PREFACE

This edition of "The Psychological Register" is to be known as Volume III. The 1929 edition, which was the first edition of "The Psychological Register," will hereafter be known as Volume II. The volume now in preparation, which is to include psychologists who died previous to the initiation of this Series and to extend all the way back to early Greek psychologists, will upon publication be known as Volume I. It is expected that Volume V, normally to be issued in 1938, will contain a cumulative index containing the names of all the important psychologists that have ever lived. As living psychologists eventually die, their names will continue in this cumulative index, the index referring to the proper volume in the Series where the complete academic and bibliographic records of the individual can be found. Since Volume II when issued contained no serial number, the proper labels for attaching the serial number to the backbone and to the title-page will be sent by the publishers, free of charge, to anyone requesting them. This request should be made by all owners of Volume II, because the cumulative index which will appear in Volume V will refer to Volume II by number only. Unless the labels are attached, it is likely that Volume II may become separated from the Series, especially in large libraries.

Volume III represents 40 countries, as compared with 29 countries represented in Volume II, and contains the names of about 2400 psychologists, as compared with the names of about 1250 psychologists in Volume II. Thousands of references in Volume II which were not absolutely complete in accordance with the bibliographical usage of the "Psychological Index" have been completed in Volume III. It has been impossible to complete many references, but there has been a decided and strenuous attempt to do so. The result is that Volume III contains more than twice as much data as Volume II.

In the United States, where there are many fringes to psychology, the result being that many able psychologists are not affiliated with the American Psychological Association, certain individuals not so affiliated have been admitted to this edition of "The Psychological Register," the admission being initiated by members of the following advisory group of psychologists selected by the Editor because of geographical and professional relationships: John E. Anderson, Edwin G. Boring, E. A. Bott, Trigant Burrow, Karl M. Dallenbach, Knight Dunlap, V. A. C. Henmon, Herbert S. Langfeld, Walter

R. Miles, Joseph Peterson, W. B. Pillsbury, A. T. Poffenberger, Edward S. Robinson, C. E. Seashore, L. L. Thurstone, Edward C. Tolman, Albert P. Weiss, F. L. Wells, Raymond R. Willoughby. As a result of the action of this advisory group, approximately fifty psychologists, residing in the United States and Canada but not affiliated with the American Psychological Association, have been admitted to this edition of the "Register."

Since the printing of Volume II in 1929, the British Psychological Society has modified its listing of members. A special committee appointed by the Society has undertaken the task of certifying which ones of the members are competent psychologists and which ones, by implication, are merely individuals interested in psychology. In the future, all such individuals thus listed by the British Psychological Society as being in the former group will automatically be included in the "Register."

I am glad to welcome Dr. Luberta Harden as Assistant Editor of this edition of "The Psychological Register." The successful emergence of this volume has depended very largely upon her.

I am grateful to the many Associate Editors throughout the world who have cooperated in the compilation of this "Register" and to the clerical workers who have labored in my offices and in the Clark University Library putting together in complete form the tedious items of this volume.
