FOREWORD

This is the first supplementary list of reprints and pamphlets added to the Pamphlet Collection of the Imperial Council of Agricultural Research during the quinquennium 1936-1940. The previous list contains entries for publications received during 1930-1935. The whole collection, now comprising more than three thousand reprints and separates of valuable articles, is available on loan on usual conditions to :—

1. Officers of the Imperial Council of Agricultural Research and those of its subordinate offices.
2. Gazetted Officers of the Provincial Agricultural and Veterinary Departments.
3. Research students and other research workers with the special permission of the Secretary.

As in its predecessor the arrangement of the entries in the list is according to the "Decimal Classification," with a slight variation in respect of the references dealing with diseases of crop plants. These references have been classified with the literature on the particular crop to which the diseases relate. The Classification numbers representing various subjects are in numerical order, but entries under each number are arranged alphabetically by author. A subject index with class numbers is given in the end.

The Library telephone number is 3598.
