, NE Italy, and Slovenia, NW Yugoslavia. Extending from the E Alps to the Adriatic, it includes in the east a fertile plain and part of the KARST region. UDINE and GORIZIA are the principal cities. The inhabitants are Italians in the west and Slovenes in the east. Friuli derives its name from the Roman city of Forum Iulii (modern Cividale). Occupied by the Romans (2d cent. B.C.), Friuli became a Lombard duchy (6th–8th cent.) and a Frankish march. Before A.D. 1000 it was divided into the counties of Gorizia (east) and Friuli (west). The western county passed (11th cent.) to the patriarchs of AQUILEIA, who made Udine their capital. In 1420 it went to Venice, and the name Friuli lost its political meaning. After the counts of Gorizia became extinct (1500), that county was incorporated in the Hapsburg possessions; attempts of Venice to acquire it were unsuccessful. With the treaties of Campo Formio (1797) and of Paris (1814, 1815) all Friuli became Austrian. After the Austro-Prussian War, Austria ceded (1866) W Friuli (i.e., Udine prov.) to Italy. During the First World War, Friuli was a battlefield. In 1919 E Friuli was also awarded to Italy, with Istria and Trieste. It formed the region of VENEZIA GIULIA. The Italian peace treaty of 1947 gave E Friuli (but not Gorizia) to Yugoslavia. The name Friuli was officially revived when Friuli–Venezia Giulia was formed as a region of Italy.

Friuli-Venezia Giulia (frēōō'lē-vānā'tsyä jōō'lyä), autonomous region (2,948 sq. mi., pop. 837,000), NE Italy, on the Yugoslav border. Comprising W Friuli, it extends from the E Alps to the Adriatic and is divided into the provinces of Udine and Gorizia. Udine is the capital. The region was formed after the Second World War by merging the province of Udine, formerly in Venetia, with the areas of the former VENEZIA GIULIA region that were left to Italy.

Fröbel, Friedrich Wilhelm August see FROEBEL.

Froben, Johannes (ō̂hä'nus frō'bun), 1460–1527, German printer. He established himself at Basel and there in 1516 printed the Greek New Testament, edited by Erasmus, with his Latin translation. Erasmus edited many publications of Froben, contributing to the fame of Froben's press for scholarly texts.

Frobenius, Leo (lā'ō frōbā'nēōōs), 1873–1938, German archaeologist and anthropologist. An authority on prehistoric art and culture, especially of Africa, he organized 12 expeditions to Africa between 1904 and 1935. He founded (1922) the Institute for Cultural Morphology, Frankfurt, where he established a noted collection of facsimiles of prehistoric paintings and engravings.

Froberger, Johann Jakob (yō'hän yä'kōp frō'bĕrgur), 1616–67, German organist and composer, pupil of Frescobaldi, whose style he transmitted to Germany. Froberger was one of the first to write harpsichord suites.

Frobisher, Sir Martin (frō'bĭshur), 1535?–1594, English mariner. Going to sea as a lad, he later made the friendship of Sir Humphrey GILBERT, through whom he became interested in the NORTHWEST PASSAGE. Licensed by Queen Elizabeth and backed by a group of merchants adventurers, Frobisher made three voyages (1576, 1577, and 1578) to the ARCTIC REGIONS in search of it. On his first voyage he sailed into Frobisher Bay, S Baffin Island, and from its shores brought back some black ore thought to contain gold. Returning to Baffin Island on his next two journeys, he explored Frobisher Bay to its head and penetrated a short distance up Hudson Strait. Since his geographical discovery was slight and no gold was revealed in his cargoes of ore, Frobisher's name was for a time under a cloud, but he won new glory in 1585 as commander of a ship in Sir Francis Drake's expedition to the West Indies and a knighthood for his services with Drake and Sir John Hawkins in the defeat of the Spanish Armada in 1588. He died as the result of wounds received at Brest during an English campaign against the Spanish. The narratives of his voyages, first published in 1578, have passed through several editions. *The Three Voyages of Martin Frobisher* by George Best was edited from the original 1578 text by Vilhjalmur Stefansson (1937). See biography by William McFee (1928).

Frobisher Bay, arm of the Atlantic, cutting into SE Baffin Island, Northwest Territories. It is 150 mi. long and 20 to 40 mi. wide, with steep, deeply indented shores and numerous islets. On its southwest side the Grinnell and Southeast Icecaps rise to c. 3,000 ft., extending tongues into the bay. At its head is Frobisher Bay trading post and an air base. The bay was discovered (1576) by Sir Martin Frobisher on an expedition in search of the Northwest Passage and until 1860 was believed to be a strait separating Baffin Island from another island.

Froding, Gustaf, Swed. *Fröding* (gŭs'täv frû'dĭng), 1860–1911, Swedish lyric poet. His first two volumes of poems, *Guitar and Concertina* (1891) and *New Poems* (1894), both translated into English in 1925, assured his popularity. His complete works (16 vols., 1917–23) contains an introduction and commentary by R. G. Berg. Several of his poems are included in *The Oxford Book of Scandinavian Verse* (1925), a selection in English, with an introduction by C. W. Stork, appeared in 1916.

Frodingham, Lincolnshire, England: see SCUNTHORPE AND FRODINGHAM.

Froebel, Friedrich Wilhelm August (frā'bul, frō-, Ger. frē'drĭkh vĭl'hĕlm ou'gōost frû'bul), 1782–1852, German educator and founder of the KINDERGARTEN system, b. Oberweissbach, Thuringia. He had an unhappy childhood and very little formal schooling, learning what he could from wide reading and close observation of nature. He studied for a short time at the Univ. of Jena. He was studying architecture at Frankfurt when he was persuaded by Gruner, master of the model school at Frankfurt, to become a teacher. He visited Pestalozzi at Yverdon and then returned to Gottingen and Berlin to study. In 1813 he joined Lutzow's Black Troops and saw active service. While serving in the army he met Heinrich Langethal and Wilhelm Middendorff, with whom he was associated throughout the rest of his career. He returned to Berlin, where he was given a position in the mineralogical museum of the Univ. of Berlin. In 1816 he founded at Griesheim a school (later moved to Keilhau) called the Universal German Educational Institute, here other teachers came to study his methods. Early in 1837 he went to Bad Blankenburg (near Keilhau), where he shortly opened the first kindergarten. In 1849 he founded a kindergarten training school at Liebenstein, but a blow which hastened his death was an edict forbidding the establishment of kindergartens. Froebel was influenced greatly by the philosophy of Fichte and Schelling. His educational system is based on a belief in the underlying unity of nature, which is God, so that religious training is a fundamental principle. Froebel stressed the importance of pleasant surroundings, self-activity, and physical training in the development of the child. His most important work is *Menschenerziehung* (1826, Eng. tr., *The Education of Man*, 1877). The translation by Susan Blow of his *Mutter- und Kose-Lieder* (1844) is called *Mother Play* (1895). Other works translated into English are *Letters on the Kindergarten* (1891), *Froebel's Chief Writings on Education* (1912), and his fragmentary autobiography. His name is also written Fröbel. See biographies by H. C. Bowen (1894) and A. B. Hanschmann (Eng. tr., 1897), W. H. Kilpatrick, *Froebel's Kindergarten Principles* (1916).

frog, an amphibian which usually lives in quiet fresh water or in the woods. The skin is smooth, usually some shade of green or brown, often spotted. Irritating or poisonous secretions are produced by the skin glands of some species. Most frogs hibernate underwater in the mud over the winter and lay their eggs in early spring. The eggs are fertilized as they are laid. A gelatinous covering secreted by the female surrounds each egg. It causes the eggs to adhere in a mass and gives them buoyancy and some protection. A small tadpole hatches from the egg, usually in from 3 to 10 days. During this larval stage the animal breathes first by external then by internal gills, feeds on water plants, and swims by means of its tail, which is later absorbed by the body. Before the end of the first summer most frogs, except the BULLFROG, have completed the metamorphosis from the fish-like form to that of the lung-breathing, tailless, carnivorous adult. Growth to the full adult size usually takes several years. Insects and worms are captured by thrusting out the sticky, forked tongue attached at the front of the lower jaw. Among the edible frogs in the United States are the leopard frog, the pickerel frog, the green frog, the common and the southern bullfrogs, and the Oregon red-legged frog. The wood frog with its fawn or brown body blends with the fallen leaves in the woods which it frequents. The TREE FROG or tree toad is arboreal. In Europe and in parts of Asia and Africa the edible frog is abundant. The flying frog of Asia uses its large webbed feet as parachutes when it leaps from trees. Some tropical species eat rats, bats, and snakes. See M. C. Dickerson, *The Frog Book* (1906), A. A. Wright and A. H. Wright, *Handbook of Frogs and Toads* (1942), P. A. Morris, *They Hop and Crawl* (1944).

Frohman, Charles, 1860–1915, American theatrical manager and producer, b. Sandusky, Ohio. Starting his career as a box-office clerk in Brooklyn, N.Y., Frohman became a successful producer with Bronson Howard's *Shenandoah* (1889). In 1893 he organized the Empire Theatre Stock Company, gradually acquiring five other New York theaters, and later headed the Theatrical Syndicate. He was known for his ability to develop talent, and his stars included Julia Marlowe, Maude Adams, John Drew, Henry Miller, Annie Russell, Ethel Barrymore, and William Gillette. In 1897 he leased the Duke of York's Theatre, London, introducing plays there as well as in the United States. Clyde Fitch, J. M. Barrie, and Rostand were among the playwrights he promoted. The system of exchange of successful plays between London and New York was largely a result of Frohman's efforts. Charles Frohman was lost with the *Lusitania*. See biography by I. F. Marcosson and Daniel Frohman (1916).

Frohman, Daniel, 1851–1940, American theatrical manager, b. Sandusky, Ohio, brother of Charles Frohman. He became manager of small traveling theatrical companies c. 1871 and in 1879 settled in New York. He was manager of the Fifth Avenue and of the Madison Square theaters until 1885. For a time Augustin Daly's business manager, Frohman was eventually manager and part owner of the Lyceum Theatre, where his stock company was based. He was for many years president of the Actors' Fund of America. He was the author of *Encore* (1937) and the autobiographical *Memories of a Manager* (1911) and *Daniel Frohman Presents* (1935).

Froissart, Jean (zhäⁿ' frŭwäsär'), c 1337–1410?, French chronicler, poet, and courtier, b. Valenciennes. He studied for the priesthood and was ordained, but his life was decidedly worldly. As a protégé of Queen Philippa of England, he went to England (1361–66), visited the court of David II of Scotland, and accompanied (1366) Edward the Black Prince on his campaign in Gascony. He visited England twice more (1367, 1394) and traveled widely in the Low Countries and in Italy. In the South of France he saw the brilliant court of GASTON III of Foix, which he later described in a famous passage. Nothing is known of his life after 1404, his death date is merely traditional. His chronicle continues that of Jean le Bel, canon of Liége, and covers the history of Western Europe from the early 14th cent. to 1400, i.e., the first half of the Hundred Years War. The first book describes the struggle between England and France, the second, the revolutions of Flanders and Brabant, the Wat Tyler rebellion, and sundry other subjects, the third, the events of Spain and Portugal, the last, the conditions in France and in England at the end of the century. In literary merit Froissart's chronicle ranks high above all similar efforts in any European language. Its historical value suffers from the very qualities that make for its literary greatness—it is personal, unobjective, enthusiastic, inaccurate, and ramified in its digressions to the point of confusion. Froissart's sympathy was with the established order—or disorder—of his time, his moral sense was not offended by the cutthroat activities of the men whom he presented as models of chivalry and prowess. As an artist, Froissart is nearly unexcelled. He saw with wide-open eyes and heard with insatiable ears, and what he saw and heard he put down with a directness, brilliance, and gusto that have lost none of their freshness in four and a half centuries. He showed little concern for historical or psychological motivation, yet few historians have brought to life an era and have put flesh on the bones of history as successfully as Froissart. Froissart personally witnessed many of the events he described, and he obtained much of his other material from eyewitnesses. Apart from a tedious romance, *Méliador*, Froissart's poetry is charming and light, it somewhat influenced Chaucer, whom Froissart probably knew personally. The standard English translation (1523–25) of the chronicles by John Bourchier, Lord Berners, is available in many editions.

Frome (frōōm), urban district (pop. 10,739), Somerset, England, on the Frome river and S of Bath. It is a trade center. It was formerly, and is still occasionally, called Frome Selwood, from Selwood Forest in the vicinity. The parish church of St. John the Baptist dates from the 14th cent., but has been much restored. The town's chief manufacture has long been wool, but flour, plastics, and acetylene are also produced.

Froment, Nicolas (nēkôlä' frômä'), fl 2d half of 15th cent, French painter While in the service (1461–80) of René of Anjou at Avignon, he painted the *Resurrection of Lazarus* (Avignon) and the triptych *The Burning Bush* (cathedral, Aix) He is credited also with the paintings of René and his wife, Jeanne Laval, on a diptych

Fromentin, Eugène (ùzhĕn' frômätĕ'), 1820–76, French painter and art critic After studying in Paris under Cabat, he traveled in the Orient and painted Moorish subjects His *Quarry* and *Fellah Women* (both Louvre) and *Arabs Crossing a Ford* (Metropolitan Mus) are good examples of his work Fromentin is perhaps best known for his book of art criticism, *Maîtres d'autrefois* (1876)

Fronde (frōd), 1648–53, a series of outbreaks during the minority of Louis XIV, caused by the efforts of the Parlement of Paris—the high court of justice—to limit the growing authority of the crown, by the personal ambitions of discontented nobles, and by the grievances of the people against the financial burdens suffered under Richelieu and Mazarin The period, 1648–49, of the **Fronde of the Parlement**, began with the refusal of the parlement to register a new fiscal edict The government, in retaliation, arrested several members of the parlement, notably Broussel, but the Parisian populace rose in protest and barricaded the streets (Aug, 1648) Broussel had to be released, and Mazarin with the court retired from Paris Agitation continued, and early in 1649 Mazarin ordered Paris to be blockaded The order was carried out by Louis II de Condé, whose brother, Armand de Conti, commanded the rebel forces Mme de Longueville, Frédéric Maurice de Bouillon, and Paul de Gondi, later Cardinal de Retz, were the other leaders of the Fronde A compromise peace was arranged between the parlement and the court at Rueil in March, 1649 Condé's overbearing attitude and intrigues caused his arrest by Mazarin in Jan, 1650, and precipitated a second outbreak, the **Fronde of the Princes** Mme de Longueville called on Turenne for aid in releasing her brother Government troops defeated Turenne and his Spanish allies at Rethel (1650), but Mazarin was forced to yield when Retz, Mme de Chevreuse, Gaston d'Orléans, and François de Beaufort all united in demanding Condé's release Mazarin fled to Germany in Feb, 1651, but the victorious nobles soon fell out among themselves and Condé left Paris to take up open warfare against the government Though joined by Gaston, Beaufort, Conti, and the provincial parlements of S France, Condé lost his principal support in Turenne, who went over to the government's side after Louis XIV reached his majority In Dec, 1651, Mazarin was recalled Condé concluded an alliance with Spain, but was defeated by Turenne at the Faubourg Saint-Antoine and was saved from capture only through Mlle de Montpensier, who admitted him and his army into Paris There his arrogant conduct alienated the people As the Fronde disintegrated, Mazarin once more left France to clear the air for a reconciliation In October the king returned to Paris, Mazarin followed in Feb, 1653 The princes soon made peace with the government, except Condé, who commanded the Spanish forces against France until the Peace of the Pyrenees (1659) The Fronde resulted in the humiliation of the nobles, the stabilization of royal authority, and the further disruption of French economy See J B Perkins, *France under Mazarin* (2 vols, 1886)

Frontenac, Louis de Buade, comte de (frôn'tĭnăk, Fr lwē' du büad' kôt' du frôtunak'), 1620–98, French governor of New France His early military career was spent in service in the Low Countries, Italy, and Germany Appointed in 1672 to the post in New France, he entered with vigor upon a course that would have resulted in considerable political independence for Canada, but was curbed by the royal government in France because his policy was not acceptable to Louis XIV and his minister, Colbert Adding to the power of the council in New France, they reduced that of the governor Frontenac was involved in long quarrels with the Jesuits, with the intendant, and with the governor of Montreal, but he dealt wisely and successfully with the Indians, forwarded explorations by Jolliet, Marquette, and La Salle, and aided in the establishment of forts and posts in the new French territory When disagreements among the heads of the colony caused division and confusion, Frontenac was recalled to France in 1682 However, the following years were so distressing because of the havoc worked by the Iroquois and the succeeding governors, La Barre and Denonville, that Frontenac was sent back to Canada as governor in 1689 He energetically warred upon the Iroquois, who submitted at last in 1696, and he sought to restrain the British in the French and Indian Wars Sir William Phips's fleet was driven back from before Quebec, Boston was attacked, and incursions were made along the coast of New England and as far south as New Jersey The governor died soon afterward at Quebec See Francis Parkman, *Count Frontenac and New France under Louis XIV* (1877), W. D. Le Sueur, *Count Frontenac* (1906); G. M. Wrong, *The Rise and Fall of New France* (1928)

Frontenac (frôn'tĭnăk), coal-mining city (pop 1,766), SE Kansas, near Pittsburg, laid out 1887, inc 1895

Frontenac, Fort, on the site of Kingston, Ont, Canada La Salle was made commandant (1673) of the original fort It was reestablished (1696) by the comte de Frontenac and was captured by Edward Bradstreet in 1758, the victory giving the British control of Lake Ontario

frontier, borderland, in various senses It may be used to mean the actual border between two countries (as in the phrase "crossing the frontier") or the region about an international boundary In U S history, however, it means the border area of white settlement, vital in the conquest of the land between Atlantic and Pacific The importance of the westward movement of the population in the British colonies established on the seaboard of North America was clear even to colonial commentators, and the lure of the frontier—with its wide lands attracting the discontented, the oppressed, the ambitious, and the restive—was a factor in American history that was not ignored by the historians of the republic even in early days The theory that the frontier was a governing factor (if not the governing factor) in developing U S. civilization as distinct from that of other nations, was, however, to await the pronouncements of Frederick Jackson Turner in 1893 Stated in a highly oversimplified way, the thesis is that American democracy was shaped by the frontier, by the contest of the settler with the wilderness—not only the woodland wilderness of the East and the Great Lakes but the grassy wilderness of the prairies, and the rocky wilderness of the Western mountains. The wilderness is a formidable adversary, and man did not always win, but in the contest he learned self-reliance, and on his lonely farm he and his heroic mate and children became assured of equality with any man and resentful of class distinctions and any attempts at civic and social coercion In the last decades a tremendous amount of research and writing has been done on the history and meaning of the frontier Its history has been traced from the beginnings as a European seaboard frontier, to the frontier of the fall line and that of the Appalachian Mts The heart of the matter is the history from 1763 (when pioneers were venturing over the mountains) to what is called the formal extinction of the frontier (if defined as a large habitable area with a population of less than 6 per sq mi) as shown by the census of 1890 There is no question that this process of peopling the West is a central theme in U S history, and the belief that it shaped American thought and character is now almost universally accepted It has been pointed out, however, that other factors were of telling weight (e g, industrialization), that individualism on the frontier has been perhaps overemphasized, and that the frontier farming community was possibly not as classless as it has been pictured Many studies have been devoted to the fur-trade frontier, the mining frontier, the grazing frontier, and other types of frontier, but emphasis has been to a good extent on the solid achievements of the farming frontier and on the central United States That this theory of the frontier cannot be applied elsewhere with any degree of success is no valid criticism, it is an explanation of what occurred, not intended as a law of the universe Somewhat similar developments may be seen in other parts of the world, as in the spread of population into and from the state of São Paulo, Brazil, in the peopling of the Pampa in Argentina, and in some of the development of the Union of South Africa In group and government-controlled development of a frontier (as in the Soviet exploitation of Siberia) the conditions are likely to be widely different, although there, too, resourcefulness (albeit supported resourcefulness) is pitted against a wilderness See F J Turner, *The Frontier in American History* (1920) and *Early Writings* (compiled by Everett E Edwards, with an introduction by Fulmer Mood, 1938), F L Paxson, *History of the American Frontier* (1924), R E Riegel, *America Moves West* (1930), R A Billington and J B Hedges, *Westward Expansion* (1949)

Frontinus (Sextus Julius Frontinus) (frŏntī'nŭs), fl A D 74, Roman administrator and writer As governor of Britain from A D 74 or A D 75 to A D. 78, he reduced the Silures and pacified Britain within its borders, it was this work, successfully done, which probably rendered possible the achievements of Frontinus' successor, Agricola The most interesting civil position he held in Rome was as *curator aquarum* or water commissioner From this experience he wrote his *De aquis urbis Romae*, which treats exhaustively of the water supply of Rome, with complete descriptions and history of the aqueducts Frontinus' *Strategematica*, a tactical study, is also well written and interesting

Fronto (Marcus Cornelius Fronto) (frŏn'tō), fl. 2d cent, Roman teacher and rhetorician, b Africa. He was the tutor of Marcus Aurelius, and Antoninus Pius made him consul in 143 A successful teacher and government official, Fronto was an admirer of the early Latin writers and tried unsuccessfully to bring about a renaissance His extant letters (discovered by Angelo Mai and published in 1815–23) reveal a fondness for an archaic and recondite vocabulary

Front Range, part of the Rocky Mts, extending c 300 mi SE and S from SE Wyoming through central Colorado to the Arkansas river near Canon City The range, which at the north includes the Laramie Mts, stretches along the eastern edge of the Rockies and faces the Great Plains It forms part of the Continental Divide in Colorado Pikes Peak is in the southern part of the range Among other summits are Grays Peak, Mt Evans, Longs Peak, Mt Meeker, Arapahoe Peak, and James Peak Rocky Mountain National Park lies in a portion of the range

Front Royal, town (pop 3,831), N Va, on the South Fork of the Shenandoah and S of Winchester, at the northern end of the Skyline Drive, inc 1788 It is near Shenandoah National Park and George Washington National Forest The courthouse of Warren co is here The town has large rayon mills It is the seat of Randolph-Macon Academy, near by is a U S army remount station On May 23, 1862, Stonewall Jackson, in his Shenandoah Valley campaign, routed a detachment under Gen N P Banks here

Frost, Arthur Burdett, 1851–1928, American illustrator and cartoonist, b Philadelphia, pupil of Thomas Eakins at the Pennsylvania Academy of the Fine Arts He worked chiefly in New York and became one of the most popular illustrators of his time He executed a number of comic series of line sketches in story sequence, such as *Stuff and Nonsense* and *The Bull Calf and Other Stories*, and produced many illustrations for *Harper's Magazine*, *Collier's*, and *Scribner's* and some admirable book illustrations, particularly those for the "Uncle Remus" stories His most characteristic drawings portray certain American countryside types—the plantation Negro, the farmer, the sportsman with his animals—with humor and drama and with a freshness and zing that won for Frost a large following

Frost, Edwin Brant, 1866–1935, American astronomer, b Brattleboro, Vt, grad Dartmouth (B A, 1886), studied in Germany and at Strasbourg From 1892 to 1898 he was a member of the astronomy department at Dartmouth At the Univ of Chicago he became professor of astrophysics in 1898 and director of Yerkes Observatory in 1905 and retired as emeritus professor and director in 1932 His investigations have been particularly in the spectroscopy of the stars, sunspots, and the thermal radiation of the sun He contributed papers to many astronomical journals and from 1902 was editor of the *Astrophysical Journal* Among his works are the autobiographical *An Astronomer's Life* (1934) and *Let's Look at the Stars* (1935)

Frost, Robert, 1875–, American poet, b San Francisco When he was 10 his father died, his Scottish mother moved to Lawrence, Mass, where he grew up In 1892 Frost entered Dartmouth, but was unable to endure the academic routine He worked as a bobbin boy, married at 20 Elinor Miriam White, and attended Harvard two years (1897–99) He tried many jobs, cobbling, editing, and teaching, and settled on a farm near Derry, N H, in 1900 To eke out a living, he also taught English at the Pinkerton Academy in Derry (1905–11) and psychology at the New Hampshire State Normal School (1911–12) In England (1912–15) he met other poets, who honored him, and his first two books of poetry, long denied publication, appeared—*A Boy's Will* (1913) and *North of Boston* (1914) *North of Boston* includes "Mending Wall," "The Death of the Hired Man," and "After Apple-picking" He found himself famous when he returned to America, and in 1916 in *A Mountain Interval* such favorites appeared as "The Road Not Taken," "Brown's Descent," and "The Oven Bird" He taught English and was poet in residence at Amherst much of the time from 1916 to 1943 except for intervals at the Univ of Michigan (1921–23, 1925–26) and Harvard (1936, 1939–42) In 1943 he was made George Ticknor fellow in the humanities at Dartmouth He has taught in the summer Breadloaf School of English, which he helped to found at Middlebury College, Vt, in 1920 His later volumes of poetry include *New Hampshire* (1923), *West-running Brook* (1928), *A Further Range* (1936), *A Witness Tree* (1942), *A Masque of Reason* (1945), *Steeple Bush* (1947), *A Masque of Mercy* (1947), collected editions (1930, 1939), and his *Complete Poems* (1949) He was awarded the Pulitzer Prize for poetry in 1924, 1931, 1937, and 1943 Frost has been called a classic poet, his an authentic New England voice He writes with clarity and conversational ease poems which appeal to all kinds of readers of verse and which are extremely quotable Unsurpassed in genre studies of New England characters, he is also hailed as a subtle symbolist See an anthology of criticisms, *Recognition of Robert Frost* (ed by Richard Thornton, 1938), Lawrance Thompson, *Fire and Ice* (1942), biographical bibliography by Louis Mertins and Esther Mertins, *The Intervals of Robert Frost* (1947)

frost or **hoarfrost,** light feathery deposit of ice, often of curious and delicate pattern, caused by the condensation of water vapor, directly in the crystalline form, on surfaces whose temperatures are below freezing. In manner of formation frost is identical to dew, except that dew forms only when the temperature of the surface upon which the moisture is condensed is above freezing The dates on which killing frosts (frosts destructive to vegetation and staple agricultural products) occur vary considerably. The first and last killing frosts average before Sept 1 and after June 1 in the northern and central Rocky Mt. region, and after Dec 1 and before March 1 along the Gulf coast and parts of California and S Arizona, and at intermediate dates in other regions Maps showing the GROWING SEASON and probable date of occurrence of frost may be obtained from the U S Weather Bureau, Washington, D C The Weather Bureau stations issue warnings when frost is likely to occur, these warnings are broadcast by radio, and are telegraphed or telephoned to farmers and fruitgrowers, who may protect their crops accordingly Methods of protection vary small flower beds and vegetable gardens are commonly protected by a screen or cloth which prevents excessive radiation from the earth and from the plants, while in orchards, especially in California and Florida, simple oil-burning stoves or smudge pots placed at intervals throughout the orchard are used to heat the air sufficiently to prevent frost Huge fans operated by gasoline engines have been used in lemon groves to prevent freezing by circulating the air Valleys are more subject to frosts than slopes, since cold air "slides down hill" and settles in depressions Therefore topography is a factor in the occurrence of frost, as are altitude, latitude, location with reference to large bodies of water, and the other factors determining temperature Orchards and citrus fruit groves are usually planted on slopes Frost, an element of climate, is an important agent of erosion Frost heaving is a factor of consideration in engineering construction, especially in highway foundations In England the word *frost* denotes freezing weather and *degrees of frost* means the number of degrees that the temperature falls below the freezing point. See *Frost and the Prevention of Frost Damage* (U S Dept of Agriculture, Farmers' Bul 1588)

frostbite, injury resulting from exposure to cold which freezes body tissue, causing it to appear grayish white The face, ears, hands, and feet are most apt to be affected Prolonged exposure to cold, especially when there is a high wind and when an individual is fatigued, in poor health, or insufficiently protected by clothing, is apt to result in frostbite The injured part should be gradually thawed by contact with another part of the body, by covering with extra clothing, or by exposure to cool air or cold water Rubbing with snow is harmful since it may bruise and tear the tissue and cause gangrene Exposure to heat is also dangerous A milder form of injury from exposure to cold is known as chilblains As a result of local disturbance of circulation the area affected becomes purplish and there are sensations of burning and itching

Frostburg, resort and trading town (pop 7,659), NW Md , W of Cumberland, in a coal-mining area, settled c 1812 A state teachers college is here, and a state park is near by

Frostproof, town (pop 1,704), central Fla , SW of Lake Kissimmee and between Reedy and Clinch lakes Citrus fruit is canned and packed here

frostweed or **frostflower,** name for several plants which under certain conditions produce radiating ribbons of ice from the base of the stem The ice evidently is exuded from a break in the stem after a sudden frost, but the phenomenon has not been fully studied Genera in which the ice ribbons are most often seen include *Pluchea, Helianthemum,* and *Verbesina* Other plants are called frostflower.

Frothingham, Octavius Brooks (frŏdh'-), 1822–95, American clergyman, b Boston, grad Harvard, 1843, and Harvard Divinity School, 1846 While he was a Unitarian minister in Salem (1847–55) he came under the influence of Theodore Parker In 1859 he organized the Third Unitarian Church of New York, but his doctrines were soon too liberal for orthodox Unitarianism and his followers from all faiths organized the Independent Society Frothingham was president of the Free Religious Association in Boston, 1867–78, until his health broke down In addition to writing sermons and such religious books as his widely read *Religion of Humanity* (1872), Frothingham became historian of the liberalism of his day *Transcendentalism in New England* (1876) and *Boston Unitarianism, 1820–1850* (1890) are today still useful, as are his substantial biographies of his liberal friends, Theodore Parker (1874), Gerrit Smith (1877), and George Ripley (1882) See his *Recollections and Impressions, 1822–90* (1891).

Froude, James Anthony (frōōd), 1818–94, English historian Educated at Oxford, he took deacon's orders, but after coming under the influence of the Oxford movement, he later abandoned the path of Newman and became a skeptic His record of this course in *The Nemesis of Faith* (1849) led to his resignation from an Oxford fellowship He became an intimate friend of Thomas Carlyle, whom he admired extravagantly, and devoted himself to writing and lecturing. In 1872–73 he came to the United States and lectured on Irish questions, and later he traveled in many parts of the British Empire In 1892 he became regius professor of modern history at Oxford. His most important work is *The History of England from the Fall of Wolsey to the Defeat of the Spanish Armada* (12 vols , 1856–70) An indefatigable worker, Froude produced an almost incredible number of volumes. Among his best-known works are *Short Studies on Great Subjects* (4 vols , 1867–82), *The English in Ireland in the Eighteenth Century* (3 vols., 1872–74), *English Seamen in the Sixteenth Century* (1892), several books on Thomas Carlyle and his wife, and biographies of Julius Caesar, Erasmus, and Disraeli He also wrote works on the empire, with a strong imperialist slant, notable among these is *Oceana* (1886) As literature, Froude's works are superb, his style is graceful and fluent, his opinions are competently and clearly expressed As history, they leave much to be desired, his numerous prejudices color all his writing, and he was prone to factual errors Nevertheless, his interest in social questions, his tireless curiosity concerning the past, and the very volume of his work with its independent conclusions give the books value See W H Dunn, *Froude and Carlyle* (1930)

Froude, William, 1810–79, English engineer and naval architect, educated at Oxford, brother of J A Froude In 1837 he worked on the Bristol and Exeter railroad, constructing the line from Whitehall Tunnel to Exeter He studied the motion of a ship among waves, demonstrating that the rolling of a ship could be reduced by a deep bilge keel This fact and his conclusions on the relationship between construction design, efficiency, and power in screwships were extensively used by the British navy He also constructed a dynamometer for measuring the power of large marine engines

frozen foods have been employed by northern peoples from prehistoric times Eskimos throw freshcaught fish on the ice to freeze, and weather-frozen fish have been a trade staple of the Great Lakes region since the mid-19th cent Brine and cold-room convection methods were in use in Europe and America from c 1860 for freezing meat products, fish, poultry, and broken-out eggs By 1905 small fruits were frozen for manufacturers of preserves, bakery products, and ice cream Freezing prevents food spoilage by inhibiting microorganic and enzyme action Deterioration is rapid after thawing, since reactivated organisms attack cells injured by ice crystals The slow sharp freezing is exemplified by early methods In quick freezing, inaugurated commercially for fish in 1925, rapid chilling yields small ice crystals and gives less time for the diffusion of salts and water for microorganic action Several methods of quick freezing include direct contact with the refrigerator, indirect cooling by contact of the product with refrigerated pans, sheaths, metal belts, or plates, cold blasts, or combination methods The rapid growth of the industry has been due to labor- and space-saving features of frozen foods and to preservation with fewer changes in taste, flavor, and appearance than by other methods, it has been paralleled by the development of suitable containers and of specialized methods of transportation, storage, and retailing An increasing variety of quick-frozen fruits, vegetables, juices, meats, and cooked foods is available Domestic preparation of foods for freezing has become common since the establishment of community locker plants and the manufacture of small freezing units See D K Tressler and C F Evers, *The Freezing Preservation of Foods* (2d ed , 1947)

Fructidor (frük'tĭdôr, Fr früktēdôr'), 12th month of the FRENCH REVOLUTIONARY CALENDAR The coup d'état of 18 Fructidor (Sept. 4, 1797), in which General Augereau was a key figure, removed Lazare Carnot and François de Barthélemy from the Directory and was generally directed against the conservatives in the government

fructose (frōōk'tōs, frük'-), **levulose** (lĭv'yŭlōs), or **fruit sugar,** a sugar much sweeter than cane sugar or sucrose, found in honey and in the fruit and other parts of plants Chemically it is a CARBOHYDRATE, its molecule consisting of 6 atoms of carbon, 12 of hydrogen, and 6 of oxygen It has the same chemical formula (see ISOMERISM) as GLUCOSE, with which it is commonly associated in nature and with which it occurs when ordinary cane sugar (SUCROSE) is boiled with water and sulphuric acid It reacts with FEHLING'S SOLUTION and can be differentiated from its isomers (glucose and galactose) by the fact that it forms a red precipitate when treated with a solution of resorcin in hydrochloric acid.

Frug, Simeon Grigoryevich (sēmyōn' grēgôr'yŭvĭch frōōk'), 1860–1916, Russian-Jewish lyricist and writer His poems appeared in Russian and Jewish periodicals under various pseudonyms. They were popular especially with the working classes.

fruit, the fully developed seed-producing organ of a FLOWER Botanically it is the OVARY of the pistil, which occupies the central position in the flower and is the female reproductive organ. The seedlike fruit (see GRAIN) of grasses is commonly called seed, and many food fruits are popularly called vegetables (e.g , beans and tomatoes). Fruits are generally broadly divided into two groups, dry fruits and fleshy fruits. Dry fruits are usually eaten for the seed, and fleshy fruits for the pulp surrounding the seed. Of the dry fruits, important kinds include the grain and the NUT, but there are also several other types. The more common fleshy fruits are botanically classed as pome (with a central seed-bearing core, e.g., apple and pear), drupe (with a central stone or pit containing usually one seed, e g , cherry and peach), berry (with many seeds, e g., tomato, blueberry, and grape), or aggregate fruit (many small drupelike parts united into one structure and popularly called a berry, e g , blackberry and raspberry). Fruit has been a human food probably from the beginning of man's history, it is the first food mentioned in the Bible Fruits were particularly valued by the American Indian who cooked the dried fleshy fruits with many of their dishes As items of food, fruits are eaten raw or cooked or variously preserved by canning (often as a jelly or pickle), freezing, or drying. New hybrid fruits are often introduced See also SEED

Fruita (frōō'tŭ), town (pop 1,460), W Colo , near the Utah line NW of Grand Junction, in a farm area; inc. 1894 Colorado National Monument is near by

fruit fly, common name for certain insects of the family Trypetidae, the larvae of which bore through fruits or other parts of the plant Among those which cause great damage to fruit in North America are the apple or blueberry maggot, the currant and gooseberry fruit fly, and the cherry fruit fly In the warmer parts of the New World the Mexican, the West Indian, and the papaya fruit flies are serious pests The Mediterranean fruit fly, a native of the Old World and destructive to numerous soft-skinned fruits in many tropical and subtropical areas, was found in Florida in 1929 and eradicated there at great cost The Old World olive fly and the melon fly of the Hawaiian Islands are harmful *Drosophila melanogaster,* known as the vinegar, fruit, or pomace fly, is a valuable laboratory insect for studies in genetics

fruit sugar. see FRUCTOSE

Frundsberg, Georg von (gā'ôrk fŭn frōōnts'bĕrk), 1473–1527, German commander in the service of Emperors Maximilian I and CHARLES V He was the principal organizer and commander of the lansquenets [Ger *Landsknechte*], a mercenary army In the ITALIAN WARS, Frundsberg contributed to the victories of La Bicocca (1522) and Pavia (1525) over the French He then helped to end the Peasants' War in Germany, but in 1527 returned to Italy to force Pope CLEMENT VII out of the League of Cognac While trying to pacify a mutiny caused by the announcement of a truce (the troops' pay was in arrear), Frundsberg was struck by apoplexy The troops continued their march on Rome under Charles de BOURBON and subjected the city to a thorough sack

Frunze, Mikhail Vasilyevich (mĭkhŭyēl' vŭsē'lyŭvĭch frōōn'zĕ), 1885–1925, Russian general. A revolutionist, he was exiled (1914) to Siberia, but returned to take part in the October Revolution of 1917 He commanded in the campaigns by which the Soviets recovered Russian Turkistan from A V. Kolchak and the Crimea from P N Wrangel. As people's commissar for the army and navy (1924–25) he reorganized the armed forces. The principal Soviet military academy is named for him

Frunze (frōōn'zĕ), city (1926 pop. 36,610, 1939 pop. 92,659, 1948 estimated pop , 140,000), capital of Frunze oblast and the Kirghiz SSR, on a branch of the Turkistan RR The center of a fertile, irrigated, agricultural area, it processes meat, flour, tobacco, leather, and wool and manufactures agricultural machinery There are several colleges, museums, and theaters Founded in 1878 as a Russian fortress and formerly called Pishpek, it was renamed in 1925 for N. V. Frunze, who was born here. Until 1924, when it was reached by the Turkstb RR, it was a small trading town

Fry, Sir Edward, 1827–1918, English lawyer. In 1877 he was made a judge of the high court of justice, and he served (1883–92) as judge of the court of appeal Later he arbitrated several important international disputes Fry wrote *Specific Performance of Contracts* (1858). See memoir by Agnes Fry (1921)

Fry, Elizabeth (Gurney), 1780–1845, English prison reformer and philanthropist A deeply religious Quaker, she led religious services. From 1813 she worked untiringly for improvement of the conditions of women in Newgate prison, advocating separation of the sexes, employment, and religious training The success of her methods at Newgate impressed the government and were tried in other prisons. For several years she traveled in Europe, visiting penal institutions. Her other philanthropies included the founding of soup kitchens in London See her memoirs (ed. by her daughters, 1847); biography by J. P. Whitney (new ed., 1945)

Fry, Roger Elliott, 1866–1934, English art critic and painter, grad. Cambridge. He was instrumental in

introducing Cézanne and the postimpressionists to England From 1905 to 1910 he was curator of paintings at the Metropolitan Museum A collection, *Last Lectures*, appeared posthumously (1939) See biography by Virginia Woolf (1940)

Fry, Sherry Edmundson, 1879–, American sculptor, b Creston, Iowa, studied in Chicago and Paris and at the American Academy in Rome His work, which is found in many American cities, includes *Modesty* (Metropolitan Mus), decorative sculptures of the pediments for the Henry C Frick house, New York, and for the Clark Mausoleum, Los Angeles, and the statue *Mahaska, Indian Chief* (Oskaloosa, Iowa) and one of Ira Allen (Univ of Vermont)

Fryeburg (frī'bûrg), town (pop 1,726), SW Maine, on the Saco near the N H line, settled 1762, inc 1777 It is a resort in a beautiful region Wood products are made Here in 1725 Indians brought to a disastrous end Lovewell's expedition against them Robert E Peary lived in Fryeburg as a boy and surveyed in the area

Fryth, John see FRITH, JOHN

Fuad I (Ahmed Fuad Pasha (fo͞o-ädˊ), 1868–1936, first king of modern Egypt, son of the deposed khedive, Ismail Pasha Fuad was educated in Europe In 1890 he returned to Egypt and was concerned with military and cultural affairs, founding (1906) the Univ of Cairo Fuad's brother Hussein Kamil succeeded (1914) the deposed khedive Abbas Hilmi The succession went to Fuad on Hussein's death (1917). Fuad acquired the title king in 1922, although the final dissolution of the British dominion in Egypt was delayed until 1923 Fuad's difficulties with the WAFD party led him, in 1928, to abrogate the constitution of 1923 and substitute a new constitution providing for a parliament with advisory powers only Great agitation compelled him, in 1935, to restore the earlier constitution On his death he was succeeded by his son Farouk I

Fuchs, Leonhard (lā'ônhärt fo͞oks'), 1501–66, German physician and botanist. His compendium of medicinal and edible plants, *De historia stirpium* (1542), based in part on Dioscorides' herbal, was long a standard work He was professor of medicine at the Univ of Tübingen from 1535 The genus *Fuchsia* is named for him

fuchsia (fū'shu, fo͞ok'sē-u) [for Leonard FUCHS], any plant of the genus *Fuchsia*, mostly tropical American shrubs, cultivated elsewhere as pot or summer bedding plants and also outdoors in mild climates, they are occasionally used as hedges The pendulous flowers are usually of various shades of red, sometimes with purple Most common fuchsias are hybrids Some species have edible berries and some yield a dye The American Fuchsia Society encourages the cultivation of the plant

fuchsine (fo͞ok'sĭn) or **magenta** (mujĕn'tu), bright red dyestuff consisting of the mixed hydrochlorides or acetates of rosaniline and pararosaniline It is composed of small crystals possessing a brilliant green sheen, which when dissolved produce a red solution, this dyes animal fibers directly and vegetable fibers after mordanting The solution is used as a stain in biology

Fuego, Tierra del see TIERRA DEL FUEGO

fuel, material which can be burned in the presence of air to produce heat for industrial, locomotive, and domestic purposes Various forms of fuel are used, but the chemical principle involved in their COMBUSTION is essentially the same The reaction is one of rapid oxidation involving the union of both the carbon and hydrogen (the important constituents of fuels) with oxygen and one in which heat energy is liberated (an exothermic reaction) The more common solid fuels are coal, coke, charcoal, peat, wood, and briquettes Of the gaseous fuels, coal gas, natural gas, producer gas, and water gas are especially important Others are acetylene, air gas (a mixture of air and certain volatile hydrocarbons, of varying composition, used also as an illuminant), blast furnace gas (essentially carbon monoxide), carbon monoxide, oil gas (from petroleum), and hydrogen The liquid fuels include PETROLEUM (the crude oil) and the products obtained from it, e g , petroleum ether, gasoline, kerosene, and the fuel oil (the residual fraction) used commonly in Diesel engines, and alcohol Fuels are valued according to the amount of heat, in calories or B T U , which a unit weight can produce The storage and handling of fuel is in itself an important industry See J S S Brame and J G King, *Fuel Solid, Liquid, Gaseous* (4th ed , 1935), A R Carr and C W Selheimer, *Fuels and Their Utilization* (1940), Kalman Steiner, *Fuels and Fuel Burners* (1947)

Fuente Obejuna or **Fuenteovejuna** (both fwänˊtā ōvähōōˊnä), town (pop 5,688), Córdoba prov , S Spain, in Andalusia In 1430 it was given to the Knights of Calatrava The revolt of the people against a tyrannical governor is pictured in a play by Lope de Vega The palace of the Knights of Calatrava, formerly a Moorish castle, is now the parish church The town is noted for its honey

Fuenterrabía (fwänˊtĕr-rä'bēä), city (pop. 1,193), Guipúzcoa prov., N Spain, in the Basque Provs, on the French frontier near the Gulf of Biscay. Once an important fortress, it was repeatedly besieged by the French, notably by Condé in 1638 without success The town has preserved its medieval character and its medieval fishermen's guild.

Fuentes de Oñoro (fwänˊtās dā ōnyōˊrō), village, Salamanca prov , W Spain, in Leon, near the Portuguese border It was the scene of two bloody engagements between the British under Wellington and the French under Masséna (May 3 and 5, 1811) in the Peninsular War The French were compelled to retire

Fuertes, Louis Agassiz (fo͞oˊĕrtĕs), 1874–1927, American artist and naturalist, b Ithaca, N Y , grad Cornell Univ , 1897 His paintings of birds appear in most of the leading American ornithological works published in the latter half of his lifetime He is also known for his murals and for his habitat groups at the American Museum of Natural History With W H Osgood he made a scientific expedition to Ethiopia (1926–27), *Artist and Naturalist in Ethiopia* (1936) is a joint account Fuertes was accidentally killed a few months after his return

Fuessli, Johann Heinrich see FUSELI, HENRY

Fugger (fo͞oˊgur), German family of merchant princes The foundation of their wealth was laid by Johann Fugger, allegedly a weaver, who moved to Augsburg c 1380 His descendants built up the family fortune by trade and banking With Jacob Fugger II (1459 1525), called Jacob the Rich, the house entered its zenith It owned extensive real estate, merchant fleets, and palatial establishments throughout Europe Jacob's fortune was largely built on a virtual monopoly in the mining and trading of silver, copper, and mercury He lent immense sums to Emperor Maximilian I and secured the election (1519) of Charles V as emperor by bribing the electors The emperor ennobled the family and granted them sovereign rights over their lands, including that of coining their own money Then the richest family in Europe, the Fuggers were generous as patrons of the arts and learning and as philanthropists, notably at Augsburg, their residence Under Raimund Fugger (1489–1535) and Anton Fugger (1493–1560) the house reached the limits of its power and fortune Its decline paralleled that of the Hapsburgs, whose wars the Fuggers financed Several descendants were prominent but except for some real estate, little is left of the once fabulous wealth See Richard Ehrenberg, *Capital and Finance in the Age of the Renaissance* (Eng tr , 1928), Jacob Strieder, *Jacob Fugger the Rich* (Eng tr , 1931)

fugitive slave laws, in U S history the Federal acts of 1793 and 1850 providing for the return between states of escaped Negro slaves Similar laws existing in both North and South in colonial days applied also to white indentured servants and to Indian slaves As slavery was abolished in the Northern states they became lax in enforcing the 1793 law, to the great irritation of the South, and as abolitionist sentiment developed, organized efforts to circumvent the law took form in the UNDERGROUND RAILROAD Many Northern states also passed personal-liberty laws which allowed fugitives a jury trial, and others passed laws forbidding state officials to help capture alleged fugitive slaves or to lodge them in state jails As a concession to the South a second and more rigorous fugitive slave law was passed as part of the COMPROMISE of 1850 By it "all good citizens" were "commanded to aid and assist [Federal marshals and their deputies] in the prompt and efficient execution of this law," and heavy penalties were imposed upon anyone who assisted Negroes to escape from bondage When apprehended, an alleged fugitive was taken before a Federal court or commissioner. He was not only denied a jury trial but his testimony was not admitted, while the statement of the master claiming ownership, even though absent, was taken as the main evidence The law was so weighted against the fugitives that many Northerners, formerly unconcerned, were now aroused to opposition New personal-liberty laws contradicting the legislation of 1850 (and described, with some justice, by Southerners as equivalent to South Carolina's notorious ordinance of nullification) were passed in most of the Northern states Abolitionists fearlessly defied the 1850 act, often mobbing Federal officials in attempts to rescue fugitives In Boston, for instance, the "good citizens," including some of the foremost Brahmans, stormed the Federal courthouse, but failed to free the escaped Virginia slave Anthony Burns, however, it was thought expedient to have 1,100 soldiers guard him when he was marched aboard ship for his return to bondage In Lancaster co , Pa , a riot broke out when a Federal official ordered Quaker bystanders to help catch a runaway, the Quakers were prosecuted, but not convicted Other notable fugitive slave cases arose in Northern courts, and the trials further stirred up public opinion both North and South The whole dispute probably served not less than the question of the extension of slavery into the territories to set the two sections at each other's throats. The actions of Northern states in nullifying the fugitive slave laws or rendering "useless any attempt to execute them" were cited (Dec. 24, 1860) by South Carolina as one cause for secession Both acts were finally repealed by Congress on June 28, 1864 See M G McDougall, *Fugitive Slaves, 1619–1865* (1891)

fugue (fūg) [Fr , from Ital , =flight], in music, a polyphonic composition in which imitation is a basic principle Fugues are in several voices, usually three or four, each part being called a voice whether the fugue is vocal or instrumental A melody called the subject makes its entry in each voice successively, alternating between the tonic and dominant When a voice has stated the subject, it often follows with a countersubject Passages in which the subject appears are called expositions, others are called episodes Expositions other than the opening one often modulate The various devices of counterpoint are often, though not necessarily, employed The fugue was created in the 17th cent , mainly in Germany Composers important in its development are Sweelinck, Froberger, and Buxtehude The peak of fugal practice is reached in the works of J S Bach, whose last work, *The Art of the Fugue* (1749), treats a single fugue-subject in 16 fugues and 4 canons Practically all the devices known to fugal writing are employed therein with great artistry Mozart and Beethoven adapted fugal writing to classical style, but few fugues were composed thereafter until the 20th cent , which has seen revived interest in fugal style See Ebenezer Prout, *Fugal Analysis* (1892), C M Kitson, *The Elements of Fugal Construction* (1929), M F Bukofzer, *Music in the Baroque Era* (1947)

Führich, Joseph von (yōˊzĕf fün fuˊrĭkh), 1800–1876, Austrian painter, designer, and engraver, studied at Prague Academy and in 1826 joined the German Nazarenes in Rome Most of his life was spent in Prague and in Vienna, where he was a professor in the Academy His paintings are usually of biblical subjects in landscape settings They include frescoes in the churches of St John of Nepomuk and Altlerchenfeld, Vienna, and *Mary's Journey over the Mountain* (Vienna) He achieved greater success with his designs for woodcuts and steel engravings, such as the series for Thomas à Kempis, the Prodigal Son, and the Psalter and the etchings for the Lord's Prayer and Triumph of Christ

Fujiyama, Fuji-yama (both fo͞oˊjēyäˈmä, fo͞oˊjēˈyämə), **Mount Fuji,** or **Fuji-san** (fo͞oˊjēsänˊ), peak, 12,389 ft high, sacred and celebrated mountain of central Honshu, Japan It is the highest elevation of the island and a volcano dormant since 1707 Its symmetrical cone rises WSW of Tokyo to a crater c 2,000 ft in diameter Fujiyama is a familiar subject of Japanese artists The peak is the central feature of Fuji-Hakone National Park

Fukien (fo͞oˊkyĕnˊ), Mandarin *Fu-chien*, province (46,376 sq mi , pop 11,053,860), on the south coast of China, on the China Sea The capital is Foochow The climate is warm and very moist, the terrain mostly hilly or mountainous. Of the ports on the heavily indented coast, AMOY, the only one which can accommodate large vessels, handles most of the foreign trade, although there is a little at FOOCHOW Fishing boats use the many small harbors About a tenth of the land is arable, chiefly very fertile delta Not enough rice is grown for the population's needs Tropical vegetables are cultivated, and sweet potatoes are a staple of the poor On the hills tea is grown, but the former great tea market has been largely lost to India and Japan Despite poor conservation practices, the extensive forests on the mountains provide a considerable lumber industry, chiefly fir and pine Fukien was a major copper-mining area during the T'ang dynasty, but now its mineral resources are scarcely exploited Excellent pottery is made from local clay Many rivers, navigable only by small boats, rise in the mountains The Min-kiang, the most important, runs west, emptying below Foochow Chinese painters have often depicted its gorges and the surrounding hills Because so many places are isolated, Fukien has perhaps the largest number of dialects of any province The people are diverse Most derive from local Chinese stocks, but many are descendants of ancient Hakka migrants from northern provinces or of non-Chinese aborigines. Lack of economic opportunity has led several million Fukienese to emigrate abroad The money they send home provides much of the province's wealth

Fukui (fo͞okōōˊēˈ), city (1940 pop 94,595, 1947 pop. 77,320), capital of Fukui prefecture, central Honshu, Japan It is a major textile center, silk making has been carried on here for many centuries, and today rayon is also made Bombed (1945) in the Second World War, the city was the scene in 1948 of a disastrous earthquake Fukui prefecture has extensive raw-silk, poultry, and fishing industries Its chief port is Tsuruga

Fukuoka (fo͞okōōˊōkäˈ), city (1947 pop. 328,548), capital of Fukuoka prefecture N Kyushu, Japan, a port on Hakata Bay It is a textile and paper-products center and the seat of the Kyushu Imperial Univ The ancient port area, Hakata, was early one of the chief ports of Japan The Mongols sought to take it in 1274 and 1281 Fukuoka prefecture embraces the important industrial centers of Ko-

kura, Moji, Wakamatsu, Yawata, Kurume, and Omuta Chikuho, the largest coal field of Japan, lies in the prefecture

Fukushima (fo͞okō'shēmä), city (1947 pop 86,763), capital of Fukushima prefecture, N Honshu, Japan. It is a silk-textile center

Fulani (fo͞olä'nē), people of NW Africa, numbering some 2,000,000, chiefly in N Nigeria They are of Hamitic stock and mainly Moslem in religion, and they appear to have migrated from the Sahara to the Niger river region In the early 19th cent groups of Fulani conquered some of the Hausa states of Nigeria setting up emirates in their place British military expeditions were needed in the late 19th cent to subjugate them A small percentage of the Fulani are seminomadic cattle herders, the majority are settled farmers or city dwellers

Fulda, Ludwig (lo͞ot'vĭkh fo͞ol'dä), 1862–1939, German dramatist and poet A skillful translator of Ibsen, Molière, Shakspere's sonnets, and the Spanish dramatists, he was a resourceful playwright His works for the stage include *By Ourselves* (1886, Eng tr, 1907), *The Lost Paradise* (1890, Eng tr, 1897), *Der Talisman* (1893), one of the outstanding successes of its period, and *The Pirate* (1911), which was freely adapted by S N Behrman in 1942

Fulda (fo͞ol'dä), city (pop 37,190), Hesse, W Germany, in former Hesse-Nassau, on the Fulda river It grew from the Benedictine abbey founded in 744 by St Boniface From this abbey, long a cultural center, Christianity spread through central Germany The abbots of Fulda ruled the town and the surrounding area as princes of the Holy Roman Empire, and in 1752 they were raised to the rank of prince-bishops Secularized in 1802, Fulda passed (1815) to Electoral Hesse (after 1866 part of the Prussian prov of Hesse-Nassau) Still an episcopal see, Fulda is the meeting place of the annual conference of the Catholic bishops of Germany and has a theological seminary Many of its historic buildings were damaged in the Second World War, but have since then been restored These include notably the baroque cathedral, in the crypt of which St Boniface is buried, the Church of St Michael (9th cent), in Carolingian style, two 10th-century churches, and the baroque château Fulda has textile and chemical industries and is an agricultural market center

Fulgens and Lucrece (fo͞ol'jənz, lo͞okrēs'), play by Henry Medwall, probably produced in 1497 It was the first English play to have a secular and romantic theme See edition by F S Boas and A W Reed (1926)

Fulham (fo͞ol'əm), metropolitan borough (1931 pop 150,928, 1948 estimated pop 123,300) of SW London, England, N of the Thames and opposite Putney A palace of the bishops of London and the tombs of various bishops are in Fulham

Fulk (fo͝ok), 1092–1143, king of Jerusalem (1131–43), count of Anjou (1109–29), great-grandson of Fulk Nerra He made his first journey to the Holy Land in 1120 He returned there in 1129, making his son, Geoffrey IV (Geoffrey Plantagenet), count of Anjou Having married Melisende, daughter of King Baldwin II of Jerusalem, he succeeded his father-in-law in 1131 Fulk's reign was disturbed by dissensions among the Latin princes and by raids of the Turks, whose prisoner he was for a short time in 1137 He was succeeded as king of Jerusalem by his son, Baldwin III

Fulk Nerra (nĕrä'), 972–1040, count of Anjou (987–1040) Continuously at war with his neighbors (Brittany, Blois, Touraine), he vastly increased his territories, notably by seizing Saumur He built numerous castles on his borders and was the founder of Angevin greatness Fulk Nerra went on several pilgrimages to the Holy Land

Fulk of Neuilly, Fr *Foulques de Neuilly* (fo͞olk' du nûyē'), d 1201, French preacher His sermons and alleged miracles gave him a wide popular following in N France, and in 1199 Pope Innocent III appointed him to preach a new crusade (the Fourth Crusade) Tremendous crowds heard him, but he lost his following when the suspicion spread that he had misused some funds he had collected

Fuller, George, 1822–84, American portrait, figure, and landscape painter, b Deerfield, Mass, pupil of Henry K Brown at Albany He first practiced portraiture in Boston and later in New York, where he became (1857) a member of the National Academy Success came in the last decade of his life, when the originality of treatment, richness of tone, and pictorial qualities of his later works awakened widespread interest Among Fuller's best canvases are *Nydia, And She Was a Witch, The Quadroon,* and *Head of a Boy* (Metropolitan Mus), *Winifred Dysart* (Worcester, Mass, Art Mus), *Turkey Pasture, Kentucky, Romany Girl,* and *Arethusa* (Mus of Fine Arts, Boston)

Fuller, Henry Blake, 1857–1929, American novelist and man of letters, b Chicago Avowedly influenced by W D Howells and Henry James, he divided his interest between European and Chicago scenes Among his romantic novels laid in Europe are *The Chevalier of Pensieri-Vani* (1890) and *The Chatelaine of La Trinité* (1892) His novels of Chicago life are early examples of American realism and had an influence on later writers, these novels include *The Cliff-Dwellers* (1893), *With the Procession* (1895), and *On the Stairs* (1918) He wrote many short stories and essays, editorials (1910–14) for the Chicago *Record-Herald,* and book reviews for the Chicago *Evening Post* From the founding of the magazine *Poetry* in 1912 until his death, he was one of its important advisers See study by C M Griffin (1939)

Fuller, John Frederick Charles, 1878–, English soldier He saw active service in the South African War and in the First World War He recognized the importance of mechanized warfare, and as general staff officer of the tank corps he planned the stunning tank attack at Cambrai His ideas, expressed in *Tanks in the Great War* (1920), *On Future Warfare* (1928), and other works, had a great effect on military thinking on the Continent His military analysis was much broader than championing armored warfare, and he established himself as one of the leading military commentators of the day He retired in 1930 but was active as an analyst in the Second World War Among his other works are *Foundations of the Science of War* (1926), *The Generalship of Ulysses S Grant* (1929), *The Dragon's Teeth* (1932), *War and Western Civilization* (1932), and *The Second World War* (1948)

Fuller, Loie, 1862–1928, American dancer, b Fullersburg (now part of Hinsdale), Ill She toured with stock companies and in 1891 appeared in New York as a dancer She gained fame for her "Serpentine Dance," by which, with the use of voluminous draperies and colored lights, she achieved new effects in dancing In later years she conducted a school of dancing in Paris She wrote *Fifteen Years of a Dancer's Life* (1913)

Fuller, Margaret (Sarah Margaret Fuller), 1810–50, American writer and lecturer, b Cambridgeport (now part of Cambridge), Mass, daughter of Timothy Fuller, lawyer Although her works are little read now, she was one of the most influential personalities of her day in American literary circles She was a precocious child and was forced by her father through an education which impaired her health but gave her a broad knowledge of European literature Her first published work was *Conversations with Goethe* (1839), a translation of Eckermann's work, it was followed in 1842 by a translation of the Gunderode-Arnim correspondence A stimulating talker, she established in Boston ladies' conversation classes on social and literary topics From these discussions grew her statement of the feminist position, *Woman in the Nineteenth Century* (1845) She was one of the transcendentalists and edited their journal, the *Dial,* for its first two years Although she has been erroneously identified as Zenobia in Hawthorne's *Blithedale Romance,* she was never in sympathy with the Brook Farm experiment upon which the book is based More recognizable is Lowell's caricature of her as Miranda in the *Fable for Critics* Horace Greeley, attracted by her writings, including *Summer on the Lakes in 1843* (1844), called her to New York as literary critic of the New York *Tribune,* from which were republished her *Papers on Literature and Art* (1846) In 1847 Margaret went to Rome, where she married the Marchese Ossoli, a follower of Mazzini, and with him took part in the revolution of 1848–49 In 1850, while returning to the United States, she was drowned with her husband and infant son when the vessel was wrecked off Fire Island Her works were republished incompletely by her brother, Arthur Fuller, and her love letters were edited by Julia Ward Howe See her memoirs (ed by R W Emerson, W H Channing, and J F Clarke, 1852) and *The Writings of Margaret Fuller* (selected and ed by Mason Wade, 1941), biographies by Julia Ward Howe (1883), T W Higginson (1884), Mason Wade (1940), and Madeline B Stern (1942)

Fuller, Melville Weston, 1833–1910, Chief Justice of the U S Supreme Court (1888–1910), b Augusta, Maine, grad Bowdoin College, 1853 He studied at Harvard Law School, and after 1856 he became a prominent lawyer in Chicago and acquired a national reputation in Democratic politics He was appointed to the Supreme Court bench by President Cleveland In his opinions he leaned toward strict construction of the Constitution Justice Fuller also served as a commissioner to help settle the Venezuela Boundary Dispute and was a member (1900–1910) of the Permanent Court of Arbitration (the Hague Tribunal) See biography by Willard L King (1950)

Fuller, Thomas, 1608–61, English clergyman and writer He was an able preacher and was noted as a wit A moderate Anglican, he adhered to the royalist cause during the civil war and was appointed a royal chaplain after the Restoration He is best remembered for his posthumously published *Worthies of England* (1662), an invaluable store of antiquarian information His other works include a *History of the Holy Warre* (1643), *The Holy State and the Profane State* (1642), and *The Church History of Britain* (1655) See biographies by John Bailey (1874) and Dean Lyman (1935)

fuller's earth, mineral substance characterized by the property of absorbing basic colors and removing them from oils It is composed mainly of alumina, silica, iron oxides, lime, magnesia, and water, in extremely variable proportions, and is generally classified as a sedimentary CLAY In color it may be whitish, buff, brown, green, olive, or blue It is semiplastic or nonplastic and may or may not disintegrate easily in water It was originally used in the fulling of wool, but is now used chiefly in bleaching and clarifying petroleum and secondarily in refining edible oils It is also put to a number of miscellaneous uses Fuller's earth is mined in many parts of the United States, Georgia and Florida being leading producers, and in England near Reigate and Nutfield and near Bath Before it can be used it has to be crushed and dried

Fullerton, Lady Georgiana Charlotte, 1812–85, English novelist and philanthropist Her novels, written from the point of view of a devout Roman Catholic, include *Ellen Middleton* (1844), *Grantley Manor* (1847), *Lady-Bird* (1852), and *Too Strange Not to Be True* (1864) She also translated novels from the French and wrote several biographies See A S Driscoll, *Literary Convent Women* (1928)

Fullerton 1 City (pop 10,442), S Calif, SE of Los Angeles, inc 1904 It is the industrial and processing center of a region producing citrus fruits, vegetables, walnuts, and petroleum A coeducational junior college is here 2 City (pop 1,707), co seat of Nance co, E central Nebr, on the Loup river in a prairie region W of Columbus, platted 1878 Dairy products are made here

fulminate (fo͝ol'mĭnāt), any salt of fulminic acid, but most commonly the name is used to indicate fulminate of mercury, a highly explosive crystalline compound of mercury, carbon, nitrogen, and oxygen Mixed with potassium chlorate, it is used as a detonator (approximately 4 parts mercury fulminate to 1 part potassium chlorate) It is formed when mercury is treated with nitric acid in the presence of alcohol The fulminate of silver is even more explosive

Fulton, Robert, 1765–1815, American inventor, engineer, and painter, b not far from Lancaster, Pa He was a man remarkable for his wide talents and his mechanical genius An expert gunsmith by the time of the American Revolution, he later turned to painting landscapes and portraits in Philadelphia from 1782 to 1786 In England and France he gained some notice with his painting, but his eager interest went into canal engineering and into inventing machinery He worked at making underwater torpedoes and submarines as well as other mechanical devices In 1802 he contracted to build a steamboat for Robert R Livingston, who held a monopoly on steamboat navigation on the Hudson He built the vessel using an English engine, and in 1807 the *Clermont* was launched with considerable fanfare A number of men had built steamboats before Fulton (see STEAMSHIP), including John Fitch and William Symington, but to the popular American mind Fulton, the maker of the first one to be commercially successful in American waters, became the inventor of the steamboat The *Clermont* marked an epoch in American history Fulton also designed other vessels, among them a steam warship See H W Dickinson, *Robert Fulton* (1913), W B Parsons, *Robert Fulton and the Submarine* (1922), C B Lowe, *Quicksilver Bob* (1946)

Fulton. 1 City (pop 2,585), NW Ill, on the Mississippi opposite Clinton, Iowa, inc 1859 It is a trade and shipping center for a farm area 2 City (pop 3,308), SW Ky, 88W of Paducah and at the Tenn line, settled 1860, inc 1874 A railroad center in a farm area, the city also has food-processing plants, a cotton gin, and garment factories SOUTH FULTON, Tenn, which is contiguous, has its own city government but no post office 3 Town (pop 1,154), co seat of Itawamba co, NE Miss, near the Tombigbee N of Columbus, in a farm and timber area, settled 1848, inc 1850 4 City (pop 8,297), co seat of Callaway co, central Mo, NE of Jefferson City, in a farm area, founded 1825, inc 1859 Firebrick and shoes are made here The county has extensive fire-clay deposits The city is the seat of Westminster College (Presbyterian, for men, 1851), William Woods College (junior, for women), and state institutions for the deaf and the insane 5 City (pop 13,362), N N Y, on the Oswego river and the Barge Canal and NW of Syracuse, inc as a village 1835, as a city 1902 Candy, paper products, and woolen goods are made here

Fulvia (fo͝ol'vēə), d 40 B C, Roman woman She was wife, in turn, of P Clodius, Q Scribonius Curio, and (44 B C) Marc Antony, to whom she remained completely loyal She had been attacked (in the *Philippics*) by Cicero, whose tongue she pierced with a needle when his head was brought to Rome (43 B C) She led a revolt in Antony's interest against Augustus, was defeated at Perusia (40 B C), and died at Sicyon See E G Sihler, *Cicero of Arpinum* (1914)

fumigation (fo͞oməgā'shən), disinfection by means of noxious fumes usually derived from formaldehyde or sulphur Such a procedure was formerly thought essential in rooms which had housed persons with communicable diseases Since fresh air, sunlight, and thorough scrubbing of walls and the contents

of the room have been proven effective, fumigation is no longer a common practice

fumitory [Latin, =smoke of the earth], any plant of the genus *Fumaria*, Old World herbs of which the common fumitory (*Fumaria officinalis*) is naturalized in North America It resembles the squirrel corn, to which it is related, but has purplish flowers tipped with red The leaves were long considered to have purifying qualities and were used for scurvy and disorders of the skin and eyes and for other medicinal purposes A related plant known as climbing fumitory, Allegheny vine, or mountain fringe is *Adlumia fungosa*, a native North American vine sometimes cultivated

Funafuti (fōōnəfōō'tē), chief atoll (1 sq mi , pop. 528) of the ELLICE ISLANDS, S Pacific There are 30 islets on a reef c 13 mi long The island was discovered in 1819 by Captain De Peyster and was included in the British colony of Gilbert and Ellice Islands in 1915 An expedition led by Sir Edgeworth David arrived here (1897) and proved the Darwinian theory of atoll formation In the Second World War the island was occupied in 1943 by U S forces, and naval and air bases were established (1945)

Funchal (fōōnshal'), city (pop 54,033), on Madeira, a port on the south coast of the island The changing beauty of the surrounding scenery and the unchanging softness of the climate make it a most attractive resort There is a 15th-century cathedral

function, in mathematics, a quantity of varying numerical value (a variable) whose value is determined by the value of one or more other such quantities, known as independent variables For example, the distance a body falls is a function of the time it is allowed to fall, the volume of an expanding sphere is a function of the length of its radius, x^2 is a function of x

fundamentalism, religious movement arising among conservative members of various Protestant denominations early in the 20th cent , with the object of maintaining traditional interpretations of the Bible and of what they believe to be the fundamental doctrines of the Christian faith It was the outcome of a long existing difference of belief as to the possibility of reconciling the findings of science with the teachings of the Christian churches The stand of the liberals, or modernists, in the matter is that there is not necessarily any conflict between the two But in 1909 a group of those who felt that the orthodox truths of Christianity were in danger organized a protest, which was circulated in a 12-volume publication, *The Fundamentals* (1910–12) Five points of doctrine were set forth as fundamental They are the Virgin birth, the physical resurrection of Christ, the inerrancy of the Scriptures, the vicarious atonement, and the physical second coming of Christ Separations arose within denominations, even within the individual congregation In 1923 the bishops of the Episcopal Church issued at Dallas, Texas, a pastoral letter requiring literal acceptance of the creeds Particular cases arose in different places and in various denominations Dr Harry Emerson Fosdick who, although a Baptist, was a preacher in the First Presbyterian Church, New York, was requested to accept the required standards of doctrine in order to continue his ministry in that church Instead, he withdrew. The struggle against instruction in the schools in subjects considered a threat to orthodoxy was climaxed in a trial in Dayton, Tenn Here, in 1925, William Jennings BRYAN, a fundamentalist leader, won the state's case against J T Scopes, accused of teaching evolution in the public schools Aggressive fundamentalism was particularly strong in the South and in agricultural districts in the 1920s See S G Cole, *The History o Fundamentalism* (1931)

Fundamental Orders, in U S history, the basic law of Connecticut colony from 1639 to 1662, formally adopted (Jan 14, 1639) by representatives from the towns of Hartford, Wethersfield, and Windsor, meeting at Hartford Thomas Hooker, John Haynes, and Roger Ludlow were most influential in framing the document, which was not "the first written constitution that shaped a government," as it has been popularly called Nor did it mark the beginning of a "commonwealth democracy," another misconception fostered by 19th-century historians straining hard to mark the foundations of American democracy Its provisions for voting (see CONNECTICUT) reveal how little democratic it really was This, however, is no reflection on the importance or soundness of the document, for political democracy, as we know it today, was virtually nonexistent in the 17th cent except in such rare cases as the colony under Roger Williams Indeed the Puritans regarded unconfined democracy as an aberration of man's mind To them only the most substantial, respectable, and reliable Christians were considered worthy to build up a community essentially religious in design The Fundamental Orders consisted of a preamble and 11 orders or laws The preamble bound the inhabitants of the three towns to be governed in all things by the orders that followed, and these were similar to the statute laws of other New England colonies, differing only in that they were combined together in a brief, clear, compact frame of government (Ludlow, a lawyer, is thought to be chiefly responsible for the excellence of the final form) The government or "combination," as Hooker called it, confirmed the system already functioning in the three towns since 1636 and closely resembled the Massachusetts model The main concern of the Fundamental Orders was the welfare of the community, not of the individual, who always had to give way if the needs of the community at large so required it Connecticut's charter of 1662 superseded and was largely based on the Fundamental Orders See C M Andrews, *The Colonial Period of American History*, Vol II (1936)

Fundy, Bay of, large inlet of the Atlantic Ocean, 170 mi long and 30 to 50 mi wide, between New Brunswick and SW Nova Scotia It is celebrated for its tide or BORE which in its upper arms, Chignecto Bay and the Minas Basin, reaches 40 to 50 ft in height At low tide wide flats are laid bare and the long estuaries of the rivers are drained Some of the flats have been diked off and are very fertile, particularly on Minas Basin, where the early Acadian settlers began the practice of reclamation Tides in the bay are strong and treacherous Annapolis Royal on the Nova Scotia side of the bay is the oldest settlement in Canada St John, N B , is the chief port on the bay

Fundy National Park, 79 5 sq mi , S N B , on the Bay of Fundy, between the upper Salmon and Goose rivers and ENE of St John, est 1949 It has high bluffs on the shore line, and the wooded interior is being developed as a recreation area

funeral customs The prevalence of a religious spirit and the general incomprehension of the mystery of death among human beings are the essential basis for the universal practice of funeral rites Such rites may serve to mark the passage of a person from life into death, to secure the welfare of the dead, and to protect the living from the dead Disposal of the dead may be by BURIAL (e g , in a GRAVE or tomb, or under a BARROW or CAIRN), by CREMATION, by exposure (e g , in a tower of silence, see PARSIS), by committal to the deep (often classed with burial), or by other methods The preparation of the corpse is usually most elaborate when it is to be buried (see COFFIN, EMBALMING, MUMMY) It is a general practice to bury or burn with the dead such things as were dear in life and may be valuable in death, and the most elaborate form this has ever taken was in EGYPTIAN RELIGION, for the burial of kings and others (see PYRAMIDS) SUTTEE and the practice of killing slaves with their master are undoubtedly examples of this Funeral ceremonies, perhaps the most highly traditionalized of all human practices, have certain widespread features These include evidences of mourning, such as the wearing of black and in some countries the use of hired mourners, funeral feasts and watching the dead, of which the WAKE is a composite example, and the religious ceremonies proper These differ according to religious belief, Roman Catholic funerals are entirely occupied with praying for the repose of the soul in PURGATORY (see REQUIEM), a eulogy being incidental, while Protestant funerals nearly always assume the welfare of the soul and tend to comfort or edify the living The harshness of death customs may be evident in the fact that persons who have little respect for religious or other tradition nearly always provide their dead with decent funerals See B S Puckle, *Funeral Customs* (1926), R P Lee, *Burial Customs* (1929), Effie Bendann, *Death Customs* (1930), A C Rush, *Death and Burial in Christian Antiquity* (1941)

Fünfkirchen, Hungary see PECS

fungicide (fŭn'jĭsīd") [Latin, =fungus killing], any substance used to destroy fungi Sulphur compounds, long used to destroy fungi on plants, have been supplemented by other chemicals, especially by compounds of copper, such as BORDEAUX MIXTURE and BURGUNDY MIXTURE, and of mercury Fungicides, including formaldehyde, are applied also to seeds and soil for the destruction of vegetative spores Plant fungicides are usually applied by SPRAYING or dusting Fungicides used on wood to prevent the development of fungi causing dry rot include creosote oils, zinc chloride, borax, and copper compounds Organic and metallic salts toxic to fungi are used to make fabrics resistant to mildew See Hubert Martin, *Scientific Principles of Plant Protection* (3d ed , 1940), J G Horsfall, *Fungicides and Their Action* (1945), D E H Frear, *Chemistry of Insecticides, Fungicides, and Herbicides* (2d ed , 1948)

fungus (fŭng'gŭs), plural **fungi** (fŭn'jī), plant without chlorophyll belonging to the Thallophyta, one of the four main divisions of the plant kingdom Like the ALGAE the fungi lack true roots, stems, and leaves Unlike the algae they are unable to manufacture food by photosynthesis and must live either parasitically (on living things) or saprophytically (on dead organic matter) Fungi reproduce by fission, budding, and spore formation They bear no flowers, seeds, or fruits Included in the fungi are BACTERIA, MILDEW, MOLD, MUSHROOM, RUST, SMUT, YEAST, PUFFBALL, TRUFFLE, and the bracket fungi, which grow on trees and stumps. The slime molds are usually considered fungi although their position is controversial See E C Large, *The Advance of the Fungi* (1940)

Funk, Casimir (kä'zĭmēr fōōngk'), 1884–, American biochemist, b Poland, Ph D Univ of Bern, Switzerland, 1904 He came to the United States in 1915 and was naturalized in 1920 Credited with the discovery of vitamins, Funk stirred public interest with his paper (1912) on vitamin-deficiency diseases He coined the term *vitamine* (now vitamin) and later postulated the existence of four such materials (B_1, B_2, C, D) which he stated were necessary for normal health and for the prevention of deficiency diseases Funk contributed to knowledge of the hormones of the pituitary and sex glands and emphasized the importance of the balance between hormones and vitamins He is the author of *Vitamines* (Eng tr , 1922)

Funston, Frederick, 1865–1917, U S general, b New Carlisle, Ohio He was a newspaper reporter and a field agent (1888–95) of the Dept of Agriculture, exploring Death Valley and the Yukon Love of adventure led him to enlist in the army of Máximo Gómez y Báez to help win Cuban independence from Spain This experience led to his being called to head a Kansas regiment in the Spanish-American War Though his troops took no active part in the war itself, they were sent to the Philippine Islands to help put down the insurrection there When his army discharge papers were already made out, Funston by a daring feat captured the insurgent leader, Emilio AGUINALDO Instead of leaving the army he became a brigadier general In 1914 when U S troops entered VERACRUZ, he was given command of the occupying troops, and as major general he commanded later in wars on the Mexican border He wrote *Memories of Two Wars* (1911)

Fuquay Springs (fōō'kwā), town (pop 1,323), central N C , SSW of Raleigh It has a tobacco market and lumber and hosiery mills

fur, hairy covering of an animal, especially the skins of such animals as have thick, soft, close-growing hair next to the skin itself and coarser protective hair above it The underhair is often called the underfur or fur proper, the outer hairs are the guard hairs, the whole, when dried, is the pelt The term *fur* is extended to dressed sheep and lamb skins when they are prepared for wearing with the hair kept on and (usually) curled (persian lamb, karakul, astrakhan, and mouton) Pony hides when used for clothing may also be called fur Since far back in prehistoric days furs have been used for clothing by man, and numerous varieties of animal skins have been and still are used Since many animals change the color of their coat from winter to summer, it is possible to have two different types of fur from the same species (e g , Arctic hare, Arctic fox) Some of the more prized furs are sable, marten, and fisher (all of the genus *Martes*), the related mink and ermine (of the genus *Mustela*), and the chinchilla from South America The staple fur of the great fur-trading days in North America was the beaver, though the fur seal was the object of different but highly lucrative fur hunts The humbler muskrat and the otter also have loomed important Ocelot, wildcat, the common house cat, the marmot, the nutria, the raccoon, the hare, and the rabbit produce somewhat cheaper furs While beaver and seal are prized for their durability, such furs as the squirrel and the skunk are prized especially for their delicacy of texture Fox furs have been much esteemed, and the rare wild silver fox and Pribelof blue fox are sought after, though silver fox is now much bred on fur farms Other furs are also now grown extensively by fur farming, which has, indeed, developed in the United States and Canada into a major industry in the 20th cent The hunting of wild furs still continues as an important occupation in wilderness sections, notably in N Canada, Alaska, Mongolia, and Siberia The finer wild furs come from the more northerly regions, where the climate causes the animals to produce sleeker and better pelts In more northerly regions, too, man finds furs indispensable as clothing (e g , the Eskimo) This is not to say that good furs have not been produced and utilized in more southerly regions The Indians in the present SE United States trapped animals for furs, and Louisiana has yielded large quantities In the more populated and temperate regions of the world, however, only small pockets of territory retain enough wild animal life to be good for fur hunting This condition has been true for centuries and has a bearing on the fact that furs have in trade always been luxury goods and were early connected with royalty and nobility (e g , sable and ermine) not only in Western Europe but in the Orient as well Fur trade has gone on since antiquity, but it reached its apogee as organized exploitation of the wilderness of North America and Asia from the 17th to the early 19th cent The desire for furs was an important factor in the commercial life of all the British seaboard colonies in North America, but its effect in opening the wilderness was even more striking in Canada, where the rivers and lakes offered avenues to the heart of the continent The licensed traders (including such eminent men as La Salle) and the

coureurs de bois thrust far into the wilderness and bought furs from even the remote tribes of Indians The speed with which fur traders (like the missionaries, but in another cause) got half-way across the continent was remarkable The Great Lakes region was being pretty thoroughly exploited by men buying furs from the Indians before the end of the 17th cent The effect on the Indians who got the white man's goods (including firearms and liquor, not to speak of the white men's diseases) in exchange for the furs was cataclysmic, native cultures were overturned This process occurred also among the natives of far NE Siberia as Russian traders reached that remote region in the 18th cent The *promyshlenniki* [fur traders] pushed even farther across the icy seas and prepared the way for the long Russian occupation of ALASKA The greatest of the British companies, the HUDSON'S BAY COMPANY, contended after 1670 with the French traders in Canada, and after Canada became British in 1763, with French and Scottish traders based on Montreal The NORTH WEST COMPANY was created, and rivalry was bitter until the two companies were combined in 1821, taking the name Hudson's Bay Company The largest of the companies in the United States was John Jacob Astor's AMERICAN FUR COMPANY, which also came into conflict with the North West Company, notably in 1812–13 at the Pacific coast establishment of ASTORIA By that time the Canadian traders had strung their posts out clear across the continent (first crossed in the north by Sir Alexander MACKENZIE) and were at the door of the Russians in Alaska A U S law in 1816 excluded British traders from the United States, and many British fur traders who had helped to build the Old Northwest were reluctantly compelled to become U S citizens The trade in the United States was now pushing west ahead of the advancing line of settlement, and the rich fur territories of the upper Missouri river, which had been tapped earlier by such traders as Manuel Lisa and Andrew Henry, attracted attention After the first expedition of William Henry Ashley in 1823, the now-celebrated MOUNTAIN MEN (chief among them Kit Carson, Jim Bridger, and Thomas Fitzpatrick), who were trappers more than they were traders, made the Rocky Mt West known The popularity of the beaver hat had helped make the demand for the staple article of the American fur trade beaver, enormous, but fashion changed, and the beaver hat declined in importance The fur trade declined with it An equally important factor was the advance of settlement, for the trade in wild furs could not flourish on a large scale near farms Finally, there was the depletion of the stock of beaver and other fur-bearing animals, hunted relentlessly for centuries, the square miles of beaver country were shrinking to acres The day of the fur trader was ended in the 1840s in the United States and S Canada, but only after he had humbly and anonymously contributed untold amounts of geographical knowledge and lore learned from the Indians to the development of both nations The depletion of fur-bearing animals was strikingly shown in the fate of the sea otter on the Northwest Coast, which had brought fortunes to mariners taking the prized skins to China in the last decade of the 18th cent The threat of similar complete extinction of the fur seal later led to the international quarrel called the BERING SEA FUR-SEAL CONTROVERSY The preparation and sale of furs remains, however, a very considerable business The dressing and dyeing of furs, the matching and the cutting to make fine fur coats and other garments occupy the labors of a great many people, concentrated in a few great fur markets of the world This luxury trade is an integral part of modern economy, and the skills involved are complex Dressing and dyeing have, indeed, reached new heights and such unnatural (though beautiful) products as blue mink are a market commonplace To protect the public against possible misrepresentations laws have been adopted, such as the requirement that the true[name of the fur be given last (e.g , what once was called Hudson seal is now Hudson seal-dyed muskrat) There are innumerable studies of the history of the fur trade, many of them monographs on particular areas or particular traders. Among the more general works are H. M Chittenden, *The American Fur Trade of the Far West* (3 vols , 1902), C A Vandiveer, *The Fur-Trade and Early Western Exploration* (1929); H. A. Innis, *The Fur Trade in Canada* (1930), G. L Nute, *The Voyageur* (1931), R H Fisher, *The Russian Fur Trade, 1550–1700* (1943), S R. Tompkins, *Alaska* (1945); Bernard De Voto, *Across the Wide Missouri* (1948). See also Max Bachrach, *Fur a Practical Treatise* (rev. ed , 1946), the periodical *Fur Trade Journal*.

fur farming, practice of raising animals in captivity for their fur. Sheep were domesticated early in Asia and fur farming might be said to have begun then with the use of karakul and other valuable pelts as furs The raising of animals for fur grew with the sharp decline in fur trapping in Canada and the N United States, and in the 20th cent it grew to be quite a sizable business, particularly in Canada and Alaska Fur farming has expanded also in many portions of the United States Most common are probably the fox farms, which have developed new subspecies of foxes more desirable for their fur Mink farms are being increasingly operated and are improving the breeds of mink. Until recently there has been great prejudice against farm furs, but with the steady development of the industry it is being recognised that in some cases the highly bred furs are superior to the wild furs See F G Ashbrook, *Fur Farming for Profit* (rev ed , 1948)

furfural (fûr'fŭrăl") or **furfuraldehyde** [from Latin, =bran], an oily liquid boiling at 161°–162°C , commonly used as a solvent It has a pleasant aromatic odor and is colorless, but upon exposure to the air it turns dark brown or black It is soluble in alcohol and ether and somewhat soluble in water. An organic compound composed of carbon, hydrogen, and oxygen, it is the ALDEHYDE of pyromucic acid, with properties similar to those of benzaldehyde It is a derivative of furan and is prepared commercially by the distillation of cornstalks and corncobs, husks of oat and peanut, and other waste products, as well as of wood tar, bran, and sugar It forms molding resins with acetone and phenol Furfural is employed also in making some deodorants, disinfectants, preservatives, and a black enamel and in paint removers It was discovered by Johann Wolfgang Doberemer.

Furies see ERINYES

Furka (fo͝or'ka), road, Switzerland, linking Uri and Valais cantons Built (1864–66) chiefly for military reasons, it crosses Furka Pass, 7,990 ft high A rail line goes through Furka Tunnel

Furman University. see GREENVILLE, S C

furnace. There are many kinds of furnaces, the type depending upon the use to which the heat produced within it is put Most familiar are the furnaces used in the heating of buildings In the hot-air furnace, fuel is burned within an inner wall, and air, led into a space between the inner and the outer wall, is heated and is led away to the various rooms of the building Hot-water furnaces, by which water is heated and led through pipes to radiators, and furnaces which turn water to steam to be used for heating purposes are common The KILN is a kind of furnace In metallurgy, the separation of many metals from their ores is accomplished by the use of various kinds of furnaces, e g , the BLAST FURNACE and the REVERBERATORY FURNACE The structure of these furnaces makes possible a good control of temperature. In the production of STEEL, however, the open-hearth furnace and the Bessemer converter are used in the treatment of cast iron Electric furnaces are extensively used in the production of high-grade steels for use in making steel alloys and for the manufacture of high-speed tools Heat is generated in these furnaces because of the very high resistance offered to the passage of an electric current Either an arc is produced between the negative and positive electrodes of the current is passed through a mixture of materials which have low conductivity Of the former type is the Héroult electric furnace used in making high-grade steels In the preparation of phosphorus from calcium phosphate, this compound of phosphorus is mixed with sand and carbon (charcoal) and treated in the electric furnace The electric current passing from one electrode to the other through the mass causes the extremely high temperature needed to bring about the chemical action which results in the production of free phosphorus Graphite is produced from coal in the electric furnace, carbon disulphide is prepared by the direct combination of sulphur and carbon in the high temperature, and the extremely hard carborundum is made by the combination of carbon and silicon (from sand) Nitrogen is obtained from the air (in the Birkeland-Eyde process) by passing a stream of air through a high-tension arc produced in an electric furnace The nitrogen and oxygen of the air then combine to form nitric oxide

Furneaux Islands (fûr'nō), group in Bass Strait between Tasmania, to which it belongs, and Australia The largest is Flinders Island The islands produce sheep, dairy products, and tin They were discovered in 1773 by Tobias Furneaux, British navigator, after whom they were named

Furness, Horace Howard (fûr'nĭs), 1833–1912, American Shakspearian scholar, b Philadelphia, grad Harvard, 1854, son of William Henry Furness Editor of the New Variorum edition of Shakspere, he was succeeded on death by his son, **Horace Howard Furness, Jr.,** 1865–1930, who gave his father's Shakesperian library to the Univ. of Pennsylvania

Furness, William Henry, 1802–96, American Unitarian clergyman and author, b. Boston, grad Harvard, 1820, and Cambridge Theological Seminary, 1823 For 50 years (1825–75) he was active minister of the First Unitarian Church, Philadelphia, as pastor emeritus, he continued preaching. For some 40 years he was also active in the antislavery movement. Among his literary works are a number of studies of the life of Jesus, hymns, and translations of German prose and poetry.

Furness, hilly district of Lancashire, England, forming a peninsula between the estuary of the Duddon and Morecambe Bay. The northern portion is part of the Lake District In the southwest are the rich iron mines and great engineering works which center at Barrow-in-Furness. Furness Abbey, near Barrow, was a wealthy institution, founded for Benedictines in 1127, the ruins are noteworthy.

Furniss, Harry, 1854–1925, British caricaturist, illustrator, and lecturer. He early contributed to the *Illustrated London News* and served (1880–94) on the staff of *Punch* There his cartoons and humorous illustrations were long a popular feature. He illustrated many books, including Lewis Carroll's *Sylvie and Bruno* and complete editions of Dickens and Thackeray Furniss also wrote and illustrated humorous books, such as *Confessions of a Caricaturist* (1901) and *Harry Furniss at Home* (1903)

furniture, properly such movables as chairs, tables, and beds It is extended to include draperies, rugs, mirrors, lamps, stoves, and other furnishings In its gradual evolution from periods of earliest civilization, the history of furniture parallels the progress of culture Furniture has been made in a great variety of materials and decorated by many methods, the most usual being INLAYING, painting or gilding, WOOD CARVING, veneering, and MARQUETRY Western furniture has drawn motifs of ornament from four chief sources, Egyptian, Asiatic (Persian and Chinese), Greek, and Gothic Probably the first pieces demanded by use were the CHEST, the stool (prototype of the CHAIR), the TABLE, and the BED From remote times Oriental furniture has exhibited carving and inlay on ebony and teak Egyptian pieces 6,000 years old display an advanced form of woodworking, structure, and decoration and are characterized by inlays of gold and ivory and by supports carved to represent animal forms The Greeks favored the low couch, the TRIPOD, and a chair with graceful, curved outlines The Romans adopted Greek and Etruscan forms and during the imperial period developed many ornately decorated variations The heavily carved Gothic furniture reflected styles in architecture The Renaissance brought, under Italian influence, richly decorated pieces designed specifically for domestic interiors. Many European countries developed characteristic styles expressive of southern exuberance or of northern restraint and conforming to periods of INTERIOR DECORATION Peasant pieces were in general solid, painted or rudely carved, and slow to change in style Provincial pieces followed, in simplified form and in native woods, the period styles developed in the centers of culture France became a leading influence with the LOUIS PERIOD STYLES, DIRECTOIRE STYLE, and EMPIRE STYLE English period styles include Elizabethan, in oak, with huge, bulbous supports, Jacobean, lighter and more comfortable, with spiral supports, William and Mary, introducing curved outlines, the trumpet leg, and the inverted-cup foot, Queen Anne, in walnut, characterized by cyma curves, the cabriole leg, and the broken pediment, Georgian, with its fine cabinetwork in a number of styles set by such designers as CHIPPENDALE, HEPPLEWHITE, the brothers Robert ADAM and James Adam, and SHERATON Early American furniture adapted current English styles in utilitarian form and in native woods—pine, maple, cherry Later PHYFE, SAVERY, John GODDARD, and other expert cabinetmakers added walnut and mahogany The late 19th cent brought mass production of machine-made furniture and saw a phase of bad taste in golden oak of rococo design followed by a reaction in America to the Mission style of rectilinear construction in weathered oak. In the 20th cent , French and English period styles were revived and many attempts were made to develop a new style The contemporary trend is toward functional design, free use of bleached wood, plywood, tubular steel, glass, and synthetic materials, low, horizontal lines, built-in pieces and unit furniture, and chairs that follow body contours See H D Eberlein and Abbot McClure, *The Practical Book of Period Furniture* (1914), Joseph Aronson, *The Encyclopedia of Furniture* (1938), L E Cotchett, *The Evolution of Furniture* (1939)

Furnivall, Frederick James (fûr'nĭvûl), 1825–1910, English philologist, one of the promoters of the *Oxford English Dictionary*, educated at Cambridge He helped to found several learned societies, including the Early English Text Society He also assisted in the organization of the Working Men's College, London

Fürst, Julius (vo͞o͝l'vo͞os fürst'), 1805–73, German Orientalist, of Jewish origin He was one of the most distinguished Semitic scholars of his time. Not only successful as a literary historian, he was among the first to apply scientific principles to the study of Semitic linguistics.

Fürth (fürt), city (pop. 95,369), Middle Franconia, Bavaria, on the Regnitz river, near Nuremberg. It manufactures machinery, precision instruments, textiles, glass, and other articles. Founded in 793, Fürth rose to importance when the Jews who were denied entrance into Nuremberg settled here (14th cent.). Gustavus II of Sweden made it his headquarters and fought an indecisive battle here with Wallenstein in 1632. Fürth was a terminal of the

first German railroad (Nuremberg-Fürth, opened 1835). It was damaged in the Second World War.
fur trade: see FUR.
Furtwängler, Adolf (ä'dôlf fo͝ort'vĕng-lûr), 1853–1907, German archaeologist, authority on ancient vases and gems. He made important excavations at Olympia, Aegina, and Orchomenus and wrote the authoritative *Meisterwerke der griechischen Plastik* [masterpieces of Greek sculpture] (1893), a smaller edition of which was later translated into English, *Die antiken Gemmen* [antique gems] (1900); and, with Karl Reichhold, *Griechische Vasenmalerei* [Greek vase paintings] (1900–1904).
Furtwängler, Wilhelm (vĭl'hĕlm), 1886–, German conductor. He began his career conducting opera in Lübeck (1911–15) and Mannheim (1915–19). In 1922 he succeeded Arthur Nikisch as conductor of the Berlin Philharmonic Orchestra. He appeared as guest conductor with the New York Philharmonic from 1925 to 1928 and as its permanent conductor in the season of 1937–38. In 1934 he resigned his post with the Berlin Philharmonic when the Nazis banned the performance of Paul Hindemith's music. He returned, however, and conducted that orchestra during the Second World War. He was tried by the American military government in Germany and in 1947 was cleared of charges that he had collaborated with the Nazis.
furuncle see BOIL.
Fury and Hecla Strait (fyo͝o'rē, hĕk'lə), narrow channel, N Canada, between Baffin Island and the north tip of Melville Peninsula. It connects Foxe Basin with the Gulf of Boothia. It was discovered by Sir William E. Parry in 1822 and named for his ships. The strait is nearly always ice-blocked, even in summer.
furze [O.E.], any plant of the Old World genus *Ulex*, spiny, nearly leafless shrubs with fragrant yellow pealike blossoms. The common furze (*Ulex europaeus*), called also gorse and whin and naturalized in parts of the United States, has been variously used as a sand binder, low hedge, and, in Europe, for fuel and winter fodder.
Fusan, Korea: see PUSAN.
fuse, electric, a safety device in an ELECTRIC CIRCUIT which automatically "breaks" the circuit, stopping the flow of electricity when the current exceeds the amount which can be safely carried. The common house fuse consists of a thin strip of low-melting alloy enclosed in an insulated case of porcelain or glass with a mica top. When too heavy a current in the circuit raises the temperature of the conductors above the danger point, the alloy strip melts, breaking the circuit, and the fuse is said to have "blown out." In the cartridge fuse the alloy strip is merely covered with an asbestos wrapping. A circuit breaker is employed where a fuse is not practical. It is essentially a switch which is opened by an electromagnet.
Fuseli, Henry (fo͞o'zlē), 1741–1825, Anglo-Swiss painter and draughtsman, b. Zurich, known also as Johann Heinrich Fuessli or Füssli. He came to England c.1763 and studied in London. He also spent a few years in Italy, where he made the studies for his famous series of nine paintings for John Boydell's Shakespeare Gallery. Returning to England, he exhibited *The Nightmare*. His paintings include a series illustrating Milton, but he is perhaps at his best in his dramatic drawings and sketches, of which he left over 800. Fuseli admired William Blake and gave him much needed aid and encouragement. Some of his lectures as professor of painting at the Royal Academy have been published. See biography by John Knowles prefacing Fuseli's collected works (1831), Paul Ganz, *The Drawings of Henry Fuseli* (1949).
fusel oil (fo͞o'zəl) [Ger., =inferior liquor], oily, colorless liquid with a disagreeable odor and taste. It is a mixture of alcohols (largely amyl alcohols) and fatty acids, occurring in the alcoholic fermentation of organic materials and, after imperfect distillation of these fermentation products, as an impurity in the distilled liquor. Fusel oil is used as a solvent in the manufacture of certain lacquers and enamels (it dissolves nitrocellulose). Its effect upon the human system is detrimental.
Fushun (fo͞o'shōōn'), city and county (pop. 59,953), NE Liaoning prov., China. The city is connected by rail with Shenyang and Talien. The Fushun coal mine, one of the largest in the world, has been in operation since the 12th cent. A.D. It provides most of the coal for the South Manchurian RR.
fusion, in physics: see MELTING POINT and HEAT.
Füssli, Johann Heinrich: see FUSELI, HENRY.
Fust, Johann, d. 1466, printer at Mainz. Johann GUTENBERG borrowed substantial sums of money from Fust, a goldsmith and money lender. When Gutenberg was unable to repay these sums, his press and types became Fust's property. In partnership with his son-in-law, Peter Schoffer, Fust carried on the work begun by Gutenberg. Fust and Schöffer were the first to print in colors (1457), using red and blue inks as well as black. They printed the first dated book (1457). Greek type was first used in 1465, by Fust and Schoffer in Mainz and by Conrad Sweynheym and Pannartz at Subiaco, near Rome. After the death of Fust, Schoffer continued the work theretofore done in partnership with him.
Fust or **Faust, Johann**, fl. 16th cent.: see FAUST.
Fustel de Coulanges, Numa Denis (nümä' dənē' fo͞stĕl' du kōōlänzh'), 1830–89, French historian. His masterly study, *La cité antique* (1864, Eng. tr., *The Ancient City*, 1874), stressed the influence of religion on the development of the Greek cities and of Rome. He lost his professorship at the Univ. of Strasbourg after Strasbourg became German and turned to medieval history. The result was a work of profound and original scholarship, *Histoire des institutions politiques de l'ancienne France* (6 vols., 1882–92, rev. ed. by Camille Jullian, 6 vols., 1905–14). In it Fustel attacked the general belief in the Germanic origin of feudalism and the manorial system and advanced instead a forceful argument tracing these institutions to Roman influences. His beliefs were widely attacked, but they opened the way for new interpretations of early medieval history.
fustic (fŭ'stĭk), wood of a tree (*Chlorophora tinctoria*) of the tropical forests of Central America and South America. From the heartwood is obtained a dye, also called fustic, which produces yellow, brown, and olive colors and is used chiefly for dyeing woolens. It has to a large extent been superseded by anilne dyes. Sometimes the dye is called old fustic to distinguish it from a substitute material known as young fustic or zante fustic which is obtained from the smoke tree *Rhus cotinus*.
futurism, Italian school of painting, sculpture, and literature which flourished from 1909, when Filippo Tommaso Marinetti's first manifesto of futurism appeared, until c. 1915. Carlo Carrà, Luigi Russolo, Gino Severini, and Giacomo Balla were the leading painters, Umberto Boccioni the chief sculptor of the group. They strove to portray movement and the dynamic character of 20th century life. Futurism glorified danger, war, and the machine age and, in theory at least, favored the growth of fascism.
Fyn (fün), island (1,149 sq. mi., pop. 338,013), Denmark, in the Baltic Sea, separated in the west from S Jutland by the Little Belt and in the east from Zealand by the Great Belt. Odense, Svenborg, and Nyborg are the chief cities. The second largest of the Danish isles, Fyn is a fertile agricultural lowland and has extensive dairy farming and cattle breeding.
Fyne, Loch (lŏkh fin'), arm of the Firth of Clyde, Argyllshire, Scotland. It extends 40 mi. N and NE from the Sound of Bute and is 1 to 5 mi. wide. The shore has numerous small lochs (e.g., Gilp and East Tarbert) and glens. The loch has long been famous for its herring fisheries. The Crinan Canal terminates at Lochgilphead. The leading city on Loch Fyne is Inveraray.
Fyt, Jan (yän' fit'), 1611–61, Flemish animal painter and etcher, second only to Frans Snyders, with whom he studied. He was early admitted to the painters' guild of Antwerp. In 1631 he went to Italy, where he remained 10 years. Returning to Antwerp in 1641, he enjoyed a high reputation in his field, collaborating frequently with Rubens, De Crayer, and Jordaens. Among his noted works are *Eagle's Feast* (Antwerp) and *Game and Fruit* (Vienna). The Metropolitan Museum has five studies of dead game.
Fyzabad or **Faizabad** (both fī'zŭbăd), town, E central United Provs., India, joint municipality with AJODHYA (total pop. 57,632). Fyzabad enjoyed its greatest glory as the capital (1724–75) of the kingdom of Oudh (1724–1856). The mausoleum (c. 1816) of a royal consort is one of the finest buildings. The town has sugar refineries and trades in produce.

G

G, seventh letter of the ALPHABET. It is a usual symbol for a voiced velar stop, as in the English *go*. It was originally a differentiated form of Greek gamma, which has C as its formal Roman correspondent. In MUSICAL NOTATION G represents a note in the scale.
Ga, chemical symbol of the element GALLIUM.
Gaal (gā'əl), leader of the Shechemites in their uprising against Abimelech. Judges 9:26–57.
Gaash (gā'ăsh), hill in Mt. Ephraim. Here Joshua was buried. Joshua 24:30, Judges 2:9, 2 Sam. 23:30, 1 Chron. 11:32.
Gaba (gā'bə), variant of GEBA.
Gabb, William More, 1839–78, American paleontologist, b. Philadelphia, trained largely under James Hall. He was paleontologist (1862–65) on the Geological Survey of California and wrote most of the two volumes dealing with paleontology in the survey's reports. He traveled over Lower California on muleback in 1867 and prepared the first adequate geological interpretation, as well as a geological map, of the peninsula. Three years' work in Santo Domingo followed, and a map and geological study of that country resulted. In 1873 he went to Costa Rica to survey the province of Talamanca. He prepared studies on the geography and Indian tribes of the region, but was stricken with tropical fever and never finished his reports. He was the chief American authority of his day on the marine forms of the Cretaceous period and, as a pioneer in the field, described several hundred new forms.
Gabbai (gă'bī) [Heb., =collector of tribute], Benjamite. Neh. 11:8.
Gabbatha (gă'bəthə) [Heb., =high place], yard or porch where Pilate sat in judgment on Jesus. John 19:13.
Gabelentz, Hans Conon von der (häns' kō'nôn fən dĕr gä'bəlĕnts), 1807–74, German linguist. He showed the broad lines of affinity among Pacific languages. A remarkable polyglot, he spoke 30 languages well and knew some 40 others.
Gabelsberger, Franz Xaver (frants' ksä'vər' gä'bəlsbĕr'gûr), 1789–1849, German stenographer. He invented a popular German shorthand system.
Gabès (gä'bĕs), town (pop. 22,512), E Tunisia, on the Gulf of Gabès, an arm of the Mediterranean. It is a fishing port and the center of an oasis noted for its date palms. A settlement was founded here by the Phoenicians.
Gabii (gā'bē-ī), ancient town of Latium, 12 mi. E of Rome on the road to Praeneste. Legend says that Romulus was reared here. One of the most important of the Latin cities, it supposedly resisted a siege by Lucius Tarquinius Superbus, but it was early overshadowed by Rome and had lost all importance even in the days of the republic. In the Middle Ages the city of Castiglione rose on the site.
Gabinius, Aulus (ô'lŭs gŭbĭ'nē-ŭs), 100 B.C.–c. 48 B.C., Roman statesman and general. When tribune of the plebs he conferred (*Lex Gabinia*) upon POMPEY command of the war against the pirates and, as consul (58 B.C.), in alliance with P. CLODIUS, he contributed to the exile of CICERO. He went to Syria as proconsul (57 B.C.), and restored Ptolemy XI to the throne of Egypt. On return to Rome he was impeached (54 B.C.) and exiled notwithstanding a defense by Cicero (undertaken at Pompey's behest). In the civil war he fought for Caesar, but took no active part against Pompey.
Gabirol: see IBN GABIROL, SOLOMON BEN JUDAH.
Gable, Clark, 1901–, American moving-picture actor, b. Cadiz, Ohio. After acting in stock companies and on Broadway, he began his career in moving pictures in 1930. Among the many films in which he has starred are *Susan Lenox*, *It Happened One Night* (in which he demonstrated his skill as a comedian), *Mutiny on the Bounty*, *San Francisco*, *Parnell*, *Saratoga*, and *Gone with the Wind*.
gable, in architecture, the vertical wall area (generally triangular) occurring beneath the ridge line of a roof and bounded by the sloping sides of the roof surface. In classical architecture it is called the PEDIMENT.
Gablonz: see JABLONEC NAD NISOU.
Gabon: see FRENCH EQUATORIAL AFRICA.
Gaboriau, Émile (āmēl' gabôryō'), 1835–73, French writer of popular detective stories, creator of M. Lecoq and Père Tabaret. He was one of the first writers of this genre and was immensely popular in English as well as in French. His works include *L'Affaire Lerouge* (1866; Eng. tr., *The Widow Lerouge*, 1891), *Le Dossier No. 113* (1867, Eng. tr., 1899), *Monsieur Lecoq* (1868, Eng. tr., 1880), and *La Corde au cou* (1873, Eng. tr., *In Peril of His Life*, 1883).
Gabriel (gā'–) [Heb., =man of God], archangel, the divine herald. In the Bible he appears to Daniel (twice), to Zacharias, and to the Virgin Mary in the Annunciation (see MARY). Dan. 8:16, 9:21, Luke 1:19, 26, 27. Christian tradition makes Gabriel the archangel trumpeter of the Last Judgment. 1 Thes. 4:16. In Islam, Gabriel revealed the Koran to Mohammed, becoming the angel of truth. In art and literature Gabriel is mainly treated as the angel of the Annunciation or in the Last Day. In the Annunciation he often carries a lily, properly the symbol of the Virgin. He is often represented on churches with trumpet raised and facing east, ready to proclaim the Second Coming. Feast, March 24.
Gabriel, Jacques Ange (shäk' äzh' gäbrĕl'), c. 1698–1782, French architect. Descendant of a long line of architects, he ranks as the most distinguished French architect of his century. He gave French architecture the elements of classical repose, purity of form, and restraint. He was appointed (1742) first architect to the king and for 30 years worked for Louis XV at Versailles, Compiègne, and other royal residences. In 1753 he designed Place Louis

XV (now Place de la Concorde), one of the beauty spots of modern Paris He designed also the twin palaces north of the square and (1748) the theater of the palace of Versailles In 1752 he commenced the vast École militaire in Paris, completed by A T Brongniart, and in 1755 began work on the unfinished parts of the Louvre, which he later had to suspend In 1768 he finished the Petit Trianon in the gardens of Versailles, which exemplifies the highest architectural attainment of 18th-century France

Gabrieli, Andrea (ändrā'ē, gäbrē'lē), 1510–86, Italian organist and composer, pupil of Adrian Willaert In 1536 he was a chorister at St Mark's Cathedral, Venice, where, in 1566, he became organist at the second organ He composed madrigals, motets, Masses, and *ricercari* and *canzoni* for organ He was the teacher of Sweelinck, of Hans Leo Hassler, and of his nephew **Giovanni Gabrieli** (jōvän'nō), 1557–1612 He lived for a time in Munich, possibly as the pupil of Lasso, and c 1584 became organist at the first organ of St Mark's In his works elements of the transition from the Renaissance to the baroque are seen, particularly in his differentiation of the choral and solo ensembles and in specific directions, in his later works, concerning the instrumentation His *Sonata pian'e forte*, published in his *Sacrae symphoniae* (1597), employs the baroque use of contrasts in dynamics and represents the beginnings of modern orchestration

Gabrilowitsch, Ossip (ô'sĭp gŭbrĭlô'vĭch), 1878–1936, Russian-American pianist and conductor, pupil of Anton Rubinstein at the St Petersburg Conservatory and of Leschetizky His debut was made in Berlin in 1896 He was well known both as a brilliant pianist and as conductor of the Munich Konzertverein Orchestra, 1910–14, and the Detroit Symphony Orchestra, 1918–36 He married Clara Clemens, concert singer, daughter of Mark Twain

Gabun see FRENCH EQUATORIAL AFRICA

Gad [Heb , =fortune] **1** Son of Jacob and Zilpah and eponymous founder of one of the tribes of Israel Its allotment was half of Gilead, E of the Jordan and NE of the Dead Sea This was the land best suited to the pastoral life, which Gad, like Reuben, continued after the years in Egypt Gad was captured by Tiglath-pileser Gen 30 11, 35 26, 49 19, Num 2 14, 13 15, 32 1,2,34, Deut 3 12, 33 20, Joshua 13 24, 1 Chron 5 18,26, 12 8,14 **2** Seer of David's reign He wrote one of the lost histories, he worked with Nathan in planning the musical services 1 Sam 22 5, 2 Sam 24 11–19, 1 Chron 21 9–19, 29 29, 2 Chron 29 25

Gadames, Libya see GHADAMES

Gadara (gă'durŭ), ancient city, Trans-Jordan, SE of the Sea of Galilee It was in the Decapolis, Vespasian destroyed it Extensive ruins mark the probable site The terms *Gadarenes, Gergesenes,* and *Gerasenes* appear variously for the locale of the celebrated miracle of the possessed swine They probably refer to an obscure town on the east shore of the lake Mat 8 28, Mark 5 1, Luke 8 26

Gaddi (gă'dī), Manassite sent by Moses into Canaan Num 13 11

Gaddi (gad'dē), celebrated family of Florentine artists **Gaddo Gaddi** (gad'dō), c 1260–c 1333, painter and mosaicist, is said by Vasari to have been associated with Cimabue and Giotto Among the mosaics attributed to him are those in the portico of Santa Maria Maggiore, Rome, and *Coronation of the Virgin,* over the portal in the Florence cathedral His son, **Taddeo Gaddi** (tad-dā'ō), c 1300–c 1366, painter and architect, the most talented pupil and the godson of Giotto, whom he assisted for 24 years, was the leader of Florentine painting after his master's death His works include the ceiling painting and a series of frescoes representing scenes from the life of the Virgin, in the Baroncelli Chapel in Santa Croce, Florence, the fine *Last Supper* in the refectory of the same church, remains of frescoes in San Francesco, Pisa, altarpieces (Naples and the Uffizi), *Madonna with Sants* (Santa Felicita, Florence), a series of episodes from the lives of Christ and of St Francis, formerly in Santa Croce and now in the Florence Academy, a predella with scenes from the life of St Lawrence (Brooklyn Mus), and an altarpiece, *Madonna and Child with Sants* (Metropolitan Mus) The architectural achievements attributed to him are the completion of Giotto's work on the Campanile, Florence, and the planning of Ponte Vecchio Taddeo's son, **AgnoloGaddi**(a'nyōlō), c 1350–1396, a pupil of his father and of Giovanni di Milano, was also a follower of Giotto His works, though deficient in design, are decorative, good in color, and inclined to realism, with dignified and well-drawn figures His works include the frescoes *Discovery of the Cross* (Santa Croce, Florence), the series representing the legends of the *Holy Girdle* (cathedral, Prato), and four paintings in the National Gallery of Art, Washington, D C Agnolo was the master of Cennino Cennini His brother, **Giovanni Gaddi** (jōvän'nē), d 1383, was also a painter of considerable talent, most of whose work was destroyed in the remodeling of Santo Spirito, Florence His promising career was cut short by early death

Gaddiel (gă'dēĭl, gădī'ŭl), leader of Zebulun sent by Moses to explore Canaan Num. 13 10

Gade, Niels Vilhelm (nēls' vĭl'hĕlm gä'dhŭ), 1817–90, Danish composer He studied in Leipsig (1843–48), where he met Mendelssohn and Schumann His eight symphonies, his chamber music, and his cantatas are essentially Scandinavian but they show the influence of German romanticism.

Gades see CÁDIZ

gadfly, name applied to the HORSEFLY or breeze fly and sometimes to the BOTFLY

Gadhelic (gudĕ'lĭk), same as Goidelic or Gaelic, a classification of Celtic languages See LANGUAGE (table)

Gadi (gā'dī), father of Menahem, king of Israel. 2 Kings 15 14,17

Gadir see CÁDIZ

gadolinium (gădōlĭ'nēum), rare metallic element (symbol=Gd, for physical constants, see ELEMENT, table), a metal of the RARE EARTHS The rare-earth gadolinia, the oxide of the metal, was obtained by J C G de Marignac in 1880 and by P E L de Boisbaudran in 1886 and was named for the mineral gadolinite, from which it was extracted

Gadsden, Christopher, 1724–1805, American Revolutionary leader, b Charleston, S C , educated in England He returned to Charleston (1746) and became a wealthy merchant At the Stamp Act Congress (1765) he was one of the first to urge colonial union against England's policy of taxation Gadsden served in the Continental Congress (1774–76) and favored independence In the struggle over the South Carolina constitution in 1778 he was a radical, favoring separation of Church and state and popular election of senators He was captured when the British took Charleston (1780), and imprisonment by the British broke his health He later helped to secure ratification of the Constitution and still later opposed the Jeffersonians

Gadsden, James, 1788–1858, American railroad promoter and diplomat, b Charleston, S C , grad Yale, 1806, grandson of Christopher Gadsden He served in the War of 1812, under Andrew Jackson against the Seminole Indians, and, later, as commissioner to remove the Seminole to their reservation in Florida He was a promoter of railroads and advocated a Southern rail system which would control the trade of the South and the West and free those regions from their dependency on the North To further this end he promoted Southern commercial conventions and at a convention in Memphis in 1845 boldly urged the construction of a railroad to the Pacific In 1853, when his friend Jefferson Davis was Secretary of War in Pierce's cabinet, Gadsden was appointed minister to Mexico, to negotiate for territory along the border The result was the GADSDEN PURCHASE He was recalled (1856) for exceeding his instructions and retired to Charleston

Gadsden, industrial city (pop 36,975), co seat of Etowah co , NE Ala , near the Lookout Mts NE of Birmingham, founded c 1845, inc 1871 Alabama City was annexed in 1932 Iron, coal, limestone, sand, clay, and timber are found in the area There are metal and textile industries and a large tire and rubber plant

Gadsden Purchase, strip of land purchased (1853) by the United States from Mexico The Treaty of Guadalupe Hidalgo (1848) had described the U S – Mexico boundary vaguely, and President Franklin Pierce wanted to insure U S possession of the Mesilla Valley near the Rio Grande—the most practicable route for a southern railroad to the Pacific James GADSDEN negotiated the purchase, and the U S Senate ratified (1854) it by a narrow margin The area of 45,535 sq mi , purchased for $10,000,000, now forms extreme S New Mexico and Arizona S of the Gila

Gadshill (gădz'hĭl), low hill, Kent, England, near Rochester It is noted as the scene of Falstaff's robberies in Shakspere's *Henry IV* "Gadshill Place" was the home of Charles Dickens from 1856 until his death in 1870

Gaea (jē'u) [Gr ,=earth], Greek earth-goddess, daughter of CHAOS, and mother of URANUS and PONTUS Her children by Uranus were the Cyclopes, the Hecatoncheires, and the Titans (see TITAN) To Pontus she bore five sea-deities—Nereus, Thaumas, Ceto, Phorcus, and Eurybia She was worshiped as the mother of all things, a counselor of gods and men The oracles of DELPHI and Olympia traced their origin to her The Romans identified her with Tellus

Gaelic (gā'lĭk), the Celtic languages spoken in Ireland and Highland Scotland Generally the form spoken in Ireland is known as Irish, that in Scotland as Scottish or Scottish Gaelic Gaelic may also be used to include Manx Erse is sometimes used as a *synonym* for Gaelic See LANGUAGE (table)

Gaelic literature, literature of Gaelic-speaking Ireland and Scotland Irish literature is conventionally divided into Old Irish (before 900), Middle Irish (until 1350), Late Middle, or Early Modern, Irish (until 1650), and Modern Irish (from 1650) Scottish Gaelic has become separate from Irish Gaelic in modern times only The old literary monuments of Irish survive in Middle Irish manuscripts, copies of older ones, the chief are the Book of the Dun Cow, the Book of Leinster, the Yellow Book of Lecan, the Book of Ballymote, and the Speckled Book. Middle Irish literature consists of romances or sagas, which fall into two groups—the Red Branch cycle (sometimes called the Ulster cycle) and the Fenian cycle The first of these deals with an Ireland populated with swaggering pagan heroes, greatest of whom is CUCHULAIN, central personage of the Ulster legends and of the great monument *Táin Bó Cúalnge* [the cattle raid of Cooley] The form of the Irish saga is the same as that of the Icelandic saga, which may have borrowed the form from Ireland, the narrative is in prose, but the dialogue, when it is impassioned, is in verse Irish saga is not Homeric in style, as its heights are lyrical A characteristic of all older Celtic literature is a beautiful simplicity and terseness varied by an exaggerated heaping of epithet and detail Some scholars allocate the inspiration of the Ulster sagas to the conquering Celtic aristocracy of Ireland, and the cycle of the Fenians (see FENIAN MOVEMENT) to the aboriginal conquered inhabitants At any rate, the Fenian literature is in its present form much later in origin than the Ulster saga, for paganism is modified, and Christianity is represented as coming in the extreme old age of OSSIAN, the poet of the Fenians *Acallam na Senorach* [colloquy of the ancients], a discussion between Ossian and Patrick, is the chief Fenian text A most artistic Fenian work is *The Pursuit of Diarmuid and Grainne* The air of the Fenian literature is gentler than that of the Ulster saga the lyric sings not so much of war and death as of love and nature and separation The themes and tales of the Red Branch died from popular memory long ago, except for the tale of DEIRDRE, but the Fenian legends survived into modern times, especially in Scotland, whence came the garbled *Ossian* to excite Europe in the 18th cent Middle Irish prose and poetry dealt not only with more literary forms, but with law, medicine, topography, and ecclesiastical subjects These make up great collections and many translations of continental works, a large portion are valuable not only as they throw light on Irish history (e g , the innumerable annals and the law collections) but also on medieval culture in general In ancient Ireland the poet held a privileged position, and apparently in Ireland, as probably in Wales, Christianity gave the poets a kind of national position as guardians of the native tradition, successors of the pagan priests After the coming of the Norman-English in the 12th and 13th cent the poets became the spokesmen of Gaelic culture Among them three may be mentioned, the courtly, patriotic Gilbride Albanach McNamee (13th cent), the religious poet Donough Mor O'Daly (13th cent), and Teig Og O'Higgins (15th cent) The late medieval prose includes one of the most celebrated Gaelic narrative collections, *The Three Sorrows of Story-telling,* which includes the immortal Deirdre The 16th and 17th cent saw a great poetic revival and the rise of modern Irish prose At this time Gaelic Ireland was fighting her losing battle with England, and Gaelic literature became more passionately patriotic and more militantly Catholic as the English conquered The best-known bard of the time is Teig Dall O'Higgins (d 1591), who lived with one family or another, singing the praises of each with melodious verse Quite different, but just as capable, was Eochy O'Hussey, poet of the Maguires of Fermanagh, who had one of the most patriotic and cultured courts of the country Eochy is the poet of the dying Gaelic Catholic Ireland, undaunted, passionate, and beautiful Before Cromwell came to Ireland, bardic poetry had begun to decline The 16th- and 17th-century prose in Ireland is transitional, it begins with some delightful tales in Middle Irish and comes to its fruition with Geoffrey Keating (1570–c 1650), whose religious works and monumental historical study of Ireland are the foundation of Modern Irish literature The greatest Irish scholar of the time was Michael O'CLERY, among other students of Gaelic culture are some English-speaking Protestants, notably Bedell, bishop of Kilmore and Ardagh, translator of the Old Testament Bedell's Bible is a fine piece of Gaelic, but it had little influence among the predominantly Catholic Irish The penal age of Ireland may be dated from Cromwell's arrival (1649), and Gaelic literature served to keep alive the old culture of the submerged Catholics From Louvain, Belgium, came a stream of religious books in Gaelic, these circulated around Ireland, how it is not known In Ireland the popular poetry was largely in the hands of wandering poets, who repeated the old stories and made new songs on the dolorous events of the time Chief of these was Anthony Raftery, of whom Donn BYRNE has written There is a great bulk of the verse of the poets of penal times, much of it lovely The penal times in Ireland were hardly over before Irish Gaelic received a great blow, this was the potato famine of 1847 The terrible depopulation of Ireland hurt most the Gaelic West, and the proportion of Gaelic speakers in Ireland dropped in three years from more than three fourths to one quarter In the 19th cent., Irish scholarship came into its own again and resulted, through the efforts of John O'Donovan, Eugene O'Curry, and

Standish Hayes O'Grady, in a Gaelic literary revival A great part in the revival itself was held by the Gaelic League and Douglas Hyde The principal figures in this new Gaelic literature were Canon Peter O'Leary (d 1920), Patrick O'Connor (d 1928), the gifted and noble Patrick Henry Pearse (d 1916), and Maurice O'Sullivan The connections between Gaelic Scotland and Gaelic Ireland were close until the rise of Presbyterianism in Scotland But since the 16th cent, Scottish Gaelic has had a literature of its own Very interesting are the remains contained in the Book of the Dean of Lismore and the Fernaig MS Here the Fenian cycle is well represented The great event of modern Scottish Gaelic culture is "the '45," when Bonnie Prince Charlie (Charles Edward Stuart) came back There was a great burst of poetry after the '45 that defied the repressive measures of Parliament and mourned the English triumph The poet par excellence of the rebellion was Alexander Macdonald (MacMaster Alasdair) He was more original than Duncan Ban McIntyre, whose poems hark back to older forms and older subjects At the end of the century came Macpherson's *Ossian* In the 19th and 20th cent a number of Highland poets and prose writers used Gaelic for their medium In general the Scottish Gaels have preserved their language and literary activity better abroad (e g , in Nova Scotia) than the Irish, but at home Scottish Gaelic is disappearing faster than Irish Most of the monuments of Gaelic literature have been translated into English, e g , by Lady Gregory, Eleanor Hull, Tom Peete Cross, and (for Scotland) James MacGregor See Douglas Hyde, *Literary History of Ireland* (1899), A S De Blácam, *Gaelic Literature Surveyed* (1933)

Gaertner, Joseph see GÄRTNER, JOSEPH

Gaeta (gä'ta), city (pop 4,967), S Latium, central Italy, a seaport Between the promontory on which Gaeta is built and the Italian mainland lies the Gulf of Gaeta The coast from Gaeta to Formia was a favorite resort of the ancient Romans A prosperous duchy from the 9th to the 12th cent, Gaeta lost its independence to the Normans and shared thereafter the fortunes of the kingdom of Naples The citadel and port were strongly fortified Pope Pius IX took refuge here (1848-49) The fall of Gaeta to Victor Emmanuel II of Sardinia after a long siege (1860-61) marked the end of the rule of FRANCIS II over the kingdom of the two Sicilies There is a fine 13th-century campanile The cathedral and other medieval buildings were seriously damaged in the Second World War

Gaffney, city (pop 7,636), co seat of Cherokee co , NW S C , NE of Spartanburg near the N C line, in a farm area, inc 1875 It has textile mills Limestone College (for women, 1845) is here

Gafsa (gäf'sa), town (pop 11,320), S central Tunisia, in an oasis It is in a region rich in phosphates, whose exports, together with dates, olives, and woolen goods The town was destroyed by Marius in the war against Jugurtha and was rebuilt under the Roman Empire The region about Gafsa (ancient Capsa) has yielded artifacts of an upper Paleolithic culture (Capsian) of North Africa and S Europe, probably contemporaneous with the Aurignacian culture

Gág, Wanda (gag), 1893-1946, American artist and writer for children, b New Ulm, Minn , studied at St Paul and Minneapolis art schools and at the Art Students League of New York Distinguished especially for her lithographs, she illustrated *Tales from Grimm* (1936) and *Snow White and the Seven Dwarfs* (1938) Among her own gay and imaginative books for children are the popular *Wultions of Cats* (1928), *The Funny Thing* (1929), and *Nothing at All* (1941) See her autobiographical *Growing Pains* (1940), biography by A O Scott (1949)

Gage, Henry Phelps: see GAGE, SIMON HENRY

Gage, Lyman Judson, 1836-1927, American banker and statesman, b Madison co , N Y After banking employment, he went (1855) to Chicago and there became (1891) president of the First National Bank of Chicago He declined President Cleveland's offer to appoint him Secretary of the Treasury, but after Gage supported William McKinley against William Jennings Bryan, he became (1896) President McKinley's Secretary of Treasury He won public approval for his conduct of fiscal affairs during the Spanish-American War, but resigned (1902) under President Theodore Roosevelt

Gage, Matilda Joslyn, 1826-98, American woman suffrage leader, b Cicero, N Y Joining the woman's rights movement in 1853, she edited in Syracuse, N Y , the *National Citizen*, a feminist journal In 1881 she collaborated with Elizabeth Cady Stanton and Susan B Anthony in their *History of Woman Suffrage* She was president of the National Woman Suffrage Association from 1875 to 1876

Gage, Simon Henry, 1851-1944, American biologist, b Maryland, N Y , grad Cornell Univ (B S , 1877) From 1878 to 1908 he taught at Cornell Besides important work in comparative histology and embryology, he is known for his standard work, *The Microscope* (1881, 17th ed , 1941) His first wife, **Susanna (Phelps) Gage,** 1857-1915, b Morrisville, N Y , grad Cornell (Ph B , 1880), was well known among scientists for her work in comparative anatomy Their son, **Henry Phelps Gage,** 1886-, b Ithaca, N Y , Ph D Cornell, 1911, after 1911 was in charge of the optical laboratories at the Corning Glass Works, Corning, N Y With his father he wrote *Optic Projection* (1914)

Gage, Thomas, d 1656, English traveler. Sent to Spain to study, he became (1603) a Dominican He lived and traveled among the Indians of Central America from 1625 to 1637, when he returned to Europe In 1641 he went to England, renouncing Catholicism and becoming an Anglican clergyman In 1654 he went as chaplain with an expedition to the West Indies and died in Jamaica His chief claim to fame is as the author of *The English-American His Travail by Sea and Land, or, A New Survey of the West Indies* (1648)

Gage, Thomas, 1721-87, British general in North America He came to America (1754) with Gen Edward Braddock and took part in the ill-fated expedition against Fort Duquesne (1755) Later in the French and Indian War he served under James Abercromby and Jeffrey Amherst Gage was appointed (1760) governor at Montreal and later succeeded Amherst (1763) as commander in chief of British forces in North America He thus had a highly significant post in the years when trouble between the colonists and the British government grew, and the soldiers were cordially disliked by many of the colonies In the critical year of 1774 he was chosen to succeed Thomas HUTCHINSON as governor of Massachusetts, where affairs were most critical He tried to put down the dissident forces in the colony and to enforce the Intolerable Acts He it was who ordered the arrest of Samuel Adams and John Hancock In April, 1775, he sent soldiers to seize military stores at Concord, and the colonial militia resisted, the battles of Lexington and Concord on April 19 began the American Revolution In Oct , 1775, he resigned, Gen William Howe succeeded him See his correspondence (ed by C E Carter, 1933)

Gager, Charles Stuart (gā'jur), 1872-1943, American botanist and educator, b Norwich, N Y , Ph D Cornell Univ , 1902 From 1910 he was director of the Brooklyn Botanic Garden Among his publications are *Effects of the Rays of Radium on Plants* (1908), *Heredity and Evolution in Plants* (1920), *The Relation between Science and Theology* (1925), and *The Plant World* (1931)

Gagern, Heinrich, Freiherr von (hīn'rĭkh frī'hĕr fŏn gä'gûrn), 1799-1880, German statesman A Hessian parliamentary leader and a conspicuous advocate of German unity, he became (1848) president of the FRANKFURT PARLIAMENT He at first favored Prussian leadership and the exclusion of Austria from German affairs, but later reversed his stand

gag rules, procedural rules in force in the U S House of Representatives from 1836 to 1844 With the growth of antislavery feeling after the founding of the American Anti-Slavery Society in 1833 the House was deluged with thousands of antislavery petitions, especially of the variety praying for the abolition of slavery in the District of Columbia Southerners, with the aid of Northern Democrats, secured passage of the gag rules, which prevented the discussion of antislavery proposals in the House The fight to secure the right of petition, waged virtually singlehandedly, and brilliantly, by John Quincy Adams, aroused the North, and the gag rules were repealed They had the effect of strengthening the cause of the ABOLITIONISTS

Gagry (gä'grē), city (1940 estimated pop 12,000), Abkhaz ASSR, Georgian SSR, on the Black Sea and at the foot of the Greater Caucasus It is a subtropical health resort

Gaham (gā'hŭm), nephew of Abraham Gen 22 24

Gahar (gā'här), Nethinim family returning with Zerubbabel Ezra 2 47, Neh 7 49

Gaillard, David Du Bose (gā'lŭrd), 1859-1913, American army engineer, b Clarendon co , S C , grad West Point He established a reputation for the execution of difficult engineering projects involving hydraulic work and channel dredging His *Wave Action in Relation to Engineering Structures* (1904) is considered authoritative on its subject In 1908 he was sent to assist General GOETHALS on the PANAMA CANAL and was given charge of the central division, which included the excavation of Culebra Cut, acknowledged to be the most difficult portion of the undertaking His success was gained at the cost of his health National regret at his death led President Wilson to change the name of the cut from Culebra to Gaillard

Gaillardet, Théodore Frédéric (tāôdôr' frādārēk gäyärdā'), 1808-82, French journalist He collaborated with Dumas père in writing *La Tour de Nesle*, a play produced with great success in Paris in 1832 Subsequent misunderstanding over it involved the two in a duel in which neither was injured Gaillardet arrived in the United States in 1837, and after three years of travel and reporting for French newspapers, he settled in New York city He edited the *Courrier des Etats-Unis* until 1848, making it the leading French newspaper in the country He returned to France in 1848, but frequently visited America. His *L'Aristocratie en Amérique* (1883) ranks among the more brilliant interpretations of America by a foreigner

gaillardia (gālär'-) [from Gaillard, a Fr botanist] or **blanketflower,** any plant of the genus *Gaillardia*, chiefly western American herbs with showy heads of composite flowers The heads are red or yellow or both, usually with dark purple centers Gaillardias are easily grown, long-blooming annuals, biennials, or perennials and are popular for bedding and cutting.

Gaines, Edmund Pendleton, 1777-1849, U S army officer, b Culpeper co , Va , brother of George S Gaines He spent his boyhood in Tennessee and at the age of 20 joined the U S army He surveyed (1801-4) Gaines Trace between Nashville and Natchez Later (1804) in Alabama, he arrested Aaron BURR and then testified at the Burr trial in Richmond For his service in the War of 1812 he received many citations Sent as a commissioner to treat with the Creek Indians, he served under Andrew Jackson in the Creek and Seminole campaigns He later took part in the Black Hawk War and led an expedition in the war in Florida There he fell into dispute with Gen Winfield SCOTT, and a court of inquiry censured them both Gaines was in command of the Western Dept of the army at the opening of the Mexican War and faced court-martial for calling for volunteers on his own authority He defended himself so ably that the charges were dismissed

Gaines, George Strother, c 1784-1873, Alabama pioneer, b Stokes co , N C , brother of Edmund P Gaines From 1806 to 1819 he was U S factor and Indian agent at SAINT STEPHENS, strategic post on the Tombigbee river near the disputed West Florida boundary He became a particular friend of the Choctaw Indians, thus giving the United States control over their territory and trade, and his influence kept them from joining Tecumseh's confederation against the Americans He opened Gaines Trace, from the Tennessee river to the Tombigbee, and aided the settlers who poured into the Alabama country after 1816 When the Choctaw Indians were to be removed beyond the Mississippi, they insisted that Gaines join their chiefs in selecting them lands, and Gaines later accompanied them again in their migration He served (1825-27) in the Alabama senate and later gained wealth as a merchant in Mobile, retiring in 1856 to his plantation at State Line, Miss See biography by J W Silver (1949)

Gaines's Mill see SEVEN DAYS BATTLES

Gainesville [for Gen E P Gaines] **1** City (pop 13,757), co seat of Alachua co , N central Fla , SW of Jacksonville, founded c 1854, inc 1869 The first settlement here, a trading post, was made in 1830, just before the Seminole War The city is a resort and an industrial and shipping center dealing in naval stores, lumber, citrus fruits, vegetables, and, notably, tung oil The Univ of Florida (see FLORIDA, UNIVERSITY OF) is here North of the city is a state institution for the feeble-minded Paynes Prairie, a large marsh, lies to the south **2** City (pop 10 243), co seat of Hall co , N Ga , near the Chattahoochee river NE of Atlanta, in the Blue Ridge foothills, inc 1821 It is a trade and industrial center (with textile mills) in a farm area Brenau College (for women, 1878) is here, near by is Riverside Military Academy In 1936 a tornado severely damaged the city **3** City (1940 pop 9,651, 1947 estimated pop 12 000), co seat of Cooke co , N Texas, on the Elm fork of the Trinity and NNW of Dallas, founded 1850, inc 1873 It was founded on the California Trail and later was a notous cow town, a stopping point on the Chisholm Trail just below a Red River crossing Respectability grew with the planting of cotton and small grains, and Gainesville has a prosperous cluster of processing plants for the farms of the region as well as an oil refinery for neighboring oil fields and various small factories The city is proud of its many trees and of its highly successful community circus, founded in 1930 There is a junior college At Gainesville is the state training school for delinquent girls

Gainsborough, Thomas (gānz'buru), 1727-88, English portrait and landscape painter, one of the greatest of all English artists, b Sudbury, ninth son of an impecunious cloth merchant He was apprenticed at 14 to a silversmith in London There he was discovered by the French engraver Hubert Gravelot, who made him his assistant and pupil, and by the painter Francis Hayman, who, it is said, taught him to sow wild oats In 1745 he returned to Sudbury There he promptly married Margaret Burr, whose stable temperament and whose income of £200 a year were decisive in establishing him in his career From then on, first in Ipswich, then in Bath, and finally in London, he worked as a fashionable portrait painter, gradually acquiring a large, lucrative practice and rivaling Sir Joshua Reynolds himself Unlike Sir Joshua, however, Gainsborough had little taste for the high society he painted He spent much spare time in painting landscapes, for which he found small sale They were among the first great landscapes painted in England and have rarely been surpassed Gainsborough is famous for the elegance of his portraits,

and his pictures of women in particular have an extreme delicacy and refinement As a colorist he has had few rivals among English painters His best works have a quivering life achieved by that running play of delicate but undisguised brush strokes which is found in Rubens and Renoir They have a light and airy quality, with greens and blues predominating Unlike most portrait painters of his day, Gainsborough is said to have painted all parts of his pictures himself Gainsborough is well represented in the national galleries of London, Ireland, and Scotland, in the Wallace Collection, London, and in many private collections In America there are beautiful Gainsboroughs in the Metropolitan Museum and the Frick Collection, New York, the Art Institute of Chicago, the Henry E Huntington Art Gallery, San Marino, Calif , and the museums of Cincinnati, Boston, Philadelphia, and St Louis Out of his large number of famous pictures may be cited *Perdita* (Wallace Coll , London), *The Blue Boy* (Huntington Art Gall , San Marino, Calif), *Lady Innes*, and *The Mall* (Frick Coll , New York) See biographies by Sir Walter Armstrong (1906), Max Rothschild (1909), W T Whitley (1915), H T. Stokes (1925), and Mary Woodall (1949)

Gainsborough, urban district (pop 18,689), in the Parts of Lindsey, Lincolnshire, England, on the Trent and NW of Lincoln It is the St Ogg's of George Eliot's *Mill on the Floss* The Congregational Church was built in memory of John Robinson, pastor of the Pilgrim Fathers in Holland, who was born near here The Old Hall was supposedly built by John of Gaunt The town is of very early establishment, King Sweyn made it his capital and died here

Gairdner, James (gârd'nur), 1828-1912, British historian, b Edinburgh An official of the Public Record Office (1846-93), he devoted his leisure to historical writing and editing With J S Brewer he edited the *Calendar of Letters and Papers of the Reign of Henry VIII* (21 vols , 1856-1910), and he made several editions of the *Paston Letters* His writings include a biography of Richard III (1878), a biography of Henry VII (1889), and *Lollardy and the Reformation in England* (4 vols , 1908-13, with memoir of Gairdner by William Hunt in Vol IV)

Gairdner, Lake (gârd'nur), shallow salt lake, area 1,840 sq mi , South Australia, at the base of Eyre Peninsula It is partly dry in the summer

Gairloch (gâr'lŏkh), parish (pop 2,376), Ross and Cromarty co , Scotland, on Gairloch (an inlet) at the mouth of the Flowerdale, W of Loch Maree It is a summer resort with good fishing and bathing

Gaiseric (gī'surĭk) or **Genseric** (gĕn'surĭk, jĕn'-), c 390-477, king of the Vandals (428-77), one of the ablest of the barbarian invaders of the Roman Empire He led (429) his people from Spain into Africa and quickly subdued a large territory, which was surrendered to him by treaty in 435 He took Carthage in 439, sent a fleet to raid Sicily in 440, and secured an advantageous peace in 442 He then dispossessed many Roman landowners and persecuted the Catholic clergy, meanwhile gaining control of the Mediterranean through his pirate fleets In 455 he sacked Rome In 460 and 468 he caused the failure of expeditions sent against him by MAJORIAN and LEO I respectively By the time of his peace with Zeno (476), his territories included Roman Africa, Sicily, Sardinia, Corsica, and the Balearic Islands

Gaithersburg (gā'thûrzbûrg), milling town (pop 1,021), W central Md , NW of Washington, D C , in a stock-farming area A U S Coast and Geodetic Observatory is here

Gaius (gā'yus) **1** Corinthian Christian, Paul's host Rom 16 23 **2** Corinthian baptized by Paul 1 Cor 1 14. **3** Companion of Paul, native of Derbe Acts 20 4 **4** Macedonian companion of Paul Acts 19 29 **5** Christian to whom 3 John is addressed It is not known which, if any, of these men are identical

Gaius (gā'ŭs, gī'-), 2d cent , Roman jurist He is known for the *Institutes*, a legal textbook which contributed materially to our knowledge of early Roman law and which was much used in the compilation of the CORPUS JURIS CIVILIS

galactose: see LACTOSE

Galahad, Sir (găl'uhăd), son of Sir Lancelot and the purest knight of King Arthur's ROUND TABLE As such he was vouchsafed a vision of the Holy GRAIL See ARTHURIAN LEGEND.

Galal (gă'-), two Levites, sons of Asaph and Jeduthun 1 Chron 9 15,16, Neh 11.17

Galápagos Islands (gulă'pûgŏs, -gûs, gulä'-) [Span , =tortoises], Pacific archipelago (3,029 sq. mi., 1944 estimated pop , 661), c 650 mi. W of Ecuador and c 1,000 mi SW of the Panama Canal, on the equator Officially named in Spanish the Archipiélago de Colón, the islands belong to Ecuador and during the Second World War served as a vital air base. They were discovered (1535) by Tomás de Berlanga and named for the gigantic (up to 500 lb.) land tortoises which are today dying out. Of 13 main islands the largest is Albemarle (officially Isabela), c 75 mi long Largely desolate lava piles, the islands have little vegetation or cultivable soil except for the higher volcanic mountains, which have heavy rains from the prevailing trade winds and are mantled on their upper slopes by dense jungles. The climate is mild because of the cool Humboldt Current What has brought fame to the islands is their wild life Besides the tortoises, there are sea and land iguanas and hosts of land and sea birds, such as the flightless cormorant, which exists nowhere else. Shore lagoons teem with sights of marine life Early travelers to this naturalists' paradise, now a protected wildlife sanctuary, were astonished by the tameness of nearly all the species. The Galápagos were visited (1835) by Charles Darwin in the famous voyage of the *Beagle* Although buccaneers, seeking food, made some inroads on the fauna, real depredations did not begin until the arrival in the 19th cent of the whalers and then the oilers, who killed the tortoises wholesale for food and oil fat Still, the Galápagos remain one of the few places in the world where naturalists can study living survivals of species arrested at various evolutionary stages See William Beebe, *Galapagos World's End* (1924)

Galashiels (găl"ushēlz'), burgh (pop 13,102), Selkirkshire, Scotland, on Gala Water and NW of Melrose Since late in the 16th cent it has been known for wool manufacture—chiefly tweeds. The Catrail, a Pictish earthwork, is near

Galata see ISTANBUL

Galatea (gălutē'ù), in Greek mythology **1** Nereid, daughter of Nereus and Doris She was loved by the one-eyed and uncouth giant, Polyphemus, who made a love song for her She and her preferred lover, Acis, listened in secret to Polyphemus' song, but he discovered them and killed Acis **2** Statue of a girl made by the sculptor PYGMALION The marble girl was so beautiful that the artist prayed that she might be brought to life Aphrodite granted his request

Galati or **Galatz** (both galats'), city (pop 80,411), E Rumania, in Moldavia, on the lower Danube and c 120 mi NE of Bucharest It is a major inland port, a fishing center, the base of the Rumanian Danube flotilla, and the see of an Orthodox bishop Timber and grain are the chief exports The city, of medieval origin, became an international trading center in the 16th cent and was a free port from 1834 to 1883 It was the seat (1856-1939) of the European Danube Navigation Commission Its large Jewish population was much reduced during the Second World War, and its harbor installations were partly demolished (1944) by the retreating Germans The 16th-century Cathedral of St George contains the tomb of Mazeppa

Galatia (gŭlā'shu) [from Gr ,=Gaul], ancient territory of central Asia Minor, in the present Turkey (around Ankara). It was so called from its inhabitants, the Gauls, who invaded from the west and conquered it in the 3d cent B C Originally composed of parts of Phrygia and Cappadocia, the territory taken by the Gauls increased until it extended from Bithynia and Pontus on the north to Pamphylia on the south About 230 B C , Attalus I, king of Pergamus, checked the advance of the Gauls and greatly reduced the limits of Galatia In 189 B C it became subject to the Romans and in 25 B C was constituted a Roman province, at first much larger than old Galatia, but later (A D 72) reduced to its smaller scope The chief city was Ancyra (present Ankara)

Galatians (gulā'shunz), epistle of the New Testament, the ninth book in the usual order It was written by St PAUL to Christians of central Asia Minor, probably those of S Galatia It may have been the earliest-written epistle (A D c 48), or, as many critics hold, it may date A D c 56 Like ROMANS, which is longer, Galatians treats justification, the spiritual process whereby the Christian enters into his peculiar relation with God The Galatians had acquired the belief that circumcision was essential to Christians as to Jews, which entailed, as Paul thought, the basic error of continuing the old dispensation of Moses, under which obedience to the Law was the means of salvation Thus would vitiate the whole of Christian freedom won for men on the Cross The main section of the book deals first with the specific question (1 6–2 21) and gives a lengthy account of St Paul's discussion with St Peter and St James on the matter The central part, on justification by faith (3 1–5 12), is of great importance in Christian theology

Galatz, Rumania see GALATI

Galax (gā'lăks), town (pop 3,195), SW Va , near the N C line SW of Roanoke, founded 1903, inc 1906 It is an industrial city producing lumber, textile, and glass products and evaporated milk The galax shrub is gathered and shipped.

galax (gā'lăks"), low-growing evergreen plant (*Galax aphylla*), native to mountain woods from Virginia to Georgia Its heart-shaped, shining green leaves, which turn to bronze in the fall, last well when cut and are widely used in floral decorations It has spikes of white flowers and can be planted as a ground cover in moist, shaded locations Beetleweed is another name. Some species of *Shortia* resemble galax, often called fringed galax is the species *Shortia soldanelloides* (or *Schizocodon soldanelloides*), native to Japan.

Galaxy: see MILKY WAY SYSTEM.

Galba (Servius Sulpicius Galba) (găl'bù), 3 B.C.–A.D 69, Roman emperor (A.D.68–A.D.69). A member of an ancient Roman family, he distinguished himself in a political and military career as praetor (A.D. 20), governor of Aquitania, consul (A D 33), commander in Gaul (from which he expelled invading Germans), and governor of Hispania Tarraconensis (A D. 60). In A.D 68, when insurrection against NERO broke out, Galba was shortly proclaimed emperor by his soldiers. After some uncertainty and danger to Galba, Nero was murdered in Rome and Galba succeeded. His reign was distinguished by an honest but parsimonious administration After a few months a rebellion took place Galba was killed, and Otho succeeded

Galdhopiggen. see JOTUNHEIM

Galdós, Benito Pérez. see PÉREZ GALDÓS, BENITO

Gale, Elbridge, 1824–1907, American horticulturist, b. Bennington, Vt He taught horticulture and was superintendent of the nursery at the Kansas State Agricultural College from 1871 to 1878 In 1884 he moved to Florida, where he specialized in the cultivation of subtropical fruits Certain mango trees, imported from India by the U S Dept of Agriculture, were sent to him, and he was successful in saving a single specimen of the Mulgoba variety, a favorite variety in Florida He contributed greatly to the knowledge of the conditions and methods favorable to the growing and propagation of the mango.

Gale, George Washington, 1789–1861, American educator, b Stanford, N Y , grad Union College, 1814, and Princeton Theological Seminary, 1819 In 1827 he founded Oneida Institute at Whitesboro, N Y , where students paid for their instruction by doing manual labor He planned a college in the West to be similarly maintained and organized a land company which founded Galesburg, Ill From the proceeds he established Knox Manual Labor College in 1837, the manual labor feature was later dropped and the institution became KNOX COLLEGE Gale served as trustee and taught literature and moral philosophy there until in 1857

Gale, Zona, 1874–1938, American novelist, b. Portage, Wis , grad Univ of Wisconsin, 1895 She worked on Milwaukee newspapers from 1899 to 1901 and then for three years on the New York *World* Her volume of stories *Friendship Village* (1908) first won her recognition and was followed by others which idealized small-town life--*Neighborhood Stories* (1914), *Peace in Friendship Village* (1919), and others The novels *Birth* (1918) and *Miss Lulu Bett* (1920) were ventures into realism, the latter sharply satiric Miss Gale's dramatization of *Miss Lulu Bett* won the Pulitzer Prize in 1921 Later novels include *Faint Perfume* (1923), *Borgia* (1929), and *Papa La Fleur* (1933) Miss Gale married William Llywelyn Breese in 1928 See biography by August Derleth, *Still Small Voice* (1940).

Galeed (gă'lēĭd), **Jegar-sahadutha** (jē'gär-sā"hudū'thu) [Heb ,=mound of testimony], or **Mizpah** (mĭz'pù) [Heb ,=watch tower], cairn, raised by Jacob and Laban to mark their covenant The so-called "Mizpah benediction" given here was a mutual warning, not a blessing Gen 31 44–55

Galen (gā'lun), c 130–c 200, physician and writer, b Pergamum, of Greek parents After study in Greece and Asia Minor and at Alexandria, he returned to Pergamum, where he served as physician to the gladiatorial school. He resided chiefly in Rome from c 162 Noted for his lectures and writings, he established a large practice and became court physician to Marcus Aurelius He is credited with writing some 500 treatises, most of them on medicine and philosophy, at least 83 of his medical works are extant He correlated earlier medical knowledge in all fields with his own discoveries (based in part on experimentation and on dissection of animals) and systematized medicine in accordance with his theories, which emphasized purposive creation Until the 16th cent his authority was virtually undisputed and this, by discouraging original investigation, hampered medical progress His work in anatomy and physiology is especially notable He demonstrated that arteries carry blood instead of air, and added greatly to knowledge of the brain, nerves, spinal cord, and pulse

Galena (gulē'nu) **1** City (pop 4,126), co seat of Jo Daviess co , extreme NW Ill , on the Galena river near the Mississippi, settled c 1820, laid out and given its present name 1826, inc 1835. The region, rich in lead and zinc deposits, was frequented by French miners as early as the first part of the 18th cent. From 1807, when the U.S government took the mines under its protection, until the 1860s, Galena was the prosperous center of the lead area of NW Illinois and SW Wisconsin and a bustling river port Its importance diminished with the decline of its mining enterprises and the diversion of its river traffic to the railroads. Today it is the trade and shipping point of a dairy-farm area, among its manufactures are dairy products, beer, gloves, and stoves. The home of Ulysses S. Grant here is now a state museum. The city, perched on the bluffs above the river, has many old and beautiful buildings and a museum of history and art

2 City (pop, 4,375), extreme SE Kansas, near the Mo. and Okla. lines, founded when lead was discovered here and inc. 1877. It is a lead- and zinc-mining town with smelters and mills

galena (gŭlē'nŭ) or **lead glance,** lustrous, blue-gray mineral crystallizing usually in cubes, sometimes in octahedrons It is the most important ore and the principal source of lead It consists chiefly of lead sulphide but frequently contains silver (it is mined for this metal in some localities) and sometimes also compounds of copper, cadmium, arsenic, bismuth, and zinc It is widely distributed throughout the world, occurring in veins and lumps and occasionally in bed deposits, in Missouri, Idaho, Iowa, Wisconsin, and Utah in the United States (leading producer of lead) and in Australia, Canada, England, France, and Mexico Galena crystals were once much used in radio "crystal" sets

Galerius (Caius Galerius Valerius Maximinianus) (gălēr'ēus), d 310, Roman emperor (305–10) Diocletian appointed him Caesar for the eastern part of the empire in 293 (Constantius I was Caesar of the West) He had to conduct hard campaigns in Pannonia and Asia Defeated by the Persians in 296, he retrieved his reputation by a resounding victory over them in 297 On the abdication of Diocletian and Maximian in 305, he and Constantius succeeded as emperors Galerius tried to increase his power, and after Constantius died in 306, he recognized Severus as coemperor in the West Severus and he attempted without success to put down the claims of MAXENTIUS After they were defeated and Severus was captured, Galerius had Diocletian approve the appointment of Licinius as emperor of the West Constantius' son Constantine (CONSTANTINE I) and Maximin Daia (see MAXIMIN) now both claimed power Galerius died before the confusion was cleared by the victory of Constantine Galerius had prompted the persecution of Christians under Diocletian but issued an edict of toleration shortly before his death

Galesburg. **1** City (pop 28,876), co seat of Knox co, W Ill, WNW of Peoria, in a farm, livestock, and coal area, founded 1836, inc 1841 A trade, rail, and manufacturing center, it is a division headquarters for the Burlington RR and has railroad shops, its manufactures include iron and steel products, bricks, and agricultural implements It is the seat of KNOX COLLEGE The town and the college were founded by a group of Presbyterians from the Mohawk valley, N Y, under George Washington GALE Galesburg is the birthplace of Carl Sandburg See E F Calkins, *They Broke the Prairie* (1937) **2** City (pop 1,040), SW Mich, between Kalamazoo and Battle Creek, in a farm region, settled 1829, inc as a village 1869, as a city 1931 W R Shafter was born here

Galesville, city (pop 1,147), W Wis, N of La Crosse, settled 1854, inc as a village 1887, as a city 1942 Dairy products are made

Galeton (gāl'tun), industrial borough (pop 1,820), N central Pa, E of Coudersport in the Alleghenies, inc 1896 A resort center, it has a glove factory

Galiani, Ferdinando (fārdēnän'dō gälyä'nē), 1728–87, Italian savant and economist, educated for the Church His *Della moneta* [on money] (1750), written as a very young man, was a classic analysis of value Sent to Paris in 1759 as secretary of the Neapolitan embassy, Abbé Galiani became famous as a wit He later wrote on the tariff and especially on trade in grain in his remarkable *Dialogues sur le commerce des blés* (1770) Galiani's easy style and the absence in his writings of the solemnity characteristic of most economists are deceptive, in fact, Galiani largely created the modern theory of value and the relativistic, historical approach to economics He opposed the dogmatism of mercantilism as well as that of physiocracy Galiani was an intimate of the circle of Holbach and Mme d'Épinay

Galich (gä'lĭch), Pol *Halicz* (hä'lĭch), city (pop 4,386), NW Ukraine, N of Stanislav, in the Carpathian foothills and on the Dniester river A historic city with medieval remains, it became (c 1134) the capital of the dukes of Przemysl and later of the duchy of Galich, which united (1188) with the duchy of Vladimir (see VLADIMIR-VOLHYNSKIY) In the 13th cent, Galich-Vladimir (which then included GALICIA and VOLHYNIA), extended as far east as Kiev Forced to accept Tatar rule (1245), Duke Daniel sought to secure aid from the West and united the church of Galich with that of Rome (1254), but except for an ephemeral title—king of Ruthenia—he obtained nothing By 1340 the duchy had disintegrated The wars between Lithuania and Poland over it ended (1366) with partition, the western section passed to Poland, the eastern section to Lithuania Galich itself soon became an insignificant town of Galicia

Galicia (gūlĭ'shu), Pol *Galicja*, former Austrian crownland, covering the slopes of the N Carpathians and plains to the north It is drained by the tributaries of the upper Dniester and by the southern tributaries of the upper Vistula Mainly agricultural and pastoral, it also has mineral resources, notably oil wells around DROGOBYCH and BORISLAV, exploited since the middle of the 19th cent Lvov (Lemberg) was the capital; other important cities are Cracow, Przemysl, Tarnow, Tarnopol, Kolomea, Stryy, Nowy Sacz, and Rzeszow Galicia took its origin in the duchy of GALICH, the region passed to Poland in the 14th cent With the first partition of Poland (1772) most of Galicia passed to Austria Until 1848 an abortive Polish insurrection in Galicia served as pretext for the annexation of CRACOW, an independent republic since 1815, by Austria. In 1848 Cracow and Lvov were centers of revolution against Austria, and in 1861 Galicia won limited autonomy, including representation in the Austrian parliament, where Galician deputies formed a powerful bloc Polish, spoken in the section of Galicia W of the San river, and Ukrainian, spoken E of the San, became official languages along with German However, the growing Ukrainian nationalist movement resulted in demands for increased political and cultural rights, or even for independence, in E Galicia The Polish independence movement also gained ground, but in the First World War the Polish legions, organized in Galicia by Marshal Pilsudski, fought under Austrian command until 1917 Galicia was a battleground throughout that war, in 1918 the Poles, having proclaimed national independence, wrested W Galicia from Austria and fought the troops of the newly established Ukrainian republic in E Galicia, forcing them to withdraw The Paris Peace Conference (1919) assigned E Galicia to Poland pending a plebiscite scheduled for 1944, however, in a treaty (1920) with the Ukrainians, upheld by the Polish-Soviet Treaty of Riga (1921), Poland obtained full title to E Galicia By the Polish-Soviet treaty of 1945, most of E Galicia was awarded to the Ukraine

Galicia (gulĭ'shu), region (10,984 sq mi, pop 2,495, 860), NW Spain, S of the Bay of Biscay, E of the Atlantic Ocean, and N of Portugal It comprises the provinces of La Coruña, Lugo, Orense, and Pontevedra It is mostly mountainous, with several swift rivers, of which the Miño is the most important Agriculture, cattle raising, and fishing are the chief sources of livelihood The mineral resources of the region, chiefly iron and tin, were known to the Romans, but are now little exploited In the 5th to 6th cent A D, Galicia was the center of the kingdom of the Germanic Suevi It was liberated (8th–9th cent) from the Moors by the king of Asturias In the Middle Ages the shrine of Santiago de Compostela was a center of culture, and it remains one of the great places of pilgrimage of Christendom The strong spirit of independence of the Galicians was shown in the Middle Ages by the frequent rebellions of the feudal lords against the royal authority and again in the 19th cent by the popular resistance to Napoleon I The Galician dialect is closely related to Portuguese A remarkable cultural and literary revival took place here in the 19th cent

Galigai, Leonora see CONCINI, CONCINO

Galilee (gă'lĭlē), region, N Palestine, roughly the portion north of the plain of Esdraelon It was one of the richest sections of the country Galilee was the chief scene of the ministry of Jesus Christ The lake, the countryside, and the towns—Cana, Capernaum, Tiberias, Nazareth—are repeatedly referred to in the Gospels Jesus himself was called the Galilean, and local fishermen became his disciples Joshua 20 7, 21 32, 1 Kings 9 11, 2 Kings 15 29, Isa 9 1, Mat 26 69–75, John 7 52

Galilee, Sea of, small fresh-water lake, NE Palestine, through which the Jordan flows In the Old Testament it is called the Sea of Chinnereth or Chinneroth, in the New Testament it is named variously from near-by geographical features—Galilee, Gennesaret, or Tiberias The modern Arabic name, Bahr Tabariyeh, continues the last of these In the time of Christ there were nine flourishing towns on its shores, of these the principal relic is a village on the site of Tiberias The lake is 680 ft below the level of the Mediterranean It is mentioned often in the Gospels, see also Joshua 12 3, 13 27, Num 34 11

Galilei, Vincenzo (vēnchĕn'tsō gälēlā'ō), d 1591, Italian lutanist, singer, writer, and composer, father of Galileo As a member of the Florentine *camerata* (see OPERA), he was one of the first to compose recitatives Thoroughly trained in the contrapuntal tradition of the Renaissance, he wrote the first literary attack on counterpoint, *Dialogo della musica antica e della moderna* (1581), he is thus a pioneer of the baroque era

Galileo (Galileo Galilei) (gă"lĭlē'ō, gälēlā'ō gälēlā'ē), 1564–1642, great Italian astronomer, mathematician, and physicist By his persistent investigation of natural laws he laid foundations for modern experimental science, and by the construction of astronomical telescopes he greatly enlarged man's vision and conception of the universe He gave a mathematical formulation to many physical laws His early studies, at the Univ of Pisa, were directed toward a medical career, but Galileo's inclination toward mathematics and physical science grew irresistible It is said that, at the age of 18, in the cathedral of Pisa, he timed the oscillations of a swinging lamp by means of his pulse beats and found the time for each swing the same, no matter what the amplitude of the oscillation, thus discovering the isochronism of the pendulum, which he verified by experiment Galileo soon became known through his invention of a hydrostatic balance and his treatise on the center of gravity of solid bodies While professor (1589–92) at the Univ of Pisa, he initiated his experiments concerning the laws of bodies in motion, which brought results so contradictory to the accepted teachings of Aristotle that strong antagonism was aroused He found that bodies of different weights fall with equal velocities and with a uniform acceleration He is said to have demonstrated this from the Leaning Tower of Pisa, but the story has been disputed He also found that the path of a projectile is a parabola, and he is credited with conclusions foreshadowing Newton's laws of motion In 1592 he began lecturing on mathematics at the Univ of Padua, where he remained for 18 years, attracting students from all over Europe There, in 1609, having heard reports of a simple magnifying instrument put together by a spectacle maker in Holland, he constructed the first complete astronomical telescope Improving it until the magnifying power brought an object more than 30 times nearer, he manufactured numbers of instruments to fill the European demand Exploring the heavens with his new aid, Galileo discovered that the moon, shining with reflected light, had an uneven, mountainous surface and that the Milky Way was made up of numberless stars On Jan 7, 1610, he discovered four satellites of Jupiter He observed and studied the phases of Venus and the spots on the sun, brought to view by the telescope His investigations confirmed his acceptance of the Copernican theory of the solar system, but he did not openly declare a doctrine so opposed to accepted beliefs until 1613, when he issued a work on sunspots Meanwhile, in 1610, he had gone to Florence as philosopher and mathematician to Cosimo II de' Medici, grand duke of Tuscany, and as mathematician (without residence or teaching requirements) at the Univ of Pisa In 1611 he visited Rome to display the telescope to the papal court In 1616 the system of Copernicus was denounced as dangerous to faith, and Galileo summoned to Rome, was warned not to uphold it or teach it But, after a period of quiet study near Florence, he published in 1632 his *Dialogo sopra i due massimi sistemi del mondo* [dialogue on the two chief systems of the world], which stated conclusions supporting the system of Copernicus Again summoned to Rome, he was tried (1633) by the Inquisition and brought to the point of making an abjuration of all beliefs and writings that hold the sun to be the central body and the earth a moving body revolving with the other planets about it Since 1761, accounts of the trial have concluded with the legendary statement that Galileo as he arose from his knees exclaimed *sotto voce*, "*E pur si muove*" [nevertheless it does move] An indefinite period of imprisonment was soon ended, and the scientist, after an enforced residence in Siena, was allowed to live in seclusion at Arcetri near Florence, where, in spite of infirmities and, at the last, blindness, he continued actively the pursuit of scientific truth until his death His last book, *Dialogues concerning Two New Sciences* (Eng tr, 3d ed, 1939) appeared in 1638 See biographies by J J Fahie (1903) and Emile Namer (Eng tr, 1931), Zsolt Harsanyi, *The Star-Gazer* (Eng tr, 1939), a fictional biography

Galion (gāl'yun), city (pop 8,685), N central Ohio, SW of Mansfield, in a farm area, settled 1831 by Pennsylvania Germans Automobile hoists, burial vaults, and road-making machinery are made here.

Galitzin or **Galitsin** see GALLITZIN

Gall (gôl), c 1840–1894, war chief of the Sioux Indians, b South Dakota He refused to accept the treaty of 1868 by which he would have been confined to a reservation, joined SITTING BULL and other dissident chiefs, and was a lieutenant of Sitting Bull in the great defeat of Custer on the Little Bighorn in 1876 He retreated to Canada but after a quarrel with Sitting Bull, returned and surrendered at Poplar, Mont He became a farmer on the reservation and with his friend, James McLaughlin, the Indian agent, did much to better relations between Indians and whites See James McLaughlin, *My Friend the Indian* (1910), C A Eastman, *Indian Heroes and Great Chieftains* (1915)

gall, in physiology see BILE

gall (gôl), abnormal growth of plant tissue resulting from a stimulus by an agent external to the plant, commonly a gall insect, a mite, a fungus, or mechanical irritation (e g the rubbing together of two branches) Of these agents the most common are the gall insects (e g, certain aphids, wasps, midges, beetles, thrips, and moths) and mites Various insects produce galls on buds, leaves, petioles, flower heads, stems, bark, and roots; usually the same type of gall is produced by a gall maker even on different hosts. Frequently they form when the larvae hatch out from insect eggs that have been laid in the plant tissue, it is believed that the larva produces an irritating substance that causes the abnormal growth The gall tissue sometimes provides food for the growing larvae Galls vary in size and shape. Rather commonly seen are small cone-shaped structures formed by certain

aphids on witch hazel The eggs are laid on twigs and branches in the fall and the stem mothers, which hatch in the spring, migrate to the lower surface of the leaves, as the nymphs feed, the upper surface of the leaf thickens The females produce their young within the hollow cones formed by the thickening As these galls become crowded some winged forms develop and fly to birch trees where another generation is produced, a later generation returns to the witch hazel Galls are often seen on goldenrod, a spherical stem gall is formed by a small fly Its eggs are laid on the stem, and the larvae bore into the stem causing a gall to form, by fall it is about as large as a hickory nut Galls have long been a source of tannin and of a good quality of permanent ink The Aleppo gall formed on several species of oak in Eastern Europe and W Asia has been used in making ink for official use by various governments The Aleppo gall and some other galls resembling nuts are sometimes called gallnuts or nutgalls Among the harmful gall formers are the Hessian fly, clover-leaf midge, chrysanthemum midge, and pear-leaf blister mite

Gallagher, William Davis, 1808–94, American poet and editor, b Philadelphia He grew up in Ohio, wrote for the Cincinnati *Gazette* for some 10 years and for other Western newspapers, and promoted Western literature as editor of several short-lived periodicals, among them the *Hesperian* (1838–39) His verse was often original in subject and notable for nature descriptions, though imitative in form It appeared chiefly in his *Erato* (3 vols , 1835–37) and in *Miami Woods* (1881) His short stories and essays are useful in any study of frontier literature of the period

Gallait, Louis (lwē′ galā′), 1810–87, Belgian painter, studied at Tournai Academy and at Antwerp He settled in Paris in 1834 His numerous historical works (upon which his fame chiefly rests) were exhibited at the Belgian salons and attracted wide attention He was finally induced to return to Brussels to head a school of historical painting His principal works are *Christ Healing the Blind* (cathedral, Tournai), *Montaigne Visiting Tasso in Prison*, painted for the Belgian king, *The Capture of Antioch by Godfrey of Bouillon* (Versailles), *Abdication of Charles V* and *The Plague at Tournai* (Brussels), *The Minstrel Boy* (Metropolitan Mus), four oil paintings and an aquarelle (Walters Art Gall , Baltimore)

Galland, Antoine (ätwan′ galā′), 1646–1715, French Orientalist He was the first to translate the Arabian *Thousand and One Nights* into any European language

Galla Placidia (gă′lu plusī′dēu), d 450, Roman empress of the West, daughter of Theodosius I Captured by ALARIC I in the course of his Italian campaign, she remained among the Visigoths as a hostage and in 414 married Alaric's successor ATAULF After the murder of Ataulf (415), she was ill-treated by Sigeric, but she was returned to her brother HONORIUS by Wallia (416) In 417 she married the general Constantius, who in 421, shortly before his death, was made coemperor as CONSTANTIUS III In 423 she quarreled with Honorius and took refuge at the court of Theodosius II, after the death of Honorius, she became regent for her son VALENTINIAN III, whom Theodosius placed on the throne after overthrowing the usurper John She exercised great influence over her son till her death, but left the government largely in the hands of AETIUS

Gallas, Matthias, Graf von (mätē′as graf fŭn gă′lăs), 1584–1647, Austrian general in the THIRTY YEARS WAR He served under TILLY in Germany until 1629, then entered Italy and, with Johann Aldringen, took Mantua (1630) As field marshal under WALLENSTEIN, he took the side of the emperor in the contest which ended in the death of the commander (1634) Gallas succeeded to a large part of Wallenstein's duchy of Friedland and to the actual command of the armies (nominally under the emperor's son) At Nordlingen (1634) he defeated the Swedes and BERNHARD OF SAXE-WEIMAR In 1637 Gallas was unsuccessful against Baner and, having yielded Pomerania to the Swedes and retired to Bohemia (1638), he lost his command He was restored (1643) but, after the failure of the north German campaign (1644), retired

Gallatin, Albert (gă′lutĭn), 1761–1849, American statesman and financier, b Geneva, Switzerland Left an orphan at nine, Gallatin was reared by his patrician relatives and was given an excellent education He came to the United States in 1780 and later settled (1784) in W Pennsylvania, where he established an estate "Friendship Hill" A member of the Pennsylvania constitutional convention in 1789, he also served in the state legislature from 1790 to 1792 Although elected U S Senator in 1793, he was deprived (1794) of his office by the Federalist-controlled Senate because of his short stay in the country and was also unfairly criticized by his political enemies for his efforts to restrain the Western farmers in the WHISKY REBELLION (1794). As a member of the U S Congress (1794–1801), Gallatin became a recognized leader of the Democratic Republican minority and was active in advocating financial reform and in opposing war with France. As Secretary of the Treasury under Thomas Jefferson, Gallatin, undertook to reshape the country's financial policy from Federalist to Jeffersonian principles and reduced the country's debt, despite the war against the Barbary States and despite the Louisiana Purchase He helped to curtail appropriations for the armed forces and opposed the WAR HAWKS because he believed that the Federal money should go to realizing the democratic vision of a broadly expanding internal economy His responsibility for U S unpreparedness in the War of 1812 is, however, highly debatable In the war he journeyed to Russia (1813) in an attempt to secure Russian mediation for ending the war When Great Britain showed willingness to negotiate directly, he was a key figure in negotiating the Treaty of Ghent He later served as minister to France (1815–23) and minister to Great Britain (1826–27) Gallatin was president of the National (later Gallatin) Bank in New York city He was an authority on banking and finance He was also greatly interested in the Indians, wrote papers on them, and in 1842 was responsible for founding the American Ethnological Society The contributions of this moderate and many-sided man to American democracy have perhaps not been fully recognized despite a notable biography (1879) by Henry Adams Gallatin's papers and writings have never been properly collated and edited The family he founded has contributed many distinguished men

Gallatin. 1 City (pop 1,642), co seat of Daviess co , NW Mo , on the Grand River and ENE of St Joseph, in a farm area, laid out 1837 Near by is the site of Adam-ondi-Ahman, a thriving Mormon settlement in the 1830s **2** Town (pop 4,829), co seat of Sumner co , N Tenn , NE of Nashville and near the Cumberland river, founded 1802 It is a tobacco, farm and livestock center Shoes are manufactured here A number of fine antebellum houses are in the area In the Civil War the town, with its Union garrison, was captured (Aug , 1862) by Gen John H Morgan

Gallatin, river, 120 mi long, NW Mont , rising in the mountains of the northwest corner of Yellowstone National Park It flows N between Madison and Gallatin ranges, then northwest to join the Madison and Jefferson rivers at the Three Forks of the Missouri

Gallaudet, Thomas Hopkins (gă″lôdĕt′), 1787–1851, American educator of the deaf, b Philadelphia, grad Andover Theological Seminary In England and France he studied methods of education in schools for the deaf and in Hartford, Conn , he founded (1817) the first such free school in America He was interested also in many other philanthropies See biography by E M Gallaudet (1888) His oldest son, **Thomas Gallaudet,** 1822–1902, was ordained (1851) as an Episcopal priest He devoted most of his time to missionary work among the deaf, founding St Ann's Church for Deaf-Mutes in New York city and the Gallaudet Home for aged deaf-mutes at Poughkeepsie, N Y **Edward Miner Gallaudet,** 1837–1917, youngest son of Thomas Hopkins Gallaudet, opened a school for deaf-mutes in Washington, D C , the upper branch of this became Gallaudet College One of the most progressive teachers in his field, he studied European methods and wrote many articles

gall bladder, pear-shaped sac lodged under the right lobe of the liver It acts as a storehouse for BILE Gall stones (concretions) may form in the gall bladder and in the bile ducts Inflammation of the gall bladder is a fairly common disorder especially in women over 40 Individuals who have had typhoid fever may become carriers of the disease as a result of the retention of typhoid bacilli in the gall bladder

Galle, Johann Gottfried (yō′hän gôt′frēt gă′lə), 1812–1910, German astronomer He is noted for his discovery of the planet Neptune, Sept 23, 1846, by following the guidance of calculations by LEVERRIER Galle was then a member of the staff of the Berlin Observatory and had discovered three comets In 1851 he became professor of astronomy at Breslau and director of the observatory there His particular field of research was meteorology

Galle (gāl), city (pop 49,038), on Ceylon, a port on the southwest coast, on the Indian Ocean Famous as a mart in ancient times, it rose to new importance under Portuguese rule (1507–1604), when it became the chief port of Ceylon With the construction (1885) of a modern harbor at Colombo, much shipping deserted Galle In the older part of the city Dutch ruins abound

Gallegos, Rómulo (rō′mōlō gäyā′gōs), 1884–, Venezuelan novelist and statesman He lived in Spain from 1931 until the death of the dictator Juan Vicente Gómez in 1935, when he returned to his country to engage in politics He became president in Feb , 1948, but was overthrown by a conservative military coup in November He is best known as the author of the powerful novel of the Venezuelan plains, *Doña Bárbara* (1929, Eng tr , 1931) The landscape is to a certain degree the protagonist of the novel, the cruel and sensual Doña Bárbara symbolizing barbarism, which is defeated in the end by civilizing influences Other important works are *Cantaclaro* (1931) and *Canaima* (1935).

Gallen-Kallela, Akseli Valdemar (äk′sālē väl′dämär gälən′-käl′älä), 1865–1931, Finnish painter; student of Bouguereau He was noted for his murals Most of his work is in Helsinki

galleon (gă′lēun), type of ocean-going sailing vessels used by the Spanish in the 15th and 16th cent They were large, cumbersome, three-masted, and square-rigged The bow and stern were both high, and the stern was square and ornamented with elaborate carvings Galleons were much used to transport treasure and goods from the Americas There were three or four decks The disadvantage of the galleon was its unwieldiness, which was shown most clearly in the defeat of the Spanish Armada (1588), in which the galleons were unable to cope with the smaller and swifter English vessels

galley, long, narrow vessels of ancient and medieval times, propelled mostly by oars but also fitted with sails They were used by the Greeks and Romans The earliest type of these vessels was sometimes 150 ft long with 50 oars The rowers were in ancient times slaves or prisoners of war and in modern times convicts, in both cases usually chained to the seats Galleys were decked at the bow and stern but were otherwise open Benches were placed along the sides for the rowers, the center of the vessel being used for cargo The ordinary number of banks of oars was three, these were the triremes Smaller and more manageable vessels (the biremes) had two banks Galleys grew very large, reputedly to as many as 40 banks of oars These were again abandoned for the smaller vessels by the 1st cent B C When the vessels were used for war, the sides were so arranged that they could be raised to afford protection for the rowers The Romans in war used hooks to fasten on to enemy vessels and carried bridges for boarding The French and Venetians used galleys in the Mediterranean until the 17th cent In modern usage the galley is the kitchen of a ship The name is also used for a light clinker-built boat

gallic acid, colorless, crystalline solid, an organic acid occurring free in nature, e g , in gallnuts, sumach, and tea, and obtained usually from the tannins (tannic acid) by hydrolysis with sulphuric acid It is soluble in hot water, but very slightly in cold When heated it decomposes at 220°C to pyrogallic acid (PYROGALLOL) and carbon dioxide Gallic acid is used sometimes in medicine as an astringent and disinfectant

Gallicanism (gă′lĭkənĭzm), theory that the French monarch had special rights in the Roman Catholic Church in France Although it is a chapter in the long struggle between the papacy and Catholic princes (see INVESTITURE, CHURCH AND STATE, PHILIP IV, BONIFACE VIII), Gallicanism had peculiar intellectual claims These were born at the Univ of Paris in the Great Schism (see SCHISM, GREAT) The teaching was that general councils supersede popes and that the French king had special rights of control over the Church in France So stated Charles VII in the Pragmatic Sanction of Bourges (1438), which legalized in France the anti-papal measures of the Council of Basel Francis I repealed the act (1518), at the time of the Concordat of 1516, a sweeping papal surrender of rights of appointment The concordat was revoked in 1561, and the struggle resumed In the quarrel between LOUIS XIV and INNOCENT XI, Louis had an assembly of bishops pass the "Four Gallican Articles of 1682," providing that kings are not subject to the pope, that general councils supersede the pope, that the pope must respect local custom, and that papal decrees do not bind unless accepted by the whole Church INNOCENT XII patched things up in 1693, Louis abandoned Gallican theory, but insisted on appointing bishops and giving permission for publication of papal decrees and for visits of papal legates Gallicanism was much encouraged by the Jansenists and remained fashionable at court The Civil Constitution of the Clergy adopted in the French Revolution had Gallican antecedents, and Napoleon made some Gallican additions to the Concordat of 1801 after its signature The theory of Gallicanism in the Roman Catholic Church is impossible since the enunciation of papal infallibility at the Vatican Council In estimating the practical effect of the theory of Gallicanism it is significant that the Spanish kings gained over the Church in their realms greater powers than the French without ever publicizing theoretical claims comparable to Gallicanism See C S Phillips, *The Church in France, 1848–1907* (1936)

Galli-Curci, Amelita (ämälē′tä gal′lē-kōr′chē), 1889–, Italian-American coloratura soprano, studied piano at the Royal Conservatory, Milan With Mascagni's encouragement, she turned to singing, in which she was her own teacher She made her debut in Rome in 1909 as Gilda in *Rigoletto*, after tours of Italy, Spain, and South America, her American debut (Chicago, 1916) was made in the same role She sang with the Chicago Opera Company until 1926 and with the Metropolitan, New York, from 1921 until 1930, when she left opera for the concert stage After a throat operation in 1936, she returned briefly to concert and opera and then retired. See biography by C. E. Le Massena (1945).

Gallic Wars (gă'lĭk), the campaigns in GAUL of Julius CAESAR in his two terms as proconsul of Cisalpine Gaul, Transalpine Gaul, and Illyricum (58 B C -51 B C) Caesar's first campaign was to prevent the Helvetii (who lived N of the Lake of Geneva) from crossing the Roman province (Provence) on their way to a new home in SW Gaul They had started from the Alps northwestward, Caesar in pursuit, but he cut them in two as they crossed the Saône, and pursued the van to BIBRACTE, where he defeated them Now the Aedui asked Caesar's help against the German ARIOVISTUS, whom Caesar routed In 57 B C Caesar pacified Belgica (between the Seine and the Rhine) In the winter of the same year an anti-Roman confederacy was formed, and in 56 B C, Caesar attacked the ringleaders of it, the Veneti, who had a fleet in what is now the Gulf of Morbihan, Brittany He defeated them by building boats of his own In 55 B C, Caesar went to the Low Countries to repel some Germans and, as a punitive measure, crossed the Rhine on a bridge he built near Cologne Then he went to Britain on a brief exploring expedition In 54 B C he invaded Britain seriously and took hostages The following winter the legions were separately quartered, because of the scarcity of food, and some Belgian tribes led by AMBIORIX raised a revolt One legion was cut to pieces and another, under Q CICERO, was in dire straits when Caesar arrived and routed the rebels In 53 B C, Caesar put down another Belgian revolt and entered Germany again But the real test came when, in the dead of winter, Caesar, in Italy, learned that all central, E, and N Gaul had raised a revolt, organized by VERCINGETORIX With incredible speed and brilliant tactics Caesar crossed the Alps and stifled the Gauls After 51 B C, when Caesar moved around the country putting down the last signs of disorder, Gaul did not revolt Caesar's Gallic Wars were the theater in which he displayed his abilities, and his organization of the new territory was the seed of modern France When Caesar became proconsul he received, beyond the Alps, a wide strip along the Mediterranean, when he gave up his command, it included everything from the Rhine to the Pyrenees, from the Alps to the Atlantic The prime source is, of course, Caesar's own commentaries, *De bello Gallico*

Galli da Bibiena see BIBIENA, GALLI DA

Galliéni, Joseph Simon (zhôzĕf' sēmō' gälyānē'), 1849–1916, French general and colonial administrator He did good service in Senegal, Tonkin, and Madagascar Military governor of Paris after the outbreak of the First World War, he was a major figure in the French victory of the Marne (Sept, 1914) Although the credit for the victory was and is disputed, it seems fairly clear that it was Galliéni who first saw the significance of the German move and urged JOFFRE into action The movement of the troops from Paris to the battle front in commandeered taxicabs was one of the most spectacular incidents of the war Galliéni later became minister of war under Briand (1915) Trouble, which Galliéni attempted to prevent, arose with Joffre When the cabinet refused to support Galliéni in a proposed reorganization of the command, he resigned on a plea of ill-health (1916) He died after an operation and was made a marshal posthumously (1921) Galliéni wrote several books on his colonial career and colonial affairs.

Gallienus (Publius Licinius Valerianus Egnatius) (gă"lĭē'nŭs), d 268, Roman emperor, as the colleague (253–60) of his father, VALERIAN, and alone (260–68) He had checked the Alemanni near Milan, when his father was in the East, and even after the capture of Valerian he was successful, but later the provinces had become too rebellious for the control of the mediocre Gallienus The dissolution of the empire first became inevitable in his reign, one of the most ineffective of the 3d cent Postumus established his independence in Gaul, and in the east ODENATHUS, spreading the conquests of Palmyra, was recognized A force sent by Gallienus against ZENOBIA was defeated. Gallienus was murdered by his men at Milan, where he was resisting a revolt, eventually suppressed by CLAUDIUS II

Galliffet, Gaston Alexandre Auguste, marquis de (gästô' älĕksă'dru ôgust' markē' dŭ gälēfă'), 1830–1909, French general He fought in the Crimean War, in colonial conquests, in the Mexican expedition, and in the Franco-Prussian War His cruel suppression of the COMMUNE OF PARIS (1871) won him a reputation as a strong man, together with the undying hatred of revolutionists and Socialists He later reorganized the French cavalry In the crucial time of the Dreyfus Affair he became minister of war (1899–1900), restoring peace and order in the army

Gallim (gă'lĭm), unidentified place, Palestine 1 Sam 25 44, Isa 10 30

Gallinas (gälyē'nas), cape on La Goajira peninsula, NE Colombia It is the northernmost point of South America

Gallio (Junius Annaeus Gallio), (gă'lēō), d A.D 65?, Roman administrator, brother of the philosopher Seneca. His name was originally Lucius Annaeus Novatus. Gallio was proconsul for Claudius in Achaea He was of an easygoing temperament When the Jews haled Paul before him he refused judgment on a question of Jewish religious law and later would not interfere between Sosthenes and his Greek assailants Acts 18 12–17

Gallipoli (gŭlĭ'pulē), Turkish *Gelibolu* (gulē'bōlōō), city (pop 16,496), European Turkey, a port at the eastern end of the DARDANELLES, near the neck of the GALLIPOLI PENINSULA Occupied by the Ottoman Turks in 1354, it has always been a strategic point in the defense of Constantinople

Gallipoli campaign, 1915, Allied expedition in the First World War, for the purpose of gaining control of the DARDANELLES, capturing Constantinople, and establishing contact with Russia through the Black Sea The idea of forcing the Straits was originally promoted by Winston S Churchill, until 1915 first lord of the admiralty After the failure (March, 1915) of a British naval expedition to the Straits, the Allies decided in favor of a land campaign On April 24 English, Australian, and New Zealand troops debarked at various points of the Gallipoli Peninsula, while a French force landed on the Asiatic side Meanwhile the Turks, commanded by LIMAN VON SANDERS, had had time to reinforce their defenses Putting up stubborn resistance, they prevented the Allies from joining and from making any important gains (Among the Turkish officers, Mustafa Kemal, later known as Kemal Ataturk, distinguished himself in the fighting) Cooperation was poor among the Allies and between the land forces and the British naval squadron stationed at Moudros, on the island of Lemnos A second landing (Aug, 1915) at Suvla, on the west coast of the peninsula, was equally futile After months of costly fighting, the Allied commander, Sir Ian Hamilton, was replaced (Oct, 1915) by Sir Charles Munro, who planned the Allied evacuation, successfully completed on Jan 9, 1916

Gallipoli Peninsula, Latin *Chersonesus Thracica*, peninsula, c 60 mi long, European Turkey, extending southwestward between the Aegean Sea and the DARDANELLES The port of Gallipoli gives it its name It was the scene of the Gallipoli campaign (see separate article) of 1915 and was (1920–36) part of the demilitarized Zone of the Straits

Gallipolis (gă"lĭpulēs'), city (pop 7,832), co seat of Gallia co, SE Ohio, on the Ohio river, settled 1790 by French immigrants, inc as a city 1865 Near by is the state hospital for epileptics (1890), oldest in the country A roller-gate dam was completed (1938) on the Ohio near by

Gallitzin (gulĭt'sĭn), Rus *Golytsyn* (gŭlyē'tsĭn), Russian princely family Among many alternate spellings are Galitzin, Galytzin, and Galitsin **Vasily Vasilyevich Gallitzin** (vŭsē'lyĕ vŭsē'lyuvĭch), d 1619, helped to enthrone the first false DIMITRI, but later joined the Shuiski conspiracy against him When sent to offer the Russian crown to Prince Ladislaus of Poland, he was thrown into prison and died there **Vasily Vasilyevich Gallitzin**, 1643–1714, was the lover and chief counselor of the regent SOPHIA ALEKSEYEVNA After Sophia's downfall (1689) he was exiled to Siberia by Peter I **Boris Alekseyevich Gallitzin** (bŭrēs' ŭlyĭksyā'lvĭch), 1654–1714, was the tutor of Peter I and helped to depose Sophia Alekseyevna He was regent in Russia during Peter's first foreign tour **Dmitri Mikhailovich Gallitzin** (dumē'trē mēkhī'luvĭch), 1665–1737, held important administrative posts, was ambassador to Turkey and Poland, and fought with distinction against Sweden in the Northern War After the death (1730) of Peter II, he led the group which forced Empress ANNA to sign articles limiting her power After Anna began to rule absolutely, she had Gallitzin sentenced to death but later commuted his sentence to exile **Mikhail Mikhailovich Gallitzin** (mēkhĭyē'l'), 1675–1730, commanded the Russian operations in Finland (1714–21) during the Northern War and was responsible for the Treaty of Nystad As governor of Finland he was extremely popular with the Finns **Aleksandr Mikhailovich Gallitzin** (ŭlyksän'dur), 1718–83, Russian field marshal, distinguished himself in the Seven Years War and in the Russo-Turkish Wars **Dmitri Alekseyevich Gallitzin**, 1735–1803, was Russian ambassador at Paris (1765–73) and later at The Hague He was a friend of Diderot and Voltaire He was the father of Demetrius Augustine Gallitzin (see separate article) **Aleksandr Nikolayevich Gallitzin** (nyĭkŭl'ûvĭch), 1773?–1844, a statesman of liberal tendencies, was an influential counselor of Alexander I He was procurator of the holy synod and minister of education, but lost his influence after the accession of Nicholas I **Nikolai Borisovich Gallitzin** (nyĭkŭl' bŭrē'suvĭch), 1794–1866, was an amateur musician and a patron of Beethoven, who dedicated quartets (Opus 127, Opus 130, and Opus 132) and his overture *Consecration of the House* to him **Nikolai Dmitreyevich Gallitzin** (dumē'trĕûvĭch), 1856–1925, was appointed prime minister in 1916 He was unable to stem the revolution of Feb, 1917.

Gallitzin, Demetrius Augustine, 1770–1840, American frontier missionary, son of Dmitri Alekseyevich Gallitzin. The young prince followed his mother into the Roman Catholic Church and determined to devote himself to church work in America He was trained in the seminary at Baltimore, was ordained a priest in 1795, and began itinerant missionary work among the frontiersmen and Indians of SW Pennsylvania, where he was known as Father Smith. At much expense to himself he founded (1799) the Catholic colony of Loretto near Gallitzin (which is named for him) There he lived, refusing to return to claim his patrimony in Russia and refusing ecclesiastical preferment There he died and is buried

Gallitzin (gulĭt'sĭn), borough (pop 3,618), SW Pa, in the Alleghenies W of Altoona, settled c 1796 It was named for the missionary Prince Demetrius Gallitzin

gallium (gă'lēum), metallic element (symbol=Ga, for physical constants, see ELEMENT, table), silver gray and relatively soft, being of the same hardness as lead It is not ordinarily affected by air but when red-hot is oxidized slightly It dissolves in both hydrochloric and nitric acids and at high temperatures reacts with water Although widely distributed, the element does not occur in appreciable quantities It is found with zinc ores, especially zinc blende, from which it is separated Because it is liquid over a wide range of temperatures, it finds limited use in place of mercury in thermometers for high temperatures The element was discovered spectroscopically in 1875 by P E L de Boisbaudran, its properties were predicted with striking accuracy by MENDELEJEFF, who classified it with aluminum (which it resembles) in the periodic system Its spectrum exhibits two violet lines

Gallivare, Sweden see NORRBOTTEN

Galloway, Beverly Thomas, 1863–1938, American botanist, b Millersburg, Mo He served with the U S Dept of Agriculture in various capacities, being chief of the Bureau of Plant Industry (1901–12), pathologist of the division of vegetable pathology and physiology (1888–1900) and of the division of plant exploration and introduction (1916–33), and assistant secretary of the Dept of Agriculture (1913–14)

Galloway, Charles Betts, 1849–1909, American Methodist bishop, b Kosciusko, Miss, grad Univ of Mississippi, 1868 He was influential in his state and in other parts of the South as a promoter of education and better race relations He was a powerful and popular speaker and showed courage in his liberal attitude toward the Negro Galloway became a bishop in 1886 See biography by W A Candler (1927)

Galloway, Joseph, c 1731–1803, American Loyalist leader, b West River (near Annapolis), Md Galloway was a prominent lawyer with an interest in commerce and in speculation in Western lands He entered the Pennsylvania assembly in 1756 and soon joined Benjamin Franklin in petitioning the king to abolish the proprietary government of the Penns Galloway understood both sides of the growing conflict between the colonies and the British government, and he believed it could be settled by legal means, especially by a written constitution for the empire He presented a plan for a constitution and for conciliation to the First Continental Congress and refused to serve again when it was rejected He tried to remain neutral in the American Revolution but was forced by the hostility of the patriots to seek safety by joining Sir William Howe after the British occupied Philadelphia He acted as civil administrator of the city Later (1778) Galloway went to England and became the spokesman of American Loyalists living there See J P Boyd, *Anglo-American Union* (1941)

Galloway, district of SW Scotland, comprising Wigtownshire and Kirkcudbrightshire The Rhinns, or Rinns, of Galloway is a rocky peninsula of Wigtownshire, its southern extremity is called the Mull of Galloway The black, hornless Galloway cattle have long been bred in this region Dairying is the principal industry Galloway is not an official or political division The chief towns are Castle Douglas, Stranraer, and Portpatrick See G Scott-Moncrieff, *The Lowlands of Scotland* (1939)

gallstone see CALCULUS, in medicine

Gallup, George Horace, 1901–, American public-opinion statistician, originator of the Gallup poll to measure public opinion (1935), b Jefferson, Iowa, grad State Univ of Iowa (B A, 1923, Ph D, 1928) After teaching journalism at Drake Univ (1928–31) and at Northwestern Univ (1931–32), he founded the American Institute of Public Opinion (1935) and the Audience Research Institute (1939), both of Princeton, N J *A Guide to Public Opinion Polls* appeared in 1944 While the Gallup poll had erred only 7 percent or less in previous presidential elections, it, like other public-opinion polls, prophesied the election of Dewey rather than of Truman in 1948 See N C Meier and H W Saunders, eds, *Polls and Public Opinion* (1949)

Gallup, town (pop 7,041, alt 6,503 ft), co. seat of McKinley co, NW N Mex, on the Puerco river and near the Ariz line, founded c 1879, inc 1891 It is a rail and trade center in an important coal-mining area and is a shipping point for wool and livestock In the heart of the Indian country, it is

a trade and distribution center for the near-by reservations and pueblos and the scene of an intertribal Indian ceremonial, held in August

Gallus (Caius Vibius Trebonianus Gallus) (gā'lŭs), d 253 or 254, Roman emperor after 251. He fought in the eastern campaign that proved fatal to DECIUS Gallus became emperor and made Hostilianus, Decius' son, his colleague He signed a treaty with the barbarians, agreeing to pay tribute. In 252 or 253 a new invasion was repelled in the Danube valley by the general Aemilianus, whose troops proclaimed him emperor Gallus sent VALERIAN to put down the sedition Aemilianus entered Italy, and the army murdered Gallus Aemilianus succeeded, and Valerian followed soon afterward

Galois, Évariste (āvärĕst' gulwa'), 1811–32, French mathematician At the age of 17 he had evolved original concepts on the theory of algebra He made important contributions to the theory of equations, the theory of numbers, and the theory of functions and was a pioneer in establishing the theory of groups in algebraic substitutions Galois was twice imprisoned for his republican sympathies He was killed in a duel with a political opponent See Leopold Infeld, *Whom the Gods Love* (1947)

Galswintha (gălswĭn'thŭ), d 567, Frankish queen, sister of BRUNHILDA. She was the wife of CHILPERIC I of Neustria, by whom she was murdered

Galsworthy, John (gôlz'wûrdhē, gălz'–), 1867–1933, English novelist and dramatist After studying at Oxford and being admitted to the bar he traveled extensively His plays, often concerned with social problems, began with *The Silver Box* (1906), *Joy* (1907), *Strife* (1909), and *Justice* (1910), others which followed include *The Fugitive* (1913), *The Mob* (1914), *The Skin Game* (1920), *Loyalties* (1922), and *The Roof* (1929) His novels, written over a period of 27 years, disclose the limited social consciousness and predictable point of view of upper-middle-class families in the late Victorian and Edwardian eras Most of the novels dealing with the Forsyte family are grouped in three trilogies *A Man of Property* (1906), *Indian Summer of a Forsyte* (1918, a short interlude), *In Chancery* (1920) *Awakening* (1920, another interlude), and *To Let* (1921) were republished as *The Forsyte Saga* (1922) The second trilogy, made up of *The White Monkey* (1924), *A Silent Wooing* (1928, interlude), *The Silver Spoon* (1926), *Passers By* (1928, interlude), and *Swan Song* (1928), was republished as *A Modern Comedy* (1928) The third group, *Maid in Waiting* (1931), *Flowering Wilderness* (1932), and *One More River* (1933), was collected as *End of the Chapter* (1935) Other stories concerning the Forsytes are *Four Forsyte Stories* (1929), *On Forsyte 'Change* (1930), and *Forsytes, Pendyces, and Others* (with a foreword by his wife, 1935). Among his other books are the novels *Island Pharisees* (1908), *Fraternity* (1909), *The Patrician* (1911), *The Dark Flower* (1911), and the volume of short stories, *Caravan* (1925) In 1932 he received the Nobel Prize in Literature His poems were collected in 1934 His letters to Edward Garnett, from 1900 to 1932, were published in 1934, many more are in the *Life and Letters* (1935) edited by H. V. Marrot See studies by Leon Schalit (1929) and Herman Ould (1934), *Memories of John Galsworthy* by his sister, M E Reynolds (1937)

Galt, Sir Alexander Tilloch (tĭ'lŭk gôlt'), 1817–93, Canadian statesman, b England; son of John Galt In 1835 he went to Canada in the service of the British American Land Company He directed (1844–55) the affairs of this company and was interested in other business enterprises, particularly in the promotion of railroads (notably the Grand Trunk, of which he was a director) He was a member of the Canadian legislative assembly (1853–67) and of the Canadian House of Commons (1867–72) Although in 1849 Galt had signed the manifesto favoring the annexation of Canada by the United States, he became one of the most persistent and influential leaders of the movement for confederation of the Canadian provinces, and when he accepted (1858) the portfolio of minister of finance in the Cartier-Macdonald administration, it was on the understanding that the government would work to achieve confederation. In 1859, in answer to England's protests against the protective tariff newly adopted by Canada, Galt penned a noted statement in which he declared that Canada must be allowed control of its financial policies While serving as minister of finance (1858–62, 1864–66) he was an influential member of the two conferences (1864) on confederation and of the London Conference which resulted in the British North America Act. He became (1867) minister of finance in the first dominion government, but he resigned in 1868 because of disagreement with Prime Minister John Alexander Macdonald and in 1872 retired from Parliament He was the dominant member of the Halifax Fisheries Commission, appointed under the Treaty of Washington, which won for Canada a large award from the United States From 1880 to 1883 he served (on appointment by Macdonald) as Canadian high commissioner in London, the first to hold that position In the last 10 years of his life he was interested in various business enterprises in W Canada, among which was the development of coal deposits in Alberta, in this connection he founded LETHBRIDGE See biography by O. D Skelton (1920).

Galt, John (gôlt), 1779–1839, Scottish novelist and founder of the CANADA COMPANY (1826). While traveling in the Mediterranean as a young man, he formed a literary friendship with Lord Byron In 1826 he went to Canada for the Canada Company, founding there in 1827 the town of Guelph and encouraging Canadian immigration He returned to England in 1829 and devoted the rest of his life to literature His best-known works are *The Ayrshire Legatees* (1820) and *Annals of the Parish* (1821), novels in Scottish dialect of Scottish country life, and *Laurie Todd* (1830), a novel of an American immigrant His other writings include *Life of Lord Byron* (1830), an autobiography (1833), and *Literary Life and Miscellanies* (1834) See biography by J W Aberdein (1936), critical study by F H Lyell (1942)

Galt, industrial city (pop 15,346), S Ont., on the Grand River and WNW of Hamilton It was founded in 1816

Galton, Sir Francis (gôl'tun), 1822–1911, English scientist, founder of eugenics, cousin of Charles Darwin He turned from his early work in meteorology (recorded in *Meteorographica*, 1863) to the study of heredity and EUGENICS (a term which he coined) His works include *Hereditary Genius* (1869), *English Men of Science* (1874), *Inquiries into Human Faculty* (1883), *Natural Inheritance* (1889), and *Eugenics* (1905) His will provided for a chair of eugenics at the Univ of London. He was knighted in 1909 See his *Memories of My Life* (1908), study by Karl Pearson (1914–30)

Galuppi, Baldassare (bäldäs-sā'rā galōōp'pē), 1706–85, Italian composer He was choirmaster at St Mark's in Venice from 1762 to 1765 His compositions include oratorios, chamber music, and over 100 operas He is immortalized in Robert Browning's poem "A Toccata of Galuppi's."

Galva, city (pop 2,812), NW Ill., SE of Rock Island, in a coal and farm area, founded 1854, inc 1867 Its manufactures include farm implements and hardware Lake Calhoun lies to the south Near by is BISHOP HILL.

Galvani, Luigi (lwē'jē galvä'nē), 1737–98, Italian physician He was professor of anatomy from 1762 at the Univ of Bologna and was noted as a surgeon and for research in comparative anatomy During experiments on muscle and nerve preparations of frogs, he noticed the contraction of a frog's leg touched with charged metal He devised an arc of two metals with which contractions could be induced and in 1791 published his results, attributing the source of electricity to the animal tissue The explanation was disputed by Volta, who claimed that the electricity originated in the metallic arc. The controversy focused attention on electricity in animals and stimulated research in electrotherapy and on electric currents Many terms in electricity are derived from Galvani's name

galvanizing, term commonly applied to the operation of coating a metal, usually iron or steel, with a protective covering of zinc Galvanized iron is prepared either by dipping iron, from which rust has been removed by the action of sulphuric acid, into molten zinc so that a thin layer of the zinc remains on the surface of the iron upon removal or by a method of electroplating Iron is also coated with zinc by a method in which it is first covered with zinc dust and then baked an alloy is formed at the surface, the resulting product being known as sherardized iron Sheets of pure iron, copper iron, and various steels, as well as wire and netting, are commonly galvanized, since the zinc coating resists oxidation and the action of moisture very successfully Furthermore, when the coating is broken or pierced some protection is still afforded, since the zinc reacts with the corroding agent first

galvanometer (gălvənŏ'mutur), instrument used to determine the presence of a current in a conductor, the direction of flow, and the strength of the current All galvanometers are based upon Hans C Oersted's discovery that a magnetic needle is deflected by the passage of an electric current along a conductor. When an electric current is flowing in a conductor, the magnetic needle tends to turn at right angles to the conductor so that its north-south direction is parallel to the lines of force around the conductor and its north pole points in the direction in which these lines of force flow. In general, the extent to which the needle turns is dependent upon the strength of the current. In the first galvanometers, a magnetic needle free to turn was hung in a coil of wire. Later, as in the modern galvanometers, the magnet was fixed and the coil made movable Modern galvanometers are of this movable-coil type and are called d'Arsonval galvanometers (after Arsène d'Arsonval) The ammeter is a form of galvanometer with a scale which indicates the number of amperes It consists of a moving coil (to which a pointer is attached) suspended between the poles of a fixed permanent magnet and has a shunt arrangement which allows only a proportional part of the current to pass through the coil. The voltmeter is a moving-coil galvanometer which has a high-resistance coil and which indicates the number of volts of the current Because of the high-resistance coil, the greater the electromotive force of the current, the greater the deflection of the needle

Galveston (găl'vustun) [for Bernardo de Gálvez], city (pop 60,862), co seat of Galveston co., on Galveston Island, S Texas The island lies across the entrance to Galveston Bay, an inlet of the Gulf of Mexico The Spanish knew the bay and the island early, it was probably here that Cabeza de Vaca was shipwrecked in 1528 The bay was explored in the late 18th cent., and later the island was outlaw country occupied sporadically by adventurers, revolutionists, and buccaneers of the early 19th cent., notably the crews and hangers-on of Jean LAFFITE Settlement began in the 1830s, and the good natural port came gradually into its own despite scourges of yellow fever, hurricanes, and occupation for a few months (1862) by a small Union force in the Civil War In 1900 hurricane winds struck Galveston, driving water across the low sandy island, killing thousands, and leaving the city in ruins Rebuilding led to the inauguration (1901) of municipal commission government in the United States and to the building of a protective sea wall (ultimately more than 7 mi long, 17 ft high) Two long causeways connect the city with the mainland, and railroads and trucks bring cotton, sulphur, rice, flour, and other products to Galveston to be stored, processed, and shipped over the world Despite the ship channel to larger Houston, Galveston remains a key port of entry It is also the home of large fishing and shrimping fleets. It is, too, a beach resort, with its attractions enhanced by pink and white oleanders, rich bougainvillea, and other subtropical blooms Fort Travis (est. 1898) and Fort Crockett (est 1897–99) were active in the Second World War. At Galveston is the Univ of Texas medical school and a group of hospitals

Gálvez, Bernardo de (bĕrnär'dhō dā gäl'vāth) c 1746–1786, governor of Louisiana, b Málaga prov., Spain. He served in the Spanish army in Portugal, New Spain, and Algiers before coming to Louisiana in 1776 as the young commandant of the troops stationed there. The favorite protégé of his powerful uncle, José de Gálvez, he assumed the governorship on Jan 1, 1777 His enlightened rule and marriage to a Creole beauty made him very popular In the American Revolution, Gálvez first played the role of benevolent neutral to the patriots American frontiersmen were supplied with arms and supplies through the agency which he permitted Oliver Pollock to establish at New Orleans After Spain declared war on England in 1779, he became a most active ally, capturing Baton Rouge and Natchez (1779), Mobile (1780), and Pensacola (1781) His taking of Pensacola was a particularly gallant exploit These victories were largely responsible for the British cession of both East and West Florida to Spain in the peace settlement of 1783 In Spain (1783–84), he was richly rewarded for his services, being made count of Gálvez, lieutenant general of the royal armies, and captain general of Louisiana and the Floridas He became, in addition, captain general of Cuba (1784) and, in 1785, succeeding his father, Matías de GÁLVEZ, viceroy of New Spain See J W Caughey, *Bernardo de Gálvez in Louisiana, 1776–1783* (1934).

Gálvez, José de (hōsā' dā gäl'vĕth), 1720–87, Spanish colonial administrator, visitor general to New Spain (1765–72) After a thorough inspection of the viceroyalty, he engineered the dismissal of the viceroy (1766). Under the successor in office, the marqués de CROIX, Gálvez held actual power War against the northern Indians opened the way for expansion of the realm, and the development of defenses made it more secure against foreign enemies After his return to Spain (1772), Gálvez became the leading spirit of the Council of the Indies, minister general of the Indies (1775), and councilor of state. He was responsible for two ordinances that profoundly affected the colonial policy of Spain—that of 1778, which established restricted free trade to replace the narrow mercantile policy of earlier days, and that of 1786, which made sweeping changes in colonial administration and set up a system of intendancies modeled on the French. He was rewarded for his services with the title marqués de la Sonora. His influence advanced the fortunes of his brother, Matías de Gálvez, and of his nephew, Bernardo de Gálvez. See H. I Priestley, *José de Gálvez* (1916)

Gálvez, Matías de (mätē'äs), 1717–84, Spanish colonial administrator, captain general of Guatemala (1779), viceroy of New Spain (1783–84), brother of José de Gálvez. He was succeeded as viceroy by his son, Bernardo de Gálvez

Galway (gôl'wā), maritime county (2,293 sq. mi.; pop. 165,201), W Ireland, in Connaught. The county town is Galway, a port, formerly of great importance, on Galway Bay The county is divided into two sections by Lough Corrib CONNEMARA, a picturesque mountainous district (Benbaun rises to 2,395 ft.), lies to the west. To the

east stretches a rolling plain, partially covered with bogs The principal rivers are the Shannon and its tributary, the Suck. The shore line is extremely irregular, and there are numerous islands, the chief of which are the Aran Islands, lying off the mouth of Galway Bay. The chief industries are agriculture (wheat, oats, and potatoes) and fishing (salmon) There are numerous round towers, dating from Celtic times, and other vestiges of ancient habitation After the Anglo-Norman invasion of Ireland the region came under the control of the De Burghs or Burkes

Galway (gôl'wā), urban district (pop 20,437), county town of Co Galway, Ireland, on the north side of Galway Bay near the mouth of the Corrib In 1124 it was a fort of the men of Connaught Fragments of the walls built in the 13th cent remain The town was taken by Ludlow in 1652 and by General van Ginkel, after the battle of Aughrim, in 1691. The Church of St Nicholas dates from 1320 and a Franciscan friary from 1296 The Lynch Stone in Market St commemorates the execution by the lord mayor, James Lynch Fitzstephen, of his own son for murder Claddagh is a quarter of the town inhabited by fishermen Galway has a good harbor and exports agricultural produce, salmon, herring, marble, and woolen goods Noteworthy is the building of University College, constituent of the National Univ of Ireland

Galway Bay, inlet of the Atlantic, 30 mi long and 23 mi wide, at its entrance on the west coast of Ireland, in Counties Galway and Clare The Aran Islands protect its entrance, and there are many other islands in the bay

Galytsin or **Galytzin:** see GALLITZIN

Gama, Vasco da (vä'skō du gä'mu, Port vash'kō dä gä'mû), c 1460–1524, Portuguese navigator, the first European to journey by sea to India His epochal voyage (1497-99) was made at the order of MANUEL I With four vessels, he rounded the Cape of Good Hope, passed the easternmost point reached by Bartholomew DIAZ in 1488, continued up the east coast of Africa to Malindi and sailed across the Indian Ocean to Calicut This voyage opened up a way for Europe to reach the wealth of the Indies It was perhaps the most significant event of Portuguese history, for out of it grew the Portuguese Empire Immediately Portugal gained great riches Gama dictated the instructions for Cabral's voyage to India (1500-1502), and in 1502 he himself led a fleet of 20 ships on his second India voyage With this force he attempted to establish Portuguese power in Indian waters and sought to secure the submission of a number of chiefs on the African coast He was harsh in his methods and was not so good an administrator as many of the Portuguese captains who later went to the East, but he was the first, and he was fittingly honored with many tributes and the title of count of Vidigueira In 1524 he was sent back to India as viceroy, but he died soon after his arrival Gama's voyage is the subject of Camoens's epic *The Lusiads* See *A Journal of the First Voyage of Vasco da Gama* (1898), the journal of one of Gama's subordinates, G Corrêa, *The Three Voyages of Vasco da Gama and His Viceroyalty* (1869), K G Jayne, *Vasco da Gama and His Successors* (1910), Edgar Prestage, *The Portuguese Pioneers* (1933)

Gamaliel (gumā'lēûl) [Heb ,=recompense of God] **1** Manassite chief Num 1 10 **2** Teacher of the Law, at whose feet Paul had learned He recommended leniency toward Christians Acts 5 34, 22 3. From nonbiblical sources it is known that he was a doctor of the law of the school of Hillel

Gamaliel of Jabneh, fl A D 100, Hebrew scholar, grandson of the Gamaliel who taught Paul the Law He was recognized even by the Romans as a leader of his people He strengthened the morale of the Jews and made two important innovations in Jewish ritual, adding the 18 benedictions to the daily prayers and substituting for the paschal sacrifice the simple service still used His purpose was to retain the spirit of Judaism after the destruction of Jerusalem

Gambarelli, surname of two Florentine painters see ROSSELLINO

Gambetta, Léon (lāôⁿ gäbĕtä'), 1838–82, French statesman and orator A lawyer, he achieved some note as an opponent of the Second Empire He was elected deputy and joined the parliamentary opposition (1869–70) After the FRANCO-PRUSSIAN WAR had precipitated the downfall of the empire, he became prominent in the provisional government and urged his compatriots to defend themselves against the onward sweep of the victorious Germans His spectacular escape from Paris in a balloon, his organization of a government of national defense, and his gallant opposition to the Prussian forces won popular sympathy over the world He bitterly opposed the Treaty of Frankfurt and bent every effort toward creating the Third Republic A moderate, he opposed the monarchists and the radicals and, especially after THIERS was gone, took up an opportunist course in opposing the conservatives and President MACMAHON. He shaped the constitution of the Third Republic. After 1879 he was a power behind the ministries as president of the chamber. He became prime minister (1881–82) at the head of a highly unpopular and short-lived ministry He was a firm anticlerical, a vigorous republican, and a fervent advocate of revenge against Germany He died as the result of an accidental gunshot wound in his hand Though he was at the time unpopular, his memory was later highly revered See Harold Stannard, *Gambetta and the Foundation of the Third Republic* (1921), J P T Bury, *Gambetta and the National Defense* (1936)

Gambia (gām'bēu), British colony and protectorate (4,033 sq mi , pop c 250,000), W Africa, on the Atlantic Ocean Bathurst is the capital Gambia, a narrow enclave (average width 20 mi) in Senegal, borders both banks of the Gambia river for c 200 mi above its mouth The river, which rises in Senegal and flows c 600 mi W to the Atlantic, has a wide estuary, and is navigable throughout Gambia It is the chief communications artery The colony (69 sq mi) comprises mainly St Mary's Island (on which Bathurst is located) and several inland sections The country is largely inhabited by Moslem Negro tribesmen It is suited to agriculture, and large quantities of peanuts are raised for export Portuguese explorers established several settlements near the mouth of the Gambia river in the mid-15th cent The British became dominant in the early 17th cent and were never permanently dislodged despite repeated French and Dutch assaults The present boundaries of Gambia were established in 1888, and the division between the protectorate and the colony was made in 1902 See J. M Gray, *A History of the Gambia* (1940)

Gambier (gām'bĕr), village (pop 470), central Ohio, E of Mt Vernon KENYON COLLEGE is here

Gambier Islands (gām'bĕr) or **Mangareva** (man"-garä'vä), coral group, S Pacific, near the southeast end of the Tuamotu Islands The islands are part of FRENCH ESTABLISHMENTS IN OCEANIA The group comprises four islands and many uninhabited islets within a reef having a circumference of 40 mi Mangareva (pop 553), the largest and only important island, is the seat of Rikitea, the capital It was discovered in 1797 by the British and annexed by France in 1881 The islands have copra and coffee plantations and pearl fisheries The natives are Polynesians

Gamble, Hamilton Rowan, 1798–1864, American political leader, b Winchester, Va , grad Hampden-Sydney College He began to practice law in Missouri, where from 1851 to 1855 he was presiding justice of the state supreme court When the state convention deposed Gov C F JACKSON and other secessionists among the state officials, Gamble, who opposed secession, was appointed provisional governor (1861–64) Gamble reorganized the administration and the state militia (which he used against the Confederate guerrillas) He proposed a system of compensation to free the slaves gradually The radical Unionists, wanting immediate and unconditional emancipation, unsuccessfully tried to force his resignation

gambling or **gaming,** the betting of money and valuables on, and often the participation in, games of chance and skill In England and in the United States, before statutes were passed which made it unlawful, gambling was not a crime at common law if it were conducted privately If it were public in nature and open to all comers, gambling became criminal as a public nuisance, and those who participated in such activities or who conducted gambling establishments were subject to prosecution In the United States, the provisions of the common law have been limited in varying degrees by the statutes of the several states Some prohibit certain games entirely, others prohibit wagering of money on them, and still others allow wagering up to a certain amount but not in excess, or forbid public wagers, or prohibit betting by minors In about one third of the states gambling in the form of parimutuel betting on horse races has been legalized and provides both state and local governments with large revenues Nevada sanctions many types of gambling The LOTTERY is a common form of gambling, and games involving playing cards or dice usually involve wagering In recent years betting on popular sports such as baseball, basketball, and football, though illegal, has increased tremendously Organized sport, however, has frowned on the practice ever since the "Black Sox" scandal of the 1919 world series in baseball. Nevertheless, instances of professional gamblers attempting to "fix" sporting events still occur In contests which are sure to be closely contested, the gambling brokers, or "bookies," as they are popularly called, usually establish two sets of odds, one for each side of the bet, so that no matter what the outcome of the contest they are bound to profit In this and in many other ways easily demonstrated by mathematics the odds are so heavily stacked against a better that in the long run he is almost certain to lose Yet gambling flourishes in the United States, usually under the control of a criminal element and with the blessings of corrupt police officials These last two aspects of organized gambling led to a nation-wide newspaper campaign in 1949–50, and in 1950 a U S. Senate subcommittee began an investigation of crime aimed primarily at gambling See Herbert Asbury, *Sucker's Progress* (1938), Ernest E Blanche, *You Can't Win* (1949), Horace C Levinson, *The Science of Chance from Probability to Statistics* (1950)

gamboge (gămbōj') [Fr ,=Cambodia], a gum RESIN, bright reddish yellow, obtained by evaporation from the sap of certain trees (genus *Garcinia*) native to Siam, Indo-China, and Ceylon It is used as a yellow pigment in paints and varnishes and also as a purgative

gambrel roof, one having double slopes on each side of a ridge and with gabled end walls The lower slope is more steep than the upper one The gambrel roof is characteristic of early American domestic buildings in New Jersey, E New York, and parts of New England It is distinctive in so-called Dutch colonial houses

Gambrinus (gămbrī'nus), mythical Flemish king, to whom is attributed the invention of beer Attempts have been made to connect him with a duke of Brabant—John I or, in a mixture of Dutch and Latin, Jan Primus—but without any sound basis Identification with other historical characters also seems groundless

game laws, restrictions on the hunting or capture of wild game, whether bird, beast, or fish. After the Norman Conquest stringent game laws, known as the Forest Laws, which made hunting the sole privilege of the king and his nobles, were enacted in England Other feudal states of Europe had similar laws English laws were progressively softened after the 16th cent , and in the 19th cent. they were so modified that anyone who obtained a hunting license might hunt game In the United States, on the other hand, game laws have been directed at protecting wildlife from indiscriminate slaughter by trappers, hunters, and fishermen The almost total extermination of the buffalo in the 19th cent pointed up the need for such conservation Almost all states have game laws of this conservational type Common protective devices include designation of a closed season during which game may not be captured or killed, limitation of the age, size, or sex of the game hunted, the requirement of licenses before game can be hunted, even in the open season, the prohibition of the sale or possession of any game after a certain period has elapsed after the termination of the open season, and the prohibition of transportation or sale outside the state See G B Grinnell and Charles Sheldon, ed , *Hunting and Conservation* (1925), R H Connery, *Governmental Problems in Wild Life Conservation* (1935), S S Hayden, *International Protection of Wild Life* (1942)

Gamelin, Maurice Gustave (mōrēs' güstäv' gămălĕ'), 1872–, French general He served on Marshal Joffre's staff in the First World War and was made chief of the French general staff (1931), commander in chief of all French forces (June, 1939), and generalissimo of the Allied forces at the outbreak of the Second World War (Sept , 1939) Considering France ill prepared for war, Gamelin relied on the MAGINOT LINE and on passive warfare In May, 1940, Germany began to overrun France, and on May 19 Gamelin was replaced by General Weygand Arrested by the Vichy government, Gamelin was one of the defendants at the abortive trial at RIOM He was freed from imprisonment in Germany in 1945

gamete see REPRODUCTION.

gaming see GAMBLING

Gammadims (gă'mudĭmz), obscure proper name Ezek 27 11

gamma ray see RAY, RADIUM, RADIOACTIVITY

Gammer Gurton's Needle, the second extant English comedy, acted at Christ's College, Cambridge, in 1566 and first published in 1575 It contains the famous old drinking song with a refrain beginning, "Back and side go bare, go bare " The author, "Mr S ," was long supposed to be John Still (1543?–1608), fellow of Cambridge, later master of St John's and Trinity colleges and bishop of Bath and Wells It is much more probable that "Mr S " was William Stevenson (d 1575), fellow of Christ's College, Cambridge The same play may have been staged as early as 1560 under the title *Dyccon of Bedlam*, a work no longer extant but recorded as published in 1563

Gamow, George (gă'mŏv), 1904–, Russian-American theoretical physicist His earlier researches in nuclear physics were carried on at the Univ of Leningrad and at the universities of Copenhagen and Cambridge After serving as professor at Leningrad (1931–33), he came to the United States and joined (1934) the faculty of George Washington Univ , at Washington, D C He formulated a theory of radioactive decay (1928) and worked on the application of nuclear physics to problems of stellar evolution His more recent work is on atomic structure He has served with U S government agencies His writings include *Constitution of Atomic Nuclei* (1931, 3d ed , with C L Critchfield, *Theory of Atomic Nucleus*, 1949), *Mr. Tompkins in Wonderland* (1939), *The Birth and Death of the Sun* (1940), *The Biography of the Earth* (1941), *Mr Tompkins Explores the*

Atom (1944), *Atomic Energy in Cosmic and Human Life* (1946), and *One, Two, Three ... Infinity* (1947)

Gamul (gä'mŭl) [Heb ,=weaned], chief priest 1 Chron. 24 17

Gananoque (gănunŏk'wē-wu), town (pop 4,044), S Ont , at the junction of the St. Lawrence and the Gananoque, SW of Brockville and E of Kingston, founded 1798 It has steel- and copperworks

Gand, Belgium see GHENT

Gandak (gŭn'dŭk), river, c 300 mi long, rising in N central Nepal It flows SE through Bihar state, India, to join the Ganges river

Gander, airport, E N F , developed on a large scale by Canada in the Second World War

Gandersheim (gan'durshīm), town (pop 5,350), Brunswick, NW Germany It is known for its former abbey, where the nun HROSWITHA (10th cent) wrote her Latin poems and dramas

Gandhi, Mohandas Karamchand (mō"hundus' kŭ"-rumchŭnd' gan'dē, gän'dē), 1869–1948, Indian political leader, educated in India and London He was admitted to the bar in 1889 While in South Africa, Gandhi gave up (c 1900) his law practice to fight legislation directed against his countrymen After c 1905 he completely eschewed Western ways and thereafter lived abstinently in accordance with Hindu ethics and dressed in a loin cloth and blanket or shawl Asserting the unity of mankind under one God, throughout his life he preached the Christian and Moslem scriptures along with the Hindu He returned (1915) to India and actively supported the First World War in the hope of hastening India's freedom Later, opposing British policy, he organized several *Satyagraha* (nonviolent resistance) campaigns, but he discontinued them when, against his wishes, disorders ensued His program, including a free, united India, the revival of home industries, especially textile manufacture, and the abolition of untouchability (see CASTE), was vigorously espoused, even when he was imprisoned The title Mahatma [great souled], which Gandhi repudiated, reflected personal prestige so high that he could exact political concessions by threatening "fasts unto death" and could unify the diverse elements of the Indian National Congress, which he headed several times He was imprisoned (1930) for violating the government salt monopoly by publicly extracting salt from sea water, but he was released to attend (1931) the London Round Table Conference on India as the sole representative of the Indian National Congress In 1939, by fasting and *Satyagraha*, he compelled several Indian princely states to grant democratic reforms When the Second World War broke out in Europe, Gandhi expressed his abhorence of fascism, but he believed the Axis powers should be opposed with passive resistance only In 1942, after rejection of his offer to cooperate with Great Britain in the war if India were immediately freed, he called for *Satyagraha* and was interned until 1944 He was a major figure in the post-war conferences with Viscount Mountbatten and Mahomed Ali Jinnah which led to India's independence and partition (to Gandhi's intense disappointment) into a Hindu state (India) and a Moslem state (Pakistan) When violence broke out between the main religious communities, Gandhi resorted to fasts and tours of disturbed areas to check it When holding (Jan 30, 1948) a prayer and pacification meeting at New Delhi, he was shot fatally by a Hindu who blamed him for the partitioning of India As Gandhi's ashes, following Hindu custom, were deposited in the sacred Ganges river at Allahabad, the Indian government swore to uphold his ideals Some of his editorials and essays were collected in *Young India* (1923), and his autobiography, first published in 1924, was restored in 1948 See Sir Sarvepalli Radhakrishnan, ed , *Mahatma Gandhi Essays and Reflections on His Life and Work* (2d ed , 1949), biographies by Romain Rolland (2d ed , 1930), G E G Catlin (1948), and Vincent Sheean (1949)

Gandía, city (pop 16,795), Valencia prov , E Spain in a fertile garden region yielding fruit and vegetables Several members of a branch of the Borja or BORGIA family were dukes of Gandía The title belongs now to a related family The palace of the Borgias now houses a Jesuit college

Gandzha, Azerbaijan see KIROVABAD

gang, group of people organized for a common purpose, often criminal Gangs of outlaws have long been known in frontier sections of the United States or wherever governmental authority has been weak Modern criminal gangs are largely urban and the product of an industrial society These are highly organized and have been aided by knowledge of modern big-business techniques and by corrupt political practices Their activities center around gambling, prostitution, the sale of illegal liquor and drugs, and racketeering (the violent attempt to control prices and wages) Intergang rivalries have led to frequent murders Juvenile gangs, especially characteristic of city slums, are primarily recreation groups Deprived of adequate facilities and guidance, however, their search for excitement may take an antisocial turn They are also susceptible to the influence of older criminal gangs. Many members become juvenile delinquents, some eventually joining the adult gangs Recent programs for prevention of juvenile delinquency include attempts to guide the activities of gangs (often keeping them intact) into constructive channels, through boys' clubs, the Boy Scouts, and similar groups For material on juvenile and adolescent gangs, see F M Thrasher, *The Gang* (2d rev ed , 1936), and W F Whyte, *Street Corner Society* (1943) Herbert Asbury's *Gangs of New York* (new ed , 1947) and Craig Thompson and Allen Raymond's *Gang Rule in New York* (1940) deal with adult criminal gangs

Ganges (găn'jēz) or **Ganga** (gŭng'gu), river, c 1,560 mi long, India, rising in the S Himalaya foothills in the N United Provs It is perhaps the most sacred river of India On its generally southeastern course through the United Provs , it supplies water to extensive irrigation works and passes the especially holy bathing sites at Allahabad (where it and the Jumna join) and at Benares The Ganges continues W across Bihar state to West Bengal state, where it divides into the HOOGHLY river and the Padma river, its main channel The area between these two rivers constitutes the rice-growing Ganges delta, parts of which are fertilized by annual silt deposit The Padma flows SE through East Bengal prov , Pakistan, to be joined by the Brahmaputra river (here the Jamuna) The united streams empty into the Bay of Bengal through many channels, chiefly that of the Meghna river

Gangotri (gŭng"gō'trē), Hindu mountain shrine, N United Provs , India, near the source of the Ganges The small temple was built in the 18th cent

gangrene or **mortification,** death of tissue resulting from lack of nourishment through interference with blood supply The dead tissue finally breaks down and falls away Gangrene occurs most commonly in parts of the arm or leg, but it may affect any organ It may result from severe injury, e g , war wounds and crushing of a part of the body by a vehicle, from a diabetic condition, or from various circulatory diseases and pressure or other obstructions to circulation It may be dry or wet Some cases result from infection with bacteria, as in gas gangrene of war wounds Sulfanilamide is effective in preventing and curing gas gangrene Early treatment of gangrene includes stimulating the blood supply, rest, and elevating the part affected Surgical treatment is often necessary to save life

Ganja, Azerbaijan see KIROVABAD

gannet (găn'ĭt) or **solan goose** (sō'lŭn), large white sea bird related to the pelican The common gannet of the N Atlantic breeds in the British Isles, in the Gaspé region of Canada, and on Bird Island in the Gulf of St Lawrence It dives for fish from high in the air into the water, sometimes to a depth of 80 to 90 ft Subcutaneous air spaces connecting with the lungs probably lessen the force of its impact with the water Its nest on a rocky ledge contains a single egg The boobies are tropical sea birds of the same family

Gannett, Ezra Stiles (gă'nĭt), 1801–71, American Unitarian minister, b Cambridge, Mass , grad Harvard, 1820, and Harvard Divinity School, 1823 In 1824 he became assistant to William Ellery Channing of the Federal St Church, Boston After Channing's death in 1842 he succeeded to the pastorate He was a leader of conservative Unitarianism in opposition to transcendentalism See biography by W C Gannett (1875)

Gannett, Henry (gă'nĭt), 1846–1914, American geographer, b Bath, Maine, grad Harvard (B S , 1869, M E , 1870) His first work as topographer was on the Hayden Survey (see HAYDEN, FERDINAND VANDEVFER) After 1882 he was chief geographer of the U S Geological Survey His work as geographer of the 10th, 11th, and 15th censuses improved the system of census taking From work on these censuses and the Philippine, Cuban, and Puerto Rican censuses as well, he became interested in place names, and his efforts to resolve difficulties caused by confusion of names finally led to the establishment (1890) of the U S Board of Geographical Names He served as chairman until 1910 He advanced the sciences of geography and map making in America His books include *Physiographic Types* (1898–1900) and *Topographical Maps of United States Showing Physiographic Types* (1907)

Gannett Peak, 13,785 ft high, W central Wyo , in the Wind River Range, highest point in Wyoming

Ganong, William Francis (gunŏng'), 1864–1941, American botanist and educator, b Canada From 1894 to 1932 he was professor of botany and director of the botanical garden at Smith College His writings include *The Living Plant* (1913) and *Textbook of Botany for Colleges* (1916)

Gansevoort, Peter (găns'vōort), 1749–1812, American Revolutionary hero, b Albany, N Y He served in the Quebec campaign and in 1777 was in command of Fort Schuyler (former Fort Stanwix) In the Saratoga campaign he gallantly defended that post against British siege under Gen Barry ST LEGER until reports that Gen Benedict Arnold was approaching frightened the British into retreat He also played a distinguished part in the campaign (1779) of Gen John Sullivan against the Iroquois and the Loyalists in W New York

Ganso, Emil, 1895–1941, American painter and etcher, b. Halberstadt, Germany He early came to America, where he achieved a high reputation as a landscape, figure, and still-life painter In 1933 he was awarded a Guggenheim fellowship and spent a year in Europe In 1940 he joined the art faculty of the Univ of Iowa He is represented in principal museums throughout the country His *Girl in Chemise* (Whitney Mus , New York) is characteristic of his happy and vital style

Gantt, Henry Lawrence, 1861–1919, American industrial engineer, b Calvert co , Md , grad Johns Hopkins, 1880, and Stevens Institute of Technology, 1884 He became interested in industrial management and after 1899 was associated with Frederick W TAYLOR in this field He devised the Gantt chart and wrote *Work, Wages, and Profits* (1913), *Industrial Leadership* (1916), and *Organizing for Work* (1919) See biography by L P Alford (1934), Wallace Clark, *The Gantt Chart* (1922)

Ganymede (gă'nĭmēd), in Greek mythology, boy of great beauty carried off by Zeus to be his cupbearer According to a late variation Zeus, in the form of an eagle, caught him up to Olympus

Gaon of Wilna see ELIJAH BEN SOLOMON

Gap (gap), city (pop 11,086), capital of Hautes-Alpes dept , SE France It lies at the foot of the Dauphiné Alps

Garamond, Claude (klōd' gărămō'), d 1561, Parisian designer and maker of printing types He is held traditionally to have learned his art from Geofroy TORY Types designed by Garamond were used in the printeries of the ESTIENNE family, COLINES, PLANTIN, and BODONI, and types used by the ELZEVIR family were based on his designs His royal Greek type (*grecs du roi*) imitated the Greek writing of a scholar of his time (Angelos Vergetios) His roman and italic types, however, were innovations in being designed as metal types, not as imitations of handwriting His roman letter forms won general acceptance in France and elsewhere and were a chief influence in establishing the roman letter as standard, in place of the gothic or black letter Some modern type designs given his name are not closely related to his, but are based on types that were mistakenly attributed to him

Garand, John Cantius (gă'rund), 1888–, American inventor, b near Montreal, Canada He came to the United States when young and became a citizen in 1920 He was a toolmaker, worked in the U S Bureau of Standards, and later, when a civil employee of the U S army's armory at Springfield, Mass , invented a semiautomatic rifle which was adopted in 1936 by the U S army and later by the marine corps It works on the principle of expanding gas and fires from 50 to 80 shots per minute as compared with the 20 of the Springfield rifle, which it replaced

Garat, Dominique Joseph (dōmēnēk' zhozĕf' garä'), 1749–1833, French revolutionist He was minister of justice during the trial (1792) of Louis XVI, whom he had to inform of his death sentence As minister of the interior (1793) Garat showed weakness and lack of foresight Jailed for a time in the Terror, he later filled various high posts under the Directory and the Consulate Napoleon made him a senator and a count Forced into retirement after the Restoration, Garat devoted himself to writing works of reminiscence and history, notably the *Mémoire sur M Suard et le dix-huitième siècle* (1820)

Garay, Juan de (hwan' du gärī'), c 1528–1583, Spanish conquistador in South America, refounder of Buenos Aires He came to Peru (1544) in the train of the first viceroy, Blasco Nuñez Vela, and was active against Gonzalo Pizarro in the civil war From 1548 to 1568 his activity, as a soldier and colonizer, was centered in Upper Peru (present Bolivia) Moving to Asunción (Paraguay) in 1568, he quickly became prominent in the provincial government He founded Santa Fe (in present Argentina) in 1573 He was named lieutenant governor of the provinces of the Río de la Plata in 1574 and continued in this office through changing governments until his death With colonists from Asunción, he made a permanent settlement in 1580 at Buenos Aires, which, first founded by Pedro de MENDOZA, had been abandoned since 1541 See Paul Groussac, *Mendoza y Garay* (2d ed , 1916, in Spanish)

garbage see REFUSE

Garber, Daniel, 1880–, American landscape painter, b North Manchester, Ind , studied at the Cincinnati Art Academy, at the Pennsylvania Academy of the Fine Arts, and in France He won many awards for his atmospheric landscapes which are represented in the Metropolitan Museum, National Gallery of Art and Corcoran Gallery, Washington, D C , Art Institute of Chicago, Carnegie Institute of Pittsburgh, Albright Art Gallery, Buffalo, Pennsylvania Academy of the Fine Arts, and Museum of Science and Art, Los Angeles

Garber, city (pop 1,086), N Okla , NE of Enid, in wheat country; inc as a town 1901, as a city 1920

Garbett, Cyril Forster (gär'bĭt), 1875–, English prelate, archbishop of York, educated at Oxford He was assistant curate of Portsea (1900–9) and then vicar there (1909–19) He became bishop of Southwark in 1919 and was translated to the bishopric of

Winchester in 1932 In 1942 he was made archbishop of York His recent books include *The Claims of the Church of England* (1947) and *Watchman, What of the Night?* (1948)

Garbo, Greta, 1905–, American moving-picture actress, whose real name is Greta Lovisa Gustafsson, b Stockholm, Sweden She attended the dramatic school of the Royal Theater, Stockholm, and her success in the Swedish film *The Atonement of Gosta Berling* brought her to Hollywood There her beauty and the restraint of her acting won her fame in such films as *Flesh and the Devil*, *Anna Christie* (the first film in which she spoke), *As You Desire Me*, *Susan Lenox Her Fall and Rise*, *Queen Christina*, *Anna Karenina*, *Camille*, and *Ninotchka*

Garborg, Arne Evensen (ärʹnu āʹvənsn gärbôrg), 1851–1924, Norwegian poet and novelist In his weekly *Fedraheim*, founded in 1877, he championed the use as a literary language of Landsmaal, the language of the peasants based on Old Norse He translated the *Odyssey* into Landsmaal His novels, of the naturalistic school, were widely translated into other European languages and one, *Peace* (1892), appeared in English (1929) A verse cycle, *The Hill Innocent* (1895), was very popular

Garcés, Francisco Tomás Hermenegildo (franchĕʹskō tōmasʹ ārmənāhĕlʹdō garsĕsʹ), 1738–81, Spanish missionary explorer in the Southwest, b Aragon Sent as missionary (1768) to San Xavier del Bac in the present Arizona, he accompanied Juan Bautista de Anza overland to California in 1775 In 1775 he again went with Anza, but separated from him and explored the Mojave region and on returning made a journey (1776) to the Hopi villages He established missions in the Yuma region in 1779 and when the Indians revolted was clubbed to death His diaries are translated in Elliott Coues, *On the Trail of a Spanish Pioneer* (1900)

García, Manuel del Popolo Vicente (mänwĕlʹ dĕl pōpōʹlō vĕthänʹtā garthēʹä), 1775–1832, Spanish tenor, teacher, impresario, and composer of a number of operas very popular in their time After several successful seasons in Paris, he created the role of Count Almaviva in Rossini's *Barber of Seville* in Rome in 1816 He founded a school of singing in London and organized an opera company which included his wife, his son, and his daughter, Maria Malibran He was the first to produce opera in Italian in New York (1825–26) and in Mexico (1827–28) Pauline Viardot-García was also his daughter His son, **Manuel Patricio Rodríguez García** (pätrēʹthyō rōdrēʹgäth), 1805–1906, left the operatic stage in 1829 to teach at the Paris Conservatoire (1830–48) and the Royal Academy, London (1848–95) He invented the laryngoscope (1854) Jenny Lind and Mathilde Marchesi were among his pupils See biography by M S MacKinlay (1908)

García Calderón, Francisco (fränsēʹskō gärsēʹä kaldārōnʹ), 1883–, Peruvian writer His father was president of Peru and his brother, Ventura García Calderón, gained a reputation as a literary critic Francisco García Calderón lived for many years in France, where he represented his country in diplomatic service and wrote (in French) *Latin America Its Rise and Progress* (Eng tr , 1913), a history of all Latin America In it he emphasizes Latin tradition, explains the importance of the *caudillo*, and subscribes to the idea that these countries should be ruled by an elite rather than through democratic processes Other works are *Hombres e ideas de nuestro tiempo* (1907) and *Profesores de idealismo* (1909), both written in a vivid and correct style and valuable primarily for their analysis of contemporary historical events and characters

García Gutiérrez, Antonio (äntōʹnyō garthēʹä gōōtyĕrʹrĕth), 1812–84, Spanish playwright He was a soldier when his best-known play, *El trovador* [the troubadour], was staged in 1836 Verdi's opera *Il Trovatore* (1853) is based on this, and his *Simon Boccanegra* on García Gutiérrez's play of that name Later in his life Gutiérrez was appointed consul in Genoa and chairman of the National Archaeological Museum of Spain His last successful play was *Venganza catalana* (1864) See Nicholson B Adams, *The Romantic Dramas of García Gutiérrez* (1922)

García Icazbalceta, Joaquín (hwäkēnʹ garsēʹä ēkasbəlsäʹtä), 1824–94, Mexican philologist, bibliographer, and historian He edited the works of many early Mexican writers, helped edit the *Diccionario universal de historia y geografía* (1853–56), compiled the *Bibliografía mexicana del siglo XVI* (1880), wrote the masterly biography *Don Fray Juan de Zumárraga* (1881), collected an incomplete *Vocabulario de mexicanismos*, and translated foreign historical works, notably W H Prescott's *Conquest of Mexico*

García Lorca, Federico (fädhārēʹkō garthēʹä lôrʹkä), 1899–1936, Spanish poet and dramatist The spirit and folklore of his native Andalusia pervade his work The multiple aspects of his talent as lecturer, folklorist, musician, and codirector of the theatrical group "La Barraca" (under the Spanish Republican government) are indicative of his rich personality His first book, in prose, *Impresiones y paisajes* [impressions and landscapes] (1918), was followed by *Libro de poemas* (1921), in the year that he went to Madrid He became the most popular poet of his generation with *Romancero gitano* [the gypsy balladeer] (1928) Some of his later poetry includes *Llanto por Ignacio Sánchez Mejías* (1935, Eng tr , *Lament for the Death of a Bullfighter*, 1937) and *Poeta en Nueva York* (1940, Eng tr , *The Poet in New York*, 1940), written when he lived in New York in 1929 His plays include farces and tragedies Between 1927 and 1931 he wrote *La zapatera prodigiosa* [the shoemaker's wonderful wife], *Amor de don Perlimplín con Belisa en su jardín* [love of Don Perlimplín and Belisa in his garden] and *Retablillo de don Cristóbal* [within the picture frame of Don Cristóbal] In 1935 *Doña Rosita la soltera* [Doña Rosita the spinster] was staged Some of his plays have been translated, *Bodas de sangre*, a rural tragedy, as *Blood Wedding* (1939) and *Yerma* and others in *From Lorca's Theatre* (1941) A selection of his poems was translated by Stephen Spender and J L Gili (1939) He was shot at Granada soon after the outbreak of the civil war See biography by Edwin Honig (1944), Arturo Barea, *Lorca the Poet and His People* (Eng tr , 1949)

García Moreno, Gabriel (gabrēĕlʹ garsēʹä mōräʹnō), 1821–75, president of Ecuador (1861–65, 1869–75), b Guayaquil A sincere religious mystic, he gradually became obsessed with the idea of Roman Catholic supremacy As president he promulgated new constitutions (1861, 1869) and signed (1862) a concordat with the Church by which the civil power became the guarantor and executor of the Church's independence and granted to it control over education State patronage ceased, inquisitional methods were restored A storm of liberal opposition was vigorously suppressed Between terms as president he retained his hold by installing puppets He was reelected in 1869 and granted additional extravagant privileges to the clerics (in 1873 he dedicated Ecuador to the Sacred Heart of Jesus), he also took extraordinary powers for himself The fanaticism and despotism of the tall, severe *caudillo* are much more remembered than his ability as an administrator who put his country on a sound financial basis and introduced material reforms He died when set upon near the capitol steps by liberal assassins, who stabbed and split his skull with a machete

García y Iñigues, Calixto (kalĕkʹstō garsēʹä ē ēnyēʹgĕs), 1836–98, Cuban revolutionist, a leader in the insurrection against Spain called the Ten Years War (1868–78) Captured and imprisoned until 1878, he entered upon revolutionary activities immediately after his release, but was again arrested In 1895 he came to the United States, and shortly afterwards played an important part in the revolution and the Spanish-American War in Cuba, particularly distinguishing himself at El Caney Sent as a member of a committee to discuss Cuban affairs with McKinley in 1898, he died in Washington His name has become a byword in the United States because of Elbert Hubbard's inspirational essay, *A Message to Garcia*

Garcilaso de la Vega (garthēläʹsō dā la vāʹgä), 1503?–1536, Spanish lyric poet of the Renaissance A soldier of Emperor Charles V, he traveled in Spain, Italy, and France and died in a reckless attack on a castle in Provence He was the perfect embodiment of the gifted courtier of his period With his friend Boscán, he was chiefly responsible for the renovation of Spanish poetry by adapting to it in a variety of combinations the 11-syllable line characteristic of Italian poetry His works include sonnets, elegies, odes, and three eclogues

Garcilaso de la Vega (gärsēläʹsō dā lā vāʹgä), 1539?–1616, Peruvian historian, son of the Spanish conquistador Sebastián Garcilaso de la Vega and an Incan princess and therefore called the Inca He grew up in Peru amid the bloody quarrels of the post-Conquest period Going to Spain (c 1560), he first served in the army and then began his literary career Best known of his works is the *Royal Commentaries of Peru* (1609–1617?, Eng tr , 1688), a valuable source of information about the conquest of Peru and the lives and legends of the Incas

Gard (gär), department (2,271 sq mi , pop 393,279), S France, in Languedoc, on the Mediterranean and on the right bank of the Rhone Nîmes is the capital The Gard river, a tributary of the Rhone, is crossed at Remoulins by the Pont-du-Gard aqueduct

Garda, Lake, Ital *Lago di Garda* (läʹgō dē gurʹdä) or *Benaco* (bänäʹkō), largest lake of N Italy, 32 mi long and covering 143 sq mi , between Lombardy on the west and Venetia on the east The northern tip, with Riva di Trento, is an Alpine resort Here the Sarca river enters the lake At the southern end, on the north Italian plain, it leaves the lake as the Mincio Long celebrated for their beauty and mild climate, the shores are dotted with vineyards Resorts are Torbole, Maderno, and Gardone ‖

Garden, Alexander, c 1730–1791, Scottish-American naturalist and physician He settled in Charleston, S C , where he collected plant and animal specimens, discovered new species (including the amphibians known as the congo snake or congo eel and the siren or mud eel), and corresponded with European naturalists, including Linnaeus The gardenia was named for him.

Garden, Mary, 1877–, American operatic soprano, b Aberdeen, Scotland, studied in Paris Her debut (1900) was in the title role of Charpentier's *Louise*, at the Opéra-Comique, Paris In 1902 she created the role of Mélisande in Debussy's *Pelléas et Mélisande* Most famous of her roles were Louise, Mélisande, and Thaïs, in which role she made her American debut (New York, 1907) with the Manhattan Opera Company In 1909 she sang in the American revival of Richard Strauss's *Salomé* She was a member of the Chicago Opera Company, of which she was director for one season (1921–22). Her vivid portrayal of character was praised more highly than her singing

garden, piece of ground devoted to the cultivation of flowers, herbs, vegetables, or small fruits, for either utility or pleasure It may range in size from the small dooryard plot to the public botanic garden or commercial truck garden Ornamental gardens were cultivated by the Egyptians, Greeks, and Romans, and the hanging gardens of Babylon were among the Seven Wonders of the World Modern landscaping of the garden was developed in Italy Most cities have public gardens where new plants and good horticultural practices are introduced to the public Adjuncts of the garden are the cold frame, the hotbed, and the greenhouse, the first example of which was made in the Jardin des Plantes, in Paris A garden may be devoted entirely to one kind of plant, e g , aquatic plants, alpine plants, or herbs During both world wars the home vegetable garden played an important part in food production The roof garden is beginning to appear frequently in crowded cities Home gardens are aided and encouraged by many local and regional garden clubs, which often hold contests and flower shows See also horticulture General books on gardens include James Bush-Brown and Louise Bush-Brown, *America's Garden Book* (1939), Montague Free, *Gardening* (1947), Woman's Home Companion, *Garden Book* (1947)

Gardena (gärdēʹnu), city (1940 pop 5,909, 1948 special census pop 12,976), in Inglewood township, S Calif , S of Los Angeles, inc 1930 Fruits, vegetables, and poultry are raised in the area

Gardena, Val (väl gärdāʹnä), Ger *Grödnertal* (grēdʹnərtäl), Alpine valley, Trentino-Alto Adige, N Italy Its scenery attracts many tourists Ortisei is the best-known resort Wood carving (mainly of toys), is a traditional home industry

Garden City. 1 City (pop 6,285), co seat of Finney co , SW Kansas, on the Arkansas, founded 1878, inc 1887 It is a trade center in a well-irrigated farming and dairying region producing mainly sugar beets The city has a beet-sugar refinery An agricultural experiment station is here **2** Residential city (pop 4,096), SE Mich , near Dearborn, in a farm area, inc as a village 1927, as a city 1934 **3** Village (pop 11,223), on W Long Island, SE N Y , near Hempstead, founded c 1869, inc 1919 A residential and industrial suburb of New York city, it has a large publishing business, factories making aviation parts and supplies, and two airfields—Mitchell Field (military) and Roosevelt Field Garden City is the seat of an Episcopal cathedral, Adelphi College (coeducational, 1896), the Cathedral School of St Mary for girls, and St Paul's School for boys

garden city, urban residential and industrial community surrounded by a rural belt, established with a predetermined maximum population and area and with ownership vested in the community The name is commonly applied to any community planned to secure the advantages of both city and country life, although the purpose of a true garden city is also to encourage decentralization of industry The idea originated as a method of preventing the massing of population in metropolitan centers which followed the Industrial Revolution The garden city was foreshadowed in Robert Owen's proposal to create new communities in the country, in Charles Fourier's advocacy of phalansteries, and in James Silk Buckingham's plan (1849) for an ideal city It found partial expression, especially in England, in the building of workmen's dwellings near factories already situated in rural areas and in new communities built to house workers in industries that were moved to the country to take advantage of lower land values Notable among centers established in England by industrialists are Saltaire, founded (1851) by Sir Titus Salt, Bournville founded (1879) by George Cadbury, and Port Sunlight, near Birkenhead, founded (1887) by Sir William Lever The term "garden city" was introduced, and the ideal city effectively presented, by Sir Ebenezer Howard in his book *To-morrow a Peaceful Path to Real Reform* (1898), it was revised (1902) under the title *Garden Cities of To-morrow* (reedited by F J Osborn, 1946) Howard organized a garden-city association (1899) in England and secured backing for the establishment of Letchworth (1903) and Welwyn Garden City (1920) The garden-city idea spread rapidly in Europe and the United States but commonly resulted in residential suburbs such as Hilversum, Holland, Forest Hills, L.I., N Y ; and Mariemont, near Cincinnati The ideal was more fully realized in satellite communities

in rural areas at a moderate distance from a large city, such as Radburn, N.J., and the greenbelt towns (organized between 1936 and 1938 by the Federal Resettlement Administration), Greenbelt, Md., Greendale, Wis., and Greenhills, Ohio. Most satellite towns, however, fail to attain Howard's ideal, since local industries are insufficient to provide employment for the inhabitants, many of whom commute to work in larger centers. The congestion and destruction incident to the Second World War stimulated the garden-city movement, especially in England. The open layout of garden cities has influenced the development of CITY PLANNING. See C. B. Purdom, *The Building of Satellite Towns* (1925), F. J. Osborn, *Green-Belt Cities: the British Contribution* (1946).

gardenia (gärdē'nyu) [for Alexander GARDEN], any plant of the genus *Gardenia*, shrubs or small trees of the subtropical Old World. The common gardenia, called also Cape jasmine (*Gardenia jasminoides*), is a popular corsage flower, waxy white and heavily fragrant, with thick glossy evergreen leaves. It is cultivated outdoors in the S United States or in greenhouses in the North and is propagated by cuttings. The true jasmine is not related to the Cape jasmine. See also CAMELLIA.

Garden of the Gods, area near Colorado Springs, central Colo., noted for its curious rock formations, the result of erosion. The various grotesque groups have fanciful names. It is a popular resort.

Gardiner, Sir Christopher, fl. 1630–32, personage in the early history of the Massachusetts Bay colony. His dramatic career has puzzled historians and provided inspiration for a number of literary works, particularly for one of the stories in Henry W. Longfellow's *Tales of a Wayside Inn*. The Puritans found Gardiner and a young woman when they landed in 1630. Accused of having deserted several wives in Europe, he was later discovered to be an agent of Sir Ferdinando GORGES, who claimed title to the land the Puritans occupied. Gardiner went to Maine and then to England, where, in 1632, he was one of the leading witnesses before the privy council in Gorges's attempt to have the Massachusetts charter revoked.

Gardiner, James, 1688–1745, Scottish colonel. He was famed for his reckless daring, fought under Marlborough, and lost his life at the battle of Prestonpans, fighting the Jacobite rebels.

Gardiner, Lion, 1599–1663, British colonist in America. Under contract with patentees of Connecticut, Gardiner designed and erected (1635–36) the blockhouse at Saybrook, which he defended in the Pequot War. He purchased (1639) Gardiner's Island from the Indians and there founded the first English colony in present New York.

Gardiner, Samuel Rawson, 1829–1902, English historian. He was educated at Christ's Church, Oxford, and for much of his life was a professor of modern history at King's College, London, as well as at Bedford College and other schools. His life work was his thorough, careful history of the Puritan Revolution in England, and it was based on researches into all the sources in England and in such foreign archives as those in Paris, Rome, and Simancas. His history appeared as several separate works, later regrouped into three—*The History of England from the Accession of James I to the Outbreak of the Great Civil War, 1603–1642* (10 vols., 1863–82, reissued 1883–84), *History of the Great Civil War, 1642–1649* (3 vols., 1886–91, reissued in 4 vols., 1893), and *History of the Commonwealth and Protectorate, 1649–1660* (3 vols., 1895–1901), which was interrupted by his death at the year 1656 and was carried on by Sir Charles Firth in his *Last Years of the Protectorate* (2 vols., 1909). Gardiner also wrote many textbooks, edited the *Constitutional Documents of the Puritan Revolution* (1889, 2d ed., 1899), wrote a biography of Oliver Cromwell (1899), and was for 10 years after 1891 editor of the *English Historical Review*. He was granted a civil-list pension in 1882 and became Ford lecturer at Oxford in 1896. See biography by H. B. Learned (1902), R. P. Usher, *A Critical Study of the Historical Method of Samuel Rawson Gardiner* (1916).

Gardiner, Silvester or **Sylvester**, 1708–86, American colonial physician and landowner, b. South Kingstown, R.I. He studied medicine in London and Paris, built up a large practice in Boston, and established a chain of apothecary shops. He was the chief promoter of the Kennebec Company which obtained a large strip of land on either side of the Kennebec river in Maine. He built the towns of Pittston and Gardiner in the development of this holding. Because Gardiner was an ardent Loyalist, his land was confiscated at the beginning of the American Revolution, and he fled to Halifax and later to England. He returned to America in 1785 and recovered part of his land in Maine, but his Boston property had been destroyed.

Gardiner, Stephen, 1483–1555, English prelate, educated at Cambridge. He became secretary to Thomas (later Cardinal) WOLSEY and later secured the favor of Henry VIII by a mission to Rome to further the king's plans for divorce from Katharine of Aragon. He was made bishop of Winchester (1531) and wrote *De vera obedientia* (1535), justifying the royal supremacy although denying a doctrinal reformation. Thomas Cromwell's fall was in part due to him, and he was partly responsible for the Six Articles, which reaffirmed the king's adherence to medieval church doctrines as against those of the Reformation. After the accession of Edward VI he was deprived of his bishopric and put in the Tower for five years. When Mary came to the throne, he was restored to his see and made lord high chancellor. Gardiner was condemned by Catholics for his support of royal supremacy and by Protestants for his opposition to Reformation doctrines. See J. A. Muller, *Stephen Gardiner and the Tudor Reaction* (1926).

Gardiner (gärd'nur), city (pop. 6,044), SW Maine, on the Kennebec below Augusta, founded 1760, inc. as a town 1803, as a city 1850. Dams, mills, and other works were built here after 1803. In 1823 Benjamin Hale established in Gardiner the first technical school in America. In 1936 a tablet was unveiled on the common to Edwin Arlington Robinson, who spent his youth here.

Gardiners Island, 3,000 acres, in Gardiners Bay between the two flukelike peninsulas of E Long Island, SE N.Y., settled 1639 by Lion GARDINER. Gardiners Point, an island of 14 acres, lies to the north.

Gardner, Erle Stanley, 1889–, American detective-story writer, b. Malden, Mass. He has lived chiefly in California, there he worked in lawyers' offices and studied at night and was admitted to the bar in 1911. About 1923 he began writing magazine stories, and since the publication (1933) of *The Case of the Velvet Claws* he has produced two or more books a year, noted for their fast action and clever legal devices. His leading characters are Perry Mason in one series and Douglas Selby and Terry Clane in others. Gardner writes also under several pseudonyms, including A. A. Fair.

Gardner, Ernest Arthur: see GARDNER, PERCY.

Gardner, Isabella Stewart, 1840–1924, American art collector, b. New York city. She lived in Boston following her marriage. After the Civil War her home became known for brilliant social affairs and as a center for gatherings of painters, literary people, musicians, and other celebrities. Her lifelong interest in design and art collecting led her to acquire many works of the masters and many valuable contemporary canvases. Her husband cooperated in her plan to create an art museum, Fenway Court was built after the Venetian manner to house their valuable collection and was willed to the city of Boston as a public museum to be preserved without change. See Morris Carter, *Isabella Stewart Gardner and Fenway Court* (1925), Arthur Pope and J. D. Hatch, Jr., eds., *The Isabella Stewart Gardner Museum: Reproductions of Paintings* (1935).

Gardner, Percy, 1846–1937, English classical archaeologist. He was educated at Christ's College, Cambridge. From 1887 to 1925 he was professor of archaeology at Oxford, where he was instrumental in building up the archaeology department and its library and collections. His works include *The Types of Greek Coins* (1883), *New Chapters in Greek History* (1892), *A Manual of Greek Antiquities* (with F. B. Jevons, 1895), *Principles of Greek Art* (1913), *A History of Ancient Coinage* (1918), and *New Chapters in Greek Art* (1926). His brother **Ernest Arthur Gardner**, 1862–1939, was educated at Cambridge. He served as director of the British School of Archaeology at Athens (1887–95) and as professor of archaeology (1896–1929) and vice chancellor at the Univ. of London. He took a prominent part in excavations in the Near East, particularly in Megalopolis and in Paphos. His principal work is *Handbook of Greek Sculpture* (1897, rev. ed., 1915). Other works include *Religion and Art in Ancient Greece* (1910), *The Art of Greece* (1925), and *Greece and the Aegean* (1933).

Gardner, city (pop. 20,206), N central Mass., NNW of Worcester, settled 1764, inc. as a town 1785, as a city 1923. Its furniture industry dates from c. 1805. Oil stoves are also produced. There is a state farm for the mentally ill.

Gareb (gā'-) **1** Member of David's guard of 30 men. 2 Sam. 23:38, 1 Chron. 11:40. **2** Unidentified hill, in the vicinity of Jerusalem. Jer. 31:39.

Gare Loch (lōkh), long narrow inlet of the Firth of Clyde, Dumbartonshire, Scotland.

Garey, Thomas Andrew, 1830–1909, American pioneer in citrus culture, b. Cincinnati. He traveled from Iowa to California by ox team (1849–52). In 1865 he built a citrus nursery on land now a commercial street in Los Angeles. The market for young citrus trees grew, and Garey introduced new varieties, one of which was a lemon called by him Garey's Eureka. It became one of two main varieties of lemon grown in California. His *Orange Culture in California* (1882) was a valuable work.

Garfield, Harry Augustus, 1863–1942, American educator, b. Hiram, Ohio, grad. Williams College, 1885, studied law at Columbia Univ., son of President James A. Garfield. From 1888 to 1903 he practiced law in Cleveland, Ohio, where he was active in civic affairs and also taught law at Western Reserve Univ. He was professor of politics at Princeton Univ. from 1903 to 1908 and president of Williams College from 1908 until his retirement in 1934. He served as U.S. fuel administrator in 1917–19 and in 1921 founded the Institute of Politics at Williams College.

Garfield, James Abram, 1831–81, 20th President of the United States. Born on a frontier farm in Cuyahoga co., Ohio, he spent his early years in poverty, and his education was obtained only through sacrifices. As a youth he worked as farmer, carpenter, and canal boatman, but after graduation (1856) from Williams College, he became a teacher of ancient languages and literature at the Western Reserve Eclectic Institute at Hiram, Ohio (the name was later changed, largely through his influence, to Hiram Institute), and later (1857–61) was its principal. He was also a lay preacher of the Disciples of Christ, was admitted (1859) to the bar, and was elected an antislavery state senator. He volunteered eagerly in the Union army and rose in rank. He was a major general of volunteers when he resigned (1863) to take his seat as Representative in Congress. He was a regular Republican, unhesitatingly following his party's program of radical Reconstruction, and later of hard-money deflationism and opposition to civil service reform. On the tariff issue he straddled. He was prominent in the settlement of the disputed election of 1876, but in 1880 he was still only moderately well known nationally. He was campaign manager for John Sherman in the Republican convention but on the 36th ballot was himself chosen as compromise candidate for President. U. S. Grant, who had wanted the nomination, and his supporter, Roscoe CONKLING, gave Garfield only formal aid in the election—and allegedly even that was conditioned on a promise of a share in the President's political favors. After Garfield had defeated W. S. Hancock and was President, he passed over Conkling's "Stalwarts" in his appointments and appointed James G. Blaine, Conkling's political enemy, Secretary of State. War was thus declared between the President and the most important faction of the Republican party. Garfield won the first round of the fight, getting his appointee for the New York port collectorship approved over Conkling's objections. He began prosecution of the STAR ROUTE frauds. Constantly harassed by office seekers, President Garfield met his death through one of them. On July 2, 1881, he was shot by Charles J. Guiteau. On Sept. 19 he died, and Chester A. Arthur succeeded to the presidency. Garfield was a brilliant orator and an able, knowing, and charming man. He had shown little originality or force in his 17 years as Congressman, and his early death prevented him from showing whether or not he might have demonstrated statesmanship as President. See biography by R. G. Caldwell (1931), T. C. Smith, *Life and Letters of James Abram Garfield* (1925).

Garfield, James Rudolph, 1865–1950, U.S. Secretary of the Interior (1907–9), b. Hiram, Ohio, grad. Williams, 1885, son of President James A. Garfield. After study at the Columbia Univ. School of Law, he was admitted (1888) to the Ohio bar and became a Cleveland lawyer. He also entered politics. He was a member of the U.S. Civil Service Commission (1902–3) and commissioner of corporations in the Dept. of Commerce and Labor (1903–7) before being given a cabinet post under Theodore Roosevelt. He supported Roosevelt's conservation policies. In the 1912 election he aided Roosevelt and the Progressives in their unsuccessful bid for power.

Garfield, industrial city (pop. 28,044), NE N.J., on the Passaic river and ENE of Passaic, inc. as a borough 1898, as a city 1917. Hydraulic equipment and chemicals are made here.

Garfield Heights, city (pop. 16,989, 1920 pop. 2,550), NE Ohio, near Cleveland, founded 1904, inc. 1932.

garfish, marine fish with a long, slender body and a long, pointed, toothed beak, found in most temperate and warm waters. It sometimes enters rivers. About 50 species are known. Some reach a length of 5 or 6 ft. They swim near the surface and are swift and predaceous. When pursuing smaller fish they often leap over obstacles. The flesh of garfish is palatable, but the green color of the bones is sometimes repellent. Other names include needlefish and bilfish. See also GAR PIKE.

Gargano (gärgä'nō), mountainous peninsula, Apulia, S Italy, projecting into the Adriatic. Monte Calvo (3,463 ft.) is the highest point.

Gargarus, Mount, Turkey: see IDA MOUNTAINS.

gargoyle (gär'goil), decorative spout projecting from a building so as to throw out the rain water from its roof. The term may apply to the water outlets in the form of lion heads upon the cornices of Greek and Roman buildings and to other such spouts, but usually refers to the highly interesting Gothic examples carved in the form of grotesque composite monsters leaning far outward from parapets and cornices. Those of Notre Dame, Paris, are perhaps the most familiar. On churches they are in stone, while the gargoyles of minor and domestic buildings more often are of lead.

Garian (gärēän'), town, Tripolitania, Libya. The native population lives in a centuries-old sub-

terranean town; above ground is a European settlement established by Italy as a garrison

Garibaldi, Giuseppe (gärĭbôl'dē, Ital jōōzĕp'pā garēbäl'dē), 1807–82, Italian patriot and soldier, a leading figure in the RISORGIMENTO. He was born at Nice (then in the kingdom of Sardinia) and as a youth entered the Sardinian navy. Under the influence of MAZZINI he became involved in an unsuccessful republican plot and fled (1835) to South America. There he gained his first experience in irregular warfare. He served Rio Grande do Sul in its rebellion against Brazil (during the minority of Pedro II and fought (1836–46) in the Uruguayan civil war, winning fame for his heroism. In Uruguay he met Anita, his faithful companion until her death in 1849. When revolution swept over Europe in 1848 Garabaldi found a new theater of action. Though a convinced republican, he joined the forces of King Charles Albert of Sardinia in the war against Austria. After the Sardinian defeat he went to Rome (1849) and, at the head of some improvised forces, fought for MAZZINI's short-lived Roman republic against the French forces intervening for Pope Pius IX. During his spectacular retreat across central Italy, Anita died. He was refused asylum by the king of Sardinia and came to the United States. Soon he resumed his seafaring life, but in 1851 he returned to Italy and bought part of the island of Caprera, N of Sardinia. By then he had definitely renounced the dream of an Italian republic and gave his support to the realistic policy of CAVOUR, publicly declaring that the monarchy as represented by VICTOR EMMANUEL II should be the basis of Italian unity. Garibaldi's popularity won many of MAZZINI's republican followers for the monarchist cause. Garibaldi took part in the war of 1859 against Austria. After the Treaty of VILLAFRANCA DI VERONA he violently attacked Cavour and denounced the cession of Savoy and his native Nice to France. In 1860, with Victor Emmanuel's connivance, Garibaldi embarked on the crowning enterprise of his life—the conquest of the kingdom of the Two Sicilies. With 1,000 volunteers, the Red Shirts, he landed (May, 1860) in Sicily, which had rebelled against King FRANCIS II, and conquered the island in a spectacularly daring campaign. He then crossed to the mainland, took Naples, and won a decisive battle on the Volturno river. MAZZINI wanted to make liberated S Italy a republic while the populace acclaimed Garibaldi as ruler, but Garibaldi himself remained faithful to his pledge to Victor Emmanuel. After meeting the king at Teano, near Naples, he relinquished his conquests to Sardinia and retired to Caprera. Shortly afterward (1861) Victor Emmanuel was proclaimed king of a united Italy. Only the PAPAL STATES remained outside the new kingdom. In 1862 Garibaldi led a volunteer corps against Rome, but the king, fearing international intervention, sent an Italian army which defeated Garibaldi at Aspromonte. Garibaldi was amnestied. He commanded a volunteer unit in the Austro-Prussian War of 1866 and in 1867 was defeated by French and papal forces at Mentana while attempting once again to capture Rome. In the Franco-Prussian War of 1870–71 he commanded a group of French and Italian volunteers and won a battle near Dijon (1871). Garibaldi was elected to the Italian parliament in 1874, but his political career was unimportant. He remained a popular hero of Italians the world over. See his autobiography (Eng. tr., 1889); G. M. Trevelyan, *Garibaldi and the Making of Italy* (1911)

Garibaldi, Giuseppe, or **Peppino Garibaldi** (pāp-pē'nō), 1879–1950, Italian general, son of RICCIOTTI GARIBALDI. He fought for Britain in the Boer War, took part in a Venezuelan revolution, commanded Greek troops in the Balkan Wars, and in the First World War commanded a legion of Italian volunteers. His opposition to Mussolini caused him to emigrate to the United States in 1924.

Garibaldi, Ricciotti (rēt-chōt'tē), 1847–1924, Italian patriot, b Uruguay, son of Giuseppe GARIBALDI. He fought with his father in Italy in 1866, 1867, and 1870–71.

Garigliano (gärēlyä'nō), name of the LIRI river, S central Italy, below its junction with the Rapido near Cassino. It separates Latium from Campania and empties into the Tyrrhenian Sea E of Gaeta. A strategic battleground since antiquity, it was the scene (1503) of Gonzalo Fernández de Córdoba's victory over Louis XII of France in the Italian Wars and was the scene of heavy fighting (1943–44) in the Second World War during the Allied drive on Rome and the battle for CASSINO.

Garland, Augustus Hill, 1832–99, American lawyer, U. S. Attorney General (1885–89), b Tipton co., Tenn., grad. St. Joseph's College, Bardstown, Ky., 1849. He became a prominent Arkansas lawyer and was admitted to practice before the U. S. Supreme Court in 1860. In the Civil War he served in the Confederate House of Representatives (1861–64) and Senate (1864–65). After the war, he was pardoned by President Johnson. His application to resume practice before the Supreme Court was denied because of the "test oath" of loyalty required from former Confederates by a congressional act of Jan., 1865. This led to *Ex parte Garland* (1867), a Supreme Court case in which Garland successfully pleaded that since the act was an ex post facto law it was unconstitutional. He was elected to the U. S. Senate in 1867 but was refused his seat. As governor of Arkansas (1874–76) Garland was influential in straightening out an involved financial situation which he inherited from preceding carpetbagger administrations. He served in the U. S. Senate from 1877 to 1885, when he resigned to accept President Cleveland's appointment as Attorney General. He wrote *Experiences in the Supreme Court of the United States* (1898) and, with Robert Ralston, *A Treatise on the Constitution and Jurisdiction of the United States Courts* (1898)

Garland, Hamlin, 1860–1940, American poet and author, b near West Salem, Wis. His family moved to an Iowa farm, where he worked while he went to school. He took up land in Dakota, but in 1884 left for Boston, and in the next few years he broadened his education and learned painfully to write. In 1893 he was established in Chicago. His first book, *Main-travelled Roads* (1891), and the later *Other Main-travelled Roads* (1910) contain stories of the Middle West, the region he was to celebrate for 40 years in verse, stories, and autobiography. These early tales bitterly picture the harsh futility of farm lives, he urged the single tax and populist doctrines in the novels *Jason Edwards, an Average Man* (1892) and *A Spoil of Office* (1892), but returned to realistic prairie stories in such works as *A Little Norsk* (1892) and *Rose of Dutcher's Coolly* (1895). The autobiographical *Son of the Middle Border* (1917) has become an American classic. *A Daughter of the Middle Border* (1921), though it won a Pulitzer Prize, is less great, and his many books of reminiscence which followed are discursive. Garland also wrote a biography of U. S. Grant (1898) and several works on spiritualism

Garland, town (1940 pop. 2,233, 1947 estimated pop. 6,500), N Texas, NE of, and near, Dallas. It is an industrial suburb producing aircraft, automobile tires, and other articles

garlic [O. E., = spear leek], perennial herb of the same genus as the onion and like it used for flavoring food, especially in the Old World, where it has been known from ancient times. The garlic of commerce is *Allium sativum*. The bulb consists of small bulbils known as cloves, and it is these that are most often used for culinary purposes and in propagating the plant. Garlic oil has been used in medicine, chiefly as a stimulant. Other species of *Allium*, native or naturalized in North America, are called wild garlic. The most common wild garlic is *Allium vineale*, naturalized from Europe and in some regions a troublesome weed in the spring because of the odor and taste imparted to the milk of cows feeding upon the plant

Garman, Samuel, 1843–1927, American ichthyologist, b Indiana co., Pa., grad. Illinois State Normal Univ., 1870. A pupil and friend of Louis Agassiz, he became a curator at the Museum of Comparative Zoology at Harvard and made several scientific expeditions. His chief work was *The Plagiostoma* (1913), on sharks, skates, and rays

Garmisch-Partenkirchen (gär'mĭsh-pär"tunkĭr'khun), town (pop. 24,624), Upper Bavaria. It is an international winter resort in the Bavarian Alps, at the foot of the ZUGSPITZE. The Olympic winter games of 1936 were held here. There are a Romanesque church and an 18th-century church to which pilgrimages are made

Garmite, obscure tribal name. 1 Chron. 4:19.

Garmo Peak, USSR: see STALIN PEAK

Garneau, François Xavier (frăswä' zavyä' gärnō'), 1809–66, French Canadian historian, b Quebec, educated at the Quebec seminary. In 1830 he became a notary, but later he was appointed translator to the legislative assembly of Lower Canada and then secretary of the municipal council of Quebec. In these official positions he found time to bring to completion his distinguished *Histoire du Canada* (3 vols., 1845–48, 2d ed., with added material, 1852). It is said that he undertook his history under the sting of a remark made by Lord Durham that the French Canadians were a people "without a history and without a literature" and the taunts of the young English clerks in the notary's office, who took delight in reminding him that he was the son of a conquered race. His *Histoire du Canada*, which he was correcting and revising until his death, covers the period from the founding of Canada to the union of the two Canadas in 1841. It passed through three editions in Garneau's lifetime and has been reprinted as recently as 1946. The fifth and sixth editions (1913–20), prepared by Hector Garneau, the author's grandson, brought the work up to date by adding the results of later research. The work has also appeared in abridged editions for classroom use and in an English translation. Garneau's history was welcomed with great enthusiasm, and French Canadian literature, particularly poetry, has never completely broken away from its spell. His work is a massive and scrupulously careful compilation of facts, laboriously gathered long before any work had been done to make the archives accessible to research workers, through it runs a vibrant current of patriotic feeling. Its captivating style has helped it to hold its place among the distinguished works of Canadian literature. There are several biographies of Garneau in French

Garner, John Nance, 1869–, Vice President of the United States (1933–41), b Red River co., Texas. He received an irregular country schooling, read law, and was admitted (1890) to the bar. He served (1898–1902) in the Texas legislature and then (1902) was elected to Congress. His seniority standing made (1921) him the ranking minority member of the Committee on Ways and Means, and subsequently he became minority leader in Congress. With the shift to Democratic control in 1931 he was elected speaker of the House. After 30 years of service in Congress, Garner was in 1932 elected Vice President under President Roosevelt and in 1936 was reelected. He opposed Roosevelt's third-term candidacy and retired (1941) from politics.

Garner, town (pop. 1,549), co. seat of Hancock co., N central Iowa, W of Mason City and on the Iowa river, in a dairy and farm area; inc. 1881.

Garnet, Henry see GARNETT, HENRY

Garnet, Henry Highland (gär'nĭt), 1815–82, American abolitionist clergyman, b Kent co., Md. Born a slave, he escaped in 1826 and was educated under Beriah Green at Oneida Institute, Whitestone, N.Y. An eloquent speaker, he became a leading abolitionist. His radicalism, particularly in a speech at Buffalo in 1843, in which he called upon slaves to rise and slay their masters, caused his influence to decline. He was opposed and superseded in leadership by Frederick DOUGLASS. Garnet held Presbyterian pastorates in Troy, N.Y., in New York city, and, after the Civil War, in Washington. In 1881 he was appointed minister to Liberia, but he died two months after his arrival there

garnet (gär'nĭt), name given to a group of minerals some members of which are used as gems. The garnets are double silicates, one of the metallic elements being calcium, magnesium, ferrous iron, or manganese and the other being aluminum, ferric iron, or chromium. Crystals are of the cubic system. Six varieties (of which there are also intermediate forms) are distinguished according to composition—grossularite (calcium-aluminum), pyrope (magnesium-aluminum), spessartite (manganese-aluminum), almandite (iron-aluminum), andradite (calcium-iron), and uvarovite (calcium-chromium). Grossularite is some shade of red, green, yellow, or brown depending on the impurities. If pure it would be colorless. The yellow and brown stones, coming chiefly from Ceylon, are used as gems under the names essonite (or hessonite) and cinnamon stone, sometimes they are miscalled HYACINTH. Grossularite is found also in the Transvaal, in Mexico, and in Oregon. The ruby-red pyrope from Bohemia, South Africa, and Arizona is the most popular variety of garnet and is sold as Cape ruby and Arizona ruby. Rhodolite, a mixture of pyrope and almandite from North Carolina, is rose-red or purple. Spessartite, brown to brownish-red garnet from Bavaria, Ceylon, and parts of the United States, is little used for jewelry. Deep red, transparent almandite is the carbuncle, it was formerly a very popular gem. There are also brownish-red and black varieties of almandite, sometimes used as abrasives. Almandites come chiefly from Brazil, India, and Ceylon. Australia and parts of the United States are also important sources. Andradite, a very common variety, is usually some shade of red, black, brown, yellow, or green. Of gem varieties there are topazolite, similar in color and transparency to TOPAZ, demantoid, a green variety with a high dispersion and adamantine luster, sometimes miscalled olivine and Uralian emerald, and black melanite. Demantoid is found in the Urals, and the other andradites come chiefly from Europe and the United States. Uvarovite, an emerald-green variety from Russia, is rarely suitable for gem use. Garnet occurs in many different kinds of rocks—grossularite, in metamorphosed impure limestones, pyrope, in basic igneous rocks, spessartite, in granitic rocks, almandite, in schists and other metamorphic rocks, as well as in igneous rocks, andradite, in serpentine, and uvarovite, chiefly in serpentine. Because of their comparative softness, garnets are not precious stones. They are extensively sold as imitations of more prized varieties

Garnett, Constance (Beach) see GARNETT, RICHARD.

Garnett, David (gär'nĭt), 1892–, English novelist; son of Edward and Constance Garnett. With Francis Meynell he was a partner (1923–32) in the Nonesuch Press. Garnett's short novel, *Lady into Fox* (1923), won acclaim for its unusual subject and imaginative quality. His later works include *A Man in the Zoo* (1924), *Go She Must!* (1927), and a factual report, *War in the Air* (1941). He edited the letters of T. E. Lawrence (1939) and works by Henry James and others.

Garnett, Edward: see GARNETT, RICHARD.

Garnett, or Garnet, Henry, 1555?–1606, English Jesuit. He was converted to Catholicism and in

1575 became a Jesuit After some years on the Continent he returned as a missionary to England (1587) and became superior of the English Jesuits He is principally remembered as one of the priests accused of taking part in the GUNPOWDER PLOT Garnett admitted to knowledge of the plot as confessor to two of the conspirators, was convicted of treason on confusing evidence, and was executed

Garnett, Richard, 1835–1906, English librarian and author, from 1851 connected with the British Museum, which he served with great distinction Owing to his efforts the printing of the catalogue, discontinued since 1841, was resumed in 1880 From 1890 until his retirement in 1899 he was keeper of the printed books Besides writing voluminous essays, biographies, and novels, he contributed to *The Encyclopaedia Britannica* and *The Dictionary of National Biography* and discovered hitherto unpublished Shelley fragments (*Relics of Shelley*, 1862) His works include *The Twilight of the Gods* (1888), *History of Italian Literature* (1897), *Essays in Librarianship and Bibliography* (1899), and *The Age of Dryden* (1895) He also wrote biographies of Carlyle (1887), Emerson (1888), Milton (1890), and Coleridge (1904) His son was **Edward Garnett,** 1868–1937, critic, essayist, and dramatist As a literary adviser, Edward encouraged and guided many writers He published, with valuable introductions, his letters from Conrad and Galsworthy See also his *Hogarth* (1911) **Constance (Beach) Garnett,** 1862–1946, Edward's wife, was famous for her translations from the Russian David GARNETT is their son

Garnett (gär'nĕt), city (pop 2,607), co seat of Anderson co , E Kansas, S of Lawrence, founded 1856, inc as a town 1861, as a city 1870 Edgar Lee Masters was born here Oil fields are in the county

Garnier, Charles (Saint Charles Garnier) (sharl' garnyā'), 1606-49, French missionary in North America, a Jesuit He entered the Society of Jesus in 1624 and went as a missionary to Canada in 1636 He was one of the missionaries among the Huron Indians and was killed by the Iroquois He is one of the group (including Isaac Jogues and Jean de Brébeuf) called the Martyrs of North America or the Jesuit Martyrs of North America, who were canonized in 1930 Feast Sept 26 or (among the Jesuits) March 16

Garnier, Jean Louis Charles (zhäⁿ' lwē' sharl'), 1825–98, French architect Garnier studied at the École des Beaux-Arts and won the Grand Prix de Rome (1848) He was awarded the commission for the Opéra in Paris (1863–75), which is his principal work, it provided an impressive focus for the new boulevards of G E Haussmann's city planning It is an ornate interpretation of Renaissance architecture, especially noted for the grand staircase Garnier built also the casino at Monte Carlo and the observatory at Nice

Garnier, Marie Joseph François (marē' zhôzĕf' fräswä'), 1839–73, French explorer and naval officer usually known as Francis Garnier He served (1860–62) against Annam and China, then in the administration of Cochin China In 1866–68 he accompanied Doudart de Lagrée's expedition through Cambodia, Laos, and Yunnan The route followed, largely unknown to European geographers, was accurately mapped On the death of the leader en route, Garnier led the party down the Yangtze to Shanghai After taking part in the defense of Paris against the Prussians (1870–71), which he described in *La Siège de Paris* (1871), he returned to the Far East In the Tonkin expedition of 1873 he captured Hanoi, but was killed there He wrote *Voyage d'exploration en Indo-Chine* (1873)

Garnier, Robert (rôbĕr'), 1534–90, French dramatic poet He wrote closet dramas in the manner of Seneca *Les Juifves* [the Jewish women] (1583), certainly the best, has been successfully produced in the 20th cent

garnierite (gär'nēərīt"), pale apple-green, amorphous mineral, chemically a silicate of nickel and magnesium It is an important ore of NICKEL found at New Caledonia and also in the United States in Oregon

Garnier-Pagès, Étienne Joseph Louis (ātyĕn' zhôzĕf' lwē' gärnyā'-pāzhĕs'), 1801–41, French politician, brother of Louis Antoine Garnier-Pagès He was a leading figure in the opposition to the Restoration and to the July Monarchy

Garnier-Pagès, Louis Antoine, (ätwan'), 1803–78, French politician, brother of Étienne Joseph Louis Garnier-Pagès He succeeded to his brother's seat in the chamber of deputies He opposed the July Monarchy and after the FEBRUARY REVOLUTION of 1848 was mayor of Paris and finance minister in the provisional government After 1864 he was a member of the parliamentary opposition to Napoleon III, and in 1870–71 he was a member of the government of national defense

garnishment, process of attaching debts owed or goods belonging to a defendant and in the hands of a third party The garnishment consists of a warning to the third party not to deliver the goods or money due to the defendant, but to hold them awaiting the outcome of the plaintiff's suit. The third party, the garnishee, after the warning holds the goods or debt as a trustee for the winner in the pending suit

Garofalo, Il (ēl garō'fälō), 1481–1559, Italian painter, one of the foremost artists of the Ferrarese school, whose real name was Benvenuto Tisi or Tisio He worked chiefly in the churches and palaces of Ferrara, Bologna, and Rome Examples of his art are numerous and well preserved, especially in Ferrara—*Adoration of the Magi* and *Resurrection of Lazarus*, in the museum, *The Kiss of Judas*, in the Church of San Francesco, *Madonna Enthroned* and the beautiful frescoes of SS Peter and Paul in the cathedral Other notable examples are *Sacrifice to Ceres* (National Gall , London), *St Nicholas Reviving the Birds* and *St Nicholas Asked to Revive a Dead Child* (Metropolitan Mus), *The Baptism of Christ* and *The Meditation of St Jerome* (National Gall of Art, Washington, D C), and many fine examples in the Vatican, Borghese Palace, and the Capitol, Rome, in the Uffizi and Pitti galleries, Florence, and in the Louvre

Garofalo, Raffaele (raf"fäā'lā), 1851–1934, Italian jurist and criminologist He studied at the Univ of Naples, where he later taught law and criminal procedure With Lombroso and Ferri, he founded the school of Italian positivists and helped (1892) to prepare a new code of penal procedure His *Criminologia* (1885) was translated into English by R W Millar (1914)

Garonne (garôn'), river, 402 mi long, SW France, in Gascony, Languedoc, and Guienne Rising in the central Pyrenees just inside Spain, it flows roughly NE to Toulouse, where it swings northwest, passing Agen and Bordeaux, to join the Dordogne and form the GIRONDE The Garonne receives nearly all the smaller rivers of SW France (Gers, Ariège, Tarn, Lot), but it is navigable only in its lower course Its flow is very irregular, and a lateral canal has been constructed from Toulouse to the Gironde

Garonne, Haute see HAUTE-GARONNE

gar pike, fresh-water fish found in the E and S United States, Central America, Mexico, and the West Indies The cylindrical body is armored with platelike scales, and the snoutlike jaws bear sharp teeth Gars are not palatable and are voracious feeders on more useful fish Among the several species are the alligator gar, the short-nosed gar, and the long-nosed gar The name garfish is sometimes used for the gar pike but is more correctly applied to the salt-water gar

Garretson, James Edmund, 1828–95, American pioneer in oral surgery, b Wilmington, Del , M D Univ of Pennsylvania, 1859 From 1874 he taught at Philadelphia Dental College (now part of Temple Univ), serving as dean from 1880 His textbook on oral surgery (1869) was the first and long the standard work in its field Under the name John Darby he published many popular books, the inspiration of a Garretsonian Society

Garrett, João Batista de Almeida see ALMEIDA GARRETT, JOÃO BATISTA DE

Garrett, Thomas, 1789–1871, American abolitionist, b Upper Darby, Pa A Quaker, he joined the Pennsylvania Abolition Society in 1818 At Wilmington, Del , where he became a hardware merchant and toolmaker, he made his home a station on the UNDERGROUND RAILROAD, helping 2,700 slaves to freedom He was not convicted until 1848, when the fine imposed took all his resources Friends helped him rebuild and he continued to aid slaves See W H Siebert, *The Underground Railroad from Slavery to Freedom* (1898)

Garrett, city (pop 4,285), NE Ind , N of Fort Wayne near Auburn It is a trading center for farmers

Garrettson, Freeborn, 1752–1827, American Methodist preacher, b Maryland At the time of his conversion to Methodism (1775), he freed his slaves and began his travels as a preacher In 1784 he went through the South, summoning preachers for the conference at which the Methodist Episcopal Church of the United States was organized and at which he was ordained He organized congregations in E New York and W New England, at the request of John Wesley, he wrote *The Experience and Travels of Mr Freeborn Garrettson* (1791) His zeal and travels helped greatly in the spread of his denomination in America See biography by E S Tipple (1910)

Garrettsville, village (pop 1,264), NE Ohio, SE of Cleveland HIRAM COLLEGE is 4 mi from here

Garrey, Walter Eugene, 1874–, American physiologist, b Reedsville, Wis , M D Rush Medical College, 1909 He taught in several colleges and was professor at Vanderbilt Univ from 1921 to 1944 His researches were especially in cardiac neurology and physiology

Garrick, David, 1717–79, English actor and manager He left the employ of his uncle, a wine exporter in Lisbon, to enter Dr Johnson's academy at Lichfield and six months later went with Johnson to London, where he set up a wine shop He began his great theatrical career by performing in his own play *Lethe* in 1740 and by his association with Peg Woffington A chance appearance as Harlequin at Gifford's Theatre, Goodman's Fields, led to an engagement at Ipswich, where, under the name Lyddal, he played Chamont in Otway's *Orphan*, Aboan in Southerne's *Oroonoko*, and Sir Harry Wildair in Farquhar's *Constant Couple* in 1741 After his appearance as Richard III the same year he was the idol of London and was engaged for the following year at Drury Lane There, from 1742 to 1745, his greatest roles were Hamlet, Macbeth, King Lear, and Abel Drugger in Jonson's *Alchemist* Short in stature but mercurial in presence, he had a simplicity of manner and diction that swept the declamatory school from the stage In 1747 Garrick became patentee and manager of Drury Lane He made important stage reforms—seating the audience in the body of the theater, introducing a system of invisible lighting, dressing the plays for their periods, employing the great stage designer Loutherburg, and establishing admission by ticket only Garrick was one of the circle of 18th-century notables that surrounded Johnson at "The Club" Besides training actors for his company and composing prologues and epilogues, he wrote *The Lying Valet* (1741), *Miss in Her Teens* (1747), and *The Irish Widow* (1772), and collaborated with George Colman the elder in writing *The Clandestine Marriage* (1766) His last appearance was in 1776 as Don Felix in *The Wonder!* by Susannah Centlivre His portrait was painted by Reynolds, Hogarth, and Gainsborough He was buried in Westminster Abbey Garrick appears in Boswell's *Johnson* See also Garrick's *Private Correspondence* (with memoir by James Boaden, 2 vols , 1831–32), biographies by Percy Fitzgerald (1868), F M W Parsons (1906), F A Hedgcock (1912), E P Stein (1938), and Margaret Barton (1948)

Garrison, Lindley Miller, 1864–1932, U S Secretary of War (1913–16), b Camden, N J , LL B Univ of Pennsylvania, 1885 After practicing law in New Jersey and in Philadelphia, Garrison served (1904–13) as vice chancellor of New Jersey President Wilson appointed (1913) him Secretary of War, but he resigned (1916) primarily because Wilson opposed his preparedness program

Garrison, William Lloyd, 1805–79, American abolitionist, b Newburyport, Mass He supplemented his limited schooling by a seven-year apprenticeship (1818–25) on the Newburyport *Herald*, became (1826) editor of the unsuccessful Newburyport *Free Press*, and in 1829 went to Baltimore to aid Benjamin LUNDY in publishing the *Genius of Universal Emancipation* This episode ended (1830) in his imprisonment seven weeks for libel On Jan 1, 1831, he published the first number of the *Liberator*, a paper which he continued for 35 years (the last number was dated Dec 29, 1865), or until after the Thirteenth Amendment had been adopted His leading article in the first number ended with these words, "I am in earnest—I will not equivocate I will not excuse—I will not retreat a single inch—and *I will be heard*" They indicate Garrison's uncompromising stand for immediate and complete abolition of slavery Though its circulation was never over 3,000, the *Liberator* became famous (notorious, to Southerners), for its editor wrote in startling and quotable language Garrison, a philosophical nonresistant, believed in the use of neither force nor the ballot to gain his end, but this only seemed to make his writing all the more militant, not to say inflammatory His reliance was wholly upon moral persuasion, but his intemperate language antagonized many Bitter attacks on the moderate antislavery element won him enemies in the North, and his opposition to political action divided the abolitionist host, but he did not swerve from his course In 1835 he suffered violence at the hands of a well-dressed Boston mob and thereby won a valuable convert to his cause in Wendell PHILLIPS Garrison opposed the work of the American Colonization Society in his *Thoughts on African Colonization* (1832) He was active in organizing (1831) the New England Anti-Slavery Society and in 1833 the American Anti-Slavery Society, of which he was president (1843–65) in its declining years Garrison crusaded for other reforms which he united with abolitionism, notably woman suffrage and prohibition, and since he demanded complete adherence to all his beliefs, he really had a small following He went to the extreme of advocating Northern secession from the Union because the Constitution, which Garrison characterized as "a covenant with death and an agreement with Hell," permitted slavery He publicly burned the Constitution at an abolitionist meeting in Framingham, Mass , on July 4, 1854, and opposed the Civil War until Lincoln issued the Emancipation Proclamation That Garrison was the foremost leader of the antislavery cause, a view generally held in the 19th cent and recently revived by his latest biographer, has been characterized as a "New England myth" The weight of historical evidence seems to indicate strongly that, while Garrison continued to make much noise, the effective fight against slavery was carried on by less well-known men who, for all their idealism, tackled the problem in a realistic manner (see ABOLITIONISTS) Garrison, a difficult personality, was not a good organizer. Even so, his contribution to the cause, though it was not as mighty as many consider it, was important. See

William Lloyd Garrison . . . His Life Told by His Children (4 vols, 1885–89); biography by Lindsay Swift (1911), G H Barnes, *The Antislavery Impulse, 1830–1844* (1933), Ralph Korngold, *Two Friends of Man* (1950)

Garrison, city (pop 1,117), W central N Dak, between Bismarck and Minot, in a lignite-mining and poultry area, inc 1920

Garry, Spokane (gă'rē), 1811–92, American missionary, a chief of the Spokane Indians He was educated at the expense of the Hudson's Bay Company at the mission school in Fort Garry (present Winnipeg) Converted to Christianity, he returned to his people, established a native school, and introduced Christian forms of worship He worked for friendship with the whites and helped to keep some of the tribes from joining the insurrection led by Chief JOSEPH His last years were, however, embittered by the incursions of the whites

Garry, Fort, early trading post on the site of the present city of WINNIPEG, Man It was founded in 1821 and named for Nicholas Garry, director of the Hudson's Bay Company, who was there in that year to arrange for the union of the Hudson's Bay Company and the North West Company The old fort was demolished in 1852, a larger one of the same name having been begun in 1835 Until the city was founded (1800s), the fort was the center and seat of authority in the Manitoba region It was captured by Louis RIEL in the rebellion of 1869 It was sold in 1882 and has been torn down, except for the gate which stands opposite the present Canadian National Railways station Lower Fort Garry, on the Red River, 19 mi below Fort Garry, was built in 1831 and still stands

Garshin, Vsevolod Mikhailovich (fusyĕ'vulŭt mĕkhī'luvĭch gar'shĭn), 1855–88, Russian short-story writer The story which first won him fame was "Four Days" (1877), "The Scarlet Blossom" (1883) is usually considered his masterpiece These with others, translated in *The Signal and Other Stories* (1912), are animated by a profound pity for mankind Garshin suffered intermittently from a mental disorder which ultimately led him to suicide

Garstang, John, 1876–, English archaeologist He was professor of archaeology at the Univ of Liverpool from 1907 to 1941, when he became professor emeritus He began conducting archaeological research in 1897 and directed expeditions in England, Africa, Asia Minor, and Palestine He was director of the British School of Archaeology at Jerusalem (1919–26) Among his writings are *Meroë, the City of the Ethiopians* (1911), *The Hittite Empire* (1929), *Foundations of Bible History Joshua, Judges* (1931), and *Prehistoric Mersin* (1950)

Garter, Order of the, oldest and most important of the orders of knighthood in England, instituted (c 1346) by Edward III The story of its origin in the restoration to the countess of Salisbury of her garter, with the remark, *Honi soit qui mal y pense*, "May he be shamed who thinks ill of it," is not accepted The original number of the knights was 25, to which was added the sovereign, but the membership has been extended and may include the queen and noble women The emblem of the order is a dark blue ribbon edged with gold, bearing the motto given above and worn by men on the left leg below the knee and by women on the left arm There is also an elaborate gold and enamel collar, or a blue ribbon from which hangs the emblem of St George, the patron saint of the order The abbreviation of the title, written after the name of the holder, is K G

Garter King-of-Arms, see HERALDS' COLLEGE

garter snake, common harmless snake of North America usually about 2 ft long Garter snakes are striped or banded lengthwise, and some are spotted Less aquatic than the related water snakes, they frequent dry places as well as swamps and marshes They prey only on cold-blooded animals, chiefly frogs, toads, small fish, and earthworms The common garter snake of the NE United States varies in color and pattern but is usually blackish or brownish with three yellow stripes The young are born alive in litters of about 30 to 65 or more The ribbon snake is a garter snake which prefers wet places

Garth, Sir Samuel, 1661–1719, English poet and physician, b Yorkshire, educated at Cambridge He advocated free dispensaries for treatment of the poor His satirical poem in couplet form called *The Dispensary* was published in 1699

Gärtner or **Gaertner, Joseph** (both yō'zĕf gĕrt'nur), 1732–91, German botanist He taught in Germany and at St Petersburg (1768–70), where he also directed the botanical gardens Gärtner wrote a standard work on the morphology of fruits and seeds *De fructibus et seminibus plantarum* (2 vols, 1788–91)

Garvan, Francis Patrick, 1875–1937, American lawyer, b East Hartford, Conn, grad New York Law School, 1899 He was assistant district attorney in New York city (1900–1910) and later (1919–23) dean of the law school of Fordham Univ In 1919 he was appointed alien property custodian by the U.S. government. He organized the Chemical Foundation, Inc, to develop German patents seized by the United States and thus did much to establish the American chemical industry

Garvey, Marcus, 1887–1940, American Negro leader, b Jamaica, in the West Indies A printer and editor, he turned to the racial problem and organized (1914) the Universal Negro Improvement Association. When he went (1917) to New York, he founded another branch of his association and became leader of what was essentially a Negro nationalist movement His association had the broad purposes of promoting unity among Negroes in many lands, of improving conditions in all Negro communities, and of developing independent Negro nations in Africa which would attain their own high civilization The project which captured public imagination was a Black Star Line Steamship Company to render triangular service between New York, the West Indies, and Africa After a total of $500,000 was subscribed, the project did not materialize, and Garvey was convicted (1925) of fraud for misusing the funds He served two years in an Atlanta prison and was deported to Jamaica, where he was elected several times to the Kingston council

Garvin, Lucius Fayette Clark, 1841–1922, governor of Rhode Island (1903–4), b Knoxville, Tenn, grad Amherst, 1862, and Harvard medical school, 1867 He practiced his profession in the mill village of Lonsdale, R I After reading *Progress and Poverty* by Henry George he became an enthusiastic single taxer He served 13 terms in the state assembly and three in the senate A perennial Democratic candidate for Congress and the governorship, he was elected chief executive in 1902 and 1903 That a Democrat and single taxer should be elected in Aldrich's Republican, machine-controlled state is an index to Garvin's personality and energy Since the state senate was Republican, however, he lacked legislative support He wrote on the single tax and economic questions

Garwood, industrial borough (pop 3,622), NE N J, W of Elizabeth, inc 1903 Paper products are made here

Gary, Elbert Henry, 1846–1927, American lawyer and industrialist, b near Wheaton, Ill, grad Union College of Law, Chicago, 1868 Rising rapidly as a corporation lawyer, he was for a time mayor of Wheaton and served two terms as county judge—afterwards always being known as Judge Gary His able organization of the American Steel and Wire Company prepared the way for J Pierpont Morgan to entrust him with the organization of the Federal Steel Company in 1898 and in 1901 with the organization of the enormous U S Steel Corp As chairman of the board of directors of the corporation, Gary was the dominant personality in the company until his death He closely directed its physical expansion and aided in founding the steel town, GARY, Ind (named for him) He adopted a policy of cooperation of management in the industry, and out of his noted "Gary dinners," where policy was discussed and informal agreements reached, grew the American Iron and Steel Institute In 1919 the Supreme Court ended the efforts of the U S government to dissolve the corporation as a monopoly Gary believed in high wages, promoted welfare and safety measures for employees, and introduced a scheme of employee stock ownership He was, however, adamantly opposed to recognizing labor unions and insisted on the open shop This policy and the notoriously long hours in the steel industry helped to bring on the bitter steel strike of 1919 It failed, but Gary later, under pressure of public opinion, shortened the working hours See biography by I M Tarbell (1925)

Gary, James Albert, 1833–1920, U S Postmaster General (1897–98), b near New London, Conn, grad Allegheny College, 1854 He was a partner with his father in, and ultimately owner of, cotton mills on the Patapsco river, in Maryland, and later had wide holdings Though defeated in the races for the House (1870, 1872) and the Maryland governorship (1879), he was the Republican leader in his state from 1872 to his death As President McKinley's Postmaster General, he urged founding of a postal savings bank

Gary, city (pop 111,719), NW Ind, at the southern end of Lake Michigan 25 mi SE of Chicago The land was purchased by the U S Steel Corp in 1905, and the city was chartered and named for Elbert H Gary in 1906 A great steel center for the world, it is midway between iron-ore beds of the Northwest and coal areas of the East and Southeast It has excellent railroad facilities, and the Calumet rivers have been converted into lake harbors The city also produces Portland cement, mechanical parts, and tin plate It has many parks and a well-planned system of boulevards

Gary plan: see SCHOOL

gas. 1 In general usage, the term *gas* is applied to any of a number of substances appearing in nature in the gaseous state under ordinary conditions of pressure and temperature It is used especially for illuminating gases such as air gas, coal gas, natural gas, oil gas, producer gas, and water gas A "gas" may be a chemical element, a chemical compound, or a mixture. The atmosphere of the earth is a mixture of gases Gaseous elements include hydrogen, helium, argon, chlorine, fluorine, krypton, neon, nitrogen, oxygen, and xenon Some common gaseous compounds are acetylene, ammonia, carbon dioxide, carbon monoxide, hydrogen sulphide, methane or marsh gas, and sulphur dioxide There are a number of varieties of POISON GAS, some of which are used in chemical warfare, for certain kinds of insecticides, and in fumigation LAUGHING GAS is often used for anesthesia in dentistry, ETHER, a liquid under ordinary conditions, volatilizes on slight rises in temperature Gasoline is often called gas The compression of certain gases forms the basis of one modern method of REFRIGERATION 2 In physics, gas is one of the three states in which matter occurs, i e, that state, as distinguished from solid and liquid, in which a substance exhibits neither definite shape nor definite volume Gases flow, as do liquids, into the shape of a containing vessel and for this reason are classed with liquids as fluids According to the kinetic molecular theory of MATTER, the molecules of a substance in the gaseous state move at a greater speed, and the distance between the molecules is greater, than in either a liquid or a solid The force of cohesion between the molecules of a gas is practically imperceptible, a condition which accounts for the fact that gases when unconfined are capable of unlimited DIFFUSION When a gas diffuses into a liquid and is held there, it is said to have undergone absorption by the liquid Certain solids are able to hold the molecules of gases upon their surfaces by adhesion, a phenomenon known as ADSORPTION Gases exhibit a number of uniform properties They are easily compressible, i e, a volume of gas can be reduced quite readily by COMPRESSION to a small fraction of itself Under great enough pressure any gas can be liquefied, but it must first be cooled below its critical temperature before it undergoes LIQUEFACTION According to Boyle's law, as the pressure on a gas is increased (the temperature being held constant), the volume of the gas decreases in direct proportion Deviations are noted in this behavior when a gas already under great pressure is compressed still more and approaches liquefaction Gases exert pressure against the sides of the vessel in which they are contained This pressure is the result of the continuous bombardment of the rapidly moving molecules against the confining walls Since heat is the kinetic energy of the molecules, when more is added and the temperature of the gas is raised the bombardment intensifies and an increase in the pressure results If a gas is confined so that its volume cannot become greater, the increase in its pressure upon the containing vessel is directly proportional to the increase in temperature (For the behavior of mixtures of gases, see DALTON'S LAW) According to Charles's law, if the pressure on a gas is constant, its volume is directly proportional to its temperature In all calculations of changes in the volume of gases and in the pressure upon them, when a change of temperature is involved a special scale known as the Kelvin or absolute scale is used Gases show uniformity also in their molecular structure and chemical activity Avogadro discovered that there are the same number of molecules in equal volumes of all gases measured under standard conditions of pressure and temperature This led to the conclusion that each molecule of an elemental gas, such as hydrogen, oxygen, and chlorine, consists of two atoms and therefore that the relative weight of a molecule, i e, the molecular weight of the gas, can be computed by multiplying the ATOMIC WEIGHT by two Another example of the uniformity of the behavior of gases is shown in the law of combining volumes as advanced in GAY-LUSSAC'S LAW, but probably the most striking illustration is that demonstrated experimentally by Avogadro If the molecular weight of any gas is measured out in grams under standard conditions of pressure and temperature, the volume of this quantity of any gas, known as the gram-molecular volume or molar volume, is found to be 22 4 liters

Gasca, Pedro de la (pā'drō dā lä gäs'kä), c 1485–1567? Spanish colonial administrator A Roman Catholic priest as well as a lawyer, he was selected by Emperor Charles V to restore order in Peru, was given full discretionary and executive powers as president of the *audiencia* of Lima, and was ordered to repeal the hated New Laws of LAS CASAS He arrived in 1547 after the death of the viceroy Blasco NÚÑEZ VELA Tactful, judicious, but unyielding, he wisely offered pardon to all and repealed the New Laws before mustering his forces and entering the field against Gonsalo PIZARRO, whom he defeated in 1548 and ordered executed Some semblance of order was restored to Peru, but he worked strictly along opportunistic lines Never having asked or accepted reward for service to the crown, he was made after his return to Spain in 1550 bishop of Sigüenza and Palencia

Gas City, city (pop 3,488), E central Ind, SE of Marion Glass is made here The city grew when a natural-gas boom occurred here in 1887.

Gascoigne, George (găskoin'), c 1539–1577, English poet, important as a pioneer in many fields of Eng-

lish literature The first essay on prosody in English appeared in the revision of his *Hundreth Sundrie Flowres* (1573) titled *The Posies of George Gascoigne* (1575), the first prose comedy in English, *Supposes* (1566), was his translation of Ariosto's *I suppositi*, the first Greek tragedy in English to be staged, *Jocasta* (1566), he translated from an Italian version of Euripides' *Phoenician Women*, and the first original nondramatic blank verse in English was in his satire *The Steele Glas* (1576) See studies by F E Schelling (1906) and C T Prouty (1942)

Gascoine, Sir William (gäs'koin), 1350?–1419, English jurist. He studied at Gray's Inn, became a king's sergeant in 1397, and became attorney to the duke of Hereford (later Henry IV) on his banishment He was made chief justice in 1400 Tradition supports the few extant facts which indicate his impartiality, dignity, and strength of character as a judge The story that Gascoine was a member of the court that condemned the earl marshal, Thomas Mowbray, and Richard Scrope, archbishop of York, is highly improbable, also improbable is the story (referred to by Shakspere in *Henry IV*, Part 2) that Gascoine committed Prince Henry (later Henry V) to prison for contempt of court

Gasconade (gäskŭnād'), river rising in S Missouri, in the Ozarks E of Springfield, and flowing northeast c 265 mi to the Missouri near Gasconade, E of Jefferson City

Gascony (gă'skunē), Fr *Gascogne* (gaskô'nyu), region and former province, SW France It is now occupied by the departments of Landes, Gers, and Hautes-Pyrénées and parts of Basses-Pyrénées, Lot-et-Garonne, Tarn-et-Garonne, and Haute-Garonne The sandy and swampy LANDES along the Atlantic coast, the majestic PYRENEES forming the border with Spain, and the hilly ARMAGNAC region between the Adour and the Garonne rivers are the main components of Gascony Fishing, stock raising, winegrowing, brandy distilling and the tourist trade are characteristic industries The historical capital is Auch, other towns are Bayonne, Biarritz, Luchon, Tarbes, and Lourdes Under the Romans the region was known first as Aquitania Propria, later as Novempopulana, and was inhabited by the Vascones or BASQUES, who since Paleolithic times had lived in the lands N and S of the Pyrenees Except in the region SW of the Adour, with Bayonne as its center, where the Basque language and customs have persisted to the present, Latin soon became the tongue of Novempopulana Conquered by the Visigoths (5th cent) and by the Franks (6th cent), Novempopulana was invaded in turn by Basque-speaking peoples from S of the Pyrenees, who in 601 set up the duchy of Vasconia or Gascony. Its limits fluctuated as the Basques fought the Visigoths, the Franks, and the Arabs throughout the Merovingian period Charlemagne forced the duke of Gascony to recognize Louis the Pious, king of Aquitaine, as his suzerain Early in the 9th cent the Basques lost interest in the lands N of the Adour, and Gascony, invaded by the Northmen, fell into anarchy and split up into small counties and seignories Meanwhile the dukes of AQUITAINE expanded southward and in the 11th cent united Gascony with their duchy Only Lower NAVARRE and BÉARN continued separate Gascony shared the fate of Aquitaine, passed under English control in 1152, and was a major battleground in the Hundred Years War, when the war was finished, it was completely recovered by France Gascony was then not a political unit; most of its territory was held by the counts of Armagnac, the counts of FOIX, and the lords of ALBRET All these lands passed, through marriage and inheritance, to Henry of Navarre, who became king of France as Henry IV in 1589 and united them to the royal domain in 1607 The province was divided under the jurisdictions of the parlements of Bordeaux and of Toulouse

gas engine see INTERNAL-COMBUSTION ENGINE.

Gashmu (-mū), the same as GESHEM

Gaskell, Elizabeth Cleghorn (Stevenson) (gă'skŭl), 1810–65, English novelist Her mother died when Mrs. Gaskell was only 13 months old and she was brought up in Knutsford, Cheshire, the background of *Ruth* (1853) and of *Cranford* (1853), her classic tale of British village life first published in Dickens's magazine, *Household Words* *Mary Barton* (1848) and *North and South* (1855) are novels of industrial life in Manchester, where she lived with her husband, who was a Unitarian minister Other novels were *Sylvia's Lovers* (1863) and *Wives and Daughters* (1866), unfinished at the time of her death This last work and *Cranford* relegated the moral to the background, while her other books succeeded as social commentaries. She was the biographer of Charlotte Brontë, but the first edition (1857) of the masterly biography roused such a furor for its statements concerning the Brontë family, particularly Branwell, that a libel suit was threatened See biographies by A S. Whitfield (1929), G. De W. Sanders (1929), and E. S. Haldane (1930); *Letters of Mrs. Gaskell and Charles Eliot Norton, 1855–1865* (ed by Jane Whitehill, 1932); L. P. Stebbins, *A Victorian Album* (1946).

gasoline, light, volatile, fuel oil, a mixture of hydrocarbons, obtained in the fractional distillation and "cracking" of petroleum and widely used as a fuel for gas engines, for cooking, and as an organic solvent It is obtained also from NATURAL GAS In England it is called petrol Ethyl gasoline contains lead tetraethyl, which acts upon the gasoline-air mixture in a motor, reducing the rate of combustion and permitting a higher compression ratio, thus stopping engine "knocking"

gasoline engine see INTERNAL-COMBUSTION ENGINE

Gaspar see WISE MEN OF THE EAST

Gasparri, Pietro (pyā'trō gäspär'rē), 1852–1934, Italian churchman, cardinal of the Roman Church He taught canon law at the Catholic Institute in Paris (1879–98) and was apostolic delegate thereafter in South America After his return he was asked by Pius X to direct the great codification of the canon law, and he received for his excellent work the cardinal's hat (1907) Just after the outbreak of the First World War (1914) Benedict XV made Cardinal Gasparri papal secretary of state, and he worked untiringly, first for peace, then for a solution of the difficulties growing out of the war Pius XI retained his services, which he brought to a culmination in the LATERAN TREATY of 1929, ending the Roman question, establishing an agreement between Italy and the papacy, and setting up VATICAN CITY He retired in 1930 and was succeeded by his pupil, Eugenio Pacelli, who later became pope as Pius XII Gasparri is the author of a widely used catechism

Gaspé, Philippe Aubert de (fēlēp' ōbĕr' dŭ gäspā'), 1786–1871, French Canadian author His *Les Anciens Canadiens* (1863), a classic of French Canadian literature, several times translated into English, is valuable for its pictures of life and customs in Quebec at the end of the 18th cent His *Mémoires* (1866) are also of historical interest

Gaspé (gäspā'), village (pop 924), E Que , on Gaspé Bay near the eastern extremity of Gaspé Peninsula It is a trade center and a tourist resort Jacques Cartier landed here in 1534, seeking refuge from a storm, and took possession for France

Gaspé, Cape, eastern extremity of Gaspé Peninsula, E Que , on the Gulf of St Lawrence

Gaspé Bay, deep inlet of the Gulf of St Lawrence, 22 mi long and 6 mi wide, E Que , at the east end of Gaspé Peninsula The village of Gaspé is near the head of the bay

Gaspee (gă'spē', gäspē'), British revenue cutter, burned (June 10, 1772) at Namquit (now Gaspee) Point in the present city of Warwick on the western shore of Narragansett Bay, R I The vessel arrived in March, 1772, to enforce the obnoxious revenue laws in an area where virtually the whole citizenry was engaged in smuggling, and her presence was decidedly unwelcome Her captain provoked the navigators of the bay further by the manner in which he carried out his duties On June 9, 1772, the *Gaspee* was lured aground c 7 mi S of Providence while giving chase to a suspect A group of prominent Providence men, including John Brown and Samuel Whipple, decided to burn the ship, and Capt Abraham WHIPPLE led the raiders They boarded the *Gaspee*, wounded the captain, captured the crew, and then burned the vessel to the water's edge Gov Joseph Wanton, in the difficult position of having to enforce British regulations without offending his constituents (Rhode Island elected its own governor), admirably solved the situation by issuing proclamations for the arrest of the officially unknown offenders and then doing practically nothing about them Despite a large reward offered by the British, the names of the men involved, though well known in Providence, were not revealed until after the outbreak of the American Revolution The incident was one of the more famous colonial acts of defiance in the troubled years before independence

Gaspé Peninsula, tongue of land, E Que , between the estuary of the St Lawrence river on the north and Chaleur Bay on the south, extending eastward into the Gulf of St Lawrence It is c 150 mi long and 60 to 90 mi broad Its backbone is an extension of the Appalachian mountain system and is known in its highest part as the Shickshock Mts Tabletop Mt (4,160 ft) is the highest elevation in SE Canada The interior of the peninsula is a mountain wilderness, completely forested and with numerous mountain streams and lakes, offering excellent hunting and fishing Settlement is almost wholly confined to the coastal rim, but a few miles wide, where there is a succession of picturesque villages whose inhabitants live by a combination of agriculture and fishing (chiefly cod) The inhabitants on the north and northeast are chiefly French Canadian, and on the south and southeast a mixture of French Canadian, Acadian, Scottish, Irish, and English The coast with its combination of mountain and sea, with many bold headlands, is famed for its beauty. A highway completely encircling the peninsula was opened in 1928. The chief towns are Gaspé, Matane, Percé, Chandler, and New Carlisle See J M. Clark, *The Gaspé* (1935); D. C Hogner, *Summer Roads to Gaspé* (1939); Doris Montgomery, *The Gaspé Coast in Focus* (1940).

Gasperi, Alcide de: see DE GASPERI, ALCIDE.

Gasquet, Francis Aidan (gă'skĭt), 1846–1929, English Roman Catholic scholar, cardinal of the Roman Church, a Benedictine. He is best known for his historical studies, principally of religious and social life in England in the Middle Ages and the Reformation His work has brought about considerable change in the prevailing views of the Reformation in England Notable among his works are *Henry VIII and the English Monasteries* (1888), *The Great Pestilence, A D 1348–9* (1893, 2d ed , with title *The Black Death of 1348 and 1349*, 1908), *The Old English Bible and Other Essays* (1897), *The Eve of the Reformation* (1899), *English Monastic Life* (1904), and *Monastic Life in the Middle Ages* (1922, essays) Pius X appointed him president of a commission to revise the Vulgate He was made a cardinal in 1914 and appointed prefect of the Vatican archives in 1918

Gass, Patrick, 1771–1870, American explorer, member of the LEWIS AND CLARK EXPEDITION, b Perry co , Pa His journal of the trip across the continent first appeared in 1807 and was widely read Gass later fought under Andrew Jackson against the Creeks and in the War of 1812 See edition of the journal by J K Hosmer (1904).

Gassaway, town (pop. 1,429), central W Va , on the Elk river and NE of Charleston, founded 1904 It has railroad shops

Gassendi, Pierre (pyĕr' gäsändē'), 1592–1655, French philosopher and scientist A teacher and a priest, Gassendi taught at Digne, Aix, and the Royal College at Paris and held several church offices In all his activities he emphasized the importance of experimental research, and his materialism is supposed to have influenced Leibniz He ranked with the leading mathematicians of his day He violently opposed the authoritarianism of Aristotle, especially in the *Exercitationes paradoxicae adversus Aristoteleos* (1624) He revived the atomic theory of Epicurus, thereby opposing the Cartesian school, and attempted to reconcile atomism with the teachings of the Church His works include *De vita, moribus, et doctrina Epicuri* (1647) and *Syntagma philosophiae Epicuri* (1649)

Gasser, Herbert Spencer (gă'sur), 1888–, American physiologist, b Platteville, Wis , grad Univ of Wisconsin (B A , 1910, M A , 1911), M D Johns Hopkins, 1915 He shared the 1944 Nobel Prize in Physiology and Medicine with Joseph Erlanger for their work on the electrophysiology of nerves, using a cathode-ray oscillograph Gasser became director of the Rockefeller Institute for Medical Research in 1935 He was formerly professor of physiology at the medical college of Cornell Univ (1931–35)

Gasset, José Ortega see ORTEGA Y GASSET, JOSÉ

Gastein (gä'stīn), valley and resort area in Salzburg, W central Austria, on the northern slope of the Hohe Tauern Some gold and silver are mined in long-worked mines Bad Gastein, one of the most fashionable bathing places of Europe, has radium thermal springs, its water is also piped to Bad Hofgastein, another resort By the **Gastein Convention** (1865) Austria assumed the administration of Holstein, and Prussia that of Schleswig (see SCHLESWIG-HOLSTEIN)

Gaster, Moses (gas'tur), 1856–1939, Rumanian-Jewish scholar and writer, grad Univ of Bucharest, 1873, Ph D Univ of Leipzig, 1877 He taught language and literature at the Univ of Bucharest from 1881 to 1885, when he was expelled from the country for his championship of the Jewish cause Settling in England, he was a lecturer at Oxford (1886–91) and principal of Judith Montefiore College (1890–96) From 1887 until his retirement in 1919, he was chief rabbi of the Sephardic communities in England For some years he was active in the Zionist movement and was vice president of the first Zionist congress in Basel (1897) He is the author of many works on theological, historical, and literary subjects, including *History of Rumanian Popular Literature* (1883), a new edition of the Sephardic prayer book (5 vols , 1901–6), and *Example of the Rabbis* (1924)

Gaston III, 1331–91, count of Foix and viscount of Béarn (1343–91) He was surnamed Phoebus because of his handsome appearance A typical feudal lord of his time, he was constantly embroiled in warfare with his neighbor, the count of Armagnac, supported the kings of France against England, but rebelled when Charles VI cancelled (1380) his appointment as governor of Languedoc, and was a passionate huntsman His brilliant court at Orthez has been made famous by Froissart, who visited it and who showered praise on Gaston in his chronicles. He was a patron of art and literature and himself wrote a treatise on the hunting of wild beasts and birds of prey

Gaston, Herbert Earle (gă'stŭn), 1881–, American journalist and public official, b Linn co , Oregon After study at the Univ. of Washington (1903–4) and the Univ of Chicago (1904–6), he worked on several newspapers throughout the country He was appointed (1931) deputy commissioner of the New York state conservation commission, was assistant to the Secretary of the Treasury (1933–39) and Assistant Secretary of the Treasury (1939–45). He also held several other important executive posts concurrently. He later became vice chairman

(1945) and chairman (1949) of the Federal export-import bank.

Gaston, William, 1778–1844, American jurist, b New Bern, N C , grad. College of New Jersey (now Princeton Univ.), 1796. After practicing law in his native city, he served a number of terms as a Federalist in each house of the state legislature, earning a reputation as a framer of legislation. While in the U S Congress (1813–17) during the War of 1812, he was a sharp critic of the administration's war program From 1833 until his death, Gaston, one of the few Roman Catholics in the state, was a justice of the North Carolina supreme court, winning respect for the clarity and liberality of his opinions As a delegate to the state constitutional convention he promoted liberal policies as to suffrage and representation He declined several national positions to continue his work as a judge and speaker in North Carolina. See biography by J H Schauinger (1949).

Gaston de Foix: see FOIX, GASTON DE

Gastonia (găstō'nēu), city (pop. 21,313), co seat of Gaston co., W central N C , W of Charlotte, in the piedmont, inc 1877 It is an important textile-mill center, and in 1935 a large tire-fabric factory was established here Gastonia has city-manager government Near by are the state orthopedic hospital and KINGS MOUNTAIN battlefield In a serious cotton-mill strike in 1929 several lives were lost

gastric juice, secretion of cells in the lining of the stomach It contains pepsin, a digestive enzyme which acts on proteins, and rennin, which curdles milk Hydrochloric acid, essential in the digestion of proteins, is also a component of the gastric juice Ulcers of the stomach may result from an over-secretion of hydrochloric acid, an under-secretion may result in nausea and vomiting A decrease or lack of hydrochloric acid is associated with such conditions as malnutrition, pernicious anemia, chronic gastritis, and carcinoma of the stomach

Gastrikland, Swed *Gästrikland* (yĕ'strĭkländ"), historic province, E central Sweden It is now administratively part of GAVLEBORG CO

gastropod. see MOLLUSK

Gat, Libya see GHAT

Gata, Sierra de (syĕ'rä dā gä'tä), mountain range, W Spain Between the valleys of the Douro and Tagus, it separates Leon from Estremadura

Gatam (gā'-), son of ELIPHAZ 1

Gatchina (gä'chēnū), city (pop 18,589), RSFSR, SSW of Leningrad It developed around the imperial palace (built 1766–70), used as a summer residence since the reign of Paul I The city was the scene (1917–19) of severe battles in the Russian civil war and was occupied (1941–44) by the Germans in the Second World War during the siege of Leningrad The palace (now a museum) was looted by the Germans

Gate City, trade town (pop 1,565), extreme SW Va , in the Clinch Mts near the Tenn line, settled in the late 18th cent , inc. 1892 The courthouse of Scott co is here Natural Tunnel (100–200 ft high, 130 ft wide, and c 900 ft long) is near by

Gates, Frederick Taylor, 1853–1929, American Baptist clergyman and educator After helping to raise funds for the founding of the new Univ of Chicago, he became assistant to John D Rockefeller in business and philanthropic activities In this capacity he organized the General Education Board, the Rockefeller Foundation, and the Rockefeller Institute for Medical Research

Gates, George Augustus, 1851–1912, American educator, b. Topsham, Vt , grad Dartmouth, 1873, and Andover Theological Seminary, 1888, and entered the ministry From 1887 to 1900 he was president of Grinnell College, which became, under his leadership, a noted center of cultural and religious liberalism He later served as president of Pomona College (1901–9) and of Fisk Univ His distinguished administrative career was cut short by a railroad accident, and in 1912 he committed suicide See biography by his wife, Isabel Smith Gates (1915)

Gates, Horatio, 1727–1806, American Revolutionary general, b Maldon, Essex, England He arrived in America to fight in the French and Indian War and saw action with Gen. Edward Braddock, at Fort Herkimer (near present Herkimer, N Y), and in the expedition against Martinique He returned to England (1765), resigned from the army, and returned to America (1772) to settle in what is now West Virginia At the start of the American Revolution, he joined the patriot cause as a general and played a part in training American troops outside Boston In 1776 Gates was given a command in the north under the supreme command of Philip J. Schuyler, whom he replaced as commander in the SARATOGA CAMPAIGN (1777). The overwhelming success of the Americans in defeating General Burgoyne made Gates a national hero, and the Continental Congress appointed him president of the board of war. Modern historians have tended to give less credit to Gates and more to Benedict Arnold, Daniel Morgan, and other subordinates, but the matter is debatable At the time Gates was considered a serious rival of Washington, and the aim of the so-called CONWAY CABAL was to make Gates commander in chief. Gates's part in this unsuccessful plan has never been fully determined In June, 1780, he was ordered south to command in the Carolinas (see CAROLINA CAMPAIGN) Poorly organized supply, badly trained troops, and hasty planning paved the way for a disgraceful defeat at Camden (1780), and Gates outdistanced his staff and men in riding away from the disaster He was plunged into deep disgrace and was superseded by Nathanael GREENE. There was never any official investigation of the affair, and Gates rejoined (1782) the army at Newburgh, N Y He freed his slaves in 1790 and moved to New York, where he spent the rest of his life See biography by S W Patterson (1941)

Gates, John Warne, 1855–1911, American financier and promoter, b near Chicago He found a market for wire fencing on the Western plains, began the manufacture of it in St Louis, and, by a succession of consolidations and promotion schemes, organized (1898) the American Steel and Wire Company He became a conspicuous operator on grain and stock exchanges and later, interesting himself in oil, became prominent in the development of Port Arthur, Texas See R I Warshow, *Bet-a-Million Gates* (1932).

Gates, Sir Thomas, fl 1585–1621, colonial governor of Virginia (1611–14) He was knighted for his services under Robert Devereux, 2d earl of Essex, in the successful expedition against Cádiz in 1596. Gates, who had been a lieutenant in the expedition (1585–86) under Sir Francis Drake which removed Sir Walter Ralegh's first colony from Roanoke Island, was the first named of the grantees in the original charter (1606) of the London Company, which founded Virginia In 1609 he commanded, as deputy governor, the "third supply" to the colony, a fleet of nine ships with over 500 colonists Two of the ships, including Gates's *Sea Venture*, were wrecked in the Bermudas (the story of this wreck as subsequently written by William Strachey, a survivor, inspired Shakspere's *Tempest*). The survivors supported themselves for 10 months in the Bermudas before they completed two pinnaces in which they finally reached Jamestown in May, 1610 Arriving at the end of the "starving time" to find that only about 10 percent of the nearly 500 colonists had survived the rigorous winter, Gates resolved to abandon the colony He had actually proceeded down the bay on the way to England in June when he was met by the governor, Lord DE LA WARR, heading a new relief At De la Warr's orders the settlers turned back to Jamestown That autumn Gates returned to England, leaving Sir Thomas Dale in charge, and in Aug , 1611, he reappeared at Jamestown with a new expedition containing 300 persons (including his wife and daughters) and many cattle and swine Since De la Warr had returned to England in March, Gates was now governor until March, 1614, when he also went back to England He planned further expeditions to Virginia, but they never materialized He is thought to have died in the East Indies in 1621 See Alexander Brown, *The Genesis of the United States* (1890)

Gateshead (gāts'hĕd), county borough (1931 pop 122,447, 1947 estimated pop 114,940), Durham, England It is on the Tyne opposite Newcastle, with which it is connected by several bridges The parish Church of St Mary dates from the 12th cent or earlier but has been rebuilt Gateshead has locomotive works and railroad shops Shipbuilding and the manufacture of glass, iron goods, cables, and chemicals are important There are coal mines in the vicinity, and Gateshead Fell is noted for its grindstone quarries.

Gatesville, city (1940 pop 3,177, 1947 estimated pop 5,000), co seat of Coryell co , central Texas, on the Leon river and WSW of Waco The area has cotton, grain, and poultry farms A state training school for delinquent boys is here Fort Gates, a long-vanished military post, was established near by in 1849

Gath (gāth) [Heb , =wine press], unidentified royal city of the Philistines, on the borders of Judah It was the birthplace of Goliath, and it was a place of refuge for David in the outlaw years Later he had a loyal bodyguard of Gittites, i e , inhabitants of Gath. Joshua 11 22, 13 3, 1 Sam 5 8, 6 17, 17 4, 23,52; 21.10, 2 Sam 6 10, 15 18, 21 19, 2 Kings 12 17, 1 Chron 7 21, 18 1, 2 Chron 11 8, 26 6, Amos 6 2

Gathas: see ZOROASTRIANISM

Gath-hepher (–hē'fûr) [Heb , =wine press of the hole], town, Palestine, near Nazareth It was the home of Jonah. 2 Kings 14 25 Gittah-hepher Joshua 29 13

Gath-rimmon [Heb , =wine press of the pomegranate tree] **1** Town, W central Palestine Joshua 19 45, 21 24; 1 Chron 6 69 **2** See IBLEAM

Gatineau (gă'tĭnō"), village (pop 2,822), SW Que , E of Hull and on the north shore of the Ottawa below the junction of the Gatineau river

Gatineau, river of SW Quebec, rising in the Laurentians and flowing 230 mi S to the Ottawa river at Hull, opposite Ottawa It has several rapids and hydroelectric power plants

Gatlinburg, city (estimated permanent pop 2,000), E Tenn., SE of Knoxville, near the foot of Mt. Le Conte in Great Smoky Mountains National Park. The park headquarters are near Gatlinburg It is a resort, with several museums, a settlement school, and handicraft workshops

Gatling, Richard Jordan, 1818–1903, American inventor, b Winton, Hertford co , N C He invented agricultural implements, which he manufactured in St Louis, and then studied medicine in Indiana, but he is remembered as the creator of a multiple-firing gun which was the precursor of the modern MACHINE GUN He offered the Gatling gun to the Union army in the Civil War and successfully demonstrated it in Dec , 1862, but it was not accepted by the Ordnance Dept until 1866, when the Civil War was ended It was long used by the U S army until replaced by more modern types His name is dubiously immortalized in the word *gat*, slang for a gun, usually meaning an automatic pistol

Gatschet, Albert Samuel (gă'chĕt), 1832–1907, American ethnologist, b Switzerland A linguist trained in the universities of Bern and Berlin, he was after his arrival in the United States a pioneer in the scientific study of American Indian languages In 1877 he became ethnologist of the U S Geological Survey, and in 1879 he went to the newly organized Bureau of American Ethnology His many reports and records were valuable, a study of the Klamath Indians published in 1890 particularly won praise

Gatti, Bernardino (bĕr"närdē'nō gät'tē), c 1495–1575, Italian painter of the Lombard school, called Il Sojaro or Sogliaro (sōlyä'rō) [the cooper], pupil and imitator of Correggio He completed Pordenone's frescoes of the Madonna in Santa Maria di Campagna, Piacenza Important examples of his work are *Pietà* (Church of La Maddalena, Parma), an altarpiece, *Madonna and Donors* (cathedral, Pavia), the beautiful *Assumption* (cupola of the Church of Madonna della Steccata, Parma), *Nativity* (Church of San Pietro, Cremona), *Crucifixion* and *Ecce Homo* (Naples), and *The Miracle of the Multiplication of the Loaves*, a large and richly colored painting (refectory of San Pietro, Cremona)

Gatti-Casazza, Giulio (jōō'lyō gät'tē-käzät'tsä), 1869–1940, Italian operatic manager He was educated to be a naval engineer, but in 1893 he succeeded his father as director of the municipal theater at Ferrara He became director of La Scala Opera Company, Milan, in 1898, leaving in 1908 to direct the Metropolitan Opera, New York In 1935 he retired and returned to Italy His first wife was the singer Frances Alda His autobiography, *Memories of the Opera* (1941), was published posthumously.

Gatty, Harold, 1903–, American aviator, b Australia He studied navigation at the Royal Australian Naval College and sailed for 10 years on merchant vessels He came to the United States in 1927 and became interested in aeronautics In 1931 he circumnavigated the globe with Wiley Post in eight days With Post he wrote *Around the World in Eight Days* (1931)

Gatun Lake, artificial lake (alt 85 ft , area 163 38 sq mi), Panama Canal Zone, formed by impounding the waters of the Chagres river Gatun Dam, 1½ mi long and 105 ft high, controls the level of the lake, which is used as part of the canal route The lower Chagres river valley, now submerged, was first selected as a transisthmian route in 1848 by John Lloyd STEPHENS

gaucho (gou'chō), a cowboy of the Argentine PAMPA, commonly a mestizo The typical gaucho, a familiar figure since the early 18th cent , is a daring, skillful horseman and plainsman, with an independent nature and a love for adventure and for wandering As Indian fighter, as revolutionary soldier, and as campaigner in frequent internal struggles he has played a significant role in national life The immigration of large numbers of European farmers to the Pampa in the late 19th cent marked the beginning of his gradual disappearance The *pajador*, a wandering minstrel of the plain, is a type of gaucho The gaucho occupies an important place in the literature of Argentina (and of Uruguay and Paraguay, where he is also known) and is especially glorified in *Martín Fierro* by José HERNÁNDEZ

Gaudeamus igitur (gou"dāä'mōōs ĭ'gĭtōōr") [Latin, =let us rejoice therefore], probably the most widely known of modern student songs Though the variant forms of it did not appear in print until the middle of the 18th cent and its present form was not set until 1781, it is based on student songs that go back at least to the 13th cent Its Latin verses are very fine. It seems to have originated in parodies of, and borrowing from, religious songs

Gauden, John (gô'dĭn), 1605–62, English clergyman He claimed to have written the EIKON BASILIKE (1649), a tract in defense of Charles I, which drew in reply the resounding *Eikonoklastes* of Milton *Eikon Basilike* was either written by Gauden or compiled from notes of Charles I After the Restoration, Gauden was bishop of Exeter (1660–62) and of Worcester (1662)

Gaudier-Brzeska, Henri (ärē' gōdyā'-bûrzĕska'), 1891–1915, French sculptor, the chief exponent of vorticism in sculpture Educated in England and Germany, Henri Gaudier added his wife's name, Brzeska, to his own after his return to France in

1910 He was killed in the First World War at the age of 24 He is known for his animal sculptures and his abstract figures, *The Dancer*, *The Singer*, and *The Embracers* See study by Ezra Pound (1916), H S Ede, *Savage Messiah* (1931).

Gaugamela: see ARBELA

Gauguin, Paul (pôl' gōgĕ'), 1848–1903, French painter, b Paris, son of a journalist and a French-Peruvian mother First a sailor, then a successful banker in Paris with painting for a hobby, Gauguin began life as a painter at the age of 35 In 1883 he gave up his position in the bank and soon after separated from his wife and children and devoted himself to his art He allied himself with the impressionist group and in 1886 contributed 19 pictures to the last impressionist exhibition The following year he sold all his possessions and went to Martinique, but illness forced him to return within a year The following years were spent between Paris and Brittany with a short but pregnant stay at Arles with Van Gogh In 1891 Gauguin sold 30 canvases and with the proceeds went to Tahiti, where he spent two years, painted some of his finest pictures, and wrote *Noa Noa* (Eng tr, 1924), an autobiographical novel of Tahiti In 1893 he returned to France, collected a legacy, and exhibited his work, rousing some interest but making very little money Disheartened and ill, he again set out for the South Seas in 1895 There his last years were spent in considerable discomfort of mind and body, but he painted until the end He died at Atuona in the Marquesas Islands Today his paintings are highly prized His figure compositions, gorgeous in color and highly decorative, have won him a place among the greatest of modern masters Classed as a postimpressionist, Gauguin did much to restore the interest of painters in the fundamentals of color and pattern for their own sake Beautiful examples of his work are to be seen in private collections and in public galleries in Europe and America, including the Louvre, the Luxembourg Museum, Paris, the Metropolitan Museum, and the Art Institute of Chicago *Ia Orana Maria* (*Ave Maria*) is in the Lewisohn Collection, New York In addition to his painting Gauguin produced some fine wood carvings and lithographs Somerset Maugham's *Moon and Sixpence* is based on the life of Gauguin See *Paul Gauguin's Intimate Journals* (with preface by Emil Gauguin, Eng tr, 1931) and *Letters to His Wife and Friends* (ed by Maurice Malingue, Eng tr, 1949), Pola Gauguin, *My Father, Paul Gauguin* (Eng tr, 1937), biography by Robert Burnett (1938)

Gaul, Alfred Robert, 1837-1913, English composer He wrote numerous cantatas, of which *The Holy City* (1882) is most famous

Gaul, Gilbert William, 1855–1919, American painter of military scenes and of Western life, b Jersey City, N J His battle scenes are valuable for their accuracy and have been used to illustrate books on the Civil War *Battery H in Action* is in Toledo, Ohio, and *Exchange of Prisoners* is in the Democratic Club, New York city

Gaul (gôl), Latin *Gallia* (gă'lēu), ancient designation for the land S and W of the Rhine, W of the Alps, and N of the Pyrenees The name was extended by the Romans to include Italy from Lucca and Rimini northwards, excluding Liguria This extension of the name is derived from its settlers of the 4th and 3d cent B C —invading Celts, who were called Gauls by the Romans Their cousins in Gaul proper (modern France) probably had been there since 600 B C at least, for the Greeks of Massilia (Marseilles) knew them The Gaul in Italy was called Cisalpine Gaul [on this side the Alps], in distinction to Transalpine Gaul, Cisalpine Gaul was divided into Cispadane Gaul [on this side the Po] and Transpadane Gaul By 100 B C, Rome had acquired S Transalpine Gaul, and by the time of Julius CAESAR it had been pacified It was usually called the Province (*Provincia*, hence modern Provence), and it included a strip 100 mi wide along the sea from the E Pyrenees northeastward and up the Rhone valley nearly to Lyons Julius Caesar conquered Gaul in the GALLIC WARS (58 B C –51 B C) He is the best ancient source on ancient Gaul, and he has immortalized its three ethnic divisions, Aquitania (S of the Garonne), Gaul proper (modern central France), and Belgica (very roughly Belgium) Aquitania was probably inhabited by the ancestors of the Basques, and the Belgae were probably Celts, like the rest of the Gauls The Romanization of Gaul went very rapidly Its great administrative divisions were Narbonensis (the old Province), Aquitania, now including as much to the north of the Garonne as to the south, Lugdunensis, a narrow central strip (Brittany, Normandy, and the Saône valley), and Belgica, including most of the rest Upper and Lower Germany were taken from Gaul, these included the upper Rhine, Alsace, W Switzerland, and the Franche-Comté, and E Belgium, S Netherlands, and the Rhineland After Caesar's conquest the only serious attempt to rebel against Rome was the rising of Postumus (A D. 257), but Gallo-Roman civilization was too strong to fall before anything but the Germans of the 5th and 6th cent In Roman Gaul it often became customary to call the chief center of a tribe by the tribe's name, using a plural case in *-s* Similarly the country around about would be called by an adjective or compounded form of the tribal name Many of these names survive today The principal tribes of Gaul (with the modern survivals or locations) were Abrincati (Avranches), Aedui; Allobroges; Ambiani (Amiens); Andecavi (Angers, Anjou), Atrebates (Arras), Baiocassi (Bayeux), Bellovaci (Beauvais), Bituriges (Bourges, Berry), Caduci (Cahors, Quercy); Carnutes (Chartres), Catalauni (Châlons), Cenomani (Le Mans, Maine), Eburovici (Évreux), Helvetii; Lemovices (Limoges, Limousin), Lingones (Langres), Lexovii (Lisieux), Meldae (Meaux), Namnetes (Nantes), Nervii, Parisii (Paris), Petrocorii (Périgueux, Périgord), Pictones or Pictavi (Poitiers, Poitou), Redones (Rennes, Breton *Roazon*), Remi (Rheims), Ruteni (Rodez), Santones (Saintes), Senones (Sens), Sequani, in the Franche-Comté, Silvanecti (Senlis), Suessiones (Soissons), Treveri (Trier, French *Trèves*), Tricassi (Troyes), Turones (Tours, Touraine), Veneti (Vannes, Breton *Gwened*) Gallo-Roman civilization was essentially the extension of the villa system (see FEUDALISM) A landed aristocracy grew up, employing the laborers, who made up the principal part of the population The influence of Christianity forwarded the local organization about the cities The greatest testimony to the stability and thoroughness of the culture of Roman Gaul is the survival of the Latin language as French For history and bibliography, see FRANCE

Gauley Bridge, unincorporated village (pop 937), S central W Va, at the confluence of the New and Gauley rivers to form the Kanawha In the building of a tunnel (1930–32) through near-by Gauley Mt a number of workers died of silicosis, a congressional investigation resulted

Gaulle, Charles de (shārl' du gōl'), 1890–, French general and politician, grad Saint-Cyr He served with distinction in the First World War until his capture in 1916 In 1921 he served under Gen Maxime Weygand in Poland In his then-neglected work, *The Army of the Future* (1934, Eng tr, 1941), he foresaw and advocated the mobile and motorized type of warfare by which Germany was to conquer France in 1940 In the Second World War, promoted brigadier general (1940) and made undersecretary of war under Premier Paul Reynaud, he opposed the Franco-German armistice and fled to London, where he organized the Free French forces He was sentenced to death *in absentia* by a French military court In Oct, 1940, after rallying several French colonies to his movement, he formed the Council of Defense for the French Empire, which was transformed (Sept, 1941) into the Free French National Committee The growing Free French forces were successful in Syria, Madagascar, and North Africa Gaulle became (June, 1943) co-president with Gen Henri Honoré GIRAUD of the newly formed French Committee of National Liberation at Algiers Though the U S Dept of State was hostile to him, he succeeded in forcing Giraud out of the committee, which was proclaimed the provisional government in June, 1944 His government, not fully recognized by the principal Allies until Oct, 1944, returned to Paris on Aug 26 Unanimously elected provisional president of the new French republic (Nov, 1945), he resigned (Jan, 1946) when the leftist parties ceased to support him Always a believer in his personal mission, he remained in retirement only briefly Most of the rightist elements having gathered under his banner, he became (1947) head of a new party which claimed not to be a party but nevertheless took part in subsequent elections—the Reunion of the French People In several important speeches he violently attacked the constitution of the Fourth Republic, denounced Soviet Russia as an enemy as dangerous as Nazi Germany, advocated the rebirth of France as a military power, and damned the institution of party politics André MALRAUX became one of his most eloquent adherents The Gaullists scored successes in local elections in 1947 and in the 1948 elections for the upper house and with the Communists formed the opposition to the government coalition (moderate Socialists and progressive Catholics)

Gaulli, Giovanni Battista (jōvän'nē bät-tēs'ta gäōl'lē), 1639–1709, Italian painter, called Il Baciccio, noted for his frescoes and figures of children *St Francis Xavier Taken Up to Heaven* (vault of the Church of Il Gesù, Rome) is his most noted work Others are *Four Cardinal Virtues* (Church of Sant' Agnese, Rome), *St John Preaching* (Dijon), and a self-portrait (Uffizi)

Gaunt, John of · see JOHN OF GAUNT

Gaur (gour), ancient city, West Bengal state, India. Gaur, earlier the metropolis of the Hindu kings of Bengal, was captured (1198) by Moslems and remained a center of their culture until it was abandoned in the late 16th cent The Kadam Rasul Mosque (1530), erected over a stone supposedly bearing the imprint of Mohammed's foot, is still a place of worship The best-preserved structure is the finely carved Golden, or Eunuch's, Mosque

Gauss, Christian (gous), 1878–, American educator, dean of Princeton (1925–45), b. Ann Arbor, Mich, grad Univ of Michigan, 1898 He taught modern languages at the Univ of Michigan and at Lehigh Univ before going (1907) to Princeton as professor of modern languages After 1925 he was dean Upon his retirement in 1945, he became dean emeritus Among his books are *Life in College* (1930), *A Primer for Tomorrow* (1934), and *American Thought* (1947)

Gauss, Karl Friedrich (kärl' frē'drĭkh gous'), 1777–1855, German mathematician and astronomer He was professor and director of the observatory at Gottingen from 1807 He made notable contributions in several branches of mathematics and wrote *Disquisitiones arithmeticae* (1801) on the theory of numbers Also significant was his method of solving binomial equations He investigated the geometry of curved surfaces and demonstrated that by elementary geometry a circle can be divided into 17 equal arcs He propounded the method of least squares He was an authority on geodesy and a pioneer in applying mathematical theory to electricity and magnetism The unit of intensity of a magnetic field (now known as the oersted) was called the gauss until 1932, when this term was applied to the unit of magnetic induction.

Gautama · see BUDDHA

Gautier, Émile Félix (āmēl' fālĕks' gōtyā'), 1864–1940, French geographer, an authority on Algiers, the Sahara, and the French African possessions He explored W Madagascar (1892–94) and traversed the Sahara in various directions His books include *Madagascar* (1902), *Le Sahara* (1923, 2d ed, 1928, Eng tr, *Sahara, the Great Desert*, 1935), *L'Islamisation de l'Afrique du Nord* (1927), and *Un siècle de colonisation* (1930)

Gautier, Théophile (tāôfēl'), 1811–72, French poet, novelist, and critic His theory of plasticity, that words should be used as the painter and sculptor use their tools, is illustrated in his volume of poems *España* (1845) His belief that art is itself a creator of beauty—art for art's sake—is exemplified in his *Émaux et camees* (1852) These poems, like carefully tooled "enamels" and "cameos," were made to appeal to the eye or ear rather than to the mind His other works include *Albertus* (1833), *Mademoiselle de Maupin* (1835), *La Comédie de la mort* (1838), *Capitaine Fracasse* (1863), and *L'Histoire de l'art dramatique en France* (1858–59) His complete works have been translated into English He prepared the way for the Parnassians and symbolists in their reaction against romanticism His daughter, **Judith Gautier** (zhudēt'), 1850–1918, was married to the poet Catulle Mendès and then to Pierre Loti, with whom she wrote *La Fille du ciel* (1911, Eng tr, *The Daughter of Heaven*, 1912) Her novels were usually on Oriental subjects

Gavarni (gavarnē'), pseud of **Guillaume Sulpice Chevalier** (gēyōm' sulpēs' shuvalyā'), 1804–66, French caricaturist and lithographer He was first known for the amusing drawings of costumes which appeared in the *Mode* and for his illustrations for Balzac's *Peau de chagrin* He founded a short-lived publication, the *Journal des gens du monde*, and on its failure was for a short time imprisoned for his debts He next contributed satirical drawings to *Charivari* Gavarni's last work, appearing mostly in the *Illustration*, reflects a more bitter attitude A trip to London in 1847 is supposed to have filled him with horror at the sight of working-class conditions there Gavarni produced over 8,000 drawings, water colors, and lithographs See studies (in French) by Eugène Forgues (1887) and Edmond and Jules de Goncourt (new ed, 1896)

Gavarnie (gavarnē'), village (pop 186), Hautes-Pyrénées dept, SW France, in the central Pyrenees Near by are a celebrated waterfall, 1,385 ft high, and a gigantic natural amphitheater, the **Cirque de Gavarnie** (sērk' du) From its bottom, with an altitude of c 5,740 ft, the amphitheater rises in concentric levels and is enclosed by crests higher than 9,000 ft The famous BRÈCHE DE ROLAND is a cleft in one of the crests

Gavazzi, Alessandro (älĕs-sän'drō gävät'tsē), 1809–89, Italian preacher and patriot A Barnabite monk, he left the order in 1848 Because of his liberal ideas he emigrated from the Papal States to London, where he led an antipapal campaign Upon his return to Italy (1859) he was twice Garibaldi's army chaplain (1860, 1866) Later he organized in Rome the Free Christian Church in Italy, also known as the Evangelical Church in Italy

Gavdos: see CLAUDA.

gavelkind (gă'vulkīnd) [Irish,=family tenure], a custom of inheritance of lands held in socage tenure, whereby all the sons of a holder of an estate in land share equally in such lands upon the death of the father Most of the lands in England were held in gavelkind tenure prior to the Norman Conquest in 1066, and the custom of dividing lands among the male heirs is still preserved in parts of England, notably Kent This system of inheritance of lands is to be contrasted with BOROUGH-ENGLISH and PRIMOGENITURE

Gaveston, Piers (pērs' gă'vŭstun), d 1312, favorite of EDWARD II of England. Son of a Gascon knight

at the court of Edward I, he was a boyhood playmate of Edward II and acquired tremendous influence over him Edward I exiled him (1307), but he returned on his friend's accession, was made earl of Cornwall, and married the new king's niece. When Edward was absent in France (1308), Gaveston was regent His greed and arrogance aroused strong hostility among the barons, who forced him to leave England, but Edward made him lord lieutenant of Ireland (1308–9) The lords ordainers who controlled England after the barons' victory once more banished him (1311) On his return the barons rose, captured him, and put him to death

gavial. see CROCODILE

Gavle, Swed *Gävle* (yĕv'lŭ), city (pop 43,250), co. seat of Gavleborg co , E Sweden, a seaport NNW of Stockholm Chartered in 1446, it is the oldest and largest city of NORRLAND Though icebound for three months of the year, the port, equipped with ore docks, exports some of the KOPPARBERG co products Gavle also has important wood-pulp, textile, tobacco, and chemical industries

Gavleborg, Swed *Gävleborgs län* (yĕv'lubôr"yus lĕn'), county (7,609 sq mi , pop 275,436), E central Sweden It comprises, roughly, the historical provinces of Gastrikland, in the south, and Halsingland, in the north, both on the Baltic coast Its abundant timber supplies large sawmills and papermills, at Sandviken and Hofors there are important ironworks Other occupations are fishing and agriculture GAVLE is the county seat, and SODERHAMN the main port

gavotte (guvŏt'), originally a peasant dance of the Gavots, inhabitants of the Gap region in France It was introduced at the court of Louis XIV and was used by Lully in his ballets and operas and by Couperin and Bach in their keyboard suites

Gawain, Sir, knight see ARTHURIAN LEGEND and PARSIFAL, for *Gawain and the Green Knight,* see PEARL, THE

Gay, Delphine see GIRARDIN, DELPHINE GAY DE

Gay, Edward, 1837–1928, American landscape painter, b Dublin, Ireland Brought to the United States in 1848, he studied in Albany, N Y , and subsequently in Germany His work is distinguished by an admirable rendering of sunlight His *Broad Acres* was presented to the Metropolitan Museum by the American Art Association (1887). He became a member of the National Academy in 1907 GAY is represented in the National Gallery of Art, Washington, D C , the Art Institute of Chicago, and the Layton Museum, Milwaukee

Gay, John, 1685–1732, English playwright and poet, b Barnstaple, Devon Among his friends were the wits of the day and powerful courtiers Gay is famous for *The Beggar s Opera* (1728, music arranged by PEPUSCH), a BALLAD OPERA very successful then and in revivals as late as 1930 A sequel, *Polly,* was suppressed in 1728 because it offended Sir Robert Walpole and was not produced until 1777 The realism and satire of *The Beggar's Opera* had been lacking in Gay's earlier plays, *The What D'Ye Call It* (1715) and *Three Hours after Marriage* (1717, written with Pope and Arbuthnot). Gay's best-known poems are *The Shepherd's Week* (1714), humorous pastorals, *Trivia* (1716), an amusing description of London street life, and *Fables* (1727), satiric tales See biography by W H Irving (1940)

Gay, Walter, 1856–1937, American painter, b Hingham, Mass , studied in Paris under Léon Bonnat He lived in Paris most of his life and after 1879 exhibited yearly in the Salon Among his earlier paintings are *Bénédicite* (Amiens), *The Cigarette Makers* (Luxembourg Mus , Paris), and *The Spinners* (Metropolitan Mus) In his later work he eliminated figures and became famous for his paintings of elegant 18th-century interiors These are represented in the Metropolitan Museum by *Green Salon* and *Chinese Objects*

Gaya (gī'ŭ), city (pop 105,223), W central Bihar state, India Hindu pilgrims visit the temple of Vishnupad [Sanskrit, =Vishnu's footstep], a plain building surrounding a depression in a rock BUDDH GAYA, the site of Buddha's enlightenment, is 6 mi. to the south

Gayarré, Charles Étienne Arthur (gīyarā'), 1805–95, historian of Louisiana, b New Orleans After studying law in Philadelphia, he returned home and was elected to the state legislature Rapid political advances were climaxed by his election at 30 years of age to the U S Senate, but ill-health compelled him to resign his seat at once He spent the next seven years in France, where he did much documentary research for his history Upon his return he was again elected to the legislature, and from 1846 to 1853 he served efficiently as Louisiana secretary of state Defeated for Congress in 1853, he retired from politics, but he continued to be prominent in state affairs and a leader of Louisiana literary circles until his death He wrote a number of novels and an interesting book on *Philip II of Spain* (1866), but his chief work was his *History of Louisiana* (4 vols , 1851–66) The 1903 edition has a biographical sketch by Grace King.

gay-feather: see BLAZING STAR.

Gay Head, western tip of Martha's Vineyard, in Gay Head town (pop. 127; settled 1669, inc. 1870). The high clay cliffs have been topped by a lighthouse since 1799 The town has an Indian village

Gayley, Charles Mills, 1858–1932, American educator and author Born of missionary parents in Shanghai, China, he was educated in England and at the Univ of Michigan There he taught Latin (1880–86) and after a year's study in Germany was appointed professor of English (1887–89) He was professor of English at the Univ of California from 1889 until his retirement in 1923 Gayley is known for his *Classic Myths in English Literature* (1893) and his studies of English drama, poetry, and criticism, which include *Plays of Our Forefathers* (1907), *Beaumont the Dramatist* (1913) and the editing of *Representative English Comedies* (4 vols , 1903–36)

Gaylord. 1 City (pop 2,055), co seat of Otsego co , N Mich , NE of Traverse City, in a farm and resort area, inc as a village 1881, as a city 1922 A state tuberculosis sanatorium is near by. The Dearborn Colony, a "back-to-the-land" movement, was begun near here in 1932 2 Village (pop 1,049), co seat of Sibley co , S Minn , SW of Minneapolis; platted 1881 It is a farm trade center

Gay-Lussac, Joseph Louis (zhôzĕf' lwē' gā'-lusăk'), 1778–1850, French chemist and physicist He was professor in Paris at the Polytechnic School (from 1809), at the Faculty of Sciences (1809–32), and at the Jardin des Plantes (from 1832) He served also as a member of the chamber of deputies (1831–39) and of the chamber of peers (from 1839) In 1804 he made two balloon ascensions, attaining on the second a height of about 7,016 meters (more than 23,000 ft), to test magnetism and the composition of the atmosphere at high altitudes Noted also in the field of analytical chemistry, he studied prussic acid, discovered cyanogen, and made advances in industrial chemistry He collaborated with L J Thénard on the decomposition and synthesis of boric acid, from which they isolated (1808) boron, in the study of the properties of iodine, and in improving on Davy's method of isolating alkali metals Gay-Lussac also invented an alcoholometer and a hydrometer In physics he is known especially for his work on gases In 1802 he discovered independently that a gas at constant pressure expands, for each degree of temperature, by a constant fraction (about $^1/_{273}$) of its volume at 0°C This law, first discovered (1787) by J A C Charles is known as Charles's law or as Gay-Lussac's law However, the term **Gay-Lussac's law** is more commonly applied to another law of gases, the law of combining volumes, which Gay-Lussac was the first to formulate (c 1808) This law states that the volumes of gases that interact to give a gaseous product are in the ratio of small whole numbers to each other and each bears a similar relation to the volume of the product For example, since 2 volumes of hydrogen combine with 1 volume of oxygen to form 2 volumes of steam the volume of hydrogen is to that of oxygen as 2 1, the volume of hydrogen is to that of steam as 2 2 (or 1 1), and the volume of oxygen is to the volume of steam as 1 2.

Gaynor, William Jay, 1849–1913, U S political leader, mayor of New York city, b Oneida co , N Y He rose to prominence as a civic reformer in Brooklyn and, as justice of the New York supreme court (1893–1909), continued to oppose municipal graft Tammany named him candidate and he won the 1909 election but soon lost Tammany support by his reform program—which was not highly successful His strong and unconventional personality made him a spectacular figure of his time

Gayoso de Lemos, Manuel (mänwĕl' gīō'sō dā lā'mōs), c 1752–1799, governor of Louisiana (1797–99) In 1787 he was appointed governor of the newly organized Dist of Natchez, under the orders of the governor of Louisiana He encouraged American settlement on Spanish soil and interested a number of Americans, notably Gen. James WILKINSON, in his intrigues to separate the American West from the United States Spanish forts were built at Walnut Hills (Vicksburg) and Chickasaw Bluffs, and alliances were concluded with the Indian tribes of the Southwest By the terms of a treaty negotiated in 1795, Spain agreed to relinquish the Natchez region to the United States, but Gayoso de Lemos, on secret orders, delayed evacuation until 1798 He succeeded the baron de Carondelet as governor of Louisiana in 1797 and spent his last years in strengthening the province's defense against an expected American invasion He was an able administrator and a man of much personal charm See A P Whitaker, *The Spanish-American Frontier* (1927)

Gaza, Theodore (gā'zu, gă'zu), c 1398–c 1478, Greek scholar, b Salonica When the Turks attacked Constantinople, he went to Italy, where he was one of the greatest classical scholars and humanists of the Renaissance He had the Este family, Pope Nicholas V, and Cardinal BESSARION as patrons and was responsible for spreading Greek learning from Ferrara, Rome, and Naples His Greek grammar was printed (1495) by Aldus Manutius

Gaza (gā'zŭ) or **Ghuzzeh** (gŭ'zu), town (pop. c 18,000), SW Palestine, near the Mediterranean Anciently it was one of the chief cities of the Philistines. Here Samson brought down the Temple on his captors and himself Gaza was besieged five months by Alexander the Great and during the wars of the Maccabees and in the Crusades. The town has long been of commercial importance, the meeting place of caravans between Egypt and Syria The modern city is inhabited mainly by Moslems Gen 10 19, Joshua 10 41, 11 22, 15 47, Judges 1 18,16, 1 Sam 6 17, Jer 47 1, Amos 1 6, 7, Zeph 2 4, Zech 9 5, 1 Mac 11 61–62, Acts 8 26 Azzah Deut 2 23, 1 Kings 4.24 The city is in territory claimed by Jordan

gazelle (gŭzĕl'), graceful antelope of the genus *Gazella* A number of species are found chiefly in Africa but also in parts of central and SW Asia and India Gazelles are rather small (usually between 2 and 3 ft high at the shoulder) fleet animals, generally fawn in color Some are strikingly marked with black and white In many the horns are ringed and curve backwards Formerly abundant, they are now much reduced in number.

Gazer (gā'-), the same as GEZER

gazetteer (gă"zutēr'), dictionary or encyclopedia listing alphabetically the names of cities, rivers, and other features of the earth and giving some information about each The term *gazetteer* originally was applied to one who wrote a gazette It was first used in its modern sense early in the 18th cent , after the publication (1703) by Lawrence Echard of the *Gazetteer's or Newsman's Interpreter,* a geographical index But lists of place names, with descriptions, had been made as early as the 6th cent , part of the gazetteer of Stephen of Byzantium, of this time, is extant The 19th cent , when geographical knowledge and the need for having geographical facts readily available had both increased greatly, was the great period of development of gazetteer making Attempts were made to produce complete gazetteers, necessitating several volumes Famous gazetteers include Johnston's (Scotland, 1850), Blackie's (Scotland, 1850), Bouillet's (France, 1857), Ritter's (Germany, 1874), Longman's (England, 1895), Garollo's (Italy, 1898), and Lippincott's (United States, 1865), later editions of many of these have appeared Many states of the United States and most countries of the world have separate gazetteers

Gazez (gā'zĕz) [Heb , =shearer], name of a son and of a grandson of Caleb 1 Chron 2 46

Gaziantep (gă"zēäntăp'), formerly **Aintab** (īntăb'), city (pop 62,873), S Turkey It has textile manufactures A strategic place in the Crusades, it was taken by Saladin in 1183 It was the center of Turkish resistance (1920–21) to the French occupation of Syria Surrendered to the French after a six-month siege, it was returned to Turkey late in 1921

Gazira (guzē'ru) or **Gezira** (juzē'ru), region, area c 7,500 sq mi , Anglo-Egyptian Sudan, occupying the tract between the White Nile and the Blue Nile Irrigation works built since 1925 have opened part of the region to agriculture, and much of the cotton crop of the Anglo-Egyptian Sudan is produced here

Gazzam (gă'zăm) [Heb , =devouring], family returning with Zerubbabel Ezra 2 48, Neh 7 51

Gd, chemical symbol of the element GADOLINIUM.

Gdansk: see DANZIG

Gdynia (gudĭn'yu), Ger *Gdingen,* city (pop 77,829), NW Poland, a Baltic seaport on the Gulf of Danzig Gdynia was constructed after 1921 to end the dependence of Poland on the port of Danzig By 1931 Gdynia handled more freight than Danzig and was a leading Baltic port It also became the main naval base and shipbuilding center of Poland In the Second World War, Gdynia was annexed to Germany Although the harbor was damaged, the city suffered relatively little damage and by 1946 was again an important commercial port, handling 3,743,000 tons of freight in that year It is a center of food and metal industries, and there are resorts near by

Ge, chemical symbol of the element GERMANIUM

gearing, in a machine, the contrivances that transmit motion from one part to another by means of teeth or of friction wheels It is one of the oldest means of transmitting motion and is still preferred to other means, such as the belt and rope drive and the chain drive, if the distance of transmission is short or if a minimum of slippage is desired **Spur gearing** consists of wheels with teeth at right angles to their shafts If each of two interlocking spur wheels has its teeth on the outer surface of the wheel, rotation is transmitted to the driven shaft in a direction opposite to that of the driving shaft To transmit rotation in the same direction, one spur wheel has teeth on the inside face of its rim. By varying the diameter of spur wheels, variation of speed is obtained A small spur wheel is called a spur pinion A rack and pinion consists of a pinion engaging and transferring motion to a rack (a series of teeth in a straight line on a flat surface). The rack and pinion changes rotary motion to straight-line motion. **Bevel gearing** is used to transmit rotary motion to shafts that are not parallel to the driving shaft and intersect it at an angle. A bevel gear has its toothed edge slanting or inclined. Two

shafts equipped with bevel gears at one end, as in the differential gearing of the automobile, and intersecting at right angles can thus transmit rotary motion **Screw gearing** or **worm gearing** transmits motion by a screwlike action, one gear being an external screw, for example, and the other an ordinary toothed wheel **Friction gearing** transmits motion by the friction of surfaces in contact with each other, without the use of teeth See William Stanıar, *Mechanical Power Transmission* (1928), H. E. Merritt, *Gears* (2d ed , 1946)

Geary, John White (gēr'ē), 1819–73, American politician and Union general in the Civil War, b. Mt Pleasant, Pa., grad Jefferson College (now Washington and Jefferson College, Washington, Pa.) He commanded a Pennsylvania regiment in the Mexican War, serving with distinction in the campaign against Mexico city In San Francisco from 1849 to 1852, Geary was the first U S postmaster, the last alcalde, and the first mayor President Pierce appointed him governor of "bleeding" KANSAS in July, 1856 His energy and firmness brought peace to the territory for the first time in many months, but the meeting of the determined proslavery legislature (Jan , 1857) and the discovery that little support could be expected from the incoming President Buchanan led Geary to resign (March) In the Civil War, Geary was made a brigadier general of volunteers in April, 1862 He was wounded at Cedar Mt (1862), commanded a division of the Army of the Potomac at Chancellorsville and Gettysburg (1863), distinguished himself under Joseph Hooker in the Chattanooga campaign (1864), and fought in W T Sherman's campaigns (1864–65) He was brevetted major general of volunteers in Jan , 1865 Geary, elected governor of Pennsylvania in 1866, held that office until shortly before his death. See biography by H M Tinkcom (1940)

Geary (gâr'ē, gēr'ē), city (pop 1,634), W central Okla., near the North Canadian river W of Oklahoma City. It is a trade and processing center for a wheat-growing district. A U.S soil conservation camp is near by

Geba (gē'ba) [Heb ,=hill], town, Palestine, c 5 mi NNW of Jerusalem, now called Jeba (jā'bə) Here Jonathan slaughtered the Philistines Joshua 21 17, 1 Sam 13 3; 1 Kings 15 22, 2 Kings 23 8, 1 Chron 6 60, Neh 11 31, Isa 10 29 Gaba Joshua 18 24, Ezra 2 26, Neh 7 30

Gebal (gē'–), biblical name of BYBLOS

Gebel Aulia or **Jebel Aulia** (both jĕ'bul ou'lēə), village, central Anglo-Egyptian Sudan, on the White Nile Near by is a large dam used in controlling the flow of the Nile

Geber (gē'–) [Heb ,=man] **1** Father of a steward of Solomon. 1 Kings 4.13 **2** Steward of Solomon 1 Kings 4 19

Geber (gā'bûr, jē'bur) or **Jabir** (jā'bur, ja'bēr), 8th cent., Arabian alchemist and physician He is believed to have lived at Kufa and at Baghdad A great number of works on alchemy, many of them unpublished, have been attributed to him, but scholars disagree as to their authenticity Recent studies indicate that many of the works in Latin, formerly considered translations from the Arabic issued under the Latinized form (Geber) of the name, are spurious and originated c 1100 or later and that many of the extant works in Arabic were written by later Arabian alchemists and issued under Jabir's name. The works influenced the development of medieval alchemy and indicate the use of laboratory experiments They perpetuated the theory that metals are composed of mercury and sulphur and can be transmuted into gold Some of the Latin works were translated into English in 1678 and reedited in 1928 with an introduction by E J. Holmyard, whose translation of several of the Arabic works appeared in 1928

Gebhardt, Eduard von (ā'dōōärt fŭn gēp'härt), 1838–1925, German painter, studied in St Petersburg and Karlsruhe and at the Düsseldorf Academy, where he later became professor He painted religious subjects in the costumes of the 15th and 16th cent Of his numerous works his realistic *Last Supper* is characteristic Gebhardt also painted portraits and murals

Gebim (gē'–), unidentified place Isa. 10 31.

Ged, William (gĕd), 1690–1749, Scottish inventor. In 1725 he patented a process of making STEREOTYPE plates for printing He printed three books from plates that he made, but did not establish his process commercially

Gedaliah (gĕdŭlī'ə) [Heb ,=God is great]. **1** Son of Jeremiah's protector Ahikam and guardian under Nebuchadnezzar of the Jews exempt from the Captivity He was treacherously murdered, and the day of death in the seventh month is still observed as a Jewish fast Jer 40–41. **2** Musician 1 Chron 25 3,9 **3** Ancestor of Zephaniah. Zeph 1 1 **4** Opponent of Jeremiah Jer. 38 1. **5** One who had a foreign wife Ezra 10 18

Geddes, Auckland Campbell Geddes, Baron (gĕ'dĭs), 1879–, British diplomat and statesman; brother of Sir Eric Geddes He was professor of anatomy at Edinburgh, Dublin, and McGill universities. During the First World War he held various ministerial posts, serving (1916–17) as director of recruiting. He was president of the Board of Trade (1919–20) and dealt successfully with the crisis in the coal industry. From 1920 to 1924 he was British ambassador to the United States and was later director of several important companies.

Geddes, James, 1763–1838, American engineer and lawyer, b near Carlisle, Pa He settled in Onondaga co , N Y , and engaged in the production of salt near the site of Syracuse He served in the state legislature and as county judge and later (1813–15) in Congress In 1808 he made a survey for a waterway between the Great Lakes and the Hudson river Rapidly becoming a leading authority on waterways, he was made engineer for the Erie and the Champlain canals and surveyed (1827), for the U S government, a canal route from the Chesapeake to the Ohio

Geddes, Norman Bel, 1893–, American scenic painter, designer, and film director, b Adrian, Mich He was originator of the modernistic style in shopwindow displays. His first New York production was Cadman's *Shanewis* (1918) at the Metropolitan Opera House *The Miracle* is probably his most popular work He designed the General Motors Corp exhibit, the "Futurama," at the New York World's Fair He wrote *A Project for a Theatrical Presentation of the Divine Comedy of Dante Alighieri* (1924) and *Horizons* (1932).

Geddes, Sir Patrick, 1854–1932, Scottish biologist and sociologist, distinguished especially in town planning He received his biological training in Huxley's laboratory, from the beginning he was concerned to relate biological knowledge with civic welfare His conviction of the importance of environment led to the organization of University Hall in Edinburgh as a center of student life and to his plan for the reconstruction of Edinburgh, with eventual elimination of slums He was selected by Zionist leaders to design the Hebrew Univ building at Jerusalem and to plan the enlargement of the city In biology, Sir Patrick was an authority on the evolution of sex, collaborating with Sir J Arthur Thomson in several works on the subject Other books by Geddes include *City Development* (1904) and *Cities in Evolution* (1915) Geddes held professorships at Edinburgh, London, Aberdeen, St Andrews, and Bombay and at his death was director of the Scots College, Montpellier, France; in 1932 he was knighted for his services to education The publishing house of Geddes and Colleagues issued chiefly Celtic books See A D. Defries, *The Interpreter Geddes* (1927), Philip Boardman, *Patrick Geddes* (1944)

Geddington (gĕd'–), village, Northamptonshire, England It is the site of one of the remaining Eleanor Crosses (see ELEANOR OF CASTILE)

Gedeon (gē'dēun), the same as GIDEON.

Geder (gē'–) [Heb ,=wall] see BETH-GADER.

Gederah (gēdē'ru, gē'dŭ–) [Heb ,=fold], town, SW Palestine. Joshua 15 36 The town, within the state of Israel, has been the site of a Zionist agricultural settlement since the late 19th cent. The name is also spelled Gedera

Gederoth (gēdē'rōth, gē'dŭ–) [Heb.,=folds], town, SW Palestine, not far from Jamnia Joshua 15.41; 2 Chron 28 18

Gederothaim (gē"druthā'ĭm) [Heb ,=two folds], unidentified Judahite town, SW Palestine Joshua 15 36

Gedor (gē'–) [Heb ,=wall] **1** Ancestor of Saul 1 Chron 8.31; 9.37 **2, 3** Two Judahite families. 1 Chron. 4 4,18 **4** Judahite town, probably the modern Jedur N of Hebron. Joshua 15 58 **5** Home of two of David's archers 1 Chron. 12 7.

Gedrosia (jĭdrō'shə), ancient coastal region corresponding to modern Makran, i e , SE Iran and SW Baluchistan. It was crossed by Alexander the Great

Geefs, Willem or **Guillaume** (wĭl'ŭm, gēyōm' gāfs'), 1806?–1883, Belgian sculptor, most distinguished of six brothers, all sculptors Examples of his work are the statues of General Belliard and King Leopold I and the mausoleum of Frédéric, comte de Mérode, all in Brussels. **Fanny Isabelle Marie (Corr) Geefs,** 1814–83, wife of Willem, was a genre painter.

Geel (khāl), town (pop 21,950), Antwerp prov., N Belgium. It is famed for its large colony of insane people, living not in institutions, but in private families The tradition of the town centers about St Dymphna, a 6th-century Irish virgin martyr at whose shrine demoniacs are said to have been healed. The colony dates from the 14th cent. The name is sometimes spelled Gheel.

Geelong (jĕlŏng', –lŏng'), city (metropolitan pop 44,561), Victoria, Australia, on Corio Bay (western arm of Port Phillip Bay), SW of Melbourne It is a port with woolen mills, meat-packing plants, and automobile plants. Wool, wheat, meat, and hides are the principal exports. Gold was discovered in the vicinity in 1851.

Geertgen van Haarlem (gärt'gun vän här'lŭm), fl. latter half of 15th cent , Dutch painter, the earliest known in Haarlem. He is sometimes called Gerard van Haarlem and also Geertgen van Sint Jans because he lived with the Knights of St John For them he painted a triptych, the wings of which (a *Pietà* and *Legend of the Bones of St. John the Baptist*) are in the Liechtenstein Gallery, Vienna. Among the works attributed to him are *Lazarus* (Louvre) and *Nativity* (National Gall , London) These paintings reveal him as an artist of considerable power and originality. See W. M. Conway, *The Van Eycks and Their Followers* (1921)

Geez (gēĕz'), classical Ethiopic language. See LANGUAGE (table).

Geffrard, Nicholas Fabre (nĭkōlà' fà'brŭ shĕfrär'), 1806–79, president of Haiti (1859–67). He took part (1843) in the revolt against Boyer and led the insurrection that overthrew SOULOUQUE in 1859 Although he tried to reform the government he was harassed by recurrent counterrevolutions and could accomplish little He was exiled in 1867.

Gegenbaur, Karl (kärl' gā'gŭnbou"ûr), 1826–1903, German anatomist. A professor at the universities of Jena (1855–73) and Heidelberg (1873–1901), he was influential as a teacher. He emphasized the value of comparative anatomy in the study of evolution and of homologies. He showed (1861) that the eggs of vertebrates are single cells His most comprehensive work is *Vergleichende Anatomie der Wirbeltiere* (2 vols , 1898–1901).

Gehazi (gēhā'zī), Elisha's dishonest servant. 2 Kings 5, 8

Gehenna. see HELL.

Gehrig, Henry Louis (Lou Gehrig) (lōō' gā'rĭg), 1903–41, American baseball player, b. New York city He studied at Columbia. After he was signed up by the New York Yankees of the American League, he played (1923–24) with the Hartford team in the Eastern League As the first baseman (1925–39) of the Yankees, Gehrig established the record of playing 2,130 consecutive league games, batted 361 in seven world series, and broke many other major-league records. The "Iron Horse," as he was known to admirers, had a lifetime batting average of 341, batting over .300 for 12 consecutive years He four times won the most-valuable-player award Stricken by a rare type of paralysis, Gehrig retired from baseball in 1939 and served (1940–41) as a parole commissioner in New York city. See biographies by Richard Hubler (1941) and Frank Graham (1942)

Geibel, Adam (gī'bəl), 1855–1933, blind American organist and composer, b Germany He studied in Philadelphia, where he was active as organist and choral director, and here he formed the Adam Geibel Music Company He is best known for his choruses for men's voices and his tune for *Stand Up, Stand Up for Jesus*

Geibel, Emanuel von (āmà'nōōĕl fŭn), 1815–84, German poet He studied theology at Bonn, traveled in Greece, was pensioned by Frederick William of Prussia, and in 1852 became professor of German literature at Munich at the invitation of King Louis At first one of the revolutionary poets, he became more conservative From 1848 to 1870 he was the representative poet of Germany; his lyric verse, if somewhat sentimental, was elegant in form and powerful in expression Among his works were *Poems* (1840) and *New Poems* (1857, Eng tr of selections from both volumes, 1864) and the dramas *Brunhild* (1855, Eng tr , 1879) and *Sophonisba* (1869), which won the Schiller Prize

Geiger, Abraham (ä'brəhäm gī'gur), 1810–74, German rabbi, Semitic scholar and Orientalist, theologian, and foremost exponent of the reform movement He was a prolific writer His great work is *Urschrift und Übersetzungen der Bibel* [text and translations of the Bible] (1857) He helped found the Jewish theological review *Zeitschrift für jüdische Theologie* in 1835 In 1870 he became chief rabbi of the Berlin congregations and director of the newly established seminary for Jewish science

Geiger, Roy Stanley (gī'gur), 1885–1947, American marine general, b Middleburg, Fla , grad John B Stetson Univ law school, 1907 He fought in the marine air arm in the First World War In the Second World War he fought at Guadalcanal, Bougainville, Guam, and Okinawa and served as director of U S Marine Corps aviation (1942–43) When Gen. Simon B. Buckner, 10th Army commander on Okinawa, was killed (June, 1945), Geiger succeeded him and was made lieutenant general. Shortly thereafter Geiger became commander of the Fleet Marine Force in the Pacific.

Geiger counter (gī'gur), instrument for the detection and quantitative determination of ionizing particles, such as beta rays and cosmic rays. Variously designed for different uses, it consists generally of a glass tube with a thin metal cylinder inside serving as one electrode and a needle as the other electrode. In a similar instrument, the Geiger-Müller counter, a thin, taut wire is used instead of a needle. A current is sent through, sufficiently weak to just fail to pass from one electrode to the other through the gas which has been sealed into the tube The gas is ionized whenever the counter is brought near radioactive substances, however little the quantity and however faint the emanations. The ionized particles of gas carry the current from electrode to electrode, thus completing a circuit. Once established, the current is amplified by an electronic device so that it can indicate by an audible click the presence of ionized particles. Since the gas quickly returns to normal,

it permits each new particle or ray to register once more, making counting possible. The instrument can also register ionization by a pointer and scale. It finds use in the detection of cosmic rays and of lost or otherwise unlocated radioactivity Counters enable radioactive tracers or substances exposed to ionization to be followed as they make their way through complex organisms such as the human body. In medicine Geiger counters have found several successful uses in the location of malignancies

Geijer, Erik Gustav (ā'rĭk gŭs'tăv yī'ur), 1783–1847, Swedish historian and poet He taught history at the Univ of Uppsala and edited a source collection of Swedish history. His *History of the Swedes* (Eng tr, 1845), terminating with the reign of Queen Christina, is his best-known work. Geijer also wrote hymns, lyrics, and songs which enjoyed wide popularity In 1838 he created considerable stir by his conversion from conservatism to liberalism and reform

Geijerstam, Gustaf af (gŭs'tăv ăv yā'yurstăm), 1858–1909, Swedish novelist His realistic novels of peasant life show Russian influence, among these are *Poor Folk* (1884) and *Pastor Hallin* (1887) He also wrote problem novels and popular studies of modern marriage in the small town Among his later works are *My Boys* (1896, Eng tr, 1933), *The Book about Little Brother* (1900, Eng tr, 1921), and *Woman Power* (1901, Eng tr, 1927)

Geikie, Sir Archibald (gē'kē), 1835–1924, British geologist, educated at the Univ of Edinburgh He joined the Geological Survey of Scotland, becoming its director in 1867 He was professor of geology at the Univ of Edinburgh (1871-82) and director general of the Geological Survey of the United Kingdom (1882–1901) He was knighted in 1891 His numerous publications include *Outlines of Field Geology* (1876), *Text-Book of Geology* (1882), and *The Founders of Geology* (1897, 2d ed, 1906) See his autobiography (1924) His brother, **James Geikie**, 1839–1915, was also a geologist, a specialist in glacial geology He wrote *The Great Ice Age* (1874), *Earth Sculpture* (1898), and *Structural and Field Geology* (1905, 5th ed, 1940)

geisha (gā'shŭ), Japanese professional entertainer, skilled in dancing and in repartee The training of the geisha begins in childhood, and after her apprenticeship is over she is usually under contract for a number of years The geisha is a courtesan, and her status varies in different cities and in different houses Many geisha live luxuriously and are able to influence state policies All receive the same fee, but the amount that they actually earn rests upon a rigid classification of their beauty and accomplishments A geisha may marry, but she always bears a certain stigma In 1937 the geisha won certain privileges through a strike

Geissler, Heinrich (hīn'rĭkh gīs'lur), 1814-79, German mechanic and inventor He worked as a glass blower and in 1854 established at Bonn a factory for making scientific apparatus His many inventions include a vacuum mercury pump and the **Geissler tube.** This is a gas discharge tube in which light is produced when an electric discharge passes through the rarefied gas in the tube. The color of the glow depends on the gas used The tubes are made in a variety of shapes and are especially useful in spectroscopy

Geistown (gīs'toun), borough (pop 1,037), SW Pa., SE of Johnstown

Geitner, Ernst August (ĕrnst' ou'gōst gīt'nur), 1783–1852, German industrial chemist He discovered German silver (or nickel silver) and worked on the use of certain salts as mordants for dyes He wrote popular works on chemistry and technology

Gela (jē'lŭ, Ital jā'lä), city (pop 31,918), SW Sicily, Italy, on the Mediterranean From the 13th cent until 1927 it was known as Terranova di Sicilia Founded *c* 690 B C by Greek colonists, it became so flourishing as to found in turn (*c* 580 B C) Acragas, the later Agrigento The height of its prosperity was reached under the tyrants GELON and Hippocrates in the 5th cent In 282 B C Mamertine mercenaries (see MESSINA) destroyed the city and Phintias, tyrant of Acragas, resettled the inhabitants at the new city of Phintias (now Licata) There are few ancient remains, but in the near-by necropolis Greek vases and other objects have been found. Modern Gela was probably founded—as Terranova di Sicilia—by Emperor Frederick II in 1230 The city was a landing point in the Allied invasion of Sicily (1943) The surrounding region is the center of cotton growing in Sicily, and cereals are also produced

Gelasius I, Saint (jĭlā'shēŭs), d 496, pope (492–96), an African; successor of St Felix III and predecessor of Anastasius II. He was a firm upholder of the papal supremacy in a dispute with Anastasius, the Byzantine emperor; this contest was an opening wedge in the struggle between Constantinople and Rome. Gelasius was supposed to have been the author of the *Gelasian Sacramentary*, a 6th-century compilation. Many of his letters and some of his polemical writings remain. Feast, Nov. 21.

Gelasius II, d. 1119, pope (1118–19), an Italian (b Gaeta) named Giovanni Caetani, successor of PASCHAL II and predecessor of CALIXTUS II. He was elected in protest against the weakness of Paschal's opposition to Emperor Henry V over INVESTITURE The Frangipani, Romans of the emperor's party, threw Gelasius in prison, but the people delivered him and forced his captor to beg forgiveness In March, 1118, soon after Gelasius' election, Henry V advanced on Rome, and the pope fled to Gaeta There he was ordained priest and consecrated bishop Henry set up an antipope as Gregory VIII, and Gelasius excommunicated them Later in the year the pope went to France, where he was welcomed He was about to call a council when he died

gelatin, glutinous material or animal jelly obtained from the supporting structures (e g, hoofs, bones, and tendons) of vertebrate animals by the action of boiling water or dilute acid The process of manufacture is a complex one which involves removing foreign substances, boiling the material (usually in distilled water in aluminum vessels to prevent contamination, and purifying it of all chemicals used in freeing the gelatin from the connective tissues The final product in its purest form is brittle, transparent, colorless, tasteless, and odorless and has the distinguishing property of dissolving in hot water and congealing when cold In contact with cold water it takes up from 5 to 10 times its own weight and swells to an elastic, transparent mass Gelatin, being readily digested and absorbed, is a good food for children and invalids It is important in fine cookery as a vehicle for other materials, in the form of jelled soups, molded meats and salads, and frozen desserts Preparations of it are used in the home manufacture of jam, jellies, and preserves to insure jellification of fruit juices It is used in the drying and preserving of fruits and meats, in the glazing of coffee, and in the preparation of powdered milk and other powdered foods Bakeries use it in making meringues, éclairs, and other delicacies In confectionery making it is used as the basis of taffy, nougat, marshmallows, and fondant Ice-cream manufacture employs it to maintain a permanent emulsion of other ingredients and thus to give body to the finished product Added to cows' milk for the feeding of babies it prevents the formation of large curds In scientific processes gelatin is widely employed, being used in electrotyping, photography, waterproofing, and dyeing and in coating microscopic slides It is used as a culture medium for bacteriological research and also to make coatings for pills and capsules, court plaster, and some surgical dressings It affords a base for ointments and pastes, such as toothpaste, it is an emulsifying agent useful in making liquid combinations and various sprays. In its less pure forms gelatin is known as glue and size Vegetable gelatin, or AGAR, is derived from East Indian seaweeds

Gelderland, Guelderland (both gĕl'durlund, Dutch khĕl'durlänt), or **Guelders** (gĕl'durz), province (1,939 sq mi, pop 1,019,799), E and central Netherlands, S of the Ijsselmeer and bordering on Germany in the east. Arnheim, the capital, and Nijmegen and Apeldoorn are the chief cities It is drained by the Ijssel and by the Lower Rhine and Waal, which enclose the Betuwe, a fertile agricultural lowland, in the southwest The Veluwe, near the Ijsselmeer, is an unproductive hilly heathland The duchy of Gelderland was conquered (1473) by Charles the Bold of Burgundy, after whose death it passed to the house of Hapsburg It joined (1579) the Union of Utrecht of the Netherlands against Spain Part of Gelderland, including the ducal capital, Geldern (pop 5,776), was ceded (1715) by the Netherlands to Prussia.

Gelée, Claude · see CLAUDE LORRAIN

Gelert, Johannes Sophus (gĕ'lurt), 1852–1923, American sculptor, b Denmark He settled in the United States in 1887 His work includes the Haymarket monument and a statue of Hans Christian Andersen (both Chicago) and *Denmark* (customhouse, New York)

Gelibolu, Turkey, see GALLIPOLI

Gelilloth (gĕ'lĭlŏth, gēlĭ'-) [Heb ,=circles], boundary landmark, S Palestine, between Benjamin and Judah Joshua 18 17. It is probably the same as the Gilgal of Joshua 15 7

Gell, Sir William (gĕl), 1777–1836, English archaeologist and traveler, grad Cambridge, 1798 He served as chamberlain to Caroline, consort of George IV, and accompanied her to Italy in 1814 In 1820 he settled in Italy, living in Naples and Rome. His original drawings of classical ruins are in the British Museum Among his works, which he illustrated, are *Topography of Troy* (1804), *Pompeiana* (1817–19), *Journey in the Morea* (1823), and *Topography of Rome* (1834)

Gellée, Claude: see CLAUDE LORRAIN.

Gellert, Christian Fürchtegott (krĭs'tyan fürkh'tū-gŏt gĕ'lurt), 1715–69, German poet and moralist He was professor of literature and moral philosophy at Leipsig. His works include the popular *Fabeln und Erzählungen* (1746, Eng tr, *Fables and Other Poems*, 1850), the Richardsonian *Leben der schwedischen Gräfin von G——* (1746, Eng tr, *The Life of the Swedish Countess von G——*, 1752), a pioneer work in German domestic fiction, *Geistliche Oden und Lieder* (1757), hymns which are classics, and several plays Gellert was the great arbiter of literary taste in his time

Gelligaer (gĕlĭgar', gŏthlĭ-), urban district (1931 pop 41,043; 1947 estimated pop 36,140), Glamorganshire, Wales, N of Cardiff. It is in a mining region

Gellius, Aulus (jĕl'yus), fl 2d cent, Latin writer He was a lawyer who spent at least a year in Athens and wrote *Noctes Atticae* [Attic nights], a collection of discussions of law, antiquities, and sundry other subjects in 20 books (of which 19 and a fraction survive). The work is chiefly valuable as a storehouse of quotations from lost works

Gelon (jē'lŏn), d 478 B C, Greek Sicilian ruler Tyrant of Gela, his native city, he interfered in the struggle for power in Syracuse (485 B C) and made himself the leader of the popular party there From this time he ruled Syracuse and dominated Greek Sicily In 480 B C Hamilcar and his Carthaginians attacked Sicily in great force, landing at Panormus and advancing to besiege Gelon's father-in-law, Theron of Acragas in Himera Gelon came to raise the siege and crushed the Carthaginian army This victory made a tremendous sensation in the W Mediterranean, and it was the first great blow to Punic prestige It is celebrated by Pindar in his great *First Pythian*. Gelon was succeeded by HIERO I

Gelsenkirchen (gĕl'zunkĭr'khun), city (1939 pop 317,568, 1946 pop 265,793), Westphalia, NW Germany, adjoining Essen It is a major industrial and coal-mining center of the RUHR district It grew rapidly in the late 19th cent and in 1928 absorbed the neighboring towns of Buer and Horst About half of the city was destroyed in the Second World War

gem, substance of either mineral or organic origin used for adornment The qualities required in gems are beauty, rarity, and durability The beauty of a gem depends primarily upon its optical properties, which impart its luster, fire, and color, the durability depends upon hardness and tendency to cleave or fracture The physical properties by which gems are distinguished from each other are form of the CRYSTAL, index of refraction of light, HARDNESS, presence or absence of cleavage, type of fracture (conchoidal, even, or uneven) in stones without cleavage, specific gravity, color, streak (color of the powder as determined by rubbing it over white unglazed porcelain), luster (appearance of the surface in reflected light—adamantine, vitreous, resinous, greasy, silky, or pearly), and transparency Minor properties which serve to identify some stones are chatoyancy, opalescence, asterism, play of color, fluorescence, phosphorescence, iridescence, and electrical properties Artificial and imitation gems are of various kinds Synthetic stones are made in the laboratory out of the same chemical elements as natural stones Synthetic rubies, sapphires, and other varieties of gem corundum have been commercially produced, minute artificial diamonds too small to have commercial value have also been produced Synthetic stones may sometimes be detected by the presence of air bubbles, which when numerous cause a cloudy appearance, by having curved, rather than straight striae, and by their unnatural color Doublets are made by combining a crown or upper part, which is a thin slice of either the true stone or some inferior but hard gem, with a lower part of the true stone, a substitute stone, colored glass, or colored paste Triplets generally consist of a layer of a paste between two genuine stones of poor color Paste gems usually contain lead and are consequently very soft, they soon lose their brilliance and color Imitation pearls are glass or plastic beads coated with a preparation made from fish scales Cultured pearls are usually made by inserting a small bead into the shell of the oyster Gems are generally cut to bring out their natural color and brilliancy and to remove flaws In the cabochon cut the upper surface of the stone is smoothed and rounded into a simple curve of any degree of convexity, the lower surface may be concave, convex, or flat All the remaining cuts have flat facets. In the table cut the facets of the natural octahedron are ground to smoothness and polished, one facet, the table, is ground much larger than any other and made the top of the gem, while the opposite facet, the culet, is left quite small The rose cut consists of a flat base and (usually) 24 triangular facets—resembling a cabochon with facets. The brilliant cut is scientifically designed to bring out the maximum brilliancy of the stone The crown of a brilliant consists of a table and 32 smaller facets, of which 8 are quadrilaterals and 24 are triangles, the base, of a culet and 24 larger facets, of which 8 are quadrilaterals and 16 are triangles The base and crown are separated by a girdle The brilliant has certain proportions—in general the depth of the crown is one third the depth of the stone and the width of the table one half the width of the stone. The trap cut or step cut consists of a table and quadrangular facets, above and below the girdle, having their horizontal edges parallel Diamond cutting and the cutting of other precious stones are distinct trades. In diamond cutting the stone is

first cleaved to remove excrescences or to break it into smaller stones, by making a groove in the surface in the direction of the grain, inserting a steel knife, and striking the back of the knife a sharp blow The next process was formerly bruting, i e , roughly shaping two stones by rubbing them against one another In modern practice the stones are sawed with a revolving wheel coated on its rim with diamond powder, and then are shaped by inserting a holder or dop containing one diamond into a turning lathe which revolves it against a stationary diamond The cutting of the facets and the polishing are done by a revolving iron wheel charged with diamond dust After the facets are cut the diamonds are cleaned and are ready for sale. Stones other than diamonds are cleaved or slit by a revolving diamond-dusted wheel, then faceted by being pressed against a lap charged with diamond dust or a carborundum wheel, and polished with a softer abrasive Most, and in the case of some gems all, of the work of faceting is done with only the eye of the workman as guide The precious stones are DIAMOND, some forms of CORUNDUM (RUBY, SAPPHIRE, Oriental emerald, Oriental topaz, Oriental amethyst), and EMERALD The chief semi-precious stones are AQUAMARINE, AMETHYST, TOPAZ, GARNET, TOURMALINE, spinel, peridot, ZIRCON, CHRYSOBERYL, QUARTZ, OPAL, TURQUOISE, MOONSTONE, and JADE. The organic gems are PEARL, AMBER, CORAL, and JET, of which pearl is usually counted as a precious stone Gems are used as seals and talismans, and there are many superstitions associated with them For birthstones, see MONTH See H P Whitlock, *The Story of the Gems* (1936), L J Spencer, *A Key to Precious Stones* (rev ed , 1946), Frances Rogers and Alice Beard *5000 Years of Gems and Jewelry* (rev ed , 1947), E H Kraus and C B Slawson, *Gems and Gem Materials* (5th ed , 1948), R M Pearl, *Popular Gemology* (1948), Marcus Baerwald and Tom Mahoney, *Gems and Jewelry Today* (1949)

Gemalli (gĕmä'lē) [Heb , =owner of camels], father of Ammiel the spy Num 13 12

Gemara: see TALMUD

Gemariah (gĕmurī'ə) [Heb , =completion by God] 1 Jewish noble favorable to Jeremiah and Baruch Jer 36. 2 Envoy to Nebuchadnezzar Jer 29 3

Gémier, Firmin (fērmē' zhămyā'), 1869-1933, French actor and director His Paris debut (1892) was at the Théâtre Libre of André Antoine, whose lifelong friend he became In 1906 he succeeded Antoine as director of the Théâtre Antoine and from 1922 to 1930 was director of the Odéon In 1924 he toured the United States, at the invitation of the Dept of State, and Canada His Théâtre Ambulant (1911) and his direction of the Théâtre National Populaire (from 1930) were among his attempts to bring the theater to the people With Antoine he sought to bring naturalism of speech and gesture to the stage Celebrated for his portrayal of Shylock in *The Merchant of Venice*, he also acted in plays of G B Shaw, Gerhart Hauptmann, Ibsen, and Eugene O'Neill, as well as contemporary French dramatists

Gemini (jĕ'mĭnē) [Latin, =twins], in astronomy, a zodiacal constellation on the side of the Milky Way opposite from Orion It is pictured as the figures of the twin heroes Castor and Pollux, with the two brightest stars in the constellation representing the heads of the figures These two stars are Alpha Geminorum or Castor and Beta Geminorum or Pollux Pollux is actually the brighter of the two, although Castor was formerly considered to be and was therefore given the Alpha designation Castor, a white star, lies a little to the northeast of Pollux and is a visual double star, each of its two components is a spectroscopic binary Pollux, a yellow star, is a multiple star with at least six components The sun is in the constellation at the time of the summer solstice Gemini is the third sign of the zodiac

Geminiani, Francesco (frĭnchā'skō jămēnya'nē), d 1762, Italian composer and violinist, pupil of Corelli He composed music for strings and wrote on methods of playing various stringed instruments His *Art of Playing the Violin* (1740) was the first work of its kind for violin

Gemistus, Georgius (jôr'jus jĭmĭ'stŭs) fl 1st half of 15th cent , Greek Platonic philosopher, called Plethon (plē'thŏn), b Byzantium He represented the Orthodox Church at the Council of Florence in 1439, led Cosimo de' Medici to found the Florentine Academy, and inspired the enthusiastic study of Plato that characterized the Italian Renaissance He rejected Aristotle's criticisms of Plato but did not always distinguish Plato's doctrine from the Neoplatonic

Gemmi (gĕ'mē), pass, 7,640 ft high, in the Bernese Alps, Switzerland, connecting Bern and Valais cantons.

Gemniczer, Wenzel: see JAMNITZER

gender, in grammar, subclassification of a form class (or PART OF SPEECH) in which the members of the subclass have characteristic features of agreement with other words The term *gender* is usually restricted to such a classification of nouns or nounlike words and is not usually considered to include the classification of NUMBER. An example of gender in French is *la viande* [the meat] vs. *le vin* [the wine], where *la* and *le* [both the] differ in form, marking *viande* and *vin* as of different genders The terms for these genders, feminine and masculine, respectively, serve to recall that most French nouns referring to males are masculine, and most referring to females are feminine In German, Russian, and Latin there are three genders, called masculine, feminine, and neuter A two-gender distinction between animate and inanimate is widespread, e g , in Algonquian languages Some Bantu languages have 10 genders English nouns may be divided into gender classes according to the personal pronoun used to refer, these do not match sex classes, e g , *she*, corresponding to *the ship* The grammatical device of concord or agreement is bound up with gender-type distinctions By it one word bears a formal signal to show it has something to do with some other word, thus, in *la viande* the form of *la* shows that it has something to do with a member of the feminine gender class, and it may be said to agree with, or to be in concord with, *viande* English has concord in inflection for number, e g , the *man runs* vs *the men run* Concord is found in many Indo-European, Bantu, Finno-Ugric, and Semitic languages, but it is far from universal in languages Few languages have the rhyming ornateness of Latin concord See Edward Sapir, *Language* (1921)

gene (jēn), ultimate units by which hereditary characters are transmitted in animals and plants Genes are contained in the chromosomes and are believed to be arranged in a single row extending the length of the chromosome Many scientists have long believed that genes are of the chemical nature of nucleoproteins (compounds of a nucleic acid and protein) In 1949 Arthur E Mirsky reported the discovery that a nucleoprotein desoxyribonucleic acid forms one of the constituents of the gene Genes are too small to be visible with ordinary high-power microscopes, but the development of the electron microscope has facilitated studies of them Some believe that they approximate viruses in size Much of the knowledge of genes has been obtained through studies of a species of vinegar fly, *Drosophila melanogaster*, in which the chromosomes of the salivary glands are especially large, and also from studies of corn (*Zea mays*) In *Drosophila* some 500 genes have been discovered, estimates as to the total number of genes range from more than 1,000 to more than 10,000 In *Drosophila* certain genes have been identified which determine eye color, the size and shape of wings, and certain other characters, and the gene for each character appears to have a definite locus or position in the chromosome It is believed that thousands of genes are present in the chromosomes of man How the genes act to control the development of specific morphological characters is not well understood It is generally believed that their influence is exerted through the control of biochemical reactions, some believe that their action is similar to that of enzymes The scientific study of the method of inheritance is GENETICS

genealogy (jē"nēŏ'lŭjē, -ä'lŭjē, jē"nē-) That the study of human pedigrees is of great antiquity is indicated by their prominent place in the Bible Ancient Greeks and Romans traced their ancestry to gods and heroes, and primitive tribes often claim descent from bears, wolves, and other animals In the Middle Ages, Trojans were favored as ancestors and were created for the purpose The British were understood to be descended from a Trojan Brutus, the Franks, from Francus, the Turks, from Turcus The rise of feudalism made possessions and status depend on genealogy, and the study flourished In less degree, this condition continues in some countries, as England, to the present day In America, pedigree is less decisive as to status and property, and interest in genealogy has been limited to a smaller percentage of the population Some societies emphasize it, limiting membership to descendants of ancestors of a given group, as soldiers in the American Revolution Genealogies necessarily omit many ancestors who may be of biological significance The incredible number of the ancestors of an individual, since each child has two parents, was shown in Blackstone's *Commentaries on the Laws of England* Examples of English genealogies are the books of Burke, Collins, and others on the peerage Many libraries have departments of genealogy, where genealogies of families may be inspected See Gilbert H Doane, *Searching for Your Ancestors* (1937)

Genée, Adeline (ädŭlēn' zhunā'), 1878–, Danish dancer She made her debut at 10 in Christiania and at 17 was *première danseuse* of the Staattheater at Stettin, Germany She toured the United States in 1908 and 1912. Genée was one of the last stars of traditional ballet She married Frank S N Isitt in 1910 and retired in 1914

Genelli, Bonaventura (bōnävăntōō'rä jänĕl'lē), 1798–1868, German painter and illustrator, studied at the Berlin Academy and in Rome He painted mythological and biblical subjects, such as *Triumph of Bacchus and Ariadne* and *Abraham and the Angels*, but his greatest success was in illustrating. Among the best are 48 outline illustrations for Homer, 36 for Dante, and copperplate illustrations for *Life of a Profligate*

General Grant National Park, E Calif. The park was abolished in March, 1940, and its lands were made part of Kings Canyon National Park

General Land Office, established (1812) in the U S Treasury Dept and transferred (1849) to the U S Dept of the Interior Empowered to survey, manage, and dispose of the public domain, the office administered the preemption acts, homestead acts, and all legislation affecting public lands After 1900 it was more concerned with conservation of the remaining land In 1946 it was consolidated with the Grazing Service into the Bureau of Land Management

general strike, sympathetic cessation of work by all or a majority of the workers in all industries and public utilities of a locality or nation Such a stoppage may be economic if it is for the purpose of redressing some grievance or pressing upon the employer a series of demands economic in nature It is political if called for the purpose of wresting some concession from the government or if used to set off a chain of events culminating in the overthrow of the existing government The political strike has been advocated by the syndicalists and to a certain extent by anarchistic movements Practically unknown in the United States and Canada, except for some local instances (e g , Seattle, 1919, Winnipeg, 1919, San Francisco, 1934), the general strike has been a powerful weapon in the hands of European labor from the latter part of the 19th cent General strikes in Belgium in 1893 and 1902 won universal manhood suffrage, in Italy, a general strike (1904) protested against the use of troops to break up strikes, a general strike (1905) in Russia resulted in the issuance of the October Manifesto, instituting some sorely needed reforms, a general strike (1909) in Sweden, called against the repeated use of the lockout by employers, ended in complete surrender of the workmen, a general strike (1919) in Germany successfully warded off a rightist putsch In 1926 a general strike in England involving over 3,000,000 workers was called in sympathetic protest against the national lockout of the coal miners, but the strikers were forced to capitulate when it became clear that the government was able to keep essential services running and when only 50 percent of the workers answered the strike call In France a general strike, which failed, was called (1938) to protest against a government decree lengthening hours and penalizing strikers In 1947 localized general strikes were called in Italy and France by the Communist parties in protest against policies of the governments in power See W H Crook, *The General Strike* (1931)

generator, machine used to change mechanical energy into electrical energy The action principle is that of electromagnetic INDUCTION, a phenomenon discovered by Michael Faraday in 1831 A simple generator consists essentially of a magnet between the poles of which a coil of wire rotates In turning, the coil cuts the magnetic lines of force of the magnetic field lying between the poles of the magnet (see MAGNETISM) The cutting of these lines of force causes a current of electricity to be generated in the coil The current is led from the coil into a closed circuit by means of metal strips called brushes which press against the coil without interfering with its rotation Because, in turning, the coil cuts the lines of force first in one direction and then in the other, the electric current flows from it first in one direction and then in the opposite direction Such a current is called an alternating current (AC), and a generator producing it is an alternating-current (AC) generator or alternator A current flowing in one direction (although still pulsating) is obtained by the use of a device called a commutator When this device is employed, the generator is known as a direct-current (DC) generator Commercial generators are of both types Although the same principle is involved as in the simple generator, the construction and arrangement of the two essential parts (magnet and coil) of the commercial generator are much complicated by the need for producing a current that is not pulsating A number of coils are used and are wound in various ways around a core of metal consisting usually of strips bound together to make up the so-called ARMATURE The number of magnetic poles is often increased, as in the multipolar generator The ELECTROMAGNET is commonly employed in the dynamo instead of the permanent magnet found in the magneto (the dynamo and the magneto being types of generators) The magnetism is produced by leading the current generated in the armature over a wire wound around the field magnets Two distinct types of field-magnet windings are used In the shunt-winding type, only a part of the current is sent through the many coils around the field magnets In this type, when a large current is used in the external circuit, a drop in voltage occurs In the series-winding type, the whole current from the armature is conducted over a few turns of thick wire about the field magnets When the current in the external circuit increases, the voltage increases The compound-winding type is a combina-

tion of both and produces a constant voltage Not in all generators do the field magnets remain stationary while the armature revolves (direct-current generators are usually of this type) In some types, the armature is held stationary and the magnets rotate (alternating-current generators are usually of this type) Various sources are used for the mechanical energy which causes the moving part to revolve Some generators are driven by steam engines and turbines, others by gasoline or oil engines Most important of all to industry, however, are those driven by water power, generators of this type driven by powerful water turbines are used in the great hydroelectric plants

Genesee (jĕnusē′), river, c 158 mi long, rising in N Pennsylvania in the Allegheny Mts and flowing northerly through New York state, crossing the Barge Canal, to Lake Ontario at Rochester Its valley is noted for its beauty and fertility On the upper Genesee lies Letchworth State Park, N Y, with a scenic gorge and waterfalls

Geneseo (jĕnusē′ō) **1** City (pop 3,824), NW Ill, E of Moline and on the Illinois and Mississippi Canal, settled 1836, inc 1855 It is a farm trade center A state fish hatchery is near by **2** Farm trade village (pop 2,144), co seat of Livingston co, W central N Y, on the Genesee and SW of Rochester, inc 1832 Geneseo was settled c 1790 by James Wadsworth, whose descendants have been prominent in the town It is the seat of a state teachers college Soap and meal are made here

Genesis (jĕ′nusĭs) [Gr, =origin], first book of the Old Testament, first of the five books of the Law (the Pentateuch or Torah) ascribed by tradition to Moses It is a religious account of the origin of the Hebrew people, its contents may be outlined as follows first, the divine origin of the race whence the Hebrews sprang (1-11), including accounts of the creation and man's first disobedience (1–3), of Cain and Abel (4), and of Noah (9–10), second, the career of God's special servant Abraham (12–24), including the stories of Hagar and Ishmael (16, 21), of Lot (18–19), of the sacrifice of Isaac (22), and especially of God's summons to Palestine and His promises (12, 13, 15, 17), third, the career of Isaac (25–26), and, fourth, the life of Jacob, who was called Israel (27–50), including his replacement of Esau (27), his vision of a ladder (28), his wrestling with an angel (32), and the extensive story of his son Joseph, with the migration of the family to Egypt (37–50) Genesis is written with a straight narrative simplicity that has made it a favorite among Bible books Its importance in Jewish and Christian thought is inestimable Controversy over its interpretation and its literary history has been extensive For critical views of its composition and works on the book, see OLD TESTAMENT

Genesis, Little. see PSEUDEPIGRAPHA

Genêt, Edmond Charles Édouard (ĕdmō′ shärl′ ādwär′ zhünā′), 1763–1834, French diplomat, known as Citizen Genêt He had served as a French representative in Berlin, Vienna, and St Petersburg before the French Revolution, which he heartily endorsed, and he continued in Russia until 1792 Sent as minister to the United States in 1793, he was met with wild acclaim by the numerous pro-French Jeffersonians, but President Washington, anxious to preserve U S neutrality in the French Revolutionary Wars, was cold to the demonstrations Genêt's efforts to raise troops to strike at Spanish Florida and to commission privateers to prey on British commerce were not approved by Washington The President, backed by pro-British Alexander Hamilton, forbade the French privateers to use U S ports as bases, despite the warm public approval Genêt challenged Washington's authority by threatening to appeal to the American people, and the U S government demanded his recall Before he could go back to France, his party, the GIRONDISTS, had fallen, and his return would have meant the guillotine Washington therefore refused to allow his extradition Genêt remained in America and married the daughter of Gov George Clinton of New York

genetics (junĕ′tĭks), scientific study of heredity The growth of the science dates from 1900, when Hugo De Vries, K E Correns, and Erich Tschermak-Seysenegg in the course of their own research independently rediscovered the work of Gregor MENDEL on inheritance These three scientists, working in different countries, arrived at a general concept of segregation of units of heredity and of a random recombination of such units to explain the variations which they observed and then discovered that Mendel had presented similar conclusions in 1866 Under the stimulus of these discoveries a more widespread interest in the mechanism of heredity was aroused and through genetic studies much has been learned, although much yet remains to be clarified With the discovery of the CHROMOSOME and of the GENE scientists found the physical basis of the transmission of hereditary characters Modifications of Mendel's principles developed as knowledge of the chromosomes increased the discovery of the presence of numerous genes in the same chromosome shed light on the tendency of certain characters to be inherited together, the discoveries that some characters are sex-linked (i e, are transmitted by genes present only in the sex chromosomes) and that interaction of different genes rather than the presence of a single factor generally determines the presence of characters helped to account for some apparent deviations from Mendelian ratios The expression "Mendelian heredity" is now generally used for transmission of characters by the chromosomes Certain terms are commonly used in explanations of inheritance When two parent organisms (plants or animals) differ in a given character (e g, tallness and dwarfness in garden peas), one or the other of the characters appears in the offspring or first filial (called F_1) generation, the character which appears (tallness, in the example given) is said to be dominant When indicating the genotype (gene composition) of an individual, the dominant character is usually represented by the capitalized initial letter of one of the characters The character which does not appear in the first generation produced by crossing two parents which are homozygous for that character is a recessive character, although it does not appear in the first generation it is carried in the genes of this generation, which are therefore said to be hybrids (The recessive character is usually represented by a small letter) Crosses between members of the F_1 generation produce offspring (the F_2 or second filial generation) among which approximately three quarters of the number show the dominant character and one quarter the recessive Of those displaying the dominant character only one third are homozygous for that character (i e, contain only genes for tallness) and two thirds are heterozygous (i e, their chromosomes contain one factor for the dominant character and one for the recessive) Two such contrasting characters as tallness and dwarfness (or in animals such characters as eye color) are called alleles (or allelomorphs) Each organism inherits one member of each of these allelic pairs from each parent, and each body cell, being ultimately derived from the fertilized egg, contains the same chromosome composition In the formation of sex cells or gametes by animals and plants which normally reproduce by a union of a male and a female cell, a process called meiosis, or reduction division, occurs In this process the chromosomes become paired off, and divisions of the cells occur which result in only one set of chromosomes (or one half the number of chromosomes characteristic of the species) entering each mature sex cell It is at this process that the segregation of pairs of alleles is accomplished Recombination of characters then occurs at random when two sex cells unite By the union of the two sex cells (each containing one half the normal number of chromosomes), the original chromosome number is restored Since great numbers of characters are simultaneously inherited, the process is a complex one, but in general the hereditary pattern can be followed for individual characters through working out the ratios on the basis of the Mendelian laws Deviations from the expected results sometimes develop because of chromosome aberrations and gene MUTATION Most of the knowledge of chromosome structure and of the behavior of genes has come from studies of the vinegar or fruit fly (*Drosophila*) The work of T H Morgan and his followers on *Drosophila melanogaster* was the basis of much of the progress in genetics in the United States Certain other small laboratory animals and also plants are sometimes used Such specimens are chosen largely because of their ability to reproduce rapidly so that many generations can be studied over relatively short periods For obvious reasons human beings are poor subjects for genetic studies, however, much has been learned from the lower forms of life that aids understanding of heredity in humans Also, by tracing the appearance of certain abnormal characters (e g, hemophilia, color blindness, and certain mental diseases and anatomical defects) through a number of generations the inheritability of these conditions has been established See E W Sinnott and L C Dunn, *Principles of Genetics* (3d ed, 1939), T G Dobzhansky, *Genetics and the Origin of the Species* (1941), J B S Haldane, *New Paths in Genetics* (1942), H B Glass, *Genes and the Man* (1943), H J Muller and others, *Genetics, Medicine, and Man* (1947), H P Riley, Geneva (jünē′vu), Fr *Genève* (zhunĕv′), canton (109 sq mi, pop 174,855), Switzerland, at the southwest tip of the Lake of Geneva In the gap between the Jura and the Alps, it is almost entirely surrounded by French territory Its rural sections produce mainly fruits, vegetables, and wine Its history is that of its capital, **Geneva** (pop 124,431), which the Rhone, emerging from the lake, divides into two parts, the older section is on the left bank A cultural and financial center, Geneva also produces machinery and instruments, aluminum ware, watches, and clothes An ancient settlement of the Allobroges, Geneva was included in Roman Gaul, became an episcopal see under the Roman Empire, and passed to the Burgundians (5th cent), to the Franks (6th cent.), to Transjurane BURGUNDY (9th–11th cent), and to the Holy Roman Empire The bishops of Geneva gradually absorbed the powers of the feudal counts of Geneva and in 1124 became temporal rulers of the city To limit the episcopal authority, the citizens placed themselves (1285) under the protection of the counts (later dukes) of SAVOY, in 1387 they won extensive rights of self-rule However, by gradually transforming the bishops into their tools, the dukes nearly succeeded in mastering the city by the beginning of the 16th cent Incensed, the citizens allied themselves with two SWISS cantons—Fribourg and Bern—expelled the bishop (1533), and accepted the Reformation preached by Guillaume FAREL (1536) The arrival of CALVIN thrust upon Geneva a role of world importance as the focal point of the REFORMATION In 1602 Geneva repulsed an attempt at recapture by Charles Emmanuel I of Savoy With its population swelled by Protestant refugees, notably HUGUENOTS, Geneva became a cosmopolitan and intellectual center, especially in the 18th cent, when the stern theocracy of Calvin had mellowed into patrician rule VOLTAIRE settled here, J J Rousseau, H B de Saussure, Jacques Necker, Albert Gallatin, and P E Dumont were among the versatile sons of Geneva in the 18th cent The city, annexed to France from 1798 to 1814, joined Switzerland as a canton in 1815 It was given a liberal constitution in 1842 In 1864 Geneva was made the seat of the International RED CROSS, it has also been the seat of the League of Nations (1920–46), the International Labor Organization, and other international bodies Among its historical buildings are the Cathedral of St Pierre and the town hall The League of Nations Palace is situated in one of the city's numerous parks The Univ of Geneva (founded as an academy by Calvin) faces the imposing Reformation monument The crescent-shaped **Lake of Geneva** or **Lake Leman**, between Switzerland and France, is 45 mi long and from 2 to 9 mi wide Its maximum depth is 1,017 ft, and its average altitude 1,220 ft The main feeder and only outlet is the Rhone Its shores are dotted with villas and resorts, and its beauty has been a favorite theme with many writers (notably Rousseau and Byron) The northern (Swiss) shore is bounded by sloping vineyards and orchards, the southern (French) shore by the French Alps Its waters are deeply blue and remarkably transparent They are subject to sudden changes of level, known as seiches Fishing is an important industry

Geneva (junē′vu) **1** Town (pop 2,803), co seat of Geneva co, SE Ala, on the Choctawhatchee river near the Fla line, settled 1836, inc 1872 It is a trade center, and clothing is made **2** City (pop 4,101), co seat of Kane co, NE Ill, W of Chicago and on the Fox river, founded c 1833, inc 1867 The state training school for girls is here **3** City (pop 1,888), co seat of Fillmore co, SE Nebr, WSW of Lincoln, laid out 1858 It is a livestock-shipping and farm-trade center in a prairie region A school for delinquent girls is here **4** City (pop 15,555), W central N Y, at the north end of Seneca Lake and SE of Rochester, in a fertile region, settled 1788, inc as a village 1812, as a city 1898 It is a trade center with nurseries and varied manufactures, including optical goods and cutlery Hobart College and William Smith College (see COLLEGES OF THE SENECA, THE) and a state agricultural experiment station connected with Cornell Univ are here **5** Village (pop 4,171), NE Ohio, near Lake Erie SW of Ashtabula, settled 1802, inc 1867 It has greenhouses and manufactures garden tools **6** Town, Utah see PROVO, city

Geneva, Lake, c 8 mi long, SE Wis, near the Ill border On its shores are the camps of several religious and social organizations and the summer homes of many residents of Chicago, Milwaukee, and other cities of the region Yerkes Observatory is at Williams Bay near the western end of the lake, the city of Lake Geneva is at the eastern end

genie see JINNI

Génissiat Dam (shānēsyä′), Ain dept, E central France, in the Rhone river, near Bellegarde and the Swiss frontier and c 20 mi S of Geneva, begun 1937, inaugurated 1948 It is part of a project for devel-

oping and making navigable the entire Rhone valley from Geneva to Marseilles—a plan that antedates and somewhat resembles the Tennessee Valley Authority The Génissiat hydroelectric plant is the largest in France and, next to the Dneproges dam in the USSR, probably the largest in Europe Construction has begun on power lines to connect it and secondary plants with the Paris and Lyons industrial regions. The navigation project is related to a Swiss plan for connecting the Lake of Geneva with the Rhine, thus permitting direct traffic from Marseilles to Rotterdam via Geneva and Basel Operated by a semiprivate company, the project is to a large extent under government control

genista: see BROOM

genitive (jĕn'-) [Latin, = genetic], in Latin grammar, CASE typically used to refer to a possessor The term is used in the grammar of other languages, but the phenomenon referred to may not resemble a Latin genitive closely, thus a Latin genitive will be translated by a number of different cases in Finnish English *his* and *father's* are said to be genitive, or, more often, possessive Most English nouns have no such case

genius, in Roman religion, guardian spirit of a man, a family, or a state, giving guidance and help In some instances, a place had its genius As the guardian spirit of an individual, the genius corresponded to the Greek demon, best known by the demon whom Socrates implicitly obeyed The genius of the head of a Roman household was one of the household gods Notable achievements or high intellectual powers of an individual were attributed to his genius, and ultimately a man of achievements suggesting a divine gift was said to have genius or to be a genius

Genk (khĕngk), town (pop 29,098), Limburg prov., E Belgium, NNE of Hasselt It is a market center, and there are coal mines near by

Gennesaret (gĕnĕ'surĕt) 1 See GALILEE, SEA OF 2 Fertile plain, NW of the Sea of Galilee Mat 14 34, Mark 6 53.

Genoa (jĕ'nōwu), Ital *Genova* (jānō'vä), city (pop 512,313, with suburbs, 634,646), capital of Liguria and of Genoa prov, NW Italy Beautifully situated on the Italian RIVIERA, it is the chief seaport of Italy and rivals Marseilles as leading Mediterranean port. An ancient town of the Ligures, it flourished under Roman rule Around the 10th cent it developed into a free commune governed by consuls Its maritime power increased steadily. Helped by Pisa, Genoa drove the Arabs from Corsica and Sardinia Rivalry over Sardinia resulted in long wars with Pisa, and Genoa finally triumphed in the naval battle of Meloria (1284) The Crusades brought Genoa great wealth The republic acquired possessions and trading privileges in areas from Spain to the CRIMEA Its expansion was largely financed by a group of merchants who in 1408 organized a powerful bank, the Banco San Giorgio Genoese policy in the Orient clashed with the ambitions of Venice, and long wars resulted, ending with the Peace of Turin (1381), which slightly favored Venice Meanwhile the Genoese republic was weakened by factional strife of Guelphs and Ghibellines, of nobles and the popular party In 1339 the first doge for life was elected Although Genoa gradually gained control of the cities of LIGURIA, it little by little lost its outlying possessions Rival factions resorted to foreign aid France and Milan in turn controlled the city, although nominal independence was preserved The power of Genoa was revived by Andrea DORIA, who wrote a new constitution in 1528, the Fieschi conspiracy (1547) against his dictatorship failed Later, however, came periods of Spanish, French, and Austrian control The Austrians were expelled by a popular uprising in 1746, but in 1768 Genoa had to cede CORSICA, its last outlying possession, to France In 1797 French military pressure resulted in the end of aristocratic rule and the formation of the Ligurian Republic, which Napoleon I formally annexed to France in 1805. The Congress of Vienna (1815) united Genoa and Liguria with the kingdom of Sardinia The city suffered heavily from Allied naval and aerial bombardments in the Second World War. Among its notable buildings, all more or less severely damaged, are the Cathedral of San Lorenzo (rebuilt in 1100 and frequently restored), the palace of the doges, the richly decorated churches of the Annunciation and of St Ambrose, the medieval Church of San Donato, and the many Renaissance palaces built for Genoa's aristocratic families. The city is surrounded by ancient walls and forts, and the steep and narrow streets of the harbor section are very picturesque Genoa has several museums and a university (originally a Jesuit college) As an outlet for Central Europe, Genoa handles extensive passenger and freight traffic; its harbor facilities have recently been greatly modernized The city is also an industrial center with large shipyards and automobile and airplane motor factories Genoa gave many navigators to the world, foremost among them Columbus. Massini and Paganini were also born here.

Genoa (jənō'ə) 1 City (pop. 1,290), NE Ill., W of Elgin, in a farm area, inc 1911. 2 Village (pop 1,231), E central Nebr., on the Loup river near the Platte and NW of Lincoln, in a prairie region; settled 1857 by Mormons An old Pawnee village has been excavated near by 3 Unincorporated town (pop c 150), extreme W Nev , SW of Carson City Founded c 1849 as Mormon Station and renamed in 1855, it was a post on the early road to California, the first permanent settlement in the present Nevada, and for a time provisional capital of the Territory 4 Village (pop 1,455), NW Ohio, SE of Toledo, settled 1835 as Stony Ridge Station, renamed Venice 1853 but recorded as Genoa, inc 1868 Limestone products are made here

Genoa, Conference of (jĕ'nōwu) On April 10, 1922, representatives of 34 nations met at Genoa, Italy, in an attempt to reconstruct European commerce and finance The occasion of the conference was the announcement that, despite its repudiation of the national debt incurred in the tsarist regime, the Soviet government would discuss that question at an international assembly In the negotiations the creditor nations, all of whom were represented but the United States, demanded recognition of the repudiated debt, compensation for the confiscated property of foreigners, and the establishment of a judicial system to enforce future contracts The Soviet representatives, headed by Chicherin, agreed to recognize the debt only upon condition that the Russian war debt be canceled, that compensation be made for damages caused by Allied forces in their post-war intervention, and that extensive credits be granted to the new government Some progress was made in the negotiations, but the announcement of the Treaty of Rapallo (see RAPALLO, TREATY OF, 1922), by Germany and the USSR caused fear and distrust, while the divergent purposes of the former Allies made cooperation on major issues impossible The conference adjourned on May 19

Genova, Italy see GENOA

Genovesi, Antonio (äntō'nyō jānōvā'zē), 1712–69, Italian philosopher and economist, a pioneer in writing philosophy in Italian instead of in Latin Genovesi introduced new ideas, particularly those of Locke, into Italy, and this introduction was bitterly opposed by the scholastics In his works he strove for a balancing of idealism and sensualism His book *Lezioni di commercio* (1765), the first inclusive work in economics in Italy, stressed human wants as the basis of economic theory Other writings include *Disciplinarum metaphysicarum elementa* (1743)

genre (zhä'rə) [Fr], type of easel painting which has for its subject matter intimate scenes from everyday life In Western art it originated in the 16th cent and has flourished ever since, probably reaching its highest development in 17th-century Holland Ter Borch, Vermeer, De Hooch, and Steen excelled in genre

gens (jĕnz), ancient Roman family group It was the counterpart of what is known in other societies as a clan or sib, the members were descended (or assumed to be descended) from a common ancestor, whose name was used by all the members of the gens as a family or gentile name Among the Romans the second name was the gens name (e.g., *Tullius* in Marcus Tullius Cicero), and descent was traced in the male line only, not in both the male and female lines The members were united in worship of the common ancestor, and marriage within the gens was generally more or less frowned upon The Roman patriarchal family, a group within the gens, in many of its features became the legal pattern for the European family The Greek gens (*genos*) was similar to the Roman See H W. Johnston, *Private Life of the Romans* (1903).

Gensan, Korea see WONSAN.

Genseric see GAISERIC.

Genth, Frederick Augustus (gĕnt), 1820–93, German-American chemist and mineralogist, b Germany, studied at the universities of Heidelburg and Marburg He emigrated (1848) to the United States and established (1850) a chemical laboratory in Philadelphia A specialist in the study of minerals, he identified 23 new kinds including one named in his honor, genthite (gĕn'thīt) He maintained his commercial laboratory while serving as professor of chemistry at the Univ of Pennsylvania (1872–88)

Genth, Lillian Mathilde (gĕnth), 1876–, American figure painter, b Philadelphia, studied with Elliott Daingerfield and with Whistler Her delicately colored figures against a landscape background are found in many museums throughout the United States She became a member of the National Academy of Design in 1908

gentian (jĕn'shu), any plant of the genera *Gentiana* and *Dasystephana* (both sometimes combined as a single genus—*Gentiana*), widely distributed herbs of many species, chiefly perennial and fall blooming Gentian flowers are of various colors but predominantly blue. The fringed gentian (*Gentiana crinita*), on which the poet Bryant wrote, is annual or biennial and one of the loveliest wild flowers It has been nearly exterminated from its native habitat in E North America and is difficult to grow in gardens There is a similar species in the West also called fringed gentian. The bottle, closed, or blind gentian (*Dasystephana*, or *Gentiana, andrewsii*) has clusters of deep blue (rarely white) flowers that remain closed or nearly so Since ancient times the European yellow gentian (*Gentiana lutea*) has been highly valued for the rhizome and roots used as a stomachic and bitter tonic, reputedly discovered by King Gentius of Illyria. It has also been used in alcoholic beverages A number of alpine gentians are valued for rock gardens See David Wilke, *Gentians* (1936)

Gentile, Giovanni (jōvän'nē jäntē'lā), 1875–1944. Italian philosopher and educator He taught philosophy in several Italian universities and for many years contributed to the magazine of Benedetto Croce In 1920 he founded the *Giornale critico della filosofia italiana*. An early supporter of the Fascist movement, he has been called the philosopher of Fascism In 1922 he was made a senator and until 1924 was minister of public instruction While in this office he reformed the structure of public education He also directed the work of the new *Enciclopedia italiana*. Gentile's philosophy, called actual idealism, is a form of neo-Hegelian idealism and was developed in *Teoria generale dello spirito come atto puro* (1916, Eng. tr , *The Theory of Mind as Pure Act*, 1922) See studies by Pasquale Romanelli (1938) and R W Holmes (1938)

Gentile da Fabriano (dä fabrēä'nō), c 1370–1427?, Italian painter, the first great representative of the Umbrian school and among the most outstanding of the primitives He is known to have been in Venice c 1411 and had an important influence on the Venetian painters In 1421 he executed his masterpiece, *The Adoration of the Magi*, for Santa Trinità, Florence (now in the Uffizi), subsequently he was engaged upon numerous works for churches of Brescia and Perugia and upon the charming *Madonna* in the Orvieto cathedral In 1427 he went to Rome to decorate the Church of St John Lateran with frescoes depicting the life of St John the Baptist and also painted the *Holy Family* for the Church of Santa Maria Maggiore Gentile painted in the spirit and manner of the older school, with the glowing color and lavish use of gilt ornamentation of the early Umbrian painters, and his technical skill was far superior to that of most of his contemporaries Other examples of his art are *Presentation in the Temple* (Louvre), *Madonna and Child* (Venice), *Madonna in Glory*, (Milan), and *Madonna and Child* (National Gall of Art, Washington, D C)

Gentile da Foligno (dä fōlē'nyō), d 1348, Italian physician, b Bologna He practiced medicine in Bologna and in Perugia Summoned to Padua because of the illness of the ruler, Ubertino of Carrara, he remained as lecturer on medicine at the university (1337–45) His activities in combating the Black Death led to his death from the disease Among his extant writings are his plague tractates, *Consilia contra pestilentiam*

Gentileschi, Orazio (ōrä'tsēō jäntēlā'skē), c 1562–1647, Florentine painter His surname was Lomi, but he adopted that of an uncle He was a brother, and a pupil of Aurelio Lomi, and he studied in Rome, where he was associated with Agostino Tassi in the decoration of palace interiors He also painted frescoes in Santa Maria Maggiore and in the Lateran After spending several years in Genoa and in France, he settled in England (1626) at the invitation of Charles I Van Dyck painted his portrait and included it in his series of illustrious men Gentileschi's principal works include *The Annunciation* (San Siro, Genoa), *Flight into Egypt* (Louvre), *Joseph and Potiphar's Wife* (Hampton Court, England), and *Moses Saved from the Waters* (Madrid) He also painted numerous portraits His daughter and pupil, **Artemisia Gentileschi** (ärtämē'zyä), 1590–c 1642, studied under Guido Reni and achieved renown for her spirited execution and admirable chiaroscuro, excelling her father in portraiture About 1638 she visited England, where she was in great demand as a portraitist Among her works are *Judith and Holofernes* (Uffizi), *Mary Magdalen* (Pitti Gall , Florence), *Christ among the Doctors* (N Y Historical Society), and a self-portrait (Hampton Court)

Gentili, Alberico (älbārē'kō jäntē'lē), 1552–1608, Italian writer on international law Forced to leave Italy because of his Protestantism, he went to England (1580), where he became regius professor of civil law and in 1605 advocate for the king of Spain in the British admiralty court His *De legationibus* (1585) had great influence in shaping modern diplomatic practice, and his *De jure belli* [on the law of war] (1598) was one of the early important works on international law to which Grotius was indebted

gentlemen's agreement, in business, a private agreement among rivals as to prices to be charged, goods handled, or areas served Such informal, verbal, and temporary arrangements are common in local trade and are not unknown in larger enterprises. Although not necessarily against public interest, they offer easy opportunity for exploitation, and they have been forbidden by the Sherman Anti-Trust Act as conspiracies in restraint of trade. Their secrecy renders detection and law enforcement difficult They are not illegal in Great Britain unless they include an illegal act, when they are against common law. At one time open-price associations

met regularly in the United States, at which members quoted prices which were openly discussed without agreements being reached, but the courts held these less definite understandings illegal. In American history, the gentlemen's agreement refers to an agreement between the United States and Japan in 1907 that Japan should stop the emigration of her laborers to the United States and that the United States should stop discrimination against Japanese. This agreement was ended in 1924 by the act of Congress excluding immigration from Japan, as immigration from China had been previously excluded.

Gentz, Friedrich von (frē'drĭkh fŭn gĕnts'), 1764–1832, German publicist A disciple of Kant and a lifelong admirer of the English political system of checks and balances, Gentz soon turned away from his early enthusiasm for the French Revolution. At first in Berlin and after 1802 in Vienna, he conducted a relentless polemical campaign against Napoleon I. In 1812 he became secretary to Metternich and thus a powerful figure in Austrian and European politics He was secretary of the congresses of Vienna, Aachen, Troppau, Laibach, and Verona and was the brain of the Holy Alliance Some of his writings, all in exemplary style, were published as *Staatschriften und Briefe* (2 vols, 1921) He also translated Burke's *Reflections on the French Revolution* See P R Sweet, *Friedrich von Gentz Defender of the Old Order* (1941); Golo Mann, *Secretary of Europe* (1946)

Genubath (gĕnū'–), son of the exile Hadad and an Egyptian princess He was reared with Pharaoh's sons 1 Kings 11 20

Genung, John Franklin (jĭn'ŭng'), 1850–1919, American educator and author, b Willseyville, N Y, Ph D Leipzig, He taught at Amherst College from 1882 and is well known for his studies on biblical interpretation These include *The Epic of the Inner Life* (1891), *The Hebrew Literature of Wisdom* (1906), and *A Guidebook to Biblical Literature* (1919) He also wrote *The Working Principles of Rhetoric* (1901) and *The Life Indeed* (with biographical sketch of Genung by J. M Tyler, 1921)

genu varum see BOWLEGS

geodesy (jē-ŏd'ŭsē) [Gr ,=dividing the earth] or **geodetic surveying,** theory and practice of determining the position of points on the earth's surface and the dimensions of areas so large that the curvature of the earth must be taken into account It is distinguished from plane SURVEYING, the operations of which are executed without regard to the earth's curvature In geodetic surveying, two stations many miles apart are selected and the latitude and longitude of each is determined by astronomical means The line between these two points, the base line, is measured The position of a third station is determined by the angle it makes with each end of the base line This process, called triangulation, is continued until the whole area to be surveyed is mapped For marking a triangulation station the U S Coast and Geodetic Survey uses a bronze disk suitably marked and with a projection on the bottom for anchoring in a concrete block Where the curvature of the earth is great or where there are hills or high trees between stations, towers are built, so that one station may be seen from another See G L Hosmer, *Geodesy* (2d ed , 1930), H O Sharp, *Elements of Geodetic Surveying* (1940), G D Whitmore, *Geodetic Surveying* (1942)

Geoffrey (jĕf'rē), 1158–86, duke of Brittany (1171–86); son of Henry II of England He was designated as heir of Brittany in 1169, being selected as the future husband of Constance, heiress of Brittany, whom he married in 1181 With his brothers he rebelled against Henry (1173–74) and was subsequently involved (1182–4) in territorial disputes with his brother Richard (later RICHARD I) Geoffrey died in Paris while forming an alliance with Philip II of France against Henry II

Geoffrey IV, known as Geoffrey Plantaganet (plăn-tăj'ŭnĕt) [O Fr ,=sprig of broom; he usually wore a sprig in his helmet], 1113–51, count of Anjou (1129–51); son of FULK, count of Anjou and king of Jerusalem He married, probably in 1128, MATILDA, daughter of Henry I of England and widow of Emperor Henry V. After Henry I's death (1135) Geoffrey, hitherto occupied in complex feuds with Angevin barons and rival nobles, undertook to conquer Normandy, to which he laid claim through his wife After 1139 Matilda attempted the conquest of England from Stephen Geoffrey did not accompany her, being still engaged in the conquest of Normandy, which he completed in 1144 In 1147 he undertook a crusade with Louis VII of France. In 1151, just before his death, Geoffrey and Matilda secured the ratification of their cession of Normandy to their son Henry (later Henry II of England), who founded the English ANGEVIN dynasty Geoffrey is also called the Fair.

Geoffrey of Monmouth (mŏn'mŭth), c.1100–1154, English author, bishop of St. Asaph after 1152 He was probably born at Monmouth and was possibly a son of one of the Bretons there. His most famous work, the *Historia regum Britanniae*, supposedly a chronicle of the kings of Britain, is one of the chief sources for the ARTHURIAN LEGEND. Geoffrey was the first to write a coherent account of Arthur, although many parts of the later stories are not found in his work He drew information from the writings of Bede, Gildas, Nennius, the Welsh chronicles, and oral tradition, and, adding much from his own imagination, he wove the whole into a fictional narrative in the form of a history His statement that he translated from an ancient British book is not now generally accepted His work had great influence on Wace, Layamon, and many chroniclers of the Middle Ages Another work, the *Vita Merlini*, which also influenced later stories of Arthur and Merlin, is now commonly attributed to Geoffrey

Geoffrin, Marie Thérèse (Rodet) (marē'tārā'rōdā' zhôfrē'), 1699–1777, French woman of letters Her salon at Paris was for 40 years a center of the ENLIGHTENMENT

Geoffroy Saint-Hilaire, Étienne (āt'yĕn' zhôfrōā' sĕtēlĕr'), 1772–1844, French zoologist He was professor at the Museum of Natural History (1793–1840) and also at the Faculty of Sciences (from 1809), both in Paris, and was a member (1798–1801) of Napoleon's scientific staff in Egypt He expressed in his *Philosophie anatomique* (2 vols , 1818–22) and in other works his theory that all animals conform to a single plan of structure; this attracted many supporters but was strongly opposed by Cuvier His son, **Isidore Geoffroy Saint-Hilaire** (ēzēdôr'), 1805–61, also a zoologist, was an authority on deviations from normal structure He succeeded to his father's professorship at the museum and was also professor at the Faculty of Sciences from 1850

geography, the science which observes, catalogues, analyzes, and correlates the facts of the differentiation of the areas on the earth's surface It was first systematically studied by the Greeks While Thales of Miletus was probably the exponent of a spherical earth, Aristotle was first to demonstrate its sphericity and to delimit its habitable parts Eratosthenes was perhaps the first true geographer He was followed by Strabo, whose interest in man's adaptation to his physical environment broadened a field previously concerned primarily with mathematical relationships The work of Ptolemy was the culmination of Greek geographic learning, which was passed on to the Arabs, who maintained the vitality of the science during the Middle Ages Revival of geographic interest beyond the Moslem world followed the journeys of Marco Polo, the increase of trade with the East, and the great voyages of EXPLORATION which culminated in the discovery of America The 16th and 17th cent brought the reincarnation of sound theoretical geography in the form of textbooks (Varenius's *Geographia generalis*) and maps (Mercator) The modern period may be said to begin toward the end of the 18th cent with the work of Alexander von Humboldt and Karl Ritter Henceforth two principal methods of approach to geography can be distinguished, the systematic and the regional The systematic approach was spurred by the rapidly widening knowledge of the physical and social sciences upon which geography must draw, while the regional approach, which integrates the results of systematic study and focuses them upon a particular place or area on the surface of the globe, received its impetus from man's discovery and penetration of vast new regions and from his desire for a complete inventory of the resources at his command. In the course of the last century emphasis has shifted several times from one approach to the other, but the mutual dependence of these two interconnected points of view in geography has been emphasized by Alfred Hettner and many others In the study of geography two main branches can be distinguished—physical and human (or cultural) geography The first, based on the physical sciences, studies the world's surface, the distribution of land and sea, and the shape, position, and size of the continents in relation to the cosmic influences which affect the globe, CLIMATE, land form (geomorphology), and SOIL are examined as to origin and are classified as to distribution Drawing on the biological sciences, fauna and flora are brought into the areal pattern Human geography places man in his physical setting and studies his relations with that environment, as well as his conscious activities and continuous progress in adapting himself to it and in transforming it to his needs Human geography may in turn be subdivided into economic geography, political geography (with its 20th century offshoot—GEOPOLITICS), and social geography (anthropogeography, demography), which all overlap While geography is a composite science, deriving its working materials from other sciences, it uses the data in a different context, integrating them in a study of areal differentiation in the world Important contributions to the development of geographic concepts were made by Baron von Richthofen, Albrecht Penck, and Friedrich Ratzel in Germany; P M. J. Vidal de la Blache and Jean Brunhes in France; and William Morris Davis and Ellen Churchill Semple in the United States Geographic knowledge is today being spread by teachers and researchers in many of the nation's universities, by agencies of the Federal government, by authors of textbooks, compilers of gazetteers, and cartographers, by scientific expeditions, and by the work of such noted geographic institutes as the Royal Geographical Society (1830, England), the American Geographical Society (1852, United States), and the Société de Géographie (1821, France) For a historical and methodological survey, see R E. Dickinson and O J R Howarth, *The Making of Geography* (1933), Richard Hartshorne, *The Nature of Geography* (1940), J Oliver Thomson, *History of Ancient Geography* (1948) For descriptive geography, see articles on countries, continents, oceans, and other major physical features

Geok-Tepe (gŏk'-tyĭpyĕ', gūk'-tĕpā'), town (1948 pop over 2,000), Turkmen SSR, on the Trans-Caspian RR, near the Iranian border A Turkmen fortress, it was taken in 1881 by the Russians under M D Skobelev and A N. Kuropatkin after a 500-mile march from Tashkent. That new step in Russian expansion toward Iran provoked some hostility in Great Britain Important remains of an ancient civilization have been discovered in the region

Geological Survey, United States, bureau organized under the Dept of the Interior in 1879 to unify and centralize the work already undertaken by separate surveys under Clarence King, F V Hayden, George W Wheeler, and J W. Powell The functions of the bureau cover the exploration of the country to gather information as to geological structure, the preparation of geological maps and of topographical maps of all parts of the country, showing surface features, the examination of natural resources with a view to their development, studying problems of irrigation and water power, the classification of public lands, and the publication of papers, bulletins, and maps, based upon the surveys made The work is divided among four branches, geologic, topographic, water resources, and conservation

geology (jē-ŏl'ŭjē), the science of the EARTH considered with respect to its structure, composition, and history and to the processes which alter the arrangement of its parts Geology depends to a large extent upon the conclusions of chemistry, physics, mineralogy, biology, and astronomy It may for convenience be divided into several fields Petrology deals with the composition and nature of rocks, structural geology, with their arrangement and disposition, including their stratification, geomorphology, with the origin of land forms, physiography, with the distribution of rock structures into land forms, as MOUNTAIN, PLATEAU, PLAIN, and VALLEY, dynamic geology, with the forces involved in geological processes, as EROSION, the formation of folds and faults, the upbuilding of continents and mountains, metamorphism, the activities of volcanoes, and the generation of earthquakes, cosmology, with the early history of the earth and with the various hypotheses about the earth's origin, as the NEBULAR HYPOTHESIS and the PLANETESIMAL HYPOTHESIS Historical geology sets forth the record of the earth's development which geologists postulate from the structure and composition of rocks and from the positions and relationships of the fossil plants and animals found in them, the study of which is the special province of PALEONTOLOGY Historical geologists divide all time since the deposition of the earliest known rocks (approximately a billion and a half years) into five grand divisions—ARCHEOZOIC ERA, PROTEROZOIC ERA, PALEOZOIC ERA, MESOZOIC ERA, and CENOZOIC ERA Each of these is supposed to have marked a new stage in the development of life and to have been brought to a close by profound changes in the disposition of the earth's continents and mountains The geologic cycle, which runs through all historical geology, consists of a period of mountain and continent building, followed by one of erosion, followed in turn by a new period of elevation Economic geology is especially concerned with rocks and rock structures so far as they are useful to man Among the ancients, observations on phenomena of earth structure and processes are found in the writings of such men as Aristotle, Lucretius, Strabo, and Seneca This portion of the Aristotelian tradition was preserved in the early Middle Ages by Avicenna Geological speculation was later one of the interests of Leonardo da Vinci In the 17th cent , cosmogonists, chief among them Descartes and Leibnis, brought forward speculative views on the origin and history of the earth The modern science of geology really arose in the 18th cent , with the work of such men as BUFFON, Guettard, Desmarest, Pallas, and De SAUSSURE Abraham Gottlob WERNER, in spite of the many errors of his specific doctrines and the energy which he diverted from new discoveries into the fruitless controversy between Neptunians and Plutonians, performed a great service for the science by the force and vigor of his personality. In the hands of such men as BUCH, DOLOMIEU, FAUJAS DE SAINT-FOND, DE LA BECHE, SEDGWICK, MURCHISON, LAMARCK, CUVIER, William SMITH, and Sir James Hall, an increasingly experimental trend became evident. James HUTTON laid the

theoretical foundations for much of the modern science with his doctrine of UNIFORMISM, which was first popularised by John Playfair and which, in the 19th cent., replaced the opposing doctrine of CATASTROPHISM, largely through the work of Sir Charles LYELL. Geology in the 19th cent was influenced also by the work of Charles Darwin and enriched by the researches of Louis Agassiz, in the 20th cent valuable new hypotheses were advanced by T C CHAMBERLIN, Sir James JEANS, and Alfred WEGENER See V T Allen, *This Earth of Ours* (1939); E B Branson and W A Tarr, *Introduction to Geology* (2d ed , 1941), George Gamow, *Biography of the Earth* (1941), Charles Schuchert and C O Dunbar, *A Textbook of Geology* (2 parts, 4th ed , 1941), A C Seward, *Geology for Everyman* (1943), Arthur Holmes, *Principles of Physical Geology* (1944), O D von Engeln, *Geomorphology* (4th ed , 1947), H D Thompson, *Fundamentals of Earth Science* (1947), K K Landes, *Geology and Man* (1948), C R Longwell and others, *Physical Geology* (3d ed , 1948), F R Shepard, *Submarine Geology* (1948), C O Dunbar, *Historical Geology* (1949), C M Nevin, *Principles of Structural Geology* (4th ed , 1949), H H Read, *Geology* (1949)

Geometric style, in architecture see DECORATED STYLE

geometry, branch of mathematics which deals with the properties of space and the relations of figures within it Some of the more common geometries are plane, solid, spherical, analytical, descriptive, and differential Plane geometry is the study of figures which lie entirely in one plane, e g , lines, angles, plane triangles and other polygons, and circles Solid geometry deals with solid or three-dimensional figures, e g , cones, cubes, and spheres Spherical geometry is the study of figures drawn on the surface of a sphere These elementary geometries as taught in the high schools follow closely the elements of EUCLID and so are presented in terms of a system of axioms The more advanced geometries also have an axiomatic basis, but axioms are frequently less formally stressed than in the study of the elementary geometries In analytical geometry the geometric relations between various curves are studied by means of the algebraic relations between certain equations made to correspond to the curves by a coordinate system Any method of geometry based on a coordinate system is called an analytic method, whereas the Euclidean type of argument which makes the proof depend on the properties of the figures directly instead of on their algebraic counterparts is called synthetic Descriptive geometry, the study of the reproduction of solid figures upon a plane, is usually treated synthetically, it is important in architecture and engineering Differential geometry, the theory of those properties of figures describable in terms of calculus, must be studied analytically The development of geometry is a long and rich tale traceable from its beginnings in the Babyloian and Egyptian geometry of a few empirically determined statements about surveying problems, through the Greeks' organized axiomatic study of figures *per se* and the analytic method initiated by Descartes, to the modern geometries in which spaces other than that in which we live are studied Modern geometry includes the study of non-Euclidean spaces, Riemannian geometry, spaces of abstract elements, and topology See W C Graustein, *Differential Geometry* (1935), C H Sisam, *Analytic Geometry* (1936), W G Smith, *Practical Descriptive Geometry* (1936)

geomorphology (jē″ôrfŏ′lujē, jē″u-), study of the origin and evolution of the earth's topographic features It developed after 1890 as a result of William Morris Davis's concept of the geomorphic cycle, the theory that land forms pass through a series of well-organized stages in an inorganic evolution The term is often considered to be synonymous with the older term *physiography*, which, however, treats of a broader, less specialized subject

Geonim, Hebrew scholars see SCRIBE

geopolitics, science of applying geographical principles to world politics Its chief exponent was Karl HAUSHOFER, who was influenced by the theories of Sir Halford John Mackinder Haushofer was a close adviser to Hitler, thus the general principles of geopolitics were adapted to the requirements of German nationalism Haushofer distinguished between static nations, i e , those which had reached their optimum of population and expansion, and dynamic nations, i e , countries with a rapidly expanding population, needing more *Lebensraum* [living space], and therefore justifiedly aggressive. Dynamic nations are growing and living, static nations, declining and dying The "oceanic countries" (e g., the British Empire) must make room for the continental nations These are primarily the chief peoples of the great Eurasian land mass ("world island") and of the American continent Russia forms the "heart land" of the "world island," therefore its conquest was necessary for German plans of world hegemony A fascinating game of ideas, geopolitics has found a wide following throughout the world. Its practical application proved detrimental to Germany. See Andreas Dorpalen, *The World of General Haushofer* (1942), Robert Strausz-Hupé, *Geopolitics* (1942), Johannes Mattern, *Geopolitik Doctrine of National Self-Sufficiency and Empire* (1942), H W Weigert, *Generals and Geographers* (1942), H J Mackinder, *Democratic Ideals and Reality* (1942), J F Horrabin, *An Outline of Political Geography* (1942).

George, Saint, 4th cent ?, patron of England He was perhaps a soldier in the imperial army who died for the faith in Asia Minor Gibbon's identification of him with GEORGE OF CAPPADOCIA is false St. George is one of the great saints of the Eastern Church Anciently the patron of soldiers, he was adopted by England in the late Middle Ages and before the Reformation had almost replaced St Edward the Confessor In old plays and in art St George is the slayer of the dragon, *The Golden Legend* did much for the extension of the tale The Red Cross Knight of Spenser's *Faërie Queene* is St George and stands for the Church of England St George's Cross is red, and it appears in the Union Jack Feast April 23

George I (George Louis), 1660–1727, king of Great Britain and Ireland (1714–27) Great-grandson of James I, he was elector of Hanover and succeeded Queen Anne to be the first British sovereign of the house of HANOVER under the provisions of the Act of SETTLEMENT He was personally unpopular because of his German manners, because of his German mistresses, whom he made the countess of Darlington and the duchess of Kendal, because of the unhappy divorce of his wife, SOPHIA DOROTHEA, and because of his inability to speak English His indifference to English government left his power largely in the hands of his ministers and allowed the formation of the first real cabnet government Yet, despite the rising of the JACOBITES under the earl of Mar (1715) and the disastrous collapse of the SOUTH SEA COMPANY (1720–21), his crown was never in danger, for he stood to Englishmen as the guarantee of the "revolution settlement" against a return of the Stuarts Before 1721, his reign witnessed the consolidation of Whig power and the international guarantee in 1718 by the Quadruple Alliance (England, Holland, France, and the Empire) of the Hanoverian succession and the status quo of the Peace of Utrecht (1713) Rising to power in the South Sea Bubble crisis, Sir Robert WALPOLE dominated the end of the reign, beginning his long virtual prime ministership (1721–42) See Lewis Melville, *The First George in Hanover and England* (1908), Basil Williams, *The Whig Supremacy, 1714–60* (1939)

George II (George Augustus), 1683–1760, king of Great Britain and Ireland (1727–60), son and successor of George I Though devoted to Hanover, George was more active in the English government than his father had been CAROLINE OF ANSPACH, whom he married in 1705, exerted a subtle and good influence on him and furthered the ascendancy of the great Whig minister, Robert Walpole, whose power continued until 1742 The early part of the reign was peaceful and notably prosperous However, just as George had quarreled with his father over personal matters, so his son, FREDERICK LOUIS, proved even more opposed to the king In the War of the AUSTRIAN SUCCESSION (1741–48) George led his troops in person at the battle of Dettingen (1743)—the last time a British sovereign did so In 1745–46 the last rising of the Jacobites was suppressed England was expanding as a commercial and colonial power and clashed with France in India and in America as well as in Europe in the complex struggle known as the SEVEN YEARS WAR (1756–63) William Pitt (later earl of Chatham) united the Whigs behind his vigorous war policy in 1757 and before the death of the old king was able to show him that England would be victorious, in spite of the fact that George had for years hated and underestimated Pitt He was succeeded by George III See J D G Davies, *A King in Toils* (1938), Basil Williams, *The Whig Supremacy, 1714–60* (1939).

George III (George William Frederick), 1738–1820, king of Great Britain and Ireland (1760–1820), son of Frederick Louis, prince of Wales, and grandson of George II, whom he succeeded In 1761 he married Charlotte Sophia, princess of Mecklenburg-Strelitz Influenced in youth by his mother and by Viscount Bolingbroke's *Idea of a Patriot King*, he determined that he would rule as well as reign He ended the long ascendancy of the Whigs by securing the resignation of William Pitt (see CHATHAM, WILLIAM PITT, 1ST EARL OF) as prime minister (1761) Minister succeeded minister—Lord Bute, Lord Rockingham, Chatham, and the duke of Grafton—until in Lord North the king found one who would do his bidding During the '60s the Sugar Act (1764), the Stamp Act (1765), and other taxation devices were preparing trouble in America, while the case of John WILKES (1763–69) was linking George's name with tyranny at home India and Canada were won in the Seven Years War (1756–63) The long ministry of North (1770–82) produced a policy of coercion in America so offensive and a military effort so ill-directed (see GERMAIN, GEORGE SACKVILLE) that the colonies fought successfully for their independence (see AMERICAN REVOLUTION), demonstrating the incompetence of the king's personal government, which rested upon lavish dispensation of patronage. Brief ministries of Rockingham, Shelburne, Portland, and Fox and North were followed by the long one of William Pitt (1783–1801), which, although it represented no complete surrender of king to Parliament, marked the end of attempts by British sovereigns to control the ministry. Pitt infused new life into the Tory party partly because of the dangers of the war with France (see FRENCH REVOLUTION and NAPOLEON) and was able to improve trade, set up better governments in Canada and India, and unite Ireland with England When George refused assent to Catholic Emancipation, Pitt resigned. The king, who had had intermittent periods of insanity since 1780, in 1810 became permanently insane, and the prince of Wales (later George IV) was made regent The growth of UTILITARIANISM had a liberalizing influence during the regency The long reign of the stubborn, conscientious George III saw major developments in England —the Industrial Revolution and its attendant problems changed the appearance of the country and the balance of its economy In art, portraiture, landscape painting, and sculpture flourished (see ENGLISH ART), and in letters the romantic movement had its rise and extraordinary flowering. See editions of George III's correspondence by John Fortescue (6 vols , 1928, additions and corrections by L B Namier, 1937), by Bonamy Dobrée (1935), and by Romney Sedgwick (1939), biographies by J D G Davies (1936), C E Vulliamy (1937), D G Barnes (1939), G M Bonstead (1940), M S Guttmacher, *America's Last King an Interpretation of the Madness of George III* (1941)

George IV (George Augustus Frederick), 1762–1830, king of Great Britain and Ireland (1820–30), son and successor to George III In 1785 he married Maria Anne FITZHERBERT, a Roman Catholic To secure parliamentary settlement of his enormous debts, he allowed Charles James Fox (1787) to deny the marriage and in 1795 made a political marriage with Princess CAROLINE OF BRUNSWICK Within a year he had turned against her, and his persecution of Caroline, especially in 1820–21, added to his already great unpopularity. In constant and open opposition to his father, he had supported the Whigs since his first friendship with Fox in 1781 Often put in temporary control, due to George III's fits of insanity, he became regent in 1811 when the king became permanently incapacitated Now, and later as king, he took little part in affairs, while unsuccessfully playing politics in the matter of appointments Despite his early Whig connections, he ruled as regent and king through Tory ministers, and even opposed the liberal views of George Canning and Robert Peel concerning Catholic Emancipation and foreign policy As prince of Wales and regent he was the leader of a profligate society, and as king he was hated for his extravagance, dissolute habits, and meanness of character He was succeeded by William IV See his letters from the years 1812–30 (ed by Arthur Aspinall, 3 vols , 1938), biography by Roger Fulford (rev ed , 1949)

George V (George Frederick Ernest Albert), 1865–1936, king of Great Britain and Ireland (1910–36), second son of Edward VII, whom he succeeded At the age of 12 he commenced a naval career, during which he visited many parts of the empire He became heir apparent on the death (1892) of his elder brother, the duke of Clarence, and in 1893 married Victoria Mary, daughter of the duke of Teck After his coronation (1911) George V visited India, where he held a durbar at Delhi, and throughout his reign he maintained a lively interest in empire affairs He was particularly interested in the social welfare of England and while keeping to his constitutional position occasionally played a decisive personal part in political controversies In 1916, during the First World War, he abandoned all German titles and changed the name of the royal house from Saxe-Coburg-Gotha to Windsor. The 25th anniversary of his accession (May 6, 1935) was celebrated with impressive festivities On his death (Jan 20, 1936) he was succeeded by his eldest son, Edward VIII His second son, on the abdication of Edward, took the throne as George VI See biography by John Gore (official biography, 1941), Philip Gibbs, ed , *Life and Times of King George V* (1936)

George VI, 1895–, king of Great Britain (1936–), second son of George V, successor of his brother, EDWARD VIII He attended the royal naval colleges at Osborne and Dartmouth and in 1916 served in the battle of Jutland Later he was in the Royal Air Force He studied at Cambridge for a time after the war, was created duke of York in 1920, and married (1923) Lady Elizabeth Bowes-Lyon. Their first child, Princess ELIZABETH, was born in 1926 Their second daughter, Princess Margaret Rose, was born in 1930 Upon the abdication of Edward VIII, George became king on Dec 11, 1936. He and his consort, Elizabeth, were crowned in Westminster Abbey, May 12, 1937. They made a state visit to France

in July, 1938, and an unprecedented royal voyage to Canada and the United States in 1939 In the Second World War the king worked to keep up British morale by visiting bombed areas, inspecting war plants, and touring theaters of war action In 1947 the royal family made a state visit and tour of South Africa, and a similar scheduled tour of Australia and New Zealand, set for 1949, was postponed indefinitely because of the king's illness at the end of 1948

George V, 1819–78, last king of Hanover (1851–66), son and successor of Ernest Augustus He sided with Austria in the Austro-Prussian War (1866) The blind king lost his throne, and Hanover was annexed to Prussia

George I, 1845–1913, king of the Hellenes (1863–1913), second son of Christian IX of Denmark On the deposition (1862) of OTTO I, he was elected to succeed on the throne of Greece He introduced (1863) a democratic constitution, acquired (1881) Thessaly and part of Epirus from Turkey, and in 1896 declared war on Turkey in order to aid the insurrection in CRETE Though badly defeated (1897), Greece eventually annexed Crete in 1908 George saw Greece through the first of the BALKAN WARS but was assassinated before the outbreak of the second VENIZELOS was the outstanding political figure in George's reign George married Grand Duchess Olga, a niece of Alexander II of Russia He was succeeded by his son Constantine

George II, 1890–1947, king of the Hellenes (1922–23, 1935–47), eldest son and successor of King CONSTANTINE He married (1921) Elizabeth of Rumania, sister of Prince Carol of Rumania (later Carol II), who married George's sister Helen George's marriage was no more fortunate than his sister's, in 1935 Elizabeth divorced him for desertion Hostility to the dynasty was such that George was compelled to leave GREECE in 1923, a plebiscite shortly afterward established a republic George spent his exile in Rumania and later in London Restored to his throne in 1935, King George allowed his premier, METAXAS, to set up a dictatorship (1936) After the conquest of Greece by Germany and Italy in the Second World War, George fled (1941) his country He spent most of his second exile in London In 1942 he visited the United States When Greece was liberated (1944) the question of the king's return was a major issue in the Greek civil war that began in Dec , 1944 George returned only in 1946, after a plebiscite had decided in favor of the monarchy George II was never popular in Greece but it was hoped that his return would end the resistance of the Communist rebel army and prevent Greece from falling under Soviet influence Though strongly backed by Great Britain and the United States, King George's government and army failed to defeat the rebels, and civil war continued after George was succeeded by his brother Paul

George, David Lloyd see LLOYD GEORGE, DAVID

George, Henry, 1839–97, American economist, founder of the single-tax movement, b Philadelphia, of a poor but deeply religious family His formal education was cut short at 14, and in 1857 he emigrated to California, here he worked at various occupations before turning to newspaper writing in San Francisco George's experience in a number of trades, his desperate poverty while supporting a family, and the examples of financial rapacity that came to his attention as wage earner and newspaperman gave impetus to his reformist tendencies George saw that poverty accompanied and even surpassed the increase in national wealth He believed that the answer to this seeming paradox lay in the fact that the economic rent of land and the unearned increase in land values profited a few individuals rather than the community whose existence made the land valuable He believed that a single tax on land would meet all the costs of government and even leave a surplus, besides unburdening labor and capital of taxes on their output He first outlined the doctrine in the pamphlet *Our Land and Land Policy* (1871) and set himself to write a more elaborate treatise, which appeared under the title *Progress and Poverty* (1879), this sold millions of copies all over the world In 1880 George moved to New York and spent the remainder of his life writing and lecturing He supported the Irish Land League and various economic and political reforms In 1886 he ran for mayor of New York city on a reform platform, and the incumbent Tammany machine was forced to go outside its ranks to find in Abram S HEWITT a man strong enough to oppose him Hewitt won, but George without a party organization polled a heavy vote, running ahead of the Republican Theodore ROOSEVELT In 1897 George ran again but died just before the election Clear presentation and moral fervor rather than originality make George's ideas outstanding His theories have influenced tax legislation in Australia and in parts of Canada, in the United States, and in certain nations of Western Europe See biographies by Henry George, Jr (1900) and Anna George de Mille (ed by D C Shoemaker, 1950), G. R Geiger, *Philosophy of Henry George* (1933).

George, James Zachariah, 1826–97, American jurist and legislator, b Monroe co , Ga He moved to Mississippi in 1834 and, after serving in the Mexican War, was admitted to the bar George became a prominent lawyer and was long reporter and later (1879–81) chief justice of the state supreme court A signer of Mississippi's secession ordinance and a Confederate brigadier general in the Civil War, he was a leader in the struggle for "white supremacy" in Mississippi in the Reconstruction period George wrote the "grandfather clause," effectively ending Negro suffrage, in the Mississippi constitution of 1890, which he later defended on the floor of the U S Senate, where he served from 1881 until his death His unfinished *Political History of Slavery in the United States* (1915) contains a biographical sketch by W H Leavell

George, Stefan (shtā'fän gā'ôr'gu), 1868–1933, German poet, leader of the revolt against realism in German literature He was much influenced by Baudelaire, Mallarmé, and other French symbolists in the creation of his aesthetic doctrine George devoted himself to the ennobling of German culture, and his lyrics bear somewhat the imprint of the poet in an "ivory tower," but their fine classicism, their beautiful and melodious words, and the austerity of George's pure art raised him to the position of being a major poet He had a tremendous influence on younger poets, not only through his verse but through the literary organ of his circle, *Blätter für die Kunst*, founded in 1892 Perhaps the most notable of his disciples was Rainer Maria RILKE George was also a gifted translator and made versions of many French and English poets and of Dante He left Germany when the Nazis came to power, ignoring an invitation to join the Prussian Academy, but ironically was adopted as the national poet after his death His poems include *Hymnen* (1890), *Algabal* (1892), *Die Buchr der Hirten* [book of the shepherds] (1895), *Das Jahr der Seele* [the soul's year] (1897), *Der Teppich des Lebens* [tapestry of life] (1899), *Der siebente Ring* [the seventh ring] (1907), *Der Stern des Bundes* [the star of the covenant] (1914), and *Das neue Reich* [the new kingdom] (1928) For translations, see Martin Sommerfeld, *George, Hofmannsthal, Rilke* (1938), *Poems* (tr by C N Valhope and Ernst Morwitz, 1943)

George, William Reuben, 1866–1936, American philanthropist, b West Dryden, N Y A successful self-made businessman, he became interested in underprivileged problem children and in 1895 founded the GEORGE JUNIOR REPUBLIC

George, town (pop 1,107), extreme NW Iowa, near the Minn line, inc 1887

George, river of N Quebec It flows north almost parallel to the Labrador coast and empties into Ungava Bay on Hudson Strait It is 365 mi long, including Indian House Lake through which it flows

George, Fort, British Columbia see PRINCE GEORGE

George, Lake, 33 mi long and 1 to 3 mi wide, NE N Y , in the foothills of the Adirondacks and S of Lake Champlain, into which it drains through a short outlet The lake, with numerous small islands, is the center of a resort area Discovered by Isaac Jogues in 1646, it was named Lac du St Sacrament by him, but Sir William Johnson renamed it for the English king in 1755 Lake George Battleground Park, with the ruins of Fort George (1759), is at the south end of the lake, as are the ruins of Fort William Henry (1755) The area was a battleground in the French and Indian War and the Revolution

George Junior Republic, community at Freeville, N Y , founded 1895 by William Reuben GEORGE for neglected and maladjusted adolescents (16–21 years) The community is a miniature republic, with full self-government and administration for the members All must work on the farm or in the community's industries Schooling is provided Similar junior republics have been established in other states and countries See W R George, *The Junior Republic* (1910)

George of Cappadocia (kăpudō'shu), d 361, Arian churchman Constantius II made him patriarch of Alexandria instead of St ANTHANASIUS (357) His oppression of Catholics and pagans made him hated, and the mob soon drove him out In 361 he returned, but when Julian acceded he was thrown into prison and, later, lynched Gibbon's identification with St George was not serious, nor is he to be confused with George of Laodicea

George of Laodicea (lāŏ"dĭsē'u), d c 363, Arian churchman, made bishop of Laodicea (335) He was excommunicated at Sardica (343) He appeared later at various councils, always among the moderates Learned and good, he is not to be confused with George of Cappadocia

George of Podebrad (pō'dyĕbrat), 1420–71, king of Bohemia (1458–71) A Bohemian nobleman, he became the leader of the UTRAQUISTS (the moderate Hussites) He seized Prague (1448) during the minority of King LADISLAUS V, was elected "administrator" by the Bohemian diet, and continued to govern the country after the formal accession (1453) of Ladislaus His relations with Ladislaus were friendly In Ladislaus's reign, George ended the anarchy of the interregnum, restored the power of the courts, recovered alienated crownlands, and secured the recognition of the central government at Prague in the Bohemian dependencies, Moravia, Silesia, and Lusatia Ladislaus died in 1457 and George was elected king in 1458 Emperor FREDERICK III formally invested him with the kingdom in 1459 When in 1462 Pope PIUS II abolished the Compactata—the compromise by which the pope recognized the Utraquists as members of the Catholic Church—George promptly declared his loyalty to them, an immediate break with Rome was averted through the mediation of Frederick III In 1466, however, Pope PAUL II excommunicated George, declared him deposed, and enlisted the aid of the emperor and MATTHIAS CORVINUS, king of Hungary, against him Matthias won Moravia and most of Silesia and Lusatia, in 1469 the Catholic party in Bohemia proclaimed him king However, George, at the head of the Utraquists, expelled Matthias To strengthen his position he had signed a treaty with Casimir IV of Poland, naming Casimir's son as his successor As a result, Ladislaus II (later, as ULADISLAUS II, also king of Hungary) became king on George's death George of Podebrad unsuccessfully proposed a European alliance against the Turks Bohemia recovered peace and prosperity in his reign, which, however, was marked by the persecution of the Bohemian and Moravian Brethren

George of Trebizond (trĕ'bĭzŏnd), c 1396–1486, Greek scholar, who took part in the revival of learning in Italy, b Crete Settling in Venice, he taught Greek, philosophy, and rhetoric there and in Vicenza before going to Rome in 1442 He became known as a translator of Aristotle and enjoyed the favor of the popes Eugene IV and Nicholas V Under Paul II he was papal abbreviator He made translations of Plato and translated into Latin some Greek patristic writings

George Pepperdine College see LOS ANGELES, Calif

Georgetown, principal settlement on Ascension island, in the Atlantic Ocean

Georgetown, city (pop 73,541), capital and largest city of British GUIANA, a port at the mouth of the Demerara river Known as Stabroek when the Dutch controlled present British Guiana, the city was renamed Georgetown in 1812 after the British had occupied the colony in the Napoleonic Wars It has wide, tree-lined streets, many with lily-covered canals reminiscent of the Dutch period Below sea level at high tide, it is protected by a mole The monotony of a muggy climate is partially relieved by year-round ocean winds With but few exceptions, most of the buildings and residences are of wood The tropical botanic gardens are among the finest in the world and the markets operated by East Indians are curious transplantings of Asiatic culture By way of river traffic and short rail lines Georgetown receives the products which constitute its chief exports—sugar, rum, timber, gold, and bauxite

Georgetown, town (pop 2,562), S Ont , on the Credit river and W of Toronto It is a manufacturing and farming center

Georgetown. 1 Town (pop 1,820), co seat of Sussex co , S Del , inc 1869 Renowned among its historic buildings is the county courthouse Near by are the county jail, with a whipping post, and a state school for the feeble-minded **2** Part (since 1895) of WASHINGTON, D C , on the Potomac near the confluence of Rock Creek It was settled c 1665, laid out in 1751, and incorporated as a town in 1789 Georgetown, in 1790 a part of the land granted by Maryland to the Federal government for a national capital, was a patrician town, its many fine old houses still lend it charm, among them Bellevue and DUMBARTON OAKS GEORGETOWN UNIVERSITY is here **3** City (pop 3,235), E Ill , S of Danville, in a farm and coal area, laid out 1827, inc 1869 **4** City (pop 4,420), co seat of Scott co , N Ky , N of Lexington, settled 1776 as a pioneer station, inc 1790 It grew up around the Royal Spring, which still supplies the city's water Georgetown is a processing center in the bluegrass farm region It is the seat of Georgetown College and has many fine old houses **5** Town (pop 1,803), NE Mass , E of Lawrence, settled 1639, set off from Rowley 1838 **6** Village (pop 1,848), co seat of Brown co , SW Ohio, near the Ohio SE of Cincinnati, laid out 1819 It is a trade center for a farm and tobacco area, and shoes are manufactured The boyhood home of U S Grant and the school he attended are here, his birthplace, Point Pleasant, is west, and near it is Grant Memorial State Park, with a museum **7** City (pop 5,559), co seat of Georgetown co , E S C , at the head of Winyah Bay, c 15 mi from the ocean Here four rivers (the Pee Dee, Waccamaw, Black, and Sampit) enter the bay It is a port of entry, a resort, and a shipping center, with lumbering activities and paper mills Founded in the early 18th cent., it flourished for a time as a shipping point for rice, indigo, and naval stores to Great Britain and the West Indies The Church of Prince George (parish organized in 1721) dates from the 1740s **8** City (pop 3,682), co seat of Williamson co , central Texas, at the point N of Austin where two branches form the San Gabriel river, founded 1848, inc 1871.

It is the market for sheep and goat ranches to the west, processes some cotton from the south and east, and also processes dairy products and poultry The city has a settled, almost ancient air It is the seat of Southwestern Univ (Methodist, coeducational, 1873)

Georgetown University, in the Georgetown section of Washington, D C , Catholic (Jesuit), mainly for men, opened 1791 by Bishop Carroll (later archbishop), chartered 1815, the oldest U S Catholic college It has a college of arts and sciences and schools of dentistry, foreign service, law, and medicine. Woodstock (Md) College is affiliated There are institutes for brain and chemo-medical research and a seismograph

George Washington Birthplace National Monument see WAKEFIELD

George Washington Bridge, vehicular suspension bridge over the Hudson, between Manhattan, borough of New York city and Fort Lee, N J , constructed in 1927–31 It has a main span 3,500 ft long and 250 ft. above the water. Cass Gilbert was the consulting architect, and O H Ammann, chief engineer of the Port of New York Authority, was in general charge of the planning and construction

George Washington University, at Washington, D C , nonsectarian, coeducational, chartered 1821 as Columbian College, opened 1822, became a university 1873 It received its present name in 1904 Besides Columbian College and a junior college, it has schools of education, engineering, government, law, pharmacy, and medicine and an inter-American center

George William, 1597–1640, elector of Brandenburg (1619–40) Mild and irresolute, he failed to turn the strategic position of Brandenburg to advantage in the THIRTY YEARS WAR His possessions were devastated by both armies George William, after a long neutrality, was in 1631 forced into a Swedish alliance by his brother-in-law, Gustavus Adolphus, but after the Swedish defeat at Nordlingen (1634), he changed sides and, influenced by his minister, Adam von Schwarzenberg, allied himself with the emperor (Treaty of Prague, 1635). The Swedes ravaged N Brandenberg Discouraged by the invasions and misfortunes of his realm, George William retired to Konigsberg (1638), leaving the state to Schwarzenberg's management He was succeeded by his son, Frederick William

Georgia, USSR see GEORGIAN SOVIET SOCIALIST REPUBLIC

Georgia, state (58,876 sq mi , 1940 pop 3,123,723, 1949 estimated pop 3,196,000), SE United States, last founded (1733) of the Thirteen Colonies The most important cities are ATLANTA (the capital and the largest), SAVANNAH, AUGUSTA, MACON, COLUMBUS, ROME, ATHENS, and BRUNSWICK Georgia is bounded on the north by Tennessee and North Carolina, on the east by South Carolina and the Atlantic Ocean, on the south by Florida, and on the west by Alabama There are three main topographical divisions Extending inland from the coast, which is edged by the SEA ISLANDS, is the low coastal plain, covering the southern half of the state Mountainous N Georgia is comprised in the Appalachian plateau, the valley and ridge province (of the Appalachian Valley), and the Blue Ridge province Bridging these two sections and embracing about one third of the state, in middle Georgia, is the *piedmont* plateau Georgia is well drained by many rivers, chief of which are the SAVANNAH, forming the boundary with South Carolina, the OCMULGEE and the Oconee, which merge in the southeast to form the Altamaha, the CHATTAHOOCHEE, which forms part of the Alabama boundary and joins with the Flint in the extreme southwest corner of the state to form the Apalachicola, and the SAINT MARYS, rising in large OKEFENOKEE SWAMP, which forms part of the Georgia-Florida line Except for the mountain area, the climate is generally mild, long summers and short winters are the usual rule Primarily an agricultural state, Georgia produces cotton, corn, tobacco, hay, oats, sweet potatoes, peaches, pecans, watermelons, and pimento Stock raising (with meat packing), dairying, and the coastal fisheries are also important Since it is heavily wooded, principally in pine, the state derives much income from lumbering and the production of naval stores It also has valuable mineral deposits in clay (especially kaolin), granite, and marble Cotton textiles dominate its diversified manufactures The route of Hernando DE SOTO took him across Georgia, and the Spanish later established missions and garrisons on the Sea Islands Georgia was included in the grant Charles II made (1663) to the eight lords proprietors of Carolina Spain, which claimed the whole eastern half of the present United States, protested the grant and in 1670 (when Charleston, S C , was founded) brought the English to agree that actual possession would determine ownership The English-Spanish contest for the territory between Charleston and St Augustine continued intermittently for almost a century, and South Carolina's threatened position before the Spanish (the Indians and the French were also feared) was a prime reason for establishing Georgia—as a buffer colony. Georgia's chief founder, James E. OGLETHORPE, was also motivated by humanitarian interest in creating a refuge for imprisoned English debtors, although, actually, few of this class arrived In June, 1732, Oglethorpe and 19 associates, chief of whom was the earl of EGMONT, received a charter from George II (for whom the colony was named), constituting them as a board of trustees to manage the colony According to the charter, Georgia included all the land between the Savannah and Altamaha rivers from the Atlantic coast to the headwaters of these streams and thence to the "South Seas" Great care was taken in choosing the colonists, who, led by Oglethorpe, reached Charleston in Jan , 1733 On a bluff c 18 mi from the mouth of the Savannah river, Oglethorpe laid out the first town, Savannah, in Feb , 1733 After winning the friendship of the CREEK INDIANS he built forts along the rivers and on the islands An expedition against St Augustine (1740) failed, but on July 7, 1742, near Fort Frederica on St Simons Island, Oglethorpe defeated the Spanish in the battle of Bloody Marsh, thereby effectively ending their claim to the land N of the St Marys river The cosmopolitan population of the new colony included Englishmen, Welshmen, Scotch Highlanders, Germans (persecuted Salsburg Lutherans and Moravians), Piedmontese, and Swiss Jews, Catholics, and settlers from other American colonies were at first barred The two classes of immigrants—charity settlers, who were financed by the trustees, and adventurers, who paid their own way (and came to receive the best land grants)—were required to plant a specified number of mulberry trees, the trustees planned to have Georgia produce all the silk England needed, a scheme that shortly came to nothing Strong spirits and Negro slavery were prohibited These and other restrictions impeded growth and by the time Georgia became a royal colony in 1754, most of them had been abolished As a royal colony Georgia fitted perfectly into the British mercantilist system, exporting rice, indigo, skins, lumber, naval stores, beef, and pork to England and buying there the manufactured articles it needed Its citizens were slower to resent those acts of the crown which exasperated the other colonies, but news of the battle of Lexington aroused the patriots, who seized the government at Savannah in July, 1775 Tory and patriot sentiment were about equally divided, with the older colonists generally loyal to England, while the younger ones, born in Georgia, were usually found on the Revolutionary side Exposed to Floridians on the south and Indians on the west, both loyal to the king, the patriots, strongest in the upcountry, fared badly After retaking Savannah in 1778, the British held virtually every important place in Georgia until the end of the war Although Georgia was the first Southern state to ratify (1788) the Constitution, it early took a strong states' rights stand In *Chisholm* vs *Georgia* (1793), the U S Supreme Court held that an individual could sue a state, a decision equally obnoxious to Georgia and to other states, it was later nullified by the Eleventh Amendment Further difficulties with the Federal government stemmed from the related problems of Indian removal and land speculation (see YAZOO LAND CLAIMS) In 1802 Georgia assumed its present boundaries when it ceded its western lands (later organized as the states of Mississippi and Alabama) to the United States in return for $1,250,000 and a pledge that the Indians would be removed The Creeks yielded their lands in 1825, but the CHEROKEE INDIANS set themselves up as an independent nation in 1827. John Marshall's decision in *Worcester* vs *Georgia* (1832) held that the state had no jurisdiction over the Cherokee, but President Jackson declined to support the Chief Justice, and in 1838 John ROSS was forced to lead his people west The invention, in 1793, of the cotton gin by Eli WHITNEY had stimulated the desire for large landholdings, and internal improvements, especially canals and railroads, facilitated Georgia's expansion to its western border Although committed to slavery, Georgia in antebellum days had the outstanding pro-Union leaders of the South in Alexander H STEPHENS, Robert TOOMBS, and Howell COBB But successive defeats on the national scene, culminating in the election of Lincoln, increased separatist sentiments, and on Jan 19, 1861, Georgia seceded and later joined the Confederacy. The coast was soon blockaded by the Union navy, and in April, 1862, Fort Pulaski (see PULASKI, FORT), which had been seized by the state in Jan , 1861, was recaptured by the Federals The wartime administration of Gov Joseph E BROWN, ardent protector of Georgia's interests, was a thorn in the side of Jefferson Davis and the Confederacy Georgia became a major battlefield in the Civil War when, in 1864, Gen W T SHERMAN launched his successful ATLANTA CAMPAIGN. Sherman's subsequent march through Georgia, from Atlanta to the sea, resulting in the fall (Dec., 1864) of Savannah, was a triumph of destruction, never forgotten by Georgians With wise leadership and few carpetbaggers, Georgia made a rapid political recovery in RECONSTRUCTION days, being definitely readmitted to the Union in 1870 after it approved the Fifteenth Amendment (the Thirteenth and Fourteenth amendments had been ratified earlier). However, it took the state some time to recover from the financial skulduggery of Gov. Rufus B. Bullock's administration (1868–71), which had existed with the support of Federal troops A more serious effect of the war was the dislocation of agriculture, formerly almost entirely dependent on the Negro, resulting in the breakup of the large plantations and the rise of farm tenancy. Offsetting this was the rise of a new industrial era, whose prophet was Henry W GRADY, characterized by the remarkable growth of Atlanta, which succeeded Milledgeville as capital in 1868 The trend away from the one-crop system became marked at the turn of the century with the introduction of peach cultivation, and agricultural diversification was practiced more widely with the coming of the boll weevil after the First World War Although Georgia's agricultural resources were partially depleted by soil erosion, the state weathered the depression, which brought about a movement back to the land, better than most Georgia's recent political history has been turbulent In 1941 the board of regents of the state university system, handpicked by Gov Eugene TALMADGE, discharged three educators alleged to have advocated racial equality in the schools This act caused national and Southern educational associations to remove state institutions temporarily from their accredited lists and led to Talmadge's defeat by Ellis G ARNALL in the 1942 Democratic primary Youth played an influential role in Arnall's victory, and in 1943 Georgia became the first state to grant the vote to 18-year-olds A new constitution, replacing an older one of 1877, was adopted in Aug , 1945 It confirmed earlier reforms, notably those concerning the penal system, which had won nation-wide notoriety in the 1930s In 1946 thousands of Negroes, for the first time, voted (on the strength of a U S Supreme Court decision) in the Democratic primary By the county-unit system in primary elections peculiar to Georgia (held constitutional by the Supreme Court in April, 1950), Talmadge won the gubernatorial nomination, although he was second in the popular vote After his formal election as governor in Nov , 1946, Talmadge died The new constitution provided no method of selecting a governor on the death of a governor-elect Arnall recognized M E Thompson, the lieutenant governor-elect as his rightful successor, but the legislature proclaimed Herman Talmadge, son of Eugene, governor, on the basis of his having received the most write-in votes in the election In March, 1947, the state supreme court declared for Thompson, and he held office until Nov , 1948, when Herman Talmadge, victor in a special primary, was inaugurated Leading schools in the university system of Georgia, which includes all state-supported institutions of higher learning, are the Univ of Georgia, at Athens, Georgia Institute of Technology, at Atlanta, Georgia State College for Women, at Milledgeville, Georgia Teachers College, at Collegeboro, Georgia State Womans College, at Valdosta, Albany State College, at Albany, Fort Valley State College, at Fort Valley, and Georgia State College, at Savannah There is a municipally supported university system for Negroes in the capital (see ATLANTA) Among the outstanding private and denominational colleges are Emory Univ , Clark College, and Morris Brown College, all at Atlanta, Paine College, at Augusta, Agnes Scott College, at Decatur, Bessie Tift College, at Forsyth, Brenau College, at Gainesville, La Grange College, at La Grange, Mercer Univ and Wesleyan College, both at Macon, and Shorter College, at Rome See H E Bolton and Mary Ross, *The Debatable Land* (1925), J T Lanning, *The Spanish Missions of Georgia* (1935), Federal Writers' Project, *Georgia: a Guide to Its Towns and Countryside* (1940), Hal Steed, *Georgia, Unfinished State* (1942), E Merton Coulter, *Georgia a Short History* (1947), E K Ware, *A Constitutional History of Georgia* (1947)

Georgia, town (pop 1,008), NW Vt , S of St Albans, chartered 1763 The town hall was built as a church in 1800

Georgia, Strait of, channel, c 150 mi long, between the mainland of British Columbia and Vancouver Island, connecting Puget Sound with Queen Charlotte Sound It forms part of the famous inland steamship passage to Alaska

Georgia, University of, at Athens, land-grant and state supported, for men and women It had the first state university charter (1785), its first college (Franklin) opened in 1801 (see BALDWIN, ABRAHAM, and HALL, LYMAN) It includes colleges of agriculture, arts and sciences (Franklin), and education; schools of commerce, forestry, home economics, journalism, law (Lumpkin), pharmacy, and veterinary medicine, and a university press See E M Coulter, *College Life in the Old South* (1928)

Georgia Institute of Technology, at Atlanta; state supported, for men; chartered 1885, opened 1888. It has university courses in architecture, chemistry, engineering, and industrial management.

Georgiana, town (pop. 1,627), S central Ala., SSW of Montgomery, in a cotton, truck, and lumber area; settled 1824, inc. 1869.

Georgian Bay, large northeastern extension of Lake Huron, S Ont., separated from Lake Huron by the long Manitoulin Island and by the Saugeen Peninsula. It is c.120 mi. long and c 50 mi wide Rivers draining the lake areas of S Ontario flow into it, they include the French river, which, with North Channel, the northern connection of Georgian Bay with Lake Huron, forms part of the old voyageur's trading route from Montreal to the northwest Georgian Bay is connected with Lake Ontario by the Severn river and Trent Canal Many of the well-timbered, rock-bound islands of Georgian Bay are summer resorts The **Georgian Bay Islands National Park** (3,458 acres, est 1929) includes 30 of the islands

Georgian Military Road, highway, 133 mi long, USSR, across the Greater Caucasus, linking Tiflis (Georgian SSR) with DZAUDZHIKAU (RSFSR) Built in the early 19th cent, it follows an ancient route used for centuries by merchants and invaders It passes through the DARYAL gorge, skirts Mt Kazbek, and crosses the Caucasian crest at an altitude of 7,815 ft In the 19th cent, during the struggle between the Russians and the Caucasian mountaineers, the road was protected by military outposts

Georgian Soviet Socialist Republic or **Georgia,** Georgian *Sakartvelo* (säkärt'vĕlô), Rus *Gruziya* (grōō'zēē), constituent republic (c 29,400 sq mi, 1946 estimated pop 3,600,000), USSR, in W Transcaucasia TIFLIS is the capital The republic borders on the Black Sea in the west, on Turkey and the Armenian SSR in the south, on the Azerbaijan SSR in the east, and on the RSFSR in the north. Georgia includes the ABKHAZ ASSR, the ADZHAR ASSR, and the South Ossetian Autonomous Oblast (see OSSETIA). It extends, roughly, from the crest of the Greater CAUCASUS southward across the valleys of the KURA and RION rivers to the Lesser Caucasus Its climate and vegetation varies from the humid subtropical Black Sea lowland of MINGRELIA to the high mountainous crest and to the dry Kura steppes in the east Fruit, tea, tobacco, mulberry trees (for silk), and vineyards (particularly in KAKHETIA) are cultivated in the warmer districts The IMERETIA region is rich in manganese, mined particularly at Chiatura Manganese, petroleum products, tobacco, citrus fruit, wine, and tea are the chief exports, they are shipped from the ports of Batum, Poti, and Sukhum A coastal rail line, the GEORGIAN MILITARY ROAD, and the OSSETIAN MILITARY ROAD connect Georgia with the rest of the USSR About two thirds of the population are Georgians speaking a South Caucasian language Among the minorities are Armenians, Azerbaijani Turks, Ossetians, Russians, Adzhars, Abkhaz, and Greeks The Georgian Church is one of the oldest Orthodox Eastern foundations, and there has been a standard Georgian literary language flourishing with a Christian literature since the 3d cent Known to the ancients as COLCHIS (in the west) and IBERIA (in the east), Georgia developed as a kingdom about the 4th cent B C MTSKHET was its earliest capital The Persian Sassanidae, who ruled the country from the 3d cent, A D, were expelled c 400, and in the 6th cent began the rule of a branch of the Armenian Bagratid dynasty, which continued, with interruptions, until the beginning of the 19th cent Georgia has varied greatly in size in the course of its history and was frequently overrun by invaders Alp Arslan held it in the 11th cent, but King David II again expelled the Seljuks, and in the 12th and 13th cent Georgia under Queen Thamar reached its greatest expansion and cultural flowering. From that period dates the national poem, *The Knight in the Tiger Skin*, by Rustaveli Ravaged (14th cent) by the Mongols, Georgia revived only to be sacked again by Tamerlane (c 1400) In the 15th cent the Mongols withdrew, but Georgia was divided by King Alexander I into three kingdoms (Imeritia, Kakhetia, and Kartlilia or Georgia proper) among his sons Hard pressed by the Afghans, the Persians, and the Turks, Georgia accepted (18th cent) vassalage to Russia in exchange for assistance The last king, George XIII, abdicated (1801) in favor of the tsar Abkhasia, Mingrelia, and Kakhetia were acquired by Russia from Turkey between 1803 and 1829 Briefly independent after the Russian Revolution of 1917, Georgia became a soviet republic in 1921 and joined the USSR in 1922 as a member of the Transcaucasian Soviet Federated Socialist Republic In 1936 it became a separate union republic Its territory was increased later (1944) by the addition of parts of the former Karachai and Chechen-Ingush autonomous oblasts

Georgian style, mode in English architecture and the allied arts of the reigns (1714–1820) of George I, George II, and George III All the English works of the 18th cent, or so-called late Renaissance, show remarkably consistent characteristics. The Georgian style, based upon the principles of Andrea PALLADIO introduced into England by Inigo Jones and Sir Christopher Wren, resolved these into a distinctive national style. Publications aiding the new fashion included Palladio's drawings in an edition of the *Antiquities of Rome*, *The Architecture of Andrea Palladio* (revised by Giacomo Leoni, 1742), and *Ruins of the Palace of Diocletian in Dalmatia* (1764) by Robert Adam. Canons controlling the proportioning of the ORDERS OF ARCHITECTURE and based upon the teachings of Palladio and other Italians were formulated anew by Sir William CHAMBERS in his *Treatise on the Decorative Part of Civil Architecture* (1759), with the result that the earlier naïveté of proportions and detail vanished before the new classic correctness In all buildings symmetry was the first consideration and was attained even at the sacrifice of comfort and convenience A vast increase in population and the birth of industrialism brought an increasing demand for formal mansions for the aristocracy and for dwelling houses for the middle classes A purely English type of dwelling, somewhat standardized as to plan and materials, was produced for the needs of town and country The use of brick had become common under William of Orange (William III), as an element of Dutch influence, and was popularized by Sir Christopher Wren The brick house, with courses and cornices of white stone and trimmings of white painted woodwork, became particularly typical of Georgian façades Houses were of two general types, the simple block plan and the central block with flanking wings, as in Kedleston Hall, Derbyshire, designed by James Paine and executed by the Adam brothers The inclusion of corridors was an innovation of the period and added to the privacy and convenience of the interiors The prevailing desire for elegance was reflected in even modest residences, while the appropriate furniture, created by great cabinetmakers such as Chippendale, Hepplewhite, and Sheraton, was augmented by the porcelains, rugs, and wallpapers of the Orient New types of public, commercial, civic, and governmental architecture arose, examples of which are St James's Club, by Robert Adam, the Old Admiralty, Whitehall, by Thomas Ripley, the treasury and Horse Guards buildings, by William Kent, Somerset House, by Sir William Chambers, the Bank of England, by Sir John Soane, and monumental street groupings such as those by John Wood and his son at Bath and by the Adam brothers at London Among notable churches are St Martin's-in-the-Fields and St Mary-le-Strand, both by James Gibbs, other important architects of the style were Nicholas Hawksmoor, George Dance, the elder, James Gandon, Sir John Vanbrugh, and Henry Holland American buildings and arts of the period, which closely resemble their English prototypes, are usually designated as Colonial

Gera (gā'–), Benjamite Gen 46.21, 1 Chron 8 3

Gera (gā'rä), city (pop 89,212), Thuringia, E central Germany, on the White Elster river and SSW of Leipzig It is an important textile center First mentioned in the 10th cent, Gera was chartered in 1224 It was largely destroyed by fire in 1780 Until 1918 Gera was the capital of the principality of REUSS (younger line) Among the notable buildings are the 16th-century city hall and the Osterstein Palace, built (1686–1735) on the site of an earlier fortress

Geraldton, town (pop 2,979), central Ont, NE of Fort William, in a lumbering and mining area

Gérando, Joseph Marie de (zhôzĕf' marē' də shärädô'), 1772–1842, French philosopher and statesman Joining the insurrectionary forces against the revolutionary government in Lyons, he was condemned to death (1793), but escaped abroad Under the empire he held several administrative offices in France, Italy, and Spain He was a member of the Academy of Moral and Political Sciences from 1832 and was made a peer in 1837 He did much for the education of the laboring classes and of deaf-mutes His philosophical writings are partly based on the system of Condillac

geranium, popular name for much-cultivated house and bedding plants of the genus *Pelargonium*, chiefly South African One of the most popular is the hybrid Lady Washington Many geraniums are cultivated for their scented leaves (e g, lemon and rose), some of these yield an oil used in perfume Rose geranium leaves are added to jellies to give a delicate flavor The related true genus *Geranium* is widely distributed, the several species native to America are usually called wild geranium or crane's-bill These have pink to purple flowers and long-beaked fruits The common wild geranium or spotted crane's-bill (*Geranium maculatum*) has astringent roots that have been used medicinally

Gerar (gē'rär), unidentified place, SW Palestine, near Gaza Here lived Abraham and Isaac, and hither Asa pursued the Ethiopians Gen 10 19, 20.1, 26.1,6,17,20,26, 2 Chron. 14.13,14.

Gérard, Étienne Maurice (ātyĕn' mōrĕs' zhärär'), 1773–1852, marshal of France He served with distinction in the French Revolutionary and Napoleonic Wars and was created count by Napoleon In the Waterloo campaign he served with gallantry at Ligny After an exile he returned to France in 1817, became a deputy of the opposition, helped in the Revolution of 1830, was twice minister of war in the July Monarchy, was made a marshal (1831), and led the French expedition to BELGIUM, taking Antwerp in 1832

Gérard, François Pascal Simon, Baron (frāswä' paskal' sēmō' härō' zhärär'), 1770–1837, French portrait and historical painter, b Rome In Paris, after brief study under Pajou and others, he became a favorite pupil of David, who influenced such works as the *Psyche Receiving the Kiss of Cupid* and the *Daphnis and Chloë*, both in the Louvre As a leading portraitist, he was patronized by the court during the empire and the Bourbon restoration Louis XVIII appointed him court painter in 1814 Examples of his historical paintings are in the Versailles Museum Characteristic of his art is a studied elegance and meticulous finish best exemplified in such portraits as those of the Countess Regnault de Saint-Jean-d'Angély (1798, Louvre) and Mme Récamier (1802, Petit Palais)

Gerard, James Watson (jürärd'), 1867–, U S ambassador to Germany (1913–17), b Geneseo, N Y, grad Columbia, 1890, and New York Law School, 1892 He practiced law in New York city and served (1908–13) as associate justice of the New York supreme court As ambassador to Germany, he handled many delicate negotiations, including those concerning the German submarine campaigns in the First World War He was recalled two months before the United States declared war His impressions of the period are found in *My Four Years in Germany* (1917) and *Face to Face with Kaiserism* (1918)

Gérard, Jean Ignace Isidore (zhä' ēnyäs' ēzēdôr' zhärär'), 1803–47, French caricaturist, illustrator, and lithographer, also known as Grandville His spirited caricatures of social and political life are noted He contributed to many periodicals and published numerous collections of his drawings and lithographs, such as *Les Métamorphoses du jour*, *Les Tribulations de la petite propriété*, *Le Convoi de la liberté*, and *La Basse-Cour* He illustrated Hugo's *Life of Napoleon* and La Fontaine's *Fables*

Gerard, John (jĕ'rärd, jürärd'), 1545–1612, English botanist and barber-surgeon He compiled a catalogue (1596) of the plants in his garden, the first of its kind to be published He is best known for his *Herball* (1597), largely an adaptation of other works to which he added folklore and some original observations

Gérardmer (zhärärmā'), town (pop 3,368) Vosges dept, E France Formerly a popular resort in the Vosges mts, it was almost completely destroyed in the Second World War

Gerardo dalle Notti see HONTHORST, GERARD VAN

Gerard of Cremona (jürärd', krĭmō'nu), 1114?–1187, Italian scholar He lived most of his life at Toledo, where he had access to the great Arabic scientific works Gerard translated the *Almagest* and Avicenna into Latin and by so doing introduced them to Western Europe

Gerard van Haarlem see GEERTGEN VAN HAARLEM

Gerasa (jĕ'rüsu), **Gerash,** or **Jerash** (both jĕ'räsh, jurash'), ancient city of the Decapolis, SW of Damascus, in present Jordan It has been sometimes identified with the biblical RAMOTH-GILEAD According to Josephus it was captured (83 B C) by Alexander Jannaeus and rebuilt (A D 65) by the Romans Though twice destroyed thereafter, it was a flourishing city in the 2d and 3d cent Under the Greeks it was devoted to the worship of Artemis The site of Gerasa, which is not the biblical country of the Gerasenes, is covered with interesting Roman ruins, including a long colonnaded street with more than a hundred columns still standing, a great theater and a smaller one, and many temples A colony of Circassians lives among the ruins

Gerasenes (gĕr'ùsēnz) see GADARA.

Gerash, ancient city see GERASA

Géraud, André (ädrā' zhärō'), pseud **Pertinax,** 1882–, French journalist, grad Univ of Bordeaux He was London correspondent for the *Echo de Paris* from 1908 to 1914 and its foreign editor from 1917, when he first used his pseudonym He left in 1938 to become editor of *Europe nouvelle* His articles on foreign policy, advocating a French-British alliance against German aggression, attracted wide attention and appeared in many English and American papers He took refuge (1940–45) in the United States, where he continued to write on European politics Among his works are *Le Partage de Rome* (1929) and *Les Fossoyeurs* (1943, Eng tr, *The Gravediggers*, 1944)

Gerbert see SYLVESTER II

Gergesenes (gûr'gùsēnz) see GADARA

Gerhard, William Wood (gär'härd), 1809–72, American physician, b Philadelphia, grad Dickinson College (B A., 1826), M D Univ of Pennsylvania, 1830. In Paris he studied and worked with P. C. A

Louis In 1837 he wrote a paper in which he clearly distinguished between typhoid and typhus fever From 1838 he taught at the medical school of the Univ of Pennsylvania He was a specialist in diseases of the chest and author of *Lectures on the Diagnosis, Pathology, and Treatment of the Diseases of the Chest* (1842)

Gerhardt, Charles Frédéric (shärl frädārēk' zhārar'), 1816–56, French chemist, b Strasbourg He revived the theory of acid radicals, which he called the theory of residues, and did valuable research in organic chemistry, especially on the anhydrides of organic acids He contributed to the development of the atomic-weight theory

Gerhardt, Elena (ālā'na gĕr'härt), 1883–, German mezzo-soprano She made her debut in 1903, appeared briefly in opera, and then devoted herself to concert and oratorio, achieving distinction as an interpreter of German lieder Her American debut was in 1912

Gerhardt, Paul, 1607–76, German hymn writer and clergyman Some of his hymns, among the greatest in the German language, are much used in English translations See also HYMN

Gerhart, Emanuel Vogel (gär'hart), 1817–1904, American minister of the German Reformed Church and educator, b Freeburg, Pa, grad Marshall College 1838, and studied theology Gerhart was president of Heidelberg College (1851–55), of Franklin and Marshall College (1855–66), and of the theological seminary first at Mercersburg and then at Lancaster, Pa (1868–1904)

Géricault, Jean Louis André Théodore (zhä' lwē' ändrā' tāōdōr' zhārēkō'), 1791–1824, French painter He studied with Antoine Vernet and with Pierre Guérin, in whose studio he met Delacroix In 1812 he exhibited his *Cavalry Officer on Horseback* (Louvre) and in 1814 the *Wounded Cuirassier* From 1817 to 1819 he studied in Rome On his return to Paris he exhibited his famous *Raft of the Medusa* (Louvre), a large painting of a group of shipwrecked men at sea The extraordinarily free conception and realistic handling of this theme awoke a storm of protest from the followers of the classical school and ushered in romanticism in French painting In 1820 Géricault exhibited the picture in London and won general acclaim His three years' stay in England was productive of a number of fine paintings of horses, including *The Village Forge, Horse Fed by a Child,* and the famous *Epsom Derby* (Louvre) He also modeled a few small figures and made excellent lithographs A fall from a horse in England resulted in Géricault's death in Paris His active life as an artist lasted little over 10 years, but it sufficed to place him among the best painters of his century His enlivening influence on French painting was immediate and lasting

Gering (gĕr'ĭng), city (pop 3,104), co seat of Scotts Bluff co, W Nebr, on the North Platte opposite SCOTTSBLUFF, founded 1887, inc 1890 A railroad division point, it is the industrial and trade center of an irrigated region producing sugar beets, alfalfa, and livestock and has a beet-sugar factory Scotts Bluff National Monument is near by

Gérin-Lajoie, Antoine (ätwän' zhārē'-läzhwä'), 1824–82, French Canadian author and journalist, b Yamachiche, Que He composed his best-known poem, the song *Un Canadien errant,* while still in school After editing (1845–52) the *Minerve* he entered the employment of the government and spent his later life as assistant librarian of Parliament His most popular works, the two novels *Jean Rivard le défricheur* (1874) and *Jean Rivard l'économiste* (1876), idealize the simple life of the French Canadian habitants He also wrote *Dix Ans au Canada, de 1840 à 1850,* a history of the government during that crucial decade

Gerizim (gĕ'rĭsĭm, gĕrī'–), mountain, central Palestine In Arabic it is called Jebel et-Tor Nablus, the ancient Shechem, lies in the valley between Gerizim and Mt Ebal Gerizim was considered by the Samaritans as the only place proper for worshiping God An ancient reading, Gerizim, is used in Deut 27 4, instead of Ebal The Maccabean leader, John Hyrcanus, destroyed the 300-year-old Samaritan temple here c 130 B C Joshua 8 33, Judges 9 7, John 4 20,21 The peak is in territory claimed by Jordan

Gerlachovka, Czechoslovakia see TATRA

Gerlsdorfer Spitze, Czechoslovakia see TATRA

germ, term commonly applied to any minute organism that causes disease Included among germs are the pathogenic forms of bacteria, protozoa, molds, viruses, and rickettsia (very minute forms having some characteristics of bacteria) The germ theory of disease (i e, the theory that disease is caused by the introduction of germs into another living organism) was finally accepted largely as a result of the experiments of Pasteur which were lent strength by Lister's use of antiseptic methods in reducing infection For methods of combating germs, see ANTISEPTIC, DISINFECTANT, GERMICIDE The expression *germ plasm* is often used in biology to indicate the living material that is passed on from one generation to another in the sex cells, as opposed to somatoplasm, all the living matter other than the germ plasm of the organism. The word *germ* is sometimes used also for a seed or a portion of a seed

Germain, George Sackville, 1st **Viscount Sackville** (jôrj'mun, –mān), 1716–85, British soldier and statesman He was known as Lord George Sackville until 1770, when under the terms of a will he took the name Germain Sackville's early military career, in the War of the Austrian Succession and the Seven Years War, ended in courtmartial and dismissal (1760) for insubordination to Ferdinand of Brunswick at the battle of Minden (1759) A member of Parliament intermittently from 1741, he attached himself to Lord North and was his secretary of state for the colonies (1775–82) With the earl of Sandwich, incompetent first lord of the admiralty, he must share much blame for the British reverses in America He and John Burgoyne were the chief authors of a triple plan (see SARATOGA CAMPAIGN) to end the American Revolution However, his vague orders to Sir William Howe to join Burgoyne possibly lost Burgoyne the campaign of 1777, while the confusion in the plans of Cornwallis and Sir Henry Clinton, arising from Germain's ignorance of American geography and American temperament, contributed largely to the disaster at Yorktown He was created viscount in 1782

Germain, Sophie (sôfē' zhĕrmē'), 1776–1831, French mathematician Although self-taught, she mastered mathematics and corresponded with J L Lagrange and K F Gauss She is known especially for her study of the vibrations of elastic lamellae

German, Sir Edward, 1862–1936, English composer, whose name was originally Edward German Jones He is best known for his incidental music to Shakspere's *Richard III* (1889), *Henry VIII* (1892), and *As You Like It* (1896) and for his light operas *Merrie England* (1902) and *Tom Jones* (1907) He was knighted in 1928

German architecture took an individual character with the Christianization of the Germanic people and the beginning of monastery building ROMANESQUE ARCHITECTURE persisted for a long time until the GOTHIC ARCHITECTURE of France penetrated to Germany It was supplanted in the 16th cent by RENAISSANCE ARCHITECTURE, which in turn developed into BAROQUE The ROCOCO of the 18th cent was popular in Germany, the 19th cent brought a uniquely German style, the BIEDERMEIER In the 20th cent Germany took the lead in MODERN ARCHITECTURE, chiefly through the efforts of Walter Gropius's BAUHAUS school

German art. The earliest extant examples of German art, in the form of ivory book covers, stem from Carolingian times Around the year 1000 German art became more extensive, this early style is Romanesque To this period belong miniature book decorations, massive bronze works such as doors and crucifixes in various cathedrals, and some painted windows The beginning of the 13th cent brought the less massive shapes and decorative linear design which developed into pure Gothic Germany's comparative isolation from the rest of the continent, lasting until the end of the 15th cent, resulted in sculpture and painting which were among the finest in the Gothic style and easily distinguished from French Gothic The cathedrals of Cologne, Strasbourg, Bamberg, and Nuremberg were built during this time In painting, altarpieces became the foremost projects, while glass painting was still popular and sculpture concentrated on religious objects In the 15th cent crafts also received much attention and schools of goldsmiths and silversmiths, wood carvers, potters, and stoneware makers began to spring up About 1400 the so-called late Gothic emerged, with softer, more rounded figures The workshop of Hans Multscher at Ulm for the first time gives us the name of an artist, with Stephan Lochner he was much influenced by the Flemish work of the brothers Van Eyck Martin Schongauer, painting at the same time, developed a more individual style, characterized by delicate and curving lines Hans Holbein, the elder, and Michael Pacher also enriched the 15th cent with their work But by far the outstanding artist of the century was Albrecht Durer, who paved the way from Gothic into the next, more Italianate period He devoted himself not only to painting but also to drawing and to woodcuts, which he gave a new popularity lasting until c 1520, when they were superseded by copperplate, at which Durer also excelled Having studied in Venice, he is chiefly responsible for bringing the Renaissance to Germany, where the Italian style was adapted to the national spirit Painting in the 16th cent was at its height in Germany and led the other arts Hans Holbein, the younger, Mathias Grünewald, Albrecht Altdorfer, Lucas Cranach, the younger, and Hans Baldung were leading painters of that age The end of the century saw a change to baroque from the pure Renaissance style and with it a revival of sculpture, bronzes being especially fine Ceiling decoration also became popular The rococo style began (c 1730) with the Tischbein family and Angelika Kauffmann, its chief exponents in painting In this time, too, the small Dresden china figures and groups became very popular, with the workshops at Meissen producing exquisite miniature statuettes The monumental statues of J G Schadow, such as the one of Frederick the Great, were regarded as the model for a century of subsequent German plastic art A R Mengs marked the transition to a romantic classicism modeled on the art of Rome, and J F Overbeck, Schadow-Godenhaus, Peter von Cornelius, and Schnorr von Carolsfeld banded together to form a group of Nazarenes active at Rome Active entirely in Germany were Alfred Rethel, leader of a school of historical painting He and A F E von Menzel both worked in woodcut as well and were responsible for the 19th-century revival of that medium The BIEDERMEIER period brought to the fore such genre painters as the Austrian Moritz von Schwind and Karl Spitzweg A new wave of romanticism in the late 19th cent emerged, having been foreshadowed earlier in the century by the softly illuminated landscapes of C D Friedrich Anselm von Feuerbach, Arnold Boecklin, and Hans von Marées were influenced by Italian painting Such painters as Hans Thoma combined a realism of technique with a romanticism of subject matter In the early 20th cent the Secessionists, led by Max Liebermann, brought new realism to painting, often taking for its subject matter the daily life of poor and simple people Impressionism made some inroads on German art, but was quickly replaced by still more modern techniques The Blaue Reiter (Blue Riders) group of abstractionists, whose colors were highly emotional, was composed of Franz Marc, Lyonel Feininger, who was Germany's foremost cubist, Paul Klee, and Vasily Kandinsky, who originated purely abstract art This group furthered expressionism, a term coined by them to mean the expression of purely subjective emotions Several of these same artists also taught at the BAUHAUS, led by Walter Gropius, assisted by Moholy-Nagy This establishment became the chief breeding place of functionalism and encouraged experimentation and abstraction with the ideal of combining artistic beauty with usefulness Its preoccupation with industrial arts as well as with such comparatively new forms as photography and moving pictures had far-reaching effects The Hitler regime, however, discouraged any but academic art, and Germany in the 1930s ceased for the time being to be of artistic significance See Harold Picton, *Early German Art and Its Origins* (1939)

German Baptist Brethren see DUNKARDS

German Catholics, religious sect founded in 1844 by dissidents from the Roman Catholic Church It was led by excommunicated priests, Johannes Czerski of Schneidemuhl, Posen, and Johannes Ronge of Breslau Their congregations, "Christian Apostolic Catholics," gained adherence for their mild rejection of Catholic practices A council was held at Berlin in 1847 Again in 1859 there was an accretion (from the "Free Congregations") The group then became the "Religious Society of Free Congregations" Few congregations now exist

German Confederation, 1815–66 The Congress of Vienna provided for a confederation consisting of 38 sovereign powers These originally were the German states (including the free cities), the emperor of Austria, the king of Denmark (in his capacity as duke of Holstein and Lauenburg), the king of England (in his capacity as king of Hanover), and the king of the Netherlands (for the duchy of Luxemboung) By 1866 the number of members was reduced to 33 The act of confederation provided for the introduction of a constitution in every member state, but this proposal was not generally carried out before 1848 The central diet met at Frankfurt under the presidency of Austria Unanimity was required for all its decisions, and the delegates' votes were bound to instructions from their respective governments The diet thus was virtually powerless The strong reactionary influence of METTERNICH dominated the confederation until 1848, when the liberal revolutions that swept Germany resulted in the creation of the FRANKFURT PARLIAMENT The diet, interrupted for a time, was resumed in 1850 By the convention agreed upon at OLMÜTZ Austrian leadership was restored, but the AUSTRO-PRUSSIAN WAR led to the dissolution of the confederation and the establishment of the NORTH GERMAN CONFEDERATION under Prussian leadership

German East Africa, former German colony, area c 370,000 sq mi, E Africa After the First World War it was divided into three parts Kionga (c 400 sq mi) was annexed to Mozambique, and the League of Nations granted a mandate over TANGANYIKA to Great Britain and a mandate over RUANDA-URUNDI to Belgium In 1946 the mandates were constituted trust territories of the United Nations under the administration of the former mandatory powers

Germanic languages, subfamily of Indo-European of which English and German, the standard language of Germany, are members. See LANGUAGE (table)

Germanic laws. The customary laws of the GERMANS before their contact with the Romans is unknown to us except through casual references of ancient authors and inferences from the codes com-

piled after the tribes had invaded the Roman Empire These codes (called *leges barbarorum*) dating from the 5th to the 9th cent , are usually divided into four groups, the Gothic (Visigothic, Burgundian, and Ostrogothic), the Frankish (Salic, Ripuarian, Chamavian, and Thuringian), the Saxon (Saxon, Anglo-Saxon, and Frisian), and the Bavarian (Alemannic and Bavarian) The Langobardic or Lombard laws are sometimes classed with the Saxon The Roman population under Germanic rule continued to live under Roman law, for law was regarded as personal, not territorial Their law was codified in the Gothic and Burgundian kingdoms and was applied to Roman subjects and the Church (the *leges Romanae* or *leges Romanorum*) Another type of legislation distinct from these was the Frankish capitulary (see CAPITULARIES) The *leges barbarorum* were sometimes called *pactus* (e g , *Pactus Alamannorum*), because people and ruler cooperated in their enactment. It is now generally agreed that the laws were substantially Germanic, though the form in which they were cast was a more or less crude imitation of Roman codes Roman influence was generally strong, since German customs had been thrown into a new pattern by Roman contacts when these compilations were drawn up, all except the Anglo-Saxon are in Latin, though interspersed with Germanic legal terms For the most part, the *leges barbarorum* deal with penal law and legal procedure, some of the older ones are merely lists of compositions to be paid for specific personal injuries (see WERGILD) Private and public law are scantily treated Much material can, however, be found concerning landholding (one of these provisions became the basis for the Salic law of succession) and the personal relationships that governed public law Many of the codes are important Oldest is the *Codex Euricianus* by King Euric, the personal law of the Visigoths, a related code was adopted in 506 under ALARIC II, the *Lex Romana Visigothorum* or *Breviary of Alaric*, for the Roman subjects Both were later superseded (c 654) by the *Lex Visigothorum* or *Liber iudicorum* compiled under CHINDASWINTH and RECESWINTH, this for the first time applied to Goths and Romans alike In the 13th cent it was translated into Spanish as the *Fuero juzgo* The *Lex Gundobada* (*Lex Gombette*) was adopted (c 501) for Burgundians and for cases involving both Burgundians and Romans, while the *Lex Romana Burgundsorum* (c 506), also from the reign of Gundobad, applied only to the Romans in the Burgundian kingdom Because of a mistake in copying, it has come to be known as *Papianus* or Papian law, it was gradually replaced by the *Breviary of Alaric* The most accomplished Germanic code was the *Edictum Rotharis*, promulgated in 643 Together with the Italian legislation of the Holy Roman emperors (the *Capitulare Langobardicum*), it became the basis for a renaissance of jurisprudence in Italy and maintained itself till the revival of Justinian's CORPUS JURIS CIVILIS in the 13th cent Its influence reaches to the threshold of modern times As to the Franks and more northerly Germans, their codes were less elaborate and they had none for Romans Most ancient and also most important was the law of the Salian Franks, *Lex Salica*, first compiled (c 508–11) under CLOVIS I, which exerted great influence, for it was the fundamental law of the Merovingian and Carolingian rulers and later of the Holy Roman emperors The *Lex Saxonum* and the *Lex Anglorum et Verinorum* probably owe their compilation to the initiative of Charlemagne, the *Lex Ripuaria* of the Ripuarian Franks, the *Lex Baiuvariorum*, and *Lex Alamannorum* are distinguished by inclusions of public law Our knowledge of the early German laws is much hampered by the faultiness of manuscripts, many are known only in fragments The standard studies of the codes were made in German by Heinrich Brunner and Richard Schroder

Germanic religion. Tacitus' *Germania* and *Beowulf* are our best sources on Germanic religion It was polytheistic, somewhat like GREEK RELIGION, in having, apparently, Olympian gods and chthonian (underworld) gods reasonably distinct Its three or four principal gods were WODEN (Odin), Tiw (Tyr), FREY AND FREYJA, and an earth-goddess Sacrifices, oracles, and fertility rites were probably commonly practiced The festivals of the year were probably seasonal, in spring and autumn The mythology was not extensively developed, although story-telling was greatly cultivated From the later works, such as the NIBELUNGENLIED, many mythical ideas can be gained, e g , that sun worship and phallic worship were important The ideas of death were, it seems, somewhat similar to those of the Greeks in having a special place for heroes After Christianity had been adopted in Iceland, the oldest direct material on Germanic myth was set down, in the *Elder* and *Younger Eddas* (see EDDA) There is no doubt that the highly developed cosmogony and eschatology of Icelandic literature were primarily the interest of poets and that they were heavily influenced by Christian ideas, this is especially true of such mythological features as RAGNAROK, BIFROST, YGGDRASILL, the NORNS, VALHALLA, FENRIS, and HEIMDALL. Other features making Norse mythology different from that of the other German peoples are the isolation of the Old Norse and the longer development of the system Late modifications of old, originally Germanic ideas are probably THOR (strength), FRIGG, BALDER (light), LOKI (fire as evil), the Aesir (Olympian gods), and the VALKYRIES (probably originally something like elemental death spirits) Norse mythology has been very popular in later literature

Germanicus, A D 41?–A D 55 see BRITANNICUS

Germanicus Caesar (jurmā'nĭkŭs), 15 B C –A D 19, Roman general, son of Drusus Senior and nephew of the Emperor TIBERIUS His wife was AGRIPPINA I He fought in Pannonia and Dalmatia and received a triumph He subsequently received command in Germany The widespread mutiny of A D 14 was largely put down by Germanicus' efforts He took advantage of an opportunity to attack ARMINIUS, but was not at first successful In A D 16 he attacked the Germans again and defeated them signally at the Weser Tiberius recalled Germanicus and put Germanicus' brother Drusus in his stead Sent to the East, Germanicus accomplished little, except for the pacification of Asia Minor, because of the enmity of Cn Calpurnius Piso After a visit to Egypt, Germanicus died suddenly, supposedly of poison administered by Piso at Tiberius' request One of Germanicus' brothers was Emperor CLAUDIUS I AGRIPPINA II and Emperor CALIGULA were his children

germanium (jurmā'nēŭm), rare metallic element, gray, brittle (symbol=Ge, for physical constants, see ELEMENT, table) It was described with striking accuracy by MENDELEJEFF according to his periodic table, and called by him ekasilicon, before its discovery by Clemens Winkler in 1886 It resembles tin and lead It occurs in a few minerals, e g , argyrodite (in combination with silver and sulphur), zinc blend (zinc and sulphur), and tantalite (iron, manganese, and columbium) It forms compounds with oxygen (oxides), chlorine (chlorides), and fluorine (a fluoride) and with carbon and hydrogen (an ethide)

German language, a Germanic language See LANGUAGE (table)

German literature includes not only the literature of Germany but a considerable portion of Swiss literature and virtually all Austrian writings The earliest known written work in German literature is a 4th-century translation of the Bible into Gothic Other writings of the period up to c 1050 are generally religious or epic in character and are written in Latin or in Old High German, they include the *Lay of Hildebrand*, the works of Otfried (c 870), the *Waltharilied* (c 925), and the later *Anegenge* (1080) The succeeding period of Middle High German (11th–14th cent) is characterized by chivalric writings, such as *Orendel* and translations of the *Song of Roland* and the *Alexanderlied*, by the epics of Hartmann von Aue, by Gottfried von Strassburg's *Tristan*, and by the works of Wolfram von Eschenbach A little later came the works of the Austrian Walther von der Vogelweide, Neidhart, Konrad von Würzburg, and Wernher der Gartenaere and the popularization of the NIBELUNGENLIED and the *Wolfdietrich* saga After Hugo von Trimberg and the Swiss Ulrich Boner a period of decadence began as chivalry yielded to the city as influence An outstanding figure of this time is the satirist Sebastian Brant A German Bible appeared (1468) and the folk epic *Reynard the Fox* (*Reinke de Vos* or *Reinecke Fuchs*) In the 16th cent a revival of classicism, due in part to the activities of the Dutchman Erasmus, competed with the effects of the Reformation, the latter having slightly more weight in the literature of the period, which includes the works of Ulrich von Hutten, Luther (whose translation of the Bible, 1522–34, became the model of German prose for later writers), the Swiss Zwingli, Hans Sachs, and Fischart At this time also appeared the Faust legend and the folk epic *Till Eulenspiegel* With the 17th cent there was a decline, the result in great part of the Thirty Years War The few leading figures of the time were Rollenhagen, Angelus Silesius, Grimmelshausen, Hofmannswaldau, and Opitz the metrical reformer The great age of German literature opened in the 18th cent with Gellert, the Swiss critic Bodmer, and Gottsched, who paved the way for Klopstock's *Messias*, the works of Kleist, and the critical writings of Lessing To this period roughly belong the works of the Swiss Gessner The period known as *Sturm und Drang* embraced the works of Herder, Wieland, Goethe (greatest figure in German literature), Schiller, and Burger Romanticism appeared with the Schlegels, Arnim, Brentano, Chamisso, Holderlin, Schleiermacher, Tieck, Richter, E T A Hoffmann, Heine, Werner, Immermann, and Grillparzer It was at this time that the revolutionary groups, such as Young Germany, appeared Hebbel, Otto Ludwig, and Richard Wagner exerted a profound influence upon the drama, the lyrics of Lenau and Ruckert were published Somewhat apart from these main streams of German writing are the works of the Swiss Zschokke and Gotthelf. The last third of the 19th cent was admittedly less brilliant, although fine works were written by Freytag, Fontane, Storm, Raabe, and Rosegger, and the Swiss Gottfried Keller produced one of the great novels of the age Another Swiss, C F Meyer, was distinguished as poet and short-story writer Foremost figures in verse were also the philosopher Nietzsche and the poets Liliencron and Dehmel Holz's unceasing championing of naturalism prepared the critics for Hauptmann and Sudermann, whose activities carry over into the 20th cent In this century have flourished such authors as Stefan George, Hofmannsthal, the Swiss Spitteler, Rilke, Unruh, Thomas and Heinrich Mann, Wedekind, Werfel, Toller, Kaiser, Bahr, Schnitzler, Frenssen, Thiess, Wassermann, Feuchtwanger, and Arnold and Stefan Zweig and such expressionists as Sorge, Klabund, Kaiser, and Brecht Younger writers include experimenters such as Doblin, Anna Seghers and Kafka Preoccupation with the First World War yielded gradually to a more tranquil outlook until the coming of Nazism made residence at home intolerable or unsafe for the great majority of important German authors and dispersed them among other lands, many have continued their activities in the United States Much of modern German writing has been translated and has attracted considerable attention in this country See histories of German literature by Kuno Francke (latest ed), J G Robertson (1931), Wilhelm Scherer (Eng tr , 1906), and Calvin Thomas (1928), E K Bennett, *A History of the German Novelli* (1934), Jethro Bithell, *Modern German Literature* (1939), Norman MacLeod, *German Lyric Poetry* (1940), William Rose, *Men, Myths, and Movements in German Literature* (1931), Oskar Walzel, *German Romanticism* (Eng tr , 1932), Bayard Q Morgan, *A Critical Bibliography of German Literature in English Translation* (1938)

Germans, great ethnic complex of Europe, a basic stock in the composition of the peoples of Sweden, Norway, Denmark, Iceland, Germany, Austria, Switzerland, N Italy, the Netherlands, Belgium, Luxembourg, N and central France, Lowland Scotland, and England Their appearance in history necessarily coincides with their contact with the Romans Little is known from history of the Germans before Christ, except in regard to the defeat of some of them by Marius c 100 B C From archaeology it is clear that their rise as a determining factor in the history of Europe came about the beginning of the Christian era with the general breakup of Celtic culture in central Europe The northern part of Germany and the shores of the Baltic were the homes of the Germans before their great expansion southward, southeastward, and westward The prime sources for the culture and distribution of the Germans are Tacitus' *Germania* and *Agricola* Caesar's *Commentaries*, remnants of old Germanic institutions in later ages, and archaeological remains Caesar noticed that there were people along the Rhine who were not Celtic, but apart from their greater barbarity and warlikeness, when compared with the Gauls, his *Commentaries* tell little As the centuries of the Christian era passed, the Germans became increasingly troublesome to the Roman Empire The VANDALS in the east and OSTROGOTHS in the east were the first to attack the empire seriously The Ostrogoths were a part of the Gothic people, often called the East Germanic whose language (Gothic) was the first Germanic language to be set down in writing The Goths apparently moved SE from the Vistula to the Balkans, thence W across Europe The Germans probably retained a certain ethnic solidarity until the 2d or 3d cent , but later they broke into many peoples Chief among these were the ALEMANNI, the ANGLO SAXONS, the Burgundii (see BURGUNDY), the LOMBARDS, the SAXONS, and the VISIGOTHS The Scandinavians, a large group, included the Icelanders, who produced the first Germanic literature (see OLD NORSE LITERATURE) Many other tribes appeared at various periods of ancient and medieval history The Chamavi were in the 1st cent N of the Rhine and SE of the Zuider Zee, later they seem to have moved southward and joined with the Frankish people The Cimbri may not have been Germans, if they were, they were the first Germanic people to enter Italy They entered Transalpine Gaul late in the 2d cent B C and fought with Roman armies in several places, c 103 B C they began a migration to Italy with some Helvetii and Teutons and were crushed by MARIUS (101 B C) on the Raudian Fields, N Italy The Eruli or Heruli, perhaps originally dwelling in Jutland, were allied to the Goths and assisted ODOACER in the final defeat of the Roman emperor by the Germans (476) The Gepidae were a Gothic people who moved southward from the Baltic at the Vistula into the Hungarian plain W of the Danube There they were overwhelmed by ATTILA, but sur-

vived, only to be defeated by THEODORIC (489) and by the Lombards and Avars (566) They disappeared thereafter. The Marcomanni lived N of the Danube in Germany in the 1st and 2d cent , forming a constant threat to the Roman border, Marcus Aurelius defeated them in the Marcomannic War They moved into the country of the Celtic Boii and probably expanded later into Bavaria, where they seem to be the same as the Baiuoarii or Boiarii, ancestors of the Bavarians The Suebi or Suevi are mentioned by Tacitus as a central German people, but their identity is not clear, the Alemanni may have been the same or, more likely, nearly related to them. They gave their name to SWABIA. The Teutons may have been Celtic, they defeated the Cimbri in 103 B C and were crushed by Marius at Aquae Sextiae By an extension of their name the Germanic peoples are sometimes called Teutonic See LANGUAGE, GERMANIC LAW, GERMANIC RELIGION; GERMANY

German silver, alloy of copper, zinc, and nickel discovered by E A GEITNER It is silver white, for this property originally receiving its name, but today the use of the term *silver* is prohibited for alloys not containing that element In composition German silver varies, the percentage of the three elements ranging approximately as follows copper, from 50 to 61 6 percent, zinc, from 19 to 17 2 percent, nickel, from 30 to 21 1 percent, the proportion is always specified in commercial alloys It is extensively used because of its hardness, toughness, and resistance to corrosion for making articles such as tableware (which is commonly silver plated), tea and coffee pots, and jugs Because of its high electrical resistance it is used also in heating coils

German Southwest Africa see SOUTH-WEST AFRICA

Germantown, 1 Village (pop 2,095), SW Ohio, SW of Dayton, in a productive tobacco area, laid out 1814 2 Residential section of Philadelphia, Pa , on Wissahickon Creek, settled by Germans c 1683, laid out 1684, inc 1689 It grew slowly until just before the Revolution and was one of the earliest American centers of printing and publishing. In 1854 it was annexed to the city of Philadelphia The Howe House and several other colonial houses, inns, and churches are standing When the British occupied Philadelphia after the battle of Brandywine, the greater part of the army encamped at Germantown Washington decided to attack the camp and on Oct 4, 1777, advanced, Gen John Sullivan commanding the right wing and Gen Nathanael Greene the left The attack was well planned, but failed chiefly because an unexpected skirmish delayed Greene and a fog confused the troops Losses were heavy on both sides It was the last important engagement conducted by Washington before he went to VALLEY FORGE for the winter

Germanus of Auxerre, Saint (jûrmā'nŭs, ôsĕr'), d 448, Gaulish churchman, bishop of Auxerre (after c 418). St Patrick was under his tutelage for a dozen years. Popes Celestine and Leo sent him to England (430, 447) to combat Pelagianism, on the first occasion he was accompanied by the deacon Palladius, first recorded missionary to Ireland On this trip, also, Germanus led the Britons in the defeat, traditionally near Mold, Wales, of an Irish and Pictish marauding party As it was Easter, the war cry was Alleluia, and the battle is called the Alleluia Victory Germanus was popular in Celtic Britain. Feast July 31

German Volga Republic, former autonomous Soviet Socialist republic, RSFSR, on the lower Volga It was constituted in 1923 Its largely German population was descended from colonists who settled here in the reign of Catherine II In 1941, as a consequence of the German invasion of Russia, the republic was dissolved and the German population deported to Siberia

Germany, Ger. *Deutschland* (doich'lant) or *Deutsches Reich* (doi'chŭs rīkh') [German commonwealth or empire], largest country of Central Europe It borders on the Baltic Sea, Denmark, and the North Sea in the north, the Netherlands, Belgium, Luxembourg, and France in the west, Switzerland, Austria, and Czechoslovakia in the south, and Poland in the east. Because of the failure of the Allies of the Second World War to reach agreement concerning a peace treaty with Germany, Germany (as of April, 1950) has no settled boundaries, no unified government, no well-defined status among the family of nations, and no permanent internal organization. It has been under military occupation since 1945. Under the Weimar constitution adopted in 1919 and suspended in 1933, Germany was a federal republic comprising 17 states. Berlin was the federal capital The boundaries of the Weimar Republic were those fixed by the Versailles Treaty of 1919 (see VERSAILLES, TREATY OF) According to the 1933 census—the last census taken before the boundary changes that began with the annexation (1938) of Austria—Germany had an area of 180,935 sq mi and a population of 62,411,190 (For the division of Germany into military occupation zones in 1945, for its administrative reorganization, and for its split into Western Germany and Eastern Germany, see end of article) The 17 states of the Weimar Republic were PRUSSIA, BAVARIA, SAXONY, WÜRTTEMBERG, BADEN, THURINGIA, HESSE, Mecklenburg-Schwerin (see MECKLENBURG), OLDENBURG, BRUNSWICK, ANHALT, LIPPE, Mecklenburg-Strelitz, SCHAUMBURG-LIPPE, and the free cities of HAMBURG, BREMEN, and LÜBECK. With the exception of Prussia, which included the relatively recently acquired provinces of Hanover, Prussian Saxony, Schleswig-Holstein, and Hesse-Nassau, these states represented, roughly, the main historic divisions of Germany. The state boundaries, however, only rarely corresponded to natural geographic and economic divisions S Germany, which includes Bavaria, Württemberg, Baden, S Hesse, and the Rhenish Palatinate, extends roughly from the RHINE in the west to the BOHEMIAN FOREST in the east, and from the Rhine, the Lake of Constance, and the Bavarian Alps in the south to the central German highlands in the north It is drained by the Danube, the Neckar, and the Main Rising to the Zugspitze (9,721 ft) in the Bavarian Alps, it consists of plateaus and of forested mountains, e g., the BLACK FOREST and the highlands of SWABIA) Though largely agricultural, S Germany contains many important industrial and commercial cities, notably MUNICH, AUGSBURG, NUREMBERG, STUTTGART, MANNHEIM, KARLSRUHE, FRANKFURT, MAINZ, and DARMSTADT. The Rhine and Neckar valleys are famous for their wines The western frontier of Germany follows the Rhine in the south, but swings W of the Rhine near Karlsruhe, the area of Germany W of the Rhine constitutes the Rhenish PALATINATE and the RHINELAND, a part of former Prussia, with the cities of COLOGNE, AACHEN, DÜSSELDORF, BONN, TRIER, and COBLENZ (at the confluence of the Rhine and the MOSELLE) The southern section of the Rhineland, which contains the Eifel and Hunsrück mts , is largely agricultural and has famous vineyards The north is heavily industrialized and is economically connected with the RUHR basin, one of the great industrial agglomerations of the world, which extends E of the Rhine from Dusseldorf, in WESTPHALIA The states and provinces of N Germany—Westphalia, HANOVER, Oldenburg, Bremen, Hamburg, SCHLESWIG-HOLSTEIN, Mecklenburg, BRANDENBURG, and POMERANIA—form the central part of the North European Plain Drained by the WESER, the ELBE, and the ODER rivers, they are, despite their generally poor soil, largely agricultural Potatoes and beets are typical crops Cattle raising is important in parts of the region Berlin is the greatest industrial center of all Germany and its chief inland port, Bremen and Hamburg are the main North Sea ports, Kiel is the main Baltic port Fishing is an important occupation along the entire northern coast. Former EAST PRUSSIA and Upper and Lower SILESIA, with an important industrial district, were detached from Germany in 1945 and placed under Polish administration (except N East Prussia, awarded to the USSR) The central section of Germany comprises SAXONY, with the great industrial centers of LEIPZIG, DRESDEN, and CHEMNITZ, former Prussian Saxony, with MAGDEBURG and HALLE, S Hanover, with GÖTTINGEN, the state and the city of BRUNSWICK, Anhalt, with DESSAU, Hesse-Nassau, with KASSEL, and Thuringia, with WEIMAR, ERFURT, and JENA There are several mountain formations, notably the HARZ, the Thuringian Forest, and the ERZGEBIRGE, which forms the Czechoslovak border The Rhineland, S Germany, and the mountains of central Germany constitute the most beautiful sections of the country and attract many tourists Although the German industries are concentrated in relatively small areas, they employ nearly half the total population Germany possesses many mineral resources, but only coal in sufficient quantity, and thus depends on the import of raw materials and the export of finished products (machinery, optical and precision instruments, chemicals, electric apparatus, textiles, and food products). Food imports are necessary to supplement domestic crops As of 1933 the majority (c.64 percent) of Germans were Lutheran Protestants, the rest being mostly Roman Catholics. Catholicism is strongest in Bavaria, the Rhineland, and Silesia. The educational level of Germany is very high, among its many universities those at Berlin, Göttingen, Bonn, Heidelberg, and Halle are world famous

Germany before 1871. Various phases of the early, medieval, and early modern history of Germany are covered in the articles GERMANS; GERMANIC LAWS, GERMANIC RELIGION; HOLY ROMAN EMPIRE, PRUSSIA, GERMAN CONFEDERATION, NORTH GERMAN CONFEDERATION The following survey is intended as a very general outline. The Romans conquered (1st cent B.C.-1st cent A D) the regions W of the Rhine and S of the Danube and penetrated (12 B.C.-9 B C) as far E as the Elbe. However, after the German victory in the TEUTOBURG FOREST (A.D. 9) Rome kept only the provinces of Lower and Upper Germany (roughly, the present Low Countries, Lorraine, and Alsace) and parts of S Germany, included in Rhaetia prov. From the late 1st cent. to the 3d cent the Romans also held the *Agri Decumates*, including Baden and Swabia, protected against Germanic inroads by a fortified line (Latin *limes*). In the period of the great migrations (4th-5th cent.) the German tribes (who did not all come from present Germany) overran and destroyed the Roman Empire, while Slavic tribes occupied Germany E of the Elbe The ANGLO-SAXONS had established themselves in Britain by the 6th cent , the FRANKS had taken over nearly all of present France, W and S Germany, and Thuringia CLOVIS, who first united the Franks late in the 5th cent., accepted Christianity, and St. BONIFACE in the 8th cent spread the gospel in the areas acquired by Clovis's successors In 751 Pepin the Short deposed the dynasty of the MEROVINGIANS and established his own, that of the CAROLINGIANS His son CHARLEMAGNE conquered the SAXONS and extended the Frankish domain in Germany to the Elbe He was crowned emperor at Rome in 800 In the first division (843) of Charlemagne's empire (see VERDUN, TREATY OF) the kingdom of the Eastern Franks, under LOUIS THE GERMAN, emerged as the nucleus of the German state It was increased at the Treaty of MERSEN (870) by the addition of part of LOTHARINGIA, but was soon divided among Louis's sons CARLOMAN, LOUIS THE YOUNGER, and CHARLES III (Charles the Fat) Emperor ARNULF reunited the kingdom, but during his reign and that of his son, LOUIS THE CHILD, last of the Carolingian kings of Germany, the Norsemen, Slavs, and Magyars began their devastating inroads while the growth of FEUDALISM weakened the royal power The dukes of Franconia, Swabia, Bavaria, Saxony, and Upper and Lower Lorraine emerged as the most powerful magnates of Germany. They elected the Franconian duke CONRAD I as king on the death (911) of Louis the Child Conrad's reign was spent in struggles against the Magyars and against the rebellious dukes, one of whom (Henry the Fowler of Saxony) succeeded him as HENRY I Henry restored some of the royal authority, took territory from the Slavs, and secured the election of his son, OTTO I, as his successor. Henry's chief accomplishment was, perhaps, his creation of walled towns, out of which grew many of the chief German cities The Holy Roman Empire came into existence with the imperial coronation (962) of Otto I (A list of Otto's successors until 1806 is appended to the article HOLY ROMAN EMPIRE) As a result of their difficult double role as emperors and German kings, Otto's successors allowed the German dukes and their vassals to increase their power at the expense of the central authority, which was further undermined by the struggle between emperors and popes Emperor FREDERICK I, one of the most energetic German medieval rulers, broke the power of HENRY THE LION of Saxony and Bavaria By partitioning (1180) Henry's domains he destroyed the last great German duchy Until the dissolution of the Holy Roman Empire, Germany remained a patchwork of innumerable petty temporal and ecclesiastic principalities and free cities The campaigns of the 12th and 13th cent against the Slavs (see WENDS) brought about a tremendous eastward expansion The margraviate of BRANDENBURG and the domain of the TEUTONIC KNIGHTS, from which the Prussian state was to emerge centuries later, thus came into existence The turbulent reign (1212-50) of Emperor FREDERICK II left Germany in a state of anarchy Several rival kings appeared, but none held wide authority, and the lawlessness of the robber barons prevailed The dark period of the Great Interregnum ended with the election (1273) of RUDOLF I, count of Hapsburg (see HAPSBURG), as German king, but neither he nor his successors could create a centralized monarchy Germany thus fell out of step with the great kingdoms of Western Europe—France, England, and Spain—where the trend was toward increasing centralization Against the anarchic tendency of the nobles the emperors relied chiefly on the prosperous cities, which formed into leagues for their common defense and interests—e g , the HANSEATIC LEAGUE and the SWABIAN LEAGUE German commerce and banking knew tremendous prosperity in the late 15th and early 16th cent during the heyday of such merchant princes as the FUGGER and WELSER families of Augsburg. With the help of the capitalist cities Emperor CHARLES V put down the rebellious lesser nobility (see SICKINGEN, FRANZ VON) and the more serious revolt of the peasants (see PEASANTS' WAR). At the same time, however, the REFORMATION created an abyss between the Catholic emperors and the Protestants among the powerful princes. The defeat of the peasants prolonged the existence of serfdom, which in Western Europe had disappeared or was disappearing, the Reformation set the stage for the final blow against German unity—the THIRTY YEARS WAR (1618-48). The chief theater of the war, Germany was reduced to misery and starvation, lost a large part of its population, and became, through the Peace of Westphalia (see WESTPHALIA, PEACE OF), a loose confederation of petty princes under the nominal suzerainty of the emperor. The most powerful German state to emerge from the wars of the 17th and 18th cent. was PRUSSIA, which under FREDERICK II success-

fully challenged the military might of AUSTRIA and became a European power. The influence of the French Revolution and the wars of NAPOLEON I swept away the moribund Holy Roman Empire and forced the German states, notably Prussia, to accept long-needed social reforms. Though humiliated by Napoleon, Prussia played a major part in his ultimate defeat and gained considerable territory at the Congress of Vienna (see VIENNA, CONGRESS OF), which redrew the German map in 1814–15 However, Austria obtained the leading position in the GERMAN CONFEDERATION, set up by the Congress, and Germany was dominated by the reactionary policies of METTERNICH and the HOLY ALLIANCE German nationalism, at that time linked with liberalism, burst into action in the Revolution of 1848, which shook all the German states However, the revolutionists were soon put down, and the FRANKFURT PARLIAMENT, having failed to obtain the unification of Germany, disbanded Prussia received humiliating treatment from Austria in the Treaty of OLMÜTZ (1850) BISMARCK, who in 1862 took charge of Prussian policy, resolved on the course of creating a "Little Germany" (i e a Germany without Austria), under Prussian leadership In the AUSTRO-PRUSSIAN WAR of 1866 Prussia triumphed over its rival, and Austria was excluded from the newly created NORTH GERMAN CONFEDERATION By the FRANCO-PRUSSIAN WAR of 1870–71 Bismarck attained his goal WILLIAM I of Prussia was proclaimed emperor of Germany by the assembled German princes in the Palace of Versailles (1871) The peace treaty with France gave Germany ALSACE and LORRAINE and made it the chief power of continental Europe The unification of Germany had been greatly aided by the gradual economic unification wrought by the ZOLLVEREIN and by the Industrial Revolution, which, though it came relatively late to Germany, progressed with extraordinary speed By 1871 Germany had, within less than a century, overtaken its neighbors economically as well as politically and militarily.

From Bismarck to Hitler Having united Germany, Bismarck, who directed German policy until 1890, sought to consolidate the new state and to establish peaceful relations with its neighbors He struggled with little success against the Catholic Church (see KULTURKAMPF) and was unable to stem the rise of German socialism by coercive legislation Changing his tactics, he achieved a *modus vivendi* with the Church and weakened the socialist cause by securing the passage in the Reichstag [federal parliament] of far-reaching SOCIAL SECURITY laws that served as models for the rest of the world Reconciliation with Austria led to an alliance (1879), joined in 1882 by Italy (see TRIPLE ALLIANCE AND TRIPLE ENTENTE) Simultaneously, Bismarck kept alive the THREE EMPERORS' LEAGUE of Germany, Austria-Hungary, and Russia He was able to weather the Liberal opposition and retained his chancellorship during the brief reign (1888) of FREDERICK III, but was dismissed in 1890 by the self-willed WILLIAM II Even before William's accession Germany had begun its colonial penetration of Africa, but it was under William II that German colonial expansion began to collide seriously with British and French interests (For a list of former German colonies, see MANDATES) Equally serious threats to peace were the increasing commercial and naval rivalry with England, German influence in Ottoman affairs (e g , in the construction of the BAGHDAD RAILWAY), and German support of the Austrian Balkan policy, which clashed with Russian interests (see EASTERN QUESTION) The two successive crises over MOROCCO helped to create and strengthen the Triple Entente of France, Russia, and England, which faced Germany and its allies (see CENTRAL POWERS) in the First WORLD WAR (1914–18) Exhausted rather than defeated, Germany was obliged to accept the Allied armistice terms and, in 1919, the harsh peace terms of Versailles William fled and abdicated (Nov , 1918) after the outbreak of a Social Democratic revolution, which swept the rulers of the German states from their thrones A democratic federal constitution was adopted at Weimar Friedrich EBERT was the first president His middle-of-the-road government suppressed attempts by the radical left (see SPARTACUS PARTY) and by the extreme right (see KAPP, WOLFGANG) to seize power However, the economic crisis of the post-war years, marked by mass unemployment and by extreme currency inflation, strengthened the extremist parties and wiped out a large fraction of the middle class The assassinations of ERBERGER and of RATHENAU were symptomatic of the terrorist tactics adopted by the extreme nationalists, who soon were to merge in the National Socialist party under the leadership of Adolf HITLER The election (1925) of HINDENBURG to succeed Ebert as president was a nationalist victory, but under the successive cabinets (1923–32) of Wilhelm MARX, Hans LUTHER, Hermann Müller, and Heinrich BRÜNING the Social Democrats, the Catholic Center party, and the conservative German People's party succeeded, by precarious coalitions, in keeping the extremists in check. Luther, with the help of Hjalmar SCHACHT, consolidated the German economy, and Gustav STRESEMANN, as foreign minister from 1923 to 1929, secured the easing of the terms of the Treaty of Versailles, particularly with regard to German REPARATIONS payments, and the admission (1926) of Germany into the League of Nations Germany was well on its way to recovery by 1929, but soon afterward the world economic crisis once more created mass unemployment and the virtual bankruptcy of the state The crisis brought huge electoral gains to the Communists and, particularly, to the National Socialists; a state of extreme political tension grew Franz von PAPEN, succeeding (1932) Brüning as chancellor, lifted the ban on the National Socialist militia Late in 1932, after two successive elections had failed to create a workable parliamentary majority, Papen resigned, and SCHLEICHER became chancellor He failed to obtain the cooperation of either Hindenburg or the Social Democrats in using radical measures to preserve the republic, on his resignation, Hindenburg appointed (Jan , 1933) Hitler as chancellor at the head of a coalition cabinet of National Socialists and German Nationalists (monarchists) Despite their terroristic measures after the REICHSTAG fire (which served as pretext for outlawing the Communists), the National Socialists fell short of an absolute majority in the elections of March, 1933 Hitler, however, obtained dictatorial powers through an enabling act voted by an overwhelming majority of the Reichstag The Third Reich, successor of the Holy Roman and Wilhelminian empires, had begun Its history is partly covered in the articles NATIONAL SOCIALISM and WORLD WAR, SECOND) Within a year Hitler's dictatorship had become absolute, resting on the terror inspired by his ruthless militia and his SECRET POLICE The CONCENTRATION CAMP became the fate of his opponents, anti-Semitism was enacted into law and eventually led to the murder of more than 5,000,000 European Jews Science, the arts, and scholarship bowed, with but isolated protests, to the doctrines of the party in power, and the vast majority of Germans welcomed what they considered the rebirth of German strength The powers of the state governments were abolished, and every aspect of German life was centralized Repudiating the military clauses of the Treaty of Versailles, Hitler geared German economy to intensive rearmament, this and large-scale public works such as the construction of superhighways (primarily intended for strategic purposes) remedied the unemployment situation but depressed the general standard of living German remilitarization of the Rhineland (1936) was shortly followed by an alliance with Fascist Italy (see AXIS), German interference in the Spanish civil war of 1936–39, German annexation of Austria (March, 1938), and German demands for parts of Czechoslovakia The MUNICH PACT (Sept , 1938), by which Germany gained large sections of Bohemia, was the culmination of French and British attempts to appease Germany In March, 1939, Germany annexed Bohemia and Moravia and the Memel district, and in April Hitler began to threaten Poland In a surprise move, on Aug 23 he secured Russian neutrality by concluding a nonaggression pact with the USSR, and on Sept 1, 1939, he cut short negotiations regarding DANZIG and the POLISH CORRIDOR and ordered the invasion of Poland The Second World War resulted After the major part of Europe had been brought under the German heel, the war turned out still more disastrously for Germany than the First World War By the end of April, 1945, nearly all Germany was occupied by Allied troops and most major German cities lay in ruins The heavy German military and civilian casualties and the destruction of property did not, however, balance the millions of lives destroyed by the German occupation authorities in the countries of Europe, the sufferings of millions of foreign slave laborers who had been put to work for the German war machine, and the general disruption of Europe caused by German aggression

Post-war Germany After the suicide—still unproved—of Hitler in April, 1945, Admiral DOENITZ took over the government On May 7–8 the unconditional surrender to the Allies was signed, and shortly afterward Doenitz's government was dissolved by the Allies, whose military commanders in Germany took over the functions of government The Allied plan for Germany, sketched at the YALTA CONFERENCE, was implemented at the POTSDAM CONFERENCE (Aug , 1945) Germany (save the areas transferred to the USSR and to Polish administration) was divided into four occupation zones The Russian zone (41,379 sq mi ; 1946 pop 17,313,734) included Saxony, Anhalt, Thurmgia, Mecklenburg, and the former Prussian provinces of Saxony, Brandenburg, Pomerania, and Silesia (except the parts under Polish administration). The U S zone (41,490 sq mi , 1946 pop 17,254,945) comprised Bavaria, N Württemberg, N Baden, most of Hesse and Hesse-Nassau, Bremen (an enclave in the British zone) and parts of the former Prussian Rhine Province The British zone (37,721 sq mi , 1946 pop 22,304,509) consisted of Brunswick, Oldenburg, Hamburg, Lippe, Schaumburg-Lippe, the former Prussian provinces of Schleswig-Holstein, Hanover, and Westphalia, and the N Rhineland The French zone (15,527 sq mi ; 1946 pop 5,077,816) comprised S Baden, S Württemberg, the Rhenish Palatinate, Rhenish Hesse, part of the Rhineland, and the SAAR TERRITORY (not included in the figures) Berlin (344 sq mi , 1946 pop 3,199,938) was divided into four zones separately occupied by the four powers, and was made the seat of a four-power control council, authorized to take economic and administrative measures regarding Germany as a whole Allied disagreements, based mainly on conflicting interpretations of the decisions taken at Potsdam, weakened the control council from the start, and in 1948 the Soviet representatives ceased to attend the council meetings Local German governments were soon set up in all four zones The new states thus created were in the Soviet zone—Brandenburg, Mecklenburg, Thurmgia, Saxony, and SAXONY-ANHALT; in the U S. zone—Bavaria, Bremen, Hesse, and WÜRTTEMBERG-BADEN, in the British zone—NORTH RHINE-WESTPHALIA, LOWER SAXONY, Schleswig-Holstein, and Hamburg, in the French zone—RHINELAND-PALATINATE, WÜRTTEMBERG-HOHENZOLLERN, and Baden The National Socialist party and affiliated organizations were outlawed throughout Germany, and many persons were indicted and were convicted of WAR CRIMES Other parties, however, were permitted to form In the Soviet zone the Communist-dominated Socialist Unity party soon gained the upper hand, in the three Western zones the Christian Democrats and Social Democrats obtained the largest votes While a program of sovietization was carried out in Eastern Germany, the Western Allies abandoned the drastic Morgenthau Plan (named after Henry MORGENTHAU, Jr), but substituted no clearly discernible program The REPARATIONS question was a major stumbling block in Allied attempts to arrive at a peace treaty, and the cleavage between Russia and the three other powers became complete in 1948 On the occasion when the Western Powers introduced a separate currency the Soviet authorities blockaded (1948–49) the western sectors of BERLIN The final lifting of the blockade did not heal the division of Germany into East and West A constituent assembly of the West German states met (1948) and adopted (1949) a federal constitution for Western Germany, of which Bonn became the temporary capital Meanwhile a similar assembly adopted (1949) a constitution for the more centralized "Democratic German Republic," consisting of the Soviet zone, with its capital at Berlin Theodor Heuss became first president of Western Germany, Kurt Adenauer became its first chancellor, heading a conservative cabinet (excluding the Social Democrats) The Communists Wilhelm Pieck and Otto Grotewohl became, respectively president and premier of Eastern Germany, with a Communist-controlled coalition cabinet Economically, the split was disastrous for Germany, its western and eastern parts being interdependent Politically, it hindered a genuine rebirth of the German democratic tradition by fanning nationalist feeling in both halves of the country The primary source for the earliest German history is the *Germania* of TACITUS, the chief source collection for medieval German history is the MONUMENTA GERMANIAE HISTORICA Historical writing flourished in 19th-century Germany, and the monumental works of RANKE, SYBEL, and TREITSCHKE, covering German history, are indispensable to the modern student See W H Dawson, *Germany and the Germans* (2 vols , 1894) and *The Evolution of Modern Germany* (rev ed , 1919), Moritz Ritter, *Deutsche Geschichte im Zeitalter der Gegenreformation und des Dreissigjährigen Krieges* (3 vols , 1889–1908), Karl Hampe, *Deutsche Kaisergeschichte* (1909), J S Schapiro, *Social Reform and the Reformation* (1909); A W Ward and Spenser Wilkinson, *Germany 1815–90* (3 vols , 1916–18), G P Gooch, *Germany and the French Revolution* (1920), *Germany* (1925), and *Studies in German History* (1948), C B Hoover, *Germany Enters the Third Reich* (1933), Konrad Heiden, *A History of National Socialism* (1935); Raphael Lemkin, *Axis Rule in Occupied Europe* (1944), Prince Hubertus zu Loewenstein, *The Germans in History* (1945), Veit Valentin, *The German People* (1946), L D Clay, *Decision in Germany* (1950) See also bibliographies under HOLY ROMAN EMPIRE and PRUSSIA

Germersheim (gĕr'mûrs-hīm"), town (pop 4,848), Rhenish Palatinate, W Germany, on the Rhine and S of Speyer Of Roman origin, it was a residence of the Frankish kings and was chartered as an imperial city in 1276

germicide (jûr'mĭsīd), chemical substance capable of killing germs It is not necessarily effective in destroying the resistant spores formed by some germs, but destroys, in addition to bacteria, other disease-causing microbes A bactericide, on the other hand, kills only bacteria The term *germicide* is synonymous with chemical disinfectant. There are, however, other agents of disinfection (e g , heat) to which the name of germicide is not applied

Among the substances having germicidal action are alcohol (50 percent to 70 percent alcohol being the only concentrations with much effect against germs), boric acid (a weak germicide), chlorine and chlorine compounds (e g , Dakin's solution), iodine, phenol (or carbolic acid), the cresols (like phenol, derivation products of coal tar and wood), silver nitrate, hydrogen peroxide, and zinc peroxide Most substances capable of killing germs tend to be harmful to living tissue and must therefore be used only according to instructions given by a doctor or by the manufacturer Some body secretions e g , saliva, gastric juice, and lysozyme (present in tears, sputum, and nasal mucous membrane), act as germicides toward certain pathogenic microorganisms

Germinal, see FRENCH REVOLUTIONARY CALENDAR

germination, in a seed, the resumption of growth of the embryo after a period of dormancy, varying much in length, and the emergence of the young plant from the seed The food stored in the endosperm or in the cotyledons provides energy for the early stages in the process Germination requires suitable conditions of temperature, moisture, and oxygen supply Some seeds require light, others darkness, and many are unaffected by light conditions Some seed, e g , that of many grasses, can germinate almost immediately after falling The embryos of others must undergo a period (from a season to many years) of slow development or of dormancy in the seed Viability of seed ranges from a few days to (rarely) about 50 years Germination of seeds of the Asiatic lotus after more than 100 years is reported Most garden crops yield best results if seed is planted within a year after ripening The percentage of germination decreases with age The use of seed tested for germination prevents the planting of old or poorly germinating seed

Germiston (jûr'mĭstun), city (pop 103,880), S Transvaal, Union of South Africa, on the Witwatersrand Gold is smelted and refined

Gérôme, Jean Léon (zhäⁿ' lāō' zhārōm'), 1824–1904, French historical and genre painter He enjoyed a high reputation in his day A good draughtsman and facile illustrator, he produced a large number of paintings, meticulous in execution and archæologically conscientious His *Age of Augustus and the Birth of Christ* (Amiens), *Gladiators before Cæsar* (Chantilly), and *Death of Cæsar* are well known In his last years he gave up painting for sculpture Gérôme is represented in several American galleries and in the Luxembourg Museum in Paris

Gerona (hārō'nä), city (pop 28,752), capital of Gerona prov , NE Spain, in Catalonia A manufacturing center on the Oñar river, Gerona dates from Roman times, and the old town has preserved its medieval aspect It was captured (1015) from the Moors by the counts of Barcelona In the Peninsular War Gerona heroically resisted the French (1808–9) The Gothic cathedral (14–16th cent) has a single nave 73 ft wide and a Romanesque cloister Noteworthy are also the Romanesque Church of San Pedro and the Church of San Feliu

Geronimo (jurŏ'numō), c 1829–1909, chief of a Chiricahua band of the Apache Indians, b Arizona He resented the restrictions placed upon his people by the whites and was often in trouble After the Chiricahua were herded into the White Mountain Reservation, he and some followers (including a son of Cochise) escaped to Mexico in 1882 and terrorized Arizona by brutal raids He surrendered to Gen George CROOK and returned to the reservation but in 1885 left again In 1886 he agreed to surrender to Crook but broke his word and escaped Crook was relieved of command at his own request In 1886 Geronimo and his small group surrendered to Gen Nelson A MILES It is said that the surrender was made on condition that the braves could join their families in Florida, they were not freed but were imprisoned in Fort Pickens, Fla Some, among them Geronimo, were later settled in Alabama, then moved to Fort Sill in present Oklahoma He dictated his autobiography to S M Barrett See Britton Davis, *The Truth about Geronimo* (1929)

Gerontius (jurŏn'shus), d 411, Roman general, a Briton He followed the usurper Constantine and was left in charge of Spain, where he set up (409) his own candidate, called Maximus, as emperor, at the same time inviting or permitting the entrance of the Alani, Suevi, and Vandals In 411 he besieged Constantine at Arles, but at the approach of Constantius (later Emperor CONSTANTIUS III), his troops deserted, he escaped to Spain, but was assassinated

Gerry, Elbridge (gĕ'rē), 1744–1814, American statesman, b Marblehead, Mass , grad Harvard, 1762 In Marblehead he joined his father and brothers in the business of shipping codfish to the southern colonies, Spain, and the West Indies He was elected (1772) to the Massachusetts General Court, became a follower of Samuel Adams, and took a leading part in the patriot agitation preceding the American Revolution He was (1774–76) a member of the provincial congresses and of the Committee of Safety On the night before the battles of Lexington and Concord he narrowly escaped capture by a British detachment Afterwards as chairman of the state committee of supply he worked energetically to procure supplies for the army gathering around Boston In Jan , 1776, he left for Philadelphia to attend the Continental Congress, of which he was a member until 1785, although he absented himself in 1781–82 He voted for and signed both the Declaration of Independence and the Articles of Confederation With his brothers at Marblehead, he carried on a large trade with Spain and other countries and procured articles needed by the Continental forces Gerry after the war was an opponent of a large standing army and of a stronger central government However, his views were modified by SHAYS'S REBELLION, and he consented to be a delegate to the Federal Constitutional Convention of 1787 There he was one of the most frequent speakers, and while realizing the need of a stronger union, he opposed those leaders who were anxious to consolidate power in the proposed central government He refused to sign the completed Constitution, for reasons stated in his published message to the Massachusetts legislature, entitled *Observations on the New Constitution by a Columbian Patriot* (1788) Most of these objections were later met by the first 10 amendments Serving (1789–93) in the first two U S Congresses, he won attention by objecting to the placing of the Treasury Dept under one head, on the ground that it gave too much power to one man He advocated a commission of three instead In 1797 President Adams appointed him, together with C C PINCKNEY and John MARSHALL, on a mission to France in a new attempt to secure a recognition of U S rights from Napoleon and Talleyrand (see XYZ AFFAIR) He was elected governor of Massachusetts in 1810 and reelected in 1811 In his second term the Jeffersonians, desiring to retain their control of the state, rearranged in a grotesque shape the election districts in their favor, a political maneuver then named by his opponents and since known as GERRYMANDER (from his name and salamander) It resulted in Gerry's defeat for reelection in 1812, but he was immediately nominated for Vice President on the ticket with James Madison, and he was elected He loyally supported the War of 1812, though his Massachusetts constituency was opposed to it He died in office

Gerry, Elbridge Thomas, 1837–1927, American reformer, b New York city, grad Columbia, 1857, grandson of Elbridge Gerry Admitted (1860) to the New York bar, he came to be adviser to the American Society for the Prevention of Cruelty to Animals, and not long afterward he became interested in child welfare In 1874 he founded, with the help of Henry Bergh, the New York Society for the Prevention of Cruelty to Children (called sometimes the Gerry Society) He ended by devoting most of his attention to this cause, which became national in scope He was also interested in other humanitarian movements

gerrymander (jĕ'rēmăn"dur), in U S politics, rearrangement of voting districts so as to favor the party in power The origin of the term, though by no means the origin of the practice, was in such an arrangement made in Massachusetts when Elbridge GERRY was governor To secure favorable districts extremely irregular boundary lines are sometimes necessary See E C Griffith, *The Rise and Development of the Gerrymander* (1907)

Gers (zhĕr), department (2,429 sq mi , pop 190,405), SW France, at the foot of the Pyrenees Named for a tributary of the Garonne, it corresponds roughly to the old Gascon country of ARMAGNAC Auch is the capital

Gershom (gûr'–) [Heb ,=banishment] **1** Moses' first son. Ex 2 21,22, 18 2–6, 1 Chron 23 14 **2** See GERSHON **3** One of Ezra's companions Ezra 8 2

Gershom ben Judah (gûr'shum bĕn jōō'du), b 960, d 1040 or 1028, rabbi, religious poet, and scholar, b Metz He was also called Me'or ha-Golah [light of the exile] He died in Mayence, where he had founded a Talmudic academy He revised the Mishna and was very influential

Gershon (gûr'–) [Heb ,=banishment], Levi's first son Gen 46 11, Num 3 21, 1 Chron 6 1 Gershom 1 Chron 6 16–20

Gershon, Levi ben. see GERSONIDES

Gershwin, George (gursh'wĭn), 1898–1937, American composer, b Brooklyn, N Y , of Russian parentage He studied harmony with Rubin Goldmark, but most of his musical training was received in "tin-pan alley," where he worked as a "song plugger" for a publisher of popular music His songs for musical shows, such as *Embraceable You, The Man I Love, Swanee,* and *Lady Be Good,* are masterpieces of their genre He wrote the music for many musical comedies, including George White's *Scandals* (1920–24) and George S Kaufman's *Of Thee I Sing* (1931), which won the Pulitzer Prize His principal larger compositions are *Rhapsody in Blue* (1923), the classic example of symphonic jazz, his Piano Concerto in F (1925), *An American in Paris* (1928), a tone poem incorporating elements of jazz as well as realistic sound effects, and *Porgy and Bess* (Boston, 1935), a folk opera about Negro life, from which comes the immortal song *Summertime.* In 1937 he composed music for three moving pictures, one of which, *The Goldwyn Follies,* was left unfinished at his death His brother Ira (1896–) wrote the lyrics for most of his best songs

Gerson, John (Jean Charlier de Gerson) (gûr'sŭn, zhäⁿ' shārlyā' dŭ zhārsō'), 1363–1429, French ecclesiastical statesman and writer He studied (1377–94) under Pierre d'AILLY at the Univ of Paris, where he took his doctorate in theology and succeeded Ailly as chancellor (1395) Both Ailly and Gerson were anxious to end the Great Schism (see SCHISM, GREAT) When they were unsuccessful in having both Benedict XIII (see LUNA, PEDRO DE) and Gregory XII resign, they began to urge that the schism be ended by action of a general council The Council of Pisa resulted, and Gerson wrote a tract (1409) to defend it This is a classic statement of the conciliar theory—that a council can supersede the pope when the good of the Church requires it Gerson was not at Pisa, but he did attend (1414) the Council of Constance (see CONSTANCE, COUNCIL OF) as head of the French delegation There, he supported Ailly in ending the schism and led in the condemnation of John Huss But Gerson had made a bad enemy in John the Fearless, duke of Burgundy, from 1408 he had publicly demanded that John do penance for the murder of Louis, duc d'Orléans Fearing John, Gerson went from Constance not home to France but to Vienna, to teach From 1419 he lived in Lyons, where he wrote many works, chiefly theological, and a tract defending Joan of Arc He strongly condemned the *Roman de la Rose* of Jean de Meung as immoral Gerson opposed the philosophy of William of Occam, and as chancellor he began the change to realism as the official philosophy of the Univ of Paris His conciliar theories were later condemned Gerson was a man of holy life See biography by J L Connolly (1928)

Gersonides (gursō'nĭdēz) or **Levi ben Gershon** (lē'vī bĕn gûr'shun), 1288–1344, Jewish philosopher, called also Rab Ba G, from the initials of his Hebrew name, b Languedoc He edited the writings of Averroes, the Pentateuch, and various scientific works His chief work was the *Milchamoth Adonai* [the wars of the Lord], an elaborate treatise modeled after the *Moreh Nebukim* of Maimonides It is mainly a systematic criticism of the agnosticism of Maimonides from an Averroistic point of view The camera obscura and other inventions are attributed to Gersonides

Gersoppa, Falls of (gursō'pu), cataract of the Sharavati river, on the border of Mysore state and Bombay state It is one of the most spectacular natural beauties of India The river cuts through the Western Ghats to fall in four cascades, of which the highest is c 830 ft

Gerster, Arpad Geyza Charles (gur'stur), 1848–1923, American surgeon, b Kosice, M D Vienna, 1872 In 1873 he emigrated to Brooklyn A pioneer in aseptic surgery, he wrote the first American manual on the subject (1888) and taught at New York Polyclinic and at Columbia (from 1916) See his *Recollections of a New York Surgeon* (1917)

Gertrude, Saint, 1256–1302, German nun, called St Gertrude the Great The account of her revelations (of which the second book is authentic) is important in the history of mysticism Benedictines and Cistercians alike claim St Gertrude Feast Nov 15

Gervase and Protase, Saints (jûr'vās, prō'tās), 2d cent , Christian martyrs of Milan, possibly twins Nothing certain is known of their lives Feast June 19

Gervase of Canterbury, d c 1210, English chronicler A monk of Christ Church, Cambridge, he wrote an account of the reigns of Stephen, Henry II, and Richard I His *Chronica* is an ecclesiastical history of Canterbury, the *Gesta regum* a general history of the kings of England into the reign of John

Gervase of Tilbury, fl 1200, medieval author, Born in England, he spent most of his life on the Continent in the service of various patrons He became marshal of the kingdom of Arles under Emperor Otto IV, for whom he wrote the *Otia imperialia,* a miscellany of legend, history, and politics It is the only extant work of Gervase

Gervinus, Georg Gottfried (gā'ôrk gôt'frēt gĕrvē'nōōs), 1805–71, German historian and literary critic A liberal, he was one of the seven professors dismissed in 1837 from the Univ. of GÖTTINGEN, he also was (1848–49) a member of the Frankfurt Parliament His chief works are *Geschichte der deutschen Dichtung* [history of German literature] (5 vols , 1835–42) and *Geschichte des neunzehnten Jahrhunderts* [history of the 19th century] (8 vols , 1855–66)

Gesenius, Wilhelm (vĭl'hĕlm gā'zā'nyŏōs), 1786–1842, German Orientalist, one of the greatest Hebrew and biblical scholars He is principally known for his *Hebrew Grammar,* which has been reedited so many times that it bears only a resemblance to the original Perhaps his finest work was his biblical commentary He was, in this, a moderate rationalist, and he aroused bitter opposition. He was one of the first to open Semitic to scientific

study, because of his point of view that Hebrew and its sister languages were not sacrosanct, as most contemporary Christians thought them. See E. F. Miller, *The Influence of Gesenius on Hebrew Lexicography* (1927).

Gesham (gē'–), descendant of Caleb 1 Chron. 2.47.

Geshem (gē'–), Arabian leader who opposed Nehemiah in the rebuilding of Jerusalem Neh 2 19, 6 1,2 Gashmu Neh 6 6

Geshur (gē'shur) or **Geshuri** (gĕ'shūrī, gēshū'rī). **1** Small kingdom which remained in the territory allotted to Manasseh It occupied barren land NE of the Sea of Galilee A daughter of one of its kings married David and was the mother of Absalom Deut 3 14, Joshua 12 5, 13 11 2 Sam 3 3, 15 8 **2** Aboriginal people in Philistia. Joshua 13 2, 1 Sam 27 8

Gesner, Abraham (gĕ'snur), 1797–1864, Canadian geologist, studied medicine in London For a while he practiced in Nova Scotia He was commissioned to make a geological survey of New Brunswick (1838) and of Prince Edward Island (1846) In 1852 he discovered kerosene oil and in 1853 introduced its use into the United States He wrote *A Practical Treatise on Coal, Petroleum, and Other Distilled Oils* (1861)

Gesner, Konrad von (kôn'rät fŭn gĕs'nur), 1516–65, Swiss scholar, noted as a physician, biologist, philologist, and bibliographer He practiced medicine in several European cities and spent his last years at Zurich as physician and teacher His works include *Historia plantarum*, written in 1541, *Bibliotheca universalis* (4 vols , 1545–55), an index to Greek, Latin, and Hebrew writers, and *Historia animalium* (5 vols , 1551–87), which assembled from many sources the known material on animals Most of his botanical writings were first published in *Opera botanica* (2 vols , 1751–71)

Gessner, Salomon (zä'lōmōn gĕs'nur), 1730–88, Swiss poet, landscape painter, and etcher His poems and "idyllic prose pastorals" were very popular in his day. The best known is *Der Tod Abels* (1758, Eng tr , *The Death of Abel*, 1761) Gessner's collected writings were published in numerous editions, the last in 1841, and his influence upon European literature, though difficult to appreciate today, was extraordinary His etchings, which are superior to his paintings, include numerous ornamental plates for *Der Tod Abels* and the other pastorals See Bertha Reed, *The Influence of Salomon Gessner upon English Literature* (1905)

Gestalt (gushtält') [Ger , =form], school of psychology which interprets phenomena as organized wholes rather than as aggregates of distinct parts and which maintains that the whole is greater than the sum of its parts Begun in Germany, the movement was transferred to the United States in the 1930s The term was coined by Charles von Ehrenfels in 1890, and after 1895 investigation was carried out along lines suggested by him In 1912 the movement was given further impetus by Max Wertheimer, Wolfgang Kohler, and Kurt Koffka Two basic laws were derived from early experimentation that of membership character, which states that each element of a pattern, through a dynamic participation, alters its individuality in becoming a constituent of the whole, and that concerning *Prägnanz*, the dynamic attribute of self-fulfillment in all structured wholes, which allows, for instance, small gaps in a drawn figure to be disregarded The body-mind problem is solved by proposing a structural correspondence between the sensory process and the corresponding extrasensory mental process Important contributions to personality and social psychology were made by a related school headed by Kurt Lewin See Kurt Lewin, *Dynamic Theory of Personality* (Eng tr , 1935), Max Wertheimer, *Productive Thinking* (1945), Wolfgang Kohler, *Gestalt Psychology* (rev. ed , 1947)

Gestapo see SECRET POLICE

Gesta Romanorum (jĕ'stŭ rō"munō'rŭm) [Latin, = deeds of the Romans], medieval collection of Latin stories (having very little to do with actual Roman history), each tale characterized by a moral Printed in the 15th cent , it had probably been first collected several centuries earlier Many of the stories were used later by Chaucer, Shakspere, and others

gestation: see PREGNANCY

Getae see DACIA

Gether (gē'thur), descendant of Shem Gen 10 23, 1 Chron 1 17

Gethsemane (gĕthsĕ'munē) [Heb , = wine press], olive grove or garden near the foot of the Mt of Olives E of Jerusalem, the scene of the agony and betrayal of Jesus Christ Mark 14 32, Mat 26 36

Gettysburg (gĕ'tēzburg) **1** Borough (pop 5,916), co seat of Adams co , S Pa , near the Md border, laid out c 1780, inc 1806 Named for Gen James Gettys, to whom the site was granted by William Penn, it is the seat of Gettysburg College (Lutheran, coeducational, 1832) and Lutheran Theological Seminary Gettysburg National Military Park (2,534 acres, est 1895) includes the national cemetery and is the shrine of the battlefield of Gettysburg (see GETTYSBURG CAMPAIGN) **2** City (pop 1,324), co. seat of Potter co , central S Dak , SW of Aberdeen, founded in the 1880s by Civil War veterans. The Cheyenne River Indian Reservation is near

Gettysburg Address, delivered by Abraham Lincoln on Nov 19, 1863, at the dedication of the national cemetery on the Civil War battlefield of Gettysburg, Pa It is one of the most famous and most quoted of modern speeches The final version of the address prepared by Lincoln, differing in detail from the spoken address, reads "Four score and seven years ago our fathers brought forth on this continent, a new nation, conceived in Liberty, and dedicated to the proposition that all men are created equal Now we are engaged in a great civil war, testing whether that nation or any nation so conceived and so dedicated, can long endure We are met on a great battle-field of that war We have come to dedicate a portion of that field, as a final resting place for those who here gave their lives that that nation might live It is altogether fitting and proper that we should do this But, in a larger sense, we can not dedicate—we can not consecrate—we can not hallow—this ground The brave men, living and dead, who struggled here, have consecrated it, far above our poor power to add or detract The world will little note, nor long remember what we say here, but it can never forget what they did here It is for us the living, rather, to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced It is rather for us to be here dedicated to the great task remaining before us—that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion—that we here highly resolve that these dead shall not have died in vain—that this nation, under God, shall have a new birth of freedom—and that government of the people, by the people, for the people, shall not perish from the earth " See W E Barton, *Lincoln at Gettysburg* (1930)

Gettysburg campaign, June–July, 1863, of the Civil War After his victory in the battle of CHANCELLORSVILLE, R E LEE undertook a second invasion of the North The reorganized Army of Northern Virginia crossed the Potomac via the Shenandoah Valley, which R S Ewell (2d Corps), as leader of the advance, swept clear of Union forces By late June, Ewell was seriously threatening Harrisburg, Pa , while Lee, with James LONGSTREET (1st Corps) and A P Hill (3d Corps), was at Chambersburg, Pa However, with the absence of his cavalry under J E B STUART, which was raiding between the Union army and Washington, Lee was unable to determine the enemy's strength and movements When he finally learned that G G MEADE (who had just replaced Joseph HOOKER in command of the Union army) was concentrating N of the Potomac, he ordered the concentration of his own force Meade, intending to make his stand at Pipe Creek in Maryland, sent ahead John F Reynolds, commanding the left wing, to delay Lee But on July 1, John Buford's cavalry, covering Reynolds, came into contact with Harry Heth's division of Hill's corps on the Chambersburg pike just W of Gettysburg The environs of Gettysburg thus became the unintended site of the greatest battle of the war (July 1–3, 1863) The Federals had the best of Hill until midafternoon, when, outflanked by Ewell, advancing from the north, they were driven to Cemetery Hill, south of the town Ewell failed to press further, although he probably could have taken the position On the recommendation of W S HANCOCK, Meade abandoned his Pipe Creek plans and hurried up his whole force Against the Union right on July 2, Longstreet led the main attack, which was not delivered till about 4 P M , the Army of the Potomac thus had time to consolidate its strong position The Confederates took the Peach Orchard but were repulsed in attempting to seize Round Top and Little Round Top, commanding eminences at the south end of Cemetery Ridge On the Union right, Ewell carried Culp's Hill but was beaten off at Cemetery Hill Meade's counterattack on the morning of July 3 retook Culp's Hill Lee ordered Longstreet to attack the Union center with G E Pickett's division, supported by part of Hill's corps (c 15,000 men in all) After a bombardment of the Union position by the massed Confederate artillery, PICKETT moved forward in his famous charge In the face of terrific artillery and rifle fire, the gallant Southerners reached and momentarily held the first Union line But Pickett's support gave way, and Hancock drove him back with tremendous losses Meanwhile Stuart's cavalry, in an attempt to get at the Union right and rear, was defeated by D M Gregg Both armies, exhausted, held their positions until the night of July 4, when Lee withdrew High water in the Potomac delayed his crossing back to Virginia, but Meade did not attack him in force The Union army, which had been more numerous, lost 23,000 men in killed, wounded, and missing, the Confederate, 20,000 Gettysburg was the turning point of the war, thereafter the fortunes of the Confederacy went into a marked decline See Cecil Battine, *The Crisis of the Confederacy* (1905), D S Freeman, *R. E. Lee*, Vol III (1935), E S Miers and R A Brown, eds , *Gettysburg* (1948)

Geuel (gū'ĕl), tribal chief of Gad Num 13 15

Geulincx, Arnold (gû'lĭngks), 1624–69, Belgian Cartesian philosopher He taught at Louvain and Leiden With Malebranche and others he formulated the doctrine of OCCASIONALISM He argued that although mind and matter operate separately they are in a harmony controlled by God This doctrine anticipated Leibniz's theory of preestablished harmony His principal work is *Metaphysica vera* (1691)

Gevaert, François Auguste (frāswa' ōgüst' guvärt'), 1828–1908, Belgian composer and musicologist In 1871 he became director of the Brussels Conservatory, where he made many improvements He composed a number of operas, but is more important as author of a treatise on instrumentation and other writings

Gex (zhĕks), town (pop 1,237), Ain dept , E central France, near Geneva, Switzerland The territory of Gex passed from the medieval counts of Geneva to the dukes of Savoy, was conquered (1536) by the Swiss, and in 1601 was ceded to France by the Treaty of Lyons The Congress of Vienna (1815) gave the region a special customs status

Geyer, Henry Sheffie (gī'ŭr), 1790–1859, American lawyer and political leader, b Frederick, Md After serving in the War of 1812, he moved to St Louis, where he built up an excellent law practice He served several terms in the Missouri legislature and occupied (1851–57) the U S Senate seat formerly held by Thomas H Benton Geyer was the leading counsel for the slaveowner in the DRED SCOTT CASE, and his arguments greatly influenced Chief Justice Taney's opinion

geyser (gī'zŭr) [Icelandic], a hot spring that intermittently erupts hot water and steam, throwing it from a few to several hundred feet into the air Geysers occur almost exclusively in Iceland, New Zealand, and Yellowstone National Park Geyser action in Iceland was studied and explained by R W Bunsen Water—chiefly rain water, but partly of subterranean origin—fills a crack in the ground and becomes heated by the contact of vapors from igneous ROCK below If the crack or tube is crooked, the heat fails to circulate by convection and is concentrated in one section of the tube, well below the surface There the water may rise above 100°C without boiling, because of the pressure of the water above, which raises the boiling point, but when at last it does turn to steam it raises the upper part of the column of water, causing it to overflow This reduces the pressure on the water below, a great deal is abruptly converted into steam, and the whole column —steam and water— is forced to erupt Geysers often build up cones of silica called geyserite around their vents "Old Faithful" in Yellowstone Park usually erupts at intervals of about 60 min Mud geysers are eruptive mud springs See C M Bauer, *The Story of Yellowstone Geysers* (1937)

Geysir (gā'sĭr), hot spring, SW Iceland, c 56 mi W of Reykjavik Although in medieval times it erupted three times daily, weeks now elapse between its eruptions, which last about 20 min The height and temperature of the jet are variable, reaching up to 200 ft and 180°F There are numerous hot springs in the neighborhood Other springs of a similar nature have taken the English name geyser from the Geysir

Gezelle, Guido (gĕ'dō khuzĕ'lu), 1830–99, Flemish poet, b Bruges, forerunner of the Flemish literary revival and one of the leading modern poets in his language In a half-dozen volumes of lyrics he revealed a deep love of nature and a mystical religious feeling, expressed in unpretentious, beautiful language He was a Roman Catholic priest See the partial English translation by Maude Sweepstone (1937)

Gezer (gē'–), natural fortress, Palestine, on a ridge south of the road from Jerusalem to Jaffa, S of Lydda Its position guarding the road has always given it importance In the Bible it figures in the wars of Joshua, David, and the Maccabees, it was several times a scene of battle in the Crusades Joshua 10 33, 12 12, 16 3, 21 21, Judges 1 29, 1 Kings 9 16,17, 1 Chron 6 67, 7 28, 20 4 Gazer 2 Sam 5 25, 1 Chron 14 16 See GOB

Gezira see GAZIRA

Ghadames or **Gadames** (both gŭdä'mĕs), town (pop 2,405), W Tripolitania, Libya, in an oasis of the Sahara It has long been an important caravan junction It was ceded by France to Libya after the First World War, reoccupied by France in 1943, and put under a provisional Tunisian administration in 1948

Gharapuri see ELEPHANTA

Ghat or **Gat** (both gät), walled town (pop 2,056), SW Tripolitania, Libya, in an oasis of the Sahara It has long been an important caravan center It was occupied by the French in 1943

Ghats (gōts, gats), two mountain ranges of S India, the Western Ghats and the Eastern Ghats The Western Ghats, averaging 3,000 ft in height, extend, with only one major break (the Palghat Gap), c 1,000 mi along the west coast from N Bombay state to the southern tip of India at Cape Comorin Mt Dodabetta (8,760 ft) in the Nilgiri Hills section in W Madras state is the highest point Lumber, cinchona, tea, and coffee are

the principal products of the range, which precipitates the southwest monsoon winds and brings heavy rain to the narrow coastal strip while keeping the interior relatively dry The Eastern Ghats, averaging 2,200 ft in elevation, extend c 1,000 mi along the east coasts of Orissa and Madras states. This broken range edges a wide coastal plain

Ghazali see AL-GAZEL

Ghazipur (gə'zēpōōr'), town (pop 31,326), SE United Provs, India, on the Ganges river It contains the tomb of Lord Cornwallis, who died here in 1805 It is the headquarters of the opium monopoly of the Indian government Perfume is distilled

Ghazni (gŭz'nē), town (pop over 10,000), central Afghanistan It was flourishing by the 7th cent, but its glory was under the Turkish Ghaznivid dynasty (962–c 1155), which was continued at Lahore, India, till 1186 The greatest ruler, MAHMUD OF GHAZNI, ruled from the Caspian to the Ganges The kings of Ghor destroyed Ghazni in 1149 but later (1173) made it their secondary capital Ogotai, a son of Jenghiz, completed its downfall in 1221 Both destroyers spared, however, Mahmud's tomb and two high columns outside the city Ghazni's strong fortress was taken by the British in 1839 and 1842 in the Afghan wars Today it is a market center

ghee (gē) [ultimately from Sanskrit], the clarified BUTTER of India It is a common article of diet there, used in making and seasoning a great variety of dishes It is used, too, in medicine and as one of the most ancient sacrificial materials in the practice of Hinduism The best quality is made from cow's milk, though the milk of the buffalo is also used, the usual process being to melt or boil butter to evaporate the water and to strain or skim off the solid residue Only the oil of the butter is left, and this may be bottled or put in covered jars (sometimes with aromatic essences) and kept for some years

Gheel, Belgium see GEEL

Ghent (gĕnt), Flemish *Gent* (khĕnt), Fr *Gand* (gā), city (pop 162,488, with suburbs c 228,800), capital of East Flanders prov, N Belgium, at the confluence of the Scheldt (Escaut) and Lys rivers and at the focus of a network of canals It is the second largest port and the chief textile center of Belgium, an episcopal see, the seat of a university (founded 1816), and a rich art center One of the oldest cities and the historic capital of FLANDERS, Ghent grew around the fortress built (9th cent) by the first count of Flanders on a small island The town soon spread to near-by islets, still connected by numerous bridges By the 13th cent it had grown into a major cloth-manufacturing center, rivaled only by Bruges and Ypres Medieval Ghent was an industrial city in the modern sense of the word Its four chief guilds—weavers, fullers, shearers, and dyers—comprised the majority of its working population There was social conflict between the "lesser folk" and the rich bourgeoisie, strikes and insurrections were frequent Ghent enjoyed vast communal liberties and played a leading part in the turbulent history of Flanders in the 14th cent, particularly under the leadership of Jacob van ARTEVELDE and Philip van ARTEVELDE The radical weavers' party continued to hold Ghent even after the defeat and death (1382) of Philip van Artevelde at Roosebeke, and in 1385 the weavers made a favorable peace with Philip the Bold of Burgundy, who had inherited Flanders in the previous year Ghent retained all its liberties and privileges until 1453, when as the result of an unsuccessful rebellion they were drastically curtailed by Philip the Good They were restored (1477) by MARY OF BURGUNDY through the Great Privilege, promulgated at Ghent Mary's marriage (1477) with Archduke Maximilian (later Emperor Maximilian I) also took place here, and their children were kept virtual prisoners by the Ghenters after Mary's death (1482) It was only in 1485 that Maximilian was able to make himself master of the rebellious city and to obtain the release of his son Philip, duke of Burgundy (later also Philip I of Castile) Philip's son, the later Emperor Charles V, was born and reared at Ghent In 1537 Ghent refused a subsidy requested by Charles, and in 1539 open rebellion broke out Charles hastened to Flanders, suppressed (1540) the rebellion, abrogated the liberties of Ghent, and established a garrison to prevent further outbreaks Ghent joined (1576) William the Silent in the revolt of Flanders against Spain, the Pacification of Ghent, signed here in the same year, was an alliance of the provinces of the Netherlands and of William the Silent for the purpose of driving the Spanish out of the country (see NETHERLANDS). The capture (1584) of Ghent by the Spanish under Alessandro Farnese completed the recovery of Flanders by the house of Hapsburg, under whose rule it remained until the French Revolution (see NETHERLANDS, AUSTRIAN AND SPANISH). Among the many fine medieval and Renaissance buildings of Ghent are the ruins of the Abbey of St. Bavon (founded 10th cent.) and of the imposing castle (12th cent) of the counts of Flanders; the Cathedral of St Bavon (13th–16th cent.), the cloth hall (16th cent); the 14th-century belfry, a tall square tower containing a celebrated carillon; and the churches of St Nicholas (13th cent) and St James (12th cent) Ghent suffered no serious damage in either world war. Flemish painting flourished at Ghent under the Burgundian dynasty (15th cent.), Hugo van der Goes worked here most of his life and the masterpiece of Huybrecht van Eyck and Jan van Eyck, *The Adoration of the Lamb*, is the altarpiece of the Cathedral of St Bavon

Ghent, Treaty of, 1814, agreement ending the WAR OF 1812 between the United States and Great Britain It was signed at Ghent, Belgium on Dec 24, 1814, and ratified by the U S Senate on Feb 17, 1815 The American commissioners were John Q ADAMS, James A BAYARD, Henry CLAY, Jonathan Russell, and Albert GALLATIN, a strong delegation, with Gallatin playing the leading role Negotiations were begun in August, with the recent victories of Napoleon giving the British an advantage reinforced by the burning of the Capitol at Washington shortly afterwards Only the victory of Macdonough at Plattsburg and the threat of further hostilities in Europe induced the British to give up their demands to control the Great Lakes and elect an Indian state under British control in the country NW of the Ohio Thus the agreement to restore territory and places taken by either party was a diplomatic victory for America It was provided that commissions would be set up to determine the boundary from the St Croix river W to Lake of the Woods Both parties were to use their best endeavors to abolish the slave trade No mention was made of the fisheries question, the impressment of American seamen, or the rights of neutral commerce since the British commissioners followed their instructions and refused to discuss these questions

Gherardesca, Ugolino della: see UGOLINO DELLA GHERARDESCA

gherkin see CUCUMBER

ghetto (gĕ'tō), section of a city in which Jews lived In the early Middle Ages their segregation in separate streets or localities was voluntary The first compulsory ghettos were in Spain and Portugal at the end of the 14th cent The ghetto was typically walled, with gates that were closed at a certain hour each night, and all Jews had to be inside the gate at that hour or suffer penalties The reason generally given for compulsory ghettos was that the faith of Christians would be weakened by the presence of Jews Within the ghetto the inhabitants were usually autonomous, with their own courts of law and their own culture Outside the ghetto walls Jews were forced to wear a badge, usually of yellow The institutions commonly to be found in the ghetto were a house for the sick and the poor, public baths, a bakehouse, a slaughterhouse, sometimes a guesthouse, a place of justice, and a school (often connected with the synagogue) The most famous ghetto was that of Frankfurt, to which Jews were compelled to move by a city ordinance of 1460 Crowded into a narrow section, it underwent several disastrous fires The ghetto in Venice was established in 1516 after long negotiations between the city and the Jews In 1870 the last ghetto, in Rome, was abolished The term, however, has been frequently applied to the sections in any large city in which the majority of inhabitants are Jews See Louis Wirth, *The Ghetto* (1928)

Ghibellines. see GUELPHS AND GHIBELLINES, HOHENSTAUFEN

Ghiberti, Lorenzo (lōrăn'tsō gēbĕr'tē), c 1378–1455, Florentine sculptor His study of goldsmithing with his stepfather later influenced his work in bronze He also studied painting In 1401 he won a competition for a bronze portal for the baptistery at Florence His trial panel, in the style of Andrea Pisano's earlier door, hangs in the Bargello beside that of Brunelleschi, his closest rival. Ghiberti worked on the great door (now the north portal) from 1403 to 1424 On 20 panels scenes from the life of Christ are shown in relief, on four, Fathers of the Church, on four others, the Evangelists Framing these reliefs is a graceful molding, with busts of prophets and sibyls set at all intersections After 1425 the artist devoted himself to the execution of the doors for the eastern entrance to the baptistery These Michelangelo declared fit to be the portals of Paradise They portray, in 10 square panels, scenes from the Old Testament By varying the proportions and using many planes of relief, Ghiberti achieved an effect of perspective that gives the panels a pictorial quality unequaled elsewhere in sculpture Other works of Ghiberti, including three statues for the Church of Or San Michele, Florence, do not attain the level of his bronze doors Of his goldsmith's art, no known examples remain

Ghilan, Iran see GILAN

Ghirlandaio or **Ghirlandajo, Domenico** (both· dōmā'nēkō gērlända'yō), 1449–94, Florentine painter, whose family name was Bigordi The son and pupil of Tommaso Bigordi, a goldsmith, he studied painting and mosaics under Alesso Baldovinetti Essentially a fresco painter, Ghirlandaio contributed immeasurably to the development of that art His earliest frescoes, *St Jerome* and the *Last Supper* (Vespucci Chapel and the refectory of the Church of Ognissanti, Florence), have perished Between 1475 and 1485 he painted the frescoes portraying the life of St Fina (Fina Chapel, Collegiate Church in San Gimignano) and the St Zenobius fresco in the Palazzo Vecchio, Florence Summoned to Rome by Pope Sixtus IV, he painted *The Calling of Peter and Andrew* (Sistine Chapel, Rome) These works reveal the dignity, balance, grace, and fine architectural settings typical of Ghirlandaio's art Portraits of contemporaries often are introduced In 1485 he completed the frescoes in the Sassetti Chapel in Santa Trinità, Florence, depicting scenes from the life of St Francis, with views of Florence in the background These magnificent paintings reflect the influence of Masaccio and are notable for admirable portraiture, realism, color, and technique. He also painted the altarpiece, *Adoration of the Shepherds*, in that chapel In 1490 Ghirlandaio completed his frescoes in the choir of Santa Maria Novella, Florence, a vast conception with innumerable portraits of distinguished men and women in contemporary dress with Florentine settings of the time of Lorenzo the Magnificent Here, too he painted the altarpiece, *Virgin in Glory* Other works are *The Visitation* (Louvre), *Adoration of the Magi* (Hospital of the Innocenti, Florence), *Adoration of the Magi* (Uffizi), *Christ in Glory* (abbey, Volterra), *St Dominic* and *St Michael* (National Gall of Art, Washington, D C); and a portrait of Francesco Sassetti with his son (Bache Coll, New York) He was the great depicter of Florentine life He employed many assistants, and his influence was tremendous Among his numerous pupils was the great Michelangelo See G S Davies, *Ghirlandaio* (1908) His son **Ridolfo Ghirlandaio** (rēdôl'fō), 1483–1561, Florentine painter, studied with Piero de Cosimo and Francesco Granacci and was influenced by Leonardo da Vinci and by Raphael, who highly esteemed his talents and vainly urged him to go to Rome His chief works are *Coronation of the Virgin* (Louvre), *Assumption* (cathedral, Prato), *The Procession to Calvary* (National Gall, London), *Portrait of a Lady* (Pitti Gall, Florence), *St Zenobius Raising a Dead Child* and *The Burial of St Zenobius* (Uffizi), and a portrait of Taddeo Taddei (National Gall of Art, Washington, D C)

Ghor (gōr) or **Ghur** (gōōr), mountainous region, W central Afghanistan A powerful Moslem dynasty was established here in the 12th cent Its two outstanding rulers were Ala ad-Din Jahansoz [world-burner] (reign 1149 56), who wrecked Ghazni and completely destroyed Bust, the old capital of Kandahar, and Ghiyath ad-Din The dynasty was conquered (1215) by Mohammed of Khorezm The region's Persian population was supplanted in the next century or two by Mongols

Ghor, the, in Palestine see DEAD SEA

ghost see APPARITION

ghost dance, central ritual of the messianic religion instituted by a Paiute Indian called Wovoka It lasted five successive days, being danced each night and on the last night kept up until morning Hypnotic trances and shaking, not unlike those of the old frontier camp meetings among whites, accompanied this ceremony, which was supposed to be repeated every six weeks The dance originated among the Paiute c 1870 and remained with that tribe until c 1887, when other tribes sent delegates to Wovoka to learn his teachings and ritual In a remarkably short time the religion spread to most of the Western tribes, and the ritual, largely because it was a feature of the Sioux uprising of 1890, became a subject of great interest to the American people

Ghur, Afghanistan see GHOR

Ghuzzeh, Palestine see GAZA

Gisc, Pierre de (pyĕr' du shĕsk'), c 1380–1427, favorite of Charles VII of France Rumor accused him of having poisoned his first wife and of other indelicate acts His misuse of funds set aside for the war against England made him unpopular. His enemies arrested and drowned him

Giacosa, Giuseppe (jōōzĕp'pā jäkō'zä), 1847–1906, Italian dramatic poet With *Una partita a scacchi* [a game of checkers] (1872) he won his first success From that time he devoted himself to playwriting, turning from romanticism to the social dramas which have been played all over the Western world and which are notable for sanity, simplicity, and perceptiveness Among his plays are *Triste amori* (1888, Eng tr, *Unhappy Love*, in *Poet Lore*, Vol XXVII, 1916); *La Dame de Challant*, written in French for Bernhardt and produced by her in New York in 1891 in the author's presence; *Come le foglie* (1900, Eng tr, *As the Leaves Fall*, 1911); and *Il più forte* (1904, Eng tr, *The Stronger*, 1913) Giacosa also collaborated with Luigi Illica in writing the librettos of Puccini's operas *La Bohème* (1896; Eng tr, 1898), *Tosca* (1899, Eng. tr., 1900), and *Madame Butterfly* (1903; Eng tr., 1905).

Giah (gī'ə), place, near Gibeon 2 Sam 2 24.

Giambono, Michele (mēkā'lā jämbō'nō), fl 1420–62, Venetian mosaicist and painter, whose real name was Michele Giovanni Boni, follower of Gentile da Fabriano. Of the few authenticated

mosaic works produced by him, the most important are probably the brilliantly colored *Nativity* and *Presentation in the Temple* (St Mark's, Venice). Among his notable paintings are *The Redeemer with Saints*, a polyptych (Venice); *St Mark* (National Gall , London), *Christ Rising from the Tomb* (Metropolitan Mus), and *St. Peter* (National Gall of Art, Washington, D.C.)

Giannini, Dusolina (jänē'nē), 1904–, American dramatic soprano, b Philadelphia, pupil of Marcella Sembrich She made her concert debut in New York in 1923 and her operatic debut in Hamburg in 1925 In both concert and opera she had achieved success in Europe, the United States, and Australia when she was engaged by the Metropolitan Opera Company in 1936 She joined the faculty of the Juilliard School of Music in 1947

Giannotti, Donato (dōna'tō jän-nōt'tē), 1492–1573, Italian political economist, b Florence He studied at Pisa and in 1527 became secretary of the supreme council of the Florentine republic After the Medici returned to power (1530), he lived in exile Giannotti, whose precepts resemble those of Machiavelli, explained his political theory in several books An ideal government, he believed, was a fusion of aristocratic, monarchical, and democratic institutions He also wrote the comedy *Vecchio amoroso* [old man in love] (1536)

giant. In the mythology of various peoples, e g , the Greeks, Germans, and Celts, giants were manlike beings of great size and strength who warred unsuccessfully with the gods Giants, e g , Goliath, are described in the Bible (Gen 6 4, 1 Sam 17, 2 Sam 21) They survive in medieval and later folklore, as in the story of Jack the Giant Killer There are strains and groups of large men, but there is no race of giants, and no skeletons of such a race have been found Bones of the mammoth and the mastodon have been mistaken for bones of giants Gigantism in humans results from an over-secretion in childhood of the growth hormone of the anterior lobe of the pituitary gland An excessive enlargement of the jaw, the hands, and the feet of an adult is not gigantism but results from a condition called acromegaly, caused by an over-secretion of the growth hormone in the adult years

Giant Mountains see RIESENGEBIRGE

giant orders see ORDERS OF ARCHITECTURE.

giant panda: see PANDA

Giant's Causeway, headland on the north coast of Co Antrim, Northern Ireland, NE of Coleraine, extending 3 mi along the coast The headland consists of many thousands of basaltic columns of volcanic origin, forming three natural platforms (Little, Middle, and Grand Causeway) There are several large caves and rock formations with imaginative names—Giant's Amphitheater, Giant's Chair, Giant's Chimney According to legend, the Causeway was built for giants to travel across to Scotland A ship of the Armada was wrecked in Spanish Bay, toward the east

Giauque, William Francis (jēōk'), 1895–, American chemist, b Niagara Falls, Ont , grad Univ of California (B S , 1920, Ph D , 1922) A member of the faculty of the Univ of California from 1922, he became professor in 1934 He was awarded the 1949 Nobel Prize in Chemistry for his studies of the properties of substances at extremely low temperatures In addition to discovering the adiabatic demagnetization method of producing temperatures approaching absolute zero, he is also known as the discoverer (with H L Johnson, 1929) of the second and third isotopes of oxygen

Gibault, Pierre (pyĕr' zhēbō'), 1737–1804, Roman Catholic missionary priest in America, patriot in the American Revolution, b Montreal He was sent to the Illinois country When Kaskaskia (in his parish) was captured by George Rogers CLARK in 1778, the priest and the frontier soldier became friends, and Father Gibault swore allegiance to the commonwealth of Virginia He was of tremendous assistance to Clark in winning the people of Vincennes to the patriot cause and in raising a force for the recapture of Vincennes in 1779 Gibault later resided in Vincennes (1785–89) and Cahokia (1789–90), then, after the government had refused to grant land for a seminary, moved to New Madrid (now in Missouri) in Spanish territory

Gibbar (gi'bär), family which returned with Zerubbabel. **Ezra** 2 20 In a similar list, Neh 7 25, Gibeon appears instead, Gibbar may then stand for Gibeon, and the children of Gibbar are then Gibeonites

Gibbethon (gi'bŭ-), unidentified town, W Palestine. **Joshua** 19 44; 21 23, 1 Kings 15 27; 16 17

Gibbon, Edward (gi'bun), 1737–94, English historian, author of the monumental *Decline and Fall of the Roman Empire* His childhood was sickly, and he had little formal education but read enormously and omnivorously He went at 15 to Magdalen College, Oxford, but was forced to leave because of his conversion to Roman Catholicism. His father sent him (1753) to Lausanne, where he was formally reconverted to Protestantism. Actually he became a skeptic and later greatly offended the pious by his famous chapters of historical criticism of Christianity in his great work. In Lausanne he fell in love with the penniless daughter of a pastor, Suzanne Curchod (who was later to be the great intellectual, Mme Necker) The two were engaged to be married, but Gibbon's father refused consent Gibbon "sighed as a lover" but "obeyed as a son" and gave up the match He left Lausanne in 1758 It was on a visit to Rome that he conceived the idea of his magnificent and panoramic history This appeared as *The History of the Decline and Fall of the Roman Empire* (6 vols , 1776–88), and won immediate acclaim, despite some harsh criticism Gibbon himself was assured of the greatness of his work, which is, indeed, one of the most-read historical works of modern times Gibbon, himself, was not, however, accorded much personal admiration He moved in the high circles of society and was a member of the literary circle of Samuel JOHNSON, but he was personally unprepossessing Short (under 5 ft), bulbously fat, always dressed in ornate and vivid clothes that flattered his vanity but not his appearance, and affected in manner and speech, he was a figure of ridicule The salons buzzed with stories mocking him He entered upon a short and highly inglorious political career, serving as a member of Parliament from 1774 to 1783 He violently opposed the American Revolution, though later he was to look with favor on the more radical French Revolution In 1783 he withdrew to Lausanne, where he completed his great work One of the fascinating things about Gibbon is the disparity between his personal character and his work, a disparity not resolved by his own *Memoirs of His Life and Writings*, commonly called the *Autobiography*, which first appeared in the edition of his miscellaneous works by Lord Sheffield in 1796 The autobiography is, however, one of the most subtle and interesting works of its kind in English An edition of Gibbon's original six drafts appeared as *The Autobiographies* in 1896 Editions of the *Decline and Fall* are legion The modern standard edition is that of J B Bury (7 vols , 1896–1900) A bibliography of the works of Gibbon by Jane E Norton appeared in 1941 | See biography by D M Low (1937)

Gibbon, John, 1827–96, Union general in the Civil War, b near Holmesburg (now part of Philadelphia), Pa , grad West Point, 1847 Made a brigadier general of volunteers (1862), he commanded a brigade at the second battle of Bull Run, at South Mt , and at Antietam and led a division in the battles from Fredericksburg (1862) through the Wilderness campaign (1864) In the final operations against Lee, Gibbon led the 24th Corps, Army of the James After the war he fought in the Indian campaigns in the West He commanded one of the columns that moved against the Sioux in 1876 The Nez Percé under Chief Joseph defeated him at Big Hole in W Montana in 1877 He wrote *Personal Recollections of the Civil War* (1928)

gibbon (gi'bŭn), smallest of the anthropoid apes, found in SE Asia and the East Indies Gibbons have slender bodies and very long arms and can travel through the trees with great speed and agility On the ground they often walk erect They live in family groups and are monogamous Fruits, leaves, insects, spiders, small birds, and eggs make up their diet

Gibbons, Abigail Hopper, 1801–93, American abolitionist and philanthropist, b Philadelphia, daughter of Isaac Tatem HOPPER She was active in many reforms, especially in the improvement of prison conditions In 1833 she married **James Sloan Gibbons,** 1810–92, a banker, who became a co-worker in her philanthropies Both were abolitionists, and the home of the Gibbons in New York city became a refuge for runaway slaves James Gibbons also wrote several books on finance

Gibbons, Grinling, 1648–1721, English wood carver and sculptor, reputedly b Rotterdam From the reign of Charles II to that of George I he was master wood carver to the crown, and Sir Christopher Wren engaged his skill in architectural decoration Many great English houses contain carvings by Gibbons He designed and carved the choir stalls in St Paul's, London, and the ornamental woodwork in the library of Trinity College, Cambridge Other works include a marble font in St James's, Piccadilly, and a bronze statue of James II, in St James's Park, London A stairway carved by Gibbons for the house of the earl of Essex is in the Metropolitan Museum

Gibbons, James, 1834–1921, American churchman, cardinal of the Roman Church, b Baltimore He studied at St Charles College, near Baltimore Ordained in 1861, he became secretary to the archbishop of Baltimore (1865), vicar apostolic of North Carolina (1868), bishop of Richmond (1872), and coadjutor to the archbishop of Baltimore in 1877 His superior died the same year, and Bishop Gibbons succeeded He was created cardinal in 1886 Cardinal Gibbons was chiefly interested in the Church and in America He was convinced of the blessings of democracy for the Church, and he was continually mentioning them abroad He was very successful in his relations with Protestants, and he was the friend of Presidents Cleveland, Theodore Roosevelt, and Taft He defended the Knights of Labor when they were condemned in Canada as a secret society Cardinal Gibbons persuaded the pope that the Knights of Labor were not secret in a canonical definition, i e , the organization had no pledge prejudicial to the confessional, and the ban was raised Cardinal Gibbons's principal work is *The Faith of Our Fathers* (1876), an apology for Catholicism written for conservative Protestants, it has gone through many editions *Our Christian Heritage* (1889) and *The Ambassador of Christ* (1896) were also widely read

Gibbons, James Sloan. see GIBBONS, ABIGAIL H

Gibbons, Orlando, 1583–1625, English organist and composer, the youngest and last of the great Elizabethans He became organist of the Chapel Royal in 1604, court virginalist in 1606, and organist at Westminster Abbey in 1623 His compositions include madrigals, English anthems and services, and music for strings and for virginal His brothers, Edward Gibbons (c 1570–c 1650) and Ellis Gibbons (1573–1603), were composers of a few pieces, and his son Christopher Gibbons (1615–76) was organist of Westminster Abbey and left some compositions See E H Fellowes, *Orlando Gibbons* (1925)

Gibbons vs. Ogden, case, decided in 1824 by the U S Supreme Court Aaron Ogden, the plaintiff, had purchased an interest in the monopoly to operate steamboats which New York state had granted to Robert Fulton and Robert Livingston Ogden brought suit in New York against Thomas Gibbons, the defendant, for operating a rival steamboat service between New York city and the New Jersey ports Gibbons lost his case and appealed to the U S Supreme Court, which reversed the decision At issue was the scope of the commerce clause of Article I, Section 1, of the Constitution, this provides that Congress shall have the power to "regulate Commerce with foreign Nations, and among the several States, and with the Indian Tribes " Chief Justice John MARSHALL held that the New York monopoly was an unconstitutional interference with the power of Congress over interstate commerce He condemned the view that the states and the Federal government are equal sovereignties and that the states may adopt valid legislation in fields where Congress has constitutional authority to act Although the states have unlimited power in regard to certain subjects, e g , intrastate commerce, Congress is supreme within its limited sphere of action This decision was highly influential in its explication of the Federal structure of the United States

Gibbs, James (gĭbz), 1682–1754, English architect, studied in Rome under Carlo Fontana Returning to England in 1709, he was appointed a member of the commission authorized to build 50 churches in London Only 10 of these were completed, they include two of Gibbs's most distinguished works, St Mary-le-Strand (1714–17) and St Martin's-in-the-Fields (1722–26), the latter formed a basic inspiration for many of the steepled churches of the colonial period in America Gibbs did considerable work for the universities, including the circular Radcliffe Camera at Oxford (1737–48), considered his finest design, and the Senate House at Cambridge, where from 1722 onward he was constantly employed He designed also many town and country residences His works show the distinction characteristic of the Georgian period and of Sir Christopher Wren, by whom he was chiefly influenced He wrote *A Book of Architecture* (1728) and *Rules for Drawing the Several Parts of Architecture* (1732)

Gibbs, Josiah Willard, 1839–1903, noted American mathematical physicist, b New Haven, Conn , grad Yale, 1858 He studied abroad and was professor of mathematical physics at Yale from 1871 His great contributions to science were in the field of thermodynamics His *Scientific Papers* (1906) were collected after his death *Vector Analysis* (1901) was written by E B Wilson from Gibbs's lectures, his *Collected Works* appeared in 1928 See W L Miller, *Method of Willard Gibbs in Chemical Thermodynamics* (1925), Muriel Rukeyser, *Willard Gibbs* (1942)

Gibbs, Oliver Wolcott, 1822–1908, American chemist b New York city, grad Columbia, 1841 He was professor at the College of the City of New York (1849–63) and at Harvard was professor of science (1863–87) and also dean of the Lawrence Scientific School (1863–71) and of the School of Mining (1865–68) He made important studies of complex compounds of cobalt and of platinum metals

Gibbs, Sir Philip, 1877–, English journalist and author He was a reporter and free-lance writer until the First World War, in which he so distinguished himself as a front-line correspondent for the *Daily Chronicle* (London) that he was knighted in 1920 Among his many novels are *The Street of Adventure* (i e , Fleet St , 1909), *The Middle of the Road* (1922), and *This Vettle Danger* (1939) He wrote valuable reports of the First World War and astute commentaries on world events He is the brother of Arthur Hamilton Gibbs (1888–), novelist, and Cosmo Hamilton (1879?–1942), novelist and playwright.

Gibbs, Willard: see GIBBS, JOSIAH WILLARD.

Gibea (gi'bēū), name of Caleb's grandson occurring in a list of Judahite towns 1 Chron. 2 49. It is possibly the same as Gibeah 2.

Gibeah (gĭb'ēŭ) [Heb ,=hill] **1** Home town of Saul, somewhere between Jerusalem and Ramah Judges 19 12, 1 Sam 10 26, 11 4, 13, 14, Isa 10 29. **2** Town, S Palestine, somewhere S of Hebron Joshua 15 57 The Gibeah of 2 Chron 13 2 may be the same as either of these or a different place See also GIBEA

Gibeon (gĭ'bŭn) [Heb ,=hill], ancient town, NNW of Jerusalem, now called El Jib Its alliance with Israel saved its inhabitants from destruction, but not from slavery Joshua 9, 10, 21.17; 2 Sam. 21 1–9 See also GIBEAR

Giblite, inhabitant of BYBLOS

Gibraltar (jĭbrôl'tûr), town (1931 pop 21,372, including garrison), constituting a British crown colony Gibraltar is built at the northwestern end of the Rock of Gibraltar (anc *Calpe*), which is one of the PILLARS OF HERCULES The rock itself forms a peninsula of S Spain, at the east end of the Strait of Gibraltar The strait (anc *Fretum Herculeum*),1 from 8½ to 23 mi wide, joins the Mediterranean Sea with the Atlantic The peninsula is connected with the mainland by a low sandy area of neutral ground West of the peninsula is the Bay of Gibraltar, an inlet of the strait There is a safe enclosed harbor of nearly 450 acres The highest point of the rock is 1,408 ft above sea level, the length 2¾ mi, the width ¾ mi The southern terminus is Europa Point The rock is of Jurassic limestone and contains caves in which some valuable archaeological finds have been made The name Gibraltar derives from the Arabian name, Jebel-al-Tarik [mount of Tarik], which dates from the capture of the peninsula by the Moorish leader Tarik in 711 The Spanish captured the peninsula in 1309 and held it until 1333, when it was retaken by the Moors In 1462 the Spaniards regained it The English have maintained possession of the peninsula since 1704, though it was subjected to unsuccessful sieges by the Spanish and French in 1704, by the Spanish in 1726, and again by the Spanish and French in 1779–83 The town is a free port, and because it is a fortress, its civil population is kept small Most of its laboring class live in the neighboring Spanish town of La Línea de la Concepción Gibraltar serves as a port of call and coaling station and handles some transit trade During the First World War it was used as a naval station Its importance increased during the Second World War, largely because of Italy's entrance into the war on the side of the Axis and the fall of France Its fortifications were strengthened and an elaborate system of underground tunnels constructed It was subjected to bombing attacks throughout 1940–41 but no important damage was done See G T Garratt, *Gibraltar and the Mediterranean* (1939)

Gibsland, town (pop 1,023), NW La , E of Shreveport, founded c 1885 It is the shipping and railroad center for a truck-farm area A training school for Negroes is here

Gibson, Charles Dana, 1867–1944, American illustrator, b Roxbury, Mass , studied at the Art Students League and in Paris His work for *Life*, *Century*, *Harper's*, *Scribner's*, *Collier's Weekly*, and other magazines established him as one of the leading exponents of black-and-white art in America He is perhaps best known as the delineator of the well-bred American woman in her various activities and as the creator of the celebrated Gibson Girl His drawings are notable for simplicity of design and brilliant execution, for humor and forceful characterization He illustrated numerous books, notably Anthony Hope's *Prisoner of Zenda* and R H Davis's *Soldiers of Fortune* Among the books of his drawings are *The Education of Mr Pipp* (1899), *The Americans* (1900), *A Widow and Her Friends* (1901), and *The Social Ladder* (1902) See Fairfax Downey, *Portrait of an Era, as Drawn by C D Gibson* (1936)

Gibson, Hugh, 1883–, American diplomat, b Los Angeles, grad École libre des Sciences politiques, Paris, 1907 He immediately entered the U S diplomatic service, and after 1908 he held various legation and embassy secretaryships in numerous Latin American and European countries After performing many important special missions in the First World War, Gibson was appointed (1919) minister to the newly created Poland He later served as minister (1924–27) to Switzerland, ambassador (1927–33, 1937–38) to Belgium and Luxembourg, and ambassador (1933–37) to Brazil He meanwhile attended several international conferences on disarmament. He also was (1935) a member of the mediatory group to end the Chaco War between Bolivia and Paraguay In 1938 he retired His several books include *Belgium* (1939), *The Road to Foreign Policy* (1944), and, in collaboration with Herbert Hoover, *The Basis of Lasting Peace* (1945)

Gibson, John, 1740–1822, American frontiersman, b. Lancaster, Pa After taking part in the capture of Fort Duquesne (renamed Fort Pitt) in the French and Indian War, he became an Indian trader there He was captured by Indians in Pontiac's Rebellion and served in Lord Dunmore's War. In the American Revolution he was principally useful in dealing with the Western Indians For a time he was commander at Fort Pitt. Later he was living in Pennsylvania at the time of the Whisky Rebellion and earned much animosity from his neighbors by siding with the government He served (1800–1816) as secretary of Indiana Territory and was of great aid to William Henry Harrison.

Gibson, John, 1790–1866, English sculptor of the classical school His early promise gained him admirers, and in 1817 he was sent to Rome There he worked successively in the studios of Canova and Thorvaldsen He lived chiefly in Rome, although most of his commissions came from England Among his best-known works are *Queen Victoria Supported by Justice and Clemency* (Westminster Palace), two reliefs, *The Hours Leading the Horses of the Sun* and *Phaeton* (Fitzwilliam Coll , Cambridge), and *Hunter and Dog* Gibson, invoking the precedent of the Greeks, endeavored to popularize tinted statues See biography by Lady Eastlake (1870), containing his autobiography.

Gibson, John Bannister, 1780–1853, American jurist, b Carlisle, Pa , grad Dickinson College, 1800, nephew of John Gibson He studied law, practiced law, and served (1810–12) in the state legislature before being appointed as judge In 1816 he became an associate justice and in 1827 the chief justice of the Pennsylvania supreme court His diligent study made him an authority on the common law, and his many forceful, well-worded decisions, based on principles rather than precedents, showed great ability to adapt the law to a particular society, did much to mold Pennsylvania law, and had great influence elsewhere See T P Roberts, *Memoirs of John Bannister Gibson* (1890)

Gibson, Paris, 1830–1920, American pioneer, b Brownfield, Maine, grad Bowdoin College, 1851 After serving in the Maine legislature, he moved to Minneapolis, where he built the first flour mill and started woolen mills He by 1879 he was in Fort Benton, Mont , where he became a sheep raiser Realizing the industrial value of the great falls of the Missouri, he promoted and planned the city of Great Falls, becoming its first mayor He pioneered in power mining, in railroading, and in sheep raising in Montana As U S Senator (1901–5) he presented advanced Western views on conservation, reclamation, and homestead legislation

Gibson, Randall Lee, 1832–92, Confederate general, b Woodford co , Ky , grad Yale, 1853, and Univ of Louisiana (now Tulane Univ) law school, 1855 Gibson served in most of the Western campaigns of the Civil War, first as an artillery officer and later as commander of an infantry brigade After the war he practiced law in New Orleans and later was a U S Representative (1875–83) and Senator (1883–92) He was Paul Tulane's agent in organizing Tulane Univ and became the first president of the board of administrators

Gibson, Wilfrid Wilson, 1878–, English poet One of the leaders of protest against mere prettiness in poetry, he writes of the obscure and lowly His many volumes of verse include *Daily Bread* (1910), *Fires* (1912), *Livelihood* (1917), *Hill-Tracks* (1918), *I Heard a Sailor* (1925), *Fuel* (1934), and *Solway Ford and Other Poems* (1945)

Gibson, William Hamilton, 1850–96, American illustrator, lecturer, and author, b Sandy Hook, N J , studied at Brooklyn Polytechnic Institute He lectured upon natural history subjects He first illustrated botanical drawings for the *American Agriculturalist* He also worked for *Harper's* and the *Art Journal* and was among the illustrators of *Picturesque America* His drawing was minutely detailed and his color delicately tinted Among his numerous books are *Camp Life in the Woods* (1882), *Our Edible Toadstools and Mushrooms* (1895), and *Eye Spy* (1897)

Gibsonburg, village (pop 2,169), N Ohio, near Fremont, founded 1871 It has limestone quarries

Gibson City, city (pop 2,401), central Ill , E of Bloomington, inc 1894 It is the trade and processing center of a farm area

Gibsonville, town (pop 1,753), central N C , E of Greensboro, in a corn, wheat, and tobacco area

Giddalti (gĭddăl'tī) [Heb ,=I have praised], temple musician 1 Chron 25 4,29

Giddel (gĭ'-) [Heb ,=gigantic], name of two families which returned with Zerubbabel Ezra 2 47,56, Neh 7 49,58

Giddings, Franklin Henry (gĭ'dĭngz), 1855–1931, American sociologist, b Fairfield co , Conn , grad Union College His early experience was in journalism In 1894 he became professor of sociology at Columbia, where he earned a name as a brilliant teacher His explanation of social phenomena was based on the principle of "consciousness of kind." He encouraged statistical studies in sociology His most important works are *The Principles of Sociology* (1896), *Democracy and Empire* (1900), *Studies in the Theory of Human Society* (1922), and *The Scientific Study of Human Society* (1924)

Giddings, Joshua Reed, 1795–1864, American abolitionist, b. Tioga Point (now Athens), Pa A successful lawyer in Jefferson, Ohio, he represented the Western Reserve in Congress (1838–59). For his militant antislavery tactics he was censured (1842) by Congress and resigned, but was promptly re-elected despite the opposition of his party (Whig) He became a Free-Soiler in 1848 and a Republican in 1854. After 1861 he was consul general to Canada See biography by his son-in-law, George W. Julian (1892)

Giddings, city (pop 2,166), co seat of Lee co , S central Texas, E of Austin; founded 1872 by Wends It is the center for a truck-farming, dairying, and poultry-raising area Serbin, near by, was (1855) the first Wend settlement in Texas

Gide, André Paul Guillaume (ăndrā' pōl' gēyōm' zhĕd'), 1869–, French author One of the most distinguished of contemporary novelists and a leader of French liberal thought, Gide founded (1909) the *Nouvelle Revue française*, which remained an outstanding and influential literary review until 1940 Gide's conflict between his emotional nature and his Huguenot background results in a moral fiction which is often interjected with autobiography Works in this category include *The Immoralist* (1902, Eng tr , 1930), *Strait Is the Gate* (1909, Eng tr , 1924), *Two Symphonies* (1919, Eng tr , 1931), and *The Counterfeiters* (copyright 1925, Eng tr., 1927) His *Travels in the Congo* (1927, Eng tr , 1929) and *Retour du Tchad* (1928), the results of travels in Africa, led to a reform of the French colonial policy Most of his works have been translated into English. His own translations of Tagore's *Gitanjali*, Shakspere's *Antony and Cleopatra* and *Hamlet*, and Blake's *Marriage of Heaven and Hell* are outstanding In 1947 he received the Nobel Prize in Literature See his autobiography *If It Die* (1926, Eng tr , 1935) and his journals (1939, Eng tr by Justin O'Brien, 1947–49) See Klaus Mann, *André Gide and the Crisis of Modern Thought* (1943), V M Ames, *André Gide* (1947)

Gide, Charles (shärl), 1847–1932, French economist A professor at the universities of Bordeaux, Montpellier, and Paris, Gide was also an expert on international monetary problems He played an important part in the cooperative movement, and his *Consumers' Co-operative Societies* (1904, Eng tr from 3d French ed , 1921) is a classic in the field. His other works include *Principles of Political Economy* (1883, Eng tr from 24d ed , 1924) and, with Charles Rist, *History of Economic Doctrines* (1909, Eng tr from 2d ed , 1915) See Karl Walter, ed, *Co-operation and Charles Gide* (1933)

Gideon (gĭ'dēun) [Heb ,=hewer], **Gedeon** (gĕ'dēun) [Gr from Heb], **Jerubbaal** (-rŭ'bāal, -rubā'ul) [Heb ,=let Baal plead], or **Jerubbesheth** (jĕrŭ'bu-, jĕ'rubĕ'-) [Heb ,=let shame plead], judge of Israel An interesting event in his oracle of the fleece He laid the fleece in the open for two nights On the first morning the fleece was wet and the ground dry whereas on the second morning the fleece was dry and the ground was wet Considering this a favorable omen he went into battle, won, and freed Israel from Midianite oppressors Judges 6–8, Heb 11 32 Jerubbaal Judges 6 30–32, 7 1 Jerubbesheth 2 Sam 11 21 For the relation between these names, see BAAL

Gideon, Peter Miller, 1820–99, American horticulturist, b Woodstock, Ohio He lived in Minnesota from 1853, and for several years he was superintendent of the state experimental farm at Lake Minnetonka, Minn He is known especially for his work in pomology he developed the "Wealthy," "Peter," and "Gideon" varieties of apples as well as several varieties of crab apples

Gideon, city (pop 1,606), SE Mo , SE of Poplar Bluff, inc 1909

Gideoni (gĭdēō'nī) [Heb ,=one who lays low], father of ABIDAN

Gideons see BIBLE SOCIETIES

Gideonse, Harry David (gĭ'dēunz), 1901–, American educator, b Rotterdam, Netherlands, grad Columbia (B S , 1923, M A , 1924) He came to the United States in 1904 He taught economics at Columbia (1924–26), Rutgers Univ (1928–30), and the Univ of Chicago (1930–38) His *Higher Learning in a Democracy* (1937), a rebuttal to Robert Hutchins's *Higher Learning in America*, forced Gideonse to leave Chicago He was appointed (1939) president of Brooklyn College

Gidom (gī'dŏm), place, Palestine Judges 20 45

Gielgud, John (gĭl'gŏōd), 1904–, English actor. A grandnephew of Ellen Terry, he was reared in the atmosphere of the theater and made his debut at the Old Vic in 1921 He established himself as an actor of the first rank in such roles as Romeo, Ferdinand in *The Tempest*, and Oswald in *Ghosts*, but his greatest portrayal was Hamlet, which he first gave in 1929–30 and which he repeated numerous times in England and in the United States (1936–37) Among the many other plays in which he starred are *King Richard II* and *The Merchant of Venice*, *The School for Scandal*, and Robinson Jeffers's *Medea* See his autobiography, *Early Stages* (1939), study by Rosamond Gilder (1937)

Giers, Nikolai Karlovich (nyĭkulĭ' kar'luvĭch gĕyĕrs'), 1820–95, Russian statesman. After serving in diplomatic posts abroad, he was made (1875) director of Eastern affairs in the foreign affairs ministry. In 1882 he succeeded Prince Aleksandr M GORCHAKOV as minister and remained in this post throughout the reign of Alexander III, whose policy of peace he promoted. Giers sought to preserve a secret al-

liance (see THREE EMPERORS' LEAGUE) with Germany despite the growing unpopularity of that country, but in 1890 Chancellor Caprivi of Germany denounced the treaty, and Giers was forced to enter upon an alliance with France in 1891 This agreement was the nucleus of the Triple Entente (see TRIPLE ALLIANCE AND TRIPLE ENTENTE)

Gies, William John (gīs), 1872–, American biological chemist, b Reisterstown, Md , grad Gettysburg College (B S , 1893), Ph D Yale, 1897 He was professor of biochemistry at Columbia Univ from 1907. He was secretary of the faculty of the College of Physicians and Surgeons (1905–21), consulting chemist of the New York Botanical Garden (1902–21), and pathological chemist of Bellevue Hospital (1910–21) From 1921 to 1931 he was in charge of a survey for the Carnegie Foundation of dental education He wrote textbooks, *Biochemical Researches* (8 vols , 1903–27), and many articles, besides editing scientific journals, notably, after 1919, *The Journal of Dental Research* He held the offices of secretary and president of the International Association for Dental Research

Giesebrecht, Wilhelm von (vĭl'hĕlm fŭn gē'zŭbrĕkht), 1814–89, German historian One of the most gifted students of Ranke, he later taught at the Univ of Königsberg His *Geschichte der deutschen Kaiserzeit* [history of the imperial period of Germany] (5 vols , 1855–88) is a monument of scholarship as well as literature Though Giesebrecht worked on it for more than half of his adult life, he left it unfinished, terminating with the reign of Emperor Frederick I

Gieseking, Walter (văl'tur gē'zŭking), 1895–, concert pianist, b Lyons, France, of German parentage, grad Hanover Municipal Conservatory, 1916 Having toured Europe from 1920, he made his debut in the United States in 1926 Considered supreme in the interpretation of impressionistic music, particularly that of Debussy, he frequently appeared here with great success until 1939, when he returned to Germany In 1945 the American military government prohibited his appearance before Allied troops in Europe, but revoked its decision in 1947 A New York engagement in Jan , 1949, was canceled when the Dept of Justice questioned his right to appear here

Giessen (gē'sŭn), city (pop 31,601, with suburbs 39,709), Hesse, W Germany, in Upper Hesse, on the Lahn river and N of Frankfurt It has varied manufactures From 1607 until 1945 Giessen was the seat of a well-known Protestant university, now converted into an agricultural and veterinary college An academy for medical research was founded here in 1949 In the Second World War the city, including its historic buildings, was heavily damaged

Giffard (zhē'fär), town (pop 4,909), S Que , on the St Lawrence near Quebec city

Gifford, Robert Swain (gĭ'furd), 1840–1905, American landscape painter, b Naushon island, Mass , studied with Van Beest, a Dutch marine painter in New Bedford, Mass Gifford settled in New York in 1866 He visited the West Coast in 1869 in order to illustrate *Picturesque America* Later he sketched in Europe, North Africa, and Egypt Moorland and seashore were his favorite subjects He became a member of the National Academy of Design in 1878 Among Gifford's paintings are *Barney's Joy Cliff* and *Near the Coast* (both Metropolitan Mus) and *October on Massachusetts Coast* (Corcoran Gall)

Gifford, Sanford Robinson, 1823–80, American landscape painter, b near Kingston, N Y , studied at Brown Univ and at the National Academy of Design, New York He was influenced by Thomas Cole From 1855 to 1860 he traveled and sketched in Europe, the picturesqueness of the Alps and Austria and the beauties of Italy being translated emotionally and poetically in his painting He returned to America to serve in the Civil War Among his many works are *Villa Malta* (National Gall of Art, Washington, D C) and *Twoli* (Metropolitan Mus) He became a member of the National Academy in 1854

Gifford, William, 1756–1826, English journalist and critic He was editor (1797–98) of the *Anti-Jacobin* and first editor (1809–24) of the archconservative *Quarterly Review* As a critic Gifford adhered to the principles of the old school, his writings are frequently marred by harsh and short-sighted opposition to young and "radical" poets His most famous poems are *The Baviad* (1791) and *The Maeviad* (1795), satirizing the English DELLA-CRUSCANS Gifford translated Juvenal (1802) and Persius (1821) and edited the works of Massinger, Jonson, and John Ford See biography by R B Clark (1930)

gift, voluntary transfer of property from one person to another without any compensation for it and without any obligation of an agreement or contract The one who gives is the donor; the one who receives the gift, the donee. There are two main classes of gifts, gifts *inter vivos* and gifts *causa mortis* The former is an outright transfer of property, the ordinary type of gift A gift *causa mortis*, on the other hand, resembles a WILL and LEGACY It is a gift made by a person in expectation of imminent death. The donor in such a situation may make a gift by delivering the goods or note or whatever is the subject of the gift to the donee, and such a gift is not complete until the donor actually dies This is the important aspect of the gift *causa mortis* It may be revoked by the donor at any time before his death, if he lives, he automatically recovers the gift It is a gift on condition of death following it The ordinary gift *inter vivos* is complete and unconditional as soon as the delivery of the gift is made The nature of the gift is of considerable importance in taxation In both types of gifts, it is essential that there be an actual and full delivery of the article given The delivery may be by handing to the donee or by giving it to some other person for the donee, but in all cases the delivery must be such as to take the property given out of the hands and the control of the donor Commonly gifts are spoken of as involving both real estate and personal property The law does not recognize a true gift of real estate, for real estate can be transferred only by deed or will Gifts in law are only of personal property A promise to deliver a gift in the future, or a promise to make a gift, unless under seal or made under very unusual circumstances, can not be legally enforced Primitive exchange, between individuals and between groups, is largely a matter of gifts, which avoid the complications of barter or sale and make for cooperation Within a household, barter and sale often have no place In Europe for many centuries such economic units as the monastery and the manor were essentially without barter or sale The stable civilizations of Egypt and China were similarly organized In the ancient civilizations of Mexico, Central America, and Peru, sale and barter were absent or exceptional

Gifu (gē'fōō), city (1940 pop 172,340, 1947 pop 166,995), capital of Gifu prefecture, central Honshu, Japan The headquarters (16th cent) of Nobunaga, it is today a manufacturing and railroad center and the seat of Nawa Entomological Institute Gifu prefecture yields charcoal, lumber, and agricultural products

Gigli, Beniamino (bĕnyamē'nō jē'lyē), 1890 , Italian tenor He made his debut (1914) at Rovigo, Italy, as Enzo in *La Gioconda* At the Metropolitan Opera, New York, he was leading tenor in French and Italian operas from 1920 to 1932, he made guest appearances in the season of 1938–39

gigue see JIG

Gihon (gī'hŏn) [Heb , =impetuous], a river of Eden Gen 2 13

Gijón (hĕhōn'), city (pop 72,053), Oviedo prov , N Spain, in Asturias, a seaport on the Bay of Biscay It is the largest city of Asturias and exports the rich mineral resources of the hinterland There are mechanical, chemical, and various other industries Of pre-Roman origin, Gijón was one of the first places recaptured from the Moors early in the 8th cent and flourished under the first Asturian kings In 1588 the Spanish Armada, defeated by the English, took refuge here In the Spanish civil war (1936–39) Gijón was the last northern port to fall to the Insurgents (1937)

Gil, Emilio Portes see PORTES GIL, EMILIO

Gila (hē'lu), river rising in the mountains of W New Mexico and flowing in long curves in New Mexico and west entirely across Arizona to the Colorado near Yuma, Ariz The "Valley of the Sun" was occupied at various places by early peoples who farmed by irrigation, and it is dotted with ruins Many Indians live in the valley today In the region of the headwaters are the Gila National Forest and the government-preserved "unimproved" Gila Wilderness Area (entered via Silver City, N Mex , but not with automobile) There are irrigation dams in New Mexico, and in Arizona the COOLIDGE DAM is on the middle river, just below the junction of the San Francisco The lower Gila has other irrigation and reclamation projects, as do its lower tributaries, notably in the SALT RIVER VALLEY See Ross Calvin, *River of the Sun* (1946)

Gila Cliff Dwellings National Monument. see NATIONAL PARKS AND MONUMENTS (table)

Gilalai (gĭ'lulā, gĭlā'lāĭ, gĭlulā'ĭ), one of Ezra's musicians Neh 12 36

gila monster (hē'lu) or **beaded lizard,** a species of *Heloderma*, the only genus of poisonous lizards It is found in the deserts of the SW United States It averages about 18 in in length, and the skin is covered with tuberclelike scales Its stout, clumsy body has a marbled appearance, a combination of black with orange or pink, yellow, or dull white The tail acts as a food reservoir Because the poison glands are in the lower jaw and the grooved teeth through which the venom enters the victim are rather far back in the mouth, the reptile must embed its teeth deeply in a certain position in order to give a fatal bite The only other definitely known species is the black and yellow Mexican gila monster

Gilan or **Ghilan** (both gēlän'), region, NW Iran, between the Elburz Mts and the Caspian Sea It was formerly a province with the capital at Resht Its products include rice, fruit, silk, and tobacco The mountainous southern part, densely wooded, is called Dailam. Gilan was held by Russia (1723–32) and was (1920–21) a Soviet republic.

Gilberd, William: see GILBERT, WILLIAM.

Gilbert, Sir Alfred, 1854–1934, English sculptor and goldsmith, studied in Paris, Rome, and Florence The Italian Renaissance was his lifelong source of inspiration In 1883 he attracted attention with his *Perseus Arming* (bronze replica, Metropolitan Mus) He is best known for such public memorials as the Shaftesbury Memorial Fountain (Piccadilly, London) and those to Queen Victoria (Winchester), the duke of Clarence (Windsor Chapel), and Queen Alexandra (Marlborough House) Despite continued success Gilbert was critical of his sculpture, much of which he destroyed He preferred to be considered a goldsmith

Gilbert, Cass (gĭl'burt), 1859–1934, American architect, b Zanesville, Ohio, studied at the Massachusetts Institute of Technology and in Europe In 1880 he entered the employ of McKim, Mead, and White, New York city, and three years later opened his own office in St Paul, Minn After a successful career there he returned in 1899 to New York Gilbert became widely known with the Woolworth Building, New York This 60-story office building was the first satisfactory SKYSCRAPER Though it made use of Gothic motives, the building achieved, by its use of continuous vertical lines, a form then novel This and his design for the U S army supply base, Brooklyn (1918), have exerted a considerable influence upon contemporary architecture Among Gilbert's other conspicuous works are the New York Life Insurance Company Building and the Federal Courts Building, New York, the U S Treasury Annex, the U S Chamber of Commerce, and the Supreme Court Building, Washington, D C., public libraries in Detroit, St Louis, and New Haven, Conn , the state capitol, St Paul, Minn , and the Essex co courthouse, Newark, N J He was consulting architect for the George Washington Bridge over the Hudson

Gilbert, Charles Kendall, 1878–, American Episcopal bishop, b Bainbridge, N Y , grad Hamilton College and General Theological Seminary Ordained in 1906, he was rector in New Dorp, N Y , Millbrook, N Y , and Scarsdale, N Y He edited the *Churchman* from 1912 to 1918 and served from 1920 to 1930 as executive secretary of the social service commission of the diocese of New York From 1930 to 1946 he was suffragan bishop of New York, in 1947 he became bishop of New York

Gilbert, Grove Karl, 1843–1918, American geologist, b Rochester, N Y , grad Univ of Rochester, 1862 When the U S Geological Survey was created in the Dept of the Interior in 1879 (to replace four surveys in the Depts of the Interior and War), Gilbert was appointed senior geologist His *Report on the Geology of the Henry Mountains* (1877) contains the first description of a laccolithic mountain group, a form of mountain structure which he was the first to recognize and explain One of the publications of the Geological Survey is Gilbert's *Lake Bonneville* (1890), a study of the ancient lake of which Great Salt Lake is the remnant He mapped the ancient shores and outlets of the Great Lakes and was the first to recognize that the successive levels of the lakes were caused by the barrier of the receding glacier, which cut off the natural drainage of the region He also published notable studies on Niagara Falls and Niagara river, the glaciation and morphology of the Sierra Nevada, and hydraulic mining debris in the Sierra Nevada He accompanied the Harriman Alaskan expedition and wrote the volume *Glaciers and Glaciation* in its reports See biography by W M Davis in the *Memoirs* of the National Academy of Sciences, Vol XXI (1926)

Gilbert, Henry Franklin Belknap, 1868–1928, American composer, b Somerville, Mass , pupil of Edward MacDowell He was an associate of Arthur Farwell and was active with the Wa-Wan Press In most of his music he made use of Negro folk tunes Outstanding among his works are his *Comedy Overture on Negro Themes* (Boston, 1911), *Negro Rhapsody* (1913), and *Dance in the Place Congo* (Metropolitan Opera, 1918)

Gilbert, Sir Humphrey, 1539?–1583, English soldier, navigator, and explorer, educated at Eton and Oxford, half brother of Sir Walter RALEIGH Knighted (1570) for his service in the campaigns in Ireland, he later (1572) served in the Netherlands Becoming convinced of the existence of a NORTHWEST PASSAGE, he set forth his theories in his famous *Discourse* (ed , with some additions, by George Gascoigne in 1576), which led to the voyages of Martin FROBISHER and John DAVIS and long motivated English exploration in the northern regions In 1578 Queen Elizabeth granted Gilbert a patent authorizing him to explore and to found colonies in America or other lands of his finding His first expedition, undertaken the same year, failed completely, but upon his second voyage (1583) he reached Newfoundland Entering the harbor of present-day St John's, he took possession of the region in the name of the queen and assumed authority as governor over the colony of fishermen he found there Still in search of the Northwest Passage, he explored to the southwest, but the loss of one of his ships and other disasters

led to his decision to return to England The little vessel in which Gilbert insisted upon casting his lot was lost in a storm in the Azores The narrative of Gilbert's voyage by Edward Hayes is included with other documents in *Sir Humfrey Gylberte and His Enterprise* (ed by Carlos Slafter, 1903). See also D. B. Quinn, ed., *The Voyages and Colonising Enterprises of Sir Humphrey Gilbert* (1940), biography by W G Gosling (1911)

Gilbert, Sir John, 1817–97, English historical painter and illustrator. He painted chiefly medieval subjects, such as *Richard II Resigning the Crown* (Liverpool Gall) He is best known, however, for his many vigorous illustrations of the works of British and American poets and above all for the more than 800 illustrations for Howard Staunton's edition (1857–60) of Shakspere Gilbert also contributed to *Punch* and the *Illustrated London News*

Gilbert, Sir John Thomas, 1829–98, Irish historian and antiquary Secretary of the Public Record Office in Dublin during its brief existence from 1867 to 1875, he devoted most of his life to writing such works as a *History of the City of Dublin* (3 vols, 1854–59) and to the calendaring and publication of much valuable source material for Irish history, such as his *Ancient Historical Irish Manuscripts* (1861) and *Crede Mihi* (1897), the register of the archbishops of Dublin before 1275 See biography by his wife, Lady Gilbert (2 vols, 1905)

Gilbert or **Gilberd, William,** c 1540–1603, English physician and scientist, M D Cambridge Univ, 1569 He was president of the College of Physicians and was physician to Queen Elizabeth and to James I He is especially noted for his studies of magnetism, described in his *De magnete* (1600, Eng tr, with biography, by P F Mottelay, 1893, and by Gilbert Club, 1900) This work formed a foundation for the work of others on magnetism and electricity

Gilbert, Sir William Schwenck, 1836–1911, English playwright and poet He first became known as the author of *Bab Ballads*, amusing but often bitter and cynical poems, published in the magazine *Fun* and collected in 1869 In 1871 he began a collaboration with Arthur Sullivan, lasting about 20 years, which resulted in the popular operettas for which they are famous Gilbert as librettist and Sullivan as composer produced together many works, of which the best known are *Trial by Jury* (1875), *H M S Pinafore* (1878), *The Pirates of Penzance* (1879), *Patience* (1881), *Iolanthe* (1882), *Princess Ida* (1884), *The Mikado* (1885), *Ruddigore* (1887), *The Yeomen of the Guard* (1888), and *The Gondoliers* (1889) Gilbert's lyrics are those of a metrical craftsman His satire is incisive comment on the Victorian period The Savoy Theatre, built by Richard D'Oyly Carte in 1881 to house Gilbert and Sullivan operas, gave them the name Savoy operas, a devotee, actor, or producer of the operas is called a Savoyard About 1890 a quarrel between Gilbert and Sullivan terminated their collaboration Thereafter neither of them produced anything to equal their joint works Gilbert died of heart failure while attempting to rescue a girl from drowning His poems and plays were collected in 1947 The librettos were published as *The Savoy Operas* (1926) See H A Lytton, *The Secrets of a Savoyard* (1921), Sidney Dark and L K Rowland-Brown, *W S Gilbert His Life and Letters* (1925), Isaac Goldberg, *The Story of Gilbert and Sullivan, or, The Compleat Savoyard* (1928), Hesketh Pearson, *Gilbert and Sullivan* (1935), W A Darlington, *The World of Gilbert and Sullivan* (1950)

Gilbert, village (pop 2,504), NE Minn, on the Mesabi iron range and SE of Virginia, in a region of lakes and forests, founded 1907, inc 1909

Gilbert and Ellice Islands (ĭl'ĭs), British colony (375 sq mi, pop 36,000), central and S Pacific, established in 1915 and placed under the Western Pacific High Commission at Suva, Fiji The colony includes the GILBERT ISLANDS, ELLICE ISLANDS, OCEAN ISLAND, FANNING ISLAND, WASHINGTON ISLAND, CHRISTMAS ISLAND, and part of the PHOENIX ISLANDS Before the Second World War the administrative headquarters were at Ocean Island, they are now at Tarawa in the Gilbert Islands The inhabitants are Polynesians and Micronesians The chief exports of the colony are copra and phosphate Most of the islands are strategically important

Gilbert de la Porrée (zhēlbĕr' du lä pôrā'), 1076–1154, French scholastic philosopher, b Poitiers He taught for 20 years at Chartres, where he was for some time chancellor He later lectured at Paris In 1142 he was made bishop of Poitiers He was twice accused of heresy Gilbert's works—*De sex principiis*, an elucidation of Aristotle's last six categories, and his commentary on the *De trinitate* ascribed to Boethius—reveal his somewhat obscure position in scholastic realism, which he held in a moderated form

Gilbert Islands, group of atolls (144 sq mi; pop 27,824), central Pacific, belonging to Great Britain The group includes 10 islands north of the equator, TARAWA, MAKIN, Little Makin, MARAKEI, Abaiang, Maiana, Nukunau, Abemama, Kuria, and Aranuka, and 6 islands of the Kingsmill Group south of the equator, Nonouti, Tabiteuea, Beru, Onotoa, Tamana, and Arorae Tarawa is the capital and port of the colony There are coconut and palm trees, but the soil is poor and yields only taro Some copra is exported The rainfall ranges from 150 in on the northern islands to 15 in on the southern islands, which suffer from periodic droughts The natives are Micronesian The islands were discovered in 1764 by Captain Byron and were visited in 1856 by Hiram Bingham, who translated the Bible into Gilbertese In 1892 the group became a British protectorate and in 1915 was included in the Gilbert and Ellice Islands colony In the Second World War, Tarawa, Makin, Abaiang, Marakei, and Abemama were occupied (1941) by the Japanese Regained in 1943 by U S forces, they became Allied bases for attacking the Marshall Islands

Gilberton, borough (pop 3,710), E Pa, near Frackville, inc 1873 Anthracite mining is done here

Gilboa (-bō'-), ridge, Palestine It runs SE from Jezreel, cutting off part of the plain of Esdraelon from the Jordan Here Saul was defeated and killed 1 Sam 28 4, 31, 2 Sam 1 21

Gildas, Saint (gĭl'dəs), d 570, British historian, possibly a Welsh monk, although little is known about him Shortly before 547 he wrote the *De excidio et conquestu Britanniae*, a Latin history of Britain dealing with the Roman invasion and the Anglo-Saxon conquest of England Its obscure wording has led to numerous theories regarding its meaning and origin, but it remains the earliest authority for the period Gildas is said to have gone to Brittany and to have founded the monastery named after him near Vannes, but this is uncertain

Gilder, Richard Watson (gĭl'dər), 1844–1909, American editor and poet, b Bordentown, N J, self-educated He was a volunteer private during the Civil War In 1869 he became an editor of *Hours at Home*, which merged with *Scribner's Monthly* in 1870 Just before the magazine became the *Century*, Gilder succeeded J G Holland as its editor (1881) and so remained until his death The *Century* was always a leading publication during his life In 1874 he married an artist, Helena de Kave, and their home was the literary and artistic center where the Authors' Club was founded (1882) His poetry, somewhat uneven in quality, includes *The New Day* (1875) and *The Fire Divine* (1907) He also wrote *Lincoln, the Leader* (1909), *Lincoln's Genius for Expression* (1909), and *Grover Cleveland* (1910) See his letters (ed by his daughter, Rosamund Gilder, 1916) His sister was **Jeannette Leonard Gilder,** 1849–1916, American editor and novelist, b Flushing, L I, N Y She was an assistant editor of *Scribner's Monthly* With her brother Joseph Gilder, she was coeditor of the *Critic* from 1881 to 1885, after which she was sole editor until 1906 She was a keen dramatic and music critic, at one time conducting a department in the New York *Herald* Her novels, *The Autobiography of a Tomboy* (1900) and *The Tomboy at Work* (1904), were widely read

Gildersleeve, Basil Lanneau (gĭl'dərslēv), 1831–1924, American classical scholar, b Charleston, S C, grad Princeton, 1849 After study at Gottingen, he was professor of Greek at the Univ of Virginia from 1856 to 1876, except for service in the Confederate cavalry in the Civil War From 1876 to 1915 he was a professor at Johns Hopkins He had high repute as a teacher and did much scholarly work, but he is most widely remembered for his much-used *Latin Grammar* (1867)

Gildersleeve, Virginia Crocheron, 1877–, American educator, b New York city, grad Columbia (B A, Barnard, 1899, Ph D, 1908) After 1900 she was associated with Barnard, first as professor and later as dean from 1911 until she retired in 1947 She was a founder and twice president of the International Federation of University Women, chairman of the American Council on Education and of the educational council advisory to the navy on Women's Reserve, the only woman member of the U S delegation to the San Francisco Conference in 1945, and a member of the advisory commission on education sent to Japan in 1946

Gil de Taboada y de Lemos, Francisco (fränthĕ'skō hĕl' dā täbō'dhä ē dā lā'mōs), d 1809, Spanish colonial administrator After serving as viceroy of New Granada (1789), he was viceroy of Peru (1790–96) In Peru he introduced administrative and moral reforms, encouraged the arts, and sent out exploring expeditions Returning to Spain, he became a member of the governing junta after Ferdinand VII fled before Napoleon

gilding, process of applying to a surface a thin layer of real or imitation gold The process is employed on wood, metal, ivory, leather, paper, glass, porcelain, and fabrics and used to embellish or preserve statuary and the decorative elements, domes, and vaults of buildings Gold, or a substitute, may be applied in leaf form to a surface prepared to receive it by a treatment of size, mercury, acid, or heat The applied leaf is burnished or left matte The oldest method of gilding metals probably consists in coating the metal with gold amalgam and volatilizing the mercury by heat. In chemical methods, employed mainly for metal surfaces, the gold in suspension is subjected to evaporation or heat, resulting in a residual deposit on the treated surface Mechanical and chemical gilding of metals has been largely superseded by electroplating (see PLATING). The art of gilding is of ancient origin It was lavishly employed in Egypt, Greece, and Rome and during the Renaissance and has been used continuously in the Orient

gilds: see GUILDS

Gilead (gĭl'ēăd) [Heb, =witness cairn] **1** Eponym of the Gileadites, grandson of Manasseh Num 26 29, 27 1, 1 Chron 2 2 **2** Gadite. 1 Chron 5 14 **3** Jephthah's father Judges 11 1,2. **4** Mountain mentioned in Judges 7 3 in a passage the text of which is obscure **5** Fertile, mountainous region, NE of the Dead Sea It was allotted to Reuben, Gad, and Manasseh and was noted for its spices, myrrh, and balm It was the home of Jair, Jephthah, and Elijah, and here Jacob met Laban, Ishbosheth was once its king, and in it David found refuge from Absalom. Syria and Assyria overran it, and Hosea denounced it It has been called variously Mt Gilead, Land of Gilead, and Gilead Gen 31 21,25, 37 25, Deut 3 12–17, Judges 5 17, 10 3, 11, 20 1, 1 Sam 13 7, 2 Sam 2 9, 19 31, 24 6, 1 Kings 4 13, 17 1, 2 Kings 10 3; 15 25, Jer 8 22, Hosea 6 8, 12 11, Amos 1 3,13

Giles, William Branch (jīlz), 1762–1830, American statesman, b Amelia co, Va, grad College of New Jersey (now Princeton Univ), 1781 After practicing as a lawyer in Petersburg, Va, he entered the U S House of Representatives as an anti-Federalist in 1790 There he opposed the establishment of the Bank of the United States and in 1793 brought charges of corruption against Alexander Hamilton, these were rejected Resigning in 1798, he was a member of the Virginia legislature (1798–1800), but in 1801 was again elected to Congress From 1804 to 1815 he was a U S Senator He took a leading part in the impeachment of Justice Samuel Chase, was active in factional contests within the Jeffersonian party, and vigorously directed his hostility against Albert Gallatin and James Monroe Giles was again a Virginia legislator for several terms, was governor of Virginia (1827–30), and took part in the state constitutional convention (1829–30) His career was marred by the intense personal animosities he held *Political Miscellanies* (1829) contains a number of his speeches and letters See biography by D R Anderson (1914)

Giles Land: see SPITSBERGEN

Gilgal (gĭl'găl) [Heb, =circle] **1** First encampment of the Israelites W of the Jordan Joshua 4 20, 5 10, 1 Sam 13 4, Hosea 4 15, Amos 4 4 **2** Place, N of Lydda, scene of Elijah's translation 2 Kings 2 1, 4 38 **3, 4, 5** Places otherwise unidentified Joshua 12 23, 15 7, Deut 11 30 See GELILOTH

Gilgamesh (gĭl'gəmĕsh), hero of a Babylonian legend, which was made into an epic of about 3,000 lines written on 12 tablets About half of the work remains It was found in the library of Assurbani-pal at Nineveh It tells of the adventures of the mighty Gilgamesh, how he spurned Ishtar, how he met and wandered with his friend Enkidu (half bull and half man), and how he sought the key to immortality possessed by Ut-napishtim, his ancestor Gilgamesh was apparently originally a Sumerian king

Gill, Sir David (gĭl), 1843–1914, Scottish astronomer While director of the private observatory of Lord Lindsay in Aberdeenshire, he organized an expedition to Mauritius to observe the transit of Venus (1874) and in 1877 planned and conducted an expedition to Ascension island for the observation of Mars to determine the solar parallax As astronomer royal of the Cape of Good Hope (1879–1907), he carried out the geodetic survey of Natal and Cape Colony and organized the geodetic survey of Rhodesia He was a leader in the use of photography in the preparation of star catalogues His survey of the heavens of the Southern Hemisphere (with J C Kapteyn) is known as *The Cape Photographic Durchmusterung for the Equinox 1875* (1896–1900) This work extended Argelander's *Bonn Durchmusterung* to the south pole Gill was knighted in 1900 His writings include *A Determination of the Solar Parallax and Mass of the Moon* (1897) and *History and Description of the Royal Observatory, Cape of Good Hope* (1913)

Gill, Eric Rowland, 1882–1940, English sculptor and wood engraver The son of a nonconformist minister, he became a Catholic His work includes *Madonna and Child; Stations of the Cross* (Westminster Cathedral, London), and *Christ Driving the Moneylenders out of the Church*, for the war memorial at the Univ of Leeds Believing that the designer should be his own craftsman, he carved his sculpture directly from the stone His books, expressing his views on art and life, include *Essay on Typography* (1931), *Clothes* (1934), *Money and Morals* (1934), *Work and Leisure* (1935), and *Work and Property* (1937) See his autobiography (1941) and letters (ed by Walter Shewring, 1949), study by J. P Thorp (1929).

Gill, Theodore Nicholas, 1837–1914, American zoologist, b New York city, privately educated He was associated with George Washington Univ, from 1866 (as professor of zoology, 1884–1910) and

was assistant librarian at the Library of Congress (1866–75). Famed as a taxonomist, he wrote *Catalogue of the Fishes of the East Coast of North America* (1861–73), *Arrangement of the Families of Fishes* (1872), and *Arrangement of the Families of Mammals* (1872). See biography by W. H. Dall (1917).

gill (gĭl), respiratory organ of many aquatic animals. In the fish, gills are throughout life the chief organ of respiration Blood flowing through the tiny vessels which permeate the gill filaments absorbs oxygen and releases carbon dioxide The filaments are attached along the outer edge of a cartilaginous or bony branchial or gill arch Projections from the inner edge of the arch are called gill rakers These are present except in fish which eat whole fish and other large food and serve to strain the food from the water which enters the mouth and flows out through the gill clefts or slits between the gills A gill cover or operculum is present in many fish Gills different in structure from those of the fish are the respiratory organs in developing amphibians and in the adult of some forms and in mollusks, echinoderms, and crustaceans Aquatic larvae of insects have gills permeated by air tubes

Gillem, Alvan Cullem (gĭl'ŭm), 1830–75, Union general in the Civil War, b Jackson co, Tenn, grad West Point, 1851 In the early part of the Civil War he fought in the Tennessee campaigns. His friend Andrew Johnson, then military governor of Tennessee, appointed him state adjutant general in June, 1863 In August, Gillem was made a brigadier general of volunteers, and after his campaign against Confederate bands in E Tennessee (1864) he was brevetted major general of volunteers (April, 1865) He commanded the Dist of East Tennessee after the war and was prominent in the reorganization of the state government In 1868 he was given command of Mississippi and Arkansas, where—to the displeasure of the radicals—he made Reconstruction comparatively easy After Johnson was no longer President, Gillem was removed to the Texas frontier In 1873 he commanded against the Modoc Indians in California

Gillespie, Mabel (gĭlĕ'spē), 1867–1923, American social worker and labor organizer, b St Paul, Minn She studied (1898-1900) at Radcliffe, then became secretary of the Boston Associated Charities, in which capacity she interested herself in the problems of workingwomen. She was active in investigating labor conditions in Massachusetts and New York, serving as executive secretary of the state child labor committee and the Consumers' League in New York and, after 1909, as secretary of the Boston Women's Trade Union League She exercised great influence in securing improved social legislation in Massachusetts In 1919 she was a founder of the Trade Union College, Boston

Gillespie, city (pop 4,440), SW Ill, NNE of St Louis, in a coal area, inc 1869

Gillett, Ezra Hall (jlĕt'), 1823–75, American Presbyterian clergyman and historian, b Colchester, Conn, grad Yale, 1841, and Union Theological Seminary, 1844 After serving (1845–70) as pastor in Harlem, New York city, he became professor of political science in the Univ of the City of New York (now New York Univ) He began the McAlpin Collection of British history and theology for the library of Union Theological Seminary Among Gillett's writings are *The Life and Times of John Huss* (1863)

Gillett, city (pop 1,145), NE Wis, on a tributary of the Oconto and NW of Green Bay, inc as a village 1900, as a city 1944

Gillette, William (jlĕt'), 1853–1937, American actor and playwright, b Hartford, Conn His New York debut in Mark Twain's *Gilded Age* (1877) was shortly followed by his own first play, *The Professor* (1881), which appeared at the Madison Square Theatre, then under his management In the same year *Esmeralda*, written with Frances Hodgson Burnett, established his success *Held by the Enemy* (1886) was the first of his popular Civil War plays, the second being *Secret Service* (1896) Both won him high personal praise With *Sherlock Holmes* (1899), however, Gillette scored his lasting triumph, creating a play and a character with which he was permanently associated He later appeared in Barrie's *Admirable Crichton* and *Dear Brutus* In retirement from 1932, Gillette returned in 1935–36 to tour in *Three Wise Fools*

Gillette, town (pop 2,177), co seat of Campbell co, NE Wyo, SE of Sheridan It is a trade center for a grain, livestock, oil, and coal area Near by is a Univ of Wyoming farm experiment station

Gilliam, David Tod (gĭl'yŭm), 1844–1923, American gynecologist, b Hebron, Ohio, M D Medical College of Ohio, 1871 From 1879 he was professor at Starling Medical College, Columbus He originated (1899) the Gilliam operation for displacement of the uterus He wrote *The Essentials of Pathology* (1883) and *Practical Gynecology* (1903)

Gillingham (jĭl'ĭng-ŭm), municipal borough (1931 pop 61,536; 1947 estimated pop 62,810), Kent, England, on the Medway and adjacent to Chatham. There is a fragment of the former palace of the archbishops of Canterbury Industrially the town is dependent upon the Chatham dockyards, the fruit orchards in the vicinity, and the manufacture of bricks, cement, and electrical equipment. It is the site of a naval hospital.

Gilliss, James Melville (gĭl'ĭs), 1811–65, American astronomer, b Georgetown, D C. He entered the navy in 1826 and was made first an assistant and in 1837 superintendent of the Depot of Charts and Instruments He began making the first astronomical observations for the government, and it was largely upon his representations that the U S naval observatory was established in 1841 He was commissioned to organize and equip it In 1861, after the resignation of M F Maury, he became superintendent of the observatory He led an expedition (1849–52) to Santiago, Chile, which studied the southern constellations and made observations for the determination of the solar parallax Its report was published in four volumes He made later journeys to observe solar eclipses Under his guidance the naval observatory began effective cooperation with other research observatories and commenced the publication of its observations See G A Weber, *The Naval Observatory* (1926)

Gillmore, Quincy Adams (gĭl'môr), 1825–88, Union general in the Civil War, b Lorain co, Ohio, grad West Point, 1849 Gillmore, a captain of engineers, captured Fort Pulaski in April, 1862, and shortly afterward was made a brigadier general of volunteers Commanding the 10th Army Corps and the Dept of the South (1863–64), he had charge of operations against Charleston Although he reduced Fort Sumter to ruins, the Confederate force there did not surrender Gillmore fought with the Army of the James at Drewrys Bluff (May, 1864), commanded two divisions in the defense of Washington against Early's raid (July), and again commanded the Dept of the South in 1865 After the war he was active in army engineering work and in 1879 was made president of the Mississippi River Commission

Gillow, Robert, d 1773, English furniture manufacturer and designer, founder of a firm of cabinetmakers prominent for two centuries They produced the original type of billiard table, a telescoping dining table, and the Davenport desk

Gillray, James (gĭl'rā), 1757–1815, English caricaturist and illustrator, studied at the Royal Academy and on the Continent His earliest cartoon, *Paddy on Horseback*, appeared in 1779 He illustrated Goldsmith's *Deserted Village* (1784) and published *John Bull and His Family Landing at Boulogne* (1792) He became famous with his caricatures of the court of George III His masterly delineations, vigorous, often subtle, though sometimes vulgar, numbered more than 12,000 Among his best-known cartoons are *A Connoisseur Examining a Cooper* (1792), *A New Way to Pay the National Debt* (1796), *Social Elements in Skating* (1805), and *A Rake's Progress at the University* (1806)

gillyflower see CARNATION; STOCK, WALLFLOWER

Gilman, Arthur (gĭl'mun), 1837–1909, American educator and writer, b Alton, Ill, M A Williams, 1867 After a brief career as a banker, he turned to writing and later was connected with the Riverside Press, Cambridge He was instrumental in establishing Radcliffe College and in 1886 founded at Cambridge the Gilman School for Girls His numerous historical and literary works include *The Story of Rome* (1886), *The Making of the American Nation* (1887), and an edition of Chaucer

Gilman, Charlotte Perkins, 1860–1935, American feminist and reformer, b Hartford, Conn, great-granddaughter of Lyman Beecher She married in 1884 C W Stetson and in 1900 George H Gilman Prominent as a lecturer and writer on the labor movement and feminism, she edited the *Forerunner*, a liberal journal Among her many books are *Women and Economics* (1898), *Concerning Children* (1900), *Human Work* (1904), and *This Man-made World* (1911) Her verses were collected in *This Our World* (1898) Incurably ill, she committed suicide See her autobiography, *The Living of Charlotte Perkins Gilman* (1935)

Gilman, Daniel Coit, 1831–1908, American educator, first president of Johns Hopkins Univ, b Norwich, Conn, grad Yale, 1852 After serving as attaché (1853–55) of the American legation at St Petersburg, he returned to Yale and was active in planning and raising funds for the founding of Sheffield Scientific School From 1856 to 1865 he was librarian of Yale College and was also concerned with improving the New Haven public school system Appointed (1863) professor of geography at Sheffield Scientific School, he became secretary and librarian as well in 1866 He resigned these posts in 1872 to become president of the newly organized Univ of California His work there was hampered by the state legislature, and in 1875 Gilman accepted the call to establish and become first president of Johns Hopkins Univ. at Baltimore. Before being formally installed as president in 1876, he spent a year studying university organization and selecting an outstanding staff of teachers and scholars Gilman was also active in founding Johns Hopkins Hospital (1889) and Johns Hopkins Medical School (1893) He founded and was long president of the Charity Organization of Baltimore and served as a trustee of the John F. Slater and Peabody Education funds and as a member of the General Education Board. He retired from Johns Hopkins in 1901, but accepted the presidency (1902–4) of the newly founded Carnegie Institution of Washington. His books include biographies of James Monroe and James Dwight Dana, a collection of addresses entitled *University Problems* (1898), and *The Launching of a University* (1906) See biographies by Fabian Franklin (1910) and Abraham Flexner (1946)

Gilman, Lawrence, 1878–1939, American music critic and author, b Flushing, L I, N Y He was music critic for *Harper's Weekly* (1901–13) and the *North American Review* (1915–23), and in 1923 he succeeded H E Krehbiel as music critic for the New York *Herald Tribune*, a post he held until his death An able and highly respected critic, he wrote (1921–39) the program notes for the New York Philharmonic Society and the Philadelphia Orchestra and also many books on music, including *Aspects of Modern Opera* (1909), *Edward MacDowell* (rev ed, 1909), *Wagner's Operas* (1937), and *Toscanini and Great Music* (1938)

Gilman (gĭl'mun), city (pop 1,554), E Ill, E of Peoria, in a farm area, inc 1867

Gilmer, Thomas Walker, 1802–44, U S. Secretary of the Navy (Feb, 1844), b Albemarle co, Va He practiced law, served (1829–36, 1839) in the Virginia legislature, and was elected (1840) governor of Virginia As Congressman (1841–44), he was a spokesman for the Tyler administration Appointed Secretary of the Navy, Gilmer, on board the *Princeton* with other government officials, was killed by a gun explosion This accident brought to the fore the question of succession to the presidency in the event of wholesale death of public officials

Gilmer (gĭl'mur), city (pop 3,138), E Texas, NW of Shreveport, La, settled 1858, inc 1902 It was transformed from a pine-woods lumbering and farming town to a bustling oil city in the 1930s

Gilmor, Harry (gĭl'môr), 1838–83, Confederate cavalry leader, b near Baltimore, Md With a small force he effectively waged guerrilla warfare in the Shenandoah Valley and W Maryland In 1864 Gilmor covered the advance of J A Early on Washington He reluctantly obeyed his superiors in burning Chambersburg, Pa (July, 1864) Sheridan's scouts captured him in Feb, 1865 See his *Four Years in the Saddle* (1866)

Gilmore, Patrick Sarsfield (gĭl'môr), 1829–92, American bandmaster, b near Dublin, Ireland He organized his own band in Boston in 1859 The first of his spectacular music festivals took place in New Orleans in 1864 and was followed by bigger ones in Boston—the National Peace Jubilee (1869) and the World Peace Jubilee (1872), in which a 20,000-voice chorus proved impossibly large Gilmore wrote the words and music of *When Johnny Comes Marching Home*, a popular Civil War song

Giloh (gī'lō), unidentified town, S central Palestine Joshua 15 51 The adjective is Gilonite 2 Sam 15 12, 23 34 See PELONITE

Gilpin, Charles Sidney (gĭl'pĭn), 1878–1930, American Negro actor, b Richmond, Va In singing troupes, stock companies, and vaudeville he toured the United States, until in 1916 he became manager of a Negro stock company in New York city He appeared in Drinkwater's *Abraham Lincoln* in 1919 and with great artistic distinction in the title role of Eugene O'Neill's *Emperor Jones* in 1920–24

Gilpin, Henry Dilworth, 1801–60, American public official, U S Attorney General (1840–41), b Lancaster, England He practiced law in Pennsylvania and served as U S district attorney in this state An ardent Jacksonian Democrat, Gilpin was solicitor of the Treasury (1837–40) and then was Attorney General in President Van Buren's cabinet He was also interested in literary and historical work and edited the papers of James Madison (3 vols, 1840)

Gilroy (gĭlroi'), city (pop 3,615), W Calif, SE of San Jose, chartered 1870 It is a processing center for the farms and orchards of the Santa Clara Valley The city has oil refineries and wineries To the northeast are medicinal hot springs

Gil Vicente see VICENTE, GIL

Gimbel (gĭm'bŭl), family of American merchants and philanthropists **Adam Gimbel,** 1817–96, b Bavaria, emigrated (1835) to the United States and traveled up and down the Mississippi peddling notions He set up (1842) a small business in Vincennes, Ind, and there expanded it considerably over a period of 40 years He sold his business to join his sons, **Jacob Gimbel,** 1850–1922, b, Vincennes, and **Isaac Gimbel,** 1857–1931, b Vincennes, who had opened in the 1880s a successful department store in Milwaukee, Wis In 1894 the Gimbels founded a large department store in Philadelphia, and in 1910 a store was opened in New York city under the direction of Jacob Gimbel—who donated much to Jewish charities. Other businesses were absorbed, and Saks and Company was purchased in 1923. Branch stores were also opened in Pittsburgh, Chicago, Detroit, Beverly Hills, Calif., and other cities **Charles Gimbel,** 1861–1932, b. Vincennes, for many years headed the Philadelphia establishment and was active in

many philanthropies of the city Another brother, **Ellis A. Gimbel**, 1865–1950, b Vincennes, headed the department stores for several years and was the founder of the Gimbel Awards The three other sons of Adam Gimbel, Louis S , Daniel, and Benedict, were also connected with the firm **Bernard F. Gimbel**, 1885–, b Vincennes, son of Isaac Gimbel, became president of Gimbel Brothers, Inc , in 1927

Gimli (gĭm'lē), village (pop 1,045), S Man , on the west shore of Lake Winnipeg and N of Winnipeg It was the first Icelandic settlement in Manitoba

Gimzo (gĭm'zō) [Heb , =sycamore], town, SW Palestine, just SW of Lydda, now called Jimzu It was conquered by the Philistines in Ahaz's time 2 Chron 28 18

gin [archaic *geneva*, from Dutch from O Fr. from Latin, =juniper], spirituous liquor distilled chiefly from fermented cereals, malted and unmalted, and flavored with juniper berries It originated in Holland (whence the name Hollands, or Holland gin) but is now manufactured also in other countries, chiefly England and the United States A type of gin developed in England is known as London gin Dry gin has been highly rectified "Old Tom" gin is sweetened for use as a liqueur Sloe gin is flavored with fresh sloes instead of juniper Spurious gin is fabricated by diluting with water alcohol flavored with juniper extract, turpentine, and other ingredients

Ginath (gī'-), father of Tibni 1 Kings 16 21, 22

Giner de los Ríos, Francisco (franthē'skō hēnär' dā lōs rē'ōs), 1839–1915, Spanish educator and philosopher He founded the Institución Libre de Enseñanza, a school which sought to develop a spirit of inquiry in its students, it did much to reform teaching methods in Spain and to shape contemporary liberal politics there Giner influenced greatly the generation who attended the institution In his work on the philosophy of law Giner attempted to reconcile positivist and rational trends His collected works were published (1916–27) in 18 volumes

ginger, perennial plant (*Zingiber officinale*) of the tropics and its underground branching rootstalk of commercial importance The plant has long, narrow, alternate, and grasslike leaves and flowers borne on separate stems It is easily propagated by the rootstalk, which is about the thickness of a man's finger, and has become one of the most widespread of the spices It is not found in the wild state but is believed to be native to S Asia, where it has been an article of commerce from ancient times Ginger was known to the Greeks and Romans and had reached England before the Norman Conquest It is marketed as preserved or green ginger—produced mostly in China—or as dried or cured ginger Preserved ginger is boiled, peeled, candied, and sold either in syrup or coated with powdered sugar Dried ginger is variously prepared for the market, sometimes with a coating of lime Ginger is used in medicine as a stimulant and a carminative and in cookery (usually powdered) as a condiment, particularly in curries, the oil flavors several beverages, e g , ginger ale Wild ginger is a North American herb with a ginger-flavored rootstalk

ginger ale, sweetened beverage made of carbonated water flavored with ginger and other ingredients Ginger beer is an unrelated beverage, properly a fermented drink brewed from ginger and bitter vegetables

Ginkel, Godart van, 1st earl of Athlone (vän gĭng'kul, Dutch khō'därt van khĭng'kul, ăthlōn'), 1630–1703, Dutch general in the service of Prince William of Orange (WILLIAM III of England) In the War of the Grand Alliance, after the battle of the Boyne (1690), Ginkel became commander in chief of the army in Ireland, capturing Ballymore and Athlone, defeating the forces of James II at Aughrim, and taking Limerick, where peace was made In the War of the Spanish Succession he commanded the Dutch wing of the forces of the duke of Marlborough

ginkgo (gĭngk'gō, gĭng'kō, jĭngk'gō, jĭng'kō) [Jap from Chinese, =silver apricot] or **maidenhair tree**, tall, slender, picturesque deciduous tree (*Ginkgo biloba*), native to the Orient, but planted for ornament and shade in Europe and America It has irregular and sparse branches and fan-shaped leaves It is interesting as a "living fossil," being the sole surviving example of a large group of trees that existed in geologic times Its form has not changed in millions of years, as is shown by fossils widely scattered over Europe and Asia In China it is considered a sacred tree and is planted near temples The kernel of the fruit is highly esteemed by the Asiatics as a food, but the pulp surrounding it is foul-odored

Ginn, Edwin (gĭn), 1838–1914, American publisher and philanthropist, b Orland, Maine, grad Tufts College, 1862 In 1867 he started in Boston his publishing business, which as Ginn, Heath & Co after 1881 and as Ginn & Company after 1885 was notable as a publisher of grammar school texts Ginn aided and organized educational work for the peace movement, and his endowment of the World Peace Foundation in 1910 gave continuity to its educational program.

Ginnetho (gĭ'nēthō, gĭnē'-) [Heb , =gardener], priest who returned with Zerubbabel. Neh. 12 4. He is undoubtedly the same as **Ginnethon** (gĭ'nēthŏn, gĭnē'-), mentioned in Neh 10.6 and 12 16

Ginsburg, Christian David (gĭns'bûrg), 1831–1914, English Hebrew scholar, b Warsaw He was converted to Christianity in 1846 and settled in England, He translated (1857) the Song of Songs, with a critical commentary, but is best known for his Masoretic studies, including Hebrew and English editions of Jacob ben Hayyim's *Introduction to the Rabbinic Bible* (1867), Elias Levita's *Massoret ha-Massoret* (1867), and *The Massorah* (4 vols , 1880–1905)

ginseng (jĭn'sĕng"), name for species of the genus *Panax*, perennial herbs of North America and Asia The true ginseng (*Panax schinseng* or *ginseng*) is native to E Asia and has long been prized by the Chinese as a panacea The large demand for this plant led to a search for a substitute—found in one of the American species, *P quinquefolium*, native E of the Rockies but nearly exterminated. It is now marketed chiefly from cultivation but requires a few years to mature the roots properly Both species have leaves of five leaflets, a cluster of small flowers, and red berries See *Ginseng Diseases and Their Control* and *Ginseng Culture* (U S Dept of Agriculture, Farmers' Buls 736 and 1184)

Gioberti, Vincenzo (vēnchän'tsō jōbĕr'tē), 1801–52, Italian philosopher, statesman, and political writer, b Turin Ordained a priest in 1825, he went into exile (1833–48) at Paris and Brussels because of his liberal political ideas In 1848 he became deputy, senator, and finally premier of the kingdom of Sardinia, but he resigned after the Austrian victory over the Sardinians at Novara (1849) After a short term as minister to Paris, he retired to private life At first a republican, favoring a federation of Italian states under papal arbitration, he later advocated the complete unification of Italy as a constitutional monarchy

Giocondo, Fra Giovanni (frä' jōvän'nē jōkōn'dō), c 1435–1515, Italian architect, engineer, and antiquary A Franciscan friar, he was accomplished in philosophy, archaeology, and classical literature, but is best known for his architectural and engineering works He designed a drainage system for the lagoons of Venice, built the fortifications of Treviso, and is universally credited with the design of the Palazzo del Consiglio (1476) at Verona, an elegant arcaded monument of the early Renaissance He accompanied Charles VIII to France in 1495 as court architect, his only known remaining work of that period is the Pont Notre Dame in Paris

Gioia or **Gioja, Melchiorre** (both mälkyôr'rā jō'yä), 1767–1829, Italian economist and political theorist An early advocate of the unification of Italy, he was several times imprisoned, once on charges of association with the Carbonari movement He opposed the doctrines of Adam Smith, insisting on the economic duty of the state He also conducted important statistical studies His chief works are *Del merito e delle ricompense* [concerning merit and rewards] (1818–19) and *Filosofia della statistica* [philosophy of statistics] (1829–30)

Giolitti, Giovanni (jōvän'nē jōlēt'tē), 1842–1928, Italian statesman, five times premier (1892–93, 1903–5, 1906–9, 1911–14, 1920–21) He and Sonnino were the leading Italian political figures in the years before the First World War A leftist, but not a Socialist, he favored the organization of labor unions and was responsible for important social reforms He opposed Italian participation in the First World War In the troubled period of his fifth premiership, Italy made a treaty with Yugoslavia to settle the FIUME dispute and acquired the Dodecanese from Turkey After 1924 he opposed Mussolini He left memoirs (Eng tr , 1923)

Giono, Jean (zhäⁿ' jōnō'), 1895–, French novelist, b Provence His semi-autobiographical novel, *Jean le bleu* (1932, Eng tr , *Blue Boy*, 1946), explores the development of his early tastes into maturity Among his best works are three short novels, *Colline* (1920, Eng tr , *Hill of Destiny*, 1929), *Un de Baumugnes* (1929, Eng tr , *Lovers Are Never Losers*, 1931), and *Regain* (1930, Eng tr , *Harvest*, 1939) He also wrote *Le Chant du monde* (1934, Eng tr , *The Song of the World*, 1937) and a short story "La Femme du boulanger" (1935, film version with English title, *The Baker's Wife*, 1939) A pacifist, Giono expressed his revolt in *Refus d'obéissance* (book form, 1937) In 1939 he translated Melville's *Moby Dick* into French

Giordano, Luca (lōō'kä jōrda'nō), 1632–1705, Italian painter of the Neapolitan school; pupil of Ribera and Pietro da Cortona He was called Fa Presto because of the rapidity with which he painted He copied the works of the great masters with amazing facility and ultimately based his style upon that of Veronese and Cortona Giordano lived in Naples, but in 1679 and again in 1683 was invited to Florence by the grand duke to decorate the cupola of the Corsini Chapel and to decorate a ceiling in the Palazzo Riccardi In 1692 on invitation of Charles II of Spain, he went to Madrid, where he remained eight years and produced numerous works in oil and in fresco, achieving fame and wealth On the death of Charles, he accompanied Philip V to Naples. His pictures are in the leading European galleries, particularly those of Madrid, Vienna, and Naples His best-known frescoes in Naples include *The Story of Judith* (San Martino); *Christ Expelling the Traders from the Temple* (San Filippo Neri), and those in Santa Brigida In Spain he painted admirable frescoes in the Chapel of San Lorenzo and in the Escorial, Madrid, and in the churches and palaces of Madrid and Toledo. Another example is *The Birth of John the Baptist* (Metropolitan Mus)

Giordano, Umberto (ōōmbĕr'tō), 1867–1948, Italian composer of operas *Andrea Chénier* (1896) and *Madame Sans-Gêne* (1915), a comedy, are best known

Giorgio, Francesco di (franchä'skō dē jōr'jō), 1439–1502, Italian engineer, architect, painter, and sculptor, b Siena With Renaissance versatility he worked as military architect and engineer, first at Siena (1463–78) and later in the service of the duke of Urbino, made a model for the dome of the Milan cathedral (1480), and invented the mines used in the siege of Naples in 1495 In sculpture he is remembered for his work in the choir of the Siena cathedral, his paintings, which show the influence of Fra Filippo Lippi, are mostly in Siena, *The Rape of Europa* is in the Louvre and *The Chess Players* in the Metropolitan Museum His treatise *Trattato di architettura civile e militare* was edited by Cesare Saluzzo in 1841 See study by A. S Weller (1944)

Giorgione (jōrjō'nā), c 1478–1510, Venetian painter, b Castelfranco Veneto, fellow student of Titian under Giovanni Bellini in Venice Giorgione was known also as Zorgo of Zorgi da Castelfranco and as Giorgio Barbarelli Almost nothing is known of his life except that he worked in Venice, undertook various important commissions in oil and fresco, and died of the plague in his early 30s Legend concedes him every personal charm A great innovator, he is credited with having been the formative influence in the lives of Titian, Pordenone, Sebastiano del Piombo, and Jacopo Palma il Vecchio Thus, in a sense, 16th-century Venetian painting stems from him No absolute was his domination that it is impossible to separate with certainty his work from that of his imitators His frescoes are practically obliterated The list of his extant works in oil is computed variously at from 4 to 70 But if Giorgione himself is an unknown quantity the Giorgionesque is not It was a new departure in Venetian painting both in technique and in spirit Technically it introduced a greater fusion of all forms and a subordination of local color to the pervading tone, in which the differences express primarily form in space This revolution was accomplished simultaneously by Leonardo, but whereas Leonardo tended to suppress color in his somewhat opaque shadows, the colors of Giorgione are luminous and warm In spirit the Giorgionesque was liberating The ostensible subject no longer limited the artist but became a pretext for self-expression The Virgin steps out of her architectural setting and becomes part of an idyllic landscape bathed in a general light The specific works associated with Giorgione himself have the poetic quality of a bucolic dreamworld never recaptured by his famous followers Among the best authenticated are *Madonna with SS Francis and Liberale* (cathedral, Castelfranco Veneto), *The Three Philosophers* (Vienna), and the Giovanelli landscape with figures (Venice) Also celebrated, if more dubious, are *Concert champêtre* (Louvre), *The Concert* (Pitti Palace), *Judgment of Solomon* and *Trial of Moses* (Uffizi), *Madonna with SS Roch and Antony* (Prado), *Venus and Cupid in a Landscape* (National Gall of Art, Washington, D C), a portrait in the Metropolitan Museum See studies by Herbert Cook (1900) and G M Richter (1937)

Giottino (jōt-tē'nō), early Florentine painter of the school of Giotto. He is supposed to have lived in the first half of the 14th cent and has been variously identified with Giotto di Stefano and Maso di Banco It is possible that the work of more than one man has been associated with this name He has been credited with frescoes in Santa Croce, Florence, and in the lower church of St Francis in Assisi and a fine *Pietà* in the Uffizi, works of great beauty and refinement See Osvald Sirén, *Giotto and Some of His Followers* (Eng tr , 1917)

Giotto (Giotto di Bondone) jōt'tō dē bōndō'nā), c 1266–c 1337, Florentine painter and architect More than any other one man he may be said to have determined the course of painting in Europe He reputedly was born at Colle, near Florence, the son of a landowner There are records of his residence at Florence at various periods from 1311 to 1336. Tradition says that he was a pupil of Cimabue, but modern critics see in his earliest works evidences of the Roman school. He early turned from the rigidity and conventionalism of contemporary Italo-Byzantine painting to the study of nature and, despite the limited technical knowledge at his command, gave new life to the art of painting in Italy. Giotto was, above all, the perfector of form and movement. His figures are graceful, dignified, natural, and individual. The

faces and gestures are expressive and lifelike; drapery and architecture are handled with simplicity and skill, movement is free and unconstrained Earnestness and dramatic force characterize all his works, and though he had but scant knowledge of linear perspective and chiaroscuro, his mature art has never been surpassed in ease and grace of pose and in the decorative effect achieved by composition and color In breaking the bonds of Byzantine tradition, Giotto undoubtedly was influenced by the naturalistic trend in sculpture inaugurated by the Pisani and by the Franciscan movement in religion His earliest extant works are probably the celebrated frescoes in the Church of St Francis in Assisi, the beautiful and well-preserved *Allegories*, *The Glorification of St Francis*, and *The Life of the Virgin and Christ* (10 scenes, including the *Crucifixion*) in the transepts and the *Miracles of St Francis*, all in the lower church In 1298 he was in Rome, where he executed for Cardinal Stefaneschi the famous *Navicella*, a mosaic (now in the portico of St Peter's), and an altarpiece for the high altar of St Peter's (now in the sacristy) About 1305 he decorated the Scrovegni (Arena) Chapel at Padua This series of 38 frescoes are counted among the greatest works of Italian art and are the best preserved of Giotto's works Painted in three rows on either side wall, they deal with biblical subjects, the *Life of Christ*, *Vices and Virtues*, *Savior in Glory*, and the superb *Last Judgment* Giotto probably was one of the band of wandering painters who traversed Italy, decorating chapels, churches, monasteries, and palaces Among numerous works attributed to him, many of which have perished, are the frescoes in the Church of Santa Croce, Florence, *Life of St Francis* in the Bardi Chapel and *St John the Baptist* and *St John the Evangelist* in the Peruzzi Chapel Such fragments as have escaped the restorer's hand place them among the great masterpieces of the world's art Striking episodes pictured are *The Funeral of St Francis*, *Ascension of St John*, *Birth of the Baptist*, and *The Dance of Salome* Of Giotto's fewer panel pictures, the most famous are the *Virgin and Child Enthroned* (Florence), *Stigmatization of St Francis* (Louvre), and *Presentation in the Temple* (Gardner Mus , Boston) On the death of Arnolfo di Cambio, Giotto was made director of the works of Santa Maria del Fiore, in Rome, he designed the west front of the cathedral and the campanile, the lower part of which, together with the sculptured decorations, were completed from his designs before his death Later the tower was modified to some extent by Andrea Pisano and Francesco Talenti, but the unique and richly decorated structure, always known as Giotto's Tower, remains a monument to the genius of its original designer His reforms in painting were carried throughout Italy by his many pupils and followers Giotto's popularity as a great Florentine and artist is attested in literature by Dante and Petrarch, by Boccaccio, Sacchetti, and Villani The *Epiphany* and eight panels, *Scenes from Holy Subjects*, attributed to the school of Giotto, are in the Metropolitan Museum, the National Gallery of Art, Washington, D C , has a *Madonna and Child* The master's later years were devoted chiefly to architecture See biography by Basil De Sélincourt (1905), Oxvald Sirén, *Giotto and Some of His Followers* (Eng tr , 1917), Bernard Berenson, *A Sienese Painter of the Franciscan Legend* (1920)

Gippsland (gĭps'lănd), rural district, 13,655 sq mi , SE Victoria, Australia, E of Melbourne Partly mountainous and forested, the area has fertile plains producing corn, oats, and sugar beets There are deposits of coal, gold, and bauxite Sale is the principal center

Gipson, Lawrence Henry (gĭp'sun), 1880–, American historian, b Greeley, Colo , grad Univ of Idaho, 1903 A Rhodes scholar (B A Oxford, 1907), he also studied at the Univ of Chicago and at Yale (Ph D , 1918) Gipson was an assistant in history at the Univ of Idaho (1903–4), professor at the College of Idaho (1907–10), and professor of history (1911–17) and of history and political science (1918–24) at Wabash College From 1924 to 1946 he was professor of history and head of the department of history and government at Lehigh Univ In 1947 he became research professor of history at Lehigh Gipson is an outstanding authority on the British Empire in the 18th cent , especially, though not exclusively, on its American colonies His outstanding work, *The British Empire before the American Revolution* (7 vols , 1936–49), is a comprehensive study, which is generally considered to have made Francis Parkman's writings on the same period obsolete as history. The seven volumes are either subtitled or separately titled as follows *Great Britain and Ireland; The Southern Plantations, The Northern Plantations* (these first three were all published in 1936), *Zones of International Friction North America, South of the Great Lakes Region, 1748–1754* (1939), *Zones of International Friction the Great Lakes Frontier, Canada, the West Indies, India, 1748–1754* (1942); *The Great War for the Empire the Years of Defeat, 1754–57* (1946), and *The Great War for the Empire Victorious Years, 1758–1760* (1949) Other of his works include *Jared Ingersoll* (1920), the section on the United States in Howard C Barnard, ed , *The Expansion of the Anglo-Saxon Nations* (1920), *Studies in Connecticut Colonial Taxation* (1931), and *Some Reflections upon the American Revolution and Other Essays in American Colonial History* (1942) He also edited *The Moravian Indian Mission on White River Diaries and Letters* (1938)

gipsy, see GYPSY

giraffe (jĭrăf'), ruminant mammal of Africa living in open country S of the Sahara Tallest of animals, a male may be 18 ft from hoof to crown The long neck has only the usual seven vertebrae The short horns are covered with skin and hair Giraffes are protectively colored with large sandy to chestnut angular spots closely spaced on the lighter background They feed chiefly on leaves of acacia and mimosa, using their extensible tongues and mobile lips to secure the food They can do without water for long intervals The giraffe can outrun most of its enemies and is usually hunted on horseback Destroyed for its hide and flesh, it is reduced in numbers and in some areas exterminated It is now protected

Giralda (jĭrăl'du, Span hĕral'da), celebrated tower adjoining the cathedral of Seville, Spain It was built (1163–84) to serve as minaret to the main mosque of Seville, on the site of which the cathedral now stands In 1568 it was converted into a bell tower by the addition of an ornate Renaissance superstructure on the simple square Moorish tower, a weathervane, or *giraldillo*, in the shape of a crowning figure representing Faith, gave the tower its name The original square minaret, with an interior ramp, is 197 ft high, the superstructure adds 123 ft

Giraldi, Giovanni Battista (jōvan'nē bat-tē'sta jĕral'dē), 1504–73, Italian author, known also as Cinthio, Cintio, Cinzio, or Cynthus He wrote tragedies, lyric verse, and tales Some of the stories in his *Hecatommathi* (one hundred tales) (1565) were translated by Whetstone and other 16th-century English writers, and Shakspere derived the plots of *Othello* and *Measure for Measure* from two of them

Giraldus Cambrensis (jĭrăl'dus kămbrĕn'sĭs), c 1146–1223, Norman-Welsh churchman, called also Gerald de Barri He was of noble parentage His ecclesiastical career was distinguished for independence and zeal Giraldus' ambition was to be bishop of Monmouth, but although nominated in 1176, 1198, and 1214, he was not elected, probably because he was known to desire to make St David's a primal see independent of Canterbury He was associated (from 1184) with the king and court of England His historical works include two descriptive works on Ireland (resulting from a visit) and *Descriptio Cambriae* [description of Wales] He is most valuable when writing from personal experience, and he provides frequent glimpses of medieval life and folklore He also wrote autobiographical works, lives of churchmen, pastoral admonitions, Latin poetry, and treatises on the rights of the see of St David's See *The Autobiography of Giraldus Cambrensis* (ed and tr by H E Butler, 1937)

Girard, Charles (jĭrard'), 1822–95, American physician and zoologist, b Mulhouse, Alsace He became an assistant to Louis Agassiz in Neuchâtel, Switzerland, and in 1848 accompanied Agassiz to the United States Girard graduated from Georgetown Univ (M D , 1856) and was affiliated with the Smithsonian Institution (1850–59) His works include *Herpetology* (1858), based on studies of reptiles collected by the Charles Wilkes expedition (1838–42), *Contributions to the Natural History of the Fresh Water Fishes of North America* (1851), and *Life in Its Physical Aspects* (1855) After the Civil War, Girard, who was a Confederate officer, left the country for Paris, where he devoted himself to medicine

Girard, Stephen (jĭrard'), 1750–1831, American merchant, banker, and philanthropist, b Bordeaux, France Girard went to sea and at the age of 23 was a captain He landed in New York in 1774 and was employed to sail for a merchant there In 1776 he settled in Philadelphia as shipowner and merchant He gained wealth and interested himself in the Bank of the United States When its charter was not renewed, he set up his own bank in Philadelphia He helped to finance the United States in the War of 1812, and in 1816 he subscribed much money for the Second Bank of the United States Girard gave of his own personal service in the yellow-fever epidemic of 1793 He contributed to the improvement of Philadelphia He bequeathed several million dollars to found Girard College, an educational institution for poor white orphan boys The presumptive heirs sued, but they failed See J B McMaster, *The Life and Times of Stephen Girard* (1918), C A Herrick, *Stephen Girard, Founder* (1923), H E Wildes, *Lonely Midas* (1943)

Girard (jĭrard') **1** City (pop 1,741), central Ill , S of Springfield, in a coal and farm area, inc 1855 **2** City (pop 2,554), co seat of Crawford co , SE Kansas, NW of Pittsburg, founded 1868, inc as a town 1869, as a city 1871 **3** City (pop 9,805), NE Ohio, on the Mahoning river and NW of Youngstown, settled c 1800 Metal products and leather are made here **4** Borough (pop 1,732), NW Pa , near Lake Erie SW of Erie, trading and residential center, settled c 1800, inc 1846

Girard College, in Philadelphia, nonsectarian, for fatherless boys (mainly from Pennsylvania), a free home, secondary school, and junior college, opened 1848 with a bequest, now grown to a huge endowment, from Stephen GIRARD Vocational and academic training are combined

Girardin, Delphine Gay de (dĕlfēn' gā' du zhĭrardĕ'), 1804–55, French woman of letters, wife of Émile de Girardin Under the pseudonym Vicomte Charles de Launay, she wrote fiction, including *Stories of an Old Maid* (1856, Eng tr , 1856) and, in collaboration with others, *The Cross of Berny* (1857, Eng tr , 1873) She also wrote popular comedies and verse Most successful, however, were the sketches published as *Parisian Letters* (1836–48, collected ed , 1856, Eng tr in part, 1851) Her literary salon was noted for its brilliance

Girardin, Émile de (ămĕl'), 1806–81, French journalist, editor of a conservative paper, *La Presse* (1836–56, 1862–66), which marked the beginning of cheap journalism in France He later edited *La Liberté* (1866–70) and joined *La France* in 1874 He served for a time in the chamber of deputies and always took a lively interest in politics He wrote many journalistic works on politics and on social questions as well as plays and novels

Girardon, François (frăswa' zhĕrardō'), 1628–1715, French sculptor, born of humble parents Chancellor Séguier, observing his talent, sent him to study in Paris with François Anguier and later to Rome On his return he was commissioned with much of the decorative sculpture in the gardens of Versailles under the direction of Le Brun He is best known for his *Tomb of Richelieu* at the Sorbonne His famous equestrian statue of Louis XIV was destroyed in the Revolution

Girardot (hĕrardōt'), city (pop 22,557), central Colombia Founded c 1850 on the upper Magdalena, Girardot, a commercial center, is a hub of rail, highway, water, and air transportation Coffee is the chief product

Girardville, borough (pop 4,602), E Pa , NW of Pottsville, settled c 1832, inc 1872 Anthracite is mined here

Giraud, Henri Honoré (ārē' ōnōrā' shĕrō'), 1879–1949, French general, grad Saint-Cyr He served through the First World War, except for a short imprisonment in Germany, from which he escaped, and distinguished himself in the Riff campaign (1925–26) Captured by the Germans again in May, 1940, he made a dramatic escape (April, 1942) to unoccupied France and from there, with Allied help, to Gibraltar (Nov , 1942) He took part in the Allied landing in North Africa, where he was given command of all French armed forces On Darlan's assassination (Dec , 1942), he succeeded as high commissioner of French North and West Africa His conservatism earned him the opposition of the Free French Committee of General de Gaulle After they met fruitlessly at the CASABLANCA CONFERENCE, a semblance of union was finally effected in June, 1943, through the formation at Algiers of the French Committee of National Liberation, with the two generals as co-presidents Despite the strong backing given him by the United States, Giraud was removed (Nov 9) from the co-presidency by the National Committee He remained commander in chief until April 14, 1944, when he was forced into virtual retirement

Giraudoux, Jean (zhā' zhĕrōdō'), 1882–1944, French novelist and dramatist His portraiture of French provincial life in *Les Provinciales* (1909) established his reputation Participation in the First World War inspired *Lectures pour une ombre* [readings for a shadow] (1917), and *Amica America* (1918) is an account of his experiences in the United States *Suzanne et le Pacifique* (1921, Eng tr , 1923) is one of his most popular novels In 1928 Giraudoux commenced a successful career as a dramatist with *Siegfried* (Eng tr , 1930), an adaptation of his novel *Siegfried et le Limousin* (1922, Eng tr , *My Friend from Limousin*, 1923) Other plays include *Amphitryon 38* (1929, Eng tr , 1937), *La Folle de Chaillot* (1945, Eng tr , *The Madwoman of Chaillot*, 1948), and *Intermezzo* (1933, Eng tr , *The Enchanted*, 1950)

girder, a beam of wood or metal supported at each end and carrying smaller or secondary beams Girders are used extensively in construction work, such as buildings, bridges, and ships In building a house, when the span of wooden floor beams is limited by the length of material available, beams may rest at one end on the wall and at the other on a girder This girder may be supported by posts or columns A girder, either of wood or of metal, may be in one piece or several pieces bolted together

girdle, belt or band worn around the body, originally to confine loose garments, later to hold arms or

small belongings The flowing dress of the early Greeks and Romans, both men and women, was gathered into ribbons or bands of wool, leather, or metal, often highly ornamented The Hebrews wore a belt, cord, or sash, which held up the robe, braced the thighs, or carried the pens and inkhorn of the scribe. The sash was a sign of rank, richly embroidered with silk and gold The ceremonial priestly girdles were elaborately prescribed The girdle confining the heavy tunic of early European peoples was massive with metal clasps and bosses With the fitted garments of the Middle Ages, the belt assumed a more ornamental and ceremonial nature The knightly belt, splendid with gems and goldsmith's work, held the sword or displayed insignia In medieval Europe, until the 15th cent, the girdle was an important part of woman's dress, varying in style and materials The girdle is symbolic of strength, of alertness, and of personality intact To gird the loins, to have the girdle loosened, or to be girded by other hands than one's own were highly significant acts Folklore records the girdle which could exorcise demons or confer invisibility By an ancient custom, a bankrupt laid off his girdle in open court See Herbert Norris, *Costume and Fashion* (1939), K M Lester and B V Oerke, *An Illustrated History of Accessories of Dress* (1940)

Giresun (gĕrusōōn′), town (pop 12,431), N Turkey, a Black Sea port The ancient Cerasus, it was famous in antiquity for its cherry trees, the word *cherry* is derived from its name, which formerly also appeared as Kerasun (kĕrăsōōn′)

Girgashite or **Girgasite** (both gûr′gu–), Canaanite nation, whose land was occupied by Israel Gen 10 16, 15 21, Deut 7 1, Joshua 3 10, 24 11 Neh 9 8, 1 Chron 1 14

Girgenti, Italy see AGRIGENTO

Girl Scouts, organization founded (1912) in Savannah, Ga, by Mrs Juliette Gordon Low (1860–1927), who had been a leader of Girl Guide troops in England The membership is divided into three age groups—Brownies (7 to 9), Intermediate Girl Scouts (10 to 13), and Senior Girl Scouts (14 to 16) Girls of every race, color, national origin, and economic group are eligible Good citizenship and service to others are stressed in their activities, which cover 11 different fields—agriculture, arts and crafts, community life, health and safety, homemaking, international friendship, literature and dramatics, music and dancing, nature, the outdoors, and sports and games Camping is an important phase of their training From 1917 the organization has published a monthly magazine, the *American Girl*

Girnar (gĭrnŭr′), sacred mountain, c 3,500 ft high, Saurashtra, India The Neminath (restored A D 1278) is the largest and possibly the oldest of its Jain temples

Girodet-Trioson, Anne Louis (ăn′ lwē′ zhērōdā′-trēōzō′), 1767–1824, French painter, student of David His name was originally Girodet de Roussy He won the Prix de Rome and while in Italy painted the *Sleeping Endymion* (Louvre), which brought him early recognition During the Revolution he painted in Naples for the king of Spain, and under the empire he returned to Paris, where he painted a series of compositions for Malmaison Among his best-known paintings are *The Deluge* and *Atala at the Tomb* (Louvre) and *The Revolt at Cairo* and *The Surrender of Vienna* (Versailles) Girodet's work is often taxed with inconsistency His classical training and marked romantic tendencies are sometimes at variance

Gironde (zhērōd′), department (4,141 sq mi , pop 858,381), SW France, on the Atlantic BORDEAUX is the capital

Gironde, estuary, 40 mi long and from 3 to 7 mi wide, SW France, formed by the Garonne and Dordogne rivers, which join c 12 mi N of Bordeaux Between the MÉDOC and the Cotes vineyards, it is the great artery of the BORDEAUX wine region

Girondists (jĭrŏn′dĭsts), Fr *Girondins* (zhērōdĕ′), group of moderate republicans in the FRENCH REVOLUTION, so called because the central members of the original group were the deputies of the Gironde dept. (1791) At first affiliated with the JACOBINS, they split with them when the extremists of the Commune of Paris gained leadership over the club Led at first by BRISSOT DE WARVILLE, the Girondists were called Brissotins. Other notable members were VERGNIAUD, CONDORCET, DUMOURIEZ, Thomas PAINE, and Jean Marie and Manon Jeanne ROLAND DE LA PLATIÈRE Representative of the educated middle class of the provinces, the Girondists held high ideals of democratic humanitarianism and classic simplicity, but they lacked effectiveness in practical politics The Girondists were very strong early in 1792, succeeding, against Jacobin opposition, in having war declared on Austria. However, though still strong in the Convention of 1792, they lost the initiative to the MOUNTAIN They sympathized with Louis XVI during his trial, but voted against him at the crucial moment. The growing power of the extremists, led by MARAT, DANTON, and ROBESPIERRE, drove the Girondists more and more toward reaction. The treason of Dumouries (March, 1793) further weakened their position, and on May 31 the moment was ripe for Marat to lead a workers' revolt against the Convention As a result, 29 Girondists were expelled from the Convention on June 2, Brissot, Vergniaud, and other leaders were executed In July, Charlotte CORDAY assassinated Marat, and the Jacobins retaliated with a new wave of executions. Now joined by the royalists, the Girondist remnants revolted openly in the provinces, particularly in Normandy, Lyons, Bordeaux, Marseilles, and Toulon, but their efforts were drowned in blood

Girtin, Thomas, 1775–1802, English draughtsman and water-colorist He was apprenticed to an engraver but early devoted himself to topographical drawing In 1792 he met J M W Turner, and the two became great friends Girtin was among the first to paint naturalistically in water color, abandoning the tinted drawing for a direct painting technique In this he anticipated the 19th-century water color He was also an admirable draughtsman Famous drawings are his *Tynemouth, View on the Wharf,* and *Kirkstall Abbey* (Victoria and Albert Mus). Girtin is represented in many important British galleries He died at 27

Girton College (gûr′tun), English college for women, founded (1869) at Hitchin, Hertfordshire, by Emily DAVIES In 1873 the college was moved to its present site 2 mi from Cambridge The students are admitted to the Cambridge Univ lectures and on completing the university requirements are granted a degree-certificate Girton was recognized as a college in the university in 1948

Girty, Simon (gûr′tē), 1741–1818, American frontiersman, known as the white renegade, b near Harrisburg, Pa After three years of captivity with the Indians, he acted as an interpreter around Fort Pitt (1759–74) He served as a scout under Simon Kenton in Lord Dunmore's War and in the Revolution was in the pay of the Continentals until 1778, when he joined the British at Detroit Girty led or participated in many savage Indian raids and was known for his cruelty He was feared, hated, and despised by most frontiersmen In the Indian wars in Ohio late in the 18th cent , he took part in General St Clair's defeat (1791) and fought against Gen Anthony Wayne at Fallen Timbers (1794) When the British surrendered Detroit (1796), Girty moved into Canada and afterward lived on a British pension See biography by Thomas Boyd (1928)

Girvan (gûr′vun), burgh (pop 5,292), Ayrshire, Scotland, at the mouth of the Girvan river SW of Ayr and opposite Ailsa Craig It is a summer resort, a port for the fertile Girvan valley, and a fishing town, with a woolen industry

Giry, Arthur (ärtür′ zhērē′), 1848–99, French historian, an authority on early French institutions He wrote, in collaboration with André Réville, *The Emancipation of the Medieval Towns* (Eng tr , 1907) and is the author of the *Manuel de diplomatique* (new ed , 2 vols , 1925), a standard work on the scientific study of documents

Gisborne (gĭz′bôrn), borough (pop 14,765, metropolitan pop 16,984), on NE North Island, New Zealand, on Poverty Bay It is a resort and a port, exporting wool, frozen meat, and dairy goods

Gish, Lillian (gĭsh), 1896–, American stage and moving-picture actress, b Springfield, Ohio In 1900 she made her stage debut and later obtained acting experience in stock companies She first appeared in moving pictures in 1914 for the Biograph Company under the direction of D W Griffith In *The Birth of a Nation* she had a great success, and she added to her stature in such silent films as *Broken Blossoms, Way down East, Orphans of the Storm, The White Sister, The Wind,* and *Camille* After 1930 she returned to the stage, where she was a notable Ophelia with John Gielgud (1936) and played the part of Mrs Day in *Life with Father* Her sister, **Dorothy Gish,** 1898–, a well-known moving-picture actress, appeared in such films as *Hearts of the World, Orphans of the Storm, Romola, Nell Gwyn,* and *Madame Pompadour*

Gispa (gĭ′spŭ), one of the overseers of the Nethinim. Neh 11 21

Gissing, George (gĭs′ĭng), 1857–1903, English author. His novels reflect the influence of Dickens and of the French naturalists as well as his own bitter poverty in their concern with the sordid life of the very poor He visited America (1876–77) and wrote several short stories (1877) for the Chicago *Tribune* His best-known novel is *New Grub Street* (1891); his many others include *Workers in the Dawn* (1880), *The Nether World* (1889), *Born in Exile* (1892), *The Odd Women* (1893), *In the Year of Jubilee* (1894), and *The Whirlpool* (1897). The somewhat autobiographic *Private Papers of Henry Ryecroft* (1903), the historical novel *Veranilda* (1904), and *By the Ionian Sea* (1901) all reflect his lifelong devotion to the classics See his *Letters to Members of His Family* (1927); biographies by F A Swinnerton (1912), May Yates (1922), and S V Gapp (1936).

Gist, Christopher (gĭst), c.1706–1759, American frontiersman, b Maryland. Commissioned by the OHIO COMPANY to explore their Western lands, he in 1750 descended the Ohio river, explored E Kentucky, and crossed to Roanoke, N.C., having penetrated the Kentucky region 18 years before the more celebrated Daniel Boone. The next season he more carefully traversed and mapped the Ohio watershed in western Virginia. He accompanied George Washington in 1753–54 on his historic trip to warn the French out of the Ohio valley and on the journey twice saved Washington's life On Gen Edward Braddock's expedition (1755) against Fort Duquesne he served as a guide He died of smallpox in the Cherokee country, where he had gone to enlist the aid of that tribe against the French He was an expert woodsman and surveyor and was highly regarded by his contemporaries See *Christopher Gist's Journals* (ed. by W M Darlington, 1893).

Gist, William Henry, 1807–74, American politician, b Charleston, S C educated at South Carolina College After managing his family's extensive planting interests he entered politics, serving in the lower house of the state legislature (1840–44), in the state senate (1844–56), and as governor (1858–60) He was an ardent advocate of secession, and when Abraham Lincoln's election seemed assured he called the special session of the legislature which provided for the secession convention

Gittah-hepher (gĭ′tu-hē′fur) see GATH-HEPHER

Gittaim (gĭ′tăĭm, gĭtā′ĭm) [Heb ,=two wine presses], unidentified town, S central Palestine 2 Sam 4 3, Neh 11 33.

Gittite (gĭt′–), inhabitant of GATH

Gittith (gĭt′–), in the titles of Pss 8, 81, and 84, apparently the name of the tune or instrument to which the psalm was to be sung

Giulio Romano (jōō′lyō rōma′nō), c 1492–1546, Italian painter, architect, and decorator, whose real name was Giulio Pippi He was the favorite pupil of Raphael and while still a youth was entrusted with the painting of most of the frescoes in the loggias (from designs by Raphael) and a group of figures in the Stanza of the Incendio di Borgo in the Vatican and also, together with Gianfrancesco Penni, with the decoration of the ceiling of the Villa Farnesina, all in Rome After the death of Raphael he completed the frescoes of the life of Constantine in the Vatican as well as Raphael's *Coronation of the Virgin* and *Transfiguration* (both Vatican Gall) In 1524 he entered the service of the duke of Mantua, for whom he executed paintings and architectural and engineering projects. He reconstructed the cathedral, established a school of art, and designed the near-by Church of San Benedetto He was the architect of the ducal palace and rebuilt the Palazzo del Te, decorating both of them with celebrated frescoes In 1546 he was appointed architect to St Peter's but died in the same year Well-known oils include *The Stoning of St Stephen* (Church of Santo Stefano, Genoa) and *Adoration of the Kings* (Louvre) A superb practitioner, Romano is often lacking in color and sensibility He is sometimes considered the first academic painter

Giunta Pisano (jōōn′ta pēza′nō), fl 1241–55, Italian painter of Pisa Among the extant works attributed to him are two large *Crucifixions,* one in Santi Raineri e Leonardo, Pisa, and the other in Santa Maria degli Angeli at Assisi He is also believed to have painted a *Crucifixion with the Franciscan, Father Elias,* in the upper church of St Francis at Assisi, which has perished

Giurgiu (jōōr′jōō), town (pop 30,197), S Rumania, in Walachia, on the Danube opposite Ruse, Bulgaria An inland port, it is linked by four pipe lines with the Ploesti oil fields The city was founded (17th cent) on the site of an older town by Genoese merchants, who named it San Giorgio It was important in the wars between Walachia and Turkey (16th cent) and in the Russo-Turkish Wars and was rebuilt after partial destruction in the First World War

Giusti, Giuseppe (jōōzēp′pā jōōs′tē), 1809–50, Italian satirical poet and patriot He directed his polemics against Austria as the oppressor of his native Tuscany and against the society of his time His verse is filled with peculiarities of Tuscan dialect, and this, together with its contemporary character, has worked against its popularity Some of his poetry was translated by W D Howells in *Modern Italian Poets* (1887) and by Lorna de' Lucchi in *An Anthology of Italian Poems* (1922), the famous "Saint Ambrose" is in the second collection

Givatayim (gĭvatä′yĭm), town (pop c 7,500), central Israel, near Tel-Aviv; founded 1942 Industries include printing and food processing

Gizeh or **Giza** (both. gē′zu), town (pop 68,520), Egypt, on the Nile opposite Cairo. The pyramid of Khufu (Cheops) and the Great Sphinx are not far (c 5 mi) to the west. Archaeological research in the vicinity has disclosed the tomb of Khufu's mother and that of his daughter. The town today is a marketing center with a large cigarette factory, and it is a resort area for Cairo.

Gizonite (gĭ′zō–). see JASHEN.

Gjellerup, Karl Adolf (kärl′ ä′dôlf yĕ′lŭrōōp), 1857–1919, Danish poet and novelist, b. Zealand. His early novels, largely autobiographical, include *The Young Denmark* (1879) and *The Disciple of the Teutons* (1882). In 1884 he published *Romulus,*

following this with some experiments in drama, *Tamyris* (1887) and *Herman Vandel* (1891) Some of his later writing shows the influence of his study of Buddhism Many of his later works were written in German *Minna* (1889) was translated into English in 1913, and the legendary romance *The Pilgrim Kamanita* (1906) in 1911 He shared with Henrik Pontoppidan the 1917 Nobel Prize in Literature.

Glace Bay (glās'), coal-mining town (pop 25,147), on Cape Breton Island, N S , on the northeast coast The mines began to be developed toward the end of the 19th cent They extend for more than a mile under the sea and are among the best equipped in the world Glace Bay has a good harbor and a large deep-sea fishing fleet The Marconi wireless tower at Table Head near by in 1902 sent the first transatlantic wireless message

glacial periods (glā'shŭl) In the PLEISTOCENE EPOCH, in the CARBONIFEROUS PERIOD and the PERMIAN PERIOD of the PALEOZOIC ERA, and in Huronian time of the PROTEROZOIC ERA, large areas of the earth's surface were subjected to an extremely cold climate, as a result of which great ice sheets extended over the land More or less extensive continental glaciations may have occurred also at other times No satisfactory theory of the cause of the occurrence of glacial periods has yet been evolved The earliest conception was that the earth's history is one of progressive cooling This conception, formed when only one glacial period, the Pleistocene, was known, lost its validity when the existence of earlier glacial periods, after which the earth again became warm, was established Among the explanations that have since been suggested are elevation of the glaciated regions into higher altitudes, changes in the direction of ocean currents, shifting of the earth's AXIS, shifting of the continents over the earth's surface, loss of heat from the earth's surface through reduction of the carbon dioxide content of the atmosphere, cutting off of solar heat by a blanket of volcanic dust, variation of solar radiation, and changes in the relative position of the earth and the sun The study of glacial periods owed its first impetus to Louis AGASSIZ, whose conception of the Pleistocene Ice Age was presented in his address before the Helvetic Society (1837) and in his *Études sur les glaciers* (1840) See A P Coleman, *Ice Ages, Recent and Ancient* (1926) and *The Last Million Years* (1941)

glacier (glā'shŭr), a moving mass of ice, formed in the Alpine and in the polar regions by the compacting of snow into *névé* and then into granular ice and set in motion outward and downward by the pressure of the accumulated mass Glaciers are of four chief types Valley or mountain glaciers are tongues of moving ice sent out by mountain snow fields into valleys originally formed by streams They follow the courses of the valleys and are held in by the valley walls In the Alps there are more than 1,200 valley glaciers Piedmont glaciers, which occur only in high latitudes, are formed by the spreading of valley glaciers at their point of emergence from their valleys or by the confluence of several valley glaciers Small ice sheets known as ice caps are flattened, somewhat dome-shaped glaciers spreading out horizontally in all directions and covering mountains and valleys alike Continental glaciers are ice sheets of huge extent The only continental glaciers now in existence are the ice sheets of Greenland and Antarctica, but in the GLACIAL PERIODS of the world's geological history they were far more widespread Glaciers are of considerable importance in the alteration of topography, and their work includes EROSION, transportation, and deposition Mountain glaciers carve out amphitheaterlike vertical-walled valley heads, or cirques, at their sources They transform V-shaped valleys into U-shaped valleys by grinding away the projecting bases of slopes and cliffs and leveling the floors of the valleys, in this process tributary valleys are frequently left "hanging," with their outlets high above the new valley floor When the tributary valleys contain streams, waterfalls and cascades are formed Elevations over which glaciers pass usually are left with gently sloping sides in the direction from which the glacier approached (stoss sides) and rougher lee sides Humps and bosses of rock so shaped are known as *roches moutonnées* The debris of glacial erosion is carried upon, within, and underneath the ice The debris frozen into the underside of the glacier acts as a further EROSIVE agent, polishing the underlying rock and leaving scratches or STRIAE running in the direction of the movement of the glacier Glacial deposits are known as DRIFT The melting of the ice in summer forms glacial streams flowing under the ice, while the retreat of a large glacier sometimes leaves a temporary glacial lake, such as Lake AGASSIZ Fjords generally owe their origin to glaciers A glacier moves as a solid rather than as a liquid, as indicated by the formation of CREVASSES The center part of a glacier moves more rapidly than the sides and the surface more rapidly than the bottom, because the sides and bottom are held back by friction The rate of flow depends largely on the volume of ice in movement, the slope of the ground over which it is moving, the slope of the upper surface of the ice, the amount of water the ice contains, the amount of debris it carries, the temperature, and the friction it encounters Glaciers are always in movement, but the extent of the apparent movement depends on the rate of advance and the rate of melting i e , if the ice melts at its edge faster than it moves forward, the edge of the glacier retreats, if it moves more rapidly than it melts, the edge advances, it is stationary only if the rate of movement and the rate of melting are the same The causes of glacial movement are exceedingly complex and doubtless are not all operative on the same glacier at the same time Important elements in glacier movement are melting under pressure followed by refreezing, which tends to push the mass in the direction of least resistance, sliding or shearing of layers of ice one on top of the other, and rearrangement of the granules when pressure causes melting See R F Flint, *Glacial Geology and the Pleistocene Epoch* (1947)

Glacier Bay National Monument, 2,297,598 acres, SE Alaska, est 1925 It is remarkable for the many glaciers flowing into the sea

Glacier National Park, 521 sq mi , SE British Columbia, in the Selkirk Mts , est 1886 It contains extensive glaciated areas, Illecillewaet Glacier is one of the outstanding features of the park Snow-capped peaks, with densely forested lower slopes, include Mt Dawson, Mt Sir Donald, and Mt Bonney, with the resort village of Glacier at its base No motor roads span the beautiful, rugged terrain of the park, which is crossed by the main line of the Canadian Pacific Railway The park is administered from Field, also the headquarters of Yoho National Park

Glacier National Park, 997,695 acres, NW Mont , est 1910 Straddling the Continental Divide, the park has more than 60 glaciers, more than 200 glacier-fed lakes (largest Lake McDonald and St Mary Lake), high peaks (highest Mt Cleveland, 10,438 ft), sheer precipices, large forests, waterfalls, and a wealth of wild flowers It was joined (1932) to the contiguous Canadian park, Waterton Lakes National Park, in the Waterton-Glacier International Peace Park, the administrations are separate but cooperate closely

Glackens, William James, 1870–1938, American landscape and genre painter and illustrator, b Philadelphia, studied at the Pennsylvania Academy of the Fine Arts and in Paris Long an illustrator for Philadelphia and New York newspapers and magazines, Glackens first exhibited his paintings with The EIGHT and achieved fame as a brilliant painter of the contemporary scene His early works are dark, but he soon acquired the high key and much of the technique of the French impressionist school His *Parade, Washington Square* (Whitney Mus , New York) is characteristic of his later work, which is in many leading American galleries

Gladbeck (glät'bĕk), city (pop 61,497), Westphalia, NW Germany It is an industrial center of the Ruhr district

Gladden, Washington, 1836–1918, American clergyman, writer, and lecturer, b Pottsgrove, Pa He was pastor of the First Congregational Church, Columbus, Ohio, from 1882 until his death His many books helped to popularize modernist views and to spread his philosophy of applying Christian principles to social problems Among his works are *Who Wrote the Bible?* (1891) and *Social Salvation* (1902) His *Ultima Veritas and Other Verses* (1912) contains his hymn, *O Master, Let Me Walk with Thee* See his *Recollections* (1909)

Gladewater (glād'wô"tur), city (pop 4,454), E Texas, W of Shreveport, La , and near the Sabine It boomed after the East Texas oil field was discovered in 1930 At the near-by oil town of Hawkins is Jarvis Christian College for Negroes

gladiators (glă'dēā"turz) [Latin =swordsmen], in ancient Rome, a class of professional fighters, who performed for exhibition Gladiatorial combats usually took place in amphitheaters They probably were introduced from Etruria and originally were funeral games The gladiators would be paired off to fight each other, usually to the number of about 100 couples, although in the imperial shows there were sometimes as many as 5,000 There were different classes of gladiators, armed and armored differently Thus a heavily armored man might be opposed to a *retiarius*, who fought almost naked, with a net and a trident as his sole weapons (The outcome was by no means sure) Often gladiators were made to fight wild beasts A defeated gladiator was usually killed by the victor unless the people expressed their desire that he be spared At first, gladiators were invariably slaves or prisoners, including Christians They normally underwent rigid training, and many gained immense popularity Later impoverished freemen also sought a living as gladiators, and finally even members of the ruling classes took part in gladiatorial combats on an amateur basis Constantine I forbade gladiatorial games, but they actually continued until A.D. 405 Some gladiators, led by SPARTACUS, took part in the third of the SERVILE WARS (73 B.C.–71B C.),

gladiolus (glădēō'lus), any plant of the genus *Gladiolus* (glădī'ŭlŭs), tender cormous-rooted plants, most of the garden kinds are hybrids of plants native to Africa The gladiolus is related to IRIS and has sword-shaped leaves and long stalks of beautiful flowers, often in pastel shades, particularly popular as cut flowers The plants grow best in a well-drained soil with plenty of sunlight The American Gladiolus Society fosters cultivation of the flower

Gladkov, Feodor Vasilyevich (fyô'dur vŭsē'lyuvĭch glätkôf'), 1883–, Russian author His childhood and youth were passed in poverty, tramping along the Volga fisheries and in the N Caucasus, where he worked at various trades and obtained elementary schooling Influenced by the writings of Lermontov, Dostoyevsky, and Nekrasov, he wrote his first short story, "Towards the Light," which was published in a provincial newspaper in 1899 He became famous with his novel *Cement* (1926, Eng tr , 1929), laid in the period of post-revolution reconstruction

Gladstone, Herbert John Gladstone, 1st **Viscount** (glăd'stŏn, -stun), 1854-1930, English statesman, studied at Eton and Oxford, son of W E Gladstone A member of Parliament from 1880 to 1910, he held various offices, was chief whip of the Liberal party (1899–1905), and served as home secretary (1905–10) He was created (1910) viscount and was the first governor general and high commissioner for South Africa (1910–14) His two books about his father are *W E Gladstone* (1918) and *After Thirty Years* (1928)

Gladstone, William Ewart, 1809–98, British statesman, dominant personality of the Liberal party from 1868 till 1894 A great orator and a master of finance, he had no fixed political principles, yet achieved many great political and administrative reforms As a young Tory entering Parliament in 1833, he was a protégé of Sir Robert Peel, who made him undersecretary of war and colonies (1834–35) His first publication, *The State in Its Relation with the Church* (1838), embarrassed his supporters, but his talents still commanded attention in the party. On Peel's return to power (1841), Gladstone became vice president of the Board of Trade and in 1843 became its president, but soon resigned As colonial secretary (1845–46) he resigned with Peel in the party split that followed repeal of the corn laws His attitude toward free trade and the colonies drew him toward the Liberals, and he served the 4th earl of Aberdeen, Palmerston, and Lord John Russell as chancellor of the exchequer (1852–55, 1859–66) Retrenchment and free trade marked his policy His budgets, which he defended with eloquence in the Commons, showed great facility in distributing the tax burden Gladstone's parliamentary reform bill of 1866 failed, but that passed by DISRAELI in 1867 was largely Gladstone's through the process of amendment Gladstone, at the peak of his career, served as prime minister four times (1868–74, 1880–85, 1886, and 1892–94) In his first ministry the Church of Ireland was disestablished (1869) to free Catholics from the necessity of paying tithes to support the Anglican church and an Irish land act was passed (see IRISH LAND QUESTION) to protect the peasantry He achieved important reforms—changes in English civil service, the vote by ballot, abolition of the sale of commissions in the army, educational expansion, and court reorganization Conservative reaction to reforms and a weak foreign policy defeated him in 1874, and he turned to his intellectual pursuits, which had already resulted in *Studies on Homer and the Homeric Age* (3 vols , 1858) and *Juventus Mundi* (1869) Popular discontent with Disraeli's pro-Turkish policy and with the Zulu and Afghan wars brought Gladstone back in 1880 A more effective Irish land act was passed (1881), and two parliamentary reform bills (1884, 1885) practically gave manhood suffrage to England and redistributed the seats in the House of Commons The army's failure to relieve C G Gordon at Khartum helped to bring his ministry to an end (1885) Gladstone's advocacy of HOME RULE for Ireland ended his third ministry (1886) after a few months and split the Liberal party so that the Conservatives were in power for the next six years Gladstone also split with the Irish leader, Charles Stewart PARNELL, because of the divorce case in which Parnell was involved Again, in 1892, Gladstone staked the ministry's life upon Irish Home Rule and resigned (1894), broken in health, after the Lords defeated his bill in 1893 The Liberal ministry continued under the earl of Rosebery He himself compiled *Gleanings of Past Years, 1843–1878* (7 vols , 1879), and theological works, including *The Impregnable Rock of Holy Scripture* (rev ed , 1892), attracted attention Many of his speeches and letters have been collected, e g , his correspondence with Palmerston (ed by Philip Guedalla, 1928) and his letters to his wife, (ed by A T Bassett, 1936) The classic biography is that by John Morley (3 vols , 1903) See biographies by W P Hall (1931), Francis Birrell (1933), and G T Garratt (1936), Paul Knaplund, *Gladstone and Britain's Imperial Policy* (1927) and *Gladstone's Foreign Policy* (1935), W. E Williams,

The Rise of Gladstone to the Leadership of the Liberal Party, 1859 to 1868 (1935), books by his son Viscount Gladstone

Gladstone (glăd'stŏn) **1** City (pop 4,972), W Upper Peninsula, N Mich , on an inlet of Green Bay and N of Escanaba, founded 1887, inc 1889 It manufactures plywood, flooring, and veneers **2** Residential city (pop 1,629), NW Oregon, S of Portland, inc 1911

Gladwin, Henry, 1729–91, British army officer in colonial America, b Derbyshire, England He served in the disastrous campaign of Edward Braddock and in other actions in the French and Indian War but is best remembered for his defense of Detroit in Pontiac's Rebellion

Gladwin, city (pop 1,600), co seat of Gladwin co , N Mich , on the Cedar river and NW of Bay City, in a farm and resort region, settled 1865, inc as a village 1885, as a city 1893 The Saginaw Trail of the Indians crossed this site A state park is here

Glaisher, James (glā'shur), 1809–1903, English meteorologist and balloonist He served as superintendent of the department of meteorology and magnetism at Greenwich Observatory from 1838 to 1874 He established the Meteorological Society in 1850 and later became one of the founders of the Aeronautical Society of Great Britain Between 1862 and 1866 he made a series of balloon ascensions with Henry T Coxwell in the interest of science He wrote many scientific books and papers, his best-known work being *Travels in the Air* (1867, in French, Eng tr , 1871)

Glamis (glămz, in Shakspere also glā'mĭs) parish (pop 985) and village, Angus, Scotland Malcolm II died in this vicinity (1034), and a sculptured cross in the village is known as King Malcolm's Gravestone Macbeth was thane of Glamis, and the castle, seat of the earl of Strathmore, is one of the places erroneously claimed to be the scene of Duncan's murder Elizabeth, queen consort of George VI, was born here

Glamorganshire (glumôr'gunshĭr) or **Glamorgan,** maritime county (813 sq mi , 1931 pop 1,225,717, 1948 estimated pop 1,183,440) S Wales, on the Bristol Channel The county seat is Cardiff The mountainous northern region of the country is worked for its rich coal deposits, and the fertile coastal plain is devoted to dairy farming and cattle grazing The Taff, the Neath and the Tawe are the principal rivers The great mineral wealth of the county has made it one of the chief industrial districts of the British Isles There are notable ironworks and copper manufactures The county contains more than half the entire population of Wales There are vestiges in Glamorganshire of its occupation by the Romans In the 11th cent began the conquest by English Norman barons, who organized it as a county palatine There was long border fighting The great industrial development began in the latter half of the 18th cent and continued increasingly thereafter In the 1920s the area was stricken by a severe industrial depression which brought much unemployment and poverty, but since the Second World War conditions have improved Cardiff and Swansea are important British ports. Rhondda and Merthyr Tydfil are other important industrial centers Richard Llewellyn's novel, *How Green Was My Valley* (1940), gives a picture of the 19th-century spread of industrialism typical of the area

gland, organ which secretes a substance from materials which its cells extract from the blood This substance, usually a fluid, may be a secretion useful to the body, or it may be waste material (see excretion) A gland varies from a single cell, which occurs even in invertebrates, to a complex system of tubes which finally unite and open on some surface by a large duct The salivary glands, the breast, and the liver are of the complex type Another type, the endocrine or ductless glands, produce secretions called hormones which are taken up directly from the gland by the blood, no duct being present The thyroid, adrenals, and pituitary are examples of this type Some glands produce both a secretion which flows from a duct and a hormone which is taken up by the blood, e g , the liver, ovary, and testis Glands are subject to infection, decreased or increased activity, and tumors

glanders, chronic disease of horses, asses, mules, and some other animals It is caused by a form of bacterium (*Pfrefferella mallei*) and is characterized by the formation of nodules or tubercles which degenerate, forming a cheeselike material If the nodules form on cutaneous (skin) tissues, they become ulcerated Different forms of the disease attack the lungs, the nasal passages, or the cutaneous tissue (this form of the disease being known as farcy) Lesions form in the lungs in almost all cases Man is susceptible to the disease, and the mortality rate is high Infected animals can be detected by means of a test using an extract of the bacteria

Glanvill or Glanvil, Joseph (glăn'vĭl), 1636–80, English clergyman and philosopher. He was chaplain in ordinary to Charles II and prebendary of the cathedral at Worcester Exponent of occasionalism and precursor of Hume, Glanvill sought to prove the inefficacy of all secondary causes, which he regarded as merely the occasion of the activity of the first cause, God This was presented in *The Vanity of Dogmatizing* (1661), recast as *Scepsis scientifica* (1665), and republished (1931) by the Facsimile Text Society Although in later life Glanvill attested to a belief in witchcraft, his appreciation of the scientific method is evidenced by *Plus Ultra, or, The Progress and Advancement of Knowledge since the Days of Aristotle* (1668) See Ferris Greenslet, *Joseph Glanvill* (1900), M E Prior, *Joseph Glanvill Witchcraft and Seventeenth-Century Science* (1932)

Glanvill or **Glanville, Ranulf de** (rā'nŭlf), d 1190, English jurist He served Henry II in many offices, finally as chief justiciar after 1180 One of the great works of English law, the *Tractatus de legibus et consuetudinibus regni Angliae* [treatise on the laws and customs of the realm of England] was ascribed to him, though he probably did not write it The compilation, much used by Bracton, was based on the common law growing up in the royal courts See edition by G E Woodbine (1932)

Glanville, Bartholomew de see Bartholomew de Glanville

Glanville, Ranulf de see Glanvill, Ranulf de

Glarus (glä'rus), Fr *Glaris* (glȧrēs'), canton (264 sq mi , pop 34,771), Switzerland, S of the Wallensee It is mountainous and pastoral, with forests and meadows in the valleys There are hydroelectrical and textile industries The chief river is the Linth, and the highest peak is the Tödi (11,887 ft) Glarus joined the Swiss Confederation in 1352 The inhabitants are mainly German-speaking Protestants The capital is **Glarus** (pop 5,266) Zwingli was a parish priest here from 1506 to 1516

Glas, John, 1695–1773, Scottish minister, founder of an independent Presbyterian sect whose members were often called Glassites He believed that national churches and civil interference in religious matters are not authorized in the Scriptures These views found expression in his *Testimony of the King of Martyrs* (1727) Glas was deposed from the ministry in 1730, he formed an independent congregation at Dundee The Glassite church moved to Perth in 1733, where it was joined by Robert Sandeman, who later took the lead in extending the movement to England and America There the Glassites were known as Sandemanians

Glasgow, Ellen (glăs'gō), 1874–1945, American novelist, privately educated She was born in Richmond, Va , where she lived all her life In revolt against the romantic treatment of Southern life prevalent when she began writing, Miss Glasgow presented in fiction a social history of Virginia since 1850, stressing the emergence of a dominant middle class Her first popularly successful novel was *The Voice of the People* (1900), followed in 1902 by *The Battleground*, a story of the Civil War The theme of the changing status of women also recurs from *Virginia* (1913) and *Life and Gabriella* (1916) through *Barren Ground* (1925), *They Stooped to Folly* (1929), *Vein of Iron* (1935), *In This Our Life* (1941, Pulitzer Prize, 1942), and others Her increasingly skillful use of satire is perhaps strongest in *The Romantic Comedians* (1926) See her critical prefaces collected in *A Certain Measure* (1943)

Glasgow (glăs'gō, -kō, glăz'gō), independent burgh or county of a city (1931 pop 1,088,461, 1948 estimated pop 1,106,072), Scotland, on the Clyde It is the largest city of Scotland and rivals Birmingham in size Most of the city is in Lanarkshire but it spreads also into Renfrewshire and Dumbartonshire Since the construction of harbor works in 1740, the Clyde has been navigable to this point for large vessels, and Glasgow is the most important seaport of Scotland, with huge shipyards It is a great industrial city, with wealth but with large slum areas Besides shipbuilding its industries include tanning, textile weaving (wool, cotton, and rayon), brass casting, and the manufacture of chemicals, paper, soap, biscuits, and tobacco The site of Glasgow was early occupied Excavations have uncovered implements of the Stone and Bronze Ages A bishopric is supposed to have been founded in the 6th cent by St Mungo (St Kentigern), it was restored in 1115, and the 12th-century cathedral is St Mungo's Glasgow's art museums include the Corporation Art Galleries and the Institute of Fine Arts Sir John Lavery was leader of the Glasgow school of art of the late 19th cent — young painters who broke with tradition Air raids in 1941 damaged the city, and especially the shipyards The Univ of Glasgow was founded in 1451 by Bishop Turnbull The present buildings were begun in 1870 and house faculties of arts, science, engineering, medicine, law, and theology The undergraduates are distinguished by their short red gowns

Glasgow. 1 City (pop 5,815), co seat of Barren co , S Ky , E of Bowling Green, founded 1799 It is the trade center for a timber, oil, livestock, and farm area and has tobacco warehouses and flour and lumber mills A state fish hatchery is near **2** City (pop 1,490), N central Mo , on the Missouri and SW of Moberly, laid out 1836, inc. 1845. It is a shipping point for cattle and grain **3** City (pop. 3,799), co seat of Valley co , NE Mont , on the Milk river, founded 1887. A brisk cow town on the Northern Pacific in the 19th cent , it later became a grain-shipping point and a center of the Milk river project It grew more important with the building of Fort Peck Dam

Glaspell, Susan (glăs'pĕl), 1882–1948, American author and playwright, b Davenport, Iowa, grad Drake Univ. and studied at the Univ. of Chicago Before her marriage to George Cram Cook (1913) she had written several novels, with him she became associated with the Little Theater movement through the Provincetown Players, of which he was director and for which she wrote several plays Her plays include the poignant *Trifles* (1917), *Inheritors* (1921), and *Alison's House* (1930), based on the life of Emily Dickinson and awarded the 1931 Pulitzer Prize in drama Her later novels include *Brook Evans* (1928) and *The Fugitive's Return* (1929) *The Road to the Temple* (1926) is a biography of Cook

Glass, Carter, 1858–1946, American statesman, U S Senator (1920–46), Secretary of the Treasury (1918–20), b Lynchburg, Va He learned the printer's trade and became owner of the Lynchburg *Daily News* and *Daily Advance* Glass became prominent in local politics, then served (1908–18) in the House of Representatives As chairman of the House Committee on Banking and Currency, he was active in the framing of the Federal Reserve System In 1918 he became Secretary of the Treasury under Woodrow Wilson, but in 1920 he resigned to become Senator by appointment He was elected Senator for the balance of the term and was reelected four times He violently opposed President Franklin D Roosevelt's monetary and New Deal policies, but supported Roosevelt's foreign policy See biography by Rixey Smith and Norman Beasley (1939)

Glass, Hugh, fl 1822–33, trapper in the American West He told a story of sailing and capture first by Jean Laffite and then by Indians before he gained his freedom in St Louis in 1822 The experience while on an expedition in the Missouri river country, of being mauled by a grizzly bear and left for dead and of his dragging himself 100 mi to Fort Kiowa, is related in John G Neihardt's *Song of Hugh Glass* He was probably killed by the Blackfoot Indians, c 1833

Glass, Montague Marsden, 1877–1934, American humorist and playwright, b England, educated at the College of the City of New York and at New York Univ He won fame for his humorous delineations of American Jewish life and character, especially in the "cloak and suit trade" *Potash and Perlmutter* (1910) and *Abe and Mawruss* (1911) were both successful in magazine story form They proved equally popular as plays when he dramatized them, the first in collaboration with Charles Klein, the second with R C Megrue

glass, hard substance, usually brittle and transparent, commonly composed chiefly of silicates and an alkali fused at high temperature Innumerable kinds of glass may be produced by varying the raw materials, the manner and degree of heating, and the method and rate of annealing and cooling Most glass is a mixture of silicon, usually in the form of silica obtained from beds of fine sand or from pulverized sandstone, an alkali to lower the melting point, usually a form of soda or, for finer glass, potash, lime as a stabilizer, and cullet (waste glass) to assist in melting the mixture The properties of glass are varied by adding other substances, commonly in the form of oxides, e g , lead, for brilliance and weight, boron, for thermal and electrical resistance, barium, to increase the refractive index, as in optical glass, cadmium, to cut out infrared rays, metallic oxides, to impart color, and manganese, for decolorizing Man has used glass from prehistoric times, at first fashioning small objects from natural glass such as obsidian, a volcanic glass, or from the immensely valuable rock crystal, a colorless, transparent quartz whose brilliance and clarity are emulated in manufactured glass The term "crystal glass," derived from rock crystal, was at first applied to clear, highly refractive glass, it has come to denote in the trade a high-grade, colorless glass and is sometimes applied to any fine hand-blown glass, including colored glass The place and date of origin of manufactured glass are not known, glass was probably derived from glazes in Neolithic times Glass was made in prehistoric times in the Far East, India, and Egypt The industry was well established in Egypt by the 16th cent B C , and extant examples include opaque, colored glass pressed into a mold or built up by repeatedly dipping a core into molten glass The Romans attained a skill unequaled until modern times They made hollow ware, small windowpanes, and artistic glassware, such as the cameo-cut Portland vase and millefiori vessels produced from bundles of thin glass rods of many colors Except in Constantinople, little is known of glassmaking in Europe from the fall of Rome until the 10th cent , when stained glass came into use Venice was the leader in making fine glassware for almost four centuries after the Crusades and attempted to monopolize the industry by strict control at Murano of glassworkers, who were severely penalized for betraying the secrets of the art The Venetians were famous for

their mirrors, beads, and ornamental glass—thin, graceful vessels, crackled, opaqued, crystal, millefiori, marbled, colored, engraved, or enameled Bohemia was noted in the 17th cent for its engraved and enameled glass, for ruby glass containing gold, and for glass cut by the method used on rock crystal After the invention (c 1688) of a process for casting glass, France was for many years supreme in the manufacture of plate glass such as that used to line the Galerie des Glaces at Versailles Late in the 17th cent England began to make flint glass, whose lead oxide content imparted a brilliance and softness that made it suitable for cut glass The first glass manufactory in America was built in 1608, and glass was carried in the first cargo exported to England Another short-lived glass factory dating from c 1621 specialized in minting beads used as a medium of exchange with the Indians Although other glasshouses were operated in the colonies, especially in New Amsterdam, the first successful and enduring large-scale glasshouse was set up by Caspar Wistar in New Jersey in 1739 Some of the finest colonial glassware was produced in the Pennsylvania glasshouses of H W Stiegel The industry underwent a radical change with the invention (c 1827 of a glass-pressing machine, which was established in practical use by Deming Jarves in his Boston and Sandwich Glass Company (1825–88), whose Sandwich glass was in great demand Although glassware is still made in the E United States the production centers have shifted to fuel-producing areas of Ohio, Pennsylvania, and West Virginia The processes of glassmaking have remained the same from ancient times The materials are fused at high temperatures in seasoned fire-clay containers, boiled down, skimmed, and cooled several hundred degrees, then the molten glass (called metal) is ladled or poured into molds and pressed, or is blown (sometimes into molds), or is drawn The shaped glass is annealed to relieve stresses caused by manipulation, then is slowly cooled Small crucibles have been largely superseded by huge beehive-shaped pots or by tanks, some of these operate continuously, the metal being withdrawn at one end as the raw materials are fed in at the other end The glass, formerly annealed on shelves in a melting furnace, is now usually carried on rollers through annealing ovens (lehrs) Although today most hollow vessels such as light bulbs or containers are machine blown, fine ornamental hollow ware is still made by gathering a mass of glass at the end of a long, iron blowpipe, blowing it into a pear-shaped bulb which is rolled on an oiled slab (marver), shaped with tools, and then reblown, often into a mold, the glass is reheated periodically in a small furnace (glory hole) It is finally transferred to an iron rod (pontil) attached to the base of the vessel, and the lip is shaped and smoothed Methods of decoration include cutting, copper-wheel engraving, etching with hydrofluoric acid, enameling, gilding, and painting Exceptionally fine blown glassware has been designed by such artists as René Lalique and Maurice Marinot in France, Edvard Hald and Simon Gate in Sweden, and L C Tiffany and Sidney Waugh in the United States The scientific study of glass was initiated in the 19th cent in Germany by Ernst Abbe, who improved optical glass New forms of glass, new applications, and new methods of production have revolutionized the industry Glass has become invaluable in architecture, illumination, electrical transmission, instruments for scientific research, spectacles, cooking utensils, and containers Sheet glass, at first produced by rotating a bulb of blown glass until it was flattened into a disk, was later blown into a cylinder which was slit lengthwise, reheated, and allowed to flatten out, today it is drawn into sheets by a continuous process Plate glass differs from it by being rolled, ground, and polished Safety glass is made of plate glass, so tempered that, when broken, it crumbles into small, rounded pieces, it may also be laminated, i e , two or more sheets are cemented by a plastic that prevents the glass from scattering if broken Glass may be drawn into continuous filaments (fiber glass), which are used in textiles and for electrical insulating tape, or produced in the form of short staple fibers (glass wool) used as insulating material, the fibers may be granulated for use as sound absorbers or in filters or may be spun into textile fibers Other recently developed forms of glass include foam glass, a black spongy substance used for rafts, life preservers, and insulation, glass blocks (mold-pressed halves fused into a unit enclosing a partial vacuum), designed to bend light rays or to diffuse them and made with varying degrees of light transmission, and polaroid glass, which reduces glare by polarizing light See N H Moore, *Old Glass, European and American* (1924), L D Skelley, *Modern Fine Glass* (1937), Raymond McGrath and A C Frost, *Glass in Architecture and Decoration* (1937); Frances Rogers and Alice Beard, *5000 Years of Glass* (1937), G S McKearin and Helen McKearin, *American Glass* (1941); C J Phillips, *Glass the Miracle Maker* (2d ed , 1948)

Glassboro, borough (pop 4,925), SW N J , S of Camden, settled 1775, inc. 1920 It is a farm trade center and the seat of a state teachers college (1923) It has glassworks

Glasse, Hannah, fl 1747, writer of a popular English cookbook *Art of Cookery* (1747) She is also credited with writing *The Compleat Confectioner* and *The Servant's Directory*, both published in 1770

Glassites' see Glas, John.

Glassport, industrial borough (pop 8,748), SW Pa , on the Monongahela and SSE of Pittsburgh, inc. 1902 It manufactures glass and steel

glass snake, legless lizard of the genus *Ophisaurus* found in the S and central United States It averages about 2 ft in length, and its shiny scaled body is gray or greenish brown, sometimes striped, above, the sides are darker with light lines, and the ventral surface is whitish The long tail, either whole or in sections, breaks easily from the body, a new, usually shorter, tail without a real backbone grows to replace it Unlike the snakes it has eyelids and ear openings, and the tongue is broad Insects, worms, and small snails form much of its diet It is a burrowing creature found in fields and dry meadows, and it seldom appears above ground by day The European species is about 3 to 4 ft long

Glastonbury, municipal borough (pop 4,514), Somerset, England, SW of Wells, in a region of orchards and meadows It is a place of many legends One tells that St Joseph of Arimathea founded here the first Christian church in England On Wearyall Hill he rested his staff, which rooted and became the Glastonbury thorn, blooming annually on Christmas Eve This local species of hawthorn was almost destroyed by the superstition-hating Puritans Another story identifies Glastonbury as the Isle of Avalon of Arthurian legend King Ine of Wessex built Glastonbury Abbey in the 8th cent This abbey was refounded by St Dunstan in 946, burned in 1184, rebuilt by Henry II, and suppressed by Henry VIII In the Middle Ages it was a center of learning and an object of pilgrimages The abbot's kitchen and parts of the chapel remain Lake-village remains have been found near by, there is a museum of antiquities See J A Robinson, *Two Glastonbury Legends* (1926)

Glastonbury, industrial town (pop 6,632), central Conn , on the Connecticut below Hartford, settled c 1650, inc 1690 It has several 17th century houses

Glatz (glăts) or **Kłodzko,** Pol *Kłodzko* (kwôtsˈkô), city (pop 22,814), Lower Silesia, on the Glatzer Neisse river It is a commercial and administrative center Glatz was transferred to Polish administration by the Potsdam Conference (1945) Dating from the 10th cent , it was the capital of a county created in 1462 It was seized by Frederick II of Prussia in the War of the Austrian Succession and was formally ceded to Prussia in 1745 The **Glatzer Gebirge** (glăˈtsur gubĭrˈgu), a range in the Sudetes, culminates at 4,672 ft in the Grosser Schneeberg (grōˈsur shnāˈbĕrk") (Czech *Kralický Sněžník*, Pol *Śnieżnik*), SE of Glatz, on the Czechoslovak border

Glatzer Neisse see Neisse

Glauber, Johann Rudolf (yōˈhän rōōˈdôlf glouˈbur), 1604–68, German alchemist A predecessor of scientific chemists, Glauber made many practical advances in analytical chemistry, he devised new procedures and was the first to prepare several compounds, including Glauber's salt Little is known of his life, but he is believed to have settled in Holland c 1648

Glauber's salt [for J R Glauber], name for hydrated sodium sulphate, a compound of sodium, sulphur, and oxygen with 10 molecules of water Upon exposure to the air it effloresces The anhydrous salt is found in various parts of the world —in salt deposits in Europe and the SW United States, especially in California and Arizona, in mineral springs, and in sea water It was first prepared by treating common salt with sulphuric acid It is used as a mild laxative

glaucoma (glôkōˈmu) [Gr , =cataract of the eye], disease of the eye, characterized by increased tension within the eyeball It occurs commonly in individuals over 40 Pressure may result in changes which terminate in blindness One or both eyes may be affected Symptoms of the disease include seeing colored halos around lights, sudden onset of pain in the eye and diminished acuteness of vision The cause of the disease is obscure In some cases surgery may relieve the condition

Glaucus (glôˈkus), in Greek legend **1** Sea-god who loved Scylla **2** Hero of Troy in the Trojan War who exchanged his golden armor for the bronze armor of his hereditary friend Diomed on the battlefield (*Iliad*, 6) **3** Son of Sisyphus and father of Bellerophon He was killed by his own horses, and his ghost sometimes appeared to horses racing in the Isthmian games

glaze, vitreous layer coating pottery, to give the surface finish or afford a ground for decorative painting Glazes, transparent, white, or colored and of many kinds to suit the nature of the pottery, are fired on the clay, usually in the biscuit stage On stoneware a salt glaze is produced by putting salt in the fires at the right point Of the various artificial mixtures used for glazes, that for whiteware contains borax and lead which are made insoluble by "fritting" before being mixed with other substances No lead is used for porcelain The coloring agents are oxides of different metals

Glazunov, Aleksandr Konstantinovich (ălyĭksändrˈ kŭnstăntyēnôˈvĭch glăzōōˈnôf), 1865–1936, Russian composer, director of the St Petersburg Conservatory, 1906–17 He assisted his teacher, Rimsky-Korsakov, in completing Borodin's unfinished opera, *Prince Igor* Glazunov's early works reflect the spirit of Russian nationalism, but Western influences are discernible in his later works He wrote eight symphonies, a piano concerto and a violin concerto, ballets, chamber music, and orchestral tone poems See M D Calvocoressi and Gerald Abraham *Masters of Russian Music* (1936)

glee, in music an unaccompanied song for three or more male solo voices in harmony An exclusively English form, glees were composed mainly between 1750 and 1830, after which time the part songs of the Victorian composers displaced them The most famous glee was *Glorious Apollo* by Samuel Webbe (1740–1816) Many societies for the performance of glees flourished in England in the 18th cent In the United States the term "glee club," usually referring to any men's choral organization, is sometimes extended to mixed groups

Gleiwitz (glīˈvĭts) or **Gliwice** (glēvēˈtsĕ), city (pop 95,980), Upper Silesia, transferred to Polish administration in 1945 (see Silesia) It now has an entirely Polish population A center of the Katowice mining region, it also manufactures metal products, chemicals, foodstuffs, and clothes Gleiwitz, incorporated in 1276, was ceded by Austria to Prussia in 1742 The city suffered damage during the Second World War

Gleizes, Albert Léon (ălbĕrˈ lāôˈ glēzˈ), 1881 , French cubist painter and illustrator He was among the outstanding cubists in the Salon des Indépendants of 1911, and his work has been consistently geometric and intellectual in character He is represented in the Museum of Modern Art, New York Gleizes is well known also as an illustrator and as a writer and lecturer on art and aesthetic theory

Glenalmond (glēnăˈmund), valley of the Almond river, Perthshire, Scotland It is the site of the traditional grave of Ossian Trinity College (1841), a public school for boys, is here

Glen Carbon, village (pop 1,091), SW Ill , just NE of St Louis, in a coal area, inc 1892

Glencoe (glĕnˈkō) **1** Residential village (pop 6,825), NE Ill , near Chicago, settled 1836, inc 1869 **2** City (pop 2,387), co seat of McLeod co , S central Minn , WSW of Minneapolis, platted 1855 It is a farm trade and cattle-shipping center

Glencoe (glĕnkōˈ), valley of the Coe river, Argyllshire, Scotland, extending c 10 mi above its mouth at Loch Leven The town Ballachulish is near the glen, which is overhung by lofty mountains, now owned by the National Trust The glen has Ossian's Cave Here in Feb , 1692, the Macdonald clan was massacred by its traditional enemies, the Campbells, with English soldiers, under the orders of Sir John Dalrymple, secretary of state to William III

Glen Cove, city (pop 12,415), on the north shore of Long Island, SE N Y , settled 1668, inc as a city 1918 Carbon paper and typewriter ribbon are made The Webb Institute of Naval Architecture, formerly in the Bronx, was moved here in 1947

Glendale. 1 City (pop 4,855), S central Ariz , in the Salt River Valley, inc 1910 **2** City (pop 82,582), S Calif , N of Los Angeles, inc 1906 It was laid out in 1886 on part of a ranch that had been the first Spanish land grant in California Glendale has a large airport and oil refineries and manufactures aircraft, clay products, and glass A coeducational junior college and Forest Lawn Memorial Park cemetery are here. **3** City (pop 2,526), E Mo , near St Louis **4** Village (pop 2,359), SW Ohio, residential suburb of Cincinnati, laid out 1852 **5** Residential town (pop 1,348), W Va , on the Ohio, in the industrial Northern Panhandle near Moundsville, inc 1924 A toy factory and Reynolds Memorial Hospital are here

Glendale, battle of see Seven Days battles

Glendalough (glĕnˈdulōˈ), wooded valley, Co Wicklow, Ireland, W of Wicklow It is noted for the ruins of the Seven Churches (a development of a 6th-century ecclesiastical foundation of St Kevin), a round tower, and Kevin's Cross (a granite monolith) A cave in the face of the rocky mountainside, above the lake that lies at the foot of the vale, is the legendary retreat of St Kevin

Glendive (glĕnˈdīv), city (pop 4,524), co seat of Dawson co , E Mont , on the Yellowstone river and NE of Miles City, inc 1902 Laid out in 1880, it was settled in 1881 with the arrival of the Northern Pacific and grew rapidly as a cattle-shipping center Today it is the center of an agricultural district and has railroad shops

Glendora, city (pop 2,822), in Monrovia township, S Calif , E of Los Angeles, in a rich citrus-fruit area, founded 1887, inc 1911

Glendower see Owen Glendower

Glen Echo, town (pop 395), W central Md , a resort near the Potomac river 6 mi NW of Washington, D C.

Glenelg(glĕnĕlg'), town (pop 13,867), South Australia, on an inlet of Gulf St Vincent It is a southwest suburb of Adelaide and a summer resort Here in 1836 South Australia was proclaimed a British colony

Glenelg, shallow river of SW Victoria, Australia, rising near the Grampians and flowing 280 mi to Discovery Bay at the South Australian border

Glen Ellyn, residential village (pop 8,055), NE Ill , W of Chicago; platted 1851, inc 1892

Glenmora, town (pop 1,452), central La , SW of Alexandria, in a farm area, settled 1898, inc 1913

Glenns Ferry, village (pop 1,290), SW Idaho, on the Snake and SE of Boise, laid out 1883 Near by was Three Island Ford of the Oregon Trail The ferry was established in 1865 The town is today a railroad center It is included in the King Hill irrigation project

Glennville, city (pop 1,674), SE Ga , WSW of Savannah, in a farm area

Glenolden (glĕnōl'dun), residential borough (pop 4,825), SE Pa , near Philadelphia, settled c 1654, inc 1894 Pharmaceutical supplies are made here

Glen Ridge, suburban residential borough (pop 7,331), NE N J , NW of Newark, settled early in the 19th cent , inc 1895

Glen Rock. 1 Borough (pop 5,177), NE N J , SW of Ridgewood, settled c 1710, inc 1896 **2** Borough (pop 1,412), SE Pa , near the Md boundary S of York, inc 1860

Glenrock, town (pop 1,014), E central Wyo , on Deer Creek near the North Platte river and E of Casper, in an oil region Near by is the site of Deer Creek Station (1861), a military post on the Oregon Trail

Glen Rose, city (pop 1,050), co seat of Somervell co , N central Texas, on the Paluxy near its junction with the Brazos and SW of Fort Worth, inc 1926 Mineral springs and rugged scenery make Glen Rose a small health and vacation resort There are dinosaur tracks in limestone near by

Glen Roy, valley, Inverness-shire, Scotland The Parallel Roads of Glen Roy are three terraces on each side of the valley, at corresponding heights One theory holds that they represent the water levels of ancient lakes Ben Nevis is near the valley

Glens Falls, city (pop 18,836), E N Y , on the Hudson and N of Saratoga Springs, settled 1763, inc as a village 1839, as a city 1908 The falls of the Hudson provide water power, and the city has paper and pulp mills, clothing factories, and other works Charles Evans Hughes was born here

Glenview, residential village (pop 2,500), NE Ill , north suburb of Chicago, inc 1899

Glenwood. 1 City (pop 4,501), co seat (since 1853) of Mills co , SW Iowa, near the Missouri river S of Council Bluffs, founded by Mormons, inc 1857 The state institution (1876) for feeble-minded children is here **2** City (pop 2,564), co seat of Pope co , W Minn , on Lake Minnewaska S of Alexandria, platted 1866, inc as a village 1881, as a city 1912 Henrik Shipstead lived here

Glenwood Springs, resort city (pop 2,253, alt 5,823 ft), co seat of Garfield co , NW Colo , on the Colorado, laid out 1883, inc 1885 It has mineral springs and is headquarters for the White River National Forest

Glidden, Joseph Farwell, 1813–1906, American farmer b Charlestown, N H He invented the form of twisted barbed wire now in common use He was stimulated to experiments of his own by an exhibit of an early type of barbed wire at the county fair of De Kalb co , Ill , in 1873, and in 1874 he received a patent for an ingenious form of twisted wire which kept the barbs in place This eventually won preeminence over a great many early barbed-wire patents See A G Warren, "Barbed Wire Who Invented It " in *Iron Age,* June 24, 1926

glider, type of aircraft similar in form to an airplane but with no motive power except gravity and the effect of natural air currents One of the earliest pioneers in gliding was Otto Lilienthal of Germany, who between 1890 and 1896 made many successful flights covering distances up to 1,000 ft He illustrated the superiority of curved over flat surfaces in flight Lilienthal was killed in 1896 when a sudden gust of wind upset his glider Following him, among others, came Percy Pilcher of England, Henri Farman of France, and Octave Chanute and John J Montgomery of the United States They launched their gliders from elevated positions or by running forward with the machine, maintaining stability while in flight by balancing their own bodies Chanute obtained stability by making parts of the plane movable In 1900 the Wright brothers constructed and flew many gliders They were the first to introduce landing skids, which are still standard equipment on present-day gliders In 1911 Orville Wright flew in a glider for nearly 10 min., a record of long standing Modern gliders are launched by means of an elastic cord, rope, or cable which is attached to the front and pulled by a launching crew (12 men), a winch, a tow car, or a tow plane In the Second World War troop-transport gliders were used for aerial invasion The gliders were launched and towed by cargo airplanes to the invasion area, where they were released. Gliders are piloted by manipulating conventional AIRFOIL controls. Under favorable conditions the gravity potential can be repeatedly utilised by piloting the craft through updrafts of air, a practice known as soaring See J P Andrews, *Gliding and Soaring* (1944); Terence Horsley, *Soaring Flight* (1946), A C Douglas, *Gliding and Advanced Soaring* (1947)

Glière, Reinhold Moritzovich (rĭn'hōlt mōrētsô'vĭch glēĕr'), 1875–, Russian composer His early work was nationalistic, but he later added romantic and impressionistic elements After the 1917 revolution, he adapted his work to Soviet subjects His works include a Lisbian tone poem, *The Sirens* (1908), operas, *Shakh-Senem* (1923–34), based on Azerbaijan folk music, and *Rachel* (1942), after Maupassant, ballets, including *The Red Poppy* (Moscow, 1927), with a revolutionary subject; and *Ilya Mouromets* (1909–11), his third symphony He became professor of composition (1913) and director (1914) of the Kiev Conservatory and a professor (1920) at the Moscow Conservatory

Glinka, Mikhail Ivanovich (mēkhōōĭl' ēvän'ôvĭch glĭn'kä), 1804-57, first of the nationalist school of Russian composers He led somewhat the life of a dilettante and composed only a few significant works Notable among these were his two operas, *A Life for the Tsar* (1836) and *Russlan and Ludmilla* (1842), and a symphonic work, *Kamarinskaya* (1884) See M D Calvocoressi and Gerald Abraham, *Masters of Russian Music* (1936).

Glittertind. see JOTUNHEIM

Gliwice, Upper Silesia see GLEIWITZ

Globe, city (pop 6,141), co seat of Gila co , E Ariz , in foothills near the Pinal Mts , settled 1876, inc 1907 Though copper had been discovered earlier (1872), a silver boom built the city, and only later did Globe become for decades a big copper center MIAMI, ARIZ , was established later Asbestos has been mined near by Ranching still fills the town with cowboys, and an Apache reservation is near

globe, spherical body used to illustrate the earth (terrestrial globe) or the sky (celestial globe) The terrestrial globe is the only means of representing sizes and shapes of continents and oceans without distortion of shape, inaccuracy of angles and direction, or mistakes in the relative area The only inaccuracy consists in the fact that globes are spherical, while the equatorial diameter of the earth exceeds the polar one by 27 mi Globes came into use as soon as the idea of the spherical form of the earth became prevalent Probably the oldest globe was constructed by the Greek geographer Crates in the 2d cent B C In modern times the first globes were made by Martin Behaim of Nuremberg in 1492 and by Leonardo da Vinci shortly afterwards One of the earliest globes constructed (1500) after the discovery of America is in the New York Public Library Most globes are made with a diameter of 12 in The largest globe, with a diameter of 128 ft , was set up on the Champs Élysées in Paris in 1824 The most famous globe in the United States is the two-ton revolving aluminum globe exhibited in the New York *News* Building It has a diameter of 12 ft Globes are generally made of paper pulp, plaster, metal, or wood and are covered with paper segments upon which map features are engraved or printed On celestial globes the stars are represented in positions corresponding to their actual situation on the sky If a celestial globe is brought into correct position, a line drawn from its center to any star marked on its surface will, if followed to the sky, focus the actual star

globe amaranth, annual plant (*Gomphrena globosa*), grown in gardens for the chaffy, dome-shaped heads of flowers, available in a number of colors The flowers are on long, stiff, branching stems and are popular for winter bouquets and holiday wreaths and decorations, for which they are best when picked and dried shortly before they have fully matured (*see* EVERLASTING) The globe amaranth, sometimes called bachelor's-button, is related to the true AMARANTH

globeflower, any plant of the genus *Trollius,* hardy perennials of moist north temperate regions, some native to America Related to the buttercups, they have similar but larger flowers of white, yellow, orange, or purple *Trollius europaeus,* with blossoms globe shaped from the incurving flower parts, is most commonly cultivated

Globe Theatre, famous London playhouse, built 1598, where most of Shakspere's plays were first presented It was burned in 1613, rebuilt in 1614, and destroyed by the Puritans in 1644 See E K Chambers, *Elizabethan Stage* (1923), J C Adams, *The Globe Playhouse* (1945)

Glocester (glŏs'tŭr), town (pop 2,099), NW R I ; set off from Providence and inc 1731 Near Chepachet village, which is in the center of the town, is a monument to Thomas W Dorr, who gathered his men here

glockenspiel (glŏ'kŭnspēl, Ger glô'kŭnshpēl) [Ger , =bell-play], percussion instrument The medieval glockenspiel was a sort of miniature carillon, sometimes played mechanically by means of a rotating cylinder with pins stuck in it. In the 16th cent. it was given a keyboard. The 18th-century glockenspiel had metal bars instead of bells, and in the romantic period the keyboard disappeared and the bars were struck by hammers Mosart, in *Die Zauberflöte,* Wagner, Puccini, and Mahler have all employed the glockenspiel in their scores

Glogau (glō'gou) or **Glogow,** Pol. *Glogów* (gwô'gōōf), town (1939 pop 33,500; 1946 pop. 1,681), Lower Silesia, on the Oder river and NW of Breslau. It was transferred to Polish administration by the Potsdam Conference (1945). It became (1249) the capital of a Silesian principality ruled, until 1506, by a branch of the Polish Piast dynasty. From 1331 it was under Bohemian suzerainty As a result of the War of the Austrian Succession, Glogau passed (1745) to Prussia Glogau retained some fine medieval architecture until the Second World War, when it was virtually destroyed The present population is entirely Polish.

Glomma (glô'mä), chief river of Norway, rising in the highlands S of Trondheim Fjord and flowing c 375 mi roughly parallel to the Swedish border to Fredenikstad, on the Skagerrak The largest and last of its 23 falls are at SARPSBORG and furnish power to the large lumber and cellulose industries between Sarpsborg and Frederikstad Between these points the river is navigable

Gloria in excelsis (ĕksĕl'sĭs) [Latin, =glory in the highest], the *Angelic Hymn* or greater DOXOLOGY, ancient Christian hymn beginning, "Glory be to God on high, and on earth, peace, good will towards men " An amplification of Luke 2 14, it was of Greek origin and took its place in the Roman MASS about the beginning of the 6th cent In the Mass it follows the *Kyrie,* but in the Anglican communion it is just before the benediction In both services it is omitted at certain seasons

Gloria Patri (pät'rē) [Latin, =glory (be) to the Father], the lesser DOXOLOGY, brief Christian hymn in praise of the Persons of the Trinity The second clause was added after the Arian controversy The hymn is much used in the Roman office, in the Anglican morning and evening prayers, and in Protestant services in general

Glorious Revolution, in English history, the events of the years 1688–89 which resulted in the deposition of JAMES II and the accession of WILLIAM III and MARY II to the English throne It is also called the Bloodless Revolution The restoration of Charles II in 1660 was met with misgivings by many Englishmen, who suspected the Stuarts of Catholic and absolutist leanings After James II's accession (1685) his overt Catholicism and the birth of a Catholic prince who would succeed to the throne united the hitherto-loyal Tories with the Whigs in a common opposition to James Seven Whig and Tory leaders, including the earl of DANBY, sent an invitation to William of Orange in Holland and his consort, Mary, Protestant daughter of James, to come to the aid of England William landed at Torbay with an army. James's forces under John Churchill (later duke of Marlborough) deserted him, and James fled to France (Dec , 1688) where his queen and his son had preceded him Early the following year William and Mary accepted the invitation of Parliament to rule as joint sovereigns The DECLARATION OF RIGHTS (1688) and the BILL OF RIGHTS (1689) redefined the relationship of monarch and subjects and barred any future Catholic succession to the throne The Glorious Revolution was a triumph of parliamentary authority over the "divine right" of kings The ultimate ascendancy of Parliament was never thereafter successfully disputed in England See G M Trevelyan, *The English Revolution, 1688–1689* (1939)

glory lily, any species of the genus *Gloriosa,* tuberous-rooted climbing plants of tropical Africa and Asia, cultivated in conservatories or out of doors, but not hardy The plant climbs by means of tendrillike leaf tips; it blooms in summer and fall with yellow, orange, or red lilylike flowers *Gloriosa superba* is also called climbing lily

gloss, explanatory note on a word or words of a text, usually written between the lines or in a margin of a manuscript In copying a manuscript, sometimes a copyist incorporated a gloss in the text, so that the copy departs from the original Often the gloss is in a language different from that of the text Old glosses on the Bible have value as evidence of tradition, as have glosses in civil and canon law.

Glossop (glŏs'ŭp), municipal borough (1931 pop 19,509; 1943 estimated pop. 20,001), Derbyshire, England, E of Manchester at the border of the Peak Glossop is the chief cotton-manufacturing city of Derby

Gloster (glŏs'tur), town (pop. 1,232), SW Miss , W of McComb near the La line, in a farm area, inc 1884

Gloucester, Gilbert de Clare, 8th **earl of** (glô'stûr, glŏ'–), 1243–95, English nobleman He married (1253) Alice of Angoulême, niece of HENRY III, and succeeded his father, Richard, as earl of Gloucester in 1262 He was a leader of the baronial party under Simon de MONTFORT, earl of Leicester, in opposition to Henry III, who surrendered to Gloucester after the battle of Lewes (1264). Gloucester aided the prince (later EDWARD I) against Leicester in 1265, returned to the baronial party in 1266, but finally joined the royal cause and

aided in Edward I's accession to the throne (1272). His first marriage was annulled, and in 1290 he married Edward's daughter Joan He also held the titles of earl of Clare and earl of Hertford, as did his son by Joan, **Gilbert de Clare, 9th earl of Gloucester,** 1291–1314, who served several times as regent of England and was killed at the battle of Bannockburn.

Gloucester, Henry William Frederick Albert, duke of, 1900–, English prince; third son of George V and brother of Edward VIII and George VI He was created duke in 1928 He was educated at Sandhurst and made the army his career, serving as a major general in the Second World War He was governor general of Australia from 1945 to 1947

Gloucester, Humphrey, duke of, 1391–1447, English nobleman, son of Henry IV and Mary Bohun He was well educated and had a great interest in humanist scholarship After the accession of his brother as Henry V, Humphrey was created duke of Gloucester and earl of Cambridge (1414), served in Henry's French campaign, and was wounded at the battle of Agincourt (1415) In 1420–21 he remained in England as regent during Henry's absence When the infant Henry VI succeeded his father as king of England and inherited his grandfather's claim as king of France, Gloucester's elder brother John of Lancaster, duke of Bedford, became protector, but was so completely occupied in France that during his absences Gloucester served under him as protector in England, with a council Gloucester's ensuing struggle for power against his uncle, Henry Beaufort, forced Bedford to return from France several times to reconcile them Gloucester's marriage (c 1422) to Jacqueline of Hainault lasted until 1425, when, after their disastrous military expedition to Hainault, he returned with Eleanor Cobham, his mistress, to England A papal decree of 1428 invalidated his former marriage and permitted him to marry Eleanor, but he was severely criticized In 1429 the council crowned the boy Henry king, and Beaufort's ascendancy increased After the death of Bedford in 1435, Gloucester was the heir to the throne, but his influence with the young king waned as he advocated continuing the unsuccessful war in France When Eleanor, Gloucester's wife, was imprisoned in 1441 for sorcery against the king, Gloucester's political importance practically ended Gloucester was suspected of plotting Henry's death and in 1447 was arrested, but fell sick and died in custody He was known as "Good Duke Humphrey," perhaps from his benefactions to scholars and men of letters He corresponded with the leaders of the new Italian humanism, had translations made from the Greek classics, and collected a considerable library He was a patron of Oxford Univ , and his gift of books formed the nucleus later restored and developed by Sir Thomas Bodley into the Bodleian Library See biography by K H Vickers (1907)

Gloucester, Richard de Clare, 7th earl of, 1222–62, English nobleman He succeeded his father, Gilbert, as earl in 1230 For some years Richard vacillated in his allegiance to HENRY III, he served the king in diplomatic missions to Scotland and Germany, but in the Mad Parliament (1258, see PARLIAMENT) he was a leader of the baronial party Gloucester and Simon de MONTFORT, earl of Leicester, were now the leading political figures in England and soon were rivals Later Gloucester alternately supported and quarreled with the king and Prince Edward Gloucester also held the titles of earl of Clare and earl of Hertford

Gloucester, Robert, earl of, d 1147, English nobleman, illegitimate son of Henry I The king created for him the earldom of Gloucester (c 1121) After his father's death (1135), Robert refused to claim the throne in opposition to the king's nephew, STEPHEN, to whom he did conditional homage in 1136, in 1138, however, they quarreled, Robert's estates were seized, the barons arose against Stephen, and Robert declared for the claim of his half sister, Empress MATILDA Stephen surrendered to Robert's forces in 1141, but later, in protecting Matilda's retreat from Winchester, Robert was captured by the royalists He was later exchanged for Stephen, who had been imprisoned at Bristol He went to France to get the aid of Geoffrey Plantagenet and returned to England with Henry (later Henry II) Robert held the Angevin party together and consistently labored for Matilda's cause

Gloucester, Thomas of Woodstock, duke of, 1355–97, English nobleman, seventh son of Edward III He was betrothed (1374) to Eleanor Bohun, a rich heiress, and became earl of Buckingham at the coronation of RICHARD II (1377) He was the king's lieutenant in France (1380), but returned to England after the failure of his siege of Nantes In 1385 he was created duke of Gloucester and soon emerged as the head of the baronial party whose opposition to the king culminated in the Merciless Parliament (1388) and the exile of the earls of Oxford and Suffolk, favorite royal ministers When the king regained his power in 1389, Gloucester, aided by Lancaster and Northumberland, made his peace with the king, whom he accompanied to Ireland in 1394 Gloucester by his opposition to the royal policy of peace with France and by efforts at another conspiracy provoked his own arrest by Richard (1397) He was imprisoned, convicted of treason, and died, probably killed at the king's command.

Gloucester, county, England: see GLOUCESTERSHIRE

Gloucester (glŏs'tûr, glô'stûr), county borough (1931 pop 52,937, 1947 estimated pop 64,100), Gloucestershire, England, on the Severn and NE of Bristol It is on the site of the Roman Glevum In 681 OSRIC founded an abbey where Gloucester's cathedral now stands. Parts of the cathedral date from the 11th cent , its high central tower from 1450 Gloucester is an industrial city with manufactures of railroad equipment, chemicals, farm machinery, and electrical goods The Three Choirs Festival is held here every third year

Gloucester (glŏs'tûr) **1** City (pop 24,046), NE Mass , on Cape Ann It is at the head of the excellent Gloucester Harbor, which is protected by a breakwater built from Eastern Point and which for over three centuries has been used by fishing ships Colonists landed in 1623, Gloucester was incorporated as a town in 1642, as a city in 1873 It is a port of entry Gloucester's development as a summer resort and artists' center began late in the 19th cent It is also a great fish-processing center The famous bronze *Fisherman* is a memorial to the thousands of Gloucestermen lost at sea The Hammond Museum houses valuable art collections The city has furnished material for authors as well as artists See Kipling, *Captains Courageous*, the works of James B Connolly, Raymond McFarland, *The Masts of Gloucester* (1937) **2** Village, E Va , on Middle Peninsula between the York and Rappahannock rivers, near Chesapeake Bay, founded 1769 The courthouse (1766) of Gloucester co and an old debtors' prison are here

Gloucester City, industrial city (pop 13,692), SW N J , on the Delaware below Camden, site of Fort Nassau (built 1623), settled 1682 by Friends, laid out 1687, inc 1868 Asbestos, cork, and paper products are made here

Gloucestershire or **Gloucester** (glŏ'stûrshĭr, glô'-), county (1,255 sq m , 1931 pop 786,000, 1948 estimated pop 916,100), W England The county seat is Gloucester In the eastern part of the county are the Cotswold Hills, devoted largely to sheep grazing, in the center is the fertile valley of the Severn river (with its chief tributaries, the Upper Avon, the Lower Avon, and the Wye), devoted to dairy farming (Gloucester cheese), and in the west, on the Welsh border, is the Forest of Dean Cirencester and Gloucester were centers of networks of Roman roads The region became part of the Anglo-Saxon kingdom of Mercia It was organized as a county in the 15th cent and is especially rich in ecclesiastical remains Manufacturing is chiefly centered around the great port of Bristol

Glouster (glou'stûr), village (pop. 2,847), SE Ohio, N of Athens There are coal mines here

glove, hand covering with a separate sheath for each finger. Cave dwellers' relics, sewn with leather thongs, as well as allusions in the writings of Homer and Herodotus, show the glove's antiquity In England, probably worn first (8th–9th cent) as a sign of rank, it became after the Norman Conquest an important part of dress, being necessary to the sport of falconry The gloves of church and lay dignitaries were rich with jewels and symbolic embroidery, huntsmen and warriors wore gauntlets of leather sewn over metal plates Ladies in the 13th cent used long linen gloves for ornament, and by the 16th cent , gloves of silk, worsted, or leather were generally worn Queen Elizabeth was famous for her richly laced, jeweled, and embroidered gauntlets In the Middle Ages the glove had symbolic uses, it was removed before superiors and in church, worn in the hat as a favor or as a token of allegiance, thrown down as a gage or challenge, and taken up in acceptance of battle A folded glove was a pledge of the fulfillment of a contract; lords bestowed gloves as tokens of privilege, vassals received them to signify service A guild of glovemakers was incorporated in France in 1190, and one in London c 1600 Glovemaking in France, early noted for its excellence, is an important industry, the kid-glove trade centering at Paris and Grenoble England specializes in heavy leather products such as capeskin In the United States, glovemaking began in 1760 when a settlement of Scottish glovers was established at Gloversville, N Y , here in 1810 gloves were first sold by the dozen New York state is the center of the glove industry in America Modern gloves are made of fabrics, plain or knitted; of leather from almost every variety of animal hide, and of rubber, used in surgical, laboratory, and household work Leather for gloves is dressed by specialized processes, cut with dies, and sewn both by hand and by machine See K. M. Lester and B V Oerke, *An Illustrated History of ... Accessories of Dress* (1940), C C Collins, *Love of a Glove* (1945).

Glover, Jose (glŭv'ûr), d 1638, English nonconformist minister, generally considered the father of printing in the British colonies of North America. He visited (c 1634) New England and on his return to England solicited support for what became Harvard College He also bought a printing press and equipment and contracted for the services of Stephen DAYE and his household (including Matthew DAYE) Glover died on the voyage to America. His wife came into control of the printing equipment, and Stephen and Matthew Daye worked for her.

Gloversville (glŭv'–), city (pop. 23,329), E central N Y , N of Johnstown, inc 1890 Gloves have been made since the early 19th cent , and other leather goods are produced.

glowworm, name applied to the luminescent larva and wingless female of certain beetles or fireflies chiefly of the families Lampyridae and Phengodidae The common European glowworm is the wingless female of the beetle *Lampyris noctiluca* Its greenish light, emitted from cells of the posterior abdominal segments, is believed to attract the males

gloxinia [for B P Gloxin, 18th-century German botanist], tuberous-rooted Brazilian herb (*Sinningia speciosa*), cultivated in several forms as a pot plant It has large, gorgeously colored, bell-shaped flowers borne above velvety leaves The plants, propagated by leaf cuttings or seeds, require a dry rest period *Gloxinia* is also a name for a genus of tropical plants not in cultivation

glucinum · see BERYLLIUM

Gluck, Alma (glŏk), 1884–1938, American soprano, b Bucharest, Rumania Her real name was Reba Fiersohn She sang at the Metropolitan Opera, New York, from 1909 to 1912 and afterward sang mainly in concerts She was one of the first singers to make phonograph records and attained great popularity through that medium In 1914 she was married to Efrem Zimbalist

Gluck, Christoph Willibald von (krĭs'tŏf vĭl'lēbält fŏn), 1714–87, operatic composer, b Bavaria, studied in Prague and later in Italy His first 10 operas were successfully performed in Italy in the years 1741–45 He visited London (1746–47), where he met Handel In 1752 Gluck became conductor of the private orchestra of Prince Sachsenhildburghausen He was director of the court opera at Vienna from 1754 until his resignation in 1764 He was appointed imperial court composer in 1774 After an apoplectic stroke in 1779 he lived in retirement His early operas, some with Metastasio as librettist, were in the Italian tradition With *Orfeo ed Euridice* (Vienna, 1762) he began his reform of the opera, inspired by classical Greek drama He gave greater unity to text and music and eliminated the meaningless coloratura of the arias To Ranieri Calzabigi, the librettist of *Orfeo* and of *Alceste* (Vienna, 1767), he gave much of the credit for his new operatic style His influence on later composers was felt mainly in his principles of composition In 1777 Gluck produced his *Armide*, and Niccolò Piccinni his *Roland*, both settings of plays by Quinault, written at the instigation of Parisian literati This was the climax of the controversy between Gluck's supporters and the proponents of pure Italian opera As to which was the winner, the critics all rendered verdicts which were in accord with their prepossessions Gluck's last important work, *Iphigénie en Tauride* (Paris, 1779), is considered his masterpiece See Ernest Newman, *Gluck and the Opera* (1895), biographies by Martin Cooper (1935) and Alfred Einstein (Eng tr , 1936)

glucose, dextrose, or **grape sugar.** Commonly, the term *glucose* is used to designate a sweet syrupy liquid known also as corn syrup (because it is obtained commercially from cornstarch by HYDROLYSIS) It is not as sweet as cane sugar, but is used extensively in making candy, chewing gum, jams, jellies, preserves, and table syrups and for various other purposes This "glucose," however, is actually a mixture of substances, included among them being the sugar maltose The term *glucose* is used in chemistry to indicate d-glucose, dextroglucose, or dextrose, a CARBOHYDRATE It is found in fruit juices with other sugars (as in grapes), as a product in photosynthesis, and normally in the blood of various animals (blood sugar) An excess occurs in the blood and in the urine of man under certain conditions resulting from disease, as in diabetes Dextrose is a white, crystalline solid There are a number of forms having the same chemical formula (6 atoms of carbon, 12 of hydrogen, and 6 of oxygen) which differ in the arrangement of the atoms in the molecule, and some also differ in optical properties Dextrose or d-glucose is changed by yeast in fermentation into ALCOHOL and carbon dioxide Its presence is indicated by the use of FEHLING'S SOLUTION, and various modifications of this test are used in determining its occurrence in urine Another test involves heating it with picric acid and an alkali, the presence of glucose causes the solution to turn red. Glucose was discovered by J L Proust

glue: see ADHESIVE

gluten (glōō'tĕn) [Latin,=glue], albuminous substance, tough, elastic, almost tasteless, and insolu-

ble in water. It is found in hard or northern wheat and is the constituent which makes good flour for yeast bread Its composition includes, approximately, carbon 53 per cent, hydrogen 7 per cent, nitrogen 15 to 18 per cent, sulphur 1 per cent It is obtained from wheat by washing in water and is used in the manufacture of breadstuffs for a diabetic diet

glutton see WOLVERINE

glycerin, glycerine (both gl'ĭsərĭn), or **glycerol** (gl'ĭsərôl, -rōl), an ALCOHOL, a colorless, odorless liquid with a sweet taste, boiling at 290°C and melting at between 17°C and 18°C It mixes readily with alcohol and with water in all proportions and is hygroscopic (takes on water from the air) With acids it forms esters, with fatty acids it forms oils and fats, which upon heating break up into their fatty acids and glycerol again, with nitric acid it forms *nitroglycerin* It is widely used, e g , in the manufacture of certain perfumes, cosmetics, and inks for rubber stamps, in medicine, in the manufacture of explosives, and in antifreeze mixtures Its chief source is as a by-product in the manufacture of soap, fats when treated with alkalies forming soap and glycerin

glycogen (glī'kujĕn, -jun), a CARBOHYDRATE, known also as animal starch because it occurs almost exclusively in animal cells (with the possible exception of the fungi among the plants), being the form in which carbohydrates are stored in animals It is made up of molecules of d-glucose, to which it reverts upon hydrolysis The animal cell, particularly the cells of the liver and the skeletal muscles, apparently can convert an excess of glucose, or blood sugar, into glycogen to be stored for later use It is stored especially in the liver It has been suggested by some that in man the phenomenon of the "second wind," which occurs during continued violent exercise, results from added energy liberated by the chemical activity following the release of glycogen from storage In muscular activity (see MUSCLES) the glycogen is decomposed to lactic acid, and energy is released Some of the lactic acid thus formed is later converted to glycogen again In physical properties, the substance resembles plant starch, and when mixed with water it forms an opalescent colloid With iodine, however, it produces a reddish brown, or a red, instead of the dark blue of plant starch

Glycon (glī'kŏn), c 1st cent B C , Athenian sculptor, who executed the FARNESE HERCULES

Glyndebourne Festivals (glĭn'dŭbûrn, glīn'bôrn), operatic festivals, begun in 1934 by John Christie, an English organ builder, at his estate at Glyndebourne, near Lewes, Sussex The first few festivals were devoted to Mozart, but other composers later were included

Glyptothek (glŭp"tōtāk'), museum in Munich, founded by Louis I of Bavaria to house his collection of ancient and modern sculptures Among these is the famous Barberini fawn (300 B C) The Ionic building, designed by Leo von Klenze, was constructed between 1816 and 1830 and was destroyed in the Second World War, the collections, however, were saved

Gmelin, Johann Georg (yō'hän gā'ôrk gmā'lĭn), 1709–55, German naturalist In the service of the Academy of Sciences, St Petersburg (1727–47, professor from 1731), he was assigned (1733–43) to Bering's scientific staff in Siberia He wrote accounts of his travels and of Siberian flora He taught at the Univ of Tübingen from 1749 His nephew **Samuel Gottlieb Gmelin** (zä'mōōĕl gōt'lēp), 1744–74, a German botanist and professor from 1766 at the Academy of Sciences, St Petersburg, made scientific expeditions in SE Russia

Gmelin, Leopold (lā'ōpōlt), 1788–1853, German chemist He taught (1813–51) at the Univ of Heidelberg and was noted for his research on the chemistry of digestion and for his discovery of potassium ferrocyanide He wrote treatises on digestion and a standard *Handbook of Chemistry* (2 vols , 1817–19, Eng tr , 1848–72)

Gmelin, Samuel Gottlieb: see GMELIN, JOHANN GEORG

Gmünd, Germany see SCHWABISCH GMÜND.

Gmunden, Austria see SALZKAMMERGUT

Gnadenhutten (jĭnä'dünhŭ"tun), rural village (pop 876), E central Ohio, W of Steubenville and on the Tuscarawas river A state memorial park marks the site of the Gnadenhutten massacre (1782), where a force of white men slaughtered a settlement of 96 Christian Indians

gnat (năt), name for various small flies of the order Diptera The BLACK FLY is a pest to humans and to most other warm-blooded animals Several species of fungus gnats injure mushrooms and a variety of greenhouse plants The potato scab gnat bores through potato tubers Gall gnats and midges damage many plants In England mosquitoes are also known as gnats

Gneisenau, August, Graf Neithardt von (ou'gōōst grä'f' nīt'härt fŏn gnī'zunou), 1760–1831, Prussian field marshal In the Napoleonic Wars he fought at Jena (1806), won fame for his valiant defense of Kolberg (1807), and was Blücher's chief of staff in the campaign of 1813–14 and the Waterloo campaign (1815) He also assisted SCHARNHORST in effecting military reforms He died while commanding an expedition to repress the Polish insurrection

gneiss (nīs), metamorphic rock characterized by alternating light and dark bands, differing in mineral composition The bands are coarser than those of SCHIST The light bands are generally composed of quartz and feldspar Gneisses usually are altered from granite or some other igneous rock, but may be altered from sedimentary rocks

Gneist, Rudolf von (rōō'dôlf fŏn gnīst'), 1816–95, German jurist Widely learned in English and continental administrative law, he tried through his teaching at the Univ of Berlin and through holding public office to reform the working of the constitution in Prussia and to make administration a cooperative function of citizens, local officials, and the central government

Gnesen, Poland see GNIEZNO.

Gniezno (gunyĕz'nō) or **Gnesen** (gunā'zŭn), town (pop 30,292), Poland, 30 mi NE of Poznan The legendary cradle of the Polish nation, Gniezno was the first capital of Poland At the Congress of Gniezno (1000) the metropolitan see of Poland was established here, and according to some historians, BOLESLAUS I was recognized as king of Poland by Emperor Otto III The city passed to Prussia in 1793 and again in 1815 In 1821 the archiepiscopal see was transferred to Poznan Returned to Poland in 1919, Gniezno was annexed to Germany during the Second World War and suffered no damage It is noted for its 10th-century cathedral Chiefly a trade center, Gniezno has also clothing, leather, food, and printing industries

gnome (nōm), in medieval folklore, a dwarf spirit connected with mountains and mines They are usually represented as misshapen They are elfin and usually unfriendly.

gnomon see SUNDIAL

Gnosticism (nŏ'stĭsĭzm), religious and philosophical movement of the late Hellenistic and early Christian eras The concept that salvation is to be sought through knowledge rather than faith, ritual, or good works was the unifying principle which blended scattered bits of ideas The definition of *gnosis* [knowledge] as concern with the Eternal was present in earlier Greek philosophy Hellenistic mystery cults had been concerned with destiny, an evil which, they taught, man resists with *gnosis* Gnostic elements existed in the doctrines of the ESSENES and the THERAPEUTAE, who taught that eternal life is attained through knowledge of the Divine, mystically revealed These Jewish sects rejected the Old Testament concept of God as Righteousness and Creator and emphasized instead love of Divine Wisdom Christian Gnostics denied the Jewish foundations of Christianity and wholly rejected the Old Testament (see MARCION) The dualism of Gnosticism was strengthened by the influence of Eastern cults such as Zoroastrianism The need for redemption was common to many creeds, and Gnostics added it to the idea of Wisdom After the 1st cent A D , Christ was accepted, but as an emanation from the First Cause Magic, a common feature of Hellenistic cults, was incorporated into Gnostic ritual, even though the Gnostics taught that God is Intellect, to be sought with the mind Later Gnostics, particularly VALENTINUS, developed a complex doctrine based on all these concepts and held together by the current influence of NEOPLATONISM They taught that through the worship of Sophia (wisdom) the work of the creator (Demiurge) of the material world was repudiated, and the individual led to the Savior, an eon who redeemed man by freeing the soul from the thrall of matter One must contemplate also the other eons, who dwelt in the heavenly Pleroma between Sophia and Jesus and reflected Truth These Gnostics divided mankind into three classes Gnostics were spiritual (pneumatic) and required no aid for their certain salvation Christians who rejected Gnosticism were animal (psychic), and might, through faith in Jesus Christ, attain a lesser salvation The rest of men were called corporeal (hylic), they lacked a divine spark and would never be saved Such a doctrine might inspire extreme asceticism (as in the Alexandrian school of Valentinus) or extreme licentiousness (as in the sect of CARPOCRATES) Cultism characterized the OPHITES SIMON MAGUS, the magician mentioned in Acts 8 9-24 was frequently cited by early Church Fathers as a prominent Gnostic Our knowledge of Gnosticism is derived from extant Coptic texts, especially *Pistis Sophia* and *Jeu*, from the *Odes of Solomon* and other Wisdom literature of the PSEUDEPIGRAPHA, and from the refutations of early Christian writers, notably St Irenaeus, St Hippolytus, and St Clement of Alexandria Gnosticism stimulated Christianity to formulate a doctrine, since, for the first time, the new faith had to declare heretical and suppress a system which threatened it Gnosticism merged with MANICHAEISM, which adopted many of its ideas The MANDAEANS are the only surviving Gnostic sect See Ernesto Buonaiuti, *Gnostic Fragments* (1924), *Pistis Sophia* (tr by George Horner, 1924); F C Burkitt, *Church and Gnosis* (1932), L. G Rylands, *The Beginnings of Gnostic Christianity* (1940).

gnu (nōō), South African antelope with a rather oxlike appearance Two species of the genus *Connochaetes* are probably the best known The white-tailed gnu or black wildebeest once abundant on the plains and grasslands is now believed to be extinct in the wild state but is preserved on some farms in South Africa and in zoological gardens It is dark brown or blackish, and the males stand about 4 ft. high at the shoulder. Both sexes have horns, the head is rather broad, and long tufts of hair stand erect on the muzzle and hang from the throat and between the forelegs, a stiff upright mane extends from the horns to the shoulder The legs are slender, and the tail is long and white (except at the base where it is brown) The brindled gnu or blue wildebeest is bluish gray in color with indistinct brown markings on the sides of the body It is larger than the white-tailed gnu (*males* about 4½ *ft* at the shoulder), but the head is less broad Although much reduced in numbers it is still found in small herds.

Goa (gō'ä), Portuguese colony (1,469 sq mi , pop 540,925), W India, on the coast and bordered by Bombay state It was founded by Afonso de Albuquerque in 1510 from territory which he seized from the sultanate of Bijapur Old Goa (pop 2,707), the original capital of the colony, was a prosperous city in the late 16th cent A cathedral, churches, and several palaces survive from this period The most notable structure is the Church of Bom Jesus, here is the tomb of St Francis Xavier, whose missionary work (1542–52) was so successful that today about half the population of the colony is Catholic Old Goa's trade declined in the 17th and 18th cent , and in 1842 the capital was moved to New Goa or Pangim (pop 14,213), which had recently been built It is now the headquarters of Portuguese India

Goat, the see CAPRICORNUS

goat, ruminant animal with hollow horns, related to the sheep It was early domesticated, probably first in Persia from the wild bezoar goat or pasan The true goats belong to the genus *Capra* of the family Bovidae and are of Old World origin, although domesticated forms are distributed throughout the world Goats are raised for milk and for wool In some regions the flesh is eaten As milk animals they are far more numerous in the Old World than in the New, although the number of registered animals in the United States has increased markedly in recent years The milk has a high mineral content and small fat globules and is more easily digested than cow's milk by some children, invalids, and older people Goat's milk is also made into cheese Among the chief breeds of milk goats in North America are the Toggenburg goat (developed in Toggenburg, Switzerland), the first purebred milk goat imported (1893) into the United States, the Saanen goat, which also originated in Switzerland, the Nubian breed, the result of crosses between African and English stock, and the French Alpine goat Many pedigreed goats, especially the milk goats, are hornless Most numerous of the goats in the United States are the Angora goats, whose clipped wool is known as MOHAIR Texas is the leading state in the number of Angoras raised The Rocky Mountain goat is not a true goat The IBEX is one of the true wild goats See W L McWalt, *Improved Milk Goats* (1942), C A Leach, *Aids to Goat Keeping* (5th ed , 1946)

Goath (gō'ăth), unidentified place, near Jerusalem Jer 31 39

Goat Island. **1** See YERBA BUENA ISLAND, Calif **2** Island, W N Y , in the Niagara river, lying between the American and the Canadian falls

goatsbeard, common name (because of the fuzzy dandelionlike fruits) for two species of *Tragopogon*, tall, narrow-leaved plants with purple or yellow flowers in large flat heads They are native to Europe, but are naturalized in North America and sometimes weedy The purple goatsbeard or salsify (*Tragopogon porrifolius*), known also as oyster plant and vegetable oyster, is widely cultivated for the long edible root, oysterlike in flavor The roots may be left in the ground over winter and dug as needed The yellow goatsbeard or meadow salsify (*Tragopogon pratensis*), sometimes called go-to-bed-at-noon because the flowers open early in the morning and close at midday, is seldom cultivated Other plants having similar names are the black salsify (*Scorzonera hispanica*), with a root like that of the salsify in flavor and use, but black skinned, and with leaves used in salads, and another plant called goatsbeard (*Aruncus sylvester*), related to the spiraeas and cultivated for its small white flowers

Gob [Heb , =cistern], town, SW Palestine 2 Sam 21 18,19 In the parallel passage, 1 Chron. 20 4, GEZER is given instead

Gobat, Charles Albert (shärl' älbĕr' gōbä'), 1843–1914, Swiss statesman. He wrote on international law and helped found an international peace bureau He received, with Élie Ducommun, the 1902 Nobel Peace Prize
